Executive Engineer, Meerut Division, reports that the canal was closed on the 6th July, and that irrigation stopped on the 4th idem generally over the division.

Executive Engineer, Agra Canal, reports that there was no demand for water from the 4th July.

Executive Engineer, Rohilkhand Canals, reports that July was a very wet month, and that the rains were very favorable for cultivation. There was a slight demand for rice in the five intervals, mostly on the Kiteha, Dhora and Paha. The heavy floods of the 7th July were due entirely to local rainfall. Very heavy floods in the hill rivers occurred on the 6th August, especially in Dhora, Kailas and Deoha rivers.

ALLAHABAD,
The 29th August 1882.

G. H. D. WALKER,
Asst. Secy. to Govt., N.-W. P. and Oudh, P. W. D., Irrigation Branch.

FRED. FIREBRACE, *Major, R.E.*,
Under Secretary.

SIMLA,
The 19th September 1882.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 19th SEPTEMBER 1882.

GENERAL REMARKS.—The reports that were due last week from the Madras Presidency, Mysore, Coorg, Guzerat and Sind, have since been received, and show good rainfalls in Madras and Coorg, slight showers in Mysore, and heavy rain in Guzerat.

During the week under report the monsoon came to an end in Coorg, but showers continued throughout the Madras Presidency, as well as in parts of Mysore, in the Nizam's Territories, and in parts of Berar. In Malabar and Ganjam the fall was comparatively heavy, so also in parts of the Deccan districts of the Bombay Presidency and in Guzerat. In Sind there has been no rain. In the Central Provinces there have been good falls in some parts and slight rain in others. In Central India and Rajputana there has been heavy rain in several States, light showers in others; none at Abu. The Punjab has had good rain in most districts, except in Mooltan and Dera Ismail Khan. The North-Western Provinces and Oudh have received light showers in several districts. In Bengal rain has fallen in all districts in varying quantities. In Assam and Burma also the rainfall has been general, and particularly heavy in Sylhet and Amherst.

Agricultural prospects continue very favourable throughout the country. Harvest operations have begun in parts of the Madras Presidency, of the Central Provinces, and of the North-Western Provinces and Oudh, as well as in a few States of Central India and Rajputana; and have been completed, or nearly so, in Bengal and Assam. Transplantation of paddy seedlings is going on or is finished in Coorg, in Mysore, in Bengal, and in Assam and Burma. More rain seems needed in two districts of Madras, in a few places in Mysore, and in several districts in Bengal. Preparations for the *rabi* crops have already commenced in some districts of Bombay, and in a few districts of the North-Western Provinces and Oudh.

The rise in the barometer in Northern India noticed last week was followed on the 16th by a fall which extended over the whole of India, and was succeeded by a rise of equal extent in area which has continued since. A slight cyclonic depression formed on the east coast, which advanced northwards and disappeared after reaching Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Sept. 13th)		
Bellary ...	**1·15 (average of eight stations).**	**Standing crops generally good, dry partially withering; harvest paddy yield below average; agricultural operations progressing.**
Kurnool ...	1·50 (average of nine stations).	Standing crops generally good; agricultural operations progressing cattle-disease in parts.
Ganjam ...	2·30 (average of fourteen stations).	Standing crops generally thriving; fever, small-pox, and cattle-disease continue; slight cholera in parts.
Kistna ...	6·50 (average of thirteen stations).	Standing crops promising; harvest gingelly, outturn below average; agricultural operations progressing; fever, small-pox, and cattle-disease prevalent.
Chingleput (Madras) ...	1·19 (average of eleven stations).	Standing crops good where water available; agricultural operations progressing; small-pox in parts.
Coimbatore ...	·37 (average of four stations).	Standing crops promising well; *cholum* damaged by insects in one taluk; harvest paddy and dry crops, outturn average; small-pox, fever, cholera, and cattle-disease in parts.
Tanjore ...	·55 (average of six stations).	Crops good; harvest dry crops, outturn below average.
Madura ...	·34 (average of three stations).	Standing dry crops fair; harvest *cholum*, yield below average; cholera in parts.
Malabar ...	3·59 (average of fourteen stations).	Harvesting of first crop progressing; small-pox, cholera, and fever in parts.
Travancore ...	4·13	Harvest impeded by excessive rain; fever prevalent.
		General Remarks.—General prospects good.
Madras—(Sept. 20th)		
Bellary ...	**·25 (average of five stations).**	**Standing crops generally good; harvest paddy, outturn average; agricultural operations progressing.**
Kurnool ...	·25 (average of two stations).	Standing dry crops generally good; agricultural operations progressing; cattle-disease in parts.
Ganjam ...	2·44 (average of eleven stations).	Standing crops thriving; fever, small-pox, and cattle-disease continue.
Kistna ...	·69 (average of twelve stations).	Standing crops promising; harvest dry crops, yield below average; agricultural operations progressing; fever and cattle-disease prevalent; small-pox slight.
Chingleput (Madras) ...	·51 (average of four stations).	Standing crops good where water available; agricultural operations progressing; fever and small-pox in parts.
Coimbatore ...	·21 (average of three stations).	Standing crops paddy promises well, dry require rain in parts; harvest dry crops, outturn average; fever, cholera, small-pox, and cattle-disease in parts.
Tanjore ...	·31 (average of three stations).	Crops generally good; harvest paddy and dry grains, yield below average; cholera in parts.
Madura ...	·06 (average of two stations).	Standing crops withering in parts; cholera in parts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*contd.*		
Malabar ...	2·36 (average of fourteen stations).	Harvesting first crop progressing; sowing second crop commenced; small-pox, cholera, and fever in parts.
Travancore ...	·21	Harvesting progressing; fever slightly prevalent.
		General Remarks.—General prospects good.
Bombay—(Sept. 20th)		
Kurrachee ...	No rain	River at Kotri on 18th, 13 feet 10 inches against 14⅘ feet on same date last year; fever increasing, prevalent in nine talukas; freshet from *gaj* on 6th, which will benefit crops; rice coming into ear in places; rats doing some damage in Shahbandar; 8 cases small-pox in Sujawal taluka; wheat, red rice, and *bajri* in Kurrachee 24, 30 and 34, in Sehwan 28, 44 and 48, in Mirpur Botoro 22, 44 and 40, and in Tatta 23, 36 and 44 lbs. per rupee respectively.
Hyderabad ...	No rain	River rising again; small-pox in Hyderabad; bad fever in five talukas; wheat 25, *juari* 48, *bajri* 43, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad ...	1·44 since 5th	Total rainfall 30·41; crops doing well; slight fever in Gogha and Dholka talukas; cholera in Viramgaum, 1 case fatal; *bajri* 32 and wheat 28 lbs. per rupee.
Baroda ...	6·38 in week up to 12th; 1·78 since.	Total rainfall 40·74; fever in parts of Nausari and Kari divisions; crops promising generally; *bajri* 34 and common rice 24 lbs. per rupee.
Surat ...	9·75 in week ending 12th; none since.	Total rainfall 43·69; crops healthy; *juari* 36 and *nagli* 52 lbs. per rupee.
Násik ...	Rain fell—maximum at Peint, 15·0; heavy in six talukas; good in all.	Weather bright since 13th; cholera abating; locusts continue; damage from floods in several talukas; wheat 28, *bajri* 36, and rice 28 lbs. per rupee.
Colaba (Bombay) ...	No rain	Total rainfall 67·89, being 2·38 above average; abnormal temperature 1° warm on 16th, 18th and 19th, *nil* on all other days; vapour in air normal; wind normal.
Poona ...	Rain throughout district—maximum at Magal, 2·73; minimum at Indapur, ·02.	Crops healthy; 33 cholera cases in Sirur and Poona, of which 23 fatal; *bajri* 48 and *juari* 61 lbs. per rupee; in Poona *bajri* 41 and *juari* 50 lbs. per rupee.
Ahmednagar ...	Akola, 3·67; Sangamner, 3·01; Kopergaon, 1·00; Parner, ·74; Rahuri, ·62; Jhamkhed, ·54; Newassa, ·35; very slight in Shrigonda, Karjat, Sheogaon, and Nagar.	Total average rainfall of the district 20·54; rainfall has done good to the *kharif* crops, but locusts are doing damage to the crops in Kopergaon, Sangamner, Akola, Newassa, and Rahuri; sowing of *rabi* in progress in Nagar, Parner, Shrigonda, Karjat, Sheogaon, and Newassa; cholera in Sheogaon 8 attacks, 3 deaths, in Rahuri 3 attacks, 3 deaths; *bajri*—maximum 66 lbs. in Jhamkhed, minimum 45 in Kopergaon; *juari*—maximum 108 lbs. in Jhamkhed, minimum 54 in Kopergaon.
Sholapur ...	No rain	*Rabi* sowing commenced; *kharif* crops, except *mug*, in excellent condition; cholera 14, of which 3 fatal; *bajri* 62 lbs. 3 tolas and *juari* 79 lbs. 27 tolas per rupee.
Dharwar ...	Slight rainfall at eight stations, varying from 1·0 to ·14.	Standing crops healthy; cotton sowing progressing; *sawan* and *ragi* being cut; slight ague in three and cattle-disease in two talukas.
Kanara ...	Karwar, 1·08; Kumpta, 1·49; Sirsi, 2·92; Hallial, ·97.	Total rainfall 102·36; rice crops in ear above ghât; *ragi*, sugarcane, and garden produce healthy; general health good; weather clearing; common rice in Karwar 10 seers, in district average 12½ seers per rupee.
Rajkot ...	.....	Weather warm and cloudy; general health fair; cholera disappeared from Nawanagar and other places; crops thriving; *bajri* 28 and *juari* 33 lbs. per rupee.
		General Remarks.—Rain in some districts of the Deccan; *kharif* crops generally doing well; preparations for *rabi* commenced in some districts; locusts doing damage in Ahmednagar, Khandesh, and Násik; fever and cattle-disease in some districts.
Bengal—(Sept. 20th)		
Chittagong ...	1·50	Weather seasonable; prospects of crops good; prices stationary; cholera and cattle-disease still prevalent.
Dacca ...	1·18	Weather cool and showery; winter rice crops progressing favourably; *bhadoi* harvest nearly completed, estimated outturn 14 annas; quality of jute inferior; cholera continues especially in Dacca city.
24-Pergunnahs (Calcutta)	Alipore, 2·82	Harvesting of early paddy and jute nearly finished, outturn above the average; prospects of *aman* fair; transplanting nearly finished; public health generally good; fever prevalent in Diamond Harbour.
Moorshedabad ...	2·14	Transplantation of *aman* almost finished; rain wanted everywhere; land being prepared in some places for *rabi* crops; except ordinary fever, public health good.
Rajshahye ...	2·8; Nattore, 2·0	More rain required for *aman*; fever prevalent in some parts.
Burdwan ...	·20; Cutwa, ·80; Culna, ·80; Raneegunge, ·42.	*Aman* suffering from want of rain; other crops doing well; fever reported from various quarters.
Rungpore ...	1·39	Weather cloudy and hot; prospects of crops favourable; transplanting of winter rice proceeding; jute still being reaped; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Bhagálpur ...	·10	Transplanting of winter rice proceeding; prospects of plants now transplanted poor.
Purneah ...	·10	Rain wanted, prospects otherwise good; ploughing for cold weather crops commenced; fever prevalent; Ganges and Kosi lower.
Patna ...	·03	Transplanting of paddy backward both in Barrh and Behar subdivisions for want of rain; reaping of *bhadoi* crops proceeding; public health generally good.
Durbhunga ...	1·07	*Bhadoi* harvest fair; late rice prospects fair; prices stationary; health fair.
Hazáribágh ...	·05	Weather sultry; autumn harvest continues; rice crops progressing; general health good.
Cuttack ...	4·26	Early rice being reaped and late rice weeded; other crops doing well; cholera disappearing.
		General Remarks.—Rain in all districts during week; more rain wanted almost everywhere for late rice crops; prospects generally fair, except in some parts of Burdwan division and other places where rice on high lands is withering; transplantation still proceeding in some places; sugarcane and other crops on the ground doing well; autumn harvest generally expected to yield fair average outturn, though in some districts early rice and jute are indifferent; cholera in Chumparun abating; except fever and sporadic cholera in some districts, public health generally good.
N. W. Provinces and Oudh—		
Benares (Sept. 19th)	No rain	Weather favourable for crops; fever and isolated cases of cholera reported in Chandausi tahsil; health of cattle good; prices stationary; bazars well supplied.
Allahabad („ 20th)	.....	Weather fine, with westerly winds; agricultural prospects good; cholera reappeared slightly; prices easy; considerable fall in *bajri*.
Gorakhpur („ 20th)	Occasional showers.	Fine weather; harvesting begun; some fever and a little cholera prevalent: cattle-disease in two tahsils; prices steady.
Jhánsi („ 18th)	No rain for some days; average rainfall 1·70.	Weather fair, which was wanted; *kharif* prospects good in every pargana; supplies sufficient; prices of minor grains falling; cholera decreasing.
Agra („ 19th)	Rain in all parganas, from ·20 to 2·40 during week.	*Bajri* and maize continue to be cut; fever continues, but general health good; prices falling.
Bareilly („ „)	.....	Weather seasonable and crops excellent; cholera prevalent in a number of villages, but has left Bareilly city and Aonla; fever increasing.
Meerut („ „)	Good rain for three days.	Since rain fell there has been a light west wind; crops doing well and harvest begun; fever continues, but does not increase; prices unaltered.
Kumaun („ „)	Light showers	Weather most seasonable; *kharif* being reaped; ploughing for *rabi* going on; fever prevalent in villages, otherwise health good; cattle-disease continues; prices stationary.
Lucknow („ „)	Sadr, ·70; Maliabad, ·50; Mohanlalganj, ·30.	Crops good; markets well supplied; prices steady; cholera still continues.
Partabgarh („ „)	Light showers during the week at Patti.	Prices steady; crops looking well; *kudri dhan* cut and in the market; wind westerly and high; cattle-disease in three tahsils; cholera continues in two tahsils.
Sitapur („ „)	Average rainfall ·80	Much land under preparation for *rabi*; new rice already in the market; *mash* coming up well; cholera and fever still hanging about; supplies plentiful; prices slightly fluctuating, with downward tendency.
Fyzabad („ „)	Sadr, ·30; no rain in tahsil.	*Dhan* and *kodo* being cut; prospects good; slight cholera in parts of district.
Rae Bareli („ 18th)	.....	High easterly wind prevailed for three days during week; early autumn crops are being cut; health of cattle good; cholera disappearing; supplies sufficient; prices falling.
Cawnpore („ 19th)	Average rainfall ·50	Prospects of the crops continue excellent; weather clear; cholera and fever decreasing; prices nearly stationary.
Farukhabad („ „)	.....	Weather seasonable; prospects of *kharif* crops good; fever still prevalent, and a few cases of cholera have been reported; prices steady.
		General Remarks.—Light rain in most districts, but weather generally now fine; prospects everywhere good; prices on the whole stationary; cholera and fever continue in the parts previously affected; cattle-disease continues in Partabgarh and Kumaun.
Punjab—(Sept. 20th)		
Delhi ...	5·80	Health fair; prospects of yield of crops fair; prices falling.
Hissar ...	1·30	Fever prevalent; prices falling; prospects of crops improved, and yield will probably be one-half.
Umballa ...	2·50	Health fair; prices of food-grains stationary; yield of crops expected to be a little below average.
Jullundur ...	1·0	Health good; prices falling; crop prospects are good.
Amritsar ...	4·90	Crops good; health good; prices stationary, except the price of gram which is falling.
Sialkot ...	6·0	Health good; prices have fallen; harvest prospects good.
Lahore ...	·70	Health good; prices falling; harvest prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—*contd.*		
Ferozepore ...	From 5·0 to 8·0 in various parts of the district.	Health good; prices stationary; prospects of yield of crops good.
Mooltan ...	No rain	Fever prevalent; price of wheat has fallen; prices of other food-grains are stationary.
Rawalpindi ...	8·60	Fever in Rawalpindi; cattle-disease in one village; prices stationary; prospects of *kharif* crops are above the average.
Dera Ismail Khan ...	No rain	Health fair; crops good; prices falling.
Peshawar ...	2·30	Prices stationary; *kharif* prospects good.
		General Remarks.—Good rain has fallen throughout the province, except in the Mooltan and Dera Ismail Khan districts, and heavy rain in Delhi, Amritsar, Sialkot, Ferozepore, and Rawalpindi; the general health continues good; prices of food-grains are falling in the Delhi, Hissar, Jullundur, Amritsar, Sialkot, Lahore, and Dera Ismail Khan districts, in the other districts they continue to be stationary; prospects of crops are generally reported to be good, but are below the average in Hissar.
Central Provinces—		
Nagpur (Sept. 20th)	·22	Weather clear and cool; prospects of *kharif* good; cholera abating; fever prevalent; prices steady.
Jubbulpore („ „)	·28	Weather clear and cool; *kharif* prospects fair; rain wanted; fever and cholera prevalent; wheat 19 seers per rupee.
Saugor („ 18th)	3·40	Crop prospects excellent; prices stationary; fever prevalent.
Seoni („ 19th)	·20	Weather clear and cool; ploughing progressing; *kharif* crops thriving; cholera reported; prices stationary.
Hoshangabad („ „)	·41	Weather hot; *kharif* crops generally good; fever prevalent; rice 9 seers per rupee.
Raipur („ 16th)	1·34	Weather cloudy and close, with light showers; crops doing well; prospects favourable; cholera abating; prices unchanged; rice 40 seers per rupee.
Sambalpur („ 14th)	1·88	Weather cloudy and sultry; prospects good; fever prevalent.
Khandwa („ 19th)	1·90	Prospects of crops good; cholera and small-pox reported; prices stationary.
		General Remarks.—Weather clear; slight rain has fallen in most districts; prospects of *kharif* crops favourable; fever reported in several districts; prices steady.
British Burma—(Sept. 16th)		
Akyab ...	2·50	Total rainfall 183·79; 8 deaths from cholera in town and 9 in district; 5 deaths from small-pox in one township; slight cattle-disease; prospects of crops good.
Rangoon ...	2·68	Total rainfall 80·73; 1 death from cholera, otherwise public health good; crops making progress.
Bassein ...	4·58	Total rainfall 105·76; 1 death from cholera in district, otherwise public health good; 23 deaths from cattle-disease in one township; transplanting finished, except in a small area; prospects of crops good.
Prome ...	·74	Total rainfall 40·51; 4 deaths from cholera in town and 7 reported from one sub-division; 12 deaths from small-pox among cattle in district; planting out proceeds favourably; more rainfall reported in district.
Amherst (Moulmein) ...	7·06	Total rainfall 181·94; public health good both in Moulmein and district; some cattle-disease in one township; transplanting of crops proceeding.
Toungoo ...	2·20	Total rainfall 74·28; 2 deaths from small-pox in one township and 2 in another, otherwise public health good.
		General Remarks.—With the exception of some cholera and a few cases of small-pox, public health good; cattle-disease seems to be decreasing; some damage to crops in Hanthawaddy from floods; prospects of crops generally reported good.
Assam—(Sept. 20th)		
Gauhati ...	1·00	Weather seasonable; transplanting of *sali* paddy in progress; public health good; cattle-disease still in the interior.
Sylhet ...	11·74	*Aus* has been reaped; *sali* still under transplantation; prospects of *amun*, sugarcane, and tea good.
Cachar ...	4·74	Reaping of *dumahi* and *murali* crops finished; transplanting of *sali* crops not quite completed; common rice 26⅝ seers per rupee; 9 cases of cholera from Silchar, 5 from Hailakandi, and 1 from Lakhimpur reported; also death of 41 head of cattle reported from Sadr.
Dibrugarh ...	5·17	Weather rainy; ploughing for winter crops in progress; cattle-disease still reported; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—		
Bangalore (Sept. 14th)	·21	Crops in thriving condition; *kartik* paddy cultivation progressing; prospects fair.
Mysore („ „)	·08	Crops in good condition; prospects good.
Mercara („ 13th)	7·12	Transplantation of rice which has been delayed by loss of cattle has been completed; *ragi* crop which is coming into ear in the Nanjarajpatna taluk has suffered from heavy rains; public health good; prices stationary.
		General Remarks.—Rain has been general throughout the province, and crops are everywhere in good condition; harvesting of *karaggi*, horse-gram, cocoanut, and sugarcane commenced in parts; prospects favourable; small-pox and fever prevalent in places; no material change in prices.
Mysore and Coorg—(Sept. 20th)		
Bangalore ...	·48	Crops in good condition; prospects favourable.
Mysore ...	No rain	Prospects and health good.
Mercara ...	·42	The south-west monsoon ceased on the 12th; transplantation of rice completed; crops looking well; *ragi* coming into ear in two taluks; cardamoms are beginning to be picked on the western ghâts; public health good; prices stationary.
		General Remarks.—Rain has slightly fallen in a few districts on the western side of the Mysore State, more rain needed in parts; transplanting of paddy seedlings commenced in the Malnad; agricultural operations progressing favourably; prospects good; fever, small-pox, and murrain prevalent in some taluks; prices unaltered.
Berar & Hyderabad—(Sept. 20th)		
Amráoti ...	.....	Weather warm; crops flourishing; prices of wheat 16 and *juari* 28 seers per rupee.
Akola ...	·65	Crops progressing favourably.
Hyderabad ...	·47	Total rainfall from 1st January 28·04; standing crops are thriving some of the *kharif* crops are nearly ripe; cattle-disease disappeared; prices – wheat 16¾, coarse rice 19½, white *juari* 26½, yellow *juari* 30, and *tur* 25¾ seers per current sicca rupee.
Central India States—(Sept. 20th)		
Indore ...	No rain	The recent heavy rains which have probably terminated the monsoon were most beneficial; [illegible] and early [illegible] promising very good [illegible], cholera is [illegible] generally [illegible] in [illegible].
Morar (Gwalior) ...	·97	Health and prospects good.
Satna ...	·33	Prospects and health good.
Neemuch ...	5·67	Public health and crops good.
Goona ...	1·59	Crops good; fever prevalent in district.
Bhopal ...	5·12	Weather fine; prospects good.
Agar ...	Heavy rain	Cholera has disappeared; health and prospects good.
Nowgong ...	2·88	Weather seasonable; *kharif* prospects good; health fair; fever prevalent.
Manpur ...	10·80	Reaping of *makka* commenced; *juari* crops good.
Rajputana—		
Abu (Sept. 20th)	No rain	Weather clear; occasional clouds.
Sirohi („ 17th)	·85	Tanks, wells, health and prospects good.
Marwar („ 15th)	·73	Four months water in tanks; wells all full; health good; prospects excellent; cloudy weather; prices falling; more rain needed to ensure full harvest.
Meywar („ 16th)	2·71	Tanks and wells good; health fair; *makka* being harvested.
Harowti („ 16th)	Deoli, 3·01; Tonk, 4·85; Shahpura, 3·32.	Previous week's rainfall in Tonk ·59; Shahpura ·24; *makka* harvested; *rabi* lands being ploughed; weather seasonable.
Jhallawar („ 13th)	4·92	Gale from south-west.
Ajmere („ 19th)	·99	Seasonable break; health good, except cholera at one village in Ajmere.
Jeypore („ „)	1·35	Prospects favourable; prices firm; health good.
Ulwur („ „)	5·43	Prices falling; prospects good; fever continues.
Nepal—		
Katmandu ...	.....	No report received.

E. C. BUCK,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Wednesday, the 20th September, 1882.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of the Panjáb, K.C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble W. C. Plowden.

UNIVERSITIES DEGREES BILL.

The Hon'ble MR. GIBBS moved for leave to introduce a Bill to provide for the granting of Honorary Degrees by certain Universities. He said:—

"It will be in the recollection of the Council that the Calcutta University, by an Act passed in 1875, has the power to grant honorary degrees. This Act was put through the Council, the standing orders having been suspended for the purpose, at a meeting held on the 14th December, 1875. The speeches reported on the occasion were those of the Hon'ble Mr. Hobhouse and Lord Northbrook, the then Viceroy, and the object of passing the Bill through the Council thus speedily was to enable the University to confer upon His Royal Highness the Prince of Wales, who was then in India, the honorary degree of a Doctor of Laws.

"It has now been decided, with regard to the Bill constituting the Panjáb University, that that University also should have the power of conferring the honorary degree of Doctor of Laws. This being the case, there remains the two older Universities, those of Madras and Bombay, who have not this power, and it is considered advisable that it should be conferred on them. With that object I have to ask for leave to introduce a Bill; the details of the measure will be considered after consulting the Calcutta and the other two Universities."

The Motion was put and agreed to.

PANJÁB UNIVERSITY BILL.

The Hon'ble MR. GIBBS also presented the Report of the Select Committee on the Bill to establish and incorporate the University of the Panjáb.

DEKKHAN AGRICULTURISTS' RELIEF ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. HOPE moved that the Bill to amend the Dekkhan Agriculturists' Relief Act, 1879, be referred to a Select Committee consisting of the Hon'ble Messrs. Gibbs and Ilbert and the Mover.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 5th October, 1882.

SIMLA;
The 20th September, 1882.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXECUTION OF DEEDS, CONTRACTS, &c., ON BEHALF OF THE SECRETARY OF STATE.

No. 1371.

Extract from the Proceedings of the Government of India in the Home Department (Judicial),—under date Simla, the 15th September 1882.

Read again the following papers relating to the execution of deeds, contracts, &c., on behalf of the Secretary of State:—

Home Department Resolution No. 1750, dated the 2nd November 1876.
Ditto ditto No. 684, dated the 31st May 1878.
Ditto ditto No. 1305, dated the 30th September 1881.

Read also—

A letter from the Director of the Indian Marine, No. 1052 (Stores), dated the 17th June 1882.

RESOLUTION.

In exercise of the power conferred by the thirty-third and thirty-fourth of Victoria, Chapter fifty-nine, Section two, the Governor General in Council is pleased, in supersession of the orders contained in Home Department Resolution No. 1305, dated the 30th September 1881, to declare that the undermentioned classes of contracts referred to in the twenty-second and twenty-third of Victoria, Chapter forty-one, Section two, may be executed as follows in the territories under the administration of the Governments of Bombay and Bengal:—

Contracts for the supply of stores, coal, &c., for the Indian Marine Service, and [illegible] Officer of the Director and Deputy rector of the Indian Marine.	By the Director [illegible] Indian Marine.
Contracts for supplies for the provincial Marine Service, Bengal.	By the Port Officer at Calcutta.

ORDER.—Ordered, that this Resolution be communicated to the Military (Marine) Department and to the Governments of Bombay and Bengal for information, and that it be published in the Supplement to the *Gazette of India*.

JAIL MANUFACTURES.

Nos. $\frac{20}{1406-19}$.

Extract from the Proceedings of the Government of India in the Home Department (Judicial), dated Simla, the 15th September 1882.

Read again—

Home Department Circular letter to Local Governments and Administrations, Nos. $\frac{16}{1070-79}$, dated 19th August 1881, on the subject of manufactures as carried on in the jails of British India.

Read also the replies to the above Circular letter—

From Government of Madras, No. 2398, dated 21st November 1881.
From Government of Bombay, No. 6466, dated 30th September 1881.
To Government of Bombay, No. 1359, dated 14th October 1881.
From Government of Bombay, No. 7175, dated 29th October 1881.

From Government of Bengal, No. 309P., dated 6th February 1882.
From Government of the North-Western Provinces and Oudh, No. 1348, dated 11th November 1881.
From Government of the Punjab, No. 149, dated 16th May 1882.
From Chief Commissioner of the Central Provinces, No. 2-236, dated 3rd January 1882.
From Chief Commissioner of British Burma, No. 130-175F., dated 9th November 1881.
From Chief Commissioner of British Burma, No. 586-61J., dated 19th June 1882.
From Chief Commissioner of Coorg, No. 947-59, dated 20th September 1881.
From Chief Commissioner of Assam, No. 1412, dated 15th October 1881.
From Resident at Hyderabad, No. 382, dated 5th October 1881.

RESOLUTION.

THE Governor General in Council has had under consideration the principles which ought to regulate the action of Government in this country in the matter of jail manufactures, and has in the course of the enquiry had occasion to examine the systems at present followed in the different provinces of British India, and the discussions which have at various times taken place in connection with this subject. It is not, however, necessary for present purposes to go further back than to the proceedings of the Prison Conference of 1877.

2. The Conference having accepted the principle that long term prisoners should be located in central jails, went on to decide that such central jails should be the seats of profitable industries. The nature of these industries was discussed in a paper submitted to the Conference by the Inspector General of Jails in Bengal, in which it was urged that, in the interests of the 'Indian tax-payer,' prisons should be made, as far as possible, self-supporting; and it was argued that 'the Prison Department had an equal right with any private individual to manufacture articles for sale in the open market,' and 'to employ State capital and convict labour in free competition with private capital and free labour.' 'Even' (it was said) 'should the case be otherwise, there can be no possible objection to the manufacture of articles required for use by the great departments of the State.' 'There is thus,'—the writer of the paper contended,—'this alternative open to the Government, either to allow the jails to compete with free labour, or to employ them in the manufacture of articles required for consumption by the State.' The Conference was invited to affirm this principle, with the further proposition that 'the employment of machinery in prisons promotes rather than interferes with jail discipline, at the same time that it enormously increases the profits from manufactures.' The discussion which followed turned principally upon the question of the employment of machinery in jail industries, and eventually the conclusion come to on this point was that 'steam or other machinery might be unobjectionably introduced into jails for the purpose of carrying on manufactures for Government.' The general feeling of the members, and ultimately their formal deliverance on the general question, was to the effect that if the labour of prisoners were devoted chiefly to the production of articles required by Government, no serious question need arise as to the competition of jails with private trade. The other specific recommendations put forward by the Conference were—

(1) that multifarious manufactures should be discouraged everywhere, and especially in district jails, and that Jail Superintendents should be taught to look for profit to one or two industries carried on on a large scale;

(2) that district jails should be made branch manufactories subordinate to central jails, the Superintendents of the latter supplying the former with work, and undertaking to dispose of their manufactured products;

(3) that in view of the large amount of jail buildings that had still to be undertaken, the Superintendents of central jails should train and organise bodies of masons and carpenters for employment where their services might be required.

3. The conclusions arrived at by the Conference were generally approved by the Government of India in their Resolution on its Report dated the 30th

April 1878; and eventually the Military Department and Police Department were directed to give jail manufactures the preference over goods procurable in the local market, on condition only that the rates at which they were supplied were equal to, or not in excess of, those demanded by local contractors or traders for goods of the same quality.

4. Since these orders were issued, the attention of the Government of India has been more particularly drawn to the importance of removing all obstacles to the spontaneous development of manufacturing industries in India, and it has become necessary to reconsider the whole question of jail manufactures and the position which the State should take up with reference to these and to the local markets. It is now very clearly recognised that the greatest economic want of India is the creation of industrial pursuits. The Famine Commissioners at Part II, page 175 of their Report, write as follows:—

"At the root of much of the poverty of the people of India, and of the risks to which they are exposed in seasons of scarcity, lies the unfortunate circumstance that agriculture forms almost the sole occupation of the mass of the population; and no remedy for present evils can be complete which does not include the introduction of a diversity of occupations, through which the surplus population may be drawn from agricultural pursuits, and led to find the means of subsistence in manufactures or some such employments."

In the soundness of these views the Governor General in Council has repeatedly of late expressed his concurrence, and the subject has been pressed upon the attention of all the Local Governments. The only possible remedies for the state of things that prevails throughout agricultural India are, in the first place, the improvement of communications to facilitate the movement of the surplus population from overstocked tracts, and the more general distribution of surplus food; and in the second, the creation of new employments for the superabundant hands. The Governor General in Council does not suppose that the direct action of Government can do much towards the creation of industrial employments. But it is distinctly the duty of the State to do nothing to hinder their spontaneous growth, and, as far as it legitimately can, to stimulate and assist their development.

5. In this view the Governor General in Council finds reason to fear that there is much in the present system of jail manufactures to which objection may fairly be taken upon economic grounds. Not merely are the suggestions of the Prison Conference as regards avoiding multifarious employments generally disregarded, but there is strong evidence that in many places the products of jail labour do supplant and compete with private industry in the local markets to a very serious extent. This last fact is no doubt one the significance of which will be differently viewed by those who accept the arguments laid before the Prison Conference, and by those who object altogether to any appropriation by the State of profits which might otherwise fall to private trade. There can, however, be no doubt that the time has come when the Government must look into the question more closely, and endeavour to discover the true limits of State action in this matter of jail industries.

6. It may be desirable at the outset to notice very briefly one or two of the main arguments which have been advanced in support of the present system.

It is said that by selling articles of jail manufacture, the Government is, by so much, able to relieve the tax-payers of some portion of the expense which would otherwise be thrown on them in order to support the jails. The value of this contention is to some extent lessened by the necessity of receiving with some caution all departmental calculations of the profits derived from such manufactures. When Government becomes a manufacturer, there is no practical check on the profit and loss account, such as applies in the case of a private trader. The accounts are merged in the transactions of the province and the empire. The officer concerned in no way finds his own private income affected. It is sometimes doubtful whether in the compilation of the accounts of profit and loss all the items that a private trader would have to reckon in are considered, especially when these take the form of

capital; and, as above remarked, there is no practical check which would serve to demonstrate their presence or absence.

7. This criticism, however, only affects the detail of the calculations. Another, and more important, rejoinder may be made to the argument now under discussion. It seems to the Governor General in Council that in that argument the fallacy is involved of only looking to the direct receipts paid into the Treasury, of separating the interests of the country from those of the Government, and of supposing that any measure which checks the productive employment of capital, and, therefore, the accumulation of wealth in the country, can possibly benefit the Government. If Government, by its own action, hinders the productive employment of capital, and, therefore, the accumulation of wealth, it must inevitably, by so much, render the tax-paying community less capable of bearing any burthens which may be imposed upon it. The receipts on account of taxation will, in some form or another, be less than they otherwise would be. This is quite certain, although it is, of course, impossible to represent, in arithmetical form, the precise results which will accrue. All that can be said is that it is easier to under-estimate than to over-estimate the effect which Government action will produce.

8. This leads up to the consideration of another argument which has been advanced in defence of the existing system. It is alleged that the outturn of articles manufactured by the jails is so limited that, practically, free labour cannot suffer from the competition. This argument can only be accepted with great caution. It is to be remembered that, when once Government begins to compete with private trade, the effect produced is altogether disproportionate to the actual outturn of the Government manufactory. What private traders fear is not only what Government does, but what it might do. If a manufacturer of bricks, or blankets, or carpets, or whatever the article may be, suddenly finds that another manufacturer has started a similar business and has entered into competition with him, he knows, with tolerable certainty, what he has to fear. He knows that he and his competitor will compete on equal terms. He knows especially that if his competitor, in order to undersell him, lowers his prices to such an extent as to realise a loss, he must either raise his prices before long, or become bankrupt. But in competing with Government the conditions of things are wholly different. In this case the manufacturer finds himself in competition with an adversary, possessed of what, for the purposes of this argument, may be considered an unlimited amount of capital, and who can perfectly well carry on his business for years with a total disregard of the ordinary laws which in private life must govern commercial transactions. It is also to be borne in mind that whilst, in most cases, the private trader, against whom Government competes, only carries on his business at one spot, there are generally several jails in each Province. The gain at one jail may, therefore, be made to compensate for the loss at another. For these reasons, Government competition must be regarded from a wholly different point of view from the competition of an ordinary trade rival.

9. Perhaps it may be the case that in a country like England, which possesses very extensive manufacturing industries, jail competition cannot exercise any very appreciable effect, though even in England the sale of jail manufactures has admittedly excited a great deal of opposition. But it is impossible in this matter to apply to India without qualification the experience of the working of a similar system in England. The stages of industrial advance in the two countries are very different. Many Indian industries are only in their infancy. A degree of Government competition which in England may be comparatively harmless, might in India do a great deal of harm. It is not the duty of Government, either in India or elsewhere, to foster the artificial growth of indigenous industries by the adoption of methods,—such, for instance, as a high protective tariff,—which are opposed to sound economic doctrine. But it is the duty of Government in India, even more than elsewhere, to carefully remove all hindrances to the spontaneous development of those industries. The proposition that jail manufactures,

as they are at present carried on in India, do not check the growth of native industries is a very doubtful one. Complaints on this score from private traders are by no means unfrequently heard.

10. There is one further general argument to which reference may be made. In some cases it is admitted in the reports now before Government that jail manufactures undersell private trades. Thus, in the Central Provinces the Inspector General of Jails says :—

"Jail Superintendents have always great difficulty in disposing of their stocks, of oil, and can often only do so by underselling local manufactures."

In most cases it is alleged that prices are fixed at rates as high, or even somewhat higher, than those which prevail in the local market. So long, however, as there is no actual loss upon the raw material employed in the manufacture, there is nothing practically to prevent such a lowering of prices as would undersell local traders; and when stocks of unsold articles are heavy it is difficult probably to avoid such a result. It is admitted indeed that in fixing prices regard is not always had to economic considerations.

"The price of jail manufactures," writes one Inspector General, "is regulated by their market value without reference to the cost of production." "I have it in my power," says another, "to order the acceptance of any rate which may be fixed upon, provided it covers the cost of raw materials."

It is true that a distinction is said to be made between articles sold to the public and those sold to Government departments, the price in the former case being higher than in the latter; but it is doubtful whether this distinction is always preserved in practice. In many instances it is to be feared that the prices are fixed in a purely arbitrary fashion for both Government and the public.

Moreover, it is to be observed that whenever the outturn of the jail is considerable—as is not unfrequently the case—the argument that prices may be fixed according to local rates, and thus any interference with private trade may be avoided, must, of necessity, fall to the ground. In such cases the jail manufactures must to a great extent make the price. It is impossible to say what the local rates would be if no such manufactures existed.

11. Turning now to the consideration of the principles by which the decision of Government on the whole general question must be guided, the Governor General in Council will say at the outset that he entirely concurs in the view that jail labour ought as a rule to be productive.

There is a universal agreement of opinion amongst the highest authorities on the management of prisons in condemnation of the system of purely unproductive labour. The Governor General in Council fully accepts that principle. It is, however, necessary to define somewhat more precisely what is meant by unproductive and productive labour. By unproductive labour is meant purely penal labour which does no good to any one, such as the treadmill, carrying shot, piling up logs of timber and unpiling them again, and the like.

By productive labour is meant the opposite of all this, that is to say, labour which, in some form or another, leads to an increase of wealth. It is to be observed that, for the purposes of this argument, there is a great distinction between making labour productive and making it as productive as possible. The former process is, and the latter is not, a necessary requirement of prison management. One or two illustrations will make this point clear. Sawing timber is a very proper occupation for prisoners. It is productive labour. When the timber is sawn it may be used for building or other purposes. But if it is desired to make the labour of sawing timber as productive as possible, a saw-mill might be more profitable than manual labour. In this case sawing by hand may be a requirement of prison management, but sawing by machinery is not necessary from the point of view of prison management, and is objectionable from the economic point of view, as it would compete to a greater extent than was necessary with the legitimate trade of persons who have invested their money in saw-mills. Again, at one Central Prison, a large number of prisoners are employed in driving two capstans connected with the machinery for making woollen twist. Whether woollen twist should be made at

all in jails by machinery may be a doubtful question; but supposing this special industry to be sanctioned, the driving of capstans is a very proper way of employing prisoners. But if, in order to make the woollen manufactory of the Jail in question as productive as possible, steam machinery were substituted for the labour of these prisoners, the change would, in the opinion of the Governor General in Council, be very objectionable, as bringing Government capital into competition with private capital to a greater extent than is necessitated by the requirements of prison management.

12. Although, therefore, jail labour may be made productive, it should be carefully directed in such channels as to interfere as little as possible with the growth of private industries. The Governor General in Council cannot help fearing, on a perusal of the papers now before him, that the minor interest involved in making the jail manufactories as profitable as possible has but too often been allowed to override the major interest involved in avoiding, so far as the necessities of prison management admit, every hindrance to the spontaneous development of native industries. It is, as already remarked, the plain duty of the Government to abstain most carefully from any action which shall hinder the spontaneous growth of such industries, and this consideration appears to be so important as to throw into insignificance any consideration based on the direct profits which, it is alleged, are derived from jail manufactures. The amount of those profits, for all India, appears only to amount to about £100,000 a year.

13. The cardinal principle, therefore, which the Governor General in Council would lay down is that, although the requirements of prison management necessitate the employment of prisoners on productive labour, yet at the same time that labour need *not* be made as productive as possible, and every endeavour should be made to turn it into channels which may, as little as possible, hinder the spontaneous growth of native industries.

14. Turning now to the practical application of this principle, the first point to which it seems desirable to direct attention is the question of extra-mural labour. "The best system ever devised," says the Surveyor General of Prisons in England, "for the employment of convicts is that of executing large public works by means of their labour." There can, the Governor General in Council thinks, be no question as to the correctness of this view. The Government of India has repeatedly insisted upon it. The subject was prominently noticed in chapter VII of the Prison Conference Report. But the papers on record in the Home Department seem to show that sufficient attention has hardly as yet been paid to the matter by Local Governments, although where the system of extra-mural labour has been tried, as in the case of the Sirhind and Soane Canal works, the results have been satisfactory. Without doubt, there are difficulties in the way of employing convicts extra-murally. In the first place, there is danger in employing the more desperate characters in the manner proposed. A large discretion must, of course, be left to the Jail Superintendents in selecting men for extra-mural employment. In the second place, strong police guards are required, which involve extra expense. In the third place, convict camps may have to be formed, as appears to have been done in the case of the Soane Canal works, or the suggestion of the Prison Conference of 1877 may have to be adopted (Report, p. 109), to the effect that portable jails should be constructed. This would, of course, involve increased expenditure. There is, however, no reason for supposing that the extra expenditure either on police guards or on portable jails constitutes an insuperable difficulty. In the case of a public work executed by the State, it would be quite justifiable to charge any such extra expenditure to the work. The cost would in all probability be more than recouped by a saving in expenditure on free labour, and indeed the experience of the Punjab Government in connection with the Rupar public works jail proves that this form of employment is really very remunerative, while the convicts have enjoyed better health than in the ordinary jails of the Province. As regards public works constructed through the agency of private enterprise, an endeavour might very well be made to contract for the employment of convict labour. In the case of a railway passing for a considerable distance through a

thinly-populated district, any private Company would not improbably be very glad to employ convict labour. Of course the Company would have to bear any extra cost for guards or for portable jails, but they might, when it was of great importance to open out any particular tract of country, be given the labour either *gratis* or at very low rates.

15. The Governor General in Council requests that Local Governments will now consider, in communication with its Public Works Department, on what large public works, whether under State or private management, convict labour can be most suitably employed, and that plans for the establishment of convict camps on or near such works may be carefully worked out. Labour on public works should in future be looked upon as the principal mode of employing long term prisoners throughout British India.

16. It will, of course, be impossible to dispense altogether with in-door employments. For district jails and lock-ups, for all short term prisoners; and for the prisoners left in the central jails after the drafts to public works have been made, such industries must still be maintained. But the Governor General in Council is clear that the use of steam machinery in any jail is quite indefensible. Its introduction in future is absolutely prohibited. The jails in which it has been already established are fortunately few in number, and are nearly all situated in Lower Bengal. The Government of India requests that any Local Government in whose jails steam machinery is employed for any purpose whatever will make arrangements for disposing of it to private purchasers at a fair valuation at a very early date. The preferable course would be that the purchaser should remove the machinery altogether from the jail premises and establish a private factory outside. But if there is any great difficulty in so arranging, the Governor General in Council would be prepared to consider whether it would be possible, with due regard to the requirements of jail discipline, to allow a private Company or individual to purchase the machinery only as it stands, and to arrange for the lease to such purchaser of the jail factory building, on condition of his agreeing to employ convict labour only in his operations and to pay for this at market rates. In such a case the jail authorities would simply contract to supply labour in certain quantities, but would be solely responsible for the strict maintenance of discipline, the lessee covenanting to refrain from interference with the arrangements of the jail officers in this respect.

17. As regards European machinery driven by treadmills, capstans, or other applications of convict labour, there is not the same radical objection to this as to steam machinery, provided that it is but sparingly used, and that only those prisoners are employed on the machines who are not fit for heavy manual labour. But it should not be introduced in any jail where it does not now exist, and the Governor General in Council would prefer that it should be got rid of, where it is devoted to any other purpose than the supply of actual jail requirements.

18. In the next place the Governor General in Council feels bound to insist upon the adoption of the recommendation made by the Conference of 1877, as to the discouragement of multifarious employments. From the reports received from Local Governments, it would seem that almost every conceivable trade and calling has been introduced into one or other of the jails in India. This should be remedied without delay. There should be a certain number of authorised industries, and no others should be allowed anywhere without the special sanction of the Government of India. In the selection of these industries careful attention should be paid to their penal character.

In the opinion of the Governor General in Council the weaving of coarse jute, cotton, or woollen fabrics by means of ordinary hand-looms, the making of coarse matting, brick and tile making, hand-sawing of timber, oil-pressing, stone-breaking, and soorkee-pounding, are the forms to which in-door prison labour should everywhere be limited. The weaving of fine cloths, and the making of such things as table-cloths, towels, curtains, and the like, should nowhere be permitted. Private enterprise can already supply such articles, and the occupation is in any case not sufficiently penal. Carpet and rug-making

may be allowed where the trade is already a jail specialty, and until private enterprise shows itself ready to supply the demand. Tent cloth may be woven, but the work of fitting up the tents and making all such accessories as chicks, purdahs, poles, &c., should be left to outside labour. Spinning, twine-making, and making up clothing, &c., should only be allowed in female jails. All such occupations as boot and sandal making, blacksmith's work, carpentry, rattan work, furniture making, tailoring, making up horse clothing, book-binding, paper-making, pottery work, sugar-making, silversmith's work, and rope-making, must be discontinued. Jail Superintendents should be instructed by their Local Governments to set themselves without delay to remodel the in-door industries of their jails in order to bring them into harmony with these orders of the Government of India.

19. In some jails printing and lithographing have been introduced. The Governor General in Council is very doubtful whether these are at all proper occupations for prisoners. The work done must now however be confined to work for Government offices, and as far as possible to form-printing from stereotype blocks. Only hand-presses can under any circumstances be permitted. The work upon these may be made sufficiently penal, but composing of type cannot be considered such. Most of the Government work now done in the jails could be unobjectionably made over on contracts to outside presses, and the Local Governments should be prepared to close their jail presses whenever satisfactory arrangements of this kind are offered. The printing of current correspondence and of confidential papers can be properly done only in Secretariat or other office presses.

20. There remain for consideration the general questions—to whom Government should dispose of its jail manufactures, and how it should fix the price of these when disposed of by sale.

The first object to which jail industries should be devoted is of course the supply of jail requirements. When these are satisfied, and not before, the question of sale to other departments and to the public will arise. The Governor General in Council has decided that no obligation ought to be imposed upon other Government departments to give a preference to jail manufactures over the goods of private dealers. The jails must be left to compete for custom upon equal terms with other suppliers. But there is no objection to their arranging to furnish Government departments with any articles, such as they will in future be permitted to manufacture. [illegible] among the outside public ought to be discouraged, the jails dealing as a rule only with traders wholesale or retail. In this way the interference with private enterprise will be reduced to a minimum.

The price of jail manufactures must always include—

(*a*) the price of the raw material;

(*b*) the wages of jail labour, rated according to the wages of free labour of the same class in the neighbourhood.

The practice of rating skilled as unskilled labour should, where it exists, be discontinued;

(*c*) a percentage for wear and tear of plant.

As to this a discretion must be allowed with reference to the nature of the trade and the plant employed. The Local Government should fix it in each instance, after enquiry as to the practice of the particular trade and the circumstance of the case;

(*d*) a percentage on account of profits.

In the case of articles supplied to Government or to wholesale dealers, this may ordinarily be fixed at 10 per cent. on the cost of the raw material and labour; for sales to retail dealers at 15 per cent. on that cost; and for sales to private consumers at 25 per cent.

If the prices thus found are below the ordinary rates at which the goods could be procured by the same class of purchasers in the open market, they must be raised to at least such market rates.

21. The Governor General in Council trusts that the reforms prescribed in this Resolution will be carried into effect by the 1st of April next, and he desires to have a report as soon as possible after that date from each Local Government showing precisely for each jail in the province on what occupations the prisoners are then employed. It may not be possible to effect satisfactory arrangements for the disposal of steam machinery by the date mentioned, but the Government of India will expect to hear of the conclusion of such arrangements by the 1st January 1884 at latest. Existing contracts for the supply of jail manufactures must of course be carried out, but no new contracts should be accepted save such as are in accordance with the principles laid down in this Resolution.

If the abolition of steam machinery is found to involve any serious loss of profit to the Local Governments, the Governor General in Council will be ready to consider the propriety of making some allowance on this account during the currency of the existing provincial contracts and until the deficiency can be made up in other ways.

ORDER.—Ordered, that this Resolution be forwarded to the Local Governments and Administrations noted on the margin for information and guidance; to the Military and Public Works Departments, and the Department of Finance and Commerce for information; and that it be published in the Supplement to the *Gazette of India*.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 26th SEPTEMBER 1882.

GENERAL REMARKS.—Moderate rain has fallen throughout the Madras Presidency; standing crops generally are in good condition; harvest operations are progressing, and an average yield is expected; dry crops in parts of three districts need more moisture. In Coorg there has been light rain throughout the week; crops are thriving. In Mysore there has been heavy rain throughout the State, which has much benefited standing crops; prospects are favourable. From the Nizam's territories and Berar light rain has been reported, and crops are progressing. In the Bombay Presidency, Sind has had no rain and Guzerat but little, while the Deccan and southern districts have had good rainfalls; prospects generally are good; harvesting of the early *kharif* crops and preparations for the *rabi* have begun in some districts; locusts have damaged standing crops in a few places.

In the Central Provinces light rain has fallen in most districts; and although a little more wet weather would now be beneficial in a few places, crops are on the whole doing well. In Central India there has been very little rain; agricultural prospects are good. In Rajputana there has been no rain in the week under report; prospects are good on the whole, except in Marwar where rain is needed. The Punjab also has had no rain; prospects of the standing crops are good everywhere, except in Sirsa and Umballa where they are reported to be below average.

In the North-Western Provinces and Oudh no rain has fallen, except two local showers; prospects generally are good, but more rain would be beneficial in Oudh, in the Benares division, and in Allahabad; harvesting operations and ploughing for *rabi* crops continue. Bengal had general rain in the early part of the week; prospects are generally fair; the late rice, however, in many places is in need of much more rain; harvest of autumn crops is nearly completed, with a fair average outturn; and preparation of land for *rabi* sowings has commenced. In Assam there has been fair rain in all districts; transplantation of *sali* paddy is coming to a close. In British Burma rain has fallen in most districts, most in Akyab, Bassein, and Amherst (Moulmein); crops are suffering from want of rain in part of Tharrawaddy and from floods in Mergui; elsewhere reports are favourable and prospects good.

A general fall in the barometer occurred in all parts of India and Burma during the middle of the week, it was most marked in Bengal and Burma; it continued on the 27th over Southern India and Burma, but recovered in all other parts. The monsoon rains seem to have ended in Upper India as far as the Central Provinces and Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Sept. 27th)		
Bellary ...	1·12 (average of eight stations).	Standing crops generally good, dry partially withering; harvest paddy, yield average; agricultural operations progressing.
Kurnool ...	·46 (average of nine stations).	Standing crops generally good; agricultural operations progressing; cattle-disease in parts.
Ganjam ...	1·72 (average of fourteen stations).	Standing crops thriving; harvest dry crops, outturn average; fever, small-pox, and cattle-disease continue; cholera slight in parts.
Kistna ...	·66 (average of seven stations).	Standing crops generally good; harvest dry crops, outturn about average; agricultural operations progressing; small-pox and cattle-disease prevalent.
Chingleput (Madras) ...	2·23 (average of nine stations).	Standing crops generally good where water available; agricultural operations progressing; small-pox and cattle-disease in parts.
Coimbatore ...	1·50 (average of fifteen stations).	Standing crops paddy good; dry grains want rain in parts; harvest dry crops, yield average; small-pox, cholera, fever, and cattle-disease in parts.
Tanjore ...	·96 (average of eleven stations).	Standing crops generally good; harvest paddy and dry grains, outturn below average; cholera in parts.
Madura ...	1·34 (average of seven stations).	Standing crops withering in one taluk; wet cultivation commenced.
Malabar ...	1·48 (average of fourteen stations).	Harvesting first crop progressing; sowing second crop continues; fever, small-pox, and cholera in parts.
Travancore ...	*Nil*	Harvest almost over; fever prevalent.
		General Remarks.—General prospects good.
Bombay—(Sept. 27th)		
Kurrachee ...	No rain	River at Kotri on 25th, 17 feet 1 inch against 13¾ feet on same date last year; fever increasing, general throughout district; cattle-disease in Shahbandar taluka; *keon* worm doing damage to crops in two talukas; wheat, red rice, and *bajri* in Kurrachee 23, 32 and 34, in Sakro 32, 40 and 48, and in Shahbandar 20, 40 and 48 lbs. per rupee, respectively.
Hyderabad ...	.....	River falling; *kharif* crops slightly damaged by insects in talukas Sakrand and Dero Mobhat; *rabi* operations commenced; small-pox continues in Hyderabad; fever in seven talukas and cattle-disease in Badin; wheat 26, *juari* 52, *bajri* 44, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Total rainfall 30·41; crops doing well; fever continues in Dholka, Viramgaum, and Gogha; wheat 27 and *bajri* 32 lbs. per rupee.
Baroda ...	.....	Total rainfall 40·74; fever continues in the Kari division; no epidemics; crops thriving; *bajri* 33 and common rice 24 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Surat ...	·49	Total rainfall 44·18; slight damage to crops by floods in some talukas; *juari* 36 and *nagli* 57 lbs. per rupee.
Násik ...	Thunder-storms and heavy rain in most talukas—maximum at Bhimthari, 5·45; minimum at Igatpuri, ·69.	*Kharif* apparently destroyed entirely by locusts in Yeola, Nandgaon, Malegaon, and partially in Chandore, Niphad, Sinnar, Baglan, and Kalwan; quantities of locusts being destroyed upon reward; slight cholera in three talukas; wheat 28, *bajri* 33, and rice 28 lbs. per rupee.
Colaba (Bombay) ...	·17	Total rainfall 68·06, being ·87 cents above average; average abnormal temperature 1° warm from 20th to 25th and *nil* on 26th; vapour in air normal; abnormal wind northerly; thunder and lightning on 22nd, 24th, and 25th; thunder-storm on the night of 23rd.
Poona ...	Rain throughout district—maximum at Junnar, 3·27; minimum at Poona, 1·33.	Standing crops good; 8 cholera cases at Sirur, 4 deaths, and 2 deaths in Haveli taluka; *bajri* 48 and *juari* 61 lbs. per rupee, in Poona *bajri* 41 and *juari* 52 lbs. per rupee.
Ahmednagar ...	Akola, 3·65; Karjat, 3·12; Sangamner, 3·10; Parner, 3·05; Shrigonda, 2·35; Rahuri, 2·24; Kopergaon ·90; Jhamkhed, ·15; Newassa, 1·12; Nagar, 1·04; Sheogaon, ·94.	Total average rainfall of district 22·50; *kharif* crops in good condition, but injured in Kopergaon, Newassa, Rahuri, Akola, Sangamner, and Nagar by locusts; sowing of *rabi* in progress in all talukas except Kopergaon, Sangamner, and Akola; cholera—in Sheogaon 8 attacks 7 deaths, in Kopergaon—6 attacks, 4 deaths; *bajri*—maximum 66 lbs. in Jhamkhed, minimum 39 in Kopergaon; *juari*—maximum 108 lbs. in Jhamkhed, minimum 48 in Kopergaon.
Sholapur ...	1·31	Total rainfall 31·53; crops in good condition; cholera has died out except in Sangola taluka, 14 cases, 11 deaths; *bajri* 62 lbs. 23 tolas and *juari* 81 lbs. 7 tolas per rupee.
Dharwar ...	Rain at all stations except Karajgi maximum at Ron, 5·10.	The rain has benefited standing crops which in some places were suffering from blight and in others withering; cotton sowings in progress; land being prepared for sowing wheat and gram; harvesting of inferior millets going on; *juari* from 56 to 96 lbs. and rice from 20 to 32 lbs. per rupee; cattle-disease in two and ague in three talukas.
Kanara ...	Karwar, 1·43; Kumpta, ·40; Hallial, ·20; and Sirsi, ·81.	Total rainfall 103·79; harvesting rice crops around Karwar; rice crop in ear above ghat; sugarcane and garden produce thriving; common rice in Karwar 10 seers, in district average 12¼ seers per rupee; weather fine.
Rajkot ...	·60	Total rainfall 21·57; weather warm; general health good; crops thriving; *bajri* 27 and *juari* 31 lbs. per rupee.
		General Remarks.—Rain general, but slight in most districts; prospects generally good; harvesting of early *kharif* crop and preparations for *rabi* begun in some districts; locusts doing damage in Ahmednagar, Khandesh, and Násik; slight cholera, fever, and cattle-disease in some districts.
Bengal—(Sept. 27th)		
Chittagong ...	·73	Weather seasonable; prospects of crops good; harvesting of *aus* almost finished; prices somewhat high; cattle-disease continues; general health good.
Dacca ...	·70	Winter rice doing well; more rain wanted; *aus* harvest progressing favourably, fair outturn; jute harvest continues, of poor quality; cholera abating.
24-Pergunnahs (Calcutta)	Alipore, ·77	Outturn of early rice and jute above the average; sugarcane and *amun* rice doing well; more rain required; high lands being ploughed for *rabi* crops; public health generally good; fever prevalent in Baraset and Diamond Harbour sub-divisions.
Moorshedabad ...	2·24	Prospects of *amun* improved by rain except in Jungipore sub-division; lands being prepared for *rabi* crops; except usual fever in some places, public health good; cattle-pox reported from one village.
Rajshahye ...	1·51; Nattore, 2·40	More rain required; condition of *amun* slightly more favourable in some parts; fever continues.
Burdwan ...	·29; Cutwa, 3·87; Raniganj, ·97.	Prospects of *amun* improved in Cutwa, indifferent elsewhere, and bad in Raniganj; *aus* crops being reaped; fever reported.
Rungpore ...	2·53	Weather cloudy and hot; prospects of crops favourable; transplantation of *amun* still proceeding; public health good.
Bhagálpur ...	·29	More rain wanted for winter rice; prospects good; lands being prepared for *rabi* sowings.
Purneah ...	1·96	Prospects of crops fair, but transplantation too late; more rain wanted; ploughing for *rabi* crops commenced; fever prevalent.
Patna ...	·24	Reaping of *bhadoi* crops continues; more rain urgently required for winter rice; sugarcane and *rahar* doing well; public health good.
Durbhunga ...	Rainfall not stated	Prospects fair; *bhadoi* below the average; cholera nearly gone; fever reported, prices show a downward tendency.
Hazáribágh ...	·22	Weather hot and seasonable; harvesting of autumn crops continues, fair outturn expected; prospects of rice favourable, but rain wanted; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Cuttack ...	·12	Reaping of autumn rice nearly completed; earlier sorts of winter rice in ear; sugarcane and other crops progressing well; public health good.
		General Remarks.—General rain in early part of week, latterly weather very hot; prospects generally fair, but much more rain still required for late rice in many places; rainfall generally much below the average, and transplantation unusually late; good rice crop cannot be expected; autumn harvest nearly completed, generally with fair average outturn; early rice and jute have yielded indifferent crops in some districts; preparation of lands for *rabi* crops has commenced, and in some districts *kalai* pulse being sown; cholera much abated in Dacca, Chumparun, and Sarun, but still prevalent in parts of Furreedpore and Bogra; small-pox lingers in parts of Chota Nagpur; fever prevalent in some districts and increasing in Nuddea.
N. W. Provinces and Oudh—		
Benares (Sept. 26th)	No rain registered except ·10 in Benares.	*Aghani* rice will probably prove a poor crop unless rain falls within two or three days, other crops favourable; no sickness among men or cattle; bazars well supplied; prices stationary.
Allahabad („ 27th)	No rain	Weather hot and dry, with westerly wind; late rice crop suffering; slight cholera; prices mostly stationary; early rice fallen.
Gorakhpur („ 26th)	.....	Clear sky; rain wanted; rice, maize, and other crops being cut; general health fair; prices steady.
Jhánsi („ 25th)	No rain	*Kharif* prospects excellent; cultivation for *rabi* in active progress; fever prevalent; a few isolated cases of cholera in Garotha pargana; cattle-disease reported from Mau.
Agra („ 26th)	No rain	*Bajri*, &c., continue to be cut; slight fever continues, but general health good; prices steady.
Bareilly („ „)	.....	Weather seasonable; crops excellent; cholera and fever not abated.
Meerut („ „)	No rain	Weather seasonable; health good; *rabi* ploughing in progress; prices unaltered.
Kumaun („ „)	.....	Weather clear and seasonable; health good; cattle-disease continues; crops excellent; *jhangra* cut; rice in unirrigated parts almost cut; prices unchanged.
Lucknow („ „)	No rain	Crops in good condition; prices stationary; cholera nearly disappeared.
Partabgarh („ „)	Sadr, 1·50	This fall was quite local; crops beginning to suffer from the hot west winds; cholera has increased considerably during the past week.
Sitapur („ „)	.....	Sky clear; gram sowing commenced; rain required in Sidhauli tahsil for *dhankar* lands, otherwise prospects everywhere fair; cholera severe in pargana Hargam; rice falling; other grains stationary in price.
Fyzabad („ „)	No rain	*Dhan* and *kodo* being cut; prospects of crops good; fever in two tahsils and cattle-disease in part of district.
Rae Bareli („ 25th)	.....	A longish break, with westerly wind; a general grumble for more rain; *juari* attacked by an insect called *sundi*; cholera still hanging about; no cattle-disease; supplies plentiful; prices stationary.
Cawnpore („ 26th)	No rain	Weather clear and hot by day, cool by night; *kharif* outturn estimated to be above average; *juari* has suffered some damage; cholera and fever continue; prices stationary.
Farukhabad („ „)	.....	Weather seasonable; prospects of *kharif* crops good, but more rain wanted for *rabi*; fever still prevalent, and a few further cases of cholera reported; prices steady.
		General Remarks.—Except slight local showers at Benares and Partabgarh, no rain has fallen during the week; prospects generally are good, except that more rain would now be beneficial in Oudh, Benares division, and Allahabad; harvesting operations and ploughing for *rabi* crop continue, prices stationary; cholera has increased in Partabgarh and Sitapur, and continues in the parts previously affected; slight fever continues to be prevalent; cattle-disease continues in Kumaun, Jhánsi, and Fyzabad.
Punjab—(Sept. 27th)		
Delhi ...	No rain	Prospects of yield average; prices of wheat and gram are falling; those of other food-grains are stationary.
Hissar ...	No rain	Fever prevalent; prices stationary; crops maturing; half an average yield is expected in Hissar and south of Rohtak, an average yield in North Rohtak, and a yield below the average in Sirsa.
Umballa ...	No rain	Health fair; prices stationary; yield of crops expected to be somewhat below the average, especially *makki* and rice.
Jullundur ...	No rain	Health good; prices falling; crop prospects good.
Amritsar ...	No rain	Health good; crops good; prices of barley, *bajri*, and rice are falling; those of the rest of food-grains are stationary.
Sialkot ...	.....	Health good; prices stationary; crops promising; sowing for *rabi* commenced.
Lahore ...	No rain	Health good; prices stationary; crop prospects are good.
Ferozepore ...	No rain	Health good; price of barley falling; prospects of yield of crops good.
Mooltan ...	No rain	Fever prevalent; prices stationary; prospects of yield of crops good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—*contd.*		
Rawalpindi ...	No rain	Fever in some parts of the district; prices of food-grains falling; harvest above the average.
Dera Ismail Khan ...	No rain	Fever prevalent; prices falling; crops good; ploughing for *rabi* commenced.
Peshawar ...	.....	Slight fever prevailing; prices stationary; harvest prospects good.
		General Remarks.—No rain has fallen in the districts reporting during the week; fever is prevalent in some districts, but the health of the province is generally good; prices of food-grains are falling in the Delhi, Jullundur, Ferozepore, Rawalpindi, and Dera Ismail Khan districts, and are stationary in the others; prospects of crops are reported to be good in all districts except in Sirsa and Umballa, where they are below the average.
Central Provinces—		
Nagpur (Sept. 27th)	·28	Weather hot; prospects of *kharif* crops good; fever prevalent; few cases of cholera; prices steady.
Jubbulpore („ 26th)	·02	Weather clear and hot; crops doing well, but rain needed; fever prevalent; cholera continues; prices unchanged.
Saugor („ 25th)	.....	Crops excellent; fever prevalent; prices steady.
Seoni („ 26th)	·27	Weather oppressive; more rain needed for crops; few cases of cholera; prices stationary.
Hoshangabad („ „)	.....	Weather unusually hot and occasionally cloudy; rain wanted; *kharif* generally good; fever prevalent; wheat 15 seers per rupee.
Raipur („ 23rd)	1·62	Weather oppressive, with occasional thunder-storms; crops doing well; fever and cough prevalent; cholera disappearing; prices stationary.
Sambalpur („ 21st)	2·0	Crops doing well; fever prevalent; rice 56 seers per rupee.
Khandwa („ 26th)	·10	Weather cloudy and close; small-pox reported; wheat 16 seers per rupee.
		General Remarks.—Weather warm during day; mornings and evenings cool; *kharif* crops doing well, but a little more rain would be beneficial; fever highly prevalent; cholera gradually disappearing; prices continue the same.
British Burma— (Sept. 23rd)		
Akyab ...	**2·94**	**Total rainfall 186·73; 6 deaths from cholera in town and 28 in district; cattle-disease in five townships, severe in one; prospects of crops good.**
Rangoon ...	1·05	Total rainfall 81·78; 3 deaths from cholera, otherwise public health good; crops making progress.
Bassein ...	4·14	Total rainfall 109·90; slight cholera in one township, otherwise public health good; a few deaths from cattle-disease in two townships; prospects of crops reported good.
Prome ...	·08	Total rainfall 40·59; 2 deaths from cholera in town, otherwise public health good; cattle-disease prevalent in one township; planting of crops progressing, but a good deal being late in the season; prospects of harvest will depend on later rains.
Amherst (Moulmein) ...	2·92	Total rainfall 184·86; public health good both in Moulmein and district; no reports on cattle-disease received; transplanting nearly over, and condition of crops good.
Toungoo ...	0·77	Total rainfall 75·05; 1 death from small-pox in district, otherwise public health good.
		General Remarks.—A few cases of cholera and small-pox reported, otherwise general health of province good; cattle-disease prevalent in Akyab district, slight elsewhere; some damage to crops from insects in part of Hanthawaddy district; crops suffering from want of rain in part of Tharrawaddy and from floods in Mergui; elsewhere reports favourable and prospects good.
Assam—(Sept. 27th)		
Gauhati ...	1·32	Weather seasonable; transplanting of *sali* paddy coming to a close; public health good.
Sylhet ...	1·64	*Amun* rice crop promises to be a very fine one; *sali* transplantation still going on; cholera, small-pox, and cattle-disease reported here and there; tea doing fairly well.
Cachar ...	·61	Weather dry and hot; transplanting of *sali* crops completed; reaping of *aus* crop continues; common rice 24⅜ seers per rupee; 1 case of cholera reported from Lakhimpur.
Dibrugarh ...	3·51	Weather seasonable; prospects of *sali* paddy are now good; public health good; cattle-disease still continues.
Mysore and Coorg— (Sept. 27th)		
Bangalore ...	2·14	Crops in good condition; prospects favourable.
Mysore ...	4·0	
Mercara ...	1·37	Drizzle and light rain throughout the week; rice and *ragi* crops thriving; picking cardamoms continues; prices stationary; health good.
		General Remarks.—There has been heavy rain throughout the Mysore State, which has considerably benefited crops; prospects are favourable; fever and small-pox continue in parts; no material change in prices.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Berar & Hyderabad— (Sept. 27th)		
Amráoti ...	·28	Crops progressing favourably; prices—wheat 16 and *juari* 28 seers per rupee.
Akola ...	·83	All crops promising.
Hyderabad ...	·25	Total rainfall from 1st January 28·29 inches; *kharif* crops prospering and in some places are ready for reaping; *tabi* sowings have commenced; general health good; weather sultry; prices—wheat 16¾, coarse rice 10½, white *juari* 26½, yellow *juari* 31, and *tur* 25¾ seers per current sicca rupee.
Central India States— (Sept. 27th)		
Indore ...	·14	Weather alternately close and cool; more rain is apparently impending; prospects continue favourable, and health is good.

Nowgong ...	No rain	Weather seasonable; *kharif* prospects good; health fair; prices stationary.
Manpur ...	No rain	Reaping of *makka* crops finished; *juari* and *tur* crops doing well.
Rajputana—		
Abu (Sept. 27th)	No rain	Weather clear; occasional clouds.
Sirohi („ 24th)	.....	Tanks, wells, health, and crops good; weather bright and very hot.
Meywar („ 23rd)	.....	Tanks and wells good; health, fair; crops excellent.
Marwar („ 22nd)	.....	Four months' water in tanks; wells almost full; health good; crops in good condition where rain fell copiously; weather clear and very warm and close; winds low; rain much needed in some districts; prices stationary.
Harowti („ 23rd)	Previous week—Khota, 2·14.	Health and prospects good.
Jhallawar („ 20th)	.....	Health and prospects good; weather seasonable.
Ajmere („ 26th)	.....	Slight cholera in Ajmere, otherwise health good; tanks full.
Jeypore („ „)	.....	Crops ripening and promising; prices steady; fever prevalent.
Ulwur („ 20th)	.....	*Bajri* being harvested; fever continues; prices falling.
Nepal—(Sept. 21st)		
Katmandu ...	·71	Beautiful weather; prospects of rice good.

REVIVAL OF THE SILK-DYEING INDUSTRY AT SHIKARPUR.

No. 211 F. S.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Fibres and Silks),—dated Simla, the 23rd September 1882.

Read the following Despatch from Her Majesty's Secretary of State for India, No. 47 of the 3rd August 1882, and enclosure, regarding the revival of the silk-dyeing industry at Shikarpur:—

No. 47, dated India Office, London, 3rd August 1882.

From—The Secretary of State for India,
To—The Government of India.

I herewith forward to Your Excellency a copy of a letter from the Collector of Shikarpur, which I have received from the Government of Bombay, in which it is stated that the members of the silk-dyeing industry of Shikarpur are anxious to revive the importance of their trade, and to that end have covenanted to use only fast colours.

2. I leave it to Your Excellency's Government to make the fact generally known in British Burma and other provinces interested in this question, and so further the object in view.

No. 1642, dated 18th April 1882.

From—W. F. Sinclair, Esq., Collector of Shikarpur,
To—The Commissioner in Sind.

I have the honour, at the request of certain silk-dyers in Shikarpur, to forward three samples of silk lately dyed here.

2. The silk-dyeing industry here was once important, but has been of late altogether insignificant, owing partly to the disturbance of trade by war, partly, it is said, to the use of inferior dyes, chiefly aniline.

3. The dealers and dyers, wishing to revive the trade lately united, signed a covenant to use only fast dyes, and asked me to witness it, and to let the matter be known, which could hardly be better done than by putting one sample in the Karachi Museum and allowing inspection, and sending the other two to Bombay—one for Government and one for the India Office.

4. If approved I can send you more samples, as the only cost to Government is the postage.

5. These samples are first fruits, and the supply at present is limited.

ORDER.—Ordered, that a copy of the Despatch be published in the Supplement to the *Gazette of India*.

E. C. BUCK,
Secretary to the Government of India.

Printed and Published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL BRANCH PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

Nº 40. CALCUTTA, SATURDAY, OCTOBER 7, 1882.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

	Acres.
Area irrigated in kharif 1880-81	802,222
Ditto ditto 1881-82	856,619
Net Increase	54,397

* Includes 2,701 acres, being the area irrigated by the Najafgarh jhil in the Delhi District, which in the return for Kharif 1880-81 was shown separately.
† The Grand Total of column 4 is different to that shown in the return for Kharif 1880-81, owing to Superintending Engineer having subsequently intimated the actual area irrigated by the Inundation Canals, and which has been entered in this return.

												NET INCREASE	143,280			

(a) Includes 12 acres supplementary irrigation not included in half-yearly returns.
(b) According to the census of 1881, except Jind, the actual area irrigated by the Inundation Canals in 1880-81, as entered in the Statements of Irrigation operations for kharif 1881-82 (vide foot-note † attached thereto), has been taken into account, and not that as shown in the annual statements of Irrigation and Revenue.

SUPPLEMENT TO

The Gazette of India.

Nº 41.] CALCUTTA, SATURDAY, OCTOBER 14, 1882.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

SIMLA,
The 5th October 1882.

FRED. FIREBRACE, *Major, R.E.,*
Under-Secretary.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 5th October, 1882.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding.*
His Honour the Lieutenant-Governor of the Panjáb, K.C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble W. C. Plowden.

PANJÁB UNIVERSITY BILL

The Hon'ble MR. GIBBS moved that the Report of the Select Committee on the Bill to establish and incorporate the University of the Panjáb be taken into consideration.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS also moved that the Bill as amended be passed. He said:—

"The Bill has received the very careful attention of the Select Committee, and we are greatly indebted to His Honour the Lieutenant-Governor for the assistance he has rendered to us in our work.

"It will be seen, I think, that the great object which the promoters of the Bill had, namely, to preserve the peculiar feature of the Oriental Department of the Panjáb College, has been carried out, and the new University will be able to create an Oriental Faculty, in which degrees somewhat similar in name, but with sufficient difference to prevent their being confounded with those given by the European Faculties, will be granted to those who pass such examinations as may be finally determined on by the University, with the sanction of the Government of India.

"It will be seen that the general management of the University will be conducted in communication with the Government of the Panjáb, the sanction of the Government of India being alone confined to the making and amending of the Statutes of the University, the Rules and Regulations for examinations, and the conditions to be fulfilled by the candidates for degrees. The provision that these two points should be left for the general sanction of the Government of India will, it is considered, prove a sufficient guarantee that the degrees and distinctions are properly conferred, while all other matters may justly be left to the Lieutenant-Governor of the Panjáb, who is also Chancellor of the University.

"The Report of the Select Committee is so full, that I need not take up the time of the Council with any detailed account of the alterations we have made, but will content myself with saying that, in passing the Bill as now framed, I feel assured that the Council will be carrying out the wishes of those interested

in the scheme; and I sincerely trust that the new University may prove a blessing to the people of the Panjáb."

His Honour THE LIEUTENANT-GOVERNOR of the Panjáb said:—

"I trust the Panjáb University Bill will be passed at this sitting of Council, and that I shall be able at last to congratulate the chiefs, nobles and people of the Panjáb upon the success which has crowned their efforts after seventeen long years of waiting and working. If any proof be needed of the thorough genuineness of the demand for a University in the Panjáb, it is, I think, to be found in the steady perseverance with which, in spite of many and repeated official discouragements and refusals, this object has been pursued by the people, and the liberality with which Natives of all ranks in the Panjáb have contributed for its attainment. For the purposes of the University, there is now a sum of no less than Rs. 3,75,000 invested in Government 4 per cent. paper,—all derived from voluntary donations,—and a regular annual income of about Rs. 45,000 from interest, contributions and fees, exclusive of any support from Government. This is a magnificent illustration of the principle of self-help which Government are now beginning to insist upon as a cardinal point in their educational policy.

"The movement for a University originated in a letter of the late lamented Sir Donald Macleod, dated 10th June, 1865, in which he called for suggestions for the improvement of Oriental learning and the extension of a sound vernacular literature, by transfusing into the languages of the country the knowledge, literature and science of the West. The subject was at once taken warmly up by a literary society, called the Anjuman-i-Panjáb, which had just been founded at Lahore, under the guidance of Dr. Leitner, to whose devotion and untiring services in connection with the University movement it is impossible to give too much prominence. A separate committee of European officers, of whom I had the honour to be one, was at the same time formed at Lahore to consider the question. The suggestions for the improvement of vernacular literature were expanded by the Anjuman into a proposal for the establishment at Lahore of an Oriental University, which should be a supreme literary, examining and teaching body for Oriental literature and Western science, and which should utilize and develop the existing educational elements in the country.

"Besides endeavouring to revive an interest in Oriental learning, to teach as far as possible through the vernaculars, and to stimulate the production of original vernacular literature, one of the chief aims of the proposed University, which should never be lost sight of, was the introduction of a popular and national system of education on the principles of the Education Despatch of 1854, by giving the people a large and direct voice in the regulation of their own educational affairs. This was very strongly insisted upon by Sir Donald Macleod, who desired as far as possible to promote spontaneity of action on the part of the Native community, and who was opposed to their being too much guided by the opinions and advice of European gentlemen. In the University as now to be established, this popular element is fully secured. The learned and influential classes of the Province will, by the Statutes, be associated with the officers of Government in the promotion and supervision of popular education. The Senate will be a consulting body in all questions of education, including primary education. It will assume, in fact, the position of a Board of Education for the Panjáb, and become in educational matters an embodiment of the principles of local self-government as recently enunciated by the Government of India.

"The name of 'Oriental University,' under which the movement was first started, was in some respects an unfortunate one. It gave rise in some quarters to the belief that the movement was a reaction against high English education and an attempt to revive the controversy between Orientalists and Anglicists, which had been fought out in the time of Lord William Bentinck. To this radical misconception of its objects and aims I believe the long-continued official discouragement and the direct opposition from a limited section of the Native community, which the movement met with, to be mainly due. So difficult,

indeed, has it been to eradicate this misconception, that, only a few months ago, a number of English-speaking Natives presented to me a petition against the University on the ground that its establishment would be detrimental to high English education and lower the value of English degrees.

"In truth, however, the necessity for the highest study of English has been recognised from the very first. In one of the earliest papers published on the subject by the European Committee of support—a paper entitled 'Objects and Principles of the proposed Lahore University'—I find, for example, the following statement:—

"'It may be stated that, although the movement to which the University owes its origin has specially been termed '*Oriental*,' yet that, by the use of the term, no revival of the old warfare between the Orientalists and Anglicists is signified. While the revival of Eastern learning and the creation of a good vernacular literature will be the primary object of the University, yet English will be still considered as the natural complement of education, and of the highest value to the Native student whose mind has been thoroughly disciplined by a study of his Native classics.'

"And again:—

"'It has been stated that the present movement is in no way intended to inaugurate a reaction hostile to the present educational system. The advantages of English are so great, as the language of the ruling class, and as a vehicle for the direct communication of modern European thought and science, that it would not only be impolitic and foolish, but fatal to the success of the new University, to attempt to oppose it or limit its influence. It may, moreover, be added that the Natives of India have so keen an appreciation of the advantages they gain from a knowledge of English, that there is no fear of its study being neglected.'

"Again, at a meeting of those interested in the promotion of the objects of the University, held at Lahore on 12th March, 1868, the following resolution was passed:—

"'That education be conveyed, as far as possible, through the medium of the vernacular.

"'That, while the highest honours of the University be reserved for those who attain the highest form of education, which, it is admitted, can only at present be attained by those possessing a thorough knowledge of English, the University shall also recognize and honour literary merit and learning in the case of those unacquainted with the English language.'

"Later on, when the Panjáb University College was established, the use of English as the medium of examination and instruction in all subjects which cannot be completely taught in the vernacular, the study of English in all schools and colleges connected with the institution, and the necessity of a thorough acquaintance with English as a condition of obtaining the highest honours of the institution, were recorded among the fundamental principles in the constitution of the college, as published in the Government of India Notification No. 472, dated 8th December, 1869.

"Although, therefore, there was no good reason to fear that high English education would be neglected, it was nevertheless just and right that, before consenting to comply with the wishes of the chiefs and people of the Panjáb and to raise the University College to the status of a University with power to grant degrees, the Government of India and the Secretary of State should be thoroughly satisfied that examiners, at once competent and independent, could be obtained for a University at Lahore, that a sufficient amount of controlling public opinion could be brought to bear on teachers and examiners through the medium of the Senate, and that the tests to be applied for degrees should be not less severe than in other Indian Universities, and should be an index that the students possessed definite and sufficiently high acquirements. As regards degrees in Arts, these conditions have been fulfilled, and the Secretary of State has expressed himself satisfied with the evidence as to the sufficiency of the tests. The new University, however, will not be empowered to grant degrees in Law, Science, Medicine or Engineering till such time as the Government of India is satisfied that the proficiency of the Panjáb students in these branches of knowledge also is equal to that of students who receive degrees from other Indian Universities.

"The interests of high English education and of Western science having thus been carefully guarded, it became still more imperative, in framing the University Bill, that the reasonable hopes and expectations of the chiefs and people of the Panjáb, who would have taken little, if any, interest in a project for a

University of a purely English type, but who are intensely interested in the Oriental aspect of the question, should be satisfied. Anything short of this would not only disappoint the aspirations which they have all along entertained, but would make it impossible to carry out the understanding on which the large funds of the Panjáb University College have been collected. Indeed, the whole controversy regarding the status of the proposed University has really centred in the assumed impossibility of securing this essential object without lowering the English standard or confusing the Oriental with the English degrees. Sections 12 and 14 of the Bill deal with this question. They are, in my opinion, the most important sections in the Bill, and I trust the Council will be of opinion that they solve the difficulty in a satisfactory manner.

"It will be observed that by these sections a separate Oriental Faculty is created, with power to grant degrees of its own; and, in consideration of the origin and character of the whole movement, the Oriental Faculty is constituted the first Faculty in order of precedence in the University. I cannot describe the object and probable effect of this arrangement better than by reading from the Report of the Select Committee a short extract taken almost *verbatim* from the letter of the Panjáb Government in which the arrangement was proposed:—

"'At present, the Oriental Department in the College is a section of the Faculty of Arts. We propose to empower the Senate to appoint a separate Oriental Faculty, thus asserting, beyond the possibility of mistake, in the constitution of the University, the prominent position assigned to Oriental and vernacular studies. In the Oriental Faculty, degrees would be granted as separate and distinct from degrees in the Faculty of Arts as are the degrees in Law or Medicine. For the B. A. and M. A. degrees, English should be the obligatory instrument both of instruction and examination. For degrees in the Oriental Faculty, in which the vernacular would be the instrument of tuition and examination, we propose the titles of Bachelor, Master and Doctor of Oriental Learning. We would leave the Senate, after the passing of the Bill, to devise precise and detailed rules prescribing the conditions and examinations required for such degrees; and such rules would be submitted, in due course, for the sanction of the Government of India. Here it is only necessary to say that the Oriental degrees would attest general education, that they would be earned by a course resembling as nearly as possible the Arts course, and that they would differ from the ordinary B. A. and M. A. degrees because the Bachelors and Masters of Arts would be obliged to acquire their knowledge in English, while the Bachelors and Masters of Oriental Learning would not necessarily be required to know English at all. They might, of course, learn more or less English at their option. They might even be examined in English as a classical language, should the Senate desire this. But the important point would be that the B. A. and M. A. degrees would, and the Oriental degrees would not, guarantee English qualification. In this way we think that the wishes of the founders and benefactors of the Panjáb University will be properly met, because degrees will be given, as they have always desired, to students who do not know English; while the value to be attached to the degrees in the Oriental Faculty, thus distinguished by an appropriate designation, will not be confounded with that of degrees in Arts, and will be proportionate to the acquirements of the candidates who obtain them as prescribed in the standards of examination.'

"I trust, then, that the misunderstanding between the advocates of Oriental and of Western culture, in so far as it existed in the Panjáb, has been got rid of once and for all by this arrangement; that henceforth both parties will meet on common ground and work together hand in hand for the advancement of all sound educational schemes in the Province, whether English or Oriental.

"I will not longer trespass on the indulgence of the Council, though there are several distinctive features of the proposed Panjáb University to which attention might usefully be directed—for example, its freedom and catholicity, whereby students of every language or race or colour, no matter where educated, can be admitted to its privileges and honours, provided only they come up to the standards prescribed; its teaching capacity; its literary functions. All these were embraced in the scheme as originally planned in 1865, and are fully provided for in the University as now to be established.

"I will only add that, as I aided in a very humble way to lay the foundation 17 years ago, so now I deem it a great privilege and honour to have been permitted to help in putting on the cope stone of this magnificent edifice."

The Hon'ble MR. ILBERT said:—

"I do not wish this Bill to become law without saying a few words about its provisions and the subject-matter to which it relates. My accidental connection with the introduction of the Bill, and, still more, the interest which I feel in any matter relating to education in India, must be my excuse for occupying the time of the Council.

"My hon'ble friend the Lieutenant-Governor has called attention to the fact that this, the fourth and youngest of the Indian Universities, possesses some characteristic features which distinguish her from her three elder sisters.

"The University of the Panjáb differs from the Universities of Calcutta, Madras and Bombay in the circumstances of its origin, in the stage at which it comes before the legislature, and in the objects at which it aims. And, first, as to the circumstances of its origin. The Panjáb University, differing in this respect from the other three Universities, but agreeing with the older English Universities, owes its origin, not to the State, but to private liberality. The founders and benefactors of this University seem to have taken to heart the eloquent words of Sir Henry Maine in one of his addresses to the Calcutta University—words which, perhaps, I may be allowed to quote.

"He said:—

"'I think that if ever there was a country in which we might expect the wealthier classes to have the ambition of perpetuating their names by University endowments, it is India. There seems to me to be no country in which men look so far forward or so far backward, in which men so deliberately sacrifice their lives to the consideration of what their ancestors have done before them, and of what their descendants will do after them. I may surprise some of you by saying this; but it is my fixed opinion that there is no surer, no easier and no cheaper road to immortality, such as can be obtained in this world, than that which lies through liberality expending itself in the foundation of educational endowments.'

"At a time like this, when we are doing our utmost to stimulate private enterprise in every form, and to induce the people at large to co-operate with the official classes in the work of governing the country, such a manifestation of voluntary and spontaneous liberality is especially welcome, and deserves our heartiest recognition and support.

"Then the Panjáb University differs from the other Universities in the stage at which it comes before us. As my hon'ble friend the Lieutenant-Governor has remarked, the task on which we are engaged to-day is not that of laying the foundation-stone of a new institution, but of placing the cope-stone on an institution which has already been in existence for many years. This circumstance has had an important bearing on the character of our legislation. We were warned that the ground before us was not clear, that there were existing regulations to which we were bound to conform, and existing trusts to which we were bound to give effect. I venture to think that some of these warnings were conveyed in somewhat exaggerated language. Nothing can be more clear than that, when the promoters of a new institution, or the founders of an existing institution, come to the legislature and ask it to confer upon them powers and privileges which the legislature alone can give, the legislature is fully entitled to annex terms and conditions to its gift. At the same time, it is obvious that, in the case of an institution such as this, it was the duty of the legislature to give effect to the wishes and intentions of the promoters and founders of the institution, in so far as those wishes and intentions were compatible with public policy.

"Those, my Lord, were the views which guided the Committee to which this Bill was entrusted; and, accordingly, before going into the details of the Bill, we thought it advisable to ascertain, as accurately as might be, what was the existing constitution of the Panjáb University College, of what particulars its property consisted, and on what trusts, if any, that property was held; and we prepared a set of questions for the purpose of obtaining information on these points. Our apologies are possibly due for the trouble we have thereby caused to the gentlemen on whom devolved the task of answering those questions; our thanks are certainly due to them for the labour which they bestowed. We had a précis of their answers prepared for the convenience of the Select Committee. I believe that the lynx eye of Dr. Leitner has detected some inaccuracies in this précis, but he may possibly derive some comfort from the assurance that two at least of the members of the Committee, including myself, had carefully examined the original documents before the précis was prepared. The conclusion we drew from these documents

was that the trusts and purposes to which we were bound to have regard were of two kinds. First, there were certain scholarships, prizes and other emoluments held on specific trusts. With these trusts there has not been, and will not be, any interference. Then there were to be gathered from some of the documents certain indications, more or less vague, of the purposes for which the contributions to the Panjáb University College, to the Oriental College and to the projected Panjáb University were solicited and made. Those indications were not sufficiently precise or consistent to constitute a trust, but, such as they were, we considered it our duty to have regard to them; and I do not think that there is anything inconsistent with them in the Bill, or that there need be anything inconsistent with them in the Statutes, Rules and Regulations which will have to be made under this measure when it has become law. And this leads me to consider some of the special and characteristic objects which the founders of this institution apparently had in view.

"In the first place, it was to be a teaching as well as an examining body. In this respect, as in the circumstances of its origin, it differs from the other Indian Universities, but agrees with the English Universities of Oxford and Cambridge. I should be the last person to criticise a feature which brings this institution into closer conformity with the renowned and venerable Universities of England, but I think it may be worth while to call attention to a certain risk to which any body which combines the functions of teaching and examining is necessarily exposed—the risk, namely, that the examining staff is not sufficiently independent of the teaching staff. That this risk is real and substantial I know from my own English experience, but that due provision will be made in the Statutes of this University to guard against it I have no reason to doubt.

"Another and more important feature of the new University is the prominence given in it to Oriental and vernacular studies. This feature threatened at one time to involve us in a formidable, and apparently interminable, controversy. I remember being told, before I came out to India, that the peculiar characteristic of Indian controversies was that they never came to an end, and that I should probably find Indian officials discussing, with unabated zeal, the same questions which exercised the minds of Lord Cornwallis and Sir John Shore. Accordingly, I was not surprised to find that the controversy which helped to make Lord Macaulay famous, and which some ignorant persons supposed that he had brought to a conclusion about fifty years ago, was still raging in the Panjáb. However, we looked this question in the face, and found that, when looked in the face, it was, like many other questions, not quite so difficult and insoluble as it had at first appeared. In dealing with it, we—and, when I say 'we,' I mean in particular my hon'ble friend the Lieutenant-Governor of the Panjáb, to whom more than to any one else is due the present form of this Bill—in dealing with the question, kept in view two or three guiding principles.

"In the first place, we bore in mind the comprehensive nature of the aims and objects of a University. In the days when etymology was not yet a science, people were fond of deriving the name of a 'University' from the universality of its aims. The derivation is erroneous, but the thought which suggested it is true. In any University which is worthy of the name, there is room, and ample room, both for Oriental and for Western studies. Next, we remembered that, whilst there are certain features which all Universities must possess in common, yet that, to give prominence to some one particular feature in one particular University, so far from being a matter for criticism, is a positive advantage. And, lastly, we considered that Oriental and Western learning differed from each other, not so much in degree as in kind, and that to confer, for proficiency in the one, marks of distinction which have been associated by usage with proficiency in the other, would be confusing and misleading. Accordingly, we have given effect to the wishes and intentions of the founders by the constitution of a special Oriental Faculty, and we have authorized the University to confer, for Oriental learning, degrees which are equally honourable with, but which cannot possibly be mistaken for, those which denote proficiency in the learning and literature of the West.

"Then, there was another difficult question which we had to consider, and that was, how far it would be possible to adopt the vernacular as the medium of instruction and examination. Those who advocate the adoption of the vernacular for these purposes are fond of contrasting the thoroughness of the instruction which the student thereby obtains with the flimsy and superficial education obtained through the medium of a foreign language. That is one side of the question. But there is another side, and, for the purpose of illustrating that other side, I shall take the liberty of again quoting from one of Sir Henry Maine's addresses to the Calcutta University. He was remarking on the change recently made in substituting classical languages for vernacular or spoken languages as subjects of examination, and he went on to say this:—

"'But, independently of the difficulty of examining in languages, many of which have no true literature, which have only a fictitious literature, a literature of translations, you must see what a premium is placed upon flimsiness in knowledge when a young man is examined in a spoken dialect, which is picked up, half unconsciously, in conversation and by the ear, against another young man who is examined in one of those classical languages which, before they are mastered, bring out the strongest powers of the memory and the reason. There is really nothing in common between the linguistic attainments of a student who passes or obtains honours in Greek, or Sanscrit, or Arabic, and those of one who passes in Burmese or Urya, or—for this is, to a certain extent, true of those languages—even in Bengálí or Hindustání.'

"I do not say that these remarks express the whole truth, but they do express one side of the truth, and it is a side of which it is important not to lose sight. So far as my own opinion goes, I do not think that it is possible at present to convey through the exclusive medium of a vernacular language such instruction in science as ought to be given—I do not say by elementary schools, but by a University. I do not think it is possible at present for two reasons—*first*, the imperfection of the language, and *secondly*, the want of books. It is not until a comparatively late stage of its existence that a language is capable of expressing the ideas of science. No nobler language was ever written or spoken than the language of Homer, and yet I think that even the Registrar of the Panjáb University College would find some difficulty in giving instruction in chemistry or geometry in the language of Homer. Then, even supposing the language to be more developed than it is, the mere want of books opposes a fatal obstacle to the further progress of the student. It must not be forgotten that the real value of a University degree consists, not so much in the actual knowledge, as in the potentiality of knowledge that it implies. The student who has been educated through the medium of a vernacular text-book may have mastered thoroughly such knowledge as he possesses; but, when he has come to the end of his text-book, he finds himself brought face to face with a blank wall. On the other hand, the education of a student who has obtained an acquaintance with one of the Western languages may be flimsy and superficial; but, at all events, he has obtained a key which will open to him the storehouse of all the learning and literature of the West. I hope it will not be supposed from what I have said that I desire in the slightest degree to disparage the admirable work which has been done, and is being done, by Dr. Leitner and his colleagues in preparing vernacular text-books for use in the University College and kindred institutions. There is no nobler, no more patriotic task, than that of raising a mode of speech from the level of a spoken dialect to the level of a literary language, of enriching a national language and creating a national literature. To make such an effort at all implies much enthusiasm and much imagination; and perhaps there is no reason to marvel that those who make the effort are sometimes involved in some confusion between what they have accomplished, what they are in process of accomplishing and what they hope to accomplish. I doubt whether the day has yet come when adequate University instruction can be conveyed exclusively through the medium of the vernacular languages of the Panjáb. That day may yet come, and, when it does come, its arrival will have been materially hastened by the labours of Dr. Leitner and his colleagues.

"Perhaps I have dwelt at unnecessary length on the distinctive features of the Panjáb University. I have done so because I observed in some of the criticisms of the Bill in its earlier stage that we were charged with having overlooked

these distinctive features, and with having copied too servilely the enactments which constituted and incorporated the three elder Universities. Possibly there may have been some justice in this charge so far as it related to the first draft of the Bill. We all remember the philosopher who professed his inability to frame to his satisfaction an abstract idea of a Lord Mayor without his fur gown and gold chain; and it is quite intelligible that there may have been some persons who felt a difficulty in recognising the Panjáb University without those Oriental literary titles, diplomas and marks of honour which they had been accustomed to regard as its outward and visible signs. But I hope that the Select Committee, and in particular that master artist who a few days ago, in a speech of unrivalled terseness, opened to the Simla public the treasures of local art, have removed such defects and shortcomings as may have existed in the original sketch, and that, in the finished picture which I now hold in my hand, the founders and benefactors of the Panjáb University will recognize a more faithful and life-like portrait of the child of their hopes and their imagination. I have nothing more to add except to wish for the new University a long, a prosperous and a brilliant career."

His Excellency THE PRESIDENT said:—

"After the very full exposition we have heard of the objects of the Bill in its present shape, and of the mode in which those objects will be attained under this measure when, as I trust, it becomes law, it would be quite unnecessary for me to enlarge upon the questions now before the Council; but I cannot let this Bill pass without expressing my great satisfaction that it should have fallen to my lot to occupy the position of Governor General and President of this Council at the time when this measure became law.

"Somewhat less than two years ago, on the occasion of my first visit to Lahore, I received more than one address from bodies in that city upon the subject of the proposal to create a University in the Panjáb. I then stated that I would give to the subject my careful consideration, and that I was very anxious to comply as far as possible with the strong wish evidently entertained by the leading men in the Panjáb that an institution of this description should be established in their midst; and I have fulfilled that pledge. I did not then state—for I had not sufficient information to enable me to state—what would be the result of the consideration given to this subject by the Government of India; but I am exceedingly glad that that result has been one which will, I trust, be greatly to the advantage of the population of the Panjáb and satisfactory to those who have, during the lengthened period to which my hon'ble friend the Lieutenant-Governor alluded, devoted themselves to further this great and important object.

"I entirely agree with one remark among many which fell from my hon'ble friend Mr. Ilbert when he said that it was not a disadvantage, but, on the contrary, was to be regarded with approval, that this University would differ in some respects from the other Universities in this country. I think that that variety in the character of the various educational institutions of the country is in itself a very great advantage, and, so far from considering it any drawback, I view it with great satisfaction.

"I also desire to express my very deep sense of the obligation under which the Princes, the Chiefs and the Native gentry of the Panjáb have laid the Government and the public by the manner in which they have come forward to support and endow this institution. The efforts which they have made are entirely in the direction in which, as it seems to me, it is most desirable that educational proceedings in this country should move; and I regard it as a most auspicious event that they should have come forward so liberally and based the foundation of this University, not upon Government contributions, nor even upon Government support, but upon the free and magnificent gifts of those who are the natural chiefs and leaders of the people of the Panjáb.

"I do not think I need now trouble the Council with any further observations. I hope ere long to have an opportunity of addressing the new University when it meets under the auspices of the law about to be passed. It only, therefore, remains for me to offer my hearty congratulations to the Lieutenant-Governor on the fortunate circumstance that it has been during the period of his administration—from which I anticipate so many benefits to the Panjáb—that the coping-stone, as he has said, has been put upon an institution in laying the foundation of which he himself so many years ago took a part."

The Motion was put and agreed to.

ELEPHANTS PRESERVATION ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. GIBBS moved for leave to introduce a Bill to amend the Elephants Preservation Act, 1879. He said:—

"That Act provides in the third section that—

"'No person shall kill, injure or capture, or attempt to kill, injure or capture, any wild elephant unless—

(*a*) in defence of himself or some other person;

(*b*) when such elephant is found injuring houses or cultivation, or upon, or in the immediate vicinity of, any main public road or any railway or canal; or

(*c*) as permitted by a license granted under this Act.'

"And the fourth section provides that—

"'Every elephant captured, and the tusks of every elephant killed, in any of the cases mentioned in section three, clauses (*a*) and (*b*), by any person not licensed under this Act shall be the property of Government.'

"The Act, however, does not provide for the case of where a person without a license captures or kills an elephant which may not be engaged in any of the amusements to which the clause refers. This question has, I believe, arisen out of the case of a person who captured three elephants for his own pleasure; in so doing, it became a question to whom the elephants belonged, and there were weighty arguments put forward as to whether the elephant was not a royal beast and the inheritance of kings, which arguments were found, however, not to be sufficient to solve the difficulty. The consequence is, that it has become necessary to repeal a portion of the fourth section of the Act, the effect of which will be that, in the case of any one killing or capturing an elephant without a license, the tusks or the elephant itself will become the property of Government."

The Motion was put and agreed to.

NIZÁMAT ACT REPEAL BILL.

The Hon'ble MR. ILBERT moved for leave to introduce a Bill to repeal Act No. XXVII of 1854. He said:—

"The necessity for this measure arises out of the arrangements which have recently been made with the ex-Nawáb Názim of Bengal. By Act XXVII of 1854 it was provided that legal processes which had to be served within the precincts of the Palace of Murshídábád should be served through the Superintendent of the Affairs of the Nizámat, or other officer discharging like functions. It will be in the remembrance of the Council that, by a deed executed in 1880, the Nawáb Názim of Bengal formally resigned the Nizámat, and, as part of the arrangements under that deed, the office of the Superintendent of the Affairs of the Nizámat has been abolished, and it is not likely that that office will be revived, or that any similar office will be created. Under those circumstances, it has become impracticable to give effect to the directions of Act XXVII of 1854, and it has been thought expedient to repeal that Act and to leave processes to be served within the precincts of the Palace of Murshídábád, as elsewhere, in accordance with the ordinary rules of law."

The Motion was put and agreed to.

PAPER CURRENCY ACT, 1871, AMENDMENT BILL.

Major the Hon'ble E. BARING moved that the Hon'ble Sir S. Bayley be added to the Select Committee on the Bill to amend the Indian Paper Currency Act, 1871.

The Motion was put and agreed to.

Major the Hon'ble E. BARING also moved that the Bill be referred back to the Select Committee. He said:—

"It will be in the recollection of those Members of the Council who were here last summer that my hon'ble friend Mr. Stokes introduced a Bill into the Council having in view the establishment of a circle of issue in British Burma. Subsequently, in conformity with the general policy of the Government in such matters, it was determined to incorporate the whole law relating to Paper Currency into one Act—that is to say, to repeal the existing law, and to re-enact it together with such changes as were necessary in order to provide for the establishment of a circle of issue in British Burma. The opportunity was at the same time taken to make some further amendments in the law. Most of these were of very trifling importance, and no objection was taken to them. One amendment, however, was of some importance. It was proposed, in conformity with orders which had been received from the late Secretary of State, Lord Cranbrook, in 1879, to relieve the Paper Currency Department of the obligation, at present incumbent upon it, to exchange notes for bullion. The result of this amendment of the law would have been that the charge for interest on the bullion whilst it remained at the Mint, and before it had been coined into rupees, would have fallen upon the importers of bullion and not upon the Paper Currency Department. This proposed amendment of the law met, naturally enough, with considerable objections from the importers of bullion. These objections found expression in this Council at the hands of my hon'ble friend Mr. Inglis. The subject was discussed at the last meeting of the Calcutta session. The importers of bullion asked for further time to represent their views, which was readily accorded by the Government. A memorial was in the course of the summer received from certain of the Calcutta banks. The banks raised one or two points into which I need not now enter fully, but as to which it will be sufficient for me to say that the thorough examination of them will take some little time. Further, before we come to any definite conclusion on the subject, a communication to the Secretary of State will probably be necessary. In the meanwhile, Burma wants its paper currency. The export season, when the notes will be especially useful to the mercantile community, is approaching. The notes themselves will be very shortly received. Under these circumstances, we propose to refer the Bill back to the Select Committee with a view to its being passed in its original form, but without the amendment in the law to which the importers of bullion take exception. It occurred to me last March that this contingency might possibly arise, and I therefore asked my hon'ble friend Mr. Inglis whether he saw any objection to the adoption of this course. In the course of the debate which ensued upon the subject, my hon'ble friend said that he saw no objection whatever to the measure being passed into law at Simla, provided it did not contain the provision to which the importers of bullion objected. As to the course which the Government will finally pursue in respect to the obligation of the Paper Currency Department of giving notes for bullion, I can at present give no pledge whatever. All I can say is, that, if any legislation on this point is required, it will take place at Calcutta and not at Simla.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 19th October, 1882.

D. FITZPATRICK,

Secretary to the Government of India,

Legislative Department.

SIMLA;

The 5th October, 1882.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

SUSPENSIONS AND REMISSIONS OF REVENUE FOR FAILURE OF CROP.

Circular No. 58R.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department,—dated Simla, 12th October 1882.

READ the following correspondence with the Government of the North-Western Provinces and Oudh on a proposal to charge interest on suspensions and arrears of land revenue:—

Letter from the Government of the North-Western Provinces and Oudh, No. 2350, dated the 9th August 1878.

Letter to the Government of the North-Western Provinces and Oudh, No. 571, dated the 6th September 1878.

Letter from the Government of the North-Western Provinces and Oudh, No. 3002A., dated the 5th October 1878.

Letter to the Government of the North-Western Provinces and Oudh, No. 26, dated the 14th January 1879.

Read the undermentioned correspondence with the Government of the North-Western Provinces and Oudh on remissions and suspensions of land revenue in a time of general scarcity:—

Letter from the Government of the North-Western Provinces and Oudh, No. 2738A., dated the 26th November 1877.

Letter to the Government of the North-Western Provinces and Oudh, No. 481, dated the 6th August 1878.

Letter from the Government of the North-Western Provinces and Oudh, No. 2636A., dated the 3rd September 1878.

Read—

Letter to the Secretary to the Famine Commission, No. 28, dated 14th January 1879, forwarding for consideration a selection of the correspondence specified above.

Famine Commission Report, Part II, Chapter III, Section III on the system of collecting the land revenue.

Read also the following correspondence on the question of varying the revenue demand with regard to the character of the seasons, which arose in connection with the agrarian disturbances in the Dekhan in 1874-75:—

Government of India (Home Department), Circular No. 6—265-274, dated the 6th March 1879.

Letters from the Government of Madras, { No. 2171, dated the 26th August 1879. / No. 2304, dated the 8th September 1879.

Letter from the Government of Bombay, No. 617, dated the 4th February 1880.

Letter from the Government of Bengal, No. 312, dated the 19th January 1880.

Letter from the Government of the North-Western Provinces and Oudh, No. 2615, dated the 22nd December 1879.

Letter from the Government of the Punjab, No. 155S., dated the 10th July 1880.

Letter from the Chief Commissioner, Central Provinces, No. 4207-233, dated the 17th October 1879.

Letter from the Chief Commissioner, British Burmah, No. 338, dated the 16th January 1880.

Letter from the Chief Commissioner of Coorg, No. 1010-56, dated the 10th January 1880.

Letter from the Chief Commissioner of Assam, No. 1774, dated the 29th September 1879.

Letter from the Resident at Hyderabad, No. 66, dated the 3rd March 1880.

RESOLUTION.

Question of relief by remission and suspension of revenue in time of scarcity referred by North-Western Provinces Government in 1878.

THE question of the extent to which revenue should be remitted or suspended in times of famine and scarcity, and of the degree of elasticity which can be given to the revenue system without losing the advantages of a fixed demand, has been before the Government of India for some years. The matter was prominently brought to the notice of the Government of India in a formal manner by the North-Western Provinces Government in their Secretary's letter No. 2350, dated the 9th August 1878. The North-Western Provinces Government suggested the extension, to cases of general drought and other great calamities, of the principles of section 23 of the Provincial rent law, which provided for the remission or suspension of rent and revenue in the event of the destruction of crops by hailstorms, floods, or similar causes. At the same time it brought forward a proposal to amend the revenue law by allowing

the charge of interest on suspended instalments of revenue with the object of establishing a system under which suspensions of revenue would be more systematically and more readily granted in case of need. It was argued on the one hand that the derangement of Imperial finance and the loss caused by delaying the collections made the revenue authorities reluctant to show indulgence even in cases of plain necessity, and it was represented on the other that if interest was chargeable there would be no loss, and that the authorities would be left free to act in the manner best fitted to save the people from distress, and to serve the true interests of Government.

Considered by the Famine Commission.

2. Shortly afterwards the whole question of the system under which remissions and suspensions of land revenue might be allowed came under the consideration of the Famine Commission. The Government of India, therefore, after some discussion of the matter with the Local Government, considered it desirable to reserve its final decision on the questions raised by the North-Western Provinces Government until such time as it had received and considered the opinion of the Famine Commissioners.

Referred to Local Governments by the Government of India in connection with the Dekhan riots.

3. About the same time also the question of varying the revenue demand with reference to the character of the seasons came before the Government of India in connection with distress in the Dekhan; and the correspondence which passed between the Government of India and that of Bombay was submitted to each Local Government with Circular No. 6—265-274, dated 6th March 1879, with a request for an expression of opinion whether there were any districts or parts of districts within its administration to which the plan of a fluctuating or varying assessment might be applied with advantage.

Necessity of dealing with it confirmed by recent reports of agricultural distress.

4. The Government of India is in possession of the views of the Famine Commission as stated in paragraph 11, Chapter III, Section III of Part II of their report.* It has also before it the opinions of the Local Governments called for by the circular above noted. It is now, therefore, in a position to deal with the whole subject. The necessity of taking it up, and of following to some extent the lines indicated by the North-Western Provinces Government in 1878, has been forcibly pressed upon the attention of the Government of India by reports lately received on the agricultural condition of several parts of the country during the years immediately succeeding the famine, which show that the measures taken in 1877-78 for preventing the revenue from pressing too heavily on the people failed adequately to meet the difficulty, and that in many places serious and permanent mischief has been caused.

* Appendix A.

Present Resolution does not affect Bombay, Madras, and permanently-settled tracts.

5. In the present Resolution it is the intention of the Government of India to deal with the subject so far only as the temporarily-settled districts of Upper India and the Central Provinces are concerned, leaving for future consideration any questions concerning the provinces of Bombay and Madras, where the principles underlying the proposals which it contains already to a greater or less extent form part of the settlement system.

Rigid enforcement of revenue demand not absolutely intended by the authors of the revenue system.

6. There can be no doubt that the rigid enforcement of the revenue demand, irrespective of calamities and of seasons, was not part of the intention of the authors of the revenue system in Northern India. This is amply proved by passages in the published Despatches of Mr. Thomason, Lieutenant-Governor of the North-Western Provinces, whose instructions formed the basis of the present system of settlement in all temporarily-settled provinces of Upper India, and from which some passages are quoted in Appendix B to this Resolution. As time has gone on, however, and as, owing to the extended area of cultivation and increase of prosperity, the relative pressure of the revenue has become less, the theory of a fixed unalterable demand, and of the duty of the landowner and cultivator to save in good years sufficient to meet the loss of bad seasons, has attained greater prominence.

Conclusions of Famine Commissioners.

7. The conclusion formed by the Famine Commissioners was that in the extreme case of a failure of the crop caused by drought so severe as to produce famine, nobody should be forced to pay the land revenue by borrowing when his crops have been such as to leave him no surplus above the amount needed for the support of himself and his family. They accordingly advocated a system of suspensions in the first instance, which should be given at an early period, and should be allowed to pass into remissions only in cases of severe and long continued loss. These principles are entirely concurred in, and on them are

based the following suggestions, premising that though the Government of India cannot in all cases expect the cultivator to lay by the surplus of good years in order to meet the deficiencies of bad years, it claims that the suspensions of bad seasons should as a rule be made good from the surplus of future good harvests.

Suspension, not remission of revenue, to be the ordinary mode of relief.

8. The Government of India desires to explain at the outset that it has no intention of allowing the introduction of a lax system of collection under which arrears will be allowed to accumulate. It does not wish to depart from the principle of a fixed assessment to a greater degree than is rendered absolutely necessary by the uncertain conditions attaching to agriculture in some parts of India. It believes that a moderate fixed demand regularly collected encourages thrift, and is ordinarily the best system for the welfare of the people; but, on the other hand, it does not wish the revenue administration to be worked with the rigidity of a machine. It desires to recognise that there are calamities of season in which even a moderate assessment cannot be paid, and that the burthen of a bad season is felt in proportion to the less or greater moderation of the assessment. At the same time it wishes it to be clearly understood that although in the case of crushing calamities remissions may be unavoidable, yet as a rule, suspension of the revenue is the remedy which the Government of India wishes to be used. It is only when suspension is obviously insufficient, and when it is clear that to enforce payment, even by easy instalments, would cause permanent injury to the agricultural prosperity of the country, that the revenue should be remitted. By suspending the revenue the Government can assist the people in a legitimate way, and save them from the calamity of being forced to borrow at exorbitant interest, without injuring their sense of responsibility and independence.

Summary of measures required—six in number.

9. Influenced by these principles, the Government of India considers it necessary that rules should be laid down under which the revenue authorities shall give certain and immediate relief to the people in time of need. The following are in its opinion the leading measures which the rules should comprise:—(i) the classification of agricultural land; (ii) the adaptation of the revenue system to the character of each class; (iii) the extension of relief to tenants; (iv) an investigation of the outturn of every harvest; (v) the grant to local officials of authority to act; (vi) the charge of interest on suspended instalments.

(i) Classification of agricultural land

10. The Government of India has in its Resolution No. 6—340-350G., dated 8th December 1881, already indicated that, in order to deal efficiently with the revenue administration of this country, the first step which must be taken in each province is to classify the land of every district. In dealing with the subject in the present Resolution it is necessary to consider the matter in greater detail and to decide the manner in which land should be classified. The classification may appropriately follow the lines suggested by the North-Western Provinces Government in paragraph 8 of their letter No. 2615, dated the 22nd December 1879 quoted in Appendix C. In accordance with its natural conditions agricultural land will therefore be distributed into three classes:— as "Secure," "Insecure" or "Fluctuating,"

(1) Areas of which the produce is to a great extent secured against failure. These may be termed "Secure areas."

(2) Areas on which in seasons of abnormal character remissions or suspensions of revenue are likely to be needed. These may be classed as "Insecure areas."

(3) Areas of which the cultivation is so fluctuating as to render an annual adjustment requisite. These may be termed "Fluctuating areas."

to be commenced at an early date,

11. As without some distribution of the above character it will be impossible to apply the system which it is proposed to adopt, it is desired that immediate measures may be taken to commence the classification of land in each district. The work will take some time to conclude. It is not, therefore, contemplated that the classification which is immediately called for should be complete. It will be sufficient at first that in each district the tracts which are most precarious, and in which distress is most likely to occur, should be at once separately recorded. But year by year the more careful study of

agricultural circumstances which is now demanded from revenue officials should lead to the more perfect classification which is required for the effectual fulfilment of the purposes in view.

to have regard to interests of tenants.

12. In making the classification the unit will ordinarily be the estate. It must be borne in mind, however, that the interests of the cultivating occupants are quite as important as those of the owners of land. Some estates are made up of tracts which, though belonging to the same proprietors, are entirely distinct in character, and in the interests of the different tenants who pay rent for them must be differently treated. One-half of a village may be secure, and the other half entirely insecure. Such, for example, is often the case in estates situated on the banks of rivers. Those areas which are distant from the river may be level, may contain good soil, and be thoroughly irrigated by canals or wells. Those areas which are near the river may on the other hand be undulating, have little good soil, and be without any kind of irrigation. In such cases the interests of the cultivating population of the precarious tract appear to demand the application of a system of relief, without respect to the ability of the proprietors to pay the revenue of the whole estate. Estates of this kind should therefore be sub-divided, one portion being classified as secure, and the other portion either as insecure or fluctuating, as circumstances may require. In the following paragraphs "Estates" will mean the areas adopted as units of classification.

Description of secure, insecure and fluctuating areas.

13. The Government of India does not wish to bind the Local Governments by hard-and-fast rules in this matter. Speaking generally, and as at present advised, it considers that all estates of which 50 per cent. and upwards of the cultivated area is secured by irrigation, and which is not liable to failure in time of drought, may be classed under "Secure areas." Into this class also will fall all estates in those parts of the country, such as the high lands of Central India, which are, whether irrigated or not, practically safe from drought.

Estates which have less than 50 per cent. of the area secured, and which lie within the zone affected by periodical droughts, will be placed in the "Insecure areas." Into this class will come also areas of which the condition is normally insecure owing to any such cause as exposure to floods, constant epidemic disease of men or cattle, and the like.

In the third class—"Fluctuating areas"—will fall those tracts in which the area under cultivation is a very inconstant and varying quantity.

Local Government to arrange details.

14. These are the principles on which the classification should, in the opinion of the Government of India, be based. But it is evidently necessary to leave a great deal to local experience. The Government of India has stated the objects it has in view; and the work of classification must necessarily be left to the Local Government. It is believed that this work can be performed by the district establishments under the guidance of the Local Agricultural Departments, but the Government of India desires to be informed if there is any doubt about the correctness of this view.

(ii) Adaptation of the revenue system to the character of each class.

15. Having thus classified the land, the next step is to determine how the revenue system can be most appropriately adapted to the requirements of each class.

In Secure areas, obviously neither suspension nor remission will ordinarily be allowed, though the former may occasionally be found necessary in the case of serious but occasional calamities, such as hailstorms, &c. The term "Secure" means secure from drought or inundation, and is not intended to imply security from hailstorms, devastation by locusts, and similar calamities.

Scale of loss of crop.

16. In Insecure areas it is necessary to adopt a graduated scale of suspension which shall fit in with a graduated scale of loss of crop. This latter scale may be graduated as follows:—

A—When the loss is total.

B—When the crop is estimated at less than $\frac{1}{4}$ of a normal crop.

C—When the crop is estimated at between $\frac{1}{4}$ and $\frac{1}{2}$ of a normal crop.

D—When the crop is estimated at between $\frac{1}{2}$ and $\frac{3}{4}$ of a normal crop.

Definition of 'normal crop.'

17. By the words normal crop as used in this Resolution must be understood a crop which is equal to $\frac{3}{4}$ of a full or bumper crop. The signification thus attached to the term is one which is familiar both to the revenue officials and to the agricultural communities of most parts of India.

Scale of suspension.

18. It will be necessary for the Local Governments to draw up a scale of suspension, which the revenue officers can adapt to the above scale of losses. The suspensions may have to be modified somewhat according to the known severity or leniency of the incidence of the revenue assessments, and the scale may therefore have a maximum and minimum within which suspensions should be granted for each grade in the scale of loss. Thus, to meet a loss under grade D, where the crop is estimated between $\frac{1}{2}$ and $\frac{3}{4}$ of a normal crop, the suspension of rent and revenue may vary between $\frac{1}{5}$ and $\frac{1}{4}$ of the demand. To meet a loss estimated to fall in grade C, suspensions may be given from $\frac{1}{4}$ to $\frac{1}{3}$ of the demand. To grade B may be adapted a suspension varying between $\frac{1}{3}$ and $\frac{3}{4}$ of the demand, and to meet a loss in grade A the whole amount may be suspended. It is to be arranged that such suspensions should be given in aliquot parts, not of the *annual* demand, but of the *kist* or instalment which is payable out of the crop that has failed.

Remissions will depend on subsequent crops and will be reported to Government of India.

19. Whatever rules may be proposed by the Local Government for the suspension of revenue under this Resolution it must be understood that the question whether suspension will ultimately pass into remission will in the main depend on the character of subsequent crops. The action of the Local Governments in granting remissions will always be reported to the Government of India, and where such remissions aggregate 10 per cent. of the entire land Revenue of the province the previous sanction of the Government of India will be required.

Modifications may be suggested.

20. The Government of India desires to know if there will be any serious difficulty in preparing and carrying out a system of suspensions based on the above or some similar scale, in which the proportion of the demand to be suspended rises in proportion to the severity of the loss, and what modifications in the scales can be suggested which will better adapt them in each province to serve as a self-regulating guide to the operations of the revenue officers.

Assessment of fluctuating areas to be annual.

21. Turning now to "Fluctuating areas," the assessment of estates in this class will vary with the area under cultivation. The assessment of such estates should not be in the form of a lump sum, but in that of fixed acreage rates, varying if necessary for different qualities of soil. The revenue of the land cultivated in each year should be collected, and that of the uncultivated land should be remitted, as a matter of course. In case of failure of the crops on the cultivated area, the rules applicable to "Insecure areas" will apply.

Not to be introduced against the wishes of proprietors during current settlement except in extreme cases.

22. In the case of estates already settled, the adoption of the proposed system for fluctuating areas must, the Government of India is aware, depend on the wishes of the persons with whom the settlement has been made. And it will ordinarily be expedient to leave matters as they are until the settlement is at an end. Only in extreme cases where the agricultural prosperity of a country is evidently injured by the present system would the Government of India desire to have the question considered whether a different system should be adopted during the currency of the settlement. In such cases, since the rates have probably been fixed by the Settlement Officer with special reference to the fluctuations of the cultivated area, it is obvious that to adapt existing rates year by year to the actual land under cultivation may involve serious loss to Government; nor again is it certain that where the settlement holder is not himself the cultivator he will consent to a revised system being applied both to rent and revenue. Should Local Governments therefore desire to introduce the above system anywhere during the currency of the existing settlement, each case should be reported to the Government of India for orders.

(iii) Extension of relief to tenant

23. It has been implied above (paragraph 12) that in dealing with this subject the Government of India has at heart the interests of the cultivators quite as much as those of the proprietors of land. The remission and suspension of rent must be a necessary consequence of the remission and suspension of revenue. This is a matter which ought perhaps to be provided for in the law

of landlord and tenant in each province. There is reason to believe that the present laws are deficient in this respect, and it is left to the Government in its executive capacity to see, so far as it can, that the intentions now expressed are carried out. It must be understood, therefore, that all suspensions or remissions of revenue involve, and are conditional on, the suspension and remission of the corresponding rent. Care should be taken to inform the tenants concerned and to have the amounts suspended or remitted recorded in the village accounts. If any proprietor collects or attempts to collect any rent thus remitted or suspended or evicts any tenant for non-payment of such rent, the Government will at once collect from him the whole amount of revenue remitted or suspended. This rule should be invariably and rigorously enforced. It may be feared that even this precaution may be insufficient in the case of tenants-at-will. But without legislation nothing more can be done.

(iv) Investigation of the character of each harvest.

24. It is evident that rules of the nature of those here laid down cannot be worked unless the district officials have full and timely information of agricultural prospects. It is necessary therefore to provide and maintain in working order the machinery requisite for this purpose. The duty of collecting information in the first instance will rest on the accountants of villages and on the kanungos who supervise them, and a regular system of reporting must be introduced, which will ensure the conveyance from time to time to the district officer of early information regarding the condition of each harvest. Measures may be taken to induce the landowners themselves, and the heads of villages, where such officers exist, to take a part in this matter.

Enquiry to be made by responsible officers.

25. On receipt of information that the harvest in any locality has been injured or has failed, the district officer will be responsible that a proper enquiry is made, and that the accuracy of the information is tested. It must be an invariable rule that no suspension shall be given until the area affected has been inspected by some officer of the district staff not below the rank of Deputy Collector or Extra Assistant Commissioner. In the more important cases the inspection should be made by the district officer himself or by one of his covenanted assistants. It is not intended to require a minute personal enquiry or full statistical report in each case. But it is intended that the inspection shall be of such a character as to be an effective check on the subordinate agency, and to guard the Government against fraud.

Periodical inspection of every village necessary.

26. In connection with this matter the Government of India takes the opportunity of once more expressing the importance which it attaches to the rules believed to be in force in every province, which require that every village or estate shall be visited and inspected by one of the district officer's assistants periodically, and that notes of the inspection shall be recorded. The great power now given to district officers in the matter of suspending and remitting the revenue renders it more than ever necessary that they and their subordinates shall acquire a full knowledge of the country under their charge, not only in the camping season, but at all times of the year, and especially in the rains, when the agricultural character of the year is determined.

(v) Grant to local officials of authority to act.

27. The duty of proposing remissions and suspensions of revenue will rest with the officers in charge of districts. The Government of India desires that they shall be required to submit their proposals to the Commissioners of Divisions, whose sanction shall be necessary and whose orders, subject of course to revision by the Local Government, will be final. The Commissioners' sanction should not be given as a mere matter of form, nor accorded without a sufficient amount of personal investigation as to the general character of the season and harvest. The Government of India trusts that the Local Governments will look to these high officials to see that the rules now laid down are carried out with zeal and intelligence.

(vi) Charge of interest on arrears of revenue.

28. The principle advocated by the Government of the North-Western Provinces of charging interest upon arrears of revenue is now accepted by the Government of India as affording without loss to the State the readiest means of advancing capital to the cultivating population when they most

need it. A rate of 6¼ per cent. will in the opinion of the Government of India suffice to protect the State against material loss. On this point the opinion of the Local Governments is desired, with an explanation of any alteration which it may render requisite in the revenue law of each province. A corresponding provision for the recovery of interest at the same rate upon arrears of rent suspended under the proposed rules must be introduced into the Rent Law.

Reports expected from Local Governments.

29. The Government of India will be glad to learn what modifications in the above proposals the Local Governments deem necessary for each province. In the meanwhile, should the occasion unfortunately arise, the suggested rules may be accepted as a guide for dealing with the question of suspensions. The Government of India desires also to receive from each Local Government, as soon as it can be drawn up, a statement showing the amount of land which may be considered secure, and on which, therefore, the revenue is practically not liable to fluctuation. Also such a rough computation as can be made of the areas which may be expected, judging from past experience, to come under each head of the scale in paragraph 16 in a period of 10 years, and the amount of suspension or remission which the Government may thus expect on the above system to have to face on an average of years. Of course nothing but a very rough computation can for some time be expected, but even this will be of great use to the Government of India.

Bengal	British Burma.
North-Western Provinces and Oudh.	Assam.
Punjab.	Coorg.
Central Provinces.	Hyderabad.
	Ajmere.

ORDER.—Ordered, that a copy be forwarded to the Local Governments and Admistrations for information and guidance and for favour of a report.

Ordered, that a copy be forwarded to the Governments of Madras and Bombay for information.

Ordered also, that a copy be forwarded to the Finance Department, and that the Resolution be published in the Supplement to the *Gazette of India*.

APPENDIX A.

Where local conditions make the possibility of cultivating the land unusually precarious as in the case of tracts habitually flooded by [illegible] inundation which may fail to take place or be excessive, or may subside too soon or too late for agricultural operations to be carried on, an exceptional procedure would appear desirable. We approve the system, successfully adopted in the Punjab in such cases, of carrying out a yearly rough measurement, according to the results of which a fixed rate of revenue per acre actually cultivated is levied. This plan would probably be found more suitable for Sind than the Bombay form of settlement now being introduced there, and we think it possible that the application of a similar principle might be beneficial in any exceptionally dry upland tracts, such as exist in some parts of India, where the rainfall is very precarious and frequently insufficient.

System of yearly assessment on cultivation in riparian lands.

APPENDIX B.

Extracts from Despatches of Mr. Thomason, Lieutenant-Governor of the North-Western Provinces.

The following extracts sufficiently indicate the strong appreciation which Mr. Thomason possessed of the necessity of maintaining a careful watch over the working of the revenue system which he was called upon to apply to his Province; and as the other temporarily settled provinces of Northern India undoubtedly accepted the North-West settlement system as their model, his remarks may be held to have had general application :—

Volume I, page 230, paragraph 5, Revenue Administration in Ajmir.—His Honour's opinion, however, of the expediency of returning as soon as possible to the system of village settlements has obtained the strongest confirmation since his visit to the district. Mr. Edmonstone's settlement failed partly no doubt from a succession of bad seasons, and defective appliances for lessening their evils by artificial irrigation. But the failure was also owing to the want of some definite rule for fixing the rights of each member of the community, and from a supposition that, when once the demand has been fixed at a moderate amount, the people might be left to themselves without any further superintendence by the Collector than consisted in enforcing payment of the demand.

Volume I, page 339, paragraph 6, and page 341, paragraph 7, Administration of Khairagarh.—The difficulty being thus apparent, a large discretion must be given to the Collector in his management of the country. Without supposing unusually bad or disastrous seasons,

it may be expected that any partial failure or sudden calamity will force itself into notice. Before, when the whole taluka was one mahal, such a misfortune in one part might be compensated by prosperity in another part of the estate, and the average profit on the whole estate might remain nearly the same; but now a hailstorm and inundation, a blight, or the absence of timely rain, may bring ruin upon certain villages, though it may not affect others. Such cases will call for immediate remedy;—suspension of the demand or the offer of takavi may be necessary to prevent the desertion of cultivators and irretrievable desolation of the village. Nor would it be right to require from the Collector minute personal inquiry and full statistical report in every such case. Reliance must be placed on his discretion in such respects, and he must be encouraged to exert himself to the best of his power, and to the exclusion of all unnecessary labour, for the amelioration of the pargana.

* * * *

These are the steps by which it appears to the Lieutenant-Governor that the pargana may be best and most quickly restored to a prosperous state, but in these, as in all other measures affecting it, a large discretion must be conceded to the Collector.

Volume II, page 67, paragraph 9, Settlement Report of Mhairwarra.—The Lieutenant-Governor acknowledges the weight of your observation that the punctual realisation of the revenue now fixed must remain to a certain degree dependent on the seasons, and that much will depend, whenever a deficiency of rain occurs, on the diligence of the Superintendent in making personal enquiry as to the extent of the evil.

Volume II, page 167, paragraph 21, Settlement of Nimar.—It must not moreover be supposed that when once a mauzahwar settlement has been made, the Collector's work is accomplished, and a machine set in motion which will work on unaided. In the first introduction of the system especially, great care and constant attention are requisite. No ordinary degree of foresight is needed on the first settlement of a village so to define and record the custom of the tenure as to meet the exigencies of most ordinary occurrences. Difficulties will arise, and disputes will occur, which must be immediately examined and decided, and their future occurrence provided against, if necessary, by some new stipulation in the village rules. All such cases are disposed of, especially on their first origin, by communication with the people and by arbitration amongst themselves. The duty of the Collector will be rather that of explanation and of instruction than of decision. The people themselves will be willing enough to slur over a difficulty and to be content with a temporary remedy. It will be the Collector's duty to point out to them the whole bearings of the case, to represent its possible consequences, perhaps to suggest apparent remedies, but to leave to themselves as much as possible the adoption of the particular rule which they will have afterwards to carry into practice.

Volume II, page 193, paragraph 15, Settlement of Parganas Bariya and Kanapur, in Nimar.—Calamities of season are unavoidable. Drought, or floods, or pestilence, or blight, may desolate any part of the country, and of course render it impossible that the whole or perhaps any revenue should be paid. Such disasters must be met as the exigency demands. They call forth all the prudence and vigilance and activity of a Collector. They must be met according to their degree by temporary suspension or entire remission of the demand, or by reduction of the settlement.

APPENDIX C.

Paragraph 8 of North-Western Provinces and Oudh Government letter No. 2615, dated the 22nd December 1879.

If reforms are made in the direction indicated above, Collectors will once more have time to attend to their legitimate duties, and will also remain sufficiently long in their districts to acquire a competent knowledge of the people and their requirements. And given a Collector with a knowledge of his district and time to ascertain its condition and necessities, Sir George Couper sees no valid reason for making any material change in the existing system of settlement. What, however, is required is a definite statement of the policy of Government in regard to suspension or remission of the demand under extraordinary circumstances. It should be laid down that, speaking broadly, for purposes of remission and suspension of revenue, the cultivated area of the united provinces may be divided into three great classes:—

(1) Tracts watered by canals, the zamindars of which under such a vicissitude of season as that which befel in 1877 literally coined money, and who reap a harvest by the sufferings of others.

Such tracts would not under any conceivable circumstances be entitled to any consideration in the shape of suspension or remission of the Government demand.

(2) Those tracts which constitute by far the larger portion of the total area of the united provinces in which no suspension or remission should be allowed under ordinary vicissitudes of season but in which they should be made in the presence of such a calamity as that which overtook them in 1877. It is presumed the subject will be fully dealt with in the report of the Famine Commission; and as Sir George Couper has no desire to anticipate their suggestions, it is unnecessary to allude in further detail to the precise form or measures of relief which should be adopted. But he thinks it ought to be clearly recognised by the Government of India that there is, and must be, a limit to the enforcement of the rule that a zamindar must look to the surplus of good years to recoup himself for the losses of bad years. The rule does very well for years of partial failure; but there come now and again years of extraordinary failure, such as a Settlement Officer does not take into account in his calculations, in which next to nothing is produced, and the zamindar or tenant if required to pay up is virtually ruined. Relief in such years ought to be given by suspension or remission or liberal distribution of takavi.

(3) Tracts which are dependent on the seasons for their irrigation, and in which the rainfall is uncertain and precarious, such as the districts of Jhansi and Bundelkhand, and the portion of the Cawnpore district referred to by Mr. Wright at page 67 of the papers. In these tracts the Collector should carefully watch the effect on each season on the crops, and be prepared at once to recommend remission and suspensions if he is satisfied that without them the zamindar will not be able to make his way. Relief might be granted on the same principles as those laid down for (2), only fully recognising that the necessity for action must arise more frequently.

If the Government of India will lay down some such broad principles as above, and confer the necessary powers on the Local Government for carrying them out, so that Collectors may be given fully to understand their recommendations will be favourably received and promptly attended to, and that their reputation will depend on the prosperity of their districts rather than on the amount of revenue they are able to realise even in bad years, Sir George Couper is convinced no further change is required, and that for the rest Government may be safely satisfied to let well alone.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 10th OCTOBER 1882.

GENERAL REMARKS.—Light rain has fallen in all districts of the Madras Presidency except Travancore, where it was heavy. There has also been some rain in Mysore and Coorg, Bengal, Assam, and British Burma. The North-Western Provinces and Oudh, Central India, and the Bombay Presidency report showers in a few districts. The Punjab, Rajputana, the Central Provinces, and the Nizam's Territories have had slight rain in one or two places; there has been none in Berar.

Prospects of standing crops are on the whole favourable everywhere, although some more rain would be beneficial in a few places.

Harvest operations continue in many parts of the country. Preparations for and sowings of *rabi* crops are in progress in parts of the Bombay Presidency, Bengal, the North-Western Provinces and Oudh, the Central Provinces, Mysore, the Nizam's Territories, and the Central India and Rajputana States.

In the Bombay Presidency locusts are doing much injury to crops in Khandesh, Ahmednagar, and Násik.

A general rise in the barometer during the earlier part of the week was followed by a fall of equal extent, less marked in Northern India than in most other parts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Oct. 11th)		
Bellary ...	1·12 (average of eight stations).	Standing crops generally good; harvest dry grain, yield average; agricultural operations progressing.
Kurnool ...	1·43 (average of one station).	Crops partially withered in one division from deficient rain; harvest dry crops, outturn average; agricultural operations progressing.
Ganjam ...	·95 (average of fourteen stations).	Standing crops thriving; harvest cotton and gingelly, outturn about average; fever, small-pox, and cattle-disease continue; cholera in one taluk.
Kistna ...	1·36 (average of twelve stations).	Standing crops good; harvest dry grains, outturn below average; agricultural operations progressing; small-pox, fever, and cattle-disease continue.
Chingleput (Madras) ...	1·23 (average of eleven stations).	Standing crops good where water available, drooping elsewhere for want of rain; harvest dry grains, yield below average; agricultural operations progressing; small-pox slight in parts.
Coimbatore ...	1·02 (average of fourteen stations).	Standing crops paddy good, dry want rain in parts; harvest paddy and dry grains, yield average; small-pox, fever, cholera, and cattle-disease in parts.
Tanjore ...	·30 (average of five stations)	Standing crops generally good; harvest paddy and dry grains, yield below average; cholera abating.
Madura ...	·75 (average of seven stations).	Standing crops withering in parts; harvest dry grains, outturn below average; cholera in parts.
Malabar ...	3·31 (average of fourteen stations).	Harvesting first crop nearly over; sowing of second crops progressing; fever, small-pox, and cholera in parts.
Travancore ...	7·96	Agricultural operations nearly over; fever slightly prevalent. *General Remarks.*—General prospects good.
Bombay—(Oct. 11th)		
Kurrachee ...	.....	River at Kotri on 9th, 10⅜ feet against 10¼ feet on same date last year; fever in all talukas; 3 cases small-pox in Sujawal taluka; disease among cattle in Sakro taluka; *kharif* harvest commenced; wheat, red rice, and *bajri* in Kurrachee 28, 36 and 36, in Kotri 30, 32 and 44, in Ghorabari 18, 44 and 42, and in Mirpur Batoro 25, 44 and 46 lbs. per rupee respectively.
Hyderabad ...	.....	*Kharif* reaping has commenced in some parts; small-pox still continues in Hyderabad, and fever in 11 talukas; cattle-disease in taluka Badin; wheat 26, *juari* 52, *bajri* 45, red rice 32, and white rice 22 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad ...	.....	Total rainfall 30·41; reaping of *bajri* and *juari* commenced; fever continues in Dholka, Viramgaum, and Gogha; cholera in Dandhuka, 16 cases, 8 deaths; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda ...	·03	Total rainfall 40·77; crops withering in Sidhpur taluka of Kari division for want of rain; cotton injured in parts of Amreli division by insects; public health good; *bajri* 33 and common rice 24 lbs. per rupee.
Surat ...	.....	Reaping of *bajri* and rice commenced, other crops healthy; *juari* 36 and *nagli* 57 lbs. per rupee.
Násik ...	Showers in some talukas.	Pulse crop harvested; locust ravages continue in nine talukas; *rabi* sowing retarded, in consequence of which distress apprehended shortly in Zeola, Nandgaon, and Malegaon; crops excellent in four talukas; wheat 28, *bajri* 36, and rice 27 lbs. per rupee; prices stationary.
Colaba (Bombay) ...	·77—all on 4th	Total rainfall 69·20, being ·32 below average; abnormal temperature 1° cool on 4th and 6th, 2° warm from 8th to 10th, *nil* on all other days; vapour in air slightly in defect of normal from 4th to 7th, afterwards in excess of normal; abnormal wind from south-east on 4th and 5th, afterwards wind normal; thunder on the evening of 8th.
Poona ...	Passing showers in seven talukas.	Locusts injuring standing crops; 2 cholera cases in Sirur taluka, 1 fatal; *bajri* 50 and *juari* 63 lbs. per rupee; in Poona *bajri* 41 and *juari* 52 lbs. per rupee.
Ahmednagar ...	Average total rainfall in the district 24·36; slight rain in Newasa, Parner, Rahuri, Shrigonda, and Karjat, none in the remaining talukas.	Kopergaon, Newasa, Rahuri, Sangamner, Akola, Nagar, and Parner are still infested with locusts; *kharif* crops good throughout the districts, except the place affected with locusts; sowing of *rabi* not yet commenced in Akola; cholera in Sheogaon, 2 attacks and 1 death; *bajri*—maximum 66 lbs. per rupee in Jhamkhed, minimum 42 lbs. in Kopergaon; *juari*—maximum 100 lbs. in Jhamkhed, minimum 45 in Sangamner.
Sholapur ...	·27	Total rainfall 39·06; *rabi* sowing nearly completed in Barsi, Madha, Karmala, and Malsiras; cholera in Sangola taluka, 20 cases, 9 deaths; *bajri* 63 lbs. and *juari* 83 lbs. 29 tolas per rupee.
Dharwar ...	Rain at all stations; except Kod where it is wanted; maximum at Karajgi, ·96.	Rice crop good; *juari* moderate; cholera in Navalgund taluka disappeared; cattle-disease in two talukas; public health good; prices—minimum rice 21 and *juari* 59 lbs. per rupee.
Kanara ...	Karwar, 1·58; Kumpta, 2·17; Sirsi, 1·21; and Hallial, 1·04.	Total rainfall 106·24; rice harvest on coast; rice crop in ear, above Ghát; sugarcane, *ragi*, and garden produce healthy; fever slight; general health good; common rice at Karwar 11½, in district average 15⅝ seers per rupee; weather fair.
Rajkot ...	.....	Weather very hot; rain wanted in some places; cholera continues at Dhrol; crops good; *bajri* 27 and *juari* 33 seers per rupee.
		General Remarks.—Slight rain in a few districts; harvesting of *kharif* and preparations for *rabi* in progress; locusts doing much injury in Khandesh, Ahmednagar, and Násik, elsewhere prospects generally good; fever and cattle-disease in many districts, slight cholera in some.
Bengal—(Oct. 11th)		
Chittagong ...	2·45	Weather continues hot; prospects satisfactory; harvesting of *aus* finished, outturn fair; average transplanting of *amun* nearly finished; prices somewhat lower; general health good.
Dacca ...	1·52	Crops satisfactory; jute harvest nearly finished; sugarcane being cut; good crop.
24-Pergunnahs (Calcutta)	Alipore, 1·32	Harvesting of early rice and jute nearly over, outturn above the average; sugarcane doing well; prospects of late rice fair; high lands being prepared for winter crops; public health generally good; fever as usual at this season prevalent in Naihatti, in Barasat sub-division, and in some villages in Diamond Harbour sub-division.
Moorshedabad ...	2·36	*Amun* plants flourishing with vigour owing to recent rain, other crops doing well; fever prevalent in and about Rangamati; cattle-disease reported from one taluka.
Rajshahye ...	1·56; Nattore, 2·25	Rain has improved prospects of crops.
Burdwan ...	·85; Cutwa, 6·03; Culna, ·17; Raniganj, 5·30.	Days very hot; rain has much benefited *amun*; more rain required; *aus* crop pretty good, except in Raniganj sub-division; fever prevalent.
Rungpore ...	1·75	Weather hot and dry; jute harvest nearly completed; prospects of crops favourable; public health good.
Bhagálpur ...	·69	Rain has done much good; prospects improved; more rain in north and south than at head-quarters; lands being ploughed for *rabi* sowings.
Purneah ...	·52	Prospects of crops fair, but more rain wanted for late rice; lands being prepared for cold weather crops; fever bad.
Patna ...	3·91	Prospects of rice improved; *bhadoi* harvest nearly completed; sugarcane and other crops looking well; public health good.
Durbhunga ...	2·7	Weather warm; prospects of crops fair; more rain wanted; prices stationary; health middling.
Hazáribágh ...	·40	Weather seasonable; prospects of rice crops good; cattle-disease reported; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Cuttack ...	1·96	Reaping of early rice completed, outturn 14 annas; late rice progressing favourably; health good.
		General Remarks.—Good general rain during the week; prospects of late rice generally improved, but more rain is still required in some districts; harvesting of autumn crops is being rapidly completed, and preparation of fields for cold weather crops is being vigorously pushed on; sugarcane generally promising; heavy floods and storms in parts of Sarun have greatly destroyed *makki* crop and a little *bhadoi* crop which remained to be cut, besides causing loss of cattle and property; cholera still reported from a few districts, and fever prevalent in some places, elsewhere public health good.
N. W. Provinces and Oudh—		
Benares (Oct. 10th)	1·40; Chandausi, 3·10; Gungapur, *nil.*	Weather now fine; ploughings are in progress for *rabi* sowings; prices steady; no sickness among men or cattle.
Allahabad („ 11th)	No rain	Weather fine, cool, and seasonable; preparations for *rabi* sowing going on still; slight cholera prevalent; prices steady.
Gorakhpur („ „)	Good fall of rain on 3rd	Harvest satisfactory; *rabi* ploughings going on; public health good; prices steady.
Jhánsi („ 9th)	Mau, ·70; Moth, ·40	Prospects of *kharif* crops good, but more rain will be beneficial to *rabi* cultivation; prices almost stationary; cholera has almost ceased; no cattle-disease.
Agra („ 10th)	No rain	*Kharif* harvesting and *rabi* ploughings in progress; slight fever continues, but general health is good; prices stationary.
Bareilly („ „)	Slight rain in Bareilly and Mirganj tahsils.	Weather good; *kharif* crops excellent, and *rabi* sowings favourable; cholera on the decrease; fever prevalent.
Meerut („ „)	.....	*Kharif* harvest going on, and *rabi* sowings in progress; weather seasonable; health good; prices stationary, with slight tendency to fall.
Kumaun („ „)	.....	The rains have apparently closed; some autumnal fever showing itself, otherwise health good; *kharif* outturn excellent; no change in prices; cattle-disease continues.
Lucknow („ „)	No rain	Prospects of crops fair; prices steady; more rain wanted; slight cholera, but fever prevalent.
Partabgarh („ „)	.....	Prices steady; prospects very good; cattle-disease at Khandwa; cholera has increased very much during the past week.
Sitapur („ „)	Slight rain in Misrikh	Cholera still in Sitapur tahsil; *kharif* crops fair, except *mash* in parts of Biswan.
Fyzabad („ „)	No rain	Gram and peas sowing commenced; ague and fever in three tahsils, and cattle-disease in two.
Rae Bareli („ 9th)	.....	No chance of more rain apparently; *kharif* outturn 12 annas in the rupee; *rabi* ploughings in progress; gram sowings commenced; fever of an ordinary type reported from two tahsils; cholera still continues; health of cattle good; prices steady.
Cawnpore („ 10th)	No rain	Weather clear; blight has appeared in *juari*, but other *kharif* crops good; *rabi* sowings in progress; fever declining; prices nearly stationary.
Farukhabad („ „)	.....	Weather seasonable, but rain much needed; occasional clouds and wind variable; fever on the decrease, but cases of cholera still continue to be reported.
		General Remarks.—Fair rain fell in parts of Benares, Gorakhpur, and Jhánsi, and slight showers in Bareilly and Moradabad; rain wanted in Lucknow, Farukhabad, and Jhánsi; *rabi* sowings commenced; prices stationary; slight cholera and fever prevalent; cattle-disease continues in Kumaon, Fyzabad, and Partabgarh, and has appeared in Saharanpur.
Punjab—(Oct. 11th)		
Delhi ...	No rain	Health fair; prices stationary; average yield of crops expected.
Hissar ...	No rain	General health good; prices stationary; yield of crops expected to be below the average on the whole, but fodder is plentiful.
Umballa ...	No rain	Health good; prices of food-grains stationary; yield of crops expected to be somewhat below the average.
Jullundur ...	No rain	Health good; prices steady; crop prospects good.
Amritsar ...	.....	Hail fell in south of district, but no damage has been done by it; health good; prices steady; crop prospects good.
Sialkot ...	No rain	Health good; prices stationary; yield of crops expected to be above average.
Lahore ...	No rain	Health good; prices stationary; crop prospects good.
Ferozepore ...	No rain	Health good; prices of food-grains falling; agricultural prospects good.
Mooltan ...	No rain	Mild fever prevalent; prices steady; crops are being reaped.
Rawalpindi ...	0·10	Mild fever in parts of the district, and cattle-disease in the Murree tahsil; prices steady; harvest above the average.
Dera Ismail Khan ...	No rain	Fever very prevalent; prices stationary; crop prospects good.
Peshawar ...	No rain	Fever prevalent; prices of food-grains are stationary, except that of *juari*, which is rising; *kharif* crops fair.
		General Remarks.—There was slight rain in Rawalpindi; the health of the province continues to be generally good, but mild fever still prevails in some districts, and cattle-disease has not yet wholly disappeared from the Murree tahsil; the prices of food-grains are falling in a few districts, but generally they are stationary; the prospects of the yield of crops in the Hissar division and the Umballa district are below the average, but in other districts they are good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Nagpur (Oct. 11th)	.....	Weather clear; prospects of crops good; few cases of cholera; prices steady.
Jubbulpore („ 10th)	.....	Weather clear and cool; yield of *kharif* crops anticipated below average; cholera and small-pox still reported; wheat 19 seers per rupee.
Saugor („ 9th)	.....	*Kharif* harvest has commenced; *rabi* sowings progressing; fever prevalent; prices steady.
Seoni („ 10th)	·15	Weather clear and cool; *rabi* sowings completed; few cases of cholera; fever prevalent.
Hoshangabad („ 11th)	.....	Weather seasonable; *kharif* generally good; *rabi* sowings commenced; fever prevalent; wheat 15 seers per rupee.
Raipur („ 7th)	.....	Weather oppressive; crops doing well, but more rain wanted; fever prevalent; prices falling; rice 42 seers per rupee.
Sambalpur („ 5th)	·05	Very hot; *kharif* promises well; fever prevalent; rice 56 seers per rupee.
Khandwa („ 10th)	.....	Weather hot; *kharif* prospects good; *rabi* sowings commenced; few cases of small-pox; wheat 16 seers per rupee.
		General Remarks.—Weather seasonable; nights and mornings cool and pleasant; *kharif* crops doing well, and a fair outturn is expected; *rabi* sowings in progress; cholera abated, but fever generally prevalent; prices steady.
British Burma— (Oct. 7th)		
Akyab ...	4·17	Total rainfall 192·84 inches; 3 deaths from cholera in town and 1 in district; 4 deaths from small-pox in district; cattle-disease severe in two townships; prospects of crops good.
Rangoon ...	2·08	Total rainfall 92·70; public health good; crops making progress.
Bassein ...	4·22	Total rainfall 117·52 inches; public health good; prospects of crops good.
Prome ...	1·0	Total rainfall 46·61 inches; public health good; slight cattle-disease in two townships; more rain required to develop late plantings in parts of district.
Amherst (Moulmein) ...	1·32	Total rainfall 190·62 inches; public health both in Moulmein and district and prospects of crops good; cattle-disease in two townships.
Toungoo ...	0·97	Total rainfall 82·15 inches; 1 death from small-pox in district, otherwise public health good; 21 deaths from cattle-disease in one township.
		General Remarks.—A little cholera prevalent, otherwise public health good; cattle-disease severe in parts of Akyab, slight in a few other districts; damage to crops has been done by floods in Hanthawaddy and Mergui; crops on about 6,000 acres of land in Thonegwa destroyed by the high tides of the month of September, elsewhere condition of crops good.
Assam—		
Gauhati (Oct. 10th)	8·56	Weather seasonable; transplanting of *sali* paddy over; prospects of crops fair; public health good.
Sylhet („ 11th)	7·50	Crops reported on favourably from all quarters; cholera and small-pox still reported.
Cachar ...	4·58	Weather very hot; reaping of *aus* crop progressing; state of *sali* crops good; public health good; common rice 22½ seers per rupee.
Dibrugarh (Oct. 11th)	Weather rainy; 3·52	Prospects of *sali dhan* good; public health good; cattle-disease decreasing.
Mysore and Coorg— (Oct. 11th)		
Bangalore ...	1·60	Crops thriving well; gram and *kartik* paddy sown in parts of districts; prospects favourable; health good; prices unchanged.
Mysore ...	1·24	Crops and prospects reported good.
Mercara ...	2·41	The heavy showers which have fallen have helped on the rice crop and coffee plants; *ragi* being cut in Naujarajapatna taluk and coming into ear in Yelusavarshime taluk; prices stationary; health good.
		General Remarks.—Seasonable showers in all districts, except Kolar, where more rain is wanted; standing crops generally in good condition; *ragi*, *juari*, horse gram, &c., harvested in parts; sowing of other grain continues; public health good; prices easy.
Berar & Hyderabad— (Oct. 11th)		
Amráoti ...	...	Crops in good condition; prices—wheat 16 and *juari* 28 seers per rupee.
Akola ...	...	Crops progressing favourably.
Hyderabad ...	·11	Total rainfall from 1st January 29·62; *abi* crops thriving; reaping of *kharif* crops continues; *tabi* crops being sown and preparations for *rabi* crops in progress; public health good; prices—wheat 16, coarse rice 10½, white *juari* 27, yellow *juari* 32, and *tur* 27 seers per current sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States— (Oct. 11th)		
Indore ...	No rain	Weather pleasant; health and agricultural prospects good; no cholera cases reported since the 4th instant.
Morar (Gwalior) ...	No rain	Health and prospects good.
Sutna ...	·63	Prospects and health good.
Rutlam ...	.....	No report received.
Neemuch ...	·15	One fatal case of cholera among European soldiers; fever prevalent in the Mewar district.
Goona ...	.....	Crops good; fever prevalent.
Bhopal ...	·60	Weather fair; prospects good.
Agar ...	No rain	Health and prospects good.
Nowgong ...	·15	Weather fair; *kharif* prospects good; health fair.
Manpur ...	No rain	Ploughing of land for wheat, gram, and opium crops resumed; prices stationary.
Rajputana—		
Abu (Oct. 11th)	·05	Clear weather; occasional clouds; pleasant mornings.
Sirohi („ 8th)	.....	Tanks, wells, health, prospects, and weather good.

* Difference in discharge passed on from Ganges Canal to Lower Ganges Canal as reported by 1st and 2nd Circles.

Executive Engineer, Meerut Division, Ganges Canal, reports that owing to the long closure, the canal took an abnormally long time to fill, and thus, although opened on the 3rd, water did not reach the division till the 9th. From that date till the 28th there was a very great demand for sugar, rice, cotton and Indian-corn, which could not be met owing to all wanting water at once. There were local rainfalls of 2 inches and 3 inches on 20th and 29th, but irrigation of rice did not stop.

Executive Engineer, Aligarh Division, reports that dry west winds set in about the 15th, and there began to be a demand. By the time water came down and was run, rain fell and the crops no longer needed water.

Executive Engineer, Mainpuri Division, reports that there was a demand for kharif crops between the 8th and 20th over part of the division and that general rain fell from the 21st.

Executive Engineer, Eastern Jumna Canal, reports that there was a heavy demand for rice planting and afterwards for general irrigation until the rain of 29th and 30th; the rain, however, did not reach Meerut district in any quantity.

Executive Engineer, Rohilkhand Canal, reports that there was a slight demand for first week. Very heavy hill floods on 5th, 6th, and 7th, which swept away all the earthen dams and outflanked the Kitcha weir. Heavy rain fell on the 29th and 30th, since which it has been fine and the rains appear to be over.

Allahabad,
The 20th September 1882.

SIMLA,
The 14th October 1882.

FRED. FIREBRACE, *Major, R.E.,*
Under-Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 17th OCTOBER 1882.

GENERAL REMARKS.—Rain has fallen in all the districts of the Bengal Presidency, in some of which it was heavy. In the Madras Presidency there has been rain in all districts, light in most but rather heavy in Malabar. In the Bombay Presidency rain has fallen in the Southern Mahratta Country and in parts of Satara only. In the North-Western Provinces and Oudh there has been no rain except a little in Benares. Rain has also fallen in British Burma, Assam, and in Mysore and Coorg. The Punjab, Central Provinces, the Nizam's Territories, Central India States, and Rajputana States report no rain during the week under notice.

Prospects of standing crops are reported generally good everywhere.

Harvest operations are still in progress in many parts of the country. Preparations for, and sowings of, *rabi* crops continue in parts of the Bombay Presidency, Bengal, North-Western Provinces and Oudh, Punjab, Central Provinces, Nizam's Territories, and the Rajputana States.

Rain is reported from the North-Western Provinces and Oudh to be wanted in three districts.

In the Bombay Presidency locusts are still doing damage to the crops in Násik, Ahmednagar, and Khandesh, but are reported to be leaving the eastern talukas of Khandesh. There was a severe shock of earthquake in Silchar on the 13th and another slight one on the 14th; no damage ensued from the latter, but considerable injury to buildings from the shock of the 13th is reported.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Oct. 18th)		
Bellary ...	·66 (average of seven stations).	Standing crops generally good; harvest dry grains, outturn average; agricultural operations progressing.
Kurnool ...	·77 (average of seven stations).	More rain wanted for dry crops in parts; harvest dry crops, yield average; agricultural operations progressing; cattle-disease in parts.
Ganjam ...	1·51 (average of sixteen stations).	Standing wet and dry crops generally thriving; harvest dry grains, outturn below average; small-pox, fever, and cattle-disease continue; cholera in one taluk.
Kistna ...	1·26 (average of eleven stations).	Crops generally good; rain needed in one taluk; harvest dry crops, yield below average; agricultural operations progressing; fever, small-pox, and cattle-disease exist.
Chingleput (Madras) ...	1·44 (average of eleven stations).	Standing crops good where water available; harvest dry grains, outturn below average; agricultural operations progressing; slight small-pox and cattle-disease in parts.
Coimbatore ...	2·87 (average of fifteen stations).	Standing crops paddy good, dry require rain; parts of one taluk harvest paddy and dry grains, yield average; fever, small-pox, cholera, and cattle-disease in parts.
Tanjore ...	1·23 (average of thirteen stations).	Standing crops good, except in parts of one taluk, where rain wanted; harvest paddy and dry grains, yield below average.
Madura ...	1·75 (average of ten stations).	Crops fading in two taluks; harvest dry crops, outturn below average; cholera in parts.
Malabar ...	4·40 (average of fourteen stations).	Harvesting first crop almost over; sowing second crop progressing; small-pox, fever, and cholera in parts.
Travancore ...	2·14	Agricultural operations over; fever slightly prevalent. *General Remarks.*—General prospects good.
Bombay—(Oct. 18th)		
Kurrachee ...	.....	Cold weather setting in; river at Kotri on 16th, 9¼ feet against 9¼ feet on same date last year; fever in all talukas; disease among sheep and goats in Kurrachee taluka; rats doing some damage to crops in Jati taluka; wheat, red rice, and *bajri* in Kurrachee 25 and 36, in Sewan 32, 48 and 56, in Tatta 24, 38 and 44, and in Játi, 20, 40 and 44 lbs. per rupee respectively.
Hyderabad ...	.....	*Kharif* reaping general throughout the district; small-pox still continues in Hyderabad; fever in eleven and cattle-disease in two talukas; wheat 26, *juari* 52, *bajri* 41, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Reaping of *bajri* and *juari* continues, other crops doing well; fever in Dholka, Viramgaum, Gogha, and Parantej; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda ...	.....	Reaping of crops commenced in parts; public health good; *bajri* 30 and common rice 24 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Surat ...	.....	Sowing of *rabi* crops and reaping of *bajri* and rice continue; *juari* 35¾ and *nagli* 57 lbs. per rupee.
Násik ...	No rain	Locusts as before, some reported in Dindori and Igatpuri; *rabi* being sown only where locusts have not appeared; cholera almost gone; wheat 22, *bajri* 36, and rice 27 lbs. per rupee.
Colaba (Bombay)	No rain	Abnormal temperature 2° warm on 11th, 1° cool on 14th and 15th, *nil* on all other days; vapour in air normal; abnormal wind northerly on 11th and 12th, southerly from 14th to 16th; wind normal on the remaining days.
Poona ...	No rain	Reaping of *kharif* in progress; damage by locusts continues, but is slight; 4 cholera cases in Sirur taluka, 3 deaths; *bajri* 48 and *juari* 62 lbs. per rupee; in Poona *bajri* 41 and *juari* 56 lbs. per rupee.
Ahmednagar ...	No rain	Rain wanted for *rabi* crops in Kopergaon, Rahuri, Sangamner, Akola, and parts of Newasa; Nagar and Parner are still infested with locusts; reaping of *bajri* commenced in all talukas; sowing of *rabi* not yet commenced in Akola or Kopergaon; people are emigrating from Kopergaon; cattle-disease in Jhamkhed; cholera—in Jhamkhed 8 attacks and 6 deaths, in Sheogaon 3 attacks and 1 death; *bajri*—maximum 66 lbs. in Jhamkhed, minimum 42 in Kopergaon; *juari*—maximum 108 lbs. in Jhamkhed, minimum 48 in Akola.
Sholapur ...	No rain	*Rabi* sowing nearly completed throughout; *kharif* being reaped, prospects good; cholera in Sangola taluka, 5 cases, 4 deaths; *bajri* 62 lbs. and *juari* 83 lbs. 22 tolas per rupee.
Dharwar ...	Rain at all stations; maximum at Hangal, 2·37.	Rain sufficient everywhere; further rainfall will damage the existing crops which are good; minor crops, such as *sawan* and *ragi*, are being harvested; land being prepared for wheat and gram; cattle-disease in three talukas; public health good; prices of food-grains stationary.
Kanara ...	Karwar, 1·08; Kumpta, 2·96; Sirsi, 2·78; and Hallial, ·90.	Total rainfall 107·32; rice harvest on coast continues; crops in ear above ghât; *ragi*, sugarcane, and garden produce healthy; 1 death from small-pox in Sirsi; slight fever in three talukas; common rice in Karwar 11 seers per rupee, in district average 13½ seers per rupee.
Rajkot ...	.....	Weather hot; general health fair; fever becoming prevalent; cholera continues in Dhrol and reappeared in Navanagar; *bajri* 27 and *juari* 33 lbs. per rupee.
		General Remarks.—Rain in Southern Mahratta Country and in parts of Satara, elsewhere weather fair; harvesting of *kharif* and sowing of *rabi* in general progress; injury by locusts continues in Násik, Ahmednagar, and Khandesh; locusts reported to be leaving the eastern talukas of Khandesh; fever and cattle-disease in many districts; slight cholera in some.
Bengal—(Oct. 18th)		
Chittagong ...	·39	Weather cloudy and stormy; two shocks of earthquake on 13th; prospects of crops fair; transplanting of *amun* nearly finished; prices steady; general health good.
Dacca ...	5·78	Prospects of crops good; jute harvest continues; sugarcane being cut.
24-Pergunnahs (Calcutta)	Alipore, 8·99	Harvesting of early rice and jute over, outturn above the average; sugarcane doing well; prospects of late rice much improved by copious rain of 15th; lands being ploughed for winter crops; price of common rice stationary; public health generally good; fever, as is usual in this season, prevalent in Diamond Harbour.
Moorshedabad ...	·50	*Amun* plants doing well; heavy rain of 15th very beneficial to crops; sowing of *rabi* crops commenced in some parts; fever prevalent in and about Rangamati and Nowada; cattle-disease reported from one taluk.
Rajshahye ...	5·5; Nattore, 5·20	Heavy rain has benefited crops generally; public health fair.
Burdwan ...	3·04; Cutwa, ·59; Culna, 4·02.	Weather cloudy, with strong variable winds; prospects of crops somewhat improved and crops being harvested; fever reported as usual at this time of year.
Rungpore ...	12·35	Heavy storm and wind and rain on 15th and 16th; prospects of crops good; jute harvest almost finished; public health good.
Bhagálpur ...	2·67	High wind continues; rain for two days; prospects of late rice improved; lands being prepared for *rabi* sowings; public health good.
Purneah ...	3·58	Prospects improved by late rain; lands being prepared for cold weather crops; fever very prevalent.
Patna ...	1·25	Prospects of crops good; lands being ploughed for *rabi* sowings; public health good.
Durbhunga ...	1·73	Rice prospects improved by rain; prices stationary; health middling.
Hazáribágh ...	3·10	Weather cloudy and showery; prospects of standing crops good; general health good.
Cuttack ...	4·89	Prospects of late rice crop excellent; public health good.
		General Remarks.—There was rain in all the reporting districts during the week, in some it was heavy, attended by high wind; the rain seems to have fallen generally over these provinces and will have greatly benefited the late rice crop which was much in want of rain, especially in some parts; this crop however is not expected to be a satisfactory one this year owing to previous deficient rainfall; autumn harvest has generally yielded a good crop, save in a few places where the outturn is said to have been below the average; sugarcane everywhere promising; ploughing for *rabi* crops proceeding with vigour, and in some places sowing has commenced; cholera still reported from a few places and fever prevalent in some district, elsewhere public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares (Oct. 17th)	1·0; Chandausi, ·50; Gungapur, ·70.	Weather fine; *rabi* sowings have commenced in some parts, but in others ploughings are going on; no sickness among men or cattle; prices steady.
Allahabad („ 18th)	No rain	*Rabi* sowings progressing; *bajri* harvest begun; prices rising slightly.
Gorakhpur („ 16th)	...	Weather fine; prospects good; *kharif* outturn up to average; public health good; prices steady.
Jhánsi („ „)	No rain	*Kharif* prospects are good; rice, *kodon*, and *rabi* are being cut; *rabi* sowings in progress; prices falling slightly.
Agra („ 17th)	No rain	*Kharif* harvesting and *rabi* ploughing continue; gram being sown; fever continues, but general health good; prices stationary.
Bareilly („ „)	No rain	Weather seasonable; *kharif* crops excellent; *rabi* sowings going on; cholera somewhat on the decrease; fever prevalent.
Meerut („ „)	.....	Weather clear and getting colder daily; health good; *rabi* sowings in progress; prices stationary.
Kumaun („ „)	.....	Weather seasonable; general health good; finer rice still to be cut; *rabi* operations in progress; prices somewhat cheaper; cattle-disease continues.
Lucknow („ 18th)	No rain	Prospects of crops fair; more rain wanted; prices steady; cholera disappearing, but fever prevalent.
Partabgarh („ 17th)	.....	Prices rising slightly; *rabi*, barley, peas, and gram sowings have germinated; slight cattle-disease at Kanda; cholera bad at Sadr tahsil, slight at tahsils Kanda and Patti.
Sitapur („ „)	.....	Occasional clouds, but no rain; wheat somewhat dearer owing to demand for seed; *juari* slightly cheaper; prices of other grains stationary; prospects fair; cattle-disease in two tahsils; cholera in Sitapur and Sidhauli.
Fyzabad („ „)	No rain	Gram, wheat, and peas sowings going on; ague and fever in two tahsils and cattle-disease in one.
Rae Bareli („ 16th)	No rain	Sky cloudy; more rain wanted for *rabi* crops; cholera still continues to be reported; autumnal fever prevalent; prices stationary.
Cawnpore („ 17th)	No rain	Weather hot and close; *kharif* harvesting and *rabi* sowings in progress; health good; prices slightly risen.
Farukhabad („ „)	No rain	Crops have suffered from want of rain; fever prevalent; prices steady.
		General Remarks.—No rain except in Benares; crops have suffered in Farukhabad for want of rain, and rain is wanted in Lucknow and Rae Bareli; prices show a tendency to rise; cholera continues in Rae Bareli, Partabgarh and Sitapur, and is disappearing in Lucknow, Moradabad, and Bareilly; fever is prevalent; cattle-disease continues in Fyzabad, Partabgarh, Saharunpur and Kumaun, and has appeared in Sitapur.
Punjab—(Oct. 17th)		
Delhi ...	No rain	Health good; average yield of crops expected; slight fall in prices.
Hissar ...	No rain	Health good; crops ripening; prospects of outturn unchanged.
Umballa ...	No rain	Health good; yield of crops expected to be somewhat below average; prices stationary, except wheat which is rising; *rabi* sowings in progress.
Jullundur ...	No rain	Health good; *juar* being reaped; prospects of crops good; prices falling.
Amritsar ...	No rain	Health good; prices stationary.
Lahore ...	No rain	Slight fever prevalent; prices stationary.
Ferozepore ...	No rain	Health good; prospects of crops good; prices stationary.
Sialkot ...	.....	Health good; crops about average; prices stationary.
Rawalpindi ...	No rain	Yield of crops above average; seasonal fever prevalent; slight fall in prices.
Peshawar ...	.....	Fever prevalent; crops being reaped; *rabi* sowings commenced; slight fall in prices.
Mooltan ...	No rain	Fever prevailing; crops being reaped; prices stationary.
Dera Ismail Khan ...	No rain	Fever prevalent; crops being reaped; slight rise in prices.
		General Remarks.—The health of the province continues generally good, though fever prevails in some districts; cattle-disease still prevails in some villages in the Shahpur district; there is a slight fall in prices of food-grains in some districts, but generally they are stationary; the prospects of the yield of crops is good, except in the Hissar Division and Umballa district, where it is expected to be below the average.
Central Provinces—		
Nagpur (Oct. 18th)	.....	Weather clear and hot, with occasional clouds; rain required for *kharif* crop in inferior soil, poor outturn expected; fever prevalent.
Jubbulpore ...	.....	Weather cloudy at times; *kharif* crops being reaped; *rabi* sowings commenced; prices stationary.
Sangor (Oct. 16th)	.....	*Kharif* harvest continues; *rabi* sowings have advanced; fever prevalent; prices steady.
Seoni („ 17th)	.....	Weather occasionally cloudy; *kharif* outturn below average, owing to deficiency of later rain; *rabi* sowings progressing; fever very prevalent; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *contd.*		
Hoshangabad (Oct. 17th)	.....	Weather seasonable; *kharif* crops generally good; *rabi* sowings continue; fever reported; wheat 13 seers per rupee.
Raipur („ 14th)	.....	Weather oppressive; prospects favourable; fever reported; prices fluctuating; rice 41 seers per rupee.
Sambalpur („ 12th)	.....	Weather clear, with signs of cold weather; prospects of crops generally good; health good.
Khandwa („ 17th)	.....	Weather clear and warm; *rabi* sowings in progress; small-pox reported; prices steady; rice 12 seers per rupee.
		General Remarks.—Weather occasionally cloudy; mornings pleasant; *kharif* crops being harvested in some districts; *rabi* sowings in progress; rain would be beneficial; fever prevalent; prices stationary.
British Burma— (Oct. 14th)		
Akyab ...	3·14	Total rainfall 195·98; public health in town good; 13 deaths from cholera in district; cattle-disease in three townships; prospects of crops good.
Rangoon ...	5·35	Total rainfall 98·10; public health good; crops making progress.
Bassein ...	0·92	Total rainfall 118·44; public health good; 84 deaths from cattle-disease; condition of crops generally good, with the exception of some miscellaneous crops west of Ngawoon which have been injured by floods.
Prome ...	2·09	Total rainfall 48·70; public health good; 106 deaths from cattle-disease in two townships; more rain required to develop crops in parts of districts.
Amherst (Moulmein) ...	2·73	Total rainfall 193·35; public health both in Moulmein and district and prospect of crops good; no cattle disease reported.
Toungoo ...	3·62	Total rainfall 85·77; 2 deaths from cholera in one township, otherwise public health good.
		General Remarks—Cholera in Akyab and Tavoy, otherwise public health good; cattle-disease in several districts; general condition of crops satisfactory.
Assam—		
Gauhati (Oct. 17th)	3·30	Weather unfavourable, high winds blowing; lands being prepared for mustard and other dry crops; public health good.
Sylhet („ 19th)	2·41	State and prospects of crops very good; public health generally good.
Cachar („ 18th)	·34	Weather cloudy; about three-fourths of *aus* crop reaped; prospects of *sali* crop and public health good; common rice 22¾ seers per rupee; another but slight shock of earthquake at 8-45 P.M. on 14th instant, no damage.
Dibrugarh („ „)	3·20	Weather rainy; prospects of *sali dhan* good; cattle-disease decreasing; district healthy.
Mysore and Coorg— (Oct. 18th)		
Bangalore ...	1·50	Crops in very good condition; prospects favourable; prices unchanged.
Mysore ...	1·49	Prospects and public health good.
Mercara ...	4·15	*Ragi* harvesting continues, as also picking of cardamoms, yield indifferent; rice crops doing well; coffee crop ripening too fast; prices stationary; health good.
		General Remarks.—Rain has been general all over the Mysore State; reports from all districts favourable as regards prospects of season, condition of crops, and public health; prices of all food-grains easy.
Berar & Hyderabad— (Oct. 11th)		
Amráoti ...	.....	Crops in good condition; prices—wheat 16 and *juari* 28 seers per rupee.
Akola ...	.....	*Kharif* crops thriving; *rabi* sowings commenced.
Central India States—		
Indore ...	No rain	Weather clear; days are still hot, but mornings and evenings are cool; prospects and health good.
Morar (Gwalior) ...	No rain	Health and prospects good.
Sutna ...	No rain	Prospects and health good.
Neemuch ...	No rain	Weather seasonable; crops and public health good.
Goona ...	.....	Crops good; fever prevalent; wheat 21 seers per rupee.
Bhopal ...	No rain	Weather clear; prospects good.
Agar ...	No rain	Health and prospects good.
Nowgong ...	No rain	*Kharif* prospects good; health fair.
Manpur ...	No rain	*Juar* and *tur* crops during well; sowing of gram and cutting of rice crop commenced.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (Oct. 18th)	.....	Weather clear and seasonable, mornings pleasant.
Sirohi („ 15th)	.....	Tanks, wells, health, and prospects good; weather seasonable.
Marwar („ 13th)	.....	About three months water in tanks; wells almost full; health good; crops ripening; cloudless sky; nights close and warm; winds low; prices falling rapidly.
Meywar ...	.....	No report received.
Harowti (Oct. 14th)	.....	Prospects favourable; gram sowings commenced; weather clear; health good.
Jhalawar („ 11th)	.....	*Rabi* sowings commenced; fever prevalent.
Ajmere („ 17th)	.....	Cholera disappeared; *makki* being reaped; ground being prepared for *rabi*.
Jeypore („ „)	.....	Crops being gathered, full average yield expected; health fair.
Ulwur („ 18th)	.....	Gathering of *kharif* in progress; *rabi* sowings commenced; fever continues.
Nepal—(Oct. 12th)		
Katmandu ...	No rain	Lovely weather; rice rapidly ripening.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

PROCEEDINGS OF THE RAILWAY CONFERENCE HELD AT SIMLA IN SEPTEMBER 1882.

No. 1002R.T., dated Simla, October 10, 1882.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution Nos. 354R.T. and 647R.T. of the 21st April and the 1st July 1882.

Read also—

Letter of the 26th September 1882, from Colonel F. S. Stanton, R.E., President, submitting the Proceedings of the Railway Conference held at Simla in September 1882.

OBSERVATIONS.—In accordance with Government of India Resolution No. 647R.T., now read again, the Conference of Railway Delegates assembled at Simla on the 4th September, and after holding twelve meetings was dissolved on the 19th idem.

2. The first business of the Conference was to revise the existing rules for the interchange of rolling-stock. This work occupied the time of eight and a half meetings; twenty-two rules were passed, and a resolution recorded that they should come into force on and from the 1st of January 1883.

3. Agreeable to the conditions accepted by the several Railway Companies, these rules will be binding on every railway represented at the Conference, one of these conditions being as follows:—

"It shall not be competent for any Railway Administration represented at the Conference to withdraw from any rule for the interchange of rolling-stock which has under these orders become binding thereon without giving one year's notice to the Government of India of such withdrawal, and no such notice shall be given within two years of the close of the Conference, or if given within that period, such notice shall be of no effect."

4. The following subjects were also discussed :—

I.—The time of engines exclusively employed in marshalling engines in locomotive yards.

II.—Mileage of engines between shed and station when the distance is considerable.

III.—Half-yearly analysis of working.

IV.—Freight on goods and parcels lost or damaged.

V.—Simplification of railway goods tariff.

VI.—Advices of alterations of tariffs.

VII.—Through booking of parcels.

VIII.—Through booking of dogs.

IX.—Arrangements for the comfort and convenience of lower class passengers.

X.—Treatment of miscellaneous items in the Revenue Account and the analysis of working.

XI.—Arbitration Act.

XII.—Brakes on wagons.

XIII.—Classes of passengers and goods of the Oudh and Rohilkhund Railway.

XIV.—Invoicing goods in through booking.

XV.—Railway clearing house.

XVI.—Through booking of coaching traffic.

XVII.—Freight on unclaimed goods and parcels.

XVIII.—Goods missent; haulage charge on.

XIX.—Route by which traffic should be despatched.

XX.—Transport of troops.

5. A minute on the subject of Retirement Funds signed by eight of the Delegates was recorded, with remarks thereon by the President.

RESOLUTION.—The Government of India trusts that the experience gained in the detailed arrangements necessary for the free interchange of rolling-stock has enabled the Conference to frame rules fully suitable for the purpose, and that it may be requited for the labour and careful consideration which has been devoted to the subject by the rules now passed being found in practice to meet all requirements.

2. The proposals with regard to subjects I, II, III, IV, VI, VII, VIII, XIV, XVI, XVII, XVIII, and XIX, mentioned above, are approved; they should be circulated to all Railway Administrations for information and guidance.

3. The Conference proposes that the question of simplifying the Railway goods tariff should be referred to a committee of traffic officers. Considering the intricate nature of the subject, this appears to the Government of India the most practical manner of dealing with it. The Secretary of State should be addressed with the view of obtaining the opinion of the several Boards of Directors on the proposal.

4. The Government of India has perused with much interest the papers recorded by the Delegates relating to the comfort and convenience of lower class passengers. These show that many improvements have of late been effected, but the subject is of such importance both as regards the Railway Administrations and the mass of the travelling public that it should be carefully kept in view, and it is trusted that endeavours will in no way be relaxed to render railway travelling more popular with the majority of the public by attention to their requirements, more especially in connection with several points which

were referred to the Conference. It should be borne in mind that 92 per cent. of the passenger traffic in India pertains to the lowest class, and it is evidently the interest of every Railway to foster this traffic to the utmost.

5. The suggestions on the method of dealing with miscellaneous items in the account and analysis should be considered by the Accountant General, Public Works Department, who should submit a report thereon for orders.

6. With the exception of one Delegate who did not record a vote, it was unanimously agreed by the Conference—

"That the Government of India be moved to pass a short Arbitration Act on the same basis as the 'Railway Companies' Arbitration Act, 1859' (22 and 23 Vic., Chap. 59), thereby establishing a Court of Arbitration, through which the rules of this Conference and agreements between the several railways may be enforced."

This question should be referred to the Legislative Department for consideration.

7. The suggestion regarding the classes of passengers and goods of the Oudh and Rohilkhund Railway should be communicated to the Secretary of State for the information of the Board of the Company, with the remark that the Government of India fully concurs in the desirability of effecting the proposed change.

8. The minutes of the Conference on the subject of the transport of troops should be referred to the Military Department for consideration and such action as may be deemed necessary.

9. The thanks of the Government of India should be communicated to all members of the Conference for the care and attention they have bestowed on the subjects brought before them.

ORDER.—Ordered, that this Resolution, together with the proceedings of the Conference, be communicated to the Governments, Administrations, and Officers marginally noted for information and guidance, and to the Chief Commissioners, British Burma and Assam, the Agents to the Governor General, Rajputana, Central India, and Beluchistan, and the other Departments of the Government of India for information.

The Governments of Madras, Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioner, Central Provinces.
The Resident at Hyderabad.
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways.

Ordered, also, that this Resolution be communicated to the Secretary of State, and published for general information in the Supplement to the *Gazette of India*.

W. S. TREVOR, *Colonel, R. E.*,
Secretary.

RAILWAY CONFERENCE, 1882.

Proceedings of the Conference of Railway Delegates assembled at Simla on the 4th of September 1882, in accordance with Government of India, Public Works Department, Resolution Nos. 354R.T. and 647R.T., dated the 12th April and the 1st July 1882 respectively.

No. 1.

The Conference assembled at the Office of the Director General of Railways at noon on Monday, the 4th September 1882.

PRESENT:

Colonel F. S. Stanton, R.E., Director General of Railways . . . . . *President.*

Jabez Lightfoot, Esq., Officiating Agent, Delegate from Sind, Punjab and Delhi Railway Company.
G. L. Calder, Esq., Auditor and Chief Accountant, Delegate from Eastern Bengal Railway Company.
H. F. Payne, Esq., Traffic Superintendent, Delegate from Oudh and Rohilkhund Railway Company.
A. M. Saunders, Esq., Agent and Manager, Delegate from Madras Railway Company.
W. S. Betts, Esq., Agent, Delegate from South Indian Railway Company.
Major L. Conway-Gordon, R.E., Deputy Accountant General, Public Works Department, Delegate from State Railways. *Members.*
W. C Furnivall, Esq., C.E., Agent and Chief Engineer, Delegate from Bengal Central Railway Company.
T. W. Wood, Esq., Agent, Delegate from Bombay, Baroda and Central India Railway Company.
H. Conder, Esq., General Traffic Manager, Delegate from Great Indian Peninsula Railway Company.
Urban Broughton, Esq., Officiating Traffic Manager, Delegate from East Indian Railway Company.

Major R. A. Sargeaunt, R.E. . . . . *Secretary.*

The following officers also attended the meeting :—

David Ross, Esq., C.I.E., Traffic Manager, Sind, Punjab and Delhi Railway Company; and H. E. Church, Esq., Traffic Manager, Madras Railway Company.

The following Resolution by the Government of India and its enclosure No. 1 was considered as read and recorded :—

No. 354R.T., dated 21st April 1882.

RESOLUTION—By the Government of India, Public Works Department.

Proposed Conference to revise the General Rules for the interchange of Rolling Stock.

Read—

Despatch No. 28 Railway, dated 16th February 1882, from the Secretary of State.

Read again—

Public Works Department Resolution Nos. 1080-1104R., dated 13th March 1879, and Nos. 0145-0165 R.T., dated 10th February 1880.

Read also—

Despatch No. 83R.T., dated 1st July 1881, to the Secretary of State, and enclosures.

OBSERVATIONS.—Some difficulty having been experienced in the working of the general rules for the interchange of rolling-stock, which were framed at the Railway Conference of 1879, it has been suggested by the Secretary of State, after communication with the Boards of the several Companies concerned, that the rules should be reconsidered.

2. As for the proper framing of a revised set of rules the careful consideration of many technical and intricate details is necessary, the Government of India has deemed it expedient to entrust the work to a Railway Conference. That the Conference may have a fitting *locus standi*, the appended rules for the conduct of business have been approved by the Secretary of State and the East Indian, the Eastern Bengal, the Oudh and Rohilkhund, the Sind, Punjab and Delhi, the Madras, the Bombay, Baroda and Central India, and the Great Indian Peninsula Railway Companies.

RESOLUTION.—The proposal to entrust the revision of the rules for the interchange of rolling-stock having been agreed to by the several Railway Companies concerned, and the rules for the conduct of business having been settled, the Governor General in Council has decided that the Conference be called at some conveniently central place, such as Poona, or else at Simla, in the month of August or September next, the actual place and date being decided by a majority of votes of the Agents of the Guaranteed Railway Companies. The first business of the Conference will be to revise the rules for the interchange of stock, but opportunity may well be taken to consider other questions of general Railway interest. Railway Administrations should therefore be instructed to submit to Government, not later than the 10th of June, questions they desire to be discussed, in order that they may be circulated before the meeting of the Conference.

2. The Agents of the Guaranteed Railway Companies (including the South Indian) should be requested to nominate Delegates to represent their Railways, and to state the time and place within the limits above mentioned which would be most convenient, and the Director General should appoint a Delegate for State Railways.

3. A copy of the Secretary of State's despatch No. 28 Railway, dated 16th February 1882, and enclosures, should be circulated for information.

Enclosure No. I to Public Works Department Resolution No. 354R.T., dated 21st April 1882.

Orders for the conduct of business at the Railway Conference proposed to be held in India in 1882, and for giving effect to the rules passed.

1. The first and principal business of the Conference shall be to revise, the rules for the interchange of rolling-stock passed in 1879.

2. Each Railway Company, the gauge of whose line is 5′ 6″, and the State Railways shall be represented at the Conference by one Delegate nominated by the several Agents and the Government respectively.

3. Besides the one Delegate other officers of the Railway Companies represented may, by the desire of their Agents, attend the meetings, but they can take no part in the proceedings.

4. The President of the Conference shall be appointed by Government. He will direct the proceedings, and vote only in the case of an equal division.

He shall be entitled to submit proposals for consideration and decision. His decision as to whether questions proposed for discussion shall be considered or not shall be final.

He may at his discretion admit any subject relating to other questions than the rules for the interchange of rolling-stock for consideration, on the proviso that the decision arrived at will require confirmation of higher authority.*

* For questions affecting Guaranteed Railways "higher authority" means the Board of Directors and the Government of India.

5. With the exception of the actual rules for the interchange of rolling-stock, every or any question before the Conference, referred to the Conference with the approval of Government, shall be decided by a majority of votes, and such decision shall, subject to the proviso in clause 4 above, be binding on all parties represented.

6. The actual rules for the interchange of stock shall be decided by a majority of votes, but any Delegate can dissent from any particular rule or rules, unless passed by at least two-thirds of the Delegates. Any rule passed by at least two-thirds shall be binding on all Railways represented.

7. Any dissent under clause 6 above must be recorded at the time the rule dissented from is passed, and shall require the confirmation of the Board of Directors or of the Government of India, as the case may be. Unless such dissent is so confirmed within six months of the close of the Conference, it shall be null and void, and the rule dissented from shall be binding on the Railway whose Delegate has recorded his dissent.

8. It shall not be competent for any Railway Administration represented at the Conference to withdraw from any rule for the interchange of rolling-stock which has under these orders become binding thereon without giving one year's notice to the Government of India of such withdrawal, and no such notice shall be given within two years of the close of the Conference, or if given within that period, such notice shall be of no effect.

9. Should any difference of opinion as to the interpretation of any rule for the interchange of stock passed at this Conference subsequently arise between any parties concerned, the question shall, on representation, be referred by the Director General of Railways to the several Agents of the Railway Companies working under the Conference rules, and the decision of the majority shall be binding, the Director General in case of an equal division having the casting vote.

The first and principal business of the Conference being to revise the rules for the interchange of rolling-stock passed at the Conferences of 1879 and 1880, it was decided to read and discuss those rules one by one.

Mr. Betts having no interest in the rules for the interchange of rolling-stock on broad gauge lines, took no part in the discussion of these rules.

---

1. *Rule* I.*—Proposed by Mr. Conder, seconded by Mr. Saunders—

"That Sunday be considered a *dies non*."

This being supported by Mr. Wood alone, was lost.

It was then put to the Meeting—

"That Rule I stand as in the original Rules."

For.	
Mr. Furnivall. „ Lightfoot. „ Payne. „ Calder. Major Conway-Gordon. Mr. Broughton.	The other Delegates did not vote.

Carried.

* The Rules quoted in these Minutes are numbered in accordance with the Rules of 1879 and 1880; and the Rules passed at this Conference have been arranged under a new series of numbers and printed consecutively as part of the proceedings,—see minute No. 108, page 40.

2. *Rule II.*—Proposed by Mr. Conder, seconded by Mr. Broughton—

That the following words be added to Rule II, *viz.*—

"or at such time and in such way as may be arranged between the Railways forming the junction."

Carried "nem. con."

---

3. *Rule III.*—Proposed by Mr. Broughton, seconded by Mr. Conder—

That Rule III read thus:—

"Passenger carriages, horse-boxes, carriage-trucks, brake-vans and passenger road or luggage vans, are, irrespective of contents, to be in all cases reckoned as coaching vehicles, whether they run upon passenger or goods trains. All other kinds of vehicles are to be reckoned as goods vehicles, also irrespective of contents."

Proposed as an amendment by Mr. Payne, seconded by Mr. Wood—

That in Rule III the following words be inserted between the words "boxes" and "carriage," *viz.*, "or wagons carrying passengers or horses."

For.	*Against.*
Mr. Payne. „ Wood. „ Lightfoot. „ Calder.	Mr. Furnivall. „ Saunders. „ Broughton. „ Conder. Major Conway-Gordon.

The amendment was lost.

The original proposal was then put to the Meeting.

For.	*Against.*
Mr. Broughton. „ Conder. „ Saunders. „ Furnivall. Major Conway-Gordon.	Mr. Wood. „ Payne. „ Calder.

Mr. Lightfoot did not vote.

Carried.

---

4. *Rule IV.*—Proposed by Major Conway-Gordon, seconded by Mr. Lightfoot—

That the following clause be added to Rule IV, *viz.*—

"But in case of accidental missending beyond original destination, mileage both ways and demurrage (if incurred), but no penalty, shall be paid upon the vehicle until it has passed the original point of missending on its return journey."

For.	*Against.*
Major Conway-Gordon. Mr. Lightfoot. „ Broughton. „ Calder. „ Saunders. „ Furnivall. „ Wood.	Mr. Conder. „ Payne.

Carried.

---

5. *Rule IV.*—Proposed by Mr. Conder, seconded by Mr. Payne—

That for the words "per diem" in clause 1, Rule IV, be substituted the words "per day or part of a day."

Carried "nem. con."

6. *Rule IV.*—Proposed by Mr. Broughton, seconded by Mr. Lightfoot—That the following be added to Rule IV, *viz.*:—

"If goods are required to be sent to a station beyond the original destination, the consignment may be sent on in the original wagon without penalty."

For.	*Against.*
Mr. Broughton.	Mr. Conder.
„ Lightfoot.	„ Saunders.
„ Calder.	
„ Payne.	
„ Furnivall.	
„ Wood.	
Major Conway-Gordon.	

Carried.

7. *Rule IV.*—Proposed by Mr. Saunders, seconded by Mr. Wood—

That the following clause be added to Rule IV, *viz.*:—

"In the event of a wagon being missent, the Railway so missending shall pay to the Railways over whose lines the vehicle runs owing to the error, a haulage rate at two-thirds of a pie per mile per ton of carrying capacity in both directions in lieu of freight. The missending Railway must also pay the mileage due, if any, to the owning Railway."

The Conference adjourned till 11 a.m. on the following day.

No. 2.

The Conference re-assembled at 11 a.m. on Tuesday, the 5th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

8. *Rule IV.*—Proposed by Mr. Saunders, seconded by Mr. Conder—

"That the further discussion of Rule IV be postponed to a future Meeting."

Carried "nem. con."

9. *Rule V.*—Proposed by Mr. Conder, seconded by Mr. Lightfoot—

"That clauses 1 and 2 of Rule V stand."

Carried "nem. con."

10. *Rule V.*—Proposed by Mr. Conder, seconded by Major Conway-Gordon—

"That clause 3 of Rule V be considered together with Rule VI."

Carried "nem. con."

11. *Rule VI.*—Having been read, the discussion of it was postponed.

12. *Rule VII.*—Having been read, it was unanimously agreed that it should stand without alteration.

13. *Rule VIII.*—Proposed by Mr. Lightfoot, seconded by Mr. Broughton—

That the following be substituted for clause 1 of Rule VIII:—

"The mileage charge on coaching vehicles to be seven pies per mile, both on the outwards and the return journey, except that no mileage is to be charged on coaching vehicles not used for ordinary traffic, unless under load."

Carried "nem. con."

14. *Rule VIII.*—Proposed by Mr. Lightfoot, seconded by Major Conway-Gordon—

"That clause 2 of Rule VIII be expunged."

For.	*Against.*
Mr. Lightfoot.	Mr. Broughton.
Major Conway-Gordon.	„ Payne.
Mr. Conder.	„ Wood.
„ Calder.	
„ Saunders.	
„ Furnivall.	

Carried.

15. *Rule IX.*—Proposed by Major Conway-Gordon, seconded by Mr Saunders—

That the following clause be added to Rule IX:—

"In the case of a ferry by which coaching vehicles are crossed over a river where the rails are not continuous, an extra allowance for crossing of twelve hours each way to be made."

For.	
Major Conway-Gordon.	
Mr. Saunders.	
„ Conder.	**The other delegates did not vote.**
„ Calder.	
„ Furnivall.	
„ Wood.	

Carried.

16. *Rule X.*—It was unanimously agreed that Rule X stand without alteration.

17. *Rule XI.*—Accepted as it stands without dissent.

18. *Rule XII.*—Proposed by Mr. Lightfoot, seconded by Major Conway-Gordon—

That after the word "junction" the following be added, *viz.*:—

"It shall be optional with the receiving Railway to tranship, at its own cost, the contents of any wagon containing a load of less than half its carrying capacity.

Carried "nem. con."

19. *Rule XII.*—Proposed by Major Conway-Gordon, seconded by Mr. Conder—

That the following clause be added after the addition to Rule XII passed in paragraph 18:—

"In case of a ferry by which vehicles are crossed where the rails are not continuous, it shall be optional with the Railway owning the ferry, in lieu of

crossing the vehicle over, to tranship the load at the nearest station to the ferry where the work can be done; advice of such transhipment being sent to the owning Railway."

Carried "nem. con."

20. *Rule XII.*—Proposed by Mr. Broughton, seconded by Mr. Payne—

That the following be added to Rule XII :—

"In case a Railway cuts off a vehicle short of its destination for its own convenience, the mileage on that vehicle shall be paid to destination."

Proposed as an amendment by Mr. Lightfoot, seconded by Mr. Saunders—

That the following wording be substituted for that proposed :—

"To avoid demurrage, it shall be optional with the receiving Railway to tranship at its own expense the contents of a foreign wagon at any point short of destination, and mileage shall cease at the point of such transhipment, notice being sent to the owning Railway within seven days."

For.	*Against.*
Mr. Lightfoot. „ Saunders. „ Furnivall. „ Wood. „ Conder. „ Calder. Major Conway-Gordon.	Mr. Broughton. „ Payne.

Carried.

21. *Rule XII.*—Proposed by Mr. Broughton, seconded by Mr. Conder—

That in Rule XII after the words "in all other respects" the following be inserted :—"except as provided in Rule XI."

Carried "nem. con."

22. *Rule XII.*—It was agreed without dissent that the last clause of Rule XII should stand.

23. *Rule XIII.*—Unanimously accepted without alteration.

The Conference adjourned till the following day.

No. 3.

The Conference re-assembled at 11 A.M. *on Wednesday, the 6th September.*

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

24. *Rule I.*—Proposed by Mr. Conder, seconded by Mr. Saunders—

That the following be added to Rule I, *viz.* :—

"That for the purposes of these rules the ton shall in all cases be reckoned as equivalent to 27 maunds."

Carried "nem. con."

25. *Rule IV.*—Proposed by Mr. Saunders, seconded by Mr. Wood—

That in lieu of the proposal recorded in paragraph 7, the following clause be added to Rule IV, *viz.* :—

"In the event of a wagon being missent, the Railway so missending shall pay to other Railways over whose lines the vehicle runs, owing to the error, a haulage rate of one pie per mile per ton of carrying capacity in both directions in lieu of freight. The missending Railway must also pay ordinary mileage due, if any, to the owning Railway."

Carried "nem. con."

26. *Rule IV.*—Proposed by Mr. Payne, seconded by Mr. Broughton—

That the following be substituted for the original Rule IV :—

"Empty vehicles must be returned to the owning Railway by the exact route and junction by which they were received loaded.

"Vehicles under load must be returned to the owning Railway by way of the nearest route and junction.

"For any departure from the above Rules for return of vehicles, the Railway so missending any vehicle shall pay to the owning Railway a penalty of Rs. 22 per day or part of a day from the time each vehicle was missent until it returns to a station on the route by which it should have been sent."

For.	
Mr. Payne. „ Broughton. „ Conder. „ Calder. „ Saunders. „ Lightfoot. Major Conway-Gordon.	The other delegates did not vote.

Carried.

27. *Rule IV.*—Proposed by Mr. Broughton, seconded by Mr. Payne—

That the following be added before the penalty clause of Rule IV as passed in paragraph 26 :—

"Vehicles of one Railway may not be reloaded by another Railway, except in the direction of or beyond the owning line."

Carried "nem. con."

28. *Rule IV.*—Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

"That vehicles may be diverted without penalty for distances not exceeding 15 miles in one direction (and for longer distances by mutual agreement) for the purpose of obtaining a return load."

Carried "nem. con."

29. *Rule IV.*—Proposed by Mr. Conder, seconded by Mr. Lightfoot—

"That penalty paying vehicles shall also be subject to ordinary mileage and demurrage charges."

Carried "nem. con."

30. *Rule XIV.*—Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

"That, subject to the proviso in Rules XIII and XVIII, payment be made to the owning Railway at the rate of two-thirds of a pie per ton per

mile on the weekly aggregate weight charged between any two stations for the contents of all vehicles of one Railway which may be run on another Railway on the outward journey.

"That no mileage be paid to the owning Railway on a return load by any Railway which loads a wagon back to or beyond the owning line; but the Railway beyond the owning Railway on to which wagons are sent with such return load must pay mileage under usual rules to the owning Railway.

"That mileage be paid on any return load sent in a wagon of another Railway to any station short of the owning line."

Proposed as an amendment by Mr. Conder, seconded by Mr. Payne—

That the following be substituted for the first paragraph of the above proposal, *viz.* :—

"That, subject to the provisions of Rules XIII and XVIII, payment be made to the owning Railway for not less than 3 tons for each goods vehicle, at the rate of two-thirds of a pie per mile per ton or fraction of a ton of goods conveyed in each vehicle of one Railway on the line of another Railway on the outward journey."

For.	*Against.*
Mr. Conder.	Major Conway-Gordon.
„ Payne.	Mr. Broughton.
„ Saunders.	„ Lightfoot.
	„ Furnivall.
	„ Wood.
	„ Calder.

The amendment being lost, the original proposal was put to the Meeting.

For.	*Against.*
Mr. Broughton.	Mr. Conder.
Major Conway-Gordon.	„ Payne.
Mr. Lightfoot.	„ Saunders.
„ Furnivall.	
„ Wood.	
„ Calder.	

Carried.

---

31. *Rule VI.*—The following proposals were placed before the Meeting and discussed:—

Suggested by Mr. Conder—

"*Rule VI.*—In cases in which the stock of either Railway is damaged upon the line of another Railway, the actual time occupied in making the repairs, but not more than ten days beyond the time allowed for the return of stock, shall be allowed free of demurrage for its repair. But if the damage is such that it will take more than ten days to complete the repairs, the vehicle shall be returned to the owning Railway within the ten days.

"In addition to the ten days, the time occupied in accordance with usual mileage rules for any necessary material, &c., required for its repair to reach the place where the damaged vehicles may be is to be also allowed free of demurrage, and the time under usual mileage and demurrage rules for working the wagon back to the owning Railway shall be also allowed free of demurrage.

"If not sent within that period either repaired or not repaired, demurrage will be charged after the expiration of the specified free allowances, unless specially exempted by the Traffic Manager of the owning Railway.

"Any demurrage caused by delay in forwarding such material is to be paid by the Railway causing the delay. Notice must be sent by the Traffic Managers of the Railways concerned, within one month, to the owning Railway in all cases how and when the damage took place, and the nature of it.

"And in cases where the damage is repaired by the owning Railway, the claim for the cost of such repairs shall be made within three months of the date at which the repairs are completed. But the cost of repair to any vehicle damaged upon any Railway other than the owning Railway, which amounts to less than Rs. 10, is to be paid by the Railway which carries out the repair."

Suggested by Major Conway-Gordon—

"*Rule VI.*—Notice shall be sent within one month to the owning Railway how and when any damage to rolling-stock took place, and the nature of it.

"No claim shall be admitted for the cost of repairs of stock unless sent to the Railway which is responsible for the payment of it, within three months of the time at which the repairs are completed, and no claim shall be submitted for damage not exceeding Rs. 10 [or Rs. 5].

"Ten additional days for the actual repairs, plus the actual time required for the conveyance of material from the owning line, shall be allowed free of demurrage in the case of damage to the stock of a Railway on the line of another Railway. If the damage be such as will require more than ten days to carry out the actual repairs, the stock must be returned to the owning Railway. If the repaired stock be not sent within the free allowance of time, or if the stock unrepaired be not sent within ten days, demurrage will be charged after the expiration of the free allowance or the ten days, as the case may be, unless specially exempted by the Traffic Management of the owning Railway."

Rule VI.—Suggested by Mr. Lightfoot—

That Rule VI remain as at present, subject to the following modification:—

"I.—That the free time be increased to ten days.

"II.—That no demurrage shall be incurred in consequence of delay in forwarding owning Railway's material from whatever cause arising, and the period of such delay, if any, shall be added to the free allowance."

Rule VI.—Proposed by Major Conway-Gordon, seconded by Mr. Broughton—

"That the actual time occupied in the conveyance of material required for repairs be allowed as free time, in addition to such other free allowances as may be passed under this Rule."

For.	*Against.*
Major Conway-Gordon.	Mr. Payne.
Mr. Broughton.	„ Conder.
„ Calder.	„ Furnivall.
„ Saunders.	„ Wood.
„ Lightfoot.	

Carried.

Rule VI.—After further discussion it was decided that ten days should be substituted for the six days now allowed, and that damages under Rs. 10 should be paid by the Railway carrying out the repairs. The Secretary was then asked to draft a new Rule VI to embrace these points for consideration at a subsequent Meeting.

---

32. *Rule XV.*—Proposed by Mr. Broughton, seconded by Mr. Furnivall—

"That Rule XV stand."

Proposed as an amendment by Mr. Conder, seconded by Mr. Payne—

"That the free allowance be fixed at 6 miles an hour, and that twelve hours be allowed free at each junction at which a wagon passes from one Railway on to another. This allowance at the junction to belong to the Railway on to which the wagon passes. The other provisions of Rule XV which are not affected by these proposals to remain as at present."

The Conference adjourned till the following day.

No. 4.

The Conference re-assembled at 11 A.M. on Thursday, the 7th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

33. *Rule VI.*—Proposed by Major Conway-Gordon, seconded by Mr. Lightfoot—

That Rule VI stand as follows, *viz :—*

"In cases in which the stock of any Railway is damaged upon the line of another Railway, the actual time occupied in making the repairs, but not more than ten days in addition to the time allowed for the return of stock under the usual mileage rules, shall be allowed free of demurrage for its repair. But if the repairs cannot be completed in ten days, the vehicle shall be despatched to the owning Railway within that time.

"In addition to the free allowances prescribed in the first paragraph the actual time occupied in conveyance of material for repairs from the owning line shall be allowed free of demurrage in the case of damaged stock of one Railway repaired on the line of another Railway.

"If the damaged stock be not returned either repaired or not repaired within the period allowed, demurrage will be charged after the expiry of such period, unless specially exempted by the Traffic Manager of the owning Railway.

"Notice must in all cases be sent by the Traffic Manager of the Railway on which the damage occurred, within one month, to the owning Railway, how and when the damage took place, and the nature of it.

"In cases where the damage is repaired by the owning Railway, the claim for the cost of such repairs shall be made within three months of the date at which the repairs are completed.

"The cost of repair to any vehicle damaged which does not exceed Rs. 10 is to be paid by the Railway which carries out the repair."

For.	
Major Conway-Gordon. Mr. Lightfoot. „ Broughton. „ Calder. „ Saunders. „ Furnivall. „ Wood.	The other delegates did not vote.

Carried.

Mr. Conder and Mr. Payne did not vote, but their objection is only to the second clause. *(See paragraph 31.)*

34. *Rule IV.*—Proposed as an addition to Rule VI by Major Conway-Gordon, seconded by Mr. Lightfoot—

"That no freight be charged for material sent for repairs of damaged stock, or for the haulage of wagons carrying damaged stock back to the owning Railway."

Proposed as an amendment in addition by Mr. Payne, seconded by Mr. Wood—

"But in the case of damaged stock loaded up for return to the owning Railway, if the damage be clearly traceable to defect of material or workmanship, haulage shall be paid by the owning Railway for the transport of the damaged stock over other Railways."

For.	*Against.*
Mr. Payne. „ Wood.	Mr. Lightfoot. „ Calder. „ Conder. „ Broughton. „ Saunders. „ Furnivall.

The amendment being lost, the original proposal was put to the Meeting.

Carried "nem. con."

35. *Rule XV.*—The Conference returned to the consideration of Rule XV.

Proposed by Mr. Lightfoot, seconded by Mr. Saunders, as a second amendment to Mr. Broughton's proposal in paragraph 32—

That Rule XV stand thus, ***viz :—***

"Goods vehicles to be allowed one hour for every six miles run on a foreign line, and thirty-six hours for unloading and twenty-four hours for reloading at destination, and twelve hours at intermediate stations for each of these operations, free of demurrage."

The original proposition and Mr. Conder's amendment being withdrawn, Mr. Lightfoot's amendment became the substantive proposition.

For.	*Against.*
Mr. Lightfoot. „ Saunders. „ Broughton. „ Calder. „ Furnivall.	Mr. Conder. „ Payne. „ Wood. Major Conway-Gordon.

Carried.

36. *Rule XV.*—**Proposed by Major Conway-Gordon, seconded by Mr. Saunders—**

That the following be added to Rule XV :—

"In the case of a ferry by which goods vehicles are crossed over a river, where the rails are not continuous, an extra allowance for crossing of twelve hours each way, or such time as may be mutually agreed upon, be given free of demurrage ; and when such allowance of time is made, mileage shall be paid for loaded stock transferred by such ferry upon half the time so allowed."

Carried "nem. con."

37. *Rule XVI.*—Proposed by Mr. Payne, seconded by Mr. Broughton—

"That this rule stand."

Proposed as an amendment by Major Conway-Gordon, seconded by Mr. Saunders—

That after the words "rate of" in the rule the words "eight annas per vehicle per hour" be substituted for the words "one anna per ton of carrying capacity per hour."

For.	*Against.*
Major Conway-Gordon. Mr. Saunders. „ Wood.	Mr. Calder. „ Conder. „ Broughton. „ Furnivall. „ Payne. „ Lightfoot.

The amendment being lost, the original proposal was put to the Meeting.

Carried "nem. con."

38. *Rule XIX.*—Proposed by Mr. Conder, seconded by Mr. Payne—
"That this rule stand."

Carried "nem. con."

39. *Rules XX, XXI, and XXII.*—Proposed by Mr. Conder, seconded by Mr. Payne—
That these Rules be placed after Rule VI, under "General."

Carried "nem. con."

40. *Rule XX.*—Proposed by Mr. Conder, seconded by Mr. Lightfoot—

That the word "demurrage" be inserted after the word "mileage" in the Rule.

Carried "nem. con."

41. *Rule XXI.*—It was unanimously agreed that this Rule should stand, with the substitution of the word "vehicles" for "wagons."

42. *Rule XXII.*—Proposed by Mr. Lightfoot, seconded by Mr. Broughton—

That Rule XXII stand, with the following addition, *viz.*:—

"No claim for mileage, demurrage, or penalty shall be preferred after a lapse of six months."

Carried "nem. con."

43. *Rule II.*—Proposed by Mr. Lightfoot, seconded by Mr. Conder—

That the following be added to Rule II:—

"But stock is not to be considered as accepted by the Railway on to which it is going at any junction station until it and the load it may contain are in a condition to be taken on by the Railway on to which it is going; and mileage, demurrage, &c., must be paid by the Railway bringing it to the junction until it is put into that condition."

Carried "nem. con."

44. *Rules XVII, XVIIA, and XVIII.*—Proposed by Mr. Conder, seconded by Mr. Wood—

"That these Rules be considered together."

For.	
Mr. Conder. „ Wood. „ Saunders. „ Broughton. „ Calder. „ Furnivall. „ Payne. Major Conway-Gordon.	Mr. Lightfoot did not vote.

Carried.

45. The Conference proceeded to discuss the provisions of these Rules, when certain proposals* were put forward for consideration, which it was decided should be printed and circulated to the delegates before the next Meeting.

* Printed below.

Suggestions circulated for consideration.

Rules XVII, XVII(a), and XVIII.—Suggested by Mr. Broughton, seconded by Major Conway-Gordon—

That these Rules stand, with the following modifications:—After the word "wagons" in Rule XVII, insert—"provided that return loads are available." At the end of the same Rule be added—"the penalty under Rule XVIII applying."

That in Rule XVII (*a*) for the word "such" in line 4, read "the whole;" and that this Rule form part of Rule XVII.

Suggested by Mr. Conder and by Mr. Payne—
"That these Rules be expunged."

Suggested by Mr. Lightfoot—

"1. That Rules XVII and XVII (*a*) be abolished, and Rule XVIII remain intact.

"2. That in the event of Rules XVII and XVII (*a*) remaining in force, and the forwarding Company being called upon to receive wagons in equalisation when it is inexpedient for the forwarding Company to accept such wagons, it shall reduce by one-half the mileage charges upon all of its own wagons thereafter sent on to the receiving line until such time as the traffic is again equalised.

"3. That an intermediate Railway shall not call upon the adjoining Railway to accept stock in exchange for wagons passing over its entire system, unless the terminal Company requires it to do so; and then only to the same extent as the wagons of the forwarding Company exceed the agreed number."

Suggested by Mr. Conder that it be put on record as a Resolution of the Conference, in accordance with a decision upon a recent arbitration—

That all the vehicles, of whatever Railway, handed to any Railway at a junction on the outward journey are to be accepted and dealt with only as vehicles of the Railway which brings them to the junction; and vehicles which are returned to a junction after an outward journey are to be treated as vehicles of the Railway to which they are so returned.

The Conference adjourned till Saturday, the 9th September.

No. 5.

The Conference re-assembled at 11 A.M., on Saturday, the 9th September.

PRESENT.—As at Meeting No. 1, with the exception of Mr. Saunders, who was unavoidably absent owing to ill-health.

Mr. Church put in the following letter appointing him to assume the duties of delegate from the Madras Railway Company:—

TO THE PRESIDENT OF THE RAILWAY CONFERENCE.

SIR,—As I am unfortunately unable to be present to-day owing to illness, I have the honour to request that the vote of the Madras Railway Company may in my absence be exercised by Mr. H. E. Church.

I have the honour to be,

SIR,

Your obedient servant,

9th September 1882. ARTHUR M. SAUNDERS,

Agent and Manager.

The proceedings of the previous Meeting were read and confirmed.

46. *Rules XVII, XVII a), and XVIII.*—Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

"That these Rules stand, with the following modifications:—After the word 'wagons' in Rule XVII, insert—'provided that return loads are available.' At the end of the same Rule be added—'the penalty under Rule XVIII applying."

"That in Rule XVII (*a*), for the word 'such' in line 4, read 'the whole'; and that this Rule form part of Rule XVII."

Proposed by Mr. Conder, seconded by Mr. Payne, as an amendment—

"That these three Rules be expunged."

Proposed by Mr. Wood, seconded by Mr. Lightfoot, as a second amendment—

"That these three Rules be retained subject to modification on further discussion."

For.	*Against.*
Mr. Wood.	Mr. Conder.
,, Lightfoot.	,, Payne.
,, Calder.	
,, Church.	
,, Broughton.	
,, Furnivall.	
Major Conway-Gordon.	

The second amendment was carried.

47. After considerable discussion on Rules XVII, XVII (*a*), and XVIII several suggestions were put in, and it was decided that these should be circulated for consideration at the next Meeting.

48. *Rule II.*—Proposed by Mr. Conder, seconded by Mr. Payne—

That it be put on record as a Resolution of the Conference, in accordance with the decision upon a recent arbitration—

"That all the vehicles, of whatever Railway, handed to any Railway at a junction on the outward journey are to be accepted and dealt with only as vehicles of the Railway which brings them to the junction; and vehicles which are returned to a junction after an outward journey are to be treated as vehicles of the Railway to which they are so returned."

Carried "nem. con."

49. The further consideration of the rules for the interchange of rolling-stock was postponed to a future meeting, and the Conference proceeded to the other business which had been laid before it, and on these questions Mr. Betts took part in the discussion.

THE TIME OF ENGINES EXCLUSIVELY EMPLOYED IN MARSHALLING ENGINES IN LOCOMOTIVE YARDS.

50. Proposed by Mr. Conder, seconded by Major Conway-Gordon—

That the following be added to Rule 8 of the Rules for the Record of Train Mileage and Engine Duty:—

"or for engines employed in marshalling engines or for other purposes within the limits of the locomotive yards."

Carried "nem. con."

Rule 8 will therefore stand as follows:—

"No record is to be kept of the time occupied in lighting fires, and getting in and out of shed, or for engines employed in marshalling engines, or for other purposes within the limits of the locomotive yards."

MILEAGE OF ENGINES BETWEEN SHED AND STATION WHEN THE DISTANCE IS CONSIDERABLE.

51. Proposed by Mr. Lightfoot, seconded by Mr. Broughton—

"That Rule 8 be held to apply in such cases."

Proposed as an amendment by Mr. Wood, seconded by Mr. Cander—

"That in cases where the shed is one mile or more from the place where trains start, the engine mileage shall be included under item 6, 'Miscellaneous Services,' no record being kept when the distance is less than a mile."

For.	*Against.*
Mr. Wood.	Mr. Broughton.
,, Conder.	,, Calder.
,, Church.	,, Lightfoot.
,, Payne.	,, Betts.
,, Furnivall.	Major Conway-Gordon.

The votes being evenly divided, the President gave a casting vote against the amendment, and the original proposal was carried.

HALF-YEARLY ANALYSIS OF WORKING.

52. The views of the Conference were invited on a suggestion to add to the half-yearly analysis of working an item 115A to show the average cost of hauling a goods unit one mile, including interest on capital expended at the rate of 5 per cent. per annum, the interest being allocated between coaching and goods, as laid down for item 18 of the Analysis.

Proposed by Mr. Broughton, seconded by Mr. Lightfoot—

"That the Conference sees no objection to the suggestion made."

Proposed as an amendment by Mr. Wood, seconded by Mr. Betts—

"That the Conference is of opinion that interest on capital outlay is not a working expense, and cannot be accurately defined in connection with any particular section of traffic. It fails, therefore, to see the advantage of the suggestion before it."

The amendment being lost, the original proposal was carried.

The Conference adjourned till Monday, the 11th September.

No. 6.

The Conference re-assembled at 11 A.M., on Monday, the 11th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

The Conference returned to the consideration of the Rules XVII, XVII (*a*) and XVIII for the interchange of rolling-stock.

53. *Rules XVII and XVII* (*a*).—Proposed by Major Conway-Gordon, seconded by Mr. Broughton—

"That the principle which at present finds expression in Rule XVII (*a*), *viz.*, that Rules XVII and XVII (*a*) do not come into force until the daily average excess of wagons passing the junction in one direction exceeds a certain minimum, be adhered to."

Proposed as an amendment by Mr. Conder, seconded by Mr. Lightfoot—

"That the principle of fixing a minimum be applied to Rule XVIII as well as to Rules XVII and XVII (*a*)."

For.	*Against.*
Mr. Conder.	Mr. Broughton.
„ Lightfoot.	„ Calder.
„ Payne.	„ Saunders.
„ Wood.	Major Conway-Gordon.
	Mr. Furnivall.

The amendment being lost, the original proposal was put to the Meeting.

For.	
Major Conway-Gordon.	
Mr. Broughton.	
„ Calder.	
„ Saunders.	Mr. Conder did not vote.
„ Payne.	
„ Lightfoot.	
„ Furnivall.	
„ Wood.	

Carried.

54. *Rule XVII* (*a*).—Proposed by Mr. Payne, seconded by Mr. Saunders—

"That the average weekly excess per diem referred to in the previous Resolution be fixed at sixty (60)."

Proposed by Mr. Broughton, seconded by Major Conway-Gordon, as an amendment—

"That the excess be limited to a weekly average of 30 per day as at present."

Proposed by Mr. Wood, seconded by Mr. Lightfoot, as a second amendment to Mr. Payne's proposal with reference to present Rules XVII and XVII (*a*)—

"That the average daily excess for one week be not a defined number but 5 per cent. of the receiving Railway's authorised wagon stock open to exchange to be named yearly."

For.	*Against.*
Mr. Wood.	Mr. Conder.
„ Lightfoot.	„ Calder.
„ Payne.	„ Broughton.
	„ Saunders.
	„ Furnivall.
	Major Conway-Gordon.

The second amendment being lost, the first amendment was put to the Meeting.

For.	*Against.*
Mr. Broughton.	Mr. Payne.
Major Conway-Gordon.	„ Saunders.
Mr. Conder.	„ Lightfoot.
„ Calder.	„ Wood.
„ Furnivall.	

Carried.

55. *Rules XVII and XVII* (*a*).—Proposed by Mr. Lightfoot, seconded by Mr. Payne—

That the following form the first portion of the new Rule in substitution of Rules XVII and XVII (*a*):—

"When the excess number of wagons taken over by any one Railway shall exceed a daily average of 30 for one week, the receiving Railway may call upon the forwarding Railway to take over a sufficient number of wagons to bring this excess within the prescribed limit of thirty; and in the event of the forwarding Railway not intimating within 48 hours after notice of tender by the receiving Railway its intention to accept such wagons, a charge of two rupees per day per wagon shall be paid as a rebate on mileage by the forwarding Railway upon the number of wagons not accepted."

For.	*Against.*
Mr. Lightfoot.	Mr. Broughton.
„ Payne.	„ Furnivall.
„ Conder.	Major Conway-Gordon.
„ Calder.	
„ Saunders.	
„ Wood.	

Carried.

56. *Rule XVII.*—Proposed by Mr. Conder, seconded by Mr. Lightfoot—

"That no notice shall be valid unless given by wire within three days after the close of a week by the receiving Railway of its intention to offer wagons in carrying out the ruling in paragraph 55, and that the two rupees shall not be charged until the expiry of 48 hours after the despatch of the notice by the receiving Railway."

Carried "nem. con."

57. *Rule XVIII.*—Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

That Rule XVIII stand with the following modification:—

For the portion commencing "certain daily" and ending "its own stock" read:—"a number of wagons at its disposal daily at the junction for traffic to and *viâ* the receiving line; and in the event of failure to comply within one week, the sending Railway shall be entitled to charge Rs. 15 a day per wagon short supplied, independent of ordinary mileage, demurrage and penalty, which may accrue under the Rules on the stock actually running with through traffic."

Proposed as an amendment by Mr. Conder, seconded by Mr. Lightfoot—

That "Rs. 12" be substituted for "Rs. 15."

For.	*Against.*
Mr. Conder.	Major Conway-Gordon.
„ Lightfoot.	Mr. Broughton.
	„ Calder.
	„ Saunders.
	„ Payne.
	„ Furnivall.
	„ Wood.

The amendment being lost, the original proposal was put to the Meeting.

For.	*Against.*
Mr. Broughton.	Mr. Conder.
„ Saunders.	„ Calder.
„ Payne.	„ Lightfoot.
„ Furnivall.	
„ Wood.	
Major Conway-Gordon.	

Carried.

58. *Rule XVIII.*—Proposed by Mr. Calder, seconded by Mr. Broughton—

That the following addition be made to the Rule passed in paragraph No. 57 after the words "carrying capacity" in the last line but one of the original Rule XVIII:—

"Provided also that in case of famine or other public necessity, failing an adequate supply of wagons by the receiving Railway to the Railway

on which the traffic originates, and should it appear to the satisfaction of the Government of India that the sending Railway will in consequence be denuded of wagons to the serious injury or loss of its local traffic, it shall be optional to the sending Railway to temporarily discontinue interchange of stock without notice."

For.	*Against.*
Mr. Calder.	Mr. Saunders.
„ Broughton.	„ Conder.
„ Lightfoot.	„ Wood.
	„ Furnivall.
	„ Payne.
	Major Conway-Gordon.

Lost.

The Conference adjourned until the following day.

No. 7.

The Conference re-assembled at 11 A.M., on Tuesday, the 12th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

59. *Rule VIII.*—Proposed by Mr. Conder, seconded by Mr. Broughton—

That the following words be added to the Rule passed under paragraph 13:—

"'Ordinary traffic' is to be understood to be only regular public trains which are advertised to carry passengers, and to include reserved accommodation on such trains: private carriages, troop extra trains, private special trains and special passenger trains put on for such occasions as fairs, &c., are not to be considered as ordinary traffic."

Carried "nem. con."

60. Proposed by Mr. Conder, seconded by Mr. Broughton—

"That the interchange of stock be carried on until the end of the present year under the Rules in force before this Conference assembled, and that the Rules for interchange of stock passed at this Conference be in force on and after the 1st of January 1883, until cancelled or modified in accordance with the Rules for the conduct of business at this Conference, which are recorded on the proceedings."

Carried "nem. con."

61. *Rules XVII and XVII* (*a*).—Proposed by Mr. Payne—

That in the Rule passed in paragraph 55, the words "at any one junction" be inserted after "by any one Railway."

This proposal not being seconded, was not put to the Meeting.

62. *Rules XVII and XVII* (*a*).—Proposed by Major Conway-Gordon, seconded by Mr. Broughton—

That the first portion of the Rule passed in paragraph 55 read thus:—

"When the aggregate excess number of wagons taken over by any one Railway from any other Railway shall exceed, &c."

For.	*Against.*
Major Conway-Gordon.	Mr. Payne.
Mr. Broughton.	
„ Wood.	
„ Furnivall.	
„ Saunders.	
„ Calder.	
„ Conder.	
„ Lightfoot.	

Carried.

63. *Rules XVII and XVII* (*a*).—Proposed by Mr. Wood, seconded by Mr. Conder—

That the following be added to the Rule passed in paragraphs 55 and 56:—

"When any two Railways have more than one junction with each other, all such junctions shall be regarded for the purposes of this Rule as one junction only."

For.	*Against.*
Mr. Wood.	Mr. Payne.
„ Conder.	
„ Broughton.	
„ Saunders.	
„ Lightfoot.	
„ Furnivall.	
„ Calder.	
Major Conway-Gordon.	

Carried.

64. *Rules XVII and XVII* (*a*).—Proposed by Mr. Payne, seconded by Mr. Broughton, as an addition to the Rule in paragraphs 55 and 56—

"But the receiving Railway shall only tender at each junction such proportion of the total excess as was received at that junction."

Carried "nem. con."

65. *Rules XVII and XVII* (*a*).—Proposed by Mr. Lightfoot, seconded by Mr. Broughton—

"That the calculations made under the provisions of the Rule passed in paragraph 55 shall be exclusive of wagons returning to the owning Railway."

Carried "nem. con."

66. *Rules XVII and XVII* (*a*).—Proposed by Mr. Conder, seconded by Mr. Wood—

That paragraph 56 be modified as follows:—

After the word "wire" add "or in any other way that may be mutually agreed upon."

Carried "nem. con."

67. *Rule XVIII.*—Proposed by Mr. Lightfoot, seconded by Major Conway-Gordon—

That the Rule passed in paragraph 57 be amended thus:—

For the words "fifteen rupees a day per wagon" read "one and a half rupees per diem per ton of wagon carrying capacity." And to insert between the words "wagons" and "than" the words "at each junction;" and also between the words "stock" and "based" the words "at that junction."

For.	
Mr. Lightfoot.	Mr. Conder did not vote.
Major Conway-Gordon.	
Mr. Broughton.	
„ Calder.	
„ Saunders.	
„ Payne.	
„ Wood.	
„ Furnivall.	

Carried.

68. The following was admitted by the President as a question outside the Rules for the interchange of stock, *viz.*,—

That, inasmuch as Mr. Conder considers the arrangement made in paragraph No. 6 for sending goods forward beyond the original destination in the same wagon as that in which they were received at the original destination (which under the constitution of the Conference the Great Indian Peninsula Company will abide by) to be in regard to the goods not only not legal, but also very undesirable.

Mr. Conder proposes, seconded by Mr. Payne—

"That, unless otherwise mutually arranged, any Railway which allows goods to be sent on beyond the original destination shall be alone responsible for all claims and other consequences which may arise after the goods have reached their original destination."

Proposed as an amendment by Mr. Broughton, seconded by Major Conway-Gordon—

"That the question of liability of any Railway under these circumstances must depend upon the peculiarities of each case."

For.	*Against.*
Mr. Broughton.	Mr. Conder.
Major Conway-Gordon.	„ Payne.
Mr. Calder.	„ Wood.
„ Saunders.	
„ Furnivall.	
„ Lightfoot.	
„ Betts.	

The amendment was carried.

The Conference adjourned till the following day.

No. 8.

The Conference re-assembled at 11 A.M., on Wednesday, the 13th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

FREIGHT ON GOODS AND PARCELS LOST OR DAMAGED.

69. Proposed by Mr. Lightfoot, seconded by Mr. Conder—

"That all freight on goods and parcels lost or damaged shall be debited to compensation account in addition to the amount of the claim."

Carried "nem. con."

SIMPLIFICATION OF RAILWAY GOODS TARIFF.

70. Proposed by Mr. Saunders—

"That the classification list of goods should be reduced by adopting as nearly as practicable the Commodity Statement introduced by the Government of India for statistical purposes, which now accompanies every Revenue Account issued half-yearly; the principal articles of produce appearing as main heads, while other articles of commerce are shown as sub-heads under the above."

This proposal not being seconded was not put to the Meeting.
Recorded.

Proposed by Mr. Lightfoot—

"That it is advisable, as far as possible, to have uniform conditions for the carriage of goods, but that the matter is of such a difficult nature that it should be referred to a Special Committee of Traffic Officers for consideration upon

the basis that rates issued to the public should be simplified and all conditions owing to greater cost of working heavier gradients or varying capacity of rolling stock be settled between the Railways themselves."

This proposal not being seconded was not put to the Meeting.
Recorded.

Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

"That the Conference considers that simplification of classification and of conditions is desirable; but it is not prepared to discuss the question in detail, and it suggests that the matter should be referred to a Committee of Traffic Officers, with instructions to recommend simplifications as far as they can be made consistently with the interests of the public and of the several Railways."

Carried "nem con."

71. Proposed by Mr. Wood, seconded by Major Conway-Gordon—

"That it is desirable that such Committee of Traffic Officers should assemble at as early a period as can be agreed on between Government and the Boards of the several Railway Companies."

Proposed as an amendment by Mr. Conder, seconded by Mr. Broughton—

"That the Boards of Directors of the Railways concerned be asked to take any necessary action if they should assent to the proposal passed in paragraph 70, the Conference being of the opinion that early steps should be taken in the matter."

For.	*Against.*
Mr. Conder.	Major Conway-Gordon.
„ Broughton.	Mr. Saunders.
„ Calder.	„ Wood.
„ Payne.	„ Betts.
	„ Furnivall.
	„ Lightfoot.

The amendment being lost, the original proposal was put to the Meeting.

Mr. Wood.	Mr. Conder.
Major Conway-Gordon.	„ Broughton.
Mr. Betts.	„ Calder.
„ Furnivall.	„ Payne.
„ Lightfoot.	
„ Saunders.	

Carried.

72. Proposed by Mr. Saunders, seconded by Mr. Lightfoot—

"That the two first propositions in paragraph 70 which were not seconded be recorded for reference to the proposed Committee for consideration."

For.	
Mr. Saunders.	The remaining delegates did not vote.
„ Lightfoot.	
„ Wood.	
„ Furnivall.	

Carried.

ADVICES OF ALTERATIONS OF TARIFFS.

73. Proposed by Mr. Conder, seconded by Mr. Broughton—

"That instead of the present arrangement under which each Railway provides all the necessary copies of all rate and fare lists for all stations of all other Railways for through booking, each Railway shall in future supply copies (not less than twelve, or in such numbers as may be arranged from time to time) only to the Traffic Managers of those Railways with which they have junctions, each Railway respectively giving all necessary rate and fare lists of other Railways to their own stations and to the Traffic

Managers of other connected Railways that they may in like manner advise their own stations. But any Railway requiring more copies may, in order to avoid reprinting, obtain on payment from the Railway to which the lists refer any additional number of copies."

Carried "nem. con."

74. With the view of obtaining uniformity of practice regarding advices of alterations in tariffs, Mr. Broughton made the following proposals:—

(1) That advices shall be sent of all changes on or before the 20th of each month, and of alterations consequent thereon by the receiving Railway not later than the end of the month. That advices so sent become operative one month after the 1st of the month following the date of advice.

This was seconded by Mr. Conder and

Carried "nem. con."

(2) That printed advices (12 copies, or such other number as may be agreed on) be sent only once a month to all Railways with which there is through booking, a "*nil*" form being sent when no alteration is proposed.

This was seconded by Mr. Payne and

Carried "nem. con."

THROUGH BOOKING OF PARCELS AND DOGS.

75. After discussion of this subject, certain suggestions were put forward, and it was decided that these should be circulated for consideration at the next Meeting.

The Conference adjourned till the following day.

No. 9.

The Conference re-assembled at 11 A.M., on Thursday, the 14th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

THROUGH BOOKING OF PARCELS.

76. Proposed by Mr. Broughton, seconded by Mr. Payne—

"That the charges for parcels be as follows:—

	1st 100 miles.	Every additional 100 miles.	
Not exceeding 5 seers or 1 cubic foot	3 annas	1 anna.	Subject to a maximum charge of one rupee for a parcel not exceeding 5 seers irrespective of distance.
„ 10 „ 2 „ feet	6 „	3 annas.	
„ 20 „ 4 „ „	10 „	5 „	
„ 40 „ 8 „ „	12 „	6 „	
For every additional 10 seers or fraction of 10 seers.	3 „	1½ „	

Fish, fruit, vegetables, bazaar baskets, meat in small quantities and ice, at half parcel rates, subject to a minimum of 2 annas.

The ordinary rule as to fractions of an anna to apply to these rates.

The charge to be reckoned on the through distance as if it were one Railway, with one minimum only, and to be divided in mileage proportion."

Carried.

Mr. Conder did not vote.

THROUGH BOOKING OF DOGS.

77. Proposed by Mr. Wood, seconded by Mr. Lightfoot—

"That the charge for dogs be 4 annas for every 50 miles, divided in mileage proportion between the Railways concerned."

Carried "nem. con."

ARRANGEMENTS FOR THE COMFORT AND CONVENIENCE OF LOWER CLASS PASSENGERS TRAVELLING BY RAIL.

78. The following remarks were laid before the Conference, and notes* by the several Delegates put in.

* Printed below.

This subject has constantly been under consideration, and has received considerable attention from Railway Administrations; but much still remains to be done before the question can be said to have been completely and satisfactorily solved.

Admissions to waiting sheds.

(1). At many of the larger stations the waiting sheds are open to the station-yards, and the lower class passengers can obtain shelter at whatever hour they may arrive. This arrangement appears good, and might, with advantage, be made universal as far as practicable.

Means of procuring tickets.

(2). Under the Railway Act of 1879, Railway Administrations are bound to exhibit at each station a time-table and tariff in one or more vernacular languages. These should be fixed in a conspicuous place where they can be seen and studied before the tickets are purchased. It is believed that this is now generally done, but probably not to the full extent desirable. These vernacular tariffs should be put up in, say, half a dozen different places in every third class waiting shed. The ticket offices should be open for the sale of tickets a considerable time before the departure of trains; this time would naturally vary with the number of passengers to be booked, but should be based on most liberal considerations and regulated by stringent traffic orders. At all large stations where the passengers are numerous, the ticket offices should not only be open for a considerable time before departure of trains, but their number should be increased, so that the present crowding outside ticket windows might be done away with.

Limit of numbers per carriage.

(3). In accordance with General Rule 14 the maximum number that each compartment will carry has to be exhibited both inside and outside in the vernacular language. It appears right that this number should vary at different seasons of the year, more space being allowed in the hotter months. It is believed that steps in this direction are now taken on some lines, but the practice might be made more general, and perhaps still more space allowed than is customary, particularly in the case of long-distance passengers. Six passengers per lateral compartment would really pay, and we should hear of fewer deaths in trains if this number was the limit in the hot weather.

Supply of water *en route*.

(4). It is very essential in common humanity that passengers should be able to obtain an ample and ready supply of drinking-water, especially in the hot season. As it is inconvenient to allow the native passengers to alight for this purpose at intermediate stations where the stoppage is short, a sufficient staff of water-carriers, both Hindu and Mussalman, should be ready to hand water to the passengers in the carriages. This staff is now generally provided, but in many cases in insufficient numbers to meet the demand for water during the stoppage of the train. Where the train stops a sufficient time at a station, passengers should be able to leave their carriages and supply themselves from stand-pipes on the platforms; this could easily be done if the compartments were not so crowded. The Punjab Northern Railway has provided these stand-pipes on many of their platforms.

Locking carriage doors.

(5). The practice as regards the locking of carriage doors differs on the various lines, and this question may well receive consideration. When both doors are locked, which should seldom be necessary, there should be a sufficient staff of ticket examiners to promptly unlock all the doors of the train when it halts for any time at a station, so that the passengers may have time to get out and purchase refreshments, or attend to the calls of nature.

(6). The Military Department has specially asked for latrine accommodation in the third class carriages supplied to troop trains. The possibility of this being given, and then how it should be done, might be discussed in connection with the above remarks.

Sind, Punjab and Delhi Railway.

Most of the arrangements detailed above have been in force on the Sind, Punjab and Delhi Railway for years, and will be briefly noticed under the respective heads given.

Admission to waiting sheds.

(1).—At all our first and second class stations (excepting Mooltan cantonment), and at many of the third class stations, waiting sheds, halls or rooms are provided, and are open to the station yards, to which access is obtained at any time. The third class booking offices are also in direct connection with these sheds, so that passengers can obtain their tickets without difficulty, and as a rule one hour before the train by which they are proceeding starts.

Means of procuring tickets.

(2).—Time-tables, fares and goods tariffs are printed in English, Urdu and Hindi, and are exhibited on the platforms, waiting sheds, outside verandahs, goods sheds, and also supplied gratis to all police thanas, court-houses, dâk bungalows, hotels, &c., as also to the principal traders within a radius of thirty miles of each station. The intermediate and third class fares from each station are posted up at all stations, as also the current price list of sweetmeats and refreshments required by native passengers. This latter information is obtained periodically from the local district authorities.

Ticket offices at first and second class stations are kept always open, and at third and fourth class stations one or two hours before the train starts; or in a press of traffic the time is extended as traffic requirements demand.

When large fairs or religious gatherings, such as the Hardwar, Basakhi, Dewali, Chiragan, occur, ticket offices (somewhat similar to moveable sentry boxes) are scattered about the station yard for the issue of third class tickets. Return tickets are also granted, available for one month, to prevent the necessity of re-booking.

Limit of numbers per carriage.

(3).—Our rule is to carry ten third class passengers in each lateral compartment in the cold season and eight in the hot weather. This gives every accommodation which can reasonably be expected. The proposed limit to six in each compartment is, in my opinion, too low. The number in double-storied carriages and those without seats are also regulated according to the season.

The maximum number of passengers each carriage can carry is painted in the vernacular and English on the side of the carriage; but not the limit for the hot season. This might be done.

Supply of water.

(4).—At all stations Hindu watermen and Mahomedan bhisties are in regular attendance on all trains. The number is regulated by the traffic of each station. When a press of passengers occurs from any cause, extra men are employed to supply third class passengers with water according to requirements.

As our carriages are not locked, passengers can leave the train at any station to proceed to the latrines. No stand-pipes are provided on our platforms. If this was done, it would be a great improvement, and should remove any shadow of complaint that may now exist.

Locking carriage doors.

(5).—Our carriages are left unlocked on both sides, so that passengers can leave the train at any station; and this they fully avail themselves of. But this step is often attended with considerable risk, danger, and sometimes accident.

Hindu and Mahomedan refreshment vendors attend trains at all stations, and walk along the platform to supply passengers with sweetmeats, &c., in the carriages.

Improved intermediate or upper class carriages to those at present in use are now under construction for native gentlemen and ladies.

DAVID ROSS,
Traffic Manager, S. P. and D. Railway.

SIMLA;
15th September 1882.

Remarks by the Delegate for the Eastern Bengal Railway.

Admission to waiting sheds.

1. The existing arrangements on the Eastern Bengal Railway are understood to provide all that is considered necessary in this direction.

Means of procuring tickets.

2. The requirements of the Railway Act of 1879 are fully complied with on the Eastern Bengal Railway. The time-table and tariff printed in the vernacular of the district are exhibited in convenient places at all stations where they can be seen and studied by the public. Convenient arrangements are also made for the sale of tickets; and at the larger stations on special occasions the number of booking offices is increased in order to avoid crowding.

Limit of numbers per carriage.

3. On the Eastern Bengal Railway the number of passengers permitted to be carried in each compartment, or where there are no compartments in each vehicle, is exhibited both outside and inside in the vernacular. But on a short line like the Eastern Bengal Railway it has not been considered necessary to further limit the number permitted to be carried during the hot weather, the space allowed being considered ample for all seasons; and in regard to this it is understood the Government officers concur.

Supply of water *en route*.

4. The arrangements for the supply of water *en route* to passengers on the Eastern Bengal Railway has had much attention; and the Railway officers, it is believed, have on all occasions readily complied with the wishes of the Government in this respect.

Locking carriage doors.

5. The orders of Government in respect to locking carriage doors are strictly complied with. Doors are locked on one side only, except when approaching terminal stations where tickets are collected, where it is necessary to lock both sides. At intermediate stations the doors on the platform side are always unlocked; and at stations where the train halts for any time to permit the purchase of refreshments, &c., passengers are on the stoppage of the train at once at liberty to get out.

6. With regard to the provision of latrine accommodation in third class carriages, it is understood that [illegible] are objections to the general provision of such accommodation at night [illegible] as to render it undesirable. The latrine accommodation at all stations on the railway has had much attention. The extent of the accommodation and the habits of the people have been duly considered, and it is believed are amply provided for. Care is devoted to the maintenance of cleanliness and to render the accommodation as little offensive as possible.

The carriage of troops on the Eastern Bengal Railway in large bodies is a rare occurrence; and it is believed that, should the necessity arise, special arrangements of a less objectionable nature could be made to meet the occasion than the provision of latrine accommodation in third class carriages.

Remarks by the Delegate of the Oudh and Rohilkhund Railway.

1. Waiting sheds are all open to the station yards; and lower class passengers can obtain shelter at whatever hour of the day or night they may arrive.

Close to some of the larger stations serais have been constructed by municipalities, where individuals and families can be accommodated in comfort during long halts; and this system should be extended.

2. Time-tables and tariffs in English and two vernacular languages are fixed in the open waiting sheds above referred to.

Ticket windows are opened, and issue commences half an hour or an hour before trains are *due to arrive*.

3. Every lower class carriage bears inside and outside a painted notice stating the maximum number of passengers which each compartment will carry.

From the 15th April to the 15th October the number of passengers allowed in a lower class compartment is reduced from 10 to 8.

4. The supply of water to both Hindus and Mahomedans is good and sufficient. In the summer months the number of watermen is increased to meet the increased wants, and at changing stations, say 50 miles apart, ample time is given for passengers to alight and supply their own wants at good wells, &c., provided by the Railway Company.

5. Doors are locked on one side only, in accordance with the orders of Government; never on both sides. At checking stations the number of ticket examiners and collectors is sufficient to perform their very necessary duties promptly, avoiding undue detentions to passengers.

6. Latrines have as an experiment been supplied to certain carriages reserved for Native females; and the effluvium from these carriages, although well and frequently cleaned, is very offensive, even after short service. Latrines in carriages give rise to many nuisances on the main line of railway, and more particularly on points and crossings, at entrances to stations, &c. Ample time is given every 50 miles for passengers to visit latrines provided at changing stations.

(Sd.) H. F. PAYNE.

Minute by the Delegate of the Madras Railway.

1. On the Madras Railway waiting sheds have been provided at nearly all stations; trees have also been planted in station compounds, and shelter under both is much availed of by native passengers. Station-masters have strict orders to keep waiting sheds open to the public during all hours.

2. Vernacular time-tables and fare lists are exhibited in the third class waiting sheds at all stations on the Madras Railway. At the principal stations the ticket windows are kept open all day long, and at other stations for not less than one hour before each train starts. This information is printed on the top of each window, and the orders regarding them are strictly enforced on Station-masters by Traffic and other officers.

3. The number of passengers allowed to be placed in each compartment is shown as directed by the Government of India. In the Madras Presidency the heat is not so excessive as in the north of India; and being pretty much the same all the year round, this Company is not prepared to reduce the number during any portion of the year, the fares on this Railway being the lowest in India (two pies per mile only). The gradients also on the line being excessively heavy, the number of carriages on the trains is limited; and to carry out the present proposal would necessitate the running of extra trains, which, under the circumstances of the case, this Company consider they would not be justified in doing.

4. The system of supplying water to passengers *en route* is carefully carried out on the Madras Railway. Very few, if any, complaints have been received on this point; and wherever it has seemed that more water-carriers were needed, they have been supplied.

5. The doors of passenger carriages are only locked on one side, in accordance with the orders of the Government of India. The trains stop at stations for from three minutes to twenty or more; and every facility is given to passengers who wish to leave the carriages to attend to the calls of nature in the latrines which are most conveniently situated at all the stations. Platform refreshments are supplied by contractors, who attend all trains and offer their wares at the carriage windows.

6. The Madras Railway do not consider it desirable to supply latrine accommodation in third class carriages. The experiment has been tried elsewhere and not found satisfactory.

ARTHUR M. SAUNDERS,
Agent and Manager, Madras Railway.

SIMLA;
16th September 1882.

South Indian Railway.

1. With two exceptions (at Madura and Tanjore, for which plans and estimates will shortly be submitted to Government), waiting sheds open to the station yards have been provided at the larger stations.

Admission to waiting sheds.

2. A vernacular time-table and tariff is exhibited at each station. It is believed that all ticket offices are open for the sale of tickets in sufficient time to prevent inconvenience to travellers. In practice it is found that the bulk of passengers do not arrive at the stations more than half an hour before the advertised time of departure of trains.

Means of procuring tickets.

3. In the southern portion of the Madras Presidency the range of temperature during the year is not so great as it is in Central and Northern India. It has not been considered necessary therefore to vary the number of passengers to be carried in third class carriages.

Limit of numbers per carriage.

4. Men are employed at all stations to supply drinking-water to passengers in the trains. At the larger stations trains stop a sufficient time to enable passengers to leave the carriages and obtain water from the station supply.

Supply of water *en route*.

5. Doors are not locked; they are secured by Italian or safety catches. Whenever a passenger wishes to alight at a platform, these catches are easily and quickly lifted by the porters.

Locking carriage doors.

WILLIAM S. BETTS,
Agent.

SIMLA;
15th September 1882.

Great Indian Peninsula Railway.

In reply to the remarks in the memorandum for the consideration of the Railway Conference printed above, which relate to the "Arrangements for the convenience and comfort of the lower class passengers," Mr. Conder states the following as to the Great Indian Peninsula Railway in regard to each of the points named, *viz.*,—

1. The practice of letting the public come into the waiting sheds whenever they arrive at the stations is carried out at the larger stations, and it is extended to as many of the stations as is found to be practicable.

Admission to waiting sheds.

2. The time-tables are exhibited at all Great Indian Peninsula stations in English and in the vernacular.

Means of procuring tickets, &c.

The fares from the principal starting places, Bombay, Jubbulpore, &c., are shown on those tables.

Separate printed lists showing the fares from each station to every other station are also put up in English at all stations. These separate lists will also be put up in the vernacular at the principal places.

The ticket offices are open for at least an hour before trains start at all places, and at all large stations they are open for two hours or even longer. At places where there are many trains they are practically almost always open.

There is, however, not much good in this so far as the public are concerned, because it is found in practice that intending passengers do not often apply for tickets until shortly before the trains are to start.

3. The number to be carried in each carriage is already put in English and in the vernacular, both inside and outside, on all third and fourth class carriages. If there are a few of these carriages on which it is not yet put, it is being added to them.

Limit of numbers per carriage.

The number authorized to be put in each third and fourth class carriage is 50, but the instructions are that in the hot weather only 40 are to be put in

each, and also that at other times of the year not more than that number are to be put in if it can be avoided.

Most of the Great Indian Peninsula third and fourth class carriages are of the saloon pattern; but a proportion, if not all, new carriages, and renewal of those classes will be of the pattern which have lateral compartments, and each compartment will be marked to carry ten; these, however, will (except upon emergency) carry only eight in the hot weather.

Supply of water *en route*.

4. The Great Indian Peninsula Railway provide staff at the stations to supply water to passengers in trains.

These men are of different castes so as to meet the various classes of passengers.

Locking carriage doors.

5. The practice on the Great Indian Peninsula Railway is to lock the doors on one side only. The carriage doors are all fitted with a catch in addition to the door latch and the lock.

There are sufficient ticket collectors and examiners and others to open doors at stations; and at stations where trains stop for more than five minutes, the doors are opened and passengers are allowed to alight.

Native refreshments are sold under authorized arrangements at most of the stations on the Great Indian Peninsula Railway.

Latrine accommodation in third class carriages supplied in troop trains.

6. Latrines cannot be provided in carriages of any class which have lateral compartments. Latrines are provided in the second class carriages which are of the saloon pattern, and these carriages are supplied as much as possible for the conveyance in troop trains of invalids (not in invalid carriages) and women and children.

But the Great Indian Peninsula Railway have not enough second class carriages to provide them for all troops, and third class have therefore been accepted by Government rather than incur the expense of increasing the number of second class carriages. The Great Indian Peninsula Railway Company put latrines in a considerable number of third class carriages, but they were found to be so offensive and objectionable from the way in which they were used, or rather misused, that they became a complete nuisance, besides being a source of danger to health. It has therefore been determined, with the concurrence of the Consulting Engineer to Government, to abandon them, and to adopt almost, if not quite, exclusively carriages with lateral compartments. Troop trains halt at frequent intervals to allow troops to alight; and as practically invalids and women and children are conveyed in carriages which are fitted with latrines, and as latrines are provided at all stations for the public, it is thought that all reasonable requirements are met on that Railway, both for troops and the public.

East Indian Railway.

Admission to waiting sheds.

1. Waiting sheds are always open, except the entrance to the platform, and we are gradually extending the sheds both in number and dimensions.

Means of procuring tickets.

2. We are arranging to book the passengers in the sheds wherever practicable, and we open the booking windows so as to enable all passengers to obtain their tickets before the trains arrive.

Limit of numbers per carriage.

3. Our carriages have been largely increased in width since the present limit per compartment was fixed, and I do not think there is any crowding which would render a reduced limit in hot weather needful. I will, however, look specially into the question and report to our Agent.

We punish severely any of our staff if a case of overcrowding is detected. I have frequently counted the numbers, but have never, during, say, the last four or five years, found more than ten in a compartment.

Supply of water.

4. This is a point on which we think we excel. We put on extra men at all stations during the hot months of the year.

Locking carriage doors.

5. Doors are *never* locked on both sides of our carriages, and we increase the staff until we arrive at the release of all the passengers in the train in 3 to 3½ minutes.

Latrine accommodation.

6. We have latrines at every station. In our new time-table we have provided halts for passengers, and if we find these halts to be insufficient, we will increase them in number and length as may be necessary.

But to provide latrine accommodation in the trains, we should create a nuisance in the trains themselves, as no amount of water and disinfectants would prevent bad smells, whilst the permanent-way would be so far affected as to involve serious consequences as regards labor for keeping the permanent-way in order.

URBAN BROUGHTON.

Bombay, Baroda and Central India Railway.

The Agent, Bombay, Baroda and Central India Railway Company, read the following extract from the Traffic Manager's memorandum, dated Bombay, 21st August 1882, to the Agent:—

ARRANGEMENTS FOR COMFORT OF LOWER CLASS PASSENGERS.

This is an important matter and deserves attention.

We are very particular to have booking offices opened early so that passengers may obtain their tickets with comfort, leisurely examine their change, and avoid being hustled.

At our Bombay stations we open the booking offices at about 6 A.M. and don't close them until about 10 P.M., and passengers at any time within these hours can obtain tickets and gain access to the platforms. Our tickets have their fares printed on them in English and the vernacular.

We try to give passengers ample accommodation in the carriages, and generally succeed in doing so. Sometimes an unexpected number present themselves, but our carriages are rarely crowded.

We have plenty of water supplies on our platforms.

We only lock the carriage doors on the side farthest from the platforms.

TREATMENT OF MISCELLANEOUS ITEMS IN THE REVENUE ACCOUNT AND THE ANALYSIS OF WORKING.

79. Proposed by Mr. Lightfoot, seconded by Mr. Calder—

"That with the view of making the procedure in both the half-yearly account and the working analysis identical, the following be referred to the Government of India for consideration:—

(*a*)—The following items to be dealt by entering only the net earnings or expenditure in their several abstracts (subject to the remarks made upon the question of interest on other Company's capital outlay):—

Hire of locomotives.

,, *of vehicles.*

Mileage and demurrage.

Rent of stations jointly occupied.

(*b*).—The following items to be dealt with specially:—

(1) *Profit on workshops and sale of revenue stores, collection of municipal dues, &c.*—

The portion, if any, attributable to exchange to be written off that account in the several abstracts.

The portion, if any, attributable to supervision to be entered as a deduction at the foot of the several abstracts.

The portion attributable to interest on shops and plant or profit to be published as miscellaneous earnings.

(2) *Telegraph earnings*—

These appear specially in the Revenue Account, and should remain there, being dealt with in the analysis of working as miscellaneous revenue.

(*c*).—The following items to remain in the Revenue Account as miscellaneous earnings, and be specially dealt with the analysis of working (subject to the remarks upon repairs to rented staff quarters) :—

Rents of dwelling-houses.
Transfer fees.
Sundries.

(*d*).—Miscellaneous earnings to be dealt with in the analysis of working in the following manner :—

To be excluded from all train mileage, ton mileage, vehicle mileage and capacity mileage calculations.

To be included in all calculations relating to percentage of expenditure upon earnings.

Carried "nem. con."

ARBITRATION ACT.

80. Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

"That the Government of India be moved to pass a short Arbitration Act on the same basis as the 'Railway Companies Arbitration Act, 1859' (22 & 23 Vic., Cap. 59), thereby establishing a Court of Arbitration, through which the Rules of this Conference and agreements between the several Railways may be enforced."

Major Conway-Gordon.	
Mr. Wood.	
„ Betts.	
„ Furnivall.	
„ Lightfoot.	
„ Payne.	
„ Saunders.	
„ Calder.	

Carried.

BREAKS ON WAGONS.

81. Proposed by Mr. Broughton, seconded by Major Conway-Gordon—

"That as inconvenience is felt on all Railways where gradients prevail, and in almost all shunting yards, from certain wagons not being provided with breaks, all Railways interchanging stock shall be required to provide breaks on all their wagons under penalty of transhipment at joint cost."

For.	*Against.*
Mr. Broughton.	Mr. Wood.
Major Conway-Gordon.	„ Lightfoot.
Mr. Saunders.	„ Payne.
„ Furnivall.	„ Calder.
	„ Conder.

Lost.

CLASSES OF PASSENGERS AND GOODS OF THE OUDH AND ROHILKHUND RAILWAY.

82. Proposed by Mr. Saunders, seconded by Major Conway-Gordon—

"That as the Oudh and Rohilkhund Railway is the only guaranteed line in India which has a different denomination for passenger and goods classes, as a matter of convenience for through booking, it be invited to

assimilate its upper and lower passenger classes and higher, middle and lower goods classes to those in use on the other Indian broad-gauge lines."

For.	
Mr. Saunders.	Mr. Payne and Mr. Conder did not vote.
Major Conway-Gordon.	
Mr. Betts.	
„ Wood.	
„ Furnivall.	
„ Lightfoot.	
„ Calder.	
„ Broughton.	

Carried.

INVOICING GOODS IN THROUGH BOOKING.

83. Proposed by Mr. Broughton, seconded by Mr. Payne—

"That there shall not be more than one invoice for each consignment instead of an invoice being issued for each wagon : the receipt agreeing with the invoice.

"Invoices shall be sent forward by the train which will arrive first at the destination of the goods."

Carried "nem. con."

RAILWAY CLEARING HOUSE.

84. Proposed by Mr. Saunders, seconded by Major Conway-Gordon—

"That in the opinion of this Conference the time has now arrived when an Indian Railway Clearing House may with advantage be established in some convenient and central position for the purpose of settling all accounts on through invoices and through passenger traffic between the different Railways ; each Railway being represented on the Clearing House Committee, and the President or Manager being elected by the votes of all subscribing Railways."

For.	*Against.*
Mr. Saunders.	Mr. Betts.
Major Conway-Gordon.	„ Wood.
	„ Furnivall.
	„ Lightfoot.
	„ Payne.
	„ Calder.
	„ Broughton.
	„ Conder.

Lost.

THROUGH BOOKING OF COACHING TRAFFIC.

85. Proposed by Mr. Conder, seconded by Mr. Broughton—

"That the through booking of coaching traffic be extended so as to include all classes of passengers, and all other coaching traffic between all stations of all Railways which have through booking arrangements with each other, the only limit being that horses and carriages are not to be booked through to the stations to which any Railway does not book horses and carriages locally."

Carried "nem. con."

INTERCHANGE OF ROLLING STOCK.

86. *Rule XIV.*—Proposed by Mr. Conder, seconded by Mr. Broughton—

"That goods vehicles carrying live stock of any kind booked through be considered as carrying six tons in all mileage accounts."

Carried "nem. con."

FREIGHT ON UNCLAIMED GOODS AND PARCELS.

87. Proposed by Mr. Conder, seconded by Mr. Broughton—

"That freight on goods and parcels left on hand unclaimed be charged against the goods or parcels as the case may be, the Railway on which they are left taking the articles and keeping the value thereof; and if the value is less than the amount of the freight, the balance to be charged against the compensation account of the Railway on which the goods were left."

For.	
Mr. Conder. „ Broughton. „ Betts. „ Wood. „ Furnivall. „ Lightfoot. „ Payne. „ Calder. Major Conway-Gordon.	Mr. Saunders did not vote.

Carried.

GOODS MISSENT.

88. Proposed by Mr. Broughton, seconded by Mr. Lightfoot—

"That in case of accidental misdespatch of goods not in through wagons by any Railway, the other Railways carrying such goods shall, in lieu of freight, be paid a haulage charge of three pies per ton per mile thereon in both directions by the Railway so misdespatching."

Carried "nem con."

ROUTE BY WHICH TRAFFIC SHOULD BE DESPATCHED.

89. Proposed by Major Conway-Gordon, seconded by Mr. Payne—

"That in the absence of specific instructions on the part of the consignor, all traffic be booked by the shortest route, provided it be the cheapest."

Proposed as an amendment by Mr. Broughton, seconded by Mr. Lightfoot—

"That a route table be agreed upon by all Railways and published to the staff."

For.	*Against.*
Mr. Broughton. „ Lightfoot. „ Calder. „ Saunders.	Major Conway-Gordon. Mr. Betts. „ Wood. „ Furnivall. „ Payne.

The amendment being lost, the original proposal was put to the Meeting.

For.	*Against.*
Major Conway-Gordon. Mr. Betts. „ Wood. „ Furnivall. „ Payne.	No votes.

Carried.

Mr. Conder did not vote on either the proposal or amendment.

The Conference adjourned till Saturday, the 16th September.

No. 10.

The Conference re-assembled at 11 a. m. on Saturday, the 16th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

Major R. McG. Stewart, R. A., Officiating Deputy Quarter Master General, and Honorary Major J. Robertson, C. I. E., Assistant Accountant General, Military Department, joined the Conference.

TRANSPORT OF TROOPS.

90. The following questions brought forward by the military members were discussed :—

(1) Regarding the introduction of a system of payment by seats, instead of by vehicles for troop extra trains.

(2) Regarding the adoption of revised railway warrants in simplification of the existing forms, and in view to facilitate the through booking of troop trains on all lines of Railway in India.

Proposed by Mr. Conder, seconded by Mr. Broughton—

"That, subject to the condition that the scale of accommodation and payment and other arrangements as they now exist or may exist from time to time on the several Railways, being made known to all concerned, these details need not be entered upon the requisiton, and the following conditions for troop extra trains be accepted :—

1st.—That the requisition Form D shall be altered so as to be merely an indent for a specified number of seats of each class, &c., and a specified quantity of luggage, &c., with a certificate at the foot that these have been provided.

2nd.—That only one warrant be delivered at the despatching station by the military authorities from starting-point to destination.

3rd.—That each Railway shall be responsible for advising the Railway to which they will hand the troops over. The several Railways will thus arrange the through journey.

4th.—Each Railway to be required to provide its own passenger carriages and breakvans at the junction stations or the nearest rest-camp to the junction; baggage wagons, horse-boxes, ammunition wagons, &c., being allowed to run through to destination. But the Railways to be at liberty to arrange amongst themselves for carriages also to run through.

5th.—Each Railway to collect its own charges.

6th.—If in consequence of the halts required by the military authorities, demurrage accrues under the usual rules in force between Railways from time to time upon any vehicles that are run through upon troop extra trains, the military authorities to pay all such demurrage to the Railway that has incurred it.

Carried "nem. con."

91. It was agreed that the military authorities be requested to prepare a revised form of requisition, Form D, containing only the information that they require under the above Resolution, and that this be circulated to the Railways concerned for approval, and that at the same time a revised Form C for booking by ordinary train be prepared and circulated to the Railways concerned for approval.

92. The question of the system of payment by seats, instead of by vehicles for troop extra trains, was raised by the Military Department and discussed. As it appeared that any change from existing practice might affect the payments to the Railway Companies, the question was left to be brought forward, if thought necessary, in the usual way.

93. Regarding the frequency of the supply of an undue proportion of third class in lieu of second class carriages for the transport of troops and their families—

It was resolved to record—

"That the Railway Companies have not second class carriages in sufficient numbers to allow of their giving a larger proportion of these carriages on troop extra trains; but they now give, and will continue to give, as many second class carriages as circumstances will admit."

94. Extra expense entailed on the State by the provision of carriages in troop extra trains of less capacity than the description of vehicle on which the scale of accommodation in the Transport Regulations was calculated.

As this point is intimately connected with the question of system of charge per seat, it was requested that the Military Department bring this forward with the subject referred to in paragraph 92.

95. The necessity of providing latrine and lavatory accommodation in vehicles carrying troops and their families.

Proposed by Mr. Broughton, seconded by Mr. Payne—

"That in the opinion of the Conference extra halts, if provided as required, would render the latrines in third class carriages unnecessary.

"That carriages with latrine accommodation will, as far as practicable, always be provided for invalids, women and children."

Carried unanimously on the part of the Railway Delegates, but the Military members could not concur with the resolution.

96. Regarding the inconvenience experienced under the recent arrangements for the movement of small bodies of troops by mail and ordinary trains, there being on some lines practically only one train now available in every 24 hours, instead of every 12 hours as formerly—

The Conference recorded—

"That as there are considerable changes about to be introduced in the train service of several of the principal lines, no conclusion can be arrived at on this question at present."

97. Regarding the method of securing baggage in the brakevans of troop extra trains, and responsibility for the same after the vans have been loaded and handed over to the Railway authorities—

It was unanimously agreed that brakevans with locked compartments should be put on to troop extra trains, the rules regarding locks for luggage vans and wagons on these trains applying.

98. Regarding the desirability of having specific information showing the maximum number of troop extra trains that can be despatched within 24 hours over main lines in India, with skeleton time-tables for the running of the same.

It was decided that the Quarter Master General should communicate with the several Railway authorities on the subject of military time-tables. But it was considered that such tables should be separate and not incorporated with the ordinary working time-tables.

The Conference adjourned till Monday, the 18th September 1882.

No. 11.

The Conference re-assembled at 11 a. m. on Monday, the 18th September.

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

99. The proceedings of the Conference from commencement up to date were read again and accepted as correct.

100. Rules for the interchange of rolling stock drafted in accordance with the Conference proceedings were read.

101. *Rule XX.*—Proposed by Major Conway-Gordon, seconded by Mr. Lightfoot—

That the following be added to Rule XX,* *viz*:—

"Wagons taken over under the provisions of this Rule shall be subject to ordinary mileage and demurrage rules, but no penalty, with the exception that notwithstanding the provisions of Rule XVII (*c*), mileage shall be paid on all such wagons in one direction, whether with or without a load, the mileage on the wagons if not loaded being charged as for five tons per wagon.

Proposed as an amendment by Mr. Broughton, seconded by Mr. Payne—

"That rule XVII shall apply to Rule XX."

For.	*Against.*
Mr. Broughton.	Mr. Wood.
„ Payne.	„ Furnivall.
	„ Lightfoot.
	„ Saunders.
	„ Calder.
	Major Conway-Gordon.

The amendment being lost, the original proposal was put to the Meeting.

For.	*Against.*
Mr. Wood.	Mr. Broughton.
„ Furnivall.	„ Payne.
„ Lightfoot.	
„ Saunders.	
„ Calder.	
Major Conway-Gordon.	

Mr. Conder did not vote on either the proposal or amendment.

Carried.

102. *Rule XXI.*—Proposed by Mr. Lightfoot, seconded by Major Conway-Gordon, as an addition to Rule XXI—

"That wagons taken over under the provisions of this Rule shall be subject to ordinary mileage and demurrage rules, but no penalty, with the exception that notwithstanding the provisions of Rule XVII (*c*), mileage shall be paid on all such wagons in one direction, whether with or without a load, the mileage on the wagons if not loaded being charged as for five tons per wagon.

Proposed as an amendment by Mr. Broughton, seconded by Mr. Payne—

"That Rule XVII shall apply in this case."

For.	*Against.*
Mr. Broughton.	Mr. Wood.
„ Payne.	„ Furnivall.
	„ Lightfoot.
	„ Saunders.
	„ Calder.
	Major Conway-Gordon.

* The Rules quoted in this and subsequent paragraphs are numbered in accordance with Rules recorded in paragraph 108.

The amendment being lost, the original proposal was put to the Meeting.

For.	*Against.*
Mr. Wood.	Mr. Broughton.
„ Furnivall.	„ Payne.
„ Lightfoot.	
„ Saunders.	
„ Calder.	
Major Conway-Gordon.	

Mr. Conder did not vote on either the proposal or amendment.

Carried.

103. After some verbal corrections it was decided that the Rules should be printed for final revision.

The Conference adjourned till the following day.

No. 12.

The Conference re-assembled at 11 A.M. *on Tuesday, the 19th September.*

PRESENT.—As at Meeting No. 1.

The proceedings of the previous Meeting were read and confirmed.

104. The printed copy of the rules, revised in accordance with the proceedings up to the close of the previous Meeting, was read.

105. *Rule VII.*—Proposed by Mr. Conder, seconded by Mr. Lightfoot—That the following be added to Rule VII, *viz.* :—

"Except that the amount of the rebate provided for in Rule XX and of the extra payment provided for in Rule XXI shall be made to, and retained by, the Railways which respectively form the junction at which the excess, which causes those allowances, arises, without reference to the Railway to which any of the vehicles exchanged may actually belong."

For.	
Mr. Conder.	Mr. Broughton and Mr. Saunders did not vote.
„ Lightfoot.	
„ Wood.	
„ Furnivall.	
„ Payne.	
„ Calder.	
Major Conway-Gordon.	

Carried.

106. Proposed by Mr. Lightfoot, seconded by Mr. Conder, as a new rule under *General*—

"That in cases of interruptions of through communication caused by failure of way or works owing to floods or other circumstances, demurrage shall not be charged upon stock delayed beyond the time allowed free under the provisions of Rules XIII and XVIII; but if required by the owning Railway, any Railway so detaining vehicles of another Railway shall, as far as is practicable, send an equal number of similar vehicles of its own to be used without mileage, demurrage or penalty upon the Railway to which the stock so detained belongs for the time that such stock is compulsorily detained."

Carried "nem. con."

107. On reading Rule XX as passed, considerable discussion ensued; and as it appeared that the Rule as worded was liable to misconception, and would probably give rise to disputes in application, it was proposed by Mr. Wood, seconded by Mr. Saunders—

That clause (*a*) of Rule XX read as follows, *viz.* :—

"(*a*) When the aggregate excess number of wagons absent from any one Railway upon any other Railway shall exceed two hundred and ten at the

end of any week, the receiving Railway may call upon the forwarding Railway to take over a sufficient number of wagons to bring this excess within two hundred and ten; and in the event of the forwarding Railway not intimating within forty-eight hours after notice of tender by the receiving Railway its intention to accept such wagons, a charge of two rupees per wagon per day shall thereafter be paid as a rebate on mileage by the forwarding Railway upon the daily balance in excess of two hundred and ten absent."

For	*Against.*
Mr. Wood.	Major Conway-Gordon.
„ Saunders.	
„ Furnivall.	
„ Payne.	

The other Delegates did not vote.

Carried.

At the request of Mr. Broughton, the accompanying illustrations, as his view of how Rule XX is intended to work, were recorded:—

Illustration No. 1.—Receiving Railway "calls" and forwarding Railway "intimates."

At end of week ending January 7th, East Indian Railway wagons on Sind, Punjab and Delhi are . . .	500
Sind, Punjab and Delhi wagons on East Indian Railway are	150
	350
30 a day = . .	210
Excess . .	140

Sind, Punjab and Delhi "calls" and East Indian Railway "intimates."

At end of week ending January 14th, East Indian Railway wagons on Sind, Punjab and Delhi are	575
Sind, Punjab and Delhi wagons on East Indian Railway are . . .	200
	375
30 a day = . .	210
Excess . .	165
Add January 7th excess . .	140
	305

Rebate is not due, as Sind, Punjab and Delhi have not supplied to full extent.

At end of week ending January 21st, East Indian Railway wagons on Sind, Punjab and Delhi are . . .	600
Sind, Punjab and Delhi wagons on East Indian Railway are . . .	575
	25

Had Sind, Punjab and Delhi sent 505 on to East Indian Railway in this week, the incident would have been closed and Rule XX ceased to operate.

Sind, Punjab and Delhi have supplied and balanced.

Illustration No. 2.—Receiving Railway "calls" and forwarding Railway does not "intimate."

At end of week ending January 28th, East Indian Railway wagons on Sind, Punjab and Delhi are . .	675
Sind, Punjab and Delhi wagons on East Indian Railway are . .	980
	305
30 a day = . .	210
	95

East Indian Railway "calls" and Sind, Punjab and Delhi does not "intimate."

Sind, Punjab and Delhi wagons on East Indian Railway are . . .	800
	300
30 a day = . .	210
Excess . .	90
Add previous week's excess . .	95
Rebate is due to East Indian Railway upon . .	185
At end of week ending February 11th, East Indian Railway wagons on Sind, Punjab and Delhi are . .	800
Sind, Punjab and Delhi wagons on East Indian Railway are . .	700
	100

Rule XX ceases to be in force.

Illustration No. 3.—Forwarding Railway declines to receive wagons.

At end of week ending January 7th, East Indian Railway wagons on Sind, Punjab and Delhi are . .	500
Sind, Punjab and Delhi wagons on East Indian Railway are . .	150
	350
30 a day = . .	210
	140

Sind, Punjab and Delhi "calls" and East Indian Railway "declines," because traffic is falling or wagons are plentiful.

Rebate is due on . .	140
At end of week ending January 14th, East Indian Railway wagons on Sind, Punjab and Delhi are . . .	300
Sind, Punjab and Delhi wagons on East Indian Railway are . . .	140
	160

Rebate ceases from causes above given.

Illustration No. 4.—No rebate can become due unless the receiving Railway "calls."

"Notices," "calls" and "intimations" under Rules XX and XXI are to be sent by the Traffic Officer of the one Railway to the Traffic Officer and the Audit Office of the other Railway and to his own Audit Office.

108. Read the following :—

INTERCHANGE OF ROLLING STOCK.

General Rules for the Interchange of Rolling Stock between all connected Broad Gauge Railways in India, passed by the Conference of Railway Delegates assembled at Simla in September 1882.

"The interchange of stock shall be carried on until the end of the present year under the Rules in force before this Conference assembled, and the Rules for interchange of stock passed at this Conference shall be in force on and after the 1st of January 1883, until cancelled or modified in accordance with the Rules for the conduct of business at this Conference, which are recorded on the Proceedings." (*See Minute No. 60 of the Conference.*)

General.

RULE I.—(*a*) The day shall be reckoned as 24 hours, commencing at midnight, Madras time being adopted in all cases. The week to end at midnight on Saturday.

(*b*) No *dies non* shall be allowed under these Rules.

(*c*) For the purpose of these Rules, the ton shall in all cases be reckoned as equivalent to 27 maunds.

RULE II.—(*a*) All stock shall be considered as handed over when entered in the number-taker's book at the junction station, and it shall be so entered directly it is put into the lines or sidings in which such stock is usually placed for that purpose, or at such time and in such way as may be arranged between the Railways forming the junction.

(*b*) Stock shall not be considered as accepted by the Railway on to which it is going at any junction station until it and the load it may contain are in a condition to be taken on by the Railway on to which it is going; and mileage, demurrage, &c., shall be paid by the Railway bringing it to the junction until it is put into that condition.

(*c*) All vehicles of whatever Railway handed to any Railway at a junction on the outwards journey shall be accepted and dealt with only as vehicles of the Railway which brings them to the junction; and vehicles which are returned to a junction after an outward journey shall be treated as vehicles of the Railway to which they are so returned.

RULE III.—Passenger carriages, horse-boxes, carriage-trucks, brake-vans and passenger road or luggage vans, shall, irrespective of contents, be in all cases reckoned as coaching vehicles, whether they run upon passenger or goods trains. All other kinds of vehicles shall be reckoned as goods vehicles, also irrespective of contents and of the train on which they run.

RULE IV.—(*a*) Empty vehicles shall be returned to the owning Railway by the exact route and junction by which they were received loaded.

(*b*) Vehicles under load shall be returned to the owing Railway by way of the nearest route and junction; but vehicles may be diverted without penalty for distances not exceeding fifteen miles in one direction, and for longer distances by mutual agreement, for the purpose of obtaining a return load.

(*c*) Vehicles of one Railway shall not be reloaded by another Railway except in the direction of or beyond the owning line.

(*d*) For any departure from the above Rules for return of vehicles, the Railway so missending any vehicle shall pay to the owning Railway a penalty of rupees twenty-two (Rs. 22) per day or part of a day from the time each vehicle was missent until it returns to a station on the route by which it should have been sent.

(*e*) Penalty-paying vehicles shall also be subject to ordinary mileage and demurrage charges.

(*f*) If goods are required to be sent to a station beyond the original destination, the consignment may be sent on in the original wagon without penalty.

(*g*) In the event of a wagon being missent through error, the Railway so missending shall pay to other Railways over whose lines the vehicle runs, owing to the error, a haulage rate of one pie per mile per ton of carrying capacity in both directions in lieu of freight. The missending Railway shall also pay ordinary mileage in both directions for the missent distance (and demurrage if incurred), but no penalty.

RULE V.—(*a*) So soon as the rolling stock of any Railway passes into the custody or possession of any other Railway, such other Railway shall be responsible for all and every contingency that may arise from the use of such stock while it remains in its possession. Except that if the contingency is clearly traceable to defect of material or workmanship, the actual repair or replacement of the vehicle in which there was such defect, but not of any other vehicle or any other consequent damage, shall be at the expense of the owning Railway.

(*b*) The cost of repairs arising from ordinary wear and tear shall always be borne by the owning Railway; but in cases of palpable damage (such as dropping heavy weights into wagons and so damaging the bottoms, neglect of greasing or oiling, and other similar neglects), and in all cases of accident or collision, the cost of repairs shall, except as provided in clause (*f*), Rule VI, be borne by the Railway in whose custody or possession the stock may be at the time the damage occurs.

RULE VI.—(*a*) In cases in which the stock of any Railway is damaged upon the line of another Railway, the actual time occupied in making the repairs,

but not more than ten days in addition to the time allowed for the return of stock under the usual mileage rules, shall be allowed free of demurrage for its repair. But if the repairs cannot be completed in ten days, the vehicle shall be despatched to the owning Railway within that time.

(*b*) In addition to the free allowance as prescribed in clause (*a*) of this Rule, the actual time occupied in conveyance of material for repairs from the owning line shall be allowed free of demurrage in the case of damaged stock of one Railway repaired on the line of another Railway.

(*c*) If the damaged stock be not returned, either repaired or not repaired, within the period allowed, demurrage shall be charged after the expiry of such period, unless specially exempted by the Traffic Manager of the owning Railway.

(*d*) Notice shall in all cases be sent by the Traffic Manager of the Railway on which the damage occurred, within one month, to the owning Railway, how and when the damage took place, and the nature of it.

(*e*) No claim for the cost of repairs shall be valid, unless made within three months of the date at which the repairs are completed.

(*f*) The cost of repairs to any vehicle damaged which does not exceed Rs. 10 shall be paid by the Railway which carries out the repair.

(*g*) No charge shall be made for the freight of material sent for repair of damaged stock, or for the haulage of wagons carrying damaged stock back to the owning Railway.

RULE VII (Rule XX of 1879).—Whatever amount is paid for mileage, demurrage, or penalty by any Railway for the use of vehicles of other Railways, shall in all cases belong to, and be paid over to the owning Railway: except that the amount of the rebate provided for in Rule XX and of the extra payment provided for in Rule XXI shall be made to, and retained by, the Railways which respectively form the junction at which the excess, which causes those allowances, arises without reference to the Railway to which any of the vehicles exchanged may actually belong.

RULE VIII (Rule XXI of 1879).—Each Railway shall accept the statements of other Railways with respect to the loads and vehicles, unless the number-takers at the junction notice and record that the loads have been interfered with, when the actual contents and their condition shall be ascertained and recorded by an authorised representative of each of the Railways forming the junction.

RULE IX (Rule XXII of 1879).—(*a*) The accounts referring to any mileage, demurrage, or penalty in which any Railway is concerned shall be open to the inspection of such Railway.

(*b*) No claim for mileage, demurrage, rebate, extra allowance, or penalty shall be preferred after a lapse of six months from the date on which a vehicle passed the junction on its outward journey.

RULE X.—In cases of interruption of through communication, caused by failure of way or works owing to flood or other circumstances, demurrage shall not be charged upon stock delayed beyond the time allowed free under the provisions of Rules XIII and XVIII; but if required by the owning Railway, any Railway so detaining vehicles of another Railway shall, as far as is practicable, send an equal number of similar vehicles of its own to be used without mileage, demurrage or penalty upon the Railway to which the stock so detained belongs for the time that such stock is compulsorily detained.

Coaching.

RULE XI (Rule VII of 1879).—The exchange of passenger stock shall be subject in extent to mutual arrangement between the respective Railways.

RULE XII (Rule VIII of 1879).—(*a*) The mileage charge on each coaching vehicle shall be seven pies per mile, both on the outwards and the return journey, except that no mileage shall be charged on coaching vehicles not used for ordinary traffic, unless under load.

(*b*) "Ordinary traffic" shall be understood to be only regular public trains which are advertised to carry passengers, and to include reserved accommodation on such trains: private carriages, troop extra trains, private special trains and special passenger trains put on for such occasions as fairs, &c., shall not be considered as ordinary traffic.

RULE XIII (Rule IX of 1879).—(*a*) Coaching vehicles shall be allowed one hour for every twelve and a half miles run on foreign lines and twenty-four hours extra at destination free of demurrage.

(*b*) In the case of a ferry by which coaching vehicles are crossed over a river where the rails are not continuous, an extra allowance free of demurrage for crossing of twelve hours each way shall be made.

RULE XIV (Rule X of 1879).—Except as provided in Rule X, demurrage shall be charged on each coaching vehicle detained beyond the times named in Rules VI and XIII at the rate of eight annas per hour.

Goods.

RULE XV (Rule XI of 1879).—The interchange of goods stock shall extend to all connected lines and branches, a fair proportion of through traffic being accepted at junctions in time of pressure.

RULE XVI (Rule XII of 1879).—(*a*) Except as provided in clause (*c*) of this Rule, all consignments of less than three tons shall be transhipped at junction, and it shall be optional with the receiving Railway to tranship, at its own cost, the contents of any wagon containing a load of less than half its carrying capacity.

(*b*) In the case of a ferry by which vehicles are crossed where the rails are not continuous, it shall be optional with the Railway owning the ferry, in lieu of crossing the vehicle over, to tranship the load at the nearest station to the ferry where the work can be done; advice of all such transhipments being sent weekly to the owning Railway.

(*c*) Traffic Managers shall be at liberty to make exceptions by mutual agreement as to transhipment in cases of consignments which, from their bulk or weight, fully occupy a wagon, or require exceptional care, such as furniture, glass-ware, stationery, millinery, pictures, musical instruments, &c., &c.

(*d*) To avoid demurrage, it shall be optional with the receiving Railway to tranship at its own expense the contents of a foreign wagon at any point short of destination; and mileage shall cease at the point of such transhipment, notice of all such transhipments being sent weekly to the owning Railway.

(*e*) In all other respects, except as provided in Rule XV, the interchange of goods traffic and stock shall be unrestricted.

RULE XVII (Rule XIV of 1879).—(*a*) Subject to the provisions of this Rule and of Rules XX and XXI, payment shall be made to the owning Railway at the rate of two-thirds of a pie per ton per mile on the weekly aggregate weight charged between any two stations for the contents of all vehicles of one Railway which may be run on another Railway on the outward journey.

(*b*) Goods vehicles carrying passengers or live stock of any kind booked through shall be considered as carrying six tons in all mileage accounts.

(*c*) No mileage shall be paid to the owning Railway on a return load by any Railway which loads a wagon back to or beyond the owning line; but the Railway beyond the owning Railway on to which any wagon is sent with a return load shall pay mileage under the usual rules to the owning Railway.

(*d*) Mileage shall be paid on any return load sent in a wagon of another Railway to any station short of the owning line.

(*e*) (Rule XIII of 1879).—No mileage charge shall be made on goods vehicles when running empty.

RULE XVIII (Rule XV of 1879).—(*a*) Goods vehicles shall be allowed one hour for every six miles run on a foreign line, and thirty-six hours for unloading and twenty-four hours for reloading at destination, and twelve hours at intermediate stations for each of these operations, free of demurrage.

(*b*) In the case of a ferry by which goods vehicles are crossed over a river where the rails are not continuous, an extra allowance for crossing of twelve hours each way, or such time as may be mutually agreed upon, shall be given free of demurrage; and when such allowance of time is made, mileage shall be paid for loaded stock transferred by such ferry upon half the time so allowed.

RULE XIX (Rule XVI of 1879).—Except as provided in Rule X, demurrage shall be charged on each goods vehicle detained beyond the time named in Rules VI and XVIII at the rate of one anna per ton of carrying capacity per hour.

RULE XX (Rules XVII of 1879 and XVIIA of 1880).—(*a*) When the aggregate excess number of wagons absent from any one Railway upon any other Railway shall exceed two hundred and ten at the end of any week, the receiving Railway may call upon the forwarding Railway to take over a sufficient number of wagons to bring this excess within two hundred and ten; and in the event of the forwarding Railway not intimating within forty-eight hours after notice of tender by the receiving Railway its intention to accept such wagons, a charge of two rupees per wagon per day shall thereafter be paid as a rebate on mileage by the forwarding Railway upon the daily balance in excess of two hundred and ten absent.

(*b*) No notice shall be valid unless given by wire, or in any other way that may be mutually agreed upon, within three days after the close of a week by the receiving Railway of its intention to offer wagons, and the two rupees rebate shall not be charged until the expiry of forty-eight hours after the despatch of the notice by the receiving Railway.

(*c*) When any two Railways have more than one junction with each other, all such junctions shall be regarded for the purposes of this rule as one junction only. But the receiving Railway shall only tender at each junction such proportion of the total excess as was received at that junction.

(*d*) Wagons taken over under the provisions of this rule shall be subject to ordinary mileage and demurrage rules, but no penalty, with the exception that notwithstanding the provision of Rule XVII (*c*) mileage shall be paid on all such wagons in one direction whether with or without a load, the mileage on the wagons if not loaded being charged as for five tons per wagon.

RULE XXI (Rule XVIII of 1879).—(*a*) The Railway on which through traffic originates shall provide wagons for such traffic. But when the through traffic offering is more than the wagon stock of the sending Railway can cope with, it may call on the receiving Railway to place a number of wagons at its disposal daily at the junction for traffic to and *vid* the receiving line; and in the event of failure to comply within one week, the sending Railway shall be entitled to charge one and a half rupees per diem per ton of wagon-carrying capacity short-supplied, in addition to ordinary mileage, demurrage and penalty which may accrue under the rules on the stock actually running with through traffic: provided that the receiving Railway shall not be required to supply more wagons at each junction than sufficient to maintain an equal interchange of stock at that junction based on the carrying capacity.

(*b*) Open wagons shall be accepted if supplied with proper sheets and ropes.

(*c*) Wagons taken over under the provisions of this rule shall be subject to ordinary mileage and demurrage rules, but no penalty, with the exception that notwithstanding the provision of Rule XVII (*c*) mileage shall be paid on all such wagons in one direction whether with or without a load, the mileage on the wagons if not loaded being charged as for five tons per wagon.

RULE XXII (Rule XIX of 1879).—In case a goods vehicle is loaded on the homeward journey to any station short of the junction with the owning line, or in case of any alteration in the destination of a vehicle caused by transhipment of the load or otherwise, the Audit Offices of the respective Railways shall make a weekly return of the same to each other, for the purpose of calculating mileage, &c., under these rules.

Resolved that the rules for the interchange of rolling stock as read and finally revised this day be passed.

Carried "nem. con."

---

109. The President admitted the following Minute on the subject of Retirement Funds to be recorded on the Proceedings of the Conference:—

That in the opinion of the undersigned Delegates to this Conference, the establishment of satisfactory Retirement Funds for the staff employed on Indian Railways is most desirable, and would be an economical measure, while it would increase the stability and attractiveness of the Indian Railway Service.

The undersigned Delegates consider that in the interests not only of the individual employés, but of the Companies and of Government, as owners of the Indian Railways, those who are engaged in working the most important instrument in facilitating the development and extension of the trade, agriculture and manufacturing industries of India, should not form the only section of the public services of the country whose retirement after approved service for a reasonable period is not provided for.

The practice of all the great Railway Companies in England is in favour of making such a provision, and shows that advantage to employers and employed is secured thereby.

The undersigned Delegates therefore, in the belief that a similar advantage would accrue to all interested from the adoption of the same practice in connection with Indian Railways, would submit the subject for the earnest and favourable consideration of Government and the Railway Companies.

This proposal is submitted not so much in the interest of the chief representatives of the Railway Companies, as in that of subordinate members of the establishments, above a limit to be decided on, whose position is less favourable.

(Sd.) L. CONWAY-GORDON.
„ HENRY CONDER.
„ T. W. WOOD.
„ ARTHUR M. SAUNDERS.
„ WILLIAM S. BETTS.
„ W. C. FURNIVALL.
„ JABEZ LIGHTFOOT.
„ H. F. PAYNE.

The PRESIDENT remarked that the subject of the Minute had his entire support. That in his opinion any sums contributed by Railway Companies to Provident Funds were fully returned to them by the increased efficiency due to a well-cared for and contented staff. He considered that any sum contributed by a Railway Company to a Provident Fund might well be charged against the working expenses of the Railway as an increase to the salaries paid, the sum, however, not being at the disposal of the staff during continuance of service.

In order to show the practice in England, he read the following rules:—

GREAT WESTERN RAILWAY COMPANY SUPERANNUATION FUND.

"The said Company shall, at the end of each and every half-year, contribute out of the revenues of the Company a sum equal in amount to the sum which during the same half-year has been contributed thereto by the officers and servants of the Company, and such further sum as the said Company and the Committee of Management from time to time agree upon, not exceeding one-half of such specified contribution."

LONDON & NORTH-WESTERN RAILWAY COMPANY SUPERANNUATION FUND ASSOCIATION.

"1. All the salaried officers of the Company who join the Association shall contribute thereto annually a sum equal to 2½ per cent. upon their actual salaries.

"2. The London & North-Western Railway Company contributing annually a sum equal to the aggregate contribution of the subscribing members.',

LONDON, BRIGHTON & SOUTH COAST RAILWAY COMPANY SUPERANNUATION FUND.

"The Company at the end of every half-year to contribute out of its revenues a sum equal in amount to the sum which during the same half-year has been contributed thereto by the officers and servants of the Company."

The Conference was dissolved.

F. S. STANTON, *Colonel, R.E.*,
Director General of Railways,
President of the Conference.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE PUNJAB FOR 1880-81.

Nos. 191-204I, dated Simla the 21st June 1882.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Government of the Punjab, No. 747I., dated 27th February 1882, forwarding copy of the Revenue Report of Irrigation Works in the Punjab for 1880-81 and of the Resolution by that Government reviewing the Report.

OBSERVATIONS.—The capital expenditure during the year under review amounted to ₹37,09,735, and the total outlay incurred on this head up to the end of the year amounted to ₹5,19,46,668, including direct and indirect charges. Of this amount ₹2,34,01,800 have been expended on Productive Public Works and ₹19,54,483 on works of irrigation and navigation, which were in operation during the year; ₹2,56,99,642 on works still under construction (the Sirhind and Swat canal); and the balance ₹8,90,743 on surveys and works under suspension.

2. The total amount of interest charges payable during the year amounted to ₹17,80,692, which was less than the net revenue actually realised, after deduction of all working expenses, by ₹15,26,273. The surplus of accumulated net revenue over the accumulated interest charges to the end of the year amounted to ₹1,76,80,673.

3. The actual receipts from all sources are compared below with those of the two previous years:—

CANALS.	ACTUAL RECEIPTS.		
	1880-81.	1879-80.	1878-79.
	₹	₹	₹
Bari Doab	17,78,919	11,91,291	9,83,213
Western Jumna	18,17,743	14,06,382	12,93,310
Inundation Canals	12,90,307	7,15,104	7,16,217
Madhupur Workshops	...	...	225
TOTAL	48,86,969	33,12,777	29,92,965

But ₹12,66,484 of the total amount of receipts during 1880-81 were on account of arrears of enhanced land revenue and water advantage rate from lands assigned to jaghirdars brought to credit during the year.

4. The previous statement shows the revenue actually collected and paid into Government treasuries, while the following statement shows the revenue assessed during 1880-81 and the two previous years:—

CANALS.	ASSESSMENTS.		
	1880-81.	1879-80.	1878-79.
	₹	₹	₹
Bari Doab	15,19,068	13,85,454	10,71,772
Western Jumna	10,29,669	13,13,685	11,71,994
Inundation Canals	10,95,551	7,34,778	6,34,918
Madhupur Workshops	...	...	225
TOTAL	36,44,288	34,33,917	28,78,909

The steady increase in the revenue of the Bari Doab Canal is very satisfactory; the increase on the Inundation canals is mainly due to the early rise of the Indus and Sutlej rivers and to a timely rise in September, which was turned to good account for sowing the "rabi" crops. The revenue of the Western Jumna Canal is the lowest yet recorded, but a hope is expressed by the Local Government that matters have reached their worst and will now steadily improve.

5. The working expenses, including indirect charges, amounted to—

CANALS.	WORKING EXPENSES.		
	1880-81.	1879-80.	1878-79.
	₹	₹	₹
Bari Doab	4,22,718	5,02,288	5,14,358
Western Jumna	4,08,254	4,75,632	4,16,069
Inundation Canals	8,84,252	6,47,511	6,18,480
Madhupur Workshops	...	14,361	16,412
TOTAL	17,15,224	16,39,792	15,65,319

The reduction in maintenance charges of the Bari Doab Canal is mainly due to diminution of establishment charges. The increase of expenditure on Inundation canals is entirely due to a large increase in the working expenses of those from the Lower Sutlej under the heads of "Establishment" and "Statute labour." Maintenance charges of the Muzaffargarh canals, amounting to ₹1,35,220, also appear for the first time in the Irrigation Revenue charges, these canals having been managed previous to 1880-81 by the district authorities. Savings of ₹1,38,837 on the Indus canals and of ₹28,860 on the Upper Sutlej canals compensate in some measure for the increase on the other canals.

6. The net *assessed* revenue, after deduction of all working expenses, amounted to—

CANALS.	NET ASSESSED REVENUE.		
	1880-81.	1879-80.	1878-79.
	₹	₹	₹
Bari Doab	10,96,350	8,83,166	5,57,414
Western Jumna	6,21,415	8,38,053	7,55,925
Inundation Canals	2,11,299	87,267	16,438
Madhupur Workshops	...	—14,361	—16,187
TOTAL	19,29,064	17,94,125	13,13,590

7. The net assessed revenue therefore exceeded the interest charges payable during the year by ₹1,48,372, and yielded a return of 7·6 per cent. on ₹2,53,56,283, the capital invested to end of 1880-81 on works in operation. The net assessed revenue of the Bari Doab Canal paid 7 per cent., that of the Western Jumna Canal very nearly 8 per cent., and that of the Inundation canals rather more than 14½ per cent. on the capital outlay incurred up to the end of 1880-81.

8. The areas irrigated during 1880-81 and the two previous years were as follows:—

CANALS.	AREAS IRRIGATED.		
	1880-81.	1879-80.	1878-79.
	Acres.	Acres.	Acres.
Bari Doab	433,080	393,317	327,553
Western Jumna	265,551	310,686	398,460
Inundation Canals	867,246	516,341	692,252
TOTAL	1,565,877	1,220,344	1,418,270

On the Bari Doab Canal there has been a steady increase during the three years mentioned in the above table, not only of the total area, but of the areas of the more valuable crops watered from the canal—rice, sugarcane, and wheat—while the area of cotton has remained stationery. On the Western Jumna Canal the area of rice irrigation has remained fairly stationary, while there has been a marked decrease in the areas of sugarcane, cotton, and wheat, as well as in the total area irrigated from the canal.

A classified statement of crops irrigated in each canal division similar to that given on pages viii and ix of the Irrigation Revenue Report of the North-Western Provinces for 1879-80, should accompany future Revenue Reports of the Punjab Government.

9. The comparison given below of the duty done by the water *entering the heads* of the Bari Doab and Western Jumna Canals shows how steadily the character of the rabi irrigation is improving, and the value of the water increasing during that "fasl" on the former canal. The decrease in the value of the water during the kharif must be due to the decrease in the number of acres irrigated per cubic foot per second, as the irrigation of sugarcane and rice has increased in very much the same proportion as that of the total area. The statement illustrates well the different character of the irrigation on the two canals, the value of the water being greater during the rabi on the Bari Doab and during the kharif on the Western Jumna Canal.

Canals.		1880-81.		1879-80.		1878-79.	
		Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.
	Per c. foot per second.						
Bari Doab	Acres	54·8	144·6	59·7	117·7	58·2	107·8
	R	161·7	319·6	172·5	259·3	181·0	235·0
Western Jumna	Acres	62·4	62·8	79·6	61·6	100·8	90·1
	R	178·5	138·2	248·4	134·9	294·3	194·6

10. The maintenance charges per acre irrigated are shown below:—

Canals.	Per acre irrigated.		
	1880-81.	1879-80.	1878-79.
Bari Doab	0·97	1·27	1·57
Western Jumna	1 53	1·53	1·04
Inundation Canals	1·02	1·25	·88
On whole area	1 09	1·34	1·10

The high rate of maintenance per acre irrigated observable on the Western Jumna Canal is due rather to the great falling off in the area irrigated than to the actual outlay on maintenance, which has decreased considerably in comparison with that of former years.

11. The cost per 100 acres of measuring the areas irrigated and of preparing the demand statements is given in the following table:—

Canals.	Cost per 100 acres.		
	1880-81.	1879-80.	1878-79.
	R	*R*	*R*
Bari Doab	2·59	3·03	2·58
Western Jumna	2·34	2·05	1·71
Inundation	2·03	2·33	2·02

An effort should be made to keep the cost down to ₹2, or 2½ per 100 acres at the outside.

12. The cost of collecting the canal revenue is compared below for the three main systems of canal irrigation:—

Canals.	Percentage of cost of collection to receipts.		
	1880-81.	1879-80.	1878-79.
Bari Doab	5·34	8·40	7·92
Western Jumna	4·90	7·65	7·60
Inundation	2·78	3·52	4·07
On total collections	4·47	7·03	6·85

The steady reduction observable in cost of collection is very satisfactory. The cost of collection on the Bari Doab Canal should, if possible, be limited to 5 per cent.

13. The balances remaining uncollected on 1st April 1881 compare very unfavourably with those of the two previous years, as shown in the accompanying table, and an effort should be made to reduce them:—

Canals.	1880-81.	1879-80.	1878-79.
	R a. p.	*R* a. p.	*R* a. p.
Bari Doab Canal	43,204 5 10	17,006 4 7	17,510 7 3
Western Jumna Canal and Najafgarh Jhil.	1,30,365 4 8	42,780 3 8	67,768 11 5
Upper Sutlej Inundation Canal	1,752 11 2	418 12 4	503 12 10
Lower Sutlej Inundation Canal	93 0 0	9 0 0	10 0 0
Shahpur Canals	7,205 8 2	4,047 10 6	... ...
Total	1,82,620 13 5	64,261 15 1	85,792 15 6

14. With reference to the remarks in paragraph 14 of the Resolution by the Hon'ble the Lieutenant-Governor of the Punjab, the Government of India will be glad to receive designs and estimates for the construction of any Inundation canals which can be executed with advantage to the Government and the people. Schemes for the Ramnaggar and Chiniot canals from the Chenab; for the improvement of the Lower Sutlej canal and for the Inundation canal from the Sidhnai reach of the Ravi, and the canal from the same river for the irrigation of the land near Montgomery, have, it is believed, already been considered and might be matured without much difficulty.

Order.—Ordered, that copies of this Resolution and of the Report and of the Resolution by the Punjab Government be forwarded to the Secretary of State, and to the Finance and Commerce and Revenue and Agricultural Departments of this Government for information.

Also, that copies of this Resolution be forwarded to the Government of the Punjab for information and guidance.

The Governments of Madras, Bombay, Bengal and North-Western Provinces and Oudh, Public Works Department.
The Chief Commissioners, Central Provinces and British Burma.
The Foreign Department, for communication to the Resident at Mysore and Coorg.
The Resident at Hyderabad.
The Agents, Governor General, Central India and Rajputana.

Also, that copies of this Resolution and of the Report and Resolution by the Punjab Government be forwarded to the Local Governments, Administrations, and Officers noted in the margin for information.

Also, that this Resolution, the Resolution by the Local Government, and the Chief Engineer's Report, with a few selected tables, be published in the Supplement to the *Gazette of India*.

By order,

HENRY A. BROWNLOW, *Colonel, R.E.*,
Deputy Secretary to the Government of India.

Proceedings of the Hon'ble the Lieutenant-Governor of the Punjab and its Dependencies, in the Public Works Department, No. 746 I, dated 27th February 1882.

READ—

Revenue Report of the Chief Engineer, Irrigation Works, Punjab, for the year 1880-81.

RESOLUTION.—The result of the working of the canals in the year under review shows an improvement on that of the previous year. The net revenue of the works in operation by assessment is 3·52 per cent. in excess of all charges, including interest, against 3·08 in the previous year.

2. The area irrigated has increased from 1,220,344 acres in the last year to 1,565,877 acres; but of this increase 239,906 acres is due to the introduction of the area watered by the Muzaffargarh Canals into the accounts for the first time. There is still an increase of 105,627 acres after deducting this; notwithstanding a falling-off on the Western Jumna Canal of 45,185 acres. As it is believed that the people on the Western Jumna Canal are now recommencing their usual irrigation, the prospects of improvement are most satisfactory.

3. The Capital invested by Government in the Punjab Canals amounted at the end of the year to R4,30,24,486, in addition to which R89,22,182 has been contributed by Native States for the Sirhind Canal, so that the total cost of the Punjab Canals has been R5,19,46,668.

4. The above includes R14,04,355 spent on the Swat River Canal, which is now classed as a Famine Protective work. It includes also a sum of R8,55,648 spent upon surveys for new canal projects made some years ago. It is to be hoped that some of these projects may be taken up and executed as Protective works, under which they may all be classed.

5. The returns, from the canals in use, by collections, amounted to R15,26,273 in excess of all charges for working expenses and interest, so that there was a profit of R3·55 per cent. on the whole Capital invested by Government.

Up to date the receipts have exceeded the whole of the charges by R1,76,80,673.

6. Of the permanent canals in operation the Capital amounted at the end of the year to R2,34,01,800, of which R5,28,362 had been spent during the year.

7. The gross revenue collected during the year was R35,96,662; the working expenses, R8,30,972; the interest charge, R9,95,394; and the profit, R17,70,296, or 7·56 per cent. on the Capital invested.

8. But the above included R2,24,138 on account of water-advantage rate of the Bári Doáb Canal for 1879-80, which has been erroneously credited both under direct and indirect income, and some adjustments of account for land revenue which had been allotted to Jagírdárs, so that a fairer view of the transactions will be obtained from the assessments of the year, which amounted to R25,48,737. The profit was thus R7,22,371, or 3·09 per cent. on the Capital. In the last year the profit, according to assessments, was 3·40 per cent.

9. The existence of a vast water-power on the Western Jumna Canal and the Bári Doáb Canal available for working machinery has again been brought prominently to notice in the *Punjab Gazette* and the *Gazette of India*. There is little doubt that this cheap motor power will be utilized in due time.

10. The Capital invested in the Inundation Canals in operation, including Mádhopur Workshops, at the end of the year, was R19,54,483. This was R18,166 less than in the previous year, the reduction being due to a decrease of the suspense balances.

11. The gross revenue amounted to R12,90,307; the working expenses to R7,49,032; and the interest charge to R84,746. The profit was thus R4,56,529, or 23·36 per cent. after paying all charges.

12. By the assessments, the revenue would only amount to R10,03,376, and the profit to R1,69,598, or 8·68 per cent. on the capital.

13. In both of these accounts, the charges of the Muzaffargarh Canals have not been included as no Capital Account is kept up for these canals, and consequently there are no interest charges at their debit.

14. An extension of the system of Inundation Canals in the arid tracts adjoining the great rivers of the Punjab could be made with great advantage, both to Government and to the people. Such canals would come under the class of Protective Works, and a grant from the sum to be devoted annually to such works could be very usefully spent.

15. The following table shows the area irrigated in the last 5 years :—

	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
Permanent	698,631	704,003	726,018	774,969	569,194
Inundation	867,246	516,341	692,261	549,511	544,888
TOTAL	1,565,877	1,220,344	1,418,279	1,324,480	1,114,082

The falling-off in the Permanent canals is entirely due to the Western Jumna Canal, and the increase in the Inundation mostly to the introduction for the first time of the area watered by the Muzaffargarh Canals.

O

16. At page 43 of the Chief Engineer's report a table is given of the results of the operations of the year based on the collections after deducting the adjustments of account for arrears of land revenue.

The results according to this table are for the—
Permanent canals in operation, a profit of 2·29 per cent.
Inundation canals, profit of 10·19 per cent.
Total canals in operation, a profit of 2·90 per cent.
On the whole capital invested, a profit of 0·08 per cent.

This is a more correct view of the operations than that given in the Provincial accounts which include the arrears collected.

WESTERN JUMNA CANAL.

17. The area irrigated by this canal shows a falling-off from last year of 45,135 acres; it was only 265,551 acres, the smallest area recorded since 1861. The causes are the same as those reported last year. But there are signs of the people reverting to their ordinary methods of cultivation.

18. The collections of the year, as shown in the Revenue Report, give a profit of 13·87 per cent., but this is due to an adjustment of account. The actual transactions of the year only shew a profit of 3·59, but there was a large uncollected balance.

The assessments of the year show a slightly better return, or 3·81 per cent.

The above percentages are net results after paying interest. The percentage by collections in the previous year was 8·98 and by assessment 7·65.

19. The working expenses were R1·54 per acre irrigated, against 1·53 in the previous year, and establishment charges 0·86 against 0·94.

20. After deducting all charges the balance at credit of this canal at the end of the year was R2,55,50,634.

21. The results of this year are the worst as yet recorded; but there is every reason to believe that the turning point has been reached, and that matters will now steadily improve.

BARI DOAB CANAL.

22. The area irrigated by this canal was 433,080 acres, being an increase of 39,768 acres over that of the previous year. Of this 23,680 acres were on the new branches.

23. The collections of the year show a net profit of 4·39 per cent.; but omitting adjustments in the accounts it is only 1·64 per cent., against 0·1 in the previous year.

24. The assessments show a net profit of 2·72, against 1·4 in the previous year. The charges and interest unpaid at the end of the year amounted to R61,71,011.

25. The charge for the establishment has been reduced to ·526, and the working expenses to 1·01 per acre irrigated. The accounts of the year show 0·496 for establishment and 0·98 for working expenses, against 0·718 and 1·27 in the previous year, but these include the adjustments of establishments due to a wrong allotment of the Direction charges in the previous year.

26. The balance uncollected at the end of the year amounted to R43,204; this is very large; and the Financial Commissioner has been asked to accelerate the collections.

27. The value of the crops irrigated in this year was R30,00,000 in excess of the whole Capital invested by Government in the canal. Many of these crops could not have been grown without irrigation; the benefit of such a work to the country in a dry season is very manifest from these figures.

28. The further enquiry called for in paragraph 5 of Government of India's Review of the Report for 1879-80 is still in progress. It is satisfactory, however, to note that swamping has nowhere resulted from the action of the Bári Doáb Canal, and that, as far as can be traced from records, variations in the levels of water in wells of that Doáb follow those of the rain-fall.

UPPER SUTLEJ INUNDATION CANALS.

29. The net profit on these canals was 0·53 per cent. on the Capital, against a loss of 3·42 in the previous year. But excluding adjustments of account, the profit is only 0·12. The accumulated interest unpaid at the end of the year was R6,57,503.

30. The area irrigated was 154,536 acres, but of this unfortunately the crops on 51,736 acres were lost owing to the fall of the river in July and August, so that the real area of the crop is only 102,800 acres, which is still 3,323 acres in excess of the previous year.

31. A re-adjustment of rates was made during the year. It is perhaps too soon to draw any conclusions from the result of one year's operations, but there was a large increase of area in Class IV., of which the rate had generally been raised.

32. The river rose early which led to an area of crop being sown in excess of that in any previous year; but, as explained above, this was afterwards lost. Still we may conclude that the people are inclined to extend the area irrigated. Unfortunately the state of the rivers is so variable, that the operations must always be liable to extensive fluctuations.

Without these canals cultivation would be almost impossible in the district in which they are situated.

LOWER SUTLEJ AND CHENAB INUNDATION CANALS.

33. The profit on these canals shown in the accounts was 411·28 per cent. after paying the interest and all charges. Even after deducting the arrears credited on account of assigned lands, the profit was 179·97 per cent.

34. The amount of land revenue credited for the year was R3,09,687. The balance at credit of these canals after paying interest and all other charges was R40,56,834.

35. The area irrigated was 299,284 acres, which was less than that in 1878-79, but in excess of all others since 1875-76. The river was low in July and August, but still there was an increase in the area of all the principal crops, except turnips, which are largely grown in the Mooltan District. Indigo, although much more than last year, is still below the average of the preceding years. Wheat is much in excess; this was due to the rise of the river in September.

36. The cost of the cultivation to the irrigators was R1·76 per acre, against R1·71 in the previous year. The increase is due to the remissions for short supply being less.

INDUS INUNDATION CANALS, DERA GHAZI KHAN DISTRICT.

37. The profit on these canals was 3·44 per cent. on the Capital, against a loss in the previous year of 22·41 per cent.

38. The balance of interest unpaid is R4,21,594. The credits due on account of arrears of assigned land revenue will reduce this to R3,23,069.

39. There was a profit to Government on the half share of the clearance rates of R13,126, which reduces the loss on this account up to date to R37,792. The charge was raised during the year from R45,000 to R54,000.

40. There was a reduction in the Maintenance charges of R76,988, and in the Executive establishment of R8,805 from the amounts in the last year, which were heavy owing to the severe floods of the previous season.

41. The area irrigated was 164,385 acres, being 20,048 in excess of that in the previous year, but less than any other since 1875-76; this is due to the low level of the river.

MUZAFFARGARH CANALS.

42. The report on these canals is as yet imperfect owing to the arrangements for the transfer of the Revenue Account from the Civil authorities not being complete.

43. The accounts of the year show a deficit of R43,045. But in the above no land revenue has been credited. The assessments show a profit of R1,44,376.

44. The area irrigated was 239,906 acres, being 59,083 in excess of that of the previous year, but this is shown in the Revenue Report for the first time.

45. It is estimated that the cost to the cultivators was R1-8 per acre, which is slightly in excess of that in Mooltan, 1·76.

46. Arrangement will be made to furnish more complete accounts next year.

SHAHPUR CANALS.

47. The profit on these canals was 1·84 per cent., exclusive of the interest; but if this be included, there was a loss of 2·45 per cent. on the Capital, against a profit of 1·19 per cent. in the previous year.

48. At the end of the year the balance of profit in excess of all charges, including interest, was R20,217.

49. The area irrigated was 9,135 acres, being 4,648 in excess of the previous year. From this it is evident that the canals will give a better return in the ensuing year, as the assessments are R8,472 in excess of those of last year.

50. It is proposed to send an officer of the Canal Department to assist the Deputy Commissioner in improving these canals.

By order of the Hon'ble the Lieutenant-Governor,

R. HOME, *Lieutenant-Colonel, R. E.,*
Offg. Joint-Secretary to Government, Punjab, P. W. D., Irrigation Branch.

CHIEF ENGINEER'S REVENUE REPORT FOR THE YEAR 1880-81.

WESTERN JUMNA CANAL.

The expenditure during the year was R5,22,683, which raised the Capital invested to R78,35,315 at the end of the year.

2. It consisted of—

	R
Works (net after deduction of receipts and suspense balance)	3,95,191
Establishment	1,00,808
Tools and Plant	1,003
TOTAL	4,97,002
Indirect charges	25,681
TOTAL	5,22,683

3. Of this about R99,000 was spent on the New Main Line and New Hánsi Branch, which are nearly ready for the admission of water, and R3,06,000 on the New Delhi Branch. The establishment charge was 24·4 on the gross expenditure on works.

4. The Revenue Account is as follows:—

EXPENDITURE.			RECEIPTS.		
	R	R		R	R
Extensions and Improvements		16,321	Water-rates	6,13,776	
Maintenance and Repairs		1,20,151	Owners' rates	2,29,371	
Compensation		1,058			8,43,147
Establishment—			Miscellaneous		66,981
	R				9,10,128
Direction	26,586		Enhanced land revenue for current year in districts where owners' rates are not yet in force—		
Executive	1,12,738		Delhi	43,890	
Revenue	65,158		Karnál	5,114	
Fees on collection	24,092		Hissár	46,888	
Plantations	187		Umballa	1,395	
		2,28,761	Assigned lands	4,995	
Tools and Plant		7,052			1,02,282
Refunds		93	Arrears of enhanced land revenue from lands assigned to Jágírdárs		8,05,333
TOTAL		3,73,436			
Book charges—					
Leave and Pension allowances		34,818			
Total Working Expenses		4,08,254			
Balance, Profit		14,09,489			
TOTAL		18,17,743	TOTAL		18,17,743

The balance of receipts is thus R14,09,489, or 17·98 per cent. on the capital invested.

5. The interest charge for the year amounts to R3,22,554. Deducting this the net profit of the year amounts to R10,86,935 or 13·87 per cent. on the Capital. The accumulated profits at credit of the canal amount to R2,55,50,634.

6. Included in the profits of the year, there is however a sum of R8,05,333, which has been brought to credit on account of the arrears of enhanced land revenue from lands assigned to Jágírdárs, this sum does not rightly belong to the transactions of the year; deducting it the real profit of the year is R6,04,166, or 7·71 per cent., and after paying the interest R2,81,602, or 3·59 per cent. on the Capital.

7. Of the expenditure under maintenance R16,321 was on account of extensions and improvements. The greater portion of this was the cost of a Canal office at Delhi, the remainder consisted of materials for replacing the Radour Bridge, and small additions to inspections bungalows.

8. The cost of repairs was R1,20,151, against R1,28,646 in the preceding year. The reduction is due to the special repairs to the Hánsi Branch carried out in the previous year not being required in this year to the same extent.

9. The following table shows a comparison of the working expenses for the last five years:—

PARTICULARS.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
	R	R	R	R	R
Extensions and improvements	16,321	8,714	12,974	3,983	4,536
Maintenance and repairs	1,21,209	1,32,211	1,33,916	1,43,019	1,22,752
Establishment, including fees on collection	2,28,761	2,92,135	2,62,932	2,63,853	2,54,895
Tools and Plant	7,052	3,062	5,263	6,263	3,322
Profit and Loss	...	...	311	...	...
Refunds, including land revenue	93	116	39	1,607	3,868
Working Expenses	3,73,436	4,36,238	4,15,435	4,18,725	3,89,373
Book charges	34,818	39,394	...	...	...
TOTAL WORKING EXPENSES	4,08,254	4,75,632	4,15,435	4,18,725	3,89,373
	Acres.	Acres.	Acres.	Acres.	Acres.
Area irrigated	265,551	310,686	398,460	507,974	366,482
Rate per acre, excluding Book charges	1·41	1·40	1·04	0·82	1·06
Ditto including ditto	1·54	1·53	...	...	...
Establishment, rate per acre	0·86	0·94	0·66	0·52	0·70

10. From the above it is seen that although there is a great reduction in the cost of maintenance, the rate per acre is R1·41, against R1·40 in the previous year. This is due to the great falling-off in the area irrigated. In an average year the rate would be about R0·90 per acre. In the last two years the addition of the Book charges for leave and pension allowances raises this rate to R1·54 and R1·53 per acre. The establishment rate in the current year is only R0·86, against R0·94 in the previous year, which, considering the decrease in the area irrigated, may be considered very satisfactory.

11. The balance uncollected at the end of the year was R1,30,365, against R42,763 in the previous year. This was due to delay caused by the change in system, the owners' rate having been assessed by the Canal Officers for the first time.

12. The actual cash transactions of the year have hitherto been under report. If we turn to the assessments there is a falling-off in the water-rates for irrigation of R1,64,196; this is due to the disturbing influences mentioned in the last report which were still in action. In addition the rain-fall was very heavy and seasonable. There is every reason to believe that the people are now reverting to their usual system of cultivation, as the estimate of area irrigated during the present kharif (1881-82) shows an increase of nearly 50,000 acres, principally in the more valuable crops.

Taking the assessments, the result will be a profit of 7·93 per cent., excluding and 3·81 per cent. including, the interest charges; but these percentages cannot be compared fairly with the collections because of the large uncollected balance.

13. The assessments for the last five years are shown below; the owner's rate has for the first time been fixed by the Canal Officers—

	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
	R	R	R	R	R
Water-rate from irrigation	6,79,868	8,44,064	10,17,451	11,91,862	9,16,244
Miscellaneous receipts by sale of water	4,074	2,649	1,700	2,726	3,161
Water-supply for domestic purposes	2,108	1,268	2,095	2,036	676
Plantations	11,711	13,010	14,829	16,394	14,233
Other canal produce	1,608	2,677	2,404	2,041	3,883
Waterpower	18,952	6,108	112	11,648	15,287
Navigation receipts	17,893	14,654	8,709	10,364	8,341
Rent of buildings	928	1,077	842	936	812
Fines	3,097	4,375	6,291	7,124	6,150
Miscellaneous	6,609	9,184	4,217	2,847	2,359
	66,980	55,002	41,199	56,116	54,902
TOTAL	7,46,848	8,99,066	10,58,650	12,47,978	9,71,146
OWNER'S RATE	1,80,539	...	...	...	...
GRAND TOTAL	9,27,387	8,99,066	10,58,650	12,47,978	9,71,146

14. The miscellaneous revenue has increased by R11,978, and is the largest during the last five years. There is an increase in the rent of water-power of R12,844, principally due to a fair rent having been obtained for the mills in the Delhi Division which were sold by auction. There is also an increase in the navigation rates, amounting to R3,239, due to more timber being rafted down the canal. The other differences are but small.

15. The following table shows details of the canal for the last five years:—

PARTICULARS.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
AREA IRRIGATED.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	144,668	174,172	204,388	215,135	175,729
Per cent.	54·48	56·05	51·29	42·34	47·95

16. The decrease in area irrigated has been before explained. There was heavy rain in September over the whole country, and a smaller quantity in December, February and March, the latter just occurring when a demand for water was beginning to arise, which was at once stopped thereby.

17. The following table shows a comparison of the areas of the principal crops grown during the last five years. It will be seen that there is a great falling off in sugarcane and cotton, but it is believed that this will be recovered in the present year (1881-82 :—

Particulars.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
	Acres.	Acres.	Acres.	Acres.	Acres.
Sugarcane	23,846	46,973	44,006	42,135	34,602
Rice	48,372	44,076	48,383	34,733	46,047
Cotton	44,213	63,201	76,286	65,989	76,616
Wheat	93,644	103,470	140,374	206,361	143,072

18. Cost of measurement and preparation of demand statements was—

The rates for the kharif measurements are higher, and those of the rabi lower than last year. Those for preparing the demand statements higher in both seasons, but only slightly so.

19. The value of the crops irrigated during the year amounted to ₹90,46,039, against ₹1,16,07,891 in the previous year. The falling-off is due to the decrease in the area of the principal crops mentioned above.

20. The following table of rainfall shows that the fall was so well distributed throughout the year as to reduce the necessity for artificial irrigation to a minimum :—

Months.	Umballa District. Hathnikund.	Umballa District. Dadúpur.	Umballa District. Kanjmán.	Karnal District. Karnal.	Karnal District. Ber.	Karnal District. Panipat.	Rohtak District. Rohtak. BARI DOAB CANAL.

22. The additions to the Capital during the year amounted to ₹5,679. The expenditure was on the Kasur and Sobráon Branches, under the headings of inspection bungalows, plantations, demarcating lands and irrigation outlets. A sum of ₹1,00,680 was written off to the several works on account of depreciation of stock collected for the remodelling works which are in abeyance. But it was balanced by decrease in the suspense accounts. The Capital at the end of the year amounted to ₹1,55,66,485.

23. The Revenue Account is as follows :—

EXPENDITURE.	₹	₹
Extension and improvements		13,534
Maintenance and repairs		1,51,042
Compensation		2,293
ESTABLISHMENT—	₹	
Direction	1,834	
Executive	1,14,103	
Medical	2,260	
Revenue	51,446	
Fees on collection	43,627	
Plantations	1,349	
		2,14,619
Tools and Plant		2,035
Refunds		4,400
TOTAL		3,87,923
Book Charges, Leave and Pension allowances		34,795
TOTAL WORKING EXPENSES		4,22,718
Balance Profit or 8·71 per cent. on Capital invested.		13,56,201
TOTAL		17,78,919

RECEIPTS.	₹	₹
Water-rates		9,54,003
Miscellaneous		1,20,916
TOTAL DIRECT RECEIPTS FOR CURRENT YEAR		10,74,919
Water-advantage rate, 1880-81		2,76,430
Arrears of water-advantage rate assigned to Jagirdars		2,03,745
	₹	
Water-advantage rate, 1879-80	2,24,138	
Deduct excess credited in 1879-80	313	
		2,23,825
TOTAL WATER-ADVANTAGE RATE		7,04,000
TOTAL		17,78,919

24. This shows a balance of profit amounting to ₹8·71 per cent. on the Capital, against 4·6 in the previous year. But this profit includes ₹2,24,138 on account of water-advantage rate for 1879-80, which has been erroneously credited both under direct and indirect income, and an adjustment of accounts by crediting to the canal the arrears of water-advantage rate which had been assigned to Jágirdárs. Deducting these the profit of the year amounts to 5·96 per cent.

25. The interest charge for the year is ₹6,72,840, so that the net revenue after paying all charges is 4·39 per cent. according to the year's accounts, but deducting the arrears, 1·64 per cent., against 0·1 in the previous year. The balance of unpaid charges and interest at the end of the year was ₹61,71,011, but the actual amount is ₹63,95,149, owing to the double credit noted above.

6. The sum of ₹13,534 was spent on extensions and improvements. These were out-offices for inspection bungalows, alterations to distributaries, and construction and improvement of mills. ₹3,857 were spent on the mills which are proving very remunerative on this canal. ₹3,186 were spent on a drainage channel. The other items were all small.

27. In maintenance and repairs there is a reduction of ₹21,559. On the Head Works the reduction was ₹10,478, but the balance can hardly be called reduction, being rather deferred expenditure ;—the demand for water in the rabi was so great that the canal could not be closed for silt-clearance.

28. There is a reduction of ₹67,870 on establishment, but this is partially due to an adjustment of the Direction charges for last year, which were in excess owing to an error in the allotment to the Inundation Canals, as explained later in this report. The reduction under Direction was ₹47,972, so that there still was a net reduction of nearly ₹20,000 in the establishment charge.

29. The following table gives a detailed comparison of the cost of the establishment :—

	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
ENGINEERING.					
Direction	1,834	49,806	54,205	58,420	73,995
Executive	1,14,103	1,28,079	1,16,543	1,24,866	1,07,064
Medical	2,260	2,026	2,065	4,549	8,877
TOTAL	1,18,197	1,79,911	1,72,813	1,87,835	1,89,936
REVENUE.					
Collection and Police	51,446	56,485	49,607	44,377	39,549
Lambardárs & Patwáris' fees	43,627	43,596	28,242	23,350	24,440
TOTAL REVENUE	95,073	1,00,081	77,849	67,727	63,989
Plantations	1,349	2,497	2,643	2,500	2,251
GRAND TOTAL	2,14,619	2,82,489	2,53,305	2,58,062	2,56,176
Area irrigated in acres	4,33,080	3,93,317	3,27,558	2,66,995	2,02,712
Rate per acre, Establishment	·496	·718	·773	·966	1·26
Do. excluding the adjustment of this year	·526	·684			

But this is misleading : owing to the adjustment mentioned above the charge for the year only comes to ·496, or nearly seven annas per acre, but for these adjustments the charge would have been ·526 per acre.

30. The following table shows the results of the operations for five years according to both collections and assessments of the year. The rate of working expenses per acre is vitiated in the same way as that for the establishment, but the true rate is shown at foot of the statement.

The profit by assessments appears to be less than by the collections, but this is due to the adjustments of the arrears of land revenue on assigned lands and the double credit on account of water-advantage rate for 1879-80 mentioned above; the true improvement is shown by comparison with the assessments of the previous year, but is still somewhat higher than it should be owing to the adjustment of the charges for Direction :—

PARTICULARS.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.

	„ „ half rate	12,980	
			2,09,360
171,341	„ „ 12 annas	1,14,274	
	„ „ half rate	7,066	
			1,21,340
433,080	Average rate ₹0·86, or 13 annas 9 pies per acre		3,74,014*

32. There is an increase of ₹1,01,838 in the water-rates assessed and ₹44,130 in the miscellaneous revenue of the year. The former is due to the increased area watered, 39,763 acres. Of this 23,680 acres was on the Kasúr and Sobráon Branches, the remainder on the older branches, principally at the tail of the canal. Of the miscellaneous revenue ₹18,270 is due to the increased mill-rents. The mills were sold at very high rates to men who had contracts for supplying flour to the army in the field, and we cannot expect to get such rates under ordinary circumstances. There is an increase of ₹2,088 in the sale of water for purposes other than irrigation, and of ₹4,069 in plantations. There is an increase of ₹12,174 under fines, which is somewhat to be regretted. It is due to punishment for breaches of regulations which are always more common where water is in such demand as it was in December and January, and to some extent to the enforcement of the rules against unauthorized irrigation.

* This includes the rate on well lands not entered in the table under para. 30.

The increase of R7,145 in sundry collections is partly due to the sale of land to the Egerton Woollen Mills Company at Dhárîwál.

33. The following table shows the comparison of the several items for the last five years :—

	Items.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.

35. It will be seen that the principal increase in the area irrigated was in the rabi, and was due to the want of rain in the Amritsar and Lahore Districts in October, November and January. Even in December, the fall in Lahore was only 0·8 inches. There was an improvement in every point of the working, except the duty of the water in the kharîf. This I attribute to a partial failure of the supply at the end of the season. The river shifted its course from the left to the right bank of the river, and there was some delay in turning the water into the canal in August and September. But for this there would have been a larger area irrigated in the kharîf. This is the great drawback to this canal; as often explained before, the slope of the bed at the site of the head works is so very great that the weir has very little effect on the direction of the stream above it: the only real effect of the weir is, that it maintains the level of the river bed and the canal head in the same relative positions, but for that it is extremely probable that the canal head would ere this have been left high and dry. I fear that we must remain liable to this uncertainty of obtaining the water when the river begins to fall in September. It has again happened in the current year 1881. We have tried bunds, sunken bars, spurs, everything we can think of, but nothing resists the force of this torrent in flood. It must be remembered that we have no large materials, and the boulders brought down in floods rapidly destroy any work consisting of small stones and mortar. But for this difficulty the kharîf returns of this canal could, I think, be largely increased.

36. The following table shows the cost of maintenance per mile of both canal and distributaries for five years. The reduction is due to the non-closure of the canal in the present year :—

	1880-81.		1879-80.		1878-79.		1877-78.		1876-77.	
	Miles.	Cost.	Miles.	Cost.	Miles.	Cost.	Miles.	Cost.	Miles.	Cost.

Rájbahás . . .	862	414	862	46	706	37	706	6	706	49

37. The percentage of each class of crops is given below for the last five years. It will be seen that they do not vary much; but it must be remembered that over a large portion of the area the people have been employed in bringing new land under cultivation and substituting wet for dry crops. I believe the cultivation of the better crops will follow in time to the benefit both of the people and the canal revenue :—

RECEIPTS.	R	R
Water-rates	14,835	
Owners' „	4,973	19,808
Miscellaneous		3,368
TOTAL		23,176
Fluctuating Land Revenue for current year	91,476	
Arrears on account of land assigned to Jágírdárs	2,386	93,862
TOTAL		1,17,038

47. The interest charge amounts to ₹23,522, so that the profit of the year is 0·53 per cent. in excess of all charges including interest. The balance of interest unpaid at the end of the year was ₹6,57,503.

48. The working expenses amount to ₹85,728 exclusive of the book charges. This is ₹27,009 less than in the previous year. Of the decrease, ₹18,705 is due to reduction in establishment. Of this ₹16,899 was in the direction charges, and was due to the re-adjustment of the amounts for last year, in which an error had occurred owing to the omission by the Examiner of the charges for the labor on the lower Sutlej and Chenab and Mozaffargarh Canals when distributing the amount among the several canals. The reduction in works and repairs was ₹5,962, due to less clearances being required.

49. Including book charges the working expenses amounted to ₹90,426, against ₹1,19,286 in the previous year.

50. In the above statements the collections of the year have been considered. If the assessments be taken as the basis of calculation, there is a great improvement, as they amount to ₹1,80,643, which is an increase of ₹63,605. The profit would thus be 15·59 per cent. excluding and 11·53 per cent. including the interest charges.

51. A comparison between the assessments of the two last years is given in the following table:—

	1880-81. Area irrigated. Flow.	1880-81. Area irrigated. Lift.	1880-81. Area irrigated. Total.	Water-rate.	1879-80.	Difference. More.	Difference. Less.
DIRECT WATER-RATES, LAHORE DISTRICT.							
Class I	2,304	56	2,360	1,180			
„ II	1,752	670	2,422	1,208			
„ III	12,131	3,355	15,486	7,735

X. „ fines				162	73	89	...
XI. „ Miscellaneous receipts				1,084	1,567	...	483
TOTAL V TO XI				3,368	3,516	...	148
Fluctuating Land Revenue				1,46,621	1,10,456	36,165	...
GRAND TOTAL				1,80,643	1,35,338	45,305	...

52. It will be seen that there is an increase of ₹11,306 in the water-rates, and ₹36,165 in the fluctuating land revenue of the Montgomery District, due to the increased area irrigated. There is a reduction of ₹2,020 in the water-advantage rate, owing to the Executive Engineer having deducted the rates on well lands in both crops, whereas last year he only deducted it for the rabbi.

The changes in Miscellaneous Revenue are but small.

53. The area irrigated during the last five years is shown in the following table:—

Years.	Lahore.			Montgomery.			Grand Total.
	Kharif.	Rabbi.	Total.	Kharif.	Rabbi.	Total.	
1880-81	20,295	28,192	48,487	59,951	46,098	106,049	154,536
1879-80	10,621	15,233	25,854	46,368	27,255	73,623	99,477
1878-79	16,355	18,380	34,735	67,902	30,324	98 226	132,961
1877-78	6,380	10,738	17,118	38,244	25,823	64,067	81,185
1876-77	4,862	11,218	16,080	23,167	34,996	58,163	74,243

The irrigation of the present year is the largest on record, being 154,536 acres against 148,924 in 1869-70, the highest in any previous year. This increase was due to the early rise of the river; but I regret to say that the dry weather in the month of August caused such a fall in the river that the crops on 51,736 acres failed, and the real area irrigated is only 102,800, but even this is in excess of that of last year by 3,323 acres.

54. The statement below compares the areas of some of the principal crops grown in the last five years:—

Crops.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
Rice	20,701	18,220	17,471	7,380	3,933
Cotton	8,441	5,716	34,835	15,906	6,076
Sugarcane	109	96	155	129	55
Jowár	5,868	5,908	1,955	4,925	4,079
Wheat	47,519	19,952	25,714	18,934	25,617

It will be seen there is a large increase in wheat. The river rose in September, and thus allowed of a large area of rabbi crops being sown.

55. The incidence on the area of the fluctuating land revenue in the Montgomery District during the last five years has been as follows:—

		1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
Kharif	₹	1,06,957	87,603	1,26,767	65,096	37,154
	=	1·8	1·8	1·9	1·7	1·6
	Acres	59,951	46,366	67,902	38,244	23,167
Rabbi	₹	39,664	23,540	24,792	20,798	29,323
	=	0·9	0·8	0·8	0·8	0·8
	Acres	46,098	27,255	30,324	25,823	34,996
Whole year	₹	1,46,621	1,10,603	1,51,559	85,894	66,477
	=	1·4	1·5	1·5	1·3	1·2
	Acres	106,049	73,623	98,226	64,067	58,163

56. A revision of the rates charged was brought into effect from the kharif of 1880-81. The follwing table shows the two schedules:—

Class.	Nature of Crops.	Old rate. ₹ a. p.	New rate. ₹ a. p.
I	Rice	3 0 0	3 0 0
	Gardens	3 0 0	
	Chillies	3 0 0	
II	Cotton	2 0 0	2 0 0
	Melons	2 0 0	
	Sugarcane	1 12 0	
	Hemp	1 12 0	
	Til	1 12 0	
III	Jowár	1 8 0	1 2 0
	Bájra	1 8 0	
	Indian-corn (makai)	1 8 0	
	Kangni	1 6 0	
	China	1 6 0	
	Mash	1 6 0	
	Mung	1 6 0	
	Moth	1 4 0	
	Turmeric	1 4 0	
	Indigo	1 4 0	
	Gram	1 4 0	
	Masúr	1 4 0	
	Chari	1 0 0	
	All kharif crops not mentioned	1 0 0	

Class.	Nature of Crops.	Old rate. ₹ a. p.	New rate. ₹ a. p.
IV	Poppy	0 12 0	0 14 0
	Tobacco	0 12 0	
	Dhonia	0 12 0	
	Wheat	0 12 0	
	Barley	0 12 0	
	Saron	0 12 0	
	Táramira	0 12 0	
	Wheat and gram	0 12 0	
	Gram and barley	0 12 0	
	Vegetables	0 12 0	
	Methra	1 0 0	
	Forests	1 0 0	
	All rabbi crops not mentioned	0 12 0	
V	Fallow lands	1 2 0	0 10 0
	Lands ploughed but not sown	1 2 0	
	Grasses	0 12 0	
	Rates for irrigation by lift, half of the above.		

57. The following table shows the area of each class of crop grown in the last two years:—

	1880-81.	1879-80.
Class I	20,795	18,269
„ II	13,406	8,336
„ III	45,434	39,564
„ IV	73,256	31,646
„ V	1,645	1,662
	154,536	99,477

It will thus be seen that the increase of rate on some of the crops in classes II and IV has had no tendency to prevent the people growing them.

58. The following table gives some details of the working of these canals, but they are not very reliable, as there are such constant variations in the supply and in the state of the heads, especially in such a year as the one under report, that no correct data can be obtained:—

		1880-81.	1879-80.	1878-79.
Duty per cubic foot of supply	Kharif	62·7	81·4	[illegible]
	Rabi	126·4	102·6	110·3
	Year	188·7	66·2	90·4
Income per cubic foot of supply	Kharif	91·5	50·9	79·3
	Rabi	119·9	119·3	81·5
	Year	153·5	85·9	114·8
Cost of maintenance	Per cubic foot of supply	75·3	76·1	64·1
	„ acre irrigated	0·54	1·09	0·71
	„ mile of canal	225·3	233·5	192·5
	„ „ of rajbaha	30·4	73·88	70·79

59. The cost of measuring and preparing the demand statements:—

Districts.	Measurement. Kharif. Area.	Cost.	Per cent.	Rabi. Area.	Cost.	Per cent.	Demand Statements. Kharif. Area.	Cost.	Per cent.	Rabi. Area.	Cost	Per cent.
Lahore & Montgomery	80,246	₹ 670·47	0·83	74,290	₹ 603·70	0·81	80·246	₹ 341·67	0·42	74,290	₹ 413·85	0·5[illegible]

60. The dates on which measurements were commenced, completed, and announced, are given below:—

	Lahore. Kharif.	Rabi.	Montgomery. Kharif.	Rabi.
Commenced	1st Sept. 1880	11th Dec. 1880	1st Sept. 1880	6th Dec. 188[illegible]
Completed	12th Nov. „	15th Feb. 1881	6th Nov. „	19th Feb. 188[illegible]
Announcement completed	24th Dec. 1881	29th Mar. „	9th to 15th Dec „	21st to 27th Mar. „

61. The following statement gives the areas in acres of the different crops which failed from the falling off of the supply in August:—

	Lahore.		Montgomery.		Total.	
	Area.	Amount.	Area.	Amount.	Area.	Amount.
	Acres.	₹	Acres.	₹	Acres.	₹
Rice	6	3	7,851	23,549	7,857	23,552
Cotton	242	121	2,352	4,541	2,594	4,662
Sugarcane	...	...	7	14	7	14
Jowár	358	179	610	644	968	823
Wheat	9,284	4,642	12,865	11,184	22,149	15,826
Others	5,080	2,540	13,081	14,397	18,161	16,937
Total	14,970	7,485	36,766	54,329	51,736	61,814

62. The dates on which demand statements were submitted to the Deputy Commissioners are given below:—

Canal Division.	British District.		Kharif.	Rabi.
	Zilah.	Tahsil.		
Upper Sutlej Division, Inundation Canals	Lahore	Kasúr, Chunián	24th Dec. 1880	29th March 1881
	Montgomery	Dipálpur, Pákpattan	18th Dec. 1880.	5th April 1881

63. The measurements in the Lahore District were commenced about the same time as last year, but completed about 15 days later, and that for the Montgomery District was begun about the same time, and the announcement of the kharif demand was about a month, and for the rabi about four days later than last year.

64. The value of the crops grown under irrigation is estimated at ₹ 27,54,897.

65. The following statement shows the rain-fall at some of the principal stations:—

Months.		Lahore District.	Montgomery District.	
		At Mámoke.	At Dipálpur.	At Pákpattan.
		Inches.	Inches.	Inches.
April	1880	...	...	...

LOWER SUTLEJ AND CHENAB INUNDATION CANALS.

67. The amount of the Capital Account at the end of the year was ₹1,10,249, being ₹2,516 less than at the end of the previous year. This was due to a reduction of the suspense balances.

68. The Revenue Account is as follows:—

EXPENDITURE.			RECEIPTS.		
		₹			₹
Extensions and improvements		312	Water-rates		80
Maintenance and repairs		86,222	Miscellaneous		6,383
Establishment—			Contribution from Zar-i-nágha		74,972
	₹.		Value of statute labor		2,98,927
Direction	47,040				
Executive	38,940		TOTAL	3,80,362	
Medical	955				
Revenue	3,311			₹.	
Fees on collection	1,555		Land revenue for current year	3,09,687	
		91,801	Arrears on account of land assigned to Jágirdárs	2,55,020	
Tools and Plant		748			5,64,707
Statute labor		2,98,927			
TOTAL		4,78,010			
BOOK CHARGES.					
Leave and pension allowances		8,717			
Total working expenses		4,86,727			
Balance profit or ₹ 415·73 per cent. on Capital invested.		4,58,342			
GRAND TOTAL		9,45,069	GRAND TOTAL		9,45,069

69. From the above it would appear that the balance of profit was ₹4,58,342, or ₹415·73 per cent. on the Capital invested, or after deducting the interest charge ₹4,903, or 411·28 per cent. But this includes the adjustment of accounts for assigned lands, the arrears of which amount to ₹2,55,020. Deducting this amount, the profit after paying the interest charge is 179·97 per cent., and the total sum at credit of the canals after paying all charges is ₹40,56,834.

70. With regard to the Zar-i-nagha expenditure, extensions and improvements, ₹312 was for making maps of the canals; maintenance and repairs cost ₹74,660, or ₹29,389 in excess of that of the previous year; this was due to the necessity for excavating new heads to the Muhammadwah, Bakhtúwah and Bihishtíwah, a branch of the Sardárwah.

71. The amount of imperial repairs was ₹11,562, or ₹202 more than in the previous year. This is principally the cost of maintenance of the Chenab bunds.

72. In the Establishment charges there is an increase on the previous year of ₹43,396 under Direction. This is due to the Examiner in the last year having omitted to take into account the value of the Chher labor supplied by the irrigating community when distributing these charges. There is a decrease of ₹4,535 on Executive, due principally to the officers being in lower grades of the Department.

73. In the miscellaneous revenue there is a decrease of ₹1,010, due to a less sale of timber and produce from the canal banks, the detail is shown in a table attached.

74. There is an increase in the land revenue credit. Omitting the arrears of assigned land revenue, the amount is ₹3,09,687, against ₹2,55,777 last year, or ₹53,910 in excess. This is due to the remissions for failure of supply being less, and to some arrears being collected. The amount of remission for the year was ₹8,992.

75. The value of the statute labor shown in the account consists of ₹1,94,231, the value under the new settlement, and ₹1,04,696 arrears of the previous year.

76. The following table shows a comparison of the items of miscellaneous revenue for the last five years:—

ITEMS.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
	₹	₹	₹	₹	₹
V.—Receipts from plantations	55	136	35	13	52
VI.— Ditto other canal produce	4,871	6,874	5,049	5,894	7,572
IX.—Rent from buildings	174	...	...	45	15
X.—Fines	432	16	105	344	182
XI.—Miscellaneous	851	367	847	272	52
TOTAL	6,383	7,393	6,036	6,568	7,843

77. The Zar-i-nagha account is as follows:—

The balance on 1st April 1880, as per revenue report, was		2,92,778
Deduct remissions and fees to Lambardárs and Patwáris	17,400	
		2,75,378
Deduct expenditure—		
1 A.—Extensions and improvements	312	
1 B.—Maintenance and repairs	74,660	
II.—Fees to Lambardárs and Patwáris	1,179	
		76,151
BALANCE		1,99,227
ADD REALIZED DURING THE YEAR		40,431
TOTAL ON 1ST APRIL 1881		2,39,658

It will be seen that assistance was given to the cultivators to the extent of ₹26,186 in excess of the fines levied.

78. The following gives a detailed comparison of the attendance of laborers in the last two years:—

	1880-81.			1879-80.			DIFFERENCE.	
	Sutlej.	Chenab.	TOTAL.	Sutlej.	Chenab.	TOTAL.	More.	Less.
Called out	392,680	181,979	574,659	349,592	193,227	542,819	31,840	...
Present	307,673	142,412	450,085	283,881	149,161	433,042	17,043	...
To Panchayats	16,797	10,828	27,625	16,581	11,469	28,050	...	425
TOTAL	324,470	153,240	477,710	300,462	160,630	461,092	16,618	...
Actually absent	68,210	28,739	96,949	49,130	32,597	81,727	15,222	...

79. The percentage of absentees was 16·9, against 15·1 in the previous year. The following table shows a comparison of the percentages for the last five years. If the percentage of absentees continues to increase, it will probably be necessary to raise the amount of fine for non-attendance.

YEARS.	Present.	Remitted.	Absent.	Fines, in rupees.	REMARKS.
	Per cent.	Per cent.	Per cent.		
1880-81	78·3	4·8	16·9	48,474	
1879-80	79·77	5·17	15·06	40,864	
1878-79	78·72	4·74	16·54	48,305	
1877-78	78·94	5·87	15·19	36,127	
1876-77	78·53	6·04	15·43	35,755	

80. The value of the labor supplied was—

	₹
Sutlej Canals	1,15,877
Chenab Canals	53,405
	1,68,782
Zar-i-nágha or fines on absentees	48,474
Share of land revenue	3,09,687
Water-rates	80
Actual cost to cultivators	5,27,023

or for 299,284 acres nearly 1·76 per acre.

The cost last year was 1·71 or a little less. No comparison can be made with previous years, as the new land assessment only came into force in 1879-80.

81 The areas of the principal crops irrigated are given below for the last five years. There is an increase in all except the turnips.

	AREAS IN ACRES IRRIGATED IN				
	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
Indigo	34,612	6,891	41,474	69,322	54,862
Cotton	32,496	25,290	37,806	28,280	24,178
Rice	16,691	10,169	12,605	9,197	8,100
Sugarcane	3,098	2,924	3,295	3,473	3,176
Millet	49,960	38,017	45,295	39,307	40,316
Wheat	98,678	80,998	89,188	51,686	60,422
Turnips	22,187	24,835	20,419	23,894	20,046

82. The areas irrigated and the proportion of flow to lift irrigation is shown in the following table for the last five years:—

	1880-81.		1879-80.		1878-79.		1877-78.		1876-77.	
	Area in acres.	Per cent.	Area in acres.	Per cent.	Area in acres.	Per cent.	Area in acres.	Per cent.	Area in acres.	Per cent.
Flow	235,212	78·6	221,747	82·7	270,785	81·7	226,599	79·6	236,693	82·9
Lift	64,072	21·4	46,293	17·3	60,845	18·3	58,081	20·4	48,952	17·1
TOTAL	299,284	...	268,040	...	331,639	...	284,680	...	285,645	...

The total irrigation is 31,244 acres in excess of last year, and slightly in excess of all the last four years, except 1878-79. Considering the state of the rivers which were extremely low in August and September, this is very satisfactory.

83. The measurements were this year made by the Civil Establishment of Patwáris, ₹1,555 being given them as fees, and the total cost including the check measurements was ₹2,413 against ₹2,900 in the previous year.

84. The following statement shows rain-fall at principal stations in the Mooltan District:—

NAME OF MONTH.	Mooltan.	Shujabad.	Mailsi.	Lodhrán.	Sarai Sidhu.	REMARKS.

INDUS INUNDATION CANALS.

86. The Capital Account at the end of the year amounted to ₹7,11,346, being ₹443 less than at the end of the previous year, owing to reduction in the suspense balances.

87. The Revenue Account is as follows:—

EXPENDITURE.

			₹
Extensions and Improvements			5,047
Maintenance and Repairs			95,000
		₹	
Establishment, Direction		—8,821	
Ditto,	Executive	43,619	
Ditto,	Medical	881	
Ditto,	Revenue	11,717	
Ditto,	Fees on collection	2,523	
Ditto,	Plantations	466	
			50,385
Tools and Plant			508
	TOTAL		1,50,940

BOOK CHARGES.

Capitalization of abatement of land revenue	2,764	
Leave and pension allowances	11,328	
		14,092
Total working expenses		1,65,032
Balance, Revenue, being 7·81 per cent. on Capital invested		55,571
GRAND TOTAL		2,20,603

RECEIPTS.

	₹
Clearance rate collected	55,743
Miscellaneous	6,907
TOTAL	62,650
Land Revenue	1,57,953
GRAND TOTAL	2,20,603

88. The interest charge for the year is R31,128, so that the net balance of profit after meeting all charges is 3·44 per cent., and the unpaid balance of interest at the end of the year, R4,21,594.

89. The amount of credits on account of land revenue assigned to the jágírdárs for the year, R16,779, has been included in the accounts; but the arrears, R98,525, were not ascertained definitely until too late. They will be credited next year.

90. The extensions and improvements of the year consisted principally in the purchase of the Dhori Canal for R5,000. I am not sure whether this should not have been charged to Capital, but generally all improvements costing R5,000 or less are charged against Revenue.

91. The expenditure on repairs was R76,988 less than in the previous year, owing to less damage being done by the floods. Of this sum R4,779 was the cost of repairs to embankments.

92. The cost of establishment was less than that of the previous year by R 66,687, but this is due to the adjustment of the charge for direction, which was last year excessive, because of the omission by the Examiner of the charge on the chher labour when allotting the charges for direction. Still there was a reduction in the charge for Executive establishment amounting to R8,805.

93. The clearance rates were raised during the year from R45,000 to R54,000, as the former sum was insufficient. The expenditure of the year was—

	R
Half cost of excavation	35,995
Ditto of establishment on surveys	1,328
Ditto of repairs to bunds	843
Whole of establishment on distribution	1,936
Half cost of measurement establishment	772
	40,874

Profit R13,126. This reduces the loss of Government up to date to R37,792, but there is still a balance uncollected amounting to R54,665.

94. There is an increase of the miscellaneous revenue of R1,467 over the previous year, but the real increase is only R1,220, as R3,247 is on account of the share of produce on the Massúwah Canal which was last year included in the clearance rates. There is an increase under fines of R600, due to the many breaches of regulation which always occur in a year of low supply in the canals.

95. The share of land revenue is R1,57,953. Of this R16,779 is the amount of credit on account of jágír lands, so that the true land revenue is only R1,41,174, which is R1,915 in excess of that of the previous year.

96. The area irrigated in the last five years has been as follows :—

1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
164,385	144,337	208,888	171,604	166,574

Comparison between the irrigated area of the year and that in previous year is given below :—

Crops.	1880-81.	1881-82.	Total.
Kharíf	121,075	96,611	+24,464
Rabi	43,310	47,726	−4,416
Total	164,385	144,337	20,048

97. The increase to the area irrigated during the kharíf is due to the early rise of the river, much of this was endangered by the low level in July and subsequent months when the river was 2·70, 3·87 and 1·79 feet, respectively, below the average; but a rise between the 6th and 16th of September averted the loss of any of the crops.

98. The rain-fall was more than in the previous year. A comparison for the last five years is shown below for three of the principal stations :—

	1880-81. Inches.	1879-80. Inches.	1878-79. Inches.	1877-78. Inches.	1876-77. Inches.
Sanghar	4·2	4·0	12·8	7·0	7·3
Dera Ghází Khan	5·50	2·95	9·37	6·1	3·2
Rájanpur	1·70	0·5	4·8	2·3	1·3

99. The area of the principal crops grown is shown below for the last four years :—

Crops.	1880-81.	1879-80.	1878-79.	1877-78.
Jowár and Bájra (Millets)	44,738	33,460	33,117	24,203
Wheat	41,451	45,876	62,402	37,479
Cotton	30,103	24,250	22,643	35,158
Indigo	10,815	5,598	6,697	28,711
Rice	12,976	11,197	10,143	11,245

It will be seen there was a large increase over the previous year in the millets, cotton and indigo, but a falling-off in the wheat, a rabi crop.

100. The following table shows the area watered by each canal during the last three years :—

No.	Name of Canal.	1880-81.	1879-80.	1878-79.
1	Massúwah	2,842	2,305	2,588
2	Mánka	77,710	19,880	29,824
3	Kot Dánd	3,936	3,728	3,165
4	Shoria	33,138	29,667	27,487
5	Kastúri	17,633	15,610	15,250
6	Dhingána	20,407	19,120	19,025
7	Chibri	4,210	5,640	7,290
8	Sághiba	10,927	8,812	11,571
9	Gámúwála	3,664	2,721	2,892
10	Sohan	7,824	7,156	7,534
11	Núr	7,186	4,623	10,243
12	Dhundi	13,134	14,806	20,432
13	Kutab	7,046	5,692	5,916
14	Kádra	4,728	4,567	3,307
	Total	164,385	144,337	166,524

101. The percentage of flow to lift irrigation for the last three years is given below, from which it will be seen that it does not alter much, though from the low supply in the canals a larger increase in the percentage of lift might have been anticipated.

	Kharif.			Percentage.		Rabi.			Percentage.	
	Flow.	Lift.	Total.	Flow.	Lift.	Flow.	Lift.	Total.	Flow.	Lift.
1880-81	108,834	12,241	121,075	89·9	10·1	39,702	3,608	43,310	91·6	8·4
1879-80	87,718	8,893	96,611	90·8	9·2	45,786	1,940	47,726	95·9	4·1
1878-79	125,635	11,810	137,445	91·4	8·6	69,056	2,387	71,443	9·67	3·3

102. The measurements were conducted by District Pátwarís, and the rates per 100 acres, for the last seven years were—

Years.	Per cent.
1880-81	2·48
1879-80	2·62
1878-79	2·23
1877-78	2·18
1876-77	2·49
1875-76	2·54
1874-75	2·34

The measurements were commenced on the 1st September, and completed by the 30th December or 120 days, against 116 of last year; the work was delayed by the census operations.

103. The cost of preparing the Revenue papers during the year was 0·19 per 100 acres the same as last year.

104. The following statement shows the rain-fall at the principal stations in the Dera Gházi Khan District :—

Months.	Sanghar.	Dera Gházi Khan.	Jámpur.	Rájanpur.
	Inches.	Inches.	Inches.	Inches.

MUZAFFARGARH CANALS.

106. These are Inundation Canals from the rivers Chenab and Indus which were formerly maintained by the District authorities, and were only taken over by this Department at the commencement of this year.

107. This is the first regular report on them, and is incomplete, as the canal revenue due has not yet been credited by the Financial Commissioner. There is no Capital expenditure, and the maintenance is carried out by *chher* labor provided by the people under the terms of the settlement, in the same manner as on the Mooltan Canals, but there is an item of ₹4,735 in the suspense accounts pending the adjustment of the accounts.

108. The following is the Revenue account according to the Provincial accounts:—

EXPENDITURE.	₹	₹	RECEIPTS.	₹
Maintenance and Repairs		320	Miscellaneous	25
Establishment, Direction	₹ 8,430		Statute labor	92,150
Ditto Executive	,, 17,332		TOTAL	92,175
Ditto Revenue	,, 10,869			
		36,631		
Tools and Plant		16		
Statute labor		92,150		
TOTAL		1,29,117		
BOOK CHARGES.				
Leave and pension allowances		6,103	Balance, loss	43,045
GRAND TOTAL		1,35,220	GRAND TOTAL	1,35,220

109. But the Superintending Engineer gives the items of income which will have to be credited in the accounts of the ensuing year as—

	₹
Receipts from Plantations	1,146
Canal produce	1,450
Fines	508
Sundry collections	588
Total Miscellaneous	3,692
Indirect income obtained from Financial Commissioner, share of land revenue	1,83,729
GRAND TOTAL	1,87,421

So that taking these as the assessments the profit would be ₹1,44,376.

110. Endeavours will be made to bring the accounts into order during the ensuing year, but as not only have the canals only been lately transferred to this department, but as an attempt is being made to work more directly with the Civil Officers of the District than is done elsewhere, it has not been possible as yet to adjust the procedure.

111. The Fine or Zar-i-nágha Fund has also not yet been adjusted; the following is the Executive Engineer's Statement:—

	₹
Balance on 1st April	20,000
Assessments of the year	20,866
Balance on 1st April 1882	40,866

112. The area irrigated was 239,906 acres, against 180,823 in 1879-80, 210,206 in 1878-79, showing an increase of 59,083 acres over that in the previous year.

113. The cost of the irrigation to the cultivators is estimated at ₹ 1-8 per acre.

114. The area of some of the principal crops grown was—

Sugarcane	4,618 acres.
Rice	37,128 ,,
Cotton	25,638 ,,
Wheat	69,449 ,,

115. The value of the crops is estimated at ₹65,62,942.

116. The following table shows the rain-fall at three of the principal stations in the district:—

The rates for Mooltan are taken for the above.

SHAHPUR CANALS.

118. There was no change in the Capital account during the year. The amount is ₹10,739.

119. The collections of the year amounted to ₹7,597. The maintenance charges to ₹ 6,847, and the charge for interest to ₹1,749, so that there was a profit of 1·84 per cent. excluding, and a loss of 2 45 per cent. including, the interest charge.

120. The balance at credit of the canals at the end of year was ₹20,217.

121. The area irrigated was 9,135 acres, against 4,487 in the previous year; this was due to the slightly better level of the river. In August many of the canals were dry, but a subsequent rise provided irrigation for the rabi crops.

122. The annexed statement gives the result of the past five years for the canals under the charge of this department:—

	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.

Balances R2,24,138 on account of water-advantage rate of Bari Doab Canal for 1879-80, which was written back from direct to indirect revenue by Examiner for 1880-81, but not taken into account in the Finance and Revenue Accounts of the Government of India owing to the amount not being included in the figures furnished by the local Accountant-General.

For the year 1880-81 the revenue direct is Rupees 10,74,919 + 2,24,138 = 12,99,057
For the year 1880-81 the revenue indirect is Rupees 2,78,450 − 2,24,138 = 54,312

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 24th OCTOBER 1882.

General Remarks.—As usual during this period of the season there has been no rain during the week under report in the Punjab, the North-Western Provinces and Oudh, Central India, Rajputana, Berar, and the Nizam's Territories. On the other hand, there has been rain throughout the Madras Presidency, the Mysore State, and Coorg. Assam and British Burma also have had moderately good rain. Slight showers have occurred in a few districts of Bengal, in two districts of the Central Provinces, and in the Southern Mahratta Country of Bombay.

Prospects are generally favourable throughout the country: standing crops are in good condition; harvest operations are in progress; and preparations for, and sowings of, *rabi* crops are advancing.

A little rain would be beneficial in a few places in Madras, in two districts in Oudh, in parts of the Central Provinces, and in two districts in Burma. In parts of the Bombay Presidency locusts are still causing some anxiety.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Oct. 25th)		
Bellary ...	1·12 (one station)	Standing crops generally good; harvest dry crops, outturn average agricultural operations progressing.
Kurnool ...	1·52 (average of five stations).	More rain wanted in parts for dry crops; harvest early dry crops and indigo, yield average; agricultural operations progressing; cattle-disease in parts.
Ganjam ...	1·08 (average of eleven stations).	Standing wet and dry crops generally good; fever, small-pox, and cattle-disease continue; cholera in one taluk.
Kistna ...	·66 (average of seven stations).	Paddy affected slightly by grub in one taluk; fever and cattle-disease general; small-pox slight; harvest dry crops, yield below average; agricultural operations progressing.
Chingleput (Madras) ...	1·71 (average of ten stations).	Standing crops good where irrigated; harvest paddy and dry grains, outturn below average; agricultural operations progressing; slight fever, small-pox, and cattle-disease in parts.
Coimbatore ...	3·86 (average of sixteen stations).	Standing paddy and dry crops generally good; harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle-disease in parts.
Tanjore ...	2·24 (average of thirteen stations).	Standing crops good, except in parts of one taluk, where want of rain felt; harvest paddy and dry crops, yield below average.
Madura ...	2·09 (average of eight stations).	Standing crops fair; cholera in parts.
Malabar ...	1·74 (average of fourteen stations).	Sowing second crop progressing; small-pox, fever, and cholera in parts.
Travancore ...	2·23	Agricultural operations progressing; fever slightly prevalent. *General Remarks.*—General prospects good.
Bombay—(Oct. 25th)		
Kurrachee ...	.....	River at Kotri on 23rd, 8 feet 10 inches against 8 feet on corresponding date last year; fever increasing and prevalent in all talukas; harvesting of crops in progress; wheat, red rice, and *bajri* in Kurrachee 25, 36 and 40, in Sehwan 32, 48 and 56, in Ghorabari 20, 44 and 44, and in Sujawal 24, 48 and 52 lbs. per rupee respectively.
Hyderabad ...	.....	*Kharif* reaping nearly over; *rabi* operations in progress; small-pox still continues in Hyderabad and fever in ten talukas; cattle-disease in Dero Mohbat; wheat 26, *juari* 48, *bajri* 47, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Reaping of rice, *bajri* and *juari* continues, other crops doing well; fever in Dholka, Viramgaum, Gogo, Parentej, and Dakhroli; cattle-disease in Sanand; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda ...	.....	Harvesting of *kharif* in progress except in Amreli, where it has not been commenced; land being prepared for *rabi*; public health good; cattle-disease in parts of Kari division; *bajri* 34 and common rice 25¾ lbs. per rupee.
Surat ...	.....	*Kharif* harvest progressing; *juari* 38 and *nagli* 57 lbs. per rupee.
Násik ...	.....	Locusts on the move westward from all talukas now affected, *bajri* being cut hurriedly in consequence; *rabi* sowings save in few places retarded from fear of locusts; cholera in one village; *bajri* 31, wheat 22, and rice 27 lbs. per rupee.
Colaba (Bombay) ...	.....	Abnormal temperature 1° warm on 19th, 20th, 22nd and 23rd, *nil* on all other days; vapour in air normal; wind normal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Poona ...	.....	Reaping of *kharif* and sowings of *rabi* crops progressing; damage by locusts continues but is not serious; 15 cholera cases in Sirur taluka, 5 deaths; *bajri* 48 and *juari* 61 lbs., in Poona *bajri* 43 and *juari* 52 lbs. per rupee.
Ahmednagar ...	.....	Reaping of *bajri* in progress in all talukas; sowing of *rabi* commenced throughout the district except in Akola and Kopergaon; locusts have now appeared in all the talukas except Jhamkhed, the least affected being Karjat and Sheogaon; cattle-disease in Jhamkhed; cholera has almost disappeared from the district; *bajri*—maximum 66 lbs. in Jhamkhed, minimum 42 in Kopergaon; *juari*—maximum 102 in Jhamkhed, minimum 51 in Kopergaon.
Sholapur ...	·02	Total rainfall 39·08; more rain wanted; *rabi* crops in good condition; cholera in one village of Sholapur taluka, 4 cases, 3 deaths; *bajri* 62 lbs. 9 tolas and *juari* 85 lbs. per rupee.
Dharwar ...	Rain at all stations except Bankapur and Hangal; maximum Hubli, 1·34.	Rice and cotton crops good; *juari* moderate owing to excessive moisture; sowings of late crops in progress in Navalgund and Gadag talukas; cattle-disease in two talukas; public health good; prices of food-grains as before.
Kanara ...	Karwar, ·81; Kumpta, ·25; Sirsi, ·40; Hallial, 1·80.	Total rainfall 108·13; harvesting rice around Karwar completed, continues on coast, and commenced above ghât; small-pox, 1 death, in Sirsi; fever in two talukas; common rice in Karwar 11 seers, in district average 13½ seers per rupee; weather cloudy and hot.
Rajkot ...	.....	Weather cooler; general health fair; cholera continues in Navanagar and Dhrol, and has reappeared but slightly in Gondal; fever in Navanagar, Dhrol, Gondal and Rajkot; *bajri* 26 and *juari* 32 lbs. per rupee.
		General Remarks.—Slight rain in the Southern Mahratta Country districts, weather fair elsewhere; harvesting of *kharif* and sowings of *rabi* in general progress; locusts continue in Násik and Ahmednagar, are disappearing from Khandesh and appearing in parts of Poona and Satara; fever and cattle-disease in many districts, slight cholera in some.
Bengal—(Oct. 25th)		
Chittagong ...	1·43	Weather seasonable; prospects of crops fair; transplanting of *amun* finished; prices steady; cattle-disease still prevails; general health good.
Dacca ...	·04	Prospects of crops good; jute harvest completed.
24-Pergunnahs (Calcutta)	Alipore *nil*	Prospects of late rice much improved by rain of preceding week; lands being ploughed for winter crops; price of common rice stationary; public health on the whole good.
Moorshedabad ...	6·91 for week ending 23rd.	*Aman* plants doing well; *aus* rice being harvested; sowing of *rabi* crops commenced in some parts; fever prevails in Gokuru, Rangamati, and Nowada.
Rajshahye ...	*Nil*	Prospects of *amun* crop and of cold weather sowings much improved; public health fair.
Burdwan ...	*Nil*	Bright sunny weather; mornings cool; late rice crop fairly good; recent rain very beneficial; fever prevalent.
Rungpore ...	*Nil*	Weather seasonable; prospects of crops good; public health good.
Bhagalpur ...	·49	Prospects improved by late rain.
Purneah ...	1·26	Fine weather set in; prospects of crops fair; fever very prevalent.
Patna ...	·34	Prospects of crops continue good; *rabi* sowings in progress; public health good.
Durbhunga ...	*Nil*	Rice prospects fair; *rabi* sowings progressing; prices stationary; health middling.
Hazáribágh ...	·10	Weather bright and seasonable; prospects of rice crop good; health generally good.
Cuttack ...	*Nil*	Fine dry weather; prospects of late rice crop excellent; public health good.
		General Remarks.—Slight rain fell in some of the reporting districts during the week; the general heavy rain of the preceding week has been very beneficial, while the high wind which accompanied it is said to have caused little or no damage to crops; prospects generally much improved, but a good crop of winter rice is not expected in several places owing to deficient supply of timely rain; sugarcane crop everywhere promising; ploughing and sowing of *rabi* crops proceeding vigorously; fever as usual at this season continues to be reported from some districts and there are cases of cholera in a few places, elsewhere public health good.
N. W. Provinces and Oudh—		
Benares (Oct. 24th)	No rain	*Rabi* sowings in progress; no sickness among men or cattle; prices steady.
Allahabad („ 25th)	No rain	*Rabi* sowings in full swing and doing well; prices stationary.
Gorakhpur („ 23rd)	.....	Weather fine; *rabi* sowings begun; prices steady.
Jhánsi („ „)	No rain	Prospects of *kharif* good; harvesting of minor grains in progress; sowing of *rabi* continues; fever somewhat prevalent; no cattle-disease; prices of grain and barley falling.
Agra („ 24th)	No rain	*Kharif* harvesting and *rabi* ploughings and sowings going on; sugarcane being irrigated; fever continues, but general health good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—*contd.*		
Bareilly (Oct. 24th)	No rain	Weather seasonable; *kharif* excellent; rice and *bajri* mostly cut; *rabi* sowings going on favourably; cholera on the decrease; fever still prevails.
Meerut („ „)	No rain	Weather seasonable; health good; *bajri* and pulses being harvested; grain sown; prices stationary.
Kumaun („ „)	No rain	Rain wanted; *kharif* crops all cut; ploughing for *rabi* commenced; general health good; cattle-disease continues; prices unchanged.
Lucknow („ „)	No rain	Prospects of crops favourable; prices stationary; cholera disappearing, but fever continues; rain wanted for *mash* and for the *rabi* sowings generally.
Partabgarh („ „)	.....	Prices falling; *rabi* sowings nearly over; *bajri* harvest commenced; cattle-disease in Kunda tahsil; cholera has decreased slightly during the past week.
Sitapur („ „)	.....	*Mash* has somewhat suffered; cholera decreasing, but ague and fever in two tahsils; no cattle-disease; prices stationary; supplies ample.
Fyzabad („ „)	No rain	*Rabi* sowings progressing; autumnal fever prevalent; cattle-disease in part of district.
Rae Bareli („ 23rd)	No rain	Weather fine and seasonable; *rabi* operations going on; cholera still continues; fever prevailing; prices slightly rising.
Cawnpore („ 24th)	.....	*Kharif* harvesting and *rabi* sowings in progress; health good; prices nearly stationary.
Farukhabad („ „)	No rain	*Kharif* yield will not be good; *rabi* sowing in progress in irrigated lands; prices steady.
		General Remarks.—No rain during the week; rain wanted in Lucknow, Sitapur, and Kumaun; prices are rising in one and falling in four districts, elsewhere they are stationary; *kharif* harvest in progress; *rabi* sowings progressing; markets well supplied; cholera continues in Partabgarh, but is decreasing elsewhere; cattle-disease continues in four districts.
Punjab—(Oct. 24th)		
Delhi ...	No rain	Health good; prices of food-grains steady; average yield expected.
Hissar ...	No rain	Health good; prices stationary; crop prospects unchanged.
Umballa ...	No rain	Health good; prices of food-grains stationary; yield of crops expected to be below the average.
Jullundur ...	No rain	Health good; prices steady; crop prospects good.
Amritsar ...	No rain	Health good; prices stationary.
Lahore ...	No rain	Health good; prices stationary; state of crops good.
Ferozepore ...	No rain	Health good; prices steady; crop prospects good.
Sialkot ...	No rain	Health good; prices stationary; crop prospects good.
Rawalpindi ...	No rain	Slight fever still prevails in some parts of the district and cattle-disease has not yet disappeared from the Murree tahsil; prices of food-grains steady.
Peshawar ...	No rain	Fever prevalent; prices of food-grains slightly falling; crop prospects good.
Mooltan ...	No rain	Fever abating; prices of food-grains are generally stationary; price of Indian corn is falling.
Dera Ismail Khan ...	No rain	Slight fever prevails; prices steady; crop prospects good.
		General Remarks.—The health of the province continues to be generally good, though slight fever prevails in three or four districts, and cattle-disease has not yet disappeared from Rawalpindi district; the prices of food-grains are generally stationary and yield of crops on the whole expected to be good.
Central Provinces—		
Nagpur (Oct. 25th)	.....	Weather seasonable; *kharif* slightly injured for want of rain; fever prevalent; *rabi* sowings almost completed; few cases of cholera; prices steady.
Jubbulpore („ 24th)	.....	Weather clear and cool; reaping of *kharif* and *rabi* sowings continue; health good; prices stationary.
Saugor („ 23rd)	.....	*Kharif* crops being cut; *rabi* sowings are well forward; fever prevalent; prices steady.
Seoni („ 24th)	.....	Weather clear and cool; *rabi* sowings progressing; fever prevalent; prices slightly risen.
Hoshangabad („ „)	.....	Weather seasonable; *kharif* good; *rabi* sowings in progress; fever prevalent; wheat 15 seers per rupee.
Raipur („ 21st)	·09	Weather clear and cool; prospects of crops fair; fever prevalent; prices stationary.
Sambalpur („ 19th)	1·06	Weather clear and cool; prospects of *kharif* good; health good; rice 54 seers per rupee.
Khandwa ...	.....	Days warm, nights cool; *rabi* sowings continue; few cases of small-pox; prices stationary; wheat 16 seers per rupee.
		General Remarks.—Weather warm during the day, nights and mornings cool; prospects of *kharif* crops favourable, would be much improved by a little more rain; *rabi* sowings far advanced; fever generally prevalent; prices remain steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (Oct. 21st)		
Akyab ...	1·31	Total rainfall 197·29 inches; public health good in town and district; cattle-disease severe in one township; crop prospects good.
Rangoon ...	0·46	Total rainfall 98·56 inches; public health good; crops making progress.
Bassein ...	0·88	Total rainfall 119·32 inches; public health and condition of crops good.
Prome ...	·08	Total rainfall 48·78; public health good; more rain required in three townships to develop late plantings.
Amherst (Moulmein) ...	4·02	Total rainfall 197·37 inches; public health both in Moulmein and district good; a few deaths from cattle-disease in one township; state of crops good.
Toungoo ...	1·66	Total rainfall 87·43 inches; 9 deaths from cholera in district. *General Remarks.*—Few deaths from cholera in Kyoukphyoo, Tharrawaddy, Toungoo and Tavoy districts, elsewhere public health good; some cattle-disease in Akyab, Sandoway and Amherst; crops doing well generally, but more rain needed in parts of Tharrawaddy and Prome; harvest prospects good.
Assam—		
Gauhati (Oct. 24th)	1·20	Weather seasonable; lands being prepared for pulses and oilseeds; public health good.
Sylhet („ 25th)	2·50	Crops doing well; cholera reported from Sunámganj.
Cachar („ „)	*Nil*	Weather dry; reaping of *aus* crop nearly finished; prospects of *sali* crop and public health good; common rice 20 seers per rupee; ploughing for winter crops commenced.
Dibrugarh („ „)	2·43	Weather seasonable; prospects of *sali* paddy good; cattle-disease decreasing; public health good.
Mysore and Coorg— (Oct. 25th)		
Bangalore ...	·10	Crops in flourishing condition; prospects favourable.
Mysore ...	2·58	Crops in good condition; prospects good.
Mercara ...	6·06	The heavy downpours have caused injury on a few coffee estates by washing away the surface soil; rice crop doing well, save in parts of Kiggatnad where it has been attacked by caterpillars; *ragi* is being reaped in Nanjarajpatna and is coming into ear in the Yelsavirshime taluk; prices falling; cardamom picking proceeding, yield short. *General Remarks.*—Rain has been general throughout the Mysore State, but scanty towards the north and east; crops in good condition; prospects favourable; no material change in prices; public health good.
Berar & Hyderabad— (Oct. 25th)		
Amráoti ...	.....	*Kharif* crops in good condition; *rabi* sowings continued; prices—wheat 16, *juari* 28 seers per rupee.
Akola ...	.....	Prospects of crops favourable; *rabi* sowings continued.
Hyderabad ...	.....	Reaping of *kharif* and sowing of *rabi* crops in progress; sowing of *tabi* rice commenced in one taluka only; cattle-disease prevails in one taluka, otherwise public health good; prices—wheat 16½, coarse rice 10½, white *juari* 27½, yellow *juari* 32½, and *tur* 27 seers per current sicca rupee.
Central India States— (Oct. 25th)		
Indore ...	No rain	Prospects unchanged; the unusually hot sun in the daytime has dried up the grass earlier than usual, but public health is good.
Morar (Gwalior) ...	No rain	Health and prospects good.
Sutna ...	No rain	Prospects and health good.
Neemuch ...	No rain	Crops and public health good.
Goona ...	.....	Crops good; fever prevalent.
Bhopal ...	No rain	Weather clear; prospects good.
Agar ...	.....	Health and prospects good.
Nowgong ...	.....	Prospects and health good; prices stationary.
Manpur ...	.....	*Juari* and *tilli* crops in ear; sowing of wheat and gram commenced; opium fields are being prepared.
Rajputana—		
Abu (Oct. 25th)	.....	Clear weather; some fever; cold setting in.
Sirohi („ 22nd)	.....	Tanks, wells, health, and prospects good; weather seasonable.
Marwar („ 20th)	.....	About two months' water in tanks; wells almost full; health good; crops ripening; weather cloudless; nights close and unusually warm; winds low; prices stationary with tendency to fall.
Meywar („ 21st)	.....	Tanks and wells fair; health good; sowing operations commenced; more rain wanted to fill tanks.
Harowti („ „)	.....	*Kharif* crops being harvested; *rabi* sowings continue; weather seasonable; health good.
Jhallawar („ 18th)	.....	Weather seasonable; health and prospects good.
Ajmere („ 24th)	.....	*Kharif* being reaped; *rabi* sowing commenced; health good.
Jeypore („ „)	.....	Prices stationary; health fair.
Ulwur („ „)	.....	*Kharif* being harvested; *rabi* sowings continue; fever decreasing; prices steady.
Nepal—		
Katmandu ...	.....	No report received.

E. C. BUCK,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 19th October, 1882.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble W. C. Plowden.

ELEPHANTS PRESERVATION ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. GIBBS introduced the Bill to amend the Elephants Preservation Act, 1879, and moved that it be circulated for the purpose of eliciting opinions thereon. He said that the Bill, as he had explained to the Council when he moved for leave to introduce it, was a purely technical one, and he need not now take up the time of the Council with further explanations about it. It was not proposed to refer it to a Select Committee, because it would be important first of all to elicit opinions from the Local Governments of the places to which the Bill applied.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS also moved that the Bill and Statement of Objects and Reasons be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

NIZÁMAT ACT REPEAL BILL.

The Hon'ble MR. ILBERT introduced the Bill to repeal Act No. XXVII of 1854, and moved that it be referred to a Select Committee consisting of the Hon'ble Mr. Gibbs, Sir Steuart Bayley and the Mover. He said that he had stated on the last occasion when the Council met the objects with which the proposed Bill was prepared; he need now only say that the enacting part of the Bill was comprised within the limits of a single line.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *Calcutta Gazette* in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

MADRAS FOREST ACT CONFIRMATION BILL.

The Hon'ble MR. ILBERT also moved for leave to introduce a Bill to confirm the Madras Forest Act. He said:—

"The reasons for which I ask leave to introduce the measure are these:—The Indian Forest Act of 1878 does not extend to the Presidency of Madras.

The Madras Government have power to extend it to their Presidency by notification; but they have come to the conclusion that this mere power of extension will not suffice, and that, to meet the circumstances of Southern India, special legislation is necessary. Accordingly, they have passed an Act which does for Madras what was done for British Burma by the Burma Forest Act of 1881; that is to say, the Act enacts the Indian Forest Act of 1878, with such changes as are necessary to adapt it to the Madras Presidency. But, in doing this, they have been compelled to embody in their measure certain provisions which, though modelled on provisions contained in the general Indian Forest Act, are inconsistent with provisions contained in certain other Acts of the Governor General in Council,—in particular, the Easements Act,—and therefore are beyond the competence of the local legislature to enact. Of course, we are anxious that the Madras Act should follow, as closely as possible, the lines of our own Act, and therefore we propose to confirm the Madras Act, so far as it purports to repeal or amend any general Act of the Governor General in Council.

"So much for this particular measure. But I should like to add a few words about the difficulty out of which the need for this measure has arisen, because it is a difficulty which is likely to recur.

"The legislative powers of the Local Governments are, as we all know, derived from section 42 of the Indian Councils Act, which is as follows:—

"'The Governor of each of the said Presidencies in Council shall have power at meetings for the purpose of making Laws and Regulations as aforesaid, and, subject to the provisions herein contained, to make Laws and Regulations for the peace and good government of such Presidency, and for that purpose to repeal and amend any Laws and Regulations made prior to the coming into operation of this Act by any authority in *India*, so far as they affect such Presidency: provided always, that such Governor in Council shall not have the power of making Laws or Regulations which shall in any way affect any of the provisions of this Act, or of any other Act of Parliament in force, or hereafter to be in force, in such Presidency.'

"Now, the effect of this section is, that the local legislatures have not the power to repeal or amend any Act of Parliament, and have not the power to repeal or amend any Act of the Governor General in Council, passed after the date on which the Indian Councils Act came into operation. Consequently, every Act which we pass, and which comes into operation in territories under local legislatures, operates, *pro tanto*, to circumscribe the powers of those legislatures. I am inclined to think that some of our Acts have had this effect to an extent not anticipated at the time when they were framed. Take, for instance, some of the important codifying Acts, such as the Contract Act, the Evidence Act or the Easements Act. The main objects of these Acts, I take it, was, not so much to alter the law, as to declare and define it—to make it clearer and more certain. But when you take a rule of common law and put it into an Act of the legislature, you alter its character and effect. As long as it is merely a rule of the common law, which says that 'the owner or occupier of the dominant heritage is entitled to enjoy the easement without disturbance by any other person,' you have a rule which, like other rules of the common law, can be repealed or altered by legislation; but directly you take that rule and put it into an Act of the Governor General in Council, as you have done by one of the sections of the Easements Act, you make a rule which can no longer be altered by the local legislatures. The consequence is that, whenever a local legislature wishes to give power to take away or to modify for any public purpose any right in the nature of an easement, it incurs a serious risk of running its head against an Act of the Governor General in Council. This is not an altogether satisfactory state of things. Of course, it is essential that we should have the power of legislating for the whole of British India; but we have not the least desire to encroach upon the province of local legislatures by passing Acts which are merely of local importance. And again, we do not want to be constantly placed in the position of being asked to do what I propose to-day that we should do; that is to say, to introduce special legislation for the purpose of removing technical difficulties of our own creation.

"It is much easier to see the difficulty than to devise a satisfactory remedy for it, because our powers, like the powers of the local legislatures, are entirely derived from, and limited by, Act of Parliament. When Parliament has said that a local legislature shall not have the power to repeal or amend an Act of the Governor General in Council, of course we cannot give it that power. But we have power to amend our own Acts; and it has occurred to me that possibly a partial remedy for the difficulty to which I have referred may be suggested by a provision which is to be found in the new Civil Procedure Code. The Civil Procedure Code extends to the whole of British India except the Scheduled Districts, but it contains, in section 4, a saving of certain local Acts. This saving is as follows:—

"'Save as provided in the second paragraph of section 3, nothing herein contained shall be deemed to affect the following enactments * * * * * * * or any law heretofore or hereafter passed under the Indian Councils Act, 1861, by a Governor or a Lieutenant-Governor in Council, prescribing a special procedure for suits between landholders and their tenants or agents,

"'or any law heretofore or hereafter passed under the Indian Councils Act, 1861, by a Governor or a Lieutenant-Governor in Council, providing for the partition of immoveable property.'

"The words to which I wish to call particular attention are "or hereafter passed,"—that is, the words which prevent the Act from affecting, not only past local Acts, but future local Acts. It has occurred to me that we might possibly, on the analogy of this section, amend such Acts as the Contract Act, the Evidence Act and the Easements Act, by enacting that their provisions shall not affect any Act hereafter passed by a local legislature for certain purposes. Those purposes would of course have to be very carefully considered and specified. The effect of such legislation would be to make it easier to extend the operation of such of these codifying Acts as have at present only a partial operation in India. The whole subject is involved in technical difficulties, and I call attention to it now for the purpose of inviting suggestion and criticism."

His Excellency THE PRESIDENT said:—"The question which has been raised by my hon'ble friend who has just spoken is undoubtedly important; it is also one of considerable difficulty, but well worthy of consideration. I should not be inclined to express any opinion on it myself at present and until I have had an opportunity of giving it fuller consideration. At the same time, I am much obliged to my hon'ble friend for having brought it to the notice of this Council, and, through the Council, to the notice of the public."

The Motion was put and agreed to.

PAPER CURRENCY ACT, 1871, AMENDMENT BILL.

Major the Hon'ble E. BARING presented the further Report of the Select Committee on the Bill to amend the Indian Paper Currency Act, 1871.

DEKKHAN AGRICULTURISTS' RELIEF ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. HOPE moved that the Hon'ble Sir S. C. Bayley be added to the Select Committee on the Bill to amend the Dekkhan Agriculturists' Relief Act, 1879.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 26th October, 1882.

D. FITZPATRICK,

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE SECOND QUARTER OF 1882.

No. 1040 R. T., dated Simla, the 19th October 1882.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 1300 R. T., dated 12th November 1881.
Public Works Department Resolution No. 725 R. T., dated 20th July 1882.

Read also—

Returns of accidents to trains, &c., on the open lines of railway in India for the quarter ended 30th June 1882.

OBSERVATIONS.—As compared with the corresponding quarter of the previous year, with an increase of 312 miles, or 3·24 per cent. in the open mileage, and of 308,460 miles, or 3·17 per cent. in the train mileage, the number of accidents to trains, rolling-stock, permanent-way, &c., shows an increase of 251 or 30·17 per cent. The numbers chiefly vary on the following railways:—

	Increase.	Decrease.
Eastern Bengal	14	...
South Indian	...	20
Great Indian Peninsula	114	...
Bombay, Baroda and Central India	21	...
Tirhoot	18	...
Muttra-Hathras	11	...
Rajputana-Malwa	18	...
Wardha Coal	38	...
Rangoon and Irrawaddy Valley	...	14
Punjab Northern	...	25
Indus Valley and Kandahar	52	...

2. The increase on the Eastern Bengal Railway mainly took place under "trains running over cattle on the line." The number of such accidents was 14 against 2.

3. Of the decrease of 20 accidents on the South Indian Railway, six were under "goods trains or parts of goods trains, engines, &c., leaving the rails," and 10 under "trains running over cattle on the line."

4. On the Great Indian Peninsula Railway the number of accidents from "goods trains or parts of goods trains, engines, &c., leaving the rails" increased from 12 to 42; the cattle accidents from 20 to 28; "slips in cuttings or embankments" from 4 to 20; cases of "fire in trains" from 9 to 61, and "other accidents" from 4 to 17. The accidents from failures of axles on this line diminished considerably, being only 1 against 8.

5. The increase on the Bombay, Baroda and Central India Railway occurred under several heads, the largest being under "miscellaneous accidents," which number 13 against 1.

6. On the Tirhoot Railway the number of "failures of machinery, springs, &c., of engines" rose from 5 to 16.

7. The whole of the increase on the Muttra-Hathras Railway took place under "broken rails," the number being 14 against 3.

8. On the Rajputana-Malwa Railway the accidents from "trains or engines travelling in the wrong direction through points" increased from 1 to 6; the cases of "trains running over cattle on the line" from 62 to 76, and the "miscellaneous accidents" from 2 to 37, while the number of "collisions between goods trains or parts of goods trains" decreased from 11 to 1, the number of accidents from "goods trains or parts of goods trains, engines, &c., leaving the rails" from 8 to 1, and the number of cases of broken rails from 11 to *nil*.

9. The increase on the Wardha Coal Railway was chiefly under "failure of machinery, &c.," "failure of tyres," and "fire in trains." The numbers of accidents under these heads rose from *nil*, 4 and 7 to 8, 14 and 23, respectively.

10. The decrease on the Rangoon and Irrawaddy Valley Railway principally took place under "trains running over cattle on the line" and "trains running over obstructions on the line." Under the former head there was 1 against 10, and under the latter *nil* against 3.

11. The number of accidents on the Punjab Northern Railway decreased by 25; 8 under "goods trains or parts of goods trains leaving the rails" and the remainder under other heads.

12. The large increase on the Indus Valley and Kandahar Railway was due to there being 63 cases of cattle accidents against 42, and 28 cases of "fire in trains" against 3.

13. The casualties resulting from accidents to trains, &c., were among passengers 1 killed and 9 injured, against 4 killed and 44 injured; and among servants 13 killed and 16 injured, against 1 killed and 13 injured. Of the casualties to servants 4 were killed on the Great Indian Peninsula Railway by a collision which took place on 1st June 1882 between a goods train and a pump truck which had been blown out of the station by a severe storm, and 1 killed and 5 injured on the Madras Railway by a wagon while being shunted getting away and colliding with an Inspector's trolly.

14. The following table exhibits the number of accidents under the different classes, and the number of persons killed and injured thereby:—

Description of accidents.	Number of accidents.	Number of passengers and others.		Number of servants.		Total.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Collisions between passenger trains or parts of passenger trains	1	...	...	...	...	...	...
Collisions between passenger trains and goods or mineral trains, engines, and vehicles standing foul of the line	11	...	...	...	...	...	...
Collisions between goods trains or parts of goods trains	28	...	...	3	8	3	8

Description of accidents.	Number of accidents.	Number of passengers and others.		Number of servants.		Total.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Collisions between light engines	2	...	...	...	...	...	...
Passenger trains or parts of passenger trains leaving the rails	10	...	4	...	...	...	4
Goods trains or parts of goods trains, engines, &c., leaving the rails	109	...	...	1	...	1	...
Trains or enginest ravelling in the wrong direction through points	14	...	...	...	...	...	...
Trains running into stations or sidings at too high a speed	1	...	...	...	...	...	...
Ditto over cattle on the line	378	...	1	...	...	...	1
Ditto „ obstructions on the line	43	1	2	2	5	3	7
Ditto through gates at level-crossings	13	...	...	1	1	1	1
The bursting of boilers or tubes, &c., of engines	16	...	...	2	...	2	...
The failure of machinery, springs, &c., of engines	71	...	...	...	...	...	...
Ditto of tyres	15	...	...	...	...	...	...
Ditto of wheels	1	...	...	...	...	...	...
Ditto of axles	12	...	...	...	...	...	...
Ditto of couplings	18	...	...	...	...	...	...
Ditto of tunnels, bridges. viaducts, culverts, &c.	2	...	...	...	...	...	...
Broken rails	16	...	...	...	...	...	...
The flooding of portions of permanent-way	13	...	...	...	...	...	...
Slips in cuttings or embankments	22	...	...	...	...	...	...
Fire in trains	168	...	1	...	...	...	1
Fire at stations, involving injury to bridges or viaducts	26	...	...	...	...	...	...
Other accidents	93	...	1	4	2	4	3
Total	1,083	1	9	13	16	14	25

15. The number of "goods trains or parts of goods trains, engines, &c., leaving the rails" increased from 74 to 109, of which 14 or 13 per cent. occurred on the Sind, Punjab and Delhi Railway, and 42, or 39 per cent., occurred on the Great Indian Peninsula Railway.

16. The number of "failure of tyres" was the largest on the Wardha Coal Railway, being 14 out of a total of 15.

17. There were 168 cases of "fire in trains" against 51. Sixty-seven per cent. of these accidents occurred on the Great Indian Peninsula, Wardha Coal, and Indus Valley and Kandahar Railways, there being 61, or 36 per cent., on the Great Indian Peninsula, 23, or 14 per cent., on the Wardha Coal, and 28, or 17 per cent., on the Indus Valley and Kandahar Railway.

18. The failures of machinery, &c., of engines were very numerous on the Indus Valley and Kandahar, Tirhoot and Rajputana-Malwa Railways, being 17, 16 and 12 respectively out of a total of 71.

19. Of the 378 cattle accidents reported, more than half occurred on the South Indian, Rajputana-Malwa, and Indus Valley and Kandahar Railways, the numbers being 52, 76 and 63 respectively.

20. Rails broke in 16 instances, of which 14 were reported on the Muttra-Hathras Railway.

21. The accidents from "slips in cuttings or embankments" numbered 22, of which 20 occurred on the Great Indian Peninsula Railway alone.

22. Under "fire at stations or involving injury to bridges or viaducts," the number of accidents rose from 8 to 26, of which 5 took place on the East Indian and 6 on the Sind, Punjab and Delhi Railways.

23. The miscellaneous accidents increased from 33 to 93, of which 17 occurred on the Great Indian Peninsula, 16 on the Bombay, Baroda and Central India, and 37 on the Rajputana-Malwa Railway.

24. The casualties to passengers from "causes other than accidents to trains, &c.," were—

	Killed.	Injured.
From falling between carriages and platforms	1	2
Falling on to the platform, ballast, &c., when getting into or out of trains	1	1
Whilst crossing the line at stations	1	2
By closing of carriage doors	...	1
Falling out of carriages during the travelling of trains	1	19
Other accidents	...	2
Total	4	27

And the accidents to servants in the employ of railways or of contractors whilst performing duties connected directly with transit of passengers and goods from "causes other than accidents to trains, &c.," were —

	Killed.	Injured.
During shunting operations	8	13
Falling off engines, vans, wagons, &c.	6	20
Coming in contact with overbridges, &c., during the travelling of trains	...	1
Getting on or off trains, engines, &c.	2	13
Whilst loading, unloading or sheeting	1	8
Whilst breaking, spragging or chocking wheels	...	1
Whilst working at cranes or capstans	...	1
Whilst working on the permanent-way or in sidings	...	2
Whilst working, crossing, or standing on the line	4	7
Whilst passing between vehicles	2	1
Whilst attending to the machinery of engines, cleaning them, &c.	...	1
Whilst attending to gates at level-crossings	2	2
Falling or being caught between vehicles and platforms	1	1
Falling off ladders, scaffolds, platforms, &c.	...	2
By falling of lamps, wagon doors, timber, weights, &c.	1	1
Whilst coupling or uncoupling wagons	2	11
Miscellaneous	...	23
TOTAL	29	108

25. Of "other persons" killed and injured by running trains, &c., 7 were killed and 1 injured whilst passing over line at level-crossings; 19 killed and 8 injured whilst trespassing on the line; 7 committed suicide; and 8 were killed, and one injured from miscellaneous causes.

26. The following table exhibits the total number of persons killed and injured from causes connected with the working of trains as compared with those in the previous corresponding quarter:—

	2ND QUARTER, 1881.		2ND QUARTER, 1882.	
	Killed.	Injured.	Killed.	Injured.
PASSENGERS.				
From causes beyond their own control	5	44	...	10
From misconduct or want of caution	6	37	5	26
SERVANTS.				
From causes beyond their own control	2	18	16	33
From misconduct or want of caution	50	74	26	91
OTHERS.				
Whilst passing at level-crossings	5	1	7	1
Trespassers, including suicides	36	7	26	8
Other persons	5	2	3	1
TOTAL	109	183	83	170

27. In addition to the above, 9 persons are reported to have been killed and 34 injured in yards, workshops, &c., and 72 passengers to have met death in carriages and at stations from causes unconnected with the working of trains.

RESOLUTION.—The attention of the Governments, Administrations and Officers concerned should be invited to the large number of accidents from "goods trains or parts of goods trains, engines, &c., leaving the rails" and "fire in trains" on the Great Indian Peninsula Railway, the increase under cattle accidents on the Rajputana-Malwa Railway, "failures of machinery, &c.," on the [illegible] "broken rails" on the Muttra-Hathras Railway, "failure of

tyres" and "fire in trains" on the Wardha Coal Railway, and "trains running over cattle" and "fire in trains" on the Indus Valley and Kandahar Railway.

The attention of the Madras Government should be invited to the fact that, owing to the late submission of some of the figures for tables Nos. 3 and 4 of the Madras and South Indian Railways, the general return has been left incomplete.

ORDER.—Ordered, that this Resolution be forwarded to the Governments, Administrations, and Officers noted in the margin for information, together with copies of the returns compiled.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces, British Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Rajputana, Central India and Biluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways, Calcutta, Lahore and Lucknow.

Ordered also, that copies be forwarded to the Secretary of State for the information of Her Majesty's Government.

Ordered further, that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

FRED. FIREBRACE, *Major, R.E.*,
Under Secretary.

GENERAL TABLE

Persons reported during the Second Quarter of 1882 as KILLED or INJURED on the several RAILWAYS open for Traffic in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS and OTHER PERSONS; and distinguishing also, in the case of the two former Classes, between ACCIDENTS happening from Causes beyond their own Control, and ACCIDENTS happening otherwise.

Mean Mileage open.	RAILWAYS.		PASSENGERS.						RAILWAY SERVANTS OR SERVANTS OF CONTRACTORS.						OTHER PERSONS.								TOTAL ALL CLASSES.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 31st OCTOBER 1882.

GENERAL REMARKS.—There has been no rain worth noticing during the week under report, except in the Madras Presidency and in British Burma and in the Chittagong district.

Harvest operations continue in some parts of the country, and have been completed or nearly so in others.

Standing crops in the Madras Presidency are generally good, but a little more rain is wanted in parts of some districts. In Coorg, in the Mysore State, in the Nizam's Territories, in Berar, in Assam, and in British Burma crops are in good condition. In the Punjab prospects of the harvest are good, but the yield is expected to be below average in the Umballa and Hissar divisions. In Bengal the rice crop in several places is not very satisfactory, owing to deficient supply of timely rain; sugarcane is doing well. In the Bombay Presidency locusts are injuring crops in parts of Poona and Satara districts. They are disappearing from Khandesh, Ahmednagar, and Násik.

The sowing of *rabi* crops in the Bombay Presidency has been completed in a few districts and is in progress in others. In the Nizam's Territories, in Berar, in the Central Provinces, in Rajputana and Central India, and in Bengal sowings are still in progress. In the North-Western Provinces and Oudh sowings are germinating well; rain is wanted in Kumaun and Sitapur for the sowings.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Nov. 1st)		
Bellary ...	No rain	Standing crops generally good; harvest dry crops, yield average; agricultural operations progressing.
Kurnool ...	·06 (rainfall of one station).	More rain wanted for dry crops in one division; harvest early dry crops and indigo, outturn below average; agricultural operations progressing; small-pox and cattle-disease in parts.
Ganjam ...	·50 (average of eight stations).	More rain wanted; crops under channels and larger tanks good, but lost under small and rain-fed tanks; fever, small-pox, and cattle-disease [illegible].
[illegible] ...	·16 (average of three stations).	[illegible] affected by grub in one taluka, [illegible] and generally [illegible] below average; agricultural [illegible] progressing; small-pox and fever slight; cattle-disease [illegible].
Chingleput (Madras) ...	·87 (average of ten stations).	Standing crops good where irrigated, withering elsewhere for want of rain; harvest paddy and dry grains, yield below average; agricultural operations progressing; small-pox and cattle-disease slight in parts.
Coimbatore ...	1·21 (average of thirteen stations).	Standing crops good; harvest paddy and dry crops, yield average; fever, small-pox, cholera, and cattle-disease in parts.
Tanjore ...	·92 (average of ten stations).	Standing crops good, except in parts of one taluka; harvest paddy and dry grains, outturn below average.
Madura ...	1·35 (average of eight stations).	Standing crops fair; cholera in parts.
Malabar ...	2·40 (average of fourteen stations).	Harvesting first crops nearly over; sowing second crops progressing; small-pox, fever, and cholera in parts.
Travancore ...	1·18	Agricultural operations progressing; fever slightly prevalent.
		General Remarks.—No rain in Bellary; general prospects good.
Bombay—(Nov. 1st)		
Kurrachee ...	.....	River higher than on same date last year; slight fever prevails; 1 case small-pox in Sujawal taluka; wheat, red rice, and *bajri* in Kurrachee 24, 36 and 50, in Manjhand 26, 36 and 50, in Jati 30, 40 and 44, and in Tatta 24, 38 and 46 lbs. per rupee respectively.
Hyderabad ...	.....	*Kharif* reaping nearly completed; *rabi* operations in progress; small-pox in Hyderabad and Nawshahro, and fever in twelve talukas; north wind has set in; wheat 23, *bajri* 44, *juari* 48, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Reaping of rice, *bajri*, &c., completed; sowing of wheat and gram commenced, other crops doing well; fever in Dholka, Viramgaum, Gogo, and Parentij; cattle-disease continues in Sanand; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda ...	.....	Harvesting of *kharif* continues; *rabi* sowings commenced in Amreli; public health good; cattle-disease continues in parts of Kari division; *bajri* 33 and common rice 24½ lbs. per rupee.
Surat ...	.....	*Kharif* harvest progressing; *juari* 37 and *nágli* 58 lbs. per rupee.
Nasik ...	.....	Weather clear, nights cold; *bajri* being reaped; *rabi* sown, save where locusts remain; locusts have left in large numbers, but have alighted in Násik, Igatpuri, and Peint eating *bájri*, rice, and *nagli*, and also in west of Baglan and Kalwan; distress apprehended shortly in Chandore and northern talukas.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Colaba (Bombay) ...	.....	Abnormal temperature 1° warm on 25th and 26th, *nil* on 27th; 1° cool on 28th, 29th and 31st, and 2° cool on 30th; vapour in air in defect of normal; wind normal.
Poona ...	No rain	Slight damage by locusts continues; 18 cholera cases in Sirur taluka, 8 deaths; *bajri* 47 and *juari* 60 lbs. per rupee; in Poona *bajri* 43 and *juari* 52 lbs. per rupee.
Ahmednagar ...	No rain	Reaping of *bajri* in progress in all talukas; sowing of *rabi* almost completed throughout the district; locusts appear to be gradually leaving; cholera in Karjat, 25 attacks, 4 deaths, Sheogaon, 1 attack, 1 death; *bajri*—maximum 66 lbs. per rupee in Jamkhed, minimum 42 lbs. in Akola; *juari*—maximum 102 lbs. in Jamkhed, minimum 45 lbs. in Sangamner.
Sholapur ...	.....	No report received.
Dharwar ...	Slight rain in Hubli and Karajgi.	Rice and cotton crops good; early rice being harvested in some villages of western talukas; sowing of late crops in progress; slight cattle-disease in three talukas; public health good; rice minimum 21 and *juari* 58 lbs. per rupee.
Kanara ...	Hallial, ·35	Harvesting rice continues on coast and above Ghât talukas; small-pox in one and fever in two talukas; common rice at Karwar 11 seers, in district average 13½ seers per rupee; weather fair.
Rajkot ...	.....	Weather cool; general health fair; cholera continues in Dhrol but slightly; fever in Nawanagar, Dhrol, Gondal, Mengui, Lodhika, Bagasra, and Vasarad; *bajri* 28 and *juari* 34 lbs. per rupee.
		General Remarks.—Weather generally clear; harvesting *kharif* and sowing *rabi* completed in a few districts, in progress in the rest; locusts have almost disappeared in Khandesh and are leaving Násik and Ahmednagar, but continue doing injury in parts of Poona and Satara districts; fever and cattle-disease in many districts; slight cholera and small-pox in some.
Bengal—**(Nov. 1st)**		
Chittagong ...	1·24	Weather hot; prospects fair; *amun* plants flourishing; prices somewhat higher; cattle-disease still prevails; general health good.
Dacca ...	*Nil*	Weather becoming cooler; prospects of crops good.
24-Pergunnahs (Calcutta)	Alipore, *nil*	Prospects of late rice and sugarcane satisfactory; lands being prepared for winter crops; health of people generally good.
Moorshedabad ...	*Nil*	Prospects of crops favourable; *amun* crop doing well; lands being ploughed for winter crops; fever prevails here and there.
Rajshahye ...	*Nil*	Prospects of *amun* much improved; *rabi* crops being sown; fever prevalent.
Burdwan ...	*Nil*; 4·29 during preceding week.	Prospects of winter rice fair; state of *rabi* crops also better; fever prevalent.
Rangpore ...	*Nil*	Weather seasonable; prospects of crops good, but tobacco seedlings said to have suffered from late rain; public health good.
Bhagálpur ...	*Nil*	Prospects of crops fair.
Purneah ...	*Nil*	Prospects of crops fair; ploughing and sowing of cold weather crops going on; fever very prevalent.
Patna ...	*Nil*	Prospects of standing crops fair; *rabi* crops being sown; early sowings have germinated; public health good.
Durbhunga ...	*Nil*	Rice prospects fair; rain still required for rice on high lands; other crops good; prices stationary; public health middling.
Hazáribágh ...	*Nil*	Weather getting cool; prospects of rice crops good; sowing of *rabi* crops commenced; public health good.
Cuttack ...	*Nil*	Weather cloudy for the last three days; prospects of crops excellent; public health good.
		General Remarks.—There was some rain in Chittagong during the week, none in any of the other reporting districts; prospects generally much improved by the late general heavy rainfall, but rice crop in several places said to be not very satisfactory owing to deficient supply of timely rain; ploughing and sowing of cold weather crops progressing favourably, and *kalai* and other pulses already sown doing well; sugarcane generally promises a good crop; fever prevalent in some districts, and cases of cholera still reported from a few places, elsewhere public health good.
N. W. Provinces and Oudh—		
Benares (Oct. 31st)	No rain	Weather seasonable; *rabi* sowings progressing; rice crop good; no sickness among men or cattle.
Allahabad (Nov. 1st)	No rain	*Rabi* flourishing; prospects good; health on the whole very good for season.
Gorakhpur (Oct. 30th)	.....	Weather fine; *rabi* sowings in progress; active demand for labour; health good and prices stationary.
Jhánsi („ „)	.....	Prospects good; *kharif* harvesting and *rabi* sowing in progress; supplies sufficient; prices stationary; fever continues; no cattle-disease.
Agra („ 31st)	No rain	*Kharif* being harvested; *rabi* ploughings and sowings continue; sugarcane being irrigated; fever abating; general health good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—*contd.*		
Bareilly (Oct. 31st)	.....	Weather seasonable; *rabi* prospects good; cholera dying out; fever still prevalent.
Meerut („ „)	No rain	Health good; *kharif* crops being harvested and cotton-picking commenced; barley and wheat being sown in Baghanat; prices stationary; export of wheat and oil-seeds recommenced from Meerut and Ghaziabad.
Kumaun („ „)	No rain	A fall now would benefit sowing of *rabi*; health good; cattle-disease still prevails; prices unchanged.
Lucknow („ „)	.....	*Rabi* sowings in progress; prices stationary; cholera almost disappearing, but fever prevalent.
Partabgarh („ „)	.....	Prices still falling; *bajri* harvest completed; newly sown crops coming on nicely; weather seasonable; cholera has abated considerably.
Sitapur („ „)	.....	Outturn of *mash* indifferent; *rabi* sowings in parts of Sidhauli hindered for want of sufficient moisture; slight cattle-disease in one tahsil; prices stationary.
Fyzabad („ „)	No rain	*Rabi* sowings in progress; weather fine; fever and cattle-disease in part of district; prices steady.
Rae Bareli („ 30th)	.....	*Rabi* ploughings and sowings in progress; cholera and fever continue; no cattle-disease; markets well supplied; prices stationary.
Cawnpore („ 31st)	No rain	*Kharif* harvest and *rabi* sowings progressing; health good; prices slightly fallen.
Farukhabad („ „)	No rain	*Rabi* sowings going on; *juari* and rice yield will be poor; prices steady; slight fever still continues.
		General Remarks.—No rain; rain wanted in Kumaun and part of Sitapur for the *rabi* sowings; *kharif* harvest nearly over; *rabi* sowings germinating well; markets well supplied; prices falling in three districts, elsewhere stationary; cholera continues in Rae Bareli, but is abating elsewhere; cattle-disease continues in four districts.
Punjab—**(Oct. 31st)**		
Delhi ...	No rain	Health good; prices stationary; prospects of yield continue to be good.
Hissar ...	No rain	Health good; prices rising; harvest prospects unchanged.
Umballa ...	No rain	Health good; prices stationary; yield of crops expected to be below the average.
Jullundur ...	No rain	Health good; prices stationary; crop prospects good.
Amritsar ...	No rain	Health good; prices steady.
Lahore ...	No rain	Slight fever prevalent; prices steady; crop prospects good.
Ferozepore ...	No rain	Health good; prices steady; crop prospects good.
Sialkot ...	No rain	Health good; prices stationary; harvest prospects good.
Rawalpindi ...	·10	Slight fever still prevails in some parts of the district; prices steady; harvest prospects above the average.
Peshawar ...	No rain	Fever decreasing; prices steady; harvest prospects good.
Mooltan ...	No rain	Fever abating; prices of food-grains are generally stationary; price of Indian-corn is rising.
Dera Ismail Khan ...	No rain	Fever not yet disappeared; prices steady; crop prospects good.
		General Remarks.—The health of the province has been generally good; slight fever prevails in the Rawalpindi, Mooltan, Dera Ismail Khan, and Peshawar districts, but in the Mooltan and Peshawar districts it is abating; the prices of food-grains are stationary, except in Hissar where they are rising; the crop prospects are generally good, but in Umballa and in the Hissar divisions it is expected that the yield will be below the average.
Central Provinces—		
Nagpur (Nov. 1st)	.....	Weather cloudy; *rabi* sowings completed; prospects good; fever and cholera prevalent; prices stationary.
Jubbulpore (Oct. 31st)	.....	Weather cool; *kharif* reaping and *rabi* sowings almost finished; wheat 20 and rice 14 seers per rupee.
Sangor („ 30th)	.....	*Kharif* being cut; *rabi* sowings almost finished; fever prevalent; prices steady.
Seoni („ 31st)	.....	Weather getting cold; *kharif* being reaped; *rabi* sowings progressing; fever prevalent; wheat 17 and rice 16½ seers per rupee.
Hoshangabad („ „)	.....	Weather seasonable; *kharif* fair; *rabi* progressing; fever prevalent; wheat 13 and rice 9 seers per rupee.
Raipur („ 28th)	.....	Weather clear and cool; rice doing well, *rabi* sowings going on; cattle-disease prevalent; prices stationary.
Sambalpur („ 26th)	.....	Weather clear and cold; prospects good; health good; rice 56 seers per rupee.
Khandwa („ 31st)	.....	Days warm and nights chilly; *rabi* sowings continue; cholera and small-pox prevalent; prices steady; rice 13 and wheat 16 seers per rupee.
		General Remarks.—Weather cloudy; mornings and nights cool and pleasant; *kharif* crops being reaped; *rabi* sowings in progress; prospects generally favourable; fever prevalent and cholera reported from a few districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (Oct. 28th)		
Akyab ...	1·49	Total rainfall 198·78 inches; public health good in town, but 10 deaths from cholera in district; cattle-disease in one township; crop prospects good.
Rangoon ...	2·13	Total rainfall 100·69 inches; public health good; crops making progress.
Bassein ...	1·81	Total rainfall 121·13 inches; public health and condition of crops good.
Prome ...	0·32	Total rainfall 49·10 inches; public health good; more rain has fallen and crop prospects are better.
Amherst (Moulmein) ...	2·11	Total rainfall 199·18 inches; public health and condition of crops good both in Moulmein and district; 24 deaths of cattle reported in one township.
Toungoo ...	0·76	Total rainfall 88·19 inches; 3 deaths from cholera in one township, otherwise public health good; 10 deaths from cattle-disease in one township.
		General Remarks.—Crop prospects are generally good; a few cases of cholera in Akyab; Tharrawaddy, Henzada, and Tavoy, and some deaths from cattle-disease in Amherst and Toungoo, otherwise public health and health of cattle generally good.
Assam—		
Gauhati (Oct. 31st)	*Nil*	Mornings cool and foggy; weather seasonable; prospects of crops favourable; public health good.
Sylhet (Nov. 1st)	*Nil*	Prospects of crops generally good; isolated cases of cholera in north and south of Sylhet and in the Sunamganj subdivisions.
Cachar („ „)	*Nil*	Weather warm; reaping of *aus* crop finished; state of *sali* crop and public health good; common rice 25¾ seers per rupee.
Dibrugarh („ „)	*Nil*	Weather seasonable; prospects of *sali dhan* good; cattle-disease decreasing; public health good.
Mysore and Coorg— (Nov. 1st)		
Bangalore ...	.....	Crops in good condition; prospects favourable.
Mysore ...	·10	Crops in good condition.
Kadur ...	·17	Rice-crop doing well; *ragi* being harvested in Nanjarajapatna and Yeluvershime taluks; coffee ripening fast; cardamom picking completed; public health and prospects good.
[illegible] ...	...	*General Remarks.*—Rain more or less in Colar, Tumkur, Mysore, Hassan, and Kadur districts; crops in good condition; prospects favourable; no material change in prices; public health good.
Berar & Hyderabad— (Nov. 1st)		
Amráoti ...	.....	*Kharif* crops good; *rabi* sowings nearly completed; rain wanted; wheat 16 and *juari* 28 seers per rupee.
Akola ...	.....	Prospects of *kharif* crops favourable; *rabi* sowings progressing.
Hyderabad ...	.....	Reaping of *kharif* and sowing of *rabi* crops in progress; *rabi* sowings continue in one taluk only; cattle-disease in one taluk; public health otherwise good; prices—wheat 16½, coarse rice 10½, white *juari* 27½, and yellow *juari* 32½ seers per current sicca rupee.
Central India States— (Nov. 1st)		
Indore ...	*Nil*	Weather seasonable; agricultural prospects continue favourable; health good.
[illegible]		
Gwalior (Gwalior) ...	.....	Health and prospects good.
Jaora ...	No rain	Health and prospects good.
Neemuch ...	.....	Crops and public health good.
Goona ...	.....	Crops good; fever prevalent; wheat 21 seers per rupee.
Bhopal ...	.....	Weather clear; prospects good.
Agar ...	.....	Health and prospects good.
Nowgong ...	.....	*Kharif* prospects good; prices stationary; health good.
Manpur ...	.....	Weather fair; sowings of *rabi* crops in progress; opium fields are being prepared; prices stationary.
Rajputana—		
Abu (Nov. 1st)	.....	Weather clear; fever diminishing; cold nights.
Sirohi (Oct. 29th)	.....	Tanks, wells, and health good; crops cut; cold nights, days very hot.
Marwar („ 27th)	.....	About two months' water in tanks; wells almost full; health good; crops being harvested; weather close; nights unusually warm and sultry; prices stationary.
Meywar („ 28th)	.....	Tanks and wells fair; health and crops good.
Harowti („ 29th)	.....	*Kharif* harvesting and *rabi* sowings in progress; tanks and wells full; weather seasonable; health good.
Jhalawar („ 25th)	.....	Health and prospects good; weather seasonable.
Ajmere („ 31st)	.....	Reaping of *kharif* crop completed; *rabi* sowings progressing; health good.
Jeypore („ „)	.....	Prospects favourable; prices firm; fever prevalent.
Ulwar („ „)	.....	Gram, barley, and wheat being sown; health fair.
Nepal— (Oct. 26th)		
Khatmandu ...	NW	Rice crop nearly harvested; splendid weather.

H. C. BUCK,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 26th October, 1882.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble W. C. Plowden.

PAPER CURRENCY ACT, 1871, AMENDMENT BILL.

Major the Hon'ble E. BARING moved that the further Report of the Select Committee on the Bill to amend the Indian Paper Currency Act, 1871, be taken into consideration. He said that he explained fully how this matter stood when he moved that the Bill should be referred back to the Select Committee. He had only now to add that the Select Committee had recommended that the provisions of the existing Currency Act regarding the issue of notes in exchange of bullion should be restored in the Bill. The only other alterations made in the Bill were of a purely formal nature.

The Motion was put and agreed to.

Major the Hon'ble E. BARING also moved that the Bill as amended be passed. He said that the Bill had been for a long time under consideration of the Council and of the public. No objection had been made to the Bill in its present form. The Select Committee had stated their opinion that no further alteration was necessary, and had recommended that the Bill as amended be passed.

The Motion was put and agreed to.

MADRAS FOREST ACT VALIDATION BILL.

The Hon'ble MR. ILBERT introduced the Bill to confirm the Madras Forest Act, and moved that it be taken into consideration at the next meeting of the Council. He said:—

"In moving for leave to introduce this Bill I described it as a Bill to confirm the Madras Forest Act, and that description was substantially, but not technically, accurate. Strictly speaking, it is a measure to amend certain general Acts so far as their provisions impede the operation of the local Act, and, as I am moving that the Bill be taken into consideration at the next meeting, I think I had better read it to the Council. It is entitled "A Bill to remove doubts regarding the Madras Forest Act, 1882," and runs as follows:—

"'Whereas doubts have arisen whether the Madras Forest Act, 1882, is consistent with certain Acts of the Governor General in Council, and it is expedient to remove those doubts; It is hereby enacted as follows:—

"'1. No enactment of the Governor General in Council shall affect, or shall be deemed to have at any time contained anything which would affect, the Madras Forest Act, 1882."

Enactments of the Governor General in Council not to affect the Madras Forest Act.

His Excellency THE PRESIDENT said:—

"As the purpose of this Bill, as is obvious, is simply to give full local effect to the provisions of the Madras Forest Act,—an Act passed by the Madras legislature, which has been fully considered by them, and which the public of Madras have also had an opportunity of considering during its passage through the Legislative Council of that Presidency,—I think there can be no objection, and indeed it is very necessary, that measures should be taken to pass this Bill through the Council as rapidly as possible. No one is more opposed than I am to any unnecessary suspension of the standing orders of the Legislative Council. It is a great security to the public against hasty and ill-considered legislation that those standing orders should be strictly observed, but in this case that necessity does not arise. The Madras Act is one that affects the Madras public only; they have had a full opportunity of considering it, and this measure is one of a purely formal character."

The Motion was put and agreed to.

AGRICULTURAL LOANS BILL.

The Hon'ble MR. CROSTHWAITE moved for leave to introduce a Bill to consolidate and amend the law relating to loans of money for agricultural improvements. He said:—

"The Council is aware that an Act was passed in 1871 for the purpose of enabling Government to make advances of money to the owners and tenants of land for the sole purpose of improving that land. After some eleven years' experience, it is universally admitted that the Act is a failure. The total advances under the Act for the whole of India do not come to more than four-and-a-half or five lákhs at the outside during the year, and the Famine Commission, in chapter 4 of the second part of their report, have called attention to this failure, and suggested that the Act should be amended, and the Local Governments might have more power to make the Act [illegible] the Act is worked elastic and suitable to local peculiarities. On the report of the Famine Commission, the Local Governments were asked to give their opinions on these suggestions. Those opinions have now been received, and are almost unanimous that the Act and the rules framed under it require simplification. The North-West Government are specially anxious that this should be done, and they have pressed it on the notice of the Government of India. In accordance with those opinions, the present Bill has been framed, on the principle of leaving everything that can possibly be thus left to rules to be framed by the Local Government. In the present case, I think this method of framing the Act is not open to objection, because the only interests concerned are those of the Government which advances the money, and it is presumed that in making the rules it will take precautions against loss. In thus amending the law we have also taken the opportunity of endeavouring to encourage the application of private capital to the improvement of land. We propose to follow the method which has been for a long time adopted in the English and the Irish Acts which have been passed for a similar purpose, the method, namely, of empowering companies whose articles of association, and the method of whose business, is approved by the Government to make advances to owners of land for the purpose of executing improvements. We propose that the Government of India should have the power to place conditions on those companies, to ensure that their business shall be carried on in a proper and reasonable manner; and, if those companies fulfil the conditions imposed upon them, the Bill is so drawn as to enable them to take advantage of its provisions for the recovery of the advances; in fact, their loans will be secured and will be recoverable in the same manner as if the money had been advanced by the Government.

"This is the Bill which I ask leave now to introduce, and I hope that the Council will give me permission to introduce it, because, although I think it is open to doubt whether it will lead to a very great extension of advances by Government, I think it is quite probable that it may open the door to private enterprise in the matter. For my own part, I fear that, until the causes which prevent people from improving their lands are removed, namely, in the case of tenants, the want of security that the profits which are derivable from

their improvements will not be appropriated by the landlord; I think that, until the provincial laws are altered in this respect, there is not much hope, so far as tenants are concerned, that they will take advances either from the Government or from private companies; but I think that, when this Bill is passed, we shall have done all we can in a direct way to make the system of advances popular."

The Hon'ble SIR STEUART BAYLEY said:—

"I have only a few remarks to make in confirmation of the proposals of my hon'ble friend, Mr. Crosthwaite, in connection with this Bill, which I quite agree with him in hoping the Council will give him permission to introduce to-day.

"He has told us of the origin of the Bill, but there was also another reason for bringing it in which he omitted to mention, which was a small technical omission, regarding the recovery of interest on loans, which was brought to our notice by one of the Local Governments. But, in reading the papers connected with the Bill, I was very much struck by the unanimity of all those consulted as to the fact of the old law having failed in accomplishing the objects with which it was established, though there was considerable difference of opinion as to the reasons of that failure: reasons were given of all kinds. Some gentlemen, I observe, actually stated that the agriculturists did not require loans for the improvement of their land; but that was not general. More commonly it was said that the dealings of the cultivator with officials in matters of this kind were exceedingly troublesome, that at every point he was thrown back, and that it took him an enormous amount of time, and caused him an unreasonable amount of trouble, to get his loan. That was, I think, very generally agreed. Another point was the excessive cost of the application in point of fees; another point was the high rate of interest; another was the shortness of the time within which he had to repay the amount, and there may have been other reasons given, but those were the main ones in regard to the Act as it stood. But the real reason, to my mind, which has prevented the old Act from having anything like [illegible] and I think every one will agree that it [illegible] raiyat, if he borrows from the Government, cannot also borrow from the money-lenders. It was a sermon on the old text that 'you cannot serve two masters.' The raiyat comes to the Government and he receives the loan, but, in order to receive it, he must hypothecate his land. Shortly afterwards he wants perhaps to borrow for some other purpose—for marriage, or to pay his revenue, or for any one of the thousand domestic purposes for which he requires money besides agricultural operations. He then goes to the village money-lender; the money-lender turns round upon him and says:—'No, you have already borrowed from the Government; the Government have been ruining my business by charging a lower rate of interest than mine; the Government have already got the first lien on your land, and now you can go to the Government for the other money that you want.' Well, when it comes to a choice, and the raiyat has to decide whether he should borrow from one of two competitors, —one of whom can only lend for one purpose, while the other can lend for all purposes,—there is very small doubt as to what he will do. He will [illegible] one who can lend for all purposes, and despise the other who can only lend for one purpose. That is, I think, the real reason which cuts at the root of any very extended usefulness of the Act as it at present stands. There remains the fact that, though this applies to the cultivators who are indebted, it does not apply to the cultivators who are not indebted. These may require loans for agricultural improvements, and to them the necessity for keeping on good terms with the village money-lender does not apply; but the great majority of cultivators—even those very well off—all over the country, must occasionally have to apply for loans for temporary purposes. Well, I suppose, the logical deduction from this would be—'Then why not give up the whole business and try and arrange a system of companies or banks conducted by private enterprise which shall take over from you the agricultural loans, and at the same time carry out the ordinary domestic and industrial loans which the raiyat wants at all times [illegible] in all parts of India?'"

"We have given a great deal of attention to this subject, with the assistance of my hon'ble friends, Major Baring, Mr. Crosthwaite and others; we have been practically working at it all the season; it has been thoroughly threshed out, and a scheme up to a certain point has been devised; but the more we worked at it, and the deeper we dug, the greater the difficulties and the more insuperable they seemed. We were met by these two main difficulties, in regard to Northern India especially,—first, that the raiyat in those parts has no transferable interest in his land which he can offer as security, and the only interest he can offer—his crops—are previously hypothecated to the landlord. These were the two points at which we stuck. We got pretty well on with the work, when it was brought to our notice that a gentleman in Bombay—Mr. (now Sir William) Wedderburn—was at work on a similar scheme, and he had the advantage of being in communication with certain bankers at Puna who were apparently willing to assist him in starting an experiment of the kind. It occurred to us that the experiment of an Agricultural Banking Society aided by Government should, in the first instance, if tried at all, be tried in a selected tract of country, and not thrown to be torn in pieces by the fortune or ill-fortune which might attend it under the varying conditions of different parts of India; and, when we came to consider to what tract of country we should apply it, it seemed to us that very obvious advantages existed in regard to the Dekkhan which did not exist in any other part of India. In the first place, the cultivator of the Dekkhan has a transferable interest in his land, and, in the second place, he has no landlord coming between him and the Government. Well, Sir William Wedderburn was good enough to come up to Simla, and we had various conferences with him, and the upshot of it all is that we propose now to consult the Government of Bombay on the possibility of introducing such a scheme into a selected area in the Dekkhan. In the meantime, the necessity remains for amending the existing law, not only on the small technical point which I have mentioned, but also on the various grounds given by Mr. Crosthwaite. We wish to amend the defects in procedure; we wish to simplify the procedure in every direction, to shorten the operations and various processes through which the raiyat has to go before he can get his loan; we wish for permission to reduce fees and stamp-duties; we wish to bring the interest down to the lowest point compatible with justice and fairness to the general taxpayer; and we wish to make the law as elastic as possible, and to leave as much as possible to be provided for by the rules of the various Local Governments.

"These are the objects with which the Bill is brought in, and I have no doubt that, in the hands of my hon'ble friend Mr. Crosthwaite, these objects will be attained. We have also provided experimentally—and these provisions will have to be very carefully considered in Select Committee when leave is given to introduce the Bill—for permission practically for the Government to make over, in any tract in which an agricultural bank may be started, its money-lending business for agricultural operations altogether. Such banks have not yet been started generally; but I was very much interested in having my attention recently called to a report in the Bengal Government Gazette by the Commissioner of the Presidency Division of Bengal, giving an account of an agricultural bank which has been started in Jessore. That bank is conducted entirely by Native managers, and it has been started by Native capital. It is principally concerned with deposits by agriculturists, but it has also a good deal of loan work. Naturally, you will ask, if an agricultural bank in Bengal can do loan work, why should we have been so much hampered with regard to the security of the land and the crops? The answer is given in the Commissioner's report on the bank. The bank lends only on the security of zamíndárís and patní taluqs, that is to say, on what is absolutely, or nearly absolutely, proprietary right, and does not descend to tenures. This, of course, limits to a certain extent the usefulness of the bank from our point of view, but still it is a very useful experiment, and I only hope the example will be followed freely and frequently in other parts of India."

His Excellency THE PRESIDENT said:—

"I have only to say, in regard to this Bill, that it is not a very large measure. I believe, however, that it will remove many of the difficulties which now prevent the practical employment of the existing machinery for Government loans for agricultural improvements, and that, as far as it has that effect, it will I cannot doubt, be beneficial to the agricultural community.

"The difficulties found to exist in India in this matter are not confined to India alone. We find also at home that loans of this description are not taken advantage of to the extent to which one might naturally suppose they would be, for very much the same reasons as those which have deterred agriculturists from availing themselves of them in this country,—namely, the difficulties created by the very strict rules which have been laid down for the guidance of applicants for loans of this description. These rules have been found to be unpalatable to English landholders, and I am not by any means surprised to find that they have had the same effect in this country. The main object of this Bill is to simplify those rules to the greatest possible extent, to enable them to be applied to the different parts of the country as varying circumstances require; and it is my earnest hope that, although the measure is not one of a very extensive character, it will effect a small and useful reform in the present system of loans for agricultural improvements."

The Motion was put and agreed to.

The Council adjourned to Thursday, the 2nd November, 1882.

SIMLA;
The 26th October, 1882.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

CALCUTTA,
The 5th October 1882.

G. F. E. S. NEILL, *Major, M.S.C.,*
Asst. Secy. to the Govt. of Bengal in the P. W. Dept.

* This return includes all the rabi area for 1882-83. The decrease, as compared with last year, is due to many channels on the Kendrapara having been entirely closed for the speedier completion of drainage cuts. The demand for canal water for kharif lands was continuous throughout the month.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

LOCAL SELF-GOVERNMENT IN MADRAS.

No. 1532, dated Ootacamund, the 20th October 1882.

From—C. G. Master, Esq., Chief Secretary to the Government of Madras,

To—The Secretary to the Government of India, Home Department.

With reference to your letter, dated 31st May 1882, No. 830, I am directed to forward, for submission to His Excellency the Viceroy and Governor General in Council, the accompanying copy of a report by the Committee appointed in this Presidency to consider the question of local self-government, containing their preliminary observations on the subject, together with the remarks passed by this Government thereon.

Extract from the Proceedings of the Government of Madras, Financial Department, No. 1531, dated the 20th October 1882.

Read again the following paper :—

G. O. No. 597, dated 29th June 1882.

Read also the following paper :—

From R. S. Benson, Esq., Secretary to the Committee on Local Self-government, to the Chief Secretary to the Government of Madras, No. 193, dated Ootacamund, the 17th October 1882.

Order thereon by the Government of Madras.

The paper recorded above contains the preliminary observations of the Committee (consisting partly of Europeans and partly of Natives) to which was entrusted the duty of reporting upon the views and instructions of the Government of India in their bearing on the question of local self-government in the Madras Presidency, after full communication alike with the officers of this Government and with the most authoritative exponents of indigenous South Indian opinion.

Resolutions—30th September 1881, No. 3353; 10th October 1881, No. 3515; 18th May 1882, No. 17—747-59: in letter—31st May 1882, No. 930; 30th June 1882, No. 2078.

2. It is gathered from the Resolutions of the Government of India that the points as to which the Governor General in Council is chiefly anxious are—

(1) that in the larger towns and more advanced rural districts election should be the rule, not the exception;

(2) that in such towns and districts the Chairman should usually not be an official.

3. The sketch which the Committee have submitted indicates the mode in which the elective franchise has been extended to the larger towns* in this Presidency; and although the privilege may have been sometimes abused and sometimes neglected, there is no reason on the whole to complain of the working of representative institutions in the rural municipalities.

* Trichinopoly. Madura. Bellary. Tanjore. Salem. Calicut. Negapatam. Kumbakonam. Ootacamund. Cuddalore. Tinnevelly. Mangalore.

4. The report further shows that, though in the districts the elective system has not yet been tried, the working of the Local Fund Boards, as at present organised, has been decidedly good.

5. The Government regard with much satisfaction the very great progress that has been made in recent years, and believe that such progress would not have been so great if the maxim *festina lentè* had not guided the action heretofore taken; but at the same time they are far from thinking that the hour has not come for a decided, although cautious, advance along the whole line in the direction of the further development of local liberties.

6. It would be easy to find not merely conservative, but very advanced liberal, authority for the doctrine that "if a principle, however progressive it may appear, can compromise all that has been acquired, it should not be enunciated." Nothing, however, could be further than this from the proposals now under consideration. What this Government are asked to do is only to build higher upon old lines. The Right Hon'ble the Governor in Council finds, therefore, no difficulty in agreeing to the first of the leading principles mentioned above. He is prepared to increase the number of towns in which the municipal body is elected, and to introduce election into the more advanced rural districts tentatively at first, but in the full belief that it will soon be possible to increase the number of Local Fund Boards which are not nominated, but elected.

7. As to the second leading principle, the Collector has hitherto been the President of all Municipalities and Local Fund Boards, wielding, in the former case, often a merely nominal authority; for it is clear that in most Municipal Boards the people have virtually managed their own affairs. His Excellency in Council considers that it will be perfectly safe to go beyond the suggestions on this point now submitted to him in the report read above, and to affirm the principle that in the larger towns, as well as in the more advanced rural districts, the Chairman should not usually be an official.

8. Though, however, the Collecter may, in most cases, cease to be the President or even a member of the Municipalities and Local Fund Boards in his district, none the less will it be his duty to act as the adviser and guide of all these organisations, and to report for the orders of Government every case in which he thinks that the action of any of them may be likely to lead to seriously injurious effects.

9. The Government of India, as His Excellency the Governor in Council apprehends, are by no means desirous of leaving a number of bodies, many of which must in the nature of things be inexperienced, to find their own way through the pitfalls and mazes of local administration without help; but there is a wide difference between keeping people in leading strings and emancipating them from all control, the whole difference in fact which is usually found between the treatment of childhood and adolescence. Occasions may of course arise in which local circumstances or peculiar conjunctures may require a different arrangement, and the Government therefore have reserved to themselves the power of directing their representative to assume the presidency of any local organisation; but the occasions for such a step will, it is believed, be always rare; and as the practical education of the people in the management of their own local affairs will continually advance, this power may at length, it is hoped, be permitted to fall into desuetude.

10. There can be no doubt that, as the prosperity and intelligence of the country increase, demands will be made upon the administration which it will be quite impossible to supply through direct official agency; and it will be more and more necessary to relieve the highly paid and elaborately trained European Superintendents of work which can be, if not at first as well, at least very tolerably, done by less trained and often unpaid ability. His Excellency the Governor in Council finds in this consideration a strong argument in favour of the views of the Government of India, altogether apart from the duty of advancing the political education of the people,—a duty to which he is far from omitting to attach importance.

11. The Committee have noticed another principle to which the Government of India have called special attention, *viz.*, that the administrative unit of Local Government in rural districts should be smaller than it has been. The suggestion will, of course, be considered more in detail when the Committee have had time to elaborate their recommendations; but meanwhile His Excellency in Council desires to remark that he is in no way disinclined to admit the principle, regard of course being had to the nature of particular tracts of country and the diffusion of elementary education within the same.

12. In thus recording his observations on the most salient points connected with this important question for the guidance of the Committee in their further deliberations, the Right Hon'ble the Governor in Council would further remark that the powers reserved in the 17th paragraph of the Resolution* of the Government of India are absolutely necessary to the safety of the changes which are to be made. For a long time to come such acts as the raising of loans, the imposition of taxes in other than duly authorised form, the alienation of municipal property, or interference with any matters involving religious questions or affecting the public peace, will require to remain under the control of the executive authority. With these safeguards there is not, in His Excellency's opinion, any doubt of the success of the suggested experiments in this part of India.

* No. 17—747-59, dated 18th May 1882.

13. The Committee are thanked for their most useful labors, and requested to continue them with a view to laying before Government a further exposition of their views and draft Acts practically applying them, regard being had to the principles affirmed in this order.

No. 1773, dated Simla, the 6th November 1882.

From—A. MACKENZIE, Esq., Secretary to the Government of India, Home Department,

To—The Chief Secretary to the Government of Madras.

I am directed to acknowledge the receipt of your letter No. 1532, dated the 20th ultimo, forwarding a copy of a preliminary report by the Committee appointed under the orders of the Government of Madras to consider the question of local self-government in the Madras Presidency, together with the remarks passed by His Excellency the Governor in Council thereupon.

2. In reply, I am to convey the thanks of the Governor General in Council to the Government of Madras for the important steps which are being taken by them with a view to carrying out in the Madras Presidency the policy of the Government of India, as laid down in the Resolution of the 18th May 1882.

DESTRUCTION OF WILD ANIMALS AND VENOMOUS SNAKES IN BRITISH INDIA.

No. $\frac{48}{1780-90}$.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 8th November 1882.

Read—

Resolution of the Home Department, No. 48—1585-95, dated the 4th October 1881, reviewing the reports on the results of the measures adopted for exterminating wild animals and poisonous snakes in British India during the year 1880.

Read also the following letters from the Local Governments and Administrations submitting returns for the year 1881, and reports of special measures adopted in some cases :—

From the Government of Madras, No. 261A., dated the 4th March 1882.
From the Government of Madras, No. 757, dated the 17th July 1882.
From the Government of Bombay, No. 2279, dated the 19th June 1882.
From the Government of Bengal, No. 429, dated the 18th September 1882.
From the Government of the North-Western Provinces and Oudh, No. 1920, dated 2nd June 1882.
From the Government of the North-Western Provinces and Oudh, No. 2480, dated 22nd July 1882.
From the Government of the Punjab, No. 1727, dated the 30th August 1882.
From the Government of the Punjab, No. 1974, dated the 7th October 1882.
From the Chief Commissioner of the Central Provinces, No. 1139-65, dated the 6th April 1882.
From the Chief Commissioner, British Burma, No. 780-98, dated the 21st March 1882.
From the Chief Commissioner, Coorg, No. 1750-110, dated the 28th January 1882.
From the Chief Commissioner, Assam, No. 722, dated the 17th May 1882.
From the Resident at Hyderabad, No. 185, dated the 29th April 1882.
From the Chief Commissioner of Ajmere and Merwara, No. 127, dated the 21st February 1882.

RESOLUTION.

The statement appended to this Resolution shows in detail for each province the number of persons and cattle killed by wild animals and snakes, and the number of wild animals and snakes destroyed, with the rewards paid for their destruction during the year 1881, as compared with the previous year. The figures are summarised in the following tables :—

Number of human beings and cattle killed.

	Persons killed						Cattle killed					
	By wild animals.		By snakes.		Total.		By wild animals.		By snakes.		Total.

2. The above figures show a decrease during the year under review, as compared with the previous year, both in the number of persons and of cattle killed, and, on the other hand, an increase in the number of wild animals and snakes destroyed. The total number of persons killed during the year was 21,427 against 21,990 in the year 1880. As was the case in the previous year, the mortality which occurred in Bengal and in the North-Western Provinces and Oudh, in which Provinces the deaths amounted respectively to 10,635 and 5,480, was far greater than in other Provinces. Of the total number of deaths, 18,670 resulted from snake-bite and 2,757 were caused by wild animals; the figures for the previous year being 19,150 and 2,840 respectively. The number of persons killed in Bengal (747) and in the North-Western Provinces and Oudh (208) by wild animals other than those specifically named in the returns was considerable. In future returns the animals which came under the general head "Other Animals," and which cause in all Provinces a very large proportion of the mortality, should be specified in a footnote with the number of deaths caused by each kind.

3. The total number of cattle killed decreased from 58,386 to 43,669. This result is chiefly due to the exclusion from the Bengal return of sheep and goats, of which a large number (6,463) were included in the figures for the year 1880. There has, however, been a marked decrease in the number of cattle killed by wild animals and snakes in the Bombay Presidency, the figures for the years 1880 and 1881 being 4,626 and 2,589 respectively. In the Punjab also the number of cattle killed was considerably less than in the preceding year, but in this Province, as in the case of Bengal, the decrease appears to be due to the exclusion of sheep and goats from the returns of the year 1881.

4. The number of wild animals destroyed was 15,279 against 14,886 in 1880. The number of tigers, leopards, bears and wolves destroyed was 1,557, 3,397, 991 and 4,538, respectively, as compared with 1,689, 3,047, 1,100 and 4,243 in the preceding year; and the number of human beings killed by these animals respectively amounted to 889, 239, 75 and 256 against 872, 261, 108 and 347 in the year 1880.

5. The total amount of rewards paid during the year was Rs. 1,02,811. Of this sum, Rs. 90,850 were awarded for the destruction of wild animals, the remainder, Rs. 11,961, being paid for the destruction of snakes. Of the latter amount,

Rs. 6,214 were paid in the Bombay Presidency, Rs. 3,430 in Bengal, Rs. 1,587 in the Punjab, and Rs. 562 in the Central Provinces. In the other Provinces the payments for the destruction of snakes were nominal, while in the Madras Presidency no rewards are given on this account.

6. In the review of the returns for the year 1880, a hope was expressed that endeavours would be made to induce men belonging to the shikari class to devote themselves specially to the work of destruction in districts which are more than usually infested with wild animals, and Local Governments were authorised to make special arrangements for the experimental employment of such men. From the present reports it appears that the Government of Madras has decided that the employment of a paid corps of shikaris is undesirable, as the cost of supervision would be excessive, while the employment of such a corps would discourage local shikaris. On this point the Governor General in Council desires to remark that where local shikaris exist, it is very desirable that every encouragement should be held out to them; and that in such cases it is preferable to trust to fixed, certain and prompt payments according to results as the most effective way of inducing the shikaris to devote themselves to the work. At the same time certain tracts of country exist in which the special and temporary employment of men from outside may be very useful and expedient, and the reports show that the adoption of this plan has in some cases been followed by satisfactory results. For instance in the Fatehpur District in the North-Western Provinces, the entertainment of a body of special shikaris resulted in the destruction of a considerable number of wolves with which that district was infested. In Dinagepore, in the Lower Provinces also, professional hunters were engaged during the closing month of the year for the destruction of tigers. In the Central Provinces the ravages committed by tigers in the Balaghat and Seoni Districts necessitated the offer of enhanced rewards for their destruction, and the District Officer of Seoni has endeavoured to organise a special expedition of shikaris for the purpose of hunting down the animals, and has provided the shikaris with ammunition. Licenses under the Arms Act appear to have been more freely given than hitherto to persons who require arms for protecting themselves and their cattle and [illegible] kept in view by Local [illegible] every possible facility [illegible] such licenses in districts in which wild beasts are more than usually [illegible]

7. As regards the destruction of venomous snakes, special measures have been adopted in some Provinces, of which it appears desirable to give a brief account in case they may be considered suitable for adoption elsewhere. In Bengal a scheme has been sanctioned by the Local Government in the case of the Patna Division, under which persons destroying snakes can obtain certificates from certain selected planters vouching for the poisonous nature of the snakes destroyed. The production of such a certificate entitles the holder to secure from the local authorities the reward offered whenever he finds an opportunity of applying for it. As observed by the Government of Bengal, this concession will probably be found to add much to the convenience of persons claiming rewards, and to act as an inducement towards the destruction of poisonous snakes. The expediency of extending the scheme will be considered by the Local Government when the results of the current year's operations are known. In the North-Western Provinces and Oudh the Lieutenant-Governor and Chief Commissioner has sanctioned the entertainment tentatively in each district of those Provinces of a staff of Kanjars, or men of similar caste who trap and kill reptiles, for the systematic destruction of venomous snakes. These men will receive pay at the rate of Rs. 2 per mensem, together with an additional reward of two annas for every venomous snake in excess of 20 destroyed by each man during any month. A gang of snake-hunters is also to be employed at each tahsili, and, if the measure proves successful, it is proposed that similar gangs should be eventually appointed to each police circle or other local area. It appears to the Governor General in Council that a plan for the destruction of snakes, such as that initiated in the North-Western Provinces and Oudh, is

likely to prove far more efficacious than the mere offer of rewards, although it is true that unless such operations are confined to towns and villages and their neighbourhoods, where it is believed that the largest number of deaths occur from snake-bite, they will probably be very costly. His Honour the Lieutenant-Governor of the Punjab has issued a circular to Commissioners and Superintendents in the Punjab, drawing attention to the matter with a view to the adoption of measures for destroying snakes by a system of rewards to be granted by District Committees and Municipalities. Casts and lithographed pictures of the more common species of deadly snakes have already been supplied to the police stations in some districts, and Deputy Commissioners have been requested to suggest to Municipal and District Committees the desirability of procuring similar means of reference for the purpose of testing applications for rewards. In British Burma the Chief Commissioner, with a view to encourage village snake-hunts in the rice plains, has arranged to grant sums varying from Rs. 10 to Rs. 20, according to the number of houses, in aid of a feast or *pweh* at the end of the annual hunt to every village which successfully carries out such an undertaking.

8. On the whole, the results recorded during the year under review appear to the Government of India to be more satisfactory than those of the previous year. The Governor General in Council is glad to notice that the question of taking measures to reduce the lamentable loss of life which is at present caused by wild animals and venomous snakes is receiving the earnest consideration of Local Governments and Administrations, and His Excellency in Council will await with interest the reports showing the results of the special measures which have been adopted in some Provinces. It is clear that much still remains to be done; but if sustained efforts are made and well considered plans adopted for the extermination of wild beasts and deadly snakes, His Excellency in Council believes that the number of deaths from these causes will in course of time be materially reduced.

ORDER.—Ordered, that this Resolution, with the appended table, be forwarded to Local Governments and Administrations for information and guidance, and that it be published in the Supplement to the *Gazette of India*.

...owing the results of the measures adopted in British India with the view of exterminat... ...nd animals and venomous snakes during the year 1881.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 7th NOVEMBER 1882.

GENERAL REMARKS.—There has been light rain in the Madras Presidency, the Mysore State, and in British Burma. In Coorg heavy showers have been injurious to the rice crop coming into flower. In the Nizam's Territories, in the Central Provinces, in Bengal, and in Assam slight rain has fallen in a few districts.

Harvest operations are still in progress in parts of the Madras Presidency, Mysore, Bombay Presidency, Central Provinces, North-Western Provinces and Oudh, Central India, Rajputana, and Punjab.

Standing crops are on the whole in good condition throughout the country. More rain would, however, be beneficial in parts of the Madras Presidency, of the Deccan and Kaladgi, and in two districts in Oudh.

Sowings of *rabi* crops are still in progress in the North-Western Provinces and Oudh, in the Punjab, and in Rajputana and Central India, and have been nearly completed in Bengal, Central Provinces, Bombay Presidency, Berar, and the Nizam's Territories.

In the Bombay Presidency locusts are now leaving Násik and Ahmednagar, but are doing damage in Poona and Satara.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Nov. 8th)		
Bellary ...	·47 (average of four stations).	Standing crops generally good; harvest dry grain, yield average.
Kurnool ...	·52 (average of four stations).	More rain wanted for dry crops; harvest early dry crops generally above, and indigo below, average; cattle-disease in parts.
Ganjam ...	2·49 (average of sixteen stations).	More rain wanted; standing crops, dry, grains and sugarcane thriving; fever, small-pox, and cattle-disease continue; cholera in one division.
Kistna ...	1·93 (average of thirteen stations).	Standing crops paddy affected by grub in two talukas, harvest dry grains, outturn below average; fever and cattle-disease prevail; water over the anicut 3 feet.
Chingleput (Madras) ...	·96 (average of eleven stations).	Standing crops good under river channels, elsewhere generally withering from want of rain; harvest paddy and dry grains, outturn below average; cattle-disease in parts.
Coimbatore ...	·68 (average of ten stations).	Standing crops good; harvest wet and dry grains, outturn average; fever, small-pox, and cattle-disease in parts; a few cases of cholera.
Tanjore ...	1·11 (average of eleven stations).	Standing crops good except in parts upland where they suffer from want of rain; harvest wet and dry grains, outturn below average.
Madura ...	·19 (average of two stations).	Standing crops fair except in one taluk; cholera in parts.
Malabar ...	·90 (average of seven stations).	Second crop progressing; small-pox and cholera slight in parts.
Travancore ...	·25	Agricultural operations progressing; fever exists. *General Remarks.*—General prospects good.
Bombay—(Nov. 8th)		
Kurrachee ...	No rain	River on 6th 7¼ feet against 7 feet on same date last year; fever in all talukas; 1 case small-pox in Sakro taluka; wheat, red rice, and *bajri* in Kurrachee 24, 36 and 41, in Kotri 30, 32 and 50, in Mirpur Botoro 23, 48 and 48, and in Sakro 16, 36 and 48 lbs. per rupee respectively.
Hyderabad ...	.....	*Kharif* reaping nearly completed; cotton picking in progress; *rabi* sowing continues; small-pox in Hyderabad; cattle-disease in two and fever in four talukas; wheat 25, *bajri* 44, *juari* 48, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Sowing of wheat and gram continues, other crops doing well; fever in Dholka, Viramgaum, Gogo and Parantej; cattle-disease continues in Sanand; wheat 29 and *bajri* 34 lbs. per rupee.
Baroda ...	.....	*Kharif* harvesting and *rabi* sowings continue; cholera re-appeared in Amreli; cattle-disease in parts of Kari division; *bajri* 33 and common rice 24½ lbs. per rupee.
Surat ...	.....	*Kharif* harvest progressing; *rabi* sowing commenced; standing crops healthy; *juari* 38½ lbs. and *nagli* 60 lbs. per rupee.
Násik ...	.....	Locusts disappearing except in Dangi villages; *bajri* nearly all reaped; much *rabi* sown and doing well, but retarded in eastern parts; health good; fever in west of Násik taluka; wheat 22, *juari* 44, *bajri* 36, and rice 26 lbs. per rupee.
Colaba (Bombay) ...	.....	Average abnormal temperature 2° cool; vapour in air in defect of normal, except on 3rd when it was in excess of normal; wind normal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Poona ...	.....	Reaping of *kharif* and sowing of *rabi* crops nearly completed; locusts beginning to move off; damage considerable in western districts, slight in centre, east untouched; *bajri* 47 and *juari* 61 lbs. per rupee; in Poona *bajri* 43 and *juari* 52 lbs. per rupee.
Ahmednagar ...	.....	Rain urgently wanted; reaping of *bajri* approaching completion; sowing of *rabi* completed; locusts gradually disappearing; cholera continues in Karjat; *bajri*—maximum 66 lbs. per rupee in Jamkhed, minimum 45 lbs. per rupee in Kopergaon; *juari*—maximum 96 lbs. per rupee in Jamkhed, minimum 45 lbs. per rupee in Sangamner.
Sholapur ...	.....	Rain wanted; *bajri* 60 lbs. 22 tolas and *juari* 80 lbs. 27 tolas per rupee.
Dharwar ...	No rain	Weather cloudy; harvesting of early rice, *bajri*, and *juari*, in progress; sowing of gram, wheat, and other *rabi* crops finished in some parts and progressing in others; sugarcane damaged by too much rain; cotton and other crops good; foot-and-mouth disease among cattle in three talukas; general health good; prices as before.
Kanara ...	.....	Rice harvest completed in Karwar taluka, continues in other talukas; sugarcane and garden produce thriving; slight small-pox in Sidapur; fever in two talukas; common rice at Karwar 11 seers, in district average 13½ seers per rupee.
Rajkot ...	.....	Nights cool; general health fair; slight cholera in Nawanagar, Junagad, Gondal, and Dhrol talukas; fever in Nawanagar, Dhrol, Gondal, Mengui, Bagasra, and Vasarad; *bajri* 28 and *juari* 35 lbs. per rupee.
		General Remarks.—Harvesting *kharif* and sowing *rabi* completed in some districts, in progress in the rest; rain urgently wanted for *rabi* in parts of Deccan and in Kaladgi; locusts leaving Násik and Ahmednagar and doing damage in Poona and Satara districts; fever and cattle-disease in some districts; slight cholera and small-pox in a few.
Bengal—(Nov. 8th)		
Chittagong ...	1·3	Weather cloudy with occasional rain, unfavourable to winter crops; prices steady; cattle-disease still prevails; general health good.
Dacca ...	·56	Harvesting of rice commenced; sowing of winter crops in progress.
24-Pergunnahs (Calcutta)	1·93	Prospects of late rice and sugarcane satisfactory; lands being prepared for winter crops; price of common rice stationary; general health good; isolated cases of cholera reported from some villages in Diamond Harbour sub-division.
Moorshedabad ...	·85	Prospects of crops favourable; sowing of winter crops commenced; fever prevails here and there.
Rajshahye ...	·53; Nattore, ·85	Prospects of crops favourable; fever general; cholera in Nattore sub-division.
Burdwan ...	3·28	Late rain has somewhat depressed prospect of a good *amun* crop; prospects of winter crops fair; public health pretty fair.
Rungpore ...	*Nil*	Weather seasonable; prospects of crops good; public health good.
Bhagálpur ...	*Nil*	Prospects of crops good; *rabi* sowings progressing.
Purneah ...	*Nil*	Prospects of crops fair; sowings of cold weather crops progressing; fever bad.
Patna ...	*Nil*	*Rabi* sowings going on; *rahar*, *juari*, and mustard growing splendidly; cutting of sugarcane continues; public health good.
Durbhunga ...	*Nil*	Rice prospects fair; *rabi* sowings progressing; prices stationary; public health middling; fever reported both from north and south.
Hazáribágh ...	*Nil*	Weather cloudy; cutting of upland rice going on; sowing of *rabi* crops continues; cattle-disease reported; public health good.
Cuttack ...	1·94	Late rice ripening; *rabi* crops doing well; public health good.
		General Remarks.—Rain fell in many districts during the week, it was not very considerable in any part and did little or no harm to the crops; *amun* rice and sugarcane generally doing well, but the latter crop will be short in several places owing to scanty rainfall in July and August; cultivation for *rabi* crops progressing favourably and the crops already sown are growing well; fever prevalent in several districts, particularly in Nuddea where deaths are said to be increasing; cases of cholera still reported from some districts.
N. W. Provinces and Oudh—		
Benares (Nov. 7th)	No rain	Weather seasonable; *rabi* sowings in progress; no sickness; prices steady.
Allahabad („ 8th)	No rain	*Rabi* prospects excellent; *kharif* crops being harvested; prices stationary; health good on the whole.
Gorakhpur („ 6th)	.....	Weather fine; *rabi* sowings in progress; late *kharif* promising; prices stationary.
Jhánsi („ „)	.....	*Rabi* sowings in progress; newly sown crops germinating; *kharif* harvesting continues; a fall of rain now would benefit the *rabi* crops greatly.
Agra („ 8th)	No rain	*Kharif* being harvested; *rabi* sowings continue; sugarcane being irrigated; fever abating; general health good; prices stationary.
Bareilly („ 7th)	.....	Prospects good; cholera ceased; fever still prevalent.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—*contd.*		
Meerut (Nov. 7th)	No rain	Health good; *kharif* harvest nearly over, outturn good; *rabi* sowings continue; markets well supplied; wheat and oil seeds exported to Calcutta; prices stationary.
Kumaun („ „)	No rain	Wheat mostly sown; general health good; cattle-disease continues; prices unchanged.
Lucknow („ „)	No rain	Outturn of *mash* poor; *kharif* harvest and *rabi* sowings in full swing; rain wanted for *do-fasli* lands; cholera dying out; fever prevalent.
Partabgarh („ „)	.....	Prices stationary; *moth* and *urd* being harvested; mornings cool; cholera continues in two tahsils; slight cattle-disease in Partabgarh tahsil.
Sitapur („ „)	No rain	Rain is much wanted in Sidhauli; *rabi* sowings not completed; cattle-disease decreasing; prices stationary.
Fyzabad („ „)	No rain	*Rabi* sowings going on; weather fine; fever and cattle-disease in part of tahsil Akbarpur.
Rae Bareli („ „)	.....	Weather seasonable; *rabi* sowings in progress; *juari* yield poor; fever and cholera still continue; markets well supplied; prices steady.
Cawnpore („ „)	No rain	*Rabi* sowings nearly completed; *kharif* outturn expected to be average; health good; prices nearly stationary.
Farukhabad („ „)	No rain	*Rabi* sowings nearly completed; prices steady; fever decreasing.
		General Remarks.—No rain; rain wanted in Lucknow and parts of Sitapur; *kharif* harvest and *rabi* sowings progressing; prices stationary; cholera continues in Rae Bareli and Partabgarh, but is disappearing elsewhere; cattle-disease continues in four districts.
Punjab—(Nov. 7th)		
Delhi ...	No rain	Health good; prices steady; average yield expected.
Hissar ...	No rain	Health good; prices stationary; harvest prospects unchanged.
Umballa ...	No rain	Health good; prices stationary; *rabi* sowings in progress.
Jullundur ...	No rain	Health good; prices stationary; average outturn of crops expected.
Amritsar ...	No rain	Health good; prices steady.
Lahore ...	No rain	Health good; prices steady; crop prospects good.
Ferozepore ...	No rain	Health good; prices steady; crop prospects good.
Sialkot ...	No rain	Health good; prices stationary; *rabi* sowings progressing.
Rawalpindi ...	No rain	Slight fever still prevails; prices steady; *rabi* sowings in progress
Peshawar ...	No rain	Fever prevalent; prices stationary; *kharif* crops being reaped.
Mooltan ...	No rain	Fever abating; prices of food-grains steady.
Dera Ismail Khan ...	No rain	Fever prevalent; prices steady; crop prospects good.
		General Remarks.—The health of the province generally good; slight fever still prevails in the Rawalpindi, Dera Ismail Khan, and Peshawar districts; the crop prospects are generally good.
Central Provinces—		
Nagpur (Nov. 8th)	·77	Weather clear and cool; *rabi* injured in some places for want of rain; fever prevalent; prices slightly risen.
Jubbulpore („ „)	.....	Weather seasonable; reaping of *kharif* crops and *rabi* sowings almost completed; rice 16 and wheat 18 seers per rupee.
Saugor („ 6th)	.....	*Rabi* sowings finished; young crops progressing favourably; fever prevalent; prices steady.
Seoni („ 7th)	.....	Weather cloudy; *kharif* reaping and *rabi* sowings approaching completion; fever prevalent; wheat and rice selling at 17½ seers per rupee.
Hoshangabad („ „)	.....	Weather seasonable; *rabi* sowings progressing; fever and small-pox prevalent; wheat 15 and rice 9 seers per rupee.
Raipur („ 4th)	1·19	Weather cloudy and rainy; *rabi* sowings going on; fever and cattle-disease prevalent; wheat 30 and rice 38 seers per rupee.
Sambalpur („ 2nd)	·65	Weather close and warm; fever increasing; rice 56 seers per rupee.
Khandwa („ 7th)	.....	Days warm, nights cold; *rabi* sowings continue; cholera and small-pox prevalent; prices steady; rice 13 and wheat 16 seers per rupee.
		General Remarks.—Slight rain in some districts; weather clear and pleasant; *rabi* sowings approaching completion; reaping of *kharif* crops going on; fever still reported; prices steady.
British Burma—(Nov. 4th)		
Akyab ...	0·68	Total rainfall 199·46; public health and health of cattle both in town and district good.
Rangoon ...	0·77	Total rainfall 101·46; one death from cholera, otherwise public health good; crops making progress.
Bassein ...	3·33	Total rainfall 124·46; public health good; slight cattle-disease in two townships; condition of crops good.
Prome ...	0·95	Total rainfall 50·05; one case of cholera in town, otherwise public health good; crops progressing well, although but a slight yield is expected; several showers last week have been most beneficial; reaping of *koukyan* paddy commenced.
Amherst (Moulmein) ...	3·42	Total rainfall 202·90; four deaths from cholera reported from district, otherwise public health good both in Moulmein and district; no cattle-disease; crops ripening and in good condition.
Toungoo ...	2·66	Total rainfall 9·85; eight deaths from cholera and one death from small-pox in the district.
		General Remarks.—Public health generally good; a few cases of cholera in Kyoukphyoo, Tavoy, Henzada and Tounghoo; crop prospects good; rains nearly over.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Assam—		
Gauhati (Nov. 8th)	No rain	Weather seasonable; mornings foggy; prospects of crops and public health good.
Sylhet („ „)	0·03	*Sali* paddy not likely to be a full crop; *amun* paddy promises well; cholera increasing.
Cachar („ „)	·65	Weather cloudy and still unseasonably warm; prospects of *sali* crop good; common rice 25¾ seers per rupee; two cases of cholera reported from Katigora.
Dibrugarh („ „)	*Nil*	Weather seasonable; prospects of crops good; cattle-disease decreasing; public health good.
Mysore and Coorg— (Nov. 8th)		
Bangalore ...	3·96	Crops in good condition; *ragi* harvested in parts; prospects favourable; pasturage ample.
Mysore ...	·74	Wet and dry crops in good condition; prospects and public health good.
Mercara ...	·44	The heavy showers are injurious to the rice crop coming into flower; *ragi* harvest over in Naujarajapatna and is proceeding in Yeluvershime, yield short; prices falling owing to good prospects in Mysore; season feverish. *General Remarks.*—Reports in regard to crops, prospects of season, and public health are favourable from all parts: agricultural operations continue active; prices easy—rice 11 to 15 seers and *ragi* 35 to 40 seers per rupee.
Berar & Hyderabad— (Nov. 8th)		
Amráoti ...	.....	*Kharif* crops in good condition; *rabi* sowings completed; rain wanted; prices—wheat 16 and *juari* 28 seers per rupee.
Akola ...	.....	Crops progressing favourably; *rabi* sowings continue.
Hyderabad ...	·28	Total rainfall from 1st January 30·31; reaping of *kharif* and sowing of *tabi* in progress; cattle-disease prevails in two taluks; no sickness; prices—wheat 16¾, common rice 11, white *juari* 28¼, yellow *juari* 33¼, and *tur* 25½ seers per current sicca rupee.
Central India States— (Nov. 8th)		
Indore ...	.....	Weather seasonable; health good; prospects of crops good; prices steady.
Morar (Gwalior) ...	No rain	Health and prospects good; weather seasonable.
Sutna ...	No rain	Health and prospects good.
Rutlam ...	.....	No report received.
Neemuch ...	No rain	*Kharif* harvest has been good; *rabi* being sown; health good.
Goona ...	.....	Crops good; health fair; wheat 22 seers per rupee.
Bhopal ...	.....	Weather cool; health and prospects good.
Agar ...	No rain	Prospects good.
Nowgong ...	No rain	Prospects and health good; prices steady.
Manpur ...	.....	Sowing of *rabi* crop continues; *juari* nearly ripe; prices stationary.
Rajputana—		
Abu (Nov. 8th)	.....	Weather clear, cold set in; ague and fever prevail.
Sirohi („ 5th)	.....	Tanks, wells, and health good; crops cut; nights cold.
Marwar („ 3rd)	.....	About two months' water in tanks, wells most full; some fever prevails; crops being cut; days quite clear and nights still close, little wind; prices stationary.
Meywar ...	.....	No report received.
Harowti (Nov. 4th)	.....	*Kharif* crops being harvested; *rabi* sowings still unfinished; weather seasonable; health good.
Jhallawar („ 1st)	.....	Health and prospects continue good; weather seasonable.
Ajmere („ 7th)	.....	*Kharif* crops reaped; *rabi* sowings progressing; health good.
Jeypore ...	.....	No report received.
Bhurtpore (Nov. 7th)	.....	Prospects favourable; prices stationary; fever prevalent.
Ulwur („ „)	.....	*Rabi* sowing continues; *kharif* being harvested; health fair.
Nepal (Nov. 2nd)—		
Katmandu ...	No rain	State of agricultural prospects good; beautiful weather.

ABSTRACT SHOWING THE RESULT OF EMIGRATION FROM THE PORT OF CALCUTTA DURING THE MONTH OF MAY 1882.

No. I.—As to age and sex.

[There was no emigration to the Colonies.]

No. II.—As to places whence emigrants come to Calcutta for embarkation.

[There was no emigration to the Colonies.]

CULTIVATION OF THE JAPAN PEA IN INDIA.

No. 63*A*.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department, dated Simla, the 2nd November 1882.

Read the following papers regarding the Japan pea :—

Extract from the Proceedings of a Meeting of the Agricultural and Horticultural Society of India held on the 2nd September 1881.

JAPAN PEA.

Read a letter from Captain J. F. Pogson, forwarding an extract from an American paper (*Mississippi Patron*) respecting a prolific pea raised in Japan, and suggesting that steps be taken towards obtaining a quantity of this variety for trial in India, which was agreed to.

The following is the extract alluded to :—

"Mr. T. E. Martin and Mr. R. T. Rutledge, both American progressive farmers, state that the "Japan Pea" is the most productive as well as good food that they have ever grown for all kinds of stock; horses, cattle, sheep, and hogs will eat the peas, stems, and leaves, if harvested before fully matured and cured like other hay, with as much relish as they do corn. Then there is no pea for the table—it is soaked in water the night before cooking—that has a more exquisite flavour. They grow on a stout bushy stalk from two to three feet high, somewhat resembling the cotton plant. The main stalk, as well as the branches of the limbs, are literally loaded with small pea-pods, filled with little yellow peas, similar in colour, size, and flavour to the English garden pea."

As regards cultivation, they state: "But the way to get the greatest yield is to plant in hills two and a half feet each way, allowing but one stalk to the hill to remain after the first working. That will give you 6,960 stalks to the acre, and on ordinary land, cultivated the same as corn, will average at the lowest estimate a pint of shelled peas to the stalk, or a fraction over 108¾ bushels per acre. I doubt not that with high cultivation and good soil it would be an easy matter to double that yield, besides there is no other crop that will yield more hay to the acre. In fact, I know of no crop so remunerative as the Japan pea. It is a sure cropper, as clearly demonstrated by my experience with this season's crop. Neither wet nor dry weather materially interferes with the quantity or quality of the yield."

Paper on the Soy Bean by Edward Kinch, F.I.E., F.C.S., &c., Professor of Chemistry, Royal Agricultural College, Cirencester.

THE SOY BEAN.

This bean, sometimes known as the Japan pea and China bean, is the seed of the *Soja hispida*, Miquel—(*Glycine hispida*, Moench; *Dolichos Soja*, Linne; Siebold; *Glycine Soja*, Jaquin)—a plant of the natural order Leguminosæ, sub-order Papilionacæ, and tribe, Phaseolæ. Its natural habitat appears to be China and Japan; it also grows in Mongolia, and in India in the Himalayas, and within the last few years it has been cultivated experimentally in several European countries. This bean is worth more than a passing notice, as it is the vegetable which approaches most nearly in its proximate chemical composition to animal food. This will be seen later on.

There are a great number of varieties of the soy bean known, which differ to some extent in the shape, size, and especially in the colour of the seed, and in a few minor particulars, but which seem to vary comparatively little in chemical composition. Dr. C. O. Harz has classified the principal varieties as follows :—

Group I.	*S. hispida platycarpa.*	
(1)		*olivacea.*
(2)		*punctata.*
(3)		*melanosperma.*
(a)		*vulgans.*
(b)		*nigra.*
(c)		*renisperma.*
(d)		*rubro-cincta.*
(4)		*platysperma.*
(5)		*pervula.*
Group II.	*S. hispida tumida.*	
(6)		*pallida* (Roxburgh).
(7)		*castanea.*
(8)		*atrisperma.*

These names sufficiently indicate the nature of the variety as far as the seed is concerned.

The soy bean is extensively cultivated in the north of China, whence it is exported to the southern provinces; it is here pressed for the sake of its oil, and the residual cake largely used as food for man and beast, and also as a manure.

In Japan it is known by names signifying THE bean, and from it are made not only soy but a paste, known as *miso*, which is in constant request at nearly every meal, *tofu* or bean cheese, and other foods used to a less extent. This bean cheese is also well known in China, and is obtained by extracting the legumin from the beans with water and precipitating it with brine. An analysis of it is given below.

These foods are most valuable additions to the dietary of the Oriental nations, and especially of the Japanese, who use so little animal food; they tend to supply the deficiencies of the staple food, rice, in nitrogenous matter, fat, and also in mineral constituents.

The Buddhist priests, who are strictly forbidden the use of animal food, consume considerable quantities of these beans, principally in the form of *miso*.

The soy bean first attracted attention in Europe in the year 1873, when specimens from Japan, from China, and from India were shown at the Vienna International Exhibition. Dr. Forbes Watson, Reporter on the products of India, called attention to it in the catalogue of the exhibits of the India Museum. Since then numerous experiments have been made on the European continent on its growth, and also feeding experiments with the bean and its straw on different kinds of animals have been prosecuted. Such experiments have been carried on by Woolling and Wein at Munich; by Haberlandt, Lehman, Harz, Stahel, Zimmerman, Siewert, Wieske, and others at various stations in Germany, Austria, and Hungary; and experiments have also been made in France and in Italy.

The proximate chemical composition of some of the different varieties, grown in different places, is now given and compared with the composition of some other foods of vegetable and animal origin :—

Percentage composition of the soy bean.

Fibre	2·2	4·0	4·5		4·5	4·2	4·4
Ash	3·8	5·0	5·0	4·0	4·7	4·7	4·4
	100·0	100·0	100·0	100·0	100·0	100·0	100·0

It has been shown by Levallois (*Comptes Rendus*) that the soy bean contains a special variety of sugar, in many of its properties resembling mellitose; this constitutes about ten per cent. of the soluble carbohydrates. Of the nitrogenous matters nearly all is in the form of albuminoids; a small quantity, about ·1 per cent., appears as a peptonelike body, and about ·1—·2 per cent. is non-albuminoid.

Percentage composition.

	Peas.	Beans.	Lupins.	Lentils.	Lean Beef.	Fat Mutton.
Water	14·0	14·8	12·2	12·5	72·0	53·0
Nitrogenous matter ...	23·0	24·0	28·3	25·0	19·0	12·0
Fat	1·7	1·6	5·0	1·8	4·0	32·0
Carbohydrates ...	53·8	49·5	36·4	54·6		
Fibre	5·0	7·0	14·1	3·6		
Ash	2·5	3·1	4·0	2·5	5·0	3·0
	100·0	100·0	100·0	100·0	100·0	100·0

These analyses show the greater richness of the soy beans in nitrogenous matter and in fat than the common bean and pea, and that, when the water is equalised, it more nearly approaches meat in proximate composition. The only leguminous seed, of common occurrence, which contains more oil than this bean, is the earth nut or ground nut *Arachis hypogæ*, which is now so largely cultivated abroad for its oil and its cake. In order to compare the soy bean straw with hay and with other straws of like nature, the following average analyses are given :—

	Meadow hay.	Bean straw.	Pea straw.	Lentil straw.	Soy bean straw.	Soy bean hulls.
Water	14·0	16·0	15·0	14·5	11·3	10·2
Nitrogenous matter	8·2	10·0	7·0	14·1	7·8	6·0
Fat	2·0	1·0	2·0	2·0	2·2	1·5
Carbohydrates	39·8	34·5	34·0	26·4	41·6	43·0
Fibre	30·0	34·0	38·0	36·6	24·9	31·0
Ash	6·0	4·5	4·0	6·4	12·2	8·3
	100·0	100·0	100·0	100·0	100·0	100·0

A special variety of the soja hispida is cultivated in some parts of Japan as a fodder crop, and cut just as the pods are fully formed. The hay made from this is much relished by horses, cattle, and sheep. A sample of a crop grown on the Imperial College of Agriculture Farm, Komaba Tokiyo, gave on analysis :—

Water	15·0
Nitrogenous matter	19·8
Fibre	35·9
Ash	6·8
Carbohydrates and fat	22·5
	100·0

It will be seen that this hay exceeds even lentil straw in the amount of nitrogenous matter it contains.

The following are means of various analyses made in Japan of food products obtained from the soy bean, and which are largely consumed there :—

Percentage composition.

	White *miso*.	Red *miso*.	Bean cheese.	Frozen bean cheese.
Water	50·7	50·4	89·0	18·7
Nitrogenous matter	5·7	10·0	5·0	48·5
Fat	24·4	18·9	3·4	28·5
Carbohydrates			2·1	2·6
Fibre	12·6	8·2		
Ash	6·6	12·5	·5	1·7
	100·0	100·0	100·0	100·0

The ash of the miso consists mainly of common salt which is added in the process of manufacture.

The ash of the soy bean was found, as a mean of several samples, to have the following percentage composition. The composition of that of the straw is also given :—

	Soy bean ash.	Straw ash.
Potash	44·5	15·4
Soda	1·1	2·2
Lime	5·6	44·2
Magnesia	9·1	15·4
Ferric oxide	·8	·8
Chlorine	·2	·2
Phosphorus pentoxide	32·7	9·4
Sulphur trioxide	6·0	6·4
Silica		5·5
	100·0	99·5

The crop takes from the soil a large amount of the valuable mineral constituents, phosphoric acid and potash, as well as a large amount of nitrogen.

The results of the German and Austrian experiments show that where the temperature is not too low, the results of the harvest as compared with that of ordinary beans or peas is exceedingly satisfactory.

The kinds most suited for cultivation there are the yellow, brown, round black, and long black varieties, *i.e.*, *pallida*, *castanea*, *atrosperma*, and *melamosperma*, especially the first three named. They require a vegetation time of about 150 days, during which the average temperature must be about 58°F. (14·3C.), and the sum of the heat (the average temperature multiplied by the number of days) about 2,100°C. They may be sown in the beginning of May, and harvested the end of September or even the beginning of October.

The seeds should not be sown deeply, not more than 1 to 1½ inches deep, and about 18 plants to the square yard may be left after weeding and thinning out. The plants grow to a small bush about 2½ feet high, and produce pods with two, three, and occasionally four or even five seeds. The most suitable soil is a peaty soil, or one containing a good deal of organic matter, and the next most favourable is a calcareous soil. Nitrate of soda has been found to be a good manure for the crop in Germany, and also potash salts, especially potassium sulphate. Ammonium sulphate did not give so good a return as the same amount of nitrogen in the form of nitrate; on soils poor in organic matter it would probably be better to supply the nitrogen in some organic combination, such as rape cake, shoddy, and the like. Phosphoric acid, especially as dicalcic phosphate, was a help on some soils.

Field experiments made by myself on this crop in Japan showed that wood ashes had a good effect, and that anything like an excess of nitrogen in the manure was very harmful to the yield of grain : in that country the plants are often sown on the dividing ridges between the plots of paddy and without any manure. The yield of seed and straw in the German experiments compares very favourably with that of beans and peas grown under the same conditions : from 2,000 to 3,000 lbs. of seed and 5,000 to 10,000 lbs. of straw per acre have been obtained.

Feeding experiments with the produce have been made with pigs, sheep, oxen, and milk cows, and with very good results. The bean is a most excellent addition to other foods, especially such as are deficient in nitrogenous matter and fat. The digestion co-efficients of the nitrogenous matters, of the fat, and of the total non-nitrogenous matter in the soy bean, and also in the cake left after its pressure for oil, closely approximate to 90 in each case. As a mean of two direct experiments with soy bean straw, the digestion co-efficients were found to be as follows : Nitrogenous matter 60·8, fat 62·2, fibre 33·6, and non-nitrogenous extractive matters 69·0. The huds are rather less digestible.

The albuminoid ratio in the beans is about 1 : 2·3, in the straw 1 : 8·1, in the huds about 1 : 20, and in the cake 1 : 1·3.

An analysis of the cake shows :—

Percentage composition.

Water	13·4
Nitrogenous matter	40·3
Fibre	5·5
Carbohydrates	28·1
Fat	7·5
Ash	5·2
	100·0

In good condition it would be a valuable addition to our feeding cakes, but it is too highly valued in the East to enable it to be imported to any extent at a profit.

The soy bean plant has considerable power of resisting unfavourable climatic influences as cold, drought, and wet; and appears to be particularly free from insect attacks, and indeed from all parasites; this last, if it continues, is by no means a slight advantage. The soy beans are eagerly bought by the natives of Southern Italy, an almost vegetarian race. That they are easily digested I can speak from experience, having frequently used them on my table cooked after the manner of haricots. Taking into account the great richness of these beans in valuable food constituents, their easy digestibility, the value of the straw, and the great probability of some variety being able to be acclimatized without great trouble, this *soja hispida* is worth consideration. The bean would form an exceedingly useful addition to the food of the poorer classes, as a substitute for a portion of the animal food which in the kitchens of the labouring classes is so wastefully cooked. One use it has already found, not altogether to be commended, *viz.*, after roasting, as an adulterant of, and substitute for, coffee.

We have procured seeds of several varieties direct from Japan, and of one variety from Germany, and these are now being cultivated in the Botanic Garden. They were sown rather late, and the month of June has not been favourable to their growth, but some of the varieties promise fairly.

No. 1853, dated 11th October 1882.

From—J. R. REID, Esq., Offg. Secy. to Govt., North-Western Provinces and Oudh,
To—The Secy. to the Govt. of India, Revenue and Agricultural Department.

In reply to your letter No. 119-A. and H., dated the 18th February last, I am directed to submit, for the information of His Excellency the Governor General in Council, a copy of the letter noted on the margin, containing a report on the cultivation of the Japan pea in the Mussoorie and Chajuri gardens.

From Superintendent, Botanical Gardens, North-Western Provinces and Oudh, No. 2406, dated 20th September.

No. 2406, dated Saharanpur, 20th September 1882.

From—J. F. DUTHIE, B.A., F.L.S., Superintendent, Government Botanical Gardens, North-Western Provinces and Oudh,
To—The Director, Department of Agriculture and Commerce, North-Western Provinces and Oudh.

In reply to your No. 1227A., dated 1st instant, I have the honour to forward a report received from the Native Overseer on the cultivation of the "Japan pea" at Mussoorie and Chajuri. This plant appears to be nothing more than an improved variety of a commonly cultivated hill pulse called "bhat" (glycine soja) or soy bean.

About three years ago I received seed of the same plant from the Director of the Oriental Museum in Vienna, together with high recommendations regarding its value as a source of food, an opinion borne out by the very large proportion of nitrogenous substances contained in the seed (see Baden-Powell's Punjab Products, Volume I, page 243).

Three pounds of seed were sent to the Overseer for sowing in both gardens.

At the Mussoorie garden one pound was sown on the 12th March last, and not a single seed germinated.

Cultivation at Chajuri.

Weight of seed	2 lbs.
Dates of sowing	28th February and 6th March 1882
Area of ground	36 feet × 12 feet.
Weight of manure	12 maunds.
Proportion of seed which germinated	About half.
Date on which the ripe seed was collected	25th July 1882.
Weight of seed produced	2 lbs. 12 oz.

OBSERVATIONS.—The Government of India desires that the cultivation of the Japan pea should be extended in this country, and in this view it is suggested that further experiments should be made in suitable places. A fresh supply of seed will be procured from Japan for distribution to such Local Governments and Administrations as may wish to try the experiment.

The Government of Madras.	The Chief Commissioner, British Burma.
„ Bombay.	„ Assam.
„ Bengal.	„ Ajmere.
„ North-Western Provinces and Oudh.	„ Coorg.
„ Punjab.	The Secretary for Berar to Resident at Hyderabad.
The Chief Commissioner, Central Provinces.	

ORDER.—Ordered, that a copy be forwarded to the Local Governments and Administrations noted in the margin for information.

Ordered also, that a copy be forwarded to the Honorary Secretary, Agricultural and Horticultural Society of India, with a request that the Government of India may be informed whether the Society would like to try any experiment with the Japan pea.

Ordered also, that a copy of the papers be published in the Supplement to the *Gazette of India*.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

THE CENTRAL PROVINCES LOCAL SELF-GOVERNMENT BILL.

No. 810, dated the 15th July, 1882.

From—D. FITZPATRICK, Esq., Secretary to the Government of India, Legislative Dept.,
To—The Chief Commissioner of the Central Provinces.

I AM directed to forward for your opinion, and that of all Commissioners and Deputy Commissioners in the Central Provinces, a provisional draft of a Bill to make better provision for local self-government in the Provinces under your administration.

2. The Bill was introduced as a Bill to provide for the levy of rates on land in the Central Provinces, and in that form it was seen and approved by you when you were in Calcutta.

Since that time the publication of the Government of India Resolution No. $\frac{17}{747-759}$, dated 18th May, 1882, on the subject of local self-government, has altered the aspect of the case. It has been necessary to revise the Bill to bring it into accordance with the main lines of the scheme laid down by Government.

As it is the first piece of legislation in which the views set forth in the abovenamed Resolution are embodied, more importance attaches to it than if it was a measure connected with the Central Provinces only. On this account it is thought expedient to subject the draft to your criticism before republishing it in the Gazette in ordinary course.

3. I am to observe that the Bill is in the form of a provisional draft, and that criticism should be directed to the substance of the measure rather than to the wording or form of the Bill.

4. Attention is particularly requested to the following points:—

(1) The formation of local administrative areas.
(2) The constitution of local administrative bodies.
(3) The relations of those bodies to each other.
(4) The conduct of business by them.
(5) Their duties.
(6) The control to be exercised over them by the executive officers and by the Local Government.
(7) The funds to be assigned to and placed under the control of the local administrative bodies.
(8) The power to be given to them of providing funds by additional taxation.
(9) The appropriation of local funds.
(10) The question of giving allowances to members of local bodies.

I am to take up these points in the order in which they are enumerated above.

5. *First*, as to the formation of the local administrative areas (section 3 of the draft). In accordance with the opinion of the Member in charge of the Bill, the village has been taken as the basis of the scheme, and the areas for administrative purposes are to be formed by aggregating the villages in circles, and the circles in groups. In forming the circles and groups, regard will be had to community of interests in such matters as roads, ferries, dispensaries, schools, and the like.

The Government of India wishes you to consider, not only whether this is the best system to adopt for the Central Provinces, but whether it is expedient to formulate it in the Act rather than to leave it to be provided for by rules.

The Member in charge of the Bill is strongly of opinion that, in the case of the Central Provinces, the basis of village-representation should be laid down by law. He considers that the only way in which vitality can be given to a scheme of self-government is by engrafting it on some living indigenous institution. The village is the natural unit in all Indian administration, and it is the only remaining seat of political life. He wishes this fact to be recognised and established in the law.

6. *Secondly*, the constitution of the local bodies (section 4) naturally follows the lines laid down in section 3. Each group of villages (which may or may not correspond to one of the revenue-subdivisions of a district) is to have its local Board. The representatives of the village-circles will form the chief element of the Board. The method of their election or appointment is left to rules to be framed by you (section 30). To them will be added members of the mercantile classes or professions, appointed or elected in such manner as may be prescribed by rule (section 30); and such persons, if any, as the Chief Commissioner may from time to time appoint. In this last class may be included such officials, or non-official persons, as the Chief Commissioner may think it necessary to add to the Board. It has not been thought necessary to make *ex officio* members. It may be that in some places the Board, constituted of classes (*a*) and (*b*), may be strong enough to walk alone; and in that case you need not exercise the power given to you under clause (*c*) of section 5. In other cases the representative Board may require strengthening, or influential men may have been left out, whose presence on the Board appears to you expedient. With the exception of the numerical limit placed on the number of nominated members,—a limit that is obviously necessary—it is intended to give the Local Administration as much discretion as possible.

The formation of the District Council is similar to that of the local Board, representatives of the larger areas—the groups—taking the place of representatives of circles.

Here, again, I am to ask you to consider, not only whether the scheme is suitable, but also whether you think it expedient to formulate it in the law.

7. *Thirdly*, as to the relations of local Boards to each other and to the District Council (sections 10 to 16). The normal constitution contemplated in the draft is that by which the local Boards shall be subordinated to the District Council. In a Province like that administered by you, this will perhaps be the necessary relation of the two bodies for some time to come. Section 14, however, provides for a case in which a local Board is capable and desirous of independent action. You will have the power to declare any Board independent, in which case, by clause (4), section 21, it will have complete control over its share of the District Fund.

Section 14 as drafted does not give the Chief Commissioner power to recall the independence thus given to a local Board. It may perhaps be necessary to give you this power.

Provision has been made in sections 15 and 16 for the joint action of several local Boards and of several District Councils for the prosecution of a common object.

In all these matters, the Government of India is desirous of leaving as much room as possible for the natural development of local varieties, which will arise from the teachings of experience and the differences in the condition and character of the people.

8. *Fourthly*, with regard to the conduct of business. Section 30 gives the Chief Commissioner power to make rules on the more important matters, while section 18 gives the Councils and Boards as much freedom as possible in managing their affairs, subject, however, to the rules framed by you. The appointment of a Chairman is regulated by the law (section 17). You will observe that the appointment is to be by election, subject to approval by you in the case of a District Council, and by the Commissioner in the case of a local Board.

On this point the Bill as at present framed leaves less discretion to the Local Government than was contemplated by the Resolution of 20th May last. Your criticism on these provisions is invited.

9. *Fifthly*, as to the duties of the Boards and Councils. Section 9 enumerates the matters which it appears expedient to place under the control and administration of these bodies. I am to ask that the list may be carefully examined, and that you will say if there are any matters which have been omitted or which ought to be more prominently mentioned, and if there are any included which it is expedient to leave out. You will observe that the matters which local bodies may administer and control (section 9) have been distinguished from those to which the District Fund may be devoted (clause (3), section 21).

10. *Sixthly*, the subject of control requires careful consideration. The intention of the draft is to guard against any undue interference on the part of the District Officers with the management by the local bodies of the business entrusted to them, while at the same time the authority of that officer, as the representative of the Executive Government, and his power to prevent mischief, is maintained. You will be able to say whether this intention has been sufficiently carried out by clause (5), section 22, as regards finance, and by sections 26 and 27 as regards general business. Sections 28 and 29 provide for cases of default or abuse of powers by local bodies, and give the Chief Commissioner ample powers of dealing with delinquent Councils or Boards. In England, analogous powers for the supersession of local administrative bodies are vested in the Local Government Board and the Education Department.

11. *Seventhly*, the heads of income which can be assigned to the District Fund are specified in section 21. The District Council should, as far as possible, be entrusted with the management of the sources from which this income is derived. This principle will not apply to the rates named in clause (*a*) of section 21, but it may apply to the heads of income mentioned in clauses (*b*) and (*c*). The management of pounds and ferries should certainly form part of the business of the local Boards, and the income from the pounds and ferries under the management of a Board or Council should belong to that Board or Council. Under the present law, the Chief Commissioner has the power to assign to each district from the provincial surplus accruing from these sources such sums as he may think fit. It should be considered whether any amendment of the law is necessary.

12. *Eighthly*, the very important question arises whether any, or what, powers should be taken of raising rates for local purposes. It is believed that the local bodies in the Central Provinces will have but scanty funds at their disposal, and that they will depend almost entirely on the supplies which you may from time to time assign to them from Provincial revenues. The Government of India is of opinion that, in order to give stability to local finance, these assignments should, as in the case of assignments to Provinces, be made for fixed periods of years.

If the proposed measure succeeds, the District Councils will, in all probability, feel the want of funds. Should this want be foreseen and provided for by the present Bill, or should legislation be deferred until the demand arises?

In the present Bombay and Madras District Committees Acts (Bombay Acts III, 1869, and II, 1871; Madras Act IV, 1871) certain powers of taxation are vested in the Government.

If any provision for raising funds is to be embodied in the present measure, it would probably take the shape of empowering the District Councils to suggest taxation, in forms and under limits to be laid down in the law, and of enabling the Government to act on such suggestions. For example, they might be allowed to suggest the establishment of tolls on highways maintained by them, or the imposition of market-dues necessary for the maintenance of market-places, and the like. The power of sanction would rest with the Government, and the form and limit of the toll or due would be laid down in the law.

I am to ask for your careful consideration of this matter.

13. *Ninthly*, you should consider how far it may be possible or expedient to limit and specify, more precisely than under the existing system, the purposes to which funds raised from a particular source or from a particular area may be appropriated. Under the Bill the District Fund may be applied towards all or any of the purposes mentioned in section 9 or in section 22 (3); but by section 30 (*d*) power is given to the Chief Commissioner to make rules as to the apportionment of the fund between general and special purposes, and the appropriation of funds raised in a particular area to purposes of that area. The principles on which such rules should be framed will require careful consideration.

14. *Tenthly*, the question has arisen whether any allowances should be given to the Members of local Boards and District Councils. In some cases the representatives of village-circles or groups will not be wealthy men, and it is important that they should not be deterred by unwillingness to incur the necessary expense from punctual attendance at all Board or Council meetings. The mukaddams or village-headmen will, it is understood, be remunerated by the village under the provisions of the Central Provinces Revenue Act, and it may not be necessary to give them any additional remuneration for attendance at the local Board. But those who are appointed to the District Council may have long distances to travel; and it may be just and expedient to pay them travelling allowance or a fee for each attendance at the Council.

At the next settlement of the land-revenue it may perhaps be possible to put the position of village-headman on a more substantial basis, and to follow the Panjáb practice of attaching some valued privileges to the post. Meanwhile, it must be understood that whatever charges it is proposed to incur for this purpose must be met from the District Fund. Your advice on this matter will be looked for.

15. In conclusion, I am to draw your attention to two matters. *First*, no definite position has been assigned to the Commissioner of the Division in the draft. It is difficult to give him any definite functions which ought not more properly to belong to the Deputy Commissioner. But it is to be understood that he will exercise the same authority and control over the Deputy Commissioner in the discharge by that officer of his duties under this Act as he exercises over him in other matters. *Secondly*, it is thought possible that the Act may be inapplicable to some of the wilder parts of the Central Provinces. Section 31, therefore, gives you the power to except from any of the provisions of the Act such districts or portions of districts as may be in your opinion unfit for self-government.

31. Power under special circumstances to except districts from operation of Act.

Supplemental and Temporary Provision.

32. Confirmation and recovery of existing rates.
    Account of receipts and charges to be kept by Deputy Commissioner.
33. Powers of Chief Commissioner with respect to rates.
34. Penalty on member, officer or servant being interested in contracts made with council, board or committee.
35. Publication of rules and orders.
36. Time for councils and boards coming into existence.
37. Saving of rights of existing officers.

No. III.

Provisional draft of a Bill to make better provision for local self-government in the Central Provinces.

WHEREAS provision has been made by the Central Provinces Land-revenue Act, 1881, for the appointment of executive headmen, or mukaddams, for the several villages in the territories administered by the Chief Commissioner of the Central Provinces; and

Preamble.

Whereas provision has been made in the settlement-records of the districts in those territories for the levy of rates for the maintenance of roads, schools and the district post, and it is proposed that the Government shall, from time to time, assign certain sums, or the income accruing from certain sources, for expenditure on objects tending to promote the welfare and improvement of the inhabitants of each of those districts;

It is hereby enacted as follows:—

Preliminary.

1. This Act may be called the Central Provinces Local Self-government Act, 1882. It shall extend only to the territories for the time being administered by the Chief Commissioner of the Central Provinces; and it shall come into force on the day of 1882.

Short title. Local extent. Commencement.

2. "Assistant Commissioner" includes an Extra Assistant Commissioner in any district where there is no Assistant Commissioner.

Definitions.

"Financial year" means the year commencing on the first day of April.

"Rate-payer" means any person liable to pay any rate leviable for the maintenance of roads, schools or the district post under any settlement made before the passing of this Act.

"Village" includes any tract of land which, at the last settlement of that land, has been recognized as a village, or which the Chief Commissioner may, from time to time, declare to be a village for the purposes of the Central Provinces Land-revenue Act, 1881.

Formation of Local Administrative Areas.

3. *(1)* The Chief Commissioner shall, by order, for the purposes of the local self-government of each district, aggregate the several villages thereof in circles, and the circles in groups.

Aggregation of villages in circles and groups for purposes of local self-government.

(2) In forming the circles and groups regard shall be had to the community of interests for purposes of this Act between the several villages comprised in each circle, and between the several circles comprised in each group.

(3) There shall be excluded from the circles and groups formed under this section such portions of the district as are for the time being included in the limits of a military cantonment or of a town having a municipal committee.

(4) The Chief Commissioner may, from time to time, by order, vary any order made under this section.

Constitution of Local Administrative Bodies.

4. There shall be established a local board for each group of circles, and a district council for each district.

Establishment of local boards for groups and of district councils for districts.

5. The local board for a group of circles shall consist of—

Constitution of local board.

(*a*) representative members, one for each circle, being the headman of a village within that circle;

(*b*) representatives of mercantile classes or professions, resident within the area comprised in the group, and chosen by or on behalf of those classes or professions; and

(*c*) such person or persons, if any, not exceeding in number *one-third* of the board, as the Chief Commissioner may from time to time appoint.

6. The district council of a district shall consist of—

Constitution of district council.

(*a*) representatives of groups of circles within the district, one for each group, being a member of and selected by the local board for that group;

(*b*) representatives of mercantile classes or professions, resident within the district, and chosen by or on behalf of those classes or professions; and

(*c*) such person or persons, if any, not exceeding in number *one-third* of the council, as the Chief Commissioner may from time to time appoint.

7. *(1)* A person who has been convicted of an offence punishable with imprisonment, or has been made a bankrupt, shall be disqualified for being elected or appointed a member of a local board or district council.

Disqualification for being member of board or council.

(2) If a member of such a board or council is convicted of such an offence, or is made bankrupt, his office shall thereupon become vacant.

8. Every district council shall be a body corporate by the name of the district council of its district, and shall have perpetual succession and a common seal, with power to acquire and hold property, both moveable and immoveable, to transfer any moveable property, and, with the previous approval in writing of the Deputy Commissioner, any immoveable property, held by it, and to contract and to do all other things necessary for the purposes of its constitution.

Incorporation of district council.

Duties of District Councils and Local Boards.

9. The following matters shall, subject to such exceptions as the Chief Commissioner may, from time to time, make by order, be under the control and administration of the district council and of the local boards within the areas of their jurisdictions:—

Matters to be administered by board and council.

(*a*) The construction, repair and maintenance of roads and other means of communication.

(*b*) The construction and repair of school-houses, hospitals, dispensaries, lunatic asylums, markets, rest houses, saráís and other public buildings.

(*c*) The supply, storage and preservation from pollution of water for drinking and cooking purposes.

(*d*) The construction and repair of public wells and tanks, or water-works, and the supply of water therefrom.

(*e*) The planting and preservation of trees on public ground.

(*f*) The establishment and maintenance of relief-works in time of famine or scarcity.

(*g*) Any other local works or measures likely to promote the health, comfort or convenience of the public.

(*h*) The visiting and management of hospitals, dispensaries, markets and schools.

(*i*) The maintenance of any building or property vested under this Act in the district council.

Relations of Local Board to District Council.

10. A local board shall not incur expenses or undertake liabilities to any amount exceeding the limit imposed by the district council of its district.

Limits on expenditure of local board.

11. Every local board shall submit annually to the district council of its district a statement of the requirements, and an estimate of the probable expenditure, of the board for the coming financial year, and a report of its proceedings, and an account of its receipts and expenditure for the past financial year, and shall also submit to the council such other reports, if any, as the council may, from time to time, require.

Periodical reports, estimates and accounts by board to council.

12. A district council may, by a majority of *two-thirds* of its whole number, reverse or vary any resolution of a local board for an area within its district.

Power for council to reverse or vary resolution of board.

13. *(1)* If a local board makes default in performance of any duty imposed on it by or under this Act, the district council may, by order in writing, fix a period for the performance of the duty.

Power for council to provide for execution of works in default of board.

(2) If the duty is not performed within that period, the council may appoint some person to perform it, and may provide for the expenses of and incidental to its performance out of the funds appropriated to or for the purposes of the local board.

14. *(1)* The Chief Commissioner may, from time to time, by notification in the local official Gazette, declare any local board established under this Act to be an independent board.

Power to declare local boards independent.

(2) A local board so declared shall thereupon within its area have the powers and perform the duties of a district council under this Act, and shall cease to be under the control of the district council.

Joint Committees.

15. *(1)* A local board may, from time to time, concur with any other local board or boards for an area in the same district, in appointing, out of their respective bodies, joint committees for any purpose in which they are jointly interested, and in delegating to any such committee any power which might be exercised by either or any of the local boards, and in framing and modifying regulations as to the proceedings of any such joint committee.

Joint committee of two or more local boards.

(2) If any dispute arises between two or more local boards acting under this section, the decision thereon of the district council of their district shall be final.

16. *(1)* A district council may, from time to time, concur with any other district council or district councils, in appointing, out of their respective bodies, joint committees for any purpose in respect of which they are jointly interested, and in delegating to any such committee any power which might be exercised by any or either of the district councils, and in framing and modifying regulations as to the proceedings of any such joint committee.

Joint committee of two or more district councils.

(2) If any dispute arises between two or more district councils acting under this section, the decision thereon of the Chief Commissioner shall be final.

Conduct of Business.

17. *(1)* Every district council and local board shall, from time to time, elect one of its members to be chairman for one year at all meetings at which he is present.

Chairman.

(2) If the chairman so elected dies, resigns or becomes incapable of acting, the council or board shall elect another of its members to be chairman for the period during which the person so dying, resigning or becoming incapable would have been entitled to continue in office, and no longer.

(3) An election under the foregoing provisions of this section shall not be valid until it is approved, in the case of the chairman of a local board by the Commissioner of the division, and in the case of the chairman of a district council by the Chief Commissioner.

(4) If the chairman is absent from any meeting, the members present shall appoint one of their number to be chairman thereat.

18. *(1)* Every district council and local board may, from time to time, make regulations as to the time and place of its meetings, the conduct of proceedings at meetings, and the appointment, powers and proceedings of committees :

Regulations as to meetings and proceedings.

(2) Provided that every regulation made under this section must be consistent with this Act and with any rules made by the Chief Commissioner under this Act.

Officers and Servants.

19. *(1)* Every district council may employ and pay a clerk and such other officers and servants as may be necessary and proper for the efficient execution of its duties.

Employment of officers and servants.

(2) A local board may employ such officers and servants, if any, and may assign to them such reasonable remuneration, as the district council of its district thinks requisite and sufficient.

(3) In the case of an officer lent by the Government, the council or board may contribute to his pension and leave allowances in accordance with the rules for the time being in force.

(4) If, in the opinion of the Deputy Commissioner,

(*a*) the number of persons employed by a council or board under this section, or the remuneration assigned by the council or board to those persons, or to any particular person, is excessive, or

(*b*) any such person is unfit for his employment—

the council or board shall, on the requirement of the Deputy Commissioner, reduce the number or remuneration, or, as the case may be, dismiss the unfit person :

Provided that the council or board may appeal against any such requirement to the Chief Commissioner, whose decision shall be final.

Vesting of Property.

20. The Chief Commissioner may, from time to time, by notification in the official Gazette, direct that any property, moveable or immoveable, which is vested in Her Majesty and is situate in the Central Provinces, shall vest in any district council, and thereupon that property shall vest in that council for the purposes of this Act, subject to all debts, liabilities and obligations (if any) affecting that property.

Power to vest property in district council.

Finance.

21. *(1)* There shall be formed for each district a fund to be called the district fund, and there shall be placed to the credit thereof—

Constitution, custody and application of district fund.

(*a*) the net proceeds (after deducting the expenses of collection) of all rates levied under settlement-records in that district for the maintenance of roads, schools or the district post ;

(*b*) all sums assigned, from time to time, by the Chief Commissioner for expenditure on local works in that district, under section eighteen of the Cattle Trespass Act, 1871, section 5 of the Central Provinces Additional Rates Act, 1878, section seventeen of the Northern India Ferries Act, 1878, or any enactment amending any of those Acts ;

(*c*) all such rents and profits accruing from nazul property in that district as the Chief Commissioner may, from time to time, direct to be paid to the district council ;

(*d*) all sums contributed to the fund by the Government or private persons ; and

(*e*) all sums received by the district council, in the execution of this Act.

(2) The district fund shall be vested in the council and the balance standing to the credit of the fund shall be kept in the Government treasury of the district.

(3) The district fund shall be applied to payment, in whole or in part, of the charges and expenses incidental to the several matters specified in section nine and also to the following purposes :—

(*a*) the maintenance of the district post;

(*b*) the payment of school inspectors and normal school teachers appointed and controlled by Government and employed in the district, and the provision of scholarships and prizes for schools in the district ;

(*c*) the payment of subordinate medical officers appointed by Government and employed in the district ; and

(*d*) the expenses attending the audit of the accounts of the district council and of the local boards within the district.

(4) When a local board has been declared independent under section fourteen, such portion of the district fund as belongs to or accrues within the area under the board shall be set apart and placed at its disposal, and shall, for the purposes of this Act, be treated as a separate district fund.

Annual estimates of income and expenditure.

22. *(1)* Every district council shall appoint a finance committee consisting of not less than *three* of its number.

(2) Every district council shall, on or before the prescribed day in each year, hold a meeting at which the finance committee shall submit to the council an estimate of the income and expenditure of the council for the next financial year, in such form as the Chief Commissioner may, from time to time, by rule prescribe.

(3) The district council shall consider the estimate, and may provisionally approve of it with or without modification.

(4) The district council shall, on or before the prescribed day, cause copies of the estimate as provisionally approved by it to be sent to the Deputy Commissioner.

(5) If the Deputy Commissioner signifies in writing to the district council his disapproval of the estimate with respect to any proposed expenditure on salaries, works or otherwise, appearing to the Deputy Commissioner to be unnecessary or excessive, or with respect to any particular or particulars appearing to the Deputy Commissioner to be erroneous, defective or improper, the district council shall consider the matter and either modify the estimate or refer it through the Deputy Commissioner to the Chief Commissioner, whose decision shall be final.

(6) The district council shall, on or before the prescribed day in each year, hold a meeting for the purpose of further considering the estimate and any objections or suggestions which may have been made with respect thereto by the Deputy Commissioner or any other authority or person, and of finally approving the same with the modifications (if any) necessary under clause (5) of this section, and with any other modifications it may think expedient.

(7) "Prescribed day" for the purposes of this section means such day as the Chief Commissioner may, from time to time, by rule prescribe.

Annual accounts and audit.

23. Accounts of the receipts and expenditure of every district council shall be made up to the last day of every financial year in such form as the Chief Commissioner, from time to time, prescribes, and shall be examined and audited as soon as may be after the end of each financial year by such persons as the Chief Commissioner, from time to time, appoints in this behalf.

Inspection of estimates and accounts.

24. The district council shall cause a copy of every estimate provisionally or finally approved by it under this Act, and of every account made up under the last foregoing section, to be kept at their office ; and any rate-payer may at all reasonable times inspect any such estimate or account.

Publication of abstract of accounts.

25. An abstract of every annual account of a district council, showing the income of the district fund under each head of receipts, the charges for establishment, the works undertaken, the sums expended on each work, and the balance, if any, of the fund remaining unspent, shall be prepared by the district council in such form as the Chief Commissioner, from time to time, prescribes, and published annually in the English and Vernacular local official Gazettes.

Control.

Deputy Commissioner's power of supervision.

26. *(1)* The Deputy Commissioner of a district shall have power to supervise the proceedings of the district council and of every local board or joint committee for an area within the district, and in exercise of that power may (among other things)—

(*a*) enter on and inspect any immoveable property occupied by the council, board or committee, or any work in progress under its direction;

(*b*) call for and inspect any document in the possession or under the control of the council, board or committee for the purposes of this Act; and

(*c*) require the council, board or committee to furnish such statements, accounts and reports as he thinks fit.

(2) Where a joint committee is appointed by the district boards of several districts, the Deputy Commissioner of any of those districts may exercise a like power in respect of the proceedings of that committee; but if any difference arises between two or more Deputy Commissioners acting under this clause, it shall be referred to the Chief Commissioner, whose decision shall be final.

Power to suspend execution of orders, &c.

27. *(1)* If, in the opinion of the Deputy Commissioner, the execution of any order or resolution of a district council, local board or joint committee, or the doing of any act which is about to be done or is being done in pursuance of or under cover of this Act, is likely to cause injury or annoyance to the public, or to any class or body of persons, or to lead to a breach of the peace, he may, by order in writing, suspend the execution or prohibit the doing thereof within his district.

(2) When a Deputy Commissioner makes any order under this section, he shall forthwith forward to the Chief Commissioner, through the Commissioner, a copy of the order, with a statement of the reasons for making it, and it shall be in the discretion of the Chief Commissioner to rescind the order or to direct that it continue in force with or without modification, permanently or for such period as he thinks fit.

Power to provide for performance of duties in default of district council.

28. *(1)* When the Chief Commissioner is informed, on complaint made or otherwise, that a district council has made default in performing any duty imposed on it by or under this Act, the Chief Commissioner, if satisfied after due inquiry that the district council has been guilty of the alleged default, may, by an order in writing, fix a period for the performance of that duty.

(2) If that duty is not performed within the period so fixed, the Chief Commissioner may appoint some person to perform it, and may direct that the expense of performing it, with a reasonable remuneration to the person appointed to perform it, shall be forthwith paid by the district council.

(3) If the expense and remuneration are not so paid, the Chief Commissioner may issue a warrant directing the person having the custody of the balance of the district fund to pay the expense and remuneration, or as much thereof as is possible, from that balance.

Power to supersede council or board in case of default or of abuse of powers.

29. *(1)* If a district council or local board persistently makes default in performance of the duties imposed on it by or under this Act or otherwise by law, or exceeds or abuses its powers, the Chief Commissioner may, with the previous approval of the Governor General in Council, by an order published, with the reasons for making it, in the official Gazette, declare the council or board to be in default, or to have exceeded or abused its powers, and supersede it for a period to be specified in the order.

(2) When a district council or local board is so declared to be in default, or to have exceeded or abused its powers, the following consequences shall ensue:

(*a*) All members of the council or board shall, as from the date of the order, vacate their offices as such members.

(*b*) All powers and duties of the council or board may, during the period of supersession, be exercised and performed by such person or persons as the Chief Commissioner, from time to time, appoints in that behalf.

(*c*) All property vested in the council shall, during the period of super-session, vest in Her Majesty.

(*d*) On the expiration of the period specified in the order, the council or board shall be re-established by the appointment or election of new members.

Rules.

Power for Chief Commissioner to make rules as to district councils and local boards.

30. The Chief Commissioner may, from time to time, make, and alter, rules consistent with this Act—

(*a*) as to the qualifications, mode and time of election or appointment, term of office, and remuneration and allowances (if any) of members of district councils and local boards;

(*b*) as to the conduct of proceedings of district councils and local boards, including the fixing of a quorum, the formation of committees and the delegation of powers to such committees;

(*c*) as to the appointment and payment of auditors of the accounts of district councils and local boards;

(*d*) as to the apportionment of the district fund between the general purposes of the district and the purposes of particular parts of the district, and the appropriation of funds raised in a particular area to purposes of that area; and

(*e*) generally, for the guidance of district councils, local boards and Government officers in all matters connected with the administration of this Act.

Exceptional Provision.

Power under special circumstances to except districts from operation of Act.

31. If the circumstances of any district or part of a district are, in the opinion of the Chief Commissioner, such that any of the provisions of this Act are inapplicable thereto, he may, by order, except the district or part from the operation of those provisions, and thereupon those provisions shall not apply to the excepted district or part until applied thereto by a subsequent order of the Chief Commissioner.

Supplemental and Temporary Provisions.

Confirmation and recovery of existing rates.

32. *(1)* All rates for the maintenance of roads, schools or the district post, for the payment of which provision has been made in any settlement-record previous to the passing of this Act, shall be deemed to have been legally imposed, and shall be recoverable as if they were arrears of land-revenue payable directly to Government and due on the land in respect of which they are payable.

Account of receipts and charges to be kept by Deputy Commissioner.

(2) An account of the gross receipts and of the charges (if any) of collection of all such rates in each district shall be kept by the Deputy Commissioner of that district, and shall be annually rendered by him to the district council of that district.

Powers of Chief Commissioner with respect to rates.

33. The Chief Commissioner may, from time to time, by notification in the official Gazette,

(*a*) prescribe in what instalments, and at what times, the rates referred to in the last foregoing section shall be payable, and make rules for their collection by village-officers or others; and

(*b*) exempt any land from liability to pay the whole or any part of any such rate, and vary or cancel any such exemption.

Penalty on member, officer or servant being interested in contracts made with council, board or committee.

34. If any member, officer or servant of a district council, local board or joint committee appointed under this Act is directly or indirectly interested in any contract made with that council, board or committee, he shall be deemed to have committed an offence under the Indian Penal Code, section 168.

Publication of rules and orders.

35. All rules and orders made by the Chief Commissioner under this Act shall be published in the local official Gazette.

Time for councils and boards coming into existence.

36. The several district councils and local boards under this Act shall come into existence at such time as the Chief Commissioner, by order, appoints in that behalf.

Saving of rights of existing officers.

37. Nothing in, or done under, this Act shall prejudicially affect the rights of any officer appointed before the passing of this Act, as to tenure of office, salary or pension.

No. $\frac{371.2}{217}$, dated the 29th September, 1882.

From—L. FRASER, Esq., Offg. Secy. to the Chief Commissioner, Central Provinces,

To—The Secretary to the Government of India, Legislative Department.

I AM directed to acknowledge receipt of your letter No. 810, dated 15th July last, forwarding, for the opinion of the Chief Commissioner and of all Commissioners and Deputy Commissioners in this Province, a "provisional draft of a Bill to make better provision for local self-government in the Central Provinces." I am accordingly to forward copies of letters received from all Commissioners and Deputy Commissioners giving expression to their opinions on the Bill: these are grouped together according to the Revenue Divisions from which they have been written. The Deputy Commissioners of Nágpur, Hoshangábád and Narsinghpur have also been called on to work out on paper for their districts the scheme contemplated by the Bill. This has been done for these districts and for the district of Wardha; and a copy of all the papers bearing on this exemplification of the probable working of the proposed Act is also appended for the information of Government.

2. I am now to submit the following observations by the Chief Commissioner on the proposed Bill. In accordance with the direction contained in the third paragraph of your letter under reply, these remarks will deal with the substance of the measure rather than the wording or form of the Bill. In the first place, then, I am to say that the Chief Commissioner cordially accepts the principles on which this Bill is based, and heartily concurs in the desire of the Government of India to do all that can be done to extend self-government "as an instrument of political and popular education." This is a subject in which he has taken considerable interest in the past, although the sphere of operation has been very limited.

3. District fund committees have hitherto been little more than bodies of respectable native gentlemen with whom the Deputy Commissioner and other local officers might take counsel for the public good. They have been assembled at head-quarters and have not been in any way representative of the district generally; but their main use has been as exponents of Native opinion in regard to measures which the local officers have had under contemplation. With Municipal Committees the case has been very different. The system of appointment of members of these Committees by election has now been in operation for years: it is now the system generally followed. In many places it is, of course, more or less of a farce; but in some it is very far from being so. The members of some municipalities, duly elected by the people themselves, are distinctly representative: that is, they represent their constituents in ideas, caste and local interests. They are elected for this purpose; and they carry it out.

4. The position of member of Committee is now looked on as one of some importance: a curious illustration of this has only recently occurred, in the presentation to the Chief Commissioner of a numerously signed petition impugning the fairness of the election of a member for a ward in the city of Nágpur. Further, considerable interest in the work of the Committee has been evinced by its members in some municipalities. In the last Administration Report (1880-81) the Chief Commissioner was able to write (p. 61):—"The Divisional reports attest the existence in many municipalities of a keen interest which extends in some to the supervision of much executive work. The Nágpur divisional report is silent on this subject, but the district reports confirm the opinion already formed by the Chief Commissioner, that the elective body of Nágpur, Wárdha, and Hinganghát take a prominent part in municipal matters. The three municipalities of the Chhattísgarh Division are administered by Committees, the Native members of which understand and appreciate their share of power and responsi-

bility. This was specially illustrated during the year in the town of Bilaspur. In the Jabalpur division, the Committees which meet most regularly and exercise a real control over municipal expenditure are those of Jabalpur, Murwara, Seoni and Mandla. It is in certain municipalities of the Narbada Division that the zeal and energy of municipal elected members is most favourably mentioned. Thus in the Hárda Municipality each member has continued to perform special duties for which he is specially responsible, and conservancy and water-supply, education and public works, are mentioned as branches of municipal administration which have thus been especially supervised. In Hoshangábád and Burhanpur also this system of distribution of work exists."

5. A further step can now be recorded in the Hárda municipality: the duties of Secretary are performed by each member in turn in monthly rotation. This shows how experienced they have become in Municipal administration, and the real assistance that may be expected from men like them. Some time ago the Chief Commissioner expressed his desire to remove all officials from the membership of Municipal Committees wherever such a measure could be safely introduced at once. The Commissioner of the Narbada Division promptly recorded his opinion that the election by certain Committees of their own Presidents and Vice-Presidents, and the removal from them of the official element, would be a perfectly safe measure and attended with many advantages. The Commissioners of the Jabalpur and Chhattísgarh Divisions also expressed their belief that the measure might be tentatively introduced in certain municipalities with very good hope of its proving successful. The Commissioner of the Nágpur Division did not report so favourably on the subject; but the Chief Commissioner believes that the measure may be tried in a few of the municipalities of that division also. He is having the experiment tried in selected municipalities throughout the province.

6. All this is mentioned here not only to show that some measures have been already adopted in a comparatively small way to educate the people in self-government, and to inculcate a spirit of self-reliance among them, but also to show that these measures have been very fairly successful. The success that has been achieved in this comparatively narrow sphere goes very far, in the opinion of the Chief Commissioner, to show that much of the pessimist opposition to the far more extensive and bolder policy now inaugurated is founded on prejudice, and on ignorance of the capacity of the Natives of this country to meet responsibility when they find that it really rests upon them. The Chief Commissioner admits freely that in few, if any, parts of this Province will self-government be introduced without the possibility of very serious blunders at first, and the necessity for anxious watchfulness for some time to come; but he is strongly of opinion that there is little or no advantage in delaying the initiation of this policy. Let such a system as is sketched in the Bill be introduced prudently and gradually; let its operation be anxiously watched but not unduly interfered with; let the spirit of self-reliance and self-respect be carefully fostered,—and the Chief Commissioner is convinced, from such experiences as are recorded above, that this policy will prove an efficient "instrument of political and popular education." To delay the initiation of a policy of education is only to prolong the period of incapacity.

7. Turning now to the consideration of the Bill itself, I am to devote special attention to the points enumerated in the fourth paragraph of your letter under reply. *First*, then, as to the formation of the local administrative areas, the Chief Commissioner is of opinion that the village should be taken as the basis of the scheme, and that this fact should be clearly laid down by law. The executive headman, or mukaddam, resident as he must be (section 137 of the Central Provinces Land-revenue Act, 1881) in the village, may not always be in full accord with all the raiyats, but is undoubtedly as a rule the best representative of the village interests: he is therefore best fitted to give his vote for, or serve as, a member of the Local Board. And the principle that every village should be more or less directly represented is one which forms so much the essence of the policy now projected, that it should, in the Chief Commissioner's opinion, find its place in the law which enunciates that policy.

In respect to the formation of circles and groups, the Chief Commissioner holds undoubtedly that regard should be had (section 3, clause 2) "to the community of interest for purposes of this Act between the several villages

comprised in them"; but he is doubtful of the expediency of laying this down in the law. It is enough to prescribe (as is done in section 3, clause 1) that the Chief Commissioner shall form these circles and groups: it is clear that he must do this on some principle; and the principle suggested in the draft Bill is the principle he would undoubtedly follow, as far as possible. There is no real advantage, therefore, in prescribing it, and it might lead to complications and unnecessary difficulties. The formation of the circles and groups by the Deputy Commissioners of Hoshangábád and Nágpur in the schemes appended to this letter has been conducted, in the case of the former district, by adopting the old sub-divisions wherever possible, and in the case of the latter, by adopting the present police circles. In both cases, divisions already well known to the people, and originally made from considerations of community of interest and of administrative expediency, have been rightly adopted. But cavilling objection might no doubt easily be taken in the case of individual villages to their inclusion within the limits of any particular circle or group. It is well, the Chief Commissioner thinks, to formulate the principles and character of the system projected, but not to tie the hands of local officers too tightly in regard to the working out of details.

9. *Secondly*, the Chief Commissioner considers that the provisions regarding the constitution of the local administrative bodies, contained in the proposed Bill, are suitable, and that they should be formulated in the law. He considers that the chief element of the Local Board should be the representatives of the village circles; that the mercantile classes should also be represented, and that, when and so long as there is need, a small proportion of the members should be appointed by the Chief Commissioner himself. He considers that all this should be laid down in the law; but that details regarding the method of the election and appointment of members should be left to the rules to be framed under the law. For his own part, the Chief Commissioner believes very strongly in the possibility of educating the people up to a full appreciation and a ready exercise of the privilege of election. In most parts of the Province, indifference must be expected for some time to come; but the progress that the system of popular election has made in some municipal towns shows that this indifference would soon yield before patient and earnest efforts to foster a spirit of self-reliance and self-help.

10. *Thirdly*, the relations of Local Boards to each other and to the District Council fall to be considered. The subordination of the Local Boards to the District Council is rightly the normal constitution contemplated by the draft Bill; and the Chief Commissioner believes that the case would very rarely indeed occur, when it would be expedient to exercise the powers conferred on him by section 14, and declare a Local Board independent of the Council. The Chief Commissioner, however, is of opinion that the functions of the District Council should mainly consist in deliberation and control, and that executive functions should chiefly belong to the Local Boards. If both have executive functions there may be friction; and the very constitution of the District Council renders it rather an unsuitable executive body. It would tend to the further extension of the scheme of self-government, and to the further development of those qualities which it is meant to foster, were executive functions mainly to belong to the Local Boards. Besides this, if the District Council had simply to deliberate on broad questions of income and expenditure, to initiate schemes for the public advantage, to exercise general supervision and control over the work of the Local Boards, and to perform other duties of a similar character, its meetings would not require to be very frequent; and there might be some hope of their being fairly well attended by members from a distance. The Chief Commissioner would suggest for consideration how far this view of the matter might be embodied in the proposed legislation. It seems anomalous that the subordinate Boards should have no possible relation to the District Council, except either complete subordination within the same sphere of executive duties or complete independence. The Chief Commissioner would rather see the Local Boards realising full responsibility to the District Council but exercising full independence in regard to executive details. I am to add that the Chief Commissioner considers that it is quite necessary to confer on him the power of withdrawing the independence granted by him to any Local Board under section 14.

11. *Fourthly*, with regard to the conduct of business, the provisions of the Bill have the Chief Commissioner's approval. Perhaps the most important points in connection with this part of the subject is the appointment of chairman to any of these local bodies. This is to be made by election. All the part in the matter to be taken by Government is that the approval of the Commissioner is required in the case of the Local Board, and that of the Chief Commissioner in the case of a District Council, to give validity to such an election. The Chief Commissioner desires no further discretion. There can be little doubt that when a high official sits as member in any of those local bodies, it is fitting that he should preside; but there can be equally little doubt that so long as that body is weak enough to require his presence, it will desire that he should preside. And the normal state of matters ought to be that the members should themselves choose the gentlemen who is to preside over their deliberations. All that the Chief Commissioner would desire is the power in case of necessity to veto any unworthy or unwise appointment: this is reserved to him in the Bill as drafted. I am here to say also that the Chief Commissioner thinks that the Bill rightly gives to him, and not to an officer of inferior position, the power to approve of the appointment of a chairman of the District Council; for it will add dignity to that appointment to have its approval notified in the Local Gazette.

12. *Fifthly*, the Chief Commissioner has nothing to add to the list of duties to be performed by these local bodies. He would observe, however, that the management of pounds and ferries is mentioned in the eleventh paragraph of your letter under reply as a matter which "should certainly form part of the business of the Local Boards." But it is not mentioned in section 9 of the Act. The Chief Commissioner would certainly include this among the duties of the Boards. There are several other duties which he thinks they may often show themselves most capable of performing, and which are indicated in the letters of some Deputy Commissioners; but the performance of these it will be best to request as a favour from the local bodies fit to perform them than to prescribe by legal enactment for all.

13. *Sixthly*, the subject of control has received careful consideration from the Chief Commissioner; and he is perfectly satisfied with the provisions of the draft Bill. The object being, as it is, to foster self-reliance and self-help, constant interference and dictation must be deprecated. The power to be reserved is that of general supervision and of occasional check: this is done in the sections of the Bill bearing on the subject.

Under the power vested in him in section 5 (*c*), the Chief Commissioner might appoint officials to be members of the local bodies so long as their presence there was necessary. But the object to be kept in view is to separate completely between the functions of district officers and those of the local bodies; and as soon as any local body showed capacity for independence the official element would be removed. Assistance would no doubt always be given in the way of unofficial advice and suggestions to members of the local bodies, so as to enable them to perform their duties more successfully and efficiently. But the sooner official interference is limited in the manner indicated in the Bill, the better. Even at the first, it would probably be found necessary in very few cases indeed to have the Deputy Commissioner a member of the Board or Council. His subordinates might necessarily at first be there; but his own influence might be exercised from without, in the manner contemplated by the Bill, from the very outset. Under no other plan would the powers and responsibilities of these bodies be real. The plan thus formulated in the Bill commends itself to the Chief Commissioner as enabling Government to exercise all necessary control.

14. *Seventhly*, the heads of income assigned to the District Fund under section 21 are explicit and full enough, except that there is no clear provision under clause 1 (*d*) for voluntary grants from Municipalities. Such grants are pretty frequently made with very good cause to the District Funds to assist in the execution of works in which the Municipality is interested. There are small funds not mentioned in this section, but indicated by some Deputy Commissioners in their letters hereto appended, which might be made over to District Funds. But these would be better made over by the Local Government on its own motion; and this is provided for by clause 1 (*d*). All that it is necessary to enact by law in this respect seems to the Chief Commissioner to be included in section 21 of the Bill.

15. *Eighthly*, the very important question, whether any, or what, powers should be taken of raising rates for local purposes, now falls to be considered. The Chief Commissioner admits at once that one of the greatest difficulties in the way of making this measure a practical success is the want of funds. This is shown in the reports of the Deputy Commissioners of Hoshangábád and Nágpur on the manner in which the scheme contained in the Bill would be applied to their districts. The funds properly belonging to any one district would hardly stand division among several Local Boards; but these funds would of course be considerably supplemented by grants from Provincial Revenues and from other sources. Still the want of funds would be felt as soon as work was earnestly taken up. The necessity for raising increased funds would pretty soon become apparent; and the propriety of allowing the District Council to raise funds, or at all events to point out the need and suggest the means of meeting it by taxation as is now done by municipalities, seems to the Chief Commissioner unquestionable. But he would not advocate any provisions being contained in the present Bill for this purpose. At the outset, such provisions might be viewed with suspicion; and the whole scheme might only be regarded as an elaborate attempt to increase taxation without attracting much attention. It would be better to wait until the scheme had vindicated itself a little, and until the need for increased taxation was felt. The introduction of such provisions then would not only not throw odium on the scheme of self-government, but might even tend to popularize taxation.

16. *Ninthly*, the appropriation of funds to special works or to the requirements of certain local areas would best be regulated by rules to be framed under section 30. It is difficult to formulate in the law principles which would sufficiently regulate this appropriation without too much limiting discretion in individual cases. The general principle would be, in the Chief Commissioner's opinion, that money raised within any local area ought ordinarily to be expended within that area by the body vested with local control. But the charges incurred in the performance of the duties of the District Council would have to be met from the general funds of the district; and the execution of works affecting the district as a whole, or more than one sub-division, would necessitate power to allocate funds within certain limits being vested in the District Council. It would probably be found enough to provide generally in the Bill that funds could not be diverted from the control of the Local Board within whose area they were collected without the sanction of the Chief Commissioner, all details being left to the rules. It is doubtful whether even this provision is required.

17. *Tenthly*, the question of the grant of allowances to members of Local Boards and District Councils has been raised. The Chief Commissioner is of opinion that it would be well to remunerate them, (1) because it would tend to make the office of member more popular, and (2) because it would establish a claim on the energetic services of the members which they would thoroughly understand.

The Chief Commissioner does not think that the remuneration granted to mukaddams under the Central Provinces Revenue Act, 1881, should be held to cover the performance of the duties of member of a Local Board also. For these are special duties. A small remuneration, in the coveted form perhaps of a remission of revenue on a limited portion of his *sír*-land, or of the land in his cultivation, might be made to any mukaddam serving on a Local Board. The Chief Commissioner believes that it is proposed to give honorary titles to members of the District Council: this would be sufficient remuneration in their case, and it might perhaps be confined to the Chairman and Vice-Chairman. But the Chief Commissioner would propose that power should also be given to him to include in the rules framed under section 30 a rule to provide for the payment by the District Council of travelling allowance at certain rates to any member coming from a distance who should apply for it.

18. In concluding your letter under reply, you refer the Chief Commissioner to two points. "*First*, no definite position has been assigned to the

Commissioner of Division in the draft." The Chief Commissioner concurs with your observations regarding the difficulty of giving that officer any definite functions, but does not think it well to leave his position to be settled on the basis of a vague understanding. The fact that certain functions are expressly given to the Commissioner in the Bill, (*e.g.*) section 17 (3), will probably be held by implication to exclude him from the performance of others, unless they also are provided for. It might be enough to enact that the Commissioner shall exercise the same authority and control over Deputy Commissioners in the discharge of their duties under this Act, as he exercises over them in the ordinary revenue-administration of the country. Or the matter might be mentioned as one to be provided for by the rules to be framed under section 30. In any case, all mention of it should not be omitted.

19. "*Secondly*, it is thought possible that the Act may be inapplicable to some of the wilder parts of the Central Provinces"; and section 31 accordingly gives power of excepting any district or portion of a district from its provisions, if necessary. The exercise of this power will certainly be required; it is right, therefore, that the power should be reserved; and the Chief Commissioner thinks that this will be sufficient to meet the requirements of the case.

20. The Chief Commissioner has now followed you through your letter under reply and has discussed the main provisions of the Bill. It meets with his general approval; and he will lend his most cordial assistance in carrying out any such measure. He has very little, if any, sympathy with the view that the development of a spirit of self-reliance and of a power of self-government among the people of India would be a dangerous measure. On the contrary, he hopes and believes that it would interest leading and influential men in the stability of institutions in which they would play a real and honourable part.

21. Neither does the Chief Commissioner believe that this boon will not be appreciated by the people. There is no doubt that such views as are quoted by the Commissioner of the Nágpur Division are held by some members of the Native community. But this is due, in the first place, to misconception of the object and terms of the measure, as is seen from the Commissioner's own remarks; and, in the second place, to the very want of that political education which this measure is intended to afford. I am to add that the views quoted in that letter are not the views generally held by the majority of Natives of education and position. The public of Nágpur, though this is the seat of the Local Government, is not representative of the best thought and spirit of the Central Provinces. The influence of the corrupt and effeminate Native Court has been very demoralizing. The Chief Commissioner therefore does not regard the views quoted by the Commissioner as being representative of enlightened Native opinion throughout the Province. He believes that this Bill will generally be received as a boon, and as the proof of confidence in the people and regard for their interests on the part of Government.

22. It would be unwise at once to thrust self-government in all its fulness on a people unaccustomed to its exercise. But the Bill does not necessitate this. The areas under Local Boards would be as small as possible, so as to secure both local knowledge and local interest on the part of the members; but they need not be made too small at first. When funds increase and capable men become more common, they could be further reduced in extent. But a beginning could at once be made in decentralization. Similarly, appointment of members by election may have to be gradually introduced; and the appreciation of the privilege may want fostering; but all this is possible under the terms of the Bill. Again, the withdrawal of the official element at once may not be possible in most cases. But the Bill provides for this being gradually done. In a word, the Bill contains provisions for a scheme of complete self-government; but it also contains provision for the gradual education of a backward people up to that scheme. The Government of India may rest assured that, should such a measure as this Bill become law, it will be patiently and carefully, but also boldly and loyally, applied; and the Chief Commissioner is persuaded that he will have the cordial co-operation of all local officers in carrying out the aims of Government.

D. FITZPATRICK,
Secretary to the Government of India.

I.

INTRODUCTION.

Preparations for the Expedition.—In the Council held at Stonehouse, Ootacamund, on the 8th September 1881, which I had been asked to attend, it was settled that I should undertake the reconnaissance, and that Mr. Sub-Engineer Cormac should be attached to the party as my Assistant. Shortly afterwards I was supplied with maps and other information, while in G. O., No. 2294 W., dated 16th September, instructions were issued for my guidance.

2. *Tents and Stores.*—Tents were telegraphed for by the Secretary to Government in the Public Works Department, all over India; but time pressing, they could not be supplied sufficiently early for the expedition.

The Quartermaster-General's Department was indented on for tents, and it was believed that department would furnish the required number; but at the last moment it declined to supply any tents, as all available canvas—so it was stated—would be required for the troops to move into camp, in case cholera, which was flying about, should break out seriously at one or more military stations. I was therefore directed to procure what tents I required from those available at the Central Jails of Coimbatore and Vellore. Accordingly I left Coonoor on the 9th October, and proceeded first to Coimbatore and then to Vellore, where I selected such tents as seemed most suitable for the purpose in view, namely, combining lightness in weight with due protection from sun and rain, and reasonable comfort.

3. I had been decided that two complete sets of tents should be supplied for the expedition, so that one set should always be a day's march ahead, both in order to secure expedition in movement and a good sanitary condition of the party.

4. The number of tents selected—twenty—at first sight seems large; but it has to be borne in mind that two sets of tents were provided for every purpose, namely, one set for to-day's and one for to-morrow's camp; so that no one in camp should at any time be without shelter. This precaution was the more necessary, seeing that the expedition started in the face of the impending north-east monsoon and had to march through a country which has not the best reputation in the matter of malarious fever and its accompaniments.

5. The tents selected were—

(1) *For the Executive Engineer and his Assistant.*

	lbs.	lbs.
2 Bengal Sleeping Páls 12′ × 12′, each weighing		222=444
1 Hill tent 12′ × 12′, weighing		300
1 Bath-room for do.		30
1 Double-fly Bechoba 11′ × 11′		220
1 Bath-room for do.		30=580

(2) *For the Hospital Assistant and the Writer.*

1 Single-fly Bechoba 10′ × 10′		135
1 Rowty 9′ × 12′		93=228

(3) *For the Revenue Subordinate.*

	lbs.	lbs.
2 Cabul Páls 6′ × 7′		80=160

(4) *For the Police Guard, Stores and Baggage.*

2 French "tentes de troupe" 18′ × 14′		90=180

(5) *For Lascars and other Camp-followers.*

6 Cabul Páls 7″ × 8′		80=480
(6)—1 Small Sholdari for cooking in bad weather		55=55
(7)—1 Necessary Tent		30=30
(8)—2 Camp tents 7′ × 6′ for sundry purposes		60=20

Total 20 tents, weighing=lbs. 2,277.

NOTE.—Two of each kind of Nos. 6 and 7 were not available at short notice.

6. The tents having been selected, there was a further week's delay in Madras, since all the tents could not be got ready for shipment by the British India steamer of the 13th October to Vizagapatam. This week was utilized by me in Madras in seeing the heads of the Government Departments concerned and ensuring the timely despatch of all the stores, scientific instruments, &c., that had been ordered to be supplied. Some of these had been already sent on by the steamer of the 7th. On the day (20th October) when I embarked at Madras for Vizagapatam, some of the tents from the Vellore Central Jail had not arrived at Madras.

For these I had to wait a week at Vizagapatam, where I arrived on the 23rd.

7. The week at Vizagapatam was made use of in unpacking, examining and repacking the tools, stores, instruments, &c., supplied; in pitching the new tents and making pegs for them (as most of the tents had come without pegs); in engaging a crew of tent lascars; observing aneroid, studying the maps, &c. I also conferred with the Master Attendant about the aneroid readings at sea level which are to be daily sent to me in camp for ascertaining altitudes in the country traversed.

8. There was a burst of the north-east monsoon and somewhat heavy rain at Vizagapatam on the 31st October and 1st November, after which the weather cleared up.

I left Vizagapatam for Vizianagarum on the 2nd November.

9. *The tract of country between Vizagapatam and Párvatipuram* was not reconnoitred, as it is well known to the Department of Public Works officers, and the levels are all on record.

This portion was therefore dawked over.

10. At Vizianagarum, which is 184 feet above sea level, I saw the Acting Agent, who gave me some useful information about such parts of the Jeypur country as are personally known to him; also His Highness the Maharajah, who seemed greatly interested in the success of the project and kindly lent me four of his elephants to carry tents and other camp equipage all the way to Raipur and back.

11. From Vizianagarum I telegraphed to the Secretary to the Commissioner of the Central Provinces, giving him my proposed route with the probable dates of arrival at places, and asked him to instruct the Rajah of Kálahundy and the Zemindars of Patna, Kariál and others to attach some responsible person to my camp to aid in procuring guides, camp supplies, coolies, &c.

12. I left Vizianagarum for Párvatipuram on the 7th November; the height of the latter place above sea level was ascertained to be 395 feet.

13. *From Párvatipuram to Ryaguddah.*—On the 12th November the reconnoitring party started on its march from Párvatipuram to Ryaguddah, one camp having been sent ahead the previous day. On the 12th began the regular reconnaissance, the taking of measurements, observations, notes, &c. The weather had been fine hitherto; but now there were signs of impending rain.

14. The whole camp train consisted of 20 tents as before specified,
4 Elephants for carrying tents, &c.,
12 Attendants on do.,

40 Pack bullocks for carrying small tents, stores, medicines, instruments, camp equipage, baggage, &c.,
13 Men, attending bullocks,
10 Bullocks to carry food and kit of the bullock men,
3 Men attending on these bullocks,
1 Hospital Assistant,
1 Hospital servant,
1 Camp Writer,
18 Lascars,
6 Private servants,
3 Ponies,
3 Horse-keepers,
3 Grass-cutters;

Total 61 men, with 20 tents, 4 elephants, 50 pack-bullocks and 3 ponies; besides a daily varying number of coolies to carry instruments and sundries, and sometimes to relieve or assist elephants or bullocks in case of need; or carry the improvised dhoolies.

15. The Dewán to His Highness the Maharajah of Vizianagarum had informed me that the elephants—which were not large ones—should not carry more than 500 lbs. each. However, to this the mahouts generally objected on the journey, on the plea of the elephants being sick and sore, which they not unfrequently were. Two additional elephants were kindly lent to the party for a time, one by the Rajah of Bisemkattak, the other by the Manager of the Bindra Noagarh Estate.

But even with this assistance a number of tents and nearly all stores and baggage had to be carried by bullocks.

The elephants, in addition to the tents, had to carry some of the mahouts and their kit, and generally a number of sick camp followers who were unable to march.

16. The pack bullocks were engaged for the whole journey from Párvatipuram to Raipur and back. This proved a very effective arrangement, as thereby a certain amount of carriage could always be depended upon; while if we had relied upon coolies only, we should in many places have been unable to obtain the number required, and thus the party would have been delayed in the jungles.

WALTAIR,
18th April 1882.

K. F. NORDMANN,
Executive Engineer.

II.

No. 14-R, dated Ryaguddah, 16th November 1881.

From—K. F. NORDMANN, Esq., Executive Engineer on Special Duty,
To—Colonel R. H. SANKEY, C.B., R.E., Secy. to Govt., Public Works Dept., Madras.

In continuation of my letter No. 12-P, of the 12th instant, I have the honor to report that the reconnoitring party left Párvatipuram on the 12th and arrived at Ryaguddah,* a distance of 30 miles and 6 furlongs, on the 14th instant, having satisfactorily attended to all necessary measurements, observations, the taking of notes, &c.

* Distance of Ryaguddah from Vizagapatam 116 miles and 6 furlongs.

2. The weather, which had been fine up to the 12th, assumed a monsoonish appearance on the night of that date. It was cloudy on the 13th and 14th, with slight drizzling rain; yesterday, the 15th, the clouds gathered in a threatening manner; there was a heavy shower in the afternoon, and steady and continuous rain last night.

3. The track, which is passable for carts in the dry weather, from Párvatipuram to this, crosses the Narrainputnum river in the seventh mile, and then enters the valley of the Nágavully (or Chicacole) river, in which it runs up to Ryaguddah, keeping always within half a mile or so of the river bank. On both sides of the track are low ridges of hills. The valley is from one to three miles wide. The track is almost level, the longitudinal slope of the valley being very gradual.

4. The cross section is mostly flat; in some places the ground is undulating and cut up by ravines and large gullies caused by erosion, but generally it is level or nearly so. There is very little rock, and there are no difficulties in the way of a road or railway.

5. The soil, as a rule, is very fertile, though frequently of a light description. There is a good deal of jungle along the track, but less jungle than cultivation. The latter consists chiefly of dry crops, and there is also some paddy and sugarcane.

6. Villages are about a mile apart, and, on the whole, the country is sparsely populated; there is room for a greater population.

7. The hill ridges limiting the valley of the river are well wooded with trees and shrubs, and patches of cultivation are to be seen on the hill sides. The ippa tree grows here, besides tamarind, mango, jack, mathi, black wood, yégi, cashewnut, acacias, &c.

8. The dry-crops consist of six different oil seeds (as per margin); three fibrous plants (ganja or Indian hemp and two kinds of flax); cholum, maize or Indian-corn, horse-gram, green-gram, ragi, combu, and three or four other kinds of food grains (gantalu sámalu údalu, and korralu).

Gingelly.
Two kinds of lamp oil.
Castor oil.
Oil from mustard seed.
Oil from the ippa tree seeds.

9. Of vegetables, the people cultivate yam, pumpkin, cucumber, water-melon, plantain, brinjal, bhírkai, bendakhai (hybis-cus), &c.; tobacco is also largely grown.

10. Of minerals, there are kunkur, limestone and iron ore. The ore is smelted at Jummadahpettah, 10 miles south of Ryaguddah. Along the whole route there is kunkur limestone to be found, and suitable clay for brick-making. Building-stone will have to be quarried in the parallel hill ridges confining the valley of the river. The prevailing rock is gneiss, frequently studded with patches of quartz, and sometimes with red garnets.

11. The traffic I met is chiefly carried on bullocks. I saw paddy and hides coming from Ryaguddah, Bengal gram from Kálahundy, rice from Sumbulpoor; all going to Párvatipuram.

12. The Ooria people and language begin about 8 miles north of Párvatipuram.—There are some Khónd villages.

13. The drainage encountered between Párvatipuram and Ryaguddah is of an ordinary description; the large streams to be bridged are the Narrainputnum river in the seventh mile, 250 feet wide and 14 feet deep in flood; a stream in the sixteenth mile, 150 feet wide and 5 feet deep; and the river near Ryaguddah, 425 feet wide with a maximum depth of 22 feet.—The streams, as a rule, have sandy or gravelly beds; no rock for foundations, except in one or two cases, being visible near the crossings. There is a good rocky bridge site for the Ryaguddah river.

14. I am preparing a continuous section of the country as I march along, which will be accompanied by a narrative descriptive of all prominent features and of the particular heads alluded to in paragraph 12 of G. O., No. 2294 W., dated 16th September last, as well as by sections of large streams.

15. The height of Párvatipuram above sea level is 395 feet; that of Ryaguddah I have not yet been able to calculate accurately, as the last aneroid readings from Vizagapatam have not yet reached this.* The aneroid here reads on an average 29·35, showing Ryaguddah to be about 700 feet above sea level.

* Just received; altitude 687 feet.

16. I have not got the maps (scale one mile to the inch) of the country between Párvatipuram and Ryaguddah.

17. The health in camp has so far been good, except that the Hospital Assistant and the Writer have had a slight attack of fever.

18. The Revenue subordinate (paragraph 15 of the above quoted Government Order) has not yet joined my camp; it having been found difficult to engage a suitable man willing to go, and able to speak English, Telugu, Oriya, and Hindustani; I have this day written to the Agent to the Governor at Vizagapatam and requested him to endeavour to supply a man with all or most of the qualifications named.

19. I leave this to-morrow for Bisemkattak, Ombadóla, Asurgor and Bógor; while Mr. Cormac marches *viâ* Singapore to Bondesor, and thence to Dádpur and Bógor. We propose to meet first at Lonjigar, to complete the section of the line from Singapore to Ombadóla; and then at Bógor, where I expect to be about the 1st proximo.

20. I shall thank you to inform me whether it is desired that I should march from Jalbal (seven miles south-east of Nára) northwards to *Onki* about 20 miles, and back. If I do not hear from you about this in time, I shall make this march.

21. I request that two fresh perambulators may be sent for me to Raipur, to await my arrival there, as my perambulators shew signs of weakness and may be out of order and unserviceable by the time I arrive at Raipur.

22. I beg that letters may, till further notice, be addressed to "Ryaguddah, care of Sub-Magistrate, to be forwarded."

III.

No. 9059, dated Nagpur, 16th November 1881.

From—The Secretary to the Chief Commissioner, Public Works Dept., Central Provinces,
To—The Secretary to the Government of Madras, Public Works Department.

I am desired by the Chief Commissioner to forward, for the consideration of the Madras Government, the accompanying copy of letter No. 6812, dated 10th instant, from Commissioner, Chattisgarh Division (with enclosures), with reference to the reconnaissance, ordered by the Government of India, of the country between Vizagapatam and Raipur for a line of railway.

IV.

No. 6812, dated 10th November 1881.

From—Colonel C. B. Lucie Smith, Commissioner, Chattisgarh Division,
To—The Secretary to the Chief Commissioner, Public Works Dept., Central Provinces.

I have the honor to acknowledge the receipt of your letter, No. 7084, dated 1st September last, with its enclosures, and to say, after careful inquiry, that the project of taking the Vizagapatam-and-Raipur Railway west of the Mahánadi is doubtless feasible, but appears hardly advisable; because such a line must necessarily pass through a stretch of difficult country in the feudatory State of Kankér, which would entail a cost of construction that would probably more than counterbalance the gain obtained by avoiding the Mahánadi, while the line would lie altogether apart from the existing trade route.

2. The natural line I should judge to be that followed at present by the Brinjári traffic from Vizagapatam, which passes through Parvatipuram, Koontipenta, and Singapore, and crosses the Kálahundy border, 24 miles, as the crow flies, S.S.E. of Bhavánipatnam (called "Bondesor" on the maps). In this distance of 24 miles the only obstacle is the Músa ghát, which is, as the crow flies, about 12 miles S.S.E. of Bhavánipatnam. From Bhavánipatam the road runs to the western border of Kálahundy, and then in a generally N.N.W. direction to a point about two miles east of Arang, where it strikes the Raipur and Sumbulpur road.

3. With ordinary surface repairs the whole road from Bhavánipatnam to Raipur is easy for wheeled traffic during the open season, and it lies through fertile and for the most part well-cultivated country, as will be seen from the accompanying extract from notes recorded by me when marching along this route with carts in February and March last. I have estimated its present length at 179 miles, but probably by straightening the line in places the distance may be reduced to about 165 miles, and of this distance only some 35 miles are in feudatory territory.

4. Looking at the proposed railway from the Central Provinces point of view, there can, I think, be no question, but that the line most calculated to open out this division is the one I have sketched, and I should judge that the Vizagapatam authorities are in its favor. I have therefore written to Mr. Nordmann at Bhavánipatnam recommending it to his attention.

Statement of Stages from Bhavánipatnam to Raipur.

No.	Stage.	Remarks.
1	Bondesor or Bhavánipatnam to Nandol.	Came out here *en route* through Kariar to Raipur, distance about 12 miles; road fair for the wheeled traffic of the country; soil sandy running into brown and black; rice, tilli, peas, pulses, wheat and chenna grown; country fairly cleared, and the following villages passed through:—Singjerram, Pukjori, Barjola, Tiljori, Kharra, Tekri, and Atangura. Met many small country carts taking rice to to-day's bazaar at Bhavánipatnam. Nandol has a fair encamping ground on the bank of the Sogora river, which has clear water.
2	Nandol to Daspur	Distance about 10 miles; road good; in many places raised and generally aligned and planted with roadside trees; country generally well cleared and cultivated with rice, pulses, some chenna and sugarcane; high and picturesque hills clothed with forest and bamboos until the Tel river is reached, where the hills open out; soil sandy running into black and brown; passed through or near Kendupati, Omatola, Makartola, Bondagaon, Poondah, Farangaon, Omta, and Daspur; good shade at Daspur, but the grove is close to sugarcane fields and a bunded nullah; passed several nice groves on road.
3	Daspur to Golamunda.	Distance about 9 miles; came through Dumerbahal, Valuchua Kholiakani to Golamunda; soil black the first half and sandy the second half; a fair amount of cultivation, chiefly rice and castor; a few teak trees appear near Golamunda; a mango tope here with fair shade, but not a nice encamping ground. There is a Kálahundy Police post here.
4	Golamunda to Nandgaon.	Distance about 9 miles; past the Kariar frontier near Dhungiamunda for three-fourths of the way black soil and afterwards sandy; country fairly cleared, road rough on the Kariar side; came through Tumra, Dhungiamunda and Cholna to Nandgaon, which is a good encamping ground, having pleasant shade and clear water from the river near.
5	Nandgaon to Lorka	Distance about 9 miles; road easy, although not always properly marked out; country well cleared and fairly cultivated; soil sandy and black; villages poor looking and very dirty; teak about; passed through Borgaon, Gondabahali, Gomargura, Kampur and Ankapur to Lorka; rice, chenna, tilli and castor chiefly grown; good shade at Lorka, but too close to village, and tank water fair.
6	Nandgaon to Polsodar.	Distance about 9 miles; soil chiefly black; small jungle and high grass with few clearings; passed through Khirmal and Lanji to Polsodar; fair shade and fair water, but a good deal shut in.
7	Polsodar to Kolinga.	Distance about 6 miles; soil sandy and black; not much cleared country; small jungle; road fair, but narrow; passed through Domjer. Kolinga has a large clearing and a good place for encamping with abundant shade; water from the river near.
8	Kolinga to Rojona	Distance about 6 miles; road good; soil sandy; crossed the Under river twice; passed some clearings belonging to Chichali and Dhargaon, otherwise the whole distance was through forest chiefly of large trees of all descriptions except teak and sal-rojona; has a fair extent of cleared land, with fair shade, and clear water from the Under river.
9	Rojona to Kisima	Distance about 9 miles; soil black and sandy; country fairly cleared, but not much cultivation; small open jungle; passed through or near Belgaon, Agarom, Bila, Bandanpali to Kisima; villages all small, but many have good mango groves; good shade at Kisima, but encamping place too low.
10	Kisima to Torbor	Distance about 9 miles; road good; small jungle the whole way; soil at first black, afterwards sandy, open clearing at Torber, and clear water but no shade.
11	Torbor to Tarnot	Distance about 12 miles; road good for the first half and then rocky and stony and over broken ground by the hills; soil of the first half chiefly black; only one village Limdi passed through; country has once been fairly cleared, but now has retrograded.

Statement of Stages from Bhavánipatnam to Raipur—continued.

No.	Stage.	Remarks.
12	Tarnot to Sarabong	Distance about 7 miles; soil chiefly sandy; road good; country cleared, but not much cultivation. There are several tanks here and some sugarcane cultivation; villages passed through this morning were Jilmila, Rothipali and Malibata.
13	Sarabong to Tendubarra.	Distance about 6½ miles; road fair; no running water in the Jong river; passed through Pathalghutkuri; the whole distance from this village to Tendubarra under forest, but not unpleasantly dense; soil sandy chiefly; no teak and only sál here and there. Tendubarra has a fairly good clearing and fair water, no shade Tendubarra is an high tableland, probably 1,400 or 1,500 feet above the sea. There is a good clear water from a kutcha well here.
14	Tendubarra to Bodrabanda.	Distance about 11 miles; road good; soil hard, red loam, no stones and only slightly rocky in one or two places; descents and ascents easy, nullahs not troublesome; in fact as good a country road as one would wish, and this is the road the Kariar Amlah induced Mr. Fisher not to travel over in 1873 and which they tried to induce me not to take. It should be widened and improved and will make a capital cart-road at all seasons; passed Sirgidi, a small hamlet of Kariar, and a little way beyond entered the Khalsa of Raipur and passed through Charbati and Koknajer to this. There is some shade here and clear water from a kutcha well; all country over forest, but neither teak, sál nor bamboos to bo seen.
15	Bodrabanda to Karti	Distance about 11 miles; soil sandy; country well cleared; road fair, but heavy in some places from sand; rice and some sugarcane grown. Karti has a good encamping ground and has a Police station-house.
16	Karti to Mahasamund.	Distance about 9 miles; soil at first black, afterwards sandy and then gravelly; country fairly cleared with mowah trees about; road fair and apparently much travelled by carts. Mahasamund is a large village on a gravelly rise, with fair shade at a pleasant distance from the village; rice, sugarcane, ulsi, and chenna grown.
17	Mahasamund to Paragaon (2 miles east of Arang).	Distance about 8½ miles; country cleared throughout; soil brown and yellow and laterite; crossed the Mahánadi by the Gorari ghât. The river here is much narrower than by the Arang crossing. Executive Engineer is making a branch road to this crossing from the Raipur and Sumbulpur road.
18	Paragaon to Nuagaon.	At Paragaon the Raipur and Sambulpur road is struck, and the whole distance from Paragaon to Raipur is by that road. About 2 miles from Paragaon, Arang, which has a considerable trade with Kálahundy, is reached, and from Arang to Nuagaon the distance is about 12 miles: country cultivated throughout.
19	Nuagaon to Raipur.	Distance about 12 miles; country cultivated throughout.

Note.—The total distance from Bhawánipatnam to Raipur by this route is about 179 miles, but I should judge that by straightening the line in places the total distance may be reduced to about 165 miles.

C. B. LUCIE SMITH,
Commissioner, Chattisgarh Division.

V.

No. 19-C, dated Ombadola, 26th November 1881.

From—K. F. Nordmann, Esq., Executive Engineer on Special Duty,

To—The Secretary to Government, Public Works Department.

In continuation of my letter No. 14 R., dated Ryaguddah, 16th instant, giving an account of the *reconnaissance* from Párvatipuram to Ryaguddah, I have the honor herewith to forward an extract from my diary from the 17th instant up to date; from which it will be seen that there has been no difficulty so far which could in the least obstruct a road or railway. A cart came with the camp to Bisemkattak, and might have come further.

2. The route travelled over has been, practically, almost a level; at least, the gradual ascent from the coast is a very easy one.

There has been nothing like a ghât or sudden and steep ascent in the way, so far; all has been plain sailing, and the people here say there is no ghât either, between this and Asurgor; this I will see to-morrow, and report on from Bôgor.

3. *Cooly labor and material* for work (such as building stone, clay for bricks, timber, &c.) are nearly everywhere available.

4. *The country* is, on the whole, well populated and cultivated, and might even be called rich; certainly, when its natural resources come to be developed, it may look forward to a very prosperous future.

5. *The people and their chiefs* are friendly disposed, and there has been no difficulty, so far, regarding guides, camp supplies, coolies, &c.

6. Along the entire route a great deal of *grain and other produce* is grown, much of which is now sent by pack bullocks to Parvatipuram, where it is bought up by merchants and distributed over the country; all this will go to swell the *traffic* of the railway. Besides this local traffic, there is a regular through-traffic from Raipur, Sumbulpur and intermediate places, to Parvatipuram.

7. I met Mr. Cormac, according to previous arrangements, at *Lonjigar* on the 24th. He had come over ground as high as 1,603 feet, half way between Singapore and Lonjigar, while I have not yet encountered a greater altitude than 1,346 feet.* Mr. Cormac marched back on the 25th to Chôthopoor (5 miles north of Singapore); thence he proceeds over the Músa ghât (near Kúndrú) to Bondesôr, Dádpúr and Bôgor. I leave this for the last-named place to-morrow *viâ* Asurgor.

* Except at *Lonjigar* which is 1,396 feet.

8. *Readings of aneroid and thermometers* are taken at every mile, or so, along the route, or at every change of gradient, or remarkable feature of the ground, and at every stream. The "battery" of three aneroids, in a case, is registered regularly at 11 A.M. and 4 P.M. in each camp, so that the heights of all halting-places can be readily ascertained and the others interpolated. It is not feasible to read the "battery" at 10-30 A.M., as we never reach the camp before eleven, having started with daylight. All the original records of every reading, whether made on the coast or on the march, will be carefully preserved, for future reference if necessary.

9. *The longitudinal section of the country* traverfed cannot be conveniently prepared on the march, partly because all spare time, when the daily march is over, is occupied with packing, unpacking and general camp duties, and partly because the aneroid readings at the coast are not at hand when wanted, but come in a week or so after date, and will arrive still more irregularly later on. For the same reason, the altitudes now reported, and arrived at by simple methods without tables are, although very nearly accurate, strictly only approximate; the final altitudes will be given in the *section* which I shall prepare at Raipur, where I intend to make a halt of ten or twelve days to bring up arrears of reports, accounts, &c., and refit the expedition for the journey southwards.

10. This part of the reconnoissance I propose to carry out in two divisions; one party proceeding from Raipur, *viâ* Dhamtari and Kankér, to Raigarh; while the other marches *viâ* Rájim to Noagarh and up the valley of the Sondor river, to Raigarh.

11. *The monsoon* has, on the whole, been merciful to the party; only one tent has been blown down; the people say the rains are over, the cold weather has commenced, and that there will be no more rain, although last night heavy clouds came up again from the north-east, but they have passed on.

12. *The health in camp* is satisfactory; the Hospital Assistant has recovered from his attack of fever; there are only a few slight cases of cold and fever.

13. I send, by parcel post, three specimens of *quartz* (which I have had pulverized for convenience in transit), two from Gowdugooda and one from

Kordáband. Both places are between this and Bisemkattak. I should be glad if the specimens could be chemically analyzed and assayed, to see if they contain any valuable metal.

14. So far the special *tappal* despatched by the Sub-Magistrate frem Ryaguddah, has arrived in camp pretty regularly twice a week. How it will be beyond Bôgor, remains to be seen.

I request that all orders, &c., despatched after receipt of this, may be addressed to "*Arang, Central Provinces, to await arrival,*' where I hope to be about the 20th proximo.

P. S.—I must apologize for the indifferent calligraphy and the numerous corrections, &c., in this letter and accompanying extract from notes; the only writer I have been able to engage for the tour is but an indifferent office hand.

VI.

Extract from Notes of Reconnaissance between Bisemkattak, Ombadóla and Lonjigar, 17th to 25th November 1881.

From Ryaguddah to Bisemkattak.—Distance 29 miles 4 furlongs 191 yards.

It had been arranged that while I marched *viâ* Bisemkattak and Ombadóla to Bôgor on the Tél Nadi (which is a tributary of the Mahánadi), Mr. Cormac was to proceed *viâ* Singapore, Bondesór and Dádpôr, likewise to Bôgor, where our camps were to be rejoined. Meanwhile we were to meet, *en route*, at Lonjigar; I coming from Ombadóla, and Mr. Cormac from Singapore, so as to complete the section of the line from Singapore to Ombadóla. Accordingly I left Ryaguddah on the 17th November for Bisemkattak, while Mr. Cormac started on the 18th for Singapore. His own report on his march, with sections, &c., will follow.

17th November, Ryaguddah to Gingerabádi.—Distance 8 miles 2 furlongs.—Rise 49 feet.—Marched through a fine, level, upland country; light soil, well cultivated with extensive dry crops and some paddy. No jungle in this part of the valley, which is formed by two parallel ranges of hills, about 3 miles apart. Saw scarcely an acre of uncultivated land for several miles. The couutry is easy to travel over; there is a bandy track to which the Local Fund Board are doing some repairs.* Met some rice coming from Patna and Kálahundy, going to Parvatipuram. There are good topes for camping along the whole route; good water is almost everywhere to be found in the small hill streams.

* But the grant is too small to do much good.

In the third mile there is some broken and irregular ground at the large village of *Comellypettah*, 5½ miles from Ryaguddah; the *Naganully river* has to be crossed below its junction with a smaller affluent. The river in flood is 363 feet wide with a maximum depth of 15 feet. The bed is sandy, the low banks are flooded in the heavy rains, there is no rock for foundations visible.

To the north of this river the level upland valley continues as before; there is some jungle, but still much dry cultivation, with numerous fine mango, tamarind, fig, ippa and other trees growing in the fields. *Tree planting* is largely attended to by the people, and the trees are fenced in and cared for.

Topes occur frequently. The names of villages I passed are Kulliagoodah, Kotapettu, Prodiguda, Comellypettah, Jugganaidupetta.

Near *Gingerabádi* a number of rocky hillocks are dotted over the valley. The rock is gneiss. There is a swampy pond, fed by hill drainage and covered with lotus flowers, near the village; the road passes below the pond. The *water* here is not very good. The fine upland valley now becomes narrower, the ground more uneven, the extent of jungle greater.

The soil here is rich, of a dark brown color, almost black. There is a good deal of *paddy cultivation*.—It rained in the afternoon and at night.—Thermometer 80 to 85° F.; height of Gingerabádi above sea level 736 feet.

18th November. Gingerabádi to Ballingy.—Distance 10 miles 4 furlongs 123 yards.

Rise 40 feet. Thermometer 74 to 86° F.; height of Ballingy above sea level 1,136 feet.—Started as usual at 6 A.M.

The sky was covered with clouds, the atmosphere moist, the low hills were wrapped in mist.

Jungle and cultivation, both wet and dry, alternate along the track.

The soil varies, being sometimes sandy, then clayey, loamy, some black. The track is smooth and level, and the country studded with small hillocks, 100 to 200 feet high, some rocky, some with patches of cultivation, the latter chiefly castor-oil and cholum.

In the third mile the track leads for some distance along a gently sloping hill side. There is more jungle and less cultivation. Some *rock* is met with; gneiss mixed with quartz and conglomerate and containing occasionally red garnets (yerra kallu).

Trees abound in the cultivated fields, such as ippa, fig, tamarind, blackwood, matti, mango, and jack; fine old banyan trees, with far spreading leafy roofs supported on root

pillars dropped from the branches; and others. The soil is mostly light, but seems to grow anything.

In the fourth mile there is some uneven and broken ground on both banks of a *stream** which when in flood is 350 feet wide, with a maximum in depth of 15 feet.

* 3 miles 3 furlongs 110 yards.

The bed is sandy, there is no rock visible near the crossing; one bank is high, the other low (alternately) and flooded.

The river lies in a deep bed. The *traffic* I met consisted largely of Bengal gram (chenna) from Kalahundy, going to Párvatipur. On the northern bank the ground rises rapidly from the river bed, and is covered with light jungle.

In the fifth mile near the village of *Gújelpádu*, there is some undulating ground, but offering no obstacle. Small *kunker* limestone is here scattered over the surface, and there is a tank near the village. At the sixth mile is the village of *Sunta Baddigáum*, at the foot of a low ridge covered with jungle. The valley here is only a mile and a half wide; the western ridge rocky. The track continues smooth and level over light soil, as before. Wet and dry cultivation, paddy, sugarcane, ragi, gram, linseed (sersá), gingelly, rape, mustard, cholum, cumbu, castor-oil, and tobacco, &c., date and sago palms.

In the seventh mile is a *stream*, 130 feet wide and 10 feet deep in flood, with ill-defined banks, bed sandy with gravel, no rock visible.

Country hilly, track undulating, partly along hill side, more jungle than cultivation. The sandy path descends slightly to *Báthpúram*, eighth mile.

In the ninth mile another *stream*, 112 feet wide and 8 feet deep in flood. Banks alternately high and low, one bank flooded. Bed, hard soil with small stones and gravel; no rock near. For some distance through hilly jungle over broken ground; no cultivation; kunker, limestone on the surface. Then flat country again, with patches of dry crops and numerous trees; *some good timber, viz.*, teak, matti, and blackwood.

The sides of the hill ridges forming this valley are now wooded, and partly cleared for cultivation.—Clouds threatening ahead; rain at night.—One of the Vizianagram *elephants* was sick and sore, and refused to work; some of the tents had to be carried by pack bullocks and coolies.

There is a *thatched bungalow at Ballangy* belonging to the Bisemkattak Rajah, who had sent a Kotwal to meet me here to act as guide and procure supplies, coolies, &c. The village is a very small one, but the surrounding country is well populated, little hamlets lie hidden in nooks and corners.

19th November, Ballangy to Bisemkattak.—Distance 10 miles 2 furlongs.

Rise 18 feet. Thermometer 74 to 84° F.; height of Bisemkattak above sea level 1,114 feet.

Distance of Bisemkattak from Vizagapatam, 146 miles 4 furlongs.

Low clouds and mist. The ground along the track *rises steadily*; there is much jungle and little cultivation; the valley becomes narrower. The path runs along the foot of the eastern ridge, where very slight hill side cutting would be required for a road or railway. This ridge is covered with dense jungle and forest; the soil is good and the vegetation luxuriant, which shows there must be ample moisture; *coffee* ought to thrive here. The ridge on the left is more rocky, the alluvium on its eastern aspect partly worn away by the north-east monsoons of ages. The hill sides are cleared in patches, whereon grow the castor-oil plant and cholum.

A mango tope in the third mile; country again flat, the two parallel ridges only about a mile apart; they rise here up to 500 feet. Very few patches of cultivation along the route.

At 3 miles and 3 furlongs a *stream*, width and depth in flood, respectively, 85 feet and 8 feet. Banks well defined, bed stony, but no solid rock apparent.

The track now runs across the slope of the western ridge; very slight hill side cutting wanted for the road. At the fourth mile a small but deep *nullah*: bridge, of 10 feet span, 15 feet high, required.

The ground is uneven, cut up by gullies. Some of the peaks of the *Niámgiri hills* come in sight. Soil brown clay mixed with sand; jungle. Another *stream*, smaller than the last, near the village of *Baliapodor*. The track here changes again to the slope of the eastern ridge, on which there is some rock cropping out along the track. The ground is irregular, but not difficult, for a road. At 4 miles and 6 furlongs there is a bifurcation of tracks, one line leading to Bisemkattak, the other to Bárigudа and Tikirapara.

Near Satikóna is the summit level of the track, so far, 1,346 feet above sea level; from here the ground descends to Bisemkattak. I met some *carts with rice*, from Tikirapara, going to Parvatipuram. The cart-men complained that the Sakal (Dhoby) of Bariguda charged them one anna for each cart as a toll; hence they came by this track instead of the easier one by Bariguda.

Aneroid read 28·72.

Altogether I have not met very much *traffic* along this line up to this, perhaps 150 bullocks a day. The Brinjarries seem to prefer the route by Singapore to and from Raipur, on account of the open and level ground to be found along that route.

There is much cultivation round the village of *Satikóna*. From here begins a steady descent along the slope of the eastern hill range. At 6½ miles the track passes through a *saddle*, thence the descent continues towards *Matakeri* and *Batugada*.

There is light jungle and but little cultivation. Soil ordinary reddish clay with sand. The path bends to the eastward to get round the Bisemkattak hill.

Bisemkattak is a little way out of the straight line to Tikirapara, but being a place of some importance it would seem correct to take the rail to Bisemkattak and have a station there.

The path continues through jungle, with occasional clearings and sparse cultivation, over level ground along the foot of the hill, to *Bisemkattak*, which is situated in the midst of hills and jungle, with a considerable extent of dry crops and paddy fields. To the west rise nearly up to 5,000 feet the peaks of the beautiful *Niámgiri hills* (the nearest only 5 miles from here); a range some 20 miles long by 5 miles in width, covered with jungle and forest.

If the rail is taken here, these hills may in time become a local *sanitarium* as well as a resort of planters. *Coffee, tea, and cinchona* should thrive on the slopes.

There was *heavy rain* on the night of the 19th; one of my tents was blown down and damaged. It rained on the 20th during the day, and again very hard at night. The monsoon seemed full upon us. I despatched a camp to Kodáband *en route* to Ombadóla.

20th November, halted at Bisemkattak.—The Tát Rajah (who pays tribute to the Rajah of Jeypur) was so civil as to call upon me. He speaks Ooriya and some Hindustani. He expressed himself highly pleased with the prospect of a railway, and offered all assistance in his power to the reconnoitring party. He has been reigning for the last seven years. His people promptly furnished guides, coolies, camp supplies, &c., and he was also good enough to lend me one of his elephants to accompany the party as far as the Tél Nadi, to relieve the Vizianagram elephants, one of which has a sore on the shoulder, seems much fatigued, and is unable to carry its proper load.

I returned the Rajah's visit within an hour, and he asked me to inform the Government that he had done all he could in furthering the expedition, which I have much pleasure in herewith bringing to notice.

The Rajah sent a Kotwal with me to assist my camp on the road. The Police Inspector, an Ooriya man, also offered to accompany me, which offer I accepted; his beat extends as far as Ombadóla, and he made himself very useful in camp and on the march.

The Hospital Assistant still suffered from fever at Bisemkattak, but has since been free from it. He brought a cart to this place all the way from Parvatipuram, but sent it back from Bisemkattak, as it has become difficult (though not impossible) to take the cart further. Being sick, he has now moved onwards in an improvised dooly.

The general health in camp is satifactory.

From Bisemkattak to Ombadóla. **Distance 23 miles 7 furlongs.**

Distance of Ombadóla from Vizagapatam 117 miles 3 furlongs.

21st November, Bisemkattak to Kordáband, **12 miles. Rise 38 feet. Thermometer 69 to 77° F; height of Kordáband above M. S. L. 1,192 feet.**

A fine morning, the clouds rising, the sky gradually cleared up, a cool northerly breeze set in, and it seemed as if the monsoon had passed on southwards for good. There was also a change in the temperature; it suddenly became cooler.

In the first mile a *stream* was crossed, 100 feet wide when in flood and 6 feet deep; bed, sandy shingle; no rock; gently sloping banks.

After passing through half a mile of *paddy fields*, the track lies through dense jungle, between two low ranges of hills. The soil is light clay, mixed with sand, and sometimes stony, very little rock.

The villages passed were *Puttamunda, Goutakal, Gordigaon;* a small *stream* (at 3½ miles) near the latter, requiring a bridge of 10 feet span, 5 feet high. Some dry cultivation near the villages; otherwise dense jungle.

Two furlongs further a larger *stream near Goilkóna*, 25 feet wide by 5 feet deep; rock for foundation. Some paddy-fields here. Near the fourth mile the village of *Bondiguda* with *extensive paddy-fields*. Further on *Burchiguda;* dry cultivation in the midst of jungle.

Junction with track from Satikóna to Tikirapara. At 5½ miles the village of *Depaguda*, with *hundreds of acres of rice cultivation*, all by means of little channels taken off from the hill streams. Then some open ground, not cultivated. *Stream* 25 feet wide and 6 feet deep; high banks; no rock; bed, sand with shingle. Some paddy and *sugareane*.

Village of *Dendra*.—Track goes on through jungle; low hill range on the left, with a few patches of clearing. Very little traffic along this route, which may be owing to the monsoon. Some carts were loading rice in the fields; the crop is just being cut.

At 7¼ miles, *Tikirapara*.—A large double village, *viz.*, for Paiks and Khonds, 100 houses. Tank, wet and dry cultivation. A hundred bullocks, with Bengal gram, from Kalahundy to Parvatipuram.

Numerous trees have died in this part of the country, which may be owing to the effect of the droughts of late years; some men said the trees had been ringed preparatory to being felled for timber and so killed, but I saw the rings only in very few instances.

At 9½ miles a *stream* requiring three spans of 30 feet each, height 10 feet; bed, shingle, no rock. Banks low and flooded; jungle; village of *Jomaraguda;* some dry cultivation.

Chellanalla village, 10th mile. Fine tope for camping.

11th mile.—Small *nullah*, waterway required 10 feet wide, 5 feet high; jungle here and there cleared.

12th mile.—*Kordáband*, dry and wet cultivation; fine tope, good water. The Sub-Magistrate of Gúnpúr had sent a peon here to attend my camp.

Height of Kordáband above M.S.L. 1,192 feet.

Good camping ground. Tank; thatched bungalow; rich dark soil. *A quartz reef;* sample powdered and sent with the report. No mercury in camp for experiments.—Cold at night. Thermometer 55 to 60° F.

22nd November, Kordáband to Ombadóla.—The monsoon seems to have passed southwards, for good. The night at Kordáband was cold, the sky clear, the morning crisp; not a cloud. Passed through extensive rice-fields to a small *stream* in the first mile; good banks, firm bed, no rock; bridge required, 10 feet span, 5 feet high. Two furlongs further another similar *stream*.

1 mile 3 furlongs.—Village of *Kutubadi*; thermometer at 7 A.M. 57° F.; jungle and dry cultivation; hills on both sides; good tree jungle; soil moderately rich.

One furlong further, small *stream* like the two last; *quartz* in the ridge on the left.

Village of *Doikal*.—Sugarcane, rice and dry cultivation.

3 miles 2 furlongs. *Panimunda stream*.—Three 30-feet spans required, greatest depth in flood 9 feet; rock for foundation. There is a crude *anicut* made here by the villagers who have utilized for this purpose a rocky ledge extending across the bed of the stream; from the anicut a considerable irrigation channel is led off.

3 miles 7 furlongs. A *quartz reef* near the village of *Gauduguda*.*

* Specimen sent with report.

Two furlongs further a *stream*, with stony bed and high banks; bridge required, 23 feet wide, 6 feet high; undulating country hills on both sides, tree jungle, patches of dry cultivation.

5 miles 3 furlongs.—Another *quartz-reef* near *Sivapodro*. The track then passes over a small ghât about 50 feet high (the railway would round the hill or be cut through it) to the village of *Dombisi*.

A small *stream*, 14 feet wide, 4 feet deep in flood. The jungle here is a *forest of large trees*, containing some good *timber*, especially matti (Telegu, madhi chettu).

A small *nullah*, coming from swamps and paddy-fields on the risng ground to the left, 8 feet wide, 3 feet deep in flood.

6 miles 6 furlongs 187 yards.—Two villages close together of the name *Mudirikuppa*, one for Khónds, the other for Paiks or Gaudus; hilly undulating ground; jungle, with some cultivation

7 miles 2 furlongs.—*Streams*, 60 feet wide, 8 feet deep in flood; good banks, no rock.

The track, after leaving *Bod Mudirikuppa*, passes through a *gorge* with dense jungle; some hill side cutting required, then flat ground again. In the gorge I picked up some rich *magnetic iron ore*, and some *ore of antimony*.

8 miles 5 furlongs.—Village of *Chumakonti* (Khónd). The railway here should follow the course of the *Bongsdara* river.

9 miles 3 furlongs.—Village of *Peddagoodak* on the left, *Rdinigooda* in front.

10 miles 67 yards.—Cross the *Bongsdara river* above its junction with Ombadóla river; rock for foundation, gneiss studded with quartz; kunker, limestone on the spot; width of stream 210 feet, greatest depth in flood 15 feet; banks flooded.

11 miles 7 furlongs.—*Ombadóla*.—Extensive rice-fields, fine country, well populated, studded with topes and trees and surrounded by hills, so that it is difficult to obtain a view; height of Ombadóla above M. S. L 1,196 feet.

23rd November, halted at Ombadóla.—Heavy dew at night, mist in the morning. Thermometer at 6 A. M. 53° F.; in the day up to 80°.

The old Amin of Ombadóla, who is under the Rajah of Bisemkattak, came to see me and expressed himself pleased with the prospect of a railway. I despatched a camp to *Lonjigar* with one elephant, five bullocks and ten coolies. The Police Inspector from Bisemkattak with some of his men, two of my Policemen, and the Ombadóla Amin's son accompanied the party.

I had to sleep in the Dresser's Rowty, as my tent that was blown down and damaged at Bisemkattak was being mended. There is a blacksmith at Ombadóla who, in the most primitive manner, forged thin iron bands out of a thick bar of country pig iron; but there was no carpenter in the place to help in mending the broken poles.

24th November, Ombadóla to Lonjigar.—Distance 12 miles. Heavy dew at night and in the early morning; clear sky in the day; thermometer 6 A.M. 55° F. Through paddy-fields and jungle; track frequently invisible.

1 mile 1 furlong.—*Stream* 126 feet wide, 9 feet deep in flood. Bed sandy and gravelly, no rock, banks low and flooded. Enter jungle, some sheet rock, gneiss with quartz veins, village of *Kutrikupa*, a few huts, with some dry and garden cultivation.

I have noticed so far a singular absence of *game* in these parts. I have not seen, between Párvatipúram and this, a single snipe, partridge, jungle fowl, hare, pig or deer; but jackals are numerous, and bear, pig, sambur, cheetahs and tigers are said to be in the denser jungle on the hills.

2 miles 158 yards.—Village of *Kutrapali*; high and dry ground, little cultivation, some cotton, oil-seeds, beans, and ragi; then jungle again. Passed the *boundary between the Jeypur and Kalahundy estates*.

Village of *Dhorabetta*.—A few small patches of paddy in the jungle, irrigated by little rills led from springs or small hill streams. Joined the *track leading from Lonjigar to Raipur vid* Kutegu, Topi, Kindera, Prokribund, and Sigriguppa; another small nullah.

4 miles 1 furlong.—*Village of Bijelkadu*; some dry crops and paddy in the midst of jungle.

4 miles 7 furlongs.—Village of *Toral*; a little beyond, abundance of gneiss rock which can be quarried for building stone.

7 miles 1 furlong.—Good camping ground in a *tope*; again jungle.

7 miles 2 furlongs.—*Stream* near the village of *Nangelbeda*, 34 feet wide, 9 feet deep in flood; good banks, gravelly bed, no rock near crossing. Half a mile further a small *nullah* with rocky bed. *Kunker limestone* is found on the surface in many places along this day's route,—jungle again; then a shallow *stream*, 26 feet by 4 feet; sandy bed, low banks, no rock; then an irrigation channel led off the stream through some deep cutting.

Village of *Batuguda*.—The hard clay in the bed of the channel has been worn by the water into the outward appearance of laterite, but there is no laterite here.

Village of *Chatterpore*.—Clear water in the small hill streams.—This part of the country is but sparsely inhabited, and there is ample room in these jungles for *immigrants*. The *soil* is good enough for paddy, sugarcane and all ordinary dry crops; water from streams and springs is plentiful; trees, shrubs and grass grow luxuriantly; the paddy and ragi crops look very fine, although the rainfall has not been ample this year.

9 miles 6 furlongs.—Another village of *Batuguda*; some dry cultivation, then again jungle. Here begins a *dense jungle and forest of young trees*, the latter 15 to 20 years old; soil varying, sometimes light and sandy, sometimes heavy clay. Small *nullah*, 6 feet wide by two feet deep.

11 miles 1 furlong.—*Nullah* 15 feet wide and 4 feet deep in flood, high banks, stony bed, no rock visible, which, however, is not far below the surface here. The sand in this stream contains shining yellow mica dust.

12 miles.—*Lonjigar*, at the foot of a hill upwards of 3,000 feet high, part of the Niámgiri, range; large village, sorrounded by hills; 100 houses (mud huts, thatched), ample fields, gardens and trees; a tank under construction; *soil* dark, rich clay, some nearly black There are weavers, blacksmiths and goldsmiths in the village; no carpenter, just as at Ombadóla. The old headman of the village was very civil, brought offerings of rice, fruit, &c., and said he was glad that there was a chance of a good road or railway being made in these parts. He also said that there had been no white man at Lonjigar since the Surveyors were here, some eighteen years ago.

The Rajah, who is tributary to Bondesor, has gone to Raipur; his two sons called upon me, one 25 and the other 18 years of age. The younger one can read and write Ooriya, the elder has no education. They speak Ooriya and a little Hindustani; the elder is a Shikari and told me he had shot five *tigers*. There are *man-eaters* here, and people are occasionally carried off.—Here I met Mr. Cormac who had come up from Singupore according to arrangements made at Ryaguddah.

The report on his march from Ryaguddah will, I hope, be sent from Bôgor.

The greatest height he has come over between Singapore and this is 1,603 feet; thermometer 52° F. at night.

The people at Lonjigar, as well as at Ombadóla and along the track between the two places, were quite civil, giving correct information and showing the way readily when asked. Nor were they shy; neither men, women, nor children ran away at our approach, as they sometimes do on the Jeypur Hills. The men have a martial look about them.—Height of Lonjigar above M.S.L. 1,396 feet.

25th November; *return to Ombadóla*, while Mr. Cormac marched back to Chothopoor (on the way to Singapore); whence he is to go on to Bondesor, Dádpúr, and Bôgor.

The people say the *monsoon* is over, there will be no more rain, and that the cold weather has set in. However, on the evening of the 25th, heavy clouds were coming up again from the north-east, and it was a warm evening in consequence; but the clouds have gone off southward.

OMBADOLA,
26th November 1881.

K. F. NORDMANN,
Executive Engineer on Special Duty.

VII.

No. 20 B., dated Bôgor, 4th December 1881.

From—K. F. NORDMANN, Esq., Executive Engineer on Special Duty,
To—The Secretary to Government Madras, Public Works Department.

I HAVE the honor herewith to forward the report and "notes" on the progress of the *reconnoissance* from Ombadóla to Bôgor, and from Ryaguddah *vid* Singapore, Bondesor and Dádpúr, in continuation of my letter No. 19-O, dated 26th ultimo (from Ombadóla) and its enclosures. The country traversed is described in detail in the notes.

2. The route from Ombadóla northwards has continued to prove an easy one. The only approach to anything like a *ghát* is a decline which begins on the *summit level*,* 3 miles and 5 furlongs north of Ombadóla. Thence the present track descends by varying, but chiefly easy gradients to the 7th

*87 feet above Ombadóla and 1333 feet above M.S.L.

mile, with a total fall of 220 feet in 3 miles and 3 furlongs, or about 1 in 80. The descent, along the track, at first is rather steep immediately below the summit; but there is no need for such a rapid descent, as there is room to take the line on higher ground along the hill side and so reduce the gradient which need not exceed 1 in 100, if the northern foot of the descent is thrown out as far as the 8th mile from Ombadóla, which is quite practicable. *This is all there is like a ghát on this line.*

3. Mr. Cormac coming from Bondesor joined me here (Bôgor) on the 1st instant. I submit, in original, his report on his march, and an approximate longitudinal section of the country travelled over by him. The altitudes given in his section, though nearly correct are strictly only approximate, as he has only two detached aneroids which read differently from mine (and a thermometer), and had not the "battery" to refer to which came with my camp. Moreover the aneroid readings on the sea coast are wanting to complete the exact calculations. A revised section will have to be prepared when those readings are all received. For this reason I defer, as I have already reported in my last letter, sending the section of my route till I have all the sea coast readings. I hope to send the correct sections from Raipur; meanwhile the approximate altitudes, which are very nearly accurate, are indicated in the notes.

4. It will be seen from Mr. Cormac's report and section that the Singapore-Bondesor route, which passes over the Músa ghát a mile north of Kúndrú, ascends to an altitude of 2,048 feet, and had a considerable ghát to descend on the northern slope; while the highest point reached on the Ombadóla route does not exceed 1,346 feet, near Satikóna, with (practically) no ghát, or only a faint approach to one. Hence, other considerations on both lines being equal, the Bisemkattak-Ombadóla line must be considered preferable, for a railway, to that *viâ* Singapore and Bondesor. Nor is it advisable to take the line from Ryaguddah, *viâ* Singapore and Lonjigar, to Ombadóla, since there is a ghát to cross, 1,603 feet high, between Singapore and Lonjigar (at Tirmui).

5. At Dádpúr Mr. Cormac crossed the trade and old military routes which lead from Chicacole to Kamptee, one *vid* Bateli, Mukuli, Dádpúr, Junágar, Kankér, Wáirágar and Umber (No. 44 in the Quartermaster-General's route book); and the other *vid* Junágar, Karial, Arang, &c. (No. 45 in the same book).

1. From Bondesor *vid* Dádpúr to Bôgor.
2. From Bondesor *vid* Turkel and past Ojarar to Badbeng.
3. From the Músa ghát *vid* Junágar, Daspúr and Manjhér to Karial; or
4. From Manjhér *vid* Borgáon and Polsodar to Kúmúna or
5. From Manjhér *vid* Borgáon, Binapur and Balda to Torbor.

6. The short cuts marginally indicated, which might be obtained by using the Músa ghát, would scarcely compensate for the inconvenience and extra cost that would be caused by that ghát; the less so since those short cuts would have to cross several formidable rivers, besides passing through some otherwise difficult country.

7. Bôgor is 628 feet above M.S.L., 205½ miles from Vizagapatam, and about 160 miles from Raipur by the route *vid* Kúmúna, Nara, and Arang. There is a good bridge site for the Tél Nadi near Bôgor, with rock visible in the bed on the northern bank, and extending most probably across the river, not very deep below the sandy bed. This bed is rather treacherous; in trying to cross this morning, my horse sank with me up to the girths into the quicksand. The water is sufficiently low to permit fording. In heavy monsoons the banks are flooded on both sides; hence considerable embankments will be required in order to have the bridge, as it ought to be, at least 30 feet above the deep bed.

8. The last letters and papers I have received are dated the 13th November. I despatch this post to Bisemkattak by the Tát Rajah's elephant which returns from here according to agreement; thence the packet is to be forwarded by the beat constable to Ryaguddah. I scarcely expect to receive any further tappal until I reach Arang. I write to Ryaguddah and Vizagapatam to redirect to Raipur. I request that all letters may, till further notice, be addressed to "Raipur, C.P., to await arrival."

9. Fever begins to prevail in the camp.

10. We leave this to-morrow for Karial, Kúmúna, &c.

VIII.

Extract from Notes of Reconnoissance, Ombadóla to Bôgor, 26th November to 3rd December 1881.

26th November, Ombadóla.—Went out and examined the lay of the country with reference to the proposed railway.

Traffic.—Thirty pack bullocks from Maringi and Kurpáni, without loads, going to the Nandapúr taluk of Jeypur, *viâ* Kálahundy, to bring down grain, &c.

A hundred and ninety pack bullocks coming from Kálahundy, going to Párvatipúram, with rice, gingelly and mustard seeds, Bengal gram and paddy.

Cooly labor.—This is at present very cheap, there being so little demand for it; except for agricultural operations when the laborers are paid in kind, coolies can be had at 1½ annas per day. If there were a heavy and steady demand for labor, as on a line of road or railway, the daily rate would doubtless be higher.

Artizans.—These are very scarce at Ombadóla. I could get a jungle blacksmith to repair my broken tent poles, but there was no carpenter in the place. Weavers there are, but no tailors or chucklers; anything required in this line by the well-to-do people of Ombadóla has to be procured from Párvatipúram.

27th November, Ombadóla.—Sunday. Dew at night and in the morning. Thermometer at 6 A. M. 55° F. Fine day. Despatched one camp 10 miles ahead to Sorigura *en route* to Bôgor.

From Ombadóla to Bôgor; 28th November, Ombadola to Sorigura.—11 miles 5 furlongs 176 yards. Descent from Ombadóla to Sorigura 269 feet; distance of Sorigura from Vizagapatam 182 miles. Height of Sorigura above M. S. L. 927. Thermometer 6 A. M. 60°.

Through paddy-fields and jungle; at 5th furlong a *stream*, 35 feet wide, 7 feet deep in flood, good banks, gravel bed. Planted topes alternating with jungle and dry crops. Village of *Kumrabal*; small *stream* 10 feet × 4 feet; jungle.

Bijapúram.—Jungle and dry cultivation.

Ishapur.—Jungle and dry cultivation. The road, if so it may be called, is here a broad and well-beaten bullock track leading through jungle.

At 3 miles 5 furlongs 153 yards from Ombadola the *summit level* is reached by a steady and gentle ascent without a ghât or anything approaching a ghât. The summit level is 1,383 feet above M. S. L. and 87 feet above Ombadóla; a rise of 1 in 226 from the latter place.

From this summit begins the descent northwards. A small stream requiring a 6 feet culvert; gneiss rock with quartz and felspar; jungle.

4 miles 2 furlongs.—Village of *Bánpúr*. Dry and wet cultivation, undulating ground.

4 miles 5 furlongs 197 yards.—A *stream* 30 feet wide, 10 feet deep in flood, banks high, rock for foundation on one bank, broken ground, stony soil. A furlong further another small *stream* 9 feet × 3 feet, much rock about here; soil, clay with some kunker; jungle. The easy decline continues.

5 miles 3 furlongs.—Village of *Peramara.*—*Traffic.*—Ninety bullocks from Binka to Párvatipúram with paddy. The ground is irregular, broken and undulating, but there is no obstacle to road or railway.

Three furlongs further a small *stream* needing a 6 feet culvert; some paddy-fields. Hill ridges to the right and left of the track, 3 to 4 miles apart, the hills rising upwards of 2,000 feet above this, well-wooded, fit for coffee, tea and cinchona.

7 miles 176 yards.—Village of *Boreguda.* Some dry cultivation in the midst of jungle. *Traffic.*—Pack bullocks from Párvatipúram going northwards to bring grain.

The fall from the summit level to this is 220 feet in 3 miles 3 furlongs, or about 1 in 80. But this gradient can be eased by keeping on higher ground and throwing the foot of the descent a mile further out, whereby a gradient of 1 in 100 for a distance of 4½ miles may be obtained. *This represents all there is, on this side, in the shape of a ghât.* It is only the present *track* that descends somewhat rapidly (as the section will show) from the summit, but there is ample room, by taking the line on higher ground along the hill side, for an easier descent. The ground is, on the whole easy, and there will not be much hill side cutting required.

8 miles 1 furlong, the country now becomes flat again, the village of *Dengen* on the right. *Kárgati* on the left; near the latter a large pond or *tank* with wet fields under it; some dry cultivation surrounded by jungle, ground irregular and undulating, and cut up by gullies; soil, red clay.

9 miles 2 furlongs.—*Boundary* between the Bisemkattak (Jeypur) and Kálahundy estates, marked by heaps of stones where the line crosses the track. Dense jungle of trees and shrubs; matti wood plentiful; stony soil.

Sigriguppa, the first village in Kálahundy territory; mud and thatch bungalow without windows. From here 4 tracks branch off, *viz.*, to Lonjigar, Bondesor,* Asurgor and Ombadóla. *Forest* of large trees; some good *timber*, especially matti, but little undergrowth.

* *Viâ* Santpúr and Dádpúr.

10 miles 3 furlongs.—*Stream*, waterway 20 feet × 5 feet, high banks, gravel bed. The hill range on the left rises up to nearly 3,000 feet, and is well wooded; small *nullah* 10 feet × 5 feet; abundance of kunker limestone about.

11 miles 50 yards.—*Stream* 25 feet × 6 feet, stony bed, good banks, no rock visible; all jungle, no cultivation.

11 miles 5 furlongs 176 yards. *Soriguro.*—A few huts in a small clearing in the midst of a dense jungle. A kind of wild ginger grows here, the people use it medicinally to heal sores.

29th November, Sorigura to Asurgor.—Distance 10 miles 6 furlongs. Height of Asurgor above M. S. L. 699'; descent from Sorigura to Asugor 228 feet. Distance of Asugor from Vizagapatam 192 miles 7 furlongs. Heavy due in the morning; thermometer at 6 A. M. 57° F. An armed man, sent from Lonjigar to my camp for assistance and carrying sword and hunting knife, led the way.

The track runs alongside of the *Sandul stream* through a dense *forest* of good timber trees, old and young; matti abundant, some yégi, sál and blackwood. An ample stock of timber for railway sleepers, &c.; soil, virgin.

1 mile 6 furlongs 117 yards. Crossed an affluent of the Sandul *stream*, 160 feet wide and 16 feet deep in flood; bed shingle and sand, banks high and low alternately, the lower side flooded in the rains. All virgin jungle and forest here, without a patch of clearing or cultivation for more than a mile. Here I heard the first jungle cock in these parts.

Village of *Padmara*, with a large pond or *tank*; country flat; soil, light clay with sand. In the third mile the jungle becomes lighter; some paddy-fields and dry cultivation; *trees*-ippa, matti, fig, tamarind mango, stunted date, gooseberry and other jungle trees.

Village of *Poremalla.*—Heavy soil; enter jungle again.

4 miles 1 furlong.—An irrigation *tank* newly constructed or repaired by the people of Bákel, a village a mile further north.

4 miles 7 furlongs 114 yards. *Bákel.* A largish village, wet and dry cultivation, paddy and sugarcane, horsegram, ragi, mustard, and gingelly; low hill ridges, east and west, 2 to 3 miles apart.

Olisirka.—The people's swamies or worshipping places here consist of a stump or block of wood let perpendicularly into the ground with its top rudely carved; scrub jungle, much stunted date, long coarse grass; dark clayey soil.

6 miles 2 furlongs. *Talagaon.*—Wet and dry cultivation. The villagers here possess more *cattle* than I have so far seen since Ryaguddah; the village pig is not wanting, nor the pariah dog. I have seen no donkeys for some time, nor dhobies. There is a good deal of open ground around this village; then scrub jungle again. The villagers here understand Hindustani, besides Ooriya.

Half a mile further a pond or *tank*; irrigation is carried on under it as well as round its margin on three sides. Country comparatively open; *good ground for a large camp*; good grass, plenty firewood, water from the Sandul river close by, ample straw and grain, other supplies procurable. The large village of *Norola* to the right; heavy dark soil, no stone or rock.

Sorgigura.—Wet and dry cultivation, numerous cattle.—There are *carts* here with solid wooden wheels, 4 feet diameter, made of three segments; wooden axles.

8th mile.—Nearing the village of *Mandel*, a *tank*, gardens of sugarcane, rice-fields, a few young trees planted, fenced in and taken care of. The village is of a good size and there is much cultivation all round; soil nearly black; country open. From here leads a track to Bhavánipatnam (which is the popular name used about here for Bondesor.)

10 miles 6 furlongs. *Asurgor.*—This village has been of some importance in former times, but is now insignificant. There is a large *tank*. The village is situated in a rectangular enclosure of earthen ramparts (an old fort) about one-third of a mile square, with a moat round it that can be filled from the tank. In the moat some paddy is cultivated, and red and white lotus flowers grow extensively. A fine *mango tope* for camping, south-west of the old fort, just under its ramparts and near the moat. Near this tope will be the most suitable site for the future railway station.

Trees.—Tamarind, wild fig, ficus religiosa, mango. yégi, ippa, sál, matti, the wild silk cotton tree and other jungle trees; also several kinds of acacia, among them the tree (I forget the name) of which the bark is used in the south for the manufacture of arrack.—I have met no sandalwood as yet in the jungles.

30th November. Asurgor to Bógor.—Distance 12 miles 4 furlongs. Height of Bógor above M. S. L. 628. Fall from Asurgor to Bógor 71 feet. Distance of Bógor from Vizagapatam 205 miles 3 furlongs; from Raipúr about 165 miles.

The Police Inspector and the Kotwal from Bisemkattak, who had accompanied the party so far and been very useful, the one in arranging for supplies and coolies and the other in acting as guide, returned from here. A Sowár mounted and armed and a minor official, sent by the Officiating Dewán of Bondesor to assist the camp, joined this morning.

Thermometer 6 A.M. 58° F.

Crossed the *Sandul river*, 19 feet deep and 170 feet wide in flood. Three 50-feet spans required. Rock for foundations of piers and abutments; gneiss mixed with quartz and conglomerate; kunker limestone near the spot.

Enter light jungle, with fields of dry cultivation here and there; soil, heavy clay, nearly black.

Village of *Borgáon.*—Open country around, extensive wet and dry cultivation, the former under a *tank*. There are no sluices in the bund of the tank; the water is lifted up by picotas into wooden troughs laid across the bund and so let into the fields below the tank. There I

saw wild geese and duck, some cranes, plover, white gulls, and the first brace of snipe since Parvatipuram. *Cattle* are numerous about here.—Rice is packed for carriage in bags (about a cubic yard in capacity) made of straw ropes worked together in a manner similar to rattan basket work.

Village of *Sétirpalli*.—Some cotton was being cleaned here by the ordinary hand-machine (Chúrka). A tope of young mango trees, about 5 years old, is being attended to; extensive rice-fields; dry crops: gram, cotton, ragi, gingelly, castor-oil, mustard, chillies, beans, gourds, pumpkins, and tobacco.

Trees.—Bhér, ippa, tamarind, mango, jack; fig; soil, lighter than before, more sand in it.

Village of *Bólaspúr*, with a *tank*. Then jungle again with a few patches of wet and dry cultivation; some rock. From here tracks lead to Bánpúr (N.E.) and Dádpúr (S.W.)

4th mile.—A small *stream* requiring a bridge 18 feet span × 9 feet high; sandy bed, good banks; jungle again.

Domsilát.—Half a dozen huts in the jungle, with a few fields; then dense jungle on light soil; the sand on the track shining with small particles of quartz and feldspar, and dust of mica and pyrites.

Torla.—Five huts in a small clearing surrounded by jungle.

Six miles 7 furlongs, crossed the *Dhéron stream*, 65 feet wide between the banks which are 7 feet high and occasionally flooded to a further depth of 7 feet for some distance. Total width 162 feet, depth 14 feet. The railway would keep on the right bank of the stream, near *Kokormal*, and cross a mile to the east of *Kandel*.

Korlakuta.—A dozen huts in a jungle clearing, with a few fields; then jungle; much kunker limestone is here lying about the surface.

Kandel.—A dozen huts in a large clearing in the jungle. A few rice-fields and some dry crops.

The *river* to be crossed a mile east of Kandel is 245 feet wide and 16 feet deep in flood, when the low banks which are about 8 feet high are covered to a further depth of 8 feet for some distance. The bed is sandy, no rock visible. Five 50-feet arches, crown 20 feet above deep bed, will be required. A few fields cultivated; then jungle again; soil, light clay with sand.

Dammermurra.—A few huts in a small cleared space surrounded by jungle. A crude "still" for the manufacture of alcoholic liquor from the flowers of the ippa tree was at work here. There are very few fields about the place; jungle again.

Limpora.—Some open ground and a few fields; some sugarcane, then light jungle. A small *nullah* 11 feet × 4 feet. A *tank* with rice-fields under it; then *Bógor*, 12 miles 4 furlongs.

1st December.—*Bógor*. Thermometer 6 A.M. 47° F.

Mr. Cormac arrived from Bondesor; all well in his camp, except one lascar and one mahout who have fever. Mr. Cormac's report and notes of reconnaissance taken during his march, as well as a section of the country gone over by him, accompany this. We are busy with accounts, reports, maps, observation of instruments, calculations of altitudes, &c., and with general camp duties. The weather is fine; the nights are cold.

Fever begins to prevail in the camp; the Dresser, the Hospital Servant, the Writer, one Police Constable, three Lascars and several servants are laid up with it.

There is much white and reddish *quartz* about here; my camp stands on a bed of gneiss and quartz. A hill near this consists of the same minerals. There is also some porphyritic granite, with feldspar in large crystals, thickly scattered over the surface in white blotches, often rectangular in shape. The quartz is full of shining specks, white and yellow, leaflets that can be detached with a pen-knife, probably mica and pyrites, as well as glistening grains of some metal, and little nodules of peroxyde of iron embedded in the quartz. I will forward from Raipur a few samples, both pulverized and solid, for chemical analysis and assay, if it be considered worth while to have this done.

Despatched a messenger, one of the men from Bondesor, to the Zemindar at Kariál to see about arrangements for supplies, coolies, &c., *en route* to that place, as nothing seems to have been arranged so far by the Kariál people, and without their authority nothing is to be had.

2nd December, Bógor. Thermometer 6 A.M. 49° F.

Occupied with office duties, as yesterday.

3rd December, Bógor. Thermometer 6 A.M. 49° F. Went out to examine the *Tél river* and find a suitable crossing. The bed is treacherous and will in some places not support the weight of horse and man.

No *tappal* received in camp for more than a fortnight.

BÓGOR,
4th December 1881.

K. F. NORDMANN,
Executive Engineer on Special Duty.

IX.

MR. CORMAC'S REPORTS.

18th November, camp Comellypettah; height 703 feet above M.S.L.

Distance from Ryaguddah, 5 miles 2 furlongs 176 yards.

At one-eighth mile crossed a river (50 feet × 9 feet) with stony bed, banks not well defined. Passed a Khónd village (Santally) 1¼ miles from Comellypettah; from that village the country is broken by ravines; low jungle prevails and continues to Coormpettah, a large village principally of Telugu people.

The country here is well cultivated, soil light and sandy, the hills on the west are well wooded, and are about one mile distant. Camped at Dorabada, where there is a large area under wet cultivation. The track to this point runs about one mile from the hills and parallel with them. There is a good camping ground beyond the village and a well of good drinking water. The land in the vicinity is fully cultivated and well irrigated; the villages round about, as well as this, are peopled with immigrants from the Kurupam taluk near Parvatipuram.

19th November, camp Dorabada; height 835 feet above M.S.L.

Distance from Comellypettah, 7 miles.

Difference in altitude + 132 feet.

Passed along the foot of the hills to the west of the valley through well cultivated land (chiefly dry cultivation), the ground having a slight inclination to the east. About 3 miles from Dorabada the track crosses several deep ravines and much broken ground with patches of dry cultivation here and there. At 7¼ miles from Dorabada the track runs parallel with the Nágavully river, and crossing a large stream (138 feet × 8 feet, banks not well defined, bed stony) at 8½ miles distance, enters upon a fine open valley where there is a good camping ground and good drinking water near the village of Shikárpoy; there is a large sugarcane plantation at this place, and the country round about is well cultivated; the rice crop which covered a large area has been harvested.

20th November, camp Shikárpoy; height above M.S.L. 992 feet.

Distance from Dórabada, 9 miles 1 furlong.

Difference of altitude + 157 feet.

The track from this village runs nearly parallel with the Nágavully river up to Singapore; the river valley is about 2 miles across, and the cross section is almost level. Fully two-thirds of the valley is under cultivation, chiefly dry crops. Four streams, one requiring a span of 15 feet, one of 16 feet, and two of 20 feet were crossed up to 3¼ miles from Shikárpoy. Here a large stream requiring a span of 30 feet was met with; the banks of this stream are not well defined, and the bed is stony.

The village of Narainpoorum (4 miles) possesses a small pucka *temple*, the first seen since leaving Ryaguddah. At 4¼ miles distance a stream requiring a span of 40 feet was crossed, banks not well defined, and bed sandy; and at 5¼ miles another stream requiring a span of 80 feet, bed rocky, banks well defined.

At Singapore crossed the Nágavully, requiring a bridge of three openings of 40 feet each; bed sandy, banks not well defined. The *produce* (which is much in excess of local requirements) of the country generally from Ryaguddah to Singapore is rice, ragi, cholum, sugarcane, horse-gram, green-gram, gingelly, linseed, and hemp. The *trade* chiefly consists of the food-grains named previously and gingelly, castor-oil, hemp, linseed and hides; the track followed by me is the trade route from Junágar and Bondesor. In the forests the timber chiefly found is jack, yégi, matti, ippa, mango, and blackwood.

At Singapore ordinary smiths and carpenters are obtainable, their hire being 4 and 5 annas per day, ordinary cooly hire is 1½ annas per man per day; this is generally paid in kind. The country is but sparsely populated, and there is space for a large number of immigrants, especially north and east of Singapore.

22nd November, camp Singapore; height above M.S.L. 997 feet.

Distance from Shikárpoy, 7 miles 2 furlongs.

Difference of altitude 5 feet.

Passed through the town of Singapore by the fort of the Rajah, a space enclosed by a mud wall about 12 feet high and 6 feet thick with a thatched coping; the buildings inside being of mud and thatched.

Beyond the town the country is open and under dry cultivation; over a large area the stumps of sál trees are still standing.

The track runs along the watershed of the San and Bodo rivers, until the San is crossed near Palkonianah; the banks of the stream which flows at the bottom of a deep ravine are not well defined, the bed is sandy, span required 70 feet × 10 feet.

At 4-3-190, track to Bondesor diverges.

At 5¼ miles distant from camp another stream flowing at the bottom of a ravine is crossed, the bed is rocky, and banks not well defined; between these two streams lies the village of Palkonianah, round which there is a large area of dry cultivation. After crossing the stream the track enters dense jungle, and crosses several smaller streams, entering a clearing of about 6 acres near Tirmui, where there is a good camping ground and good water; the jungle is very thick, and it was with difficulty that the elephants passed through it.

Here see section from Palkonianah to Loujigar.

23rd November, camp Tirmui; height above M.S.L 1,602 feet.
Distance from Singapore, 10 miles 5 furlongs.
Difference of altitude + 605 feet.

On leaving camp, entered dense junge which continued for 3½ miles, when the village of Narraindong was reached; the country from this place is well cultivated and under sugarcane, and rice quite up to Lonjigar, where a halt was made. Just before entering Lonjigar, the Bongsdara was crossed, banks are well defined, and the bed stony, requiring a span of 40 feet × 12 feet. The *forest* abounds with sál, yégi, matti, jack, mango, ippa, and blackwood trees; the soil is rich loam, except at the small ghâts where it is rocky. The track is evidently not much used, and probably only the produce of the south of the Lonjigar valley is conveyed by this route.

The country from Singapore to Lonjigar is very thinly populated, and there is ample room for a large number of immigrants. The crops produced are chiefly rice, ragi, gram and sugarcane. There is a good *camping ground,* and good water obtainable.

26th November, camp Palkonianah; height above M.S.L. 1,158 feet.
Distance from Singapore, 4 miles 4 furlongs.
Difference of altitude 161 feet.

Skirted the side of a hill, through jungle, for five-eighths of a mile, passing south of the village of Chothopoor which is surrounded by wet cultivation; and at 1¼ miles passed through low jungle with a small patch of dry cultivation on the south.

At 1⅝ miles crossed low ground under paddy cultivation and entered the village of *Moondeegoodah*; here met hides coming from Junágar.

At 2⅜ miles joined the regular track of the Brinjarries from Singapore; this track lies on the watershed of the Bodo and the San rivers and has a very gradual ascent.

At 2½ miles distance crossed the *San river* (banks well defined, bed sandy, and requiring a waterway of 60 feet × 10 feet), passed up the valley (about half a mile broad and with an almost level cross section) of a small stream up to a low saddle, skirted the side of a hill, crossed a second saddle and entered upon a wide open valley (well cultivated) in which stands the village of Bijepur. The ascent to this is very gradual and might be made practicable for carts at a small cost. The track continues along the valley (ascent very gradual) which is broad and open and nearly level across up to spot marked *Nisanpur* on the map, where the camp was pitched. Up to this the country from Bijepur is well cultivated, both wet and dry, the dry being chiefly lamp-oil seeds. The soil is a sandy, reddish clay, camping ground good and good water procurable. The hills on each side of the valley are well wooded, and several topes of large mango trees were passed.

27th November, camp near Kundru; height above M.S.L. 1,757 feet.
Distance from Palkonianah, 9 miles 4 furlongs.
Difference of altitude + 599 feet.

Left camp, proceeding up the valley of the Kundru stream, which is crossed several times by the track (but which may be avoided) through dense jungle (which had to be cut to permit the passage of the elephants) to the head of the *Músa ghât,* which is 2,047 feet above mean sea level.

With the exception of the last furlong, the ascent is so gradual that the track may be made practicable for wheeled traffic for a small outlay, and no difficulty will be experienced in the last furlong. From the ghât head, on the Bondesor side, the gradient is very steep for 1⅛th miles to the foot, whence it runs with a gradual descent for four miles through dense jungle to the camping ground. Good water is procurable, and the camping ground is good.

Owing to the heavy jungle, it was not possible to see much; but from what was observed of the hills, the difficulties attending the opening out of a good ghât road, with a gradient of 1 in 22, will be very slight, as apparently little more than earthwork will be necessary.

28th November, camp Majigaon; height above M.S.L. 915 feet.
Distance from near Kundru, 6 miles 6 furlongs.
Difference of altitude 842 feet.

Left camp along the valley of the Patna river which was crosssd about 5 miles distant, and proceeded nearly parallel with the course of the Simli Jor which was crossed near *Beheragura,* about 9½ miles from last camp; all this distance was traversed through dense jungle, passing only two small patches of cultivation.

The village of Beheragura stands in an open piece of ground, but there is very little cultivation near it, and it has the appearance of being almost deserted. From thence the track continues through low jungle quite up to Bondesor, where there is an excellent camping ground; good drinking water has to be brought from a distance.

Between the foot of the *Músa ghât* and Beheragura there is a large area of land available for immigrants; the soil is good and fertile.

In the forest one matti tree was measured and found to be 13 feet in circumference, 6 feet above the ground; there is sál, jack, yégi, ippa and mango in any quantity, and also small bamboo.

Limestone is procurable (nodular kunker) in abundance; iron is found and worked in Bondesor, nearly every person met being armed with an axe of local manufacture.

The *climate* is said to be unhealthy, but with so much jungle this may be expected; the working season would be from November to July; the country would be difficult to travel in during the remainder of the year on account of the rains.

The chief *trade* is in rice, gingelly, Bengal gram and linseed; this is chiefly exported from Junágar, the route to that place diverges to the west about 9 miles south of Bondesor.

Fully 600 Brinjarries pack-bullocks were met from Junágar this day with rice and Bengal gram, and about 200 (empty) on their way to the same place.

A few *bricklayers,* carpenters and stone-cutters, live at Bondesor, and are said to receive 8 annas each per day; judging from the description of the buildings in the town, very few have been employed, as only two tiled houses were seen, besides the house of the Rajah, which is of brick in clay, but is incomplete.

The jail is a wattle-and-daub structure with a thatched roof; the prisoners (about 90) are employed in making roads; a few also make carpets.

A kind of cloth resembling Tassa silk is manufactured in this part of the country.

It was ascertained that rice is being sold in Bondesor at 50 seers per rupee, and at Singapore only 32 miles distant at 12 seers per rupee; this fact shows the necessity for improved means of communication between the two places.

The Acting Dewán of Kalahundy was exceedingly attentive and gave every assistance in his power; without his help it would have been very difficult to obtain supplies, as the villages passed are small and do not possess any bazaars.

30th November, camp Bondesor; height above M.S.L. 279 feet.
Distance from Majigaon, 11 miles 3 furlongs.
Difference in altitude 186 feet.

Proceeded through the town of Bondesor, emerging from it at three-fourths of a mile from starting point. From limit of town to 2 miles passed through wet cultivation and thence through a well-cultivated country to Bijepur, 5¾ miles distant from Bondesor. From this place the country has a most deserted appearance, land previously cultivated having been abandoned.

At 7¼ miles passed through the village of *Dádpúr,* consisting of about 200 thatched houses and with a small area under cultivation near the village. The country is partially cleared of jungle where not cultivated, and heavy jungle is not seen except on the hills.

At 3¼ miles beyond Dádpúr crossed a small ghât through thick jungle, and at 4½ miles crossed a river with sandy bed and well-defined banks, requiring a waterway of 80 feet × 15 feet. There is a good *camping ground* and good water at Komári; country more or less rocky.

1st December, camp Komári; height above M.S.L. 558 feet.
Distance from Bondesor, 13 miles 5 furlongs.
Difference of altitude 171 feet.

On leaving Komári, passed through patches of cultivated land, surrounded by partially clear jungle; the appearance of the country here gives the impression that it has been more populous, but has been deserted, there being traces of cultivation all along.

At 2½ miles crossed a stream with stony bed, and banks not well defined, requiring a waterway of 50 feet × 6 feet.

Up to 3¼ miles passed through country covered with long grass, *at Jujrang,* (3¼ miles) where patches of cultivated land and partially cleared jungle continued to 5½ miles, up to the village of *Uthekela,* round which also is some cultivated land.

At 8¼ miles passed the village of Boria, on high ground; open country all round, and wet cultivation to east.

At 9½ miles crossed a *river, the Ret Noi,* with sandy bed and well-defined banks, requiring a waterway of 250 feet × 15 feet.

At 13 miles 2 furlongs reached *Bógor*; height above M.S.L. 628 feet.

Along the last five miles of this journey a tolerably level road was traversed, without any surface covering of gravel or metal, but with side drains and recently planted avenue trees at intervals; this road runs from Bondesor to Sumbulpoor, and is said to be fairly practicable for carts.

Bógor,
4th December 1881.

J. CORMAC,
Sub-Engineer.

K. F. NORDMANN,
Executive Engineer on Special Duty.

X.

No. 24R., dated Raipúr, the 6th January 1882.

From—K. F. NORDMANN, Esq., Executive Engineer, on Special Duty,
To—The Secretary to the Government of Madras, Public Works Dept.

Submits Report of Reconnaissance from 5th to 30th December, with Sections.—I have the honor herewith to submit the report on the reconnaissance from Bógor to Raipúr (5th to 30th December 1881), together with an extract from my notes taken *en route.*

The sections will follow in a few days, *i.e.,* as soon as all the aneroid observations, taken on the coast up to date, have been received. I request that all the altitudes, entered in my previous reports, may now be corrected according to the figures given in the sections, which are final and accurate.

2. *March from Bógor to Onki.*—The party crossed the Tél Nadi near Bógor on the 6th December, and marched along the left bank of the Sunder river, *viâ* Bodkapodór, Badbeng, Túkla, Kariál, Kolinga, Kúmúna to Torbor, thence across a low watershed and through some very dense jungle, *viâ* Kandamuri, Sialjóri and Jalbal, into the valley of the Jong river, and along its right bank to Onki.

3. *From Jalbal to Raipúr.*—Returning from Onki to Jalbal, the reconnaissance was continued *viâ* Nara, Súarmál, Kopli, Batrapáli, Telibanda, Umarda, Mahásamund, Kharóra and Belsóra to Gorári, where the Mahánadi was crossed; thence to Arang, where I halted a few days to give the people and cattle some rest, and then along the Sumbulpoor road to Raipúr, the distance of which from Vizagapatam by this route is 372 miles.

4. *Crossing of the Mahánadi.*—Gorári is the best place to cross the Mahánadi about here, as the banks are well defined, and the river is not so wide as in the adjoining reaches above and below.

There is a still better crossing near Lound, some 50 miles north-east of Arang, but it is too far away from this line.

5. *General character of the line.*—The ground traversed all the way from Bógor to Onki, and from Jalbal to Raipúr has been, practically, almost level; that is to say, the slopes have been very easy, and the gradient need never exceed 1 in 100. Bógor is 628 feet and Raipúr 962 feet above sea level.

The greatest elevation reached between the two places is at Bagbáhra, *viz.*, 1,084 feet; while Onki is 899 feet above mean sea level. The entire route is perfectly easy, there is no obstacle of any sort for either road or railway, and there are only three large rivers to be crossed, named the Tél Nadi, the Jong and the Mahánadi.

6. *Building materials, labour, soil, wet and dry crops.*—Building materials, such as stone, timber, clay and sand, limestone and iron, are abundant; and labour is to be had to such an extent as the somewhat sparsely populated jungles will admit.

The soil is rich throughout; rice and sugarcane, besides the ordinary dry crops, are grown along the whole line; the irrigation expedients for the wet crops being of the most primitive kind, yet quite sufficient.

7. *Recommends that the line viâ the Músa Ghât and Bondesór be finally rejected.*—I have already recommended (in my letter No. 20B., dated 4th December 1881, paragraphs 4 to 6,) that the line *viâ* Bondesór may be rejected for the purposes of the proposed railway, owing to the obstructions offered by the Músa Ghât; likewise the Lonjigar line, on account of the high elevation attained, (upwards of 1,600 feet) at Tirmui.—Hence, if the railway is to be taken east of the Noagarh Hills, the Ombadóla line seems the best.

8. *A line from Asurgor to Sónpoor and Sumbulpoor.*—It is apt to strike any one looking at the map that, having arrived at Asurgor, this line seems naturally to trend in a northerly direction to Sónpoor and Sumbulpoor (crossing the Tél Nadi near Turla), rather than to Onki or Raipúr. Asurgor is about 125 miles from Sumbulpoor, nearly the same distance from Onki, and 180 miles from Raipúr; so that by joining the Chattisgarh line at Sumbulpoor or Onki, instead of Raipúr, a saving of 55 miles could be effected. But, so long as it is not definitely settled whether the railway from Nandgáon (the present terminus of the Nagpúr-Chattisgarh line) is to come to Raipúr at all and cross the Mahánadi twice, at Arang and Sumbulpoor, or to go to Bélaspur without crossing the river, it seems premature to discuss the merits of a line from Asurgor to Onki or to Sumbulpoor.

9. *The route recommended by the Commissioner of the Chattisgarh Division.*—As regards the route travelled over by the Commissioner, Colonel Lucie-Smith (alluded to in the papers which accompany G. O. No. 3025 W., dated 5th December 1881), that portion of it from Bondesór to Polsodar may now perhaps be left out of consideration, since the railway is not intended, I think, to cross the Músa Ghât, and consequently will not touch Bondesór. From Polsodar to 5 miles north of Torbor, a distance of about 30 miles, the route traversed by the Commissioner coincides with my line; as does also that portion from Mahásamund to Raipúr, another 30 miles.

The only part of the route, where his line deviates from mine, is that between Tarnot and Mahásamund, about 45 miles; his line going from Torbor *viâ* Limdi, Tarnot, Sarabong, Tendubarra, Sirgidi, Bodrabanda, Kamaria and Karti, while mine (which may be 5 miles longer than the former) proceeds *viâ* Sialjóri, Jalbal, Nara, Súarmál, Bagbáhra Patrapáli, Telibanda and Umarda to Mahásamund.

10. *Objections to the above route.*—Although the line travelled over by the Commissioner may be unobjectionable for an ordinary cart road, yet for the purposes of a railway there are two obstructions in the way. These are a small ghât 2 miles south of Tarnot, between that place and Góbra, and a heavier ghât at Sirgidi, where Colonel Lucie-Smith says that he had attained an altitude of 1,500 feet. These two small ghâts, I consider, offer sufficient grounds for rejecting that line for a railway, when an easier line without any ghât is available by making a slight détour.

I was informed of the Tarnot and Sirgidi line by the Rajah of Kariál (as mentioned in my notes dated 9th December), but from the description I heard of it I did not consider it a suitable line for a railway, and hence did not reconnoitre it.

11. *Faulty Tappal arrangements at Ryaguddah, and delay in receipt of telegram, dated 1st December.*—If I had received G.O., No. 3025 W., dated 5th December 1881, and your telegram, dated 1st December, in time, I should nevertheless have examined this line; but the tappal arrangements made at Ryaguddah were very faulty.

No letters or papers reached me for nearly six weeks, *i.e.*, from 14th November to 23rd December, on which date the printed Government Order, alluded to, containing your telegram, was delivered to me. This was the first intimation I had of the despatch of that telegram. A copy of the telegram, posted at Madras on the 1st, which had been to Ryaguddah and thence returned to Vizagapatam, reached me only on the 26th December at Arang. I had then left Bondesór, 150 miles behind me; and, looking to the work still to be done between this and the hot weather, and the uncertain state of the health of my establishment, I thought I should not be doing the right thing if I turned back, or sent Mr. Cormac back, the more so since I had already pronounced against the line in question.

12. *Consultation with the Chief Commissioner, Central Provinces, and the Commissioner, Chattisgarh Division.*—I went to see the Chief Commissioner of the Central Provinces, Mr. Morris, who was here on tour, and the Commissioner of the Chattisgarh Division, Colonel Lucie-Smith, as soon as I reached Raipúr on the 30th, and explained my views with regard to the Músa Ghât and the route *viâ* Tarnot and Sirgidi; and I believe both these gentlemen agree with me that, although the latter route may be very suitable for a road, it is objectionable for a railway, on account of considerable ascents and descents and the high altitude attained, while there is an easier route running parallel to it which is but very little longer.

13. *Readiness of Native Chiefs to forward the post.*—I do not know who is to blame for the faulty tappal arrangements at Ryaguddah. I believe the Sub-Magistrate there had orders from the Collector of Vizagapatam to forward the post after me, and I instructed him to despatch a post twice a week; but he only did so until I reached Ombadola, not after that; although the Tát Rajah at Bisemkattak and the Zamin at Ombadola were quite prepared and willing to send letters to follow me as far as Kárial; while the Bondesór Ráni would have sent them on to Raipúr, if necessary. A Bondesór Policeman actually walked 120 miles through the jungle in four days and brought me a letter (*vide* "Notes," dated 20th December), which had been sent by the Commissioner of Chattisgarh Division *viâ* Sumbulpoor, and had been delayed *en route*.

14. *Traffic along the route.*—On the whole I have not met much bullock traffic on the route traversed; but this may be owing to the season, just after the monsoon, when the crops have only just been harvested. However, from my own recollection, the traffic from Raipúr, Nagpúr, and Bustar, *viâ* Jeypur and Potinghy, and down the several ghâts in that direction, is very much heavier than by this route.

15. *Acknowledgment of assistance rendered to the party.*—I have to record my obligations to the Jeypur Rajah's Amins at Ryaguddah and Ombadola, the Tát Rajah at Bisemkattah and his Kotwal; the Police Inspector of Bisemkattah; the headmán of Bógor village; the Ráni of Bhavanipatnam (Bondesor), her Dewán and other officials; the Rajah of Patna; the Rajah of Kariál and his most obliging police officers; and the zamindars of Nara and Súarmál, for their readiness to assist the reconnoitring party in every way, with information, guides, coolies, camp supplies, &c. Without their willing aid it would have been very difficult indeed to traverse those wilds. Even so it was sometimes very trying work to push on, without unnecessary delay, through almost trackless jungles, with such a large camp, the sick having to be carried in improvised dhoolies; but we managed to push through without losing a man, and attended to our survey. Mr. Sub-Engineer Cormac has given me most valuable assistance during the whole journey, and the Hospital Assistant, P. V. Ramaswamy Naidu, has looked well after the sick.

16. *Another set of Ordnance Maps asked for.*—I beg to request that another set of ordnance maps (scale 4 miles to the inch), comprising the sheets containing Raipúr, Sumbulpoor, Jeypur, Vizagapatam and the intermediate country, may be mounted in one large map on rollers (similarly as I have had the first set mounted), so that I may on my return mark thereon the lines traversed and the exact location of the proposed Railway by the several routes; since the map with me is somewhat the worse for wear, and I have only been supplied with one set of maps, but not with the duplicates, as mentioned in paragraph 8 of G.O. No. 2294 W., dated 16th September 1881.

17. *Two more Aneroids wanted.*—I also request that two fresh aneroid barómeters may be sent to Nárangpur, to await my arrival there, as two of my aneroids have become unreliable.

18. *Letters how to be addressed.*—Letters despatched after the 15th instant should likewise be addressed to "Nárangpur, care of the Postmaster, to await arrival." I have made arrangements for letters to be sent after me from Raipúr as far as Noagarh.

19. *Proposed details of reconnaissance from Raipúr southwards.*—The reconnoitring party will leave Raipúr in a few days, as soon as all the office work that has to be done is disposed of. Mr. Cormac's party will march *viá* Dhamtari and Kankéir through a corner of Bustar, *viá* Banskót to Omorkót, while I shall proceed *viá* Rajim, Kopra, Paregáon and Noagarh to Raigarh and Omorkót; thence we march together to Nárangpur where I expect to be about the 8th February, reaching Kuraputi about the 14th idem. At Kuraputi I propose to halt a week or ten days to bring up arrears of reports, sections, &c.

20. *The Revenue Subordinate not yet joined.*—A Revenue Subordinate (as provided for in paragraph 15 of G.O. No. 2294 W., dated 16th September 1881) has not yet joined the reconnoitring party.

The Agent at Vizagapatam states, under date the 2nd December, that he has been unable to find a qualified gumastah, and that he has telegraphed to the Agent in Ganjam to send me a man who knows the necessary languages.

Nothing further has been heard on the subject.

Meanwhile I have had to employ two inferior men, one from Párvatipuram, the other from Ryaguddah, who between them share the pay intended for the qualified gumastah; one of these men is attached to Mr. Cormac's party and one to my own.

XI.

Extract from Notes of Reconnaissance from 5th to 30th December 1881.—Bógor to Raipúr, distance 166 miles.

Bógor, 5th December 1881.—Thermometer 6 A.M., 48°; 10-30, 65°; 4 P.M., 77°. Despatched one camp ahead.

Received a letter from the Officiating Dewán of Bondesor, saying that a parwána (order) from Sumbulpoor, dated 14th ultimo, to render assistance to the party, had reached him only on the 1st December, and that Her Highness the Maharáni had directed him to send orders along the route to Kariál accordingly.

The Dewán sent a specimen of a metallic ore, found near Bondesor, containing antimony and graphite; he also sent some rose-coloured stones (probably spinel rubies) found near

Manjhér. Among the fruit, vegetables, pastry, &c., politely sent by the Maharáni of Bondesor, were some very delicate leafy cake of the finest texture, some sweet large yellow oranges with loose coats, besides tomatoes, radishes, kholl-kohl, yam, spinage, and large brinjals the size of melons.

The Dewán and the young Rajah's tutor are the only English-speaking persons in Bondesor. The Rani and her officers and policemen have been most attentive in providing camp supplies, guides and coolies.

From Bógor to Kariál.—Distance 38 miles, 3 furlongs.—*December 6th, Bógor to Bodkapodór.*—8 miles, 7 furlongs. Thermometer 6 A.M., 50°; 11 A.M., 77°; 4 P.M., 78°.

1 mile, 5 furlongs; bank of the Tél Nadi.—We had to wade through the river, as the sand was too soft and yielding for riding. The river from bank to bank is 1,560 feet wide and 20 to 25 feet deep between the banks; but these are flooded in heavy monsoons to a further depth of 5 feet at least, so that the bridge would have to be quite 35 feet above the deep bed. On one bank there is rock visible which probably extends across the river not very deep below the sandy bed.

2 miles, 7 furlongs, village of Móhda.—Wet and dry cultivation.

Soil.—Heavy clay, with some sand and some gravel.

Crops.—Cotton, gram, gingelly, lamp-oil, castor-oil, ragi, mustard, tobacco, vegetables, paddy and sugarcane.

Dungripara.—Some dry cultivation; country open.

Gontaballi.—Like most of the villages here, built upon a high and dry site. The ground is somewhat undulating; the open country with its scattered trees has a park-like appearance; there is a little light scrub jungle; good grass land.

Serka.—Fine, open country; high and dry ground; hard soil; many trees about.

6 miles, 106 yards.—A stream flowing into the Sunder river. This stream is not marked on the map. It is 9 feet deep and 50 feet wide in flood; high banks and sandy bed; no rock visible.

Open grass country, with some trees and shrubs, and some cultivation. Half a mile further, the large village of *Udepúr*.

There is a peculiar *temple* here, and another at Gurár, a little further on. The structure is built of stone in the shape of a flask with broad stopper; or a lime kiln with a crown or cap,* about 20 feet high, with the greatest diameter 8 feet, and a door 2 feet × 5 feet. The top ornament, resembling the stopper or cap, is a single flat stone carved at the edges, about 5 feet in diameter and a foot thick.

7 miles, 3 furlongs. Gurár.—Large village; fine tanks; sugarcane, rice and dry crops; much garden cultivation by means of numerous *wells*, 3 feet in diameter, 15 to 20 feet deep, worked by a kind of picota; the mouth of the well mostly unprotected. Soil, light.

8 miles, 7 furlongs, Bodkapodór.—Good camping ground. Light sandy soil.

A rich metallic *ore* crops out in masses above the surface, containing much pyrites, mica, iron; and to all appearance copper, antimony, bismuth, arsenic, traces of silver, and probably gold. Specimens will be sent from Raipur.—Height of Bodkapodór above mean sea level, nearly the same as Bógor, *viz.*, 618 feet.

Distance of Bodkopodór from Vizagapatam 214 miles; from Raipur about 151 miles. The country is better cultivated here; the villages are larger, and there is less jungle about than I have met hitherto since leaving Ryaguddah; the people are more civilized too, they stipulated for payment for labour, supplies, &c., beforehand, whereas further south they were satisfied with what they received, and frequently did not ask for payment, sometimes even refused it when proffered.

December 7th.—Bodkapodór to Sorman.—Distance 11 miles, 7 furlongs. Thermometer 6 A.M., 53°; 11 A.M., 81°; 4 P.M., 79°. In the first mile a *stream*, from which a small irrigation channel is taken off. Bed sandy, one bank high, the other low, alternately; no rock visible; greatest width and depth in flood 110 feet and 9 feet respectively.

2 miles, 7 furlongs, 116 yards. Kuland.—A large village, with extensive cultivated fields, both wet and dry.

The country open, no jungle here; a *mango tope* near the village; also two tanks, one large, the other smaller. The country here looks prosperous, and the people (who are dressed to some extent) look well-to-do.

Almost all the ground, except the hill sides, is cultivated; there is scarcely any waste land to be seen in the plain.

After this the ground rises and becomes undulating; there is less cultivation, and some light scrub jungle.—At 4 miles 2 furlongs, there is a sheet rock composed of a kind of conglomerate with metallic lustre and traces of iron and copper.

Kunkur limestone is found all over the country.

The railway line from Bógor should hug the northern bank of the Sunder river, keeping an average distance of half a mile or so from it, as the ground further north rises rather rapidly towards the hills and is undulating and in places somewhat irregular.

Gondergura.—Village with a large tank; rocky hillocks dotted about.

5 miles, 2 furlongs, 144 yards.—A stream with perpendicular banks, 8 feet high, and sandy bed; no rock. Width and depth in flood 110 feet and 7 feet, respectively.

* Somewhat like the tomb-stones in the cemetry of Scutari.

Village of *Daíton*, small; little cultivation; some jungle; hilly and undulating ground; soil, dark clay.

7 miles, 4 furlongs. Village of Itchegáon.—Wet and dry fields; soil, dark clay with some sand. Open, flat country.

Then a *tank*.—Then the Village of *Porsasora*, with tank and tope; light soil; good camping ground.

All the villages about here are built on rising ground. Ground slightly undulating.

9 miles, 3 furlongs. Bálbeng.—Large village; there are *weavers* here.

11 miles, 7 furlongs. Sorman.—A small place, at the foot of a hill; supplies scanty. Much wet cultivation in the lower grounds towards the river. Height of Sorman above mean sea level 638 feet. Distance from Vizagapatam 226 miles 2 furlongs; from Raipúr about 139 miles.

A Policeman from *Bishapatnam* (on the map called Sindikola) 2 miles from here, belonging to the Patna Zemindar's establishment, came to see about supplies, &c.—Much fever in camp; ten to twelve people more or less laid up with it; some have to be carried on the elephants and in dhoolies.

One of the large tents from Coimbatore (that had been blown down in the rains at Bisemkattak, had one pole and the ridge piece broken and was temporarily repaired at Ombadola) got out of order again, and the ridge piece required further repair before the tent could be pitched.

8th December.—Sorman to Tukla.—Distance 10 miles 1 furlong. Thermometer, 6 A.M., 52°; 11 A.M., 78°; 4 P.M., 77°.

1 mile, 6 furlongs. Bishapatnam.—Large village belonging to the Patna Zemindar.

Police station.—Open country, well cultivated; dark clayey soil, rock cropping up in several places; gneiss, decayed near the surface; and conglomerate.

3 miles, 7 furlongs, 125 yards. Sáleburut.—Large village with broad fields; a tope, good camping ground.

5½ miles. Jholop.—Wet and dry fields; large gardens with wells; tank, top and camping ground; soil gravelly.

A remarkable hill of *white quartz* half a mile south of the village; also quartz in large masses cropping out in several places; the village stands on quartz; the large reef, of which these outcrops evidently form part, runs form north to south.

6 miles, 7 furlongs. Boslar.—Some cultivation, and some waste land with light scrub jungle.

8 miles, 1 furlong. The Búsan stream with low banks and sandy bed; width between banks 145 feet, depth 6 feet, which depth during high floods, when the banks are overtopped, increases to 13 feet; the width during such floods is not easily ascertainable; the country around is then flooded by water of the Sunder river which is quite near.

10 miles, 130 yards. Tukla.—Large village with tank and topes; open flat country, good camping ground for a small army; light soil; water from wells, tank and river. Supplies procurable.

Two officials, sent by the Zemindar of Karial, were here to attend to camp supplies, &c.

Height of Tukla above mean sea level 686 feet; rise from last camp 48 feet.

Distance of Tukla from Vizagapatam 236 miles, 2 furlongs; from Raipur about 129 miles.

The people here speak Maráthi, Hindí, and Ooriya.

There are many *weavers* in Tukla and the neighbouring village of Risga, making a coarse cotton cloth; as well as *Tassa silk*, which sells here for about 6 annas a yard.

December 9th.—Tukla to Kariál.—Distance 7¼ miles. Kariál is the largest village met with since Párvatipúram; it is said to have 400 houses and about 2,000 inhabitants.

The Zemindar or Rajah of a large estate resides here.

Thermometer, 6 A.M., 52°; 11 A.M., 72°; 4 P.M., 77°.

1 mile, 183 yards. Risga.—Large village where Tassa silk is manufactured; open country; wet and dry fields; topes and trees; then some scrub jungle. The railway must continue to keep near the river bank, as far as San Doil, as the ground to the north of the river is high and irregular.

2½ miles. Pokansor.—Wet and dry cultivation as before; black soil; numerous cattle.

3¼ miles. Bóro Doil.—Soil, rich dark clay. Then *San Doil*; some light jungle.

At 5 miles 3 furlongs, a *large tank*, near the *village of Ránipur*, constructed by the Rajah of Kariál, upon springy ground; the drainage from the hills being excluded. The tank is for drinking water only; there is no irrigation from it.

It measures about 500 feet square and is 6 feet to 9 feet deep.—Here the Rajah's son, a fine young man of 24 years, richly dressed, with a younger brother, and a retinue of a dozen armed men, some well mounted and in becoming native costume, and some on foot in red coats of the 16th Regiment, met us and escorted us into the town.

7 miles, 4 furlongs. Kariál.—Distance from Vizagapatam 243 miles, 6 furlongs, 116 yards; from Raipur about 122 miles.

In the afternoon we visited the Rajah Padmanabha Singh, who is a polite and pleasant elderly gentleman, somewhat infirm. His son had come to camp to invite and escort us. The Rajah has horses and elephants and keeps 40 sepoys; there is a small menagerie, in which besides other animals a large tiger is kept. The Rajah's house is in the native style, not an

imposing edifice; near it is a small flower garden after the English pattern. There is only one person here who speaks English: a Baboo from Calcutta, who is tutor, Secretary, Interpreter, Gumastah, &c.

The last European who has been here was the Deputy Commissioner from Raipur, eight months ago; he is again expected in February. The Commissioner is said to be on his tour from Raipur, *viá* Sumbulpoor, to Bondesor, where the Rani has received notice of his visit.

The Rajah Padmanabha Singh expressed himself pleased with the prospect of a railway through his country.

Trades and manufactures.—There are carpenters, blacksmiths, and weavers (both of cloth and silk) in Kariál; also jewellers, gold and silver smiths, tailors, dhobies, and barbers; but no shoemakers; saddlery, shoes, boots, sandals, &c., have to be procured from Raipur by those who use them.

There are good sized donkeys here, the first I have seen for a long time; also crows, which are not found in the small villages in the jungle I have passed through.

Cattle are numerous, and a good many ponies are seen about here. There is a local *Post Office* belonging to the Rajah's establishment. Letters are said to take ten days to reach Raipur; one man takes the post right through.

The ordinary traffic route to Raipur lies *viá* Kumuna, Torbor, Tarnot (here called Khóla), Sarabong, Sirgidi, Charbati, Kamaria, Kárti (Police Station and local Post Office), Mahásamund; Gorári, and Arang.

By this route it is reckoned an eight days' journey from here to Raipur, at the rate of 15 miles a day, or about 120 miles; by the proposed railway line it will be but little (perhaps 5 miles) more.

The railway cannot conveniently follow the ordinary traffic route, because the latter crosses two ghâts, one 2 miles south of Tarnot, and the other near Sirgidi.

Height of Kariál above mean sea level, 802 feet.—Rise from Tukla, 116 feet.

Distance of Kariál from Vizagapatam 243 miles, 6 furlongs; from Raipur about 125 miles.

10th December.—Kariál.—Thermometer, 6 A.M., 52°; 11 A.M., 68°; 4 P.M., 78°.

I despatched one camp to Tikali, 12 miles ahead. In the afternoon the Rajah Padmanabha Singh (who succeeded his elder brother on the Musnud some sixteen years ago) and his son came on an elephant to visit me. We had some friendly conversation; the Rajah again expressed himself pleased with the prospect of a railway, and asked whether Kariál would be a station, where the station would be located, &c. His son asked questions about the fate of the unfortunate Rajah of Pooree, who was tried and imprisoned last year and who is a friend of this family. The Rajah ordered his officials to pay every attention to the wants of the expedition.

The ridge pole of the large Coimbatore tent, which had been broken and repaired at Bisemkattak and Sorman and was again in want of repair, was here renewed during the night by the Rajah's order. There are ten to twelve fever cases in the camp.

The large Vizianagram elephant has sore elbows from kneeling down on stony ground when being loaded and unloaded.

Kariál is prettily situated and presents a fine oriental picture, especially when viewed from the west. The Rajah's modest palace, with its enclosure and small cupolas, the adjoining sheets of water, with date and cocoanut palms along their banks surrounded by green fields, form a pleasing scene.

11th December.—Kariál to Tikali.

Distance 11 miles, 7 furlongs. Thermometer . . { 6 A.M., 60°. / 12 noon, 87°. / 4 P.M., 81°.

Outside of Kariál the jungle begins again, chiefly low scrub jungle with scarcely any cultivated fields for more than 2 miles. At 2½ miles the village of *Chindagura*, with extensive garden cultivation, mostly castor oil and tobacco; a few fields, both dry and wet. They have good cattle here, especially fine black buffaloes of large size. At the 3rd mile a *stream* 25 feet × 6 feet; soil swampy, banks not well defined.

3 miles, 4 furlongs. Tonkpali.—Very little cultivation; some mangoes trees, the first seen for the last hundred miles or so. Then jungle again, which in some parts is very heavy.

5 miles, 5 furlongs. Kódpéj.—Much garden cultivation; castor-oil, mustard, curry vegetables, beans, pumpkins, hybiscus, gourds, and tobacco; in the fields Indian-corn, millet, cholum, and cotton; iron is manufactured here. Then some heavy jungle. A small nullah requiring a culvert 5 feet × 5 feet.

7 miles, 1 furlong. Nuapára.—A stream 20 feet × 6 feet close to the village is dammed up and utilized for rice-fields. Gardens and fields. Jungle again. Kunkur limestone everywhere abundant.

8 miles, 192 yards. Borgáon.—There is a small furnace at work here for smelting iron ore; the ore used is a brown hæmatite; it is pulverized before being put into the furnace and then smelted with charcoal. There are also potters making pots and chatties in this village.

A quartz reef crops out near it; indeed quartz is found in many places along the whole route travelled over, and much of it seems to be more or less auriferous.

The soil here is light and contains much gravel. The railway should keep near the river bank, because the ground to the east is high and undulating. Light scrub jungle and high grass. Some matti wood and stunted teak.

In the 9th mile three small *streams*, averaging 12 feet in width and 5 feet in depth. Light jungle.

Shardéra.—Light jungle; swampy ground; some rice-fields; a field with hemp or nara.

10 miles, 5 furlongs. Kolinga.—The low Noagarh hills visible on the left are well wooded; so also are the hills around this village.

11 miles, 7 furlongs. Tikali.—A few huts in a jungle clearing.—Half the lascars are laid up with fever; also several servants and some of the men belonging to the pack bullocks.

The Rajah of Kariál sent me some flowers from his garden, the first garden flowers I have seen since Párvatipúram.

Height of Tikali above mean sea level 761 feet; fall from Kariál 41 feet.

Distance of Tikali from Vizagapatam 255 miles, 5 furlongs; from Raipur about 115 miles.

Fair camping ground; drinking water from the river. No wells; they have been very rare along the entire route, so far.

12th December.—Tikali to Kúmúna.

Distance 10 miles, 3 furlongs. Thermometer { 6 A.M., 60½°. 11 A.M., 80°. 4 P.M., 81°.

Hilly jungle, stony soil with gravel, much quartz all about.

1 mile, 6 furlongs, 112 yards. *Stream* 30 feet × 10 feet, high banks, rock for foundation.

Village of Lámipani; a little cultivation. Jungle, with much stunted teak.

3rd mile.—A *stream* 26 feet × 6 feet; much rock in the bed; ledges of stratified gneiss dipping at an angle of 45°, with conglomerate and quartz, extend across the stream. Jungle, rocky and stony soil. In the 4th mile, two small *streams*, one 6 feet × 4 feet, the other 10 feet × 5 feet. Hilly jungle.

4 miles, 4 furlongs, 128 yards.—Village of Jalkusum.—The railway here should keep close to the bank of the river; soil, dark and rich. A small stream, 15 feet × 5 feet, with a rocky bed.

5 miles, 7 furlongs, 115 yards.—Stream 36 feet × 9 feet; rocky bed, high banks; jungle. Here we join the Brinjarries' track from Raipur to Kariál, Dádpúr, &c.

6 miles, 6 furlongs. Dumribahal.—Met some 300 pack bullocks carrying gingelly seed from Raipur to Párvatipúram, Pallakonda and Nowpauda, whence they intend to bring up salt. Less jungle, and some cultivation.

7 miles, 5 furlongs. Bilinjar.—Tope, gardens and fields; tank; wet and dry cultivation. Jungle again on hilly ground, some very dense jungle through which a broad track 20 to 30 yards wide has been cleared for some distance.

10 miles, 3 furlongs. Kúmúna.—A large village, with a stone temple. Kúmúna was formerly the capital of the Kariál estate, and the late Rajah lived here; it was abandoned as a residence in favor of Kariál owing to a severe outbreak of cholera, from the effects of which the Rajah died.

Height of Kúmúna above mean sea level 857 feet; rise from Tikali 96 feet.

Distance of Kúmúna from Vizagapatam 266 miles; from Raipur about 105 miles.

13th December.—Kúmúna to Torbor. Thermometer { 6 A.M., 52°. 12 noon, 88°. 4 P.M., 80°.

Distance 12 miles, 2 furlongs, nearly all through jungle. The Kariál estate on this side consists of little else than jungle, with scarcely any inhabitants. The soil is rich almost throughout; there are hundreds of square miles that might be made to produce fine crops of wheat if the country were colonised.

At the 7th furlong, crossed the *Gurmai stream*, 60 feet wide, 15 feet deep, just below its junction with a smaller stream; one bank high, the other low, alternately; bed sandy, no rock; jungle on rich dark soil.

Site of the village of Gursor which has been deserted (so it is said) on account of the Brinjarries having troubled the inhabitants too much for labour and supplies. Open country; grass land with some light jungle.

Village of Kisana; some dry and wet cultivation.

Site of the village of Tókapára, deserted; jungle, grass 5 to 7 feet high; no track; rich, dark soil.—Here I saw the first partridge on this trip.

4 miles, 5 furlongs, 171 yards. Kurisor.—A small village; some wet and dry cultivation; soil, rich clay, nearly black.

5 miles, 3 furlongs. Stream, 36 feet × 7 feet, high banks, sandy bed, no rock.

The ruins of an old tank. The country bears evidence of having been more thickly populated in times past. Grass jungle, the grass 6 to 8 feet high; track barely visible; ground full of holes owing to the cracking and bursting of the dry black soil.

Koirbari.—A few huts. Some open ground, with a little cultivation; then dense jungle.

8th mile. Jondramura.—A deserted village, the people having left owing, it is said, to a severe outbreak of cholera eight months ago; one or two small huts remain standing and are inhabited; fine jungle all round.

9 miles, 6 furlongs. Manikgura.—A few huts in a small clearing in the jungle; good jungle around.

12 miles, 2 furlongs. Torbor.—A good-sized village, with a large tank, and ample fields and gardens; rich, dark soil; jungle all round. A camp of Brinjarries was here with 300 bullocks carrying rice; they have come from Itaipur and are on their way to Párvatipúram (which they say it will take them a month to reach); thence they go to Nowpauda for salt; good camping ground; supplies available.

Drinking water from tank and river, no wells. A vaccinator (a Mussulman) has lately arrived here from Raipur. He has experienced some difficulty in procuring supplies, as he had orders, so he said, to obtain all he wanted without payment.

Height of Torbor above mean sea level 949 feet; rise from Kúmúna 92 feet.

Distance from Vizagapatam 278 miles, 3 furlongs; from Raipur about 93 miles.

14th December.—Torbor to Sialjóri. Thermometer { 6 A.M., 52°. 11 A.M., 82°. 4 P.M., 80°.

Exposed to the sun at noon, 115°.

Distance 11 miles, 5 furlongs, 175 yards.

1 mile, 1 furlong.—*Stream,* 26 feet × 6 feet; low banks, sandy bed, no rock. Tree and scrub jungle with a few fields here and there, soil hard and gravelly; then some heavy and dense jungle.

A track 20 to 30 yards wide has been cleared through the densest parts of the jungle, and leads evenly over hard and high ground without much change of gradient.—Another small *stream,* 12 feet × 3 feet; low banks, gravelly bed; some rice-fields about.

The railway should be kept on the lower ground to the west; jungle light; soil, dry and hard.

Two small *streams* close together, each 6 feet × 3 feet.

4 miles, 183 yards, *a stream,* 50 feet × 10 feet; crossed below the junction with a smaller stream; one bank high, the other low; bed sandy; some rock for foundations.—Some *sál* trees about here; much *quartz.* Light scrub jungle with a few patches of cultivation.

Small *nullah,* 6 feet × 3 feet. 5 miles, 2 furlongs, a large pool in the fields, near a small village, Daldalli.

Some cotton grown here and a good deal of rice; high ground; dark soil.

6 miles. Nuapára, in a large clearing; high ground; dark soil; wet and dry fields. Thin scrub jungle.

Village of Kandamuri.—The custom of the villagers in these parts is to bring tobacco to approaching strangers (everybody smokes here), sometimes they bring buttermilk besides.

8 miles, 4 furlongs, 113 yards. Sámbarsingi.—From here leads a track to Tarnot (Khóla). There are three *tombs* here on the roadside, where the headmen of the village are buried; the graves are marked by heaps of stones. The common people are buried in the jungles, or else burnt. *Iron* is manufactured at Sámbarsingi. The place was probably named after the sambur, which seem to be plentiful here, to judge from the traces they leave. Open country, then light jungle. A small *stream,* 10 feet × 4 feet.

9 miles, 6 furlongs. Kajurbara.—Undulating ground; the line of rail should keep a mile further to the east; soil, dark rich clay.

A fine hill ridge, the Ganda-Mardan hills, 3,000 feet high, 6 to 8 miles long with a plateau on top, a mile broad, larger than Rámandroog, lies 15 to 20 miles to the east.

Two small *streams,* close together, each 12 feet ×, 4 feet; no rock.

There is some *game* in these jungles and in the low hills to the west. The traces of bear, sambur and bison are frequently seen. A small cheetah was brought in that had been killed in a fight with a larger one near the village, where both were hovering about the cattle.

11 miles, 6 furlongs. Sialjóri.—The line of rail should run about a mile to the east of this.

Height of Sialjóri above mean sea level 1,047 feet; rise from Torbor 98 feet.

Distance from Vizagapatam 290 miles; from Raipur about 82 miles.

15th December.—Sialjóri to Birumál, on the line to *Onki.* Thermometer { 6 A.M., 56°. 11 A.M., 78°. 4 P.M., 86°.

Exposed to the sun at 4 P.M., 86°.

Distance 10 miles, 7 furlongs.

In the first mile a small *nullah* 8 feet × 3 feet; some thin jungle, then open country.

1 mile, 4 furlongs. Paraskol.—A good-sized village which seems to have moved a mile eastwards since the map was made. Villages here sometimes shift their site.—Some Brinjarries belonging to these parts were buying gingelly seed in order to take it to Párvatipúram and Junágar and the Músa ghát. High ground, hard soil; jungle.

The railway should be 1½ miles to the east of the straight line from Sialjóri to Jalbal; the ground to the east is not so high, and more even; but the jungle is very dense. Many traces of sambur and some of bison; soil hard; a long stretch of trackless jungle; near Jalbal it becomes lighter. *Stream* 10 feet × 5 feet; no rock visible.

Emerging from the jungle we come upon the village of *Jalbal,* 5 miles, 2 furlongs. Here the rail to Raipur will turn north-westwards to Nara; but we now continue our northerly march towards Onki to explore the ground in case the rail should be taken there. Open

ground round Jalbal, some wet and dry fields; in the gardens are chillies, beans, pumpkins, hybiscus, castor oil and tobacco. South of the village the soil is chiefly light, to the north mostly heavy and black. The higher ground is generally of light soil, the lower parts are swampy; but the undulation of the ground is very slight.

A small *tank*, breached; a *stream* 9 feet × 3 feet used for irrigation comes through the breach, muddy bed and banks.

Gúchapali, the site of the deserted village; the inhabitants are said to have left 20 years ago on account of cholera; there is no trace of the village left, except the fields, which are still partly cultivated.

Kóduméra, a mile to the left; light soil, open country, good camping ground.

Small *nullah*, 12 feet × 5 feet.

D ripali, small village; some iron furnaces here; the ore worked is of two kinds, hæmatite and bog ore. Here is also a *weaver's* loom. Country somewhat open. Sál trees are found in the surrounding jungle. Light soil, brown clay with sand. Then dense jungle of shrubs and small trees. Level ground.

10 miles 7 furlongs. Birumál in a jungle clearing, a mile in diameter; soil hard; good camping ground, except that the only drinking water available, *viz.*, from the tank or dammed-up-stream, is inferior; but wells could easily be dug in the fields, the water being not far below the surface. There are no wells in these villages. The line of rail should be half a mile to the east of this, where the ground is more even.

Height of Birumál above mean sea level 1,013 feet; fall from Síaljóri 34 feet.

Distance of Birumál from Vizagapatam 301 miles.

16th December.—Birumál to Amúndi. Thermometer { 6 A.M. 47°. 11 A.M. 80°. 4 P.M. 77°.

Exposed to the sun at 3 P.M. 102°.

Distance from Birumál to Amúndi 12 miles 3 furlongs.

Height of Amúndi above mean sea level 918 feet; fall from Birumál 95 feet.

Distance from Vizagapatam 313 miles 3 furlongs.

In the first mile a *nullah*, 15 feet × 5 feet, dammed up in several places so as to make it spread over the adjoining fields on both banks which are cultivated with rice; hence the ground on both sides is very swampy and difficult to get across, even at this season when the rice crops have been harvested; then jungle.

Pára, a Brinjarri village which has been here for the last three years only; the people of Gyran would not allow the Brinjarries to live in their village from fear that cholera might be introduced by that wandering tribe, so the Brinjarries had to build a village of their own.

1 mile, 4 furlongs, 192 yards. Gyran.—A largish village in the midst of an extensive jungle clearing; further on the jungle is light; soil, dark, stiff clay.

2 miles, 4 furlongs. Séndebutta.—A new village, only six years old, not marked on the map; rich, dark soil; there are some weavers here; then jungle again, not very dense; ground gently undulating. Large clearings alternating with stretches of jungle; soil, lighter on rising ground, and heavier in the hollows which are mostly swampy.

3 miles, 4 furlongs. Bavankéla.—Black soil; extensive rice-fields. Small *nullah* 10 feet × 4 feet, converted into wet fields; then some undulating ground with light jungle.

Stream 20 feet. × 5 feet used for irrigation, muddy bed and banks.

5 miles, 6 furlongs. Village of Bisora.—Another *stream* dammed up in several places in the manner in vogue here, and converted into swamps for rice cultivation. Then jungle of trees and scrub, on light sandy soil; the jungle soon becomes dense and contains numerous *sál trees*; after a mile of this the bush becomes thinner again. The soil continues chiefly light (with black patches here and there) and the ground slightly undulating till past the 8th mile. At the beginning of the 9th mile a small muddy *stream*, 10 feet × 4 feet, used for irrigation.

9 miles, 210 yards. Village of Beltikri.—Open country around, the jungle clearing measuring about a mile in diameter. A mile beyond Beltikri, a *nullah* 20 feet × 8 feet, with swampy bed and steep banks.

11th mile. Balésar, an ordinary small village with gardens and fields; then sál jungle.

12 miles, 3 furlongs. Amúndi, surrounded by jungle containing numerous sál trees, which abound in this part.

Country open; good camping ground; drinking water from the Jong river. Supplies available; soil, dark clay; quartz and kunkur limestone found along the whole route; gneiss continues to be the prevailing rock formation.

Iron ore (hæmatite) is smelted at Amúndi. The villagers have a number of crude carts with solid wooden wheels, drawn by black buffaloes; cattle numerous.

The greater part of the country traversed from Karial up to this (mostly jungle, and much of it virgin soil), would, I believe, produce good wheat crops with very little cultivation.

No difficulties exist with regard to the railway, the country being practically flat, well watered and wooded, though sparsely peopled.

17th December, Amúndi to Onki and back to Amúndi. Thermometer { 6 A.M. 43½°. 12-30 P.M. 86½°. 4 P.M. 78½°.

Distance 6 miles, 7 furlongs.

Height of Onki above mean sea level 899 feet. *Fall from Amúndi 19 feet.* Explored both banks of the *Jong river*; crossed over to *Cheruda* on the left bank, thence went to *Nilasar*. (The "Cheruda" marked on the map on the right bank, a mile north of Amúndi, does not exist, and the people say there never was such a place on the right bank.) Fine jungle; soil black, full of cracks, fissures and holes; then scrub jungle and high grass. Some people have come here all the way from Rájim to cut grass and take it away for thatching, &c. The grass is very long and strong, and is used for making mats, fences, verandah screens, and for thatching roofs.

Nilasar is a small collection of mud hovels in the midst of sál jungle; thence I went to *Belanger* on the right side of the river; jungle of scrub and grass; soil, dark and rich; a kind of *hemp* is grown here, called "son" in Hindi and janam nara in Telugu.

The nullah near Belanger is 50 feet wide and 15 feet deep; one bank is 15 feet high, the other low and subject to inundation during floods. There is rock for foundations. A stretch of coarse grass jungle; the grass 10 feet high, and upwards; then some sál jungle, and irregular ground. A small *nullah* 6 feet × 3 feet; light soil, hard and stony.

Two small *streams* each 15 feet × 5 feet, beds and banks muddy; then good tree jungle with ippa, sál and matti; ground flat again, soil light.

Marched over some very holy ground; black soil with wide and deep cracks and fissures, and deep holes where the ground has subsided from the rain. These holes occur every few yards, and, covered with grass as they are, it is difficult to avoid putting one's foot into a hole. It is impossible to ride over this ground.

6 miles 7 furlongs. Onki.—A small collection of miserable hovels in a howling wilderness, jungle all round; soil, stiff dark clay. The people of the village at sight of us ran away, but returned again by-and-by.—Returned to Amúndi on the right bank *viâ Belanger* and *Parsoda* (the latter two miles north of Amúndi); crossed two small streams, 20 feet × 5 feet each, dammed up and converted into swamps for rice cultivation; and a larger stream 45 feet × 8 feet, a mile north of Amúndi, with high banks, sandy bed, and no rock.

Reached Amúndi at 12-30 P.M., having travelled 14 miles 3 furlongs since 6 A.M., taking observations, making notes, &c.; the temperature during this time having varied between 43° and 90°.

Straw about here is plentiful and cheap; it is left in the rice-fields to rot and manure the ground; only the ears of the paddy, with a short length of straw, being cut out in harvesting.

There is a remarkable scarcity of *mosquitos* in these jungles. I have only seen one small *snake* since leaving Párvatipúram, and met no *scorpions* or *centipedes*; *white-ants* are not plentiful. I have seen no *hares* nor *rabbits*, no wild *pig* nor *deer*, except a tame one in a village; very few *jungle fowl*, no *pea fowl*, no *bustard*; *pigeons* are numerous; *partridge*, *quail* and *snipe* scarce. There are *ducks*, and other water fowl on some of the tanks; also cranes, storks, plovers, and white gulls and paddy birds; some Java sparrows, minas, parroquets, a few swallows; crows are scarce in the small villages in the jungles; jackals everywhere plentiful. Gum, dyes and resin (sál) are to be obtained from several jungle trees.

There is a pretty *orchid* growing on some young ippa trees, with a red flower like honeysuckle.

Distance of Onki from Vizagapatam 320 miles 2 furlongs.
" from Raipur about 70 miles.
" from Sumbulpoor about 100 miles.

18th December, returned from Amúndi to Birumál, distance 12½ miles. Thermometer { 6 A.M. 43½°. 11 A.M. 74°. 4 P.M. 78°.

The sick whom I had left behind in the camp at Birumál had improved during their two days' halt there.

19th December, returned from Birumál to Jalbal, thence to Nara.

Distance travelled 14 miles 6 furlongs, *viz.*, Birumál to Jalbal 5 miles, 6 furlongs.

Jalbal to Nara 9 miles. Thermometer { 16 A.M. 40°. 11-30 A.M. 91°. 4 P.M. 80°.

There was some *hoar frost* on the ground in the morning, between Birumál and Jalbal.

Resumed march to Nara, where we left off on the 15th. After leaving Jalbal, some light jungle was passed through, on light clayey soil.

1 mile, 2 furlongs, 94 yards.—Village of Salia; country rather open, very little jungle about.

Wet and dry fields, and garden cultivation; some laterite was seen cropping out.

2 miles 1 furlong, 108 yards. Chanabeda.—A tank, gardens and fields. Plantains in the gardens, the first seen since Bisemkattak. Country open, trees and shrubs about.

2 miles, 6 furlongs, 71 yards. Stream 35 feet × 10 feet, sandy bed, banks low and flooded. Then a swamp at this season dry, except in the lowest part.

3 miles, 2 furlongs, another swamp,—with a *stream* running through it about 30 feet × 8 feet; the bed is muddy and irregular and has several branches; swamp extends close up to Amseri.

3 miles, 4 furlongs, 149 yards, village of Amseri on high ground, with a tank and wet and dry fields. Near the village is a small hillock through which a *quartz reef* runs. Then

light jungle with some swampy patches. Then high ground with light jungle on hard soil, followed by a gentle descent, with another stretch of swamp partly cultivated.

5 miles, 4 furlongs, 109 yards. Kopathora.—Gardens and fields; tame pigeons are kept in many of these villages, and on the trees are found large blue, green and grey pigeons in a wild state.

No bustard seen, very few partridges, scarcely any snipe.

6 miles, 6 furlongs. Mogravali.—With a tank and the usual cultivation. Met a large herd of Brinjarri bullocks carrying wheat to Párvatipúram.

Village of Kurrumura, small, not marked on the map.

8 miles, 2 furlongs, the Jong stream, 600 feet wide, depth in flood 16 feet; irregular, sandy bed with small islands, low banks subject to floods, no rock visible. This river is the boundary of the Karial estate.

9th mile. Nara.—Large village, the head-quarters of a zemindar who owns twelve villages. The old zemindar is 84 years of age and infirm; his sons and his dewan came to the camp and attended to our wants; guides, coolies and supplies were promptly furnished. There is a good encamping ground at Nara, good water to be had from tanks and the river; there are also some wells in the gardens.

In the village are weavers and iron smelters, no carpenters.

The Police Officers of the Karial Rajah, who had accompanied the camp up to this and been very useful, returned from here.

Height of Nara above mean sea level 1,010 feet; fall from Birumál 3 feet, from Sialjóri 37 feet.

Distance of Nara from Vizagapatam 304 miles 3 furlongs; from Raipur about 62 miles.

20th December.—Nara to Bagbahra.—Distance 10 miles, 5 furlongs. Thermometer { 6 A.M. 41½°. 11 A.M. 80°. 4 P.M. 80°.

Passed through some paddy fields and uncultivated swamps, crossed two small streamlets requiring culverts, then a fine tank near the village of *Bendravan*, 1 mile, 4 furlongs. No jungle here, all cultivation, both wet and dry.

2 miles, 4 furlongs, village of Ukra; much wet cultivation. Then thin scrub jungle.

A small village, named Lámi; jungle again, with a few isolated patches of fields.

4 miles, 1 furlong, 153 yards. Kandajori stream 250 feet wide, 16 feet deep, sandy bed with some rock; banks low, and flooded in the rains. The rock is gneiss, with quartz and felspar in veins and patches.

The railway need not cross this nullah if the Jong river is bridged a mile below Nara.

4 miles, 5 furlongs, 155 yards. Kumakan.—A large village; the zemindar of Súarmal lives here, who owns 80 villages. This village has two tanks and a large swampy place in a shed; a new building is being constructed of stone; beyond the village, a *nullah* 20 feet × 4 feet.

3 miles, 7 furlongs, 94 yards. Kulia.—With extensive fields; black soil; then some high ground with thin jungle on light soil. A tank; jungle again; small nullah 6 feet × 3 feet.

8 miles, 2 furlongs. Púluari.—A few huts in a small jungle clearing; soil, dark clay with sand.

8 miles, 7 furlongs, 133 yards. Kopli.—A large village where a new tank is being constructed by the zemindar of Súarmal, Umra Sing, who met me outside the village with his two little sons and a large following, and accompanied me to *Bagbahra*. He was most attentive to the wants of the party and asked that the Government might be informed of this fact. He seemed very energetic and intelligent, and was pleased with the prospect of a railway through these parts.

A letter from the Commissioner of Raipur, dated the 9th November, and addressed to me at Bondesor, was brought to me only to-day by a Policeman from Bondesor who had walked 120 miles in four days.

Height of Bagbahra above mean sea level 1,083 feet; rise from Nara 73 feet.

Distance of Bagbahra from Vizagapatam 315 miles; from Raipur about 55 miles.

21st December.—Bagbahra to Telebanda. Distance 12 miles, 6 furlongs, 204 yards. Thermometer { 6 A.M. 52°. 11 A.M. 87°. 4 P.M. 89°.

Some rice fields in the lower grounds; then jungle; a small streamlet with rocky bed; irregular ground, slightly hilly; jungle of brushwood and trees for nearly 4 miles on varying soil, mostly rich dark clay. In the jungle (3rd mile) *Pendri*, the site of a deserted village which the people are said to have left on account of want of good water; dense jungle. At the end of the 3rd mile a *nullah* 25 feet × 5 feet, sandy bed, low banks, no rock. Further on, two small nullahs 10 feet × 4 feet each; a third 8 feet × 3 feet; undulating ground.

5 miles, 5 furlongs, 79 yards.—Patrapali, with fine garden cultivation, and wells; maize, hemp, onions, garlic, spinage, beans, pumpkins, chillies, brinjals, plantains, castor-oil, mustard, sugarcane, tobacco, &c., are grown here. Met 200 Brinjarries' bullocks carrying gingelly seed and wheat to Párvatipúram.

6 miles, 5 furlongs, 203 yards. A shallow *nullah* 100 feet × 6 feet, low banks, sandy bed; all jungle again. Another *nullah* close to the former, 50 feet × 4 feet, with low banks and sandy bed. Some paddy swamps; then the village of *Kasibara* at 7 miles, 5 furlongs, wet and dry fields, and gardens with wells; jungle again; a small *nullah* 8 feet × 3 feet.

9 miles, 3 furlongs. A *stream* 60 feet × 5 feet with sandy bed and low banks, near the site of *Aoraibabri*, a deserted village. Black soil, full of cracks, fissures and holes; scrub jungle with swamps, uncultivated. Two small swampy streamlets 5 feet × 2 feet. More swampy ground; then another. *Kasibara*, a large village at the end of the 12th mile; gardens with wells and extensive fields. The water in the wells is 6 to 10 feet below the surface; *laterite* is found here.

A Superintendent of Vaccination from Raipur and a vaccinator were in the village.

12 miles, 6 furlongs, 204 yards. Telibanda, small village. A Head Constable from *Karti*, which has a Police station and Post office, came here to assist the camp. A Munshi, sent on the 12th November by the Deputy Commissioner of Raipur to meet the party at Karial, turned up here only to-day (having been to Karial and missed me) and made himself useful in procuring supplies, &c.

Height of Telibanda above mean sea level 1,022 feet; fall from Bagbahra 61 feet.

Distance of Telibanda from Vizagapatam 327 miles, 7 furlongs, 117 yards; from Raipur about 46 miles.

December 22nd.—Telibanda to Mahasamund.—Distance 11 miles, 6 furlongs, 124 yards. Thermometer, 6 A.M., 47°; 11 A.M., 80°; 4 P.M., 80°.

Passed over extensive rice fields, now nearly dry, the crop having been gathered. Then jungle on slightly undulating ground.

2 miles, 6 furlongs. Mámubancha, a large village with much cultivation around.

Then an uncultivated swamp, with a small *stream*, 10 feet by 4 feet, running through the deepest part; muddy bed and banks.

8 miles, 7 furlongs.—The site of Pathripali village, now deserted; no sign of former cultivation; jungle all around. The people are said to have been engaged in illicit dealings with timber and spirits, hence they were driven from the village. All jungle. Some laterite is seen cropping out.

4 miles, 170 yards. Sikli nullah, 25 feet by 8 feet; sandy bed, good banks, no rock. Then some clearing with cultivation. Soil black, full of holes. Small *nullah*, 6 feet by 3 feet.

5 miles, 190 yards. Arand, a considerable village, with fields and gardens. Wells in the latter; water about 10 feet below the surface, and said to be good.

6 miles, 3 furlongs. Umarda, a small village with a tank.

7 miles, 1 furlong.—A *stream* 15 feet by 6 feet, with laterite rock for foundations. Light clayey soil; jungle.

7 miles, 6 furlongs, 120 yards.—Stream 10 feet by 4 feet; laterite, gravel in the bed. Jungle on both sides. Then a swamp; beyond that two small villages, *Murmár* and *Kamári*. Then two small nullahs, 9 feet by 3 feet.

There is much laterite about here; the prevailing rock formation is still gneissic, which ceases at the Mahánadi.

9 miles, 1 furlong.—The village of *Pathripali*, where a blacksmith is at work with rude implements and contrivances.

A small *stream*, 4 feet by 3 feet, then a larger one 12 feet by 4 feet.

10 miles, 3 furlongs, 189 yards.—Pitiajor, small village.

11 miles, 6 furlongs, 124 yards.—Mahásamund, a large place, said to contain 400 houses and over 1,000 inhabitants. Carpenters and blacksmiths here. A survey station and a temple are prominent objects. The soil consists chiefly of laterite; water is good. Encamping ground high and extensive. A tank; topes and trees about. Here is the beginning of a cart-road marked out by side drains, leading to Arang; and here also the track from Tarnot (*vid* Tendubara, the Sirgidi Ghat, Kamaria and Karti) joins our line.

Height of Mahásamund above mean sea level, 915 feet; fall from Telibanda 107 feet.

Distance of Mahásamund from Vizagapatam 339 miles, 6 furlongs; from Raipur 34 miles.

December 23rd. Mahasamund to Arang.—Distance 10 miles, 2 furlongs. Thermometer, 6 A.M., 44°; 11 A.M., 79°; 4 P.M. 75°.

Marched along a cart track, partly lined out and roughly made. All fields; no jungle.

1 mile, 3 furlongs. Kharóra, a large village with much wet cultivation; good topes; a tank.

3 miles, 5 furlongs. Belsóra, a *large village* like the former. Country level and open, well cultivated; no jungle.

At the sixth mile, near the bank of the Mahánadi, the village of *Gorari*. Here is some solid kunkur rock; also stratified limestone rock, similar to that at Cuddapah and Kurnool.

Then cross the Mahanadi River, 2,040 feet wide and 25 feet deep during great floods which spread close up to the village of Gorári, covering the ordinary banks near the river's edge to a depth of 10 feet.

The ordinary floods, contained between the banks, and not overflowing them, run about 15 feet deep.

The bridge will require to be 30 feet to 35 feet above the deep bed. The low water at present is 260 feet wide and little more than 2 feet in depth. The bed is sandy; on the eastern bank and in the bed is limestone rock; on the west bank none is visible, but it will probably be found not far below the bed.

A quarter of a mile from the west bank is an irrigation canal taken off from the river.

7 miles, 6 furlongs. Paragáon, with a suburb occupied by potters. Soil, clay and laterite; mostly cultivated; little waste land; no jungle.

Here we join the main road from Raipúr to Sumbulpoor; a new road is being made to Gorári.

Ninth mile, a nullah, 20 feet by 6 feet; high banks, stony bed (limestone).

10 miles 2 furlongs. Arang.—Good encamping ground.

Fine tope, good water from wells and tanks. Post office, police station and school here; also a travellers' bungalow, a dispensary, and a fine temple.

Distance of Arang from Vizagapatam 350 miles; from Raipúr 23 miles.

Height of Arang above mean sea level 942 feet; rise from Mahásamund 27 feet.

December 29th. Arang to Hasaud.—Distance 13 miles 4 furlongs. Thermometer 6 A.M., 55°; 11 A.M., 75°: 4 P.M., 78°.

First mile, village of Bihiar.—Open, flat country, well cultivated; black soil.

2 miles 6 Furlongs. Rasni, an ordinary village, with tope and tanks; sugarcane and rice-fields.

5 miles 2 furlongs. Tappal hut.—The ground here is gently undulating; soil laterite; the whole of the country, so far as the eye can reach, is cultivated; little waste land; no jungle; firewood is scarce; no hills.

Trees are few and far between, but each village has one or more topes and tanks; some have wells.

7 miles 2 furlongs. Kulhán stream, 50 feet wide and 10 feet deep in flood; high perpendicular banks; bed gravelly, no rock visible.

10 miles 2 furlongs. Náogáon, a small village, with a police station, temple, tope and tank; soil in some parts red, in others black; ample fields, dry and wet. Here I met the first *wheat* fields along this route: there were none east of this.

13 miles 4 furlongs. Hasaud, a large village, with tanks, topes, wells and extensive cultivation. Soil, light brown clay. Good encamping ground.

Distance of Hasaud from Vizagapatam 363 miles 4 furlongs; from Raipúr (east end) 8¼ miles.

Height of Hasaud above mean sea level 969 feet; rise from Arang 27 feet.

December 30th. Hasaud to Raipúr.—The country is flat and well cultivated, with both wet and dry crops.

2 miles, 1 furlong. Sirikheri, village with tope and tank.

3 miles 5 furlongs, 185 yards. Jora, similar to the last, with much wet cultivation; black soil.

5 miles. Labhandih, similar to the last two villages; black soil. A *stream* 40 feet by 8 feet, with high banks, and limestone rock in the bed.

Half a mile further a smaller stream, 15 feet by 6 feet; banks and bed of black soil.

Much wheat and linseed are grown about here.

6 miles 6 furlongs 130 yards. Village of Telibanda or Kurwatoli; with a fine tank, and tope of mhowa trees.

8 miles 1 furlong 80 yards. East end of Raipúr Cantonment, near the Deputy Commissioner's Court.

The distance of Raipúr from Vizagapatam by the route marched over is 371 miles 5 furlongs 211 yards.

Altitude of Raipúr above mean sea level 962 feet.—I went at once to see the Chief Commissioner of the Central Provinces, Mr. Morris, B.C.S., who was here on tour; and the Commissioner of the Chattisgarh Division, Colonel Lucie-Smith; both officers are going into camp to-morrow, *en route* to Bélaspur.

RAIPÚR,
6th January 1882.

K. F. NORDMANN,
Executive Engineer, on Special Duty.

XII.

No. 27R., dated Raipúr, 14th January 1882.

From—K. F. NORDMANN, Esq., Executive Engineer, on Special Duty,

To—The Secretary to Government of Madras, Public Works Department.

In continuation of my letter No. 24R., dated 6th instant, I have the honor to inform you that I have this day posted to your address a tin case, containing the longitudinal section of the country traversed by the reconnoitring party, from Párvatipuram to Raipúr, and the cross sections of all streams exceeding 30 feet in width.

2. I have despatched one camp this day, and leave Raipúr to-morrow for Rájim, whence I march up the valley of the Pairi, and then up the Sondor river passing Noagarh, then up to Raigarh, Omorkót, Nárangpur and Kuraputi.

3. Mr. Cormac follows *viá* Dhamtari, Kankér and Banskót to Omorkót, where we expect to meet about the 1st of February; reaching Kuraputi about the 14th idem.

4. From all the information I have been able to collect, I see no necessity for examining a line leading from Dhamtari up the valley of the Silári to Sihóa and Borái, which was travelled over and reported on, in 1876, by Colonel Francis, then Executive Engineer at Raipúr. This line goes over some very high, rough and uneven ground, and seems in every respect inferior, for the purpose of a Railway, to either the line up the Sondor river, passing near Noagarh, or the line *viá* Dhamtari, Kankér and Banskót.

5. I beg that letters may be addressed to "*Nárangpur* viâ *Kuraputi, to await arrival.*"

XIII.

No. 38 K., dated Kuraputi, 25th February 1882.

From—K. F. NORDMANN, Esq., Executive Engineer, on Special Duty,

To—The Secretary to Government of Madras, Public Works Department.

In continuation of my letter No. 27 R., dated Raipúr, the 14th ultimo, I have the honor to submit* herewith my Notes of Reconnaissance of the country between Raipúr and Kuraputi *viá* Rájim, Kópra, Bourka, Noagarh, up the Pairi and Sondor rivers, then *viá* Háthgaon, Raigarh, Omorkót and Nárangpur to Kuraputi, a total distance, by the straightest and easiest route, of 217⅛ miles.

*A. Executive Engineer's Notes of Reconnaissance from Raipúr *viá* Rájim up the Sondor River to Nárangpur.
B. Do. do. from Nárangpur to Kuraputi *viá* the Mádeoputi Ghât.
C. Mr. Cormac's Diary from Raipúr *viá* Dhamtari and Kankér to Omorkót.
D. Do. do. from Pupogáon to Kuraputi *viá* Jeypur.
E. Do. do. Report No. I-O, dated 1st February 1882.
F. Reports by Colonel Francis on routes from Raipúr *viá* Dhamtari and Sihóa towards Raigarh.

2. I left Raipúr on the 15th ultimo and marched through a well-cultivated country *viá* Khandwa to Rájim, where I crossed the Mahánadi river, which is there 1,900 feet wide between the banks and 20 feet deep when in flood. From Rájim I marched up the right bank of the Pairi river. The ground traversed is on the whole very favourable for the construction of a Railway. The country is fully cultivated as far as Kópra and some miles beyond, and the gradients are generally light.

3. Near Bourka there will be some hill-side cutting required, for upwards of a mile along the steep and stony banks of the Pairi river. This part of the work, although insignificant in itself, may be reckoned among the heaviest that will have to be done on this line, which is a remarkably easy one throughout.

4. Near Karti I crossed the Pairi river, here 1,530 feet wide and 18 feet deep, and then passed over some high ground, culminating at the head of the Urtúli Ghât to Noagarh. The Urtúli Ghât is a steep ascent of about 120 feet, over which the present track passes, but which would be circumvented by a regular road or a Railway line. Thence I marched up the right bank of the Sondor river *viá* Baltema and Tumaribahal to Karkú, and, crossing the Bag river, to Risgaon, Gourgaon, and Háthgaon.

5. There is no need for taking the road over the Urtúli Ghât to Noagarh, which is a very small place, although the head-quarters of a zemindar; as the line can be taken entirely up the right bank of the Sondor river from Karti *viá* Benkura and Karka to Baltema. At Risgaon I fell in with the Brinjarri traffic from Jeypur and Kuraputi; the trade route leading from Raigarh *viá* Háthgaon, Gourgaon and Risgaon to Sihóa, and thence to Dhamtari.

6. The sections, which will be submitted in a few days, show that the ascent up to Háthgaon (1,870 feet above mean sea level) is a very gradual one. From Háthgaon begins the final ascent on to the Jeypur plateau. There is a total height of 220 feet to be overcome, which, distributed over 5 miles, gives a gradual rise of 44 feet per mile, or 1 in 120. This route is quite practicable for a railway throughout, no regular ghât or steeper gradient than 1 in 100 being required; while the line passes through many miles of magnificent forest on virgin soil in a country full of promise, containing all the elements of future prosperity, where hundreds of square miles of the most fertile ground are waiting for the plough.

7. The Goláriah nullah, a mile to the east of Háthgaon, offers the greatest facility for taking a road up to the Jeypur plateau by a light gradient. The work will be quite easy; the jungle is dense, but there is only a small amount of hill-side cutting or ghât work required, very little heavy embanking and bridging, and as little rock blasting.

8. The whole country passed through from Bourka to Háthgaon is covered with forest and jungle. Villages are few and far between, especially in the upper course of the Sondor river; but the soil being good and well drained, the agricultural capabilities of the country are unlimited, and only wait for development.

9. The highest elevation reached on the Jeypur plateau, near its edge, was 2,100 feet above mean sea level, at Koliapodor; the distance traversed from Raipúr to Omorkót 143 miles.

10. At Omorkót I met Mr. Cormac on the 31st January, who had marched from Raipúr through the rich grain country of Dhamtari *viâ* Dargahan to Kankér, then up the valley of the Hatkul river to Banskót in Bustar, thence *viâ* Paorbel, Gurjinga and Bakúda to Omorkót, total distance 150½ miles. This line is 13 miles longer than the route I traversed, *i.e.*, *viâ* Rájim and up the Pairi and Sondor rivers; but the former also proved easy, as shown by Mr. Cormac's report (hereto appended) and his sections (which will follow), except in that part of the Hatkul valley between Chiprail and Siduwan, where for 4 miles a regular ghât road will have to be constructed along the hill-side at an average gradient of 1 in 40. The highest level reached by Mr. Cormac near the edge of the plateau was 2,146 feet near Siduwan.

11. Having carefully compared the two lines above described, I am of opinion that for the Railway the shorter line up the Sondor river should be chosen, while the route marched over by Mr. Cormac should be laid out as a road, *i.e.*, from Dhamtari *viâ* Kankér to Raigarh; and other feeders should be constructed to connect Dhamtari, Kankér, and Sihóa with the line of rail.

12. From Raigarh *viâ* Omorkót and Nárangpur to Ránigar, at the foot of the Mádeoputi Ghât, a distance of 90 miles, the line leads through a rich and beautiful upland country with fertile soil, and fine forest and jungle, at an average elevation of 1,900 feet; the surface in most parts level, in others diversified by hillock and swamp; much of the latter cultivated with rice, the whole offering no obstacles but every facility for the construction of a line of rail.

13. Whether this line west of the Noagarh Hills or the eastern line *viâ* Ryaguddah and Ombadóla is chosen for the Railway, I would recommend a specially important feeder that should be made in either case, *viz.*, a road between Nárangpur and Ryaguddah, leading from the former place up the Indrávati river to Jagannathpur and Kurmeli, then up the valley of the Golagad river to Maribata and down the valley of the Ryaguddah river to Ryaguddah, a distance of 65 miles. This is an easy and natural line of ghât, and the summit level near Maribata is not more than 2,700 feet above the sea.

14. And whichever of the two lines is selected for the Railway, whether that east or west of the Noagarh hills, I consider that the other line should be made into a good cart road with bridges, &c., complete, to be passable at all seasons.

15. The following lines would seem to be foremost among those required to be constructed as Railway feeders, in case the line of rail is taken from Raipúr *viâ* Rájim, Kopra, Karti, Baltema and Háthgaon to Raigarh, Omorkót, &c.:—

(1) Raipúr *viâ* Dhamtari and Dargahan to Kankér.
(2) Kankér *viâ* Salabat, Siduwan, and Banskót to Raigarh.
(3) Kankér to Jagdalpur in Bustar.
(4) Kankér *viâ* Sihóa and Sankra to the nearest Railway Station, say Tumaribahal.
(5) Sihóa viâ Borai to Banskót (on the Kankér-Raigarh line).
(6) Sihóa to Dhamtari.
(7) Dhamtari *viâ* Achota to Kopra or Panduka (to be continued to Chura and Nara).
(8) Noagarh to the nearest Railway Station.
(9) Jeypur to Malkangiri.
(10) Jeypur to Jagdalpur.
(11) Jagdalpur, Kotpad, Nárangpur.
(12) From Omorkót westwards *viâ* Amrati and Bamini to the Baordhig river.

(13) Nárangpur, *viâ* Jagannathpur, Kurmeli, and Maribata to Ryaguddah (*vide* paragraph 13 above).

16. In case the Railway is constructed east of the Noagarh hills, *i.e.*, *viâ* Párvatipuram, Ombadóla, Bógor, Karial, Nara, &c., the lines of road chiefly required to be constructed as feeders would appear to be the following:—

(1) Torbor, Tarnot, Tendubara, Kamaria, Karti, Mahásamund.
(2) Sankra (on the road from Raipúr to Sumbulpoor) *viâ* Onki to Nara.
(3) Nara, Chura, Panduka, Dhamtari.
(4) Karial to the teak forest on the Udet river.
(5) Patna to Torbor.
(6) Patna to Bógor.
(7) Asurgor to Sónpoor on the Mahânadi *viâ* Turla and Bamini.
(8) Ryaguddah *viâ* Singapore and the Músa Ghât to Bondesor, Dádpur and Bógor.
(9) Bondesor *viâ* Nandol, Daspur, and Manjhér to Karial.
(10) Daspur to Déobhog, and up the valley of the Tél river.
(11) Singapore to Ombadóla *viâ* Lonjigar.
(12) Báliguda *viâ* Tumriband to Ombadóla.
(13) Párvatipuram to Kurupám, Butelly, and Goonipur.
(14) Godairy to Bisemkattak.
(15) Ryaguddah to Nárangpur *viâ* Loddah, Maribata, Kurmeli, and Jagannathpur (*vide* paragraph 13 above).

17. When the Madras Government in 1875 proposed to make a road from the head of the Potinghy Ghât through the Jeypur country *viâ* Nárangpur, Omorkót and Raigarh to the Central Provinces, the then Executive Engineer, Colonel Francis, at Raipúr, placed himself in communication with me at Potinghy, and, under orders from the Nagpur Government, that officer explored the country within his charge with a view to finding the best line of road to connect Raipúr with our proposed road through the Jeypur country. I have obtained through the Executive Engineer at Raipúr a copy of Colonel Francis' report, which I beg to append to these papers. From this report it will be seen that the several routes explored by Colonel Francis are unsuitable, on account of the hilly nature of the country, for the purposes of a Railway; but one of the routes, viz., that from Raipúr *viâ* Dhamtari, Kukrel, Dokal, Gatásili, Burgudi, and Borái will do very well for an ordinary road to act as a feeder to the Railway.

18. From Pupogaon, 17 miles south of Nárangpur, I sent Mr. Cormac to Jeypur, and thence up to Kuraputi by the new road, to report on the lay of the country and take a section* of the ghât leading up to Kuraputi; while I marched *viâ* Cheptaamb and Ránigar up the old Mádeoputi Ghât, in which direction, *i e.*, up the Kuradi nullah, the easiest line for a Railway to the Kuraputi plateau is to be found; the gradients on this line will not exceed 1 in 75. The Railway Station for Kuraputi would in this case be near a village called Dengagura, about 2⅛ miles east by north of Kuraputi, and 400 feet lower than the latter place. Kuraputi itself, being near the edge of the higher plateau, is not easily accessible for a Railway from below, except by means of steep gradients. From Dengagura the line would gradually ascend to Dumriput, and thence go on *viâ* Chikapár towards Sálúr. This section of the road will form the subject of a separate report when the reconnaissance of that part of the country and of the ghât portion of the line has been completed. I leave Kuraputi in a few days to undertake this the last section of the reconnaissance.

* Report and section appended.

19. As regards the general question of the location of the proposed line of Railway, *i. e.*, whether it should go east or west of the Noagarh hills, it seems too early to discuss the subject until the most difficult part of line now being explored, *viz.*, the ghât leading from the 3,000 feet plateau to Sálúr, has been carefully considered by the light of figures and otherwise. But I may, perhaps, even at this stage of the investigation, be permitted to make a few observations bearing on the question, and I therefore submit the following points for consideration:—

(1) The economical importance of the country to be developed is probably equal on both sides of the Noagarh hills, except perhaps that, looking to the rich and fertile rice and wheat pro-

ducing country of Dhamtari, the balance would appear to incline in favour of the western line which taps that great grain country.

(2) The development, likewise, of the natural resources of the Jeypur State in the direction of the western route may be considered a pressing necessity, and the Railway on this line would lead all through Madras territory to within 100 miles of Raipúr. Of the present grain and salt traffic, between Chattisgarh and the coast, the major portion passes undoubtedly along the western route, as cannot fail to be observed by any one who travels over both routes.

(3) For military and political reasons the western line also may be thought the more important of the two, bearing in mind the desirability of bringing the Railway near Jeypur and Bustar, where there have been from time to time outbreaks of rebellion which may occur again in future.

(4) The engineering difficulties on both lines are much the same, but the cost of the western line would be somewhat enhanced on account of the ghâts which have to be surmounted at an altitude of over 3,000 feet, while on the eastern line the greatest elevation reached is only 1,346 feet. The item of bridging would probably be more costly on the eastern than on the western line, the former crossing a greater number of formidable streams than the latter.

(5) As regards length, the western line will be from 20 to 30 miles shorter than the eastern, the saving in distance varying between the two figures named according to the gradient that may be accepted for the ghât portion of this route. With a gradient of 1 in 57 the saving in distance would amount to about 24 miles. But the shorter line would not be on that account much less expensive than the longer one, since the 25 or 30 miles of ghât work would cause extra outlay on the shorter line and so nearly assimilate its cost to that of the longer one. The relative cost of the two lines would roughly stand about thus :—

		£
Cost of eastern line, 372 miles, at £5,000 per mile	.	1,860,000
Cost of western line . { 320 miles, at £5,000 per mile		1,600,000
{ 30 „ at £8,000 „	.	240,000
		1,840,000

(6) Finally, if Vizagapatam is to be improved as a port, it will be very advantageous in many respects to be able to send indigenous coal to the port, and for this purpose a Railway from the Godávari coal-fields to Vizagapatam would eventually have to be constructed. Now, if the Raipúr Railway at present under discussion is taken west of the Noagarh hills, it will answer for a certain distance the purposes of the coal traffic from Chanda to Vizagapatam, as well as the grain traffic from Raipúr to Vizagapatam. In fact, part of the line from the port of Vizagapatam to the coal-fields will virtually be made by taking the Raipúr Railway west of the Noagarh hills. This western line will therefore save so much future outlay on a separate Railway which would have to be constructed from the port to the coal-fields, and it will answer the combined purposes of the Chanda-Vizagapatam coal traffic and the Raipúr-Dhamtari-Vizagapatam grain traffic.

Taking the whole distance from Vizagapatam to Chanda to be 450 miles, then about one-third of this distance, *i.e.*, nearly 150 miles, would actually be made by taking the Raipúr Railway west of the Noagarh hills. And, possibly, we may not have to go as far as Chanda or Wuróra for coal, since there is every likelihood of coal being ere long discovered in the valley of the Kolâb river between Jeypur and Bustar, and in the Malkangiri Taluk of Jeypur. This will constitute a strong argument in favor of the Railway being brought near these parts.

20. Observations regarding natural resources, produce, labor, soil, climate, seasons, manufactures, trade, population, &c., along the routes explored have been recorded from time to time in my Notes of Reconnoissance, as directed in paragraph 12 of G. O., No. 2294 W., dated 16th September 1881; the following is a summary of the observations recorded under these heads :—

(1.) BUILDING MATERIALS PROCURABLE; MINERALS AND METALS FOUND.—Materials, such as timber, building stone, clay for bricks, sand, limestone, iron, &c., are equally available on both lines. The rock formation is chiefly gneissic, except west of the Mahánadi, where sandstone and limestone rock prevail. Nodular kunkur limestone and different iron ores abound along both routes, except that kunkur is scarce on the Jeypur plateau. Quartz veins and reefs were found in many places; also some rubies and garnets. Traces of lead, graphite, antimony, arsenic, copper, silver and gold were met in several localities indicated in the notes. The soil is more or less fertile throughout on both lines, and varies from black cotton to light sandy loam. I scarcely saw any very poor soil anywhere.

(2.) CHARACTER AND AMOUNT OF LABOR AVAILABLE.—Local labor will, on the whole, not be found sufficient for the work on the railway, especially in the more sparsely populated parts, where both skilled and unskilled labor must be imported from other parts. The unskilled labor available will, as a rule, be found of a superior description, quite equal to the best in the Madras Presidency.

(3.) RATES OF SKILLED AND UNSKILLED LABOR.—The rates for unskilled labor are at present low along both routes, averaging 1½ to 2 annas per man per diem, paid mostly in grain, not coin; but these rates will in time, with large works going on, and a great demand for labor, very likely increase to 3 or 4 annas per diem.

Skilled labor will have to be brought from a distance to most parts of the work. The indigenous skilled laborers available, such as carpenters, blacksmiths, iron smelters, masons, &c., are of inferior quality, and very scarce besides on both lines. The rates of wages for such (inferior) skilled labor as there is at present are naturally low, say 2 to 4 annas per diem, paid generally in grain. When skilled labor is hereafter brought to the works from other parts, the rates to be paid in coin will be rather in advance of those prevailing in the more settled parts of the southern country.

(4.) CAMPING GROUNDS, DRINKING WATER, &c.—The country may be said to be equally salubrious on both sides of the Noagarh Hills, and good camping grounds are to be found near most of the principal villages; while wholesome drinking water can generally be obtained from the numerous streams and rivulets encountered on both lines. But where the only water available is from swamps or tanks, as is the case in many places, it is of course of inferior quality, and, especially when beginning to dry up, undoubtedly dangerous if used for drinking purposes. Wells, however, could easily be dug along both routes, the water being almost everywhere found close to the surface.

The forests contain a fair number of wild animals and game, such as tigers, cheetas, bear, bison, buffalo, nilgai, pig, sambhur and deer. There are no elephants. Pea fowl, jungle fowl, partridge, &c., are met.

(5.) CLIMATE AND WORKING SEASONS.—The climate along the several routes naturally varies in some measure; the lines explored between Vizagapatam and Raipur passing through 3½ degrees of latitude, while the elevation varies from sea level up to 1,346 feet on one line and over 3,000 feet on the other. But, allowing for the change of temperature due to an elevation of 3,000 feet on the upper Jeypur plateau, the climate may be said to be much the same on the both lines; and on the whole it is a very favourable climate for carrying out large works during the greater part of the year.

The working seasons are also nearly alike on the rival lines, both being but lightly affected by the two monsoons; practically there is nothing to prevent work being carried on throughout the year, save for a month or so during the

first violent burst of the north-east monsoon and for some time afterwards, when the jungles are very unhealthy, say from the end of October to the beginning of December. The hot weather is rather favourable for ordinary outdoor labor here as elsewhere in Southern India. The indigenous labor available will not suffer from fever, dysentery, &c., to the same extent as imported labor would.

(6.) CULTIVATION AND MANUFACTURES; FORESTS.—Detailed notes on the prevailing cultivation, in different parts along the several routes explored, have been given in my reports submitted from time to time. About one-fifteenth of all the country marched through, south and east of the Mahánadi, may be said to be under cultivation; the rest is chiefly jungle and forest, with some pasturage and waste land, but there is not much of the last.

West of the Mahánadi, however, and for some distance eastwards from its right bank, between Gorári and Achtôa, and in the whole of the Dhamtari Taluk the country is fully cultivated, and there is little or no jungle.

The finest forests on the eastern line were found between Bisemkattah and Asurgor, then along the Sunder or Under river in the Karial estate, and between Kúmúna and Telibanda; while there is an extensive teak forest 15 to 20 miles south-west of Karial.

On the western route I marched through some magnificent forests, along the course of the Sorul or Sonder River, from Karti up to Raigarh. There is fine and uninterrupted *forest* (not merely *jungle*) from Paraga to Noagarh, a distance of 16 miles, with not a village among the whole line.

From Noagarh to Nárangpur, and further south, is beautiful forest all the way, sometimes primeval forest, on rich virgin soil. Now and then the tall forest relieved by common jungle, or small clearings for cultivation, and divided by occasional belts of swampy ground, partly cultivated, through which the drainage of the country passes. The number of villages is small and the population sparse. Hundreds of square miles of the most fertile soil are waiting for the plough. This description of country continues up to the foot of the Mádeoputi Ghát leading to the upper Jeypur plateau (Kuraputi).

The useful timber trees chiefly found in the forests are sál and matti, but there are also blackwood, yégi and some other kinds. Teak is rather scarce in these jungles, except in special localities, such as the teak forest near Karial noted above. Of fruit and other useful trees, jack, fig, gooseberry, tumica, mango, tamarind, margosa, and variety of acacias are everywhere found. The mhowa or ippa tree abounds in all the country travelled through, north of Ryaguddah and west of Potinghy, but its wood is not useful for timber.

The sheep and cattle met with were on the whole not numerous, and of a very ordinary breed. Country ponies are to be had at Ráipur, Rajim, and Sónpur, where cattle fairs are periodically held.

The crops, which are much the same east and west of the Noagarh hills, consist of several kinds of rice, sugarcane, ragi, two or three kinds of gram, millets, oilseeds, wheat (this last chiefly west of the Mahánadi), tobacco, chillies, mustard, garden vegetables, &c. The quantity of rice grown along both lines, sometimes by means of primitive and inexpensive methods of irrigation, and sometimes dependent upon a few seasonable showers of rain only, is very large, and shows what could be done in this direction by a more numerous and civilized agricultural population. Irrigation is carried on partly by small river and spring channels, or under rudely-constructed tanks; and partly along the sides of nullahs, when the banks are cut down, the ground levelled and small flat valleys created; as well as in swamps, which are to some extent drained and then converted into rice-fields.

The average price of rice at Raipur and Dhamtari in December and January was one rupee for 60 seers, and of wheat one rupee for for 45 seers.

Several kinds of oil, coarse sugar, ghee, and alcoholic liquor distilled from the flower of the ippa or mhowa tree are largely manufactured.

Tassa silk and coarse cotton cloths are made at Risga near Tukla in the Karial estate, also near Dhamtari, and in some other places. The tassa silk-worm feeds upon the leaves of sál and matti trees.

Glass bangles and some rough lacquered ware are manufactured at Nárangpur.

Skilled workers in leather and iron, as well as gun-makers, brass-workers, goldsmiths and jewellers, are rare.

(7.) TRADE AND TRADE ROUTES.—The chief products carried from Chattisgarh, Jeypur, and Bustar to the coast are rice, wheat, gingelly-seed, linseed, Bengal-gram, horse-gram, turmeric, ginger, dammer, arrowroot, soapnuts, marknuts, myrabolams or gallnuts, hides, beeswax, honey, horns, hoofs, iron, and lac (the product of an insect). The chief imports carried from the coast to the interior are salt, saltfish, cloths, opium, spices, glass bangles, &c.

Trade is almost exclusively carried on by means of pack-bullocks belonging to the wandering tribes of the Brinjaries, and the chief routes frequented by them are the following:—

I. From the several salt-pans on the coast to Sálúr and Párvatipúram.
II. Párvatipúram *viá* Ryaguddah, Bissemkattah, and Ombadóla to Santpúr, Dádpúr, and up to the Tél Nadi and Mahánadi to Sónpoor and Sumbulpoor.
III. Párvatipúram *viá* Narrainputnum, Letchmipuram, Dasmatpur, Girliguma to Nárangpur.
IV. Ryaguddah *viá* Singapore and the Músa Ghât to Bondesor (Bhawánipatnam).
V. Músa Ghât *viá* Junágar and Déobhog to Noagarh and Rájim.
VI. Bondesor *viá* Daspúr, Manjhér, Karial, Torbor, Tarnot, Sirgidi, Karti to Arang and Raipur.
VII. Sálúr, Kuraputi, Nárangpur, Omórkot to Kánkér and Dhamtari.
VIII. Omórkot, Raigarh, Risgaon, Machka, Sihóa to Dhamtari.
IX. Kankér to Bustar.
X. Bustar to Jeypur.
XI. Jeypur, Sogaru, Padawa, down the Galikonda Ghât to Kasipuram.
XII. Jeypur to Malkangiri and Moet.

(8.) POPULATION AND LAND AVAILABLE FOR IMMIGRANTS.—The people in the jungles are almost wild, and live in a semi-barbarous state, partly by the chase. They are mostly miserably poor, and dwell in small huts built of sticks and thatch. The small garden plots and spaces round their huts are fenced in with stakes as a protection against wild animals. Their agricultural operations are of the most primitive kind, and they have barely enough to subsist on. In the more civilized parts, in the large villages and towns, and in the well-cultivated tracts, such as the Dhamtari Taluk for instance, the people are comparatively well-to-do; they live in better houses, and have enough to live on and to spare for export.

There are large tracts of the best soil, now covered by jungle and forest, which offer a very promising field for immigrants. Such tracts are to be found in the zemindaries of Karial, Patna, Bodosamar, Nara, and Súarmal, in the Noagarh and Kankér estates, as well as in Kálahundy, Jeypur, and Bustar.

21. I have much pleasure in recording my obligation to the authorities of the Central Provinces and to the Manager of the Bindra-Noagarh Estate, as well as to the Rajahs of Kankér, Bustar, and Jeypur, for the ready assistance rendered to the reconnoitring party in the matter of guides, coolies, camp supplies, &c.

22. As the expedition is drawing to a close, I request your authority to hand over all Government tents, tools, stores, instruments, &c., belonging to my party, to the charge of the Executive Engineer at Waltair. Unless I receive other orders, I propose to embark at Vizagapatam for Madras by the first steamer in April. Till then I beg that all communications may be addressed to me at Waltair.

Ordered to store them at Vizagapatam. 7th March.

NOTE.—I must ask your indulgence for the inferior caligraphy of this letter, and for all corrections, erasures, &c., as my writer is not very efficient.—K. F. N.

XIV.

A.

Extract from Executive Engineer's Notes of Reconnoissance from Raipur to Nárangpúr via Rájim, Bindra-Noagarh, Háthgaon and Omorkót, 185 miles, 4 furlongs. January 15th to February 5th, 1882.

January 15th, 1882. Raipur to Khandwa en route to Noagarh. Height of Raipur above M.S.L. 963 feet. Distance 14 miles, 2 furlongs, 137 yards. Thermometer 6 A. M., 55° F.; 11 A.M., 79°; 4 P.M., 79°.

Thermometer and aneroid readings.

55°
29·3 w

Just outside the cantonment limits limestone rock is seen cropping out on the surface; an irrigation channel crosses the road.

60°
29·34

58°
29 38

At the 3rd mile is the village of *Lalgaon* with a tank; then *Deopuri*. The soil is laterite.

5 miles, 0 furlong, 187 yards. Dumurtuli, village with tank and tope. Soil laterite covered with brown clay. Extensive wet and dry cultivation; but most of the crops have been harvested, except wheat and linseed. There is some waste land about here, but little compared to the extent of cultivation. The laterite soil is occasionally varied by black clay, full of cracks and fissures in its present dry state.

60°
29·38

7th mile. Two culverts required, each with one vent 3 to 4 feet square. The general *drainage* is of an ordinary description; besides the bridges, noted as required in the report, about 4 to 5 culverts with vents, each 2 to 3 feet square, are wanted per mile.

68°
29·37

8 miles, 2 furlongs. Village of Mana, with tank and tope, gardens and wells; soil light brown clay.

68°
29·35

10th mile. The village of Nembhora half a mile to the right; a fine tank by the roadside There is much iron-stone gravel about; also some red sandstone and a kind of coarse clay slate.

72°
29·32

11 miles, 6 furlongs, 178 yards. Uparwara, village with tope, tank, gardens and wells. A stream (Taivar nullah), 20 feet by 7 feet, with clay and gravel in the bed, and well-defined banks; no rock visible. Fields of rice (harvested) and wheat (growing). Then a gentle rise in the ground; half a mile further a swamp, with a stream, 6 feet by 4 feet. Laterite soil.

76°
29·36

78°
29·34.

13 miles, 5 furlongs. A stream called Ghatóriah, 15 feet by 6 feet, with perpendicular banks; bed laterite gravel.

14 miles, 2 furlongs, 137 yards. Khandwa, village with tank, tope, gardens and extensive fields. Soil laterite. Height above mean sea level 1,001 feet. Rise from Raipur 38 feet. *A good made road* runs from Raipur to this and further too, but it becomes gradually more and more neglected the further it goes. *Avenue trees* have been planted by the roadside, but they are not prospering owing to the manner in which they are protected, *i.e*, about a cubic yard of earth is being heaped round the base, whereby the tree is deprived of the necessary moisture, and the roots grow above ground in the earth heaped round the tree.

80°
29·29

January 16th. Khandwa to Rájim. Distance 11 miles, 2 furlongs, 118 yards. Thermometer 6 A.M., 57°; 11 A.M., 75°; 4 P.M., 80°. In the first mile occurs a small *stream* (Chittar. nullah) 10 feet by 5 feet, in black soil, with muddy bed and high banks; a road bridge is about to be built here, for which red sandstone is being collected. The country is nearly all cultivated; there is very little waste land; the soil is mostly black; the chief crops are rice, wheat (ghóún), linseed (alsi), and Bengal-gram (chenna).

2 miles, 4 furlongs, 160 yards. Kolhán nullah, 20 feet by 10 feet, banks well defined; bed sandy with gravel. The village of Thanond lies half a mile to the right; there is large tope near it; most of the villages here have fine topes; otherwise there are few trees about.

3 miles, 4 furlongs. On the summit of some gently rising ground a cross road running north and south. Topes and trees begin to occur more frequently than before, and there is some waste land about. Two small tanks by the roadside and a young mango tope; extensive rice fields.

5 miles, 3 furlongs, 154 yards. Sunderkhera, a large village with topes and tanks and extensive wet and dry fields. Soil chocolate coloured, with small stones and gravel (red sandstone); numerous mhówa trees about. The minor drainage required for the road is of an ordinary description, four to five culverts per mile, each 2 to 3 feet square, would suffice.

7 miles, 1 furlong. Parsáda, a large village with a tope. Babul trees plentiful especially by the roadside. Near the village is a nullah 35 feet wide and 8 feet deep, with gravelly bed and steep banks; no rock visible; soil black. A little further on two small tanks by the roadside. Linseed (alsi) is largely grown about here.

8 miles, 5 furlongs, 180 yards. Village of Ghónt; a nullah 15 feet wide by 10 feet deep, with steep banks and soft bed, in black soil.

10 miles, 1 furlong, 175 yards. Paragáon, a large village, with extensive groves of mango and tamarind trees and several tanks. Laterite rock is seen cropping out. Here the Mahánadi is crossed, about a mile above Noapára.

The river is 1,908 feet wide between the banks, but in floods the northern or left bank, which is low (about 15 feet high), is inundated; the southern or right bank is 25 to 30 feet high. The low water in the deep bed at present is 1 to 1½ feet deep and 200 feet wide, the bed is sandy, but there is laterite rock on both banks. There is an island, with a temple, just below the junction with the Pairi river. The temple is dedicated to Kolésa Mahadéo.

11 miles, 2 furlongs, 112 yards. Camp on southern bank of Mahánadi in a fine tope near a temple, on the out-skirts of the town of *Rájim* where a zemindar lives. There is an Imperial Post Office, a Police station and a vernacular school here. The temple is considered a very holy one. The priests have in their possession three copper plates, joined by a copper ring with a seal; the plates are rectangular, measuring 12 by 9 inches, one-eighth of an inch thick, and bear an inscription in the Páli language; they are said to be very ancient and to contain the title deeds of the temple property. General Cunningham of the Archæological Survey has seen them and I believe taken a copy of the inscription.

Rájim is 917 feet above mean sea level. Fall from Khandwa 84 feet.

Distance from Raipur 25 miles and 5 furlongs. I halted two days at Rájim to dispose of some office work, as this is the last Post Office I shall meet until I get to Nárangpur.

January 19th. Rájim to Kopra. Distance 10 miles, 1 furlong, 206 yards. Thermometer 6 A.M., 49°; 11 A.M., 75°; 4 P.M., 79°.

Mean aneroid reading at Kopra 29·23. Passed through the town of Rájim and its fine topes; then over some waste land with black soil, the ground full of cracks and fissures.

The country is open; topes, fields and villages are seen in all directions. The crops are chiefly wheat, linseed and Bengal-gram.

2 miles, 2 furlongs. Village of Chobebandha, with gardens, wells, topes, and fields; the latter mostly wet. The village of Sindhori was left half a mile to the right. Black soil.

4 miles, 2 furlongs. Baronda, on high ground, with light soil and some red gravel. Fields gardens, tank and tope. The castor-oil plant, sugarcane, tobacco, and garden vegetables are grown. A spring channel (called Damahúa nullah) beyond the village requires a small bridge, 10 feet by 5 feet.

There are numerous wells about here, near the bank of the Pairi river, by means of which vegetables are cultivated. The water in the wells is about 8 feet below the surface. The village of *Chichond*, with a mango tope, was left a quarter of a mile to the east.

The river Pairi here is very broad and shallow, has a very gentle fall and inundates the country on its right or eastern bank. In the 6th mile is a shallow sandy *nullah* which is subject to floods from the river, and requires a waterway of 45 feet by 4 feet.

6 miles, 2 furlongs. Kuraskera, with several mango topes and extensive gardens. In the latter are found chillies, brinjals, castor, onions, garlic, beans, pumpkins, mustard, tobacco, and sundry vegetables. Soil light loam.

6th mile. Túra, a small village, with gardens, topes and several small tanks. The soil continues of a light description. Half a mile beyond the village a young *mango tope* is being reared. In the 9th mile is another and larger plantation of young mango trees, which are protected by basket work fences and seem well attended to.

10 miles, 1 furlong, 206 yards. Kopra, a large village with extensive fields, gardens and topes on high ground and light soil.

The Noagarh hills and jungles are seen looming in the distance.

Kopra is 931 feet above mean sea level. Rise from Rájim 14 feet.

Distance of Kopra from Raipur 35 miles, 7 furlongs.

January 20th. Kopra to Bourka. Distance 12 miles. Thermometer 6 A.M., 49°; 11 A.M., 82°; 4 P.M., 78°.

The soil south of Kopra is alternately black and light; there are large rice fields; wheat is becoming scarcer; some waste land is seen, and some land lately reclaimed from the jungle.

At 1½ mile a *stream* is crossed, called Bhór nullah 10 feet by 5 feet, with high banks and soft bed. The route lay along the bank of the Pairi river, which is here broad and shallow, and has very little fall. At 2½ miles the village of *Surkunda* with a tope, gardens and well, and numerous cattle. Sugarcane and plantations are grown. Then begins *jungle*, as yet of a light description; a tank is passed; the village of *Pandúka*, where there is a Police station, is left to the east. I did not go by the bandy track to Pandúka, as I wished to keep along the river bank where the railway should be made; the bandy track crosses a small ghát near Bourka. The soil is mostly black and much cut up by cracks, fissures and holes.

Traffic.—Several large gangs of Brinjarri bullocks were met, carrying rice and wheat southwards.—In the fourth mile a *tank*. Then the *village of Kutéra* (4 miles, 1 furlong). Some light jungle about here; and sandstone rock is seen cropping out. In the 5th mile begins the regular *jungle* again, and gradually becomes denser. A small stream is crossed, 9 feet by 4 feet, with good banks and hard bed, a tributary of the Pairi river. Soil light. At 5½ miles occurs a large *plantation* of *sugarcane* on the river's bank. Near this a stream, flowing into the Pairi, 25 feet wide and 8 feet deep in flood, with steep banks and a good hard crossing. Here the *gneiss formation* begins again; no more limestone rock or sandstone; much gneiss rock is seen cropping out; kunker nodules lying on the surface; there are some patches of cultivation in the jungle.

At the 6th mile are large rice fields on rather high ground in the jungle, rudely cultivated without visible means of irrigation, by rain water most likely, in the wet weather; they are now dry.

6 miles, 4 furlongs. The village of Kúkda. Some rice fields. Thin scrub jungle all round. Light clayey soil with sand. Some laterite is seen cropping out, but the prevailing rock is gneiss. In the 8th mile much rock occurs along the bank of the river, and the jungle becomes very dense. A few patches of swampy soil are met with, roughly cultivated. The route continues along the river's bank; the soil is alternately stony and swampy; some high rocky ground to the left. Jungle dense.

9th mile. A nullah, 12 feet by 5 feet, with steep banks and soft crossings; close by two smaller nullahs 7 feet by 4 feet each, another 9 feet by 4 feet, and a fifth 12 feet by 5 feet; the last four with stony crossings.

9 miles, 3 furlongs. Páhpur, the site of a deserted village, belonging to Bourka; a few huts are left standing; there are very few signs of cultivation about; the place looks an unmitigated wilderness. At 9½ miles, two small nullahs close together, each 9 feet by 4 feet; the ground here is broken, and the soil stony and rocky, the jungle dense, the grass high. The rocky hill side rises from the bed of the river; and some hill side cutting for about a mile would here be required for the road.

11th mile. A nullah, in a swamp, 25 feet by 6 feet. Banks ill defined; bed sandy.

12th mile. Bourka, a small village in a jungle clearing, a swamp partly cultivated, surrounded by rocky hills well wooded.

Mean aneroid reading at Bourka 29·21, height above mean sea level 992 feet. Rise from Kopra 61 feet. The place is spelt Bourka on the map, but the people pronounce it Bárka.

Distance of Bourka from Raipur 47 miles, 7 furlongs.

21st January. Bourka to Dongriga. Distance 9½ miles. Thermometer 6 A.M., 43°F.; 11 A.M., 80°; 4 P.M., 80°.

The rough bandy track, such as it is, leads from here over some gently rising flat ground, with hilly jungle on both sides, which offers no obstacles to road or railway. Some rude rice cultivation in a swamp on sloping ground is met.

The low hill ridges accompanying the track on either side are well wooded; the soil is hard and gravelly, much nodular kunkur limestone lies about on the surface. A little further on, the track leads for some distance along the slope of the ridge on the left, from which much drainage descends that crosses the road and will require a culvert, 3 feet to 4 feet square, per furlong. There is not much rock here; what there is, is gneiss decomposed on the surface, and conglomerate. Near the end of the 2nd mile the line runs close to the bank of the Pairi river which is here shallow and broad, with but little fall, and overflows its banks.

2 miles, 1 furlong. Stream 10 feet by 4 feet; low banks and sandy bed. The track is cleared of jungle to a width of 15 to 20 yards, and the surface has been roughly improved for cart traffic in the dry weather.

At 2½ miles, two streams, not far apart, each 10 feet by 4 feet.

At 3½ miles a large clearing in the jungle with some cultivation. Not far from this is the village of *Kárti,* on the other side of the river. *Kurubata* lies to the left, with a tank and extensive rice fields.

4 miles, 5 furlongs. Village of Malga, situated on the hill side, somewhat above the general level of the country.

5th mile; cross the Pairi river, here 1,530 feet wide. The bed is sandy and there is no rock visible. The northern bank is not well defined, low and subject to inundation during floods; the southern bank is steep and rises 12 feet above the bed.

The high floods are said in some years to rise 6 to 8 feet above this bank and to submerge the country up to the village of *Manjarkata, which is at 6 miles, 1 furlong.* On the southern banks of the river the jungle is largely cleared, some apparently quite lately, and the ground is well cultivated. The village of *Chikli* is left on the right.

Rice, sugarcane, Bengal-gram, linseed, castor-oil and tobacco, besides vegetables, are grown; wheat is no longer met. The soil is mostly black. A small tank (bhandhárbúla) is near the track. Some sheet rock (gneiss) appears above the surface.

7 miles, 1 furlong. Village of Amdi, with some cultivated fields; then jungle again; the country here is quite flat. At 7½ miles a small nullah, 12 feet by 5 feet.

7 miles, 6 furlongs, 149 yards. A larger nullah 55 feet wide, with low perpendicular banks, 4 feet high, which are said to be covered by extraordinary floods to a further depth of 3 feet. The water-way required to be provided to pass such floods is more than twice that contained between the banks.

8th mile. The village of Paraga, where the Manager of the Noagarh estate lives; the young Rajah, a minor, being in school at Raipur. There is a Police station at Paraga. Some good gardens are here; an avenue of young mango trees has been planted and is taken care of.

From Paraga to Noagarh, a distance of 15 miles, there is uninterrupted jungle, without a single village. The villages that once existed have been deserted.

A swamp is met near Paraga; then the jungle begins, through which a track has been cleared 15 to 20 yards wide, and the surface has been improved for cart-traffic. There is much sheet rock about (gneiss) and some conglomerate, called Choári in Hindustani.

8 miles, 5 furlongs. A shallow nullah, 20 feet by 4 feet, with low banks and sandy bed.

9 miles, 3 furlongs, 105 yards. Dongriga, the site of a deserted village, near the Bamni Dévi rock (which looks like a ruined castle). There are no traces of cultivation left; the jungle

grows all round the place, which is said to have been deserted by the villagers on account of the numerous wild animals about here.

The mean aneroid reading at Dongriga is 29·04 feet.

Height above mean sea level 1,130 feet.

Rise from Bourka 138 feet.

Distance of Dongriga from Raipur 57 miles, 2 furlongs, 126 yards.

January 22nd. Dongriga to Noagarh. Distance 13 miles, 1 furlong. Thermometer 6 A.M., 46° F.; 11 A.M., 86°; 4 P.M., 80°.

In the first furlong the *Dongriga nullah* is crossed, 35 feet wide and 7 feet deep in flood, with a sandy bed, but rock for foundations near; the banks are about 5 feet high and well defined, they are flooded in the rains.

The track through the jungle continues to be cleared to a width of from 15 to 20 yards, and is made passable for carts. The soil is alternately swampy and stony, and embankments will be required in several places. The ground level is slightly undulating, the drainage ordinary, mostly from left to right. The jungle is small but dense, there is no large timber in the first mile.

1st mile, a shallow stream, 12 feet by 3 feet. At 1 mile, 3 furlongs, 146 yards, Tírnai nullah, a stream 35 feet wide at bottom and 5 feet deep, with low banks, sloping at 1 in 30, and sandy bed; no rock. There are some tall forest trees here in the jungle, matti (sája) and sál (sarái) predominating. Some rock is seen near the surface, chiefly gneiss; much quartz is lying about in fragments.

The soil is alternately hard and gravelly, then sandy or clayey loam. Much tall young timber, chiefly sál; fine straight poles.

1 mile, 7 furlongs. A stream 9 feet by 3 feet. Ground undulating.

2 miles, 6 furlongs, 54 yards. Bugai nullah, a stream 35 feet wide with irregular sloping banks and sandy bed; rock for foundation near at hand; the rock is a kind of decayed gneiss called "Darraputtar" in Hindi. Then some rising ground and stony soil.

3 miles, 1 furlong. A small drainage channel 6 feet by 4 feet, flowing to the left. In the same mile there are several more small drainages like the above, all leading from right to left. There is no cultivation here; all jungle and tall grass, upon a hard but fertile soil. Ample space for agricultural operations.

4 miles, 1 furlong, 40 yards. Aneroid reading 29·06. *Korihardi nullah,* a shallow stream with low irregular banks and sandy bed; probable section in flood 25 feet by 3 feet. There was a village of *Karihardi* here, some twenty years ago, which, the people say, has been deserted on account of the depredations of wild animals. The ground continues to rise gently; the jungle is tall, with little underwood, but high grass; the soil is hard and gravelly. Further on the ground undulates again, and some hill-side cutting will be required for the road; but not much. Good matti timber is abundant.

In the 5th mile is the Mogni nullah draining to the right, and measuring 16 feet by 4 feet.

The jungle here is hilly and stony, and the ground irregular. The track leads over the *Urtuli Ghát,* a small ascent, about 120 feet in perpendicular height. The track is taken straight up the hill-side, while the new road or railway should keep lower either to the right or left where there is enough room for a gradient of 1 in 100. Much quartz is lying about the surface; reefs of it, and large veins in gneiss rock, occur in several places about here.

5 miles, 5 furlongs, 187 yards. Head of the Urtula Ghát.—Aneroid reading 28·93. From here the track descends again; but, as before stated, the rail need not be taken up so high as this. Further on, the ground becomes flat again, only now and then gently undulating. Some grassy plots—pretty glades—are seen here and there in the jungle; they are swampy in the rains, I suspect.

Aneroid 28·95.

7 miles, 4 furlongs. Near the deserted village site of *Joba;* with patches of grassy swamp, now dry.

8th mile, a nullah draining to the right, 5 feet by 3 feet; black soil. Then some gently rising ground.

8 miles, 4 furlongs; a nullah, 6 feet by 4 feet, in stony soil.

9 miles, 1 furlong, 172 yards. Summit of low rise. Descent very gradual from here; the cleared track through the jungle continues, but only 10 yards wide; the surface improvements become scarcer.

Aneroid 28·95.

Some broken and irregular ground; stony; a small drainage culvert required 3 feet square; another 7 feet by 3 feet.

10 miles, 1 furlong, 152 yards. Teregi nullah, 15 feet wide and 9 feet deep, in soft soil, with steep banks; no rock. Much young sál-wood grows here, good straight poles, 50 feet high and 1 foot in diameter. The jungle consists largely of sál; there are also many matti trees. No bamboo is seen about here.

Aneroid 29·03.
Thermometer 72°.

11 miles, 2 furlongs, 170 yards. Kasoni nullah, 20 feet by 4 feet; sandy bed, but rock for foundations at hand.

Aneroid 29·01.
Thermometer 80°.

11 miles, 5 furlongs. A nullah 12 feet by 5 feet, in a swamp. Then again good, hard soil. Some undulating ground, involving cutting and embankments, and occasional hill-side cutting; but only on a small scale.

12 miles, 5 furlongs, 110 yards. *Harpali nullah,* 25 feet by 7 feet, sandy bed; steep banks; rock for foundations. Here the track to *Kusmi* branches off to the south-west. Much sheet rock (gneiss) cropping out between this and Noagarh.

Aneroid 28·97.
Thermometer 84°.

13 miles, 1 furlong, Noagarh, a small village, containing about 40 mud huts, besides the Zemindar's buildings (which are also of mud, timber and thatch); situated at the foot of a rocky hill which has a temple. The village and its fields are placed in a confined, ill-ventilated space, on irregular ground, with rocks and swamps about, and three or four stagnant tanks.

11-30 A.M.
Aneroid 28·96.
Thermometer 85°.

There is no need for bringing the railway to Noagarh; it can be taken over lower and better ground between this and the river Sondor, some 4 or 5 miles west of Noagarh; or better still, entirely along the river, *i.e.*, within half a mile or so of the bank.

January 23rd. *Halted at Noagarh,* and despatched one camp ahead to Balétma, which is on the Sondor river.

The mean reading of the aneroid battery at Noagarh is 28·82; height above mean sea level 1,314 feet.

Rise from Dongriga 184 feet. Distance of Noagarh from Raipur, 70 miles, 3 furlongs, 154 yards.

January 24th. *Noagarh to Baltéma.* Distance 10 miles, 6 furlongs, 131 yards. Thermometer 6 A.M., 57°; 11 A.M., 78°; 4 P.M., 82°.

Detached Aneroid 28·95.

Returned to the *Harpali nullah,* where the *track to Kusmi* branches off.

From here the ground becomes somewhat irregular and the jungle is pretty dense; the soil as a rule is light and sandy, rather stony, occasionally rocky; the drainage is of an ordinary description and runs from left to right. The track leads up and down, but mostly up-hill at easy gradients. Some hill-side cutting would be required, but not much.

Detached Aneroid 28·94.

At 1 mile, 2 furlongs, 165 yards, the summit level of the rise is reached.

1 mile 4 furlongs. *Murgi nullah,* 15 feet by 4 feet. Much young sâlwood and high grass.

2 miles, 1 furlong, 168 yards. *Teregi nullah,* 15 feet by 7 feet; the same that was crossed on the 22nd at a lower part of its course. Here is an abundance of *quartz,* white, pink, red and black, scattered about the surface. The soil is hard and gravelly. Both the Murgi and Teregi nullahs flow from left to right, have steep banks, a rapid fall and sandy beds with stones.

2 miles, 6 furlongs. *A clear spot* in the jungle, somewhat swampy; the sight of the deserted *village of Bardul,* said to have been left by the people 10 years ago on account of the numerous wild animals about. But this is scarcely a satisfactory explanation; there must be some other cause for this and other villages in these parts being deserted. Not a vestige of a house remains at Bardul, and scarcely any sign of cultivation, except the jungle clearing. The ground here is no longer hilly, but flat.

3 miles, 5 furlongs. *Satigat nullah,* 60 feet wide at bottom, 8 feet deep; bed sandy, with gravel and loose stones. Banks high, and sloping at an angle of about 45°. The soil here is light sandy loam, on which grows the ordinary jungle and some tall grass. The track has been cleared of trees and bushes, 5 to 6 yards wide, and is passable for carts.

In the 4th mile is a large area of deserted fields in the jungle which have apparently not been cultivated for some years; this belongs to the village of Kusmi.

4 miles, 2 furlongs, 190 yards. *Kusmi nullah,* 60 feet by 8 feet, of the same size and nature as the Satigat nullah in the 4th mile.

4 miles, 4 furlongs. *A small drainage channel,* 6 feet by 2 feet.

A temple of Máta Dévi, i.e., a rude mud-and-thatch hut, surrounded by wooden palisades as a protection against intruders, both men and animals. Then another small streamlet, 6 feet by 2 feet.

5th mile. *Village of Kusmi,* consisting of about 25 huts, containing 60 people, in a large jungle clearing, with extensive wet fields on rich soil; a small tope and a good herd of cattle. Then jungle again, at first light scrub, then dense with young sâl and some matti trees. Soil, light sandy loam; a few masses of gneiss rock showing above the surface. On the left, about a mile off, is a hill, marked on the map 2,366 feet high, or about a thousand feet above this village. Between this and the 7th mile four larger culverts are required, averaging 7 feet by 3 feet.

7 miles, 5 furlongs. *Village of Boirga,* six huts in a small jungle clearing, enclosed by palisades as a protection against wild animals. Very little cultivation, although the soil is good. There are signs of sámbhur, bison, and wild pig about. Next to the village is a swampy glade: a grass plot in the jungle, on black soil, which will be difficult to pass in the rains. Two furlongs further a track, *i.e.*, a foot-path, branches off to the right, leading to Amaróra, through a young sâl forest 10 to 15 years old, with tall grass. The path we follow is very slender, sometimes scarcely visible, but the grass and brushwood along it have been cleared a little by the party sent on yesterday.

9 miles, 2 furlongs. *Kolbóra nullah,* 15 feet wide at bottom, 4 feet deep; banks sloping at an angle of 30°; sandy bed, but rock for foundations at site. The rock is gneiss (in Hindi Gaunha). All jungle, no cultivation. Ground slightly undulating.

9 miles, 5 furlongs. *Budra nullah,* 35 feet wide, 6 feet deep; steep banks; sandy bed, no rock.

Tall grass, 7 to 10 feet high.—A swampy glade; then again jungle of young sâl trees, with scrub and brushwood. Indeed, for the last 40 miles of this march the country has been one uninterrupted jungle, except at the few miserable villages met.

10 miles, 4 furlongs. *Amajóri nullah,* 25 feet wide, greatest depth 5 feet.

One bank high, the other low and flooded; bed sandy, no rock visible.

10 miles, 6 furlongs, 131 yards. *Baltéma,* a wilderness with eight miserable huts, built of sticks and thatch, inhabited by about 20 people all told, most of whom had run away last night at the approach of the advance camp; no signs of cultivation to be seen.

Mean reading of aneroid battery at Baltéma 28·83; height above M.S.L. 1,295 feet.

Fall from Noagarh 19 feet. Distance of Baltéma from Raipur, *viâ* Noagarh, 81 miles, 2 furlongs, (deducting 1 mile for the distance, from Harpali nullah to Noagarh, travelled over twice). But along the Sondor river—where the railway should go, instead of *viâ* Noagarh—the distance is only 75 miles and 2 furlongs—Baltéma has a reputation for tigers. The Manager of the Bíndra-Noagarh estate, who was most solicitous for our welfare, furnished each tent in camp and each horse with a guard of two jungle men to keep the tigers off. Firewood was plentiful, and the guards slept peacefully, roasting themselves within a few inches of the blazing fires. No tiger came.

January 25th. *Baltéma to Tumaribahál*—Distance 12 miles. Thermometer 6 A.M., 50°; 11 A.M., 84°; 4 P.M., 84°.

Passed through low scrub jungle, with young sâl trees and tall, thick grass over rich, dark soil that must be swampy in the rains. In the first half-mile crossed two small drainage channels, 5 feet by 3 feet; the ground in parts uneven.

1 mile 2 furlongs. *Pendra,* a village partly deserted, and rebuilt on another site. Soil reddish, sandy loam with gravel. Then three small nullahs, 5 feet by 3 feet: the ground still uneven.

1 mile 6 furlongs. A small stream, 10 feet by 4 feet, with clear water running in it.

2 miles, 2 furlongs. The present village of *Pendra* in a new clearing.

2 miles, 4 furlongs. *María nullah,* 10 feet by 3 feet; uneven and broken ground.

2 miles, 6 furlongs. *Parsá páni nullah,* 15 feet by 4 feet. Much quartz about here.

3 miles 70 yards. *Jámun nullah,* 9 feet by 3 feet. A little further on a 3-foot culvert is required.

3 miles, 5 furlongs. *Pulbhari nullah,* 25 feet by 4 feet; perpendicular banks, sandy bed; some rock for foundations near.

3 miles, 7 furlongs. *Serai nullah,* 12 feet by 4 feet. Sâl jungle and tall grass. Traces of bison, sámbhur, pig and bear.

4 miles, 2 furlongs. *Jarr nullah,* 20 feet by 5 feet, with steep banks and rocky bed.

The track (which is barely visible) here crosses a number of spurs running out from the hills on the left.

4 miles, 3 furlongs, a small drainage channel, 4 feet by 2 feet. Ground uneven; a succession of spurs; soil hard and stony. The railway should keep close to the river's bank. A hill covered with fragments of quartz, near the right bank of the Sondor, about opposite the village of *Jounra* which is on the left bank.

4 miles, 5 furlongs. *Small nullah,* 4 feet by 2 feet. The soil is quartz gravel.

4 miles, 7 furlongs. *Chickla ki nullah,* 15 feet by 3 feet; rocky bed. The rock is gneiss, with patches and veins of pink quartz, alternating with conglomerate.

5th mile, small nullah, 8 feet by 3 feet.

5 miles, 2 furlongs. *Gobra,* a deserted village; the ten huts, built of sticks and thatch, remain standing, (the walls are made of sâlwood poles placed perpendicularly in the ground; they are 4 feet high at the sides and 8 feet up to the ridge pole; sometimes the spaces between the sticks are closed with mud, but not always. There is only one opening: a door 4 feet by 2 feet.) The people are said to have left about four months ago on account of sickness. No clearing or traces of cultivation near.

5 miles, 3 furlongs. A 3-foot culvert required.

Soil stony: quartzose, gneiss, and conglomerate.

5 miles, 7 furlongs, 205 yards. *Gógor nullah,* 8 feet deep, 60 feet wide; steep banks, level, sandy bed with some rock; a good bridge site is available 2 furlongs higher up the stream which there flows over solid rock between steep rocky banks.

The jungle about here is dense and looks very wild; there is, besides the trees and bushes, tall coarse grass of two kinds, some with thick round stems, some with long flat leaves; the slender path is barely visible.

6 miles, 5 furlongs. *Kátipára,* site of a deserted village said to have been left three years ago. Good, fertile soil.

Here is the boundary of the Noagarh estate. We now pass into the Sihóa Iláqa of the Dhamtari Táhseel.

The country is flat again and the ground even. At the 7th mile a marshy glade in the sâl jungle. A little further on the soil is sandy clay with fine gravel.—Some uneven ground again.

7 miles, 4 furlongs. Two culverts required, 4 feet by 3 feet.—Then some sheet rock (gneiss). Fine young forest, chiefly sâl.

8 miles, 3 furlongs, 110 yards. *Burrpani nullah,* 10 feet by 4 feet. Wild jungle and tall grass.

In the 9th mile two small nullahs, 5 feet by 3 feet. Ground flat, sometimes swampy.

9th mile. *Múra Córa nullah,* 10 feet by 4 feet. Grand old forest, chiefly of sâl and matti; but little brush and underwood.

10 miles, 3 furlongs, 170 yards. *Junction of Dhour* and Sondor rivers.

Cross the Dhour 100 yards above the junction 65 feet wide, 9 feet deep in flood, steep banks, sandy bed, no rock.

10 miles, 6 furlongs. *Tenai,* three or four small huts of sticks and thatch in a jungle clearing. There are signs that the place has been better inhabited formerly. A 4-foot oulvert required.

11th mile. Signs of former rice-fields in a clearing; soil dark and swampy.

12 miles, Tumaribahál, a small village of a dozen huts, with some gardens and a few rice-fields. Castor, pumpkins, beans, hybiscus, chillies, brinjals and tobacco are grown near the huts. Young mango trees have been planted and are fenced in by upright sâl poles, 6 inches thick and 6 feet high, being let into the ground and forming a circle round the tree 3 feet in diameter. This is a very effective protection and gives the young trees enough light, air and moisture. The village is near the right bank of the Sondor river, which is here 150 feet wide and 10 feet deep in flood, and has regular and steep banks, and a sandy bed with rock here and there. A very good encamping ground on the river bank, in an old clearing planted with young mango trees.

The mean reading of the aneroid battery at Tumaribahál is 28·66. Height above mean sea level 1,441 feet.

Rise from Baltéma 146 feet.

Distance of Tumaribahál from Raipur 93 miles. 2 furlongs.

January 26th. *Tumaribahál to Risgáon.* Distance 10 miles, 5 furlongs, 170 yards. Thermometer 6 A.M., 48°; 11 A.M., 87°; 4 P.M., 84°.

The track leads along the bank of the Sondor, through stately jungle.

In the 6th furlong *Mudibabal,* a deserted village; a few sticks left standing; the people are said to have moved their village to another site.

First mile, a few solitary ploughed fields in the jungle. Ground flat; soil light and soft; sandy clay; jungle thin with some clearings and natural grass plots. A watercourse, 5 feet by 3 feet, in a small swamp, just outside the village of *Kasrór.*

2 miles, 4 furlongs, 152 yards. *Kasrór,* four huts containing about twenty inhabitants; a few fields, no gardens. A blacksmith is in the village. The people here still speak Chattisgarhi, a dialect of Hindi.—High hills to the left, a peak is marked 2,445 feet on the map.

3 miles, 100 yards. *Kámunkór nullah,* 15 feet by 4 feet; steep banks, soft bed. Tall rank grass, then forest of sâl; ground slightly undulating.

3 miles, 2 furlongs. *Kauribahár nullah,* 15 feet by 5 feet. Soil, light sandy clay.

4 miles, 194 yards. *Tél Dhorigi nullah,* 20 feet by 5 feet; steep banks; bed, hard soil and gravel.

4 miles, 4 furlongs, 160 yards. *Bórpodór village,* fifteen huts with sixty inhabitants: rice-fields and gardens; some date-palms; south of the village the *Katasaru nullah,* 25 feet by 5 feet, partly dammed up and converted into rice-fields.

5 miles, 2 furlongs. *Kunnár nullah,* 20 feet by 5 feet, with clear running water; rocky bed; banks sloping at an angle of 45°. Then some undulating ground with young sâl jungle.

5 miles, 7 furlongs. *Jhurra nullah,* 15 feet by 5 feet. Underwood and grass very thick; no track; some people have to go ahead to clear a path; slow progress.—Small drainage channel, 6 feet by 3 feet.

6 miles, 6 furlongs. *Káser nullah,* 12 feet by 5 feet, a stony watercourse with rocky bed. A good deal of rock about here, and the ground somewhat undulating; a high hillock to the left, half a mile distant.

7th mile. *Urai nullah,* 8 feet by 3 feet. Undulating and stony ground.

7 miles, 3 furlongs, 146 yards. *Lafni nullah,* 18 feet by 5 feet, with a rocky bed. Much quartz in small fragments about the surface.

7 miles, 7 furlongs. *Kissi nullah,* 15 feet by 4 feet

8th mile; a small ploughed field, quite solitary in the jungle.

8 miles, 3 furlongs, 100 yards. *Karha,* a small village containing five huts with 25 people: some fields and gardens. The people here speak Ghóndi besides Chattisgarhi. A man addressed me as "Máprábu," instead of Jíhó or Máharáj, as hitherto.

8 miles, 6 furlongs; cross the *Bag nullah* (near its confluence with the Sondor), 50 feet wide, 9 feet deep; steep banks, sandy bed, no rock. Brinjarris with gingelly-seed going to Párvatipuram; others with salt coming from Sálúr. The latter said they had been 25 days from Sálúr and would take 10 or 12 days more to reach Dhamtari.

(Risgáon is in the regular trade route from Sálúr and Párvatipuram to Dhamtari and Raipur).

They go from Risgáon, *viá* Kálgád, Sankra, Ránigáon, Malleri, Sirsída, Sihóa, Sémra, Birgúdi, Gatigáon, Gatásili, Dókal, Bunbugowd, Kukrel, Bhoina, Achóta and Koliari to Dhamtari. But this route is not suitable for a railway on account of the irregular ground it passes over.

10 miles, 5 furlongs, 170 yards. *Risgáon,* 15 huts with 60 people. Fields, gardens and a tamarind grove. The camping ground is small and too near the village, also near a swamp; but the headman (or Malgúzár) said the place was healthy.

Mean reading of aneroid battery at Risgáon 28·53.

Height above mean sea level 1,569 feet.

Rise from Tumaribahál 128 feet.

Distance of Risgáon from Raipur, 104 miles.

January 27th. *Risgáon to Háthgáon.*—Distance 8 miles, 7 furlongs. Detached aneroid 28·63. Thermometer 6 A.M., 44°; 11 A.M., 77°; 4 P.M., 82°.

There had been heavy dew at night, and it was a crisp, cold morning. This day we had to ascend some of the last steps to the Jeypur plateau, to which the valley of the Sondor river has been gradually leading up. The track in the first furlong lay through a swamp drained by a nullah, 20 feet by 5 feet. The jungle at starting was light, with some swampy ground in places. At the 7th furlong is the site of the deserted *village of Kursudi,* said to have been abandoned on account of depredations and exactions committed by the Brinjarris. The sâl jungle around is pretty, with occasional grassy glades; there are some young teak trees in the jungle; the soil is light sandy loam, except in the swamps and glades where it is dark, stiff clay.—All jungle.

Aneroid 28·61.

2 miles, 4 furlongs. *A small drainage* 6 feet by 3 feet; half a mile further three more nullahs like the last. The ground is slightly undulating and steadily rising, but gently. Aneroid 28·57.

3 miles, 5 furlongs, 117 yards. *Paudripáni nullah,* 10 feet by 4 feet. Fine tall jungle, and forest trees; aneriod 28·58.

3 miles, 6 furlongs, 150 yards. *The track crosses the Soreá river,* 65 feet wide at bottom, 10 feet deep in flood; sandy bed with some rock; one bank low and and flooded, the other high and steep. This river need not be crossed by the railway which should keep on the right bank.

4 miles, 1 furlong. *The site of Gourgáon,* a deserted village; the people are said to have left on account of Brinjarris, and settled in another place away from the beaten track. A number of young mango trees are planted on the site, and fenced in by upright sâlwood poles, 5 to 6 feet high. The soil is rich clay. Aneroid 28·57. The country here is flat; hills are seen in front and to the right. There are some rice fields, belonging to Gourgáon, which have not apparently been cultivated for some time.

4 miles, 4 furlongs, 145 yards. *A deep nullah,* 15 feet by 5 feet; in clayey soil. Then low scrub jungle and coarse long grass.

At 5 miles, 1 furlong, the track crosses the Soroá river again; but the railway would remain on the right bank, as explained *supra.* Along this right bank the railway should be taken up to Samrathdéi and Dindandi, towards Kóliapodór and Raigarh.—Here is fine old forest, with large matti and sâl trees, also some teak. The ground is undulating and irregular for some distance; then it becomes flat again. The soil is rich. Sâl jungle continues.

At the 7th mile we leave the Central Provinces and *enter Jeypur territory.* Aneroid 28·47.—A drove of pack-bullocks, from Sálúr to Dhamtari, with salt.

7 miles, 4 furlongs; a small drainage to the left, 8 feet by 3 feet. Then some undulating ground.

8 miles, 6 furlongs; a swamp with black soil. Forest of matti and sâl.

8 miles, 7 furlongs. *Háthgáon,* a small village containing five huts and about 25 people, who are not so miserably poor as in some of the villages met along the route for several days past. There is quite a flock of small children, and the headman is building himself a new and roomy hut. The people here speak Ooriya and Ghóndi, the latter a dialect of Chattisgarh Hindi; but they understand Hindustani well enough.—No arrangements had been made here by the Jeypur agency for supplies, &c., for the party; and the Manager of the Bindra-Noagarh estate continued to afford his assistance.

Detached Aneroid 28·39.

No ghât, except the small Urtúli Ghât (on the 22nd) which can be circumvented, has been encountered on this route so far, and no sudden changes of level; the ascents have been gradual and easy, the undulations of the ground but slight; nothing to constitute an obstacle to the railway. The gradient need nowhere exceed 1 in 100. The jungles are magnificent, the soil is good; but villages are few and far between and the population is exceedingly sparse. There are hundreds of square miles of good forest land in the Bindra-Noagarh estate that might be colonized with advantage alike to the colonists and to the administration.

The mean reading of the aneroid battery at Háthgaon was 28·22.

Height above mean sea level 1,870 feet.

Rise from Risgáon 301 feet in 9 miles; about 1 in 150 or 33⅓ feet per mile.

Distance of Háthgáon from Raipur 113 miles.

January 28th. *Háthyáon to Raigarh.*—Distance 11 miles. Detached aneroid at 6 A.M. 28·38. Thermometer 6 A.M., 50°; 11 A.M., 86°; 4 P.M., 81°.

On leaving the village the track crosses a swamp and some rice fields; then through high grass and jungle, chiefly sâl. There is a steady ascent which can be eased by keeping along the Golária nullah to the left. In the first mile we rise about 40 feet, the aneroid at the end of it reading 28·34. Then come repeated ascents and descents (but not very steep or high) which, combined, the Brinjarries call the *Paramári Ghât.*

At 1 mile, 4 furlongs, 109 yards, the aneroid reads 28·24; then we descend again; then another rise; then down and up again. On the last summit (at 2 miles 57 yards) the aneroid reads 28·23. After that we go down once more and cross the *Kurudádodi nullah*, 10 feet by 3 feet; at 2 miles, 1 furlong, 165 yards. Then ascend again. From here a track branches off to the right to Kósampur; there is some rock about.

At 3 miles, 2 furlongs, another summit is reached where the aneroid reads 28·19, showing a total rise from Háthgáon of 200 feet; from here the track leads steadily downwards. The jungle consists of tall matti and sâl trees.

At 3 miles, 6 furlongs, the Mongosáriah (or Golária) nullah is met (25 feet by 5 feet) where the aneroid reads 28·27, showing a rise from Háthgáon of only 100 feet in 3½ miles. This is the nullah along the banks of which the trace should be taken down to the Soroá river (*vide* notes on the 27th, at 5 miles 1 furlong).

From here begins another gentle ascent, and then come a few slight undulations with two swampy glades draining to the left into the Golaria; until at 5 miles 4 furlongs we arrive finally on the Jeypore plateau, and the flat country stretches far away to the south. Met 300 pack-bullocks, taking salt from Sálúr to Raipur.—At the edge of the plateau (aneroid 28·16) there is some dense, young sâl jungle, with a thick undergrowth of stunted dates and other bushes and tall grass, the whole forming a tangle almost impenetrable. Then begins a long swampy glade, partly cultivated, about half a mile wide, and extending southwards for miles, bordered with sâl jungle east and west; the Poragora hills looming in the distance, where there is said to be good black-wood timber and iron stone.

6th mile. Village of Kúruberra. Aneriod 28·16. Soil, dark clay.—We are now in the campaign country of Jeypur.

7 miles, 3 furlongs. Kóliapodór, with twenty houses and about 100 inhabitants. The homesteads have large compounds enclosed by fences of upright stakes; there are some vegetable gardens. The people here speak Ooriya. The track leads along the eastern edge of the great swampy glade, through low scrub jungle and young sâl.

At 8 miles, 6 furlongs, where the aneroid reads 28·18, the swamp is crossed; the country continues flat, while swamp and jungle occur alternately along the track. The soil gradually becomes lighter and harder as we get away from the large swamp.

At 11 miles, 100 yards, Raigarh; with a fine mango tope, good encamping ground and the remains of an old mud fort. Here are about 40 houses, containing 150 people; all Hindus, no Mussulmans or Ghónds.

The detached aneriod reads 28·16; while the mean reading of the battery is 27·98. Height above mean sea level 2,101 feet. Rise from Háthgáon 231 feet. Distance of Raigarh from Raipur 124 miles.

The Manager of the Bindra-Noagarh estate, who had accompanied the party up to this and made himself very useful, returned from here.

The Amin of Omorkót was here to look after supplies, &c.

Halted at Raigarh on the 29th.

January 30th. Raigarh to Béra. Distance, 11 miles 4 furlongs. Thermometer 6 A.M., 55° F.; 11 A.M., 81°; 4 P.M., 83°.

Near the village a tank bund is crossed or rather a dammed-up swamp; then begins the jungle again. There is a well trodden track; the soil is hard brown loam, with laterite cropping out in places; also some gneiss rock. Then jungle and swamp, the latter cultivated in places, alternate. The jungle is chiefly sâl; some of the swamps must be nearly impassable in the rainy season.

At 3 miles, 2 furlongs, the site of Kumli, now deserted. The villagers are stated to have moved to another spot on account of the Brinjarri traffic along the track troubling them. Here is a tank which is said to be never dry, and a temple to the goddess Mátá. There is a large swamp near, which has been cultivated. Then jungle again, young sâl and scrub.

In the 5th mile we pass into a fine forest of old and young trees, chiefly matti and sâl, with some black-wood and yégi, and very little underwood. The forest continues for miles, interrupted here and there by grassy glades, which are swampy in the rains. The soil is fertile and the lay of the ground easy for a road. The track leads for several miles through beautiful forest over level ground, on a water-shed and encounters very little drainage. Here is some of the finest forest I have seen on this expedition; it has apparently never been touched by the hand of man and might be called primeval.

In the 7th mile the ground is slightly undulating: the soil in the lower parts is rich, dark clay; on the higher ground light brown and sandy.

In the 10th mile the ground descends gently towards Béra; the soil is sandy loam. At 10 miles, 4 furlongs, we emerge from the great forest and enter small jungle. At 10 miles, 5 furlongs is a large clearing where the village of *Béra* formerly was.

The people are said to have shifted to another site, not far from this, some years ago, when the Police was first introduced here. There are extensive rice fields; a ledge of gneiss rock shows above the surface in two places.

11 miles, 4 furlongs. *Béra* has about 15 huts and 40 inhabitants. It is situated near the Tél Nadi, which is here 40 feet wide and 8 feet deep between the steep and soft banks, subject to floods which inundate the swamp on both sides. The drainage encountered on this day's march was very little, as the track led for the most part along the ridge of a low water-shed, from which the country falls away in scarcely perceptible slopes to the right and left.

All glades and swamps, along which the drainage runs, will of course require embankments with culverts or small bridges. There is a good encamping ground on the old site of Béra and a smaller one on the bank of the Tél Nadi, in a loop formed by the river, by the side of the track.

The mean reading of the aneroid battery at Béra is 28·15.

Height above mean sea level 1,967 feet. Fall from Raigarh 134 feet. Distance of Béra from Raipur 135 miles, 4 furlongs.

January 31st. Béra to Omorkót. Distance 7 miles, 4 furlongs. Thermometer 6 A.M., 48°; 11 A.M., 77°; 4 P.M., 81°. In the first furlong the Tél Nadi is crossed, 40 feet by 8 feet between the banks, which are subject to floods, for some distance, to a further depth of at least 3 feet. Then jungle and high grass; some rising ground; a drainage channel flowing to the left, about 4 feet by 2 feet. At the 5th furlong is the summit of the rising ground, about 12 feet above the starting point; then two small nullahs, 5 feet by 3 feet.

Stately primeval forest of grand old trees; dead trunks are lying about where they fell years ago, some quite decayed, apparently never touched by man. Ground slightly undulating. At 2 miles, 2 furlongs, a glade draining to the left. Embankment required, with a culvert, 6 feet by 3 feet.

3 miles, 1 furlong. Burja; two small villages containing together about 50 houses and 150 people. The large farm yards are fenced in with palisades as a protection. South of the village common jungle again: no longer the fine old forest.

At 3 miles, 5 furlongs, a large swamp, more than a square mile in area; partly bunded up and converted into a tank, with extensive fields under it belonging to Burja. The tank might be improved and irrigation extended. From this swamp flows a nullah called Bakuli. Then thin scrub jungle, on light sandy loam. At the 4th mile another swamp and a clearing in the jungle; then low scrub jungle again.

5 miles, 3 furlongs; a clearing and swamp; then light jungle with some fields; then a ploughed swamp. It is mostly good, rich soil between Béra and Omorkót, classed as No. 1 by the Revenue Surveyors.

7 miles, 3 furlongs. Bhaskel nullah. Steep banks; hard bed; no rock; 40 feet wide between the banks, which are 8 feet high and covered during great floods to a further depth of 3 feet, for some distance.

7 miles, 4 furlongs. Omorkót, a considerable village with a Police station, and the head-quarters of an Amin. Here I met Mr. Cormac who had marched from Raipur *viá* Dhamtari and Kankér. His own report on his reconnaissance accompanies these notes.

Mean reading of aneroid battery 28·12. Height above mean sea level 2,021 feet. Rise from Béra 54 feet.

Distance of Omorkót from Raipur *viá* Rajim and Háthgáon 143 miles;* *viá* Dhamtari and Kankér, 150 miles. Good camping ground in tope; good water from the Bhaskel nullah. Halted at Omorkót on the 1st February.

February 2nd. Omorkot to Bijepur.—Distance 12 miles, 4 furlongs. Thermometer 6 A.M., 52°; 11 A.M., 86°; 4 P.M., 79°. The track enters the jungle at once; there is some rock; the soil is light sandy loam. In the 2nd mile the village of *Dongrigura;* with a small irrigation channel called Júnapáni.

At the 3rd mile a swamp with some cultivation; rich, dark soil all around.

4 miles, 1 furlong, the village of Sána Borondi; then across a swamp, past a newly planted mango tope. Then a tank near the village of Bóro Borondi.

5 miles, 1 furlong. Bóro Borondi, with some vegetable gardens, and a wooden temple (*i. e.*, merely a rude framework) to the goddess Bhíma (Káli?)

There is also a sacred swing, with numerous sharp nails driven through the seat from below; on these nails good and holy persons are said to be able to sit without injury, and some do so at great festivals. But none of my people would try it.

6 miles, 3 furlongs, 124 yards. Ndgi river; steep banks and gravelly bed; no rock; 80 feet wide and 15 feet deep. This river should be bridged a mile to the east of the present track, to avoid crossing twice as the track does. Some laterite cropping out here.

7th mile, Dodra village. Fine tope and two tanks. Extensive rice fields. Numerous cattle. Then light jungle and clearings alternately.

9 miles, 4 furlongs, village of Tétargáon. Then a swamp. Further on, the ground is gently undulating.

10th mile. The village of Bokra to the right. Scrub jungle; another swamp. Then small sâl jungle.

11 miles, 6 furlongs. Chatagura village. Then some low swampy ground.

11 miles, 8 furlongs; cross the Chatringi river, 45 feet by 12 feet; in soft sandy soil. Then a swamp again.

12 miles, 4 furlongs. Bijepur, with a splendid old tope of different kinds of trees, but chiefly mango and fig. The village is very insignificant now, but Bijepur is said to have been once a great place and the residence of a Rajah.

Mean reading of aneroid battery 28·14. Height above mean sea level 1,955 feet.

Fall from Omorkót 66 feet.

Distance of Bijepur from Raipur 155 miles, 5 furlongs.

* NOTE.—By avoiding Noagarh and keeping along the Sondor river this distance is reduced to 137 miles.

February 3rd. Bijepur to Dabgaon—Distance 10 miles, 6 furlongs. Thermometer 6 A.M., 52°; 11 A.M., 75°; 4 P.M., 77°.—We enter sâl jungle; at 1 mile, 4 furlongs cross a swamp; then sâl jungle again, with occasional glades, each glade or swamp requiring an embankment and one or more culverts. The soil varies from dark, stiff clay to light, sandy loam; with red soil and gravel here and there.

In the 4th mile a large swamp, partly bunded up for cultivation.

4 miles, 2 furlongs; passed village of *Nakjor*.

At 5 miles, 2 furlongs; a swamp, with a drainage requiring a culvert 9 feet by 4 feet.—All small sâl jungle.

6 miles, 3 furlongs. Belari nullah, 35 feet by 15 feet. Steep soft banks; sandy bed; no rock.

7 miles, 4 furlongs. A swamp about 100 yards across. From here a path is cleared through the jungle 8 to 10 yards wide; the surface has been smoothed, and side drains cut. Fine sâl forest again. Then some undulating ground, where cuttings and embankments will be wanted; but nothing on a large scale. A nullah 9 feet by 3 feet.

8 miles, 7 furlongs, a swamp, with soft black mud. Then jungle again, soil, sandy loam.

9 miles, 4 furlongs, a deep swamp, where a considerable embankment and a bridge, 20 feet by 10 feet, will be wanted to let the drainage pass through.

10 miles, 6 furlongs. Dabgaon, with 30 houses and 100 inhabitants; a police station. Good encamping ground in a mango tope. Water fair.

Mean reading of aneroid battery 28·12.

Height above mean sea level 1,983 feet, rise from Bijepur 28 feet.

Distance of Dabgaon from Raipur, 166 miles, 3 furlongs.

February 4th. Dabgaon to Páparhandi.—Distance 11 miles. Thermometer 6 A.M., 51°; 11 A.M., 75°; 4 P.M., 77°.

3 furlongs, 106 yards. Ongi nullah, 60 feet by 14 feet, both banks subject to flooding; sandy sides and bed; no rock. A rude foot-bridge, well above high water, has been provided for this and some other large nullahs.—All jungle.

2nd mile. Village of Moideri, on somewhat irregular ground; large rice fields. Other crops: gram, ragi, mustard, castor, tobacco, and garden vegetables.

Then a *swamp* requiring an embankment with a culvert, 10 feet by 4 feet. Fine sâl forest again.

3rd mile, a drain, 5 feet by 3 feet required.

4th mile, some undulating ground.

5 miles, 2 furlongs. Barigura village. Then jungle again.

6 miles, 6 furlongs. Jelabahal village. Then a swamp.

7 miles, 1 furlong. Basni nullah, 90 feet wide and 12 feet deep; sandy bed; ill defined, soft banks; no rock.

A temporary foot-bridge is laid from bank to bank. In the 8th mile, a swamp; drain 10 feet by 5 feet required. Then some rising ground. All sâl jungle. Good medium soil, classed as No. 2 by the Revenue Surveyors.

10 miles, 6 furlongs. Turi nullah, 90 feet wide 12 feet deep. Sandy bed; low, soft banks, flooded; no rock. Then cross a swamp 400 yards wide.

11 miles. Páparhandi.—About 100 houses and 400 people. Fine tope for camping; good water from Túri nullah. Magnificent old banyan trees, with far-spreading branches supported by numerous root pillars. An *old fort* overgrown with jungle. A fine *temple* of Siva, built of stone resembling Chunár sandstone. A fair is held here weekly. There are some sugar-mills at work. The Sub-Magistrate of Nárangpur came here to meet the party.

Mean reading of aneroid battery 28·21.

Height above mean sea level 1,922 feet.

Fall from Dabgaon 61 feet.

Distance of Páparhandi from Raipur 177 miles, 3 furlongs.

February 5th. Paparhandi to Nárangpur. Distance 8 miles, 193 yards. Thermometer 6 A.M., 52°; 11 A.M., 72°; 4 P.M., 78°.—From Páparhandi I detached a small party this morning to go up the valley of the Indrábati, and then up the Golagad river to Maribata, to ascertain by the aneroid the height of the saddle between the sources of the Golagad and Ryagudda rivers; as this valley would seem to offer a favorable line for connecting Ryagudda with Páparhandi and for ascending the Jeypur plateau from the former place by an easy ghât.

The long-promised Revenue Subordinate, in the person of N. Páni Grâhi, Head Clerk Special Assistant Agent's Office, Kuraputi, joined the party here at last.

The track leads through fine tree jungle, and then crosses a swamp, where a masonry drain 10 feet by 5 feet is required. After that the ground rises slightly and the soil becomes red. 1 mile 4 furlongs, another swamp; drain 10 feet by 5 feet required. Another stretch of jungle on rising ground, and then a swamp again. Then a long gentle rise, and then descent to swamp.

2 miles, 6 furlongs, a long winding swamp cultivated. Scrub jungle all round.

3rd mile. Gantat River, 60 feet by 14 feet; soft bed and banks. In the 4th mile a swamp, with rising ground and jungle on both sides; a similar one in the 5th, and another in the 6th mile.

7th mile. Village of Májigura, with a good mango tope. Some laterite. From here a fine avenue, consisting of a treble row of mango trees, about fifty years old, leads to Nárangpur.

8 miles, 193 yards. Nárangpur, with a Sub-Magistrate's Court, a Mulki Post Office, and a Police Station; the Jeypur Rajah's Amín also lives here, who politely came out on an elephant some miles to meet me. Nárangpur contains some 650 houses, with from 3,000 to 4,000 inhabitants. It has four tanks and some fine topes. There are carpenters, blacksmiths, and weavers here. Tasser silk is made, also lacqueredware and glass bangles.

The mean aneroid reading is 28·24.

Height above mean sea level 1,918 feet.

Fall from Páparhandi 4 feet.

Distance of Nárangpur from Raipur *viâ* Rajim and Háthgáon 185 miles, 4 furlongs.

The Jeypur Rajah's Dewán at Nárangpur was very obliging, and afforded all necessary assistance to the party.

NÁRANGPUR,
10th February 1882.

K. F. NORDMANN,
Executive Engineer, on Special Duty.

NOTE.—The heights, which had been originally only approximately calculated, *i. e.*, without reference to the aneroid readings at the sea-coast, have now been corrected by means of the latter, and are correct.—K.F.N.

XV.

B.

Extract from Executive Engineer's Notes of Reconnaissance from Nárangpur to Kuraputi viâ Boriguma and the old Madeoputi Ghât, 38 miles. February 13th to 16th, 1882.

February 13th. Nárangpur to Porli.—Distance 8 miles, 5 furlongs. Thermometer 6 A.M., 61°; 11 A.M., 83°; 4 P.M. 85°.—After passing southwards through the town of Nárangpur, extensive rice-fields were crossed; then some jungle, consisting chiefly of mango trees; then another expanse of paddy flats.

Height of Nárangpur above M.S.L. 1,918 feet.

In the 1st mile is *Bagabukli*, a small village.

At 1 mile, 4 furlongs, *a nullah*, 25 feet by 8 feet, with muddy banks and bed. The prevailing soil is reddish loam, and there is some laterite showing above the surface. At 1 mile, 5 furlongs, the northern bank of the *Indrábati* is reached; the bank is soft and steep, the bed sandy. There was from 2 to 3 feet of water in the river, which has a lively current. The water to be crossed was 220 feet wide, while the river in flood is 465 feet wide and 24 feet deep in the deepest part; the highest floods, which overtop the banks, are said to add 4 feet more to that depth. A ferry is here, consisting of a platform resting on three canoes. Then follows some light jungle with patches of dry cultivation, Bengal-gram, dholl, tobacco, &c.; then more rice-fields. Soil sandy loam. A nullah, 10 feet by 6 feet; then paddy-fields. The soil on the higher ground is brown clay.

In the 3rd mile jungle again; the ground rises; prevailing soil laterite gravel.

At 3 miles, 5 furlongs, the summit of the rising ground is reached; after that there is a gentle slope down to a rice flat at the 4th mile. From here the ground continues level for some distance; another swamp is crossed at 4 miles, 6 furlongs; then comes a short rise; the jungle continues.

At 5 miles, 3 furlongs, we are again on a summit, about 60 feet above the last swamp. The jungle here consists of small scrub; soil red gravel. At the 6th mile a small water-course 7 feet by 3 feet, is crossed. Then a descent to a narrow swamp, and rising ground again on the other side; jungle continues.

At 6 miles, 6 furlongs, the track once more reaches a summit, this time on the shoulder of a small hill. The soil here is brown clay, the jungle light. Then begins a descent. Near the 8th mile the track crosses a paddy flat.

At 8 miles, 5 furlongs, the village of *Porli* is reached, containing about 30 houses and 120 people. Paddy and several kinds of gram, besides garden produce, are cultivated here. There is a good encamping site, well shaded, on the high ground north of the swamp adjoining the village; but the drinking water is of indifferent quality.

Mean reading of aneroid battery at Porli 28·18.

Height above M.S.L. 1,873 feet.

Fall from Nárangpur 45 feet.

Distance of Porli from Raipur 194 miles, 2 furlongs.

February 14th. Porli to Pupogáon. Distance 8 miles, 6 furlongs. Thermometer 6 A.M., 62°; 11 A.M., 84°; 4 P.M. 87°.—Marched over a cultivated swamp, through which a stream flows, 30 feet by 10 feet, with steep soft banks; then over rising ground, after which jungle and swamp occur alternately. The soil on the higher grounds is sandy loam; in the swamps stiff, dark clay.

In the 2nd mile some undulating ground; a long glade to the left, extending north and south, and indicating the direction of the future railway.

2 miles, 2 furlongs. *Village of Kondra,* with a fine mango tope and wet fields.

3 miles, 1 furlong. *Jilimili,* with a tope.

4th mile. *Boriguma,* with upwards of 100 houses; a travellers' bungalow built of mud walls, with a thatched roof. There is a *temple* with some old tanks about a mile west of Boriguma near Gondaguda. The temple is dedicated to Pátálésworo (Siva), and contains some very ancient carvings, amongst them a figure of Bhoirawan, the husband of Káli. It is said that a large town stood here in remote times.

4 miles, 6 furlongs. *Village of Dulaguda.*—Beyond, swamp and jungle. Soil heavy clay. Then a small ascent, followed by a fall of the ground, and a narrow swamp.

At 5 miles, 6 furlongs, the foot of another gentle ascent; then some undulating ground.

7 miles, 1 furlong; on the summit of the sloping ground, near *Satrela* village, a tope. Then down to a swamp, and up-rising ground again beyond. This is the general character of the country about here: low ridges with easy slopes clad with jungle and forest, alternating with swampy flats partly cultivated.

8 miles, 6 furlongs. *Pupogáon,* a middle-sized village. There is much quartz about here. Fine encamping ground on a high site west of the road, but the water obtained from the tanks is indifferent. Wells could easily be dug in the lower ground, where the water is not far below the surface.

Mean reading of aneroid battery 28·09.

Height above M.S.L. 1,981 feet.

Rise from Porli 108 feet.

Distance of Pupogáon from Raipur 203 miles.

February 15th. *Pupagáon to Ránigar.* Distance 7 miles. Thermometer 6 A.M., 65°; 11 A.M., 80°; 4 P.M., 86°.—The road leads through light jungle, over stiff brown clay; ground slightly rising.

At 1 mile, the summit of the ascent is reached, about 40 feet above the starting point. There are patches of dry cultivation, chiefly red and black gram, in the jungle. Then comes a downward slope, and at the foot of it a small swamp converted into fields. Thence rise again.

In the 2nd mile is the village of *Kumárput,* with some wet and dry fields, and many mhówa trees around. The kenda tree (Telegu, tumica) is found here, on the fruit of which mixed with honey and a kind of white clay the poorer Ooriya people live to a great extent in the hot weather when they have nothing else to eat.

Further on the village of *Kebbedy*; with gardens containing dholl, the castor plant cholum, tobacco, brinjals, plaintains, &c.

From here the road descends to the Telingiri river at 2 miles 6 furlongs. The water at present is from a foot to 18 inches in depth and 90 feet wide, but during floods it is 160 feet wide and 12 feet deep. The banks are of soft clay, alternately high and low; the bed is sandy, but firm.

Near this is Chept-amb, an old village-site, where a weekly fair is held, although there is no village now.

South of the river are rice-fields on high sloping ground, not irrigated except by the rain-fall direct. Mhówa trees abound in this part.

At 4 miles, 3 furlongs; *Bóriput,* with some date palms and fields of gram, dholl, ragi, paddy, wheat and flax.

Iron is made at Nawa Bóriput, not far from here; but no limestone has yet been found. Soil, dark brown clay. Hills on both sides of the road.

Traffic.—In two hours this morning I met upwards of a thousand pack bullocks, some carrying salt from Sálúr to Chattisgarh; others rice, wheat, and Bengal-gram from the latter to the former place; again, others going empty to Kotpad to buy rice there and sell it at Sálúr. One gang was returning empty *vid* Kankér to Raipur; they had been engaged in taking rice from Kotpad to Sálúr.

The ground now becomes irregular and in parts rocky; the road is cut out of the hill-side; and I saw coolies at road repairs, the first thing of the kind since leaving Raipur.

At 6 miles, 1 furlong, a nullah, 15 feet by 6 feet, is crossed, which flows into the Telingiri river. There is hilly jungle all around.

At 7 miles, *Ránigár,* a small village of five or six huts, on the high northern bank of the Telingiri river. Soil red clay.

Mean reading of aneroid battery 28·04.

Height above M.S.L. 2,017 feet.

Rise from Pupogáon 36 feet.

Distance of Ránigar from Raipur 210 miles.

From Pupogáon I despatched Mr. Cormac's party to Jeypur to examine the intervening country and the ghât leading from Jeypur to Kuraputi; his report accompanies these papers.

I marched to Ránigar and thence up the old *Mádeoputi Ghât,* which seems to offer fewer obstacles and easier gradients for a railway than other lines. But the railway should not follow the old ghât too closely, especially in its lower course; the line should rather be taken entirely along the adjoining valley of the *Kuradi nullah,* which offers the most gradual ascent of all available lines.

February 16th. *Ránigar viá Mádeoputi to Kuraputi.*—Distance 13 miles 4 furlongs. Thermometer 6 A.M., 63°; 11 A.M., 87°; 4 P.M., 80°.—The road crosses the Telingiri river again, which is here 150 feet wide and 12 feet deep in flood, with soft high banks and hard sandy bed. There is rock 200 yards higher up. The low water at present is only a foot in depth and 70 feet wide. The railway would not cross here, but keep on the right bank and go up to Palkam, cross the Telingiri above its junction with the Kuradi, and thence up the latter to Kendra, Giliput and Mádeoputi.

The old ghât is sometimes cut into the hill-side, sometimes it goes along a piece of flat ground on the high river bank; in other places straight up a steep incline. There is jungle the greater part of the way. A number of small hill streams cross the road.

At 1 mile from Ránigar the roads bifurcate, the new one on the right going to Kuraputi, the old track on the left to Mádeoputi. A good deal of traffic still passes by this ghât, although the greater part goes up the new road to Kuraputi.

Near the village of *Dakra* the track crosses the Telingiri river again. The ground is uneven, the hill-side stony; there is good jungle with fine sál and matti trees. In the first 2½ miles the ascent is 80 feet. The village of Músaput is passed, and then the Telingiri is crossed again at 2 miles 6 furlongs. The hill-sides are partly cultivated, chiefly with castor. The *banddna* tree grows here, with fine purple flowers. The wood, which is very tough, is used for ploughs, yokes, and buildings.

4 miles, 2 furlongs. *Village of Bandakatra.*—Ten houses, with gardens containing mango and jack trees, plantains, &c.; in the fields are gram, dry paddy, gingelly, tobacco, flax, and castor. The total ascent up to this is 130 feet, *i.e.*, at the rate of 30 feet per mile. After passing Bandakatra the track leaves the valley of the Telingiri and, leading up a steep ascent, crosses over into the Kuradi valley.

At 5 miles, 4 furlongs, the total ascent amounts to 270 feet, *i.e.*, at the rate of about 50 feet per mile from Ránigar.

5 miles, 7 furlongs. *Village of Panasput.*—The total ascent up to this is 330 feet.

At the 6th mile is a *tank* for drinking water, about 150 feet square. Soil red sandy loam, with gravel here and there.

At 6 miles, 6 furlongs, a mango grove.

7 miles, 4 furlongs. *Mádeoputi,* with 30 houses, tamarined and mango topes. The rise from Ránigar to this is 450 feet, or about 53 feet per mile. We are now on the upper plateau; there is no jungle, but much dry cultivation.

8 miles, 6 furlongs. *Muchra village,* near the Kuradi stream. A mango tope. Rise from Mádeoputi 20 feet.

9 miles, 7 furlongs. *Village of Mastiput* on the bank of the Kuradi, Rise from Muchara 40 feet. From here the railway should continue to follow up the course of the Kuradi nullah towards Dumriput. The railway station for Kuraputi should be near *Dengagura,* 2½ miles east by north of Kuraputi, which latter is nearly 500 feet above Dengagura.

The mean reading of the aneroid battery at Mastiput is 27·61.

Height above M.S.L. 2,350 feet.

Rise from Ránigar 503 feet, or 50 per mile.

Distance of Mastiput from Raipur 220 miles.

From Mastiput I went across country *vid* Chinder to Kuraputi, a distance of 3½ miles. Total distance of Kuraputi from Raipur 223½ miles.* Height above M.S.L. 2,900 feet. The aneroids in the battery being graduated only up to 27·50, do not show heights above 2,500 feet.

KURAPUTI,
18th February 1882.

K. F. NORDMANN,
Executive Engineer, on Special Duty.

The heights, which had been originally only approximately calculated, *i.e.*, without reference to the aneroid readings at the sea-coast, have now been corrected by means of the latter, and are correct.—K.F.N.

C.

MR. CORMAC'S Diary of Reconnaissance from Raipur to Omarkot in Jeypur *viá* Dhamtari and Kankér, 16th to 31st January 1882. Distance 150½ miles.

Raipur, 16th January 1882.—Left camp at Raipur at 6 A.M., passing through the town along the main road, and emerged from it at a distance of *1 mile 180 yards* from camp.

At *1 mile, 5 furlongs, 166 yards* the Rajim road branches off to the east. Passed the rifle range of the Native Infantry Regiment stationed at Raipur and the village of Bhatagaon at *2 miles, 5 furlongs, 166 yards,* and crossed a stream (20 feet by 6 feet) with sandy bed and well-defined banks of clay; stream is bridged.

At *3 miles, 4 furlongs 130 yards,* passed the village of Boria Khoord; here there is a fine tank surrounded by two rows of large tamarind trees; cultivation now commences, there being a large area here under linseed and wheat.

* NOTE.—By avoiding Nosgarh and keeping along the Sondor river, the distance is reduced to 217½ miles.

At *5 miles, 3 furlongs, 200 yards,* crossed a stream (24 feet by 8 feet) with clayey bed and ill-defined banks; the country all along is fully cultivated; soil black clay, full of holes and fissures.

At *7 miles, 1 furlong*, crossed a stream (60 feet by 8 feet) with sandy bed and well-defined banks; up to this all streams are bridged.

At *8 miles, 5 furlongs, 96 yards,* passed the village of Amdul, the land near which is all under linseed cultivation.

At *10 miles, 2 furlongs, 200 yards,* there is a large well and a good camping ground, but no shade of any sort.

At *11 miles, 6 furlongs, 170 yards,* crossed an unbridged nullah (50 feet by 9 feet) with sandy bed and well-defined banks; reaching camp near the village of Kolur at a distance of *11 miles, 7 furlongs, 71 yards, from Raipur,* good drinking water procurable, but no good spot for camping.

Kolur, 17th January 1882. Distance from Raipur 11 miles, 7 furlongs.—Left Kolur at 6 A.M., passing through country fully cultivated, and crossed a stream (48 feet by 8 feet) at 1 mile, 1 furlong, 140 yards from camp. Passed the village of Khorpa at *1 mile 5 furlongs;* Bhutgaon at *2 miles, 3 furlongs, 200 yards;* Rakhi at *3 miles, 7 furlongs, 190 yards;* and Kuchna at *6 miles, 2 furlongs, 170 yards.* Country slightly undulating, and cultivated to the fullest extent; good topes near each village, and tanks in very good repair.

At *7 miles, 4 furlongs* crossed a stream with sandy bed and well-defined banks (89 feet by 14 feet), and passed the village of Kanamuka, reaching camp at Silturra at 9-30 A.M.; distance from Kolur *9 miles, 2 furlongs.* Camping ground not good; there are a few stunted acacia trees which give no shade; good water not procurable.

Silturra, 18th January 1882. Distance from Raipur 21 miles, 1 furlong.—Left Silturra at 6 A.M., passing through well-cultivated country.

At *1 mile, 3 furlongs,* passed the villages of Singdehi on the east and Supela on the west; country nearly flat, and studded with small acacia trees.

At *2 miles, 7 furlongs,* crossed a stream with sandy bed and well-defined banks (33 feet by 7 feet); some castor-oil tree cultivation on right bank.

At *4 miles,* passed the village of Bhukara, with about 300 huts; a school-house and police station here; laterite rock surface of about 2 acres; on leaving passed a string of 41 camels going to Dhamtari for lac. Passed the village of Kusmurra at *7 miles 4 furlongs, 110 yards,* and reached camp at Gujra at 9-40 A.M.; distance from Silturra *8 miles 4 furlongs, 156 yards.* Gujra is a small village of about 80 huts, and has four large tanks of water unfit, however, for drinking purposes; there is a small tope of recently planted mango trees; no good site for camping.

Gujra, 19th January 1882. Distance from Raipur 29 miles, 6 furlongs.—Left Gujra at 6 A.M, passing the village of Doma at a distance of 1 mile. Passed through country cultivated to the fullest possible extent, leaving the villages of Kurmatarave, Demar, Arjuni and Buthena, and reached the town of Dhamtari at a distance of *8 miles, 5 furlongs, 70 yards* from Gujra; camp on the opposite side of the town at *9 miles, 7 furlongs, 125 yards;* total distance from Raipur *39 miles, 4 furlongs, 138 yards.* Dhamtari is a large town with about 5,000 houses and a population of 14,000 or thereabouts. There is a school-house, hospital, police station-house, and Tahsildar's Cutcherry; there are several large tanks and splendid mango and tamarind topes which surround the town, and some garden cultivation. Labor is available here to a large extent; hire as follows: coolies one and-a-half annas each (men); smiths, carpenters, and bricklayers at from three to five annas per day; good clay is procurable for bricks as well as limestone. The chief produce of the country is rice; wheat, linseed, several descriptions of gram and ragi are also cultivated and exported in considerable quantities; lac also forms a large item in the export trade, as I met 16 carts laden with it leaving Dhamtari. Tobacco, chillies, pumkins, calabashes, brinjals and several other descriptions of vegetables are cultivated in gardens. The mango, custard-apple and bora fruit are procurable in the season; and plantains are to be had at all times, and are largely cultivated.

Dhamtari, 21st January 1882. Distance from Raipur 39 miles, 5 furlongs, 138 yards.—Left camp at Dhamtari at 6 A.M., through fine mango topes for half a mile; then through wet cultivation up to the village of Roodree, *2 miles, 115 yards* from Dhamtari. After passing this village entered jungle with patches of cultivation here and there; the track here runs along the left bank of the Mahánadi, past the villages of Murradeo (*3 miles, 5 furlongs, 70 yards*) and Gangrel (*5 miles, 4 furlongs, 120 yards*), crossing this river at *6 miles, 3 furlongs, 57 yards,* and reaching the village of Kokri at *7 miles, 2 furlongs,* from Dhamtari. Near this village there is a large quantity of stratified gneiss rock cropping out, suitable for building purposes. The track continues up the valley of the Mahánadi (on the right bank) up to *8 miles, 4 furlongs, 68 yards,* where it turns up the valley of the Dorki Naddi, which it crosses at *10 miles, 4 furlongs.* The valley is about 2 miles in width, with an almost level cross section; on each side there is a low ridge of hills thickly wooded with good trees, principally ippa and matti, and a few teak trees.

At *11 miles, 1 furlong, 55 yards,* passed the village of Lamkeni, round which there is a large area of cultivated land; soil sandy.

At *12 miles, 4 furlongs, 180 yards,* reached camp at Dargahan where there is a police station-house. There are several good camping grounds near the village, and good drinking water is procurable from a well; distance from Raipur *52 miles, 2 furlongs, 98 yards.*

Dargahan, 22nd January 1882. Distance from Raipur 52 miles, 2 furlongs, 98 yards.—Left camp at Daraghan through wet cultivation until reaching the village of Sunghola at *7 furlongs* distance. This village is situated on rocky ground, and has a good tank below it; there is some garden cultivation near the village, principally tobacco and castor-oil trees.

At *1 mile, 4 furlongs, 58 yards,* reached the village of Bhirawun, a small hamlet at the foot of some hills.

At *2 miles, 4 furlongs, 140 yards,* passed the village of Mogragahan, round which there is a large area of wet cultivation and numbers of ippa trees. There is some sugarcane cultivation in the valley of a small stream crossed at *3 miles, 3 furlongs, 100 yards,* and a sugarcane-mill at work; the ground is swampy at this place.

At *4 miles,* entered the Kankér State near the village of Alva, which is fenced all round as a protection against wild animals. There is a little cultivation near the village in low-lying ground.

At *6 miles, 3 furlongs, 80 yards,* entered light jungle, with plenty of good-sized ippa and matti trees; quartz and gneiss rock cropping up in all directions.

Reached the village of Charima on high ground at *7 miles, 5 furlongs, 80 yards,* after crossing two streams; there is a little cultivation near the village, which stands in the midst of jungle; kunkur limestone is found near the village.

Reached camp near the village of Polawai at *10 miles, 2 furlongs, 84 yards;* near the village is a large tank of fairly good water and a good camping ground; soil all along sandy red clay. Distance from Raipur *62 miles, 4 furlongs, 182 yards.*

Polawai, 23rd January 1882. Distance from Raipur 62 miles, 4 furlongs, 182 yards.—Left Camp at Polawai at 6-15 A.M. and passed through uncultivated country and some swampy land, reaching the village of Sawada at *7 furlongs and 186 yards.* There are numbers of young mango trees planted near the village, and there is about 1 square mile of wet cultivation.

At *1 mile, 4 furlongs, 70 yards,* crossed a stream (40 feet by 7 feet) with clayey bed and banks; there is wet cultivation from this up to the village of Kurna, which is a collection of miserable mud hovels. Distance from Polawai *2 miles, 150 yards.*

Reached the Mahánadi at *2 miles, 3 furlongs, 125 yards;* there is no rock visible in the sandy bed of the river; the banks are clay and well defined. From this the country is uncultivated; ippa trees very plentiful.

Crossed the Makree River at *7 miles, 60 yards* (150 feet by 12 feet); bed sandy, and well-defined, banks of clay; passed the village of Berawai at *7 miles, 2 furlongs, 190 yards,* where there is some little cultivation.

Reached the town of Kankér at *9 miles, 7 furlongs,* and crossed the Dúhd River at *10 miles 1 furlong;* bed sandy, and banks of clay, well defined (115 feet by 8 feet); passed the Rajah's house and a temple on the west, and encamped beyond the town. Distance from Polawai *10 miles, 7 furlongs.* Total distance from Raipur *73 miles, 4 furlongs.*

The Rajah's house and the temple, which stand at the foot of a rocky hill, are built with brick in chunam; kunkur limestone is found here, but little or no labor is to be had, there being only two bricklayers, two smiths, and one carpenter in the town.

The chief produce of the country is rice; ragi, green-gram, horse-gram, Bengal-gram, black-gram, and dholl are also cultivated, and a very poor kind of plantain, as well as the usual country vegetables.

Kankér 25th January 1882. Distance from Raipur 73 miles, 4 furlongs.—Left camp at Kankér at 6 A.M. through small jungle with thick undergrowth; this continued up to *2 miles, 7 furlongs,* where the Hutkul River was crossed (167 feet by 15 feet); sandy bed and well-defined banks of clay. Observed much kunkur limestone near the crossing; beyond the river the ground is somewhat broken, and further on slightly undulating.

At *3 miles, 6 furlongs,* crossed a smaller stream (40 feet by 9 feet) with sandy bed and well-defined banks of clay.

At *4 miles, 210 yards,* reached the village of Kongera, a small cluster of miserable huts and with about 6 acres of cultivated land near. There is a small area of garden cultivation consisting of tobacco and castor-oil trees.

Continued through dense jungle up to *5 miles, 6 furlongs,* where the Amordorgi river was crossed (40 feet × 10 feet); the banks of this stream above the crossing are well defined, the bed is sandy.

Traversed jungle till the village of Aravail was reached at *7 miles, 4 furlongs, 210 yards.* There is a large area of sugarcane, tobacco, and plantain cultivation in the gardens, as also castor-oil trees; the clearing near the village is extensive. No sál trees were met with up to this, but beyond, this was almost the only description seen.

At *8 miles, 2 furlongs, 174 yards,* crossed the Hatkul river again (117 feet × 14 feet); higher up the stream, the bed and banks are rocky and the cross section somewhat less. The bed is sandy at the crossing, and one bank rocky, the other clay.

Crossed a small stream (10 feet × 6 feet) with rocky bed, and reached camp in a small clearing in the forest at *9 miles, 4 furlongs, 135 yards.* There is an abundance of good timber here, chiefly sál. There is no good camping ground, but good water is obtainable from the Hatkul river, 1 furlong distant. Distance from Raipur *83 miles 147 yards.*

Camp in the forest near Salabat, 26th January 1882. Distance from Raipur 83 miles 147 yards.—Started from camp at 6 A.M. to the Hatkul river, distance *1 furlong, 100 yards*; passed up the valley in the bed of the stream, for *1 mile*, then up the right bank to Chiprail; *2 miles* from camp.

Aneroid reading 28·80.

Continued up the course of the stream, sometimes on the right bank and sometimes on the left, and latterly through dense bamboo jungle, through which the sun could only be seen at intervals, to *7 miles 2 furlongs*, at the junction of two large streams; passed some very large sized matti trees in the forest and also sál; from this place the guides desired to take me across to Chiklidi, but I decided to continue up the bed of the stream until I should reach the plateau, and proceeded accordingly. Up to this no obstacles were met with to hinder the construction of a first-class road or railway, the cross section of the ground being almost level. Here, however, some difficulties were encountered; the banks of the stream were precipitous; above, the hills came sloping down at an angle of 45°, and the jungle was impenetrable. I had therefore to move up the bed of the stream, frequently crawling over the rocks, which were as slippery as glass, on my hands and knees; the perambulator could not run over such rocks, and was therefore carried for about 2 miles, which occupied two hours to get over. There is much quartz rock in the bed of the river, of a pink color, and gneiss of various colours, black or nearly so, slate colored, and reddish; this last being studded with crude garnets.

Aneroid reading 28·67.

At *9 miles* (about) the junction of the small stream from Siduwan was reached, and a small path found, along which the perambulator was again started; and leaving the river bed, passed through sál jungle for *2 miles, 2 furlongs, 110 yards*, when Siduwan was reached. This is a fairly large village, surrounded by a substantial fence of strong stakes, about 6 feet in height; there is a large clearing, and extensive wet cultivation near the village; the camping ground is not good, there being no shade; and good water is not procurable.

Aneroid reading 28·40.

Aneroid reading 28·14.

Total distance from Raipur *94 miles, 3 furlongs, (about)*.

Siduwan, 27th January 1882. Distance from Raipur 94 miles, 3 furlongs (about).—Left camp at 6 A.M. through dense sál jungle, with few trees of any size; thick undergrowth of date shrubs about three feet high.

At *2 miles, 4 furlongs, 82 yards*, crossed a stream (80 feet × 7 feet) with well-defined banks of clay and sandy bed, and reached the village of Korgaon at *2 miles, 7 furlongs, 104 yards*. There is a tolerably large clearing round the village; a small area of wet and some garden cultivation; soil sandy brown clay.

At *5 miles, 130 yards*, reached the village of Kalgoan through sál jungle. There are large boulders of gneiss near the village; continued through sál jungle to the village of Kajrau, where there is a large area of wet and garden cultivation: tobacco, plantains and some country vegetables.

Crossed the Baordhig river at *10 miles, 210 yards*; bed sandy, banks clay, and well-defined.

Crossed another stream at *10 miles, 5 furlongs, 90 yards*, and reached the village of Liagaon at *11 miles, 3 furlongs*. This is the largest village passed since entering the Bustar State. There are a number of carts lying about the village. The area under wet cultivation is large, and there are several small gardens.

Crossed a large stream at *12 miles, 5 furlongs* (82 feet × 18 feet) with sandy bed and well-defined banks of clay, and reached camp at Banskot, after crossing a swamp near the village, at 11-30 A.M.; distance *14 miles, 3 furlongs*.

Banskot is a small village in a clearing in the jungle, and has but a small area of wet cultivation in the swamp close by.

Banskot, 28th January 1882. Distance from Raipur 108 miles, 6 furlongs.—Left camp at Banksot at 6 A.M., passing through sál jungle with small date shrub undergrowth.

Crossed swampy ground under paddy cultivation and entered the village of Dodra at *2 miles, 4 furlongs, 136 yards*; a small village in a small clearing in the jungle.

At *4 miles, 2 furlongs, 110 yards*, reached the village of Simora, a small village in a clearing in the jungle with some wet cultivation near.

Crossed a stream (22 feet × 12 feet) with well-defined banks of clay and sandy bed, and passed through the village of Tumda, the largest village passed this day. There is an extensive area of wet cultivation; and sugarcane, castor-oil trees, and plantains in gardens; two iron smelting furnaces at work in the village. Passed the small village of Kudi at *7 miles, 1 furlong* n a small clearing in the jungle; and passing through some jungle entered a fine sál forest at *9 miles, 2 furlongs*; this continued for about one mile; numbers of trees measuring 14 feet in girth, 4 feet above the ground. Reached camp at Paorbel, a small village in a clearing in the ungle; camping ground not good, and good water not procurable; distance 11 miles 160 yards.

Paorbel, 29th January 1882. Distance from Raipur 119 miles, 6 furlongs, 207 yards.—Left Paorbel at 6 A.M. through dense sál jungle with but few trees of any size.

At *1 mile, 1 furlong, 180 yards*, passed through a small village, also called Paorbel, where there is a splendid camping ground, fine mango and fig trees, giving grateful shade. There is some garden cultivation, plantains, castor-oil trees, and cholum near the village.

Again entered sál jungle and crossed a stream (20 feet by 7 feet) with sandy bed and clay banks at *2 miles*, continued through sál jungle up to the village of Odepur at *3 miles 6 furlongs, 200 yards*; some garden cultivation, consisting of tobacco, plaintains, castor-oil trees, and cholum; some wet cultivation in low swampy land near the village.

After crossing this swamp, again passed through sál jungle to the village of Mohundi at *6 miles*; another small village of the same name lies 2 furlongs further on; a stream with rocky bed and well-defined banks of clay flowing between the two. In the latter village there is an iron-smelting furnace at work, and near each there is some wet cultivation; tobacco, cholum, castor-oil trees, and plantains are largely cultivated in gardens. Passed through sál jungle until reaching camp at Gurjinga at *9 miles, 6 furlongs, 180 yards* from Paorbel. This is a small village in a clearing in the jungle surrounded by a fence of stakes; part of the enclosure is under tobacco, cholum, plantains, and castor-oil tree cultivation; camping ground not good, and water abominable.

Gurjinga, 30th January 1882. Distance from Raipur 129 miles, 5 furlongs, 167 yards.—Left camp at 6 A.M. through sál jungle, passing through a belt of good forest. Many trees (sál) measuring 11 feet in girth, 4 feet above the ground; soil sandy red clay.

At *1 mile, 5 furlongs, 100 yards*, crossed a stream (18 feet by 8 feet) with sandy bed and well-defined banks of clay; and a second stream at *2 miles, 2 furlongs*, with rocky (gneiss) bed and banks at the crossing, and for some distance up stream (58 feet by 9 feet).

At *3 miles 2 furlongs* crossed a third stream (40 feet by 8 feet), and at *4 miles, 2 furlongs, 160 yards*, a fourth stream (20 feet by 8 feet), both streams having rocky beds and banks. Reached the village of Kurulubahal at *5 miles, 4 furlongs*; here there is an excellent camping ground, a large clearing and good shade from mango and fig trees. There are also some fine ippa trees here, and good water is procurable; an extensive area is under wet cultivation just outside the village; some garden cultivation also; soil quartz gravel.

At *6 miles, 6 furlongs, 145 yards*, passed the small village of Serapur in a small clearing in the jungle. Proceeded through alternate belts of sál jungle, and abandoned clearings covered with grass 5 and 6 feet high, to the village of Bakuda; distance *11 miles, 6 furlongs, 200 yards*. Camping ground not good; no shade; good water is procurable.

Bakuda, 31st January 1882. Distance from Raipur 141 miles, 4 furlongs, 147 yards.—Left camp at Bakuda at 6 A.M. through sál jungle. Crossed the Dumabal river at 5 *furlongs, 100 yards* (90 feet by 12 feet), with sandy bed and well-defined banks of clay; after passing through a belt of sál forest, crossed the Patibal river at *2 miles, 1 furlong* (18 feet by 10 feet); the bed and banks of the river are rocky. After passing a very large area, recently under wet cultivation, entered the village of Bámini at *3 miles, 6 furlongs, 110 yards*; here there is an excellent camping ground in a fine large mango tope, and good shade. There are several good gardens with caster-oil trees, plantains, and tobacco cultivation.

At *4 miles, 7 furlongs*, crossed a stream (18 feet by 9 feet) with sandy bed and well-defined banks of clay; there is much rock above the crossing.

At *5 miles*, reached the village of Barhona, a small village in a clearing, castor-oil and plantain trees in gardens, and fine mango and tamarind trees outside the village.

Crossed a stream at *5 miles, 7 furlongs* (18 feet by 12 feet) with sandy bed and clay banks, and reached the village of Birondi at *6 miles, 2 furlongs, 130 yards*; here there are gardens with sugarcane, plantains, castor-oil trees and tobacco, and a large area of wet cultivation. There are some fine mango and tamarind trees south of the village, and good water is procurable from the stream.

At *7 miles, 4 furlongs, 100 yards*, passed the village of Kochtiamo, where there is a tank and an irrigation channel about a quarter of a mile long; the village is small, but there is a large area under wet cultivation.

At *8 miles, 7 furlongs*, reached camp at Omorkót, a large village with a large area of wet and dry cultivation; tobacco, castor-oil trees, and plantains in gardens, and several descriptions of country vegetables. There is a police station-house here and a force of 18 Police Constables and 1 Head Constable. The camping ground is in a fine tope, where there is good shade; good water is procurable from the river at hand.

Total distance from Raipur *150 miles, 3 furlongs, 202 yards.*

OMORKOT,
1st February 1882.

D.

MR. CORMAC's Diary of Reconnoissance from Pupogaon *viá* Jeypur to Kúraputi, 15th and 16th February 1882. Distance 24 miles.

15th February 1882. Pupogaon, 1,981 feet above M.S.L.—left camp at 6 A.M. over waste land, passing the village of Pupogaon at *3 furlongs, 160 yards*, where there is a tank of good drinking water and a large number of fine mango and tamarind trees giving good shade. After leaving the village, passed through a considerable area of swampy paddy-fields, and crossed a stream (30 feet by 8 feet) with muddy bed and clay banks which are not well defined.

At *1 mile, 6 furlongs, 184 yards*, passed the village of Dangragaon, a small cluster of wretched huts with a small area of paddy-fields.

At *3 miles, 1 furlong*, passed the village of Dondasanogoda on the left; on right sál jungle with jack and ippa trees; soil sandy; a large area of rice-fields just beyond the village.

At *4 miles, 2 furlongs, 200 yards,* crossed a stream (40 feet by 11 feet) with well-defined banks and muddy bed, and then through paddy-fields to the village of Randapali, which was passed at *4 miles, 7 furlongs, 94 yards.* There are only 10 houses in the village, which has a tank of good drinking water and several fine topes of mango and tamarind trees.

At *6 miles, 2 furlongs,* crossed the Potra stream (120 feet by 14 feet) with well-defined clay banks and sandy bed; a fine tope of mango trees on the left bank; on each side of the stream there is a wide area of rice-fields.

At *7 miles,* reached the village of Umerigaon with 60 houses and several fine mango topes; a blacksmith was at work in a small shed making knives. At this village I was met by the Dewan of the Maharajah of Jeypur. Here I joined the road from Boriguma to Jeypur. Crossed a stream in swampy ground (18 feet by 8 feet) and, passing over rising ground uncultivated, crossed a second stream (12 feet by 8 feet); small scrub jungle to the right and paddy-fields to left. In the swampy places the road is in embankment about 2 feet high; the streams are not bridged. Crossed high ground, along the road, and then turned eastward along a roughly-made narrow road, crossing several small streams leading into a large tank covering an area of upwards of half a square mile; tank on the right, and a halting bungalow on the left; then through a fine mango tope, and past a second large tank, to the camping ground in a mango tope, outside the town of Jeypur. Distance traversed *10 miles, 4 furlongs.* There is a good bungalow here for travellers, and good drinking water; there are large topes of fine mango trees covering a very large area and giving good shade, which make excellent camping grounds. There are about 2,500 houses in the town and 8,000 inhabitants; about 20 houses are tiled and one terraced, the remainder being thatched.

The Maharajah of Jeypur resides in the town; a palace of brick and stone is now being constructed in the enclosure, which contains a number of small dirty buildings, and the Maharajah's present residence and offices. There are a Sub-Magistrate, an Inspector of Police, and 15 Constables in the town; there is an Elementary School maintained by the Maharajah.

The produce of the taluk consists of rice (sold at 30 seers per rupee in Jeypur), ragi, green-gram, dholl, Bengal-gram, wheat (in the Kotpad Taluk), and linseed. Sâl, jack, ippa, tamarind, matti and mango trees (especially the latter) are abundant. There are some silk-weavers in the town, who procure the cocoons of the tasser-worm from Kotpad. About 30 goldsmiths, 30 carpenters, and ten smiths reside in the town; but no bricklayers, these being brought up from Sálúr when required; stone-cutters are obtained from the Ganjam district. Kunkur limestone is obtained from Jaganathapuram, a village about 3 miles distant from Jeypur. The town lies in a hollow, near the foot of the hills; the site does not seem a healthy one. The unhealthy season is in July and August, after the commencement of the rains.

The adjacent hills are gneiss; laterite is also found in abundance.

16th February 1882. Jeypur, 1,955 feet above M.S.L.—Left camp at 6 A.M. through mango topes, and joined the road from Jeypur to Kúraputi at *5 furlongs.* Travelled along the road from this place, with small scrub jungle on both sides (ground side-lying and rocky), crossing some small streams, to *2 miles,* when a large stream (63 feet by 14 feet) with rocky bed and well-defined banks was crossed. This spot is only 24 feet higher than the starting point of this day's march, and up to *2 miles, 4 furlongs, 70 yards,* the rise is inconsiderable; from here, however, to *3 miles, 2 furlongs, 160 yards,* there is a rise of 348 feet, the gradient being 1 in 12; in the next half mile there is a descent of 84 feet; then a continuous rise to *5 miles, 1 furlong* of 622 feet, the gradient being 1 in 11⅓; a fall of 84 feet follows in the next half mile, and then an ascent by a gradient of 1 in 40 to *6 miles, 3 furlongs, 160 yards.*

The village of Bogepodor, which was passed here, lies some distance away to the right. Crossed undulating and hilly country, with some good timber trees about, and a small area of sâl jungle about a mile distant. The country is cleared of jungle up to the village of Damiguda at *11 miles, 2 furlongs, 110 yards;* this is a small village of about 20 houses, with a small area of cultivated land near; a stream lies between the village and the road.

At *12 miles,* reached the saddle overlooking Kúraputi (height 2,999 feet) and descended to the town of Kúraputi at a gradient of 1 in 12; passing through the station along the road, reached camp near the quarters of the Special Assistant Agent at *13 miles, 3 furlongs.*

KURAPUTI,
19th February 1882.

J. CORMAC,
Sub-Engineer.

E.

No. I-O, dated Omorkót, the 1st February 1882.

From—Sub-Conductor J. CORMAC, Sub-Engineer,

To—K. F. NORDMANN, Esq., Executive Engineer, on Special Duty.

I BEG to inform you that, in obedience to your orders, I left Raipur on the 16th ultimo for Omorkót *viâ* Dhamtari and Kankér.

2. The road from Raipur to Dhamtari is gravelled for about half a mile outside Raipur, after which there is simply a cart-track, without any surface covering; it has been so worm by traffic that in some places the level is lower than that of the adjacent fields; avenue trees have been planted all along, but are not now in a very healthy condition; margosa trees, which give little or no shade, compose the avenue for quite 15 miles.

3. The line is bridged for the first 10 miles, and for this distance the soil is generally sandy; beyond it is black cotton soil, full of holes and fissures; and during the rains the road will be almost, if not quite, impracticable for carts.

4. No large streams are crossed between Raipur and Dhamtari, and the country is almost level; it is dotted over at present with large stacks of rice straw, which testify to the abundance of the crop recently cut.

5. The grains chiefly cultivated are rice, wheat, linseed, Bengal-gram, green-gram, and ragi; rice is now being sold at Dhamtari at 55 seers and wheat at 40 seers per rupee.

6. The chief exports are rice, wheat, linseed and lac. I met 16 carts leaving Dhamtari laden with the latter, and passed 40 camels going there for loads of the same; this lac is the product of an insect, the *Coccus ficus,* which deposits its eggs upon certain trees, and covers them with a reddish resinous substance which is lac, and intended as a protection to the eggs.

7. Some native cotton cloths are manufactured at Dhamtari and tasser-silk cloths at a village 20 miles distant; the tasser silk-worm being found in all the sâl jungles in this part, feeding upon the leaves of the sâl and the matti.

8. There is no systematic irrigation, the crops being dependent on the seasonable fall of rain; there are numerous tanks kept in admirable repair by the ryots at their own expense; these are, however, generally used for drinking purposes, and are not situated so as to be of much use for irrigation.

9. The soil is very fertile, and the country passed through is cultivated to the fullest possible extent; there are but few small patches of uncultivated land to be seen.

10. There are good topes of fine mango trees near the villages, but no other timber was seen except a few unhealthy-looking acacias, dotted over the country near Dhamtari; firewood is scarce and dear.

11. Dhamtari was reached on the 19th ultimo. The town has a population of about 14,000 inhabitants and about 5,000 houses, chiefly mud huts; there is a tahsildar's cutcherry, post office, police station-house, and hospital in the town, which is surrounded with magnificent topes of mango and tamarind trees; there are several fine tanks near the town.

12. Limestone is procurable near Dhamtari, and a fair supply of labor; cooly-hire being one and-a-half annas per day per men; and for such bricklayers, carpenters and smiths as are to be had there, from three to five annas per day.

13. Leaving Dhamtari on the 21st ultimo I crossed the Mahánadi river twice and the Makri and Duhd rivers, reaching Kankér on the 23rd; the latter river divides the town of Kankér into two portions.

14. There is a good and easy cart track all the way from Dhamtari to Kankér; and as the soil is more sandy, the line will not be so difficult in the wet weather as between Dhamtari and Raipur.

15. The country between Dhamtari and Kankér is jungly, only one-third (or thereabouts) of the whole area being under cultivation; so, as far as I could learn, the Kankér State produces little more than is required for consumption within its own limits, and the exports are inconsiderable.

16. The grains chiefly cultivated are rice, wheat, green-gram, Bengal-gram, horse-gram, and ragi.

17. Mango and ippa (mhowa) trees abound; the spirit distilled from the flowers of the latter tree is sold in the villages at one anna per quart; a few teak trees were also met with, but none of any size.

18. The hills, which run almost parallel with the track for about 14 miles from Dhamtari, are well wooded, chiefly with ippa, matti, and bora trees; a deal of care is given to the planting of mango trees, several topes of young trees having been passed on the way.

19. The villages in the Kankér State are small, and, generally speaking, composed of miserable mud hovels; the town of Kankér is a little better in this way, the huts being somewhat larger, and possessing a temple and house belonging to the Rajah, built of brick in chunam; the villages are all fenced in as a protection against wild animals.

20. The camp at Dargáhan was twice alarmed in the night by a cheetah, and the foot-prints of one of these animals and of a tiger were observed for a distance of 2 miles along the track traversed; wild buffaloes are said to be numerous here, though none were seen by me.

21. The country near Kankér is hilly, chiefly rocky hills of gneiss with low jungle. Kunkur limestone is found at several places, and was seen near Charima and Kankér. There are two bricklayers, two smiths, and one carpenter in the latter town, their hire being two and-a-half annas per day; cooly-hire one anna per day.

22. I left Kankér on the 25th and passed up the valley of the Hatkul river through dense jungle, with fine matti trees here and there, and thick undergrowth, meeting with sâl trees on entering the Buster State.

23. I camped the same night in the jungle; and having sent on my baggage the next day *viâ* the Tél Ghât to Siduwan on the plateau, I started up the valley of the Hatkul river, passing Chiprail, making my way, where the jungle on the banks was impenetrable, in the bed of the stream; there was no path, but the perambulator was run for 7 miles (5 beyond Chiprail) and the barometer showed a rise in this distance of only 130 feet.

24. From this point the perambulator could not travel, and had to be carried; the banks were covered with dense undergrowth, quite impenetrable, and were in some places precipitous;

so that I had to make my way up the bed of the stream, climbing at times, on my hands and knees, the rocks being as slippery as ice in several places; about 2 miles were covered in this manner, the aneroid showing a rise in that distance of 270 feet; a path was then found, and the perambulator started along it, measuring 2½ miles to camp with an ascent of 260 feet; this was the highest point reached, and the approximate height above mean sea level was 2,050 feet.

25. From Siduwan the country commenced to fall, and continued to do so until Omorkót was reached.

26. The villages passed are composed, generally speaking, of a few miserable huts, built near water-courses, and fenced round with stout stakes placed closely together, about 6 feet high, inside which is some garden cultivation: tobacco, castor-oil trees, plantains, and the usual native vegetables. The villages are usually about 3 miles apart, with alternate belts of sâl forest and abandoned clearings intervening.

27. The area cultivated is certainly not more than one-twentieth of the whole, so that there is ample room for a large number of immigrants; this remark applies to the whole country from Kankér to Omorkót.

28. Good camping grounds were observed at Paorbel, Kurulubahal, Bamini, and Omorkót; near the other villages passed all trees have been cleared, and there is no shade. The water-supply on the plateau is not good; and as there are no means of storage, there must be a scarcity in the dry season.

29. Several belts of fine sâl forest were passed through; some trees measuring 11 feet in girth, 4 feet above the ground.

30. The soil in the hollows and swampy places is black clay, and in the portions at a higher level sandy reddish clay.

31. The country is sparsely populated, and all labor will have to be imported; the clay found everywhere is suitable for bricks; and stratified gneiss, suitable for building purposes, is found in several places; kunkur limestone is found here and there, and will, I believe, be found all over the plateau if searched for; there is an abundance of good sâl wood in Bustar and Jeypur.

XIX.

F.

Reports by Colonel A. FRANCIS, late Executive Engineer, Raipur Division.

Report on the Road from Raipur to Dhamtari.

THE total length of this road from the cantonment boundary is 38 miles.

Soil.—Of these only 8 are moorum, sandy loam or laterite; the remaining 30 are black cotton, very deep; and at least 10 miles of these 30 are under water from 6 to 16 inches deep for from four to five months during the rains, owing to the road being on the same level or a little lower than the rice fields which are on both sides.

Masonry Works.—The first six miles and a quarter are bridged with seven drains and bridges; the waterway of five of these is too little, and the approaches have been breached.

These breaches have been now sloped down to allow high floods to pass over. It would be an improvement to rivet both sides of these slopes with a masonry wall, as then a foot of good broken stone could be rammed between them, and a causeway would be formed that would remain hard even after rain.

Nullahs and Rivers.—Between the last bridge built and the village of Bhukara, a distance of 18 miles, there are ten nullahs, all of good size, from 15 to 60 feet broad, and which have all soft and swampy bottoms, and offer considerable obstruction to traffic up to the end of January, and even when the bottoms become dry and hard, yet from the very steep slopes leading to them they detain heavily laden carts for hours.

Improvements required.—These nullahs should have causeways; and instead of the raised causeways, such as have been built on the Belaspur and Sumbulpoor road, it would be both better and cheaper to build walls, level with the bed of the stream and running up the approaches as far as high-water mark, on the up and down stream sides, and then fill in between them a foot of hard road metal well consolidated.

There is but little scour, and it would stand well; the raised causeways become very slippery and covered with green moss.

From Bukara to Dhamtari there is only one causeway required, but that one, though not large, will have to be carefully constructed, as it is in one of the submerged lengths; and in the rains the first intimation a traveller has that there is a nullah is finding the water above his saddle flaps. A raised causeway with hand rails above high water level, and with openings for the bottom water to pass through, would probably be the best for this. All the approaches to these nullahs require being brought to a proper slope, which could easily be done.

The map shows that the Karun river runs with the road on the west side at a distance varying from 1 to 3 miles; the road runs north and south nearly, and the drainage is from east to west.

The country is very flat, and the road running across the drainage has suffered very much from the scouring of its side ditches; in some places they are 8 feet deep.

These side ditches have been dug between the road and avenue, and should be filled and dug outside the avenue, or, better still, omitted altogether, as, owing to the light nature of the soil, the smallest stream of water cuts deeply in a few hours until the harder subsoil is reached.

To convert the present road into a bridged road for all weathers would be very expensive, as on an average the whole 30 miles of black soil would have to be embanked about 3 feet to lift it 1 foot above high-water mark.

Eleven streams would have to be bridged, all of which, owing the proximity of the Karun river, rise and overflow their banks when that river is in flood; besides these eleven bridges numerous small 3-feet drains would be required.

The present state of the road shows how dangerous it is to carry the water from one nullah to another along the sides of the road.

Report on the Road from Dhamtari towards Raigarh as far as the Boundary of the Central Provinces.

First Stage, from Dhamtari, to Kukrel, Distance 8½ Miles.

STARTING from the new Tasilee, the main street of Dhamtari is broad for a short distance; it then contracts into a narrrow lane, the houses having encroached on it, until there is only about 9 feet left; and this in the rains is knee-deep in water. After getting clear of the town there is a mere track to the Achota Ghât; across the Mahánadi river the road requires marking out.

The soil is very sandy and heavy, but there is moorum in the vicinity, and a good road could be made at a small expense. The road could also be made good up to the Tasilee with very little damage to the houses, as by a little care in lining, it would be chiefly compound walls and outhouses that would be taken down.

The distance from the town to the river is 2½ miles. The banks of the river require but little sloping; the north bank especially is easy; the south requires a little done to make an easy slope. A memorandum of probable expense will be given at the end, as more easily noted than is scattered through the report.

After crossing the river the cart track is well defined; the soil is sandy for the first half mile; jungle open. The soil then changes to good moorum up to the village of Bhoina, which is 4⅜ miles from Dhamtari, where the soil becomes a sandy loam, varying from hard to very sandy, and continues with little change to Kukrel.

The two nullahs on the road are easy, with hard bottoms, with stone at hand for causeways, if considered necessary; but unless the traffic increases very considerably, the causeways will not be required.

Water is procured from a nullah which, though indifferent in quality, is sufficient now; later there must be some scarcity.

The Malguzars of this place are Baboojee Huddut and Jinyars; they appear well-to-do, and informed me they held other 34 villages; they have an elephant and good ponies, but professed entire ignorance as to the road beyond their own village.

From Kukrel to the village of Bunbugowd, about 1½ miles, the track is good and easy; and water is here also procured from the nullah below the village. After passing this the line of road as marked on the map, Sheet No. 1 of the Ganjam and Orissa Topographical Survey, runs over rocks and stones; to avoid this the cart track turns to the village of Komda. A glance at the map will show that the line runs along a watershed; and up to the borders of Bustar near Burgudee the tracks are well chosen in this respect, avoiding nullahs and cross drainage; and the points passing from one watershed to another are wonderfully well chosen.

Second Stage, from Kukrel to Dokal, Distance 10½ Miles.

The whole length by the old track is 8 miles to Dokal from Kukrel, but the cart track is a mile and-a-half longer; still it is to be preferred for a fair weather road.

The jungle is of the same description as to Kukrel: tall trees without much girth, only fit for poles, with no underwood. The grass has mostly been burnt. The headman of Dokal is Mithoo Naik, who gave a good deal of information willingly. He is a very intelligent old Brinjarri; he has dug a tank and built a temple, and possesses about 100 head of cattle.

Third Stage, from Dokal to Gatasili, Distance 10 Miles.

From Dokal there are three tracks, but only No. 1 is good for carts; the second is at present impassable except for foot-passengers and pack animals; the third, an empty or lightly laden cart can pass with difficulty. No. 1 goes by Parwari, Donora, Palgaon, and on to Gatasili, a very roundabout track, but easy; the extra length is 3 miles.

The second is that shown in sheets Nos. 1 and 3 of the Ganjam and Orissa Topographical Survey, and the only difficulty is at the crossing of the Silari river. Should this line be taken—and it is the best of the three—a proper crossing must be traced, which is not difficult.

The present crossing is taken straight down the face of the hill on to a low spur, and then, turning on the spur, nearly straight to the river; this point on the spur should be retained, and the slope worked from it upward along the side of the hill where any desired gradient can be worked out; and downwards, first keeping a little way along the side of the hill, till sufficiently low, and then bending round by the left to the river. A trial trace should be first

made, 3 feet wide; there will not be much blasting; most of the rock is detached boulders. For approximate expenditure, see memorandum at the end.

The third line leaves Parwari on the left and runs by Attakolee to Gatasili. The crossing of the river is easier than in No. 2, but the nullahs that have to be crossed are a little larger, and it approaches Gatasili from the wrong side of the tank through swampy ground; and notwithstanding easier crossing and less clearing of jungle required, will not be so satisfactory in the end. The track is here, as elsewhere, generally about 8 feet broad; in places it is much more, even 30 feet, and looks like a road; but this is only for very short distances. Up to Dokal the road may compare favorably with the road from Busna to Buruankera on the Sumbulpoor road; and after this crossing is made and jungle cleared, &c., the road on to Gatasili will be equally good. There are in this stage six nullahs to cross, besides several smaller drainage channels; but all have hard bottoms, and can have easy slopes to their banks.

The ground near Parwari looks as if it would be very swampy in the rains and up to November.

Fourth Stage, from Gatasili to Burgudee in Bustar Territory, Distance 9¾ Miles.

From Gatasili to Burgudee the road is everywhere passable; where there is jungle the trees are thicker together, but still there is very little valuable timber, and open spaces are more frequent than in the second and third stages. There are four nullahs in this stage; the one nearest Burgudee will be the longest, and it is the only one that has a bad bottom.

The detour taken by the road here is necessary, for on examination of the ground to the right, with a view to cutting off this bend, it proved to be very swampy, and a long and heavy embankment would be necessary; besides the nullahs here would have to be bridged, as it is very muddy and holds water to the end of the hot weather. The road crosses the boundary of Bustar near the 9th mile from Gatasili, and the town of Burgudee belongs to Bustar.

The Sihoa road turns just before reaching Burgudee, from which Sihoa is about 4 miles. Several of the villages marked on the map have been deserted. Gatigaon remains; Kongera and Paklupara have disappeared; but a village in these parts means a few huts made of sticks without mud walls, and very imperfectly thatched.

Burgudee is the best-to-do village on the line; gram and other supplies are procurable. There was a difficulty about guides here, and a peon had to be sent down to Belargaon to bring up a guide, the headman of Burgudee steadily refusing to give any guide. When guides had been procured from Belargaon, he then gave one who knew the country well, though for four hours he had declared not a man in the village knew the road to Borai.

Fifth Stage, from Burgudee to Borai, Distance 19½ Miles. From Borai to the Boundary, Distance 3 Miles. Total Distance from Dhamtari to Boundary 61 Miles.

From Burgudee hills are visible on both sides, and also in front; the road here is very undefined; apparently it is cultivated in the rains, and the traffic picks out a path in the dry weather. Up to this point there passed on an average 12 carts and 30 foot-passengers a day and 60 head of pack cattle every other day.

From this point carts cease; only ten pack cattle pass in three days and about 15 foot passengers. At Keontipara, ¾ of a mile from Burgudee, the Mahánadi is crossed; this is also the boundary of Bustar. From this the line is in Kalsa; the road runs by Bamka to Belargaon; this latter is a very straggling village. Three nullahs are passed, and the ground will be swampy until late in November. After the road is fairly opened, an embankment will be needed here and causeways; but the whole of this 3 miles require lining out; probably a better crossing could be found for these nullahs.

The country changes from Belargaon; the hills draw close to the road; the jungle is thicker and the trees are of better size. The track continues fair after passing Belargaon; but 7½ miles from Burgudee the road runs round a very steep hill, marked A on the trace; this is rocky, with a nullah on the right, and will have to be worked out. The whole road from Burgudee should be relined and straightened, the jungle cleared, and nullahs sloped; the general direction cannot be altered on account of the ground.

The road from this point is only a foot-path, though four carts came down with the camp with only one breakage. 12½ miles from Burgudee the Chita river is crossed for the first time; during the day an attempt was made to see if the road could be turned round this river and be brought down the left bank on the line shown by red dots B B B; but the ground is very difficult, and the expense of making even a 12-foot track through it would be great. To ascertain the feasibility properly, a trial trace should be cut; but the natural difficulties (rock and ravines) appear to be too great for a line of road the traffic on which can never be anything but very small. Crossing the Chita river, the road gets a little better, and the path is more defined; for merely a fair weather road the fact of crossing the river twice is of little consequence, as the crossings can be made very easy.

Towards the top of the ascent the brushwood commences and becomes thicker as you proceed. Before reaching Borai it is thick; the trees along this portion of the road are larger; several fine sál trees were seen. The jungle becomes more open; after reaching Borai it ceases, fields and low hills replacing it. About 2 miles of jungle have been cleared on this line of road before reaching Borai, but the trees have been cut too high up, and the stumps are rather long and sharp; but still it renders the track easier. From Borai, Baniadi village is visible; and between

this and Hatmoli is the boundary dividing the Central Provinces and Jeypur. This line runs through fields, and should be embanked from 1½ to 3 feet high. The nullah is a very troublesome one, and as there is plenty of timber lying and rotting within 3 miles, I would suggest a good substantial well-put-together wooden bridge; the only cost would be the carriage and labor. Care should have to be taken to clear all grass from its vicinity early in November to prevent its being burnt; and a bridge could be put up that would last for 20 years.

From the boundary Raigarh is about 15 miles; from thence to Nárangpur is 65 miles; the road is not yet in hand on this section. From Nárangpur to Kúraputi there is a dry-weather cart road, distance 36 miles. Potinghy Ghât is 28 miles from this, and Sálúr 24 miles beyond Potinghy. This would fix Potinghy, which is not marked on any of my maps, at about 18° 50′ north and 83°12′ 30″ east. Sálúr is well known; it is 66 miles from Calingapatam 52 miles from Bimlipatam, and 66 from Vizagapatam; the new ghât commences 4 miles from Sálúr and is 20 miles in length. The distances given are by the road, not straight across country; the ghât is not expected to be finished till 1878, by which time the rest of the road may probably be somewhat advanced. In looking at the Ganjam and Orissa Topographical Survey it appeared likely that a line from Borai, leaving Hathma to the left, up to Gorawan would probably be easier than the Chita river route; although if this line should be decided on, owing to the swampy nature of the ground near Kaunkera and Mainpur, it will still be advisable to run the road by Borai, joining into the Chita river road on the ground just above the village.

Returning from Borai to Dhamtari the first stage had to be any place where water was to be found, as there are no villages on the line. The spot selected was Birpani, just at the junction of the roads from Hathma and Kosmi to Gorawan. It takes its name from a large bir tree.

First Stage, on return from Borai, by Hathma to Birpani 10½ miles. From Border to Borai, 3 Miles, Total 13½ Miles.

The first 7 miles are easy; the proper line would be somewhere between the two red-dotted lines, but the jungle is too thick to decide without cutting a trial trace.

The next 4 miles, after crossing the Dhamtari border, present as many difficulties in the way of rock-cutting and clearing as the Chita river route, though only one nullah of any size is crossed up to this point.

There is a thick bamboo jungle for these last 4 miles, with rocky hillocks on both sides of the path; and the line is exactly that shown in the map, with the drainage sometimes from right to left and sometimes from left to right.

Second Stage, from Birpani to Borsidonga, 6½ Miles.

The nullah is crossed immediately after leaving Birpani, and long slopes with some rock-cutting will be required. Bamboo jungle continues as before up to the place where the road for Amgaon turns off; here it ceases; open jungle commences, the country becomes more and more clear, and the soil changes from good to black cotton. From this point up to Borsidonga will be wet and swampy until January. Any line can be taken here; the carts drive all over the country. From Borsidonga hills are visible on all sides, from 1 to 5 miles distance.

Third Stage, from Borsidonga to Jamgaon, 9¾ Miles.

From Borsidonga up to Deklaond there is no defined road, but carts drive over the country in any direction they wish, making a detour to avoid any difficulty. The ground is usually black, and will be swampy till late; it is quite dry now.

The Mahánadi is crossed near Déokot, and is about 250 feet broad. There is no jungle, only pollard trees. At Deklaond a road joins from Bamka, and from this point there is a well-defined route; the pollard trees continue, and soil changes to hard sandy loam. There are after this about 2 miles of uncut jungle, open and with no large trees. Passing this, the trees have again all been lopped; and on to Jamgaon the country continues the same, with here and there short distances of swamp, or what would be swamp in the rains and cold weather.

Fourth Stage, from Jamgaon to Madgadaian 9½ Miles.

From Jamgaon the track continues good and well defined; country open; trees are lopped as before; a river about 100 feet broad is crossed, near which is a narrow belt of uncut jungle; the soil is black cotton with a few yards of hard kunkur now and then. The small drainage channels would be troublesome if there were any traffic. All the large nullahs have good sandy bottoms and easy slopes. There is a little cultivation at the village of Bansoli; after this there is a mile of very good road, and then three chains of swamp, after which for 3 miles the road is good, running through open jungle; and the soil improves and continues good up to a small drainage channel which has a soft bottom, on the other side of which is black soil until the nullah is reached, on the bank of which is the village of Madgadaian.

Fifth Stage, from Madgadaian to Themli, 9 Miles.

This march is a difficult one. Carts can go, but nullahs are numerous. The road is shut in with rocky hills, and so confined that one large nullah is crossed four times; six other

nullahs are passed, and everywhere the track is sandy and heavy, except where it is rocky. There are about 2½ miles of rocky track on which a good deal of labor would be required to make it easily passable, and the line is one that would not be chosen if there was the slightest possibility of the road being bridged or much improved.

Sixth Statge, from Themli to Dhamtari, 8 Miles. Total from Border to Dhamtari 56¼ miles.

From Themli the road crosses the Silari river, and is shut in for about 1½ miles between the river and a ridge of rock ; the hill then recedes from the river, and the track runs through cultivation and waste to the Mahánadi, which is crossed at Rodree ferry. The track up to this point is very heavy. After crossing the river, there is half a mile of good hard soil, and then alternately sand and swampy ground, to the town of Dhamtari.

Summary.

From the above it will be seen that there are two tracks, one by Kokrel, Dokal, Gátasili, Burgudee and Borái, 61 miles in length, and the other by Themli, Madgadaian, Jamgáon, Bursidonga, Birpáni and Borái, 56¼ miles.

The first runs, with exception of 1¾ miles, entirely through country belonging to the Raipur district and under the Tasilee of Dhamtari ; it is now used by carts as far as Burgudee, offers no great obstacles, and up to this point can be improved, to any extent that may be considered advisable, by a corresponding expenditure. The soil on the whole is favorable, and the only heavy work is that detailed from Burgudee to the boundary, 22¼ miles. This road is also linked by a fair cart track to Sihóa from Burgudee ; and what cart traffic there is, follows this line.

The second line is through a much more open country, and the soil is generally unfavourable, swampy and heavy ; and it would be a good month longer than the first route in becoming dry. The last two stages from Madgadaian to Themli and Dhamtari is also very difficult, and could not be taken for anything but a fair-weather road. The distance is 4¾ miles shorter than the first route ; but owing to the heaviness of soil, carts would take longer to traverse the shorter distance ; it also runs for half its length through Kankér territory, and the Sihóa carts would have to follow the first route as far as Bamka before being able to join into this track.

Under these circumstances the first appeared the best, and a memorandum of expenditure required to open it for a cart track, 15 feet wide, is appended.

DRUG,
18th March 1876.

A. FRANCIS, *Lieut.-Colonel,*
Executive Engineer, Raipur.

XX.

No. 60 W., dated Waltair, the 30th March 1882.

From—K. F. NORDMANN, Esq., Executive Engineer, on Special duty,

To—The Secretary to Government, Madras, Public Works Department.

Adverting to my letter, No. 38-K, dated 25th ultimo, with which I submitted my report on the reconnaissance from raipúr to Koraput, I have the honor herewith to forward* the longitudinal sections (specified below) of the routes traversed, as well as cross sections of streams.

* In two registered covers.

14 longitudinal sections of the line from Raipúr viâ Dhamtari, Kankér and Banskót to Omorkót (150 miles).

2 longitudinal sections from Pupagáon *viâ* Jeypur to Kuraputi (24 miles).

21 longitudinal sections of the line from Raipúr *ávi* Rájim, Noagarh, Háthgáon, Omorkót, Nárangpur, Ránigar, Mádéoputi to Kuraputi (218 miles).

27 cross sections of streams, exceeding 30 feet in width, on the route *viâ* Rájim, Noagarh, &c.

2. The above sections have been unavoidably delayed, owing to the want of tracing cloth, which has since been received. One set had been prepared at Kuraputi, but was spoilt and had to be done over again.

3. Revised sections of the line from Ryaguddah *viâ* Singapore, the Músa Ghât, Bondesor and Dádpúr to Bôgor, promised in paragraph 3 of my letter, No. 20-B, dated 4th December 1881, are under preparation and will shortly follow.

4. The final report, and drawings belonging to the last section of the reconnaissance, viz., the crossing of the Jeypur plateau and the descent down the Eastern Ghâts, are now in hand, and will be submitted from here before I embark for Madras.

XXI.

No. 72 W., dated Camp Waltair, the 14th April 1882.

From—K. F. NORDMANN, Esq., Executive Engineer, on Special duty,

To—The Secretary to Government, Madras, Public Works Department.

As promised in paragraph 3 of my letter No. 20-B., dated 4th December 1881, and paragraph 3 of my letter No. 60-W., dated 30th March 1882, I have the honor herewith to submit 11 revised longitudinal sections of 95 miles of country reconnoitred by Mr. Sub-Engineer Cormac, in November last, between Ryaguddah, the Músa Ghât, Bondesor and Bôgor.

2. The altitudes have now been corrected, with reference to the aneroid observations at the sea coast, which had not come to hand when the original calculations were made ; and I beg that the heights on the original sections and in the reports, may be corrected according to the figures now furnished, which can be relied upon as correct.

3. As already intimated by a telegram, dated the 10th instant, I have been unable to finish the report and sections for the last portion of the reconnaissance, and to wind up the affairs of the reconnoitring party before this ; but I hope to do so by the end of the week, and intend to embark for Madras by the steamer of the 19th instant.

4. I shall thank you to instruct me whether I am to proceed to Ootacamund with my maps, field books and other papers, to give personally such further information, regarding the country reconnoitred, as the Government may desire to have.

5. Please address letters to me, till further notice, to *Madras—General Post Office*—to *await arrival.*

XXII.

No. 74 W., dated Camp Waltair, the 18th April 1882.

From—K. F. NORDMANN, Esq., Executive Engineer, on Special duty,

To—The Secretary to Government, Madras Public Works Department.

IN continuation of my letter No. 38-K., dated Kuraputi, 25th February 1882, wherewith I forwarded my report on the reconnaissance of the country between Raipúr and Kuraputi *viâ* Omorkót, I have the honor herewith to submit my notes on the last section of the reconnaissance, *viz.*, from Kuraputi across the Jeypur plateau and down the Eastern Ghâts to Sálúr ; together with 17 sheets of longitudinal sections* of the country traversed, illustrating the most practicable lines for a railway across the plateau and down to the plains ; and three cross sections of streams.

* In a separate cover.
Enclosures 3.
1 Book of Section.
1 "Notes."
1 Appendix A.

2. In paragraph 5 of G. O. No. 2294 W., dated 16th September 1881, I was directed to ascertain the best of the alternative routes, (1) from Párvatipúram *viâ* Ryaguddah, east of the Noagarh hills, to Raipúr ; and (2) from Sálúr over the Jeypur plateau and through Noagarh, west of the above hills, to Raipúr.

3. All my papers on the subject are now before the Government. I have already, in my letter above quoted (paragraphs 19 and 20 to which I beg to refer), made an impartial, preliminary comparison between the two routes ; and reviewing the whole circumstances again, I find a difficulty in arriving at a verdict as to which of the routes is the better.

4. Out of upwards of a thousand miles of country reconnoitred, two routes distinctly present themselves as (to my mind) equally eligible ; and the Government, with my notes, reports and sections, &c., before them, will be able to choose the route that seems to answer those purposes best which the

Government have chiefly in view in this matter. These routes are laid down in detail on my maps, and they lie as follows:—

(*1.*) *East of the Noagarh Hills.*—Párvatipúram (395 feet), Ryaguddah (687 feet), Bisemkattak (1,154 feet), Ombadóla (1,196 feet), Asurgor (699 feet), Bôgor (628 feet), (cross the Tél Nadi); then following the course of the Sunder river *viâ* Tukla (686 feet), Kariál (803 feet), Kúmúna (857 feet), Torbor (949 feet), Sialjóri (1,047 feet), Jalbal, Nára (1,010 feet), Súarmál, Patrapáli, Telibanda (1,022 feet), Mahásamund (916 feet), Gorári (cross the Mahánadi), Arang (952 feet), to Raipúr (963 feet); distance 372 miles.

This is the route which was recommended to me by Colonel Shaw-Stewart, R.E. It is a very excellent route and by far the best to be found in that direction. It encounters scarcely any ghât work (except a little, north of Ombadóla), and its summit level is not more than 1,346 feet above mean sea level.

(*2*) *West of the Noagarh Hills.*—From Sálúr (570 feet) up the ghâts to Merialpád Saddle (3,250 feet), thence along the Upper Jeypur plateau (averaging 3,000 feet) to Chikapar and Dumriput; down to Mádéoputi (2,500 feet); then following the course of the Kuradi Nallah downwards to Ránigar (2,018 feet); from there across the Jeypur Champaign country (averaging 2,000 feet elevation) to Nárangpur (1,918 feet), Paparhandi (1,922 feet), Dabgaon (1,984 feet), Bíjepur (1,955 feet), Omorkót (2,021 feet), Béra (1,967 feet), Raigarh (2,101 feet), to the edge of the Jeypur tableland near Kóliapodor (2,100 feet); thence following the drainage downwards *viâ* Dindandi and Gourgáon to Risgáon (1,569 feet); from there along the banks of the Sorul or Sondor river *viâ* Tumaribahál (1,441 feet), Baltema (1,295 feet), Benkura to Karti; there cross the Pairi river, then following this river *viâ* Bourka (992 feet), and Kopra to Rájim (958 feet), there cross the Mahánadi, and then *viâ* Uparwára to Raipúr (963 feet). The length of this line will vary from 356 to 343 miles, according to the gradients which may be accepted for the ghât portion.

5. On the western line the ghâts are to be encountered, with a summit level of 3,250 feet (Merialpád Saddle). The ghâts have been carefully explored with the result that six practicable lines have been found, *viz.*, five different lines to connect the Upper Jeypur plateau (having an average elevation of 3,000 feet) with the plains near Sálúr; and one line to connect the Upper Jeypur plateau with the lower plateau (which has an elevation of 2,000 feet).

6 The following are the different ghât routes, which have been described in detail in my "Notes" (11th and 12th March, and "*Résumé*")—*Vide* Sections, Sheet No. 17:—

(*a*) From Merialpád Saddle to Páchipenta Saddle, *viâ* Chandka, and Súnki valley, to the foot (4 miles north-west of Sálúr). Gradients varying from 1 in 50 to 1 in 75. Length 29 miles. Probable cost, at £10,000 per mile, £290,000.

(*b*) From Merialpád Saddle *viâ* Merialpád cutting (on the new Potinghi Ghât), Bittrah valley, Lávidy Saddle, High Súnkipenta, Súnki valley and Páchipenta Saddle, to foot. Gradients varying from 1 in 50 to 1 in 125. Length 32 miles. This is the longest route of all, and has the easiest gradients. Cost, at £10,000 per mile, £320,000.

(*c*) From Merialpád Saddle *viâ* Merialpád cutting, Bittrah valley, Lávidy Saddle, Chandka, head of Súnki valley, and Páchipenta Saddle, to foot. Gradients from 1 in 50 to 1 in 92. Length 29 miles. Cost, at £10,000 per mile, £290,000.

(*d*) From Merialpád Saddle to Merialpád cutting; 2½ miles; gradient 1 in 92. From Merialpád cutting *viâ* the proposed Wondranghy viaduct and Ródavalsa tunnel, to foot; gradient 1 in 50; length under 23 miles; total length 25⅓ miles. Cost, at £10,000 per mile (besides £50,000 extra for tunnel and viaduct), £300,000.

(*e*) From Merialpád Saddle to Merialpád cutting, as before, 2½ miles; gradient 1 in 92. From Merialpád cutting *viâ* the proposed Wondranghy viaduct and Ródavalsa tunnel, to foot; gradient 1 in 35; length 10 miles; total length 19 miles. This is the shortest practicable line, and has the heaviest gradients. Cost, at £10,000 per mile (besides £50,000 extra for tunnel and viaduct), £240,000.

The railway would traverse the upper plateau between the Merialpád Saddle and the Limka Saddle (near Dumriput), a distance of 33 miles.

(*f*) From Limka Saddle, which is 2,880 feet above mean sea level, *viâ* Mádéoputi and the Kuradi valley to the foot of the hills near Ránigar; an easy descent of 862 feet which in a length of 14 miles can be accomplished at an average gradient of 1 in 85. Probable cost, at £8,000 per mile, £112,000.

7. The total distance from Vizagapatam to Raipúr by the eastern or Párvatipúram route is 372 miles. By the western route, *viâ* the Jeypur hills, the distance would vary according to the gradients adopted for the ghâts.

By the longest ghât line, *vide* (*b*), paragraph 6 *supra*, the distance would be 356 miles, or 16 miles less than along the eastern route *viâ* Párvatipúram.

By the shortest line, *vide* (*e*), paragraph 6 *supra*, the distance would be 343 miles, or 29 miles less than by the eastern route.

8. The total probable cost of a narrow gauge line for each of the two routes (east and west of the Noagarh hills) would stand thus:—

A.—East of the Noagarh Hills.

	£
372 miles at £5,000	1,860,000
Add for some heavy work north of Ombadóla (5 miles at £2,000)	10,000
Add for bridges	30,000
TOTAL	1,900,000

The item of bridging is heavier on this line than on the other.

B.—West of the Noagarh Hills.

	£
Raipúr to foot of upper plateau at Ránigar, 204 miles, at £5,000	1,020,000
Ghât from Ránigar to Limka Saddle, 14 miles, at £8,000	112,000
Limka Saddle to Merialpád Saddle along the upper plateau, 33 miles, at £6,000	198,000
Ghât from Merialpád Saddle to foot in the plain (4 miles north-west of Sálúr) by the longest route (*b*), 32 miles, at £10,000	320,000
Foot to Sálúr and Vizagapatam, 73 miles, at £5,000	365,000
TOTAL	2,015,000

Or, Raipúr to foot of upper plateau at Ránigar, 204 miles, at £5,000	1,020,000
Ghât from Ránigar to Limka Saddle, 14 miles, at £8,000	112,000
Limka Saddle to Merialpád Saddle along the upper plateau, 33 miles, at £6,000	198,000
Ghât from Merialpád Saddle to foot by the shortest route (*e*), 19 miles, at £10,000	190,000
Add for Tunnel and Viaduct	50,000
Foot of hills to Vizagapatam, as before, 73 miles, at £5,000	365,000
TOTAL	1,935,000

9. As regards the gauge on which the new railway is to be constructed, it is, I submit, a matter for consideration whether a narrow-gauge line will fully answer the requirements of the great traffic, partly already existing and partly to be further stimulated and developed by the railway. It has to be considered that this railway will tap a large tract of country, about equal to France in size,

and with a population of some forty millions. But if, for reasons of present economy, the line is made a narrow-gauge one, I would strongly advocate that, in view of future requirements, all the bridges at least be built sufficiently strong to carry the additional weight consequent upon a broad-gauge line; in case the gauge should have to be eventually changed, as will most likely be the case.

10. If the railway is made by the eastern route *viâ* Párvatipúram, Ombadóla and Asurgor, the line would seem naturally to trend in a northerly direction, and might be continued from the last-named place *viâ* Banpur to Turla, there cross the Tél Nadí, then proceed along the left bank of the river *viâ* Bamini to Sónpoor, and thence along the western bank of the Mahánadi, *viâ* Binka, to Sumbulpoor, crossing the Mahánadi there.

This subject has been alluded to in my letter No. 24R., dated Raipúr, 6th January 1882, paragraph 8.

11. In case the railway should be taken from Raipúr to Sumbulpoor direct, along the old trunk road, crossing the Mahánadi twice, namely, at Gorári and Sumbulpoor, the line from Vizagapatam need not go to Raipúr at all, but might from Jalbal be taken north, *viâ* Onki, along the eastern bank of the Jong river, and there join the line from Raipúr to Sumbulpoor; whereby about 55 miles of railway would be saved.

There need be no objection, on the score of economy, to crossing the Mahánadi twice, as above mentioned; for, if the line from Raipúr is taken north of the Mahánadi, by Belaspur, &c., the amount of drainage encountered there would considerably exceed that south of the Mahánadi *plus* the double crossing of the latter. This is accounted for by the numerous large tributaries entering the Mahánadi from the north between Arang and Sumbulpoor.

12. It is not advisable to take the line from Singapore *viâ* Lonjigar to Ombadóla, as there is much hilly ground (a small ghât in fact) encountered between Singapore and Lonjigar, and an altitude of 1,608 feet (at Tirmuí) has to be overcome.

13. The route from Ryaguddah *viâ* Singapore, the Músa Ghât, Bondesor and Dádpúr to Bógor, has been carefully examined and must be considered objectionable for a railway, owing to the Músa Ghât, the head of which is 2,048 feet above mean sea level; while, by taking the route *viâ* Bisemkattak and Ombadóla, this ghât can be avoided.

14. The route mentioned* by Colonel Lucie-Smith, *viz.*, from the Músa Ghât *viâ* Nandól, Daspúr and Lorka, to Polsodár on the Sunder river (where it would meet my line from Kariál to Kúmúna), naturally shares the fate of the Músa Ghât, and must be rejected for the purposes of the railway if the ghât is rejected. But, with a view to opening out that part of the country, an ordinary cart-road should be made along Colonel Lucie-Smith's line, as well as from the Músa Ghât southwards *viâ* Singapore to Ryaguddah. This road would serve as a feeder to the railway if the latter is taken along the eastern, or Ombadóla route.

* *Vide* G. O. No. 3025W., dated 5th December 1881.

15. Similarly, the line recommended from Torbor (where it leaves my line) *viâ* Limdi, Tárnot, Sárábong, Tendubarra, Sirgidi, Bodrabanda, Kamaría and Kárti to Mahásamund (where it joins mine again), although a very good one for an ordinary road, has this drawback for a railway, that the line encounters two small ghâts (near Tárnot and Sirgidi) with an elevation of upwards of 1,500 feet; while the route *viâ* Jalbal, Nára and Súarmál, which is very little longer, meets no such obstacles; and its summit level is about 400 feet lower.

This subject has been reported on in my letter No. 24R., dated Raipúr, 6th January 1882, paragraphs 9 to 11.

16. The line from Raipúr *viâ* Dhamtari and Kankér to Omorkót, or Raigarh, is 13 miles longer than that *viâ* Rájim, along the Pairi river, through the Bindra-Noagarh Estate, and then up the Sorul or Sondor river. It would no doubt be desirable to take the rail *viâ* Dhamtari, which is situated in the very heart of a rich grain-producing country. But, besides being a long one, this line would encounter some difficult ghât work in the Hatkul valley, south-east of Kankér; while the grain country is also tapped by the Rájim line, although not to the same extent as it would be *viâ* Dhamtari.

This line has been discussed in my letter No. 38K., dated Kuraputi, 25th February 1882, paragraphs 10 and 11.

17. The lines examined and reported on by Colonel Francis, between Dhamtari, Sihóa and Borái, must be considered, on account of the hilly nature and irregular configuration of the country, as not eligible for the purposes of a Railway, when there are other and better lines. But the easiest of that officer's route (that *viâ* Kukrél, Dókál, Gatásili and Burgudi) should be opened as an ordinary cart-road; when it would act as a feeder to the Railway.

I have submitted a copy of Colonel Francis' report, with my letter No. 38K., dated 25th February 1882, paragraph 17.

18. Altogether, the reconnoitring party has travelled upwards of 1,100 miles, as specified in the margin.*

	Miles.
* Vizagapatam to Raipur *viâ* Párvatipuram and Ombadóla	372
Raipur to Vizagapatam *viâ* Kuraputi	356
Ryaguddah *viâ* Músa Ghât and Bondesor to Bógor	100
Raipur *viâ* Dhamtari and Kankér to Omorkót	150
Nárangpúr to Maribatta	50
Pupagáon *viâ* Jeypur to Kuraputi	24
Jalbal to Onki and back	50
Singapore *viâ* Lonjigár to Ombadóla and back	40
Total	1,142

G. O. No. 2294W., dated 16th September 1881 (paragraph 9) requires the longitudinal section of one line only; but, as I collected all the necessary material in the shape of measurements, observations, field notes, &c., I have submitted sections of nearly all the lines examined (with cross sections of streams); so that there are now before Government longitudinal sections of 900 miles of the country traversed, with the heights determined by the aneroid at about 900 places which are, on an average, a mile apart.

19. The perambulators used were by Elliot Brothers, of London.

The party was supplied with 11 aneroids, *viz.*, 5 by E. J. Dent, 3 by T. Cooke and Sons, 2 by L. Casella, and 1 by Negretti and Zambra; which were compared, and set, at the Public Works Stores in Madras, before being despatched. Of these, six that read best together were formed into two batteries of three each; one battery being kept and observed by the Master Attendant at Vizagapatam, while the other was registered in camp by myself daily at 11 A.M. and 4 P.M.

The other aneroids were carried about on the march and registered at every mile, at every stream, and at every change of level in the ground.

For calculating the altitudes, the hypsometrical tables of Major Morant, R.E., were used.

20. I cannot close this report without bringing to the special notice of Government the good services of my Assistant, Mr. J. Cormac, Sub-Engineer, who throughout the whole expedition has shown the most praiseworthy zeal, has been indefatigable in the discharge of his duties, and rendered me very valuable assistance; combining, as he did, great intelligence with arduous work and perseverance under difficulties. Two hundred and fifty miles of the country explored were reconnoitred by him alone, and I have submitted his own original notes and reports on these. I should be glad if the Government would acknowledge his good services by granting him a step in promotion, namely, from the 2nd to the 1st grade of Sub-Engineers.

21. I enclose an Appendix (1 A), containing a description of the preparations for the expedition, which Appendix I beg may be placed at the head of such of my papers as are to be printed in connection with the Reconnaissance.

22. The tents, stores, instruments, &c., have been handed over to the Executive Engineer, Vizagapatam Division, in accordance with memorandum No. 567C., dated 8th March 1882, from the Chief Engineer.

XXIII.

Notes of Reconnaissance of the Eastern Ghâts from Kuraputi to Sálúr, 6th to 16th March 1882.

6th March, Kuraputi to Chikapár.—Having finished the report on the reconnaissance from Raipur to Kuraputi, and the sections appertaining thereto,

the survey party left Kuraputi on the 6th March 1882 to undertake the last portion of the work, namely, across the Jeypur plateau and down the Eastern Ghâts to Sálúr.

From Kuraputi I first proceeded to *Mastiput*, a distance of 3½ miles, and took up the proposed Railway line there, where I had ceased work on the 16th of February. Mastiput is 214 miles from Raipur.

The aneroid battery, which had been of no use at Kuraputi, here began to work again, Mastiput being 2,520 feet above mean sea level. The aneroids in the battery, being figured only up to 27·50, could not be registered at an elevation exceeding 2,500 feet.

Marching from Mastiput towards *Dumriput*, a stream was crossed at the 2nd furlong, measuring 25 feet × 6 feet, in flood. At 1 mile 1 furlong is the village of *Dengagura*, which is conveniently situated for the future Kuraputi Railway station: a valley leading from here to Kuraputi, along which a hill-side road could be easily and cheaply made to connect the two places which are 2½ miles apart.

The track proceeds along the bank of the Kuradi nullah; there is some low scrub jungle about; the soil is hard and light.—Low hills on the left.

At 1 mile 2 furlongs a *stream*, 25 feet × 8 feet.

The ground then becomes somewhat irregular, and some cutting and embanking will be required.

At 2 miles 5 furlongs a small stream, 8 feet × 5 feet; the ground is hilly and irregular, and rather stony.

At 2 miles 6 furlongs the *Kuradi nullah* (25 feet × 8 feet) is crossed again by the track; there is some hilly jungle about; no cultivation.

The hill side is stony, occasionally rocky; the soil brown clay mixed with sand.

There is a rise from Mastiput up to this of 150 feet or 1 in 97.

The road about here would be mostly in hill-side cutting, and some rock blasting required, but not much.

In the 4th mile a *stream* is crossed, 15 feet × 5 feet.

At 3 miles 6 furlongs the track leads over a *saddle*, 360 feet above the starting point.

The soil is light clay, rather stony.

At 4 miles a *stream*, 25 feet × 9 feet; then another, 18 feet × 7 feet.

At the 5th mile there is some dry cultivation; no jungle.—Soil brown clay.

Before joining the high road from Kuraputi to Potingi, the village of *Nigamangura* is reached, where there are some paddy-fields. A stream, 25 feet × 7 feet, is crossed; and at 5 miles 6 furlongs the high road is joined.

The village of *Dumriput* was passed, and at 6 miles 7 furlongs the *Karandi stream* was reached, 30 feet × 9 feet, with soft clayey banks and muddy bed.

Then another stream, 14 feet × 5 feet.

At 7 miles 7 furlongs 143 yards the day's work was brought to a close, to be resumed to-morrow.

The party at this point left the high road to proceed to the site of the old Chikapár bungalow where the camp had been pitched.

As regards the fitness for a Railway of the line traversed to-day from Mastiput to Chikapár bridge, distance 8 miles, the section shows that, up to 1 mile 1 furlong 92 yards, the maximum gradient required would be 1 in 155; thence to 2 miles 6 furlongs 47 yards, 1 in 76; and up to the saddle, 1 in 25.*—From the saddle, by which the line enters on the Jeypur plateau (averaging 3,000 feet in elevation), there is a gentle descent of 101 feet in 4 miles 1 furlong and 90 yards. This descent includes some undulating ground which has to be negociated in detail; but there is nothing serious in the way of cutting or embanking required, and a good line could be easily laid out.

* Or, an average gradient of 1 in 55; but, by taking the line from Rénigar *above Mastiput*, this gradient could be considerably eased.

7th March, Chikapár to Dóliámb.—Distance 9 miles 3 furlongs.

We joined the public road where work was left off yesterday, and marched towards Potingi.

At the 2nd furlong the *Karandi stream* was crossed, over which there is a temporary timber bridge. The banks of the stream are steep and soft, the soil

is tenacious clay, the bed sandy and muddy alternately; there is no visible rock near for foundations.

Some dry cultivation along the route; no jungle.

At 2 miles 7 furlongs the road passes over a *saddle* not far from the village of *Kakkigám*.

A drainage channel 12 feet × 4 feet is crossed.

The prevailing soil is stiff clay.

At 4 miles 5 furlongs the old Police station at *Semligura* was passed.

At 5 miles 7 furlongs a *stream*, 30 feet × 8 feet, with steep, soft banks and sandy bed; no rock near for foundations.

Some wet and dry cultivation; no jungle. The soil here is brown clay; some laterite rock occurs near the road, a few feet below the surface.

7 miles 70 yards; *stream* 24 feet × 8 feet, with steep, clayey banks. Some light scrub jungle.

At 8 miles 6 furlongs, the village of Márliput was passed.

At 9 miles 143 yards a *stream*, 45 feet × 7 feet; bed, clay and shingle; soil, red clay; some laterite; the banks are sloping; the bed during floods is large and well defined; there is a distinct channel in the centre where the water at present runs about 4 feet deep.

At 9 miles 3 furlongs the camp near *Dóliámb* was reached, where there is both wet and dry cultivation. Jungle on the hill side.

To-day's march lay entirely along the 3,000 feet pleateau; the ground undulates considerably; but a good and easy line for the Railway can be obtained by keeping along the low ground as much as possible, and generally following the course of the longitudinal valleys leading in the direction of the proposed line.

Some high embankments would be required, but not much cutting. The soil is easy, the drainage to be crossed moderate, and there is not much rock.

8th March, Dóliámb to Dókrigát Saddle, 11 miles 4 furlongs. Dókrigát Saddle to Merialpád camp, 7 miles 6 furlongs. Total distance 19 miles 2 furlongs.—Continued along the public road for some distance from Dóliámb.

At 1 mile 4 furlongs 187 yards a *stream* was crossed, 25 feet × 10 feet, with steep clayey banks; bed, sand with shingle.

Some dry cultivation.

Prevailing soil, stiff clay.

Here we left the road and marched towards the village of *Kundili*, at the third mile, where ample wet cultivation was seen.

Beyond the village, the track passed over a tank bund.

At 3 miles 5 furlongs, a *stream* flowing into the Koláb was crossed, 35 feet × 9 feet, with steep clayey banks, and firm bottom; no rock visible. The ground here is somewhat undulating.

The track follows the course of the river just crossed; there are hills on both sides; the slopes are cultivated.

At 4 miles 5 furlongs the village of *Temba* was passed; Dusra was left on the right, on the other side of the stream. We then passed along a narrow valley where some hill-side cutting for the road would be required.

The main path leading from Potingi to Nandapur was met.

At 5 miles 5 furlongs a *stream*, 25 feet × 8 feet, flowing into the stream last crossed.

At 5 miles 8 furlongs, the *village of Kitajóla Dusra* was reached. Here are some dry fields, chiefly with ragi; and some gardens with castor-oil and plantain trees. Hills and jungle around.—In the 7th mile the last-mentioned stream was again met, and then its course followed up along the narrow valley, where some hill-side cutting would be required for the road.—Much dry cultivation around.

7 miles, 4 furlongs.—Near the *village of Déo Potingi*; at least *one* of the villages of that name: there are several.

We passed between *Déo Potingi* and *Sargigura*.

At the 9th mile the last stream was crossed once more. The soil here is red clay. There is some dry cultivation. Thin scrub jungle and stunted date grow all around. Some hill-side cutting for the road required.

At 9 miles 6 furlongs, passed through another *Déo Potingi* which seems to be the chief of the several villages of that name about here.

Then the path led through a *gorge*, where much hill-side cutting would be needed.

A small irrigation channel, coming from the head of the gorge (the Dókrigát Saddle) and flowing towards Déo Potingi, is led along the hill-side.

Beyond the gorge there is some flat ground again, breaking into irregular features here and there.

At 11 miles 4 furlongs, we arrived in the *Dókrigát Saddle*, having come at a steady ascent (about 300 feet) all the way from the village of Kundili.

The height of this saddle above mean sea level is 3,190 feet.

The track through the saddle is a short cut from Kundili to Merialpád; the easier but somewhat longer route lies along the valley of the Koláb river, further west.

From Dókrigát Saddle the lower ground to the south is overlooked wherein the village of *Pukeli* lies, to which the track descends rapidly from the saddle. But a gradual descent on an easy gradient can be obtained by keeping along the hill-side to the east, instead of descending at once.

Having no topographical maps of this part of the country, on the scale of one mile to the inch, and the ordnance map being incomplete for these parts, *as it does not show the hills* (the chief feature here), I had under-estimated the distance from Dóliámb to Merialpád, and sent the camp ahead to the latter place, along the main road *viâ* Potingi and then down the new ghât. So that from Dókrigát Saddle (which I left at 11 A.M.) I had to march across country, over hill and dale, through the jungle, to Merialpád.

We marched along the hill-side, passed through the *village of Sangamgure*, and at the 13th mile got into another *saddle* connected with the last by a ridge, and about 90 feet lower.

At last we reached the camp at Merialpád at 2-30 P.M., the thermometer in the aneroid box showing 105° F.; having marched 21 miles since 6 A.M., taking observations, notes, &c., and never halted.

Merialpád is near the edge of the 3,000 feet plateau, and is at the natural head of all lines of communication that can be brought up from the Sálúr plains to the plateau, in this direction.

The *Merialpád Saddle*, 3,250 feet above mean sea level, a mile to the west of the village, is the natural ghât head for all ghât lines converging here.

If it should be decided to take the Railway over the Jeypur plateau, there is nothing, encountered in this day's march, to form any obstacle or difficulty. No gradients steeper than 1 in 70 need be used; the amount of hill-side cutting required is by no means formidable, while scarcely any rock is met.

9th March, Potingi.—Inspected the new ghât, as far as Potingi, and confirmed my previous impression based upon careful examination of the country, some years ago, that this portion of the line should not be used for the Railway; the proper ghât head being at Merialpád and not at High Hadmári. Indeed, if Potingi had not been, chiefly with reference to Mr. Turner's Taudevalsah Ghât, made an obligatory point, nine years ago, when the new ghât was traced by me, this ghât would have entered upon the plateau at Merialpád, and not at Hadmári or Potingi. Thus the new ghât would have been 4 miles shorter than it is at present, and its head 250 feet lower.

It is a matter for consideration whether it is, even now, too late to change the upper part of the new ghât by abandoning that portion north of the Merialpád cutting (where the shaft was sunk), tracing thence into the Merialpád Saddle, taking the road from that to Pukeli; and thence either *viâ* Dókrigát Saddle and Déo Potingi, or else along the valley of the Koláb, towards Kundili, near which village the main road to Kuraputi would be joined. This would do away with Potingi as a station on the main road; the fertile Koláb valley would be opened out; and Pootapád, Pukeli and Kundili would then become important points on the new road.

10th March, Merialpád to Dókrigát Saddle.—This march was undertaken to obtain a complete longitudinal section of the line between the Merialpád and Dókrigát Saddles, which are nearly on the same level.

We first worked into the Merialpád Saddle, which is 2½ miles from the camp, and 3,250 feet above mean sea level.

From this saddle to Dókrigát Saddle (3,190 feet above mean sea level) the distance is 7 miles 6 furlongs. At 1 mile 1 furlong, we arrived opposite the village of *Sanduka*, which is on the other side of the valley. The track leads along the hill-side on the left; the soil is light; there is no rock visible. Some dry cultivation, and a little jungle. The ground is alternately flat and side-lying; hill-side cutting would be required in places.

At 1 mile 7 furlongs, a small *nullah* was crossed, 10 feet × 4 feet; 160 yards further another nullah, 15 feet × 4 feet. Here the track changes from the left to the right side of the valley. Patches of jungle and dry cultivation occur alternately.

At 2 miles 5 furlongs the last *stream* is crossed again, and the track changes back to the left side of the valley.

The ground here is rather irregular.

At 3 miles 5 furlongs a small *nullah*, 12 feet × 4 feet. Hilly jungle.—Soil, brown clay.

The longitudinal section here shows a considerable dip, because the track descends unnecessarily low; the road would avoid this dip by crossing the valley somewhat higher up.

At the 4th mile the track passes through the *Pukeli Saddle*, and then descends towards the village of *Pukeli*. But the saddle can be circumvented by following the course of the nullah last crossed.

We passed a small hamlet belonging to Pukeli, and called *Pukeliguda*, situated on a gently sloping hill-side.

There is some dry cultivation near this village.

At 5 miles 6 furlongs the village of *Pukeli* was passed *en route* to the *Dókrigát Saddle*. There is extensive wet and dry cultivation near the village. Half-a-mile north of Pukeli a stream is crossed, flowing into the Koláb river.

From here the line may either follow the course of the Koláb river to Kundili, or be taken up into the Dókrigát Saddle; but the former is the easier line for a railway. In case the road is taken through Dókrigát Saddle, the ridge on the eastern side will take the line from the saddle down towards Pukeli at a maximum gradient of 1 in 70.

From Dókrigát Saddle we returned to Pukeli, a distance of 2 miles, where the camp had been pitched.

The distance marched to-day was as follows:—

	M.	F.	Y.
Merialpád Camp to Merialpád Saddle	2	4	0
Merialpád Saddle to Dókrigát Saddle	7	6	92
Dókrigát Saddle to Pukeli Camp	2	0	42
TOTAL	12	2	134

The march to-day was chiefly through a broad valley; some intricate ground was passed over near Pukeli, but nothing was encountered that could be considered a serious obstacle to tracing a suitable line for a railway.

11th March. Pukeli to Merialpád viâ Pútapár.—Distance 9 miles 6 furlongs.

We marched back from Pukeli to Merialpád Saddle along the route described yesterday.

From Merialpád Saddle we followed the Brinjarri track leading into the old and new ghâts between Lávidy and Pútapár. The track is an easy one and leads chiefly along a gently sloping hill-side.

The railway should descend the hill-side at 1 in 75 from Merialpád Saddle, keep above the present ghât and above Lávidy Saddle, pass Chandk a and enter the valley of the Súnki river not far from Páta Lávidy. It would then cross the Súnki valley, as high up the stream as may be found convenient, and proceed along the southern slope of the valley into the *Páchipenta Saddle*, *i. e.*, the head of the old Páchipenta ghât, south of the Súnki stream.

Or, another line could be run as follows:—

From Merialpád Saddle into the Bittra valley; then through a cutting, to be made in the low ridge near Volagah; along well-wooded hill-sides into Lávidy Saddle; thence either *viá* High Súnkipenta, or *viá* Lávidy and Chandka, into the Súnki valley; across the Súnki stream, and into Páchipenta Saddle, as before.

From Páchipenta Saddle, which is 2,213 feet above mean sea level, there is a descent of 1,443 feet to accomplish, and there is a length of 14 miles of hill-side available to get to the foot of the hills (4 miles north-west of Sálúr); so that a line could be traced at a gradient of 1 in 50, which gives a fall of 105 feet per mile. Much heavy rock would be encountered on these last 14 miles, and a number of large stone revetments would have to be built.

The work on the plateau, *i.e.*, above Páchipenta Saddle, would be rather easy compared to that on these 14 miles; the outer (southern) face of the ridge being very stony.

From the foot of the hills an easy descent of 1 in 100, for 4 miles, takes the line into Sálúr, which is 569 feet above mean sea level, 100 feet above Rámabhadrapúram, and 175 feet higher than Párvatipuram.

12th March, Bittra Valley line.—Went to reconnoitre the Bittra valley and to refresh my memory about its features which I had very carefully examined in 1873, 1874 and 1875.

The submit level of this line is also the Merialpád Saddle. The road can be taken down from that saddle, along easy hill-sides, by a gradient of 1 in 50 to the site of the proposed viaduct, 1,500 feet long, 1,622 feet above mean sea level, and 150 feet above the bed of the Wondranghy stream; there we should have to pierce the Ródavalsa ridge by a tunnel 2,000 feet long, and emerge on the southern face of the ridge at the same elevation, *i.e.*, 1,622 feet above mean sea level, or 852 feet above the foot of the hills (which is 4 miles north-west of Sálúr). To accomplish this descent at a gradient of 1 in 50, would require a length of about 8 miles which is available on the same hill-side along which the new Potingi Ghât is being made, and along which the railway from Páchipenta Saddle would come down.

As in the case of the latter, so also here, a considerable amount of rock would have to be blasted, and a number of heavy stone revetments to be built, on these 8 miles.

13th March, Merialpád to Dóbata.—Went along the new ghât, as far as Lávidy Saddle; thence along the cattle track leading to Lávidy, Chandka, and Súnki. Passed the village of Páta Lávidy. Then entered the valley of the Súnki stream, followed its course downwards to Súnki, and returned by the old ghât to High Súnkipenta, and thence by the new ghât to the camp at Dóbata, just under Lávidy Saddle.

14th March, Dóbata to Súnki.—Proceeded along the new ghât to Súnki, crossed the Súnki stream (which contained very little water) and ascended the old ghât to its summit level on this side (Páchipenta Saddle). Fixed the height of the latter (2,213 feet), and explored the hill-side with a view to the location of the line of rail, in case it should be decided to bring the line here.—Then returned to the camp at Súnki.

15th March, Súnki to Ródavalsa.—Marched along the new ghât, as far as the cutting on Ródavalsa Saddle.

Thence descended the steep hill-side into the rocky bed of the Wondranghy stream, and examined the sites of the proposed viaduct and tunnel.

Fixed altitudes, &c., and then returned to the camp on Ródavalsa Saddle, which saddle is 2,001 feet above mean sea level.

16th March, Ródavalsa to Sálúr.—Went along the new ghât to the foot, and then along the new line of road being constructed from the foot to Sálúr. There I closed the field work of the last section of the Reconnaissance.

Résumé.

As the result of my exploration of the ghâts, on this occasion as well as in previous years, I have arrived at the conclusion that the routes above mentioned (side notes for 11th and 12th March), and described as accurately as they can be without actual levels, &c., having been taken, represent the shortest and most practicable lines (subject to modification in details) that can be found for a railway ghât from Sálúr to the Jeypur plateau. Other lines may be possible, but those here specified offer a minimum of obstacles and difficulties.

These routes are:—

I.—The Lávidy and Súnki Line.

(*a*) From Merialpád Saddle to Páchipenta Saddle *viá* Chandka and Súnki valley.

Miles.	
15	Fall 1,037 feet; gradient 1 in 75; length 15 miles (Section No. 6).
14	From Páchipenta Saddle to foot (4 miles north-west of Sálúr). Fall 1,443 feet; gradient 1 in 50; length 14 miles (Section No. 10).
4	From foot to Sálúr. Fall 200 feet; gradient 1 in 100; length 4 miles (Section No. 15), total 33 miles.
33	

(*b*) Or, from Merialpád Saddle to Merialpád cutting (on the new Potingi Ghât).

Miles.	
2½	Fall 143 feet; distance 2½ miles; gradient 1 in 92 (Section No. 11).
7½	From Merialpád cutting into the Bittra valley and to Lávidy Saddle. Fall 507 feet; gradient 1 in 75; length 7½ miles (Section No. 7).
2½	From Lávidy Saddle to High Súnkipenta; fall 106 feet; distance 2½ miles; gradient 1 in 125 (Section No. 9).
5½	From High Súnkipenta *viá* Súnki valley to Páchipenta Saddle; fall 281 feet; gradient 1 in 100; length 5½ miles (Section No. 9).
14	From Páchipenta Saddle to foot; fall 1,443 feet; gradient 1 in 50; length 14 miles (Section No. 10).
4	Foot to Sálúr; fall 200 feet; gradient 1 in 100; distance 4 miles (Section No. 15).
35⅓	

Total length 36 miles.—This is the longest route of all, and has the easiest gradients.

(*c*) Or, from Merialpád Saddle *vid* the Bittra valley to Lávidy Saddle, as before 9 1/16 miles (Section No. 7).

Miles.	
9 1/16	From Lávidy Saddle *viá* Chandka and the head
5½	of the Súnki valley to Páchipenta Saddle; fall
18	387 feet, gradient 1 in 75; length 5½ miles.
33 3/16	Páchipenta Saddle to Salúr, as before, 18 miles; total length 33 3/16 miles.

II.—The Bittra Valley Line, with Viaduct and Tunnel.

(*d*) From Merialpád Saddle to Merialpád cutting, as before; distance 2½ miles. From Merialpád cutting to Wondranghy stream; roadway of viaduct 150 feet above bed. Fall 1,485 feet; gradient 1 in 50; length 14 miles (Section No. 11).

Miles.	
2½	Wondranghy Viaduct, and Ródavalsa Tunnel;
14	combined length 3,500 feet (Section No. 16).
⅔	From south entrance of tunnel, to foot (4 miles
8⅙	north-west of Sálúr); fall 852 feet, gradient 1
4	in 50; length 8⅙ miles (Section No. 13).
29⅓	

From foot to Sálúr; fall 200 feet; gradient 1 in 100; length 4 miles; total length 29⅓ miles (Section No. 15).

(*e*) Or, from Merialpád Saddle to Merialpád cutting, as before; distance 2½ miles. From Merialpád cutting to viaduct, at a gradient of 1 in 35; length 10 miles (Section No. 13). Viaduct and tunnel, as before, ⅔ mile. Tunnel to foot, at 1 in 35; 5⅞ miles; foot to Sálúr, 4 miles; total 23 miles.

Miles.	
2½	
10	
⅔	
5⅞	
4	
23	

This is the shortest practicable line, and is shorter than the new Potingi Ghât which is now being made.

The steep gradient may be considered objectionable for a railway; but railways on similar gradients have been made in other parts, for instance over the Alps (the Semmering Pass in Austria, and the Brenner Pass in Bavaria); over the Western Ghâts near Bombay (the Bhore and Thull Ghâts); and others.

K. F. NORDMANN,
Executive Engineer.

WALTAIR,
18th April 1882.

XXIV.

Statement of Particulars describing Mr. Nordmann's Route—from Párvatipuram to Raipur.

Distance from Vizagapatam.	Distance between principal Stations.	Distance between Villages.	Height above M.S.L.	Rise.	Fall.	Remarks.

		1 0 80	2,041·0	...	...	Summit of ascent, light jungle with patches of cultivation; soil stiff clay. Village of Kumerput, swamp made into fields. Village of Kebeddy.
		2 6 20	1,971·0	...	...	Telingiri river; Section No. 26; near Cheptaamb, site of former village. Stream, rice fields on sloping ground; rain fed; many mhówa trees. Village of Boriput; dry cultivation.
		4 3 30	2,017·0	...	...	Soil dark brown clay; hills on both sides; irregular ground; rocky; road is on hill side; cutting alongside Telingiri river.
		6 1 200	2,037·0	...	...	Stream 15′ × 6′; hilly jungle on the bank of the Telingiri river.
210 0 72	7 0 84	7 0 84	2,017·0	36	...	Village of Ránigar, five huts. Telingiri river; hill stream 10′ × 4′; hill side road; jungle; some clearing; hard rocky soil.
		1 0 200	2,094·0	...	...	Bifurcation of roads to Mádéoputi and Kuraputi; uneven ground; some cutting and embanking required; stream 12′ × 4′; soil soft clay; some rock.
		1 7 125	2,061·0	...	...	All hill side cutting; stony hill side; hard soil; good jungle; fine sâl and matti trees.
		2 4 0	...	...	...	Stream 12′ × 4′. Stony bed and banks.
		2 4 207	2,105·0	...	...	On river bank, Section No. 27.
		2 6 173	2,105·0	...	...	Young mango tope; fields; village of Musaput; stony stream 12′ × 4′. The hill side partly cultivated, chiefly with castor-oil trees. Stream 12′ × 4′.
		4 2 150	2,160·0	...	...	Village of Bandakatra; ten houses with gardens; stream 15′ × 4′; stony soil; stony and swampy stream.
		5 4 40	2,314·0	...	...	Mango tope; broad flat saddle.
		5 7 100	2,380·0	...	...	Village of Panasput. Tank for drinking water; soil red gravel; stony stream; fine mango trees.
		6 6 25	2,457·0	...	...	Soil red sandy loam; small mango grove. Plateau.
		7 4 180	2,457·0	...	...	Village of Mádéoputi; 30 houses; tamarind and mango topes; no jungle; much dry cultivation.
		8 6 108	2,479·0	...	...	Village of Muchra. Stream 20′ × 5′; soil yellow clay with sand; stream 12′ × 4′.
220 0 27	9 7 175	9 7 175	2,520·0	503	...	Village of Mastiput.
223 4 27	3 4 0	3 4 0	2,900·0	380	...	Village of Kuraputi.

XXVI.

Statement of particulars describing Mr. Nordmann's Route from Mastiput across the Jeypur Plateau and down the Eastern Ghâts to Sálúr.

Distance from Vizagapatam.	Distance between principal Stations.	Distance between Villages.	Height above M.S.L.	Rise.	Fall.	Remarks.
M. F. Y.	M. F. Y	M. F. Y.	Feet.	Feet.	Feet.	
		...	2,520·0	...	...	Near the village of Mastiput.
		...	...	...	...	Along the banks of the Kuradi.
		1 1 92	2,560·0	...	...	Low hills on the left.
		...	...	...	...	Low scrub jungle, hard light soil.
		1 2 0	...	...	...	Stream 25′ × 8′. Ground somewhat irregular.
		...	...	...	...	Hilly and irregular ground, stony.
		2 5 0	...	...	...	Stream 8′ × 5′.
		2 6 47	2,670·0	150	...	.....

Statement of particulars describing Mr. Nordmann's route, &c.—contd.

Distance from Vizagapatam.	Distance between principal Stations.	Distance between Villages.	Height above M.S.L.	Rise.	Fall.	Remarks.
M. F. Y.	M. F. Y.	M. F. Y.	Feet.	Feet.	Feet.	
		...	...	...	...	Stony hill side.
		...	...	...	...	Sandy brown clay.
		...	...	...	...	No cultivation since; Mastiput.
		...	...	...	...	Rock
		3 6 52	2,880·0	210	...	Limka saddle.
						(Note.—By keeping along the hill-side *above* the village of Mastiput the gradient to the saddle can be considerably eased.)
		4 0 0	...	...	...	Stream 25′ × 9′.
		...	...	...	...	Soil clay, rather stony.
		...	...	...	...	Stream 18′ × 7′.
		...	...	...	...	Dry cultivation.
		5 0 76	2,830·0	...	...	Village of Nigamangura.
		...	...	...	...	Rice fields.
		...	...	...	...	Stream 25′ × 7′.
		...	...	...	...	Join the high road from Kuraputi to Potinghi.
		5 6 92	2,799·0	...	...	.....
		6 6 195	2,759·0	...	...	Village of Dumriput.
		...	...	...	...	Karandi stream 30′ × 9′. Soft clay banks, muddy bed.
	7 7 143	7 7 143	2,779·0	...	101	On the high road near Chikapar bridge.
		...	...	...	...	Karandi stream, Section No. 1.
		...	...	...	...	Dry crops.
		...	...	...	...	No jungle.
		...	...	...	...	Soil stiff clay.
		1 4 165	2,869·0	...	...	.....
		...	...	...	...	Scrub jungle.
		2 6 193	2,949·0	...	...	Saddle.
		...	...	...	...	Stream 12′ × 4′.
		...	...	...	...	Dry cultivation.
		...	...	...	...	No jungle.
		4 5 76	2,869·0	...	...	Near the old Semligurah Police Station.
						(Descent from the saddle can be made at an easier gradient than that of the present road.)
		5 7 11	2,839·0	...	...	Stream 30′ × 8′. Steep soft banks, sandy bed, no rock.
		...	...	...	...	Wet and dry cultivation.
		...	...	...	...	No jungle.
		...	...	...	...	Soil brown clay, laterite rock below surface
		7 0 70	2,840·0	...	...	Stream 24′ × 8′. Steep clayey banks, some jungle.
		8 5 99	2,895·0	...	...	Light scrub jungle.
		9 0 143	...	...	...	Stream 45′ × 7′. Section No. 2.
	9 3 103	9 3 103	2,870·0	91	...	Camp Doliamb.
		...	...	...	...	Stream 25′ × 10′. Steep clay banks, bed sand with shingle.
		...	...	...	...	Some dry cultivation.
		1 4 187	2,780·0	...	...	Leave the road.
		3 0 145	2,840·0	...	...	Village of Kundili.
		...	...	...	...	Ample wet cultivation.
		3 4 206	2,745·0	...	...	Stream 35′ × 9′. Section No. 3.
		...	...	...	...	Village of Temba.
		4 5 22	2,780·0	...	...	Village of Dusra on the right.
		...	...	...	...	In a narrow valley.
		...	...	...	...	Cross track from Potinghi to Nandapur.
		5 5 60	2,745·0	...	...	Stream 25′ × 8′.
		5 7 173	2,780·0	...	...	Near the village of Kirijola Dusra, dry cultivation, ragi, plantain and castor-oil trees.
		...	...	...	...	Hills and jungle all round.
		...	...	...	...	Some hill-side cutting required.
		7 3 209	2,840·0	...	...	Passing between { Deo Potinghi. Sargigura
		...	...	...	...	Dry cultivation.
		9 0 35	2,795·0	...	...	Village of Deo Potinghi, thin scrub jungle and stunted dates.
		9 6 35	2,975·0	...	...	Pass through a gorge.
		...	...	...	...	Hill-side cutting required.
		...	...	...	...	Flat ground, broken here and there.
	11 4 90	11 4 90	3,190·0	320	...	Dokrigat saddle.
						(Note.—The section shows chiefly the present track; an easier line for a road can of course be traced along the hill-side.)

Statement of Particulars describing Mr. Nordmann's Route, &c.—contd.

Distance from Vizagapatam.	Distance between Principal Stations.	Distance between Villages.	Height above M. S. L.	Rise.	Fall.	Remarks.
M. F. Y.	M. F. Y.	M. F. Y.	Feet.	Feet.	Feet.	
		...	...	...	...	Stream.
		2 0 42	3,017·0	...	...	Village of Pukeli to the right.
		...	...	...	...	Village of Pukeliguda.
		...	...	...	...	Some dry cultivation.
		3 7 12	3,185·0	...	5	Pukeli saddle.
		4 1 148	3,150·0	...	...	Stream 12′ × 4′.
		...	...	...	...	Hilly jungle.
		...	...	...	...	Soil brown clay.
		5 1 92	...	...	...	.....
		...	...	...	...	Jungle and dry cultivation.
		5 6 152	3,190·0	...	...	Stream 15′ × 4′.
		...	...	...	...	Dry cultivation and jungle.
		6 5 52	3,210·0	...	...	Opposite village of Chandka.
		...	...	...	...	Light soil.
		...	...	...	...	Dry cultivation.
	7 6 92	7 6 92	3,250·0	65	...	Merialpád saddle.
		...	2,870·0	...	...	Camp at Doliamb.
		3 0 145	2,840·0	...	...	Village of Kundili.
						(This line represents the fall of the Kolab river between Pukeli and Kundili.)
	12 0 0	12 0 0	3,017·0	...	...	Village of Pukeli.
		...	3,250·0	380	...	Merialpád saddle.
						(This line represents a trace that can be made along the hill-side at a gradient of 1 in 76 between the termini—distance 15 miles.)
	15 0 0	15 0 0	2,213·0	...	...	Páchipenta saddle.
		...	3,250·0	1,037	...	Merialpád saddle.
		2 4 0	3,107·0	...	...	Merialpád cutting.
	9 6 0	9 6 0	2,600·0	...	650	Lávidy saddle.
						(This line represents the gradient of a trace that can be made along the hill-side between termini at 1 in 75 feet, distance 5½ miles.)
	5 4 0	5 4 0	2,213·0	...	397	Páchipenta saddle.
		...	2,600·0	...	...	Lávidy saddle.
						(Gradient 1 in 126.)
		2 4 0	2,494·0	...	...	High Sánkipenta.
						(Gradient 1 in 100.)
	8 0 0	8 0 0	2,213·0	...	...	Páchipenta saddle.
						(Fall 1,443′, gradient 1 in 50=distance 14 miles.)
						(This line is meant to be traced along the rocky hill-side on which the new Potinghi Ghât from Ródavalsa downwards is now being constructed.)
	14 0 0	14 0 0	770·0	...	1,443	Foot of hills 4 miles north-west of Sálúr.
		...	3,250·0	...	...	Merialpád saddle (gradient 1′ in 92′.)
		2 4 0	3,107·0	...	...	Merialpád cutting on new Potinghi Ghât (gradient 1′ in 50′.)
		16 4 0	1,622·0	...	...	Wondranghy stream; level of roadway over viaduct.
		...	1,472·0	...	...	Viaduct.
		...	...	...	...	Northern entrance to tunnel.
		...	2,001·0	...	1,249	Ródavalsa saddle.
	17 1 66	17 1 66	1,620·0	...	...	Southern entrance to tunnel.
		...	1,622·0	...	379	Ródavalsa tunnel (fall 852 feet; gradient 1 in 50, length 8=⅓ mile.)
	8 1 0	8 1 0	770·0	...	852	Foot of hills.
		...	3,250·0	...	...	Merialpád saddle (fall 143′; gradient 1 in 92, distance=2½ miles.)
		2 4 0	3,107·0	...	143	Merialpád cutting (on the new Potinghi Ghât.)
						(Fall 1,485′, gradient 1 in 35, length 10 miles.)
	12 4 0	12 4 0	1,622·0	...	1,485	Beginning of viaduct.
		...	1,622·0	...	...	Ródavalsa tunnel.
						(Fall 852 feet, gradient 1 in 35′, distance 5½ miles.)
	5 5 74	5 5 74	770·0	...	852	Foot of the hills; fall 201′ (gradient 1′ in 105′; length 4 miles.)
						(Note.—This section answers for all the ghât lines, coming down from Merialpád saddle.)
	4 0 0	4 0 0	569·0	...	201	Town of Sálúr.

BELLARY,
28th August 1882.

K. F. NORDMANN,
Executive Engineer.

No. 2367 W., dated 13th September 1882.

From—The Secretary to the Government of Madras, Public Works Dept.,
To—The Secretary to the Government of India, Public Works Dept.

With reference to your letter No. 692 B.C., dated 12th August 1882, on the subject of the report of the results of the reconnoissance undertaken with a view to decide the best line for a Railway between the littoral of Vizagapatam and Raipur in the Central Provinces, I am desired by the Right Honourable the Governor in Council to express regret at the delay which has occurred in laying the results before the Government of India. The following explanation will show that this has been unavoidable. Owing to the numerical weakness of the establishment, the officer who conducted the investigations had, immediately on his return from Vizagapatam, to be placed in executive charge of a division, and in addition he had temporarily to carry on the current duties of the Superintending Engineer, so that he had no time to elaborate his original reports which were necessarily submitted in the first instance in a somewhat crude form. In consequence the task of passing the reports through the press, correcting the proofs, and calculations of altitudes, marking the routes, and preparing detailed statements in a tabular form of the particulars given on the various sections, devolved on the Chief Engineer's Office, already overburdened with the current work of the department. The papers had afterwards to be sent to Bellary, in view to their final revision by Mr. Nordmann, from whom they have just been received.

2. In order to avoid further delay, I am directed to forward herewith copies of the printed reports, &c., together with a brief note thereon by the Consulting Engineer to this Government. In doing so, I am to explain that the papers in question are now under the consideration of this Government, and that their views thereon shall be forwarded at the earliest possible date.

Statement of particulars and sections, &c.
Route map.
Brief note by Consulting Engineer (See page 1653.)

Note on proposed Railway to connect the Vizagapatam Sea-board with Raipúr in the Central Provinces.

A preliminary reconnaissance of the country to be traversed was made during the cold season of 1881-82 by Mr. K. F. Nordmann, who examined several routes which had been suggested.

2. Mr. Nordmann concluded his examinations by stating that two routes distinctly commended themselves to him as being equally eligible—

(1) East of the Noagarh hills, passing near Párvatipur, Bissemkattak, Ombadóla, Asurgor, Kariál, Nara, and Arang.

(2) West of the Noagarh hills, passing near Sálur, Merialpád, Nárangpur, Omorkót, Raigarh, Risgáon, Kárti, and Rájim.

3. Mr. Nordmann started on his reconnoissance along the eastern route, and returned from Raipúr to the coast along the western route. The following notes, extracted from his reports, are given in the direction in which each march was made.

EASTERN ROUTE.

Starting from Vizagapatam, the line proceeds *viâ* Bimlipatam, Vizianagrum, and Ramabhadrapuram to Párvatipur, 85 miles north of Vizagapatam and 395 feet above mean sea level. It then crosses the Narrainputnum river, where a waterway of 256 feet will be required, and enters the valley of the Nagavully (or Chicacole) river, in which it runs up to Ryaguddah, 687 feet, the distance being 116 miles. The line here keeps always within half-a-mile or so of the river bank.

From Ryaguddah the line passes through a fine upland country, crossing a river 363 feet wide at the 122nd mile. To the north of the river the upland valley continues as before to Gingerabadi, 736 feet, and proceeds to Ballingy 1,136 feet, and Satikona 1,346 feet, where the summit level of the line is reached. The ground then descends to Bissemkattak, 1,154 feet (146 miles). From Bissemkattak the line proceeds to Kordaband (158 miles) with a rise of 38 feet, attaining the height of 1,192 feet at this place.

After leaving Kordaband the line crosses several small streams, and passing through a gorge with dense jungle it then descends to flat ground, and following up the course of the Bongadara river, crosses above the junction with the Ombadola river at a point requiring a waterway of 210 feet, rock being available for a foundation. Ombadola (170 miles) is then reached, the height being 1,196 feet.

The route from Ombadola northwards as far as Bogor (205 miles) is an easy one. The only approach to anything like a ghât is a decline which begins on the water-shed, 1,234 feet above mean sea level, 3½ miles north of Ombadola. This ghât Mr. Nordmann states can easily be worked out at a gradient of 1 in 100.

At Bogor (205 miles, height 627 feet) the Tel Nadi is crossed. The river is 1,560 feet wide between the banks; on one bank there is rock visible. The line then follows the course of the Sondor river. *vid* Balipodor, Badbeng, Tukla, Karial, Kaluiga, and Kumuna to Tobor (272 miles), which is 949 feet above mean sea level.

The line then passes a low water-shed, and proceeds through some dense jungle *vid* Kandamuri, Siagori (290 miles), and Jalbal; whence proceeding *vid* Kura, Surumal, Kopli, Patripali, Telebanda, and Mahasamund (369 miles) to Gorai 810 feet, where the Mahanadi is crossed. The width of the river here is 2,040 feet, and the bed sandy. On the eastern bank and in the bed is limestone rock; on the west bank none is visible. After crossing the Mahanadi the line continues to Arang (350 miles) and follows the Sumbalpur road to Raipur (372 miles). Height 962 feet.

The ground traversed all the way from Jalbal to Raipúr is described as being practically almost level, the slopes easy, and the maximum gradient 1 in 100.

WESTERN ROUTE.

From Raipur, 963 feet, the line traverses a well-cultivated country to the south *vid* Khandwa to Rajim (25 miles) where the Mahánadi is crossed, the

river being 1,908 feet broad at this place. The line then follows the right bank of the Pairi river. The ground traversed is described as being on the whole very favourable, and the country fully cultivated as far as and beyond Kopra, 35 miles from Raipur. The gradients are generally light. Still keeping close to the Pairi river, the line proceeds to Bourka (47 miles, height 992 feet) where some hill-side cutting will be required for upwards of a mile along the steep and stony banks of the river. Some of the heaviest work along the line will be necessary here.

Proceeding to Karti (52 miles) the line here crosses to the left bank of the Pairi river at a place 1,530 feet wide, and continues along the right bank of the Sondor river *viâ* Baltema 1,295 feet, and Tumaribahal to Karku, where it crosses the Bog river, 50 feet wide, and proceeds due south to Risgaon (104 miles), Gourgaon, and Hathgaon (112 miles).

The ascent up to Háthgaon (1,870 feet above mean sea level) is a very gradual one. From this place the final ascent to the Jeypur plateau commences. A total height of 220 feet has to be overcome, which, distributed over five miles, gives a gradual rise of 44 feet per mile, or 1 in 120. The line passes through many miles of magnificent forest, and continues *viâ* Kolaipodor, Raigarh, and Bera to Omorkot, 137 miles from Raipur. From Omorkot the line, trending to the south-east, passes Bijapur (155 miles), Dobgaon, Paparhandi, and Narangpur (185 miles) to Ranigar (210 miles), at the foot of the Madeoputi Ghât, tapping a rich and beautiful upland country, with fertile soil, and fine forest and jungle, at an average elevation of 1,900 feet. The surface in most parts is level.

The line then continues *viâ* Madeoputi and Mastiput (220 miles, height 2,520 feet) up to Dengagura, on the Kuraputi plateau (223 miles, height 2,900 feet).

From Dengagura the line gradually ascends to Dumraput (2,799 feet), and proceeds thence *vid* Chikapor to Doliamb, along a 3,000 feet plateau. The ground here undulates considerably, but an easy line can be obtained by keeping along the low ground, and following the course of the longitudinal valleys leading in the direction of the line. Some high embankments would be required, but not much cutting. The line then continues to the Dokrigat Saddle (3,190 feet); after passing which it turns due east over the Merialpad Saddle (3,250 feet), passes Dobata (2,600 feet) and the Rodavalsa Saddle (2,001 feet)—a viaduct and tunnel being here required—and proceeds thence to Salar, 570 feet. The descent from the Merialpad Saddle to the plains is somewhat abrupt, the heavy fall of 2,680 feet having to be encountered within some 20 or 30 miles, according to the line chosen.

The entire length of the western route from Raipur to Vizagapatam will vary from 356 to 343 miles.

4. When the proposal was first made by the Madras Government for the survey of a line of railway to connect the Vizagapatam sea-board with the Central Provinces, Raipur was named as the point to be made for, as it was understood that a railway was then being constructed between Nagpur and Raipur. The conditions affecting the proposal have, however, been greatly modified by the investigations which have been subsequently made with the object of connecting the East Indian Railway at Sitarampur with the Nagpur-Chattisgarh Railway at Belaspur; and it will probably be now considered open to question whether Raipur is the most suitable point of junction for the two lines.

5. For purposes of comparison between the two lines reconnoitred by Mr. Nordmann, Raipur may, however, be conveniently accepted for the present as the terminus of the proposed Vizagapatam line, and the leading features of the two routes may be briefly stated as follows.

The eastern route crosses a summit level of 1,346 feet; it is 372 miles in length, with a ruling gradient of 1 in 100, or less.

The western route crosses a summit level of 3,250 feet; it is either 356 miles in length with ruling gradient of 1 in 50; or 343 miles in length, with ruling gradient of 1 in 35.

6. The comparative cost of constructing a metre-gauge railway along the

two routes has been roughly estimated by Mr. Nordmann as follows:—

Eastern Route.

	£
372 miles at £5,000	1,860,000
Add for some heavy work near Ombadola, 5 miles, at £2,000	10,000
Add for bridges	30,000
TOTAL	1,900,000

The item of bridging is heavier on this line than on the other.

Western Route.

	£
Raipur to foot of upper plateau at Ranigar, 204 miles, at £5,000	1,020,000
Ghât from Ranigar to Limka Saddle, 14 miles, at £8,000	112,000
Limka Saddle to Merialpad Saddle along the upper plateau, 33 miles, at £6,000	198,000
Ghât from Merialpad Saddle to foot in the plain (4 miles north-west of Salar) by the longest route (*b*), 32 miles, at £10,000.	320,000
Foot to Salar and Vizagapatam, 73 miles, at £5,000	365,000
TOTAL	2,015,000

Or

Raipur to foot of upper plateau at Ranigar, 204 miles, at £5,000	1,020,000
Ghât from Ranigar to Limka Saddle, 14 miles, at £8,000	112,000
Limka Saddle to Merialpad Saddle along the upper plateau, 33 miles, at £6,000	198,000
Ghât from Merialpad Saddle to foot by shortest route (*e*), 19 miles, at £10,000	190,000
Add for tunnel and viaduct	50,000
Foot of hills to Vizagapatam as before, 73 miles, at £5,000	365,000
TOTAL	1,935,000

These figures show a slight difference in favour of the eastern route; but, looking to the uncertainty which must attend the execution of the heavy ghât and tunnel works on the western line, in a locality which has acquired an unenviable reputation for malaria, it is not improbable that the difference in cost between the two routes will be considerably more.

7. With respect to the nature of the country traversed by the two routes there does not seem to be much difference. The construction of a railway along either route will serve to open out a vast tract of new and undeveloped country, apparently abounding in natural resources of all kinds.

8. From an engineering point of view, there can be no room for doubt in giving an opinion between the alternative routes; and the same may be as decidedly asserted from the point of view of railway traffic. This is conclusively shown by the figures in Mr. Nordmann's map, giving the heights above sea level of the various points reached, as fixed by aneroidal observations.

The western route encounters the line of ghâts at a part where the lowest practicable saddle is 3,250 feet above sea level. In order to reach that saddle, it makes an abrupt rise of 2,680 feet within 23 or 35 miles, according to the line selected; while within the next 30 miles it falls 1,250 feet. If a railway were taken over the hills by the western route, every ton of goods carried between the Central Provinces and the coast would have to be carried up and down some 2,500 feet unnecessarily, besides being debited with the haulage charges on the steep gradients of the ghât. It must also be borne in view that the heavy ghât work lies within a tract which is notoriously unhealthy; and that the unhealthiness will affect not only the construction of a railway, but also its subsequent working.

The eastern route passes through the line of ghâts at a singularly favourable saddle near Ombadola, and the highest point which it touches is 1,346 feet above sea level. The only part which approaches the nature of a ghât lies

to the north of the Ombadola watershed, where Mr. Nordmann states that a gradient of 1 in 100 may be necessary for about 4 or 5 miles.

9. The facts and figures collected by Mr. Nordmann during his reconnoissance seem to prove that the main line of the proposed railway should be carried from the sea-board northward, through the Ombadola gap, as far at least as Assurgor. Whether from Assurgor the line should follow the route reconnoitred by Mr. Nordmann, in a north-westerly direction, to Raipur, or should trend to the north-east, passing near Sonepur and Sambalpur, to join the proposed line between Sitarampur and Belaspur, will probably depend upon the decision arrived at by the Government of India respecting the route to be followed by that line. It appears far from improbable that there is room for both lines in the vast tract of country to be served. If it be considered essential that the Jeypur plateau be tapped, a branch could without difficulty be led off from Ryaguddah towards Narangpur, which would avoid the chief difficulties of the western route over the hills. From Narangpur the branch could be extended in any direction that may seem desirable. Other branches from the eastern main line could also be made without difficulty.

J. SHAW-STEWART, *Col., R.E.,*

The 11th September 1882. *Consulting Engineer for Railways.*

Letter from the Government of India, dated 12th August 1882, No. 692 R.C.

No. 2366 W., dated 13th September 1882.

Order thereon by the Government of Madras, P. W. Dept.

ORDERED, that the following letter be addressed to the Government of India :—

(No. 2367 W., dated 13th September 1882—see page 1652.)

No. 2682 W, dated 16th October 1882.

From—Colonel J. SHAW-STEWART, R.E., Offg. Secretary to the Government of Madras, Public Works Dept.,
To—The Secretary to the Government of India, Public Works Dept.

In continuation of my letter No. 2367 W., dated 13th ultimo, submitting a report with map and sections showing the result of the reconnoissance lately made for a railway between the littoral of Vizagapatam and Raipur in the Central Provinces, I am desired now to state briefly the conclusions at which this Government has arrived after a careful consideration of the information which has been received.

2. As regards the location of the line, His Excellency the Governor in Council sees no reason to dispute the accuracy of the deductions recorded by the Consulting Engineer for Railways in his note of the 11th September as to the general preferability of the eastern route, *vid* Ombadola, to the western one passing over the Jeypur highland, and west of the Noagarh hills. Not only would serious engineering difficulties have to be overcome in ascending by the latter to the Merialpad Saddle, 3,250 feet above mean sea level, but it is clear from the work now under execution in the new Potinghy Ghât that fever of a very deadly character has to be encountered, and must, in the opinion of this Government, constitute a very grave objection to this route, both in reference to first construction and to the subsequent working of the line.

3. As a set-off against these objections there is nothing in the character of the country traversed, in the natural productions seeking an outlet, or in any such decided shortcoming of the eastern line as to present preponderating advantages. The reverse is in fact the case, as the uplands of Jeypur which have to be crossed before descending into the country to the westward are more sparsely populated and have a poorer soil than probably any similar portion in either of the routes in question. For these and other reasons His Excellency the Governor in Council has no hesitation in pronouncing in favour of the eastern route, so far at least as relates to the portion extending from Parvatipur, *vid* Raigudda and Ombadola, to Assurgor.

4. Northward of the last named point the country presents no further difficulties than those inseparable from the crossing of several streams, and particularly the river Mahanadi, and as the question of extension in this direction must in the main depend on considerations connected with the location of the projected line which is to traverse the country between Sitarampur (with regard to which the Government of India are necessarily in possession of the best information), this Government does not consider it necessary to record any decided opinion.

5. In the event, however, of the Government of India deciding that eventually a bifurcation of the main line is to take place at Assurgor, one branch leading north-west towards Raipur, and the other through Sampur and Sambulpur to the north-east, the former should, I am to say, be first constructed, as it would tap a better grain country and would thus more directly meet the immediate objects of a protective work.

6. As regards the traffic which may be expected, there is abundant proof in Mr. Nordmann's report and in all the evidence which has reached this Government that already, notwithstanding the absence of anything like a made-road, there is an immense amount of produce, carried now wholly on pack-bullocks, seeking an outlet in both directions, and which may on reasonable facilities being afforded readily increase tenfold.

7. Any amount of the best land in Kalahundy and elsewhere is to all appearances only awaiting emigrants and the plough to yield an enormous produce, and the cheap conveyance of salt from the coast must prove an incalculable gain to all that part of India. In famine, moreover, as has been pointed out in previous communications, the provision of a railway leading direct from the grain-producing country of Chhattisgurh to the coast cannot fail to save life and counteract the suffering on the recurrence of famine, similar to that to which the inhabitants of Vizagapatam were exposed in 1865-66.

8. For administrative purposes it may suffice to note that the whole strip of country, constituting the Vizagapatam and Ganjam Districts, is from the absence of trunk roads to the westward, and the presence of a dangerous surf during the monsoon, frequently entirely cut off from communication with the rest of India, and that any means, such as the railway now proposed, must of necessity prove of the utmost utility to Government. The disturbances which not long since occurred in the hill tracts to the south and west, and more lately in Kalahundy, and the difficulties found in dealing promptly with these owing to the total absence of communications, add to the force of these remarks.

9. Notwithstanding, however, the very favourable general projects of returns from the line now proposed, there are no present means of so formulating these as to prove what may be the actual present amount of traffic, still less what this under altered circumstances may be expected to expand to; His Excellency the Governor in Council therefore prefers to base proposals for the line, for the early construction of which both the late and present Maharajahs of Vizianagram and all the neighbouring zemindars have expressed the greatest desire, on its claims as an invaluable protective work for the inhabitants of the coast districts.

10. Were the scheme to prove itself barren of any other results than those of saving life during famine, and of improving the communications for administrative purposes, His Excellency in Council would have no hesitation in according the scheme his warmest support; but as to this must be added the many certain but necessarily at present undefined advantages which must follow on the opening of this important artery of trade, he looks forward with assurance to the early sanction of the scheme by the Government of India. Were an energetic staff at once appointed, the whole work of locating, surveying, and estimating for the line might be carried to completion in the approaching cold season.

11. In conclusion, I am desired to draw attention to one point which has for various reasons neither formed portion of Mr. Nordmann's reconnoissance, nor of the Consulting Engineer's note. I allude to the terminus of the proposed railway on the coast.

12. As well known, there are no engineering difficulties in the country traversed anywhere between Parvatipur and any place which may be selected

as a terminus on the coast, whether that be Calingapatam to the north or Bimlipatam or Vizagapatam to the south.

13. Looking generally to the demands of trade alone, there would not appear to be very much to choose between the two first named ports, at both of which there are European firms commanding large means and a thriving and increasing trade, but taking into account the fact that Vizianagram is the capital of this part of the coast, that the Maharajah has all along taken a most lively and intelligent interest in the scheme, and that Waltair to the south (close to Vizagapatam) is the divisional head-quarters, His Excellency in Council is disposed to recognise the superior claims which this direction for the main line possesses over any other.

14. As already indicated (see G. O., No. 1718 W., dated 8th July 1882), none of the three ports mentioned apparently hold out any such facilities for the construction of large harbours as would lead to the conclusions that works of this character will be undertaken, and this circumstance taken with the general considerations attaching to Vizagapatam as being practically the head-quarters of the division, gives this place in His Excellency's opinion paramount claims to be made the terminus of the line on the coast. As Bimlipatam has the largest, and Calingapatam the next largest trade, it can scarcely be matter of doubt that once the main line has been constructed, branch lines (probably with local capital) will be constructed to both places.

15. Should His Excellency's views, as above indicated, meet with acceptance, the trunk line would proceed from Vizagapatam to Vizianagram, Parvatipur, Raigudda, and Ombadola to Assurgor, and thence, at the option of the Government of India, either bifurcate to Raipur or Sambulpur or, if a single line be preferred, hold a directly northern course so as to join the main east and west line at the most convenient point.

Extract from a letter No. 943 R.-C., dated the 7th October 1882, from the Secretary to the Government of India, Public Works Department, to the Secretary to the Government of Madras, Public Works Department.

In acknowledging receipt of your letter No 2682W., of the 16th October, and with reference to the telegrams sent to you regarding surveys for the Kurnool and Nellore lines, I am directed to say that the Government of India is most anxious that the location survey of the Vizagapatam-Raipur line, and the preliminary surveys of the other two lines should be at once undertaken.

I am to say that the Government of India fully concurs with the Government of Madras in the expediency of selecting the eastern route reconnoitred by Mr. Nordmann, as the route by which the railway should be taken, and I am to ask that the project may be sent forward in sections as ready, in order that the sanction of the Secretary of State may be obtained to the commencement of construction.

The Government of India accepts the conclusion of the Government of Madras in favour of Vizagapatam as the sea terminus of the line, and I am to suggest that the project for the section from Vizagapatam to Parvatipuram might be first completed and sent on for sanction.

In conclusion, I am to request that an expression of the high satisfaction of the Government of India may be communicated to Mr. Nordmann and his Assistant Mr. Cormack for the very careful and complete way in which the duties entrusted to them have been carried out.

INDEX TO CORRESPONDENCE.

1.—Introduction to the Reports.

Resolution dated 18th September 1882, No. 2312.

A statement showing the irrigation and rainfall for 1881-82, compiled from the above returns, will, as usual, be forwarded to the Chief Engineer for Irrigation, with reference to Board's Proceedings, dated 11th May 1874, No. 1092.

2. The following abstract shows the area irrigated from Government sources in 1881-82, as compared with 1880-81:—

	Anicuts and other Important Works.		Other Works.		Total.		Difference.
	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.	
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Government land . .	1,315,640	1,315,408	2,380,978	2,268,045	3,696,618	3,583,453	—113,165
Inam land . . .	328,882	327,725	592,738	530,592	921,620	858,317	— 63,303
Zemindari land . .	122,272	117,532	57,900	45,108	180,172	162,640	— 17,532

Difference . . .	...	— 6,129	...	— 187,871	...	—194,000	...

* is exclusive
† is inclusive
} of the irrigated area under the Cauvery Lower Anicut.

3. A small decrease, amounting to acres 6,129, appears in the area irrigated under anicuts and other important works, that is, the eight works for which capital and revenue accounts are maintained. Of this decrease, acres 4,740 are returned under Zemindari lands for which accurate accounts are not available. Under other works the irrigated area shows a large falling off, amounting to acres 187,871—acres 112,933 in Government lands, acres 62,146 in Inâms, and 12,792 in Zemindari lands. The bulk of the decrease* occurs in Ganjam, Nellore, and Chingleput, where the rainfall was scanty and the season unfavourable.

*	Acres.
Ganjam	40,776
Nellore	45,269
Chingleput . . .	43,363

4. As the Cauvery Lower Anicut is not one of the eight systems of irrigation works, it is not shown separately in the statement, but is included under other works—*vide* paragraph 3 of Board's Proceedings, dated 27th January 1882, No. 281.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 14th NOVEMBER 1882.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras— (Nov. 15th)		
Bellary	·82 (average of four stations).	Standing crops generally good; harvest paddy and dry grains, yield average.
Kurnool	·41 (average of three stations).	More rain wanted for dry crops, wet crops withering in five talukas; harvest early dry crops, outturn generally below average; cattle disease in parts.
Ganjam	·80 (average of nine stations).	More rain wanted for standing crops; dry grains and sugarcane thriving; harvest paddy, outturn average; fever, small-pox and cattle disease continue.
Kistna	1·08 (average of eleven stations).	Standing crops paddy affected by grub in three talukas; harvest dry grains and tobacco, yield below average; fever and cattle disease prevail; water over anicut 2·34 feet.
Chingleput (Madras)	1·45 (average of eleven stations).	Standing crops good under river channels, larger tanks and wells, elsewhere withering from want of rain; harvest paddy and dry grains, yield below average; fever, small-pox and cattle disease in parts.
Coimbatore	2·85 (average of sixteen stations).	Standing crops good; harvest wet and dry grains, yield average; fever, small-pox, cholera and cattle disease in parts.
Tanjore	1·62 (average of thirteen stations).	Standing crops good except in parts upland; harvest wet and dry grains, outturn below average.
Madura	1·94 (average of ten stations).	Standing crops fair except in two talukas; cholera in parts.
Malabar	1·76 (average of thirteen stations.	Second crop progressing; small-pox and fever slight in parts.
Travancore	2·17	Agricultural operations progressing; fever continues. *General Remarks.*—General prospects good.
Bombay—(Nov. 15th)		
Kurrachee		River at Kotri on 13th, 6 feet 7 inches against 6½ feet on same date last year; fever and colds in all talukas; two cases of small-pox in Sujawal taluka; cattle disease in Sakra; wheat, red rice and *bajri* in Dadu 34, 40 and 56, in Mirpur Batoro 22, 48 and 56, in Tatta 24, 32 and 46, and in Kotri 30 and 50 lbs. per rupee respectively.
Hyderabad		*Kharif* crops are being thrashed; *rabi* sowing still continues; days unusually hot, north winds not set in; small-pox in Hyderabad; cattle disease in Badin and fever in twelve talukas; wheat 25, *bajri* 44, *jowari* 50, rice red 32 and rice white 22 lbs. per rupee.
Ahmedabad		Sowing of wheat and gram continues, other crops doing well; fever in Dholka, Veramgaum, Gogo and Parentij; cattle disease continues in Sanand; wheat 28 and *bajri* 33 lbs. per rupee.
Baroda		*Kharif* harvesting and *rabi* sowing continue; slight cholera in Amreli and Dehgam; *bajri* 33 and rice common 24½ lbs. per rupee.
Surat		*Rabi* sowing progressing; standing crops healthy; *jowari* 39, and *nagli* 59 lbs. per rupee.
Nasik		Locusts gone save in Peint and Ghát tracts; *rabi* prospects good on the whole; distress reported in Chandore; *bajri* harvested; wheat 25, *jowari* 44, *bajri* 36, and rice 26 lbs. per rupee.
Colaba (Bombay)		Abnormal temperature *nil* on 8th and 14th; 1° cool on 9th and 11th, 2° cool on 10th and 12th, and 3° cool on 13th; vapour in air normal except on 14th when it was in defect of normal; wind normal.
Poona		*Rabi* sowing completed; locusts disappearing; *bajri* 46, and *jowari* 57 lbs. per rupee, in Poona *bajri* 39 and *jowari* 52 lbs. per rupee.
Ahmednagar		Rain urgently wanted; *rabi* crops withering; reaping of *bajri* completed; locusts almost disappeared; *bajri*, maximum 66 lbs. per rupee in Jamkhed, minimum 42 lbs. in Akola; *jowari*, maximum 96 lbs. per rupee in Jamkhed, minimum 48 lbs. in Akola.
Sholapore		Rain badly wanted; *bajri* 59 lbs. 16 tolas, and *jowari* 80 lbs. 17 tolas per rupee.
Dharwar	Slight rain in Gadag, Hangal and Karajgi.	Harvesting of early crops in progress; sowing of late crops finished in three talukas and progressing in others; three cholera cases in a village of Ron taluka; slight cattle disease in two talukas; rice, minimum 20, and *jowari* 52 lbs. per rupee.
Kanara		Rice harvest continues in all talukas except Karwar where second crop preparations commenced; *ragi* harvest in Sirsi and Sidapur; small-pox subsiding in Sidapur; fever in two talukas; common rice at Karwar 11 seers, in district, average 13½ seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bomb y—*contd.*		
Rajkot	. . .	Weather cold; general health fair; cholera slight in Junagad, Navanagar and Rajkot talukas, disappeared from Dhrol and Gondal; fever in Navanagar, Dhrol, Gondal, Mengui, Lodhika and Bagasra; *bajri* 30 and *jowari* 33 lbs. per rupee. *General Remarks.*—Harvesting *kharif* and sowing *rabi* completed in some districts, in progress in the rest; rain urgently wanted for *rabi* in Ahmednagar and Sholapur, also in Satara; locusts in parts of Nasik and Satara; fever and cattle disease in some districts; slight cholera and small-pox in a few.
Bengal—		
Chittagong . . .	1·17	Weather variable, beginning to get cold; prospects of crops good; cattle disease prevails; fever and small-pox reported from Cox's Bazar; prices stationary.
Dacca	*Nil*	Winter crops being put in; rice promising well.
24-Pergunnahs (Alipore)	*Nil*	Prospects of late rice and sugarcane continue satisfactory; sowings of winter crops going on; price of common rice stationary; public health generally good, though isolated cases of cholera and fever reported from Baraset and Diamond Harbour Sub divisions.
Moorshedabad . .	·29	*Aman* crops promising; other crops doing well; *rabi* being sown; fever prevails here and there.
Rajshahye . . .	*Nil*	Prospects generally favourable; cholera in parts of district; fever prevalent.
Burdwan . . .	*Nil*	Prospects of winter crops fairly good; sugarcane doing well; a considerable amount of fever in the district.
Rungpore . . .	*Nil*	Weather seasonable; prospects of crops good; cultivation of lands for tobacco, mustard, and potatoes going on; public health good.
Bhagalpur . . .	*Nil*	*Rabi* sowings in progress; cutting of *aghani dhan* begun; prospects of crops good; fever prevalent in Muddehpoora and Soopole Sub-divisions.
Purneah . . .	*Nil*	Prospects of crops fair; winter crops being sown; public health bad; fever very prevalent.
Patna	*Nil*	*Rabi* sowings continue; wheat, barley, and gram have germinated; *rahar*, cotton, and castor promise well; *bhadoi* harvest all over; public health good.
Durbhunga . . .	*Nil*	Prospects of crops fair; public health fair; prices stationary.
Hazaribagh . . .	*Nil*	Weather bright and cool; prospects of rice favourable; *rabi* sowings continue; general health good.
Cuttack	·9	*Sarad* rice ripening; no more rain wanted; prospects of crops excellent; public health good.
		General Remarks. Some rain fell in Chittagong, and a slight shower in Moorshedabad and Cuttack, none in the other reporting districts; prospects of late rice not very satisfactory in several places owing to want of early rains, but the crop on the whole is expected to be a fair one; sugarcane crops generally promising; prospects of winter crops generally reported to be favourable. In Chittagong Hill Tracts cotton crop is said to have suffered materially from the heavy rain of the preceding week; fever reported from almost all the districts of the Burdwan and Presidency Divisions and from a few other districts, but it is said to be bad in Purneah; there is still cholera in some places; small-pox reported from one or two places; public health otherwise good.
N.-W. Provinces and Oudh—		
Benares (Nov. 14th)	*Nil*	Weather seasonable; *rabi* sowings almost completed; rice crop good; no sickness amongst men or cattle; prices steady.
Allahabad („ 15th)	*Nil*	Prices falling; health very good; young crops doing well; *juar* and *bajra* nearly harvested; prospects very good.
Gorakhpur („ 13th)	. . .	Weather fine; crops promising; health good; prices stationary.
Jhansi („ „)	. . .	Except *juar* and *bajra*, all *kharif* grains are cut; *rabi* sowings still in progress and are germinating well; prices stationary; fever prevalent; no cattle disease.
Agra („ 14th)	*Nil*	*Kharif* being harvested; *rabi* sowings continue, and standing *rabi* crops being irrigated; fever abating; general health good; prices stationary.
Bareilly („ „)	. . .	Weather good; health much improved, and fever abating; *rabi* sowings completed; prospects excellent.
Meerut („ „)	*Nil*	Health good; weather mild; *kharif* harvest nearly over, and *rabi* sowings about finished; markets fairly supplied; exports stopped; cotton coming into market.
Kumaun („ „)	Slight drizzling on the 12th.	Rain wanted; health good; cattle disease continues; prices unchanged.
Lucknow (Nov. 14th)	*Nil*	Outturn of *kharif* harvest poor; *rabi* sowings completed, except in *dofasli* lands; rain much wanted; want of fodder felt; public health good.
Partabgarh („ „)	. . .	Prices almost stationary; *bajra* yield light; irrigation going on; fever at Kanda, also slight cattle disease; cholera is dying out
Sitapur („ „)	*Nil*	Wind west during the week; *rabi* sowings completed, and crops being irrigated where water is procurable; prices steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Fyzabad (Nov. 14th)	*Nil*	Irrigation going on; prospects good; cattle disease and fever still in part of district.
Rae Bareli („ 13th)	*Nil*	*Juar*, *urd* and *morhi* being harvested; *rabi* sowings completed; fever and cholera still continue; no cattle disease; prices stationary.
Cawnpore („ 14th)	*Nil*	Irrigated *rabi* crops flourishing; *kharif* harvesting in progress; health good; prices nearly stationary.
Farukhabad („ 13th)	*Nil*	*Rabi* sowings approaching completion; prices steady; fever decreasing. *General Remarks.*—No rain except a slight drizzle in Kumaun; rain wanted in Kumaun and Lucknow, otherwise prospects good. The *kharif* harvest continues; with the exception of the *kharif* crops in Lucknow and the *bajra* crop in Partabgarh, the outturn is fair; cholera is dying out; cattle disease continues in three districts.
Punjab—(Nov. 14th)		
Delhi	*Nil*	Health good; prices stationary; average yield expected.
Hissar	. . .	Rain wanted in Rohtak tehsil; health good; prices fluctuating.
Umballa . . .	*Nil*	Health good; prices stationary.
Jullundur . . .	*Nil*	Health good; prices falling.
Amritsar . . .	*Nil*	Health good; slight fall in prices.
Lahore	*Nil*	Health good; prices steady; crop prospects good.
Ferozepore . . .	*Nil*	Health good; slight fall in prices; crop prospects good.
Sialkot	*Nil*	Health good; prices steady; harvest prospects good.
Rawalpindi . . .	*Nil*	Seasonal fever still prevails; prices steady.
Peshawar . . .	. . .	Rain wanted; slight fever prevailing; prices steady.
Mooltan	*Nil*	Fever abating; prices steady.
Dera-Ismail-Khan . .	*Nil*	Fever still prevalent; prices steady; crop prospects good. *General Remarks.*—Health of the province is generally good; the crop prospects are also good; but rain is wanted in the Rohtak district of the Hissar division and at Peshawar.
Central Provinces—		
Nagpur (Nov. 15th)	. . . .	Cool and pleasant; prospects *rabi* good; fever prevalent; prices steady.
Jubbulpore („ 14th)	. . . .	Cool; *rabi* sowings almost finished; health good; prices unchanged.
Saugor („ 13th)	. . . .	*Rabi* sowings excellent and progressing favourably; fever prevalent; prices steady.
Seoni („ 14th)	. . . .	Clear and cold; *rabi* sowings completed; fever decreasing; prices stationary.
Hoshangabad („ 14th)	. . . .	Cool and clear; *rabi* sowings progressing; fever prevalent; wheat 15 and rice 11 seers per rupee.
Raipur („ 11th)	·36	Clear and chilly; *rabi* sowings progressing; fever continues; prices rising; rice 36 and wheat 29 seers per rupee.
Sambalpur („ 9th)	1·06	Cloudy and close; prospects good; fever continues; rice 56 seers per rupee.
Khandwa („ 14th)	. . . .	Mornings clear and nights chill; *kharif* being reaped; *rabi* sowings progressing; cholera and small-pox prevalent; rice 13 and wheat 16 seers per rupee. *General Remarks.*—Weather growing cold and pleasant; *kharif* crops being harvested; *rabi* sowings almost finished and promise favourably; fever still reported; prices stationary.
British Burma—		
Akyab (Nov. 11th)	2·18	Total rainfall 201·64 inches; public health and health of cattle, both in town and districts, good; crop prospects good.
Rangoon . . .	·09	Total rainfall 101·55 inches; public health good; crops making progress.
Bassein . . .	0·51	Total rainfall 124·97 inches; public health and condition of crop good.
Prome	0·01	Total rainfall 50·06 inches; one death from cholera in town, otherwise public health good; the late rains have benefited the crops, and a fair yield is anticipated.
Amherst (Moulmein) .	*Nil*	Total rainfall 202·90 inches; public health good both in Moulmein and the district; thirteen deaths of cattle reported in two townships; condition of crops good.
Toungoo	0·03	Total rainfall 90·88 inches; seven deaths from cholera in one township and two in another, otherwise public health good. *General Remarks.*—A little cholera in Tavoy, otherwise public health good; crop prospects good; everywhere rains practically over.
Assam—		
Gauhati (Nov. 14th)	1·08	Weather seasonable; mornings cool and foggy; prospects of crops and public health good.
Sylhet („ 15th)	*Nil*	Subordinates are finding out that *sali dhan* will not be a good crop; *aman* promises well; still cholera reported from all directions.
Cachar („ „)	*Nil*	Weather, days hot and nights cool; prospects of *sali* crops favourable; sowing of winter crops progresses; common rice 25⅝ seers per rupee; one case of cholera from Sader, two from Hailakandi and one case of small-pox from Katigoree reported.
Dibrugarh („ „)	0·83	Weather seasonable; prospects of crops good; cattle disease still present; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—		
Bangalore (Nov. 15th)	·62	Crops in very good condition; prospects fair.
Mysore	·11	Crops in good condition. *General Remarks.*—Rain has fallen throughout the province, except at Shimoga and Chitaldroog; crops in excellent condition, harvesting of *ragi, navane,* wheat, &c., continues; sowing of gram and sugarcane commenced in parts; prospects very good; price of *ragi* Bangalore 35 seers per rupee, Mysore 27¼, Shimoga 25 to 45, Chitaldroog 36 to 50; rice on an average 13 seers per rupee; public health good.
Berar and Hyderabad-		
Amraoti (Nov. 15th)	. . .	Crops in good condition; wheat 16, *jowari* 28 seers.
Akola	. . .	*Kharif* crops progressing favourably; *rabi* sowings completed.
Hyderabad . . .	. . .	Reaping of *kharif* crops nearly concluded; *abi* crops prospering; *tabi* being sown; general health good; prices, wheat 16½, coarse rice 10¾, white *jowari* 28, yellow *jowari* 33, and *tur* 24½ seers per hali sicca rupee.
Central India States—		
Indore (Nov. 15th)	. . .	Weather clear and colder; prospects continue favourable.
Morar (Gwalior) . .	. . .	Weather seasonable; health and prospects good.
Sutna	*Nil*	Health and prospects good.
Sehore	. . .	Weather cool; health and prospects good.
Neemuch . . .	*Nil*	Sowing *rabi* in progress; health good.
Goona	. . .	Crops good; fever prevalent; wheat 22 seers per rupee.
Agar	. . .	Report not received.
Nowgong . . .	. . .	Standing crops good; health fair; prices stationary.
Manpur	. . .	Weather clear and cool; sowings of wheat continue; prices steady.
Rajputana—		
Abu (Nov. 15th)	. . .	Weather cold, seasonable; fever abating.
Sirohi („ 12th)	. . .	Tanks, wells, and health good; crops cut; nights cold.
Ulwur („ 14th)	. . .	*Rabi* sowings continue; *kharif* being harvested; health fair; prices steady.
Harowti („ 11th)	. . .	Outturn of *kharif* somewhat above average; *rabi* sowing almost completed; markets well supplied; weather cooler; health good.
Ajmere („ 14th)	. . .	Getting colder; sowing still continuing for *rabi;* health good.
Jeypore („ „)	. . .	*Rabi* sowings commenced; prices stationary; fever still prevalent.
Nepal—		
Katmandú (Nov. 10th)	*Nil*	Good rice crop; beautiful weather.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

Despatch from Her Majesty's Secretary of State for India, No. 28, dated the 28th September 1882.

Endorsement to the Legislative Department, No. 1668, dated the 11th instant.

RESOLUTION.

The Governor General in Council is pleased to direct the transfer of the Little Cocos Island, which is situated in North Latitude 13° 57′, and East Longitude 93° 26′, and of Preparis Island, which is situated in North Latitude 15° and East Longitude 94°, from the Administration of the Chief Commissioner and Superintendent of the Andaman and Nicobar Islands to the Administration of the Chief Commissioner of British Burma.

ORDER.—Ordered, that this Resolution be published in the Supplement to the *Gazette of India* for general information.

A. MACKENZIE,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

PROGRAMME OF THE AMSTERDAM INTERNATIONAL EXHIBITION, 1882.

No. 288 M. and Ex.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department, dated Simla, the 14th November 1882.

Read the following Despatch and its enclosures from the Secretary of State, regarding the International Exhibition to be held in Amsterdam in 1883 :—

No. 161, dated India Office, London, the 12th October 1882.

From—The Secretary of State for India,

To—The Government of India.

I have received your letter of 29th July last, No. 2 (Exhibitions), stating that your Government has made a grant of Rs. 12,000 for the purpose of exhibiting a collection of Indian raw products at the proposed Amsterdam Exhibition, and asking that a space of 10,000 superficial feet may be reserved for India.

2. I telegraphed to you on the 22nd ultimo, asking whether the above-named space included any area required by Madras and Bombay, and from your reply dated the 27th ultimo I learn that such is the case. The necessary arrangements for reserving this space will therefore be made at once.

3. The enclosed papers issued by the Central Committee of the Exhibition will show the arrangements made as regards the dates of opening and closing the Exhibition, as well as the latest date for the reception of goods. As regards Indian exhibits, an endeavour will be made to obtain sanction for their admission up to a somewhat later date than February 1st next, and any arrangement that may be made concerning them will be communicated to you hereafter.

4. With reference to the request in the latter part of paragraph 3 of your letter under reply, I have appointed a Committee consisting of the gentlemen named in the margin to deal with all the necessary arrangements in London and Amsterdam connected with the forthcoming Exhibition, and I concur in your proposal that the Secretary in the Revenue and Agricultural Department should arrange all matters of detail in direct communication with the Secretary to the above Committee.

Sir L. Mallet.
Mr. W. G. Pedder.
Sir G. Birdwood.
Managing Secretary.
Mr. J. R. Royle.

5. The Secretary in the Revenue and Agricultural Department will be furnished in due course with address labels for the cases to be despatched from India, and arrangements will be made for the reception of the goods on their arrival in Amsterdam.

KINGDOM OF THE NETHERLANDS.—CITY OF AMSTERDAM.

International Exhibition of Colonial Objects and of General Exportation.—May 1883 October.

GENERAL PROGRAMME.

The brilliant success achieved by the city of Amsterdam in obtaining a direct road of communication to the North Sea, and by which she has maintained her ancient reputation of being the first commercial city in the Kingdom, has given her a fresh stimulus to show renewed signs of life and energy in every department of human knowledge. A Committee, selected from the most influential men of the town, purpose to organise an International Exhibition of Colonial Objects and of General Exportation for the year 1883.

One of the principal objects of this Exhibition will be to promote the interests of the Dutch Colonies as well as those of the Colonies of other nations, who, it is confidently expected, will gladly support and patronise this work.

London, Paris, Vienna, and other important places, in the latter part of the present century, have successively collected at their Exhibitions the products of Trade and Industry, of Agriculture and Horticulture, of Science and Art, in a manner calculated to raise the admiration of the whole world.

Of late years the great cities of the New World, Philadelphia, Sydney, and Melbourne have successfully followed their example.

As one of the eldest Colonial Powers, Holland would claim the privilege and the honour of taking the initiative in organising a concourse between the various colonising peoples, such as has never yet taken place.

The Committee selected for the execution of this project is convinced that an Exhibition of this kind, whilst spreading a new light on the Colonies in general, cannot fail to be of immense interest.

Much as has been done for stimulating the spirit of enterprise, and securing the success of fresh commercial designs, there still remains a great deal to achieve in propagating a vaster knowledge of those countries, whose inexhaustible wealth of the soil only wants knowledge and capital—those powerful levers of our age—in order to contribute most thoroughly to the universal prosperity.

There is perhaps no fitter medium for the spreading of more knowledge concerning Colonies than a Colonial Exhibition, where, with the aid of History and Science, is shown what those Colonies were and what they actually are.

The projected Exhibition will be subdivided into five great departments :—

1st.—Colonial Exhibition.
2nd.—General Export-Exhibition.
3rd.—Retrospective Exhibition of Fine Arts and Arts applied to Industry.
4th.—Special Exhibitions.
5th.—Scientific Lectures and Meetings.

ART. 1. The Colonial Department forms the main basis of the Exhibition.

A comparative inquiry into the various systems of Colonisation, of tropical Agriculture, of the Exploitation of the treasures of the soil, promises to be a useful and original labour, worthy of the general interest.

This Exhibition should not be limited to a mere show of materials and products, but must also offer an opportunity of comparing the manners and customs of the natives of the trans-Atlantic regions.

Public works and means of conveyance, as being the foundations of prosperity and civilisation, should form part of the Exhibition.

It is likewise thought desirable to represent specimens from the fauna and flora of the Colonies, as images of the luxuriant nature of the tropical countries.

Finally, the Army and Navy, those bulwarks of liberty, should not be wanting.

ART. 2. The second department will contain all that belongs or relates to the General Export Trade. A vast space will be set apart for Industry as applied to the transformation of matter, whilst Industry and Commerce will find ample opportunity for honest competition.

ART. 3. In the third department will be exhibited specimens of Art from the remotest times, as an instructive picture of the ideas that have existed with regard to them among the original peoples, and how these ideas have been developed under the influence of civilisation.

A comparative inquiry into the fine arts of different periods and nations seems highly interesting.

ART. 4. The object of the fourth department is that of Temporary Exhibitions. These will be for the greater part of a national character, so as to show the native products of Agriculture and Industry and as tending to promote the general interest.

ART. 5. The fifth department is the intellectual part of the Exhibition. Scientific lectures and meetings will offer an opportunity to the men of science, those pioneers of civilisation, to communicate their ideas on and discuss the interests of Trade and Industry, of Science and Art, International Law, Education, Hygiene, &c.—Colonial Economy, especially the relations between the mother-country and colony, will occupy a first place in the list of interesting subjects of discussion.

The interests of mankind are universal, as the human genius is.

We venture to hope that the invitation which the Dutch Government will forward to the other European Powers, for a hearty support of the Colonial Exhibition of Amsterdam, will meet with a favourable reception, so that by a general co-operation a complete success may be secured.

Even the mightiest nations will profit by occasionally entering into intellectual contests with their rivals, be it only for the purpose of showing that power and wealth, supported by moral and intellectual energy, will ever continue to deserve the esteem of the whole civilised world.

Extending the commercial operations, encouraging industry, raising the moral force of nations, strengthening the bond of union among the peoples,—those will be the salutary fruits of so many united efforts, both for the colonies and the mother-country.

For the Executive Committee.

AMSTERDAM, *August 15th* 1881. D. CORDES, *President.*

S. DE CLERCQ, WZN., *Deputy Member.*

E. AGOSTINI, *General Commissary.* J. KAPPEYNE VAN DE COPPELLO, *Secretary.*

GENERAL REGULATIONS.

First Section.

Patronage, Commission of Organisation, Executive Committee, General Commission, Provincial and Colonial Committees, Foreign Commissions.

Article I.—Under the high Patronage of His Majesty the King of the Netherlands and of the Government of the Netherlands, and under the honorary presidency of His Excellency the Minister of Colonies, an International Colonial and General Export Trade Exhibition will be held in Amsterdam in the year 1883.

This Exhibition will contain—

1°. Produce of the Colonies.

2°. Articles of General Export.

3°. Works of Art and Antiquities.

It will give opportunity for competitive exhibitions of—

4°. Living Animals, Flowers, Fruit, &c.

5°. For Congresses and Conferences.

It will be opened on the 1st of May 1883 and have a minimum duration of five months.

Article II.—The Exhibition is organised by a Commission called the Committee of Organisation. It is placed under the direction of an Executive Committee, represented by a Delegate.

The administration and general management is entrusted to a Commissioner General.

Article III.—Provincial and Colonial Committees are formed, having for function—

1°. To make known within their province the object and purport of the Exhibition.

2°. To promulgate informations concerning its organisation and to distribute the forms for requests of admission and all other documents.

3°. To find out the most prominent inhabitants of colonies, agriculturists, manufacturers, artists, &c., whose admission to the Exhibition would tend especially to enhance its solemnity; and to indicate the importing merchants, exporters, &c., fit to lend efficacy to the organisation for competition.

4°. To call forth exhibitions of agricultural and horticultural products of the colonies and provinces.

5°. To call forth and, eventually, to organise the collective grouping of similar products of the colonies and the provinces, and to accredit to the executive committees Delegates charged with representing each collective exhibition.

Article IV.—The Foreign Commissions appointed by the several countries at the request of the Government of the Netherlands are invited to communicate as early as possible with the Executive Committee, and to have themselves represented there by Delegates.

Each Delegate will be appointed to treat with the Commissioner General on questions touching his nation.

Second Section.

Commissioners of Groups, Juries, Rewards.

Article V.—For every group in the Exhibition of the Netherlands and the Dutch Colonies a special commissioner will be appointed charged with—

1°. Preparatory labours for the organisation of his group.

2°. Transmitting to the Commissioner General all claims of his exhibitors, and to detect all breaches of the rules, which he is bound to execute strictly.

The Foreign Commissions or their Delegates are charged with presiding at the installation of the exhibits of their nation.

Article VI.—Rewards will be granted by an International Jury.

The Jury will be divided into sections corresponding to the groups and classes of the Exhibition.

Article VII.—The rewards will consist of—

1°. Diploma of Honour.
2°. „ for Gold Medal.
3°. „ „ Silver Medal.
4°. „ „ Bronze Medal.
5°. „ „ Honourable Mention.

Every Diploma of Medal will be accompanied by an official Medal of Bronze.

These rewards will be apportioned on the reports of juries to the exhibitors whose contributions are pronounced to be of incontestable superiority.

A special regulation for the procedure of the jury will be drawn up later.

Third Section.

Arrangement of Products.—Catalogue.

Article VIII.—The articles exhibited will be arranged for every nation into nine groups for the two first divisions. Each group is divided into classes according to the system of the General Classification.

Article IX.—An official catalogue of the produce of all nations and the names of the exhibitors will be drawn up in the French and Dutch languages.

Fourth Section.

Admission of Exhibitors.—Installations.

Article X.—Applications for admission will be sent up to the Commissioner General and submitted to the Executive Committee, which will decide in the highest instance as to the admission of the applicants.

The Commissioner General will be charged with sending the certificates of admission to every admitted exhibitor.

Article XI.—The space allotted will be placed at the disposition of the exhibitors, subject to the following charges :—

Galleries of the main building.	For every superficial meter	...	25 guilders.
„ „ „ „ „ „ „	for isolated spaces	...	50 „
Annex galleries in the gardens	„ „ „	...	12,50 „
Space in the open air	„ „ „	...	7,50 „

Article XII.—The industrial exhibitors requiring water, gas or steam must state so on applying for admission, indicating the quantity of water, gas or steam required.

The supply of water, gas or steam furnished by the administration is subject to a proportionate charge, regulated according to a special tariff, which will be at the disposal of parties interested.

Article XIII.—The exhibitors that are admitted will receive in due course all the necessary informations, particular regulations and printed addresses for the despatch and transport of their products.

The addresses will contain the following printed indications :—

1°. The number of the group.

2°. „ „ „ class.

3°. „ labelled address as follows :—

International Exhibition of Amsterdam, 1883, Amsterdam, Netherlands.

Colonial Section or Section of General Export or, &c., &c.

The packages must bear on one side of the address in large characters and on paper of the national colours :—

1°. The nationality.
2°. The name of the exhibitor.
3°. His address.
4°. His consecutive number.

Article XIV.—The Exhibition enclosures will be constituted bonded warehouses, where the foreign products will be admitted as in transit.

Article XV.—Every exhibitor must attend either personally or through his agent to the despatch, transport, and reception of his packages, as also to the declaration of their contents.

If the exhibitor or his agent is not present to receive the packages on their arrival within the enclosures of the Exhibition, the supervisor will be charged to remove them immediately and store them at the expense of the exhibitor.

Article XVI.—The exhibitor who shall not have stalled his contributions before the 20th April 1883 will lose all his right on the space allotted; his application for admission and the certificate addressed to him will be considered null and void. The Commissioner General, after conferring with the Executive Committee, shall have the power of disposing immediately of the space allowed for his exhibits, without any judicial or extra-judicial formalities.

Article XVII.—The cases and other wrappings of packages after unpacking must be removed by the exhibitors or their agents; if not, they will be removed under the direction of the administration, without the latter incurring any responsibility in the discharge of their duty, and this at the expense of the exhibitor.

The storing and keep of empty cases, &c., will take place at the charge of the exhibitors, and must be done outside the enclosures of the building, either by themselves or by the supervisor, after a special tariff.

It is distinctly understood that all the cost of packing, transport, keeping, unpacking, putting up and return, &c., &c., will be at the expense of the exhibitor.

Immediately after the close of the Exhibition, the exhibitors must proceed to remove their exhibits. This operation must be completed by the 31st December 1883.

After this date, the products, packages, &c., which shall not have been withdrawn by the exhibitors or their agents, will be removed officially, and stored at the expense, risk and peril of the exhibitors.

The articles which shall not have been withdrawn from the storehouse on the 31st May 1884 will be put to public sale, and the net proceeds handed to the Municipality of Amsterdam for the benefit of the Poor Fund.

FIFTH SECTION.

Administration and Police.

Article XVIII.—All Colonial products and articles of exportation are admitted into the Exhibition, save the following :—

Detonating and explosive materials, and, in general, every article considered dangerous.

Spirits or alcohol, oils and essences, corrosive materials, and, in general, whatever may damage other exhibited products or incommode the public, will not be received excepting in solid and appropriate receptacles and of limited sizes.

Percussion caps, fireworks, chemical matches, and other analogous objects, cannot be received except in imitated form and without any addition of inflammable material.

Article XIX.—The Commissioner General, in consultation with the Executive Committee, has the absolute right to cause the withdrawal of all products of such substance, which rom their nature or appearance may seem to him to be dangerous or incompatible with the aim and propriety of the Exhibition.

Article XX.—Products are exhibited under the name of the signatory of the application ticket. This condition will be strictly adhered to.

The exhibitors are invited to indicate within the space of their stall the names of their co-operators, whoever they may be, that have contributed, in what manner soever, to the excellence of the products exhibited.

They are particularly invited to state the selling price of the articles exhibited.

Article XXI.—The exhibitors will be permitted to sell their articles, but cannot remove them during the hours that the Exhibition remains open : when removed, they must replace them immediately by articles of the same nature.

They are in such case to provide themselves with a permissive pass.

The articles produced on the spot can at once be delivered to the purchasers.

Drinks and products for consumption sold on the spot are subject to a special agreement.

Article XXII.—No article or object whatsoever shown at the Exhibition can be imitated, copied or reproduced under whatever form, without a special authorisation from the exhibitor and from the Commissioner General; the latter reserves the right of authorising the reproduction of collective groups.

Art XXIII.—An entrance card is delivered gratis to every exhibitor. This card is personal.

It will be withdrawn if it be found to have been lent or ceded to another person, and this without prejudice to the right of prosecuting the delinquent.

The card must be signed by the exhibitor, bear his photograph and the number of group and class to which he belongs.

It must bear, moreover, the stamp of the Commissioner General.

Article XXIV.—The exhibitors are allowed to be represented by agents of their choice, agreed to by the Executive Committee.

The personal cards of free entry will be delivered to the agents under the conditions enumerated in the preceding article.

The representative of an exhibitor will not be allowed to have more than one entrance card, whatever be the number of exhibitors he represents.

Article XXV.—The Executive Committee will take the necessary measures to secure the articles exhibited against every damage, but will in no case be responsible for fires, accidents deterioration or damages which they may undergo, whatever the cause or extent.

The Committee leave the exhibitors to attend to the insurance of their goods, immediately and at their own expense.

It will furnish the necessary persons for guarding the articles exhibited, but it will not be responsible for thefts or irregularities which may be committed.

Article XXVI.—All communications relative to the Exhibition must be addressed by the exhibitors and others interested *to the Commissioner General of the International Exhibition of 1883, Amsterdam, Netherlands.*

SIXTH SECTION.

Supplementary Exhibitions.—Congresses and Conferences.

Article XXVII.—Supplementary Exhibitions, competitions, congresses, conferences, lectures, reports, &c., will take place during the Exhibition.

Article XXVIII.—The Executive Committee will invite International Congresses on all questions subject to diversity of opinion and action, and lend their assistance to all projects the realisation of which they consider likely to increase the importance and success of the Exhibition.

Special Regulation.

Natives of the Netherlands and foreigners who become exhibitors, are thereby held to declare themselves bound to conform to the present general regulations, as well as to the special rules hereafter to be enacted.

Dated in Amsterdam, 15th December 1881.

For the Executive Committee.

D. CORDES, *President.*

E. AGOSTINI,
Commissioner General of the Exhibition.

S. DE CLERCQ, Wz., *Delegate.*

J. KAPPEYNE VAN DE COPPELLO, LL.D.
Secretary.

APPENDIX I.

Explanatory remarks to the Programme for the Colonial Section of the International Colonial and Export Trade Exhibition.

In framing the programme for this Exhibition its object, to wit, "the extension and a more general diffusion of the knowledge regarding the Colonies and extra-European possessions of the different Powers," has been kept in view as much as possible. The authors have considered it the best means of attaining that end, by dividing the programme into three distinctly characterised chief groups, and by sub-dividing these into classes which, as it were, constitute the units thereof.

In Group *I*, "*the physical conformation of the colonies and possessions*," Natural Science in its strictly critical sense is the primary object. Moreover, as basis for the development of both the succeeding groups, it is destined to embrace all such data which may contribute towards the knowledge of the soil and its productions, of natural forces acting thereon, the races and tribes inhabiting it, its realms of plants and animals.

In both the succeeding groups we have endeavoured to include everything connected with the life and doings of the different classes of the populations in the colonies, with the object of giving a clear and exact representation of them.

Although completeness has been the aim, we do not contend that the limit of perfection has been attained, and, perhaps, much has been withheld or forgotten which nevertheless strictly belongs to an Exhibition, and contributions of which would therefore be desirable.

In each class under the three groups objects are mentioned contributions in which would be particularly welcome, and on which the authors intended to draw special attention. It should be remembered, however, that we have done so in a descriptive, not in a limited, sense, so that articles not mentioned are not necessarily therefore excluded.

A few explanations may render our meaning more clear, and show that what may appear to have been omitted in one group will sometimes be found in another.

In the second class of the first group, "*meteorology and terrestrial magnetism*," mention is only made of charts, tables and graphical diagrams. We had then, as regards the Netherlands Indian possessions, mainly in view the series of magnetical and meteorclogical

observations made in Batavia by Dr. P. A. Bergsma, and published by order of the Netherlands Indian Government, as well as the magnetical survey of the Indian Archipelago by Dr. E. van Rijckevorsel, the report of which is accompanied by charts on which the lines of equal magnetical intensity and those of inclination and declination are indicated.

Similar contributions may also be expected from other countries, and are of the greatest importance to science. Besides, comparisons instituted by means of the exhibition of instruments used or required for such observations are of the highest value, since it has often been proved, also recently at the Geographical Exhibition held at Venice, that the acquaintance with instruments as used by different nations is unequal and far from common. These meteorological and other instruments were, however, ranged in our programme under the 3rd group, letter *B*, of the 23rd class.

In the 4th class of this group, "*Geology and Mineralogy*," Palæontology, or descriptions, sketches and exhibitions of fossils have not been mentioned in so many words, but it was considered desirable to draw attention thereto in an especial manner in the explanatory remarks, owing to the great importance of this branch of geology. Liberal and well chosen contributions of both articles and pictures, with descriptions of them as well as of the places of origin and their vicinity, are earnestly invited.

The demands of the 6th class of this group, "*Animals*," are various, and it was not feasible to mention all in the programme.

The researches in natural history do not only require animals and constituent parts, hides, skins, tender organisms, &c., preserved in serviceable condition, but also full descriptions and drawings mentioning the place of origin, species, native names, tables of measurements, &c.

Monographs of multifarious species found in different climes, or of species conspicuous from their close connection with the mother-country or other lands, are very desirable, and their value will be enhanced by explanatory collections and drawings.

Of the 4th or last class of this group, "*Anthropology*," besides the foregoing, communications or contributions are very much desired of every thing which could bring out conspicuously the difference of races and the form of development of man, from the most barbarous up to the most civilised races.

"*Furniture*" in the 9th class, *II* group, mentioned under letter *B*, must be taken in the most liberal sense, so that it would comprise furniture for ease and luxury, cooking and washing utensils, means of illumination and heating, implements for making fire, riceblocks, and such like.

In sending head-gear, turbans, mantles, ponchos, sarongs, loincloths, &c., comprised under letter *C*, "*Clothing and Finery*," it is desirable to accompany them by elucidations regarding the manner in which they are worn by the natives. Such can be done by means of drawings or painted figures, but it is hardly necessary to add that dressed figures of natural size would be extremely welcome.

In the year 1878, "Models and instruments used in diamond digging and polishing at Banjermassin" were exhibited in Paris. Similar articles are also invited for this Exhibition and ought to be classed under the 10th class letter *F*, "*Mining*."

As regards letter *G*, "*Industry*," it would be of importance to illustrate under this class the gradual processes previous to completion and fitness for use, by exhibiting the products in their different stages of treatment.

It would be extremely difficult, if not impossible, to exhibit in this country sea and river craft, fishingsmacks, and other conveyances by land and water, as they are used by the natives in the colonies. It has therefore been decided to limit contributions under letter *H*, "*Trade and Navigation*," to models and drawings which, however, to be of value, ought to be made in exact proportions, with indication of scale, and be accompanied by a description of the construction and joints, &c.

It would, however, not be quite impossible to bring over rowing and sailing-craft and transports of small description and to allot them place in the Exhibition. This applies equally to sleighs and sedan-chairs, which, together with harnesses, saddles and whips, should be classed with means of land transport.

Among the conveyances by land choice should rather be made of those conspicuous by elegance, strength, lightness or adaptedness as excellent rowing and sailing-boats. Among craft such attention should be given as much to elegance in form as to particular excellence in its use.

Also specimen of planks and knees to illustrate native ship-building are greatly desired.

Among ship's requisities are particularly included tackle and sails, cordage, anchors, oars, paddles, &c.

In the 13th class, "*Forms of Government and States Institutions*," under the heading *Military*, communications are invited regarding modes of warfare, usages in war, and the art of fortification by the natives. It has been proved, especially in later times, that some native peoples are far from being unskilled in that art; hence, in order to demonstrate the progress of such peoples in the construction of defensive works, it is considered desirable to accompany these communications by models of forts (bentings), redoubts or other earth or stone defences. Contributions in these are therefore earnestly solicited.

Under the title "*Public Buildings*," letter *E*, models and sketches of which are desired, no special mention has been made of palaces or dwellings of native chiefs or grandees, as being comprised among dwellings of chiefs; yet it is obvious that contributions in such will be greatly appreciated.

Regarding the 10th class in group III, "*Naval and Military Forces in the Colonies*," it is to be observed that by "means of fortification and defence" is meant in the widest sense everything which belongs to the living or dead fighting forces of a country, or is destined for the organisation, preparation, exercise and equipment of armies and fleets; among which may also be mentioned marine wharfs and establishments for the construction of steam engines, armourplates, gunfoundries and pyrotechnical ateliers, and particularly institutions for the education of officers and non-commissioned officers, and asylums for invalids and old soldiers who do not return to civil life.

The definition of the 17th class, "*Public Works*," has been purposely given in general terms, in order to embrace everything that has been done in the Colonies by Governments, private companies or individuals, for general benefit and use, such as rail and tramways and engineering constructions therewith connected, bridges and river passages, the building of harbours and docks, digging of canals, the improvement of rivers, irrigation works, drainage of lakes, the construction of breakwaters, dikes and dams, and the erection of buildings for the public service or for general benefit.

Finally, it must be remarked that where statistical data and comparative statistics regarding navigation, commerce, industry and agriculture are mentioned, particularly in the third group, graphical descriptions of the movements on these various subjects, although not expressly stated, are nevertheless much desired, as being best calculated to place such movements to view in a distinct manner.

Hints to Contributors to the Colonial Exhibition.

It is absolutely necessary that exhibitors do accompany their contributions by such careful explanations and details as may be required to fully indicate the nature, the use and application, the origin, the composition, and value or price of the articles, and which are also indispensable for the drawing up of a good and explanatory catalogue.

It need hardly be added of how much importance such a catalogue would be for the many exhibitors themselves, especially for those who exhibit the products of agriculture, art-machine and manual-industry, as it is also scarcely necessary to show how much the usefulness of the Exhibition would thereby be enhanced.

Objects classed in the II group of the Colonial Section must be ranged under the name by which they are known in the country of their origin, but must also have the nomenclature which European colonists or European countries may have given them.

The value of the contribution would be enhanced by a description, or rather by the addition of samples of the materials out of which they are made.

Simple articles in daily use by the natives, indicating their morals, customs, and way of living, nature and degree of culture, are more desired than costly articles or those in less general use, betraying European influence. Even repaired articles have a peculiar value, as indicating the manner in which the repairs are done. Such articles, showing the skill of the native people to imitate European art and compete with it, should neither be omitted.

Small but carefully selected collections tending to improve the knowledge of the people and country and advance their prosperity, are valued more than large or even costly collections where these objects have not been kept in view.

In sending models, care should be taken that all the proportions of the original have been faithfully reproduced, whilst it would be advisable to state also of what kind of wood or raw material they are made of. In case that the models require to be taken to pieces for transit, the different parts should be marked with numbers or letters in pencil (if possible twice repeated) referring to a list or sketch indicating the manner in which the parts are to be joined.

It is requested not to label the articles, as during the voyage the labels frequently fall off or become detached through moisture. It would be better to write the numbers or letters in pencil on the articles, which are then detailed in a separate list.

Seeds liable to spoil through damp or otherwise should be rather despatched in tins or stoppered bottles.

It is advisable when packing to put camphor or insect powder in the cases, and to rub in iron or steel articles with a little grease, or, what would be better still, with some vasseline.

It is earnestly solicited not to hold any so-called preparatory exhibitions, if the cases have thereby to be opened after despatch by the sender. Experience has taught that through that cause articles reach in a damaged, and sometimes quite unserviceable, condition. For nobody can be expected to attend better to a good and careful packing than the owner or exhibitor himself.

Thus the cases ought to reach the Exhibition building unopened, and should be opened there first.

The latest date on which goods can be received has been fixed as *1st February 1883.*

If sent later, the risk is incurred of their not being accepted.

As regards India, an endeavour will be made to obtain a slight extension of time.

The packages destined for the First Section should be marked distinctly on at least two contiguous sides, thus :—

"EXHIBITION, AMSTERDAM, 1883.

Colonial Section."

PROGRAMME OF THE COLONIAL SECTION.

The Exhibition will embrace the Colonies and extra-European Possessions of the different Powers. Nations without Colonies or Possessions abroad may contribute towards the Exhibition, provided they trade or are connected with Colonies, or in case they have advanced the knowledge of such parts through charts, books, collections of the products thereof, &c.

The Colonial Exhibition is divided into three general groups :—

I.—Physical conformation of the colonies and possessions.

II.—Their native populations.

III.—The Europeans in such countries and their relation towards the natives.

1ST GROUP.

7 CLASSES.

Physical conformation of the Colonies and Possessions.

1ST CLASS.—*Geography.* Descriptions, atlases, charts, plans, reliefs, profiles, &c.

2ND „ *Meteorology* and *Terrestrial Magnetism.* Charts, tables, and graphical diagrams.

3RD „ *Scenes,* by means of paintings, drawings, engravings, lithographs, photographs, &c.

4TH „ *Geology and Mineralogy.* Zoological and mineralogical descriptions, pictures and collections.

5TH „ *Plants.* Live and dried plants, pictures of plants and descriptions of the Flora.

6TH „ *Animals.* Stuffed and otherwise preserved animals. Pictures of animals and descriptions of the Fauna.

7TH „ *Anthropology.* Descriptions and pictures, casts, sculls, preserved heads.

2ND GROUP.

6 CLASSES.

Native Populations.

(By which is understood all inhabitants not of European race.)

8TH CLASS.—*Statistics of population* in tables and graphical diagrams.

9TH „ *Domestic and social life*—

(*a*) Pictures and models of cities and villages, dwelling houses, shops, workshops, &c.

(*b*) Furniture.

(*c*) Clothing and Finery. Toilet requisites, designs of tatoo-processes and instruments.

(*d*) Dietary. Utensils for preparation, use and preservation.

(*e*) Stimulants. Utensils for preparation, use and preservation of tobacco, betel, opium, drinks, &c.

(*f*) Morals and Customs. Pictures, paintings, drawings, sketches, costumes, arms or other objects illustrative of ceremonies and customs, such as betrothals and marriages, pregnancy and births, death and burial, contracts and oaths. Sports and popular games, and objects and pictures thereto appertaining.

(*g*) Pauperism. Communications regarding the means of counteracting it. Poor laws.

10TH CLASS.—*Means of subsistence*—

(*a*) Sport and Fisheries. Apparatuses and instruments for capture and treatment of animals, as—traps, drummets, fences, nets, lines, hooks, harpoons, darts, nooses, cages, &c. Fishing craft and models thereof. Produce of the chase and fishing, as ivory, horns, musk, skins and hides, pearls, mother-o'-pearl, coral, tortoise-shell, amber, dried fish, &c.

(*b*) Cattle-breeding. Statistics of cattle markets in tables and graphical diagrams.

Pictures of cattle, buffaloes, horses, sheep, &c., indigenous or cross breeds; with quotations of prices.

Products derived from cattle, as—horns, hides, wool, dairy produce, &c.

Instruments for feeding, dairy manufacture, wool shearing, &c.

Cattle marks, pictures and stamps.

Cattle bells, shepherds' tools, stables and fences.

(*c*) Breeding of useful insects, such as silkworms, bees and cochenille-insects. Utensils and samples.

(*d*) Agri. and Horticulture. Products of agri and horticulture obtained by native means, such as sugarcane and tobacco for home use, pepper, betel, gambier, rice, Indian-corn, and other cereals; arrowroot, sago, kapok, cotton, cocoa, &c.

Models and drawings of waterworks and means of irrigation.

Implements for agri and horticulture, such as ploughs, harrows, shovels, spades, hatchets, grasscutters, choppers, scythes, &c.

Lofts and sheds.

(*e*) Forest produce, as samples of wood for house and ship building; for piers, embankments and bridges; for the manufacture of furniture, agricultural implements, instruments, weapons, &c.; for charcoal, &c.

Resins, gums, rattans of different descriptions, bamboos, wax, aconyte, oils and fat, fibrous stuffs, colouring matters, wild nutmegs, massooy.

(*f*) Mining. Mining explorations, gold and diamond washing, salt boilings, &c. Implements and samples. Eatable clay.

(*g*) Industry. Spinning, weaving, thrashing, dyeing, cotton printing, tools, models and samples.

Spun yarn, fibrous materials, raw materials, &c. Implements and samples.

Basketry, rope and matwork, raw materials. Implements and samples.

Paper manufacture. Materials, tools and samples.

Workmanship in precious stones, gold, silver, iron, stone, clay, wood, leather, &c. Tools, models and samples.

Preparation and manufacture of animal substances, such as amber, musk, wax, honey, ivory, horn, bones and teeth, tortoise-shells, shells, skins and hides, feathers, hairs, &c. Tools and samples.

Preparation of popular drinks. Materials, utensils and samples.

(*h*) Trade and Navigation. Review of the inland trade in tables and diagrams. Review of maritime trade, as coast trade and foreign commerce driven by natives, models and drawings of crafts and other means of transport by land and water for the inland trade.

Models and designs of craft for the native sea-trade. Sea-charts and instruments. Ship's requisites.

Charts, drawings or models of communications by land and water, bridges, marketplaces, sale exhibitions, and other institutions in favour of commerce.

Examples of the native modes of packing. Coins, measures, and weights. Seals and trademarks.

11TH CLASS.—*Arts and Sciences*—

(*a*) Drawings, paintings, engravings, sculptures and lacquered ware.

(*b*) Music and musical instruments.

(*c*) Stage appurtenances and dramatical representations.

(*d*) Calligraphy and printing-materials and samples.

(*e*) Education. Reports on the organisation and results of native education.

Models and plans of school buildings.

Means of instruction and school furniture.

Educational schemes and school rates.

12TH „ *Religion and Religious Customs*—

Descriptions, models or copies of temples, mosques, &c.

Idols.

Images of priests, female priests, astrologers, soothsayers and objects in use in the discharge of their avocations.

13TH „ *Forms of Government and State Institutions*—

(*a*) The present and early forms of Government. Literature.

Pictures of princes, grandees and chiefs. Their symbols of distinction and dignity. Flags and banners.

(*b*) Military. Communications on the modes of warfare, customs of war, and arts of fortification.

Means of attack and defence.

Arms, war garbs and equipment. Martial music.

Attributes and drawings of heralds and champions.

Symbols of challenge and truce.

(*c*) Means for maintaining public peace and safety.

Contributions to the knowledge and conduct of the civil police.

Spearforks, handcuffs, stocks, &c.

(*d*) **Judicial institutions and customs. Laws, placards, and other contributions to the knowledge of native judicial institutions.**

Objects in use in judgments by ordeal. Drawings or models of instruments of punishment and torture.

(*e*) Public buildings. Models or pictures of houses of chiefs, communal buildings, guard-houses and prisons.

3RD GROUP.

The Europeans in Colonies and their relation towards the natives.

14TH CLASS.—*Voyages of discovery and investigation.*

Descriptions and charts.

15TH „ *Colonial systems, their application and results.* Charters and Octrois.

Laws and rules, principally relating to administration and justice. Literature.

Books on Colonial policy and economy.

Decorations and honours exclusively for the Colonies.

16TH „ *Naval and Military Forces* in the Colonies.

Means of fortifying and defence, descriptions, drawings and models.

17TH „ *Public Works.* Descriptions, plans, or projects, models, charts, designs, or other drawings.

18TH „ *Telegraphy and Post Office, Telephones and Signals.* Instruments, models and drawings, postage stamps and seals.

19TH „ *Commerce and Navigation in and with the Colonies.*

(*a*) Literature on commercial law and treaties of commerce and navigation.

Tariffs of import, export and transit, pilotages and port dues. Harbour Regulations.

(*b*) Statistics of trade and navigation.

Comparative statements of trade and navigation prior to and after the reduction and abolition of import, export and transit duties.

Comparative statements of trade and navigation of the colonies with their mother countries and foreign lands prior to and after the abolition of differential duties.

Comparative statements of the proportion of steamers and sailing vessels in the trade movement.

(*c*) Communication by land and water.

Ways and means of transport. Descriptions and models.

Steam, sailing, and rowing crafts, wharfs, docks, lighters, diving apparatuses, cranes, &c. Models, drawings and sections.

Statistical data regarding traffic in connection with tariffs, particularly as to Railways.

(*d*) Communications relative to institutions of commerce and credit.

(*e*) Coins and coinage. Stamps.

20TH CLASS.—*Agriculture and industry*—

(*a*) Description of agriculture aided by Europeans on proprietary, leased or farmed lands.

(*b*) Agricultural implements or models, drawings and descriptions.

(*c*) Agricultural establishments. Models or drawings and descriptions.

(*d*) Agricultural handbooks.

(*e*) Agricultural statistics in diagrams showing the increase and decrease of produce, rise and fall of prices, increase and decrease of cost of production.

Comparative returns regarding Government and private cultivation.

(*f*) Agricultural products. Samples.

(*g*) Forest cultivation. Description of the cultivation of forests by Europeans. Implements and instruments, charts, drawings, photographs and models.

Products. Models of kinds of wood, which are already in use in the colonies for mining, shipbuilding, &c., and samples of sorts of wood to be recommended for export to Europe.

(*h*) **Mining, metallurgy and artesian wells.**

Laws and regulations.

Mining. Description of experiments, construction of mining establishments, mining explorations, rockboring, illustrated by models, charts, sketches, sections, drawings and photographs. Instruments and implements, or models and drawings. Samples of the products.

Metallurgy. Descriptions of metallurgical establishments and processes, illustrated by models, plans, profiles and drawings. Instruments and implements or models and drawings. Samples of produce.

Artesian Wells. Descriptions of artesian means of water-supply, means of boring, boring instruments, illustrated by charts, plans, profiles, drawings, photographs and models.

(*i*) Industry.

Machine and manual industry. Descriptions. Models, instruments and products.

21ST „ *Domestic and social life of the European*—

(*a*) Necessaries for the passenger to and from the colonies, and for the pioneer and the scientific traveller.

(*b*) Life in the colonies.

Copies or models of dwellings.

Furniture, clothing.

Diet.

Recreations and amusements differing from those of the European. Objects used in such, with drawings.

(*c*) Pauperism. Information regarding pauperism and means of alleviating it, and Poor laws.

22ND CLASS.—*Education and Instruction*—

(*a*) Preparatory, lower, middle and higher instruction.

Laws and regulations.

Schemes of instruction and schoo-rates, school-requisites and means of instruction.

Drawings and models of schools.

Educational statistics.

Reports and literature.

(*b*) Missionary labour. Information regarding the activity of missionaries and results obtained.

23RD „ *Scientific Research*—

(*a*) Requisites for forming scientific collections, *viz.*, animals, plants minerals, geological specimens, ethnological objects, &c. Means of preserving, cabinets and labels.

(*b*) Instruments for scientific observations such as astronomical means of determining latitudes, measurement of levels, surveys, hydrographical surveys, meteorological and magnetical observations.

(*c*) Printing. Products—books, periodicals, journals and weekly papers illustrations. Stereotype plates, frames. Binding.

The Colonial Committee.

DR. P. J. VETH, *Honorary Chairman.*
M. P. PELS, *Chairman.*
I. J. VAN SANTEN, *Secretary.*

The Central Committee.

D. CORDES, *Chairman.*
S. DE CLERCQ Wz., *Delegated Member.*
J. KAPPEYNE VAN DE COPPELLO, *Secretary.*

PROGRAMME OF THE SECOND SECTION.

Exhibition of Articles for export to the Colonies and Trans-oceanic Possessions.

GROUP IV.

Furniture and Upholstery.

24TH CLASS.—*A.*—Joinery and cabinet-work. Furniture in every sort. Wicker-work.
Bedsteads and accessories.
Billiards and accessories. Arms and other rests.
School and office furniture.
B.—Garden furniture and garden ornaments in wood, bamboo and twig-work.

25TH „ Furniture stuffs, trimmings, galloon-work, &c. Carpets, furniture coverings, tapestry, rugs, alcatives, &c.; waxcloth, canvas, imitation leather, camptulikon, corticine, &c.
Blankets, sheets and other bedding.
Mirrors, frame-work and separate parts of same.

26TH „ Chandeliers, candlesticks, lustres, candelabras, lamps, gas ornaments. Separate parts.
Chamber ornaments in bronze.
Garden furniture and garden ornaments, in iron.
Safes. Locksmiths' work.

27TH „ Gold and silver work. Articles of iron, steel, bronze, yellow and red copper, tin, aluminium, nickel and other metals or metal compositions, electro-plate and such like for ornament and domestic use. Cutlery. Pins and needles.

28TH „ Clock-work, pendulums, house barometers, thermometers, &c. Mechanical numerators.

29TH „ Porcelain and crockery. Glass-work, ceramic, terra-cotta, mirror glass, &c.

30TH CLASS.—Apparatuses for heating, cooling and ventilation; filters and separate parts. Ice chests.
Furnaces and cooking utensils. Apparatuses for weighing and measuring. Weights and measures for domestic use.
Bathing utensils. Washing machines, wringers, mangles, &c.
Ice machines, apparatuses for distillation of water and utilising the sun's heat.
Heat reservoirs, &c.

31ST „ Morocco and other delicate leather-work.
Fancy goods. Toys. Fine brushing work.
Social games. Haberdashery.

32ND „ Stationery and office articles. Drawing and writing requisites. Printing and book-binding. Albums and engravings, photographs, &c. Trade labels, prints, &c. Educational and school requisites.

33RD „ Music and musical instruments, organs, pianos, wind, string and mechanical instruments, &c. Musical boxes, &c.

GROUP V.

Clothing, Linen and Accessories.

34TH CLASS.—Twist and tissues of hemp, linen, cotton, silk, wool, rameh, &c.; rugged, bleached, dyed, printed. Filt, &c.
Shawls, wrappers, laces.

35TH „ Ready-made clothes, uniforms, liveries and separate parts, &c. Waterproof clothing.
Body linen, head coverings, gloves, shoes.
Umbrellas and parasols.
Toilet and fancy articles, flowers, feathers, head-dresses, hair.

36TH „ Jewelry and trinkets, precious stones, gold, silver and other personal ornaments.
Imitation and fancy-work fans.

37TH „ Outfits for a residence in the colonies, for out and homeward voyages, &c.
Travelling articles, tents, camp equipage, &c.
Portable weapons. Implements for chase and fishery.
Preciseness instruments for travellers. Travelling and pocket barometers. hypsometers, clinometers, teleometers, pedometers and others. Telescopes, spectacles, eye-glasses and other optical instruments.

GROUP VI.

Dietary, Chemical Products, and modes of packing them.

„ „ „ „ „ No. 476, dated 21st April 1882.

RESOLUTION.—The Governor General in Council has had under consideration the rules under which students are admitted to the Engineer Class of the Thomason College at Roorkee. Both to the Secretary of State for India in Council and to His Excellency in Council it has been a matter of constant remark and regret that, in spite of the advantages which the College offers to natives of India in the form of valuable scholarships and of the right to compete for a certain guaranteed number of appointments in the Public Works Department, very few persons of pure Asiatic race have passed into the public service through the Engineer Class. In the 11 years from 1870 to 1880 the number of students bearing Indian names who qualified for appointments in the Public Works Department was only 40,—a number not equal to the number of the Thomason and Vizianagram scholarships available during the period. This state of things has appeared, both to Her Majesty's Government and to the Government of India, to be unsatisfactory, as being inconsistent with the purposes for which the Engineer Class of the College was established, and inconsistent also with the general principle, which has of late years been followed, of endeavouring to employ natives of India more largely in the public service. With a view, therefore, to providing a remedy, and to making the class more attractive to persons of Indian origin, His Excellency in Council has been pleased to make certain alterations in the rules of entrance, and of the conditions of competition for such appointments, in the Public Works Department as may be guaranteed to students of the class. These alterations are embodied in the following orders.

2. All persons who pass the Entrance Examination in November 1882 will be eligible for admission to the Engineer Class of the Thomason College after passing the First Arts Examination of a University, or the special Entrance Examination of the College instead of, as now, after passing the examination for the B. A. degree, or the special Entrance Examination of the College. The first three at the final examination will be appointed to the Engineer Establishment of the Public Works Department as heretofore.

3. In future years all candidates, of whatever race, who pass the Entrance Examination, and who fulfil the other preliminary conditions laid down in the College Calendar, will be admitted to the benefits of the education given in the Engineer Class; but appointments in the Public Works Department will be given to the extent guaranteed from time to time to students of Asiatic descent who qualify according to the College standard, and who can obtain the usual medical certificate for admission to the public service, and who have been born and educated elsewhere than in the provinces of Madras, Bombay, and Bengal, which have their own Civil Engineering Colleges. If a sufficient number of natives do not pass the test, the appointments not gained by natives will be open to the European competitors, who will be placed according to their order of merit on the whole list of those winning appointments.

4. The number of appointments available in 1886 will be four.

5. As the scholarships for natives at the Thomason College have been very rarely held to their full extent, it appears to the Governor General in Council that their existence cannot be generally known. It should be publicly notified that there are ten scholarships, of which five fall vacant annually, and are awarded to the five candidates who pass most successfully the prescribed Entrance Examination. Of these five scholarships, the three termed "Thomason Scholarships" are each worth Rs. 50 per mensem, and are open to native inhabitants of the North-Western Provinces or the Punjab; the remaining two were founded by the Maharajah of Vizianagram in 1873, and are worth—the first Rs. 40, and the second Rs. 35 per mensem: they are open to all natives of India. All these scholarships are tenable for two years, subject to good conduct and satisfactory progress in studies.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab, in the Public Works Department.
The Chief Commissioners, Central Provinces, British Burma, Assam, and Coorg.
The Resident, Hyderabad.
The Agents to the Governor General for Central India and Rajputana.

ORDER.—Ordered, that this Resolution be communicated to the Local Governments and Administrations marginally noted, and the Director General of Railways; also that it be published in the *Gazette of India* and all local Official Gazettes.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 21st NOVEMBER 1882.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Nov. 22nd)		
Bellary	·28 (average of two stations).	Standing crops generally good; harvest paddy and dry grains, yield average.
Kurnool	·88 (average of seven stations).	Standing wet crops withering in parts from insufficiency of water-supply; harvest early dry crops, outturn below average; cattle disease in parts.
Ganjam	. . .	Standing crops dry and sugarcane thriving; rain wanted in one taluka; fever, small-pox, and cattle disease continue.
Kistna	·85 (average of seven stations).	Standing crops, paddy requires rain in two taluks; harvest paddy and *cholum* below average; fever and cattle disease prevail; water 3·29 feet over *anicut*.
Chingleput (Madras) .	5·20 (average of eleven stations).	Standing crops generally good; harvest paddy, yield below average; fever, small-pox, and cattle disease in parts.
Coimbatore . . .	·91 (average of fourteen stations).	Standing crops good; harvest dry grains, yield average; fever, cattle disease, and cholera in parts.
Tanjore	4·46 (average of twelve stations).	Standing crops good, harvest paddy and dry crops, outturn below average.
Madura	1·90 (average of ten stations).	Standing crops fair; cholera in parts.
Malabar	1·38 (average of fourteen stations).	Standing crops good; fever, small-pox, and cholera slight in parts.
Travancore . . .	·05	Agricultural operations progressing; fever continues.
		General Remarks.—No rain at Ganjam; general prospects good.
Bombay—(Nov. 22nd)		
Karrachee . . .	. . .	River at Kotri on 17th, 6 feet 2 inches against 6 feet on same date last year; fever in all talukas; cattle disease in Ghorabari taluka; wheat, red rice, and *bajri* in Karachi 24, 36, and 38, in Sehwan 32, 48, and 56, in Jati 20, 40, and 44, and in Sakro 16, 36, and 48 pounds per rupee respectively.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad		*Rabi* sowings continue; other crops healthy; fever in Dholka, Viramgaum, Gogo, and Parantej; cattle disease ceased in Sanand; one death from cholera in the city; *bajri* 34 and wheat 29 pounds per rupee.
Baroda		*Kharif* harvesting and *rabi* sowings continue; slight cholera in Amreli; *bajri* 32¾ and rice common 24½ pounds per rupee.
Surat		Standing crops healthy; *jowari* 41½ and *nagli* 60 pounds per rupee.
Nasik		Locusts still lingering in Kalwan, Peint, and Igatpuri; *rabi* sowings progressing; wheat 25½, *bajri* 36, and rice 26½ pounds per rupee.
Colaba (Bombay)		Abnormal temperature 1° cool on 15th and 19th, 2° cool on 18th, 2° warm on 20th, and *nil* on all other days; vapour in air in defect of normal on 15th, afterwards normal; wind normal.
Poona		*Rabi* sowings completed; locusts disappearing; *bajri* 43 and *jowari* 56 pounds per rupee; in Poona *bajri* 39 and *jowari* 48 pounds per rupee.
Ahmednagar		Rain badly wanted; *rabi* crops generally good, except in some parts where they are withering; cholera at Patoda in Jamkhed; some locusts only in Kopargaon; *bajri* maximum 66 pounds per rupee in Jamkhed, minimum 45 pounds in Sangamner; *jowari* maximum 93 pounds per rupee in Jamkhed, minimum 45 pounds in Sangamner.
Sholapore		Crops suffering for want of rain; *jowari* 70 pounds 27 tolas, and *bajri* 57 pounds 3 tolas per rupee.
Dharwar		Harvesting of early and sowing of late crops in progress; slight cattle disease in 4 talukas; cholera in 6 villages of Navalgand, and 3 of Ron; 19 cases fatal of 55 in Navalgand, and 4 out of 14 in Ron; rice minimum 20 and *jowari* 56 pounds per rupee.
Kanara	Karwar ·31 Kumpta ·20	Total rainfall 108·44; rice harvest completed in 3 talukas, continues in others; *ragi* harvest in 2 talukas; preparing ground for second crop in Karwar; sugarcane and garden produce healthy; small-pox subsiding; cattle disease in 3 talukas and fever in 2; common rice in Karwar 11 seers per rupee, in district average 13¾ seers per rupee; weather fair.
Rajkot		Weather cold; general health fair; cholera continues in 2 villages of Navanagar, disappeared from Junagad and Rajkot talukas; fever in Porbunder and Bagasra; *bajri* 28 and *jowari* 34 pounds per rupee. *General Remarks.*—Harvesting of *kharif* and sowing of *rabi* completed in some districts and still in progress in the rest; *rabi* crop suffering for want of rain in parts of Ahmednagar, Sholapur, Satara, Kaladgi, and Belgaum; elsewhere good; locusts in parts of Nasik, Satara and Colaba; fever and cattle disease in some districts; slight cholera and small-pox in a few.
Bengal—(Nov. 21st)		
Chittagong	*Nil*	Weather cool and pleasant; prospects of crops good; early *amun* being harvested in places; cattle disease and fever not yet ceased.
Dacca	*Nil*	Winter crops being sown; harvesting of early winter rice commenced; main crop promises very well; sugarcane being cut.
24-Pergunnahs (Alipore)	*Nil*	Prospects of late rice and sugarcane continue satisfactory; *rabi* crops doing well; price of common rice stationary; public health good; fever said to be prevalent in Baraset, and an outbreak of cholera in Barrackpore sub-division.
Moorshedabad		*Amun* ripening and in some places ripe and about to be cut; except fever here and there, health of district generally good.
Rajshahye	*Nil*	Prospects of crops fair; fever prevalent; cholera in several thanas.
Burdwan	*Nil*	Prospects of crops generally fair; a good deal of fever prevalent.
Rungpore	*Nil*	Weather seasonable; prospects of crops favourable; public health good.
Bhagalpur	*Nil*	*Aghani* harvest begun in the Sadr sub-division and about to commence elsewhere; *rabi* sowings in progress; prospects of crops good; fever prevalent in Muddehpoorah and Soopole.
Purneah	*Nil*	Late rice being reaped, outturn moderate; winter crops nearly all sown; fever very prevalent.
Patna	*Nil*	*Rabi* sowings progressing; paddy being reaped in Behar sub-division; poppy, wheat, and barley coming on; fever prevalent in some parts of Behar; public health good.
Durbhunga	*Nil*	*Rabi* prospects good; rice prospects fair; public health fair; prices stationary.
Hazaribagh	*Nil*	Weather clear and cool; prospects of crops favourable; prices stationary; cattle disease reported; general health good.
Cuttack	*Nil*	Harvesting of early *sarad* commenced; late *sarad* flowering; *rabi* progressing well; public health good; cattle disease reported from the interior. *General Remarks.*—No rain fell during the week; cold weather appears to have set in in all parts of these provinces; earlier sorts of *amun* rice being reaped in several places, and the crop is expected on an average to be a fair one; *rabi* sowings progressing with vigour, and prospects everywhere promising; prospects of sugarcane also very favourable; prevalence of fever reported from several districts, and cases of cholera from a few only.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—		
Benares (Nov. 21st)	No rain	*Rabi* sowings finished; no sickness among men or cattle; prices steady.
Allahabad („ 22nd)	No rain	Health good; all crops doing well; prices stationary.
Gorakhpur („ 20th)		Weather clear; crops promising; health good; prices stationary.
Jhansi („ „)		Harvesting of *kharif* continues; sowing of *rabi* continues, and the crops germinated are looking well; prices stationary; health generally good; no cattle disease.
Agra („ 21st)	No rain	*Rabi* sowings going on and crops being irrigated; fever abating; general health good; prices stationary.
Bareilly („ „)		Weather seasonable; prospects good; fever abating.
Meerut („ „)		Weather clear; health good; slight cattle disease; prices unaltered.
Kumaun („ „)		Weather clear; rain wanted; wheat mostly sown; general health good; cattle disease continues; prices unchanged.
Lucknow („ „)		Rain urgently required for *rabi* sowings in *dofasli* lands; public health good.
Partabgarh („ „)		Prices almost unchanged; crops coming up well; the *jarhan* harvest has commenced; slight cattle disease prevails; cholera is now confined to a few villages in Kanda tahsil.
Sitapur („ „)	No rain	*Rabi* has germinated, and so far prospects are favourable; general health good; prices stationary.
Fyzabad („ „)	No rain	Irrigation going on; prospects good; fever decreasing; prices steady.
Cawnpore	No rain	*Rabi* sowings almost completed; crops flourishing; health good; prices steady.
Farukhabad (Nov. 21st)		Prospects fair; prices steady; fever much abated.
		General Remarks.—No rain during the week; more rain wanted in Lucknow and Almorah; *rabi* sowings completed in eastern and progressing in western districts; general health good and prices steady; slight cattle disease in Kumaon, Meerut, and Partabgarh.
Punjab—(Nov. 21st)		
Delhi	No rain	Health good; prices fluctuating; *rabi* sowings in progress.
Hissar	No rain	Health good; prices stationary; *rabi* sowings in progress; *kharif* nearly gathered.
Umballa	No rain	Health good; prices stationary; *rabi* sowings finished.
Jullundur	No rain	Health good; prices steady.
Amritsar	No rain	Health good; prices fluctuating.
Lahore	No rain	Health good; prices steady; harvest prospects good.
Ferozepore	No rain	Health good; prices steady; *kharif* prospects good.
Sialkot		Health good; slight fall in prices; harvest prospects good.
Rawalpindi	No rain	Weather seasonable; fever prevalent; prices steady; *rabi* sowings progressing.
Peshawar		Rain wanted; fever decreasing; prices falling.
Mooltan	No rain	Health improving; prices steady.
Dera-Ismail-Khan	No rain	Fever still prevalent; prices steady; crop prospects good.
		General Remarks.—The health of the Province and prospects of crops are generally good.
Central Provinces—		
Nagpur (Nov. 22nd)		Days warm, mornings and evenings cool; *rabi* crops doing well; public health good.
Jubbulpore („ 21st)		Weather cool; health good; prices stationary.
Saugor („ 20th)		*Rabi* crops progressing favourably, but a little rain is required; fever prevailing; prices steady.
Seoni („ 21st)		Weather clear and cool; fever lessening, though very severe; prices stationary.
Hoshangabad („ „)		Weather cool and clear; *rabi* crops doing well; fever prevalent; wheat 15 seers per rupee.
Khandwa („ „)		Weather cool; prospects of crops good; small-pox reported; wheat 16 seers per rupee.
Raipur („ 18th)		Weather clear and cool; *rabi* sowings continue; early sown wheat and gram almost destroyed by recent rain; fever and cough prevalent; rice 38 seers per rupee.
Sambalpur („ 16th)		Weather cool; prospects of crops good; fever continues; rice 56 seers per rupee. *General Remarks.*—Days warm, mornings and evenings cool; prospects of crops favourable; fever still reported from most districts; prices stationary.
British Burma—		
Akyab (Nov. 18th)	*Nil*	Total rainfall 201·64 inches; public health in town good; 25 deaths from cholera in the districts; the disease still continues in one township; cattle disease prevalent in one township; crop prospects good.
Rangoon	*Nil*	Total rainfall 101·55; one death from cholera, otherwise public health good; crops making progress.
Bassein	0·65	Total rainfall 125·62; public health good; slight cattle disease in one township; reports regarding crops favourable.
Prome	*Nil*	Total rainfall 50·06; one death from cholera in town; otherwise public health good; crop prospects fair.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burmah—*contd.*		
Amherst (Moulmein) .	*Nil*	Total rainfall 202·90; five cases of cholera reported from the district, otherwise public health good; 68 deaths of cattle in one township; crops healthy; early paddy being reaped.
Toungoo . . .	*Nil*	Total rainfall 90·88; 7 deaths from cholera reported in one township; otherwise public health good.
		General Remarks.—A little cholera in Akyab and Henzada, otherwise public health good; crop prospects good elsewhere.
Assam—		
Gauhati (Nov. 21st)	No rain	Weather seasonable; mornings and nights foggy; prospects of crops and public health good.
Sylhet („ „)		Harvesting *amun* crops commenced; cultivation for cold-weather crops commenced; public health generally good.
Cachar („ 22nd)	*Nil*	Cold weather has set in; reaping of *sali* crops commenced; sowing of winter crops finished; common rice 24⅜ seers per rupee; 9 cases of cholera reported from Sadr and 4 from Haila Kandi.
Dibrugarh („ „)	*Nil*	Weather seasonable; prospects of crops good; cattle disease still prevalent; public health good.
Mysore and Coorg—		
Bangalore (Nov. 22nd)	·73	Crops in a thriving condition; prospects fair.
Mysore	·43	
Mercara	·78	Rice crop thriving; coffee ripening, picking has commenced in some parts; north-east winds continue; fever still prevalent.
		General Remarks.—Crops generally in good condition; rain was general throughout the Mysore State; a break in the weather is needed for harvesting of *ragi* crop; sowing operations in active progress; prospects fair, though the water-supply in tanks in some districts is below the average; public health good; prices unaltered.
Berar and Hyderabad—(Nov. 22nd)		
Amraoti		Cotton picking progressing; *kharif* crops ready for harvesting; *rabi* good; prices—wheat 16, *jowari* 28 seers per rupee.
Akola		Prospects of *kharif* crops favourable; *rabi* in good condition.
Hyderabad		Reaping of *kharif* crops nearly concluded; reaping of *abi* crops commenced; standing crops thriving; cholera has broken out in some places; prices—wheat 17, common rice 10¾, white *jowari* 28¾, yellow *jowari*, 35¼, and *tur* 27¼ seers per current sicca rupee.
Central India States—(Nov. 22nd)		
Indore		Health good; weather cool; prospects favourable.
Morar (Gwalior)		Health and prospects good; weather seasonable.
Sutna		Health and prospects good.
Neemuch		Weather seasonable; crops and public health good.
Goona		Crops good; health fair; wheat 22 seers per rupee.
Bhopal		Health and prospects good.
Agar		Health and prospects good.
Nowgong		Prospects and health good; prices stationary.
Manpur		Wheat and gram crops doing well; sowing of opium commenced.
Rajputana—		
Abu (Nov. 22nd)		Cold; seasonable weather; fever abating.
Sirohi („ 19th)		Tanks, wells, and health good; crops cut; weather pleasantly cool.
Marwar („ 17th)		About 1½ months' water in tanks; wells almost full; health good; *rabi* crops sown and in good condition; *kharif* being harvested; cold increasing; prices stationary.
Meywar („ 18th)		Tanks and wells fair; health good; crops sown; weather cold; heavy dews.
Harowti („ „)		Crops progressing favourably; opium fields being prepared; health good.
Jhallawar („ 16th)		Weather continues seasonable.
Ajmere („ 21st)		*Rabi* area sown in excess of average of year; health good.
Jeypore		No report received.
Ulwur (Nov. 21st)		*Rabi* sowing continues; health good; prices steady.
Nepal—		
Khatmandú (Nov. 16th)	*Nil*	Fine weather; the rice harvest is good throughout the country.

D. M. BARBOUR,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXAMINATION OF CLERKS FOR CERTAIN OFFICES.

No. 1847.

Extract from the Proceedings of the Government of India, in the Home Department (Public),—under date Fort William, the 24th November 1882.

Read—

Home Department Resolution, No. 31—1298-1308, dated the 31st August 1882, on the subject of the filling up, by a system of competitive examination, of vacancies in the clerical establishments of the Secretariat Offices connected with the Government of India.

RESOLUTION.

The Governor General in Council has been pleased to decide that, in addition to the Offices and Departments specified in paragraph 16 of the Resolution read above, the Resolution will also apply to the undermentioned Offices:—

Office of the Surveyor General of India.
" Superintendent of the Geological Survey of India.
" Meteorological Reporter to the Government of India.
" Accountant General, Military Department.
" Director General of Telegraphs.
" Press Commissioner.

ORDER.—Ordered, that a copy of the above Resolution be forwarded for information and guidance to all the Departments of the Government of India, and that the Resolution be published in the Supplement to the *Gazette of India*.

(True Extract.)

SUPPLEMENT TO

The Gazette of India.

Nº 48. CALCUTTA, SATURDAY, DECEMBER 2, 1882.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 28th NOVEMBER 1882.

General Remarks.—More or less rain has fallen throughout the Madras Presidency; standing crops, with a few exceptions, are in good condition; and harvest is progressing. Coorg has had a little rain; the *ragi* harvest here is over, the rice crop is almost ready for cutting, and coffee-picking has commenced in the south.

In Mysore there has been more or less rain in every district, but one; standing crops are thriving.

In the Nizam's Territories and Berar there has been a little rain, and prospects are favourable.

In the Bombay Presidency the harvesting of *kharif* and sowing of *rabi* have been completed in some districts and are in progress in others; some showers have fallen in the Deccan districts and in Dharwar; rain is wanted in Kaladghi and Belgaum.

In the Central Provinces rain in varying quantities has fallen in most districts, benefiting the *rabi* crops; the harvest of *kharif* crops has begun in a few districts. In Central India and Rajputana prospects are good.

In the Punjab *rabi* sowings have been completed in some parts and are in progress in others. In the North-Western Provinces and Oudh a little rain occurred in three districts; the *rabi* sowings have been completed, and the young crops generally are doing well; in Lucknow, however, the sowings need rain in some places. In Bengal almost all reporting districts have had a little rain; the harvest of *aman* rice is progressing with fair outturn in some places and very good in others; prospects of *rabi* crops are very favourable everywhere, and sugarcane is very promising. Assam also has had a little rain in all reporting districts; and harvesting of rice has commenced. In British Burma crops are progressing satisfactorily.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Nov. 29th)		
Bellary	·87 (average of 7 stations).	Standing crops generally good; harvest paddy, dry grains, and sugarcane, yield average.
Kurnool	1·09 (average of 6 stations).	Standing wet crops withering in 5 taluks; dry crops fair; harvest early dry crops, outturn generally fair; cattle disease in parts.
Ganjam	·55 (average of 6 stations).	Standing crops, dry grains and sugarcane thriving; harvest paddy and dry grains, yield below average; fever, small-pox, and cattle disease continue.
Kistna	3·30 (average of 10 stations).	Standing crops, paddy affected by blight in parts; harvest paddy and *cholum*, outturn below average; fever and cattle disease prevail; water 2·94 feet over anicut.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*contd.*		
Chingleput (Madras) .	8·27 (average of 11 stations).	Standing crops good; harvest paddy, yield below average; small-pox and cattle disease in parts.
Coimbatore . . .	·30 (average of 9 stations).	Standing crops generally good; harvest paddy and dry grains, yield average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore . . .	9·61 (average of 13 stations).	Standing crops generally good; harvest paddy and dry grains, outturn below average.
Madura	1·57 (average of 10 stations).	Standing crops generally fair; cholera in parts.
Malabar . . .	·75 (average of 12 stations).	Standing crops good.
Travancore . . .	1·45	Standing crops good; fever continues. *General Remarks.*—General prospects good.
Bombay—**(Nov. 29th)**		
Kurrachee . . .	. . . . .	River at Kotri on 23rd 5 feet 7 inches, one inch higher than on same date last year; fever in all talukas; cattle disease in two talukas, but to no great extent; prospects of *kharif* crop of 1882-83, area 1,700 acres in excess of last year, average realization 10½ annas in the rupee, deficient outturn due to floods; wheat, red rice, and *bajri* in Karachi 25, 36, and 39, in Manjhand 26, 36, and 56, in Ghorabari 20, 44, and 44, and in Sajwal 22, 36, and 46 pounds per rupee, respectively.
Hyderabad . . .	. . . . .	Thrashing of *kharif* crops still continues; cotton picking in progress; *rabi* crops flourishing; cold daily increasing; small-pox continues in Hyderabad and Manshahro; cattle disease in two talukas, and fever general throughout; wheat 25, *bajri* 42, *jowari* 46, red rice 32, and white rice 22 pounds per rupee.
Ahmedabad . . .	. . . . .	*Rabi* sowings continue; other crops healthy; fever in Viramgaum, Gogo, and Parantej; wheat 29 and *bajri* 33 pounds per rupee.
Baroda	. . . . .	Harvesting of *kharif* in progress; sowings of *rabi* completed; standing crops in good condition; slight cholera still continues in the Amreli taluka; cattle disease in the Kari and Sidhpur talukas; *bajri* 32⅜ and common rice 24¼ pounds per rupee.
Surat	. . . . .	Standing crops healthy; *jowari* 40 pounds and *nagli* 58 pounds per rupee.
Nasik	Slight showers of rain	Weather cloudy and muggy; wheat 25½, *bajri* 36, and rice 23½ pounds per rupee.
Colaba (Bombay) . .	·03 on 27th and 28th	Abnormal temperature 1° cool on 22nd, 3° cool from 23rd to 25th and then gradually rose to 1° cool on 28th; vapour in air in defect of normal from 22nd to 26th, afterwards in excess of normal; wind normal; thunder and distant lightning on 28th.
Poona	Rain in all talukas, about 2·0 on 27th at Poona.	Rainfall beneficial to *rabi*; *bajri* 44 and *jowari* 55 pounds per rupee, in Poona, *bajri* 37 and *jowari* 48 pounds per rupee.
Ahmednagar . . .	Nagar . . ·36 Karjat . . ·20 Sheogaon . . ·42 Newasa . . ·25 Rahuri . . ·15 Shrigonda . ·09 Sangamner . ·08	No rain in rest of the talukas; more still wanted throughout the districts; locusts disappeared; cholera subsided in Jamkhed taluka; *bajri* maximum 66 pounds per rupee in Jamkhed, minimum 41 in Sheogaon; *jowari* maximum 93 pounds per rupee in Jamkhed, minimum 44 pounds in Akola.
Sholapur . . .	Sholapur . . ·52 Madha . . ·38	Total rainfall 30·60 in Sholapur; this timely rainfall will probably improve the crops; *jowari* 65 pounds 6 tolas, and *bajri* 54 pounds 6 tolas per rupee.
Dharwar . . .	Rain in all talukas except Ranibennur and Kod. Heavy in Dharwar and slight in others.	Rainfall beneficial to late crops; early crops being harvested; sowing of late crops completed; cotton crop good; slight fever in Mugud and Mundargi; cholera continues in Navalgand and Ron; 21 deaths in Navalgand and 9 in Ron; slight cattle disease in 3 talukas; rice minimum 22 and *jowari* 54 pounds per rupee.
Kanara	Karwar . . ·28 Kumpta . . ·68	Rice harvest continues in 5 talukas; *ragi* in two; preparing ground for second crop in two talukas; garden produce healthy; fever and cattle disease in two talukas; common rice in Karwar 11 seers per rupee, in district average 15½ seers per rupee; weather cloudy with light showers.
Rajkot	. . . . .	Weather cold; general health good; fever decreasing; *bajri* 25 and *jowari* 35 pounds per rupee. *General Remarks.*—Harvesting of *kharif* and sowing of *rabi* completed in some districts and in progress in others; rain in the Deccan districts and in Dharwar, wanted in Kaladgi and Belgaum; fever and cattle disease in some districts; slight cholera and small-pox in a few.
Bengal—**(Nov. 28th)**		
Chittagong . . .	A few drops	Weather seasonable till 24th, since which cloudy, with south-westerly wind; prospects of crops good; prices steady; cattle disease in thana Chakaria; general health good.
Dacca	·05	Late rice harvest commencing; prospects promising; winter crops still being sown; sugarcane being cut, outturn good.
24-Pergunnahs (Alipore)	·29	Prospects of late rice and sugarcane satisfactory; rice on high lands being harvested; winter crops doing well; price of common rice stationary; public health good; sporadic cholera reported from almost all sub-divisions.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Moorshedabad . .	*Nil*	State and prospects of crops favourable; *amun* being harvested in some places; fever in and about Rangamati, and here and there; elsewhere in a mild form.
Rajshahye . . .	·02	Weather seasonable; winter crops doing well; outturn of rice in Nattore, average, but in higher lands not so good; cholera severe in some thanas.
Burdwan . . .	*Nil*	Prospects of crops generally fair; fever prevalent.
Rungpore . . .	·10	Weather cloudy and cool; tobacco being planted; other cold-weather crops being sown; prospects of crops good; public health good.
Bhagalpur . . .	·95	Harvesting of rice begun; prospects of crops good; fever abating in Soopole, but still prevalent in Muddehpoorah sub-division.
Purneah . . .	·35	Late rice being harvested, outturn moderate; much mortality from fever.
Patna	1·18	Prospects of *rabi* crops good; paddy being cut; public health good.
Durbhunga . . .	·65	*Rabi* prospects good; rice fair; prices stationary; health good.
Hazaribagh . . .	·30	Weather cold and cloudy; rice harvest continues, outturn seems good; prospects of *rabi* crops favourable; health generally good.
Cuttack	. . . . .	Weather cloudy; harvesting of late rice in progress; *rabi* crops doing well; public health good. *General Remarks.*—There was a little rain in almost all the reporting districts during the week; harvesting of *amun* rice progressing; outturn will be only fair in several places, but in Orissa and in parts of Eastern Bengal and Chota-Nagpore it promises to be very good; prospects of *rabi* crops everywhere reported on very favourable; sugarcane crop also very promising, it is being harvested in some districts; prevalence of fever reported from several districts, and of cholera from some.
N.-W. Provinces and Oudh—		
Benares (Nov. 28th)	Benares . . ·60 Chandauli . ·40 Gangapur . . 1·40	Rice being cut in places; rainfall good for *rabi* crops; no sickness among men or cattle; prices steady.
Allahabad („ 29th)	Average fall of ·50 in district.	The rain has been most beneficial to rising crops; irrigation stopped; health good; prices stationary; prospects excellent.
Gorakhpur („ 27th)	. . . .	Weather cloudy yesterday; crops promising; health good; prices stationary.
Jhansi („ „)	. . . .	Weather cloudy; rain threatening; *kharif* harvesting almost over, outturn good; prices falling; no cattle disease; health good.
Agra („ 28th)	. . . .	No rain but clouds during the night; *rabi* sowings nearly completed; standing crops being irrigated; small-pox reported in pargana Fatehabad; general health good, prices stationary.
Bareilly („ „)	No rain	Weather warmer; prospects good; some fever prevalent, but not of a severe type.
Meerut („ „)	. . . .	Weather clear; health good, but slight cattle disease exists; prices unaltered.
Kumaon („ „)	. . . .	Weather fair; rain much wanted; typhus fever in some villages, total deaths up to date below 25, otherwise general health good; cattle disease continues; prices stationary.
Lucknow („ „)	. . . .	Rain urgently wanted for *rabi* sowings in *do-fasli* lands; public health good.
Partabgarh („ „)	. . . .	Weather has been cloudy for the last few days with occasionally a few drops of rain; *rabi* crops promising; a fair harvest of rice is being reaped; a few cases of cholera still continue to be daily reported from all tahsils.
Sitapur („ „)	. . . .	Weather cloudy for three days during week, but no rain; general health good; prices stationary.
Fyzabad („ „)	No rain	Weather cloudy; crops coming up well; irrigation going on; public health good; prices stationary.
Rae Bareli (Nov. 27th)	Slight drizzling rain on 25th and 26th.	Sky cloudy; *rabi* sowings completed; irrigation from wells is being carried on; cholera still continues; prices stationary.
Cawnpore („ 28th)	No rain except slight showers in four parganas.	*Rabi* sowings completed; crops looking well; health good; prices stationary.
Farukhabad („ „)	. . . .	Prospects fair; prices steady; weather seasonable; rain needed; weather slightly cloudy. *General Remarks.*—Rain in three districts; weather cloudy; prices stationary; general health and prospects good; a few cases of typhus fever in Kumaon.
Punjab—**(Nov. 28th)**		
Delhi	. . . .	Health and harvest prospects good; slight fall in prices.
Hissar	. . . .	Health good; prices stationary; *rabi* sowings in progress; *kharif* nearly gathered.
Umballa . . .	. . . .	Health good; prices stationary.
Jullundur . . .	. . . .	Health good; prices steady.
Amritsar . . .	. . . .	Health good; *rabi* sowings nearly completed; prices stationary.
Lahore	. . . .	Health good; prices fluctuating; harvest prospects satisfactory.
Ferozepore . . .	. . . .	Health good; prices stationary.
Sialkot	. . . .	Health good; prices stationary; *rabi* sowings continue.
Rawalpindi . . .	. . . .	Seasonal fever prevailing; prices stationary; *rabi* sowings in progress.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—*contd.*		
Peshawar . . .	. . . .	Rain wanted; fever decreasing; prices falling.
Mooltan . . .	. . . .	Health improving; prices stationary; *rabi* sowings in progress.
Dera-Ismail-Khan . .	. . . .	Fever abating; harvest prospects good; prices falling.
		General Remarks.—The health of the Province and the prospects of crops are generally good; there has been no rain during the week.
Central Provinces—		
Nagpur (Nov. 29th)	3·17	Weather cloudy; prospects of *rabi* crops good; health good; prices steady.
Jubbulpore („ 28th)	1·14	Weather cloudy; rain beneficial to *rabi* crops; health good; wheat 19 seers per rupee.
Saugor („ 27th)	·57 recent rain.	Crops lying on the threshing floors, they have been somewhat injured; fever prevalent; prices steady.
Seoni („ 28th)	3·43	Standing crops much benefited by rain, but rice suffers from damp; prices stationary.
Hoshangabad („ „)	. . . .	Weather rainy and cloudy; prospects of crops good; fever prevalent; a few cases of small-pox reported; wheat 15 seers per rupee.
Raipur („ 25th)	·10	Weather cloudy; reaping of *kharif* crops continue; *rabi* sowings in progress; fever abating; prices stationary.
Sambalpur („ 23rd)	. . . .	Weather cool; prospects of crops good; fever still prevalent; rice 56 seers per rupee.
Khandwa („ 28th)	·32	Weather cloudy and chilly; prospects of crops good; small-pox reported; prices steady; wheat 16 seers per rupee.
		General Remarks.—Weather cloudy and cool, with rain during the latter portion of the week, which has been beneficial to *rabi* crops; *kharif* crops being harvested in a few districts; fever still continues; prices steady.
British Burma—		
Akyab (Nov. 25th)	*Nil*	Total rainfall 201·64 inches; public health in town good; 2 deaths from cholera in district and some from small-pox, but number unknown; cattle disease in one township; crop prospects good.
Rangoon . . .	*Nil*	Total rainfall 101·55; 4 fatal cases from cholera, otherwise public health good; crops progressing.
Bassein . . .	*Nil*	Total rainfall 125·62 inches; public health good; crop prospects generally good.
Prome . . .	*Nil*	Total rainfall 50·06 inches; 5 deaths from cholera in town, otherwise public health good; crop prospects fair.
Amherst (Moulmein) .	*Nil*	Total rainfall 202·90 inches; public health in Moulmein town good; 11 deaths from cholera in one township; otherwise public health and health of cattle good; crops healthy; reaping commenced.
Toungoo . . .	*Nil*	Total rainfall 90·88 inches; public health good.
		General Remarks.—A few cases of cholera in several districts; but public health generally good; crop prospects good.
Assam—		
Gauhati (Nov. 28th)	·28	Weather seasonable; nights and mornings cool and foggy; prospects of crops and public health good.
Sylhet („ 29th)	·07	Harvesting *amun* and cultivation for winter crops progressing well; prospects good; cholera and small-pox reported from some quarters.
Cachar („ „)	·10	Weather cloudy and rather warm for the season; reaping of *sali* crops progressing; price of common rice 26⅝ seers per rupee; cholera somewhat abated, only one new case reported.
Dibrugarh („ „)	·11	Weather cool; cutting of *sali* paddy has commenced; public health good; cattle disease decreasing.
Mysore and Coorg—		
Bangalore (Nov. 29th)	4·12	Standing crops thriving; prospects fair.
Mysore („ „)	·58	Crops in good condition; the north-east monsoon has broken and rain has been general.
Mercara („ „)	·37	Rice crop almost ready for cutting, everywhere good; *ragi* harvest over; coffee picking commenced in South Coorg, probable outturn a little below average; prices of food grains falling gradually.
		General Remarks.—The north-east monsoon has broken and rain has been general throughout the east of the State; Kolar has had 4·32 inches, Tumkur 2·49; the ripe crops in parts are being injured from continuous rain; towards the west of the State, rain has been more or less general, thus in Chickmagalur ·14, Chitaldrug ·52, Shimoga none; crops in good condition; prospects fair; prices steady; public health good.
Berar and Hyderabad (Nov. 29th)		
Amraoti . . .	·09	Crops in good condition; prices—wheat 16, *juari* 28 seers per rupee.
Akola . . .	. . . .	Prospects of crops favourable; weather cool.
Hyderabad (Nov. 30th)	·89	Standing crops benefited by rainfall; cholera still prevalent in some places; prices, wheat 16½, common rice 10¾, white *juari* 27, yellow *juari* 33¼, and *tur* 26½ seers per current sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States— (Nov. 29th)		
Indore	. . .	Weather cloudy with occasional showers; prospects and health good.
Morar (Gwalior) . .	. . .	Weather seasonable; prospects of crops and public health good.
Sutna	1·24	Weather still wet.
Neemuch	. . .	Weather seasonable; prospects of crops and public health good.
Goona	. . .	Weather seasonable; prospects of crops and public health good.
Bhopal (Serohi) . .	. . .	Health and prospects of crops good.
Agar	. . .	Health and prospects of crops good.
Nowgong	. . .	Health and prospects of crops good.
Manpur	. . .	Weather cloudy and cold, attended with slight showers; wheat and gram crops doing well; prices stationary.
Rajputana—		
Abu (Nov. 29th)	·35	Cloudy, cold, seasonable weather; fever disappearing.
Sirohi („ 26th)	. . .	Tanks, wells, and health good; crops cut; weather pleasantly cool.
Marwar („ 24th)	. . .	One month's water in tanks; wells resorted to; health good; *kharif* almost harvested; *rabi* crops springing up promisingly; cold increasing; prices stationary.
Meywar („ 25th)	. . .	Wells and tanks fair; health good; sowing operations continued; weather very cold.
Harowti („ „)	. . .	Standing crops and health good; weather seasonable.
Ajmere („ 28th)	. . .	Weather seasonable; health good.
Jeypore („ „)	. . .	Prices firm; prospects satisfactory; health fair.
Ulwar („ „)	. . .	*Rabi* sowings continue; tanks drying; wells in good supply; health good.
Nepal—		
Khatmandú (Nov. 23rd)	*Nil*	Weather beautiful, cold, bright, and frosty; agricultural prospects good.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 5th DECEMBER 1882.

GENERAL REMARKS.—Rain has fallen more or less throughout the Madras Presidency; standing crops are reported in good condition; and the harvest outturn is generally fair.

In Coorg there has been fair rain; the rice crop is said to be a good one; coffee-picking is proceeding, but the crop is rather short.

In Mysore the rainfall has been abundant, and standing crops are in good condition. In the Nizam's territories and Berar there has been slight rain, and prospects of crops continue favourable.

There has been slight rain in some districts of the Central Provinces, which has been beneficial to *rabi* crops; the *kharif* crop is being harvested in some places.

There has been no rain in the Punjab; but prospects continue generally good. In the North-Western Provinces and Oudh there has been slight rain in four districts; the prospects of crops are good everywhere except in Lucknow, Kumaon, and part of the Meerut Division, where rain is needed.

There has also been a little rain in four districts of the Bengal Presidency; and the rainfall of the week preceding is said to have been very beneficial to the winter crops and sowings; harvesting of late rice is proceeding quickly with generally fair outturn. In Assam there has been no rain; harvesting of rice continues.

In British Burma crop prospects are good everywhere.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Dec. 6th)		
Bellary	3·07 (average of 8 stations.)	Standing crops generally good; harvest paddy, dry grains, and sugar-cane, outturn average.
Kurnool . . .	5·91 (average of 9 stations.)	Standing dry crops fair; harvest early dry crops, yield generally fair; cattle disease in parts.
Ganjam . . .	2·03 (average of 17 stations.)	Standing crops, paddy, dry grains, and sugarcane thriving; harvest paddy, outturn good; fever, small-pox, and cattle disease continue
Kistna	8·19 (average of 8 stations.)	Harvest paddy, yield average; fever and cattle disease prevail; water 8 feet over anicut.
Chingleput (Madras) .	8·32 (average of 11 stations).	Standing crops generally good; harvest paddy, outturn below average.
Coimbatore . . .	1·30 (average of 15 stations).	Standing crops generally good; harvest paddy and dry grains, outturn average; fever, small-pox, and cholera in parts.
Tanjore . . .	1·23 (average of 11 stations).	Standing crops generally good; harvest paddy and dry grains, yield below average.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*contd.*		
Madura	2·12 (average of 10 stations).	Standing crops generally fair ; cholera in parts.
Malabar	1·90 (average of 14 stations).	Standing crops good ; small-pox and cholera slight in parts.
Travancore	3·51	Standing crops good ; fever continues, *General Remarks.*—General prospects good.
Bengal—(Dec 5th)		
Chittagong	·36	Weather cool and cloudy at intervals; prospects of winter crops favourable; *amun* being harvested, average yield expected; prices stationary; public health generally good.
Dacca	*Nil*	Prospects of crops good; late rice being harvested.
24-Pergunnahs (Alipore)	*Nil*	Prospects of *amun* rice satisfactory; harvesting commenced; *rabi* crops doing well; public health good; cases of cholera and fever, as usual in this season, reported from several parts of district.
Moorshedabad	*Nil*	Harvesting of *amun* going on; *rabi* crops doing well; with the exception of fever in and about Rangamati, health of district generally good.
Rajshahye	·03	Winter crops promise fairly; cholera severe in some places.
Burdwan	·08	Late rice being harvested; cold-weather crops doing well; fever abating.
Rungpore	*Nil*	Weather seasonable; prospects of crops favourable; harvesting of *amun* commenced; prices of food-grains stationary; public health good.
Bhagalpur	*Nil*	Prospects of crops favourable; late rain very beneficial to *rabi* crops, except to some of the mustard in bloom; fever still prevalent in Muddehpoorah and Soopole sub-divisions; some small-pox and cholera reported from various places in the south of the Ganges.
Purneah	*Nil*	Cold-weather crops promise well; late rice being harvested, crop poor; fever prevalent.
Patna	*Nil*	Prospects of *rabi* crops good; reaping of paddy going on; public health good.
Durbhunga	*Nil*	*Rabi* crops doing well; paddy being cut in places; prices of food-grains falling slightly; public health generally good.
Hazaribagh	·10	Weather bright and cold; rice harvest nearly brought to an end; *rabi* prospects favourable; prices remain unchanged; health good.
Cuttack	*Nil*	Prospects of crops excellent; late rice being reaped; public health good. *General Remarks.*—The rain, which was reported last week, fell in most districts and was general in Behar; it has greatly benefited the winter crops and sowings, which are everywhere promising well; harvesting of late rice is in rapid progress; general outturn is expected to be only fair in many districts and good in some; in Purneah alone it is reported to be poor; fever still prevalent in many districts, and cholera in some.
N.-W. Provinces and Oudh—		
Benares (Dec. 5th)	·40	Prospects of *rabi* crop very favourable; prices rising; no sickness.
Allahabad („ 6th)	No rain	Crops doing well; health good; prices stationary.
Gorakhpur („ 4th)	Slight showers on two days.	Crops promising; health good; prices fair.
Jhansi („ „)	A slight shower in pargana Man.	*Rabi* crops coming up well; prices falling; small-pox in pargana Jhansi; no cattle disease.
Agra („ 5th)	No rain	*Rabi* sowings very nearly finished; irrigation going on; small-pox in one pargana; general health good; prices stationary.
Bareilly („ „)	No rain	Weather seasonable; prospects excellent; condition of cattle and people good.
Meerut („ „)	. . . .	Weather clear; rain wanted for unirrigated crops; cane-pressing commenced; small-pox appeared in Sirdhana; prices generally stationary, but wheat risen slightly in Ghaziabad and Sirdhana.
Kumaon („ „)	. . . .	Weather fine; rain required; somewhat smaller area sown for *rabi* owing to hardness of ground; *mahamari* in two villages; cattle disease still prevalent; prices stationary.
Lucknow („ „)	No rain	Prospects of crops fair, but rain is urgently required; public health good; want of fodder felt.
Partabgarh („ „)	. . . .	*Rabi* crops very promising, they have been considerably benefited by the slight rain and heavy dews of last week; dew still continues heavy; cases of cholera are still reported from all three tahsils.
Sitapur („ „)	No rain	Wind west during the week; prospects continue favourable; general health good; prices stationary.
Fyzabad („ „)	. . . .	Cloudy weather during three days in the week; weather seasonable; prospects good; irrigation going on; prices steady; health good.
Rae Bareli (Dec. 4th)	No rain	Weather seasonable; *rabi* crops germinated; cholera lingering; prices stationary.
Cawnpore („ 5th)	No rain	*Kharif* harvesting and *rabi* sowing completed; crops flourishing; health good; fever declining; prices nearly stationary.
Farukhabad („ „)	. . . .	Prospects fair; prices steady; weather seasonable; sky clear. *General Remarks.*—Slight rain in four districts; rain wanted in Lucknow, Kumaon, and part of the Meerut division; elsewhere prospects good; prices on the whole steady; slight cholera in two districts and small-pox in three; some cattle disease and *mahamari* in Kumaon.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Punjab—(Dec. 5th)		
Delhi	. . . .	Health and harvest prospects good; slight fall in prices.
Hissar	. . . .	Health good; prices stationary; *kharif* harvesting completed.
Umballa	. . . .	Health good; prices stationary; *rabi* sowings completed.
Jullundur	. . . .	Health good; prices steady; sugarcane-pressing in progress.
Amritsar	. . . .	Health good; prices fluctuating; *rabi* sowings nearly completed.
Lahore	. . . .	Fever slightly prevalent; harvest prospects good; prices stationary.
Ferozepore	. . . .	Health good; prices almost stationary; *rabi* sowings in progress; *kharif* being gathered in.
Sialkot	. . . .	Health good; prices stationary; *rabi* sowings completed.
Rawalpindi	. . . .	Seasonal fever prevailing; prices almost stationary; *rabi* sowings in progress; cattle disease in the Murree tahsil.
Peshawar	. . . .	Slight fever; prices falling; *rabi* sowings in progress.
Mooltan	. . . .	Health fair; harvest prospects good; prices fluctuating.
Dera-Ismail-Khan	. . . .	Fever abating, but the mortality continues high; harvest prospects good; prices steady. *General Remarks.*—The health of the province and the prospects of the crops are generally good; there has been no rain during the week.
Central Provinces—		
Nagpur (Dec. 6th)	. . . .	Weather clear; prospects of *rabi* good; public health good; prices slightly fallen.
Jubbulpore („ 5th)	. . . .	Weather clear and cool; health good; prices stationary.
Saugor („ 4th)	·65	Crops flourishing; health good; prices steady.
Seoni („ 5th)	. . . .	Weather clear and cold; *rabi* sowings going on; *kharif* crops suffered from late rains; fever prevalent; prices steady.
Hoshangabad („ „)	. . . .	Weather cool and clear; *rabi* crops doing well; fever prevalent; wheat 15 and rice 9 seers per rupee.
Raipur („ 2nd)	·31	Weather clear; reaping of *kharif* crops almost completed; *rabi* sowings completed; health good; fever abating; prices rising.
Sambalpur (Nov. 30th)	·07	Weather cloudy; prospects of crops good; fever prevalent; rice 56 seers per rupee.
Khandwa (Dec. 5th)	. . . .	Clear nights, mornings cold; *kharif* reaping nearly completed; *rabi* prospects good; small-pox reported; prices steady. *General Remarks.*—Weather clear and cold; slight rain in some districts, and where fallen, has been beneficial to *rabi* crops; *kharif* being harvested in places; fever abating, and health generally good; prices stationary.
British Burma—		
Akyab (Dec. 2nd)	1·48	Total rainfall 209·12 inches; public health in town good; five deaths from cholera in the district; cattle disease in one township; crop prospects good.
Rangoon	·47	Total rainfall 102·02 inches; five deaths from cholera, otherwise public health good; crops progressing.
Bassein	·04	Total rainfall 125·66 inches; two deaths from cholera in town, otherwise public health good; crop prospects generally good; reaping commenced, average outturn expected.
Prome	·15	Total rainfall 50·21 inches; one death from cholera in town, otherwise public health good; crop prospects fair.
Amherst (Moulmein)	*Nil*	Total rainfall 202·90 inches; 29 deaths from cholera reported from the districts; public health in town good; no cattle disease; crops healthy; reaping still going on.
Toungoo	0·76	Total rainfall 91·64 inches; 4 deaths from small-pox in the district; otherwise public health good. *General Remarks.*—A little cholera in several districts, otherwise public health good; crop prospects good everywhere.
Assam—		
Gauhati (Dec. 5th)	*Nil*	Weather seasonable; nights and mornings foggy; reaping of *sali* paddy commenced; public health good.
Sylhet („ 6th)	*Nil*	Reaping of *aman* and *sali* continues; cultivation for winter crops progressing well; cholera spreading in most sub-divisions.
Cachar („ „)	*Nil*	Weather still warm for the season; reaping of *sali* crop progressing; common rice 26¼ seers per rupee; 23 cases of cholera from Sadr and 3 from Haliakandi reported.
Dibrugarh („ „)	No rain	Weather cold; cutting of *sali dhan* commenced; public health good.
Mysore and Coorg—(Dec. 6th)		
Bangalore	·44	Crops in thriving condition.
Mysore	·67	
Mercara	·06	Rice harvest commenced; crop good; coffee-picking proceeding in South Coorg; light showers interfering with curing; crop rather short and a failure on the Sampaji ghât estate from previous want of timely blossom showers; prices of food grains show tendency to fall; fever prevalent in Nanjarajpatna taluk. *General Remarks.*—Rain in Chitaldrug 2·69, in Shimoga 1·72; rain has fallen copiously throughout the Mysore State, and has somewhat injured *ragi* crops which are being harvested; standing crops generally in good condition; prospects fair; public health satisfactory; no material change in prices.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Berar and Hyderabad—(Dec. 6th)		
Amraoti	. . . .	Cotton-picking continued; *juari* being cut; prospects of *rabi* good; prices of wheat 16, *juari* 26 seers per rupee.
Akola	·82	*Rabi* crops thriving, much benefited by recent rain; reaping of *kharif* crops commenced.
Hyderabad	1·0	*Rabi* and *tabi* crops prospering; fever and cattle disease prevail in two talukas; cholera declining at Hyderabad; prices, wheat 16, coarse rice $10\frac{3}{4}$, white *juari* $27\frac{1}{2}$, yellow *juari* 33, and *tur* 25 seers per hali sicca rupee.
Central India States—(Dec. 6th)		
Indore	·59	Health and prospects good.
Morar (Gwalior)	. . . .	Health and prospects good; weather seasonable.
Sutna	·02	Health and prospects good.
Neemuch	Few drops of rain last week.	Sowing *rabi* crops in progress; public health good.
Goona	. . . .	Crops good; health fair; wheat 22 seers per rupee.
Bhopal (Serohi)	·38	Weather cloudy; crops good; public health good.
Agar	. . . .	Health and prospects good.
Nowgong	41·	Health fair; prices stationary.
Manpur	. . . .	Weather clear and cold; yield of *jowari* estimated from 12 to 14 annas in the rupee; *rabi* crops doing well.
Rajputana—		
Abu (Dec. 6th)	. . . .	Clear, cold, seasonable weather; health good.
Sirohi („ 3rd)	. . . .	Tanks, wells, health, and prospects good; weather cloudy.
Marwar („ 1st)	. . . .	One month's water in tanks; wells resorted to; health good; *rabi* crops thriving; weather cloudy for three days, now clear; prices stationary; cold mild.
Meywar („ 2nd)	0·1	Wells, tanks, and health fair; prospects good; weather very cold; sky cloudy; slight shower on 29th.
Harowti („ „)	Deoli ·06 Touk *nil.*	Prospects favourable; health good; weather partially cloudy.
Jhallawar (Nov. 29th)	. . . .	Weather seasonable; health and prospects good.
Ajmere (Dec. 5th)	. . . .	Fever prevalent; health good.
Jeypore („ „)	. . . .	Prices steady; prospects favourable; health good.
Ulwar („ „)	. . . .	*Rabi* sowings coming up; prospects and health good.
Nepal—		
Khatmandú (Nov. 30th)	Drops of rain during week.	Prospects good; rain threatening for the last two days.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 12th DECEMBER 1882.

GENERAL REMARKS.—Rain in varying quantities has fallen in several districts of the Madras Presidency and in two districts of British Burma. A little rain has also fallen in parts of Mysore and Coorg. Elsewhere there has scarcely been any worth noting. In the preceding week the Konkan and the Southern Mahratta Country had good showers.

Agricultural prospects are good everywhere. The *rabi* crops are promising in all provinces, but need rain in Peshawar and a few districts of the North-Western Provinces and Oudh.

The rice harvest in Bengal, Assam, and Coorg is proceeding with prospect of a fair outturn. In the Madras Presidency and British Burma reaping has commenced.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Dec. 13th)		
Bellary	. . . .	Standing crops generally good; harvest paddy, dry grains, tobacco, and sugarcane, outturn average.
Kurnool	. . . .	Standing crops, later dry crops, generally fair but damaged by late rains in parts; harvest paddy and early dry crops, yield, paddy below average, the rest fair; cattle disease in parts.
Ganjam . . .	1·17 (average of 10 stations).	Standing crops, dry grains, and sugarcane thriving; harvest paddy and *ragi*, outturn about average; fever, small-pox, and cattle disease slight.
Kistna	3·11 (average of 4 stations).	Standing crops affected by rain and grubs in parts; harvest paddy and dry crops, yield below average; fever and cattle disease prevail; water 3 feet over anicut.
Chingleput (*Madras*) .	·41 (average of 3 stations).	Standing crops generally good, but in some places damaged by late rains; harvest paddy, outturn below average; cattle disease in parts.
Coimbatore . . .	·31 (average of 11 stations).	Standing crops generally good; harvest paddy and dry grains, outturn average; fever, small-pox, cholera and cattle disease in parts.
Tanjore . . .	·88 (average of 12 stations).	Standing crops generally good; harvest paddy and dry grains, yield below average.
Madura	1·23 (average of 6 stations).	Standing crops fair, except in parts; cholera in parts.
Malabar . . .	·69 (average of 4 stations).	Standing crops paddy, second crop good; small-pox, fever, and cholera slight in parts.
Travancore . . .	2·16 . .	Fever continues. *General Remarks.*—No rain in Bellary and Kurnool; general prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—(Dec. 6th)		
Kurrachee		River at Kotri on 28th 5 feet 2 inches, same level as last year on same date; fever generally prevalent; slight cattle disease in three talukas; *rabi* sowings in progress; wheat, red rice, and *bajri* in Karachi 25, 36 and 30, in Kotri 30 and 50, in Shahbandar 20, 48, and 48, and in Tatta 24, 32, and 44 lbs. per rupee respectively.
Hyderabad		Threshing of *kharif* crops still continues; cotton-picking in progress; *rabi* crops flourishing; cold seasonable; small-pox continues in Hyderabad and Naushahro; cattle disease in two talukas and fever general throughout; wheat 25, *bajri* 41, *jowari* 46, red rice 32, and white rice 22 lbs. per rupee.
Ahmedabad		*Rabi* sowings nearly completed; standing crops healthy; fever in Dholka, Viramgam and Parantej; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda		Harvesting of *kharif* crops nearly completed in the Amreli taluka *rabi* plants somewhat injured by cloudy weather; sugarcane-pressing in progress in the Nowsari division; cholera decreasing in the Amreli taluka; cattle disease still continues in Sidpur and Kari talukas; *bajri* 32¾, and rice common 24½ lbs., per rupee.
Surat		Standing crops healthy; *jowari* 39, and *nagli* 59 lbs. per rupee.
Nasik		Locusts disappeared; *rabi* crops look splendid owing to late rain wheat 25½, *bajri* 36, and rice 23½ lbs. per rupee.
Colaba (Bombay)		Abnormal temperature 1° warm on 29th and 2nd; *nil* on 30th and 1st; suddenly fell to 3° cool on 3rd, and then rose to 2° cool on 4th and 5th; vapour in air in excess of normal till the 1st and afterwards *normal*; *wind normal*; distant lightning on 29th.
Poona		Late rain has benefited *rabi* crops which are thriving; weather clear; *bajri* 45 and *jowari* 56 lbs. per rupee; in Poona, *bajri* 39 and *jowari* 48 lbs. per rupee.
Ahmednagar	Nagar . 1·59 Parner . 1·64 Rahuri . 1·52 Sangamnar 1·09 Shrigonda ·52 Karjat . ·51 Jamkhed ·71 Sheogaon ·15 Newasa ·14 Akola . ·58 Kopargaon ·26	*Rabi* crops good; *bajri*, maximum 60 lbs. per rupee in Shrigonda, minimum 41 lbs. per rupee in Sheogaon; *jowari*, maximum 75 lbs. in Jamkhed, minimum 44 lbs. per rupee in Akola.
Sholapore	·97 minimum 1·12 in Barsi; maximum 2·26 in Pandharpur.	Total rainfall 40·57; prospects good; *jowari* 69 lbs. 16 tolas, and *bajri* 53 lbs. 32 tolas per rupee.
Dharwar	Heavy rain throughout the district.	Early crops in four, and late crops in one, talukas injured by excessive rain; cholera continues in Navalgund and Ron; 19 deaths in Navalgund, and 9 in Ron; slight fever and cattle disease in three talukas; rice, minimum 26 lbs., and *jowari* 49 lbs. per rupee.
Kanara	Kumpta ·32 Sirsi ·50 Kalial 1·02	Rice harvest completed in four talukas; preparing grounds for second crop; slight fever and cattle disease in two talukas; common rice in Karwar 11 seers per rupee, in district average 15½ seers per rupee; weather fair and cold.
Rajkot		Weather cold; general health fair; cholera at Ranawad, Und, and Porbandar; it has re-appeared in Navanagar and Dhrol; *bajri* 29 lbs. and *jowari* 38 lbs. per rupee. *General Remarks.*—Harvesting of *kharif* and sowing of *rabi* nearly completed everywhere; *rabi* improved by rain in Konkan and Southern Maratha Country; injured in Dharwar; prospects generally good; fever and cattle disease in several districts; slight cholera and small-pox in a few.
Bombay—(Dec. 13th)		
Kurrachee		Weather sultry; river on 9th, 4½ feet against 4 feet 5 inches last year; 2 cases small-pox in Karachi; first case imported from Mekran by a woman; 2 cases in Kotri also; fever generally prevalent; cattle disease in five talukas; keon worm has done some damage in Sehwan taluka; wheat, red rice, and *bajri* in Karachi 25, 13, and 39, in Dadu 36, 40, and 52 lbs., in Ghorabari 20, 44, and 44 lbs.; and in Mirpur Batoro 27, 40, and 42 lbs. per rupee respectively.
Hyderabad		Rice crops have suffered from rats in Guni; *rabi* crops flourishing; weather mild; clouds gathering; small-pox in Hyderabad, Naushahro, Moro and Kandiaro; cattle-disease in Badin and Mirpur; wheat 25, *bajri* 41, *jowari* 46, red rice 32 and white rice 22 lbs. per rupee.
Ahmedabad		Standing crops healthy; fever in Dholka; wheat 27½ and *bajri* 32 lbs. per rupee.
Baroda		Reaping of *kharif* and sowing of *rabi* continue; *bajri* 31½ and common rice 25¾ per rupee.
Surat		Crops healthy; reaping commenced in some talukas; *jowari* 36 and *nagli* 60 lbs. per rupee.
Nasik		Weather cold, favourable to *rabi* crops; fever in many talukas; wheat 25½, *bajri* 36 and rice 23½, lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Colaba (Bombay).		Abnormal temperature, 2° cool on 6th, 11th and 12th; 1° warm on 9th; *nil* on all other days; vapour in air in defect of normal on 7th and 8th, in excess of normal on 10th; normal on all other days; wind normal.
Poona		*Rabi* thriving; *bajri* 44 and *jowari* 55 lbs. per rupee; in Poona *bajri* 37 and *jowari* 48 lbs. per rupee.
Ahmednagar	*Nil*	*Rabi* crops good; cattle-disease at Chas in Nagar taluka; *bajri*, maximum 60 lbs. in Shrigonda, minimum 42 lbs. per rupee in Akola; *jowari*, maximum 72 lbs. per rupee in Shrigonda, minimum 51 lbs. in Kopargaon
Sholapore		Crops good; *jowari* 71 lbs. 11 tolas, and *bajri* 55 lbs. 22 tolas, per rupee.
Dharwar	*Nil*	Early crops being harvested; cotton and other late crops good; cholera has appeared in a village of Gadag, abated in Navalgand and continues in Ron; slight fever and cattle-disease in three talukas; rice, minimum 25 lbs. and *jowari* 52 lbs. per rupee.
Kanara		Harvest completed on coast and two talukas above ghat; preparing ground for second crop; fever subsiding; cattle-disease in two talukas; common rice, in Karwar 12½ seers per rupee; in district average 15 seers per rupee; weather cold and fair.
Rajkot		Weather cold; general health good, cholera continues in Navanagar and its two villages, and slightly in Dhrol; *bajri* 29 and *jowari* 34 lbs. per rupee. *General Remarks.*—No rain; weather cold; *rabi* crops doing well; fever and cattle disease in a few districts; slight cholera in a few places.
Bengal—(Dec. 12th)		
Chittagong	·14	Weather cloudy in the beginning of week, since fair and seasonable; prospects of crops good; harvesting of *amun* continues; cattle disease in Chakaria; public health generally good.
Dacca	*Nil*	Pulses being sown; harvesting of *amun* rice proceeding, outturn good.
24-Pergunnahs (Alipore)	*Nil*	Prospects of late rice crop continue satisfactory, yield estimated at from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; fever and cholera somewhat prevalent all over the district.
Moorshedabad	*Nil*	Prospects of standing crops favourable; cutting of *amun* paddy continues; fever prevails in a mild form here and there.
Rajshahye	*Nil*	Prospects of all crops seem good; cholera in several villages; fever prevails as usual.
Burdwan	*Nil*	Harvesting of *amun* continues, prospects good; general health fair; occasional cases of fever and cholera reported.
Rungpore	*Nil*	Weather cloudy and dry; *amun being harvested in some places*; prospects of winter crops favourable; transplanting of tobacco commenced; public health good.
Bhagalpur	*Nil*	Prospects of crops favourable.
Purneah	*Nil*	Cold-weather crops promise well; late rice nearly all harvested, outturn moderate; fever abating.
Patna	*Nil*	Prospects of *rabi* crops good; reaping of paddy continues; mustard crop flowering; public health good.
Durbhunga	*Nil*	Harvesting of rice crop in progress; *rabi* and tobacco crops promising; prices stationary; public health fair.
Hazaribagh	*Nil*	Weather clear and cold; paddy harvest over; prospects of cold-weather crops favourable; public health generally good.
Cuttack	*Nil*	Prospects of late rice and *rabi* crops excellent; late rice being reaped; public health good; cattle disease still reported. *General Remarks.*—Slight rain fell in Chittagong during the week, but none in any other reporting district; harvesting of *amun* proceeding, generally with prospect of a fair outturn; *rabi* and sugarcane crops are generally reported on very favourably; prevalence of fever, though decreasing in some parts, still reported from several districts, and of cholera from some; there is still a little small-pox in Pooree, Singbhoom, and Manbhoom.
N.-W. Provinces and Oudh—		
Benares (Dec. 12th)	No rain	*Rabi* crops flourishing; prices falling; no sickness among men or cattle.
Allahabad („ 13th)	No rain	Crops doing well; prices steady.
Gorakhpur („ 11th)		Weather clear; *aghani* rice being reaped; prospects of *rabi* crop good; health fair; prices stationary.
Jhansi („ 12th)		*Kharif* harvesting over; *rabi* crops promising; prices stationary; small-pox in parganas Jhansi and Garotha.
Agra („ „)	No rain	Weather cloudy off and on; *rabi* sowings completed; well irrigation continues; small-pox in two parganas; general health good; prices stationary.
Bareilly („ „)	No rain	Weather seasonable; crops good; condition of cattle and people very fair, some fever still prevalent.
Meerut („ „)		Weather damp and cloudy; prospects of rain which is needed; small-pox continues; prices stationary; crops promising.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Kumaon (Dec. 12th)	No rain	General health good; that form of typhus called *goliarog* is not spreading, and is on the decrease; cattle-disease continues; prices unchanged.
Lucknow („ „)	. . . .	Prospects continue favourable, but rain is urgently required; general health good; want of fodder felt.
Partabgarh („ „)	. . . .	*Rabi* and sugarcane crops promising; a few cases of cholera are still reported.
Sitapur („ „)	. . . .	Prospects still favourable, but rain wanted; small-pox reported in tahsil Sitapur, otherwise health good; prices stationary.
Fyzabad („ „)	No rain	Irrigation going on; prospects good; prices steady; ague and fever in part of district
Rae Bareli („ 11th)	. . . .	Weather seasonable; in irrigated lands *rabi* crops coming up well; cholera declining; cattle-disease in tahsil Rae Bareli; prices stationary.
Cawnpore („ 12th)	No rain	*Rabi* doing well; poppy being sown; general health good; prices nearly stationary.
Farukhabad („ „)	. . . .	Prospects fair; prices steady; weather seasonable; sky clear; rain needed.
		General Remarks.—Weather clear, except at Agra, Meerut, and Saharanpur; rain needed in Lucknow, Sitapur, Farukhabad, Aligarh, Meerut, and Saharanpur; some fever and small-pox, but general health and prospects favourable; prices generally stationary.
Punjab—(Dec. 12th)		
Delhi . . .	. . . .	Health and harvest prospects good; prices fluctuating.
Hissar . . .	. . . .	*Burani rabi* crops require rain; prices stationary; sporadic small-pox in Rohtak; health otherwise good.
Umballa . . .	. . . .	Rain wanted; *rabi* sowing completed; prices stationary; health good.
Jullundur . . .	. . . .	Prices stationary; health good; sugarcane-pressing in progress.
Amritsar . . .	. . . .	*Rabi* sowings nearly completed; prices stationary; health good.
Lahore . . .	. . . .	Prospects of crops good; prices fluctuating; health good.
Ferozepore . . .	. . . .	Kharif crop gathered; *rabi* sowings in progress; prices falling; health good.
Sialkot . . .	. . . .	Prospects of crops good; rain wanted; prices stationary; health good.
Rawalpindi . . .	. . . .	*Rabi* sowings in progress; cattle disease in the Murree tahsil; slight fever throughout the district; prices slightly rising.
Peshawar . . .	. . . .	Rain wanted; prices stationary; slight fever still prevalent.
Mooltan . . .	. . . .	Health fair; crops good; prices fluctuating.
Dera Ismail Khan . .	. . . .	Fever abating; mortality still high; prospects good; prices steady.
		General Remarks.—The prospects of the crops are generally good; slight fever prevails in two or three districts, and sporadic small-pox is reported from Rohtak; there has been no rain during the week.
Central Provinces—		
Raipur (Dec. 9th)	. . . .	Weather clear and cool; *rabi* crop promises well; fever abating; health generally good; prices fluctuating.
Jubbulpore („ 12th)	. . . .	Weather clear and cool; *rabi* crops thriving; prospects and health good; prices steady.
Saugor („ 11th)	. . . .	Crops excellent; health fair; prices steady.
Seoni („ 12th)	. . . .	Weather clear and cool; *rabi* crop flourishing; threshing of rice commenced; fever prevalent; prices steady.
Hoshangabad („ „)	. . . .	Weather seasonable; *rabi* crop promises well; fever prevalent; few cases of small-pox; wheat 16 seers per rupee.
Nagpur („ 13th)	. . . .	Nights cool with heavy dew; prospects of crops and health good; prices steady.
Sambalpur („ 7th)	. . . .	Weather clear and cool; prospects of crops good; fever still prevalent; rice 56 seers per rupee.
Khandwa („ 12th)	. . . .	Days warm, nights cool; *kharif* reaping nearly complete; *rabi* prospects good; few cases of small-pox; prices stationary.
		General Remarks.—Weather clear and cool; some rain; crops are being harvested; *rabi* crops are in good condition; fever still reported from few districts but is on the decline; prices remain steady.
British Burma— (Dec. 9th)		
Akyab . . .	1·05	Total rainfall 204·17 inches; public health in town good; twenty-one deaths from cholera and six from small-pox reported from district; slight cattle disease in one township; crop prospects good.
Rangoon . . .	*Nil*	Total rainfall 102·02 inches; two deaths from cholera and one from small-pox; otherwise public health good; crops progressing.
Bassein . . .	0·17	Total rainfall 125·83 inches; eight deaths from cholera in town and two in district; thirty-two deaths from cattle disease in one township; prospects of crops generally good.
Prome . . .	*Nil*	Total rainfall 50·21 inches; public health and general health of cattle good; crop prospects fair; reaping well advanced.
Amherst (Moulmein) .	*Nil*	Total rainfall 202·90 inches; public health both in Moulmein and district good; eighteen deaths of cattle in one township; prospects of crops good; reaping progressing.
Toungoo . . .	*Nil*	Total rainfall 91·64 inches; five deaths from cholera reported from district; otherwise public health good.
		General Remarks.—Public health good; prospects of crops favourable; reaping commenced.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Assam— (Dec. 13th)		
Gauhati . . .	*Nil*	Weather seasonable; nights and mornings foggy; reaping of *sali* paddy in progress; public health good.
Sylhet	*Nil*	Paddy harvest continues; no information about outturn yet; cholera in epidemic form in many places.
Cachar . . .	0·4	Weather cloudy and still unseasonably warm; reaping of *sali* crops continues; common rice 26¾ seers per rupee; thirty-two deaths from cholera in and about Silchar reported.
Dibrugarh . . .	*Nil*	Weather cold; *sali dhan* being harvested; public health good.
Mysore and Coorg— (Dec. 13th)		
Bangalore . . .	. . . .	Crops in good condition; harvesting of *ragi* almost completed; prospects favourable.
Mysore . . .	·06	A good rice crop is being reaped; coffee is being picked and pulped outturn deficient; demand dull; prices of food-grains and of cardamoms falling; public health good, save in Nanjarajapatna taluk, where small-pox and fever prevail.
Mercara . . .	·01	*General Remarks.*—The crops throughout province are in a thriving condition; cultivation of *vaisakh* paddy progressing favourably; propects good; fever and murrain prevalent in parts; general health good.
Berar and Hyderabad— (Dec. 13th)		
Amraoti	. . . .	Cotton-picking continued; *kharif* crops being harvested; *rabi* crops progressing favourably; wheat 16 and *jowari* 26 seers per rupee.
Akola	. . . .	Prospects of crops favourable; *kharif* reaping progressing.
Hyderabad . . .	. . . .	*Tabi* crops in good condition; *abi* crops continue to be reaped; no fever or cattle disease; cholera still prevalent; prices, wheat 16½, coarse rice 11, white *juari* 27, yellow *juari* 34½, and *tur* 23¾, seers per hali sicca rupee.
Central India States— (Dec. 13th)		
Indore	. . . .	Weather seasonable; health and prospects good.
Morar (Gwalior) . .	. . . .	Health and prospects good; weather seasonable.
Sutna	. . . .	Health and prospects good.
Neemuch . . .	. . . .	*Rabi* sowings in progress; public health good.
Goona	. . . .	Crops good; health fair; wheat 22 seers and 8 chittacks per rupee.
Bhopal	. . . .	Weather cool; crops good; public health good.
Agar	. . . .	Health and prospects good
Nowgong . . .	. . . .	The *kharif* harvest is being reaped; health fair; prices stationary.
Manpur . . .	. . . .	Weather clear and cool; *rabi* crops thriving; sowing of opium continues; prices stationary.
Rajputana—		
Abu (Dec. 13th)	. . . .	Weather seasonable but somewhat cloudy.
Sirohi („ 10th)	. . . .	Tanks, wells, and health good; crop prospects fair.
Meywar („ 9th)	. . . .	Wells and tanks fair; health and crop prospects good.
Harowti („ 11th)	Kotah . ·05 Shahpura . ·64	Weather seasonable; health and prospects good.
Jhallawar („ 6th)	. . . .	Health and prospects continue good.
Ajmere („ 12th)	. . . .	Health good; *rabi* sowings completed.
Jeypore („ „)	. . . .	Prices steady; prospects favourable; health good.
Ulwar („ „)	. . . .	Crop prospects and health good; prices steady.
Nepal—		
Khatmandú (Dec. 7th)	·10	Prospects good; weather much warmer than in the previous week; occasional cloudy days, but for the past two days bright and clear.

E. C. BUCK,
Secretary to the Government of India.

Deduct excess discharge . . 233
3,222

Owing to the very low supply which was run and to the necessity for keeping the water passed into the Lower Ganges Canal to a minimum, the discharge tables are not reliable. The Lower Canal was closed after the 2nd of the month.

Executive Engineer, Meerut Division, reports that there was a general demand only from 7th to 14th, and that during the rest of the month there was a demand only for rice.

Executive Engineer, Aligarh Division, reports that from the 20th September a demand sprang up for water for cotton and rabi poles. A fair supply was obtained by the 25th, from which date irrigation has been going on.

Executive Engineer, Eastern Jumna Canal, reports that the canal was closed from the 1st to the 6th and again from the 16th to the 22nd, both dates inclusive.

Executive Engineer, Agra Canal, reports that the canal was closed for most of the month.

Executive Engineer, Rohilkhand Canal, reports that there was no demand for water except on the Dhora river.

Allahabad,
The 6th November 1882.

G. H. D. WALKER,
Asst. Secy. to Govt., N.-W. P. and Oudh, P. W. D., Irrigation Branch.

The Reports on the Administration of the Jails throughout British India for the year 1881.

RESOLUTION.

IN the despatch read in the preamble Her Majesty's Secretary of State for India suggested that it would tend greatly to the due supervision of the working of the Jail Departments in India if a review of the statistics for the various Provinces were prepared annually by the Government of India. In accordance with this suggestion the Governor General in Council proceeds to review the jail statistics of British India for the year 1881. It may be noted that the jail reports for the several Provinces with the orders of Local Governments and Administrations thereon were received by the Government of India on the dates specified in the margin. In some cases the local reports were not received until very long after the close of the year to which they relate, and the Governor General in Council trusts that arrangements will be made whereby the reports with the orders of the Local Governments or Administrations thereon will in future reach the Government of India not later than the 1st June, the date prescribed by paragraph 3 of Home Department Circular letter Nos. 14—1051 to 1060, dated 25th July 1882.

Hyderabad Assigned Districts, 19th June 1882.

RESULTS IN BRITISH INDIA AS A WHOLE.

2. The statistics* appended to this Resolution, which have been compiled from the local reports, show that at the close of the year 1881 there were 32 central jails, 206 district jails, and 238 subsidiary jails or lock-ups throughout British India. The prisoners of all classes received into these jails and lock-ups during the year 1881 aggregated 295,046, being a decrease of 21,286, or 6·7 per cent. as compared with the number received during the previous year. The total daily average number of prisoners throughout British India was 91,218, or 6·81 per cent. less than in the previous year when it amounted to 97,880. The number of prisoners who remained in jail at the close of the year was 86,598, of whom 82,104 were convicted prisoners, 3,614 under-trial, 822† civil prisoners, and 58 security, insane and State prisoners. Of the convicted prisoners who were

* Statements 1 to 4. Distribution of prisoners of all classes: classification of convicts according to religion, age, sex, previous occupation, length of sentence and nature of imprisonment: and number of convicts who had been previously convicted.

† This number is exclusive of 182 civil prisoners in the Bombay Presidency as they are not shown in the Statement headed "General Summary" appended to the Provincial Report.

confined in jail on the 31st December 1881, the majority, 48,671, or 59·49 per cent., were classed as Hindus, 24,204, or 29·58 per cent., as Muhammadans, and the remainder 8,945, or 10·93 per cent., as belonging to other religions. A comparison of the average daily strength of the convicts and of the admissions in each Province during the year with the results of the census taken in the year 1881, is made in paragraph 8 of this Resolution. The general result for the whole of British India is that the average daily strength of the convicts during the year 1881 represented a proportion to every 10,000 of the population of 4·3, and that the number of convicts admitted during the year showed a proportion of 6·8 to every 10,000 of the general population.

3. Of the total number of convicts in jail at the close of the year 1881, 78,192, or 95·57 per cent., were males, and 3,628, or 4·43 per cent. females. The distribution of these convicts according to age is shewn by the following figures :—

Under 16 years of age ...	...	862, or 1·05 per cent.
Between 16 and 40 years of age	...	63,085, or 77·10 „
Between 40 and 60 years of age	...	15,129, or 18·86 „
Above 60 years of age ...	...	2,444, or 2·99 „

The previous occupations of the convicts were classified thus :—

Persons employed under Government or a Municipal or other local authority	...	2,793, or 3·57 per cent.
Persons engaged in agriculture and with animals	...	43,889, or 56·13 „
All other classes	...	31,510, or 40·3 „

The distribution of the convicts according to length of sentence is thus shewn :—

Not exceeding 1 year ...	...	31,317, or 38·33 per cent.
Above 1 year and not exceeding 5 years ...		36,514, or 44·68 „
Above 5 years and not exceeding 10 years		9,210, or 11·27 „
Exceeding 10 years ...	...	1,063, or 1·3 „
Transported beyond the seas	...	3,612, or 4·42 „

Of the total number of convicts sentenced to transportation beyond the seas, 1,672 or 46·29 per cent., were sentenced to transportation for various terms of years, and the remainder 1,940 or 53·71 per cent., to transportation for life. Lastly, of the convicts in jail at the close of the year 1881, 72,711, or 99·06 per cent., were working out sentences of rigorous imprisonment, and 687, or less than one per cent., had been sentenced to simple imprisonment.* The general results stated above may be summarized thus : Of the total number of convicts confined in the jails of British India on the 31st December 1881, the majority were Hindus, the large bulk were between 16 and 40 years of age; the class of the population from which the convicts were drawn was mainly the agricultural class; the large majority of sentences of imprisonment inflicted were for periods not exceeding 5 years, and the nature of imprisonment generally inflicted was rigorous, the comparative number of sentences of simple imprisonment being very small. These results are very much what might have been expected.

4. The number of convicts in jail during the year 1881, who had been previously convicted, was 39,628, as compared with 41,971 in the previous year, the ratio to the total number of convicts being 17·7 against 17·4 in the year 1880. Of the number of convicts, 11,835, who came under the rules for remission of sentences, 5,126, or 43·31

* These figures are exclusive of the Central Provinces, British Burma and Coorg, the reports for which Provinces do not show the distribution of the convicts according to the nature of imprisonment to which they were sentenced.

per cent., gained remissions, and 6,709, or 56·69 per cent., failed to gain any remission of sentences. The total number of juvenile prisoners (*i.e.*, prisoners under 16 years of age) imprisoned during the year 1881 was 2,703 against 3,062 in the previous year, while the number of juvenile prisoners who had been previously convicted was 672, or 24·86 per cent., as compared with 680, or 22·2 per cent., during the year 1880.

5. The manner in which the convicts were employed is shewn in Statement No. 5. The average number of effectives was 71,495 against 76,840 in the previous year, and the manner in which they were employed during the two years is thus shewn :—

Statement 5—Employment of convicts.

	1880.	1881.
On unremunerative labour	2,081	**1,299**
As prison officers	3,579	**3,534**
As prison servants	9,589	**8,954**
Building and repairing jail	15,085	**12,768**
On jail garden	5,484	**5,105**
On manufactures	34,733	**32,804**
Extramurally	3,610	**3,378**

The ratio of convicts employed during the year 1881 as prison officers, as prison servants, and on manufactures to the average number of effectives was 4·9, 12·5 and 45·9, respectively, as compared with 4·6, 12·7 and 45·2, in the previous year. For all practical purposes these ratios may therefore be said to have been identical during the two years. The daily average number of civil prisoners was 1,019 against 975 in the previous year, of whom 50 and 44 respectively were females.

6. Particulars regarding the behaviour of the convicts in jail are given in Statement No. 6. In addition to 327 criminal offences which were judicially tried and punished by the criminal courts, 76,098* breaches of jail rules occurred which were punished departmentally. The punishments inflicted for these breaches of jail rules consisted of solitary confinement, reduced diet, solitary confinement with reduced diet, corporal punishment, and certain minor punishments which are not separately shewn in the reports. Under the head of solitary confinement there was a small increase, as compared with the previous year, in the number of cases in which resort was had to this form of punishment—from 4,022 to 4,050, and in the case of solitary confinement with reduced diet from 7,190 to 7,651. The punishment of reduced diet was resorted to in 15,201 cases against 23,179 in the previous year, and "other" punishments fell from 41,813 to 40,229. As regards corporal punishment, which is being separately dealt with by the Government of India, it is sufficient to notice here that the number of cases in which resort was had to this form of punishment shows a very considerable falling off as compared with the previous year, from 17,057 to 8,920, or by 47·7 per cent. The general ratio of the total punishments of all kinds to the average number of convicts decreased from 101·2 in the previous year to 88·8 during the year 1881.

Statement 6—Offences and punishments of convicts.

7. The total expenditure incurred in guarding and maintaining prisoners of all classes in the jails of British India during the year 1881 (exclusive of the cost of building new jails, and of additions,

Statement No. 7—Cost of guarding and maintenance.

* Smoking or having possession of forbidden articles 8,297
Offences relating to work 39,159
Other offences against prison discipline 28,642

alterations, or repairs of existing jails) was Rs. 47,99,672 as compared with Rs. 53,86,718 during the previous year. The total gross cost per head of average strength aggregated Rs. 64-15-11 against Rs. 66-11-10 in the year 1880, and was thus distributed:—

	1880.			1881.		
	Rs.	A.	P.	Rs.	A.	P.
Cost of rations per head of average strength ...	29	10	1	**26**	**6**	**6**
Do. establishment „ „ ...	18	7	5	**19**	**5**	**3**
Do. police guard „ „ ...	8	9	7	**8**	**14**	**9**
Do. hospital charges „ „ ...	1	15	1	**1**	**12**	**9**
Do. clothing „ „ ...	3	1	10	**3**	**9**	**7**
Do. contingencies „ „ ...	4	15	10	**4**	**15**	**1**
Total ...	66	11	10	**64**	**15**	**11**

Statement No. 8—Net cost of prisoners.

The cash receipts from manufactures during the year 1881 aggregated Rs. 36,07,910, as compared with Rs. 36,03,977 during the previous year, and the net cost to Government per head of all convicts amounted to Rs. 40-10-0 against Rs. 43-5-0 during theyear 1880.

Statement No. 9—Sickness and mortality amongst prisoners.

8. As compared with recent years the death-rate amongst the prisoners of Indian jails during 1880 and 1881 shows a very marked improvement. During the three years, 1877 to 1879, the mortality was exceptionally high—the maximum ratio, 8·1 per cent., having been reached in 1878. This was in great part due to the famine which ruled in Southern India during 1877, and to the widespread privation and want which prevailed in Northern India also during the succeeding two years. In 1880 the death-rate fell to 4·8 per cent. or to nearly one-half that of 1878, and in 1881 it fell still further, viz., to 4·4. The average number of daily sick and of admissions into hospital have not, however, shown such a marked improvement during recent years, but it will be more instructive to examine these points when the results in the several Provinces come to be considered. The following comparative tabular statement has been prepared in the Sanitary Commissioner's Office, and will suffice to indicate generally the principal points as regards the sickness and mortality amongst prisoners of the country taken as a whole during the last five years.

Jails of British India.

Year.	Ratio per 100.				
	Admissions into hospital.	Daily sick.	Deaths from		
			Cholera.	Dysentery and Diarrhœa.	All causes.
1877	101	3	·7	2·5	6·1
1878	119	4	·5	3·2	8·1
1879	129	4	·4	2·7	7·3
1880	121	4	·07	1·9	4·8
1881	**121**	**4**	**·3**	**1·6**	**4·4**

Accommodation and dietaries of prisoners.

It is satisfactory to note that considerable progress has been made in all Provinces in providing sufficient and suitable accommodation for the prisoners and in various other ways promoting their general well-being. With regard to some Provinces, however, it has been found necessary to draw special attention to the evidence of overcrowding which was furnished in the local reports, and although in most instances mention was made that accommodation for the surplus population was provided by resorting to worksheds and verandahs, nevertheless, such accommodation, in the opinion of the Governor General in Council, must always be deemed highly unsatisfactory, and local authorities are urged to do all in their power to discourage jail officials from depending on such means for relieving overcrowding, as any reduction of the space allowed is attended with the gravest risk, which cannot be removed by the use of workshops, &c., as dormitories. The dietaries also of the prisoners have received careful consideration during the year, and the recent orders* of the Government on this subject have already borne fruit. Several of the suggestions contained in the able memoranda by the Sanitary Commissioner and by Surgeon-Major Lewis, which were circulated with the Government orders, have already been adopted by many jail officials. The experience of the year 1881 as well as of 1880 fully confirms the opinion expressed by the Government of India that the excessive sickness and mortality of the immediately preceding years were not due to insufficient food.

Results in the several Provinces.

Convicts to general population.

9. The statement given in the margin† shows for the several Provinces the proportion to every 10,000 of the population (as ascertained by the last census) (1) of the average daily strength of the convicts, and (2) of the number of convicts admitted during the year 1881. This statement shows that the above proportion calculated either upon the average daily strength, or upon the total number of convicts admitted during the year, was far larger in the case of British Burma than elsewhere. The figures show that the several Provinces stand in the following order as regards the criminality of the population if the proportion to every 10,000 of the population is calculated (a) on the daily average strength of convicts throughout the year and (b) on the total number of convicts admitted during the year:—

Province.	Population	Average daily strength of convicts.	Number of convicts admitted during the year.	Proportion to every 10,000 of population	
				(a) of daily average strength.	(b) of number admitted during the year.
Madras ...	31,170,631	10,250	10,607	3·3	3·4
Bombay ...	16,454,414	9,410	18,025	5·7	10·9
Bengal ...	69,536,861	15,506	31,465	2·2	4·5
North-Western Provinces and Oudh.	44,107,869	26,477	38,776	6·0	8·8
Punjab ...	18,850,437	13,238	19,462	7·02	10·3
Central Provinces.	9,888,791	3,915	6,672	3·9	6·8
British Burma	3,736,771	4,550	7,270	12·2	19·5
Assam ...	4,981,426	1,356	3,427	2·8	7·02
Coorg ...	178,902	78	148	4·4	8·3
Hyderabad Assigned Districts.	2,872,873	1,239	1,698	4·6	6·3
Total ...	201,428,175	86,019	137,580	4·3	6·8

* Home Department Resolution No. 3—114-24, dated the 3rd February 1882.

Broadly speaking, it may be said that the figures show the criminality of the population in British Burma, in Upper India, and in the Bombay Presidency to be relatively greater than in Southern India and in the Lower Provinces of Bengal where the minimum amount of criminality is reached. These results are probably in accordance with the facts.

Total Jail population in the year 1881 as compared with 1880.

10. The first of the tabular statements appended to this Resolution gives a general summary of the distribution of prisoners of all classes in the jails of British India during the year 1881. There was a general and uniform decrease in the number of prisoners admitted into jail as compared with the previous year, the Provinces in which the falling off was most marked being the following :—

Province.	Decrease.	Percentage.
Bombay	6,376	21·7
Bengal	4,652	5·6
Madras	3,163	16·1
Central Provinces	2,742	18·8
Hyderabad Assigned Districts ...	1,500	35·5

Similarly the daily average jail population decreased in the case of all Provinces except Assam (where there was a small increase of 31 or 2·12 per cent., which is attributed to a slightly larger number of long-term sentences), the proportionate decrease as compared with the previous year being greatest in Madras, Bombay and the Central Provinces, where it represented a percentage of 13·22, 13·41 and 14·94 respectively. The total number of prisoners in jail during the years 1880, 1881 and the daily average in the larger Presidencies or Provinces was—

Provinces.	Total number of prisoners.		Decrease.	Percentage of decrease.	Daily average number.		Decrease.	Percentage of decrease.
	1880.	1881.			1880.	1881.		
Madras	32,049	**27,986**	4,063	12·67	12,202	**10,589**	1,613	13·22
Bombay	41,738	**33,524**	8,214	19·67	11,371	**9,846**	1,525	13·41
Bengal	100,711	**95,009**	5,702	5·66	18,001	**16,746**	1,255	6·97
North-Western Provinces and Oudh	125,259	**122,784**	2,475	1·97	29,175	**28,067**	1,108	3·18
Punjab	65,189	**63,424**	1,755	2·69	14,673	**14,357**	316	2·15

The jail population of Northern India and the Lower Provinces was thus very considerably larger than that of Madras and Bombay, although the relative decrease in the numbers as compared with the previous year was greater in the case of the latter than in the former. The general decrease in the jail population during the year 1881 is probably to be attributed to favourable seasons and the generally prosperous condition of the people.

Convicts according to religion.

11. The following statement shows the distribution of the jail population (*i.e.*, of the convicts in jail on the 31st December 1881), according to religion as compared with the results of the census of

1881, under the general heads of Hindus, Muhammadans, and other classes :—

Province.	Population according to the Census of 1881.			Total number of convicts in Jail on December 31st, 1881.			Percentage of population, jail and free, to total population.			Percentage of jail population on December 31st, 1881, to total jail population on that day.		
	Hindus.	Muhammadans.	Others.	Hindus.	Muhammadans.	Others.	Hindus.	Muhammadans.	Others.	Hindus.	Muhammadans.	Others.
Madras	28,497,678	1,933,561	739,392	7,000	757	1,539	91·4	6·3	2·3	75·30	8·14	16·56
Bombay	12,308,582	3,021,131	1,124,701	5,127	3,491	210	74·8	18·4	6·8	58·07	39·54	2·39
Bengal	45,452,806	21,704,724	2,379,331	8,463	5,980	788	65·3	31·2	3·5	55·57	39·26	5·17
North-Western Provinces and Oudh.	38,053,394	5,922,886	131,589	20,492	4,227	40	86·2	13·5	·3	82·77	17·07	·16
Punjab	7,130,528	10,525,150	1,194,759	3,161	8,256	1,408	37·9	55·8	6·3	24·65	64·37	10·98
Central Provinces ...	7,317,830	275,773	2,245,188	2,549	463	932	74·3	2·8	22·9	64·63	11·74	23·63
British Burma ...	88,177	163,881	3,479,713	225	258	3,808	2·3	4·5	93·2	5·24	6·01	88·75
Coorg	162,489	12,541	3,272	38	23	18	91·1	7·0	1·9	48·10	29·12	22·78
Assam	3,062,148	1,317,022	502,256	613	546	198	62·8	26·9	10·3	45·17	40·24	14·59
Hyderabad Assigned Districts.	2,425,654	187,555	59,464	1,003	203	4	90·8	7·0	2·2	82·89	16·78	·33

These figures show that the number of Hindu convicts in jail at the close of the year 1881 bore in the case of all Provinces (except British Burma where peculiar conditions exist) a smaller percentage to the total jail population than the Hindu population in each Province bears to the total population, jail and free. On the other hand, the number of Muhammadans in jail on the 31st December 1881, as compared with the total jail population on that day, showed, in the case of all Provinces, a larger ratio than the ratio which the general Muhammadan population bears to the total population of the Province. In some cases, as for instance the Bombay Presidency, the Punjab, and some of the smaller Provinces, the differences which are thus shewn are very striking.

Convicts according to sex, age and previous occupation.

12. The distribution of the prison population according to sex, age and previous occupation does not call for any detailed remark. The figures contained in Statement No. 2 may be thus summarized :—

Sex, age and previous occupation of convicts in the jails of the several Provinces on the 31st December 1881.	Province.									
	Madras.	Bombay.	Bengal.	North-Western Provinces and Oudh.	Punjab.	Central Provinces.	British Burma.	Assam.	Coorg.	Hyderabad Assigned Districts.
Sex.										
Males	8,933	8,416	14,665	23,380	12,339	3,661	4,259	1,312	75	1,152
Females	363	412	566	1,379	486	283	32	45	4	59

Persons employed under Government, &c. ...	291	448	535	625	459	216	113	73	1	32
Persons engaged in agriculture, &c. ...	3,594	4,054	9,581	13,941	6,926	1,783	2,290	880	9	231
All other classes	5,048	3,314	4,549	8,814	4,954	1,662	1,856	359	65	889

The male prisoners in the case of all Provinces represented upwards of 90 per cent. of the total jail population, and the large bulk of the prisoners consisted everywhere, as might have been expected, of persons between 16 and 40 years of age. The number

of convicts in prison who were, previous to conviction, employed either under Government or by Municipal or other local authorities, amounted in the North-Western Provinces and Oudh to 625, or 2·67 per cent., of the jail population, in Bengal to 535, or 3·65 per cent. in the Punjab to 459, or 3·72 per cent., in Bombay to 448, or 5·32 per cent., and in Madras to 291, or 3·26 per cent. In all Provinces, except Madras, the Central Provinces, Coorg and the Hyderabad Assigned Districts, the bulk of the prison population on the 31st December 1881 was described as having belonged to the agricultural class.

Convicts according to length of sentence.

13. As regards the distribution of convicts according to length of sentence, the following figures show for the several Provinces the proportion to the total number of convicts in jail on the 31st December 1881, of convicts (1) who were sentenced to terms of imprisonment not exceeding five years, and (2) who were sentenced to terms of imprisonment exceeding five years or to transportation beyond the seas—

Length of sentence.	Madras.	Bombay.	Bengal.	North-Western Provinces and Oudh.	Punjab.	Central Provinces.	British Burma.	Assam.	Hyderabad Assigned Districts.
Convicts sentenced to terms of imprisonment not exceeding five years	66·24	80·60	82·63	86·60	88·22	87·55	83·29	90·86	80·24
Convicts sentenced to terms of imprisonment exceeding five years or to transportation beyond the seas...	33·76	19·40	17·37	13·40	11·78	12·45	16·71	9·14	19·76

It will be seen from the above figures that convicts under sentence of imprisonment for terms not exceeding five years were relatively most numerous in Assam and least numerous in Madras. In all other Provinces the number of such convicts represented upwards of 80 per cent. of the total jail population at the close of the year 1881. In the Madras Presidency the relative number of convicts under sentence for terms of imprisonment exceeding five years was far larger than in any other Province. The number of convicts on the 31st December 1881, who were working out sentences of transportation for a term of years or for life in the jails of the several Provinces was as follows :—

Length of transportation—sentences.	Madras.	Bombay.	Bengal.	North-Western Provinces and Oudh.	Punjab.	Central Provinces.	British Burma.	Coorg.	Assam.	Hyderabad Assigned Districts.
Number of convicts sentenced to transportation for a term ...	475	429	173	399	84	41	58	...	12	1
Number of convicts sentenced to transportation for life ...	445	316	273	486	306	40	46	...	13	15
Total ...	920	745	446	885	390	81	104	...	25	16

These figures show that the number of convicts under sentence of transportation was far larger in Madras, Bombay and the North-Western Provinces and Oudh than elsewhere. The proportion of

convicts on the 31st December 1881 under sentences of simple and rigorous imprisonment respectively was nearly identical in the several Provinces, convicts of the latter class forming in all cases upwards of 90 per cent. of the total prison population. The total number of convicts sentenced to death during the year 1881 was 104 as compared with 127 in the previous year. Of these no less than 37 were sentenced to death in the Punjab, 16 in the Bombay Presidency, 14 in the North-Western Provinces and Oudh, and 11 in Madras and Bengal respectively.

Previous convictions.

14. Statement No. 4 shows the number of convicts in the jails of the several Provinces at the close of the year 1881 who had been previously convicted. The proportion of such convicts to the total number was as follows :—

Province.	Male.	Female.	Total.
Madras	23·8	17·8	23·5
Bombay	15·2	7·3	14·7
Bengal	16·7	8·0	16·2
North-Western Provinces and Oudh ...	21·7	10·1	20·9
Punjab	12·9	6·0	12·6
Central Provinces	20·9	8·7	19·9
British Burma	17·2	2·4	16·8
Assam	13·0	5·6	12·7
Coorg	5·8	...	5·8

Prisoners recorded as having been previously convicted were thus relatively most numerous in Madras, the North-Western Provinces and Oudh, and the Central Provinces, and least numerous in Bombay, the Punjab, and Assam. The question of the measures which should be taken to ascertain the antecedents of persons brought to trial and to make the jail authorities acquainted after conviction with the fact that such persons have been previously convicted, is discussed in some of the departmental reports. It is believed that the rule generally in force is for previous convictions to be noted on the warrant sent by the committing Magistrate to the jail officers, who are also required, if it should come to their knowledge that any under-trial prisoner has been convicted before, to communicate the fact to the Magistrate. It is certainly desirable that every possible effort should be made both by the Magisterial, Police and Jail authorities to ascertain whether prisoners have been previously convicted, in order that, if convicted, they may be subjected in jail to such deterrent discipline as may appear necessary. In some Provinces a disposition is noticed on the part of Magistrates to pass inadequate sentences upon habitual offenders. This subject requires careful attention, as it is very undesirable that habitual offenders, especially those re-convicted of offences against property, should be too leniently dealt with either as regards the length of their sentences or the discipline to which they are subjected in jail.

15. The number of juvenile prisoners (under 16 years of age) confined during the year 1881, and the number of such prisoners who had been previously convicted in the several Provinces* was—

Juvenile prisoners.

Province.	Number confined during 1881.	Number previously convicted.
Madras	381	166
Bombay	500	92
Bengal	365	73
North-Western Provinces and Oudh	739	209
Punjab	364	78
Central Provinces	161	30
British Burma	121	13
Assam	21	1
Coorg	...	...
Hyderabad Assigned Districts	51	10
	2,703	672

It is noteworthy that out of the total number of juveniles confined during the year in the Madras Presidency and in the North-Western Provinces and Oudh, no less than 166, or 43·57 per cent., and 209, or 28·28 per cent., respectively, are entered as having been previously convicted. Up to the present time the Reformatory Schools Act (No. V of 1876) has only been extended by Local Governments to the Lower Provinces of Bengal and to British Burma, and Reformatory Schools under that Act have been established only in those Provinces—at Alipore and Hazaribagh in Bengal, and at Poungdeh in British Burma. The Governor General in Council desires to repeat the view recently expressed by the Government of India in a separate correspondence with the Government of the North-Western Provinces and Oudh that there is, perhaps, no project in connection with jail administration which is more worthy of attention than the establishment of proper reformatories for juvenile offenders. His Excellency in Council is aware that arrangements are at present made in some Provinces whereby juvenile convicts are to a greater or less extent segregated from adult prisoners, but the establishment of a reformatory for juvenile offenders is to be advocated not only as affording a means of separating such prisoners from adult criminals but also on other grounds, and especially because, until a separate reformatory has been established, it is impossible to pass sentences under the Reformatory Schools Act of 1876. Moreover, a separate reformatory, supervised by a special committee, affords exceptional facilities for providing a good industrial training for the inmates, and for making arrangements whereby youthful offenders may on release be satisfactorily settled in life. In these respects the experience gained in Bengal has abundantly shewn that the establishment of a reformatory is attended by very beneficial results which cannot be gained merely by providing for the segregation of juvenile offenders during the currency of their ordinary sentences.

* Column 5 of Statement No. 4.

16. It may be convenient here to notice the subject of the remissions of sentence which were allowed under the good conduct rules in the various Provinces. The figures for the year 1881 were as follows :—

Remissions.

Province.	Number of convicts who (a) gained remissions.	Number of convicts who (b) did not gain remissions, although eligible for remission under the good conduct rules.	Total number of convicts eligible for remission under the good conduct rules.	Percentage of (a) to the total number eligible for remission.	Percentage of (b) to the total number eligible for remission.
Madras	1,750	328	2,078	84·22	15·78
Bombay	212	1,373	1,585	13·38	86·62
Bengal	2,188	271	2,459	88·98	11·02
North-Western Provinces and Oudh	379	3,964	4,343	8·73	91·27
Punjab	347	756	1,103	31·46	68·54
Central Provinces ...	12	Not shewn	12	.....	.....
British Burma	102	Ditto	102	.....	.....
Assam	131	17	148	88·51	11·49
Coorg	.....	.....	.....	.....	.....
Hyderabad Assigned Districts...	5	.....	5	.....	.....
Total ...	3,124	6,709	11,835	43·21	56·79

The late Inspector General of Jails in the North-Western Provinces and Oudh has in his report for the year 1881 especially noticed that the rules under which remissions of sentence are granted for good conduct and industry appear to work very unequally in the different Provinces, and the above figures clearly show this to be the case. In Madras, Bengal and Assam, upwards of 80 per cent. of the total number of convicts entitled to remissions of sentence under the good conduct rules succeeded in gaining a remission, while in Bombay the percentage was only 13·38, in the North-Western Provinces and Oudh 8·73, and in the Punjab 31·46. The Governor General in Council is not aware of the precise rules which are in force in the several Provinces as regards remission of sentence; but, unless the figures are susceptible of some explanation, it appears to His Excellency in Council that they show the necessity for the revision of the existing rules in some cases. In a matter of this sort, although the rules in force in one Province may not be suited to the circumstances of another Province, and although it may be impossible and undesirable to attempt to secure any absolute uniformity of system, there seems to the Government of India to be no sufficient reason why such differences should exist as are above disclosed.

17. The manner in which the convicts in the several Provinces were employed during the year 1881 is shewn in Statement 5. The large majority of the convicts were in all cases employed

Employment of convicts.

upon manufactures, whereas the extra-mural employment of convicts on any extensive scale was only resorted to in Bombay, the Punjab and Assam. The figures under these heads for the year 1881 were—

Province.	Number of prisoners employed on manufactures.	Number of prisoners employed extramurally.
Madras	3,402	...
Bombay	3,081	2,154
Bengal	5,612	37
North-Western Provinces and Oudh	8,539	51
Punjab	6,349	903
Central Provinces	2,462	...
British Burma	2,548	...
Assam	234	232
Coorg	42	...
Hyderabad Assigned Districts	535	0·73

In the current year and for the future the above statistics will doubtless show a considerable difference under the operation of the orders recently* issued, in which it has been laid down that labour on public works should in future be looked upon as the principal mode of employing long-term prisoners throughout British India.

The percentage of the average number of effectives employed during the year 1881 as prison officers or as prison servants was as follows:—

Province.	Percentage of the average number of effectives employed as	
	Prison Officers.	Prison Servants.
Madras	10·1	16·2
Bombay	3·5	9·2
Bengal	5·4	10·9
North-Western Provinces and Oudh	3·3	14·3
Punjab	5·3	12·4
Central Provinces	2·5	10·9
British Burma...	3·9	7·9
Assam	4·3	12·6
Coorg	10·0	18·3
Hyderabad Assigned Districts	3·5	14·1

It is noteworthy that (excluding Coorg where the average daily strength was very small, being only 78 convicts) in the Madras Presidency only are convicts employed to any considerable extent as prison officers, while the percentage of convicts employed as prison servants varies to a greater or less extent, but exceeds 10 per cent. of the average number of effectives in the case of all Provinces except Bombay and British Burma. The departmental reports contain ample evidence of the fact that the employment of carefully selected prisoners as warders and in other capacities has been attended with satisfactory results, except in the case of British Burma where Burmese convicts are said not to form good warders.

* Home Department Resolution Nos. 20—1406 to 1419, dated the 22nd September 1882.

Under-trial and civil prisoners.

18. The figures given in the margin show the distribution of under-trial and civil prisoners in the jails of the several Provinces at the close of the year 1881. These figures do not require any detailed remark, but measures should be taken, where necessary, to provide against under-trial prisoners being detained in confinement for unduly long periods, and also to prevent their being subjected while in confinement to unnecessarily harsh treatment or to insufficient diet. The first of these points has been carefully dealt with by the Bengal Government in reviewing the jail report, and explanations have been called for from District Magistrates when the period of detention appeared to be unduly long. In the North-Western Provinces and Oudh it has been found necessary, at the instance of the late Inspector General of Jails, to invite the special attention of District Officers to the second of the above points, as there was reason to suppose that the treatment of under-trial prisoners was not in all cases what it should be. As regards civil prisoners it is observed that 37 female prisoners remained in jail at the close of 1881, as compared with 39 at the close of the previous year. The question of amending the law on this subject is now under the consideration of the Government of India.

Province.	Under-trial prisoners.	Civil prisoners.	Total.	Remarks.

Total ...	1880	8,628	93,288	278	4,023	23,179	7,190	17,057	41,813	93,539	101·2
	1881	8,246	76,098	337	4,050	15,201	7,651	8,920	40,229	76,388	88·8

As regards criminal offences, it is observed that a considerable increase took place during 1881 in Bengal, Assam and British Burma, but the figures under this head do not call for any detailed comment. The number of breaches of jail rules shows a decrease more or less considerable in the case of every Province except the Punjab and the Hyderabad Assigned Districts, the decrease being especially marked in Bombay and Bengal, and being due in a great measure to a falling off in the number of offences relating to work—in the case of Bombay from 2,809 offences in the previous year to 1,110, and in Bengal from 40,527 offences to 27,963. In connection with this subject the Governor General in Council notices that, in more than one of the departmental reports, remarks are made to the effect that the offence of having possession of forbidden articles is one which is frequently committed with the connivance, if not with the actual assistance, of subordinate officers of the Jail Department. This is doubtless true, and points to the great desirability of taking every possible step to improve the position and prospects of subordinate jail officials, and thereby to render it possible to procure the services of more trustworthy men. With this object Dr. Walker, the late Inspector General of Jails in the North-Western Provinces and Oudh, has been in correspondence with the Military Pension Department, in order, if practicable, to secure the services of military pensioners, not altogether incapacitated by old age, as warders and night watchmen. It is possible that this or some similar experiment might be successfully tried elsewhere. In the Lower Provinces of Bengal, the re-organization of the subordinate jail service has now been completed to the great improvement of the discipline and general administration.

20. As regards the punishments inflicted for breaches of prison discipline, the extent to which solitary confinement was resorted to increased during 1881 as compared with the previous year in all Provinces, except Bengal, British Burma, Assam and the Hyderabad Assigned Districts. In no case, however, was the increased use of this form of punishment considerable. The punishment of reduced diet was less freely resorted to in Bombay, the North-Western Provinces and Oudh, the Central Provinces, British Burma and Assam; and in the Lower Provinces of Bengal this form of punishment was inflicted in a very considerably smaller number of cases than in the previous year. The punishment of solitary confinement with reduced diet was used less freely than during the previous year in all Provinces except the Central Provinces, British Burma and the Hyderabad Assigned Districts. The question of corporal punishment for jail offences is being separately dealt with by the Government of India, and need not, therefore, be noticed here. The punishments of other kinds which were inflicted during 1881 do not show any very considerable variations as compared with the previous year, but the number of those punishments inflicted in the several Provinces shows large differences varying during the year 1881 in the larger Provinces from 40 in the Punjab to 34,593 in Bengal. The ratio of total punishments of all kinds to the average number of convicts during the year 1881 also varies very considerably, from a minimum of 16 per cent. in the Punjab to 320·77 per cent. in Bengal, where, under the strict system of record and supervision which has been introduced within the last few years, the number of jail offences is naturally far in excess of that formerly usual. It may be noted that separate enquiries are being made by the Government of India as to the extent to which, and the classes of cases in which, reduced diet is at present inflicted as a punishment for jail offences throughout British India, and whether any and what safeguards are applied to prevent this mode of punishment

from acting injuriously on the health of the prisoners. On this point it is only necessary for the Governor General in Council to observe here that the system of periodical weighments adopted in some Provinces appears to be attended by many advantages both in preventing the hasty punishment of prisoners for tasks that loss of weight may show to be beyond their strength, and at the same time furnishing a constant and much needed check upon the proper issue of rations by the jail subordinates. The subject of regulating by law or otherwise the minor penalties at present imposed by jail officials which are not separately shewn in the returns of the Jail Department, but are grouped together under the general head of "other punishments" is also under the separate consideration of the Governor General in Council.

Escapes.

21. The number of escapes, which occurred during 1881, from the jails of the several Provinces is shewn in the margin, the figures for the previous year being also inserted. These figures do not call for any detailed comment, but it may be observed that the escapes appear from the reports to be usually due to carelessness or breach of rule on the part of the subordinate officers of the Jail Department. The total number of convicts who escaped from jail during the year 1881 and previous years, and had not been recaptured on the 31st December 1881, amounted to 879.

Province.		Total convict population during 1881.	Remaining uncaptured on the 31st December 1880 of those who escaped during the previous ten years.	Escaped during the year.	Re-captured during the year.	Remained uncaptured on the 31st December 1881.	Percentage of escapes during the year to total convict population.

Gross cost of guarding and maintenance, and net cost to Government.

22. Particulars as to the gross and net expenditure incurred during the year 1881 in guarding and maintaining the prisoners of all classes in the jails of British India will be found in Statements Nos. 7 and 8. As regards (a) the total cost per head of average strength and (b) the net cost per head of all convicts, the several Provinces stand in the following order (excluding Coorg where the number of prisoners is so small as to make any average misleading) :—

Province.	Total cost per head of average strength.	Province.	Net cost per head of all convicts.
Madras ...	72 10 0	Assam ...	70 8 0
Assam ...	72 8 8	Madras ...	61 4 0
British Burma ...	71 6 0	British Burma ...	52 9 0
Bombay ...	62 1 10	Punjab ...	52 0 0
Berar ...	59 7 11	Berar ...	51 2 0
Punjab ...	59 2 5	Bombay ...	42 0 0
Bengal ...	54 6 10	Central Provinces	30 11 0
Central Provinces	45 8 8	Bengal ...	30 7 0
N.-W. P. & Oudh	35 15 5	N.-W. P. & Oudh	30 0 0

The above figures show that the total cost per head of prisoners of all classes, and the net cost per head of all convicts, is smallest in

the North-Western Provinces and Oudh, Bengal and the Central Provinces, and largest in Madras, Assam and British Burma; the details given in Statement 7 show that the large cost per head in Madras, British Burma and Assam is chiefly due to the high cost of rations per head of average strength in those Provinces. In Assam, moreover, the cost of police guard and of clothing per head is much higher than elsewhere. In all cases (except Coorg) the cost of rations per head, which is lowest in the North-Western Provinces and Oudh (Rs. 14-2-0), shows a substantial decrease as compared with the previous year. In the North-Western Provinces and Oudh, the comparative smallness of the total cost per head of average strength points to the fact that the Jail Department in those Provinces has been administered in a very economical manner. On this point the Governor General in Council concurs in the view expressed by the Local Government in reviewing the jail report for the year 1881 that the results are extremely satisfactory, and bear ample evidence to the care and watchfulness bestowed by Dr. Walker, the late Inspector General of Jails in those Provinces, on the working of the local Jail Department. As regards the cost of rations, Dr. Walker explains in his report that much has been done to reduce expenditure by the use of cereals common to the districts in which the jails are situated, by the apportioning of the diet scale according to the terms of the convicts, by the purchase and storage of grain in the cheap season, and by economy in the fuel used in the jail kitchens. It is unnecessary to discuss at any length the question of jail manufactures, as it has been recently very fully considered by the Government of India, and orders have been issued whereby the manufacturing operations to be in future carried on in Indian jails will be very restricted in extent. It may, however, be observed that the net proceeds of jail manufactures during the year 1881 exceeded four lakhs of rupees in Bengal, two lakhs in Bombay, and one lakh in Madras, the North-Western Provinces and Oudh and the Punjab.

Sickness and mortality—Madras and Bombay.

23. As regards the relative amount of sickness and mortality amongst the prisoners of the several Presidencies and of individual Provinces, full details will be found given in the Annual Report of the Sanitary Commissioner with the Government of India, which will shortly be published and to which reference may be made for information as to details. A few of the more salient features of the year's history in regard to these questions are, however, given below. Of the three Presidencies, the Madras returns are, on the whole, the most favourable, though as regards the mortality the percentage was identical in Bombay and Madras, viz., 4·2. In the Bengal Presidency, the ratio was slightly higher, 4·4 per cent. The average number of convicts in the Madras Presidency during 1881 was less than half what it was during 1878, and the death-rate was only one-third what it was during the same period. The principal results of the year under review, so far as the vital statistics of the jails of the Presidency are concerned, are given in the accompanying marginal table, in

Year.	Madras Presidency. Ratio per cent.			Bombay Presidency. Ratio per cent.		
	Admissions.	Daily sick.	Deaths.	Admissions.	Daily sick.	Deaths.
1877	96	4·1	17·6	93	2·8	5·4
1878	94	5·2	12·5	132	4·3	11·8
1879	88	4·7	5·6	125	5·1	10·9
1880	85	3·8	4·5	115	4·1	4·6
1881	78	2·8	4·2	107	3·4	4·2

which, also, will be found the figures for the four preceding years. A similar statement has been prepared as regards Bombay, which, for convenience of comparison, has been placed alongside that of Madras.

Bengal Presidency.

Of the five Provinces in Bengal, the jails of the North-Western Provinces and Oudh have furnished the most favourable statistics. The death-rate in these combined Provinces was only 2·4 per cent., or nearly one-half the ratio returned by the jails of the Presidency as a whole. The Central Provinces yielded the next most favourable death-rate, 2·9 per cent. of the average strength, against 6·0 per cent. in 1880. The admission and daily sick-rates were also low in both these Provinces. Assam stands third on the list as regards the mortality, 3·9 against 5·2 in 1880. In 1881, the amount of sickness, as inferred from the admission-rate, was, however, slightly greater than it was in 1880. The table in the margin shews that in each of these three Provinces a marked decrease has taken place under nearly all the headings during 1881, as compared with the rates for 1878 and 1879. In the remaining two Provinces also—Lower Bengal and the Punjab—a marked decrease in the mortality ratios has been recorded, though the percentage of deaths for both Provinces, 6·5, continues to be still very high. In the Punjab, there is a decrease under this heading as compared with 1880; but in Lower Bengal there is a slight increase both in the death-rate and in the admissions into hospital. Indeed, an examination of the statistics of Bengal jails during the last decade shews that sickness, as gauged by the admission and daily sick-rates, was more prevalent among the prisoners of this Province during 1881 than in any of the previous ten years, and that the death-rate in 1881 was also higher than in any of those years, with the exception of 1878 and 1879. The unfavourable results of the year cannot be ascribed to excessive prevalence of cholera, for, with the exception of the two years just cited, the mortality from this cause was less than it had been for many years. In view of this unsatisfactory condition of the health of the prisoners in the Lower Provinces, the Government of India have suggested to the Government of Bengal the desirability of appointing a small Committee of specially qualified officers to enquire carefully into the whole subject.

* From the Local Reports.

Burma and the Hyderabad Assigned Districts.

The results in Burma and in the Hyderabad Assigned Districts do not call for special remark. The mortality amongst the prisoners

of the latter Province was exceedingly low, only 1·6 per cent.; and as regards Burma, the death-rate, 4·5, though higher than the low rate for 1880, was in great part due to an epidemic of cholera in the Moulmein Jail, and to an epidemic of Beri Beri at Thayetmyo. Were the deaths from these two causes excluded from the computation, the death-rate of the year for the jails of the Province would be only 2·6 per cent.

24. On the whole, the departmental reports on the administration of the jails throughout British India for the year 1881 appear to the Governor General in Council to show generally satisfactory results, and in some respects decided progress as compared with the previous year. There must, of course, be many matters connected with jail administration in regard to which much room for improvement still exists, and which can only be gradually provided for, but His Excellency in Council is satisfied that these matters will not be lost sight of by Local Governments and Administrations, and that, as opportunity offers, the necessary steps will be taken to place them on a proper footing. One of the best means of ascertaining and remedying existing defects is, without doubt, the frequent and periodical inspection of jails either by the local head of the Department or by the official visitors, and the Government of India trust that steps will, where necessary, be taken by Local Governments and Administrations to insist upon this important duty being everywhere performed in a systematic and careful manner.

Order.—Ordered that a copy be forwarded to all Local Governments and Administrations for information and guidance, and that the Resolution be published in the Supplement to the *Gazette of India*.

(True Extract.)

F. C. DAUKES,
for *Secretary to the Government of India.*

Statements appended to Home Department Resolution No. 28—1757-67, dated the 12th December 1882.

REVIEW OF ADMINISTRATION REPORT OF IRRIGATION WORKS IN MADRAS FOR 1881-82.

Nos. 457—64I., dated Fort William, the 21st December, 1882.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Administration Report of Irrigation Works in Madras for 1881-82.

OBSERVATIONS.—The Government of India has much pleasure in acknowledging the promptness with which this report has been submitted and the complete and careful manner in which it has been drawn up. Although the figures representing outlay refer to the official year ending on the 31st March, and those giving the irrigated area and revenue to the revenue year ending on the 30th June 1882, the interval is a season during which but little cultivation is carried on, and, for all practical purposes, the comparison of expenditure and income is sufficiently correct.

2. During 1881-82 the Sangam Project was added to the number of irrigation schemes sanctioned as Productive Public Works, which are now six in number, as noted in the margin. The number of Irrigation and Navigation Works under other main and sub-heads remain as in 1880-81.

1. Godavari Delta Works.
2. Kistna „ „
3. Penner Anikat „
4. Kavari Delta „
5. Srivaikuntham Anikat Works.
6. Sangam Anikat „

3. The direct Capital outlay is compared below with the allotments for 1881-82:—

—	No. of works in class.	Grant for 1881-82.	Expenditure during 1881-82.
		R	R
Productive Public Works	6	4,58,530*	3,95,135
Irrigation and Navigation Works for which Capital and Revenue Accounts are kept	3	89,057	87,263

* Includes R98,280 allotted for Commamur canal of Kistna Delta.

The short outlay under "Productive Works" occurred almost entirely on the Sangam Anikat Works owing to the difficulty experienced in obtaining labor and the necessity for revising several estimates.

4. The Capital outlay (direct and indirect) to the end of the year on the six Productive Public Works amounted to R2,07,83,046; the gross revenue assessed (including share of enhanced land revenue due to the works) to R39,26,472; the maintenance charges, direct and indirect (including charges for collection in Civil Department) to R10,40,661, and the net revenue to R28,85,811, yielding 13·9 per cent. on the total Capital outlay to the end of the year.

	R
Godavari Works	1,07,95,332
Kistna „	56,73,820
Penner „	16,65,159
Kavari „	11,19,277
Srivaikuntham Works	12,98,151
Sangam „	2,31,307
TOTAL .	2,07,83,046

5. The Capital outlay (direct and indirect) incurred up to the end of the year on the three Irrigation and Navigation Works, for which Capital and Revenue Accounts are kept, amounted to R29,24,961; the gross revenue including share of enhanced land revenue to R1,54,652; the maintenance charges of all kinds to R1,14,844, and the net revenue to R39,808, yielding 1·36 per cent. on the total Capital outlay to the end of the year.

	R
Chambrambakam Tank . . .	7,36,800
Palar Anikat Works	18,23,827
Palandorai Anikat Works . . .	3,64,334
TOTAL .	29,24,961

6. The area irrigated by the Productive Public Works during 1881-82 amounted to 1,781,798 acres, and the irrigation revenue credited to the works as water-rate to R31,62,920, showing an incidence per acre of R1·77. The area irrigated by the other Irrigation and Navigation Works, including those for which neither Capital nor Revenue Accounts are kept, amounted to 2,401,632 acres and the irrigation revenue credited to the works as water-rate to R78,00,798, shewing an incidence per acre of R3·25. The difference in the value to the land of the water delivered by the two classes of works is remarkable and is explained in para. 13.

7. The total area taken up for irrigation of the first crop of rice on the Godavari Works amounted to 523,992 acres during the revenue year 1881-82, the area irrigable by the completed works being 612,000 acres, and 28,426 acres were double-cropped against 20,087 acres in 1880-81.

The gross income derived from the works amounted to R17,92,530;* the maintenance charges to R4,41,820,† and the net revenue to R13,50,710, yielding 12·5 per cent. interest on the Capital outlay (R1,07,95,332) to the end of the year. The net revenue exceeded the interest charges of the year by R9,91,876, and the surplus revenue in excess of interest charges payable up to the end of the year, amounted to

	R
* Direct receipts, Revenue Department.	15,83,710
„ „ Public Works „ .	99,949
Indirect receipts	1,58,871
TOTAL .	17,92,530
† Direct charges	2,97,078
Indirect „	22,877
Charges for collection	1,21,865
TOTAL .	4,41,820

R1,48,33,447, that is, 37 per cent. more than the total Capital outlay to the same date.

The navigation receipts and charges of 1881 are compared below with those of 1880 and previous years:—

—	Receipts.	Charges.	Excess charges.
	R	R	R
Average of years 1876 to 1879 inclusive . . .	50,357	65,972	15,615
„ „ 1880 „ . . .	51,315	76,301	24,986
„ „ 1881 „ . . .	55,670	79,610	23,940

The freshes in the Godavari commenced in the middle of June 1881, and were moderate throughout the rainy season, but the supply of water was ample up to the end of September when it fell short, and during October and November water was very deficient, the harvest suffering considerably in consequence in some parts of the delta.

8. The area irrigated on the Kistna Canals, during the year under review, amounted to 287,027 acres, the total area irrigable by the completed works being 475,000 acres.

The gross revenue amounted to R10,43,782,* the maintenance charges to R3,30,653,† and the net revenue to R7,13,129, yielding 12·5 per cent. interest on the capital outlay (R 56,73,820) to end of the year. The net revenue exceeded the interest charges of the year by R4,88,451, and the surplus revenue, in excess of interest charges payable up to the end of the year, amounted to R52,02,265, or 91·7 per cent. of

	R

Indirect „	15,280
Charges for collection . . .	72,303
TOTAL .	3,30,653

to the same date.

The irrigation receipts and charges of 1881 are compared below with those of 1880 and previous years:—

	Receipts.	Charges.	Excess charges.
	R	R	R
Average of years 1876 to 1879 inclusive . . .	18,266	30,079	11,853
1880	23,834	41,787	17,953
1881	21,788	68,384	46,596

The large increase in charges during 1881 is due to unusually heavy expenditure on silt clearances.

The season was on the whole a fair average one. The river commenced to rise on 9th June 1881; there was a scarcity of water, for a short time, during the end of October, but the completion of a temporary stone "bund" on the crest of the "anikat," and rain, early in November, prevented any loss of crops.

9. The area irrigated by the Penner Anikat System amounted to 57,207 acres; the gross revenue amounted to R1,41,431; the maintenance charges to R49,280, and the net revenue to R92,151, or 5½ per cent. on the total capital outlay (R16,65,159) to the end of the year.

The cultivation dependent on the "anikat" was fairly supplied with water, but the harvest was below the average.

The river rose steadily and continued to flow over the anikat from the 23rd August to 18th December, except for a period of 16 days in the end of October, when the water was very low. The highest flood of 1881 rose to 4·87 feet on the crest of the anikat, the highest recorded flood having risen to 18·37 feet on October 26th, 1874.

10. Acres 897,221 were irrigated by the Kavari Delta Works during 1881-82, being 85,143 acres more than in the preceding year. The gross revenue derived from these works amounted to R8,75,763,* the maintenance charges to R1,91,201,† and the net revenue to R6,84,562, or 61 per cent. on the capital outlay (R11,19,277) to the end of the year. The net revenue exceeded the interest charges of the year by R6,43,875, and the surplus revenue, after payment of interest and all other charges up to the end of the year, amounted to R1,87,19,263, very nearly 17 times the amount of capital expended on the works.

† Direct charges	1,29,915
Indirect "	9,122
Charges for collection in Civil Department.	52,164
TOTAL .	1,91,201

The season was throughout favorable for cultivation, the heavy rain of the north-east monsoon during December 1881 supplementing the deficiency of water in the river, and preventing any injury to the crop.

11. The areas of "first" and "second" crop irrigated from the Srivaikunthan Anikat were, respectively, 18,770 acres and 15,680 acres during 1881-82, the areas of 1880-81 having been 17,856 and 15,705 acres, and the irrigable area being 33,500 acres. The gross revenue amounted to R72,986, and the maintenance charges to R27,994, leaving a net revenue of R44,992, or 3·46 per cent. on the total capital outlay (R12,98,151), incurre dup to the end of the year.

During the south-west monsoon the supply in the Tambrapurni river was very limited, and much difficulty was experienced in irrigating the crops dependent on the anikat, indeed much of the land produced little else but straw. The supply during the north-east monsoon was ample. This work is the lowest weir on the river and has hitherto only been able to pick up what little water was passed down from seven other weirs above it, but, under the orders of Government, the distribution of the water to the several channels was placed under the charge of the Public Works Department from the 1st April 1881, and arrangements are being made to regulate fairly the allotment of the available supply.

12. The Sangam Anikat System will extend irrigation to the northern portion of the delta, of which the Penner Anikat irrigates the southern portion. The weir will be situated about 20 miles above the Penner Anikat, and the supply in the river being intermittent, the water will be stored in two large reservoirs having an aggregate capacity of about 7,500 millions of cubic feet. The works have only lately been commenced, R2,31,307 having been spent, up to the end of 1881-82, out of a sanctioned outlay of R30,26,056.

13. The incidence per acre irrigated of the direct irrigation revenue, credited in the Civil Department, is compared below for the several systems of Productive Public Works—

	R
Godavari	2·92
Kistna	3·05
Penner	1·80
Kavari	0·66
Srivaikuntham	1·81

The extremely low rate of incidence on the large area watered by the Kavari works explains the difference commented on in para. 6.

14. The following statement gives the figures of chief interest in connection with the three systems of Irrigation and Navigation Works, for which Capital and Revenue Accounts are kept—

NAME OF WORK.	Capital outlay to end of 1881-82.	1881-82.		Net revenue.	Net return on Capital outlay Per cent.	Area irrigated.	Sums included in gross revenue on account of "old maintenance charges saved."
		Gross revenue.	Maintenance charges.				
	R	R	R	R	R	Acres.	R
Chambrambakam Tank.	7,36,800	43,618	7,949	35,669	4·84	12,623	7,145
Palar Anikat Works .	18,23,827	1,10,856	39,795	71,031	3·89	66,560	4,101
Pelandorai ditto . .	3,64,334	208	67,100	-66,892	...	2,155	155

The average incidence of water-rate on each acre irrigated from the Chambrambakam Tank and the Palar Anikat was R1·62.

The deficiency of revenue on the Pelandorai Anikat System was due to the want of water in the Vellar river across which the anikat is built. The area returned as irrigated was watered from the few tanks which received a good supply from local rainfall, independently of the Government works.

15. The direct outlay during 1881-82 upon irrigation works for which neither "Capital nor Revenue Accounts" are kept, amounted to R10,11,908 against a grant of R10,76,092. Of the total outlay R1,66,745 were expended on extensions and improvements of existing works, and the balance on maintenance and establishments. Acres 2,179,012 of first crop rice, and 361,331 acres of second crop, yielding an irrigation revenue of R76,73,229, were dependent on these works, the average incidence of the irrigation revenue being a small fraction over 3 rupees per acre.

16. The direct outlay upon agricultural works during the year amounted to R3,48,579 against a final allotment of R3,74,588.

17. Rupees 59,882 were debited against a grant of R60,000 under the head of Protective Public Works. Of this amount, however, R47,000 were merely transferred to "Provincial" on account of the Buckingham Canal, the balance of expenditure having been incurred on surveys for new Protective Works.

18. The rainfall of the south-west monsoon was below and that of the north-east monsoon in most places considerably less than the fall of the previous year. The floods in the rivers were moderate, but the irrigation supplied from them was generally good and sufficient. The cultivation dependent on rain-fed tanks was, on the contrary, in most cases insufficiently watered.

19. The Madras Irrigation and Canal Company's works were taken over by Government in July of the present year. Rupees 89,725 were expended on Capital Account during 1881-82, and the direct Capital outlay to the end of the year amounted to R1,17,58,802. The operations of the year proved, as usual, hopelessly unremunerative, the gross receipts amounting to only R85,922 against an outlay of R1,70,909. The areas supplied with water and the irrigation revenue are given in the margin for 1881-82 and the four previous years. R51,924 were expended on maintenance and repairs, and R1,18,555 on pay of establishments, including a charge of R51,924 for "general management."

Year.	Area.	Revenue.
	Acres.	R
1877-78 . . .	50,918	1,49,616
1878-79 . . .	18,386	81,831

ORDER.—Ordered, that a copy of the Resolution be forwarded to the Government of Madras for information.

Also that a copy of the Resolution be forwarded to Local Governments and Administrations marginally noted for information.

The Governments of Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab, in the Public Works Department.
The Chief Commissioner, Central Provinces.
The Agent to Governor General for Rajputana.

Also that a copy be forwarded to the Publisher of the *Gazette of India* for publication in the supplement to the Gazette.

H. A. BROWNLOW, *Colonel, R.E.,*
Depy. Secretary to the Govt. of India.

Executive Engineer, Meerut Division, Ganges Canal, reports that the low supply in the canal prevented much new irrigation from being effected, as a large area of sugarcane had to be irrigated.

Executive Engineer, Aligarh Division, reports that there was a great demand throughout the month for rabi *pálee*.

Executive Engineer, Mainpuri Division, reports that there was a demand for rice, sugarcane and rabi *pálee*, that irrigation commenced on the 6th October on the Cawnpore Branch and 9th October on Bewar Branch after re-opening of the canal.

Executive Engineer, Eastern Jumna Canal, reports that the canal was closed from 23rd to 29th, inclusive.

Executive Engineer, Rohilkhand Canal, reports that there was scarcely any demand for water, but that rabi palewar is beginning.

Allahabad,
The 30th November 1882.

Besides this rabi irrigation there was some kharif irrigation effected this month in the following divisions:—

RESOLUTION.—A statement showing the irrigation and rainfall for 1881-82 compiled from the above returns will, as usual, be forwarded to the Chief Engineer for Irrigation, with reference to Board's Proceedings, dated 11th May 1874, No. 1092.

2. The following abstract shows the area irrigated from Government sources in 1881-82 as compared with 1880-81 :—

—	ANICUTS AND OTHER IMPORTANT WORKS.		OTHER WORKS.		TOTAL.		Difference.
	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.	
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Government land .	1,315,640	1,315,408	2,380,978	2,268,045	3,696,618	3,583,453	—113,165
Inam land . .	328,882	327,725	592,738	530,592	921,620	858,317	—63,303
Zemindari land . .	122,272	170,662	57,900	45,108	180,172	215,770	+35,598
TOTAL .	(*a*)1,766,794	1,813,795	(*b*)3,031,616	2,843,745	4,798,410	4,657,540	—140,870
Difference . . .	...	+47,001	...	—187,871	...	—140,870	...

(*a*) is exclusive } of the irrigated area under the Cauvery Lower Anicut.
(*b*) is inclusive }

3. A small decrease amounting to acres 6,129 appears in the area irrigated under anicuts and other important works, that is, the eight works for which capital and revenue accounts are maintained. Of this decrease, acres 4,740 are returned under zemindari lands for which accurate accounts are not available. Under other works the irrigated area shows a large falling off amounting to acres 187,871—acres 112,933 in Government lands, acres 62,146 in inams and 12,792 in zemindari lands. The bulk of the decrease* occurs in Ganjam, Nellore, and Chingleput where the rainfall was scanty and the season unfavorable.

	Acres.
* Ganjam	40,776
Nellore	45,269
Chingleput	43,363

4. As the Cauvery Lower Anicut is not one of the eight systems of irrigation works, it is not shown separately in the statement, but is included under other works—*vide* paragraph 3 of Board's Proceedings, dated 27th January 1882, No. 281.

Comparative Statement of Irrigation and Rainfall for the Years 1880-81 and 1881-82 in the several Districts.

* These figures do not correspond with those given in the similar statement for last year, as corrections in these areas have since been made in some districts.
2. Area twice cropped is entered twice over in column 4. This accounts for the extent entered in that column being in some cases higher than the figures in column 3.

E. GIBSON,
Acting Secretary.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch.*)

D. M. BARBOUR,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

LOCAL-SELF GOVERNMENT IN THE NORTH-WESTERN PROVINCES AND OUDH.

No. 2017, dated Fort William, the 21st December 1882.

From—A. MACKENZIE, Esq., C.S., Secretary to the Government of India, Home Department,
To—The Secretary to the Government of the North-Western Provinces and Oudh.

I am directed to acknowledge the receipt of your letter No. 372 of the 15th December, submitting a copy of a Resolution, No. 358 of the 5th idem, by His Honour the Lieutenant-Governor and Chief Commissioner on local self-government in the North-Western Provinces and Oudh, together with copies of other papers bearing on that subject.

2. In reply, I am to convey the thanks of the Government of India to Sir Alfred Lyall for the manner in which he has sought to give effect to the wishes and policy of the Government of India so far as the circumstances of the provinces under his charge would appear to admit. The Governor General in Council is particularly glad to observe that the Lieutenant-Governor has found it possible to introduce a large measure of local self-government throughout the municipal towns of those provinces, and His Excellency in Council is sanguine that, under the able and judicious guidance of Sir Alfred Lyall, there will soon be realized not only in these towns but also in the interior of the more advanced districts, a steady and real progress in the work of training the people to the intelligent management of their own local affairs.

3. From paragraph 6 of the Resolution it appears that the District Boards will, for the present, consist of an incorporation of all the subordinate Tahsili Boards within the district area, all the members of the Tahsili Board being *ex-officio* members of the District Board. This arrangement will probably work fairly well in cases where the Tahsili Boards are not numerous and where the district area is moderate and communication easy; but it may possibly be found difficult, where the opposite conditions obtain, to secure a full and regular attendance of members at the meetings of the District Board. The Local Government may in such cases deem it desirable either to constitute more than one Central Board in the district, or to provide for the election of a limited number of delegates from each Tahsili Board as members of the Central Board, and provision for enabling this to be done may perhaps usefully be embodied in the legislation which will now have to be undertaken. The point is one which the Governor General in Council commends to the attention of the Lieutenant-Governor.

4. The Government of India will be glad to receive at an early date a rough draft of the amendments in the law which the Lieutenant-Governor and Chief Commissioner considers to be necessary in order to give effect to the schemes now under acknowledgment.

No. 358, dated Camp Lucknow, the 5th December 1882.

RESOLUTION—By the Government of the North-Western Provinces and Oudh.

Read—

(1) Resolutions by the Government of India (Department of Finance), Nos. 3353 and 3514, dated 30th September and 10th October 1881.

(2) Resolutions by this Government, Nos. I to VIII of General Series, Decentralisation, Part II.—Administrative.

(3) Resolution by the Government of India (Home Department), No. $\frac{17}{747\text{-}67}$, dated 18th May 1882.

(4) Orders Nos. 145 and 147, dated 21st June 1882, and Nos. 160 and 162, dated 29th June 1882, issued by this Government to Divisional and District Officers.

(5) Replies of Divisional and District Officers to above.

(6) Resolution by this Government, No. 230, dated 7th August 1882.

(7) Minute recorded by the Hon'ble the Lieutenant-Governor and Chief Commissioner, dated 22nd August 1882.

(8) Report of Committee appointed under Resolution No. 230, dated 7th August 1882.

OBSERVATIONS.—In the first and second of the Resolutions quoted above, His Excellency the Governor General in Council, in declaring the principles upon which the decentralised system of finance as revised and extended was to be applied to Provincial Governments and Administrations, announced his intention that that system should now be accompanied by a material development of local self-government, and indicated generally on what principles and by what methods it seemed desirable to proceed in re-constituting the local committees and investing them with larger financial and executive authority.

2. In accordance with the views and instructions communicated in those Resolutions, the system of local administration in these provinces was carefully revised and re-organised, upon the plan of extending the functions of the existing municipal and district committees, and of placing those bodies in a more independent position. To a considerable degree the arrangements prescribed by the Resolutions of this Government (Nos. I-VIII), cited in the preamble above, were put in force and are now in operation. Upon the issue, however, by the Supreme Government of a subsequent Resolution, dated 18th May 1882, which gave a wider scope to, and explanation of, the policy announced, and which defined, in modification of some of the instructions contained in the earlier Resolutions, the principles upon which local self-government should be established throughout India, it became incumbent upon the Lieutenant-Governor and Chief Commissioner to review the arrangements previously made.

3. Accordingly, steps were taken, first, to obtain regarding the more important points recommended for consideration on the subject of local self-government in these provinces, the opinions and suggestions of the chief officers of this Government, of the municipal and district committees, and of leading native gentlemen most interested and best qualified to advise. The inquires thus instituted, which were prosecuted by officers in whose ability, experience, and impartiality the Lieutenant-Governor and Chief Commissioner has full confidence, procured from all the districts under this Government a valuable collection of information and practical advice. It is to be remembered that in these provinces the people at large have not yet had time perfectly to understand the principles or realise the objects of the new policy, both of which indeed are outside the circle of their ordinary experience; and that for the most part they cannot be expected, from want of the requisite preliminary knowledge, to be fully competent to advise as to details; but the Lieutenant-Governor nevertheless believes that the reports received may be taken as a fairly comprehensive representation of the present public opinion of the country upon the various points discussed. The second step was to appoint a committee of officers, selected from different parts of these provinces, with whom were associated four native gentlemen, for the careful consideration of the district and divisional reports and other papers (including a minute by the Lieutenant-Governor, dated 22nd August 1882), and for general consultation upon the main questions raised by the 18th May Resolution of the Government of India. To this committee Sir Alfred Lyall is much indebted for clear and well-reasoned conclusions upon all the principal matters referred for deliberation, especially upon the methods best adapted, in the present circumstances of the country, for carrying out the policy of local self-government as declared by His Excellency the Governor General in Council.

4. In proceeding to deal with the various questions to be examined, it will be convenient to begin by considering shortly the constitution of municipalities; and the first point to be decided is whether each municipality should be left to determine for itself whether or not the system of appointing the members of the Municipal Board shall be by popular election, or whether election

should be authoritatively declared the only system of appointment now to be employed. The Lieutenant-Governor and Chief Commissioner has resolved to accept the recommendation of a majority of the provincial committee, and to introduce the elective system into all the municipalities of these provinces, save such exceptional townships as Naini Tal and Fatehpur Sikri, where for particular reasons nomination by the Government had better for the present be retained. The elective system, in more or less completeness, is already in force in various places, although, as might perhaps have been expected, the privileges of voting and of candidature seem generally to have made little progress anywhere in popular regard, and to have been used sparingly, if not with indifference. In all countries the practice of popular election, upon any wide scale, extends slowly and by degrees. In India it is still unfamiliar; and the connection between the use of the suffrage and the administration of local affairs has not hitherto been so close and obvious as to invest the voting privilege with any striking character or remarkable value. Nevertheless, since increased attention to public affairs on the part of the more intelligent sections of the urban population throughout the country may now be anticipated, it is advisable that opportunity should be taken still further to test in various localities the suitableness of the elective system as a means of enlisting the interest and securing the co-operation of the citizens in the management of local affairs. The Lieutenant-Governor therefore requests all district officers to arrange with those municipalities which do not already elect their committees, or which have not already submitted proposals for election, or which are not especially excepted, for the preparation of schemes for introducing the system as early as may be convenient. The municipal committees of those towns in which election is in force should also consider whether the present constitutions cannot be amended or improved; and everywhere the system should be given a fair field for real and effective operation. The Lieutenant-Governor has determined that all Honorary Magistrates, exercising powers within a municipality, shall *ex-officio* be members of the Municipal Board in addition to the elected members; but in all other respects the entire body will be chosen by some form of voting, and in many cases the Honorary Magistrates are already members, or are likely to be elected. The size and distribution of electoral wards, the number of members that should represent each ward, the qualification of voters and candidates, the registration of voters, the nomination of candidates, and the mode of recording votes, are matters for which the municipalities concerned will frame their own rules. But the Lieutenant-Governor concurs with the majority of the provincial committee in deciding that for the purposes of complete representation, and with the object of avoiding confusion and securing the participation of inhabitants of different parts of each town in the elections, all municipalities should be divided into wards of moderate size, consisting either of large muhallas or of groups of muhallas, possessing from their contiguity or for other reasons interests and concerns to some extent in common. There is much force in the reasons given by the committee against introducing representation and voting by guilds, castes or sects, as this might in some places foster rivalries and prejudices which the present policy, if it succeeds in bringing together the representatives of the general community on the common ground of civil interests and local responsibility, may very much help to obliterate.

5. The second matter for consideration regarding the Municipal Boards is their chairmanship. In these provinces that position has been held almost invariably by an executive officer of the Government; and from the district and divisional reports it is evident that though in some towns it might be possible at once to substitute non-official for official chairmen, the sense of the municipalities generally is against compulsory substitution, and in favor of leaving the Boards to choose their own chairman. The matter was carefully discussed by the provincial committee, and the Lieutenant-Governor and Chief Commissioner accepts the proposal of the majority (including all the native members) that, except in a few municipalities to be specified by the Government, where the presidentship of the chief district officer is for the present necessary, Municipal Boards shall be at liberty to choose their own chairman,

official or non-official, as may seem to them proper. Accordingly steps will be taken by the Government for ascertaining in what municipalities the chief district officer must, at least for a period, remain as chairman, either in order that he may have time to transfer functions and accounts, often onerous and complicated, to a non-official successor, or for lack of a qualified non-official to deal with special circumstances, or by reason of the expressed wish of the Municipal Board itself. In other municipalities, including all those not situated at the head-quarters of districts, the Boards will elect their chairman, official or non-official, who will for the present hold office for the period of one year, and who may afterwards be re-elected. When a non-official member of Municipal Board is chosen to be chairman, he shall for a period of his tenure of office be appointed an Honorary Magistrate by the Government.

6. The foregoing are the principal points in the constitution of Municipal Boards that seem to require separate and special orders; and in passing from them to the examination of the more complex questions affecting the constitution and functions of the District Boards, the first thing to be determined is the territorial jurisdiction of the Boards now to be formed. At present there is a single Board in each district, formed of members resident in various parts of the district, who meet periodically as an undivided administrative and executive body at the head-quarters of the district. The almost unanimous opinion of those who have been consulted throughout the provinces is in favour of modifying this arrangement by constituting Boards of each tahsil or fiscal sub-division of the district, not as independent bodies, but as local sub-committees of the central District Board, exercising considerable power and discretion in all matters within the sub-divisional circle. The members of the subordinate Boards would invariably be members of the District Board, which would in fact be an incorporation of the different subordinate Boards within the district area, and would from time to time meet at the head-quarters of the district for the purpose of collective administration. The arguments for the adoption of this plan, drawn mainly from the reports of the district and divisional officers, are ably summed up in paragraphs 4 to 7 of the report of the provincial committee, where is also explained the reciprocal relations to be established between the subordinate and the central Boards. In a few exceptionally situated localities, such, for example, as the hill country of Kumaun and the sub-montane Tarai, it may for the present be advisable to retain the existing constitution of Local Boards; and there may possibly be districts whose local peculiarities may render preferable the distribution of the whole area into other sub-divisions than the tahsil circles. But for the provinces generally the Lieutenant-Governor quite agrees with the arguments in favour of making the area of each subordinate Board's jurisdiction conterminous with a tahsil; and this plan has accordingly been adopted. On the one hand, the formation of representative Boards for the chief subordinate divisions of each district will ensure better knowledge of and attention to local wants, more regular attendance at Board meetings, closer supervision over the departments under local management, and prompter and more effective execution of local works, than is possible with a single District Board, meeting only at head-quarters. On the other hand, to make separate and independent units of local administration within each district would tend to break up piecemeal the organisation of the district, and, while increasing the necessity for, would throw serious difficulty in the way of, the constant exercise of central direction and control. For it must be admitted that there is little or no prospect of obtaining for Sub-divisional Boards throughout the provinces, or even in different parts of many districts, an equal standard or anything like a level, of general intelligence and working capacity. To set up all these Boards as separate administrative bodies, would be to accept the risk of great and confusing variety in the results of their administration, a risk that would be greatest in the remote and backward tracts, where intelligence and energy are often most required, and where these qualities are of course least likely to be available on the spot. The business of settling matters of finance and adjusting public interests between the several Sub-divisional Boards concerned in them, would cause much correspondence and would lead to the multiplication of petty offices, with the probable consequence of wasting much

money and time on establishments, and in the preparation, submission, and scrutiny of returns and reports. The plan of making the central District Board an aggregate of the Sub-divisional Boards is, on the contrary, in many ways favourable to the adjustment of the mutual relation between the various subordinate Boards, and between them and the central Board; while it appears to be the best arrangement for maintaining a consistent and systematic administration of local affairs throughout the district. Moreover, upon no other system could the minor bodies generally rely upon securing the membership of the leading men within their jurisdiction; while, lastly, the plan has the great advantage of reducing to a minimum the necessity for official superintendence and interference. If the Sub-divisional Boards were independent, the expedient of placing them in different classes for the purpose of graduating their powers according to the circumstances and conditions of different parts of the provinces and of districts, would in the beginning probably be unavoidable. But all such intermediate classifications are apt to affect the simplicity of the broad ground-work and fundamental principle of self-government; and the Lieutenant-Governor infinitely prefers that the District Board, which will be by far the best judge of the claims and capabilities of each section of its own body, should delegate the proper degree of power and allot the requisite amount of funds to each interior circle. It will be for the District Board, as composed of members representing all parts of the district, to act, after full consultation, upon the system thus sketched out, and to draw up a scheme explaining the arrangements made for distributing the work of local administration to its various subordinate Boards and adjusting their mutual relations.

7. The second point to be determined is the constitution of the District Boards is the method of appointing their members. Whether and to what extent or proportion the membership of the Boards should be determined by election, was specially referred for inquiry and opinion to all the districts of the provinces; the point was discussed in every district, with the result described in the district and divisional reports; and, as is shown in the committee's report, it is closely debated by the provincial committee. The large towns are much alike everywhere: they are always centres of comparative wealth and intelligence; they form constituencies easily represented; and their administration is always open to public observation and criticism. But the ordinary Indian districts possess none of these characteristics; and as far as can be judged from these papers, the balance of native opinion preponderates decidedly against the unrestricted introduction into them of the elective system. Such a step certainly appears inadvisable at the present time, when the state of society varies so widely in different parts of the country, when the whole principle of self-government is novel and imperfectly understood, and when the practice of general election is not only unknown outside the towns, but is apparently not in accord with the feelings and ideas of those classes of the community that have the largest interest in local self-government, and to whom we must look for its success. It is manifest that local self-government —meaning a system of administration by the gratuitous exertions of persons best acquainted with the characteristics and needs of the neighbourhoods in which they are interested, and possessed of means, leisure, and public spirit enabling and impelling them to devote themselves to that administration—cannot be initiated and developed into real independence except by the co-operation of these classes, represented by men who can lead and will be trusted by the community at large. This is how all systems of local representation have begun in all times and countries; so that it would be remarkable if in such a country as I[illegible] the best way of beginning were found to be by popular suffrage. That [illegible] services of such persons could be secured by open election, that they themselves would seek election, or would generally allow their names to be submitted for the purpose, seems from all the information hitherto collected to be questionable. If therefore we find that the views and prepossessions, as far as they have been elicited, of persons qualified to form a judgment on the best mode of initiating local self-government in the extensive districts of these provinces, are largely in favour of leaving at the outset the constitution of the Local Boards more or less in the hands of the Government, there seems to be

no sufficient reason for endeavouring, almost on the spur of the moment, to invent any such elective machinery as would necessarily raise numerous and various questions of franchise and voting rights, and all the practical difficulties inseparable from the attempt to adjust an arbitrary system to the diverse circumstances of the country. In short, the solid and universally recognised fact that local self-government depends absolutely for its success upon the character and ability of those to whom it is entrusted, has led the Lieutenant-Governor and Chief Commissioner to the conviction that in inaugurating the policy in the districts, a system of careful and consultative nomination by Government of the electoral body is preferable to election by untried and unfamiliar methods. Sir Alfred Lyall believes that this conclusion is supported by [illegible] judgment and conforms to the present wishes of a large majority of the pe[illegible]

8. Having regard, then, to the extreme importance of placing in competent hands the duties and responsibilities of district administration in the beginning of what is avowedly an experiment, and of maintaining the continuity of existing arrangements which imply (in such matters as, for example, education and sanitation) a standard of civilisation in advance of the average intelligence and culture of native society, the Lieutenant-Governor and Chief Commissioner has decided to adopt in principle the recommendation formulated in the 9th paragraph of the provincial committee's report. The committee proposed that the Government should nominate for each tahsil an electoral body which should elect a certain number of its members to form the tahsil or Sub-divisional Board. They advised, also, that a minimum qualification (on the basis of land-revenue or license-tax assessment) should be fixed, and that details might be left to be settled by local officers. But the differences in the distribution of the population, of wealth, and of property in land, between and within different districts, are so large and manifold, that after much examination of the question it has been found impracticable to fix any comprehensive qualification for election purposes, much less to devise methods of canvassing and election that would be everywhere applicable or universally acceptable. The only comprehensive plan that can be laid down at the first introduction of the system is to determine, with reference to the area, revenue and tenures, population, wealth, and to other conditions and special features of each sub-division, how many persons, not being salaried officers of the Government, should fairly represent its inhabitants and interests. The district officer must then be empowered to prepare in each district the measures that may be most convenient and appropriate to its circumstances and peculiarities, for ascertaining how many suitable persons are available in its sub-divisions, and how they can best be chosen. The proceedings taken will be reported to the Government, and the lists of electors that are drawn up will be duly placed on record. As soon as the lists are complete, the electors will be asked to return from among their own body, by such method as many seem appropriate or necessary, the members of the Sub-divisional Board, who will hold office for a term of three years. All Honorary Magistrates will *ex-officio* be members of the electoral body for the sub-division in which they exercise jurisdiction; and for the head-quarters sub-division of the district the nomination will usually include a larger number of residents of property and influence than for the outlying sub-divisions. As a general rule, the electors should be residents of the sub-divisions for which they have a vote; but exceptions will be allowed, since residence is not necessarily a condition of interest in and knowledge of a locality, and the possession of a certain amount of landed property or of a place of business in a sub-division should qualify a person otherwise suitable. Accordingly, the Lieutenant-Governor directs that each Commissioner, in consultation with the chief officers of the district and the existing local committees, shall propose the number of electors to be fixed for each sub-division, and shall decide by what method the lists of the persons who are qualified and prepared to serve can best be filled up. It is not essential that the standard number of electors, which may vary in different districts and sub-divisions, shall in all parts of the country be at once nominated, though the full number of names should be sent up whenever this is not impossible. It may in some few places be sufficient to determine

that standard, and to appoint at once as many persons as may be fit and willing to serve, leaving room for additions to be made according to requirements and opportunities. The Lieutenant-Governor and Chief Commissioner is disposed to consider that the maximum number of the electoral body for a sub-division should be 100, and the minimum 25, and that the lists should be revised from time to time at intervals, at the longest, of three years. The number of members to be elected to each Sub-divisional Board should not exceed 8; and as vacancies take place from death, resignation, or other causes, the electoral body should be required to elect new members, who shall serve for the remainder of the Board's term of office. In a few outlying and sparsely populated tracts it may not be found possible to appoint a sufficiently large electoral body, and it may therefore be expedient and even unavoidable to proceed to the direct nomination of the Sub-divisional Boards; but it is hoped that in almost all parts of the country a sufficient number of electors may be found to give latitude in the choice of the members of the Boards. These details, however, are committed to the careful attention of Commissioners, who will have the goodness to report, before the end of the present official year, the conclusions eventually arrived at, and to submit, for sanction and publication in the Government Gazette, the names of the members of the Boards who have been elected or nominated. The Lieutenant-Governor agrees in the unanimous opinion expressed by the provincial committee that it is inexpedient to confer honorary titles *ex-officio* upon the members of Local Boards, seeing that the value of such titles is likely to be depreciated by their too general conferment; and all that appears to be required is the separate issue by the Government to each member of Local Boards of the notification of his appointment.

9. Upon the third point of importance in the constitution of the District and Sub-divisional Boards, namely, the appointment of their chairmen, the Lieutenant-Governor and Chief Commissioner observes that the question of the chairmanship of the District Board was the subject of prolonged discussion by the provincial committee. Their finding coincides in principle with the opinions and prepossessions generally elicited by the district inquiries and recorded in the district and divisional reports. Of the four native members of the provincial committee, three strenuously insisted upon the necessity for maintaining, by law, the chief district officer as chairman of the District Board. The fourth, a gentleman of large property and influence in his own district, held a different opinion; though it may be added that, while he is said to be exceedingly well fitted for the chairmanship, he had nevertheless declined the office in his own district on the grounds of indifferent health, want of leisure, and residence at a distance from head-quarters. And the district and divisional reports, which in the Lieutenant-Governor's opinion evince on the part of the writers a most satisfactory disposition to interpret the genuine feeling and wishes of the people, indicate clearly that the main current of native opinion runs decidedly towards maintaining the position of the chief district officer at the head of local affairs, until some experience in the transaction of public business and the management of committees has been gained by leading members of the native community. It is beyond doubt expedient that the District Board should be exempt from official pressure and unnecessary interference; but the Lieutenant-Governor is confident that in these provinces all district officers are thoroughly prepared to give every facility and aid to the policy of the Supreme Government, and to promote whatever measures may be adopted for its introduction. There is accordingly, in Sir Alfred Lyall's opinion, no reason why due weight should not attach to the [illegible]e and impartial reports of the officers best qualified to inform and advise their Government, when they declare that the native community, so far as it has been consulted, has expressed itself very widely in favour of retaining for the present the district officer as chairman of the District Board. It seems that the district officer is trusted and preferred, in the existing complexion of local affairs and feelings, for sound and practical reasons. There can be no question that the experience and business habits of an official chairman will at first be of great assistance to the District Boards; and there must also be

borne in mind the strong probability that the Boards will for a time need much direction and advice, possibly even admonition and control; especially where distinctions of creed or caste, or other differences, still keep alive the germs of antagonism among sections of the native community. It may be inferred that, in the majority of districts, the choice will be found to lie between, on the one hand, guiding the Boards by recognised official presidents, who have all the details of business at their command, and respecting whose impartiality as between the various prepossessions and motives of their own members the Boards seem to have no distrust, and, on the other hand, directing their course from the outside by checks, interference, and revision. For the more completely the official element is eliminated from the Board's constitution, the greater will be the need for enforcing a system of external superintendence. Under the former plan there is every prospect, looking to the spirit in which the new policy has been accepted by the officers under this Government, that the Boards, working in harmony with other parts of the public administration, will rapidly acquire experience and self-confidence fitting them for larger independence. And it has to be remembered that the machinery for external control upon which the latter system would be altogether based, though it cannot be wholly dispensed with, requires to be employed with great judgment and much reserve; otherwise we may have controversy instead of co-operation; and the effect may be to weaken rather than to strengthen the good understanding that it is most desirable and even necessary to preserve between the District Boards and the provincial authorities.

10. But however this may be, the middle course recommended by the committee in the 12th paragraph of their report, which couse the Lieutenant-Governor and Chief Commissioner has decided, with a slight amendment, to adopt, will further test the wishes of the country, and will allow time for opinion to form and show itself among the District Boards themselves. The committee recommend that the district officer shall be *ex-officio* chairman of the District Board, except when the Board, on application made to the Government by a majority of the members, receive permission to elect a non-official chairman from their own body. The Lieutenant-Governor and Chief Commissioner agrees to the principle with this modification, that as soon as all the members of the District Boards shall have been chosen, or at some time before the end of the present official year, they shall be invited to assemble for the purpose of deciding whether they wish to proceed to the election of a non-official chairman, or whether they will leave their chairman's appointment in the hands of the Local Government. If the Board by a majority, at a full meeting of not less than three-fourths of the whole body, decide to propose one of their own number to be their chairman, the Lieutenant-Governor will give their nomination his best consideration, and nothing except some plain reason, to be formally shown and recorded, will prevent him from acceding to their wishes. If, on the other hand, the appointment is left to the Local Government, the ordinary result will be that the chief district officer will be empowered to assume the chairmanship of the newly-constituted District Boards for the first term of office, after which it shall be open to the Boards to consider again the propriety of proposing to elect non-official chairmen. In any case, they shall proceed immediately to the election of a vice-president, or if the Board be a large one, of two vice-presidents; and these officers of the Board shall preside at ordinary meetings at which the presence of the president is not required. In districts in which the nomination of a non-official chairman has been confirmed, the appointment will take effect by notification in the Government Gazette.

11. A majority of the provincial committee was of opinion that no permament chairman should be appointed by the Sub-divisional Boards, that it would be sufficient for these Boards to elect a chairman at each meeting, and that the special executive duties that otherwise would devolve on the permanent chairman might be entrusted to the permanent secretary. It is, however, to be observed that some element of permanency in the office of president of the Sub-divisional Boards seems necessary, particularly at first, for the proper

transaction of business and in order to preserve continuity of administration and uniformity of procedure. It is understood that in all countries standing executive Boards elect their chairmen for a period more or less prolonged; because the chairman's duty is to hold the balance among parties, and generally to conduct discussion. And in this country as elsewhere, to require the executive Boards for local administration to elect a fresh chairman whenever they meet, would be to open a door to much change and contention, since any decided difference of opinion on matters before the Board might lead to a contest at each meeting over the election of the chairman. For these reasons, the Lieutenant-Governor and Chief Commissioner, agreeing with the minority of the provincial committee, directs that a chairman, who shall hold office for not less than one year, and for such longer period as the Board may deem advisable, shall be elected by each Sub-divisional Board.

12. A few points remain that are common to the constitution of both Municipal and District Boards, and that may be discussed with reference to both. First, in regard to the secretaryship of Municipal, District, and Sub-divisional Boards, the Lieutenant Governor and Chief Commissioner concurs in the proposals of the provincial committee. Every Board shall have one or more permanent secretaries, who shall be appointed by the Board itself, and shall be paid or unpaid as the Board may determine, provided always that if the secretary be a member of the Board, he shall receive from it no remuneration, and that a Municipal Board may for special reasons apply to the Government for the services as secretary of any native officer stationed in the district, who, if the application is sanctioned, will then become a member of the Board. The secretary will ordinarily be charged with the correspondence and with making proper arrangements, in consultation with the chairman, for the execution of works and measures passed by the Board. Knowledge of the English language is not indispensable in the secretary or chairman, as the language used in the discussions and records of the Board should be a point for the Board's decision. The existing rules for the guidance of municipal and local committees should be followed in conducting business; but Municipal and District Boards may make rules for their own guidance; and, subject to the approval of the District Board, the Sub-divisional Boards may also do so for themselves. The strength and cost of the office establishments to be employed by the Boards may in a great measure be left to be determined by the Boards themselves; though the first proposals of the District Boards should be passed by the Commissioner of the Division, who will see that the establishments entertained in different districts are, as far as funds and the work to be done admit, fixed at the outset according to a uniform standard. The Commissioner shall be the channel of communication between the Municipal and District Boards and the Government.

13. A second point is the membership of officers of the Government, other than the chief executive officer of the district, on Municipal and District Boards. This subject has been discussed by the provincial committee in paragraphs 15-18 and 25 of their report; and in the conclusions of the committee the Lieutenant-Governor and Chief Commissioner is disposed for the most part, though not altogether, to agree. It is advisable that membership of the Boards, Municipal and District, by virtue of salaried office under Government should cease, and that, unless popularly elected, Government officials should not be appointed members of the Municipal Boards. But in regard to Tahsildars, the feeling and opinion of the country, as ascertained and reported by the district and divisional officers, is almost unanimously in favour of their being members of the District Boards; and this fact, combined with the strong recommendation of the majority of the provincial committee, has led the Lieutenant-Governor and Chief Commissioner to decide that the Tahsildar shall be ordinarily nominated to the Board of his sub-division and shall be eligible like other members for appointment to its chairmanship and secretaryship. Assuming that for some time to come many Sub-divisional Boards will need control and guidance, the Lieutenant-Governor must repeat his conviction that for the present the arrangement which is preferable and will be more popular is not a

system relying for guidance upon external check and revision only, but a system that allows the presence upon the Board of at least one local officer whose position enables him to give material aid of various kinds in the transaction of business. Nor is the Lieutenant-Governor prepared to lay down the rule that State employ should absolutely disqualify native officers, other than Tahsildars, from membership of the District Boards, though such appointments will usually be made upon special exigencies. But since the Tahsildars of a district, if assembled together upon the central District Board, might exercise considerable official influence, the Lieutenant-Governor is willing to direct that, while all members of the Sub-divisional Boards are also members of the District Board, the Tahsildars shall not attend the District Board meetings unless summoned by that Board for reasons to be specially recorded by it.

14. The position in regard to Municipal, District, and Sub-divisional Boards, of the special officers who are attached locally to such State Departments as Public Works, Public Instruction, and Sanitation, is a third point of detail requiring separate consideration. The provincial committee has advised that the Executive Engineer should not, and that the Inspector of Schools and the Civil Surgeon should, be members of the District Board, and that all of these officials should not be members of Municipal Boards. In this conclusion of the committee the Lieutenant-Governor and Chief Commissioner does not altogether agree. The Civil Surgeon represents in his district the Sanitary Department of the State, while the Executive Engineer and the Inspector of Schools are in their divisions the advisers and inspectors of their respective departments; so that there is practically little or no essential difference in the character of the relative functions of these officials. The Lieutenant-Governor is of opinion that, following the analogy of systems elsewhere in force, it is of much importance, on the one hand, that the Boards should be able to act in consultation with the skilled departmental advisers of the Government, and on the other hand, that in important cases the views and conclusions of the Government should be explained to the Boards through the medium of the professional or scientific advisers of the State. Accordingly, the plan approved by him is that, while the officers referred to shall be entitled to attend meetings of Municipal, District, and Sub-divisional Boards in order to explain the objects and principles of the Government in dealing with the subject-matter of their departments, and if necessary to draw attention to cases requiring early orders, their functions shall be confined to their specialities, and they shall have the right to be present and to speak without being members. It may not ordinarily be necessary for them to attend Board meetings, for many cases will be disposed of by correspondence; but in important and difficult questions, especially those in which principles are involved, personal attendance and participation in discussion will unquestionably facilitate snd expedite decision; and upon such occasions they will be expected to exercise their right of representing the Government.

15. Lastly, in the 19th, 26th, and 59th paragraphs of the report submitted by the provincial committee, the subject of the control to be exercised over Boards, Municipal and District, by the district officer and the Government is discussed; and in the 19th paragraph the arguments and views of the majority and minority of the committee are clearly set out. The conclusion of the majority was to the effect that, while copies of the proceedings of all Board meetings should be promptly submitted for the information of the district officer, the latter, whether a member of the Board or not, should have power to advise the Board, to examine its records and call for and criticise its proceedings, and to suspend its action provisionally pending reference to the Commissioner and the Government. Upon this the Lieutenant-Governor and Chief Commissioner would remark that if the general result of the reforms now contemplated were to make the district officer entirely responsible as an independent supervising authority for the control and direction of the Boards' proceedings, and thus to substitute stringent powers of suspension and revision from without for recognised predominance within, it is doubtful whether the cause of local self-government would gain by the change, and whether the

native community generally and the Boards in particular would welcome it. This was the view of the four native members, who voted with the minority of the committee; while there is also the separate question whether the powers which the majority of the committee would confer upon the district officer are compatible with his position as chairman of a Municipal or District Board. It would, for example, hardly be in keeping with his position as member and chairman of one of these Boards that he should be able summarily to suspend, by the exercise of his external authority, measures passed by the Board against his vote; for nothing would be more likely to raise misunderstandings between the Boards and Government, and by suppressing independence of opinion and action, to deprive the new policy of its chief meaning and design. Such a power of veto as was suggested by the majority of the committee would, unless used with great discretion and forbearance, either reduce the Board's discussions on any really debateable points to a mere form, or else disappoint and mortify members heartily interested in the free expression and enforcement of their views. The Lieutenant-Governor therefore considers that, although copies of the proceedings of meetings should be submitted to the district officer, who should be authorised and enjoined to make suggestions to the Boards and to call for their records, and to report where necessary his comments and objections to superior authority, the power of provisionally suspending the action of District Boards should rest with the Commissioner of the Division, who, should he after reference to the Board feel obliged to exercise it, must at once report the circumstances to the Government for confirmation. The business of District Boards may be important, but it is not likely, except in very rare instances, to be urgent; and since the ordinary law gives to Magistrates ample power of interference when the public peace or the public health requires the adoption of prompt and decisive measures, it is hardly conceivable that the delay involved in a reference to the Commissioner would give rise to public inconvenience or loss. In regard, however, to Municipal Boards, which may have to confront emergencies arising in large towns, the Lieutenant-Governor considers that a power of provisional suspension may properly be reserved to the chief executive officer of the district, who will not so ordinarily belong to the Boards. But he will of course report his action without delay for the information and orders of Government. The measure of control over the Boards that the Lieutenant-Governor thus proposes to provide, will be embodied in the new laws that will be required for the completion of the scheme of local self-government in these provinces.

16. The foregoing paragraphs deal with the principles and contain all the directions, affecting the constitution and functions of Local Boards, that it seems necessary to explain at present; and there remain for consideration and decision only certain matters of administrative detail connected mainly with local finance. Such of the financial questions of detail as depend upon the adjustment of responsibility between the Provincial Government and the Local Boards, and between District and Municipal Boards, will be treated in a separate Resolution; and it will here be sufficient to indicate generally the principles upon which the adjustments will be carried out.

17. The first of the questions to be considered is the extent to which municipal funds may fairly be relieved of police charges and the method of adjusting the charges for which they are fairly liable. The question was discussed by the provincial committee, and the unanimous conclusion of the committee is stated in the 27th paragraph of their report:—

"The preservation of peace and the prosecution and detection of crime are duties for which municipal revenues can hardly be said to be fairly liable, as these duties seem to devolve more equitably on the central Government of the country than on the scattered municipal towns. But the cost of watch and ward, including under this term such additional duties of a miscellaneous kind (*e.g.*, the enforcement of sanitary rules and the regulation of intra-municipal traffic) as clearly appertain to municipal police, appears to be *the* one of all others that can with most fairness and propriety be debited to municipal funds,

and paid for by the people whose interests and property are the immediate objects of the guardianship of the *chaukidari* force."

The conclusion is supported by the analogy of small towns under Act XX of 1856 and of rural villages, where the watchmen are paid, not from the general revenues of the country, but from funds raised locally, in the former by a house-tax levied for the purpose under the Act, in the latter by the local cess levied from landholders along with the land-revenue under Act III of 1878. The principle stated by the committee appears incontrovertible. For since the inhabitants of small towns and the landholders in villages, in accordance with the long established custom and law of the country, are required to pay for the services of the watchmen who remain on watch at night, who report crime, and who are empowered to challenge and arrest thieves and persons carrying suspicious property within their beats, there is no reason why the inhabitants of the larger towns (in many of which Act XX of 1856 was formerly in force) should, merely through the transformation of the town into a municipality, be altogether exempted from the charge. It is true that many municipalities have, in addition to the legitimate cost for watch and ward, been required to share the cost of the provincial police employed within their limits; but this arrangement, which is manifestly unfair, will be cancelled; and it now remains only to determine how the legitimate charge for watch and ward is to be computed and adjusted. In a few municipalities the town watchmen as a distinct body have been abolished, their places being taken by regular police, who form one force, and are paid on the same scale, with the district police stationed within the municipality; while in the majority of the municipalities the town watchmen form a separate body, wear a distinctive uniform, and not being liable for service outside their own town, are paid, like the watchmen in small towns and villages, at lower rates than the regular police. The Lieutenant-Governor and Chief Commissioner prefers the latter system, because it marks off a separate body of men for municipal service; but he directs that the question be considered by Municipal Boards in consultation with the Magistrate of the district and the Inspector-General of Police, and that each Board be left to decide which system it will adopt. One condition only [illegible] men of the regular police serving as town watchmen shall, while so employed, be relieved of all duties (such as the serving of summonses, the execution of warrants, and the like) that do not belong to the duty of the village and town watchman. Similarly, the Lieutenant-Governor and Chief Commissioner leaves it to each Municipal Board, in consultation with the district authorities and the Inspector-General of Police, to determine what the strength of the town police shall be, and if it is retained as a distinct body, what shall be the rates of pay and the manner of appointing and promoting the men. It is indispensable that the Magistrate and the District Superintendent of Police should have over the town police the same disciplinary authority as they have over the watchmen of small towns and villages; but in municipalities where the town police is retained as a separate body, it will be advisable that, subject to approval by the Magistrate, the watchmen should, on the analogy of the arrangements in force for the appointment of village watchmen, receive appointment and promotion from the Municipal Board.

18. The relation between the District and Municipal Boards in respect to institutions, such as schools and dispensaries, in which both are concerned, involves two questions, one pecuniary, the other administrative. In regard to the financial responsibility of the several Boards, the suggestion of the provincial committee, recorded in the 28th paragraph of their report, for the adjustment by mutual arrangement of the cost of the common institutions according to the proportions in which they are attended from town or district, approves itself to the Lieutenant-Governor and Chief Commissioner. The question of administrative control is not quite so simple, but as a general rule, administrative control should follow financial responsibility; and where two or more Boards are financially responsible for any institution, control should be exercised over it by a joint committee formed of members delegated

from the Boards concerned; reports, budgets, and other returns submitted to the district officer or to official departments being sent through the Board which can more conveniently forward them. The Lieutenant-Governor hopes that no provision is necessary for the special association with the District or Municipal Board of subscribers to dispensaries, since it is likely that influential subscribers will themselves be on one or other of the Boards, or be adequately represented by some of the members. In respect to High or Zila Schools, the Lieutenant-Governor is disposed to accept to a certain extent the recommendation of the provincial committee. These schools, usually situated within municipal limits but attended by boys whose homes are without as well as by boys whose homes are within the municipality, will in most districts be, as regards financial responsibility, institutions common to both the Municipal and the District Board, and would therefore be controlled by the joint committee. But the Lieutenant-Governor would not withdraw from the Board's committee the power of visiting, inspecting, and reporting upon these schools; and these powers will accordingly be retained, in addition to the control over endowments, boarding-houses, and local scholarships. In other respects, as, for example, the exercise of authority over teachers and servants, the regulation of studies and examinations, and the classification of pupils, the schools will continue entirely under the charge of the Department of Public Instruction.

19. The provincial committee have gone at some length into the relation of the Department of Public Works to the Local Boards, more especially the District Board, and have advocated some important changes in the existing arrangements for carrying out local works. The subject in its details falls beyond the immediate range of the present Resolution; and before final orders can be given, the views of the committee must be considered in the Public Works Department. The Lieutenant-Governor and Chief Commissioner however agrees in the general principles that the District Board should, like Municipal Boards, have very large discretion in the expenditure on local works of money at their credit, that the system of sanctioning their projects and keeping and auditing their accounts should be as simple and easy as is compatible with safety and regularity, and that the officers of the Public Works Department should report upon all important projects, and finally, after inspection, upon their execution.

20. It remains to examine the questions, which are of great importance, involved in framing a scheme of local finance. In the first place, the Lieutenant-Governor and Chief Commissioner accepts the principles set forth in the third paragraph of the provincial committee's report, that the income of Local Boards shall, subject to the proper maintenance of the institutions and works transferred to them, be utilised in projects designed and approved by the Boards; that the District Boards shall, for a term of years, be placed in secure possession of a distinct assignment of funds; and that, at least within the limits of that term, the unexpended balances of one year shall be available for expenditure by the District Boards in the following years.

21. Secondly, the chief source of the income of District Boards is, and must continue to be, the local rates, which are levied along with the land-revenue. Under the existing law a fixed proportion of these rates is appropriated to certain provincial purposes, namely, protection against famine and the construction of railways and canals; while the greater part is available for expenditure upon the rural police or village watchmen, the district post, schools, dispensaries, roads, and other institutions and works of public utility. It will be necessary to amend the law (Acts III and [illegible] under which the local rates are levied and local affairs are at present administered, in order to give legal force to the new administrative arrangements [illegible] preceding paragraphs; and it will be also advisable, while maintaining the rate's percentage and the method of collection, to treat the portion devoted to provincial purposes separately from the portion which, being levied for expenditure managed by the District Boards, will be entirely at the Board's disposal. As far as possible the latter portion will be made over to the District Boards

without deductions for central establishments, the charge for these being debited to provincial accounts.

22. The Lieutenant-Governor and Chief Commissioner further approves generally, subject to detailed adjustment, of the transfer to the District Boards of ferries, pounds, nazul, and the other items specified in the 46th paragraph of the provincial commitee's report, both as regards income and expenditure on one side, and control and management on the other. In respect, however, of any of these items in the management of which the Boards may deem the assistance of the district officer necessary, they may be allowed to apply for it.

23. Again, the transfer to Local Boards of the management of excise [illegible] referred to in the report of the provincial committee; but although the Lieutenant-Governor and Chief Commissioner does not altogether discard the [illegible] of eventually discovering some means of subjecting excise to local management, no practicable scheme has suggested itself, and the question may for the present be laid aside. The only other source of income that has been proposed as suitable, along with its management, for assignment to Local Boards is the license-tax. The proposal for the transfer of this tax was however, negatived by a majority of the provincial committee for reasons which, though by no means exhausting the case against the transfer, seem to the Lieutenant-Governor to be sound and valid; nor is their weight materially counterbalanced, in Sir Alfred Lyall's judgment, by the arguments of the minority in favour of the proposal. The policy of local self-government has been adopted because the system of committing local affairs to local management is now universally accepted as a necessary element of well-ordered administration. But the people of this country, who have been taxed from time immemorial, are not so backward in this branch of political education as still to need to be taught that taxes are necessary and that the payment of them cannot, with due regard to the public interest, be made pleasant. And it is to be recollected that a general tax upon trades and occupations is in no proper sense a local tax; that it is as yet untried in the category of local taxes; and that its management has never, in the Lieutenant-Governor's knowledge, been undertaken by Local Boards at the [illegible] to be instituted. Whether such Boards, unless largely composed of commercial men, would possess a knowledge of the profits of bankers and traders in a district sufficient to enable them to make a just assessment, is open to question. But however this may be, the proper taxation of trades and professions is no essential part of local self-government; and the Lieutenant-Governor does not feel himself justified, at the outset of a new and experimental system, in imposing on gentlemen, who will be asked to undertake much gratuitous labour, an onerous and possibly invidious responsibility that they seem, reasonably enough, somewhat unwilling to assume.

24. There are besides other reasons why it seems inexpedient to make over the license-tax to the Local Boards. If the tax be treated as a local one, its management and income should be assigned to the Boards holding jurisdiction over the areas in which the persons taxed have their places of business. As a number of these persons carry on their trades and occupations in municipalities, it would follow that a considerable part of the tax would be transferred to Municipal Boards at the expense of the general revenues of the country, a result that does not seem at present to be either necessary or desirable, particularly as the provincial revenues are already relieving the towns from the cost of [illegible] police. We should therefore have some disarrangement of local finance, [illegible] of inequality and mistakes in assessment arising from the [illegible] number of independent assessing Boards, while the sum transferred to the District Board would not be the full amount raised in the district by the license-tax. And even if this difficulty were met by setting [illegible] purposes of license-tax management, the clear distinction laid down in all other respects between town and district finances, the assignment of the license-tax to District Boards would by no means facilitate the difficult task of re-arranging local finance. The districts of these provinces vary much and disproportionately to their total area, not only in their revenue upon which

the local rates depend, and in other sources of local income, but also, and very materially, in their need for the expansion and improvement of their communications and local institutions, and for the development of their resources. The effect of allotting the license-tax to the District Boards of the districts in which it is collected, would be to increase considerably the funds of districts within which the large commercial towns are situated, while the outlying and agricultural districts would gain little. At the same time the Government would lose control of a source of revenue which is by no means of a local character, and which may usefully be kept as a provincial asset whence the deficiencies of the poorer tracts, or special requirements anywhere, might occasionally be supplemented, and inequalities of local income reduced. For, unless various parts of the provinces are to be kept, even more than at present, in various and very unequal stages of progress, it will be impossible altogether to do away with the system of grants from provincial revenues in aid of local income. And while it is only just that every district should have the benefit of the whole of the funds that are raised within it by special rates or from sources that are properly under district management, it is equally right, and the exigencies of the public finances demand, that we should proceed with great caution in localising funds on which localities have not a clear and primary claim.

25. Nevertheless, if financial considerations should eventually permit, and if there should hereafter be manifested a disposition on the part of the Local Boards to enter into arrangements with the Provincial Government in regard to the assessment and appropriation of the license-tax, the Lieutenant-Governor and Chief Commissioner will be willing to entertain and consider the proposals; but time is needed for working out and testing in practice the whole scheme of local finance for the provinces, and for correcting inequalities, so that no sudden change may take place in any essential part of the existing arrangements for the advance and improvement of the districts.

26. The following is a summary of the more important conclusions arrived at in the foregoing paragraphs:—

(*a*) *Constitutions and functions of Municipal and District Boards.*

(1) The system of open election shall be introduced into all municipalities, except in a few very special cases. Details as to the qualifications of voters and candidates, methods of voting, and other similar matters, shall be decided by each municipality, subject to the approval of Government.

(2) Except in certain municipalities to be specified by Government, where the presidentship of the district officer is at present considered essential, every Municipal Board shall elect its own chairman, who may be official or non-official, and who shall hold office for one year.

(3) Honorary Magistrates shall *ex-officio* be members of the Board within whose jurisdiction they exercise powers; and non-official chairmen, if not already Honorary Magistrates, shall for their term of office be appointed Honorary Magistrates.

(4) Each tahsil or fiscal sub-division of a district shall be represented by a Board; but all the Sub-divisional Boards shall be subordinate to the central District Board, which shall consist of the aggregate of the several Sub-divisional Boards of the district, and shall regulate their powers and functions.

(5) In all districts in which a sufficiently large electoral body can be constituted, the district officers shall prepare for each sub-division a list of persons who may be chosen to act as electors. The number of these will vary according to the circumstances of each sub-division, but it will not ordinarily be more than 100 or less than 25; and the list shall be periodically revised. Honorary Magistrates shall *ex-officio* be members of the electoral body.

(6) The electors shall be asked to appoint, by such method of election or nomination as they may decide upon, a certain number of their own body to serve on the Sub-divisional Board. The number of such members shall not exceed eight; and membership shall be for periods of three years, intermediate vacancies being filled up, for the remainder of the Board's term, by the electoral body.

(7) The District Boards shall decide whether they will propose to nominate a non-official member as their chairman, or leave the appointment in the hands of the Local Government. In the former case the proposed appointment will be submitted for sanction to the Government; in the latter, the chief district officer will ordinarily assume the chairmanship. The Sub-divisional Boards shall appoint their own chairman. In all cases the chairman shall hold office for one year.

(8) Each Board, Municipal, District, and Sub-divisional, shall appoint its own secretary or secretaries, official or non-official, paid or unpaid; but no member acting as secretary shall receive any remuneration. Municipal Boards may apply to the Government for the services as their secretary of a native official serving in the district, who, if the application be sanctioned, will thereby become a member of the Board.

(9) Each Board shall decide what language is to be used in its discussions and in recording its proceedings. Existing rules of business shall, as far as possible, be adhered to. The Municipal and District Boards will decide as to the strength and cost of the establishments to be employed.

(10) Except as provided in clauses (2) and (7), no Government official shall *ex-officio* be member of a Board. But all Tahsildars shall be eligible for membership of, and shall ordinarily be nominated to, the Boards of their sub-divisions. They shall not however attend meetings of the District Board unless specially summoned by it.

(*b*) *Relations of the district officer to Municipal and District Boards.*

Copies of all Board proceedings shall be at once submitted to the chief district officer, who is at liberty to make suggestions to, and call for information from, the Boards. If suspension of a District Board's action be deemed necessary, reference shall be made to the Commissioner, who may direct provisional suspension, and shall at once report to the Government. Power to suspend provisionally the action of a Municipal Board is given to the chief district officer, who will also report at once to the Government.

(*c*) *Relations between Municipal and District Boards.*

(1) The proportion of cost to be borne by each Board for works and institutions in which more than one are interested, will be decided by mutual arrangement.

(2) The administration of such common works and institutions shall ordinarily be conducted by a joint committee of delegates from the Boards interested.

(*d*) *Local Finance.*

(1) Municipalities shall be relieved of all police charges except those for watch and ward.

(2) The income of District Boards shall be fixed for a term of years, and, subject to the proper maintenance of institutions and works under their control, shall be placed entirely at their disposal, unexpended balances being carried to their credit, and not lapsing.

(3) The rates levied along with the land-revenue are the chief item of local income, and to it will be added the income under all or any of the following heads:—pounds, ferries, nazul, stage carriage fees, and arboricultural, educational, and medical receipts. Management will usually follow financial control.

J. R. REID,

Offg. Secy. to Govt. N.-W. P. and Oudh.

M

ORDER.—Ordered, that this Resolution be published for general information in the *Government Gazette* of the North-Western Provinces and Oudh; also that copies be forwarded to the Secretary to this Government in the Public Works Department, the Director of Public Instruction, the Surgeon-General, the Sanitary Commissioner, and the Accountant-General, for information; also to all Commissioners of Divisions for information and communication to District Officers and to District and Municipal Committees.

By order, &c.,

R. SMEATON,

Junior Secy. to Govt., N.-W. P. and Oudh.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 19th DECEMBER 1882.

GENERAL REMARKS.—There has been no rainfall to report from any part of the country, except in three districts of the Madras Presidency, at Rawalpindi, and at Dibrugarh.

In the Madras Presidency standing crops are on the whole in good condition, and the harvest of paddy and dry grains is in progress. In Coorg rice harvest is proceeding, and coffee is being picked. In the Mysore State the harvesting of *ragi* has been completed, and standing crops are in good condition. In the Berars and the Nizam's Territories *kharif* crops are still being reaped, and cotton-picking s in progress.

In the Bombay Presidency *rabi* crops are reported to be doing well; so also in the Central Provinces, where the reaping of the *kharif* continues in most districts. In the Central India and Rajputana States general prospects seem satisfactory.

In the Punjab, prospects generally are good, but for the *rabi* sowings rain would nearly in all districts be beneficial. In Oudh and the western districts of the North-Western Provinces rain is also wanted for the *rabi* crops. In Bengal all cold-weather crops generally are reported to be very promising, except in Burdwan where they are somewhat indifferent. In Assam and British Burma the rice harvest is progressing.

An earthquake was felt on the 15th in Khandesh, Panch Mahals, Kattywar, Neemuch, Indore, Abu, Marwar, Ajmere and Ulwar.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Dec. 20th)		
Bellary		Standing crops generally good; harvest paddy, dry grains, tobacco, and sugarcane, yield average.
Kurnool		Standing crops, later dry crops generally fair; harvest paddy, outturn below average; cattle disease in parts.
Ganjam		Standing crops dry grains and sugarcane thriving, paddy being harvested; fever, small-pox, cholera, and cattle disease continue.
Kistna		Standing crops paddy and dry crops affected in parts by blight and excessive rain; harvest paddy and dry grains, outturn below average; fever and cattle disease prevail; water 3 feet over anicut.
Chingleput (Madras)		Standing crops generally good, but not thriving for want of timely rain in parts; harvest paddy, yield below average.
Coimbatore	·22 (average of five stations.)	Standing crops generally good; harvest paddy and dry grains, yield average; fever, small pox, cholera, and cattle disease in parts.
Tanjore	·62 (average of eight stations.)	Standing crops good; harvest paddy and dry grains, outturn below average; cholera slight in one taluka.
Madura		Standing crops fair, except in parts; cholera, fever, and cattle disease in parts.
Malabar	·27 (average of three stations.)	Standing crops, paddy second crop, good; small-pox, fever, and cholera slight in parts.
Travancore		Standing crops, paddy good; fever continues.
		General Remarks.—No rain except in Tanjore, Coimbatore, and Malabar; general prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—(Dec. 20th)		
Kurrachee		River at Kotri on 14th, 4 feet 2 inches, 1 inch more than last year; small-pox in 3 talukas; fever generally prevalent; cattle-disease in 4 talukas; *rabi* crops going on well; wheat, red rice, and *bajri* in Kurrachee 24, 32, and 34 lbs., in Sehwan 32, 45, and 48 lbs., in Sakro 16, 34, and 48 lbs., and in Shahbandar 20, 44, and 44 lbs. per rupee respectively.
Hyderabad		*Rabi* crops flourishing; weather not settled; small-pox in Hyderabad, Sakrand, Moro, and Khandiaro; cattle disease in Badin; wheat 25, *bajri* 41, *jowari* 46, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		Standing crops healthy; fever in Dholka; wheat 27½ and *bajri* 32 lbs. per rupee.
Baroda		Reaping of *kharif* nearly completed; sowing of *rabi* continues; cotton-picking commenced; *bajri* 31½ and common rice 25¾ lbs. per rupee.
Surat		Crops healthy; reaping continues; *jowari* 39 and *nagli* 60 lbs. per rupee.
Nasik		Weather excellent, only a little warm in the afternoon; *rabi* crops thriving; fever in Dangi villages only; wheat 25½, *bajri* 36, and rice 23½ lbs. per rupee.
Colaba (Bombay)		Average abnormal temperature 2° cool from 13th to 16th; *nil* on 17th, and 1° warm on 18th and 19th; vapour in air slightly in excess of normal; wind normal except on 15th, when abnormal wind was northerly.
Poona		State of *rabi* crops good; *bajri* 44 and *jowari* 55 lbs. per rupee; in Poona *bajri* 41 and *jowari* 48 lbs. per rupee.
Ahmednagar		*Rabi* crops good, except those in the inferior fields; *bajri* maximum 60 lbs. per rupee in Parner, minimum 41 lbs in Sheogaon; *jowari* maximum 75 lbs. per rupee in Jamkhed, minimum 51 lbs. in Kopergaon.
Sholapore		Reaping of early crops nearly completed; late crops promising; cotton crop not good; *jowari* 70 lbs. 34 tolas, and *bajri* 55 lbs. 37 tolas per rupee.
Dharwar		Harvesting of early crops in progress; cotton suffering from blight in Rannibennur and gram from insects in Gadag; other late crops good; deaths from cholera in Navalgand 3 and in Gadag 4, Ron none; slight fever in four, and cattle disease in two talukas; rice minimum 21 and *jowari* 49 lbs per rupee.
Kanara		Rice and *ragi* harvest completed; preparing ground for second crop on coast; sugarcane thriving; cattle disease subsiding; fever partial; common rice in Karwar 12½ in district average 15¼ seers per rupee; weather cold and fair.
Rajkot		Weather cold; general health good; cholera continues in Navanagar; slight shock of earthquake in Navanagar, Morvi, Rajkot, Gondal and Malia on 15th at 8 in the evening; *bajri* 29 and *jowari* 35 lbs. per rupee.
		General Remarks—Rabi crops doing well; slight fever and cattle disease in a few districts; slight shock of earthquake in Khandesh, Panch Mahals and Kattywar, on 15th.
Bengal—(Dec. 19th)		
Chittagong	*Nil*	Weather clear and seasonable; prospects of crops favourable; harvesting of *amun* rapidly going on; prices stationary; cattle disease continues; public health generally good.
Dacca	*Nil*	Pulses being sown; reaping of *amun* rice proceeding; prospects of *roachiaya* paddy in the jurisdiction of station Keranigunge not good; outturn in other respects good; sugarcane being cut, outturn good.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice going on, yield estimated at from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; fever and cholera prevalent in some parts of district, as usual at this season.
Moorshedabad	*Nil*	*Amun* being still cut; prospects of *rabi* crops good; mild fever in places.
Rajshahye	*Nil*	Prospects of crops generally favourable; cholera abating.
Burdwan	*Nil*	Winter rice being harvested; prospects of sugarcane good and of *rabi* crops indifferent; cholera and fever rather prevalent.
Rungpore	*Nil*	Weather seasonable and dry; *amun* being harvested; prospects of cold-weather crops favourable; fever reported from Nilphamari Sub-division; general health good.
Bhagalpur	*Nil*	*Aghani* harvest going on, outturn in Muddehpoora said to be fair; prospects of *rabi* crops favourable; fever abating in Muddehpoora, but cases of cholera reported from Bhagulpore town and the south of the district.
Purneah	*Nil*	Late [illegible] moderate crop; cold-weather crops very promising; fever abating.
Patna	*Nil*	Prospects of *rabi* continue good; reaping of paddy nearly finished; public health good.
Durbhunga	*Nil*	*Rabi* and tobacco crops progressing favourably; paddy being reaped; fever still prevalent in Tajpore Sub-division, otherwise public health fair; prices of food-grains stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Hazaribagh	*Nil*	Weather bright and cold; prospects of cold-weather crops good public health good.
Cuttack	*Nil*	Late rice being reaped; *rabi* crops progressing well; cholera has appeared both in town and interior.
		General Remarks.—No rain fell during the week; all cold-weather crops generally reported on to be very promising, except in Burdwan, where some crops are said to be indifferent; in some districts *amun* rice will yield below an average crop; generally, however, a fair crop is expected for the whole province; sugarcane is being cut in some districts with a good outturn; weather is generally reported to be not so cold as usual at this season, and consequently fever and cholera continue to be prevalent in several parts; small-pox is said to be increasing in Singbhoom.
N.-W. Provinces and Oudh—		
Benares (Dec. 19th)	No rain	*Kharif* rice crops being cut; prospects of *rabi* crops good; a slight rise in prices of food grains; no sickness among men or cattle.
Allahabad („ 20th)	No rain	Crops most promising; prices falling slightly.
Gorakhpur („ 18th)	No rain	Prospects of *rabi* crops good; fever and ague in some tahsils; prices steady.
Jhansi („ „)	. . . .	*Rabi* crops flourishing; prices almost stationary; small-pox and cattle disease of a mild type in a few villages of pargana Jhansi.
Agra („ 19th)	No rain	Sky now and then cloudy; *rabi* crops promise well and are being irrigated; small-pox in two parganas; general health good; prices stationary.
Bareilly („ „)	. . . .	Rain would benefit unirrigated crops; prices unchanged; condition of people and cattle good.
Meerut („ „)	No rain	Weather again clear and frosty; small-pox unabated; prices stationary; prospects good.
Kumaon („ „)	. . . .	Weather fair; rain wanted; general health good; typhus decreasing; cattle disease continues; prices unchanged.
Lucknow („ „)	. . . .	Prospects of crops fair; rain urgently wanted for *rabi* crops; general health good, but small-pox prevalent in the city.
Partabgarh („ „)	. . . .	Prospects satisfactory; cholera has ceased.
Sitapur („ „)	. . . .	Rain urgently required; small-pox still bad in tahsil Sitapur, otherwise health good; prices stationary.
Fyzabad („ „)	No rain	Prospects good; irrigation going on; weather seasonable; health good.
Rae Bareli („ „)	. . . .	Prospects fair; rain much wanted; irrigation from wells going on; isolated cases of cholera still reported; cattle disease continues in tahsil Rai Bareli; prices steady.
Cawnpore („ „)	No rain	Weather seasonable; prospects fair; health good; prices steady.
Farukhabad („ „)	. . . .	Prospects fair; prices steady; weather seasonable; rain needed; sky clear.
		General Remarks.—No rain; rain wanted for the *rabi* crops in Oudh and in the north-western districts, elsewhere prospects fair prices have raisen slightly in two districts and fallen in one; sporadic cholera in one district and small-pox in five; cattle disease continues in Rae Bareli, Kumaon, and Jhansi.
Punjab—(Dec. 19th)		
Delhi	. . . .	Health and harvest prospects good; slight rise in prices.
Hissar	. . . .	Health generally good; sporadic small-pox in Rohtak; prices almost stationary.
Umballa	. . . .	Health good; prices stationary; rain wanted.
Jullundur	. . . .	Health good; prices steady; rain wanted.
Amritsar	. . . .	Health good; prices fluctuating; *rabi* sowings completed, rain wanted.
Lahore	. . . .	Health and harvest prospects good; prices almost stationary.
Ferozepore	. . . .	Health and harvest prospects good; prices almost stationary.
Sialkot	. . . .	Health and harvest prospects good; prices stationary; rain wanted.
Rawalpindi	Slight rain	Seasonable fever prevailing; slight fall in prices; *rabi* sowings completed, and *kharif* gathered in; cattle disease in the Murree tahsil.
Peshawar	. . . .	Slight fever prevailing; prices almost stationary; rain wanted.
Mooltan	. . . .	Health and harvest prospects good; prices almost stationary.
Dera Ismail Khan	. . . .	Fever abating, but the mortality continues high; harvest prospects good; prices falling.
		General Remarks.—The health of the Province and the prospects of crops are generally good; rain is wanted in nearly all the districts, Rawalpindi being the only one in which there has been a slight fall during the week.
Central Provinces—		
Nagpur (Dec. 20th)	. . . .	W[illegible] clear and cool; prospects of *rabi* crops and health good.
Jubbulpore („ 19th)	. . . .	We[illegible] clear and cool; crops thriving; prospects and health good; w[illegible] 12 seers per rupee.
Saugor („ 18th)	. .	Crop[illegible] excellent; a few clouds about; health fair; prices steady.
Seoni („ 19th)	. . . .	Weather clear and cool; *rabi* crops thriving; prospects good; *kharif* crop being threshed; fever declining; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*contd*		
Hoshangabad (Dec. 19th)	. . . .	Weather seasonable; *rabi* crops doing well; small-pox reported; fever prevalent; wheat 15 seers per rupee.
Raipur („ 16th)	. . . .	Weather clear and cool; threshing of *kharif* commenced; health generally good; prices unchanged.
Sambalpur („ 14th)	. . . .	Weather clear and cool; prospects of crops good; fever abating; rice 56 seers per rupee.
Khandwa („ 19th)	. . . .	Weather clear and pleasant; prospects of crops good; few cases of small-pox; prices steady.
		General Remarks.—Weather clear and cool; *kharif* crops being harvested in most districts; *rabi* crops in good condition; fever abating; public health generally good; prices unchanged.
British Burma—(Dec. 16th)		
Akyab	*Nil*	Total rainfall 204·17 inches; 22 deaths from cholera, and 2 from small-pox reported from district; public health in town good; cattle disease severe in one township; crop prospects good.
Rangoon	*Nil*	Total rainfall 102·02 inches; 4 deaths from cholera; otherwise public health good; crops progressing.
Bassein	*Nil*	Total rainfall 125·83 inches; 19 deaths from cholera in town, otherwise public health good; crop prospects generally good; reaping going on; some slight damage done by late rains.
Prome	*Nil*	Total rainfall 50·21 inches; 3 deaths from cholera in town, and 6 in district; otherwise public health good; earlier crops of paddy have been reaped.
Amherst (Moulmein)	. . . .	Line interrupted.
Toungoo	. . . .	Line interrupted.
		General Remarks.—Public health good, with exception of a little cholera in Akyab district and Bassein town; reaping progessing; crop prospects good everywhere.
Assam—		
Gauhati (Dec. 19th)	*Nil*	Weather seasonable; reaping of *sali* paddy in progress; public health good.
Sylhet („ 20th)	*Nil*	Paddy harvest continues; outturn of *amun* in Sunamganj said to be good; no other reports of outturn; *sali* seems to be a very poor crop in Sadr and Karimganj Sub-division; cholera apparently abating.
Cachar („ „)	*Nil*	Weather getting cooler; about half of the *sali* crop reaped; 9 deaths from cholera in Silchar, 4 in Lakhipur, 7 in Hailakandi reported; common rice 26¾ seers per rupee.
Dibrugarh („ „)	0·20	Weather cold; *sali dhan* being harvested; public health good.
Mysore and Coorg—(Dec. 20th)		
Bangalore	. . . .	Standing crops in good condition; prospects fair; price of *ragi* 33 seers per rupee.
Mysore	. . . .	Standing crops in good condition; prospects fair; price of *ragi* 25 seers per rupee.
Mercara	. . . .	High east wind prevailing; rice harvest proceeding; coffee being picked, outturn short and below estimate; market dull; no sale for cardamoms; prices of food grains falling; climate feverish.
		General Remarks.—The condition of the crops throughout the Mysore State is good, and prospects fair; harvesting of *ragi* and *poonji* paddy completed; price of *ragi* in Shimoga 23 to 60 seers per rupee; in Chittaldrug, 36 to 60; rice on an average, 12 seers; public health satisfactory.
Berar and Hyderabad—(Dec. 20th)		
Amraoti	. . . .	*Kharif* reaping continued; cotton-picking progressing; *rabi* in good condition; prices, wheat 16, *juari* 36 seers per rupee.
Akola	. . . .	Cotton-picking and *juari*-cutting continued; *rabi* progressing favourably.
Hyderabad	. . . .	*Tabi* crops prospering; *abi* crops continue to be reaped; cholera still prevails; prices, wheat 15, coarse rice 10½, white *juari* 27, yellow *juari* 33, and *tur* 30 seers per current sicca rupee.
Central India States—(Dec. 20th)		
Indore	. . . .	No change since last report; slight shock of earthquake felt on evening of 15th.
Morar (Gwalior)	. . . .	Weather seasonable; health and prospects good.
Sutna	. . . .	Health and prospects good.
Neemuch	. . . .	*Rabi* crops thriving; public health good; a slight shock of earthquake was felt at 7 o'clock P. M. on Friday last, the 15th instant.
Goona	. . . .	Crops good; [illegible] fair; wheat 22 seers 8 chittacks per rupee.
Bhopal	. . . .	Weather [illegible] crops and public health good.
Agar	. . . .	Health and [illegible] pects good.
Nowgong	. . . .	The *kharif* harvest is being reaped; health fair; prices stationary.
Manpur	. . . .	Weather clear and cold; sowings of opium finished; *rabi* crops doing well; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (Dec. 20th)	. . . .	Weather cold; severe shock of earthquake on 15th at 7 P. M., periodical small shocks have continued since.
Sirohi („ 17th)	. . . .	Tanks and wells full; health good; crop prospects fair.
Marwar („ 15th)	. . . .	Only one month's water in tanks; wells almost full; health and crop prospects good; shock of earthquake on 15th, lasting about three seconds.
Harowti („ 11th)	. . . .	Crops progressing favourably; health good; weather cloudy and colder; prices stationary.
Jhallawar („ 13th)	. . . .	Health good; weather mild.
Ajmere („ 19th)	. . . .	Unusual heat; earthquake on 15th; weather cloudy; health good.
Jeypore („ „)	. . . .	Weather cloudy; prospects satisfactory; health good.
Ulwar („ „)	. . . .	Prospects and health good; shock of earthquake on 15th.
Nepal—		
Khatmandú (Dec. 14th)	No rain	Prospects good; weather fine, but rather more warm than in the last week of November.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA,

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 15th December, 1882.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore Bahádur, K.C.S.I.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.

NEW MEMBERS.

The Hon'ble H. S. THOMAS and the Hon'ble G. H. P. EVANS took their seats as Additional Members.

BIKRAMA SINGH'S ESTATES' BILL.

The Hon'ble MR. ILBERT introduced the Bill to confirm and give effect to an award made by His Excellency the Viceroy and Governor General regarding certain matters in dispute between Sardár Bikrama Singh and the Kapúrthhala State, and moved that it be referred to a Select Committee consisting of the Hon'ble Mr. Gibbs, the Hon'ble Sir Steuart Bayley and the Mover. He said that, when he obtained leave to introduce this Bill, he explained that it was not a Bill of any public or general importance. Its object was merely to confirm and give effect to a certain award passed for settling some family disputes. The circumstances under which the award was made, the nature of the award and the proceedings which had since taken place were fully explained in the preamble of the Bill, and it was not necessary that he should do anything further except to state that, when he obtained leave to introduce the Bill, the trust-fund to which it related consisted partly of land and partly of money to be invested in land. Since that date the whole of the fund had been invested in land, and the trustees had consequently discharged the duties imposed upon them, and nothing more remained to be done. He was consequently enabled to make the Bill much shorter and simpler than it would have been if it had been introduced when leave was obtained.

The Motion was put and agreed to.

o

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *North-Western Provinces and Oudh Government Gazette* in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

EXPLOSIVES BILL.

The Hon'ble MR. ILBERT also moved for leave to introduce a Bill to regulate the manufacture, keeping, sale, conveyance and importation of explosives. He said :—

"The object of this Bill is to provide a comprehensive law regulating the manufacture, keeping, sale, conveyance and importation of explosives throughout British India. The matter was first brought to the notice of the Government in connection with an application made to the Government of Bombay by the agents of Nobel's Explosives Company, Limited, for permission to import dynamite manufactured by that Company. The Government of Bombay referred the question to a Committee, which reported that the expediency of allowing the importation into that Presidency of dynamite and other preparations of nitro-glycerine was doubtful. The Government of Bombay forwarded a copy of this report to the Government of India with a request that the importation of preparations of nitro-glycerine might be prohibited until further notice by a notification under the Sea Customs Act. Before complying with this request, the Government of India thought it well to consult the Governments of Madras and Bengal. In reply, both Governments expressed an opinion that the importation of these explosives should not be forbidden. The Government of Bengal further submitted a draft set of rules to regulate the importation, package, transport and storage of dynamite and similar substances, with a report which had been prepared by a Committee appointed by the Lieutenant-Governor to consider the entire subject. This Committee, while recommending that the draft rules should be published as rules under the Indian Arms Act, 1878, suggested the enactment of a comprehensive Imperial Act of a similar nature to the English Explosives Act, 1875 (38 Vic., c. 17), which would (I am quoting from the report) 'in a convenient and compendious Code deal with the subject of explosives in its entirety, and furnish the public, as well as Government officials, with an easy means of ascertaining their duties, responsibilities and powers respecting articles which, by their inflammable, explosive or dangerous nature, imperil the public safety.'

"It appears to the Government of India that it would be an abuse of the powers conferred by the Indian Arms Act, 1878, to make under that Act rules of the nature of those submitted by the Bengal Committee. There are, no doubt, powers conferred by the Indian Arms Act which might, at first sight, seem to authorise the making of such rules; but the object to which the rules proposed by the Bengal Committee are directed is altogether different from that of the Act. The object of the Arms Act was to enable the Government more effectually to prevent arms and ammunition (which term, under section 4, includes gun-cotton, dynamite, lithofracteur and other fulminating substances) from getting into the hands of persons who would make a bad use of them. In other words, the main object of that Act was to *restrict* the possession of arms and ammunition. But the main object of the rules prepared by the Bengal Committee is not restrictive. Their object is to *protect* the public against the dangerous nature of the explosives to which they relate by regulating dealings with those explosives. If they are restrictive, it is only so far as is necessary to carry out their protective object. Under these circumstances, it appears to the Government that the proposed rules could not properly be published under the Indian Arms Act, 1878.

"Nor does it appear that there is any other enactment, as the law at present stands, under which rules of the nature of those prepared by the Bengal Committee can be issued. Under the existing law, the only enactments relating to this subject are to be found in various fragmentary provisions, dealing with gunpowder and fireworks only, which are in force in the Presidency-towns and in certain municipalities and ports. It appears to the Government that it is unsatisfactory that the law should be in this state at a time when dynamite and other compounds of nitro-glycerine are rapidly taking the place of gunpowder in all works where blasting is necessary. These explosives have already been used to a considerable extent in connection with various works undertaken both by the Government and by private enterprise throughout India; and it is only natural to suppose that, as their superiority to gunpowder becomes more widely known, their use will increase.

"Under these circumstances, the suggestion of the Committee that an Act drawn on the model of the English Explosives Act, 1875, and dealing comprehensively with the whole subject of explosives, should be added to the Indian Statute-book, has recommended itself to the Government of India as being the only satisfactory method of treating the subject. Accordingly, the present Bill has been prepared. It embodies such of the provisions of the English Act as are, in the opinion of the Government, necessary in this country. In addition to the omission from the Bill of certain provisions of the English Act, the Bill further differs from that Act in that, in accordance with the well-recognized principle of Indian legislation, it confers power on the Local Governments to provide, by means of rules adapted to the varying local circumstances of the provinces under their administration, for many points for which there are specific provisions in the body of the English Act."

His Honour THE LIEUTENANT-GOVERNOR said: "I quite agree, my Lord, that early legislation upon this subject is very desirable. I speak under correction, but I think the rules proposed to be adopted by the Committee under the Arms Act, which my hon'ble friend Mr. Ilbert referred to, were under action taken by the late Lieutenant-Governor, Sir Ashley Eden. The recommendation of that Committee was based on the conviction that early measures of a protective character were necessary, and as much time would elapse before recourse could be had to legislation, it was thought that rules under the Arms Act were the only possible way of securing some means of protection in the importation and transport, through the port of Calcutta, of admittedly very dangerous explosive articles. I concur in the view expressed by the Hon'ble Legislative Member that it is not expedient or right to frame such rules under an Act passed for a different purpose; but I would mention that, for the security of the port, the Bengal Government has already had to take action to prevent ships carrying dynamite and other such explosives for approaching the limits of the port, and it is very necessary that no time should be lost in passing an enactment to regulate the importation, transport and warehousing of such articles."

The Motion was put and agreed to.

SUNDRY BILLS.

The Hon'ble MR. ILBERT also moved that Major the Hon'ble E. Baring be added to the Select Committees on the following Bills:—

To amend the law relating to Merchant Shipping.

To give power to arrest persons whose evidence is needed under Act XII of 1859.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Hon'ble Mr. Thomas be added to the Select Committees on the following Bills:—

To amend the law relating to Merchant Shipping.

To give power to arrest persons whose evidence is needed under Act XII of 1859.

To amend the Indian Railway Act, 1879.

The Motion was put and agreed to.

BURMA LABOUR LAW REPEAL BILL.

The Hon'ble SIR STEUART BAYLEY moved for leave to introduce a Bill to repeal the British Burma Labour Law, 1876. This law, he said, was passed in 1876 with the object of establishing a system of State emigration for Burma, and it was originally framed very much on the lines of the Assam Emigration Act, with this difference, that the contracts, instead of being made with private individuals, were to be made in the first instance with the Government, and the Government was afterwards to distribute the labour. It provided for the appointment of emigration agents at ports and the establishment of depôts, and also for the punishment of people who endeavoured to recruit without a license under the Act. A certain amount of action was taken under the law, an emigration agent was appointed at Coconada and a few emigrants went to Burma; but at the end of a few years the law was found to be a dead failure. The office of emigration agent was abolished, the depôt was sold by auction, and no further attempt was made to carry out the Act. But, side by side with this system of State emigration, there was, both before and after, and during the continuance of that action, a system of labour emigration continually going on from Madras to Burma under private arrangement. A certain number of labourers was collected, their passages were paid, advances were given to them and those engaged in the business took their chance of recovering the outlay from the wages of the labourers. This system practically only applied to Rangoon and the large coast towns, but not to the interior of the country. It had grown to considerable dimensions, and was still being carried on satisfactorily. No complaints had been made either by the Burmese or by the Madras Government, nor by the parties to the contract. But last year an officer in Madras discovered that this system of emigration was illegal; a case was tried there, the persons concerned were fined and the matter was referred to the High Court. The High Court decided that it was illegal, because the recruiter held no license. He could not have a license, because there was no emigration agent to grant one. The Madras Government, however, were of opinion that the Act was never intended to have that effect, that it referred only to State emigration, and not to private emigration, which had been going on there for years. On a reference to the Chief Commissioner of British Burma, he strongly supported the view taken by the Madras Government, and he subsequently wrote very strongly that private emigration should be allowed to go on, because he found that the importation of labour from Madras, which was largely resorted to in connection with the construction of the Sittang Railway, was seriously impeded under the existing law; and he recommended that the existing law, Act III of 1876, should be repealed. The Madras Government fully approved of the proposed repeal of the law. They recommended that the law should be abolished, and that section 3 of the Madras Act, which it repealed, should be revived. That section simply provided a penalty for recruiting people by fraud, violence or whilst in a state of intoxication. The Government of India decided that this was unnecessary, as the provisions of the Indian Penal Code were sufficient to punish the commission of such offences. The Government of India were on principle opposed to the re-enactment of such a shred of legislation; the Government of Madras accepted that view, and it was therefore determined to introduce the present Bill.

His Honour THE LIEUTENANT-GOVERNOR said: "The Act of 1876, my Lord, was a very unnecessary one, and should be repealed. It was passed under the mistaken idea that the Government should intervene to control and direct emigration from India to Burma, and in the hope that the action of Government might lead to the settlement of coolies in the province. The fact is that the demand for labour there at special seasons is amply supplied by the perfectly voluntary emigration which sets in from both Madras and the districts of Bengal adjoining Burma. These men, however, only go to Burma for a short season, and, having obtained very large wages during their stay, they return to their homes enriched with their earnings. They confer no permanent benefit upon the province. The attempt of Government, however, to control it has made no improvement. It cost the Government a good deal

of money, and did not for a moment check the voluntary emigration which went on side by side with it. And it is certainly much better that the voluntary system should continue; and it is in this direction the present Chief Commissioner, Mr. Bernard, is acting, in promoting, as much as he can, voluntary emigration, by enabling the steam companies to carry over emigrants at a cheaper cost."

The Motion was put and agreed to.

DEKKHAN AGRICULTURISTS' RELIEF ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. HOPE presented the Report of the Select Committee on the Bill to amend the Dekkhan Agriculturists' Relief Act, 1879.

RULES OF BUSINESS.

The Hon'ble MR. ILBERT gave notice of his intention to propose certain amendments of the Rules of Business which had been passed under the Indian Councils Act. He said that a draft of the proposed amendments, with a Statement of the Objects and Reasons for which they were proposed, had, he believed, been circulated among hon'ble Members of Council. But as these proposals only formed part of a general scheme for giving greater publicity to legislative measures, it would perhaps be convenient that he should take this opportunity of stating what the Government of India had done, what they were doing and what they were proposing to do in furtherance of this policy. It was doubtless in the remembrance of those present that, in the course of one of the debates which took place in the early part of this year, Mr. Plowden, who bade them farewell at the last meeting, and whose absence they all regretted to-day, called attention to the inadequacy of the existing arrangements for giving publicity to Bills brought into Council. His remarks were taken up by the Press and gave occasion to some interesting and suggestive articles and letters in the newspapers; amongst which he might be permitted to mention an article in the *Hindoo Patriot* of February the 13th last, and a letter written by a Native correspondent to the *Pioneer* of February the 25th. The subject was not overlooked by the Government of India, and on his arrival at Simla, at the end of April, he found that it was under the consideration of the Legislative Department. At that time, the legislative machinery of this country was entirely new to him, and he was anxious in this, as in other matters, to gain some practical knowledge of the working of the system before committing himself to proposals for its amendment. Accordingly, he pleaded guilty to being personally responsible for any delay which had occurred in taking action on the subject. The most important conclusions at which the Government of India ultimately arrived were embodied in a circular letter from the Secretary to the Legislative Department, which was issued on the 8th September last, and to which the widest publicity had been given. That letter began by observing that more direct steps were already taken by the Government of India than were taken in England to make the Bills before the legislature known to the public. In Bengal and, it was believed, in other parts of India, the Vernacular Gazettes were sent to all the Courts, and were there read by the pleaders and mukhtárs. Public bodies of weight or influence were consulted on Bills of importance. Besides the large associations to which the Local Government referred direct, there were local associations which the District Officer usually consulted. Every District and Sub-divisional Officer was expected, not only to express his own opinion, but also to ascertain the opinions of the Natives around him; and, as a matter of fact, the papers which were printed regarding important Bills commonly contained many valuable opinions from Native associations and from individual Native gentlemen. The letter went on to remark that it must be borne in mind that some of the most important Bills which came before the Council, and, in particular, measures like the great codifying Acts in connection with which this question had arisen, were, no matter how clearly they might be drafted, of such a nature that, even

with the aid of the fullest explanations, none but experts could hope to master their contents sufficiently to offer any useful criticism on them. Similar measures met with but little criticism in England outside professional circles, and in India the prospect of obtaining useful criticisms on measures of this class was much diminished by the difficulties of translation, to which reference was subsequently made. Perhaps he might be allowed to confirm the last remark from his own experience. Amongst the measures which had engaged the attention of Parliament during the last two years, some of the most important were two Acts passed at the instance of Lord Cairns--one for the amendment of the law of conveyance and the other for the amendment of the law relating to settlements of land. The first of these measures had made important alterations in the practice relating to the transfer of landed property; in regard to the second, it was not too much to say that it materially affected the position and powers of the landed gentry throughout the whole of England. Yet neither of these measures met with much general criticism. Their provisions were, to the best of MR. ILBERT's belief, criticised by no one outside the ranks of professional lawyers, and by very few of them. The Criminal Code Bill, which had not yet become law, had been a good deal more talked about, but the amount of serious criticism which it had undergone, and the number of those who had taken the trouble to master its provisions, was extremely small. Hon'ble Members knew that it was very easy to talk about matters of this kind without any great knowledge of the provisions of the Bill. He very much doubted whether any one who was not a lawyer had turned over its pages. He did, indeed, remember seeing a clever little pamphlet entitled "Thoughts on the Criminal Code Bill by a Habitual Criminal," but he suspected that the gentleman who so described himself was a member of the profession to which MR. ILBERT himself had the honour to belong. The truth was, that codifying measures of this description were, as a rule, very seldom read; although they were, doubtless, consummate works of art in their way, they were extremely dry reading; and no one, so far as his experience went, took the trouble to read them except under the pressure of dire necessity. Accordingly, he had no reason to expect that measures of this kind would ever constitute a popular form of literature either among the criminal or among the non-criminal classes.

To return to the circular letter. After these prefatory remarks, which were made, not for the purpose of minimizing the importance of the subject, but for the purpose of guarding against exaggerated notions of what the Government proposed to do, the letter went on to suggest certain practical changes.

The first of these related to the Statement of Objects and Reasons. One suggestion was that a fuller and more popular Statement of Objects and Reasons might be published, showing why the measure was required, and giving a short history of the circumstances which had led up to it, and an explanation of the effect it was likely to have on the subject-matter and on the people. They had done their best in the Legislative Department to give effect to this proposal, and to make not only the Statements of Objects and Reasons but the Reports of Select Committees fuller and more popular in form than was formerly the practice, and, so far as was consistent with the nature of the subject, to make them clear and intelligible to the ordinary unscientific mind. The draftsman of a Bill always had to steer between the Scylla of the judicial Bench and the Charybdis of the public. If he aimed at a popular style—if he tried to express the intention of the legislature in popular language, the language of everyday life—he was sure to be told by the Bench and the Bar that he was prolix, that he was inaccurate and that he was wanting in precision. If, on the other hand, he aimed at scientific accuracy and precision, he was informed by the public that he was crabbed in style, and that he was obscure and unintelligible. To escape altogether from this dilemma was impossible, but perhaps the best plan would be to provide a technical text for the official and professional classes and a popular commentary for the public, and that was what the Legislative Department had attempted.

The next subject to which the letter directed attention was that of translation, and here there was a serious difficulty inherent in the subject which

could not be entirely removed. Any one who had attempted it would acknowledge that it was hard enough to give an adequate rendering of English legal terms in French or German, or of French or German legal terms in English. But it was infinitely more difficult to translate such expressions accurately into languages where not only the modes of thought and forms of expression were further removed from English than in the case of European languages, but the requisite scientific terminology was either altogether wanting, or was so defective that the vocabulary had to be supplemented with unfamiliar and artificial importations from the Arabic or Sanscrit. They could not, under these circumstances, hope to make translations which were altogether satisfactory. All that could be aimed at was to make them as accurate and as intelligible, not only to experts, but to the ordinary public, as the circumstances of the case would admit, and steps were being taken to effect that object. In the first place, arrangements had been made to test the accuracy and intelligibility of the translations which had already been made of Bills and Acts; secondly, the Local Governments had been applied to for information as to the machinery which they employed for making translations, with the view of considering whether it was possible to make any improvements in that direction; and thirdly, it was proposed to utilise to a greater extent than at present the labours of the Translation Branch of the Legislative Department.

Assuming that the objects aimed at had been sufficiently explained in English, and that provision had been made for tolerably satisfactory translations into the vernaculars both of Bills and of the accompanying documents, the next question was, how all these documents could be brought to the notice of the persons whose opinion it was desired to elicit. That was a point on which the Local Governments would be consulted, both as to the machinery for distribution, and as to the persons and associations to whom those documents were to be supplied. In the meantime, it was proposed generally that, when a Bill had been introduced, the Bill itself, the Statement of Objects and Reasons and, whenever it appeared necessary, the speech made by the Member in charge when he moved for leave to introduce the Bill or when he introduced the Bill, should be printed in a separate form on cheap paper, so as to be available, with the translations, for gratuitous distribution to the Press, and to such municipalities, local boards and associations interesting themselves in public questions as was considered desirable. It was also proposed that these papers might be made available for perusal without fee at court-houses and kachahrís, and that they should be sold at a low price to the public. Steps had been taken to ascertain how cheaply they could be published and sold. MR. ILBERT could not speak positively at present, because the necessary inquiries had not been completed; but he thought the Government of India saw its way to supply to any person or association, who might be willing to subscribe, copies of all Bills, Statements of Objects and Reasons, Reports of Committees and Reports of Debates in the Council at what he thought would be admitted to be the very reasonable rate of two rupees a year.

Supposing that as much publicity as was practicable had been given to the proceedings of the Council, the next question was how they could best secure that such criticisms as were offered should duly reach the Council and not be overlooked. It was hardly necessary to say that, without the light afforded by external criticism, every legislative proposal was, and must be, to a great extent a leap in the dark. Experience showed that legislative proposals could not be effectually or thoroughly considered until they had been reduced into the form of Bills, and that, until a Bill had gone through the ordeal of external criticism, its draftsman, however skilful and experienced he might be, must feel uncertain that he had attained the object which was desired. What the Government desired to know was whether they had succeeded in making their meaning sufficiently clear; whether they had provided for all matters for which it was necessary that provision should be made; whether their proposals were consistent with each other, harmonious with existing legislation and adapted to local requirements; whether they had omitted to make any provision which was required for the effectual working of the Act; whether any of their proposals were likely to produce effects which they neither contemplated

nor intended. To put the matter shortly, they wanted to know two things:—First, whether the machinery which they had devised was likely to work; and secondly, to change the metaphor, where the shoe was likely to pinch. For information on the first point, they naturally turned to the official classes, to the officers who would have to administer the law and to the Judges who would have to expound it. They had freely availed themselves of their privilege of consulting this class on all the larger measures which were brought into Council, and in so doing they were compelled to levy heavy contributions on their valuable time. The only way in which they could repay the debt was by taking care that their suggestions should not be overlooked. The second point on which information was desired was one of equal importance, but far more difficult to obtain. What they wanted to know was, not only how the Bill would work, not only what was thought of it by those who would work it, but the effect the Bill would have on the persons on whom it would operate. They wanted to find out what were the feelings and the expectations, the apprehensions and the impressions, not of those who were to administer the law, but of the people on whom the law was to operate, and whose interests and welfare it must, for good or bad, intimately affect. Something was to be learned on these points from sympathetic and experienced officials, who had lived among the people and had acquired some knowledge of their ways and modes of thought: something more could be learnt from influential and representative associations, such as the British Indian Association, the Puna Sarvajanik Sabha and others, though it must always be borne in mind that such associations represented not so much the public at large as the views of particular classes and interest. But, after making due allowance for all such sources of information, their best source of information was, and must be, the public Press. They all knew that the Press was by no means an infallible guide; that it was sometimes misleading, inasmuch as it was apt to be the mouth-piece not of the public, but of a particular class or set of interests. But after all, and making due allowance for all this, it was almost the only voice that spoke to them from outside the charmed circle of officialism, and therefore it was a voice which the Government could not afford, and certainly did not desire, to disregard. Accordingly, attempts were being made to watch more closely than heretofore the comments in the Press, both English and Vernacular, and the Government of India had requested that those who were responsible for compiling the weekly extracts from the vernacular newspapers should pay special attention to any comments in these papers on matters connected with pending legislation; and they had arranged that, in certain cases, full abstracts from newspaper articles should be circulated to members of the Legislative Council in the same way as official communications were now circulated. He had no doubt that members of Council had already observed that the number and bulk of the papers with reference to published Bills had materially increased owing to such abstracts.

The next point to which reference was made in the letter was the possibility of making some amendments in the Rules of procedure, and that was the point to which MR. ILBERT'S notice specially referred. But, before touching upon that, he should like to say a few words on one other subject. So far they had been considering only Bills which were destined to become Acts. But there was a great deal of legislation which affected the interests of the public as intimately as—he was inclined to think, even more intimately than—the Acts either of the Governor General in Council or of the local legislatures. What he referred to were the numerous notifications, rules and regulations which were made from time to time either under executive authority or under the authority of a particular Act. The existing practice with reference to these rules was that, when they were made, they were published in the local official Gazette or in the *Gazette of India*, as the case might be. It appeared to the Government of India that, in the case of legislation of this kind,—for it was legislation,—it was as important as in the case of Bills that opportunity should be given for external unofficial criticism before the rules had been finally settled. The Government had accordingly recommended that any rule, regulation or notification which affected the outside public, whether made under executive authority or

under the authority of an Act, should, before being issued by the Local Government or Administration, and, where sanction was required, before being submitted for the sanction of the Governor General in Council, be published as a draft, with the view of ascertaining whether any valid objection could be taken to it. In making this recommendation, it was proposed to follow an English precedent, which was precisely in point. Under numerous Acts of Parliament, power was given to bodies like Railway Companies, Harbour Boards, Municipal Councils and the like to frame bye-laws which were binding on particular sections of the public. Where powers of this kind were conferred by modern Acts of Parliament, it was almost uniformly the case that the power was conferred with a proviso that, before the bye-law was submitted to the confirming authority, it should be published as a draft in such a manner as might appear necessary to bring it to the notice of the class of the public likely to be affected by the bye-law. The mode of publication usually required was that the bye-laws should be inserted as advertisements in two or more local newspapers circulating in the district to which they related, and that copies should be posted up during a specified time in certain public offices, as well as in the town hall and other public buildings where they were likely to attract attention. Of course, that precise mode of publication might not be found suitable in India, and the Government would have to consider what was the best mode to adopt for the purpose of securing the end in view.

Now, he turned to the proposals which had been made for amending the Rules of Business. Criticisms had been passed on the existing procedure to the effect that, under that procedure, sufficient time for consideration was not allowed after the introduction of a Bill, especially to those who were dependent on translations, which could not be brought out until some time after the introduction of the Bill, and it had been suggested that a Rule of Business should be framed which would preclude the Select Committees, to which all Bills of any importance were referred, from reporting on a Bill until a specified period had elapsed from the date of its publication in the vernacular languages. Any such hard-and-fast rule would, it was feared, be altogether unworkable. The time to be allowed in each instance must depend upon all the circumstances of the case; but, with a view to imposing a check upon over-haste, it was proposed to introduce into the 24th of the Rules of Business a provision to the effect that, when publication in the vernacular or in the local Gazettes had been ordered by the Council (as it always was in the case of any Bill in which the people were interested), the Select Committee should in their report state the date on which the Bill had been published in each language and Gazette. The result of this would be that, if in any case the Committee proposed to proceed with a Bill before any particular section of the community had been allowed the time to form its opinion which would ordinarily be considered sufficient, the fact would be brought prominently to notice, and some special grounds of urgency would have to be adduced in support of the course proposed.

Another point to which reference was made in the letter of the 8th September related to the republication in the vernacular as well as in English of Bills which the Select Committee considered had been so amended as to need republication. As regarded this point, MR. ILBERT ought to state that, though the Rules of Business contained no express provision respecting it, the more important Bills were at present republished in vernacular as well as in English. The only question was whether this practice should not be extended.

It would seem right, as a general rule, that, when a Bill was of such a nature that the Council thought it necessary to order it, on its introduction, to be published in the vernaculars, and the Select Committee thought it had been so altered as to require republication, there should be a republication in the vernacular languages as well as in English. But this was not always so. It occasionally happened that the alterations in a Bill which led the Committee to recommend its republication were alterations merely in drafting or in matters of procedure, and that republication was recommended, not because the interests of any persons concerned were supposed to be affected, but simply because, owing to the complication of the subject, or to the danger of there

being some flaw which would cause a hitch in the working of the Bill as amended, it was thought desirable to submit it once more to the judgment of experts. In a case of this sort, a republication in English was obviously all that was required.

In this case also, it had been thought impracticable to lay down any hard-and-fast rules, and the requirements of the case would probably be best met by adding to the twenty-fourth Rule of Business a provision to the effect that, when the Committee recommended the republication of a Bill originally published in a vernacular language, the republication should, as a rule, take place in the vernacular as well as in English, and that, if in any case the Committee did not consider republication in the vernacular to be necessary, they should give their reasons for that opinion in their report. The clauses it was proposed to insert laid down a similar rule regarding republication in local Gazettes, a matter to which the same considerations appeared to apply.

Lastly, it had been suggested that, when a Bill came to be "taken into consideration," whether it had been dealt with by a Select Committee or not, the President should have power, in any case in which such a course seemed to him desirable, to submit the Bill to the Council section by section, as was done in Parliament in Committees of the whole House. The discretion as to whether this course should be adopted or not would rest with the President, who would determine whether the Bill was of such a kind as to require it or not. There was no doubt that the adoption of this course would take up time, but this objection, it was thought, would be more than outweighed by the advantage gained in affording a better opportunity than at present existed for explaining to the public the details of a measure and the real meaning of its separate provisions. Members of the Council would, where a Bill was dealt with in this way, have more means than they now possessed of asking questions upon points of detail, and the Government would be able to give more ample explanations than it was possible for them to give under the ordinary procedure.

His Excellency THE PRESIDENT suggested, that it would perhaps be both more regular and advisable that the Council should not enter into any discussion of the points raised by Mr. Ilbert on the present occasion. His Hon'ble friend had given a very clear explanation of the proposals of the Government on the subject, and HIS EXCELLENCY himself would, therefore, at present abstain from making such remarks as he might be inclined to make at a later period. He thought that it would be better that members of Council should take time to consider Mr. Ilbert's proposals, and that a subsequent stage, after a certain amount of discussion had taken place on them in the Press, and the public had an opportunity of considering them, would present a more fitting occasion for the expression of the views of members on those proposals.

The Council adjourned to Friday, the 22nd December, 1882.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

AMENDMENT OF RULE II OF THE RULES REGARDING THE LEVY AND EXPENDITURE OF FEES ON MASONRY GRAVES AND MONUMENTS IN CEMETERIES AND CHURCHES.

Extract from the Proceedings of the Government of India, in the Home Department (Ecclesiastical),—Nos. 4—248-63A., under date Fort William, the 27th December 1882.

Read again:—

Home Department Resolution Nos. 6—370 to 382, dated the 9th November 1876, containing rules relating to churches and cemeteries.

Home Department Notification, dated the 12th December 1877, publishing rules for the care and use of Government cemeteries throughout India except those in the Presidency Town of the Diocese of Calcutta.

Read also the following papers regarding the materials to be used in the erection of tombs:—

From the Government of Madras, No. 2254 W., dated 1st September 1882.

To the Venerable the Archdeacon of Calcutta, No. 190, dated 21st September 1882.

From the Venerable the Archdeacon of Calcutta, No. 896, dated 5th October 1882.

RESOLUTION.

In paragraph 3 of Home Department Resolution, dated the 9th November 1876, cited in the preamble, it is laid down that the dimensions of a monument over a pucka grave must not exceed eight feet by four feet at the base except with the previous sanction of the Local Government concerned, and that a simple cross or head-stone on an adequate masonry foundation, not ex-

ceeding three feet by two feet, is the only monument that should be allowed over a kutcha grave. Rule II of the rules regarding the levy and expenditure of fees on masonry graves and monuments in cemeteries and churches throughout India, published under Home Department Notification, dated the 12th December 1877, read above, provides that a fee of one rupee per square foot shall be levied on the erection of a monument in a burial ground, provided, however, that for a simple head-stone or flat slab not more than three feet six inches in height or length and two feet in width, a uniform fee of ₹ 5 only shall be charged.

2. With reference to the rules contained in the Resolution of 9th November 1876, the Government of Madras, in September last, invited the attention of the Government of India to the desirability of laying down some rule in regard to the nature of the materials to be used in the erection of tombs. In view of the great expense entailed in the maintenance of structures formed of brick and chunam, of which the great majority of tombs in the Madras Presidency are built, the Madras Government suggested that above the level of the ground the use of any other material than cut stone should in all cases be prohibited.

3. The Governor General in Council is, however, advised that the adoption of the recommendation made by the Government of Madras might possibly be productive of hardship in view of the fact that in most parts of India cut stone is very expensive, while in some parts it is believed to be practically unattainable except by persons in affluent circumstances. In order to attain the object in view, it has been suggested by the Venerable the Archdeacon of Calcutta that—

(1) the words "of stone or marble" should be added after the words "a simple head-stone or flat slab" in Rule II contained in Home Department Notification dated 12th December 1877; and

(2) that the fee of one rupee per square foot prescribed by that rule for all masonry monuments should be retained, but that the monuments should not exceed an entire height of three feet from the ground, the fee of one rupee being reduced to 8 annas in the case of monuments of stone or marble.

4. The suggestions made by the Venerable the Archdeacon of Calcutta commend themselves to the Government of India, and the Governor General in Council accordingly directs that Rule II of the rules contained in Home Department Notification, dated 12th December 1877, be altered in the manner described in the preceding paragraph of this Resolution.

ORDER.—Ordered, that the above Resolution be forwarded to the Government of Madras for information, with reference to the letter thence, No. 2254W., dated 1st September last, and to other* Local Governments and Administrations for information; to the Public Works and Military Departments, and the Department of Finance and Commerce; and to the Bishop's Chaplain, the Venerable Archdeacon† of Calcutta, and the Senior Chaplain of the Church of Scotland.

* Bombay. Bengal. N. W. P. and Oudh. Punjab. Central Provinces. British Burma. Coorg. Assam. Hyderabad.

† With reference to his letter No. 896, dated 5th October 1882.

Ordered further, that the Resolution be published in the Supplement to the *Gazette of India*.

(True Extract.)

A. MACKENZIE,
Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch.*)

D. M. BARBOUR,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 26th DECEMBER 1882.

GENERAL REMARKS.—During the week under report there has been no rainfall in any part of the country, except in four districts of the Madras Presidency and at Kurrachee and Dibrugarh.

Agricultural prospects continue good in the Madras and Bombay Presidencies, in the Central Provinces, British Burma, Assam, Mysore and Coorg, the Nizam's Territories, Central India States, and in Rajputana. In the North-Western Provinces and Oudh crop prospects are also favourable, but rain is needed. Rain is also much wanted in most districts of the Punjab, and owing to the deficiency of the autumn rains the *kharif* crops in parts of the Rohtak district have almost entirely failed. In the Bengal Presidency all cold-weather crops are on the whole doing well.

The rice harvest in Coorg is giving a good outturn, but in the Bengal Presidency the outturn will in many places be only fair and in some below the average owing to want of early rains.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Dec. 27th)		
Bellary	. . . . .	Standing crops generally good; harvest paddy, dry grains, tobacco, and sugarcane, yield average.
Kurnool	. . . . .	Standing crops thriving, except in parts injured by excessive rain; harvest paddy, outturn below average; cattle disease in parts.
Ganjam	. . . . .	Standing crops, dry grains and sugarcane thriving; fever and small-pox continues; cholera and cattle disease in one taluk.
Kistna	. . . . .	Standing crops generally fair; harvest paddy, outturn below average; fever, small-pox, and cattle disease in parts; water 2 feet over anicut.
Chingleput (Madras)	·03 (average of one station.)	Standing crops generally good, except where injured for want of timely rain; harvest paddy, yield below average.
Coimbatore	·22 (average of four stations.)	Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore	·98 (average of twelve stations.)	Standing crops good; harvest paddy and *cholum*, outturn below average; cholera in four taluks.
Madura	·82 (average of eight stations.)	Standing crops fair, except in parts of two taluks; fever, cholera, and cattle disease in parts.
Malabar	. . . . .	Standing crops, paddy second crop good; slight small-pox, fever, and cholera in parts.
Travancore	·33	Standing crops, paddy good; fever prevails. *General Remarks.*—No rain in Ganjam, Kistna, Bellary, Kurnool, and Malabar; general prospects good.
Bombay—(Dec. 27th)		
Kurrachee	Kurrachee . ·8 Tatta . ·5 Sakro . ·17	Fever generally prevalent; cattle disease in 5 talukas; small-pox in Kurrachee city, Sujawal, and Kotri; river on 21st 1 inch lower than last year; wheat, red rice, and *bajri* in Kurrachee 24, 32, and 32, in Ghorabari 20, 44, and 44 lbs., and in Sajawal 22, 38, and 44 lbs. per rupee respectively.
Hyderabad	. . . . .	Estimated average outturn of *kharif* crops is 12¼ annas; *rabi* crops flourishing; weather seasonable; small-pox in Hyderabad, Kandiaro, and Moro; cattle disease in Mirpur; on 15th earthquake felt in the whole of Badin taluka and town Bago Tando; wheat 25, *bajri* 41, *jawari* 46, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad	. . . . .	Standing crops healthy; fever in Dholka; wheat 28½ and *bajri* 32 lbs. per rupee.
Baroda	. . . . .	Reaping of *kharif* nearly completed; sowing of *rabi* continues; cotton-picking commenced; *bajri* 31½ and common rice 25¾ lbs. per rupee.
Surat	. . . . .	Crops healthy; reaping progressing; *jowari* 39½ and *nagli* 58 lbs. per rupee.
Nasik	. . . . .	No change in the weather; *rabi* crops doing well; wheat 25½, *bajri* 36, and rice 23½ lbs. per rupee.
Colaba (Bombay)	. . . . .	Abnormal temperature 2° warm on 20th, 24th, and 25th, 1° warm on 21st and 26th; nil on 22nd and 23rd; vapour in air normal; abnormal wind southerly on 21st and 25th; wind normal on all other days.
Poona	. . . . .	*Rabi* thriving; *bajri* 44 and *jowari* 56 lbs. per rupee; in Poona *bajri* 41 and *jowari* 47 lbs. per rupee.
Ahmednagar	. . . . .	*Rabi* crops good, except those in the inferior fields; *bajri* maximum 80 lbs. in Parner, minimum 41 lbs. per rupee in Sheogaon; *jowari* maximum 75 lbs. in Jamkhed, minimum 50 lbs. per rupee in Sheogaon.
Sholapore	. . . . .	Reaping of early crops almost completed; late crop good; *jowari* 73 lbs. 19 tolas, and *bajri* 54 lbs. 15 tolas per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Dharwar . . .	. . . .	Early crops being harvested; exotic cotton suffering from blight in Ranibennur, Karajgi, and Ron, other late crops good; cholera disappeared in Navalgund and Ron and continues in Gadag; slight fever in 3 talukas; rice minimum 26 and *jowari* 45 lbs. per rupee.
Kanara . . .	. . . .	Preparing ground for second crop on coast talukas; garden and sugarcane produce healthy; cattle disease in 2 talukas; common rice in Karwar 12½ seers per rupee, in district average 15 seers per rupee.
Rajkot	. . . .	Weather cold; general health good; cholera at Kanara, Und, and Porebunder, continues in Navanagar, and re-appeared but slightly in Dhrol; *bajri* 29 and *jowari* 34 lbs. per rupee.
		General Remarks.—*Rabi* crops doing well; slight fever and cattle disease in a few districts.
Bengal—(Dec. 26th)		
Chittagong . . .	*Nil*	Weather fine and cold; prospects of all crops good; harvesting of late rice still continues with good outturn; public health good; cattle disease in the town station; prices stationary; a shock of earthquake on night of 25th.
Dacca	*Nil*	Harvesting of early winter rice continues; outturn good; sugarcane being cut; prospects of cold-weather crops good; public health generally good.
24-Pergunnahs (Alipore)	*Nil*	Rice harvest continues; crop likely to be full up to average; sugarcane and winter crops doing well; public health fair, but more cases of cholera than usual in some parts of district; price of common rice stationary.
Moorshedabad . .	*Nil*	Late rice still being harvested; cold-weather crops doing well; public health generally good; a few cases of fever reported in places.
Rajshahye . . .	*Nil*	Prospects of winter crops continue favourable; public health improving.
Burdwan . . .	*Nil*	Weather seasonable; prospects of crops tolerable; cholera in some localities; fever generally prevalent.
Rungpore . . .	*Nil*	Weather seasonable; prospects of crops favourable; harvesting of late rice going on; cholera somewhat prevalent in some parts of Gaibanda sub-division, otherwise public health good.
Bhagalpur . . .	*Nil*	Harvesting still going on; outturn of paddy, not injured by drought, good; prospects of winter crops good; public health improving.
Purneah . . .	*Nil*	Cold-weather crops looking well; late rice almost harvested; outturn moderate; fever has almost disappeared.
Patna	*Nil*	Harvesting of late rice going on; prospects of winter crops continue good; public health good.
Durbhunga . . .	*Nil*	Rice crop still being harvested; winter crops promising; prices falling; public health generally good.
Hazaribagh . . .	*Nil*	Weather cold and seasonable; winter crops doing well; general health good.
Cuttack	*Nil*	Prospects excellent; late rice being harvested; winter crops progressing well and in some places flowering; cholera still reported; fever also prevails.
		General Remarks.—No rain has been reported in any part of the province during the week; all cold-weather crops generally doing well, save in Burdwan where they are said not to be good; sugarcane also very promising everywhere; transplanting of tobacco nearly finished, and the plants are thriving well; rice harvest is rapidly being completed; good outturn reported from some parts, but in many places it will be only fair, and in some places even below the average, owing to want of early rains; fever and cholera, though decreasing in some parts, still prevalent in several places; fever is said to have almost disappeared from Purneah; a little; small-pox reported from Sarun, Singbhoom, and Manbhoom.
N.-W. Provinces and Oudh—		
Benares (Dec. 26th)	No rain	Prospects of *rabi* crops good; no sickness among men or cattle prices steady.
Allahabad („ 27th)	No rain	Prospects favourable; prices falling.
Gorakhpur („ 25th)	. . . .	Weather misty; crops promising; fever in the north; prices steady.
Jhansi („ „)	No rain	Prospects of *rabi* crops favourable; prices stationary; small-pox amongst children continues; cattle disease in pargana Jhansi continues.
Agra („ 26th)	No rain	Cloudy weather during the week; well irrigation continues; small-pox continues in 2 parganas; general health good; prices stationary.
Bareilly („ „)	. . . .	Prospects generally good, but rain wanted; slight rise in prices; health of people and cattle good.
Meerut („ „)	No rain	Weather often cloudy; rain much wanted; health good, though small-pox continues; crops as yet flourishing; prices stationary.
Kumaon („ „)	. . .	Clouds come and go, and are now gathering; rain much wanted; typhus ceased; health good; cattle disease continues; prices rising.
Lucknow („ „)	. . . .	Rain urgently wanted for *rabi*; crop prospects unfavourable; prices almost steady; sky now and then cloudy; general health good, but small-pox prevalent in the city.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Partabgarh (Dec. 26th)	. . . .	The *rabi* out-look is an unusually good one; sugarcane being cut; general health good.
Sitapur („ „)	. . . .	Weather has been cloudy during the week, but no rain; small-pox confined to tahsil Sitapur; prices stationary.
Fyzabad („ „)	. . . .	Rain wanted; prospects good; irrigation from wells going on; public health good; prices steady.
Rae Bareli (Dec. 25th)	. . . .	Irrigated *rabi* crops thriving; rain generally wanted; cholera abating; prices stationary.
Cawnpore („ 26th)	. . . .	Prospects good; rain wanted; general health good; prices unchanged.
Farukhabad („ „)	. . . .	Prospects fair; prices steady; weather seasonable; rain much needed.
		General Remarks.—No rain during the week; prospects continue favourable, but rain is wanted; small-pox in tahsil Sitapur, pargana Jhansi, and city Lucknow, but general health good; prices nearly stationary.
Punjab—(Dec. 27th)		
Delhi	. . . .	Rain wanted; health and prospects good; prices fluctuating.
Hissar	. . . .	Rain required for *barani rabi*; prices fluctuating; small-pox at Rohtak continues, health good elsewhere; suspensions of revenue are proposed in parts of Rohtak, where *kharif* almost entirely failed.
Umballa . . .	. . . .	Rain wanted; *rabi* down; prices stationary; health good.
Jullundur . . .	. . . .	Rain wanted; prices steady; health good.
Amritsar . . .	. . . .	Rain wanted; prices fluctuating; health good.
Lahore	. . . .	Prospects of crops and health good; prices fluctuating.
Ferozepore . . .	. . . .	Health and state of *rabi* crops good; prices falling.
Sialkot	. . . .	Prospects good, but rain wanted; prices stationary; health good.
Rawalpindi . . .	. . . .	*Kharif* crop gathered; *rabi* sown; cattle disease continues in Murree tehsil, and seasonal fever prevails in district; generally slight fall in prices.
Peshawar . . .	. . . .	Rain wanted; slight fever continues; prices slightly rising.
Mooltan	. . . .	Health and crops good; prices almost stationary.
Dera Ismail Khan .	. . . .	Rain wanted; health improving; prospects good; prices falling.
		General Remarks.—The health and harvest prospects of the province are generally good; but rain is much wanted in most districts; the *kharif* crops in parts of Rohtak district have almost entirely failed.
Central Provinces—		
Nagpur (Dec. 27th)	. . . .	Weather cool and pleasant; *rabi* crops promising; health good; cattle disease in Nagpur tahsil.
Jubbulpore . . .	. . . .	Weather clear and cool; *rabi* crops thriving; prospects favourable; prices stationary; health good.
Saugor	. . . .	Crops excellent; prices steady; health fair.
Seoni (Dec. 26th)	. . . .	Weather warm and cloudy; *rabi* prospects good; fever decreasing; prices steady.
Hoshangabad . .	. . . .	Weather cloudy and cool; crops thriving; cotton-picking in progress; *tilli* outturn expected to be good; fever prevalent.
Raipur (Dec. 23rd)	. . . .	Weather clear and cool; rice-threshing continues; cotton being picked; *rabi* crops thriving; health good; prices fluctuating.
Sambalpur („ 21st)	. . . .	Weather clear and cool; rice on high land partially failed; pulses good; sugarcane good; health good.
Nimar.	. . . .	Weather clear; prospects good; small-pox 110 cases, 9 deaths; prices stationary.
		General Remarks.—Weather clear and pleasant; crops thriving; health and prospects good; prices steady.
British Burma—(Dec. 27th)		
Akyab	*Nil*	Total rainfall 204·17, public health good in town; slight cholera in one township; cattle disease severe in one township; condition of crops favourable; reaping commenced.
Rangoon . . .	*Nil*	Total rainfall 102·02 inches; 6 deaths from cholera in town; otherwise public health good; crops progressing.
Bassein	*Nil*	Total rainfall 125·83 inches; 5 deaths from cholera in town and 12 in district; reaping progressing rapidly.
Prome	*Nil*	Total rainfall 50·21 inches; 7 deaths from cholera in town, otherwise public health good; harvest prospects fair.
Amherst (Moulmein)	*Nil*	Total rainfall 202·90 inches; two cases of cholera reported from district, otherwise public health good; twelve deaths from cattle disease in district; reaping still going on.
Tounguo . . .	*Nil*	Total rainfall 91·64 inches; public health good.
		General Remarks.—Public health generally good; reaping progressing; crop prospects good.
[redacted] (Dec. 26th)	. . . .	Weather seasonable; mornings foggy; reaping of *sali* paddy in progress; public health good.
Sylhet („ 27th)	*Nil*	Harvesting nearly over; winter crops in Sadr and Sunamganj promising; [redacted]ting of *boro* in Sunamganj commenced; isolated cases [redacted]ra still reported from Sunamganj; no other reports received.
Cachar („ „)	*Nil*	Weather cool; more than half of the *sali* crop reaped; common rice 26¾ seers per rupee; no cholera reported.
Dibrugarh („ „)	0·47	Weather seasonable; *sali dhan* being harvested; cattle disease continues.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg— (Dec. 27th)		
Bangalore		Crops in good condition; harvesting of *ragi* completed; prospects favourable; health good.
Mysore		Report in regard to crops, prospects, and health good.
Mercara		Rice harvest proceeding, crop good; coffee being picked and pulped, crop short and price offered low; much rice and *ragi* being imported from Mysore and Canara; disagreeable east wind prevailing.
		General Remarks.—Condition of crops and prospects favourable; *ragi*, *kartik* paddy, horse-gram, Bengal gram, and sugarcane mostly harvested; water-supply and pasturage abundant; public health good; prices easy.
Berar and Hyderabad— (Dec. 27th)		
Amraoti		*Kharif* reaping nearly finished; cotton-picking continued; *rabi* doing well; prices, wheat 16 and *jowari* 26 seers per rupee.
Akola		*Kharif* reaping continued; *rabi* in good condition.
Hyderabad		Standing crops in good condition; cholera abating; weather cold; prices, wheat $16\frac{1}{2}$, coarse rice $10\frac{3}{4}$, white *juar* $26\frac{3}{4}$, yellow *juar* $32\frac{3}{4}$, and *tur* $23\frac{1}{4}$ seers per halli sicca rupee.
Central India States— (Dec. 27th)		
Indore	No rain	Weather warm during the last few days; health and prospects good.
Morar (Gwalior)		Health and prospects good; weather seasonable.
Sutna		Health and prospects good.
Neemuch		Health and prospects good; weather seasonable.
Goona		Crops good; health fair; wheat 22 seers 8 chittacks per rupee.
Bhopal		Weather cool; crops and public health good.
Agar		Health and prospects good.
Nowgong		*Rabi* crops thriving well; prospects and health good; prices steady.
Manpur		Weather clear and cold; prospects of *rabi* crops good; prices stationary.
Rajputana—		
Abu (Dec. 27th)		Seasonable weather; health good; slight shocks of earthquake during the week.
Sirohi („ 24th)		Tanks and wells fairly full; health good; prospects fair.
Meywar („ 23rd)		Wells and tanks fair; health good; prospects favourable.
Harowti („ 25th)		Crops thriving; rain needed; weather unseasonably warm; health good.
Jhallawar („ 20th)		Health and prospects good; weather seasonable.
Jeypore („ 26th)		Cloudy, with high easterly winds; rain wanted for *rabi* crops; health good.

GOVERNMENT OF INDIA,

LEGISLATIVE DEPARTMENT.

THE DEKKHAN AGRICULTURISTS' RELIEF ACT, 1879, AS AMENDED BY ACTS XXIII OF 1881 AND XXII OF 1882.

CONTENTS.

PREAMBLE.

CHAPTER I.

PRELIMINARY.

SECTIONS.

1. Short title.
   Commencement.
   Local extent.
2. Construction.
2A. Jágírdárs, &c., to be deemed Subordinate Judges.

CHAPTER II.

OF THE HEARING OF CERTAIN SUITS BY SUBORDINATE JUDGES.

3. Application of this chapter.
4. Certain suits to be instituted in Courts of first class Subordinate Judges.
5. Subordinate Judges not to act as Judges of Small Cause Courts.
6. Jurisdiction of Subordinate Judge and Small Cause Court.
7. Summons to be for final disposal and suit. Court to examine defendant as witness.
8. Written statements.
9. Record of evidence.
10. No appeal to lie.

CHAPTER III.

OF SUITS AND OTHER PROCEEDINGS TO WHICH AGRICULTURISTS ARE PARTIES.

11. Agriculturists to be sued where they reside.
12. History of transactions with agriculturist-debtors to be investigated.
13. Mode of taking account.
14. Interest to be allowed.
15. Reference to arbitration in certain cases.

SECTIONS.

15A. Mortgagor entitled to decree for redemption though time fixed by mortgage has not arrived or debt has not been paid.
15B. Power to order payment by instalments in case of decree for redemption, foreclosure or sale.
15C. Power to order payment by instalments in suits for possession of mortgaged property.
15D. Mortgagor may sue for account.
16. Agriculturist-debtors may sue for accounts.
    Amount of debts in such cases to be determined according to foregoing provisions.
17. Decree under section 16 may provide for payment by instalments.
    Execution of decrees under this section.
18. Payment into Court in cases under section 16.
19. Power to discharge judgment-debtor.
    Power to direct institution of insolvency-proceedings.
20. Power to fix instalments in execution.
21. Arrest and imprisonment in execution of decree for money abolished.
22. Immoveable property exempted from attachment and sale unless specifically pledged.
23. Chapter not to apply to Village-Munsifs' Courts.

CHAPTER IV.

OF INSOLVENCY.

24. Subordinate Judges to have jurisdiction in agriculturists' cases.
25. Agriculturists may apply for adjudication in cases not provided for by Code.
26. Modification of section 351 of the Code.

SECTIONS.

27. Receiver.
28. Proof of debts.
29. Immoveable property not to vest in Receiver, but may be managed for benefit of creditors.
30. Secured debts.
31. Insolvent incompetent to sell, &c., property dealt with under sections 29 and 30.
32. Scheduled debts discharged.
33. Appeals barred.

CHAPTER V.

OF VILLAGE-MUNSIFS.

34. Appointment of Village-Munsifs.
35. Suits triable by them.
Jurisdiction of other Courts excluded.
Proviso.
36. District Judge's power of revision.
37. Power of Local Government to make rules.

CHAPTER VI.

OF CONCILIATION.

38. Appointment of Conciliators.
39. Matters which may be brought before Conciliator.
40. Procedure thereupon.
Day for attendance may from time to time be postponed.
41. When all parties appear, Conciliator to endeavour to reconcile them.
42. Conciliator to hear the statements of witnesses, &c.
43. Any agreement arrived at to be reduced to writing.
44. Procedure when agreement finally disposes of case.
45. Procedure where agreement is for reference to arbitration.
46. Certificate to be given to applicant if conciliation fails.
47. Suit, or application for execution, not to be entertained by Civil Court unless such certificate is produced.
48. Allowance to be made in period of limitation.
Limitation in certain cases.
49. Local Government to make rules.

CHAPTER VII.

SUPERINTENDENCE AND REVISION.

50. District Judge to inspect, &c.
51. District Judge may withdraw case from Conciliator or Subordinate Judge, or sit with Subordinate Judge as a Bench for trial of any case.
52. Appointment of Assistant or Subordinate Judge to aid District Judge.
53. Of revision.
54. Special Judge.

CHAPTER VIII.

REGISTRATION BY VILLAGE-REGISTRARS.

55. Appointment of Village-Registrars.
56. Instruments executed by agriculturist not to be deemed valid unless executed before a Village-Registrar.

SECTIONS.

57. Such instruments to be written by or under the superintendence of a Village-Registrar and executed in his presence.
Attestation of such instruments.
58. Registration of instruments by Village-Registrars.
59. Consideration to be fully stated in every instrument executed before a Village-Registrar.
Previous instruments to be produced.
60. Registration under this Act to be deemed equivalent to registration under Indian Registration Act, 1877.
61. Village-Registrars to be subordinate to the Inspector-General of Registration.
62. Exemption of instruments to which Government or any officer of Government is a party.
63. Power of Local Government to make rules.

CHAPTER IX.

OF RECEIPTS AND STATEMENTS OF ACCOUNT.

64. Agriculturists entitled to written receipts:
65. To annual statements of account:
66. To have account made up from time to time in a pass-book.
67. Penalty for contravention of sections 64 to 66.

CHAPTER X.

LEGAL PRACTITIONERS.

68. Pleaders, &c., excluded in certain cases.
69. Power of Court to appoint pleader for agriculturist.

CHAPTER XI.

MISCELLANEOUS.

70. Mortgages, &c., to be valid only when written.
71. [*Repealed.*]
72. Limitation.
73. Decision as to whether person is an agriculturist, final.
73A. Certain agricultural produce exempted from attachment, &c.
74. Civil Procedure Code to apply in Subordinate Judges' Courts.
75. Additional power to make rules.
76. Rules to be published.

ACT No. XVII OF 1879, AS AMENDED BY ACTS XXIII OF 1881 AND XXII OF 1882.

WHEREAS it is expedient to relieve the agricultural classes in certain parts of the Dekkhan from indebtedness; It is hereby enacted as follows:—

Preamble.

CHAPTER I.

PRELIMINARY.

1. This Act may be cited as the Dekkhan Agriculturists' Relief Act, 1879:

Short title.

and it shall come into force on the first day of November, 1879.

Commencement.

This section and sections eleven, fifty-six, sixty and sixty-two extend to the whole of British India. The rest of this Act extends only to the districts of Puna, Satára, Sholapur and Ahmadnagar.

Local extent.

2. In construing this Act, unless there is something repugnant in the subject or context, the following rules shall be observed, namely:—

Construction.

1st.—"Agriculturist" shall be taken to mean a person who by himself, his servants or tenants earns his livelihood wholly or principally by agriculture carried on within the limits of the said districts, or who ordinarily engages personally in agricultural labour within those limits.

Explanations.—(*a*) An agriculturist who, without any intention of changing his status as such, temporarily ceases to earn his livelihood or to engage personally in agricultural labour as aforesaid does not thereby cease to be an agriculturist within this definition.

(*b*) An assignee of Government assessment or a mortgagee is not as such an agriculturist within this definition.

2nd.—In chapters II, III, IV and VI, and in section sixty-nine, the term "agriculturist," when used with reference to any suit or proceeding, shall be deemed to include also a person who, when any liability incurred by him and forming the subject or part of the subject of that suit or proceeding was so incurred, was an agriculturist as defined in the first rule.

3rd.—An agriculturist shall be deemed to reside where he earns his livelihood or personally engages in agricultural labour as aforesaid.

4th.—"Money" shall be deemed to include agricultural produce, implements and stock.

2A.—Every jagírdár and other authority invested with powers under Bombay Regulation XIII of 1830 and Act XV of 1840 shall, for the purposes of this Act, be deemed to be a Subordinate Judge of such class as the Local Government may from time to time direct.

Jágírdárs, &c., to be deemed Subordinate Judges.

CHAPTER II.

OF THE HEARING OF CERTAIN SUITS BY SUBORDINATE JUDGES.

3. The provisions of this chapter shall apply to—

Application of this chapter.

(*a*) suits for an account, whatever be the amount or value of the subject-matter thereof, instituted on or after the first day of November, 1879, by an agriculturist in the Court of a Subordinate Judge under the provisions hereinafter contained, and

(*b*) suits of the descriptions next hereinafter mentioned and instituted on or after the same date—

(*1*) when such suits are heard by Subordinate Judges of the first class and the subject-matter thereof does not exceed in amount or value five hundred rupees, or

(*2*) when such suits are heard by Subordinate Judges of the second class and the subject-matter thereof does not exceed in amount or value one hundred rupees, or

(*3*) when such suits are heard by Subordinate Judges of the second class and the subject-matter thereof exceeds one hundred rupees, but does not exceed five hundred rupees, in amount or value, and the parties to the suits agree that such provisions shall apply thereto.

The descriptions of suits referred to in clause (*b*) are the following (namely):—

(*w*) suits for the recovery of money alleged to be due to the plaintiff—

on account of money lent or advanced to, or paid for, the defendant, or

as the price of goods sold, or

on an account stated between the plaintiff and defendant, or

on a written or unwritten engagement for the payment of money not hereinbefore provided for;

(*x*) suits for the recovery of money due on contracts other than the above, and suits for rent or for moveable property, or for the value of such property, or for damages; and

(*y*) suits for foreclosure or for the possession of mortgaged property, or for sale of such property, or for foreclosure or sale, when the defendant, or any one of the defendants, is an agriculturist; and

(*z*) suits for the redemption of mortgaged property when the plaintiff, or, where there are several plaintiffs, any one of the plaintiffs, is an agriculturist.

4. Where a Subordinate Judge of the first class and a Subordinate Judge of the second class have ordinary jurisdiction in the same local area, every suit referred to in section three, clause (*b*), and instituted in such local area shall, if the amount or value of the subject-matter of such suit exceeds one hundred rupees and does not exceed five hundred rupees, be instituted in the Court of the Subordinate Judge of the first class.

Certain suits to be instituted in Courts of first class Subordinate Judges.

5. Notwithstanding anything contained in the Bombay Civil Courts Act, 1869, section 28, no Subordinate Judge shall be invested with the jurisdiction of a Judge of a Court of Small Causes; and any such jurisdiction heretofore conferred on any Subordinate Judge shall be deemed, except as regards suits instituted before the said first day of November, 1879, to have been withdrawn.

Subordinate Judges not to act as Judges of Small Cause Courts.

6. The Local Government may, from time to time, by notification in the local Gazette, direct that any class of suits which a Subordinate Judge would be precluded from hearing by section 12 of Act XI of 1865 (*to consolidate and amend the law relating to Courts of Small Causes beyond the local limits of the ordinary original civil jurisdiction of the High Courts of Judicature*), shall be heard and determined by him and not otherwise, and may, by a like notification, cancel any such direction.

Jurisdiction of Subordinate Judge and Small Cause Court.

7. In every case in which it seems to the Court possible to dispose of a suit at the first hearing, the summons shall be for the final disposal of the suit.

Summons to be for final disposal of suit.

In every suit the Court shall examine the defendant as a witness unless, for reasons to be recorded by it in writing, it deems it unnecessary so to do.

Court to examine defendant as witness.

8. In suits of the descriptions mentioned in section three, clauses (*w*) and (*x*), no party shall be entitled without the permission of the Court to file a written statement.

Written statements.

9. When the subject-matter of any suit does not exceed ten rupees in amount or value, it shall not be necessary to take down the evidence or make a memorandum thereof in manner provided by the Code of Civil Procedure; but in cases where the evidence is not so taken down and no memorandum is so made, the substance of the evidence shall be stated in the judgment.

Record of evidence.

10. No appeal shall lie from any decree or order passed in any suit to which this chapter applies.

No appeal to lie.

CHAPTER III.

OF SUITS AND OTHER PROCEEDINGS TO WHICH AGRICULTURISTS ARE PARTIES.

11. Every suit of the description mentioned in section three, clause (*w*), may, if the defendant, or, when there are several defendants, one only of such defendants, is an agriculturist, be instituted and tried in a Court within the local limits of whose jurisdiction such defendant resides, and not elsewhere.

Agriculturists to be sued where they reside.

Every such suit in which there are several defendants who are agriculturists may be instituted and tried in a Court within the local limits of whose jurisdiction any one of such defendants resides, and not elsewhere.

Nothing herein contained shall affect sections 22 to 25 (both inclusive) of the Code of Civil Procedure.

12. In any suit of the description mentioned in section three, clause (*w*), in which the defendant or any one of the defendants is an agriculturist,

History of transactions with agriculturist-debtors to be investigated.

and in any suit of the descriptions mentioned in section three, clause (*y*) or clause (*z*),

the Court shall, if the amount of the creditor's claim is disputed, enquire into the history and merits of the case, from the commencement of the transactions between the parties and the persons (if any) through whom they claim, out of which the suit has arisen, first, with a view to ascertaining whether there is any defence to the suit on the ground of fraud, mistake, accident, undue influence or otherwise, and secondly, with a view to taking an account between such parties in manner hereinafter provided.

When the amount of the claim is admitted and the Court, for reasons to be recorded by it in writing, believes that such admission is true and is made by the debtor with a full knowledge of his legal rights as against the creditor, the Court shall not be bound so to enquire, but may do so if it thinks fit.

In other cases in which the amount of the claim is admitted, the Court shall be bound to enquire as aforesaid.

Section IX, clause first, of Bombay Regulation V of 1827 is repealed so far as regards any suit to which this section applies.

Nothing herein contained shall affect the right of the parties to require that any matter in difference between them be referred to arbitration.

13. When the Court enquires into the history and merits of a case under section twelve, it shall—

Mode of taking account.

notwithstanding any agreement between the parties or the persons (if any) through whom they claim, as to allowing compound interest or setting-off the profits of mortgaged property without an account in lieu of interest, or otherwise determining the manner of taking the account,

and notwithstanding any statement or settlement of account, or any contract purporting to close previous dealings and create a new obligation,

open the account between the parties from the commencement of the transactions and take that account according to the following rules (that is to say):—

(*a*) separate accounts of principal and interest shall be taken:

(*b*) in the account of principal there shall be debited to the debtor such money as may from time to time have been actually received by him or on his account from the creditor, and the price of goods, if any, sold to him by the creditor as part of the transactions:

(*c*) in the account of principal there shall not be debited to the debtor any money which he may have agreed to pay in contravention of section 257A of the Code of Civil Procedure:

(*d*) in the account of principal there shall not be debited to the debtor any accumulated interest which has been converted into principal at any statement or settlement of account or by any contract made in the course of the transactions, unless the Court, for reasons to be recorded by it in writing, deems such debit to be reasonable:

(*e*) in the account of interest there shall be debited to the debtor, monthly, simple interest on the balance of principal for the time being outstanding, at the rate allowed by the Court as hereinafter provided:

(*f*) all money paid by or on account of the debtor to the creditor or on his account, and all profits, service or other advantages of every description received by the creditor in the course of the transactions (estimated, if necessary, at such money-value as the Court in its discretion, or with the aid of arbitrators appointed by it, may determine) shall be credited first in the account of interest; and when any payment is more than sufficient to discharge the balance of interest due at the time it is made, the residue of such payment shall be credited to the debtor in the account of principal:

(*g*) the accounts of principal and interest shall be made up to the date of instituting the suit, and the aggregate of the balances (if any) appearing due on both such accounts against the debtor on that date shall be deemed to be the amount due at that date, except when the balance appearing due on the interest-account exceeds that appearing due on the principal-account, in which case double the latter balance shall be deemed to be the amount then due.

14. The interest to be awarded in taking an account according to the rules set forth in section thirteen shall be—

Interest to be allowed.

(*a*) the rate, if any, agreed upon between the parties, or the persons (if any) through whom they claim, unless such rate is deemed by the Court to be unreasonable; or

(*b*) if such rate is deemed by the Court unreasonable, or if no rate was agreed upon, or, when any agreement between the parties, or the persons (if any) through whom they claim, to set-off profits without an account in lieu of interest has been set aside by the Court, such rate as the Court deems reasonable.

15. Instead of enquiring into the history and merits of a case under section twelve, or if upon so enquiring the Court is unable to satisfy itself as to the amount which should be allowed on account of principal or interest or both, the Court may of its own motion direct that such amount be ascertained by arbitration.

Reference to arbitration in certain cases.

If the parties are willing to nominate arbitrators, the arbitrators shall be nominated by them in such manner as may be agreed upon between them: If the parties are unwilling to nominate arbitrators or cannot agree in respect of such nomination, the Court shall appoint any three persons it thinks fit:

Provided that if all the parties reside in the [illegible] or city, and in the opinion of the Court [illegible] the residence, town or city, it shall appoint residents of such village, town or city.

The provisions of sections 508 to 526 (both inclusive) of the Code of Civil Procedure shall apply to every reference to arbitration under this section.

15A. In a suit of the description mentioned in section three, clause (*y*), the Court shall not refuse to pass a decree for redemption merely on the ground that the time fixed for the payment of the principal of the mortgage-money has not arrived, or on the ground that the mortgage-debt has not been completely discharged, or on both.

Mortgagor entitled to decree for redemption though time fixed by mortgage has not arrived or debt has not been paid.

15B. (*1*) The Court may in its discretion, in passing a decree for redemption, foreclosure or sale in any suit of the description mentioned in section three, clause (*y*) or clause (*z*), or in the course of any proceedings under a decree for redemption, foreclosure or sale passed in any such suit, whether before or after this Act comes into force, direct that any amount payable by the mortgagor under that decree shall be payable in such instalments, on such dates and on such terms as to the payment of interest, and, where the mortgagee is in possession, as to the appropriation of profits and accounting therefor, as it thinks fit.

Power to order payment by instalments in case of decree for redemption, foreclosure or sale.

(*2*) If a sum payable under any such direction is not paid when due, the Court shall, except for reasons to be recorded by it in writing, instead of making an order for the sale of the entire property mortgaged or for foreclosure, order the sale of such portion only of the property as it may think necessary for the realization of that sum.

15C. (*1*) The Court may, if it thinks fit, in any suit for the possession of mortgaged property under section three, clause (*y*), instead of passing a decree for possession of that property, pass a decree directing that the amount payable by the mortgagor shall be payable in such instalments, on such dates and on such terms as to the payment of interest, and as to the appropriation of the profits and accounting therefor, as it thinks fit.

Power to order payment by instalments in suits for possession of mortgaged property.

(*2*) If a sum payable under any such direction is not paid when due, the Court may, if it thinks fit, instead of making any other order which it is empowered to make for the realization of that sum, make an order directing that the mortgagee be put in possession of the whole or any portion of the property mortgaged.

15D. (*1*) Any agriculturist whose property is mortgaged may sue for an account of the amount of principal and interest remaining unpaid on the mortgage, and for a decree declaring that amount.

Mortgagor may sue for account.

(*2*) When any such suit is brought, the amount (if any) remaining unpaid shall be determined under the same rules as would be applicable under this Act if the mortgagee had sued for the recovery of the debt.

(*3*) At any time before a decree in the suit is signed, the plaintiff may apply to the Court to pass a decree for the redemption of the mortgage, or the mortgagee, if he would then have been entitled to sue for foreclosure or sale, may apply to the Court to pass a decree for foreclosure or sale (as the case may be), instead of a decree merely declaring the amount remaining unpaid, and the Court may, if it thinks fit, grant the application.

(*4*) The provisions of section 15B shall apply to any decree passed under sub-section (3).

16. Any agriculturist may sue for an account of money lent or advanced to or paid for him by a creditor, or due by him to the creditor as the price of goods sold, or on a written or unwritten engagement for the payment of money, and of money paid by him to the creditor, and for a decree declaring the amount, if any, still payable by him to the creditor.

Agriculturist-debtors may sue for accounts.

When any such suit is brought, the amount (if any) payable by the plaintiff shall be determined under the same rules as would be applicable under this Act if the creditor had sued for recovery of the debt.

16A. A decree passed under section sixteen may, declaring the amount it may provide for payment by instalments, direct that such amount shall be paid by instalments, with or without interest; and, when any such decree so directs, the plaintiff may pay the amount

Decree under section sixteen declaring amount may provide for payment by instalments.

of such decree, or the amount of each instalment fixed by such decree, as it falls due, into Court, in default whereof execution of the decree may be enforced by the defendant in the same manner as if he had obtained a decree in a suit to recover the debt.

Execution of decrees under this section.

18. The plaintiff in any suit instituted under section sixteen may at any stage of such suit deposit in Court such sum of money as he considers a satisfaction in full of the defendant's claim against him.

Payment into Court in cases under section 16.

Notice of the deposit shall be given by the Court to the defendant, and the amount of the deposit shall (unless the Court otherwise directs) be paid to the defendant on his application.

No interest shall be allowed to the defendant on any sum so deposited from the date of the receipt of such notice, whether the sum deposited be in full of the claim or fall short thereof.

19. When a decree has been passed, whether before or after this Act comes into force, under which any sum less than fifty rupees is recoverable from an agriculturist, the Court, on application or of its own motion, may, either in the course of execution of such decree or otherwise, if it is satisfied that the other debts (if any) due by him do not, taken together with such sum, amount to fifty rupees, and that he is unable to pay the whole of such sum, direct the payment of such portion of the same as it considers him able to pay and grant him a discharge from the balance of such sum.

Power to discharge judgment-debtor.

When the sum payable under the decree amounts to fifty rupees or upwards, or when there are other debts due by the debtor which together with such sum amount to fifty rupees or upwards, the Court, on application or of its own motion, may direct proceedings to be taken with respect to him as nearly as may be as if he had applied to be declared an insolvent under the provisions hereinafter contained.

Power to direct institution of insolvency-proceedings.

20. The Court may at any time direct that the amount of any decree passed, whether before or after this Act comes into force, against an agriculturist, or the portion of the same which it directs under section nineteen to be paid, shall be paid by instalments with or without interest.

Power to fix instalments in execution.

21. No agriculturist shall be arrested or imprisoned in execution of a decree for money passed whether before or after this Act comes into force.

Arrest and imprisonment in execution of decree for money abolished.

22. No agriculturist's immoveable property shall be attached or sold in execution of any decree or order passed whether before or after this Act comes into force, unless it has been specifically mortgaged for the repayment of the debt to which such decree or order relates, and the security still subsists.

Immoveable property exempted from attachment and sale unless specifically pledged.

But the Court, on application or of its own motion, may, when passing a decree against an agriculturist or in the course of any proceedings under a decree against an agriculturist passed whether before or after this Act comes into force, direct the Collector to take possession, for any period not exceeding seven years, of any such property of the judgment-debtor to the possession of which he is entitled, and which, in the opinion of the Collector, is not required for his support and the support of the members of his family dependent on him, and the Collector shall thereupon take possession of such property and deal with the same for the benefit of the decree-holder in manner provided by section twenty-nine.

The provisions of section thirty-one shall, *mutatis mutandis*, apply to any property so dealt with.

23. No provision of this chapter shall apply to the proceedings in the Courts of Village-Munsifs unless such provision has been specially extended thereto under the power hereinafter conferred.

Chapter not to apply to Village-Munsifs' Courts.

CHAPTER IV.

Of Insolvency.

24. Every Subordinate Judge shall have the powers conferred by sections 344 to 359 (both inclusive) of the Code of Civil Procedure, as modified by the provisions next hereinafter contained, for the purpose of dealing with applications under the Code of Civil Procedure or under this Act to have agriculturists residing within the local limits of his ordinary jurisdiction declared insolvent and proceedings taken under orders passed under the second clause of section nineteen; and, except as provided in chapter VII of this Act, no such application or proceeding shall be dealt with by any other Court.

Subordinate Judges to have jurisdiction in agriculturists' cases.

25. Any agriculturist whose debts (if any) amount to fifty rupees or upwards may apply to any Subordinate Judge within the local limits of whose ordinary jurisdiction he resides to be declared an insolvent, though he has not been arrested or imprisoned, and though no order of attachment has issued against his property, in execution of a decree.

Agriculturists may apply for adjudication in cases not provided for by Code.

26. Notwithstanding anything contained in section 351 of the Code of Civil Procedure, the Court shall declare an agriculturist an insolvent if it is satisfied that he is in insolvent circumstances, and that the application to have him declared an insolvent has been properly made under section 344 of the said Court or section twenty-five of this Act.

Modification of section 351 of the Code.

27. No person other than the Názir of the Court shall be appointed as Receiver, and no Receiver shall be entitled to commission.

Receiver.

28. In determining under section 352 of the said Code the amount of any claim of the nature referred to in section twelve of this Act due by an insolvent agriculturist, the Court shall proceed in the manner prescribed by sections twelve to fifteen of this Act, both inclusive.

Proof of debts.

29. No immoveable property of the insolvent shall vest in the Receiver; but the Court, on application or of its own motion, may direct the Collector to take into his possession, for any period not exceeding seven years from the date on which the Receiver has been appointed, any immoveable property to the possession of which the insolvent is entitled, and which, in the opinion of the Collector, is not required for the support of the insolvent and the members of his family dependent on him, and, subject to any rules the Local Government may from time to time make in this behalf, to manage the same for the benefit of the creditors by letting it on lease or otherwise:

Immoveable property not to vest in Receiver, but may be managed for benefit of creditors.

Provided that, if the insolvent or his representative in interest at any time pays into Court the balance of the scheduled debts then unpaid, he shall, subject to any rights created in favour of other persons by the Collector, be entitled to recover possession of such property.

A Collector managing property under this section shall during the management have all the powers which the owner might as such have legally exercised, and shall receive and recover all rents and profits of such property, and for the purpose of recovering such rents and profits shall have, in addition to any powers possessed by an owner, all powers possessed by a Collector for securing and recovering the land-revenue due to Government except the powers mentioned in the Bombay Land-Revenue Code, 1879, section 150, clauses (*b*), (*d*) and (*e*).

Nothing in this section shall authorize the Court to direct the Collector to take into his possession any houses or other buildings belonging to and occupied by an agriculturist.

[illegible] scheduled debt is secured by a mortgage of any portion of the insolvent's immoveable property, the Court, on application or of its own motion, may direct the Collector, if he can obtain a premium equal to the amount of such debt, by letting such property for a term not exceeding twenty years, to let such property; and, if he cannot so obtain such premium, to sell such property under section 325 of the Code of Civil Procedure.

Secured debts.

Where property is let under this section, the premium shall be applied to the payment of the debt, and the rent, if any, shall for a period of seven years from the date of such letting be paid to the Receiver and thereafter to the insolvent or his representative in interest.

When property is sold under this section, the sale proceeds shall be applied first, to the payment of the debt, and the balance, if any, shall be paid to the Receiver.

31. So long as any management under section twenty-nine or letting under section thirty continues, the insolvent and his representative in interest shall be incompetent to mortgage, charge, lease or alienate the property managed or let, or any part thereof.

Insolvent incompetent to sell, &c., property dealt with under sections 29 and 30.

32. When the balance available for distribution among the scheduled creditors under section 356 of the said Code has been distributed, the claims of such creditors shall be deemed to have been discharged, except as regards the right to share in the profits of any property managed by the Collector under section twenty-nine, or let by him under section thirty.

Scheduled debts discharged.

33. No appeal shall lie from any order passed under this chapter except orders passed in exercise of the power conferred by section 359 of the Code of Civil Procedure.

Appeals barred.

CHAPTER V.

Of Village-Munsifs.

34. The Local Government may, from time to time, appoint any Pátel of a village or any other person possessing local influence in a village to be a Village-Munsif for such village or for such village and for any other villages the sites of which are situate in the same district not more than two miles from the site of such village, and may cancel any such appointment.

Appointment of Village-Munsifs.

35. Every Village-Munsif so appointed shall take cognizance of suits of the description mentioned in section three, clause (*w*), when the subject-matter thereof does not exceed ten rupees in amount or value, and all the defendants at the time of the commencement of the suit actually and voluntarily reside or carry on business or personally work for gain within the local area for which such Village-Munsif is appointed.

Suits triable by them.

Notwithstanding anything hereinbefore contained, a suit cognizable by a Village-Munsif shall not be heard by any other Court:

Jurisdiction of other Courts excluded.

Provided that the District Judge may, from time to time, transfer any suit instituted before a Village-Munsif to his own Court or any other Civil Court in the district for trial:

Proviso.

Provided also that no Village-Munsif shall try any suit to or in which he is a party or is personally interested, or shall adjudicate upon any proceeding connected with or arising out of such suit.

36. The District Judge may, on a petition being presented within thirty days from the date of any decree or order of a Village-Munsif by any party deeming himself aggrieved by such decree or order, set aside such decree or order on the ground of corruption, gross partiality or misconduct of the Village-Munsif, and pass such other decree or order as he thinks fit.

District Judge's power of revision.

Except as provided in this Act and in section 622 of the Code of Civil Procedure, every decree and order of a Village-Munsif shall be final.

37. The Local Government may, from time to time, by notification in the official Gazette, make rules consistent with this Act for regulating the procedure of Village-Munsifs and for conferring on them or any of them all or any of the powers for the trial of suits or the execution of decrees exercised by a Civil Court under the Code of Civil Procedure or any other enactment for the time being in force.

Power of Local Government to make rules.

CHAPTER VI.

OF CONCILIATION.

Appointment of Conciliators.

38. The Local Government may, from time to time, appoint any person other than an officer of Police to be a Conciliator, and may cancel any such appointment.

Every Conciliator appointed under this section shall be appointed only for a term not exceeding three years, but may on the expiration of the period for which he has been appointed be again appointed for a further term not exceeding three years.

Every Conciliator so appointed shall exercise his functions under this Act in respect of matters affecting agriculturists residing within such local area as the Local Government may, from time to time, prescribe.

The expression "officer of police" in this section shall not be deemed to include a police pátel appointed under Bombay Act No. VIII of 1867 (*for the Regulation of the Village Police in the Presidency of Bombay*).

Matters which may be brought before Conciliator.

39. When any dispute arises as to, or there is a prospect of litigation regarding, any matter within the cognizance of a Civil Court between two or more parties one of whom is an agriculturist residing within any local area for which a Conciliator has been appointed, or when application for execution of any decree in any suit to which any such agriculturist is a party, and which was passed before the date on which this Act comes into force, is contemplated, any of the parties may apply to such Conciliator to effect an amicable settlement between them.

Procedure thereupon.

40. If the application be made by one of the parties only, the Conciliator shall take down, or cause to be taken down, in writing, a concise statement of the applicant's case, and shall thereupon, by summons or by such other means as he deems fit, invite the person against whom such application is made to attend before him at a time and place to be fixed for this purpose, and shall direct the applicant also to be present at such time and place.

Day for attendance may from time to time be postponed.

If such person fails to appear at the time first fixed, the Conciliator may, if he thinks fit, from time to time extend the period for his appearance.

When all parties appear, Conciliator to endeavour to reconcile them.

41. Whenever all the parties are present, the Conciliator shall call upon each in turn to explain his case regarding the matter in question, and shall use his best endeavours to induce them to agree to an amicable settlement or to submit such matter to arbitration.

Conciliator to hear statements of witnesses, &c.

42. The Conciliator shall hear but shall not record the statement of any witness, and shall peruse any book of account or other document produced by the parties, or so much thereof as may be necessary, and, if any party or witness consents in writing to affirm any statement upon oath in any form not repugnant to justice or decency and not purporting to affect any third person, shall provide for such oath being duly taken in the presence of all the parties.

Any agreement arrived at to be reduced to writing.

43. If on the day on which the case is first heard by the Conciliator, or on any subsequent day to which he may adjourn the hearing, the parties come to any agreement, either finally disposing of the matter or for referring it to arbitration, such agreement shall be forthwith reduced to writing, and shall be read and explained to the parties, and shall be signed or otherwise authenticated by the Conciliator and the parties respectively.

Explanation.—A Conciliator may be appointed arbitrator under this section.

Procedure when agreement finally disposes of case.

44. When the agreement is one finally disposing of the matter, the Conciliator shall forward the same in original to the Court of the Subordinate Judge of lowest grade having jurisdiction in the place where the agriculturist who is a party thereto resides;

and shall at the same time deliver to each of the parties a written notice to show cause before such Judge, within one month from the date of such delivery, why such agreement ought not to be filed in such Court.

The Court which receives the agreement shall, after the expiry of the said period of one month, unless cause has been shown as aforesaid, order such agreement to be filed; and it shall then take effect as if it were a decree of the said Court passed on the day on which it is ordered to be filed, and from which no appeal lies.

The Court may in any case, for reasons to be recorded by it in writing, from time to time extend the period of one month allowed for showing cause under this section.

Procedure where agreement is for reference to arbitration.

45. When the agreement is one for referring the matter to arbitration, the Conciliator shall forward it to the Court having jurisdiction in the matter, and such Court shall cause it to be filed and proceed thereon in manner provided by sections 523 and 524 of the Code of Civil Procedure.

Certificate to be given to applicant if conciliation fails.

46. If the person against whom any application is made before a Conciliator cannot after reasonable search be found, or if he refuses or neglects, after a reasonable period has been allowed for his apperance, to appear before the Conciliator, or if he appears but the endeavour to induce the parties to agree to an amicable settlement or to submit the matter in question to arbitration fails, the Conciliator shall, on demand, give to the applicant, or when there are several applicants to each applicant, a certificate under his hand to that effect.

Suit, or application for execution, not to be entertained by Civil Court unless such certificate is produced.

47. No suit, and no application for execution of a decree passed before the date on which this Act comes into force, to which any agriculturist residing within any local area for which a Conciliator has been appointed is a party, shall be entertained by any Civil Court unless the plaintiff produces a certificate in reference thereto obtained by him under section forty-six within the year immediately preceding.

Explanation.—The expression "Civil Court" in this section does not include a Mámlatdár's Court under Bombay Act No. III of 1876 (*to consolidate and amend the law relating to the powers and procedure of Mámlatdárs' Courts*).

Allowance to be made in period of limitation.

48. In computing the period of limitation prescribed for any such suit or application the time intervening between the application made by the plaintiff under section thirty-nine and the grant of the certificate under section forty-six shall be excluded.

Limitation in certain cases.

Any such application which after the first day of November, 1879, has been rejected, and which, if such time had been excluded in computing the period of limitation prescribed for such application, would have been entertained, shall be entertained if made within two months from the twenty-sixth day of October, 1881.

Local Government to make rules.

49. The Local Government may from time to time make rules—

(*a*) regulating the procedure before Conciliators in matters not provided for by this Act;

(*b*) fixing the charges to be made by Conciliators for anything done by them under this chapter; and

(*c*) determining what record and accounts shall be kept by Conciliators and what returns shall be framed and furnished by them.

CHAPTER VII.

SUPERINTENDENCE AND REVISION.

District Judge to inspect, &c.

50. The District Judge shall inspect, supervise and control the proceedings, under chapter II, chapter IV and chapter VI of this Act, of all Subordinate Judges and the proceedings of all Village-Munsifs and Conciliators.

District Judge may withdraw case from Conciliator or Subordinate Judge,

51. The District Judge may—

(*a*) transfer any application pending before a Conciliator to the file of any other Conciliator;

(*b*) transfer to his own file any suit or other matter pending before the Court of any Subordinate Judge under chapter II, chapter IV or chapter VI of this Act, and may dispose of the same as if he were a Subordinate Judge; or

(*c*) stay the proceedings in any such suit or matter, and sit together with such Judge as a Bench to dispose of such suit or matter in accordance with the provisions of this Act.

or sit with Subordinate Judge as a Bench for trial of any case.

If the members of any Bench sitting under this section differ in opinion, the opinion of the District Judge shall prevail.

Appointment of Assistant or Subordinate Judge to aid District Judge.

52. The Local Government shall appoint an Assistant or Subordinate Judge to inspect and supervise, subject to the control of the District Judge, the proceedings of all Subordinate Judges, under chapter II, chapter IV and chapter VI of this Act, and of all Village-Munsifs and Conciliators in each of the said districts of Puna, Satára, Sholapur and Ahmadnagar:

Provided that, if the Local Government thinks fit, the same Assistant or Subordinate Judge may be so appointed for two or more such districts.

Any Assistant or Subordinate Judge appointed under this section may in any district for which he is so appointed, if the District Judge so directs, exercise the powers of the District Judge under section fifty-one of this Act, and transfer any suit under section twenty-five of the Code of Civil Procedure.

Of revision.

53. The District Judge may, for the purpose of satisfying himself of the legality or propriety of any decree or order passed by a Subordinate Judge in any suit or other matter under chapter II, chapter IV or chapter VI of this Act, and as to the regularity of the proceedings therein, call for and examine the record of such suit or matter, and pass such decree or order thereon as he thinks fit;

and any Assistant Judge or Subordinate Judge appointed by the Local Government under section fifty-two may similarly, in any district for which he is appointed, call for and examine the record of any such suit or matter, and, if he see cause therefor, may refer the same, with his remarks thereon, to the District Judge, and the District Judge may pass such decree or order on the case as he thinks fit:

Provided that no decree or order shall be reversed or altered for any error or defect, or otherwise, unless a failure of justice appears to have taken place.

Special Judge.

54. The Local Government from time to time may, and if the Government of India so direct shall, appoint an officer, as Special Judge, to discharge in the place of the District Judge all the functions of the District Judge under this Act in respect of the proceedings of all Subordinate Judges, Village-Munsifs and Conciliators, and may cancel any such appointment.

Such Special Judge shall not, without the previous sanction of the Government of India, discharge any public function except those which he is empowered by this Act to discharge.

If any conflict of authority arises between the Special Judge and the District Judge, the High Court shall pass such order thereon consistent with this Act as it thinks fit.

No appeal shall lie from any decree or order passed by the District Judge under this chapter, or by the Special Judge, or by an Assistant or Subordinate Judge appointed under section fifty-two, or by a Bench, in any suit or proceeding under this Act.

But the District Judge or Special Judge, or an Assistant or Subordinate Judge or Bench, may refer to the High Court, under section 617 of the Code of Civil Procedure, any question of law, or usage having the force of law, or the construction of a document, arising in any case pending before him or it under this chapter as if that case were a suit or an appeal pending before him or it; and in respect of every reference so made, sections 618 to 621 of the said Code, both inclusive, shall apply:

Provided that no reference shall be made under this section by any Assistant or Subordinate

Judge, or by any Bench of which the District Judge or Special Judge is not a member, without the previous sanction of the District Judge or Special Judge, as the case may be.

CHAPTER VIII.

REGISTRATION BY VILLAGE-REGISTRARS.

Appointment of Village-Registrars.

55. The Local Government may, from time to time,—

(*a*) appoint such persons as it thinks fit, whether public officers or not, to be Village-Registrars for such local areas as it may, from time to time, prescribe;

(*b*) direct the Village-Registrar for any local area to discharge the functions of a Village-Registrar for any other local areas concurrently with the Village-Registrars of such other local areas; and

(*c*) delegate to any person, by name or in virtue of his office, the powers conferred on it by this section;

and may cancel any such appointment, direction or delegation.

Instruments executed by agriculturist not to be deemed valid unless executed before a Village-Registrar.

56. No instrument which purports to create, modify, transfer, evidence or extinguish an obligation for the payment of money or a charge upon any property, or to be a conveyance or lease, and which is executed after this Act comes into force by an agriculturist residing in any local area for which a Village-Registrar has been appointed, shall be admitted in evidence for any purpose by any person having by law or consent of parties authority to receive evidence, or shall be acted upon by any such person or by any public officer, unless such instrument is written by, or under the superintendence of, and is attested by, a Village-Registrar:

Provided that nothing herein contained shall prevent the admission of any instrument in evidence in any criminal proceeding or apply to any instrument which is executed by an agriculturist merely as a surety.

Such instruments to be written by, or under the superintendence of, a Village-Registrar and executed in his presence.

57. When any persons intend to execute any instrument to which section fifty-six applies, all such persons shall appear before the Village-Registrar appointed for the area in which the agriculturist, or when there are several agriculturists intending to execute the instrument, any one of such agriculturists, resides, and such Registrar, after satisfying himself in such manner as he deems fit as to the identity of the intending executants and receiving the fee (if any) prescribed by the Local Government in this behalf, and the stamp (if any) which may be required by law, shall write the instrument, or cause the same to be written under his superintendence; and after reading the same aloud, or causing it to be so read, in the hearing of the intending executants, shall require them to execute it in his presence.

Attestation of such instruments.

Every instrument so written and executed shall at the time of execution be attested by the Village-Registrar; and also, if any of the executants thereof is unable to read such instrument, by two respectable witnesses.

For the purposes of this section every executant of any such instrument shall appear in person before the Village-Registrar; but every other party thereto may appear either in person or by any agent, being his relative, servant or dependent, whom he has duly furnished with a power-of-attorney executed and authenticated in such manner as the Local Government may from time to time by rule prescribe, authorizing him to appear and act on his behalf.

Registration of instruments by Village-Registrars.

58. Every Village-Registrar shall keep a register of instruments executed before him in such form as shall, from time to time, be prescribed by the Inspector-General of Registration.

As soon as all the intending executants have executed any instrument before a Village-Registrar, he shall make a copy of it or cause a copy of it to be made in his register, and shall deliver the original instrument to the party entitled to the custody of the same, and a certified copy thereof to the other party, or to each of the other parties if there be more than one.

Previous to delivery, the original instrument and each such copy shall be endorsed under the Village-Registrar's signature with the date of registration, the name and residence of the Village-Registrar and the volume and page of the register in which the instrument has been registered.

Consideration to be fully stated in every instrument executed before a Village-Registrar.

59. In every instrument written by, or under the superintendence of, the Village-Registrar, the amount and nature of the consideration, if any, shall be fully stated.

The Village-Registrar shall also endorse upon the instrument a note under his hand, recording whether or not the transfer of the consideration stated therein, or of any part thereof, took place in his presence.

Previous instruments to be produced.

If the instrument modifies, or wholly or partly supersedes, a previous instrument, such previous instrument shall be produced before the Village-Registrar and shall be fully described in the instrument to be executed, and shall be marked by the Village-Registrar under his hand for identification.

Registration under this Act to be deemed equivalent to registration under Indian Registration Act, 1877.

60. Every instrument executed and registered in accordance with the foregoing provisions shall be deemed to have been duly registered under the provisions of the Indian Registration Act, 1877; and no instrument which ought to have been executed before a Village-Registrar but has been otherwise executed shall be registered by any officer acting under the said Act, or in any public office, or shall be authenticated by any public officer.

Village-Registrars to be subordinate to the Inspector-General of Registration.

61. The Inspector-General of Registration shall exercise, by himself and his subordinates, a general superintendence over all Village-Registrars, and may, from time to time, with the previous sanction of the Local Government, make rules consistent with
