"Two hundred years ago there was a larger population in this country. The Veddah Rajah lived in this place. He had a fortress at the Manera Kotta and one at the Tom Tom Hill; the Devála Kotta is the sacred place. This Rajah collected much gold; all the holes and caves in the country were dug by his people in getting gold.

"The Kurumbranád Rajah, who lived in the low country, wanted his gold and came up the ghâts with all his soldiers to take it away. The Veddah people were not soldiers; they dug in the ground. When the Veddah Rajah heard that the Kurumbranád Rajah was coming up he put all his gold into large copper pots and threw it into the tanks below his forts. There is much gold buried in these tanks both at Manera Kotta and at the Shuli Kolam.

"The Kurumbranád Rajah killed all the Veddah people. A few ran away and are still in Mysore and in the Nilambúr Forests. The Kurumbranád Rajah gave the country to the Numboly Kotta Vanavaar and his descendants. About eighty years ago the Vanavaar tried to get the gold from the Shuli Kolum; he made great poojah; all the people were feasted three days; a great tamasha was made.

"Then the Rajah got elephants and chains, and the chains were fastened to the great copper pot at the bottom of the tank. The elephants were beaten, all the people screamed and cried, the priests prayed, and the top of the great pot appeared above the water. Then suddenly two chains slipped, the great pot rolled back into the water, and nothing was left, but the copper cover. A fearful storm of wind and rain commenced, the people fled to their homes, and on that night the Vanavaar's son and most of the people engaged in this business died.

"The copper cover was for a long time kept at the Devála Kotta and was afterwards removed to the Numboly Kotta Temple, where it has been seen by many of us. But no one will now go near this Shuli Kolum, and whoever attempts to recover this gold will surely be killed."

The above legend may or may not have some solid foundation, but it is certain that one of the most acute and farsighted men in the Wynaad believes in it so far as to have made such an offer to the Nilambur Rajah for the right to search for the hidden gold as to prove that he was thoroughly in earnest. The offer was refused. I have seen the so-called tank. It is a deep water-hole in a swamp, covered thickly with screw-pines.

The Committee state that the best informed persons who gave evidence before them estimated that not more than 1,000 persons were engaged in gold-mining in the whole Province of Malabar. Most of these, it was added, were married, and it was assumed that probably between 4,000 and 5,000 people derived a portion of their means of subsistence from the produce of the mines.

The miners were not employed during the whole year in searching for gold: they followed this pursuit only during those periods when the weather interfered with the carrying on of agricultural operations; and it is said that there was no instance known of any persons giving up other occupations for the purpose of devoting their time exclusively to gold-mining.

It is impossible now to ascertain whether any large number of persons continued to employ themselves in mining in Malabar between the years 1832 and 1842. In the year last named the planting of coffee was commenced in the Nílgiris;—and its cultivation subsequently was rapidly extended. In 1854 a large extent of land was cleared in South-East Wynaad for plantations, and it may be assumed that the miners as well as others were attracted to the plantations by the wages offered by the planters. Labor was in some way withdrawn from the miners. In 1857, according to information furnished by Mr. Alexander Wright, there were less than four hundred persons working the mines at Yellem-Bullay, Devála, and Karambaut.

What number was employed near Nilambúr at that time is not known. It is almost certain that the working of the mines by the natives in South-East Wynaad practically ceased with the extension of the coffee plantations in 1862—65. At the present time, as far as can be ascertained, there are no mining operations carried on by the Korumbars, Moplahs, or other tribes in this area.

In other parts of India, however, a considerable number are still employed in washing the auriferous earths and the beds of the streams and in breaking up quartz, using the same methods and appliances as those described elsewhere.

Earnings of the native miners.

The information collected by Lieutenant Nicolson respecting the earnings of the miners at the time when he was exploring the Nílgiris and the country adjacent does not accord with that obtained by the Committee which subsequently took evidence on this question.

Lieutenant Nicolson states in his letters to the Government that at the mines near Nilambúr the yields varied from the weight of one-third of a gold fanam to the weight of ten gold fanams* per man per diem, and that at a hill named Combala Mallay (one of the Chulu Mallay range) the average yield was about one gold fanam's weight per man per diem.

In his evidence, when he was examined by the Committee, he stated that the average earnings from the *best* shafts with the methods of working then in vogue were about the weight of a gold fanam per man per diem.

The Committee in their report to the Government assumed as the average produce of each man's labor per diem one-third of a gold fanam's weight, and on this their calculations of the total produce of gold in Malabar is based.

One witness examined by the Committee gave, as what the miners would consider a fair remuneration, half an old gold fanam (two annas) each per diem adding that the miners got generally less than this.

Another witness thought a quarter of a fanam's weight was the average.

A sheristadar, Principal Collector's Cutcherry, Calicut, gave as the average produce from actual inspection four barleycorns per man a day.

Mr. King, the Deputy Superintendent of the Geological Survey, could not ascertain that either by washing the soils or crushing the quartz the miners ever got gold, except in very rare instances, in larger quantities than would pay the average day's work of each man, or from two to three annas' worth of gold (*letter, dated Madras, 11th March 1875*).

* The average weight of the new gold fanam is 6 grains nearly, and 80 may be reckoned to the ounce troy the average mint value of 100 pieces is Rs. 24-8-11.

The average weight of the old gold fanam is about 5·79 grains and the mint value of 100 pieces is Rs. 24-7-3—*Report of Committee, 14th December 1832.*

The star pagoda of gold was 19¼ carats fine, and, intrinsically, worth 7*s.* 5½*d.* weight, equal to 52¼ grains troy.

Twelve barleycorns are equal to one fanam's weight.

Mr. Lindon, in a report dated October 1876, states that "a laborer, working on his own account, can raise, crush and wash about 16 lbs. of reef-stuff per day. In order, therefore, to give him a day's wages of four annas (say three grains of gold) the (say) 16 lbs. treated must yield *him* at the rate of about one ounce of gold per ton, and contain actually, nearly, if not quite two ounces of gold per ton of stone." In the pamphlet entitled *Gold Prospecting in the Wynaad* it is estimated that less than 15 pennyweights of gold to the ton would not have found the workers in food, as it takes a man the whole day of ten hours to pulverize 12 lbs. of stone.

From these different and somewhat conflicting statements it is not easy to arrive at a result which would have a value in any attempt to estimate the quantity of gold procurable by the native miners either from a given weight of earth or vein-quartz, but there is some information available.

The Committee above referred to had some test-washings made during their stay at Nilambúr, and they found that "two maunds or 66 pounds of the earth from the upper stratum of the Mambaat mine being washed produced a quarter of a barleycorn, value one-hundredth part of a rupee; touch reported by the Company's gumastah 9¼; time occupied in washing 20 minutes. Two maunds of the lower stratum produced a still smaller quantity * * * * * * * * * The same quantity of the red earth from Coopul produced one grain; time occupied in washing alone 50 minutes."

The first washing shows that the proportion of gold in the soil was equal to 4·24 grains per ton; and the last gave at the rate of 33·93 grains per ton. Now in Australia the results of actual mining operations by hydraulic or jet-sluicing prove that a yield of ·800 grains per ton will cover expenses, even where hired labor is employed and the water is paid for.

In Colonel Sankey's report on the Coliban and Geelong schemes of water-supply (Victoria, Australia) there is, in addition to the principal matter of it, much valuable and interesting information on the subject of sluicing auriferous soils. He estimated the quantities of water required to reduce a cubic yard of soils of different characters as follows:—

	Gallons.
1. Stiff clayey soil	10,000
2. Medium	5,000
3. Easily worked	2,000

The nearest approximation to the average quantity of soil which each man can sluice in a day he gives as follows:—

	Per diem. C. yards.
1. Stiff clayey soil	10
2. Medium	20
3. Easily worked	35

These averages were ascertained, by direct experiment, to be as nearly as possible correct.

At Blackwood it was proved that, in sluicing medium soil from 10 to 12 feet in depth, one grain of gold per cubic yard would return ordinary wages.

As the soils on the slopes of the hills throughout the area occupied by gneissoid rocks in Southern India are not difficult to wash, and would come under the head of "easily worked" in Colonel Sankey's classification, it is possible that sluicing on a large scale may in some localities become a profitable pursuit.

It is true that the soils in the Wynaad are nowhere very thick, but a modification of the arrangements adopted in Australia in sluicing would admit of large quantities of earth being treated with but a moderate supply of water.

Assuming that the proportion of gold in the soil was no more than the lowest named by the Committee, a man could earn in such a place as Mambaat at least twenty shillings per diem by sluicing on the large scale.

The imperfect means employed by the miners in washing the earth, when the Committee witnessed the tests, leaves room for doubt as to whether they recovered more than a percentage of the gold in the quantities of soil they treated; and instead of the results being discouraging as suggested by the Committee (gold-mining as an industry being then in its earliest stage), they are

such as to lead to favorable conclusions, both as to the value of the soils and the reefs.

Assuming that each miner got no more than the quantity named by the Committee and Mr. King, his earnings for the whole year, allowing twenty-four working days to the month, would amount to 24 pennyweights of gold only.

When the gold fields of Victoria were first "rushed" by miners the average earnings per man per annum were equal to 65 ounces of gold; afterwards, as the shallow diggings became exhausted, the yields decreased; and at the present time the average earnings of quartz and alluvial miners vary from 16 oz. to 26 oz. per man per annum.

What the average yield of gold from the richest earths was when the gold fields of Southern India were first opened cannot be conjectured. It may be believed that all the streams and slopes where the richer earths had accumulated and all the outcrops of quartz where gold was visible to the eye were eagerly attacked by the natives; and that at all times since the discovery of gold was made it has been the endeavour of the miners to find the most productive patches. Except as regards deep mining in the reefs which the natives could not undertake, the gold fields of Southern India may be looked upon, like those of many districts in Australia and California, as practically exhausted as far as it has been possible to exhaust them by the native system of working. Any comparison therefore between what the native miners earned in 1832 or since and the earnings of the miners of Australia formerly or at the present time can have no value in measuring the auriferous resources of Malabar.

When the miners commenced to work the fields in Australia and California they found numerous shallow deposits in gullies and "flats" where the gold derived from the disintegration of a great vertical extent of auriferous quartz veins was stored at depths varying from one or two feet to thirty feet or more; sheets of lava in many parts sealed up and conserved old stream-beds also rich in gold, and these as well as the earths on the slopes of the hills were easily worked. In Malabar there are no recent formations similar in character to those which were so productive in the countries named. It would be altogether unreasonable to compare the produce of the miners here with that now obtained by miners in Victoria. The native miner has a *mamooty*, *a murriya* or a *pautty*, worth altogether perhaps one rupee: the Victorian miners have machinery valued at £2,000,000, that is to say, they have appliances of the value for each man of £45. And this does not represent the enormous difference in their modes of labor. The Australian miners have extraordinary energy, great skill in using their appliances, and, above all, organization. They labor for the most part under the most excellent management and the most active superintendence. A native, it is said, can crush from 12 lbs. to 16 lbs. weight of quartz per diem: one heavy stamp-head in Australia will do as much work as 500 natives; and at present there are more than 6,000 stamp-heads in one colony alone.

It is well to remember, too, that a well-trained European miner will do as much ordinary work as five or six natives. With a good pick a practised miner would probably excavate more earth or rock in one hour than a native would do in five or six hours with a mamooty.

The only way in which the relative value of the gold fields could be tested would be to set a party of natives at work on an abandoned gold field in Australia or California restricting them to their ordinary modes of mining. It is doubtful whether they would earn one anna a day. Perhaps one pie would be nearer the mark.

Taxes paid by native miners.

The taxes paid by the native miners may fairly be considered in connection with the amount of their earnings as estimated by different persons at different times. The Committee previously mentioned reported as follows:—

"In an extract of a paper, dated 9th January 1829, by Mr. Sheffield * * * * it is stated that in 1801 the gold dust in the Ernád country was farmed for Rs. 1,408-8-0. He mentions also that at the time of writing (1829) the privilege of gathering gold was farmed out above the ghâts for the sum of Madras Rs. 1,250, and below the ghâts in Ernád for Rs. 937-15-4, making a total of Rs. 2,187-15-4. Since 1803 a tax of Rs. 33 a year each has been levied on a certain number of *pautties* or troughs employed in washing for gold. At present (1832) this

amounts in Ernád to Rs. 839, which is a falling off of Rs. 569 a year since 1801, and in Wynaad to Rs. 1,260. Besides this, the privilege of collecting gold in Caraloondy has within the last two or three years been farmed for Rs. 108, which makes the whole amount now received by way of tax upon gold paid to the Company Rs. 2,207."

It is said that there were 1,000 persons employed in gold-mining in the whole Province of Malabar; and, assuming that the average yield per man was that estimated by the Committee, the taxes amounted to 5 per cent. on the produce, relatively a very heavy impost.

When the taxes paid directly by the gold miners in Victoria (1853) amounted to the large sum of £720,864, the proportion was no more than 6¾ per cent. on the gold raised. At the present time the taxes, rents, &c., paid directly by the gold miners in that colony amount to less than ½ per cent.*

For each *pautty* a tax of Rs. 33 was paid, and consequently, if the two men employed to work it earned no more than the average, there must have remained to them as wages only 1 anna 7 pies each per diem. Allowing that they worked throughout the year this tax would amount to over 36 per cent. on the produce, and if they worked for only five months in the year it would nearly equal their whole earnings. These are fair deductions from the statements made in the report of the Committee and from the evidence given before them. The aspect of the case which I have presented never seems to have been considered by the Committee or they would have made further investigations. I have made inquiries and ascertained that the mode of collecting the tax was very different from that which was stated to the Committee. The native officer was accustomed to require the Rajah or his officers to state what number of pautties there were at work. A return was made perhaps of eight or ten when in fact there were one hundred or more at work. The principal native witness who appeared before the Committee neglected to mention this as the rule observed in transacting business in connection with the collection of revenue.

In the descriptions of the auriferous reefs which follow it will be observed that in those places where there are enormous bodies of quartz exposed at the surface the old native workings are extensive. The most striking examples of this rather remarkable occurrence of what must have been highly auriferous quartz, where the reefs exhibit their greatest thickness, are to be found at Parcherry Hill, the Skull Reef near the Alpha Works, the reefs on the Sandhurst, Elizabeth and Strathearn Estates, and at Karambaut. Though the natives worked the leaders in many localities, they found it evidently more profitable to break out quartz in such places as those mentioned; and it is highly encouraging, as regards the future mining prospects of the district, to find that the reefs of the Wynaad do not, as in most other countries, become poorer as they increase in thickness.

Auriferous reefs and native workings near Devála.

It would be wrong to infer from this that the thickest reefs are invariably the richest in gold: the facts adduced admit of no other conclusion than this, that the miner need not be discouraged when in following a vein he finds it enlarging. It has been often noted by those working quartz reefs in Australia that the absolute amount of gold per foot downwards does not decrease, but that where the reef thickens the gold is distributed generally through the stone and a larger proportion of stone has to be crushed to obtain the same amount of gold as in those parts where the reef was thinner. It would appear that this rule does not apply to the reefs in this country, but, until the veins have been opened throughout a considerable length and to some depth, no certainty on this point can be arrived at.

It has been considered advisable to use great caution in suggesting the probable connection of the outcrops of quartz as they appear at the surface—in laying down hypothetical lines so as to connect one outcrop with another. The direction of the lines of reefs may from the surface indications be guessed at; it can be ascertained in no other manner than by extensive explorations; and the facts mentioned in other parts of this report justify hesitation in laying down, as absolutely beyond question, any line of reef in the Wynaad.

At Sandhurst in Victoria, notwithstanding that the lines of reefs have been largely mined and carefully mapped, their strike at a small distance from the workings either on the north or on the south is usually conjectural only, and in other localities in the same colony the miners have found it impossible to determine the course of the veins.

In the *Mineral Statistics* of Victoria it is stated in a note that the returns relating to the number of "distinct" quartz reefs which have been proved to be auriferous cannot be strictly correct, as parts of the same reef in some localities are held to be distinct reefs and named accordingly; and again as the reefs are further explored it is found that what were supposed to be separate reefs are not really distinct. In the Wynaad the difficulties in the way of determining even approximately the strike of the reefs is, it is scarcely necessary to say, far greater than in Victoria.

There is no information to be obtained as to the depth of the water-level in the rocks of the Wynaad, but it may be assumed from the character of the climate that water in most places will be reached at no great depth from the surface. This would be embarrassing and cause great cost in prosecuting mining operations if it were necessary to sink vertical shafts. As horizontal shafts will in nearly all cases be driven to cut the reefs, the depth of the water-level is of no great importance, except as affecting the minerals associated with the quartz and gold. Above the water-level the proportion of iron pyrites and other sulphides is smaller than below it.

The results of the treatment of the samples from many of the reefs will be regarded as discouraging by those who have not given much attention to quartz mining. It should be remembered, however, that in the greater number of cases the stone was broken from outcropping blocks, and it is a matter for surprise that so large a number should have proved to be auriferous and that so many should have yielded well. Enough has been done to prove that the area shown on the maps is one which must ultimately attract capital and that several localities will hereafter be the scene of successful mining enterprises.

It is not unlikely however that the first attempts will fail. Speculative undertakings having for their object the making of money by buying and selling shares are commenced invariably by appointing Secretaries and Managers at high salaries and the printing of a prospectus. This is followed by the erection of costly and not seldom wholly unsuitable machinery; no attempts are made to open the mine; and then, after futile endeavours to obtain gold, and a waste of capital, it is pronounced and believed that gold mining on a large scale will never prove remunerative.

It is probable that this story will be repeated again and again, here as in other gold-mining countries, until some one of the mines is opened by experienced persons who desire to secure profits not by dealing in shares but by mining.

Within the boundaries of the Needle Rock Estate there are quartz veins and alluvial workings.

Needle Rock.

The rocks throughout the central, northern and north-eastern parts, consist of quartz, hornblende and magnetic iron with granular quartz rock in places. South of the bungalow there are numerous scattered blocks of weathered rock, exhibiting somewhat irregular rhombohedral and prismoidal forms. Where decomposed these enclose reniform and laminated limonite and hæmatite derived from the decomposition of magnetic iron. At Dawson's Diggings the direction of the foliation of the rock which is composed of quartz, felspar and magnetic iron, is nearly east and west; but there is a well-marked system of joints, like strike-joints, the direction of which is N. 20° E. and the dip E. 20° S. at 40°. There are other joints transverse to the latter and the foliation.

South-east of Dawson's Diggings the rock appears as if not much altered; it is in thin laminæ, and these are disposed in lines striking N. 55° W. and nearly vertical.

There are five separate outcrops of quartz at Needle Rock, the most important of which are the Buckingham Reef extending from the north-western angle of the estate south-eastwards for thirty-six chains or more, and the Chandos Reef which is seen about twenty-five chains southerly from the bungalow. The Buckingham Reef may be a continuation of the Monarch Reef and that which is found at the Dingley Dell Bungalow.

* While the rents and taxes paid *directly* by the miners of Victoria are low, it is right to state that under the system of "protection to native industry" they are very heavily burdened.

The Chandos Reef is nearly sixteen chains to the east of the line just mentioned; the outcrop is at an altitude of 3,361 feet or 261 feet below the Buckingham. The quartz of the latter has a good deal of micaceous iron intermixed with it.

Both the reefs are strong and apparently persistent. No gold was seen in the stone which was broken out when prospecting; but Mr. C. R. Dawson exhibited specimens of quartz with gold visible from the outcrop on the southern boundary of the estate, which perhaps is a prolongation of either the Buckingham Reef or the Chandos Reef.

The character of the stone may be judged however from the gold found in the soil. Having been informed that rough gold had been washed out from shallow workings marked "Dawson's Diggings" on the map, and having inspected some of it, it was decided to continue the ground-sluicing operations which had been commenced by the Korumbars and also to wash by box-sluicing.

The Korumbars made an excavation forty-five feet in length, twenty-five feet in breadth, and two feet and a quarter in depth. They dug down to the bed-rock which everywhere is uneven. A ditch was cut for a length of thirty chains for conveying water to the working; and I frequently observed the native method of washing. It was obvious that the coarse gold might be concealed in the crevices of the bed-rock, and escape the eyes of the Korumbars who searched for the larger pieces; and it was equally clear that some of the fine gold would be carried away beyond the end of the sluice. Some of the earth ("tailings") carried down by the water was washed by Mr. Thomas Laing, and he found gold in it. Still the yield obtained by the natives was sufficient to prove the value of the reefs from which it had been derived: the average was 1·18 grs. of gold per cubic yard.

Other experiments with the box-sluice were satisfactory; several small pieces of gold were got as well as fine gold; and there is little doubt hydraulic sluicing combined with a modified form of the box-sluice would at this place yield returns sufficient to give good wages to the natives.

Gold was found in the soil by sluicing and washing in other parts of this area.

The gold workings at Needle Rock were visited by His Grace the Governor on the 1st November 1878, when sluicing operations were going on; and gold was obtained by the Korumbars with their ground-sluice and by Mr. Thomas Laing with the box-sluice.

There is a good supply of water in this locality during the monsoon, but, if the reefs be mined, it will probably be found economical to use steam to drive the stamps.

From the appearance of the soil in all places where it was excavated it was apparent that it had been moved; indeed there is reason to believe that the hill sides in times long past were sluiced after the fashion now practised by the Korumbars, and that the superficial deposits have nearly everywhere been robbed of their gold.

It was near Dawson's Diggings that the stone and muller used for pounding quartz were found.

Dingley Dell.

The main outcrop of quartz at Dingley Dell is found close under the bungalow where large masses of stone appear at the front and back of the house. In an excavation close to the outcrop the reef is of great thickness, perhaps twenty feet or more; its strike is N. 25° W. nearly; and it dips eastward at an angle of 30°. The dip however is not regular. The quartz is laminated (the laminæ are rather thick); there is some of it jasperoid, in other places it is white; and there is much ferruginous quartz with white iron pyrites in nests. No gold was visible in the stone. It is said that rather heavy gold has been found in the soil not far from the reef.

About sixteen chains west of the bungalow there is another reef, which is probably merely a prolongation of that which is seen on the bandy-road about seventeen chains west of the western boundary of Needle Rock. If this be so, the strike would be N. 30° W.

Eastward of and a short distance beyond the boundaries of the Dingley Dell Estate the Korumbars say that there are native workings.

Mr. J. W. Ryan forwarded two baskets full of rather ferruginous quartz and earth from Dingley Dell, and portions were tested—the yields being 2 dwts. 8·4 grs. per ton, and 1 dwt. 19·8 grs. per ton. The samples were from depths of 3 feet and 5 feet respectively, and necessarily are no fair indications of the value of the quartz.

Trevelyan.

The outcrops of quartz on the Trevelyan Estate are most probably connected, as hereafter stated, with the reef which appears near the Provident Bungalow.

The reef proper comes to the surface about twenty-seven chains north-easterly of the bungalow, and along the line of reef south-easterly for some distance there are several old shafts. Between these and the bungalow there is a pretty strong leader, which was cut when the Korumbars were ground-sluicing. Quartz with gold was found by Mr. J. Hodgson Williams in the trench and shown to me.

In three other places, as shown on the map, Korumbars employed occasionally by Mr. Williams, and for a short time by me, got gold by ground-sluicing.

About five chains south-easterly from the bungalow rather coarse gold as well as fine gold was washed out of the stones and earth lying on the slope of the hill, and about twelve chains from the house the debris and detritus forming the banks and bed of a small stream yielded well.

Mr. Williams was active in prospecting with the aid of Korumbar miners, who worked under the direction of an old Korumbar miner named "Matha," and thus the occurrence of gold over a large area has been proved.

Mining operations could be conducted in this locality at no very great expense.

Provident.

On the Provident Estate at an altitude of 3,621 feet, and very near the bungalow, a quartz reef comes to the surface, which is no doubt the south-eastern extension of a reef which appears in the Trevelyan Estate. Mr. J. W. Ryan and Mr. J. H. Williams state that they saw gold which was found here when a hole was being sunk for a post.

Strathearn and Maryland.

On the extreme northern boundary of the Strathearn Estate, and beyond the boundary, there are native workings extending over an area of five or six acres. The reef is seen exposed on the northern face of the steep slope overlooking a paddy flat. At one spot its direction is north 27° west nearly; but following the several outcrops south-easterly the strike appears to be nearly north 20° west—south 20° east.

About six chains southerly from the bandy-road there are old workings, and twenty chains south-easterly from the latter the reef again appears in the midst of small pits and excavations. Outcrops are found near the Strathearn Bungalow, as shown on the maps, and the flat low land, west of the pulping house, has been worked by the natives.

The main reef shows strongly all along the outcrops, and it may be an extension of the reef which is seen at the surface at the Hamslade Bungalow. If this supposition be correct, the longitudinal extent is two miles and twenty chains and the strike north 18° 30′ west.

Mr. W. King is of opinion that the Strathearn Reef is a prolongation of the Skull Reef, and it is easy to trace outcrops all the way from the edge of the ghât to the northern extremity of the Strathearn Estate, but it is not so easy to determine whether or not they are connected. Supposing Mr. King's view to be sustained the strike of this line of reef would be north 28° west.

Mr. Lindon in a printed report, dated October 1876, expresses the opinion that the Strathearn is an extension of the Hamsluck Reef (also traceable all the way by outcrops of quartz), and its direction in that case would be north 14° west.

As regards the outcrop overlooking the paddy flat, there are, from the formation of the ground, great facilities for mining and crushing the quartz.

There is a stream of water at the foot of the hill, and water could be stored at no great expense. It is at this point that operations might be undertaken with the best prospects of success.

The thickness of the vein is considerable, but until it is opened up, its real dimensions and true character will not be known.

There is a great quantity of broken quartz on the spot, showing that the natives must have found gold in sufficient quantities to remunerate them.

The yield of one sample of quartz taken from this reef was at the rate of 4 dwts. 21·8 grs. per ton; and another parcel gave 5 dwts. 19·77 grs. per ton.

Thirty-six chains north-easterly from the Maryland Bungalow a reef has been cut in making a road near the summit of the ridge, and in washing the soil and quartz gold was found in small quantities. At a lower level there are masses of quartz indicating the occurrence of a thick reef, which may perhaps pass through Poothacotah (where the natives say there are old workings in the thick jungles), and thence to the vein on the ridge overlooking Sheardale.

On the road from Richmond to Strathearn (see map) a vein, which seems to be a leader, is exposed for a length of about eight feet. Its direction was found to be N. 10° E.—S. 10° W., and the thickness two feet and-a-half. The rocks in the immediate vicinity strike N. 30° E. and N. 40° E. in the direction of the foliation, and main joints run nearly north and south (almost vertical).

Richmond.

There is one reef on the Richmond Estate which crops out about forty chains east of the bungalow. Its direction is north 15° west for a very short distance; but it is not improbable that it is a prolongation of the reef which is found in the Sheardale Estate. The dip and thickness could not be ascertained. The blocks of quartz near it, however, indicate that it is a strong vein. It has been named the "Richmond" Reef. There is a shallow pit near the outcrop, but it does not appear that the ground at this place has been largely worked by the natives.

North-eastward of the reef, and on the western side of the bandy-road there are native workings extending for a length of half a mile, consisting mostly of shallow pits.

These are old workings. Trees and shrubs are growing in and near the pits. Information respecting the rocks within the boundaries of this estate is given on the map.

Elizabeth.

On the Elizabeth Estate the outcrops of quartz are numerous, and large blocks of quartz cover the north-western face of the high ridge which extends south-westerly and north-easterly.

Dawson's Reef, which is at an altitude of 3,591 feet, is perhaps no more than a series of strong leaders from the main reef similar to those which have been cut in making the road on the south-east. Here there is a long adit which could not be followed to its furthest extent as the roof had fallen in. For a distance of thirteen feet the inclination is at an angle of 30° to 35° and thence at a less inclination. The quartz was found to be full of pyrites, and gold was visible in some of the pieces. In places the quartz was "mice-eaten;" numerous cubes of pyrites partially decomposed and coated with limonite were seen; and some agatised quartz of lenticular form was implanted in the ordinary white or ferruginous quartz of the veins.

Thirteen chains south of the Korumbar village there is a large outcrop of quartz named the Elizabeth Reef; and the main reef appears again on the north-western face of the hill where it can be followed into the Sandhurst Estate. In looking at the lines on the map allowance must be made for the difference of heights and then the run of the reef can be followed. Over an area of nearly fifty acres, all within the boundaries of the Elizabeth Estate, the ground has been worked by the natives, and it was only when Mr. C. R. Dawson caused the jungle to be cleared that the extent of these old mines and the character of the mining operations were ascertained. Many of the shafts are similar to those at Glenrock; they are vertical for a depth of six or eight feet and thence level or inclined. There are, besides the shafts, numerous large excavations, and there is scarcely a square foot of ground that has not been turned over.

It is said that the natives used to fell the trees and make large fires on the blocks of stone in order to facilitate the work of breaking up the quartz.

South of the Korumbar village of Neru-muttum (literally—"water-level") there is a swamp at a considerable elevation; and water was conveyed by a channel to the point on the map marked "aqueduct." Here there are the remains of the old embankments on both sides of the gully, and the natives must have made a flume and supported it by a framework of the height of twenty-one feet. The flume was probably constructed of bamboos or hollowed trees. Beyond the aqueduct the water was taken to the face of the hill, no doubt in channels varying in height. The race or channel amidst the old

workings which is at the present time most conspicuous and most easily traced is about fifteen chains in length, and at its extremity is twenty-five feet below the level of the flume.

There are numerous smaller channels leading into this cut apparently as catch-water drains.

On going over this ground the stranger is amazed at the great extent of the workings, and, if a miner, is astonished too when he observes the skill displayed by the natives as shown in the now crumbling remains of their earth-works and channels and walls.

Mr. Thomas Laing carefully prospected a portion of the area here referred to, and he found gold both in the worked-out soils on the north-western face of the hill and also near the aqueduct.

The rocks here are nearly of the same character as those occurring on the east and south-east. At A on map they are highly talcose, decomposing into a soapy clay. The direction of the foliation is nearly east and west (vertical); the main joints are well marked and are nearly at right angles to the foliation, and the dip is east at from 50° to 60°.

The weathering here is much like that of granite—hard cores of rock surrounded by concentric layers in various stages of decay.

I was not able to measure the thickness of the main reef or the principal "leaders" in this area, but the huge blocks of quartz which cap the hills and lie on the slopes and the longitudinal extent throughout which the reef and "leaders" can be traced are evidences of their strength and persistence.

The formation of the ground could not well be more favorable for carrying on mining works at a small expense, and even if steam had to be used for driving the crushing machinery the costs of extraction and crushing could not be large. Timber could be obtained suitable both for supports in the mines and for fuel; and I have no hesitation in stating that when the resources of this area are ascertained by miners competent to form an opinion and with capital sufficient to fairly test the ground, it will become once more under different conditions a centre of mining operations.

Downham.

On the map of the Downham Estate a reef is shown west of the bandy-road which leads to Devála. The site is marked by huge blocks of quartz mostly more or less ferruginous; and on the slope of the hill towards the swamp there are native workings. An adit driven at a level a little above the bandy-road would prove this reef at small cost.

Mr. Thomas Laing found gold in the soil near the edge of the swamp which lies south of the Korumbar village.

The yields of gold per ton from the reefs on the Richmond, Elizabeth and Downham Estates are given in Appendix H.

Harewood and Kintail.

The most important and the most interesting native workings on the Harewood and Kintail Estates are those which are found near the summit of the high hill north of the Harewood Bungalow. Here there are three vertical shafts from twenty to thirty feet in depth, and these are undercut by an adit the mouth of which has fallen away. At the entrance to the adit a mass of quartz *in situ* is exposed. Its direction as well as could be ascertained is north 20° west and at one point the dip is westerly. The country rock (gneissoid) is penetrated throughout by thin veins of white quartz varying from one-eighth of an inch to six inches in thickness. There are also both in the quartz and in the rock nests and veins of limonite and hæmatite, the latter in places stalactitic. Some of the quartz is slightly opaline and bluish in color.

The adit is about 126 feet in length, and very irregular in slope and direction. A few feet from the mouth there is a drive to the left from which a blind shaft has been sunk either on the underlie or for the purpose of following the "leaders" of quartz. Following the main adit onwards it was found that a similar system of working had been pursued. A careful examination showed that not unsuccessful attempts had been made to support the roof, the rock being left in some places; and in another, a pillar had been built. The adit was made after the shafts had been sunk and at such a level as to undercut them.

The ground has moved considerably since the mining operations were carried on; in some places there are long, narrow spaces left by the slipping away of the rock; much soil has been washed into the shafts and adit, and the changes thus effected, more particularly by the partial landslip, make it somewhat difficult at this time to ascertain exactly what was done by the miners. These old mines are situated on a very steep slope of the hill; there is no water near and it may be conjectured that the quartz was carried into the valley and treated after the methods of the natives. Though a careful search was made no broken quartz such as generally marks the site of other native workings was seen near the spot. Perhaps the debris may have been carried away by the rains. Where the veins are thickest the quartz is coarsely laminated and iron pyrites are scattered through it, while in other parts there are nests and cavities nearly wholly filled with peroxide and protoxide of iron. Three samples of stone were tested—one showed no gold, one gave at the rate of 1 dwt. 19·68 grs. per ton, and the amalgam of the last was lost.

Another sample yielded at the rate of 2 dwts. 4·41 grs. per ton.

This reef could be properly tested by a short adit. Sixteen chains east of the Harewood Bungalow there is an outcrop of a reef, and it again appears on a hill thirteen chains to the south-eastward, where there are a few shallow pits and a large excavation.

There is vein quartz near the cattle shed (see map) and thin veins of quartz about six chains north-easterly where the soil has been washed.

A large vein, but irregular and with a low dip, appears on a high ridge overlooking Sheardale. Where strongest it shows about five feet of quartz. The same vein is found almost on the boundary between Sheardale and Harewood, and on washing the soil and detritus at this spot gold was got in small quantities. It was reef gold, not water-worn. The soil had evidently been washed by the natives.

On the eastern side of the road from the Dhoby village southwards there are native workings extending for a length of seventeen chains or more.

About seventy chains eastward (100°) from the Roman Catholic Church a reef comes to the surface on the slope of a hill. It is probably a continuation of one east of the Alpha Bungalow. It bears N. 24° W. from the Etucull Reef and N. 15° W. from the Cavern Reef.

A small shallow pit was sunk here, and Mr. Thomas Laing carefully tested the soil by washing, but no gold was obtained. There are no native workings to be seen near the spot.

The rocks on the Harewood and Kintail Estates are highly interesting.

On the road between Harewood Lower Bungalow and Sheardale there are large symmetrical rhombohedral and prismoidal blocks and square prisms of dense granular quartz rock, some of it being true quartzite. The square blocks with the angles truncated were almost as smooth as if the stone had been cut and polished.

Near the Roman Catholic Church the direction of the foliation is N. 50° E. and N. 55° E. and the dip south-easterly at 60° nearly. One set of planes have the direction of N. 15° W.; and there are other joints transverse to the foliation and master-joints. The rock is fissile, splitting off in thin layers in the direction of the lines of foliation. Mineralogically it does not differ much from the ordinary gneissoid rock of the country.

About twenty-four chains east of Harewood Bungalow the rocks are composed of quartz, mica, and felspar (plagioclase), coarse (altered) sandstone, and friable micaceous sandstone.

On the north-eastern boundary of the estate near the gap the direction of the foliation is N. 30° E. to N. 44° E. and the dip 85° to nearly vertical.

Near the outcrop of quartz on the hill overlooking Sheardale there is a good deal of magnetic iron in the rock. It is like that at Needle Rock presenting beautifully smooth prismoidal blocks in many places.

There are the usual facilities for working the reefs in the Harewood and Kintail Estates; there is an abundance of timber; and the land trends eastward and south-eastward towards streams which during the greater part of the year carry a good volume of water.

Sheardale and Dunbar.

The Dunbar Reef is seen at the surface at the face of a very steep hill about twenty-two chains from the road forming the northern boundary of the Sheardale and Dunbar Estates. Its strike, as well as could be observed, is N. 30° W. and the dip easterly at about 27°. The thickness exposed is from three feet six inches to four feet. The total thickness could not be ascertained. The quartz is full of iron pyrites in places, and generally highly ferruginous. It is a remarkably good-looking stone, and it was disappointing to find no gold visible in it.

There is a pretty large excavation near the outcrop, but it is now covered with soil washed down by the rains.

Respecting this reef Mr. King writes thus:—

"Mr. Powell, the Superintendent of this garden, when down showing me the reef, was successful in knocking out pieces of quartz in which small streaks of gold were visible. The underside of this lode is very like in color and contents to that of the Alpha Company, the richer seam in the quartz being on this side. Leaders are numerous and large. The casing is of talcose schist and seamed with ferruginous and manganese streaks. The lode is traceable northwards into the Balcarras Estate, where there is a great show of white quartz on the eastern slope of one of the low hills. This part of the reef has been very extensively riddled by the old miners. In fact all its extension northwards towards Pandalur has been washed, and its immediate neighbourhood on the underside is still a favourite locality for washing during the rainy season. It runs through the Elizabeth and Sandhurst Estates, and close alongside the Caroline and Mr. Holmes' Application, and thence northwards."

From this description it would appear that the direction of the reef is N. 32° W.

On a cliff about twenty-two chains north-easterly there are veins of quartz which may probably indicate the north-western extension of a reef which crops out on the Adelphi Estate.

Thirty chains westward from the Dunbar Reef there are numerous large blocks of quartz and masses of country rock veined with white quartz.

North-east of the pulping-house there are loose blocks of quartz and at this spot also what appear to be native workings, and west of the pulping-house there are thin veins of quartz intersecting the rocks.

There are here the same favorable conditions for carrying on mining operations as on other estates in the district. The land trends towards a large stream, and there is thick jungle near from which good timber can always be easily procured.

In the lower parts of the estate the rock is decomposed to a great depth, but on the road which has been cut along the northern boundary fine sections are exposed. The direction of the foliation is shown in several places on the map. It varies from N. 35° E. to N. 60° E., and there are here, as elsewhere, systems of joints like those described in another place. At one spot there are masses of garnetiferous rock. The minerals associated with the garnets are white and glassy felspar and hornblende. The rock closely resembles that found at Nadukale.

At the bend of the road just above the precipitous cliff where the white masses of quartz appear the country rock is penetrated in all directions by veins of bluish opaline and white quartz, some specimens showing scattered crystals of felspar (orthoclase) and nests of greenish black mica (biotite).

The planes of division in some places have caused the rocks to appear as cuboidal blocks and in others as square or hexagonal prisms.

It is interesting to observe the weathering of the masses in this locality. The rock has decayed much after the manner in which granite decomposes when exposed to the influence of the atmosphere. Around a core of hard rock there are concentric layers in various stages of decay, those on the outer surface being nearly as soft as kaolin.

Hamsluck, Hamslade, and Adelphi.

Thirteen outcrops of quartz were observed on the Hamsluck, Hamslade, and Adelphi Estates, as well as several areas which had been worked by the native miners.

Under the Hamslade Bungalow there is a strong reef, and near it gold can be washed out of the soil; and Mr. Minchin informs me gold has been got in the quartz also. This reef again appears at the surface at a point about seventeen chains south-easterly.

Nearly twenty-two chains eastward of the bungalow there is a reef which has been worked, and on this line there is a shaft five feet by two-and-a-quarter feet and fifteen feet in depth which, it is said, was sunk by Mr. Sterne. The country rock here is everywhere intersected by small leaders and veins of quartz. The bearing of this reef is about N. 30° W.—S. 30° E; and it is perhaps a prolongation of the reef which crops out near the monument.

The Waterfall Reef is seen cropping out in the valley where a road has been made. It is about nineteen chains from the bungalow. Near it are veins of quartz which may be styled granitic, and also a dyke of diorite. Mr. Withers broke out stone from this reef and one specimen contained gold visible to the eye. From analyses made by Messrs. Johnson and Sons of London it appears that the yield per ton was at the rate of 3 pennyweights of gold and 2 pennyweights of silver. Mr. King gives the average yield as 11 pennyweights per ton.

About twenty-six chains south-easterly from the waterfall there is a large reef, probably averaging more than six feet in thickness, which from the formation of the ground rising, as it does, from the valley to a height of 250 feet or more westerly, is exposed for some distance in the direction of its dip. In fact, the eastern slope of the hill may be said to be faced with quartz. On the lower side of the reef towards the stream there are large loose blocks of quartz lying about. There has been a landslip here at no distant date, and the surface has been recently altered by that and also to some extent by the heavy rains acting on the denuded area.

Mr. King tested stone from this reef, and he states that the average proportion of gold obtained was for the Hamsluck Reef 3 pennyweights per ton, and for the Hamsluck (middle) 10 pennyweights per ton.

Messrs. Johnson and Sons' analysis of stone taken from the adit marked No. 2 on map showed a yield of 8 dwts. 18 grs. of gold and 8 dwts. 18 grs. of silver per ton.

Eight chains west of the high hill on which this reef appears there is another outcrop of quartz and gold was got in the stone. It is marked No. 3 on map.

There are blocks of quartz lying on the low ground north-easterly of the high hill marked C on map, which probably indicate the prolongation of this reef.

A vein of quartz comes to the surface on the south-eastern boundary of the Hamsluck Estate. Gold has been got in the stone. It is marked No. 1 on map. Near the line which divides the Perseverance from the Adelphi Estate and on the north-west and north-east there are outcrops of quartz in the midst of native workings.

On the outcrop of the reef marked with a cross on the map, Lieutenant Nicolson is said to have fixed his camp in 1831, and in Appendix B will be found his description of this country and the mines. When I visited the mines they were probably much in the same state as he found them, the changes occurring during the lapse of forty-eight years being limited to the washing into the shafts year after year of a small quantity of earth.

A large area has been mined by vertical shafts. These appear in groups of five, six, or eight, and in most places are so close to each other that walls of no more than three or four feet divide them.

It is known that the ground has been worked in this manner for a length of about fifteen chains and for a breadth of nearly four chains, but whether to any much greater extent has not been ascertained.

In most of the shafts the first twenty feet is through decomposed country rock.

There are some sloping shafts sunk, no doubt, in order to follow the "leaders" or reef on the underlie.

The ground is strewn with fragments of quartz, and this spot, now covered with jungle, must at one time have had a busy population.

The Korumbars were asked why the shafts had been sunk so close together. They replied that the natives mined in this manner, in order to have sufficient air and light. This could not have been the reason for a proceeding so remarkable. It is known that formerly under the native rulers the slaves were punished severely if they failed to get gold, and when one person was fortunate enough to find gold in his shaft the others would crowd around and sink other shafts as near to his as possible. In 1851—53, though under the local regulations each man or party of men had a "claim" allotted with boundaries marked by pegs, the Australian miners often sank their shafts as near each other as their boundaries allowed. If one man got gold his neighbour put down a shaft on the very edge of his boundary, and not seldom found that the wash-dirt had been taken out before his shaft was "bottomed."

If the slaves were punished by their allowance of rice, or ragi, being diminished, or in other ways, when they failed to get gold in quantities sufficient to satisfy the demands of their master, it is reasonable to believe that they would have worked in the manner described.

There must have been an enormous waste of labor, as there was in early gold-digging times in Australia and California.

It is said that three natives worked at each shaft.

It is not clear what method was employed by them for hauling the quartz and rock to bank: in ascending and descending there was no difficulty; the holes cut in the sides of the shafts for the toes are still visible. It is however not certain that these holes were made by the men who sunk the shafts. They may have been cut by the natives employed by Lieutenant Nicolson, or by others subsequently.

It would take a considerable time to prospect this area, and it could not be done without incurring expense, but it is beyond question that it is to be numbered amongst the many important and highly interesting mining tracts which are to be found in South-East Wynaad.

In other parts of the Hamsluck, Hamslade, and Adelphi Estates there are native workings as shown on the maps, and at one spot (E on large map), which has been largely worked by the natives rather heavy gold has been got. One piece of seven pennyweights (with a little quartz) was found by Mr. Minchin's coolies, and the people who opened the land for coffee say they often picked up small pieces of gold. It is now four or five years since the ground was worked, but the trench where the miners carried on ground-sluicing is still to be seen.

The rocks throughout the area comprised in these estates are generally similar in character to those already described, and information respecting the direction of the foliation and the dip is given on the maps.

It is necessary to repeat here what has been stated over and over again as to the extraordinary facilities for mining which present themselves in nearly every part of South-East Wynaad. The Hamsluck, Hamslade, and Adelphi Estates are on the edge of the ghât; there is thick jungle with noble trees quite near the reefs, and there are perennial streams the waters of which could be made to drive machinery of any power likely to be required.

The reefs, the strike and dip of which nearly correspond with those in other parts, are thick and persistent; the average yields of gold as ascertained by competent persons are high; and the time cannot be far distant when miners will bring their skill and knowledge to bear on the extraction of gold from veins situated so favorably.

Perseverance.

Thirteen chains eastward from the Perseverance Bungalow there is an outcrop of quartz, and within five chains off it some shallow alluvial workings.

Near the western boundary of the estate there are two outcrops of quartz close together—the one a thick reef and the other a "leader." Near them is an adit, now fallen in, which was probably driven for the purpose of working the thin vein.

On the northern boundary of the estate there is another adit surrounded by native workings.

A reef once worked by the natives is intersected by the eastern boundary. This is described elsewhere.

The quartz reefs in this area have a promising appearance, and it is probable that the native workings are more extensive than is shown by the map.

Gold was found by Mr. G. E. Withers at the point marked B.

Prince of Wales' Company.

It is almost beyond doubt that the reef shown on the maps as extending from a little beyond the Alpha Works north-westward is a continuation of the Skull Reef.

On the ridge overlooking Devála the reef is exposed in a shallow excavation, where it is seven feet in thickness. It dips here to the westward at 44° nearly.

From this locality stone was taken which yielded gold at the following rates per ton:—

			oz.	dwt.	grs.
No 1 Section	...	...	Button not weighable.		
„ 2 „	...	...	0	0	1·91
„ 3 „	...	...	0	2	4·40

The proportion of pyrites in the quartz was not large.

Subsequently other samples of stone from the three sections above referred to were treated and the average yield of gold was 1 dwt. 8·03 grs. per ton.

The stone was merely broken out at or near the surface.

The old native workings and the shafts and adits made by the Prince of Wales' Company are shown on the map. There are at least five shafts which were sunk by the Company and at least three adits, but it does not appear that any profitable work was done.

No difficulties would be found in making a thorough exploration of the reef and "leaders" in this locality.

The appearance of the quartz in every part where it was examined was highly encouraging.

Skull Reef.

It is not necessary in this place to give a further detailed description of the Skull Reef. The maps and the statements contained in special reports on this reef and the Alpha Company's Work (Appendices A and H) afford all the information it is in my power to give.

I have stated that I found it impossible to obtain any accurate information respecting the boundaries of the lands claimed by the Companies who have established mining works near Devála; and it is not known to me whether the "new reef" (shown on map), the outcrop of which is nineteen chains eastward of the Alpha Mill, belongs to the Prince of Wales' Company or to the Alpha Company or beyond the boundaries of both. It is undoubtedly a valuable reef. Quartz had been brought to me from the outcrop in which gold was visible, and when surveying, and I had to fix its position, I caused some of the quartz to be broken on the spot, and specimens showing free gold were obtained in a few minutes.

It probably has some connection with one of the reefs (indicated on the map by native workings) which intersects the country rock between the Alpha Bungalow and the Cavern Reef.

Reefs east of the Alpha.

The area granted to or held by the Wynaad Gold Prospecting Company, according to the reports made, appears to include the Cavern Reef, the Etucull Reef, the Korumbar Reef, Bear Reef, Hamlin's Reef and the Monarch Reef.

Cavern Reef.

On the steep slope just on the edge of the ghât the natives have made a large lateral excavation on the outcrop of the Cavern Reef. There is also a vertical shaft near the mouth which is partly filled in with large stones. This was done probably to prevent injury to the workmen whilst they were making the excavation.

The direction and dip of this reef differ little from those observed elsewhere; the thickness is about five feet, less in some places and more in others; pyrites are abundant in seams and nests; much of the quartz is very ferruginous, and gold is visible both in the body of the reef and in the casing.

The natives worked a good deal on the footwall, but the run of gold as visible in the stone was followed wherever practicable.

The average yields per ton of samples of stone taken from this reef have been as follow:—

	oz.	dwt.	grs.
Quartz	0	2	21·80
Pyritous quartz, the proportion of pyrites being large	4	19	3·00
Pyritous quartz	0	10	2·59
Do.	0	11	4·99
Do.	0	8	5·60
Do.	0	14	11·00
Quartz, no gold visible	0	11	15·50
"Casing;" small particles of gold to be seen	0	11	16·00
No. 1 Section	0	1	10·94
(A proportion of this amalgam was lost.)			
No. 2 Section	0	0	17·47
Do.	1	15	17·47
No. 3 Section	1	0	9·88
No. 4 Section "Casing"	0	1	10·94
Pyrites	1	16	0·00

The position of this reef; the fact that the ground has been worked over a large area in the vicinity of it; its nearness to a perennial stream, and the character of the vein ought to be sufficient to attract the attention of miners and to lead to the development of mining operations which, though proverbially uncertain, ought, if the indications are to be trusted, to result in complete success.

There are very few reefs of a more promising appearance or more favourably situated than this.

Etucull Reef.

The Etucull Reef is found at the surface about sixteen chains north-easterly from the Cavern Reef. The face of the hill which this reef intersects has been cut away by the Wynaad Prospecting Company, and the old native workings are exposed. The main body of stone is not touched by any recent workings as far as could be seen, and there is reason to believe that it is under foot near where the numerous "leaders" have been followed by the natives.

A great deal of work has been done in this locality. In the pamphlet entitled *Gold Prospecting in the Wynaad* it is stated that there are six native shafts within a radius of twenty yards, some as deep as seventy feet or more.

Specimens of quartz with gold visible were obtained from this reef, and pyrites said to have been broken out by the Wynaad Prospecting Company yielded at the rate of 2 oz. 1 dwt. 8·11 grs. per ton.

Korumbar Reef.

Nearly six chains north-east of the Etucull Reef is the Korumbar Reef. This vein is about six feet in thickness where exposed and consists of very ferruginous quartz with nests of iron pyrites. Other outcrops toward the north-west probably indicate the prolongation of this line, all of which have been worked more or less by the natives. Vertical shafts as deep as 40 and 50 feet are numerous.

The country rock in the vicinity of the reef is everywhere penetrated by "leaders" from the main reef and by small veins of quartz, and mineralogically they resemble the vein stone of the Cavern Reef.

Mr. King found the average proportion of gold in the stone taken from the Korumbar Reef to be 4 pennyweights per ton, the highest yield per ton being 9 oz. and the lowest 12 grs.; and Mr. Linton records as the average of six assays 1 oz. 1 dwt. of gold per ton.

The results of the several assays are as follows:—

	oz.	dwt.	grs.	
Quartz	0	4	0	
Do.	4	13	4·8	
Do.	0	2	12	
(Silver in addition 2 dwts. per ton.)				
Do.	0	15	13	
Do. (estimated)	0	2	0	
No. 1 Leader				Traces of gold.
No. 2 Leader	2	6	16	
No. 3 Leader	1	3	8	
Quartz	1	0	1·15	

The Bear Reef crops out on the left bank of a stream which, at a short distance, falls suddenly down a precipitous cliff on the edge of the ghât.

Bear Reef.

The vein has been mined by the natives, and their old adits are more like natural caves than artificial works. It is of variable thickness, similar to others in this locality, but it is probably not less than on an average four feet. It is more than seven feet in thickness in one place, and there are several leaders near it.

The quartz is highly pyritous, and the stone is much stained with oxyde of iron. Some of it closely resembles that which, at Wright's Level, is so rich in gold, and samples were obtained with gold visible to the eye.

This reef is nearly parallel to those which crop out immediately to the westward, and in formation it is similar to the Cavern and the Korumbar Reefs.

Mr. Lindon tested several samples of stone from the Bear, and he gives the yields of gold per ton as follows:—4 dwts., 11 dwts., 11 dwts. 16 grs., 15 dwts. 13 grs., and 1 oz. 11 dwts. Assays made subsequently by me showed yields varying greatly. In some samples there were only minute specks of gold: others yielded as high as 1 oz. 6 dwt. 5·88 grs. of gold per ton.

This reef is undoubtedly a very valuable one, and it could be easily and cheaply worked.

The outcrop of Hamlin's Reef is seen near the right bank of the Chungaroo Poya at a distance of eighteen chains north-easterly from the Bear Reef.

Hamlin's Reef.

This is a thick and strong reef, and appears to be traceable for some forty chains north-westerly. Its direction, if the several outcrops are continuous, is more westerly than the other reefs in the neighbourhood.

The native miners have excavated this vein, and they no doubt found rich stones. Mr. Withers procured specimens showing free gold.

The quartz is highly ferruginous, and there is a relatively large proportion of pyrites.

The average yields per ton from small samples have been as follow:—

	oz.	dwt.	grs.
Quartz	0	16	8
Do.	1	0	9·88

The Monarch Reef is supposed to be continuous for a distance of about eight miles. North of the road from Devála to Gúdalur, and about sixteen chains east of the toll bar, there is a mass of white quartz indicating the presence of a very large reef.

Monarch Reef.

A shallow pit has been sunk here which has cut what appears to be a "leader" from the main reef, and there is also an adit. These works were undertaken apparently under a misapprehension as to the dip of the reef. The dip is not always easily ascertained in places where there is a large body of quartz and numerous strong leaders until some considerable amount of work has been done.

The reef known as Roscrow's (see map) is believed by those who have examined this line to unite with the Monarch near Kittacardoo Mulla. On this point I can say nothing, as I did not attempt to follow the outcrop of Roscrow's Reef onwards.

Mr. King tested stone from the main reef, and the lowest proportion of gold was 0·5 dwt. to the ton, and 2 dwts. to the ton, and the highest 69·19 dwts. per ton.

Mr. Lindon obtained the following yields: 11 dwts. 16 grs. and 2 to 3 dwts.

Specimens full of pyrites and with gold visible to the eye were broken out of the Monarch Reef.

The native workings in many places are conspicuous, and near Nadakani and at Kittacardoo Mulla a great deal of ground has been opened.

There are other outcrops of quartz, and near them native workings, within the boundaries of the area now, or formerly, held by the Wynaad Gold Prospecting Company; and it would be difficult, indeed, to indicate any more valuable veins than those just described. And yet here an attempt was made to extract gold which failed. One stamp

Wynaad Gold Prospecting Company.

head was erected, great cost was incurred in machinery, and a number of contrivances supposed to be suitable for saving gold were procured. Some of these are now entirely covered with grass and shrubs, but by following downwards from the stamper the extraordinary complexity of the arrangements is discovered.

The quartz was roasted in a kiln and, judging by the samples now lying near the works, so completely as to make amalgamation impossible.

But the history of this adventure is best told in the following statement which has been furnished to me:—

"These small trial crushing works were set up by the Wynaad Prospecting Company in January 1876 with the special object of ascertaining what gold might be extracted from pyritous stone by the ordinary amalgamation process.

"Rupees 20,000 were subscribed for this purpose, principally among the Planters in the neighbourhood.

"There was some mistake about the crusher. It was intended that a Husband's pneumatic crusher, capable of pulverising from seven to eight tons per diem, should be ordered, instead of which a small crusher capable of pulverising only one ton in twenty-four hours was sent out. A Jordon's hydraulic amalgamator was also obtained, certificates having been given of the great success of this machine in treating pyritous stone in Wales, and a ten-horse power turbine was purchased to drive these machines. It was supposed that by a process of burning and roasting the sulphur in the ore would be destroyed, and that gold associated with the iron and sulphur would be freed and taken up by the quicksilver.

"It was arranged that the quartz and ore should be delivered by a wire-shoot from the mines to a platform just above a kiln erected for burning the stone. The stone was shovelled into the kiln, which was kept supplied with fuel and stone from the top, and as it was burnt, the stone was raked out from the aperture below into a water-trough, where the charcoal and ashes were washed off. The burnt stone was then shovelled into a hopper constructed to contain a certain ascertained weight of stone.

"This hopper when filled was opened from below, and the stone shot into the receiver of the pneumatic crusher, which was supplied by a self-acting feeder, as required by the action of the water. From the crusher, as the stone was pulverised, the sand was washed through very fine gratings to an amalgamated copper-plate, and, after passing over four feet of quicksilvered copper, it passed two quicksilver ripples, three feet more of quicksilvered copper and so through troughs to the patent hydraulic amalgamator. This machine consisted of an iron basin in which was deposited 300 lbs. weight of quicksilver. In this basin was fitted a revolving muller so hung as to touch the surface of the quicksilver and thus, in its revolution, always to cause a fresh surface of quicksilver to be presented. Through the centre of this revolving muller was a pipe 15 feet long, down which the quartz sand was forced by hydraulic action, and the sand had to pass through the quicksilver and over the side of the iron basin so as to leave the gold in the quicksilver.

"After leaving the amalgamator the sand passed through a series of Cornish buddles and a blanket table, and finally through a MacDougal's amalgamated spike trough, before being saved for final assay in the catch pits. The Cornish buddles and blanket table were erected for the purpose of separating the heavier pyritous particles from the silicious and earthy matter by gravitation, and the pyrites thus saved was subsequently treated in a reverberatory furnace built at the side of the works.

"The actual result of a crushing of one-hundred tons of stone treated in this way was at the rate of only three pennyweights of gold per ton.

"The assay of an average sample of the stone collected for this trial which was sent to England (one hundred weight) as a check to the trial made in India was nine pennyweights to the ton. Assays of the tailings from the blanket table and buddles gave from eleven pennyweights to five pennyweights to the ton, while the actual result from a trial of the tailings roasted in the reverberatory furnace and reground by hand gave only two pennyweights six grains of gold to seven tons of tailings. The unsatisfactory results obtained are attributed, first, to burning the stone in the kiln before crushing; this burning being now known to coat the gold so as to prevent amalgamation and also to prevent the ready separation of the pyritous and silicious matters by gravitation; secondly, the tyes and buddles were lined with iron sheeting to prevent any risk of leakage, and this iron prevented the settlement by gravitation of the heavier particles which rolled along the smooth surface; thirdly, the excessive and continuous heat of the reverberatory furnace prevented the saving of the gold, the gold having possibly volatilised, while the silica and iron particles frequently fused. The work was all done by men quite inexperienced, the services of any practical expert not being available in India. And notwithstanding all the apparatus in use, nine-tenths of the gold saved was taken from the copper-plate within six inches of the perforated gratings of the crusher.

"The stone was from 12 to 18 hours in the kiln and always 24 hours in the furnace before being raked out.

"The cost of raising 200 tons of stone, which was collected before any crushing operations were commenced, was Rs. 240 delivered at the kiln; after this there were no mining operations carried on unless for special trials. We calculate a ton as one cubic yard of broken stone."

It is to be feared that there will be other failures not unlike this. If there is gold it is assumed, except in countries where men have been taught by experience, that any kind of machinery and any person willing to receive payment for managing it, must, as a matter of course, bring about satisfactory results. Mining for gold cannot be conducted successfully in a haphazard way. It would be as reasonable to place a landsman in charge of a ship as to give the control of a gold mine and gold-mining machinery to one who has not qualified himself to perform satisfactorily the work required to be done.

Glenrock. The map of the Glenrock Estate shows three outcrops of quartz and native workings of great extent.

The rocks on the summit of Chic Hadiabetta are gneissoid, and in places somewhat granitoid. Masses are found containing a pretty large proportion of magnetic iron, similar to the formation lying to the east and north.

The vein-quartz is milk-white with pellucid grains of quartz scattered through it, and no pyrites were found in the place where the quartz was broken out.

The summit of Chic Hadiabetta is honeycombed with shafts, most of them resembling those found on the Elizabeth Estate—vertical for a few feet with a sloping adit therefrom. On the north-western and western face of the hill the pits and adits are numerous; indeed the appearance of these old excavations is striking, and the large amount of work done leaves no room for doubt as to the value of the reef and veins. The workings are continuous from the summit of the hill to a swamp (shown on map) where it is said Korumbars in former times used to sink shafts. The water interfered much with their operations, but it did not prevent them from getting out auriferous pyrites, which, according to the statements made, they carried to their homes and treated for gold.

The proprietor of the Glenrock Estate got very fine samples of heavy gold in the water-course which intersects this swamp.

Hadiabetta and the neighbouring hills are scored with the now indistinct lines of old channels in which the miners in former times had conveyed water to their workings; and from these and the number of excavations, as well as the area which they cover, one can judge how attractive this field must have been in past times.

The workings indeed may be said to extend from Hadiabetta to Parcherry Hill, and the reef at the latter is probably one of the same series which has been so largely mined at Glenrock.

The formation of the country in this locality, except that the hills are loftier, is similar to that generally observed in this tract, and the facilities for carrying on extensive mining operations are very great.

There is perhaps no part of the Wynaad where there is a surer prospect of developing prosperous mines than here, and a very small expenditure of labor would suffice to ascertain accurately the extent and the value of the reefs.

Within the boundaries of the neighbouring Phœnix Estate there are two outcrops of quartz—one near the summit of Hadiabetta and the other about twenty-eight chains southwards from it. The sites where gold has been found are marked on the map from information afforded by the proprietors of the Glenrock and Phœnix Estates.

They say that gold in unusually large pieces is found in this area, and a sample of coarse gold was shown to me by Mr. Williams, who had had Korumbars employed in washing.

On the Rosedell Estate east of and adjoining Glenrock there are old workings in which is exposed a large vein of quartz with several smaller veins thrown off from it.

The outcrop is a little above the road leading to Devála and about forty chains eastward of the Glenrock Bungalow. Where it is exposed the strike of the reef is N. 30° W. The quartz is similar to that found in the vein on the summit of Chic Hadiabetta, the casing is ferruginous, and very small plates of mica appear in it. There is also a little micaceous iron ore, and the quartz in the vein is stained with oxyde of iron on the faces of the laminæ.

When I visited this reef I was accompanied by Mr. H. V. Ryan, the proprietor of the Glenrock Estate, and I suggested that some explorations should be made. They were accordingly undertaken under that gentleman's direction,

and several pieces of quartz with gold in moderately-sized grains and minute spangles were got without difficulty.

The Rosedell Reef is undoubtedly valuable and will in time be thoroughly prospected.

North-east of Rosedell and adjoining the Elizabeth and Richmond Estates is a small area marked Sandhurst on the map. Here the rocks are hornblendic. There is an unusually large outcrop of quartz in a line with the old workings on the high hill on the Elizabeth Estate. Immense blocks of pyritous quartz lie on the surface in the midst of old native workings. The altitude of the locality of the reef is 3,333 feet.

South of the road from Cherambádi to Devála, and about three miles west of Cherambádi and more than two miles north-west of Hadiabetta South Peak, there is a hill known as Yellembullay or Parcherry Hill. On a lower hill, a little to the south-west of Parcherry, there is an outcrop of quartz, or perhaps, to speak more correctly, a series of outcrops, some representing the main body of the veins and others strong leaders therefrom. At this point the reef has all the appearance of an irregular mass of quartz, and where it is possible to observe the dip and strike there is much uncertainty concerning them, as they are often no more than the boundary lines of lenticular and wedge-shaped masses of country rock. Moreover, the whole of the hill is honeycombed with shafts, and adits, and great blocks of the reef which the surrounding country rock have sunk down bodily, almost completely closing the adits and shafts. It was extremely difficult to examine any portion of these owing to the falls of rock which have taken place since the workings were in progress.

Parcherry Hill.

It was not possible to ascertain the total thickness of the reef where it was partly exposed in a large excavation, but it is undoubtedly very great. The quartz is everywhere full of soft iron pyrites and limonite and hæmatite; and on breaking some of the blocks large cavities were found nearly full of sulphur.

The native workings cover a large area, and the heaps composed of the broken quartz which have been thrown away are almost as regular in form as if tramways had been laid and trucks had been used, and the stuff "tipped" over the end of the embankments.

A very great deal of work has been done at this place. Even as late as 1857 there were two hundred and more Korumbars engaged in mining at Yellembullay; it is said that they burned the stone, and that the women ground it on a flat rock near the workings, many of them earning as much as 1, 2, and 3 rupees per diem.

No gold was seen in the quartz, though a careful search was made for it. On pounding the stone, however, and washing it gold was got in minute particles.

This reef and its leaders could be economically worked by a large open cutting and by a horizontal shaft; and by storing water, which is practicable, the crushing machinery might be driven by a water-wheel. There are not the same facilities for procuring large timber in this locality as at Devála, but there would be no difficulty in obtaining fuel if it should be thought advisable to employ steam for crushing, &c., and it is probable that steam would be cheaper than water at this spot if the interest on the capital which would have to be invested in water-works be taken into account.

The altitude of the reef is 3,300 feet. About half a mile eastward of the workings there is another outcrop of quartz.

Assays show that the yield of gold from this reef varies from 1 dwt. 6 grs. to 13 dwt. 20·41 grs. per ton.

On the Naiken Shola and Little Windsor Estate there are at least fifteen outcrops of quartz. The situation of these is shown on the maps which accompany this report. About twenty-five chains from the Cherambádi bazaar an outcrop of quartz is seen on the main district road, and in the swamp on the south not more than five chains distant from the outcrop gold was got by washing the earth. Gold has since been found by Captain Cox in the reef itself.

Naiken Shola and Little Windsor and westward to Vellirymulla.

The Bazaar Reef is clearly traceable for a distance of fifty chains south-easterly from a cattle-shed near the bazaar, and about seven chains from the bungalow gold was washed out of the soil. Sixty chains south-easterly of this point the reef again appears in the jungle, and it may be assumed that it has a bearing of N. 36° W.

Near a stream where the Manilla plant is growing luxuriantly (see map) there are large masses of quartz indicating an outcrop. Some washing was done here, but no gold was seen. About twenty chains east of this stream another reef was found highly pyritous and promising well, but no gold was seen in it. There are three outcrops in this place.

On the eastern boundary of these estates, south of what is named Kallattimalai coffee, there is reef outcropping near a stream which is traceable south-easterly into the jungle. There are also what appear to be very ancient alluvial workings at this spot. Seven dishes of earth (surface soil) taken from various parts near the reef were washed, and a little gold was found in five. One dish of earth dug out of the bank of the stream near the reef yielded one pretty large particle of gold much water-worn.

The results of the explorations in this area indicate the probable existence of gold in the Bazaar Reef, and that on the eastern boundary of the estates in such proportion as would justify a reasonable expenditure of money in prospecting.

On the Cheppah Thodah Estate, north of Cherambádi, there are numerous outcrops of quartz, and in the coffee garden loose blocks of quartz are to be seen. There is one large reef not far from the bungalow which looks well. No native workings were seen on this estate, but only a small part of it was examined.

About sixty chains north-westerly from the Cherambádi bazaar there is a reef of quartz similar in character to those on the Naiken Shola Estate, and it is probably a prolongation of that which crops out near the bazaar road. One mile west of the bazaar there is a vein of quartz intersecting the road, and sixty chains westward of this there is a very thick reef with numerous small "leaders" and veins in the vicinity. Nearly two miles from the bazaar another outcrop is seen on a hill to the right of the road.

On the Choladi Estate, which lies to the south of the road from Cherambádi to Vytheri, and is distant a little more than two miles from the bazaar, there are several reefs and veins of quartz, some of which are probably productive. They bear north-westerly and south-easterly. The quartz generally is translucent, enclosing large and small particles of highly transparent crystalline quartz, the whole having a granular appearance. The reefs, where exposed, are not very thick.

The swamp at Choladi is said to have yielded gold in pretty large grains. Here some ground-sluicing operations were undertaken and the results were as follows :—

First dish . . .	No gold.
Second dish . . .	A few specks.
Third dish . . .	Seven or eight specks; a fair result.

Two dishes of stuff taken from the bank of the stream were washed, and in one there were two specks of gold, in the other none.

The material in the bed of the swamp consists of a blue clay with a relatively large proportion of black iron sand.

It is certain that if the swamp were sluiced down to the bed-rock the yield of gold would be very much greater than that obtained by such washings as were attempted when this locality was prospected, but they were undertaken solely for the purpose of ascertaining the probable character of the adjacent reefs, and not to determine the value of the alluvial deposit in the swamp.

Between Cherambádi and Moopenaad eighteen separate outcrops of quartz were observed. The position of these is shown approximately on the general (Ordnance) map herewith. Many of these reefs are several feet in thickness, and they throw off leaders which penetrate the country rock in all directions, but principally appearing as nearly horizontal veins and strings.

About eleven miles from Cherambádi and on the right-hand side of the road as you travel towards Moopenaad, there is a swamp in a coffee garden in which

lie large blocks of quartz close to an outcrop. This Neddikarna swamp is not unlike that at Choladi, and is probably auriferous. The reef strikes from north-west to south-east and is evidently, in places, of great thickness. It is granitoid, has a granular appearance, and is composed of quartz with plates of mica. Nowhere in this locality was any other mineral observed in association with the quartz.

The whole of this area, intersected as it is with quartz reefs nearly parallel to one another and not more than from forty to fifty chains apart, seems to have had little attraction for the native miners. Gold is found in the swamps and in the beds of the streams, proving that the reefs themselves are auriferous; but it is, to say the least, doubtful whether at any time the natives found remunerative employment in any of the auriferous reefs or streams between Cherambádi and Moopenaad.

On the Moopenaad Estate there are great masses of quartz appearing at the surface on the banks of a stream east of the bungalow. The quartz, which is micacised and granitoid in character, more resembles quartz-rock than vein-quartz. In other places there are well-marked veins, greatly contrasting the more massive quartz which occurs generally. The latter is mostly saccharoid or granular, transparent particles of quartz impacted irregularly in snow-white quartz being common. There were no pyrites seen, and indeed the most of the rock and veins consisted of iron-free quartz.

No native workings were seen at Moopenaad. At Vellirymulla the hills are sharper in outline than at Cherambádi or Devála, and they are well clad with vegetation. Fragments of quartz are seen nearly everywhere. On the slope of a hill towards a swampy flat, and not very far from the river, I was shown some pieces of quartz with gold visible in them—really good specimens—lying on the ground. I gathered all of these that I could see and then sought for more, but no quartz similar in character to those showing gold was to be found. I then caused earth to be taken from the spot where the specimens had been lying and had it washed, and not a particle of gold was to be discovered. Every care was taken to ascertain the facts connected with this rather remarkable occurrence of rich specimens lying exposed on a path daily trodden by persons employed on the estate; but nothing further was elicited than the fact that the specimens bore a great resemblance to those to be found at Wright's Level near Devála.

On the ridge beyond the site of this discovery a very good reef appears on the surface; the quartz is pyritous, but no gold was seen in it.

In the bed of the river a little gold was found in the soil and gravel.

On proceeding to the Vellakul Toda (white-stone stream) a good exposure of rock was observed. All of it was more or less granitoid and its mode of decomposition was like that of granite, shelling off and hardening towards a core. In places the foliation was distinctly marked.

On the road to Munniya Poya a few small quartz veins were seen, and several dishes of earth were washed in a swamp not far from Mr. Brunton's Bungalow, but no gold was found.

On the Munniya Poya, where it intersects a swampy flat near the pulping-house, there is a large outcrop of quartz, and numerous small leaders are thrown off from it. The quartz is in part ferruginous and laminated. Several dishes of earth were washed here, and gold was found in all but one.

Here, as elsewhere in the western district, no native workings were seen, though the proportion of gold in the soil would lead one to infer that the reefs and veins are quite as rich as others where the natives have labored. If the country were carefully prospected, it is more than probable that a discovery of importance would be made.

Nedukale.

At Nedukale, which lies about four miles west from Nelakotta and about six miles in a straight line northerly from Devála bazaar, there are two outcrops of quartz—one about ten chains north-easterly from the Gadbrook Bungalow, and the other twenty-seven chains south from the junction of the Pekki Pula with the Ponnéni Pula. The first is visible at the surface for some sixty yards or more; it seems to strike N. 25° W., S. 25° E., and is at least twenty feet in thickness. Gold was not found in the quartz of this reef or in the soil near it. The stone exposed has not the appearance of auriferous quartz; it is mostly dense, very white, and no mineraized

The reef near the river (marked Breakfast Reef on the maps) is auriferous. Numerous dishes of earth dug out near the outcrop were washed, and gold was found in nearly every one.

This reef contains a good deal of iron pyrites and is not unlike some of those lying south-east of Devála. It is about four feet in thickness, but its true character could only be ascertained by opening it for some length. It seems to throw off strong leaders towards the west.

There is a swamp planted with coffee (No. 3, Cudlacullee), not within the boundaries of the area embraced by the map, south-easterly of the bungalow, and both in the surface soil and in a seam of blue clay underlying the soil, gold was got by washing. Some of the results were such as to lead to favorable conclusions as to the character of the reef which crops out on the north. In the midst of the swamp there are large loose blocks of quartz, and numerous, more or less smaller, water-worn fragments of quartz. On "washing off" iron-sand, garnets and fragments of hornblende were found in the dish.

In another swamp west of the river and marked No. 1 on map, gold was found. Five dishes were washed, and gold was seen in four.

The rocks in the neighbourhood of Nedukale are usually hard, dense and massive, though showing foliation in many places very distinctly. A little north of the Breakfast Reef (see maps) the rock is garnetiferous.

The situation of the reefs at Nedukale, outcropping as they do on the edges of steep slopes, admits of their being mined by horizontal shafts; quartz could be got out at a small cost and there is a good supply of water close at hand which could be used for moving crushing machinery. Timber could be got also at no great expense.

No native workings such as are found on the south and west were seen at or near Nedukale, but at one point there are indications of an excavation having been made near the bank of the river; and the natives say that very large pieces of gold were washed out of the sand and gravel taken therefrom.

Reefs between Devála and Gúdalúr.

There are several outcrops of quartz between Devála and Gúdalúr, but the character of the quartz changes as one travels eastward, the stone becoming in many places almost granitic like that found so abundantly in the areas surrounding Vellirymulla.

On the Bolingbroke Estate, at an altitude of 3,134 feet, there is a large reef with strong leaders and small veins of quartz thrown off westward.

The direction of the reef is nearly north and south, but its strike could be observed in only one place and for a very short distance. The stronger leaders are nearly flat. There are here and there some small pits recently dug, where the leaders are exposed; much of the quartz is solid and massive, in places laminated, and in following it downwards it is seen to be "mice-eaten," or, where decomposition has not set in, full of pyrites.

The reef itself has been partially explored.

From the excavation in what appeared to be one of the main western leaders, quartz was got at the time of my visit with gold visible in it.

The appearance of the stone would seem to warrant the belief that it is throughout more or less auriferous. The old workings seem to have been confined almost entirely to the sluicing of the earth near the reefs. I could not discover any such excavations in the solid quartz as are found near Devála.

The yields from the Bolingbroke Reef have been as high as 1 oz. 1 dwt. 3·35 grs. per ton (see Appendix H).

The Pulliamparah Reef is marked by the occurrence on the surface of large blocks of quartz. Its strike cannot well be ascertained, but it appears to be nearly N. 30° W. The quartz is everywhere full of pyrites, and it much resembles the outcrop on the Bolingbroke Estate.

About five miles on the Devála side of Gúdalúr there are outcrops of quartz in several places. Much of the stone is cavernous, where the pyrites have decomposed and disappeared; in other blocks the ordinary iron pyrites are rather abundant.

On the Nundhutty Estate there is a reef near the bungalow. The quartz is granular and opaque, and there is a good deal of mica in it.

There are large blocks of quartz lying on the outcrops of a reef at Gúdalúr, a short distance from the Public Works Bungalow. Large plates of mica are associated with the quartz; there are no pyrites to be seen, and it does not appear that gold has been found in the immediate locality.

The character of the rocks changes suddenly at Gúdalúr; the hard, dense country rock is composed of quartz and hornblende; garnetiferous masses occur, and the veins of quartz are infrequent and very thin.

It is said that there is a large outcrop of quartz near Pykara, but I have not visited the spot.

The river-drift at Seeputee is mentioned elsewhere. The adit is at an elevation of 2,841 feet.

Karambaut, Murada, and Eddacurra.

On leaving the bungalow at Hamslade and following the track which leads through the jungle towards Eddacurra, the descent is rapid. The altitude of the Hamslade Hill is approximately 3,106 feet, and at a distance of little more than one mile the altitude is 1,798 feet, showing a decrease of 1,308 feet.

The jungle from the edge of the ghât to the last-named point is dense: each tall tree has a crown of foliage so close as to cause a perpetual shade; the undergrowth of shrubs in some parts is thick, and the climbing plants reach the highest branches of the tallest trees.

Many of the trees are not only high, but of great girth. One (Naaga Murrum) measured thirty-three feet in circumference at a height of three feet from the ground.

At a point less than two miles from the Hamslade Bungalow, and at an altitude of 1,216 feet, a large stream was crossed. The bed was full of masses of water-worn rocks. Throughout the rocks observed were gneissoid in which appeared with frequence numerous small veins and strings of quartz.

About twenty chains south-westerly from the river there is a large outcrop of quartz. Enormous blocks of this rock are piled one on another, indicating a reef of very great thickness. When broken the stone did not present the appearance of being auriferous, and no gold was seen, but native workings were observed not far from the reef. It may therefore be regarded as auriferous, and it would be injudicious to attach too much importance to its appearance, as gold is found in the Wynaad in the most unlikely-looking stone.

The reef appeared to have a strike of N. 40° W. Other streams were crossed in following the route to Karambaut, and in most of them there was a good "wash" consisting of sand, clay and water-worn stones.

The grass huts at Karambaut were erected on a flat spot near a stream and in the midst of bamboo thickets. Though the place was hot and close, shut in as it was by bamboos, it proved to be convenient, as it was near the old native workings.

Karambaut is distant about four miles in a straight line from Hamslade, and the altitude was found to be 484 feet.

In the bed of the stream there was a considerable deposit of sand and gravel which a quarter of a mile up was from 4 to 5 feet in thickness.

Prospecting was commenced as soon as possible. Two pans of earth taken from the bank of the stream were washed, and a few particles of gold were found in both. The results, indeed, were highly encouraging.

Subsequently, the Korumbar miners were set to work in the bed of the stream. As the gravel was said to be 30 feet in thickness at the place where operations were begun, it was impossible to reach the bed-rock; but the heavy sand remaining after sluicing contained gold.

The sand and gravel in the bed of this stream are constantly undergoing changes which result in the deposit of fine and coarse gold throughout its extent, the heavier particles of course gradually finding their way to lower depths, and finally to the bed-rock if no other impermeable stratum intervene.

The bed of the stream is enriched by the rains of every monsoon, but the proportion of gold brought down each season cannot be measured by washing to the depth of only a few feet.

At a distance of little more than three chains from the grass huts, huge blocks of quartz lying on a low spur indicated the outcrop of the Karambaut Reef. It was not easy to arrive even approximately at the strike, as the ground

was everywhere strewn with quartz, and the old native workings extended all along the line of reef for a distance of a mile and-a-half and for a great breadth. It appeared to be N. 15° W. The ancient sluices, as well as those of more modern construction, and the deep-walled channels for conveying water and for washing were of considerable length, and clearly testified to the immense time and labor which had been devoted to gold mining at this spot.

Specimens of the rocks were collected as well as samples of quartz from various points; and on the latter being pounded and washed free gold was seen in the dish. Several pieces of more or less pyritous quartz were subsequently tested and the yields varied from a mere speck of gold to 9 dwts. 11·13 grs., 17 dwts. 23·38 grs., and 1 oz. 4 dwts. 1·4 grs. per ton.

Fragments of garnet and hornblende were found in the iron sand which remained in the dish after washing off.

The stream near the reef is, I am informed, commonly known as the Karambaut river. Mr. Alexander Wright, a planter in the Wynaad, tells me that he has seen as many as fifty Panniars washing the earth for gold in the vicinity of the reef just described.

Quartz could be quarried here at a small price per ton; an abundant supply of water could be derived from the mountain streams, and excellent timber is to be got within a very short distance.

The climate, it must be confessed, is unsuitable for Europeans, and even the natives at certain seasons are attacked by fever. Whether the same evil influences would prevail if the country near the reef were partially cleared, and the workmen were properly lodged and fed, is a question which cannot at present be satisfactorily answered.

At Murada, three miles south of Karambaut, three reefs were found intersecting hard dense gneissoid rock.

In the bed of a stream flowing into the Keilaka Poya, about thirty chains north-west of the Rajah's house, the first, which was named the Stream Reef, showed a strong body of barren-looking quartz. It is traceable for a mile and-a-half and its strike is west of north. The Korumbars state that the natives have never worked either the soils near this reef nor the reef itself, and I could not discover that there were any old native workings near it.

Two samples of stone taken from the Stream Reef were tested by amalgamation and minute particles of gold were obtained, but not a weighable button.

About five chains north-east from the stream there is another outcrop of quartz, and two chains from the latter, a reef which appears to be similar in character to the Stream Reef.

The samples tested by amalgamation showed gold, but in very small quantity.

The strike of No. 2 reef was ascertained to be N. 15° W. nearly. As the other reefs were not opened, the dip and strike could not be noted.

The country is open where these reefs occur, and the stream which is intersected by one of them is said to be perennial.

If the reefs were opened up near the stream it would be necessary to sink vertical shafts, and to provide machinery for winding and for pumping water.

The route pursued after leaving Murada was nearly in the direction of the Keilaka Poya, and the stream was crossed twice. About one mile above Edacurra rafts were procured and we floated down as far as the bridge.

There was not much to observe between Murada and Edacurra. The track (close to the river) was principally through swampy flats overgrown with tall grasses. On the banks of the stream a chocolate-brown deposit, consisting of clay, sand, fragments of country rock and angular pieces of quartz, was seen, which may be in some parts auriferous.

Three-quarters of a mile south-west from Edacurra, a reef having a strike west of north outcrops in the jungle at an altitude of 332 feet. There was only surface stone to be seen. On testing some samples a very small quantity of gold, not weighable, was obtained.

In the vicinity of Edacurra a hornblende schist (Tremolite) occurs. The country is low and flat or slightly undulating, and it is mostly covered with recent drift probably overlying tertiary deposits. Whether or not it would be

easy to penetrate to the bed-rock and whether there is a rich auriferous layer resting on that can be matter for conjecture only. That the rock from the surface downwards contains gold is certain, but only rather costly prospecting operations would prove or disprove the existence of auriferous *leads*.

The mines near Nilambúr were not visited.

On returning to Devála the ghât road was followed, and at a distance of five miles from Edacurra and at the foot of the ghât a reef was seen having a strike of N. 15° W. Near this spot the country rock is much decomposed, but the veins are in place. About twenty chains north-east from the reef there is an exposure of rock intersected by thin veins of quartz bearing N. 10° W., and still further to the north-east at a distance of about ten chains a fine large body of stone is outcropping.

On ascending the ghât and not far from the foot the direction of the foliation of the country rock was observed to be N. 40° E. and about two miles south-west of Nadakani N. 60° E.

Near the head of the ghât and about one mile from the bridge at Nadakani there is a large reef of quartz.

At one part of the road the rock broken up for metal was massive hornblende, and diorite was found at one spot (not in place), the only occurrence of a trappean rock observed during the journey.

Nanjanad.—It is not easy to indicate the areas which have been worked for gold, presumably by the natives, in the Nanjanad Valley. The quartz workings are extensive, and as they are found principally on land used for grazing, it may be supposed that they remain now very much in the same state as the miners left them. It is different with what may be called the alluvial workings in the old stream bed.

Though numerous evidences of the work done in former times are to be seen, they have been obliterated by the Burgher cultivators over an area whose limits cannot now be discovered. On my last visit the Burghers were engaged in levelling ground which had been sluiced for gold. The uneven surface was being made smooth and in course of preparation for sowing grain; and how many acres may have been thus treated cannot now be ascertained. Here in Southern India as in Australia the cultivator follows the miner; and a gold field that at one time afforded employment to thousands of persons becomes in a short time unrecognisable by its former inhabitants. The bright green crops of grain and the removal of the trees and scrub completely alter the character of the landscape and render it as unlike a gold field as any tract can well be.

It is certain that much work was done at one time by gold miners along the course of the stream which rises near the Belmont Tea Estate and flows thence through the Nanjanad Valley.

About one mile north-eastward from the Nanjanad Chuttrum there are outcrops of quartz which have been worked to some extent.

Prospecting operations have been carried on here during the last four months, but no quartz showing gold visible to the eye has been found and the results of experiments have been unsatisfactory.

Mr. Thomas Laing has washed several dishes of earth taken from the slopes of the hills in this area and several have shown gold; and quartz pounded by him and washed has in some cases given a few particles of the metal.

In testing the stone by amalgamation several samples showed no gold: others yielded minute grains, but no weighable button was obtained.

The reefs are thick—some strike nearly N. 70° W.—and all along the outcrops westward of the stream known as Buk-kanhalla, there are old workings to be seen. The quartz is ferruginous, but the proportion of undecomposed iron pyrites is usually very small. Near the veins there are seams and nests of black oxyd of manganese intersecting the country rock and coating the quartz.

Strong "leaders" are thrown off towards the north and these have generally a low dip.

Nearly one mile and-a-half west from the stream where these outcrops occur there are numerous heaps of quartz broken into very small pieces; and the excavations are large and deep. One sample of quartz from this locality

yielded at the rate of 6 dwts. 13·47 grs. per ton, and another between 5 dwts. and 6 dwts. (a portion of the amalgam was lost).

These old workings are near what is said to be a perennial stream, and the quartz could be economically mined by adits. The locality is one which might be prospected with some certainty that the results would fairly exhibit the character of the reefs of the Nanjanad Valley.

The quartz is in most places white, but there is a proportion of brassys yellow pyrites and much of the stone resembles that found at the Skull Reef near Devála.

Two dishes of earth were washed here and gold was obtained in both.

Avalanche.—After crossing the range about one mile south of the Nanjanad Chuttrum, up to which point the country rock is interseeted by well-marked large veins of quartz, there is a change in the character of the strata. Numerous very thin veins of quartz, nearly everywhere following the direction of the foliation of the rocks, present themselves; and not a reef is to be seen.

At Avalanche and near Kudiakad the strike of the rocks is N. 60° E.—S. 60° W. varying but a few degrees. They are quartzose and a little magnetic iron is seen in places, but hornblende is rare. In the beds of the rivers rounded water-worn blocks were found very similar in composition to a basaltic rock, and here quartzose gneiss was got with minute foliated particles of graphite.

These were not traced to the rocks *in situ*.

In this locality also thin veins of quartz were observed running in the direction of the strike of the rocks, and there were intercalated masses of garnetiferous rock.

Though it was easy to collect specimens of pure quartz, no really persistent reef was seen; and it was soon evident that this was not a locality which would reward the prospector.

Mr. Thomas Laing made a cutting in the banks of a stream on both sides where there was a good "wash," and tested several dishes of the earth overlying the bed-rock, but no trace of gold was found; and many dishes of earth washed in other places gave the same unfavorable results. Quartz also was crushed and washed at various points and not a speck of gold was discovered.

Sispara.—Careful attention was given to every feature in travelling from Avalanche to Sispara—in the neighbourhood of Sispara—and thence down the ghât for some distance; but nothing was seen which would encourage the miner to search for gold; and though many dishes of earth were washed in the most likely places, no gold was seen anywhere.

About two miles and-a-half north-east from the mud-hut at Sispara the rock is composed of quartz and felspar in coarse grains and closely resembles a binary granite; but where a weathered surface is observed the lines of foliation shown by slightly projecting indurated veins composed mainly of quartz indicate a gneissoid structure. Again, down the ghât and elsewhere thick bands of ternary granite consisting of quartz, felspar, and black mica form the mass of the country rock; but these again are only intensely metamorphosed strata coinciding in direction with the ordinary foliated gneiss, and not true granite.

Where these bands occur the detritus is exactly like that derived from granite; and where the rock has decomposed pieces can be picked up having a small specific gravity: they consist of a skeleton of silica (quartz); the more perishable associated minerals (chiefly felspar) having become Kaolin or having dissolved out altogether.

On the edge of the plateau and in the jungle down the ghât several slab-shaped pieces of white and crystalline quartz were dug out of the soil, not resembling the quartz in the country rock; but in these pyrites and oxyd of iron were absent, and no gold was seen in them.

Several dishes of earth were washed at and near Sispara, but not a trace of gold was found.

I have not yet had opportunity to examine all the minerals and rocks collected during the journey; but there is no reason to believe that the tract lying between the southern part of the Nanjanad Valley and Sispara is likely to yield

gold in quantities sufficient to remunerate the miner either from the masses of quartz (nearly everywhere granitic) or from the soils.

It may be mentioned here that some samples of quartz collected by direction of His Grace the Governor, when His Grace visited Sispara, yielded minute particles of gold by amalgamation. The locality as pointed out to me will be shown on the map.

Machinery for treating auriferous quartz, &c.

The machinery and appliances for crushing auriferous quartz and saving gold are simple in themselves and easily managed when the principles on which they are designed are understood. Neither that portion of the work of reduction which is purely mechanical, bringing the mineral into such a state as to admit of metallurgical treatment, nor the metallurgical treatment itself is of such a character as to call for more than the knowledge which is to be gained in any large quartz-crushing establishment. A competent superintendent may not be an engineer, nor a chemist, but he should have a sufficient acquaintance with mechanics and mechanical processes, and he should be familiar at least with the chemistry of the metals and minerals with which he has to deal.

The machine for crushing quartz consists of a series of stamp-heads arranged in batteries of four or five. To each stamp-head is attached a lifter with a circular disc. A horizontal shaft, provided with wipers (so placed as to catch the discs) when put in motion causes the stamp-heads to act as so many pestles. The wipers are arranged in such a manner as to make the stamp-heads in each battery fall successively, but the order in which they fall is not the same in all mills. And each stamp-head rotates, making part of a revolution each time that the wiper catches the disc.

The stamp-head moves in an iron box or coffer having spaces covered with perforated plates for the passage of the crushed quartz. The bottom of the coffer is packed with broken quartz to the depth of three inches and on the broken stone lies the false bed of wrought iron.

In the best mills the stamp-head with its shank or lifter weighs from 6 cwt. to 8 cwt., in some the weight is as low as 2 cwt., and in others as high as 9 cwt. The height the head falls varies from 6 inches to 15 inches, and in the number of blows per minute there is a wide range; in one mill the number may be no more than 45, and in another 85.

Connected with the mill there ought to be one or more machines for breaking the blocks of quartz into small pieces. When the quartz is brought to the mill the smaller pieces are picked out and sent direct to the stampers and the blocks to the stone-breakers. A stone-breaking machine will break about eight tons of quartz per diem. As the price of labor is very low in India it might be practicable to have all the stone broken by hand, but the saving effected (if any) by employing manual labor would be very small.

A self-feeding apparatus is almost indispensable. It not only saves labor, but also ensures regularity in feeding.

The water trough is usually placed under the self-feeding hopper.

In front of the coffers are three or more troughs containing quicksilver, and below these are the tables. The tables should be evenly and securely fixed and in such a manner as to admit of the inclination being altered if necessary. They should be at least twenty feet in length. The strakes (sub-divisions of the table formed by fastening narrow strips of wood to the floor) should be about fourteen inches in breadth. In all well-planned mills there are breaks in the tables, generally at intervals of three feet, the upper edge of the lower strake being about two inches below the slightly overlapping edge of the one above. The tables should be made quite smooth, and the utmost nicety is required in setting them so that the inclination may be the same throughout, and any line at right angles to the strakes absolutely horizontal. The same care should be employed in putting on the blankets; they should lie flat and cling to the boards.

Closely-woven green baize is perhaps the best material for blanketing.

At the extreme end of the tables there is another trough containing quicksilver, and finally a waste trough through which the sand, pyrites, slime, &c., pass to settling boxes.

The boxes are cleaned out from time to time during the working day, often at intervals of a few hours.

The separation of the pyrites from the sand, &c., constituting the tailings is now generally effected by some form of buddle.

Borlase's buddle with Munday's patent scrapers is believed by many to be the best. It consists of a circular wooden trough or basin from eighteen to twenty-four feet in diameter. It is about one foot six inches in depth. The tailings consisting of crushed quartz, pyrites, &c., are made to pass along a sluice and fall into a box whence they are conveyed by pipes to the sides of the trough. The greater specific gravity of the pyrites causes the mineral to separate from the quartz sand and to remain on the floor of the buddle, while the latter being carried down the table passes away through a discharge pipe. In order to prevent the loss of the valuable material, two or three rims or stops are fixed on the floor of the basin. The pyrites are raked by knives, which, as well as the pipes conveying the material to the trough, are made to revolve round the central shaft. A machine making seven or eight revolutions per minute is recommended. The knives are raised or lowered by means of screws.*

The concave buddle has had the attention of Mechanical Engineers for some years, and several improvements have been adopted from time to time. Other ore-dressers have also undergone modifications with a view to fit them for the use of the gold miner, and some forms of percussion tables have given good results.

The pyrites, however excellent the system of concentration may be, are never entirely free from a certain proportion of quartz sand; but this is not to any serious extent objectionable when the material comes to be roasted in the furnace. Numerous forms of furnace have been devised for roasting pyrites; one kind after another has been tried and it has been found in this as in all other appliances for treating auriferous pyrites and auriferous quartz, that the simplest plan is invariably the most efficacious. An inclined reverberatory furnace on the following plan is highly approved of in Australia:—It consists of a fire-box from which the heat and products of combustion pass over a hearth into condensing chambers. The charge is supplied through a hopper and gradually drawn down over the hearth by rakes until it reaches a channel near the fire-box, whence it is drawn into a pit at the side of the furnace. Four or five small doors are provided into which the rakes are inserted. As the charge is drawn downwards to the bottom of the hearth it becomes gradually heated, more and more, and to such a degree as to decompose the sulphides. The roof of the furnace over the hearth should be arched.† In a well-constructed reverberatory (oxidating) furnace all the sulphides thrown into the bed are completely decomposed in a short time.

A dull red heat is maintained throughout, and until the sand is actually raked out into the pit there is a continous stream of heated air playing upon the pyritous minerals.

It is not necessary to describe other furnaces designed for roasting sulphides; but it may be mentioned that Hocking and Oxland's patent revolving furnace saves manual labor and presents also other advantages.

In India, however, it is advisable, and almost indispensable, that every appliance should be of such a kind as to be easily constructed and easily worked.

In using the several appliances for crushing quartz, &c., and for saving the gold, it is necessary to give attention to the character of the principal minerals and the metal as they occur in the Wynaad.

Iron-free quartz in which gold is found in some reefs near Devàla has a hardness of 7 and a specific gravity varying from 2·5 to 2·8. Where associated with limonite or other forms of sesquioxyd of iron the specific gravity of the rock is increased in a ratio with the preponderance of the accidental ingredient. The iron pyrites commonly occurring in nests and cavities in the quartz either as crystals (not seldom with gold visible when the crystals are broken) or massive has usually a hardness of 6· or 6·5, and a specific gravity varying from 4·8

* A description and a plan and section of Borlase's buddle are given in the report of the Board appointed to investigate the methods of treating pyrites in Victoria. And descriptions of other forms of buddles are contained in the "Gold Fields and Mineral Districts of Victoria."

† Report of the Board appointed to investigate the methods of treating pyrites, 1874.

to 5·2. The magnetic iron has a hardness of 5·5 to 6·5, and its specific gravity is 4·9 to 5·2. The native gold found in the quartz has a hardness of 2·5 to 3·, and the specific gravity varies according to the amount of silver or other metals with which it is alloyed, but it may be stated at from 12 to 19.

All these are to be subjected to the stamping process. The quartz is the hardest of all and the most difficult to reduce to fine grains, but its specific gravity is less than that of pyrites and very much less than that of native gold; and in dealing with it, both the pyrites and the gold are liable to be beaten into fine particles, and, unless precautions be taken, lost. In arranging the bed on which the quartz, &c., are made to fall, there is first of all the wrought-iron bottom and underneath this a layer of finely-broken quartz. A large proportion of the particles of free gold are deposited in this layer and easily recovered if water alone be used, but if quicksilver is put into the coffer, the raw pyrites beaten to powder accumulate and "sicken" and "flour" the quicksilver, and this metal, with any gold it may have taken up, is carried away. It is therefore advisable to crush the quartz in the coffers without quicksilver and to save the auriferous pyrites which pass through the gratings for subsequent treatment.

The number of perforations per square inch in the gratings should be regulated by the character of the gold. In Victoria the number of perforations per square inch is in some mills as low as 60 and in others as high as 342. It is only by observation of the results that the degree of fineness of the perforated plates can be determined. In crushing quartz from some of the reefs in the Wynaad fine gratings would be required, and even where coarse gold occurs, as in some parts of the reef at Wright's Level, at Rosedell Reef and others, it would be desirable to use fine gratings, because there is usually with the coarse grains much fine gold.

The speed at which the stamps may be driven so as to secure the greatest advantage varies with the height of the lift, but a high speed is in all cases desirable. With stamps weighing about 8 cwts. and lift of (say) 9 inches, the number of blows per minute should not be less than 75 or 80; and, fed with properly broken stone, each stamper should crush at least 2 to 2½ tons per diem of twenty-four hours as a constant average. The average quantity of quartz crushed in one mill in Victoria is, for stamps weighing 6 cwts. each, 2 tons 4 cwts. per head for twenty-four hours, and for stamps weighing 8 cwts. each, 4 tons per head per diem. In some mills in Victoria the average quantity is no more than 5 cwts. and in others as much as 3 tons 7 cwts. (on the average) per stamp head per idem are put through. The water used per head per hour should vary, depending in a great measure on the kind of material under treatment; but it would not be less, on an average, than 400 gallons. In Victoria mills the quantity used per head per hour is from 50 to 900 gallons.

The quantity of mercury put into the ripples in like manner is dependent on the amount of gold in the stone: in some mills it is as low as 4 lbs., and in others as high as 70 lbs. per stamp head. It is not difficult in practice to determine what weight can be used with the greatest advantage. The loss of mercury per stamp head per week in Victoria (which means in nearly all cases a loss of gold as well) varies from half an ounce to twenty ounces.

The blankets should be changed very often when the proportion of pyrites in the crushed material is large. The further they are removed from the ripples the less often are they changed. As a rule, the blankets next the ripples should be renewed every hour, those next every three hours, and those still lower at longer intervals. This matter must be left to the skill and experience of the Superintendent. If any of the decomposed country rock, such as is found in the Wynaad, should come to be mixed with the auriferous quartz, frequent changes of the blanketing would probably be necessary.

Instead of putting the material which accumulates on the blankets through amalgamating barrels, it would be more economical in most cases to treat it exactly as the concentrated tailings are treated, namely, in the furnace and by subsequent amalgamation. But this, like nearly everything else connected with the extraction of gold, can be judged of only when the works are in operation. When the blankets are washed it is easily seen of what the sand, &c., consist. The barrels are usually of cast iron and about 3½ feet or more in length and some-

what less than half that in diameter. The charge will weigh perhaps 1,000 lbs., and for every pound weight of material there should be added 4 ounces of quicksilver at least. The pyrites, &c., are dampened and put into the barrel, which revolves slowly making about 12 or 15 revolutions a minute. After this has gone on for a few hours, say six or eight, all depending on the character of the sand and the amount of gold it is supposed to contain, hot water is added and the operation is continued for three hours or more at a slackened speed, and finally the quicksilver is withdrawn from the barrel and the sand mixed with quicksilver and amalgam is so treated as to cause it to separate from the latter. This last process, in what manner soever it may be conducted, is often tedious, difficult and unsatisfactory.

It may be mentioned in this place that the gold got in the several parts of the mill and appliances is, as ascertained by Mr. R. H. Bland, of the Port Phillip Works at Clunes in Victoria, as follows:—

	Per cent.
Stamp beds	66·08
Mercury boxes	22·95
Blankets	10·97

The tailings are dressed up to an average of 3 ounces or 4 ounces of gold to the ton of material, and an average of about 85 per cent. of the gold as determined by assay is extracted. The cost of operating on the tailings including the buddle, roasting, grinding, loss of mercury, &c., averages about £2-14-5 per ton, or about £1 per ounce of gold got.

The tailings which are caught in the settling boxes are sent to the buddles and when the concentration is effective, about 80 per cent. or more of the practically non-auriferous quartz sand is washed away and the remaining auriferous pyrites and free gold remain for treatment.

All this seems simple enough, but there are still difficulties in the way of saving the pyrites by the buddle alone. Nearly all the highest authorities who have written on this subject of concentrating are of opinion that a classification of the sand operated on according to the size of grain should be made; but the greater number of mill-owners appear to think that the buddle is sufficient. Professor G. H. F. Ulrich and Mr. J. Cosmo, Newbery, B. Sc., than whom there are no higher authorities on this question, believe that classification will be found beneficial and will eventually be adopted. They state that they have "come to the conclusion that if the crushed pyritous material after passing the usual amalgamating appliances (quicksilver troughs, copper-plates, &c.) was, by one triangular double trough and two pyramidal boxes, classified into three sizes of grain, *viz.*, coarser sand, fine sand and slime, and the first treated by self-acting jigging machines, the other two by Borlase's buddle, it would prove a more satisfactory process for the saving of the pyrites than any at present in use."

It is unlikely that, at least for some time to come, any other appliance than the buddle will be used in Southern India; but if the mines should be successfully worked, there will no doubt be every attempt made to bring the machinery employed to a state as near perfection as possible.

The pyrites when freed as far as is practicable from quartz sand are sent to the furnace. Every care should be taken in roasting, and time in conducting this process must not be considered. The sulphur (and the arsenic), if any, must be driven off. Though in most cases the oxidization is effected rapidly—the more rapidly if a steady current of air is made to pass over the material—still it necessarily takes some time to dispel the whole of the sulphur.

It has been proved by experiments in the laboratory that partially decomposed iron pyrites causes more "flouring" of mercury and consequent loss than undecomposed pyrites,* and this should always be borne in mind when treating these auriferous sulphides. Undue haste or inattention on the part of the person in charge of the operations would certainly result in serious loss to the proprietors of the mine who would probably never ascertain the cause of the deficiency of yield of the pyrites.

* Ulrich and Newbery.

Not a few who have had experience in treating pyrites in the furnace believe that they gain an advantage by mixing the pyrites with charcoal, and certainly there is much to be said in favor of this practice. If the fires be well and steadily maintained and the construction of the furnace is good, there is no need of the addition of any combustible substance; but otherwise it is advantageous. A small proportion of quartz sand, whether present as the result of imperfect concentration or purposely introduced to prevent the agglutination of the particles of pyrites, tends to ensure a more easy, rapid and perfect oxidization; but a highly experienced Mining Manager in Australia, Mr. H. Rosales, is of opinion that, though the quartz sand in calcining prevents caking in the subsequent process of amalgamation (in a Chilian mill for example), it causes a great loss of quicksilver. The quartz sand undoubtedly has the effect described just as the iron sand often associated with auriferous quartz cuts up the mercury and amalgam and makes it impossible when experimenting to save them in the ordinary way.

It is not at present possible to say what quantity of such fuel as is found in the Wynaad would be required to calcine one ton of pyrites: it is known, however, from what is stated in this report, that many trees growing near Devála yield timber which is excellent as fuel, and it is not probable that the quantity ordinarily used in Australia, *viz.*, one ton of wood for every ton of pyrites, would be exceeded. With a good furnace, and careful feeding of the fires, the amount of fuel might be probably even less than is here named.

For the purpose of amalgamation, the next process to which the roasted pyrites are subjected, Wheeler's pans are commonly used; but many managers prefer the Chilian mill; and the arrastra (inferior as it is) is still found in several well-conducted works. In amalgamating with the Wheeler's pans a charge weighing about 5 cwt. is put into each pan and quicksilver is added according to the judgment of the operator. The quantity of quicksilver varies greatly; one will use as much as 12 lbs. of the metal to 1 cwt. pyrites, and another less than 4 lbs.

The great importance of breaking up the quicksilver, of mixing it thoroughly with the pyrites, and thus bringing it into contact with the fine gold is well understood; but when this is done effectually there is the greater difficulty in recovering the quicksilver and amalgam. A very small quantity of sodium amalgam added to the material prevents "flouring," but the utmost care is needed in using this aid to amalgamation. A solution of soda or any alkaline solution is beneficial. It is at this stage by mechanical action that the flouring is caused, as any one can easily prove by attempting amalgamation in the presence of substances that cut up the quicksilver.

The Chilian mill is greatly in favor in many large and long-established works; and a summary of the evidence of Mr. H. Rosales respecting it cannot but be of interest to gold miners.* He says—

"In amalgamating, charges the mill (a small one 12-inch faced roller) at starting with 110 lbs. of mercury, then adds 66 lbs. of damp calcined ore, works dry for ten minutes, breaking up the mercury; works ten minutes more in a thick pasty state; adds clay-pipe full of mercury containing 2½ per cent. sodium amalgam, and works again ten minutes; then flushes off for ten minutes, runs off water and fine sand, leaving the mercury and heavy sand in bottom of pan; adds 66 lbs. more of roasted pyrites, and repeats the process; every week cleans out pan, and squeezes the quicksilver through chamois leather. To secure thorough amalgamation, the mercury must be floured through the mass, and a loss to a certain extent put up with. If the mercury be left in mass at the bottom of the pan, and the roasted material in the form of slime very little loss of mercury occurs, but a very great loss in gold. Adopts the following method to collect the amalgam (broken up mercury):—(1) a large force dolly to dilute the slime; (2) two of Rittenger's Small-basin Tyrolese mills; (3) two small force dollies; (4) copper plates, with blanket strips; after every flushing off the floured mercury collected on the plates is rubbed off with a few drops of quicksilver containing 2½ per cent. of sodium amalgam; (5) blankets and large dolly. Tyrolese mills can be advantageously applied to save amalgam and broken up mercury. The loss of mercury has averaged about 1¾ lbs. to 2 lbs. per ton of calcined ore."

A loss of mercury equal to 2 lbs. per ton of calcined ore may or may not in all cases represent a large loss of gold. Assuming that the average yield of

* Report of the Board appointed to investigate the methods of treating Pyrites, 1874.

pyrites is 2 oz. 13 dwt. per ton, the loss of gold would be equal to 10 grains for every ton of pyrites treated, or, adding the value of the mercury, a sum of nearly 10 shillings per ton which represents a loss of about 5 per cent. This cannot but be regarded as unsatisfactory; but as there are improvements effected nearly every day in the methods of treating pyrites, it may be assumed that the loss in this operation will soon almost disappear. When we compare the above results with those which were regarded as excellent some 15 years ago, we may surely gather hope and confidence as to the future. The loss of 10 shillings per ton of pyrites treated may be regarded as the greatest that can arise from the waste of quicksilver. The average loss is probably less than 5 shillings per ton.

The Board appointed in Victoria to report on the several methods of treating pyrites give the following table showing the number of tons of quartz crushed by certain Companies in 1873, the number of tons of pyrites saved, the yield of gold from the quartz and the pyrites respectively, and the cost of treating the pyrites:—

Name of Company.	Locality.	Number of Tons of Quartz crushed.	Number of Tons of Pyrites saved from the Quartz.	Yield of Gold from the Quartz alone.	Yield of Gold from the Pyrites alone.	Cost per Ton of treating the Pyrites, including Concentration.	Information supplied by

(a) Cannot give the return of gold from the public crushing. The method of treatment adopted was by the use of the buddle, Wheeler's pans and reverberatory furnace.

(b) Parcels of pyrites treated for the public from the Morning Star and other reefs in the district have yielded from 2½ oz. to 7½ oz. to the ton.

(c) A poor sample; the balance saved the remains in stack awaiting treatment. A lot of 89 tons 7½ cwt. previously treated yielded 259 oz. 3 dwts. of gold or an average of about 3 oz. 6 dwts. per ton.

(d) The cost could be reduced at least £1 per ton by lengthening our furnace and adding a second Chilian mill to our plant, which would enable us to reduce double the quantity at a very slight increase to the cost now incurred for labor, &c.

(e) Crushed between June 1857 and October 1864.

The table shows that the quantity of pyrites saved was generally in a small proportion to the number of tons of quartz crushed; but at the Caledonian Quartz Company's Works the proportion of pyrites recovered was 8·2 per cent.

It has been stated already that to crush raw pyritous quartz with quicksilver in the coffers is certain to result in loss, both of quicksilver and gold, and if mercury is not used in the coffers the ordinary copper plates may be dispensed with. Copper plates are considered almost as necessary as ripple boxes by many managers of mills, but experiments have shown that in most cases they cause a loss of amalgam.

In the Wynaad, in the many futile attempts made to treat the auriferous stone, it was the practice to roast the quartz before sending it to the mill. Where the proportion of gold in the stone is large, and if sulphides are absent, it is not injudicious to calcine the quartz previous to crushing; the quartz is made friable, and a greater quantity can be crushed per day—but if sulphides are present calcining is injurious. The effect of calcining when pyrites are

present is to cause a glazing of the particles of gold in such a way as to make amalgamation with mercury impossible. The pyritous material can never be thoroughly oxidized in a kiln; a lower sulphide is formed which coats the particles of gold. The "slags" seen at the works in the Wynaad when examined under a lens show why the yields were so far below what might have been anticipated from the appearance of the free gold in the quartz before it was sent to the stampers.

The price of unskilled labor in Southern India is low, and it might be advisable in working some reefs, to have the heaps of stone when broken picked and all the non-pyritous material sent to a kiln to be roasted if by assay such material showed a yield sufficient to make the treatment of it profitable.

It is now known that gold in the Wynaad is usually most plentiful in the parts of the reefs which contain pyrites, and therefore the methods of extracting gold, commonly adopted in Australia, are most likely to give good results.

It has not been thought desirable at this stage to give minute descriptions of all the various chemical processes for treating pyrites which have from time to time attracted attention. Professor E. J. Chapman, of University College, Toronto, has great confidence in the method employed by him. The buddled ore is mixed with a tenth of its weight of nitrate of soda, and the mixture passed through an iron cylinder or gas retort fixed at a slight inclination and heated towards its centre to moderate redness, when the sulphur and arsenic become in part rapidly eliminated and in part absorbed chemically by the alkali of the nitrate. The ore is then leached in water; the soluble compounds rapidly dissolve out leaving the bulk of the ore in the form of a dull earthy residuum. This is passed a second time, somewhat more slowly, through the heated cylinder, when practically all the gold contained in it is set free. The gold may be extracted by amalgamation or by chlorine.

At my request Mr. J. Cosmo Newbery reported on this method and the following is an extract from his report:—

"The treatment with nitrate of soda is one which I do not think applicable in this country (Victoria); it will probably give an increased yield of gold, but the cost of this extra yield will be more than its value. By the present method of treatment careful concentration of the sand, roasting, and amalgamation, about eighty per cent. of the gold in the pyrites is obtained. If we say the pyrites contains two ounces of gold per ton this would give a loss at present of eight pennyweights of gold, worth 32 shillings (taking gold at £4 per ounce). Now the amount of nitrate recommended is one-tenth of the weight of the ore to be roasted (2 cwt. per ton), worth in this country 24 shillings per cwt., so that without including extra labor, fuel, &c., the 32 shillings' worth of gold would require 48 shillings' worth of nitrate of soda. This is supposing the whole of the 20 per cent. now lost were to be recovered by the use of this salt, a result hardly to be looked for. This loss of 16 shillings per ton would have to be recovered from the arsenical pigments, which are at present of little or no value here. Tons of arsenic are taken from the flues of our pyrites furnaces and buried or thrown away as there is no market for it."

When at Blackwood, in Victoria, I had an opportunity of seeing the apparatus invented by Mr. A. Robertson as adapted to the chlorination process and of listening to his explanations. Whether or not his system has been brought successfully into practice I cannot say, but the matter is in the hands of an energetic and able man, and if any one will make the process applicable to the extraction of gold from pyrites, Mr. Robertson is in a fair way to do it.

All these processes have a certain amount of interest for persons intending to embark their capital in gold mining in the Wynaad. At the same time it is clear that under existing circumstances the simple and easily managed methods, now in favor in the largest reduction establishments in Australia and California, are most likely to prove remunerative.

Appendix C shows the results of the process of treating pyrites at the establishment founded by F. Claudet and J. A. Phillips at Widness, near Liverpool. Their method deserves consideration, if only because of the prospect afforded of some of the sulphides here becoming articles of export.

The prime-mover best adapted to give motion to the stampers and stone-breakers is undoubtedly a steam engine. It is easily managed, and is constant in its duty, but to work it, as compared with some other prime-movers, is costly. In the Wynaad there are numerous perennial streams (varying, it is true, during the seasons in their volume of water), which in many places might be used

either for overshot-wheels, breast-wheels or turbines. And water in this district can be easily and cheaply conserved.

On the edges of the ghâts a sufficient fall can be found everywhere; and whatever the form of water-engine power to move even one hundred head of stamps can be obtained at no great cost.

The situation of the reef and the surrounding circumstances would serve to determine whether or not it would be more economical to employ steam or water, but it may safely be asserted that a complete plant, consisting of ten stamp-heads with engine, stone-breaking machine, buddle, saw, and frame, necessary buildings, reverberatory furnace, and all other works could be erected for £5,000.

Allowing, then, 10 per cent. on the capital, and providing also for a competent mining manager and two European miners (sufficient, if success should result, for the efficient management of one hundred stamps and the mining operations which would then be necessary), and providing also for stores, &c., and contingencies at the rate of 25 per cent. on the whole, the annual returns would be, if the quartz yielded gold at the rate of 2 dwts. per ton, nearly equal to the expenditure; if at the rate of 3 dwts., £690 per annum, and if at the rate of 5 dwts., £3,570 per annum.

This estimate may be put in another way: some eleven years ago it was ascertained that in one mine in Victoria, Australia, the costs of raising and treating quartz were as follow:—

	£	s.	d.
Getting quartz, at 3*s.* 10½*d.* per ton, say	0	4	0
Cartage per ton	0	1	6
Crushing, including wear and tear, &c.	0	3	9
Contingencies	0	0	3
	0	9	6
A yield of 5 dwts. per ton, say, at 3*s.* 6*d.* per dwt.	0	17	6
Leaving a clear profit per ton of	0	8	0

The prices actually paid for similar work by the Alpha Gold Mining Company, as stated in a return furnished by the Managing Director, were as follow:—

	£	s.	d.
Raising quartz, Rs. 2 per ton	0	4	0
Carriage, Rs. 1-8-0 per ton	0	3	0
Crushing, Rs. 1-13-0 per ton	0	3	7
	0	10	7
Add contingencies as above	0	0	3
	0	10	10
A yield of 5 dwts. per ton, at 3*s.* 6*d.* per dwt.	0	17	6
Leaving a clear profit per ton of	0	6	8

Why the Alpha Company failed to derive fair profits from their operations is told in another place in this report.

It is scarcely necessary to state that if, instead of ten stamp-heads, fifty or one hundred were erected, the profits would be in a largely increased proportion.

The question of the introduction of Chinese labor for the purpose of working the gold mines of the Wynaad is one which I am not competent to discuss, as I have not a sufficient knowledge of India or of the several peoples inhabiting it.

In Australia the Chinese miners are exceedingly industrious and skilful; and they are successful in working the shallow auriferous deposits, following the European miners and getting gold under conditions which would not be accepted by even the poorest "hatter."

The Chinamen are employed in the alluvial mines in Victoria in all the mining districts, and their wages vary from fifteen shillings to thirty-six shillings per week. They labor often as long as nine or ten hours per diem, and neither cold nor heat nor wet seems to affect them injuriously.

They are easily managed by Europeans, but they might not behave well in the midst of a mixed population like that of the Wynaad.

Results of the treatment of auriferous quartz in Victoria, Australia.

In considering in what manner the quartz veins of the Wynaad and those in Southern India generally may be mined most advantageously, and in what manner the auriferous quartz should be treated, one turns naturally for information to the records relating to the large operations in Australia where experience gained during the past twenty years, appliances perfected by engineers ever on the watch for improvements, and methods of treatment suggested by the experiments of chemists in the laboratory, leave but little to be desired as regards the economical extraction on a large scale of gold from its matrix.

From what has been already stated, it is clear that in various parts of Southern India,—and certainly in the Wynaad,—there are reefs which ought to give profitable returns to the capitalist, if the same skill in mining and the same appliances for extracting gold were brought to bear on the operations as are at this moment indispensable to success in the largest gold-producing countries in the world.

Now that the old theories respecting the modes of occurrence of gold are no longer accepted even by the ignorant,—now that it has been proved that quartz reefs are productive at greater depths than any to which the miner can penetrate by vertical shafts, and that in the latter rich veins have been cut more than 2,000 feet from the surface and quite 1,300 feet below the level of the sea,—the miner is encouraged to undertake works which a few years ago would have been regarded as reckless enterprises. In one mine in Victoria 11,500 tons of quartz, obtained at depths varying from 430 to 1,060 feet from the surface, yielded from 1 oz. 3 dwts. to 5 oz. 14 dwts. per ton; and elsewhere in the same colony the yields of stone got at levels as low as 500 and 1,000 feet from the surface have given at the rate of 1 oz. 14 dwts. to 2 oz. per ton.*

The mining records relating to this part of Australia afford instructive lessons to all who are interested in gold-mining in any country. They show that the average yield of 13,402,915 tons of quartz crushed and treated in Victorian mills has been 11 dwts. 6·30 grs. per ton; and that during the year 1876, 1,011,808 tons 4 cwt. gave an average of 10 dwts. 13·48 grs. per ton. It is a noteworthy fact, in connection with these returns, that the greatest quantity of gold is not obtained from the veins which yield the largest amount of gold per ton. For instance, in the last case cited the quantities crushed in the three most important quartz-mining areas were 315,407 tons 6 cwt. yielding an average of 6 dwts. 14·46 grs., 356,927 tons 10 cwt. giving at the rate of 11 dwts. 22·86, and 111,716 tons 10 cwt. with an average of 7 dwts. 14·45; on the other hand, where the yields per ton were 16 dwts. 22·47 grs. and 1 oz. 3 dwts. 12·58, respectively, the quantities of stone crushed were 88,729 tons and 40,784 tons. In some districts of Victoria parcels of quartz treated in 1874, 1875, and 1876, yielded as follows:—

Tons crushed.	Average yield of gold per ton. oz.	dwts.	grs.
1874.			
104,256	0	5	14·31
14,810	0	3	4·47
91,427	0	6	7·86
8,980	0	3	21·82
44,921	0	6	20·67
1875.			
97,830	0	5	18·27
18,667	0	2	22·93
9,805	0	3	19·89
9,814	0	6	22·99
26,524	0	5	11·81
39,553	0	5	13·63
16,112	0	6	22·47
1876.			
116,770	0	5	2·54
112,232	0	6	8·78
10 000	0	3	16·68
14,206	0	3	10·97
23,507	0	4	19·89
46,350	0	5	3·96

* *Mineral Statistics of Victoria.*

During the three years 1874-1876, 880,641 tons of quartz were crushed which yielded an average of only 5 dwts. 12·78 grs. per ton.

Where the reefs are thick or where the "leaders" are numerous and the facilities for mining are great, the returns, even when the yield per ton is very small, are far more profitable than those from veins in hard rock, however rich they may be. The Black Hill Company at Ballarat crushed 283,550 tons of quartz which gave an average of only 2 dwts. 23 grs. per ton; yet the dividends paid amounted to £23,900; the machinery cost £10,030; and the Company paid £24,235 for "claims" (*i.e.*, lands on which to mine.)

Numerous similar cases could be mentioned where the operations have been profitable, and yet the average yields per ton very small, namely, 2 dwts. 13·4 grs., 3 dwts. 6·01 grs., 3 dwts. 7·89 grs., and 3 dwts. 18·53 grs.

One remarkable case, which however cannot but be regarded as exceptional, is that of the Independent Company, Black Hill, Ballarat. They obtained the quartz they crushed with great facility, working in an open cutting, and the yields, though very small, were remunerative. "During the early part of 1863 the average yield was 3 dwts. 12 grs. per ton; from October 1863 to May 1864, 7,453 tons gave 910 oz. 0 dwt. 12 grs. of gold equal to 2 dwts. 10·6 grs. per ton; and 24,447 tons taken at different dates between May 1864 and December 1865 from the cutting gave 2,043 oz. 10 dwts. 2 grs. equal to 1 dwt. 16·12 grs. per ton."*

During a period of eight years the records show also that in the part of Australia above referred to 40,002 tons of pyrites and pyritous quartz were operated on by certain mining companies, and that the average yield per ton was 2 oz. 13 dwts. 7·81 grs.

In these operations all the bye-products were lost,—the sulphur and all the other constituents of the pyrites,—but with such aids as the chemist has given many of these might be saved and turned to profit.

From 1864 to 1875, inclusive, 1,728,959 tons 7 cwt. of "quartz, tailings, &c.," were crushed in Victoria and yielded 306,831 oz. 10 dwts. 23 grs. of gold, being an average of 3 dwts. 13·18 grs. per ton.

In other parts of this report the yields of gold per ton of quartz taken from several reefs in South-East Wynaad are given, some the results of experiments made by Mr. W. King, the Deputy Superintendent of the Geological Survey of India, and others by Mr. Lindon and the writer; and the proportion of gold per ton is such as to justify the commencement of mining operations on a scale which would fairly test the character of the veins. If well conducted and successful, such operations would lead ultimately to the thorough development of the gold mines of Southern India. It is satisfactory to be able to add that specimens of the quartz sent to Victoria by the writer have been analysed by Mr. J. Cosmo Newbery, B. Sc., the Superintendent of the Laboratory in Melbourne, and the results, as recorded in Appendix E, more than confirm the conclusions arrived at by those who have investigated the reefs near Devála.

It is obvious that in this part of the world no such "prospecting" as that which has resulted in the discovery of rich reefs in Australia and California can be expected, even if the gold mines were proved to be richer than those of the countries named. The people generally have occupations which they would be loath to leave for what might be an uncertainty; and it is more than doubtful if their means,—their ability to maintain themselves for such periods as they would have to do unproductive work,—would permit of their following gold mining as a pursuit in the same manner as it was followed a quarter of a century ago in Australia and America. Hence, it will happen that discoveries of rich veins here will probably be relatively few as compared with the number of the reefs and made only at long intervals. The excavations and pits of the native miners,—works prosecuted in times past and now nearly everywhere abandoned,—are, however, often sure guides to the reefs in which gold occurs. It may be truly said that the veins now known to be highly auriferous have been discovered by tracing the old workings on or to the outcrops.

The facilities for mining these auriferous reefs, as already stated, are very great; the reefs in most places appear at the surface either on the summits or

* *Victorian Exhibition, 1872* (*Mining and Mineral Statistics*).

on the slopes of the ranges; and the contours of the hills are such as to admit of horizontal shafts being driven so as to intersect the reefs. All the costs of winding, pumping water, and the maintenance of machinery with the expenses of fuel and management attendant thereon are thus avoided. The difference in the price per ton of getting quartz under such favorable circumstances as those described and in other places where vertical shafts are required to work the veins is very great. In the Beechworth District (Victoria) there is one gold field where the formation of the country admits of the quartz being mined by horizontal shafts, and the average cost there of raising quartz and delivering it at the machine is 2*s.* 2*d.* per ton, whereas in other places, where vertical shafts are sunk, the cost per ton varies from 12*s.* 10*d.* to 27*s.* 4*d.* The cost of breaking out quartz in mines worked from vertical shafts, and under the most skilful management, may be set down at from 4*s.* to 9*s.* per ton; and including the cost of machinery, dead-work, and delivery at the reduction works a total cost of at least 12*s.* per ton. The prices charged for crushing and treating quartz, too, are different in different districts. In some they are as low as 2*s.* 2*d.* per ton, and in others as high as 14*s.* and 20*s.* per ton. Where water-power can be employed for giving motion to the crushing machinery, the cost of reduction is usually very low as compared with that where steam is used, the proportion being for Victoria according to circumstances and position as 1 to 4 and in California as 1 to 2 nearly.

The wages paid to miners and others in Victoria, even where profitable results are obtained from quartz giving only a very small proportion of gold per ton, are high. Miners are paid from 38*s.* to 48*s.* per week, laborers working on the surface from 30*s.* to 45*s.*, and engine-drivers and others, from 42*s.* to 70*s.* All the materials used are also costly; for instance, props are £12 per 1,000, laths 24*s.* per 100, logs 1*s.* 10*d.* per cubic foot, sawn timber 6*s.* per 100 feet, and firewood 25*s.* per cord. The prices paid for timber continue to increase, as the forests in the vicinity of the mines are now in most cases denuded, and fuel, &c., have to be brought from great distances; but in spite of all these difficulties, a severe but a wise economy in all departments connected with the mines and the reduction works enables the Companies to pay good dividends to the shareholders.

What may properly be described as economical quartz-mining has been known and practised but for a very few years. When attention was first given to the auriferous reefs in Australia, the method of treatment was similar to that now, and in times long past, pursued by the natives of Southern India. The stone was broken out of the reef, and the "specimens" with gold visible to the eye were pounded by hand and the gold washed out.* Subsequently, the "Dolly," a log of wood shod with iron and suspended from a sapling over a stump, was in use as a crusher, and finally stampers moved by water or steam were introduced, and quicksilver for amalgamation employed. Very slowly improved processes were adopted, and important discoveries were made, but it was not until the miners had been at work for some sixteen years that a proper system of treatment was generally adopted. In the early days of quartz-mining in Australia, as much as £8 and £10 per ton were paid for crushing, and the tailings consisting of auriferous pyrites, quartz, sand, &c., were thrown aside and formed large heaps near each crushing plant. Years afterwards, when the value of the pyrites came to be known, the heaps of "tailings" were sold to and re-washed by Chinamen again and again. The pyrites were slowly decomposed by exposure to the atmosphere and the gold set free, and some profit accrued at each washing. When, however, the tailings were collected in settling boxes and sent to the buddles, the pyrites concentrated, roasted in a suitable furnace, and subsequently ground with mercury, a large amount of gold was obtained. So excellent is the process now commonly adopted, that at least 86 per cent. of the gold contained in the material (as determined by assay) is extracted.

* At Ballarat, even as late as the year 1872, many small co-operative parties of miners were making a living on some of the reefs by picking out the best stone and crushing it with hammers and getting the gold by "washing off" with a cradle and tin dish. So inefficient was this method of treatment, that a parcel of 100 tons of tailings cast aside and subsequently sold for £5 yielded, when treated in the battery, a profit of over £100.—*Victorian Exhibition* 1872 (*Mining and Mineral Statistics*).

The Wynaad Prospecting Company state that they were able to break out quartz and deliver it at the kiln for Rs. 1-3-2 per ton, and now that nitro-glycerine compounds for blasting have been greatly improved and made as safe as it is perhaps possible to make them, there is no reason why, in quarrying the large bodies of quartz that appear at the surface in so many places in the Wynaad, the cost per ton should much exceed that paid by the Public Works Department for quarrying hard country rock. From information afforded by the Executive Engineer, Nilgiris, it appears that a native laborer, working eight hours per diem, can, in ordinary cases, quarry about 1½ cubic yard of solid rock per diem, and his pay is six annas per diem, that is to say, the cost of quarrying is four annas per cubic yard. The same authority gives the price of excavating earth by native labor at two annas per cubic yard. By making adits or sinking shafts and using dynamite, rock can be quarried, it is said, in reports lately received, at the rate of nearly 140 tons for every pound weight of lithofracteur exploded.

The consideration of these facts leads to the conclusion that, while it is possible quartz-mining, with such rude machinery and crude treatment as were common some twelve or fifteen years ago, might have yielded profits in some places in Southern India, the reefs generally could not have been worked remuneratively.

But the conditions are now changed, and it is beyond doubt that the old gold mines of Western and Southern Asia, and Eastern and Southern Europe, will sooner or later be re-opened by Europeans, who will provide themselves with all those appliances which have been brought almost to perfection by mining managers in Australia and California.

Assays of gold.

The gold obtained in the Wynaad is unequal in fineness, that from the soils being of the best quality. It has been observed in other countries that the finer the particles of the gold procured from alluvial deposits, the higher is the quality.

The following figures are taken from a report furnished to the Government on the 13th January 1832 by the Mint Committee, of assays of gold made by the Mint Master's Assayer:—

Coopal Mines	Gold	99·22
	Silver	·78
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	43 4 8

Nilambur Rajah's Mines	Gold	94·53
	Silver	5·47
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness.	41 4 0

Devala Mines	Gold	90·88
	Silver	8·86
	Copper	·26
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	39 10 6

The Assay Master made a further report on seven samples of gold on the 10th February 1832, showing the following results:—

Nilambur Mines	Gold	94·53
	Alloy	5·47
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	41 3 8

Exactly similar results were obtained from another sample of the gold of the Nilambur Mines:—

Nilambur Mines	Gold	96·09
	Alloy	3·91
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness.	41 13 8

Coopal Mines	Gold	98·96
	Alloy	1·04
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	43 2 10

Coopal Mines	Gold	99·22
	Alloy	·78
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	43 4 2

Coopal Mines	Gold	98·96
	Alloy	1·04
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	43 2 10

Carcatode Mines	Gold	99·22
	Alloy	·78
		100·

	Rs. A. P.
Value of an ounce of gold of this fineness	43 4 7

Mr. King, under date 11th March 1875, reported that two samples of gold obtained from ordinary washings of surface soil were assayed at Calcutta with the following results:—

Number 1	Gold	93·00
	Silver	7·00
		100·

Number 2	Gold	90·90
	Silver	8·67
		99·57

Three samples of reef gold collected by Mr. King were examined in the laboratory of the Geological Survey of India, and the proportions of gold and silver were for each as follow:—

No. 1	Gold	67·07
	Silver	32·93
		100·

No. 2	Gold	82·69
	Silver	11·32
		94·01

No. 3	Gold	86·86
	Silver	10·96
		97·82

Nos. 1 and 3 of the above were assays of reef gold got from different parts of reefs; No. 2 was from one part of a reef close to the outcrop.

In another report it is stated that the percentage of pure gold in a sample of metal obtained by washing the earth was 97·5, and from a sample of matrix gold 92·875.

Mr. J. W. Minchin sent some gold to Mr. H. B. Medlicott, the Superintendent of the Geological Survey of India, in 1875, which was supposed to be stream gold (it was really reef gold), and it was found to consist of gold 84·7 and silver 15·3.

The same gentleman also sent a sample of auriferous quartz got near Devála to Johnson and Sons, Assayers to the Bank of England and Her Majesty's Mint; and they gave a certificate to the following effect:—

		Grains Troy.
Assay of 5 lbs. of auriferous quartz	Fine gold	191½
	Silver	5⅜
The proportions of the above being	Gold	79·13
	Silver	20·87
		100·00

Mr. King, having had assays made of gold from six reefs, gives the average for Wynaad gold as follows:—

Gold	86·86
Silver	10·96
Dross	2·18
	100·00

Mr. J. Cosmo Newbery, B.Sc., Superintendent of the Technological Museums and Laboratory in Melbourne, has examined some samples of quartz forwarded by me from the Wynaad, and from auriferous pyrites and quartz taken out of the Skull Reef he found the yield per ton as follows:—

		oz.	dwts.
Gold		49	10
Silver		37	6
The proportions being	Gold	57·02	
	Silver	42·97	
		99·99	

In Victoria the fineness of the gold obtained from the alluvial workings varies considerably in the different districts, but "the fineness is pretty constant for each field and will seldom deviate from the average mark more than a few eighths of a carat grain."

At the Wool-shed near Beechworth and at Ballarat, Maryborough, and McIvor, Victoria, the fineness recorded is as high as 23 carats 2⅞ carat grains, and in Gippsland as low as 20 carats 3⅛ carat grains.

Amalgam gold from the Mariner's Reef, Maryborough, Victoria, marks 23 carats 2⅞ carat grains and 23 carats 3⅛ carat grains. It is the highest known matrix gold.

Gold got from the reefs on the Goulburn river, Victoria, varies in fineness from 17 carats 0⅛ carat grains, and 17 carats 2⅛ carat grains to 23 carats 1⅝ carat grains.

The gold obtained from the quartz veins by crushing and amalgamation is higher or lower in quality according as the quartz is treated, and the differences in samples from the same reef are frequently very great though the gold in its native state may be pretty uniform in character.

The proportion of pure gold in samples of native gold found in various parts of the world is given here for comparison with the above results. The figures are extracted from a table in *Dana's System of Mineralogy*:—

	Gold.	Silver.
Wicklow Company, Ireland.	92·32	6·17
Transylvania, Vöröspatak	60·49	38·74
Katharinenburg	95·81	3·58
Do.	70·86	28·30
Czar Nikolajeosk (Miask)	92·47	7·27
Boruschka (N. Tagilsk)	94·41	5·23
Beresof	91·88	8·03
Petropavlooski	86·81	13·19
Siränooski, Altai	60·98	38·38
Schlangenberg, Altai	64·00	36·00
Malacca	90·89	8·98
Siam, Pachim	88·57	6·45
Africa, Senegal	94·00	5·85
Do. do.	84·50	15·30
Brazil	94·00	5·85
Bolivia, Ancota	94·73	5·23
Do. Tipuani	91·96	7·47
North Grenada, Bogota	92·00	8·00
Do. Marmato	73·45	26·48
Do. Santa Rosa.	64·93	35·07
Peru, Carabaya	97·46	2·54
Do. Yungas	78·69	21·31
Nova Scotia, Tangier	98·13	1·76
California	96·42	3·58
Do.	75·86	20·67
Canada, Chandiere	89·24	10·76
Australia	99·28	0·44
Do. Omeo	85·23	14·77
Tasmania	92·77	7·23
Do. Fingal	90·89	8·02

"The average proportion of gold," says Dana, "in the native gold of California, as derived from assays of several hundred millions of dollars' worth is 880 thousandths, while the range is mostly between 870 and 890. The range in the metal of Australia is mostly between 900 and 960 with an average of 925."

Gold is found associated with rhodium and with palladium and silver. There is an argentiferous telluret of gold, a plumbo argentiferous telluret of gold and a sulpho-plumbiferous telluret of gold, "the color of which is a deep lead grey, very brilliant, crystallizing in slightly elongated hexahedral tables. Its fracture is lamellar; it is soft and stains slightly. Its composition is as follows:—

Gold	9·0
Silver	0·5
Lead	54·0
Copper	1·3
Tellurium	32·2
Sulphur	3·0
	100·0"*

Gold is found in association with ores and metals in various proportions; and such ores and metals, many of them now rare, may perhaps hereafter be found in quantities in some places, and become remunerative to the miner.

Methods of testing auriferous quartz and auriferous pyrites.

Only by a careful chemical analysis can the proportion of gold in any given quantity of quartz, pyrites, or other mineral be ascertained; but for all practical purposes assays by amalgamation are sufficient. The methods pursued in treating quartz taken from the reefs in the Wynaad have been as follow:—

When a reef was tested in sections, the stone from each section was taken out in far larger quantities than were required for testing; each heap of quartz was broken into small pieces, and the whole was well mixed, and from the heap so mixed the portion to be treated was taken. The stone was broken still smaller

* *Manual of Practical Assaying* by John Mitchell, F.C.S.

and weighed; and it was then ground very fine on a suitable stone, another stone being used as a muller. The finely pulverised stone was put into a clean iron pan and roasted until fumes were no longer given off, until it was certain that it was in a fit state for amalgamation. If after roasting the pulverised material seemed to require it, it was again ground on the stone. The heat at all times was so regulated as to prevent the possibility of "glazing."

The roasted stone was put into an enamelled dish, and a proper proportion of quicksilver was added.

The whole was then thoroughly rubbed by hand, at first dry; subsequently a little cold or hot water was poured in until a paste was formed; more water was added, the stuff being thoroughly rubbed all the time, and finally the amalgam or (if there was no gold) the quicksilver was washed off, the utmost care being taken to prevent the loss of any quicksilver. The water and sludge from the enamelled dish were poured into other vessels, and these were most carefully examined subsequently, and if there was doubt,—and sometimes when there was no doubt as to the results, the sludge-sand, &c., in these were treated again,—the amalgam or quicksilver was most often placed under the flame of the blowpipe, but at other times nitric acid was used and the gold (if any and of sufficient quantity) was weighed.

The results were calculated in the ordinary way.

It happened occasionally that the roasting was not sufficiently protracted or that all the material subjected to the roasting was not ground as fine as it ought to have been, and then it became necessary to subject it to further roasting or to use acids to decompose the sulphides. In all cases the utmost care was taken to preserve the conditions necessary for effective amalgamation.

The quartz collected in various localities was treated in the same manner as that taken from sections of the reefs.

In order the better to illustrate the value of this system of testing quartz, I took a quantity of sludge and sand from which the gold had been extracted, and which had been saved in pans, and into this I put half a grain of very fine gold. The gold was well mixed with the sludge, &c.,—quicksilver was then added and the operation of amalgamating performed in the ordinary manner. The amalgam was treated also in the ordinary manner, and the gold recovered weighed ·4786 grains nearly, showing that the loss was 4·28 per cent. The loss may be partly accounted for by the mere handling of the fine gold in a very damp atmosphere, *i. e.*, weighing it, transferring it to the dish of sludge, &c., and reweighing it. This system however is, when very carefully managed, so certain that if the actual assay produce of a parcel of quartz was at the rate of one ounce per ton, the gold got by amalgamation would weigh 19 dwts. 3·5 grains. It will be observed that the result in every case must necessarily be slightly in defect, never in excess. Messrs. Johnson and Matthey, the well-known Analytical Chemists, in a report to the Directors of the Port Phillip and Colonial Gold Mining Company, make the following statement:—

"We finally had recourse to amalgamation and were surprised at the ready results so obtained (having been led to suppose that the mineral—pyrites—was unworkable under that process) * * * * * * The results recorded by the Analysts are highly interesting:—

	oz.
The pyrites (raw) gave by 'assay'	
Obtained by amalgamation	11·425
	10·400

"The pyrites exposed to the decomposing influence of the atmosphere from 15 to 20 days being laid out in a thin layer and occasionally stirred:—

	oz.
Assay	11·425
Obtained by amalgamation	10·850

"The pyrites calcined in an ordinary calcining furnace slowly and at a low temperature:—

	oz.
Assay	11·400
Obtained by amalgamation	11·275"

The loss by the amalgamating process was in the first experiment 8·97 per cent., in the second 5·04 per cent., and in the third 1·1 per cent.

Timber and timber trees in the Wynaad.

It is all-important to the gold miner that he should be able to procure a supply of good timber in the near neighbourhood of his operations. Even where the yield of gold is high, whether from alluvial deposits or quartz veins, this matter is of so much consequence

that, if there should be difficulty and great expense in obtaining firewood and supports for the mine, the profits may be so greatly reduced as to lead to the abandonment of the works.

In the Colony of Victoria the statistics of gold-mining show that the cost for firewood, &c., props, and cap-pieces, laths and slabs and sawn timber used in the mines have been for three years as follow:—

	£
1874	441,731
1875	365,176
1876	328,401

These figures show that the timber used for every ounce of gold raised costs 7*s.* nearly, or, assuming this as the average, that every ton of quartz raised and treated costs for timber alone 3*s.* 6*d.* nearly. In cases where the quartz yields gold of average value per ton of 10*s.* only or less, such a charge would be severely felt; but in many mines, owing to the modes of working the reefs and to the economy practised, the costs for timber are very much less than the average.

When in Victoria, Colonel Sankey* ascertained that at one mine at Sandhurst the consumption of firewood was fifty cubic feet per stamp-head per week and the cost 6*s.* 6*d.* Mr. Bland of Clunes stated that firewood was about 27*s.* per cord of 128 cubic feet, equal in weight to 2½ tons, and for steam purposes equal to one ton of coal. Others considered that four tons of wood were equal to one ton of coal.

The cost therefore of firewood in Victoria for crushing one ton of quartz is from 5*d.* to 8*d.*, and firewood at the time Colonel Sankey made these inquiries was about the same price as it is now at Devála.

The miners in the colony mentioned have again and again drawn attention to the want of a sufficient supply of timber in their several districts. In some places it has to be drawn from forests far distant from the mines; and it is well known that this alone has seriously affected mining operations and prevented the opening of promising *leads* and reefs.

Inquiries have been made respecting the timber-trees in the forests adjacent to the mines at Devála, and it appears from the information furnished by Colonel Beddome, the Conservator of Forests, and Mr. J. W. Minchin, who from long residence is well acquainted with the district, as well as from observations made when this area was being prospected, that "an almost inexhaustible supply of large trees is available."

Colonel Beddome has supplied a list of the principal trees growing in the Wynaad in the neighbourhood of the gold mines and on the Carcoor Ghât and on the slopes below Devála, and he has indicated those best adapted for conversion into logs, props, slabs, planking, &c.

The names of the latter, together with some information taken from the *Flora Sylvatica for Southern India* by Colonel Beddome, are as follows:—†

Mesua ferrea.—Two varieties; iron wood, valuable for engineering purposes. In the Wynaad abundant; not utilized and seems hardly to be known; called in the Wynaad *Naaga* or Nàghá or *Nàghà champa.*

Mesua, Sp.—From the Nilambúr jungles; common; much used by the natives for building purposes; durable and not liable to the attacked by insects.

Hopea Malabarica.—A very large tree with a most valuable hard timber, Carcoor Ghât, Wynaad; called *kallu* in Malabar.

Cedrela toona.—White cedar of Europeans. A large tree with an erect trunk; known as *kal kilingi* on the slopes of the Nílgiris; much used for furniture and cabinet purposes and also for building.

Chickrassia tabularis.—A tree of large size, often 8 to 10 feet in girth, with a thick, straight trunk 60 or 80 feet to first bough. Much used for furniture; said to be used at Madras for all purposes for which ordinary mahogany would be used in Britain.

Schleichera trijuga.—One of the most valuable unreserved timbers; wood much prized in some districts; makes excellent crushers for sugar and oil-mills;

* *Report on the Coliban and Geelong Schemes of Water-supply, 1871.*

† Some notes have also been extracted from a work entitled *The Timber Trees, Timber and Fancy Woods, as also the Forests of India and Eastern and Southern Asia*, by Edward Balfour, L.R.C.S.E.

is in use for building and a variety of purposes. In Canarese it is called *chakota* and *Akotà*.

Dalbergia latifolia.—Blackwood or rosewood trees. Grows to a very large size on the mountains. Some trees considerably over 20 feet in girth. The timber is one of the most valuable in India and generally fetches a higher price than teak; it is heavy, strong, fibrous, close-grained and durable; extensively used for gun-carriage purposes. The tree is abundant in Wynaad and Coorg. Planks four feet broad are often procurable after all the external white wood has been removed. The Canarese names are *Bitti* and *Thòdagatti*.

Pterocarpus marsupium.—A most valuable timber tree next to teak and blackwood; a large and very beautiful tree attaining a fine size in the western forests and in favorable ravines and sub-alpine jungles elsewhere. Size and manner of growth differ under different circumstances; often very poor and scrubby. Common all round the foot of the Nilgiri Ghâts. Two thousand trees were seen by Dr. Cleghorn along the roads through the Wynaad notched with a V-shaped incision for the extraction of kino; called in Canarese *Whonay*, *Hove*, and *Wulla Honay*.

Acrocarpus fraxinifolius.—One of the largest and loftiest trees in the Madras Presidency, generally of very straight growth with large buttresses at the base. It is sometimes 27 feet in girth above the buttresses: timber light and much resembles that of the *Cedrela toona*; much used by planters at Coonoor and in the Wynaad for building purposes, furniture, &c.: and in Coorg it is largely used for shingles; called *Kilingi* by the Burghers on the Nilgiris.

***Xylia dolabriformis.*—A large tree. It is excellent for post, railway-sleepers, naves of wheels, and all purposes demanding great strength, and it is in use for building purposes; called *Pirwa* in Canarese (South Canara).**

***Terminalia tomentosa.*—One of the most useful of the timber trees; grows** to a very large size and very straight; used for house-building; it bears a good transverse strain and is a wood much esteemed for all railway purposes. Used also for boats and canoes, solid wheels of carts, &c. The Canarese names are *Matti Mairthee*, *Madi Muttee*, and *Karrai Matti*.

Terminalia paniculata.—A fine large and valuable timber tree; timber not equal to that of *Terminalia tomentosa*. Said to be improved by being kept under water; often called *Matti* or *Mardah*; known by the name of *Keerijul* in South Canara.

Eugenia Jambolana.—A very large and beautiful tree; wood much used in native house-building, for cart-framing, agricultural implements, and for a variety of other purposes. Resists the action of water, some say almost for ages, and is used for well work. Not very strong or durable except in water. Called *Narala* in Canarese.

Lagerstrœmia Reginæ.—A good sized tree; tough and very durable under water, though it soon decays under ground; much used by the natives for building purposes and in boat-making. In the Madras Gun Carriage Manufactory it is used for light and heavy field cheeks, felloes, and cart naves, framing and boards of wagons, limbers and platform carts and ammunition box-boards. It is called *Challa* in Canarese.

Lagerstrœmia microcarpa.—A large tree. The wood is straight, fibred and elastic; much used for building purposes, flooring rafters, &c., and also in dockyards. If left exposed in the forests it very soon rots and is rapidly attacked by white-ants. It is universally known by its Tamil name of *Venteh* and is called *Balandur* and *Billi nàndi* in Canarese. Some think that the value of this wood has been underrated. It is said to have great "stiffness," and wooden bridges have been built of it.

Vitex Altissima.—A very large tree; trunk erect and of great girth; one of the most valuable of the timber trees. The wood is hard, durable and fissile, with a coarse grain; does not split or warp; it is much in use for building, construction of carts, and many other purposes. It is called *Sampagapala* in Canarese.

Tectona Grandis.—Teak tree. One of the most valuable timber trees in the world. In some favorable situations it has a girth of 22 feet, and a straight trunk of some 80 or 90 feet to the first bough, elsewhere is less than 9 feet

girth, but is usually beautifully straight. The timber it yields is so well known as to need no description here.

Phyllanthus emblica.—A good-sized tree. The wood is hard, fibrous, and flexible; tolerably close and straight grained. It is remarkably durable under water, on which account it is much in use for well rings; it is also used for building purposes, furniture, gun-stocks, &c.

Bischoffia Javanica.—A very large tree with a tall, erect trunk, often of great girth. The timber is very hard and durable and is used for building, planking, &c.; very little known or utilized in general.

Briedelia retusa.—A large tree; trunk pretty erect; a very valuable timber tree, wood very stiff, strong, close-grained and durable, but not easily worked. It is used for house-building, construction of carts, agricultural implements, railway sleepers and for a number of other purposes.

Girouniera reticulata.—A large and valuable timber tree; wood very hard and heavy; a valuable engineering timber.

Artocarpus hirsuta.—A very lofty tree attaining upwards of 200 feet in height and of great girth. Timber strong, tolerably close and even-grained; much in use for ship-building, house-building, furniture and other purposes. In Canarese (Mysore) it is called *Hebalsu*. It is said to be valuable for canoes and for planks.

The total number of the principal trees mentioned in the manuscript list furnished by Colonel Beddome is fifty-six, and all might be used as firewood.

Mr. Minchin has forwarded a paper containing the native names of trees growing in the Wynaad, the timber of which is suitable for mines.

The names are as follow:—

Poon murrum	or Poon spar	. . . . .	Splits well.
Parley ,,	or Spurious Guttapercha or Milk tree		Do.
Muttee ,,	or Ven Teak	. . . . .	Do.
Veetee ,,	or Blackwood	. . . . .	Good for posts and sets.
Cheera ,,	or Buttress tree	. . . . .	Splits well.
Iney ,,	or Jungle Jack	. . . . .	Good for posts and sets.
Ugalee ,,	or Cedar tree	. . . . .	Splits well.
Naaga ,,	or Iron wood tree	. . . . .	Good for posts and sets.

Mr. Minchin adds:—"The commonest trees in the forests are the Parley murrum and the Naaga murrum and are the easiest got at for firewood. On the Coomary land, where the forest has been cleared for cultivation and allowed to grow up again, the commonest tree is the Venda murrum (*Sponia Orientalis*) or charcoal tree, which is the quickest-growing tree in the Wynaad, but it does not last many years and is of no value for timber. It yields a very good charcoal, which is used by the natives for making gunpowder."

That charcoal can be procured easily and at no great cost is of some importance. It is essential that the miner should have a proper supply in all large operations. It is used in sharpening tools, &c.

Mr. Minchin says that the price of sawn timber, cut in various dimensions, is at the present time at Devála one rupee per cubic foot, and that logs and firewood cost for cutting and carting about two rupees per ton.

Major Morant, R.E., Executive Engineer, estimates the cost of jungle-wood sawn to scantlings at one rupee per cubic foot.

The late Manager of the Prince of Wales' Tribute Company, Devála, states that the cost of fuel was Rs. 3 per ton; but when the Alpha Mine was at work, the cost, it is said, was Rs. 5 per ton.

In a report by Colonel Beddome published in the *Madras Mail* of the 22nd April 1879 it is mentioned that the average price of wood (for fuel for railway purposes) for the last five years has been Rs. 5-15-11 per ton delivered on the engine.

Occupation of lands in the Wynaad.

Up to the present time I have not been able to procure any map showing the areas which are claimed or occupied by the Zemindars or others (except coffee-planters) in the Wynaad; as already stated, it has been found impossible even to ascertain the boundaries of the lands which have been granted for mining purposes. Mr. W. Logan, in a letter dated 16th June 1875, in referring to the surveys of the Wynaad, states that "little or nothing apparently has been done in the direction of demarcating *private forests and waste lands belonging*

to natives." Whether the boundaries of these lands have been surveyed or not it is impossible for me to say; but, in view of the probability of lands being applied for by persons desirous of mining for gold, it seems desirable that no time should be lost in publishing maps showing—

(*a*) The lands held in fee-simple by Europeans and Natives.
(*b*) Lands leased for cultivation or other purposes.
(*c*) Lands held on tenures other than leases.
(*d*) Waste lands of the Crown.

This is not the place to discuss the manner in which lands should be leased for mining purposes, nor would it be right to offer opinions which might be opposed to the policy of the Government, but it is perhaps proper to suggest that regulations should be framed and published under which persons could make applications—

1st.—For licenses giving the right to "prospect" for gold.
2nd.—For leases of lands containing auriferous rocks.
3rd.—For licenses to take and divert water for mining purposes.

The manner in which lands held under the various tenures should be dealt with, the taxes (if any) to be paid by landholders who grant leases for gold-mining purposes, and the method of assessing mining properties are questions solely for the consideration and final decision of the Government. It is, however, now well ascertained in countries where gold-mining is an established industry that the fewer impediments placed in the way of mining enterprise and the lighter the exactions, the more certain are the profits to the revenue. The State gains largely indirectly, and, in sacrificing the revenue which might be obtained directly by laying imposts on the miner, it encourages him in his labors and leads him to undertake explorations which, if he were heavily taxed, he would never contemplate.

I hope I have expressed with sufficient distinctness the opinion I entertain respecting the gold fields of South-East Wynaad.

The facts will speak more strongly than words to those acquainted with gold mines. Gold has been found on the south near Eddacurra and on the north near Nellacottah, on the west near Vyteri, and on the east as far as Bolingbroke, that is to say, over an area of more than 500 square miles.

The reefs are very numerous and they are more than of the average thickness of those found in other countries; they are of great longitudinal extent, some being traceable by their outcrops for several miles; they are strong and persistent and highly auriferous at an elevation of less than 500 feet above the sea, and they can be traced thence upwards to a height of nearly 8,000 feet; near them gold can be washed out of almost every dish of earth that is dug; the proportion of gold in some of the soils and reefs in the neighbourhood of Devála is large; and, the country presenting the greatest facilities for prosecuting mining operations at the smallest cost, it must be apparent to all who have given attention to this question that sooner or later gold-mining will be established as an important industry in Southern India.

The retardation of this event will be caused, not by the meagreness of the resources—they are large,—but probably by the mistaken notion that wherever there is gold all the care, all the forethought that would be deemed requisite in other pursuits may be disregarded in conducting mining operations.

In concluding this report I would wish to bring to the knowledge of His Grace the Governor that throughout the period I have been engaged on the duties assigned to me I have received the most generous assistance from all the officers of the Government with whom I have been brought in contact or to whom I have had to apply for information.

To the planters in the Wynaad I have been also greatly indebted; and, if I had to mention the names of all the gentlemen who from time to time took the trouble to accompany me in my explorations and to point out the sites of old workings and the outcrops of reefs, the list would be a long one.

I cannot sufficiently express my sense of the value of the assistance they, one and all, so cheerfully rendered.

Mr. Thomas Laing has at all times performed his duties to my entire satisfaction, and it is to be hoped that the injury to his health caused by hard labor and exposure may ultimately be repaired.

Mr. G. E. Withers, whose local knowledge is great, gave me, during the period he was employed in the Wynaad, all the assistance in his power, and to his explorations, undertaken some years ago, the country is indebted for a knowledge of the occurrence of rich reefs of quartz near Devála.

R. BROUGH SMYTH,
Mining Engineer.

APPENDICES.

APPENDIX A.

Dated Devâla, 18th February 1879.

From—R. Brough Smith, Esq., Mining Engineer,

To—The Acting Secretary to the Government of Madras, Revenue Department.

Referring to the paper dated 10th January 1879, No. 42, wherein I am instructed by the Government to ascertain how it is that, notwithstanding the presence of considerable quantities of gold in the reefs at the Alpha Mine and to the extent reported by me, the operations have not proved successful, and especially whether this want of success has arisen from any peculiar difficulties in separating the gold from the matrix at this particular spot, or from the cost of labor or fuel or from other reasons within or beyond the control of the mine proprietors, I now do myself the honor to submit the following report for the consideration of His Grace the Governor in Council.

Preliminary.

Immediately on receipt of the instructions above referred to, and as directed by the Government, I communicated with the Directors of the Alpha Company and sought permission to make a careful examination of the mine, and at the same time I asked a number of questions respecting the operations of the Company.

Subsequently I wrote to the Secretaries and Treasurers in Madras requesting them to furnish such information respecting the work done in the past as they could supply.

The Directors very promptly furnished papers relating to the expenditure of moneys, the quantities of quartz raised and the results, and they replied to some of the questions asked by me; and I would wish to record my appreciation of the assistance afforded by them, by Messrs. Parry and Company and by Mr. G. E. Withers who at one time had the management of the works under what is known as "The Prince of Wales' Quartz Reef Gold Prospecting Company," a Company which held and worked the Alpha Mine on tribute for a brief period.

Though necessarily from the nature of the duties which I have had to discharge since I came to this district, I was well acquainted with the mine and the machinery of the Alpha Company, I have since the receipt of instructions made a further careful examination of the land held by them, the reefs, and the works erected for the purpose of reducing the auriferous quartz.

The Area granted to the Alpha Company.

I have not been able to obtain a plan or a sufficient description of the boundaries of the area granted to the Alpha Company. The extent is said to be fifteen acres, but on the map of the Ouchterlony Valley and three Amshoms of South-East Wynaad the area marked "Alpha Company" exceeds one hundred acres.

The lines of demarcation as pointed out to me on the ground seem to embrace a larger area than fifteen acres.

The boundaries are thus described in the prospectus of the Company:—A block of fifteen acres bounded on the west and south by two large streams, and on the east and north by four demarcation stones.

As my report deals principally with only so much of the main reef as is known to be within the area granted to the Company, the question of boundaries need not be further referred to.

The Quartz Veins.

The principal quartz vein intersecting the land is that known as the "Skull Reef." It appears at the surface at various points between "Wright's Level", and the northern boundary of the Company's area, and is traceable further northward for a great distance. Wright's Level is on the eastern slope of the range that forms the Western rim of the basin drained by the Carcoor Poya, and is distant thirty chains from the Alpha mill.

The country is intersected by streams trending to the Carcoor Poya, and there are low and high hills, some very steep, but nearly all with smooth contours.

At Wright's Level the vein is from four to five feet in thickness near the surface, and seven feet six inches at a depth of thirty feet. Its strike for a distance of more than one chain is nearly north and south and the dip is east at an angle of 30° to 40°.

The quartz in some parts of the vein is laminated, the laminæ being from two to four inches and more in thickness, and they are nearly parallel to the line of strike. These are crossed by other lines transverse to the dip and strike, and there are in places thin veins of talcose clay cutting the reef transversely. There is also solid iron-free nearly white quartz. Near the surface the stone, when broken out, is seen to be highly ferruginous and is colored yellow, bright red, and bluish purple. Much of the quartz is cavernous, honey-combed, or

mice eaten, and the associated minerals near the upper part of the vein are limonite and other oxyds of iron due to the decomposition of iron-pyrites which are found in considerable quantities in the deeper levels. Sulphur is also seen occasionlly in cavities. I have not seen any sulphide of antimony or any of the ores of lead.

Northward, twelve chains from Wright's Level, an adit made by native miners has been re-opened by me, and the thickness of the reef at this point is four feet; the strike is nearly north and south, and the dip is nearly due east at an angle at the outcrop of 45° and at a depth of twenty-four feet 60° nearly.

A section taken from the middle of this reef shows massive white nearly iron-free quartz. It is ferruginous and cavernous near the hanging wall and foot wall

At the large excavation from which the reef derives its name about twenty-two chains north of Wright's Level, the vein is thick: at the face it is not less than fourteen feet from the hanging wall to what appears to be a "horse," the extent of which has not been ascertained. The total thickness of the reef at this point is not known. The general character of the stone is similar to that at Wright's Level, but there is much more sulphur. It is not difficult to find rather large quantities of clean sulphur in the cavities. Here also there is an absence of those minerals that are most detrimental to amalgamation. The strike of the reef is N. 20° W. and the dip N. 70° E. at an angle of 18° to 30°, but the dip nowhere is uniform.

About four chains and fifty-six links north-westerly from the excavation the reef is again seen on the bandy-road where it intersects a low hill. Here the dip is N. 80° E. at an angle of 40°, and the thickness as well as can be observed is six feet. On the north-western side of the hill the outcrop is again found, and it is seen also on the further side of a stream which runs at the foot of the hill. On a bandy-road south-easterly of the Skull Reef there are thin ferruginous veins containing numerous cubes of iron-pyrites decomposing into limonite which are said to be highly auriferous. The "casing" of the reef throughout is generally a talcose schist.

There is another reef within the boundaries pointed out to me, west of Wright's Level and one near the Alpha Bungalow. Neither of these has been opened by the Company.

The Mines.

Now that the thick and high grass is burnt on many of the ridges it is comparatively easy to follow the outcrops of the reefs and to discover old native workings. Since this report was commenced I have examined very extensive native workings south and west of Wright's Level quite on the edge of the ghât. The ridge southward of the Alpha workings has been sluiced on both sides, and a channel has been cut in the valley about five feet in width and eight feet in depth for a length of more than three hundred yards. There are also numerous subsidiary small channels and deep and large excavations. On following the main channel downwards (it commences at the outcrop of the reef at Wright's Level) in a direction 8° south of west a strong vein of quartz is found nearly three hundred and fifty yards from the Alpha workings. One shaft has been sunk here, but the reef has not been excavated. It appears to have a strike of N. 30° W., and is probably a continuation of that which crops out in the jungle on the further side of a stream trending towards the ghat. The existence of these native workings and the reef referred to is, I am informed, unknown to the proprietors of the Alpha Mine. Surrounding the recent excavation at Wright's Level there are other native workings, evidently very ancient. There are several shallow pits and small excavations, and heaps of broken quartz are to be seen all along the strike of the reef. At one place, between Wright's Level and the Skull, there is a shallow pit communicating with an aperture like a chimney in which it is probable the quartz was roasted.

Near the Skull and for some distance northwards the workings are numerous, and at the Skull itself there is an excavation, the full extent of which cannot be ascertained as the roof has fallen: as far as it can be examined it shows a width at the entrance of twenty-nine links, a breadth at the broadest part of fifty-three links; and it measures seventy-five links to the mouth of a drive which cannot be followed until some expenditure is incurred in clearing it and securing it. The height of the excavation from flow to roof is twenty-five links. There are vertical shafts communicating with this excavation, which no doubt were sunk long before the adit was commenced. The amount of work done on the reef is conclusive proof that the native miners found gold in quantities sufficient to remunerate them. They appear to have dug into the soft casing and taken stone from the foot-wall, but they did not confine their operations to this part of the reef. They followed the run of gold wherever they were able to do so.

According to the information I have been able to obtain it appears that the Alpha Company commenced their mining operations by quarrying stone in the old native workings at the Skull, where they took out about one hundred tons of quartz. Subsequently they quarried stone near Wright's Level, and then the adit named Wright's Level was driven for a length of about twenty feet.

At a point a little more than ninety feet eastward of Wright's Level and twenty-five feet below it an adit forty-two feet in length, five feet in width, and six feet in height was driven to cut the reef; and the reef is now seen in the "face" where a hole has been sunk in quartz to the depth of five feet. The Company or the Tributers also put down a shaft east of, but quite near, Wright's Level. It was sunk to the depth of forty feet where the reef was struck, and it is said good stone was got from the bottom. Further northward, but still within a few yards of Wright's Level, a shaft was sunk to the depth of sixteen feet and an adit was driven cutting the shaft about five feet from the bottom. This is known as "Harris' Tunnel." On

the slope of the range towards the ghât and about three hundred and thirty feet east of "Harris' Tunnel" another adit was driven evidently for the purpose of cutting the reef. It has been continued for a distance of over fifty feet. It is not timbered, and near the mouth there is a fall of earth. It has intersected a small vein of quartz. It is nearly on the same level as the other adit below Wright's Level. A shallow pit was sunk south of the large excavation at Wright's Level, with, I am informed, good results.

Another shaft now filled in and completely covered with broken quartz was sunk on the dip a few feet south of Wright's Level. It was fourteen feet in depth and a drive was put away for a distance of fourteen feet. It is stated that rich stone was got in the shaft and drive. Subsequently rich stone was broken out, it is said, at the north-western corner of the excavation.

The excavation at Wright's Level as it appears at present is eighty feet in length, twenty-two feet in breadth, and from ten to fifteen feet in depth.

Near the excavation at the Skull and about fourteen feet below it some native workings were re-opened by those who had the management of the mines. What is known as "Binny's Level" is situated a little distance northward of the Skull. The reef was cut here about twenty feet from the entrance. Still further northward is "Ryan's Level" which is about twenty-five yards from the battery. A commencement only was made with this work. Indeed it may be described as a hole from which broken quartz—the results of native labor—was carried away to the battery. An adit known as "Withers' Level" not far from the works was driven about fifty feet and then abandoned. It did not cut the reef. It was undertaken prior to the formation of the Alpha Company.

It would seem then that quartz in some quantities was taken and crushed by the Alpha Company and Tributers from the Skull, from the excavation at Wright's Level, and from shallow pits and short adits near Wright's Level; and that seven adits were driven at various points and two shafts sunk which, even where the reef was struck, were, for reasons probably known to the Managers, discontinued. These works, the seven adits, and the two shafts were unproductive, and it would be difficult to discover why they were undertaken at all. Having regard to the position of the battery nothing was to be gained by making adits east of Wright's Level.

It is probable that the Company expended some moneys in other similar works not known to me. I have, however, made every effort to ascertain the facts.

Yield of Gold from Quartz.

It will be apparent from the statements already made that little has been done to develop the reef within the boundaries of the Alpha Company's area or to determine its value. The apparently purposeless scratchings on the surface and the useless expenditure of moneys in driving short adits and sinking shallow pits have not even had the result of proving the character of the reef except at one or two points. It is however evident from the character and extent of the native workings and from experiments made in the laboratory that the stone in some places is highly auriferous.

The yields obtained by myself have been as follow:—

Wright's Level.

	oz.	dwts.	grs.	
1. No gold visible in the stone at the rate of .	0	11	6·0	per ton of 2,240 lbs.
2. No gold visible in the stone	2	16	1·6	„ „ „
3. A little gold to be seen	56	13	19·5	„ „ „
4. Gold visible in the stone	204	11	16·7	„ „ „

Large blocks of quartz were broken out at the spot where the stone giving these results was obtained, and in several of these gold was visible. In one or two instances loose gold was found in cavities; and indeed some of the quartz was so rich that if portions of it had been tested the yields would have occasioned excitement amongst persons not acquainted with quartz-mining, and unheedful of the cautions and statements which would necessarily have accompanied the report of any such yields. According to the judgment of those well able to form an opinion some of the quartz from the reef near Wright's Level would have yielded at the rate of 1,000 oz. or more per ton. The value of the reef, however, cannot be measured by such results. Where this quartz was obtained the vein is about four feet in thickness, and the heaviest gold is found mostly in the upper part of the vein, as it is now exposed, and near the foot-wall, throughout a thickness of two feet only. It is to be followed downwards across the line of dip for a distance of sixty feet where there is good stone showing gold near the foot-wall. Quartz with pyrites obtained from the adit below Wright's Level, and not on this run of gold, gave at the rate of only 3 dwts. 23·04 grs. per ton.

At the face of the large excavation at the Skull a vertical section of the reef was taken, and the results for the several parts were as follow:—

	Rate per Ton. oz.	dwts.	grs.
1. One foot in thickness (hanging wall).	0	0	16·19
2. Three feet in thickness	0	0	9·92
3. Four feet in thickness	0	1	2·20
4. Five feet in thickness	0	2	2·21
5. Six inches in thickness	0	0	4·25

Northward of the excavation and within a few yards of it the run of gold is found, and quartz from that portion yielded at the rate of 1 oz. 4 dwts. 5 grs. per ton.

Mr. W. King, B.A., the Deputy Superintendent of the Geological Survey of India, estimated from preliminary crushings made by him that the yield per ton of the reefs in this district would be 7 dwts.; and he refers to the results obtained by the Tributers who worked at Wright's Level, *viz.*, 11 dwts. and 17 dwts. per ton.

In the table attached to Mr. King's report in the *Records of the Geological Survey of India* (No. 3—1878, Vol. XI) it is stated that 769½ tons crushed by the Alpha Company gave an average yield of 2 dwts. 9 grs. per ton. One large parcel included in this return yielded only 1 dwt. 17 grs. per ton, but another parcel—6½ tons—treated at the Wynaad Prospecting Company's works yielded 19 dwts. 22 grs. per ton.

In a report, dated 2nd April 1875, Mr. King writes as follows:—

"Among the lodes detailed above [referring to a table] the Skull reef about to be mined by the Alpha Company was tried most carefully by seven parcels of quartz obtained from one cross-cut through the reef where it is 15 feet wide. There was no gold visible in the sample which gave the proportion of 25·92 dwts. to the ton. This rich proportion of gold is from a band of laminated quartz about 2 feet thick within a couple of feet of the foot-wall or underside of the reef. The average proportion from this two feet band would be 22·68 dwts., or taking the 10th, 12th and 13th feet of the 15 feet cross-cut, from each of which I have samples, we get a proportion of 16 dwts. for what appears to be the richest part of this reef. The work was done by hand and dry crushing."

In a pamphlet entitled "Gold Prospecting in the Wynaad" a table is given which purports to be an extract from a report made by Mr. King. The experiments were made on quartz taken from the Skull reef, and they are as follows:—

"*Appearance, Color, &c.*	Results.	Depth in cross-cut from back of reef.
Compact, coarse texture, laminated, white color	2 dwts. to ton.	1st foot.
Still-white in color but stained with ferruginous matter	2·5 dwts. to ton.	3rd foot.
Whitish, discolored with iron	None.	5th foot.
Whitish, discolored with iron, good color in dish-host in amalgamation	...	7th foot.
Still-white but ferruginous matter	5·18 dwts. to ton.	10th foot.
Highly colored, red and brown, ferruginous, cellular with white iron pyrites; gold visible	19·44 dwts. to ton.	12th foot.
Highly colored, red and brown, washed and amalgamated in my presence by Mr. Withers; gold not visible	25·92 dwts. to ton.	13th foot."

In a printed report made by Mr. R. Lindon to the Directors of the Alpha Company there are results of trials as follow:—

	oz.	dwts.	grs.
Quartz from Wright's Level, picked specimens	25	13	0
Quartz from Wright's Level, picked pieces without gold visible	11	13	0
Quartz from Skull working	0	6	16

It would be altogether injudicious to attempt to give an average from the above results; but they are sufficient to prove that the reef within the boundaries of the Alpha Company's area is in some parts highly auriferous, and, having regard also to the large extent of native workings, that its character is such as to justify a Mining Company in opening it thoroughly with a view to the erection of works for treating the quartz.

The Machinery and Works.

The machinery consists of a battery of fifteen stamps in three groups of five and a fourteen horse-power steam-engine having a tubular boiler and a fire-box constructed to burn coal. It was intended that this engine should drive also a pulverizer and a circular saw, both of which can be connected with the engine and are under the same roof as that which covers the stamps and the engine. The stamps, including the shanks and discs, are said to weigh about 3½ cwt. each, but they appear to be very much heavier. Motion is given to the stamps by cams attached to a shaft. The coffers in which the stampers work have in front of them only (and not at the back) perforated iron plates with 125 holes to the square inch. There are three copper plates four feet six inches in width—one is seventeen inches in length, one three feet eleven inches and the lowest twenty inches. These are divided by ripples. The angle of inclination of the plates is from 3° to 3¼°, but they are not even. They bulge a little in some places. The tables are from ten feet eight inches to twenty-six feet in length, each group of stamps having tables of different lengths; each table is in three partitions, seventeen inches in width; the angle of inclination of the tables is 6°. The blankets were nine feet in length, and only nine feet in length of the tables were covered with blankets. The tailings ran through launders to catchpits.

A small furnace for roasting the tailings, a retorting furnace and kilns for roasting the quartz previous to crushing, complete the list of appliances at the mill.

The information I have received, furnishes a melancholy history of the various attempts to work the machinery. When it was erected, it is said, it worked very well, that is to say,

the machinery moved smoothly, but it never crushed any such quantities of stone as ought to have been crushed. One day about eight tons of stone were crushed; but the Alpha Company crushed, at the best of times, only seven tons in twenty-four hours, and even this rate would not be maintained. It was found impossible to move the stamps, the pulverizer, and the circular saw at the same time. The engine, it is stated, was worked at a pressure of 60 lbs., but it was never possible to keep up steam. It usually took three hours to get up steam. No firewood was stored. It was cut green, and even old wood that was gathered was often quite wet.

The present condition of the battery and tables is, of course, worse than it was when they were erected. The weather and use have injured them; and one of the Managers, in order to re-arrange the tables of the middle battery according to his ideas, cut away one of the main bed-logs, and since that was done the vibration has been so great with the machinery in motion as to shake the tables to pieces. The wood of the tables is shrunken and warped; there are numerous apertures through which water, quicksilver, and amalgam could escape; and I am told that 35 lbs. of quicksilver were found under one table. The fall from the coffers is not on to the plates; there is a space of over an inch between the plates and the edge of the coffers, and even now the course which the water and tailings took as they escaped through this aperture is plainly to be seen under the tables. The fastenings too are bad; the nuts and washers below the coffers do not cover the holes in the plates for the bolts, and the mercury and amalgam fell through the spaces thus exposed. Some of the arms of the drum for the belt connecting the engine with the pulverizer are broken, owing, it is supposed, to their having been screwed up too tightly.

The pulverizer is said to have reduced the tailings to a fine powder, but the quicksilver "floured" owing to the iron pyrites not being properly roasted.

About 10 cwt. of "tailings" could be ground by this machine in a day. Owing to the condition of the machinery I would not deem it prudent to put the pulverizer in motion. It is to be noted that the taps through which the quicksilver or amalgam flows from the pulverizer are made of brass. They are now nearly entirely eaten away.

The Treatment of the Quartz and the Results.

From information furnished by the Directors it appears that mining operations were commenced by the Alpha Company in February 1875 and ceased in March 1876, and that the total quantity of quartz treated from first to last was 779½ tons. The time occupied in crushing and treating this quantity was seven months, including stoppages. The gold obtained weighed 91 oz. 12 dwt. 23 grs., being at the rate of 2 dwt. 8·43 grs. nearly per ton. This is inclusive of six tons and-a-half which were treated at the Wynaad Prospecting Company's Works for the Alpha Company, and which, as already stated, yielded at the rate of 19 dwt. 22 grs. per ton. The average cost of raising quartz was Rs. 2 per ton; the average cost of conveying the stone to the mill was Re. 1-8 per ton, and the average cost of crushing Re. 1-13 per ton. The total cost of raising and crushing quartz is stated to have been Rs. 2,971-6.

To these must be added the following items as given in the statements furnished by the Directors:—Firewood (estimated) Rs. 50 (per week); timbering in the mine, Rs. 150; blasting-powder, Rs. 700; and quicksilver (quantity used not known), Rs. 3,000. The cost of supervision is set down at Rs. 2,384 for seven months only. The machinery is stated to have cost Rs. 25,000, and the erecting of it about Rs. 1,800. The construction of roads cost Rs. 795-7-7.

The aggregate of these sums, including interest on the capital invested, shows that the quartz, for raising, treating, supervision, stores, &c., must have cost more than Rs. 15 per ton, or, to put the matter in another way, that the gold was obtained at an expense of Rs. 127 per ounce.

The balance sheet of the Alpha Company, prepared by the Secretaries and Treasurers (copy hereto marked A), shows that the sums expended in preliminary expenses were Rs. 8,708-4-5, and in supervision, management, &c., Rs. 14,675-11-9; and the only point in the statement that is really important is the relatively small sum expended in actual mining operations, which under the head of "Mining, Felling, and Storage" is set down as Rs. 11,327-0-10. The value of the gold got, the result of these operations, is stated at Rs. 3,087-6-3.

The stone treated at the Wynaad Prospecting Company's Works, six tons and a-half, was got from the reef at Wright's Level, and it cost for sinking the shaft and raising Rs. 70-10, for breaking Rs. 3-10, for conveyance to the Works Rs. 21, and for crushing Rs. 65; total Rs. 160-4.

The gold got sold for Rs. 297-6-3. The stone treated by the Alpha Company at their works was not roasted before being sent to the mill; but the "tailings" collected in the settling pits were roasted in a furnace and ground in the pulverizer. I have not been informed as to the results of the treatment of the tailings.

The stone crushed for the Alpha Company at the Wynaad Prospecting Company's Works was roasted before being crushed.

"The Prince of Wales' Quartz Reef Gold Prospecting Company" took possession of the Alpha Works on the 1st June 1877, under an agreement with the Alpha Company. They commenced mining operations on the 17th August 1877, and continued to mine with some interruptions until the end of February 1878. The pecuniary results of this adventure are

shown in the balance sheet hereto marked B. The value of the gold got, including specimens, is stated at Rs. 8,132-10-8.

Copies of the reports furnished by the Manager, as well as several papers relating to this Company's proceedings, have been placed in my hands for perusal by one of the proprietors, and I gather the following facts from them :—

Quartz crushed and treated.

	Tons.	Average yield per Ton. oz.	dwt.	grs.
Wright's Level	41⅔			
Skull Reef	63			
	104⅔			
Skull Reef	12	0	2	18·5
Wright's Level	50	0	2	5
Do.	50	0	11	19
Do.	104	0	16	12·5
Do.	2	0	14	21·34
		0	8	0

The average yield per ton from these parcels was 10 dwts. 12 grs. nearly. Pieces of quartz containing gold were sold for Rs. 1,251-4. The "specimens" containing gold got from the parcel of 104 tons are said to have been sold for Rs. 920, and it may be assumed, therefore that the stone was very rich.

There is not much information to be obtained as to the mode of treatment pursued by the Alpha Company, but it is stated that the stamper-boxes were charged with quicksilver, not largely, and that they relied mainly on their copperplates and ripples for saving the gold They used sodium amalgam very freely.

The Manager of the Prince of Wales Tribute Company has furnished many details respecting the mode of treating the quartz when the results of the operations were apparently to some extent satisfactory to the shareholders.

Kilns were built, and the stone before being sent to the mill was roasted. Wood was placed in the kilns and the stone piled thereon and the roasting was continued for forty-eight hours.

He informs me that a small quantity of quicksilver was put in the coffers two or three times a day according to the estimated richness of the stone. On the copper plates 2½ per cent. of sodium amalgam was used with the quicksilver, and in the pulverizer as much as 8 per cent. Still the quicksilver "floured."

Blankets of the ordinary kind were used, and the length covered by the blankets was nine feet. They were washed every half-hour. It seems that all the tables were for this length covered with blankets and the water was allowed to spread itself over the whole.

Water was conveyed to the mill through troughs which discharged into a tank, and an iron pipe, fed from the tank, was fixed in front of the battery. To this were attached smaller pipes provided with taps, two to each battery, and when the supply was sufficient the water must have entered the coffers with great force. The flow, however, was not even, the smaller pipes were often choked with grass, and owing to the troughs or boxes being badly made and improperly placed the water escaped and sometimes there was not sufficient for the tables.

The stone was broken by hand, before being sent to the mill, at a cost of nine annas per ton.

The feeding was very irregular. It happened not seldom that so much quartz was put into a coffer as to stop the action of the stamper, and at other times the coffer was not fed and the disc struck upon and injured the cam.

Oil from the machinery often dropped on the plates and it found its way also into the coffers.

Tailings escaped from the catchpits.

The stone treated, as already mentioned, must have been rich. In one "cleaning up" of a stamp-box coarse pieces of gold were found weighing from 6 grs. to 3 dwts., and of these about thirty were obtained ; one piece weighed about 7½ dwts.

Causes of Failure.

The first important step taken by the Alpha Company was to erect machinery, and subsequently they made attempts under the advice of various Managers to open their main reef. As stated in another part of this report, they first quarried stone at the native workings on the northern extension of the reef and subsequently at the southern portion of it, but no successful effort was made to mine systematically. There was consequently unnecessary cost incurred in getting stone, and great cost in conveying it to the mill.

There was no stone-breaking machine at the mill ; the stone was broken by hand. There was no self-feeding apparatus ; the feeding was irregular, and the platform on which the quartz was delivered was not partitioned off from the stampers and engine. The dust rose sometimes in clouds and fell on the bearers, injuring them and rendering necessary a large supply of oil, &c., for lubricating the various parts of the machinery, some of which often dropped on the plates, thus making effective amalgamation impossible, even if there had not been other detrimental influence in operation.

A great error was committed by the Tribute Company in roasting the quartz in kilns before sending it to the mill. Nearly all the quartz in the reef is more or less pyritous, and

the percentage of iron pyrites in several sections probably varies from 0·1 or less to 5 per cent, and when this is placed in a kiln in the manner described elsewhere in this report, it is impossible to oxydize the sulphur. The fusible lower sulphides coat the gold and prevent its amalgamation with mercury. The roasted stone I have seen in Devála is often a slag, and any gold in it must be "glazed."

Sodium amalgam appears to have been used in excessive quantities. This amalgam has all the valuable properties ascribed to it by the patentee, Mr. William Crookes, F.R.S. ; but the utmost care and caution are necessary in using it in the extraction of gold and silver. A very minute quantity of sodium amalgam added to quicksilver has the effect of rendering the metal more mobile and more "eager" for gold, and therefore it is the more likely to escape from the mill and carry the fine gold with it unless the ripples are properly arranged and other precautions taken.

It was a mistake to put quicksilver in the coffers. The undecomposed pyrites, reduced to powder, would accumulate in the coffers and cause the "sickening" and "flouring" of the mercury. The metal breaking up into minute globules or adhering to the powdered pyrites would be carried away.

If no quicksilver had been put in the coffers, the copper plates might have been dispensed with.

The inclination of the tables was excessive. Instead of 1 in 10 they should have been not more than 1 in 14 or 1 in 16.

The water from the battery (often insufficient) was allowed to spread itself over the whole extent of the tables ; whereas, as there was not sufficient water, but under any circumstances, it should have been so regulated as to carry the tailings evenly over the blankets. And the length of the blanketing, nine feet, was not enough. I have been informed that iron pyrites from the Alpha Mill was taken out of the bed of the stream quite 200 yards away, and that it was found to yield 1 oz. to the ton.

Buddles were not used for concentrating the tailings, and a large proportion of the stuff sent to the furnace must have consisted of quartz.

The furnace which was built by the Tributers is unsuitable for treating pyrites.

The steam-engine was never equal to the duty required of it. One of forty-horse power would be needed to drive the stampers and keep in motion the pulverizer, fully charged, and the saw. The Alpha Company and the Tributers are said to have crushed 1,102 tons of quartz in fifteen months : if the machinery had been effective, and if the works had been skilfully managed, at least 11,000 tons should have been reduced in fifteen months.

During the whole period that the works were in operation, when only an average of 2·8 tons were crushed per diem, the expenses of management, dead-work, &c., were running on as well as interest on the capital invested, and it is not a matter for wonder that doing only one-tenth of the work that ought to have been done the two adventures were not remunerative.

The greatest credit, it appears to me, is due however to the projectors for their spirit and enterprise. They failed because they did not first of all commence to mine, and because they had not appliances for saving gold.

How the operations should be conducted.

A run of gold in the main reef is found at Wright's Level, and this has been followed for a distance of sixty feet. I would advice that in the first instance this run should be followed still further on the under-lie—say—if the good stone continues—for 100 feet or 150 feet ; that the shaft should be well and safely timbered, and that skids should be put in so that the quartz might be brought to grass with facility. It may be assumed, judging from the stone already taken out, that the quartz from this shaft would yield a fair proportion of gold.

This preliminary work, but productive, would indicate the best site for a main adit, and that will be found at a point on the slope of the ghât eastward of Wright's Level.

This main adit running west should be driven at a low level so as to intersect the reef at a considerable depth below the outcrop on the ridge.

From this adit and other cross-cuts the reef could be mined economically. It could be stopped from different levels quite up to the surface. A site for the battery could be found near the mouth of the main adit. All these undertakings and all arrangements connected with them should be well considered, and the objects in view should be to open the mine on a good plan and to raise a large quantity of stone which, from careful assays, should show such a yield per ton as would justify the erection of machinery.

I recommend that water-power be employed for driving the machinery, either an over-shot wheel or a turbine.

I regret to say that I am not sufficiently acquainted with the laws or regulations in force in India under which water may be diverted, but it would be no doubt practicable to arrange for the diversion of water from the stream near the Wynaad Prospecting Company's Works.

Perhaps reservoirs would have to be constructed for storing water.

The relative cost of using steam and water in this district cannot be fairly estimated by me, as I am ignorant at what cost fuel could be got if proper arrangements were made for procuring it in large quantities, but in mills elsewhere the proportions are—for water about 1·2, and for steam 2·1.

There is not much at the Alpha Mill that could be used in any new adventure. The stamps could be made available, and the coffers seem to be uninjured and might again be set up; but in my humble opinion it would be more economical to procure a new plant furnished with all the best appliances than to pitch up the machinery at the Alpha.

All patent contrivances that have not been proved to be of value by a lengthened experience should be rejected, and only those adopted that are known to have yielded good results and now find a place in the best-conducted mines.

As well as a battery there would be required—

(*a*) A stone-breaking machine. The smaller pieces of quartz would be separated from the larger and sent direct to the stamps and the latter to the stone-breaking machine.

(*b*) A self-feeding hopper.

(*c*) A buddle for concentrating the "tailings" which are saved in the settling boxes.

(*d*) An inclined reverberatory furnace for roasting the "tailings." This would consist of a fire-box, hearth, &c., and should be on the plan of some of those that have given the best results in Victoria.

The quartz should be crushed raw. Quicksilver should not be used in the coffers, and copper platforms are likely to cause a loss of amalgam, and I do not recommend that they should be employed. Ripples and blanket-strakes will do the work more effectually. The tables should be twenty feet or more in length and about fourteen inches in breadth for each stamp-head; the fall should be about one in sixteen (if a good supply of water is maintained), and they should be covered with closely-woven green baize.

Experience would, of course, lead to some modifications in the arrangements, but it would not be difficult to adjust the length and fall of the tables so as to meet any conditions that might arise.

Summary.

I have endeavoured to indicate as briefly as possible the causes which prevented the Alpha Company from obtaining profitable results from their adventure. I am satisfied that their machinery and appliances are such as to make it impossible to save the gold even if the best scientific and technical knowledge was brought to bear on the operations. The one fact that oil and grease were allowed to fall on the copper plates and to get into the coffers is sufficient to show what the state of affairs was when the best results were obtained.

The main reef within the area held by the Alpha Company is nearly 2,000 feet in length; it is from 4 to 14 feet (at least) in thickness; in one part the quartz is of extraordinary richness, and other parts have yielded well.

Native miners have picked what must have been auriferous quartz all along the outcrop, and at the "Skull" their excavations are extensive. The position of the reef and the formation of the ground both offer facilities for economical mining.

It appears that the yields of gold have been for 779½ tons of quartz 2 dwts. 9 grs., and for 322·66 tons, 10 dwts. 12 grs.; and the gold was got, as I have shown, under the most disadvantageous circumstances.

These results may be compared with some operations in Australia.

The compilation of mineral statistics was commenced in Victoria in 1860, and from 1660 to 1876 (inclusive) information has been obtained respecting the results of the treatment of 13,402,915 tons of quartz, and the returns show an average yield of 11 dwts. 6·30 grs. per ton. The average yield of gold from 1,011,808 tons crushed in Victoria during the year 1876 was 10 dwt. 13·48 grs. per ton.

The Black Hill Company at Ballarat crushed 283,550 tons, which yielded an average of 2 dwts. 23 grs. per ton and the dividends paid amounted to £23,900. It is stated that the machinery cost £10,030, and that the Company paid £24,235 for "claims" (*i.e.*, land on which to mine).

Other Companies have treated large quantities of quartz yielding averages per ton of 2 dwts. 13·4 grs.; 3 dwts. 6·01 grs.; 3 dwts. 7·89 grs.; and 3 dwts. 18·53 grs., and have paid dividends.

The prices paid by the Alpha Company and Tributers for labor, for timber, and for firewood are no criteria to guide me in estimating the costs of mining at Devála. Under skilful management arrangements would be made for procuring all necessary supplies at the minimum cost, but in desultory operations the maximum cost as a matter of course has to be paid.

In reply to the questions in the paper, dated 10th January 1879, No. 42, I can safely say that the want of success of the Alpha Company has not arisen from any peculiar difficulties in separating the gold from the matrix, and I cannot believe the cost of labor or fuel would be so great here as injuriously to affect mining pursuits.

In this report I have omitted all details that appeared to me not necessary to the full elucidation of the questions with which I was instructed to deal.

Note.—The late Manager of the Prince of Wales' Tribute Company states that the wages paid for native labor were from four to five annas per diem; the cost of fuel was Rs. 3 per ton; the cost of drilling in hard rock was four annas per foot, and in soft rock two annas per foot; and the cost of driving such adits as are seen here varied from six annas to Rs. 3 per foot.

The cost of carrying stone from the "Skull" to the battery was six annas per ton, and the cost of carting stone from Wright's Level to the battery was thirteen annas per ton.

APPENDIX B.

REPORTS OF LIEUTENANT NICOLSON AND OTHER PAPERS RELATING TO GOLD IN MALABAR.

Dated Calicut, 10th January 1831.

From—W. SHEFFIELD, Esq., Principal Collector of Malabar,

To—The Secretary to Government of Madras, Revenue Department.

I have the honor, with reference to your letter of the 4th instant, to acquaint you, for the information of the Right Honorable the Governor in Council, that I have already charged in my accounts the value of the gold dust procured in this district on account of Government, amounting, as per annexed memorandum, to Rs. 5,287-11-5. Of this quantity, by far the greatest portion has been forwarded to the Presidency, the remainder being 2,908½. New gold fanam's weight, valued at Rs. 1,326-6-2, will be delivered over by me to Mr. Hudleston, who has been instructed to collect as much more gold dust for the use of Government as can be obtained.

Places where the gold dust was found and the quantity procured at each place.	Weight in new Gold Fanams.	Rate at which the gold dust was purchased per 10 new Gold Fanams' weight.	Amount value.
		Rs. A. P.	Rs. A. P.
Cargatode in the Ernád Taluk . . .	3,501½	5 0 0	1,750 12 0
In the Nilambur valley	2,738½	4 12 0	1,300 14 3
Caraloondy on the sea beach in the Shernaad Taluq	1,561½	4 7 3½	695 7 3
Moonanaad, Moopeyanaad, and Nambollacotta in Wynaad	3,657½	4 3 8½	1,537 12 2
Gold fanams transmitted to weigh the gold dust with	10	...	2 13 9
Total .	11,459	...	5,287 11 5

I beg, however, to state that, in consequence of an increased demand for this valuable commodity, owing to a greater number of persons resorting to this province from the eastern districts of Coimbatore, Madura and Trichinopoly to purchase it, the price has risen in the average 5⅛ per cent., or from Rs. 4-2-40 to 4-3-35 for ten new gold fanams' weight.

Though gold is found in all the rivers of this district, from the stream which falls into the sea at Elatoor, about eight miles north of Calicut, and as far south as the numerous streams flowing through the Pálghat valley, which at their junction, about 15 miles below Palghatcherry, form the great Ponáni river, some of which reach the southern boundary between Cochin and Malabar, about 110 miles to the southward of Calicut, the places and streams which afford the largest supply of gold dust are the following:—

The Toodakull river, which rises in the Koondah mountains, and after dividing the Walawanád Taluk from the taluk of Neringanaad falls into the great Ponáni river at Moochickul, about two miles north-east of Turtullah.

The Arliparambur, a rivulet which flows through Walawanád and part of Neringanaad and joins the Toodakull river about two miles east of Cherpalcheri.

The Arnakyem river, which has its source in the Moorkoorty and Koondah mountains, and forming the boundary between the Ernád and Walawanád taluks, and, passing the towns of Malapuram and Tirurangádi, it meets the sea at Caraloondy.

The Carcatode stream, which rises in the Moorkoorty valley and joins the Arnakyem river near Pynaad in the Ernád Taluk.

The gold found at the places above mentioned is the purest that is procurable in the district, its touch being equal to 9½.

The sea-beach from the town of Parparangady to Caraloondy, and thence to Beypore, extending about eight miles in length, the latter place being seven miles south of Calicut. Here the gold is equal to 8¾, and it is evidently washed down from the mountains during the great freshes in the south-west monsoon, and after being carried out by the flood beyond the mouths of the Beypore and Caraloondy rivers, it is thrown back by the action of the surf, when the sea runs high and is much agitated by tempestuous weather, and deposited on the sands much higher up than the sea usually reaches when the weather is moderate.

Kutchambara on the bank of the Coodarapoya river, which comes from the Moorkoorty valley and unites with the Beypoor river, about two miles below Nilambúr. The touch of the gold found here and in the bed of the Coodarapoya river is nearly 9¼.

The Karumpoya and Poonapoya, or golden river, both which streams take their rise in a high range of mountains called the "Paral Mallah" situated north-east of Moorkoorty and forming part of the main chain of the Nílgiris, and, when collected in one body near Poolliemparra in Wynaad, the stream receives the name of the "Paundypoya;" but this, on its approach near the ghâts, is again divided into two streams, and the main branch, called in the

Nilambúr valley the Carumbye, rushes down the Alliampully Cherrum. The Poonapoya descends the mountains between Alliampully and the Caracoor Cherrum; and long before its junction with the Carumbye it receives both the Kellakumpoya and Caracoorpoya.

The Kellakumpoya and Caracoorpoya above mentioned; the former river rushes down from Wynaad into the Nilambúr valley through the Cundaloor Cherrum, and the latter descends from Devála to the right of the road through the Caracoor Pass.

Gold dust is also found on the plains in the Nilambúr valley and frequently on elevated spots, particularly at Teeroowally, a hill near Mambaatangady, about 150 feet above the level of the Beypore river, during the highest freshes; and on the slope of this eminence gold is procured some feet below the surface of the ground in pits dug by those who come in search of it.

North of the Beypore river it is found in the Teeroowambaddy Division of Polyee in a mountain stream, which, descending the ghats to the left of the road through the Tambercherry Pass, runs through the Tambercherry and Polyee districts and forms a junction with the great Beypore river between Pawoor and Shirwaddee and opposite to Mapooram in the Ernád Taluk. The touch of the gold found here and of that which is generally procured in the Nilambúr valley is about 8½.

Above the ghâts, in Wynaad, gold is found in Parkureetil, a higher table-land between Manantoddy and Nambellacotta, at a place called Choolloyde in Moonanaad, and at Nellyalom and Ponáni in Moopeynaad. It is likewise found at Devála and its immediate vicinity in Nambollacotta, but the gold of Wynaad is much inferior to that which is washed down from the lofty mountains actually appertaining to the Nilgiris and Khondahs, its touch being only 7¾.

The manner in which gold dust is found and separated from the soil is as follows:—The earth or sand in the mountains, hills, paddy fields, and beds of rivers and rivulets known to be impregnated with this valuable ore is dug up, but it is only in or near water, and consequently in running streams, ruts, ravines, and breaks in the mountains and ground into which the course of the water is most likely to drive the ore during the rainy season, that gold is dug for; and being put into a pautty, a kind of wooden tray hollowed in the centre and not unlike a turtle's shell, the soil is immediately submerged in water just enough to overflow it and no more, and kept in an undulating motion by the washer with one hand, while the earth is stirred up with the other until all the earthy particles are washed entirely out of it and a sediment is left in the hollow, consisting chiefly of a mixture of black sand and particles of iron and gold. The pautty is then taken out of the water, and one end of it being somewhat elevated, water is gently poured upon its contents until the gold distinctly appears on the border quite divided from the principal mass. The golden particles are separated with a grain or two of quicksilver which is rubbed into them and then put in a piece of tobacco leaf, which, being placed in a crucible or more generally between two pieces of lighted charcoal, the heat causes the quicksilver to evaporate, and the gold is then taken out in a pure state.

When gold dust is found in streams, a wooden trough about 4 to 4½ feet long and 15 inches wide is frequently used, and into this the sand or soil from the bed of the river or rivulet is thrown as fast as it is taken out and then washed by the person in charge of the trough, who is constantly stirring the sand with his right hand and pouring a gentle stream of water upon it with his left, until nothing remains but heavy black sand and particles of iron and gold; and when the dust appears on its borders, it is collected with a proportion of quicksilver and then separated in the manner before mentioned.

When gold is found in small pieces, which is often the case in the beds of the several branches of the Beypore river flowing through the Nilambur valley before they all unite above Mambaatangady, there is no occasion for quicksilver or heat.

In the rainy season the pautties are worked upon the mountains, hills and other elevated spots; but these places, owing to the want of water to assist the operation, are abandoned at the end of the rains and the pautties are employed during the dry months in the beds of rivers and smaller streams.

The sands on the sea-beach between Parparangady, Caraloondy, and Beypore are most productive during the months of June, July, August and September, when the rivers which fall into the sea at Beypore and Caraloondy are filled by the south-west monsoon; but gold is found here, though in smaller quantities, throughout the year.

There appears no reason whatever to doubt that golden ore is homogeneous to the soil in the mountains and hills of Malabar, and even many elevated spots in the valleys of Nilambur and Moorkoorty and the immediate vicinity of Devála and the Koondah and Nilgiri mountains; whilst that which is found in the beds of rivers and other mountain streams is fortuitously brought down by the monsoon rains.

Though a very extensive search has been made among the records of my office since I had the honor of receiving the commands of the Right Honorable the Governor, under date the 18th November 1828, to afford information on this subject, I regret to state that I have not succeeded in finding that any endeavour whatsoever was made by the several Collectors since this province accrued to the possession of the Honorable Company, to discover the mines or places whence the gold issues. These, however, appear to have been noticed by the Honorable Mr. Duncan, late Governor of Bombay, who enjoined the authorities then in the province, in the year 1793, to collect and submit to him every information that could be obtained on the subject; but it does not appear upon record that any scientific person was deputed to explore

the places where the dust is found in order to trace the sources from whence the supplies are derived, or that any particular inquiry on the subject was set on foot, though it has been well known from the earliest period that gold is produced in the province, and the collecting of it has been farmed out in Wynaad and the Nilambur valley for the last forty or fifty years.

Agreement between Harry Louisa Hugnenin, Native of Switzerland, and the Right Honorable Stephen Rumbold Lushington, Governor of Madras and its Dependencies.

I, Henry Louis Hugnenin, do hereby engage to search for gold mines in the mountains on the Malabar Coast on the following conditions:—

1st.—That the search be conducted at the expense of Government and that I receive all reasonable assistance and countenance from the local authorities.

2nd.—That my proceedings shall be under the superintendence of such controlling authority as the Government may be pleased to appoint.

3rd.—That I shall receive one-half of the gold I may assist in finding and raising during the next twelve months and the same proportion of all gold I may collect from the mountain streams, &c., by washing. It shall, however, be optional with the Government to take my share of the produce at the market-price of gold and to renew this privilege in my favor for another year if they shall think fit.

H. L. HUGNENIN,
Horloger.

Dated 16th February 1831.

By order of the Right Honorable Stephen Rumbold Lushington, Governor of Madras.

H. CHAMIER,
Secretary to Government.

Witnessed.

J. LUSHINGTON,
Private Secretary.

Dated Devalacottah, 18th April 1831.

From—Lieutenant W. Nicolson, 49th Regiment N. I.,

To—Major R. Crewe, Commanding Nilgiris.

In obedience to the orders contained in your letter of the 12th instant at Ootacamund, I have the honor to acquaint you, for the information of Government, that I met Mr. Hugnenin at this place on the 16th instant, and that, after all due consultation with him and minute inquiries from the natives into the causes, times, and places of fever about this part of the country, I am of opinion that nothing whatever is to be apprehended on that score until the setting in of the heavy rains in June, and scarcely even then if proper precautions are taken to prevent it.

The country in our immediate vicinity is entirely free from jungle with the exception of a few hills presenting nearly the same features as some parts of the Nilgiris. The thermometer ranges between 71° and 82° in the 24 hours. There does not appear at present to be any unhealthy symptoms among the natives, nor are there any to be feared by their accounts during the *heaviest rains*, but merely at their commencement and ceasing, that is, during the months of June and September. The monsoon, however, is the most favorable time for the collection of gold dust in consequence of its being then brought down in large quantities by the mountain torrents; for during the rainy season the quantity washed by one person daily varies from the value of 3 to 6 rupees, and during the dry season scarcely from 1 to 2 rupees, so that justice can scarcely be done to the undertaking if the possibility of the rains affecting the health of those employed be considered an objection to it.

I now beg to inform you that there are three mountains near this in which Mr. Hugnenin is confident of finding quantities of gold. The one which he intends commencing is called Chulimally by some, and Vellimally by others, of the natives; it contains the sources of several streams flowing into a branch of the Beypoor river near Carcare in which streams a great quantity of the gold dust of this district is collected. In Arrowsmith's Map this place is marked Dienoote, about 12 miles from Goodaloor, a little to the southward of the main road to Manantoddy, and the mountain in question is about three miles further south. There is nothing however in the shape of a road, nor even a path to be found towards it, and from the abruptness of the intermediate hills and rocks the way is in some parts utterly impassable for cattle, so that in the first instance a practicable path must be cut for the supplies of a bazaar, as there are no provisions to be found even in this village, which scarcely contains a dozen huts.

I have the honor to enclose a list of workmen which will be required to place all things in readiness for commencing operations immediately. In the first instance I have the honor to submit that I conceive thirty men at least requisite to carry on the work with certainty and expedition, the whole to be employed at first in hutting themselves and making a practicable pathway to the mountain, and afterwards 15 as miners and 15 in washing the sand and searching for gold dust in the rivers. I also beg to to add that, if an intelligent native officer was detached with the party, he would be of the greatest assistance to me in overlooking one

party while I am with the other, &c. These circumstances, however, will of course remain for your consideration and decision.

List of Workmen required.

One bricklayer for the construction and repairs of smelting furnaces and reverberatories.
One carpenter for the construction and repairs of wooden washing bowls and all wood work required for the mining implements, &c.
One smith and one bellowsman.
Two wood-cutters for the supply of the reverberatories and smelting furnaces.

DEVALACOTTAH,
18th April 1831.

W. NICOLSON, *Lieut.*,
49th Regiment, N.I.

Dated Devalacottah, 22nd April 1831.

From—LIEUT. W. NICOLSON, 49th Regiment, Native Infantry,

To—MAJOR R. CREWE, Commanding Nilgiris.

I have the honor to acknowledge the receipt of yours of the 20th instant, and, in reply, beg to state that the tools required for the men will depend entirely on the number of men sent. I consider that the chests of mining tools should be allowed at least six men each, and that a spade, a momety, and a pickaxe will be required for every man beyond that number with a supply of baskets for carrying earth, observing at the same time that the more hands available, the more expeditious will be our operations.

I have now the honor to acquaint you, for the information of Government, that Mr. Hugnenin and myself proceeded yesterday for the third time to the Chulimally mountain for the purpose of searching for an old mine which, it seems, was worked long before the Honorable Company obtained possession of this part of the country, the fearful probability of which event, it is said, induced the Rajah of that day to abandon the mine for the time being from a dread of losing it altogether, and, making the business a State secret, he issued orders that no one on pain of death was to approach the mountain, on which, I am here told, he let loose as many wild beasts as he could procure. How far this account may be true is difficult to say. We have not as yet, however, succeeded in persuading a single villager to accompany us to the mountain in consequence of the above belief.

I now proceed to acquaint you that yesterday, after cutting our way for several hours in the thickest part of the jungle on the mountain, we came upon the mine in question, consisting of three shafts about five feet each in diameter and 10 from each other, forming an equilateral triangle, the deepest of them extending to about 70 feet, since a stone dropped in took about 4½ seconds to reach the bottom; the depth, however, has no doubt greatly decreased by the effects of rotten vegetation, &c. On further search we soon found that this mine was not the only one, for, having penetrated as far as we possibly could through the jungle towards the *summit* of the mountain, we discovered no less than 27 shafts, all sunk in the same manner and forming a chain of triangles as before described, the disposition of which with regard to each other leads me to suppose that they have all subterraneous countershafts communicating with each other and probably extending to a large main shaft which, I trust, may be discovered on the arrival of the pioneers. How these mines could have remained so long a secret appears surprising; however it is certain that had not a descendant of the above said Rajah mentioned all these circumstances to Mr. Hugnenin and made the contract herein enclosed, which he was unable to fulfil for want of sufficient capital, the mountain would of course have still remained unknown. I have the honor to forward a few specimens of minerals which I found on the surface near the shafts, as also a small quantity of gold dust, the result of Mr. Hugnenin washing the earth for a few hours on the same spot.

I now beg to conclude by stating that I am perfectly satisfied in my mind that any *labor* or *expense* whatever that may be incurred in this undertaking will be most amply repaid hereafter.

This morning I came across the new road to the Nilgiris.

The Moorkooty hills bear from hence east-north-east about 12 miles; Paratmala hills north-east 30 miles; Munoor ghat east-south-east, 40 miles. The Cherrunhoya is *navi'a ble even now* 10 miles beyond Oorumpoom, from which place I have just now come dow dhony.

Karcatode is about six miles south-east of Manjury on the bank of the river.
Mr. Hugnenin joined me on the 10th all right.

Dated Madras, the 27th September 1831.

EXTRACT.

These minerals are of a class so generally known and understood that I have only to give them their proper designations, and you will find them described at length in any mineralogical work you may happen to have in your possession.

The mineral marked "copper mica" is what mineralogists usually call "mica." It is found very abundantly in India. It separates into many thin laminæ, and in that state is

transparent and is the article with which the natives form those lanthorns that are exhibited in their festivals. It forms one of the component parts of the stones called granite and gneiss and constitutes a considerable portion of the bulk of the globe.

The component parts of this mineral have been so frequently ascertained by the first chemist in Europe that I conclude the Right Honorable the Governor would be disposed to rely more on their analysis than mine.

One by Dr. Ure is as follows:—

Silix	47
Alumina	22
Oxide of iron	15·50
Oxide of Manganise	1·75
Potash	14·50
	100·75

The two other specimens are likewise sub-species of the same mineral and are both called chlorite by mineralogists. Although of different colors, they are of the same sub-species. I have examined both these minerals and have found them so nearly the same that I am rather inclined to ascribe the difference to some slight inaccuracy in the process (arising chiefly from a want of a proper apparatus for this purpose, and perhaps also in some degree to a want of tact on my own part in conducting the process) than to any considerable difference between them.

My analysis is as follows:—

Silix	36
Alumina	38
Oxide of iron	6
Maker	12·5
Potash, Oxide of Manganise, Magnesia, Loss	7·5
	100

The last three substances I have not the means of collecting and ascertaining with precision, but I have no doubt that their proportions are in the order in which they stand. Potash most, manganise less, and magnesia least of all; indeed of the last there was only a trace.

Thus briefly to recapitulate:—

1. The mineral marked "copper mica" is the ordinary mineral called "mica" and does not contain any copper.
2. The earth marked "mineral gum paint" is chlorite, a sub-species of mica. This and the following earth you will find described in books under the name of chlorite; "mineral gum paint" or the paint called "mineral gum" is a pigment derived from copper and is an artificial, and not a natural, production.
3. The earth marked "metallic clay" derives that shining and metallic appearance from the undecomposed mica it contains. It is another variety of the same sub-species as the last mineral chlorite. It contains neither verdigris nor arsenic. The smell arising from these earths is common to all earths of this kind.

I should have acknowledged the receipt of your letter and of the minerals immediately after they came to hand, but in consequence of indisposition I had gone as far as Porto Novo for change of air, and, hearing then that the Governor had left the Hills, I did not know where to address a letter that was likely to reach you before you arrived at Madras. I hope you will consider this a sufficient apology for the delay.

Dated Nadghainey, Carcoor Pass, 16th November 1831.

From—LIEUTENANT W. NICOLSON, 49th Regiment, Native Infantry,

To—MAJOR R. CREWE, Commanding Nilgiris.

I have the honor to report that the Havildar's party of pioneers under my orders arrived here on the 7th instant and are as yet employed in hutting themselves, with the exception of two or three, who take their daily routine of duty on learning the method of washing for gold in this district, as I have obtained for that purpose from a ryot in the neighbourhood the services of the head Kuroombar in his employ during the absence of Mr. Hugnenin, from whom I have not yet heard.

I trust ere long to have the honor of seeing you here, as it is almost impossible to give you any adequate idea on paper of the nature of the work requisite and of the small number of men I have to perform it with. Gold there is in all directions—*every nullah in the neighbourhood contains it*—and I have no doubt we shall collect a good quantity as soon as the washing trays, &c., arrive from Calicut, as I have only been able to procure one tray from the natives to teach the pioneers with.

I have to add that a direct road to Chulimally from hence cannot be made without an excessive loss of time at present, particularly as I find there is little or no water on the mountain just now, without which the work cannot proceed, and during the dry season should at any rate be confined to the big rivers and nullahs.

No sickness has as yet made its appearance in the detachment.

Dated Caapul Gold Mines Near Momboatangady, 3rd January 1832.

From—Lieutenant W. Nicolson, Superintending Gold Mines,

To—Major R. Crewe, Commanding Nilgiris.

I have the honor to report, for the information of Government, that, having arrived at Carcatode on the 10th ultimo, we continued our researches for the most lucrative places for gold in that neighbourhood until the 24th, when it became evident from the daily average of work that it was not worth while remaining there, at any rate at this season. The place seems famed for gold in consequence of the *superior touch* of the small quantity found there, a circumstance which greatly affects the nominal value of the metal to be found elsewhere, a great deal of which is sold by the natives as Carcatode gold. The nature of the work in that direction will be found in the detailed reports I shall duly have the honor of forwarding.

I have now to add that, with the view of pursuing the search throughout the Nilambúr Valley, we arrived at this place on the 26th ultimo and were not a little surprised at finding a regular set of mines worked by five or six hundred Moplahs, who (if their headmen could be believed) are obliged to give one barleycorn-weight of gold *per man* to the Zemindar per day, by which a direct daily tax of about twenty rupees is levied by him without his paying anything to Government. On our arrival the whole of the Moplahs made off; but, in consequence of my issuing proclamations that in continuing their work they should meet no molestation, a great number have returned to the mines. These works are very extensive; the shafts are generally from ten to fifty feet, and the deeper they are the greater is the quantity of gold to be found, the only impediment to the work being the continual accumulation of water which they have no idea whatever of raising, but by assembling in great numbers with chatties. We could easily employ bamboo syphons for this purpose; but, as our work would be overlooked by the Moplahs, they would not fail instantly to apply the syphon to all the other mines in the neighbourhood to our great disadvantage hereafter. Therefore, until we have a sufficient number of workmen and are sufficiently strong in pioneers or others to place guards over the mines, we cannot work them to any great advantage.

It will at once appear evident that when five or six hundred men find it worth their while to work with the miserable and slovenly apparatus they possess, and with which the very least each man can possibly find is the weight of the third of a gold fanam per day, which trifling day's work *very seldom* happens (as the quantity found by one man daily varies from that just mentioned to the weight of ten gold fanams, on which occasion the mud is always taken from the deepest shafts); it will then, as above mentioned, appear evident that, were these mines systematically worked on the European principle, the quantity of gold to be had would be very considerable. But situated as I am without the above means and with so small a party, we can do little more than as many of the natives, and can only for the present continue the search for the most lucrative mines in the district and for those places where it may be worth while for Government to keep up regular mining establishments, amongst which number these mines may most undoubtedly be classed. The pioneers have collected nearly an ounce of gold during the week they have been here, and, had I the regular European apparatus, this *ounce* would, I have no doubt, have been a *pound*. This will be duly forwarded to yourself or the Collector as you may desire.

Dated Carembat Jungle near Carcoor, 25th January 1832.

From—Lieutenant W. Nicolson, Superintendent, Search for Gold Mines,

To—Major R. Crewe, Commanding Nilgiris.

In continuation of my reports for the information of Government, I have now the honor to acquaint you that the Moplahs at the Coopal mines having commenced a system of devastation in filling up the shafts, &c. I have been under the necessity of applying to the Collector for a Havildar guard, on the arrival of which at Coopal (having heard that the same system of depredation was going on in the mines in this direction for the purpose of giving us every possible difficulty and impediment in our search), I immediately left half my party at Coopal under the command of the Pioneer's Havildar with the necessary orders for protecting the works, &c., while I am continuing the search and endeavouring to prevent injury being done to the mines in this neighbourhood, which are said to be very numerous and much richer than those at Coopal. As yet, however, we have only come upon one which is in a mountain called "Combalamally," one of the Chulimally range close under Nelliallum.

The average quantity of gold to be found in this mine may be taken at about a gold fanam weight per man daily, but in consequence of the constant search we are making in the jungles for the best mines we have no time for gold-washing.

I take this opportunity of a party returning to Ootacamund, who have brought pay for the detachment, to forward to you by them the gold which has been found by the Pioneers up to this date in searching the Nilambúr valley. The situations of the richest mines I shall duly have the honor to forward in a rough map.

In now again submitting for consideration the necessity of my party being increased, I trust I may not be accused of presumption in suggesting the expediency of teaching the whole corps of Pioneers the methods of washing for gold and furnishing them with trays accordingly, a system which, if well followed up, would no doubt lead to the discovery of many valuable mines, particularly in the Koondar and Moorkooty hills, *to which we have fairly traced the strata which contain gold in that direction*. It may be as well to remark *en passant* that the

abovementioned trays are very light, and with a little ingenuity would form a much more comfortable and useful covering for the head for men who are exposed to the sun the whole day than the cap they now possess. The quantity of gold sent herewith is as follows:—

From the Coopal mines three ingots weighing thirty-nine new gold fanams and seven barleycorns (touch 9).

From Killarkumpoya and Poonapoya rivers, Nilambúr valley, three ingots weighing thirty new gold fanams, five barley corns (touch 8½).

From the Kakatode and Cherrumpoya rivers under the Moorkooty hills one ingot weighing thirteen new gold fanams (touch 9½).

Total sent eighty-three new gold fanam weight; a small quantity of gold dust remains, but as it is not melted and therefore very liable to be lost I have not sent it.

No. 37, dated Fort St. George, 3rd February 1832.

From—The Hon'ble H. Chamier, Chief Secretary to the Government of Madras, Financial Department,

To—Major R. Crewe, Commanding Nilgiris.

I am directed to acknowledge the receipt of your letter of the 7th ultimo, and to transmit to you the report of the Mint Master's assayer on the three specimens of gold received from Lieutenant Nicolson.

The specimens were sent to the Mint without any communication of the cost of the several pieces as noted in the card attached to each, but with orders to report both as to the touch and real value of each. You will perceive from the memorandum given below that the value of each is greater than the cost, and if you are satisfied that the cost is correctly reported, it is obvious that the purchase at the prices specified will be advantageous to Government, especially of the gold from the Coopal mines:—

Specimens.	Weight.	Fineness.	Touch.	Value as stated by the Assayer.	Cost as stated by Lieutenant Nicolson.	Gain in value.	Value of an ounce of gold of this fineness.
1	2	3	4	5	6	7	8
	Dwts. Grs.	C. Grs.		Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
No. 1, Coopal Mines ...	2 14	B 1 3¼	Gold ... 99·22 Silver ... 0 78 100·0	5 9 5	4 4 0	1 5 5	43 4 8
No. 2, Nilambúr Mines...	3 4	B 0 2¾	Gold ... 94·53 Silver ... 5·47 100·0	6 8 6	5 12 0	0 12 6	41 4 0
No. 3, Devála Mines ...	3 2	W 3¼	Gold ... 90·88 Silver ... 8·86 Copper ... 0·26 100·0	6 1 10	5 0 0	1 1 10	39 10 6

You will be pleased to preserve carefully the assayed specimens herewith transmitted and communicate with the Principal Collector of Malabar on the subject of the best mode of obtaining the gold on account of Government, which he will be fully qualified to state when he shall have ascertained in whom the ownership of the several mines is vested, and what claims require to be satisfied before undisputed possession of the mines or their produce can be obtained. A copy of the letter addressed to him under this date is herewith transmitted for your information.

Dated Arecote, 24th February 1832.

From—Lieutenant W. Nicolson, Superintendent, Search for Gold,

To—Major R. Crewe, Commanding Nilgiris.

For the further information of Government I have now the honor to report our return to the Coopal mines after having duly searched as much of the Nilambúr valley as the jungle has permitted us to penetrate, and I am happy to add that we have been as successful as could be wished. The mines in that direction are innumerable; the principal ones are, however, in the thickest part of the jungle immediately under the Wynaad hills and near the following villages belonging to the Teroopad of Nilambúr, *viz.*, Carembat, Katchapara, Moondairy, and Maneecoote. The Carembat jungle is mined throughout wherever the ground will admit of water being supplied from the neighbouring rivers, this being the only thing requisite, as the whole of the soil under the hills contains gold, the quality of which is much the same as the specimen I have had the honor to forward labelled "from the Nilambúr Rajah's mines." This you will perceive by a small specimen herein enclosed (weight six new gold fanams), cost 2 rupees 4 annas.

I now beg to state that in consequence of an intimation from the Collector of Malabar, requesting to see me respecting further operations, I am proceeding to Calicut, where I shall have the honor to await your further orders.

Dated Calicut, the 3rd March 1832.

From—LIEUTENANT W. NICOLSON, Superintendent, Search for Gold,

To—The Principal Collector of Malabar.

In reply to yours of the 1st instant, and with reference to the communications therein contained from Government, I have the honor to state that my having obtained at such low prices the specimens of gold lately forwarded to Government arises from my having purchased them from the *gold-washers themselves* previous to their getting into the hands of the Swookars, whose customary profits would have otherwise made them much dearer; but it appears that a slight inadvertency has occurred in consequence of my not having had the means of determining the exact proportion of each specimen to an ounce, which circumstance has caused a slight overcharge of the specimens from Nilambúr and Wynaad, and an undercharge of the specimen from Coopal. This, however, does not affect the cost of the whole, *viz.*, Rs. 15, nor its value according to the Mint Master's report, *viz.*, Rs. 18-3-9; and if people were stationed at the several mines to purchase the gold on account of Government, they could obtain it at the following rates:—

	Per Ounce.	Value according to the Mint Master's Report.		
	Rs.	Rs.	A.	P.
In Wynaad	32	39	10	6
In the Nilambúr Valley	34	41	4	0
At Coopal and Kakatode	36	43	0	0

If required to be melted into ingots four annas per ounce must be added for goldsmith's hire and borax, so that the purchase of Wynaad gold will yield a profit of upwards of 23 per cent., Nilambúr gold 20 per cent., and Coopal gold 19 per cent.

Dated Cannanore, the 28th March 1832.

From—LIEUTENANT W. NICOLSON, 49th Regiment, Native Infantry,

To—MAJOR R. CREWE, Commanding Nilgiris.

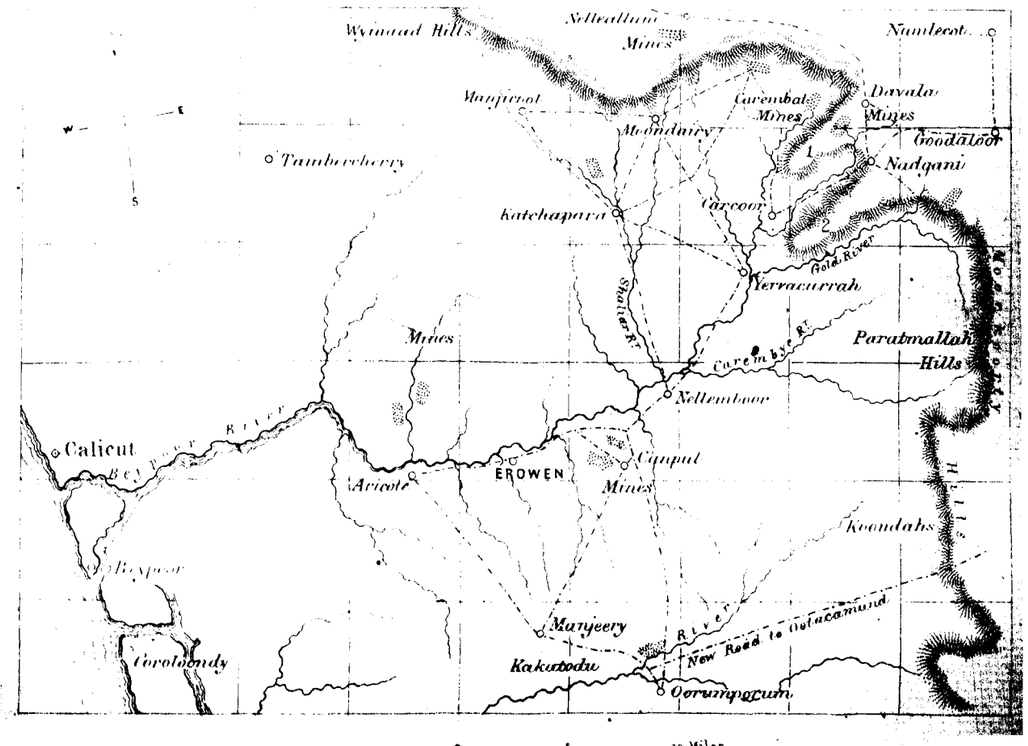
In further continuation of my reports for the information of Government, I have the honor to acquaint you that another severe attack of jungle fever, shortly after my arrival at Calicut, rendered it necessary, in the opinion of the medical officer, that I shall be removed to this station in order to be in readiness to meet the probable necessity of my being obliged to embark on a long sea voyage or for England for the recovery of my health.

With regard to the gold mines which we have already discovered, and the best means of obtaining the greatest possible quantity of gold on account of Government, I beg to observe that it appears to me—

1st.—That the only people who can be employed with advantage on account of the insalubrity of the climate are those who are resident at the several spots where the mines are situated and who have been accustomed to the work.

2nd.—That these people may be overlooked and controlled by trusty natives and peons stationed at the different mines and placed under the general superintendence of a European officer, who might visit them occasionally.

3rd.—That from the application of machinery to the mines, such as pumps, stamping mills, washing troughs, &c., Government might reap the greatest possible advantages, as these would enable the mines to procure a much greater quantity of gold than they now do, when Government might not only lay a heavy tax on the workmen without distressing them, but also have an opportunity of purchasing a larger proportion of gold at the rates which I have already had the honor to submit.



Whether the machinery required could be made up in this country so lasting or so cheap as in England may be considered doubtful. I would therefore beg to suggest that, under existing circumstances, I may be permitted to proceed at once to England for the purpose of procuring such machinery as may be requisite,—a measure which would not only facilitate the end in view, but would also tend so much to the restoration of my health as to enable me to continue the researches so successfully commenced.

My present state of health not admitting of my drawing out a plan of the situation of the different mines already discovered, I have marked them out in map belonging to the Principal Collector in Malabar and Canara, which is all I am at present able to do, being confined to my bed and not able to put pen to paper further than to sign my name, and I am indebted to a friend with whom I am living for drawing up what I have now the honor to forward.

In conclusion, I beg to bring to the notice of Government that the allowances which I have hitherto drawn as a Pioneer Officer have been far below the outlays I have been put to in order to obtain the information I have already had the honor to forward to Government, having not only had to contend with every imaginable difficulty that could be thrown in my way by the natives (and which could scarcely ever be overcome without heavy bribes, presents, &c.), but also having been put to considerable expense for guides, coolies, stationery, servants,

The largest mines are at Coopal and Carembat. All the rivers produce gold, and wherever the *gold ink* has been used mines have been discovered.

(Signed) W. NICOLSON, *Lieutenant.*

horses, &c., for which I trust that Government, with their usual liberality, will deem it expedient to grant me an increase of allowances from the date of my appointment, or such other remuneration as they may think fit.

Dated Cotacamund, the 17th July 1832.

From—Lieutenant W. Nicolson, Superintendent, Search for Gold,

To—Major R. Crewe, Commanding Nilgiris.

I have the honor to acquaint you, for the information of Government that, having sufficiently recovered my health during my voyage round from Cannanore to Madras, I have returned to the prosecution of my duties in the search for gold, on which subject I now beg to forward the following communications.

During my progress to the hills by the Salem road, the first place that I could get any tidings of gold being found at was Dharmapuri at the foot of the Shevaroy Hills, afterwards Satyamangalam, Denkanikóta, Addivaram, or Stremogay, and Mettapoliem, in the neighbourhood of which there are, I am informed, *now* about *thirty people* employed in gold-washing. It is therefore to be hoped we shall meet with the same success as heretofore on situations and at such elevations amongst the hills as will preclude our being again laid up with fever.

I have now to observe that in all large bazaars where there is a great demand for gold its *commercial value* far exceeds its real value as reported by the Mint Master; for instance, gold of 9 touch is generally sold in the Madras bazaar at 15 rupees for the weight of one rupee, which is at the rate of 50 rupees per ounce (troy), since that quantity weighs 3⅓ rupees, while its value as reported by the Mint Master is only Rs. 41-4-0. Now the original cost at the mines being 3¼ rupees (for 9 touch) per ounce, it follows that the profit to be obtained in a *commercial point of view* is nearly 50 per cent., while the real value of the metal at the Mint only gives a profit of about 23 per cent. on the prime cost, thus showing the infallible advantages that must accrue to Government from their monopolizing the sale of gold, wherever it is to be found, by purchasing it *direct from the miners* before it can possibly get into other hands.

The method of carrying such a monopoly into effect *you* will, of course, be the best judge of. From the experience *I* have now had, however, I am of opinion that it will be impossible for Government to procure the whole or even half of the gold that is actually found unless the utmost vigilance is kept up by small detachments at the different mines to prevent the gold being smuggled or purchased by the native merchants, who are always on attendance for the produce of every day's work, and for which they *never pay the workmen in coin*, but in articles of food, raiment, &c., on which *again* they charge a very great percentage, so that their profits must be enormous; and as they are in the habit of using false weights, such as introducing lead into the grains of paddy with which the gold is weighed, and various other modes of extortion, the gold brought by these Swookars does not probably cost them more than half what *I* paid for it. The whole of the miners appeared to be entirely at the mercy of these merchants, and were obliged to give them over every rupee they received from me. It is therefore to be supposed that if these merchants had nothing to say to the miners the gold would be sold at a much cheaper rate than that at which *I* purchased it.

What may be the actual quantity to be daily procured it is impossible to say until Government take means for preventing the metal from having *any* other outlet from the miners than Government servants stationed there to purchase it. It must be nevertheless evident that a little machinery would greatly increase the quantity to be procured; for instance, their present mode of crushing the ore is by breaking one piece against another until there is a sufficient quantity of dust to fill a trav, which slow mode of working does not allow them to wash more than three or four trays full per man in the course of the day, whereas with pumps and stamping mills they might probably wash ten times that number. No fear can reasonably be entertained of the mines *failing* or becoming *exhausted*, since the whole country for a circle of nearly fifty miles *immediately under the ghâts* contains gold.

In addition to the profits I have above enumerated there is also that of the tax which appears to have been hitherto raised by the zemindars of districts unknown to Government authorities. This tax varies from one paddyweight of gold per man to one paddyweight of gold for three men, according to the produce of the mine. At Coopal it is a paddycorn weight per man daily. I have had the honor to forward a small map of the situations of the mines as yet discovered, which I can make out on a larger scale if required; and in conclusion I beg to forward a memorandum of the extra expenses and losses I have sustained during the search, and to solicit the consideration of Government for my future allowances and instructions for my future proceedings.

Dated Ootacamund, 1st October 1832.

From—Lieutenant W. Nicolson, Superintending Gold Mines in Malabar,

To—Major R. Crewe, Commanding Nilgiris.

With reference to the Minute of Council of the 31st August last respecting the gold mines in Malabar, I have the honor to request you will be pleased to signify my most grateful acknowledgments for the readiness and liberality with which Government have repaid my humble endeavours, and I now beg to forward a few suggestions for the future management of the mines. With regard to the choice of mines, those at Coopal would seem, all things considered, to be as good as any for commencing operations on; but although the party and

tools which were furnished me last year *were sufficient for searching the country*, I have already had the honor to state that nothing can possibly be accomplished *on a grand scale* without the common machinery requisite for working any mine in the world, *viz.*, *pumps* for raising the water out of the shafts, *cranes* for craning up the ore and earth, *stamping mills* for crushing it, troughs for washing it, and (if the metal is required in bars) apparatus for melting it. All the other implements requisite are contained in the mining chests of tools forwarded by Government, of which, however, a much greater number will be now necessary in order to furnish the miners with them; and I should think that in addition to the two chests already sent from Madras if *ten more* be now despatched to Coopal they will not be found too many. Carpenters and smiths (for the repairs of these articles and the construction of scaffolding, &c.) will of course be necessary. Three-inch cylinder pumps may be procured at Mr. Law's depôt on the Mount Road at 250 rupees each (the price in London is, I believe, £10).

Cranes, I understand, may be made up at Pálghat, to which place Mr. Hugnenin and myself are now proceeding, but the greatest requisites are *stamping mills* and *steam engines*, neither of which, I fear, can be made up in India unless at enormous expenses, and they could never of course be compared to those of English manufacture.

Without the articles above mentioned all that can be done in the present state of the mines is to see that the whole of the gold that is found be purchased on account of Government instead of its going to the Nairs, &c., as hitherto; and this circumstance will greatly depend on the strict *honesty* and *trustworthiness* of the native civil authorities attached to the party in counteracting the tricks, obstacles, and difficulties continually thrown in our way by those who have hitherto shared in the profits of the mines, and who will now find themselves obliged to give up these profits to Government. I have now to add that it is of the utmost importance that quarters rendered secure from the night air and dews should be erected for those employed at the mines, without which it is next to an impossibility that the climate can be withstood *for any length* of time by any but the natives of the district in that neighbourhood; it is, I presume, needless to say that the Revenue Officer who attends on the party should always be provided with a sufficient sum for purchasing daily the quantity of gold found in the mines by the Moplahs.

In conclusion, I most respectfully beg to submit that a sight of these mines would do more than all I can write on the subject, and I therefore humbly beg to suggest that a committee of such competent persons as Government may deem fit may assemble at Coopal with a view to the full consideration of the circumstances I have above mentioned and of the plans which I have now the honor to submit for the future management of the mines.

Dated Ootacamund, 6th October 1832.

From—Major R. Crewe, Commanding Nilgiris,

To—The Chief Secretary to Government, Fort St. George.

As relates to the Minutes of Consultation, under date 31st August last, the purport of which was duly communicated to Lieutenant Nicolson, I now beg to enclose a communication from that officer connected with the labors of the approaching season at the Coopal mines, and I take the liberty of respectfully submitting for the consideration of the Right Honorable the Governor in Council.

That from past experience and from all information to be arrived at without pumps for the removal of the water out of the shafts, it would seem impracticable adequately to prosecute the work; in the outset two might be sufficient, but after a short time, as the shafts become deeper, two additional ones would be requisite, making a total of four, and which, if Lieutenant Nicolson's information is correct, are procurable from Mr. Law's depôt of building materials at the Presidency.

2. Cranes and troughs I calculate on being able to have prepared at Palghatcherry, and I shall take measures to this effect.

Stamping mills are much to be desired. In the last report a model of one was stated to be in preparation at Calicut under Mr. Hugnenin's superintendence; everything shall be done in order to having one prepared, but if unsuccessful some preparation of granite in the shape of pestle and mortar, or even sledge hammers, may serve as substitutes, and under any circumstances the work can progress without the two former, though not to an equal extent.

The melting the ore I do not immediately see the necessity of, but this equally with the purchase of gold at the mines. The selection of trustworthy persons for such purposes, as also for the supply of coolies and superintendence of all local matters, are duties devolving, I conceive, on the Principal Collector in Malabar, who alone possesses means adequately to provide for their performance.

3. A further supply of chests of mining tools I would also recommend, and should they and the pumps be sanctioned, I beg to suggest their early despatch to Calicut by sea, as well from motives of economy as to carriage, as from the important object of their reaching their destination in sufficient time to be brought into use as required during this season.

4. Smiths and carpenters for the construction of scaffolding and repairs of various tools in use will also, I conceive, be supplied on the spot under the orders of the Principal Collector.

5. As relates to the insalubrity of the climate, and fevers contracted during the two former seasons, in part from want of adequate protection against the heavy dews, I beg to suggest the practicability of the construction of a temporary range of sheds on an appropriate site near to the mines of palmyra and cadjan leaves by the inhabitants of the country, the expense of which I presume would be most trivial.

6. In furtherance of these duties Lieutenant Nicolson will leave Ootacamund for Palghatcherry on the 8th instant *en route* to Calicut, where he will commence preparations in communication with the Principal Collector in Malabar, and there await the receipt of further instructions, with which I beg to be honored the above points.

Extract from the Minutes of Consultation, under date 12th October 1832, No. 257.

Read—The following letter from Major R. Crewe, Commanding Nilgiris, dated 6th October 1832.

Resolved, that the Military Board be instructed to purchase two 3-inch cylinder pumps at Mr. Law's depôt and forward them with eight chests of mining tools to the Principal Collector of Malabar, at the earliest practicable moment, for delivery to Lieutenant Nicolson. If these articles cannot be sent by sea before the monsoon, they should be forwarded direct to Lieutenant Nicolson at Pálghat.

Resolved, that authority be given to Major Crewe to cause the requisite number of cranes and troughs to be made up at Pálghat.

The Principal Collector of Malabar will cause a sufficient number of carpenters and smiths to be supplied to Lieutenant Nicolson, and a trustworthy Native Revenue Officer to be in attendance; he will also cause a range of temporary sheds to be erected for the protection of the party at night.

Dated Palghat, the 26th October 1832.

From—Lieutenant W. Nicolson, Superintending Search for Gold.

To—Major R. Crewe, Commanding Nilgiris.

With reference to your letter and its enclosure of the 8th instant, I have now the honor to acquaint you that I arrived here on the 18th, and having made every inquiry as to materials and workmen for manufacturing machinery for the Coopal mines the following have been the results:—

(1) That the only substantial article to be procured is wood.

(2) The iron and all other requisites are of the coarsest possible quality, and would therefore be continually breaking and getting out of order.

(3) No workmen can be found expert enough to put them *cleverly* and *substantially* together, being all carpenters of the most ordinary description without the slightest idea of mechanical powers or proportions, *even if models were placed before them*. Troughs and rakes are therefore the only articles to be depended on here, and under these circumstances we must, I fear, be reduced to the only alternative of looking to the Presidency for assistance, although from all inquiries I made there in *May* last I could not hear of any workmen competent to the task, as they are mostly ignorant of those principles of mechanics without which no sound machinery of any sort can possibly be constructed. The opinion here is that we should be more successful at Cochin. I beg to add that as soon as the Principal Collector of Malabar has informed me of all preparations being in readiness at the mines for the construction of quarters, &c., the Pioneers will march for Coopal to assist in the work; in the meantime I beg again most respectfully to submit the expediency and necessity that exist for assembling a committee at Coopal of such persons as may be thought the most competent to form an opinion on the present state of the mines and their future management, as well as of the propriety and advantages of sending to England at once for machinery; and with this view I take the liberty of mentioning the names of the following gentlemen, *viz.*, Mr. Brown at Tellicherry, Mr. Caldecott at Alippy, Mr. Fischer at Coimbatore, Mr. Lettardy at Ootacamund, all I believe men of known genius and general information, who, with the Collector and Engineer of the district, would form a body whose opinions on this subject would, I presume, prove most satisfactory to Government.

I have now the honor to state that there is at this moment a very large quantity of gold for sale at this place and at Coimbatore at prices which, although much higher than at the mines (in consequence of having passed through several hands), are by *some strange anomaly* still actually under the intrinsic value of the metal, as reported by the Mint Master last season, and its intrinsic value at Madras may generally be reckoned at about 20 per cent. *below* its commercial value, so that it would still yield a good profit in the Madras market if bought up on account of Government. Enclosed I beg to forward a small piece, the price of which in the bazaar is at the rate of 39 rupees and a half per ounce; its touch is about 95. I would therefore beg to request that you will be pleased to solicit permission for me to draw upon the Principal Collectors of Malabar and Coimbatore for the price of any quantity of gold I may be able to procure in this manner, the same being deposited in their respective treasuries. Under all these circumstances, I beg to request further instructions as to my immediate proceedings.

Dated Palghatcherry, the 10th November 1832.

From—Lieutenant W. Nicolson, Superintending Search for Gold,

To—Major R. Crewe, Commanding Nilgiris.

Until the receipt this day of yours of the 14th instant in answer to mine of the 25th ultimo, I have to inform you that as I could not know whether the pumps, &c., had been sent round by sea to Calicut, or forwarded to me at this place by land, I have been obliged to wait here for that information, and I am now proceeding without delay to Calicut *viâ* Coopal and Arecote.

I have to add that my purchasing gold would not in any way interfere with my duties at the mines, as the purchases might be effected by natives placed under my orders; and had I been authorized, I have reason to think that I could already have procured about fifty thousand rupees worth, yielding a high profit to Government.

Dated Ootacamund, the 14th November 1832.

From—Major R. Crewe, Commanding Nilgiris,

To—Lieutenant W. Nicolson, 49th Regiment, Native Infantry.

Adverting to your letter of the 25th ultimo, which would have met with earlier reply had not indisposition precluded it, I can only now urge upon you the absolute necessity of giving up your attention to what I consider to be the present main object, *viz.*, that of applying all your means to the working of the Coopal mines, in order that we may this season arrive at a probable knowledge of the return to be expected from such labors, the degree of efficiency afforded by the tools, &c., already supplied, and any further implements or machinery desirable, in the event that any further prosecution of these labors should hereafter be deemed expedient.

A list of pumps, &c., despatched for this service I have the honor to give cover to, and I hope to hear that by this time you will have reached Calicut in furtherance of your arrangements there with the Principal Collector, and I shall also be glad to hear of the state of Mr. Huguenin's health, and if any and what was his success as to the preparation of a model of a stamping mill long since commenced on under his superintendence.

The purchase of gold in the bazaar of Palghatcherry or Coimbatore would, in my mind, be a misappropriation of your time, as your superintendence and science will be so much more advantageously disposed of at the Coopal mines.

Dated Cochin, the 20th December 1832.

From—Lieutenant W. Nicolson, Superintending Gold Mines,

To—The Principal Collector of Malabar.

In compliance with the request contained in your letter of the 7th instant, I have now the honor to acquaint you that I arrived here on the 12th, and having made the necessary inquiries as to materials and workmen at this place, I find that machinery for the gold mines can be made here, but I fear it would be far inferior to what might be manufactured in the Mint or brought out from England, while the expense would most probably be much greater; to avoid delay, however, I am collecting materials for a windlass crane of elephant power for the main shafts at Coopal, the expense of making and setting up which will cost (as far as I am at present able to calculate) between six and seven hundred rupees; and although several of these are required, *one alone* will, I have no doubt, suffice to prove the advantages to be derived by Government from such machines.

2. With regard to pumps, wooden ones can be made, but not iron ones; these, however, unless on the *forcing principle*, can only answer for a short time, and I am given to understand there is no such thing as a forcing pump in Madras.

3. A stamping mill for crushing the ore if made here will take up much time, and will cost (with its necessary requisites) about a thousand pagodas.

4. In addition to the above iron wire sieves for sifting the pounded ore, troughs for washing it, rakes, &c., may probably come to one thousand rupees more, so that an outlay of about five thousand rupees altogether would, I should think, suffice to prove to Government the advantages to be derived from working these mines on a very extensive scale.

5. A reservoir for water should be built at Coopal immediately of brick and chunam, as there is no water near at hand but what comes from the shaft, and which, from the want of a reservoir, runs now to waste.

6. With utmost deference I now do myself the honor to submit the following opinions; but those of a *special committee* would, I presume, be far more satisfactory to the Right Honorable the Governor in Council.

7. How long these mines have been worked, and what their average produce has been, are questions involving the interest of the natives to answer, and it therefore becomes a very difficult matter to ascertain the truth; their appearance, however, together with the slovenly mode of work adopted by the Moplahs, lead me to suppose that they have been worked for at least a century.

8. The Honorable Mr. Duncan, late Governor of Bombay, recommended a search for gold mines (according to Mr. Sheffield's Report) as far back as 1793.

9. And the bare fact of one mine supporting five or six hundred men and their families with the *commonest native tools* may reasonably be considered a sufficient criterion of its value.

10. Although the Coopal mines are the largest we have as yet discovered, it is not to be supposed that this circumstance arises from their particular situation or quality; it is because there is a dense and comparatively enterprizing population of Moplahs in their immediate neighbourhood, and there can be little doubt that, being guided by similar mineralogical appearances on the surface (and these occur almost everywhere under the ghâts in that direction), innumerable spots exist, as we found last year, where, if shafts were sunk to the same extent as at Coopal, similar, if not much greater, benefits would result.

11. In the present promising state of the undertaking the despatch of boring apparatus along the foot of the ghâts under efficient and competent persons must assuredly be worthy the consideration of Government; to obtain such persons, however, appears to be the grand difficulty, and to strike at the root of it it would appear expedient to suggest some mode of supplying the service with persons conversant with these duties, either by establishing a school for mines or transferring one of the Honorable Company's home establishments to some mining country where their officers might obtain a thorough practical knowledge of mining and of such branches of mechanics as are therein required, with which, and being obliged to pass examinations in mineralogy and metallurgy, they would arrive in India with competent information to prosecute researches and make discoveries which certainly appear to promise, at no very distant period, the most advantageous results to the Honorable Company.

12. The East India Depôt at Chatham, for instance, would not, I humbly presume, cost more in Cornwall than in Kent; yet this simple change of bounties (with the same facilities of embarking troops, &c.,) and a good Professor of Mineralogy would, no doubt, suffice for the attainment of the object desired.

13. In the meantime, however, if the Moplahs who have hitherto worked the mines were embodied on regular pay and officered from the line, Government would no doubt immediately derive such benefits from the undertaking as would do away with all doubts as to its success. The employment also of such men from the European Regiments as have seen anything of the sort at home would probably be attended with great advantages, for the natives, *one and all*, whether in *Government employ or not*, continue by every means in their power to thwart our views and impede our progress; they will not even sell *to us* more than a very small quantity of the gold daily found, knowing if they sold us the whole of it we could very shortly come to some correct estimate of the value of the mines.

In conclusion, I beg to observe that there does not appear to be any danger of fever at Coopal or its immediate vicinity, *for the present at least*, as the pioneers have been at work there for the last two months, and no case of fever has yet occurred amongst them.

Finally, with regard to machinery there can be no doubt that it may be brought out from England, of a far superior quality, at a much cheaper rate and in less time than it can possibly be made up in this country.

Dated Cochin, the 22th December 1832.

From—Lieutenant W. Nicolson, Superintending Gold Mines,

To—The Principal Collector of Malabar.

I have the honor to acknowledge the receipt of your letter of the 24th instant, in answer to which I beg to state I am fully aware that until the sanction of Government is obtained any disbursement of funds that I may make in order to ascertain the capabilities of the workmen of this place must be at my own risk.

2. I beg to add that I hold myself in readiness to make any further communications and answer any questions that the Committee ordered by Government may require of me.

3. In the meantime the following details may probably be of service in determining the value of the mines.

4. The only work that I have hitherto been able to rely upon (in endeavouring to ascertain what quantity of gold can be daily found by one man) is that of the party of pioneers placed under my orders, by whom the average quantity of gold daily found may be considered at about half a gold fanam's weight per man. It must be recollected, however, that these men are complete novices at the work, and that a Moplah who has been in the habit of gold-washing for years must find a much greater proportion of the metal. Allowing, however, that this may not be the case, it is evident that a Moplah must find at least as much as a pioneer, and consequently when six or seven hundred Moplahs are at work they must find from three hundred to three hundred and fifty gold fanams' weight of gold, or about four ounces (each weighing eighty new gold fanams) per day, of which quantity the Revenue Officer sent by you to Coopal can only obtain twenty or thirty gold fanams' weight from the Moplahs per day, who would thus endeavour to mislead us as to the value of mines.

Dated Cochin, the 2nd February 1833.

From—Lieutenant W. Nicolson, Superintending Gold Mines,

To—The Principal Collector of Malabar.

I was duly honored with yours of the 30th ultimo, in reply to which I beg to state, with regard to the mines hitherto discovered, that I have already made every possible inquiry in my

power on the spot and made myself as well acquainted as I possibly could with their localities, &c., as will be seen in a small map which I forwarded to Major Crewe in June last.

To the several details, however, I have already had the honor to forward, I beg to add the following.

As connected with all the mines that are worked by Moplahs, I have repeatedly tried to get these men to work for me on monthly pay, having offered them five rupees per man, but they have always refused, giving as their reasons for doing so that, if they worked for me, they would be obliged to work *every* day, whereas in working on their own account they could often find enough gold in *one, two,* or *three* days to support them for *a week* without working at all.

As connected with the mines in the Nilambúr Valley, which are worked by Curoomba slaves belonging to the Tirooapad, and for which he pays a yearly nigiddy of 1,000 rupees from different circumstances which occurred last year, together with the universal opposition to our search which we invariably experienced, and several complaints in Malialam against the Tirooapad which were brought to me by a man called Beganad Nair, copies of which were forwarded to Mr. Hudleston and Major Crewe, I have every reason to think that the Tirooapad must make enormous profits on these mines, particularly since some Moplah merchants who came to me last year offered to throw a certain number of miners into the Nilambúr jungles upon each of whom they were willing to secure to the Circar a monthly nigiddy of from 10 to 12 gold fanams' weight of gold if authority had been obtained to that effect, which, they said, would be extremely difficult in consequence of the influence of the Tirooapad and of a man called Kinra Menon, a Sheristadar in the Cutcherry at Calicut, whom they accused of being in league with the former to keep Government in ignorance of the mines.

3. As connected with the mines in Wynaad, as far as I could learn, the Rajah of Nilambúr, Numbilicottah, and other parts employ Chetties to superintend their slaves in working the mines, giving them a commission on the quantity of gold found. I should add that all these slaves are most inhumanly and barbarously treated, their daily pittance being one or two seers of paddy in the husk; while the slightest deficiency in the quantity of gold they are daily expected to deliver up is visited with the most unmerciful floggings and crushing their limbs in a kind of vice to such a degree and so repeatedly that they are sometimes disabled for life and often left in this state to die of starvation.

4. In reply to that part of your letter in which you suggest that I may visit any part of the district in which, from my past experience, I may suppose that mines are to be found, I have the honor to acquaint you that I have every reason to think that there are many more mines to be discovered on the Coondah and Moorcooty Hills, as you will perceive I mentioned in my letter to Major Crewe, dated Carombat jungle, near Carcoor, 25th January 1832, and I am about to proceed in order to carry on the search in that direction.

APPENDIX C.

Extraction of Gold and Silver from Copper Pyrities.

Fred Claudet, Annales de Chimie, Quatrieme Serie, November 1872, *T. XXVII, p.* 407, *being an Appendix to the Report of the Victorian Board on the Treatment of Pyrites.*

English manufacturers draw the greatest part of the pyrites they employ in making sulphuric acid from Spain and Portugal. As they all contain more or less copper, the residues, after the extraction of the sulphur, are sold to the copper smelters, who, on account of the large quantity of oxide of iron they contain, employ them as a flux for silicious copper ore. In the operation they recover the copper from the pyrites, but all the iron passes into the slags. The extraction of copper from minerals, by the humid method first practised by Longmaid, and since applied by W. Henderson to the treatment of pyritous residues, does not give rise to this loss of the iron of the pyrites. This mode of treatment is now much used in consequence of the increasing importation of these pyrites, which has risen to 400,000 or 500,000 tons annually, and continues to increase. The pyrites are sold according to the amount of sulphur and copper they contain. The manufacturers, who only buy them for the sulphur they contain, sell the roasted mineral to works at which the copper is extracted. Such an establishment has been founded by F. Claudet and J. A. Phillips at Widness, near Liverpool.

Spanish and Portuguese pyrites vary little in their composition. The following is a fair average from the mines of San Domingo, which furnish about half the pyrites used :—

Sulphur	49·00
Arsenic	0·47
Iron	43·55
Copper	3·20
Zinc	0·35
Lead	0·93
Lime	0·10
Water	0·70
Quartz residue	0·63
Oxygen and loss	1·07
	100·00

In the last item (1·07) are comprised traces of a great number of metals.

These pyrites, after being roasted in the manufacture of sulphuric acid, form the material treated for the extraction of copper. They contain, with slight variations,—

Sulphur	3·76
Arsenic	0·25
Iron	*58·25
Copper	4·14
Zinc	0·37
Cobalt	Traces.
Silver	Traces.
Lead	1·14
Lime	0·25
Insoluable residue	1·06
Water	3·85
Oxygen and loss	26·93
	100·00

The traces of silver amount to from 20 to 28 grammes per ton according to assay, and can be extracted with profit by the process now to be described.

The pyritous residues are first pounded and sifted, and are then roasted in a reverberatory furnace, at a very low temperature, with chloride of sodium. The oxidation of the metallic sulphides and the decomposition of the chloride of sodium which follows give rise to the formation of sulphate of soda and soluble chloride of copper. When it is found by assay that the mineral has been sufficiently roasted and has become cool enough, it is placed in a large wooden tub with a double bottom forming a filter, and is several times washed with water slightly acidulated with hydrate of chloride until the copper is removed. The insoluble residue remaining in the tub consists almost entirely of oxide of iron and has about the following constituents according to analysis :—

Sesquioxide iron	96·20	= iron 67·35
Sulphate of lead	0·86	
Copper	0·18	
Cobalt	Traces.	
Alumina	0·45	
Lime	0·46	
Soda	0·10	
Phosphoric acid	0·00	
Arsenic acid	Traces.	
Sulphuric acid	0·49	
Sulphur	0·16	
Chlorine	0·03	
Silica	1·22	
	100·15	

This oxide of iron, on account of the uniformity of its composition, is sold to the iron workers, where it is used with advantage to line the puddling furnaces. The washings from which the copper has to be recovered are poured into other tubs previously supplied with pieces of iron. Chloride of iron is thus formed and metallic copper precipitated taking with it the small quantity of silver contained in the liquid. The precipitated copper is then melted and refined to bring it to the state of merchant copper. The liquid from which the copper has been separated still contains salts of iron and the alkalies which are lost, but in the subsequent operations adopted in our works we obtain on the one hand sulphate of soda nearly absolutely pure, and on the other oxide of iron in a state of very fine division suitable for polishing glass. The liquor before the precipitation of the copper by the iron contains, as stated, silver dissolved in the state of chloride. This cannot be extracted by precipitation with metallic copper, for the silver being soluble in a mixture of chloride of sodium and bichloride of copper, the precipitation cannot take place until all the bichloride is reduced to the state of protochloride by the metallic copper added. Then the most minute quantity of silver is wholly precipitated by the excess of copper, but also with some protochloride of copper which the chloride of sodium is no longer able to hold in solution. It is necessary, therefore, to have recourse to a further separation, the cost of which more than absorbs the value of the silver. This process is of no economic value. There is another method of separating the silver from the copper, which consists in converting the precipitate into sulphate of copper; but, as the market for this is limited, this method is only applicable to a limited extent.

After much research I have arrived at the following mode of separation. It is founded on the fact that iodide of silver is nearly soluble in solution of chloride of sodium at ordinary temperatures.

The mineral roasted with common salt undergoes, as has been before stated, several successive washings, but only the first three waters contain a notable quantity of silver.

* Representing 83 of Fe O.

We have found by experience that the two first waters contain about 80 per cent., and the three first 95 per cent., of the total quantity of silver dissolved. According to analysis of one of these waters marking 1·24 on the areometre, a cubic metre of this liquor contains—

	Grammes.
Sulphate of soda	144·171
Chloride of sodium	63·914
Chlorine (in combination with other metals)	66·143
Copper	52·855
Zinc	6·857
Lead	0·571
Iron	0·457
Lime	0·743
Silver	0·0437
	335·7547

Minute quantities of arsenic, bismuth, and other minerals are omitted in this analysis. The above is only given as an example, for the silver here given as 43·7 grammes varies in our operations from 25 to 75 grammes to the cubic metre, according to the richness of the mineral and the degree of concentration of the liquors. We only employ the three first washings; these are poured into a wooden cistern and allowed to remain till the solid matters in suspension settle, and, in order to employ the quantity of iodide absolutely necessary, we commence by determining the quantity of silver contained in the liquor. To effect this, a given quantity is taken and diluted with water, a little hydrochloric acid is added to retain the copper in solution; then a weak solution of iodide of potassium is added drop by drop, which converts the soluble chloride of silver into insoluble iodide; at the same time, by the addition of a solution of acetate of lead, we throw down a heavy plumbic precipitate which entangles all the silver. This precipitate is dried and melted with a flux with addition of metallic iron. The resulting lead button is cupelled and the quantity of silver held in the liquor thus determined. The clear assayed liquor is then run into another vessel, where the quantity of iodide of potassium shown by the assay to be required is added diluted with a quantity of water equal to about one-tenth of the cupreous liquor. The whole is then agitated and afterwards allowed to settle for 48 hours. The supernatant liquor is then clear. This is drawn off, and the vessel again filled for a fresh operation, and so on (the iodide of silver not being quite insoluble, about 5 grammes to the cubic metre remain in solution and pass into the copper). After every fiftieth charge the accumulated deposit is collected. It consists principally of sulphate of lead, iodide of silver, and salts of copper. The latter are easily separated by a washing with weak hydrochloric acid. The deposit thus freed from copper is decomposed by metallic zinc which in presence of water rapidly and completely reduces the silver with the formation of soluble iodide of zinc. The following are the products:—(1st) soluble iodide of zinc, which is filtered off, and, after "tritration," is used instead of iodide of potassium in the subsequent operations to precipitate fresh quantities of silver; (2nd) a deposit, rich in silver, composed in great part of lead in the state of metal and of sulphate of lead besides several other substances. The following assay of a dried sample will give an example:—

Silver	5·95
Gold	0·06
Lead	62·28
Copper	0·60
Oxide of zinc	15·46
Oxide of iron	1·50
Lime	1·10
Sulphuric acid	7·68
Insoluble residue	1·75
Oxygen and loss	3·62

This analysis shows that all the iodine of the iodide of silver has combined with the zinc and become soluble since the deposit does not contain any or only traces. The gold appears here for the first time. It must have existed in the mineral, and it would appear that in the operation of roasting chloride of gold is formed, which, rendered more stable by the presence of chloride of sodium, is not reduced at the low temperature of this roasting. This chloride therefore enters into solution with the silver, and is precipitated with it by the iodine. It is now easy to separate from these products the precious metals by the ordinary processes of fusion for matters containing gold and silver.

During 1871 we operated on 16,300 tons of roasted pyrites, from which we extracted gold 3,172 grammes, silver 333,242 grammes, being a little more than 20 grammes of the precious metals to the ton, which produced 80,800 francs after deducting cost of melting and refining. The special expense of separation of the precious metals is about 10,400 francs; in this is included 137 kilogrammes of iodine, representing the loss of this substance, and 1,900 kilogrammes of zinc. It is remarkable that the gold which is not present in the mineral in weighable quantity should be sufficient, nevertheless, to cover all the cost of the operation. The cost of the iodine, always high, has become much more considerable by the abnormal increase of the cost of this substance. This has called my attention to the use direct of the washings of the "varech" ash instead of iodide of potassium, and recent experiments in this direction have answered our expectations. Not only are we able by this means to utilize all the iodine contained in this varech, of which a great part, as is well known, is usually lost, but also these

trials have suggested the idea of an inverse operation, on which I am engaged, for manufacturing iodine, which consists in precipitating this metalloid from the washing of the varech ash by means of a salt of silver. This separation of 20 grammes of precious metals to the ton of burnt pyrites is doubtless small; but, when we reflect that in England alone the operation can be applied to 340,000 tons of mineral and produce thus, with a proportionally increased profit, 7,200 kilogrammes of precious metals of a value of 1,700,000 francs, we shall see that such an annual result should not be neglected. The above process can also be employed for various cupreous minerals capable of treatment by the wet method, and we are beginning to apply it to the copper ores of Cornwall, which contain generally more silver than Spanish pyrites, and and which at present are only worked by the dry method and for the extraction of their copper only.*

APPENDIX D.

List of specimens of Quartz with Gold visible for the Museums of Madras and Calcutta.

Madras Museum.

Wright's Level	99
Wither's Reef	2
Rosedell Reef	4
New Reef—Prince of Wales'	1
Waterfall Reef	1
Hamlin's Reef	1
Cavern Reef	3
Bear Reef	1
Etucull Reef	2

Leader, Trevelyan Estate	3
Reef, Adeline Estate	2

APPENDIX E.

Yield of Gold from Quartz and Pyrites sent from Reefs near Devdla as ascertained by Analyses made by J. Cosmo Newbery, Esq., B. Sc., Melbourne, Victoria, Australia.

On the 3rd December 1878 specimens of quartz and pyrites were forwarded to J. Cosmo Newbery, Esq., B. Sc., who has the control of the Laboratory and Technological Museums in Melbourne, and the yields as reported by him are as follow:—

		Yield of gold per ton. oz.	dwt.	grs.
1.	Pyrites, adit below Wright's Level	2	12	16
2.	Pyrites, Cavern Reef	1	16	0
3.	Pyrites, Wright's Level	1	6	10
4.	Pyrites (auriferous), Wright's Level	(Assay lost)		
5.	†Skull Reef Quartz and Pyrites (the yield of silver in addition was from this sample at the rate of 37 oz. and 6 dwts. per ton)	49	10	0
6.	Cubes of pyrites and limonite near the Alpha Mine	3	1	19
7.	Quartz near Alpha	6	4	3

* "The results obtained by this process at the Widness Metal Works show that 0·65 ounces of silver and 3 grains of gold may be extracted from each ton of ordinary Spanish pyrites at a total cost, including labor, loss of iodide, &c., of 8*d.* per ton, or 12·3*d.* per ounce of silver produced. If from this amount be deducted the value of the gold, the expense of working a ton of ore is reduced to 2*d.*, thus leaving a profit of about 3*s.* on each ton of ore treated."

Elements of Metallurgy by J. Arthur Phillips, pages 681-2.

Mr. Miller, of the Melbourne Branch of the Royal Mint, is of opinion that, should the process prove available in this colony [Victoria], it would give rise to the formation of a new industry in the manufacture of iodine from the sea weeds of the coast.

† Mr. Cosmo Newbery states that there was a little free gold in this sample, the most of it enclosed in the pyrites. His report is dated 10th June 1879.

APPENDIX F.

The more important localities where rocks have been collected during the progress of the survey of the Gold Fields in the Wynaad.

1. Wynaad Prospecting Company's area.
2. Pookote, South Wynaad.
3. Hills east of Harewood.
4. On road to reef west of Alpha Mill.
5. Adit below Wright's Level.
6. Westbury below Seegur Ghât (Mr. C. R. Dawson).
7. Carcoor Ghât.
8. Sheardale.
9. Devála.
10. Eddacurra.
11. Downham.
12. Iron ore, Harewood.
13. Nundhutty.
14. Trevelyan.
15. Sandhurst.
16. Karambaut.
17. Etucul.
18. Richmond.
19. Gadbrook.
20. Hamslade.
21. Needle Rock.
22. Near the Hospital, Devála.
23. Elizabeth.
24. Nanjanad.
25. Marlimund.
26. Avalanche.
27. Simla.
28. Sispara and Sispara Ghât.

NOTE.—In some cases a large number of specimens were collected from the abovenamed localities.

APPENDIX G.

The more important districts or localities in the Madras Presidency where auriferous quartz veins occur, or where there are abandoned gold workings, or where gold-mining operations are now carried on, are as follow:—

1. Devála.
2. Pandi River.
3. Nelliallum.
4. Choladi.
5. Charambadi.
6. Moopenaad.
7. Vytheri.
8. Karambaut.
9. Kellakumpoya and Caracoorpoya.
10. Eddacurra.
11. Nilambúr.
12. Nanjanad Valley.
13. Avalanche towards Sispara.
14. Coonoor and near Wellington.
15. Palghât Valley.
16. Toodakull River.
17. Arliparambur Rivulet.
18. Arnakyem River.
19. Carcatode Stream.
20. Sea-beach from Parparangady to Caraloondy and thence to Beypoor.
21. Kutchambara on the bank of the Coodarapoya.
22. Carumpoya and Poonapoya.
23. Mijar and Karkal in South Canara.
24. Támbraparni.
25. Godavari.

APPENDIX H.

Table showing the yield of gold per ton of samples of quartz taken from reefs in the Wynaad, Carcoor Ghât, and Nilgiris, as determined by assay.

(Compiled for convenience of reference.)

The letters show by whom the assays were made.

(*a.*) W. King, B.A., Deputy Superintendent of the Geological Survey of India.

(*b.*) R. Lindon.
(*c.*) Johnson and Sons, Assayers to the Bank of England and Her Majesty's Mint.
(*d.*) W. Maylor.
(*e.*) R. Brough Smyth.
(*f.*) J. Cosmo Newbery, B.Sc., Superintendent of the Laboratory and Technological Museums, Melbourne, Victoria (Australia).

NOTE.—The samples marked (*e*) contained no gold visible to the eye unless so stated in the column of remarks.

No.	Letter.	Name of reef.	Proportion of gold per ton. oz. dwt. grs.	Remarks.
1	(*a*)	Skull	0 11 0	Mr. King gives the higyest proportion as 25 dwts. and the lowest as 2 dwts.

The following Assays (Wynaad Prospecting Company's Work) form an appendix to Mr. King' Report—"Record of the Geological Survey of India," No. 3, 1878:—

	oz.	dwts.	grs.
Catch-pits, not burnt	0	6	7
Do. burnt	0	3	21
Blanket, not burnt	0	4	20
Buddle, burnt	0	4	18
Reverberatory Furnace, hand ground	0	11	16
Do. do. not ground	0	3	8
Do. do. hand ground	0	6	3
Blanket Tailings, English Assay	0	1	7
Catch-pit Tailings, do. do.	0	1	5
Average of 200 ton heap, English Assay	0	9	0
Same stuff, Wither's Assay	0	9	8
Do. do. Koorumber's Assay	0	2	9
Koorumber's Assay, Bear Reef, No. 2	1	3	0
Do. do. do. „ 1	0	10	0
Do. do. Sand from trials	0	2	12
Do. do. do.	2	5	0
Do. do. do.	1	0	0

Mr. Lindon in his report to the Southern India Alpha Gold Mining Company gives the following as the results of some assays of "Tailings" of various description :—

	oz.	dwt.	grs.
Burnt Tailings from works	1	3	8
Tailings packed up in river	0	15	13
Do. from outflow to tyes	1	11	0
Iron pyrites washed out from sand in outflow launder	2	6	16

Assays of Tailings and sand from the Alpha Work were made by me: sand from the Reverberatory furnace yielded at the rate of 9 dwts. 11·36 grs. per ton; and Tailings from the catch-pits gave at the rate of 3 dwts. 15·36 grains per ton.

Assays were made by me of five samples of stone forwarded from Estates near Vythery by Mr. J. L. Yonge and gold was found in all; but one only gave a weighable button.

Two samples of stone sent from the Chumberra Estate by Mr. R. Lamb; twelve collected near Charrambaddi and Vallerymulla; one from the Grange Estate sent by Captain Ponsonby Watts; one from the Eagle Estate sent by George Salmon; two from Teriott and Glenmary Estate sent by Mr. Percy Batty; two from Cheppa Toda; and three from the Glenlee Estate, Manantoddy, sent by Mr. J. H. Anderson, were tested and gold was found in minute particles in fourteen

The quartz crushed by the Alpha Company from 1st to last was 779½ tons; and the yield of gold per ton was 2 dwts. 8·43 grs.; the quartz crushed by the "Prince of Wales' quartz Reef Gold Prospecting Company" was 322⅔ tons, and the average yield of gold was 10 dwts. 12 grs. per ton.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 13th February, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding.*
His Honour the Lieutenant-Governor of Bengal, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Whitley Stokes, C.S.I., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore, C.S.I.
The Hon'ble C. Grant.
The Hon'ble E. C. Morgan.
The Hon'ble J. Pitt Kennedy.
The Hon'ble G. C. Paul, C.I.E.
The Hon'ble H. J. Reynolds.

PROBATES AND ADMINISTRATION BILL.

The Hon'ble MR. STOKES presented the Report of the Select Committee on the Bill to provide for the grant of Probates of Wills and Letters of Administration to the estates of certain deceased persons.

DISTRICT DELEGATES BILL.

The Hon'ble MR. STOKES also presented the Report of the Select Committee on the Bill to make further provision for the grant of Probate and Letters of Administration in non-contentious cases.

NORTH-WESTERN PROVINCES RENT ACT, 1873, AMENDMENT BILL.

The Hon'ble MR. COLVIN moved for leave to introduce a Bill to amend the North-Western Provinces Rent Act, 1873. He said that the present Rent Law of the North-Western Provinces, which was contained in Act XVIII of 1873, had been in force for rather more than six years, and during that time had worked successfully. As might be expected, however, some errors and inadvertences had come to light in its operation, some doubtful questions of interpretation had been raised, and the necessity of introducing one or two new provisions into the law had been shewn. The Bill which he wished to introduce was intended to supply these deficiencies. The precise nature of the amendments which were contemplated would be fully set forth in the Statement of Objects and Reasons accompanying the Bill, and it did not seem necessary to recapitulate them on the present occasion. They would be found to be mostly unimportant changes. At the same time a few of them could not be long delayed without causing inconvenience and mischief. The time, therefore, seemed to have come for undertaking the first of those revisions which a law of that description periodically required. A similar revision of the Land-revenue Act of 1873 was undertaken upon the like grounds, and had

been completed during the last year; and he trusted that, with the explanation which he had now given, the Council would consent to the introduction of a corresponding measure for the revision of the North-Western Provinces Rent Act.

The Motion was put and agreed to.

MERCHANT SHIPPING BILL.

The Hon'ble MR. STOKES asked leave to postpone the presentation of the Report of the Select Committee on the Bill relating to Merchant Shipping.

Leave was granted.

BURMA SURVEY BILL.

The Hon'ble MR. RIVERS THOMPSON presented the Report of the Select Committee on the Bill to provide for the demarcation and survey of land in British Burma.

MULTÁN DISTRICT LAWS BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to declare the law in force in certain lands annexed to the Multán district. He said that the tract of land in the Baháwalpur State now occupied by the line and premises of the Indus Valley State Railway was, in 1872, ceded by that State to the British Government in full sovereignty. This tract had, by a notification of the Governor General in Council of the 11th of July last, been declared to be subject to the Lieutenant-Governorship of the Panjáb, and, by a notification of the 2nd September, 1879, issued under the provisions of Act No. VI of 1867, the Lieutenant-Governor of that Province had included it within the limits of the Multán district. Now, most of the laws in force in the Panjáb operated in all the territories for the time being administered by the Lieutenant-Governor of the Panjáb, but some of such laws (for instance, the much amended Panjáb Laws Act, IV of 1872) operated only in the territories subject to the Lieutenant-Governor at the dates at which they were respectively enacted. The effect of the two notifications was, therefore, to bring only a portion of the law in force in the Multán district into force in this tract. It was obviously desirable that the law throughout that district should be the same; and as this result could not be attained without legislation, the present Bill had been prepared at the request of the Local Government. It consisted of a single section declaring generally that all enactments in force in the Multán district on the day when the tract in question became portion of that district should be deemed to have come into force in this tract on that day.

The Motion was put and agreed to.

FACTORIES BILL.

The Hon'ble MR. COLVIN moved that the Hon'ble Mahárájá Jotíndra Mohan Tagore, the Hon'ble Sir A. Arbuthnot and the Hon'ble Mr. Reynolds be added to the Select Committee on the Bill to regulate labour in Factories.

The Motion was put and agreed to.

The Council adjourned to Friday, the 20th February, 1880.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

SYDNEY EXHIBITION.

Dated Elizabeth Street, No. 717, Sydney, N. S. Wales, *via* Galle, the 23rd December 1879.

From—MAJOR M. CLEMENTI, Bengal Staff Corps,

To—The Offg. Secretary to the Government of India, Home, Revenue and Agricultural Department.

I have the honour to acknowledge the receipt of your letter marginally noted, with copy of telegram of the 17th October.

No. 267, dated Simla, the 24th October 1879.

2. In the face of considerable difficulties, which I need not now more refer to, I have managed to display all the exhibits with the exception of one large carpet.

3. I have been careful in the matter of expenditure, which has been less than I estimated. As requested by you, I will furnish a detailed account of the expenditure at the close of the Exhibition.

4. I gather from the newspapers that the Government of India purpose participating in the forthcoming Melbourne Exhibition. Melbourne, I may say, is very far in advance of Sydney in civilization, and I would therefore suggest that the art manufactures for that Exhibition should be selected with care.

5. I would suggest for selection the following:—

Castor and other oils; Indian pottery; a small quantity of Bombay blackwood furniture and sandalwood goods; Lucknow, Sindh, and Kashmir silver-ware, *surahis*, and so on; *chaddars;* shawls; *choghas; malida* and similar cloths, silks, muslins, cottons, prints, *chikan* work, carpets; a small and light Swiss cottage tent complete, with iron pegs, and a small sleeping *pál;* native jewellery; Benares, Moradabad, and Gujrat metal wares; Agra mosaic and inlaid stone work; Jaipur figures in marble; photographs; papier-maché; ivory work; medicinal barks and roots; dyes; tea; coffee; spices; tobacco; rice; sugar; shell lac, rough and prepared; gunny cloth and bags and woolpacks.

6. It would be a saving of expense, labour and material being so much dearer in these colonies than in India, if the show-cases could be sent down with the exhibits; they should be of teak, or some other strong wood, and the larger ones should be packed in pieces, the glazing and polishing being left to be done at Melbourne.

7. The show-cases sent down from Madras are not suitable for the protection of the exhibits from persons or from the atmosphere and dust; and as they were sent glazed there was loss from breakage. Moreover, the style of the cases do not admit of good arrangement, or for the most advantageous display of the exhibits.

8. Some of the teas from the Bengal side were sent down in stopper bottles; but the packing was so bad that a large number of the bottles were, on arrival, found to be broken. The treatment packages receive in transit to this is so rough as to necessitate strong cases and the most careful packing. In some instances the bottles were smashed to atoms. I had better mention also that the indigo from Madras came through the wrappers, and discoloured some of the grain exhibits; and some of the coffee bags (which are not of very strong material) burst, and the contents got mixed.

9. The labels for the exhibits from either Presidency were not very securely fastened on, and many came off.

10. I think that stopper bottles are as good and inexpensive a way as there is for exhibiting teas, coffee, spices, grain, manufactured tobaccos, oils, sugar, dyes, roots, &c., &c.; for chinchona barks, tobacco leaf and other long exhibits bottles are unsuitable. The labels might be placed at the bottom part of the bottle, and be of such size as to leave the contents of the upper part open to view. In addition to other descriptive matter, the labels had better give

the prices. This is the more important as prices are not allowed in the official catalogue. This suggestion as to marking the prices applies to all exhibits, and not only to those in bottle.

11. The bottles might be packed in strongly made cases with the tops screwed, not nailed, down, each bottle being in a separate partition, and these cases should not be too large. This method of packing may be dearer than that commonly adopted, but it will, I venture to say, prove to be cheaper in the end.

12. There would seem to be no occasion to send more than fair samples, and a 40-ounce bottle will, as a rule, hold quite sufficient tea both for exhibition and for tasting. If it be considered advisable to send larger quantities then the bulk might be packed separately; but the samples in bottle should, I think, be sent; for to open tea and keep it exposed for any time is to cause it to deteriorate in flavour, and exposure to the air is not necessary until the time for judging. Large and nicely printed cards, giving names and addresses of respective exhibitors and their local agents, together with any description necessary or advisable (descriptive matter not being permitted in the official catalogue), might well accompany the different collections of exhibits.

13. I found that the catalogue sent from Madras was not in accord with the official classification and rules promulgated by the Sydney Commission. But, as I had to make a general catalogue for the entire Indian section, this did not much matter; and I distributed the Madras catalogue as an unofficial one. Copies of the Indian catalogue will reach you, I trust, by the Torres Straits mail leaving this on the 27th instant. The descriptive and unofficial part preceding the catalogue, headed "Statistics," I compiled from the Madras catalogue and other sources. Had there been time I should have referred to your department for this part; and I would suggest that the statistical and descriptive portion of the Melbourne catalogue be supplied from India.

14. The prices marked on the metal wares and on the shawls do not tally with those given in the lists I received from your department. I am disposing of those articles at the prices marked on them, although these are somewhat lower than the prices given in the list.

15. May I ask you to do me the favour to correct the statement officially made in India that I am a retired officer?

I have the honour to be,

SIR,

Your most obedient Servant,

(Sd.) M. CLEMENTI, *Major*,
Bengal Staff Corps.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 17th FEBRUARY 1880.

General Remarks.—Rain fell during the week throughout Northern India, and has greatly benefited the spring crops. The rain in Behar has done some little harm. There were a few showers in Rajputana, Central India, the Central Provinces, Bombay and Madras. More rain is wanted in some districts of the last-mentioned province. Public health and agricultural prospects remain good on the whole.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 18th)		
Bellary ...	...	*Ragi* 37·24; standing crops generally fair; harvest of Bengal and horse-gram; second crop paddy being sown.
Kurnool ...	...	*Ragi* 29·85; harvest of white *cholum* and Bengal gram, outturn fair; pasture and water ample.
Ganjam (Feb. 18th)	·7 (in one station).	*Ragi* 31·54.
Kistna („ „)	...	*Ragi* 30·46; standing dry crops doing well; some *ragi* and black gram sown; no water over anicut.
Chingleput (Madras) ...	...	*Ragi* 22·34; cultivation proceeding actively; standing crops generally good; harvest of wet and dry crops progressing, outturn ½ to ¾; pasture sufficient.
Coimbatore ...	...	*Ragi* 22·55; wet and garden crops fair; dry crops generally want rain; harvest of paddy ½ to full, a few dry crops ⅓ to full.
Tanjore ...	...	*Ragi* 28·98; crops generally good; rain required in one taluk; harvest progressing, outturn ⅝ to full.
Madura ...	...	*Ragi* 24·69.
Malabar ...	·97 (in one station).	*Ragi* 22·01.
Travancore ...	...	Prices unchanged; paddy crop good; harvest over.
		General Remarks.—General prospects good; rain urgently wanted in North Arcot, Trichinopoly, Tinnevelly and Coimbatore for dry and tank-raised crops.
Bombay—(Feb. 18th)		
Kurrachee ...	·03 in Mirpur Batoro, ·03 in Tatta, ·05 in Bulakhan, and ·09 in Kéti.	*Rabi* crops generally looking well; some injury to crops in Dadu from frost; fever prevalent; considerable mortality amongst cattle in three talukas; 16 cases of small-pox in Dadu, 3 fatal; 9 cases, 5 deaths, in Shahbandar.
Hyderabad ...	...	Report not received.
Ahmedabad ...	...	Crops promising; cold severe; public health good.
Baroda ...	...	Agricultural prospects good; cotton-picking continues; prices stationary.
Surat ...	...	Crops generally healthy.
Násik ...	...	Ague in two talukas; cattle disease and measles in Dindori; no fresh cases of cholera at Igatpuri; *rabi* crops fair.
Colaba (Bombay) ...	·01 on the 17th.	Abnormal temperature 3 degrees cool till 12th, 1 degree cool till 16th, and 6 degrees cool on 17th; vapour in air largely in defect of normal till 12th and on 17th, and slightly in excess on remaining days; abnormal wind northerly till 12th, then southerly till 16th, and on 17th strong from north-west.
Poona (Feb. 15th)	...	Slight cholera in Poona city.
Ahmednagar ...	...	Harvest of *rabi* crop continues.
Sholapore ...	...	Harvest progressing; public health good.
Dharwar ...	...	Report not received.
Kánara ...	...	
Rajkot ...	A few drops of rain on the morning of 16th.	Weather windy and very cold; harvest of wheat crop in progress; healthy.
		General Remarks.—Weather cold; slight rain in parts of Gujrat and Sind; one death from cholera in Poona City; no fresh cases at Igatpuri; crops healthy.
Bengal—(Feb. 17th).		
Chittagong ...	*Nil*	Weather fair; prospects of cold-weather crops continue good; cholera almost abated.
Dacca ...	3·72	Crops good; health good.
24-Pergunnahs (Alipore)	0·91	Prospects good; peas, gram, &c., being collected; sugarcane being pressed, and juice converted to molasses; tobacco leaves being cut; health of people good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Moorshedabad ...	1·18	Prospects of crops good; fever and cholera in mitigated form in some thanas of Sudder sub-division; cholera also broken out in a village in Jungypore sub-division.
Rajshahye ...	0·37	Weather unsettled in beginning of week; wind variable; a storm with slight rain on evening of 9th; moderately heavy rain on night of 11th and morning of 12th; since then bright, clear, and cool; *rabi* crops thriving; *boro dhan* being transplanted; in some places *amun* being sown in low lands; 8 cholera cases and 4 deaths in two villages in thana Manda.
Burdwan ...	4·72	General heavy rain; crops promise very well; slight injury by hail in Culna.
Cutwa ...	3·25	
Culna ...	1·50	
Raneegunge ...	6·70	
Rungpore ...	1·36	Weather cloudy; winter crops good; public health good.
Bhágalpur ...	1·86	Weather cloudy and chilly; prospects of *rabi* crops improved by rain; general health good.
Purneah ...	1·33	Standing crops benefited by rain, but mangoes damaged.
Patna ...	2·21	Rain has damaged *rabi*.
Durbhanga ...	1·65	Weather cloudy; rain generally beneficial to *rabi*; some small damage to cut tobacco; prices stationary; public health good.
Hazáribágh ...	1·55	Weather cloudy and cool; rain considerably damaged gram, *kodo*, *masoor*, poppy, *mohwa*, and mango; other *rabi* crops, barley, linseed, and mustard ready for harvest; general health good.
Cuttack ...	1·54	Winter crops good; small-pox still prevalent. *General Remarks.*—Rain general over province, except in Chittagong division and in Backergunge, Tipperah, Pooree, Balasore, and Singbhoom; it has greatly benefited all standing crops, and also ploughing for *aus*, but damaged in some places crops in blossoms and those being reaped; slight injury done by hail in Culna; small-pox still prevalent in Cuttack, Pooree, Cooch Behar, and in some places in Chumparun, and cholera in Rampore Hat; cases of small-pox and cholera also reported in some other places; public health otherwise good.
N.-W. Provinces and Oudh—		
Benares (Feb. 17th)	·7 (average)	Prospects good.
Allahabad („ „)	·6 in east and south.	General benefit so far to crops, especially to gram; clear weather is now wanted; a little hail in parts; wheat 13⅜ seers; coarse *chawal* 20; unhusked *dhan* 34½.
Gorakhpur („ 16th)	·5	Weather continues cloudy with light rain; dampness is likely to injure spring crops; public health good.
Jhánsi („ 18th)	...	Weather cloudy; *rabi* prospects fair; prices almost unaltered; health good.
Agra (Feb. 17th)	Slight rain on 17th.	*Rabi* crops good; sky cloudy and threatening; health good; cattle disease still continues in Jarar.
Bareilly („ 18th)	Heavy rain with thunder.	Slight damage by hail; prospects of harvest excellent.
Meerut („ „)	1·3	Prices falling slightly.
Kumaun („ 17th)	Snow and rain	Severely cold; the rain was accompanied by strong wind.
Lucknow („ 15th)	·5	Prospects good.
Partabgarh („ 16th)	·25 at Sadr and ·2 at Patti.	Prospects good in all the three tahsils; rain has much benefited the *rabi* crops.
Sitapur („ 18th)	·3	Weather stormy.
Fyzabad („ „)	·3	Prospects good. *General Remarks.*—Rain has fallen in every district which has benefited the *rabi* crops; prices have slightly fallen; slight damage done in Allahabad and Bareilly by hail; clear weather now wanted; cattle disease continues in Agra; health continues good.
Punjab—(Feb. 17th)		
Delhi ...	*Nil*	Prospects good; health fair; prices steady.
Hissar ...	Slight rain	Crops thriving; prices steady; health good.
Umballa ...	1·5	Crops and health good.
Jullundur ...	1·4	Health good; prices improving; crops promising.
Lahore ...	·5	Crops and health good.
Ferozepore ...	·7 at Sadr	Prices steady.
Siálkot ...	·5	Prospects of harvest good.
Ráwalpindi ...	·5	Prospects good; health improving.
Peshawar ...	Slight rain	Harvest prospects fair; prices steady.
Mooltan ...	·3	Crops and health good.
Dera Ismail Khan ...	Slight shower	Health good; prospects fair. *General Remarks.*—Prospects continue favourable, rain having again fallen over a considerable portion of the province.
Central Provinces—		
Nágpur (Feb. 18th)	...	Clear and cool; *rabi* cutting continues; prospects good; no epidemics; prices stationary.
Jubbulpore ...	Few showers	Clear and cold; *rabi* promising; small-pox continues; prices slightly easier.
Saugor ...	...	Clear; *rabi* promising; health good; prices declining.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*contd.*		
Seoni	...	Cloudy and cold; prospects of *rabi* fair; four cases of small-pox.
Hoshangabad ...	...	Cloudy; *rabi* doing well; health good; prices stationary.
Raipur (Feb. 14th)	...	Days warm; nights cool; *rabi* promising; cattle disease continues; prices unchanged.
Sambalpur („ 13th)	....	Cloudy and warm; no crops on ground; small-pox and cattle disease in places. *General Remarks.*—Cloudy and close at the commencement of the week, clear and cold now; linseed and pulses being gathered, also wheat in some districts; prospects continue good; prices stationary.
British Burma— (Feb. 18th)		
Akyab ...	...	Public health normal; cattle disease very slight.
Rangoon	...	One fatal case of cholera; 15 fatal cases of small-pox; a few cases of cholera and small-pox in the Hanthawaddy District, otherwise public health good; health of cattle good; reaping completed.
Bassein	...	Public health good.
Prome	...	Thirty-five deaths from small-pox in Prome town; small-pox also prevalent in Mahathaman.
Amherst (Moulmein) ...	...	No further report of cholera from Yay; public health good.
Toungoo	...	A few cases of small-pox, otherwise public health fair. *General Remarks.*—Public health generally good; small-pox somewhat prevalent; a little cholera and cattle disease.
Assam—(Feb. 18th)		
Gauháti	·5	Weather seasonable; land being ploughed for *asu* cultivation.
Sylhet	2·83	Ploughing for *amun* and *aus* progressing; latter part of the week cloudy and rainy, also cold.
Cachar	1·73	Weather cold and rainy; no rice crops on the ground; common rice 14½ seers per rupee; public health good.
Dibrugarh ...	·37	Weather cloudy and cool; small-pox and cattle disease prevalent.
Mysore and Coorg— (Feb. 18th)		
Bangalore ...	...	Crops in good condition; prospects favourable; fever prevalent; murrain amongst cattle in parts; prices generally stationary.
Mysore ...	...	No report received.
Mercara ...	...	
Berar & Hyderabad— (Feb. 18th)		
Amráoti	...	Reaping of *rabi* crops continued.
Akola	...	*Rabi* crops doing well.
Central India States— (Feb. 18th)		
Indore	...	Weather cold; health and agricultural prospects good.
Morar (Gwalior) ...	...	Health good; sky cloudy; prospects good; no change in prices of food-grains.
Sutna ...	·45 at Rewah ...	Prospects improved; *jowar* 30 seers.
Rutlam ...	Two slight showers.	Weather cold and windy; health and agricultural prospects good.
Neemuch ...		Weather cloudy and cold; health and crops good.
Goona ...	...	Weather cloudy and stormy; health and crops good; wheat 13 seers.
Bhopal ...	...	Weather cloudy; health good.
Ágar ...	...	Weather cloudy; health good; agricultural prospects favourable.
Nowgong ...	...	Report not received.

G. L. MOLESWORTH, Esq., C.E., Consg. Engr. to Govt. of India,
COL. J. G. MEDLEY, R.E., Consg. Engr. for Gd. Rys. to the Govt. of India,
CAPT. W. J. ENGLEDUE, R.E., Offg. Manager, D. and Manmád S. Ry. } „ „ State Railways,

CAPT. R. A. SARGEAUNT, R.E., Depy. Consg. Engr. for Guantd. Railways,
Secy. to the Conference.

2. The Conference held seven meetings and was dissolved on the 13th January.

3. The Conference was convened for the purpose of revising the code of Rules and Regulations for Indian Railways, and also for considering the question of adopting some uniform system of recording locomotive miscellaneous services. Other subjects hereafter mentioned, however, were permitted to be brought forward and were fully discussed.

4. The draft code of Rules and Regulations, which had been previously circulated, was discussed, and after laying down general principles and fixing certain salient points, a Sub-Committee of ten was appointed to consider the rules in detail. The following are the names of the gentlemen elected to serve :—

G. L. MOLESWORTH, ESQ., Consulting Engineer for State Railways ... CHAIRMAN.
W. S. BETTS, ESQ., Agent, South Indian Railway Co.
F. PRESTAGE, ESQ., Agent, E. B. Railway Co.
S. HARTWELL, ESQ., Deputy Agent, O. and R. Railway Co.
D. W. CAMPBELL, ESQ., Locomotive Superintendent, E. I. Railway Co.
N. ST. L. CARTER, ESQ., Traffic Manager, E. I. Railway Co.
H. CONDER, ESQ., General Traffic Manager, G. I. P. Railway Co.
D. ROSS, ESQ., Traffic Manager, S. P. and D. Railway Co.
F. H. TREVITHICK, ESQ., Locomotive Superintendent, Madras Railway Co.
A. W. RENDELL, ESQ., „ „ N. B. State Railway.

5. The existing rules for the record of train-mileage and locomotive services were revised.

6. On the proposal of Mr. Mathew, it was agreed to recommend that "the carriage of material, including coal and ballast, on Revenue Account, be charged to the Department requiring the material."

7. At the request of the Delegates from the East Indian, Madras and Great Indian Peninsula Railways, a rule regarding the interchange of rolling-stock at junctions was passed subsidiary to Rule XVII of the Conference of 1879.

8. On the motion of Captain Wallace, it was decided to solicit Government to appoint a Committee to revise the forms of statistics of Railway working.

9. Mr. Campbell brought forward the advisability of adopting one system of continuous brakes for all Indian Railways.

10. On a proposition by Colonel Medley, the establishment of a central clearing-house was considered, and it was found to be the opinion of the Conference that the time had not yet arrived for such an institution.

11. A memorandum on the claims of Guaranteed Railway staff to Government pensions and retirement allowances signed by nine of the Delegates was recorded.

12. Certain questions were raised as to the application of the Government Savings Bank rules to Guaranteed Railway employés.

13. The adoption of an uniform goods classification for all India was considered, and an opinion recorded.

RESOLUTION.—The Government of India learns with satisfaction that a code of general Rules and Regulations for all Indian Railways is in course of preparation, and awaits the result of the labors of the Sub-Committee.

The opinions given on the system of recording train-mileage and locomotive miscellaneous services will receive full attention ; and revised rules, based on the various resolutions passed, should be prepared and submitted for sanction.

The proposal to charge for the carriage of all Revenue stores would, if carried out, involve such a radical change in the Revenue Accounts that the Government of India hesitates to adopt it without further consideration, and desires to communicate with Her Majesty's Secretary of State on the subject before passing any definite orders.

It is trusted that the subsidiary rule, which has been added to the rules for the interchange of rolling-stock passed at the Conference last year, will remove all difficulty experienced as regards this important question, and that the several Railway Companies will unite in rendering every facility in their power for the expeditious and effective working of through traffic by which the general welfare of the country as well as that of each Railway undertaking is greatly affected.

A Committee will be appointed as suggested to revise the present form of Railway statistics.

The Government of India considers the question of uniformity of continuous brakes for all connected Railways one of great importance, and fully concurs in the views brought forward by Mr. Campbell ; and, in order to avoid the adoption of various systems on different Indian lines, desires that no system be adopted without its previous sanction.

The thanks of the Government of India should be communicated to the Railway Delegates for the service they have rendered and for the valuable opinions they have recorded.

ORDER.—Ordered, that this Resolution, together with the proceedings of the Conference, be communicated to the Governments, Administrations, and Officers marginally noted, for information and guidance ; to the Foreign Department for transmission to the Chief Commissioner of Mysore and Coorg for information and guidance, and to the other Departments of the Government of India for information.

Madras, Bombay, Bengal, North-Western Provinces and Oudh, and Punjab.
Central Provinces, British Burma, Assam, Hyderabad, Central India and Rajputana.
The Director General of Railways.
The Consulting Engineers for Guaranteed Railways.

Ordered also, that this Resolution be communicated to the Secretary of State.

Ordered also, that this Resolution be published for general information in the Supplement to the *Gazette of India*.

ALEX. FRASER, Major-Genl., R.E.,
Secretary to the Govt. of India.

RAILWAY CONFERENCE, 1880.

Proceedings of the Conference of Railway Delegates assembled at Calcutta on the 6th of January 1880, in accordance with Government of India, Public Works Department, Resolution Nos. 262—81 R T, dated 18th November 1879.

No. 1.

1. The Conference assembled at the Public Works Secretariat in Calcutta at noon on Tuesday, the 6th January 1880.

PRESENT :

MAJOR-GENERAL J. S. TREVOR, R.E., Director General of Railways, ... PRESIDENT.
BRADFORD LESLIE, Esq., C.E., Agent and Chief Engineer, E. I. Ry. Co., VICE-PRESIDENT.

G. A. BARNETT, Esq., Agent,	Delegates from G. I. P. Ry. Co.,	MEMBERS.
H. CONDER, Esq., General Traffic Manager,		
F. MATHEW, Esq., C.E., Agent and Chief Engineer,	" " B. B. & C. I. Ry. Co.,	
D. ROSS, Esq., Traffic Manager,		
C. SANDIFORD, Esq., Locomotive Superintendent,		
T. COX, Esq., C.E., Officiating Chief Engineeer,	" " S. P. & D. Ry. Co.,	
S. HARTWELL, Esq., Deputy Agent,		
J. G. COOKE, Esq., Locomotive Superintendent,	" " O. & R. Ry. Co.,	
FRANKLIN PRESTAGE, Esq., Agent,		
J. BRANDER, Esq., Traffic Superintendent,	" " E. B. Ry. Co.,	
CAPTAIN W. A. J. WALLACE, R.E., Engr.-in-Chief and Manager, N. B. S. Railway,		
A. W. RENDELL, Esq., Locomotive Supdt., N. B. S. R.,	" " Bengal State Railways,	
G. L. MOLESWORTH, Esq., C. E., Consg. Engr. to Govt. of India,		
COL. J. G. MEDLEY, R.E., Consg. Engr. for Guaranteed Railways to the Government of India,	" " State Railways,	
CAPTAIN W. J. ENGLEDUE, R.E., Offg. Manager, D. and M. S. Railway,		
D. W. CAMPBELL, Esq., Locomotive Superintendent,		
N. ST. L. CARTER, Esq., Traffic Manager,	" " E. I. Ry. Co.,	
W. S. BETTS, Esq., Agent,	" " S. I. Ry. Co.,	

CAPTAIN R. A. SARGEAUNT, R.E.,
Deputy Consg. Engr. for Railways ... Secretary to the Conference.

The following telegram was received from Madras :—

"Agent and Locomotive Superintendent, Madras Railway, will reach Calcutta on Thursday night for Conference."

2. The Conference proceeded to consider the general Rules and Regulations.

As in the general opinion of the Conference the draft rules entered into too much detail, it was agreed in the first instance to decide on what points rules should be drawn up and submitted for the sanction of the Governor General in Council in accordance with Section 8 of the Railway Act of 1879, for general adoption on all Indian Railways.

3. Mr. Conder, General Traffic Manager, Great Indian Peninsula Railway, remarked that as the Conference was constituted, it was a question whether each delegate should have a separate vote, and proposed that—

The State Railways combined, and that each Railway Company have only one vote each. On this point there was some discussion, but it was decided that the votes should be taken individually, each delegate having one vote.

4. The subjects comprised in Sections I, II, III and VI having been discussed, it was agreed that the following rules of the draft be struck out, being replaced, where necessary, by subsidiary rules framed by each Railway Administration :—*viz.*, Rules 4, 23, 29, 32, 33, 34, 37, 39, 40, 41, 44, 48, 97, 138 (first para.), 148, 151, 153, 154, 158, 163 and 165.

It was also decided that—

Rule 129 be transferred to Section VIII, "Guards."

" 163 be replaced by a new rule.

Rules 167 and 168 be transferred to Section I, and that—

Rule 169 be placed after Rule 171.

The Conference adjourned till the following day.

No. 2.

5. The Conference re-assembled at 11 A. M. on Wednesday, the 7th January.

Present :—As at Meeting No. 1.

6. The consideration of the general Rules and Regulations was continued, and the subjects comprised in Sections IV, V, VII, VIII and IX as far as Rule 293 having been discussed, it was agreed that the following rules of the draft be struck out, *viz.*, 63, 78, 84, 86 to 93 inclusive, 175, 176, 180, 183, 187, 197, 206, 212, 218, 225, 226, 228, 229 (last two paras.), 232 (first para.), 237, 239, 249, 252, 253, 254, 256, 260, 261, 288 (last two paras.), 290 (last para.)

It was also decided that—

Section V should be re-cast so as to conform more closely to the existing practice on Indian Railways.

That—

The note at head of Section VI should be incorporated in the definitions, and that—

Rules 191, 223 and 289 be entirely re-cast.

From Rule 224 to omit from "when" in line 4 to "Station" in line 8.

In Rule 278 the latter portion stand as follows :—"without a written order, except in cases of unavoidable necessity to be established by the engine driver".

In Rule 282 the portion after "distant signal" in line 7 be omitted.

The Conference adjourned till the following day.

No. 3.

7. The Conference re-assembled at 11 A. M. on Thursday, the 8th January.

Present :—As at previous Meetings, with the addition of—

A. M. SAUNDERS, Esq., Agent and Manager.	Delegates from Madras Railway Co.
F. H. TREVITHICK, Esq., Locomotive Superintendent,	

8. The consideration of the general Rules and Regulations was continued to the end of Section X.

It was decided that the following portions of the draft be struck out, *viz.*,—

In Rule 294 from the word "when," line four, to the word "station" inclusive ; Rules 296, 298 para. 3 : 300 para. 2, the words "and must not

stop short of, or overrun the platform," 300 para. 5, in note 303 all words after "operation," rules 305, 306, 307 para. 1, 309, 310, 316, 320, 321, 322, 322 *a*.

It was decided that the following rules be added in the proper place, *viz.*—

Engine drivers with trains must run within the limits of speed fixed for the section of the line they are upon; but these limits, on the 5 feet 6-inch gauge are not on any line to exceed for passenger trains 60 miles an hour, and for goods or mixed trains 30 miles an hour, and on the metre gauge, are not to exceed for passenger trains 40 miles an hour and for goods or mixed trains 20 miles an hour.

Engine drivers with trains must not make up between stations more time than is allowed to be made up in that distance by the Railway Administration.

It was agreed to strike out the following, *viz.*—

Rules 332, 334, 344 para. 2, 345, in rule 346 the words from "every" to "also" inclusive, 347, 348 the words "in a length of at least twenty yards," 360 the words "to secure themselves from the risk of passing trains, 361, 364, 365, 366.

It was decided that—

in 335 for "one mile" read "$\frac{1}{2}$ mile on the level and $\frac{3}{4}$ mile on a falling gradient steeper than 1 in 250"

in rules 336 and 338 that "a quarter of a mile" be substituted for "half a mile," and after "miles" in 338 para. 1, add or such lower speed as may be ordered.

That—

A general rule on the subject of rule 345 be added to Section I.

Rule 340 be modified as follows:—

No lorry used for the conveyance of material, or trolly for the conveyance of men may, in any case, be placed on the line, except by the authorized person, who is responsible for its proper protection and use according to the rules in force on the Railway.

In 339 for "is" substitute "loaded or empty," and omit the words "or men along the line," for "three quarters of" substitute "half," for "any" substitute "a double."

That—

After the word "lorry" in rule 341 the words "or trolly" be added.

That after the word "due" in rule 342 the words be added "except on lines worked on the block system when the time must not be less than five minutes."

In 357 for "two feet" "three feet" be substituted.

9. It was proposed by Mr. Barnett that—

the consideration in detail of the rules generally agreed to, be referred to a Sub-Committee.

This was agreed to without dissent.

The Conference adjourned till the following day.

No. 4.

10. The Conference re-assembled on Friday, the 9th January, at 11 A. M.

Present:—As at Meeting No. 3.

11. The President proposed that—

A Sub-Committee of ten members of the Conference, *viz.*—

2	from the E. I. Railway,	1	from the B. B. and C. I. Railway,
1	„ O. and R. Railway,	1	„ G. I. P. Railway,
1	„ S. P. and D. „	1	„ S. I. „
1	„ Madras „	2	„ State „

be appointed to revise the rules in detail.

And that the revised rules, when prepared, be circulated to the Railway Administrations for re-concurrence on general principles before submission for sanction of the Governor General in Council.

Mr. Saunders proposed as an amendment that—

from the General Conference, 3 Sub-Committees be formed from the 3 Executive Departments to consider and reframe the rules, and to report to the General Conference as soon as they have completed their work. It being suggested to them that one week should be sufficient for the purpose.

The amendment was lost.

Mr. Molesworth proposed that—

four Officers be elected by the Members of the Conference to consider the wording of the rules, *viz.*:—

An Agent,
An Engineer,
A Traffic Manager,
A Locomotive Superintendent,

and that a State Officer nominated by the President be added to act as Chairman of the Sub-Committee, having only a casting vote.

This amendment was lost.

The original proposition being carried, the following were elected Members of the Sub-Committee, *viz.*:—

Mr. Molesworth, Chairman.

Mr. Carter.	Mr. Conder.
„ Campbell.	„ Trevithick.
„ Hartwell.	„ Betts.
„ Ross.	„ Prestage.

Mr. Rendell.

Colonel Medley proposed that—

In case no reply is received from any Railway Administration within six months of the date on which the revised rules are put in circulation, it shall be understood that such Administration has no objection to their being formally sanctioned.

12. This was carried *nem con.*

13. The consideration of the general Rules and Regulations was continued.

It was decided that—

In Rule 368 all words after "Train-guards" be struck out.

In Rule 371 the word "require" be substituted for "direct".

Rule 372 read "No ballasting is to be carried on except with permission of the Engineer in charge of the section of Railway."

Rule 373 be struck out.

Rule 376 be made to agree with 342.

Rule 377 be repeated in section of definitions.

In Rule 382 the words "when authorized" be struck out and after "fog" "or dust storm" be added—

Rule 383 read "Ballast trains may be run with a pushing engine on a written order, but in such cases the speed must not exceed fifteen miles an hour," or be re-cast in these terms to agree with Rule 295.

In Rule 386 the words "*viz.*, a tri-coloured hand lamp, red, green, and white flags, and 12 detonating signals," be struck out.

In Rule 387 omit "locked."

Rule 389 be omitted.

In 395 omit "person from."

In 398 for "test the" read "satisfy himself of the proper."

In Rule 401 for the words "when the following precautions must be adopted" substitute "on the authorized rules for working in such cases in force on the Railway."

The subsequent portion of Section XIII be struck out.

14. On the proposal of Mr. Barnett it was agreed that the Sub-Committee be requested to revise Sections XIV, XV, XVI, XVII and XVIII, and frame a set of general Rules for each system of working applicable to all Indian Railways.

Mr. Saunders observing that the system in force on the Madras Railway was not provided for, it was agreed that a section should be added to make good the omission.

Mr. Conder proposed that—

Rule 1 in Section I be modified as follows :—

Every line of Railway upon which engine power is used for the conveyance of passengers must be worked upon one of the following systems, namely—

A.—Line clear obtained by telegram by which either authority is given for one train only to run between any two stations at one time, or authority is given for trains to follow each other between any two stations at intervals.

B.—Train despatching.

C.—Train Staff and Ticket.

D.—Pilot Guard.

E.—One Engine only.

in accordance with the Rules laid down in Sections * * for the several systems respectively.

Mr Molesworth proposed as an amendment that—

Rule read—

Every line of Railway upon which engine power is used for the conveyance of passengers must be worked on one of the following systems, *viz.* :—

"Line clear and caution message."

"Absolute Block."

"Train Despatching."

"Train Staff and Ticket."

"Pilot Guard."

"One Engine only."

in accordance with the Rules laid down in Sections * * for the system adopted.

Mr. Saunders proposed as an amendment that—

The wording of Rule 1 be left to the Sub-Committee with instructions to define the systems under which lines may be worked with or without an electric telegraph.

The amendment being lost Mr. Molesworth's amendment was put to the Meeting and carried.

15. Major A. Filgate, R.E., Officiating Accountant General, Public Works Department, joined the Conference.

SYSTEM OF RECORDING SHUNTING AND OTHER MISCELLANEOUS LOCOMOTIVE SERVICES.

16. Proposed by the President that—

All light Engine running required to equalize the up and down traffic mileage be classed as traffic train-mileage, and that the divisions under train-miles run for the Traffic Department be—

Passengers.
Goods.
Mixed.
Light.

After discussion this was carried by a majority.

17. Proposed by Mr. Barnett that—

The mileage of mixed trains be divided between coaching and goods in the proportion of the mileages of the goods and coaching vehicles on such trains, and that light engine mileage be reckoned as goods or coaching according to the class of train from which the necessity for such light mileage arose.

This was agreed to.

18. Proposed by Mr. Mathew that—

In the opinion of this Conference it is desirable, and that it be recommended that the carriage of material, including coal and ballast on Revenue Account, be charged to the Department requiring the material.

The proposition was adopted.

The Conference adjourned till the following day.

No. 5.

19. The Conference re-assembled at 11 A. M. on Saturday the 10th January.

Present :—As at the latter portion of Meeting No. 4 with the exception of Colonel Medley and Captain Wallace who were unavoidably absent.

20. Proposed by Mr. Leslie that—

Para. *c* of the existing Government rules as follows be adhered to.

Proposed by Mr. Ross as an amendment that—

The mileage of trains containing vehicles running on revenue account be divided on the same principle as that adopted for the division of mixed train, between coaching and goods.

The amendment being lost, the original proposition was carried.

21. Proposed by Mr. Cox that—

A mileage allowance be made per hour for the whole time engines are kept under steam for the Engineering Department.

Carried.

Mr. Cox proposed that a rider be added to the preceding, *viz.*, that—

The above rule does not apply to any time-table train running for the Engineering Department.

This proposition was lost.

22. Mr. Leslie proposed that—

The mileage allowance for engineering trains be at the rate of 8 miles an hour, with a minimum of 5 hours a day.

Mr. Trevithick proposed as an amendment that—

The mileage allowance for engineering trains be at the rate of 10 miles an hour with a minimum of 60 miles a day.

Mr. Cooke proposed as an amendment that—

The mileage allowance for engineering trains be at the rate of 6½ miles an hour.

Both amendments being lost, the original proposition was carried.

23. Proposed by Mr. Saunders that—

The time for engineering trains be reckoned from the time the engine is taken charge of each day by the Traffic Department for working the train until it is released from duty by the Traffic Department.

Carried.

24. Proposed by the President that—

The time occupied at stations by traffic train engines standing in steam be not taken into account.

Carried.

25. Proposed by Mr. Trevithick that—

If any engine is lighted up by order of the Traffic Department, but not used, a minimum allowance of five hours be made to the Locomotive Department as shunting mileage.

Proposed as an amendment by Mr. Carter, that "three hours" be substituted for "five hours."

The amendment was carried.

26. Mr. Campbell proposed that—

Any shunting done by train engines at road-side, terminal and changing stations, beyond ten minutes shunting done to their own trains, be booked from commencement, a certificate for the same being obtained from the Station Master.

Mr. Conder proposed as an amendment that—

No shunting certificate be given for less than 15 minutes ; and that the first 15 minutes shunting be not reckoned.

The amendment was carried.

27. Mr. Campbell proposed that—

All shunting done by engines, specially provided at the request of the Traffic Department at terminal, changing, or other stations, be reckoned, and that the whole time such engines are standing in steam be allowed.

Carried.

28. Proposed by the President that—
The word "piloting" be struck out in clause *e* of the present Rules, and the words "standing in steam for traffic purposes" be inserted instead.

Carried.

29. Proposed by Mr. Campbell that—
All time of engines used for shunting or standing in steam for traffic purposes be reckoned at five miles an hour.

Mr. Saunders proposed as an amendment—
That the rate be fixed at 6 miles an hour.

The amendment being lost, the original proposition was carried.

30. Proposed by the President that—
The word "piloting" be limited to engines running for the protection of trains, and that the mileage of such engines be reckoned as traffic train-mileage.

Carried.

31. Proposed by Mr. Barnett that—
No record be kept of the time occupied in lighting fires, and getting in and out of shed.

Carried *nem con.*

The Conference adjourned till Monday the 12th January.

32. At Meeting No. 6, when the proceedings were read for confirmation, it was

Proposed by Mr. Molesworth that—
In the heads *d*, *e*, and *f* of the Government Rules the word "time" be struck out, and that the heads read—

(*d*).—Miles run in assisting disabled engines.
(*e*).—Miles run in shunting calculated at 5 miles an hour.
(*f*).—Miles run for miscellaneous services calculated on the actual distance run.

Carried.

33. Proposed by the President that—
The resolutions arrived at be embodied in a revised draft of rules for recording mileage, and that they be adopted from the 1st January 1880.

Carried.

No. 6.

34. The Conference re-assembled at noon on Monday the 12th January.
Present :—As at the latter portion of Meeting No. 4.

35. The proceedings of Meetings 1 to 5 were read, and the proposals shown in clauses 32 and 33 were added.

36 Mr. Saunders stated that—
Since the introduction of the rules for interchange of rolling-stock passed at the last Conference, questions have arisen respecting the working of Rule XVII. And the East Indian and Great Indian Peninsula Railway Companies join with the Madras Railway Company in requesting that this rule may be discussed by the Conference before it separates.

It was agreed to discuss the question.

37. Proposed by Mr. Leslie and seconded by Mr. Saunders that—
Rule XVII should only be brought into force when the daily average excess of wagons passing the junction in one direction exceeds for one week thirty per diem, and in that case the forwarding Company should not be called upon to take more than one-third of such excess number in empties. The demurrage on these empties to be paid at the rate of two pies per ton of carrying capacity per hour instead of at the usual rate. This ruling to have force from the 1st January 1880.

Carried without dissent.

The Conference adjourned.

No. 7.

38. The Conference re-assembled at 11 A. M. on Tuesday the 13th January.
Present :—As at Meeting No. 6.

39. The proceedings of Meeting No. 6 were read and confirmed.

40. Proposed by Mr. Ross that—
To ruling in minute 37 the following be added—
That forty-eight hours' notice be given by wire by the receiving Company of its intention to forward empties.

This was agreed to.

41. Proposed by Mr. Leslie that—
In addition to the resolution in minute 17—
It also be recommended that in statistics of Railway working, the results be shown on passenger, ton and vehicle mileage, as per attached extract of letter dated the 7th December 1878 (printed Appendix).

Proposed by Captain Wallace as an amendment—
That the present statistical returns require revision, with a view to uniformity in the statements prepared, and a reduction of the quantity of useless information furnished at great labor and expense. Government be requested to appoint a Committee to make this revision at an early date, and that Mr. Leslie's memorandum, dated 7th December 1878, be placed before the Committee for careful consideration.

The amendment was carried.

42. Proposed by Mr. Campbell that—
Proposals having been put forward for the introduction of continuous brakes, it is recommended that one system be adopted on all Indian Railways, in order that vehicles belonging to the different Railways may be so fitted as to be easily interchangeable, thus avoiding the very great inconvenience, insecurity and expense at present found to be the case on English Railways through so many different kinds of continuous brakes being in use of lines running in connection with one another.

Adopted.

43. Proposed by Colonel Medley, seconded by Mr. Saunders that—
In the opinion of this Meeting, the time has arrived for the establishment of a Railway Clearing House in some central position (such as Jubbulpore) for the whole system of Indian Railways on the basis of the English Clearing House, and that the Government be asked to undertake the subject accordingly.

For the proposition ... 3 votes.
Against ... ... 15 „

Lost.

44. Mr. Mathew, seconded by Mr. Saunders, desired that the following might be recorded in the Minutes. This was agreed to :—

The undersigned Members of the Conference, before separating, desire to submit to Government, and to the Home Boards of the Guaranteed Companies, the claims of the Members of Railway Staff in India to such privileges as regards pensions and retirement allowances as Government has allowed to the members of every other branch of the Public Service in this country.

2. The cost of pensions and retirement allowances would, in part, fall on the Railway Shareholders, and the undersigned are confident that the Railway Companies would willingly contribute their share on any scale adopted and recommended by Government.

3. The Members of the Indian Railway Staff, whose services Government has frequently in formal resolutions acknowledged, have now, during several years, been looking forward to a settlement of the claims which they have submitted; and, after the Meeting of this Conference held a year ago, it was hoped that suitable regulations would have been established.

4. Looking to the progressive increase of the revenue from Indian Railways and the further growth of that revenue, which may with confidence be anticipated, it is submitted that the provision of pension and retirement allowances for the Members of the Staff may be made—without disturbing the financial budget of the department—with real advantage to the Public Service and to the Railway Companies, as well as to the members of the working establishment.

5. The undersigned, with the conviction that the measure, whilst being only fair to the members of a service which has most arduous duties to perform, would also, by offering an inducement to continuous service, and by facilitating retirement in due time, conduce to efficient and economical working of undertakings which have now become of great magnitude, beg most respectfully to submit the subject for the consideration of Government.

A. M. SAUNDERS, Agent and Manager, Madras Ry.
W. S. BETTS, Agent, South Indian Ry.
F. MATHEW, Agent and Chief Engineer, B. B. and C. I. Ry.
F. PRESTAGE, Agent, E. B. Ry.
J. BRANDER, Traffic Supdt., E. B. Ry.
F. H. TREVITHICK, Locomotive Supdt., Madras Ry.
J. G. COOKE, Locomotive and Carriage Supdt., O. and R. Ry.
C. SANDIFORD, Locomotive and Carriage Supdt., S. P. and D. Ry.
T. COX, Acting Chief Engineer, S. P. and D. Ry.
D. ROSS, Traffic Manager, S. P. and D. Ry.

45. Mr. Conder brought up the rules lately promulgated for the formation of State Railway Savings Banks, and enquired whether the Government of India would withdraw, in the case of the servants of Guaranteed Railway Companies, the restriction of deposits to a maximum of Rs. 5,000 in one year, and also whether Government were disposed to listen favourably to any proposals for the extension of these rules to Guaranteed Companies.

The President, in reply, stated that there would probably, on application, be no objection to cancel the maximum annual limit for deposits, and that the Government of India would be inclined to regard with favour any suggestion for the extension of the State Railway Savings Banks rules to Guaranteed Companies, but that no pledge could be given, as the question would have to be referred for the orders of the Secretary of State.

Recorded.

46. Enquiry was made by the President whether it would be desirable on another occasion to bring before a Conference the question of the adoption of an uniform goods classification for all India.

On the matter being discussed it appeared that in the opinion of the Members it was certainly desirable that differences in the classifications of the several Railway Administrations should be removed as far as possible, and it was gathered that communications were frequently passing between Traffic Managers with this object, it was however impossible in a large country like India to obtain the desired result without experience and careful study of the local peculiarities of Railway goods traffic. Under these circumstances it was considered that the time had not yet arrived when a satisfactory result could be hoped for from a discussion at a Conference, and it was decided that the subject should be left to the several Railway Administrations with a recommendation that the removal of variations should continue to receive the attention of the traffic Officers.

The Conference was dissolved.

J. S. TREVOR, Major-General, R.E.,

Director General of Railways,

President of the Conference.

APPENDIX to Proceedings of Railway Conference assembled in January 1880.

Extract from letter No. 1000G., dated 7th December 1878, from the Agent, East Indian Railway, to the Consulting Engineer to the Government of India for Guaranteed Railways, Calcutta.

4. But I would draw attention to the extremely unsatisfactory nature of train mile statistics when employed as a measure of work done or as a measure of the cost of doing it. In the report on Railways in India for the year 1877-78 by Mr. Juland Danvers the following paragraph occurs:—

> "The train mile results are, however, of little worth in comparing one line with another. The proportion of train miles run to the length of a line is no real test of the work done, and the receipts per train mile alone are far from being an accurate guide as to the profitable character of an undertaking. The returns issued by the Board of Trade, showing the results of the English lines, do not give the information which would enable the only reliable comparative test of economical working to be applied. Until the number of passengers and tons carried one mile on each line is given, and the average cost of conveying a passenger and a ton of goods one mile becomes thereby ascertainable, any attempt to draw comparisons that are of real practical service or to form an accurate judgment of how the business of a railway is managed is futile."

5. The inherent defect of train mileage statistics consists in the fact that they are statistics about a collective term which designates a variable number of units and units which are themselves variable, and yet the statistics in a great measure are valuable only on the assumption that this collective term is always constant in its meaning, and that it always designates the same number of units and units always alike. A goods train, however, may be a train of 40 vehicles or of half that number, or a train with a carrying capacity of any number of tons below a certain limit, or with 35 vehicles and a carrying capacity of 350 tons, or with 35 vehicles and a carrying capacity of only 210 tons.*

6. To a great extent, therefore, train mileage statistics, unless supplemented by a great deal of other information, are almost worthless. One of the essential conditions of useful statistics of railway working is that the unit of the statistics should have a well defined invariable meaning, not only on any one particular railway, but on all railways, for this is necessary if statistics are to be fairly reliable means of comparison of working on different railways.

7. **'Ton mile' is such a unit having a definite constant meaning, and in supersession of train mileage statistics it would seem that statistics of the following nature might be usefully adopted:—**

(1) The mileage of ton carrying capacity hauled.
(2) Ton miles hauled.
(3) Vehicle mileage.
(4) The mileage of Locomotives hauling goods trains.
(5) Ditto ditto passenger trains.
(6) Ditto ditto mixed trains.
(7) The mileage of carrying capacity of passenger trains in numbers distinguishing 1st, 2nd, 3rd and 4th class.
(8) Passenger mileage distinguishing 1st, 2nd, 3rd, and 4th class.
(9) The up traffic to be shewn separately from the down traffic.
(10) Total vehicle capacity of the Railway in tons.

The difference between (1) and (2) would show the extent of empty running and how far the carrying capacity of trains had been utilized.

(1) divided by (3) would indicate the average carrying capacity of the vehicles employed, and it is important to have this information, because Sindh, Punjab and Delhi Railway wagons have a carrying capacity of 6 tons; Great Indian Peninsula Railway wagons a carrying capacity of 8 tons; East Indian Railway wagons a carrying capacity of 10 tons. The result of (2) divided by (3) would be the average load per vehicle; (3) divided by (4) plus the proper proportion of (6) would give the average number of vehicles per goods train; (2) divided by (4) plus the proper proportion of (6) the average load of a goods train. Similar results would be obtainable from the coaching figures. One of the advantages of showing the up traffic separately from the down is that some check would be afforded in respect of the empty running.

8. Some such statistics as these would offer, I think, more realiable information regarding the working of Railways than train mileage figures as they are now in use. The train mileage would, however, still be ascertainable by (4), (5) and (6).

* On the Eastern Bengal Railway Goods trains of 400 tons carrying capacity are run.

NOTE.—By adopting ton mileage in place of train mileage statistics, the difficulty experienced in apportioning on a satisfactory basis the mileage of mixed trains between Goods and Passenger train will be obviated.

GOVERNMENT OF INDIA.

Remarks.

Ganges Canal.

The total weight carried during the month is less by 1,529 tons than it was for the same period in 1878.

The chief cause of this decrease is the great sickness which has prevailed throughout the North-Western Provinces during the past season.

Boat-owners were unable to obtain crews, and many boats were idle up to the end of December simply for want of men.

Cotton, oil-seeds, and salt, all show a heavy decrease as compared with the returns for December, 1878, but it is hoped that a revival in this description of traffic will soon take place.

The stoppage of boats at the Ranjitpur bridge during the close week in the Cawnpore branch is having a marked effect on our traffic returns.

Agra Canal.

The Agra Navigation Channel was re-opened on the 20th December.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 24th FEBRUARY 1880.

General Remarks.—General rain in Madras and Bengal has benefited the spring crops on the whole, though doing some damage in parts of the latter province. In five Madras districts, dry and tank-raised crops continue to suffer from drought. Light showers have fallen in parts of all the other provinces. Public health and agricultural prospects continue good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 25th)		
Bellary ...	...	*Ragi* 27·16; standing crops generally fair; white *cholum* not very promising; second crop paddy being sown.
Kurnool ...	...	*Ragi* 29·85; harvest of white *cholum* and pulses, outturn fair; pasture and water ample.
Ganjam ...	·58 (average of 3 stations)	*Ragi* 33·57.
Kistna ...	·67 (average of 4 stations)	*Ragi* 29·98; crops under wells good; harvest of gram and oilseed, outturn ½ to ¾; water below anicut.
Chingleput (Madras) ...	1·89 (average of 7 stations)	*Ragi* 22·31; cultivation proceeding actively; standing crops generally good; harvest of wet and dry crops progressing, outturn ½ to ¾; pasture sufficient.
Coimbatore ...	...	*Ragi* 22·75; wet and garden crops fair; dry crops generally want rain; harvest of paddy ½ to full, a few dry crops $\frac{1}{16}$ to full.
Tanjore ...	1·07 (average of 9 stations).	*Ragi* 27·25; crops generally good, but require rain in one taluk; harvest of paddy and a few dry grains, outturn ⅔ to full.
Madura ..	·52 (average of 5 stations).	*Ragi* 25·02.
Malabar ..	2·31 (in one station).	*Ragi* 21·52.
Travancore ...	·05	Prices and state of agriculture unchanged. *General Remarks.*—Prospects good; in parts of South Arcot, Trichinopoly, Tinnevelly, and Coimbatore dry and tank-raised crops have failed more or less from deficiency of rain.
Bombay—(Feb. 25th)		
Kurrachee ...	Slight rain in parts.	Twenty-two cases of small-pox in Dadu, 4 deaths; 17 cases in Shahbander, no deaths.
Hyderabad ...	Heavy shower on 19th.	Weather unsettled; *rabi* looks promising; rain hoped for.
Ahmedabad ...	...	Crops promising; public health good.
Baroda ...	...	Cotton slightly injured by frost in northern division; prospects generally good.
Surat ...	...	*Rabi* harvest progressing.
Násik ...	...	Ague in two talukas; cattle disease in Sinar and Dindori; *rabi* crops fair.
Colaba (Bombay) ...	...	From 18th to 20th the abnormal temperature rose from 7 degrees cool to 3 degrees cool, at which it remained steady till the end of the week; vapour in air largely in defect of normal at beginning of week, rose till 21st, and then remained nearly normal to end of week; abnormal wind northerly till 22nd, afterwards southerly.
Poona (Feb. 22nd)	...	No cholera.
Ahmednagar ..	...	Harvest continues.
Sholapore ...	...	Report not received.
Dharwar ...	...	Harvest of late crops progressing; exotic cotton much damaged; fever decreasing.
Kánara ...	...	Report not received.
Rajkot ...	...	Weather partially cold; health good. *General Remarks.—Rabi* harvest progressing; exotic cotton much damaged in Dharwar; slight rain in Sind; small-pox in Kurrachee.
Bengal—(Feb. 24th)		
Chittagong ...	Few drops	Weather cloudy on 17th and 18th, since fair; cold-weather crops progressing well; cholera not yet abated in Moiscal.
Dacca ...	1·17	Prospects of crops favourable; public health good.
24-Pergunnahs (Alipore)	1·40	Prospects of winter crops fair; rain has helped preparation of land for *aus*; public health generally good; a few isolated cholera cases in Barrackpore and Dum-Dum.
Moorshedabad ...	4·25	Crop prospects continue good; rain general and benefited crops, but slightly injured mango blossoms; fever still in some villages of Sudder sub-division; cholera in mitigated form prevalent in four villages.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Rajshahye ...	3·85	Heavy rain on 16th and 17th; very cold and clear on 18th and 19th, warmer on 20th when clouds gathered, clear again on 21st; heavy rain did some damage to *khesari* and peas; all other *rabi* crops thriving and promise an abundant harvest; *amun dhan* and early *til* sowings going on; *boro dhan* being transplanted; mustard being cut, yield good; a few cholera cases in thana Manda.
Burdwan ...	0·9	Weather good; crops good; health good.
Rungpore ...	0·23	Weather clear and dry; prospects of winter crops good; *amun* outturn very good; public health good.
Bhágalpur ...	0·88	Weather unusually cold; prospects of crops good; general health good.
Purneah ...	0·63	Outturn of *rabi* crops good; *bhadoi* ploughing commenced; prices stationary; public health good.
Patna ...	0·84	Prospects of *rabi* good.
Durbhanga ...	*Nil*	Weather clear and bright; prospects of *rabi* continue favourable; prices stationary; public health good.
Hazáribágh ...	0·5	Weather cloudy and fine at intervals; *rabi* crops more or less damaged by late rain; prices of food-grains unaltered; general health good.
Cuttack ...	0·54	Winter and *dalua* crops good; small-pox still prevalent. *General Remarks.*—Late rain done some injury in places, but on the whole benefited crops on ground and helped ploughing for spring sowings; weather again generally very cold; small pox still prevalent in Cooch Behar and Cuttack, and cholera at Rampore Hát; some small-pox and cholera also in a few other districts.
N.-W. Provinces and Oudh—		
Benares (Feb. 24th)	*Nil* since 19th	Prospects good.
Allahabad („ „)	·2 at Manjhanpur.	Weather clear and seasonable; health excellent; slight fall in prices, wheat $13\frac{9}{16}$, coarse rice $19\frac{1}{2}$, unhusked *dhan* $35\frac{9}{16}$ seers.
Gorakhpur („ 23rd)	...	Weather clear and seasonable; *rabi* prospects excellent; health good.
Jhánsi („ 25th)	...	Weather fine; prospects favourable; prices falling.
Agra („ 24th)	...	*Rabi* crops promise well; sky cloudy off and on; health good; cattle disease continues in Jarar.
Bareilly („ 25th)	...	Cloudy; wind west; crops most promising.
Meerut („ „)	...	Weather clear; prospects good; prices falling.
Kumaun („ 24th)	*Nil.*	
Lucknow („ 25th)	...	Weather fine; prospects good.
Partabgarh („ 23rd)	1·15 at Sadr; ·1 at Kunda; ·4 at Patti; hail with rain fell in Partabgarh and Kunda on 17th.	No injury has been done to crops; prospects good.
Sitapur („ 25th)	*Nil*	Clear weather much needed.
Fyzabad („ „)	*Nil*	Prospects good. *General Remarks.*—Slight rain in Allahabad and Partabgarh; some hail fell in Partabgarh but caused no damage: prospects excellent and health good; prices falling in Allahabad and Jhánsi; cattle disease continues in Agra.
Punjab—**(Feb. 24th)**		
Delhi ...	·2	Prospects good; health fair; prices steady.
Hissar ...	Slight but general rain.	*Rabi* prospects brighter; prices falling; health good.
Umballa ...	2·3	Crops and health good.
Jullundur ...	1·0	Crops and health good; prices falling.
Lahore ...	...	Prospects good.
Ferozepore ...	1·8 at Sadr	Slight improvement in prices.
Siálkot ...	·2	Prospects good.
Ráwalpindi ...	Slight rain	Prospects good; health improving.
Peshawar ...	...	Harvest prospects fair; prices steady.
Mooltan ...	...	Crops and health good.
Dera Ismail Khan ...	...	Health good; prospects fair; rain wanted. *General Remarks.*—Prospects continue favourable, rain having again fallen over a considerable portion of the province.
Central Provinces—		
Nágpur (Feb. 25th)	...	Cloudy and close; *rabi* harvest continues; health good; prices stationary.
Jubbulpore ...	...	Cloudy and warm; *rabi* prospects good; small-pox continues; prices easier.
Saugor ...	...	Alternately clear and cloudy; pulses being harvested; prospects fair; prices stationary.
Seoni ...	...	Cloudy; *rabi* harvesting; small-pox continues.
Hoshangabad ...	...	*Rabi* harvesting; prices of *jowar* and gram fallen.
Raipur (Feb. 21st)	...	Clear and cool; prospects of *rabi* generally good; cattle disease continues; prices stationary.
Sambalpur („ 20th)	1·0	Twenty-six fields being prepared for *kharif* crops; small-pox and cattle disease continue. *General Remarks.*—Cloudy and warm; good rain fallen in Sambalpur; slight in three other districts; *rabi* harvest continues; prospects generally good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (Feb. 25th)		
Akyab ...	...	Public health good; slight cattle disease.
Rangoon ...	...	Ten fatal cases of small-pox; fever and small-pox in parts of Hanthawaddy district, a few deaths from former, otherwise public health good; cattle disease very slight.
Bassein ...	...	A few cases of cholera in Bassein town, otherwise public health good.
Prome ...	...	Small-pox very prevalent in Prome town, also in Mahathaman, 63 deaths in former.
Amherst (Moulmein) ...	...	Public health good; cattle disease very slight.
Toungoo ...	...	Public health good. *General Remarks.*—General health good; small-pox prevalent; some cholera and slight cattle disease.
Assam—**(Feb. 25th)**		
Gauháti ...	·11	Weather seasonable; lands being ploughed for *asu* cultivation; outturn of *sali* crop favourable and that of mustard tolerably good; prospects of tea fair.
Sylhet ...	·36	Some cases of cholera and small-pox reported from Karimganj and Sunamganj; sugarcane being cut and pressed; ploughing for *aman* and *aus* continues.
Cachar ...	·44	Weather cold; no rice crops on the ground; common rice 16 seers per rupee; public health good.
Dibrugarh ...	·37	Land preparing for *aus*; small-pox and cattle disease still continuing.
Mysore and Coorg— (Feb. 25th)		
Bangalore ...	...	Standing crops in good condition; general prospects favourable health good but fever prevalent; prices stationary.
Mysore ...	...	No report received.
Mercara ...	...	
Berar & Hyderabad— (Feb. 25th)		
Amráoti ...	...	Reaping of crops continued.
Akola ...	...	*Rabi* crops ripening and promise well.
Hyderabad ...	...	Season prospects not yet improving.
Central India States— (Feb. 25th)		
Indore ...	...	Weather warmer; prospects fair though opium has suffered some damage in Malwa through frost and high wind.
Morar (Gwalior) ...	...	Health and prospects of crops good; weather cloudy.
Sutna ...	...	Health and prospects good; *jowar* 37 seers.
Rutlam ...	...	Weather clear and getting warm; public health and prospects good.
Neemuch ...	...	Opium suffered severely by frost, gram slightly.
Goona ...	...	Crops and health good, wheat 15 seers.
Bhopal ...	...	Weather clear; prospects of crops and health good.
Ágar ...	...	Weather cloudy; agricultural prospects favourable; health good.
Nowgong ...	...	No report received.
Mánpur ...	...	Weather cold; slight injury to opium and gram fields; prospects good.
Rajputana—		
Abu ...	...	Report not received.
Sirohee (Feb. 21st)	...	Tanks drying; wells fairly full; health normal; crops fair; much colder.
Marwar ...	...	Report not received.
Meywar ...	...	
Harowtee ...	·04 in Deoli; ·03 in Kotah; ·04 in Tonk.	Health and prospects good.
Jhallawar ...	...	Cooler; cloudy; south-east high winds; health and prospects good.
Ajmere (Feb. 25th)	·03	Prospects excellent; small-pox prevalent.
Jeypore ...	...	No report received.
Bhurtpore ...	...	
Ulwur (Feb. 24th)	...	Rain much wanted; prospects fair.

C. BERNARD,

Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 20th February, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of Bengal, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Whitley Stokes, C.S.I., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore, C.S.I.
The Hon'ble G. H. M. Batten.
The Hon'ble C. Grant.
The Hon'ble E. C. Morgan.
The Hon'ble J. Pitt Kennedy.
The Hon'ble H. J. Reynolds.

PROBATE AND ADMINISTRATION BILL.

The Hon'ble MR. STOKES moved that the Report of the Select Committee on the Bill to provide for the grant of Probates of Wills and Letters of Administration to the estates of certain deceased persons be taken into consideration. He said that he might remind the Council that, as the law of British India at this moment stood, there was, speaking generally, no procedure for conferring upon any one a complete and conclusive title as representative of the estate of a deceased Hindú, Muhammadan or Buddhist or other person exempt from the operation of the Indian Succession Act. The primary object of the Bill was to provide such procedure, while guarding against interference with the substantive succession-laws of the classes in question. The Bill as introduced, following the course adopted in the Hindú Wills Act, incorporated by mere reference the sections of the Indian Succession Act which it was proposed to apply. This mode of legislation, it had been strongly urged by several of the authorities consulted,—by none more effectively than by Mr. Mahmud, District Judge of Rai Bareli, the son of their Hon'ble colleague Sayyad Ahmad Khán,— was likely to render the Act less intelligible and convenient to many of those who would have to use it; and the Committee had accordingly set out at length in the amended Bill all the sections of the Succession Act which it was intended should apply, and thus made the measure complete and self-contained.

Apart from this, which, though it much altered the appearance of the Bill, was a change merely in form, the amendments made by the Committee were few. The most important of these consisted in the introduction, in section 12, of the provision of the Indian Succession Act (omitted in the Bill as introduced) which barred the establishment of any right as executor or legatee, until a grant of probate or letters of administration with the will annexed had been obtained; but in introducing this provision the Committee had confined it to cases in which the property comprised in the will amounted to more than one thousand rupees —in other words the Committee proposed that every will bequeathing in the whole property worth more than a thousand rupees should be proved.

The Committee did not think that, in this limited class of cases, the considerations which had been urged against making the obtaining of probate or

letters of administration a condition precedent to the establishment of any right based on succession had any application; for in such cases the persons concerned could hardly be said to be poor or ignorant. On the other hand, the advantages of requiring the will to be proved were too obvious to call for comment. The genuineness of the document, if it were genuine, was established; authenticated evidence of the executor's title was provided; and the revenue of the country was benefited, as it fairly might, considering the advantages received by persons claiming under the will. The experiment had already been fully tried under the Hindú Wills Act of 1870, with most satisfactory results, and no hardship could reasonably be expected from applying to wealthy Native testators throughout British India what had been the law applicable for the last ten years to all Hindú testators throughout the Lower Provinces and the Presidency-towns.

With this solitary exception, the Bill remained a purely permissive measure. But it would not, he thought, be the less effective. Regarding this MR. STOKES would quote a paper by Mr. Geddes, of the Bengal Civil Service, and lately Acting Remembrancer of Legal Affairs in Calcutta. Mr. Geddes, after stating his opinion that the Bill would be useful and would supply a want which was beginning to be felt rather extensively in Bengal, went on to say,—"It is useless to ignore the fact that the Western institution of will, developed as it has been by the partial application of the Indian Succession Act, is profoundly modifying Hindú custom and usage. Musalmán customary law proves more intractable, but even this is beginning to recognize the *jus representationis* hitherto unknown to that system of jurisprudence. The change is going on. It is impossible for any one who has served as District Judge for some time not to observe a marked change of late years.....It is the people themselves who are spontaneously appreciating and resorting to this English principle of determinate succession or representation. It is they themselves who are modifying their own legal usage."

The amendment next in order of importance would be found in section 91 of the Bill, where the Committee had rendered the consent of the Court necessary to every disposition of the property made by an executor or administrator. This limitation had been considered necessary in the mufassal, where it was deemed unsafe to entrust to an executor or administrator the full powers conferred by the Succession Act. In the Presidency-towns, however, where executors and administrators at present were allowed these powers, and where, moreover, the expense attending an application to the Court would be considerable, the Committee had given the Court power to exempt the executor or administrator from the necessity of applying for its consent in each case. And in the Mufassal, though the Bill, as now settled, was in accordance with the decision of the Committee, he (MR. STOKES) would be inclined to require the Court's consent only in case of alienations of immoveable property and, perhaps, Government-securities, which were specially provided for under the Certificate Act, XXVII of 1860, section 9. To compel an executor or administrator to apply to the Court whenever he wanted to sell any of the bullocks or household-utensils of the deceased, would obviously lead to much useless trouble and expense.

Coming now to minor amendments, he might mention that the Committee had omitted in sections 8 and 14 of the Bill the words to be found in the corresponding sections of the Succession Act, making the consent of the husband a condition precedent to the grant of probate or letters of administration to a married woman. Such consent was required in England, partly because by the law of that country husband and wife were considered but as one person and as having one mind, which (according to our male lawyers) was "placed in the husband," and therefore the wife could do no act, such as taking probate, which might prejudice the husband; partly because, in all actions by or against the wife, the husband must be joined. But these reasons did not apply to India. Among a large proportion of the persons for whom the Bill was intended, married women had a proprietary status which rendered them, in the eyes of the law, almost independent of their husbands; and the technical objection as to the necessity of joining the husband in suits by or against the wife fell to the ground under the new Civil Procedure Code, section 439, which expressly declared that, unless the Court directed otherwise, the husband of a married administratrix or executrix should not be a party to a suit by or against her.

The Committee had, in section 63, required an applicant for probate to insert in his application, as an applicant for letters of administration was bound to do under the Succession Act, an estimate of the amount of assets which were likely to come to his hands. This amendment was required to complete the chain of securities at present provided by law for the protection of the revenue derived from Court-fees on probates and letters of administration, and it merely brought the Bill into conformity with the law of England (55 Geo. III, c. 184, s. 38) and the existing practice of the Calcutta High Court.

The other changes to which he would call the attention of the Council were all directed to making the measure more in accordance with the usages and circumstances of the population of the Mufassal. Thus the rate of interest (4 per cent.) prescribed by sections 307 and 313 of the Succession Act seemed to the Committee too low for the purposes of this Bill, and they had accordingly, in sections 127 and 133 of the Bill, raised it to six per cent., the ordinary Court rate, and the lowest usual rate among Natives.

Again, in introducing section 276 of the Succession Act into the Bill, the Committee had, with a view to adapting it to the ideas and practices of the classes to which the measure would apply, limited the duty of the executor to providing the necessary funds for the performance of the funeral ceremonies of his testator instead of requiring him to perform them himself, as the section as it stood in the Succession Act had been supposed by some to do. According to Hindú law, funeral-rites must be performed by certain specified persons, who might or might not be executors; and he believed that Muhammadans had similar rules on the subject.

He would conclude by mentioning what was perhaps the most important of the changes to which he had last referred. The Committee had excluded from the Bill sections 283 and 284 of the Succession Act, which provided that, in the case of a deceased person whose domicile was not in British India, the application of his moveable property to the payment of his debts should be regulated by the law of the country in which he was domiciled. Such a provision, if applied to the classes of persons for whose benefit this Bill was intended, would, the Committee felt certain, be the source of endless complications and difficulty. The vast majority of those persons, when not domiciled in British India, were domiciled in countries—such as Afghanistan, Nepal, Burma—where either there was nothing that could be called law applicable to the matter in question, or, such laws as existed were merely personal laws. Wherever this was so, to withdraw the matter from the operation of the Bill and relegate it to the territorial law of the domicile, would be in effect to remove it altogether from the sphere of ascertainable law, leaving it to be determined according to some vague principle of equity and good conscience, as compared with which the proverbial Chancellor's foot would be an absolute standard.

The Committee thought the only feasible plan in dealing with the class of persons to which this Bill applied was to subject the matter to our law in all cases without any reference to the domicile of the deceased. The Committee had the less hesitation in doing this, as the principle which allowed the law of the domicile to prevail in this particular against the law of the situs of the assets, though recognised in some parts of the continent of Europe and followed in a well-known English case (*Wilson* v. *Lady Dunsany*, 18 Beav. 293), was far from being universally accepted, was at variance with the late Vice-chancellor Kindersley's decision in *Cook* v. *Gregson*, 2 Drew. 286, and had been condemned by eminent textwriters, such as Westlake and Story, as out of place in any system founded on the English law. Practical convenience was obviously in favour of the change proposed by the Committee, and in theory the rule that the law of the situs of the assets should prevail might be supported—to quote a recent book on private international jurisprudence—by regarding all questions of the priority of creditors as touching matters of procedure, a principle asserted in general terms by jurists and recognised in English Courts as to the distribution of assets under a bankruptcy.

The Hon'ble MR. KENNEDY said that he ventured to add a few words in support of the motion of the hon'ble Member in charge of the Bill. The greater portion of it might be said to be properly merely a matter of procedure. There was, however, one provision of very considerable importance which would

effect an important change in the law, except in the Presidency-towns and in the Provinces subject to the Lieutenant-Governor of Bengal. There it merely continued the same state of the law which, so far as regards Hindús, had there existed for the last ten years. But the change seemed to him to be one that he had long thought to be requisite. His professional experience had convinced him that it was of the greatest possible importance that the basis of the title under which any rights were to be claimed should be made secure, and that probate of the will or grant of administration under which property was claimed should be obtained as early as possible. A false case was strengthened by the lapse of time; a true case became weakened. When a will was put forth after a time he had seen an array of false witnesses brought forward either in support or contradiction of it. While the facts were recent the Judge had the opportunity of coming to a right decision. But when the lapse of time had weakened an accurate recollection of the facts, if the Judge did come to a right conclusion, it might not unfrequently be rather by chance than the real weight of evidence. Therefore, it was most important to make persons understand that, if they meant to put forward a will, they should put it forward at a very early opportunity. The Bill would not prevent applications for probate of wills at later periods; but if it was made an absolute duty imposed by the law to obtain probate, it would throw extreme difficulty in the way of persons who kept them, as it were, concealed for a long time, and the grant of letters of administration in the meantime would in most cases absolutely exclude any attempt to put forward a will. MR. KENNEDY would have wished even to go further, but the change would have been too serious until the people of the country had been more accustomed to the operation of letters of administration. In numerous cases great difficulties arose in dealing with property for want of some authorised representative of the estate of a deceased person, especially in the case of Musalmáns, when their families had remained (as they often did in these Provinces) undivided for considerable periods. Under those circumstances, as a result of their peculiar system of inheritance, most infinitesimal, shares became vested in some individuals. But this difficulty would become obviated if on death the whole property became vested in some one representative of the family. He felt, however, that it was safe not at present to ask to have administration made general and compulsory. We must wait until the people of the country were convinced by experience of the working of the voluntary system, that the grant of administration to one party was beneficial for the general interests of the parties concerned.

The other modifications mentioned in the Committee's report which the Hon'ble Member in charge of the Bill had alluded to seemed to be required: they very much carried out the provisions which did exist in cases where there were managers of the property appointed under the existing Acts. A manager could not sell the immoveable property of an incapacitated person without the consent of the Court; and as to certificates taken out under the Act of 1860, special power must be given to authorize sale of Government Promissory notes.

The Hon'ble MR. HOPE said he observed that the Committee, at the end of their report, made the following recommendation:—

> "We think the amendment we have referred to in paragraph 3 *suprà* is of sufficient importance to make it desirable that the Bill be re-published; but as we do not anticipate that any objections will be made to that amendment, we recommend that this report should be taken into consideration before the end of the Calcutta sittings, so as to place the Council in a position to pass the Bill at Simla in the event of no valid objection being brought forward, say, within two months."

In order to see what the amendment referred to was, he would ask leave to read a portion of the Statement of Objects and Reasons, which ran thus:—

> "The reports of the local authorities have now been received, and their purport may be briefly described by saying that, while there is a considerable body of opinion in favour of providing the means of obtaining probate of the will or letters of administration to the estate of any deceased person when those interested desire to do so, the proposal to insist on probate or letters of administration as essential has been generally condemned, as tending to impose upon a multitude of poor and ignorant people, in cases where there is no difficulty or dispute, an unnecessary amount of trouble and expense."

On further referring to the report of the Committee, paragraph 3, it would appear that they had so far modified their previous determination as to make the Bill apply to all cases of probate in which the property comprised in the will amounted to more than one thousand rupees.

It was, perhaps, unnecessary for him to attempt to prove what the Statement of Objects and Reasons itself admitted, namely, that the proposal to insist upon probates had been generally condemned; but he would very briefly invite attention to one or two opinions which had been expressed. The Government of Madras, in their communication, which was printed as Paper No. 7, said that "the measure is not wanted in the circumstances of the country and is highly impolitic." The Chief Commissioner of the Central Provinces stated that there appeared "to be no necessity for altering the law so far as these Provinces are concerned;" and he generally concurred in the remarks of the Judicial Commissioner, who said "I consider the proposed legislation to be premature and unnecessary, and beyond the present condition of the inhabitants of these Provinces." Again, referring to the opinion received from the Lieutenant-Governor of the Panjáb, MR. HOPE thought he was not in error in understanding the qualified approval therein given to the Bill as given only to the Bill as first introduced, in which this extension of the measure did not exist. The hon'ble Mr. Justice Thornton, a late colleague of the Members of this Council, also merely said that, *as* the taking-out of probate and letters of administration was not to be compulsory in the case of those to whom the Bill applied, he thought there could be no objection to the principle of the measure.

The Hon'ble MR. STOKES thought the hon'ble Mr. Hope was out of order in speaking and quoting opinions upon the principle and substance of the Bill when the motion was simply that the report of the Select Committee be taken into consideration. Under the Rules for the conduct of business, his remarks should apparently have been made when the Bill was introduced.

The Hon'ble MR. HOPE remarked that, if there was to be no discussion now upon the substance of the Bill, he should like to be informed at what stage the discussion should take place: a prolonged discussion took place upon the Dekkhan Raiyats Bill at this very stage.

His Excellency THE PRESIDENT did not think the hon'ble Mr. Hope was out of order: if no discussion were allowed at this stage, and the Bill was passed elsewhere than in Calcutta, some Hon'ble Members might have no opportunity of speaking upon it.

The Hon'ble MR. HOPE proceeded. He had just referred to the qualified approval given by the Lieutenant-Governor of the Panjáb. In the report from the Government of the North-Western Provinces, paragraph 2, it was stated that "the proposal to render recourse to the Bill voluntary removes His Honour's main objection," which MR. HOPE took as only a similarly qualified approval.

Besides this particular objection which had been pointed out, MR. HOPE would also remark that the Bill raised a very important, broad question of principle and of policy. It was a very important question, deserving of most serious consideration, whether it was desirable to give special encouragement to the practice of making wills amongst the Natives of the country, instead of allowing property to devolve in accordance with Hindú or Muhammadan law. The Council had been told by a preceding speaker that this system of making wills was entirely at variance with old Hindú customs and usages: amongst Muhammadans the practice was allowed by their law and did, to some extent, prevail; but still MR. HOPE thought the step now proposed should not be taken without mature and careful consideration. The practical effect of the measure before the Council should also be considered, even supposing it was desirable in the abstract that the making of wills should be encouraged. There could be no question that the procedure proposed was of a highly technical nature. On this point he would not quote other authorities; but the Lieutenant-Governor of the North-Western Provinces said he would "strongly object to the application of the procedure laid down in the Indian Succession Act, as far more complicated and detailed than is in any way desiderated." The Members of the Council all knew the direct effect of introducing a highly technical law. The effect

was—and they had been told on another occasion that it was a desirable one—to force the management of every kind of dispute into the hands of the recognized agents of the parties, that was to say, of pleaders, and from this it followed that there would be an immense increase of litigation. As regards increase of litigation, the point would be perfectly obvious, but it was well expressed in one of the papers before the Council (Paper No. 6), where an officer in Mysore remarked that, "with the proneness evinced by Natives to resort to litigation, it may be concluded that the law Courts will, in a short time, be had recourse to largely to settle disputes among families, which are now adjusted by mutual arrangement or private arbitration." It was a very serious question whether such an immense amount of litigation should be encouraged and such an apple of discord thrown among Hindú and Muhammadan families of the Mufassal generally.

On these points MR. HOPE did not propose at present to give any opinion whatever; the remarks which he offered were merely for consideration in connection with the course he thought should be adopted, and with the view of showing that, in his opinion, the Committee were somewhat over-sanguine in supposing that no objection would be made to this very important amendment which they had inserted in the Bill. At any rate, he thought there could be no question that ample time should be given for the great Hindú and Muhammadan communities which were to be affected by the Bill fully to realize what was about to be imposed upon them. The change which was proposed was an enormous one. The Hon'ble Mover of the Bill had stated that the cases in which wills would be found relating to property above Rs. 1,000 in value would be very few. MR. HOPE understood him to imply that Rs. 1,000 was rather a large amount of property for an individual to have. But it should be remembered that it would include property in land; and property in land, for the purposes of litigation or otherwise, was not valued according to the annual rental, but according to a certain multiple of that rental. He had not been able to ascertain exactly on what principle the valuation of this Rs. 1,000 would be made. Supposing it were, as the Secretary, from a reference just made to him, would seem to think, that the market-value would be considered, MR. HOPE thought the market-value might be taken at from ten to twenty times the annual rental. If it were twenty times the rental, this provision of the Bill would apply to all land having a yearly rental of more than Rs. 50: if the other valuation of ten times the rental were adopted, the provision would apply to every landholder having a property yielding more than Rs. 100 a year; and who knew how many millions of such landholders there were? But even if the operation of the law was not so extensive, still its operation would be exceedingly wide.

He did not find, in the whole of the papers before the Council, one single indication that the great Hindú and Muhammadan communities were even aware of what was going on. The Council was accustomed to receive memorials from the leading associations which represented those communities in different parts of the Empire. Not one single representation of the kind had been received; there were certainly a few communications from Native officials in various parts of the country; but otherwise the Council had received no indication of the feeling of the Native communities regarding the provision to which he had drawn attention. If it were contended that it was the fault of those associations for not having been sufficiently prompt in memorializing, MR. HOPE might reply that it was only about ten months since this Bill was introduced, and that from their own experience the Council knew that it took a long time for a knowledge of the effect of any proposed legislation to be diffused; and that it was not until a Bill was approaching maturity that the general public was roused to the effect of the proposed legislation. But ten months was not the period during which the Bill, with reference to which he was pointing out these objections, had been before the public. The Bill now before the Council was a Bill of a totally different operation from that introduced ten months ago, and, therefore, the Council could not at all infer, because no representations had hitherto been made, that none would be made.

It would be observed from this that all MR. HOPE was asking for was some more time for the consideration of the Bill. He was not himself prepared to give a decided opinion one way or the other; he had too much respect for the people to consent to the gradual undermining of their most important institutions before they had been fully heard upon the proposed measure; and he had too much respect for the Committee to assume, until he had heard both sides of the question, that they were in the wrong. It did not appear to him that the other side had been heard at all; therefore, he trusted that some considerable extension of time would be allowed, or some modification made in the intention to pass the Bill in two months. The passing of the Bill on the expiry of two months would involve its being passed at Simla. There were a great many Bills which might be properly passed at Simla, and regarding which no reasonable objection could be raised. But this was not one of those cases. The probability was that, when the time came forward for consideration of the Bill at Simla, the Hindú and Muhammadan Members of the Council would not be in their places to represent the interests of their countrymen. MR. HOPE would, therefore, simply suggest that the further consideration of the Bill might very well be deferred until the Council re-assembled in Calcutta: the form in which that could most rightly be done would be by adjourning the debate to that time. But that was merely a matter of form.

His Excellency THE PRESIDENT asked if the Hon'ble Member concluded with a motion.

The Hon'ble MR. HOPE observed that the Rules required that every amendment should be given notice of three days before the consideration of the Bill upon which it was an amendment. But, on the other hand, the Rules likewise did not render it necessary that notice of the business to come before the Council should be sent to Members longer than two days before the meeting. It so happened that, before the notice of business reached him and he became aware that this Bill would come forward at this meeting, the three days required for notice of an amendment had already been broken into. But MR. HOPE believed that an amendment could be moved with His Excellency's permission. He would, with the President's permission, move that the debate on this Bill be adjourned until the Council re-assembled in Calcutta.

The Hon'ble MR. STOKES said that, as the Member in charge of the Bill, he might aver that he personally was anxious that it should receive the fullest consideration from the Native community; and though he, in common with the other Members of the Committee (of whom the Hon'ble Sayyad Ahmad was one), thought that two months would afford ample time for such consideration, he was not immutably bent upon passing the Bill at Simla. He was willing that this should be deferred till the Council re-assembled in Calcutta.

His Excellency THE PRESIDENT remarked that the Hon'ble Member had merely been speaking as to the recommendation of the Select Committee. It was not the intention of the Government to proceed to pass the Bill prematurely into law, and he hoped the Hon'ble Member would be satisfied with the assurance which the Hon'ble Mover had given on the part of the Government.

The Hon'ble MR. HOPE expressed his entire satisfaction with the assurance which had just been given.

The Hon'ble MR. STOKES said that it was incorrect to assert that the proposal to render probate compulsory had been generally condemned, and that it was an exaggeration to describe the intended change as enormous. Considering the infrequency with which the testamentary power was still exercised by Natives, he might say that ninety-nine out of every hundred persons would remain as they were before the Bill was amended—they would simply be entitled to avail themselves of the optional procedure provided in case of an intestacy. The only change which would be effected by the amendment was the extension to the wills of Native testators throughout British India of the law regarding probates, which had applied for the last ten years to every Hindú will in

the Lower Provinces of Bengal and the Presidency-towns; and even that extension was confined to wills comprising property exceeding Rs. 1,000 in value. As to the authorities which had been quoted by the Hon'ble Member as opposed to the Bill, they were both outnumbered and outweighed by authorities the other way. Besides the almost unanimous opinions of the Local Governments in favour of a permissive procedure which had led to the framing of the Bill as introduced, MR. STOKES might mention the learned and experienced Chief Justice of the Bombay High Court, who thought the Bill "much needed". Then there were the Legal Remembrancer, Bombay, the Commissioner and Judicial Commissioner of the Haidarábád Assigned Districts, the Recorder of Rangoon, the Commissioner of Ajmer, Mr. Sandford the Judicial Commissioner of Mysore, the Advocate General of Madras, Mr. Barkley the Commissioner of Jalandhar, the Government Advocate, Panjáb, the Judicial Commissioner of Oudh, the Judge of the Assam Valley Districts and others, of whom he would cite only one, a Muhammadan gentleman, the District Judge of Rai Bareli, to whose opinion MR. STOKES had before referred. This gentleman, Sayyad Mahmud, said:—

"The reasons given by the Hon'ble Mr. Whitley Stokes in his 'Statement of Objects and Reasons' for the necessity of making provision for the grant of probate and letters of administration, in respect of the estates of deceased persons of the Hindú, Muhammadan and other persuasions, are borne out by my own past experience as a practising member of the Bar. The administration of justice according to well-recognised principles of law and equity has been carried on long enough in British India to make the people aware of their rights and careful to guard them. Purchasers take greater care than formerly to investigate the title of their vendors, and the knowledge that defective title can be easily set aside by Courts of justice naturally operates to lower the value of property held by persons having defective titles. Any law which has for its object the providing of facilities for supplying purchasers with the means of obtaining from their vendors perfect titles to the subject of sale must tend to promote the contract and to raise the value of property. The absence of a law such as the one proposed in the Bill no doubt makes unnecessary litigation an almost inevitable sequence of the death of a person leaving many heirs and unsettled claims. This observation applies with especial force to Muhammadans, who, owing to the nature of the law by which they are governed, as a rule leave a large number of heirs,—father, mother, widow, sons and daughters, &c.,—being all entitled to inherit according to a very complicated code of rules."

The Hon'ble MR. HOPE asked whether the proposed law referred to in the extract which had just been read was not the Bill as first prepared and not the present Bill.

The Hon'ble MR. STOKES said that the hon'ble Member was well aware that it referred to the Bill as introduced, but the observations of Sayyad Mahmud were equally, if not still more, applicable to the Bill in its present form. With reference to the hon'ble Member's remark that the Bill gave special encouragement to the power of making wills, he begged to say that it did nothing of the kind. It recognised the validity of the testamentary power of Natives, as had long since been done by the High Courts, the Privy Council and this Legislature, and it provided, after the exercise of that power, certain safeguards which the experience of all civilized countries had shown to be necessary. He denied that the procedure prescribed by the Bill was of a highly technical nature. On the contrary, it was one of great simplicity, though of course it seemed technical to those who had not studied the subject. The multiplication table was 'technical' to people who did not know the meaning and use of numbers, factors and products. As to the assertion that the Bill would encourage litigation, he had long since learned to distrust such prophecies when made by persons unfamiliar with the working of our civil Courts, and he had already quoted a passage from the paper of Sayyad Mahmud to show that the Bill would have quite a different effect. Was it not matter of ordinary experience that people were more prone to go to law and bring or resist claims when the rights claimed were doubtful than they were when those rights were certain? The effect of obtaining probate of a will was to establish its authenticity and thus to preclude doubts as to the rights which it conferred and to stop unnecessary litigation among the parties claiming under it; and he confidently appealed to all those who had had judicial experience of the Lower Provinces and the Presidency-towns as to whether the Hindú Wills Act, by requiring

probate to be taken out, had not lessened litigation among the class to which it applied.

The only further observation of the hon'ble Member which need now be noticed was that the Council had received no memorials from Native associations upon the subject of the Bill. Several opinions had been received from Native gentlemen, most of which were in favour of the measure; and MR. STOKES thought the absence of memorials was due to the fact that the Native associations in question had no objections to urge. The Bill had been nearly a year before the Native public, and he was much mistaken if the managers of those associations, who were both shrewd and watchful, had not recognised it as likely to stop useless litigation, to prevent fraud, forgery and perjury, and (by enabling Native executors and administrators to give good titles) to increase the value of property all over the country.

The Hon'ble MR. COLVIN said that he had no objection whatever to the proposed delay in passing the Bill, but as a Member of the Select Committee, he wished to say a few words, in order to show that they neither desired to make such revolutionary changes as had been laid to their charge, nor to carry into effect such changes as they had recommended without allowing any time for their consideration.

He would point out, in the first place, that the principal innovation which the Committee advocated was far from being so important as it might appear to persons who formed their opinion of it from the Hon'ble Mr. Hope's speech. The Bill, no doubt, provided that no right as executor or legatee should be established until probate had been obtained, in cases in which the property comprised in a will amounted to more than one thousand rupees. But, as a matter of fact, he believed that the practice of making wills amongst the Hindú community was still exceedingly uncommon. He was not speaking of Bengal or the Presidency-towns of Madras and Bombay, where the Hindú Wills Act was already in operation, and where the Bill, therefore, would make no change whatever. He was speaking of the country generally; and he thought that it was within the mark to say that the number of Hindú wills executed throughout the rest of India in any one year would not exceed a few hundreds. The Muhammadans made wills more frequently; but the number of wills made by them, which comprised property exceeding one thousand rupees in value, could not be very numerous. To whatever extent this compulsory provision of the Bill did operate, its results could hardly be other than beneficial; for it provided the best safeguards that could be given against fraud and mistake, and ensured as far as possible that a testator's wishes should be duly executed.

Then, as regards letters of administration, the taking out of these had been left optional. If nothing whatever in the nature of letters of administration had hitherto been required in cases of disputed succession, it might be said that to give this optional power was a considerable change. But the law over the greater part of India already prescribed that in such cases application must be made to the civil Court for a certificate of succession by any person desiring to collect debts due to a deceased person, and declared that nobody should be compelled to pay such a debt to any person, except on the production of such a certificate. The only difference made by the Bill, if it became law, would be that instead of a certificate of succession, letters of administration would probably be applied for in future, as the position of an administrator would be more secure and better defined than that of a certificate-holder. The Bill would improve the procedure in such cases, but would introduce no great substantial change.

He did not think that these alterations of the law were of such a startling nature as had been described. Such as they were, the Committee had certainly not tried to take the Local Governments and the public by surprise in regard to them. The republication of the Bill had been recommended expressly in order to allow time for their being understood and considered. Two months might not be sufficient to allow of objections being discussed and settled; but two months were long enough to show if objections existed which would make a further delay in passing the Bill necessary.

The Hon'ble SAYYAD AHMAD KHÁN BAHÁDÚR said:—"My Lord, I think this Bill in its amended form may safely be accepted by the Council. Section 149 of this Bill has clearly provided against all possible inconsistency with the Muhammadan substantive law relating to wills, as well as with the Hindú law on the subject.

"Section 12, no doubt, is important. It has made the possession of probates and letters of administration compulsory in certain cases. But this compulsion and other proceedings provided in the Bill are simply matters of procedure. They do not interfere with the substantive law of the Muhammadans and Hindús. The passing of this Bill will, I am sure, remove all uncertainty as to the position of executors and administrators of the property of a deceased.

"With these remarks I beg to support the Motion."

The Hon'ble MR. BATTEN said that he understood that the Motion before the Council was that the Report of the Select Committee be taken into consideration. It appeared that the Committee recommended that, if no representations against the changes now made in the Bill were received within the space of two months, the Bill might be passed after the lapse of that period at Simla. It seemed to be the hon'ble Mr. Hope's desire not to oppose, but rather to intensify, the Motion before the Council; that was to say, he wished for a more prolonged consideration of the Bill as reported, in fact that there should be a period of gestation of nine months before the Council were delivered of it. He should vote for the Report being taken into consideration.

The Motion was put and agreed to.

BURMA SURVEY BILL.

The Hon'ble MR. RIVERS THOMPSON moved that the Report of the Select Committee on the Bill to provide for the demarcation and survey of land in British Burma be taken into consideration. He said that the Report of the Select Committee would show that, since this Bill was introduced into Council, very few amendments had been made in it. The Committee had been in communication with the Chief Commissioner of the Province, and at his instance an amendment had been made by the omission of the proviso which was originally attached to section 3. As originally prepared, the measure had been drawn for revenue purposes only, and it had been intended that all lands situated in towns, villages, cantonments or civil stations should be exempted from the operation of the Bill; but the Chief Commissioner reported that, in many of such places, lands existed which were liable to assessment of land-revenue and should be brought under the provisions of the Bill, which provided for the demarcation and survey of land. The Committee had, therefore, accepted the Chief Commissioner's recommendation to omit the proviso to section 3. As a consequence, in section 19 words had been added which made appeals from proceedings in connection with boundary-disputes in the town of Rangoon lie to the Recorder of Rangoon and not to the Commissioner. The Committee had also made a material amendment in section 18, providing for an appeal where the Boundary-officer might refuse to take cognizance of any objection that might be urged before him: in such a case the Committee thought it right that an appeal should lie. He might say that the report omitted to mention that the Bill had been published in due course in the *British Burma Gazette*. It had been ascertained, however, from the Chief Commissioner, that publication had taken place in that Gazette, and therefore any objection on that ground would not be tenable.

The Motion was put and agreed to.

The Hon'ble MR. RIVERS THOMPSON also moved that the Bill as amended be passed.

The Motion was put and agreed to.

MULTÁN DISTRICT LAWS BILL.

The Hon'ble MR. STOKES introduced the Bill to declare the law in force in certain lands annexed to the Multán District and moved that it be referred to a Select Committee consisting of the Hon'ble Mr. Colvin and the Mover. He had no remarks to offer.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the Bill be published in the *Government Gazette, Panjáb*, in English and in such other languages as the Local Government thinks fit.

The Motion was put and agreed to.

VACCINATION BILL.

The Hon'ble SAYYAD AHMAD KHÁN moved that the Bill for giving power to prohibit the practice of inoculation, and to make the vaccination of children compulsory in certain Municipalities and Cantonments be referred to a Select Committee consisting of the Hon'ble Messrs. Stokes and Thompson, the Hon'ble Mahárájá Jotíndra Mohan Tagore, and the Hon'ble Messrs. Colvin and Grant and the Mover. He said,—"My Lord, the Vaccination Bill, which I had the honour of introducing into the Council on the 30th of September last, has been published in the *Gazette of India*, and also in the local Gazettes in English as well as in the vernacular languages. The Local Governments have submitted their opinions and those of local officers as to the expediency of the proposed legislation. Some of the Municipal Committees and Societies have commented on the measure. All these opinions, remarks and papers are now before the Council.

"My Lord, on the first occasion when I advocated in the Council the expediency of making vaccination compulsory by legislation I said:—'I have carefully considered the difficulties which exist in putting such a law into practice; and I am aware that there are some parts of India which have not yet reached the stage when the enforcement of such measures would be advisable. The proposed Bill will, therefore, not be generally compulsory. It is not meant to be applicable to those parts of India which possess local legislatures, and its operation will be confined to such municipalities and military cantonments in British India as the Local Governments in their discretion deem fit to place under the proposed law.' I further remarked that the object of the proposed Bill was to provide a law to enable the Local Governments of those Provinces, which do not possess their own legislatures, to make vaccination compulsory in such places as they consider fit for the promulgation of such a law. I am glad to find that the opinions hitherto received from various quarters support my views; since some of the municipalities and cantonments are declared by the local authorities to be prepared to accept compulsory vaccination, while others are represented as less advanced, and not in such a state as to admit of such a law being safely enforced. The difference of opinions among the various local officers in regard to the expediency of rendering vaccination compulsory is due to the variety of local circumstances which I had in view when framing the Bill now before the Council.

"My Lord, the legislation which I have proposed meets the objections of those who oppose it, and the wishes of those who support it; since one of the most essential features of the Bill is that its adoption is permissive. If the Bill is referred to a Select Committee, I shall be glad to adopt any alterations which the Select Committee may consider necessary, in accordance with Dr. Cunningham's suggestions, to restrict the power of the Local Governments in respect of enforcing the proposed law.

"My Lord, it has been said, as a reason against the passing of the Bill, that vaccination is gradually spreading, and that the prejudices of the people against it are giving way to the beneficial influence exercised by local officers. The statement, my Lord, on which this argument is based is no doubt correct; but I may be permitted to say that the circumstance, far from furnishing an argument against the Bill, strongly supports its policy. Even the greatest opponents of the

proposed legislation do not maintain that the object in view is not desirable. The strongest argument against the proposed law is that there are still many amongst the people of this country who look upon vaccination either as unnecessary or objectionable. But in a matter of this kind the discussion resolves itself into the simple question, whether the indifference or opposition of a part of the community should be allowed to deprive the whole community of advantages which the truths of science and the conclusions of actual experience have made undeniable.

"My Lord, I am myself a Native of India, brought up under the same social circumstances and prejudices as those of my countrymen whose voice is raised against the proposed legislation. And at my time of life, my Lord, I hope I may confidently escape the imputation of arrogance in saying that I have lived long enough amongst my countrymen to have obtained a familiar insight into the laws which regulate their feelings and prejudices. I can emphatically say that the hatred which once existed against vaccination is a thing of the past, at least in the more advanced parts of British India. The opposition to vaccination, wherever it exists, is due either to the manner in which some of the underlings of the department conduct themselves, or to defects of system. Such being my views, I have no hesitation in saying that, if the causes of the opposition are removed by introducing better organization and more effective supervision, by providing facilities and by obtaining the co-operation of influential native gentlemen, vaccination will become more popular every day. But this result cannot be achieved without a legislative measure such as I have ventured to propose.

"The highest castes of Hindús have accepted vaccination. There is a memorial in favor of the Bill before the Council sent up by forty-eight of the most respectable Hindú citizens of the ancient city of Benares, a place which in the eyes of orthodox Hindús is still unsurpassed in sanctity and religious learning. To those forty-eight names I may be allowed to add that of Rájá Shimbhú Narain Singh Bahádur, a gentleman of great influence and high position in that city, and a Brahmin by caste. In a communication addressed to me he has strongly supported the policy of the Bill, and has expressed his wish that it may pass into law. It is true, as has been urged by some of the opponents of the Bill, that there are still in India many temples consecrated to the worship of *Mátá-Debí*, the goddess of small-pox, and that large numbers of people resort to these places of worship. But I feel sure that vaccination has never been regarded as interfering with the worship of this goddess or any of the ceremonies connected with it. The parents of vaccinated children perform the ceremonies of worshipping *Mátá-Debí* without the smallest feeling that a resort to the prophylactic against the disease in any way interferes with their religion.

"My Lord, I must confess I was in no small degree surprised when I read the speech of the President of the Anjumán-i-Panjáb and the communication which he has made to the Council. He seems to think that the natives of India were not aware of the source from which the vaccine lymph was taken, and that Dr. Cunningham's *Sanitary Primer* and the Bill now before the Council have, for the first time, supplied the information to the people. On this statement he has based his argument that the people will consider vaccination as interfering with their caste-prejudices.

"My Lord, I am not aware that the Government, in adopting its earliest measures to introduce vaccination, ever made a secret of the source from which the vaccine matter is drawn. I feel confident that it was never a secret to the people, nor ever regarded as doing injury to caste. On the contrary, inoculation was not unknown in India. It was called *chhopa*, while vaccination has ever since its introduction received the name of *gau-than-sitla*, which, literally translated, means cow-udder-small-pox. The name itself suggests the source from which the lymph was obtained, and there is, therefore, little foundation for the proposition that Dr. Cunningham's *Sanitary Primer* or the present Bill have, for the first time, enlightened the people upon the subject. I am in possession of two treatises upon the subject published by Dr. Pearson in the Hindi and Urdú languages in 1867, and intended for public distribution,

which furnish minute information as to the source from which the vaccine-lymph is obtained.

"I should have dwelt more upon this point had I not felt that a full answer to the objection is to be found in a sentence which His Honour the Lieutenant-Governor of the Panjáb has recorded with regard to the Society's argument. His Honour observes:—

"'There is one point which is not noticed by the Society, and which has a practical bearing on vaccination, namely, that a child of the age at which vaccination is practised on it is not, according to Hindú law, liable to ceremonial impurity, and, therefore, even though vaccine may be impure to Hindús, the child would not be made impure by it.'

"My Lord, the practice of vaccination has gained footing in some native States also. I can speak of two Hindú States in the Panjáb. The history of Patiálá, written by its able minister, informs us that vaccination was introduced in the State in the Hindú year 1933, corresponding with the year 1876. The late Mahárájá had his own son vaccinated, and all the young children of the Minister's family were also vaccinated. I have trustworthy information that, in the State of Patiálá, no less than 55,618 children were vaccinated in three years. Similarly, in the State of Kapurthalá no less than 4,394 children were vaccinated in one year.

"My Lord, I now come to another important subject connected with the Bill, namely, the prohibition of inoculation. The majority of opinions which have been received are in favour of prohibitive provisions in this respect. When one member of a family is inoculated, others are also obliged to undergo the operation as a protective measure; and the appearance of small-pox is its necessary consequence. The reasons for prohibiting inoculation make it all the more necessary that every measure should be adopted to make vaccination prevalent; for the State should not deprive the people of one remedy without supplying facilities for adopting a better and a more efficacious substitute.

"My Lord, I do not wish to take up the time of the Council in dwelling upon the provisions of the Bill. They appear in the Bill itself, and will be fully considered, with reference to the valuable opinions that have been received, if the Bill is referred to a Select Committee. But I wish to mention the principles which have been prominent in my mind in framing the Bill. I have endeavoured to make its provisions as simple as possible, to provide facilities for their being carried out, to avoid everything likely to give offence to the feelings of the people, and lastly, to encourage, as far as possible, the co-operation of Native gentlemen in giving effect to provisions of the proposed law.

"My Lord, no one can hold stronger views than I do, that no measure relating to the welfare of the public should be adopted by the State without due regard to the feelings of those to whom the measure relates. Whatever my own personal opinions might have been, I should not have ventured to seek the passing of a legislative measure like the one now under consideration, if I had felt that it would raise the opposition of the masses of the people of India, or that it would involve evils which would outweigh the advantages which can be expected from it. But the tenderest regard to the prejudices of the people does not prohibit the proposed legislation. The British rule in India has, for is guiding principles, the alleviation of human suffering and the protection of the weak and the helpless. Those principles have abolished the sacrifice of human lives at the altar of superstition, and put an effective check upon female infanticide. Who can deny that those evils were time-honoured institutions, and had become fixed habits of a portion of the population of India? Who can maintain that the State was not justified in adopting decisive measures to remove those evils? Who can maintain that the State in adopting those measures acted in opposition to the principles of toleration or humanity? And, my Lord, I feel that in advocating the measure now before the Council, I am not asking the legislature to act contrary to the principles upon which it has always acted. I am not asking the legislature to interfere with the religious prejudices of the people. I am not seeking the abolition of any of their time-honoured customs. I am asking the legislature to interfere in a matter which, to thousands of innocent and helpless children, is a matter of life and death.

I feel that I am advocating the cause of humanity against the indifference of the majority, and the vague and unfounded prejudices of a limited section of the population. The ravages of small-pox are not now involved in uncertainty. They are terrible both in their extent and their regularity. An instalment of a hundred thousand human lives is paid every year to the malady, and, my Lord, in view of this awful fact, I must confess that I find it difficult to conceive how any vague apprehensions of opposition, or the existence of unfounded prejudices, can have greater weight than the absolutely certain fact of the enormous loss of human life which the absence of a well-organized system of compulsory vaccination involves. The British rule, to whose guardianship the lives of millions are entrusted, has always felt itself called upon to adopt measures for preventing the loss of human life, and I feel that the legislation proposed by me, if sanctioned by the legislature, would only be an addition to the numerous instances of the policy of humanity which the British Rule in India has always pursued.

"My Lord, I move that the Bill be referred to a Select Committee consisting of the Hon'ble Messrs. Stokes and Thompson, the Hon'ble Mahárájá Jotíndra Mohan Tagore, and the Hon'ble Messrs. Colvin and Grant and the Mover."

The Hon'ble MR. GRANT said it was not without diffidence that he took it upon himself to oppose, in a question affecting the life and habits of the people, a gentleman who was himself a native of India, and whose opinion must command special weight owing to the prestige attaching to his distinguished career and character. In demurring to his authority, MR. GRANT felt that he was laying himself open to the charge—one not unfrequently made against Anglo-Indian officials—of being more conservative than those whose interests they sought to guard. But to that charge there was a reply which, if not altogether pleasant or satisfactory, was at least significant; and that was that, although the hon'ble mover of the Bill and those who thought with him might undoubtedly claim to represent the enlightenment and the intelligence of the country, whilst those who differed from him must admit that they were held back by the prejudice and superstition of the masses, yet unfortunately these latter made up by far the larger constituency of the two; and, however much the Council might regret their existence, they certainly could not afford to overlook or disregard them.

These were of course mere general propositions, and it might fairly enough be argued that in the Bill now before the Council the danger of ignorant opposition had been foreseen; and with that very object its operation had been limited to large towns, the population of which was presumably more enlightened and advanced than that of the country generally. He believed such an impression to be an entirely mistaken one. Unfortunately, it was from the larger towns and from the wealthier classes—whether because they were more independent in means and character, or better versed in what they believed to be the requirements of their religion than villagers—that most opposition had been experienced to the extension of vaccination. Probably all who had been concerned in promoting the cause of vaccination throughout the country would bear MR. GRANT out in this assertion; but, indeed, ample evidence in its support was forthcoming, if it were needed, in the papers now before the Council. Thus, he found that the Chief Commissioner of the Central Provinces wrote—

"In the Central Provinces, at all events, opposition to vaccination comes more from the well-to-do classes than from the poorer, who form the bulk of the population; and it seems to the Chief Commissioner questionable policy to frame a law which will place the higher classes in opposition."

And again—

"On this analogy most reluctance to vaccination would be experienced in towns, and the Chief Commissioner believes that considerable sections of the town-population would very much resent a law which will necessarily interfere with their domestic relations."

This opinion was confirmed by the Commissioner of the Haidarábád Assigned Districts, an officer whose views were entitled to much respect:—

"It (the Bill) means that compulsory vaccination is to be introduced into the largest towns and cities of India (for these alone are municipalities), inhabited by the highest and most influential classes. These are the very places into which it would be most dangerous to introduce a measure of the kind."

But then the Bill was not unprovided with other safeguards. It was permissive—permissive, that was to say, in the sense of permitting Local Governments to compel municipalities—and it was to be applied only to those Provinces which, having no Councils of their own, were unable to legislate for themselves. Certainly no measure could have been brought forward in a more moderate or modest manner. But, after paying the fullest possible tribute to the spirit in which it was conceived, surely the Members of the Council were not only entitled, but bound, to ask, what was the justification for introducing it at all? The *Indian* Provinces which it was intended to benefit—he said Indian, for Burma so differed in social habits from the rest of the Empire that it might for the present be left out of account—were the North-Western Provinces, the Panjáb, Oudh, the Central Provinces, Assam, Ajmer and Coorg. Of these the last three only showed any willingness to accept the Bill; and, whilst Ajmer and Coorg were insignificant in area and population, the Chief Commissioner of Assam only accorded a very qualified welcome to the measure. Indeed, he admitted that the native public generally would be vehemently opposed to it; and he would not avail himself of its provisions, except possibly in the single municipality of Shillong.

The larger Governments, namely, the North-Western Provinces with Oudh, and the Panjáb, followed by the Central Provinces, were strongly against the Bill. Thus, the Lieutenant-Governor of the North-Western Provinces says:—

"To declare vaccination compulsory would be apt to stimulate the dislike with which it is regarded by many, and would be a grave political mistake, as it will give a handle to mischievous agitators, by which they may work on the religious scruples of the unenlightened masses."

The Chief Commissioner of the Central Provinces stated that, in his opinion, "the proposed legislation was not necessary." The Lieutenant-Governor of the Panjáb "would have much hesitation in applying the provisions of the Bill to any town in his Province."

On the other hand, the hon'ble mover had referred to the opinions of well-known gentlemen, Hindú as well as Musalmán, to show that there was a general desire for vaccination; but if there really were such a desire, and it was genuine and general, the question irresistibly suggested itself—what need could there be for compulsion at all?

Was the Council, then, to pass such a measure as this, which would be viewed with suspicion by all the ignorant and all the superstitious, and which would be misrepresented by all the designing and all the discontented, for the sake of the small outlying territories of Coorg and Ajmer, and for the single municipality of Shillong in Assam? In that case, our task would be, at best, one of supererogation; but surely this was not a time for trying experiments or playing with prejudices. Possibly, if the legislature were bent on it, it might suppress, or at any rate mitigate, small-pox, as the Government of this country had already suppressed *satí* and mitigated female infanticide. But, setting aside all question of the comparative gravity of the cases, it was an important point to remember that vaccination was now surely and steadily extending itself without legislative aid, and that anything like compulsion would immeasurably increase the opposition to it. In the interests, then, of vaccination itself, even if there were no other reasons, he should feel bound to vote against the motion now before the Council.

The Hon'ble MAHÁRÁJÁ JOTÍNDRA MOHAN TAGORE said that, although he was not in a position to speak with authority of the feelings and sentiments of the people of the North-Western Provinces, if he understood medical opinion

aright, it ascribed the spread of epidemics of small-pox, in a great measure, to the practice of inoculation; and he therefore thought Government would be justified in passing a measure of this kind prohibiting the practice of inoculation. Inoculation was already prohibited in Calcutta and Bombay; and, if inoculation was prohibited, there ought to be a substitute for it. Besides, between inoculation and vaccination there could not be any doubt of the bulk of medical opinion being on the side of vaccination as by far the safer of the two. On that consideration he supported the Bill, remembering also that it would be of a permissive nature and would not interfere with the prejudices of the mass of the people.

The Hon'ble MR. HOPE said that he had very few remarks with which to trouble the Council on the subject of this Bill. Admitting the argument of the hon'ble Member who spoke before him, that inoculation was the cause of a large amount of small-pox, and if it was prohibited it was necessary to provide for compulsory vaccination instead, it appeared to him that the time had hardly come for going so far on either one way or the other. No one who understood these matters could refuse sympathy to the enlightened motives of philanthropy, of those especially of the Native Member of this Council, who came forward for the purpose of mitigating the suffering of the people. But at the same time it was absolutely necessary that, in matters which affected the religious scruples of the masses, the Council should proceed with caution, and he believed that vaccination would be diffused a great deal faster if they did not attempt to run before they were well able to walk.

He did not consider this Bill, although technically permissive, as really and substantially so. Properly speaking, a permissive Bill would be a Bill which provided for the introduction of compulsory vaccination under one or other of two procedures. One was to follow the analogy of the procedure prescribed by Act XXVI of 1850, when municipalities were first introduced, which was that, whenever a sufficient number of respectable inhabitants of any town memorialized the Government that they desired the law of compulsory vaccination to be introduced, it should be introduced there, after hearing any objections that might be offered and finding out that such was really the desire of a majority of the respectable inhabitants of the place. The second mode of procedure was rather more stringent. It was that the Government, when it proposed to make vaccination compulsory in any town, should notify its intention and should allow a sufficient time to ascertain the wishes of the inhabitants. Of the two safeguards, MR. HOPE should prefer the former; but, unless some such restriction was introduced, he should not support the Bill.

The Hon'ble Sir ALEXANDER ARBUTHNOT observed that he had only a few words to say on this subject. He thought the Members of the Council must all have listened with great interest to the speech which had been made that day by the hon'ble mover of the Bill. His arguments appeared to Sir ALEXANDER ARBUTHNOT to be entitled to very considerable weight. But he confessed there was a great deal to be said on the other side of the question. Since this matter was last discussed in this Council, he had been greatly struck by the great extent, if not the preponderance, of opinion which had been brought forward in opposition to the measure. As he was listening to the speech of the hon'ble Mr. Grant, it occurred to him that, although it might be inexpedient so far to stop the measure as to prevent its being referred to a Select Committee, it would be very desirable, in the event of that reference being made, that the Select Committee should consider the expediency of introducing into the Bill some such limitations as those which had been proposed by the hon'ble Mr. Hope. SIR ALEXANDER ARBUTHNOT had not very recently referred to the debate which took place at Simla, and he had not a precise recollection of what he said on that occasion; but he remembered thinking then, and he thought so still more now, that it would be very desirable that the proposed measure should not be introduced in municipalities or in large

towns until the authorities which introduced it were satisfied that there was a very strong feeling, especially on the part of the influential Natives of the place,—of those who might be supposed to lead and to guide Native opinion,—in favour of the adoption of the measure. No substantive Motion had been made by the two hon'ble members who had spoken in opposition to the Bill. If he was in order in doing so, he would beg leave to move that the reference of the Bill to the proposed Select Committe should be accompanied by instructions to the Committee to consider the expediency of providing that the Bill should not be introduced into any municipality or military cantonment, unless the authorities were satisfied that there was a preponderance of Native opinion, so far as it could be ascertained, in favour of the application of the Act. He thought that if such a provision was inserted in the Act, coupled, as it would be, with the discretion which it might reasonably be hoped would be exercised by the various Local Governments and Administrations, no serious apprehension need be entertained as to the effects which would ensue from passing the Bill.

His Excellency THE PRESIDENT said that an hon'ble colleague had suggested whether it would not be desirable to omit the word "cantonments" from the Motion which had just been made. HIS EXCELLENCY believed that no Native community could exist in cantonments without the permission of the military authorities.

General the Hon'ble SIR E. JOHNSON said he thought it would be inexpedient to allow the majority in a large bázár within the limits of a cantonment to decide whether the law should be applied.

The Hon'ble MR. RIVERS THOMPSON said the discussion, whether the Act should apply to cantonments or not, would come up when the Select Committee's report was brought on for consideration. Possibly the Select Committee would omit the reference to cantonments altogether.

The Hon'ble SIR ALEXANDER ARBUTHNOT moved the following amendment:—

"That the reference to the Select Committee be accompanied by an instruction to the Committee to consider the expediency of providing that the Act should not be introduced into any municipality or military cantonment, unless the local authorities were satisfied that there was a preponderance of local Native opinion, so far as could be ascertained, in favour of the application of the Act."

The Motion as amended was agreed to.

DISTRICT DELEGATES BILL.

The Hon'ble MR. STOKES moved that the Report of the Select Committee on the Bill to make further provision for the grant of Probate and Letters of Administration in non-contentious cases be taken into consideration. He said that the only change made by the Select Committee, beyond the correction of mere errors in drafting, consisted in requiring that an application for probate should contain an estimate of the amount of the assets likely to come to the executor's hands. The reasons for this amendment were the same as those which he had just given, when referring to a similar amendment made in the Probates and Administration Bill.

The Motion was put and agreed to.

JHÁNSI ENCUMBERED ESTATES RELIEF BILL.

The Hon'ble MR. COLVIN moved for leave to introduce a Bill to provide for the relief of Encumbered Estates in the Jhánsí Division of the North-Western Provinces. He said: "I will explain, as briefly as I can, the nature of the evil to be dealt with, the necessity which exists for legislation, and the general outlines of the measure which I wish to introduce.

"The Jhánsí District, in Bundelkhand, consists of four parganas—Jhánsí Gurotha, Mau and Moth, and lies between the great sub-Himalayan plain on the north and the high table-land of Central India on the south.

"The general circumstances of the district are not very different from those of the adjoining district of the North-Western Provinces. The people, in language, character and customs, are much the same. Their agriculture is not much more backward, if at all; and their soil is hardly less fertile. But in one respect there is an important difference between Jhánsí and the districts to the north of it; and that difference is greatly to its disadvantage. Except in one pargana, it has hardly any irrigated land at all. There are rivers and lakes in the country, but at present they supply little or no water to the fields; and the nature of the soil is unfavourable to the construction and working of wells. The people of Jhánsí are therefore dependent upon seasonable rain for their crops; and their harvests, the produce of which varies greatly from season to season, are exposed to great and constant risk.

"This absence of irrigation is generally admitted to be closely connected with the present distress of the landed proprietors of Jhánsí, and is a point which it is important to bear in mind.

"A few words are necessary, in the next place, as to the land-tenure of the district, which occupies a no less important place among the causes of its distress.

"The whole of Jhánsí has been under British administration since 1853 when Gangadhar Ráo, the last Native Ruler of the Jhánsí State, died. Under the Maráthas, the tenure of the land was raiyatwár, as was usual in Marátha States, *i. e.*, the land-revenue was taken from the individual occupier of the soil. The State was the only recognized landlord, and there was no distinction between rent and revenue. The Government collected its rents directly from the cultivators, with whom it dealt through certain headmen or representative raiyats. These headmen received a small allowance in money or land, which they shared with their kinsmen. They were not, in any sense of the word, landlords; nor were they responsible for the revenue, which usually did not even pass through their hands. They were only bound, in consideration of their allowance, to maintain and extend the area under cultivation, and to assist the ruling power generally in collecting its revenue. The mode in which the revenue was collected was not uniform. It differed with different rulers and at different times. But there was one characteristic which was common to nearly every mode of collection under the Marátha system, and that was that the demand of Government was never fixed for a term of years, but varied according to the produce. Officials were deputed by the Government who, either at each harvest or at the end of the year, made a valuation of the actual outturn of the crops, and raised or lowered the demand accordingly. It is said that this system was attended by great drawbacks, and I have no doubt that the practical working of such a plan under Marátha officials was not free from defects; but it possessed the great advantage of adjusting the revenue to the cultivators' means of paying. In a good year, they would pay more: in a year below average, less: in a very bad year, hardly anything at all. This was an advantage of the greatest importance in a country where the harvests, from their dependence on rain, varied greatly and were always precarious.

"Upon assuming charge of the country, the first change made was to extend to it the system of conferring proprietary rights upon the people and fixing the revenue-demand for a long term of years which had been so successfully followed in the North-Western Provinces.

"The officers who were entrusted with this duty, finding that there were no landowners, looked about for persons upon whom proprietary rights could be conferred, and for this purpose pitched on the headmen and those of their relations who were entitled to receive any share in the allowance made by the State. After a short time, a regular settlement for a term of years was made; and a certain portion of the cultivators of the country, namely, those who had been headmen, or were kinsmen of headmen, were recognized as proprietors, acquiring a new and valuable property thereby, and undertaking responsibilities of which, at the time, probably no one foresaw the consequences.

"Those consequences were simply disastrous. It may be thought strange, at first sight, that they should have been so. It was not unnatural to suppose that, in making such a change, a great benefit was being conferred. On the whole, the grant of proprietary rights had been a great benefit to the recipients of them, in the North-Western Provinces and Bengal. But the actual result throughout the greater part of Jhánsí has been the utter ruin of the proprietary class. Mr. Porter and Mr. LaTouche, two selected officers, were deputed two or three years ago to enquire into the condition of the three worst parganas—Moth, Gurotha and Mau—and they both agree in declaring that the people are now wholly destitute, without capital or income. There is ample evidence to show that this description, as applied to the proprietary class, is in no way exaggerated.

"Why have the grant of proprietary rights and the limitation of the demand of the State, which were beneficial elsewhere, been so mischievous in Jhánsí?

"Various causes, no doubt, have contributed to this result. In the first place, it was a mistake to introduce the alien zamíndárí system of the Doáb into a country where the tenure had been raiyatwárí for generations, and where (to quote from Mr. LaTouche) the holdings in most respects 'are now as purely raiyatwár as in the times of the Maháraths.' It would have been far wiser, as observed by the North-Western Provinces Government in its orders on the settlement of Jhánsí, if the example set in certain parts of the Sagár and Narbada territories had been followed, and all independent cultivators of standing had been declared proprietors, each of his own holding.

"In the next place, the Jhánsí zamíndárs have suffered from extraordinary calamities since they passed under British rule. They began in difficulties. Mr. Jenkinson, in his Settlement Report, has drawn a graphic picture of the general deterioration of the country, and the impoverishment of the people, at the time when the district passed into the hands of the British Government. Then in 1857 the Mutiny occurred, and the people suffered severely from the depredations of the Oorcha State and of the Ráni of Jhánsí; and, after the mutiny was over, they were compelled in many instances to pay over again to the British authorities revenue which had already been exacted from them by the Oorcha or Jhánsí troops. After this, in 1867, came a failure of crops, and in 1868 a severe famine, in which one-fourth of the whole stock of cattle in the district died, and the poorer classes emigrated and perished in large numbers. That famine was followed by several years of short harvests, and, in 1872, by a murrain, which carried off many thousands of their plough-cattle. In addition to the ordinary consequences to agriculture of such misfortunes, there is a special one in Bundelkhand. A peculiar weed known as *káns* grass springs up there rapidly in land thrown out of cultivation, and mostly in the best land. This weed is extremely difficult to eradicate, and for the years during which it retains possession of the ground it greatly impairs its productive value. The consequence of all the agricultural misfortunes which I have described was that this *káns* grass spread widely over the country.

"Much would be accounted for by such calamities as I have enumerated, but they are not enough by themselves to explain the present hopeless destitution of the zamíndárs. Other parts of the country have gone through misfortunes scarcely, if at all, less than these, and yet the power of the people to recover from them has not been so utterly destroyed. Causes more permanent in their effect than these misfortunes must have been at work to reduce the proprietors of the soil in Jhánsí to their actual state of chronic insolvency.

"It was supposed at one time that the settlement might have been pitched too high, but it has been shown by ample evidence that this is not the case.

"Again, it has been said that to confer proprietary rights on a portion of the people was to give them a new and easy means of raising money, and that, once in debt, they were irresistibly drawn into destruction by the money-lenders and the action of our civil Courts. There is truth in this, no doubt; but it hardly serves to explain why the whole body of landed proprietors should be in such urgent and general want of money. It has been said, indeed, that the British revenue-officials were too exacting, and pressed too hardly for the revenue. This may possibly be true in a few instances, but I think that more evidence is necessary before such a charge against the former revenue-administration of the district can be fully established. Indeed, as it is admitted on all hands that the revenue is by no means excessive, it is difficult to understand how its collection by no other than the ordinary modes of coercion can have been a measure of much harshness and exaction. Besides this, during the last ten or twelve years at least, large sums have been foregone, and the Government and its officers have certainly not pressed unduly for the revenue. I believe that the principal causes which have plunged the great body of the landowners of Jhánsí into hopeless debt must be sought elsewhere. I speak with much diffidence on a matter regarding which there is room for great differences of opinion; but there are two causes which, operating together, seem to me to be sufficient to explain a great deal of the present debts and difficulties of the Jhánsí zamíndárs. The first is that, in changing from a zamíndárí to a raiyatwárí tenure, we considerably reduced the number of persons who were responsible for the revenue, and so decreased the security for it. The second is that we made the revenue, at the same time, far more difficult to pay, by changing it from a varying share of the produce, which depended on the harvests, to a fixed money-payment. We added, in fact, to the burden of the revenue and then laid it upon fewer persons. I think it is certain that, sooner or later, the newly-made zamíndárs must have broken down. It is no wonder that they did so, when, in addition to these two causes, they were overwhelmed by such a succession of calamities as war, famine, murrain and drought.

"I think that the present condition of the tenants in Jhánsí serves to confirm the probability of this view. They cultivate under precisely the same conditions as the landowners. They are exposed to the same losses from failure of rain. They have gone through the same misfortunes. The only point of difference between them and the zamíndárs is that they are no longer liable to the State for its revenue as they used to be. In a bad year the tenants do not pay, and the landlords neither can, nor dare to, proceed to extremities with tenants whom it is not easy to replace. On the other hand, the landowners are between the upper and the nether millstone. They are crushed between the impossibility of withholding their revenue from the Government above, and the impossibility of extracting their rents from the tenants below. This difference seems to explain the fact, which is admitted by everybody who knows the country, that the raiyats of Jhánsí are fairly prosperous, whilst the zamíndárs are almost all beggars. A further confirmation may be found in the state of the villagers in the adjoining territories which belong to the States of Gwalior and Oorcha. They do not differ from the people of Jhánsí, except in holding on a raiyatwárí instead of a zamíndárí tenure, in the revenue being distributed generally instead of partially among the people, and in the payment being variable in amount instead of a fixed sum. These people are far from being in the same embarrassed state as the proprietors of Jhánsí. It is possible also that the freedom from distress of the Jhánsí pargana, as compared with the other three parganas, may be mainly due to a considerable portion of its area being irrigated, which makes the harvests less precarious, and the payment of a fixed sum more possible.

"I will turn now to the remedy which is proposed for the evils that I have described.

"Several schemes of relief have been suggested at different times. One, which was advocated with great vigour and ability by the late Mr. Pollock, a valued friend of mine, who was for some years Commissioner of Jhánsí, was that the State should buy back the zamíndárí rights which it had conferred, and restore the old raiyatwárí tenure; the interest of the capital so expended being provided for by the landlords' rental, which in that case would revert to the State. I believe that this scheme contained the elements of success, if it had been combined, as no doubt it would have been, with measures for adjusting the revenue-demand in some way to the outturn of each year.

"Besides this, various other plans have been suggested, all of which aimed more or less at the same principal object of reverting to the raiyatwárí system. It is unnecessary, however, to take up the time of the Council with describing these; for the North-Western Provinces Government, on full consideration, has rejected them all, and has preferred a plan of its own. Under this plan, it will dispossess for a time the encumbered zamíndárs, will undertake the management of the embarrassed estates for them, will pay their debts and will hereafter restore their property to them, subject to certain conditions. The measure which I wish to introduce is intended to carry out this plan. The details of it will be fully described hereafter. At present it is, perhaps, enough to say that it will follow generally the provisions of the Sindh Encumbered Estates Act, adopting certain sections from the Broach and Kaira Act, and from the Act for the Relief of the Dekkhan Raiyats.

"As regards the part which is borrowed from the latter Act, I am bound to add that it will contain certain provisions which I opposed at the passing of that Act last year, and of the expediency and probable success of which I am no more persuaded now than I was then. I think it right to say this much. But as the principles contained in the sections referred to have been so recently affirmed by the Government of India, I have no intention on the present occasion of asking the Council to reconsider its decision upon the subject. Those principles have been fully accepted and adopted by the Government of the North-Western Provinces; and as I have been entrusted with a measure intended to carry out their views, I shall confine myself to endeavouring to give effect to the wishes of the Local Government to the best of my ability.

"The measure is intended to apply, in the first instance, to the Jhánsí District only, but power will be given to the Local Government to extend its operation to any part of the Jhánsí Division. Its main outlines will be sufficiently apparent from what I have already said. Its provisions will be similar to those which are usual in the case of encumbered estates. But all debts will be examined before liquidation, and an account taken, in the manner prescribed in the Dekkhan Agriculturists' Relief Act.

"The most important difference between the Bill which I desire to introduce and other similar measures lies in the manner in which it proposes to deal with an estate after it has been freed from incumbrances. Supposing the management to have terminated successfully, and the debts to have been paid off, the zamíndár will not necessarily be restored to exactly the same position that he occupied before. His rights, if he recovers them, will thenceforward be neither transferable nor alienable in any way, but will remain, as now, hereditary. In short, he will be no longer absolute proprietor, but a hereditary tenant holding at a privileged rate.

"This future restriction of present rights rests upon the ground that, without the interference of the State the zamíndár would have lost his rights altogether, and that the Government, having saved them for him, may fairly annex such conditions to their restoration as seem proper in his interest. It may

be added that, when the debts of the proprietors are so burdensome as to prevent them from paying their revenue, they have failed to fulfil the contract in consideration of which proprietary rights were conferred upon them, and have forfeited those rights. It must be remembered also that any zamíndárs who may apply voluntarily for the benefits of the Act may fairly be presumed to be consenting parties to this limitation of their future rights.

"These are the main features of the Bill. It will be seen that it is proposed to confer very large powers upon the Local Government and its officers, larger than those conferred by the Sindh, Chutia Nagpúr, Broach and Kaira, and Dekkhan Agriculturists' Relief Acts. It may be observed, in justification of this, that very large powers will be necessary for the success of the scheme. It is no easy task which the North-Western Provinces Government are going to attempt in undertaking the direct management of such a vast number of petty and encumbered estates, and in endeavouring to release from debt and restore to prosperity so large a section of the whole agricultural population of these distressed parganas.

"A few figures taken from the correspondence will make this clear. The total number of proprietors in three of these parganas is probably not less than 6,000. Of these, it may be said that three-fourths are in debt. Eliminating on the one hand those who are hopelessly insolvent, and on the other hand those whose debts are not so heavy as to require interference, it is quite possible that some 2,000 estates may be thrown upon the hands of the Government. These estates will be scattered over some hundreds of square miles and they will all be very small; for the average profits of an estate in Jhánsí do not exceed Rs. 50 per annum. They are also exceedingly embarrassed, for the interest on the debts in these three parganas is estimated to exceed the profits of the encumbered estates by nearly Rs. 80,000 per annum. Now, not only have those debts after due scrutiny to be liquidated, but the cost of management must be provided, efforts must be made to improve the estates, and, in some cases, an allowance granted for the support of the excluded proprietors.

"These figures will give some idea of the great difficulty of the task which the Government of the North-Western Provinces, in its desire to relieve the distress in Jhánsí, is willing to undertake. It has satisfied itself that, with the powers which it asks for, the task is not impossible; but it is certain that large powers will be necessary, and I trust that none which can be legitimately conferred upon it for the purpose in view will be withheld.

"In conclusion, I have only to say that the importance of modifying the revenue-system of Jhánsí, and of adjusting it for the future in some way to the variations in the annual produce of the harvests, has not escaped the attention of the North-Western Provinces Government; and the question, I believe, is

now under consideration and discussion. Personally, it seems to me that no scheme for relieving the distress of the proprietors in Jhánsí can be permanently successful which does not provide for this. In the oldest settled part of the North-Western Provinces, where rents have been paid in cash for half a century, there are particular fields and plots of land which no tenant will take at a fixed annual rent, but only on an engagement to pay a certain share of the produce, whatever that produce may be. The reason in such cases is that the yield of those fields, from local causes, such as exposure to inundation, diluvion, or the like, is so precarious that no one will take a lease of them at a fixed yearly rent. I believe that parts of the country, like Jhánsí, which have no irrigation and are dependent for their crops upon the rain from heaven, are in a like predicament; and that a fixed revenue for a term of years can never be realized from them (especially when the proprietors are small and needy) unless it be pitched below the due share of the State in average years, and greatly below it in years of prosperity. The only possible way of securing a fair contribution for the State in such cases is to make the demand vary with the produce.

"When the revenue-system is being modified, a point which may deserve enquiry is whether the basis on which the revenue now rests may not be widened and rendered more secure, by restoring to the tenants of our day some of the responsibility in respect of the revenue which in Marátha times they shared with those who are now proprietors. The present scheme of the North-Western Provinces Government will result, in part at least, in restoring a raiyatwárí tenure. So far as it does that, it will only be an extension of it to make cultivators of standing responsible for their fair quota of revenue.

"With this explanation I have to move for leave to introduce a Bill for the relief of encumbered estates in the Jhánsí Division of the North-Western Provinces."

The Motion was put and agreed to.

MERCHANT SHIPPING BILL.

The Hon'ble MR. STOKES presented the Report of the Select Committee on the Bill relating to Merchant Shipping.

TRADE-MARKS BILL.

The Hon'ble MR. STOKES asked leave to postpone the presentation of the Report of the Select Committee on the Bill to provide for the registration of Trade-marks.

Leave was granted.

ADJOURNMENT OF THE COUNCIL.

His Excellency THE PRESIDENT said he had hoped to have been in a position that day to adjourn the Council till tomorrow for the purpose of enabling his colleague Sir John Strachey to make his Financial Statement. Unfortunately, it had not been found possible to prepare the Financial Statement so rapidly as that; but HIS EXCELLENCY had ascertained that his colleague would be prepared to make his Statement next Tuesday, and he therefore adjourned the Council to Tuesday, the 24th instant, at noon.

The Council adjourned to Tuesday, the 24th February, 1880.

D. FITZPATRICK,

Secretary to the Government of India,

Legislative Department.

CALCUTTA;
The 20th February, 1880.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

THE Council met at Government House on Tuesday, the 24th February, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding.*
His Honour the Lieutenant-Governor of Bengal, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Whitley Stokes, C.S.I., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore, C.S.I.
The Hon'ble G. H. M. Batten.
The Hon'ble C. Grant.
The Hon'ble E. C. Morgan.
The Hon'ble H. J. Reynolds.

TRADES AND PROFESSIONS TAX BILL.

The Hon'ble SIR J. STRACHEY moved that the Resolution of the Council of the 24th December last, referring the Bill to impose a tax on Trades and Professions to a Select Committee, be cancelled. He said—

FINANCIAL STATEMENT.

"1. MY LORD, I have now to lay before the Council the Financial Statement for the coming year 1880-81. It takes what has become the somewhat unusual form of a speech by myself, instead of a Resolution published in the Gazette. I shall state to the best of my ability all facts necessary to enable the Council and the public fully to understand the present condition and apparent prospects of our finances.

"I propose in the first place to give a summary of the main facts and figures for the year 1878-79, for the year 1879-80, now about to close, and for the coming year 1880-81, and to reserve for a later part of my statement the observations which I may wish to make upon some of the more important questions of our financial policy.

"2. The Council will see, from the Abstract Statements which have been laid on the table, that a few changes have been made in the forms of the accounts.

"New major heads have been opened to show separately the revenue from *Registration* and the expenditure on that department of the administration.

"The *Guaranteed* and *State Railways* are now shown together under the single head *Railways*. The purchase of the East Indian Railway by the State, involving its transfer from the category of guaranteed to that of state railways, has made comparisons of the current estimates with the past accounts in each separate category impossible; and a like disturbance will ensue on the acquisition of other lines constructed by private capitalists under a guarantee of interest from the public revenues. Moreover, negotiations are already in progress for the working of the Indus Valley State Railway by the Sindh, Punjab, and Delhi Railway Company. It would be difficult to distinguish between the transactions of the two railways under one management. Similar arrangements for the management of other state railways are likely in the future.

"For like reasons, the transactions with the *Madras Canal and Irrigation Company* will henceforth be entered under the major head, *Irrigation and Navigation*, under which head the cost of agricultural works (drainage and embankments) will also, hereafter, be shown.

"Thus the public works heads of account will now be *Railways*, *Irrigation and Navigation*, and *Other Public Works*.

"3. In March last the Regular Estimate for 1878-79 showed a probable surplus, on the ordinary Account, of £1,300,000; the actual surplus was £2,044,391, or £744,391 better than the estimate. The differences between the Accounts and the Regular Estimates are for the most part unimportant, and there are not many of them which now call for remark.

"The net cost of the war in Afghanistan in 1878-79 was £676,381, a close approximation to the estimate of £670,000 made last year. Against this must be set the gain, the amount of which cannot be exactly stated, under the heads of *Railways* and *Telegraphs*. We estimate at £575,000 the ultimate net total cost of the operations in Afghanistan recorded in the Accounts of 1878-79. The sum of £313,420 was spent on *Famine Relief*.

"4. Compared with 1877-78, the Revenues of 1878-79 show an improvement of £6,238,393, of which, however, £2,400,331, under the head of *Provincial Rates*, for the first time incorporated in these accounts, is nominal. The largest increase was under *Land Revenue*, £2,460,919; the loss under this head in 1877-78, in consequence of famine, had been very large. There was a saving of £5,032,355 in *Famine Relief*; there was an increase of expenditure of £1,705,767 under *Loss by Exchange*, and £1,339,281 under *Public Works*. The apparent increase under *Public Works* is explained by the transfer of charges in the earlier year from this head to that of *Famine Relief*, and does not represent a real fluctuation of Public Works expenditure. Altogether the expenditure of the year exceeded that of the previous year by £650,915. The net result is £5,587,478 better than the result of 1877-78.

"5. Thus the financial outturn of 1878-79 was very satisfactory; with the help of the additional taxation imposed in that and in the previous year, amounting to £1,227,891, of which £313,420 was spent on Famine Relief, the true surplus of the year exceeded the amount of £2,000,000, decided to be necessary to meet our obligations on account of famine, and to leave a margin for other contingencies; and this result was obtained, notwithstanding the expenditure on the war, and the remission of the Inland Sugar Duties and some of the Customs Duties on cotton goods and other articles. The standard at which, for ordinary times, the Government aims, namely, a surplus of £2,000,000, less any expenditure on Famine Relief and exclusive of extraordinary charges such as those for great military operations, would have been attained if the accounts had shown a surplus of only £1,010,199, or £1,034,192 less than the actual surplus.

"6. I see only one drawback to entire satisfaction with these results; some of the capital expenditure under productive public works, as, for example, that on the Indus Valley and Punjab Northern Railways, cannot at present be regarded as directly reproductive. The works themselves possess the highest value; and for the future, as the Council is aware, no expenditure which is not really and directly reproductive is to be excluded from the comparison upon which the Surplus or Deficit of the revenue is ascertained. It will be seen later on that we are acting strictly on this principle in the present and coming years.

"7. I come now to the Regular Estimates for the present year, 1879-80.

"It is now expected that the revenue will amount to £67,583,000, or £3,021,000 more than the original estimate, and that the ordinary expenditure will be £67,464,000, or £1,507,000 more than was estimated. Thus, instead of a deficit of £1,395,000, with which, when our budget estimates were framed, we expected that the present year would close, our estimates now show a surplus of £119,000.

"8. The original estimates provided for an additional military expenditure of £2,000,000 for the war in Afghanistan; if the war had ended with the treaty of Gandamak, I believe that this estimate would not have been exceeded; but, in consequence of the renewal of hostilities, the estimated additional charge has risen to £3,216,000. In addition to this amount, we have had to undertake the construction of railways on our frontier. I shall have to speak of them further on; but in the present year they are estimated to cost £1,670,000. Thus the total provision on account of the war has now been increased to £4,886,000. With the exception of £230,000 on account of the Railway from Jhelum to Rawal Pindi, which is included under the head of *Railways*, the whole of this sum, under orders from the Secretary of State, is charged against *Army*. It was a question whether they ought not to have been included under the head of *State Railways*, and as they will undoubtedly, quite independently of their present military importance, possess great and permanent value to the country, much was to be said in favour of this view. But, as their construction was primarily due to the war, it was decided to include their cost in the war expenses. The result will be to exaggerate the apparent amount of our military expenditure.

"An expenditure of £10,000 upon *Famine Relief* was estimated; this, on account of distress in parts of the Bombay Presidency, has been raised to £99,000. On the other hand, the Railway and Telegraph receipts are better, by reason of the war, to the extent of about £300,000.

"9. Thus, but for war and famine, the Regular Estimates of the present year would have shown a surplus revenue of about $4\frac{3}{4}$ millions sterling. The taxes imposed in 1877 and 1878, to enable us to discharge our obligations in time of famine, will, it is estimated, yield £1,184,000; and, if we deduct the sum of £99,000, actually spent on famine relief, there will remain of this revenue £1,085,000. To this extent, the new taxes have had the effect of preventing debt. Making allowance for other abnormal items on both sides of the account, the true surplus of the year for comparison with the standard surplus of £2,000,000, at which we aim, will be about £4,160,000. This surplus, if it had been actually obtained, would have been much in excess of the whole expenditure on productive public works, which is estimated at £3,700,000.

"If present prospects are fulfilled, the financial outturn of the present year 1879-80 will leave nothing to be desired.

"10. The most important variations from the original estimates are the following:—

"*Land Revenue.*—Improvement, £450,000; more than half of this has been collected on account of arrears of former years, and the increase is due to the increased prosperity of the country.

"*Salt.*—Net improvement £362,000; this also is highly satisfactory, as showing a general increase of consumption.

"*Opium.*—Net improvement, £1,900,000. In September last the duty on Malwa Opium was raised by Rs. 50 a chest; the revenue from Opium this year has been unprecedentedly large.

"*Assessed Taxes.*—Decrease £93,000. This is the result of the orders given during the year for the exemption of the smaller incomes from taxation.

"*Stamps* have improved by £114,000. The stamp revenue has been constantly increasing; during the last seven years it has risen from £2,516,400 in 1872-73 to £3,090,000 in 1879-80, or by £573,600.

"Under no head of the revenue has there been any serious decrease.

"11. On the expenditure side of the account, the following are the chief variations from the original estimates:—

"*Interest on debt.*—Decrease £389,000; the chief saving is in the discount on the loan of March 1879.

"There has been a satisfactory increase in the Savings Bank Deposits, which now exceed £2,000,000; in December last new rules were issued increasing the rate of interest from $3\frac{3}{4}$ to $4\frac{1}{6}$ per cent., and for preventing trouble to depositors.

"*Post Office.*—Increase £63,000. The new contract with the Peninsular and Oriental Company came into force in February 1880. The yearly subsidy has been reduced from £430,000 to £360,000; the efficiency of the service has been increased, and the rates of postage to Great Britain have been reduced. Post cards costing $\frac{1}{2}$ anna each were introduced in April 1879, and are already so popular that it is difficult to supply the demand.

"In *Telegraphs*, the excess of expenditure over receipts will, this year, be only £6,000; there has been a satisfactory growth of revenue, amounting to £145,000, of which, however, £50,000 is attributed to the war.

"*Stationery and Printing.*—Decrease of expenditure £99,000; this is to some extent nominal. Supplies will, in future, be largely bought in India, instead of in England.

"*Superannuations.*—Increase of net expenditure, £168,000; this is owing to the reduction of Public Works establishments, to which I shall have again to refer.

"Including an expenditure of £230,000 on the Jhelum and Rawal Pindi line, *Railways* are worse by £204,000, of which, however, £150,000 appears as a transfer under *Gain by Exchange*. If these adjustments are made, the Railways show an improvement of £176,000. But the Railways, and especially the Great Indian Peninsula and the Oudh and Rohilkund lines, have not been as prosperous as, at one time, we hoped they would be.

"*Public Works.*—There has been a saving of £747,000, to which I shall refer again.

"*Provincial and Local Surpluses.*—Net surplus £265,000. Improvement £456,000.

"There was a like improvement of £469,000 in the accounts of 1878-79, as compared with the regular estimates. The provincial and local balances at the end of 1879-80 are now expected to exceed the sums last estimated as follows:—

	Provincial.	Local.	Total.
	£	£	£
Now estimated	1,331,800	1,336,700	2,668,500
Estimated last year	837,000	716,900	1,553,900
Better	494,800	619,800	1,114,600

"This result is the more remarkable and satisfactory in that, during the year, the Local Governments agreed to contribute from their balances in special aid of the imperial treasury the sum of £670,000, half of which, £335,000, is charged in the accounts of the current year. The other half will be charged in 1880-81. The reduction of their expenditure on public works and the general improvement of their provincial resources has enabled the Local Governments to afford this timely help to the general finances with little apparent difficulty.

"The *Army* shows an increase of £2,768,000; which I have already noticed. Apart from the war, the regular estimate is for a net expenditure of £15,487,000; the excess of £112,000 over the original estimate being due to high prices.

"*Exchange* shows an improvement of £1,010,000; the original estimate was for the remittance to the Home Treasury of £15,000,000 at an exchange of 1*s.* 7*d.*; it is now hoped that £15,750,000 will be remitted at an average rate of 1*s.* 8*d.*

"*Productive Public Works*, on which £3,700,000 was spent, show a small increase; 511 miles of railways have been opened for traffic during the year. At the end of the year there will be 8,724 miles in use and 1,462 under construction. I shall speak again of the frontier railways. Great progress has been made during the year with the Rajputana Line. The Lines in Bengal have been completed, and fair progress has been made on the Line from Nágpúr to Ráipúr.

"*Irrigation Works* show an expenditure of £797,000. In Madras, much progress was made with the Godaveri and Kistna Delta and other works. In Bengal, the Orissa project, so far as the works have been sanctioned, approaches completion. In the North-Western Provinces and Punjab, much useful work has been done on the Upper and Lower Ganges Canals, and on the Western Jumna and Sirhind Canals.

"Satisfactory progress has been made with the Madras Harbour Works.

"*Revenue and Working expenses of Productive Public Works* show an improvement of £638,000, due mainly to the inclusion, so long desired, of the land revenue in the Madras Presidency attributable to these works.

"12. The details of the Loan operations of the year are as follows:—

"*Debt incurred.*—Net £5,131,000. More than estimate £804,500, of which £540,700 was in India, where less was paid off than was expected, and £263,800 in England, where £270,016 less than was estimated in March last was raised at the close of 1878-79.

"The loan of £5,000,000, which was notified on the 13th March 1879, was subscribed at an average of 95-0-6 per cent. The discount upon it charged in the accounts of 1879-80 was £247,239. Of the outstanding portion of the 5½ per cent. Loan of 1859-60, £1,123,900 will be paid off during the year, leaving £105,600 still due. Other outstanding notes, amounting to £2,400, have been discharged. The net sum borrowed is thus £3,850,000.

"13. A Local Debenture Loan of £45,020 was raised for the Cawnpore-Farakhábad Light Railway at 4 per cent. interest with share of profits.

"A Local Debenture Loan of £50,000 was offered at Nágpúr in November at par at 4½ per cent. interest, with half the percentage of surplus profits on the Nágpúr-Ráipúr Railway. The subscriptions amounted to £42,700, of which £17,300 is payable this year and £25,400 next year.

"The Secretary of State received £2,000,000 without interest from Her Majesty's Imperial Government under the Indian Advance Act, 1879: but on the other hand he repaid sterling debt amounting to £736,200.

"14. Thus the net debt incurred amounted to £5,131,000, or, excluding the loan from Her Majesty's Government, £3,131,000. Including railway capital transactions, savings bank deposits, service funds, loans to native states, &c., and the repayment of such loans, the net amount borrowed in 1879-80 was, apart from the £2,000,000 advanced as aforesaid under the Indian Advance Act, £3,523,000.

"The equation of the year 1879-80 may accordingly be stated thus—

	£		£
Borrowed	5,523,000	Net expenditure ...	3,581,000
Net other receipts ...	148,000	Balances decreased ...	2,090,000
	5,671,000		5,671,000

"15. The price of public securities has risen rapidly during the year. The price of 4½ per cent. paper has for some time been more than 101, and that of 4 per cents. now exceeds 94.

"16. I come now to the Budget Estimates for the coming year 1880-81.

"The revenues are estimated at £66,746,000. The ordinary expenditure is estimated at £66,329,000; we expect therefore a surplus of £417,000.

"17. The estimated expenditure includes excess military charges, amounting to £4,360,000, of which £2,090,000 is for military operations proper, and £2,270,000 for the frontier railways; against this, there will be a set-off on account of improvement in the Railway and Telegraph revenues, estimated to £300,000, leaving the net charge for the war on the estimates of 1880-81 at £4,060,000.

"But for the war expenditure, the true surplus of the year, to compare, as before, with the standard surplus of £2,000,000, would not have been less than £4,000,000.

"The estimated revenue includes £982,000 obtained from the taxes imposed in 1877 and 1878, to enable the Government to meet its famine obligations.

"18. The estimates for 1880-81 thus show an extraordinarily satisfactory result, far surpassing the standard at which two years ago the Government of India aimed. The result is the more satisfactory, because the total estimated expenditure on the productive public works of a doubtful character, to which I have before referred, is only £398,000.

"19. I will notice a few only of the heads in which the Budget Estimate differs from the Regular Estimate of the present year.

"20. *Assessed Taxes* and *Customs* show a decrease of revenue, to which I shall refer later on. I may, however, notice here that, in February 1879, the Hon'ble Mr. Hope and Mr. J. D. Maclean were appointed Commissioners to report *inter alia* whether it was desirable to revise the tariff valuations yearly, and, if so, how such revision should be made. The Commissioners recommended a yearly revision

of the tariff values, and advised that the materials for such revision should be systematically collected throughout the year at the ports of Calcutta, Bombay, Madras, Rangoon, and Kurrachee, and collated in Calcutta, in February of each year, by a Committee of three persons to be appointed by the Government of India, one of them being *ex-officio* the Collector of Customs at Calcutta. The first Committee of revision was accordingly appointed in January last; the Hon'ble Mr. Hope, and, on the nomination of the Bengal Chamber of Commerce, Mr. J. W. O'Keefe, a member of the firm of Messrs. Kettlewell, Bullen, and Company, consented to serve upon it, with Mr. J. D. Maclean, Collector of Customs, Calcutta. The Committee has just completed its revision, which is estimated to produce an increase of £15,000 to the Customs revenue.

"21. *Salt* shows an increase, of which also I shall speak separately.

"22. The net revenue from *Opium* is estimated at £7,250,000; this estimate, although £1,150,000 less than the amount we expect to receive in 1879-80, is largely in excess of any estimate made in any previous year. Although the actual net revenue of the last two years has been more, it is not thought prudent to take the estimate for the coming year at a larger amount than that which I have stated.

"The Bengal crop of 1878-79 yielded 29,876 chests 75 % consistence and 20,175 chests 70 % consistence. Thus the stock in hand on the 1st January 1880 was 38,179 chests 75 % consistence, and 43,404 chests 70 % consistence, total 81,583 chests. The provision for sale during 1880 is 28,200 chests of each consistence, so that the reserve on the 1st January 1881 will be 9,979 chests 75 % consistence, and 15,204 chests 70 % consistence, total 25,183 chests.

"23. Under *Telegraphs* we estimate for the first time that the revenue will exceed the expenditure.

"24. *Railways.*—Net revenue £794,000, of which £250,000 is attributed to the military operations in Afghanistan. Improvement £1,080,000.

"Of this large amount, £268,337 is nominal, owing to only three-quarters of the East Indian Railway annuity falling due in the financial year 1880-81, against which, however, may be set a payment of £235,000 due to the Company under the old contract for the second half of 1879. The purchase of the East Indian Railway is expected, upon the estimates of 1880-81, to produce a net revenue of £300,000 in excess of what it would have yielded under the old system. The guaranteed Railways will, it is hoped, in the prosperous season which we anticipate, yield £405,000 more than this year.

"From the State Railways an improvement of £231,000 is expected from increased mileage open and from development of traffic.

"There is no doubt always an element of speculation in the estimates of Railway revenues; but an increasing return may fairly be expected from the constantly increasing capital expenditure on the construction of these works, which by the end of 1880-81 will amount to £130,000,000, or 144 crores of rupees.

"The chief event of the year is the purchase of the East Indian Railway for the State with effect from the 1st January 1880. The price paid was £37,200,000. I need not repeat the details of the new arrangements under which the line has been purchased, and under which it is to be worked.

"On the expenditure side of the account an improvement is expected of £242,000 under *Interest;* this partly arises from the proposed conversion of the 5 per cent. sterling loan, and is partly nominal.

"25. Under *Administration* there is a decrease of £30,000, in consequence of various reductions in Imperial Establishments.

"26. The grants for 1880-81 for *Ordinary Public Works* are less than those for 1879-80 by £597,000; the grants for *Productive Public Works* have been reduced by £1,000,000. There is thus a total gross reduction in Public Works expenditure of £1,597,000, of which the saving in establishments is estimated at £247,000. Against this, however, must be set the special grant of £230,000 under *Railways* on the Jhelum and Rawal Pindi line.

"The reduction in the ordinary expenditure on Public Works, apart from establishments, is more apparent than real; for the actual expenditure in past years has never exceeded the amount granted for 1880-81. I shall again refer to the question of expenditure on Public Works.

"27. I have already spoken of the *Army* expenditure. Apart from the war, the estimate stands at £15,330,000. According to our present accounts and estimates, the net cost of the war from 1878-79 to the end of 1880-81 will be about 9¼ millions, of which about 3¾ millions is for the railways, and 5½ millions for military operations. The estimates of the cost of the war must of course be to a great extent speculative; but they have been prepared with much care; and their accuracy up to the present time is highly creditable to Major Newmarch and the Military Department. There is no reason to suppose that they err on the side of being too low.

"To what extent it will be found hereafter that stores, chiefly camp equipage, have been expended and wasted and lost, we cannot possibly know accurately until the war is over; but every thing bought for the war is included in the estimates, and the reserves in our arsenals are being maintained at their proper standard, the cost being charged, for the present, as current expenditure.

"28. Our estimates show under *Loss by Exchange* a net loss of £3,174,000, being an increase on the regular estimate for the present year of £310,000; in 1880-81 it is proposed to remit £16,900,000; the expenditure of the Home Treasury will be largely increased by the payments for stores for the frontier railways. We assume that the average rate of exchange will be the same as that of the present year, or 1*s.* 8*d.*

"29. The rate of exchange for the adjustment of the public accounts between the English Treasury and India has been fixed at 1*s.* 8½*d.*

"30. *Productive Public Works* (*Capital expenditure*).—Grant £3,312,000. Decrease £388,000. The grant is thus distributed:—

	£
Irrigation and Navigation ...	630,000
Madras Harbour (besides £50,000 granted under 34, *Other Public Works*)	70,000
East Indian Railway	630,000
Other State Railways	1,982,000
TOTAL ...	3,312,000

"This grant is made in strict accordance with the conditions prescribed by the Secretary of State as follows:—

	£
Fixed grant...	2,500,000
Saving in 1879-80 re-granted	182,000
Capital expenditure on the East Indian Railway	630,000
TOTAL ...	3,312,000

"It is hoped that 988 miles of railway will be opened for traffic in 1880-81. This will complete the communication between Bombay and the North-Western Provinces through Rajputana. Good progress will be made towards the completion of railways and works of irrigation already begun, but the funds at our disposal for productive works are now so small that we cannot commence in the coming year any new works of magnitude. In Madras the chief outlay on irrigation works will be in the Godaveri Delta. In Bombay and Bengal the sanctioned works will be nearly all completed. In the North-Western Provinces the principal work will be on the Lower Ganges Canal. In the Punjab the weir at the head of the Sirhind Canal and the remaining large masonry works will be nearly finished; the new main line of the Western Jumna Canal will probably be opened, and the new Delhi branch will be well advanced.

"It is hoped that the Madras Harbour works will be finished in 1880-81. It was not possible to grant on this account more than £70,000 under the head of *Productive Public Works*, but the completion of the work being very important, this amount has been supplemented by a grant of £50,000 under the ordinary head.

"31. *Revenue and Working expenses, Public Works.*—Net revenue £318,000. The improvement is under Railways.

"32. I now come to the important subject of the provision of the Ways and Means for the service of the ensuing year.

"33. In this respect the responsibility of the Government of India is confined chiefly to the requirements of the public service in India. Its direct concern with the provision of Ways and Means to meet the demands of the Home Treasury is limited to the remittance of the amount for which the Secretary of State intimates his intention of drawing bills during the year. The Secretary of State has resolved to raise, in this way, during 1880-81, the sum of £16,900,000. Owing to the heavy estimated expenditure at home for the frontier railways (£360,000 in 1879-80, and £1,070,000 in 1880-81), this large sum will not much exceed the current requirements of the Home Treasury. The Secretary of State could not therefore frame his requisition upon us for less than £16,900,000; but he has authorised the Government of India to state that his drawings may be reduced if the demand for his bills upon India proves insufficient.

"34. According to present prospects, the balances in the treasuries in India on the 31st March 1880 are expected to amount to Rs. 14,19,00,000. The surplus of Imperial revenue in India during 1880-81 is estimated at Rs. 12,88,68,000, or, deducting from the expenditure the loss by exchange on the Secretary of State's bills, Rs. 16,26,68,000. We expect to receive in India the sum of Rs. 1,01,38,000 for remittance to England, and, in the shape of Savings Banks and Service Funds Deposits and recoveries of Railway Capital, Rs. 56,15,000. Besides the Secretary of State's bills, provision must be made for the estimated deficit in the Provincial and Local revenues of Rs. 11,60,000 and for the net disbursement of Rs. 19,50,000 on the Remittance and Deposit Accounts. Thus, including Rs. 20,28,00,000 for the Secretary of State's bills, we have to contemplate a liability of net Rs. 20,59,10,000, against which we have net assets amounting to Rs. 17,84,21,000, showing a deficiency of Rs. 2,74,89,000.

"35. The Government of India has had to consider whether the whole or any part of this sum should be provided from the balances, or whether it shall raise the whole or any part of it by a loan. After due deliberation we have resolved to adopt the former alternative, and to endeavour to meet all the expected demands in India, during the coming year, without recourse to the money market for a loan.

"36. In consequence of this resolution the balances in the treasuries in India on the 31st March 1881 are expected to fall somewhat below 11½ crores of rupees, a sum considerably less than the minimum sum which the Government of India usually estimates.

"37. The estimates of the Home remittance and Loan Transactions are habitually presented with expressed reserve; and this reserve must be understood to be this year greater than usual. But while thus emphatically reserving to ourselves the freest discretion to raise, during the year, any loan which actual events may render necessary, we consider the prospects of our being able to dispense with a loan during the year sufficiently substantial to make it unnecessary for us to enter any loan upon the estimates. We shall not in any case hesitate to raise any small Local Debenture Loans which may seem expedient during the year.

"38. The year 1878-79 was one of restricted and depressed trade as compared with the trade of the year immediately preceding it, though the value of the merchandise imported and exported (excluding gold and silver) was hardly below the average of the four years ending with 1877-78. When it is considered that famine still afflicted extensive provinces, that the war with Afghanistan was in progress, interfering with ordinary traffic on railway lines, causing a scarcity of carriage, and increasing the effects of drought and floods on the prices of food, and that trade generally in Europe and America was passing through a prolonged period of depression, it is a matter for congratulation that the industry of the country was able to bear up so well against adverse influences.

"The value of the exports of raw cotton, oilseeds, hides and skins, indigo, silk, wheat, saltpetre, lac, teakwood, and sugar, exhibited a sensible decline, most strongly marked in cotton, seeds, indigo, wheat, and sugar. The fall in cotton followed on a continuous decline of some years; the crops of seeds failed extensively, and at the same time the European and American demand for them fell off; the wheat trade was for the time almost annihilated, the low range of prices and enormous supplies from America forbidding the competition of Indian wheat; and sugar, after a large trade in the two previous years, suffered from the increase of prices caused by exhaustion of stocks and a failure of the sugarcane crop in the North-Western Provinces. Large quantities in excess of the imports of the previous year were imported to supply the deficiency.

"But while the trade in these articles diminished, owing to what we may hope were in most cases temporary causes, the exports of cotton twist and piece goods, rice, jute and jute manufactures, tea, coffee, and wool, afforded indications of prosperity in some of our chief staples.

"The value of the cotton manufactures imported was smaller than it had been for many years. Metals, railway materials, liquors, coal, and apparel all declined, and there was an increase in silk, sugar, provisions, woollen goods, machinery, and spices.

"The net imports of silver were nearly £10¾ millions less than those of 1877-78, and gold was sent out of the country to the value of nearly £900,000.

"The trade of the ten months of the current year for which figures are available shows a marked recovery from the depression of 1878-79, a recovery which, with abundant harvests, a decline in the prices of food stuffs, and renewed vitality in European and American trade, may reasonably be expected to continue.

"Even raw cotton has shared in the recovery, both quantities and values having, for the first time for years, increased instead of diminished. Twist, rice, jute, hides and skins, tea, indigo, wheat, and saltpetre, have all increased, in some cases remarkably. The recovery of the rice trade, with the fall of prices and the reduced demand for consumption in India, is very satisfactory. So also is the increase in the trade in tea, although it is said that the planting interest has not been a gainer by the increased exports.

"The imports of merchandise also, like the exports, are much larger than in 1878-79. A large and active trade is being done in cotton goods, in the development of which there is reason to believe that the remission of duty on the coarser kinds of grey goods has aided. On the whole, the prospects of trade are satisfactory.

"39. I have now, my Lord, stated the general facts and figures for the past and present years, and for the year that is about to commence. The result must be considered highly satisfactory. The aggregate actual and estimated surpluses of the three years amount to £2,580,000. Let it be remembered that this will be arrived at after spending, out of our ordinary revenue, 5¾ millions on the war, 3½ millions on frontier railways, and £400,000 on famine relief; let it be remembered that the amount charged in these three years under the head *Loss by Exchange* has been nearly 10 millions; let it also be remembered that we have given up £340,000 from the License tax; £150,000 from Salt; £150,000 from the Inland sugar duties; £300,000 on cotton goods, and a multitude of other articles; and that the sum raised by taxation is thus less than the sum raised at the beginning of 1878, by more than £900,000.

"40. I shall now, My Lord, proceed to notice some of the more important questions of policy which the Government has had to consider. And first I may refer to that question which, at the present time, chiefly occupies our thoughts, the war in Afghanistan.

"My Lord, I do not now propose to discuss the reasons which led the Government to undertake this war. The discussion by me of such questions on the present occasion would be irrelevant to the matter before me. Whether the war has been just and necessary, or iniquitous and foolish, it has now to be carried on and paid for, and my present duty is confined to showing how the Government proposes to meet the obligations which, whether rightly or wrongly incurred, cannot now be avoided.

"41. There is, however, one question to which I must refer. It has been maintained by many persons that England, and not India, ought to bear the cost of the war in Afghanistan. I must explain why I consider this opinion incorrect.

"Circumstances may be imagined under which it would be just that England should bear the whole cost of military operations carried on by the Government of India, even though the finances of India might be so prosperous that they could without difficulty dispense with such assistance. It is conceivable that a war might be undertaken for the maintenance or defence of purely English interests, real or imaginary does not matter, and that India might be called upon by England to co-operate in such a war, although no Indian interests could be possibly served by it. In such a case the liability of England could not justly be denied.

"It will be said by those who are opposed to the policy which the Government has followed, that the war in Afghanistan falls precisely within this category, and that this war has been entered upon in defence of no Indian interest whatever, but in furtherance of the so-called Imperial policy adopted by Her Majesty's Government. Persons who hold this opinion may reasonably object to throwing any part of the cost of this war upon India; but this is not the opinion of the Government.

"42. Her Majesty's Government, and the Government of India, and, I will make bold to say, the intelligent loyalty of the people of India itself, hold that the war in Afghanistan was undertaken for the protection of India from the menaces of foreign aggression, and for the maintenance within her borders of permanent domestic tranquillity. The Government believed that this war could not be avoided, unless we were prepared to acquiesce in the establishment on our North-West Frontier of new conditions, which would infallibly lead to a great increase of military expenditure, to intolerable financial burdens and difficulties, and to the disturbance throughout India of the very foundations of our power. Great as is the interest of England in preventing such consequences, the questions at issue were primarily and essentially Indian questions.

"Believing that the true interests of India are indissolubly bound up with the peaceful maintenance of our own dominion, we say that this war was undertaken with the conviction that justice to India herself rendered it unavoidable. If it be right to expend the revenues of India in maintaining the armies by which British supremacy is ordinarily secured, in giving to her internal peace and good administration, in the development of her wealth and civilization, and on the thousand other beneficial objects which we desire to promote, it is right to spend those revenues in rendering it impossible that any hostile influence should grow up on her borders, to threaten the existence of everything which the duty of England to India makes us most desirous to develop.

"43. I can imagine few greater misfortunes to India than the loss of her financial independence, and the acceptance by England of financial responsibility for her Indian Empire. It would signify to India the loss of control over her own affairs in every department of her administration, the possible subordination of her interests to those of a foreign country, and the substitution of ignorance for knowledge in her Government. Although some rare instances may be quoted in which, when there seemed to be a conflict between English and Indian interests, it may perhaps be doubted whether India has been treated with perfect fairness, there can be no question that, on the whole, the government of India has been carried on with as honest and thorough a regard for Indian interests as if India had a separate national existence of her own. England may rightly be proud of the way in which she has treated her great dependency. These fortunate results have, however, been due not only to her justice, but also to the wisdom with which she has left to India a separate financial responsibility. England has felt that it would be no kindness to take upon herself burdens which India now bears, to guarantee Indian debts, pay for Indian wars, and relieve Indian famines. England has also felt that it was wise, in her own true interest, to refuse to take into her own hands the control of the £67,000,000 which now constitutes the revenue of India. England does not choose that there should be grounds for even a suspicion in regard to the purity of her motives. I say this in the belief that India has before her a future of increasing wealth and prosperity; but if this anticipation should not be verified, and her future should be one of financial embarrassment, the loss of her financial independence would bring with it other misfortunes. I trust that the people of England may never find cause for believing that the maintenance of their Indian Empire means the imposition of heavy burdens on themselves.

"44. If, My Lord, India is ever to have a separate national existence, she must have self-respect and self-reliance, and I am sure that Indian patriots, who, with perfect loyalty to British rule, may nevertheless have, as they may rightly have, visions and aspirations of a distant future of another kind, ought to be the first to declare that their magnificent country shall bear its own burdens. India expects justice from England, but does not ask for charity. She feels that, with her ample and splendid resources, her two hundred millions of people, her revenue, which is surpassed by that of two only of the greatest European nations, she is a source of strength, not of weakness, to the British Empire. Whether we look to the extent of her territory, or to the numbers and character of her population, her military strength and capabilities, her public revenue and credit, India is one of the great powers of the world, ready at all times to stand side by side with England, and to fulfil every obligation which she owes to the common interest. If England be wise, she will not suffer either her own people, or her friends, and still less will she suffer her enemies, to be ignorant of the fact that her Indian Empire possesses almost inexhaustible resources. I repudiate, as unworthy of India and of England, the notion that India requires help to protect herself against the hostility of an Afghan Chieftain, encouraged though he may have been by a great power beyond. Nor does the fact that English as well as Indian interests are at stake, afford any reason for asking England to help us with her money. Everything which conduces to the safety and prosperity and progress of India, is a matter of concern to England; but there is no more reason that England should help us to pay for a local war, necessary for the protection of the interests of India, than that she should help us in the relief of our famines, or in meeting the ordinary charges of our administration.

"45. Holding, my Lord, these views, it was, I confess, with some regret that I saw India, a year ago, accepting from England even the small amount of assistance which was given to us in the shape of a loan of £2,000,000, to be repaid without interest in seven years. But the circumstances of the time were peculiar. India had been suffering from a succession of famines and other unavoidable misfortunes, which had thrown enormous burdens on her finances, and there was a strong feeling in England, shared by men of all classes and parties, that, when the new calamity of war was added to the calamities which had gone before, England should help India in her difficulties. Although the course prompted by this generous feeling may not have been politically wise, its motives were so honourable to the people of England that I cannot cavil at it.

"46. But, whatever may be thought of the action taken in the past, when we were in a position of temporary embarrassment, no reasons exist at the present time for asking England to help us to meet the charges of the war. The figures which I have stated to the Council show that we have in our possession ample means of defraying all expenditure which it is likely we shall have to incur. We have obtained these means not only without the imposition of fresh burdens on the people, but at a time when we are relieving important industries, and freeing from taxation a vast number of persons, who, if not actually, are still relatively poor. To say that when we are reducing the pressure of taxation, when the general condition of the people of India is one of great prosperity, when every branch of our revenue is flourishing, and when we have actually got all the money that we want, we ought nevertheless to ask England to tax herself, and relieve us from a burden which we are perfectly able to bear, does not seem to me reasonable.

"47. But it will be said that, even if India must bear the cost of the Afghan war, and must pay for the frontier railways, the construction of which the war has made inevitable, all these charges ought not to be thrown on the present generation of tax-payers; that this expenditure is undertaken for the future, rather than for the present protection of India; that posterity should pay its share of burdens imposed for its benefit; and that these charges should be met by loans, not out of the income of the year.

"The question thus raised is an old one; but I think I may be allowed, without disrespect to those who think differently, to say that, in England at least, statesmen of all parties have agreed about the principles on which such questions are to be decided. Those principles are, that, especially in a country with a heavy public debt, and not able to reckon confidently on a large and constantly recurring surplus, by means of which new debt can certainly and speedily be cleared off, the wise course is undoubtedly to provide for war expenditure out of the revenue of the year, so far, but so far only, as this is possible without throwing excessive burdens on the taxpayers, and overloading (to use Sir Stafford Northcote's words) the springs of industry and commerce; and that, if the expenditure cannot thus be covered, the deficiency may properly be made good by loans or other temporary resources not included within the regular revenue of the year. This is the doctrine which I understand to be held by that great authority in matters of finance, Mr. Gladstone, and I have partly stated it in his own words, although at one time he went further in his advocacy of meeting such expenditure without recourse to loans. In India there may undoubtedly be special reasons for charging heavy war expenditure against loans, in preference to placing new burdens on the country. Not only is it difficult to make a very large and sudden addition to our existing taxation, but it may be politically unwise to do so. There would therefore be no cause for surprise if, in the case of having to meet a large expenditure on war, we were unable to contribute from current revenue as large a proportion of the cost as in England would be thought right. Nevertheless, the general principle is as true in India as in England,—that, to the utmost of our ability, we ought to provide for the expenses of every year out of the year's income, and to allow no borrowing that is not really unavoidable. As the late Prince Consort, contrasting these two plans of meeting war charges, observed:—"The former course is manly, statesmanlike, honest; the latter is convenient, cowardly, perhaps popular."

"48. For the reasons which I have given, it is improbable that the Government would, if our finances had been less prosperous, have thought it right to propose the imposition of fresh taxation to meet the expenses of the present war; but it is fortunate that no such question now arises. We can carry out the wise principles which I have quoted, not only without any fresh demand upon the resources of the country, but while we are giving relief from present taxation. I can hardly conceive that it can seriously be maintained that, having in our possession all the money that we are likely to require for the prosecution of the war, we should not spend it on that object, that we should abandon existing income, and then borrow to supply the loss.

"49. The reasons for which it is right to provide for the charges of the war out of current income apply equally, and indeed with greater force, to the charges for the frontier railways. Although they will permanently benefit the country, it is plain that we could not construct them with borrowed money on the grounds on which we borrow for productive public works, and that their cost must be included among our ordinary charges. If, however, we could not have paid for them out of our ordinary revenue, it would have been quite right to borrow for their construction. I should have said this because the works are absolutely necessary, and because the political and financial evils of borrowing would be less serious than those involved by fresh taxation. I should not have defended borrowing for these railways on the ground that they will benefit posterity as well as the present generation. That is a matter about which I know nothing; but I know that posterity will have quite enough to do in bearing its own burdens.

"50. I may add, with reference to these railways, that the urgent necessity for pushing on their construction is not likely to be denied even by those who have opposed the policy under which the war in Afghanistan was undertaken. The estimates show a probable expenditure on this account of £1,440,000 in the present year, and of £2,270,000 next year. The Council is aware of the great and unprecedented speed with which the Railway from the Indus to the foot of the Biluchistan hills, on the line towards Kandahar, has been pushed on. The extension of the Punjab Northern Railway from Jhelam to Rawalpindi and Peshawar, and to Khushalgarh, is making rapid progress. In less than four months from the commencement of operations, trains were running for 140 miles towards Kandahar; while on the Peshawar line, where the rails have to be carried over viaducts 100 feet high and through cuttings of rocks 60 feet deep, the engines are expected to reach the banks of the Indus before the end of 1880. Independently of military considerations, which possess, of course, at the present time, extreme importance, the completion of these lines, within the shortest practicable time, has become very urgent. As the Government of India has written on this subject, "it is obvious that immediate outlay upon the early and effectual improvement of our means of transport would be amply repaid by reduction in the excessive, and, to a great extent, wasteful expenditure which must otherwise be prolonged throughout the course of our present military operations, with the certainty of its recurrence on the first occasion of their renewal. The financial and economical interests affected by the inadequacy of our present Frontier communications are far-reaching, and the injury they sustain can scarcely be exaggerated."

"51. I have now, my Lord, to state to the Council the course which the Government proposes to take in regard to the Bill for amending the License Acts. It will be remembered that, when this measure last came before us, I announced, on behalf of the Government, that it was not proposed to take any further steps in the matter, until after the publication of the Financial Statement.

"The changes proposed in the existing law, when the Bill was introduced in November last, would, if they had been adopted, have had no appreciable effect upon the revenues, the amount surrendered by the exemption from taxation of the lower classes of traders being just made good by the extension of taxation to the official and professional classes. The effect of the further modifications subsequently proposed, and of the additional exemptions in favour of the poorer traders, would have been a loss on the one hand of £340,000 a year, and a gain on the other hand of £240,000, thus leaving us, as the general result, with £100,000 less revenue than we get now. The measure was essentially one which had for its object the equitable re-adjustment of taxation, and it had no financial importance.

"52. Before going further, I wish to ask the Council to recall the circumstances under which fresh taxation was imposed two years ago.

"The object of the new taxes was described in the preamble of the License Act passed by this Council; and nearly the same words were used in the other similar Acts passed for the various provinces of the Empire. It was stated that—'in order to provide means for defraying the public expenditure from time to time incurred, and to be incurred, for the relief and prevention of famine in British India, it is necessary to effect a permanent increase of the revenue.'

"In making this quotation, I do not attach any exaggerated importance to the declaration that these taxes were intended to give a 'permanent increase' to the revenues. It is, of course, competent to the Legislature to alter its policy in regard to this, as to any other matter. The declaration, nevertheless, has this value, that it shows the intention of the Legislature, when these measures were enacted two years ago; and since the object for which they were enacted—the protection of the country against famine—is undoubtedly as important now as it was then, and as earnestly desired by the Government, it is reasonable to say that very good cause ought to be shown, before we consent to give up taxes avowedly imposed to make a 'permanent increase' to the revenues.

"53. I may remind the Council what this increase really was. Taking together the measures adopted in the two years 1877 and 1878, the first new taxation was the Public Works cess, imposed on the land in Bengal: this yielded in 1878-79 £355,590. In 1878, new cesses were also imposed on the land in the North-Western Provinces, Oudh, the Punjab, and the Central Provinces, yielding about £170,000. The total amount of new taxation on the land was therefore about £525,000; the actual receipts during the last two years have, however, not been so large, because it was thought right to postpone for a time the collection of the cess in parts of Northern India which had suffered from drought. Similar taxation was not imposed on the land in Madras and Bombay: the principal reason for this exemption was, that the salt duties had just been increased in those presidencies, and it was held to be inexpedient to impose cesses on the land at a time when the effects of the famine were still

being felt, and when the salt duties were being increased. A license-tax on traders was first imposed in 1877 in the North-Western Provinces, and, in the following year, the present License Acts were applied throughout India. They yielded, at their maximum, about £820,000 net.

"The total amount of what has been called the Famine Insurance taxation was therefore about £1,345,000.

"54. Considering that precisely the same reasons were given by the Government, and accepted by the Legislature, for imposing fresh taxation on the trading and on the agricultural classes, with the object of protecting the country against the financial consequences of famine, and that special stress was laid upon our desire to make the burden fall with approximate equality on each of these classes, it would be difficult, for the present Government at least, to accept any proposition for treating them differently now. In fact, it would be hardly possible to maintain the cesses on the land, if the tax on trades were abolished. It might be more possible to defend the abolition of the cesses on the land and the maintenance of the tax on trades. But it is needless to discuss such questions. Practically, so far as we are now concerned, these taxes on the agricultural and trading classes stand on the same basis.

"I need hardly say, after what has been said on former occasions, that the Government can entertain no idea of giving these taxes up, and of sacrificing a million a year of revenue. Even if these taxes were as bad as some think them, a time like the present, when we have to meet the heavy obligations entailed by a serious war, would not be opportune for abandoning them; still less could such a course be approved by those who believe with me, that these taxes are far less objectionable than others that could be named, and that when the time comes for remitting taxes, it is not with these that we ought to begin.

"55. At the same time, the Government desires to make all practicable improvements in the assessment and the administration of the License Acts. It was this desire which led the Government to the conclusion, explained by me to the Council, when the Bill for amending those Acts last came forward, that it was desirable to exempt from liability all persons whose annual earnings are less than Rs. 500 a year. As I formerly said, we expect by this change to exempt from taxation about a million and three quarters of the smaller traders, and to lose £340,000. The Government still adheres to these conclusions.

"56. Although, when this Bill was last before the Council, I was able to state that there had been great improvement in the financial position of the Government, I did not then venture to anticipate that the improvement would, when we came to make our estimates for next year, be so considerable as it is now shown to be. It has necessarily obliged the Government to reconsider the question of the propriety of extending taxation to the official and professional classes, and thus making good the greater part of the loss incurred by the exemption of the smaller traders from the License Acts.

"Although the main object of the Government in this part of its proposals was a more equitable adjustment of taxation, we felt that it was hardly prudent to give up £340,000 of income without any compensation, and this was one of the reasons assigned for the proposal to tax the officials and professional men. The Government has now had to consider this question:—admitting—as we must do, in the present state of the finances—that we do not absolutely require the £240,000 which the contemplated taxation of these classes would yield, is it now desirable to impose it merely for the purpose of making our system of taxation more theoretically equal, and removing to some extent the reproach, which undoubtedly is true, that certain classes do not at present bear their full share of the public burdens?

"If it had now been possible to attempt the removal of the numerous inequalities and anomalies which are inseparable from any such partial system of taxation as that which now exists, this would have been an object of high importance; but the mere extension of taxation to the official and professional classes would clearly be no complete solution of such a problem, although it might be a step towards it. On the whole, the Government thinks it better, for the present at any rate, not to press this part of its proposals. We have given up £340,000 from our existing taxes, and we do not ask that any fresh taxation shall be imposed. The amendment of the present law is desirable to carry

out the exemption of the lower classes of traders, and for the removal of one or two difficulties which I shall explain later on; but with these exceptions no change is proposed in the License Acts now in force.

"57. I do not intend, My Lord, on this occasion to discuss afresh the vexed question of the Famine Insurance Fund or Surplus. There has been much misunderstanding between the Government and some of its critics as to what was said and as to what, though unsaid, we are presumed to have meant when the taxes to which I have referred were first imposed in 1877 and 1878: for this misunderstanding, so far as it has been due to want of precision in the explanations of our policy, I am prepared to accept my full share of responsibility, but for my part, I do not intend to refer to it again. I shall only say further that there has been, in regard to this matter, no change in the financial policy of the Government, nor is any change proposed now. In the following remarks, I shall endeavour to avoid controversy, and to refer only to actions and to facts which, whatever their motives and origin, can hardly be misconstrued.

"58. When the serious character of the financial obligations of the State in times of famine had been recognized, it became the duty of the Government of India to make sure that the public resources were adequate to meet the fresh strain imposed upon them. Upon careful inquiry we came to the conclusion that we must contemplate a liability from famine amounting, in loss of revenue and actual expenditure, to, on an average, £15,000,000 in ten years. It was clear that this liability must be included among our ordinary obligations, and that it would have been a fatal error to go on increasing the public debt to meet charges which must periodically occur. To enable us to discharge the liability thus estimated, we determined to aim constantly at a surplus of £1,500,000, supplemented by a further surplus of £500,000 to provide for extraordinary and abnormal demands other than famine, as, for example, to name the most serious of such demands, for war.

"This standard surplus of £2,000,000 was to be ascertained on a comparison of the revenues with the expenditure, exclusive of:—First, Productive Public Works, which, to whatever extent might be necessary, it was assumed might be provided for by loan; Secondly, Famine Relief, and loss of revenue due to famine; Thirdly, Protective works, *i. e.*, works not strictly fulfilling the definition of Productive Public Works, but constructed specially for the protection of the country against famine; and Fourthly, Abnormal expenditure, other than for famine, as, for example, on war.

"I do not stay to inquire afresh how far the standard thus adopted was adequate to the object in view, namely, the solvency of the State, although I believe it to have been so; I only recite facts.

"59. In order to secure this standard average surplus of £2,000,000, the Government next resolved that it was necessary to increase the revenues of the country. The occasion for such increase was the recognition of the increased obligations of the State in times of famine, and the measures of taxation adopted were framed in the belief that there were certain classes upon which this particular burden ought primarily to fall. As I have already explained, that taxation amounted originally to £1,345,000. It has now been reduced to £1,000,000.

"60. Whether the public accounts show surplus, equilibrium or deficit, it is indisputable that these taxes must prevent debt by the exact amount which they yield, and that, when famine occurs, our resources for meeting it will be increased by an amount exactly equal to the amount obtained from these taxes, with compound interest upon them. This part of the subject needs no further remarks.

"I have shown to-day that the precise burden borne by the country during these three years for this purpose has been or is estimated to be—

	£
in 1878-79	1,227,891
in 1879-80	1,184,000
in 1880-81	982,000
	3,393,891

"The actual expenditure on famine relief has been or is estimated to be:—

	£
in 1878-79	313,120
in 1879-80	99,000
in 1880-81	5,000
	417,120

"Therefore, the taxation thus levied in these three years, has enabled us to defray the expenditure on famine relief, and, moreover, to prevent debt to the amount of £2,976,471, with interest upon this sum. That this result has been achieved is self-evident, and, being independent of the surplus or deficit of the revenue as a whole, requires no further demonstration.

"61. I have perhaps already said enough upon the other part of this subject. The standard which we accepted was £2,000,000 revenue in excess of the expenditure on the ordinary account, excluding the expenditure upon famine, and other abnormal obligations. In my opinion this standard has been, in each of the three years of which I am speaking to-day, greatly surpassed.

"It will doubtless be always right to scrutinise rigidly and jealously the validity of the grounds upon which any part of the public expenditure is excluded from the account upon which the surplus for comparison with our standard surplus of £2,000,000, is ascertained; but I believe that, if the accounts and estimates of the three years before us are subjected to the most severe criticism, it will be found that the actual and estimated surplus of revenue during this period does truly far exceed the £6,000,000 which, according to the standard which we have prescribed for ourselves, should be attained in three years, if the solvency of the State is to be ensured.

"62. I find an apt illustration of our policy in this matter, ready to my hand, which I quote the more willingly because it is, in other respects, of much interest. According to present prospects, in the ten years ending with 1880-81 we shall have spent, all-told, including productive public works, war, and famine, £36,848,000 more than our whole revenue. The items included in this expenditure, which should be excluded before applying our standard, are—

	£
Productive Public Works*	35,881,000
War in Afghanistan	9,250,000
Famine	14,607,000
TOTAL ...	59,738,000

Our revenue will have exceeded the rest of our expenditure by £22,890,000; and, but for loss of revenue from famine, this surplus would have been £25,890,000, or, on an average, £2,589,000 a year.

"Thus, during these ten years, with an average surplus of £2,589,000 to compare with our standard of £2,000,000, we expect to have defrayed the whole cost of our famines and our wars, from our revenues, excepting only the trifling deficiency of £967,000. Considering the magnitude of our expenditure on famine and war during this period and the immense increase of charge under Loss by Exchange, this retrospect appears to me highly satisfactory.

"63. I wish I could say that our plans for the construction of works for the actual prevention and relief of famine had been as successful as our financial arrangements have been. And this brings me, My Lord, to another part of my subject.

"Financial safety was by no means our sole object. We felt not only that we had financially to provide the means of relieving famine when it occurred, but that the equally important duty devolved upon us of doing everything which it was possible for a Government to do, towards preventing these most terrible of all natural calamities, and furnishing the country with the machinery by which, when they occurred, the largest practicable amount of relief could be most speedily and effectually distributed. The new taxation and the other measures by which our finances were improved, would give us, we believed, the

* Including £11,676,000 spent on what I have called doubtful works.

means of carrying out these objects with a certainty and rapidity which would otherwise have been difficult.

"The investment of our surplus in Productive Public Works was, from a merely financial point of view, in no sense essential to our scheme, and it will be seen, from what has been said elsewhere, that this part of our plans was modified by the orders of the Secretary of State in a manner to which, on financial grounds, we could take no exception. But we certainly contemplated the extensive construction of works for the protection of the country against famine; and it was to these projects that public attention was mainly directed, and in them the public naturally and rightly felt a deeper interest than it could take in any merely financial arrangements.

"64. A nobler programme was, in my opinion, never put forth by any Government than that put forth by Your Excellency; a more beneficial scheme was, in my judgment, never formed for the material improvement of any country, than the scheme which Your Excellency explained to this Council on the 27th December 1877, in your Minute of March 1878, and on other occasions, I desire to remind the Council and the public of what the plans of the Government of India were, and to explain why they have not been carried into effect as completely as we desired.

"65. I wish, My Lord, it were possible for me to read to the Council, and incorporate in this Financial Statement, Your Excellency's speech of the 27th December 1877. As I cannot do this, but am anxious to place the whole case in the clearest light, I must ask Your Excellency's permission to string together some passages from that speech, for I could not describe the programme of the Government in any words so good as those which Your Excellency used—

"The measures now before the Council have, for their principal object, the provision of that increase of the public income which experience has proved to be the first condition of any practical insurance against famine; and, therefore, it is only proper that the Council should know how we intend to employ the resources which its adoption of these measures will place at our disposal for that purpose. * *

"Of the countless suggestions made from time to time, and more especially during the present year, for rendering less bitterly ironical than it still seems, that famous inscription on the huge granary built at Patna, for 'the perpetual prevention of famine in these provinces,' there are only three which merit serious consideration. These are firstly, Emigration; secondly, Railways; and, thirdly, Irrigation Works. Unfortunately for India, the first of these three material factors in the practical solution of problems similar to those we are now dealing with, is inapplicable, or only very imperfectly applicable, to the actual conditions of this country; * * though emigration unquestionably claims our fostering encouragement, I fear that, for many years to come, we must practically exclude this expedient from the list of those on which we mainly rely as a means of insuring the population of India against the calamities of periodical famine. The conclusion thus arrived at forcibly confines our immediate efforts to the most rapid development, by the cheapest methods, combined with the most appropriate and efficient application, of the only two remaining instruments for increasing the produce of the soil, facilitating its circulation, and thereby improving the general social condition, and augmenting the collective wealth, of the whole community. Those instruments are railroads and irrigation works.

"'Now the incalculable value to India of her present railways has been unmistakeably demonstrated during the past year; and the Government is unquestionably bound to stimulate the extension of this class of works to the greatest extent and with the greatest rapidity, consistent with the requirements of financial prudence.

"'* * It is an unquestionable fact, that the railways, and the railways alone, were the salvation of the situation in Northern Behar during the famine of 1874; and that they have again been the salvation of the situation in Madras during the famine of the present year.

"'* * Had there been no railway within reach of these districts, the people, where they have now died by hundreds, must have assuredly succumbed by thousands.

"'I am satisfied that the development of a network of subsidiary lines of railway, giving the means of transport through every district of British India, has become a matter of vital necessity for the attainment of the great object now before us. Our present object is to render available within the shortest possible time a maximum length of line, especially constructed for a slow goods traffic, rather than to provide those more ample conveniences for passengers and goods, which have commonly been deemed necessary for all Indian railways hitherto constructed. * * *

"'The early conclusion of such an undertaking must necessarily depend upon its financial practicability; and, for this reason, all minor considerations must be subordinated to the most rigid economy in construction, and the most severe limitation of the works to what is indispensable for the efficient exercise of their special function. But, if these conditions be duly com-

plied with, I have confidence that, at a comparatively early period, we shall, without any strain upon our financial resources, have extended to all parts and provinces of our empire the most efficacious protection, not indeed from dearth (for that is impossible), but from those terrible effects of dearth which now generally terminate in famine.

"'These, then, are the principles on which we are prepared to apply at once to the extension of our railway system, as a means of insurance against famine, an adequate proportion of the resources at our command for that purpose. * * * * * *

"'We propose to apply to the extension of irrigation works precisely the same principle and policy. * *

"'I am not now speaking of what we ought to do, or would do, to ensure this country against the worst effects of future famine, had we only the means of doing it; but of what we can do, and will do, with the means already provided for in the measures now before the Council. I do not mean to say that the construction of such an extensive system of local railroads and irrigation works as we propose to undertake, will not be the gradual task of many years. But I do mean to say that, in the manner and on the principles already explained, we are now providing for the prompt commencement, and uninterrupted continuation, of this great and necessary task. We are systematising a policy, the principles of which have been repeatedly proclaimed and approved by our predecessors. We are associating with it the interests, the powers, and the duties of our local administrations. We are providing them with the means of permanently prosecuting and developing it, not without reference to our financial control, but exempt from the distressing uncertainty which has hitherto been inseparable from the practical execution of this policy, in consequence of the obligation, which has till now rested upon the Government of India, with the very limited funds at its disposal for the prosecution of public works, to choose, from year to year, between the conflicting claims upon its purse of the various and dissimilar localities of this spacious Empire.'

"66. My Lord, I am convinced that the policy, which Your Excellency thus proclaimed your resolution to carry out, was not only wise and humane, because it provided the only possible means by which the Government could protect the country against the future calamities of famine, but that, financially, it was sound and prudent. Notwithstanding many mistakes which, in transactions of such magnitude, were inevitable, the policy by which, for many years past, we have been constructing railways and canals in India was, in my belief, sound and statesmanlike in its conception, and its practical results have been triumphantly successful. The wealth of the country, and the prosperity and happiness of its people, have been increased by it to an incalculable extent; the consequent gain to the country and the public finances has been immense, and is not to be measured by figures showing only the direct returns from the works which have been constructed. For my part, I see no drawbacks, no dangers, and no disadvantages, which deserve to be weighed for one moment against the benefits which have been derived. The Government of Your Excellency desired to extend and develop this policy, and hoped, by the construction of a network of cheap railways and of carefully planned works of irrigation, to do all that it was in the power of a Government to do, to prevent the frightful calamities of famine to which the country is now periodically exposed. We believed, and I believe still, that we could do this not only without financial risk, but with certain financial advantage.

"67. The Local Governments shared our convictions and our expectations. Sir Ashley Eden, the Lieutenant-Governor of Bengal, was prepared to undertake, from the resources already assigned to him, a system of railway communications which, without costing the imperial revenues a shilling, would, he believed, have added millions to the wealth of his great province. Sir George Couper sent us up a scheme, carefully prepared by my friend General Fraser, for constructing a complete system, some twelve or thirteen hundred miles in length, of light railways, which, in combination with works of irrigation, would have gone far, if not to make future famines in the North-Western Provinces improbable, at least to render the relief of such famines a comparatively easy and a certainly successful operation.

"68. My Lord, these visions have for the present, but I hope only for the present, faded. The plans which Your Excellency described to the Council two years ago, and which I have repeated to-day, have not yet been carried out; we have had to defer the hope of protecting the country against famine by the rapid development of railways and works of irrigation; and not only this, but we have even been compelled largely to reduce the expenditure which, for many years past, we have been incurring on works of this description.

"My Lord, I shall not call in question the sufficiency of the reasons which

led Her Majesty's Government, and a Committee of the House of Commons, to think that a very large reduction should be made in the expenditure of the Government of India on Productive Public Works; nor is it necessary that I should now repeat those reasons, because they have been fully explained in the Report of the Committee, which was published during the last session of Parliament. Nor do I wish it to be supposed that I am insensible to the advantages which we derive from this temporary restriction of expenditure. It has enabled us to carry out in a way which might otherwise have been hardly practicable, important reforms in the Public Works Department, and to get rid of hugely overgrown establishments.

"69. The limit of £2,500,000 which has been placed on our annual expenditure on productive public works has avowedly no sort of finality. 'The amount to be annually expended' (I am quoting from the Report of the Committee of the House of Commons) 'should mainly depend upon the financial condition of India, and should, therefore, for the present, be limited to an amount of £2,500,000, as recently fixed by the Secretary of State for India in Council.' Considering what our financial condition already is, and what we hope it will be in the future, I predict with confidence that the check, which has been placed upon our expenditure on useful works essential to the progress of the country and to its protection against famine, will be only temporary, and that the execution of the plans described by Your Excellency two years ago has been only temporarily deferred. But at the same time I wish to make it clear that, if the Government of India has failed for the present fully to carry out its programme for the construction of material works for protecting the country against famine, no responsibility for that failure rests upon us. While I say this, I must again ask the Council to remember that, however much we may regret this disappointment, it in no way affects the financial efficacy of the measures taken to enable us to discharge our obligations in times of famine without fear of insolvency. Nothing can prevent the success of those measures, which have been subjected to this modification only, that, owing to the improvement of our general financial position, we have ventured to dispense with about a quarter of the additional taxation (amounting at its maximum to £1,345,000 a year) which was their main feature.

"70. I may here notice, with regard to the policy of the construction of productive public works, that, although the correspondence on the subject between the Government of India and the Secretary of State is not concluded, it is understood that the following points have been settled for the present:—

"i. That any money which it may be necessary to borrow for the construction of such works shall be borrowed in India in rupees, and not in London in sterling money.

"ii. That not more than £2,500,000 a year, on an average, shall be thus borrowed, in addition, however, to any capital expended upon the East Indian Railway or any other undertaking which may be hereafter acquired by the State in like manner; in addition also to any money which may be lent to the Government of India by Native States for the construction of productive public works.

"iii. That the yearly grant for the construction of productive public works shall not exceed £2,500,000 in addition to the capital expended upon the East Indian Railway or any undertaking similarly acquired hereafter, and to the expenditure upon any works the funds for the construction of which are lent to the Government of India by Native States.

"iv. That the unexpended portion of the grant of the past year may be re-granted for expenditure in the following year. The object of this provision is to prevent the waste and inconvenience incident to the lapse of unspent grants for the construction of public works.

"As already explained, the grant for the construction of productive public works in 1880-81 has been regulated strictly by these principles.

"71. There are, My Lord, various questions connected with the customs tariff to which I must now refer.

"Beginning with the import duties, there is first the duty on cotton goods, and this is a subject of which I cannot speak without some reserve, because there has been in past times, as everybody knows, no unanimity of opinion regarding it among the members of the Government. Speaking, as I now am, on behalf of the Government generally, I desire to say nothing to which

any of my colleagues might take exception, and, although it will not be possible for me altogether to avoid the expression of my own opinions on questions of past and future policy, I hope it will be understood that I shall, in giving such opinions, be stating only what I myself think.

"The Government does not at present propose to make any alteration in the duties actually levied on cotton goods. There are, however, obvious and serious defects in the existing system, and no one can say that it can long be maintained.

"72. The measures taken during the last two years, whatever other results may have followed, have at least effected the particular object for which they were declared necessary. They have, for the present, removed all grounds for the complaint, that we were levying protective duties in favour of the Indian mills in their competition with English manufacturers. Some classes of English goods may be unduly favoured in comparison with other classes of English goods; but no protection remains for the special benefit of goods produced in India.

"When, last year, Your Excellency decided that it was impossible to defend the maintenance of the duty on certain classes of cotton goods, because it had a distinctly protective character, it was thought right to make a considerable sacrifice of revenue for its immediate removal. Whether the course adopted was right, as I then thought and think still, or whether it was wrong, is a question which I will not now discuss, but the Government feels that it cannot at the present moment go further, or submit to loss of revenue beyond that which the measures of the last two years have rendered unavoidable.

"73. I must say something of the effect which those measures have actually produced. Mr. Hope's Commission stated in its report last year that the remission of duty on all goods made of 30s and under 'would probably soon effect a complete revolution in the piece goods trade,' and it quoted, in support of its own conclusions, a report by Mr. Pritchard, the Commissioner of Customs in Bombay, who, with reference to this remission, wrote as follows:—

"'It will operate to create a new class of shirtings made of yarns 28 by 29 or 30, instead of the present standard quality of 32 by 36. This will pass free of duty, and, if it finds favour in the market, will take the place to a large extent either of the long cloths or of the shirtings now used, or of both.'

"The Commission also quoted the following opinion of a large mercantile firm:—

"'There can be no doubt that a trade in cloth made of yarn just within the limit of exemption of duty would be fostered, and which might gradually become of considerable importance. Such cloth would probably be appreciated by consumers for its intrinsic value, as well as for its comparative cheapness, owing to there being no duty upon it; and, if this should be the case, it might do away with the importation of cloth made of yarns varying from 32s upwards.'

"74. I quote these passages, because the actual results have closely corresponded with the anticipations thus formed by the Commission and adopted by the Government. The chief difference has been that those results have followed more rapidly than either the Commission or the Government expected.

"The immediate consequence of the exemption from duty of goods containing no yarn of a higher number than 30s, was the rapid development of the manufacture and import of a new class of goods made of 30s and lower counts. In consequence of their superior relative cheapness, these duty-free goods have rapidly become popular; and the experiment having thus proved successful, the tendency is now to make of the coarser yarns all cloth for which they can be used, and to substitute the coarser for the finer fabrics formerly made of yarns ranging from 30s to 40s. This process has already reached such a point, that last month the duty-free shirtings and longcloths constituted more than 74 per cent. of those kinds of imported goods, and the dutiable qualities of some other classes of goods have almost disappeared from the market. We estimated last year that we might lose in the first year revenue to the amount of £150,000, and in subsequent years more. It is now probable that the loss in the first year, now about to close, will be nearly £200,000, and for the coming year it is estimated at £50,000 more.

"75. Now, clearly, the present state of things is not satisfactory. We are holding out to English manufacturers a strong inducement to supplant finer by coarser classes of goods, and it has been forcibly represented that these and other anomalies ought not to be left uncorrected. I may refer in particular to a letter addressed to us by the Bengal Chamber of Commerce. The Chamber points out that the declaration made last year by the Government, that "it is not reasonable that certain goods should be admitted free, while large quantities of goods of almost precisely the same character in every thing but name remain liable to duty," is still true, with this difference, that the hardship is now "not caused by the competition between Lancashire and our local mills, but by competition amongst Lancashire manufacturers themselves, to secure the full benefit of the Government of India's last act. They do not, however, carry less weight on that account." The letter of the Chamber has been seen by the Council; I need not repeat the forcible illustrations which it contains of the anomalies which now exist, but I fully admit the accuracy of its statements.

"The Chamber says that "to all appearance, these duties are dying a natural death, and as that process involves serious anomalies and hardships, it is a question whether the present is not a fitting moment to abolish them *in toto*. To the Committee there does not appear any other course open, consistent with the declarations of Government, to which they have referred."

"76. If I could now put aside financial considerations, I should say that this conclusion of the Chamber is perfectly right. I may add that the alternative course which it has suggested as possible, namely, the recall of last year's exemptions, and the re-imposition of a uniform duty of 2½ per cent. on all imported cotton goods, would not only be, in my opinion, objectionable in itself, but seems impracticable, because it would be opposed to the policy laid down for our guidance by Parliament, and by Her Majesty's Government. That policy was declared on the 4th April 1879, by the House of Commons, in the following Resolution:—

"'That the Indian import duty on cotton goods, being unjust alike to the Indian consumer and the English producer, ought to be abolished, and this House accepts the recent reduction in these duties as a step towards their total abolition, to which Her Majesty's Government are pledged.'

"I need not pursue this subject further. It is impossible to deny that the present state of things is anomalous and objectionable. The Government will give to this question in the future that constant attention which its importance demands, but it cannot, at the present moment, make the large sacrifice of revenue which its complete solution would involve, and, as a provisional arrangement, meanwhile, it does not seem possible to draw any line better than that drawn last year. The abolition of the remaining duties on cotton goods would cost us £600,000, in addition to the £250,000 which we have given up already.

"I may remind the Council that the measures of last year were not hastily taken, and that they were in precise accordance with the specific recommendations of the Chambers of Commerce of Manchester, of Bengal, and of Bombay. I may add that, although I cannot doubt that the objections to which I have referred must have been felt as strongly in Lancashire as anywhere else, the Government has not received from the English manufacturers any complaints regarding them.

"77. Although, my Lord, I do not intend to discuss the propriety of the course that has been followed in regard to the removal of the duty on cotton goods, I must ask Your Excellency's permission to say a few words on what is, in some respects, a personal matter. We are constantly told that these measures have been adopted in disregard of the interests of the people of India, and in obedience to the selfish demands of the Manchester manufacturers. If, my Lord, we had, indeed, manipulated, in the interests of England or of any political party in England, the taxes paid by the people of India, our conduct would have been not only shameful and odious, but absolutely criminal, and I, as Your Excellency's chief constitutional adviser in the financial measures of the last two years, must have borne my share of the responsibility. But for myself, who

have taken part in these measures, I wish to say that I hardly remember the time when I did not argue, in the interests of India, for the removal of these and all other restrictions on her commerce. I advocated the abolition of these duties before, to the best of my belief, Manchester had herself discovered that she was injured by them, and long before Lord Salisbury had proved in his despatches, in a manner which seems to me unanswerable, the serious injury which they were inflicting upon this country. As I said in my first Financial Statement three years ago, I would not have accepted my present office, if I had not hoped that I should have an opportunity of co-operating with Your Excellency in carrying out what, I may say without exaggeration, have been the convictions of a life-time. I have had that opportunity. The cotton duties are, in my opinion, virtually dead.

"78. Before leaving this subject, I think it right once more to point out that we ought not to shut our eyes to the consequences which, as it seems to me, must inevitably follow from the loss of the cotton duties. Whether those consequences ought, as I believe, to be welcomed as fraught with a great development of wealth and prosperity to India, or ought, as others think, to be looked on as disastrous, we cannot wisely shut our eyes to the fact that the abolition of the duty on cotton goods will involve in all probability the loss of a great part of our revenue from sea customs. In the Financial Statements for 1877-78 and 1878-79 this was clearly pointed out. In the former of these, I said that I looked forward with confidence to the almost total abolition of customs duties in India, and I used these words:—"I do not know how long a period may elapse before such a consummation is reached, but, whether we see it or not, the time is not hopelessly distant, when the ports of India will be thrown open freely to the commerce of the world."

"My Lord, the fulfilment of this vision seems to me now not far off. It was shown in the Financial Statement for 1878-79 that, putting aside the duties levied on salt and alcoholic liquors, which stand on special grounds, and on which internal excise duties corresponding with the customs duties are imposed, there would remain, apart from the cotton duties, a very small amount of import duties. Taking the estimates for the coming year, the net sum which we expect to receive from the sea customs duties, exclusive of salt, alcoholic liquors, and arms, is £1,115,000. The cotton duties will yield say £615,000, and, if I am right in believing that they must ultimately be altogether given up, our whole import duties would then yield only about £500,000. The truth is that cotton goods are the sole article of foreign production, which the people of India now largely consume, and there is no present possibility of a large customs revenue from anything else. Will it be possible, when cotton goods have been freed from duty, still to tax woollen goods and many other articles? And can it be believed that we should long maintain our customs establishments for the sake of obtaining the insignificant revenue that would remain?

"79. I know only one suggestion which seems to deserve discussion, for saving a considerable portion of our customs revenue. I do not remember by whom it was first made, but I have heard of it for a good many years past. I believe that it really had its origin in a plan which at one time Mr. Gladstone thought of for England. My hon'ble friend, Mr. Hope, has lately given it his attention.

"Starting with the assumption that our customs tariff on its present footing cannot be maintained, this suggestion is that, instead of customs duties properly so called, we should, with certain exceptions, levy on all articles imported into India, and possibly, also on those exported, a registration fee at a very low rate. In this way, it is urged, we might obtain a considerable revenue in an unobjectionable way. I give no opinion of my own, much less do I give any opinion on behalf of the Government, in favour of this scheme, and all I say of it is that it deserves to be considered.

"80. Another solution of these difficulties has lately been suggested, but it seems to me unsound in theory, and impossible in practice. It is that a sort of treaty of commerce should be entered into between England and India, on the principle that India will admit all English merchandize free,

on condition that England gives up the duties which she now levies on Indian tea and coffee; if, it is added, England, in order to maintain her duty on China tea, prefers to continue to levy duty on tea and coffee from India, she might pay the proceeds amounting to a million a year, into the Indian Treasury.

"Of course we should be glad to see the English or any other duties on Indian tea and coffee or on anything else removed; but, if free trade be good for India, it is good for her whether other countries maintain duties on Indian products or not, and the fact that England (for, as it seems to me, excellent reasons) taxes our tea and coffee, is no reason for our taxing her cotton manufactures, and almost everything else that we get from her. To maintain the contrary is, to maintain the old delusion of reciprocity. In regard to the suggestion that England should pay to India the million which she levies on Indian tea and coffee, this is clear, that, whoever else might profit from such an arrangement, it would not be our tea and coffee interests. They would have to pay as much as before, nor would they be reconciled to the new arrangement by the reflection, that it was almost equivalent to the imposition upon them of an export duty for the purpose of saving the English treasury from loss, and for the benefit of the general revenues of India.

"81. I must add that I do not know why tea and coffee have alone been mentioned, as if they were the only articles of Indian production on which England levies any duty. There is tobacco, from which England derives a revenue of between eight and nine millions; I hope and believe that Indian tobacco has before it a great future; I should be delighted to see every legitimate encouragement given to its production; but I cannot conceive how it can be admitted into England free of duty. As, however, the adoption of the proposals, to which I have alluded, would practically lead to the surrender by England of the greater part of her customs revenue, I need hardly say more on this subject.

"82. Leaving the import tariff, I come now to questions connected with the duties on exports. Since 1875, the only export duties have been those on indigo, lac, and rice.

"83. It is surprising that the duties on the two first of these articles should have survived so long. Nobody has ever defended them, and the only reason assigned for keeping them has been that the Government could not give up the revenue yielded by them, though this has never been great. The average amount derived annually from the export duty on indigo is £42,000. The duty is levied at a fixed rate on quantity, so that the revenue does not fluctuate with the fluctuation of prices. On the finer qualities the incidence of the duty is not much over one per cent.; on the lower qualities it may be as much as four per cent. The cultivation of indigo by natives of the country has, in Northern India, been somewhat rapidly increasing, and the duty falls much more heavily on the qualities made by them, than on the better qualities turned out by the factories managed by Europeans. Indigo from Central America competes with ours in the European markets, but not very actively; and a more serious future danger to this industry is probably to be found in the competition of chemically prepared substitutes. The danger is not the less real because no efficient substitute has yet been found. The progress of scientific discovery is now so rapid, that we might hear almost any day that this highly important Indian industry was seriously threatened, and we should then be exposed to the deserved reproach that this competition had been stimulated by the suicidal folly of our fiscal legislation. Export duties enjoy the credit of having ruined the Indian trade in saltpetre; they were taken off when it was too late to repair the mischief; the Government does not wish to run any similar risk with indigo. A notification will, therefore, be issued to-day under the powers conferred on the Governor General in Council by the Sea Customs Act, 1878, exempting indigo from liability to export duty.

"84. The same notification will abolish the equally indefensible export duty on lac. The trade in lac has been in a depressed condition, and during the last two years the average amount of revenue yielded by the duty has been only about £9,000.

"85. I do not think that any one will question the propriety of these exemptions. Taking them both together, they involve a loss of about £54,000 a year.

"86. The only export duty, which will now remain, is that on rice. It yielded, in 1878-79, a net revenue of £556,000. As it is an export duty, it is often assumed that its effect must be more mischievous than that of any import duty. No one can be more alive than I am to the economical objections to export duties; but this duty on rice is, in my opinion, at the present moment, less open to objection than some of our other customs duties. I have before me a valuable note by Mr. O'Conor on the Indian rice trade. It is shown that more than half of our exports of rice goes to Europe. Of the remainder, the greater part is consumed in the countries near India, such as Arabia, Persia, Ceylon, the Straits, &c., or is sent to various colonies, of which Mauritius is the most important, for the supply of the cooly population. The table rice exported from Bengal to Europe is used as food; other qualities, and the rice from Burmah, a thick coarse grain, is chiefly used for distillation, or for conversion into starch.

"87. There is practically, at the present time, no competition with India on the part of other countries in Asia or America in the rice trade. Great apprehensions were expressed some years ago of the competition of Saigon. Similar apprehensions have been felt in regard to Siam. As yet these apprehensions have not been justified; but I must observe that there has been this year a large increase in the export of rice from Saigon to Europe. Northern Italy produces a good deal of rice, and sends large quantities to France; other countries furnish smaller supplies. Rice cultivation, which was formerly very extensive in North Carolina, has ceased to be important, and little rice now goes from the United States to Europe. Thus, although it would not be correct to say that India has a monopoly of the trade in rice, she has something approaching to it, and, so long as this remains true, it cannot be said that the export duty has a seriously injurious effect on Indian interests. At the same time, it is impossible to say how long this may continue true; the Government cannot keep too watchful an eye on the rice trade, and must be prepared, if it should become necessary, to take immediate action. While, therefore, I am not prepared to say that our export duty on rice is at the present moment especially objectionable, I feel that we cannot count upon it as a permanent source of revenue, and if we could afford the loss, I should be very glad to get rid of it. The exports of rice from India, during the last seven years, have not very greatly varied in quantity. In 1873, the year before the Bengal famine, they were 1,164,697 tons; in 1875, in consequence of the famine, they fell to 869,646 tons, and this was the lowest amount reached; in 1879 they had again risen to 1,061,861 tons, and the trade is now again increasing.

"88. Considering that, between 1874 and 1878, the country was passing, with hardly any intermission, through a period of drought and famine, and that vast quantities of rice were absorbed in feeding the famine-stricken population, it is satisfactory to find that exports to other countries should have shown little diminution, and that the enormous increase in prices should not have interfered materially with the foreign demand. In 1878-79, although prices still ruled high and an active demand continued for internal consumption, the exports nearly attained the level of the trade previous to the famine period. This year the exports will, it is thought, exceed those of last year, and, if harvests continue good, next year will probably be a time of great activity in the rice trade.

"89. In leaving this part of my subject, I will only add, that I am as sure as ever that there is no country in the world in which the fullest application of the principles of free trade is more desirable than it is in India. India (to repeat what was said in the Financial Statement for 1878-79) "is a country which, from its poverty, the primitive and monotonous condition of its industrial life, and the peculiar character of its political condition, seems to require from its Government, before all things, the most economical treatment of its resources, and, therefore, the greatest possible freedom in its foreign exchanges." I confidently believe that the time is not far off when the truth of this will be generally recognized.

"90. The re-adjustment of the salt duties, to which I must next refer, has proved a very successful measure. It will be in the recollection of the Council that, at the end of 1877, a step was taken towards equalizing the rate throughout India, by raising it, in the Presidencies of Madras and Bombay, from 1 Rupee 13 annas to 2 Rupees 8 annas per maund, and by lowering it, in the Lower Provinces of Bengal, from 3 Rupees 4 annas to 3 Rupees, and, in the Upper Provinces, from 3 Rupees to 2 Rupees 12 annas per maund. In the following August, a further reduction was made of 2 annas in Lower Bengal, and of 4 annas in the Upper Provinces. By these means a uniform rate of 2 Rupees 8 annas per maund has been established throughout India, except in Bengal, where the duty is 6 annas higher, and in Burma and part of the Punjab trans-Indus, where it is nominal.

"On the 1st October 1878, the salt sources which the British Government had, under recently negotiated agreements, obtained on lease from the Native States in Rajputana, were taken over, and at these, as well as at the Sambhar Lake already in our possession, the duty of 2 Rupees 8 annas per maund was then levied on all salt, excepting that exempted under the agreements just mentioned, the details of which were fully described in the Financial Statement last year. Considering that this result has been obtained not only without any general increase in the rate of duty on salt, but with a large reduction of that rate throughout by far the greater part of India, and simultaneously with a reduction of price to the vast majority of the population, I think we may congratulate ourselves on the success of our policy.

"It was formerly shown that, by the re-adjustment of the rates of duty, we hoped to lower the price of salt to 130,000,000 of people, while only 47,000,000 were affected adversely. Rajputana and Central India are now liable to the salt tax, but a portion of the population still obtains its salt free of duty, and another portion pays only half the usual rate. Throughout the greater part of these States the price of salt, independent of the duty, has been greatly diminished, not only directly, but by the extension of railways. The people have further been relieved by the abolition of local transit duties, and by the abolition of the British duty on sugar taken across the now defunct Inland Customs Line, which yielded £150,000 a year. The Government is now endeavouring to redeem all remaining transit duties on salt in Rajputana and Central India, so that the transport of salt may everywhere be free from restriction.

"91. The Inland Customs Line, on the enormities of which I have so often dilated, finally disappeared at the commencement of the present official year. When I think of this abominable barrier, which was likened to the Great Wall of China, stretching 2,000 miles across the whole of India, so that, if it had been put down in Europe, would have reached from London to Constantinople, with the countless evils that it entailed, I find it difficult not to begin again my old expressions of indignation. However, it is now dead, and I congratulate Your Excellency and the country on the fact. By its disappearance we have saved about £100,000 a year.

"92. I will state to the Council the principal facts in my possession, illustrating the effect produced by our measures on the consumption of salt and on the public revenues.

"We have complete returns for the first ten months of the present year. Comparing these with the returns for the same period in 1877-78, the last year in which the old rates of duty were in force, there has been an increase of consumption, throughout India, amounting to about 2,400,000 maunds; the total consumption in the former period was 20,373,000, and in the latter period 22,776,000 maunds. More than 537,000 maunds of this increase is the increase in Lower Bengal, and nearly 1,900,000 maunds in Northern India. About a third part of the latter is attributed to the consumption in the Native States of Rajputana and Central India. In Madras and Bombay there was a small falling off in the consumption, which fell from 8,850,000 to about 8,654,000 maunds, or by 196,000 maunds. The reduction in Madras is believed to be more apparent than real, because a large number of the population consume untaxed salt. The law relating to salt in the Madras Presidency is as yet very leniently enforced, or is, perhaps, not sufficiently stringent.

"In making the above comparison, I have taken the most unfavourable figures for my own argument that I could find; 1877-78 was the great famine year, but nevertheless for some reason, which I have failed to understand, the amount of salt taxed in Madras in that year was, as I noticed in the last Financial Statement, extraordinarily large.

"If we compare the returns for the first ten months of the present year with those of 1876-77 (and, if I went further back, my case would be still stronger), we find that, taking the whole of India, there has been an increase in the total consumption of 2,718,000 maunds, or from 20,058,000 to more than 22,776,000 maunds; and this increase has been spread over the whole country. In Lower Bengal the consumption has risen from 6,822,000 to 7,682,000 maunds, and, notwithstanding the reduction of duty, the revenue has only fallen off by £30,000, or from £2,220,000 to £2,190,000.

"In Northern India the consumption has risen from 3,775,000 to 5,442,000 maunds, and, in spite of the reduction of duty, the revenue has increased from £1,142,000 to £1,318,000. Even in Madras and Bombay, where the duty was increased, and where the revenue has risen from £1,662,000 to £2,155,000, the consumption has increased from 8,641,000 to 8,654,000 maunds.

"The figures I have just quoted refer to revenue derived from the duty on salt. There are, besides this, large receipts from other heads, such as the sale price of Government salt.

"In 1877-78 the gross salt revenue of the whole year was under 6½ millions sterling; in 1878-79 it had risen to 7 millions; the Regular Estimates for the current year exceed 7⅓ millions, while, for next year, our estimate of salt revenue is 7½ millions. Thus the improvement is expected to be more than one million in four years.

"While the revenue has thus increased, the salt expenditure has diminished from £508,000 in 1875-76 to £404,000 in 1878-79, and is estimated at £368,000 in 1880-81. Against this saving in expenditure, however, must be put £253,000 on account of the annual compensations paid to the Native States and to Portuguese India; this, with £70,000 for the Sambhar Lake, is charged in the public accounts under *Allowances and Assignments*.

"93. I think, my Lord, I may now say confidently that the wisdom of the policy followed in regard to the equalization of the salt duties has been proved by experience. To what extent the increased consumption and lower price of salt throughout the greater part of India have been the consequence of the reduction of the duty, and to what extent they have been attributable to the extension of railways, to the general improvement of communications, the opening out of new markets, and the increase of the population, it is not possible to say; these various influences have, doubtless, all contributed to the result; but it was with the knowledge, and indeed with the certainty, that all the conditions with which we had to deal were highly favourable to the success of our policy, that we were induced to adopt it.

"94. I must add that we received a few weeks ago a representation from the President of the Salt Chamber of Commerce, Cheshire and Worcestershire, to the effect that one of the results of our late measures has been an increase of the former difference between the rates of duty on Liverpool salt and that produced in Northern India, which places the former at a greater disadvantage than heretofore, and has driven it back from markets in Behar formerly supplied by it. Although, as I have already shown, there has lately been a great increase in the consumption of Liverpool salt in Bengal, careful inquiry is now being made into this subject. But, whatever may be the result of that inquiry, I may say at once that, although the Government cannot, at the present moment, make any further reduction in the Salt Duty in Bengal, it fully recognises the necessity of completing, as soon as possible, the actual equalization of the duty throughout India. It is an essential part of our policy to do so, and I feel sure that the measures which have still to be taken will prove as satisfactory to the country, and as beneficial to the revenue, as those of which I have been describing the results.

"95. When, my Lord, the Financial Statement for 1879-80 was published a year ago, we were far from foreseeing the extraordinary improvement which was about to take place in our financial position, and which we now perceive had even

then commenced. The loss caused by the great disturbance in the relative value of gold and silver had reached alarming proportions, and there was nothing to re-assure us regarding the future. We were engaged in war; the surplus which we considered necessary to protect the country against the financial consequences of famine had disappeared; our estimates, apart from the war, showed a surplus of only £605,000. We decided, however (to quote the words of the last Financial Statement), that it was "wise to abstain from imposing any fresh burdens on the country, and to accept the temporary loss of the surplus by which it was hoped that an insurance against famine had been provided."

"96. I see nothing to be ashamed of in our want of foresight. I do not see how we were to know that there would be a great improvement in the exchange, which would last through nearly the whole year, and which, in spite of an increase in our remittances, would better our position by £760,000; that our opium estimate, which we had taken at a higher amount than, with one exception, it had ever been taken at before, would prove, taking both sides of the Account, to be too low by £1,900,000; that in consequence of the most favourable season which India has known for many years, the increased prosperity of the people, and other causes, every great branch of the public income would show an increase; that we should get £450,000 more from Land Revenue, £335,000 more from salt, and so on.

"97. Although, as I need hardly say, it was not a pleasant task which I had last year to perform, in laying before the Government and the public so unpromising a budget, there are now good reasons for not expressing much regret that we were not gifted with greater powers of foresight. For the result was to make us undertake a most searching examination into every branch of the public expenditure, with the firm resolution that everything superfluous should be ruthlessly sacrificed. The reductions which we have made already, and which we hope still to make, are not the leasts atisfactory part of the year's history.

"The Local Governments throughout India loyally responded to our invitation to co-operate in the task which we had undertaken. We left it entirely to their discretion to decide where they could reduce their expenditure, and exercised no kind of interference in their proceedings. The result of our communications with them was, that, with their full consent in every case, the assignments made to them from the Imperial treasury in the present year have been reduced by £335,000, and a similar reduction will be made in the coming year.

"98. Besides less important savings, which I need not now detail, there has been in the present year a reduction in the Public Works expenditure of £661,000. I hope that £400,000 to £500,000 a year will eventually be permanently saved by getting rid of superfluous establishments. Some explanation is necessary on this subject.

"99. Before any orders to reduce the expenditure on Productive Public Works had been issued by the Secretary of State, or the question of reducing the Ordinary Public Works expenditure had been taken up afresh by the Government of India, it was an acknowledged fact that the strength of our Public Works establishments was enormously in excess of what was necessary. When the Secretary of State ordered, subject to certain conditions, the reduction of our annual expenditure on Productive Public Works to the sum of £2,500,000, this excess became, of course, a still more serious evil. I will not now go into the question of the causes which led to the growth of these needlessly large establishments. It is easy to be wise after the event; they were, for the most part, the result of errors of system which were only discovered to be errors by experience. However, this may have been, we found ourselves, at the beginning of the present financial year, in this position, that our Public Works establishments were declared by the highest authorities in the Public Works Department to be costing not less than £500,000 a year more than was necessary for the expenditure on Ordinary and on Productive Works which had to be carried on. We therefore resolved that these superfluous establishments must be at once reduced.

"100. The Local Governments and the authorities in the Public Works Department deserve the thanks of the Government of India for the efficient manner in which the serious task of making this great reduction has been performed. I think it will be admitted that the measures of the Government were carried out with the greatest possible consideration for individuals, and that the engineers with whose services we have unwillingly been compelled to dispense have been treated liberally. The reductions actually made will save us £250,000 a year. In the present year there will, of course, be a large set-off on account of pensions and gratuities; it amounts, indeed, to about £280,000; but the greater part of the cost of reduction will be incurred, once for all, in the shape of gratuities.

"Although these great changes in the constitution of the Public Works Department could not be made without some temporary inconvenience, there can be no doubt, I hope, that they will lead to a permanent increase of efficiency. Our difficulties, however, are not over; our Public Works establishments are still larger than they ought to be, and the constant supply of young engineers that pours in from Cooper's Hill will, if it be not speedily stopped, prove a cause of renewed embarrassment, and of useless and serious expense.

"101. Before leaving this subject, there is one important point that I must notice. It will be plain from what I have said, or have still to say to-day, that the Government of India looks with regret on the reduction of expenditure on Productive Public Works, and that it hopes to see that expenditure again increased hereafter. How, it may be asked, holding these opinions and expectations, can you justify this reduction of Public Works establishments? If, hereafter, your expenditure is increased as you hope it will be, you will have deprived yourself of the machinery necessary for the execution of your works.

"102. If, my Lord, this were true, I should, for my own part, have thought our proceedings very foolish; but I am satisfied that we need be under no apprehensions of the kind. I think that I cannot better explain the views of the Government on this subject, than by reading to the Council the following extract from a despatch addressed by the Government of India to the Secretary of State in September last:—

"'Our present difficulties have not disturbed our belief in the great importance of the most rapid possible development of the means of communication and other material improvements in India. * * * * * * *

"'With these convictions, we should not have acquiesced, without remonstrance, in the absolute permanent restriction to £2,500,000 a year, of our expenditure on the construction of Productive Public Works, if we had understood this to be Your Lordship's intention. * * Accordingly, we have been careful so to frame our proposals for the re-organisation of our establishments, that we shall have no difficulty in hereafter increasing our expenditure on Productive Public Works to any extent which is likely to be considered expedient. We could not have undertaken any reductions not compatible with this condition.

"'The ordinary difficulty of organising an efficient and economical service has been aggravated, in the case of the Public Works Department, by the fluctuations of public policy which have manifested themselves in large variations of the grants made for expenditure in this Department. We need not now enquire into the causes of these fluctuations, and we do not wish to criticise the policy either of the school which advocates a lavish public expenditure on such works, or of that which regards with distrust any such expenditure which can be avoided. It only concerns us now to recognise the fact that we have no reason for expecting, hereafter, more immunity from such alternations of conflicting influences than we have enjoyed heretofore Our duty, therefore, is to anticipate their recurrence, and frame our measures accordingly.

"'Hitherto, our establishments have been organised on a plan which demands, for successful and economical results, a steady and unbroken prosecution of works; engineers having been brought into the service on engagements which have been understood as ensuring to them continuous employment. But such employment is incompatible with the conditions on which we can provide funds for the construction of Productive Public Works; and, clearly, we must now so organise our establishments that their strength may be, at any time, readily reduced or increased. In other words, the cause of our present difficulties being that we have, on the whole, been burdened with establishments in excess of what, with the funds at our disposal, we could constantly and profitably employ, we must, for the future, take care to engage no establishments in excess of the greatest strength for which we can confidently expect to provide constant and full employment, whatever policy as to the material improvement of the country may be in the ascendant.

"'We have resolved, therefore, to organise our permanent establishment, rather upon the model of the staff of a great contractor, supplementing it, as occasion requires, by temporary establishments engaged for particular works only, with no claim to absentee allowances, pensions, employment upon any other work, or any of the rights and privileges of a regular establishment. Moreover, we desire to look, more and more, to the employment, upon considerable undertakings, of contractors with large capital, and to the development of the existing system of petty contracts for petty works. In this way, we expect to avoid a recurrence of the inconvenience from which we are now suffering.

"'We anticipate no difficulty in carrying out the policy thus designed: on the contrary, we believe that, while guarding us against a return of our present embarrassment, this policy will, by encouraging persons to adopt the profession of Civil Engineer, and otherwise, promote the general interests, and be favorable to the extended employment of Natives of India in this department of our service, an object which we have much at heart.'

"103. Before leaving the subject of reduction of expenditure, I have still to mention what I hope may prove hereafter to have been the most important measure of the year. I refer to the appointment of the Special Commission, presided over by Sir Ashley Eden, to inquire into the organisation and expenditure of the army in India. The Report of the Commission is now under the consideration of the Government, and I should be going altogether beyond my own proper business, if I were to attempt in any way to discuss the recommendations which the Commission has made, or to give any opinion as to the extent to which those recommendations may be carried out. But there are some facts to which I may refer without impropriety, and which seem to me highly encouraging. This Commission, presided over by one of the most eminent of Indian statesmen, and including among its members some of our greatest Indian soldiers, has arrived at unanimous conclusions on almost every one of the questions submitted to it. These high authorities believe that the adoption of their proposals would greatly increase the efficiency of the army in peace and war; that it would add to the military strength of the British portion of our forces; that the strength and efficiency of the Native army, as a fighting body, and the popularity of the service, would be increased; that the medical service would be placed in harmony with the true principles of army organisation; that in the departments of the army greater uniformity and power of administration would be obtained; that the great lines of military communication would be improved and made permanently secure; that, under a more scientific system, the troops could be more rapidly and easily mobilised; and that (to quote the words of the Commission) "with improved transport arrangements, with a more thorough knowledge of the vast resources of the country in supply and transport, and with a decentralised military system, the Government of India will be able, provided the details are thoroughly worked out beforehand, to place in the field a force which will be a powerful weapon of offence or defence, while the troops remaining in garrison will be ample to supply a reserve if needed, and to maintain the peace of the country undisturbed." The Commission believes that these great results, by which the efficiency of the army would be immensely increased, could be attained, not only without additional expense, but with a positive saving to the State of £1,250,000 a year.

"I have not been able to take credit for any part of such savings in the coming year; but I sincerely trust that this most important matter will not be allowed to sleep, and that no feeling that the improvement in our finances has rendered military economy less urgently necessary, will be permitted to cause delay in settling the questions which have been raised. As the Commission, quoting the principles strongly enunciated by Lord Mayo, and reiterated by his successors, has observed, "the people of India ought not to be called upon to support or pay for one unnecessary soldier."

"104. The warning which I have now given, that we ought not to be induced by the improved state of our finances to relax our efforts in the direction of economy, is not true in regard to military expenditure alone. It would be a dangerous mistake to conclude that our prospects are not still uncertain.

"In the Financial Statement for last year, prominent attention was called to the consequences entailed upon India by the violent disturbance of the long standing equilibrium between gold and silver. It was then stated that the Government of India had submitted its views on this subject to the Secretary of State, and, as the Council is aware, Her Majesty's Government did not think it possible to accept our recommendations.

"Although the exchange has, during the present year, been less unfavourable to India than we anticipated, it would be a great error to suppose that our anxiety on this account has been removed, or even seriously diminished. The gravity of the subject can hardly be better illustrated than by this fact, that, even in the present year, which has been comparatively favourable, the charge for Loss by Exchange amounts to £3,188,000, while for the coming year it is estimated at £3,411,000. Ten years ago, in 1869-70, the charge was £142,555. Although the relations between the two metals have, of late, been comparatively steady, yet, as this stability does not rest upon any known foundation, it does not afford ground for confidence in the future relations of the two metals, which, under the existing conditions, cannot be predicted for a single month.

"Obviously we cannot depend on the maintenance of our Opium revenue at its present unprecedentedly high amount. Other causes for a prudent anxiety are not wanting. It is, for example, plainly impossible to say what may be the actual cost, and the future obligations entailed upon us by the war in Afghanistan; although, so far as can now be foreseen, ample provision on this account seems to have been made. Altogether, while our financial prospects look, on the whole, far brighter than they were a year ago, we cannot say that there are not many causes for anxiety remaining. The prudent view to take is this, that we ought to take advantage of the breathing time that has now been obtained, to set our house in order.

"105. I think, my Lord, that there is only one remaining subject to which I need refer. Attempts have recently been made in England to compare the financial condition of India as it is now with what it was in past periods, and it seems to have been assumed by many persons that, because difficulties are found in making such comparisons without more information than is given in the published abstracts of our accounts, therefore there is something wrong in the structure of our accounts themselves. The fact is that, for many years past, we have been steadily striving to make such improvements in our published abstracts as were called for by changes in financial circumstances, and in order to give fuller information. In this view, heads of accounts which used to be lumped up together have been separated, while others have been consolidated, and, instead of entries showing merely the net result of the differences between revenue and expenditure, the actual revenue and expenditure have been entered on each side of the account respectively.

"106. For example, in Mr. Wilson's Budget Statement in 1860, there were only six revenue heads. The first was "Land Revenue, Sayer and Abkaree," and it included Land, Forest and Excise revenue, all lumped together; then came, separately, "Customs," "Salt" and "Opium;" then "Miscellaneous," a large item of over 4 millions; and lastly, "Receipts from Railway Companies," which at that time were only £330,000. On the expenditure side the charges on account of collecting the revenue on account of Land, Forest, Excise, Customs, Salt, Opium, Post Office and Stamps together with Political Pensions, Allowances, Assignments, and Charitable Grants, were all included under one head; the remaining heads were "Interest on Debt in India;" "Military Charges;" "Marine;" "Civil Charges," which included all Political, Judicial, and Police Establishments, and all Public Works, except Military and Marine; "Miscellaneous;" and "Guaranteed Interest on Railway Capital." The charges incurred in England were not classified at all. In the next year, 1861, the heads of Revenue and Expenditure were re-arranged and somewhat increased in number. The net charges in England were also shown separately.

"From that time the abstract has been, from year to year, improved in the manner I have indicated. In the last few years these changes have been considerable, involving the entry of large amounts on each side of the Account, which were previously shown net on one side only. For instance, until quite recently, the excess of the Guaranteed Interest on Railway Capital over the net earnings of the Railways was shown in one entry on the expenditure side, instead of the net earnings being entered on the revenue side and the full Guaranteed Interest on the expenditure side; this obvious improvement has caused an addition to each side of the account of some 5 millions sterling. So again, the Provincial Revenue and Expenditure is now entered in the gross, under the appropriate heads, instead of net on one side only of the account. This has added about a million to both sides. Finally, local revenue and expenditure which, although as much public transactions as any other, used to be excluded altogether from the Financial Statements, have now been included, adding more than 2½ millions to each side of the account.

"Thus, under these three heads alone, the totals of our revenue and expenditure have been increased by about 8½ millions, without any addition whatever to our revenue or expenditure. I will not say that our form of abstract is even now perfect; but it gives detailed information which it was impossible to obtain from the abstracts as formerly framed. The improvement of late years has been great, and it is certain that few countries now publish such full and accurate accounts as India. It can hardly be contended that the difficulties which such changes throw in the way of persons who wish to make minor comparisons, ought to have deterred us, or should in future deter us, from rendering our published accounts as perfect and comprehensive in form as possible, or that because our published statements were incomplete ten or twenty years ago they ought to have remained incomplete for ever.

"107. I cannot now take up the time of the Council with any elaborate comparison between our present financial position and that of ten or twenty years ago. As, however, there seems to be an impression that there has been a great increase in the public expenditure, I will briefly compare the accounts of our net expenditure in 1868-69 and 1869-70 with the accounts of 1878-79 and the estimates of 1880-81. That this comparison may be effective, I have eliminated the expenditure from Local Funds, recently incorporated with the rest of the public expenditure, and also the expenditure on the war in Afghanistan. In like manner I have removed, throughout, the credits from the extinct Military Funds. I have then divided the net expenditure thus ascertained into four groups, as follows:—

"*First.*—Land Revenue (except Charges of collection, Surveys and Settlements), Post Office, Administration, Minor Departments, Jails and Penal Settlements, Law and Justice, Police, Marine, Education, Ecclesiastical, Medical, Stationery, Printing, Political, and Miscellaneous.

"*Second.*—Interest, Loss by Exchange, Furlough Allowances, Pensions and Famine.

"*Third.*—Public Works, Telegraphs, Railways, and Canals.

"*Fourth.*—The Army.

"The whole net expenditure thus classified is as follows:—

	1868-69.	1869-70.	1878-79.	1880-81.
	£	£	£	£
Group I.—Effective civil administration ...	10,042,000	10,489,000	10,997,000	11,255,000
Group II.—Non-effective civil expenditure ...	7,054,000	6,543,000	11,182,000	10,536,000
Group III.—Public Works ...	8,195,000	6,235,000	3,454,000	1,883,000
Group IV.—The Army ...	15,137,000	15,251,000	15,441,000	15,330,000
TOTAL ...	40,428,000	38,518,000	41,074,000	39,004,000

"108. *Group I.*—The effective civil charges proper have increased in the twelve years by about one million sterling, of which £587,000, under the Head of Law and Justice, is due to the development of backward provinces, such as Assam, Burmah and Oudh, and to improved administration; and £233,000, under Education and Medical Services, is to be attributed to the constant demands for more schools and dispensaries. It does not seem to me that either the fact that the whole active civil administration of this great country costs only net 11¼ millions a year, or the increase of its cost in twelve years by one and a quarter million sterling, is indicative of any laxity of financial control or any disregard of the interests of the tax-payers.

"109. *Group II.*—The non-effective civil charges, many of which are not subject to control, show an increase of about 3½ millions, caused mainly by the disturbance of the relative values of gold and silver, but also notably by the growth of the pension list. Notwithstanding the addition of 37¼ millions (net)

to our debt, the charge for interest shows little or no increase, the rate of interest having been, by successive operations involving labour and forethought, constantly reduced. The average rate of interest upon the whole debt is now 4·40 per cent.

"110. *Group III.*—The growth of the revenue from Railways, Telegraphs and Canals, and the reduction of the expenditure on Public Works Ordinary has produced a diminution of the net expenditure in this group of more than six and a quarter millions a year, which therefore largely exceeds the increase in Group II. During this period we have spent 65¼ millions sterling upon Railways, including the Guaranteed Railways, Canals, and Telegraphs. The result shown in the figures here given is remarkable evidence of the manner in which India responds to outlay of this character.

"We have seen that in the coming year, the revenue derived from productive public works is likely to exceed the interest on the capital expended in their construction, together with the working expenses. I have read criticisms, in which the policy of constructing these works has been condemned on the ground that they had not yielded, and in many cases were not likely to yield, any extra profit after fully paying their expenses. But if the Government has succeeded in making these magnificent works for nothing, that is, without throwing any permanent charge for them on the people of India, surely it may well be contented.

"111. *Group IV.*—Although there was an intermediate reduction of the cost of the Army, the net military expenditure here shown is little larger in the later than it was in the earlier years.

"112. Owing to the rapid improvement in the financial results of our Railways, Canals, and Telegraphs, and to economy in the expenditure on public works ordinary, the whole net expenditure shows no increase, but a positive reduction.

"113. Considering that, during this period, the charge for loss by exchange has increased by 3 millions, and that, including the guaranteed railways, we have invested no less than 65¼ millions in productive public works, this, My Lord, is a result of which the Government of India need not be ashamed, and which I earnestly commend to the study of those statesmen who, from motives worthy of all respect, but which appear to me to be founded upon a dangerous misapprehension of facts, would withhold from India those material benefits which are to be obtained only by the expenditure of capital upon the development of her vast resources.

"114. It now, My Lord, only remains for me to make the motion standing against my name. If it be adopted by the Council, it will be equivalent to a resolution that the Trades and Professions Bill shall be dropped altogether, and I shall afterwards ask permission to introduce a new Bill for the amendment of the present law. It will be understood, from what I have said to-day, that it will be a very short and simple measure, and its principal effect will be to relieve the poorer classes of traders from the taxation to which they are now liable."

The Motion was put and agreed to.

LICENSE ACTS AMENDMENT BILL.

The Hon'ble SIR J. STRACHEY moved for leave to introduce a Bill to amend the law relating to the licensing of trades and dealings. He said:—

"After the explanations that have been given by me in the Financial Statement to-day, I need only occupy the time of the Council for a few minutes in explanation of the small and simple measure which I wish to introduce.

"The reasons for which the amendment of the present law is desirable are these. In the first place, it is thought right to sanction by legislative action the exemptions already proposed, and in some instances already ordered, by the Executive Government, in favour of the poorer classes of tax-payers.

"Secondly, it is desirable that the license-taxes should be collected everywhere, as they are already in Bengal, for the official instead of for the calendar year, although the assessments should continue to be made during the cold season, and as soon as possible after the first January. As the Council will remember, the collections which under the present Acts ought, excepting in Bengal, to have been made in the first three months of the calendar year, were suspended by executive order, until the Financial Statement could be brought forward, and if there were now no legislation, we should lose a great part of the tax for the next financial year. The result of the change now proposed will be that the tax for three months will be relinquished. Thus, a certain small amount of temporary relief has been given.

"It is thought desirable to take the opportunity of removing two or three other defects in the existing law.

"Doubts have arisen in some Provinces whether tea-planters and others are legally liable to the License-tax when they sell the produce of their own land. They have been exempted from payment by executive orders, but it is thought desirable to make it clear that the law imposes on them no such liability.

"As the law now stands, a person carrying on trade in more than one Province or district may sometimes be called on to pay license-fees in more than one place. The Bill will invest the Governor General in Council with power to direct that a person shall be assessed at one place in British India, however numerous may be his places of business.

"I must explain that in Bengal the collections are already made for the financial year, and the second reason that I gave for amending the existing law is therefore not applicable to Bengal. The Bengal Act also provides already for the exemption of tea-planters and others. As there are other matters in which the Bengal Government desires to amend its local Act, it is thought better to make no reference to Bengal in our amending Bill."

The Motion was put and agreed to.

The Hon'ble SIR J. STRACHEY then introduced the Bill.

The Hon'ble SIR J. STRACHEY also applied to His Excellency the President to suspend the Rules for the Conduct of Business.

THE PRESIDENT having declared the Rules suspended,

The Hon'ble SIR J. STRACHEY said:—"The Bill is of so simple a character that it may seem hardly necessary to refer it to a Select Committee, but it is, I think, as well to do so, for its consideration may suggest improvements which have been overlooked. I will only add to what I have said already, that the Bill is really shorter and simpler than it looks. It has been thought desirable so to frame it that the provisions applicable to each Province will fit in to, and form part of, the existing local Acts, for this will be convenient to the local officers, who have to administer the law. The Bill has, therefore, been divided into three parts, applicable to Northern India, Madras and Bombay respectively. The result is that provisions which are virtually the same, appear three times over, and the Bill thus seems longer than it really is. I have already explained why it does not apply to Bengal. I beg now to ask the Council to refer the Bill to the same Committee which was formerly appointed to consider the defunct Trades and Professions Bill, and to move that the Bill be referred to a Committee consisting of the following Members:—

"The Hon'ble Messrs. Stokes, Thompson, Hope and Colvin, the Hon'ble Mahárájá Jotíndra Mohan Tagore, and the Hon'ble Messrs. Batten, Morgan, Paul and the Mover."

His Excellency THE PRESIDENT said, before he put the motion, it might be as well that he should explain that, if this motion was carried, he proposed to adjourn the Council to that day week, in order that all hon'ble Members, who wished to make any observations on the Financial Statement, might have full time to consider it. With that explanation, he put the question that the Bill be referred to a Select Committee consisting of the Hon'ble Messrs. Stokes, Thompson, Hope and Colvin, the Hon'ble Mahárájá Jotíndra Mohan Tagore, and the Hon'ble Messrs. Batten, Morgan and Paul and the Mover.

The Motion was put and agreed to.

The Council adjourned to Tuesday, the 2nd March, 1880.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

I.

REVENUE AND EXPENDITURE OF THE GOVERNMENT OF INDIA IN INDIA AND IN ENGLAND.

Estimates, 1880-81.

REVENUES.	Accounts, 1878-79.	Budget Estimates, 1879-80.	Regular Estimates, 1879-80.	Increase.	Decrease.	Budget Estimates, 1880-81.	Budget Estimates, 1880-81, compared with Regular Estimates, 1879-80. Increase.	Decrease.
CIVIL.	£	£	£	£	£	£	£	£
I.—Land Revenue ...	22,450,803	21,939,000	22,389,000	450,000	...	22,062,000	...	327,000
II.—Tributes ...	703,660	703,000	714,000	11,000	...	698,000	...	16,000

* The Estimates in this Statement of the amounts to be borrowed and to be supplied to the Home Treasury by Bills in 1880-81 are the best that can now be made; but they are subject to modification as the year goes on; the Government must not be understood to pledge itself that the Secretary of State will raise by Bills the exact amount stated; or that the exact amount stated will be borrowed during the year.

Abstract of the above showing how the Ways and Means are provided.

ACCOUNTS, 1878-79.

	£

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 2nd MARCH 1880.

GENERAL REMARKS.—Rain has again fallen in Eastern Bengal, Assam, and Sindh. The want of rain is still felt in a few of the southern districts of the Madras Presidency. Public health remains generally good; agricultural prospects are excellent in Bengal and Northern India, and are good elsewhere.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(March 3rd)		
Bellary ...	...	*Ragi* 27·16; standing crops generally fair, cotton excepted; second crop paddy being sown.
Kurnool ...	...	*Ragi* 29·85; harvest of white *cholum* and pulse, outturn fair; second crop paddy flourishing; pasture and water ample.
Ganjam ...	1·23 (average of 10 stations).	*Ragi* 31·57.
Kistna ...	...	*Ragi* 30·97; harvest of pulses, outturn about half.
Chingleput (Madras) ...	...	*Ragi* 22·38; cultivation proceeding actively; standing crops generally good; harvest of wet and dry crops progressing, outturn ½ to ¾; pasture generally sufficient.
Coimbatore ...	...	*Ragi* 22·97; wet and garden crops fair; dry crops seriously affected by want of rain; harvest of paddy, outturn ½ to full, a few dry crops ½ to full.
Tanjore ...	...	*Ragi* 28·25; crops generally good; harvest of paddy and *dâl*, outturn ¾ to full.
Madura ...	...	*Ragi* 25·38.
Malabar ...	·23 (average of 2 stations).	*Ragi* 20·73.
Travancore ...	·07	Prices fallen. *General Remarks.*—General prospects fair; want of rain still seriously felt in some southern districts.
Bombay—(March 3rd)		
Kurrachee ...	·10 in Mánjhand, ·31 in Sákro, ·06 in Keti, and ·10 in Sujáwal.	Wheat crops require rain; *jamba* and *muttur* being harvested; wireworm attacked barley and *jamba* in Tatta and Sonda tappas; cattle disease in 7 and small-pox in 2 talukas; measles in Shahbandar.
Hyderabad ...	Slight rain in 3 talukas.	Frost has slightly injured *jamba* here and there.
Ahmedabad ...	...	*Rabi* crops slightly damaged by frost; public health good.
Baroda ...	...	Weather cool; crops thriving; wheat ripe in places; health good.
Surat ...	...	Report not received.
Násik ...	...	Ague in one taluka; cattle disease in Sinar and Dindori; *rab* crops fair.
Colaba (Bombay) ...	...	Abnormal temperature 3 degrees cool till 26th, gradually rose to 3 degrees warm on 29th, and then fell to 0 degrees at the end of week; vapour in air slightly in defect of normal from 27th to 29th; abnormal wind gradually changing from north-west to south-east.
Poona (Feb. 29th)	...	Price of *jowari* in districts rising.
Ahmednagar ...	...	Harvesting of *rabi* finished in Sangamner and continues elsewhere.
Sholapore ...	...	Harvest progressing; public health good.
Dharwar ...	...	*Rabi* harvest in progress; slight fever in six talukas; exotic cotton generally damaged.
Kánara ...	...	Report not received.
Rajkot ...	...	Mornings and evenings cool; health good. *General Remarks.*—*Rabi* harvest progressing everywhere; frost in parts of Guzerat and Sind, and slight rain in Kurrachee; public health fair.
Bengal—(Mar. 3rd)		
Chittagong ...	*Nil*	Weather seasonable; prospects of cold-weather and spring crops satisfactory; cholera still prevalent in Moisal; cattle disease in some parts of district.
Dacca ...	1·1	Prospects of crops favourable; public health good.
24-Pergunnahs (Alipore)	0·10	Peas and pulses nearly gathered, outturn average; land being prepared for *aus*; health generally good; sporadic cholera in Busseerhat.
Barripore ...	0·56	
Diamond Harbour ...	1·08	
Dum-Dum ...	0·2	

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Moorshedabad ...	*Nil*	Prospects of crops continue good; fever and cholera in mitigated form still in some thanas; small-pox in Jellinghee and Kalyangunge thanas.
Rajshahye ...	*Nil*	Weather getting gradually warmer; sowing of *amun* and early *til* continues; *boro* thriving; mustard being cut; prospects of *rabi* good, though *khesari* and peas suffered somewhat by late heavy rain.
Burdwan ...	0·4	Crop prospects favourable; public health good.
Rungpore ...	*Nil*	Weather clear; nights cold; prospects of winter crops good; cases of cholera and small-pox here and there.
Bhágalpur ...	*Nil*	Weather seasonable; prospects of crops excellent; small-pox beginning to the west, otherwise health good.
Purneah ...	*Nil*	*Bhadoi* ploughing in operation; prices stationary; small-pox and fever prevalent.
Patna ...	*Nil*	Prospects of crops favourable.
Durbhanga ...	*Nil*	Prospects of *rabi* continue well; prices stationary; public health good.
Hazáribágh ...	*Nil*	Weather seasonable and fine; notwithstanding damages done by late rains, *rabi* crops promise a fair outturn; prices of food-grains cheap; general health good.
Cuttack ...	*Nil*	Winter and *dalua* crops good; small-pox decreasing. *General Remarks.*—Slight rain in places in Burdwan, Chota Nagpore, Orissa, and Dacca divisions, and in 24-Pergunnahs; cold-weather and spring crops on ground generally very promising, although in places some damage caused by late heavy rains; in some districts cold-weather crops being reaped with good outturn; sugarcane being generally cut and pressed; ploughing for early crops going on in all districts; cholera and small-pox still reported in some places; public health otherwise good.
N.-W. Provinces and Oudh—		
Benares (Mar. 2nd)	*Nil*	Prospects and health good.
Allahabad („ „)	*Nil*	Weather seasonable, though warmer; crops magnificent, save on high sands and kankar near river; are ripening and being cut in places; health excellent; slight fall in prices.
Gorakhpur ...	...	Report not received.
Jhánsi (Mar. 3rd)	*Nil*	Field rats doing much damage to crops; prices stationary.
Agra („ 2nd)	...	Prospects good; rats are injuring fields in Khairagarh, Fatehabad and Panáhat; health good.
Bareilly („ 3rd)	...	Clear; wind strong west; crops excellent.
Meerut („ „)	...	Weather clear; prospects unchanged; prices stationary.
Kumaun (Mar. 2nd)	*Nil*	Weather fair and warmer.
Lucknow („ 3rd)	...	Weather fine; prospects good.
Partabgarh (Mar. 1st)	...	Prospects continue good.
Sitapur („ 3rd)	*Nil*	Prospects good.
Fyzabad („ „)	*Nil*	Prospects continue good. *General Remarks.*—No rain during the week; weather warm and seasonable; prospects excellent and health good; field rats have done some damage in Agra and Jhansi.
Punjab—(Mar. 2nd)		
Delhi ...	*Nil*	Prospects good; health fair; prices steady.
Hissar ...	...	Prospects favourable; prices steady; health good.
Umballa ...	...	Crops and health good.
Jullundur ...	...	Health and crops good; prices falling.
Lahore ...	...	Crops and health good.
Ferozepore ...	...	Harvest prospects and health good; prices steady.
Siálkot ...	...	Harvest prospects good.
Ráwalpindi ...	...	Agricultural prospects good; health fair.
Peshâwar ...	·4	Harvest prospects fair; prices steady.
Mooltan ...	...	*Rabi* prospects and health good; prices steady.
Dera Ismail Khan ...	...	Rain wanted; health good; prospects fair. *General Remarks.*—Prospects continue favourable; health good; prices steady.
Central Provinces—		
Nágpur (Mar. 3rd)	...	Clear and cloudy alternately; *rabi* harvest continues; outturn good; no epidemic.
Jubbulpore ...	...	Cloudy and warm; *rabi* prospects good; small-pox slight; prices easier.
Saugor ...	...	Warm; *rabi* harvesting; small-pox prevalent; prices decreasing.
Seoni ...	...	Warm; *rabi* prospects good; prices falling.
Hoshangabad ...	...	Fine; *rabi* harvest continues; prices stationary.
Raipur (Feb. 28th)	...	Cloudy; *rabi* doing well; cattle disease in Drug and Dhamtari tahsils; health good; prices stationary.
Sambalpur („ 27th)	·10	Ploughing for *kharif* sowings progressing; cattle disease continues. *General Remarks.*—Slight rain in Sambalpur, Biláspur, Mandla, Bálaghát, and Chánda; *rabi* harvest progressing; prospects generally good; prices falling in some districts and in others are stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—(Mar. 3rd)		
Akyab ...	...	A few deaths reported from sporadic cholera, otherwise public health fair.
Rangoon ...	...	Thirty-five cases of cholera in town; a few cases of small-pox and fever in Hanthawaddy district, otherwise public health good.
Bassein ...	...	A few deaths from cholera in town, otherwise public health fair.
Prome ...	...	Small-pox prevalent throughout district, 37 deaths during week in Prome town.
Amherst (Moulmein)	...	A few cases of cholera, 4 of which were fatal, otherwise public health good.
Toungoo ...	...	Slight small-pox, otherwise public health fair.
		General Remarks.—Small-pox prevalent in Rangoon town and in Prome town and district; sporadic cholera here and there throughout province; weather becoming sultry.
Assam—(March 3rd)		
Gauháti ...	*Nil*	Weather seasonable; growing hot during the day; ploughing for *asu* cultivation in progress; prospects of tea favourable.
Sylhet ...	*Nil*	Cultivation of rice crops going on, *bura* rice promising well; good outturn of cold-weather crops.
Cachar ...	·18	Weather unchanged; no rice crops on the ground; common rice 16 seers per rupee; public health good.
Dibrugarh ...	1·76	Outturn of mustard and potatoe fair; small-pox and cattle disease prevalent.
Mysore and Coorg—(March 3rd)		
Bangalore ...	...	Standing crops in good condition; prospects favourable; fever still prevalent, otherwise health good; murrain prevalent in parts; prices generally stationary.
Mysore ...	...	No report received.
Mercara ...	...	
Berar & Hyderabad—(March 3rd)		
Amráoti ...	...	Reaping of *rabi* crops in progress.
Akola ...	...	Crops progressing favourably.
Hyderabad ...	...	Nizam's Government reports agricultural prospects still disappointing; other accounts are more favourable.
Central India States—(March 3rd)		
Indore ...	...	Weather warmer; prospects good.
Morar (Gwalior) ...	...	Health and prospects good; wheat 13, *bajra* and *jowar* 27 seers per rupee.
Sutna ...	...	Prospects very good; *jowar* 37 seers.
Rutlam ...	...	Weather clear; health and agricultural prospects good.
Neemuch ...	...	Health and grain crops good.
Goona ...	...	Crops and health good; wheat 14 seers.
Bhopal ...	...	Weather fair; health and prospects of crops good.
Agar ...	...	Report not received.
Nowgong ...	...	
Mánpur ...	...	Weather fine; opium crops in flower; reaping of grain crops commenced.
Rajputana—		
Marwar (Feb. 13th)	·05	Tanks almost dry; wells full; mild small-pox prevailing; crops flourishing; cold intense.
Harowtee („ 28th)	...	Health and prospects good; seasonable.
Jhallawar ...	...	Health and prospects good.
Ajmere (Mar. 3rd)	...	Prospects good; small-pox still prevalent.
Ulwur („ 2nd)	...	Prospects fair; health good.

ERRATUM.—At page 340 of the Supplement to the *Gazette of India* of the 24th January last, in the rainfall column opposite Kumaun, for "13·0" inches, read "1·3."

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

IRRIGATION OPERATIONS OF THE NORTH-WESTERN PROVINCES FOR KHARIF SEASON 1879-80.

No. 110A., dated Allahabad, the 4th February 1880.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces and Oudh.

Read—

Statements A, B, C 12, shewing the irrigation operations of kharíf, 1879-80.

OBSERVATIONS.—The season was one of exceptionally favourable rainfall, which commenced in the middle of June and continued to the end of September. The area is consequently much less than that of 1877-78 and of 1878-79; in the first of which the rains completely failed, while in the latter they not only commenced late, but irrigation was further encouraged in the early monsoon months by the extreme dryness of the soil after the drought of the previous year.

2. To obtain, therefore, a proper standard of comparison for the kharíf season of 1879, it is necessary to go back to areas of years prior to the recent years of drought.

The following statement compares the canal-irrigated areas of the last ten years:—

		Acres.
1870-71	kharíf	396,399
1871-72	„	333,120
1872-73	„	353,621
1873-74	„	401,622
1874-75	„	389,707
1875-76	„	429,957
1876-77	„	463,520
1877-78	„	731,583
1878-79	„	660,026
1879-80	„	555,641

These figures shew that, although the area of 1879-80 is less than the areas of recent years, it is considerably larger than those of 1875 and 1876 when the rainfall was an average one, but more favourable to canal irrigation than that of 1879-80 on account of the rains being late in both years.

The year 1874 resembled 1879 in rainfall more than any of the intermediate years; but the area irrigated during the kharíf of 1879 is 165,934 acres greater than that of 1874, and this increase may be taken to represent the real growth of canal irrigation in the period of five years.

The increase on the several canals has been as follows:—

	Acres.
Ganges	111,282
Eastern Jumna	15,219
Dún	565
Rohilkhand	7,537
TOTAL	134,603

To which must be added the increase due to two new canals:—

Lower Ganges	10,883
Agra	20,817
	31,700
Gross increase	166,303
Deduct decrease, Bijnor and Bundelkhand lakes	369
Net increase	165,934

The increase in the various crops was—

Sugar	23,999
Rice	17,560
Grains	19,525
Cotton	53,709
Indigo	28,760
Other crops.	22,381
TOTAL	165,934

3. The following statement compares the areas of the several crops irrigated for the four last years:—

Crops.	1876.	1877.	1878.	1879.
	Acres.	Acres.	Acres.	Acres.
Sugar	129,607	139,005	147,661	165,661
Rice	84,744	66,684	79,257	75,903
Bájra and juár	4,830	81,137	12,079	6,635
Maize	27,414	61,577	65,818	17,265
Other food grain	2,533	12,272	19,326	12,535
Fodder	5,273	36,030	17,155	5,996
Fibres	41,150	105,309	74,532	59,580
Dyes	148,589	214,286	228,284	185,195
Miscellaneous	19,380	15,283	15,914	26,871
TOTAL	463,520	731,583	660,026	555,641

Taking 1877 as a typical year of drought and 1879 as a typical year of good rain, it will be observed that out of the net decrease of 175,942 acres in 1879, 148,565* acres were under the coarse grain and fodder crops. The area of sugarcane steadily increases, and is this year 18,000 acres larger than the area of the previous year which was again greater than the area of any

* Bájra and juár	74,502
Maize and other grains	44,029
Fodder	30,034
TOTAL	148,565

year before it. The area of rice was smaller than the areas of ordinary years. This may be due to the discouragement arising from unsuccessful cultivation of this crop for the two preceding dry years. The area of indigo was 43,283 acres less than that of 1878.

4. The following statement compares the kharíf areas of 1878 and 1879 by canals:—

	1878.	1879.	More.	Less.
	Acres.	Acres.	Acres.	Acres.
Ganges	483,356	399,721	...	83,635
Lower Ganges Canal	...	10,883	10,883	...
Agra Canal	40,484	20,817	...	19,667
Eastern Jumna Canal	110,722	98,032	...	12,690
Dún	3,597	6,160	2,563	...
Rohilkhand	21,679	18,981	...	2,698
Bijnor	...	656	656	...
Bundelkhand	188	391	203	...
TOTAL	660,026	555,641	...	104,385 Net.

The decrease in area of the Agra Canal is the only one which requires any special notice, the decrease on the other canals being sufficiently explained by the difference of the seasons.

5. The fluctuations of area irrigated during the kharíf since the opening of the Agra Canal are shewn below:—

	Acres.
Kharíf 1875	5,656
„ 1876	17,577
„ 1877	57,652
„ 1878	40,484
„ 1879	20,817

Thus the irrigation which was stimulated by the two dry years has fallen to little more than the area of 1876. By crops, the comparison for these two years, 1876 and 1879, is as follows:—

	1876.	1879.
Sugar	1,406	2,925
Rice	8	16
Food grains	1,935	2,375
Fodder	1,308	49
Cotton	10,679	10,599
Indigo	1,627	3,344
Others	614	1,509
TOTAL	17,577	20,817

which shews that, while cotton has not decreased, sugar and indigo have slightly increased, nevertheless cotton is the only crop that seems to have established itself in any way as one of the irrigated staples.

Comparing the maximum area of 1877 with that of 1879, it will be found that the net decrease of 36,835 acres in 1879 is almost equally divided between grains and fodder, and cotton,* and is virtually confined to these crops. A permanent area for the kharíf cannot be anticipated until the cultivation of sugar and indigo has been fully established.

Grains and fodder	18,160*
Cotton	18,575
	36,735

6. The following statement compares the assessment on account of water-rate for four years :—

	1876-77.	1877-78.	1878-79.	1879-80.
	Rs.	Rs.	Rs.	Rs.
Ganges	9,33,303	13,38,155	13,18,842	12,01,470
Lower Ganges Canal . . .	...	...	...	31,072
Eastern Jumna Canal . .	39,133	1,41,262	1,23,138	69,478
Agra	3,29,960	3,58,278	3,84,001	3,99,739
Rohilkhand	34,354	20,548	19,053	20,106
Dún	14,185	12,385	11,097	19,219
Bijnor	4,859	1,036	...	1,146
Bundelkhand . . .	783	1,449	309	469
TOTAL .	13,56,577	18,73,463	18,56,440	17,42,699

The revenue therefore, though more than a lakh of rupees less than in the two preceding years, which were extraordinarily favourable to canal irrigation, is nearly four lakhs greater than the revenue of 1876.

The following compares the rates per acre for each year :—

	Rs.
1876	2·92
1877	2·56
1878	2·81
1879	3·14

The higher rate of 1879 is due partly to the large areas of sugar and rice, and partly to the irrigation of the Agra and Lower Ganges Canals being assessed with higher rates than on the other canals. The revenue will therefore tend to increase faster than the area.

ORDER.—Ordered, that copies of this Resolution be submitted to the Government of India for information; that it be circulated as usual to other Governments and Departments and published in the *Government Gazette*.

By Order, &c.,

H. A. BROWNLOW, *Colonel, R.E.,*
Secy. to Govt., N.-W. P. and Oudh, P. W. D., I. B.

J. W. OTTLEY, *Captain, R.E.,*
Asst. Secy. to Govt., Punjab, P. W. D., Irrigation Branch.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 9th MARCH 1880.

GENERAL REMARKS.—The week has been characterised by a general rise of temperature and absence of rain. Dry and tank-raised crops in some southern districts of Madras continue to suffer from drought, and field-rats have been doing damage in parts of the North-Western Provinces. The spring harvest has begun. Public health and agricultural prospects are generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(March 10th)		
Bellary ...	...	*Ragi* 27·16; standing crops generally fair, cotton excepted; second crop paddy being sown.
Kurnool ...	...	*Ragi* 30·93; harvest of white *cholum* and pulses nearly completed, outturn fair; second crop paddy flourishing.
Ganjam ...	...	*Ragi* 31·54.
Kistna ...	...	*Ragi* 30·39; crops generally good.
Chingleput (Madras) ...	...	*Ragi* 22·4; cultivation proceeding actively; standing crops fair; harvest of wet and dry crops progressing, outturn ½ to ¾.
Coimbatore ...	...	*Ragi* 23·4; wet and garden crops mostly fair; dry crops seriously affected by want of rain; harvest of paddy, outturn ½ to full; a few dry crops ½ to full.
Tanjore ...	...	*Ragi* 27·95; crops generally good; harvest of paddy and a few dry grains, outturn ¾ to full.
Madura ...	...	*Ragi* 24·96.
Malabar ...	...	*Ragi* 20·23.
Travancore ...	...	Prices unchanged. *General Remarks.*—General prospects fair; in some southern districts failure of dry crops from insufficient rainfall still reported.
Bombay—(Mar. 10th)		
Kurrachee ...	·15 in Kurrachee, ·10 in Mirpur Bakora, ·81 in Jerruck, ·06 in Keti, ·30 in Kotri	*Rabi* crops promise fairly; small-pox in two talukas, 35 cases and 13 deaths; cattle disease in 4 talukas; weather getting warm; river rising, 2 feet 6 inches in Kotri on 6th, against 2 feet 1 inch on same date last year.
Hyderabad ...	...	Weather warm; high southerly winds with dust prevail; districts fairly healthy, though small-pox continues in 2 talukas.
Ahmedabad ...	...	Cold-weather crops generally come to maturity; harvest commenced in some places.
Baroda ...	...	Warm weather set in; cotton-picking in progress; wheat crop being cut.
Ahmednagar ...	...	Harvest of *rabi* nearly finished.
Sholapore ...	...	Harvest continues; public health good.
Dharwar ...	...	Harvest of late crops almost completed; slight fever in 4 talukas; cotton-picking commenced.
Kánara ...	...	Early second crop coming into ear on coast; fever prevails; small-pox in Honore.
Surat ...	...	*Kabi* harvest progressing.
Násik ...	...	Ague in two talukas; cattle disease in Sinnar and Dindori; *rabi* crops fair.
Colaba (Bombay) ...	·02 on the 6th	Abnormal temperature rose from 0 degrees to 4 degrees warm at which it remained from 7th to 9th; vapour in air slightly in defect of normal except on 6th; abnormal wind southerly till 7th, afterwards northerly.
Poona (March 7th) ...	...	Prices of *jowari* fallen in Poona city and district.
Rajkot ...	...	Weather warm; health generally good.
		General Remarks.—*Rabi* crops being harvested; cotton-picking commenced; weather getting warm; slight rain in Kurrachee; small-pox in Kurrachee, Hyderabad and Kánara.
Bengal—(Mar. 9th)		
Chittagong ...	*Nil*	Weather getting warmer; state of crops good; cholera continues in Mouseal, and re-appeared in Teknaaf, Roum, and Satkania; cattle disease in Mirkasarai.
Dacca ...	*Nil*	Prospects of crops favourable; public health good.
24-Pergunnahs (Alipore) ...	*Nil*	Winter crops yielded an average outturn; land being prepared for *aus*; sporadic cases of small-pox and cholera in Barasat.
Moorshedabad ...	*Nil*	Reaping of *rabi* crops commenced; prospects good; fever and cholera still in some thanas; small-pox in Kalyangunge and Sujangunge thanas.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Rajshahye ...	*Nil*	Weather much warmer; condition of *rabi* and *boro dhan* continues good; *amun* and *til* being sown; *kesari*, mustard, and peas being harvested; general health good.
Burdwan ...	*Nil*	Crop prospects and public health good.
Rungpore ...	*Nil*	Weather hot; prospects of crops good; public health good.
Bhágalpur ...	*Nil*	Good outturn of *rabi* expected; small-pox on the increase; public health otherwise good.
Purneah ...	*Nil*	*Rabi* likely to yield a full crop; *bhadoi* sowings progressing; health fair; small-pox very prevalent in south; water level high for time of year.
Patna ...	*Nil*	Prospects favourable.
Durbhunga ...	*Nil*	Weather seasonable; prospects of *rabi* continue excellent; sugarcane pressing in progress; prices stationary; public health good.
Hazáribágh ...	*Nil*	Weather seasonable; warm in day, but mornings and evenings still cool; *rabi* crops being harvested with fair outturn; prices of food-grains cheap; general health good.
Cuttack ...	*Nil*	Weather getting warm; winter and *dalua* crops good; small-pox decreasing. *General Remarks.*—Slight rain only in Tipperah; weather becoming hot; *rabi* prospects generally satisfactory; in some districts crops being reaped; spring crops doing well; ploughing for autumn crops progressing favourably; public health on the whole fair; small-pox and cholera still reported in some districts.
N.-W. Provinces and Oudh—		
Benares (Mar. 9th)	...	Prospects and health good.
Allahabad („ „)	*Nil*	Weather seasonable; crops excellent; gram and *sarson* exceptionally fine; barley and peas being cut; a few cases of cholera in south; wheat $15\frac{3}{8}$, unhusked dhan $34\frac{9}{16}$, coarse rice $19\frac{1}{4}$ seers.
Gorakhpur ...	...	Weather warm but seasonable; *rabi* prospects excellent; health good.
Jhánsi (Mar. 10th)	...	Except injury by field-rats, *rábi* prospects fair; prices fluctuating.
Agra („ 9th)	...	Prospects good; weather warmer; rats still infest Khairagarh, Fatehabad and Panáhat; health good.
Bareilly (Mar. 10th)	...	Clear; harvest prospects good.
Meerut ...	...	Weather warm; health good; prospects unchanged.
Kumaun (Mar. 9th)	...	Weather clear and warmer; prospects good.
Lucknow („ 10th)	...	Prospects good.
Partabgarh („ 8th)	...	
Sítapur („ 10th)	...	Weather fine; prospects good; prices falling.
Fyzabad („ „)	*Nil*	Sugarcane being pressed and peas cut. *General Remarks.*—Field-rats still continue damage in Jhánsi and part of Agra; weather warmer and prospects good; a few cases of cholera have occurred in Allahabad, otherwise health good; prices falling in Sítapur.
Punjab—(Mar. 9th)		
Delhi ...	*Nil*	Prospects good; health fair; prices steady.
Hissar ...	...	Crops thriving; prices steady; health good.
Umballa ...	...	Health and crops good.
Jullundur ...	...	Health and crops good; prices falling.
Amritsar ...	...	Health and crops good; prices steady.
Lahore ...	...	Crops and health good.
Ferozepore ...	...	Health and agricultural prospects good; prices falling.
Siálkot ...	...	Agricultural prospects good.
Ráwalpindi ...	...	Agricultural prospects good; health fair.
Pesháwar ...	...	Harvest and prospects fair; prices steady.
Mooltan ...	...	*Rabi* prospects and health good; prices steady.
Dera Ismail Khan ...	...	Rain wanted; health good; prospects fair; prices steady. *General Remarks.*—Prospects continue favourable; health good; prices generally steady, but with a downward tendency.
Central Provinces—		
Nágpur (Mar. 10th)	...	Warm; *rabi* harvest nearly completed; a few cases of small-pox reported.
Jubbulpore ...	...	Cloudy and warm; prospects of *rabi* good; a few cases of small-pox; prices easier.
Saugor ...	...	Reaping progressing; small-pox continues; prices declining.
Seoni ...	...	Warm; *rabi* harvesting; one death from small-pox; prices falling.
Hoshangabad ...	...	Fair; *rabi* harvesting, good outturn anticipated; prices falling.
Raipur (Mar. 6th)	...	Warm; rice threshing almost completed; *rabi* generally good; cattle disease prevalent; prices slightly fallen.
Sambalpur („ 5th)	...	Cool; ploughing for sugarcane sowings continues; small-pox and cattle disease prevalent. *General Remarks.*—Clear; slight rain at Chanda; threshing of rice almost completed; *rabi* harvest continues; prices falling.
British Burma—(Mar. 10th)		
Akyab ...	...	Public health good; slight cattle disease.
Rangoon ...	...	Three cases of cholera, and 36 fatal cases of small-pox; fever and small-pox continue in parts of the Hanthawaddy district, otherwise public health good; no cattle disease.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*		
Bassein ...	...	A few deaths from cholera, otherwise public health good; 92 deaths from cattle disease in 2 circles.
Prome ...	...	Small-pox continues throughout district, 37 deaths in Prome town.
Amherst (Moulmein)	...	Small-pox prevalent in 3 circles of Thatone township, 2 deaths reported, otherwise public health good.
Toungoo ...	...	Public health fair; very slight small-pox. *General Remarks.*—Public health in Arakan satisfactory; in Pegu a good deal of small-pox and some cholera; small-pox in parts of Tenasserim.
Assam—		
Gauháti (Mar. 10th)	*Nil*	Weather seasonable; mornings cool and days hot; gathering of the mustard is over; sowing of *asu* is commenced; prospects of tea favourable.
Sylhet („ „)	*Nil*	Weather getting warm; cultivation for rice crops continues; small-pox increasing towards Sunamganj.
Cachar („ „)	*Nil*	Weather getting warm; no rice crops on the ground; common rice 16 seers per rupee; public health good.
Dibrugarh („ „)	·38	No crops on the ground; cattle disease still prevalent; public health good.
Mysore and Coorg—(Mar. 10th)		
Bangalore ...	...	Standing crops in good condition; general prospects favourable; health good, but fever prevalent; murrain prevalent among cattle in parts; prices stationary.
Mysore ...	...	Report not received.
Mercara ...	...	
Berar & Hyderabad—(Mar. 10th)		
Amráoti ...	...	Reaping of *rabi* crops nearly completed.
Akola ...	...	Harvesting continues; prospects good.
Hyderabad ...	...	Agricultural prospects still rather unfavourably reported by Nizam's Government, though other accounts continue to describe them as better.
Central India States—(Mar. 10th)		
Indore ...	...	Prospects good.
Morar (Gwalior) ...	...	Prospects and health good; weather clear; *bajra* 28 seers.
Sutna ...	...	Prospects good; *jowar* 35 seers.
Rutlam ...	...	Weather clear and warm; public health good; opium prospects no favourable.
Neemuch ...	...	Health excellent; gram crops good.
Bhopal ...	...	Public health good.
Agar ...	...	Health good; agricultural prospects favourable.
Nowgong ...	...	Health fair; prospects of *rabi* crops good.
Mánpur ...	...	Report not received.
Rajputana—		
Abu ...	...	No report.
Sirohee (Mar. 7th)	...	Tanks drying; wells fairly full; health fair; much warmer.
Marwar (Feb. 27th)	·10	Tanks almost dry; wells full; mild small-pox and fever; crops excellent; cold much less.
Meywar ...	...	No report.
Harowtee (Mar. 6th)	...	Weather close and cloudy; health and prospects good; some small-pox.
Jhallawar ...	...	Health and prospects good.
Ajmere (Mar. 10th)	...	Prospects excellent.
Jeypore ...	...	Cloudy, seasonable; health good; prospects favourable.
Bhurtpore ...	...	
Ulwur (Mar. 9th)	...	Prospects fair; health good.

C. BERNARD,

Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 2nd March, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of Bengal, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Whitley Stokes, C.S.I., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
Major-General the Hon'ble A. Fraser, C.B., R.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore, C.S.I.
The Hon'ble E. C. Morgan.
The Hon'ble J. Pitt-Kennedy.
The Hon'ble G. C. Paul, C.I.E.
The Hon'ble H. J. Reynolds.

LICENSE ACTS AMENDMENT BILL.

The Hon'ble SIR JOHN STRACHEY presented the Report of the Select Committee on the Bill to amend the law relating to the licensing of trades and dealings.

The Hon'ble SIR JOHN STRACHEY also moved that the Report be taken into consideration. He had so fully explained on a former occasion everything that he had to say on this subject, that he thought it unnecessary to take up the time of the Council with any further remarks. The Select Committee had made no alteration in the Bill referred to it, and the Committee had recommended that the Bill be passed.

The Hon'ble MR. PITT-KENNEDY said that he was slightly astonished to find, when he read the report of the Select Committee on the Bill to amend the law relating to trades and dealings, that they had made no alteration in it, except one trifling verbal amendment in section 13. He was still more astonished when he heard the Financial Minister repeat the same statement. So far as he was acquainted with the proceedings of the Council, no such Bill had ever been referred to the Select Committee. He held in his hand a Bill which bore the title of a Bill to impose a tax upon trades and professions. That Bill was referred to a Select Committee, and it was referred under circumstances against which he then felt himself bound to protest, and which now formed the subject of the report which they had laid before them, and he and those who protested thought they were fully justified in the protest which they then made. He did not say that the Select Committee had not power to change the title of the Bill—of course they had; he did not say that they had not power to make any alterations in the provision of that Bill; but the Bill which was laid before them was a Bill which, so far as he could see, was not in any one single passage the identical Bill which was referred to the Committee. The amended Bill which was placed in his hands late last night was a Bill which contained references to a multitude of sections in different Acts of the local legislatures which he had not had an

opportunity of referring to, and whether substantially the provisions remained the same as those in the Bill originally drafted—

His Excellency THE PRESIDENT was sorry to interrupt the Hon'ble Member, but it was his duty to point out that the original Bill—the Bill to which the Hon'ble Member was referring—had been withdrawn. The Bill now before the Council was the Bill which was referred to the Select Committee, and it was a totally different Bill from the Bill which was originally introduced.

The Hon'ble MR. PITT-KENNEDY continued—With great respect to His Excellency the President he might, perhaps, be permitted to explain what his position actually was. As he understood, no Bill was withdrawn. The precise objection which was raised by himself and other Hon'ble Members was that the Bill which had been pending before the Council had not been withdrawn, and a new Bill was not introduced.

His Excellency THE PRESIDENT again explained that, at the close of the Financial Statement made by his Hon'ble colleague at the last meeting of the Council, a motion was carried to cancel the reference of the former Bill to a Select Committee, and the Bill, the Committee's report upon which the Council was now considering, was at the same time introduced.

The Hon'ble MR. PITT-KENNEDY continued—He was not aware that the Bill which had been originally referred to the Committee had been withdrawn. He was present certainly when much discussion took place, when the intention was stated of retaining the Bill, originally introduced, with a large number of changes. But a different course was adopted, and under the circumstances, certainly all the Members had not had an opportunity of consideration and discussion of the Bill in that Council. The reason why it seemed to him important to call attention to that was that matters of this kind, matters affecting the financial arrangements of the country, did seem to him to deserve more serious consideration and a larger publicity before they were finally adopted; that if the Bill, which was practically to impose for an indefinite period a system of taxation on the country, was to be considered, and the whole arrangements made for its being passed into law, at one sitting of the Council, surely the attendance of Members who wished, so far as they could, to put before the Council and the public views which they might entertain, was embarrassed by very considerable difficulty. It was difficult, without some opportunity of previous consideration, to know what the nature of the measure was to be with which one had to deal. In this instance, no further publication was considered necessary. Under the usual practice of obtaining leave at one meeting and introducing it another week, the Council was at liberty—

His Excellency THE PRESIDENT was sorry again to interrupt the Hon'ble Member. The Bill before the Council was no new measure; it introduced no new taxation; it simply revised a system of taxation which had already been introduced, and had long been existing, chiefly with the object of relieving a very large number of the poorer classes.

The Hon'ble MR. PITT-KENNEDY continued—This was a Bill by which it was intended to fix on the country or portions of the country, for an indefinite period, a system of taxation which he submitted was not necessary. He would submit to the Council that it did a little more; it altered the incidence of taxation, and, further, they had in the Bill now before them a series of references to various Acts passed by local legislatures, making alterations and amendments upon them. That seemed to him at least an extremely difficult question, which might afterwards require to be discussed, namely, whether those legislatures could examine and deal with their own measures after they had been incorporated into an imperial measure. Therefore, to pass such an Act as this, was a very very serious thing. If this were a Bill for a limited period, to terminate in its own course in a limited time, one might see some prospect of relief, or perhaps the introduction at a future time of a better method of taxation. But introduced as it was at one meeting, to be passed at the next, it certainly did occur to him that it was a measure which was brought to its consummation much more rapidly than could be

desired. However, there were other reasons. The question at present was whether the necessities of the State required additional taxation. When the responsible Finance Minister stated that that was the case, MR. PITT-KENNEDY for one could not attempt to deny it; and therefore it might be an absolute necessity that some such measure, whether one approved of it or not, should pass for the present; but when one had to consider all the circumstances of the case, one could hardly doubt that the necessity had been brought about by the modification of the cotton-duties—a measure, legislative in its effect, adopted by a narrow majority of the Executive without the assent of the Legislative Council. A very considerable portion, at any rate, of the present alleged deficit would not have existed if measures, which, some people at least, had thought not justified by the language of the Statute, had not been taken in the Executive Council for the remission of taxation. If one could see one's way to the aspirations of the Financial Member being ever fulfilled; if one could see any mode of taxation so little oppressive, so little likely to afford injustice, as the customs-duties; if one's experience of this country did not tell him that all these attempts at direct taxation produced the largest amount of inconvenience to the population with the least possible benefit to the State, one might regret with him the existence of customs-duties. But he feared that such a prospect was a very remote one, and that the political necessities of the State would prevent the abolition of the customs-frontiers which the country possessed. They were told that a great benefit was conferred by remitting taxation when it operated as a protective duty. The protection which might be afforded by small rates of duty hardly seemed to call for such a rigid application of economical law, especially when one remembered that in England one remnant of protection still remained to the great detriment of Indian productions. It might seem a small matter, but he believed almost the only remnant of protection left in England was the differential duty upon foreign-manufactured tobacco. Now, MR. PITT-KENNEDY had little doubt that if that duty were removed, the exports of this country in the way of manufactured tobacco would indefinitely increase. Indian tobacco, it seemed, was not so capable of undergoing further processes, by which it could be made capable of being worked up in English manufactories. The consequence was that Indian tobacco was, to a very large extent, excluded from the European market, notwithstanding that the cheapness of labour in the country did admit of Indian-manufactured tobacco being exported at a very low rate. That, he believed, was the only instance of a protective duty existing still in England, and which bore more hardly upon Indian production than on that of any other country. He could suggest a mode of taxation which might have some effect, perhaps, on English-manufactured goods, if a tax were imposed upon the China clay and size contained in imported cloths. He doubted whether it would not be found the most complete check to importation which had ever been suggested. Unless its results were that the adulterations would no longer continue, and then it would not be a very lucrative source of revenue.

Those were the observations which he thought himself bound to make upon the Bill. It seemed to him that neither the Council nor the public had had any sufficient opportunity of discussing the Bill, and that at least its duration should be limited, so that the Council and the public should have some future opportunity of dealing with it.

The Hon'ble MR. MORGAN said: "My Lord,—It is a somewhat ungracious task to comment on the results of a financial year which has terminated so favourably as the one just closed, and I trust Your Lordship and the Council will recognise that the remarks I am compelled to make are made in no obstructive or hypercritical spirit, but are the necessary outcome of a very careful consideration of the Statement made last week by the Hon'ble Member in charge of the finances, and of the accounts upon which that Statement was based.

"Perhaps, the most important event, and certainly the most disturbing element, in the finances, which has occurred during the year, has been the Afghán war. As regards the political aspect of the war, I shall follow Sir John Strachey in giving no opinion. My object is merely to consider the subject financially.

"From the figures before the Council, it appears that the amount expended, during the year 1879-80, upon the war, directly and indirectly, has amounted to about £4,900,000. The amount which it is estimated will have to be spent, directly and indirectly, during the coming year is about £4,000,000, or a total, including the comparatively small amount expended during the year 1878-79, of close upon ten millions sterling. The whole of this very large amount of abnormal expenditure it is proposed to meet out of current revenue, and it is the wisdom and justice of this procedure that I take the liberty to question.

"It is not very long ago—three years only—when the condition of the finances of the country necessitated the imposition of a certain series of taxes to enable the Government to meet its obligations with respect to famine. At that time the position of the finances was shown by the Hon'ble Member in charge to be such that, in order to establish an equilibrium between revenue and expenditure, and to provide a sum of £1,500,000, which was then considered to be necessary as a provision against extraordinary charges on account of famine, as well as £500,000 for a working surplus, fresh taxation was necessary. Had the position of the finances been such as to yield this surplus of two millions of revenue over ordinary expenditure, no taxation would have been necessary, and the natural deduction from these premises was that, as soon as the financial position of the country should have improved so as to yield the amount needed to provide for famine-relief, which was thenceforward to be considered as a regular charge on the country, to the extent of £1,500,000 per annum, and the working surplus of £500,000, the taxes then imposed would be repealed.

"The principle of the new taxes, very briefly stated, was this—that, whereas the agricultural and trading classes were those not only who suffered most by famine in those districts where famine was rife, but who also were gainers by the misfortunes of their neighbours, when it happened that they themselves were in the midst of plenty, these classes should be called upon to contribute towards the mutual insurance of each other. This principle was very open to question, and it was the subject of considerable criticism; moreover, the incidence of the tax was very unequal, not only as regards the classes to be taxed, but also as regards the individuals in those classes, for, in the Bill, as it first came before the Council, it was not proposed that any individual or firm, however wealthy, should contribute more than Rs. 200 per annum, whilst, upon small incomes, the contribution amounted to a sum not exceeding two per cent. The Mover of the Bill was at some trouble to explain that this was a deliberate intention, not only because small traders contributed next to nothing towards the support of the State, but also because those who contributed proportionately most would be the ones who would derive most benefit from the fund in the shape of pecuniary relief in times of distress. In consequence of hostile criticism on the publication of the Bill, the maximum contribution was increased, but that from the smaller incomes remained untouched.

"It is now proposed in the Bill before the Council to relieve traders whose incomes amount to less than Rs. 500 per annum, and I cannot better illustrate the importance of this measure than by a reference to a speech made by the Hon'ble Mr. Mackenzie in the Bengal Council, in which he stated that the numbers, in Bengal alone, liable to the amended Act, would stand at 66,668 as against 715,887. To relieve so large a number of persons from direct taxation is no doubt very desirable, but it is difficult to understand why traders alone should be selected, and agriculturalists whose income is less than Rs. 500 per annum should still be held liable to contribute. However, I shall not dwell upon this point, but, my Lord, I must say that, to my mind, the proposed change has destroyed whatever symmetry the original measure may have been thought to possess. There is now no mutual insurance, but one class, the agriculturalists, and a few of the wealthier people in another class, the traders, are selected, in a purely arbitrary manner, to pay a contribution towards the general needs of the State, to the exclusion of the rest of the community.

"This can hardly, I think, be considered satisfactory; but I have now to point out that the necessity for these taxes does not really appear to have existed subsequently to 1877-78. From Sir John Strachey's Statement, it appears that, in 1878-79, the amount collected from assessed taxes was £1,227,891, and he proceeds to add—

"'The standard at which, for ordinary times, the Government aims, namely, a surplus of £2,000,000, less any expenditure on famine relief and exclusive of extraordinary charges, such as those for great military operations, would have been attained if the accounts had shewn a surplus of only £1,010,199, or £1,034,192 less than the actual surplus.'

"It would, therefore, appear that the collections from the famine-taxes, save about £200,000, were not required to make up the surplus of £2,000,000, but constituted a separate and independent surplus over and above that figure.

"The figures of 1879-80 are even more remarkable. In that year, Sir John Strachey says—

"'The true surplus of the year for comparison with the standard surplus of £2,000,000, at which we aim, will be about £4,160,000, towards which the famine-taxes have contributed £1,184,000.'

"Exclusive of the famine taxes, there was, therefore, an additional surplus of one million over what Sir John Strachey has called the true surplus.

"From these figures, it is abundantly evident that neither in the year 1878-79 nor in the year 1879-80, were the so-called famine taxes needed to make up the surplus of £2,000,000, and in point of fact the money collected from these sources would certainly not have been required for the ordinary fiscal operations of the country. It is not, however, my object to do more than point out the actual state of affairs as regards the past, but I find the same thing as regards the future. Sir John Strachey states—

"'But for the war-expenditure, the true surplus of the year to compare as before with the standard surplus of £2,000,000, would not have been less than four millions.'

"He adds—

"'The estimated revenue includes £982,000, obtained from taxes imposed in 1877 and 1878, to enable the Government to meet its famine obligations.'

"To my mind, the foregoing statement conveys the impression that, but for war expenditure, the Government would have had enough to meet their famine obligations and two millions to spare, or, exclusive of the famine taxation, upwards of a million to spare, and I cannot therefore avoid the conclusion that the maintenance of the assessed taxes is not to meet the charges of famine, but to defray the cost of war. This I must consider altogether erroneous and unjust, for, whatever arguments may be brought forward to prove that the particular classes who are taxed are specially liable to contribute towards expenditure on famines, certainly no reasons can be adduced to prove that they of all others, derive any special benefit from the war now being carried on upon the frontier.

"Sir John Strachey has in his speech alluded to the question as to whether the cost of the war should fall upon England or India, and upon this point I do not desire to express any opinion, but it is quite clear that if, as Sir John Strachey has urged, India should properly pay the cost, it is rather for prospective than for actual benefits, and consequently the entire burden should not fall upon the existing tax-payers. It appears that, up to the present time, about 5½ millions have actually been paid from funds in the hands of Government, and there would appear to be nothing either convenient, save in the sense of fitting, and certainly nothing cowardly, in spreading the balance of the expenditure over a term of years, especially when it is considered that the war expenditure includes a sum of upwards of 3½ millions for the construction of Railways which, though at present constructed for strategical purposes, will, as Sir John Strachey has pointed out, permanently benefit the country.

"It would doubtless be inconvenient, if not impossible, for the Government to make any alteration in the financial programme for the coming year, but I urged when sitting in Committee upon the Bill now before the Council, that its operation should be limited to one year. My object in proposing this amendment was to insure the fullest reconsideration of the entire subject of the

assessed taxes as soon as the actual result of the coming year was known. I do not desire now to press the amendment, but I trust the public may receive Your Lordship's assurance that the views I have put forward, which coincide with those already expressed by the Hon'ble Mr. Inglis in the Bengal Council, and which I believe to be very generally entertained, will be duly considered by the Government when the finances shall again become the subject of discussion.

"One other point I wish to mention with reference to the Financial Statement. Sir John Strachey stated in his speech, that he did not see how the Government were to know there would be a great improvement in the exchange, and it is no doubt a fact that, as long as the present system prevails, it must of necessity remain a matter of the greatest difficulty, if not of impossibility, to make an accurate forecast. But it is a proof of the viciousness of the present system, as regards the maintenance of any accuracy in the Government accounts, that so enormous a variation as one million can take place during a single year. The manner in which this subject should be dealt with, in order to obtain a more secure basis for the preparation of estimates, must of course rest with the Executive, but I trust Your Lordship will not consider that I am out of order in drawing the attention of Government to this subject. I have no hesitation in saying, that I consider the present system entirely faulty, not only because it imports an element of absolute uncertainty into the accounts of Government throughout the year, but because it is also calculated to entail upon the Government the maximum loss of revenue. There is no assimilation in the system now adopted to the natural expansion and contraction of trade which takes place at various periods of the year, so that, on the one hand, the Government is unable to take advantage of high rates when they exist, save to a very limited extent, and when there is little demand it is compelled to force-off bills much in excess of trade requirements, to the manifest detriment of the treasury.

"Since the time when it was determined to adopt the plan now in vogue, great changes have taken place, the most important being the large increase which has occurred in the annual amount of the drawings, and I would urge that, as the figures now involved are so very large, the attention of the Government should at once be turned towards devising a change which would ensure greater stability, and be more suited to the existing state of affairs."

The Hon'ble MAHÁRÁJÁ JOTÍNDRA MOHAN TAGORE said:—"My Lord, the country and the Government are no doubt to be congratulated on the prosperous state of the finances as shown in the Statement submitted to this Council last week. But there are one or two points in it on which I beg to offer a few remarks with your Lordship's permission. In the first place, I would refer to the cost of the Afghan war. I do not mean to discuss the question as to whether India or England ought in equity to bear the whole or any portion of the cost; that, my Lord, is too large a question, and involves principles which I apprehend cannot authoritatively be decided here. What I would submit for consideration is, that since India has been made to bear the cost, whether the whole burden ought to be thrown upon the present generation, especially as the cost of the war includes charges for the construction of frontier-railways. If the war has been undertaken for the protection of India, the future generation is as much interested in its issue as the present; again, railways benefit posterity no less than ourselves, and it is on this principle that State-railways have hitherto been constructed out of loans. The Hon'ble Member in charge of the Finances has dismissed the question by saying 'Posterity will have quite enough to do in bearing its own burden'; on that ground, I submit, no present burden could possibly be thrown upon future generations.

"The next point, my Lord, is this, when the License-tax was first introduced, Sir John Strachey, in a speech which he delivered in this Council on the 27th December, 1877, said—

"'So far, however, as we can now speak for the future, the Government of India intends to keep this million and a half as an insurance against famine alone. In saying this, I should explain that we do not contemplate the constitution of any separate statutory fund, as such a course would be attended with many useless and inconvenient complications, without giving any

real security. Unless, then, it should be proved hereafter by experience that the annual appropriation of a smaller sum from our revenues *will give to the country the protection which it requires*, we consider that the estimates of every year ought to make provision *for religiously* applying the sum I have mentioned to this sole purpose, and I hope that no desire to carry out any administrative improvement, however urgent, or any fiscal reform, however wise, *will tempt the Government to neglect this sacred trust.*'

"In fact, it was very generally understood at the time that the policy of the Government was to apply the proceeds of the tax to the construction of works which would give to the country protection from famines. Considering the humane purpose to which the money was intended to be applied, my countrymen did not complain of the tax; since then, however, instructions have come from the Home Government stopping all public works beyond a certain limit, and consequently these works for the prevention of famines could not have been proceeded with. Notwithstanding this, the tax has been collected all the same, and has been otherwise spent; and it is now proposed to continue it to add to the general revenues of the Empire, which, notwithstanding the under-estimates made, seem at present to be in a prosperous condition, and do not stand in need of the continuance of the tax. Of this, my Lord, my countrymen do complain, and I think with good reason.

"Then, again, if the License-tax is to form a permanent part of the fiscal system of the country, I cannot understand why the burden should not be distributed over all sections of the community, and 'an equitable adjustment of taxation,' as had been originally proposed, should not be carried out. While the trader, earning a little over forty rupees a month, will have to bear his share of the tax, nay, while the poorest cultivator will have to pay his one pice in the rupee in the shape of the Public Works Cess, the professional and salaried classes, earning perhaps hundreds and thousands by the month, are not required to pay anything. This, my Lord, I submit, seems to me to be very anomalous. It has been said that this scheme has been abandoned because no more money is absolutely required; but at least relief could have been given to the other classes to the extent that the taxation of these two classes would have yielded, or perhaps the minimum of the five hundred rupees could have been raised to a higher figure, or, better still, a fair minimum limit for the assessment of the Public Works Cess, which is but a counterpart of the License-tax for the agricultural classes, might have been fixed. Such an equitable adjustment of taxation would have thrown the burden upon those who could well bear it, and would have afforded relief to those who most needed it."

The Hon'ble MR. COLVIN said that he wished to make a few remarks on the objections which had been taken to the measure by his Hon'ble friends who had previously spoken. In the first place, he would notice the criticisms made by his Hon'ble friend Mr. Kennedy. Of these, the first to which he would advert was the allegation that sufficient opportunity had not been afforded, either to the Members of Council or to the public, for discussing the present measure. It seemed to him a sufficient answer to this criticism to say that the Bill now before the Council made no change whatever in the existing law, and, except that the fees on annual incomes below Rs. 500 would be remitted, that it left existing taxation exactly as it was. Moreover, the previous measure which had been introduced, and subsequently withdrawn, had, as it happened, given the fullest opportunity for discussion both of the principles and details of the present license-tax. Since there had been this opportunity, and since the law which it was proposed to continue had actually been in force for two years, he thought that no criticism could be more beside the mark than to say that there had been no opportunity of discussing the present Bill.

In the next place, it had been said by the Hon'ble Member that the Bill might possibly limit the powers of the Local Governments in a way that this Council never intended. He did not think that this would be the case; but if it were, the remedy would be very simple, namely, to convert the license-tax into an imperial measure, instead of leaving it, as now, to be dealt with by local Acts.

Then, again, the Hon'ble Member (Mr. Kennedy) had said that he accepted the necessity which the Hon'ble Member in charge of the Financial

Department had asserted to exist for continuing further taxation, but he had gone on to say that this necessity would never have been felt if it had not been for the late repeal of the duties on cotton. Now, he would remind the Council that the total amount of money lost by the repeal of this duty in this year was less than ¼ million, and that the amount during next year would not exceed ¼ million. But ½ million out of the surplus of 2 millions for which additional taxation had been imposed two years ago had been provided for administrative improvements and financial reforms, and the excess of revenue over expenditure on the ordinary account during the approaching year would probably be much over 2 millions. Provision enough, therefore, had been made to meet this charge out of the anticipated income of that year. Even if there had been no such additional charge of ¼ million to be met, it could hardly be said that the state of the finances would have been such as to justify the permanent remission of 1 million sterling of taxation. To repeal the license-tax would cost the Treasury not less than this sum; for it must be remembered that, if the license-tax were repealed, the famine-cess on the land must also be given up. The two taxes stood or fell together, and could not, with fairness, be treated differently. He would not follow the Hon'ble Member in his further remarks and suggestions for changes in those duties, as these were matters which were not before the Council. Whether such changes might be necessary hereafter, and whether future taxation should then be increased or diminished, were questions which had better be left to the future.

Turning now to the remarks made by his Hon'ble friend to the right (Mr. Morgan), his first charge was that the taxation of the commercial and trading classes was originally not very equitable, and, since it was now proposed to limit taxation to incomes exceeding Rs. 500, that not only had the symmetry of the edifice been destroyed, but its foundation, so to speak, had been taken from beneath it. Now, he could not at all understand this argument. He would admit that the commercial and trading classes had been selected as the classes upon whom this taxation should peculiarly fall, not because it had been considered an absolutely just or perfect measure to lay the whole burden of the tax upon them, but because it had been necessary, either to draw the line more or less arbitrarily somewhere, or else to extend the tax to the whole community and make it an income-tax. The latter course had not been thought a proper one to adopt when the new taxes were introduced; and, that being so, he thought that the selection of the agricultural and commercial classes, as being the portion of the community to whom it might, with least injustice, be confined, could easily be justified; but he understood the Hon'ble Mr. Morgan rather to impugn the justice of the proportion in which the tax would now be divided between these two classes, than the propriety of their selection in the first instance. In reply to that criticism, he would point out that, according to the estimate, the agricultural class would pay £525,000 and the traders £535,000 during next year. He thought that these figures were sufficient to show that the balance did not incline unduly against either class, and that the burden was pretty equally distributed between them. Then, as to the argument that the foundation of the tax on the commercial class was destroyed when all incomes below Rs. 500 were exempted, it must be borne in mind that in taxing the commercial classes, a certain number of incomes under all circumstances must necessarily be exempted. The tax could not be paid by every trader, however small; it could not be argued that it was necessaryto tax paupers in order to relieve paupers; a line must, in practice, be drawn somewhere in order to exclude the poorest traders. Whether that line was rightly drawn above incomes of Rs. 500 was a matter to be determined by expediency, and there might be much difference of opinion about it, but the exemption of a large number of petty incomes was an indispensable accompaniment of a tax of this nature, and did not destroy its foundation. He would not now notice the remarks of his friend about the application of the surplus created by the famine-taxes, because he (MR. COLVIN) thought it would be more convenient to deal with them in connection with the arguments which had been adduced on the same subject by the Hon'ble Mahárájá Jotíndra Mohan Tagore. He would, therefore, revert to that subject hereafter. Mr. Morgan had gone on to argue that, granting for the sake of argument that it was right that India

should pay for the entire cost of the Afghán war, still it was not fair that the existing tax-payers should pay the whole of the cost, but that some portion might, with justice and propriety, be shifted on to the shoulders of posterity. There must always be room for a good deal of argument about the extent to which war-charges should be debited to the people in whose time a war was carried on. He would leave that argument to be more fully dealt with by others, but he must say that he was not one of those who thought that the charges on account of war could fairly be transferred to posterity, unless they were clearly beyond our own means to pay. If, indeed, the question at issue had been that of imposing heavy additional taxation to meet the present war-expenditure, a good deal might be said in favour of hesitating and looking further, before we undertook to pay the whole cost of it; but, seeing that no additional taxation was proposed, and that our present taxation, whatever objection might be urged against it, could not by any means be called excessive and beyond the power of the country to bear, it did seem to him that we ought to bear our own burdens, and not remit a million sterling of taxation, for our own benefit, in the vague hope that posterity might find it much easier to pay than we do.

He would proceed now to the remarks made by his Hon'ble friend the Hon'ble Mahárájá Jotíndra Mohan Tagore. He would not repeat what he had said on the cost of the war, but he would turn to the argument used by the Mahárájá in regard to the application of the proceeds of the famine insurance taxation. He thought a few words of explanation on that subject might be of some use, because there was still a great deal of misapprehension in regard to it. The arrangement made two years ago, when additional taxation for famine purposes had been imposed, was that there should be a permanent surplus of 1½ millions of ordinary income over ordinary expenditure, and that this surplus should meet the charge for famines. It was obvious that in arranging for this surplus, ordinary receipts and expenditure only had been taken into calculation, because no financier could promise that he would have a surplus in every year under all possible circumstances. He could not guarantee a yearly surplus when he had to meet extraordinary and unforeseen heads of expenditure of indefinite amount, unless he had Fortunatus' cap in his possession. All that he could do was to provide a surplus in excess of the ordinary annual charges, and to take care that those ordinary charges did not increase so as to absorb his surplus. Any such increase, made without due cause, would have given very just grounds for saying that the proceeds of this taxation had been misapplied. It was quite clear, however, from the figures which had been laid before the Council, that there had been no such increase, and that a permanent addition to the annual ordinary revenue of the country had actually been made to the extent of one and half millions. Now it had been fully explained at the time when this tax had been imposed, that this 1½ millions were to be used in extinguishing or preventing debt. To quote the words of the Hon'ble Member in the Finance Department: "I think, my Lord, I have now made clear how we propose to apply this 1½ millions, which we hope to provide as an insurance against famine. We shall apply it virtually to the reduction of debt." It was then explained that this 1½ millions of surplus would enable Government to borrow 1½ millions less in each year hereafter, so that, at the end of ten years, it might, if necessary, borrow as much as fifteen millions, without putting itself in a worse position than it occupied at the commencement of that period. It had been shewn beyond dispute in the Financial Statement made the other day, that a surplus exceeding six millions will have been applied during the three years under review to the object contemplated. Financially, therefore, the engagements which were made in 1878 had been fulfilled. It had been said, however, by his friend to the right that the money which had been so added to the income of Government should have been applied, as was then promised, to productive public works. He (MR. COLVIN) would say, before going further, that this did not appear to him to have been an essential part of any obligation which the Government then undertook. So long as it diminished debt, it did all, in a money point of view, that it undertook to do. But it was true that, at that time, it was fully intended to apply this surplus of 1½ millions to the construction of public works of a productive character, and that this intention had been strongly expressed. As he understood the matter, there were two reasons for

so applying it. In the first place, in a year when the ordinary income exceeded the ordinary expenditure, no debt was usually contracted by the Government, except for one purpose, and that purpose was the prosecution of productive public works; secondly, because, by pushing on and completing works of this kind, the best possible precautions were taken against the disastrous effects of future famines, and against the recurrence of heavy charges upon this account hereafter. Now, we had seen in the Financial Statement that the debt will have been kept down during 1878-79-80, by a sum fully equal to the proceeds during those three years of the taxation for famine purposes. It could not be maintained, therefore, that those proceeds had been misapplied, even if productive public works had been neglected. There had, however, been no such neglect of them. Something like eight millions, if he remembered right, had been spent upon them during the last two years. In the approaching year, no doubt this sum would be considerably diminished, under orders which the Government of India could only obey, and no more than 2½ millions would be expended on that account. He did not see, even if 2½ millions only were expended upon productive public works, how it could be said that the famine-insurance-money had not been properly applied. As long as a sum equal to the proceeds of famine-taxation was applied to the reduction or prevention of debt, there was no such misapplication. Now, the annual proceeds of those taxes, as every body knew, were much less than 2½ millions. They had never exceeded £1,350,000, and were now, in round figures, only about £1,000,000 per annum. Financially, therefore, the enforced reduction of expenditure during next year upon productive public works did not affect the question of famine-insurance at all. On other grounds, however, this reduction was very greatly to be deplored. It was impossible to deny that, after what had been said in the budget of 1878, the public had good reason to expect that productive public works should be actively pushed on. Their vigorous prosecution was in itself a most desirable thing, because they afforded the best means of mitigating or averting the disastrous effects of future famines in India. Besides this, there was no mode in which capital could be more profitably invested. It had been shewn in the Financial Statement of last week that over 65 millions had been so expended during the last twelve years to the incalculable benefit of the public, and without costing them a penny of interest. He thought that every body might well join in the hope that the limit of 2½ millions during the present year would soon be increased.

In the last place, his Hon'ble friend had remarked on the exemption from taxation of the official and professional classes. He had understood him to say that, if taxation was to be equitable, it ought to be extended to these classes also. MR. COLVIN quite agreed with him that, if taxation for famine purposes was to be perfectly equitable, it should be extended a good deal further than it went now; but, in that case, he did not see, as he had already said, how any line was to be drawn which would not be open to criticism, unless it embraced the whole community. That was the only equitable way of extending the tax. No doubt, if more money were needed, the tax might, on grounds of necessity rather than of equity, be made to include some classes who were now exempt. It had, indeed, been proposed a short time back to include the professional classes; but that proposal was avowedly made because more money was believed to be necessary, not because there was any special propriety in taxing the professional classes, who neither received relief in times of famine, nor derived profit under any circumstances from it. He thought it would be difficult to give any equitable reason for taxing professional persons and exempting fund-holders. Nevertheless, if a further contribution to the treasury had been needed, he thought that there were grounds other than those of strict equity on which it would have been justifiable to take that contribution from the official and professional classes. But when there was no need of further taxation, he could not see that there was any greater fairness in extending the incidence of the tax to the professional classes than in leaving it as it was. He believed that the feeling which lay at the bottom of much of the desire to extend this taxation to the official and professional classes had found expression in a memorial which had been circulated that morning to Members of Council. That memorial said—

"Rightly or wrongly, men are apt to endure, with a comparatively light heart, burdens common to all. * * * * For the general run of tax-paying humanity, the question is no doubt, as has been confessed, one of feeling, and a far from generous feeling. For them misery loses half its sting when it is universal. They are apt to regard it as among the ills that flesh is heir to. A general calamity, like the well-known 'one touch of nature,' makes the whole world kin."

He supposed that the writers meant that general suffering from an income-tax was better than partial suffering from a license-tax, and if they meant that, he was not at all inclined to disagree with them; but he did not think the feeling there expressed should be gratified by extending taxation to any one particular class, when no extension of taxation was otherwise called for.

The Hon'ble MR. HOPE said:—"My Lord, the Hon'ble Sir John Strachey, in his recent Financial Statement, alluded to the scheme for saving a considerable portion of our customs-revenue by substitution of registration-fees for customs-duties. He gave no opinion of his own, or on behalf of the Government, but he said that the scheme deserved to be considered, and he made allusion to myself, as having lately given it my attention. It will probably be expected that in response to this invitation, I should over to the Council and the public some explanation on the subject.

"This explanation I must preface by two very distinct provisoes. I have no intention of discussing the propriety of the policy which the present Government has followed regarding the cotton-duties and other items of the Tariff, and I beg that nothing which I may have to say in elucidation of my subject may be taken as even indirectly raising such an issue. Moreover, I do not to-day come forward as the proposer of registration-fees: my position is not that of an advocate, but analogous to that of an enquirer giving an account of his investigations, or a Judge summing up evidence for the consideration of a jury.

"The discussions consequent on the Tariff Act of 1875 naturally led me to look into the whole history and structure of the Indian Tariff, and to consider all possible changes and alternatives. The idea of registration-fees, which is, as the Hon'ble Sir John Strachey has told us, a very old one, then had its share of attention, and I again examined it in 1876, when an opinion that many of the main heads of the Tariff did not yield enough to justify their retention was first emphatically urged on the Government of India. The matter, however, had no present importance until 1878, when the notification of March 18th abolished the duties levied on certain coarse cotton-goods, and under twenty-seven main heads of the Tariff. In this practical declaration that a duty was indefensible if it either was at all protective or did not yield a sum absolutely as well as relatively large, together with the important exposition of customs-policy contained in the Financial Statement of that year, was clearly foreshadowed the end of the bulk of the import-duties. At the same time, the financial difficulty of dispensing with such an important item in the Indian revenues was obvious, and I therefore, after my return from England a year ago, obtained Sir John Strachey's permission, with full official aid, for investigating the registration-fee question in a more thorough manner than I had hitherto found practicable. I may here acknowledge the valuable assistance I received from Mr. J. D. Maclean, the Collector of Customs at Calcutta, from Mr. O'Conor, the Assistant Secretary in the Department of Finance and Commerce, and also from the Head Appraiser at the Custom-house, Mr. Phipps. A few days ago, too, Mr. J. W. O'Keefe, a member of the Committee of the Bengal Chamber of Commerce, and recently my colleague on the Tariff Valuation Committee, kindly placed at my disposal some very interesting and useful calculations and suggestions, drawn up by himself a couple of years since. But though I have been told that the registration-fee idea has been more than once mooted in India, I have been unable to discover on record one single line, official or demi-official, about it, and have therefore had to work it out, *ab initio*, on what I suppose to be its first principles.

"Registration-fees I understand to mean a charge upon *all* articles of import and export (except a few otherwise dealt with on special grounds), imposed primarily with the view of covering the cost of registering and publishing statistics of trade and navigation for the benefit of the commercial public,

but enhanced for revenue-purposes slightly beyond the actual cost of such statistics. The excess charge is in reality a customs-duty, laid on quite irrespective of protectiveness or other general considerations, and defended on the ground, first, that it is needed for revenue, and, secondly, that it is practically inappreciable by trade.

"I will now relate my working out of the scheme on this basis. To be practically inappreciable by trade, it is evident that the form in which the fee is levied must be that which puts trade to the least possible trouble, delay and indirect expense, and that the rate of the fee must be extremely low.

"As to form, existing commercial practice might be largely followed. The denominations under which various descriptions of goods pay freight, dock-dues, quay-fees, landing and other charges are the gradual outcome of long experience, and will be found a valuable, though not infallible, guide. In other words, weight, number, measurement, customary package (*i. e.*, bale, chest, case, bundle, &c.), and the like, will each be found to have its peculiar appropriateness for certain goods, which may be charged accordingly. Again, wherever goods already pay dues to Port Commissioners, the registration-fee might be included in their bill, so that one payment would cover everything, and the merchant would be saved all separate dealing with customs-officers. In many cases the fee might be paid in stamps affixed to a bill, manifest, port-clearance or other document.

"As to rate of fee, it would seem that one per cent. is the very highest which could be imposed consistently with the principle. As to whether one per cent. would be 'practically inappreciable by trade' or not, I have received very conflicting opinions from mercantile men. Some contend that 'one per cent. is one per cent.,' and that in these hard times everything tells: others rejoin that the one per cent. duty on iron, for instance, and many even heavier private trade-charges, have not the slightest effect on the market. I must hasten to explain, however, that I do not mean that any goods, excepting possibly some few for which this would be the fairest course, should be charged the fee *ad valorem*, but merely that the fees fixed per ton, package, &c., should not have a higher incidence than this on the value of the goods.

"To draw up schedules of fees suitable in form and amount to the different classes of goods would evidently be a task of some difficulty, to be performed only by a Committee of experts, in which the mercantile community must be largely represented. The fees would have to be convenient round sums, and owing to this, and to fluctuations in value, there might often be an inequality in their incidence on different articles. But such inequality necessarily accompanies Tariff-valuations under the present system; the maximum being one per cent., it could here only extend to some petty decimal, and it would be redressed periodically by revision such as Tariff-valuations now undergo. Whether such a Committee could produce satisfactory schedules or not has been disputed. I am not prepared to affirm that it could. But I have been assured by excellent mercantile authority that the thing is quite feasible, and would incidentally produce much greater equity in Port Commissioners' and similar charges, and I am inclined to think so.

"The next point presenting itself is, what branches or classes of trade should be subjected to the fee? It has been strongly urged on me, by both official and commercial authorities, that the coasting-trade should pay it; but I am totally unable to concur. The coasting-trade could not be made liable without subjecting it to a vast amount of restriction from which it is now free, and reversing the policy of liberating it as much as possible which I followed in the Sea-customs Bill, now Act VIII of 1878. I cannot see why goods moved by sea from one part of British India to another should pay a fee any more than goods so moved by land, and we surely are not going to re-establish transit-duties throughout India. Moreover, goods moved from port to port would pay over and over again. As to other branches, it would be highly objectionable to levy a fee on treasure; and re-exports, which now get the benefit of drawback, should perhaps be exempt. Another exception to the registration-fee-system would be the case of articles on which it was necessary, for special reasons, to maintain the existing duties—that is to say, arms, bearing a high duty for political reasons; salt and liquors, on which we levy an excise; opium,

nominally, but for the maintenance of our monopoly; and rice. The case of rice is a peculiar one, but I need not discuss it as it has just been fully explained by the Hon'ble Sir John Strachey. In short, the fee-system, if introduced at all, might fairly apply to the whole external import and export-trade excepting the classes I have just mentioned.

"I will now turn to the financial aspect of the measure. From the Trade and Navigation Statements for 1878-79 calculations have been made, distinguishing every sub-head of the Tariff, and applying to the known quantities and values fees expressed (provisionally) in the denominations used for the statements, and not exceeding one per cent. in incidence. The result thus arrived at cannot be far different from that which fees, according to schedules eventually prepared by a Committee, would yield.

"The total receipts in 1878-79 from import and export-duties, excluding salt, were £2,273,000. Deducting £200,000 for loss by reduction of cotton-duties in 1879-80 and £56,000 for indigo and lac just made free, we have a customs-revenue of £2,017,000, from which further heavy loss through importations of free cotton-goods is anticipated. Deducting from this, again, the duties to be retained, namely, £5,600 for arms, £361,900 for liquors, and £570,300 for rice, we arrive at a balance of £1,079,000 derived solely from duties which would come under the registration-fee scheme. The fees are calculated to produce on imports £388,000, on exports £420,000, and by saving in customs-establishments about £80,000, total £888,000. This shews a loss of £191,200, compared with the £1,079,000 just mentioned. But this loss would be a final loss, and the fee-revenue would increase in future with the trade of the Empire; whereas, as things now are, the Financial Statement contemplates a loss of £50,000 in 1880-81 from importation of grey duty-free goods alone, and the ultimate disappearance of £615,000 more for cotton-duties, if not the abolition of the whole import-tariff.

"Such are, roughly speaking, the aspects which a registration-fee system, supposing I rightly understand it, would present if applied to British India.

"Those who approve of the system would probably support it by some such considerations as the following. Whatever may happen to customs-duties in general, some customs-establishment must be maintained to levy duty on salt, liquors and the other special items. The quantities, value and other particulars of all the sea-borne trade, whether free or not, must always be collected and tested for statistical returns, such as the Board of Trade compiles and publishes in England, and a charge may fairly be made for this. Port Commissioners, who levy certain fees on all goods, now exist at Calcutta, Bombay and Rangoon, and will probably soon be constituted at Karáchí—four ports which engross between them 88 per cent. of the whole trade of India. It is just as easy for a clerk to levy four annas in one bill as two annas. Why not utilise all this inevitable machinery for a registration-fee-system, securing a large sum for revenue-purposes, and at the same time getting rid of a mass of customs-officials and restrictions, with all the friction they involve? Again, this system will practically, as has been said in a Calcutta newspaper, 'lay for ever the phantom of protection.' Theoretically, it of course will not do so, since articles imported which can also be produced in India will be weighted with the fee, but the fee will be so light as to have no practical effect. Mr. Laing in 1861, and many high authorities since, have argued that an import-duty was justifiable on articles similar to any produced at home, if its amount was so moderate that it could not seriously affect trade, and that the establishment of a corresponding excise was not worth while. If this argument was good for anything when used, as it was, in support of a duty of five per cent. and upwards, it is infinitely stronger in support of a fee of only one per cent. At any rate, the system may well be accepted by all parties as an eirenicon, removing all grounds of bitterness and ill-will between India and Manchester, and as substituting an unexceptionable source of revenue, 'expansive in proportion to the progress of the Empire,' for a heterogeneous mass of duties open to, and destined to fall before, numerous economical objections.

"On the other hand, the advocates of a total remission of customs-duties may be expected to produce obvious objections. 'One per cent. is one per

cent.,' they will say, a burden on trade and a protection of home-industries, just as bad in principle at one per cent. as at five per cent., but not so productive, and reaching numberless articles now absolutely free. Again, the fee can never be absolutely equal and equitable unless charged *ad valorem*, which would be very vexatious. Round sums must be fixed, which will vary in real incidence according to market-prices. Inequality of incidence *ad valorem* is justifiable in wharfage or Port Commissioners' charges, because packages occupy space, or cause labour in hoisting and removal, quite irrespective of their value, but to the case of a fiscal fee this does not apply. Moreover, £200,000 out of the proposed fees on imports will be derived from cotton-goods, so the whole remaining import-trade will be taxed for the paltry sum of £188,000! No duty, fee, or whatever else you please to call it, is worth the trouble of collecting if less than five per cent. Finally, the export portion of the scheme is especially obnoxious. Export-duties, excepting where there is virtually a monopoly of the foreign market, are equally condemned by economists and politicians. Sir William Muir denounced them emphatically in 1875, with the concurrence of Lord Northbrook, and no one pretending to education or common-sense can say a word in their favour. It is no use in this case to talk of the lightness of the fee. The Indian export-trade (except in rice) lives 'by the skin of its teeth,' and cannot bear the slightest fiscal impost. Quick and easy communication, with competition, have so cut down profits that one per cent. often makes all the difference between gain and loss on a shipment.

"To this attack, the rejoinder may be offered that we cannot regulate practical questions by the theories of doctrinaires, and *de minimis non curat lex*: that one per cent. *is* inappreciable in all trade not of a purely speculative and unsound character; that on exports the fee might be only a half per cent., though this concession is not really necessary: that the 'inequality of incidence' objection to the fee applies equally to tariff-valuations, which are used by all nations as an unobjectionable convenience; and that as we must make some charge for keeping trade-statistics, the opportunity of aiding the revenue by a slight enhancement of it should not be thrown away.

"I must not ignore another class of objectors, who will demur to the entire proposition that the whole cotton-duties, much less the other import-duties, are either 'dead' or dying. They will contend that the recent reduction of cotton-duty has gone entirely into the pockets of Manchester instead of benefitting the Indian consumer, that the cotton-duties remitted should be re-imposed, and that even if they should eventually be removed, the other duties should be maintained on revenue-grounds, as they are collected easily and without pressure. They will be for sacrificing nothing except upon compulsion, and for living on in hope of a change of policy. But regarding such objections I can only note their existence, for to do more would be to raise the whole question of policy from which I began by declaring my intention to abstain.

"My Lord, I have now stated to the best of my ability the case for and against the project of registration-fees. It is fortunately not necessary for me to draw any conclusion, and I do not mean to do so, or to point at any. The subject in its principles and details needs general discussion and consideration by the public, and after that, a decision could be formed only in full view of the doom of the existing duties and of the alternatives presented. In the abstract, I presume that almost every one would prefer no duties. I myself, when moving the consideration of the Sea Customs Bill in February, 1878, expressed the following opinion:

"'The second step by which custom-house restrictions might be further and very largely relaxed is by alteration of our Customs-tariff. If it were possible in lieu of the fifty or sixty main heads of the Import-tariff, to have duties on only six or seven important, well-defined and readily distinguishable articles, the relief afforded in the matter of preventive scrutiny, check, stoppage, seizure and the like, and informalities, would be enormous. It is, of course, no part of my duty to indicate or suggest any policy of this sort on general grounds. What I say is said merely in connection with the subject of customs-procedure now before us.'

"Whether the alternative to a registration-fee is to be absolute freedom, or the substitution of some other specified form of taxation, is a consideration material to the issue, and until the time has arrived, if it ever does arrive, when

the Financial Member and the Executive Government think it necessary to present the question in a complete form, no final opinion can be satisfactorily arrived at."

His Honour THE LIEUTENANT-GOVERNOR said:—"My Lord, in common with all those who feel an interest in the welfare of this country, I congratulate the Government of India on its financial position as it was described in the statement of my honourable friend Sir J. Strachey, and I must congratulate the Government almost as much on having at length discovered how good its financial position really has been for some time past. I cannot too strongly express the gratification which I feel that the Government of India is now in a position to give unanswerable proof of the absolute groundlessness of the mischievous panic which has of late been started on the subject of the insolvency of India. But my congratulations would not, I am sure, be so valuable to my honourable friend if they were unaccompanied by such criticisms on his statement as should indicate the sincerity of the spirit in which I am dealing with the subject, for my honourable friend is well aware that there are certain financial points on which I am not altogether at one with him. Nothing is further from my mind than to make any disagreeable comments on the policy of the Government of India, and indeed it would be very unbecoming that I should do so. What I wish to do is simply to raise a voice of warning against a tendency to lose sight of some of the real causes of that anxiety, under the feeling of intense relief at our release from a position of embarrassment and anxiety.

"What I have to say is to a great extent in the interests of the Local Governments, because I think that we have been placed in a position in which we should not have been placed if a little more foresight and confidence in the elasticity of the revenue of this country had been shown. We have been exposed to a process of what is commonly called squeezing, and as a consequence, we have had to suspend all progress in administration and public works for a whole year. If that was all, I should not have so much to say; but what I do complain of is that the same process is apparently to be continued for another year, when nobody can, I should think, hold that anything of the sort is necessary. In May last the Government was led to take a most alarming view of its position—a view which has now been shown not to have been warranted by the facts. So far as we are now told, there was nothing whatever to justify the scare which possessed the Financial Department in May. I am not among those who hold that the scare was not real: I fully believe that my honourable friend was suffering from the apprehensions which were then expressed. But though I am quite prepared to accept to the fullest possible extent Sir J. Strachey's assurance that this want of foresight on the part of the Government led to a searching examination into every branch of the public expenditure, which has been very useful and very satisfactory, I believe that this examination might have been just as well carried out without such violent measures. I greatly regret the entire abandonment of that great scheme for the development of public works and for the material improvement of the country which was put forward by Your Excellency only two years ago, and which has been justly described by Sir J. Strachey as one of the noblest programmes ever planned by a Government. I do not care to enter into a discussion as to how far the Government was pledged, or how far it was not actually pledged, to devote the increase of public income which it received during 1878 and 1879 to public works. Whatever its actual pledges may have been, I think nothing can be clearer than that its intention was to invest the money in this way, and that it did lead everyone to believe that the money would be so invested. It is quite certain that the public were induced to look upon these schemes for fresh taxation with comparative favour, on the ground that the proceeds would enable the Government to carry out at once, and without that constant change of policy which has hitherto been so mischievous to India, a grand scheme of public works; and therefore when the public see that if it had not been for expenditure on the war, the Government might in this one year have had four millions more to spend than it has spent on public works, and that this great increase of revenue, so far from leading to the promised development of public works, has been accompanied by such a contraction of expenditure on railways and irrigation as to make it impossible to look for any progress in the material improvement of the country for years to come, there is naturally a feeling of disappointment. What I complain of is, not any breach of pledges, but the unnecessary abandonment of an admirable policy.

"If we set aside the fact that the Financial Department might have foreseen this increase of revenue, and if we suppose the Government suddenly to have tumbled into this vast surplus, then I should say that my honourable friend is perhaps justified, on suddenly finding himself in possession of a large and unexpected surplus, in devoting that surplus to paying for such extraordinary charges as the Afghan war; but if, on the other hand, other ordinary spending departments were starved in order to procure a surplus which might be devoted to the war, then I cannot admit that my honourable friend has been proceeding on a sound principle. He has impressed upon us the soundness of the doctrine that, to the utmost of our ability, we ought to provide for the expenses of every year out of the year's income. But this doctrine requires to be taken with a limitation to the effect that, in order to do this, the whole administrative machinery of the country should not be thrown out of gear, and that the Government should not for such a purpose depart from a policy of developing public works to which it has distinctly pledged itself when endeavouring to convince the people of the necessity for fresh taxation. Saying nothing, however, more about last year, I must say that I cannot approve of the proposal to meet the cost of the war in the coming year from revenue, so long as I find that, in order to do this, the Government of India is again compelled to starve public works, and let another year pass away in inaction. The Committee of the House of Commons, which recommended a reduction in the expenditure on public works, did so under an entire misapprehension as to the real financial condition of India, and clearly recognised that, when the financial position was shown to be better, a larger expenditure should be provided for. I believe it to be true, as my honourable friend has said, that the suspension of public works is a policy which is deplored by the Government of India as much as it is by every one interested in this country. I came out to this country in 1876 with my honourable friend, and I am able to say that the chief idea by which his mind was possessed—always of course excepting the abolition of the cotton-duties—was the carrying out of a great scheme of railways for India; but I cannot agree with him that the failure to carry out the programme of public works is a matter for which the Government are not responsible. If they had seen that the revenue was increasing steadily and enormously as it has done, they would not have taken such a desponding view of their financial position, and their despondency would not have spread to England. I do feel, in the face of these facts, that I am only doing what is right in urging in the strongest possible manner that the money obtained from the Local Governments under mistaken impressions should be returned to them, or at all events that the deduction in provincial assignments should not be continued, as my honourable friend proposes it should be, for the coming year. I trust that no time will be lost in setting matters right as regards the capabilities of India, and that even now some portion of the war-charges may be met by a loan in order to provide funds for pushing on public works. I shall then see more hope for the future. I am sure that the Government have only to urge upon the Home Government the importance of carrying out the expectations encouraged when the new taxes were imposed to induce them to reconsider the present limit on public works. I can imagine no policy more short-sighted than that of starving public works; it is to them that we are indebted in a great measure for the steady growth of our revenue, and it is just as bad economy to starve them, as it would be for a man to starve the horse by which he earns his living. Railroads have added enormously to the general prosperity of the country, and in addition to the direct revenue they yield, no one really can fail to see how enormous are the indirect benefits which the country is receiving from them.

"When I look at the marvellous growth of our railway-receipts in our small Bengal railways alone, I am surprised that any one should doubt whether rail-

ways, if properly conducted and worked, will pay in India. The Gya railway, starved as it is, unballasted and unstocked, carrying passengers in goods-wagons, because it is not allowed money for carriages, is paying a profit of six per cent. in the first six months of working, and the goods carried by the Northern Bengal Railway were as nearly as possible double what they were last year, and yet with all the excellent schemes which have been prepared for a system of cheap lines throughout Bengal, the construction of railways is absolutely suspended.

"My Lord, I will now take up the only other subject on which I have any difference of opinion with my honourable friend: I mean the cotton-duties. Sir J. Strachey has given it as his opinion that the cotton-duties are virtually dead. Here I hope and believe that he is mistaken; but if they are not, it is certainly no fault of his. In spite of every warning that could be given, the Finance Department has so handled these duties, that the revenue lost was much in excess of their professed anticipation, and the confusion which they have caused has led to what Sir J. Strachey calls an anomalous and objectionable state of things, his only remedy for which is to leave the wounds which he has inflicted on our customs-system to fester and putrify till they become so unbearable that extermination shall be demanded by common consent. This is what he means by saying he believes the duties to be dead. I can only liken my friend to a not very scrupulous physician called in by greedy and unprincipled heirs-expectant to attend a sick relative. In his first visit, he administers the strongest dose of deadly poison which he dare give; at his second visit, he expresses great concern at the mischief caused by the first dose, and gives another of double strength to see if that will remedy matters; at his third visit, he expresses the greatest consternation at the entire break-up of the vital system which his treatment has caused, and, rubbing his hands, turns to his constituents with an unmistakable smile and says—'I think our patient's case is now quite hopeless; my treatment has unfortunately caused such entire derangement of the system that I fear she is virtually dead, and I therefore prefer to leave her to nature.' If in addition to these facts it could be shown that such a physician had in his youth staked his reputation on a theory that a patient suffering under such a disease as that he was asked to treat ought to die, I am quite sure that any Coroner's jury would find him guilty of wilful murder, and my honourable friend need not therefore be surprised if the public find a verdict of this nature against him when charged with the destruction of the cotton-duties. Indeed, I do not believe that he would raise any objection to a conviction under this head. We can all see how the 'convictions of a lifetime' are being realised. This spontaneous destruction of the cotton-duties is, it seems, only a part of another prophetic vision, which is to be realised later on, under which the whole of the customs-duties are to be repealed, and all Europeans living in India, and enjoying the benefits and protection of a civilized Government, are to be absolutely released from the only contribution they now make towards the expenses of Government. This may truly be said to be prophecy made easy. The proper remedy for the confusion and anomalies which have been caused by the measures of the preceding year undoubtedly is that suggested by the Chamber of Commerce of Calcutta, namely, to bring all cotton-goods under a uniform duty, and to make that duty so low that no one can pretend, however brazen they may be, that the duty is protective; and I entirely differ with my honourable friend in thinking that the Government of India is in the slightest degree barred by the Resolution of the House of Commons from doing what is right in a matter so seriously affecting the revenues of India, and the interests of the people under his charge.

"I am sorry to see the prophetic eye of my honourable friend turned towards the abolition of the rice-duty. If ever there was a customs-duty which is alike productive and harmless, it is this. I will not go into a detailed statement of my reasons for thinking this, for I had an opportunity of doing so before this Council in 1875, and I had hoped that the matter had then been set at rest for ever. No one asks for the reduction of this duty; no one pretends for a moment it is mischievous; the merchants chiefly interested in the trade have deprecated its abolition,

and I cannot conceive what possible grounds there are for meddling with this highly productive duty, unless it is that England hopes to obtain still cheaper the material with which she adulterates and makes heavy her cotton-goods for Eastern consumption. The soft rice is not used for food anywhere in Europe, and it is the soft rice from which the duty is chiefly raised. It is simply used for making starch for cotton-manufacturers and spirits for Germany. As to the abolition of the duties on indigo and lac, I do not suppose that anybody will object to it, as my honourable friend has money to give away. The remission will certainly not benefit the trade in these articles of export in any tangible degree. It may, on the other hand, encourage the production of inferior indigo, and thus help the scientific discovery of an efficient substitute for indigo, which is so much feared.

"As regards the salt-revenue, I will only say that I belive that the increased consumption of salt in Bengal is not in any way attributable to the reduction of duty. The price of salt at the great markets in the interior has not been affected by the reduction. The money surrendered by Government went into the pockets of the traders. The increased consumption of salt is partly due to returning prosperity after years of scarcity and pinching, and partly to improvements in the means of communication. Salt is carried now with safety in a few hours to markets which before it only reached after a journey of some weeks, accomplished with much risk and wastage. These are among the indirect benefits of our railways which are so constantly ignored. Take the Northern Bengal Railway alone. In 1878 it only carried 2,000 maunds of salt, while in 1879 it carried over a lákh and seventeen thousand maunds. No doubt the differential duty which now exists to the disadvantage of Bengal is mischievous, and the Liverpool salt is being driven out of the Bihár markets by Northern India salt, but the remedy for this is, not to sacrifice still more revenue by a heavy reduction in Bengal, but gradually to level the other Provinces upwards, and make them pay what Bengal pays. No impartial man can believe that there is any reason why this should not be done, and why Madras, Bombay and Upper India should not pay what the people of Bengal pay without a murmur, and with a constantly increasing consumption.

"An allusion has been made by my honourable friend to the work of the Army Commission over which I had the honour to preside. I am sorry to find that he has not been able to take credit for any part of the savings proposed by the Commission during the current year; but I am quite aware that the subject is a great one, and that among the Commission's proposals are some on which a very speedy decision is not perhaps to be expected; on the other hand, there are some of the Commission's proposals which might in my opinion be carried out at once with great advantage. I have no hesitation in saying this, because, if there is one merit more than another which I desire to claim for the report of the Commission, it is that it does not contain a single original idea—certainly I cannot pretend that it contains a single original idea—of my own. All we did was to exhume and examine the opinions of able soldiers and statesmen which have from time to time been laid before the Government, to invite the opinions of soldiers of the present day, and to put them in such a shape as we hoped would enable the Government to come to an early decision on reforms regarding which there has been a most remarkable consensus of opinion for years past. I look upon our proposals as of very much less importance from an economical than from an administrative point of view; and when I think that the report contains the views of the most experienced officers of the army on such questions as the formation of reserves, a system of transport, the officering of the army, the reorganization of the Native army, its territorial distribution, and the substitution of strong efficient battalions for the present weak and expensive cadres, I cannot agree with those who say that this is not the time for the consideration of such a subject.

"My Lord, there is no part of my honourable friend's able and exhaustive statement in which I concur more heartily and more completely than that

which lays stress on the wisdom of maintaining the financial independence of India. I think with him that the greatest misfortune which could happen to India would be that England should accept financial responsibility for the Indian Empire. Although I know that many of my Native friends think otherwise, I do feel that it would be a change which India would never cease to regret. It might no doubt be easy to make out a case showing that European interests are involved in the Afghan war, but I am quite sure that, if this principle was acted upon, not a year would be allowed to pass in which it was not shown that heavy expenditure in England was connected with Indian interests, and that India should be made to pay. We have had examples of this already, and if the principle of financial reciprocity be once admitted, these charges against India would be the rule and not the exception. If India was bankrupt, I could understand her selling her independence in order to obtain the necessary relief, but when she is flourishing and prosperous in the highest degree, such a wish is to me unintelligible.

"My Lord, I will not take up the time of the Council any further. I do hope that your Excellency's Government will take immediate measures to obtain permission to expend more of the steadily increasing revenue of India on the improvement of India. We may hope that this may be done without greatly disturbing the budget-estimates; the last opium sale of this year, which took place yesterday, having given prices which will, if maintained, bring opium up by £1,300,000 over the estimates which were presented to us last week."

The Hon'ble MR. COLVIN said that, if he was not out of order, as he believed he was not, he wished to say a very few words by way of explanation, and to correct an error into which his honourable friend the Lieutenant-Governor of Bengal had fallen. What MR. COLVIN had said to-day was that, as he understood the arrangement under which the present taxation for famine-purposes had been introduced, it did not commit the Government of India necessarily to its expenditure on productive public works. His Honour had quoted, as if it had been contradictory of this, a passage from a speech uttered by MR. COLVIN three years ago, in which he had said that certain measures of which he was then speaking had been framed "solely with a view to the extension of provincial responsibility for public works." He wished to remind the Council that the speech from which these words had been quoted had no reference whatever to the question of famine-insurance. In 1877, no idea of providing for famine by special taxation had been conceived. The purely local measures to which MR. COLVIN had referred on that occasion were not intended for the prevention of famine, but for the transfer of responsibility on account of public works to the Government of the North-Western Provinces; they had absolutely no relation at all to the question upon which he had just been speaking.

The Hon'ble MR. RIVERS THOMPSON said:—"I do not think, my Lord, the Government of India can take any exception to the general character of the discussion which has passed this day upon the Financial Statement of the year. Indeed, in the presence of a budget which, above all that has gone before it for the last five or six years, is so unprecedently satisfactory (and perhaps its great charm lies in its unexpected refutation of anticipated difficulties), satisfactory not only in established results, but in its promising out-look for the coming year, and especially in this, that it seems to me to controvert the theories of professors as to the bankruptcy of India and as to the inelastic character of its fiscal system—I say in the presence of such facts, while we could scarcely have expected any expression of serious disapprobation or dispraise, we cannot be disappointed that a free discussion has taken place upon points which are considered open to objection. These appear in the speeches of my friend the Hon'ble Member who represents so ably and temperately the commercial interests of Calcutta, and of the Hon'ble Mahárájá who is a large landholder and in deservedly high estimation among the Native community of the Lower Provinces; and they both speak to us with an authority which claims, I may say for the Government, our patient attention. I would add, speaking as a Member of that Government, that we welcome in every way the fullest and freest discussion of any topics of interest to India, which the debates in this Council permit, and especially so in the matters of such wide concern and

magnitude as those which are raised in the annual Statement of our Hon'ble colleague the Financial Minister. The immediate question before the Council is simply as to the passing of an Act to amend the License Acts of 1878. My Hon'ble and learned friend (Mr. Kennedy) who spoke first in the debate, looking round upon us with great indignation, asked what justification there was for the introduction of heavy taxation upon the people in such a time of financial prosperity, and he seems altogether to have overlooked, till rightly corrected by your Excellency, that so far from imposing extra taxes, the Bill before us really contemplates the exemption of large numbers from the operation of an Act which has been two years in existence, and that, in fact, we are surrendering between three and four hundred thousand pounds by this measure. Simple and short however as the Bill is, the issues which are raised upon this question are great and diversified, involving matters of policy so vast as that concerning the prosecution of the war in Afghanistan, the liability of England to a share of the expenses, the measures connected with the insurance against famine, the action taken last year in a partial repeal of the cotton-duties, the prosecution of public works of a remunerative character, and the general question as to the applicability of direct taxation in a country like India.

"I am not going to inflict upon the Council a review of all these measures, I will ask your Lordship's permission, however, to say a few words upon the Afghan war, because it seems to me that the position and prospects of our finances depend to a large extent upon that war; and outside the Council, if not to-day within these walls, the policy of the Government has been unjustly censured and misunderstood. The work of a Member of Council is so little before the public, that it gives rise occasionally to impressions that the Members of the Government are not united in their action, and that grave dissensions on matters of public concern exist in the Government. I can appeal to your Lordship in the presence of my colleagues in the Government whether, as regards this war in Afghanistan, there has been the slightest difference as to the justice of its policy or as to its general conduct. We have been taunted with the declaration of an unnecessary war, and the prosecution of it in a cruel and costly manner. To all such I would recall the circumstances of the first intimation of the arrival of the Russian Embassy at Cabul in September, 1878. At a time of peace throughout the Empire in India, when the Government were exercised by no greater considerations than those connected with the ordinary civil administration of the country and the prospects of the harvest after a somewhat adverse rainy season, we received the intelligence that a Russian Mission was established in Cabul. No one had dreamt of the possibility of such an event, and the fact that had been accomplished seemed to me always to prove two things very clearly, namely, the utter unreliability of our Native agency at Cabul, and the ease and secrecy with which a Russian advance on Cabul could be effected. This was not done in a manner which would have the character of a complimentary visit on some special occasion, under which the Russian Embassy would simply discharge its duty and retire. It must have been the work of long preparation and of secret understanding, and confidential accord between the two powers. The one wishing to come and the other welcoming an accepted guest. Triumphal arches and special demonstrations received the visitors, and such knowledge as we have of the secret conclaves which ensued and the whole conduct and proceedings of the Russian officers in the capital, prove to us beyond dispute that the object of the mission was one of active hostility to the English power in India. It may be said that everything is fair in love and war, and though we were not at war with Russia, I lay no particular stress upon the fact that she took such a step under the strained relations between England and Russia at the time. It must be remembered, however, that Russia had always declared, declared repeatedly, declared with all solemnity, that Afghanistan was a country beyond the sphere of her operations in Central Asia; and it may be, if the fact was truly known, that the Government of St. Petersburg had no intention of violating that promise. It makes it, however, as far as our position in India is concerned, none the less dangerous that irresponsible agents of Russia can assume to themselves the power of making such a demonstration as that of September, 1878, in Cabul,

and when it came upon us with its startling announcement, I venture to say that no man who had the interests of India and England at heart, unless he was blinded by the exigencies of party-requirement or annoyed at the discomfiture of a personal policy of inactivity, would have hesitated for a moment what the action of the Government of the country should have been in such an emergency. I am not going to follow the fortunes of that war. I believe history will record that it has been conducted as humanely as it has been prosecuted with vigour and bravery and tenacity of purpose, and that, with no covetous desire of annexation of territory, our only aim as a Government has been to attain the establishment of a safe frontier under conditions which shall secure the protection and progress of the vast interests which lie behind that frontier. It is to the cost of that war, commenced and carried on in behalf of these interests, that a great deal of hostile criticism has been directed, not in this Council but in many places outside of it, and it is in connection with this as affecting the financial administration of the country, that such a digression as that I have made is pardonable. But this point seems to me to be beyond dispute, that, if we had not interfered for the expulsion of the Russians, a Russian Residency would have been an accomplished, an established and a permanent fact at Cabul. All past experience of Russian progress among the Central Asian States confirms this opinion. A non-interrupted Residency in that capital would have led eventually to facilities of communication over the Hindu Koosh and beyond the Oxus, and as each year confirmed and consolidated that position, I ask those who condemn our policy either on political, on administrative, or financial grounds, what would have been the cost to the people of India, and what the security of their privileges and possessions under English rule, if we had stayed our hands in the presence of so grave an insult, and been indifferent to our responsibilities ?

"It is impossible to deny that the conduct of these extensive military operations has largely disturbed our financial arrangements—a disturbance which was greatly aggravated by the loss on exchange; and in the course of the present discussion, it has been argued by Hon'ble Members that the course which the Government has taken in an admitted difficulty arising from these circumstances, has been an improper course, and unjustifiable. Not only has the Minister been by implication condemned for a want of statesmanlike prevision, as if unprovoked wars and an extraordinary fall in the value of silver in relation to gold in the short period of a few months were of daily occurrence; but a breach of faith has been charged upon the Government for an unjust application of the money raised under the famine-taxes. Now, my Lord, I am aware that it was said in last year's budget-statement that the famine-insurance had ceased to exist. I trust my Hon'ble friend Sir John Strachey will excuse me for saying that I have always thought it an unfortunate expression; but however, that may be, it was made at a time when, from causes unavoidable or altogether uncontrollable, the financial position was overshadowed with gloom, and when definite forecasts as to the future were absolutely impossible. With the cost of, as I maintain, a just war, thrust upon them, the Government had the option of either opening a loan or extending the taxation of the country to meet the expenses of the war, or the course it adopted, of using the money which the taxation of the previous year gave as a part of the general revenues for the financial safety of the country, and exempting the people from further demands. I was not a Member of the Government when the License Acts were introduced, but if the debates of the time are consulted, it will be seen that, while the Government in view of the increased obligations imposed upon it by the constant occurrence of famines, adopted an increased taxation upon the land and the trading classes for the relief and prevention of famines, it never bound itself by any promise that the moneys so raised should be constituted a separate and distinct fund which should be exclusively devoted to such an object. In the nature of things it was impossible that such an obligation could be accepted; and the accounts of the year now put before us have shown how the money not only raised under this taxation has enabled the Government not only to meet famine-expenditure but to prevent debt to the amount of nearly three millions.

"It has been urged by many, not only in this country but at Home, that in the character of this war which we were waging on our frontier, there was

justification for England bearing a large share in the cost of that undertaking, as a war in a great measure in the interests of England, and in consideration of the financial difficulties of this country. I hope, my Lord, the interests of India and England will always be identical and inseparable; but I see no greater reason in the argument for English help in money for the Afghan war, instigated as it was by Russian design, than a war which, in the defence and maintenance of its rights, India should undertake against any other independent State on its borders, encouraged and supported by any other foreign power. We hear a great deal very often of the alleged subservience of India in the present day to the dictates of English rulers or the interests of particular politics. I can conceive no greater evil to India than her subjection to such a position, and I know no surer method by which that subjection could be brought about than her permanent obligation to and dependence upon the money of English tax-payers. We all remember the well known-saying of Sir C. Metcalfe that, if India is ever lost to England, it would be lost in the House of Commons; and the right to control and interfere in every detail of administration would be absolutely established were it ever accepted that England had such a claim upon us. We should be in the position of the familiar illustration of the shuttlecock between the battledores of rival competitors. The game might be interesting enough to spectators, but the process would be one in which we should before long suffer the loss of all our feathers. The character of India as a resource and support to the mother country, and as the brightest jewel in Her Majesty's crown, rests upon her independence. I trust that independence, within legitimate limits, will never be forfeited, and certainly not by any act of our own.

"But perhaps, my Lord, the most important suggestion, as being the most direct in its application to the Bill before us, is that which emanates from my Hon'ble friend Mr. Morgan, that the License Act should be limited in its operation to one year. It was made, as he has stated, in the Select Committee, and was successfully resisted; and though no formal motion has been submitted upon that proposal now, I am not sorry that the Hon'ble Member has raised a discussion upon the point. He based his argument upon the general good prospects of the year, which promise again a considerable surplus at the end of it. I hope, as sincerely as my Hon'ble friend, that his anticipations will be fulfilled; but whether there be a deficit, an equilibrium, or a surplus, and whether that surplus be small or large, I object, for more than one reason, to the suggestion that this Act should be limited by specified provision to a single year's duration. In the first place, in the presence of a war, in the unsettled condition of Burma, and in the uncertainties of the season, the Government would be most unwilling to give such a pledge to sacrifice a revenue which amounts to more than a million pounds, for it is indisputable that, as a measure of taxation, the license-tax is but a supplement of the taxes which impose the cesses upon land. If one goes the others must fall with it. The Government has in no way departed from its resolution that a million and a half for famine-expenses and half a million for extraordinary demands must, for the solvency of the State, be included in our ordinary obligations; and it seems to me that it would be in the highest degree an act of incaution and presumption, if, with the first touch of returning financial prosperity, we surrendered a principle which is as sound in theory as it is necessary for our financial safety. Again, though I have said that I sympathise in the hope of the Hon'ble Member (Mr. Morgan) that at the close of the next twelve months we shall be able gratefully to look back upon a year of agricultural prosperity and extended trade, and with their blessings shall possess a considerable surplus for future needs, I dissent altogether from the conclusion, which the Hon'ble Member accepts, that it would be the duty of the Government to remit the particular form of taxation which the License Act provides. I do not pretend that it is a perfect measure, or that it does not present many anomalies, inherent in some sense in all systems of direct taxation, appertaining more or less, with all the long experience, to the income-tax in our own country; and I trust the coming year will afford us the opportunity of giving consideration to those anomalies and of modifying and rectifying their inconveniences. But this I do maintain that, for a sound

fiscal system throughout our Indian Empire (and I would say in the Lower Provinces of Bengal in particular), some measure of direct taxation is absolutely necessary. It is contended that direct taxation is unsuited to India, and especially on the ground that the agency employed in realising such taxes is corrupt and rapacious, and the incalculable advantages of an insensible indirect taxation are advocated with vehemence. I would ask, in the first place, to what cause primarily is the defective agency, on which such stress is laid, traceable? Ever since the days succeeding the mutiny, when the financial position of the country was most disordered, successive efforts have been made by successive Governments to establish a system of direct taxation, which shall secure the result that those who are rich and affluent and possessed of goods, deriving large benefits from their trade and commerce in the peace and order of British rule and development of the country's resources, shall bear their legitimate share in the State's burdens. No one would deny that such classes exist—no one will deny that the principle is sound which imposes such a liability upon them. But the unfortunate thing has been that, from the days of Mr. Wilson, license-taxes have succeeded our income-taxes, and certificate-taxes have followed upon license-taxes, in various forms and shapes and standards; and each in turn has been abandoned from an entire absence of settled continuity of administration in our finances. No agency could be perfected under such constantly recurring changes, and for myself I hope that, if the stamp of permanence can be given now to the principle which I have asserted, every day's experience will tend to lessen, and eventually to extirpate, those abuses, the effects of which have been already largely minimised where careful attention has been given to the working of the Acts, and which will be still further facilitated by the amendment which this Bill proposes of exempting from taxation under it all the poorer class of traders, all those whose annual earnings are estimated at less than Rs. 500; and though I express only an individual opinion here, I should advocate and support with satisfaction that, with a view to the permanency of our efforts in this direction, and a more equitable distribution of such taxation, the official and professional classes should be included in its provisions. It is only so, I believe, that a right financial system can be established throughout this country.

"I do not stay to dilate upon the rich openings to the wealth of the country and the happiness of the people which a wise system of provincial productive works is extending throughout the length and breadth of the land. I trust and believe that the restrictions which have been placed upon it are but temporary and accidental. We are but in the day of small things in this matter. The time cannot be distant when they will be resumed with increasing energy and effect, with results which, though we cannot calculate them all at present, will secure, we may be certain, the prosperity and contentment and loyalty of the people of this magnificent Empire."

The Hon'ble SIR ALEXANDER ARBUTHNOT said:—"My Lord, I wish that the Standing Orders admitted of Hon'ble Members speaking in a different order from that prescribed. Under the present system of speaking from left to right, the Council has first a continuous wave of criticism, which is followed by a wave of reply, broken to-day by the ripple of comment introduced by my Hon'ble friend the Lieutenant-Governor of Bengal. I propose to offer a few remarks, with reference to some of the points which have been noticed by my Hon'ble colleagues, and it is possible that, in the observations which I shall feel it my duty to make, I also may slightly vary the wave of reply by a ripple of criticism. But before I proceed, I wish to add my congratulations to those which have been addressed by Sir A. Eden to your Excellency and my colleagues in this Council, and especially to the Hon'ble the Financial Member, for the exceedingly prosperous budget which he has been able to bring forward on this occasion.

"During the past year, I may say during the past eighteen months, the Government of India has passed through an anxious time, darkened as it has been by a costly war, and by a condition of our currency which, though it has slightly improved of late, has still constituted an excessive burden on the resources of the State; and had that double calamity been accompanied by deficient harvests and unexpanding or deficient revenues, I need hardly say that the present situation would have been a most serious one. But, by the mercy of Providence, the country has been blessed with an abundant harvest, with a remarkable rise in one important branch of revenue, and general prosperity in the remainder, so that the deficit which this time last year was estimated at one million and a third, has been converted for the current year into a small surplus, notwithstanding the resumption of the war and its heavy direct and indirect expenses; and we have a prospect of a surplus of nearly half a million for the coming year, after taking into account the continued expenditure which still may have to be incurred for the war, and notwithstanding the relief which is to be given by the Bill now before the Council to a number of persons, which has been estimated to be not less than $1\frac{3}{4}$ millions. This is a state of things which it would have been impossible to predict a year ago, and for which we cannot be sufficiently thankful, and notwithstanding what has been said by my Hon'ble friend the Lieutenant-Governor of the want of foresight which has been displayed, it seems to me that it would have been out of the power of the most prophetic vision to assume that the state of things which now exists, was at all likely to take place. It was impossible for my Financial colleague to foresee that the gross revenue from opium would, during the year, be increased by $1\frac{1}{2}$ millions; it was, perhaps, more impossible to predict with certainty that the unfortunate and calamitous loss by exchange from which the country has so long suffered, would be reduced in comparison with the then anticipations by $\frac{1}{2}$ million.

"My Lord, it has been urged by some of my Hon'ble friends at the other end of the table, that the expenses of the war ought to have been met by a loan, and that, if that had been done, the surplus of two millions, which it has been deemed necessary to provide with reference to the normal liabilities of this country to meet the cost of famines, would have been provided, and a good deal more besides. In the course of the remarks I am about to make, I will refer presently to the question of meeting war-expenses by a loan; but before turning to that subject I wish to observe that, in a great deal which has been said by Mr. Morgan and the Hon'ble Mahárájá, as to the imperfections and incompleteness and inequality of the system of taxation which the Bill before the Council is intended to continue, I very cordially concur. I am fully sensible of those imperfections; I am alive to the invidious exemptions for which that Bill provided; and I earnestly hope, though I shall not be here to see it, that before another year is over, the consideration which your Lordship and my colleagues will be able to give to this important question, will, if it shall then be deemed requisite to continue a system of direct taxation, enable you to place it on a basis which is more fair, more equitable, and which can be continued on a more permanent footing. And it appears to me that the remedy is not far to seek; that, in order to do what is necessary, we have only to revert to the system of direct taxation which was abolished in 1873; in other words, to revert to a light income-tax with a high minimum of income liable to the tax. The more consideration I have given to the subject, the more I have read about it, the more discussion I have heard, the more convinced I am that, if there must be direct taxation, an income-tax with a minimum so high as not to fall on the comparatively poor—a tax which shall compel the wealthy and the comparatively wealthy to bear their fair share of the burdens of the community—is the only right and equitable system of direct taxation, and the only one which can be permanently maintained; and when I speak of permanency, I wish to say that, in what has fallen from the Hon'ble Mr. Thompson, as to the evils and mischief of the constant shifting of this system of direct taxation, I most cordially concur. My hope is that, in the consideration which I trust will now be given to this question, a plan may be devised which can be adhered to without change, and without any material deviation. I am aware that by many persons such a step will be deemed to be retrograde. It will be said that the reasons which led the Government of your Excellency's predecessor to dispense with an income-tax as a part of the financial system of India, are not less cogent now than they were seven years ago. And while I think that, if the Government must have a system of direct taxation, an income-tax is the right and proper tax, I feel bound to say that I

concur for the most part in the views which have been held, and which are still held, by many, of the evils of such a system in its application to this country. In my opinion the course taken by the Government of Lord Northbrook was, in the circumstances of the time, a wise course, although it was opposed by three very eminent members of the Government, including the then Financial Member of the Council. It was opposed by Sir R. Temple, by Lord Napier of Magdala and by Sir Barrow Ellis; but notwithstanding the opposition of those eminent men, I believe that, politically, the abolition of the income-tax in 1873 was a wise measure. It was certainly a very popular measure, and it will be long before the grateful recollections by which it is connected with Lord Northbrook's Government of India are blotted out of the minds or the hearts of the people of this country. We must remember that the world is not governed by logic, and the sentiment, in deference to which it was deemed at the time to which I allude, inexpedient to continue the income-tax, was a sentiment which it might well be argued that it would have been unwise to ignore.

"But, my Lord, the financial position and the circumstances of the country are, in more respects than one, very different in 1880 from what they were in 1873. In the financial year 1872-73 our customs-duties yielded a revenue of considerably over 2½ millions, or nearly ½ million more than that particular source of taxation is estimated to yield during the ensuing year, the difference being very little below the amount of the income-tax which was levied in the financial year 1872-73, and which, at that time, at the reduced rate of 1 per cent., amounted only to £575,000. At that time, the agitation—and this is an important fact to which I would invite the special attention of the Council—the agitation which has since arisen against the continuance of the cotton-duties, had not commenced. The cotton-duties in 1873 yielded a revenue of, I believe, £845,000. Our Hon'ble colleague, the Financial Member, has told us very plainly what the results of that agitation have been; he has told us that, in his opinion, the days of the cotton-duties are doomed; and he has also told the Council—though whether his prediction on that matter will be fully verified still remains to be seen, but to my apprehension the prediction is a very grave one,—that the extinction of the greater part of the customs-duties, of duties which in 1873 yielded an income little short of 2⅓ millions, is merely a question of time.

"My Lord, there is another important difference between the financial situation in 1873 and the financial situation in 1880. At the earlier period, the financial responsibility which the Government has since accepted in connection with famines, had not been fully recognised. The famine which shortly afterwards ensued in the western districts of the Provinces under the Government of the Lieutenant-Governor, had not commenced; the calamitous famine which, a few years later, desolated the Southern and Western Presidencies of India, was still hidden in the dim recesses of the future. It was merely suggested as an object which ought to be aimed at, but with regard to the accomplishment of which there was no certainty, that, if possible, the Government should provide a surplus to meet charges of that kind and other unforeseen expenditure of a million a year.

"Moreover, in 1873, India was at peace, and although at the time to which I allude, an event had happened which might have warned the Government of what afterwards took place; although we might all have known, after the occupation of Khiva, that the breaking out of troubles, and possibly of war, on the North-Western Frontier was merely a question of time, the contingency was not seriously kept in view either by the Government of India or by any party in the State. As a matter of fact, the last thing that anybody thought of was, that, in less than six years, the Government of India would be engaged in a costly war.

"In 1873, again, the great calamity—for I can characterise it by no less serious a term—of the depreciation of the currency, which had put the whole of the finances out of gear, although it had commenced, had not attained anything like the dimensions it has since assumed. In 1873, the loss by exchange was a little more than half a million. For the ensuing year, my Financial

colleague has been obliged to estimate for a loss by exchange of £3,174,000, and if we are to judge of the uncertainty of the question by the fall which has occurred even during the past week, the Government cannot be at all certain that the estimate will prove to be sufficient.

"I think my Hon'ble colleagues will see, in the circumstances to which I have drawn attention, that very important changes have occurred, which make the situation and prospect in 1880 very different from the situation and prospect in 1873; and that a tax which it was wise to dispense with in 1873, may prove to be a measure of absolute necessity in 1881. Therefore, my Lord, while speaking as an individual Member of this Council, I deeply regret the policy which has deprived the Government already of a portion of their indirect revenues, and which threatens to exterminate an important branch of those revenues altogther; while I view that policy with the gravest apprehension; I cannot but recognise the fact that, as a result of that policy, a permanent system of direct taxation may prove to be inevitable. And if it shall so prove, if events shall so turn out that the Government of this country shall deem it necessary to retain such a system as a permanent part of their fiscal system, I feel bound to say that, in my opinion, it will be incumbent upon the Government of India to place that taxation on such a basis that it will touch not only the trading community, but all the comparatively wealthy, and especially all possessors of realised property, and to discard the present license-tax, which, notwithstanding the remedy afforded by the Bill before the Council, still falls unduly on the comparatively poor, and too exclusively on one class of the community.

"My Lord, it has been said during the debate to-day, and it has been often said outside this Council, that the Government of India are dealing unfairly and unjustly and unwisely in not imposing a tax, which was at one time contemplated, on the official and professional classes. I cannot help remarking, when I allude to this topic, that the proposal, when it was made three months ago, did not receive the welcome which might have been anticipated; and I may remind Hon'ble Members how it was then pointed out, as to that proposal, that it was only a partial mode of restoring the balance of taxation, that it still left the system of direct taxation imperfect and incomplete, and that it still left room for unfair and invidious exemptions. I trust that, in the further consideration that may be given to the subject, any such partial measure as that will not be thought of. I hope that the official and professional classes, as well as the trading classes, and all classes of the community who possess realized property, will be called upon to bear a fair share of the burdens of the State.

"I may be asked why, holding these views, I am prepared to vote for a continuance of the license-tax, the amendment of which is now before the Council. In the first place, no motion has been made against the Bill which provides for that amendment; but I feel bound to say that, if the Council had been divided, I should have felt it my duty to support the motion of my financial colleague. The Council must remember that such a thing as the resumption of an income-tax, after all that has been said and done on that subject, after all the denunciations of it which have taken place, is not a thing which can be hastily resolved upon. It is not a measure which the Government could resolve upon without the sanction of the Secretary of State, and I think that, notwithstanding the unexpectedly prosperous figures which characterize the budget now before us, it will be apparent to those who examine the figures in connection with the facts to which I have alluded, that if the Government were now to dispense with the whole of the direct taxation which has been enforced during the last two years, and if we omitted to provide a substitute for it, we should land ourselves in a deficit. It may seem to those who entertain more sanguine expectations than I venture to entertain in regard to the condition and prospects of the revenues, that for such a deficit the Government of India might well be prepared, that the risk would be so light that it would do no harm to run it. But it appears to me that, at the juncture in which we are now placed, the Government would require a great deal of justification, and would find it very difficult to justify their incurring the risk of a deficit amounting to not less than a million a year; for if the license-tax were to be dispensed with, in common fairness

Government would be compelled to remit that portion of the additional direct taxation which is borne by the land; and at such a time as this, he would be a bold man, after all that has happened during the past few years, who would venture to predict what is likely to happen in the future or even a few months hence. We all hope, and no one more earnestly than I do, that the war in which we are at present engaged, will speedily be brought to a close; but the burden which that war, or perhaps I should say the events which brought about that war, will impose upon the Government of India, is not a burden from which we shall be entirely relieved. We may hope that a considerable portion of the war-expenditure now being incurred will be got rid of; but we cannot expect that we shall be able to maintain what is called our rectified frontier, without a considerable and permanent increase to our military charges; and when I say this, I do not forget the recommendations which have been made in the able report presented by the Commission, of which Sir A. Eden was the president. Those recommendations will, I have no doubt, enable the Government to effect some economies; but I very much fear that these economies, right as some of them may be, and innocuous as some of them may prove, will be more than counterbalanced by the additional burdens that will be imposed upon us by the great change which has taken place in our military situation.

"And, my Lord, when I turn to the receipt-side of the budget, I must venture to say, notwithstanding all that has been affirmed to the contrary, that it is possible to take—and that if we are guided exclusively by the figures of the present budget, we shall be pretty certain to take—an unduly sanguine view of our future prospects. We must remember that one of the principal causes of the very favourable aspect of the finances at the present moment, is the great increase which has taken place in the opium-revenue. According to the budget-estimates, the nett opium-receipts are estimated at not less than 7½ millions. That is an estimate exceeding by more than one million, the actual nett average receipts from opium for the last ten years. Now, it may be said that there is no reason why the present increasing and expanding revenue from opium should not be maintained, and still further expanded. But I think we should recollect that the very nature of this opium-revenue—the very nature of the sources from which this revenue is derived—renders it a very precarious item in the revenues of India. It is an item of revenues which is liable to incidents over which the Government of India can exercise no possible control. It may be that, for a series of years, the opium-revenue will continue to be maintained at its present high standard; it is possible that it may continue to expand; but, on the other hand, it is equally possible that a serious diminution may take place.

"My Lord, I have referred to the anticipated decrease in the customs-duties. Of that loss of revenue only a very small portion has been provided for in the present budget; but if the anticipations of my Hon'ble colleague Sir John Strachey shall in any degree be realised, a great part of the surplus which, if there were no war to deal with, would be yielded by the revenues of the present year, will then completely disappear. In these circumstances, I cannot but think that the Government of India will exercise a wise discretion, if we hesitate, without the most careful consideration, to part with any existing source of revenue without supplying its place by an equivalent.

"My Lord, it has been argued, I believe by my friend Mr. Morgan and the Mahárájá, and something to the same effect has been said by the Lieutenant-Governor, that either the whole or a portion of the existing war-expenses ought to have been met by a loan. It has also been said, in other quarters, that the cost of the war ought to have been shared by England. I have just expressed my dissent from the policy which has been adopted by Your Lordship and my Financial colleague with regard to one branch of the finances, and on certain other financial matters, not in this Council, but in the consultations of the Government of India, I have at different times felt it my duty to dissent from Your Lordship's policy. But, as regards this matter of a loan for defraying the expenses of the war, in what has been said by my Financial colleague and by my Hon'ble friend opposite, as to the inexpediency of throwing any part of the charges of this war on the Government of England, it is impossible for any Member of this Council to concur more heartily than I do. When I remember

how enormously during the past twenty-three years, during the period which has elapsed since the mutiny, the debt of India has been increased; when I consider the heavy burden of interest which now weighs upon the country; when I regard the present political situation; when I consider the possibilities of the political future; and when I bear in mind the demands for improvement in every branch of the administration, demands involving additional expenditure, however great may be the economy with which the administration is conducted, my feeling is, that to add to our debt in a time of unusual financial prosperity, even to meet the cost of a war, would be to take a course, which not only it would be impossible to justify, but which it would be difficult, in my opinion, too emphatically to condemn."

His Excellency THE COMMANDER-IN-CHIEF said that he had not intended to offer any remarks on this occasion, but those of the Lieutenant-Governor regarding the immediate measure of relief which might be expected from the recommendation of the Army Commission, he thought, demanded some little comment. Every one knew with what delight a father looked upon his infant; but when the young gentleman was presented to the world, he was not always received with a uniform meed of admiration; therefore, HIS EXCELLENCY must observe, that the Commission over which Sir Ashley Eden presided had produced a very symmetrical work at all events, and so far he deserved immense credit for it, whatever might be said regarding the details when discussed. But as regards the immediate financial relief, he thought His Honour would admit, and he considered it right that the Hon'ble Members should know, that from the statements made by the Commission itself, the recommendations made by it could not possibly have an immediate result. The position in which the Army now stood was not that contemplated by the Commission, when the reductions involved in their recommendations were brought forward. Who could say that the Army would ever again occupy the position it held in September last? He did not think such an idea could, even for one moment, be entertained, and therefore, he said, that neither Sir Ashley Eden, nor the members forming his Commission, could possibly forecast the future, or say that the Army would ever revert to the position in which it was when they felt themselves justified in bringing forward the measures they had. Sir Alexander Arbuthnot had touched upon this point, and also referred to the advance upon Khiva. HIS EXCELLENCY was always one of those who looked upon Khiva as a mere prologue to Merv, and consequently to Herat, and that he believed was now working itself out. Who could say what military complications might be brought about, and he hoped, consequently, that Government would not anticipate any immediate relief from the army reduction.

His Excellency THE PRESIDENT said:—"The Financial Statement, which gave rise to the Motion now before the Council, was so full and clear, that I should be reluctant, at this late hour, to delay the vote by any lengthened remarks, were it not that this is my only opportunity of personally noticing various criticisms on the financial administration of the Government I have the honour to represent. Those we have heard in the course of to-day's discussion, I will endeavour to answer with all possible brevity. Others which have emanated from leading English statesmen, I feel bound to notice at greater length.

"In the course of his interesting speech, my Hon'ble colleague, Sir Alexander Arbuthnot, explained his personal views on the general subject of direct taxation, with special reference to the reasons which would, in his opinion, not only justify, but necessitate, recourse to an income-tax, if a larger revenue from that source were actually required by the Government of India. As this is not at present the case, I will not pause to discuss the recommendations of my Hon'ble colleague; but I freely admit that the present very limited direct tax upon trades and callings is not strictly scientific, or completely logical. I believe that no form of direct taxation short of an income-tax could be made wholly free from these objections. It is, indeed, this consideration which has influenced my concurrence in the decision not to supplement the license-tax by taxation based on any different principle, and not to seek, from the extension of that tax to the salaried and professional classes, the recovery of the revenue sacrificed by exemption from it of all incomes under Rs. 500

derived from trade. In the present favourable condition of our finances, I do not think we could justify to ourselves any measure which would have the effect of increasing taxation merely for the sake of scientific re-adjustment. It will be time enough to discuss the principles which should regulate such re-adjustment whenever the occasion for making it arises. It would not, in my opinion, be expedient, and for myself and the Members of this Government it is, in any case, impossible, to set forth now what the Government may, or will, do whenever it is called upon to deal either with a large deficit, or a large surplus. In the former eventuality, the considerations set before us by my Hon'ble colleague, Sir Alexander Arbuthnot, would certainly demand, and doubtless receive, most careful examination. But I think it right to say, at once, that if, in the latter eventuality, we were enabled to contemplate a large remission of taxation, it seems to me very doubtful whether it would be by the remission of the license-tax that we should commence the enjoyment of our good fortune. Not to mention other taxes to which objection might reasonably be made, we should, for instance, have to consider the still existing taxes upon salt. Our policy of equalising the salt-duties throughout India has been carried out, thus far, with great financial success; and it has largely increased the consumption of salt. But this policy may still require, for its completion, some temporary sacrifice of revenue.

"The success of our efforts to effect the early removal of the great salt-cordon is largely owing to the friendly and enlightened spirit in which our representations have been received by the Native States concerned, and also to the intelligence and loyal exertions of our own political and fiscal officers. Of the former, my acknowledgments are due to Mr. Alfred Lyall, a gentleman of rare intellectual gifts and attainments, to whose efficient assistance in the administration of our Foreign Department I am greatly indebted; and also to General Sir H. E. Daly and Colonel Bradford, for their cordial co-operation with Mr. Hume, the value of whose labours in this matter have been repeatedly acknowledged. Of the latter, I must mention, with special gratitude, our late colleague in this Council, Mr. George Batten, who was one of the earliest and most enlightened apostles of the policy it has been my privilege to promote; and also Mr. Halsey, who has energetically assisted the prosecution of it. The Council will, perhaps, allow me to mention here that, on my way from Simla to Calcutta, I recently took occasion to visit the most important of the salt States of Rájputána and Central India, with the object of ascertaining, from personal observation and enquiry, the practical effect of our late measures in the States thus visited. So far as regards the rulers of those States, I ascertained that they are perfectly satisfied with the arrangements we have made with them. These arrangements, indeed, have everywhere largely benefited their revenues. As regards the populations of the States concerned, so far as I can judge from the assurances I received from their Native representatives, and from the statements of our own local officers, the necessarily increased price of the salt consumed by them has nowhere given rise to discontent, or caused any serious discomfort. In some parts of the country, where the Bunjara traffic had been temporarily disorganised, salt, I found, was dearer than it should be. But the formation of depôts for the sale of it at a distance from the places of production, and the extension of railways still in progress, will, I feel assured, rapidly remove this only drawback to the advantages of a reform which, in its essential consequences, has proved eminently beneficial to all concerned. I may add that the practical working of the new system has been wonderfully free from friction. I was not without anxiety, lest, in practice, it should have encountered difficulties not adequately provided for by our agreements. But, so far as I could ascertain, no such difficulties have occurred, and certainly the practical success, thus far, of our recent arrangements with the salt-producing States, has surpassed my most sanguine expectations.

"I must now ask leave to notice briefly the chief objections I have heard since last Tuesday, and more especially in the course of to-day's discussion, to the financial policy of the Government, as explained by my Hon'ble colleague in his Statement of last week. The first of these objections is that the inutility and impropriety of our reductions in public works establishments, and other useful branches of administrative expenditure, is now clearly demonstrated by

the satisfactory result to which, I must take leave to say, those timely reductions have not slightly contributed.

"It is certain, however, that, but for the reductions complained of, the present year would have ended in a deficit amounting to the by-no-means contemptible sum of at least three-quarters of a million. And next year, also, we should have had to estimate for a deficit, a smaller one no doubt, but still a deficit, in lieu of a surplus of £417,000. I shall presently have occasion to point out that the contraction of our expenditure on *productive* public works, which occasioned a great portion of these reductions, was a measure not under the control of the Government of India, and about which we had no option. The grant on account of *ordinary* public works is not less for next year than the amount actually spent on those works in any previous year, although the official machinery for the prosecution of them has been considerably cheapened. These so-called ordinary works are of great utility; and many of them are of a reproductive character. In other branches of the administration, there has been no sacrifice, and in some there has been a decided increase, of efficiency. The reductions and economies, for which we are responsible, have undoubtedly been facilitated by the recognised uncertainty of our financial prospects, which justified caution and stimulated economy. But they were, in my opinion, requisite and salutary, without any reference whatever to the present or future condition of our finances. I hope we shall steadily continue the good work thus commenced: for I consider that we shall be grossly neglecting our duty to the State, if, even when we have converted our small surplus into a large one, we were, on that account, to relax our efforts to reduce all expenditure not clearly needed for the efficient service of the State, or to improve the economic administration of all expenditure which *is* necessary for that purpose.

"My Hon'ble friend the Lieutenant-Governor, who has criticised our budget in a candid and practical spirit which I gratefully appreciate, told us that, experience having shown how unnecessary it was for us to call on the Local Governments for special contributions from their balances to the imperial treasury, we ought now to refund to them the sums needlessly taken from them; thus furnishing them with the means to carry out useful works which, in their present impoverished condition, they are unable to undertake. Now, I fully share the views expressed by my Hon'ble friend as to the great importance and value of useful public works; and I shall regret no less than His Honour any unnecessary or unduly prolonged stoppage of them. But from a financial point of view, I think the Local Governments cannot fairly complain of their treatment or present condition. The fact is that, after making these special contributions to the imperial treasury, amounting altogether, in the last few years, to £670,000, the Provincial balances of the Local Governments will actually be larger by nearly half a million than the sum at which they were estimated at the commencement of the year. In Bengal more especially, the budget-estimate of the Local Government for 1879-80 showed, as the closing Provincial balance of the year, the sum of £357,000; the amount which the Local Government will actually have in its possession, after making a special contribution to the imperial treasury of £200,000, will be no less than £524,000, and its closing balance for next year is estimated at £562,000. Thus, the Bengal Government is very much better off now than it was before its special contribution was made. Of course, no doubt, the reason why money is there, is that it has not been spent: but I am not now discussing the expediency of public works expenditure, whether provincial or imperial. I merely wish to point out that these contributions have not impoverished the local treasuries. As regards the imperial treasury, however, I must remind Hon'ble Members that, but for these special contributions, we should show, for the present year, instead of a small surplus, a deficit of nearly a quarter of a million sterling; and that, for next year, our estimated surplus would very nearly disappear altogether.

"And this consideration leads me to follow the example of His Excellency the Commander-in-Chief, by making a few remarks on the military Commission, whose valuable labours were so admirably conducted, and have now been so effectually concluded, by its distinguished President, my Hon'ble friend the

Lieutenant-Governor of Bengal. The report of that Commission is still under the consideration of Government; and, until it has been laid before the public, it would not be proper for me either to refer in detail to its recommendations, or to express, from this chair, any opinion upon them. But there is one result of that Commission which I am free to mention, and which I desire to point out. My Hon'ble friend the Lieutenant-Governor and his fellow Commissioners have succeeded in collecting from all parts of India an immense body, not only of information, but also of opinion; representing the official experience and personal views of all the most competent practical authorities, both civil and military, on every question submitted to that Commission for examination and advice. These materials are invaluable. So far as I am aware, no such copious and detailed information, no such collection of authoritative opinion, on the organisation and administration of the army has, at any previous time, been in the possession of the Government; nor do I think it will, at any future time, be in the power of the Government to augment the mass of materials thus collected. These materials, which are very voluminous, the Commission has annexed to its report, which bears conspicuous evidence of the conscientious care and labour devoted by it to the examination of them. It is now, therefore, possible for the Government, and, ere long, I trust it will also be possible for the public, to compare the recommendations of the Commission with the evidence on which they are based. All who read the report can thus judge for themselves how far its conclusions are sound, or its recommendations wise; and to what extent they are in accordance with verified fact or practical experience. That being the case, I must certainly say that both the Government of India and the Government of Her Majesty would gravely neglect their duty, and incur a most serious burden of responsibility on behalf of the increasingly important public interests, financial, military and administrative, which are involved in the result, if they failed, or delayed, to give to this report the most impartial and practical consideration. I cannot too highly express my lasting sense of our great obligation to my Hon'ble friend Sir Ashley Eden for the astonishing industry with which he has devoted his great intellectual powers to the accomplishment of one of the most arduous, and one of the most important, tasks ever undertaken by an Indian statesman. I wish also to express my appreciation of the work done by the able and distinguished officers who assisted Sir Ashley Eden in the labours of the Commission. There is one of those officers whose services in connection with that Commission were the latest but not the least of the many he has rendered to the Government of India. I refer to Sir Peter Lumsden; and I cannot refrain from making special mention of his services on that occasion, because they were given without stint, at a time, during the greater part of which he was simultaneously discharging the honourable and onerous duties of Chief of the Staff; a post of great importance during the progress of military operations, to which I had much satisfaction in appointing him in compliance with the strong recommendation of His Excellency the Commander-in-Chief.

"The second objection I have heard made to our financial policy, of which the results were shown by Sir John Strachey in his Statement of last Tuesday, is curiously derived from the unexpectedly re-assuring character of that Statement. It has been said that, if our financial prospects are so bright to-day, they could not have been, three months ago, so gloomy as we supposed or represented them to be. In short, that we ought to have foreseen from an earlier date the financial results which were announced last Tuesday; and that, if we did not foresee them, we have been singularly deficient in foresight.. I am unable to perceive how we could have foreseen the sudden and unprecedented expansion of our opium-revenue, for which we had estimated at a higher figure than it was ever estimated for before; or the partial recovery of our exchanges, upon which no cautious financier could have ventured to base any important calculation, or the other causes which have led to so remarkable an improvement in our financial position. But 'How does it happen,' we are asked, 'that, only two months ago, the Government was doubtful whether it could afford to remit taxation to the amount of £340,000 upon the poorer classes of traders and artisans without recouping itself by the extension of taxation to other classes?' Well, in reply to this inquiry—and I do not say that it is by any means an unnatural inquiry—I wish to make one observation. The

Government was certainly, and I venture to think rightly, anxious not to close the present or the coming year with a deficit, if it could legitimately avoid doing so. A deficit, whether small or great, brings with it a certain amount of dissatisfaction to the community and discredit to the Government, even when it is susceptible of explanation upon grounds that will satisfy all reasonable persons. There is much practical wisdom in a well-known remark by Mr. Micawber, whether that remark be addressed to individuals or nations. Mr. Micawber, as Hon'ble Members are aware, was a gentleman who had large experience about deficits. And on the subject of them he laid down the follwing golden precept. I will repeat it in his own words, which cannot be improved. 'Annual income, twenty pounds: annual expenditure, nineteen, nineteen, six. Result, happiness. Annual income, twenty pounds: annual expenditure, twenty, ought, six. Result, misery. The blossom is blighted; the leaf is withered; the God of Day goes down upon the dreary scene, and—and, in short, you are for ever floored.'

"Now, let me apply this maxim to our own position. With a revenue of 67 millions, it is obviously impossible, even in the last three months of the year, to foresee, with any certainty, whether or not a sum of less than a quarter of a million will be required to avoid deficit. As a matter of fact, this sum of £340,000 would have turned the scale between deficit and surplus; in other words, the part played by the license-tax in our calculation was that of Mr. Micawber's sixpence. Relatively indeed to the vast amounts of revenue and expenditure with which we are dealing, it would be more difficult for us, even when approaching the close of the year, to be certain whether we require £340,000 to balance our account, than for Mr. Micawber to calculate *his* account of £20 to a sixpence. And we had not only to provide for this year, but also for the next. As soon, however, as we were fairly assured of a surplus, we decided, for the reasons already explained by Sir John Strachey, not only to persevere in our resolution to reduce the license-tax by exempting from its operation all trade-incomes under Rs. 500, but also not to seek the recovery of the income thus abandoned, by the contemplated taxation of the professional and salaried classes; although, in our opinion, such taxation would have been perfectly justifiable, when, last November, we were seeking to protect the State from loss on the remission of the tax upon the poorer traders, by shifting the burden of it to stronger shoulders. Nor, indeed, am I prepared to maintain that, from any other point of view than that which I have endeavoured to explain, the exemption from taxation of any class which does not at present pay its fair contribution to the necessities of the State, is free from the animadversions we have heard to-day. By some, however, who do not dispute the point on which Sir John Strachey laid stress last Tuesday,—namely, that the license-tax and the land-cesses are so closely associated in principle and object that they must stand or fall together; and that, if the Government cannot afford to give up the one, it must not give up the other,—it has been urged that we have weakened this obvious reason for maintaining the license-tax, by our very endeavours to free that tax from its most objectionable feature; that, in short, the exemptions we have made on behalf of the poorer class of traders demand similar exemptions on behalf of the corresponding class of agriculturists; and therefore that, unless the whole of our famine-taxation can be thus re-adjusted, it ought to be entirely abandoned. I am unable to follow that argument. The reasons which led the Government to exempt the poorer class of traders are clearly inapplicable to the corresponding agricultural classes. Of these latter it has never been alleged that they were made the victims of maladministration and oppression in the assessment and collection of a tax which, if not improperly levied and collected, is neither unjust nor injurious to either of the two classes concerned.

"I must now say a few words about the cotton-duties. They shall, however, be as few as possible. My Hon'ble friend the Lieutenant-Governor of Bengal has, with much pathos, reproached us for our barbarous maltreatment of those suffering and now perishing duties. Well, I must admit that our pathology has not been conducive to the longevity of the patient. But our position in this matter has not been that of physicians who have bungled young Hopeful,

or perhaps I should say old Hopeless, to death. It has been rather that of engineers laying seige to to a hostile stronghold, with the avowed object of breaching its fortifications, when the prosecution of that object is restrained and retarded, partly by lack of powder, and partly by consideration for the terrified women and children who have taken shelter within the walls of the fort. In such circumstances, the engineers concerned would carry out with caution the orders of attack. They would extend their parallels slowly; and, trusting to time, patience, and their knowledge that the enemy's position could not permanently hold out, they would regard the spontaneous capitulation of the garrison as a result preferable, even if less rapid, than any which might have been obtained from the premature delivery of a general assault. That, at least, is the light in which I have always regarded my own position, and, apparently, we may now expect, ere long, the spontaneous capitulation of the fortress. I have purposely laid stress on the fact that this has been from the first not only our deliberate, but also our unconcealed, object; for, however highly I might approve the object itself, I trust I should be the last member of this Government to approve, or justify the insidious or deceitful attainment of it. I must, however, remind the Council that in every one of our Financial Statements for the last three years, the complete abolition of the cotton-duties has been openly avowed as the ultimate aim of the policy we have been pursuing, in accordance with repeated resolutions of the House of Commons, and repeated instructions from the Secretary of State. Every step taken by myself towards the attainment of this object has been restrained only by considerations of time, opportunity and expediency; never by disapproval of the goal to which, at every stage, those steps were tending, and to which, from the outset, they were addressed. On the question of the cotton-duties, I have always, when speaking in this Council, or on behalf of the Government of India, been careful to avoid controversial discussions to which I was not directly challenged. But I have never disguised my opinion about these duties. Speaking on the subject of them, and speaking from this chair, in 1877, I said—'I have the misfortune to differ on this subject from many able and honourable gentlemen. Some of them have wide experience on fiscal and commercial questions, and not a few of them are my esteemed personal friends.' I explained why, partly for this reason, I refrained then, as I refrain now, from all unnecessary discussion of the points on which we differed. 'But' I added—'There is one view of the question to which I must demur. It is that which assumes, on the one hand, that those who advocate the maintenance of these duties, do so regardless of their obligations as English statesmen to English interests; or, on the other hand, that those who, like myself, desire their removal, are recklessly indifferent to the duty which, as Indian legislators, they owe to Indian interests. I do not accuse our opponents of disregarding the interests of England; but I am not prepared to concede to them a monopoly of disinterested devotion to the welfare of India.' Well, I do not now wish to defend the views then expressed, in any controversial or aggressive spirit. I will not stop to discuss whether the consumers of the goods we have already cheapened are Englishmen or Indians. But what is the present practical effect, upon Indian interests, of the continued duty upon English cottons? Why, they are tempting, or driving, the English manufacturer in one direction, and the Indian manufacturer in another direction, to the manufacture of cloths which neither of them would wish to make, were it not that the one desires to escape the duty, whilst the other desires to produce goods protected by it. From those who still suppose that the pressure of a five per cent. duty upon cotton-imports is too light to have any appreciable effect, let me solicit consideration of the serious extent to which the whole character of the trade has already been actually changed by it.

"But on other points of more immediate moment our financial policy has been recently criticised by eminent and influential gentlemen whose statements call for serious notice. Mr. Forster, a distinguished Member of Her Majesty's late Government, is reported to have stated at Leeds that 'the expenditure of the Indian Government in 1840 was £22,000,000 sterling; and in 1878, £62,000,000 sterling.' Furthermore, that 'the taxation of India per head is now

more than double what it was in 1840.' Now I am quite satisfied that, in making this extraordinary statement, Mr. Forster had no desire to misrepresent fact, or mislead opinion. But his statement is a startling illustration of the scant study given to the facts of Indian administration and history even by Cabinet Ministers when in office, and of the disturbing and obscuring influences under which those facts are studied by them when out of office. Since the year 1840 the following five great Provinces have been added to British India:—Sindh, the Panjáb, Oudh, and the greater part of British Burma, and the Central Provinces. This additional territory represents an area of about 350,000 square miles, and comprises a population of 42,000,000. The number of the population is nearly equal to, and the extent of the area is nearly double, that of the whole German Empire. It seems inconceivable that any man, especially an ex-Cabinet Minister, who has participated in the joint responsibility of Her Majesty's Government for the administration of Her Majesty's Indian possessions, should attempt to compare the expenditure of this Empire before and after such vast extensions of its territory and population, without any reference to their acquisition, or the least allowance for their financial consequences. That Mr. Forster should have done so, and done so in good faith, as I sincerely believe, is an illustration of the danger of forgetting Indian history in the hurried study of Indian finance, under the heavy pressure of party claims on the leisure or the labour of English politicians. Mr. Forster, however, did not stop here. He went on to say that the debt of India in 1840 was less than £30,000,000, and that now it is close upon £140,000,000. I am not personally concerned to defend the administration of India during the past forty years; but as every honest administration has a great public interest in preventing the propagation of error, I must ask the Council to allow me to make a few observations upon this increase of our debt. The burden practically thrown upon any country by its debt must be measured by the annual charge for interest upon that debt. By no other means can the actual weight of it be correctly ascertained. Now, in the year 1840, the amount of the annual interest paid by India on her public debt was one and a half million sterling. The estimates presented last week to this Council show that in 1880-81, our liabilities for interest on debt will amount to 5¾ millions. The analysis of this estimate, however, yields very remarkable, and I venture to think very satisfactory, results. Of the 5¾ millions at which we estimate the present amount of interest payable on our public debt, 1¾ millions is on account of productive public works; and this sum will be completely covered by the revenue derived from the works on account of which that portion of our debt has been incurred. The actual amount of our liabilities for the repayment of debt is thus reduced to four millions sterling; that is to say, since the year 1840 the necessary annual provision for interest upon debt has been increased to the extent of two and a half millions. Now, I must ask the Council to remember that, during the last forty years, the Government of India has had to meet the cost of the Afghán wars carried on under the administrations of Lord Auckland and Lord Ellenborough, the cost of the Sindh war, the cost of the two Sikh wars, the cost of the second Burmese war, the cost of the suppression of the mutiny in 1857, the cost, thus far, of renewed hostilities in Afghánistan, the cost of several severe famines, and, lastly, the heavy losses incurred by the fall in our exchanges during recent years. Furthermore, that the Government of India during this period has been compelled, in the highest interests of the country, to construct numerous and costly public works which are not of a productive character; such, for instance, as barracks, forts, jails, military roads, civil buildings, and the like. Now, in explanation of the causes of this expenditure, and as an illustration of its results, I shall ask the Council to allow me to read a few passages from a memorandum communicated a few years ago to a Committee of the House of Commons by my Hon'ble friend and colleague Sir John Strachey. Speaking of the condition of India between thirty and forty years ago, he then wrote:—

"'It is not too much to say that there was then, comparatively speaking, little in India of what we now think the first necessities of a civilized Administration. When I went from Calcutta to my first station in the North-Western Provinces, I was carried about a thousand miles in a box on men's shoulders; there were no other means of travelling through the richest and most advanced and most important parts of India. Speaking broadly, roads and bridges

had but begun to appear; there were no canals to save the people from destruction by famine, or those that existed were on a very small scale; there were few barracks in which English soldiers could live with tolerable health and comfort; there were few jails in which a sentence of imprisonment did not carry with it a serious probability that it would prove a sentence of death. The country at that time was entering on a phase of rapid change. The firm establishment of order was followed by improvements in all directions.

"'Ten thousand things were demanded which India had not got, but which it was felt must be provided. The country must be covered with railways and telegraphs, and roads and bridges. Canals must be made to preserve the people from starvation. Barracks must be built and every sort of sanitary arrangement be carried out.

"'This was not only true in regard to matters of imperial concern. Demands for improvement, similar to those which fell upon the Central Government, cropped up in every city and in every district of the country.

"'Twelve or fifteen years ago, in Calcutta, there was no drainage. The filth of the city rotted away in the midst of the population in horrible pestilential ditches, or was thrown into the river, there to float backwards and forwards with every change of tide. To nine-tenths of the inhabitants clean water was unknown. They drank either the filthy water of the river, polluted with every conceivable abomination, or the still filthier contents of the shallow tanks. The river, which was the main source of supply to thousands of people, was not only the receptacle for ordinary filth,—it was the great graveyard of the city. I forget how many thousand corpses were thrown into it every year. I forget how many hundred corpses were thrown into it from the Government hospitals and jails alone, for these practices were by no means confined to the poor and ignorant; they were followed or allowed, as a matter of course, by the officers of the Government and of the municipality. I wish the Committee could have seen the sights which were to be seen in Calcutta in those days in the hospitals, and jails, and markets, and slaughter-houses, and public streets. The place was declared by myself in official reports which I sent to the Government, when Sanitary Commissioner in the year 1864, of which the language, although strong, was not, and could not be, stronger than the truth required, to be hardly fit for civilized men to live in.

"'Only about a year ago, in the great city of Rangoon, containing more than 100,000 people, with half a million tons of shipping, there was not a single public lamp, no supply of wholesome water, not a single drain except the surface-drains at the sides of the streets, and no proper means of removing the night-soil and filth out of the town.

"'When I say that, to a great extent, the requirements of civilised life and of modern administration have had to be provided for India, for the first time, within the space of a few years, I do not speak only of material objects, of roads and railways, and canals, and barracks and city improvements, and so forth. The demand for improved administration has been so strong that it is not too much to say that the whole of the public services have been reorganised."

"Well, I venture to think that, if all these facts are fairly and impartially taken into account, the surprisingly small addition of two and a half millions to our annual liabilities, on account of debt, since the year 1840, cannot be reasonably regarded as matter for severe reproach to the Government of India. Reproach! Why, good heavens! the debt of England was increased to the extent of no less than 121¼ millions sterling by the American war of the last century; and to the extent of 601½ millions by the war with France during those twenty-four years of unavoidable military expenditure which were closed by the peace of 1816; involving extra annual burdens on the country for the interest payable on its debt, amounting, in the first case, to five, and in the second case to 22¾ millions sterling. The present annual charge on account of India's public debt, exclusive of that portion of it which is covered by our Public Works revenue, represents only one-sixteenth or seventeenth of our annual income; whilst the corresponding charge for which England is taxed, on account of *her* public debt, amounts to no less than one-third of her annual income.

"Mr. Forster, however, is not the only one of Her Majesty's late advisers who has recently turned his attention to the finances of India for the purpose of enlightening the constituencies of England, and with very remarkable results. In the month of November last, Mr. Gladstone addressed a large public meeting at Edinburgh, and on that occasion he is reported to have made the following statements:—'The expenditure of India,' he said, 'during our time (that is to say, during the time of the late Liberal Ministry) was £50,400,000 on the average; it was £49,200,000 for our last year in office, and I know it has now risen to £58,970,000 or very nearly £60,000,000.' Now, I do not know whence Mr. Gladstone obtained his figures. At any rate, they are not those recorded in our accounts. The last year of the Liberal Ministry was the year 1873-74. The total recorded ordinary expenditure of that year was £51,405,921. The last year for which the accounts had been closed

at the time when Mr. Gladstone spoke was 1877-78. The expenditure in that year was £62,512,388. Thus, although Mr. Gladstone's figures do not agree with those recorded in the accounts of the Government of India, still no doubt the fact remains that an increase of eleven millions is shewn in the accounts of our expenditure. My Hon'ble colleague Sir John Strachey has already explained that of these eleven millions no less a sum than eight and a half millions is due to entries on both sides of the account under the heads of Railways, Provincial and Local Expenditure; and that, consequently, to that large extent the increase is purely nominal. There remains, then, an actual increase of two and a half millions; and this remaining increase is due to two causes, for which, I must be allowed to say, neither the Government of India, nor any English Ministry, can fairly be held responsible. These causes are famine, and the depreciation of silver in relation to gold. Famine-expenditure and loss by exchange amounted, in 1873-74, to £4,851,203. In 1877-78, they amounted to £6,999,152, constituting an increase of more than two millions sterling. I am, therefore, unable to find in the ascertained facts and verified figures of the two periods any foundation for the inference drawn by Mr. Gladstone from his comparison between them, namely, that the expenditure for which the present Ministry is responsible exceeds by ten millions sterling the amount of the expenditure incurred in India under the late Liberal Government. I have not, however, allowed myself to be hastily satisfied with this conclusion. Mr. Gladstone, speaking on questions of finance, whether Indian or English, speaks with the undoubted weight, and I must be allowed to add with the serious responsibility, of an unrivalled authority on such questions. Not only my respect for the eminent position and splendid talents of that Right Hon'ble gentleman, whose high reputation must be precious even to his political opponents, but also, I will frankly add, my reliance on the fairness and generosity of his character, have induced me to examine with great care the facts and figures in dispute between us. And as these do not concern my personal reputation only, but also the interests of India and the character of her Government, I shall not be deterred from recording the result of that examination by the unavoidable invidiousness of presenting comparisons between the Government of India under my own administration, and under that of my distinguished predecessor, the Earl of Northbrook. I feel assured that the noble Earl will acquit me of any intention to disparage his great services and high character; and, indeed, I expect his sympathy in the distasteful task imposed upon me by his illustrious political leader. Lord Northbrook assumed charge of the Government of India on the 3rd of May, 1872; and he relinquished it on the 12th of April, 1876. Her Majesty's present Ministry came into office on the 22nd February, 1874. I have therefore taken, for the purpose of comparison, the actual expenditure of this country for each year from 1872-73 to 1878-79, and the estimates for the years 1879-80 and 1880-81; and I find that, excluding expenditure incurred on account of famine-relief and loss by exchange, two items obviously not under the control of any Indian administration, the total nett expenditure of the Government of India during the four years of Lord Northbrook's administration, that is to say, from 1872-73 to 1875-76, amounted to the sum of £146,940,546, and the total nett expenditure of the Government of India during the four years of my own administration, that is to say, from 1876-77 to 1879-80, has amounted to the sum of £147,469,508. It will thus be seen that the total nett expenditure during the last four years exceeds the total nett expenditure of the four preceding years by only £528,962, that is to say, little more on the average than £130,000 a year. And this excess is much more than accounted for by the growth of our military expenditure, to which I shall presently advert. For the estimates of the year 1880-81, I take no credit. My noble friend the Earl of Northbrook will, I feel sure, be just as little surprised as I am myself at the proof furnished by the figures I have mentioned, that the accession of a new Viceroy cannot practically impart any immediate impulse to the ponderous wheels of the administration of this great Empire, even should that impulse assume the acceptable and unwonted form of an access of extravagance. Speaking for myself, I will only say that, though duly conscious of this obvious fact, I was not prepared to find, from any comparison of the last eight years, so satisfactory an illustration of the steadiness

of our financial administration as a whole. It gratifies me, and I trust it will equally gratify the Right Hon'ble gentleman who has afforded me the opportunity of recording these facts, to find in them proof so conclusive, and so reassuring, that the good administration of the finances of India is not dependent on the political opinions of Her Majesty's Government for the time being. Doubtless the Right Hon'ble gentleman was misled by that change in the form of our accounts which Sir John Strachey has already explained. The only other point to which I need further refer in connection with the Right Hon'ble gentleman's remarks at Edinburgh is the increase in our military expenditure. That increase is unquestionable, and by no one is it more regretted than by me. It began under Lord Northbrook's administration. The estimates for 1876-77, prepared by that noble Earl before his departure from India, provided for a nett expenditure upon the army of £15,101,000. The actual nett expenditure, however, turned out to be only £14,866,639; which was, nevertheless, an increase of £603,791 over that of the previous year. This increased expenditure has, since then, been somewhat further, though not largely, augmented by the high prices due to famine. In the present year, the charge for it is £15,487,000, and for the coming year, it is estimated at £15,330,000, thus barely exceeding the actual nett charge in 1869-70. No one knows better or appreciates more highly than I do the constant personal attention devoted by the Earl of Northbrook to the reduction of military expenditure: and, without now troubling the Council with any detailed explanation of its increase in the estimates framed by the Government of the noble Earl, I can confidently assert, that those causes were beyond the control of the Government of India.

"Mr. Gladstone, however, in a recent pamphlet has recapitulated and specified his accusations against our Financial administration. I quote them in his own words—'I have alleged,' he says, 'as follows:'—

"'1. That if for a few years more—say through a new Parliament, for which the Ministry are inviting a renewal of their power—the finance of India is to be handled as it is now handled, the people of this country will probably have to undertake, themselves, the charges of Indian Government, and the 134 millions of the Indian debt.

"'2. That to match the deficit of six millions for this country, the Ministry already show another deficit of (about) six millions for India.

"'3. That at a time when, owing to whatever cause, there had been a vast increase in the expenditure of India, and its finance was most critical, the Ministry chose that time for a policy both of dishonour and of wanton and destructive war in Afghánistan.

"'4. That having created by severe taxation a fund of famine-insurance (one million and a half), with the most definite and solemn pledges to the people of India as to the exclusive application of it to the relief of famine, they have diverted the great bulk of it to the prosecution of this destructive war, and have applied £200,000 or more to the remission of duties upon imports.

* * * * * * * * * * * * * * * *

"'6. That there is now a widespread belief that the real cost of the Afghán war has not been made known to the country; among other things, that stores and *materiél* have been largely consumed and not replaced; and that I mentioned the allegation in order that it might be contradicted from authority.'

"Well, the Right Hon'ble gentleman's first sinister prediction has been, I trust, sufficiently refuted by the Statement to which we listened last Tuesday, and I cordially re-echo Sir John Strachey's repudiation of any desire on the part of this Government to throw the burdens of India, or of India's administration, on the people of England. The question whether India or England should pay the expenses of the present Afghán war must be considered in connection with the far wider question whether the British rule is or is not beneficial to India. If England is ruling India for the advantage of British interests only, and without any reference to India's own welfare, then unquestionably England alone should pay for the protection of her Indian possessions. But, if the British rule is maintained with due regard to the interests of India, and if that rule is presumably more advantageous to India than any other rule which could be substituted for it, then India, if she has the means, should assuredly bear all the charges which are requisite for her maintenance and preservation as a great State, including the cost of wars for the security of her frontiers. To distinguish between paying for the maintenance of an army and paying for the employment of that army in the performance of the duties for which it is

maintained is not only unreasonable but impossible. It is the frontiers of India, not the shores of England, that have been threatened by the advance of Russia and the hostility or treachery of the two last Amírs of Cabul. It is for the safety of India's Provinces, not for the defence of the British Isles, that war is being waged. My Hon'ble colleague has pointed out that circumstances might conceivably occur, in which India would, perhaps, be required to take up arms for a cause in which she had no special interest of her own; and that, in such cases, England would be rightly liable for the cost of India's armed co-operation. But, in a war undertaken solely for the security of India's own frontier, no one can justly affirm that the interests involved are exclusively English, or that they are not directly and materially Indian. This, at least, can only be affirmed with any show of reason on the assumption that the downfall of the British power in India would be either beneficial or immaterial to India. All argument as to the justice or expediency of the war, and all remarks about the people of India having had no voice in it, are absolutely and obviously beside this question. The acts of a Government are the acts of the State, whether the administration of that State be republican, monarchical, absolute, national or alien. Those who affirm that India should not pay the expenses of the Afghán war, because that war was the unjustifiable act of a wicked Government, or because her people have had no voice in the matter, might as reasonably urge that the people of France should not pay the cost of the Franco-German war, because the Government of France unjustifiably attacked Germany; or that the people of Russia should not pay the expenses of the war lately waged by their Government against the Sultán of Turkey, because Russia is ruled by an absolute sovereign, and her tax-payers have no voice in the conduct of his policy. It is, I trust, scarcely necessary to point out that, if England profits by her association with India, India also profits by it, at the very least, to an equal extent. That association gives both England and India a nobler place among the nations of the world than either of them could separately hold; but, so far as regards the purely domestic and material advantages of their union, it is assuredly India that is the greater gainer by it. Her peace at home and security abroad are guaranteed by it. And what constitutes this guarantee? It is not the comparatively small garrison of British and Native troops maintained in India—a force which, in proportion to the population, is less than the force maintained for similar purposes by any known State,—it is the vast reserve of military power and appliances of all sorts, war-material, arms of precision, &c., which India owes to her connection with England. And if we regard from a purely monetary point of view the benefits which this connection confers upon India, be it remembered that India is at this moment reaping in peace and security (for the development of her steadily expanding resources and the satisfaction of her growing commercial requirements) all the advantages derived from many thousand miles of railway, which, under any Asiatic Government—such, for instance, as that of Persia or China, or the old Mogul Power—she would have either gone without altogether, or obtained only by paying for them the ruinous rates of interest at which alone Asiatic Governments can raise money. The only ground, therefore, on which India could ask England to pay the expenses of the Afghán war would, I repeat it, be the ground of charity. Her position would be that of a poor country appealing to a wealthy one for eleemosynary aid in dire distress. I can imagine nothing more unjustly humiliating to India; nothing more degrading to the dignity of her Princes, more corrupting to the character of her people, more destructive, as my Hon'ble colleague rightly pointed out, to all ideas of self-reliance or self-respect. Nor can I imagine anything more certain, in the end, to subject India to incessant English interference of the most vexatious and mischievous character. She would soon become a *corpus vile* for the ruthless experiments of administrative quacks, or an arena for the reckless antagonisms of political parties. No, the suggestion to transfer to the English tax-payer the burden of this Indian war, however admirable may have been the motives in which it originated, has, I am convinced, been used insidiously by many whose real object is, not to relieve Her Majesty's Indian subjects, but to embarrass Her Majesty's English Government.

"The deficit of six millions assigned to us by Mr. Gladstone is a purely imaginary deficit. It is, I am aware, maintained by some persons that our expenditure on productive works should be charged against revenue, and that if it were so charged, our finances would be in a constant condition of deficit. I regard this proposition as unreasonable, and I think that the calculations on which preceding Governments (including that of Mr. Gladstone himself) founded their decision that the Government of India could safely and advantageously borrow a certain sum annually for the construction of *bonâ fide* productive works were thoroughly sound calculations. I am not, indeed, prepared to deny that the exclusion of expenditure on productive works from ordinary charges was, at first, extended to some works which ought not to have been constructed out of borrowed funds. But I can truly say that the present Government of India, and the present Government of Her Majesty, have strenuously endeavoured to maintain the principle we approve, by including in our charges against revenue every public work which cannot, with confidence, be expected to pay both its working expenses and the interest on the capital invested in its construction. Reference to the Abstract No. II attached to my Hon'ble colleague's Financial Statement will show that, whilst the interest and working expenses on productive public works amount in the regular estimates for 1879-80 to the sum of £8,676,000, the revenue derived from those works is £8,090,000, whilst for next year we estimate that revenue at an amount which will exceed the expenditure on these works by £313,000. Thus, no permanent burden is thrown upon the tax-payers of India on account of public works constructed for the development of her resources; and the exclusion of the capital-expenditure on their construction from charges against revenue has been, I think, fully justified. My own confident expectation is that, not only will these works involve no permanent burden on the Indian tax-payer, but that they will also yield, ere long, a surplus-revenue, which may facilitate the further reduction of taxation. Fairly excluding, therefore, this expenditure from charges against revenue the result is—that after meeting all extraordinary charges for war, inclusive of frontier-railways, to the amount of £9,250,000, extraordinary charges for famine amounting to £14,607,000, and loss of revenue from famine amounting to £3,000,000, that is to say, after meeting extraordinary claims upon it to the total amount of £26,857,000, our revenue for the ten years ending 1880-81 will have been only £967,000 less than our expenditure, as shewn in Sir John Strachey's Financial Statement. But, if we exclude from the account this extraordinary expenditure on account of war and famine, including loss of revenue from famine, it will be seen that we should have had a surplus-revenue, of £25,899,000, while, again, if we exclude loss by exchange, that surplus would have been swollen to no less a sum than £43,165,200, that is to say, more than £4,000,000 a year.

"Now, I am not here concerned with the wisdom or the wickedness of the steps taken by this Government, in consequence of the hostile alliance formed by the Court of Cabul with the Russian Power. Nor will I discuss the question whether it was practically in our power to choose our own time and opportunity for hostilities forced upon us by the Amír's rejection, first, of our Mission, and then, of our ultimatum; but I think I have shown that, in any case, the war in Afghánistan was not deliberately undertaken at a time when our expenditure had largely increased, or when our finances were in a most critical condition.

"Mr. Gladstone's allegation that the additional revenue created by severe taxation has been diverted from the purpose to which we had solemnly pledged ourselves to apply it in all circumstances exclusively, is founded on a misconception which has, I grieve to say, been so general that, much as I may regret, I cannot certainly resent, the ready credence given to this charge by that Right Hon'ble gentleman. The copious explanations contained in the Financial Statement made to this Council last Tuesday were not before Mr. Gladstone when he re-echoed this indictment against us. I can only now repeat that, even previous to the reductions which have been made in it, the taxation referred to by Mr. Gladstone was not, in my opinion, severe. But that it is now severe, it seems to me impossible for any one to assert with seriousness. Those who object to all direct taxation may reasonably object to these taxes on that ground, and

others may object to them on the ground that they are unscientific or illogical; but I am unable to perceive how any man can fairly object to them on the ground that they are severe. As regards the alleged diversion of our famine-surplus from the purpose for which it was raised, I think that my financial colleague has sufficiently shown that there has been no such diversion of it. The Government of India, when defining that purpose, distinctly repudiated any intention of regarding, or treating, the proceeds of famine-taxation as a separate fund, or a branch of the revenue in any wise differing, as regards the financial conditions of it, from the funds required for the administration of justice, the maintenance of military establishments, the provision of public education, or any other recognised permanent claims upon the revenues of the State. It is true, indeed, that the construction of certain kinds of preventive works indicated by me in the speech referred to last Tuesday by my Hon'ble colleague Sir John Strachey, has been checked,—I trust not permanently checked—by orders from the Secretary of State to which I will hereafter more fully refer. But I maintain that there has been no breach of faith in our employment of the revenue raised either from the land-cesses or from the license-tax; no diversion of this revenue to any purpose other than that to which the Government was pledged to apply it; and no failure, financially speaking, in the complete accomplishment of the object for which these taxes were imposed.

"And now I come to Mr. Gladstone's last allegation. It is that we have deliberately falsified our military accounts, in order to conceal the real cost of the Afghán war. Now, I need not remind this Council that the Government of India is not a party Government. I hope it will never become a party Government, and in the interests of this country I cannot too strongly deprecate attempts to treat Indian questions as party-questions. But, even with every allowance for the invariable, and doubtless unavoidable, exaggeration of party-oratory addressed to large popular audiences, I must really express my astonishment that a Statesman whom we all know to be himself incapable of deliberately sanctioning or abetting financial dishonesty, should have stooped to pick up, and fling, such a charge against the Government of India. Had that Right Hon'ble gentleman been the object, instead of the exponent, of it, I should not, for my own part, have hesitated to denounce it as an incredible calumny. When Mr. Gladstone endorsed this allegation, he must have been aware that it was not then in the power of the Government of India to show on its accounts the actual and yet unascertained cost of its military operations. Our estimates, so far as it has hitherto been possible to verify them, have proved to be remarkably accurate; and for this we are greatly indebted to our able Accountant General in the Military Department,—Major Newmarch. One fact, however, these estimates already place beyond question. So far from seeking to conceal the real cost of the Afghán war, we have not only included in our military accounts all stores, and *materiél*, the amount and value of which it has been possible to ascertain, but we have also, under orders from the Secretary of State, actually charged as war-expenditure the cost of frontier-railroads, lines of telegraph, postal communications and other similar items of expenditure, much of which we had contemplated in times of peace and should probably have been in any case obliged to incur at no distant date,—expenditure which will, I trust, be of permanent benefit to the country.

"So much for these accusations. The facts and figures which illustrate the comparative financial position of India at different periods are open to any one who will take the trouble to examine them. My Hon'ble colleague was fully justified in the observation he made last Tuesday, that few countries now publish such full and accurate accounts as India. Not only do our abstract-statements of account contain an unusual amount of financial information, but they are also accompanied by elaborate and detailed explanations of the more important variations in every item of revenue or expenditure, together with a mass of other statistical information bearing on the finances of the country. In point of fact, what is, I believe, most commonly complained of in our financial accounts, is that they contain more information than the public cares to receive. I am far from saying, however, that a perfectly correct comparison of our financial position, during different periods, and under different administrations, is an

easy task. On the contrary, I believe, that in such comparisons absolute accuracy and completeness are rendered almost impossible by the nature of the case. A mercantile company or firm, for instance, or any owners of property involving the annual receipt and disbursement of money, when desirous of comparing their present with their previous position at any particular period, would take account, not only of their incomings and outgoings, but also of the amount and quality of their stock, in other words, the present value of their property at such particular periods; and this they would include in the comparison. Now, a great Empire cannot take stock like a private firm; yet, without such a comparative valuation of the national stock at different periods, it is impossible to form any correct idea of the comparative wealth of this Empire during those periods. To estimate correctly our present financial position as compared with that of ten, twenty or forty years ago, it would be necessary to ascertain the comparative value now, and then, of that splendid property which we call the Indian Empire. Every railway, every canal, every road, every telegraph, every military work for the protection, and every civil building for the better administration, of the country is an asset of this great national property. Were it possible to make the comparison thus completely and correctly, the Government of India would assuredly have no reason to shrink from it. The increase during the last thirty years, in the value of India as a State property, is incalculably great; and it could not have been effected without the investment of public money either derived from the revenues of the State or borrowed or guaranteed by Government for the purpose. In this respect, India differs essentially from every other country possessing a civilised Government, and it is this feature peculiar to her administration which is so frequently ignored by the superficial critics of Indian finance; yet, without the most careful recognition of it, Indian finance is unintelligible. Where will you find any parallel to the case of a Government which, in the shape of a rent-charge, rather than a tax, receives more than twenty millions as its share in the produce of the land; nine millions of revenue from public works constructed at its own cost, and ten millions from the monopoly of one of the great staples of the country; a Government which is therefore called on to expend annually vast sums of money on the direct improvement of the land and its resources, and to undertake, as public services, expenses usually provided in all other civilized countries out of private funds.

"Now, in the course of these remarks, I have said more than once that, before concluding them, I should take occasion to refer to that programme for the rapid and uninterrupted prosecution of works specially designed for the mitigation or prevention of famine, which I explained to this Council in connection with the Financial Statement of 1876-77, and to which reference was made last Tuesday by my Hon'ble colleague Sir John Strachey. It was certainly my hope that, by this time, I should have been enabled to announce considerable progress made in the prosecution of that programme, with the assistance of the Provincial Governments on whose intelligent co-operation its successful completion must always be dependent. It is with great and deep regret that I acknowledge the disappointment of that hope, but its disappointment is not due to any change in the public works policy of the Government of India, or to any want of sympathetic co-operation from the Provincial Governments in what I still regard as an undertaking of the highest and most pressing importance. It has been caused by orders from the Secretary of State; which, in any case, it would have been our duty to obey, but which, in the present case, have been rendered doubly binding on our obedience by the fact that they are in accordance with the conclusions arrived at by the Committee of the House of Commons lately appointed to enquire into the subject of Indian Public Works. The Secretary of State has largely reduced our authorized expenditure on productive works, coupling that decision with very stringent conditions as to the character of the works which this Government is allowed to construct by means of borrowed capital,—conditions which exclude from that category a great number of the preventive works I conceive to be most requisite as insurances against famine. I do not think the Government of India can fairly complain of these restrictions on its public works expenditure, *provided* they are temporary *only*,

and conditional on annual revisions of the financial resources, as compared with the agricultural requirements, of the country. I trust that they will not be permanent; for I regard public works, if well selected and constructed in accordance with sound financial conditions, as the greatest national benefit which British rule can bestow upon India. But for the present, at any rate, these temporary restrictions have at least facilitated the improved organization of our public works expenditure, and the reduction, not a day too soon, of our overgrown public works establishments. Nor, in spite of these restrictions, has the preparation of our programme of preventive works been abandoned. Projects for the construction of light cheap railroads have been, and are being, prepared. Some of these railroads are already commenced. Others have been surveyed and estimated; and we shall continue our preparations for an extended scheme of cheap railway-communication, so that it may be ready for execution whenever we are in a position to undertake it with the sanction of the Secretary of State.

"I think that the Government of India may still record with satisfaction the results which, in these circumstances, it has already achieved. The country at present possesses 8,724 miles of railway, which by the end of next year will, we anticipate, be increased to 9,712 miles. It has been furnished with 17,971 miles of completed telegraphic communication, which will, next year, be increased to 19,108 miles; while the area directly served by artificial irrigation will then be not much less than ten millions of acres. For future years, we have under preparation a programme suited to our restricted expenditure, but capable of immediate expansion whenever the limit is enlarged. Up to the end of the year 1880-81, the capital-expenditure on railways, telegraphs and canals will have been as follows:—

"On railways, under the Government guarantee of a minimum rate of interest, £66,816,000 will have been spent. From what is called productive public works grants, we shall have spent £64,800,000; and this sum includes the purchase-money of the East Indian Railway. A sum of £4,651,000 will have been spent on railways from the ordinary annual revenues; and as regards telegraphs, we shall have spent upon these £4,792,000, also from ordinary revenues. Upon canals, £12,680,000 will have been spent from the productive works grant, £7,619,000 from ordinary revenues, and £1,000,000 of guaranteed capital, besides £600,000 lent to the Madras Irrigation and Canal Company. Thus, the total expenditure on these classes of productive works has been close upon £163,000,000 sterling. The burden on the tax-payers caused by this enormous expenditure is, as I have already shown, rapidly disappearing.

"The saving we expect to make by recent reductions in Public Works establishments, together with travelling allowances and other contingent charges, will amount to nearly half a million sterling per annum. I may here mention that the Central establishments of the Imperial Government have not been exempted from these reductions. The reductions effected in the Public Works Secretariat of the Government of India, and in the office of railway-administration, is not far short of £7,500 in the pay of officers alone; whilst another £8,000 will be saved by not filling up the vacancy caused by the retirement of the Public Works Member of Council. To these amounts must be added the saving in contingencies which necessarily accompanies reduction of establishments. As a complement to the statistics of our nett expenditure presented to this Council by Sir John Strachey, I have requested Mr. Chapman to lay upon the table a statement of our nett revenue during the years 1868-69 to 1880-81. I will not now trouble the Council with all the details of that statement; but I may say that it shows in every branch of our revenue an elasticity not commonly attributed to the financial resources of this country. The only items in which there is any noticeable decrease are the assessed taxes, the inland sugar-duties, which we have abolished, and the customs-import-duties. The revenue from land has increased by one million; that from opium by about a million and three quarters; the excise on wines and spirits by nearly three quarters of a million; salt by nearly a million and a half; stamps by three quarters of a million. Altogether, the average nett revenue of the

two years 1878-79 and 1879-80 exceeds by more than six and a half millions, the average nett revenue of 1868-69 and 1869-70; and the average nett estimated revenue of the three years 1878-81 exceeds by more than five and three quarter millions the average nett revenue of the three years 1868-71. Nor does a detailed examination of this statement suggest any misgiving that this great improvement in our revenue is the result of oppressive taxation or a scourging fiscal system. Although there has been, since the year 1869-70, a great increase in the public revenues, it is undoubtedly due to a steady growth of national prosperity, largely resulting from improved administration, and healthfully exhibiting itself in the even expansion of all the great sources of income. It has not been caused by the imposition of new taxation. The salt-tax, no doubt, has been increased to some of our population, but it has been simultaneously reduced to an immeasurably greater number of that population; if provincial rates have been imposed, customs-duties have, on the other hand, been taken off, which yielded a larger revenue; and, in lieu of an income-tax, which in 1869-70 produced a million, and in the following year nearly two millions, sterling, we have now a license-tax, expected to produce next year only half a million.

"Now, when this Government is charged with having, in wanton and criminal disregard of the great interests committed to its care, insidiously sought occasion for that war which we first undertook, God knows, in reluctant recognition of its unavoidable necessity, and solely for the preservation of the splendid national heritage I have now endeavoured to describe,—a war of which the renewal has been forced upon us by the flagrant violation of most solemn treaty-obligations, and the cruel massacre of our whole Mission at Cabul,—when, I say, this odious charge is made against our character as Englishmen, and our conduct as Indian administrators,—I am content to ask all those whose common sense is still unbiassed, to consider, first, the startling magnitude of the war-power and material which Sher 'Alí, as the world now knows, had long been accumulating and organising on our immediate border, at a time when we commanded not a single one of its mountain-passes; and then, to reflect on the ruinous condition of chronic panic and unrest, the intolerably increased burden of permanent military expenditure, which we should have bequeathed to India, if, when fully warned of her danger, we had left this great and growing war-machine planted on the very threshold of her Empire, not only at the uncontrolled command of a Prince avowedly hostile to her, but also under the established influence, and undisputed direction, of that despotic and aggressive military Power which has for years been steadily advancing to her gates.

"In the presence of His Excellency the Commander-in-Chief, whose personal organization, and constant supervision, of all its operations have so greatly contributed to the successful results, thus far, of a war which will soon, I trust, be satisfactorily finished, it would be presumptuous in me to make any comment on the military conduct of it. But I esteem it nothing less than an imperative, though it is also a congenial, duty, to take this, the earliest opportunity in my power, of vindicating, from the cruel aspersions lately cast on it, the high character of that fine soldier, and true gentleman, Sir Frederick Roberts. To all who have the privilege of being intimately acquainted with General Roberts, the marked humanity of his character is well known. The armed mission on which that officer went to Cabul was primarily, and essentially, one of stern retribution. He has been accused of indiscriminate severity in the discharge of the painful task imposed on him. The number of those who instigated the massacre of Sir Louis Cavagnari and his companions, we shall probably never know. The number of those who participated in that crime we cannot accurately estimate, but it may certainly be reckoned by hundreds. The total number of persons tried at Cabul, under the authority of General Roberts, for that crime, and on other charges, was 163. The total number of persons executed under his authority was 87. But it has been alleged that some of the persons thus executed were *boná fide* combatants, punished by General Roberts under a cruel and fictitious charge of rebellion, for no worse deed than the defence of their country. It is with great satisfaction that, on behalf of General Roberts and this Government, to which he has rendered a strict account of his proceedings, I deny the truth of that allegation. The fact is, that no combatant, or non-combatant, has been put to death by General Roberts on any mere charge of rebellion, or for openly bearing arms against us; no man has suffered death under any charge not punishable with death by the ordinary practice of civilized warfare, or without the fullest trial compatible with the inevitable conditions of martial-law in a barbarous country under hostile occupation. General Roberts has explained that his reason for offering rewards for the apprehension of the men who fought against him at Charasiab, and who were declared by the Amír to be traitors to himself, was the knowledge that the assailants and murderers of the Embassy were to be found in their ranks. But not one of those men has been executed unless, and until, the Court which tried him was satisfied by the evidence before it that he had either participated in the attack on the Residency or committed some other crime to which the recognised usages of war apply the penalty of death. To rummage amongst the refuse of hearsay for every crooked pin, dropped there by the recklessness of rumour or the rancour of personal spite, and then to employ these ignoble little weapons in scarifying the character of men who are labouring to serve their country in conspicuous positions of constant anxiety and tremendous responsibility,—this, I must be allowed to say, is not merely cruel, it is essentially cowardly. Neither a swaggering patronage of the public conscience, nor ostentatious professions of a superior personal morality, never tested by the dread conditions of responsible public action, can mitigate or conceal—in my opinion they seriously aggravate,—all that is either frivolous or despicable in such conduct.

"I have but one word more to say about the Afghán war. It is with astonishment that I read, four days ago, the assertion reported to have been made in Parliament by a noble Duke, that the Government of India, or some of its members, had communicated to the Press confidential orders received on the subject of this war from the Secretary of State with the 'object of raising excitement in India,' and 'exciting the Indian Services against the decision of Her Majesty's Government;' and that I myself, with a similar object, had circulated in England 'an elaborate document recommending measures much more severe and violent than those approved of' by the Queen's responsible advisers; furthermore, that an article lately written by Sir Henry Rawlinson on the subject of the Afghán war, was written in communication with the Viceroy, as a manifesto on my behalf against Her Majesty's Ministers, whose policy it is my clear duty, as it is certainly my earnest desire, to carry out in this matter. Had I been guilty of any such conduct, I should, indeed, have been unworthy of the high office which I hope to transmit uninjured and unsullied to my successor. But, whilst giving to these incomprehensible assertions the most unqualified contradiction on behalf of my colleagues and myself, I now declare that neither between the members of the Government of India, nor between this Government and Her Majesty's Ministers at home, is there any conflict of opinion or purpose respecting our relations with Afghánistan, or the prosecution and objects of the war imposed on us by the condition in which we found them. It has been, it is, and it will, I feel sure, continue to be, our unanimous desire and unceasing effort in loyal co-operation with each other, and complete concurrence with the Government of Her Majesty, to bring this unsought war to the earliest conclusion compatible with the honourable and secure attainment of the purely defensive objects for which it is being waged."

The Motion was put and agreed to.

The Hon'ble SIR JOHN STRACHEY then moved that the Bill as amended be passed.

The Motion was put and agreed to.

TRADE-MARKS BILL.

The Hon'ble Mr. STOKES presented the Report of the Select Committee on the Bill to provide for the registration of Trade-marks.

FACTORIES BILL.

The Hon'ble Mr. COLVIN presented the Report of the Select Committee on the Bill to regulate labour in Factories.

The Council adjourned to Friday, the 5th March, 1880.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 2nd March, 1880.

STATEMENTS.

FORT WILLIAM,
DEPARTMENT OF FINANCE:
The 2nd March 1880.

R. B. CHAPMAN,
Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

BSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 5th March, 1880.

PRESENT:

The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., C.I.E., Senior Member of the Council of the Governor General of India, *presiding*.
The Hon'ble Sir J. Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Whitley Stokes, C.S.I., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
Major-General the Hon'ble A. Fraser, C.B., R.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble G. C. Paul, C.I.E.
The Hon'ble H. J. Reynolds.

MERCHANT SHIPPING BILL.

The Hon'ble MR. STOKES moved that the Report of the Select Committee on the Bill relating to Merchant Shipping be taken into consideration. He said that the Council would remember that the primary object of this somewhat heterogeneous, but, he hoped, useful Bill was to legislate in respect of unsafe and unseaworthy ships on the lines of the English Statute commonly called Plimsoll's Act; and he would now state shortly the principal modifications made by the Committee in the Bill.

The Committee had exempted from the operation of the chapter corresponding with Plimsoll's Act, vessels under 150 tons burthen engaged in the Native coasting-trade. It was urged that these vessels went to sea only in fair weather; for example, vessels of this class left the Madras ports when the south-west winds began, and did not return from Penang or Burma until the settled north-east breeze was blowing. "Thus," said the District Magistrate of Madura, "they incurred little risk, and lives were seldom lost from wrecks or foundering caused by unseaworthiness." To subject them to the stringent provisions of the Bill was unnecessary, and would probably have the effect of stamping out the Native coasting-trade altogether. The Committee had been informed that the same considerations applied to the Native coasting-trade of the Bombay Presidency, and had ascertained that the Lieutenant-Governor of Bengal saw no objection to the proposed exemption. They had accordingly introduced, in section 3, a clause exempting coasting and fishing-vessels of less than 150 tons burthen from the operation of the chapter altogether.

As it was obviously desirable that there should be a certain harmony between our general and our special punitive laws, the Committee had reduced the penalty for sending or taking unseaworthy ships to sea (section 5) to six months' imprisonment and one thousand rupees fine, the penalty provided for similar offences by the Indian Penal Code, sections 280, 282.

They had, in the sections relating to deck and load-lines (33—43), fixed the responsibility entirely on the master, as, in a large proportion of the cases to which this portion of the Bill applied, the owner would be at too great a distance to exercise any effective control.

The Committee had, in accordance with a suggestion which he had made when the Bill was introduced, added to section 69 a proviso to enable the surveyors to Lloyd's Register and to the similar association called Bureau Veritas to discharge their duties as such without qualifying as ship-surveyors in the manner prescribed by the Bill; and he had given notice of an amendment which, if carried, would extend the operation of this proviso.

They had omitted chapters VII and VIII of the Bill as introduced, relating respectively to Port-inspectors and the Merchant Shipping Act of 1875, as they considered that the matters to which these chapters related would be more fitly dealt with in a Bill to consolidate Act IV of 1875 and the sections of Act XIII of 1878 by which it was amended. The Indian law of merchant shipping, scattered, as it would be when the present Bill was passed, through nine Indian Acts and ten or twelve British Statutes, was indeed, from the draftsman's point of view, in a most unsatisfactory condition; and anything that could be done to reduce the number of these enactments would be a boon, not only to the Courts and the legal profession, but to all merchants and sailors concerned in Indian commerce.

These were the chief modifications made in the Bill. The Council would see that the chapter on unsafe and unseaworthy ships was in the amended Bill, as it was in the Bill as introduced, restricted in its operation to British ships, although it had been urged on us from more than one quarter that it was chiefly in the case of ships owned by the subjects of foreign States in Asia that such a law was required; that it was notorious that such ships were the most unseaworthy and unsafe that left Indian ports; that it was in them the greatest number of lives was lost; and that this chapter should accordingly be extended to them.

The suggestion was one which, in the opinion of the Committee, should not be lost sight of; but they were not prepared to deal with it in connection with the present Bill. They believed the only precedent for such legislation in regard to foreign ships was to be found in section 13 of the Merchant Shipping Act, 1876, and they were informed that, up to this moment, no attempt had been made to enforce that section. The Committee thought that, as it touched only the matter of overloading, it would not be sufficient to apply its provisions to the class of ships now referred to, the complaint regarding which was not so much that they were overloaded as that they were thoroughly rotten and insufficiently equipped.

It might be that, looking to the peculiar circumstances of the case, the Council would be warranted in legislating for some classes of foreign Asiatic ships frequenting Indian ports to an extent to which it was not usual to legislate for foreign ships in England; but the Committee were unable to judge from the papers before them whether they should or not. To enable them to form an opinion on this point, it would be necessary for them to have the fullest information as to the description of the various classes of ships in question, the sources from which their crews were drawn, the particular trade in which they were engaged, the States to which they belonged, and the nature of their relations with those States. To call for such information now would unduly delay the passing of the urgent measure before the Council, and the Committee accordingly recommended that the question of these foreign vessels be reserved for separate treatment.

The Motion was put and agreed to.

The Hon'ble MR. STOKES moved that the following words be added to the title of the amended Bill, (namely):—

"and for other purposes."

He said, the object of this amendment was to make the title correspond more accurately with the subject-matter of the Bill, which would not relate merely to Merchant Shipping, if, as he anticipated, his amendment relating to assessors in admiralty-cases were carried.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the following words be added to section 69, (namely):—

"or apply to any person specially exempted by the Local Government from the operation of this section."

Chapter IV of the Bill, section 68, enabled the Local Government to appoint competent persons for the purpose of examining persons desirous of practising the profession of a ship-surveyor, and to make rules for the conduct of such examinations, and the qualifications to be required, and for the grant of certificates to qualified persons, and section 69 declared that no person should, in any port in which there was a person exercising the profession of a ship-surveyor,

and holding such a certificate, exercise such profession in such port unless he also held a certificate granted under section 68. The object of the chapter was two-fold; first, by creating a monopoly in favour of persons who had passed examinations, to induce them to go to small ports in which there were no ship-surveyors at present; and, secondly, to amend the present system of ship-surveying as practised in Calcutta by subjecting to some control men on whose professional skill, and on the care with which they exercised it, the safety of valuable property and still more valuable life so greatly depended. The desirability of making such amendment had been recognised not only in India but in England, owing to the startling statements made in the last report of the Registrar of Wrecks. He had not yet seen this report; but the *Pall Mall Budget*, for February 6, 1880, after remarking that the last return of wrecks and casualties in Indian waters seemed to shew that there was need of a Plimsoll in this country, quoted the report and proceeded—

"The *Coda Bux*, with fifty souls on board, left False Point for Madras in May, 1877, and has not since been heard of, though there was no very bad weather at the time. One surveyor refused her a certificate on any terms, yet two other experts were found who passed her as seaworthy. The *Wild Rose*, which left the Hugli in June, 1878, has, so we learn from the same report, 'a reputation so bad that a crew can scarcely be got to sail her, and she has been the cause of more unfortunate seamen being sent to gaol than almost any vessel afloat.' Notwithstanding all this, and that she had some time previously put back to Adelaide in a leaky condition after having been a month at sea, though only in ballast trim, and that no repairs were executed in Calcutta, surveyors were found willing to pronounce her a good vessel. The cause of this state of things is not far to seek; for the Registrar adds that 'the present system of ship-surveying, as practised in Calcutta, offers a premium to dishonesty, inasmuch as a man who does his duty strictly and understands it may almost starve, whilst dishonourable competition makes a rapid fortune.'"

MR. STOKES did not endorse the truth of that statement, as he had not enquired into the facts of the two cases just mentioned; but he believed the Council would admit that a *primâ facie* case was established in favour of legislating in the way proposed.

Since the Select Committee's report was signed, the Government of India had received, through the Secretary of State, letters not only from Lloyds, but from the General Shipowners Society, objecting that the application to their employés of the provisions as to ship-surveyors was not needed and might cause inconvenience and hardship. The Committee had already exempted persons employed by Lloyds or Bureau Veritas from the provisions of the Bill requiring examinations and certificates. The General Shipowners Society, however, pressed for further exemption. They said,

"the shipowners of this country are supremely interested in this proposal of the India Government, seeing the immense value of the property which is now engaged in loading to the Indian ports. If Your Lordship will reflect for one moment on the value of one canal-steamer and on the amount at risk on ship and cargo when any accident happens to such a ship, it will be no surprise to learn that, in such circumstances, it is not an uncommon thing to send experts possessing the confidence of both shipowner and merchant to India from this country for the special purpose of surveying and directing repairs. The very best men who can be found are invariably sent, and if this Bill becomes law, no such surveyor can commence his duties until he has passed an examination by Indian officials, of whom those interested know nothing, and who themselves would never be employed for surveying purposes in preference to the man whom they have by law to examine."

Now it seemed to him that a gentleman sent out to survey and direct repairs of a single specified ship, and making that survey and directing those repairs in an Indian port, could hardly be said to "exercise the profession" of a ship-surveyor within the meaning of our section. Nevertheless, to preclude all possible chance of hardship to competent persons, he proposed that the Council should empower the Local Governments to exempt specially any person from the operation of section 69; and he had no doubt that each of the four Local Governments concerned would readily exercise this power whenever it was applied to, by, or on behalf of, any person sent out by the General Shipowners or any other respectable society. The power might also be exercised in favour of any person of skill, experience and character now practising as a ship-surveyor in Calcutta or any other British Indian port.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that, for the title to chapter VII of the amended Bill, the word "MISCELLANEOUS" be substituted. He said, that the adoption of this amendment would depend upon the adoption of the next amendment which he would propose, and which he had reason to believe the Council would accept.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the following section be added to the Bill, (namely) :—

"85. And whereas it is also expedient to provide for the assistance of assessors in certain causes in Courts exercising Admiralty or Vice-Admiralty jurisdiction; it is hereby further enacted as follows :—

Assessors in causes of salvage, &c.

"In any Admiralty or Vice-Admiralty cause of salvage, towage or collision, the Court, whether it be exercising its original or its appellate jurisdiction, may if it think fit, and upon request of either party to such cause shall, summon to its assistance, in such manner as the Court may by rule, from time to time, direct, two competent assessors; and such assessors shall attend and assist accordingly.

"Every such assessor shall receive such fees for his attendance as the Court by rule prescribes. Such fees shall be paid by such of the parties as the Court in each case may direct."

The reason for making this amendment was known not only to the Committee but to the Council. It was suggested by a case recently heard by Mr. Justice White, who was kind enough to send him a letter which had been printed as paper No. 12 and circulated to Hon'ble Members. The learned Judge said, that he thought it was very desirable that the Court should have the assistance of nautical assessors as the Courts in admiralty-cases had in England, and then he went on to say—

"It is very unsatisfactory to the public and very perplexing to the Judge that causes of collision should be tried, as they now are in our Court, by a single Judge sitting alone. I experienced the difficulty very recently in the case of *The Ava* v. *The Brenhilda*."

The Hon'ble and learned Advocate General had also favoured the Council with a note which was printed as paper No. 11, in which, referring to that very case, he said the presiding Judge expressed a desire to have the assistance of a nautical assessor.

"There being no provision in the existing law for the appointment of an assessor, it was proposed to nominate one by consent; but the parties not having been able to agree to the selection of an assessor, the learned Judge was obliged to hear the admiralty-cause without the required assistance. In having to call and examine a great many skilled witnesses as experts, the parties were necessarily put to great expense, and the Court lost much time in recording their examination. Such expense and inconvenience would have been avoided, either altogether or to a great extent, had the cause been tried by the Judge and an assessor."

Therefore, his Hon'ble and learned friend proposed that a clause be added to this Bill providing for assessors in cases of salvage, towage and collision. The majority of the Committee, however, thought that such a clause would not be appropriate in a Bill relating merely to Merchant Shipping, and that, as the matter did not appear to be pressing, it would be better to put it into the Code of Civil Procedure when next that Code was amended. But since the Report of the Committee was presented, he learned from the Advocate General that the matter was really a pressing one, and MR. STOKES had accordingly framed the section for the insertion of which he now moved.

The Hon'ble MR. PAUL observed that, in his opinion, the section which was proposed was essential for the due administration of justice, and he should be glad if the Council accepted its introduction. He had already expressed in a short letter his reasons for urging on the legislature the necessity of introducing such a clause. The reasons for its insertion in the Bill were so very obvious, that he did not think it necessary to take up the time of the Council. The power was absolutely required for the proper trial of admiralty-cases. It would doubtless be more appropriate to insert such a provision in the Code of Civil Procedure, but he thought it would be detrimental to the interests of justice to wait until the time arrived for the further amendment of the Code of Civil Procedure; he had therefore suggested that the present section be introduced in the Bill. If, for the sake of uniformity, it be necessary to incorporate this section hereafter in the Code of Civil Procedure, that of course could be done.

The Hon'ble MR. STOKES said that, before the question was put, he thought it right to mention that the Secretary of State had just sent us a set of draft Rules for the Vice-Admiralty Courts in Her Majesty's possessions abroad, which had been received from the Colonial Office. These Rules had been framed by a Committee nominated by the Colonial Office for the purpose of revising the procedure and scale of fees in the Vice-Admiralty Courts in the Colonies, with a view to the establishment of an uniform system in all those Courts, based on the present practice in the Admiralty Division of the High Court of Justice in England. They provided for assessors as follows :—

"97. The Judge, on the application of any party, or without any such application, if he considers that the nature of the case requires it, may order the attendance at the hearing of one or more nautical or other assessors to be appointed by him.

"98. The fees of the assessors shall be paid, in the first instance, by the plaintiff, unless the Judge shall otherwise order.

And the tables of fees provided for payments to each assessor of sums varying, according to the case, from £1 to £5. It would be seen that there was no very substantial difference between his section and the Rules proposed by the Colonial Office. Those Rules would be referred for consideration to the Presidency High Courts and, he presumed, the Recorder of Rangoon, who exercised admiralty-jurisdiction under Act XVII of 1875, section 65; and if the shape which they would ultimately assume involved any conflict with the section before the Council, nothing could be easier than to repeal that section.

The Motion was put and agreed to.

The Hon'ble MR. STOKES then moved that the Bill as amended be passed.

The Motion was put and agreed to.

The Council adjourned to Friday, the 12th March, 1880.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 12th March, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding.*
His Honour the Lieutenant-Governor of Bengal, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir A. J. Arbuthnot, K.C.S.I., C.I.E.
The Hon'ble Sir John Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Whitley Stokes, C.S.I., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
Major-General the Hon'ble A. Fraser, C.B., R.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble T. C. Hope, C.S.I.
Hon'ble B. W. Colvin.
The Hon'ble Mahárájá Jotíndra Mohan Tagore, C.S.I.
The Hon'ble C. Grant.
The Hon'ble E. C. Morgan.
The Hon'ble J. Pitt Kennedy.
The Hon'ble G. C. Paul, C.I.E.
The Hon'ble H. J. Reynolds.

JHÁNSÍ ENCUMBERED ESTATES RELIEF BILL.

The Hon'ble MR. COLVIN introduced the Bill to provide for the relief of Encumbered estates in the Jhánsí Division of the North-Western Provinces.

INDIAN LIMITATION ACT, 1877, AMENDMENT BILL.

The Hon'ble MR. STOKES moved for leave to introduce a Bill to correct a clerical error in the Indian Limitation Act, 1877. He said that the Code of

Civil Procedure, section 366, as amended by Act XII of 1879, provided that where a sole plaintiff died and his legal representative did not, within the time limited by law, apply to be placed on the record, the Court should, on the application of the defendant, award him certain costs or pass a certain order. The "time limited by law" for the application by the representative was sixty days from the date of the plaintiff's death, and the intention was that the defendant should have a further period of sixty days in case the representative failed to make his application within due time. Owing, however, to a clerical error, the period prescribed for the defendant's application was also sixty days from the date of the plaintiff's death, and the result was (as had been observed by a learned Judge) that the right to apply under the Code, section 366, was barred by limitation as soon as it accrued. The object of the present Bill was simply to correct this error by giving the defendant a period of sixty days from the expiration of the period allowed to the representative.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also introduced the Bill, which ran as follows:—

"*A Bill to correct a clerical error in the Indian Limitation Act, 1877.*

In the second schedule to the Indian Limitation Act, 1877, No. 171A, column three, for the words 'The date of the plaintiff's death' the words 'The sixtieth day from the date of the plaintiff's death' shall be, and be deemed to have always been, substituted."

The Hon'ble MR. STOKES also applied to His Excellency the President to suspend the Rules for the Conduct of Business. The error might involve serious consequences, and should be corrected at once.

The PRESIDENT declared the Rules suspended.

The Hon'ble MR. STOKES then moved that the Bill be taken into consideration. He believed that it would effect its object, and he was sure that it had one merit—extreme brevity—which would be appreciated by the Council and the public.

The Motion was put and agreed to.

The Hon'ble MR. STOKES also moved that the Bill be passed.

The Motion was put and agreed to.

NORTH-WESTERN PROVINCES RENT ACT, 1873, AMENDMENT BILL.

The Hon'ble MR. COLVIN introduced the Bill to amend the North-Western Provinces Rent Act, 1873.

VACCINATION BILL.

The Hon'ble SAYYAD AHMAD KHÁN asked leave to postpone the presentation of the Report of the Select Committee on the Bill for giving power to prohibit the practice of inoculation, and to make the vaccination of children compulsory in certain Municipalities and Cantonments.

Leave was granted.

FACTORIES BILL.

The Hon'ble MR. COLVIN asked leave to postpone the Motion that the Report of the Select Committee on the Bill to regulate labour in Factories be taken into consideration. He said that objection had been taken to proceeding with the Bill on the ground that sufficient time had not been allowed for discussing the change which the Select Committee had introduced into the Bill, by which it had been converted from a permissive, into a compulsory, measure, and he understood that the Government wished to give further time for a full discussion of the proposed alteration.

Leave was granted.

The Council adjourned *sine die*.

CALCUTTA;

Bulandshahr Division reports the rain fall of 27th and 28th December 1879 stopped demand and caused a closure till the 10th January of all rajbahas in this division. Rain fell again on the 19th, and it remained cloudy till the 22nd evening, causing a closure of the right Dasna and Kalda rajbahas, and a partial closure of nearly all the first sub-division rajbahas till the 26th. This most extraordinary season has told on the demand for water in the second sub-division especially, this sub-division having irrigated 6,200 acres only.

ALLAHABAD,
The 24th February 1880.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 16th MARCH 1880.

General Remarks.—Some rain has fallen in northern Bengal and Assam. The harvest of the spring crops is proceeding with a satisfactory outturn, but that of dry crops in the southern districts of Madras is generally poor. The public health is on the whole good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(March 17th)		
Bellary ...	...	*Ragi* 27·25; standing crops generally fair; harvest of white *cholum* and cotton.
Kurnool ...	...	*Ragi* 30·93; harvest of white *cholum*, pulse and cotton, outturn fair; *ragi* and second crop paddy generally flourishing.
Ganjam ...	...	*Ragi* 31·54.
Kistna ...	...	*Ragi* 30·26; harvest of some dry grains.
Chingleput (Madras) ...	...	*Ragi* 22·43; cultivation proceeding actively; standing crops generally good; harvest of wet and dry crops, outturn ½ to ¾.
Coimbatore ...	...	*Ragi* 23·42; wet and garden crops mostly fair; dry crops seriously affected by want of rain; harvest of paddy, outturn ½ to full, dry crops ¼ to full.
Tanjore ...	...	*Ragi* 28·93; crops generally good.
Madura ...	·69 (average of two stations.)	*Ragi* 25·49.
Malabar ...	...	*Ragi* 21·23.
Travancore ...	...	Paddy 25·08.
		General Remarks.—General prospects fair; harvest of dry crops generally poor in southern districts.
Bombay—(Mar. 17th)		
Kurrachee ...	·05 in Manora.	Harvesting going on throughout district; small-pox in Dadu, 3 cases, all fatal; cattle disease in 3 talukas.
Hyderabad ...	...	Small-pox continues in Kandiaro and Naushahro; disease amongst camels in Tanda division and amongst cattle generally in Badin taluka; *rabi* promising; weather sultry.
Ahmedabad ...	...	*Rabi* harvest continues; hot season commenced.
Baroda ...	...	Wheat and cotton harvest progressing satisfactorily; public health good.
Surat ...	...	*Rabi* harvest progressing.
Násik ...	...	Ague in two talukas; cattle disease in three; *rabi* crops fair.
Colaba (Bombay) ...	...	Average abnormal temperature 1 degree warm; vapour in air in excess of normal except on 10th; abnormal wind southerly except on 10th.
Poona (March 15th)	...	Weather warm.
Ahmednagar ...	...	*Rabi* harvest nearly finished; land being prepared for next season.
Sholapore ...	...	Harvest continues; public health good.
Dharwar ...	...	Harvest of late crops progressing; slight fever in four talukas; cotton-picking progressing.
Kánara ...	...	Second crop in ear on coast; fever prevails; weather hot.
Rajkot ...	...	Weather hot; public health good.
		General Remarks.—Rabi harvest progressing satisfactorily; public health on the whole good, but fever in some districts.
Bengal—(Mar. 16th)—		
Chittagong ...	*Nil*	Weather warm and airy; state of crops promising; cholera in Moiscal and Ukhea.
Dacca ...	1·85	Prospects of crops favourable; public health good.
24-Pergunnahs (Alipore)	*Nil*	Sugarcane thriving well; ploughing still going on; a few cholera cases in Satkhira; in Baraset small-pox prevailing and cholera still continues.
Moorshedabad ...	*Nil*	Reaping of *rabi* crops going on; prospects good; fever and cholera still in some thanas.
Rajshahye ...	*Nil*	Weather gradually getting warmer; sowing of *amun dhan* and *til* and transplanting of *boro dhan* continue; *choitali* crops being cut; yield generally good; public health good.
Burdwan ...	*Nil*	Crop prospects good; cholera has appeared in thanas Raneegunge, Burdwan, Raynah, Khundghose, Bood-bood, Gangooria and Cutwa.
Rungpore ...	0·50	Weather cloudy; prospects of crops good; public health good; but stray cases of cholera and small-pox here and there.
Bhágalpur ...	*Nil*	Weather getting hot; *rabi* crop ripening; small-pox and one or two cases of cholera in town.
Purneah ...	*Nil*	Prospects of crops good; *bhadoi* cultivation progressing; health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Patna ...	*Nil*	Prospects of crops favourable.
Durbhunga ...	*Nil*	Weather getting hot; east wind; prospects of *rabi* continue good and promise a full crop; sugarcane pressing in progress; indigo coming up well; prices fallen; public health good.
Hazáribágh ...	*Nil*	Weather seasonable; day warm, but night still cool; *rabi* being harvested and yielding a 12-anna crop; prices cheap; district health good.
Cuttack ...	*Nil*	*Dalua paddy* requires rain; small-pox decreasing.
		General Remarks.—Some rain in parts of Northern Bengal and in Dacca; a heavy hail-storm in Darjeeling; ploughing progressing; in some places sowing of early rice commenced; sugarcane still being cut and pressed; *rabi* crops being harvested in many districts with prospect of good outturn; in Behar *rabi* promises an excellent harvest; spring crops doing well; some cholera and small-pox still in places; small-pox very prevalent in Cooch Behar.
N.-W. Provinces and Oudh—(Mar. 17th)		
Benares (Mar. 16th)	...	Health and prospects good; *rabi* being cut.
Allahabad („ „)	*Nil*	Weather getting very warm; cutting of *rabi* progressing rapidly; occasional cases of cholera still continue to occur in the south of district; health otherwise good; wheat 16¼, unhusked *dhan* 27⅛ coarse rice 19⅓ seers.
Gorakhpur (Mar. 15th)	...	Weather warm but seasonable; wheat and barley being cut; prospects excellent; health good.
Jhánsi („ 17th)	...	Weather hot; health good; prices falling; gram being cut.
Agra („ 16th)	...	Prospects continue favourable; field rats continue to do damage in Khairagarh, Fatehabad, Panáhát and Fatehpur; health good.
Bareilly („ 17th)	...	Weather warm; harvest prospects excellent.
Meerut („ 17th)	...	Heat unusual; prices falling; prospects unchanged.
Kumaun ...	...	Weather fine; prospects good.
Lucknow (Mar. 17th)	...	Weather hot; prospects good; health fair.
Partabgarh („ 15th)	...	Peas are being cut, and here and there barley; wheat and barley crops have mostly matured; the height of these crops is somewhat shorter than usual, but otherwise good; *arhar* unusually promising.
Sítapur („ 17th)	...	Weather fine; prospects good; prices falling.
Fyzabad („ „)	...	Peas cut; wheat and barley being reaped.
		***General Remarks.*—Weather unusually warm; health generally good, except a few cases of cholera in the south of the Allahabad district; prices falling in Meerut, Sítapur, and Jhansi; *rabi* harvest begun; prospects generally good; rats continue to do damage to the crops in parts of Agra.**
Punjab—(Mar. 17th)		
Delhi ...	...	Prospects good; health fair; prices steady.
Hissar ...	...	Health good; *rabi* ripening; prices stationary.
Umballa ...	...	Health and crops good.
Jullundur ...	...	Crops and health good; prices steady.
Amritsar ...	...	Crops flourishing; some damage by locusts; health good.
Lahore ...	...	Crops and health good.
Ferozepore ...	...	Prospects and health good; prices steady.
Siálkot ...	...	Harvest prospects fair.
Ráwalpindi ...	...	Prospects fair; health good.
Pesháwar ...	...	Harvest prospects fair; prices steady.
Mooltan ...	...	Prospects and health good; prices steady.
Dera Ismail Khan ...	...	Health good; prospects fair; prices stationary.
		General Remarks.—Prospects continue favourable; health good; prices steady.
Central Provinces—		
Nágpur (Mar. 17th)	...	Warm; *rabi* harvest continues; outturn promising; cattle disease in Umrer tahsil.
Jubbulpore ...	...	Warm; *rabi* harvest progressing; prospects good; small-pox continues; prices easier.
Saugor ...	...	Hot; *rabi* harvest progressing; small-pox and cattle disease continue; prices declining.
Seoni ...	...	Days warm and nights cool; *rabi* harvesting; a few cases of small-pox; prices falling.
Hoshangabad ...	...	*Rabi* harvest continues; outturn promising; prices falling.
Raipur (Mar. 13th)	...	Cloudy and warm; *rabi* harvest progressing; cattle disease continues; prices stationary.
Sambalpur („ 12th)	...	Days warm and nights cool; sugarcane planting commenced; small-pox and cattle disease continue.
		General Remarks.—Weather getting hot; *rabi* harvest progressing; outturn reported to be generally good, particularly that of linseed prices falling.
British Burma—(Mar. 17th)		
Akyab ...	...	Public health normal; slight cattle disease.
Rangoon ...	...	Slight cholera; small-pox prevalent.
Hanthawaddy ...	...	A few cases of small-pox, none fatal, otherwise public health good.
Bassein ...	...	A few cases of cholera and small-pox; cattle disease in Bassein township.

ERRATUM.—At page 666 of the Supplement to the *Gazette of India*, dated the 13th March 1880, opposite Allahabad, for "crops excellent; gram and *sarson* exceptionally fine", read "crops, except gram and *sarson*, exceptionally fine."

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*		
Prome ...	...	Thirty deaths from small-pox in Prome town; small-pox continues throughout district.
Amherst (Moulmein)	...	Public health good; no further report of small-pox.
Toungoo ...	...	Slight small-pox, otherwise public health fair.
		General Remarks.—Small-pox still prevalent throughout Pegu Division, except Thayetmyo district; elsewhere public health on the whole satisfactory; cattle disease in Bassein district.
Assam— (Mar. 17th)		
Gauháti ...	3·9	Weather seasonable; sowings of *asu* in progress; prospects of tea favourable; public health good.
Sylhet ...	3·62	*Bura* rice doing very well; agricultural operations proceeding rapidly.
Cachar ...	1·36	Weather cloudy with rain; cultivation for sowing *asra dhan* commenced in some part of the district; common rice 16⅓ seers per rupee; public health good.
Dibrugarh ...	1·37	Sowing for early rice crop commencing; cattle disease still reported.
Mysore and Coorg—(Mar. 17th)		
Bangalore ...	...	Standing crops in good condition; prospects favourable; fever prevalent, otherwise health good; murrain continues amongst cattle in parts; prices stationary.
Mysore ...	...	Report not received.
Mercara ...		
Berar & Hyderabad—(Mar. 17th)		
Amráoti ...	...	Reaping of *rabi* completed; threshing going on.
Akola ...	...	Reaping of *rabi* in progress.
Hyderabad ...	...	Agricultural prospects still reported as somewhat unfavourable by Nizam's Government.
Central India States—(Mar. 17th)		
Indore ...	...	Prospects good; weather warm.
Morar (Gwalior) ...	...	Prospects and health good; weather warm; *bajra* 30 and *jowar* 28 seers.
Sutna ...	...	Prospects good; *jowar* 37 seers.
Rutlam ...	...	Weather clear and warm; health good; gathering of opium commenced.
Neemuch ...	...	Health good; weather hot; average grain crop expected.
Goona ...	...	Crops and health good; wheat 14 seers.
Bhopal ...	...	Health good.
Agar ...	...	Health good; prospects favourable.
Mánpur ...	...	Weather growing warm; wheat crops good; fever and cough prevalent.
Rajputana—		
Abu ...	...	Report not received.
Sirohee (Mar. 14th)	...	Tanks drying; wells pretty full; health good; heat increasing.
Marwar („ 5th)	...	Very little water in tanks; wells almost full; fever and small-pox abating; prospects excellent; heat increasing.
Meywar („ 12th)	...	Good supply of water in tanks and wells; health good; crops very good.
Harowtee („ 13th)	...	Wells full; tanks decreasing; health and prospects good; weather seasonable.
Jhallawar ...	...	Weather sultry; health and prospects good.
Ajmere (Mar. 17th)	...	Prospects good.
Jeypore ...	...	Prospects favourable; health good; few cases of small-pox.
Bhurtpore ...	...	
Ulwur (Mar. 16th)	...	*Rabi* prospects fair.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

SANITARY CONDITION OF PILGRIMS AT MECCA.

No. 3586, dated Bombay Castle, the 31st December 1879.

From —J. NUGENT, Esq., Acting Secretary to the Government of Bombay, General Department,

To—The Offg. Secretary to the Government of India, Home, Revenue and Agricultural Department.

I am directed to acknowledge the receipt of your letter, No. 306, dated 20th August 1879, forwarding copy of a report by Assistant Surgeon Abdur Ruzzack on the sanitary condition of pilgrims to Mecca, and requesting the opinion of this Government on the practical recommendations made by him, particularly on the measures which he proposes should be adopted previous to embarkation and during the voyage.

2. In reply, I am directed to forward a copy of a letter, No. 10243, dated 11th November last, from Mr. J. H. Grant, Municipal Commissioner for the City of Bombay, and Sir F. Souter, Kt., C. S. I., Commissioner of Police, Bombay, who were requested to ascertain the feelings of the Muhammadan community on the subject of Mr. Ruzzack's proposals.

3. In speaking generally on the subject, His Excellency the Governor in Council would premise that he does not think it necessary or expedient for Government to interfere with pilgrims going to Mecca. Government are bound, in his opinion, to satisfy themselves that all persons who leave the shores of India in Native passenger ships are properly cared for on their voyage, and this is effectually secured by the operation of Act VIII of 1876 which seems to provide all that is necessary.

There is no doubt that the pilgrims, rich and poor, have to undergo great privations, both on their voyage and after they reach the holy places of Islam. But as regards Indian pilgrims, the hardships of the travel are mitigated by the comparatively short sea voyage and the good arrangements on boardship. The same is the case with the Persian pilgrims. They used to go by the Arabian Desert route, and then undoubtedly they were compelled to undergo real hardships; but now they are abandoning that line for the better route down the Persian Gulf and round by Aden. Moreover, the privations which

are incidental to the pilgrimage are willingly encountered, and are known beforehand to be inevitable. It may fairly be assumed, therefore, that those who go to Mecca are buoyed up by strong religious sentiment which would probably resent any interference on the part of the State; and it is the belief of this Government that the Native community who go on pilgrimages would very much prefer the absence of any interference on the part of Government. The Turkish Government might promise the introduction of improved arrangements for the comfort and safety of pilgrims, but how far those promises would be effectually carried out is by no means certain. Even, therefore, were it politic to endeavour to better the condition of the pilgrims after their arrival at Jeddah, the attempt to do so would probably prove fruitless.

The feeling which prompts the Muhammadans of Bengal or Northern India to encounter the hardships and miseries of a pilgrimage is entitled to the fullest sympathy, and the belief universally entertained that death on a pilgrimage is a sure passport to heaven will, as long as Islamism lasts, induce thousands of Indians to follow in the footsteps of those who have gone before them. Beyond seeing that the ships which convey the pilgrims from our shores are fully and properly fitted out and equipped in accordance with the provisions of the Native Passengers Act of 1876, and that the humane provisions of that law are carefully carried out, this Government are entirely opposed to any interference whatever.

4. Adverting to the enclosure to this letter, it will be seen that the Bombay Mussulman community is averse to the adoption of the more important of the proposals made by Assistant Surgeon Abdur Ruzzack, and opposed generally to interference on the part of Government with the pilgrims and their arrangements. That community also disapproves of the suggestions regarding the appointment of a pilgrim health officer and agent in Bombay, and objects—and in the opinion of His Excellency the Governor in Council with reason—to the proposals that no pilgrim should be allowed to leave Bombay without an examination of his purse and person to show, first, that he possesses at least Rs. 300; and, secondly, that he is physically fit to endure the hardships of the journey. For reasons already stated in paragraph 3, it would, His Excellency in Council thinks, be cruel and impolitic to carry out either of these proposals. Further, to adopt Mr. Ruzzack's suggestions would virtually be to entrust the entire management of, and responsibility for, the conveyance and comfort of the pilgrims commencing from the actual chartering of the steamers in Bombay to Government, and this clearly is not a duty which legitimately devolves upon them.

The suggestion that no vessels of smaller registered tonnage than 1,100 or 1,200 tons should be permitted to carry pilgrims is not practicable; nor has it any great advantages were it feasible, seeing that the number of passengers a vessel may carry is practically still determined by her tonnage. A steamer of 2,000 tons might therefore be proportionately as much crowded as one of 1,000 tons. It is also a mistake to suppose that a large steamer must necessarily be a better sea-boat, and roll and pitch less, than a smaller vessel; long narrow screw steamers of large registered tonnage are often the most uncomfortable vessels in a sea way.

On the subject of latrine accommodation the Bombay Muhammadans concur with Mr Ruzzack in thinking that the present latrine accommodation furnished under the rules is insufficient, and should be doubled. This might be done with advantage, and can easily be effected by a verbal alteration, substituting 50 for 100 as the number of passengers referred to in Rule 4 of the rules made by the Government of India under Section 46 of Act VIII of 1876.

As regards cooking arrangements, this Government cannot see that anything further is required beyond what the rules already contain. In respect of cooking accommodation Mr. Ruzzack seems to have been unfortunate in his selection of the *Trentham Hall*, as in this matter she does not seem to have been as fully equipped as ordinary pilgrim steamers. The same remarks apply to the ventilation of the vessels.

Concerning the proposal that a Mussulman medical officer should be appointed to each vessel, His Excellency in Council is unable to perceive how the owners of the vessel, if she has a competent European surgeon, can be required to provide a Mussulman surgeon also. What is required in such a case is an interpreter, not another doctor. Any alterations in the existing system regarding the dieting of pilgrims on boardship seem unnecessary. If the pilgrims and the Mussulmans generally are content, there appears no reason why Government should interfere.

5. The other proposals made by Mr. Ruzzack involve the appointment of an agent at Jeddah, to which this Government has always been opposed, and negotiations with the Turkish Government, which very probably would be unwilling to assent to arrangements which would involve expenditure and supervision of their own officials. All concerned, however, might be informed that the British Government has now a political officer at Jeddah, who has been instructed to watch over the working of the pilgrim traffic at certain seasons of the year, and to promote fair and impartial obedience to the regulations in force by the Turkish officials on the one hand, and by British ships on the other.

6. The suggestion that the funds for paying for Mussulman surgeons afloat and on shore in Arabia, and for lodging houses and hospitals at, or on the road to, the holy places of Islam, should be obtained by imposing a tax on shipowners and charterers, seems to need no serious comment.

7. The liberal offer of a Mussulman gentleman, referred to in the last paragraph of the letter enclosed, is, in the opinion of His Excellency in Council, deserving of favourable consideration.

No. 10243, dated Bombay, the 11th November 1879.

From—J. H. GRANT, Esq., Municipal Commissioner, and Sir F. SOUTER, Kt., C.S.I., Commissioner of Police.

To—The Secretary to the Government of Bombay, General Department.

With reference to your letter No. 2507 of 12th September 1879, forwarding the Government of India's No. 306, and enclosures (herewith returned), we have the honour to report that we have ascertained the feelings of the Muhammadan community of Bombay in regard to the measures proposed by Assistant Surgeon A. Ruzzack for the benefit of pilgrims to the holy places of Islam, in consultation with the leading members of that community, and the result of our inquiry, briefly stated, is that the Muhammadan community are not of opinion that much interference on the part of Government with the pilgrims is necessary or desirable. As regards the arrangements under class A, the proposal that no pilgrims should be permitted to embark unless he can prove that he is possessed of the necessary qualifications, as regards health and means, is not supported, and the appointment of a health officer and of an agent for the purposes specified in the report is considered unadvisable.

The Muhammadans all allow that a pilgrim ought to have sufficient means to perform his journey, after providing for the maintenance of his wife and family while he is absent; but they allege that, if a pilgrim has not sufficient means, he is generally assisted by other pilgrims who have more than sufficient, and, as an instance of this, one gentleman has stated that when he went on the pilgrimage himself, it cost him Rs. 16,000, the greater part of which was spent on paying for the passages of poor pilgrims. And now that people generally go to Jeddah in steam ships, and are not more than ten or twelve days on the voyage, very little food is required for one man on the voyage.

It is further urged that poor pilgrims are aware of the hardships they will have to undergo on the journey, and are prepared to face them for the sake of their religion; and if a man dies on the pilgrimage, he will obtain the blessing of God for all that he has gone through for his religion.

They acknowledge that the intentions of Government in instituting the present inquiry are kind and good, but they think that, when people voluntarily undergo hardships, it is not necessary for Government to do anything to assist them.

The poor and ignorant, they say, would not understand that what is now proposed is for their own good, and therefore the Government should not interfere to prevent people, however poor and feeble, from undertaking the pilgrimage if they wish to do so.

As regards the size of the vessels to be used by pilgrims, they do not consider it necessary that no ship whose tonnage is less than 1,100 tons should be allowed to be engaged in the pilgrim traffic, provided nine feet be allowed for each passenger. At the present time many people who cannot get passage by steamer go to Jeddah by bugla on payment of about Rs. 5 for the passage.

As regards latrines, they agree with Assistant Surgeon Ruzzack that two latrines should be provided for every 100 pilgrims, and they are of opinion that each vessel should carry

not less than four sweepers. The latrines for females cannot, they believe, be constructed outside the ship, for the women would be afraid to go to them whenever there was any sea on; but if it could be arranged it would certainly be better to have all the latrines outside the ship.

As regards cooking arrangements, it is alleged that the ship *Trentham Hall*, in which Mr. Ruzzack made the passage, was never intended for pilgrim traffic, being cargo boat with accommodation for a few first class passengers only; and that steamers which are expressly intended for pilgrims are fitted with long galleys where there is space for 100 people to cook at one time. It is recommended that every ship engaged in the pilgrim trade should be fitted with a sufficient number of "chullahs" to meet the requirements of the passengers.

They do not approve of the suggestion that the captain of the ship should arrange for the pilgrims' diet, and that if this were done half a gallon of drinking water daily would be sufficient for each pilgrim. One gallon of drinking water per head is considered necessary, and the passengers should be allowed to cook for themselves.

As regards ventilation, it is alleged that ships engaged in pilgrim traffic are fitted with ventilators, and that they would not be allowed to proceed to sea without ventilators. They have also 12-feet hatches, which are left open, and, in addition to these, wind-sails are generally used.

The proposal to appoint a Muhammadan medical officer for each pilgrim vessel is considered a good one, and one that should be adopted.

It is also considered very desirable that hospitals should be established at Jeddah, Mecca and Medina with Muhammadan doctors in charge of them.

The proposal to appoint an agent at Jeddah to look after the Indian pilgrims, and to register their names and compare them with the lists produced by the captain of the ship, is considered a good one, but it is not considered advisable that the agent should have anything to do with the pilgrim's money.

Motowwifs intending to take charge of Indian pilgrims should have their names registered; and when a pilgrim dies, the motowwif should send information to the agent. The dulals in Bombay should be registered by the Commissioner of Police.

It would be desirable, they think, to erect or purchase a building at Mecca for the use of Indian pilgrims, but it would not be practicable to set up tent hospitals when the pilgrims leave Mecca and proceed to Arafat, because the journey is made too quickly; but the doctor might take a supply of medicine with him.

It is stated by gentlemen who have had personal experience that at Arafat the tents are so numerous that if a man leaves his own tent he can hardly find it again.

If the Turkish Government would provide more latrines and slaughter-places for the pilgrims generally at Arafat, it would be a very good thing to do; but as the pilgrims are all dressed alike there, and the crowd is so tremendous, it would be impossible to distinguish the people for whom special latrines and slaughter-places were provided.

It is not considered practicable for the agent on the journey to Medina and back to Mecca to register the names of all persons who depart with a caravan.

The Bedouin is already responsible for all the people of his kafilah, and he gives an undertaking to that effect to the Sheriff of Mecca. It would, they think, be advisable to make the Bedouin responsible through the agent.

An escort of Turkish cavalry with each caravan, as proposed, would, it is considered, be of great benefit to the pilgrims, if the Turkish Government would agree to provide one; and if a doctor could accompany each caravan, it would be advisable that he should do so, but sometimes a caravan consists of two thousand persons. It would also be a good thing if the doctor kept returns as suggested.

As regards the establishment of lodging-houses for Indian pilgrims at Jeddah, Mecca and Medina, it is stated that there are already serais for the poor and lodgings for people who can pay. There are also resting-places free to all Indians, but in some cases these do not serve their purpose. A gentleman mentioned one, that was built by his mother, but when she returned to it she found it in the possession of Arabs, and there was a difficulty in turning them out.

As regards the means of raising the necessary funds for carrying out the proposals, the Muhammadans are of opinion that it would not answer to pay the charges from interest; for having regard to the Muhammadan law as to usury, many people would refuse even to take medicine provided from such a source.

It would be better therefore, they think, that the requisite funds should be raised by a light contribution from ship-owners and charterers engaged in the pilgrim traffic, the passage money charged to the pilgrims being made to cover the cost.

Regarding the establishment of a mossaffor-khana in Bombay for pilgrims, Hajee Cursom bin Sullimon has promised that, if Government will grant a free site somewhere in the neighbourhood of Moody Bay, he will give Rs. 25,000 for the erection of the building, which on its completion should be handed over to the Bombay Municipality in trust.

No. 398, dated Calcutta, the 13th February 1880.

From—HORACE A. COCKERELL, Esq., Secretary to the Government of Bengal, Judicial, Political, and Appointment Departments,

To—The Secretary to the Government of India, Home, Revenue and Agricultural Department.

I am directed to acknowledge the receipt of your letter No. 62, dated the 14th March last, intimating that the Government of India would be willing to sanction the establishment at Jeddah of an agency for Indian pilgrims, if sufficient funds were provided for the purpose, either from private subscriptions, or from Muhammadan endowments, or from both these sources.

2. Copies of your letter were on receipt forwarded to the Muhammadan Literary Society, and the National Muhammadan Association, and they were asked if the trustees of any of the Muhammadan endowments in Bengal would be willing to contribute from the funds of the charities under their control towards meeting the expenses of the proposed agency, and whether the Societies would undertake to raise subscriptions for the formation of a fund for the same object. The Board of Revenue were also requested to report whether the funds of any Muhammadan endowment administered by them could, consistently with the intention of the founder of the charity, be made available towards meeting the expenses of the proposed agency. The replies of the Muhammadan societies and the Board of Revenue have now been received, and copies of the reports marginally noted are forwarded herewith for the information of the Government of India.

1. Letter from the President, National Muhammadan Association, No. 166, dated 21st June 1879.
2. Letter from the Secretary, National Muhammadan Association, No. 178, dated 31st October 1879.
3. Letter from the Secretary, Muhammadan Literary Society, dated 15th September 1879.
4. Letter from the Secretary to the Board of Revenue, No. 771A, dated 21st November 1879.

3. From these reports, it will be seen that the two Associations consulted are of opinion that the trustees of Muhammadan endowments have no power to divert the funds in their hands to purposes other than those contemplated by the donors, which do not include the proposal to establish a pilgrim agency at Jeddah, and that, even if the funds could be diverted, none of the endowments have any sufficient surplus available from which the necessary contribution could be made. They also think it very doubtful if enough money could be raised by private subscriptions to carry out the object in view, but they are willing to assist in collecting subscriptions.

4. From the report submitted by the Board of Revenue, it appears that, of the endowments under their administration, the Syedpore Trust, founded by Hajee Mahomed Mohsin, is the only one the funds of which might, consistently with the intention of the founder, be made available towards the establishment of a pilgrim agency at Jeddah. The portion of this fund, which is at the disposal of Government, amounts to about Rs. 55,000 a year, derived partly from land collections, and partly from the interest on invested accumulations, and the whole sum is at present appropriated to the furtherance of Muhammadan education. The fund is a trust fund, and is not available for general State purposes; Government is bound to spend it for the benefit of members of the Muhammadan community. At present it is spent in educating them, but if it is thought proper to spend it in assisting them to go on pilgrimages, this would be a perfectly legitimate application of the funds of the trust. It must not, however, be inferred from the letter of the Board of Revenue, which speaks of "accumulations amounting to 1½ lakhs," that any part of the fund is at present lying idle and unappropriated. The whole surplus of the fund is spent on education, and any money which may be given from it to assist pilgrims at Jeddah will have to be withdrawn from the education of Muhammadans in this country. The Lieutenant-Governor would very strongly deprecate any such diversion of the money from the purpose to which it has hitherto been devoted, although it is quite possible that the original donor would have thought the object of assisting Muhammadans on their pilgrimages a more important object than their education.

5. Besides the share of the fund devoted to secular purposes, a three-ninth share, amounting in round numbers to Rs. 20,000, is paid to the Committee of the Hooghly Emambara for expenditure on local religious ceremonies. Government cannot interfere with the expenditure of this money, which is

entirely at the disposal of the Emambara Committee. It is just possible that if an application were made to the Committee, they might be induced to make a grant from the religious share of the fund for the assistance of pilgrims; but the Lieutenant-Governor thinks it very unlikely that anything would be obtained from this source, as the Matwali has represented that the Committee find the funds of the religious share barely sufficient for the conduct of the local religious ceremonies.

6. Under these circumstances, and as the Muhammadan Associations, as already stated, consider it doubtful if enough money could be raised to carry out the object in view, the Lieutenant-Governor does not think it advisable that Government should take the initiative in the matter, though, if the Muhammadan community take action, and can provide the funds either by subscriptions or from endowments, the agency might with advantage be established on the terms proposed by the Government of India.

7. I am also directed now to reply to your letter No. 307, dated the 20th August last, forwarding a report from Assistant Surgeon Abdur Ruzzack, who was deputed to Mecca "to report on the sanitary condition of pilgrims at that place," and requesting the opinion of the Lieutenant-Governor on the practical recommendations made by the Assistant Surgeon, and particularly on the measures which he proposes should be adopted previous to the embarkation of the pilgrims at Bombay and during their voyage to Jeddah. Of the measures proposed, the principal are—

(1)—The appointment of a Health Officer and a Pilgrim Agent at Bombay whose duties will be to see that no one is allowed to undertake a pilgrimage to the holy places of Islam, who cannot show that he is in a fit state of health to encounter the fatigue and hardships attendant on the pilgrimage, and who has not sufficient funds to prosecute it.

(2)—The establishment of a hospital at Jeddah under a Muhammadan Assistant Surgeon, who should also perform the duties of a Pilgrim Agent at that place.

(3)—The formation of a fund of four lakhs of rupees for carrying out the above and other suggestions made by the Assistant Surgeon Abdur Ruzzack, the necessary amount being raised by subscriptions from the whole Muhammadan population of India, to be realized by the local authorities from private endowments and funds, by a tax on pilgrims and pilgrim vessels, and by aid from the British and Turkish Governments.

8. Of these proposals, the one regarding the establishment of an agency at Jeddah has already been accepted by the Government of India, on the condition that sufficient funds for the purpose are forthcoming from Muhammadan endowments, or from contributions by the Muhammadan community. The result of the enquiries made to ascertain if sufficient funds could be provided, and the opinion of the Lieutenant-Governor, have been fully stated above. With regard to the other proposals of the Assistant Surgeon, and to the report generally, I am to solicit a reference to my letter No. 593T, dated the 18th October 1878, and to say that, after a careful perusal of the Assistant Surgeon's full and interesting narrative, the Lieutenant-Governor sees no reason to modify the view he has already expressed. Sir Ashley Eden is convinced that the general body of pilgrims to the sacred places of Islam could not be well cared for and protected by Government throughout their pilgrimages without an expenditure far in excess of the estimate of the Assistant Surgeon. The Lieutenant-Governor has already pointed out in my letter of October 1878, that the imposition of a direct tax on pilgrims would be liable to misconstruction, and any fee leviable as proposed from ship-owners and charterers on the ship's tonnage and passage money would really amount to a heavy tax on the pilgrims themselves. Any measures also that Government might take in any of the directions indicated in the report would operate, so far as they operated at all, as restrictions upon pilgrimages to Mecca and Medina. The ignorant among the pilgrims would consider that Government was intentionally interfering with their religion, and their belief would be supported and encouraged by the brokers at Bombay and Jeddah, and by the

cicerones and public of the places at which the pilgrims stay whose profits would be materially diminished by Government interference.

No. 166, dated Calcutta, the 21st June 1879.

From—AMEER ALI, Esq., President of the National Muhammadan Association,
To—The Under-Secretary to the Government of Bengal, Political Department.

I have the honour to acknowledge the receipt of your No. 1605, dated 7th April 1879, forwarding a copy of a letter from the Government of India, intimating the willingness of the Governor General in Council to sanction the establishment of an agency for Indian pilgrims at Jeddah if sufficient funds were provided for the purpose, either from private subscriptions or from Muhammadan endowments, or from both these sources.

2. In reply, I beg to state, for the information of His Honour the Lieutenant-Governor, that the Association has put itself in communication with the trustees of most of the Muhammadan endowments in Bengal to ascertain whether any of them are willing to contribute from the funds of the charity under their control towards meeting the expenses of the proposed agency.

3. I beg also to mention that the National Muhammadan Association is perfectly willing to undertake the collection of subscriptions towards the object in view, if desired to do so. I would, however, take the liberty to add that, in view of the impecunious condition of the Muhammadan community, we do not feel altogether sanguine as to the success of the enterprise.

No. 178, dated Calcutta, the 31st October 1879.

From—The Secretary to the National Muhammadan Association,
To—The Offg. Under-Secy. to the Govt. of Bengal, Judicial and Political Depts.

I have the honour to acknowledge, on behalf of the President of the National Muhammadan Association, your letter dated the 16th October 1879, and in reply beg to state that it appears practically impossible to obtain any contribution from the Muhammadan charities in Bengal towards the maintenance of an agency at Jeddah for the purpose of assisting Muhammadan pilgrims. As a rule, Mussulman charities are conducted and administered according to certain definite instructions of the appropriator, technically called *Wakef*. The Motwallees have no power to divert the proceeds of the trust estate to purposes other than those intended by the original grantor and mentioned in the wakfnamah. Under these circumstances, the Motwallees with whom the Association has put itself in communication have expressed their inability to afford any assistance out of the charities under their control towards the carrying out of the proposal of Government.

2. The Association has already expressed to the Government its willingness to undertake the collection of subscriptions towards the object in view, but it feels very doubtful as to the ultimate success of the enterprise. The generally impecunious and impoverished condition of the Muhammadan population of this province excludes the possibility of raising subscriptions to any large amount. The Association has postponed taking any further action in the matter, pending the orders of Government.

Dated Calcutta, the 15th September 1879.

From—MOULVIE ABDOOL LUTEEF, KHAN BAHADOOR, Secretary to the Muhammadan Literary Society,
To—The Secretary to the Government of Bengal, Judicial and Political Departments.

I have the honour, on behalf of the Committee of the Muhammadan Literary Society, to acknowledge the receipt of your office letter No. 1604, dated the 7th April last, regarding the proposed establishment of an agency for Indian pilgrims at Jeddah, and to submit the following reply to the questions involved therein.

2. The Committee perceive with great satisfaction the recognition by the Government of India of the necessity of appointing an eligible Muhammadan gentleman as Assistant British Consul at Jeddah for the purpose of affording

advice and assistance to poor Indian pilgrims in Arabia. When they look to the past of that controversy, they feel grateful to Providence that, in this matter at least, there should be uniformity of sentiment between Her Majesty's Government and her subjects professing the faith of Islam.

3. The Committee are, however, afraid that even for the limited purpose of meeting the expenditure of the Pilgrim Agent's establishment, including his own salary, it would be hopeless to look for aid from Muhammadan endowments in India. In the first place, it is doubtful how far the *Mutwallees* of such endowments have the power to contribute towards a fund, the very existence whereof was never contemplated by the endowers. In the second place, the endowers have in a great number of cases fixed the expenditure to be incurred under various heads, leaving little or no margin for subscriptions like those under consideration.

4. Nor are the Committee hopeful of being able to raise by private subscription in India a capital fund, from the interest of which the expenses of such agency might be met. At the same time it would not be advisable for the Government to appoint a Pilgrim Agent, merely relying on the spasmodic efforts of private benevolence to meet the expenses every year. Indeed the latter plan seems never to have been entertained.

5. Further, the Committee are of opinion that, apart from the feasibility of the plan of raising such a fund from private sources, there are other considerations which they are in duty bound to lay before the Government in this matter. The Committee believe that, according to the law of all civilized nations, it is the sacred duty of every State to appoint Consular Agents in those places in foreign territory where a large number of its subjects have occasion to resort for purposes of trade or otherwise. They believe that it was in the discharge of such duty that Her Majesty's Government have appointed a Consul at Jeddah. But the duty cannot be fully and satisfactorily discharged, unless the said British Consul has given to him a Muhammadan assistant of position, who is fully and freely able to communicate with the Muhammadan pilgrims from India, who constitute a large proportion of the British subjects resorting to that port.

6. The Muhammadans of India are not an unimportant class of tax-payers of the Empire, and the pilgrims themselves create a traffic which contributes in diverse ways to the general revenues of the Empire. Taking all these circumstances into consideration, an expenditure from the Indian Exchequer of three or four hundred rupees per mensem for a Pilgrim Agent, including his establishment, could not be reasonably objected to by any class of Her Majesty's subjects. The grant would be made for purely secular purposes, and in discharge of obligations which every Government owes to its subjects, when sojourning in large numbers for a lawful purpose in foreign lands.

7. The Committee also observe, in the communication of the Government of India, an indication of an intention that the function of the Pilgrim Agent should be also to disburse such sums to destitute pilgrims at Jeddah, or beyond that, as may be remitted for their relief by Muhammadan gentlemen from India. There can be no doubt that diverse sums are transmitted by private parties to various quarters in Arabia for the pious purpose of affording pecuniary assistance to *hadgis* in that country, and such assistance is very useful so far as it goes, inasmuch as the *hadgis* are often, from causes entirely beyond their control, reduced to the utmost depths of destitution and misery in a foreign country. The concentration of such voluntary remittances in the hands of one responsible and reliable disbursing authority would no doubt enhance the usefulness of those remittances. But at the same time the Committee cannot refrain from submitting that the destitution of the pilgrims is often too great to be relieved by the efforts of private charity, and that the question of pilgrim relief can only be placed on a sound and self-supporting basis by the creation of an insurance fund. As the present state of the Imperial finances cannot admit of the large expenditure which pilgrim relief (including a provision for return to India) would necessitate, the only practicable plan, the Committee venture again to submit, is to raise the fund by taxing the pilgrim-carrying vessels.

8. Should the considerations submitted above fail to convince the Government of the advisability of both the courses, namely, the defrayal out of the Imperial Exchequer of the salary of a Muhammadan Assistant British Consul at Jeddah, and the levying of an indirect tax on the pilgrim traffic, the Committee would loyally endeavour to try their best to raise such funds as they can from private sources for the purpose contemplated by the Government.

No. 771A, dated Fort William, the 21st November 1879.

From—R. H. WILSON, Esq., Offg. Secy. to the Board of Revenue, Lower Provinces,

To—The Secretary to the Government of Bengal, Political Department.

I am directed to acknowledge receipt of Government order No. 1606, dated 7th April 1879, and subsequent reminders, requesting to be informed whether the funds of any Muhammadan endowment administered by the Board can, consistently with the intentions of the founder of the charity, be made available towards meeting the expenses of the agency proposed to be established at Jeddah, with the object of meeting cases of destitution occurring among Indian pilgrims who go to Arabia unprovided with sufficient funds, or who are defrauded by unscrupulous agents.

2. In reply, I am to say that the Board selected for enquiry the endowments named in the margin as being most likely to be able to contribute towards the object in view, and the following are briefly the particulars of each.

1. Sasseram Endowment.
2. Syedpore Trust.
3. Massumpore Endowment.
4. Durga Kudeem Shureef.
5. Hosaini Dullan.

3. The history of the creation of the Sasseram Endowment, the object of the grants, &c., are set forth in a note by the late Secretary, Mr. Geoghegan, copy of which was forwarded to Government with the Board's letter No. 375A, dated 17th June 1875. From the translations of the firmans therein given, it will be seen that that of Shahalam given in 1762 A.D. speaks of the 2,81,000 dams of land as having been given for the support of travellers "kharch warid sadir;" but reading this in connection with the previous firmans, of which translations are given, the Board do not think it would justify a diversion of the funds from local purposes for the benefit of pilgrims in general. From the Board's report No. 138A, dated 4th March 1879, it will be seen that the income of the endowment is about Rs. 22,000, which it is expected will rapidly increase to Rs. 40,000, and ere long to Rs. 60,000; while for the present a scale of expenditure has been fixed which will fall within Rs. 27,000 per annum.

4. As regards the Syedpore Trust, founded by Hajee Mahomed Mohsin, I am to invite a reference to the orders of Government in the General Department, No. 3494, dated 28th November 1874, to the address of the Commissioner of Burdwan, which goes into the question of the appropriation of the funds of the endowment; and to add that the accumulations of the four-ninth share amount to about one and a half lakhs, and that Government applies the lapsed one-ninth share formerly paid to a Mutwallee to education. Some of these assets might perhaps be made available towards meeting the funds of the proposed agency.

5. The Massumpore Endowment in Midnapore. From the various sunnuds under which this endowment was created and continued, it appears that the villages of Bissenpore and Massumpore were assigned for the support of religious mendicants, students of the Madrassa Asylum and mosque of Abdool Hossain. From the Board's report to Government, No. 601C, dated 22nd October 1870, it will be seen that the assets of the endowment, on an average of five years, were Rs. 4,258-2, and that there was no surplus; and if any were available, it could not properly be applied to such general purposes as are now contemplated, the endowment being for strictly local purposes.

6. Durga Kudeem Shureef in Moorshedabad. No deed creating this endowment is forthcoming, but from a Persian letter from Nawab Nazir Bassanta Ali Khan to the Agent, Governor General, Moorshedabad, written in 1833, it appears that the founder endowed the mosque and imambara situated at Begumgunge with a third of all his movable and immovable property,

appointing Mutwallees to lay out the income for the purposes of the above religious establishment, and to pay allowances to those persons who had been in the receipt of them and to his dependents. He also instructed the Mutwallees to set aside "a third of his whole property for the performance of his funeral ceremonies, and for the observance of certain acts,* the religious duties of which hold out promise for the salvation of the soul."

* 1. Oblations offered for the soul of the dead.
2. A pilgrimage to Mecca.
3. Visiting sacred places.
4. Exercise of charity for the atonement of sins committed in life.
5. Feeding of the poor to obtain pardon for sin.

7. The general terms in which the religious observances noted in the margin above are described, might perhaps admit of any available funds from this endowment being applied as now proposed; but the Board's report to Government, cited in paragraph 5, also shows that the then income of this endowment was Rs. 8,777-3-10, and the legitimate expenditure Rs. 7,003-15-1, leaving a balance of Rs. 1,773-4-9, which was disbursed in conducting lawsuits, in travelling allowances of amlah and mooktears, and in meeting other contingent charges. It is also noted therein that the estate was encumbered with a heavy debt, and had to conduct expensive lawsuits brought against it. Possibly the financial position may have improved since that report was submitted in 1870. Mr. Dampier will not, however, delay the submission of this report for any further enquiries. Whether any funds can be made available will be ascertained and reported as soon as possible, but in any case the amount of surplus funds must be small.

8. With reference to the last-named endowment, the "Hosaini Dullan," I am to say that Government pays the equivalent of Sicca Rs. 2,500 annually to defray the expenses of the mohurrum, during which the building is illuminated. The endowment is for purely local purposes, and there is no surplus available.

9. To sum up, it seems clear to the Board, from the particulars above given, that the Syedpore Endowment is the only one which is rich enough to contribute any considerable amount towards an agent at Jeddah.

Nos. 58-59, dated Fort William, the 17th March 1880.

From—C. BERNARD, Esq., Officiating Secretary to the Government of India, Home, Revenue, and Agricultural Department,

To—The Secretary to the Government of Bombay / Bengal.

I am directed to acknowledge the receipt of your letter No. 3586 / 3087, dated 31st December 1879 / 13th ultimo, submitting the opinion of the Bombay / Bengal Government regarding the report of Assistant Surgeon Abdur Ruzzack upon the sanitary condition of pilgrims at Mecca.

2. In reply, I am to say that the Governor General in Council accepts the view of His Excellency the Governor of Bombay in Council / His Honour the Lieutenant-Governor, as stated in the letter under acknowledgment, and considers that the proposal to interfere more effectively in behalf of Moslem pilgrims to Mecca must, for the present, be abandoned. I am to add that if, or when, the Muhammadan community evinces a desire again to raise the question, and is prepared to provide the necessary funds, the Government of India will, if it should be shown that any large section of the community desire Government action, be prepared to consider the matter.

Extract paras. 286—302 from a Report by Assistant Surgeon Abdur Ruzzack on the sanitary condition of pilgrims to Mecca.

286. From what I have observed and seen of the arrangements made for the pilgrims by the Turkish authorities, the hardships that they endure, and the difficulties that they meet with, together with the miseries that the poorer pilgrims suffer after the termination of this grand annual gathering of the moslem world, I am of opinion that many of the evils can be remedied and abuses rectified, and also much of the sufferings which fall to the lot of the poor pilgrims from India during the several phases of this great journey which they undertake from Bombay to Mecca and Medina, and *vice versâ*, may be alleviated. The evils that commence at Bombay, the abuses that exist at Jeddah and Mecca, and the sufferings that are undergone on the road to Medina, all are capable not only of great amendment but also of complete removal. The means that may be adopted for this purpose I humbly propose to divide into—

(A) The steps which might be undertaken by the British Government alone; (B) The measures to be adopted in conjunction with the Turkish Government.

The arrangements under class A are again divisible into—

I.—Those previous to embarkation.
II.—Those after embarkation and during voyage.

The arrangements under class B may also be grouped under three heads—

I.—Those at Jeddah and for the journey to Mecca.
II.—Those at Mecca, Arafat and Mena.
III.—For the journey to Medina and back.

287. Commencing with class A, I beg to propose that no pilgrim should be permitted to embark unless he proves that he is possessed of the necessary qualification for proceeding on the *Hadj*—first, as regards health, and, second, as regards means. For the purpose of arriving at a correct knowledge of these, I consider the appointment of two officers as necessary—

(1)—A Health Officer.
(2)—An Agent.

The Health Officer will examine every pilgrim and see that he is healthy and fit to undertake such a long and arduous journey. Persons not in a state to bear the hardship of a deck trip, or suffering from any such disease as is likely to prove fatal to themselves during the voyage, or transferable by contagion or infection to others, should, I am of opinion, be told by the doctor that in his opinion they are not in a fit condition to travel, and should be refused the required certificate. This will by no means amount to a direct inhibitory order likely to hurt the religious feelings of Muhammadans, which should always be avoided. The persons, however, who are considered fit to undertake the journey should each be furnished with a certificate to that effect.

288. This must be produced before the Agent, who will be an officer resembling the Protector and Superintendent of Emigrants in Calcutta. He will then enquire and see whether the pilgrim has a sufficient sum to cover the expenses of his journey to Mecca and Medina and back to Bombay. No pilgrim should be allowed to proceed on the *Hadj* unless he can shew that he has with him at least the sum of Rs. 300. This sum will barely suffice for all ordinary expenses. Those who cannot produce this sum should be informed that Rs. 300 is a sum much less than the *nisab* (standard) laid down by the *Shara* (Muhammadan Law), and is the minimum amount fixed, which every pilgrim is bound to have in his possession before he can be allowed to proceed, and that unless he can deposit that sum he would not be allowed to go on the *Hadj*. Each deck passenger should therefore be made to deposit this amount with the Agent, who will grant him a receipt for the sum which shall also serve as a passport.

With a part of the money deposited with him the Agent shall purchase tickets for each pilgrim for the voyage to Jeddah. This is specially necessary for the purpose of guarding the pilgrims against being swindled by *dallals*, or brokers, a short account of whom I have given in paragraph 9.

As great inconvenience is experienced by the pilgrims in carrying eatables and provisions with them during the voyage, which also very much increases the luggage, the Agent should be empowered to arrange with the Captain for the diet of the pilgrims, the expenses of which should be deducted from the same money that shall have been deposited by the pilgrims. The balance of all such moneys should be forwarded through the Captain of the same ship in which the pilgrims embark, to the Pilgrim Agent or Protector of Pilgrims at Jeddah, of whose appointment I shall speak further on. As pilgrims, when they fall sick on boardship, are generally relieved of their purse either by their own friends or by other passengers who are their neighbours, this arrangement will ensure them against loss and theft (*vide* paragraphs 41 and 42), and in case of those who die during the voyage this money will be saved, and can remain in deposit with the Agent at Jeddah to be made over to the heirs of the deceased, should any turn up and establish his right; and if no claimant appears within a fixed time, the sum in deposit may be placed at the disposal of the Agent, to be spent by him in consultation with the British Consul in relieving the poor and the destitute Indian pilgrims. Along with the cash the Agent at Bombay shall also despatch to Jeddah a statement showing the amount of money received from the pilgrims, the sums expended in the purchase of the tickets, and providing for their diet; and a list of all the passengers, men, women and children, together with the name of the medical officer put in charge. First class passengers should also be compelled to deposit their passage money with the Agent in proportion to the number of berths they require. As the first class passengers generally have servants and many other people with them, they should be allowed the option of either providing their own food or arranging for their mess through the Agent. The diet of the pilgrims should be regulated for each class according to a fixed scale. A complete account of all these arrangements and the scale of diets which will be allowed in the ship should be printed both in Urdu and Bengali in the form of a Railway Time Table, and sold at almost the same rate to all the pilgrims not only at Bombay but all over India.

289. With reference to the arrangements No. 2 of class A, I beg to suggest that no ship whose net tonnage is less than 1,100 or 1,200 tons should be allowed to be engaged in the pilgrim traffic, as the larger the vessel the more comfortable it will be for the pilgrims, and there will be at the same time less rolling and pitching, more breathing space in the 'tween-decks, better arrangements for ventilation in the ship, and no scarcity of drinking water, which

is condensed in all large steamers. It would be a great boon if troopships could be made available for the purpose during the *Hadj* season. But if this be not practicable, the largest vessels should be secured. The Agent should enter into arrangements with charterers and ship-owners and make them agree to certain fixed rates for each class, and bind them not to take any pilgrims surreptitiously or without the Agent's knowledge. The Agent should have all the decks, the poop and the cabins measured out, and each pilgrim allowed to have a certain number of square feet and his place in the ship marked and numbered, which should correspond with that of his ticket. This plan ought to be carried out not only with the deck passengers, but with the poop and first class passengers also. Each pilgrim will thus know his place in the ship, and no confusion can possibly occur. The strong will not be able to snub or domineer over the weak or females and oust them out of the space originally allotted to them. It is often the case now with charterers and ship-owners who, unmindful of the comforts of the passengers, smuggle a larger number on board than what is allowed by law, or can be conveniently held by the ship. If this plan is followed out no more tickets can be issued than there is room for, and the rate per ton which I consider to be defective will be done away with. The present rate is one man to each 1½ ton, but I would recommend two tons for each man.

290. The number of latrines and cooking sheds which are now as a rule temporarily set up in each pilgrim ship is, I think, quite insufficient. Supposing there are seven latrines altogether in a ship carrying 700 souls (although there were nearly 800 people in our ship) and allotting one latrine to each 100 people, and giving to each individual five minutes' time for answering the calls of nature, the 100th or the last man gets his turn at 2-15 P. M., and that too if the use of the latrine has commenced exactly at 6 A. M., and continued without intermission, but this clock-work order cannot be followed in answering nature's calls, and it is therefore evident that one hundred people cannot use one latrine without great inconvenience—*vide* paragraph 36. I would therefore beg to urge strongly that every ship carrying pilgrims should provide latrines at the rate of at least two per cent., and as such a large number of latrines would take up considerable space if placed on the deck as it is now the case with female latrines, I would suggest that all these latrines be built along the outer side of each vessel just in the same manner as male latrines are generally built, which will leave the deck free and do away with all the bad smell that at present springs up in and around them. All the latrines should not only be covered on the sides but also roofed.

291. With regard to the cooking-sheds, the same reasoning may be applied in a much stronger sense. In the *Trentham Hall* there were four of these, which hardly sufficed for one-fourth of the passengers. Nearly all the pilgrims had movable iron stoves in which they cooked all over the ship, almost each near the place where he had his luggage and bedding, which I consider dangerous not only for the pilgrims themselves, but for the vessel also, not to mention the great nuisance which is caused by the smoke flying all over the ship and under everybody's nose. The four cooking-sheds above mentioned were every small, and only three persons at a time were able to cook in any one of these. At this rate there were 12 persons cooking their food at a time in all the four sheds. I find that to cook meat and rice it takes 2½ hours, dall and rice two hours, vegetable and rice 1½ hours, and *khitcherry* only one hour; and therefore, allowing two hours as the least time in which a man can cook his dinner, the four cooking-sheds could be used by only 144 persons in the 24 hours, taking for granted that the people were working at the sheds throughout the 24 hours without intermission. From this it is manifest that if the pilgrims had not the portable iron stoves with them it would have been utterly impossible for the 800 people which our ship carried to cook their food with these four sheds only. Now, as these four sheds and even double that number would be insufficient, and cooking all over the ship in portable iron stoves dangerous, my recommendation about arranging for the diet with the Captain appears to be the most feasible plan, and I would therefore beg again to impress the necessity of the above arrangement.

292. When anxiety about their food is taken off the pilgrims' mind, it will be quite sufficient to supply each with half a gallon of drinking water daily. For the purpose of ablution sea water is and can be used, and I would beg to suggest that two hand pumps be set up for the purpose, one on each side, just in midships.

293. As I found ventilation in the 'tween decks generally deficient, I would recommend for pilgrim traffic all those vessels which are supplied with patent ventilators, which I saw and approved of when coming out in the *Ben Gloe*. I would also prefer ships which besides the port-holes have a good number of side ports on each side. Although a ship may have patent ventilators as well as side ports, it is also very desirable to use windsails and put them up in every suitable part of the ship, *i. e.*, down every hatch. All the above arrangements are to keep the ship cool, and as I found these arrangements necessary during November and March, they will be doubly so during the summer months.

294. The last, if not the least, suggestion that I have to make under this heading is the appointment of a medical man for each pilgrim vessel. Some English ships carry their own doctors; but as generally speaking they are not conversant with any of the Indian languages, their presence in the ship is of no use whatever to the pilgrims, as I have already shown in the course of my narrative, *vide* paragraph 40. I would therefore beg to recommend that a Muhammadan medical officer be sent in charge of each pilgrim vessel. He should be supplied with a box of medicines, specially those for treating fevers and bowel complaints. He should keep a diary of all the cases showing the total number of deaths and of the sick cured and relieved during the voyage, which on arrival at Jeddah he will present to the Agent there for inspection and information.

295. Regarding the arrangements at Jeddah, Mecca and Medina, which fall under the head of class B, I shall first begin with those that appear to me to be necessary at Jeddah, being No 1 of class B. These arrangements consist of the establishment of a hospital and the appointment of an Agent.

296. The hospital at Jeddah is in my opinion very necessary, and will prove of great service to the pilgrims as well as the resident British subjects. The pilgrims will be benefited by the hospital during the *Hadj* season, while the resident British subjects will receive medical aid throughout the year. There is not a single medical man at Jeddah, and from what I have seen of the place and its inhabitants, it appears to me that they stand very much in need of a hospital. The poor people suffer from a variety of diseases, but bear every affliction with patience, and hundreds die, whereas, if medical aid were available, the sufferings of many would be alleviated, and also many a life saved. Leaving aside the subjects of His Majesty the Sultan, I have been informed that Jeddah contains about 4,000 to 5,000 British subjects only, several of whom I have seen in the most wretched state of existence, suffering from chronic sores and ulcers and various other diseases. I was one day asked to see a boy who I was informed had been hurt by a bale falling on his leg. I went over and saw that it was a case of compound fracture of the middle third of the leg. It had occurred four days ago, strong fever was on, the parts around were highly inflamed, mortification had set in at the lowest part, and the wound was full of maggots. The ignorant people were trying every sort of application in vain. I advised them to try and get him admitted into the hospital, but never learnt the result. The boy most probably died. Can any language paint the affliction of the father, whose grief without doubt must have been of the acutest when he daily saw his boy gradually sinking into the arms of death without being able to help him in any way. What must be the heart-rending distress of those who saw a father, a mother, a brother, or a child dying away by inches without any medical assistance being at hand, or the means available to cure the sick or relieve their sufferings. Does not all this make a hospital a *sine quo non*? I have often had talks with these people, and most of them seemed very willing to lend a hand towards the establishment of such an institution. If the British Consul were to call a general meeting of the leading British subjects at Jeddah, and explain to them the willingness of the British Government to meet them half way if they agree to co-operate in such an undertaking, I have no doubt that contributions will flow in freely. A Muhammadan Assistant Surgeon ought of course to be put in charge of this hospital, and he at the same time could very conveniently and appropriately be appointed as the Agent, and act as Assistant to the Consul as well. During the *Hadj* season there is no doubt that both the British Consul and the Agent will have hard work, specially the latter, and therefore I would beg to suggest that a second Muhammadan Assistant Surgeon be sent out every year from India in charge of the first pilgrim vessel that leaves Bombay for Jeddah who, on arriving there, will relieve the Agent from his labours in the hospital, and continue in charge thereof himself throughout the season. The Agent will then look after the pilgrims in general, and carry out those duties the pressing nature of which has been the primary cause of the creation of his office, and—

I.—Immediately after the arrival of the *Hadjis* he will register the name and description (age, country, village, occupation) of each individual and those of his next heir, and compare them with the register which will have arrived from Bombay with the Captain of the ship.

II.—He will receive and take charge of the money sent by the Bombay Agent, and will grant a receipt to the Captain for the same.

III.—He will then deduct from the balance of the amount deposited by each pilgrim at Bombay a sum sufficient for the return passage and diet during the voyage, and after taking a receipt deliver the remainder to him, together with a receipt for the amount that has been deducted for the return passage, &c., which will serve as a passport as well.

IV.—If he finds any of the pilgrims taken ill or unable to proceed from disease or debility, he will make arrangements for their accommodation in the hospital.

V.—As the finalé of the arrangements at Jeddah he will enquire from the pilgrim the name of the *motowwif* or cicerone under whose guidance he intends to perform the *Hadj*, and if he has made up his mind for any he will introduce and make him over to that particular person, or else entrust him to the care of one of the *motowwifs* whom the Agent may think fit or proper. The rogueries of some of these *motowwifs*, and the mean artifices to which they resort for deluding the poor pilgrims, makes it very desirable, if not absolutely necessary, that those *motowwifs* who intend to take charge of Indian pilgrims specially should have their names registered at the Consulate, which will act as a check, and prevent them to some extent from fleecing their clients. To render this mode of procedure effectual, it must be backed by the order of the Pasha and the consent of His Highness the Sherif.

VI.—Before starting from Jeddah for Mecca all the pilgrims should be informed of the arrangements that have been or will be made for them at Mecca, Arafat and Mena, and for the journey to Medina and back, either by beat of drum or by

the public crier, or by posting notices in Arabic, Urdu and Bengali in all the conspicuous parts of the town of Jeddah.

Here commence the arrangements coming under group II of class B, *i. e.*, those required at Mecca, Arafat and Mena—

I.—After the departure of all Indian pilgrims for Mecca, the Agent should also proceed to that place and take along with him the Muhammadan Native Doctors that have come out in charge of each pilgrim vessel, leaving the new or temporary Assistant Surgeon in charge of the hospital at Jeddah.

II.—Immediately on arriving at Mecca the Agent will rent a well ventilated house for the season to accommodate those pilgrims who are taken ill there. It would perhaps be more advisable to rent and keep ready a house of this sort a few days previous to the arrival of the pilgrims from Bombay to Jeddah.

III.—When the pilgrims leave Mecca and proceed to Arafat, and then to Mena, he will also accompany them to these places, leaving one of the Muhammadan Native Doctors in charge of the hospital at Mecca, and set up at both these places tents for temporary hospitals in some conspicuous part of the valley or the encampment. These tents must be distinguished by some such sign or emblem as to enable the pilgrims to recognise them at once. The necessity of establishing these moving hospitals at the above two places will have already become manifest from the account I have given of them in the course of my narrative. During the gathering of a vast multitude varying from sixty to a hundred thousand or more, such as that which congregates on the plains of Arafat and encamps in the valley of Mena, where deficient means of conservancy, insufficient number of latrines, and paucity of slaughter-sheds for the sacrifice of eighty to two hundred thousand animals, fluctuating according to season, with a burning sun acting upon the exposed masses of decaying animal matter, all tend to favour the development of miasma, and which consequently becomes the fountain head for the production of disease, the fact of a moving hospital being a great desideratum, and medical assistance indispensable, is not at all open to question. In the hurry and scurry of departure from the plains of Arafat, and the precipitate haste with which everybody pushes on on the road to Moozdalafa and Mena, it would not at all be a matter of surprise if casualties and accidents of the most serious kinds occurred, and ministration to the wants of those who fall ill or become helpless from any cause during the mustering of this one of the world's greatest fairs, should therefore be one of the first objects of solicitude, and attract the attention and excite the benevolence of the rulers of the country. To promote this object, and to establish such hospitals, the exertion not only of the British Government is needful or sufficient, but the hearty co-operation of the Turkish authorities is also essentially necessary.

IV.—Particular arrangements should be entered into with the Turkish Government for the erection of a larger number of latrines and slaughter-sheds; for observing greater precautions in burying the offal, and sweeping away daily all the dirt and filth and excrementitious matters from the streets and lanes of the town of Mena; for separating the place of encampment from the latrines, and building the latter at proper distances from each other; and for setting up the slaughter-sheds at a more distant and sequestered part of the basin of Mena.

V.—All those who fall ill at Arafat and Mena should on their return to Mecca be accommodated by the Agent in the building which had been turned into a hospital for the season previous to the *Hadj*.

297. I now come to the arrangements under group III, class B, namely, those required for the journey to Medina and back—

I.—When the pilgrims, after a short stay at Mecca, prepare to set out for Medina, the Agent should register the names and description of all the pilgrims from India that depart with each caravan. The amount of cash that they have still left with them, and the clothing, &c., which they possess should also be taken down.

II.—He should then particularly instruct the *mo-kaiyem*, or the chief Bedouin of each caravan, regarding the number of the Indian pilgrims that are about to proceed with his party, and hold him responsible for their safe return. He can thus know the number and the names of every pilgrim and of the Bedouin with whom they set out on the journey; and on their return the Agent can call upon the Bedouin to give an account of each individual that is missing or has not arrived till then. The relatives of such people also can at any time know their whereabouts by referring to the Office of the Agent at the Consulate.

III.—Steps should also be taken to arrange with the Turkish Government that an escort of at least a dozen soldiers under a subaltern should be provided for each caravan when it leaves the city, whose duty it will be to guard the place of encampment every night. The petty pilferings by the inhabitants of the villages near which the encampments are formed are very harassing to the pilgrims, who, after having been on the march for 15 or 20 hours, hardly have any strength left to keep up a look-out after their luggage, and for this purpose the Turkish soldiers would be very useful. But perhaps it would be still better and would ensure perfect quiet throughout the country during the *Hadj* season if strong guards were established at each halting place, which would not only scare away the light-fingered gentry who abound in the villages in the vicinity of the encampments, but would also keep in awe the more daring banditti who infest the wild passes and narrow defiles, especially within the domains of Saad. The sudden variations of the temperature, the fatigues of the long marches, and the uncertain hours in which the Bedouins, regardless of the comfort of the pilgrims, set out on each journey according to their own caprice or fancy, all these tell upon the pilgrim seriously, and cause him much suffering; but if the caravans were protected by the escort or the guard of soldiers at each halting place, and previous instructions are issued, the hours of starting and marching could then be properly regulated.

IV.—Out of the several Native Doctors that the Agent will have with him at Mecca, he can put one in charge of each caravan, and give him a supply of medicine which the Agent may think sufficient for the march to Medina and back. He should then leave a Native Doctor in charge of the sick at Mecca, and go on himself to Medina with the last caravan that leaves for that city.

V.—After the return of the caravans to Mecca, each Native Doctor should submit a written account of his journey to and from Medina, and of his stay in that city to the Agent. The number and causes of deaths and accidents and the number of the missing to be particularly noted therein.

VI.—As soon as all the pilgrims have returned from Medina, and the Agent informed by the Native Doctors of the particulars of the journey, and the number of the sick whom they have brought back with them, the Agent should collect all these as well as the sick whom he had left in Mecca under the care of the Native Doctor, and proceed to Jeddah, where he should arrange for their accommodation in the hospital.

VII.—Before leaving Mecca for Jeddah the Agent should, immediately on his arrival there from Medina, communicate his return to the British Consul, that he might in the meantime arrange with ship-owners and charterers for the passage of the pilgrims back to Bombay.

VIII.—At Jeddah the Agent will see that each pilgrim vessel leaves port under the same arrangements as those followed out at Bombay, and a Native Doctor put in charge of each.

IX.—The Assistant Surgeon, who had been up to this in temporary charge of the hospital at Jeddah, should now be relieved of his duties, and sent off in the last pilgrim vessel that leaves Jeddah for India.

298. Together with the above arrangements, it is very necessary that the Turkish authorities in Hedjaz should pay a little more attention than ordinary in depurating the three towns Jeddah, Mecca and Medina of all the contaminations which taint and poison the air of these places. Medina surely is comparatively much more looked after than the other two cities, but the period of stay of the pilgrims in this place is also very short. The greater part of the pilgrims' time is spent in Mecca, while at Jeddah their stay is regulated according to the early or late arrival of the steamers bound for India. Many as a rule have, however, to stop long at Jeddah, especially the poor. The conservancy, therefore, of these two towns should be better attended to, and all those places abounding in dirt and filth or covered with foul and stinking water should be cleansed and covered up at least during the season of the *Hadj* if not throughout the year.

299. There is another item which should also find a place under the head of these suggestions; but I believe there will at first be certain drawbacks which will not allow the scheme to have full play, as it will indirectly interfere with the private and long-established rights of the inhabitants of these towns, who will therefore clamour and throw obstacles in the way even with the connivance of the authorities that be. But its ultimate object being the good of the pilgrims in general and the middle and poorer classes in particular, I have no doubt of its eventual success after some time—I mean the establishment of lodging-houses, which may be either free, if it can possibly be built, or bought by private subscription from Indian Muhammadans, or otherwise rent-paying.

300. To carry out my suggestions, however, either entirely or with modifications, will entail considerable expense, to meet which a funded capital of at least four lakhs of rupees will be necessary. I see no reason why the whole of this should fall on the shoulders of our Government, and I would recommend that the amount necessary may be raised in the following ways:—

I.—By subscriptions from the whole Muhammadan population of India, to be realised by the local authorities of each district through meetings held by them of all the Muhammadan Nawabs, Raeeses and Zemindars. If this course is followed throughout India, a very large amount, I presume, will be subscribed; but should Government try to raise subscriptions only through private individuals or clubs and societies, success is not so certain.

II.—From private endowments and funds like Mohammud Mohsin's, the object of whose bequest is to provide for the good of the Muhammadans. If a hospital from that Fund can flourish in Hooghly, one can be established with better results in the Holy Land of the Muhammadans, where it is more wanted.

III.—By fixing a certain tax leviable from ship-owners and charterers upon the ship's tonnage, and the passage money payable by each pilgrim.

IV.—By donations and subscriptions from the merchants and resident British subjects at Jeddah.

V.—By aid from both the British and Turkish Governments. A portion of the quarantine fees taken at Jeddah may be appropriated for the purpose which will hardly tell upon the purse of the Turkish Government. I subjoin a list of the vessels which landed pilgrims at Jeddah during the season from all parts, and the number of the *Hadjis* that arrived in each, from which it will appear that 22 vessels arrived from India alone bringing in 8,710 pilgrims. The quarantine fees in rupees corresponding exactly with the number of *Hadjis*, the total realizations will amount to Rs. 8,710; and if the Turkish Government allowed one-third of the money thus realized from Indian pilgrims alone every year, it would go far towards aiding the object in view.

301. The good which is intended to be derived from the above arrangements is not only for Indian pilgrims, but those from other countries will also be greatly benefited by them.

302. These suggestions wind up my report, but I cannot conclude it without thanking the Surgeon-General for having very kindly borne with the unavoidable delay which has occurred in the compilation and submission of this report owing to this being my first attempt of its kind, and the consequent fact of my having no adequate idea of the nature of such a work and the time it would occupy; and also expressing a hope that the Surgeon-General will be pleased to deem my want of previous experience as a sufficient excuse for any oversights or omissions that may be found in my report.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

EXECUTION OF DEEDS, CONTRACTS, &c., ON BEHALF OF THE SECRETARY OF STATE.

Extract from the Proceedings of the Government of India in the Home, Revenue, and Agricultural Department (Judicial),—No. 320, dated 22nd March 1880.

Read—

A letter from the Government of Bengal, No. $^{969}_{1}$ L. R., dated the 6th instant, on the subject of the execution of deeds, contracts, &c., on behalf of the Secretary of State.

RESOLUTION.—In exercise of the power conferred by the thirty-third and thirty-fourth of Victoria, Chapter fifty-nine, Section two, the Governor General in Council is pleased to declare that the under-mentioned classes of deeds, contracts and other instruments referred to in the twenty-second and twenty-third of Victoria, Chapter forty-one, Section two, may be executed as follows in the territories under the administration of the Government of Bengal:—

Contracts and other instruments in matters connected with the lease or sale of land.	By Collectors of Districts and Deputy Collectors.

ORDER.—Ordered, that a copy of this Resolution be communicated to the Government of Bengal, and be published in the Supplement to the *Gazette of India*.

E. STACK,
Offg. Under Secy. to the Govt. of India.

R. B. CHAPMAN,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 23rd MARCH 1880.

GENERAL REMARKS.—Rain fell in Central and Eastern Bengal, Assam, and Mysore and Coorg. In Assam the rain was very heavy, over 19 inches having fallen in Sylhet and 12 in Cachar, doing much injury to crops. Agricultural prospects and public health remain generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(March 24th)		
Bellary ...	...	*Ragi* 27·72; standing crops generally fair; harvest of white *cholum* and cotton progressing.
Kurnool ...	...	*Ragi* 30·96; second crop paddy indifferent; harvest of white *cholum*, pulse and cotton, outturn fair.
Ganjam ...	...	*Ragi* 31·43.
Kistna ...	...	*Ragi* 29·98; standing crops generally good; harvest of some dry grains, outturn about ¾.
Chingleput (Madras) ...	...	*Ragi* 22·39; cultivation proceeding actively; standing crops generally fair; harvest of wet and dry crops, outturn ½ to ¾.
Coimbatore ...	...	Report not received.
Tanjore ...	...	*Ragi* 28·15; standing crops generally good; harvest of paddy, *cholum* and oil-seeds, outturn ½ to full.
Madura ...	...	*Ragi* 23·8; wet and garden crops mostly fair; dry crops seriously affected by want of rain; harvest of paddy, outturn ¼ to ¾; dry crops, outturn $\frac{1}{6}$ to $\frac{5}{6}$.
Malabar ...	·13 (average of three stations.)	*Ragi* 21·83.
Travancore ...	·2	Prices unchanged. *General Remarks.*—General prospects fair; dry crop harvest generally poor in southern districts.
Bombay—(Mar. 24th)		
Kurrachee ...	·01 in Manora	One case of small-pox in Dadu and 5 deaths in Shahbandar; *rabi* crops being harvested; fever in 4 and cattle disease in 3 talukas.
Hyderabad ...	...	Small-pox in Kandiaro and Naushahro; fever in 5 talukas; cattle disease in Naushahro and Badin; days hot and nights cold; high winds.
Ahmedabad ...	...	*Rabi* harvest progressing; public health good.
Baroda ...	...	*Rabi* harvest still progressing; hot weather begun; public health good; prices steady.
Surat ...	...	*Rabi* harvest progressing.
Násik ...	...	Ague in one taluka; cattle disease in Dindori and Niphad; *rabi* crops fair.
Colaba (Bombay) ...	...	Abnormal temperature, which at the beginning of the week was 1 degree warm, rose till the 22nd when it was 4 degrees warm, on the 23rd, it fell again to 3 degrees warm; vapour in air in excess of normal; abnormal wind southerly.
Poona (March 22nd)	...	Average price of *bajri* risen, while that of *jowari* fallen in districts.
Ahmednagar ...	...	Harvest of *rabi* finished.
Sholapore ...	...	Harvest continues; public health good.
Dharwar ...	...	Harvest of late crops still in progress; slight fever in 6 talukas; cotton-picking progressing.
Kánara ...	...	Second crops healthy; harvest continues in places; fever prevails; weather cloudy and hot.
Rajkot ...	...	Weather hot; health generally good.
		General Remarks.—Small-pox and cattle disease to slight extent in Sind; public health generally good elsewhere; *rabi* harvest in progress.
Bengal—(Mar. 23rd)		
Chittagong ...	0·75	Weather cloudy, with southern wind and showers at intervals; crops much benefited by rain; cholera still prevails in Moisal and Ukhia.
Dacca ...	7·43	Prospects of crops on the whole good; public health good.
24-Pergunnahs (Alipore)	*Nil*	*Boro dhan* at Satkhira promising; land being ploughed for *aus*; health generally good; cholera at Baraset abated.
Moorshedabad ...	*Nil*	Reaping of *rabi* crops not yet over; prospects good; fever and cholera still in some thanas.
Rajshahye ...	*Nil*	Weather hot in day time.
Nattore	0·66	Windy in evenings, and cloudy; sowing of *dhan* and *til* continues; latter nearly finished; *chaitali* harvest going on, outturn generally good; a few small-pox cases in three thanas and a few cholera cases in one thana.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Burdwan ...	*Nil*	Cultivation progressing; sporadic cases of cholera and small-pox.
Rungpore ...	0·11	Weather hot and cloudy; prospects of crops good; cholera in Bagdogra sub-division; scattered cases of small-pox; public health otherwise good.
Bhágalpur ...	...	Rainfall not enough for measurement; easterly winds and clouds cleared away; hot westerly winds commenced; *rabi* harvest commenced; small-pox increasing, otherwise public health good.
Purneah ...	*Nil*	Prospects favourable; many cases of small-pox.
Patna ...	*Nil*	Prospects favourable.
Durbhunga ...	*Nil*	Strong east wind; *rabi* crops being harvested; prices falling; publi health good.
Hazáribágh ...	*Nil*	Weather seasonable; day warm, but night still cool; harvesting of *rabi* crops nearly completed with a fair outturn; food-grains cheap; general health good.
Cuttack ...	*Nil*	Strong southerly wind prevailing; *dalua* progressing well; rain much wanted for ploughing; cholera cases reported; small-pox decreasing. *General Remarks.*—Rain in Central and Eastern Bengal has done much good, but hail in places caused slight damage; winter crops being reaped; outturn on the whole expected to be very good; spring crops doing well; cultivation for autumn crops progressing, but rain much wanted in Cuttack and Balasore; cholera and small-pox still in many places; small-pox increasing in Midnapore and Bhágalpur, and still very prevalent in Cooch Behar and Lohardugga.
N.-W. Provinces and Oudh—		
Benares (Mar. 24th)	...	Unusual heat; cholera unusually prevalent in the city; *rabi* being cut.
Allahabad („ 23rd)	*Nil*	Seasonable weather; harvest rapidly proceeding; a little cholera still in south; wheat 17½, coarse rice 19½, unhusked *dhan* 30 seers.
Gorakhpur („ 23rd)	...	Weather fine; *rabi* being harvested; outturn excellent; health good.
Jhánsi („ 24th)	...	Heat unusual; prices falling; health good; *rabi* prospects fair.
Agra („ 23rd)	...	Prospects good; wheat, gram and barley being reaped; rats not doing much damage; health good.
Bareilly („ 24th)	...	Weather seasonable; barley harvesting; prospects excellent.
Meerut („ „)	...	Weather warm; prices and prospects unchanged.
Kumaun („ 22nd)	...	Weather fine; prospects good.
Lucknow („ 24th)	...	Harvest operations in progress; prospects good.
Partabgarh („ 22nd)	...	Peas cut; reaping of barley and wheat in progress.
Sitapur („ 24th)	*Nil*	Prospects fair; health good.
Fyzabad („ „)	*Nil*	Wheat, barley and gram being reaped. *General Remarks.*—Weather unusually warm; harvest operations in progress, outturn good; health good except in Benares city and the south of Allahabad where there is some cholera; rats doing less damage in Agra; prices falling in Jhansi.
Punjab—		
Delhi (Mar. 23rd)	...	Prospects good; prices improving.
Hissar ...	...	Crops flourishing; prices stationary; health good.
Umballa ...	...	Report not received.
Jullundur ...	...	Crops and health good; prices steady.
Amritsar ...	...	Crops and health good; prices steady.
Lahore ...	...	Crops and health good.
Ferozepore ...	...	Prospects and health good; prices steady.
Siálkot ...	...	Harvest prospects fair.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 30TH MARCH 1880.

GENERAL REMARKS.—Rain fell in Madras, Bengal, Assam and Mysore and Coorg. *Rabi* harvest continues; agricultural prospects fair. Small-pox prevalent in parts of Bengal and British Burma; otherwise the public health is generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
(March 31st)—		
Bellary ...	·7 (average of three stations).	*Ragi* 28·13; standing crops generally fair; harvest of white *cholum* and cotton progressing.
Kurnool ...	Slight rain ...	*Ragi* 31·76; standing crops, paddy and second crop indifferent; harvest of cotton, outturn fair.
Ganjam ...	·05 (average of two stations).	*Ragi* 31·77.
Kistna ...	.....	*Ragi* 30·77; standing crops generally good; harvest of cotton, later maize and pulses.
Chingleput (Madras) ...	.....	*Ragi* 22·27; cultivation proceeding actively; standing crops injured in parts by blight and want of rain; harvest of wet and dry crops, outturn $\frac{1}{2}$ to $\frac{3}{4}$.
Coimbatore ...	·85 (average of two stations).	*Ragi* 23·45; wet and garden crops mostly fair; dry crops lost in parts from want of rain; harvest of paddy, outturn $\frac{1}{3}$ to $\frac{3}{4}$, dry crops $\frac{1}{4}$ to $\frac{3}{4}$.
Tanjore ...	.....	*Ragi* 28·15; harvest of paddy, *ragi*, *cholum* and oilseeds, outturn $\frac{3}{4}$ to full.
Madura ...	·55 (average of three stations).	*Ragi* 25·33.
Malabar ...	·49 (average of eight stations).	*Ragi* 18·66.
Travancore ...	·64	Prices unchanged. *General Remarks.*—General prospects fair; dry crop harvest generally poor in southern districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay— (March 31st)—		
Kurrachee ...	...	River on 27th at Kotri 2 feet, lower by 11 inches than last year on same date; preparations for *kharif* continue; small-pox in three talukas, cattle disease in two.
Hyderabad ...	...	*Rabi* reaping commenced; weather seasonable.
Ahmedabad ...	...	*Rabi* harvest nearly over; fever in Dholka town.
Baroda ...	...	Weather seasonable; public health good; wheat and cotton harvest continues; prices stationary.
Surat ...	...	*Rabi* harvest progressing.
Násik ...	...	Ague in one taluk; cattle disease in three; *rabi* crops fair.
Colaba (Bombay) ...	...	Abnormal temperature on 21th 2° warm, average from 25th to 30th 4° warm; vapour in air in excess of normal; abnormal wind, southerly on 24th, easterly on 25th, and northerly on the remaining days of the week; dust-storm with thunder and lightning on the night of the 25th.
Poona (March 28th)	...	Weather sultry.
Ahmednagar ...	...	*Rabi* harvest completed; threshing progressing.
Sholapur ...	...	Prospects unchanged; public health good.
Dharwar. ...	Slight rain in nine talukas.	Harvest of *rabi* crops nearly completed; slight fever in seven talukas; cotton picking progressing.
Kanara ...	...	Second crop being harvested on Coast; weather sultry and cloudy.
Rajkot ...	...	Weather hot; health good.
		General Remarks.—*Rabi* harvest nearly completed; small-pox in one collectorate; fever prevalent in three, and cattle disease in two collectorates.
Bengal— (March 31st)—		
Chittagong ...	·45	Weather seasonable and cold; winter and spring crops being gathered with good outturn; lands being prepared for *punia* and *aus*; sporadic cases of cholera in Satkania and Moiscal; cattle disease in Cox's Bazaar and Patia.
Dacca ...	3·17	Prospects of crops good; public health good.
24-Pergunnahs, Calcutta	·61	Winter crops have yielded a good outturn; prospects of *boro dhan* satisfactory; no other crop on the ground; ploughing still going on; health generally good; cholera at Baraset abated; more rain would be beneficial.
Moorshedabad ...	·14	Land being ploughed for next crop; public health generally good, except a few cases of cholera in some thanas.
Rajshahye ...	·90	Weather cloudy and sultry; rain on 25th and 28th accompanied in some parts by hail; *rabi* harvest in progress, outturn generally very good; sowing of *amnir dhan* and *til* continues; public health good.
Burdwan ...	1·46; ·60 in Culna; ·13 in Raneegunge.	Cultivation going on briskly owing to rain; sporadic cases of cholera and small-pox, otherwise public health good.
Rungpore ...	·46	Weather cool; crops good; sporadic cholera, health otherwise good.
Bhágálpur ...	·85	Violent storm; *rabi* harvest in progress, outturn promising well; small-pox increasing.
Purneah ...	·16	*Bhadoi* sowing commenced; small-pox prevalent.
Patna ...	*Nil*	*Rabi* prospects good.
Durbhunga ...	*Nil*	East wind and threatening of rain; storm during week; *rabi* being harvested; mango crop promising; prices falling; public health good.
Hazáribágh ...	A slight shower on 29th.	Rain has comparatively cooled the atmosphere; *rabi* crops harvested with fair outturn; food-grains cheap; a few cases of cholera in interior.
Cuttack ...	*Nil*	Rain much wanted; cholera cases reported; small-pox decreasing; prices stationary.
		General Remarks.—More or less rain throughout Bengal Proper and in Bhágálpur, Purneah and Hazáribágh; floods in Tipperah caused much damage to spring rice and interfered with ploughing and sowing in low lands; elsewhere crops doing well and cultivation going on, but in Cuttack and Balasore rain much wanted; mango crop in many places entirely destroyed by rain, hail and storm; *mohwa* crop in Chota Nagpore good; *rabi* harvest in progress and generally promises good results; small-pox increasing in places; cholera abated.
N. W. P. and Oudh—		
Benares (March 30th)	.....	Heat somewhat less; cholera still prevalent in city; *rabi* being cut.
Allahabad („ „)	.....	Weather seasonable, but perhaps unusually warm; wind mostly east; harvest nearly all on the threshing floors; rain would benefit newly planted sugarcane; cholera spreading; wheat 19·5, unhusked *dhan* 29½, coarse rice 19½ seers.
Gorakhpur („ 29th)	.....	Weather seasonable; wind easterly; *rabi* being harvested; outturn excellent; health good.
Jhansi („ 31st)	.....	Harvest commenced; prices stationary; health good.
Agra („ 30th)	.....	Prospects fair; gram and barley being reaped; crops are now beyond the ravages of rats; health good; heat increasing.
Bareilly („ 31st)	.....	Weather seasonable; cutting of *rabi* crops begun; crops very good.
Meerut („ 31st)	.....	No change; prices and prospects stationary.
Kumaun („ 30th)	.....	Weather fine; prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. P. and Oudh— *continued.*		
Lucknow (March 31st)	.....	Weather hot; wind east; prospects excellent.
Sitapur („ „)	.....	Wind east; harvesting well advanced.
Fyzabad („ „)	*Nil*	Harvest of wheat, barley and gram nearly finished; sugarcane being sown.
		General Remarks.—Weather warm and seasonable; *rabi* harvest well advanced; outturn good, especially in Gorakhpur, Bareilly and Lucknow; sugarcane being sown; health good except in Allahabad and Benares, where cholera is prevalent.
Punjab (30th March)—		
Delhi ...	.....	Prospects good; prices steady.
Hissar ...	.....	Prospects and health good; prices steady.
Umballa ...	.....	Crops and health good.
Jullundur ...	.....	Health good; prices falling; crops promising; locusts passed over district without injuring crops.
Lahore ...	.....	Crops fair; health good.
Ferozepore ...	.....	Prospects and health good; prices steady.
Siálkot ...	.....	Prospects fair; rain wanted on unirrigated tracts.
Ráwalpindi ...	.....	No report received.
Pesháwar ...	.....	Prospects fair; prices steady.
Mooltan ...	.....	Crops and health good; prices steady.
Dera Ismail Khan ...	.....	Health good; prospects fair.
		General Remarks.—Health good; prices steady; prospects generally good.
Central Provinces— (March 31st)—		
Nágpur ...	.....	*Rabi* cutting finished; threshing continues; prices steady.
Jubbulpore ...	.....	Clear; hot; *rabi* harvest progressing; prices stationary; small-pox continues.
Saugor ...	.....	Reaping progressing; prospects good; small-pox continues; cattle disease prevalent; prices declining.
Seoni ...	.....	Hot; threshing of *rabi* crops nearly completed; small-pox continues; prices of wheat falling.
Hoshangabad ...	.....	*Rabi* harvest continues; prospects good; prices stationary.
Raipur (March 27th)	.....	Cloudy; *rabi* harvest progressing; cattle disease continues; prices stationary.
Sambalpur („ 26th)	.....	Warm; close; sugarcane planting; small-pox and cattle disease continue.
		General Remarks.—Hot; *rabi* cutting almost completed; threshing in progress; outturn generally good; prices stationary, but easier than they were this time last year.
British Burma— (March 31st)—		
Akyab ...	.....	Public health good; slight cattle disease.
Rangoon ...	.....	Thirty-three fatal cases of small-pox reported; in the Hanthawaddy district small-pox confined to Pegu sub-division; otherwise public health good.
Bassein ...	.....	Fevers rather prevalent; slight small-pox in district.
Prome ...	.....	Small-pox still prevalent in town and district; sixteen deaths in town.
Amherst (Moulmein) ...	.....	Public health good.
Toungoo ...	.....	Twenty-four deaths from small-pox in one township; otherwise public health good.
		General Remarks.—Small-pox prevalent in Pegu division; otherwise public health generally good.
Assam (March 31st)—		
Gauháti ...	1·51	Weather seasonable; *asu* cultivation progressing.
Sylhet ...	·43	Weather growing hot; much of the *bura dhan* destroyed by the late flood, owing to which ploughing in low lands has not commenced; public health good.
Cachar ...	2·82	Weather getting warm; sowing of *dumahs, murali* and *asra dhan* commenced in some parts of the district; common rice 14½ seers per rupee; public health good.
Dibrugarh ...	·08	Only sowing for early rice crop going on at present; cattle disease still reported in the interior; weather getting warm.
Mysore and Coorg— (March 31st)—		
Bangalore ...	·26	Standing crops in good condition; fever continues, as also murrain among cattle; prices generally stationary.
Mysore ...	·32	
Mercara ...	·11	
Berar & Hyderabad— (March 31st)—		
Amráoti ...	.....	Weather warm; ploughing continues.
Akola ...	.....	*Rabi* reaping and threshing continue.
Hyderabad ...	.....	Weather warm; no disease; employment sufficient for the poor; *rabi* crops fair, though the outturn is expected to be less than last year; *rabi* reaping in progress; gram reaping finished; prices—rice 9⅓ seers, white *jowar* 12, yellow *jowar* 16, wheat 7, gram 12, *tur* 15 per half sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States—(March 31st)—		
Indore ...	.....	Weather warm; prospects good; wheat 10 seers.
Morar (Gwalior) ...	.....	Prospects and health good; weather seasonable; no change in prices of food-grains.
Sutna ...	.....	Prospects good; *jowar* 37 seers.
Rutlam ...	.....	Weather clear and warm; public health good; price of opium rising rapidly.
Neemuch ...	.....	Weather hot; season crops being gathered.
Goona ...	.....	Crops and health good; wheat 14 seers.
Bhopal ...	.....	Weather fair; crops and health good.
Agar ...	.....	Health good; prospects favourable.
Nowgong ...	.....	No report received.
Mánpur ...	.....	Weather warmer.
Rajputana—		
Abu ...	.....	No report received.
Serohi (March 28th)	.....	Tanks about dry; wells fairly full; healthy, though many deaths of children from measles; remarkably hot.
Marwar („ 26th)	.....	Tanks dry; water in wells decreasing; health good; prospects excellent; usually hot; prices falling.
Meywar ...	.....	Tanks drying; plenty of water in wells; pneumonia prevalent; prospects very good.
Harowtee (March 27th)	.....	Health and prospects good; very hot.
Jhallawar ...	.....	Weather cooler; greater part opium in.
Ajmere (March 31st)	.....	Prospects excellent.
Jeypore ...	.....	Crops ripening favourably; measles and small-pox decreasing; health otherwise good.
Bhurtpur ...	.....	
Ulwur (March 30th)	.....	Very hot; barley and gram being harvested.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 6TH APRIL 1880.

GENERAL REMARKS.—Rain has fallen during the week in Madras, Bengal, Burma and Assam and has done good to the crops in Bengal; in the other provinces there has been little or no rain. The *rabi* harvest is progressing rapidly and is yielding a satisfactory outturn. Agricultural prospects and public health continue good on the whole.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras— (April 7th)—		
Bellary ...	·28 (average of five stations).	*Ragi* 28·72; standing crops generally fair; harvest of white *cholum* and cotton progressing.
Kurnool ...	.....	*Ragi* 31·76; standing crop paddy and second crop indifferent harvest of paddy and cotton, outturn generally fair.
Ganjam ...	·17 (average of three stations).	*Ragi* 31·77.
Kistna ...	.....	*Ragi* 31·0; standing crops generally good; harvest of *ragi*, cotton and maize, outturn fair.
Chingleput (Madras) ...	.....	*Ragi* 22·32; cultivation proceeding actively; standing crops affected in parts by insects and want of rain; harvest of wet and dry crops, outturn fair.
Coimbatore ...	·57 (average of fourteen stations).	*Ragi* 23·39; wet and garden crops mostly fair; dry crops lost in parts from want of rain; harvest of paddy $\frac{1}{3}$ to $\frac{2}{3}$, dry crops $\frac{1}{4}$ to $\frac{1}{2}$.
Tanjore ...	.....	*Ragi* 28·34; harvest of *ragi*, *cholam*, oil-seeds and chillies, outturn $\frac{1}{2}$ to $\frac{2}{3}$.
Madura ...	·45 (average of three stations).	*Ragi* 21·7.
Malabar ...	·63 (average of twelve stations).	*Ragi* 29·81.
Travancore ...	·03	Prices unchanged. *General Remarks.*—General prospects fair; dry crop harvest generally poor in southern districts.
Bombay— (April 7th)—		
Kurrachee ...	.....	River at Kotri on 3rd, 3 feet against 3 feet 10 inches on same date last year; *adava* crops promise well; small-pox in eight talukas, fever in five, cattle-disease in three; weather sultry.
Hyderabad ...	.....	Disease amongst goats, sheep, cows and buffaloes in Badin taluka; small-pox continues in Naushahro and Kandiaro; weather seasonable.
Ahmedabad ...	.....	*Rabi* harvest nearly over; heat increasing.
Baroda ...	.....	Wheat and cotton harvest continues; public health good; weather hot.
Surat ...	.....	*Rabi* harvest progressing; fever in three talukas.
Násik ...	.....	Ague in one taluka; cattle-disease in Igatpuri and Dindori; *rabi* crops fair.
Colaba (Bombay) ...	.....	The abnormal temperature which at the beginning of the week was 2° warm rose till the 2nd when it was 6° warm; it fell again gradually to 2° warm on the 5th; on the 6th it was still 2° warm; vapour in air slightly in excess of normal; abnormal wind southerly, except on the 1st and 2nd when it was northerly.
Poona (April 4th)	.....	Prices of *jowari* and *bajri* in the district falling.
Ahmednagar ...	.....	Threshing of *rabi* continues.
Sholapur ...	.....	Prospects unchanged; public health good.
Dharwar ...	Slight rain in six talukas.	Harvest of *rabi* crops progressing in five talukas; fever in seven and cattle-disease in one taluka; cotton picking progressing.
Kanara ...	.....	No report.
Rajkot ...	.....	Weather very hot; measles and fever prevail in Warla and Lathi.
		General Remarks.—*Rabi* harvesting nearly completed; small-pox in two collectorates in Sind; cattle-disease in four districts; slight fever in four.
Bengal— (April 7th)—		
Chittagong ...	*Nil*	Weather warm and close; cold weather and spring crops being gathered; cholera continues in Satkania, Ramoo and Moiscal; cattle-disease in Hathazaru, Sitakund and Cox's Bazaar.
Dacca ...	*Nil*	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	*Nil*	No crops on ground except some sugarcane and vegetables, and in Satkhira sub-division *boro dhan*; ploughing going on for early rice; a few cases of cholera and small-pox.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Moorshedabad ...	·73	Reaping of *rabi* crops almost over; land being prepared for next crop; cholera in Jungipore sub-division.
Rajshahye ...	*Nil*	Weather getting hotter daily; *rabi* harvest continues; yield generally above average; paddy sowings going on; public health good.
Burdwan ...	·10	Prospects of crops good; sporadic cases of small-pox, cholera and cattle-disease.
Rungpore ...	·07	Weather variable and cool for the season; prospects of crops favourable; public health good.
Bhágalpur ...	1·50	Heat oppressive; *rabi* harvest progressing.
Purneah ...	·10	*Bhadoi* sowings and *aghani* cultivation of low-lying grounds well advanced; health good.
Patna ...	*Nil*	Prospects favourable.
Durbhunga ...	*Nil*	Weather getting hot; *rabi* harvest in progress; mango and indigo promising; prices falling; public health good.
Hazáribágh ...	*Nil*	Weather cool for the season; *rabi* yielded a twelve anna crop; food-grains cheaper; sporadic cholera in northern parts.
Cuttack ...	*Nil*	Rain wanted; small-pox decreasing; sporadic cases of cholera; prices stationary.
		General Remarks.—Late rain generally done much good, but storm in Tipperah, Noakholly and Maldah caused some damage; rain wanted in Cuttack and Pooree; *rabi* harvest generally yielding well; ploughing proceeding, and sowing of early crops commenced in some districts; spring rice ripening and on the whole promises good outturn; *mohwa* crop in Chota Nagpore excellent, but damaged by storm in Manbhoom; sporadic small-pox and cholera in many places; small-pox still very bad in places in Cooch Behar, increasing in Bhágalpur, and still prevalent in Lohardugga.
N. W. P. and Oudh—		
Benares (April 6th)	.....	Weather very hot; cholera still continues in the city, but cases are not so frequent as heretofore; the *rabi* harvest has nearly all been got in; prices falling.
Allahabad („ „)	.....	Persistent east winds and some clouds; heat great; cholera not spreading but bad where reported; wheat 19⅞; coarse rice 19$\frac{9}{16}$, unhusked *dhan* 29 seers.
Gorakhpur ...	.....	Report not received.
Jhansi (April 7th)	.....	Harvest in progress; gram all cut; wheat being cut; prices stationary.
Agra („ 6th)	.....	Prospects good; harvest cutting commenced; slight fever; heat intense.
Bareilly („ 7th)	.....	Weather seasonable; health good; harvest excellent.
Meerut („ „)	.....	Weather warm and cloudy; harvest progressing rapidly; prices falling; health good.
Kumaun („ 6th)	Slight showers	Cloudy weather; prospects good.
Lucknow („ 7th)	.....	Prospects unchanged; weather clear; heat increasing; wind east; *rabi* nearly harvested; sporadic cholera reported in seven circles; prices easy; wheat 20$\frac{9}{16}$ seers.
Partabgarh („ 5th)	.....	Larger portion of the *rabi* has been reaped; threshing going on; some cholera cases mostly in the eastern portion of the district, otherwise health good.
Sitapur („ 7th)	*Nil*	Wind east; prospects fair.
Fyzabad ...	*Nil*	Harvest of *rabi* crops nearly finished.
		General Remarks.—No rain during the week except slight showers in Kumaun; heat intense; east wind prevalent; *rabi* harvest nearly completed; prices falling in Benares and Meerut; cholera still continues in Benares and Allahabad and has appeared in Gorakhpur and Partabgarh; slight fever in Agra; with these exceptions health good.
Punjab— (April 6th)—		
Delhi ...	.....	Prospects good; prices steady.
Hissar ...	.....	Harvesting continues, outturn good; prices falling; health good.
Umballa ...	.....	*Rabi* being harvested; health fair.
Jullundur ...	.....	Crops and health good; prices steady.
Lahore ...	.....	Crops and health good.
Ferozepore ...	.....	Prospects and health good; prices steady.
Siálkot ...	.....	No report received.
Ráwalpindi ...	.....	Crops suffering from drought; health good.
Pesháwar ...	.....	Harvest prospects less promising.
Mooltan ...	Slight drizzling	Health good; prices steady.
Dera Ismail Khan ...	.....	Health good; prospects fair.
		General Remarks.—Health good; prices steady; prospects generally good.
Central Provinces—		
Nágpur (April 7th)	.....	Hot; *rabi* cut; winnowing almost completed, outturn fair.
Jubbulpore ...	.....	Hot; *rabi* cut; winnowing commenced; small-pox continues; prices falling.
Seoni ...	.....	Days hot, nights cool; outturn of *rabi* good; few cases of small-pox reported.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*		
Hoshangabad ...	.....	*Rabi* cutting almost completed, winnowing progressing, outturn good; prices falling.
Raipur (April 3rd)	.....	Hot; *rabi* cut; winnowing in progress; few cases of cholera; cattle-disease continues; prices stationary.
Sambalpur („ 2nd)	·08 on 1st	Rain accompanied with storm and thunder; sugarcane planting progressing; small-pox continues; prices falling.
		General Remarks.—Hot; slight rain at Chánda and Sambalpur; *rabi* crops cut; winnowing progressing, outturn generally good; prices falling.
British Burma— (April 7th)—		
Akyab ...	.....	Slight small-pox and cholera, otherwise public health generally good.
Rangoon ...	.....	One death from cholera, 28 from small-pox; small-pox and fever prevalent in two townships of the Hanthawaddy district, otherwise public health good; health of cattle good.
Bassein ...	·13	Public health good.
Prome ...	.....	Small-pox still prevalent throughout district.
Amherst (Moulmein) ...	1·06	Public health good.
Toungoo ...	·11	Thirty-one deaths from small-pox in one township, otherwise public health good.
		General Remarks.—Small-pox continues prevalent; a little cholera; weather at end of week squally and showery.
Assam— (April 7th)—		
Gauháti ...	*Nil*	Weather seasonable; *asu* cultivation in progress.
Sylhet ...	*Nil*	The country is drying up rapidly; agricultural operations are in full swing; tea is doing well.
Cachar ...	·27	Weather unchanged; sowing of *dumahi*, *murali* and *asra dhan* commenced; common rice 14½ seers per rupee; public health good, except in Háilákándi where cholera is reported.
Dibrugarh ...	1·3	Sowing for early rice still going on; weather seasonable; public health good.
Mysore and Coorg— (April 7th)—		
Bangalore ...	.....	Standing crops in good condition; prospects favourable; fever prevalent, as also murrain among cattle; prices generally stationary.
Mysore ...	.....	
Mercara ...	1·78	
Berar & Hyderabad— (April 7th)—		
Amráoti ...	.....	*Rabi* brought in entirely.
Akola ...	.....	*Rabi* crops harvested; winnowing in progress.
Hyderabad ...	·5 in one taluk	Weather hot; some fever and small-pox, no cattle disease; *rabi* reaping nearly completed; standing crops in fair condition; hail in places without injury; Nizam's Government reports that *rabi* cultivation is fairly good and that impression of unfavourable prospects previously reported has been due to mistake.
Central India States— (April 7th)—		
Indore ...	.....	Prospects and health good; prices of food-grains falling; opium rising, as crop has suffered much through weather.
Morar (Gwalior) ...	.....	Weather seasonable; sky cloudy; health and prospects good.
Sutna ...	.....	Prospects good; *jowar* 35 seers.
Rutlam ...	.....	Weather clear and warm; public health good.
Neemuch ...	.....	Weather hot; health good; prices falling.
Goona ...	.....	Very hot; health and crops good; wheat 16 seers.
Bhopal ...	.....	Weather clear; health good.
Agar ...	.....	Health good; prospects favourable.
Nowgong ...	.....	No report received.
Mánpur ...	.....	Weather warmer.
Rajputana—		
Abu ...	.....	No report received.
Serohi (April 4th)	.....	Tanks nearly dry; wells fairly full; healthy; hotter than usual.
Marwar („ 2nd)	.....	Tanks dry; well water subsiding; health good, but Guinea worms; prospects good; very warm.
Meywar ...	.....	Tanks drying; plenty of water in wells; pneumonia still rather prevalent; harvest commenced; outturn favourable.
Harowtee ...	.....	No report received.
Jhallawar ...	.....	Health and prospects good; warm.
Ajmere (April 7th)	.....	Harvest progressing satisfactorily; heat injured opium; health good.
Joypore ...	.....	Harvesting progressing favourably; measles and small-pox disappearing; health good.
Bhurtpore ...	.....	
Ulwur (April 6th)	.....	Cloudy; cooler; health good.

C. BERNARD,

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 13TH APRIL 1880.

GENERAL REMARKS.—Rain fell during the week in Madras, Burma, Assam, Mysore and Coorg. In the Bassein and Prome Districts of Burma the rain was very plentiful. There was slight rain also in some districts of Bombay and Bengal. In parts of the latter Province and of the Punjab the want of rain is felt. The harvest of the *rabi* crops is almost completed; the yield has been good; and preparations for the sowing of *kharif* crops are in progress. Agricultural prospects and public health remain generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras— (April 14th)—		
Bellary ...	·29 (average of four stations).	*Ragi* 28·21; standing crops generally fair; harvest of white *cholum* and cotton progressing.
Kurnool ...	·75	*Ragi* 31·76; standing crop paddy and second crop withering in two taluks, elsewhere good; harvest of paddy and cotton.
Ganjam ...	·73 (average of three stations).	*Ragi* 31·77.
Kistna ...	.....	*Ragi* 30·74; harvest of some later dry crops, outturn ½ to ¾.
Chingleput (Madras) ...	.....	Report not received.
Coimbatore ...	1·38 (average of fifteen stations).	*Ragi* 23·9; dry crops, where not already lost, benefited somewhat by recent showers; harvest of paddy, outturn ⅓ to ⅔.
Tanjore ...	·42 (average of two stations).	*Ragi* 28·63; harvest of *cholum*, *ragi*, oil-seeds and chillies, outturn ½ to ¾.
Madura ...	·51 (average of six stations).	*Ragi* 25·02.
Malabar ...	1·75 (average of thirteen stations).	*Ragi* 21·66.
Travancore ...	·86	Ploughing going on; prices unchanged. *General Remarks.*—General prospects fair; dry crop harvest generally poor in the southern districts.
Bombay— (April 14th)—		
Kurrachee ...	Slight rain at Kohistan on 30th March.	Sugarcane being transplanted in Ghorabari taluka; small-pox in five, measles in one, cattle-disease in three and fever in six talukas; river on 6th 3 feet 4 inches, 3 inches lower than on same date last year.
Hyderabad ...	.....	*Rabi* harvest continues; fever and colds prevalent; temperature cool; cattle-disease in taluka Shahdádpur.
Ahmedabad ...	.....	*Rabi* harvest completed; public health good.
Baroda ...	.....	*Rabi* harvest nearly finished; public health good; prices slightly fallen.
Surat ...	.....	*Rabi* harvest progressing; fever in three talukas.
Násik ...	.....	Ague in two talukas; cattle-disease in Igatpuri; crops all harvested and nearly threshed; weather getting warm.
Colaba (Bombay) ...	A few drops of rain on 13th.	Average abnormal temperature 2° warm; vapour in air slightly in excess of normal; wind normal from 9th to 13th, abnormal wind southerly on 7th and 8th.
Poona (April 11th)	.....	Prices of *jowari* and *bajri* in the district falling.
Ahmednagar ...	.....	Threshing of *rabi* still continues.
Sholapur ...	.....	Prospects unchanged; public health good.
Dharwar ...	·58	Harvest in progress in three talukas; cotton picking progressing; slight fever in eight talukas.
Kanara ...	·83 at Yellapur	Harvest nearly completed on coast; fever prevails.
Rajkot ...	.....	Weather very warm; general health good. *General Remarks.*—*Rabi* harvest approaching completion; slight rain in the southern part of the Presidency; cattle-disease in two districts, small-pox in one and fever in three; public health otherwise good.
Bengal—		
Chittagong ...	A few drops	Prospects of crops favourable; cholera continues in Moiscal and Ramoo.
Dacca ...	*Nil*	Prospects of crops favourable; public health good.
24-Pergunnahs (Calcutta)	*Nil*	*Boro dhan* at Satkhira promising; sugarcane thrives well; ploughing for early rice and jute progressing; rain wanted; public health generally good; cholera abated.
Moorshedabad ...	*Nil*	Land being prepared for next crop; prices stationary; cholera [illegible] in Jangipur sub-division and thana Goas.
Rajshahye ...	*Nil*	Weather sultry in day time; strong south-easterly wind every evening; *rabi* harvests nearly over, though wheat and barley still being cut in north; outturn over average; *amun* and jute sowings progressing rapidly; seedlings of earlier sowings thriving.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Burdwan ...	*Nil*	Cultivation well forward; some sporadic cases of cholera and small-pox.
	·8 Cutwa.	
Rungpore ...	*Nil*	Weather warm; prospects of crops favourable; small-pox somewhat prevalent in Phoorunbari.
Bhágalpur ...	*Nil*	Weather very hot; west wind; *rabi* harvest nearly finished; small-pox increasing.
Purneah ...	*Nil*	*Bhadoi* sowing and *aghani* cultivation in good progress; much small-pox.
Patna ...	*Nil*	Prospects favourable; *rabi* harvest in progress.
Durbhunga ...	*Nil*	Weather hot; *rabi* harvest in progress; mango and indigo promising; prices stationary; public health good.
Hazáribágh ...	*Nil*	Weather seasonable; heat at times oppressive; *mohwa* and *rabi* crops yielded a twelve-anna outturn; food-grains cheap; a few cases of small-pox; cholera in interior, otherwise health good.
Cuttack ...	·45	Small-pox decreasing in town; prices stationary.
		General Remarks.—Slight rain in some districts; cultivation for early crops active, but in places rain wanted; *rabi* harvest in Behar still continues and yielding well; spring rice in north of Tipperah much damaged by late heavy rain, elsewhere promises good outturn; *mohwa* in Chota Nagpore excellent; plantation of sugarcane progressing; small-pox still prevalent in Cooch Behar, Bhágalpur, Purneah and Lohardugga; sporadic small-pox and cholera also in some other districts.
N. W. P. and Oudh—		
Benares (April 13th)	.....	Weather seasonable; very hot; excepting occasional cases of cholera in city and outskirts, general health good; *rabi* harvested; sugarcane being irrigated; prices stationary.
Allahabad („ „)	.....	Hot, dry, seasonable weather; westerly winds; crops all cut; early millets being sown; cholera still north of Ganges; wheat 19⅝ seers, unhusked *dhan* 28$^{5}_{16}$ seers, coarse rice 18$^{5}_{16}$ seers.
Gorakhpur („ 12th)	.....	Hot west wind; *rabi* nearly harvested; sporadic cholera reported in thirteen circles; prices easy; wheat 21 seers.
Jhansi („ 14th)	.....	Weather very hot; harvest has nearly all been got in; prices falling.
Agra („ 13th)	.....	Prospects good; crops being harvested; slight fever; days hot.
Bareilly („ 14th)	.....	Health good; crops nearly all cut.
Meerut („ „)	.....	Hot; occasionally cloudy; barley and pulses harvests well forward; prices falling.
Kumaun („ 13th)	.....	Weather fine; prospects good.
Lucknow („ 14th)	.....	No change; a few cases of cholera reported in Konarja thana.
Partabgarh („ 12th)	.....	Reaping completed; threshing continues; prices pretty stationary; cholera cases in four thanas; wind veering to the west; nights and mornings pretty cool, days unusually warm.
Sitapur („ 14th)	.....	West winds commenced; public health good; harvest well advanced; prospects fair.
Fyzabad („ „)	*Nil*	*Rabi* crops being cut and threshed; small-pox in places; a good deal of cholera prevailing.
		General Remarks.—Weather unusually warm; westerly winds begun; harvest nearly completed; early sowings begun in Allahabad; prices falling in Jhansi and Meerut; sporadic cholera reported from Benares, Gorakhpur, Allahabad, Lucknow, Fyzabad and Partabgarh; slight small-pox in Allahabad and fever in Agra, otherwise health good.
Punjab— (April 13th)—		
Delhi ...	.....	Prospects good; reaping in progress; prices steady.
Hissar ...	.....	Harvesting continues; prices fluctuating; health good.
Umballa ...	.....	*Rabi* harvested; health good.
Jullundur ...	.....	Prices falling; crops being cut; health good.
Lahore ...	.....	Crops fair; health good.
Ferozepore ...	.....	Crops being cut; health good; prices steady.
Sialkot ...	.....	Prospects fair; barley being reaped.
Rawalpindi ...	.....	Health good; agricultural prospects less promising.
Peshawar ...	.....	Harvest prospects less promising; prices steady.
Mooltan ...	.....	Crops and health good; prices steady.
Dera Ismail Khan ...	.....	Health good; prospects fair.
		General Remarks.—Health good; prices steady; prospects generally good, with the exception of Ráwalpindi and Peshawar, where rain is wanted.
Central Provinces—		
Nágpur (April 14th)	.....	Cloudy; close; threshing of *rabi* almost finished, outturn good; ploughing for *kharif* commenced.
Jubbulpore ...	.....	Hot; threshing continues; a few cases of small-pox; prices falling.
Saugor ...	.....	Cloudy; reaping nearly completed; outturn good; small-pox and cattle-disease prevalent.
Seoni ...	.....	Cloudy; hot; threshing progressing; prices falling.
Hoshangabad ...	.....	Threshing continues; outturn good; prices stationary.
Raipur (April 10th)	.....	Cloudy; warm; threshing of *rabi* progressing; slight cholera; cattle-disease continues; prices stationary.
Sambalpur („ 9th)	.....	Cloudy; oppressive; sugarcane planting continues; small-pox prevalent.
		General Remarks.—Cloudy; hot; *rabi* threshing continues; outturn generally good; ploughing for *kharif* on hand; prices easier.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (April 14th)—		
Akyab ...	·64	Public health good; slight cattle-disease.
Rangoon ...	1·38	Small-pox prevalent in parts of the Hanthawaddy district, otherwise public health good; health of cattle good.
Bassein ...	5·87	Total rainfall 6·0; cholera and small-pox in one township, otherwise public health good; slight cattle-disease.
Prome ...	9·94	Small-pox prevalent in one township.
Amherst (Moulmein) ...	·66	Total rainfall 2·02; public health good.
Toungoo ...	·85	Total rainfall ·96; public health good.
		General Remarks.—Rain has fallen in several districts; weather very oppressive and sultry; small-pox still prevalent in Pegu division; cattle healthy.
Assam—		
Gauháti (April 14th)	2·18	Weather seasonable; *asu* cultivation and tea manufacture in progress.
Sylhet („ „)	7·25	Rain still falling; river rising; cultivation and sowing of rice crops going forward; some area of low land may remain uncultivated.
Cachar ...	.....	No reports received.
Dibrugarh ...	.....	
Mysore and Coorg— (April 14th)—		
Bangalore ...	·19	Crops generally in good condition; prospects favourable; fever and cattle-disease prevalent in parts; prices stationary.
Mysore ...	·79	
Mercara ...	1·28	
Berar & Hyderabad— (April 14th)—		
Amráoti ...	.....	Weather very warm; ploughing in progress.
Akola ...	.....	Winnowing completed; health good.
Hyderabad (April 15th)	Some rain	Fever reported in places, also murrain amongst cattle; *moles* and mango slightly injured; prices, wheat 9 seers, *tur* 16, coarse rice 9.
Central India States— (April 14th)—		
Indore ...	.....	Weather seasonable; wheat harvest good; opium prices still rising.
Gwalior ...	.....	Weather seasonable; health good; wheat 13, *bajra* 32, *jowar* 20 seers per rupee.
Rewah ...	.....	Prospects good; *jowar* 39 seers; cholera at Rewah.
Rutlam ...	.....	Weather clear and warm; health good; opium prices stationary.
Neemuch ...	.....	Health good; weather hot; nights cool.
Gwalior ...	.....	Very hot; crops and health good; wheat 17 seers.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME, REVENUE, AND AGRICULTURAL DEPARTMENT.

EXECUTION OF DEEDS, CONTRACTS, &c., ON BEHALF OF THE SECRETARY OF STATE.

[To be substituted for the Resolution bearing the same number and date.]

Extract from the Proceedings of the Government of India in the Home, Revenue, and Agricultural Department (Judicial),—No. 320, dated Fort William, the 22nd March 1880.

Read—

A letter from the Government of Bengal, No. $\frac{999}{641}$ L. R., dated the 6th instant, on the subject of the execution of deeds, contracts, &c., on behalf of the Secretary of State.

RESOLUTION.—In exercise of the power conferred by the thirty-third and thirty-fourth of Victoria, Cap. fifty-nine, Section two, the Governor General in Council is pleased to declare that the under-mentioned classes of deeds, contracts and other instruments referred to in the twenty-second and twenty-third of Victoria, Cap. forty-one, Section two, may be executed as follows in the territories under the administration of the Government of Bengal:—

By Collectors of Districts and Deputy Commissioners.	Contracts and other instruments in matters connected with the lease or sale of land.

ORDER.—Ordered, that a copy of this Resolution be communicated to the Government of Bengal, and be published in the Supplement to the *Gazette of India.*

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 20TH APRIL 1880.

GENERAL REMARKS.—General rain fell in the eastern portion of Bengal, in Assam, Burma, Madras and Mysore; there was also slight rain in the Southern Mahratta Country, but none has fallen elsewhere. The threshing and winnowing of *rabi* crops is proceeding, the outturn is satisfactory; prices are falling. From Pesháwar only is want of rain reported. Agricultural prospects and public health remain good on the whole.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(April 21st)—		
Bellary ...	·48 (average of nine stations).	*Ragi* 29·34; standing crops generally good.
Kurnool ...	·36 (average of three stations).	*Ragi* 33·41; harvesting of second crop paddy commenced in one taluk.
Ganjam ...	·21 (average of two stations).	*Ragi* 31·42.
Kistna ...	·18 (average of two stations).	*Ragi* 30·96.
Chingleput (Madras) ...	.....	*Ragi* 22·32; dry crops being harvested; standing crops doing well.
Coimbatore ...	·48 (average of eight stations).	*Ragi* 23·49; harvest of paddy in six taluks, outturn ⅓ to full; crops benefited by recent showers.
Tanjore ...	.....	*Ragi* 28·15; crops generally good; harvest of *cholum*, oil-seeds and chillies, outturn ⅝ to ¾.
Madura ...	·35 in one station	*Ragi* 25·43.
Malabar ...	·98 (average of eight stations).	*Ragi* 20·8.
Travancore ...	·44	*General Remarks.*—General prospects fair.
Bombay—(April 21st)—		
Kurrachee ...	.....	Strong westerly breeze; river on 19th 5 feet 10 inches, higher than on same date last year; *kharif* sowings commenced; fever in five, small-pox in three talukas; cattle-disease in two talukas.
Hyderabad ...	.....	Weather seasonable; fever prevalent; small-pox in three, cattle-disease in five talukas.
Ahmedabad ...	.....	*Rabi* harvest completed; public health good.
Baroda ...	.....	Weather hot; *rabi* harvest nearly over; public health good.
Surat ...	.....	*Rabi* harvest nearly completed; fever in three talukas.
Násik ...	.....	Ague in one taluka; cattle-disease in Igatpuri; all crops harvested and nearly threshed; weather getting warm.
Colaba (Bombay) ...	.....	Average abnormal temperature 3° warm till 16th, afterwards 2° warm; vapour in air in excess of normal; abnormal wind northerly till 15th, afterwards southerly.
Poona (April 18th)	.....	In district average price of *bajri* rising, while that of *jowari* falling.
Ahmednagar ...	.....	Threshing completed; land being prepared for monsoon crop.
Sholapur ...	.....	Prospects unchanged; public health good.
Dharwar ...	·46 (average)	*Rabi* harvest completed; cotton picking almost completed; slight fever in eight and cattle-disease in one taluka.
Kanara ...	·30 (average)	Harvest of second crop nearly completed in all talukas except Karwar.
Rajkot ...	.....	Weather very warm; health generally good.
		General Remarks.—*Rabi* harvest nearly completed; weather hot; slight rain in Dharwar and Kanara; fever, small-pox and cattle-disease in Kurrachee and Hyderabad.
Bengal—(April 21st)—		
Chittagong ...	2·0	Weather seasonable during day but cold during night; prospects of crops favourable; cattle-disease in Kumeria; cholera almost abated.
Dacca ...	2·39	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	1·50	*Boro dhan* at Satkhira being harvested; sugarcane thrives well; no other crops on ground; ploughing going on for early rice and jute; late rain very much facilitated ploughing; health generally good.
Moorshedabad ...	1·12	Rain will assist preparation of land for next crop; *rabi* crops still being harvested; cholera still in Jangipur sub-division and thana Goas.
Rajshahye ...	Slight rain on evening of 16th.	Weather hot till 16th, when a storm brought down temperature nearly 8°; *amun dhan*, jute and *til* sown and seedlings thriving, but rain would do them good; *aus dhan* being sown; *boro dhan* excellent; a few cases of cholera and small-pox.
Burdwan ...	·78; Culna ·65; Cutwa ·8	Weather favourable for cultivation; cholera in Raneegunge, and sporadic cases of cholera and small-pox in other parts of district; some cases of cattle-disease in Raneegunge and Cutwa.
Rungpore ...	·98	Weather warm; *aus* sowing proceeding; fever and bowel complaint rather common; price of rice low.
Bhágalpur ...	*Nil*	Easterly wind; all crops cut; small-pox still prevalent.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Purneah ...	*Nil*	Prospects of crops good, and would be better if light rain falls; sowings progressing; health fair for time of year.
Patna ...	*Nil*	Prospects favourable.
Durbhunga ...	*Nil*	*Rabi* harvest for most part complete; mango and indigo promising; prices stationary; public health good.
Hazáribágh ...	Slight shower on 17th	Weather seasonable; easterly wind has rendered it cooler; no crops on ground; food-grains cheap; general health good.
Cuttack ...	Sufficient rain in interior.	Small-pox decreasing; sporadic cases of cholera; prices stationary.
		General Remarks.—Rain in most parts of Bengal proper and Cuttack; cultivation for early crops proceeding satisfactorily, save where rain has not fallen; spring rice promising; indigo prospects good; mango in many places destroyed; *rabi* harvest in Behar nearly complete, outturn satisfactory; *mohwa* crops in Chota Nagpore, Monghyr and Sonthal Pergunnahs good; small-pox and cholera still in some places; public health on the whole good.
N. W. P. and Oudh—		
Benares (April 20th)	*Nil*	Weather seasonable; wind easterly; prospects good; a few cases of cholera, otherwise general health good; prices stationary.
Allahabad („ „)	.....	Wind easterly for last four days; no other sign of rain; heat great; health generally good; cholera still in north; wheat 19¾ seers; coarse rice 19 $\frac{7}{16}$ seers; unhusked *dhan* 28½ seers.
Gorakhpur („ 9th)	.....	Wind again veered east; *rabi* nearly harvested; *mohwa* very plentiful; cane thriving; cholera increasing, especially in north of district; small-pox also prevalent; prices easy; wheat 21 $\frac{9}{16}$ seers.
Jhansi („ 20th)	.....	Weather hot; harvest good; slight fever; prices falling.
Agra („ „)	.....	*Rabi* crops being harvested; slight fever prevails; heat increasing; cattle-disease has appeared in three parganas.
Bareilly („ 21st)	.....	Weather seasonable; health good; fields cleared.
Meerut („ „)	.....	Weather hot; wind variable; harvest progressing well; prices tending downwards; health good.
Kumaun („ 20th)	.....	Weather fair; high wind blowing after noon.
Lucknow („ „)	.....	Weather hot; no change in prospects; a few cases of cholera.
Partabgarh ...	.....	Report not received.
Sitapur (April 20th)	.....	No change; heat great; prospects fair.
Fyzabad („ „)	.....	Crops being harvested; threshing still going on; cholera cases continue; wind gone back to the east.
		General Remarks.—Wind east; heat great; *rabi* harvest almost completed; prices falling in Jhansi and Meerut; sporadic cholera continues in Benares, Allahabad, Fyzabad and Partabgarh and is increasing in Gorakhpur, a few cases reported from Lucknow; small-pox is prevalent in Gorakhpur, and slight fever is reported from Agra and Jhansi, otherwise health generally good; cattle-disease has appeared in Agra.
Punjab— (April 20th)—		
Delhi ...	.....	Prospects good; reaping in progress; improvement in prices.
Hissar ...	.....	Harvest nearly gathered; outturn good; prices falling; health good.
Umballa ...	.....	Crops being harvested; health fair.
Jullundur ...	.....	Health good; crops being cut; prices falling.
Lahore ...	.....	Crops fair; health good.
Ferozepore ...	.....	Crops being cut; health good.
Siálkot ...	.....	Crops being cut.
Ráwalpindi ...	.....	Health good.
Peshawar ...	.....	Prospects indifferent.
Mooltan ...	.....	Health good; slight rise in prices.
Dera Ismail Khan ...	.....	Health good; prospects fair.
		General Remarks.—Health good; prices generally have a downward tendency; prospects generally good but indifferent at Peshawar, where rain is wanted.
Central Provinces—		
Nágpur (April 21st)	.....	Hot; *rabi* threshing completed; ploughing for *kharif* sowings continues; fever prevalent; prices steady.
Jubbulpore ...	.....	Warm; threshing and winnowing of *rabi* progressing; small-pox continues; prices falling.
Saugor ...	.....	Hot; threshing of *rabi* crops progressing, outturn good; small-pox and cattle-disease continue; prices declining.
Seoni ...	Slight shower on 20th	Threshing and winnowing of *rabi* completed.
Hoshangabad ...	.....	Threshing continues; small-pox prevalent.
Raipur (April 17th)	.....	Hot; threshing of *rabi* crops almost completed; no cholera cases during week; cattle-disease continues; prices stationary.
Sambalpur („ 16th)	.....	Very hot; occasionally cloudy; sugarcane plants thriving; small-pox continues.
		General Remarks.—Hot; threshing of *rabi* crops continues in some districts, outturn generally good; land is being prepared for *kharif* sowings; prices stationary, but easier than they were this time last year.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (April 21st)—		
Akyab ...	5·13	Total rainfall 5·77; public health good; slight cattle-disease.
Rangoon ...	1·67	Total rainfall 5·29; 30 deaths from small-pox. Small-pox in two townships of the Hanthawaddy district, a few deaths, otherwise public health good; health of cattle good.
Bassein ...	*Nil*	Total rainfall 6·0; public health good; slight cattle-disease in two townships.
Prome ...	·59	Total rainfall 1·61; small-pox prevails slightly.
Amherst (Moulmein) ...	2·61	Total rainfall 3·27; public health good; no cattle-disease.
Toungoo ...	.....	Total rainfall 1·05; a few deaths from small-pox in one township, otherwise public health good.
		General Remarks.—Small-pox continues somewhat prevalent in Pegu, general health otherwise good; slight cattle-disease; rain has fallen generally; weather cloudy.
Assam—(April 21st)—		
Gauháti ...	1·0	Mornings cool, days hot; sowing of *asu* retarded by the rains; prospects of tea favourable.
Cachar ...	4·41	Weather warm; sowing of the seasonable crops continues; common rice 13 $\frac{5}{8}$ seers per rupee; public health good.
Dibrugarh ...	2·74	Only sugarcane cultivation going on at present; weather seasonable; some cases of cholera.
Mysore and Coorg— (April 21st)—		
Bangalore ...	1·64	Standing crops in good condition; prospects favourable; fever continues; prices fluctuating.
Mysore ...	·06	
Mercara ...	.....	
Berar & Hyderabad— (April 21st)—		
Amráoti ...	.....	Heat increasing; ploughing going on.
Akola ...	.....	*Rabi* harvest over; weather warm.
Hyderabad ...	.....	Weather hot; fever and cattle-disease continue in places; local storms and cloudy weather have somewhat injured the mango and *mohwa* crops.
Central India States— (April 21st)—		
Indore ...	.....	Weather seasonable; health and prospects good.
Morar (Gwalior) ...	.....	Fever in Lushkur and Morar; heat intense; *jowar* 30 and *bajra* 35 seers per rupee.
Sutna ...	.....	Prospects good; *jowar* 40 seers; cholera disappearing from Rewah.
Rutlam ...	.....	Weather clear and hot; health good; outturn of wheat crop satisfactory.
Neemuch ...	.....	Weather very hot; health good.
Goona ...	.....	Hot; crops and health good; wheat 17 seers.
Bhopal ...	.....	Health and crops good.
Agar ...	.....	Health good; prospects favourable.
Nowgong ...	.....	Health fair.
Mánpur ...	.....	Weather warm; fever and small-pox prevalent.
Rajputana—		
Abu ...	.....	Report not received.
Serohi (April 18th)	.....	Tanks dry; wells fairly full; healthy; warmer.
Marwar ...	.....	Report not received.
Meywar (April 16th)	.....	Tanks drying; wells good; health improving; harvest progressing.
Harowtee („ 17th)	.....	Health and prospects good; weather sultry; close.
Jhallawar ...	Sprinkle of rain	Health good.
Ajmere (April 21st)	.....	Harvest reaped; good produce; seasonable; health good.
Jeypore ...	.....	Fair; harvest secured.
Bhurtpore ...	.....	Reaping progressing promisingly; seasonable; health good.
Ulwur (April 20th)	.....	*Rabi* crop below average.
Nepal— (April 13th)—		
Katmandu ...	*Nil*	Prospects good; cholera exists in Katmandu owing to a recent influx of pilgrims.

IRRIGATION OPERATIONS IN THE PUNJAB OF FASL RABI OF 1879-80 UP TO 29th FEBRUARY 1880.

PUBLIC WORKS DEPARTMENT.

| CANAL DIVISION. | WATER DISTRIBUTED DURING FEBRUARY inst. | | |

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Burdwan ...	*Nil*	Cultivation progressing satisfactorily; nearly all cases of cholera in Raneegunge fatal; sporadic cases of cholera and small-pox in other parts of district.
Rungpore ...	·17	Weather cool; prospects of crops favourable; public health good; price of rice low.
Bhágalpur ...	*Nil*	Easterly wind; no crops on ground; small-pox subsiding.
Purneah ...	*Nil*	Prospects good and would be better for rain; progress of farming operations well forward in some parts; *bhadoi* sowing delayed for want of moisture; low lands still moist; health of cattle good and of men not bad for the season; cholera, small-pox and fever prevalent.
Patna ...	*Nil*	Prospects favourable.
Durbhunga ...	*Nil*	*Rabi* crops almost harvested; mango and indigo promising; *moong*, *dhan* and *cheena* being sown in parts; prices stationary; public health good at head-quarters; a few cases of cholera and small-pox in Mudhoobunnee sub-division.
Hazáribágh ...	*Nil*	Weather seasonable; no crops on ground; food-grains cheap; solitary cases of small-pox and cholera here and there; general health good.
Cuttack ...	Rain sufficient in town and interior.	Ploughing continues; cases of small-pox and cattle-disease reported; prices stationary.
		General Remarks.—Slight rain in parts of Bengal proper, Orissa and Chota Nagpore, but none in Behar; ploughing and sowing proceeding, but rain wanted in places; spring rice promising and being harvested in places; *rabi* harvest in Behar generally yielded a very good crop; cholera and small-pox still in some places; fever in Rajshahye and Purneah fatal; cattle-disease in parts of Palamow.
N. W. P. and Oudh—		
Benares (April 27th)	*Nil*	Weather very hot; wind variable; sharp attack of cholera at Básni and Alinagar; cases in city decreasing; general health otherwise good; prices stationary.
Allahabad („ „)	.....	Wind west, weather seasonable; cholera decreasing; general health good; some disease among cattle; wheat $20\frac{3}{16}$ seers, coarse rice $19\frac{7}{16}$ seers, unhusked *dhan* 29 seers.
Gorakhpur („ 26th)	.....	Weather seasonable, wind variable; cholera continues principally in north; small-pox not increasing; prices easy; wheat $23\frac{6}{16}$ seers.
Jhansi („ 29th)	.....	Prospects good; crops being harvested; slight fever; days hot; prices falling.
Agra („ 27th)	.....	*Rabi* crops are still being harvested; slight fever prevails.
Bareilly („ 28th)	.....	Weather seasonable; some fever reported.
Meerut („ „)	.....	Days hot and nights cool; prices falling; fever in parts but not reported except in Mowana.
Kumaun („ 27th)	.....	Very hot; slight storms on 21st; *rabi* being reaped.
Lucknow („ 28th)	.....	Wind east; a few cases of cholera reported.
Partabgarh („ 20th)	.....	*Rabi* harvest is being garnered; sowing of *sawan* and *jaith* paddy in low ground and near water going on; cholera much as reported last week.
Sitapur („ „)	.....	Weather seasonable; health good; prospects fair.
Fyzabad („ 28th)	.....	Weather seasonable; cholera decreasing.
		General Remarks.—Weather hot but seasonable; wind variable; prices falling in Jhansi and Meerut; slight fever prevails in Jhansi, Agra, Meerut and Bareilly; cholera still continues in Benares, Gorakhpur, Lucknow and Partabgarh and is decreasing in Fyzabad; otherwise health good.
Punjab— (April 27th)—		
Delhi ...	.....	Public health and agricultural prospects good.
Hissar ...	.....	*Rabi* crop almost gathered, outturn good; prices falling; public health good.
Umballa ...	.....	Crops still being harvested; reports favourable; health good.
Jullundur ...	.....	Crops still being cut; prices falling; public health good.
Lahore ...	.....	Crops being harvested; health good.
Ferozepore ...	.....	Crops being cut and harvested; health good.
Siálkot ...	.....	Crops fair; health good.
Ráwalpindi ...	.....	Agricultural prospects not good owing to want of rain; fever prevails.
Pesháwar ...	Slight rain	Harvest prospects indifferent.
Mooltan ...	.....	*Rabi* crops being threshed and garnered; health good.
Dera Ismail Khan ...	.....	Crops being reaped; health good.
		General Remarks.—Agricultural reports generally favourable, with the exception of a few districts in the north; prices have a downward tendency.
Central Provinces—		
Nágpur (April 28th)	.....	Cloudy, hot; *rabi* harvest over; ploughing for *kharif* continues; fever continues.
Jubbulpore ...	.....	Warm; threshing and winnowing progressing; small-pox continues; prices falling.
Saugor ...	.....	Hot; threshing of *rabi* nearly completed; small-pox and cattle-disease continue; prices rising owing to exports.
Seoni ...	.....	Ploughing for *kharif* continues; prices stationary.
Hoshangabad ...	.....	Winnowing of rabi nearly at an end; small-pox continues; prices stationary.
Raipur (April 24th)	.....	Warm; threshing of *rabi* continues; few cases of cholera and small-pox reported; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*		
Sambalpur (April 23rd)	.....	Very hot; sugarcane plantations doing well; health good; cattle-disease continues.
		General Remarks.—Cloudy, hot; threshing and winnowing continue in Nerbudda Valley districts, outturn generally good; land being prepared for *kharif* sowings; prices stationary, but easier.
British Burma— (April 28th)—		
Akyab ...	.....	Public health fair; no cattle-disease.
Rangoon ...	·42	Total rainfall 5·91; 22 deaths from small-pox.
Bassein ...	2·88	Total rainfall 8·88; public health good.
Prome ...	·33	Total rainfall 1·94; small-pox very prevalent in one township.
Amherst (Moulmein) ...	1·43	Total rainfall 6·06; public health good; no cattle-disease.
Toungoo ...	1·49	Total rainfall 1·54; public health good.
		General Remarks.—Small-pox still somewhat prevalent in Pegu; slight cattle-disease, otherwise public health good; weather continues showery.
Assam—(April 28th)—		
Gauháti ...	1·26	Frequent high winds and rain; *asu* cultivation retarded by the rains.
Sylhet ...	1·25	Cultivation going on rapidly; common rice 14 seers.
Cachar ...	3·3	Weather continues unchanged; sowing of seasonable crops progresses; common rice $13\frac{5}{16}$ seers per rupee; public health good.
Dibrugarh ...	3·81	Ploughing for *sali* commenced; weather wet and cool; a few cases of cholera reported.
Mysore and Coorg—		
Bangalore ...	.....	Reports not received.
Mysore ...	.....	
Mercara ...	.....	
Berar & Hyderabad— (April 28th)—		
Amráoti ...	.....	Weather cloudy; public health good.
Akola ...	.....	Ploughing going on; weather hot.
Hyderabad ...	.....	Weather hot; slight fever prevalent; labour for poor sufficient; *kharif* sowing operations commenced in some places; prices, coarse rice 9 seers, wheat 10, *tur* 15, white *jowar* 14, yellow *jowar* 16, per current sicca rupee.
Central India States— (April 28th)—		
Indore ...	.....	Cloudy, hot; health and prospects good.
Morar (Gwalior) ...	.....	Weather seasonable; fever still prevails; wheat $16\frac{1}{4}$, *jowar* 29, *bajra* 32 seers.
Sutna ...	.....	Prospects good; *jowar* 39 seers.
Rutlam ...	.....	Weather close and cloudy; opium market steady; grain price falling; health good.
Neemuch ...	.....	Health good; weather hot.
Goona ...	.....	Hot; crops and health good; wheat 19 seers.
Bhopal ...	.....	Weather fair; prospects and health good.
Agar ...	.....	Health good; prospects favourable.
Nowgong ...	.....	Health fair.
Mánpur ...	.....	No report received.
Rajputana—		
Abu ...	.....	Report not received.
Serohi (April 25th)	.....	Tanks dry, wells fairly full; healthy; mornings and evenings cooler.
Marwar („ 23rd)	.....	Tanks dry, wells diminishing; health and crops good; not so hot, owing to rainfall; crops being harvested; prices falling.
Meywar ...	.....	Tanks drying, wells good; health improving; threshing *rabi* crops.
Harowtee (April 24th)	.....	Health and prospects good; prices falling; heat great; nights cool.
Jhallawar ...	.....	Health and prospects good; weather cooler.
Ajmere (April 28th)	.....	Health and prospects good; prices falling slowly.
Jeypore ...	.....	Average harvest secured; health good; seasonable.
Bhurtpore ...	.....	
Ulwur (April 27th)	.....	Harvestings completed; health good; hot winds.
Nepal— (April 20th)—		
Katmandu ...	·05	Prospects good.

SUPPLEMENT TO

The Gazette of India.

№ 19.} SIMLA, SATURDAY, MAY 8, 1880.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

APPREHENDED UNDERESTIMATE OF THE COST OF THE MILITARY OPERATIONS IN AFGHÁNISTÁN.

The following extracts from a Despatch addressed to Her Majesty's Secretary of State for India, No. 143, *dated 4th May, are published for general information, with the documents which accompanied it :—*

In continuation of our Despatch No. 81, dated 25th February, we regret to report for the information of Her Majesty's Government, that we have grave reasons for apprehending that the cost of the military operations in Afghánistán will seriously exceed the amount entered in the Financial Statement for 1880-81.

2. The total expenditure upon those operations in India was calculated in that document at 5,512,670*l.*, as follows :—

	£
In 1878-79 (Account No. 57)	600,270
In 1879-80 (para. 130 of Statement, less expenditure from the Home Treasury)	2,954,400
In 1880-81 (para. 18 of Statement, less expenditure from the Home Treasury)	1,958,000
	5,512,670

3. The estimates for 1879-80 and 1880-81 were prepared in the Military Department by the usual methods, with careful deliberation. We forward with this Despatch a Memorandum by Major Newmarch, the Military Accountant General, detailing the procedure in ordinary use, describing how it was actually employed on the present occasion, and explaining, in particular, his estimates of the cost of the war. Major Newmarch submitted his estimates to the Military Department with a Memorandum, No. 4108, dated 19th

January. It is shown in the Minute of our Honorable Colleague, Sir Edwin Johnson, which accompanies this Despatch, that those estimates were carefully examined and accepted in the Military Department; they were formally transferred by that department, on the 26th January, to the Financial Department, with the recommendation that they should be adopted; and they were incorporated, in usual course, in the Budget presented with the Financial Statement.

4. The estimates were held open to revision till just before the Statement was made; but no correction was suggested in the Military Department, or considered necessary in the Financial Department. On the contrary, the unexpectedly high amount of our January balances (1,352 lakhs), coupled with the comparatively moderate amount of the military expenditure brought on record up to that date, gave rise to a doubt whether the Accountant General in the Military Department might not have entered too large an amount in his Regular Estimate; but it was ascertained specifically on the 18th February, six days before the Statement, that the Accountant General in the Military Department fully maintained that estimate, and it was not altered. There being thus, at that time, no apparent cause for distrusting the sufficiency of the Military Department's estimates, Sir John Strachey, in paragraph 27 of the Financial Statement, while pointing out that "the estimates of the cost of the war must of course be, to a great extent, speculative," said that he saw "no reason to suppose that they erred on the side of being too low."

5. Before the middle of March, however, we became uneasy at the unexpectedly large demands upon our frontier treasuries; and, not being satisfied with the result of a summary investigation of the causes, we instituted a fresh enquiry into the cost of the war, which has brought to light the fact that the aggregate net disbursements from our treasuries to the Military Department since the beginning of the operations, have so much exceeded the normal payments to that department as to suggest strong doubts of the correctness of its estimates of the cost of the war.

6. No doubt, the balances in the treasure chests and with the military disbursers are much in excess of the ordinary amount. Moreover, apart from the operations in Afghánistán, the disbursements on account of the Malta Expedition, the Nága disturbances, and political events in Burma, have caused exceptional military drafts upon our treasuries; and there may be other abnormal transactions which may operate, eventually, in reduction of the obligations of the Military Department. Nevertheless, and taking the most sanguine view of the prospects of the termination of the war, we cannot, now, doubt that its cost will largely exceed the departmental estimates.

7. There is, however, much still to be done before we can venture to estimate the cost of the war afresh with any precision. It has not yet been fully explained why the large outflow from our treasuries in excess of the military estimates did not show itself sooner in the diminution of our balances, which we are now at last witnessing. Nor is the Accountant General in the Military Department, an officer in whose prudence and ability we place the greatest confidence, as yet, able to reconcile the treasury figures with the estimates which reach him from the Military Controllers.

8. Under ordinary circumstances, we should have thought it desirable to wait until we could explain the facts better than is yet possible. But we are sensible of the inconvenience which must result from the failure of our war estimate, and deem it incumbent on us to substitute for that estimate at once the most correct forecast that we can make with our present data, however imperfect such may be. We hope that, before Your Lordship makes the yearly Financial Statement to Parliament, we may be in a position to telegraph more trustworthy estimates of the cost of the war than we can now make. Meanwhile, we consider that it will be necessary to add at least 4,000,000*l.* to our estimate of the cost of the war in 1880-81. We can only speak, now, with much reserve of the total amount which the war, apart from the Frontier Railways, will ultimately cost. The responsible officers in the Military Department still confidently expect that its cost will not be nearly so much as 10,000,000*l.*; but we are unable, at present, to reconcile this expectation with the actual outgoings from our treasuries.

9. Our Honorable Colleague General Sir Edwin Johnson has recorded, for our information and for that of Her Majesty's Government, a Minute, which we transmit herewith, describing the action of the Military Department throughout the whole proceedings, the manner in which the estimates for the war were made, and the circumstances under which the Military Department thought itself justified in recommending the Financial Department to accept them; and explaining, so far as this can now be done, the causes which, in our Honorable Colleague's opinion, have operated, and are still operating, to render those estimates insufficient.

10. As stated by the Military Accountant General in paragraph 14 of his memorandum, although it cannot now be doubted that the amount of the war charges outstanding at the close of 1879-80, and which will have to be adjusted in 1880-81, will be much larger than was anticipated, there is no reason for supposing that the amount of these charges brought to account in the former year will seriously differ from the Regular Estimate presented with the Financial Statement.

* * * * * * *

13. As we have been obliged to take the unusual course of revising our estimate of one important item before the Financial Statement is made to Parliament, we subjoin, for any use which Your Lordship may think fit to make of it, a statement of the other variations from our Regular Estimates, which are now known to us:—

	Regular Estimates.	Approximate Accounts.	Better.	Worse.
	£	£	£	£
I. Land Revenue	22,389,000	22,426,200	37,200	...
IV. Excise	2,765,000	2,792,587	27,587	...
V. Assessed Taxes	797,000	783,800	...	13,200
VII. Customs	2,231,000	2,283,352	52,352	...
VIII. Salt	7,335,000	7,256,698	...	78,302
IX. Opium	10,459,000	10,361,555	...	97,445
X. Stamps	3,203,000	3,192,811	...	10,189
TOTAL ...	49,179,000	49,097,003	...	81,997

14. * * * * * * *

The deficiency under *Salt* is due to an unexpected intermission of the deliveries from the Sámbhar Lake, which will, doubtless, soon be resumed. The deficiency under *Opium* is owing to a similar temporary check in the trade in Málwa Opium.

15. On the whole, our estimates have been very satisfactorily realised. The only considerable Revenue Head of which we do not yet know the approximate result, is that of *Railways*, the accounts of which cannot be quickly closed. We know no grounds for revising our estimates of Railway revenue.

16. On the expenditure side, however, 100,000*l.* must be added under Head *32—Railways*, being the supplementary grant made for the Jhelum-Rawalpindi Section of the Punjab Northern State Railway, as explained in paragraph 6 (4) of our Despatch No. 142 of this date. This is, in truth, part of the cost of the war.

17. However disappointing it is to find that the war is likely to cost so much more than was expected, the permanent effect upon the condition of our finances will be limited to the extent to which the charge for interest on the debt may be increased. In all essential respects the condition of our finances appears to us no less sound and satisfactory now than it did when the Financial Statement was made. The improvement in our general financial position remains as unquestionable as before; there is still no reason to doubt that, but for the war, our surplus of revenue over expenditure would have hardly been less than 4,000,000*l.*, both in the year 1879-80, which has just closed, and in the year 1880-81, which has now commenced; nor do we see reason to modify any of the views regarding the past, or any of the anticipations regarding the future, which were set forth in the Financial Statement.

Minute by General the HON'BLE SIR E. B. JOHNSON, K.C.B., C.I.E.

The attention of the Financial Department having been directed to the large disbursements which were being made from the Civil Treasury on account of the war in Afghanistan—

disbursements seriously in excess of the estimated cost of the operations—the Military Department was requested to cause enquiry to be made, and to furnish information as to the cause of this difference between the estimates and the actual expenditure.

In accordance with this request, the Military Accountant General was called on for a report on the subject; and at the same time full enquiry was ordered in other branches of the Military Department, in view to eliciting the causes of these unexpected calls on the Civil Treasury.

Pending the result of these enquiries, the Military Accountant General has furnished a statement explaining, fully and clearly, the course he has followed in the preparation of the estimates of expenditure on account of the operations in Afghanistan for 1880-81.

To Major Newmarch's statement, which I attach, I need add nothing; but, as Head of the Military Department, I desire to state that the estimates which were prepared by the Military Accountant General were not submitted by me to the Financial Department until, in personal and anxious communication with him, I had satisfied myself that they were framed on just principles and on data which might fairly and reasonably be accepted in the forecast of the probable expenditure on account of the war.

Satisfied, therefore, of the correctness of the estimates, which appeared to me as accurate as any estimate of the cost of military operations can be, I accepted them, and caused them to be sent to the Financial Department, with a recommendation that they should be adopted.

It will be seen, therefore, that though the estimates were prepared by the Military Accountant General, they were submitted and explained to me before acceptance; and I desire to state, without any reserve whatever, that, as Head of the Military Department, I alone am responsible for the estimates, and that I fully accept such responsibility.

That this Department has underestimated the probable cost of the war cannot be gainsaid; but until the result of the enquiries which have been ordered to be made is received, it is not possible for this Department to state either the extent to which the estimates have been exceeded, or the causes which have led to such excess.

Without attempting to anticipate the result of the enquiry, I may be permitted, however, to touch very briefly on some of the causes which have led to such a disturbance of our calculations, and which were not, and could hardly have been, foreseen at the time the estimates were prepared.

First, the purchase of a very great proportion of the transport, instead of hiring it. This recommended itself to the Controller General of Transport and Supply as not only a measure of expediency and improved organisation, but one which, owing to the nature of the service and to the extreme difficulty of hiring, appeared to be an absolute necessity. The outlay under this head has been considerable.

The necessity, as a measure of precaution, when it became evident that the war would not be brought to a close as early as was anticipated, for purchasing and transporting six months' supplies to be stored at the front and on all the lines of communication before the hot weather set in.

The enormous increase in the price of grain and other supplies—famine prices in fact—owing to the unexpected scarcity which prevailed in the Peshawar and Rawalpindi Districts notwithstanding the promise of an abundant harvest which has been fulfilled everywhere else.

A similar, and also unexpected, increase in the price of stores, such as firewood, forage, &c., purchased in Afghanistan itself.

The necessity for paying increased wages, in addition to half-rations, to all followers north of Jhelum—a necessity which arose partly from the growing dread of service in Afghanistan, and partly from the extreme demand for labor, locally, by the Railway authorities on the line to Rawalpindi.

In addition to what has been already stated, there is also this fact to be taken into consideration, that when it became evident that the occupation would be prolonged through the summer months, and even into autumn, the works necessary for the maintenance of our positions and protection of the troops, thus detained, necessarily far exceeded any charges which had hitherto been incurred, or would under other circumstances have been needed, both at Kabul and on the whole line of communications.

In short, in such operations as those in which we are engaged, their cost increases in a progressive ratio, week by week, with their continuance. For not only are the local resources of a poor country drawn on to a point almost of exhaustion, thereby forcing supplies to be sent from remote bases, but also the transport, which has to be continuously renewed to supply the ordinary casualties, has to be procured and drawn from far distant provinces in India at an ever-increasing cost.

It is now clear to myself that, in accepting, as the basis of the estimated cost of the war carried on in the year 1880-81, the estimates which had proved sufficient for the operations of the corresponding months of the previous year, I had not sufficiently appreciated the main fact of progressive rates of expenditure—an expenditure necessarily increasing through an expansion both of the period and scope of the operations which have since been developed.

It seemed to me that, in providing for the war expenditure up to the month of July of the present year, based on the rate which had proved sufficient for those of the preceding year, which I had no reason to believe was being materially exceeded, I was making the utmost provision which I could at the time have been justified in recommending to the Council; and I submit that the correctness of the course I then pursued is not invalidated by the facts which have since come to our knowledge.

E. B. JOHNSON.

SIMLA;
1*st May* 1880.

Memo. No. 451, dated 30th April, 1880.

From—MAJOR O. R. NEWMARCH, Accountant General, Military Dept.,

To—The Secretary to the Government of India, Military Department.

With reference to Military Department No. 6538K. of the 28th April 1880, the undersigned has the honor to explain, for the information of Government, the course followed in the preparation of the estimates of expenditure on account of the operations in Afghanistan.

2. The military estimates are prepared by the Controllers of Military Accounts, Bengal, Madras and Bombay, received and consolidated in this branch, and submitted by the Military Department to the Financial Department. In all ordinary cases, the figures proposed by the Controllers—officers of considerable experience and having the advantage of local knowledge—are accepted. But when there is reason to suppose—from a reference to past actuals; from a consideration of impending changes of organisation or other facts not known to the Controllers when their estimates were prepared; from the prospects of the harvests; from the progress of the accounts which are more advanced when the estimates are finally consolidated; and for other reasons—that their estimates are not correct, then they are increased or diminished to the extent thought to be necessary, in view of the foregoing considerations.

The reasons for any variation from the figures of previous years are always given in abstract and in detail in the transmitting memorandum and its appendices.

3. The first provision for the Kabul Campaign was made in the revised estimate for 1878-79.

In this estimate the Controller of Military Accounts, Bengal, provided 90 lakhs on this account, with the remark—"This sum may cover the extra charges that will be brought forward this year, but a correct estimate seems impossible at present." The Madras Controller made no provision. The Bombay Controller estimated the charges at 20 lakhs; total of estimates 110 lakhs. Judging from the state of the accounts when the estimate was made up, and from the known delays in their receipt from officers in the field, it appeared to the undersigned that the charges to be brought into the year would not exceed 67 lakhs, and that there would remain between 50 and 60 lakhs to be adjusted in the accounts of 1879-80.

4. In proposing these figures, the following remarks were made in paragraph 5 of the transmitting memorandum:—"Looking at the twofold uncertainty attending this item, the doubtful estimate of the probable expenditure, and the progress of adjustment, every allowance must be made for any want of accord hereafter between the revised estimate and the actual charges." The amount charged in the year in India was Rs. 60,02,703, a tolerably close approximation to the estimate.

This left, according to the above calculation, about 60 lakhs outstanding from 1878-79, under the head of Advances Recoverable, Unadjusted Items, &c., which would have to be adjusted and charged in the accounts of 1879-80.

5. In the Budget estimates of that year, the Bengal Controller, writing on the 17th December 1878, made no provision whatever for Kabul, remarking—"At present it is impossible to state what amount will be charged to this head in the accounts of 1879-80; perhaps, later on, more definite information than now exists may be available." The Controllers of Military Accounts, Madras and Bombay, made no provision for the "Kabul operations," having no information as to whether the war was likely to extend to the year 1879-80, or if it did, as to how long it might be expected to continue. Allowing for the arrears to be brought forward from 1878-79, and in the anticipation of an early termination of the campaign, the extra expenditure of the year was estimated in this branch at 200 lakhs, with the following remark:—"It is of course impracticable to form any trustworthy estimate of the year, but it is not considered necessary to make any larger provision on this account at present than the above sum."

The above anticipation was realised by the signing of the Treaty of Peace on the 26th May 1879, and had the war then been finally concluded, the estimate would probably have proved to be fairly correct.

6. On the renewal of hostilities in September, it of course became necessary to increase the estimate.

In submitting his revised estimate for the year 1879-80, the Bengal Controller provided 300 lakhs under the head of "Kabul" in lieu of 170 lakhs, the sum allotted to Bengal in the budget estimate, with the remark—"Increased, to provide for charges on account of the second expedition."

The Madras Controller reduced his allotment of 12 lakhs to 8 lakhs, with reference to the amounts compiled under this head in the accounts received by him up to date.

The Bombay Controller increased the 18 lakhs assigned to that Presidency to 40 lakhs, with the remark—"Provision made for second Kabul Expedition."

The total of these estimates amounted to 348 lakhs.

7. After the most careful and anxious consideration of all the facts available, and after personal consultation with the officers in charge of the field commissariat accounts, with the special Examiner of these accounts, and with the Controller of Military Accounts, Bengal, the undersigned considered that about 300 lakhs would probably be charged in the year, and that something over 100 lakhs would, as in 1878-79, be outstanding under the head of Advances Recoverable, Unadjusted Items, &c., and fall into the charges of 1880-81.

8. It was, as may be easily understood, extremely difficult, if not wholly impracticable, with the scanty materials available, and in view of the uncertainty as to the progress, extent and duration of operations, the phases of which were changing from week to week, to frame even an approximate estimate of the extra cost of the war, and the above conclusion was not arrived at without much hesitation and anxious consideration. In submitting it, the following remarks were offered for the consideration of Government:—

"In the revised estimate it has been deemed necessary, owing to the renewal of hostilities, to increase the provision on this account to Rs. 3,00,00,000. The estimates submitted by the Controllers provided Rs. 3,48,00,000 on this account; but so far as any estimate can be made of charges so uncertain, both in their nature and as to the period within which they may be brought forward, their estimates appear susceptible of reduction by Rs. 48,00,000. There is one charge in particular which may affect the calculation very considerably—the compensation for loss of camels; but up to date no trustworthy statistics, or even estimate, of the probable losses and consequent claims have been received. With every desire to make full provision for the war charges, the undersigned can, at present, see no reason for going beyond the above figures."

9. These figures are exclusive of the charge for the construction of frontier railways and telegraphs, the estimate for which *in India* is Rs. 1,12,15,000 in 1879-80, and Rs. 1,04,22,000 in 1880-81.

10. In the estimate for the year 1880-81, the Controller of Military Accounts, Bengal, provided 200 lakhs for "Kabul" without remark. The Madras Controller provided six lakhs, with the remark that the figure had been reduced (that is, from last year's figures), with reference to the first four months of 1879-80. The Bombay Controller made no provision, with the remark—"Provision on this account was made by the Accountant General in the current year's budget, and will, it is assumed, be similarly made for 1880-81, if necessary."

11. Following the course pursued in preparing the estimate of 1879-80, as explained in paragraph 5, it was estimated by the undersigned that about 100 lakhs would be brought forward from 1879-80, and that, anticipating, as in 1879-80, an early termination of the campaign, a hundred lakhs would be spent on the war during the year 1880-81. This rate of expenditure was based on rough estimates prepared in this branch of the cost of the war, and supported by a consideration of the expenditure incurred in 1878-79 and in the early months of 1879-80.

12. In submitting this estimate, the following remarks were made in the transmitting memorandum:—

"For the Kabul charges it has not been considered necessary to do more than repeat last year's provision, Rs. 2,00,00,000. But for the renewal of hostilities in September last, that sum would probably have sufficed to meet the extra charges of the year. With an early settlement of affairs beyond the frontier, the same amount may suffice to wind up the accounts of the campaign; should the operations be protracted, this figure will, no doubt, have to be increased hereafter in the revised estimate, as has been done this year."

13. As regards the threatened inadequacy of the estimates, the undersigned proposes to defer any explanation on this head till the accounts for the year 1879-80 are completed, and the further information called for by the Military Department has been received.

14. The completed accounts for January 1880 have been received, with approximate figures for the remaining two months of the year; and there are grounds for supposing that, apart from the charges for frontier railways and telegraphs, the recorded charges of the year will not much exceed the estimate of 300 lakhs. There is, however, reason to fear that, owing to the largely increased expenditure of the last three months of the year—January, February and March 1880—considerably more than a hundred lakhs will be outstanding at the close of the year, and have to be adjusted in the accounts of 1880-81. At the same time, this increased rate of expenditure shows no signs of diminution, and the war promises to be protracted considerably beyond the anticipation of the estimate, while the operations are more extended than they were, or than was foreseen when that estimate was prepared. It may also be noted that from various causes, which will no doubt be elucidated hereafter, the war expenditure has increased, beginning from January last, and is progressing, at a rate far beyond any calculation that could have been made, based on the past rate of expenditure, and on the relative number of troops in the field at various periods.

From these two causes, the expected increase in the outstandings from 1879-80 and in the cash expenditure in 1880-81, the budget estimate of the year threatens to prove very inadequate. To what extent it will actually be found to be insufficient can only be determined on the receipt of the further information lately called for, and by the progress, extent and duration of the campaign.

On this point a further report will be submitted hereafter.

R. B. CHAPMAN,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 30th April, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
Major-General the Hon'ble A. Fraser, C.B., R.E.
The Hon'ble B. W. Colvin.
The Hon'ble C. Grant.

BOMBAY CIVIL COURTS ACT, 1869, AMENDMENT BILL.

The Hon'ble MR. GRANT moved that the Bill to amend the Bombay Civil Courts Act, 1869, be taken into consideration. He said that it would be in the recollection of the Council that in January last a short Bill had been introduced by the Honourable Member in charge of the Legislative Department to empower the Bombay Government to alter the local limits of the jurisdiction of subordinate judges in that Presidency. After its introduction the Bill was referred for opinion, in the ordinary course of business, to the Bombay Government, and early in the present month a telegram was received, expressing approval of the Bill as it stood, reporting that the prescribed number of publications had been made in the local Gazette, and requesting that the Bill might be passed into law with the least possible delay, as the powers conferrible by it were urgently needed in order to give effect to certain of the provisions of the Dekkhan Agriculturists' Relief Act. In the absence, therefore, of the Honourable introducer of the Bill, he (MR. GRANT) moved that it should be taken into consideration.

The Motion was put and agreed to.

The Hon'ble MR. GRANT also moved that the Bill be passed.

The Motion was put and agreed to.

NORTH-WESTERN PROVINCES RENT ACT, 1873, AMENDMENT BILL.

The Hon'ble MR. COLVIN moved that the Bill to amend the North-Western Provinces Rent Act, 1873, be referred to a Select Committee consisting of the Hon'ble Messrs. Stokes and Thompson, the Hon'ble Sayyad Ahmad Khán, the Hon'ble Mr. Grant and the Mover.

The Motion was put and agreed to.

JHÁNSÍ ENCUMBERED ESTATES RELIEF BILL.

The Hon'ble MR. COLVIN also moved that the Bill to provide for the relief of Encumbered Estates in the Jhánsí Division of the North-Western Provinces

be referred to a Select Committee consisting of the Hon'ble Messrs. Stokes and Thompson, the Hon'ble Sayyad Ahmad Khán, the Hon'ble Mr. Grant and the Mover.

The Motion was put and agreed to.

MULTÁN DISTRICT LAWS BILL.

The Hon'ble MR. COLVIN also moved that the Hon'ble Mr. Grant be added to the Select Committee on the Bill to declare the law in force in certain lands annexed to the Multán District.

The Motion was put and agreed to.

The Council adjourned to Friday, the 21st May, 1880.

SIMLA;
The 30th April, 1880.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 4TH MAY 1880.

GENERAL REMARKS.—Rain has continued in the Provinces from which it was reported last week, and has also fallen in the North-Western Provinces and Oudh. There has been none in Berar and Hyderabad, the northern districts of Bombay, the Central Provinces, Central India States, Rajputana and the Punjab. Preparations for the *kharif* sowings are in active progress. General prospects continue good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras— (May 5th)—		
Bellary ...	·1 in Pennakonda	*Ragi* 29·26; standing crops generally good.
Kurnool ...	·35 in Cumbum	*Ragi* 33·41; paddy harvest nearly completed, outturn ¾ to full.
Ganjam ...	·17 (average of six stations).	*Ragi* 34·53.
Kistna ...	·76 (average of two stations).	*Ragi* 32·24.
Chingleput (Madras) ...	.....	*Ragi* 22·58; wet and dry crops being harvested; standing crops doing well.
Coimbatore ...	·74 (average of ten stations).	*Ragi* 23·87; crops generally fair; harvest of paddy in Erode full.
Tanjore ...	·71 (average of five stations).	*Ragi* 25·52; crops generally good; harvest of oil-seeds, chillies and tobacco, outturn ¾ to ⅞.
Madura ...	·82 (average of seven stations).	*Ragi* 25·21.
Malabar ...	·85 (average of ten stations).	*Ragi* 20·2.
Travancore ...	·17	*General Remarks.*—General prospects fair.
Bombay— (May 5th)—		
Hyderabad ...	.....	Fever of a mild type in six, cattle-disease in four talukas; small-pox continues in Moro, Naushahro and Kandiaro; weather seasonable.
Ahmedabad ...	.....	Manuring operations for next season's crop going on in some talukas.
Baroda ...	.....	Harvest of *rabi* completed; sowing of summer *jowar* commenced in the Kani division; preparations for *kharif* progressing; weather seasonable; public health good; prices stationary.
Surat ...	.....	*Rabi* harvest nearly completed.
Násik ...	.....	Ague in one taluka; cattle-disease in Igatpuri; crops harvested and nearly threshed; land being prepared for new crops; weather getting warm.
Colaba (Bombay) ...	.....	Average abnormal temperature 1° warm; vapour in air in excess of normal till 1st, afterwards normal; wind normal, except from 29th to 2nd when it was abnormal and southerly.
Poona (May 2nd)	.....	In district average price of *jowari* falling, whilst that of *bajri* rising.
Ahmednagar ...	.....	Preparation of land for monsoon crop progressing.
Sholapur ...	·31 (average of seven talukas and Peta station).	Slight fever and cattle-disease in two talukas; cotton picking progressing; harvest of late crop nearly completed.
Dharwar ...		
Kanara ...	·30 (average)	Land being prepared for monsoon crop.
Rajkot ...	Few drops in Songad and Gohelvád.	Weather very hot; health good.
		General Remarks.—Land being everywhere prepared for *kharif* crops; public health good, except in Hyderabad; slight rain in Dharwar and Kanara.
Bengal—		
Chittagong ...	1·19	Weather cloudy and more rain expected; prospects of crops favourable; cholera in some parts; cattle-disease continues.
Dacca ...	1·28	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	·36	*Boro dhan* at Satkhira being harvested, outturn satisfactory; ploughing going on; sowing of *aus* commenced at Busseerhat; a few cases of small-pox in Baraset, of cholera in Baraset and Barackpore, and of cattle-disease in Satkhira and Diamond Harbour.
Moorshedabad ...	·48 (rain general)	*Amun* and *aus* sowings commenced; fever and cholera in a few places, otherwise public health good.
Rajshahye ...	1·66	Sowing of *aus* going on; outturn of *boro* good; other crops doing well; some cases of cholera.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Burdwan ...	·2 Culna ·42; Cutwa 1·93; Raneegunge ·25.	Weather seasonable; cultivation progressing satisfactorily; some cases of cholera and small-pox, otherwise public health good.
Rungpore ...	3·05	Prospects of crops good; slight fever prevalent.
Bhágalpur ...	·24	Easterly winds and occasional storms; no crops on ground; health good; small-pox abating.
Purneah ...	*Nil*	Prospects of crops good all round; farming operations well advanced; sufficient moisture for growing crops; health fair.
Patna ...	·10	Outturn of *rabi* good.
Durbhunga ...	·71	Harvesting of *rabi* nearly finished; rain beneficial to *dhan* land; general health good at head-quarters; prices stationary.
Hazáribágh ...	*Nil*	Weather seasonable; easterly wind rendered it comparatively cool; no crops to report on; food-grains cheap; general health good; solitary cases of cholera in north; a few cases of small-pox in interior.
Cuttack ...	Sufficient rain in town and interior.	Ploughing continues; small-pox still reported.
		General Remarks.—Rain in most districts during week, but still wanted in Midnapore, 24-Pergunnahs, Backergunge and Lohardugga; few crops on ground doing well, and ploughing and sowing are proceeding, save where rain has not fallen; spring rice being harvested with good outturn; sugarcane plantation still continues in some districts; *rabi* in Behar generally yielded a good outturn; with the exception of some cholera and small-pox in places, public health good.
N. W. P. and Oudh—		
Benares (May 4th)	.....	Wind easterly; rain threatening, must have fallen in vicinity, as the weather has become remarkably cool; cholera seems to be decreasing; prices stationary.
Allahabad („ „)	Slight shower	Wind east; cholera decreasing; wheat 20¼ seers; coarse rice 19½ seers; unhusked *dhan* 28$\frac{5}{16}$ seers.
Gorakhpur („ 3rd)	·3	Weather cooler; wind variable; thunder-storm on the 3rd; cholera decreasing; prices easy; wheat 24$\frac{6}{16}$ seers.
Jhansi („ 5th)	.....	Harvest over; fever continues, but is not severe; prices falling slightly.
Agra („ 4th)	.....	The crops are being harvested; fever prevails in district except Futtehabad; days hot; nights pleasant.
Bareilly („ 5th)	Heavy shower on night of 2nd.	East wind; slight fever.
Meerut („ „)	·2 with slight hail-storm.	Wind easterly; small-pox prevalent at Mowana; prices falling.
Kumaun („ 4th)	Rain on 28th April, 1st and 2nd.	Cloudy; *rabi* nearly cut; outturn good.
Lucknow („ 5th)	·1 on 3rd	Strong and continuous east wind; fever, cholera and cattle-disease prevalent; harvesting nearly completed; outturn good; barley 29 seers.
Partabgarh („ 3rd)	*Nil*	Cholera cases continue; wind variable.
Sitapur („ 5th)	.....	No change; a few cases of cholera reported, health otherwise good.
Fyzabad („ „)	1·3	*General Remarks.*—Weather much cooler; wind easterly; slight rain has fallen in Gorakhpur, Allahabad, Meerut and Lucknow; heavier rain in Bareilly, Kumaun and Fyzabad; slight hailstorm in Meerut; cholera prevalent in Lucknow and Partabgarh, but is decreasing in Benares, Gorakhpur and Allahabad; a few cases are reported from Sitapur; fever prevails in Jhansi, Agra and Lucknow, and small-pox in one tahsil of the Meerut district; some cattle-disease in Lucknow; prices falling in Jhansi; harvest outturn in Kumaun and Lucknow good.
Punjab— (May 4th)—		
Delhi ...	.....	Agricultural and health reports favourable; prices of food-grains fluctuating, with downward tendency.
Hissar ...	.....	Weather seasonable; winnowing and storing in progress; prices almost stationary; health good.
Umballa ...	.....	Crops being harvested; health fair.
Jullundur ...	.....	Health good; crops cut; prices steady.
Lahore ...	.....	Crops cut, outturn good; health good.
Ferozepore ...	.....	Crops being cut and threshed; prices have a downward tendency; public health good.
Siálkot ...	.....	Crops being harvested; health good.
Ráwalpindi ...	.....	Health fairly good; rain wanted for next crop.
Peshâwar ...	.....	Harvest prospects still reported indifferent, but price of wheat has fallen during the past week.
Mooltan ...	.....	*Rabi* crops still being threshed and garnered; prices steady; health good.
Dera Ismail Khan ...	.....	Reaping in progress; health good.
		General Remarks.—Agricultural and health reports generally favourable, except in the Peshawar district where the harvest prospects are indifferent.
Central Provinces—		
Nágpur (May 1st)	.....	Harvest over; ploughing for *kharif* continues; prices stationary.
Jubbulpore ...	.....	Cloudy; threshing nearly completed; winnowing progressing; small-pox continues; prices stationary.
Saugor ...	.....	Hot; harvest over; small-pox and cattle-disease continue; prices declining.
Seoni ...	.....	Warm; cloudy; ploughing for *kharif* progressing; prices stationary.
Hoshangabad ...	.....	Cloudy; ploughing continues; small-pox prevalent; prices stationary.
Raipur ...	.....	Report not received.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*		
Sambalpur (April 30th)	.....	Clear and cloudy alternately; sugarcane doing well; no other crops on ground.
		General Remarks.—Cloudy; hot; winnowing still continues in a few districts; outturn of *rabi* generally good; preparations for *kharif* sowings progressing; prices stationary.
British Burma— (May 5th)—		
Akyab ...	.....	Public health normal.
Rangoon ...	1·30	Total rainfall 7·11; 19 deaths from small-pox. Fever prevalent in two townships in the Hanthawaddy district; health of cattle good.
Bassein ...	*Nil*	Total rainfall 8·88; public health good; slight cattle-disease in two townships.
Prome ...	·92	Total rainfall 2·86; small-pox in one township.
Amherst (Moulmein) ...	4·26	Total rainfall 10·33; public health good.
Toungoo ...	·46	Total rainfall 3 inches; public health good.
		General Remarks.—Small-pox continues in Pegu; a few cases in Arakan, otherwise general health good; weather unsettled.
Assam—(May 5th)—		
Gauháti ...	2·19	Frequent rain; sky overcast with clouds; *asu* cultivation much retarded by rains; prospects of tea fair.
Sylhet ...	1·98	Ploughing and sowing going on satisfactorily.
Cachar ...	1·95	Weather hot; sowing of seasonable crops continues; common rice 13$\frac{5}{8}$ seers per rupee; public health good.
Dibrugarh ...	·26	Sowing for early rice crop all done; sugarcane cultivation still in progress; weather clear and cool.
Mysore and Coorg— (May 5th)—		
Bangalore ...	·01	Prospects favourable; health good; murrain still prevalent in parts; prices generally stationary.
Mysore ...	1·09	
Mercara ...	.....	Report not received.
Berar & Hyderabad— (May 5th)—		
Amráoti ...	.....	Land being prepared for sowing.
Akola ...	.....	Weather very hot; health good.
Hyderabad ...	.....	*Lahi* crops nearly ripe; land being prepared for *kharif*; no sickness or cattle-disease, except in southern taluk, where heat is intense, with some fever; prices—yellow *jowar* 18, white *jowar* 15, wheat 9 seers per current sicca rupee.
Central India States— (May 5th)—		
Indore ...	.....	Weather seasonable; health and prospects good.
Morar (Gwalior) ...	.....	Fever still prevails; heat intense; *jowar* 30, *bajra* 34 seers.
Sutna ...	.....	Prospects good; *jowar* 37 seers 10 chittacks.
Rutlam ...	.....	Weather clear and hot; public health good.
Neemuch ...	.....	Health good; weather hot and cloudy.
Goona ...	.....	Hot; crops good; health good; wheat 19 seers.
Bhopal ...	.....	Health good.
Agar ...	.....	Health good; agricultural prospects favourable.
Nowgong ...	.....	Health fair; *rabi* harvest good.
Mánpur ...	.....	Weather hot; fever and small-pox prevalent.
Rajputana—		
Serohi (May 2nd)	.....	Tanks dry; wells fairly full; healthy; very much hotter.
Marwar (April 30th)	.....	Water only obtainable in wells; health good; crops excellent; excessively hot; hot winds blowing furiously; prices falling.
Meywar ...	.....	Tanks dry; from some parts water reported low in wells-around Oodeypore plentiful; health good; threshing in progress; high winds.
Harowtee (May 1st	.....	Health good; wind variable; prices steady; heat great.
Jhallawar ...	.....	Health and prospects continue good.
Ajmere (May 5th)	.....	Prospects favourable; seasonable; health good; prices stationary.
Jeypore ...	.....	Reaping completed; fair outturn; health good; seasonable.
Bhurtpore ...	.....	
Ulwur (May 4th)	.....	Health good; hot winds.
Nepal— (April 27th)—		
Katmandu ...	1·22	Prospects good.

* Dhan.
† Choti jowar.
‡ Kodon.
§ Makai, moth, marhua, sawan kodon, and mairi.
‖ Laharra, sawan, kodon, and marhua.
¶ Peas, arhar, and másh.

[a] Barley, bajra and gram falling.
[b] Barley, jowar and firewood falling.
[c] Firewood rising.
[d] Barley falling.
[e] Firewood falling.
[f] Barley falling and firewood rising.
[g] Barley and gram falling.
[h] Jowar and firewood falling.
[i] Barley rising.
[j] Salt rising.
[k] Salt falling.

Prices Current of Food-grains throughout India for the 1st half of April 1880—concluded.

QUANTITIES PER RUPEE IN SEERS OF 80 TOLAHS.

Wheat ...	160,323	The area irrigated on the Bári Doab Canal during month was 5,377 acres over that for February 1880; 28,829 acres over that for March 1878-79, and 53,310 acres more than the reported irrigation of March 1877-78. About half of this increase is due to new irrigation on the Kasur and Sobraon Branches. The water entering the canal was 2789·64 cubic feet per second, of which 0·17 passed out of escapes and 2908·20 was utilized, or 118·73 more than the volume entering minus escapes. The reason for the excess is the temporary closure of the canal for 2 days which did not affect the gauge readings at Aliwal.

C. TAYLOR,
Asst. Secy. to the Govt. of Bengal,
P. W. Dept., Irrigation Branch.

The 23rd April 1880.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY ESTABLISHMENT.

PROGRESS MADE IN THE CONSTRUCTION OF THE RUK-SIBI SECTION, KANDAHAR STATE RAILWAY.

Nos. 261-62 R.E., dated Simla, 28th April 1880.

RESOLUTION—By the Government of India, P. W. Dept.

Read again—

Public Works Department Resolution Nos. 079-80R.C., dated the 6th February 1880.

Read also—

No. 6 R.—238, dated 12th March 1880.

From—Colonel C. J. Merriman, C.S.I., Acting Secy. to the Govt. of Bombay, P. W. Dept.,
To—The Secretary to the Government of India, Public Works Department.

In continuation of my letter No. 5 R.—164, dated 24th February 1880, I am directed to forward, for the consideration of the Government of India, a minute, dated 10th March 1880, by the Governor of Bombay, on the "Services of Engineer Officers on Surface Railway between Indus Valley and Sibi," together with the report (in original) by Colonel Lindsay, R.E., referred to in paragraph 1 of the minute.

Minute by the Governor of Bombay, dated 10th March 1880.

1. I have much pleasure in submitting, for the consideration of the Government of India, the report (in original) received from Colonel Lindsay, R.E., Engineer-in-Chief of the Kandahar Railway, on the completion of the Jacobabad-Sibi Section of that line.

2. The work, which was begun on 5th October 1879, was completed on 14th January 1880, and represents the construction of 133½ miles of surface broad-gauge railway in 101 days, showing a daily average of 1⅓ miles—a fact which of itself speaks to the energy and zeal displayed by all concerned.

3. I entirely concur in the commendation bestowed by the Engineer-in-Chief on the officers mentioned in his report, but would more particularly bring to the notice of the Supreme Government the names of the following gentlemen specially mentioned by Colonel Lindsay, for the reasons stated in paragraphs 17 and 18 of his report. Mr. J. R. Bell, the Superintendent of Works, an officer well known for his ability in several of the special branches of the Engineering profession; Mr. MacIvor, Mr. Routh, and Mr. Hutchinson: and of the platelaying division; Mr. Monk, Executive Engineer, whose services have been conspicuous on this occasion and whose administrative ability is well proved; Mr. Tait; and Mr. Moyle, a young officer, who has rendered remarkably good service; also Mr. Peel.

4. I would also add the names of Captain Hall and Lieutenant Rayner of the Transport Department, serving with the Railway authorities.

5. I would further mention, for the kind consideration of the Government of India, the name of Mr. Maclean, of the Government Telegraph Department, whose exertions in keeping the telegraph line well up with the advancing railway are well worthy of commendation.

6. Of Colonel Lindsay himself it is almost superfluous for me to speak. The services of this officer are already well known to the Government of India; and I will but add that it is to his untiring energy, superior discretion, and ceaseless exertions that the rapid construction of the railway is especially due. I am sure that his high professional qualifications will be specially manifested in the further progress of the line through the difficult country which lies before us.

7. Lastly, I have to record my sense of the services rendered to me by my Military Secretary, Major E. S. Rivett-Carnac, 11th Hussars, whose practical experience in the field in various countries was of great use to me in ensuring rapid and useful progress in a work of this nature.

No. 486, dated 15th February 1880.

From—Lieut.-Col. J. G. Lindsay, R.E., Engineer-in-Chief, Kandahar State Railway,
To—The Military Secretary to the Government of Bombay.

I have the honor to report, for the information of His Excellency the Governor of Bombay, the completion of the Jacobabad Section of the Kandahar Railway, and to place on record as briefly as possible a few facts regarding its construction. Mr. Mallet, Engineer-in-

Chief, Indus Valley State Railway, received orders on 10th September to begin the line at Ruk. On 12th September I was desired to proceed from Darjeeling to Jacobabad and select a line from that towards Dadur. Mr. J. R. Bell, then at Simla, was appointed Superintendent of Works; and the Engineers named in the margin were posted to the line, and joined on the dates specified.

Lieutenant-Colonel J. G. Lindsay, R. E.	Sept.	19th
Mr. J. R. Bell	,,	16th
Mr. H. L. Monk	,,	18th
Mr. J. Tait	,,	25th
Mr. G. Moyle	,,	22nd
Mr. Routh	,,	19th

2. The first few days were occupied in laying down sidings at Ruk Station, and making preliminary arrangements for the reception and carriage of material. The platelaying on the main line began on 5th October. In the meantime I had examined the country between Jacobabad and Dadur by the Bagh and Lehri routes, and had recommended to His Excellency the adoption of the direct line.

3. On the 15th October Sir Richard Temple arrived at Ruk, travelled by the line as far as Shikarpur, the first station; and as the work had been well started by Mr. Mallet and the forward line selected, His Excellency handed over charge of the undertaking to me on 16th October, the platelaying on that date having advanced nearly to mile 13th from Ruk.

4. The orders of the Government were to make a surface line of railway from Ruk to Dadur at a mile a day. The obstacles met within the first 45 miles were the different irrigation canals and channels. On these temporary wooden bridges were made, the line was cleared of jungle to allow of a double cart-road, and a one-foot bank, just enough to pack the sleepers, was thrown up. In this preliminary work the civil authorities, who had immediate command of local labor, greatly assisted. From mile 45th the difficulty lay in the fact of there being a waterless desert for a distance of 84 miles.

5. A survey party, as named in the margin, marked out the line and built small sheds every six miles. They were supplied with water by means of camels and carts from the right and left; but the quality was bad, and the supply small, and it was soon realized that all water for the platelayers and cattle must be brought from the rear.

Mr. MacIvor, Executive Engineer,—25th September.
Mr. Routh, Assistant Engineer,—19th September.
Mr. Hutchinson, Assistant Engineer,—4th October.

6. His Excellency the Governor, before finally approving of the line I had recommended, rode over it on 26th October.

7. For the supply of the large quantity of water required, two reservoirs were made at mile 45th, where advantage was taken of a small channel which brought Indus water by the Begari and Nourwah canals. Mr. Tait, the Engineer in charge of the local irrigation works, undertook to, and did, keep this reservoir full of water; and the necessary steam-pumping machinery was fixed there. Mr. Bell, with much forethought, had procured ten tank-wagons from the Sind, Punjab and Delhi Railway Company, each containing 2,000 gallons of water. General Trevor, the Director-General, subsequently procured five more of these vehicles, which were supplemented by 400-gallon tanks, eight of which were placed on each wagon frame.

8. On an average there were 3,800 men in the platelaying camp and 1,400 cattle these required 20,000 gallons of water daily, which was sent them.

9. From the beginning it was anticipated that there would be trouble in inducing the laborers to enter on their work in the desert. It was true that its horrors could not be exaggerated; the workmen of course heard of the manifold dangers before them long before they reached the desert border, and it remained to be proved whether their confidence in the Engineers who led them would overcome their natural fears or not. Camps were established every six miles across the desert; firewood and forage were stacked there, and at the first three camps portable mat huts (which were moved on as the line advanced) were erected. The workmen struck, as had been anticipated; they were asked to state their fears fully, and the preparations that had been made for their safety and comfort were patiently and distinctly described to them. All demands for an increase of pay were refused, while it was shown that extra work on the part of the men would bring extra wages. The strike was, in my opinion, most firmly and judiciously dealt with by Mr. Bell and Mr. Monk. The men were convinced that they would be taken care of; they saw and heard of the preparations made for their safety, and after a delay of five days started work again with a will; and, with only one day's holiday, worked as, I believe, men seldom have worked in this country until the line was completed to Sibi.

10. A Storekeeper and Assistant Locomotive Superintendent, who joined on the dates named, were appointed to the line. On the first devolved the duty of receiving, loading, and despatching all the material at and from Ruk; and the second had charge of all rolling-stock and workshops. These duties were admirably performed; material and stores arrived at the front with almost perfect regularity, and all work connected with the Locomotive Department was most satisfactorily done.

Mr. L. C. Desmazures	September	29th
Mr. M. MacInerney	,,	28th

11. The permanent-way with which the line was laid is particularized in the margin; the many different descriptions of it entailed, as may be imagined, considerable trouble, and great care had to be taken that the material was not mixed.

Railway from which received.	No. of miles.	Description of permanent-way.
East Indian Railway Company.	30	80-lb. iron rails with cast-iron chairs and wooden sleepers supplied by East Indian Railway.
Do. do.	40	Ditto ditto purchased.
Great Indian Peninsula Railway Company.	45	84-lb. bull-headed steel rails, new cast-iron chairs; 25 miles sleepers supplied by Great Indian Peninsula; balance purchased.
Punjab Northern State Railway.	19½	60-lb. flat-footed steel rails, wooden sleepers; spikes made in Bombay.
Sind, Punjab and Delhi Railway Company.	14½	72-lb. new steel rails with cast-iron pot sleepers.
Do. do.	8	Old 70-lb. iron rails with cast-iron posts keyed inside.
Do. do.	10	Old rails corroded very badly with salt water; cast-iron chairs with wooden sleepers purchased.
Do. do.	5	Old 72-lb. rails with cast-iron chairs; wooden sleepers purchased.
TOTAL	172	

12. Some time elapsed before the full staff required were able to join. The Engineers named in the margin* joined on the dates specified, and were employed in various duties connected with the completion and up-keep of the line as it was laid down.

13. The progress of the work may be briefly recorded as follows: From the 5th October to 16th December the daily average was 1·05 miles; from 16th December to 14th January the average daily progress was exactly 2 miles; the greatest length laid in any one day was 2¾ miles, and the whole 133½ miles were laid in 101 days, giving a daily average of 1⅓ miles.

14. For the purpose of carrying forward permanent-way material from the front, where it was daily brought by train, His Excellency allotted six hundred carts of the Bombay Transport Train, which were first under Lieutenant Rayner and afterwards under Captain Hall. To show that the work they did was well done, I need only mention that they used to lead forward over 600 tons of material daily, on an average lead of four miles loaded, four miles empty. Had it not been for the transport carts, the work would either have been delayed, or the people of the district heavily taxed by the necessity of forced labor.

15. Dr. Faulkner, Indian Medical Department, was posted to the Railway. He paid much attention to the sick along the long length of line to which his duties extended and well looked after the sanitation of the Railway camps.

16. The Subordinates' staff, who advanced with and followed up the platelaying party, were those named in the margin.† They worked throughout with unremitting energy and skill.

17. His Excellency the Governor has spent so much time actually on this work, that he is well aware of the merits of the Engineers who have been engaged on it; and it is only necessary for me to name those who have borne the most prominent part in the undertaking. On Mr. J. R. Bell, the Superintendent of Works, fell the burden of the work; and to his ceaseless energy and ability its successful completion must be attributed.

Mr. MacIvor, with his Assistants Messrs. Routh and Hutchinson, when the heat was still severe, marked out the line to Sibi and to Dadur. With Mr. MacIvor to deal with, I felt that the work entrusted to him would be well and efficiently done, as indeed it was.

18. The platelaying division was under Mr. Monk, Executive Engineer, assisted by Messrs. Tait and Moyle. I need only draw attention to the result of their labors to show how well and how devotedly they worked. Mr. Peel, Assistant Engineer, was early in the field, and most efficiently carried out the preliminary work and arrangements north of Jacobabad. In this hurriedly-written narrative of an important work, directed by His Excellency Sir Richard Temple, I am actuated by a desire to name all who have well borne their part in it, and trust that I have not omitted any who have contributed to its success. I write this in justice to those whose labors have resulted in the completion of this line in less than the time named by the Government of India—in less time, I may be permitted to say, than was thought possible even by the most sanguine.

RESOLUTION.—His Excellency the Governor General in Council is pleased to add the names of Mr. C. V. MacIvor, Executive Engineer, and Messrs. R. S. Routh and W. C. Hutchinson, Assistant Engineers, to the list of officers whose services have been specially recognized in Public Works Department Resolution Nos. 079-80R.C., dated the 6th February 1880, and to whom certain privileges have been granted.

ORDERED, that this Resolution be communicated to the Government of Bombay and to the Director-General of Railways for information and guidance, and be published in the Supplement to the *Gazette of India*.

J. S. TREVOR, *Major-General, R.E.*,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 11TH MAY 1880.

GENERAL REMARKS.—Rain has fallen in Assam, Bengal, British Burma and Madras; it was heavy in parts of Central and Eastern Bengal and in Sylhet. In Mysore, the North-Western Provinces and Oudh, Rajputana and the Punjab, the rain was slight and partial. In Bombay (with the exception of a fall of about one-third of an inch in Kanara), Berar and Hyderabad, the Central Provinces and Central India States, there was no rain. Agricultural operations are proceeding satisfactorily. Agricultural prospects and public health remain good on the whole.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
(May 12th)—		
Bellary ...	·1 at Pennakondah	*Ragi* 28·72; paddy harvesting in two taluks; standing crops generally good.
Kurnool ...	.....	*Ragi* 33·41; paddy harvest nearly completed.
Ganjam ...	1·35 (average of ten stations).	*Ragi* 31·33.
Kistna ...	·50 (average of three stations).	*Ragi* 33·05.
Chingleput (Madras) ...	.....	*Ragi* 22·15; wet and dry crops being harvested; standing crops doing well.
Coimbatore ...	1·0 (average of fourteen stations).	*Ragi* 23·95; crops generally fair; harvest of paddy full in Erode.
Tanjore ...	·97 (average of seven stations).	*Ragi* 25·54; crops generally good; harvest of oil-seeds and chillies, outturn ¾.
Madura ...	·81 (average of six stations).	*Ragi* 25·60.
Malabar ...	·2 (average of six stations).	*Ragi* 19·4.
Travancore ...	·15	*General Remarks.*—General prospects fair.
Bombay—		
(May 12th)—		
Kurrachee ...	.....	High westerly wind; river at Kotri on 10th 6 feet 5 inches, against 5 feet 2 inches on same date last year; sowing of *kharif* crops progressing; measles in two, fever in four, and cattle-disease in three talukas.
Hyderabad ...	.....	*Kharif* operations progressing; fever and cattle-disease in three talukas, small-pox in four.
Ahmedabad ...	.....	Ploughing and manuring operations going on; public health good.
Baroda ...	.....	Sugarcane crop in good condition; land being prepared for *kharif* sowing; public health good.
Surat ...	.....	*Rabi* harvest completed; fever in three talukas.
Násik ...	.....	Ague and cattle-disease in one taluka; land being prepared for monsoon crop; weather warm.
Colaba (Bombay) ...	.....	Abnormal temperature 1° warm on the 5th, afterwards *nil*; vapour in air normal; abnormal wind northerly, except on 5th when it was southerly.
Poona (May 9th)	.....	Cattle-disease in Khed taluka.
Ahmednagar ...	.....	Preparation of land for monsoon crop progressing.
Sholapur ...	.....	Prospects unchanged; public health good.
Dharwar ...	.....	No report received.
Kanara ...	·33 (average of two talukas above Ghât).	Ground being prepared for monsoon crop.
Rajkot ...	.....	Weather very hot; public health good.
		General Remarks.—Weather hot; public health good, except in Sind; slight rain in Kanara.
Bengal—		
Chittagong ...	6·33	Late rains have bettered prospects of crops; weather since fair; cholera in Puthia; cattle-disease continues.
Dacca ...	3·18	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	2·23	*Boro dhan* at Satkhira harvested; ploughing going on vigorously; sowing commenced; late rain very beneficial; price of rice stationary; a few cases of cholera in Busseerhat and Baraset.
Moorshedabad ...	2·09	*Boro* being reaped in Jangipur sub-division; *aus* and *amun* sown; fever in three thanas of sudder, otherwise public health good.
Rajshahye ...	1·72	Sowings of *auso* and *amun dhan* going on; outturn of *boro dhan* good, other crops doing well; slight cholera in thana Beauleah.
Burdwan ...	1·52; Culna 1·45; Cutwa 1·10; Raneegunge ·21.	Weather seasonable; sowing of *aus* begun; still some cases of cholera.
Rungpore ...	3·97	Weather cool with showers; sky cloudy; prospects of crops favourable; fever prevalent.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Bhágalpur ...	1·12	Rain permits early preparation for *bhadoi*; small-pox abating; cholera still keeping off.
Purneah ...	1·28	Prospects of crops good all round; *bhadoi* and *aghani* cultivation well advanced; moisture quite sufficient; health much improved by rain falling.
Patna ...	1·10	Outturn of *rabi* favourable.
Durbhunga ...	·55	Threshing of *rabi* crops nearly completed; prices stationary; general health good in head-quarters.
Hazáribágh ...	Slight rain with hail	Weather seasonable; rain with hail somewhat damaged mango crop, but cooled atmosphere and enabled ryots to plough lands; prices of food-grains cheap; general health good.
Cuttack ...	2·82	Ploughing continues; prices stationary; small-pox still reported. *General Remarks.*—Rain general and heavy in parts of Central and Eastern Bengal; all prospects good; cultivation very forward; more rain wanted in Mozufferpore, Pooree and Lohardugga; in some places sowing of early rice and jute finished and seedlings doing well; sugarcane plantation still going on in places; indigo and other crops on ground promising; *boro* paddy being reaped with good outturn; small-pox, cholera and fever still in some places, but public health generally good; prices reported stationary in many districts.
N. W. P. and Oudh—		
Benares (May 11th)	Slight rain on 9th	Wind easterly; weather cloudy; cholera has decreased very much in the city, though it is still flying about the district; prices stationary.
Allahabad („ „)	Slight partial showers chiefly north of Ganges.	Cholera in scattered localities, chiefly north of Ganges, fatal where existent; small-pox still raging at latter place among children; wind east; wheat 20½ seers, coarse rice 19$\frac{5}{16}$ seers; prices rising slightly.
Gorakhpur („ 10th)	Slight rain ·3	Weather unusually cool, calm and cloudy with light rain; cholera decreasing; prices easy; wheat 23$\frac{6}{16}$ seers.
Jhansi („ 12th)	.....	Weather hot but seasonable; slight fever; prices fluctuating; *rabi* outturn good.
Agra („ 11th)	.....	Weather changeable; storms frequent; sickness about.
Bareilly („ 12th)	Shower on night of 10th.	Wind east; health fair.
Meerut („ „)	Sardhana ·2; Ghaziabad ·3; Hápur ·6; slight rain in Mowana and Meerut.	Wind easterly; fever reported at Sardhana, Baghpat and Mowana; prices stationary.
Kumaun („ 11th)	.....	Weather stormy and cloudy; harvest still being cut.
Lucknow („ 12th)	·9	Heat excessive; harvest stored; cholera, fever and cattle-disease still prevalent; barley 30 seers.
Partabgarh („ 10th)	Slight shower on night of 9th.	Weather cool; a few cases of cholera and fever.
Sitapur („ 12th)	·7	Wind east; *rabi* produce poor; no new crops sown; health good; price of unhusked *dhan* 27 seers.
Fyzabad („ „)	·2	*Sawan* being cut; cholera decreasing. *General Remarks.*—Slight rain during the week; wind east and weather cooler; prices rising slightly in Meerut; cholera decreasing in Benares, Gorakhpur, Fyzabad and Partabgarh, but still prevalent in Allahabad and Lucknow; some fever in Meerut and Lucknow; small-pox is reported in one tahsil in the Meerut district and cattle-disease in Lucknow.
Punjab—(May 11th)—		
Delhi ...	Slight rain	Harvest completed; a few fever cases; prices stationary.
Hissar ...	.....	Crops almost garnered; wind easterly; weather cloudy; prices stationary; fever about.
Umballa ...	.....	Crops harvested and being collected; health fair.
Jullundur ...	.....	Health good; crops cut; prices steady.
Lahore ...	.....	Crops cut; health good.
Ferozepore ...	.....	Crops being gathered; prices of food-grains fluctuating.
Sialkot ...	·1 at Zaffarwal	Crops being harvested; health good; prices falling.
Ráwalpindi ...	.....	Report not received.
Pesháwar ...	.....	
Mooltan ...	.....	Crops being threshed and garnered; health good; prices steady.
Dera Ismail Khan ...	Slight rain	Health good; crops being reaped. *General Remarks.*—Agricultural and health prospects generally favourable.
Central Provinces—		
Nágpur (May 12th)	.....	Hot; ploughing for *kharif* continues; prices stationary.
Jubbulpore ...	.....	Occasionally cloudy; winnowing progressing; small-pox continues; prices stationary.
Sangor ...	.....	Hot; threshing almost complete; small-pox and cattle-disease continue; prices stationary.
Seoni ...	.....	Hot; windy and cloudy; small-pox continues.
Hoshangabad ...	.....	Harvest over; small-pox prevalent; prices stationary.
Raipur (May 8th)	.....	Very hot; threshing completed; small-pox continues; cholera ceased; prices rising.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*continued.*		
Sambalpur (May 7th)	.....	Warm; ploughing for *kharif* continues; small-pox in places; prices rising. *General Remarks.*—Hot; *rabi* harvest nearly completed; ploughing for *kharif* sowings progressing; prices stationary.
British Burma—		
Akyab ...	3·57	Total rainfall 9·34; public health good; four deaths from cholera in two townships; slight cattle-disease.
Rangoon ...	.....	Twenty-one deaths from small-pox; fever and small-pox prevalent in two sub-divisions of the Hanthawaddy district, ten deaths from the latter; health of cattle good.
Bassein ...	1·12	Total rainfall 10·0; cholera and small-pox still prevalent; cattle-disease continues.
Prome ...	·85	Total rainfall 3·71; small-pox decreasing.
Amherst (Moulmein) ...	1·21	Total rainfall 11·54; public health good; ploughing commenced in some places.
Toungoo ...	1·14	Total rainfall 4·14; six deaths from small-pox in one township, otherwise public health good. *General Remarks.*—Small-pox prevalent in Pegu division and in Toungoo; some cholera and fever; slight cattle-disease; rain has fallen generally, but weather is still hot and oppressive.
Assam—(May 12th)—		
Gauháti ...	·25	Weather seasonable; sowing of *asu* still going on; prospects of tea favourable.
Sylhet ...	4·07	Cultivation progressing satisfactorily; prospects good.
Cachar ...	Information not received.	Weather seasonable; about one-half of *asra*, *murali* and *dumahi dhan* sown; common rice 14½ seers per rupee; public health good.
Dibrugarh ...	2·21	Prospects of early rice crop reported good; ploughing for *sali* going on; weather seasonable; cholera reported on the north bank.
Mysore and Coorg—(May 12th)—		
Bangalore ...	·44	Rain not sufficient for standing crops; fever prevalent in parts, as also murrain among cattle; prices generally stationary.
Mysore ...	·03	
Mercara ...	·3	
Berar & Hyderabad—(May 12th)—		
Amraoti ...	.....	Preparations for *kharif* sowings continue.
Akola ...	.....	Land being ploughed for *kharif*.
Hyderabad ...	.....	*Tabi* crops being harvested, damaged in places by want of water in tanks; fever and small-pox prevail in parts; prices—white *jowar* 13, yellow 15, coarse rice 9½ seers per current sicca rupee.
Central India States—(May 12th)—		
Indore ...	.....	Clear and cool; health and prospects good; wheat 13½ seers.
Morar (Gwalior) ...	.....	Cloudy; fever prevailing; *jowar* 29 seers, *bajra* 32 seers.
Sutna ...	.....	Cloudy with dust-storms; cholera again in Rewah; *jowar* 33 seers 15 chittacks.
Rutlam ...	.....	Weather hot and windy; health good; opium and grain markets steady.
Neemuch ...	.....	Weather seasonable; public health good.
Goona ...	.....	Hot; crops good; wheat 20 seers.
Bhopal ...	.....	Prospects of crops and public health good.
Agar ...	.....	Health good; agricultural prospects favourable.
Nowgong ...	.....	Health fair; *rabi* harvest good.
Mánpur ...	.....	Weather hot; fever and small-pox continue.
Rajputana—		
Abu ...	.....	Report not received.
Serohi (May 9th)	.....	Tanks dry; wells fairly full; healthy; hot winds; days warmer; seasonable.
Marwar („ 7th)	.....	Well water diminishing daily; health good; crops almost gathered; clouds gathering; air moist; prices stationary.
Meywar ...	.....	Tanks dry; water in wells in some parts low, at Oodeypore plentiful; health good; high winds.
Harowtee (May 8th)	.....	Health good; tanks drying; wells fairly full; seasonable.
Jhallawar ...	.....	Strong west winds; dust-storms; health good.
Ajmere (May 12th)	·03	High winds; cool; prices rising.
Jeypore ...	·3	Preparing for sowings; health good.
Bhurtpore ...		
Ulwur (May 11th)	Slight showers	Health fair.
Nepal—(May 4th)—		
Katmandu ...	2·94	Continued rain has somewhat injured the wheat; sunshine needed; cholera decreasing.

* Explanation has been called for for the slight differences between the figures now quoted for 1879 and those entered in the original return for the corresponding period of 1879.

† As the figures now quoted for the past fortnight differ from those given in the previous return, the Collector has been called upon to explain the discrepancy.

‡ This is the average of Bombay and Goa salt, *vide* G. O., 6th April 1880, No. 417.

a In the interior the prices range as follow :—Wheat 13-8 to 16-4 seers, barley 28-8 to 32 seers, best rice 14-8 to 17 seers, common rice 16 to 20-8 seers, and gram 17 to 18 seers.

b In the interior the prices range as follow :—Wheat 9-8 to 15 seers, barley 20 to 45 seers, best rice 14 to 18 seers, common rice 15 to 19 seers, maize or Indian-corn 20 to 32 seers, and gram 12 to 16 seers.

c In the interior the prices range as follow :—Wheat 13-8 to 21 seers, best rice 13-8 to 22 seers, common rice 18-8 to 24 seers, and gram 15 to 25 seers.

d In the interior the prices range as follow :—Wheat 11 to 16 seers, barley 16 to 23 seers, best rice 7 to 16 seers, common rice 14 to 17 seers, and gram 12 to 16 seers.

e In Mohesrekha the prices are—Best rice 12 seers, common rice 16-8 seers, and gram 11 seers.

f In the interior the prices range as follow :—Wheat 12-4 to 13 seers, barley (in Kidderpore) 20 seers, best rice 6-8 to 8 seers, common rice 13 to 17 seers, maize or Indian-corn (in Kidderpore) 16 seers, and gram 14-8 seers.

g In the interior the prices range as follow :—Wheat 13-4 to 23 seers, barley 20 to 38 seers, best rice 8 to 16 seers, common rice 14-6 to 19 seers, maize or Indian-corn (in Kooshtea) 16 seers, and gram 17-4 to 24 seers.

h In the interior the prices range as follow :—Wheat 8 seers, best rice 8 to 17 seers, common rice 17 to 19 seers, and gram 8 to 14 seers.

i In the interior the prices range as follow :—Wheat 16 to 20 seers, barley 30 to 40 seers, best rice 12 to 18 seers, common rice 16 to 19 seers, and gram 21 to 25 seers.

Prices Current of Food-grains throughout India for the 2nd half of April 1880 —continued.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

STATE RIGHTS IN MINERALS AND MINING LEASES.

From the Government of India, to the Secretary of State for India,—No. 7, dated Simla, the 1st September 1879.

WE have now the honour to reply to Your Lordship's despatches marginally noted, concerning the rights of the State in minerals, and the terms that should be imposed on gold-mining leases on Government lands in the Wynaad districts of Madras. There has been delay in coming to a decision on these points, because we were obliged to take legal advice on some of the questions raised, and because we desired to ascertain the policy recently adopted in Australia regarding mining leases in the gold-fields of that continent.

No. 40, dated 10th May 1877.
No. 69, dated 10th October 1878.

2. Regarding the State rights in minerals, three distinct questions had first to be considered, namely—

(1) whether the royal prerogative, as it obtains in England in respect to gold and silver mines, prevails in British India; and whether grantees of waste land are entitled to mines of gold or silver found thereunder, when the deed of grant is silent as to such mines;

(2) whether, apart from such prerogative, the Crown in India can assert a right to gold, silver, or other minerals on any other ground;

(3) whether, if both these questions are answered in the negative, the mineral resources of the land can be taken into account in assessing land-revenue.

3. The Madras Government, in their letter No. 320, dated 23rd January 1877, concurred with their Advocate General, and expressed an opinion that the royal prerogative regarding gold and silver mines did not prevail in India. They held that it would be impolitic, even if it were legally possible, to assert any Government right in the mineral resources of lands sold under the Waste-Land Sale Rules, or in lands held by certain ancient proprietors of the Malabar district. The Governor of Madras in Council advised also that the claims of ryots to the mineral wealth of their holdings should not be disturbed; and on this point His Grace in Council differed from the view expressed by the Madras Board of Revenue. The Madras Government pointed out that, if large numbers of gold-workers were to come to the mines, police and other expenses would be thrown on the Government, to meet which a reasonable royalty might properly be imposed. The Governor of Madras in Council also recommended that, until the policy of Government with reference to mineral rights in the soil was settled, all sales of Government land under the Waste-Land Sale Rules should be made subject to the reservation of the State rights in minerals found underneath those lands.

4. We referred the three questions stated in the second paragraph of this letter for the opinion of our Advocate General, of our Standing Counsel, and of one of the first lawyers in Calcutta. We submit copies of the opinions of these gentlemen for Your Lordship's information. It will be seen that they all three agree that the prerogative of the Crown regarding gold and silver mines does not exist in India outside the presidency towns, and that grantees of waste land are entitled to mines of gold or silver found thereunder when the terms of the grant are silent as to such mines. While there is no doubt that all the prerogatives essential to the maintenance of the executive power, such as the right of making war, peace and treaties, are in force throughout British India, yet, as the right to mines of gold and silver is merely a fiscal prerogative, and is not essential to the maintenance of the executive power,

it stands precisely on the same footing as the prerogative rights to whales and sturgeon, wrecks, treasure-trove, waifs and estrays—cases in which no one would maintain that the Crown has any right in India apart from express legislation. Such prerogatives, in fact, belong to that part of the English Common Law which has arisen from, and is adapted to, merely local requirements, and is not therefore in force in this country. Moreover, since the Indian Legislature, in the Punjab Land-Revenue Act (XXXIII of 1871), section 29, thought it necessary to declare that in the Punjab mines of metal shall be deemed to be the property of Government, and since, by the Ajmere Land-Revenue Regulation (II of 1877), section 3, the Government is, with certain exceptions, presumed to be the sole owner of all mines until the contrary is proved, it would be inconsistent to contend that the prerogative right to gold and silver mines exists in India, as, if it did, there would have been no need for these express statutory provisions, or at least these particular metals would have been excluded in framing them. On these grounds, we consider that the opinion of the law officers may be finally accepted, and that whatever be the rights of the Government of India in the matter, no claim on the part of the State can be preferred on the ground of the prevalence in India of this royal prerogative outside the limits of the presidency towns. As to the right of grantees, the decisions in England are to the effect that mines of gold and silver will not pass by a grant from the Crown without express words granting them. We are, however, advised that the principle of such decisions is wholly inapplicable to India. When this principle was established in England, grants from the Crown of its land had the effect of impoverishing the Crown, being made from favour and without consideration moving from the grantee. But in India such grants have, it is believed, usually been made in consideration of a money payment, and have therefore had the effect of enriching the Crown. We are aware that this argument was used unsuccessfully before the Judicial Committee of the Privy Council in the case of *Woolley* v. *The Attorney General of Victoria*, Law Reports, 2 App., Ca. 163, 165. But the reason why it failed was that the Common Law of England (including all the prerogatives and the consequences thereof) had been introduced into the Colony of Victoria, from which that appeal was presented. No such introduction, it is conceived, can be held to have taken place in this ceded and conquered country. The reason why in England grants from the Crown are construed strictly against the grantee is generally said to be that prerogatives are conferred on the Crown for public use, and are therefore not to be understood as diminished by any grant beyond what it takes away by necessary and unavoidable construction. But where no such prerogative exists, of course that reason ceases. We therefore consider that grantees of waste lands (whether or not the grants expressly comprise "all products both above and below the surface") are, in the absence of any provision to the contrary, entitled to mines of gold and silver found thereunder.

5. In regard to the second question, whether the State possesses other general or special rights in minerals lying under lands which are private property, our Advocate General differs from the other two learned gentlemen who were consulted. Their opinions referred mainly to Bengal and the permanently-settled districts, with the circumstances of which they were conversant. Mr. Paul considers that the State has rights in the minerals found in permanently-settled estates; while Messrs. Bell and Evans think that the State does not possess such rights. We consider that the latter is the opinion most likely to be taken by the Courts. And we are confirmed in this view by the practice of the past twenty years, whereby the Government or any private parties who desired to work coal or iron within the limits of a permanently-settled estate have been obliged to buy, or at any rate have bought, the right of so doing from the zamindar of the lands underneath which such coal or iron might exist. Regarding the circumstances of other provinces, and the way in which State rights in minerals had been asserted or waived, enquiry was made from Local Governments in the year 1871. The replies to that enquiry are recorded in the Proceedings of the Revenue, Agriculture and Commerce Department for August 1872, Nos. 26 to 37, copies of which are now submitted for Your Lordship's perusal. It appears from these papers that in most parts of the country

no established law or practice was known upon the subject; and that, as no mines had been opened, no occasion had arisen to determine the rights of the State in respect to such property. In the North-Western Provinces, however, it had been ruled that, where the surface land had been declared private property, the ownership extended, in default of some distinct and special reservation, to what was below the surface. In newer provinces, on the other hand, such as the Punjab, there was no settled judicial precedent making mines and metal private property. And accordingly opportunity was taken to declare by legislation (section 2 of Act XXXIII of 1871) that mines of metal in the Punjab and also in Ajmere (section 3 of Regulation II of 1877) should be deemed to be the property of Government. Similarly, in the Central Provinces, at the time when proprietary right in their lands was conferred upon the landholders, the full right of Government to minerals was reserved under the provisions of the Settlement Code. So also in Berar, a notification issued by the Resident in 1868 concerning the settlement then in progress declared that "the prior right to all valuable things below the surface belonged to the State."

6. On the third point, namely, whether minerals belonging to private proprietors can be taken into account in assessing the estates of those proprietors to land-revenue, the Advocate General and the other learned gentlemen consulted are, in the main, agreed that, when temporarily-settled estates come under resettlement, the minerals, just like the other resources of such estates, constitute assets on which land-revenue may fairly be assessed. This practice has been already partially followed in provinces where miscellaneous items are reckoned into the village assets for the purposes of the assessment of land-revenue.

We have already noticed (paragraph 3 of this despatch) the views of the Madras Government and of the Madras Board of Revenue regarding the rights of ryots to all mines and minerals in their holdings. Seeing that different classes of tenure may be grouped under the generic term of 'ryotwari tenure,' we hesitate finally to accept, without further enquiry, the view that all holders of ryotwari lands are entitled to all mines and minerals under the holdings. Probably the *jenmies* of Malabar, whose tenure is ancient, may be so entitled. But we shall ask the Madras Government to consider further the question of the rights of ordinary ryots in the minerals under their holdings.

7. Such being the opinions of the Law officers, and such being the reports or recommendations of the several Local Governments, we would advise Your Lordship to answer the three questions summarised above (paragraph 2) thus:—

(1) The Crown has in British India no special prerogative over gold and silver mines outside the presidency towns; and grantees of waste land are entitled to mines of gold or silver found thereunder when the deed of grant is silent as to such mines.

(2) No general rule, applicable to all provinces, can properly be laid down, either that minerals and metals found in proprietary lands belong to Government, or that they do not so belong. Even in different parts of the same province, the law and the fact on this matter may be different. When the question arises in each province, it will have to be answered for that province only, in accordance with the practice of the Government and with judicial (or other) precedent. But in any province where proprietary rights have been a recent creation of the British Government, where their precise nature and extent are still unsettled, and where custom or practice about mines has not had time to grow up, advantage should be taken of favourable opportunity to declare by legislation that mines of metals in such provinces are State property.

(3) Mineral resources of temporarily-settled lands, where the proprietors are held to be the owners of such resources, may be taken into account at any resettlement as assets on which the public demand for land-revenue may be assessed.

Further, we should have no hesitation in proposing legislation, if necessary, to provide for raising from mining communities the expenses of special police, special communications, regulating the water-supply, or other special administrative arrangements which might be necessary for the protection or welfare of such communities. Such legislation would be in accordance with the principle adopted in section 14 of Act V of 1861, where provision is made for enlisting special police for the protection of, and at the cost of, any manufactory or public work.

8. We have considered the proposal of the Madras Government that in future sales of waste lands the State should reserve full rights and property in all metals and minerals which may be found in such lands, and also all reasonable conveniences for working such minerals or metals, either by itself, or through other parties. We agree that it is expedient henceforward to sell or grant on lease waste lands subject to these reservations. We solicit Your Lordship's sanction to our modifying the Waste-Land Sale Rules accordingly; and we enclose copy of a circular order we have issued, directing that, until Your Lordship's orders are received, sales or leases of waste lands shall be made subject to such reservation of full State rights in mines and minerals, together with all convenient powers for getting the same.

9. Lastly, there remains the practical question, which requires early decision, namely, on what terms shall mining leases on Government waste lands in the Wynaad, Coorg, or adjacent auriferous tracts be given. We recognise the fact that it is of great importance to India that these gold sources should be worked to the best advantage; we admit that, if gold should be produced in large quantities, the effect of such production on the exchanges between England and India would be of great value; and we think that the terms as to royalty, area of mining leases, and the mode of working should be as liberal as may be possible without encouraging undue speculation. We learn from Mr. Brough Smyth that the most approved system of mining leases in Australia now is to let the land at a moderate rent (ten shillings) per acre, the lessee being bound to employ per acre, or per running yard of reef, a certain minimum quantity of labour on *bonâ fide* mining operations of an approved kind. If the lessee fails to fulfil this condition, he forfeits his lease; and the terms of the mining lease make the Governor of the Colony the final arbiter, on such evidence as may be laid before him, whether a particular lessee has, or has not, failed to fulfil the condition. In the early days of gold-mining industry in Australia, heavy fees (£3 and £2 per month) were charged for mining licenses. Subsequently an export duty was levied on gold taken from the colony; but latterly the Colonial Government of Victoria has found that the largest indirect advantages to the Colony are secured by making the mining leases simple and liberal, subject to the one condition that a certain quantity of labour is employed on *bonâ fide* mining operations for each acre leased.

10. Plans for levying a royalty on the ton of quartz raised, or for establishing a local office of assay and levying a royalty on the gold, have been proposed. But we consider that, for the present, while the industry is undeveloped, our object should be to make the terms of mining leases of Government lands as simple and liberal as possible. In order to prevent large areas falling into the hands of speculators, it has been suggested that a certain limit of available capital, or a certain quantity of (stamping or other) machinery, should be required per acre of land leased. But we are advised that these conditions have been tried, and have been found inoperative and unsatisfactory in Australia, and that the simple condition that a certain quantity of labour shall be employed per acre in *bonâ fide* mining has been found to work best. For the present, therefore, we would propose to authorise the Government of Madras to grant gold-mining leases of Government lands, in lots of from one to thirty acres, for a term of ten to twenty years, at a rent of five rupees an acre, subject to the condition that not less than five labourers are regularly employed per acre on *bonâ fide* mining operations in such manner as the Government may approve. The leases should be liable to forfeiture on failure of this condition, or failure to pay rent, as soon as either failure had continued for a period of six months; and should be renewable, at the lessee's option, on such terms as the then

Government may settle, at the expiration of the original term. The Governor of Madras in Council would be declared to be in each case the final arbiter, whether the lessee had, or had not, fulfilled the conditions of his lease.

We would propose thus to leave wide discretion to the Local Government with reference to the term of each lease and the area comprised therein. We do not propose to levy any royalty or other tax, for the present, on the industry, because we deem it most important to attract capital to the Wynaad gold-fields. The cost of bringing machinery for quartz-crushing to the spot will be heavy; the pioneers of the undertaking will have to buy their experience in many directions; and it is very undesirable that the first ventures now to be made should be unsuccessful.

11. If Your Lordship approves the foregoing sketch of the terms on which gold-mining leases of Government lands might be granted, we shall authorise the Government of Madras to act thereupon, and we shall cause draft leases to be drawn up by our legal advisers.

12. There is apparently ground for believing that some of the best gold reefs that are known in India lie in the estates of the Raja of Nellambor, and of other private proprietors. The Alpha Gold Company's works were opened in the Nellambor lands. As yet the Raja has made his own terms with companies intending to carry on gold-mining; and at present we are not prepared to urge the Madras Government to undertake legislation with a view of compelling private landowners to give gold-mining leases on any particular terms, or against their will.

13. We shall be glad to be favoured with early instructions from Your Lordship, not only on the subject of the terms on which mining leases should be granted in the Wynaad, but also on the three questions raised in paragraph 2 and answered in paragraph 7 of the present despatch. And we solicit Your Lordship's confirmation of our orders directing that, in all future sales or agricultural leases of waste lands in any part of India, mines and minerals found on such lands shall be reserved to the State, together with all convenient powers for working and getting and carrying them away.

From the Secretary of State for India, to the Government of India,—No. 35 (Revenue—Minerals), dated India Office, London, the 25th March 1880.

I HAVE considered in Council your letter, with accompaniments,* dealing with the important questions of the general rights of the State to minerals in India, of modifications of the Waste-Land Rules necessary to secure these rights, and of the terms on which applications to mine in Government waste lands in auriferous tracts shall be complied with.

* No. 7 (Home, Revenue and Agricultural Department) of 1st September 1879.

2. You point out that, regarding general State rights in minerals, three distinct questions have to be considered. In the first place, you hold, and I concur in your view, that the royal prerogative, as it obtains in England in respect to gold and silver mines, does not prevail in British India, at least outside the presidency towns. You proceed to infer that grantees of waste lands, whether or not the grants expressly comprise all products above and below the surface, are, in the absence of provision to the contrary, entitled to mines of gold and silver found thereunder. If this proposition be limited to grantees of waste lands "in fee simple" under the rules framed in different provinces in accordance with the instructions given by my predecessor, Sir C. Wood, in his despatch No. 14 of 1862, I do not dispute it. But I must point out that the expression "grantees of waste land," used without limitation, might be held to include persons who have received, under ordinary terms of settlement, the proprietary rights in lands formerly waste and unoccupied; and to such grantees this view does not apply.

3. As regards the second question, whether, apart from the prerogative, the Crown in India can assert a right to gold, silver, and other minerals found in proprietary lands, you are disposed to agree with Messrs. Bell and Evans that, in the permanently-settled districts, the State does not possess such right. This was the view arrived at by my predecessor, Sir C. Wood, after consideration of Mr. Millet's report, dated 26th March 1842. But, without weighing this opinion against that of your learned Advocate General, I am disposed to think that, even if the legal right to minerals in permanently-settled estates could be established, it would not be desirable to enforce it. I agree with you that the indirect advantages resulting from making available the mineral resources of India are likely to be more valuable to the State than any direct returns; and I therefore consider that it would not be desirable to enforce the right of the State, supposing that such right can be established, to mines in permanently-settled estates. Industries requiring skilled and scientific management and the extensive application of capital have flourished under the permanent settlement; and I apprehend that, speaking generally, the landholders of the Lower Provinces are sufficiently alive to their own interests either themselves to develop the mineral resources their estates may contain, or to afford facilities to others to do so.

4. This, however, does not apply to many other parts of India. I look upon it as pretty certain that the mineral resources of their lands will not be effectually worked by the peasant proprietors themselves of Madras or Bombay, or by the village communities of Northern India; and I apprehend that other promoters of mining enterprise would be likely to meet with considerable obstacles from intricacies of tenure and the difficulty of dealing with numerous small landholders. I consider, therefore, that care should be taken to reserve all State's rights to minerals which still exist. And I am of opinion, especially with reference to the views of the Madras Government mentioned in paragraphs 3 and 6 of your letter, that, in the absence of any distinct judicial precedent or proof of established law or practice, such rights should be presumed still to exist throughout India. I take it that the notion that payment of an assessment based on the agricultural value of land, and intended to cover the right of cultivation, conveys property in minerals below the surface of the soil is essentially a modern one, and would never have occurred to the Native Governments to which our own succeeded. I approve therefore of the instructions you propose (paragraph 6 of your letter) to give to the Government of Madras on this subject. With regard to the other provinces, you state that no general rule, universally applicable, can be laid down, either that minerals found in proprietary lands belong to the State, or that they do not so belong. But, speaking generally, in the North-West Provinces it was ruled, but not, as it appears, by judicial authority, that when the surface is private property, the ownership extends, in default of special reservations, to what is below the surface. The precise degree of authority possessed by this ruling should, however, receive further consideration. In the Central Provinces and Berar the full right of Government to minerals has been reserved at settlement, while in the Punjab and Ajmere, and, it may be added, in the Bombay Presidency,* it has been declared by legislation that mines are the property of Government. You conclude therefore that, whenever the question as to the right of the State to minerals found in proprietary lands actually arises, it will have to be answered for that locality in accordance with practice and precedent. But that where the nature and extent of proprietary rights are still unsettled, and where custom and practice regarding mines has not been established, opportunity should be taken to declare by legislation that mines are State property. With these views I fully concur.

* Section 69 of the New Land-Revenue Code.

5. With regard to the third question, you consider that where proprietors of lands temporarily settled are held to be the owners of the minerals they may contain, such mineral resources may be taken into account for assessment on resettlement. In this view I concur; but request that care may be taken not to confer proprietary rights in minerals by including them among assessable assets where such ownership has not been proved previously to exist.

6. Upon the second point discussed in your letter,—the modification of the Waste-Land Rules suggested by the Government of Madras,—I agree with you that, in future, sales and leases of waste lands for agricultural purposes should be generally made subject to reservation of the full right of the State in mines and minerals, and of right of access and other reasonable conveniences for working them on behalf of Government, or the assignees of Government. I approve the circular you have issued on this subject, and sanction the necessary modification of the Waste-Land Rules.

7. Regarding the last subject discussed in your letter,—the terms on which applications to mine in Government waste land in Wynaad and similar auriferous tracts shall now be granted,—you point out that, if gold should be largely produced in India, the effect on exchanges would be highly beneficial, and that it is consequently of great importance that the gold sources in India should be worked to the best advantage. You consider therefore that the mining terms granted by Government should be as liberal as possible without encouraging undue speculation, and you deem it of importance thus to attract capital to the Wynaad gold-fields. You have ascertained that Australian experience is that the largest indirect advantage to the State is secured by making mining leases simple and liberal, on the one condition that a certain quantity of labour is employed per acre on *bonâ fide* mining operations. You propose therefore to authorise the Government of Madras to grant gold-mining leases of Government lands, in lots of from 1 to 30 acres, for terms of 10 or 20 years, at a rent of Rs. 5 per acre, on condition that not less than five labourers per acre are regularly employed on *bonâ fide* mining operations, in such manner as Government may approve. Power will be given to the Government of Madras to enforce fulfilment of these conditions, and the leases are to be renewable at the expiration of the original period on such terms as the Madras Government may then settle. You thus leave to the Government of Madras wide discretion with reference to the term and area of each lease, and you do not propose for the present to levy any royalty or other tax on the industry.

8. These arrangements appear to me to be judicious, and I approve them. With reference however to the last sentence of the preceding paragraph, and also to the last clause of paragraph 7 of your letter, I am of opinion that it should be made clear that for the term of leases now granted there will be no liability to any future royalty or other tax in addition to the rent, with the exception of any taxation which may hereafter be found necessary to provide, at the expense of mining communities,—the expenses of special police, communications, water-supply, sanitation, or other similar administrative arrangements needful for their own protection or convenience.

9. Finally, I have to observe that the arrangements you now propose appear to refer to mining operations in Government waste lands only. Should, however, it be decided that mineral rights in any owned or occupied lands in Madras are vested in Government, and should gold be discovered in any such lands, I presume that, with due regard to the rights of the cultivating proprietors, mining privileges will be granted on terms similar to those now approved for Government lands.

From the Officiating Secretary to the Government of India, to all Local Governments and Administrations,—No. 1-40—48 (Minerals), dated Simla, the 15th May 1880.

In continuation of my Circular No. 2-11—19, dated the 1st September 1879, I am desired to forward copy of a despatch No. 35, dated 25th March 1880, from the Secretary of State for India, regarding rights of Government to minerals in this country. The policy of the Government of India, as already announced, is generally approved, subject to certain additions to be noticed below.

2. The most important declaration contained in the despatch is that expressed in the fourth paragraph. Hereafter, except in permanently-settled

estates, it will be presumed throughout India that, in the absence of any distinct judicial precedent or proof of established usage, the State has a right to minerals.

3. Attention is invited to paragraph 2 of the despatch, under which the ruling that grantees of waste lands, whether or not the grants expressly comprise all products above and below the surface, are, in the absence of provision to the contrary, entitled to mines of gold and silver found thereunder, is limited to grantees of waste land "in fee simple," made in accordance with the rules framed upon the instructions given in Sir C. Wood's despatch No. 14 of 1862. Should any question hereafter arise in respect to grants of waste land made on other terms, Local Governments and Administrations will have to consider, in each class of cases, what is the specific effect of the form of grant regulating them as touching rights to minerals. The general ruling above quoted must be held not to apply to ordinary cultivating leases made in the course of settlement operations, or in the routine of district revenue work.

4. The direction in paragraph 5 of the despatch, to avoid conferring proprietary rights in minerals by including them amongst the assessable assets where such ownership has not been previously proved to exist, will be duly observed in making temporary settlements. The view of the Government of India, that where proprietors of temporarily-settled lands have been judicially held to be owners of minerals contained therein such mineral resources may be taken into account for assessment on resettlement, has been accepted by the Secretary of State. But, as explained in paragraph 2 above, in the absence of a judicial decision, the presumption will be that such landholders are not owners of the minerals underneath the surface of their lands.

5. With reference to paragraph 6 of the despatch, I am to request that the rules regarding the sale and lease of waste lands for agricultural purposes in force in may be modified, so far as may be necessary, to make leases and sales under them subject to reservation of the full right of the State in mines and minerals, and of right of access and other reasonable conveniences for working them on behalf of Government or the assignees of Government. Full publication should be given to the modifications of rule made under these instructions; and copies of such orders as may be passed by the on the matter should be forwarded to this Department for information.

C. BERNARD,
Offg. Secretary to the Govt. of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR TH WEEK ENDING THE 18TH MAY 1880.

GENERAL REMARKS.—The rainfall of the week presents no new features either in distribution or amount, except that in Mysore it was heavier, and that from Bombay, the Central Provinces and Central India States, where, with the single exception of the Kanara District, there was no rain in the previous week, slight showers are reported. Cultivation is progressing satisfactorily. Agricultural prospects and public health remain generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(May 19th)—		
Bellary ...	·58 (average of nine stations).	*Ragi* 32·4; paddy harvesting in two taluks; standing crops generally good.
Kurnool ...	·44 (average of six stations).	*Ragi* 34·13.
Ganjam ...	·34 (average of six stations).	*Ragi* 31·69.
Kistna ...	·67 (average of four stations).	*Ragi* 33·1.
Chingleput (Madras) ...	1·02 (average of four stations).	*Ragi* 22·74; wet and dry crops being harvested; standing crops doing well.
Coimbatore ...	1·57 (average of sixteen stations).	*Ragi* 24·15; crops fair; harvest of paddy in two taluks, outturn full.
Tanjore ...	.....	*Ragi* 25·54; crops generally good; harvest of chillies, outturn ½.
Madura ...	·83 (average of seven stations).	*Ragi* 25·58.
Malabar ...	·91 (average of twelve stations).	*Ragi* 19·7.
Travancore ...	·88	*General Remarks.*—General prospects fair.
Bombay—(May 19th)—		
Kurrachee ...	.....	River at Kotri on 16th 10 feet 9 inches against 6 feet 1 inch on same date last year; *kharif* preparations and rice transplanting progressing; fever and cattle-disease in four, and small-pox in two talukas.
Hyderabad ...	.....	Fever in three, cattle-disease in two, and small-pox in five talukas; dust-storm on the evening of 18th with very hot wind from the north, lasted for about half an hour.
Ahmedabad ...	.....	Ploughing and manuring operations going on; public health good.
Baroda ...	.....	Sugarcane crop in good condition; land being prepared for *kharif* cultivation; public health good.
Surat ...	.....	Fever in three talukas; one death from cholera in Surat.
Násik ...	.....	Public health good; land being prepared for new crops.
Colaba (Bombay) ...	A few drops on 12th	Average abnormal temperature 1° warm; vapour in air normal; abnormal wind northerly; lightning on the 18th.
Poona (May 16th)	.....	Cattle-disease continues in Khed.
Ahmednagar ...	.....	Preparation of land for monsoon crops nearly finished; sky clear.
Sholapur ...	.....	Prospects unchanged; public health good.
Dharwar ...	·53 in seven talukas	More rain required; *rabi* harvest completed; land being prepared for sowing; slight fever in six, and cattle-disease in one taluka.
Kanara ...	.....	Monsoon crop preparations continue; weather cloudy.
Rajkot ...	·10 on 16th	Weather very hot; health good.
		General Remarks.—Land being prepared for monsoon crops; slight rain in Kattywar and Dharwar; public health generally good, except in Sind, where fever is prevalent.
Bengal—(May 19th)—		
Chittagong ...	2·58	Weather fair but unusually hot; prospects of crops favourable; *aus* seedlings being transplanted; *pania aus* thriving well; cholera in several places.
Dacca ...	·95	Prospects of crops promising; public health good.
24-Pergunnahs (Calcutta)	·81	No crops on ground, rice and jute being sown, prospects good; late rain very beneficial; some cholera in Satkhira and Baraset.
Moorshedabad ...	1·30	*Aus* and *amun* paddy sown; rain general and good for cultivation; fever in some thanas of sadr and cholera in Sujagunge, otherwise public health good.
Rajshahye ...	1·16	Last two days of week very hot; sowing of *amun* considerably advanced; cutting of *boro* still continues; prospect of *til* good; public health good.
Burdwan ...	·51; Culna ·55; Cutwa ·67; Raneegunge 1·90.	Weather seasonable; sowing of *aus* going on, *amun* cultivation begun; a few cases of cholera.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Rungpore ...	1·49	Weather hot; prospects of crops good; price of rice low; public health fair.
Bhágalpur ...	·14	Rain enabled cultivators to begin preparing land for next crops; public health good.
Purneah ...	·77	Prospects of crops good; farming operations well forward; plenty of moisture; health fair.
Patna ...	·47	Prospects favourable; rain enabled cultivators to commence preparing land for future crops.
Durbhunga ...	*Nil*	Weather moderately hot, with strong east wind; general health good in head-quarters; a few cases of small-pox and cholera in Mudhoobunnee; prices stationary.
Hazáribágh ...	·88	Weather unusually cool for time of year; lands being ploughed for autumn and winter crops; prices cheap; solitary cases of small-pox and cholera and cattle-disease here and there, otherwise general health good.
Cuttack ...	·9	Ploughing and sowing continue; small-pox decreasing; prices almost stationary.
		General Remarks. Rain in nearly all districts during week; general prospects favourable; cultivation forward and crops on ground promising; in Central and Eastern Bengal *aus* and jute sowing mostly finished and *aman* sowing commenced; small-pox and cholera still in some places, otherwise general health good.
N. W. P. and Oudh—		
Benares (May 18th)	A smart shower on 17th.	Wind still easterly; weather close; after the fall of rain the clouds dispersed; cholera still in the district, but almost disappeared from the city; prices stationary.
Allahabad („ „)	Slight and partial showers.	The rain was chiefly to the north of the Ganges; cholera still in some centres, but most severe at present in the extreme south-east; fever not more prevalent than usual; wind easterly; wheat 21¼ seers, coarse rice 19⅝ seers, unhusked rice 27⅜ seers.
Gorakhpur („ 17th)	.1	Wind east; weather cool, with occasional storms; cholera decreasing; prices are easy; wheat 22½ seers.
Jhansi („ 19th)	.....	Estimated outturn of *rabi* is 14 annas; slight fever; prices fluctuating.
Agra („ 18th)	.....	Weather changeable and unseasonable; there is sickness, but not to a great extent.
Bareilly („ 19th)	.....	Wind easterly; appearance of weather more settled; health fair.
Meerut („ „)	.....	Wind variable; frequent dust-storms; fever reported in places; prices stationary.
Kumaun („ 18th)	·6 at Champawat, ·26 at Pithoragarh, ·4 Naini Tal, ·3 Almorah, ·9 Haldwani, between 8th and 15th.	Health good; *rabi* outturn good; prices of wheat 13 seers, barley 14 seers, rice 11 seers; *kharif* crop being sown; wind variable.
Lucknow („ 19th)	.....	Wind variable, mainly easterly; cattle-disease reported, but not increasing; barley 30 seers, wheat 21 seers.
Partabgarh („ 17th)	.....	Weather cool; slight showers in parts of two tahsils; sugarcane is being irrigated; cholera decreasing.
Sitapur („ 19th)	·1	Wind easterly; a great deal of grain still on the threshing floor; no new grain crops; a few cases of cholera again reported; no cattle-disease; wheat 23 seers, barley 35 seers.
Fyzabad („ „)	*Nil*	Cholera on decrease.
		General Remarks.—Slight rain during the week; weather cooler; wind variable but mainly east; *rabi* outturn in Kumaun good, and in Jhansi average; cholera reported in Lucknow, Sitapur and Allahabad, but decreasing in Gorakhpur, Benares, Fyzabad and Partabgarh; some fever in Allahabad, Jhansi, Agra, Meerut and Lucknow. Cattle-disease still continues in Lucknow.
Punjab— (May 18th)—		
Delhi ...	.....	Harvest completed; prices steady; fever springing up.
Hissar ...	.....	*Rabi* outturn much smaller than anticipated; weather fair; prices steady; fever prevalent.
Umballa ...	.....	Crops harvested and nearly gathered; health fair.
Jullundur ...	·1	Health good; crops cut; prices rising.
Amritsar ...	.....	Crops being threshed; prices steady.
Lahore ...	·7	Crops cut; health good.
Ferozepore ...	·1	Crops being gathered; prices steady.
Siálkot ...	Between ·2 and ·4	Crops unharmed by the rain; prices steady; health good.
Ráwalpindi ...	.....	Report not received.
Pesháwar ...	.....	Harvest prospects bad.
Mooltan ...	.....	*Rabi* crops being harvested; health good; prices rising.
Dera Ismail Khan ...	.....	Crops being reaped; small-pox prevailing.
		General Remarks.—Harvest prospects generally favourable; health fair.
Central Provinces—		
Nágpur (May 19th)	.....	Ploughing for *kharif* sowings progressing; no epidemic; prices stationary.
Jubbulpore ...	·08	Cloudy; cool; winnowing completed; small-pox continues; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*		
Saugor ...	.....	Hot; threshing completed; ploughing for *kharif* commenced; small-pox and cattle-disease prevalent; prices stationary.
Seoni ...	.....	Cloudy; crops harvested.
Hoshangabad ...	.....	Occasionally cloudy; winnowing progressing; small-pox continues; prices stationary.
Raipur (May 15th)	.....	Cloudy, stormy, hot; no crops on the ground; prices risen.
Sambalpur („ 14th)	·33	Cloudy, very warm; sugarcane plants doing well; ploughing continues; slight small-pox.
		General Remarks:—Cloudy, hot; slight rain at Sambalpur and Jubbulpore; *rabi* harvest almost completed; ploughing for *kharif* sowings progressing; prices stationary.
British Burma— (May 19th)—		
Akyab ...	1·50	Total rainfall 10·84; slight small-pox reported from Naaf, otherwise public health good; cattle-disease very slight.
Rangoon ...	·74	Total rainfall 7·75; 5 deaths from small-pox; three deaths from small-pox in Hanthawaddy District; otherwise public health good; health of cattle good.
Bassein ...	·12	Total rainfall 10·12; health bad in town; 3 deaths from small-pox; fevers prevalent; cattle-disease in Bassein township; 30 deaths; weather extremely oppressive.
Prome ...	1·40	Total rainfall 5·11; small-pox almost disappeared in town, but prevails in district.
Amherst (Moulmein) ...	1·09	Total rainfall 12·63; public health good; ploughing commenced in some places.
Toungoo ...	1·33	Total rainfall 5·47; 5 deaths from small-pox, otherwise public health good.
		General Remarks.—Small-pox continues somewhat prevalent in Pegu division; slight cattle-disease; general health otherwise good; weather very oppressive at end of week.
Assam— (May 19th)—		
Gauháti ...	1·42	Cultivation of *asu* in progress; prospects of tea good.
Sylhet ...	5·61	Cultivation progressing satisfactorily; prospects good.
Cachar ...	1·77	Weather extremely warm; half of *asra*, *murali* and *dumahi dhan* sown; cultivation of *sali dhan* commenced; common rice 14½ seers per rupee; public health good.
Dibrugarh ...	2·48	Sugarcane cultivation nearly all done; sowing for *sali* commenced; weather getting warm; cattle-disease still prevalent.
Mysore and Coorg— (May 19th)—		
Bangalore ...	2·93	Crops generally in good condition; fever still prevails, as also murrain among cattle; prices slightly fallen.
Mysore ...	5·51	
Mercara ...	·76	
Berar & Hyderabad—		
Amráoti (May 19th)	.....	Weather cloudy; ploughing operations progressing.
Akola ...	.....	Health good; weather getting warmer.
Hyderabad ...	.....	*Tabi* harvesting continues; small-pox prevalent in some places; weather hot; white *jowar* 16, yellow 17, coarse rice 10, and wheat 10 seers per current rupee.
Central India States— (May 19th)—		
Indore ...	.....	Weather hot and cloudy; health and prospects good.
Morar (Gwalior) ...	.....	Sky cloudy; fever still prevailing; wheat 16, *bajra* 30, *jowar* 38, seers per rupee.
Sutna ...	.....	Weather seasonable; cholera abating; *jowar* 35 seers.
Rutlam ...	A few drops	Weather hot and cloudy; public health good.
Neemuch ...	·20	Sky cloudy; weather warm; few cases of small-pox out of cantonment limits.
Goona ...	.....	Weather hot and cloudy; crops good; health good; wheat 19 seers per rupee.
Bhopal ...	.....	Health and prospects good.
Agar ...	.....	Health good; agricultural prospects favourable.
Nowgong ...	.....	Health fair.
Mánpur ...	.....	Weather cloudy; fever and small-pox disappearing.
Rajputana—		
Abu ...	.....	Report not received.
Sirohi (May 16th)	.....	Tanks dry, wells fairly full; healthy; frequent storms.
Marwar („ 14th)	Slight shower	Well water diminishing daily; health good; crops almost gathered; not so hot, clouds gathering; prices rising.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—*continued.*		
Meywar ...	.....	Tanks dry; well water low; at Oodeypore plentiful; health good.
Harowtee (May 15th)	Slight showers with dust and storms.	Health good and seasonable.
Jhallawar ...	.....	Health good; a few clouds.
Ajmere (May 19th)	·93	Daily storms; winds high.
Jeypore ...	Showers ...	Sandstorms and high winds; preparation for *kharif* ploughing; health good.
Bhurtpore ...		
Ulwur (May 18th)	.....	Hot winds; ploughing; general health fair.
Nepal—		
(May 11th)—		
Katmandu ...	1·30	Continued rain is injuring the wheat crop; rice already being planted; cholera still in the valley.

ADMINISTRATION REPORT OF THE INDIAN TELEGRAPH DEPARTMENT FOR THE YEAR 1878-79.

Nos. 184-200T., dated Simla, the 11th May 1880.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 763T., dated 15th January 1880, from the Director General of Telegraphs, together with its enclosure, the Administration Report of the Telegraph Department for the year 1878-79.

RESOLUTION.—The year under review has been one of great activity in Telegraph business. The revenue of the Department has exceeded the working expenses (excluding interest charges) by Rs. 6,08,246; the surplus of the previous year, which, till now, was the highest on record, was Rs. 1,82,128.

2. The net Capital expenditure during the year amounted to Rs. 5,48,270, of which Rs. 3,759 will be subsequently recovered. The Capital Account, which stood at the end of the year at Rs. 3,35,61,872 (exclusive of Ceylon), is stated to include Rs. 55,99,799 (or nearly one-sixth of the whole amount) for abandoned lines, buildings, and stores. The Government of India desires a report in explanation of the details of this latter sum.

3. The Capital Account of the Ceylon Telegraphs is shewn separately, as the management of these Telegraphs by the Indian Telegraph Department will cease in 1880.

4. During the year 379 miles of line and 1,783 miles of wire were added to the system, bringing the totals up to 18,589 miles of line and 44,578 miles of wire (including cables), the property of Government. In addition to this, 6,723 miles of wire, the property of Railway Companies, were maintained by the Telegraph Department.

5. The total net expenditure on Revenue Account was Rs. 29,70,607; the Revenue receipts (excluding Ceylon receipts) amounted to Rs. 35,97,015.

6. The foreign traffic, both "State" and "private," shews a small increase. There is a large increase in "State" inland traffic, attributable to the military operations in Afghanistan; but in "private" inland traffic there has been a large decrease, owing to the cessation of the activity in the grain trade which sprang up during the famine. This decrease is, however, not so large as was anticipated, and there appears to be reason to hope that some increase to the revenue will be maintained. There is, again, a decrease in the "*pro formâ*" message revenue amounting to Rs. 24,686.

7. The average speed of transmission of messages on the main lines has practically been maintained, notwithstanding the increased traffic; and in most cases it has been considerably increased.

8. The interruptions to traffic have been also fewer and shorter than in previous years; and the returns on this head compare favorably with the results attained in European systems.

9. Owing to the great depreciation in the value of silver, the charge for messages to England was increased from Rs. 2-8 to Rs. 2-12 per word, with a corresponding increase in the rates to other countries.

10. The figures which accompany the Report do not agree exactly with those entered in the Finance Accounts. The former shews the entire earnings of the Department during the year concerned, while the Finance Accounts include only the actual adjustments which have been made on account of those earnings. The Administration Report also includes the rent realized from Telegraph buildings, and the cost of repairs to them by the Public Works Department. Neither of these items is included under this head in the Finance Accounts.

11. The Government of India has much satisfaction in thinking that the results of the year's working shew that the Department possesses a very good staff, very ably directed; and that a comparison of the figures with those of previous years reveals a gradual and steady reduction in cost of working, combined with an equally steady growth of revenue, which testifies to the care and ability with which the Department has been administered.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Secretary of State; to the Local Governments and Administrations noted on the margin; to the Government of Ceylon; and to the Commissioner in Sindh.

Madras, Bombay, Bengal, North-Western Provinces and Oudh, Punjab, Central Provinces, British Burma, Assam, Hyderabad, Central India, and Rajputana.

Also, that a copy of this Resolution be forwarded to the Director General of Telegraphs for information and guidance.

Also, that a copy of this Resolution and of the Report and Appendices A, B and F be forwarded to the Home Department of the Government of India for information, and to the publisher of the *Gazette of India* for publication in the Gazette.

Also, to the Foreign Department for communication to the Chief Commissioner of Mysore and Coorg.

J. S. TREVOR, *Major-General, R.E.,*
Offg. Secy. to the Govt. of India.

ADMINISTRATION REPORT OF THE INDIAN TELEGRAPH DEPARTMENT FOR 1878-79.

The results of the operations of the Department for the year 1878-79 shew a satisfactory progressive improvement.

The total working expenses amounted to Rs. 30,88,177 and the earnings to Rs. 36,96,423, shewing a surplus of Rs. 6,08,246,* as compared with the surplus of Rs. 1,82,128 during the preceding year.

The number of paid telegrams increased from 1,357,014 in 1877-78 to 1,371,721 in 1878-79, of which latter 1,173,851 were inland and 197,870 foreign.

The miles of lines and wires (including cables) increased respectively from 18,210 and 42,795 to 18,589 and 44,578, and, in addition, 6,723 miles of wire, not the property of Government, were maintained by the Department for the service of Railway Companies.

The number of Departmental offices increased from 239 to 250, and at the close of the year 525 Railway Telegraph offices were technically supervised by the Department, as against 484 during the preceding year.

Notwithstanding the increase of traffic, the speed of transmission has, in the case of all the main routes, practically been maintained and in most of them considerably increased. Details will be found at paragraph 20.

The number of complaints received from the public in which this Department is concerned is slightly in excess of those received last year, amounting to about 3 per cent. against an increase of traffic of 1·08 per cent. The increase is for non-delivery only. Complaints under the heads "Error" and "Delay" shew a decrease. There is an increase in the number of complaints in which other Telegraph Administrations are concerned, amounting to about 12 per cent. The increase of traffic with other Administrations was under 6 per cent. Details will be found further on.

2. A clear idea of the progress that has been made year by year will be readily obtained from the following table and from diagrams which are annexed to this Report:—

Heads of Financial Results.			1871-72.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.

REVENUE AND EXPENDITURE.

3. The total net capital expenditure of the Department during the year amounted to Rs. 5,48,270, of which Rs. 3,759, on account of the Telegraph Lines in Cashmere, will be recovered from the Maharajah.

The Capital Account of the Department (excluding Ceylon†) at the end of the year stood at Rs. 3,35,61,872, including Rs. 55,99,799 for abandoned lines, buildings, and stores.

* After providing for the loss of Rs. 18,162 sustained in working the Ceylon system of telegraphs.
† Particulars of the Capital Account of Ceylon are shewn separately in Appendix A.

4. The following is a brief Statement of Receipts and Expenditure on Revenue Account of the whole Department, including India and Ceylon, for the year 1878-79:—

	Rs.	Rs.	Rs.
Expenditure in India and Ceylon	...	...	30,88,577
RECEIPTS.	INDIA.	CEYLON.	TOTAL.
Revenue from paid Messages	29,63,569	95,817	30,59,386
Receipts from State Railways	1,71,071	900	1,71,971
Ditto Guaranteed Railways	2,55,386	...	2,55,386
Claims from Guarantors, &c.	33,694	1,822	35,516
Minor undertakings	16,850	482	17,332
Miscellaneous	39,478	387	39,865
TOTAL ...	34,80,048	99,408	35,79,456
Pro formâ Message Revenue	1,16,967	...	1,16,967
GRAND TOTAL ...	35,97,015	99,408	36,96,423
Net Profit for the year ...	...	...	... 6,08,246

5. The following is an abstract Revenue Account for India only with corresponding figures for 1877-78:—

EXPENDITURE.	1877-78.	1878-79.	RECEIPTS.	1877-78.	1878-79.
	Rs.	Rs.		Rs.	Rs.
Repairs to lines	2,80,248	2,77,397	Message Revenue earned ...	28,03,967	29,63,569
Repairs to buildings by Public Works Department.	31,728	32,058			
Repairs to buildings departmentally.	3,559	1,907	Receipts from State Railways for interest, line maintenance, technical supervision, &c.	52,503	1,71,071
Direction	1,76,649	1,81,635			
Accounts	57,963	52,170			
Superintendence	6,73,076	6,61,748			
Line Maintenance	1,24,418	1,26,654	Receipts from Guaranteed Railways.	1,68,519	2,55,386

Profit and Loss	3,149	197			
Printing charges by Printing Department.	...	2,488	Sales of Books, Gazettes, &c.	16,469	16,850
Absentee Allowances paid in England.	1,43,475	50,470	Miscellaneous	10,492	39,478
			News-free and other *pro formâ* Message Revenue.	1,41,603	1,16,967
TOTAL EXPENDITURE ...	31,47,319	30,57,137			
DEDUCT—					
Value of printed forms supplied to Ceylon.	5,023	1,023			
Share of General Charges debited to Ceylon.	10,650	10,146			
Share of General Charges debited to Capital.	1,22,416	75,361			
TOTAL DEDUCTION ...	1,38,089	86,530			
NET REVENUE EXPENDITURE	30,09,230	29,70,607			
NET PROFIT ...	2,11,652	6,26,408	TOTAL RECEIPTS ...	32,20,882	35,97,015

The increase of message revenue earned over that of the previous year (excluding Ceylon) is Rs. 1,59,602, due wholly to increase in State messages.

6. The receipts from Railways shew an increase over the previous year of Rs. 2,05,435, of which Rs. 1,18,568 are from State Railways and Rs. 86,867 from Guaranteed Railways. This increase is due chiefly to the claims for the previous year having been made out for nine months only.

7. There has been a net decrease in the *pro formâ* message revenue of Rs. 24,636.

8. Summaries of the financial results obtained in working the Telegraphs in India and Ceylon separately from the commencement up to the end of the year 1878-79 will be found in Appendix A.

TRAFFIC.

9. A return of the number and value of Inland and Foreign Messages under the sub-heads "State" and "Private" will be found in Appendix B, the percentage being as follows:—

CLASS.	INLAND.		FOREIGN.		TOTAL.	
	No.	Value.	No.	Value.	No.	Value.
State	15·27	24·33	0·24	1·42	15·51	25·75
Private	70·30	46·88	14·19	27·37	84·49	74·25
TOTAL ...	85·57	71·21	14·43	28·79	100·00	100·00

Shewing the following absolute and proportionate increase over the result of the previous year:—

CLASS OF MESSAGES.	ACTUAL INCREASE.						ACTUAL DECREASE.						PERCENTAGE OF INCREASE.						PERCENTAGE OF DECREASE.					
	Inland.		Foreign.		Total.		Inland.		For-eign.		Total.		Inland.		Foreign.		Total.		Inland.		For-eign.		Total.

Private ...	...	...	9,762	3,567	...	...	81,813	1,51,594	...	...	72,051	1,48,027	...	...	5·28	0·42	...	...	7·82	9·55	...	...	5·85	6·11
TOTAL ...	3,897	1,44,376	10,810	11,308	14,707	1,55,684	...	...	...	...	...	...	0·33	7·10	5·78	1·30	1·08	5·36	...	...	...	...	...	...

10. The total number and value of paid messages as compared with the previous year was as follows:—

YEAR.	STATE.		PRIVATE.		TOTAL.	
	No.	Value.	No.	Value.	No.	Value.
		Rs.		Rs.		Rs.
1877-78	126,093	4,84,034	1,230,921	24,19,668	1,357,014	29,03,702
1878-79	212,851	7,87,745	1,158,870	22,71,641	1,371,721	30,59,386

INLAND TRAFFIC.

11. In State messages there has been a considerable increase, due principally to the Military operations in Afghanistan. There has been a falling off in private messages explained by the fact that last year's increase was abnormal owing to the famine in Southern India. The decrease however was not nearly so great as was anticipated and budgetted for.

The growth of the inland message traffic, State and private, since the introduction of the present tariff will be seen at a glance from the figures below :—

YEAR.	STATE.						PRIVATE.						TOTAL PAID MESSAGES.					
	Number.	Value.	Percentage of *number*, compared with previous year.		Percentage of *value*, compared with previous year.		Number.	Value.	Percentage of *number*, compared with previous year. FOREIGN TRAFFIC.

12. There has been a small increase in Foreign Traffic, State and Private. The percentage of increase compared with previous years is shewn in the following figures :—

YEAR.	Percentage of Increase, compared with previous year.	
	No.	Value.
1873-74	12·72	7·33
1874-75	15·75	6·24
1875-76	8·87	8·21
1876-77	22·44	5·34
1877-78	38·14	27·28
1878-79	5·28	0·42

13. Appendix C shews the percentage of number of messages between India and places to the westward by each route for the past eight years. The comparative results of the period under review and of the two previous years are as follows :—

	1876-77.	1877-78.	1878-79.
Viâ Suez	60·22	79·10	75·04
,, Teheran	37·57	17·72	23·07
,, Turkey	2·21	3·18	1·89

Details of the number and value of messages to, from, and through India by each route will be found in Appendix B.

14. The following return corresponds with that given in paragraph 11 for inland traffic :—

YEAR.	STATE.						PRIVATE.						TOTAL.					
	Number.	Indian share of charge.	Percentage of *value*, as compared with previous year.		Percentage of *number*, as compared with previous year.		Number.	Indian share of charge.	Percentage of *value*, as compared with previous year.		Percentage of *number*, as compared with previous year.		Number.	Indian share of charge.	Percentage of *value*, as compared with previous year.		Percentage of *number*, as compared with previous year.

15. Diagrams A and B give the number and value respectively of Inland and Foreign paid messages from year to year as far back as the record is available.

CHANGES IN FOREIGN TARIFF.

16. There were no changes of any importance in the rates for international messages; but owing to the continued depreciation in the value of silver, the rate of exchange for adjustment of balances with Foreign Administrations was, from 1st January 1879, changed from Rs. 44 to Rs. 50 per hundred francs. This resulted in the charge per word from India to Europe being raised from Rs. 2-8 to Rs. 2-12, and in a corresponding increase in the rates to other countries.

SIGNAL OFFICES.

17. Appendix D is a classified abstract of signal offices according to the amount of traffic originating at each for the past seven years.

18. Appendix E shews the number of offices in each division open at the end of 1878-79. The following were opened and closed during the year :—

Opened.	Date.	Closed.	Date.
Khelat	27th May.	Hubli	31st May.
Mach	19th June.	Coimbatore	7th ditto.
Naraingunge ...	11th July.	Beawar	1st ditto.
Ngathineyoung ...	2nd September.	Bhawalpur	31st ditto.
Akote (re-opened) ...	17th November.	Cuddapah	27th June.
Jumrood	21st ditto.	Erode	27th ditto.
Thull	9th ditto.	Salem	27th ditto.
Koorum Fort	25th December.	Ongole	31st July.
Ali Musjid	29th ditto.	Dagshai	28th October.
Pegu	29th January.	Sabathu	3rd ditto.
Dhakka	20th ditto.	Mittri	31st January.
Lundi Kotul	15th ditto.	Panadure	13th February.
Peiwar	10th ditto.	Bhurtpore	28th ditto.
Gulistan Karez ...	9th ditto.		
Kalatura	15th February.		
Basawal	16th ditto.		
Jellalabad	18th ditto.		
Bagh	4th ditto.		
Chaman	22nd ditto.		
Nawalapitya	28th March.		
Pachmarhi	24th ditto.		
Peiwar Kotal	19th ditto.		
Abdool Rahman ...	24th ditto.		
Kandahar	31st ditto.		

Number of offices open on 31st March 1878 ...		...	239
Add—Number of offices open during 1878-79	24		
Deduct—Number of offices closed during 1878-79	13	...	11
Number of offices open on 31st March 1879 ...		...	250

COMPLAINTS.

19. In Appendix F will be found particulars of all the complaints received from the public during the year, those in which this department was concerned being separated from those chargeable to Railway or Foreign Telegraph Lines.

SPEED OF TRANSMISSION.

20. The average time occupied in the transmission of messages over the long main routes during the years under review, and the two previous years were as follows:—

	1876-77.		1877-78.		1878-79.	
	H.	M.	H.	M.	H.	M.
Calcutta to Kurrachee	0	47	0	41	0	55
Kurrachee to Calcutta	0	44	0	26	0	29
Calcutta to Bombay	1	13	1	14	0	57
Bombay to Calcutta	1	13	1	15	0	59
Calcutta to Madras	1	51	2	28	1	22
Madras to Calcutta	1	56	2	20	1	25
Bombay to Madras	0	46	1	16	0	33
Madras to Bombay	0	48	1	8	0	38
Galle to Madras	3	8	5	6	3	27
Rangoon to Calcutta	11	49	7	41	2	32
Bombay to Kurrachee	0	47	0	43	0	41
Kurrachee to Bombay	0	47	0	28	0	31

A better idea of the improvement in speed will be obtained from Diagram C, which shews graphically the speed of transmission in each principal line for many years past.

NEWS FREE MESSAGES.

21. Reports of the state of the weather, of the arrivals of mail steamers, &c., exhibit a slight increase in number, but a considerable decrease in length and value, *viz.*,—

	No.	Value.
		Rs.
1877-78	7,358	78,966
1878-79	7,591	57,329
Increase	233	...
Decrease	...	21,637

TRAFFIC WITH RAILWAY TELEGRAPHS.

22. Appendix G shews the number and value of messages transferred to and received from State and Guaranteed Railways during the past six years. A comparison of the figures of the period under report with those of the preceding two years shews the following result:—

Particulars.	1876-77.			1877-78.			1878-79.		
	No.	Value.		No.	Value.		No.	Value.	
		Rs.	A.		Rs.	A.		Rs.	A.
Traffic exchanged with State Railways ...	21,049	30,582	7½	28,985	32,339	14½	37,783	43,322	5½
Traffic exchanged with Guaranteed Railways	75,260	77,205	8¾	96,225	93,372	15	94,453	95,952	0
Total Traffic exchanged with Railways	96,309	1,07,788	0¾	125,210	1,25,712	13½	132,236	1,39,274	5½

PRESS MESSAGES.

23. The number and value of Press messages sent at reduced rates during the past six years by Reuter's Telegraph Company, and by other associations or individuals, are given in Appendix H.

As compared with the previous year the number of messages has slightly decreased, but the value has increased as follows:—

	Number less.	Value more.
		Rs.
Messages sent by Reuter's Company... ...	74	7,280
Do. by others	66	138
Total increase in value		7,418

UNDELIVERED MESSAGES.

24. The number of undelivered messages was 4,295 as against 4,064 in the previous year.

The causes of non-delivery were as follows:—

Not found, address insufficient	1,132
Not found at address given	1,400
Address changed in transmission	113
Left station, new address not known	275
Left India	120
Left for original station	843
Refused	87
Returned by Dead Letter Office	160
Addressee, or the address given, unknown	54
Other reasons	111
	4,295

The increase is nearly entirely under the head "Not found at address given," a cause manifestly beyond Departmental control.

INTERRUPTIONS ON DEPARTMENTAL LINES.

25. Notwithstanding the increase of miles of line and wire, the following statement shews that there has been a decrease in both the number and duration of interruptions as compared with those of previous years. The statement includes interruptions due to extraordinary causes, details of which are given further on:—

	1877-78.	1878-79.
Total number of interruptions	386	350
Aggregate duration, hours	5790	4910
Average duration, hours	15	14
Interruptions for every 100 miles of wire ...	0·92	0·80

26. It may perhaps be interesting to contrast with these statistics those for one of the best appointed and best managed Telegraph systems in Europe, that of Germany.*

Number of interruptions per 100 miles of wire.

Germany.		India.		Average number of interruptions per mile of wire *more* in Germany than in India.
		Official year.		
1876	18·4	1875-76	1·8	10·4 times more.
1877	8·7	1876-77	1·18	7·37 „ „
1878	6·25	1877-78	0·92	6·8 „ „
1879.	Information not available.	1878-79	0·80	

The above is a great reduction on previous years, and is due in a great measure to the substitution of underground for aerial lines.

27. The interruptions during the year due to extraordinary causes, and included in the above figures, were as follows:—

April 1878.—Between Nowshera and Hoti Murdan, lasting 148 hours. Span across the Cabul river washed away during heavy floods

Between Kohat and Bunnoo, lasting 576 hours. Flying line across the river Koorum washed away by floods.

* Taken from "The Electrician" of the 15th of March 1879.

July 1878.—Between Attock and Peshawur, lasting 247 hours. Span across the River Indus washed away by flood. The river at Attock rose 55 feet 10 inches above ordinary level, an occurrence not known for fifty years.

August 1878.—Between Umballa and Jullunder, lasting 226 hours, and between Jullunder and Umritsur, lasting 107 hours. Caused by floods carrying away the railway bridges at the East Beyne, 100 miles from Umballa, and near the Jullunder Railway Station, also at various other points.

August 1878.—Between Mooltan and Sukkur, lasting 142 hours. Heavy floods along the Indus Valley State Railway, between Kotsamabu and Naushara, Sangi and Rohri, and also between Mirpur and Sarhad.

November 1878.—Between Vizagapatam and Coconada, lasting 134 hours. Caused by heavy storm blowing down trees, which fell on the line in 30 places between Coconada and Annaveram.

December 1878.—Between Vizagapatam and Coconada, lasting 212 hours. Caused by the cyclone and floods of 6th and 8th December. In some places the water rose higher than the tops of the supports.

SIGNALLING ESTABLISHMENT.

28. There were 855 departmental and 111 military telegraph masters and signallers on the strength of the establishment at the close of the year, as compared with 815 and 66 respectively on the 31st March 1878.

The casualties among departmental telegraph masters and signallers have been 34, as per margin, against 27 during the preceding year, a percentage of 3·97 against 3·30 of last year.

Deaths	9
Dismissals	7
Resignations...	10
Remanded to duty	1
Transferred to other Departments	3
Services dispensed with ...	2
Struck off, unfit for duty ...	2
	34

The number of military signallers trained by the Department during the year to whom certificates of proficiency were given was 94 as against 21 last year. Eighty military signallers were employed in departmental offices and 31 in purely military offices.

ELECTRICAL.

29. The office of Electrician was held by the late lamented Mr. R. S. Brough, and also by Mr. W. P. Johnston to the 31st December 1878, when the permanent incumbent, Mr. L. Schwendler, returned to duty and assumed charge.

30. *Line Testing.* The number of regular testing stations remains the same as last year, *viz.*, 20. Every year shews the high state of efficiency to which the practice of testing overland lines of telegraph has been brought in India, the primary result being that the majority of the lines possess a degree of insulation and a carrying power that leave but little to be desired, and that faults in the line are accurately localized and speedily removed.

31. *Insulator testing*, which has now for many years been established upon a firm basis, still continues.

32. *Duplex Working.*—The split battery system continues to be employed on our lines, for the reason that no better system has yet been brought forward. Although it would be hazardous in these days of invention to say that no better system will ever be produced, yet for efficiency, stability and simplicity our present system will not easily be surpassed.

33. *Duplex arrangements* for the line from Akyab to Rangoon were manufactured and set up during the year.

34. *Cables.*—A considerable length of gutta-percha covered wire was received during the year. The bedding of Manilla hemp treated with tannin, and the protecting guards of iron wire, were put on by our own machines which continue to work perfectly.

EXTENSIONS OF LINES AND WIRES AND LINE MAINTENANCE.

35. Appendix I is a classified list of all telegraph lines, the property of this Department in India, Burma and Ceylon on the 31st March 1879. The following are the total mileages of line, wire and cable contrasted with those existing on the same date in 1878 :—

	Line.	Wire.	Cable.
1877-78 ...	18,210	42,687	108
1878-79 ...	18,589	44,470	108
Increase ...	379	1,783	...

In addition to the above, the Department maintained 1,912 miles of line and 6,723 miles of wire, the property of Railway Companies, particulars of which are given in Appendix J.

36. The principal works executed in each division are as follows :—

ARAKAN.

37. The doubling of the wire, Calcutta to Rangoon and Elephant Point, begun last year, was completed during the year.

BENGAL.

38. A permanent two-wire line, 57½ miles in length, was constructed for the Bankipore-Gya State Railway. New cables were laid across Channel Creek at Mud Point in the Hooghly River and at Mokameh in the Ganges. In Calcutta, 9 miles of line and 37 miles of wire were erected for the Meteorological Department and for certain private firms, and instruments to work them were fitted up at fifteen different places in the city. The telegraph lines in the Nulhatti and Calcutta and South-Eastern State Railways were re-constructed. The Central Office at Calcutta was connected by wire with the Railway Telegraph Offices at Howrah and Sealdah, and the latter station was connected with the Calcutta and South-Eastern State Railway Office.

The repairs to the East India Railway telegraph lines which were in progress at the close of the last official year were completed.

BOMBAY.

39. The only work of any extent in this division was the erection of an additional wire from Poona to Shahabad, 249·5 miles in length.

DACCA.

40. Two new cables were laid during the year, one across the Pudda river to replace that laid in 1875, the other across the Ganges at Sara. A loop line was erected from Dacca to Naraingunge and an office opened at the latter place. An additional wire was erected for 89 miles on the existing posts from Barrackpore to Parodha.

MALABAR COAST.

41. The line from Bangalore to Mysore, 85 miles, originally partly on Hamilton's ¾ standards and partly on stone pillars, was re-constructed for the greater portion of the distance along the Bangalore-Mysore State Railway, with Hamilton's whole standards and two wires.

NAGPUR.

42. A new 4-wire line for 11 miles was constructed along the Nagpur and Chatteesgurh State Railway from Nagpur to Kamptee. A 3rd wire, 28½ miles in length, was erected on the supports of the main line from Kureli to the Piparia Railway Station, and from the latter place a single wire line for 50½ miles was constructed to Pachmarhi.

PUNJAB.

43. A new single wire line, 118 miles, was constructed from Umritsur to Dalhousie. A temporary line on bullies was erected from Lahore to Ferozepore. An additional wire was erected between Jhelum and Pubbee, completing the 2nd wire between Lahore and Peshawur. An additional wire was also erected between Umballa and Simla, and between Umritsur and Lahore.

RAJPUTANA.

44. The line from the Chumbul river to Gwalior, a distance of 36·5 miles, was dismantled and re-constructed along the Scindia State Railway.

SINDH.

45. A second wire between Sukkur and Jacobabad, 50 miles, was completed and brought into circuit before the close of the year.

BELUCHISTAN.

46. The line Quetta to Khelat, 69·5 miles in length, was completed on the 24th of May.

STATE AND GUARANTEED RAILWAY TELEGRAPHS.

47. Appendix J is a return shewing the number of telegraph offices and extent of line and wire maintained for State and Guaranteed Railways, together with the capital expended by this Department on behalf of each Railway.

STORES AND WORKSHOPS.

48. The following are the principal items of expenditure under this head during the year :—

	Rs.
Purchase of stores in India	1,20,102
London stores, including freight and landing charges ...	3,57,665
Workshop and Press	1,65,855
Store keeping	81,530
Stationery received from Superintendent of Stationery, and value of printing done by the Superintendent of Government Printing without charge	15,752
TOTAL ...	7,40,904

49. Under the head of "Purchase of stores in India" Rs. 16,033 are for military stores received without cost in previous years and now debited to this Department.

50. The value of outturn from the workshops was Rs. 3,51,527 and from the Press Rs. 33,075, against Rs. 3,63,446 and Rs. 40,362 respectively during the previous year.

51. The total value of stores received and issued during the year amounted to Rs. 16,20,455 and the store keeping charges to Rs. 81,530.

CEYLON.

52. Appendix A contains the usual summary of financial results of the Ceylon telegraphs from the 1st of January 1869, the date of their transfer to the Indian Government, up to the end of the year 1878-79.

53. There has been a very small capital outlay of Rs. 131 during the year, and the total of such outlay by the Indian Government up to the end of the year stands at Rs. 67,609. The net loss on working for the year amounts to Rs. 18,162, and from the transfer in 1869 up to the end of the year, to Rs. 2,22,008, exclusive of all interest charges.

54. The following is an abstract of the Revenue Account for the years 1877-78 and 1878-79:—

Expenditure.	1877-78.	1878-79.	Receipts.	1877-78.	1878-79.
	Rs.	Rs.		Rs.	Rs.
Repairs of lines	20,142	12,613	Message Revenue earned ...	99,735	95,817
Repairs to buildings (Departmentally).	462	141	Receipts from Ceylon Railway for maintenance of line	900	900
Direction, Accounts, &c. (share)	10,650	10,146	Miscellaneous ...	735	869
Superintendence	26,022	26,685	Claims from the Colonial Government under Guarantee.	...	1,822
Line maintenance	11,169	10,457			
Signalling	54,236	51,771			
Tools and Plant	2,785	4,751			
Value of printed forms supplied	5,023	1,023			
Total Expenditure ...	1,30,489	1,17,587	Total Receipts ...	1,01,370	99,408
Deduct—					
Share of Charges for Direction, &c., debited to Capital	405	17	Net Loss	29,524	18,162
Total Revenue Expenditure	1,30,894	1,17,570	Total ...	1,30,894	1,17,570

55. The working expenses of the year are therefore less than those of the previous year by Rs. 13,324, which occurs chiefly under Repairs, Signalling, and Printed Forms. The charges for Repairs and Printed Forms in 1877-78 were exceptional. The lines required heavy repairs in that year, and the stock of printed forms was written off with the view of keeping only a numerical account of such articles in future.

There is a falling off in the message revenue of Rs. 3,918.

MILITARY OPERATIONS IN AFGHANISTAN.

56. Detailed reports of the operations of the Telegraph Department in connection with the military advance into Afghanistan prior to the Treaty of Gundamuck will be found in the following appendices:—

Appendix K.—Report by Mr. Officiating Superintendent S. J. Josephs, in charge of Telegraphs with the Kurrum Valley Field Force.

Appendix L.—Report by Mr. Officiating Superintendent C. E. Pitman, in charge of Telegraphs with the Kandahar Field Force.

Appendix M.—Report by Mr. Officiating Superintendent S. P. W. V. Luke, in charge of Telegraphs with the Khyber Field Force.

KURRUM VALLEY FIELD FORCE.

57. The Government of India letter No. 359T., dated 3rd October 1878, requested that arrangements might be made for the supply of 200 miles of semi-permanent line for the Kohat Field Force.

58. No time was lost in pushing up the stores to Kohat, and owing to the zeal and energy displayed by the Construction officer, Mr. Assistant Superintendent N. Jones, the line was completed and an office opened at Thull, 66 miles from Kohat, on the 8th November.

59. Mr. Jones was then relieved by Mr. S. J. Josephs, Officiating Superintendent, to whom had been entrusted the charge of the military lines in this direction, and proceeded to Peshawar, where he constructed with equal celerity and success the short line from Peshawur to Jumrood.

60. Mr. Josephs was placed at the disposal of the General in Command, and, under orders received from him, extended the line from Thull to Ali Kheyl by the 12th April, and eventually to Karatega, 170 miles from Kohat. Offices were opened at:—

Thull on the 8th November.
Hazar Pir on the 26th December.
Kurrum Fort on the 25th December.
Peiwar on the 10th January.
Peiwar Kotal on the 19th March.
Ali Kheyl on the 2nd April.

61. The only casualties with Mr. Josephs' party were 2 muleteers murdered near Ali Kheyl.

62. The line was constructed with great energy and judgment, and was maintained practically without interruption, and, after the early days of our occupation of the district, but little difficulty was experienced from marauders. The total length of working wire cut and carried away was 15½ miles—a large quantity certainly, but inconsiderable compared with our losses in the Khyber.

63. Mr. Josephs carried out the important duty entrusted to him with complete success, and the value of his assistance was specially represented to Government by the General Officer Commanding.

KANDAHAR FIELD FORCE.

64. On the 3rd October 1878 the Government of India, by letter No. 359T., ordered arrangements to be made for the supply of 250 miles of line to run along the line of communication through the Murri Bugti country to connect Mittri with Rajunpore. On the 22nd October this order was cancelled and instructions issued to send the material to Quetta for use if required.

65. The difficulties experienced in getting these stores to Quetta were very considerable, but were overcome by the great energy and zeal of Mr. C. E. Pitman, the Officiating Superintendent in charge of Telegraphs in Beluchistan.

66. Pending the arrival of the stores at Quetta, Mr. Pitman was engaged in making every possible preliminary arrangement for the possible extension to Kandahar, and accompanied the Agent to the Governor General to select a route and arrange for the protection of the line.

67. To Gulistan-Karez, 40 miles, the line was completed on the 8th January. Beyond this place its extension was not possible till the 17th February owing to the detention of the stores in the Bolan. Between Gulistan-Karez and Chaman, 23 miles, the line was constructed in 5 days and an office opened on the 22nd February.

68. On the 6th March Mr. Pitman received authority to commence the line from Chaman towards Kandahar, a distance of 77 miles, and on the 31st March he opened the office in the citadel of Kandahar.

69. The line, although so rapidly constructed, has worked without interruption, and only three known cases of wilful damage have occurred.

70. On the 28th March Mr. Pitman's working party was attacked by a band of marauders, and Sub-Inspector Mahomed Sidi of this Department and Sepoy Neck Mahomed of the Sappers were severely wounded and two camelmen slightly wounded.

71. Mr. Pitman's local knowledge and fertility of resource were invaluable; and his conduct of the whole expedition was characterised by the zeal and energy for which he has always been conspicuous.

72. Mr. Pitman brings to notice the very great assistance he received from Mr. Inspector J. Hutchins. Not alone as a Telegraph subordinate officer did Mr. Hutchins distinguish himself, but he displayed a rare courage and devotion during the severe outbreak of cholera among the troops at Abdul Rahman, which called forth the admiration of Major Clifford, the Road Commandant, and the thanks of the Lieutenant-General.

KHYBER FIELD FORCE.

73. On the 13th November 1878, the Military Department enquired as to the possibility of arranging for the construction of a line from Peshawur to Jumrood and subsequently on to Dhakka, and on the same day a copy of Military Department letter to the Quarter Master General followed conveying the formal instructions of Government for the erection of a line to Jumrood, to be advanced to the head of the Pass should it be entered and held. The line was erected and office opened at Jumrood on the 21st November 1878.

74. Complete arrangements were then made for a considerable advance, and Mr. Officiating Superintendent P. V. Luke was directed to proceed to

Peshawur with a strong staff for charge of the work. He was instructed to report himself to the General Officer Commanding, and to push on the construction of the line as desired by him.

75. From the 5th paragraph of Mr. Luke's report (Appendix M), it will be seen that he was delayed at Jumrood from the 25th November to the 26th December: on the latter date he received orders to advance, and within four days the line was erected to Ali Musjid and an office opened there.

76. On the 8th January he received permission to make the attempt to extend his line to Lundi Kotal and succeeded in completing it and in opening the Lundi Kotal office five days later, *viz.*, on the 12th January. On the 20th January he had reached Dhakka and established the office there. The remaining offices were opened:—

Basawul on the 16th February,
Jellalabad on the 18th February,
Gundamuck on the 24th April,

and notwithstanding the enormous difficulties with which Mr. Luke had to contend, communication was almost uninterruptedly maintained.

77. Some conception of what these difficulties were will be gathered from Mr. Luke's Report (Appendix M), which shews that, on a total distance of 108 miles of line, it was cut 98 times and 60 miles of the working wire were carried away and never recovered.

78. The undertaking entrusted to Mr. Officiating Superintendent Luke proved to be in some respects more onerous than that of either Mr. Josephs or Mr. Pitman. It is impossible to over-estimate the value of the tact he throughout displayed, or too highly to praise the zeal and devotion with which he applied himself to the execution of his difficult duty. How well he succeeded will be apparent from a perusal of the preceding remarks and of his own report.

79. The experience of this campaign has shewn conclusively the value of the system introduced by the late Director General, Major-General D. G. Robinson, R. E., and since largely extended, of spreading a knowledge of telegraphy throughout the Army, and employing soldiers as signallers in times of peace to fit them for this duty during military operations.

80. With each of the advance columns the large majority of the signallers were soldiers, who, on the whole, did the work really well.

81. The total length of line constructed beyond the frontiers in connection with these operations amounted to 420 miles.

PERSONAL.

82. In the Direction the following changes occurred during the year:—

Colonel R. Murray, Officiating Director General, was confirmed in the appointment of Director General.

Mr. A. J. L. Cappel, Officiating Deputy Director General, was confirmed in the appointment of Deputy Director General.

Mr. J. H. Lane, Officiating Director of Traffic, was confirmed in the appointment of Director of Traffic.

Major H. Mallock, Director of Construction, proceeded on furlough on the 15th of April 1878, and Mr. 1st grade Superintendent W. R. Brooke was appointed to officiate as Director of Construction during the absence of Major Mallock.

83. The success of the Departmental operations is greatly due to the valuable assistance and invariable co-operation I have received from the Deputy Director General Mr. A. J. L. Cappel. To Mr. J. H. Lane, Director of Traffic, and Mr. W. R. Brooke, Officiating Director of Construction, my best thanks are due for their unremitting exertions and for the ability and success with which they have conducted the important duties of their respective offices, as also to my Personal Assistant, Mr. F. G. Teale, and to Major J. Eckford, R. E., Superintendent of Stores and Workshops, for the very efficient manner in which he has carried out the duties of his onerous charge.

Messrs. C. B. P. Gordon and W. K. D'O. Bignell have administered the large Divisions under their charge with great tact, skill and success.

With scarcely an exception the officers of the Department in all grades deserve my cordial thanks for the excellence of their work, acknowledgments no less due to the Signalling Establishment for loyal and good service under all circumstances.

84. This Report cannot fitly close without an expression of the deep sense of the loss the Department has sustained by the death from cholera on the 3rd April 1879 of one of its most distinguished young officers, Mr. R. S. Brough, lately Officiating Electrician, whose great ability and attainments, high sense of duty, and singleness of purpose had won for him the respect and regard of all associated with him.

CALCUTTA,
The 1st December 1879.

R. MURRAY, *Colonel,*
Director General of Telegraphs in India.

APPENDIX A.

Summary of Financial Results of the Indian Telegraph Department for the year 1878-79.

a Superintending Engineer explains that the difference between these figures and those shown in last year's statements is due to approximate figures having been entered in the latter in order to avoid delay.
b These were omitted by Superintending Engineer from last year's statement, hence the difference between the totals of these columns and those in last year's returns.
c In last year's statement Superintending Engineer included the irrigation from waste water, which has been omitted from the present return.
d The difference between these figures and those entered in last year's statement is due, the Superintending Engineer explains, to the Executive Engineer having used only one place of decimal instead of two in the latter. This does not affect the total rain-fall, which is the same as that entered in the kharif returns of 1878-79.

C. TAYLOR,
Asst. Secy. to the Govt. of Bengal,
P. W. Dept., Irrigation Branch.

The 5th May 1880.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 21st May, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, K.C.S.I.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir J. Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
Major-General the Hon'ble A. Fraser, C.B., R.E.
The Hon'ble J. Gibbs, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble C. Grant.

MULTÁN DISTRICT LAWS BILL.

The Hon'ble MR. COLVIN presented the Report of the Select Committee on the Bill to declare the law in force in certain lands annexed to the Multán District.

The Hon'ble MR. COLVIN also moved that the Report be taken into consideration.

He said that the object of this simple Bill had been already sufficiently explained to the Council. All that he need add to that explanation on the present occasion was that the Select Committee had made no change in the Bill since its introduction. Inquiry had been made in order to ascertain whether any validating clause would be necessary in respect of things done during the time which had elapsed between the cession of this territory in 1872 and the time when the present Bill would become law. It had been found, however, that no such clause was required, and that the Government of the Panjáb did not wish any other change to be made in the Bill. Accordingly the Committee recommended that it should be passed in the shape in which it had been introduced.

His Honour the LIEUTENANT-GOVERNOR remarked that the Bill was very short and simple, and the object of it appeared perfectly clear from the wording of it. It had been found necessary to enact a law to provide that jurisdiction might be legally exercised over the lands of the Indus Valley State Railway transferred from Baháwalpur territory to the Multán District; and the Bill as it stood met that want completely.

The Motion was put and agreed to.

The Hon'ble MR. COLVIN also moved that the Bill be passed.

The Motion was put and agreed to.

CENTRAL PROVINCES LAND-REVENUE BILL.

The Hon'ble MR. GRANT moved for leave to introduce a Bill to consolidate and amend the law relating to Land-revenue and the jurisdiction of Revenue-officers in the Central Provinces. He said this Bill, and the Tenancy Bill which he would subsequently move for leave to introduce, were of a kind familiar to the Council, several similar measures having been enacted in the course of the last few years. As in those cases, the Land-revenue Bill would provide for the

assessment and collection of the land-revenue, and for the maintenance of the machinery required for those purposes; whilst the Tenancy Bill would complete the scheme of revenue-administration by regulating the relations of landlords to tenants, and the fund out of which the revenue was ultimately paid.

The Land-revenue Bill would, however, differ from most of its predecessors, and indeed from the form in which it was itself at first cast, in being limited as closely as possible to the subjects just enumerated, and so in excluding much matter of a class which, though usually treated as belonging to Revenue-administration proper, really lay quite apart from it. Whether it was because we inherited some of the traditions of the Native rulers whom we succeeded, or because the position of the Government, as partner in so vast an estate, tended somewhat to cast its other relations into the shade, the fact was notorious—that the collection of land-revenue had always been allowed in this country to stand forward as the representative function of the executive, as might be exemplified in the common designation, so puzzling to English ears, of the chief administrative official of a district as the "Collector," or in the recognized division of the public services into two branches, the Judicial and the Revenue Departments, the latter embracing, as was well known, almost every miscellaneous duty which could be imposed on an executive official, such, for instance, as supervising girls' schools, or looking after the board and lodging of travellers, or even providing fireworks for fairs. Probably for that reason few Land-revenue Acts were quite free from some admixture of foreign matter, and in the Central Provinces Revenue Bill, as it first stood, there were chapters on pre-emption, partition, Government wards and irrigation-tanks, all of which had now been transferred to a separate Bill. As Land-revenue administration pure and simple was a subject on which the authorities were pretty well agreed, its principles having been settled by a long course of experience, the transfer would not only shorten the Revenue Bill, but also, by excluding from it most questions on which difference of opinion was likely to arise, would, he hoped, have the effect of accelerating its passage through the Council.

How important it was that the Revenue Bill, as well as the Tenancy Bill, should be passed without avoidable delay would, he thought, be apparent if he explained briefly the existing condition of the Land-revenue and Rent Law in the Central Provinces. In doing so, he would endeavour to pass as lightly as possible over all details, geographical and historical, which might be found in any ordinary gazetteer or book of reference.

The Central Provinces, as was well known, were made up of various fragments, including a large division of the North-Western Provinces, a district from Central India, another from Orissa, the remains of an extinct Marátha kingdom, and a wild strip of territory from Haidarábád. For present purposes it would, perhaps, be sufficient if he confined his remarks to the two larger of these component portions, formerly known as the Nágpur Province and the Saugor and Nerbudda territories.

The Saugor and Nerbudda territories had now been under British rule for rather more than sixty years, during the first two-thirds of which they were tossed about from Administration to Administration. They were originally divided between the political authorities of Nágpur and Central India, but were soon united under a Governor General's Agent of their own. From his charge they were transferred to the Government of the North-Western Provinces. Then broke out the rebellion of 1842, and the Governor General, Lord Ellenborough, took them into his own hands. In a few years, however, they were restored to the North-Western Provinces, and lastly, in 1861, they were incorporated into the newly created Central Provinces.

Thus, in little more than forty years, there were five changes of administration, with an average duration scarcely exceeding eight years to each. It would readily be conceived that in such circumstances there was little opportunity for the law to settle down and consolidate. The spirit of the Regulations was, it was true, prescribed for the guidance of local officials, but it did not seem to have penetrated very deeply; for in 1834 Mr. Mertins Bird, a distinguished and still remembered Member of the North-West Revenue Board,

who was deputed to visit and report upon the country, wrote that "none of the British officers had read a word of the Regulations applicable to the province," and that they "knew nothing of their spirit or of what was valuable in them." Twenty years later a scheme of coercive processes for the collection of the land-revenue was introduced by the North-West Board of Revenue; but as parts of the existing province were not confiscated and annexed until after the rebellion of 1857, whilst others again, though managed by us from an early period, were not formally ceded to us until 1860, it was impossible to say that the powers with which the Local Government was thus armed were of universal application even in the Saugor and Nerbudda territories.

In the Nágpur province the difficulty was, not to say how far the revenue-law was applicable, but what was the law—indeed, whether there was any law at all. After the death of the last Bhonsla Rájá in 1853, and on our assumption of the country in 1854, it was decided by Lord Dalhousie that the system which had been employed in the management of the State by Sir R. Jenkins, during a Regency lasting from 1818 to 1827, should be resumed. The essence of that system was declared to lie in the adoption of "plain, simple and efficient Regulations based on the ancient laws and usages of the country." It did not seem, however, to have provided any particular procedure for the collection of the land-revenue. Probably it would not have occurred to anyone at that time that special powers were needed for such a purpose. The land was undisputedly the property of the State, and, even if there could have been any doubt on the point, the Resident, assuming, perhaps, some of the despotic powers of the Native dynasty which he represented, had been long accustomed to solve far more intricate questions by his simple fiat. Thus, when he determined to put down complaints of witchcraft, he ordered fifty lashes, and if necessary more, to be administered to all over-officious witchfinders; and he suppressed, even in a more summary way, an ancient and lucrative usage of the country, *viz.*, the sale of poor men's widows for the benefit of their richer neighbours and of the Government. An authority, thus competent to declare a new offence and suppress an old usage, would certainly not be unequal to enforcing, even without legislative aid, the collection of revenue admittedly due to the State.

When by degrees a more settled system was introduced, the moderation of the land-revenue assessment, and the long habituation of the people to executive guidance, for a time kept administrative jars and legal difficulties in the background. Of late years, however, the diffusion of legal knowledge and the increasing facility for obtaining legal advice had on some occasions placed the Government and the land-revenue payers at arm's length, if not in actual collision; and, although, by the exercise of some mutual forbearance, those cases had been compromised or otherwise settled, it was high time that the rights and liabilities to each other of the Government and the land-holders should be clearly defined, and that land-revenue administration should no longer proceed more or less in the dark.

Passing on to the Tenancy question, we came upon the firmer ground of positive law, though it might be questioned whether the reign of a foreign law was altogether preferable to the kind of legal anarchy, tempered by local custom, which it replaced. The present law of landlord and tenant in the Central Provinces was the well-known Act No. X of 1859, which had been described as the "raiyat's charter,"—the complement, in regard to tenants, of the beneficent legislation which conferred a permanent settlement on the landlords of Bengal. Act X might perhaps have been entitled to those high eulogies in the Lower Provinces, where landlords had, by their long start, gained considerable vantage-ground over their tenants, and used it—so it was said—to obtain enhanced rents by means of confinement and other modes of restraint. But in Upper India the new law was certainly no unmixed boon to tenants. Even in the North-Western Provinces it altered the law to their disadvantage by introducing a rapid and summary procedure for enhancing rents instead of the slow and cumbrous process of a civil suit, and by materially enlarging the grounds on which a Court might decree enhancement.

In the Central Provinces, where, as we had seen, custom was stronger than law, it substituted machinery which, if somewhat rigid and ill-adjusted to

local circumstances, was none the less powerful in skilled hands, for a system of complete conservatism, founded, partly no doubt on sympathy for the people, but also on a fear of all changes and disturbances which might prejudice the collection of the land-revenue. Mr. Bird, whom MR. GRANT had already quoted, described very graphically the lengths to which this apprehension led the revenue-authorities—how they forced bankers to give loans to insolvent cultivators—how they refused to enforce Civil Court decrees against cultivators until the revenue had been collected—how all agricultural stock was exempted from distraint—and, generally, how all other interests were subordinated to the paramount object of getting in the State dues. As at that time cultivators were scarce, the displacement of a cultivator would have been discouraged, not only as injurious to him, but as objectionable on fiscal grounds, and the result was that old cultivators in the Saugor and Nerbudda territories enjoyed a very considerable measure of protection, and indeed were practically secure against ejectment, so long as they paid a moderate rent with reasonable punctuality. Not only were those privileges directly curtailed by Act No. X of 1859, but, as Mr. Jones, the author of these Bills, pointed out—

"with the inevitable tendency of written to drive out unwritten and customary law, it spread among all ranks of officers a more or less definite impression that it was not very necessary to enquire what rights tenants had before its introduction, and that they could have no rights except those which it recognized. An Act, which was intended to confer rights on tenants, was construed as if it had demolished rights which, before its introduction, they possessed."

Now, no definite law could, of course, restore to tenants, even if such restoration were desirable, immunities which they derived from the very absence of a defined legal system; but this much at any rate might be advanced with confidence respecting the Bills which he asked leave to introduce—that they had been prepared with much research, and with careful regard to the interests, not only of tenants but of landlords, by one of the most experienced of the officials who had served in the province, and that they had since been subjected to repeated and minute criticism, both here and in the Central Provinces. When the time came for him to explain the details of the Bills, the Council would, he hoped, find that they adequately met all reasonable requirements.

The Motion was put and agreed to.

CENTRAL PROVINCES TENANCY BILL.

The Hon'ble MR. GRANT then moved for leave to introduce a Bill to define and amend the law relating to the tenancy of land in the Central Provinces.

The Motion was put and agreed to.

EXEMPTION FROM MUNICIPAL TAXATION BILL.

The Hon'ble MR. GRANT also moved for leave to introduce a Bill to exempt certain persons and property from municipal taxation. He said it was a Bill for the purpose of empowering the Governor General in Council to exempt military officers and men (not being in civil employ), and also public property, such as horses and wagons, from certain forms of municipal taxation in municipalities which were not also military cantonments. As regards military cantonments, that object had already been attained by section 24 of the recently passed Cantonment Act, No. III of 1880, and it had been proposed to deal with the case of military men and public property in ordinary municipalities by introducing the necessary provisions into the Bill to regulate the levy of Town-duties and Tolls in Municipalities. That Bill, however, could not be proceeded with immediately, and hence it had been thought advisable to complete the necessary legislation by asking the Council to deal with the subject independently.

The Motion was put and agreed to.

The Council adjourned to Friday, the 28th May, 1880.

SIMLA;
The 21st May, 1880.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 25TH MAY 1880.

GENERAL REMARKS.—General rain has fallen in British Burma, Assam, Bengal, Madras, and Mysore and Coorg. In Bombay, Central India, Rajputana, and the North-Western Provinces and Oudh slight showers fell in a few districts and States. In the Central Provinces and the Punjab the rain was very partial. Autumn sowings are being pushed on actively. General prospects and the public health continue good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—		
(May 26th)—		
Bellary ...	·90 (average of eight stations).	*Ragi* 28·8; harvesting of second crop paddy in one taluk; standing crops generally good.
Kurnool ...	·57 (average of four stations).	*Ragi* 34·73.
Ganjam ...	·64 (average of ten stations).	*Ragi* 32·33.
Kistna ...	·69 (average of seven stations).	*Ragi* 33·42.
Chingleput (Madras) ...	·50 (average of four stations).	*Ragi* 22·79; wet and dry crops being harvested; standing crops doing well.
Coimbatore ...	1·04 (average of fourteen stations).	*Ragi* 23·76; crops generally fair; harvest of paddy in Udamalpet, outturn full.
Tanjore ...	·32 (average of four stations).	*Ragi* 25·54; crops generally good; harvest of chillies, outturn ¾.
Madura	·29 (average of seven stations).	*Ragi* 25·58.
Malabar ...	·46 (average of ten stations).	*Ragi* 19·7.
Travancore ...	·96	*General Remarks.*—General prospects fair.
Bombay—		
(May 26th)—		
Kurrachee ...	.....	Weather cloudy, rain expected; river at Kotri on 24th 8 feet 11 inches, against 8¾ feet on same date last year; freshet in Gaj on 10th, watering 115 acres and filling all tanks; 8 cases of small-pox in Dadu taluka; fever and cattle-disease in Joti taluka.
Hyderabad ...	.....	Fever in four talukas; cattle-disease in Naushahro taluka; small-pox in Tando Bago, Guni, Moro, and Naushahro talukas; usual high winds with dust; river rising.
Ahmedabad ...	.....	Sugarcanes being watered in Dholka; ploughing and manuring operations progressing.
Baroda ...	Slight showers in parts on the 22nd.	Weather cloudy; public health good.
Surat ...	.....	Fever in three talukas.
Násik ...	Showers in five talukas	Ague in Peint only.
Colaba (Bombay) ...	.....	Average abnormal temperature 1° warm; vapour in air normal; abnormal wind southerly till the 21st, afterwards northerly.
Poona ...	.....	In district average price of *bajri* rising, whilst that of *jowari* falling
Ahmednagar ...	.....	Preparation of land for monsoon crops nearly finished.
Sholapur ...	.....	Prospects unchanged; public health good.
Dharwar ...	·66 (average of three talukas).	*Rabi* harvest completed; lands being prepared for sowing; rice sowing retarded for want of rain; slight fever in seven; cattle-disease in two talukas.
Kanara ...	·50 (average)	Ground being prepared for monsoon crop.
Rajkot ...	.....	Weather very hot; public health good.
		General Remarks.—Prospects generally unchanged; slight rain in Baroda, Násik, Dharwar, and Kanara.
Bengal—		
(May 26th)—		
Chittagong ...	3·48	Weather hot and cloudy, with occasional rain; prospects of crops favourable; cholera in several places; cattle-disease continues.
Dacca ...	2·23	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	·90	No crops on ground; *aus* and jute sowings progressing favourably price of common rice stationary; health generally good; a few cholera cases in Baraset.
Moorshedabad ...	*Nil*	Prospects of *bhadoi* paddy good; *boro* reaped in Jangipur; fever in some thanas of sadr; slight cholera in Suti and Sujagunge.
Rajshahye ...	1·20	Days growing hot; sowings of *amun* and *aus* nearly completed; harvesting of *boro* continues; *til* doing well; a few cholera cases in thanas Lalpore and Manda.
Burdwan ...	2·10; Cutwa 1·18; Culna ·55; Raneegunge ·7.	Weather rainy; sowing of *aus* still going on; cholera in Khandaghosh and Selimabad thanas.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Rungpore ...	2·54	Weather hot and cloudy; prospects of crops favourable; health good.
Bhágalpur ...	·14	No crops on ground; land being prepared for *bhadoi*; public health good.
Purneah ...	1·1	Prospects of crops good; progress of farming operations well forward; plenty of moisture; health fair; small-pox, fever, and cholera flying about.
Patna ...	*Nil*	Prospects good; land being prepared for *bhadoi*; cholera in Dinapore.
Durbhunga ...	2·4	High east wind; crops good; prices continue stationary; general health good in head-quarters; a few cases of small-pox and cholera in Mudhoobunnee.
Hazáribágh ...	·88	Monsoon apparently set in, though a month earlier; mango damaged a little by high wind and hailstorms; ploughing for autumn and winter crops going on; with exception of sporadic cholera and small-pox here and there, general health good.
Cuttack ...	Sufficient rain	Rice plants on low lands germinated; prices stationary; small-pox decreasing.
		General Remarks.—Rain in almost all districts during week; general prospects favourable; agricultural operations in full swing; in Bengal proper sowing of *aus* and jute nearly completed, and of *amun* going on in places; in Behar land being prepared for *bhadoi* sowings; in Orissa and Chota Nagpore ploughing and sowing rapidly progressing; sugarcane, indigo, and other minor crops on ground doing well; fever very prevalent in Chittagong Hill Tracts, and small-pox and cholera still in some places, otherwise public health good.
N. W. P. and Oudh—		
Benares (May 25th)	.....	Weather till yesterday very close; a strong north-easterly wind set in last night; rain threatening, temperature perceptibly cooler; sporadic cholera still continues, otherwise health good; prices stationary.
Allahabad („ „)	.....	Weather such as usually foreruns rains; cholera has spread in district; city and station healthy; wheat 21¼ seers, coarse rice 19⅜ seers, unhusked *dhan* 28 seers.
Gorakhpur („ 24th)	*Nil*	Strong east wind; weather continues cool; cholera still decreasing; wheat 23 1/16 seers, gram 27 seers.
Jhansi („ 26th)	Slight shower on the 25th.	Prices stationary; fever continues.
Agra („ 25th)	.....	Weather unsettled; wind easterly to-day; fever continues.
Bareilly („ 26th)	·4	Wind and weather variable; prolonged storm on night of 24th.
Meerut („ „)	Slight rain	Wind variable; very hot; duststorms frequent.
Kumaun („ 25th)	Showers	Health good; *kharif* crop sowing; prices unchanged; wind variable.
Lucknow („ 20th)	·5	Weather cool; thunderstorms, wind east; cholera and fever decreasing; a few cases of cattle-disease; barley 30 seers.
Partabgarh („ 24th)	.....	Weather closer; wind variable.
Sitapur („ 26th)	*Nil*	Prevailing winds east; weather unsettled; prices steady; health good; no cattle-disease.
Fyzabad („ „)	2·1	Violent storms and hail; sugarcane being weeded; cholera decreasing.
		General Remarks.—Weather threatening and unsettled; wind variable, but chiefly from the east; slight rain in Jhansi, Meerut, and Kumaun, and heavier rain in Bareilly, Lucknow, and Fyzabad; cholera continues in Benares, but is decreasing in Gorakhpur, Lucknow, and Fyzabad, and spreading in Allahabad; fever prevalent in Jhansi and Agra, but decreasing in Lucknow; a few cases of cattle-disease in Lucknow.
Punjab— (May 25th)—		
Delhi ...	.....	Prospects good; fever increasing; prices fluctuating.
Hissar ...	.....	Crops gathered; outturn small; prices steady; weather seasonable; fever prevalent.
Umballa ...	·3	Crops harvested and being gathered; health fair.
Jullundur ...	.....	Crops cut and gathered; health good; prices steady.
Lahore ...	.....	Crops cut; health good.
Ferozepore ...	.....	Crops being gathered; prices falling.
Sialkot ...	.....	Three-fourths of crops harvested; health good.
Ráwalpindi ...	.....	Health fair; four cases of *suspected* cholera in district.
Pesháwar ...	.....	Harvest prospects bad; *prices* steady.
Mooltan ...	.....	Crops garnered; health good; prices steady.
Dera Ismail Khan ...	.....	Small-pox prevailing; crops being gathered.
		General Remarks.—Health fair; harvest prospects generally good.
Central Provinces— (May 26th)—		
Nágpur ...	.....	Hot, close; ploughing for *kharif* sowings progressing.
Jubbulpore ...	.....	Cloudy, close; crops harvested; small-pox continues; prices easier.
Saugor ...	.....	Cloudy, hot; ploughing for *kharif* in hand; small-pox and cattle-disease continue; prices declining.
Seoni ...	·16	Cloudy; ploughing for *kharif* continues.
Hoshangabad ...	.....	Cloudy, hot; small-pox continues; prices fallen.
Raipur (May 22nd)	.....	Very hot, cloudy; fields being prepared for *kharif* sowings; prices slightly risen.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *continued.*		
Sambalpur (May 21st)	A few drops of rain	Cloudy; ploughing for *kharif* progressing; prices rising.
		General Remarks.—Cloudy, hot; slight rain at Seoni and Sambalpur; preparations for *kharif* sowings continue; prices rising in Eastern Districts, falling in the Nerbudda Valley Districts.
British Burma— (May 26th)—		
Akyab ...	5·06	Total rainfall 15·90; slight small-pox in two townships, otherwise public health good; slight cattle-disease.
Rangoon ...	3·44	Total rainfall 11·19; a few deaths from small-pox; small-pox and fever still continue in parts of the Hanthawaddy district, a few deaths from both reported; health of cattle normal.
Bassein ...	2·40	Total rainfall 12·52; health indifferent; small-pox somewhat prevalent; slight cholera; cattle-disease in several townships.
Prome ...	4·97	Total rainfall 10·08; small-pox in district; weather stormy.
Amherst (Moulmein) ...	8·29	Total rainfall 20·92; public health good; ploughing commenced everywhere.
Toungoo ...	2·92	Total rainfall 8·39; a few deaths from small-pox, otherwise public health good.
		General Remarks.—Small-pox still somewhat prevalent in Pegu division, a few cases in Akyab and Toungoo; some cattle-disease, otherwise general health good; rain has fallen freely during week; ploughing commenced in Tenasserim.*
Assam— (May 26th)—		
Gauháti ...	3·01	Days hot, mornings cool; *asu* getting on well, but the early rains had impeded cultivation.
Sylhet ...	2·4	Cultivation progressing satisfactorily; prospects good; tea doing well.
Cachar ...	5·05	Weather seasonable; more than one-half of *asra, murali,* and *dumahi dhan* sown; cultivation of *sali dhan* in progress; common rice 14½ seers per rupee; public health good.
Dibrugarh ...	·29	Sowing for *sali* going on; prospects of early rice reported good; weather warm; cattle-disease very prevalent.
Mysore and Coorg— (May 26th)—		
Bangalore ...	1·92	Crops in good condition; fever and cattle-disease still prevalent in parts; prices stationary.
Mysore ...	2·28	
Mercara ...	·32	
Berar & Hyderabad— (May 26th)—		
Amráoti ...	.....	Weather cloudy and close.
Akola ...	.....	Preparations for *kharif* sowings going on.
Hyderabad ...	Copious shower of rain fell on morning of 26th.	Fever and small-pox still prevalent in some places; harvesting of *tabi* crops and preparations for *kharif* sowings continue.
Central India States— (May 26th)—		
Indore ...	·79	Prices falling; some fever, but generally health good.
Morar (Gwalior) ...	.....	Weather stormy and cloudy; fever decreasing; *bajra* 81, *jowar* 29 seers.

* As some errors have occurred in recent rainfall returns from British Burma, the Chief Commissioner has furnished the following corrected data from the 27th March to the 8th May 1880.

Rainfall.		Akyab.	Rangoon (Town District).	Bassein.	Prome.	Amherst (Moulmein).	Toungoo.

N. B.—The decrease in the traffic for the week ended 3rd April 1880, as compared with that for the week ended 5th April 1879, or the receipts for 1879 being inclusive of other amounts than those belonged to the week, *viz.*, adjustments made at the end of the quarter. The figures for 1880 represent the earnings for the week only—the supplementary statement for the 1st quarter of 1880 not having been received as yet.

R. B. CHAPMAN,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Monday, the 31st May, 1880.

PRESENT:

His Excellency the Viceroy and Governor General of India, G.M.S.I., *presiding*.
His Excellency the Commander-in-Chief, G.C.B., G.C.S.I., C.I.E.
The Hon'ble Sir John Strachey, G.C.S.I., C.I.E.
General the Hon'ble Sir E. B. Johnson, R.A., K.C.B., C.I.E.
The Hon'ble Rivers Thompson, C.S.I.
Major-General the Hon'ble A. Fraser, C.B., R.E.
The Hon'ble J. Gibbs, C.S.I.
The Hon'ble Sayyad Ahmad Khán, Bahádur, C.S.I.
The Hon'ble B. W. Colvin.
The Hon'ble C. Grant.
His Highness Raghbír Singh, G.C.S.I., C.I.E., Rájá of Jheend.

NEW MEMBER.

His Highness RÁJÁ RAGHBÍR SINGH took his seat as an Additional Member.

EXEMPTION FROM MUNICIPAL TAXATION BILL.

The Hon'ble MR. GRANT introduced the Bill to exempt certain persons and property from municipal taxation, and moved that it be referred to a Select Committee, consisting of the Hon'ble Sir E. Johnson, the Hon'ble Messrs. Gibbs and Colvin and the Mover. He said that at the last meeting of the Council, in asking for leave to introduce the Bill, he explained that it had been found necessary to insert in the Cantonment Act lately passed, No. III of 1880, a section empowering the Governor General in Council to exempt certain persons or classes of persons and property from municipal taxation in military cantonments. Those powers had been taken in order to protect military officers and men from certain forms of taxation, such as taxes on salaries and professions, which in their case were thought inappropriate; and to prevent municipalities from raising income at the public expense by taxing Government property. In order to carry out those objects, a notification was issued by the Governor General, which he would read to the Council, as it would show the nature of the proceedings which might be taken under the present Bill. It was as follows:—

"In exercise of the power conferred by section 24 of Act No. III of 1880 (The Cantonments Act), the Governor General in Council is pleased to declare that in any cantonment situated in British India, which may have been, or may in future be, brought under the operation of a Municipal Act, the following classes of persons shall, when on duty in such cantonment, be exempted from the operation of taxes of the following kinds (namely):—

"*Classes of persons to be exempted.*

(*a*) Regimental officers, non-commissioned officers and soldiers, medical or veterinary officers, and warrant officers on military duty.

(*b*) Royal Engineers in the Public Works Department.

(*c*) Officers of the Staff Corps and Indian Army and warrant officers of the Army employed in the Military Branch of the Public Works Department.

(*d*) Officers and warrant officers of the Army staff and of Army departments, such as the Commissariat, Ordnance or Pay Department.

"*Taxes from the operation of which exemption is granted.*

(1) Municipal taxes on salaries.

(2) Municipal taxes on professions, trades, callings, offices or appointments.

(3) Municipal taxes on horses, mules or ponies kept for military duty.

(4) Municipal, ferry or road tolls on animals or vehicles kept or used for military duty.

"2. In further exercise of the power conferred by the same section, the Governor General in Council is pleased to prohibit the levy, in any cantonment in British India, of any municipal tax whatsoever on public property, animals or vehicles.

"3. In this order the expressions 'municipal tax,' 'municipal taxes' and 'municipal tolls' include any tax or toll imposed by virtue of the provisions of a Municipal Act under the operation of which any cantonment may have been, or may in future be, brought."

The interests of military officers and men, and public property in cantonments, having been thus guarded, it became necessary, for the sake of fairness and uniformity, to extend similar immunities to military officers and men obliged to live outside cantonments, and to protect public property wherever it might be found within municipal limits. It was with those objects that the present Bill had been drawn; and the measure was of so simple a character, that it required no detailed exposition.

The Motion was put and agreed to.

The Hon'ble MR. GRANT moved that the Bill be published in the local official Gazettes, in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

VACCINATION BILL.

The Hon'ble SAYYAD AHMAD KHÁN moved that the Hon'ble Mr. Gibbs be added to the Select Committee on the Bill for giving power to prohibit inoculation and to make the vaccination of children in certain municipalities and cantonments compulsory.

The Motion was put and agreed to.

The Council adjourned *sine die*.

SIMLA;
The 31st May, 1880.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

REPORT OF THE OPERATION OF THE POST OFFICE OF INDIA FOR THE YEAR 1878-79.

Extract from the Proceedings of the Government of India, Department of Finance and Commerce,—No. 980 (Separate Revenue—Post Office), dated 5th June 1880.

Read—

Report of the operation of the Post Office of India for the year 1878-79.

RESOLUTION.—The administration of the Post Office during the year was successful, and a steady rate of progress was maintained. The charges for the carriage of books and patterns and for insurance of inland parcels and letters, and the extra charges for insufficiently paid parcels were reduced; a system of granting certificates of posting of unregistered articles at a charge of half an anna was also introduced.

The effect of the abolition of the charge for redirection postage, and of the introduction of the insurance and value-payable systems, was not fully felt till the year 1878-79. The first resulted, as was anticipated, in a considerable loss of revenue, which was fully compensated by the gain in administrative *efficiency* and public convenience.

The insurance system is evidently appreciated; the total value of the articles insured during the fifteen months of its existence being Rs. 3,96,19,505, with a total of fees collected of Rs. 1,36,786, while only Rs. 25,092 were paid as compensation for the loss of insured articles. The value-payable system is not as yet largely employed by the public; but its use is steadily increasing.

Certain reforms decided on by the Universal Postal Union in the course of the year came into operation only with the commencement of the year 1879-80.

The war in Afghánistán caused a sudden strain on the resources of the Department; but, notwithstanding special difficulties arising out of the exceptional demand for cattle, and the occurrence of disease among both horned cattle and horses, the arrangements for the conveyance of correspondence to the front were, on the whole, satisfactory.

The number of post-offices increased by 285, of letter-boxes by 323, and of village postmen by 434.

Covers carried by the Post Office increased by 2·39 per cent.; but newspapers decreased by 6·57 per cent. This decrease must be viewed in connection with the increase of 11·33 per cent. in the previous year—an abnormally large increase, for which special reasons existed in the interest in European news connected with the Russo-Turkish war, and in the famines in Madras and Bombay. The number of newspapers carried is still considerably in excess of that given for 1876-77.

The operations of the Dead Letter Office were satisfactory; for, though about the same proportion of covers passed through that office as in the previous year, a smaller proportion remained finally undisposed of.

The net revenue from the Foreign Parcel Post again showed an increase from Rs. 97,277 to Rs. 1,09,717. The rapid development of this branch of the parcel traffic is indicated by the following figures, extracted from paragraph 35 of the Report:—

Years.	No. of parcels.
1873-74	21,923
1874-75	25,563
1875-76	35,819
1876-77	45,325
1877-78	59,095
1878-79	69,534

The exchange of letters with the United Kingdom has increased by 5·9 per cent., and of newspapers by 3·5 per cent.; while that of books and patterns has decreased by 12·5 per cent. This decrease is accounted for partly by the increased use of the parcel post for the conveyance of books, and partly on the assumption of a depression of trade either in books or patterns, or both.

The proportion of revenue collected in cash continues to decrease, the extended use of the embossed half-anna envelopes, as exhibited in the following table, having contributed materially to this result:—

Years.	No. of half-anna envelopes.	Value. Rs.
1872-73	99,391	3,106
1873-74	2,613,195	81,662
1874-75	5,804,140	1,81,380
1875-76	11,046,066	3,45,190
1876-77	17,915,653	5,59,864
1877-78	25,163,257	7,86,352
1878-79	30,872,300	9,64,759

The demand for these envelopes will, if the present rate of increase continues, soon exceed the maximum annual supply of 35,712,000 envelopes for which the present contract with Messrs. De La Rue & Co. provides.

The financial results, though contrasting unfavorably with those of the previous year, are not unsatisfactory: the net revenue, after deducting postal expenditure proper, is Rs. 12,63,563; or, after deducting other expenditure which, though not charged in the postal accounts, is fairly debitable to the Post Office, Rs. 1,27,898. The reduced surplus is mainly due to the reductions of postage and the abolition of redirection charges.

The following statement, extracted from paragraph 78, exhibits, in an interesting manner, the general progress of the operations of the Post Office:—

Year.	Comparison of number of letters and newspapers, those of 1855-56 being represented by 100.	Comparison of revenue from private correspondence, that of 1855-56 being represented by 100.	Comparison of expenditure, that of 1855-56 being represented by 100.
1855-56	100	100	100
1867-68	207	237	161
1870-71	257	235	175
1873-74	328	284	184
1876-77	368	345	196
1877-78	387	378	206
1878-79	394	390	222

The thanks of the Government of India are again due to Mr. Monteath for his able administration of the Department. The officers of the Department mentioned* in paragraphs 79 to 81 have also earned the approval of Government by their loyal and zealous services in connection with the war in Afghánistán, or in other special directions.

* Colonel W. M. Lane, Mr. S. S. Sullen, Mr. E. Hodgkinson, Mr. F. J. Jordan, Mr. J. H. Cornwall, Mr. C. Lawder, Mr. W. T. VanSomeren, Mr. P. Sheridan, Mr. W. A. Sutherland, Mr. C. Goodburn, Mr. G. W. Creswell, Mr. Dinshaw Jijibhai, and Pundit Sundar Lal.

ORDERED, that this Resolution be communicated to the Director General of the Post Office of India, and that the Report and the Resolution be published in the Supplement to the *Gazette of India*.

ANNUAL REPORT

ON THE

OPERATIONS OF THE POST OFFICE OF INDIA

FOR THE YEAR

1878-79.

No. 11573, dated 30th March, 1880.

From—A. M. MONTEATH, Esq., *Director General of the Post Office of India,*
To—*The Secretary to the Government of India,* DEPARTMENT OF FINANCE.

I have the honor to submit the Annual Report on the Operations of the Post Office of India during the year 1878-79.

GENERAL POSTAL UNION.

2. Six more countries were admitted into the General Postal Union during the year, as shewn in the list below:—

Countries belonging to the General Postal Union on the 1st April 1878.

Great Britain.
Germany.
Austria.
Hungary.
Belgium.
Denmark.
Egypt.
Spain.
United States of America.
France.
Greece.
Italy.
Luxembourg.
Norway.
Holland.
Portugal.
Roumania.
Russia.
Servia.
Sweden.
Switzerland.
Turkey.
British India.
French Colonies.
British Colonies, including—
Trinidad.
Bermuda.
Jamaica.
Guiana.
Ceylon.
Straits Settlements.
Labuan.
Mauritius.
Hongkong.
Spanish Colonies in—
America and
Oceania.
Dutch Colonies in—
America and
Asia.
Portuguese Colonies in—
Asia,
Africa, and
Oceania.
Danish Colonies in—
America.
Brazil.
Japan.
Persia.

Countries admitted to the General Postal Union during the year.

Argentine Republic.
British Honduras.
Canada.
Falkland Isles.
Newfoundland.
West Coast of Africa.

3. The General Postal Union now comprises nearly all the principal countries in the world: the only important exceptions being the British Colonies of Australasia and South Africa.

4. A new international postal treaty, termed the Convention of Paris, was signed on the 1st of June 1878, whereby the Postal Union was continued for an indefinite period with provision for an international Congress at least every five years. The next Congress was fixed to be held at Lisbon in 1884.

5. The new convention, although signed, as above stated, during the year under report, did not come into actual operation till the commencement of the following year (1st April 1879): but this is perhaps the best opportunity of referring to such of its provisions as involved changes of public interest. These may be enumerated as follows:—

(1.) The introduction of international post-cards, which before was optional, was made compulsory.

(2.) The rates of postage were fixed on standards somewhat lower than those previously existing: the result being a reduction of the Indian rates as shewn below:

		Former rates.	*Revised rates from 1st April 1879.*
Viâ Southampton.	Letters ...	5 annas per half ounce	3 annas per half ounce.
	Newspapers ...	1 anna per 4 ozs.	1 anna per 4 ozs.
	Books, &c. ...	1½ annas per 2 „	1 „ „ 2 „
Viâ Brindisi	Letters ...	6 annas per ½ oz.	5 annas per ½ oz.
	Newspapers ...	2 „ „ 4 ozs.	2 „ „ 4 ozs.
	Books, &c. ...	2½ „ „ 2 „	2 „ „ 2 „

(3.) The limit of weight of books, &c., was raised from 1 kilogramme (2lbs. 3 ozs.) to 2 kilogrammes (4lbs. 6 ozs.).

(4.) Insufficiently paid articles other than letters were allowed to pass under conditions of taxation similar to those in force for letters.

(5.) The name was changed from that of General Postal Union to that of Universal Postal Union.

SEA COMMUNICATION WITH EUROPE.

6. Although the sea communication with Europe is not part of the Indian Inland Post to which this report refers, it is usual to give here some information respecting its cost. All the sea postage collected by India is handed over to the British Post Office, and, when this as well as the British collections have been deducted from the total cost of the service, the balance or net cost, is charged in equal shares upon Great Britain and India. The actual payments are made on estimate before the accounts are completed, but in the figures given below (up to 1876-77) there have been entered instead the adjusted amounts, *i.e.*, the amounts found ultimately to be properly debitable to each year.

	£	
1869-70	73,110	
1870-71	69,150	
1871-72	68,110	
1872-73	61,072	Adjusted amounts as explained above. The increase in 1876-77 and following years was caused by the reduction of postage carried out on 1st July 1876, when India entered the Union.
1873-74	54,770	
1874-75	57,170	
1875-76	53,125	
1876-77	66,685	
1877-78	70,000	The adjustments for these years have not been received from London. The amounts shewn are estimated.
1878-79	**70,000**	

Name of the Vessel.	Due date and hour for arrival at Bombay.	Actual date and hour of arrival at Bombay.	Number of hours late.	
			H.	M.
Mongolia ...	14th November 1878, 6 P.M.	15th November 1878, 5-55 A.M.	11	55
Malwa ...	19th December 1878, 6 P.M.	19th December 1878, 7-45 P.M.	1	45

7. There were no instances of material delay in the arrival of the European mails. In fact, the delays beyond contract time were altogether only four in number, as shewn on the margin.

LOCAL STEAM SERVICES.

8. The changes made during the year in the Local Steam Services have been made the subject of remarks opposite the entries affected thereby in the following statement:—

By the British India Steam Navigation Company.

(1.)	Fortnightly communication between Calcutta and Kyouk Phyoo *viâ* Chittagong and Akyab, with a four-weekly extension to Sandoway during the fair season.	Nos. 1 to 9 are under the control of the Post Office, by which a subsidy of Rs. 7,25,000 per annum is paid. No. 5 was changed from January 1879 into a weekly service, the additional trips being performed by the Company on its own account and not under contract. No. 6 was changed under like conditions from April 1878 into a weekly service. No. 9 was also changed under like conditions into a fortnightly service, but after a trial of five months the change was abandoned.
(2.)	Fortnightly communication between Calcutta and Rangoon *viâ* Akyab.	
(3.)	Weekly communication between Calcutta, Rangoon and Moulmein.	
(4.)	Four-weekly communication between Calcutta, Singapore, and intermediate ports.	
(5.)	Fortnightly communication between Moulmein and Singapore *viâ* Penang and Malacca.	
(6.)	Fortnightly communication between Madras, Rangoon, and intermediate ports on the north-east coast.	
(7.)	Weekly communication between Calcutta and Bombay, touching at intermediate ports on the Coromandel and Malabar Coasts.	
(8.)	Semi-weekly communication between Bombay and Karachi, with a weekly continuation to the Persian Gulf.	
(9.)	Four-weekly communication between Aden and Karachi.	

(10.)	Four-weekly communication between Calcutta and Port Blair, with extensions to Camorta and Rangoon.	No. 10 is under the control of the Military Department, the consideration given being, not in the form of subsidy, but of guaranteed rates for the transport of Government stores.

By other Agencies.

(11.)	By the Irrawaddy Flotilla Company, a weekly communication between Rangoon, Mandalay, and intermediate ports with a monthly extension to Bhamo, the subsidy being Rs. 5,000 per mensem.	Nos. 11 to 13 are under the control of the Chief Commissioner of British Burmah, the Post Office contributing a portion (Rs. 500 per mensem) of the subsidy for No. 12. No. 11 was made the subject of a new contract, but without any material change in the service.
(12.)	By the Irrawaddy Flotilla Company, a semi-weekly communication between Rangoon and Bassein on a monthly subsidy of Rs. 1,500.	
(13.)	By the Burmese Steam Tug Company, a fortnightly communication between Moulmein, Tavoy and Mergui, on a monthly subsidy of Rs. 1,500.	
(14.)	By Jardine, Matheson & Co. (of Hongkong) and Apcar & Co. (of Calcutta), a monthly communication between Calcutta, the Straits and Hongkong, the dates of departure being regulated primarily with reference to the Calcutta opium sales.	No subsidy for No. 14.
(15.)	By the Euphrates and Tigris Steam Navigation Company, a communication thrice a month between Busrah and Bagdad.	No. 15 is under the control of Her Majesty's Secretary of State for India; the subsidy is £300 per mensem.

The small service maintained by the Government of Ceylon, between Point Calimere on the Indian side and Kankesanturai on the Ceylon side, was also continued.

9. The Sea Services maintained by the British India Steam Navigation Company were performed with substantial regularity, except on the Bombay and Calcutta line. The contract allows considerable latitude in the way of stoppage at intermediate ports on that line, which is not one of those maintained primarily for postal requirements: the time-table accordingly shews, not the contract time, but the anticipated average duration of each voyage, and the deviations from the time-table in the current year did not go beyond what was allowable under the contract.

CHANGES OF INLAND RATES OF POSTAGE.

10. The changes of inland rates of postage carried out in the latter part of last year included the important measure of abolishing re-direction postage, and reference is made to it again in this year's report, because it is the first year in which the full financial effect of that measure was felt. Other changes were made during the year under report, of which the following are the chief, *viz.*:—

1.	A reduction of the rate chargeable on books and patterns from 1 anna to ½ anna for 10 tolas, articles other than books and patterns being excluded from the list of allowable contents.	With effect from the 1st April 1878.
2.	Insufficiently-paid packets formerly charged at letter or parcel rates were made chargeable with only double of the deficiency.	Ditto ditto.
3.	Certificates of posting granted for unregistered articles at a charge of ½ anna each.	Ditto ditto.
4.	Reduction of insurance rates from one-half to one-quarter per cent.	With effect from the 1st August 1878.

11. The first of these measures involved a considerable sacrifice of revenue both on private and official correspondence. The Calcutta Trades Association subsequently urged a reduction of the minimum parcel rate to provide cheap transit by post for the small articles of merchandize which formerly enjoyed the same privilege as books and patterns: but it has not as yet been deemed advisable by the Government to admit a further reduction of revenue.

12. The reduction of the insurance rates was the result of the first six months' experience of the system of insuring inland parcels and letters. This important additional postal facility will form the subject of remarks in a separate section of this report (see paragraphs 52 to 56).

IMPORTATION OF DUTIABLE ARTICLES BY POST.

13. The extent to which the practice of importing dutiable articles by post had grown having been brought to the notice of the Government of India, an order was issued, under date the 7th March 1879, directing the strict enforcement of the clauses of the Indian Post Office Act applicable thereto. In the Bombay Post Office fifty-one letters were challenged and made over to the Custom House Authorities, of which forty-one were found to contain dutiable articles.

CREATION OF A NEW POSTAL CIRCLE FOR EASTERN BENGAL.

14. Intimation was given in the report of the previous year of the formation of the province of Behar into a separate postal circle; and it has now to be added that Eastern Bengal, with Dacca as its centre, was formed into a separate Circle during the year under report. When the postal operations in a province become too much for the personal supervision of the officer in direct administrative control, it is the custom in this Department not to supplement his staff but to lessen his jurisdiction; and hence it is that record is made from

time to time of the fact of the creation of a new postal Circle. Even with the transfer in late years of Assam, Behar and Eastern Bengal from the control of the Post Master General of Bengal, the Bengal Circle still holds the foremost place, as respects amount of work, among the postal Circles in India.

OTHER DEPARTMENTAL CHANGES.

15. During the year under report an important revision was made of the staff of Postal Inspectors with the view of meeting the increased demands resulting from the ever-growing number of post offices and amount of correspondence. The opportunity of a favourable financial position (as shewn in the previous year's report) was also taken of increasing the number of Railway Parcel Sorting Offices. The sorting of letters and newspapers is performed on almost all Railway lines in travelling offices, but for parcels it would be impossible to make similar provision without great expense; and hence it becomes necessary to select convenient places on the main lines where parcels can be stopped in transit for the purpose of being sorted. The constant extension of the railway system makes it necessary from time to time to revise the arrangements for such work, and this was done during the year under report.

There was also an extensive revision of departmental system with the object of reducing labor. Besides the ordinary growth of correspondence, new work in the way of insurance, &c., had been undertaken, and the opportunity was availed of for carrying out various important measures of the character above described. Such changes always involve trouble and expense at first, in the provision of revised forms and other working material.

POSTAL ARRANGEMENTS FOR INDIAN TROOPS DESPATCHED TO MALTA AND CYPRUS.

16. The despatch of Indian troops to Malta, and ultimately to Cyprus, in the summer of 1878, involved the organization of special postal arrangements for the despatch and delivery of mails, and this was successfully done by the despatch with the expeditionary force of a fully equipped postal establishment.

AFGHAN WAR.

17. The war which broke out in November 1878 with the Ameer of Cabul caused a sudden strain upon the Postal Department not only beyond, but within, the limits of its ordinary operations.

18. It was called upon to make emergent provision for a large increase of the Goods and Passenger Services between Jhelum and Peshawar, as well as to create new services of a similar kind between Rawalpindi and Thull. These operations were rendered especially difficult by the enormous demand which sprang up on all sides for draught cattle of every description, and still more so by the sudden appearance of rinderpest among the bullocks, carrying off some 300 head actually on the line besides diminishing the supply in the adjoining districts. Glanders also broke out among the horses, spreading rapidly over the whole line and necessitating summary preventive measures in the way of destroying all affected animals.

19. The trans-frontier operations were also extensive.

20. Beyond Peshawar a horsed line of communication was opened to Daka, Jalalabad, and then, as the camp advanced, to Gundamak. After the first week or two the working of this line was quite satisfactory.

21. In the Kurram Valley, arrangements were made for maintaining communication between Thull and Alikheyl by means of a horse post. These arrangements were from the first satisfactory.

22. But the most serious part of the operations was in the direction of Beloochistan. A horsed tonga service was established from Sukkur to Jacobabad; but beyond that point, all the way to Quetta and Kandahar, the Department had to rely entirely on the Political Authorities. Even the horsemen of the Belooch Guides, who had formerly carried the mails between Jacobabad and Quetta, could no longer be spared for that service. It was months before this part of the service could be got into anything like order, and that only by the strenuous efforts of the Political and Military authorities combined.

23. Special arrangements had also to be made on the Railway lines for disposing of correspondence for the front. There were three distinct lines of transit and yet a large proportion of the correspondence contained nothing but the addressee's name and regiment, and often, in the case of Medical, Transport and other Officers, there was nothing but the name. Officers had to be specially equipped at selected points for the sole purpose of collecting information about the destination and progress of officers and troops; and by this means and the free use of printing in the revision of lists from day to day, this part of the work was eventually mastered in a satisfactory way.

24. I shall refer in the appropriate place (paragraph 79) to those officers whose exertions are especially deserving of notice in connection with the operations above referred to.

SECTION I.—POST OFFICES, LETTER-BOXES AND VILLAGE POSTMEN.

	No. at close of 1877-78.	No. at close of 1878-79.	Increase.
Post Offices	4,107	4,392	285
Letter-boxes	5,809	6,132	323
Village postmen	2,242	2,676	434

25. The usual statistics under this head will be found in Appendix I, of which an abstract is given on the margin. The increase is large, but it must be remembered that for the two previous years there had been considerable restriction owing to financial pressure.

SECTION II.—POSTAL LINES.

Year.	Railway.	Mail-cart, horse and camel line.	Runners and boats.	Sea.	Total.
1877-78 ...	7,338	3,781	33,157	13,687	57,963
1878-79 ...	8,123	3,269	32,875	13,687	57,954
Increase ...	785	...	...	...	...
Decrease ...	...	512	282	...	9

26. In Appendix II will be found the usual statistics of postal lines. The abstract on the margin shews that the total increase in railway mileage almost exactly balanced the decreases under the other heads.

27. The principal Railway extension was that of the Indus Valley State Railway (Mooltan to Kotri, 508 miles), and this with various smaller extensions, *viz.*, on the Northern Bengal State Railway (47 miles), on the Neemuch State Railway (50 miles), on the Western Rajputana State Railway (35 miles), and on the Dhond-Munmad State Railway (145 miles) make up the considerable total of 785 miles.

28. The decreases under the other heads were for the most part due to the abolition of lines superseded by the railway. Besides this, there was the abolition of the horse and camel line across the desert of Sind between Ahmedabad and Hydrabad, which as well as other smaller decreases were balanced by some new lines opened in Sind and by a series of lines opened for military purposes in the Punjab.

SECTION III.—CORRESPONDENCE.

Year.	Letters.	Newspapers.	Parcels.	Books, Patterns and Packets.	Total.
1877-78 ...	115,089,336	10,999,758	909,962	1,827,024	128,826,080
1878-79 ...	118,599,609	10,276,990	928,901	2,023,768	131,829,268
Increase ...	3,510,273	...	88,939	196,744	3,073,188
Decrease ...	...	722,768	...	...	...
Percentage of increase ...	3·05	...	9·77	10·77	2·39
Percentage of decrease ...	...	6·57	...	...	...

29. The correspondence returns for the year are shewn in Appendix III, of which an abstract is given on the margin. The general percentage of increase compares unfavorably with the results of previous years, as will be seen from the following abstract:—

	Percentage of correspondence. Increase.
1875-76	2·88
1876-77	2·57
1877-78	5·13
1878-79	2·39

30. As observed in the report of last year (paragraph 19), "a time of famine affects the Post office during the actual currency of the dearth by stimulating correspondence in connection with the transport of grain, the remittance of money, &c." It is not, therefore, to be wondered at that the stimulus given in 1877-78 should leave the following year, now under report, with a less than usual increment as compared with the results of its predecessor. That this is the cause of the reduced rate of progress is apparent from the fact that while other postal circles shew a fair average progress in the amount of correspondence, the Bombay and Madras Circles, in which the famine prevailed, shew actual decreases.

31. It will be observed also that newspapers which shewed an unusual expansion of no less than 11·33 per cent. in 1877-78, have this year gone down somewhat in number. This fluctuation will be more apparent from the following figures:—

	No. of Newspapers.
1876-77	9,880,679
1877-78	10,999,758
1878-79	10,276,990

It must be remembered that the statistics of correspondence are based on enumerations made in only one week of each half year, so that temporary fluctuations may produce an exaggerated effect on the returns. It is possible, perhaps, that the operation of Act IX of 1878 (an Act for the better control of publications in oriental languages) may have had something to do with the fluctuation now under notice.

32. A further analysis of the returns relating to letters is given on the margin. The growing habit of prepaying letters, instead of sending them unpaid, is very noticeable. This change is most marked in the correspondence of natives and is partly due to the extended use of embossed envelopes since the cost of such envelopes was reduced (in 1873) to the value of the stamps borne by them. Although the increasing habit of prepayment does not improve the postal revenue, it has always been regarded as an object to encourage the habit, and the Indian Post Office has now for years been content to do so, not

Year.	Paid.	Unpaid.	Registered.	Total.
1877-78 ...	70,568,823	32,773,919	2,746,594	116,089,336
1878-79 ...	84,324,076	31,429,552	2,845,981	118,599,609
Increase ...	4,755,253	...	99,387	3,510,273
Decrease ...	...	1,344,367	...	...
Percentage of increase ...	5·98	...	3·62	3·05
Percentage of decrease ...	...	4·10	...	...

merely at the loss of the higher unpaid rate of postage, but of the cost of the envelopes for which nothing is charged in addition to the value of the embossed stamps.

33. The unusual extent to which during the year under report unpaid letters have been supplanted by paid letters is also partly due to steps which were taken for expediting the delivery of paid letters.

34. The correspondence returns include under the head of parcels not only inland parcels, but also foreign parcels, and it is usual to give separate statistics respecting the latter in the following form :—

FOREIGN PARCELS.

Parcel Exchanges.	Total number of parcels.		Average weight of each parcel.		Net revenue derived by the Indian Post Office after deduction of Custom-duty and sums due to P. and O. Company.	
	1877-78.	1878-79.	1877-78.	1878-79.	1877-78.	1878-79.
	No.	No.	lbs. ozs.	lbs. ozs.	Rs.	Rs.
With United Kingdom.						
To India	38,389	46,369	6 1·01	5 11·53	73,469	81,762
From India	17,614	18,968	2 11·63	2 12·50	18,943	20,812
	56,003	65,337	5 0·22	4 13 88	92,412	1,02,574
With Continent of Europe.						
To India	881	1,025	6 14·81	6 15·87	1,756	2,057
From India	1,811	1,955	4 3 31	4 12·56	2,444	2,960
	2,692	2,980	5 1·43	5 8·78	4,200	5,017
With Ceylon, Aden & Straits.						
To India*	55	208	1 14·41	1 13·83	20	162
From India	345	1,009	3 4·74	3 7·79	645	1,964
	400	1,217	3 1·64	3 3 35	665	2,126
TOTAL ...	59,095	69,534	5 0·07	4 13 88	97,277	1,09,717

35. The development of this branch of the parcel traffic has been rapid, especially in late years, as will be seen from the following figures, commencing with the year in which the Foreign parcel post was started :—

	No. of parcels.
1873-74	21,923
1874-75	25,563
1875-76	35,819
1876-77	45,325
1877-78	59,095
1878-79	69,534

36. The correspondence entered on the margin of paragraph 29 was disposed of as follows :—

Sent out for delivery ...	...	131,899,268
Received back undelivered ...	...	5,418,138
Balance actually delivered	...	126,481,130
Sent to Dead Letter Offices ...	...	2,865,742
		129,346,872

Note.—Of the number received back undelivered, some are subsequently delivered under re-issue, the remainder being sent to Dead Letter Offices.

The actual delivery continues to bear the same proportion (97 per cent.) to the total as in the two preceding years.

* This does not include parcels from the Straits to India, respecting which no information is available.

37. Foreign correspondence is included in the general correspondence statistics referred to in paragraph 29, but on the margin will be found a separate statement respecting it. The exchange of *letters* with the United Kingdom has increased by 5·9 per cent., that of *newspapers* has increased by 3·5 per cent., and that of *books* and *patterns* has decreased by no less than 12·5 per cent. This large decrease in the exchange of books and patterns is made up of a decrease of 5·7 per cent. on the homeward route and of 14·3 per cent. in the outward route. The relatively large decrease of books and patterns on the outward route is manifestly due to the cheaper means of transmission afforded by the parcel post, in which the charge on *outward* book parcels was reduced by one-half in the preceding year. Indeed, the foreign parcel post returns prove this to be the case. But there remains a decrease of about 5 per cent. common to both routes (homeward and outward), which can be accounted for only on the assumption of a depression of trade either in books or patterns or both.

	ESTIMATED AGGREGATE NUMBER.			
	1877-78.		1878-79.	
Despatched from *India* to the *United Kingdom*—				
Letters	2,293,295	Decrease 1 p. c.	2,386,014	Increase 4 p. c.

Books, &c.	213,390		201,257	Decrease 5·7 p. c.
Received in *India* from the *United Kingdom*—				
*Letters**	2,181,455	Increase 9·5 p. c.	2,353,208	Increase 7·9 p. c.
Newspapers	2,03.,354	4·7 p. c.	2,104,249	3·3 p. c.
Books, &c.	720,694		677,770	Decrease 14·3 p. c.
GRAND TOTAL ... *Letters* ...	4,474,660	Increase 4·4 p. c.	4,739,222	Increase 5·9 p. c.
GRAND TOTAL ... *Newspapers* ...	2,407,010	5 p. c.	2,490,719	3·5 p. c.
GRAND TOTAL ... *Books* ...	1,004,284		879,027	Decrease 12·5 p. c.
Despatched from *India* to *Foreign Countries* other than the United Kingdom—				
Letters	275,169		491,062	
Other articles	165,610		171,314	
Received in *India* from *Foreign Countries* other than the United Kingdom—				
Letters	569,372		562,822	
Other articles	327,111		243,864	
GRAND TOTAL ... *Letters* ...	924,520	Increase 28 p. c.	1,053,884	Increase 14 p. c.
GRAND TOTAL ... *Other articles* ...	492,751		415,168	Decrease 15·7 p. c.

* *Note.*—The figures for letters received in India from the United Kingdom in 1877-78 have been revised in respect of "soldiers' letters," which have intermediately been made the subject of more accurate statistical record.

38. The statistics of exchange with foreign Europe shew a similar result, *i.e.*, an increase (14 per cent.) in letters and a decrease (15·7 per cent.) in other articles.

39. It may be mentioned here that the statistics of exchanges with foreign Europe for next year will be the same as those for this year ; as it was decided by the Paris Convention that statistics should be taken only every two years.

40. The statistics relating to the working of Dead Letter Offices are given in Appendix IV, of which the following is an abstract :—

Dead Letters.	NUMBER.		PERCENTAGE.	
	1877-78.	1878-79.	1877-78.	1878-79.
Total number of articles received in Dead Letter Offices	2,781,626	2,865,742		
DEDUCT— (1877-78. 1878-79.)				
Articles issued by Dead Letter Offices for delivery to the addressees or senders and received back again as undeliverable ... 134,596 146,972				
Articles transferred to other Dead Letter Offices 607,858 645,426				
	742,454	792,398		
Net receipts to be disposed of by the Dead Letter Offices	2,039,172	2,073,344	100	100
Articles disposed of by the Dead Letter Offices, less the proportion of articles returned undelivered. — Disposed of by re-direction to addressees	197,819	211,226	9·70	10·19
Articles disposed of by the Dead Letter Offices, less the proportion of articles returned undelivered. — Disposed of by return to senders	1,174,183	1,226,217	57·58	59·14
Articles undisposable and deposited as dead ...	667,170	635,901	32·72	30 67

41. The work of Dead Letter Offices being either to find out the addressees or to return the correspondence to the senders, the measure of efficiency is the proportion of total receipts so disposed of. This proportion is on the increase year by year.

42. The statistics of the sales of postage stamps are contained in Appendix V (ordinary stamps) and Appendix VI (service stamps), of which an abstract is given below :—

Ordinary Postage Stamps.		9-pie labels.	½-anna envelopes.	1-anna envelopes.	½-anna labels.	1-anna labels.	2-anna labels.	4-anna labels.	6-anna labels.	8-anna labels.	12-anna labels.	1-rupee labels.	Gross value.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1877-78	Value of each kind of stamps sold	22,311	7,66,352	8,591	13,97,862	2,94,838	2,43,507	7,39,963	3,74,066	1,79,223	63,634	1,51,275	42,61,622
	Proportion of each to whole value of stamps sold	·52	18·45	·20	32·80	6·92	5·72	17·36	8·78	4·21	1·49	3·55	100

1878-79	Proportion of each to whole value of stamps sold in previous year	·55	22·64	·22	30·86	7·16	5·98	18·17	10·22	5·93	1·89	5·43	109·05

Service Postage Stamps.		9-pie labels.	½-anna labels.	1-anna labels.	2-anna labels.	4-anna labels.	8-anna labels.	Gross value.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1877-78	Value of each kind of stamps sold	891	2,70,666	6,41,483	1,11,421	1,35,132	1,25,552	12,85,145
	Proportion of each to whole value of stamps sold	·07	21·06	49·91	8·67	10·52	9·77	100
	Value of each kind of stamps sold	375	2,83,125	6,44,692	1,03,427	1,28,400	1,03,505	12,63,524
1878-79	Proportion of each to whole value of stamps sold in previous year	·03	·22·03	50·17	8·05	9·99	8·05	98·32

43. The only point in connection with these figures upon which remark is called for is the continued increase of the sale of ½-anna embossed envelopes. Below will be found a statement shewing the sale of these envelopes in recent years.

Sale of ½-anna envelopes.

	No.	Value.
		Rs.
1872-73	99,391	3,106
1873-74	2,613,195	81,662
1874-75	5,804,140	1,81,380
1875-76	11,046,066	3,45,190
1876-77	17,915,653	5,59,864
1877-78	25,163,257	7,86,352
1878-79	**30,872,300**	**9,64,759**

44. It was in 1873 that the Government decided to offer the envelopes for sale at the value of the stamps borne by them, the object being to induce the native public to use envelopes of a proper size and texture instead of the small flimsy covers in which they were accustomed to place their letters. These covers were generally little more than the size of a finger, so that the addresses were always crowded and sometimes written on both sides. Over these crowded addresses were impressed the various office stamps, and thus an address originally difficult to read became almost illegible before arrival at destination. It was to obviate this great inconvenience that the Government decided to sell the envelopes at the value of the stamps borne by them. This practically reduces the postage rate by the cost of the envelope; but the object in view fully warranted the sacrifice.

45. The maximum annual supply of envelopes under the present contract with De La Rue & Co. is 74,400 reams, or 35,712,000 envelopes, so that the sale of the year under report came but little short of the maximum. The manufacture is now going on at the maximum rate, and it remains to be seen whether the demand will be met thereby.

46. The proportion of revenue collected in cash and stamps for the last few years is shewn below :—

	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	**1878-79.**
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Total postage revenue ...	100	100	100	100	100	**100**
Cash	31·23	31·23	30·97	30·71	29·33	**26·62**
Proportion derived from ordinary stamps	51·50	52·08	52·37	52·29	53·87	**57·30**
Proportion derived from service stamps	17·27	16·69	16·66	17·00	16·80	**16·08**

47. The large increase this year in the proportion collected by the sale of ordinary stamps is due partly to the marked increase of paid letters (as compared with unpaid letters) already noticed in paragraph 32, but mainly, I think, to the fact that the prepayment of insured parcels is compulsory. The introduction of the insurance system has thus had the indirect effect of largely increasing the proportion of revenue collected in stamps. The insurance fees are also accounted for by Post Masters in stamps, but this is a comparatively small item.

SECTION IV.—DISTRICT POSTS.

48. As explained in previous reports, the District Posts have for their primary object the conveyance of official correspondence between police and revenue stations in the interior of districts, where the general wants of the locality are not such as to call for the provision of postal facilities by the imperial post. The cost of such arrangements is defrayed in some cases by local cesses and in others by Imperial grants. The Administration is in every case under the Local Government; but under arrangements carried out between 1864 and 1878, the Local Officers of the Imperial Post are now everywhere employed by the Local Governments as managers of the District Posts. When a District Post Office attains to a fair proportion of private correspondence and fulfils certain prescribed conditions about self-support, it is deemed eligible for transfer to the Imperial Post, and the District Post funds thus set free become available for extending District Post facilities. The District Post thus acts as a pioneer to the Imperial Post, and its use in this way is most important.

49. Owing to the extension of Imperial Post operations during the year under report, there was a considerable transfer to it of offices from the District Post, and some time naturally elapses before the complement of the District Post is restored. It thus happens that the returns shew fewer District Post Offices at the close of the year under report than in the previous year. But the mileage of District Post lines is greater.

50. The correspondence conveyed by the District Post has decreased by over 10 per cent. as compared with the previous year, and this is partly attributable to the transfer of offices to the Imperial Post and partly to the cessation of operations connected with famine relief.

51. The usual figures relating to District Posts are given below. These figures are always more or less incomplete and liable to error, owing to their being compiled through so many different channels and from accounts kept in different ways under different Local Governments:—

Names of Postal Circles.		Number of District Post Offices and Receiving Houses.	Number of District Post village postmen and postmen.	Number of District Post letter-boxes.	Distance in miles of District Post lines.	Local cess.	Grant from Imperial Revenue.	Expenditure.	Articles received from the Imperial and District Posts for delivery by the District Posts.	Articles posted in the District Post for despatch to the Imperial or District Post.	Articles returned by the District to the Imperial Post undelivered.	Percentage of those returned on the total number received for delivery by the District Post.

(a) Including 270 letter-boxes in charge of village headmen, not shewn in the Return for 1877-78.
(b) The distance in the rainy season amounted to 761 miles in 1877-78 and 741 miles in 1878-79.
(c) Including contributions from Provincial and Local Funds in the Central Provinces and Berars.
(d) Including Rs. 720 contributed from the District Improvement Fund in Assam.
(e) Excluding Rs. 21,862 paid from the Imperial revenues on account of pay of village postmen and postmen attached to District Post Offices.
(f) Including the annual subsidy paid from the District Dák Fund for the maintenance of the Dera Ismail Khan and Chickawatni hill cart-line in the Punjab.

SECTION IV A.—INSURANCE AND VALUE-PAYABLE SYSTEMS.

52. It has been deemed appropriate to give a place among the regular sections of the report to the measures named above, because separate notices of them will probably be found useful in future reports as well as in this one.

53. Both of the measures referred to were introduced towards the close of the preceding year, so that the year under report is the first complete year of their existence.

54. The Insurance system had its origin in a desire to separate between the valuable and non-valuable portion of the mails. From the time when currency notes were introduced in India, the use of the letter post for transmitting them increased: and as the practice grew, it became a source of danger to the entire mail, for a thief would steal many letters in the hope of finding notes in one of them. Various attempts were made to check the evil. Unregistered letters manifestly containing notes were ordered to be registered and charged on delivery with a double registration fee; and a special organization under Mr. Turton Smith of the Punjab Police was arranged with the view of checking the growing evil. The result, however, was a conviction that the proper direction for such efforts was that of inducing a separation of the letters containing notes from those which did not contain them. A plan was accordingly laid before Government for the transmission under insurance of currency notes presented at the Post Office for that purpose: but the Government considered that such a measure might favor wrong expectations regarding the cashing of notes so transmitted. The larger scheme of insurance for all kinds of valuables was thereupon prepared and introduced, the rates of insurance being based in the first instance on a scale of about ½ per cent., which was subsequently reduced to a scale of about ¼ per cent.

55. The working of the Insurance system up to the close of the year under report may be exhibited as follows:—

	Value insured.			Insurance fees.
	Letters.	Parcels.	Total.	
	Rs.	Rs.	Rs.	Rs.
1877-78—				
Last quarter, being the commencement of the system ...	6,66,320	18,60,191	25,26,511	13,230
1878-79—				
First quarter	9,00,511	42,60,125	51,60,636	27,652
Second quarter, *during which* the insurance rates were reduced to a scale of about ¼ per cent.	14,32,831	52,97,848	67,30,679	23,529
Third quarter	22,94,445	71,88,701	94,83,146	26,549
Fourth quarter	43,43,988	1,13,74,545	1,57,18,533	45,826
Total ...	96,38,095	2,99,81,410	3,96,19,505	1,36,786

56. During the whole period (15 months) above referred to the compensation paid for losses, after deducting the recoveries of lost property, amounted to only Rs. 19,201, and even if losses occurring in that period, but not made the subject of compensation till the following year, were to be added, the total amount would not exceed Rs. 25,092.

The total losses without deducting recoveries, as well as the recoveries and other deductions are shewn on the margin.

	Rs.	A.	P.
Losses by departmental fraud or neglect ...	15,520	9	6
Ditto by highway robbery in British territory ...	3,301	0	0
Ditto by highway robbery in Native States ...	14,266	15	0
	33,088	8	6
Value of property recovered	7,974	9	3
	25,113	15	3
Claims not preferred	22	0	0
	25,091	15	3

57. *Value-payable System.*—Reference will now be made to the Value-payable system. It was based on the general plan of a system which had found much favor in Germany and other countries of the Continent, under which the sender of a parcel could declare the value of the contents for realization from the addressee, in view to the subsequent payment to him of the amount so realized, less a postal commission. Under this system the German Post had carried parcels in 1874 of the value of over 2½ millions sterling, while in the Austrian Post the value carried in the same year was nearly 3½ millions sterling.

58. The Value-payable system commenced to work in India in a very small way, but it has gone on increasing since, as will be seen from the following figures:—

	No. of parcels.	Value declared for realization.	Commission.
		Rs.	Rs.
1877-78—			
Third quarter, being the commencement of the system (only one month, December 1877)	35	843	19
Fourth quarter	378	5,878	176
1878-79—			
First quarter	816	13,276	409
Second quarter	1,261	20,546	605
Third quarter	2,475	52,118	1,506
Fourth quarter	2,856	46,169	1,422
Total ...	7,821	1,38,830	4,137

59. The idea of extending the Value-payable system to parcels coming from the United Kingdom gave rise to strong opposition on the part of the Trades Associations, and the idea was eventually abandoned.

SECTION V.—MISCELLANEOUS.

60. *Security taken from Post Office Servants.*—The usual statement of operations connected with the security fund is given below :—

Receipts.	Number of Employés. First half year.	Number of Employés. Second half year.	Amount of Subscription. First half year.	Amount of Subscription. Second half year.	Amount of Subscription. Total.	Charges.	Amount.
			Rs.	Rs.	Rs.		Rs.

						Total charges ...	4,396
						Balance at credit ...	1,27,488
Grand Total ...	...	...	...	...	1,31,884	Grand Total ...	1,31,884

61. As explained in previous reports, the taking of security from Post Office employés under a system of subscription controlled departmentally was introduced to meet a great want. Private Guarantee Associations demanded enormous premia, and when the European Assurance Guarantee Society, in which many postal officials were secured, failed in 1872, the opportunity was taken of organizing a departmental system.

62. The subscription rate for pensionable subordinates is 1 rupee half-yearly, and that for non-pensionable subordinates 8 annas half-yearly; but the former class are entitled to the ultimate refund, on a rateable calculation, of all subscriptions in excess of actual expenditure, while the latter (non-pensionable) class, who pay at the lower rate, are not entitled to any refund. Hence it comes that the Government holds a certain amount returnable to one class of subscribers, and also a surplus not returnable to the other class of subscribers. The balance so divided is shewn below :—

	1877-78.	1878-79.
	Rs.	Rs.
Total balance	1,01,551	1,27,488
Returnable portion	46,253	58,407
Non-returnable portion	55,298	69,081

63. It may be explained here that the receipts and charges of the so-called security fund appear in the ordinary yearly accounts of the department under the heads of revenue and charges. The security fund is not a fund properly so called, but merely a calculation designed to shew separately the financial results of the system, and especially the amount which the Government holds itself responsible to refund under the prescribed conditions. It was intended at one time to bring compensation payments for losses of insured articles under this head of account, but it has been deemed better on the whole to exhibit separately the losses accruing under the Insurance system. This has already been done (see paragraph 56).

64. *Complaints from the public.*—There were 5,517 complaints made by the public in the year under review, as compared with 5,339 in the previous year. The number left pending at the end of the year was less by 146 than the corresponding number in the previous year.

This accounts in part for the increased number of complaints acknowledged to be well-founded. This increase is also partly accounted for by what happened in Calcutta, where the presence for a time of two dishonest postmen (eventually convicted) gave rise to a large increase (53) of well-founded complaints. There was also an increase of well-founded complaints in the Punjab, connected chiefly with the trans-frontier operations during the war.

65. The following is an analysis of complaints relating to articles of value in the last two years :—

	Ordinary letters.		Registered letters.		Parcels.		Total.	
	1877-78.	1878-79.	1877-78.	1878-79.	1877-78.	1878-79.	1877-78.	1878-79.
I.—Cases in which the enquiry shewed either that no loss had occurred, or that the loss had not occurred through fault of postal officials	153	166	114	107	105	187	402	520
II.—Cases in which the postal establishment was proved to be in fault, or in which there was strong ground for believing it to be so	150	183	95	59	72	99	317	341
III.—Cases in which no definite conclusion was arrived at	578	611	23	14	108	135	714	760
Total ...	831	960	237	240	285	421	1,433	1,621

The figures given above include all complaints made about insured articles under the system of insurance, of which the year under report is the first complete year.

66. *Convictions and departmental punishments.*—The number of legal convictions and departmental punishments will be found detailed in Appendix VIII, of which the following is an abstract :—

	1877-78.	1878-79.
Number of legal convictions ...	171	213
Number of cases punished departmentally...	95	85
Total ...	266	298

The increased detection of crime is due mainly to the fact that under the Insurance system the chances of detection are much greater than formerly.

67. In the annual report for 1876-77 reference was made to the exposure of a series of frauds committed by a gang of forgers, who operated by bribing postal officials in order to get access to letters passing in transit through the post. The information so obtained enabled them to perpetrate many successful forgeries on native bankers. Another gang of the same kind was discovered in Central India during the year under report. They operated in Neemuch and Oodeypur, bribing the sorting clerk of the Neemuch Post Office. They were, however, soon discovered, and all three forgers, together with their postal accomplice, were convicted and punished.

68. *Highway robberies.*—The usual abstract of highway robberies is given on the margin, to which is attached a summary of the total highway robberies in each year since 1871-72. It will be seen that the large increase last year caused by the famine has been only partially reduced during the year under report. The fact that in 1876-77 the robberies in Madras and Bombay aggregated only 7, whereas in the year under report they aggregated 24, shews where the great bulk of the excess lies.

Highway Robberies.

Total (British) 28, besides 7 attacks. Total (Foreign) 18, besides 9 attacks.

70. In the Madras cases (10 robberies and 3 attacks) convictions were obtained in four instances, and the greater part of the stolen property was recovered. In the Bombay cases (14 robberies and 9 attacks) convictions were obtained in ten instances: the amount plundered was in all these cases serious, but more than half of it was recovered. In the North-Western Provinces cases (10 robberies and 2 attacks) convictions were obtained in five instances, and very little of the property was recovered. In the remaining cases (12 robberies and 2 attacks) convictions were obtained in seven instances, and the greater part of the property plundered was recovered.

71. In no case was there loss of life.

Postal officials.	1877-78.	1878-79.
	No.	No.
Inspectors	197	205
Post Masters, Deputy and Sub-Deputy Post Masters	3,770	4,061
Clerks	3 097	3,143
Postmen and other servants	6,477	6,961
Road Establishment...	13,121	14,010
Village Postmen	2,313	2,357
Total ...	28,975	29,636

72. The usual abstract shewing the strength of the postal establishments is given on the margin. The details for each circle are given in Appendix IX.

SECTION VI.—NON-POSTAL BRANCHES OF THE DEPARTMENT.

73. The number of Government Carrying Agency Offices for goods at the close of the year under report was two in excess of the previous year's number; one office (Agra) having been closed, and three (Kohat, Thull and Solan) opened. The Carrying Agency lines were augmented during the year under report by an important military branch from Rawalpindi to Thull. They consisted at the close of the year of a line from Calcutta to Jhelum (rail), and onwards to Peshawar (bullock-train), with branches to Fattehgarh (bullock-train), Gwalior (partly rail and partly bullock-train), Moradabad (rail), Mussoorie, Roorkee and Landour (bullock-train), Simla (bullock-train), Ferozepore (bullock-train), Mooltan (rail), Sialkot (bullock-train), Murree (bullock-train) and Thull (bullock-train).

74. The passenger services on mail cart lines were increased during the year under report by the extension of the Kalka line to Simla; and by new lines from Peshawar to Jumrood, Kohat to Thull, and Sukkur to Jacobabad,—all these new lines having been required in connection with the military operations on the frontier. The passenger services comprised, at the close of the year, lines from Jhelum to Peshawar (with branches to Sialkot, Murree, Thull and Jumrood), from Amritsar to Pathankote, Umballa to Simla, Bareilly to Ranibagh and Sukkur to Jacobabad.

SECTION VII.—FINANCIAL RESULTS.

75. The following figures represent the financial results in the usual form :—

Review of Financial Results.

	1877-78.	1878-79.
Purely Postal Service.	Rs.	Rs.
Receipts, including sale of Service postage stamps ...	(a) 72,07,171	74,72,532
Ditto excluding ditto ditto ...	60,11,035	62,09,575
Disbursements	(b) 60,82,704	65,57,308
Net revenue, including sale of Service postage stamps ...	12,14,467	9,15,284
Non-Postal Branches.		
Bullock Train.		
Receipts	(c) 7,13,046	11,05,540
Disbursements	(d) 6,03,017	8,04,250
Surplus ...	1,10,029	3,01,290
Punjab Military Van Dâk.		
Receipts	2,29,863	2,70,621
Disbursements	2,00,227	2,23,632
Surplus ...	29,636	46,989
Passenger Service on Mail Cart Lines.		
Receipts	86,421	97,586
Disbursements	86,421	97,586
Contract subsidies to local steamers employed to a large extent on general and military considerations, but paid entirely through the Post Office as a matter of convenience.		
Disbursements	7,08,515	7,12,000

(a) The difference of Rs. 7,158 between this and the figure entered in the report for 1877-78 is owing to the omission of value-payable items from this statement. These items do not form part of the receipts and disbursements, as they represent money collected in one place for payment in another.

(b) The difference of Rs. 4,953 is on account of value-payable items as explained above.

	1877-78. Rs.	1878-79. Rs.
(c). Purely bullock-train	6,01,587	8,02,855
(d). Postal charges debited to bullock-train	1,430	1,395
Total ...	6,03,017	8,04,250

These results may be summarized briefly as follows :—

	1877-78. Rs.	1878-79. Rs.
A net revenue in the purely Postal Department of ...	12,14,467	9,15,284
A net surplus in the Bullock Train Department of ...	1,10,029	3,01,290
A net surplus in Punjab Military Van Dâk of ...	29,636	46,989
Total ...	13,54,132	12,63,563

76. But there is another list of items chargeable against the Post Office although **not** shewn in the accounts, and this will be found on the margin. Taking the total net revenue as given in paragraph 75 at Rs. 12,63,563, and deducting the total of the items in this list, we find a net profit of Rs. 1,27,898 for the year under review, being less by Rs. 89,610 than the corresponding figure for last year.

	1877-78.	1878-79.
	Rs.	Rs.
Cost of stationery supplied by the Superintendent of Stationery	55,813	32,270
Railway service estimated at 1877-78 Rs. 4,17,113; 1878-79 Rs. 4,17,113		
Less actual payments ... 50,398 ... 1,47,069		
	3,66,715	2,70,344
	3,63,600	2,70,000
English stores	1,78,612	1,74,470
Value of service rendered to the Post Office by the Government Press ...	18,969	27,041
Rent of Government buildings	2,75,000	2,16,384
Estimated postal share of Local Marine subsidies	2,48,854	2,14,148
Gratuities	2,555	8,186
Leave allowances paid in Great Britain	15,191	6,222
Pensions granted during the year, aggregating in annual value Rs. 15,665 capitalized at 10 165 year's purchase (15,665 × 10·165 =) Rs. 1,59,244 ...	87,647	1,59,234
TOTAL	11,30,021	11,36,665

77. The year under report has been a very special one in many ways. It followed two years of financial pressure when the extension of operations had been much curtailed; it is compared with a year in which correspondence was specially stimulated by the famine operations (as explained in paragraph 30); it has borne the full force of the reductions of postage (notably the abolition of redirection charges) carried out in the last quarter of the preceding year; it commenced with a list of fresh reductions of postage (see paragraph 10) of considerable financial importance; and it had to bear the cost of a series of important departmental revisions (described in paragraph 15).

SECTION VIII.—GENERAL REVIEW OF PROGRESS.

YEAR.	Comparison of number of letters and newspapers, those of 1855-56 being represented by 100.	Comparison of revenue from private correspondence, that of 1855-56 being represented by 100.	Comparison of expenditure, that of 1855-56 being represented by 100.
1855-56—first complete year of new rates ...	100	100	100
1867-68—thirteenth ditto ...	207	237	101
1868-69—fourteenth ditto ...	228	248	198
1869-70—fifteenth ditto ...	253	246	190
1870-71—sixteenth ditto ...	257	233	176
1871-72—seventeenth ditto ...	270	272	173
1872-73—eighteenth ditto ...	279	279	177
1873-74—nineteenth ditto ...	328	284	184
1874-75—twentieth ditto ...	348	305	189
1875-76—twenty-first ditto ...	352	326	191
1876-77—twenty-second ditto ...	368	345	196
1877-78—twenty-third ditto ...	387	378	206
1878-79—twenty-fourth ditto ...	394	390	222

78. The usual comparison of correspondence revenue and expenditure from the year 1855-56 onwards will be found on the margin.

SECTION IX.—NOTICES OF POST OFFICE OFFICIALS.

79. Among the officers specially connected with the postal operations in Afghanistan and Beluchistan, I would mention the following: Colonel W. M. Lane, Post Master General of the Punjab, upon whom devolved the control of all the operations; Mr. S. S. Sullen, Superintendent of the Passenger and Bullock Train Services between Jhelum, Peshawar and Thull, for indefatigable work in managing the line during a severe pressure of work notwithstanding the presence of epidemic disease both among the bullocks and horses; Mr. E. Hodgkinson, Officiating Chief Inspector of Sind, upon whom devolved the first organization of the Jacobabad line; Mr. F. J. Jordan, Inspector and Superintendent, to whose energy was due the organization of a good horse post from Peshawar to Daka and ultimately to Gundamuk under circumstances which obtained for him the deserved commendation of the Military Authorities; Mr. J. H. Cornwall, Inspector, and Mr. C. Lawder, Superintendent, Beluchistan; and Mr. W. T. Van-Someren, Inspector and Superintendent in the Kurram Valley, for postal arrangements which from the first gave full satisfaction.

80. Although not serving beyond the frontier, the Railway Travelling Post Office establishment bore to a large extent the real brunt of the postal work connected with the war, and among that establishment I would specially notice Mr. P. Sheridan, Chief Superintendent, and his Assistants, Messrs. W. A. Sutherland and C. Goodburn.

81. Among the officers brought to notice in the reports of the several Post Masters General, the following have been selected for mention here: in *Madras*, Mr. G. W. Creswell, Inspector, for promptly establishing postal communication between Rajahmundry and the disaffected Rumpa country when the forces proceeded to the scene of disturbance; in *Bombay*, Mr. Dinshaw Dijibhai, for good service with the expeditionary force sent to Malta and Cyprus; and in the *North-Western Province*, Pundit Sundar Lal, Supernumerary Inspector, for the successful prosecution of the gang of forgers (referred to in paragraph 67).

A. M. MONTEATH,

Director General of the Post Office of India.

APPENDIX No. I.

Statement showing the number of Post Offices and Letter Boxes opened, and Village Postmen entertained during the year 1878-79, *and the total number that stood at the end of the Official Years* 1877-78 *and* 1878-79.

Column 2.—These figures represent the net proceeds of the sale of ordinary postage stamps after deducting the sale discount.

Column 3.—The great differences observable in this column are due mainly to changes of system in the treatment of official correspondence, which was charged at full letter rates up to 1865-66, at the same rates as ordinary correspondence (letters and newspapers, &c.), from that year on to 1872-73, after which a low privileged rate of 1 anna for each letter not exceeding 10 tolahs (about 4 ozs.) was conceded, thus reducing immensely the postage income.

Column 8.—The figures in this column are useful as showing the revenue undisturbed by the changes of system in respect of official correspondence explained in the note referring to column 3.

No. XII.

of the Post Office Department in India, from 1853-54 *to* 1878-79.

Column 12.—The figures in this column show the proportion of the cash collections in column 4 to the total postal revenue of columns 2, 3 and 4. The comparison commences with the year 1872-73, when the official postage rate was reduced (see note on Column 3) and the whole collected in stamps.

Columns 21 *to* 25.—Three digits are omitted from the figures in these columns.

Columns 26 *and* 27.—These figures cannot be given prior to 1873-74, owing to a difference in the system of statistical record.

Column 28.—The registration of newspapers only commenced in the year 1871-72 and ended in 1877-78.

(*a*) Revised so as to include letters to Gibraltar, Malta, and places east of Suez.

* Being the adjusted amounts properly debitable to each year.

† The amounts shewn are estimated.

A. M. MONTEATH,
Director General of the Post Office of India.

R. B. CHAPMAN,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 1ST JUNE 1880.

GENERAL REMARKS.—Rain was plentiful in British Burma and Mysore, and general in Assam, Bengal and Madras. In Bombay, Berar, the Central Provinces, Central India, the North-Western Provinces and Oudh, Rajputana and the Punjab the rain that fell was slight and more or less partial. In Bengal cultivation has been impeded in places by rain. Autumn sowings are progressing satisfactorily. Agricultural prospects and the public health continue generally good.

Later telegrams to the Meteorological Reporter appear to show that the monsoon had set in on the Malabar coast, in Burma and at the mouth of the Hooghly by the 2nd current.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(June 2nd)—		
Bellary ...	1·21 (average of twelve stations).	*Ragi* 28·3; standing crops generally good.
Kurnool ...	·97 (average of eight stations).	*Ragi* 34·32.
Ganjam ...	1·01 (average of thirteen stations).	*Ragi* 32·14.
Kistna ...	·68 (average of five stations).	*Ragi* 33·28.
Chingleput (Madras) ...	·14 (average of three stations).	*Ragi* 22·79; wet and dry crops being harvested; standing crops doing well.
Coimbatore ...	·76 (average of thirteen stations).	*Ragi* 23·57; crops generally fair; harvest of paddy in Udamalpet, outturn $\frac{7}{8}$.
Tanjore ...	·31 (average of six stations).	*Ragi* 25·54; crops generally good; harvest of chillies and oilseeds, outturn $\frac{1}{2}$ to $\frac{3}{4}$.
Madura ...	·79 (average of seven stations).	*Ragi* 25·58.
Malabar ...	4·82 (average of fourteen stations).	*Ragi* 19·4.
Travancore ...	4·03	*General Remarks.*—General prospects fair.
Bombay—(June 2nd)—		
Kurrachee ...	Slight rain in Sehwan taluka and Kohistan.	The rain in Sehwan and Kohistan was accompanied by hail; river at Kotri on 31st 9¾ feet, 2 feet higher than on same date last year; one case of small-pox at Kotri; rice transplanting progressing.
Hyderabad ...	.....	Fever of mild type in three talukas; small-pox in Kandiaro and Naushahro talukas; cattle-disease in Naushahro decreasing.
Ahmedabad ...	.....	Sugarcane being watered in Dholka; ploughing and manuring operations progressing.
Baroda ...	.....	Preparation of land for *kharif* progressing; weather hot; public health good; prices steady.
Surat ...	.....	No sign of early monsoon yet; fever in four talukas.
Násik ...	.....	Ague in two talukas, cattle-disease in one; weather hot.
Colaba (Bombay) ...	.....	Average abnormal temperature *nil*; vapour in air normal; abnormal wind considerable, and persistently from northward; lightning on 29th and 31st.
Poona ...	.....	In district average prices of *bajri* and *jowari* rising.
Ahmednagar ...	·62 at Nagar; ·23 at Shrigonda; ·64 at Karjat; ·11 at Sheogaon.	Preparation of land for monsoon crops almost finished.
Sholapur ...	·04	Prospects unchanged; public health good.
Dharwar ...	1·12 (average)	More rain greatly needed in western talukas; land being prepared for sowing, rice sowing retarded in some talukas for want of rain; slight fever in seven and cattle-disease in two talukas.
Kanara ...	1·30 at Karwar on 27th; average 1·23.	Sowing operations continue on coast; rice plants sprouted; monsoon set in mildly.
Rajkot ...	·04 at Songad	Weather hot and sometimes cloudy; health good.
		General Remarks.—Public health generally good; slight rain in most districts of the Presidency; report from Kanara says monsoon has set in.
Bengal—(June 2nd)—		
Chittagong ...	2·53	Weather cloudy, with showers almost daily; *aus* being damaged by insects in places; general prospects good; cholera and cattle-disease still reported.
Dacca ...	3·19	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	1·27	*Aus* and jute very promising; sowings continue; price of common rice stationary; public health generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*continued.*		
Moorshedabad ...	1·96	Prospects of *bhadoi* paddy good; land being ploughed for next crop; fever in some thanas of Sadr; cholera in thana Suti.
Rajshahye ...	2·40	Harvesting of *boro* nearly completed; condition of *amun*, *aus*, *til* and jute plants good; in several thanas sowing of *amun* and *aus* still continues; several cases of cholera in thanas Manda and Nattore.
Burdwan ...	·05; Cutwa ·48; Culna 3·25; Raneegunge ·01.	Weather seasonable; cultivation promising; still cases of cholera and small-pox in parts of district.
Rungpore ...	1·86	Weather very hot; prospects of crops favourable; public health good.
Bhágalpur ...	*Nil*	Heavy clouds gathering; every appearance of rain imminent; heat extreme; health good.
Purneah ...	·6	Heat excessive; farming well forward; health good.
Patna ...	·63	Prospects good.
Durbhunga ...	1·60	Weather hot with east wind; crops good; prices stationary; health good in head-quarters, but a few cases of cholera and small-pox in Mudhoobunnee.
Hazáribágh ...	·65	Weather seasonable and cloudy with east wind; no crops on ground, ploughing for rice being carried on; food-grains cheap; general health good, small-pox diminished, cholera still in thana Gowan.
Cuttack ...	Sufficient rain	Rice plants doing well; prices stationary; small-pox abating.
		General Remarks.—More or less rain in almost all districts during week; ploughing and sowing proceeding, but in places somewhat retarded by rain; jute and *aus* sowings in most parts of Bengal proper completed; indigo, sugarcane, and other standing crops promising; small-pox and cholera still in places and fever in Chittagong Hill Tracts, public health otherwise good.
N. W. P. and Oudh—		
Benares (June 1st)	·5 on the 1st	Wind easterly; cholera still continues in places in the district, but is decreasing; prices stationary.
Allahabad („ „)	*Nil*	Easterly winds, clouds and great heat; every sign of early rains; cholera deaths 79 against 104 last week; station and city healthy; wheat 21⅛ seers, coarse rice 19$\frac{9}{16}$ seers, unhusked *dhan* 21⅝ seers.
Gorakhpur (May 31st)	·5 on the 25th; heavy fall in south of district.	Weather now hot and close; cholera decreasing; prices easy; wheat 22½ seers, barley 39$\frac{9}{16}$ seers.
Jhánsi (June 2nd)	Garotha ·6	Slight fever; prices fluctuating.
Agra („ 1st)	.....	Frequent dust-storms; wind variable; days very hot; sickness decreasing.
Bareilly („ 2nd)	.....	Weather unsettled; wind east; health good.
Meerut („ „)	Slight hail at Sardhana	Wind variable; heat unusual; dust-storms frequent.
Kumaun („ 1st)	Showers with much wind.	Health good; *kharif* crops sown; prices unchanged; wind variable.
Lucknow („ 2nd)	·2	Barley 29 seers; weather cloudy; heat intense; occasional dust-storms.
Partabgarh (May 31st)	·6 at Sadr, and two days rain in parts of district.	Wind variable, but mainly east; slight cholera reappeared in parts.
Sitapur (June 2nd)	·5	East wind; weather unsettled; health good; prices steady; wheat 22 seers, barley 35 seers.
Fyzabad („ „)	*Nil*	Sugarcane being weeded.
		General Remarks.—Weather unusually hot and close; slight rain in Meerut and Lucknow and heavier showers in other districts; wind variable, but generally easterly; cholera continues in Benares and has reappeared in Partabgarh, but decreasing in Gorakhpur and Allahabad, health otherwise generally good; prices continue steady.
Punjab—(June 1st)—		
Delhi ...	·2	Fever continues; prices slightly lower.
Hissar ...	.....	Weather seasonable; prices steady; fever prevalent.
Umballa ...	·7	Crops gathered; health fair.
Jullundur ...	·4	Crops cut; health good; prices steady.
Lahore ...	.....	Crops cut; health good.
Ferozepore ...	.....	Crops being gathered; prices slightly higher.
Siálkot ...	·5	Prices steady; health good.
Ráwalpindi ...	.....	Health fair.
Pesháwar ...	·3	Harvest prospects bad; prices slightly lower.
Mooltan ...	.....	*Kharif* sowings commenced; health good; prices steady.
Dera Ismail Khan ...	.....	Small-pox prevailing; crops almost gathered.
		General Remarks.—Health fair; harvest prospects generally good.
Central Provinces—(June 2nd)—		
Nágpur ...	·35	Cloudy, very hot; ploughing progressing; no epidemic.
Jubbulpore ...	·02	Hot; small-pox continues; prices stationary.
Saugor ...	.....	Hot, cloudy with high winds; ploughing continues; small-pox and cattle-disease prevalent.
Seoni ...	·02	Cloudy, very hot; ploughing continues.
Hoshangabad ...	·09	Cloudy, hot; small-pox continues; prices stationary.
Raipur (May 29th)	.....	Cloudy, close; ploughing continues; prices slightly fallen.
Sambalpur („ 28th)	·12	Cloudy; ploughing continues; small-pox prevalent; prices steady.
		General Remarks.—Very hot and cloudy with slight rain in some districts; preparations for *kharif* sowings continue; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (June 2nd)—		
Akyab ...	9·32	Total rainfall 25·22 ; slight small-pox in Naaf, otherwise public health normal ; slight cattle-disease.
Rangoon ...	2·60	Total rainfall 13·79 ; sixteen fatal cases of small-pox.
Hanthawaddy ...	4·15	Total rainfall 13·81 ; public health normal, a few deaths from fever ; health of cattle good.
Bassein ...	4·58	Total rainfall 17·10 ; public health good ; ploughing commenced in some parts ; weather highly seasonable ; cattle-disease reported from Bassein township.
Prome ...	2·53	Total rainfall 12·61 ; small-pox abating ; ploughing begun here and there.
Amherst (Moulmein) ...	2·21	Total rainfall 23·13 ; public health good ; ploughing commenced everywhere.
Toungoo ...	2·99	Total rainfall 11·38 ; public health good. *General Remarks.*—Small-pox abating ; some cattle-disease in three districts ; general health good ; rain plentiful ; ploughing commenced in Sandoway, Bassein and Tharrawaddy, general in Amherst.*
Assam— (June 2nd)—		
Gauháti ...	1·63	Days very hot ; *osu* getting on well.
Sylhet ...	1·36	Cultivation going on satisfactorily ; the *bura* rice has turned out nearly half a crop in spite of flood in March.
Cachar ...	1·59	Weather extremely warm ; more than one-half of *asra, murali* and *dumahi dhan* sown ; cultivation of *sail dhan* in progress ; common rice 16 seers per rupee ; public health good.
Dibrugarh ...	.....	Report not received.
Mysore and Coorg— (June 2nd)—		
Bangalore ...	3·1	Crops in good condition ; fever continues ; murrain abating ; prices generally stationary.
Mysore ...	4·495	
Mercara ...	.....	
Berar & Hyderabad— (June 2nd)—		
Amráoti ...	·36	Weather cloudy.
Akola ...	.....	Weather very hot ; health good.
Hyderabad ...	.....	*Tabi* harvesting continues ; recent rain favourable for preparation of ground for *kharif* ; fever and small-pox in one taluka only.
Central India States— (June 2nd)—		
Indore ...	·06	Hot ; stormy ; prospects good.
Morar (Gwálior) ...	*Nil*	Weather cloudy and stormy ; heat intense ; prices stationary.
Sutna ...	.....	*Jowar* 39 seers 11 chittaks ; weather very hot ; cholera at Rewah.
Rutlam ...	·23	Weather close ; prices falling.
Neemuch ...	*Nil*	Public health good.
Goona ...	.....	Hot ; cloudy ; crops and health good ; wheat 19 seers.
Bhopal ...	·32	Public health good.
Agar ...	.....	Weather cloudy ; health and prospects good.
Nowgong ...	·09	Health fair.
Mánpur ...	.....	Weather cloudy ; ploughing continues.

* In the foot-note attached to the British Burma report published at page 907 of the Supplement to the *Gazette of India* of the 29th May 1880, for the rainfall in the column headed "Rangoon Town District" read the following :—

	Inches.
Rainfall up to 27th March 1880	2·13
For week ending 3rd April 1880	·11
For week ending 10th April 1880 ... ... Total	2·24
... ...	1·38
For week ending 17th April 1880 ... ... Total	3·62
... ...	1·67
For week ending 24th April 1880 ... ... Total	5·29

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

NOTICE ON THE GROWTH OF THE CORN TRADE OF ANTWERP.

Some thirty years ago the production of breadstuffs in Belgium generally exceeded the demand for home consumption. We exported Belgian grain occasionally and, after the repeal of the corn laws in England, pretty regularly. Imports of foreign grain took place only on a notable scale in case of a failure of crops, and on the whole our grain business was quite unimportant.

This could however hardly be otherwise.

The corn trade had until then been prevented from developing by injudicious legislative interference. The measures which were decreed in turn for the protection of the producer and of the consumer proved fatal to both. The sliding scale, imported from England into France and Belgium, acted as a prohibition of imports and combined with prohibitions of exports which were always impending whenever there was a serious apprehension of scarcity, introduced an element of uncertainty into every transaction connected with the corn trade which produced a disinclination on the part of the merchant to import and discouraged production beyond the wants for home consumption.

Railways and other artificial means of communication were still in a relatively rudimentary state, and the cost of transport of such a cumbrous article as grain to any great distance was enormous. The development of industrial life was stunted by the protective system flourishing everywhere, the working classes were mostly poor and indifferent consumers, the growth of population slow.

The economical reforms inaugurated in England and imitated on the continent rather timidly at first, but by-and-by at a more rapid pace, especially since the conclusion of the commercial treaty between France and England in 1860, wrought a complete change in this situation.

We witnessed then a marvellous increase of the industrial activity and of the international exchanges, railways were constructed, canals dug, rivers regulated, ships and steamers built and their machinery improved, capital was rapidly accumulating and credit expanding, wages were rising and the population fast increasing. The home production of cereals grew more and more insufficient, first in the United Kingdom, afterwards elsewhere, and the corn trade acquired gradually that volume which is one of the greatest marvels of the age.

Belgium was one of the first countries on the continent that adopted the free trade policy of England, and although the reforms were not here so rapid, nor so sweeping, the effects were hardly less wonderful than in the United Kingdom. Among the many benefits we reaped from the reduction of tariffs not the least important was the development of the corn trade

which, promoted besides by the eminently favorable topographical position of **Antwerp**, made rapid progress.

As we stated above, we had as good as no regular corn trade some thirty years ago, and ANTWERP has now already become one of the largest corn markets of Europe. This fact is of so recent a date that it may not be so generally known abroad as it would seem desirable for this market. Some statistics about the growth of this trade and a few remarks respecting its prospects of future progress may therefore be a welcome contribution. To offer some is the object of this notice, and we should be happy if, by rousing or stimulating the attention of shippers, it could in any measure promote the direct intercourse, especially between distant corn-growing centres and our port.

What our trade was formerly and what it has become in the relatively short space of time which has elapsed since the inauguration of the free trade era, will be best shown by the comparison of our imports in the ten years from 1845 to 1853, and in the last ten years which we give in the two following tables :—

Imports of Cereals into Antwerp from 1844 to 1853.

Year.	Wheat.	Rye.	Barley.	Oats.	Maize.	Total.
	Hect.	Hect.	Hect.	Hect.	Hect.	Hect.
1844	101,090	67,230	361,230	19,500	—	549,050
1845(1)	768,720	87,000	253,620	7,980	—	1,117,320
1846(2)	1,741,440	814,920	185,100	32,490	—	2,773,950
1847	1,453,500	1,037,670	104,120	17,370	—	2,612,660
1848	151,920	64,860	72,150	2,010	—	290,940
1849	127,521	22,368	28,544	400	—	178,853
1850	42,553	43,477	60,602	—	—	146,632
1851	197,113	53,190	64,368	5,977	—	320,648
1852(3)	829,607	264,298	110,023	6,911	—	1,210,839
1853(4)	820,095	322,714	178,041	—	—	1,320,850
	6,233,559	2,777,747	1,417,798	92,638	—	10,521,742
Averages	623,356	277,775	141,779	9,264	—	1,052,174

(1) First appearance of the potato disease.
(2) Failure of crops all over Europe which pushed up prices of wheat to Frs. 61·25 and of rye to Frs. 46·75 per 100 Kos.
(3 & 4) Failure of crops.

Imports of Cereals into Antwerp from 1870 to 1879.

Year.	Wheat.	Rye.	Barley.	Oats.	Maize	Total.
	Hect.	Hect.	Hect.	Hect.	Hect.	Hect.

" " " 10 " 1870-79 " 8,540,080 "
Total importation of grain in 1879 **16,352,777** "

The above figures speak so eloquently for themselves that we need scarcely commeht upon them. They supply also ample proof of the exact truth of our assertion that Antwerp has really become one of the largest corn markets of Europe. The following comparison of our last year's imports with those of Liverpool and London, undoubtedly the two largest emporiums of the European corn trade, will render that fact evident :—

Imports of Foreign Wheat in 1879.

Liverpool. London. Antwerp.
Qtrs. 3,845,721 — Qtrs. 2,855,128 — Qtrs. 2,857,389 — (hectol. 8,257·845).

This comparison shows that our imports of foreign wheat were last year fully as large as those of London and inferior to those of Liverpool by only qtrs. 984,858. But this inferiority to Liverpool even is only apparent. In fact, while in England the population lives exclusively on wheaten bread, in Belgium and still more so in Germany, our principal customer, a good deal

of rye is still consumed. To get a correct view of the matter, it seems to us that all grain serving for human food ought to be compared. We would then have to add to our above imports of wheat, hect. 2,993,584 = qtrs. 1,035,584 of rye, of which article the import is *nil* in Liverpool. This will make our total qtrs. 3,892,973 wheat and rye against qtrs. 3,845,721 imports of wheat into Liverpool, or a surplus of about qtrs. 50,000 in our favor. Such argument may also be justified on the ground that the substitution of wheat for rye is progressing rapidly in Germany, and that the consumption of the latter grain will very likely soon become there as trifling as it is already in Belgium ; in future the imports of wheat will therefore be correspondingly increased at the expense of rye.

Our trade, as shown by our imports in the years from 1870 to 1879 and especially by those of last year, is already sufficiently important to be worth the while of shippers in all corn-growing centres to compete for a share of it. But they will have the more reason for doing so, if they consider that this trade is as yet only in an early stage of its development and that it bids fair to increase still very considerably. In fact, Antwerp is not only the commercial emporium of Belgium, it is also the most favorably situated port for a large part of Germany and France. A glance at the map will show that our market extends far beyond our southern and eastern frontiers and comprises large territories with dense industrious and wealthy populations which may be considered as our natural customers. No other continental port except Rotterdam, and that only as far as the navigation on the Rhine is concerned, can in these quarters compete successfully with us. What we have said in the beginning of this notice of the transformation of commerce and industry applies in every respect to these countries. Our trade with them has augmented considerably, especially since the annexation of Alsace-Lorraine to Germany which secured for us the cheapest, because it is the shortest, railway route to these provinces and Switzerland. The consequent accession of trade is one of the chief reasons of the enormous increase of our corn imports. (*a*)

That this trade will go on developing there is no doubt. The progress realised until now was obtained under a system of partial free trade. We may reasonably hope to enjoy one day the blessings of complete commercial freedom. What might then be the expansion of our trade ? There is certainly every reason to believe that it would develop in a similar manner as the British corn trade has done since 1846 when the great economical reform of Sir ROBERT PEEL was completed by the repeal of the corn laws. It may therefore be interesting to give here some statistics concerning this trade.

We extract from M'Culloch's supplemental notes to Adam Smith's " Wealth of Nations " the following table of the imports of wheat and flour of the 12 years ending 1846 :—

Imports of Wheat and Wheat Flour into the United Kingdom during each of the 12 years ending 1846.

1835	Qtrs. 42,628	1839	Qtrs. 2,634,556	1843	Qtrs. 941,902
1836	" 168,647	1840	" 1,903,383	1844	" 1,100,361
1837(*b*)	" 455,871	1841	" 2,409,764	1845(*c*)	" 871,256
1838	" 1,241,460	1842	" 2,722,349	1846(*d*)	" 1,436,686

The average of these 12 years is ... ... Qtrs. 1,334,904
According to the official returns the average importation of the last 15 years 1865 to 1879 amounted to ... ... " 10,736,440
The increase has therefore been in the ratio of 1 : 8.

From a comparison of our above tables of imports for the years of 1844 to 1853 and 1870-79 it will be observed that a similar growth has taken place in our trade.

The average of our imports in the former period was Hect. 623,356
and in the latter ... ... " 4,330,049
thus an increase in the ratio of 1 : 7.

If such an increase has been realised under much less favorable circumstances than those which existed in the United Kingdom, what would be our progress, if our trade were allowed to develop freely ?

Every experienced merchant will perceive at once the immense margin for expansion still existing here.

There is however another stimulus which has come into play quite recently and which may in the end prove more powerful than all the internal causes which favored the development of the international corn trade in the past.

A good deal of uneasiness has been created in agricultural circles by the enormous importation of foreign grain, especially from America, in 1878 in spite of the low prices then ruling. The question has been earnestly discussed since, whether the old European agricultural system will be able to stand the competition of the large new and cheaply producing countries, foremost of which stand the United States. This competition was not very dangerous as long as the cost of transport was so heavy that only with pretty high prices ruling in Europe an extensive import from such distant countries could take place. But now that railways have been so

(*a*) As long as Alsace and Lorraine were French provinces, and the railways there dependencies of the "Chemin de fer de l'Est," the French ports enjoyed tariff favors which deprived us of our natural advantages and rendered competition extremely difficult. This was changed immediately after the war.
(*b*) In 1837 and succeeding five years the crops were considerably deficient.
(*c*) First appearance of the potato disease.
(*d*) The worst crop on record.

extensively constructed and freights have become so much reduced by the building of large sized vessels and steamers, all supplied with improved machinery, there can hardly be any doubt that whenever crops are abundant in such new countries (and they will very likely always be so in one or the other) a large supply of grain from thence may be expected even at such moderate prices as were current in 1878. It must not be lost sight of that the United States will very likely not remain the only country producing grain on an immense scale. Canada seems to have good prospects in this respect; in India and Australia the production is fast increasing, and last, not least, the River Plate States bid fair to become soon an important source of supply.

Very competent authorities in Europe(1) have contended that, unless the old European agricultural system be entirely reformed, the landed interest is threatened with complete ruin, and that protective duties, and even much higher ones than those recently introduced in Germany, would be quite unavailing to prevent this. The exclusive growing of corn is condemned and the substitution of green crops combined with cattle breeding and the industries connected therewith, is recommended. This would imply a large reduction of the European production of grain and a corresponding increase of foreign imports.

From the foregoing we think we may safely draw the conclusion that the continental corn trade is more and more deserving the full attention of grain shippers in all parts of the world, and that of all the European continental markets, where an extensive and regular business in grain may be done, the most important is incontestably **Antwerp**.

BERDOLT & CO.

Antwerp, January 1880.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

RE-ARRANGEMENT OF THE FIRST FOUR GRADES OF EXTRA ASSISTANT COMMISSIONERS IN THE PROVINCE OF ASSAM.

No. 225, dated Simla, the 28th May 1880.

RESOLUTION—By the Government of India, Home, Revenue and Agricultural Department.

The Governor General in Council is pleased to sanction the following re-arrangement of the first four grades of Extra Assistant Commissioners in the Province of Assam, namely:—

First grade, one appointment on Rs. 600 per mensem.
Second grade, two appointments on Rs. 500 per mensem.
Third grade, four appointments on Rs. 400 per mensem.
Fourth grade, four appointments on Rs. 300 per mensem.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Department of Finance for information, in continuation of endorsement No. 164, dated the 14th ultimo, and that the Resolution be published in the *Gazette of India*.

C. BERNARD,
Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REVENUE REPORT OF IRRIGATION WORKS IN THE NORTH-WESTERN PROVINCES FOR THE YEAR 1878-79.

Nos. 112-1261., dated Simla, the 25th May 1880.

RESOLUTION—By the Government of India, Public Works Department (Civil Works—Irrigation..)

Read—

Letter No. 1616A., dated 30th December 1879, from the Secretary to the Government of the North-Western Provinces, Public Works Department, Irrigation Branch, and its enclosures, being the Irrigation Revenue Report of the North-Western Provinces for the year 1878-79, and a Resolution by His Honor the Lieutenant-Governor reviewing the Report.

OBSERVATIONS.—The operations of the year under review show better results than even those of the previous year. The aggregate area irrigated was

(1) Amongst others a German Professor has published a most interesting pamphlet on this subject: "Welche Zukunft hat die Getraide Production Deutschlands? by Dr. Hugo Werner, Professor der Landwirthschaft und Administrator der Gutswirthschaft der landwirthschaftlichen Akademie zu Poppelsdorf bei Bonn.—Bonn, Emil Strauss."

1,736,651 acres, larger by 275,225 acres than the area obtained in 1877-78, and 294,733 acres larger than that of 1868-69, which was the largest area obtained previous to 1877-78. A portion of the increase on the Ganges Canal was due to the opening of extensions, the water-rate on which, it is stated, amounted to Rs. 9,771, but the area of this irrigation is not given. The irrigation from the Lower Ganges Canal commenced in the year under review, and amounted to 16,695 acres. The irrigation from the Agra Canal was not so extensive as in the previous year, but the prospects of this canal are still very favorable.

The value of crops irrigated by the canals is estimated at Rs. 6,81,47,506.

The net revenue (direct and indirect) yielded by the works amounted to Rs. 38,62,282, and exceeded the interest charges for the year by Rs. 18,46,454.

The balance of interest charges at debit of the works at the close of the year was Rs. 50,97,492, and there is every prospect that this debt will be cleared off in the course of a few years.

2. The investigations as to loss of water by absorption and evaporation referred to in previous reports are not mentioned in the report under review. The results formerly given were for the Ganges Canal only. A comparison of the results of such investigations on other canals would be instructive in showing what effect, if any, on the amount of absorption is due to section of canal channel and velocity of current. The loss of water between the distributary head and the field, especially in village channels, is also a matter of much importance for investigation.

3. The traffic on the navigable canals shows little improvement. The rates of carriage of goods on the Ganges Canal for the last two years are given in a table at paragraph 7 of the Superintending Engineer's Report, but the weights carried at these rates are not stated. In the report for the ensuing year, it should be mentioned what obstructions to navigation, if any, still exist on the Ganges Canal. One is referred to in the Report under review, namely, the intermittent supply in the Cawnpur Branch, but it is not known whether the bridges have all been raised to the required height, or whether the measures for the reduction of the velocity of the current in the main canal have been carried out in full. The steady increase in the salt traffic from Muradnuggar to Cawnpur is a hopeful sign.

4. It is noticed that the demands "outstanding" show a considerable reduction.

5. In paragraph 4 of the Chief Engineer's Report, the total expenditure to end of 1878-79 on Irrigation Works in the North-Western Provinces from loan money, on which the Government of India pays interest, is shown at Rs. 2,80,78,025; but the correct amount, as recorded in the Finance and Revenue Accounts of the Government of India, is Rs. 2,82,32,840, as follows:—

	Rs.
Total outlay to end of 1878-79	2,84,94,300
Deduct outlay on the abandoned Eastern Ganges Canal .	2,61,460
NET TOTAL .	2,82,32,840

6. In the Finance and Revenue Accounts of the Government of India, a debit and credit of Rs. 2,052* and Rs. 2,230† respectively were taken into account. No mention has been made of them in the report. This omission is probably due to the preparation of the report prior to the receipt of intimation of these adjustments.

* *Charges for collection of owner's rate.*	Rs.
Ganges Canal	1,857
Agra "	143
Eastern Jumna Canal	52
TOTAL .	2,052

† Amount of owner's rate, Ganges Canal 2,230

7. The condition and prospects of the canals in the North-Western Provinces appear to be very satisfactory.

ORDER.—Ordered, that a copy of this Resolution and of the Report and Resolution by the Local Government be forwarded to the Secretary of State

and to the Finance and Commerce, and the Home, Revenue and Agricultural Departments of the Government of India for information.

Also, that copy of this Resolution be forwarded to the Government of the North-Western Provinces and Oudh, Public Works Department, Irrigation Branch, for information and guidance, and to the Local Governments and Administrations noted in the margin, in the Public Works Department, Irrigation Branch, for information; and to the Foreign Department for communication to the Government of Mysore.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chief Commissioners, Central Provinces, British Burma, and Assam.
The Resident at Hyderabad.
The Agents, Governor General, Central India and Rajputana.

Also, that this Resolution and the Resolution of the Local Government be published in the Supplement to the *Gazette of India*.

J. CROFTON, MAJOR-GENL., R.E.,
Depy. Secy. to the Govt. of India.

No. F. C. 1A., dated Lucknow, the 6th November 1879.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces.

The Lieutenant-Governor has read with great interest and satisfaction the record of the good work done by the irrigation canals of the North-Western Provinces, which is contained in the Chief Engineer's review of their working during the past year of drought.

2. The very large area irrigated (more than 2,700 square miles) shows with what diligence and care the Superintending and Executive Canal Officers distributed the limited volume of water which was available for the supply of the various canals, and what a marked effect their unsparing and self-denying exertions must have had in mitigating the drought and scarcity of the year.

3. The Lieutenant-Governor has much pleasure in recording his hearty acknowledgment of these exertions, and in bringing to the notice of the Government of India the good services rendered to him, during a season of the greatest anxiety and public distress, by Mr. Clinton Anderson, the Officiating Chief Engineer of the Irrigation Department in these Provinces, and the officers under his orders.

4. The table C given in para. 4 of the Chief Engineer's review shows to what a satisfactory financial position the canals of the North-Western Provinces attained during the year under review, and that they were not only invaluable from an administrative point of view in aiding the Government to ward off the effects of famine, but financially remunerative also. It must, however, be remembered that this satisfactory financial position has been reached under the stimulus of severe drought, and that the state of affairs set forth in the Chief Engineer's review is exceptionally prosperous. We may not unreasonably hope now for a return to years of good rainfall when the expenses of canal maintenance will unavoidably increase and the revenues decrease. The prudence of avoiding too sanguine an estimate of the progress of any of the new canals may be seen from the returns of the Agra Canal, of which the revenue has fallen off owing to causes over which the irrigation officers had no control, notably epidemic fever and the timorous, suspicious nature of the cultivators.

5. It is well that these facts should be borne in mind, and ideas of the large capacities of irrigation canals as a source of revenue tempered with moderation, and the recollection of recurring cycles of maximum rainfall when floods are most destructive and canal water is a drug in the market.

HENRY A. BROWNLOW, *Col., R.E.,*
Secy. to Govt., N.-W. P. and Oudh, P. W. D., I. B.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 8TH JUNE 1880.

GENERAL REMARKS.—Rain has been general in British Burma, Assam, Bengal, Madras, Mysore and Coorg, and Bombay; in the first three provinces and on the Malabar Coast it was plentiful. In Berar and Hyderabad, the Central Provinces, Central India States, North-Western Provinces and Oudh, and Rajputana slight showers fell. In the Punjab there was rain only in the Peshawar District, where one-tenth of an inch fell. The monsoon has appeared in Bombay, on the Malabar Coast, in part of Bengal, in Assam, and in Burma. Agricultural prospects and the public health remain good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(June 9th)—		
Bellary ...	1·95 (average of sixteen stations).	*Ragi* 27·7; harvesting of second crop paddy in one taluk; standing crops generally good.
Kurnool ...	1·73 (average of seven stations).	*Ragi* 33·0.
Ganjam ...	1·09 (average of fourteen stations).	*Ragi* 32·25.
Kistna ...	·57 (average of ten stations).	*Ragi* 33·40.
Chingleput (Madras) ...	·15 in one station	*Ragi* 22·67; wet and dry crops harvested to small extent.
Coimbatore ...	·73 (average of ten stations).	*Ragi* 23·76; crops generally fair; harvest of *cholum*, gingelly, and sugarcane in four taluks—outturn one-fourth to three-fourths.
Tanjore ...	·47 (average of five stations).	*Ragi* 25·54; crops generally good.
Madura ...	·23 (average of four stations).	*Ragi* 25·91.
Malabar ...	12·36 (average of fourteen stations).	*Ragi* 19·4.
Travancore ...	3·80	*General Remarks.*—General prospects fair.
Bombay—(June 9th)—		
Kurrachee ...	.....	Weather cloudy; rain expected; river at Kotri on 7th 10½ feet against 8 feet 1 inch on same date last year; fever, small-pox, and cattle-disease in three talukas.
Hyderabad ...	.....	Fever of mild type in five talukas, cattle-disease in two, small-pox continues in three talukas; usual high winds have commenced; river much higher than on corresponding date last year.
Ahmedabad ...	A few drops on evening of 7th.	Manuring operations progressing; weather close and cloudy.
Baroda ...	.....	Signs of the approach of monsoon; health good.
Surat ...	Rain moderate in Southern talukas.	South wind strong; fever in two talukas.
Násik ...	Rain in all talukas	Land being prepared for sowing; health good.
Colaba (Bombay) ...	Rain every day except on 2nd and 4th; heavy on 5th and 6th; total of week 4·20.	Total rainfall to date 4·23, being ·77 above average; abnormal temperature 1° warm on 2nd, *nil* till 5th, and 2° cool on 6th, afterwards rose gradually to 1° warm on the 8th; vapour in air normal; abnormal wind, changing from north on the 2nd to south-east on the 5th, on 6th it was due east, and on 7th and 8th north-west; lightning every day except the 8th, and thunder on 5th and 6th.
Poona ...	·51	Sowing of rice in Mawal, and *mug* in eastern talukas progressing.
Ahmednagar ...	2·0	Sowing of *mug* and *urid* delayed for want of rain; public health good.
Sholapur ...	.....	Report not received.
Dharwar ...	.....	Report not received.
Kanara ...	Maximum at Karwar 6·81; minimum at Sirsi ·50.	Plants healthy.
Rajkot ...	Slight showers on 4th	Weather very hot; health good.
		General Remarks.—Monsoon burst everywhere except Guzerat; river unusually high in Sind; public health generally good, but fever and small-pox in Sind.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—		
(June 9th)—		
Chittagong ...	7·08	Weather unsettled with alternate heat and rain; prospects of crops good; cholera and cattle-disease not yet ceased.
Dacca ...	5·50	Prospects of crops good; public health good.
24-Pergunnahs (Calcutta)	4·35	Rice and jute plants very promising; sowing and weeding going on vigorously; some cholera in Dum-Dum and Baraset, and cattle-disease in Diamond Harbour.
Moorshedabad ...	2·53	Prospects of crops good; fever still in some thanas of sadr, and cholera in thana Sati.
Rajshahye ...	8·45; rain more or less throughout the district.	Sky cloudy; last two days very hot; condition of standing crops good; harvesting of *boro dhan* completed in nearly all thanas; two cholera cases in thana Lalpore; public health good.
Burdwan ...	2·71	Weather hot and damp; prospects of crops good; public health fair.
Rungpore ...	15·66	Weather cool, cloudy, and showery; incessant rain done some injury to *aus*; public health good.
Bhágalpur ...	2·88	Weather steamy and hot; land being prepared for future crops; public health good.
Purneah ...	9·15	Prospects generally good, but too much rain complained of; no further progress made on account of rain; health fair; rivers rising.
Patna ...	·14	East wind; land being prepared for *bhadoi*; prospects good.
Durbhunga ...	·27	Weather cloudy; *bhadoi* sowing commenced; prices stationary; fever prevalent in south of Mudhoobunnee; public health good in head-quarters.
Hazáribágh ...	1·70	Weather cloudy and very warm; broad-cast sowing of rice going on; food-grains cheap; a few sporadic cases of cholera and small-pox in north; public health otherwise good.
Cuttack ...	1·63	Weather very hot; rice plants doing well; prices stationary; small-pox still reported.
		General Remarks.—Rather too much rain in Rungpore and Purneah, and low lands in Bankoora flooded in some places; ploughing and sowing stopped by the heavy rain; elsewhere farming operations in full progress; young *aus* and jute thriving well, and sugar-cane, indigo, and other minor crops promising; public health generally good.
N. W. P. and Oudh—		
Benares (June 8th)	Slight rain	Weather variable; wind yesterday westerly and strong, to-day wind light; atmosphere close; occasional cases of cholera still reported from district; otherwise health good; prices stationary.
Allahabad („ „)	Slight shower in west of district.	Cloudy weather and intense heat; wind easterly for first part of week, now westerly; cholera deaths 66 against 79 last week; station and city healthy; wheat 21 1/16 seers, coarse rice 19 seers, and unhusked *dhan* 28 5/8 seers.
Gorakhpur („ 7th)	.....	Weather unusually hot and close; heavy clouds; cholera still decreasing; prices steady.
Jhánsi („ 9th)	Slight shower on 8th	Small-pox reported amongst cattle; prices stationary.
Agra („ 8th)	.....	Weather unsettled and stormy; heat intense with hot west winds; health improving.
Bareilly („ 9th)	.....	Weather hot; wind west; health good.
Meerut („ „)	.....	Heat intense; high westerly hot wind; fever increasing; prices stationary.
Kumaun („ 8th)	.....	Wind variable; weather hot; health good; four deaths from cholera in Bhabur; prospects good; prices unchanged; wheat 13 seers.
Lucknow („ 9th)	.....	Weather cloudy; heat great; barley 30 seers; health fair.
Partabgarh („ 7th)	*Nil*	Great heat; wind variable.
Sitapur („ 9th)	*Nil*	Wind west last two days; health good; prices steady; wheat 23 seers, barley 35 seers.
Fyzabad („ „)	Slight rain on 9th	Sugarcane being irrigated and in places weeded.
		General Remarks.—Heat intense; weather unsettled; wind generally from west; slight showers in Benares, Gorakhpur, Allahabad, Jhánsi, and Fyzabad; sugarcane being weeded and irrigated in Fyzabad; cholera decreasing and health generally good; small-pox among cattle in Jhánsi; prices stationary.
Punjab—		
(June 8th)—		
Delhi ...	.....	Fever continues; slight fall in prices.
Hissar ...	.....	Prices steady; heat intense; fever about.
Umballa ...	.....	Crops gathered; health fair.
Jullundur ...	.....	Health good; prices steady; agricultural prospects favourable.
Lahore ...	.....	Crops cut; health good.
Ferozepore ...	.....	Crops gathered; prices steady.
Siálkot ...	.....	Crops gathered; health good.
Ráwalpindi ...	.....	Public health good.
Pesháwar ...	·1	Harvest prospects bad; prices fluctuating.
Mooltan ...	.....	*Kharif* sowings in progress; health good; prices steady.
Dera Ismail Khan ...	.....	Crops almost gathered; small-pox prevailing.
		General Remarks.—Health and harvest prospects generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
(June 9th)—		
Nágpur ...	·31	Cloudy, very hot; ploughing for *kharif* continues.
Jubbulpore ...	.....	Cloudy and hot with dust-storms; small-pox slight; prices stationary.
Saugor ...	.....	Cloudy and windy; ploughing progressing; small-pox and cattle-disease continue; prices stationary.
Seoni ...	·08	Very cloudy with signs of approaching monsoon.
Hoshangabad ...	1·38	Cloudy; small-pox continues; prices unchanged.
Raipur (June 5th)	.....	Cloudy, close; ploughing for *kharif* sowing continues; small-pox slight; prices stationary.
Sambalpur („ 4th)	2·3	Very close and warm; ploughing continues; early rice sowings commenced in places; small-pox prevalent; prices stationary.
		General Remarks.—Good rain fallen at Sambalpur and Hoshangabad, slight in a few other districts; ploughing for *kharif* sowing progressing; prices stationary.
British Burma—		
(June 9th)—		
Akyab ...	12·54	A few cases of small-pox in Naaf, otherwise public health fair; cattle-disease slightly more prevalent.
Rangoon ...	3·79	Total rainfall 17·58; five deaths from small-pox.
Bassein ...	4·33	Total rainfall 21·93; small-pox slightly prevalent; cattle-disease in four townships; weather generally seasonable, occasionally oppressive.
Prome ...	1·45	Total rainfall 14·06; health generally good; small-pox abated.
Amherst (Moulmein) ...	3·23	Total rainfall 26·35; public health good; crop prospects good.
Toungoo ...	1·87	Total rainfall 13·25; public health good.
		General Remarks.—Small-pox continues in deltaic districts of Pegu, cattle-disease in several districts, public health otherwise good; weather seasonable; ploughing commenced in two more districts.
Assam—		
(June 9th)—		
Gauháti ...	8·72	Weather cool; reaping of *asu* commenced on low lands.
Sylhet ...	11·06	State and prospects of crops satisfactory.
Cachar ...	6·39	Weather seasonable; about three-fourths of *asra, dumahi,* and *murali dhan* sown; cultivation of *sail dhan* continues; common rice 16 seers per rupee; public health good.
Dibrugarh ...	7·74	Land prepared for *sail* crops; cattle-disease still very bad.
Mysore and Coorg—		
(June 9th)—		
Bangalore ...	1·09	Crops generally in good condition; fever continues, as also murrain among cattle; prices stationary.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

REVENUE REPORT ON IRRIGATION WORKS IN AJMERE AND MHAIRWARRA FOR THE YEAR 1877-78.

Nos 133-41I., dated Simla, 2nd June 1880.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 331?S., dated 18th November 1879, from the Agent Governor General for Rajputana, and its enclosure, being the Revenue Report on Irrigation Works in Ajmere and Mhairwarra for the year 1877-78.

OBSERVATIONS.—The Revenue Report now received was prepared and despatched before the orders of the Government of India on the report for the previous year were issued, so that the information then called for is not fully furnished in the present report. It is understood that a Committee has been convened under the orders of the local Administration to consider the questions then raised.

2. The year under review was one of deficient rainfall; so much so, that the tanks were not even filled for the rabi irrigation. The revenue is Rs. 14,587 less that that of last year; and though the working expenses were reduced by nearly Rs. 3,000, a deficit is shewn of Rs. 9,489. The direct financial result was thus a failure; but it is nevertheless satisfactory that the scanty rain that fell was so far utilised by the works, without which latter the position would have been far more serious.

3. The demand for water from the new tanks appears to be continually increasing, and so far the prospects of these works appear to be favorable; but as yet the interest charges amount to Rs. 39,571, while the revenue realised falls short of the working expenses by Rs. 2,799.

4. It is satisfactory to note that every effort is being made to reduce the working expenses; these have been increasing largely on the old tanks, while on the new tanks, though they have already been somewhat reduced, they are still extremely high.

5. From the remarks in paragraph 19 of the report, to the effect that the old tanks had paid their expenses with large surplus profits before they were transferred to the charge of the Public Works Department, and that since that date they have been unremunerative, it would appear that the old system, under which there was hardly any special establishment employed for the maintenance of the tanks, which were looked after mostly by the tehseel officials, was financially preferable to the Public Works control, and that the professional supervision of late years has been a mistake. The Government of India would be glad to know whether this is the case: it may be that improvements effected since the works came under the present system of management have not been clearly exhibited, nor full credit given to the works for their effects on the land revenue, which is confessedly mainly dependent on them.

6. The additions to capital during the year are stated at Rs. 65,195, bringing up the total to the end of the year to Rs. 14,38,892. But the charges for interest on the construction cost of the tanks have been included in the capital outlay, as detailed in table A, paragraph 2, of the Report. The interest charges should, according to the orders in force, be kept separate, and not added to the capital outlay.

7. In paragraph 5 of the Report it is stated that the capital expenditure on the tanks is entirely from the "ordinary" funds. It has apparently been lost sight of that Rs. 1,86,980 of the total outlay were expended previous to 1874-75 from the Productive Public Works funds (then called "extraordinary"), and that permission to write back this amount to "ordinary" has been refused under the orders of the Right Hon'ble the Secretary of State.

8. Future Revenue Reports of these works should be accompanied by a map showing the positions of as many of the works as possible.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Governor General's Agent and Chief Commissioner of Rajputana for information and guidance.

Also, that copy of the Resolution and of the Report be forwarded to the Governments of Madras, Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab, in the Public Works Department, Irrigation Branch, for information.

Also, that copy of the Resolution and of the Report be forwarded to the Home, Revenue and Agricultural Department, and to the Department of Finance and Commerce for information.

Also, that copy of the Resolution be published in the Supplement to the *Gazette of India*.

J. CROFTON, *Major-General, R. E.,*
Deputy Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

UTILIZATION OF CITY REFUSE AS MANURE.

No. 1151, dated Poona, the 31st March 1880.

MEMORANDUM—By J. H. E. HART, Esq., C.E., Superintending Engineer for Irrigation.

Submitted for the information of Government in the Public Works Department, Irrigation, with a copy of this office No. 5026, dated 12th November 1879, and Government Resolution No. 3222, dated 20th November 1879 (General Department).

2. The Superintending Engineer for Irrigation is induced to draw the special attention of Government in the Irrigation Department to the importance of the information furnished in these reports by the officers of the Poona Municipality on the subject of the use of poudrette as a manure.

3. The précis of correspondence, circulated under Government Memorandum (General Department) No. 2633, dated 31st August 1875, shows that the use of poudrette was up to that time almost entirely unknown in this Presidency, except on a restricted scale in a few places.

4. The development of the revenue realised by the Poona Municipality from the sale of poudrette, since the opening of the Mutha Canals, is of great importance. The manure supplies a want essential to any great extension of garden cultivation, and the revenue realised by the Municipality is so considerable that it may fairly be hoped other Municipalities will make some endeavour to turn to account the sewage of their towns, more especially in places like Sholápur, Karar, Sátára, &c., situated in the vicinity of large irrigation works. It is believed that at the instigation of Mr. Burke the manufacture and sale of poudrette has been taken in hand by the Sholápur Municipality within the last few years, and with satisfactory results. Detailed reports on the subject might be asked for.

5. It appears from the papers that originally a system of preparing the poudrette by heating the night-soil in furnaces was experimentally tried at Poona, but was subsequently abandoned as being too elaborate. The "sun-drying" process was then resorted to, and the result is approved both by sanitary and medical officers and by the purchasers. It may be noted that this process is almost exactly that described as followed in Nâsik, *vide* the précis referred to in paragraph 3.

6. The following are some of the most important matters on which information is obtainable in connection with the manufacture and sale of poudrette in Poona:—

Population of city 90,436.

Night-soil 44 cart-loads = 575 cubic feet per day. This shrinks in drying to 430 cubic feet.

Street sweepings 65 to 75 cart-loads = 1,950 cubic feet per day. When burnt and sifted produce is 300 cubic feet of ashes.

Poudrette 430 cubic feet of night-soil mixed with 300 cubic feet of ashes produce 730 cubic feet of poudrette per day or 266,450 cubic feet per annum.

The price realised is 1 rupee per cubic yard or 27 cubic feet. The annual value of the poudrette is thus Rs. 9,870 at current rates. This is incorrectly stated by the Secretary, Poona Municipal Committee, as Rs. 4,934.

The cost of conveying night-soil and sweepings to the depôt is shown as Rs. 11,736. The cost of manufacturing the poudrette is stated as Rs. 6,264. The cost of conveyance has of course to be incurred in any case. The manufacture of the poudrette will yield a very handsome profit to the Municipality The Municipal Secretary notes that the price of the manure is susceptible of increase and the cost of manufacture of reduction.

The revenue from the sale has increased from Rs. 766 in 1874-75 to Rs. 7,438 during the first 9 months of the current year (1879-80).

7. The remarks in paragraph 10 of the Secretary's letter are worthy of particular attention. He states that 5 years ago cultivators "would not touch the poudrette" and "could not be induced to take it away at even a nominal charge. At the present moment the outturn of manure is not enough to keep pace with the demand, and it has become necessary to take special precautions that the poudrette is not taken away in its raw state, which the cultivators sometimes attempt to do. They frequently pay for manure to the Municipality from 4 to 6 months *in advance* in order to ensure a timely supply."

8. The Superintending Engineer recommends that Mr. Plunkett's letter and the report by Mr. Narso Ramchandra, Secretary, Poona Municipal Committee, be printed, and copies circulated to all Presidents of Municipalities and to Cantonment Committees. Also that the papers be printed in the *Government Gazette*. Copies might also be furnished to the Government of India, *vide* Government Resolution (General Department) No. 850 of 23rd March 1880, and to the Inspector General of Prisons.

No. 98, dated Poona Municipal Office, the 14th January 1880.

From—A. H. PLUNKETT, Esq., City Magistrate, and Chairman, Poona Municipality,
To—The Collector, and President, Poona Municipality.

With reference to Government Resolution No. 3222 of the 20th of November last, in the General Department, I have the honor to report that the following sums were realised by the sale of poudrette manufactured by the Poona Municipality during the past five years:—

YEAR.	Approximate quantity manufactured in cubic feet.	Amount realised in Rupees.	REMARKS.
1874-75	60,000	766	All sold during the year.
1875-76	90,000	1,3 8	
1876-77	120,000	2,632	
1877-78	150,000	2,810	About 2,500 cubic feet remained unsold.
1878-79	220,000	4,356	About 100,000 cubic feet remained unsold. The selling price was increased 50 per cent.
1879-80 (up to 1st January 1880, 9 months.)	200,000	7,438	About Rs. 2,300 were obtained from the sale of old stock.

2. The mode of preparing the poudrette advocated by Ráo Bahádur Professor Keru Luxman Chhatre in his report (copy of which is appended for ready reference),* was abandoned as too elaborate and expensive after a very short trial. The mode now adopted is described in the accompanying report of the Municipal Secretary.

* Not printed.

3. I beg to remark that the present mode of preparing the poudrette has the approval of the medical profession and the Sanitary Commissioner of Bombay, and to add that the value of the poudrette as a manure is recognised by the agricultural classes, the demand for it being steadily on the increase since the opening of the Mutha Canals.

Report on the disposal of the night-soil of the City of Poona and its preparation into poudrette.

The process adopted may be called the "sun-drying process." It consists in exposing night-soil in shallow beds covered with ashes to the sun to dry, and when perfectly dried in heaping it away to be sold to agriculturists for manure.

Night-soil.

2. About forty-four card-loads of night-soil are daily collected in the city, and carted out to a depôt at the village of Dhankodi, 2½ miles away to the south of the city from its extreme limits. Twenty-two carts each of a capacity of 18 cubic feet are employed. They make two trips a day. They are barrel-shaped (5′ 9″ long and 2 diameter) and are perfectly air-tight. They have a mouth for filling on the top at the fore end covered with an air-tight trap lid and an opening at the left end at bottom for emptying, covered by a close fitting short piston, which is worked up and down by a screw worked from the top of the cart.

3. The carts are taken away three-fourths full, each containing about thirteen cubic feet of matter. The space left vacant is required partly for the location of the gas which is generated in the night-soil when exposed to the sun and stirred by the jolting of the carts, and partly for preventing the night-soil from spilling or overflowing as it rises while fermenting and while the gas is produced.

4. The night-soil collected is in a semi-liquid state, as a great quantity of water used by people for ablution mixes with it, from which it cannot be separated. About 575 cubic feet of such soil is collected daily.

Ashes.

5. Street and house sweepings collected from the dust bins of the city are carted out and burnt into ashes, which are afterwards carted out to the depôt

referred to in paragraph 2 above. The carts are of open box form, 5 feet long, 3 feet broad and 2 feet deep, which make a capacity of 30 cubic feet. 25 carts are employed, and they make three trips daily. Allowing for stoppages, accidents, &c., about 65 cart-loads of sweepings, consisting of house ashes, stable litter, sweepings, and a quantity of road dust and brickbats are taken out daily. The total refuse thus taken out is about 1,950 cubic feet. When burnt, it is reduced to $\frac{2}{13}$ths of its bulk, or about 300 cubic feet of pure ashes.

Deodorisation.

6. At the depôt beds are formed with a floor made of moorum or other hard substance to receive the night-soil; the beds are 18 feet square and 1 foot deep. A layer of ashes one inch thick is first spread over the floor of the beds; night-soil is then poured on about 5 inches deep, and is covered over with a layer of ashes also an inch deep. It is then allowed to remain for 24 hours in the sun during the fair season and for three days under sheds during the rainy season: The night-soil is after the lapse of the time mentioned above stirred and well mixed with the ashes spread above and below it, and a fresh layer of the latter ½ inch thick put on, when it is allowed to lie for three days further in the fair season and eight days during the rains. The mixture is then again stirred, taken out of the beds, and spread on dry open ground exposed to the sun to complete its drying. It is then stored in heaps for sale, and is in dry weather fit for immediate use.

7. In the rainy season the drying has occasionally to be done under cover, and consequently the process occupies as many as 12 days, whereas in the cold season it takes six days and in the hot season only four days.

Remarks.

8. Experience has shown that ashes form the most efficient and cheapest deodoriser of the noxious gases generated from night-soil, and the depôt when there is no uncovered night-soil in it, is free from stinks at a distance of 50 yards on its windward and not more than 150 yards on its lee-ward side, provided always that the supply and use of ashes is sufficient.

9. It will be observed that 575 cubic feet of semi-liquid night-soil is obtained daily from the city, and only 300 cubic feet of ashes, that is, the latter is a little over one-half of the former. Experience has shown that to ensure thorough deodorisation, complete freedom from stink, and the best poudrette, the proportion of ashes to night-soil should be about equal, and the Municipality are trying to augment their collection of ashes to the required quantity.

Poudrette.

10. The manure prepared in this manner is much valued by cultivators, and is in great demand. Applications for the manure have been increasing since the opening of the Mutha Canals, and consequent extension of wet cultivation. Five years ago, agriculturists would not touch the poudrette then prepared, and could not be induced to take it away at even a nominal charge. At the present moment the outturn of manure is not enough to keep pace with the demand, and it has become necessary to take special precautions that the poudrette is not taken away in its raw state which the cultivators sometimes attempt to do. They frequently pay for manure to the Municipality from four to six months *in advance* in order to ensure a timely supply.

11. The poudrette manufactured by the Municipality is clean and free from brickbats, broken glass and other rubbish or common earth. This is secured by the ashes being sifted before being mixed with night-soil.

12. It may not be out of place here to quote a paragraph from a letter, No. 618 T., dated 8th November 1879, from the Sanitary Commissioner of Bombay, on the mode of preparing the poudrette now followed by the Poona Municipality:—

"Before the depôt is removed it is only fair to place on record that hitherto its management reflects the highest credit on all concerned. I have visited it often and unexpectedly, and remembering how rude are the means as they generally are in India, I can answer for it that every process is very carefully conducted."

Quantity manufactured.

13. Five hundred and seventy-five cubic feet of semi-liquid night-soil and 300 cubic feet of ashes are collected daily at the depot and mixed together. The night-soil shrinks in drying to $\frac{3}{4}$ths its bulk or about 430 cubic feet. The daily outturn of poudrette is therefore 430+300=730 cubic feet, or 266,450 cubic feet in the year.

Financial results.

14. Before concluding this report, it will be of interest to note the financial results of this branch of work of the Poona Municipality—

44 cart-loads of night-soil conveyed daily to the depôt by 22 pairs of bullocks at Rs. 24 per pair with driver per month, cost per annum	Rs.	6,336
65 to 75 cart-loads of street sweepings conveyed daily to the depôt by 25 pairs of bullocks at Rs. 18 per pair with driver per mouth, cost per annum	„	5,400
Cost of sifting refuse, burning, preparing ashes, mixing night-soil and preparing poudrette, per annum	„	2,664
Maintenance of sheds and beds at the depôt, per annum	„	900
Repairs to night-soil and refuse carts, per annum	„	2,500
Tools, plant, and contingencies	„	200
Total cost per annum	Rs.	18,000

15. The poudrette is now sold at 27 cubic feet forming 96 ordinary iron baskets full for a rupee; the annual revenue from the 266,450 cubic feet of poudrette prepared is Rs. 4,934, say 5,000.

16. There is thus at the present moment a net loss to the Municipality of Rs. 13,000 per annum. It should be borne in mind that the Municipality would have as its first duty to remove the night-soil and refuse of the city in some way or other; what therefore has been mentioned as a net loss to the Municipality is only what it costs them to get rid of the filth of the city in the best manner possible. The price of poudrette is yet susceptible of increase and the cost of preparing it of decrease, and it is possible that the cost to the Municipality might be reduced in three or four years to Rs. 7,500 only by reducing charges from 18,000 to 15,000, and increasing sale proceeds of poudrette to Rs. 7,500. The sale of poudrette will thus pay half the cost of the removal from the city of its night-soil and street and house sweepings.

NARSO RAMCHANDRA,
Secretary, Poona Municipal Committee.

N. B.—1. The figures for British Burma for 1880-81 include collections at Tavoy and Mergui for April only.
2. Collections for the years previous to 1875-76 cannot be separately given for Imports and Exports, as, in the returns furnished by Local Governments, refunds on Imports and Exports were not distinguished.
3. The figures for the years previous to 1875-76 are exclusive of those for Land Customs Revenue.

GOVERNMENT OF INDIA.

HOME, REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 15TH JUNE 1880.

GENERAL REMARKS.—General rain fell during the week in British Burma, Assam, Bengal, Madras, Mysore and Coorg, and the Central Provinces; in all these provinces it was plentiful, save in Madras, where the fall was moderate. In Bombay, Central India, Rajputana, and the North-Western Provinces and Oudh the rain was slight and partial. From Berar and the Punjab no rain is reported. Rain is wanted in the Deccan, the Southern Mahratta Country, and the Punjab for *kharif* sowings.

The monsoon appears to be slowly advancing. Agricultural prospects and the public health remain generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(June 16th)—		
Bellary ...	1·17 (average of five stations).	*Ragi* 28·1; standing crops generally good.
Kurnool ...	·44 (average of eight stations).	*Ragi* 33·0.
Ganjam ...	1·17 (average of eleven stations).	*Ragi* 32·25.
Kistna ...	·49 (average of nine stations).	*Ragi* 34·0.
Chingleput (Madras) ...	·33 (average of six stations).	*Ragi* 22·71; wet and dry crops harvested.
Coimbatore ...	·24 (average of four stations).	*Ragi* 23·68; crops generally fair; harvest of *cholum*, *cumboo*, and gingelly—outturn ¼ to ¾.
Tanjore ...	·82 (average of six stations).	*Ragi* 25·54; crops generally good.
Madura ...	·32 (average of two stations).	*Ragi* 26·58.
Malabar ...	2·78 (average of fourteen stations).	*Ragi* 20·9.
Travancore ...	1·13	*General Remarks.*—General prospects fair.
Bombay—(June 16th)—		
Kurrachee ...	.....	High monsoon wind; river on 13th 10½ feet, against 11¾ feet on same date last year; six cases of measles in Kurrachee, four deaths; small-pox in Manjhand talukas, measles in Ghorabari, cattle-disease in Shahbandar; some animals dying from scarcity of forage.
Hyderabad ...	.....	Fever in four talukas, cattle-disease in one, small-pox continues in three; very high winds with clouds of dust blowing for the last two days; river lower than on same date last year, but fair average height.
Ahmedabad ...	·73	Preparations for *kharif* sowings progressing; weather occasionally cloudy; strong winds.
Baroda ...	Slight showers in a few places.	Very high south-west winds; public health good; prices stationary.
Surat ...	.....	Monsoon not commenced; south wind strong.
Násik ...	.....	Rain holds off; health good; prices easy.
Colaba (Bombay) ...	·16	Total rain 4·39 inches, being 5·49 inches below average; abnormal temperature rose from 1° warm on the 9th to 2° warm on the 12th, and afterwards remained steady till the end of the week; vapour in air normal; abnormal wind changed gradually from due west on the 9th to north-west on the 14th, and back again to due west on the 15th.
Poona ...	Maximum at Bhimthadi, ·58; minimum at Indapur, ·07.	Rain much wanted.
Ahmednagar ...	A few cents at Jamkhed and Sheogaon.	Prices rising; public health good.
Sholapur ...	·30	Total rain 2·47; rain very much wanted for *kharif* sowing; public health good.
Dharwar ...	·05	More rain urgently needed; sowing of rice crops suspended; fever in six and cattle-disease in three talukas.
Kanara ...	1·98 at Karwar	Total rainfall 10·69, maximum at Kumpta 8·78, minimum at Halial ·49; rice cultivation progressing; cattle-disease above Ghât.
Rajkot ...	.....	Weather hot and windy; health good.
		General Remarks.—Very little rain, more urgently needed in Deccan and Southern Mahratta Country; river in Sind lower than on same date last year; public health fair; very high winds in Sind and Guzerat.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—		
(June 16th)—		
Chittagong ...	3·60	Weather cloudy for last two days; *pania aus* being reaped; transplanting of autumn rice commenced in some places; cholera not yet ceased.
Dacca ...	3·48	Prospects of crops good; early rice and sessamum being gathered; public health good.
24-Pergunnahs (Calcutta)	2·13; plenty of rain throughout district.	Rivers full; rice and jute sowings and transplanting of late rice going on favourably; rice and jute plants promising; price of common rice stationary; public health good.
Moorshedabad ...	·59	Prospects of crops good; public health generally good, except cases of fever in some thanas of Sadr.
Rajahahye ...	1·22	Heavy rain in almost all thanas has done some damage to crops; Ganges rising rapidly; prospects of crops generally good; public health good.
Burdwan ...	1·57	Prospects of crops good; public health fair.
Rungpore ...	4·39	Weather cloudy and showery; prospects of crops favourable; prices of rice rising; health good.
Bhágalpur ...	·12	Prospects of crops good; rivers rising rapidly.
Purneah ...	3·3	Crops being damaged by heavy and continuous rain; no farming operations in consequence of rain; rivers in flood; health fair.
Patna ...	·43	Prospects of autumn crops good; sowing commenced in some places.
Durbhunga ...	2·08	Sowing of autumn crops and paddy in progress; outturn of *moong* good; prices stationary; some fever at head-quarters.
Hazáribágh ...	4·28	Weather cloudy; sowings of autumn and winter crops continue; food-grains cheap; general health good.
Cuttack ...	Sufficient rain	Prospects of crops good; prices stationary; cholera and cattle-disease in parts of Kendrapara sub-division; small-pox still prevalent.
		General Remarks.—More or less rain in all districts during week; heavy rain in places somewhat damaged crops on low-lying lands and interfered with sowing; on the whole, however, prospects of autumn rice, jute, sugarcane, and other crops on ground very good; transplanting of winter rice commenced; in some places indigo and sessamum harvest begun; rivers rising; public health generally good.
N. W. P. and Oudh—		
Benares (June 15th)	*Nil*	Sky overcast; a few cases of cholera still occur; prices steady.
Allahabad („ „)	Slight and partial showers.	Wind west in daytime and east at night; very cloudy; heat [illegible]; 62 deaths from cholera, otherwise very healthy; wheat 21 seers, coarse rice 19½ seers, unhusked *dhan* 28½ seers.
Gorakhpur („ 14th)	·2; heavy fall over north of district on 11th.	Weather cloudy, hot and close; cholera disappearing; health good; prices steady.
Jhánsi („ 16th)	·6 at Garotha	Strong westerly winds; health fair; prices stationary.
Agra („ 15th)	.....	Weather trying; hot westerly winds; health good; cattle-disease has appeared in three parganas.
Bareilly („ 16th)	*Nil*	Wind easterly; clouds round the horizon; health good.
Meerut („ „)	.....	Heat intense; wind variable; fever unabated; prices stationary.
Kumaun („ 14th)	Rain fell in parts	Very hot; the last few days cloudy; fever prevalent; *kharif* sowings nearly completed; prospects good; prices unchanged.
Lucknow („ 16th)	Slight shower in Sadatgunge.	Heat intense, but atmosphere cooler last two days; a few cases of cholera reported from district and cantonments; barley 30 seers.
Partabgarh („ 14th)	*Nil*	Weather cooler; sky at times cloudy.
Sitapur („ 16th)	*Nil*	Wind east; weather cloudy; still a little cholera; general health good; wheat 23 seers, barley 36 seers.
Fyzabad („ „)	.....	Weather cloudy and unsettled; sugarcane being irrigated and weeded; *sawan* being cut; sowing of rice and *kodo* begun; sporadic cholera in some places.
		General Remarks.—Slight rain in Allahabad, Jhansi, Kumaun, and Lucknow, with a heavy fall in north of Gorakhpur; weather intensely hot and trying with varying winds; still a little cholera in Benares, Gorakhpur, Allahabad, Lucknow, Sitapur, and Fyzabad, and fever unabated in Meerut, but general health on the whole good; cattle-disease appeared in Agra; prices stationary.
Punjab—		
(June 15th)—		
Delhi ...	.....	Fever continues; prices fluctuating.
Hissar ...	.....	Heat intense; *kharif* operations in canal lands; prices fluctuating; fever still about.
Umballa ...	.....	*Kharif* ploughing commenced; health fair.
Jullundur ...	.....	Heat intense; health good; agricultural prospects satisfactory; prices steady.
Lahore ...	.....	Crops cut; health good.
Ferozepore ...	.....	Prices steady.
Siálkot ...	.....	Health good.
Ráwalpindi ...	.....	Health good.
Peshawar ...	.....	Harvest prospects bad; slight fluctuation in prices.
Mooltan ...	.....	*Kharif* sowings in progress; health good; prices steady.
Dera Ismail Khan ...	.....	Health fair; small-pox prevailing.
		General Remarks.—Health generally good; rain much wanted for *kharif* sowings.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Nágpur (June 16th)	1·66	Land being prepared for sowings; prices stationary.
Jubbulpore ...	3·0	Cloudy, cool; land being prepared for sowings; small-pox decreasing; prices stationary.
Saugor ...	·01	Cloudy, cool; small-pox and cattle-disease continue; price of wheat fallen, of other grains stationary.
Seoni ...	4·22	Cloudy, cool; ploughing continues.
Hoshangabad ...	·1	Cloudy; small-pox continues; prices fallen.
Raipur (June 12th)	2·06	Sowings commenced in parts of district; cattle-disease to some extent; prices slightly fallen.
Sambalpur („ 11th)	·4	Close; sowings of earlier rice continue; small-pox prevalent; prices steady.
		General Remarks.—Rained more or less in all districts, except Damoh and Chanda; ground being prepared for sowings; prices on the whole stationary.
British Burma—		
(June 12th)—		
Akyab ...	7·51	Total rainfall 44·60; general health good; cattle-disease increasing slightly.
Rangoon ...	5·66	Total rainfall 23·24; a little small-pox.
Bassein ...	1·89	Total rainfall 23·82; public health good; cattle-disease continues; weather seasonable.
Prome ...	1·69	Total rainfall 15·75; public health fair; ploughing progressing.
Amherst (Moulmein) ...	9·53	Total rainfall 35·88; public health and prospects of crops good.
Toungoo ...	2·98	Total rainfall 16·23.
		General Remarks.—Small-pox apparently abating; cattle-disease continues in Pegu slightly.
Assam—		
(June 12th)—		
Cachár ...	4·07	Damage to *asu* apprehended in places from inundation.
Sylhet ...	6·53	Heavy rain; waters rising; prospects good.
Cachar ...	2·91	Weather unchanged; three-fourths of *asra, murali* and *dumahi dhan* sown; cultivation of *sail dhan* in progress; common rice 16 seers per rupee; public health good.
Dibrugarh ...	5·27	Transplanting of *sali dhan* commenced; cattle-disease still prevalent.
Mysore and Coorg—		
(June 16th)—		
Bangalore ...	1·5	Crops in good condition; public health improving; cattle-disease abating in parts; prices generally stationary.
Mysore ...	·54	
Mercara ...	3·33	
Berar & Hyderabad—		
(June 16th)—		
Amráoti ...	.....	Weather cloudy and windy; ploughing continues.
Akola ...	.....	Weather very hot.
Hyderabad ...	.....	Monsoon set in; weather cool; no sickness; *tabi* harvesting and ploughing for *kharif* continue.
Central India States—		
(June 16th)—		
Indore ...	.....	Cool, windy; health and prospects good.
Morar (Gwalior) ...	.....	Stormy and cloudy; prices stationery.
Sutna ...	·68	*Jowar* one maund for the rupee; high winds, cool; cholera still at Rewah.
Rutlam ...	.....	Strong wind continues; health good; opium and grain prices steady.
Neemuch ...	.....	High wind; public health good.
Goona ...	.....	Cloudy, high wind, cool; health good; wheat 19 seers.
Bhopal ...	.....	Strong winds; prospects favourable; public health good.
Agar ...	·23	Health good.
Nowgong ...	.....	Health fair.
Manpur		Hot and cloudy; small-pox reappeared.
Rajputana—		
Abu (June 16th)	2·23	High winds, cloudy.
Sirohi („ 13th)	Drops	Tanks dry, wells fairly full; healthy; cooler than usual.
Marwar („ 12th)	.....	Tanks dry; well water diminishing daily; health good; *rabi* crops almost gathered; partial clouds; winds sharp and hot; prices rising; nights comparatively cool.
Maywar („ 11th)	.....	Tanks dry; well water low in some parts, plenty around Oodeypore health good; ploughing progressing.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—*contd.*		
Harowtee (June 12th)	.....	Health good; heat great; wind high.
Jhallawar ...	.....	Cool; strong wind from south-west; health good.
Ajmere (June 16th)	.....	Weather and wind cool; health good.
Jeypore ...	.....	Preparing for *kharif* sowings; cloudy; health good.
Bhurtpore ...	.....	
Ulwur ...	1·1 in one tahsil	Health fair; sowing continues; heat great.
Nepal— (June 8th)—		
Katmandú ...	2·88	Weather sultry and oppressive; the spring crops are estimated to be about 25 per cent. below the average, owing to constant rain.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR THE YEAR 1878-79.

Nos. 143-56I, dated Simla, the 4th June 1880.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 4966I.A., dated 30th December 1879, from the Government of Bengal, in the Public Works Department, and its enclosures, being the Revenue Report of Irrigation Works in Bengal for the year 1878-79, and a Resolution by His Honor the Lieutenant-Governor reviewing the operations.

OBSERVATIONS.—The Capital outlay on irrigation works during the year was Rs. 28,32,279, and the total debit to the end of the year on Capital account, excluding indirect charges, was Rs. 4,93,10,013, made up as follows:—

	Rs.
Orissa canals	1,83,08,173
Midnapore „	73,29,941
Hidgellee Tidal canal	17,72,699
Sone canal	2,07,74,097
Total Productive Public Works	4,81,84,910
Imperial Ordinary	8,33,353
Provincial	2,91,750
GRAND TOTAL	4,93,10,013

2. The amount of interest payable by the Bengal Government to the Imperial Treasury is shown in paragraph 6 of the Chief Engineer's review, as follows:—

	Rs.
On Capital Productive Public Works	21,20,416
„ „ other than Productive Public Works	39,091
TOTAL	21,59,507

Interest has been calculated on the Capital outlay on works not included as Productive Public Works, but the expenditure on which was defrayed from Imperial funds in accordance with the orders of the Government of India; but it has lately been decided that no interest is payable by the Government of Bengal on these works, as they have been abandoned.

3. The expenditure of Rs. 13,507 on canal plantations has been entered as a separate item, distinct from the Capital outlay of the canals concerned. With reference to this, the attention of the Government of Bengal is invited to Government of India Public Works Circular No. 77A.—G., dated 10th November 1879.

4. The Capital outlay on Productive Public Works is shown under the head "Provincial." The attention of the Bengal Government is invited to the orders conveyed in Government of India Public Works Circular No. II, dated 7th January 1880, issued subsequently to the preparation of the report under review.

5. The improvement in the financial prospects of the Bengal canals, which commenced in the previous year, is shown by this report to have been continued during the year under review.

Orissa canals.—The total irrigated area in Orissa was 143,175 acres against 119,042 acres in the previous year; while 111,250 acres were charged with water-rate against 98,495 acres in 1877-78, and this increase has occurred although the rainfall amounted to 52·32 inches, while in the previous year it was 43 inches only. The additional distributaries, the want of which was noticed in last year's review, were not commenced pending the submission of the estimates which are still under preparation.

Midnapore canals.—On the Midnapore canals the area irrigated was 58,731 acres against 19,819 in the previous year; of this area, 57,751 acres were under lease for four or five years; and the irrigated area was, it is stated, subsequently increased to 96,000 acres, most of which was leased for four or five years. This is probably the maximum limit of the irrigating capacity of the works without the proposed storage reservoirs. There was a large area of unauthorized irrigation during the year under review from these canals, due, apparently, to the imperfect state of the distributary system: for the remedying of the latter, provision will be made in the revised estimates now under preparation.

Sone canals.—On these canals the irrigated area shows a decrease from 241,790 acres in 1877-78 to 197,018 acres in 1878-79; the greater portion of the difference being in the rubbee crop, owing, it is stated, to losses of crops in the previous rubbee having made the cultivators doubtful of the success of irrigation; the losses having been chiefly due to excess of water given to the crops consequent on inexperience in artificial irrigation. The development of sugar-cane cultivation on these canals is remarkable, the area under this crop amounted to 19,621 acres against 9,891 in the previous year; and the export of unrefined sugar from Shahabad by the East Indian Railway shows still more clearly the extent to which the production has already increased. During the last years the exports were—

	Mds.
1877	307,241
1878	485,669
1879	461,399

the largest export in any of the five preceding years having been only 56,868 maunds.

6. *Navigation.*—The traffic on the *Orissa* canals shows an increase over that of the previous year, though, compared with the increase in length of navigable line on which tolls were levied, the increase is not so great as might have been expected; the length of canal in operation during the year having been 133 miles, or an increase of 30 miles, while the tonnage on which tolls were levied amounted to 129,646 tons against 105,257 tons in the previous year. But on the other hand, it must be considered a hopeful sign that the diminution in traffic was comparatively so small, the demand for rice for Madras having abnormally developed the traffic in 1877-78.

During the year, by the completion of the Gobri navigable branch of the Kendrapara canal navigable communication was opened between Cuttack and Chandballee. A regular passenger service was carried on very successfully for a portion of the year in spite of difficulties from shoals in the Chota Brahminee. An extension of the Gobri canal connecting with the river below these shoals is in contemplation. When this is opened, a considerable traffic may be expected on this line.

On the *Hidgellee Tidal canal* the traffic continues to increase, the tonnage amounting to 164,687 against 154,426 in the previous year.

On the *Midnapore* and *Sone canals* navigation is in its experimental stage. The results already attained, however, hold out fair prospects of success, as experience is gained of the best class of vessels and mode of working.

The cost of carriage by boat on the Sone canals was 5·88 pies per ton per mile, including tollage. This for a commencement may be considered a fair rate, but it is too high to attract a large traffic.

7. The cost of maintenance of the canals generally is still very high. On the Sone canals it is stated to be mainly due to the quantity of silt deposit brought in during the flood season. This might to a certain extent be probably obviated by admitting only surface water when the river water is heavily charged with silt. The experiment at any rate is worth trial.

8. The financial results calculated on the earnings of the year are, on the whole, very satisfactory, as compared with those of former years. The aggregate earnings and net balance after deducting working expenses, as shown by the booked accounts, differ from those given by the Chief Engineer, thus:—

	Chief Engineer. Rs.	Booked accounts. Rs.
EARNINGS—		
Orissa	2,43,873	2,35,318
Midnapore	1,77,970	1,72,597
Tidal	60,060	60,798
Sone	5,90,465	6,71,135
	10,72,368	11,39,843
NET BALANCES—		
Orissa	4,783	—3,772
Midnapore	5,134	—239
Tidal	36,880	37,613
Sone	2,19,961	3,00,631
	2,66,758	3,34,233

These statements should have been compiled in communication with the Examiner, Public Works Accounts, and any differences should be adjusted or explained before the submission of the report in future years.

9. The unrealized balance on the Orissa canals at the close of the year was very large, amounting to Rs. 80,237, out of a total demand of Rs. 2,04,911; but arrangements have been made which will probably secure better results in the future.

10. The calculations of the duty obtained from the water in irrigation are still very unreliable; but it is satisfactory to notice that efforts are being made to obtain the requisite data. The subject is a most important one in forming a judgment on the efficiency of the canal administration, as well as in the calculation of probable results from future schemes.

11. In future reports a statement of the approximate value of the irrigated crops should be given similar to those which accompany the annual reports from the North-Western Provinces and the Punjab. For the Midnapore system, a statement is given in which the value is estimated at Rs. 21,72,952, but the subject is not noticed in the reports on Orissa or the Sone.

12. The Government of India endorses the Lieutenant-Governor's expressions of approval of the ability and valuable public services of the late Chief Engineer of the Irrigation Department, Colonel (now Major-General) Haig, who for eight years devoted abilities of no common order, with unremitting assiduity, to the improvement of the work entrusted to him, as testified by every Lieutenant-Governor under whom he served.

ORDER.—Ordered, that copies of this Resolution and of the Report and its accompaniments be forwarded to the Secretary of State, and to the Finance and

Commerce, and the Home, Revenue and Agricultural Departments for information.

Also, that a copy of this Resolution be forwarded to the Government of Bengal for information and guidance.

Also, that copies of this Resolution and of the Report be forwarded to the Local Governments and Administrations noted in the margin, in the Public Works Department, Irrigation Branch, for information.

The Governments of Madras, Bombay, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces and British Burmah.
The Resident at Hyderabad.
The Agents to the Governor General for Central India and Rajputana.

Also, to the Foreign Department for communication to the Chief Commissioner of Mysore.

Also, that this Resolution, the Resolution of the Bengal Government, and the Chief Engineer's Report, with a few selected statements, be published in the Supplement to the *Gazette of India*.

J. CROFTON, *Major-Genl., R.E.,*
Depy. Secy. to the Govt. of India.

Extract from the Proceedings of the Lieutenant-Governor of Bengal in the Public Works Department, Irrigation Branch,—No. 4874 I. A., under date the 19th December 1879.

Read—

The Canal Revenue Report for the year 1878-79 and the note by the Chief Engineer on the same.

The Capital outlay on irrigation works during the year under review was Rs. 28,34,204, and the total outlay under this head amounted to Rs. 4,93,73,192, of which Rs. 4,82,47,938 have been expended on productive works; the balance, Rs. 11,25,254, is the expenditure on works other than productive, but for which capital accounts are kept, divided into "ordinary" charged to Imperial funds, Rs. 8,33,504, and "ordinary" charged to Provincial funds, Rs. 2,91,750.

The amount of interest for 1878-79 payable by the Government of Bengal to the Imperial treasury is Rs. 21,59,507.

The receipts of the year amounted to Rs. 8,51,133, against Rs. 4,94,772 in the year 1877-78.

The following statement shows the revenue for each project from the several sources, as compared with that of the two previous years:—

	Receipts, 1878-79.	Receipts, 1877-78.	Receipts, 1876-77.
	Rs.	Rs.	Rs.
Orissa canals—			
Water-rates	1,16,416	1,17,818	40,378
Navigation	57,042	33,844	22,881
Miscellaneous	8,546	9,445	11,298
TOTAL	1,82,004	1,61,107	74,557
Midnapore canal—			
Water-rates	85,014	53,483	61,460
Navigation	77,340	1,06,917	67,651
Miscellaneous	8,356	9,693	7,876
TOTAL	1,70,710	1,70,093	1,36,987
Hidgellee canal—			
Navigation	59,723	60,971	44,572
Miscellaneous	1,070	1,309	464
TOTAL	60,793	62,280	45,036
Sone canals—			
Water-rates	3,73,312	59,651	59,761
Navigation	29,332	26,774	4,852
Miscellaneous	34,982	14,867	8,567
TOTAL	4,37,626	1,01,292	73,180
GRAND TOTAL	8,51,133	4,94,772	3,29,760

The great increase in the revenue of the year is mainly due to the fact that the Sone canals have been brought more fully into operation. The receipts from irrigation would, however, have been much greater had a larger proportion of the assessments been realized. In Orissa and Midnapore most of the demand falls due on the 1st of February, but little time was therefore left for collecting the revenue before the end of the financial year. On the Sone canals the non-realization of the large outstanding balance of Rs. 3,04,411 was due to delay in the preparation of the demand statements, unsatisfactory measurements, and the destruction of a large part of the rubbee crops by insects, on account of which considerable remissions will have to be made. It is satisfactory to be able to state, with regard to the first two causes, that a great improvement has taken place, and that of the arrears, upwards of 50 per cent. have since been realized.

The working expenses amounted to Rs. 8,05,610, against Rs. 7,02,857 in 1877-78 and Rs. 5,97,960 in 1876-77. The increase is wholly on the Sone, and is mostly due to the additional length of canal and distributaries brought into operation.

The areas assessed for water-rates, compared with those of the former year, are as follow:—

		1877-78.	1878-79.
		Acres.	Acres.
ORISSA	Khurreef	95,088	105,500
	Rubbee	3,071	5,517
	Perennial	336	233
	TOTAL	98,495	111,250
MIDNAPORE	Khurreef	19,550	58,607
	Rubbee	269	124
	Perennial	...	...
	TOTAL	19,819	58,731
SONE	Khurreef	107,087	99,964
	Rubbee	124,812	77,430
	Perennial	9,891	19,624
	TOTAL	241,790	197,018
	GRAND TOTAL	360,104	366,999

The increase in the assessed area under the Orissa canals was 12,755 acres, besides which 11,567 acres were irrigated free of charge on the newly-opened second and third ranges of the High Level canal. Also 20,350 acres on the lower portions of the Kendrapara and Patamoondee canals received surplus water and could not be assessed; thus the total area watered was 143,167 acres, against 109,000 acres in 1877-78. The success attending the irrigation operations in Orissa has in a great measure been due to the energy and ability of Mr. Wylly, the Deputy Revenue Superintendent, who has been ably assisted by his subordinates and by the engineering staff. Of the 105,500 acres no less than 94,492 acres were leased for five years under the following conditions:—

(1) That the whole irrigable khurreef area of the village must be included.

(2) That the assessment be based on former measurements, or on the cadastral survey maps when available.

(3) That the rate for flow irrigation be Re. 1-8 and Re. 1 for lift per acre. To those not taking out leases for five years, or only desirous of using water for portion of a village, the charge to be Rs. 3 for flow and Rs. 2 for lift per acre.

The great increase in the irrigated area in Midnapore, *viz.*, from 19,819 acres in 1877-78 to 58,731 acres in 1878-79, is attributed partly to a deficiency of rain in the early part of the khurreef season, and partly to the fact that canal water is thoroughly appreciated by the people with whom long leases are popular. During the last khurreef season the area irrigated has reached the unprecedented figure of 96,000 acres, most of which has been leased for four and five years.

On the Sone canals the falling off in the khurreef area irrigated is due to the rainfall of August and September 1878 having been so much heavier than in the corresponding period of 1877; it is also partly due to the higher water-rate of Rs. 2-8 per acre, against Re. 1 in 1877, when orders were given to save as much of the crops as possible irrespective of the returns. The falling off in rubbee is attributed to the destruction of a large portion of the crops of 1877-78 by insects, and to heavy rain in the cold season which followed an injudicious application of excess irrigation. Both these causes doubtless hindered the cultivators from taking water for the rubbee crops in 1878-79 as freely as they did in the previous year.

19,624 acres of sugarcane were irrigated in 1878-79, against 9,891 in 1877-78. The increase is important, as the rate is Rs. 5 per acre. The following statement of the exports of *jaggery* from Shahabad by the East Indian Railway during the past eight years, gives some idea of the great increase of sugarcane cultivation in that district since the construction of the canals and the introduction by Messrs. Burrows, Thomson, and Mylne, of Bihia, of their simple and handy mill for extracting the juice:—

Year.	Maunds of jaggery exported.
1872	51,407
1873	42,919
1874	28,170
1875	56,863
1876	51,495
1877	3,07,241
1878	4,85,669
1879	4,61,599

A system of three-year leases, based on differential rates for rubbee and khurreef crops, was introduced last year on the Sone canals, but with little success. The object, as stated by the Chief Engineer in paragraph 65 of his report, "was to avoid the continually recurring measurements of the irrigated "areas, annual application for water, and other harassing details; but this was "entirely frustrated when the people sowed rice on rubbee lands, rubbee on rice "lands, and sugarcane on both. It is clear that no lease based on crops for a "term of years can possibly be satisfactory. The unit of assessment must be "the land. It is believed that an arrangement of this sort would be generally "popular, and measures will be adopted to introduce the system". The Lieutenant-Governor concurs in this view of the question, and will be glad to see the system of long leases for large areas, which has proved so successful in Orissa and Midnapore, introduced on the Sone canals also.

The construction of village channels by the people is a matter of great importance on the Sone canals. On this depends in a great measure the spread of irrigation. Messrs. Burrows, Thomson, and Mylne have constructed 60 miles on their estates at Bihia in Shahabad. From other zemindars in the same district 142 applications for village channels have been received, and Rs. 10,675 have been deposited for their construction. Much difficulty is, however, experienced in obtaining the consent of proprietors through whose lands the channel must pass, and the law has in most cases to be put in force.

The revenue from navigation has somewhat fallen off from that of the last year, which on the Midnapore and Hidgellee canals was quite exceptional on account of the great demand for food grains for the Madras famine. The following statement shows that on the whole there has been a steady advance:—

Year.	Toll Collections.				
	Orissa.	Midnapore.	Hidgellee.	Sone.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.
1872-73	10,044	20,994	14,454	...	45,492
1873-74	18,577	34,104	27,978	...	80,659
1874-75	21,412	44,886	52,209	...	1,18,507
1875-76	16,377	51,810	22,540	...	90,727
1876-77	22,881	67,651	44,572	4,852	1,39,956
1877-78	33,844	1,06,917	60,971	26,774	2,28,506
1878-79	57,042	77,340	59,723	29,382	2,23,437

The increase in Orissa is due to the enhancement in the tollage rates as explained in the Chief Engineer's note, paragraph 27. On the Sone canals, though there was an increase of tollage amounting to Rs. 2,558 only, the private traffic increased by Rs. 10,353 with a corresponding diminution in carriage of materials for the work. The latter figure of course is the true test of the extent to which the canals are appreciated by the public.

During the year steam navigation was started on the Kendrapara canal in Orissa, between Chandbally and Cuttack, on the Midnapore canal, between Calcutta and Midnapore, and on the Patna canal in Behar, between Dinapore and Baroon, near Dehree. In Orissa the experiment has proved most successful; the little steam-launch *Pioneer* having cleared all her working expenses and shown a profit of Rs. 7,466. The steamers employed on the other canals were not well adapted for the traffic, and have worked at a loss; but the steady increase in the receipts has fully warranted the continuance of the service, and when the new steamers, now under construction, are brought into use, no doubts are entertained of their success.

No revenue has as yet been derived from plantations; but a large number of trees have been planted out on all the canals, and in the course of a few years it is expected that a considerable profit may be derived from them.

A sugar-mill has been established on the Arrah canal, to utilize the water at one of the falls to the extent of 50-horse power, for which Rs. 3,750 per annum is to be paid. A small experimental flour mill has also been erected on the Buxar canal. It is hoped that this beginning may lead to an extended use of the vast power available on the canals, and at the same time prove a valuable source of revenue.

The results of the irrigation operations of the year, as shown in paragraph 98 of the Chief Engineer's note, cannot be considered otherwise than very satisfactory. "The receipts have exceeded the working expenses by "Rs. 45,523, and thus *for the first time* irrigation in Bengal has shown a profit, "which would have been greater had the outstanding balances been collected. "Calculated by the earnings of the canals, the surplus of the year's operations "would be Rs. 2,66,758 as follows:—

	Rs.
"Orissa. canals	4,783
"Midnapore do.	5,134
"Hidgellee do.	36,880
"Sone do.	2,19,961
"Total	2,66,758"

The report by the Deputy Revenue Superintendents in Orissa and Midnapore give full information regarding the working of the system in this district. The reports of the Superintending Engineers of the Orissa, South-West, and Sone Circles are very complete; but especially deserving of notice is that by Mr. Odling, Executive Engineer of the Arrah Division. Referring to the 74th paragraph of the Chief Engineer's note, the Lieutenant-Governor observes that the Commissioner of Patna, in the last paragraph of his report, has prominently brought forward certain defects in the system in vogue on the Sone canals, and quoted some disparaging remarks made by one of the collecting officers. It is to be regretted that he did not also notice the marked improvement reported by the same officer; and seeing that the shortcomings referred to had, at the time he wrote, been to a great extent remedied, the necessity for quoting from a previous letter in which they had been noticed is not apparent.

The Lieutenant-Governor fully appreciates and highly commends the great interest taken by Mr. Edgar, the Collector of Shahabad, in all matters connected with irrigation in his district. He has given close attention to the subject and afforded many valuable suggestions for the better working of this system, which will, it is believed, ultimately lead to a great development in the revenue.

The Government of Bengal is responsible for the payment of the interest on the large sums which have been expended on the irrigation works in

the province; it is of great importance therefore that all the officers, in any way connected with the canals, should exert themselves to the utmost for the development of the revenue, both by judiciously encouraging the spread of irrigation, and by keeping down the expenses of working and revenue establishments.

In January last Colonel (now General) Haig, R.E., Chief Engineer and Joint-Secretary in this Department, retired from the service. The Lieutenant-Governor desires now to place on record his appreciation of the conscientious and able manner in which he performed his duties. Sir A. Eden has always received from him the most valuable assistance, and it is mainly due to him that the position of irrigation in Bengal is now more promising than it ever was before.

The Lieutenant-Governor greatly regrets the loss which the service has sustained by the retirement of Mr. Walker, Superintending Engineer, whose able management of the Orissa work for many years is deserving of the highest commendation. He also fully endorses the remarks made by the Chief Engineer in the last paragraph of his note regarding the officers therein mentioned, *viz.*, Major Heywood, R.E., Superintending Engineer, Mr. Odling and Mr. Fouracres, Executive Engineers, and Messrs. Douglas and Inglis, Assistant Engineers.

By order of the Lieutenant-Governor of Bengal,

H. C. LEVINGE, *C. E.*,
Jt.-Secy. to the Govt. of Bengal,
P. W. Dept., Irrgn. Branch.

REVENUE REPORT.

Note on the Canal Revenue Reports for the year 1878-79 by H. C. LEVINGE, Esq., C. E., *Chief Engineer, Bengal, Irrigation Branch.*

The capital outlay on irrigation works in Bengal in 1878-79 was . . . . . Rs. 28,34,204

In the four previous years the capital outlay was as follows:—

	Rs.
1874-75	49,97,142
1875-76	42,14,204
1876-77	33,93,328
1877-78	24,15,348

2. The total capital invested up to the end of the year amounted to . . . . . 4,93,73,192 *viz.*,—

	Rs.
Productive public works	4,82,47,938
Ordinary works for which capital accounts are kept and the cost of which has been charged to Imperial funds	8,33,504
Ditto ditto ditto to Provincial funds	2,91,750
	4,93,73,192

3. The items composing the outlay are as follow:—

Projects.	Outlay: During the year.	Outlay: To the end of the year.
CAPITAL OUTLAY.	Rs.	Rs.
PRODUCTIVE PUBLIC WORKS.		
Orissa project	5,57,644	1,83,38,546
Midnapore canal	2,78,168	73,29,941
Hidgellee Tidal canal	...	17,83,905
Sone project	17,10,506	2,07,95,546
TOTAL	(a)25,46,318	(a)4,82,47,938
WORKS OTHER THAN PRODUCTIVE PUBLIC WORKS.		
1. Works in abeyance—		
Tirhoot project	—3,482	5,31,425
Hooghly ,,	—382	(b)1,42,577
2. Work suspended—		
Damoodur project	...	1,59,502
3. Works in progress—		
Joojooty project	(c)42,092	42,092
Sarun ,,	2,36,151	2,36,151
Canal plantations	13,507	13,507
TOTAL	2,87,886	11,25,254
GRAND TOTAL	28,34,204	4,93,73,192

(a) Includes capitalized abatement of land revenue, *viz.*, Rs. 1,925, during the year and Rs. 60,128 to the end of the year.
(b) Includes Rs. 151 on account of capitalized abatement of land revenue.
(c) Includes Rs. 9,052 expended from contributions.

4. The following table shows the total receipts, working expenses, and charges for interest for the year 1878-79, as compared with the four previous years:—

	1878-79.	1877-78.	1876-77.	1875-76.	1874-75.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts from all sources	8,51,133	4,94,772	3,29,760	2,30,434	2,17,593
Working expenses	8,05,610	7,02,857	5,97,960	5,29,490	3,61,388
Net revenue	45,523	—2,08,085	—2,68,200	—2,99,056	—1,43,795
Charges for interest	21,64,747	20,39,713	19,12,094	17,40,118	15,42,962
TOTAL DEFICIT	21,19,224	22,47,798	21,80,294	20,39,174	16,86,757

5. The following are the details of the charges for interest for 1878-79:—

	Rs.
Productive public works	21,20,416
Works other than productive public works of which the expenditure was charged to Imperial Ordinary funds	39,091
Works other than productive public works of which the expenditure was charged to Provincial funds	5,240
	21,64,747

6. The amount of interest for 1878-79 payable by the local Government to the Imperial treasury is Rs. 21,59,507.

7. The total accumulated debt on account of interest and unpaid working expenses to the end of the year amounted to Rs. 1,53,89,005, *viz.*,—

	Rs.
Working expenses	15,27,607
Interest	1,38,61,398

8. The total expenditure by the Irrigation Department during the year 1878-79 was—

	Outlay. Rs.
IMPERIAL ORDINARY.	
Agricultural for which no capital or revenue account is kept .	4,38,957
PROVINCIAL.	
Capital productive public works	25,44,393
PROVINCIAL ORDINARY.	
Ordinary productive public works, *viz.*, expenses of working and maintenance	8,05,610
Works for which capital and revenue accounts are kept, but which are not classed as productive	2,78,884
Agricultural for which no capital and revenue accounts are kept	42,416
TOTAL PROVINCIAL ORDINARY .	11,26,860
GRAND TOTAL, IMPERIAL AND PROVINCIAL .	41,10,210
Tuccavi outlay .	(*a*)2,18,553
Contributions .	32,349
TOTAL OUTLAY .	43,61,112

In addition to the above outlay, the Irrigation Branch spent in Orissa, from the budget grants of the General Branch of the Department, Rs. 63,016 on the improvement of the tidal creeks, and Rs. 1,55,610 on roads, buildings, and other works.

(*a*) Includes Rs. 4,335, amount of outlay by buildings and roads branch.

9. The following table shows the areas irrigated in the three circles, as compared with those of the three previous years :—

	1878-79.				1877-78.				1876-77.				1875-76.

1878-79	105,500	5,517	233	111,250	61·98*

* These are the mean of observations at Cuttack and Marsaghai.

14. There was therefore an increase in the assessed area of 12,755 acres. Besides the above, 11,567 acres were irrigated from the second and third ranges of the High Level canal, for the first time utilized for the supply of water which was given free of charge for one year only. Also 20,358 acres, according to

statements submitted by the Executive Engineer, were irrigated, mostly on the lower parts of the Kendrapara and Patamoondi canals, by surplus or over-flow water which, for want of proper distributaries or drainage, could not be charged for: thus the total area irrigated amounted to 143,175 acres, against 109,000 acres in 1877-78. A question has been raised by the Officiating Collector of Cuttack, Mr. Nolan, as to the legality of the practice hitherto in vogue in Orissa of assessing lands which, though they may clearly have benefited by the use of canal water, have been irrigated without previous application by the cultivator or otherwise than through a village channel. The subject is under consideration.

15. The year opened with an outstanding balance of Rs. 28,796 on account of water-rates and miscellaneous canal revenue, while the assessments falling due within the year amounted to Rs. 1,76,115; making a total demand of Rs. 2,04,911. Of this amount, Rs. 1,21,804 were collected and Rs. 2,834 remitted or written off as irrecoverable, leaving a balance of Rs. 80,237 at the close of the year. In explanation of this large balance, Mr. Wylly, the Deputy Superintendent, states that "when it is considered nearly 80 per cent. of the total demand of the year only fell due on the 1st of February, or two months before the expiration of the official year, and that Government sanction to the entertainment of middlemen was not received until December (too late to make suitable arrangements for the year under report), the decrease (in the collections) will not, I hope, be deemed very unsatisfactory." The middlemen referred to by Mr. Wylly are influential villagers appointed to collect water-rates on a commission of 5 per cent. The cost of revenue establishment has therefore been increased, but Mr. Wylly hopes by their means to collect in each year over 90 per cent. of the assessments.

16. The rainfall at Cuttack was 52·32 inches, against 43 inches in 1877-78, and an average of nearly 55 inches for 22 years. There was nothing abnormal in the season; and though the rainfall of September and October was somewhat below the average, it was greater than in the corresponding months of 1877.

17. Under these circumstances the spread of irrigation, as above mentioned, cannot be considered otherwise than most satisfactory; but much of the success attending the operations is due to the energy and ability of Mr. Wylly, the Deputy Revenue Superintendent, who has most successfully continued the working of the system so favorably commented on in the report of last year. He has been ably assisted by his subordinates and the engineering staff.

18. The increase of 2,343 acres in rubbee and perennial irrigation is probably due to sanction having been accorded to the use of canal-water without previous application. The Deputy Revenue Superintendent is, however, not hopeful of any material increase in this respect.

19. The execution of five-year leases, to which allusion was briefly made in the report of last year, was sanctioned on the following conditions:—(1) That the whole irrigable khurreef area in the village must be included; (2) that the assessment be based on the measurements of former years, or on the cadastral survey maps where available; (3) that the rate for flow-irrigation be Re. 1-8 and for lift Re. 1 per acre. To those not taking out leases for five years, or only desirous of using water for portion of the village, the charge to be Rs. 3 for flow and Rs. 2 for lift per acre. The statement in the 11th paragraph of the Deputy Revenue Superintendent's report shows the assessments as follows:—

	Acres.
For five years at Re. 1-8 per acre	94,942
Unauthorized irrigation assessed at Re. 1-8 per acre under Section 79 of Act III of 1876	5,866
At penalty rates under the same section	4,692
TOTAL KHURREEF	105,500
Rubee	5,750
TOTAL	111,250

Explanation regarding the imposition of the rate of Re. 1-8 per acre for unauthorized irrigation and Rs. 3 penalty rate is given in the 16th paragraph of the Deputy Revenue Superintendent's report.

20. The statements in the 5th and 6th paragraphs of the Superintending Engineer's report show the length of canal and distributaries, the area irrigable and irrigated from each, and the increase and decrease of irrigation during the year as compared with the previous year. From this it appears that in all the canals, except the Patamoondi, some progress has been made. The area irrigable from the Kendrapara canal includes 20,000 acres from the Gobri, which was opened during the year. This branch and the Patamoondi, neither of which have as yet been provided with distributaries or drainage channels, command 105,000 acres, of which a large proportion consist of low lying tracts, until quite recently, under tidal influence. It cannot be expected that irrigation will be resorted to from the lower portion of the canals, except in years of drought, until the system of distributaries and drainages is complete. Without them it is practically impossible to restrict the water to the leased areas; and when surplus water finds its way to unleased lands, or drainage channels, from which it is raised by cross-dams on to the adjoining fields, the canal officer at once reports such lands or fields as irrigated unauthorizedly. Some correspondence has taken place between the revenue and canal officers on this subject, which has resulted in the Chief Engineer calling on the Superintending Engineer for reports on the whole subject of escapes from the canals and distributaries for the purpose of more efficiently regulating the supply, and to discharge the surplus water into the regular and well-defined drainage channels of the country. The question is being considered, and the estimates for the necessary works will be included in the revised estimates of the project under preparation.

21. The Deputy Revenue Superintendent in the 12th paragraph of his report sums up the result of the irrigation in Orissa as follows:—

(1)—That about 35 per cent. of the irrigable area has been brought under long lease, and that on this revision of assessment by the survey maps, this percentage will probably rise to over 50 per cent, of the area commanded.

(2)—That whenever drainage has been completed, nearly the whole area commanded has been leased for; but that with imperfect drainage and absence of distributary channels, the progress made on the lower portion of the Kendrapara, including the Gobri and Patamoondi canals, is still most unsatisfactory.

22. The question of flow and lift irrigation is dealt with by the Superintending Engineer and Deputy Revenue Superintendent in paragraphs 6 and 14 of their reports respectively. The result is shown to be that, while the area under irrigation in 1877-78 has increased from 98,495 acres to 111,250 acres in 1878-79, lift irrigation has fallen from 9,077 acres to 6,385 acres.

23. The cadastral maps have been brought into use with good results, as shown by the Deputy Revenue Superintendent in paragraph 17 of his report, from which it appears that the area assessed according to these maps is 50 per cent. in excess of the areas entered in the leases.

NAVIGATION.

24. The canals in operation and the toll collections were as follow:—

CANAL.	Length of canal open.	Toll collections.	Collection per mile.
	Miles.	Rs.	Rs.
Toldunda	27	1,811	67
Kendrapara	39	28,389	728
Gobri	15	8,046	536
High Level, Range I	33	11,853	359
Do. do. II	12½	6,195	495
Do. do. III	6½	748	115
TOTAL	133	57,042	421

The collections in previous years were—

	Rs.
1877-78	33,844
1876-77	22,881
1875-76	16,377
1874-75	21,412
1873-74	18,577
1872-73	10,044

25. The revenue from navigation is thus shown to have greatly advanced. In May 1878 the Gobri canal, a branch 15 miles in length, leading to the river Brahminee, was opened for traffic, and from the 1st of October 1878 tolls were levied on boats using the second and third ranges of the high level canal. The following statement shows the traffic and earnings during 1878-79, as compared with 1877-78:—

Year.	Length of canal open.	Number of boats.	Tonnage.	Value of cargo.	Tollage.
	Miles.	No.	Tons.	Rs.	Rs.
1877-78	103	12,484	105,257	53,12,548	32,866
1878-79	133	14,042	129,646	40,79,504	62,343
Difference	+30	+1,558	+24,389	—12,33,044	+29,477

26. It will be seen that, although there has been comparatively a diminution in traffic and a considerable reduction in the value of the cargo, caused probably by the reaction which followed the great demand for rice during the famine in Madras, the tollage was nearly doubled. This was caused principally by the enhanced rates levied since the 1st November 1878, partly also by the increased length of canal opened for traffic.

27. The rate of toll on the Orissa canals was two pies per ton mile, while on the Midnapore canal it was three pies; but owing to the different description of boat in use on the latter, the tollage on the actual cargo comes to 6 pies per ton mile. It was therefore decided to double the tolls on the Orissa canals from the 1st November to 1st July, leaving them as formerly during the rainy season when the rivers are in competition with the canals The figures in paragraph 25 show how the change has favorably affected the receipts from navigation; but it is impossible to say as yet if the enhancement of the tolls has really affected the amount of traffic. That this has fallen off is certain, but the falling off commenced two months before the tolls were doubled; and it must be remarked that a similar decrease occurred in the Midnapore canal traffic where the tolls remained unchanged. The probability therefore is that the falling off is due to the cessation of demand for grain for Madras, and this fact seems to be established by the figures in the following tabular statement giving the particulars of traffic, from which it will be seen that the reduction in tonnage is chiefly in articles of food:—

	Tonnage of cargo.		Value of cargo.	
	1877-78.	1878-79.	1877-78.	1878-79.
	Tons.	Tons.	Rs.	Rs.
Articles of food	50,627	42,054	34,57,378	28,36,605
Stimulants	64	19	39,240	14,000
Clothing	327	48	42,016	27,840
Staples of manufacture	1,232	1,225	2,85,707	2,59,890
Building materials	8,719	8,708	3,03,120	3,35,057
Live-stock	19	...	580	...
Fuel	302	448	5,803	1,241
Cooking utensils and domestic implements	142	130	3,647	1,520
Miscellaneous	24,828	33,949	11,34,794	5,51,773
Total	86,260	86,581	52,72,285	40,27,926

28. During the year the steam-launch *Pioneer*, one of the old gun-boats which had been in use on the Ganges during the mutiny in 1857-58, was employed in towing passenger-barges between Cuttack and Chandbally. The experiment has proved most successful, as she cleared the sum of Rs. 7,466, over and above the working expenses, in about nine months, notwithstanding that for the first month or two she worked at a loss, and that navigation was much impeded by the shoals in the Chota Brahminee. The profits

do not appear in the revenue accounts, as they are included in the suspense account of the whole fleet, the earnings of which amounted during the year to Rs. 2,285. A new steamer is now being built in the Cuttack workshops for the Cuttack and Chandbally line. It is intended to complete the Gobri canal to Hansooa on the river Brahminee; when this is opened, it is believed that there will be a large traffic both in passengers and goods.

29. The total revenue from all sources for the last two years was as follows:—

	1877-78.	1878-79.
	Rs.	Rs.
Water-rates	1,17,818	1,16,416
Navigation	33,844	57,042
Miscellaneous	9,445	8,546
Total	1,61,107	1,82,004

From this it will be seen that the increase of revenue is due entirely to navigation, the irrigation receipts having been less than those of the previous year. But Mr. Wylly has shown that the irrigated area had increased by 12,755 acres, representing Rs. 20,889 of revenue; so that the falling off in the water-rate receipts is only apparent, and is simply due to the outstanding balances of the years having been Rs. 28,796 and Rs. 80,237 respectively, as explained in paragraph 15 *ante*.

30. The abstract of miscellaneous receipts, as given in the statement in the 13th paragraph of the Superintending Engineer's report, is not very satisfactory. The largest item, Rs. 2,672, is for rents of buildings. Revenue from plantations show but a poor result, but it is hoped that in this item there will soon be a marked improvement.

31. The working expenses for the year amounted to Rs. 2,39,090, *viz.*,—

	Rs.	Rs.
Maintenance	...	2,04,047
Irrigation establishment	27,598	
Navigation ditto	7,445	
		35,043
Total		2,39,090

The receipts therefore fell short of the expenses by Rs. 57,086.

32. In the statement in paragraph 12 it was shown that the earnings of the year were Rs. 2,43,873, the working expenses being Rs. 2,39,090 as above. Calculating in this way, there would be a profit of Rs. 4,783, and there appears to be every probability of this being the last year of deficit.

33. The following tables show the receipts and working expenses for the past seven years:—

RECEIPTS.

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	Rs.	Rs.	Rs.	Rs.
1872-73	19,071	10,044	7,508	36,623
1873-74	17,412	18,577	7,846	43,835
1874-75	20,382	21,412	6,691	48,485
1875-76	20,380	16,377	8,733	45,490
1876-77	40,378	22,881	11,298	74,557
1877-78	1,17,818	33,844	9,445	1,61,107
1878-79	1,16,416	57,042	8,546	1,82,004

WORKING EXPENSES.

PARTICULARS.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1. *Maintenance*—							
Works . . .	1,63,884	74,505	1,17,547	1,36,856	1,40,494	1,37,044	1,47,113

Tools and plant .	...	683	18,070	5,823	11,688	8,234	17,238
Profit and loss .	30	...	...	...	...	...	...
Refunds of revenue .	...	...	...	...	...	41	623
TOTAL MAINTENANCE .	1,90,466	84,756	1,55,717	1,76,180	1,87,130	1,76,837	2,04,047
2. *Revenue management*—							
Irrigation establishment . . .	41,382	38,607	35,016	25,785	21,696	33,223	27,598
Navigation ditto .	6,154	5,828	5,694	5,653	5,835	6,012	7,445
TOTAL REVENUE MANAGEMENT .	47,536	44,435	40,710	31,438	27,531	39,235	35,043
TOTAL WORKING EXPENSES . . .	2,38,002	1,29,191	1,96,427	2,07,618	2,14,661	2,16,072	2,39,090

34. The reduction in cost of irrigation revenue management is very satisfactory. The percentage was reduced from 53·73 in 1876-77 to 28·2 in 1877-78, and in the year under review to 23·7 per cent. The increase in navigation establishment is due to the extension of the canals, the Gobri, and the second and third ranges of the high level canals having been opened for traffic during the year.

35. The following tables show the cost of maintenance of the canals and distributaries, as compared with the two previous years :—

MAINTENANCE OF CANALS.

YEAR.	Length of canal open.	Cost of maintenance.	Cost per mile.
	Miles.	Rs.	Rs.
1876-77	114	65,778	577
1877-78	166	65,639	395
1878-79	181	87,714	484

MAINTENANCE OF DISTRIBUTARIES.

YEAR.	Length of distributary open.	Cost of maintenance.	Cost per mile.
	Miles.	Rs.	Rs.
1876-77	554	23,653	42¾
1877-78	587	17,567	30
1878-79	587	26,303	44¾

The excess cost of maintenance of canals in 1878-79 over that of the previous year is mostly due to the increased expense of keeping down the weeds in the canals which, during the year, had not been closed for repairs; whereas, in 1877-78, they had been laid dry for silt clearance, the growth was consequently unchecked in the hot weather of 1878. Some excess was also caused by the increased cost of the earth-work for repairs of the banks; the earth having been carried from a distance, instead of, as in former years, from the silted canal bed during the closure. On the Kendrapara canal the cost of weed-clearing alone amounted to Rs. 470 per mile; while on the high level and Machgong canals it was Rs. 292 and Rs. 170 respectively. The introduction of a simple machine for weed-clearing is much to be desired, and some experiments in this direction will shortly be made. The increased cost of maintaining distributaries is due

to additional repairs to earth-work and masonry works which were absolutely necessary to keep them in an efficient state. Some of the repairs of the distributaries from the Machgong canal, which should have been executed in 1877-78, were postponed till 1878-79; hence the increased charge under that head from Rs. 38 per mile in the former year to Rs. 61 per mile in 1878-79.

36. No measurements of the quantity of water escaping from the canals having been kept, it is impossible to say what has been the duty of the water used for irrigation. Orders have recently been received from the Government of India on the subject, and from the commencement of the irrigating season of 1880-81 observations will be recorded.

37. Experiments on irrigated rice crops have been continued in the year. The results obtained by Mr. Macmillan, Executive Engineer, Mahanuddy Division, give the following :—

	Paddy. Mds.	Straw. Mds.
Irrigated per acre	30	41½
Unirrigated ditto	20½	30½

showing that there were in favor of irrigation 9½ maunds of paddy and 11 maunds of straw. At 10 seers per rupee for the former and 5½ maunds per rupee for the latter, the value of the produce of an acre of rice would be increased by irrigation by Rs. 11-8; and after deducting the water-rate of ⅛ per acre, the profit to the cultivator would be Rs. 10. The results obtained by Mr. Rhind on the Brahminee-Byturnee Division are very different. The increased yield due to irrigation is stated by that officer to be as follows :—

	Paddy. Mds. s. c.	Straw. Mds. s. c.
First class land	3 12 4	4 22 7
Second ditto	3 19 4	4 23 9
Third ditto	2 39 9	5 15 8

At the same rates the profits (after deducting the water-rates) would be—

	Rs.
First class land	2·65
Second ditto	2·80
Third ditto	2·46

No explanation regarding this discrepancy between the results of the experiments in the two divisions has been offered; but it will be seen from the report of last year that the balance in favor of irrigation in the Mahanuddy Division was said to be 16·89 maunds of paddy, and 6·25 in the Brahminee-Byturnee Division in that year. The difference is very nearly proportional to that shown in the year under notice.

MIDNAPORE CANAL.

38. The capital, interest and revenue accounts of this canal are shown below :—

CAPITAL ACCOUNT.

	Outlay during 1878-79.	Outlay to end of 1878-79.

			Deficit . . .	2,126	2,57,607

39. The total debt for unpaid working expenses and interest amounted for the year to Rs. 3,26,659 and up to the end of the year to Rs. 27,19,883.

40. The expenditure on the canals and the earnings are given in the following table and show a profit of Rs. 5,134:—

REVENUE ACCOUNT—(EARNINGS.)

Expenditure.	Amount.	Earnings.	Amount.
	Rs.		Rs.
Works	1,09,211	Water-rates	88,777
Establishment	50,542	Navigation	76,090
Tools and plant	13,083	Miscellaneous assessments by Deputy Collector . .	13,000
		Ditto recoveries . .	103
Total .	1,72,836	Total .	1,77,970
Profit	5,134		

41. During the year 39,118 acres were leased for irrigation in addition to 19,301 acres in 1877-78. The total area irrigated was 58,731 acres, of which 57,751 acres were under lease for four and five years, and the remaining 980 acres for one year. In 1877-78, 19,818 acres were irrigated, or about $\frac{1}{3}$ of the area watered in the year under report. This favorable result is attributable partly to the fact that canal water is now thoroughly appreciated by the people with whom long leases are popular, and partly to a deficiency of rain in the beginning of the khurreef season; only $7\frac{3}{4}$ inches having fallen at Midnapore between the 1st of June and the 25th of July, against an average for that period of 22 inches. After the 25th July, however, timely rain fell, and eventually nearly the average annual quantity was registered.

42. The Superintending Engineer has shown in his report that the duty of the canal water in the early part of the season, when the country was dry, was only 58 acres irrigated per cubic foot of supply; the discharge of the canal being 701·22 cubic feet per second and the area irrigated 41,000 acres, or 1·66 acres per cubic foot per diem; but the duty, taking the average of the year, was, under the Midnapore weir 78 acres per cubic foot, and under the Panchkoora weir, 122 acres; but on account of some uncertainty regarding the discharge, these results must be received with caution. It is quite certain that very much better results would have been obtained if the canal had been cut to the full dimensions in the first reach. This work will be carried out this season, and in fact it has become imperatively necessary to do so, as the irrigated area has this year reached the unprecedented figure of 96,000 acres, most of which has been leased for four and five years.

43. The total demand for water-rates and miscellaneous revenue, inclusive of arrears of previous years, amounted to Rs. 1,31,932, of which Rs. 93,262 were realized and Rs. 5,393 remitted during the year, leaving a balance of Rs. 33,277. The assessments for water-rates amounted to Rs. 88,777, of which

Rs. 62,717, or about 70 per cent., were collected in the year. As mention was made in the report of last year of the unsatisfactory state of the collections, it will be as well to show by the following comparative statement that a marked improvement has taken place in this respect in the year under review:—

Year.	Assessments.	Recoveries.	Balance outstanding at end of year.	Percentage of recoveries to assessments.
	Rs.	Rs.	Rs.	Rs.
1874-75 . . .	1,17,069	67,145	49,874	57
1875-76 . . .	87,789	25,576	61,713	29
1876-77 . . .	49,156	4,703	44,453	9
1877-78 . . .	29,960	7,961	21,999	26
1878-79 . . .	88,777	62,717	26,060	70

44. The miscellaneous revenue which amounted in the year to Rs. 13,000 is composed of the following items:—

	Rs.
Land rent	5,171
Produce of canal banks	5,293
Fisheries	905
Miscellaneous	1,631
Total .	13,000

The following statement shows the assessments and collections under this head, as compared with previous years:—

Year.	Assessments.	Collections.	Balance.
	Rs.	Rs.	Rs.
1875-76	5,828	2,827	3,001
1876-77	7,789	4,931	2,858
1877-78	8,849	6,802	1,962
1878-79	13,000	5,940	7,060

The increase in miscellaneous revenue is very satisfactory; the outstanding balance is, however, large; but as the greater portion of the demand is payable with the water-rates, the tehsildars could spare but little time from the latter to attend to the realization of the former before the year came to a close. It is reported that on the 30th June the balance was reduced to Rs. 5,000.

45. The navigation revenue of the Midnapore canal, which rose in 1877-78 to the unprecedented figure of Rs. 1,06,917, was reduced during the year to Rs. 77,340. This falling off was due to the cessation of the demand for rice for export to Madras, and also to accidents and closures on the canal; but the steady increase in the traffic will be seen from the following figures:—

Year.	Tollage. Rs.
1870-71	11,781
1871-72	12,985
1872-73	20,994
1873-74	34,104
1874-75	44,886
1875-76	51,810
1876-77	67,651
1877-78	1,06,917
1878-79	77,340

46. The canal revenues for the year were as follow:—

	Rs.
Water-rates	85,014
Navigation	77,340
Miscellaneous	8,356
Total .	1,70,710

47. The working expenses were—

	Rs.	
Maintenance	1,50,807	
Revenue management	22,029	
Refunds of revenue	...	
		1,72,836
DEFICIT		2,126

48. The following table shows the details of revenue and working expenses of the year, as compared with those of previous years :—

RECEIPTS.

YEAR.	Water-rates.	Navigation.	Miscellaneous.	TOTAL.
	Rs.	Rs.	Rs.	Rs.
1872-73	23,556	20,994	6,714	51,264
1873-74	35,823	34,104	2,711	72,638
1874-75	67,015	44,886	4,316	1,16,217
1875-76	52,791	51,810	6,508	1,11,109
1876-77	61,160	67,651	7,876	1,36,987
1877-78	53,483	1,06,917	9,693	1,70,093
1878-79	85,014	77,340	8,356	1,70,710

WORKING EXPENSES.

	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
I.—Maintenance, viz.,—							
Works and repairs	62,884	88,486	92,185	1,13,225	1,09,509	1,41,334	1,09,211
Establishment, including direction and accounts	9,705	15,474	19,425	26,398	27,662	33,006	28,513
Tools and plant	...	...	714	4,164	9,714	6,117	13,083
TOTAL MAINTENANCE	72,549	1,03,960	1,12,324	1,43,787	1,46,885	1,80,457	1,50,807
II.—Revenue Management, viz.,—							
Irrigation establishment	9,316	10,701	11,006	16,493	17,245	16,189	14,802
Navigation do.	5,133	5,896	7,097	7,119	7,149	7,151	7,227
TOTAL REVENUE MANAGEMENT	14,449	16,597	18,103	23,612	24,394	23,340	22,029
III.—Refunds of Revenue	...	...	...	...	...	17	...
TOTAL WORKING EXPENSES	86,998	1,20,557	1,30,427	1,67,399	1,71,279	2,03,814	1,72,836

49. It will be observed that, notwithstanding the large increase in the area irrigated and the amount of the collections during the year, the cost of the irrigation establishment has been reduced. The percentage in 1876-77 and 1877-78 was 28 and 30 respectively, while in 1878-79 it was 17·4 only.

50. The following statements show the cost of maintenance and repairs of the canal and distributaries, as compared with previous years, after deducting certain items enumerated by the Superintending Engineer in the 7th paragraph

of his report, which are properly chargeable to capital and special heads of revenue :—

MIDNAPORE CANAL.

YEAR.	Length of canal open.	Cost of maintenance.	Cost per mile.
	Miles.	Rs.	Rs.
1872-73	24	26,543	1,106
1873-74	48	42,144	878
1874-75	48	56,281	1,172
1875-76	48	63,303	1,319
1876-77	48	65,343	1,361
1877 78	48	77,521	1,615
1878-79	48	59,787	1,246

DISTRIBUTARIES.

	Miles.	Rs.	Rs.
1872-73	103	7,012	68
1873-74	146	7,251	50
1874-75	178	8,917	50
1875-76	228	13,176	58
1876-77	251	25,025	99½
1877-78	255	22,726	89
1878-79	254	20,903	82

The reduction in expenditure on maintenance is satisfactory, but there is still room for improvement.

51. The state of the traffic during the last seven years is shown in the following tables :—

CANAL TRAFFIC.

DESCRIPTION.	Unit.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.

CLASSIFICATION OF TRAFFIC.

DESCRIPTION.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78	1878-79.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
Articles of food	39,574	50,541	61,407	69,425	114,336	201,256	108,339
Stimulants	2,971	4,382	4,327	8,228	10,819	18,199	14,765
Clothing	7,801	7,073	7,355	6,558	5,801	8,893	8,950
Staples of manufacture	11,269	14,610	14,760	20,172	19,399	19,104	24,942
Building materials	4,895	5,028	7,240	11,140	13,030	21,576	28,268
Fuel	18,173	15,009	5,606	4,707	6,142	8,952	11,558
Cooking utensils and other domestic implements	2,533	1,951	1,766	2,135	2,782	3,677	4,633
Miscellaneous	16,630	16,366	65,629	67,021	67,604	79,311	79,518

52. During the year the steamer *Midnapore* was started for passenger traffic between Calcutta and Dainan on the river Roopnarain, a distance of

36 miles, or half way to Midnapore, but she is ill-adapted for the work and constantly under repair. Though at first she worked at a loss, latterly the revenue has exceeded the expenditure. Some interesting particulars of the relative rates of speed in the canal and open water of the river will be found in the 35th and 36th paragraphs of the Superintending Engineer's report. The new paddle-steamer and barge built for this line has been completed. At the trial trip she attained an average of 7·7 miles per hour in the canal; when put regularly to work, and the journey from Midnapore to Calcutta can be performed in one day, there is little doubt of the success of the passenger traffic.

53. Experiments on the yield of the rice crop grown on irrigated and unirrigated lands have been continued by both the Executive Engineer and the Deputy Canal Revenue Superintendent. The results obtained by the former may be briefly stated as follows:—

		Paddy.	Straw.	Rainfall.
		Mds.	Mds.	Inches.
Under the Midnapore weir	Irrigated	23·24	61·40	
	Unirrigated	15·32	31·30	
Difference in favor of irrigation		7·92	30·10	53·42
Under the Panchkoora weir	Irrigated	33·43	60·17	
	Unirrigated	28·62	54·03	
		4·81	6·14	42·96
Hidgellee, unirrigated		23·63	39·70	54·01

Statements on the subject in greater detail will be found in the report by the Superintending Engineer, who shows by comparison with the yield in 1876, when a full crop was obtained without irrigation, "that irrigation may be credited at Midnapore with a gain of 4½ maunds of paddy and 18 maunds of straw over and above that obtained in the best year on unirrigated ground. In the irrigated areas under the Panchkoora weir, the difference in favor is 4 maunds paddy, the straw, however, being deficient as compared with that obtained from unirrigated land."

54. The results obtained by the Deputy Revenue Superintendent were different. He divided the irrigated portion of the country to be experimented on into three equal zones—the first being that nearest the distributary, and the third the most distant—and selected certain fields in each. In this way the following results were obtained:—

AVERAGE YIELD OF CROPS.

		Irrigated crops per acre.	Unirrigated crops per acre.	Difference in favor of irrigation per acre.
		Mds.	Mds.	Mds.
Midnapore weir	First zone	21·45	18	3·45
	Second do.	19·50		1·50
	Third do.	17·50		—·50
Panchkoora weir	First zone	32·71	26·06	6·65
	Second do.	36·28		10·22
	Third do.	32·62		6·56

No explanation is offered why the yield of an irrigated acre in the third zone under the Midnapore weir is less than that of an unirrigated acre, or why the yield in the second zone under the Panchkoora weir is so much greater than that of either the first or second. The discrepancies in this set of experiments, as well as between those of the Executive Engineer and the Deputy Revenue Superintendent, show that the results must be received with caution.

HIDGELLEE TIDAL CANAL.

55. The capital, interest, and revenue accounts are given below:—

CAPITAL ACCOUNT.

	Outlay during the year.	Outlay to end of year.
	Rs.	Rs.
Works	...	12,66,239
Establishment	...	4,49,790
Tools and plant	...	57,585
	...	17,73,614
DEDUCT—Receipts on capital account	...	915
	...	17,72,699
ADD—Capitalized abatement of land revenue	...	11,206
	...	17,83,905

INTEREST ACCOUNT.

	Rs.
Interest to end of previous year	6,05,992
Ditto of the year	80,268
Total interest to end of 1878-79	6,86,260

REVENUE ACCOUNT—(ACTUALS.)

	Expenditure			Receipts	
	During the year.	To end of year.		During the year.	To end of year.
	Rs.	Rs.		Rs.	Rs.
Works (maintenance)	16,599	1,70,412	Water-rates	...	2,611
Establishment	6,581	61,480	Navigation	59,723	3,13,775
Tools and plant	...	4,103	Miscellaneous	1,070	5,659
Total	23,180	2,35,995	Total	60,793	3,22,045
Surplus	37,613	86,050			

56. If the revenue from this canal be calculated from the earnings instead of actual receipts of the year, the account will stand as follows:—

REVENUE ACCOUNT—(EARNINGS).

Expenditure.	Rs.	Earnings.	Rs.
Works (maintenance)	16,599	Navigation	58,990
Establishments	6,581	Miscellaneous	1,070
Tools and plant	...	Total	60,060
Total	23,180		
Surplus	36,880		

57. The tonnage on this canal increased from 154,426 in 1877-78 to 164,687 in 1878-79; the tollage, however, diminished from Rs. 60,971 to Rs. 59,723.

58. The revenue from the Hidgellee canal, as compared with that of the previous year, will be seen from the following figures:—

Year.	Revenue.	Working expense.	Balance.
	Rs.	Rs.	Rs.
1877-78	62,280	30,564	31,716
1878-79	60,793	23,180	37,613

The surplus of the year, Rs. 37,613, represents a profit of 2·10 per cent. on the capital of Rs. 17,83,905.

59. The reduction in the cost of working expenses is due to the fact that no silt clearance was found to be necessary during the year. The expenditure on maintenance amounted to Rs. 572·3 per mile of canal, against Rs. 774·8 in the previous year.

60. The details of the traffic from 1872-73 are given in the following tables:—

COMPARISON OF TRAFFIC.

	Unit.	1872-73.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.

* Sugarcane 19,624 acres at Rs. 5 = Rs. 98,120 A. 0 P. 0
Khurreef and rubbee (flow) 159,255 ,, ,, 2-8 = 3,98,137 8 0
Ditto ditto (lift) 18,139 ,, ,, 1-10-8 = 30,231 10 0
TOTAL 5,26,489 2 0

The above profit represents nearly one per cent. on the capital expenditure of Rs. 2,08,00,000 to end of 1878-79.

63. The following is a comparative statement of the irrigated areas assessed in 1877-78 and 1878-79 :—

Year.	Khurreef.	Rubbee.	Sugarcane.	Total.
	Acres.	Acres.	Acres.	Acres.
1877-78 .	107,087	124,812	9,891	241,790
1878-79 .	99,964	77,430	19,624	197,018
Difference .	—7,123	—47,382	+9,733	—44,772

The falling off in the khurreef is due to the rainfall in August and September 1878 having been so much heavier than in the corresponding period of 1877; the mean fall over 25 stations in 1878 and over 5 stations in 1877 having been 15·55 and 7·27 inches respectively. It is also partly due, no doubt, to the higher water-rate of Rs. 2-8 per acre, against Re. 1 in 1877, when the orders were to save as much of the crops as possible without reference to returns. The falling off in rubbee is due to the destruction of a large portion of the crops of 1877-78 by insects, and to heavy rain in the cold season which followed an injudicious application of excess irrigation. Experience will soon teach the people, who are as yet unaccustomed to the use of canal water, that the rubbee crops will not stand such heavy floodings as they that year applied. Both the above-mentioned causes doubtless hindered the cultivators from taking water for the rubbee crops in 1878-79 as freely as they did in the previous year.

64. The great increase in the area of sugarcane irrigated is very satisfactory. Within the last few years—since in fact the canals have been constructed—the area of this crop under cultivation has enormously increased, especially in the district of Shahabad. The facilities given to the growth of the plant by the canal water and to the expression of the juice by the handy little mills invented by Messrs. Thomson and Mylne, of Behea, have no doubt been the cause of this increase, which will be more clearly seen from the following figures extracted from statement P of the Superintending Engineer's reports, showing the exports of *jaggery* from Shahabad by the East Indian Railway during the past eight years :—

Year.	Mds.
1872	51,407
1873	42,919
1874	28,170
1875	56,863
1876	51,495
1877	3,07,241
1878	4,85,669
1879	4,61,399

It is much to be regretted that the supply of water in the Sone falls so low in the months of April, May, and June that but a limited area of sugarcane can be watered.

65. The system of leasing for three years, alluded to in paragraph 48 of last year's report, has not proved successful and has been abandoned. The terms offered were as follow : —

(1)—For khurreef the rate per acre to be Re. 1-8, but no lease to be given for any area less than the whole irrigable area of the village.

(2)—For rubbee the rate to be Rs. 2-4 and the area to be leased must be at least half the gross irrigable area.

The object with which the three-year lease system was introduced was to avoid the continually recurring measurements of the irrigated areas, annual applications for water, and other harassing details; but this was entirely frustrated when the people sowed rice on rubbee lands, rubbee on rice lands, and sugarcane on both. It is clear that no lease based on *crops* for a term of years can possibly be satisfactory. The unit of assessment must be the land. It is believed that an arrangement of this sort would be generally popular, and measures will be adopted to introduce the system.

66. Comparison of the area leased, that is, for which application for water was made, and actually measured and assessed for water-rate in 1878-79, is given below :—

Crop.	Area leased.	Area irrigated.	Excess irrigated.
	Acres.	Acres.	Acres.
Khurreef	73,033	99,964	26,931
Rubbee	48,397	77,430	29,033
Sugarcane	10,475	19,624	9,149
Total .	131,905	197,018	65,113

67. The area irrigated under the different canals and executive divisions is shown in the following table :—

Division.	Canal.	Khurreef.	Rubbee.	Sugarcane.	Total.
		Acres.	Acres.	Acres.	Acres.
Arrah . .	Arrah . . .	74,827	44,002	14,424	133,253
Buxar . .	Main Western .	18,260	23,382	5,074	46,716
	Buxar . . .				
Eastern Sone .	Patna . . .	6,877	10,046	126	17,049
	Main Eastern .				
	Total .	99,964	77,430	19,624	197,018

68. The proportion of flow to lift irrigation is as 90·8 to 9·2; but under the Arrah canal, which has been longest open, 25 per cent. of the rubbee was irrigated by lift. The percentage under the other canals was very much smaller as will be seen from the Executive Engineer's reports. This seems to point to the fact that as experience is gained there is an increased tendency to lift irrigation for the rubbee crop.

69. The following figures showing the areas commanded by the different canals in 1878-79 and actually irrigated are interesting :—

	Canals.					Total.
	Arrah.	Western Main.	Buxar.	Eastern Main.	Patna.	
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Area for which water can be given	413,530	18,660	206,388	12,080	271,830	922,438
Do. actually irrigated, 1878-79 .	133,253	46,716		17,049		197,018
Percentage of area irrigated to area commanded . . .	32·27	20·75		6·00		21·35

The distributaries from the Patna canal were opened during the year for rate payable irrigation. In the previous year water was given from this canal free of charge. The total length of all the canals and distributaries from which irrigation can be given is 217½ and 918½ miles respectively.

70. The spread of irrigation is to a great extent dependant on the construction of village channels. A good example has been set on the estate of Messrs. Burrows, Thomson and Mylne, of Behea, by whom 60 miles of channel have been neatly and well constructed and 16 miles more are in hand. The cost per mile is said to have been Rs. 270. In the Arrah and Buxar Divisions 142 applications have been received from zemindars, and Rs. 10,675 have been deposited by them, for the construction of village channels. But little progress has, however, been made, for reasons given by the Executive Engineer, Arrah Division, who states that "the proprietors of land through which such channels pass invariably offer the most obstinate resistance to the alignment originally selected and to any modification of it that is proposed." In the Buxar Division 16 channels, aggregating 13 miles, have been mostly completed. On the east of the Sone, in the districts of Gya and Patna, very little has yet been done towards the construction of village channels. There is, however, not the same

necessity for them there as in Shahabad, as the ridges of the country on which the distributaries are aligned are closer together and very well defined.

71. The rules framed in October 1878 under the Bengal Irrigation Act have been carefully revised, and fresh instructions to the officers engaged in canal revenue work have been issued.

72. The cadastral survey of the irrigable area under the canals east of the Sone in Gya and Patna, as well as that under the Arrah canal and its branches, has been completed. The survey of the area commanded by the Buxar canal lying to the west of the river Kao in Shahabad has not been undertaken, as the cost, 9 annas per mile nearly, has proved so high that it has seemed expedient to wait until it is seen from practical experience how far it is desirable to extend it. The total area surveyed by the Revenue Survey Department is 1,808·400 square miles at a total cost of Rs. 6,49,315, or Rs. 359-0-10 per mile. To this must be added Rs. 29,419 for the survey of 46·5 square miles by the officers of this department previous to 1874-75, when the Revenue Survey Department took the work in hand. The total expenditure on the survey of 1,855 square miles has been therefore Rs. 6,78,734. Tabular statement M2, attached to the Superintending Engineer's report, affords some interesting results of the work done by the Revenue Survey Department in the five years 1874-75 to 1878-79. It will be seen from this that in 3,240 villages surveyed there were 4,026,315 fields aggregating 1,157,379 acres, so that each field averaged ·287, or a little over ¼ acre. The maps have been plotted to a scale of 32 inches to a mile and are well executed. Besides these maps, sheets to a scale of four inches to a mile, in which the village maps are combined, have been prepared, and will be most useful in laying out village channels. With the maps *khusrahs* have been issued showing the area of each field and holding with the cultivators' names. The maps will shortly be brought into use, and next year it will be possible to say how far they will have proved useful and economical.

73. The outstanding balance on account of water-rates at the commencement of the year amounted to Rs. 81,341, and the demand for the year to Rs. 6,06,821, making a total of Rs. 6,88,162, of which Rs. 3,73,312* were collected and Rs. 10,439 remitted, leaving an outstanding balance of Rs. 3,04,411, of which upwards of 50 per cent. has since been collected. That so large a balance should have remained uncollected at the end of the year is due to several causes—(1) late period at which demand statements were sent to the Collector; (2) measurements not being satisfactory; (3) cultivators having lost much of their rubbee crop of 1877-78 by the ravages of insects, and being unable in consequence to pay up the water-rate. On this latter account considerable further remissions will have to be made.

	Rs.
* Western Main canal series	3,64,112
Eastern ditto ditto	9,200
TOTAL	3,73,312

74. The Commissioner, in the 7th paragraph of his report, quoting from that of Deputy Collector Baboo Gunganath Roy, enumerates seven items of defects in the present system which, in the opinion of the latter, have retarded the progress of the collections; but the same Deputy Collector also states that the remissions on account of wrong assessments amounted to Rs. 1,873 only, but at the same time he says that "further relinquishments may be looked for." It must, however, be noted that the wrong assessments referred to by the Commissioner have for the most part been caused by the non-attendance of the village putwaris at the measurements, and the consequent difficulty of obtaining correct information regarding boundaries and the right persons to be assessed. It will be understood from perusal of the several items mentioned by the Commissioner that this department can hardly be held responsible for such defects when no authorized village headman or putwari is present to give the necessary information. The defects in the system have since been, to a great extent, remedied, the Collector having taken steps to appoint a better class of men as putwaris, and to compel their attendance during the measurements. That much improvement has taken place may be inferred from the 15th paragraph of the report of the Deputy Collector above-mentioned, who states that "the demand statements for water given in 1878-79 received, so far as has been seen of them, appear to be reliable documents, free from the defects so conspicuous in the demand statements for the previous year."

75. The navigable canals in operation and the amount of total collections for the year are shown in the following statement:—

CANAL.	Length of canal open.	Toll collections.	Collections per mile.
	Miles.	Rs.	Rs.
Main Western	22	4,706	214
Arrah	65	6,056	93
Patna	87	18,570	213
TOTAL	174	29,332	168

76. The collections in each year since the opening of the canal are as follow:—

1876-77	4,852
1877-78	26,774
1878-79	29,332

77. The state of the traffic during the past three years is shown below:—

	Unit.	1876-77.	1877-78.	1878-79.
Number of miles open at end of year	Miles	84	171	174
Toll collections	Rs.	4,852	26,774	29,332
Rate of tolls per mile	„	58	156	167
Boats, including empties	No.	2,421	8,693	6,878
Measured tonnage of boats, excluding empties	Tons	26,040	81,897	66,389
Estimated value of cargo	Rs.	4,04,399	12,79,257	26,98,541

78. The above figures represent the total traffic in each year, inclusive of carriage of stores and materials for the works, which has decreased in the last year, as the works have been drawing towards completion. The Superintending Engineer in his report has shown that there has been a very considerable increase in the private traffic on the canals as follows:—

There was an increase in tollage receipts on private traffic of	Rs.	10,353
There was an increase in number of boats engaged in private traffic passed through the canals of	No.	1,463
There was an increase in tonnage of boats employed in private traffic of	Tons	17,221
There was an increase in value of private cargo of	Rs.	13,78,715

These figures and not the general results, Mr. Walker justly remarks, "are the best tests of the extent to which the canal irrigation is appreciated by the general public." The increase cannot be considered otherwise than satisfactory.

79. During the year the tollage rates on stone, kunkur, brick, and coal, and empty boats were reduced by one-half, as a tentative measure; the reasons for doing so, and the results so far, are given in the Superintending Engineer's report (page 13).

80. The following statement shows the classification of goods, exclusive of materials for the works :—

	1876-77.	1877-78.	1878-79.
	Tons.	Tons.	Tons.
Articles of food	843	11,445	9,049
Stimulants	24	760	1,143
Clothing	17	78	591
Staples of manufacture	13	988	4,878
Building materials	153	2,265	7,387
Live-stock	...	...	...
Fuel	...	957	1,949
Cooking utensils and other domestic implements	...	290	1,059
Miscellaneous	940	6,497	14,445

81. The Superintending Engineer, at pages 14 and 15 of his report, gives some interesting particulars regarding the details of the traffic on the canals. It appears that salt is the principal article of food carried; that of 2,271 boats which plied on the Patna canal with private goods, 1,251 passed through the outfall lock into the Ganges, and that the number of outgoing boats almost exactly balanced the number entering the canal. Of this 731 paid tollage on the whole length of the canal, and return freights, consisting of oil-seeds, hides, lime, mill-stones, &c., were generally obtained. The tollage on rafts of bamboos and poles amounted to one-eighth of the private traffic. One hundred and fifty-nine boats with passengers passed through the outfall lock of the Patna and Arrah canals, which is encouraging for the future. The average cost of conveying 100 maunds of goods by these canals for a distance of one mile is 1·80* anna, while the cartage rate of the district is 10 annas.

	As.
* Boat hire	1·20
Tollage	·60
TOTAL	1·80

82. During the past year attempts have been made to start steam navigation on the canals, and for some months last cold weather the steamer *Sir Arthur Cotton*, a launch built by Messrs. Thornycroft in England, was kept running twice a week up and down the Patna canal. The vessel is not adapted for the work required, and, as expected, she did not pay her working expenses; but the satisfactory increase of passengers and goods carried, fully warranted the continuance of the experiments; and it is hoped when the new steamer at present under construction is ready, that goods and passenger traffic on the canals will be worked with advantage to the revenue of the canals and to the requirements of the district. It is in contemplation to construct several steamers for the navigation of the Arrah, Buxar, and Patna canals. The cost will be that of the hulls and fittings only, as there are four powerful locomotives which were used for the conveyance of stone to the weir, when under construction, available for them. These locomotives being of four feet gauge, are useless for any railway in India.

83. The miscellaneous revenue for the year amounted to Rs. 34,982 as follows :—

	Rs.
Miscellaneous receipts by sales of water	330
Water-supply to towns	199
Receipts from plantations	39
Ditto from other canal produce	893
Rents of buildings	6,229
Do. of lands	4,082
Do. of fisheries	140
Fines	2,060
Profits on sales from workshop manufacture	9,759
Miscellaneous and other receipts	11,251
TOTAL	34,982

Rents of land and income from plantations will probably increase; but on the other hand, sales of stock manufacture in the Dehree shops will surely dwindle down to a low figure when the division is abolished.

84. The Superintending Engineer, at page 17 of his report, has given a detailed statement of the trees on all the canals which now amount to 144,135 of sorts. During the year 56,965 young trees were planted out from the nurseries. The cost of maintenance has been about two annas per tree, and about 40 per cent. are sufficiently grown to be beyond the reach of cattle.

85. A contract for seven years has been entered into with the Shahabad Sugar Company for a supply of water at the second fall of the Arrah canal at Nasrigunge, equivalent to 50-horse power, for which they are to pay Rs. 75 per horse-power per annum after the second year. On the Buxar canal a small experimental flour-mill of an inexpensive description has been erected, and it is hoped, now that a beginning has been made, that a new source of income will be established for the Sone canals by utilizing the immense horse-power of the water available at the falls.

86. The revenue from all sources and the working expenses for the last two years were as follow :—

	1877-78.	1878-79.
	Rs.	Rs.
Receipts—		
Water-rates	59,651	3,73,312
Navigation receipts	26,774	29,332
Miscellaneous	14,867	34,982
TOTAL	1,01,292	4,37,626
LESS REFUNDS OF REVENUE	750	276
TOTAL RECEIPTS	1,00,542	4,37,350
Working expenses—		
Maintenance (including establishment)	2,10,828	2,94,084
Irrigation establishment	32,562	66,173
Navigation ditto	8,267	9,971
TOTAL WORKING EXPENSES	251,657	3,70,228
SURPLUS	—1,51,115	67,122

87. The irrigation establishment, which does not include any share of engineers and subordinates' salaries, is made up of the following items. The percentage of each on the total collections is shown in the adjoining column :—

	Amount.	Percentage on collections.
	Rs.	
Permanent and temporary establishments, such as zilladars, ameens, and measurement khalasis, patrols, &c.	46,089	12·34
Establishments employed under the Collector	13,400	3·59
Headmen's fees	6,684	1·79
	66,173	17·72

88. If we suppose the whole water-rate of the year, Rs. 5,26,489, to have been collected, and a proportionate increase of the Collector's establishment to be added, as well as the full charge of 10 per cent. for headmen's and putwaris' fees, the account will stand thus :—

	Amount.	Percentage on earnings.
	Rs.	
Permanent and temporary establishments, such as zilladars, ameens, measurement khalasies, patrols, &c.	46,089	8·75
Collector's establishments	18,901	3·59
Headmen's and putwaris' fees	52,649	10·00
TOTAL	1,17,639	22·34

89. Headmen's fees form a heavy charge against the revenue. Under the rules in force during the year 4 per cent. was payable to the headmen for work in connection with water distribution and 4 per cent. for collecting the rates. Two per cent. was also payable to putwaris for attending at the measurements, copying the *perchas* for the cultivators, &c. There does not appear to be any probability of reducing these charges for some time to come.

90. The cost of navigation revenue establishment amounted, during the year, to 34 per cent. on the toll collections. It must be remembered, however, that the khalasies working the locks also regulate the water-supply at the falls; a portion of their salary is therefore properly chargeable to irrigation revenue.

91. The cost of maintenance, Rs. 2,94,084, is made up of the following items:—

	Rs.	Rs.
1. Maintenance and repairs		2,34,812
2. Establishment (direction and account)	12,185	
Proportion of engineers and subordinates' salaries	42,776	
		54,961
3. Compensation for damage to crops, &c.		1,260
4. Tools and plant		3,051
TOTAL		2,94,084

92. Mr. Walker has entered very fully in his report into the details of cost of maintenance. Distributed under the four main heads of outlay, the expenditure on works has been as follows:—

	Rs.
1. Head works	34,192
2. Main canals	1,48,194
3. Distributaries	46,695
4. Drainage	5,731
TOTAL	2,34,812

93. The repairs to the weir across the Sone, which is 12,461 feet in length, constitute the bulk of the work on the headworks. The cost of maintenance has been Rs. 2·744 per running foot. The cost of repairs to under-sluice shutters was Rs. 2 per foot run.

94. The cost of repairs for each mile of canal, as given by Mr. Walker, is as follows:—

DIVISION.	CANALS.	Length of Canal.	Total cost of repair.	Cost of repair per mile.	Bottom width of canal.
		Miles.	Rs.	Rs.	Feet.
Arrah	Main Western	9	49,077	5,453	180
	Arrah	65	37,845	582	86 to 47
Buxar	Main Western	12	10,377	865	124
Eastern Sone	Main Eastern	4	12,377	3,095	180 to 100
	Patna	79	38,522	488	84 to 47
	TOTAL	169	1,48,198	...	...

95. The high cost of maintaining the Main Western and Eastern canals is due to the great expense incurred in removing the immense quantity of silt deposited near the heads during the freshes. The short length over which the cost of this item is distributed causes the incidence of charge on each mile to appear excessive. There is no possibility of preventing this great deposit of silt, which is proportional to the volume of water entering the canals during the freshes. It was known that such would occur, and provision for its removal by dredging was made in the estimates. In Mr. Walker's report (page 4) full particulars of the cost of each item of repairs is fully stated.

96. The cost of repairs to distributaries was as follows:—

DIVISION.	Canal from which distributaries are taken off.	Distributaries with particulars.	Length of distributaries under repair.	Total cost of repairs.	Cost per mile.
			Miles.	Rs.	Rs.
Arrah	Arrah	Behea (branch canal)	30	8,527	284
		Doomraon (ditto)	40	13,721	343
	Arrah and Main Western	Ordinary	410	16,137	39⅓
Buxar	Buxar	Branch canal and ordinary	48½	8,310	171⅓
		TOTAL	528	46,695	...

The Behea and Doomraon branch canals are 30 and 40 miles in length respectively, and the Chowsa branch in the Buxar Division is 40 miles long. They carry from 500 to 600 cubic feet per second in full supply. The cost of maintenance of these lines and of the ordinary distributaries as shown in the above statement must be considered moderate.

97. No very reliable particulars of the duty of the water on the Sone canals can be given, as the water escaping at the end of the canals and distributaries was not measured. The Superintending Engineer, in the 7th page of his report, gives some information on the subject, taken from the report of the Executive Engineer, Arrah Division. He says—"The average duty during a month of very scanty rainfall (the fall in October being only 0·21 inch over the whole of Shahabad) is stated to have been 55 acres to each cubic foot of discharge. The most diverse results, however, were obtained in the different sub-divisions in October, from which the foregoing was obtained, as Mr. Odling shows in his report. Thus in the Nasrigunge sub-division the duty was only 50 acres, while in the Lethan distributary the irrigation over an area of 10,212 acres gave so high a value to the cubic foot unit as 94 acres nearly."

Measures will be adopted for determining the escape water from each channel in the current year with the object of arriving at a more correct result than has hitherto been possible.

GENERAL REMARKS.

98. The results of the irrigation operations of the year are, on the whole, satisfactory. The receipts have exceeded the working expenses by Rs. 45,523; thus *for the first time* Bengal irrigation has shown a profit which would have been greater had the outstanding balances been collected. Calculated by earnings of the canals, the surplus on the year's operations would be Rs. 2,66,758 as follows:—

	Rs.
Orissa canals	4,783
Midnapore do.	5,134
Hidgellee do.	36,880
Sone do.	2,19,961
TOTAL	2,66,758

99. For the spread of irrigation in Orissa we must look to the extension of the distributaries and the completion of the canal system. In Midnapore the limits to which irrigation can be expected to extend have been nearly reached; further development must depend on the construction of reservoirs in the hills to supplement the supply in the river Cossye. On the Sone canals the eventual increase of the irrigated area is certain; but the rapidity with which it is likely to be developed will be dependant, in a great degree, on the seasons and the amount of the rainfall; much will also depend on the speedy construction of village channels, and it is expected that the introduction of a satisfactory system of leases for long periods will have a most beneficial effect.

100. It is much to be regretted that Mr. Walker, the Superintending Engineer of the Sone Circle, has been compelled by ill health to retire from the service. This officer had been in charge of the Orissa Circle since 1869 up to the commencement of the current year, when he was transferred to the Sone Circle in the hopes that the drier climate of Behar would prove beneficial to his health, but unfortunately this has not been the case and he now retires from the service. His able management of the work in Orissa left nothing to be desired, and the admirable report hereto annexed shows that he had thoroughly grasped, and made himself master of the details of the system on the Sone canals.

101. It is difficult when all the officers of the department have performed their duties in a praiseworthy manner to make any selection, but I would specially mention Major Heywood, R.E., Superintending Engineer, whose supervision of the South-Western Circle has been very satisfactory, and Mr. Odling, Executive Engineer, Arrah Division of the Sone Circle, who has devoted himself to the revenue work with the best results. His report attached hereto *in extenso* shows how thoroughly he has mastered the details of his duties. Mr. Fouracres, the Executive Engineer of the Workshop Division, continues to exercise his inventive talents for the benefit of the work; his new dredger having proved to be one of the most successful and useful machines of the sort ever yet constructed. Of the Assistant Engineers, Messrs. Douglas and Inglis (both from Cooper's Hill) have distinguished themselves in the revenue management of their sub-divisions in the Arrah Division.

H. C. LEVINGE, C.E.,
Chief Engineer, Bengal, Irrigation Branch.

19th December 1879.

GOVERNMENT OF BENGAL, PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

R. B. CHAPMAN,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE 4th QUARTER OF 1879.

Circular No. 13R., Simla, the 12th June 1880.

Read again—

Public Works Department Circular No. 24R., dated 31st July 1879.

Read also—

Returns of Accidents to trains, &c., on the open lines of Railway in India for the quarter ending 31st December 1879.

OBSERVATIONS.—The number of accidents to trains, rolling-stock, permanent-way, &c., decreased from 711 in the corresponding quarter of the previous year to 594 or by 117, with an increase of 128 miles in the open length of railway and of 84,381 in the train-mileage. The decrease appears to be due to the elimination from the present returns of minor accidents on the East Indian Railway which were previously included in the returns. The number of miscellaneous accidents on this line is shown as 2 against 115.

2. There was an increase of 19 accidents on the Oudh and Rohilkhund Railway, 16 on the South Indian, 37 on the Punjab Northern, 25 on the Indus Valley and 20 on the Rajputana, and a diminution of 15 on the Eastern Bengal, 32 on the Sind, Punjab and Delhi, 13 on the Madras, 37 on the Great Indian Peninsula, and 20 on the Rangoon and Irrawaddy Valley Railways.

3. On the Oudh and Rohilkhund Railway the increase chiefly took place under "Goods trains, or parts of goods trains, engines, &c., leaving the rails," and "trains running over cattle on the line;" on the South Indian under "goods trains, &c., leaving the rails" and "trains running through level-crossing gates;" on the Punjab Northern under "failure of machinery, &c.," and "failure of couplings," and on the Rajputana under "failure of couplings."

4. On the Eastern Bengal Railway the cattle accidents decreased from 10 to 2.

5. On the Sind, Punjab and Delhi the decrease appears to have mainly taken place under "goods trains, &c., leaving the rails," "trains running over cattle on the line" and "miscellaneous accidents."

6. On the Great Indian Peninsula Railway the accidents from "goods trains, &c., leaving the rails" diminished from 9 to 2, and those from "trains running over cattle" from 14 to 3. In the corresponding quarter of 1878 there were 7 cases in which couplings had failed; no such accidents have been reported for the quarter under review.

7. On the Rangoon and Irrawaddy Valley State Railway the machinery, &c., of engines failed in one instance only, against 10; and the number of cases of trains running over obstructions on the line was *nil*, against 6 in the 4th quarter of 1878.

8. The casualties resulting from accidents to trains, &c., show a very large increase. There were 22 passengers killed and 49 injured against 3 injured; and one servant killed and 10 injured against 1 killed and 5 injured. In one accident alone which occurred to a mail train on the Madras Railway on 31st October 1879, 22 passengers were killed and 46 passengers and 2 servants injured. A detailed account of this accident is given in the Appendix to the Returns.

9. There were 18 collisions between "passenger trains" and "goods or mineral trains, engines and vehicles standing foul of the line" by which 2 Railway servants were injured; 26 collisions between goods trains or parts of goods trains resulting in 1 servant killed and 2 injured; 7 collisions between light engines; 7 cases of passenger trains or parts of passenger trains leaving the rails; 89 cases of goods trains or parts of goods trains, engines, &c., leaving the rails; 14 cases of trains or engines travelling in the wrong direction through points; 2 cases of trains running into stations or sidings at too high a speed; 154 cases of trains running over cattle on the line; 14 cases of trains running over obstructions; 19 cases of trains running through gates at level-crossings; and 12 cases of bursting of boilers or tubes, &c., of engines. There were 47 failures of engine machinery by which three servants were injured, 1 of tyres, 1 of wheels, 10 of axles, and 54 of couplings, by which one servant was injured. There have also been reported 10 cases of broken rails; 3 cases of flooding of permanent-way; 9 cases of slips in cuttings and embankments by which twenty-two passengers were killed and forty-six passengers and two servants injured; 64 cases of fire in trains; 8 cases of fire at stations, or involving injury to bridges or viaducts; and 25 miscellaneous accidents by which three passengers were injured.

10. All the 3 cases of flooding of permanent-way took place on the Rangoon and Irrawaddy Valley State Railway. Of the 10 cases of broken rails, 7 were on the Northern Bengal and 3 on the Muttra-Hathras; of the 12 cases of bursting of boilers or tubes of engines, 1 was on the Eastern Bengal, and 11 on the Sind, Punjab and Delhi; and of the 9 cases of slips in cuttings or embankments, 6 were on the Madras and 3 on the South Indian.

11. The number of goods trains or parts of goods trains, engines, &c., leaving the rails was the largest on the Oudh and Rohilkhund Railway; cattle accidents and fires in trains on the Indus Valley; failures of machinery of engines on the Punjab Northern; and failures of couplings on the Rajputana.

12. The casualties to passengers from causes other than accidents to trains, &c., were 10 killed and 15 injured, of whom 1 was killed while getting out of a train in motion; 2 injured whilst crossing the line at stations; killed and 8 injured by falling out of carriages during the travelling of trains; and 3 killed and 5 injured through other causes.

13. Of other persons killed and injured by running trains, &c., 1 was injured whilst passing over the line at level-crossings; 28 killed and 6 injured whilst trespassing on the line; 8 were suicides, and 7 were killed and 1 injured from miscellaneous causes.

14. The accidents to servants in the employ of Railways or of contractors whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains, &c., consisted of 34 killed and 78 injured. Of these 1 was killed and 11 injured during shunting operations; 2 killed and 9 injured by falling off engines, vans, wagons, &c.; 1 injured by coming in contact with overbridges, &c., during the travelling of trains; 1 killed by coming in contact whilst shunting with vehicles, &c., standing in adjoining lines; 3 killed and 8 injured whilst getting on or off trains, engines, &c.; 2 killed and 3 injured whilst loading, unloading, shunting; 1 injured whilst braking, spragging or chocking wheels; 2 injured whilst working at cranes or capstans; 3 injured whilst working on the permanent-way or in sidings; 7 killed and 1 injured whilst walking along the line on the way home or to work; 8 killed and 4 injured whilst walking, crossing, or standing on the line; 1 killed and 1 injured whilst passing between vehicles; 1 killed and 7 injured whilst attending to the machinery of engines, cleaning them, &c.; 1 injured whilst attending to gates at level-crossings; 2 killed and 1 injured by falling off ladders, scaffolds, platforms, &c.; 1 injured by the falling of lamps, wagon doors, timber, weights, &c.; 2 killed and 9 injured whilst coupling or uncoupling wagons; and 4 killed and 15 injured from miscellaneous causes.

15. The following table exhibits the total numbers of persons killed and injured from causes connected with the working of trains, as compared with those in the previous corresponding quarter:—

	Fourth quarter, 1878.		Fourth quarter, 1879.	
	Killed.	Injured.	Killed.	Injured.
Passengers.				
From causes beyond their own control	2	4	22	49
„ misconduct or want of caution	4	13	10	15
Servants.				
From causes beyond their own control	7	19	3	24
„ misconduct or want of caution	34	59	32	64
Others.				
Whilst passing at level-crossings	2	...	...	1
Trespassers, including suicides	30	5	31	4
Other persons	5	3	12	3
Total	84	103	110	160

16. In addition to the above, 21 persons are reported to have been killed and 20 injured in yards, workshops, &c., and 85 passengers to have met death in carriages and at stations from causes unconnected with the working of trains.

Resolution.—The attention of the Director General of Railways should be called to the large number of failures of couplings on the Punjab Northern and Rajputana State Railways. These were at the rate of 115 and 50 per million train-miles respectively, whereas the average on all other lines did not exceed 4·6 per million train-miles.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces, Assam, and British Burmah.
The Resident at Hyderabad.
The Agents to the Governor General for Rajputana, Central India, and Beluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways.

Order.—Ordered, that this Resolution be communicated to the Governments, Administrations and Officers noted in the margin for information, together with copies of the returns compiled.

Ordered also, that these papers be forwarded to the Foreign Department for communication to the Chief Commissioner of Mysore and Coorg, and that copies be forwarded to the Secretary of State for the information of Her Majesty's Government.

Ordered further, that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

FRED. FIREBRACE, *Captain, R. E.*,
Under Secretary.

TABLE No. I.

GENERAL TOTAL.

NUMBER of PERSONS reported during the Fourth Quarter of 1879, as KILLED or INJURED on the several RAILWAYS open for Traffic in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS and OTHER PERSONS; and distinguishing also in the case of the two former Classes, between ACCIDENTS happening from Causes beyond their own Control, and ACCIDENTS happening otherwise.
