JAN-JUN

SUPPLEMENT TO

The Gazette of India.

Nº 1. } CALCUTTA, SATURDAY, JANUARY 6, 1883.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 2nd JANUARY 1883.

GENERAL REMARKS.—During the past week there has been again no rainfall to report from any part of the country, except in five districts of the Madras Presidency, in Saugor in the Central Provinces, and in two of the Central India States. In the Punjab there was a slight fall in the Rawalpindi and Peshawar districts.

Agricultural prospects continue good everywhere. In the North-Western Provinces and Oudh and Punjab, however, rain would prove beneficial to the crops.

The rice harvest in Bengal is expected to give generally fair outturn for the whole Province. In Coorg the rice crop has been good, but the coffee crop has fallen short.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Jan. 3rd)		
Bellary	. . . .	Standing crops generally good; harvest paddy and dry grains, yield average.
Kurnool	. . . .	Standing crops in good condition; harvest paddy, outturn below average; cattle disease in parts.
Ganjam	. . . .	Standing crops, dry grains and sugarcane thriving; fever and small-pox continue.
Kistna	. . . .	Standing crops generally fair; harvest paddy, outturn below average; fever and cattle disease prevail; small-pox in parts; water 2 feet over anicut.
Chingleput (Madras) .	·30 (average of 3 stations.)	Standing crops generally good, except where injured for want of timely rain; harvest paddy, yield below average.
Coimbatore	·23 (average of 3 stations.)	Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore . . .	4·32 (average of 12 stations.)	Standing crops generally good; harvest paddy and *cholum*, outturn about average; cholera in parts.
Madura	·80 (average of 7 stations.)	Standing crops generally fair; fever and cholera in parts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*contd.*		
Malabar . . .	. . . .	Harvest second crop paddy commenced in two taluks; fever in parts; small-pox slight.
Travancore . . .	·18	Standing crops, paddy good; harvest paddy, outturn average; fever exists. *General Remarks.*—No rain in Ganjam, Kistna, Bellary, Kurnool, and Malabar; general prospects good.
Bombay—**(Jan. 3rd).**		
Kurrachee . . .	*Nil*	River at Kotri on 25th, 3 feet 7 inches, 1 inch higher than on same date last year; fever generally prevalent; cattle disease in six talukas; small-pox in Kurrachee city, Kotri, and Sajawal talukas; wheat, red rice, and *bajri* in Kurrachee, 24, 32, and 32 lbs. in Dadu 36, 36, and 50 lbs., in Tatta 24, 34, and 42 lbs., and in Jati 20, 36, and 40 lbs. per rupee respectively.
Hyderabad . . .	. . . .	*Rabi* crops flourishing; fever in eight talukas; small-pox in Hyderabad Bago Tando, Sakrand, Moro, and Nansharo; cattle disease in Badin and Mirpur; wheat 26, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad . . .	. . . .	Standing crops healthy; fever in Dholka; small-pox in Dhandhuka, 1 death; wheat 29 and *bajri* 32 lbs. per rupee.
Baroda	. . . .	Reaping of *kharif* completed, except in the Kari division; standing crops in good condition; *bajri* 31½ and rice 26 lbs. per rupee.
Surat	. . . .	Crops healthy; reaping progressing; *jowari* 39 and *nagli* 56 lbs per rupee.
Nasik	. . . .	Weather fair; *rabi* crops doing well; wheat 25½, *bajri* 36, and rice 23½ lbs. per rupee.
Colaba (Bombay) . .	. . . .	Abnormal temperature 1° warm from 28th to 30th, 2° warm on 27th, 31st and 1st, and 3° warm on 2nd; vapour in air slightly in excess of normal, except on 29th, when it was in defect of normal; wind normal.
Poona	. . . .	Standing crops good; slight cholera in Baramati petta; *bajri* 44 and *jowari* 56 lbs., in Puna, *bajri* 41 and *jowari* 46 lbs. per rupee.
Ahmednagar . . .	. . . .	*Rabi* crops generally good; *bajri* maximum 66 lbs. per rupee in Karjat, minimum 41 lbs. in Sheogaon; *jowari*, maximum 72 lbs. per rupee in Parner, minimum 50 lbs. in Sheogaon.
Sholapore . . .	. . . .	Reaping of early crops in progress; *rabi* crops promising; *jowari* 40 lbs. 25 tolas and *bajri* 50 lbs. 14 tolas per rupee.
Dharwar . . .	. . . .	Weather chilly; harvesting of early crops in progress; exotic cotton suffering from blight in five and wheat in two talukas; other late crops good; 5 deaths from cholera in Gadag; fever in four and cattle disease in three talukas; rice minimum 26 and *jowari* 47 lbs. per rupee.
Kanara . . .	. . . .	Preparing ground and sowing for second crop on coast; threshing paddy above Ghât; harvesting sugarcane on coast; cattle disease in two talukas; fever slight; common rice in Karwar 12½ seers per rupee, in district average 15¼ seers per rupee.
Rajkot	. . . .	General health good; weather cold; cholera continues in Navanagar and its two villages; *bajri* 29 and *jowari* 35 lbs. per rupee. *General Remarks.*—*Rabi* crops doing well; slight fever and cattle disease in a few districts.
Bengal—**(Jan. 2nd)**		
Chittagong . . .	*Nil*	Weather fine and cold; prospects of crops good; harvesting of *amun* still continues; prices steady; public health generally good.
Dacca	*Nil*	Harvesting of *amun* paddy continues, yield average; winter crops doing well; public health good.
24-Pergunnahs (Alipore)	*Nil*	Prospects of late rice fair, yield estimated at about from 12 to 14 annas; *rabi* crops doing well; public health generally good, though fever and cholera somewhat prevalent in some parts of the interior.
Moorshedabad .	*Nil*	State and prospects of crops favourable; harvesting of *amun* still going on; *rabi* crops promising; fever in a mild form prevails here and there.
Rajshahye . . .	*Nil*	Prospects of crops favourable; public health fair.
Burdwan . . .	*Nil*	Weather seasonable; harvesting of winter rice not quite finished; prospects fair; cholera and fever prevalent in parts of the district.
Rungpore . . .	*Nil*	Weather seasonable; prospects of crops favourable; reaping of *amun* still going on; cholera still prevalent in Gaibanda Sub-division.
Bhagalpur . . .	*Nil*	Prospects of winter crops good; rice still being harvested, outturn fair; general health good.
Purneah . . .	*Nil*	Prospects of crops good; reaping of rice not finished; health improving.
Patna	*Nil*	*Rabi* crops progressing favourably; paddy being reaped; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Durbhunga . .	*Nil*	Rice crop nearly all harvested; *rabi* crops very promising; fever prevailing in south of district; otherwise public health generally good.
Hazaribagh . .	*Nil*	Weather cold and seasonable; prospects of cold-weather crops good; general health good.
Cuttack . . .	*Nil*	Late rice still being reaped; prospects of winter crops good; public health good. *General Remarks.*—There has been no rain this week also in any part of the province; most of the *amun* rice has been harvested; and a general fair outturn is expected for the whole province, though in some parts the crop has been much below the average; prospects of *rabi* crops and tobacco reported on very favourably almost everywhere; sugarcane also promising, it is being cut in some districts; fever and cholera, though still prevalent, are said to be abating in several places; cases of small-pox continue to be reported from Sarun, Singbhoom, and Manbhoom.
N.-W. Provinces and Oudh—		
Benares (Jan. 2nd)	No rain	Prospects favourable; *aghani* rice cut; no sickness; prices steady.
Allahabad („ 3rd)	No rain	Prices falling slightly; prospects good.
Gorakhpur („ 2nd)	. . . .	Weather fine; crops promising; work plentiful; prices steady.
Jhansi („ 1st)	. . . .	*Rabi* germinating well; weather cloudy; rain will be most beneficial; prices almost stationary; small-pox amongst children continues; cattle disease of a mild type prevailing in pargana Jhansi.
Agra („ 2nd)	. . . .	No rain, but weather cloudy now and then; well irrigation going on; small-pox continues in two parganas; general health good; prices stationary.
Bareilly („ „)	. . . .	Rain wanted; prices unchanged; health good; prospects generally good.
Meerut („ „)	No rain	Rain very much wanted, but prices as yet unaffected; *gur* coming into market in large quantities; small-pox abating.
Kumaon („ „)	No rain	Crops suffering from want of rain; typhus has again broken out in three villages, otherwise health good; cattle disease still prevalent; prices slightly risen.
Lucknow („ „)	. . . .	Rain urgently wanted for the *rabi* crops; prospects fair; general health good, but small-pox and measles continue in the city.
Partabgarh („ „)	. . . .	*Rabi* promising exceedingly well; sugarcane being pressed; no sickness.
Sitapur („ „)	No rain	Rain much wanted; irrigation from wells in progress; small-pox abating in tahsil Sitapur, but reported to have appeared in Biswan; prices still on the whole stationary.
Fyzabad („ „)	No rain	Prospects good; general health good; prices steady.
Rae Bareli („ 1st)	. . . .	*Rabi* outlook good; rain wanted; no sickness among men and cattle; prices stationary.
Cawnpore („ 2nd)	No rain	*Kharif* outturn above average; *rabi* crops look promising; health good; prices slightly fallen.
Farukkabad („ „)	. . . .	Prospects fair; prices steady; weather seasonable; rain much needed. *General Remarks.*—No rain; prospects continue favourable, though rain would be beneficial all round; typhus has again broken out in three villages of Kumaon; small-pox continues in Lucknow city and in portions of Sitapur, Jhansi, and Agra, otherwise general health good; prices with slight fluctuations remain stationary.
Punjab—**(Jan. 3rd)**		
Delhi	. . . .	Rain wanted; health good; harvest prospects fair; prices fluctuating.
Hissar	. . . .	Rain for *barani rabi* much wanted; small-pox continues in Rohtak; health otherwise good; prices almost stationary.
Umballa . . .	. . . .	Rain wanted; health good; prices of food grains stationary, of gram and barley falling.
Jullundur . . .	. . . .	Rain wanted; health good; prices falling.
Amritsar . . .	. . . .	Rain wanted; health good; *rabi* sowings completed; slight rise in prices.
Lahore	. . . .	Health and harvest prospects good; prices fluctuating.
Ferozepore . . .	. . . .	Health and harvest prospects good; slight rise in prices.
Sialkot	. . . .	Rain wanted; health good; prices stationary.
Rawalpindi . . .	. . . .	Slight rain; seasonal fever continues in the district generally; *kharif* gathered in and *rabi* sowings completed; cattle disease at Rawalpindi; slight fall in prices.
Peshawar . . .	. . . .	Slight rain; *rabi* sowings completed; prices almost stationary.
Mooltan . . .	. . . .	Health and harvest prospects good; prices stationary.
Dera Ismail Khan . .	. . . .	Rain wanted; health fair; harvest prospects fair; prices steady. *General Remarks.*—The health of the province and the prospects of the crops are generally good; rain is much wanted in nearly all the districts, Rawalpindi and Peshawar being the only ones in which there has been a slight fall during the week.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Nagpur (Jan. 3rd)	. . . . .	Weather seasonable; prospects of *rabi* crops very good; health good; prices stationary.
Jubbulpore („ 2nd)	. . . . .	Weather clear and cold; *rabi* crops in good condition; prospects and health good; wheat 20 seers per rupee.
Saugor („ „)	·10	Crops excellent; health good; prices falling.
Seoni („ „)	. . . . .	Weather warm and sometimes cloudy; *rabi* crops most promising; health good; prices stationary.
Hoshangabad (Jan. 2nd)	. . . . .	Weather clear and cool; *rabi* crops doing well; fever prevalent; wheat 16 seers per rupee.
Raipur (Dec. 30th)	. . . . .	Weather cool and pleasant; *rabi* crops promise well; health generally good; rice 32 seers per rupee.
Sambalpur („ 28th)	. . . . .	Weather seasonable but a little cloudy; prospects and health good; rice 56 seers per rupee.
Khandwa (Jan. 2nd)	. . . . .	Weather clear; *rabi* prospects good; small-pox reported; wheat 16 seers per rupee.
		General Remarks.—Weather clear and cold; reaping and winnowing of *kharif* crops being rapidly pushed on; *rabi* crops promise well; public health generally good; prices steady.
British Burma— (Dec. 30th)		
Rangoon . . .	*Nil*	Total rainfall 102·02 inches; one death from cholera, otherwise public health good; crops progressing.
Bassein . . .	*Nil*	Total rainfall 125·83 inches; two deaths from cholera in town, otherwise public health good; reaping going on.
Prome . . .	*Nil*	Total rainfall 50·21 inches; two deaths from cholera in town, otherwise public health good; reaping nearly finished in several places.
Amherst (Moulmein) .	*Nil*	Total rainfall 202·90 inches; public health good both in Moulmein and the district; no cattle disease reported; reaping nearly finished.
Toungoo . . .	*Nil*	Total rainfall 91·64 inches; public health good.
		General Remarks.—Public health good; crops good; reaping and gathering progressing.
Assam—		
Gauhati (Jan. 2nd)	*Nil*	Weather seasonable; reaping of *sali* paddy in progress; ploughing land for *aus*; public health good.
Sylhet . („ 3rd)	*Nil*	Harvesting of *aman* nearly finished; cold-weather crops promising; cholera still reported from sub-divisions, apparently abating; small-pox reported from Karemganj and Sunamganj.
Cachar . („ „)	*Nil*	Weather unchanged; reaping of *sali* crops continue; common rice 21 $\frac{5}{16}$ seers per rupee; three cases of cholera reported from Sadr station.
Dibrugarh („ „)	*Nil*	Weather very cold; *sali dhan* nearly gathered; few cases of cholera reported from the Sadr sub-division.
Mysore and Coorg— (Jan. 3rd)		
Bangalore . . .	. . . . .	*Kartik* paddy and horse-gram harvested; standing crops in good condition; season prospects favourable; health good.
Mercara . . .	. . . . .	Rainfall up to date 208·55, being the maximum ever reached; reaping of rice and picking of coffee proceeding, former crop good, latter short; price of food grains falling; public health good, but fever prevalent in Nanjarajapatna taluka.
		General Remarks.—General reports from the districts favourable generally in all respects; fever prevalent in parts, but public health good on the whole; harvesting of season crops active; prices continue easy.
Berar and Hyderabad- (Jan. 3rd)		
Amraoti . . .	. . . . .	Cotton-picking continued; *rabi* crops in good condition; wheat 16 and *juari* 26 seers per rupee.
Akola	. . . . .	*Kharif* reaping continued; *rabi* crops progressing favourably.
Hyderabad . . .	. . . . .	Standing crops prospering; cholera abating; cattle disease in some taluks; prices: wheat 16, course rice 10½, white *juari* 25¼, yellow *juari* 34½, and *tur* 29¾ seers per halli sicca rupee.
Central India States— (Jan. 3rd)		
Indore	. . . . .	No change since last report.
Morar (Gwalior) . .	·05	Health and prospects good; weather seasonable.
Sutna	. . . . .	Health and prospects good.
Neemuch . . .	. . . . .	Weather cold; *rabi* crops thriving; public health good; prices falling.
Goona	·11	Crops good; health fair; wheat 23 seers 8 chittacks.
Bhopal	. . . . .	Weather cool; crops and public health good.
Agar	. . . . .	Health and prospects good.
Nowgong . . .	. . . . .	*Rabi* prospects favourable; prices steady; health good.
Manpur . . .	. . . . .	Weather clear and cold; prospects of *rabi* crops good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (Jan. 3rd)	. . . .	Weather cold ; health good.
Sirohi (Dec. 31st)	. . . .	Wells fairly full, prospects fair; health good.
Marwar („ 30th)	. . . .	Only 15 days' water in tanks ; wells almost full ; health good ; *rabi* crops flourishing.
Meywar („ 30th)	. . . .	Wells and tanks fair ; health good; prospects favourable ; weather seasonable.
Harowti (Jan. 1st)	. . . .	Weather cloudy and unusually mild ; crops doing well, but rain would be beneficial and seasonable ; health good ; prices steady.
Jhallawar (Dec. 28th)	·07	Health and prospects good.
Ajmere (Jan. 2nd)	. . . .	Weather still cloudy at times ; health good.
Jeypore („ „)	. . . .	Rain wanted ; prospects favourable ; prices stationary ; health good.
Ulwur (Dec. 26th)	. . . .	Tanks drying ; wells in good supply ; health and prospects good ; rain wanted.
Nepal— (Dec. 28th)		
Khatmandu . . .	*Nil*	Prospects good ; weather fine and cold.

E. C. BUCK,
Secretary to the Government of India.

[illegible] 1st February 1883.

ALEXANDER IZAT,
Offg. Under Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 30th JANUARY 1883.

GENERAL REMARKS.—During the week under report there has been abundant rain in the North-Western Provinces and Oudh and a good deal has also fallen in the Punjab, where it was badly wanted. Rain in varying quantities has also fallen in most parts of the Bombay and Bengal Presidencies, in the Central Provinces, Assam, Rajputana, and in the Central India States. In the Madras Presidency it has fallen in three districts only. In British Burma, Mysore and Coorg, and the Nizam's territories there has been no rainfall to report.

With the more or less general rain which has fallen during the past week, agricultural prospects have improved everywhere.

In Bengal the rice harvest still continues in some places, and in British Burma and Coorg it has closed. The coffee crop in Coorg has turned out much below estimate, and the prices have fallen heavily in the home market.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Jan. 31st)		
Bellary	·07 (average of one station.)	Standing crops generally good; harvest paddy, dry grains, [illegible] and sugarcane, outturn average; cholera in one taluk.
Kurnool		Standing crops in good condition; harvest dry grains, yield [illegible] average; cattle disease in parts.
Ganjam	·33 (average of three stations.)	Standing crops dry grain, cotton, and sugarcane thriving; harvest paddy and red grain, outturn average; fever and small-pox and cattle disease continue.
Kistna		Standing dry crops affected by grubs and blight in parts, elsewhere promising; harvest paddy and dry grains, yield below average; small-pox prevalent; fever more general; cattle disease abating; water 1 foot over anicut.
Chingleput (Madras)		Standing crops in good condition; harvest paddy, outturn below average; small-pox and cattle disease in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, cholera, and cattle disease in parts.
Tanjore		Standing crops good; harvest paddy and *ragi*, yield below average; cholera increasing and severe.
Madura		Standing crops withering in parts; harvest paddy and dry crops; cholera in parts.
Malabar	·15 (average of one station.)	Harvest second crop paddy progressing, outturn fair; fever and cholera in parts; small-pox slight.
Travancore		Harvest progressing; fever and small-pox continue.
		General Remarks.—No rain, except in Ganjam, Bellary, and Malabar; general prospects good.
Bombay—(Jan. 31st).		
Kurrachee	Slight showers of rain at Kurrachee, Sehwan, and Manjhand.	Weather colder; river very low on 28th, 2 feet 8 inches, being 1 foot less than on corresponding date last year; 8 fresh cases of small-pox in Karachi during week, 3 deaths, total to 24th 57 cases, 17 deaths, remaining sick 24, 5 cases in Sehwan; cattle disease in 5 talukas; wheat, red rice, and *bajri* in Karachi 24, 32, and 33 lbs., in Dadu 32, *nil*. and 48 lbs., in Sakro 16, 34, and 46 lbs., and in Jati 20, 36, and 40 lbs. per rupee, respectively.
Hyderabad	Sharp thunderstorm at Mirpur Khas on 24th, rain in torrents for 2 hours.	*Rabi* crops fair; small-pox in Hyderabad and Guni; fever in 8 and cattle disease in 3 talukas; wheat 26, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		Standing crops suffered by rain on the 25th; small-pox in Dhandhuka; wheat 29 and *bajri* 32 lbs. per rupee.
Baroda	·67	*Rabi* crops generally prospering; cotton somewhat injured by rain; fever in parts of Naosari and Kari Division; *bajri* 30¼ and common rice 26 lbs. per British rupee.
Surat	·70	Slight damage to crops, and fever in some talukas; small-pox in city, *jowari* 39 and *nagli* 52 lbs. per rupee.
Nasik	Slight showers of rain on Thursday night and Friday last. No rain in Zeola, Nandgaon, and Maligaon. Igatpuri 1·02.	Weather cleared up; *rabi* harvest commenced; last unfavourable weather slightly injured crops in Dindori and Nasik; wheat 25½, *bajri* 36, and rice 25 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Colaba (Bombay)	·12 on morning of 26th.	Abnormal temperature 1° warm on 24th, 3° warm on 25th, 3° cool from 26th to 28th, and 1° cool on 29th and 30th; vapour in air slightly in excess of normal on 24th and 25th, afterwards largely in defect of normal; abnormal wind southerly on 24th and 25th, from due west on 26th and afterwards northerly; strong wind from morning of 25th to morning of 26th, commencing from south and south-west and changing to west and south-west.
Poona		State of crops good; *bajri* 44 and *jowari* 55 lbs. per rupee; in Poona *bajri* 37 and *jowari* 45 lbs. per rupee.
Ahmednagar	*Nil*	*Rabi* crops generally good; harvesting commenced in 8 talukas; *bajri* maximum 54 lbs. per rupee in Parner, minimum 45 lbs. in Akola; *jowari* maximum 72 lbs. per rupee in Shrigonda, minimum 54 lbs. in Akola.
Sholapore	·02	Standing crops healthy; *rabi* harvest commenced; *jowari* 72 lbs. 39 tolas, and *bajri* 57 lbs. 10 tolas per rupee.
Dharwar		*Kharif* harvest nearly completed; cotton suffering from blight in 8, and wheat in 5 talukas; other late crops good; cholera disappeared from Gadag; fever and ague in 3 talukas; cattle disease re-appeared in 1 taluka; rice minimum 26 and *jowari* 40 lbs. per rupee.
Kanara		Second crop rice plants healthy; small-pox in 1 taluka and fever in 2; common rice in Karwar 12½ lbs. per rupee, in district average 15 lbs. per rupee; weather fair.
Rajkot	·14	Weather very cold; general health good; cholera continues slightly in Navanagar and Morvi; *bajri* 29 and *jowari* 36 lbs. per rupee.
		General Remarks.—Some rain in most districts, injurious to crops in few places; *rabi* generally doing well; fever, small-pox, and cattle disease in several districts.
[illegible]—(Jan. 30th).		
Chittagong	*Nil*	Weather variable, days warm, nights cool; harvesting of *amun* paddy over, average outturn; prospects of winter crops promising, but rain wanted; prices stationary; cholera, cattle disease, and small-pox not yet ceased.
Dacca	·26	Harvesting of *amun* paddy nearly completed, yield average; prospects of winter crops continue good; *boro* paddy being sown.
24-Pergunnahs (Alipore)	·12	Harvesting of late rice and sugarcane going on, yield estimated at about from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; cholera still prevails in some parts of the district.
Moorshedabad	·05	Harvesting of *amun* almost over; cold-weather crops continue satisfactory; a few cases of cholera reported from outpost Mohimapore.
Rajshahye	·14	
Burdwan	Nattore ·70 Cutwa ·21 Culna ·05 ·07	Rain beneficial to winter crops; public health fairly good.
Rungpore	·50	Some of the cold-weather crops being harvested; fever less prevalent; a few cases of cholera reported.
Bhagalpur	·39	Prospects of *rabi* crops favourable; ploughing for *aus* crop commenced; cholera still prevalent in some parts of the district.
Purneah	·96	Prospects of crops good; mustard spoilt by caterpillars in some places.
Patna	·33	Prospects of *rabi* crops good owing to rain; public health fair.
Durbhunga	1·68	Prospects of *rabi* crops continue favourable; reaping of mustard going on; public health good.
Hazaribagh	·9	Winter rice harvested; *rabi* crops not benefited by rain; lands being prepared for indigo; public health generally good.
Cuttack	*Nil*	Weather very cold since latter part of week; wheat and other standing crops promise well; general health good.
		Harvesting of late rice nearly completed, and that of *rabi* in progress; *dalua* rice growing well; public health good.
		General Remarks.—There was been rain in most parts of the province during the week; prospects of *rabi* crops continue generally satisfactory, but the rain is said to have damaged some of these crops, specially mustard, in some parts of Behar; harvesting of *rabi* crops has commenced in some districts, and that of sugarcane is becoming general; sugarcane harvest is generally expected to yield well; late rice is still being harvested in Orissa and a few other low-lying tracts; fever and cholera have generally much abated, but in Nuddea numerous deaths from fever still reported; sporadic cases of small-pox reported from a few districts.
N.-W. Provinces and Oudh—		
Benares (Jan. 30th)	Benares 1·50 Chandauli 1·20	No damage to crops; no sickness; prices steady.
Allahabad („ 31st)	There has been good rain all over the district.	The *sarson* has been injured and the grain in an advanced state, but all over dry tracts, effect beneficial; prospects very good; health good; prices slightly fallen.
Gorakhpur („ 29th)	Storm and heavy fall of rain, 2·80 on 26th.	Dry weather now required; edible crops good; oilseeds injured by insects; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Jhansi (Jan. 29th)	1·40	Prospects of *rabi* crops very good; prices of food-grains almost stationary; small-pox of a mild type continues; cattle disease disappearing.
Agra („ 30th)	Rain in all parganas from 1·30 to 2·20.	Small-pox in four parganas; general health good; prices almost stationary.
Bareilly („ „)	Average rainfall during the week 3·00.	The rain has been general throughout the district and most opportune; *rabi* prospects all that could be desired; health good.
Meerut („ „)	Meerut . 2·30 Hapur . 2·50 Mowana . 5·00 Beghpat . 3·00 Ghaziabad . } 2·20 Sirdhana . }	The rain has been beneficial to the crops; health good; prices easier.
Kumaon (Feb. 1st)	Most copious rain, also snow, and in some places heavy.	The statement made last week to the effect that eight persons had died from typhus, incorrect; four deaths apparently from typhus during this week, otherwise general health good; cattle disease continues; prices unchanged.
Lucknow (Jan. 30th)	Lucknow . 5·20 Maliabad . 5·20 Mohunlalgunj 2·50	Prospects of crops favourable; general health good; small-pox abating in the city.
Partabgarh („ „)	. . . .	The rain during the week has done good to the crops; weather now clear; prices almost stationary; health good.
Sitapur („ „)	Average rainfall throughout district over 4·00.	Light hail in parts, but no damage caused; general health good; prices stationary.
Fyzabad („ „)	Sadr . . 4·00 Akbarpur . 1·90 Bikapur . 4·20 Tanda . 2·20	Prospects good everywhere, except where damages have been caused by hail; extent of damage not yet known.
Rae Bareli („ 29th)	Sadr . . 2·50 Digbijaiganj . 3·10 Dalmau . 2·30 Salon . 2·90	Crops flourishing; health of men and cattle good; prices almost stationary.
Cawnpore („ 30th)	Average rainfall 1·90	The rain has been beneficial to crops; prospects good; sowings completed; health good; prices unaltered.
Farukhabad („ „)	Rainfall on 25th and 26th from ·60 to 2·00.	The rain has vastly improved the prospects of the season; clouds are still visible, but no rain expected; no further report about spread of small-pox. *General Remarks.*—There has been a copious fall of rain ranging from ·60 to 5·20 inches throughout the Provinces, the effect of which has been most beneficial; some damage to crops from hail is reported from Fyzabad, but the prospects of the *rabi* crops are generally very good; the general health is good, the small-pox epidemic in Lucknow is abating; small-pox continues to be reported from Agra and Jhansi; prices on the whole are stationary.
Punjab—(Jan. 31st)		
Delhi	1·40	Small-pox continues in the city and district; harvest prospects good; prices almost stationary.
Hissar	Rain throughout the district.	Harvest prospects much improved; small-pox continues in Rohtak; health elsewhere good; prices falling.
Umballa . . .	2·20	Harvest prospects much improved; health good; prices stationary.
Jullundur . . .	2·42	Health good; prices steady.
Amritsar . . .	2·50	*Rabi* harvest prospects improving; prices of wheat and gram falling, of other grains stationary.
Lahore	1·60	Health and harvest prospects good; slight rise in prices.
Ferozepore . . .	Rainfall good throughout the district.	Health good; *rabi* harvest prospects improved; prices fluctuating.
Sialkot	3·00	*Rabi* assured; health good; prices falling.
Rawalpindi . . .	Nearly 3·00 in the district, and 22 feet of snow at Murree.	Fever continues in the Kahuta tehsil, and cattle disease in the Murree and Fattehjang tehsils; *rabi* harvest prospects good; slight fall in prices.
Peshawar . . .	1·70	Health and harvest prospects good; prices stationary.
Mooltan	1·00	Health and harvest prospects good; prices stationary.
Dera Ismail Khan . .	Slight rain	Health and harvest prospects fair; prices almost stationary. *General Remarks.*—Good rain has fallen throughout the province, and the harvest prospects have improved; the general health of the province is good.
Central Provinces—		
Nagpur (Jan. 31st)	·24	Weather clear; prospects good; public health good; prices slightly fallen.
Jubbulpore („ 30th)	·40	Weather cloudy and cold; prospects favourable; *rabi* crops in good condition; health good; wheat 20 and rice 15 seers per rupee.
Saugor („ 29th)	·61	Weather cool and clear; health fair; prices stationary.
Seoni („ 30th)	·96	Weather cloudy; public health good; prices stationary.
Hoshangabad („ „)	·15	Weather cloudy and cool; health good; small-pox prevalent; wheat 17 and rice 11 seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*contd.*		
Raipur (Jan. 27th)	·22	Weather cloudy and threatening; *rabi* crops threatened by cloudy weather; slight cattle disease
Sambalpur („ 25th)	. . . .	Weather clear and cold; prospects and health good.
Khandwa („ 30th)	·20	Weather very cold; prospects good; small-pox prevalent; prices steady. *General Remarks.*—Weather cloudy and cool, with slight rain in most districts; *rabi* crops promise well; although slight damage has been caused by rain in a few districts; public health generally good; prices steady.
British Burma—(Jan. 27th)		
Akyab	. . . .	Ten deaths from cholera in two townships; small-pox in one township, otherwise public health good; slight cattle disease in one township; reaping over.
Rangoon . . .	. . . .	Three deaths from cholera and one from small-pox, otherwise public health good; crops reaped.
Bassein . . .	. . . .	Two deaths from cholera in one township, otherwise public health good; crops reaped.
Prome . . .	. . . .	Public health good; reaping finished.
Amherst (Moulmein) .	. . . .	Eleven cases of cholera in one township and one in another, otherwise public health good both in Moulmein and district; 56 deaths of cattle reported from one township; reaping finished.
Toungoo . . .	. . . .	Three deaths from small-pox and four from cholera reported from one township, otherwise public health good. *General Remarks.*—Some cholera here and there, otherwise public health good; a little cattle disease.
Assam—		
Gauhati (Jan. 30th)	·42	Weather seasonable; public health good; lands being ploughed for *aus*.
Sylhet . („ 31st)	·13	Prospects of winter crops good; transplantation of *boro* paddy still going on; ploughing for spring sowings has commenced; cholera is still reported and small-pox.
Cachar . („ „)	1·18	Weather very cold; reaping of winter crops progressing; common rice 21 $\frac{5}{6}$ seers per rupee; no cholera reported.
Dibrugarh („ „)	1·11	Weather cold and seasonable; no further report of cholera received; mustard promises well.
Mysore and Coorg—(Jan. 31st)		
Bangalore . . .	. . . .	Crops in good condition; prospects fair.
Mysore	. . . .	Crops in good condition; prospects fair.
Mercara . . .	. . . .	Reaping of rice crops completed; threshing has commenced; prospects of coffee-planters disappointing; prices fallen heavily in home market, and crops turned out much below estimate; season sickly; fever prevalent in South Coorg and Nanjarajapatna taluk. *General Remarks.*—Standing crops in the Province in good conditions; harvesting operations continue in active progress; prospects fair; public health good; prices unaltered.
Berar and Hyderabad—(Jan. 31st)		
Amraoti . . .	. . . .	Threshing of *kharif* crops continues; reaping of *rabi* crops commenced; wheat 16½ and *juari* 26 seers per rupee.
Akola	. . . .	*Rabi* crops thriving; prospects favourable.
Hyderabad . . .	. . . .	Reaping of *rabi* crops commenced; *tahi* crops flourishing; cholera disappearing; prices—wheat 16½, common rice 11, white *juari* 25, yellow *juari* 31, and *tur* 29½ seers per halli sicca rupee.
Rajputana—		
Abu (Jan. 31st)	·40	Cold severe weather, windy and cloudy; health good.
Sirohi („ 28th)	·30	Wells full; health and prospects good.
Marwar („ 26th)	·66	No water in tanks; health and prospects good.
Harowti („ 27th)	Deoli . ·29 Kotah . ·48 Tonk . ·54 Shahpoora . ·50	Slight hail at Kotah and Tonk; prospects improved; weather clear, crisp, and cold; health good.
Jhallawar („ 24th)	·20	Weather windy and cloudy; small-pox of a mild type prevalent.
Ajmere („ 30th)	·28	Fever and small-pox prevalent; cold severe.
Jeypore („ „)	1·22	Crops looking well; prices stationary; health good.
Ulwur („ „)	. . . .	Rain general throughout State, has done much good; prospects and health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States—(Jan. 31st)		
Indore . . .	Slight rain on 25th	Weather much colder in consequence of rain, healthy and seasonable; agricultural prospects good.
Morar (Gwalior) . .	1·56	Health and prospects good; weather seasonable.
Sutna	·87	Health and prospects good.
Neemuch . . .	·30	Crops doing well; weather very cold; public health good.
Goona	1·0	Crops and health good; weather cloudy; wheat 23 seers per rupee.
Bhopal	·39	Weather cool; crops and public health good.
Agar	Some rain during the week.	Health and prospects good.
Nowgong . . .	1·23	*Rabi* prospects favourable; prices steady; health good.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

CORRESPONDENCE RELATING TO THE EDUCATION OF EUROPEAN AND EURASIAN CHILDREN IN INDIA.

No. 2 / 56—66

Extract from the Proceedings of the Government of India, in the Home Department (Education),—under date Fort William, the 8th February 1883.

READ again—

Home Department Resolution No. 8, dated the 8th October 1881, reviewing the subject of the education of European and Eurasian children in India, and appointing a Committee to prepare a draft Code for regulating the grant of Government aid to European and Eurasian schools.

Despatch from Her Majesty's Secretary of State for India, No. 27, dated 23rd February 1882, approving of the proposals set forth in the foregoing Resolution.

Letter No. 4461, dated the 20th July 1882, from A. W. Croft, Esq., submitting the draft Code drawn up by the Committee appointed in the said Resolution, together with an Explanatory Report.

Home Department letter No. 484, dated the 20th September 1882, thanking the Committee and inviting them to re-consider certain points in the draft Code.

Letter No. 2, dated 22nd December 1882, from A. W. Croft, Esq., in reply to the foregoing, with revised copy of the draft Code.

RESOLUTION.

IN paragraph 22 of the Resolution of the 8th October 1881, the Governor General in Council appointed a Committee* to draft a Code for regulating the conduct of European education in the Bengal Presidency so far as this is dependent upon Government support. The Committee were instructed to consider, in accordance with the general principles laid

President:

* A. W. Croft, Esq., Director of Public Instruction, Bengal.

Members:

The Venerable Archdeacon Baly.

The Very Reverend Father Van Impe, Rector of St. Xavier's College.

The Reverend J. Robertson, Principal of the Free Church College, Calcutta, and late Principal of the Doveton Institution.

down in the Resolution, the conditions upon which Government aid should be given to European schools, the mode in which the system of payment by results could best be introduced and worked, the standard of education to be required in the different classes of schools, the scales of remuneration suited to each class, the manner in which the Government scholarships should be distributed and awarded, the development of a system of pupil teachers, and the establishment of training colleges. They were directed, in framing their proposals, to bear in mind the wish of the Government of India that the total extra expenditure to be thrown on the Provincial Governments by any revised arrangements should not aggregate more than one lakh of rupees per annum over the whole of the Bengal Presidency.

2. The Report of the Committee, with the draft Code prepared by them, was received by the Government of India in July last, and has been carefully considered by the Governor General in Council. The cordial thanks of Government have already been conveyed to the Members; and regrets expressed at the untimely death of the Very Reverend Father Van Impe, whose place upon the Committee was ably filled by the Reverend Father Lafont.

3. The Committee have dealt with the whole subject referred to them in a most complete and satisfactory manner, and have taken much pains to consult, in the course of their deliberations, not only the principal educational officers of the different provinces but also the managers of all the leading European schools. They have borne in mind the financial restrictions imposed upon them, and endeavoured, in framing their proposals, to effect as little disturbance as possible in the amounts of existing grants. They believe that the sysem of grants suggested in the Code, if applied to existing primary and middle schools, would not at the outset raise the Government expenditure by more than 10 per cent. At the same time, they are conscious that no very certain conclusion can be come to on the subject of expenditure until the application of the standards has been tested by actual experience. They propose, therefore, that the Code should not be brought into full operation immediately, but that for two years the schools affected by it should be examined under the proposed standards and the amounts that would be earned under the Code recorded, existing grants being, for the meantime, maintained. In the light of the information thus accumulated, the rates and rules embodied in the draft Code should, it is suggested, be eventually revised.

4. The Governor General in Council fears that if the introduction of the Code as a whole is postponed absolutely for two years, nothing will be done in that time to establish schools in stations where they are now required; while the introduction of a system of training pupil teachers will be undesirably delayed. He would be glad, therefore, if the Local Governments interested could see their way to introducing and working in actual experiment the provisions of Chapter III of the Code, regarding pupil teachers; of Chapter VI, regarding building grants; and of Chapter VII, regarding scholarships. They might also, it is thought, apply the provisions of the Code, with any desired modifications, in the case of new schools. If this is done, the Committee's suggestion may be acted upon for the next two years in the case of all existing schools.

5. In paragraph 7 of their Report the Committee go on to explain the details of the draft Code. The Governor General in Council will here only notice those points upon which the orders or remarks of Government seem to be called for. In the absence of any indication to the contrary the proposals of the Committee may be deemed to have been accepted by the Government of India.

6. The Committee have adopted in Article 3 of the Code the definition of the term "European" followed in the Government

Resolution of the 8th November 1881, but they anticipate difficulty in applying the definition in particular cases. These difficulties may be met by adding to this Article the words—"The Local Governments "shall in all cases of doubt decide the proper application of the "term."

7. The conscience clause, embodied in Article 5 of the Code and explained in paragraph 10 of the Report, is accepted by the Governor General in Council as generally sufficient.

8. In paragraphs 11 and 12 of the Report is discussed the question whether all schools are to be eligible for grants irrespective of their status or financial position. The Committee rightly hold that no school should get a grant that can do without it, and this general principle is enforced in clause (f) of Article 6 of the Code; while, to meet the case of high schools that may require aid to some though not to the full extent contemplated by the ordinary rules, provision is made in Article 40 for a reduction in the grant earned in such schools when the income from all sources is large enough in the opinion of the Department to render the full grant unnecessary for efficient maintenance. The Committee are not themselves altogether satisfied with this rule, and the objections to any such plan of determining grants with reference to expenditure in the manner proposed are forcibly stated by one of their Members in paragraph 12 of the Report. The Governor General in Council requested the Committee to re-consider this question, but they have failed to discover any more satisfactory rule than that adopted in the Code. His Excellency in Council is disposed to agree with the view taken in paragraph 10 of the Committee's further letter upon this subject (No. 2 of the 22nd December 1882), that the best way of meeting the difficulty eventually will be found in the imposition of a fee-limit, and the attention of the Department should be given to the determination of such fee-limit in the case of high schools. Meantime, a Note will be appended to Article 40 of the Code to the effect that—"The operation of this Article is limited to a term of three years "from the date on which the Code comes into force."

9. The Local Governments are requested to keep the Government of India informed of any rules they may lay down, or orders they may give, regarding the disallowing of schools by the Department under Article 6 (*e*) of the Code, on the ground of their being unnecessary or unsuited to the requirements of the locality.

10. The Committee, by a majority, decided that private adventure schools should be excluded from the benefits of the Code. The Governor General in Council is not prepared, in the present state of European education in the Bengal Presidency, to place a special ban upon schools of this class. If they fulfil the requirements of the Code, he would be willing to give them grants. The Government is bound to avail itself at present of every educational agency that may offer itself, provided the education afforded by it is satisfactory. Clause (*b*) of Article 13 of the Code as drafted,—"That the school is not carried on with a view to private emolument,"—will, therefore, be omitted.

11. In paragraph 28 of the Report, the Committee advocate the appointment of a special European officer to have the supervision of European education throughout Upper India. As the cost of the measures proposed will fall upon the various Local Governments concerned, it is not practicable for the Government of India to give effect to this suggestion. Each Government must be left to make its own arrangements for inspection, but the advisability of entrusting this duty to a carefully selected European officer in each province should be borne in mind; and it will be very useful if the inspecting officers of the different provinces communicate freely with

one another directly and meet occasionally to discuss and settle any points of importance that may arise.

12. The special attention of Local Governments is invited to the proposals of the Committee in paragraph 29 of the Report, regarding the proper mode of dealing with the case of non-European pupils in European schools. The point is one on which full report will be expected hereafter. It should be considered whether the required majority of European pupils should not be raised to two-thirds of the whole number of pupils. Meantime, the rules suggested are provisionally accepted by the Government of India.

13. The Committee's proposals regarding the standards of examination meet with the approval of the Governor General in Council except in the case of the final standard of high schools. The University Entrance Examination is admittedly not a proper standard for schools of this class, and the Government of India direct that it be excluded from the Schedule of Standards of Examination and from Article 27 of the Rules. The final standard for high schools will be that shewn as Standard B in the Code submitted by the Committee.

14. The Committee's original proposals regarding night schools (paragraphs 52 and 53 of their Report) appeared to the Governor General in Council to be somewhat too limited in scope. The revised rules proposed in their letter of the 22nd December last are accepted by the Government of India.

15. In the matter of scholarships, the Government of India would be glad to see provision made by Local Governments for the grant of scholarships to be held in colleges of technical instruction by lads passing with credit the final standard of examination in high schools. This is the more necessary now that the University Entrance Examination has been rejected as a final standard for such schools.

16. The Governor General in Council accepts the proposals of the Committee regarding the qualifications of teachers as modified by their letter of the 22nd December.

17. A copy of the draft Code, as finally accepted by the Government of India, is appended to this Resolution.

ORDER.—Ordered, that a copy of this Resolution, together with a copy of the papers noted on the margin, be forwarded to all Local Governments and Administrations in the Bengal Presidency for information and guidance, to the Public Works Department for information, and to the Foreign Department for information and communication to the Chief Commissioner of Ajmere and the Agent, Governor General, Central India.

From the President of the Committee on European and Eurasian education, No. 4461, dated the 20th July 1882.
Report of the Committee, dated 17th July 1882.
To the President of the Committee on European and Eurasian education, No. 484, dated the 20th September 1882.
From ditto, No. 2, dated the 22nd December 1882.

Ordered also, that these papers be published in the Supplement to the *Gazette of India*.

(True Extract.)

A. MACKENZIE,
Secretary to the Government of India.

No. 4461, dated Calcutta, the 20th July 1882.

From—A. CROFT, Esq., President of the Committee appointed under Home Department Resolution No. 8, dated 8th October 1881,
To—The Secretary to the Government of India, Home Department.

I HAVE the honour to submit the report called for in your No. 280, dated the 29th April last, together with the draft Code for regulating the conduct of European Education in the Bengal Presidency, which has been drawn up by the Committee appointed with that object under Home Department Resolution No. 8, dated 8th October 1881.

REPORT OF THE COMMITTEE APPOINTED TO DRAFT A CODE FOR REGULATING THE CONDUCT OF EUROPEAN EDUCATION IN THE BENGAL PRESIDENCY.

Introduction.

IN accordance with the Resolution of the Government of India in the Home Department, No. 8, dated Simla, the 8th October 1881, we have the honour to submit, for the consideration of his Excellency the Governor-General in Council, the accompanying draft of a Code for regulating European education in the Bengal Presidency, so far as it is dependent on Government support.

Explanation of the delay in submitting the draft Code.

2. We regret that, owing to a variety of causes, it has been found impossible to complete our deliberations within the time specified in the Resolution. The delay has been largely occasioned by the necessity of supplementing by more detailed enquiries the information placed before us, and by the great difficulty we have experienced in obtaining replies to the circulars issued.

The difficulty of drafting a Code in present circumstances.

3. In framing the draft Code and appended schedules, we have turned to account all the information that we could obtain in India, and have also freely availed ourselves of the results of recent experience in England and Scotland. But the problem of European education in India is complicated by special difficulties which have no existence in England. In elementary education, for example, it is necessary to provide for a double system of money tables, weights, and measures; for the history and the special geography of India in addition to that of England; and for an Indian vernacular. Rules must also be laid down for secondary education; and this must be done in such a way as on the one hand to develope commercial education, which can hardly be said to exist at present, and on the other, to supply a suitable connection between the elementary school and the University. The varying principles on which grants have hitherto been given have to be replaced by a system of payment-by-results, without doing any avoidable harm to existing schools. In framing this system, it is necessary to take into account the different circumstances of boarding as well as day schools, of schools in the hills as well as those in the plains, and of the large schools in the Presidency towns as well as the small schools in the mofussil. The system must also provide for the maintenance of indigent children in free schools and orphanages. Moreover, provision must be made for adding 50 per cent. to the number of children at present under instruction, and for supplying additional school accommodation in the smaller stations, without adding finally more than Rs. 1,00,000 a year to the present Government expenditure.

Tentative character of the proposed scale of grants.

4. We have received returns from 70 schools, showing 6,600 scholars on the rolls. Taking these returns as a guide, we have calculated the amounts of the grants to be given for attendance and instruction, in such a way as to disturb the existing grants as little as possible. We must, however, point out that these returns are not sufficiently accurate to furnish data for a final settlement of the grants, or for an estimate of the probable cost to Government. None of the schools have as yet been examined by the proposed standards, and in very few schools does the course of instruction exactly correspond to that now laid down. The returns can give at best only the teacher's estimate of the knowledge possessed by each scholar; and in many cases they merely show the number of children in each class of the school, without any attempt at classification by standards. The scale of grants proposed in the Code can therefore be regarded only as tentative and experimental; at the same time we believe that it will serve as a basis for determining the rates that may finally be adopted. We are disposed to think

that if the proposed rates were applied to existing primary and middle schools, the additional expenditure, if any, that would fall on Government, would not at the outset exceed 10 per cent. The case of high schools is considered in a later paragraph.

Means adopted to obtain the opinion of experts.

5. The standards of examination which we proposed to adopt were sent to the Directors of Public Instruction in the different provinces to which the Code is intended to apply, as well as to the managers of all European schools in those provinces, with the object of obtaining an expression of their views upon our proposals. We also took the opportunity of consulting those educational officers from Bombay and Madras who were present in Calcutta during the cold weather as members or the Education Commission. The majority of those whom we consulted approved entirely of the standards proposed, and all were willing to accept them with modifications. Of the many valuable suggestions that we received, the most important have been adopted. In the Central Provinces, indeed, it was represented that the standards were uniformly too high; but on a careful examination of those proposed by the Inspector General of Education, we found that the main difference lay in the introduction of an initial standard of examination below that which we have adopted as standard I. We hold, however, to the opinion that no advantage is likely to result from the individual examination of children at so early a stage of their school career. For children at that stage, we are of opinion that grants should be determined solely by attendance, organization, and discipline; and we have accordingly proposed in their case a higher rate of attendance grant.

The mode of introducing the Code.

6. We are unanimously of opinion that if the Code in its present form is approved by His Excellency the Governor-General in Council, it should not be brought into full operation immediately. We recommend that, in the first two years, the schools should be examined under the proposed standards by an Educational officer specially deputed to that duty, and the amounts that would be earned under the Code recorded for future guidance; but that during that period no change should be made in the grants now enjoyed by the schools. The information obtained during this period of transition will enable the Education Department to determine the sufficiency and suitability of the rates here tentatively proposed, and to modify them in any way that experience may show to be necessary; while the schools will have time allowed them to work up to the proposed standards. The revised rates may then be finally introduced, and grants made to schools in strict accordance with them; with the possible modification, should such a course be found desirable, that in the third year half the grants should be made on the old, and half on the new system, the full introduction of the Code being postponed to the fourth year. This appears to us to be the only satisfactory method of removing the uncertainty that must otherwise attend the introduction of the new system, and of securing that "no avoidable harm is done to existing schools." In the words of the Resolution (paragraph 19), "the system must be introduced gradually, with such temporary modifications and adaptations as will enable all really sound institutions to bear the change without injury. As time goes on and the standard of education rises, the conditions of the grants may be modified and made more stringent."

7. Having thus explained our view of the practical value of the scheme which we have the honour to submit, we now proceed to explain in detail the principles by which we have been guided and the methods by which we propose to give effect to them.

The definition of the term "European."

8. We have adopted, with a few verbal modifications, the definition of the term "European" given in the note appended to paragraph 6 of the Resolution. We anticipate, however, that there will be difficulty in applying the definition to particular cases. We were at first disposed to recommend that the term should be applied only to those children whose parents (or one of whose parents) use a European language as a vernacular; but on reconsideration we found that, apart from the general difficulty of applying such a test, it might have the effect of excluding from the benefits of the Code a certain number of children, specially those of unknown parentage, in free schools and orphanages, for whom the Government of India intended that provision should be made. On the other hand, it should be understood that the definition, as it now stands, does not clearly exclude such classes as the "Feringhis" of Chittagong, the "Portuguese" of Bombay, or the Indo-Chinese of Calcutta, who can hardly be regarded as having been contemplated in the Resolution. These classes would be largely, if not entirely, eliminated by the application of the language test.

The scope of the resolution.

9. As explained in the Resolution (paragraph 19), "the chief object to be kept in view is the provision of greater facilities for the education of the poorer classes of European children." This is to be secured by a more equitable distribution of grants-in-aid, by the award of scholarships, and by providing a larger supply of efficient teachers; and the only conditions laid down (paragraph 18) are (1) that the system shall be one of strict religious neutrality; (2) that all schools which give a sufficient and suitable secular education shall be eligible for aid; (3) that aid shall be given on the system of payment-by-results; and (4) that every aided institution shall be freely open to the inspection of the Government educational officers.

The conscience clause.

10. The Resolution does not appear to contemplate any application of the principle of religious neutrality beyond requiring that no school shall be disqualified for a grant-in-aid because of the religious denomination to which it belongs. This would probably be sufficient for all practical purposes in these places in which schools suited to the various denominations actually exist, but it does not meet the case of those places in which there is room for only one or two schools, and in which, therefore, children of one denomination will have to attend schools of another. In the last-mentioned case it appears to us only reasonable that an institution aided by the State should be subject to a conscience clause; and the existence of such a clause in all aided institutions will probably tend to give increased facilities for education. We have therefore recommended (article 5) that every aided institution shall be conducted in accordance with a conscience clause similar to that which is enforced in every public elementary school in England and Scotland, and in every Irish National school. We do not recommend that the managers of every aided school should be required to give facilities, on the school premises, for the religious instruction of scholars whose parents object to that given in the school. In schools established wholly or for the most part by Government such facilities might well be required, as is the case in the "vested" schools of Ireland; but a school built mainly by voluntary subscriptions, like the "non-vested" schools, must in fairness be left in this respect entirely under the control of its managers. We think it sufficient that no scholar shall be required to attend any religious service, or to receive any religious instruction, against the expressed wish of his parents or guardians. But to give greater prominence to the principle of religious neutrality, as well as to make it clear that grants are given only on account of "a sufficient and suitable secular education," we have inserted in article 6 the declaration that no grant is given for or in respect of any instruction in religious subjects. A similar declaration will be found in article 7 (*a*) of the English and Scotch Codes. We have reason to believe that the proposed conscience clause will be generally acceptable.

The eligibility of all schools that give a sufficient and suitable secular education.

11. The principle of the eligibility of all schools that fulfil the condition of giving a sufficient and suitable secular education is enunciated in the Resolution in connection with the requirement of religious neutrality, and appears to us to have been intended to prevent the exclusion of any school on religious grounds, rather than to secure the inclusion of all schools that satisfy the condition. However this may be, we are of opinion that the principle should not be adopted without limitations of a somewhat stringent character. There are certain schools which, owing to their high rate of fees or the possession of substantial endowments, are, or ought to be, independent of Government support; and in view of the strong tendency in this country to lean as much as possible on Govern-

Exceptions. Schools with a large income from fees or endowments.

ment, we think it desirable that such schools should be excluded from the operation of the Code. We have, therefore, introduced into article 6 the limitation that no grant shall be made in respect of any school, the income of which from all sources is sufficient, in the opinion of the Education Department, to maintain it in efficiency. But as it is evident that there are high schools which may require aid in varying degrees, we have provided in article 40 that such schools shall not receive the full grants to which they would otherwise be entitled under the Code, but only such a proportion of the full grants as the Department may think necessary in order to maintain them in thorough efficiency. We admit that we are not entirely satisfied with this method of fixing the grants to high schools, the working of which may not be free from difficulty; but after careful consideration of the arguments adduced in the next paragraph, we have found ourselves compelled to introduce some such condition as this, on account of the large amounts that might otherwise be claimed by flourishing schools in Calcutta, which stand in no real need of such assistance. Under the conditions of a fixed total grant for European education, the admission of such schools to the full benefit of the Code could only have the effect of largely reducing the amount available for grants to small and poor schools, and of developing high education at the expense of primary and middle.

The corresponding limitation in the English and Scotch Codes is that, in any school receiving aid, the ordinary fee for instruction must not exceed nine pence a week (English Code, article 4; Scotch Code, article 6 *d*); but with our present information we are unable to recommend the introduction of a fee limit.

Objection to the proposed method of determining grants to high schools.

12. One of our number is unable to concur in the recommendation of this mode of determining the grants to high schools, and desires to place his views on record, so that they may be taken into consideration in the final settlement of the question. Exception is taken to the proposed method, because it introduces a principle that has been carefully excluded in determining the grants to primary and middle schools. Grants earned by the latter are limited only by their income from all other sources (article 38); grants to high schools are similarly limited, but are finally determined by expenditure (article 40). The question of efficiency need not be considered in this connection, as that is equally secured by either method. But it is contended that the principle of basing grants on expenditure has a tendency to encourage and develope small schools, by making it possible to maintain schools with a comparatively small number of scholars; and that it fails to supply the stimulus to the formation of large schools which is secured by allowing a grant to increase with the income from other sources, that is, practically, with the number of scholars. A more serious objection is that the want of any uniform rule as to the rate of expenditure in the different high schools will cause great difficulty, and probably much uncertainty, in its application. This principle regulates the present grants to colleges in Lower Bengal, and in one case it has necessitated the substitution of estimated for actual expenditure. It will be practically impossible to obviate this awkward result in the case of Roman Catholic schools, the establishments of which, as a rule, provide only a subsistence allowance for their teachers. The full force of this objection may be seen by comparing the tuitional expenditure of such schools as Bishop Cotton's School, Simla, the Naini Tal Diocesan School, St. George's College, Mussoorie, the Allahabad High School, and St. Francis de Sales' School, Nagpore, in which the monthly expenditure varies from R14-12-5 to R3-13-4 for each scholar. The application of this principle will also cause grave irregularities in the rates of the grants allowed to the various schools. If carried out on the basis of actual expenditure, it will seriously reduce the grants to most Roman Catholic high schools; and if the expensive establishments of many of the hill schools are admitted to be necessary, it will allow these schools to draw full grants, while it reduces the grants to schools of precisely the same class in Calcutta. The principle therefore, it is urged, practically subsidises hill schools as opposed to Calcutta schools. If high schools were opened, as they should be, only where a number of scholars sufficient to justify the expense could be collected, the principle would be found to subsidise hill schools as opposed to schools in the plains, and thus to be inconsistent with the principle laid down in paragraph 15 of the Resolution. If it is contended that the proposed method is needed in order to secure the grants necessary for the maintenance of all high schools outside Calcutta, it is replied that these schools have been unnecessarily multiplied, that they have been opened at places where there is not a sufficient amount of local support, and that the supposed necessity is the direct result of the principle objected to, which facilitates the multiplication of small schools. The method proposed in the Code does not recognise the superior merit of either self-denial or success; it discourages a successful school, and encourages one that is less successful. It must thus tend to create uncertainty and dissatisfaction, and as the Department is not likely to allow any discussion of the reduction adopted for a particular school, this tendency will be greatly increased in any disputed case. In short, the proposed method leaves the present anomalies and inequalities in the mode of aiding high schools practically untouched, and affords no prospect of a final settlement of the question. If the condition of a fixed total grant for European education makes it impossible to admit all high schools to the benefits of the Code, it is contended that it would be more just and reasonable to adopt some method of eliminating schools that are intended for the better classes, and therefore charge high fees. The most direct method of securing this is to insist on a fee limit, as in England and Scotland, and to refuse grants to any school in which the monthly boarding fee exceeds R24, and the monthly tuition fee exceeds R2 in the primary, R4 in the middle, and R6 in the high department. If the amount to which high schools would thus be entitled should still absorb too large a proportion of the total grant, a further reduction might be secured by cutting off grants for attendance, as less necessary in those schools, and allowing grants for passes alone. This method would secure uniformity in all aided schools, and by tending to reduce high fees would give greater facilities for the education of the children of the poorer classes. Schools for the higher classes may be left to themselves, as in England and Scotland. But whatever method is finally adopted, it is contended that until fuller information is obtained than is at present available, it would be better to continue the present mode of aiding high schools than to introduce an exceptional method based on an uncertain principle.

Unnecessary schools.

13. We are all agreed in thinking that, where there are more schools than can reasonably be expected to be maintained in efficiency, the interests of education require that there should be some means of reducing their number; and when there is a tendency to multiply small schools for any purpose, denominational or other, an effort should be made to check this tendency. This is partly secured in England and Scotland by article 7 (*b*) of their Codes; but as the purpose we have in view is somewhat wider, we recommend that the limitation should be expressed as in article 6 (*e*) of the draft Code:—"No grant is made for or in respect of any schools which the Department declares to be unnecessary, or unsuited to the requirements of the locality." This limitation is all the more important in view of article 6 (*d*), which fixes the minimum of scholars constituting a school at 12.

Private adventure schools.

14. Further, we are of opinion, though on this point we have been unable to arrive at a unanimous conclusion, that as in England and Scotland, no school carried on with a view to private profit should be eligible for aid under the Code, and accordingly we have introduced this limitation into article 13 (*b*), which corresponds to article 17 (*b*) of the English and Scotch Codes. Its introduction is held to be justified, partly by the practice prevailing in other countries, but mainly by the considerations that efficient schools of this class can hardly be said to exist in India; that the majority of those that do exist have acted prejudicially to the interests of education by preventing the establishment of more efficient

schools; and that the recognition of them in the Code would only increase this tendency, and thus help to defeat the great purpose of providing facilities for the extension of efficient education. On the other hand, it is contended that the proposed limitation excludes good and bad alike; that it may prevent the opening of schools by private persons in some stations in which there is at present no school, and in which there is little probability of a school being opened at an early date under the management of a committee; and that it seems to traverse the principle laid down in paragraph 18 of the Resolution, that Government "will not insist on any particular form of management." But those of us who support the view which has been embodied in the Code are so deeply impressed with the mischievous tendency of such schools as a rule, with the impropriety and impolicy of giving Government aid to what is a purely private adventure, and with the necessity of enforcing in every possible way the principle that schools, if aided by Government, must be carried on with exclusive reference to the interests of the scholars, that notwithstanding the considerations above adduced, we cannot recommend the recognition of any school conducted with a view to private emolument or profit. To give full effect to that principle, indeed, no teacher should be allowed to be a manager of the school in which he is employed; but this regulation would interfere so seriously with the arrangements of some of the best schools, that it would be impossible to enforce its adoption in every case. We recommend that, except with the consent of the Department, teachers should not be allowed to be members of the committee of management (article 11 *b*), which should in every case consist of at least three members (article 12). We have also added the condition that the income of every aided school must be applied solely to educational purposes recognised by the Department (article 14 *c*). These last two provisions will be governed by the admission or the exclusion of private adventure schools.

Teachers as managers.

As, however, the opinions of the Committee are equally divided on the question of admitting private adventure schools to the benefits of the Code, we have thought it advisable to enter upon a fuller statement of the grounds for supporting or opposing that policy.

15. In the first place, it not contended that inefficient and unnecessary private adventure schools ought to be placed under the Code. Nor, again, is it contended that an efficient and necessary private adventure school, which is carried on at a profit, or allows its principal teacher an income, after payment of all expenses, equal to the salary which he might fairly claim if the school were under a committee of management, should be entitled to claim a grant. The only condition, therefore, under which a private adventure school, being both efficient and necessary, can claim a grant, is that its income does not suffice to maintain the proper standard of efficiency, unless the principal teacher, who is its proprietor, carries it on at a loss to himself. Those of us whose opinion is now being stated think it doubtful whether such a school exists, or is hereafter likely to exist, in the Presidency of Bengal. But admitting the supposition that under the operation of the Code such schools may be called into existence, and also allowing the justice of aiding them, we are decidedly of opinion that the aid given should be given under the regulation of the Code which places the school under a committee of management, the principal teacher and his assistants (if any) becoming thenceforth their salaried officers. Our grounds for this opinion are as follows:—

Conditions under which private adventure schools could be recognised.

(1.)—It is impossible for the Department to exercise the regular supervision and control which the school would have under a local committee of management. The Inspector makes one visit of inspection, and at most one or two visits of surprise, during the year. The school accounts are inspected only once a year. But a school under a local committee is frequently visited by one of the members, or by the secretary of the committee; its accounts and attendance registers are made up, examined, and checked monthly; the recovery of unpaid fees is more easily made; and complaints made by parents more satisfactorily settled by a committee of management than by a teacher carrying on the school for his own profit.

Better supervision under a committee.

(2.)—A teacher of a school under a committee of management occupies a much more independent position towards his scholars and their parents than the teacher of a private adventure school. In private adventure schools, children are often withdrawn on unfounded charges of unjust or severe punishment, or for having been put down in their class, or because other children are thought unduly favoured, or on account of a private disagreement, entirely unconnected with the school, between the teacher and the parents. The proprietor and teacher of a private adventure school has to keep the parents in good humour, and he cannot enforce either strictness of discipline, or regularity and punctuality in payment and attendance. Every one acquainted with the working of European schools in India, especially in the smaller stations, knows to what an extent these evils exist even when there is a committee of management. But in this case they are greatly kept in check, and are sooner corrected, by the influence which the managers can bring to bear upon the parents.

Greater independence.

(3.)—Schools under a committee of management are maintained, not by fees alone, but also by local grants and voluntary contributions, wherever such are needed. Private adventure schools are without this source of income, and therefore can fulfil the conditions of the Code (if they can fulfil them at all) only in an inferior degree, and at a higher cost to the parents of their scholars. Further, the teacher of a private adventure school has too strong a pecuniary interest to get the most out of the school with the least possible expenditure, since it comes out of his own pocket. His assistants, if he has any, have lower salaries and lower qualifications than those of schools conducted by a committee, and in the smaller Indian stations he has to charge higher fees than many of the parents can afford to pay. But the committee of a school under management has neither the same necessity nor the same strong individual interest to attain the maximum of income from fees and the minimum of expenditure; it is therefore able both to lower the fees to the level of the means of the parents, and to maintain a higher standard of efficiency.

Larger income and greater efficiency.

(4.)—The teacher of a private adventure school carried on at a loss—the only case in which a private adventure school can be brought under the Code—would not, it may be presumed, object to place his school under a committee of management. As the salaried officer of a committee responsible to public opinion, and subject to the supervision of the Department, his income would be at least as large, and much less precarious. Refusal could only arise when there was a dislike to inspection and control, which would also make the teacher unwilling to put his school under the Code at all. We cannot recall the case of any salaried teacher in a school under a committee, who, without some special and personal reason, has given up his position to undertake a private adventure school; nor of any teacher of a private adventure school who has not been willing to exchange it for a salaried teachership (principal or assistant) in a school under management.

Teachers unlikely to object.

16. We have assumed above, for the sake of the argument, that private adventure schools which are both efficient and necessary may be called into existence under the operation of the Code. We must, however, express our conviction that this assumption rests on exceedingly doubtful grounds. For instance, in all the larger stations of the Presidency, no private adventure schools are any longer needed. Calcutta, Allahabad, Lahore, Cawnpore, Lucknow, Agra, Jubbulpore, Nagpore, Simla, Murree, Naini Tal, Darjeeling, Mussoorie, are already supplied with sufficient and suitable schools of a public character for European children of the middle and lower classes, except, indeed, those of the pauper class. If a private adventure school were now started in any one of these stations, and

Private schools unnecessary in large stations.

were to apply for a grant under the Code, the application must be rejected on the ground that the school is 'unnecessary,' unless indeed the school was established only for pauper children who could find admission into none of the existing schools. But pauper education is a field of enterprise which the teacher of a private adventure school is unlikely either to enter or to succeed in.

Unlikely to arise in small.

In smaller stations, now without schools, but with a sufficient number of European children of school-going years, it is true that a private adventure school could not be excluded from the benefit of the Code as 'unnecessary.' Yet the fact that schools of this class in such stations have been shortlived and conspicuously inefficient; and, on the other hand, the fact that every school which has had, or promises to have any permanence, and approaches to any degree of efficiency, is and has been under a committee of management; are strong arguments for concluding that there is a cause of failure inherent in private adventure schools, which prevents both their permanency and their efficiency, and therefore for discouraging their establishment. This cause is simply that it will never pay any man or woman with the qualifications of a good teacher to establish or maintain them.

Improvement of such schools under the Code doubtful.

17. It is contended, however, that private adventure schools may become profitable and efficient if they are admitted to the benefit of the Code,—not, perhaps, as efficient as they would be under a committee of management, but efficient enough to justify Government in paying them for such education as they can supply. It certainly may happen that in the smaller mofussil stations there may be an absence of united effort on the part of the residents to establish a school, and for such stations a private adventure school may be thought better than none. But this case will, in our opinion, be better dealt with by the local Governments, as provided in article 31 or 36 of the Code, than by encouraging the establishment of schools which, during the time of their existence, will impart (as we believe) an inferior education, while they may bar the way to better. For, even admitting all that the advocates of the opposite view can claim, we hold the possible exclusion of a moderately good school in isolated cases (for such cases will admittedly be rare) to be a lesser evil than the encouragement offered to the indifference or supineness of residents in the smaller stations, if aid is given to schools which, but for that provision, might soon give place to better.

Again, as regards the possibility of profit, it will be remembered that the grant is not a net gain to a school, but involves a very considerable expenditure in fulfilling the conditions on which it is given. The receipt of a grant does not involve any great addition to income, since most private adventure schools are so poorly equipped and conducted, that to carry them on under the regulations of the Code would very largely reduce the net profit to be derived from the grant. For all these reasons, we are opposed to the extension of the grant-in-aid system to any school which is conducted as a private adventure school. We do not think the Resolution requires the inclusion of such schools.

Arguments for not excluding private adventure schools as such.

18. On the other hand, some of us hold that article 13 (*b*), which excludes private schools as such, is inconsistent with the principles laid down in paragraph 18 of the Resolution. This consideration, however, need not be insisted on, as we have been directed to submit reasoned opinions. Taking the arguments adduced in support of the disputed article, some of us contend that they are inconclusive. It is evident that general arguments applicable only to a majority of private schools cannot logically be applied to particular cases, which in common fairness must be dealt with according to their individual merits. It is also evident that arguments for excluding private schools on the ground that they are inefficient, or unnecessary, or unsuited to particular localities, are either irrelevant to article 13 (*b*) or, if relevant, prove that it is superfluous; for every such case will be completely met under the ordinary operation of the examination tests and of articles 6 (*e*, 13 (*c*), *d*, *e*, and *f*) and 39. Similarly, any

contention that private adventure schools are unlikely to arise goes to prove that is it unnecessary to insist on specially excluding them. The real question at issue is, whether an efficient private school should be excluded from the benefits of the Code simply because it is carried on with a view to private emolument. The argument for their exclusion asserts that such schools can hardly be said to exist in India; but as a matter of fact some of them, *e.g.*, the Calcutta High School and D'Cruz's Bengal Academy, have proved their efficiency by their success at the University examinations, and notwithstanding the detailed statement which has been laid before us by one of our number, it is not clear that some of those which now exist are not fairly efficient. At all events, this point cannot fairly be settled without a thorough and detailed application of the tests provided in the Code, and a fair comparison of these with other European schools. The argument from the practice prevailing in other countries loses much of its force when it is noted that these countries are well supplied with public schools, properly so called, whereas in India all the schools for Europeans, with the single exception of the Kurseong Government school, are really private, though only a few are private adventure schools. In our opinion, any argument that can be adduced for aiding an efficient denominational school can with equal justice be urged in favour of an efficient private adventure school of the same class. It has been stated, further, that the majority of these schools have prevented the establishment of more efficient schools, that their recognition would tend to strengthen this mischievous tendency, and that their exclusion is necessary in order to enforce the principle that aided schools must be carried on with exclusive reference to the interests of the scholars. These considerations are far too general to be safely applied to individual cases. It is admitted, however, that difficulties of the kind referred to may arise in connection with private adventure schools, as they have arisen, and may again arise, in connection with denominational schools; but they are at best matters of detail, which may be safely left to the ordinary working of the Code under the Education Department. Certainly, efficient schools cannot fairly be charged with exerting a prejudicial influence on the interests of education, or with neglecting the interest of their scholars; and it is contended that any mischievous tendency which private adventure schools may show is much more likely to be checked by bringing them under the Code than by excluding them from its operation. Even in the supposed case in which a moderately good private adventure school stands in the way of the establishment of a more efficient school of a less private character, it is open to the Department, as soon as satisfactory evidence is adduced, to declare the existing school unsuited to the locality under article 6 (*e*), and encourage the establishment of the proposed new school. In such a case it would be, to say the least, very remarkable if the indifference and supineness of parents should induce them to sacrifice the interests of their children by persisting in sending them to a school which the reports of the Department show to be less efficient than another equally convenient school. The argument that the pecuniary interests of the teacher of a private adventure school must tend to make him reduce his expenditure on the school to the lowest possible point compatible with efficiency, is irrelevant in any case in which the tests of efficiency are satisfied, and this is the only case under discussion. If it is suggested that private adventure schools must charge high fees, facts can be quoted to show that, in some cases at least, the fees charged in them have been 25 per cent. under those charged in other schools that are eligible for aid under the Code. But the suggestion has little force in view of the fact that no free limit is proposed in the Code. The only remaining argument for the exclusion of these schools is based on the impropriety and impolicy of giving Government aid to what is a purely private adventure. It would probably be difficult to support this contention as a general proposition, or as a portion of an argument which admits the propriety of aiding denominational schools; but the question really turns on the extent to which the private adventure provides a public advantage, and as efficient private schools must be admitted to do this, the impropriety and impolicy of aiding them is not evident. The argument has no force except in the case in which the school shows a surplus after affording reasonable salaries to those employed

in it. It is well known that denominational schools do not as a rule show such a surplus; and if the salaries of R500 or R700 (with a house) paid to the head-masters of some aided denominational schools be regarded as reasonable, it is difficult to see how any question of excessive profit could ever arise. Those who would exclude private adventure schools practically admit that the objection on the score of profit has no foundation in fact. The small number of such schools in India, and their want of permanence, go to prove that they have not been profitable; but in any case excessive profit is fully met by articles 6 *f* and 40.

Arguments for the recognition of private adventure schools.

19. Passing now to more direct arguments for allowing private adventure schools to come under the Code, we note at the outset that no special provision is required to secure this; all that is needed is that they should be examined and reported on by the Department, and that those which are found to satisfy the various tests should, as in the case of other efficient schools, be allowed to claim grants. In this way the Department will obtain a full and trustworthy report on each case, and be enabled to take action on ascertained facts; inefficient and unnecessary or unsuitable schools will be condemned, while any school that may be found efficient will be recognised as doing a public service, instead of being placed in a position that may reasonably suggest a grivance. The recognition of those schools has also the advantage of securing for the Department an opportunity of obtaining a more complete acquaintance with the means and methods of European education in India than can be expected if such schools are excluded. Again, the great object of Government is to secure efficient instruction for every European child; and as a means of securing this, it is proposed to aid schools that give a sufficient and suitable secular education. For this purpose it is a matter of little importance whether the school in which the child is efficiently instructed is private or public; the point of real importance is to see that the work is actually done, and if this is secured, there is neither impropriety nor impolicy in allowing an efficient private school to earn the same grant as is allowed to an efficient denominational school of the same class. The form of management is at best a question of machinery, which should never be permitted to usurp the place of the great object aimed at by Government. "Free trade" in education is the only consistent policy, unless Government is prepared to take the work entirely into its own hands. Further, it should be noted that, according to the report of the Committee of Enquiry, dated the 15th May 1880, schools of this class were alone available for Europeans at 11 mofussil stations, and were in existence at several other stations, as well as in Calcutta. Some of them, however, were not private adventure schools; but no detailed information is given with regard to them. The majority of them may have been very inefficient, as not a few denominational schools also appear to have been; but the latter are expected to improve under the operation of the Code, and a similar hope may reasonably be entertained with regard to the former. The contention that private adventure schools are unnecessary in large stations, because these are supplied with sufficient and suitable schools of a public character, rests on exceedingly uncertain grounds. In Calcutta, for example, the statement cannot be admitted, if due regard be had to distance, the climate, and the rate of fees. An efficient private adventure school, with upwards of 150 scholars and a low scale of fees, is a stubborn fact that cannot be disposed of by the assertion that the school is, or ought to be, unnecessary. It is not impossible, nor even improbable, that similar cases may arise in some of the larger towns in the plains; and as regards hill stations, local necessity is of little importance whether the school is private or otherwise. At all events it is wiser policy to await the development of facts. Private adventure schools afford a means, though it may not be the best, for the extension of educational facilities; and unless there is some probability of other schools being established at an early date to take their place, the proposed exclusion of private schools must tend to circumscribe the efforts of Government to bring about such an extension. It is doubtful how far Government can directly undertake the work at present, and if the suggested application of article 31 be made in favour of denominational schools, the exclusion of private adventure schools may be

impolitic, as tending to force all European children into denominational schools. The proposal to overcome the difficulty by extending the operation of article 36, labours under the grave objection that it would remove children from the immediate care of their parents and guardians at a very tender age. It has been suggested also that efficient private adventure schools might be admitted to the benefits of the Code, if they were placed under the charge of a committee in terms of article 12, the teacher, who is really the proprietor, becoming a salaried officer; and this proposal is supported by a statement of reasons for preferring a school under a committee. Were general arguments of the kind adduced regarded as relevant to a discussion of individual cases, it would be easy to construct a counter-statement of probabilities; but it is more important to observe that the Code lays down no condition as to the mode of appointing a committee, and that at present it is impossible to devise satisfactory conditions. The suggested transfer will be either a fact or a fiction; if it is a fact, the private adventure school is not recognised in any form; if it is a fiction, the school may indeed be recognised, but in a way that evidently encourages dishonesty. The latter case has not been found to be imaginary in England; and the danger of such a development adds force to the contention that no antecedent conditions as to the form of management should be laid down, but that the Department should be left free to recognise any efficient school, denominational or other, whatever form of management it may have. It might still further be urged that the recognition of private adventure schools, by opening up a field for an independent career, would encourage capable men to adopt the profession of teacher; while the operation of the Code might be entirely relied on to remedy defects and check abuses. The probability that such cases will not arise is of no avail against facts, if they should arise; and Government can well afford to wait for and watch the facts. If they do not arise nothing is lost; if they do, something may be gained. In any case it is urged that, whatever may be the final decision as to private adventure schools, they should not be excluded from the operation of the Code until they are fully examined and reported on, and that they should in the meantime be allowed to earn grants under the ordinary rules, as appears to have been the case hitherto in at any rate one instance.

No probationary period for schools.

20. The English Code (article 7 N. B. 2*a*) provides that no grant shall be made to any school for the first twelve probationary months. In view of the large number of stations in India which at present have no school for European children, we think that the great object of the Resolution will be best secured by requiring no probationary period before a school may receive a grant. We therefore recommend (article 18) that if any school has, at the time of the Inspector's first visit, been open for less than a year, it shall receive a proportionate amount of the grants payable to schools that have been open for a whole year. This provision will reduce the initial difficulty usually experienced in establishing schools in India, and stimulate efforts towards a speedy supply of the pressing want of European schools. In no case, however, should a grant be given for any period prior to the date of application.

Grants determined by results.

21. The third leading principle mentioned above, *viz.*, that all aid shall be given on the system of payment-by-results, has been applied to every grant proposed in the Code, with some slight exceptions which, we trust, will commend themselves to His Excellency the Governor General in Council. The grants for attendance and instruction in day and night schools, the grants for pupil teachers and training colleges, and the grants for scholarships, are in every case determined by results alone, and we have provided for reducing and even for entirely withholding them when the Department is dissatisfied with the results. Building grants are to be determined by the circumstances and requirements of each locality, and by the suitability of the proposed school as tested by these.

Grants to boarding establishments.

22. It may be doubtful whether the grant recommended in the case of boarding schools (article 35) is covered by the terms of paragraph 18 of the Resolution; but it depends

wholly on results, and we are unanimously of opinion that it should find a place in the Code. Boarding schools are a necessity in India to so large an extent that, apart from Calcutta and the larger European stations, half the children of school-going age must go to a boarding school if they are to go to school at all. The Resolution points out (paragraph 4) that boarding schools at a distance are the only available means of education for 608 children of school-going age, who live in stations where no school can be established because of the small number of children at each station. There are also 1,083 children in some larger stations where schools might be established, but where at present there is no school. This being so, we think it desirable in the interests of education that the domestic arrangements of boarding schools should be brought under supervision, as well as their arrangements for tuition; and indeed in many cases the two are so closely connected, that it would be practically impossible to separate them. The best mode of securing this object is to attach a grant to the boarding establishment as such, as proposed in articles 34 and 35. We have reason to believe that the proposed inspection of boarding schools will be regarded by the public as a boon.

23. The proposed grants which do not come under the principle of payment-by-results, are those recommended in articles 31, 36, and 37.

Exceptions.

24. Article 31 provides that a special grant may be given by the Department to a school in a place where there is a small or poor European population, provided that the Inspector reports favourably of the school. This corresponds to article 19 *a* of the English and Scotch Codes, and is intended to facilitate the establishment and maintenance of schools in small stations, and in the poorer districts of large towns.

Article 31.

25. The grant under article 36 is a maximum grant of R5 a month, to be paid on account of the boarding charges of any child residing in a place where there is no school of a standard suited to his requirements, provided that the Magistrate certifies, after enquiry, that the child's parents or guardians are too poor to pay the full boarding charges. We do not regard this grant as being opposed to the views of Government with reference to charitable scholarships (paragraph 20); we recommend it rather as a means of providing suitable elementary education for children in small stations, which will prove better and cheaper than the establishment of small local schools. With the proviso that the grant shall be made only on the production of a Magistrate's certificate, for scholars reading in standards I—VII, we see no reason to anticipate that it will be liable to abuse.

Article 36.

26. The grant recommended in article 37 is a maximum grant of R5 a month, on account of the boarding charges of scholars in free schools or orphanages, with the proviso that the amount of the grant shall never exceed half the total cost of their maintenance. This grant, though not falling under the principles enunciated for our guidance in paragraph 18, appears to us to be in harmony with the general scope of paragraphs 10—13. We recommend it as a convenient mode of giving larger grants to these deserving and indispensible schools, without altering in their favour the rates proposed for attendance and instruction. It introduces an eleemosynary element, but only under strict conditions, and with a view to maintaining in efficiency a most important class of schools, which support and educate many hundreds of poor and neglected children, and which would otherwise be in chronic difficulties under the regulations laid down in the Code. In England, the necessary provision for the maintenance and education of such children would be made under the Poor Law.

Article 37.

27. The principle that every aided institution must be subject to the inspection of the Education Department, and must submit to the required tests and examinations, is expressed

Inspection.

in article 6 (*b*), which prescribes that no grant shall be made on account of any school that is not subject to the inspection of the Department, and in article 10, which prescribes that in general no grant shall be paid except on a report by the Inspector. A slight exception to this is that in article 27 we propose to accept the University Entrance examination as an alternative in the final examination of high schools; but this must be combined with the Inspector's report. We have provided that the Inspector shall make an annual inspection and examination of each aided school, giving the managers previous notice of the date of his visit (article 8); but he may visit a school at any other time without notice (article 9). At every visit without notice, he is to note in the log-book any particulars that require the attention of the managers (article 46); and all such visits must be borne in mind in reporting on the organization and discipline of the school (article 21). These visits would also have a special bearing on the grants to boarding schools recommended in article 35.

28. For the successful working of the system, we are unanimously of opinion that an officer should be specially deputed for the supervision of European education, and that this officer should in every case be a European. Although we have endeavoured to make as precise as possible the tests that should be applied in determining the grants, much must still be left to the judgment of the inspecting officer, and it is of the last importance that he should command the entire confidence of parents, teachers, and managers. This can be secured only by the appointment of a European officer of high standing and great experience; who should, however, be assisted in dealing with the lower schools and classes by an officer of lower standing.

The Inspector should be a European.

29. While deeply convinced of the necessity of providing separate schools for European children, as explained in paragraph 6 of the Resolution, we have not understood the principles there enunciated as requiring, nor do we recommend, that non-European children should be entirely excluded from the schools under the Code. The practice prevailing in European schools, and the social affinities of the race, might supply strong reasons for admitting Armenians to all the advantages of the Code. Native Christians, and even Hindus and Mahomedans of the higher classes, largely avail themselves of European schools; and Burmese pupils have of late years frequented some of the Calcutta schools. We see no reason for suggesting that this privilege should be entirely withdrawn, or that any steps should be taken to bring about its withdrawal. All that appears to us to be necessary is to secure that the schools recognised by the Code shall be attended mainly by Europeans. This could not be secured with a minimum limit of twelve European scholars in average daily attendance (article 6*d*), unless there was also a maximum limit for non-European scholars. We therefore recommend (article 6*c*) that no grant should be made under this Code on account of any school in which the majority of the scholars are not Europeans. Any tendency to increase the number of non-European scholars unduly will probably be checked by the action of parents and guardians. Further enquiry may show that the maximum limit for non-European scholars in any school might be very considerably reduced.

Non-Europeans in European schools.

30. Having thus explained the general conditions on which we recommend that Government should aid any school under the Code, we pass on to explain the mode in which the system of payment-by-results should be worked, the standard of education that should be required in the different classes of schools, and the scales of remuneration suited to each class. This will show how we propose to bring about a more equitable distribution of grants than at present prevails; but we must repeat that the scales of remuneration which we propose are intended to supply merely a provisional basis for a thorough and detailed examination and comparison of the various schools, and that an equitable distribution of the grants cannot be fully secured until this investigation has been completed.

More equitable distribution of grants.

31. It will be convenient to refer first to the standards of examination which are given in Schedule I. We have divided the subjects of instruction in elementary schools into seven standards in accordance with the proposals recently submitted to Parliament by the Committee of Council on Education, but with such modifications as we think necessary in order to adapt them to the circumstances of European education in India. We assume that from two to three years will be required to enable a child to pass the first standard, that in ordinary circumstances he will pass that standard when he is seven or eight years of age, and that he will pass the seventh standard before completing his fifteenth year. We propose that, if he wishes to carry his education beyond this stage, he should go through a two years' course of special preparation for the University Entrance examination, though with the low standard which that examination requires in English and arithmetic, so much time can hardly be said to be necessary at present. For those who do not wish to study for the Entrance examination, we propose as an alternative two standards, one adapted for girls' schools and the other for boys' schools. The latter has been drawn up with the object of giving effect to the views of Government (paragraphs 18 and 20) as to the great importance of a sound commercial or mechanical education; but schools for this purpose have practically to be created in India.

The standards of examination.

32. Aided schools are divided into three classes, according to the highest standard taught in them (article 15). Schools that do not give instruction above Standard IV are classed as primary; those that give instruction above that standard but not above Standard VII, as middle; and those that give instruction up to the final standard of the Schedule, as high. But we have made a distinction between schools and departments of schools; a middle school may contain a primary department giving instruction in Standards I—IV, as well as a middle department giving instruction in Standards V—VII; while a high school may include a primary and a middle department, in addition to a high department preparing pupils for the final examination of the schedule. This is in our opinion a much better and more convenient arrangement than the alternative method of treating each department as a separate school.

Classification of schools.

33. The subjects of instruction in Standards I—VII are divided, as in the English and Scotch Codes, into elementary, class, and special subjects (article 17), the term "special" being substituted for "specific." Of these, only elementary and class subjects are recognised in primary schools or departments. The explanation of these terms is given below:—

Classification of subjects.

Elementary subjects are obligatory on all scholars in a primary or middle school or department; and no scholar will be regarded as having passed by any standard if he does not pass in two of these subjects.

Elementary subjects:—

Reading.	Arithmetic.
Writing.	

Class subjects must be taught to every scholar in a class, understood as meaning all scholars reading the same standard in elementary subjects. The selection of class subjects rests to some extent with the managers; under the conditions, however, that two class subjects must be taught in every school teaching above Standard II, and four in every school teaching above Standard IV (article 16), and that English is obligatory in all boys' schools and needlework in all girls' schools, from Standard III to VII inclusive. The examination in class subjects will be conducted individually; but the grant will depend on the proficiency of the classes taken as a whole, and will be paid for every scholar in a class if half of those presented for examination in it satisfy the Inspector (article 22 *b*).

Class subjects:—

English.	History.
Needlework	Mathematics.
Geography.	Elementary science.

Special subjects are entirely optional, and scholars presented for examination in them will be examined individually, the grant being paid only for those who pass. The European language may be either Latin, French, or German.

Special subjects:—

An Indian vernacular.	Botany.
A European language.	Drawing.

34. The English Code treats English literature, mathematics, and physical geography as specific subjects. We have, however, preferred to place them among class subjects, as being more in accordance with the existing practice of European schools, the studies in which are arranged mainly with reference to the Entrance examination of the University. This arrangement is equally suitable for those who do not carry their studies beyond Standard VII. The subject of needlework is restricted to girls' schools, in which it is virtually made obligatory throughout, as in the new English Code. Some of us were disposed to place an Indian vernacular among the class subjects for boys' schools, which would not only be in harmony with the practice of most European schools, but would also give fitting prominence to a branch of knowledge of special importance in Indian life. We propose, however, that it may be taken up either as a class or as a special subject, the decision in the case of each school resting with the Department.

Remarks on the class subjects.

35. We have not followed the English Code (article 19 *c*) in limiting the number of class subjects to two. We are strongly of opinion that such a limitation would be prejudicial to the interests of sound education; in elementary education the basis of instruction should gradually be made broader as the standard rises. It should also be borne in mind that the actual difference is not so great as it appears to be, since some of the class subjects of Schedule I may be taken up under the English Code as specific subjects. Further, it is not unlikely that the provisions of the English Code will in this respect be modified, when it is extended so as to include secondary education. Four class subjects in addition to reading, writing, and arithmetic, can hardly be regarded as too many for a pupil of eleven or twelve years of age. This amount of work is indispensable for those who are to prepare for the University; it is in accordance with the practice of the best European schools; and is also in agreement with the standards in force for native schools. We propose that in every case class subjects should be taught continuously throughout the school, so that the scholars should advance regularly from standard to standard as in elementary subjects (article 24 *a*). The plan of allowing a school to be arranged, for the teaching of class subjects, in classes different from those determined by the elementary subjects, does not appear to us to be conducive either to thorough instruction or to regular progress. The English Code also makes it a condition of a grant for class subjects, that half the scholars in all the classes taken together shall satisfy the Inspector. We think it a more fair and reasonable plan that each class should be treated by itself.

Variations from the English Code in the class subjects.

36. It will be noted that, while the English Code recognises ten, and the Scotch Code fourteen, specific subjects, we propose as special subjects only an Indian Vernacular, Latin, French, German, botany, and drawing. The first and the last are not recognised in England and Scotland. We regard Greek, chemistry, and electricity and magnetism, as unsuited to scholars in the middle departments of schools in India. We have combined portions of the English courses in mechanics, and in light and heat, to form one of two alternative courses in elementary science, which we think should be taken as a class subject; the other course being a combination of animal physiology and the outlines of zoology. We have united English literature with grammar, and physical with political geography, and have placed these also among class subjects. Mathematics again, we consider, finds its proper place in Indian education as a class subject. In this way we obtain a comprehensive scheme of education, which we believe to be better adapted to develope the mental faculties than one of more limited range. The limitation of the range of study finds its true place at a higher stage of mental development than is usually found in scholars between the ages of ten and fifteen.

Remarks on special subjects.

37. We should, however, explain that we have been compelled to omit domestic economy from the course. We fully recognise the great importance of this subject, and

Domestic economy.

should most gladly have recommended its adoption, but we are not aware of the existence of any manual on the subject suited to India; and though we believe there are many teachers, perfectly competent to give instruction in it, we prefer to postpone its introduction until some suitable text-book is produced, which may serve as a guide both to the teacher and to the Inspector. We are therefore content with recommending that for the present it should be included in the course for training colleges, in which it will be taught, by means of systematic lectures, to those who will hereafter be employed as teachers.

The final standard of high schools.

38. We have already indicated our opinion that, as a final standard for European high schools, that of the Entrance examination is too low. The standard in English is determined mainly with reference to students whose vernacular is not English; and though fairly suited to them, it entirely fails to give a sufficient stimulus to the study of this subject in European schools. The standard in arithmetic should also be raised so as to include the whole subject; in a well conducted school the present standard can easily be reached by pupils in Standard VII. For the present, however, we propose to accept the Entrance examination, without any addition in the form of optional subjects; but unless in the meantime the University raises its standard, it will be necessary to reconsider this subject when, under the operation of the Code, the standard of education in European schools begins, as we are convinced it will, to rise. The alternative standard which we have proposed includes, in boys' schools, the substitution of a modern European language for Latin or an Indian vernacular; an extension of the arithmetical course, with the addition of book-keeping; and the introduction of political economy and commercial geography. Mechanical drawing, elementary physics, and elementary chemistry, are also included as optional subjects. In girls' schools a third language (which may be either French or German), or alternatively, a course of elementary physics, is substituted for the mathematics and book-keeping of the boys' course; and commercial geography and political economy are replaced by general and physical geography and a sketch of European history. The optional subjects are drawing, the theory of music, and botany. We have marked our preference for the alternative standard by proposing a higher grant for those who take it up. We trust that this will be an inducement to managers of high schools to open classes for a practical and commercial education.

The course in girls' schools.

39. We have arranged the standards so as to enable girls' schools to take up needlework as a class subject up to Standard VII, without seriously reducing their range of study, or placing them at any disadvantage as compared with boys' schools. We propose that no grant should be given to any girls' school for a class subject unless needlework is taken up (footnote § to Schedule I); and as all schools teaching above Standard II must teach class subjects (article 16), this secures for needlework the first place among them. The same result will be obtained in schools teaching the first two standards, which will probably, as at present, take up two or three class subjects. The standard in arithmetic is modified in the English and Scotch Codes by directing that the work of girls shall be adjudged more leniently than that of boys. We see no need of this in the first three standards, and in Standard IV and upwards we prefer a definite limitation of the course to an indefinite direction to the Inspector. A further modification is that in the middle standards for girls we have made mathematics a special subject. Needlework practically replaces it as a class subject; but the two are not on a footing of equality. A more satisfactory arrangement would be to combine needlework with domestic economy, when suitable text-books in the latter subject are produced. The introduction of French and German into the list of special subjects is intended mainly for the benefit of girls, for whom the grammatical study of an Indian vernacular is less important than it is for boys. There is, however, nothing in the Code or the Schedules to prevent girls from taking up an Indian vernacular if it should be preferred. We have not thought it necessary to insist on needlework above Standard VII.

Number and duration of school meetings.

40. We have made it a condition of earning the full grant, that a day school shall have held 200 full school meetings during the year; and we have provided for a proportionate reduction in the case of a school which has held less than 200 meetings (article 18). This latter provision will enable the Department to meet the case of newly established schools, and also that of unavoidable interruptions to school work. At the same time, the penalty involved will check any tendency to the undue multiplication of holidays. We have defined a full school meeting as a period of four hours of secular instruction on the same day, in which period may be included half an hour of the time allowed for recreation (article 19). The number and duration of school meetings are practically the same as in the English and Scotch Codes, which require 400 morning and afternoon meetings of two hours each, and admit five or ten minutes of the time for recreation to be included in each period of two hours. Having regard to the circumstances of hill schools, and the many breaks that are apt to occur in small schools during the rains, we cannot recommend a higher number of meetings than 200, which, however, we regard as a reasonable and easily attainable limit. The number which we propose allows twelve weeks in each year for vacations, and also one whole holiday or two half holidays a week in addition to Sundays. The duration of a full school meeting is largely determined by the fact that, in many parts of the Bengal Presidency, schools must, for a great part of the year, meet in the early morning and be dismissed by 10 o'clock. The distinction between morning and afternoon meetings can hardly be said to exist in many schools. To meet cases in which it is recognised, and also the case of half holidays and of days when a full school meeting cannot be held, *e.g.*, during the rains, we recommend (article 19 *a*) that two periods, each comprising not less than two hours of secular instruction in school, whether on the same or on different days, may be counted as one full attendance.

Grants given on the terms specified in the Resolution.

41. In accordance with the terms of the Resolution (paragraph 18), the grants-in-aid have been determined "with reference to the attendance and individual proficiency of the scholars, and the completeness of the educational appliances and discipline of the institution aided."

The attendance grant.

42. The attendance grant for all day schools is regulated by article 20. We have followed the English and Scotch Codes in making it depend on the average daily attendance, mainly with a view to secure greater regularity. We have provided that attendance grants shall not be given for any scholar under three or over eighteen years of age (article 19 *b*). The rates proposed may appear to be high; but we have graduated them with general reference to the actual state and requirements of European education, and with a special view to help the smaller schools and schools for infants. A lower attendance grant might have been found sufficient, had it been possible for Government to adopt the principle of compulsory education for all children residing within a reasonable distance of an efficient school. The rates proposed will, we trust, tend indirectly to secure the advantages of compulsion; and this tendency might be greatly strengthened if measures were taken by Government, the Railway Companies, and other large employers of European labour, to induce parents in their service to send their children to school.

The instruction grant in primary and middle schools or departments.

43. The instruction grants for scholars presented for examination by Standards I—VII are specified in article 22. These grants may be earned by scholars between the ages of six (article 22, *note* 1) and eighteen (article 19), who have made 120 full attendances during the school year; it being understood that no scholar shall be allowed to earn a grant in any subject unless the time-table of the school, which must in every case be approved by the Department (article 13 *d*), has provided for continuous instruction in that subject throughout the year (article [illegible] *note* 2). The number of attendances prescribed is somewhat less than that [illegible] English and Scotch Codes; but the difference appears to us to be fully justified by the circumstances of European life in India.

44. It will be observed that the minimum limit of age at which a scholar may be examined by the ordinary standards has been fixed at a point lower than that adopted in the English Code, or even than that contemplated in the recent proposals of the Committee of Council. We consider that a strict limitation as to age, however well meant, is apt unnecessarily to repress clever children, while it gives no corresponding advantage to dull children. A clever child of seven years of age might, under the English Code, be presented for examination by Standard II; and we can see no advantage in preventing him from being examined by Standard I at the age of six. We would rather encourage his presentation at an early age, and provide for the case of sickly or backward children, by empowering the Inspector to refuse to examine by standards any child under eight years of age (article 22, *note* 1), and by allowing for each such child a uniform grant of ₹18 a year (article 20). The last-mentioned grant will be allowed only if the children have been taught as a separate school or department, in a room properly constructed and furnished, and by a special teacher of their own.

The minimum limit of age.

45. As already stated, we have based the instruction grants on the number of passed scholars who have made 120 full attendances during the school year. We have discussed the alternative plan of basing these grants on the average daily attendance during the same period and requiring that every scholar whose name has been on the roll for six months should be presented for examination. We have, however, come to the conclusion that, for the present, the interests of education will be best served by insisting on a minimum of attendance as a condition of earning an instruction grant, and requiring, as in article 25, that every scholar who has made the prescribed number of attendances shall be presented for examination in elementary and class subjects. Having regard to the present condition of European education in India, we are convinced that the pressure and emulation resulting from this latter plan will be found to be most helpful, and that the method we have adopted is the one best calculated to bring about speedy improvement. The other method will find its proper place, as in England, after the system of payment-by-results has been fully established, and the schools have been brought into a more satisfactory condition. The plan we propose has also the advantage of dealing more liberally with the schools, and of giving greater importance to regularity of attendance and progress. It is, moreover, the plan that has been carried out in England and Scotland since the passing of the Elementary Education Acts.

Instruction grants based on a prescribed number of attendances.

46. It is very undesirable to introduce any provision that may seem to encourage the practice, so common in India, of transferring pupils from one school to another on insufficient grounds; but in the circumstances of European life in India transfers must frequently be made, and it is only fair and reasonable that under proper safeguards, this should be recognised in the Code. When good reasons can be adduced, parents and guardians will seldom hesitate to state them, and school managers cannot reasonably refuse to admit their force. We have therefore provided (article 22, *note* 3) that any pupil, transferred from one school to another in the course of the school year, may earn a grant for instruction in the second school, provided that the total number of his attendances is not less than 120, and provided that his transfer is certified in his "scholar's register" (article 42), as having taken place with the consent of the managers of the school from which he has been transferred. This makes it the interest of the school to which he is transferred to obtain this certificate, and will thus tend to bring to the notice of the Department all cases of improper transfer. The financial interests of Government are protected by the proviso that in no case shall attendance for the same period be reckoned twice.

Provision for transfer of scholars in cases of necessity.

47. We propose that it should be a condition of earning any instruction grant whatever, whether for elementary, class, or special subjects, that every scholar for whom a grant is made shall have satisfied the Inspector in at least two elementary

Restrictions on the instruction grants.

subjects (article 23 *a*). This should make progress in the elementary subjects the first care of both teacher and scholar. As a further safeguard for securing that the elementary subjects taught in a school shall have the greatest prominence, we propose that, unless 60 per cent. of the whole number of scholars presented in these subjects obtain passes, only half grants shall be allowed for class, and no grant at all for special subjects; and that if less than 40 per cent. pass in elementary subjects, no grant at all shall be allowed even for class subjects (article 23 *b* and *c*). Further, if any scholar fails in the same elementary subject in two successive years, we propose that no grant should be paid on his account for class or special subjects (article 24 *c*). These provisions should make the elementary subjects the most important in every school, and give the class subjects a higher rank than the special.

48. We attach great importance to a well regulated system of promotion in schools, but we do not consider it desirable that this matter should be introduced into the Code otherwise than indirectly. We propose therefore to allow a pupil who has passed in only two elementary subjects in any standard, to be presented in the same standard again in the following year, and to earn grants in any of the subjects in which he may have failed in the previous year (article 24 *c*). If there were no such provision, as is the case in the English and Scotch Codes, the pecuniary interests of the managers must act in favour of promoting such scholars; whereas the permission to earn a grant in any subject in which the scholar may have failed in the previous year, combined with the condition that two successive failures in the same elementary subject disqualify a scholar from earning a grant for class and special subjects (article 24 *d*), will probably make it the interest of the managers, as it is the real interest of the scholar, that he should not be promoted. On the other hand, we think it most important that an effort should be made to counteract the tendency to be satisfied with mediocrity, which is so apt to arise among teachers under a system of payment-by-results, and which so often mars the interests of really clever scholars. We propose, therefore, that up to and including Standard IV, managers shall be allowed to present scholars for examination in two successive standards in the same year; and that, for every scholar who passes in all the elementary subjects, instruction grants may be given in each standard (article 24 *b*). After passing by Standard IV, such scholars will find sufficient scope for their energies in special subjects. These provisions should fully protect the interests of both dull and clever scholars; while the interests of Government also are fully secured, since no scholar can earn a grant twice in the same subject.

Promotion of scholars.

49. In high schools the scholars in the primary and middle departments may earn instruction grants at the same rates as scholars in primary and middle schools; but in the high department we recommend that there should be special rates (article 27 *a* and *b*). The proposed rates may appear by comparison to be high; but if allowance is made for the fact that they really cover the work of two years, for the greater costliness of maintaining the higher standard of work, and for the small number of scholars that are likely to earn grants, it will be found that the rates are not extravagant. We recommend that, before an instruction grant can be claimed for any scholar in a high school, he shall have passed Standard VII, and after doing so, shall have made 250 full attendances (article 26), and have passed in at least three of the compulsory subjects prescribed for the final examination of Schedule I. The first condition will secure that only deserving scholars shall be recognised in the high department, and will be a check on unwise promotion. The second will secure that every scholar in a high department shall go through a two years' course of study. The third is intended to be a liberal concession to the schools; but it insists that, even in case of partial failure, a considerable amount of work shall have been done. The graduation of the rates should secure that efficiency in the compulsory subjects shall be the first care of the managers, and the same result should be obtained indirectly by the last clause of article 27;

High schools.

while in article 28, the case of a scholar who fails to pass by the full standard is provided for in such a way that no instruction grant can be earned twice in the same subject.

Grant for organization, discipline, &c.

50. The grant for the completeness of educational appliances and for discipline is regulated by article 21 (*c*), which provides on this account a maximum yearly grant of R3 for each scholar, an amount which will only be given in cases of exceptional merit. This is intended as a substitute for the 'special merit' grant recently proposed in England; and, when taken in connection with the reduction provided for in article 39, will give a sufficiently wide range for the discrimination of schools. Clauses (*a*) and (*b*) of the same article offer grants for singing and for drill or gymnastics.

Mode of paying the grant.

51. The mode of paying the grants is explained in articles 29 and 30. At his annual visit, the Inspector will calculate the amount to which the school is entitled according to the proposed rates for the year then ended, and this amount is to be paid to the school, less the amount of any provisional grants that it may have received from Government during the year. Article 18 provides for a proportionate reduction in the case of a school that has not held the prescribed number of meetings at the time of the Inspector's visit. The method of provisional grants has been proposed in reference to the Indian custom of paying salaries monthly, and with the object of enabling the managers to carry on the school during the following year. We recommend that provisional grants should be paid monthly, for both instruction and attendance. The former has been fixed at one-twelfth of the full amount earned for instruction during the previous year, according to the Inspector's report; the latter at one-twelfth of the yearly rate for attendance, for every scholar in average daily attendance during the month for which the bill is drawn. If a school has not been open for a full year, the provisional grants for the second year are to be calculated on a corresponding principle (article 29, *note*). The proposed method of payment will facilitate the introduction of the new system of grants, and will undoubtedly prove a boon to the schools, without involving any serious risk of loss to Government. If the standard of education rises, as under the Code we hope it will, every good school ought to have a balance in its favour at the close of the year; but if this should not be the case, article 30 provides that any deficit shall be made good by deduction from the provisional grants payable in the following year or otherwise.

Night-schools.

52. We do not anticipate that there will be any great demand for grants to night-schools; but some schools of this class already exist in connection with the railway workshops, and others may be established in some of the larger towns. They are required only for those who cannot attend a day-school, and therefore we propose that the managers of any night-school applying for a grant should be required to certify that the scholars admitted to it are "beneficially and necessarily" employed during the day (article 32). We further propose that these schools should be confined to Standards I—VII, and that primary night-schools should earn grants only in elementary subjects, and middle night-schools in elementary, and at most in two class subjects (article 33 *e* and *f*). These recommendations are based mainly on the small amount of time that can be devoted to instruction in such schools. Primary night-schools will probably be found only in the larger towns; middle night-schools may be established in connection with large workshops, especially for the benefit of apprentices who enter the workshop at an early age, and desire to carry on their education. The need of primary night-schools should gradually disappear under the operation of the Code.

Grants to night-schools.

53. We have adopted a considerably higher limit, as to both the number of school meetings and the number of attendances, than that prescribed in the English and Scotch

Codes. In England and Scotland the limit is determined by the consideration that night-schools can be held with advantage only during winter. In India there can be no hardship in requiring them to meet three times a week for rather more than half the year, and in requiring each scholar to be present at 50 meetings of one hour each. The instruction grants for night-schools are fixed at the same rates as those for day-schools: but the attendance grant is a uniform grant of R4 in primary schools, and of R3 in middle schools, for every scholar in average attendance throughout the school year (article 33).

54. To European schools established by Government, as contemplated in paragraph 21 of the Resolution, the provisions of the Code will apply as fully as to any aided school. The salary of the teachers will be governed, partly at least, by ordinary departmental rules; but it would be desirable to enforce in any such rules the condition that a part of the salary should be determined by the results of examination. Care would, it may be presumed, be taken to prevent an excessive proportion of the amount set apart for European education being given to such schools.

Scholar's register.

55. To enable the Inspector to trace easily the school history of each scholar, it is provided that, on his admission to a school, he shall deposit with the principal teacher a "scholar's register," showing his age, attendance, and proficiency at every stage (article 42), and certifying, in the case of his being transferred from one school to another, that he has been transferred with the consent of the managers of the former school (article 22, *note* 3). The "scholar's register" is intended to serve the same purpose as the "child's school book" in England and Scotland, and much care will be needed in order to render it thoroughly effective. As far as possible, a certificate of age should be required; a mere declaration by a parent or guardian has not been found to work well in England and Scotland. If sufficient care is taken, the "scholar's register" may become a powerful check on any tendency to too frequent transfers. The form proposed for the "scholar's register" is given in Appendix I of the Code.

Number of teachers.

56. We have not proposed any definite rule as to the number of teachers to be employed in a school. It would not be difficult to lay down such a rule on abstract principles; but we think it better that this question should be deferred until some experience has been gained of the working of the schools under the Code, and the scholars have been classified on a uniform system. We therefore suggest that it should in the meantime be left to the Education Department to determine whether the staff of teachers in any school applying for a grant is sufficient (article 13 *e*); and to enable the Department to do so, that every application should state the class of the school, the number of scholars in each standard, and the names and qualifications of the teachers (article 7 *a*, *b*, and *d*). As a large number of the schools that are likely to come under the Code are conducted on the continental method of having a separate teacher for each class, we might have suggested a limit for the number of scholars in a class; but probably it is advisable that this, too, should be left for future regulation. The only point on which we have insisted is that the staff, as to number and qualifications, shall be approved by the Department, and that no teachers shall be recognised in day-schools except certificated teachers or pupil-teachers.

Registers and accounts.

57. A complete record of the working of each school is provided for in articles 43—46. The principal teacher is required to make a weekly entry in the log-book, showing the visits of managers, the admission or withdrawal of scholars, the progress of the various classes, changes in the staff, and other facts relating to the school or its teachers; and no entry once made in the log-book may be removed or altered except by a subsequent entry. All changes in the staff must be at once reported to the Department for sanction, otherwise the school does not satisfy the conditions of article 13 (*e*), and cannot receive a grant. Records of the daily attendance of scholars must be made regularly, and accounts of income and expenditure must be kept by the managers, regularly audited, and

submitted to the Department annually (article 14 *b*). The Education Department will thus be provided with complete information as regards every school.

Accommodation.

58. We have laid down limits of accommodation for both day and boarding schools. In the former we require that an area of 12 square feet shall be provided in each class-room for every scholar in average daily attendance, and that this limit shall be raised to 16 square feet if more than one class is taught in the same room at the same time (article 13 *c*). This is practically twice the area required by the English and Scotch Codes; but it is necessitated by the conditions of climate in India, which render the maintenance of effective discipline much more difficult than in England or Scotland. We have ascertained that the area specified is already provided in most of the more efficient schools. In boarding schools we recommend that an effort should be made to regulate the sleeping space allotted to each boarder, by requiring in every case a certificate from some competent medical authority that it is sufficient for the purposes of health. But we are of opinion that the space assigned to each boarder should not be less than 40 square feet and 400 cubic feet if he is under 12 years of age, or 48 square feet and 480 cubic feet if he is above 12. We are aware that the space allotted to each boarder in some boarding schools is considerably less than this; but we are strongly of opinion that the interests of good health and thorough discipline in the dormitories cannot be properly secured with a smaller space than that recommended by us.

Reduction of grants.

59. The total amount of the grants proposed for the maintenance of schools in Chapter II, Sections II—IV, may be reduced by an amount varying from one-tenth to one-half for faults of instruction, discipline, or registration on the part of the teacher, or (after six months' notice) for failure on the part of the managers to provide efficient instruction or proper apparatus, or to remedy any serious defect in the premises (article 39). The total amount of the grant may also be reduced by the excess of the attendance and instruction grants (articles 20, 21, 22, 26 and 27) above the income of the school from all sources other than Government grants (article 38). The reduction clause in the English and Scotch Codes (article 32 *a*), corresponding to article 38, is limited by the condition that the grant shall not be reduced below 17*s*. 6*d*. for every scholar in average attendance throughout the year; but the circumstances of the schools that are likely to come under the Code are so varied that we are unable to recommend the adoption of any minimum below which the grant shall not be reduced. It appears to us to be a sound principle that the amount of Government aid should not, except in extraordinary cases, exceed the amount contributed from private sources, including fees; and we understand that this principle is regularly applied to grants-in-aid at present. In any case, the article as it stands allows the income of a school from sources other than Government to be doubled; and we are of opinion that this will be found sufficient for all practical purposes, until, if it should be thought necessary to adopt a minimum, fuller information may supply the data for a satisfactory decision. The operation of the article will, however, be seriously modified, if not neutralised, unless steps are taken to separate boarding and tuition fees, which in many schools are at present charged in one consolidated fee. We ought also to explain that, in our judgment, the grant for pupil-teachers, as indicated by the place assigned to it (article 50), should not for the present be brought under the operation of the article on reduction, as is the case in the English and Scotch Codes. That is a reasonable course when the pupil-teacher system has been thoroughly established: the case is entirely different in India, where the system will need every advantage that can reasonably be allowed to it in order to secure its speedy and successful adoption. The reduction of the grant to high schools has been already referred to.

Scholarships.

60. Proceeding now to the subject of scholarships (Chapter VII), we propose that only two grades should be recognized: one adapted to scholars who are reading in Standard IV,

and are therefore preparing to leave the primary school or department; the other adapted to those who are reading in Standard VII, and are therefore preparing to leave the middle school or department. The scholarships are termed respectively primary and middle; the former being open to all scholars who are under 11 years of age, the latter to all who are under 14. The primary scholarships are of the value of R5 a month, and are tenable for three years in a middle school or department; the middle scholarships are of the value of R8 a month, and are tenable for two years in a high school if the scholar elects to read for the final examination of Schedule I, or for five years in a technical school, if the scholar prefers a technical education. The scholarships are open to any candidate, wherever educated; but we propose that no scholarship should be tenable in any school unless it is certified by the Department as efficient, and is therefore open to inspection. This is the course followed with regard to scholarships tenable in schools for natives. The limits of age have been so fixed that a capable and deserving boy may earn a scholarship at each stage of his school course, reaching the Entrance Examination at 16; after which his requirements are sufficiently provided for by the ordinary college scholarships. In accordance with paragraph 20 of the Resolution, we have restricted scholarships to boys; but there is nothing in the Code to prevent girls from competing at the examination, *honoris causâ*. The scholarships are to be awarded entirely by competitive examination, marks being assigned on the scale proposed in article 107. We propose that the schools shall, for the purposes of this examination, be arranged in circles or groups; that a certain number of scholarships shall be assigned to each circle; that the examination shall be held simultaneously at selected centres towards the close of the year; and that the managers of every school shall be at liberty to send to the examination as many candidates as they think proper. We further propose that a scholarship may be transferred from one school to another with the sanction of the Department, and should be liable to reduction or forfeiture in cases of misconduct, continued absence, or failure to pass by the prescribed standards. We have proposed the grouping of schools in circles, partly in order to secure a satisfactory distribution of scholarships, but chiefly in order to meet difficulties likely to arise from the dependence of the school year on the date of the Inspector's visit. The Inspector would probably visit all the schools in a circle about the same time; but he could hardly arrange to visit all the schools in a province within a period that would make a simultaneous scholarship examination a fair comparative test.

Technical scholarships.

61. The provision that a middle scholarship may be held in a technical school is in accordance with the suggestion made in paragraph 20 of the Resolution, that a certain number of scholarships should be reserved for lads desirous of receiving technical instruction. Further facilities of the same kind might be secured by offering scholarships, tenable in technical institutions of a higher class, to candidates passing the final examination from high schools. In Lower Bengal some provision of this kind already exists, in connection with the Government Engineering College at Sheebpore, near Calcutta. In addition to a similar privilege enjoyed by 40 native students, 30 European and Eurasian apprentices of the "mechanical apprentice" class are boarded and educated in that institution on payment of a monthly charge of R5; the extra cost, amounting to R15 a month, being defrayed by Government. Twenty stipends of R10 and of R6 a month, tenable for a year and a half during the last (or purely practical) portion of the course, are also awarded to those apprentices, European and native, who have made the best use of their time in the earlier portion. Ten special scholarships of R10, R15, and R20, open to Europeans as well as to natives, are awarded, on the result of the Entrance Examination, to students intending to join the engineer class of the college. Four graduate scholarships of R50, and ten of R30 each, are also awarded to those European and native students of the college who pass with the greatest credit at the final University examination for engineers. They are tenable for one year, provided that the students are continuously employed during that period in practical work.

General statement of provisions with regard to teachers.

62. We proceed to explain our recommendations with regard to the teachers that are to be recognised in schools under the Code. The Resolution refers to the difficulty that is likely to "arise in applying the system of payment-by-results from the want at present of properly trained teachers in many schools" (paragraph 19), and directs us to devote special attention to the introduction of an efficient pupil-teacher system (paragraph 24). We have made provision for a thorough classification of the teachers at present employed in the schools (Chapter IV), for securing that those who are hereafter employed shall be properly qualified (Chapter IV), and for developing what will, we trust, form an efficient pupil-teacher system (Chapter III).

Teacher recognised in the Code.

63. The Code recognises none but certificated teachers and pupil-teachers on the staff of any day-school; but other persons may be employed in a night-school with the approval of the Department (article 13*e*). The assistant teachers recognised in article 79 of the English and Scotch Codes are, we think, properly placed among certificated teachers (articles 60, 61, 70, and 71). The stipendiary monitors recognised in the English and Scotch Codes (article 70 *i* and *k*) can hardly be regarded as efficient teachers, and therefore are not recognised in this Code. If the system which we propose should not meet every case that may arise, we do not think it would be more likely to do so by accepting as teachers children of 12 years of age, who have passed the examination in reading, writing, and arithmetic by Standard IV.

Certificates.

64. We recommend that there should be three grades of certificates, determined partly by examination and partly by service, and that there should be a strict limitation as to the position for which any certificate qualifies its holder (article 57). Our recommendations in the latter respect are more elaborate than the provisions of the English and Scotch Codes; but as the range of education in the schools, and, consequently, of the qualifications required in the teachers, is much wider than in England and Scotland, where secondary education has not been brought under the Code, we think it is fairer to the teachers, and will be more conducive to the interests of education, that the certificates should be more strictly defined.

Provisional certificates.

65. Putting aside for the present the arrangements for pupil-teachers, which will be explained separately, we propose that in determining the certificate to which any applicant is entitled the Department shall be guided by the examinations he has passed and the training he has had as a teacher; and that, if the latter has been too short to give assurance of his fitness, he shall undergo probation for a longer or shorter period, receiving in the meantime a provisional certificate of the grade to which he is entitled by examination. This provisional certificate consists in entering his name in a register kept for such cases by the Education Department; and with the limitation stated in article 57 (*d*), it qualifies the teacher for holding the position to which he would be entitled under a permanent certificate of the same grade.

Examinations.

66. The ordinary examinations for teachers' certificates should ultimately be those held in connection with training colleges, as in England and Scotland; but in the absence of such colleges we propose that the Department should avail itself as far as possible of the University examinations. This affords a convenient test of qualifications for regulating the various grades of certificates; and at the same time secures a greater degree of simplicity and uniformity in the educational system than could otherwise be attained. Moreover, in the case of high schools it is eminently desirable that the principal teacher should have received a University training; and we have accordingly proposed that no certificate of the highest grade should be granted to any one (except as provided in article 67)

who is not a graduate. For the present, the First Examination in Arts may be accepted as serving the same purpose in the case of female teachers. It may be observed that, under the regulations of the Calcutta University, a teacher can be admitted to any examination without going through a course of study in an affiliated college.

Probation.

67. We propose that in all cases, except those provided for in articles 79 and 80, a longer or shorter period of probation should be required as a condition of obtaining a permanent certificate of any grade. This period consists of service with credit (article 60, *note*) for a certain number of years, during which the Inspector will report annually upon the work of the teacher. An unfavourable report from the Inspector will render the teacher liable to a further year of service. This secures that the probation shall be undergone in a school open to inspection. We assume as a general rule that, for certificates of the same grade, the higher the qualifying examination the shorter the period of probation should be; and that for certificates of different grades, the higher the grade the longer the probation. When training colleges are established, the period of probation for certificates of the lower grades may fitly conclude with an examination on school management, similar to that which students in training colleges will have to pass (Schedule III).

General statement of the scheme for awarding certificates.

68. Taking the case of male teachers, we may state our scheme briefly as follows:—The Entrance examination with three years' probation, or the First Arts examination with probation for two years, qualifies for a permanent third grade certificate (articles 61 and 62); two years' service with credit under that certificate, with further probation for two years after passing the First Arts examination, or three years' service with credit after obtaining a degree from a University of the United Kingdom or India, qualifies for a permanent second grade certificate (articles 63 and 64); and three years' service with credit under the latter certificate, with two years' further probation after graduating, qualifies for a permanent first grade certificate (article 65). To meet special cases, *e.g.*, the case of teachers specially brought to India to take charge of high schools, we propose that the Department should be empowered to give provisional certificates of the first grade to any graduate of a University of the United Kingdom who is over 25 years of age, but that this certificate should be made permanent only after three years' service with credit.

The scheme for female teachers is parallel to this, but the highest examination required is the First Examination in Arts.

Cases specially provided for.

69. Cases which are not directly included in the foregoing statement are separately provided for. For example, no reference is made in that statement to teachers holding certificates from the Education Department of the United Kingdom, nor does it provide for the case of the great majority of teachers in the schools connected with the Church of Rome. These and similar cases are provided for by the general rule laid down in article 58, it being understood that the Department is at liberty to require candidates for certificates to undergo examination if that should be deemed necessary.

Classification of present teachers.

70. The classification of the teachers at present employed in the schools will be secured by the rules laid down in articles 67 to 69 and 75 to 77. We propose to recognise the principal teacher of a high school as entitled on application to a first grade certificate, provided that the school is efficient, and that the teacher has been in charge of it for the three years immediately preceding the date of application. Shorter service will entitle the candidate to a provisional first grade certificate, which shall be made permanent on the completion of the period of three years, provided that the Inspector reports favourably of the school. Corresponding provision is made for the principal teachers of middle schools. Teachers

holding a lower position will receive provisional certificates, to be determined in each case by age, character, qualifications, and period of service, provided that the candidate is an efficient teacher serving in an efficient school.' We propose that these clauses should be in force only for two years after the Code comes into operation. This will afford ample time to any one who wishes to apply for a certificate.

Teachers passing through a training college.

71. It will be observed that, in dealing with the case of teachers passing through a training college, we attach great importance to the training which a candidate may have had as a pupil-teacher; and that we regard such training as a reason for reducing some of the periods of probation which we have required in the case of other candidates for certificates. This course appears to us to be not only reasonable in itself, but also fitted to secure for the training colleges their legitimate place in the system of European education.

Objections to the scheme.

72. It is not unlikely that doubts may be felt whether our proposals will work satisfactorily when brought to the test of practice, especially in view of the high qualifications that we demand, and the small number of Europeans who prosecute their studies beyond the Entrance examination. And it may appear also that, as pupil-teachers are to be introduced only into "the larger elementary schools" (paragraph 19 of the Resolution), and as the only other teachers we recognise in day-schools are certificated teachers (article 13 *e*), we exact too much in practically requiring all the teachers of primary schools to have passed the Entrance examination. We admit that these objections have force, and that if carried out very stringently, our proposals might perhaps seriously injure some schools. But we regard the scheme as laying down the lines on which any permanent progress in European education must be made. The conditions required in the case of high and good middle schools are certainly attainable, and are not higher than those required in the corresponding schools for natives. And if the conditions are somewhat stringent in the case of primary schools, it must be remembered that these are precisely the schools that suffer most from inefficient management, and that one of the first steps for their improvement must be to secure for them a more efficient class of teachers. Much caution will, no doubt, be required on the part of the Inspector to prevent any avoidable harm during the period of transition; present teachers should not be rashly removed; the better prospects that teachers will have under the operation of the Code will probably induce larger numbers than hitherto to qualify themselves for employment. Certainly, the qualifications prescribed are not in themselves too high, nor are they higher than the parents and guardians of the scholars generally desire. Our proposals will also, we trust, give a much needed stimulus to the demand for higher education among Europeans in India. It would be a great mistake to limit our proposals by the results of the very unsatisfactory system which we desire to replace.

Pupil-teachers: conditions of engagement.

73. The scheme which we propose for the introduction of the pupil-teacher system is drawn up on the lines of that now in force in England and Scotland. We require that the candidate for employment shall be 14 years of age; shall have passed Standard VI; shall produce certificates of health, physical fitness, character, and conduct; and shall satisfy the Inspector that he possesses aptitude for teaching. The school in which he is employed must be thoroughly efficient, and likely to be maintained during the period of an engagement duly entered into between the candidate and the managers (article 47). The pupil-teacher is to be under engagement for three years, in the first of which he shall be required to teach in the school classes for two hours a day, and in the last two years for three hours; and he shall receive throughout his engagement an hour's special instruction each day, from a teacher holding a certificate of the first or second grade (article 49). The candidate must be approved by the Department; but the Department, though it prescribes the form of agreement (Appendix II), is in no way a party to his engagement (article 48). At the end of each year of

his engagement, he must be presented to the Inspector for examination in the subjects prescribed in Schedule II, producing on each occasion the certificates prescribed in Note (1) appended to that Schedule; and if he passes in the compulsory subjects prescribed for that examination, the grant specified in article 50 will be paid on his account, he himself receiving one-half of the whole amount earned, in addition to the salary specified in his agreement. This grant, however, may, on the report of the Inspector, be reduced by an amount not exceeding one-third (article 51). If the pupil-teacher fails to pass in the compulsory subjects, he must be presented again for examination by the same standard (article 52); and if he fails a second time in these subjects or in the art of teaching, he shall cease to be recognised as a pupil-teacher (article 53), and therefore can form no part of the staff of an aided school (article 13 *e*). We have provided in Appendix II for a new memorandum of agreement on change of managers; but this provision would, as we are advised, be unnecessary in the case of any school registered under Act XXI of 1860, or incorporated under Act VI of 1882 (section 26.) We think it very desirable that every school under a committee should register or incorporate itself under one or other of these Acts, not only for the reason above given, but also because it would in that case have a legal status for the recovery of debts. The registration, we desire to point out, would be much facilitated if it could be effected without the payment of any fee.

Reasons for preferring a short engagement and a comparatively small amount of work.

74. We have recommended a much shorter period of engagement than that recognised in England and Scotland, and have also materially reduced the amount of time to be devoted to teaching. At the outset, a longer period of engagement would probably act as a deterrent both to the candidates and to their parents and guardians; but apart from this, we regard a three years' engagement as quite sufficient to secure satisfactory results, and we depend mainly on the subsequent training and periods of probation to develope fully the skill of the teacher. The limitation of the amount of work to be done by the pupil-teacher is based on the conviction that the permanent interests of education as well as the personal interests of the pupil-teacher are seriously prejudiced by the practice of requiring him to teach for five hours a day. A boy or a girl of 15 has not the strength required for this, and in addition for a vigorous prosecution of the studies prescribed. If the pupil-teacher's strength is overtaxed by teaching, his studies suffer, and he is less likely to turn out a good teacher. We believe too that if we were to require a full day's teaching, and thus to prevent the pupil-teacher from joining the higher classes during any part of the day, we should find it exceedingly difficult to establish the system. And we understand that, even in the far more favourable climate of England and Scotland, experience points very decidedly to the necessity of shortening the time that pupil-teachers must devote to teaching. It should be noted too that the diminution of the time spent in teaching has enabled us to insist on a higher standard of qualification.

The rates proposed for pupil-teachers.

75. The rates which we have proposed in article 50 are very much higher than those that now prevail in England and Scotland, but they are really lower in the aggregate than those that were allowed during the period in which the pupil-teacher system was being established. They are no doubt very liberal; but we do not think they are more liberal than is necessary for giving the system an opportunity of establishing itself. In fixing the relative proportions of the rates, we have endeavoured to emphasize the great importance of the art of teaching, and the necessity of regular and well marked progress in it. The provision of article 51 will be specially valuable in carrying out this principle, by reducing the grant when the pupil-teacher does not show complete efficiency; and the provision that he himself is to receive half the amount of the grants earned should stimulate his application to study.

Prospects of the proposed pupil-teacher system.

76. The foregoing remarks show that we are not insensible to the difficulties of establishing an efficient pupil-teacher system. The few prizes that are within the reach

of teachers trained in India, compared with the valuable prizes that may reasonably be looked forward to by really capable lads who obtain appointments under Government, may for some time make it difficult to secure the services of the best scholars as pupil-teachers. We trust, however, that the proposals we have made will be found sufficiently attractive to give the system a fair start. The offer of free tuition and a small salary during the most expensive period of school education will, it may be hoped, prove an inducement to capable scholars to enter upon a career, the emoluments of which are certain to rise as the demand for trained teachers increases under the operation of the Code. At the same time, we have followed the English Code in the provision that at the close of their engagement pupil-teachers are perfectly free in their choice of employment (article 56); but we are not without hope that many of those who begin will be disposed to continue as teachers.

77. The means by which we propose to connect the pupil-teacher system with that for certificated teachers, are indicated in articles 60, 70, and 79. It will be observed that we propose to make the successful completion of a three years' engagement as pupil-teacher practically equivalent, for the purposes of a teacher's certificate, to passing the First Arts Examination; and that we give an advantage also to pupil-teachers who pass with credit through a course of one or two years in a training college. We have suggested this from a conviction of the great value of such a training, and with the view of retaining as teachers those who have been trained.

The connection between the two classes of teachers.

78. To complete the pupil-teacher system, and at the same time to give effect to the suggestion conveyed in the closing sentence of paragraph 24 of the Resolution, we have drawn up a scheme for aiding training colleges (Chapter V), and have worked out the details of a two years' course (Schedule III) on the model of the courses prescribed in England and Scotland. The course is so arranged that it can to a large extent be made to suit an Arts College; and in this way it will be possible to secure a collateral advantage for the training colleges without sacrificing anything of their efficiency. If hereafter it should on any grounds be found advisable, the approximation to the First Arts course may be made still closer. How far the scheme is likely to be utilised we have no means of forming an opinion, but there is reason to hope that it will be accepted by some of the leading denominations at no distant date.

Scheme for aiding training colleges.

79. The rates of grant proposed in article 91 appear at first sight to be higher than those sanctioned in England and Scotland; but in reality it will be found that they are not so. The amount paid annually in England and Scotland is £50 for each male and £35 for each female student in continuous training throughout the year, provided that the total grant does not exceed 75 per cent. of the actual expenditure of the college. We calculate that the average annual grant for each student in continuous training throughout the college year of eight months (article 95) will probably be less than R500, which does not exceed the average for England and Scotland. Even if it should, any excess may, in our judgment, be well allowed if it helps to bring about the establishment of training colleges. The proposal in article 92, the mode of payment recommended in articles 93 and 94, and the exceptions referred to in the latter part of article 95, are all intended to facilitate the opening of such colleges.

Grants to training colleges.

80. The reference to the higher education of Europeans in paragraph 5 of the Resolution may require that we should offer some definite recommendation on the subject. The arguments in favour of separate institutions for Europeans do not appear to us to apply with any great force to the higher or University education. As a matter of fact, few, if any, of the colleges in which Europeans study are confined to them exclusively, and we see no reason to think a change in this respect necessary. That being so, we are of opinion that any aid given by

University education.

Government to the higher education of Europeans should be regulated by the ordinary grant-in-aid rules in force in the various provinces. The case of any college confined to Europeans exclusively would be sufficiently met by allowing a fixed grant on account of each student who passes the First Arts, B.A., or M.A. examination.

81. A scheme for providing "greater facilities for the education of the poorer classes of European children" would not be complete unless provision were made for grants on account of school buildings. We have therefore added a chapter on building grants (Chapter VI), in which we propose that grants should be given in aid of the erection, enlargement, and furnishing of schools, of carrying out extensive repairs, and, in special cases, of paying debts incurred before the Code comes into operation in erecting or extending school buildings (article 96). We have felt some hesitation in recommending grants in the last two cases, but we do so because it is a matter of notoriety that many schools are in a state of chronic embarrassment owing to old debts and the difficulty of meeting the expense of repairs. Much of the difficulty, we are aware, has arisen from the unsatisfactory way in which accounts have been kept and dues realised, and if the provisions of article 14 (*b*) are carefully carried out, it will, no doubt, disappear under the operation of the Code; but we think it most important that the schools should have a fair start under the new system, and to secure this we recommend that the grants provided for in 96 (*b* and *c*) should at the outset be allowed. There will be no difficulty in selecting the cases that really need and deserve this aid.

Building grants.

82. In the varying circumstances of the stations in which school buildings are likely to be required, it is impossible to find any general rule that will be suitable to all; some stations can help themselves to a much greater extent than others, while in many small stations, with a very fluctuating European population, it would probably be unwise to erect any school building. For the purposes of this chapter, therefore, we recommend that the local Government should take cognisance of the circumstances of each station and determine the rates of grant accordingly. No grant should be given for any school building unless the European population for whom it is intended is sufficiently large to justify the expense (article 99*a*), regard being had, among other circumstances, to the requirements of the different religious denominations of the locality. If the circumstances are such as to justify the expense of erecting or extending a building, we propose that a grant should be made, not exceeding two-thirds of the total estimated cost in places where large private contributions cannot be looked for, or not exceeding one-half in places where the people may reasonably be expected to help themselves. These grants being maximum grants, it will be in the power of the Department to fix the amount of the actual grant according to its own judgment.

Rules for building grants.

Conditions of building grants.

83. The remaining articles in this chapter are only such as are required to secure that the school buildings shall be properly maintained, and be always available for school purposes. We have also provided for the refund of the Government grant in the event of the building ceasing to be used as a school within three years of the date of payment. These recommendations are based largely on the present rules for building grants in Bengal.

Other conditions of building grants.

84. The only other duty assigned to us in the Resolution was to frame, as well as we could on the information placed before us, an estimate for each province of the cost of the scheme adopted by us. Taking the total number of scholars in the several departments of the schools for which returns have been received, and assuming that a certain proportion would pass by the various standards proposed, we might without difficulty construct an estimate; but after careful

No accurate estimate of the cost of the scheme can be framed at present.

consideration we have come to the conclusion, as already indicated, that such an estimate would, in the present condition of European schools, be of little practical value. The returns are at best very incomplete; we have no means of knowing how many of the 5,000 children who, as stated in paragraph 3 of the Resolution, are at present receiving no instruction, are likely to be sent to school; and the absence of any trustworthy classification of the scholars makes it impossible to form any but an arbitrary estimate of the proportion of passes. In these circumstances, we recommend that the framing of the desired estimate should be deferred until all the schools in the various provinces have been thoroughly inspected and examined according to the prescribed standards. This alone will supply the data for an accurate estimate of the operation of the Code as regards existing schools; and by affording time for observation, it may incidentally throw light on the probable increase in the number of schools and scholars.

85. We cannot conclude this report without giving expression to our very deep feeling of sorrow at the early and lamented death of our colleague, the Very Rev. Father Van Impe, whose warm interest in, and devotion to, the work on which we have been engaged contributed, we fear, to that sad event.

86. We have also to express our deep sense of obligation to Mr. A. W. Garrett, Inspector of Schools, Presidency Circle, and to Mr. A. M. Nash, who succeeded him in that office, for the very valuable assistance they have afforded us in the discharge of our onerous duties. By their kindness and courtesy we have been enabled to test our conclusions by reference to several of the European schools under their inspection, and we have particularly to acknowledge the help given by Mr. Nash in working out the system of grants.

JAMES ROBERTSON.

CALCUTTA,
The 17th July 1882.

DRAFT CODE OF REGULATIONS FOR EUROPEAN SCHOOLS AS FINALLY ACCEPTED BY THE GOVERNMENT OF INDIA.

CHAPTER I.

PRELIMINARY.

1. A sum of money is annually granted by local Governments and Administrations for European education in India. This grant is administered by the Education Department of each local Government or Administration, hereinafter called the Department.

2. The object of the grant is to aid local exertion in maintaining efficient schools for European children, and training colleges for teachers in such schools.

3. The term European is used in this Code to signify any person of European descent, pure or mixed, who retains European habits and modes of life; but the Local Governments shall in all cases of doubt decide the proper application of the term. The term scholar is used to signify European scholar.

4. Aid to maintain schools is given by monthly and annual grants to the managers, conditional upon the attendance and proficiency of the scholars, the qualifications of the teachers, and the state of the schools.

5. Every school aided by Government under the provisions of this Code shall be conducted in accordance with the following regulations (Elementary Education Act, England, 1870, section 7):—

"(*a*) It shall not be required, as a condition of any child being admitted into or continuing in the school, that he shall attend or abstain from attending any Sunday school or any place of religious worship, or that he shall attend any religious observance or any instruction in religious subjects in the school or elsewhere, from which observance or instruction he may be withdrawn by his parent, or that he shall, if withdrawn by his parent, attend the school on any day exclusively set apart for religious observance by the religious body to which his parent belongs.

"(*b*) The time or times during which any religious observance is practised, or instruction in religious subjects is given, at any meeting of the school, shall be either at the beginning or at the end, or at the beginning and the end of such meeting, and shall be inserted in a time table to be approved by the Educational Department, and to be kept permanently and conspicuously affixed in every school-room; and any scholar may be withdrawn by his parent from such observance or instruction without forfeiting any of the other benefits of the school.

"(*c*) The school shall be open at all times to the inspection of the departmental inspector, so, however, that it shall be no part of the duties of such inspector to enquire into any instruction in religious subjects given at such school, or to examine any scholar therein in religious knowledge, or in any religious subject or book."

6. No grant is made for or in respect of—

(*a*) any instruction in religious subjects;
(*b*) any school which is not subject to the inspection of the Department;
(*c*) any school in which the majority of the children attending the school are not European;
(*d*) any school with an average daily attendance of less than 12 European scholars;
(*e*) any school which the Department declares to be unnecessary, or unsuited to the requirements of the locality;
(*f*) any school the income of which from all sources is sufficient, in the opinion of the Department, to maintain it in efficiency.

7. No school shall be placed on the list of those to which grants may be made, until an application is sent to the Head of the Department of the province in which the school is situated. The application shall contain the following particulars, according to a form supplied by the Department:—

(*a*) Class of school.
(*b*) Names and qualifications of the teachers.
(*c*) Constitution of the committee of management.
(*d*) Number of scholars in each standard (Schedule I).
(*e*) Scale of fees.
(*f*) Probable income from all sources other than the grant.

The Inspector shall thereupon visit and report on the school.

8. If the application is approved, the Department will inform the managers from what date the school will be regarded as coming under the Code, and in what month the Inspector will make his annual visit. The month will remain unaltered, unless the Department informs the managers of a change. Notice of the day of the Inspector's annual visit will be given beforehand to the managers.

9. The Inspector may visit an aided school at any other time without notice.

10. No grant is paid except on a report from the Inspector, unless some unforeseen cause makes it impossible for him to visit and report upon the school.

11. (*a*) The managers of a school must appoint a correspondent with the Department, and must give notice to the Department of any change of correspondent.

(*b*) Teachers cannot act as correspondents for the schools in which they are employed, nor can they be recognised as members of its committee of management, without the special sanction of the Department.

12. By managers are meant those who have the financial and general control of the school. The committee of management must consist of not less than three members.

CHAPTER II.

GRANTS FOR THE MAINTENANCE OF SCHOOLS.

SECTION I.—*Preliminary.*

13. Before any grant is made to a school the following conditions must be satisfied:—

(*a*) That the school is conducted in accordance with article 5.

(*b*) That the school premises are healthy, well lighted, drained, and ventilated, are properly furnished and supplied with suitable offices, and contain sufficient accommodation for the scholars attending the school. For the present 12 square feet in each class-room will be required for every scholar in average daily attendance,* or if more than one class is taught in the same room, 16 square feet.

(*c*) That the time table is approved by the Department. The time-table should show the hours allotted to instruction in elementary, class, and special subjects (Schedule I), to the additional subjects of article 21, and to the training of pupil-teachers. No change can afterwards be made without the consent of the Department.

(*d*) That the staff of teachers is sufficient, and the teachers approved by the Department. The recognised classes of teachers in day schools are pupil-teachers (Chapter III) and certificated teachers (Chapter IV). Other persons may be employed as teachers in night schools.

(*e*) That the principal teacher is not allowed to undertake duties unconnected with the school which occupy any part whatever of the school hours, or of the time appointed for the special instruction of pupil-teachers.

14. Every school receiving a grant shall comply with the following conditions:—

(*a*) Due notice shall be given to the Department of any changes in the school staff and management (article 45), which occur in the course of the year.

(*b*) All returns called for by the Department shall be duly made; the admission, daily attendance, and withdrawal of the scholars shall be registered by, or under the supervision of, the principal teacher; accounts of income and expenditure shall be kept by the managers, regularly audited, and submitted to the Department annually.

(*c*) The income of the school shall be applied to educational purposes recognised by the Department.

15. Schools and departments of schools aided under this chapter shall be classed as Primary, Middle, or High, according to the highest standard of instruction (Schedule I) taught in them.

Those teaching to a standard not above IV shall be classed as Primary; those teaching to a standard above IV and not above VII as Middle; those teaching to either of the final standards of the Schedule shall be classed as High Schools.

Note.—If from any cause the managers of a school desire to change its class, they must submit a fresh application under article 7.

16. The subjects of instruction in aided schools shall be as follows:—

(*a*) In the primary and middle departments, the elementary, class, and special subjects of Schedule I.

(*b*) In the high department, the subjects prescribed for the final examinations (A and B) of Schedule I.

In primary schools and departments teaching above Standard II two class subjects must be taught. In middle schools and departments four class subjects must be taught.

* The average daily attendance for any period is found by adding together the attendances of all scholars for that period and dividing the sum by the number of full meetings within the same period; the quotient is the average daily attendance.

17. In primary and middle schools and departments the following order of instruction must be observed:—

Elementary subjects (reading, writing, and arithmetic) must be taught to every scholar in a school.

Class subjects must be taught to every scholar in a class.

Special subjects may be taught to individual scholars.

Note.—All scholars reading the same standard in elementary subjects form one class.

SECTION II.—*Grants to Day Schools.**

18. A school which has held not less than 200 full school meetings during the year may receive aid under this Section.

If a school has held less than 200 full school meetings during the year, a proportionate reduction shall be made in the grants payable under this Section, and in the number of attendances required under article 22.

Note (1).—The school year is reckoned as ending with the last day (inclusive) of the month preceding that fixed for the Inspector's annual visit (article 8).

Note (2).—School meetings held before the school comes under the operation of the Code (article 8) will not be counted for the purposes of this article.

19. By a "full school meeting" is meant a period of four hours of secular instruction on the same day, in which period may be included not more than half an hour of the time allowed for recreation. A "full attendance" is an attendance at a full school meeting.

(*a*) Two periods, each of not less than two hours of secular instruction in school, whether on the same or on different days, may be counted as one full school meeting.

(*b*) Attendances may not be reckoned for any scholar under three or over eighteen years of age.

20. For every scholar in average daily attendance during the school-year, the following attendance grants may be claimed by the managers:—

	Rs.
For the first 25	12 per scholar.
For the next 25	9 „
For the next 50	6 „
For every additional scholar	3 „

For children who are not presented for examination by standards, a uniform attendance grant shall be made at the rate of Rs. 18 for each child not above eight years of age at the end of the school year, provided they are taught as a separate school or department of a school, by a teacher of their own, in a room properly constructed and furnished for their instruction. Of this grant Rs. 3 will be withheld in the case of girls, if satisfactory instruction is not given in needlework.

21. The managers may also claim the following sums for each scholar in average daily attendance:—

(*a*) Annas 8 (or Re. 1), if singing by ear (or from notes) is taught throughout the school to the satisfaction of the Inspector.

(*b*) Annas 8, if systematic training in drill or gymnastics is given to boys above eight years of age without extra charge.

(*c*) A sum not exceeding Rs. 3, at the discretion of the Inspector, for discipline, organization, apparatus and method of instruction.

The Inspector will bear in mind, in reporting on the organization and discipline of a school, the results of any visits without notice (article 9) made in the course of the year. To meet the requirements respecting discipline, the managers and teachers will be expected to satisfy the Inspector that all reasonable care is taken in the ordinary management of the school to bring up the children in habits of punctuality, of good manners and language, of cleanliness and neatness, and also to impress upon the children the importance of cheerful obedience to duty, of consideration and respect for others, and of honour and truthfulness in word and act.

22. For scholars who are presented for examination by Standards I to VII of Schedule I, and who have made 120 full attendances during the year, the managers may claim the following instruction grants:—

(*a*) Each elementary subject, Rs. 5 for every scholar passing in that subject.

(*b*) Each class subject, Rs. 3 for every scholar in a class reading that subject, if 50 per cent. of those presented for examination satisfy the Inspector.

(*c*) Each special subject, Rs. 5 for every scholar passing in that subject.

* This Section applies to all day schools in which the standards described in Schedule I are taught. For special rules for boarding establishments connected with day schools, see articles 34—37.

Note (1).—No child under six years of age shall be presented for examination by standards; and it shall be in the discretion of the Inspector to refuse to examine any child under eight years of age.

Note (2).—No scholar shall be examined in any subject unless the timetable has provided for continuous instruction in that subject throughout the year.

Note (3).—When a scholar has been transferred from one school to another in the course of the year, his attendance at the former school will not be counted unless his scholar's register (article 42) shows that he has been transferred with the permission of the managers of that school; but in no case shall attendance for the same period be reckoned twice.

Note (4).—The results of the examination of each scholar shall be communicated to the managers.

23. (*a*) No instruction grant may be claimed under article 22 on account of any scholar who fails to pass in two elementary subjects.

(*b*) No grant may be claimed for class subjects under article 22 (*b*), if the number of passes in elementary subjects fall below 40 per cent. of the whole number of scholars presented in those subjects. If the number of such passes fall below 60 per cent., the grant shall be reduced by one-half.

(*c*) No grant may be claimed for special subjects under article 22 (*c*), if the number of passes in elementary subjects fall below 60 per cent. of the whole number of scholars presented in those subjects.

24. (*a*) Any scholar presented for examination must be presented under the same standard in all subjects.

(*b*) Any scholar who passes in all the elementary subjects of Standards I, II or III, may be at once presented for examination by the next higher standard, and may earn separate grants for passing in each standard.

(*c*) If a scholar fails in one elementary subject only, he may be presented for examination in the following year either by the same or by the next higher standard; but no scholar can earn a grant twice in the same subject in any standard.

(*d*) If a scholar fails in two successive years in the same elementary subject, no grant shall be given on his account for class or special subjects.

25. If a scholar who has made the prescribed number of attendances is (without a reasonable excuse) withheld from examination in elementary or class subjects, the school shall receive no grant on his account.

26. Scholars in high schools, who have attended 250 full school meetings after passing by Standard VII, may be presented for final examination by the standard in schedule I. The examination will be held at the times and places indicated in Chapter VII for the scholarship examination.

27. For scholars passing by this standard, the managers may claim the following instruction grants:—

(1) Rs. 80 for every scholar passing in three subjects.
(2) Rs. 120 ,, ,, ,, four ,,
(3) Rs. 160 ,, ,, ,, all ,,
(4) Rs. 25 for each pass in an optional subject.

No grant can be claimed for optional subjects for any scholar who fails to earn a grant in the compulsory subjects.

28. A scholar who does not pass in all the compulsory subjects may be again presented for examination in the following year. If he then passes, the managers may claim on his account the full grant payable under article 27, less any amount that may have been earned by him in the preceding year.

29. After each annual visit of the Inspector (article 8), the school shall receive monthly during the following year—

(*a*) a *provisional* attendance grant, calculated at one-twelfth of the rates fixed in article 20, for each scholar in average daily attendance during the preceding month;

(*b*) a *provisional* instruction grant, calculated at one-twelfth of the instruction grant earned for the preceding year under articles 22—28.

Note.—If a school has been open for less than twelve months (article 18), the denominator of the fraction in (*b*) shall be the number of months during which the school has been under the Code.

30. At the end of each year, when the annual visit (article 8) is paid by the Inspector, the school shall receive the amount of the annual grants earned for attendance and instruction under articles 20—28, less the total amount of the provisional grants received during the course of the year under article 29. But if the amounts received under article 29 exceed the amounts earned under articles 20—28, the excess shall be deducted from the first or (at the discretion of the Department) any subsequent grants payable in the following year under article 29, or be otherwise refunded to the Department.

31. A special grant, to be determined by the Department, may, on a favourable report from the Inspector, be made annually to schools in places where there is a small or poor European population.

Note.—This grant shall not be taken into account in making reductions under Section V.

SECTION III.—*Grants to Night Schools.*

32. Grants may be given to night schools [illegible] scholars admitted to the school are [illegible] by the managers [illegible] necessarily employed during the day.

33. The rules for grants to day schools (Section II) shall apply also to night schools with the following changes:—

(*a*) By a "full school meeting" is meant a period of not less than one hour of secular instruction.

(*b*) The number of full school meetings in the year must be not less than 80, and of full attendances qualifying for an instruction grant not less than 50.

(*c*) The attendance grants shall be at one-third of the rates prescribed in article 20.

(*d*) The number of class and special subjects to be taught in each school shall be determined by the Inspector. For the purpose of calculating the grants all such subjects shall be treated as special subjects.

(*e*) Any scholar who has passed by Standard V may, with the sanction of the Inspector, substitute for the full course prescribed for day schools, a special course consisting of arithmetic and one or more of the following subjects:—

Mathematics, Elementary Science, Drawing } of Standards VI and VII.

Mathematics, Mechanical Drawing, Elementary Physics, Elementary Chemistry } of Standard B.

To such scholars the provisions of article 24 (*a*) shall not apply.

SECTION IV.—*Grants to Boarding Schools.*

34. Grants may be given under this Section to boarding establishments, in addition to the grants payable under Section II to the day schools with which they are connected.

35. A yearly grant not exceeding Rs. 3 may, on the report of the Inspector, be made for each boarder, according to the average number in residence during the year, if the organization, discipline, sanitation, and domestic arrangements are satisfactory.

Note.—The sleeping space allotted to each boarder must be declared by competent medical authority to be sufficient for the purposes of health. In administering this article, the Department will endeavour to secure a provision, for each child under 12, of not less than 40 superficial feet and 400 cubic feet, and for each child above 12, of not less than 48 superficial feet and 480 cubic feet. When a boarding school is hereafter erected with the aid of a building grant (Chapter VI), the internal space provided for each boarder must be in accordance with the measurements stated in this article.

36. A special grant, to be fixed by the Department, may be made to boarding schools in aid of the boarding charges of children residing in places where there is no school of a standard suited to their requirements, provided that the Magistrate of the district certifies, after enquiry, that the parents or guardians of such children are too poor to pay the full boarding charges. The amount of this grant shall not exceed Rs. 5 a month on account of each such boarder.

Note.—No grant shall be made under this article on account of scholars reading beyond Standard VII.

37. A special grant may be made to free schools and orphanages in aid of the boarding charges of scholars educated therein, provided that the amount of such grant does not exceed (*a*) one-half of the total cost of their maintenance, (*b*) the rate of Rs. 5 a month for each boarder.

SECTION V.—*Reduction of Grants.*

38. If the amount earned under Sections II and III exceeds the income of the school from all sources other than the grant, it shall be reduced by the amount of that excess.

Note.—In calculating the income of the school under this article, boarding fees shall not be included.

39. The total amount of the grant may, upon the Inspector's report, be reduced by not less than one-tenth nor more than one-half for faults of instruction, discipline, or registration on the part of the teacher, or (after six months' notice) for failure on the part of the managers to provide efficient instruction according to the regulations of the Department, to remedy any defect in the premises that seriously interferes with the efficiency of the school, or to provide proper furniture, books, maps, and other apparatus of instruction. If the Inspector, at a visit without notice not less than six months after intimation has been given of the requirements of the Department, reports that they have not been carried into effect, a deduction may be made from the next grant to the school.

40. If the income of any high school from all sources is large enough, in the opinion of the Department, to render the full grant, claimable under Section II, unnecessary for the efficient maintenance of the school, a reduction shall be made in its amount. The proportion of the full grant that may be claimed shall be fixed from time to time by the Department, and shall be notified beforehand to the managers.

Note.—The operation of this Article is limited to a term of three years from the date on which the Code comes into force.

41. Any grant [illegible] the Inspector's report, there appears to be any [illegible] *prima facie* [illegible] such instance an enquiry shall be made by the [illegible]partment, the result [illegible] communicated to the [illegible].

SECTION VI.—*Registers.*

42. Every scholar in a school receiving grants must be provided with a "scholar's register" (see Appendix I), showing his age, attendance, and proficiency at every stage of his school course. This register must be deposited with the principal teacher on admission to the school, and must be shown to the Inspector when required.

43. In every school receiving grants, the managers must provide out of the school funds—

(*a*) the Code for the year;
(*b*) registers of attendance;
(*c*) a diary or log book, stoutly bound, and containing not less than 300 **ruled pages**;
(*d*) a portfolio to contain official letters, which should be numbered (1, 2, 3, &c.) in the order of their receipt.

44. The principal teacher must, at least once a week, make an entry in the log-book showing the visits of managers, the admission or withdrawal of scholars, the progress of the various classes, and other facts concerning the school or its teachers, such as commencements of duty, cautions, illness, &c., which are likely to be required for future reference.

Every entry in the log-book must refer to facts; general expressions of opinion are to be excluded. No entry once made in the log-book may be removed, nor may it be altered otherwise than by a subsequent entry.

45. The summary of the Inspector's report after his annual visit, and any remarks made upon it by the Department, when communicated to the managers, must be immediately copied *verbatim* into the log-book. The names and standing (*Certificated Teacher of the——grade*, or *Pupil Teacher of the——year*; *see* Chapters III and IV) of all teachers to be continued on, added to, or withdrawn from, the school staff, as determined by the Department upon the Inspector's report, shall at the same time be entered and signed by the correspondent (article 11 *a*). This entry settles the school staff for the year. Any subsequent change in the staff must be recorded in the log-book, and reported to the Department (article 14 *a*) for sanction.

46. The inspector will examine the log-book and portfolio at every visit, and will report whether they have been properly kept. He will specially refer to the entries made pursuant to article 45. At every visit paid without notice, he will make an entry in the log-book of such particulars as require the attention of the managers.

CHAPTER III.

PUPIL TEACHERS.

47. Pupil teachers are boys or girls employed to serve in a day-school on the following conditions:—

(*a*) That the school is—

(1) held in suitable premises;
(2) well supplied with books, apparatus, and furniture;
(3) under a duly certificated teacher (article 49);
(4) properly organized and efficiently instructed;
(5) under good discipline;
(6) likely to be maintained during the period of engagement.

(*b*) That the pupil teachers—

(1) are not less than 14 years of age at the date of their engagement;
(2) have passed Standard VI of Schedule I at the date of their engagement;
(3) produce certificates of health, physical fitness, character, and conduct.

(*c*) That the managers enter into an agreement in the terms of the memorandum prescribed in Appendix II.

The Inspector will test the aptitude of the candidates for pupil-teachership by having them give a reading lesson and requiring them to set copies, and he will pay special attention to distinctness of utterance.

48. If all the foregoing conditions have been satisfied, and all the pupil [illegible] approved by the Department, the engagement is complete. The Department is [illegible] to the engagement, but confines itself to requiring that the pupil [illegible] the Inspector year by year, at the time fixed by his notice (article [illegible]) for examination by the prescribed standards (Schedule II).

49. Every pupil teacher shall be required to undergo a course of [illegible] instruction, and to pass the examinations specified in Schedule II. During [illegible] he shall teach daily for two hours in the school classes, and during the last two years for three hours, and he shall also receive one hour's special instruction daily from a teacher holding a certificate of the first or second grade (article 57).

50. For each pupil teacher passing with credit in the subjects specified in Schedule II, the managers of the school shall receive the following sums:—

	Rs.
For the compulsory subjects	60
„ each optional subject	20
„ the art of teaching—	
in the first year	50
„ second year	80
„ third year	120

Half the amounts earned under this article shall be paid by the managers to the pupil teacher, in addition to any salary specified in the memorandum of agreement.

51. The amounts stated in the preceding article are maximum grants, to be given only if the results of the examination are thoroughly satisfactory; and they may be reduced, on the report of the Inspector, by an amount not exceeding one-third.

52. No grant shall be paid on account of a pupil-teacher who fails to pass in the compulsory subjects of Schedule II. He will be re-examined by the same standard in the following year.

53. If a pupil teacher fails twice during his course in the compulsory subjects or in the art of teaching, he shall cease to be recognised as a pupil teacher.

54. If in the course of any year a vacancy occurs in the office of pupil teacher, notice of the vacancy must be at once given to the Department; and pending a permanent appointment under the terms of articles 47 and 48, temporary arrangements may be made by the managers of the school to fill the vacancy.

55. The number of pupil teachers to be employed in any school shall be determined by the Department.

56. At the close of their engagement pupil teachers are perfectly free in the choice of employment. If they wish to continue in the work of education, they may, under the conditions of article 60, become teachers in primary or middle schools or departments, or may be admitted into training colleges (Chapter V).

CHAPTER IV.—CERTIFICATED TEACHERS.

SECTION I.—*Preliminary.*

57. Certificates are of three grades, and may be either permanent or provisional. A provisional certificate consists of an entry of the teacher's name in a register kept by the Department.

(*a*) A first grade certificate qualifies the holder to be the principal teacher in a high school.
(*b*) A second grade certificate qualifies the holder to be the principal teacher in a middle school, or an assistant teacher in a high school.
(*c*) A third grade certificate qualifies the holder to be the principal teacher in a primary school, or an assistant teacher in a middle school or department.
(*d*) A provisional third grade certificate qualifies the holder to be the principal teacher of a primary school, only if (*a*) he has completed his engagement as a pupil teacher, or (*b*) has passed with credit the first year's examination at a training college, or (*c*) has served with credit for two years as an assistant teacher.

Note.—In cases of emergency, persons may be temporarily recognised as teachers who do not hold the certificates required by this article.

58. Teachers at any stage shall be entitled to receive certificates from the Department, provided they satisfy the Department that they have received a training and passed examinations equivalent to those required under the following articles.

[illegible]—A holder of a second class certificate from any of the Education Departments of the United Kingdom shall be entitled to receive a permanent certificate of the [illegible] grade.

[illegible] this article, it shall be in the power of the Department to hold examinations for the purpose of testing the qualifications of applicants for certificates.

59. A certificate may at any time be suspended, reduced, or cancelled, but in every case the Department shall give the teacher an opportunity of explanation.

SECTION II.—*Male Teachers.*

[illegible] the final examination specified in Schedule II [illegible] with credit, his certificate shall be made permanent. After not [illegible] provisional certificate must be exchanged for a permanent [illegible], or it [illegible]

[illegible]—"[illegible] will credit" [illegible] the following articles implies two favourable [illegible] the Inspector [illegible] school will not be recognised by the Department, unless the [illegible] of the Inspector.

61. Any one who, without having served an engagement as a pupil teacher, has completed his 17th year, and has passed the Entrance Examination, or the alternative examination for high schools under Standard B of Schedule I, may, on the recommendation of the Inspector, receive a provisional third grade certificate. After three years' service with credit his certificate shall be made permanent.

62. Any one who has completed his 18th year and passed the First Arts Examination, may, on the recommendation of the Inspector, receive a provisional third grade certificate. After two years' service with credit, his certificate shall be made permanent.

63. Any holder of a permanent third grade certificate, who has served with credit for two years under that certificate, and has also passed the First Arts Examination, shall be entitled to a provisional second grade certificate. After two years' further service with credit, his provisional certificate shall be made permanent.

64. Any graduate of a University of the United Kingdom or India, who has completed his 22nd year, may receive a provisional second grade certificate. After three years' service with credit, his certificate shall be made permanent.

65. Any holder of a permanent second grade certificate, who has served for at least three years with credit under that certificate, and who is also a graduate of a University of the United Kingdom or India, may receive a provisional first grade certificate. After two years' service with credit, his certificate shall be made permanent.

66. It shall be open to the Department in exceptional cases to grant a provisional certificate of the first grade to any graduate of a University of the United Kingdom who has completed his 25th year. After three years' service with credit, his certificate shall be made permanent.

67. Any person who, at the date on which this Code comes into operation, is actually employed as the principal teacher of a high school recognised by the Department as efficient, and who has been so employed for the three years immediately preceding that date, shall be accepted by the Department as qualified to be the principal teacher in a high school, and shall, on application, be entitled to receive a certificate of the first grade.

68. Any such person whose period of service as principal teacher at the date on which this Code comes into operation shall have been more than one year, but less than three years, shall, on application, receive a provisional certificate of the first grade. After completing the period of three years as principal teacher, and on obtaining a satisfactory report from the Inspector, his certificate shall be made permanent.

69. Any other person who, at the date on which this Code comes into operation, is actually employed as a teacher in any school recognised by the Department as efficient, shall, on producing certificates of character and qualification, and on satisfying the Department of his efficiency as a teacher, be entitled to receive a provisional certificate—

(*a*) of the third grade, provided—
  (1) that he is over 20 years of age;
  (2) that he has been employed as a teacher for a continuous period of not less than three years:

(*b*) of the second grade, provided—
  (1) that he is over 25 years of age;
  (2) that he has been employed as a teacher for a continuous period of not less than five years, and has served for not less than three years of that period as a teacher in the middle department of a school.

After two years' service with credit, his certificate shall be made permanent.

Note.—All applications for certificates under articles 67, 68, 69, 75, 76, and 77 must be made within two years from the date on which this Code comes into operation.

SECTION III.—*Female Teachers.*

70. A pupil teacher who has passed the final examination specified in Schedule II, shall receive a provisional third grade certificate.

After not less than two years' service with credit, her certificate shall be made permanent. Before completing her 25th year, her provisional certificate must be exchanged for a permanent certificate, or is *ipso facto* cancelled.

71. Any one who, without having served an engagement as a pupil teacher, has completed her 17th year, and passed the final examination for high schools specified in Schedule I, may, on the recommendation of the Inspector, receive a provisional third grade certificate. After three years' service with credit, her certificate shall be made permanent.

72. Any holder of a permanent third grade certificate, who has served with credit for two years under that certificate, and has also passed the Entrance Examination, shall be entitled to a provisional second grade certificate. After two years' further service with credit, her provisional certificate shall be made permanent.

73. Any person who has passed the First Arts Examination, and has completed her 22nd year, may receive a provisional second grade certificate. After three years' service with credit, her certificate shall be made permanent.

74. Any holder of a permanent second grade certificate, who has served for at least three years with credit under that certificate, and who has passed the First Arts Examination, may receive a provisional first grade certificate. After two years' service with credit, her certificate shall be made permanent.

75. Any person who, at the date on which this Code comes into operation, is actually employed as the principal teacher of a high or middle school recognised by the Department as efficient, and who has been so employed for the three years immediately preceding that date, shall be accepted by the Department as qualified to be the principal teacher in a high or middle school, and shall be entitled on application to receive a certificate of the corresponding grade (article 57).

76. Any such person whose period of service as principal teacher at the date on which this Code comes into operation shall have been more than one year, but less than three years, shall receive a provisional certificate of the corresponding grade (article 57). After completing the period of three years as principal teacher, and on receipt of a satisfactory report from the Inspector, her certificate shall be made permanent.

77. Any other person who, at the date on which this Code comes into operation, is actually employed as a teacher in any school recognised by the Department as efficient, shall be entitled, at any time within two years from that date, on producing certificates of character and qualification, and on satisfying the Department of her efficiency as a teacher, to receive a provisional certificate of the corresponding grade (article 57).

This certificate shall be made permanent after one year's further service with credit, or in the case of any person who, at the date on which this Code comes into operation, has not completed three years' service as a teacher, after two years' further service with credit.

78. It shall be open to the Department in exceptional cases to grant provisional certificates of the first or second grade to persons not entitled to such certificates under any of the foregoing rules.

SECTION IV.—*Teachers passing through a Training College.*

79. Any student who has been admitted to a training college after completing his engagement as a pupil teacher, and who has passed the first year's examination of the college, shall be entitled to receive a permanent third grade certificate. After passing the second year's examination of the college, he shall receive a provisional second grade certificate.

80. Any student of a training college who, without having completed an engagement as a pupil teacher, has passed the first year's examination of the college, shall be entitled to receive a provisional third grade certificate. After passing the second year's examination of the college, he shall receive a permanent third grade certificate.

81. After two years' service with credit, the provisional certificates granted under articles 79 and 80 shall be made permanent, and the permanent third grade certificates granted under the same articles shall be exchanged for provisional certificates of the second grade.

82. Any holder of a provisional second grade certificate under the preceding article shall, after two years' service with credit under that certificate, receive a permanent certificate of the second grade.

CHAPTER V.

TRAINING COLLEGES.

SECTION I.—*Preliminary.*

83. A training college includes—

(*a*) A college for boarding, lodging, and instructing candidates for the office of teacher.

(*b*) A practising school, in which such candidates may learn their profession.

84. No grant shall be made to a training college, unless the Department is satisfied with the premises, management, and staff.

85. The grant to a practising school shall be made under the conditions specified in Chapter II.

SECTION II.—*Admission to Training Colleges.*

86. Candidates for admission to a training college are selected by the authorities of each college on their own responsibility, and are admissible to the college provided that they produce satisfactory certificates of moral character,

87. No grant will be payable to a training college on account of any student who on admission does not satisfy the following conditions:—

(*a*) That he is at least 17 years of age.

(*b*) That the state of his health is satisfactory, and that he is free from any infirmity or bodily defect likely to interfere with the profession of a teacher.

(*c*) That he signs a declaration signifying his *bonâ fide* intention to follow the profession of a teacher.

(*d*) That he has passed the final examination for high schools specified in Schedule I, or the pupil teachers in Schedule II.

SECTION III.—*Examinations.*

88. Every student admitted to a training college under the conditions specified in article 87, who has been in residence for eight months of the year, and who has spent in that year at least 75 hours under proper supervision in the practising school, shall be presented at the close of the year for examination by the standards fixed, for first and second year students respectively, in Schedule III.

89. The yearly examinations will be conducted by the Department. After each examination the names of the successful candidates will be arranged in two divisions, the first in order of merit, the second in alphabetical order.

90. The place taken by each student in the examination will be recorded on the certificates granted by the Department under articles 79, 80.

SECTION IV.—*Grants.*

91. The managers of a training college shall be entitled to a grant of Rs. 750 for each student passing the annual examination in the first division, and of Rs. 500 for each student passing in the second division.

92. On the recommendation of the Inspector, a grant not exceeding Rs. 100 may be made on account of a student who fails to pass the annual examination; but this grant will not be made more than once for the same student.

93. The managers shall receive monthly a provisional grant of Rs 35 for each student on the rolls during that month.

94. After the annual examination, the managers shall receive the amounts payable under articles 91 and 92, less the amounts actually paid under article 93.

If the amounts paid under article 93 exceed the amounts payable under articles 91 and 92, the excess shall be deducted from the first or (at the discretion of the Department) any subsequent grants payable in the following year under article 93, or be otherwise refunded to the Department.

95. The amounts specified under article 91 will not be payable on account of any student who has resided for less than eight months during the year.

Exceptions to this rule may, at the discretion of the Department, be made in special cases, provided that no grant will be payable for any student who has resided for less than six months, or who has spent less than 75 hours under proper supervision in the practising school. In the case of students so excepted, a reduction not exceeding Rs. 200 will be made in the amount of the grant.

CHAPTER VI.

BUILDING GRANTS.

96. Grants may be given under this Chapter to managers of schools, in aid—

(*a*) of erecting, enlarging, or furnishing school buildings;
(*b*) of executing extensive repairs;
(*c*) in special cases, of paying off debts incurred in erecting or enlarging school buildings.

Note.—Expenditure in the purchase of buildings may be treated as expenditure on the erection of buildings.

97. Except in the case provided for in article 96 (*c*), no grant shall be made in consideration of former expenditure on school buildings.

98. For the purposes of this Chapter local Governments will divide stations into three classes:—

A.—Stations in which the maximum grant shall not exceed one-half of the total cost.
B.—Stations in which the maximum grant shall not exceed two-thirds of the total cost.
C.—Stations in which, from the fluctuating number of European children, the erection of permanent school buildings is undesirable. In these stations the amount actually paid as rent will be considered in determining the special grants that may be allowed under article 31.

99. Before a grant is sanctioned for the erection of school buildings, the Department must be satisfied—

(*a*) that the European population of the locality is sufficiently large to render the existence of the school necessary, and to give a reasonable probability of its permanence;
(*b*) that the school is suited to the requirements of the locality;
(*c*) that the school is likely to be maintained in efficiency;
(*d*) that the site, plans, estimates, and specifications are suited to the school, and the title and trust deeds in due form.

100. The trust deed must declare the building to be granted in trust for school purposes only. It must also provide for the legal ownership of the premises, for the proper maintenance of the building, and for the inspection and management of the school.

Note.—This article does not preclude the managers from using the building for other purposes when not required for the purposes of the school.

101. The grant is not paid until—

(*a*) a report is received from the Executive Engineer, Public Works Department, certifying that the building has been completed in accordance with the sanctioned plans and specifications;
(*b*) a certificate is received from the managers, setting forth that the funds in their hands will, when added to the grant, be sufficient to meet all claims and to close the account; and
(*c*) the trust deed is duly registered, and a copy lodged with the Department.

102. The trustees must undertake to refund the amount of the grant if the building ceases to be used as a school within three years from the date of payment.

103. All applications for grants must be submitted to the Department not later than the 1st of October in any year.

CHAPTER VII.

SCHOLARSHIPS.

104. Scholarships are of two grades, primary and middle; the number of each grade will be determined by the local Government. Boys only are eligible for scholarships, which will in every case be awarded after a competitive examination.

105. Primary scholarships are of the value of Rs. 5 a month, and are tenable for three years in a middle school, or in the middle department of a high school. Middle scholarships are of the value of Rs. 8 a month, and are tenable for two years in a high school, or for five years in a technical school. Scholarships are tenable only in schools recognised by the Department as efficient.

106. Candidates for primary scholarships must be under 11 years of age, and for middle scholarships under 14 years of age, at the date of examination. The selection of the candidates from each school shall be left to the managers of the school.

107. The examination for primary and middle scholarships shall comprise the subjects of Standards IV and VII respectively. Marks shall be awarded to the several subjects of examination as follows:—

Primary Scholarships.

English ..	Grammar and Composition	100	200
	Explanation of passages	50	
	Dictation	50	
Arithmetic			200
Geography			100
	Total ...		500

Middle Scholarships.

English, including Grammar and Composition	250
Second Language	150
History	75
Geography	125
Arithmetic	125
Geometry and Algebra	200
Elementary Science	75
Total ...	1,000

108. For the purposes of this Chapter, each province will be divided into circles, and a certain number of scholarships allotted to each circle, to be competed for by candidates from schools situated in that circle. In November of each year (or some other month to be fixed by the Department), the examination shall be held simultaneously at certain centres previously selected. The examination papers shall be the same for all centres.

109. A scholarship may be reduced or withdrawn in cases of misconduct, of continued absence, or of failure to pass by the prescribed standards.

110. A scholarship may be transferred from one school to another with the sanction of the Department.

CHAPTER VIII.

REVISION OF THE CODE.

111. Subject to the confirmation of the Governor General in Council, the local Government may cancel or modify any articles of this Code, or may introduce new articles.

112. The schedules and notes appended to the Code shall have the same effect as the articles of the Code, and shall be subject to the provisions of article 111.

SCHEDULE I.

STANDARDS OF EXAMINATION (PRIMARY).

	Lower Division.		Upper Division.	
Subjects.	Standard I.	Standard II.	Standard III.	Standard IV.
	Elementary Subjects.			
(1) Reading* ...	To read a short paragraph from a book not confined to words of one syllable. *Accuracy of pronunciation to be considered.*	To read a short paragraph from an elementary reading-book.	To read a passage from a more advanced reading-book, or stories from English or Indian history. *Spelling to be tested.*	To read a short passage of prose or poetry from a more advanced reading-book.
(2) Writing† ...	To copy in manuscript characters a line of print; to write from dictation a few common words.	To write a passage of not more than three lines from the same book, slowly read over once, and then dictated word by word. *Before examination, the passage shall be read over again.* Copy-books to be shown.	To write six lines from one of the reading-books of the standard, slowly read over once, and then dictated a few words at a time. Copy-books to be shown, with improved writing.	To write eight lines from a reading-book slowly read over once, and then dictated in sections. Copy-books to be shown, with improved writing.
(3) Arithmetic‡	Notation and numeration up to 1,000. Simple addition and subtraction of numbers of not more than three figures. In addition, not more than five lines to be given. Multiplication table to 6 × 16.	Notation and numeration up to 100,000. The first three simple rules, and division by numbers not exceeding 12. Multiplication table to 12 × 16. Anna table to 100 annas.	The four simple rules. Addition and subtraction of English and Indian money. Multiplication table to 16 × 16. Pence table to 120 pence.	A.—The compound rules, and reduction in all weights and measures of common use. B (for boys only).—Easy examples of G. C. M. and L. C. M. Easy fractions, with denominators not over 20.
	Class Subjects.			
(4) English ...	To recite 10 lines of easy poetry, and to know their meaning.	To recite 20 lines of poetry, and to know their meaning. To point out nouns and verbs in the passages read or written.	To recite with intelligence and expression 30 lines of poetry. To point out nouns, verbs, adjectives, adverbs, and personal pronouns in the passages read or written.	To recite 40 lines of poetry, and to explain the words and allusions. Easy parsing; to point out the subject and predicate in a simple sentence; to form simple sentences illustrating the use of the parts of speech named in Standard III.
(5) Needlework‖ (for girls only).	Hemming; plain knitting with two needles.	Seaming; knitting with two needles, plain and purled rows alternately.	Frilling and pleating; plain knitting with four needles.	Stitching and sewing on strings; knitting with four needles, plain and purled rows alternately.
(6) Geography	.....	To name the points of the compass in the school room, and on a local or district map. Explanation of simple geographical terms by reference to a map.	The outlines of the geography of India by book and map. To draw on the slate a ground-plan of the school-room, showing the position of the furniture.	The outlines of the geography of Asia, and of the British Isles, by book and map. To draw a ground-plan of the school compound and the principal objects in it, with its approaches.
(7) Object Lessons.	Common objects; colour.	Common objects; their colours, shapes, and uses.	Habits and uses of domesticated animals.	General comparison of animals, vegetables, and minerals; common substances used in arts and manufactures.

N.B.—The clauses in italics apply to all succeeding standards.

* Reading with intelligence will be required in all the standards, and increased fluency and expression in successive years. In Standard III and upwards, two sets of reading-books should be provided, of which one should be historical or biographical. The Inspector may examine in any of these books, and may test the intelligence of the reading by questions on the meaning of what is read.

† The writing of Standards I and II may be on slates or paper, at the discretion of the Inspector. In Standards III and upwards it must be on paper.

‡(*a*) The Inspector may examine scholars in arithmetic in any standard lower than that in which they are presented, and in mental arithmetic suited to their respective standards. The object of the exercise in mental arithmetic is to encourage dexterity and correctness in computation; and to anticipate, by means of rapid and varied oral practice with small numbers, the longer problems which have to be worked out in writing. Such exercises should from the first deal with concrete as well as with abstract numbers.

(*b*) In those schools in which arithmetic is taught up to the fourth standard in a different order from that [illegible] the subjects in the first three standards may, with the previous sanction of the Inspector, be re-arranged accordingly.

‖ No grant will be given for a class-subject in any standard unless in boys' schools English, and in girls' schools needle-work is taken up.

In each standard a simple garment must be shown containing the stitches required in that and lower standards.

SCHEDULE I.

STANDARDS OF EXAMINATION (MIDDLE).

Subjects.	Standard V.	Standard VI.	Standard VII.
		Elementary Subjects.	
(1) Reading	To read a passage from a more advanced book. Allusions to be explained in the case of passages previously read. *Reading may be tested by passages from a newspaper, or from a book not comprised in the school course.*	To read a passage from a more advanced reading-book. Allusions to be explained in the case of passages previously read.	To read a passage from Shakspeare or Milton, or from a standard history of England or India.
(2) Writing	To write from memory the substance of a short story read out twice; spelling, hand-writing, and correct expression to be considered. (At the discretion of the Inspector, dictation may be substituted for the story.) Copy-books to be shown.	To write a short narrative or letter; spelling, hand-writing, and composition to be considered. Copy-books and exercise-books to be shown.	To write a letter or narrative, or a short essay on some subject comprised in the school course for the year. Exercise-books to be shown.
(3) Arithmetic. A.—For boys	Vulgar fractions (simple); proportion (simple); practice. *Progressive exercises in mental arithmetic.*	Vulgar and decimal fractions; proportion; interest.	Discount and stocks; exchange; averages and percentages; the metric system.
B.—For girls	G. C. M. and L. C. M.; vulgar fractions (simple); proportion (simple). *Progressive exercises in mental arithmetic.*	Vulgar fractions; proportion; practice; decimals (simple).	Vulgar and decimal fractions; proportion; interest.
		Class Subjects.*	
(4) English	To recite 60 lines of poetry or 30 lines of prose, and to explain the allusions.	To recite 80 lines of poetry or 40 lines of prose from a standard writer, and to explain the allusions.	To recite 100 lines from Shakspeare or Milton, or 50 lines of prose from a standard writer, and to explain the allusions.
	To parse and analyse a simple sentence, and to know the method of forming English nouns, adjectives, and verbs from each other.	To parse and analyse a short complex sentence, and to know the meaning and use of Latin prefixes in the formation of English words.	Grammar and analysis of sentences. Prefixes and terminations; easy derivations from Latin and Greek.
(5) Needlework (for girls only).	Herring-boning, and marking on coarse material; knitting socks or stockings; plain darning and mending stockings; patching old garments.	Gathering; stroking; setting-in; sewing on buttons and button-holing; knitting a full-sized stocking; improved darning and mending; cutting out plain under-garments.	Running tucks; whipping; setting-on frills; marking on finer materials; knitting a stocking with thickened heels; Swiss darning; cutting out any garment which can be made by children at this standard.
(6) Geography (including physical geography).	The outlines of the geography of Europe; special knowledge of the geography of India. To draw outline maps of the British Isles and India. Latitude and longitude; day and night.	The outlines of the geography of the world; special knowledge of the geography of the British Isles; maps of the great continents, of the British Isles (with greater detail), and of India; showing ranges of mountains, rivers, principal towns, and railways. General circumstances which determine climate; the seasons.	Special knowledge of European geography, with maps of the several European countries, showing the principal towns, rivers, and ranges of mountains. General arrangement of the planetary system; phases of the moon.
(7) History	The outlines of the history of India (British period).	The outlines of the history of India from Akbar. The outlines of the history of England from Elizabeth to Victoria.	The outlines of the history of India from the Mogul period, and of England from the Norman conquest.

N.B.—The clauses in italics apply to all succeeding standards.

* No grant will be given for a class-subject in any standard, unless in boys' schools English, and in girls' schools needle-work is taken up.

MIDDLE—*continued.*

Subjects.	Standard V.	Standard VI.	Standard VII.
(8) Mathematics.*	(1) Geometry; Euclid to I, 21	(1) Geometry; Euclid to the end of Book I. (2) Algebra; addition, subtraction, and multiplication.	(1) Geometry; Euclid, Books I and II. (2) Algebra; the first four rules, resolution into factors, H. C. D. and L. C. M.
(9) Elementary science.†	(*a*) General comparison of the chief divisions of the animal kingdom; *or* (*b*) gravitation, weight, and specific gravity.	(*a*) Distribution of animals; the races of mankind; *or* (*b*) the common pump, barometer, and thermometer; pulleys and levers.	(*a*) The build of the human body; names, positions, and functions of the organs of alimentation, circulation, and respiration; *or* (*b*) elementary properties of light and heat; construction of the steam-engine.
	SPECIAL SUBJECTS.		
(10) An Indian vernacular.‡	(1) To read and translate into English a passage selected by the Inspector from the book or portion of the book read during the year.	(1) Improved reading and translation into English. Translation into the vernacular of short and easy sentences selected by the Inspector.	(1) To read and translate a passage from a book not comprised in the school course. To translate, in writing, a short passage from an easy English reader.
	(2) To write the letters of the alphabet, and words of one or two syllables.	(2) To write, from the dictation of the teacher, an easy passage from the book or portion of the book read during the year.	(2) To write, from the dictation of the Inspector or teacher, a passage from a book not comprised in the school course.
	(3) Inflections of nouns and regular verbs.	(3) Inflections; easy syntax.	(3) Grammar.
(11) A European language.	*A.—Latin.* Grammar to the end of regular verbs. Translation of easy sentences into English.	*A.—Latin.* Irregular verbs and leading rules of syntax. Knowledge of a first reading-book; translation of simple English sentences.	*A.—Latin.* Grammar; Cæsar de Bello Gallico, Book I. Somewhat longer sentences to be translated from English.
	B.—French or German. Grammar to the end of regular verbs. Ten pages of an easy reader. To write from dictation a few common words.	*B.—French or German.* Inflexions and easy syntax. Improved reading and translation. Twenty pages of a conversation book approved by the Inspector. Dictation.	*B.—French or German.* Grammar: reading and translation of a text-book approved by the Inspector. Oral translation of easy sentences, with tolerable correctness of pronunciation. Easy letter-writing.
(12) Botany§	Characters of the root, stem, leaves, and parts of the flower, illustrated by specimens of common flowering plants. The phenomena of the movements of plants by twining, climbing, and catching hold of objects by tendrils or other contrivances.	The phenomena of the ripening of the flower into fruit. The various forms of fruits, and the structure of seeds, *e.g.*, a bean, and a grain of wheat or rice. The various contrivances to effect distribution. The phenomena of germination. The comparison of a fern and a moss with a flowering plant.	Structure of wood, bark, and pith; cells, vessels, and tissues. Functions of the stem, root, and leaves. The food of plants, and the manner in which a plant grows. The elements of classification according to natural characters, illustrated by familiar plants.
(13) Drawing.	Easy outlines (free-hand), straight and curved.	More difficult outlines. Shading.	Easy linear perspective, and drawing from models.

* In girls' schools mathematics may be taken up as a special subject.

† Instruction in the science subjects should be given mainly by experiment and illustration. If these subjects are taught to children by definition and verbal description only, such instruction will not be accepted as qualifying for a grant.

‡ An Indian vernacular may be taken as a class or as a special subject, the decision resting with the Department in the case of each school.

§ The instruction in botany shall be given, as far as possible, with the object of cultivating the scholar's powers of observation.

SCHEDULE I.

STANDARD OF EXAMINATION (HIGH).

(FINAL EXAMINATION.)

FOR BOYS ONLY.	FOR GIRLS ONLY.
Compulsory Subjects.	
1. English:—The matriculation standard, with the addition of a manual of English literature.	1. The same.
2. French *or* German.	2. The same.
3. Arithmetic and Book-keeping.	3. Arithmetic.
4. Mathematics:—Algebra as far as quadratic equations; Wilson's Geometry, Books I—V (new edition); Mensuration.	4. Elementary Physics, or a third language (French *or* German).
5. Political Economy. Commercial Geography.	5. A general sketch of European History. General and Physical Geography.
Optional Subjects.	
6. Mechanical Drawing	6. Free-hand Drawing.
7. Elementary Physics	7. Music (as in the final examination for pupil teachers, Schedule II).
8. Elementary Chemistry	8. Botany.

SCHEDULE II.

STANDARDS OF EXAMINATION FOR PUPIL TEACHERS.

Subjects of Examination.	End of first year.	End of second year.	End of third year.
Compulsory Subjects.			
1. English, including reading, writing, grammar, composition, and the explanation of passages.	1. Standard VII of Schedule I.	1. Recapitulation of the subjects of the first year, with the addition of a manual of English literature.	1.* The matriculation standard, with the addition of a manual of English literature.
2. A second language, namely, Latin or an Indian vernacular.	2. Ditto	2. A selected portion of the matriculation course for the following year.	2.* The matriculation standard.
French or German (*for girls only.*)	Ditto ...	A course prescribed by the Department.	
3. History and Geography.	3. Ditto	3. Recapitulation. A selected portion of the matriculation course in physical geography.	3.* The matriculation standard.
4. Mathematics :— (*a*) Arithmetic. (*b*) Geometry and Algebra.	4. Ditto	4. (*a*) The whole. (*b*) Euclid, Book III; Algebra, to simple equations.	4.* (*a*) The whole. (*b*) The matriculation standard.
or (*b*) Needlework (*for girls.*)	Ditto ...	(*b*) To cut out and make parts of any plain garment in common use. Knitting.	(*b*) The same.
Optional Subjects.			
1. Music	Notation; the treble and bass staves, and the relation between them. Time, simple common and simple triple The scales, major and minor, with the intervals (major and minor, perfect or other) found in both.	1. Notation; the alto and tenor staves, and their relation to the treble. Time, compound common and compound triple. Chromatic intervals of the minor scale. Transposition from one key to another, and from one variety of time to another (as from $\frac{3}{2}$ to $\frac{3}{4}$).	1. Classification of intervals, as perfect and imperfect, consonant and dissonant. Resolution of individual dissonant intervals. Rudiments of harmony; positions of chords, progression, inversion, discord of the dominant seventh in its direct form only.
2. Drawing	2. Standard VII of Schedule I.	2. Linear perspective and drawing from models.	2. The same; blackboard drawing.
3. An Indian vernacular (if not taken up for the second language).	3. Ditto	3. A selected portion of the matriculation course for the following year.	3. The matriculation standard.
Art of Teaching.			
	To teach a class to the satisfaction of the Inspector.	The same, and to show increased skill in instruction and discipline. To write notes of a lesson on some common object.	The same. To answer questions on the methods of teaching reading, writing, and arithmetic. The form of school registers, the mode of keeping them, and of making returns from them.

Note (1).—At the end of each year's course, the following certificates must be presented before admission to the examination :—

1. A certificate from the medical officer of the school that the pupil teacher has not suffered any failure of health likely to incapacitate him for the profession of a teacher.
2. A certificate of good conduct from the managers.
3. A certificate of punctuality, diligence, obedience, and attention to duty from the principal teacher.

Note (2).—Pupil teachers who have passed the Entrance examination of the University will not be examined in the subjects marked. *

SCHEDULE III.

TRAINING COLLEGES FOR MEN.

Subjects of Examination.

I.—Reading and Repetition from Memory.

First Year.

To read with distinct utterance, due attention to punctuation, and just expression.

Each student must have learned at least 200 consecutive lines of poetry from one of the works appointed for the year in English Literature, some of which he will be called upon to repeat at the annual examination of the Training College.

Second Year.

Candidates will be expected to show improvement in the higher qualities of reading, such as expression, modulation of voice, and the correct delivery of long or involved sentences.

Each student must have learned at least 100 consecutive lines of poetry and 100 consecutive lines of prose from the works appointed in English Literature, and will be called upon to repeat some part at the annual examination of the Training College.

II.—Penmanship.

First Year.

1. To write a specimen of the penmanship used in setting copies in text hand and small hand.
2. To write a passage from dictation.

Second Year.

As in the first year, but defects more severely visited with loss of marks. Also, to set copies upon the black-board.

Note.—In examining the papers of the candidates attention will be paid to the character of the handwriting and the accuracy of the spelling.

III.—School Management.

First Year.

1. To answer questions on the best methods of instruction in reading, spelling, writing, arithmetic, and other common subjects of elementary education, both generally and with special reference to the development of the intelligence of children.
2. To answer questions on the art of oral teaching generally.
3. To write notes of a lesson for a primary school, and to teach a class.

Second Year.

1. To teach a class in the presence of the Inspector, in any standard up to VII.
2. To answer questions in writing on the following subjects:—
   (*a*) The different methods of organising an elementary school.
   (*b*) The form of school registers, the mode of keeping them, and of making returns from them.
   (*c*) The mode of teaching geography, history, and grammar, both generally and with special reference to the development of the intelligence of children.
3. To answer questions on the principles of education.

IV.—English Literature, Grammar, and Composition.

(Text-books in prose and poetry will be appointed from year to year.)

First Year.

1. To answer questions on the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry taken from one of the appointed text-books; or
   To write an essay on a given subject.
3. Précis writing.

Second Year.

1. To answer questions on the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry.
3. To write an essay on a given subject.

V.—Geography.

First Year.

1. The elements of geography, mathematical and physical.
2. To draw a map of the four quarters of the globe, of each country in Europe, and of India (those of England and India in greater detail).
3. The physical and political geography of Europe.
4. The physical and political geography of India in detail.

Second Year.

1. The geography, physical, political, and commercial, of Great Britain and its dependencies.
2. To draw maps readily and correctly upon the black-board.

VI.—History.

First Year.

1. General outlines of English history.
2. General outlines of Indian history.
3. The history of India; British period in greater detail.

Second Year.

1. General outlines of the history of Greece and Rome.
2. Elementary questions on Political Economy.

VII.—Mathematics.

First Year.

1. Arithmetic, including mental arithmetic.
2. Algebra, as far as the theory of quadratic equations.
3. Geometry; easy problems on the geometry of the point, straight line, and circle. (Wilson, Books I—III; edition of 1881.)
4. Mensuration of plane surfaces, including the theory of surveying with the chain.

Second Year.

1. Algebra, as far as the binomial theorem.
2. Geometry; easy problems in the geometry of the point, straight line, and circle, including proportion. (Wilson, Books I—V; edition of 1881.)
3. Plane Trigonometry, as far as the solution of triangles.

VIII.—A Second Language (Latin or an Indian Vernacular.)

First Year.

1. Passages for translation into English from two books to be named beforehand. Questions on grammar and idiom.
2. Easy passages of English to be translated into the second language.

Second Year.

1. Passages for translation into English from two books to be named beforehand. Explanation of passages; questions on grammar and idiom.
2. Translation of a passage from an author not previously named.
3. Translation from English into the second language.

Note.—The foregoing eight subjects are compulsory. Any of the following may also be presented.

IX.—Music.

First Year.

1. Notation; the treble and bass staves and the relations between them.
2. Time; simple common and simple triple.
3. The scales, major and minor, with the intervals (major and minor, perfect or other) found in both, and the chromatic intervals found in the latter.
4. Transposition from one key to another and transcription from one variety of time to another (as from $\frac{3}{2}$ to $\frac{3}{4}$).

Second Year.

1. Notation; the alto and tenor staves, and their relations to the treble and bass.
2. Time; compound common and compound triple.
3. Classification of intervals, as perfect and imperfect, consonant and dissonant.
4. Resolution of individual dissonant intervals.
5. Rudiments of harmony, positions of chords, progression, inversion, discords by suspension (on fundamental basses only), the discord of the dominant seventh (in its direct form only).

X.—Drawing.

First Year.

Free-hand drawing, from copies and models.

Second Year.

Practical geometry, perspective, and projections.

XI.—A Third Language.

1. For candidates who have taken Latin:—an Indian Vernacular, French, German, or Greek.
2. For candidates who have taken an Indian Vernacular:—Latin, French, German, or Greek.

Subjects of examination in the first and second year as under VIII.

XII.—Physics.

The subjects of the First Arts Course of the Calcutta University.

TRAINING COLLEGES FOR WOMEN.

Subjects of Examination.

I.—Reading and Repetition from Memory.

First Year.

To read with distinct utterance, due attention to punctuation, and just expression.

Each student must have learned at least 200 consecutive lines of poetry from some work selected by the authorities of the College, with the approval of the Inspector; a part of which she will be required to repeat at the annual inspection of the Training College.

Second Year.

Candidates will be expected to show improvement in the higher qualities of reading, such as expression, modulation of voice, and the correct delivery of long or involved sentences.

Each student must have learned, in addition to what she has learned in the first year, at least 100 consecutive lines of poetry and 100 consecutive lines of prose from works selected by the authorities of the College, with the approval of the Inspector; and she will be required to repeat some part at the annual inspection of the Training College.

II.—Penmanship.

First Year.

1. To write a specimen of the penmanship used in setting copies in text hand and small hand.
2. To write a passage from dictation.

Second Year.

As in the first year, but defects more severely visited with loss of marks. Also, to set copies upon the black-board.

Note.—In examining the papers of the candidates, attention will be paid to the character of the handwriting and the accuracy of the spelling.

III.—School Management.

First Year.

1. The methods and principles of elementary teaching, both generally and with special reference to the development of the intelligence of children.
2. To write notes of a lesson for a primary school, and to teach a class.
3. To answer questions on the form of school registers, the mode of keeping them, and of making returns from them.
4. Special questions on the following subjects will be inserted in the papers for those candidates who desire to obtain special certificates as teachers of infants:—
   (*a*) The method of teaching infants and of conducting an infant school.
   (*b*) Notes of object lessons, such as common domestic processes, functions of the human body; common plants, animals, and minerals, their appearance and use.

Second Year.

1. To teach a class in the presence of the Inspector.
2. To answer questions in writing on the following subjects:—

(*a*) The different methods of organizing an elementary school.
(*b*) The form of school registers, the mode of keeping them, and of making returns from them.

IV.—English Literature, Grammar, and Composition.

(Text-books in prose and poetry will be appointed from year to year.)

First Year.

1. To answer questions in the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry taken from one of the appointed text-books; or
To write an essay on a given subject.
3. Précis writing.

Second Year.

1. To answer questions on the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry.
3. To write an essay on a given subject.

V.—Geography.

First Year.

1. The elements of geography, mathematical and physical
2. To draw a map of the four quarters of the globe, of each country in Europe, and of India (those of England and India in greater detail).
3. The physical and political geography of Europe.
4. The physical and political geography of India in detail.

Second Year.

1. The physical, political, and commercial geography of Great Britain and its dependencies.
2. To draw maps readily and correctly upon the black-board.

VI.—History.

First Year.

1. General outlines of English history.
2. General outlines of Indian history.
3. The history of India, British period in greater detail.

Second Year.

A special period of English history.

VII.—Arithmetic.

The whole subject, with special reference to the methods of teaching it.

VIII.—Needle-work.

First Year.

1. To cut out and make parts of any plain garment in common use.
2. Knitting.

Second Year.

Domestic needle-work in all its branches.

IX.—Domestic Economy.

First Year.

1. Rules for the preservation of health.
2. Clothing.
3. Food, and its preparation.

Second Year.

In addition to the subjects of the first year:—
4. Household accounts and management.
5. Sick-room management.

Note.—The foregoing nine subjects are compulsory. Any of the following may also be presented.

X.—Music.

First Year.

1. Notation; the treble and bass staves, and the relation between them.
2. Time; simple common and simple triple.
3. The scales, major and minor, with the intervals (major and minor, simple or other) found in both, and the chromatic intervals found in the latter.
4. Transposition from one key to another, and transcription from one variety of time to another (as from $\frac{3}{4}$ to $\frac{3}{4}$.)

Second Year.

1. Notation; the alto and tenor staves, and their relations to the treble and bass.
2. Time; compound common and compound triple.
3. Classification of intervals, as perfect and imperfect, consonant and dissonant.
4. Resolution of individual dissonant intervals.
5. Rudiments of harmony; positions of chords, progression, inversion, discords by suspension (on fundamental basses only); the discord of the dominant seventh (in its direct form only).

XI.—Drawing.

First Year.

Free-hand drawing, from copies and models.

Second Year.

Perspective; landscape drawing.

XII.—Second Language. (French, German, Latin, or an Indian Vernacular.)

First Year.

1. Passages for translation into English from two books to be named beforehand. Questions on grammar and idiom.
2. Easy passages of English to be translated into the second language.

Second Year.

1. Passages for translation into English from two books to be named beforehand. Explanation of passages; questions on grammar and idiom.
2. Translation of a passage from an author not previously named.
3. Translation from English into the second language.

XIII.—Mathematics.

First Year.

1. Algebra, as far as simple equations.
2. Geometry; the first two books of Euclid.

Second Year.

In addition to the subjects of the first year—
1. Algebra; ratio and proportion.
2. Geometry; the third and fourth books of Euclid.

Page 1.

SCHOLAR'S REGISTER.

_____ (Name of child)

residing at _____

was born at _____

on the _____ day of _____ 18_____, as certified

by _____

Signed _____

(1) _____

(1).—To be signed by the principal teacher, the secretary, or one of the managers of the school.

N.B.—This book, on the child's admission to an aided school, is to be given to the teacher, who will keep it, and at the end of every school year make an entry of the child's attendance (after 3 years of age). At each annual examination, the Inspector will make an entry showing the subjects in which the child has been examined, and those in which he has passed. The book will be given back, duly made up, when the child leaves the school.

Page 4.

Certificate in accordance with Article 22, *Note* 3 *of the Code* :—"When a scholar has been transferred from one school to another in the course of the year, his attendance at the former school will not be counted unless his scholar's register shows that he has been transferred with the permission of the manager of that school.

_____

Certified* that _____ has been withdrawn from the

_____ school with the consent of the managers.

_____ Head Master.

* This certificate is to be repeated in the above form for every subsequent transfer

GOVERNMENT OF INDIA,

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 22nd December, 1882.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore Bahádur, K.C.S.I.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble R. Miller.

NEW MEMBER.

The Hon'ble R. MILLER took his seat as an Additional Member.

DEKKHAN AGRICULTURISTS' RELIEF ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. HOPE moved that the Report of the Select Committee on the Bill to amend the Dekkhan Agriculturists' Relief Act, 1879, be taken into consideration. In doing so he said he did not think it was necessary to trouble the Council with any lengthy remarks at present, as he had already on a previous occasion given a somewhat full account of the objects which this Bill proposed to secure, and he had subsequently also explained certain modifications which the Select Committee proposed to make. A complete statement of the modifications they finally recommended would be found in the report of the Select Committee which was last printed, and it was so full that he did not think that any speech which he could make would explain more clearly to the Council than that document did the changes which had been made and the reasons which had rendered those changes necessary. He would only add that the Committee had done their best to give effect to the suggestions made by the Local Government, which, in a purely local Bill of this nature, was the best qualified to decide on matters of detail, and that they had also given their most careful consideration to the whole of the remarks contained in the communications and memorials which had been received from the outside public.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS moved that after section 10 of the Bill the following section be inserted:—

Amendment of section 40. (Power of Conciliator to compel attendance.)

"11. In section forty, for the word 'invite' the word 'direct' shall be substituted; and for the second clause the following shall be substituted, namely:—

"'Any person who, without sufficient excuse, fails to attend or be present as directed under this section shall be deemed to have committed an offence under section 174 of the Indian Penal Code.'"

This clause, he said, had been excluded at the last meeting of the Select Committee, at which he was unable to be present, by the casting vote of the President, and, as it was a matter of considerable importance, it was thought advisable to place the amendment before the Council. On looking at the papers which had been circulated to the members of the Council, it would be seen that the question of compelling the attendance of the opposite party before the arbitrator was regarded as one of considerable importance. The Local Government advised that the power should be granted, and the Special Judge also thought that such a course would be judicious, although he had some doubt as to the best mode of carrying it into effect. Dr. Pollen showed that, when both parties appeared, fifty per cent. of the cases were amicably settled, and the Puna Sarvajanik Sabhá had forwarded a memorial, passed by a general meeting of the inhabitants of Puna, in which they accepted the alteration, only they thought the penalty should be made more stringent. He therefore thought the change was a desirable one, and he would propose that it should be adopted.

The Hon'ble MR. HUNTER said:—"My Lord, I should be sorry to impede in any way the passing of the Bill as revised by the Select Committee. But in the Report of that Committee I read the following words:—'We have, after a very full consideration of the arguments adduced on both sides, struck out the 11th section of the Bill as introduced, which would have empowered a Conciliator, whose assistance is invoked by one party to a dispute, to compel the attendance of the opposite party. The majority of us think it safer not to confer such a power at present.' The present amendment seeks to restore the *ipsissima verba* of the section thus rejected. The punitive sanctions which it creates, seem to go beyond the intention of the Legislature in framing the original Act. The question as to whether attendance on Conciliators should be made compulsory was considered when the original Act was under discussion, and it was decided that such attendance should be left optional. The question has again been considered by the Select Committee to which the present Bill was referred, and after a full examination of the arguments on both sides, the proposal to make such attendance compulsory was rejected. I feel sure, my Lord, that reasons must exist for now proposing to grant punitive sanctions which have been thus repeatedly and deliberately refused. But I hope that the Hon'ble Member in charge of the Bill will favour the Council with a statement of those reasons; and that any Member of the Select Committee who may have altered his opinion, since he signed the Report, will acquaint us with the arguments that have led to his doing so."

The Hon'ble MR. CROSTHWAITE said that, as one of the members of the Select Committee, and as being in part responsible for the rejection of this amendment by the Committee, he thought it necessary to state his reasons for his opinion. In the first place, this amendment differed entirely from any of the other amendments which had been made in the Bill. He was quite ready to agree, and he thought the Council ought to agree, to any amendment which might be necessary to make the intention of the original Act clear. But the amendment now before the Council went beyond the intention of the original Act, and authorized a system of conciliation which the Legislative Council in passing it did not intend. The question whether attendance on the Conciliators should be made compulsory was considered by the Bombay Government before

the Act was passed, and it was decided in the negative after careful consideration by the then Government of Bombay. The then Governor wrote that, having carefully considered the question whether the raiyat should be compelled to attend before the Conciliators, he thought that he should not be so compelled.

"If the Conciliation Judge had the power of compelling the attendance of the raiyat to answer the money-lender's claim, he, the Judge, would have a power which would be liable to abuse. Though he would not have the power of deciding, or enforcing his decision if he formed one, still he would, by compelling attendance, be able, if so disposed, to put great pressure on the raiyat to compromise the claim. Such power of applying pressure by an educated man of position upon an uneducated and humble man, or a claim preferred by a man generally of some education and wealth, is a power that ought not to be conferred upon honorary Conciliation Judges in the present state of society in the Dekkhan. I state this with confidence, appealing to the knowledge of those who are acquainted with the Native gentry of the Dekkhan, from among whom the Conciliation Judges would have to be selected."

This view of the matter was accepted by the Legislative Council in 1879, and, if not actually accepted, was acquiesced in by the Hon'ble Member who was the distinguished author of the Act. But what had happened after that with regard to the system of conciliation? It would be in the recollection of the Council that the original Act provided that no police-officer should be appointed a Conciliator. Apparently, that provision was intended to include, or rather to exclude, the village-officers called police-patéls from being Conciliators. Afterwards, in 1881, the Government of Bombay having, MR. CROSTHWAITE supposed, found out that this exclusion was inconvenient, and being unable to find a sufficient number of Conciliators without having recourse to the services of police-patéls, this Council was asked to amend the Act, and then his hon'ble friend Mr. Gibbs asked the Council to say that the words "officer of police" in the original Act should not be deemed to include the village-patél. The village-patél as represented by Sir Richard Temple and the Hon'ble Mr. Hope in 1879 was a person who ought not to be entrusted with the administration of cases between money-lenders and raiyats.

Speaking of the appointment of patéls to be village-munsifs, Sir Richard Temple advocated the measure, and explained that the village-tribunals would have nothing to do with affairs between raiyats and money-lenders—a class of cases, he added, with which they would be utterly unfitted to deal; and the Hon'ble Mr. Hope, speaking in relation to the same matter—the appointment of the headmen to be village-munsifs—said in 1879, "there is this further difficulty in their case, that the bulk of our petty suits are brought by money-lenders with whom the patél would too often be, by want of education or by absolute interest, unqualified to cope."

Accordingly, it was understood at that time that these patéls were not to be Conciliators, but now by the alteration made in the law in 1881 they could be appointed Conciliators, and, MR. CROSTHWAITE supposed, had been so appointed in many instances by the Bombay Government. Therefore, he thought it fair to infer that the class of men who could be appointed Conciliators at present were not a higher class of persons than those in respect of whom the legislation of 1879 was enacted, but that they might absolutely include a class which was declared at that time to be unfitted to deal with cases in which raiyats and money-lenders were concerned. Now, the Council was called upon to go a step further and reverse the decision it had come to in 1879, and to make failure to attend before the Conciliators penal. MR. CROSTHWAITE thought, under these circumstances, they should proceed with great caution. They ought to have before them full information as to the real working of this measure of conciliation, and as to whether the abuses which Sir Richard Temple anticipated had occurred. In a note by the Hon'ble Mr. Hope which had been put before the Council as Paper No. 1 relating to the Bill, and in several other papers connected with this Bill, reference was made to a report of Dr. Pollen, and quotations were made from that report which showed that the system of conciliation had on the whole worked very well. MR. CROSTHWAITE had no fault to find with those quotations, but he thought it necessary, as Dr. Pollen's report had not been placed before the Council, to quote at greater length than the

Hon'ble Mr. Hope had done what Dr. Pollen said on the other side of the question; and if the quotations which were already before the Council were read in connection with the quotations which MR. CROSTHWAITE would make, he thought the Council would then be placed in a position to arrive at a fair understanding of Dr. Pollen's meaning. The Special Judge said:—

"The chief objection I have to the system is that it tends to encourage collusive agreements and to nullify to a great extent one of the principal objects of the Act, namely, the relief from debt of the indebted agriculturists, by the facilities which it affords for evading that searching enquiry into the merits of each transaction which to my mind is the most important means of relief afforded by the Act. There are many conscientious and zealous Conciliators who seek to probe the true merits of each case, and who use all their influence to persuade the parties to come to an equitable compromise. Other Conciliators are more easy-going, and such persons are apt to be made mere registrars for giving legal sanction to the claims presented to them. Large number of conciliation-agreements are little better than mere renewal bonds supplanting old deeds. In former reports I have enlarged upon this subject, and it will here suffice thus briefly to refer to my views. I have only to mention in this connection a new practice which seems to be growing up in some places. When a loan is being negotiated, in order to avoid the trouble and expense of writing out a bond on stamped paper and of having it formally registered by a Village-Registrar, the parties go before a Conciliator. The creditor makes a demand. The debtor admits the debt and promises to pay in certain sums and at certain times as may have been fixed upon. The Conciliator takes down the agreement in writing. It is signed by the parties. It is then sent to Court and takes effect as a decree. The dispute and the pleadings are a kind of legal fiction to give the Conciliator jurisdiction. The lender thus gets what is equivalent not only to a registered bond, but to a registered bond with a decree cut and dry already tacked thereto, and this he gets, without stamped paper, registration or litigation—by the mere collusion or consent of the borrower. In this way the stamp and registration laws are easily evaded. I do not think a state of things like this was ever contemplated. It does not, however, appear illegal."

The Bombay Government, in commenting on Dr. Pollen's report in paragraph 17 of their resolution, wrote as follows:—

"The merits and defects of the system of conciliation are impartially stated at length in paragraph 44 of the report. It is satisfactory to learn that both Mr. Ranadé and Mr. Bhede testify to the usefulness of the system, and that the Special Judge is himself of opinion that, where the Conciliators are efficient, the system may fairly be held to have done much good. But His Excellency in Council considers that it would be still too early to pronounce a definite opinion on the success of this system. The irregular practice referred to at the end of paragraph 44 requires careful watching. The mere fact that it is possible under the existing law to obtain what is equivalent to a registered bond with a decree attached by means of a collusive dispute before a Conciliator, and without registration, stamp or litigation, shows the necessity of careful supervision."

That being the state of the case, the Council should consider to what extent abuses of this kind might possibly extend. It appeared from the returns attached to Dr. Pollen's report that there were something like 70,000 applications made to the Conciliators last year, and in 25,000 of these cases the party invited to attend (who, Mr. CROSTHWAITE presumed, would generally be the raiyat) neglected or refused to appear. Possibly, the effect of the amendment which the Hon'ble Mr. Gibbs had proposed would be that these 25,000 persons might be compelled to attend. But, before they authorized such a measure of compulsion, the Council ought distinctly to know that no such abuses as had been pointed out by Dr. Pollen had taken place, or were likely to take place. And information to that effect was not before the Council. His hon'ble friend Mr. Hope, when the Act was passed, stated his belief that, if the decisions of the Conciliators were just and equitable, the parties would attend. Mr. CROSTHWAITE perfectly agreed in that expression of opinion, and he believed, if time was given, it would be found that confidence would grow up, and that before a just Conciliator the parties would attend, but before an unjust one they would not attend; which was the result they must all wish to see attained. But there had not been sufficient time to ascertain the effect of the Act, as it had been in force a very short time. The report of Dr. Pollen was not before the Council; but it had been seen from the passages now quoted that even he spoke in a dubious manner on the subject, and that the Bombay Government re-echoed his tone.

The Council would no doubt be told that what had been done was exactly in accordance with the French law, from which this system was borrowed.

But MR. CROSTHWAITE, on looking into the matter, had found some very material differences between the two laws. He had quoted Dr. Pollen to show the force which a decree given by the Conciliators had: it had the effect of an unappealable decree. A man might go before a Conciliator and mortgage his property on most unconscionable terms, and there was no appeal from the agreement so made. If MR. CROSTHWAITE wanted to upset the Act altogether, this was the very provision which he would introduce. Notwithstanding the clauses forcing the Courts to go behind the bond, the money-lenders were provided with the means of evading those wholesome provisions of the Act. It might be said that the Government could watch the working of this conciliation-system and prevent its abuse. But we had to deal with very clever people, who had their whole attention directed to the matter, and they would soon find out how to evade the law. He was firmly of opinion that the introduction of the proposed clause, together with the extraordinary force given to agreements made before a Conciliator, would virtually upset the intention of the Act if its operation was not very carefully watched. Under the French law, the agreement in a Conciliation Court had no such power as the Act gave to it. It was merely an authenticated private agreement, by which no lien on real property could be created: and if the parties wished to enforce it, they had to go before the Courts. Neither had the Council a precedent in the French law in the matter of the penalty which it was proposed to attach to non-attendance before the Conciliator. The French law merely provided that, if either of the parties did not choose to attend, he was liable to pay a fine of ten francs, and that fine could be imposed only by the Court of first instance before which the case might ultimately come. If the fine was not paid, that Court might refuse to hear the defaulting party's suit if he was a plaintiff, or might give a decree against him without hearing his defence if he was a defendant. This was very different from what was now proposed.

The only other argument likely to be brought in support of the amendment was what he might call the confidence argument. It was said that this Council was now dealing with a local question, and ought to accept the recommendations of the Local Government. MR. CROSTHWAITE was quite prepared to act to a certain extent on that principle, but he thought that in this instance it was carried too far. He thought that their confidence must be tempered with discretion. When, having already confided in the Bombay Government of 1879, which was against the conferment of power to compel attendance before the Conciliators, he was now asked to place confidence in the Bombay Government of 1882, which asked that the power might be conferred, he felt himself very much in the position of the patriarch when he was called upon to give a second blessing. The Council had already given their confidence to the Bombay Government in 1879, and if that Government now wished them to adopt a different course, it should afford the Council very strong reasons for changing their opinion; and that had not been done. He held a strong opinion on this point, and he thought that, before the Council proceeded to make attendance upon Conciliators compulsory, they ought to have greater experience of the working of the Act and a certain assurance that those abuses (which, he must confess, he considered gross abuses) to which Dr. Pollen had referred were not likely to recur.

He would therefore vote against the amendment.

The Hon'ble MR. HOPE said it would be necessary for him to reply to the running fire of objections which had been brought to bear upon him by a somewhat similar series of rather curt replies, because, as regarded some of the points raised, if he were to resort to the means of answering them fully which were at his disposal, it would lead him to draw largely from the bulky volume which was in his hand and from one or two more which he had under the table; and, if he attempted to do so, he would be obliged to trespass very largely upon the time of the Council. As, however, he did not think the Council would consider such a tedious course to be necessary, he should be obliged to give replies which must necessarily appear to be of a somewhat dogmatic character. One of

the objections which had been taken was that the effect of the amendment would be to go beyond the intention of the original Act, and was therefore inadmissible, since it was recognised on all hands that, in the legislation now before the Council, it was not intended to interfere in any degree whatever with the principles of that Act. But he ventured altogether to deny that the amendment went in any way beyond the scope and intention of the Act. The Act might be said to comprise both main principles and detailed provisions by which those principles were to be carried out. Starting with the previous litigation was a very ruinous as well as a very tedious process for all parties. The principle of conciliation was that the two persons at issue, who both, or, at any rate, one of them, were supposed to be more or less wrong-headed, should be brought in the first instance before a person of greater intelligence and better position, and of certainly more calm mind than either,—a person who was able to give them good advice; and that they should then be left to decide whether they would take it or carry on the war to the bitter end. Any measure, therefore, which was calculated to allow that principle full play was within the intention of the original Act. The present proposal was to be looked upon as a mere detail of machinery for carrying out that intention fairly on a point in which that machinery had been found to fail; and he could, with little trouble, point out to the Council various amendments of a similar character which had been made without any objection by the Bill of last year. The point in which the original intention of the Act had failed was simply this, that whereas it was intended that both the parties should appear before an intelligent person, who would, if possible, bring them to terms, it was found in practice that, in a large proportion of the total number of cases, one of the parties did not so come before the Conciliator; and, consequently, the conciliation, which the law intended to take place before litigation was resorted to, had no chance of coming into play.

As to the next objection which was taken to the Bill, it was raised by the Hon'ble Member who spoke first in the debate, and MR. HOPE thought it was also embodied in substance in the remarks which fell from his hon'ble friend Mr. Crosthwaite. It was said that, when the original Act was under consideration, the Government of Bombay was opposed to conferring upon Conciliators the power which the amendment now proposed to give them, and quotations were made in support of that statement from a minute written by Sir Richard Temple, in which he said that he thought the power was liable to abuse, and that the Conciliator might put great pressure on the raiyat in order to induce him to compromise the claim in favour of the money-lender. It was likewise said that the refusal on the part of the Bombay Government to confer upon the Conciliator the power of summoning the defendant had been accepted by the Council as well as by himself. Thirdly, it was pointed out that, as regarded police-patéls, he himself had said, in a certain note which he had written, that he did not think it was desirable to impose upon the police-patéls in the Dekkhan the responsibility of deciding certain cases.

With regard to these three points, which he had briefly, but he hoped not incorrectly, enunciated, he would remark that the Council were now in the year 1882 and not in the year 1879, and that they might therefore at present very well grant a power, though in 1879 they had no sufficient warrant for doing so. Again, without laying too much stress on technicalities, he might say that the only way in which the refusal had been accepted was a demi-official way, in the course of the private consideration given to the subject by the Executive Government. So far as he recollected, the subject never came up before the Legislative Council. As to the particular question of police-patéls, he must point out that his note was on a totally different subject, and what he there said was, that he did not think it was desirable to impose upon the hardworked patéls of the Dekkhan the duty of acting as judges in all civil suits exceeding Rs. 10 in value. He had never said that they might not be trusted to exercise the power of bringing two wrong-headed people together with a view to enter into a compromise, and he objected to that inference being drawn from his note or to its being used for such a purpose.

The Hon'ble MR. CROSTHWAITE here observed that he had said that the quotation referred to the different matter of village-munsifs.

MR. HOPE said that this was so, but then what became of the applicability of the quotation? Either it applied to this case, or it did not. If not, then the remarks by his hon'ble friend must be held to come under the stricture of total irrelevance.

However, passing from the observation that the Council were now legislating in the year 1882 and not in 1879, he would proceed to the demand which had been made for fuller information to prove that certain abuses had not occurred. Reference had been made to certain quotations which were given in the note which he had written on Dr. Pollen's report, and it was said that, if they were read with certain other quotations from the latter document which he had not given, a very different view of the question from his would probably be justified. He would here remark that he *did* in that note also say as follows:—

"While thus quoting Dr. Pollen against himself, it is only fair to invite perusal of his 43rd and 44th paragraphs, in which he objects to the system that there is in it no guarantee against claims purposely enhanced in order to make the remissions imposing, against collusive agreements, or for that thorough investigation into the true merits of each transaction which could be secured by the application of the law in the Civil Courts."

MR. HOPE did not for a moment suppose that his hon'ble friend meant to imply that Dr. Pollen was not quoted with fairness, but, having supplemented his statement by the words out of his note which MR. HOPE had just read, he would remark that the whole of this matter was outside the present question. The issue which the whole of Dr. Pollen's remarks, taken together, really raised was, whether conciliation, on the whole, was a good thing or not. Dr. Pollen was an able and thoroughly trained judicial officer, and his general opinion was that no authority, except the regular Civil Courts, was fit to investigate matters of this sort; he considered, on the whole, that any procedure by way of conciliation was unsatisfactory, and that the Courts would do the work much better. In carrying out the system of conciliation, his recommendations would be directed towards bringing the Conciliators under the fetters of the law, and attaching to them the restrictions imposed on the Civil Courts. MR. HOPE was not now called upon to defend the principle of conciliation, because it was not proposed to touch it in the present Bill. On the other hand, he thought that the demand to show that abuses had not occurred was an exceedingly fair and reasonable one. In answer to that demand, he could only say, in the first place, that no general complaints had been received from any portion of these districts that the Conciliators had abused the power which had been entrusted to them. No such complaint had been made in any of the memorials which were before the Council, nor had it ever reached him from outside. As to the statement made by Dr. Pollen, that certain objectionable agreements might be made before the Conciliator, and that renewal-bonds might be substituted for the existing ones, all MR. HOPE could at present produce in answer to it were certain statistics which he intended to refer to at a later period of the debate, and in which it was shown that the greater number of bonds were not renewal-bonds but records of original transactions between the parties. He thought, therefore, that there was nothing to show that that particular form of abuse had prevailed to any great extent. Then, another argument which had been brought forward in proof that abuses must exist was this, that he himself had said that, if the Conciliators' Courts were good, the people would themselves resort to them, and that, if they were not, they would stay away; and it was inferred, from the large number of refusals or neglects to attend, that the people were dissatisfied with the system. MR. HOPE found that neither this argument nor the facts would bear that inference. As regarded the people failing to attend before the Conciliator, it was shown in the reports that it was not always the raiyat who stayed away, but the complainant, the saukár himself, who, having brought his complaint before the Conciliator, did not appear to press it, the reason being that he merely sought to use this process as a screw *in terrorem*. But, granting that there was a large proportion of raiyats who did not attend before the Conciliator, there was

another answer, which was that there was no security that the raiyat had ever received the summons to attend. If the argument from Sir Richard Temple which was put forward was held to be good, and if it was to be supposed that the Conciliators would use their powers in favour of the saukárs, then that at once afforded a good reason why the Conciliator and the saukár between them should take uncommon good care that the raiyat heard nothing about the application. The saukár usually did not want conciliation at all. Therefore, nothing could be inferred from the mere absence of the parties. Nor was there any inconsistence between the present motion and the remarks which he had made on a former occasion, and to which reference had this day been made. The most probable reason, if he might venture to suggest one, for the non-attendance of the parties was a combination of all these reasons together. There might be certain cases in which the saukárs succeeded in preventing the attendance of the raiyat; there might be some cases in which the raiyat took no trouble to attend; and there might be others in which he had never heard of the application made to the Conciliator. The objections now made were of exactly the same character as those which were taken to the provision in the Bill of 1879, that the defendant should be obliged to attend; yet they now knew that that provision had produced the very best effect.

He would now pass on to another point, namely, the remarks which had been made with reference to the French system. It was said that the system inaugurated by the Dekkhan Agriculturists' Relief Act differed from the French system, because in France the parties might appear before the Courts to contest an agreement made before a Conciliator, whereas here it had the effect of an unappealable decree. His answer to that was, that here also, before an agreement could take effect, the parties were allowed to appear before the Court, and they received ample notice that they might do so. The Act required the Conciliator to forward the agreement to the Court of the Subordinate Judge, notice was issued to the parties to show cause within one month why the agreement should not take effect as a decree, and rules were framed taking the utmost possible precautions to ensure the notice reaching the parties. It was said that these were "unappealable decrees," but to that statement MR. HOPE begged altogether to demur. These proceedings were entirely open to revision under Chapter VII of the Dekkhan Raiyats' Act. Under that chapter, the special Judge was empowered to transfer applications from one Conciliator to another in cases in which he had reason to believe that injustice was likely to be done, and in every way the proceedings could be rectified, under the revisional power given, if there was anything very gross or wrong in them. Finally, it was said that the fine imposed under the French law was only ten francs, and that that could not be imposed by the Conciliator. To that MR. HOPE would reply that here the fine could not be imposed by the Conciliator either. The amendment merely rendered a person disobeying a summons to attend before a Conciliator liable to the same fine to which every person is liable for not attending on the lawful summons of a Court of Justice. Proceedings would have to be taken before a Magistrate for the adjudication of the fine, and the Conciliator would have nothing to do with its imposition.

He hoped that by these remarks he had succeeded in showing, first, that the amendment was not beyond the original intention of the Act; secondly that the Council were perfectly at liberty now to provide new details of machinery for carrying out that intention, which they did not feel justified in providing in 1879; thirdly, that there was no proof that any abuses had arisen, or were likely to arise, in the working of the Act, or that any of the precautions against abuse which had been provided were insufficient. Also that no extraordinary power was asked for the Conciliators, and no special hardship was likely to occur from the exercise of that which it was proposed to confer on them.

Lastly, he would refer to the "confidence argument" which had been objected to by his friend the Hon'ble Mr. Crosthwaite. It should be remembered that on this question this Legislative Council was, for technical reasons,

obliged to legislate, instead of the discussion and settlement of the matter being left to the local legislature. That being so, he thought that in this matter the Council might place the same confidence in the judgment of the present Local Government as it might be seen from the debates had been placed in the Local Government of 1879; especially might they do so in a matter in regard to which the Government of Bombay was in close communication with the local authorities to whom the duty of administering the law had been entrusted, and had also the advantage of watching closely the comments of the local Press. But there was another form of the confidence argument to which he would refer, and that was, that, at the time the conciliation-system and the village-munsifs were proposed, he had to undergo considerable opposition on the ground that there were no fit men available for the discharge of the duties which it was proposed to impose upon them. The line of argument MR. HOPE then took was more generous and, he was glad to say, had been proved more just, with regard to the integrity and the capacity of the Natives of India. He then said that, to his own personal knowledge, there were a considerable number of Native gentlemen who would be found quite fitted to exercise the small amount of authority proposed to be conferred upon them by the Act. He was glad to say that these anticipations had been fully justified. There were at present upwards of three hundred Conciliators, and, after making due allowance for the incompetence or even for the misconduct of a few, if such really were necessary,—he thought only two or three had been removed from office,—the experience which these gentlemen brought to the performance of their duties, and the general satisfaction in which their proceedings were held, amply justified the confidence which was reposed in them. He, therefore, saw no reason why the Council should hesitate for a moment to confer upon them the small additional power which was now proposed. He did not know how the Natives of India were ever to be educated to self-government or to independence if they were not to be allowed to exercise a certain amount of responsibility. His own opinion was that, if responsibility was put well upon people's shoulders, it would be found that they bore it much better than was expected. There was no ground whatever to cast a slur on a number of gentlemen who had been performing these honorary and delicate services well for the last two years, and to refuse to give them the power of summoning the parties to appear which the amendment proposed.

The Hon'ble SIR STEUART BAYLEY said that he would not take up the time of the Council very long after the thorough and lengthy way in which this question had been threshed out; but as he happened to be one of the unfortunate minority of the Select Committee, and having been called upon as such by his friend the Hon'ble Mr. Hunter to explain the reasons on which he had acted, he wished to say a few words in support of the vote he had given in favour of the amendment before the Council. It was, he would not say unfair, but still not quite correct, to draw an argument in favour of the law as it stood from the fact that the Select Committee in this instance were willing to leave that law on the lines on which the Act had been originally passed; because, if the Hon'ble Member would look into the history of the case, he would find that the present amendment was put into the first draft of the Bill, and it was only at the last stage of the Committee's meetings that it was proposed to abandon it. His friend Mr. Gibbs had not been able to be present on that occasion, and consequently the members were two and two, and therefore the abandonment of the proposed section was carried by the casting vote of the Chairman of the Committee. Had Mr. Gibbs been able to be present, the section would have stood as originally drafted; so that, if any weight was to be attached to that occasion specially, it was fair to say that there were as many on one side as on the other.

But he himself did not attach much weight to that circumstance. The real reason which justified him in voting for the amendment was that the Bombay Government, who were really responsible for the working of the Bill, and who possibly understood better than the members of this Council the character of the amendment, although they rejected it in 1879, had subsequently,

after three years' experience gained, found that this power could safely be given to the Conciliator. It was not a question of giving their confidence to that Government in 1879, and not giving that confidence in 1882. But it seemed to him that that Government spoke in 1879 before gaining experience, and the Government of the present day made their recommendation after having found that experience. Considering the importance of the functions entrusted to Conciliators, it was only reasonable to give the Conciliators this additional power without which those functions were shorn of half their usefulness. His own opinion was that, in the majority of instances, it was not the raiyat but the saukár against whom the exercise of this power would be needed, and that it would be absurd for the Government to appoint Conciliators and to give them all these powers for the express purpose of bringing the two sides together, if, at the end, they were not in a position to do it. The penalty, as it stood in the amendment, was, he believed, only declaratory. He could not pretend to offer a professional opinion on that point, but it appeared to him that, if the word "directed" was used instead of "invited," the penalty would follow as a matter of course under section 174 of the Penal Code. The Conciliators could not act under that section themselves, but would have to go to the local Magistrate to enforce the penalty, and it struck SIR S. BAYLEY that the number of cases in which they would take the trouble to do so would not be very great. If they proceeded against one or two recusant persons, the parties concerned would become aware of the existence of this power, and the result would be that the parties would be brought together and the object of conciliation would be attained. But, without this power of bringing two parties together, it seemed to him that the Conciliators would be placed in a very false position. These were the reasons which induced him to support the amendment.

The Hon'ble MR. ILBERT said that he admitted that the amendment would merely have the effect of restoring to the Bill a section which originally stood in it. He admitted, also, that the omission of that section was due to an accidental circumstance, namely, the unavoidable absence of Mr. Gibbs from the meeting of the Select Committee. Owing to that absence, MR. ILBERT was unfortunately compelled to decide the question by his casting vote. He thought the supporters of the amendment were fully entitled to the benefit of both these admissions. After what had been said by Mr. Crosthwaite, he need not explain at length his reasons for opposing the amendment. They were, first, that the amendment made, not an alteration of detail, but a modification of principle, and, as such, went beyond the proper scope of the Bill; and, secondly, that the evidence before the Council was not sufficient to justify the making of the amendment. He would explain his first point by quoting the concluding remarks of the very able note by his friend Mr. Hope on which this Bill was founded. Speaking of the measure of 1879, Mr. Hope said:—

"In order to succeed in all respects, it needs no modification of principle, no change of method, nothing except the aid of a few legislative amendments to make its original meaning more clear, of vigorous executive action to carry out the provisions fully, and a little patience."

Then, was the effect of this amendment to make the original meaning of the Act more clear? He would answer this question by another quotation from the Hon'ble Member's speech in introducing the Bill in 1879:—

"The proposed Conciliators will so far differ from the French *Juges de Paix* that they will not have, in addition to conciliatory functions, a petty judicial jurisdiction up to 100 francs (=Rs. 50), nor will they be able to compel the attendance of the defendant before them; but they will in consequence be unable to exercise undue pressure, which, in India, might perhaps, under some circumstances, be apprehended."

So it was perfectly clear that the Government had in 1879 considered this point, and had, after deliberation, come to the conclusion that it was not wise or safe to confer on the Conciliators the powers which would be given them by the amendment. The principle, as he understood it, of the original Act was, that the plaintiff, before he began his suit, should be required to give the defendant an opportunity of attending before an impartial and reasonable person, and talking the question over, an opportunity of which the defendant might avail himself or not, as he pleased. The proceeding, so far as the defendant was concerned, was to be probably voluntary. If so, was the Council now justified in making so great a departure from this principle? He submitted that they would not be justified in doing so, except upon full and clear evidence that the dangers apprehended in 1879 were found by experience to have no foundation. The Council were told that this was a matter in which they were to be guided by the opinion of the Bombay Government. MR. ILBERT admitted that they ought to attach the greatest possible weight to the opinion of the Bombay Government on such a point, but he did not think that they could altogether disclaim responsibility for this legislation, or refrain from exercising their own judgment as to the effect of the evidence before them. They had before them the very able report which had been drawn up by Mr. Pollen on the working of the Act in 1881. MR. ILBERT had very carefully read that document, particularly paragraphs 43 and 44, from which extracts had been made in previous speeches; and the impression which it left on his mind was that Mr. Pollen was on the whole favourably disposed to the system of conciliation, but that he believed it to be in certain cases liable to serious abuse. "My judgment," says Mr. Pollen, "is still, to a certain degree, in a state of suspense, and I cannot feel sanguine as to the ultimate success of the experiment." Now, what was the fair inference to be drawn from this statement? The inference which he would draw was that the Council would be fully justified in continuing the powers conferred by the existing law on Conciliators, but that they would not be justified, without further evidence, in extending those powers. That was the inference he drew, and he thought the proper course to adopt was to leave the law as it stood,—not to take away one jot or tittle of the powers given by the existing law, but not to increase those powers. Nor did he think that the adoption of such a course would place the Conciliators in a false or undignified position. What was the position which they occupied? It was difficult to conceive a more dignified or responsible position. They occupied the position of arbitrators selected by the State for the purpose of determining disputes between saukárs and raiyats; like other arbitrators, they had no power to compel the attendance of the defendant; but, if he failed, without sufficient reason, to appear, the Court would subsequently draw its own inference from his non-appearance. MR. ILBERT did not wish to make a single remark which might imply the slightest reflection on the integrity or capacity of the gentlemen who had been appointed to perform the responsible functions of Conciliators, but he would prefer to give them the opportunity of justifying that selection. He believed that the parties would appear before those Conciliators in whom they had confidence, and would decline to appear before those in whom they had no confidence.

The Hon'ble MR. GIBBS said in reply that the first practical observation which offered itself to his mind was that he regretted very much that he was unable to attend the last meeting of the Select Committee, because then the Council would probably have been spared this long debate. As had already been explained, so evenly were opinions balanced in the Committee, that, owing to his unavoidable absence, the question now before the Council had to be determined by the casting vote of the Chairman. Under such circumstances, MR. GIBBS did not think any argument or conclusion could be drawn one way or the other from the decision of the Committee. His hon'ble friend Mr. Hope had in his reply almost entirely disposed of all the points at issue. His hon'ble friend Mr. Crosthwaite, in considering the question of police-patéls, had quoted what he, MR. GIBBS, had said when he had charge at Simla of the first amending Bill. He did not think his friend could draw from what was then said any argument against the proposal to confer this power on police-patéls. The police-patéls of the Dekkhan were a very mixed class of people. Some of them were of a highly respectable class, and were the leading men of the village, and were possessed of great local influence, and were merely hereditary police-patéls. The appointment of Conciliators was in the hands of the Local Government, who would make them on the recommendation of the local officers, who were intimately acquainted with all the people of the upper and more respect-

able classes; and every care would be taken to exercise in a proper manner the power which the Act gave for the appointment of Conciliators. It was because it was desirable that the best men available should be appointed Conciliators, that MR. GIBBS had urged the adoption of that amendment. It was not to be supposed that every police-patél would be made a Conciliator, but it was not desirable that Government should be debarred from appointing persons who were in a position of influence in the villages simply because they were hereditary police-patéls.

With regard to the observations which fell from his hon'ble friend Mr. Ilbert, he must say he could not quite understand how the amendment which he proposed was an alteration in the principle of the Bill. It might be so, but he did not see it himself. The principle of the Bill was conciliation, and the principle of conciliation was to bring the parties together before a person who was to act as Conciliator. That being the principle of the Bill, he looked upon this amendment as an additional step taken in furtherance of that principle. It was proposed under the advice of the Government of Bombay, given after an experience of a three years' working of the Act. It was not an "appeal from Philip drunk to Philip sober," as had been suggested, but the opinion of the Bombay Government given in the dark *versus* the Bombay Government given after a great deal of light had been thrown on the subject. He thought that this amendment was not an alteration in principle: it was only an alteration in the procedure by which that principle would be carried out.

As to the fact of there not being evidence sufficient before the Council to prove whether the Conciliators had done well or not, MR. GIBBS admitted that there was not much information on that point in the letters of Dr. Pollen. But the Council must remember that with Dr. Pollen's report came up the reports of two of the Subordinate Judges, one of whom had a longer judicial experience than Dr. Pollen; and he was very strongly in favour of the measure which MR. GIBBS pressed the Council to accept. They must remember also that the Local Government did not form its opinion entirely on Dr. Pollen's report. If it did, this Council would be able to form exactly as good an opinion as the Bombay Government. But the Bombay Government had before them other papers and also the experience of a conference on this very point. At that conference were the Commissioner, the Special Judge and one, if not both, of the Subordinate Judges, together with the Members of Council. And the result of that conference was that the measure as originally laid before the Select Committee was approved, and this contained the clause which formed his (MR. GIBBS') amendment.

He did not think he need take up the time of the Council any longer in regard to this matter. He thought it was a matter in regard to which the Council ought to be guided by the opinion of the Bombay Government, which was, that the want of authority to enforce the attendance of parties seriously impeded the work of conciliation; and, for his own part, he did not think that the grant of such power was likely to be detrimental in any way. The Sarvajanik Sabhá recommended that the Conciliators should have power given to them to summon the defendant to appear, and if he failed to appear the Conciliator should have power to issue a warrant to compel attendance. There might be some doubt as to whether section 173 of the Penal Code did or did not apply to the case of Conciliators—whether they were or were not public servants; and therefore it was thought better to make the matter perfectly clear by a declaration that that section should be applicable to orders made by Conciliators, and this was proposed to be done by the alteration of the word "invite" to the word "direct." MR. GIBBS did not think that any harm was likely to occur to any body from the exercise of this power, and he thought that a provision of this sort was the more necessary, because, from his knowledge of the people of the Dekkhan, derived from an experience of many years, he knew that they were in the habit of disregarding the summonses of the Civil Courts to a very great extent. In three districts it had been found that, out of 80 per cent. of the money-suits, the defendants never appeared in something like 74, preferring that the decree should be passed *ex parte*. Thus, it would be seen that the people of the Dekkhan had got into a sort of chronic habit of not obeying summonses, and that was another reason for the enactment of these provisions; for, unless both the parties appeared before the Conciliators, they would not carry out the work which it was intended they should do; the principle of the original Act being that, by the intervention of Conciliators, resort to the Civil Courts would be rendered unnecessary.

His Excellency THE PRESIDENT said:—

"It is quite evident, from the mere fact that the members of the Executive Government differ in opinion upon this question, that it must be one of considerable difficulty, and, at the same time, also that it is not one of very vital importance, because, if it was not difficult, they would be likely soon to come to an agreement upon it, and, if it had been a matter of very vital importance, they would have been bound to express an united opinion upon it.

"My own view is that, on the whole, it would be better to adopt the amendment of my hon'ble friend Mr. Gibbs, and I am led to that opinion by the fact that the amendment is supported by the two members of this Council representing Bombay, and is consistent with the wishes expressed by the Government of Bombay. The Bill is of a local character, and would not have been brought forward in this Council if it had not been for special reasons, to which I need not advert: ordinarily, it would have been brought in in the Bombay Council, and there discussed with an amount of knowledge of local circumstances which it is impossible to obtain here; but, as that course has not been taken, we ought to look specially to the opinions expressed by the two able gentlemen who represent Bombay here, and to bear in mind that those views are in concurrence with the recommendations of the Bombay Government, who, as Mr. Gibbs has shown, have very carefully considered the various proposals connected with the present Bill. I am also the more confirmed in my opinion—though I do not take a very strong view on the matter one way or the other—that, on the whole, it would be better to accept the amendment of my hon'ble friend, because it appears to me that no objection whatever has been felt to this provision by the gentleman whose name has been frequently referred to in this discussion, and whose opinion on this question is of great importance—I mean Dr. Pollen. My hon'ble friend Mr. Ilbert has quoted Dr. Pollen's report in support of his view, but the most recent paper that I find among these documents emanating from that learned person is a letter or report of his addressed to the Bombay Government, and dated the 14th of last November. In that report Dr. Pollen says—

"'When I was at Mahabaleshvar on the 1st instant, I had an opportunity of reading the Bill, and I then stated my opinion that it was a great improvement on the original draft, and that its provisions seemed adequately to meet all the requirements of the case; but, at the same time, I expressed a wish to have a further opportunity of examining the details of the Bill more deliberately, so as to guard, as far as possible, against the chances of any latent errors which on a cursory perusal might have escaped observation. I have now the honour to submit, in accordance with the instructions of Government, the following remarks on the sections of the Bill which seem to require special notice.'

"Then Dr. Pollen, having prosecuted that further inquiry, proceeded to make comments at considerable length upon the various sections of the Bill, but makes no comment, and takes no objection, to the section now under discussion. Under these circumstances, I am inclined to draw the inference that Dr. Pollen does not think that this section would work unsatisfactorily, and, looking to the weight of local opinion, so far as we have it before us in these papers, I shall give my vote in favour of Mr. Gibbs' amendment."

The question being put, the Council divided—

Ayes.	*Noes.*
The Hon'ble R. Miller.	The Hon'ble G. H. P. Evans.
The Hon'ble T. C. Hope.	The Hon'ble H. S. Thomas.
The Hon'ble Sir S. C. Bayley.	The Hon'ble H. J. Reynolds.
Lieutenant-General the Hon'ble T. F. Wilson.	The Hon'ble Durga Charan Láhá.
Major the Hon'ble E. Baring.	The Hon'ble Sayyad Ahmad Khán.
The Hon'ble J. Gibbs.	The Hon'ble W. W. Hunter.
His Honour the Lieutenant-Governor of Bengal.	The Hon'ble Rájá Siva Prasád.
His Excellency the President.	The Hon'ble C. H. T. Crosthwaite.
	The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore.
	The Hon'ble C. P. Ilbert.

So the Motion was negatived.

The Hon'ble MR. THOMAS moved that after section 16 of the Bill the following section be inserted, namely :—

"16. (*1*) In section fifty-six, after the words 'for which a Village-Registrar has been appointed' the words 'and not being a person exempted from the operation of this section by a written order of the Collector' shall be inserted.

"(*2*) To the same section the following shall be added, namely :—

"The Collector may make an order under this section where, in his opinion, the applicant for exemption is a person of sufficient education to conduct his own business."

He said :—

"I may premise that I make this suggestion not in opposition to the Select Committee, but because through an accident I have not had an opportunity of ventilating it through them.

"My object is to modify in some measure the extreme stringency of section fifty-six, which invalidates instruments executed by agriculturists unless '*written by or under the superintendence of*' a Village-Registrar. I wish to lay stress on the words '*written by or under the superintendence of*'.

"It seems to me a very serious disability to impose on the people, educated and uneducated alike, that no single agriculturist in all the area embraced by the Act shall ever be at liberty to conduct his own monetary business without the intervention of the Village-Registrar.

"My belief is that it is quite as repugnant to Asiatics as it is to Europeans to conduct all their little borrowings in public, and I know the experience of the Presidency in which I have served is, that agriculturists prefer to borrow at considerably higher interest from their own private banker to going before the public official, and that they show their repugnance to publicity and officialdom to be strong by practically having no recourse to them. Why then should we take away their option in the matter, and compel them to submit to the annoyance of opening out their affairs to public canvas at the Village-Registrar's office, where there will always be a goodly knot of people within sight and earshot while the deed is being dictated and written?

"But besides vexatiously disturbing the sensibilities of the people, this requirement about the Village-Registrar seems also to hamper their *business* arrangements; for deeds want drawing with some exactitude of phraseology, and it not unfrequently happens that the force of a certain stipulation is not fully comprehended till it takes shape in writing, and then it is objected to, and has to be discussed, and perhaps modified. Is it to be expected that, with a number of others waiting their turn with the Village-Registrar, the slow-witted will not be hurried, and the timid jostled, into agreeing to terms somewhat different from what they would have consented to if they had had sufficient time to consider them in the undisturbed privacy of their own verandah? And who will be the sufferer from the pressure of the circumstances of publicity and haste? Not the habitual money-lender accustomed to such surroundings, but the less tutored agriculturist. The very man, in short, whom it is intended to protect.

"In the case of such agriculturists as are quite as competent to draw their own instruments as the Village-Registrar is to draw them for them, it is surely an unnecessary interference with the liberty of the subject to compel them, nevertheless, to sit under the Village-Registrar; and it is not well, I think, to legislate with a view to keeping people in leading-strings after they desire to cast them aside: we should aim rather at encouraging a spirit of self-help. I think, therefore, that every one petitioning to be freed from such leading-strings, and known by the Revenue-authorities to be able to read and write, should be exempted by an order published in the District Gazette, or otherwise as may be locally preferred. The effect of such exemption from the requirements of the special Dekkhan Act would be to throw them on the general Indian Registration Act, 1877.

"I believe I am right in saying that the legal measure before us is avowedly for the temporary purpose of spanning the period of growth from what may be called the helpless childhood to the self-protecting manhood of the body of the agriculturists in the Dekkhan. If so, I would suggest that the law should carry in itself both an opening for such growth and an indication of its extent, so that we may know when the transition stage is sufficiently past to point to the withdrawal of special protection; otherwise, if that protection is continued too long, the day will come when the remedy—the very treatment that is being applied to the weakness of the child—may be injurious to the growth of the man. I think that, if we allow such raiyats as wish it and are competent to be exempted in the way I propose, we shall see the number of exempted persons gradually increasing, and have some gauge of their relative numbers to the agriculturists still protected under section 56. We shall have some practical gauge, too, of their preferences, whether they are for protection or for exemption.

"But apart from the agriculturists, just one word may be said about the Village-Registrar. The Act makes him compulsorily legal draughtsman, and sole draughtsman too, to the whole community. Surely, it is only in a very primitive village that he can possibly be equal to the task. With the improvement of agriculture and the increase of the outlay thereon, with the growth of wealth and its accustomed luxuries and sudden calls for aid, the money-transactions may well become so numerous as to swamp the Village-Registrar, and, long before he is so hopelessly swamped as to attract the attention of his superiors, he will probably have gone through the usual course of perfunctorily hurrying through his duties to the injury of the parties, and in nine cases out of ten, to the injury of that party, the agriculturist, whom he is supposed to be protecting. And if he abuses his powers, the raiyat is precluded from engaging any other legal draughtsman.

"In my proposal I have suggested the Collector as the exemptor, because I presume he has in his tahsíldárs or amíldárs and village-officials the machinery for feeling into his every village, and I presume also that in such minor matters he can delegate his powers.

"To sum up, my Lord, I submit briefly that to invalidate instruments unless *written by or under the superintendence of* the Village-Registrar is to impose a serious disability on educated and uneducated alike, which may well be repugnant to the feelings of the agriculturists, hampering to their business and injurious to their advancement in self-help; that it may also become impracticable to the Village-Registrar and be abused by him; and that it is better to give the opening for growth and the gauge of growth which I have the honour to propose—such gauge and liberty running consistently with, and not counter to, the protective principle of the Act for such as still need that protection."

His Excellency THE PRESIDENT remarked that he ought to point out to the hon'ble gentleman that he had altered his amendment as it originally stood in the paper, and that, under the rules, it was not open to him to have it considered now without the consent of the Council. HIS EXCELLENCY thought that, in order to put the discussion on a proper footing, that consent should be obtained.

The Hon'ble MR. HOPE said that, as His Lordship had pointed out, the Council was under some slight disadvantage owing to the wording of this amendment having been altered at the last moment. He would be the last to wish to take any mere technical advantage, but there was a more serious objection to the amendment. It was an amendment which went against the principle of the original Act. A prominent principle of that Act was a system of village-registration of all documents, and it was not within the scope and the object of the present Bill to alter the original Act in any important particular. He therefore submitted that the amendment was inadmissible. But it might perhaps be desirable that he should in a few words mention to the Council that the amendment corresponded in substance with a suggestion

which had been made by the Puna Sarvajanik Sabhá in their memorial on this Bill. The Select Committee had considered that suggestion very carefully, and had unanimously come to the conclusion that it was, for a variety of reasons, inadmissible. He did not know whether he could now effectively state those reasons, because they were so numerous, nor did he know whether he would be in order in speaking in detail against an amendment which was contrary to the principle of the Bill; but he might perhaps be permitted to mention briefly a few of those objections. On what principle was the Collector to exercise this discretion of exempting particular persons? How was he to ascertain that a man could read or write, or was sufficiently educated to dispense with the assistance of the Village-Registrar and to manage his own affairs? Was he to have a particular man brought before him and examine him to ascertain whether he was intelligent, and was a man's right to exemption to depend on the mere chance opinion of some Collector, who possibly could not speak the language well, formed in the course of a conversation of five minutes? MR. HOPE ventured to suggest that it would be impossible to exercise such a discretion in an intelligent and reasonable manner, or, if it was exercised notwithstanding, it might be exercised so as to give rise to favoritism and abuse. Again, suppose the exemption was not to be given to individuals on application, then was there to be a general examination of the whole district? If, on the one hand, the exemption was to be given to individuals,—to the men who went up to the Collector, and not to all,—we should make a distinction between man and man; on the other hand, if the power of exemption was to be exercised with reference to a whole district, the Act would impose an obligation on the Collector which it would be utterly impossible for him to perform. Further, suppose the Collector had given exemption to a particular person, and, when the matter came under litigation, the man who was thus exempted denied that he could read and write, and averred that some other man must have been substituted for him before the Collector. Suppose, again, the man who was exempted was dead. Were his relatives to be called to depose whether he could read and write, or to what extent he could do so? MR. HOPE could enumerate many other practical objections of this kind. But another difficulty was that these exceptions would totally destroy the value of registration. At present, when a person was asked to lend money on the security of land or to take part in any transaction connected with it, he could examine the register and ascertain whether the land was in any way encumbered with previous transactions. But under the proposed amendment the whole of the registers would become unreliable, and a man would have to ascertain not only whether there was any previous recorded transaction connected with the land, but whether any of the various parties who had held it from the time of the last known transaction had been exempted by the Collector or not. Moreover, MR. HOPE would point out that there were a good many other advantages to be secured by this village-registration, besides the mere protection of the actual executants who could not read and write, such as the publicity of the transaction and security against extortionate terms.

He regretted that, for these reasons on the merits, no less than on the technical objection, he must oppose this amendment.

The Hon'ble SIR STEUART BAYLEY said he concurred with his hon'ble friend Mr. Hope in opposing this amendment. Agreeing, as he did, with the admirable principles which the mover of the amendment had laid down for guiding legislation on such subjects generally, still those principles, he regretted to say, were scarcely applicable to a Bill of this nature; this being a Bill to meet a peculiar and exceptional set of circumstances, in regard to which special legislation was undertaken on lines very different from those on which measures of an ordinary kind were based. He would not repeat the practical objections which had been taken by the hon'ble mover of the Bill, but the main objection which he took to the amendment was the period at which it was proposed. The Council could not accept it without knowing whether it was capable of being worked practically, and what its effect would be. The Government of Bombay was most anxious that this Bill should be passed in the course of this month.

But if this measure was taken into consideration and the passing of the Bill deferred in order to ascertain the opinion of the Bombay Government on the proposal, the effect would be to throw back the operation of the measure, and the whole of the cold season, in which the work of inspection and instruction was done, would be lost. He agreed with the hon'ble mover of the Bill that it was rather difficult to consider the amendment, because the exact way in which it was proposed to work it was not made perceptible from the manner in which the amendment was drawn, and the Council could not say how the scheme would work without consulting the Bombay Government.

The Hon'ble MR. ILBERT said he quite sympathised with the desire of the hon'ble mover of the amendment to make the Act more elastic, but he agreed with his hon'ble colleague Sir Steuart Bayley that it was impossible to accept the amendment at this stage of the proceedings.

His Excellency THE PRESIDENT observed that he agreed with the remarks of his hon'ble colleague on his right (Mr. Ilbert). He did not think it would be possible to make the proposed amendment now, as it would undoubtedly necessitate a further reference to the Bombay Government; it was contrary to their feelings and wishes upon the subject; and it was introduced at the eleventh hour. With all due respect, therefore, to the arguments of his hon'ble friend Mr. Thomas in favour of it, he should certainly recommend the Council not to accept the amendment.

The Hon'ble MR. THOMAS said in reply that, while not wishing, after what had been said, to press his amendment at this date, he would like to say just a few words to show that it was not quite so unworkable as the Hon'ble Mover of the Bill seemed to think. He was not proposing anything open to objection as contrary to the principle of the Bill; he was not proposing to do away with village-registration, but only to make individual exemptions. In reply to the objection that the Collector would be unable to cope with the numbers if everybody in a village came up to him for exemption, he would observe that he had already said that he presumed the Collector would delegate the duty to his subordinates. In the Presidency from which MR. THOMAS had come, this work could be done with ease through the taluq and village officials. As regarded the amount of education necessary to qualify for this exemption, he considered that being able to read and write would be sufficient, and he did not understand how exemptions made on this ground could be looked upon in the light of "favoritism." As to the objection that the grant of these exemptions would destroy the completeness of the village-registers, he would reply that the only effect would be to make the sub-registry more perfect, and the village-registers would gradually give way to the registration effected under the general Indian Registration Act, 1877, which registration was presumed to be sufficient; for, if it was not, the Indian Registration Act must be admitted to be defective. Under that Act, it was not required that these documents should *be written by or under the superintendence of* the village-registrar; it was simply required that they should be attested and recorded, and that was all he asked for in favour of the educated.

The Motion was put and negatived.

The Hon'ble MR. HOPE moved that the Bill, as amended, be passed. He said—"My Lord, I regret that I must inflict upon the Council some remarks which, I fear, may be somewhat tedious. I find, however, that certain misapprehensions are so prevalent, and the absence of definite information is so very marked, that it is necessary, in order that the Act should stand fairly in public opinion, to give some explanation regarding its working up to the present time.

"The original Act was passed in October 1879; a small number of village-munsifs, about 138, were appointed between January and August 1880; the new Subordinate Judges' Courts were not constituted till 1st June 1880. No Conciliators were nominated until between the 1st May and 1st August

of that year. Village-Registrars were constituted from March 1st, 1880; but it soon became apparent that the rules and instructions for them had been insufficient and unsuitable, as far as old deeds were concerned; difficulties accumulated in that respect—accumulated till they became insurmountable; the repeal of section 71 of the Act, abandoning in despair the registration of old mortgages, was deferred till October 1881; and the documents in hand have only lately been pretty well cleared off. On the same occasion (by Act XXIII of 1881) some doubts of interpretation were settled, and verbal improvements made.

"Consequently, the year 1881 was the first year throughout which even the machinery of the Act was in tolerably complete order, while some of its most important provisions are not, as the present Bill testifies, in operation up to the present day. What I wish to point out is that, until effect has been given to the whole Act, and the results during at least a year or two have been ascertained, the measure cannot be said to have received even an approach to a fair trial.

"The instructions of the Secretary of State were that the relief of the Dekkhan raiyat should be effected by a 'comprehensive measure,' which should provide Courts more accessible, more absolute, less technical, less dilatory and less expensive than the present ones; and should also mitigate 'the extreme severity of the law on debtors' and extend the powers of the Judges 'to modify the contracts entered into between man and man.' In accordance with these instructions, coupled with some of the recommendations made by the Dekkhan Riots Commission, the Act of 1879 contemplated five main amendments of the existing conditions, namely:—Courts having larger powers over smaller areas than before; improved control over such Courts; improved procedure; absolute relief of insolvents under certain circumstances; and protective measures, such as conciliation between disputants previous to litigation. Under the first of these heads, the Subordinate Judges' Courts in the four districts to which the Act applied were increased from 24 to 36. Six months afterwards, however, the Bombay Government, observing a large falling off in the number of suits filed, took away seven out of the twelve Additional Judges and combined their jurisdictions with the adjacent ones; moreover, some other Subordinate Judges were employed for part of the year out of their proper charges. This has necessarily somewhat interfered with the fulfilment of the intention of the Act, in the matter of bringing the administration of justice nearer to the homes of the people. Moreover, the falling off in the institution of suits proved merely temporary. The result has consequently been that arrears have accumulated, and rose from 1,100 in January 1880 to 3,658 in January 1882. I am glad to say that the Bombay Government have now determined to restore at once five out of the seven Subordinate Judges whom they had withdrawn. Another measure coming under the first head was the establishment of village-munsifs with a jurisdiction in money-suits not exceeding Rs. 10. The fact that these munsifs are chiefly resorted to by the non-agricultural classes need excite no surprise, for it was well known, and was stated in my speech in 1879, that the bulk of the suits disposed of by village-munsifs in Madras are not suits between raiyats. Still, no doubt, a certain number of such suits do come before these Courts. At that time I myself was not in favour of the establishment of village-munsifs, and in my original draft of the Bill I did not provide for them; but Sir Richard Temple considered it very desirable to make an advance in the direction of giving these petty judicial powers, and they were therefore inserted. I did not expect much good, but I feared no harm from them. I am, however, glad, in the present instance, to sit on the stool of repentance, for I find that the institution has had a popularity and success which I never anticipated. Mr. Ranadé, who is one of the Native assistants of the Special Judge, Dr. Pollen, reports that 'there can be no doubt of the popularity of this office, and the inhabitants of several places have applied for the services of such officers.' As regards their efficiency, Dr. Pollen reported last year that 'most of the village-munsifs are respectable and intelligent men, and have done their work and kept the records in a satisfactory manner.' And, again this year, he has given testimony of a similar character. Moreover, the fact speaks for itself, that, although there were only 138 munsifs in 1880 and 136 in 1881, they disposed of 2,866 suits in

the first year and 2,934 in the second. I may also mention, as an indirect proof which the statistics afford of the excellent effect of these new Courts, that the number of suits below Rs. 10 in value filed in the ordinary Subordinate Judges' Courts has fallen to 521, or $\frac{1}{10}$th of the total number, instead of $\frac{1}{6}$th or more at which it used to stand. It is evident, therefore, that these institutions supply a much-felt want in the settlement of disputes. I am glad to say that the Bombay Government intend to take special measures to find out a larger number of gentlemen competent to hold the office of village-munsif than have already come to notice.

"With reference to the second head, namely, improved control over the Courts, it will be remembered that the Act of 1879 substituted for appeal a system of revision by the Special Judge and two Assistant Judges subordinate to him. This reform, which received at the time the approval of Mr. Justice Melvill and four other Judges of the Bombay High Court, has amply justified the expectations which were formed of it. I will not weary the Council by long quotations from Dr. Pollen's reports. Suffice it to say that, during the year, he and his assistants scrutinized 75 per cent. of the cases instead of 30 per cent., which I had considered a sufficient percentage for the exercise of a proper control in lieu of the system of appeal, under which only 3 per cent. used to come to notice. The cases actually taken up for revision amounted to 2 per cent. On this subject Dr. Pollen says:—

"'The people are showing themselves keenly sensitive of the advantages of the revision system, which provides a surer and more constant, as well as a cheaper, safeguard against injustice and error than that afforded by the costlier and more tedious process of appeal which, as a rule, was a luxury which only the rich were able to indulge in.'

"Turning next to the improved procedure provided under the Act, one provision, intended to shorten the duration of suits, relates to their disposal at the first hearing as far as possible. The result has been that the average period has been brought to 3 months and 9 days. But that is still too high an average. I trust that further efforts will be made to reduce the time. Various causes of delay are mentioned, but over-formality and technicality are still the chief. Dr. Pollen states that—

"'It rarely happens, even in the simplest cases, that the personal attendance of the plaintiff is required less than six times in the progress of a suit; and on most of these occasions it is only to perform some purely formal or ministerial duty.'

"That is a burden which, in the absence of the simplified procedure which, I trust, will some day relieve the whole of India, every effort ought to be made to lighten under the special powers of the Act.

"Another important change in procedure was that for suppressing *ex parte* decisions by means of requiring the Court to examine the defendant. The result of this has been a complete success, for whereas under the old law *ex parte* decrees used to be passed in from 54 to 74 per cent. of all suits, and in from 93 to 97 per cent. of money-suits only, the proportion is now only about 6 per cent. On this subject a high authority in England has written to me a few remarks which are so expressive that, with the permission of His Excellency the President, I will read them to the Council—

"'Although considerable improvement in its working is possible, I am sure that the Act has already effected great good. It has, it is quite clear, effected its principal object; it has rendered it possible for the indebted raiyat to get a hearing and fair justice. I see that the result of contested suits was that claims were cut down 25 per cent. It is not the amount of the reduction (although that is not insignificant) which is of importance; it is the fact that for the first time the debtor's case has been gone into. The effect of this on the relations between creditor and debtor must be immense and beneficial.'

"The next question connected with procedure relates to pleaders. As pleaders have been admitted by the Act of 1381 in petty suits, the Government of Bombay now propose to adopt Dr. Pollen's recommendation and appoint Government pleaders experimentally in a certain number of taluqas, so that the raiyats may not be put to expense in consequence of the alteration of the law.

"One of the most important points in which the Act effected an alteration is in respect of the well-known operation called 'going behind the bond.'

The new provisions have been applied in about 25 per cent. of suits, and are estimated to have effected an average abatement of 26 per cent. in claims. Dr. Pollen remarks that—

"'There has been no violent or radical change. Debtors are not unfrequently dissatisfied at the small results in their favour, and creditors on the whole are fairly satisfied. * * * The Subordinate Judges all speak in the highest terms of the general operations of the three sections referred to; and I fully share their opinions, regarding, as I do, these sections as being the most important and successful part of the whole Act.'

"With reference to the provisions in the present Bill regarding management of insolvents' land by the Collector, no remarks in addition to those made on previous occasions are necessary. But I am glad to be able to state that the Government of Bombay have accepted my suggestion to appoint a special officer to go thoroughly into the question, to draw up a set of rules of a really practical character, and to take other measures for ensuring that these provisions shall not be allowed to remain a dead-letter.

"Upon the question of conciliation I have already said so much that I need not trouble the Council with more than two figures, namely, that, in the first year of the operation of the Act, 10,195 disputes, and in the second year 14,146, were settled by the Conciliators without resort to the Civil Courts. I consider this to be a highly satisfactory result, and one which fully justifies the establishment of the institution.

"There is one further point to which I ought to allude, and that is the question of how far the relations between raiyats and saukárs have been affected by the Act, which was regarded by some persons as being such a terrible engine for oppression of the latter. On this point I do not wish to be tedious. I will merely put before the Council what Dr. Pollen and the Inspector-General of Registration have said on the subject. Dr. Pollen says—

"'It does not, therefore, seem to be the case that the saukárs invariably insist upon getting sale-deeds or mortgage-deeds passed to them before making advances. * * * But there has been a considerable decrease in the sale of general stamps, which makes it clear that comparatively few documents were executed in the year under report (1881).'

"Confirmation upon this point is also obtained from the Registrar-General of Assurances, who reports thus of 1880—

"'As far as can be judged from the returns received, the saukárs have proved themselves willing to lend to all those whose credit is good. * * * When questioned, several Natives of different classes told me that it is more difficult for the agricultural classes to get money than formerly, but, when asked to explain, they were generally obliged to agree that this only related to those whose credit was not high at any time; and, even admitting that this Act has made it more difficult than formerly to borrow, may not this very fact be of future benefit to the people, by making them more provident, and careful to spend less on ceremonies and extravagancies, which were recklessly indulged in when money was more plentiful?'

"In short, the Inspector-General held that there was no foundation for the statement which had been made that 'credit has been extinguished and capitalists have closed their business.' I myself always anticipated, and stated in 1879, that possibly a certain amount of pressure might at first be occasioned, but I held that it would be confined to those who were not really entitled to receive credit at all, and that the Act would not bring about any difficulty to obtain money in the case of those who might legitimately borrow. As I said in my first speech in 1879, I have no faith in the virtue of 'unlimited tick.'

"In conclusion, I must remark that the introduction of a measure so new in principle as well as detail has necessarily met with extraordinary difficulties. The interests of money-lenders and pleaders, the prejudices of some judicial officers, the intricacies of legal interpretation, the stupidity or corruption of some of the inferior agents, the ignorance of the people of their own best interests and the clamour of adverse *doctrinaires*—eager to draw conclusions before facts were available—all were against it. But I submit that, in order to succeed in all respects, the Act needs no modification in its general and broad principles and no essential change in the method of procedure; nothing except a few legislative touches to make its meaning more clear or its machinery more

complete, and finally, a little of that virtue which so few seem inclined to exercise in its behalf—the virtue of patience."

The Hon'ble MR. HUNTER said:—

"My Lord,—At the last meeting of this Council it was announced that, among other improvements in procedure, the Reports of the Select Committees would be fuller than heretofore. I am not aware whether the Report now under consideration may be regarded as illustrative of the new rule. But its clear statement of the difficulties with which the Committee have had to contend, and of the reasons which guided them to their conclusions, are very welcome to one who, like myself, questions some of the principles involved. I understand from the Select Committee's Report, and from the speeches of the Hon'ble Member in charge of the Bill, that, in voting for the particular amendments now proposed, we do not express any opinion either as to the soundness of the general principles involved, or as to the adequacy of the original Act to cope with the evils which it was intended to cure. In 1879, the Government decided that the Dekkhan peasantry had sunk into such a depth of distress as to demand legislation of an exceptional character. The Dekkhan Agriculturists Relief Act was accordingly passed to free the cultivators, under certain conditions, from their burden of debt to the money-lenders. It was a novel device in Indian legislation, and its supporters claim—and justly claim—that all reasonable facilities shall be given for the proper working of the measure. Obscurities of interpretation, and imperfections in mechanism, are inevitable incidents of so complicated a legislative experiment. I think, therefore, that those who, like myself, entertain doubts as to the adequacy of the original Act, should support the technical amendments now declared necessary for its effective operation. For it will be impossible to call in question the adequacy of the original Act until it has had a fair trial.

"But, my Lord, I do not think that even the present amendments will give the Act a fair trial. From the papers before the Council, those amendments seem to have been suggested by the Report for the year 1881, of Dr. Pollen, the chief Special Judge entrusted with the administration of the Act. The amendments now before the Council, however, deal with only a small part of the evils which the Special Judge brings to light, and which the Relief Act is intended to remedy. The difficulty which the Special Judge and his subordinates have to encounter in their efforts to bring substantial relief to the cultivators, is not merely a technical difficulty, nor can it be removed by technical amendments, however skilfully contrived. Permit me to explain my meaning by quoting a paragraph from the chief Special Judge's report:—

"'The inquiries made by the Subordinate Judges while on circuit, concerning the condition of the agriculturists in a few selected villages, have led to the accumulation of a mass of valuable information which I have not yet had leisure properly to digest. The general conclusions, however, to which the information points, seem to be: (1) that the raiyats are overburdened with an intolerable load of paper-debt outstanding against them; and (2) that in average years, the ordinary Dekkhan raiyat does not gain enough from the produce of his fields to pay the Government assessment, and to support himself and his family throughout the year; so that really no margin is left for the payment of his debts.'

"The fundamental difficulty of bringing relief to the Dekkhan peasantry, as stated by the chief Special Judge entrusted with the task, is, therefore, that the Government assessment does not leave enough food to the cultivator 'to support himself and his family throughout the year.' Be it remembered that this is the state of the peasantry, not in time of famine, but in ordinary seasons. In another paragraph, he thus describes the state of the tract under one of his Subordinate Judges:—

"'During the last two years, although the crops have been in most parts fairly good, the very low prices that prevail leave no margin of profit to the cultivator. He can, perhaps, pay the Government assessment and support his family for a portion of the year.'

"'For a portion of the year,' my Lord. If the Government assessment reduces the cultivator to this condition after a 'fairly good' harvest, what must be his misery in the seasons of distress which afflict the Dekkhan every few years?

The Special Judge is the chief officer responsible for bringing relief under the Act to these unhappy people. The measures of relief which he suggests consist partly of technical amendments in the Act, and partly of substantive amendments in the revenue-system. The technical amendments are now before the Council, and I have much pleasure in supporting them, as I would support any proposal necessary to give the Act a fair trial. But the substantial amendments suggested by the chief Special Judge in the same Report have not been circulated to the Council, and, with your Lordship's permission, I shall read a single paragraph containing the most important of them:—

"'Much may be done for the insolvent raiyat of the Dekkhan by modifications in the present rigorous system of collecting the assessment, by more liberal and elastic rules for the grant and recovery of takkavi advances, and, perhaps, by the gradual introduction of agricultural banks. When prices are very low, the fixed cash assessment presses on the people with undue severity; when prices are high, they hardly feel the pressure. When crops fail, and at the same time prices are low, they find it as hard to pay Government as to pay their saukárs. The adoption of a sliding scale of charges would be productive, I think, of much good. I feel convinced, from the experience I have gained in these districts during the last two years, that a rigid revenue-system is not suited to a deeply-indebted and practically insolvent peasantry, which lives truly from hand to mouth.'

"It may be argued that, although the system is rigid, it is nevertheless based on a fair average of good years with bad. But it is precisely this system of fixing a hard-and-fast line, based on a general average, which the Special Judge declares to be unsuited to the Dekkhan. A witness before the Dekkhan Riots' Commission illustrated the case by a short Native story. A man, he said, once wished to ford a river, and set to work to ask the passers-by as to the depth of the stream at various spots in its course. He found from one, that it was ten feet deep at a certain place; from a second, three feet at another place, and so on. Having thus collected a large body of statistics, he struck an average, and finding the mean depth was only four feet, he boldly jumped into the river. But unfortunately, the channel happened to be seven feet deep at that particular spot, and he was drowned.

"My Lord, on the one hand, we are told that the Dekkhan peasantry are so hopelessly plunged in misery and debt, that a special insolvent law is necessary to free them from their private creditors--the money-lenders. On the other hand, we find that the Revenue-officers have, during the past ten years, greatly enhanced the land-assessment in these afflicted districts. The Government has sent forth one set of officers to absolve the cultivators from the loans which they have borrowed from private individuals; and, almost with the same breath, it launches another set of officers to collect a largely-enhanced rental from the cultivators. I do not wish to open the question of the Bombay revenue-system or its enhancements at present. The Dekkhan Riots' Commission Report is now several years old. It is absolutely necessary, in order to arrive at a just view of the case, to know how far the Government has adopted the measures recommended by the Commission, and what steps it has taken to carry them out. For, when we are asked to vote for certain technical amendments suggested by the Chief Judge's Report, we cannot shut our eyes to the painful substantive facts also disclosed in that Report. It may be that a perfectly good defence is forthcoming for the enhancements. But I do earnestly press on your Lordship's Government the necessity of a full and fair enquiry into this matter. I had hoped that a promise of such an enquiry would have been contained in the speech of the Hon'ble Member in charge of the Bill. I shall rejoice if, before the debate closes, some member of your Lordship's Government will give such a pledge. For I feel convinced that this Bill, with its technical amendment, only skims the surface of the evil; and that substantial relief will not reach the Dekkhan peasant under this or any other Act until an impartial enquiry is granted, not only into his obligations to his private creditors, but into the burdens imposed upon him by the State.

"There are other reasons which render such an enquiry desirable. The peasantry of the Dekkhan, and, indeed, the Mahrattas of all classes in the Dekkhan, have been suffering from economic causes sufficient to break the spirits and to ruin the fortunes of any race. Seventy-four years ago, when the Mahrattas

and the peasantry of the Dekkhan passed under our Government, they had five great sources of livelihood. The economic and political changes brought about by British Rule have deprived them of four of these sources and left them only one. In the first place, the Mahratta race had, during nearly two centuries, derived a large, although a fluctuating, income from war. Its pillaging invasions of wealthier provinces were reduced to a system of strictly mercantile adventure, which enriched alike the fort of the chief and the cottage of the peasant. For the Dekkhan hordes were not the accidental product of any single leader, but the natural result of an overflowing peasant population under the guidance of a hereditary administrative caste. The secret of the Mahratta Power was a great standing army of cultivators, who fed themselves off their own fields in intervals of peace, and plundered their commissariat from the enemy in time of war. Their second source of income was Administration. Throughout the greater part of India the Mahrattas made a fixed demand of one-fourth, or *chauth*, on the provincial revenues; and organised this annual process of plunder into an administrative system. The peasant spearman of the Dekkhan was followed by the Mahratta scribe; ample employment existed for both; and tributary streams of silver poured into the Puna treasury from many distant provinces. A century ago, the Mahrattas were draining India of its wealth from Delhi to Haidarábád, and from the delta of Orissa to the Gulf of Cambay. Their third source of income was a great carrying trade by pack-bullocks, partly from north to south, but chiefly down the Ghâts from the Dekkhan to the coast. The railway has destroyed this trade as completely as British rule has put a stop to internal wars and the Mahratta *chauth*. Their fourth source of income consisted of domestic and local manufactures—hereditary handloom industries, now borne down by Manchester competition, as the old pack-bullock has disappeared before the railway. Their fifth source of income was the tillage of their own fields. Seventy-four years of British Rule have stripped the Dekkhan Mahrattas and the Dekkhan peasantry of the first four means of livelihood, and crowded the whole population into the last. For a time, the land responded to the extra labour given to it, and Settlement-officers rejoiced in the statistics of increased cultivation. But they forgot that extended cultivation, without capital, means a falling back upon inferior soils and a harder struggle for life. Sir George Wingate, the most illustrious of the Bombay Survey Settlement-officers, thus wrote in 1841—

"'There can be little doubt that the over-estimate of the capabilities of the Dekkhan, formed and acted upon by our early Collectors, drained the country of its agricultural capital, and accounts in a great measure for the poverty and distress in which the cultivating population has ever since been plunged.'

"These words, written by the highest official authority on the subject, describes the condition of the Dekkhan peasantry forty years ago when the process of decay was only half accomplished. Permit me to quote the statement of the great Dekkhan Association ('the Sarvajanik Sabhá'), issued last July, now that the decay is more complete:—'Confining our remarks for the present to the Kopergaum taluqa, the first point we wish to press upon the notice of Government relates to the fact that, as in 1876-77, with the failure of the rabi crops last year, nearly half the inhabitants of the taluqa found it necessary to leave the villages. In the 27 villages visited by the Agent, out of a normal population of 19,850 souls, it was found that there were 9,450 villagers left in the villages, while the rest had gone into the Nizám's territory and Khandesh to earn their livelihood. In the same manner, in these 27 villages, the number of agricultural cattle was 6,830; out of which number about 2,000 cattle alone were left in the villages in March last, while the others had to be driven away for want of fodder into the Nizám's territory. The 27 villages visited by the Agent represent one-fourth of the whole taluqa in area and revenue. It follows, therefore, that, with the first sign of distress, more than half the people and three-quarters of the cattle have no stock to fall back upon;' that half the inhabitants of the tract under report have to leave their villages, and that two-thirds of the cattle must be driven away to the foreign territory of the Nizám.

"My Lord, I do not offer this description of the tract reported on as a picture of the entire Dekkhan. I sincerely hope that it is not a true picture of

the entire Dekkhan. Nor do I blame the Bombay Revenue authorities for this intense destitution of the people, or in any way prejudge the difficult questions as to the assessment. For I have shown that economic causes are at work, which would have stripped the Dekkhan cultivators of their former prosperity, quite independently of the Revenue authorities or of the rates of assessment. But there is abundant evidence in the report of the Dekkhan Riots' Commission, in the debates upon the Relief Act of 1879, and in the very Report of the special Judge on which the present amendments are based, to prove that misery and destitution are widely spread throughout the Dekkhan. There is proof that, while the State has stepped in to annul the debts of the cultivator to his private creditors, it has greatly enhanced its own demands for rent upon his fields. There is proof to show that, in the opinion of the people, of their representative Association, and of distinguished officers, this increase of the Government demand is the last straw that has broken the cultivator's back. Whether this statement be true or not, there is abundant ground for a searching enquiry into the economic and fiscal condition of the Dekkhan peasant—an enquiry not postponed to some indefinite date, but conducted concurrently with the operations of the amended Relief Act, which will, I trust, be passed to-day. It is not possible to solve a great political question of this sort by shelving it. I have lately had an opportunity of conversing with several of the Judges engaged in the administration of the Act, and with many other persons, both official and non-official, in the Dekkhan. I feel certain that nothing short of a full and complete enquiry will satisfy either the necessities of the case or the just claims of the people."

The Hon'ble Mahárájá SIR JOTÍNDRA MOHAN TAGORE said:—

"Not having any personal knowledge of the peculiar circumstances of the province, I confess I do not feel myself in a position to speak with any degree of assurance on the questions now before the Council. I deem it due, however, to submit that there is certainly a very widespread impression abroad that, notwithstanding the laudable efforts of the Government to ameliorate the condition of the raiyats of the Dekkhan, their exertions have not met with sufficient success, inasmuch as the root of the evil lies not so much in the extortion of the mahájans as in the pressure of the over-assessment of the Government demand on the raiyats—a fact which has been so ably stated by my hon'ble friend the last speaker. Besides, fear is entertained that the additional protection intended to be extended to the raiyats may throw additional difficulties in his way in raising money when in need; for naturally the mahájans will fight shy of all loan-transactions, having to work under such risks and rigid restrictions as the Act will impose. I would, therefore, give my humble support to the proposal for a full enquiry into the state of the raiyats of the Dekkhan, with special reference to the assessment and realisation of the Government revenue, as has been suggested by my hon'ble friend Dr. Hunter."

The Hon'ble MR. CROSTHWAITE had a few words to say on the amendments which this Bill proposed to make in the original Act. He referred chiefly to those contained in sections 7, 9 and 10 of the Bill before the Council. These amendments were in principle merely verbal, and affected sections 19, 22 and 29 of the original Act. Section 19 gave power to the Court to direct that insolvency-proceedings should be taken with reference to an indebted raiyat in cases which came before it. Section 22 gave a Court, when passing a decree against an agriculturist or at any subsequent time, power to direct the Collector to take possession of the debtor's land, and manage the same for the benefit of the creditor for seven years; and section 29 gave the Court similar powers in the case of an insolvent. The Select Committee had agreed to amendments which inserted words making it more clear that the Court had the power in its discretion, and without being moved by a party to the case, of directing these proceedings to be taken. He had no objection to these amendments, and he should have had nothing more to say if it had not been for some remarks which his hon'ble friend Mr. Hope had made in the course of his

speech and in a note which he had written, which was to be found printed as Paper No. 1 relating to the Bill. It was evident from the expressions used in this note, and also from the speech which he made in connection with the original Act in 1879, that the Hon'ble Mr. Hope laid great stress on the clauses to which MR. CROSTHWAITE had referred, and that he considered them the keystone of the Bill. He said in his note:—

"In short, what the Act contemplates is a compensatory system. If the creditor was, on the one hand, to have his bonds questioned, his accounts discredited and his power of imprisonment taken away, he was, on the other, to receive the benefit for seven years of all that could be got out of the land by efficient Collector's management, the debtor being declared an insolvent if necessary."

These sections were, in fact, the gilding of the pill, the jam to induce the creditor to swallow the dose, and they had failed to effect the purpose intended. They had not in fact "worked at all—well or ill," as was shown in Dr. Pollen's report. The Hon'ble Mr. Hope attributed this failure to the supine attitude of the judges—to that taint of original sin, that infection of nature, which doth remain even in judges regenerated by a contemplation of the provisions of the Dekkhan Relief Act. Accordingly, it was not only with the object of making their powers clear to them, but of pressing or forcing them to use those powers, that these amendments had been advocated by the Hon'ble Member. It appeared from his hon'ble friend's note that that might be presumed to be his purpose, and that he intended that the Courts should resort very largely to the use of the discretionary power which the legislature had given them. This would appear from paragraphs 29 and 30 of the Hon'ble Member's note. He wrote—

"If the Courts had vigorously used their powers to require management by the Collector, the rules would soon have been forced into existence"—

referring to the rules which the Local Government was empowered to make for working these provisions through the Revenue-officers. Again, he wrote, with reference to a remark made by Dr. Pollen in his report—

"The Court *is* empowered already, but its powers must be expressed more fully, and the duty of using them must be explicitly laid upon it."

In fact, the failure which had occurred in the working of this part of the Act was attributed to the supineness of the Courts. Now, MR. CROSTHWAITE wished to guard against the supposition that, for his own part, in acceding to these amendments, he in any way acquiesced in his hon'ble friend's view of the case as expounded in this note. He thought the use of these sections should be left entirely to the discretion of the Courts, and that there was no reason to believe that, in the restricted effect hitherto given to them, the Courts were actuated otherwise than by a wise discretion. The reasons for the failure of these well-intentioned measures laid, in his opinion, much deeper. He would not dwell on the danger of pressing the Courts to take action and force debtors who were naturally unwilling, and who were not pressed to take this step by their creditors, to pass through the Insolvency Courts. He was more concerned with the point that, if these sections were to be worked in the way it was proposed, some steps should be taken to see that the working of them should not put any undue stress either on the Revenue-officers or on the raiyats of the Dekkhan. The law empowered the Court to direct the Collector to manage the debtor's land for seven years. In the ordinary sense of management, it would be impossible to apply these sections to thousands of raiyats whose holdings averaged about 20 acres. But, as was evident from his speech on introducing the Dekkhan Relief Bill in 1879, the interpretation which his hon'ble friend Mr. Hope put on the term "management" was something very different. His intention was that the Collector should leave the raiyat in possession of the land, and should impose on him a rack-rent, and collect it by all the powers, short of selling the land, which the revenue procedure gave to the Collector for the purpose of getting in the Government revenue. Now, it was impossible to weigh the effect of such a measure apart from the consideration of the amount of the nett produce enjoyed by an average raiyat in the Dekkhan. Unless the Council was prepared to say that, in the

majority of cases, there was a surplus left to the raiyat over and above what was necessary for the maintenance of his family, which the law obliged the Collector to set aside, and over and above the Government revenue, which was a first charge on the land,—unless there was a steady surplus left after meeting these two charges,—it would certainly cause serious difficulties if these sections were used in an indiscriminate manner. And, therefore, MR. CROSTHWAITE thought it right to say that, when this matter was before the Select Committee, as far as he was concerned, these verbal alterations were merely made to show that the Courts had a discretion under the law.

With reference to the question whether or not the raiyats had a surplus after meeting the two charges to which he had referred, he was entitled to call attention to a paper which was presented to the Council yesterday, and which purported to show the position of the people in the Dekkhan districts. He had looked through the reports of Government and other papers to see what represented the sum left to the Collector to meet the raiyat's debts after providing for the maintenance of his family and paying the Government revenue, but he had been saved from further trouble by this paper which bore the well-known name of Mr. Lee-Warner. It appeared from this that, on the average, the Government assessment was "less than half the nett produce,—more perhaps in very bad lands,—but far less in better lands even where the cultivation is poor." With these data to go upon, and knowing, as they were told before by the Hon'ble Mover in his speech in this Council on the 17th July 1879, that the average Government assessment on poor land was 7 annas, while on good land it was 12 annas, MR. CROSTHWAITE arrived at the result that the average nett produce on bad land was not more than 14 annas or 1 rupee, and on good land about 24 annas, or say even 2 rupees. If the average holding of a raiyat in the Dekkhan was, as he believed it was, about twenty acres, and the Government assessment was about half the nett produce, it seemed probable that the whole surplus left to the average cultivator in an ordinary year would not be more than Rs. 15 or Rs. 20. So that, although it might be true—and he was quite ready to accept the assurances of the Bombay Revenue-officers that it was true—that the revenue was light, still it was plain that, owing to the poverty of the soil and smallness of the holdings, the margin left to come and go on, to meet fluctuations of price and production, was very small. Under those circumstances, MR. CROSTHWAITE thought that nothing ought to be left unsaid to guard against the supposition that it was desired that the Courts should act in an indiscriminating manner in the application of these sections. He now wished to recall to the recollection of the Council the speeches which were made in 1879 in reference to the revenue-system as affecting the Dekkhan and in connection with this Bill. He would confine himself to a quotation from the speech made by the Hon'ble Mr. Hope himself, who said—

"To our revenue-system must in candour be ascribed some share in the indebtedness of the raiyat . . . It seems likely that indebtedness arising mainly from other causes . . . has been aggravated by our rigid system. If any considerable increase at a revision were gradually worked up to in the course of two to five years, the raiyat would have time to re-adjust his expenses to his means, instead of being taken by surprise and perhaps driven to the money-lender. Again, if the recovery of instalments were more coincident with the time when the raiyat realizes on his produce, instead of falling sometimes too early and sometimes too late, and so the land-revenue were more in practice (what it is in law) a first charge on the latter, much temporary borrowing, fraud in crediting produce, and eventual Government process for recovery might be avoided . . . Moreover, though the system of taking revenue in kind, besides involving the injustice of assessment on the gross produce, instead of the nett, is so open to fraud when adopted on a large scale as to be impracticable, its object might be attained, in localities subject to drought, by such suspension of the revenue-demand as to spread over three or four years according to the seasons, the aggregate amount to be recovered in that period. Finally, in times of famine, suspension of demand might be systematically granted, as of late it has been by Sir Richard Temple, and even total remission, which is not inconsistent with the Bombay settlements."

There was no need to detain the Council by further quotations from the speeches made in 1879. MR. CROSTHWAITE thought that the passage he had read admitted in the clearest manner that the revenue-system was partly to blame, and that, in the opinion of the Hon'ble Mr. Hope, which they all must allow was entitled to very great weight, there were certain faults in the revenue-system of Bombay which required amendment and alteration. He had taken some trouble to find out what had been done since 1879 by the Bombay Government to amend those faults, and he found it a matter of great difficulty to ascertain what had actually been done. He had, however, succeeded in obtaining a volume published by the Bombay Government so lately as October last, which purported to contain "all the rules, orders and official correspondence on the system of revenue-survey assessment and its administration." And he could find nothing bearing on the matter now in hand in that compilation. This volume, however, did not appear to deal with the system of collection. On that point he had consulted the valuable work of Mr. Nairn, which contained all the standing orders on the subject. He could not, however, find any general order passed since 1879 correcting the faults with which his Hon'ble friend Mr. Hope had charged the Bombay revenue-system. The prevalent tone of these orders was certainly against remissions or suspensions of revenue; and the latest order, which was dated March 1878, was to the effect that no remission of revenue should be made without the sanction of Government. He could find no orders that put the matter on a sound and defined basis by ascertaining the tracts of country subject to great seasonal changes, and by giving Commissioners or Collectors power to suspend collections of revenue when harvests failed, and to deal promptly when occasion required. He was aware that, in particular districts, remissions and suspensions of revenue had been made; but that was not sufficient. In order substantially to improve the raiyat's credit, the matter must be put on a sound basis and definite rules laid down by measures similar to those lately promulgated by His Excellency's Government for the benefit of Northern India. He believed that the Dekkhan Raiyats' Act had done good, and he believed it would in the future do more good, although not perhaps exactly in the way which was intended by its accomplished author. It would prevent creditors from harassing the raiyats; it would enable the Courts to exercise their discretion in bringing debtors and creditors to terms; but, speaking from his own experience as a Revenue-officer, he did not believe that, without a proper revenue-system,—by which he meant a system that would ensure discretion and moderation not only in the assessment but in the collection of the revenue,—the conditions, being so bad as they had been described to be, could be materially improved. He believed that, when widespread indebtedness of this sort was found among the agricultural classes of a large tract of country, a prudent Government would look to its revenue-system to see if it was well-suited to the conditions of the country. As regarded the present case, he had the very best authority, namely, that of his Hon'ble friend Mr. Hope, for attributing some part of the indebtedness of the raiyats to defects in the revenue-system. He wished to speak in terms of the greatest respect of the Bombay Survey and Revenue Departments, and of the Revenue-officers and of the many great men who had served in that Presidency; but he did wish to see this question dealt with in a more liberal spirit than that in which it had hitherto been met. If he was wrong in supposing that nothing had been done by the Government of Bombay, and if the Government of India had at its disposal information which was not before the Council, he hoped the opportunity would be taken of informing the Council what had been done in this matter.

The Hon'ble Sir STEUART BAYLEY said that, in the course of this debate, questions had been asked to which he should have been glad to give more complete answers, but to which he thought it right that he should give such answers as the information at his disposal enabled him to do. Although he could not go into the general question of the Bombay revenue-system,—in fact, he must leave the defence of that system to persons who were abler and more competent than himself to do so,—he should not like it to be supposed that the particular strictures on that system which he neglected to meet were therefore unassailable. It seemed to him, from his small experience of the Bombay revenue-system, the operation of which he had an opportunity of seeing for one year in Birár, where the seasons were less variable than in the Dekkhan, and the produce consequently more even, that that system was very much to be recommended. He saw a system which worked smoothly and harmoniously and as satisfactorily as any system in India. There were as few complaints of pressure and

of inability to meet the assessments as in any other part of India with which he was acquainted. It might be that that system was not equally applicable to all parts of the Presidency. He presumed the attack which had been made was not on the raiyatwárí system, but on the incidents of that system and the mode of collection. [MR. CROSTHWAITE said he had no objection to take to the Bombay raiyatwárí system.] But he was merely saying that in Birár the system, as a whole, worked satisfactorily. The parts of the system to which objection had been taken were no doubt less favourable in their operation in the Dekkhan districts than in Birár: those districts were specially notorious for the uncertainty of the rainfall and, in consequence, great variation in the quantity of produce. The hon'ble gentleman opposite (Sir Jotíndra Mohán Tagore), speaking of the assessments generally, referred to the exceptional weight of the assessment, and in some other expressions which were used the weight of the assessment was the burden of the complaint. But the Government of Bombay had always maintained that their assessments were not heavy; and the speaker thought that, on an average of years, they had shown good grounds for saying so. A quotation on this point had been made from a note by Mr. Lee-Warner, but only a small portion of what that gentleman said on the subject was quoted. His opinion was, on the whole, very much against the hon'ble gentleman who quoted him. He compared the assessments in the British villages of Satára and Puna with those in some of the Native States adjoining. He fixed the value of land in the Bhore (Native) State and in the British villages adjoining, and he found that the assessment fell just twice as heavily in the Native State of Bhore as in the British adjoining district of Satára. But however that might be, the objection taken was to a system of assessment on an average of years. One hon'ble gentleman quoted from the Dekkhan Riots Commission the story there given of a gentleman who attempted to cross a stream on the system of striking a general average of the depths at various parts of the stream, the result being that the place at which the gentleman crossed was beyond his depth and he was drowned; and the analogy drawn from that was, that the assessment might be fair on an average of years, but was oppressive in an unfavourable year. [The Hon'ble MR. HUNTER said the analogy was the speaker's; he did not draw it.] He was about to question the entire relevancy of the apologue; but, whether the criticism was just or unjust, there could be no doubt that, in a district exceptionally liable to variation in the productiveness of the soil, the margin which the assessment left to the cultivator must be similarly liable to variation, and the opinion that this margin was dangerously narrow and required to be tempered by special elasticity of procedure was maintained by many authorities. This opinion, reiterated as it was by the newspaper Press, renewed and repeated by officials of weight and position, and pressed upon this Council not only when the Bill was brought in but on the present occasion, was not to be overlooked by the Government of India, nor was that Government likely to discredit the importance of such criticism or to pass it by unnoticed.

The two main points to which criticism had been directed were the rigidity of the system of collection and the suddenness of enhancements. These were the points of attack in the speeches made in 1879 to which his hon'ble friend Mr. Crosthwaite had referred, and they were the main points now. And, though he might not altogether be able to satisfy the anxiety of the critics or of enquirers generally, he might be able to show that the Government of India had not altogether lost sight of the question nor been indifferent to it. In the first place, the attention of the Government of Bombay had been called to the speeches which were made in this Council when the Dekkhan Raiyats' Act was originally passed, and he would now read to the Council a portion of the letter on the subject:—

"There is one point, however, which, although it may possibly not involve legislation, appears to the Governor General in Council to demand further consideration from the Bombay Government, namely, the possibility of adapting the assessment of the land-revenue to the variations in the season. This question is discussed in paragraph 10 of the Bombay Government letter of the 6th April, 1877. The Governor General in Council fully agrees in the view that, in ordinary cases and where the land-revenue is moderate, it would not be good, either for the raiyats or for the public treasury, that the land-revenue demand should fluctuate. But the

system which is best for districts enjoying an ordinarily regular rainfall may not be the best for the arid tract of the Central Dekkhan, where (it is said that) a good rainfall comes only once in three years. In view of the very great fall of prices and the vicissitudes of season in the Dekkhan during the last few years, it would be desirable that the present Government of Bombay should consider whether the recent (1873-75) revisions of the revenue have given sufficient relief from an assessment which was based, in part, on an unduly high estimate of the normal value of field-produce in the Dekkhan; and, further, the Governor General in Council would wish the Government of Bombay to consider whether, in these four districts or in parts of them, it would not be wise to have a varying scale of revenue-demand, to be applied in unfavourable seasons, whereby the nominal assessment might be reduced by a certain percentage over an entire district or division of a district in the event of failure of rain or other serious damage to the crops."

The Government of Bombay at first postponed their answer to this question, and it was finally merged in the answer they sent on the recommendations of the Dekkhan Riots Commission. The point mainly alluded to was the possibility of having fluctuating assessments. On this point they said:—

'Before further discussing this important question, the Governor in Council desired to have before him the opinions of the most experienced Revenue-officers of this Presidency; and the Commissioners of Divisions, the Commissioners of Survey and the Collectors were therefore instructed to submit their views on the proposed modification of the system of collecting the land-revenue. Their reports are now before this Government; and I am to say that they are unanimously opposed to any departure from the principle of fixity of demand. Among the reasons given for this conclusion are, that the assessments have been fixed with due regard to the occurrence of bad and indifferent seasons, that uncertainty of demand is unfavourable to habits of thrift, that the necessity for annual inspections will open the way to frauds, and that the remissions will be unequal—in some cases sacrificing revenue which might be collected, and in others giving insufficient relief to real distress.

"His Excellency the Governor in Council concurs generally in the opinion of the Revenue-officers that the objections to a varying scale of revenue-demand are of a very serious kind, and at the same time desires me to say that this Government found other means in the recent years of scarcity to afford a timely relief to the raiyats from the rigidity of the revenue-demand, by suspending or deferring the exaction of the revenue-instalments. While, therefore, he feels grave reasons to doubt the urgency or advantage of a radical change in the method of collection, His Excellency in Council anticipates no difficulty in adopting, whenever abnormal circumstances may recur, such temporary expedients as may relax the stringency, without departing from the principle, of the land-revenue system of the Presidency."

They then went on to explain the reasons why they thought the recommendations of the Dekkhan Riots Commission would be very difficult to work in practice. And they said:—

"On the other hand, I am to submit to the consideration of the Government of India that the expedient of allowing payment of revenue to be deferred, which has been adopted by this Government in the late abnormal seasons, is at once effectual for its purpose and free from all the objections which are fatal to the alternative suggestions. The Bombay raiyat is not permitted by the theory of his contract to claim a remission of his very moderate assessment. It may, no doubt, be imperative to depart, to some extent, from this principle in a year of famine such as 1876-77; but seasons of total failure have not been of such frequent occurrence as seems to be supposed; and it can be shown that the system of fixed demand and realization has been worked with great success in many of the worst districts of the Dekkhan during a long series of years. For fifteen, twenty or even a greater number of years in succession the returns show that the revenue was realized without remissions and without outstandings, and with an annual increase from the extended occupation of land. During seasons of this character it has been found possible to maintain the principle of the survey-settlement without any noticeable pressure. The system, however, is not so inelastic as to be unable to bend to the stress of abnormal circumstances. The Revenue-officers have at their command accurate information as to every field and holding. When careful inquiries have assured the Collector that certain of the raiyats of his district are, from total failure of their crops, unable to meet their liabilities, an instalment of the whole year's demand is allowed to stand over until a better season furnishes the means of payment. Strict orders have been issued by the Government that the raiyats are not to be so pressed for recovery of land-revenue as in any way to impair their efficiency as tillers of the soil. I am to submit for consideration that the suspension of the assessment, not without hope of its ultimate collection, does not detract from the certainty of the tenure, does not discourage thrift, does not demoralize the raiyat by the expectation of constant remissions, offers no inducement to the bribing of officials, occasions the smallest financial loss, and at the same time secures the desired advantage of recovering the dues of the State from the tenant at the time when he has resources wherewith to pay, and of thus adjusting the demand

to the circumstances of the season. I am to say that the Governor in Council has reason to believe that the postponement of payment has, by aid of the intimate knowledge of the people and the land possessed by the Revenue-officers, been worked with precision and has afforded the required relief.

"In conclusion, I am to say that His Excellency in Council trusts that the above considerations will satisfy the Government of India that there are the very gravest objections to importing a varying scale of revenue-demand into the land-revenue system of this Presidency, and that the expedient of suspending or postponing or ultimately remitting the payment of the assessment, to which Government now resorts in abnormal seasons, affords the necessary relaxation of pressure without deranging the most important principles of the survey-settlement. On the other hand, the proposed remedial measures would be only applicable to years of rare and exceptional occurrence, and would be positively detrimental and demoralizing under all ordinary circumstances and in the general run of years."

At the time that reply was received by the Government of India, the same question of a variable system of assessments was under the consideration of the Famine Commission, and their view of the question was given in page 127, Part II of their report; and, although it was too long to quote, SIR STEUART BAYLEY might briefly be permitted to state their conclusions. They were not prepared to advocate the adoption, as a normal rule, of any of the proposals for making collections vary with the ordinary variations of the season; it should only be in exceptional cases of calamity that any such concessions should be made. They laid down the principle that, in such times of calamity, no cultivator should be made to pay the revenue by borrowing money when the yield of the crops was such as to leave no surplus above the amount needed for the support of himself and his family. They wished to make the degree of remission uniform over a considerable tract of country, so as to avoid the danger of corruption, and to make suspensions of revenue dependent on suspensions of rent; and they insisted on the necessity of relief being given early and promptly and regulated systematically. They also proposed that, in tracts where not only the outturn but the amount of cultivation was precarious, there should be an exceptional procedure, namely, a collection of a fixed average rate, but only upon the land actually brought under cultivation each year. These views, SIR STEUART BAYLEY thought it would be admitted, did not differ very materially from the policy which the Government of Bombay laid down for itself and accepted as part of the revenue-system. They agreed in the main points of preferring moderate fixed assessments to fluctuating assessments, the necessity of suspensions and remissions in bad years, and making such suspensions uniform over considerable tracts of country; and the points on which the Bombay system differed were in matters of administrative detail, such as systematic rules for procuring prompt and spontaneous action on the part of the Revenue-authorities.

To show what the Bombay system was in regard to suspensions and remissions, he might be permitted to refer to the same authority from which his hon'ble friend Mr. Crosthwaite had already quoted. The general order of 1867 laid down the general principle:—

"Permanent and entire remissions should only be granted in cases of complete failure of crops, and in villages which have been subject to a succession of bad seasons. In other cases, partial remissions, coupled with a postponement of the remaining Government demand or part of it, may be sanctioned. Individual enquiries should, as far as possible, be avoided, and measures of relief, as a rule, applied to entire villages. In taluqas where the assessment is very light, the raiyats ought to be able to meet deficiencies in occasional bad years.—*G.R. No. 151, Jan. 15, 1867.*"

And in the order of October 1847, repeated in 1874, they said:—

"When a group of villages has suffered from an exceptionally bad season, an average reduction of assessment all round will be made, if necessary. When this is done, there will remain certain individuals unable from poverty to pay up their quota, even after the proportional abatement from the full demand had been made. These cases will require to be particularly enquired into, and the unrealized balances due written off at the close of the collecting season.—*G. R. No. 3899, October 5, 1847, and No. 1200, March 7, 1874.*"

Those were the general orders which existed long before the debate which took place in this Council in 1879. Then he had been asked what had been done since. He could not refer to any general orders, but could show what practical action had been taken. He had in his hand two orders passed in 1882; one in which directions were given to the Collector of Ahmadnagar in the following terms:—

"(1) In villages where there has been a total failure of crops, the Collector may exercise his discretion in granting remissions of the current year's revenue.

"(2) In villages where the failure has not been so complete, he may remit the increase imposed at the revised settlement, and postpone the collection of the remainder for the current season, or for a longer period if necessary.

"(3) In villages where the failure of crops has only been partial, the Collector may remit a fraction of the revenue in proportion to the estimated failure.

"Before, however, granting any remissions, the Collector should cause a careful enquiry to be made into the circumstances of each case. * * *. No revenue should be collected by distraint and sale of the defaulter's property without the clearest evidence of contumacy."

These were directions given to a particular Collector in a particular district, and it was uncertain how far they might be known and acted upon generally, but the principle was distinctly laid down in the Resolution of February, 1882, in which it was said:—

"It must, however, be clearly understood that Government do not desire that in any case the payment of the assessment should be rigorously enforced when such payment will cripple the cultivator and reduce him to a state of insolvency. Government do not desire that remission should be granted lightly or for insufficient reasons, but they do desire that the payment of the full assessment should not be exacted when such a measure would prove the financial ruin of the raiyat and be the means of preventing him from properly cultivating his land."

He thought he had now shown that the policy of the Bombay Government and the principles it had adopted for its guidance in revenue-matters in years of scarcity were identical, or nearly identical, with the recommendations of the Famine Commission. The recommendations of that Commission had been taken up and thoroughly considered by the Government of India; and, so far as regarded the North-Western Provinces, the result had been the publication of a Resolution in October of this year. The effect of that Resolution was that, after a careful classification of protected and unprotected areas, it would become the duty of each Local Government to lay down a scale in accordance with which, and in proportion to the severity of the calamity, suspensions of revenue would be made. These would afterwards be turned into remissions where that course was found necessary.

The main point insisted upon was the necessity of providing for the prompt and spontaneous action, on a pre-arranged system, by the local authorities, as soon as their enquiries showed them the real nature of the calamity with which they had to deal. The Resolution also followed the lines laid down by the Famine Commission for those precarious tracts in which the cultivation fluctuated from year to year. This Resolution was, in the first instance, promulgated only for Northern India. It was not thought expedient to extend it to Bombay, because the principles underlying it were already accepted by the Bombay Government, and also because the Government of India did not know, without further enquiry, how far the scope of the scheme would have to be altered to make it suitable to the special revenue-procedure of Bombay. It was, however, still a matter for consideration whether the principles which the Bombay Government had accepted might not be further systematised and formulated so as to give Collectors some knowledge as to what their action should be on the occurrence of a calamity, and some power to deal with it, without having to refer each case separately for the orders of the Central Government.

With regard to the other point, namely, the suddenness of enhancements, he could only say that the Government of India had watched the action of the Bombay Government with much interest and not without some anxiety. But they had not felt called upon to interfere in any direct way with the discretion of the Government of Bombay. The Government of Bombay was in this matter in direct communication with the Secretary of State;

it sent him its settlement-proceedings direct, and he reviewed and assented to them, or modified them, as he thought fit. In one case, when the Government of India, after failing to persuade the Government of Bombay to adopt its views on a question of enhancement, thought it necessary to indicate to the Secretary of State that they viewed with apprehension the extent to which, in one instance, enhancements had been made, the Secretary of State pointed out in reply the unquestionable fact that the Government of Bombay had at its disposal much more complete and accurate means of information than the Government of India, and the interference of the Government of India was distinctly and decidedly deprecated. The Secretary of State had, however, himself dealt directly with this question of enhancement. In some of the distressed districts of the Dekkhan he did not sanction the enhancements originally proposed; that was to say, he laid down the principle that enhancements above 20 per cent. should not be carried out in those districts for a term of five years, in order to allow time for them to recover from the effects of the famine. This term was afterwards, on the application of the Government of Bombay, reduced to three years, and the Government of Bombay had, on its own motion, suspended the introduction altogether of the enhanced revenue in several of these taluqas. It was not intended to deny that the Government of India had a distinct responsibility in the matter, but, under existing arrangements, they could only exercise it with advantage through the Secretary of State. Where the Government of Bombay corresponded directly with the Secretary of State, there was always a possibility of divergent orders being given by two supervising authorities, and the inconvenience thus caused would be very great. The result was that, though the Government of India watched this question earnestly and anxiously, they considered any direct interference in the matter inexpedient, but, should occasion arise, they would not fail to express their opinion after full inquiry and in the way most likely to be useful.

The Hon'ble MR. ILBERT said he should have been glad to have had the opportunity of commenting on some of the criticisms offered on the Bill since its first publication—criticisms some of which were extremely useful. Amongst other things, he should have liked to explain and to support, as he was fully prepared to do, the proposed amendments of the law relating to mortgages. But the debate upon the Bill had been protracted to an unusually late hour, and, under the circumstances, he thought the best course he could adopt—and it would certainly be the course most acceptable to the Council—would be to leave unsaid what he had intended to say.

The Hon'ble MR. GIBBS said he had not anticipated such a protracted debate on the revenue-system of Bombay. He had some doubt whether the criticisms which they had heard were technically within the purview of the Council, but, as far as he was concerned, he was certainly taken by surprise, so that he was not in a position fully to defend that which had been attacked. As it was, he would only make three brief observations. He was a member of the Bombay Government from 1874 to 1879. When he went into that Council, he had not had any large official experience of the matters under debate; but from enquiries which he had made outside, and from what had come before him from time to time, he had arrived at the conclusion that the revenue-assessments in Bombay were high. But, having subsequently, as a member of Government, to go into the matter at considerable detail, he might say that he left the local Council with the impression full on his mind that the assessments were not high. While he was in Council there, before the famine took place, during the administration of Sir Philip Wodehouse, the question of the revision of the settlements in some of the Dekkhan districts came up for the first time, and the question whether any limit should be put to the amount by which the assessments should be enhanced was discussed, and a resolution was passed limiting the increase to certain fixed percentages on districts, villages, and on individual holdings. He could not then exactly remember the figures, but he recollected that the resolution was not passed without the opposition of some of the members of the Bombay Government; and the only thanks they got in the matter was a despatch from the Secretary of State stating that they had gone

further than they should have done. Again, when the famine took place, the Bombay Government recommended to the Supreme Government that certain remissions of revenue should be granted in the territory subject to the distress; but the order which came back was that they should not make remissions, only suspensions of revenue. These were the only facts which then occurred to him in defence of the action of the Bombay Government.

The Hon'ble MR. HOPE said it might perhaps be expected that, as a member of the Bombay Civil Service, and one having protracted experience in revenue-matters, he should enter upon an elaborate reply to the attacks on the revenue-system of that presidency which had been made on the present occasion. He had, however, no intention either of satisfying the curiosity, or, it might be, of trying the patience, of the Council on this subject. His reasons for adopting this course were two: first, he considered that the revenue-system of the Bombay Presidency, whether good or bad, was not the question at present immediately before the Council. The Hon'ble Member who led off the discussion complained that, although the amendments which the Bill proposed would do good in their way, they would not do everything wanted to remove the evils which the Relief Act was intended to remedy. To this MR. HOPE would reply that the Relief Act was not intended to remedy any evils connected with the revenue-system, and it therefore contained no provisions on the subject. At the same time, he would take in a friendly spirit, in consideration of the desire to allow all subjects to be ventilated which ought to distinguish a Government, the remarks which had been made on this side issue. And he did so the more, because the remarks which he had himself made in introducing the Bill in 1879, and which had now been quoted, were of a somewhat similarly irrelevant character. His second reason for not attempting to offer any reply to what had been said regarding the revenue-system was, that he did not feel himself at liberty in any way to commit the Government of India, of which he was a member: anything which he or any other member of the Government of India might say to-day was merely said in their capacity as individual members of this Council. In that capacity he need not say more than this, that a great deal had since been done, as his hon'ble colleague Sir Steuart Bayley had shown, to meet the strictures contained in his speech of 1879, and that those strictures were coupled with the emphatic statement that the assessment was "low in itself, very low for *a landlord* to take, far lower than that prevailing in 'alienated' British villages, and adjacent foreign states." He could only recommend his hon'ble friends who still found fault with the Bombay revenue-system to recollect the caution which, as Sir Steuart Bayley had mentioned, was conveyed by the Secretary of State as to the difficulty of criticising the revenue-systems of other provinces in remote parts of India.

With these remarks he would ask the Council no longer to postpone a measure which was intended to afford considerable relief to a large body of raiyats, including many whose suits were now pending.

His Excellency THE PRESIDENT said:—

"I have not the least intention of detaining the Council by entering into any discussion of this measure itself. Indeed, the chief part of the debate now brought to a close has turned on a question which, though connected with the subject of the Bill, is distinct from it,—namely, the question of the Bombay revenue-system generally. Not unnaturally my hon'ble friends Mr. Gibbs and Mr. Hope have intimated some doubt as to the regularity of that discussion. I myself entertained for a few moments some hesitation on the point, but did not think it advisable to put a stop, by the exercise of the powers of the Chair, to a continuance of that discussion; because it partly arose out of a circumstance which is of itself an anomaly,—namely, that a Bill of this purely local character affecting Bombay, and indeed applying only to a limited portion of that Presidency, should have been brought in and passed, and subsequently dealt with, by the Governor General's Council. The discussion here in this Legislative Council in Calcutta of the local affairs of Bombay would have been altogether

out of order if it had not arisen upon a measure in which those affairs are directly dealt with; but, as that is the case, a latitude of debate may fairly be allowed which would have otherwise been inadmissible.

"But even if this had not been so, I should have been quite unable to interfere after the circulation of the paper written by an able and very intelligent Bombay officer, my friend Mr. Lee-Warner, which relates to the question of the Bombay revenue-system and to nothing else. Of course, after that paper had been circulated to members of this Council by the hon'ble member in charge of the Bill, with special reference to this discussion, it would have been quite impossible for me to raise any objection to observations being made by members of this Council which naturally arose out of a paper already in their possession; and, under those circumstances, I thought it advisable—being always anxious to determine any doubtful point in favour of freedom of debate—that I should not attempt to place any restriction upon the discussion which has just taken place. But I must, at the same time, say that I think it exceedingly inconvenient that we should attempt to discuss in this Council the strictly local affairs of the minor Presidencies, and that such a proceeding is, generally speaking, much to be deprecated, and might easily lead to serious difficulties. As regards the general question of the Bombay revenue-system, I wish to reserve entirely my own opinion. My hon'ble friend Sir Steuart Bayley has explained the course hitherto taken with regard to that question, and has shown how revenue-questions relating not only to Bombay, but to Madras also, fall in a special manner under the cognisance of the Secretary of State; so that any premature declaration of the policy of this Government would be clearly out of place. My own views on the question of suspensions and remissions of revenue are embodied in the recent Resolution of the Government of India on that subject; and, as regards the question of enhancement, I cordially concur with the views expressed by the Secretary of State, that, even when an enhancement may be reasonable in itself, it is not desirable that, if it is heavy in amount, it should be made at once, but that it should be introduced gradually, so as not suddenly to raise very largely the payments which the raiyats have previously been accustomed to make.

"I do not think that I need detain the Council with any further observations. I merely wished in the present instance to make something of protest against a course of proceeding which I think should be avoided as much as possible, and also to explain my reasons for not entering now upon the general question that has been raised, and reserving my opinion respecting it."

The Motion was put and agreed to.

BURMA LABOUR LAW REPEAL BILL.

The Hon'ble SIR STEUART BAYLEY introduced the Bill to repeal the British Burma Labour Law, 1876, and moved that it be circulated for the purpose of eliciting opinion thereon.

The Motion was put and agreed to.

The Hon'ble SIR STEUART BAYLEY also moved that the Bill and Statement of Objects and Reasons be published in the *Fort St. George Gazette* and the *British Burma Gazette* in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

EMIGRATION BILL.

The Hon'ble MR. ILBERT moved that the Hon'ble Mr. Hunter be added to the Select Committee on the Bill to amend the law relating to the Emigration of Natives of India to the Colonies.

The Motion was put and agreed to.

CENTRAL PROVINCES TENANCY BILL.

The Hon'ble MR. CROSTHWAITE presented the third Report of the Select Committee on the Bill to consolidate and amend the law relating to Agricultural Tenancies in the Central Provinces.

AGRICULTURAL LOANS BILL.

The Hon'ble MR. CROSTHWAITE moved that the Hon'ble Mr. Hunter and the Hon'ble Sayyad Ahmad Khán be added to the Select Committee on the Bill to consolidate and amend the law relating to loans of money for agricultural improvements.

The Motion was put and agreed to.

CENTRAL PROVINCES LOCAL SELF-GOVERNMENT BILL.

The Hon'ble MR. CROSTHWAITE also moved that the Hon'ble Rájá Siva Prasád be added to the Select Committee on the Bill to make better provision for Local Self-government in the Central Provinces.

The Motion was put and agreed to.

SUNDRY BILLS.

The Hon'ble MR. ILBERT moved that the Hon'ble Mr. Miller be added to the Select Committees on the following Bills:—

To amend the law relating to Merchant Shipping.

To give power to arrest persons whose evidence is needed under Act XII of 1859.

The Motion was put and agreed to.

CHUTIÁ NÁGPUR ENCUMBERED ESTATES ACT, 1876, AMENDMENT BILL.

The Hon'ble SIR STEUART BAYLEY moved for leave to introduce a Bill to amend the Chutiá Nágpur Encumbered Estates Act, 1876, and, in doing so, he said that only a few words were necessary in explanation. It came out, on the examination of the Act for the relief of the Oudh taluqdárs, that there was a mistake in the Act which enabled a proprietor to demand the release of his estate as soon as the scheduled debts were paid off. It did not occur to the drafters of the Act that, when the scheduled debts were paid, there might be a debt due to the Government for money borrowed for the purpose of paying off the scheduled debts, and the owner might demand the release of his land although the debt to Government was unpaid. The defect in the Oudh Act was remedied, and His Honour the Lieutenant-Governor was asked whether a similar correction was needed in the Chutiá Nágpur Act; to which His Honour replied that, although hitherto it had not been found necessary to contract any loan, it might possibly be necessary to do so on some future occasion. He was of opinion, therefore, that it would be desirable to amend the law in the direction indicated, and also to make special provision for loans to be raised by Government on the same lines as those on which sections 24 and 26 of the Broach Thákurs' Act were framed. Some other alterations had also been suggested by the Board of Revenue, but, as the Government of Bengal did not support those recommendations, SIR STEUART BAYLEY need not detain the Council further with regard to them.

The only other point for consideration was a proposal to remedy an oversight in the amended Act of 1877. Under section 12 of the Act, the Commissioner was required to decide within twelve months whether the management of an estate was to be proceeded with or to be abandoned, but, under section 18, the manager was empowered to effect a mortgage six months after the estate was brought under the Act. Although in the original Act the two sections were drawn so as to give the same limit of time in both, yet, when the time came to be altered in the one from six months to twelve, the other section was left unaltered; and the result was that the Commissioner might direct the management of the estate to be abandoned after twelve months, although the manager had effected a mortgage upon it within the period between the six months and the twelve months. It was, therefore, expedient to extend the period for effecting a mortgage under section 18, so as to make the period conform to the period prescribed in section 12 for the continuation of the proceedings or the abandonment of the estate.

The Motion was put and agreed to.

The Council adjourned to Friday, the 5th January, 1883.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 5th January, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore Bahádur, K.C.S.I.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Áhmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble R. Miller.

EXPLOSIVES BILL.

The Hon'ble MR. ILBERT introduced the Bill to regulate the manufacture, keeping, sale, conveyance and importation of explosives. He said that, as he found that the Bill had not been circulated among hon'ble members before last Wednesday, he proposed to postpone until the next meeting the Motion that

the Bill be referred to a Select Committee; but he should like, with the permission of the Council, to take this opportunity of explaining shortly the main provisions of the Bill. The Bill was divided into ten chapters. The first chapter contained the usual preliminary matter. It exempted from the operation of the Act Government establishments, and it contained a clause saving the operation of the Indian Arms Act. As he had said on a previous occasion, the object of the Arms Act and the object of the present Bill were entirely different, and it was desired to keep the measures as distinct from each other as possible; and, therefore, it was provided that nothing in this measure should affect any thing contained in the Arms Act. Then the Bill fixed the date on which the measure was to come into operation. It was to come into operation on a date to be fixed by notification; but power was given to make, at any time before that date, such rules as might be required for its actual working, subject to the proviso that the rules were not to come into effect until the Act itself came into effect.

Chapter II laid down the general law as to the manufacture and keeping of explosives, and prescribed the places at which they might be manufactured or kept. It was to be read subject to certain exceptions in the supplemental chapter (X).

Chapter III dealt with the licensing and registration of factories and magazines, and the registration and regulation of registered places, and conferred powers on the Local Government to make rules on all necessary matters. It would be observed that there were three classes of places to which this chapter applied, namely, factories, magazines and registered places. A factory under the Act was a place licensed for the manufacture of explosives; a magazine was a place licensed for keeping explosives; and a registered place was a place registered for the keeping of explosives. The difference between a magazine and a registered place was this. Magazines were places which were devoted exclusively to the keeping of explosives. Registered places were places like general stores or shops, which were not devoted exclusively to the keeping of explosives, but in which explosives might be kept.

This chapter would, for the present, have a very limited operation. The chapter did not apply to Government establishments, and it appeared, from returns which had been recently obtained from the Local Governments, that, if these establishments were eliminated, the number of places in British India in which explosives were manufactured was trifling. The chapter would, indeed, apply to places in which fireworks were made or kept, but he thought it right to say that there was no intention on the part of Government to interfere, by means of vexatious restrictions, with one of the most popular amusements in India. The object of the Act was simply to protect the public against danger, and, whenever it was found that the existing practice was not attended with any appreciable risk of danger to the public, it would, he presumed, not be interfered with.

Chapter IV related to the sale of explosives. It prohibited explosives being hawked, sold or exposed for sale on highways or public places; it prohibited the sale of an explosive to a child under thirteen; and it prescribed the manner in which an explosive exposed for sale or sold was to be packed and labelled.

Next, Chapter V treated of matters relating to the conveyance of explosives; it empowered the Governor General in Council to make rules as to the packing of explosives; it empowered the Local Governments to make rules to regulate the conveyance, loading, unloading and keeping of explosives within ports, and it directed Railway-administrations to make rules for their own railways. Moreover, it gave supplementary powers to the Governor General in Council to make rules for matters not provided for by the rules framed under the powers last mentioned.

Chapter VI regulated the importation of certain explosives, and prohibited their importation except under a license. The Governor General in Council was

given power to regulate all matters connected with the grant of these licenses, and the officers of Sea Customs were given similar powers with regard to these explosives as they had with regard to any article on the importation of which restrictions were placed by the law for the time being relating to Sea Customs.

Then came Chapter VII, which conferred special powers on the Governor General in Council to regulate or prohibit all dealing with any explosives which, in the opinion of the Governor General in Council, were specially dangerous to the public safety.

Chapter VIII was headed "Government Supervision," and it provided for the appointment, and defined the powers, of Government Inspectors and other similar officers, giving them powers of search and detention in certain cases. It also provided for the giving of notices of accidents arising from explosion or fire in or about any factory, magazine or other place where explosives might happen to be kept.

Chapter IX dealt with penalties and legal proceedings. The penalties for breaches of the provisions of the Act and the rules made under it were restricted to forfeitures and fines, and the only instance in which the Act prescribed imprisonment as a punishment was that of resistance to a public officer.

A supplemental chapter (X) provided for several miscellaneous matters, of which there was only one to which he need draw special attention. Those who had studied the Bill would have seen that, although it appeared to be somewhat long and complicated, it was, in fact, a skeleton measure. What it substantially did was to confer upon different authorities power to make rules relating to a number of different matters. The Government was obliged to adopt this form of legislation in consequence of the great variety of places and circumstances to which the Act would apply, and the necessity for making the Act elastic in order to make it workable. The result was, that the sting of the measure would lie, not in the Act itself, but in the rules made under the Act; and, that being so, they were bound to provide the same kind of opportunity for criticising the rules made under the Act as was given for criticising the Act itself. He had endeavoured to do this by section 75 of the Bill, which ran as follows:—

"Every authority having power to make rules under any section of this Act other than section fifteen or section twenty-nine shall, before making the rules, publish a draft of the proposed rules for the information of persons likely to be affected thereby.

"The publication shall be made, in the case of rules made by the Governor General in Council, in such manner as may, in his opinion, be sufficient for giving information to persons interested, and, in the case of rules made by any other authority, in the prescribed manner.

"There shall be published with the draft a notice specifying a date at or after which the draft will be taken into consideration."

It would be seen that this section gave general effect to the policy to which he had referred on a recent occasion. He need add no more than this, that, as the Bill was simply an empowering Bill, and as it was important that there should be no unnecessary delay in making the rules which might be found necessary, he should probably ask the Council to take the Bill into consideration and pass it before the end of the Calcutta session. Therefore, he hoped that those who were interested in the measure would give the Council the benefit of their criticisms and suggestions at as early a date as possible.

CHUTIÁ NÁGPUR ENCUMBERED ESTATES ACT, 1876, AMENDMENT BILL.

The Hon'ble SIR STEUART BAYLEY introduced the Bill to amend the Chutiá Nágpur Encumbered Estates Act, 1876, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Ilbert and Reynolds and the Mover. He said that he had explained the grounds upon which this Bill was rendered necessary at a previous meeting, and, as its provisions were very simple, he thought he need not take up the time of the Council any further by going over the same ground again.

The Motion was put and agreed to.

The Hon'ble SIR STEUART BAYLEY also moved that the Bill and Statement of Objects and Reasons be published in the *Calcutta Gazette* in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

CENTRAL PROVINCES LOCAL SELF-GOVERNMENT BILL.

The Hon'ble MR. CROSTHWAITE presented the further Report of the Select Committee on the Bill to make better provision for Local Self-government in the Central Provinces.

The Council adjourned to Friday, the 12th January, 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

SUMMARY OF THE WEATHER CHARACTERISTICS OF THE RECENT RAINY SEASON (MAY TO OCTOBER) 1882.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department, No. 1 Met., dated Calcutta, the 6th January 1883.

Meteorology.

READ the following Summary of the weather characteristics of the recent rainy season (May to October 1882), which has been submitted by the Meteorological Reporter to the Government of India:—

Summary of the weather from May to October 1882.

The warm dry weather, usually characteristic of May in Northern India, was interrupted in the first part of the month by considerable oscillations of temperature, due to falls of rain accompanying local storms. These oscillations were particularly noticeable in Bengal on the 5th, over the whole of Northern India between the 9th and 12th, and in the Punjab on the 19th. After this, the storm ceased, the temperature increased, and a dry hot period set in which lasted till the beginning of June, during which, temperatures of 100° and upwards at 10 A. M. were recorded at several stations in the Punjab and the Gangetic provinces; the highest, 109°, at Dera Ismail Khan.

At the same time barometric pressure was also subject to great oscillations over Northern India. It fell in the early days of the month, but the fall was succeeded by a steady rise which, by the 9th, brought the pressure up to an abnormal height; at which point it remained with some slight oscillations, till past the middle of the month. The earliest notice of the approach of the monsoon was the report of heavy rain at Cochin and Colombo on the 19th, and a telegram of the same date from Mangalore to the effect that the monsoon was apparently setting in. From this date onward, the current gradually advanced up the Peninsula; on the 20th it was reported from Mercara, and 18 inches of rain fell at Calicut; on the 22nd the rains set in in Burma, and easterly winds were felt over Northern India; and by the 29th were established up to the Punjab.

On the average of the month, the temperature was some degrees above the normal at Quetta and over the greater part of the Punjab; but elsewhere, with very few exceptions, it was below. The humidity of the atmosphere was below the mean almost everywhere. But although at a majority of the stations the total fall of rain was also below the average, over a large part of the North-Western Provinces, Bengal, and more particularly in the south of the Peninsula, there was more or less excess of rain, the low average humidity notwithstanding.

The first days of June were marked by a severe gale of wind at Bombay, accompanied by 16·5 inches of rain, and dark gloomy weather all along the west coast, denoting the burst of the monsoon. But while the westerly branch of the monsoon was blowing strongly across the Peninsula, and producing an excessive precipitation on the west coast and in the Deccan, and more especially in Coorg, the Bengal branch was feeble, and heavy rain was restricted to the coasts of Arakan and Pegu up to the 12th, when heavy continuous rain fell in Lower Bengal. In Central India and the Upper Provinces, general rain set in about the same date; but cloudy weather, with occasional storms, had prevailed throughout the earlier part of the month in the North-Western Provinces and the Punjab.

After this fall of rain, the pressure gradually increased in the North-Western Provinces and the Punjab, and a break in the rains commenced in the Punjab and speedily extended to the south-east over Rajputana, the Bombay Presidency, Central India, Orissa and Western Bengal. On the 21st rain was general over Bengal, Assam, and Burma, owing to a small cyclonic storm which appeared over the Bay.

A comparison of the monthly mean results shows that the temperature was again above the average in the Punjab, but below it in nearly all other parts of India. The dampness of the air, on the contrary, was generally above the mean. The rainfall returns show that there was a deficiency of rain over the Punjab, Rajputana, Sind, and Gurjat. Elsewhere it was in excess, particularly so at Mercara, where it exceeded the mean by 35 inches.

With the beginning of July, the rains recommenced. On the 12th, two small cyclones appeared—one over Western Rajputana, which subsequently passed to the north-west; the other over Bengal, which, after remaining stationary for a day or two, also passed north-westward, and gave rather heavy rain to parts of Bengal and the North-Western Provinces. From this time, until almost the close of the month, the monsoon current continued to blow steadily and with considerable force, on the Bombay coast; while over the head of the Bay of Bengal, a succession of small cyclonic vortices were formed and passed westward or north-westward occasioning heavy rain in the interior.

Except in Assam and Bengal, the temperature of the month was generally low, and the humidity above the average. The rainfall also was considerably in excess, except in the two provinces above specified. At Mercara, the excess over the general average was as much as 59 inches.

The beginning of August was marked by weather conditions similar to those of July. Small cyclonic vortices were formed, and the pressure in Northern India was reduced to much below the mean. The monsoon blew strongly on the west coast, and rain was general, except in the Punjab. On the 5th or 6th a break in the rains set in in Rajputana, Central India, and the western divisions of the North-Western Provinces, which lasted till about the 20th. During this period the barometer was generally high, and the wind from the north-west throughout North-Western India. On the 19th, however, a small cyclonic depression formed over the head of the Bay, and like that which ended the similar break in the rains of August 1880, moved westward across the country, bringing rain over Northern and Central India. From this time till the close of the month, the pressure oscillated unsteadily from day to day, and the weather was cloudy and rainy, but there were no changes of importance.

On the mean of the month the temperature was below the average, though not so generally as in the previous month. The humidity was slightly excessive in parts of the North-Western Provinces, Rajputana, and the south of the Peninsula, but deficient elsewhere; and the rainfall followed the same general rule, the regions of excessive fall being the lower parts of the North-Western Provinces, Upper Bengal, and the southern districts of Madras. At Mercara, however, conditions had changed, and the rainfall was below the mean.

In September, a succession of cyclonic vortices traversed the country from the Bay of Bengal. The first appeared on the coast of the Northern Circars on the morning of the 3rd and on the 4th lay between Vizagapatam and Nagpur, occasioning general though not heavy rain. On the 5th it was lost in a general and brisk decrease of pressure, which occurred over the whole of India. On the 6th and 7th a fresh disturbance formed over the head of the Bay of Bengal, and on the 8th advanced westwards past Gopalpur, towards Nagpur. On the 11th the centre was a little to the north of Neemuch, whence it passed on to the north of Jacobabad and disappeared on the 15th. In the meantime a fresh vortex had appeared on the 14th off the Northern Circars, and on the 15th was approaching the coast between False Point and Masulipatam. During the next two days it travelled *very slowly* northward towards Cuttack, occasioning cloudy skies and heavy rain in its neighbourhood; but on the 19th it had disappeared. After this for a few days the weather remained, on the whole, fine: but on the 25th a general fall of the barometer took place, and a fresh depression appeared over the Bay. It continued in that position till the 29th, when it advanced over Orissa, and on the 30th lay over Chutia Nagpur. It occasioned a considerable amount of cloud and rain within the regions affected by it, but even before its appearance the sky had become cloudless in the Punjab and North-Western Provinces and continued so till the close of the month.

The monthly summaries show that, for the first time in the six months under review, the temperature was generally above the mean in Northern India, but that, in the south, it was still below it. The dampness of the air was in excess in the Punjab, but deficient elsewhere, and the rainfall was generally above the average in the Punjab and variable elsewhere.

The weather of the first few days of October was determined by the depression formed at the end of the preceding month, and which broke up on the 5th. A few days of fine clear weather followed, but on the 10th the barometer fell over the whole of India and Burma, on the 11th and 12th bad weather was evidently brewing over the south-west of the Bay, and by the 13th it was plain that a small cyclone was travelling northward along the coast of the Northern Circars, and between one and two hundred miles distant from it. On the 14th the storm centre was approaching the Orissa coast; on the 15th it lay near Cuttack, and heavy rain was falling in Orissa and Bengal, and on the 16th near Burdwan, heavy rain continuing. On the 17th, the storm centre was rapidly dispersing, after having occasioned exceedingly heavy rain in Darjeeling and its neighbourhood. This dispersion was followed by a general increase of pressure, bringing light winds and fair weather to most parts of the country, except the Coromandel coast. On the 26th a large area of low pressure was slowly formed over the Bay and the south of India, causing easterly winds over Burma, north-easterly winds over Bengal and the north of the Bay and north-westerly winds on the Coromandel coast. As the low pressure over the Bay became more marked, the atmosphere round the Bay became damper, the sky cloudy, and some rain fell.

The returns for the whole month show that temperature was below the general average of past years in Madras and Burma, but above it in all other parts of India, particularly the Punjab and North-Western Provinces. The humidity of the atmosphere was above the mean in Bengal, the North-Western Provinces and some parts of Madras and Mysore, but below it elsewhere; thus agreeing exactly with the rainfall, which shewed an excess at Madura, Cochin and Mercara, as well as in Bengal and the North-Western Provinces, and a deficiency elsewhere.

The returns for the whole six months show that, on the whole, the season was rather warmer than usual in the northern parts of the Punjab and North-Western Provinces, but that elsewhere the temperature was below the average. The highest mean temperature was 93·5° at Jacobadad, the lowest 75·7° at Belgaum. The rainfall was subject to many local variations, but on the whole amounted to that of a good average season. The most remarkable case of excess was in Coorg. At Mercara the fall was not less than 100 inches above the average, or nearly double. The regions of most decided deficiency were Eastern Bengal, the Madras coast, and the Umballa and Lucknow districts.

ORDERED, that the Summary be printed in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 9th JANUARY 1883.

GENERAL REMARKS.—Rain has fallen in two districts of the Madras Presidency and in three districts of the North-Western Provinces and Oudh. There has also been slight rain in a few districts of the Punjab and at Jubbulpore, Gowhati, and Sutna. Elsewhere there has been no rain to report during the past week.

Agricultural prospects are fair throughout the country. In the Punjab, however, rain is still much wanted for the crops in most of the districts. In two districts of the North-Western Provinces and Oudh some injury has been done to mustard by the *mahee* insect, and in parts of Ratnagiri in the Bombay Presidency locusts are reported to have caused some damage to the crops.

In the Madras Presidency harvest operations are progressing with an outturn below average in three districts. The harvesting of the rice crop in Coorg still continues. In the Bengal Presidency the crop has been nearly all gathered in except in some of the low-lying districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Jan. 10th)		
Bellary		Standing crops generally good; harvest paddy, dry grains, tobacco, and sugarcane, yield average.
Kurnool		Standing crops good; cattle disease in parts.
Ganjam		Standing crops, dry grains and sugarcane thriving; fever and small-pox continues; cholera and cattle disease in one taluk.
Kistna		Standing crops in parts affected by blight and grubs, elsewhere doing well; harvest paddy and dry grains, outturn below average; fever and cattle disease prevail; small-pox in parts; water 2 feet over anicut.
Chingleput (Madras)		Standing crops generally good; harvest paddy, &c., outturn below average.
Coimbatore		Standing crops good, harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore	·15 (average of 1 station.)	Standing crops generally good; harvest paddy and *ragi*, yield below average; cholera in parts.
Madura		Standing crops generally fair; cholera in parts.
Malabar		Harvest second crop paddy commenced; fever and cholera in parts; small-pox slight.
Travancore	·09	Paddy ripening; fever prevails; no rain except in Tanjore and Travancore.
		General Remarks.—General prospects good.
Bombay—(Jan. 10th).		
Kurrachee		River at Kotri on 5th 1 inch lower than on same date last year; small-pox in Karachi city, 15 cases, 3 deaths; fever in nine talukas; cattle disease in five talukas; wheat, red rice, and *bajri* in Karachi 24, 32, and 32 lbs., in Schwan 32, 32, and 48 lbs., in Sakro 16, 34, and 46 lbs., and in Sajawal 38, 44, and 44 lbs. per rupee respectively.
Hyderabad		*Rabi* crops fair; rain desirable; cattle disease in two, small-pox in three, and fever in nine talukas; wheat 25, *bajri* 39, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		Standing crops healthy; small-pox in Dhandhuka; wheat 29 and *bajri* 32 lbs. per rupee.
Baroda		Standing *kharif* and *rabi* crops doing well; sugarcane-pressing continues in the Naosari division; public health good; *bajri* 31½ and rice 26 lbs. per British rupee.
Surat		*Rabi* crops thriving; *jowari* being cut; fever in Pardi; *jowari* 40 and *nagli* 57 lbs. per rupee.
Nasik		Weather a little muggy and said to be unfavourable for *rabi* crops that have been thriving up to this time; wheat 25½, *bajri* 36, and rice 23½ lbs. per rupee.
Colaba (Bombay)		Average abnormal temperature, 4° warm from 3rd to 5th and 2° warm from 6th to 9th; vapour in air slightly in excess of normal; abnormal wind southerly and weak.
Poona		Crops thriving; *bajri* 44 and *jowari* 56 lbs. per rupee, in Poona *bajri* 41 and *jowari* 46 lbs. per rupee.
Ahmednagar		*Rabi* crops generally good; *bajri* maximum 60 lbs. per rupee in Parner, minimum 42 in Akola; *jowari* maximum 72 lbs. in Parner, minimum 40½ lbs. per rupee in Sheogaon.
Sholapore		Reaping of early crops continue; *rabi* crop generally good; *jowari* 71 lbs. 26 tolas, and *bajri* 56 lbs. 32 tolas per rupee.
Dharwar		Weather chilly; harvesting of early crops continues; exotic cotton suffering from blight in five and wheat in two talukas, other late crops good; cholera continues in Gadag, one case fatal; fever and cattle disease in four talukas; rice minimum 26 and *jowari* 52 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Kanara		Sowing for second crop in progress; rice plants springing up in Karwar Taluka; sugarcane harvest on coast; garden produce, healthy; fever subsiding; common rice in Karwar 13 seers per rupee, in district average 15½ seers per rupee; weather fair and cold.
Rajkot		General health fair; weather warm; cholera continues but slightly in Navanagar; *bajri* 29 and *jowari* 36 lbs per rupee.
		General Remarks.—*Rabi* crops doing well; some destruction of crops by locusts reported in parts of Ratnagiri; fever, small-pox, and cattle disease in a few places.
Bengal—(Jan. 9th)		
Chittagong	*Nil*	Weather seasonable; harvesting of *amun* continues; winter crops doing well; cholera in the town and station; cattle disease in Chakaria.
Dacca	*Nil*	Harvesting of *amun* paddy continues, yield average; prospects of winter crops good; cutting of sugarcane continues; public health generally good, except in Manickgunge sub-division, where a good deal of fever and some cholera are reported.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice going on, yield estimated at about from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; public health good, except in some scattered parts of the district, where cholera is reported.
Moorshedabad	*Nil*	Harvesting of *amun* continues; *rabi* crops doing well; public health on the whole good.
Rajshahye	*Nil*	Prospects of crops favourable; cholera still reported from parts of the district.
Burdwan	*Nil*	Harvesting of *amun* continues; prospects of sugarcane good; and of *rabi* indifferent; fever prevalent; cholera reported in some localities.
Rungpore	*Nil*	Prospects of standing crops good; harvesting of *amun* not yet completed; cholera prevalent in Gaibanda sub-division, and has extended to Chilmari in Kurigram sub-division.
Bhagalpur	*Nil*	Prospects of *rabi* crops good; rice harvest continues, generally the outturn has been fair.
Purneah	*Nil*	Late rice reaped; prospects of *rabi* crops good; public health improving.
Patna	*Nil*	Prospects of *rabi* crops continue favourable; poppy and cotton growing well; cutting of sugarcane being pushed on; public health good.
Durbhunga	*Nil*	Rice crop being harvested; *rabi* and tobacco crops continue favourable; prices stationary; fever in a few places south of district, otherwise public health fair.
Hazaribagh	*Nil*	Weather cold and cloudy since 8th; *rabi* crops doing well; prices unchanged; general health good.
Cuttack	*Nil*	Cutting of late rice not completed; gathering of *rabi* commenced; public health good.
		General Remarks.—There has again been no rain in any part of the province, but in some districts it is reported that clouds have appeared during the latter part of the week; the rice crop has been mostly gathered in; the harvesting still continues in some low-lying districts; all cold-weather crops are generally reported to be in a very satisfactory condition; in Burdwan alone the crops are said to be indifferent; fever and cholera though decreasing, are still prevalent in some places; small-pox continues to be reported from Singbhoom and Manbhoom.
N.-W. Provinces and Oudh—		
Benares (Jan. 9th	No rain	Weather seasonable; *aghani* rice cut; no sickness; prices steady.
Allahabad („ 10th)	Average fall of ·60 over district.	The rain has been of great advantage to *rabi* crops; prospects as good as possible; prices stationary; health good.
Gorakhpur („ 8th)		Heavy dews; crops promising; health good; prices steady.
Jhansi („ 8th)		Weather cloudy; *rabi* crops promise well; a fall of rain would be very beneficial; prices stationary; small-pox of a mild type reported in three parganas; cattle disease continues.
Agra („ 9th)	No rain	Weather cloudy; well irrigation continues; insects in *bijhar* and *sarson* reported in one pergunnah; small-pox in three pergunnas; general health good; prices stationary.
Bareilly („ 8th)		Rain wanted; everything normal.
Meerut („ „)		Rain still hangs off, though threatening; no damage yet; health good; supplies sufficient; prices stationary.
Kumaon „ „)	No rain	Sky cloudy; public health good, except that typhus continues in two or three villages; cattle disease continues; prices slightly risen; rain urgently wanted.
Lucknow („ „)		Rain urgently needed for *rabi* crops; prospects favourable; general health good, but small-pox prevalent in the city; prices rising; weather cloudy.
Partabgarh („ „)	Rain on 9th	*Rabi* promises exceedingly well; irrigation in progress; the rain which has fallen will be beneficial, especially to mustard attacked by *mahee* insect; prices almost stationary; health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Sitapur (Jan. 8th)	. . . . .	Weather cloudy during the week, but no rain; prospects fair; small-pox abating; prices steady.
Fyzabad („ „)	No rain	Irrigation going on; prospects good; *sarson* injured by *mahee* insect; health good; prices steady.
Rae Bareli („ „)	. . . . .	Weather cloudy during last two days; rain much wanted; health of men and cattle good; prices stationary.
Cawnpore („ „)	Slight showers	Weather cloudy; prospects fair; health good; prices stationary.
Farukhabad („ 9th)	. . . . .	Prospects fair; prices steady; sky cloudy; rain much wanted.
		General Remarks.—Rain has fallen in Allahabad, Cawnpore, and Partabgarh; weather cloudy in Lucknow, Rai Bareli, Sitapur, Aligarh, Meerut, Kumaon, and Jhansi; general health good and prices normal.
Punjab—(Jan. 9th)		
Delhi	. . . . .	Rain wanted; health good; harvest prospects fair; prices fluctuating.
Hissar	. . . . .	Rain much wanted; small-pox still prevalent in Rohtak, health good elsewhere; prices fluctuating.
Umballa . . .	. . . . .	Health good; *rabi* crops suffering for want of rain; prices of food grains stationary.
Jullundur . . .	Slight rain	Health good; prices stationary.
Amritsar . . .	. . . . .	Rain wanted; health good; *rabi* sowings completed; prices stationary.
Lahore	Slight rain in places	Health and harvest prospects good.
Ferozepore . . .	Slight fall in places	Health and harvest prospects good.
Sialkot	. . . . .	Rain much wanted; health good; prices stationary.
Rawalpindi . . .	Slight rain	Cattle disease continues in Murree tahsil, and seasonal fever prevails in the district generally; prices fluctuating.
Peshawar . . .	. . . . .	Harvest prospects good on irrigated lands; prices rising for want of rain.
Mooltan	Slight rain	Health and harvest prospects good; prices stationary.
Dera Ismail Khan . .	. . . . .	Rain much wanted; health fair; harvest prospects good; prices steady.
		General Remarks.—The health of the province and the prospects of the crops are generally good; rain is much wanted in most districts.
Central Provinces—		
Nagpur (Jan. 10th)	. . . . .	Weather clear; *rabi* crops promise to be exceptionally good; health good; prices stationary.
Jubbulpore („ 9th)	·03	Weather cloudy and cool; *rabi* crops in very good condition; prospects favourable; health good; wheat 19 seers per rupee.
Sangor („ 8th)	. . . . .	Weather cloudy; crops excellent; health good; prices steady.
Seoni („ 9th)	. . . . .	Weather cloudy and warm; threshing of rice progressing; *rabi* crops and health good; rice 19 seers per rupee.
Hoshangabad („ 9th)	. . . . .	Weather cloudy and cool; *rabi* crops doing well; fever prevalent wheat 16 seers per rupee.
Raipur („ 6th)	. . . . .	Weather cool and pleasant; threshing of *kharif* crops in progress, outturn reported to be better than last year; *rabi* crops doing well; slight cattle disease; health good; prices stationary.
Sambalpur („ 4th)	. . . . .	Weather cool; prospects of crops good; health good; rice 56 seers per rupee.
Khandwa („ 9th)	. . . . .	Weather cloudy; small-pox reported; prospects of crops good; wheat 16 seers per rupee.
		General Remarks.—Slight clouds occasionally, but weather generally cool and clear; threshing and winnowing of *kharif* crops progressing outturn expected to be good; *rabi* crops in good condition; public health good; prices steady.
British Burma—(Jan. 6th)		
Akyab	*Nil*	Twenty deaths from cholera in one township, otherwise public health good; slight cattle disease in one township; reaping nearly finished.
Rangoon . . .	*Nil*	One death from cholera, otherwise public health good; crops progressing.
Bassein . . .	*Nil*	Four deaths from cholera in town and six in district, otherwise public health good; slight cattle disease in three townships; crops nearly reaped.
Prome . . .	*Nil*	Public health good; reaping progressing.
Amherst (Moulmein) .	*Nil*	Five cases of cholera in district, otherwise public health good both in Moulmein and district; 209 deaths of cattle reported from one township; reaping completed in Moulmein and nearly finished in district.
Toungoo . . .	*Nil*	Fourteen deaths from cholera in district, otherwise public health good.
		General Remarks.—Some cholera in Akyab and Thonegwa districts and cattle disease in Amherst, otherwise public health and health of cattle good; reaping nearly finished; crops good.
Assam—		
Gauhati (Jan. 9th)	·21	Weather seasonable; nights and mornings cool and foggy; reaping of *sali* paddy nearly over; public health good.
Sylhet . („ 10th)	*Nil*	Harvesting of *amun* nearly over; transplanting of *boro* paddy continues; cold-weather crops promising; cholera and small-pox still reported.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Assam—*contd.*		
Cachar . (Jan. 10th)	*Nil*	Weather seasonable and cool; reaping of *sali* crops nearly finished; three deaths from cholera reported from Hailakandi; common rice 21$\frac{5}{16}$ seers per rupee.
Dibrugarh („ „)	*Nil*	Weather cold; *sali dhan* crop gathered; mustard is doing well; cholera abating in the Sadr sub-division.
Mysore and Coorg—(Jan. 10th)		
Bangalore . . .	. . . . .	Crops in good condition; prospects favourable.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 16th JANUARY 1883.

GENERAL REMARKS.—There has been slight rain in the Madras and Bengal Presidencies, in the Punjab, Central Provinces, Assam, and in the Central India States. In the North-Western Provinces and Oudh, the rainfall, although moderate, shows an improvement over that of the week preceding, and has been more or less distributed throughout the country. In the Bombay Presidency, British Burma, the Nizam's Territories, and in Rajputana, there has been no rain to report during the past week.

Agricultural prospects are generally good or fair throughout the country. But rain is still much wanted in most districts of the Punjab, and more is also needed for the *rabi* crop in the North-Western Provinces and Oudh. The partial destruction of crops by locusts in Ratnagiri in the Bombay Presidency still continues, and some damage to the winter crops by insects is also reported from two districts of the Bengal Presidency.

In the Madras Presidency and in Mysore and Coorg, harvesting, chiefly of rice, is still in progress; in British Burma and Bengal the rice harvest has nearly closed. In the Central Provinces and Northern India the ordinary autumn crops are off the ground and are being threshed, and the cutting of sugarcane is in progress.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Jan. 17th)		
Bellary	. . . .	Standing crops generally good; harvest paddy, dry grains, tobacco, and sugarcane, yield average.
Kurnool	. . . .	Standing crops in good condition; cattle disease in parts.
Ganjam	. . . .	Standing crops, dry grains and sugarcane thriving; harvest paddy one taluk; fever and small-pox continue; cholera and cattle disease in one taluk.
Kistna	. . . .	Standing crops in parts affected by grubs, elsewhere fair; harvest paddy and *ragi*, outturn below average; fever and cattle disease prevail; small-pox in parts; water three feet over anicut.
Chingleput (Madras) .	·30 (average of one station.)	Standing crops generally good; harvest paddy, outturn below average; small-pox and cattle disease in parts.
Coimbatore . . .	. . . .	Standing crops good; harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle disease in parts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras - *contd.*		
Tanjore	·23 (average of four stations.)	Standing crops good ; harvest paddy and *ragi*, yield below average ; cholera prevails in parts.
Madura	·30 (average of one station.)	Standing crops generally fair ; harvest paddy and dry grains ; cholera in parts.
Malabar	. . . .	Harvest second crop paddy continues ; fever and cholera in parts.
Travancore	. . . .	Harvest commenced ; fever and small-pox continue.
		General Remarks.—No rain except in Tanjore, Chingleput, Madura ; general prospects good.
Bombay—(Jan. 17th).		
Kurrachee	*Nil*	River at Kotri on 14th 3 feet 1 inch lower than on same date last year ; fever in 10 talukas ; 11 fresh cases of small-pox in Karachi City since last report, disease also in Schwan and Kotri talukas ; cattle disease in five talukas ; wheat, red rice, and *bajri* in Karachi 24, 32, and 33 lbs., in Manjhand 26, 40, and 46 lbs., in Ghorabari 20 and 44 lbs., and in Jati 20 and 36 lbs. per rupee respectively.
Hyderabad	*Nil*	*Rabi* crops fair ; small-pox continues in three talukas ; wheat 25, *bajri* 39, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad	. . . .	Standing crops healthy ; small-pox in Dhandhuka ; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda	. . . .	Sowing of *rabi* crops completed, except in Kadi division, where it is still in progress ; harvesting of late *kharif* crop in progress ; public health good ; *bajri* 31½ and rice 26 lbs. per British rupee.
Surat	. . . .	*Rabi* crops thriving ; *jowari* and cotton being removed ; *jowari* 40 and *nagli* 57 lbs. per rupee.
Nasik	. . . .	Weather continues muggy, but has not harmed *rabi* crops ; wheat 24, *bajri* 36, and rice 23½ lbs. per rupee.
Colaba (Bombay)	. . . .	Average abnormal temperature 3° warm ; vapour in air slightly in excess of normal ; wind normal on 10th, afterwards abnormal ; wind southerly and weak.
Poona	. . . .	*Rabi* crops good ; *bajri* 44 and *jowari* 55 lbs. per rupee in Poona *bajri* 39 and *jowari* 46 lbs. per rupee.
Ahmednagar	. . . .	*Rabi* crops generally good ; *bajri* maximum 57 lbs. per rupee in Sangamner, minimum 45 lbs. in Kopargaon ; *jowari* maximum 72 lbs. per rupee in Parner, minimum 54 lbs. in Nevasa.
Sholapore	. . . .	Crops generally good ; *jowari* 73 lbs. 3 tolas and *bajri* 57 lbs. 19 tolas per rupee.
Dharwar	. . . .	Early crops being harvested ; cotton suffering from blight in seven, and wheat in four talukas ; other late crops good ; 3 deaths from cholera in Gadag, fever in four, and cattle disease in one taluka ; rice minimum 26 and *jowari* 45 lbs. per rupee.
Kanara	. . . .	Sowing for second crop continues ; sugarcane harvest on coast ; fever in two talukas ; general health good ; common rice in Karwar 13 seers per rupee, in district average 15 seers per rupee.
Rajkot	. . . .	Weather cold ; general health good ; cholera continues slightly in Navanagar, and has also appeared in Morvi from 6th instant ; *bajri* 28 and *jowari* 34 lbs. per rupee.
		General Remarks.—*Rabi* crops doing well ; partial destruction of crops by locusts in Ratnagiri continues ; fever, small-pox, and cattle disease in a few places.
Bengal—(Jan. 16th).		
Chittagong	*Nil*	Weather bright and cold ; state and prospects of crops fair ; harvesting of *amun* paddy nearly over ; cholera and cattle disease continue ; prices somewhat risen.
Dacca	*Nil*	Harvesting of *amun* paddy nearly completed ; prospects of winter crops good.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice and sugarcane going on and yield from the former estimated at about 12 to 14 annas ; *rabi* crops doing well ; price of common rice stationary ; fever and cholera much abated ; general health of people good.
Moorshedabad	*Nil*	Harvesting of *amun* paddy going on ; *rabi* crops doing well ; average price of rice 22 seers per rupee ; public health generally good, except a few cases of cholera in thana Mirzapur.
Rajshahye	*Nil*	Weather cloudy ; prospects of crops favourable ; cholera still reported from parts of district.
Burdwan	*Nil*	*Amun* harvest nearly over ; prospects of sugarcane good ; *rabi* crops indifferent ; fever prevalent ; cholera lingers, small-pox in thana Selimabad.
Rungpore	*Nil*	Weather seasonable, occasionally cloudy and foggy ; prospects of crops favourable ; cholera still prevalent in certain parts of district.
Bhagalpur	*Nil*	New rice 25 seers and 4 chuttacks per rupee ; prospects of crops good, though some damage to mustard crop by caterpillars is heard of ; general health good.
Purneah	*Nil*	Weather excellent ; prospects of crops continue good ; late rice being harvested ; *rabi* crops thriving ; common rice 24 seers per rupee ; health improving.
Patna	·59	Prospects of *rabi* crops good ; harvesting of winter rice continues ; mustard, *khasari* pulse, and barley said to have been damaged to some extent by insects in Barh subdivision ; cutting of sugarcane continues ; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Durbhunga	·15	Threshing of paddy going on ; *rabi* crops promising ; public health fair ; prices stationary.
Hazaribagh	·1	Weather clear and cold ; the slight rain during the week was beneficial to the standing crops ; public health good.
Cuttack	*Nil*	Reaping of *sarud* still continues ; *rabi* crops being harvested ; common rice sells at from 22 to 30 seers per rupee ; public health good.
		General Remarks.—More or less rain fell in some of the districts during the week, benefiting the standing crops ; harvesting of late rice nearly completed, except in some lowlying districts where it still continues ; winter crops generally in a satisfactory condition, though some damage by insects reported from Bhagalpur and Barh subdivision ; fever and cholera, though abating, still reported to be prevalent in some places, small-pox has appeared in thana Selimabad in Burdwan.
N.-W. Provinces and Oudh—		
Benares (Jan. 16th)	Benares ·70 Chandauli ·80 Gangapur ·80	Mustard slightly damaged by rain ; health good ; prices steady.
Allahabad („ 17th)	Slight rain in 5 tahsils.	All crops flourishing and irrigation entirely ceased ; prices falling slightly ; general health good.
Gorakhpur („ 15th)	. . . .	Cloudy weather during beginning of week but fine afterwards ; *kharif* which has been reaped, up to average ; *rabi* promising ; prices stationary.
Jhansi („ 15th)	Slight showers on the 9th and 10th.	*Rabi* promises well ; rain would be exceedingly beneficial to the standing crops ; prices fluctuating ; small-pox amongst children continues ; cattle disease of a mild type continues in three villages of pargana Jhansi.
Agra („ 16th)	No rain	Weather cloudy from time to time ; crops promising well ; irrigation going on ; small-pox in four parganas ; general health good ; prices slightly fallen.
Bareilly („ „)	·30	More rain is still required ; prospects still very fair.
Meerut („ „)	Slight rain	Rain has been beneficial ; health good ; prices stationary ; supplies sufficient ; more rain needed.
Kumaon („ „)	. . . .	Rain urgently wanted, *rabi* suffering from want of it ; health good, except that there is still typhus in some villages ; cattle disease continues ; prices slightly rising.
Lucknow („ „)	. . .	Rain urgently needed for *rabi* crops ; prices stationary ; prospects favourable ; small-pox continues in the city.
Partabgarh („ „)	Rain on 9th	The rain has done great good to the *rabi* crops, which promise exceedingly well ; weather again clear ; irrigation has ceased in Kunda tahsil ; *sarson* injured by *mahee* ; prices slightly fluctuating ; no sickness.
Sitapur („ „)	. . . .	Cloudy weather, but no rain, which is much wanted for unirrigated lands ; supplies ample ; prices nearly stationary.
Fyzabad („ „)	No rain	Crops promising ; irrigation in progress ; public health good ; prices steady.
Rae Bareli („ „)	Sadr ·20 Digbijaiganj ·10 Dalmau ·70 Salon 1·10	*Rabi* prospects good ; health of men and cattle good ; prices almost stationary.
Cawnpore („ „)	Average rainfall ·40	The rain has been beneficial to crops, but more is wanted ; health good ; prices nearly stationary.
Farukhabad („ „)	. . . .	Prospects fair ; prices steady ; sky alternately clear and cloudy ; rain much wanted.
		General Remarks.—Moderate rain fell in 11 districts, but more is wanted ; mustard slightly damaged in Benares and *sarson* in Partabgurh ; small-pox continues in Lucknow City, in four parganas, in Agra and in Jhansi ; slight cattle disease in Kumaon and Jhansi ; general health good ; prices steady except in Kumaon and Saharanpur, where there has been a rise.
Punjab—(Jan. 16th)		
Delhi	Slight rain	Health good ; harvest prospects improving ; prices almost stationary.
Hissar	. . . .	Rain much wanted ; small-pox in Rohtak decreasing, health elsewhere good ; prices stationary.
Umballa	. . . .	Health good ; *rabi* crops suffering for want of rain ; prices of wheat, *bajra*, and gram rising, of other food-grains stationary.
Jullundur	Slight rain	Health good ; prices falling.
Amritsar	Slight rain	Health good ; *rabi* prospects fair ; prices stationary.
Lahore	. . . .	Health and harvest prospects good ; prices fluctuating.
Ferozepore	. . . .	Rain much wanted ; health good ; harvest prospects fair ; prices almost stationary.
Sialkot	Slight rain	Health good ; prices stationary.
Rawalpindi	Slight rain	Cattle disease continues in the Murree tahsil and seasonal fever in the district generally ; slight rise in prices.
Peshawar	. . . .	Harvest prospects good ; prices falling ; rain much wanted.
Mooltan	. . . .	Rain wanted ; health and harvest prospects good ; prices stationary.
Dera Ismail Khan	. . . .	Rain much wanted ; health improving ; harvest prospects good ; prices steady.
		General Remarks.—The general health of the province continue good ; rain much wanted in most districts ; harvest prospects fair.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—		
Nagpur (Jan. 17th)	. . . .	Weather seasonable; crops continue good; no epidemic; prices stationary.
Jubbulpore („ 16th)	·17	Weather cloudy at times; prospects of *rabi* crops good; health good; wheat 20 seers per rupee.
Saugor („ 15th)	·5	Weather occasionally cloudy; crops excellent; health good; prices steady.
Seoni („ 16th)	. . . .	Weather warm and cloudy; prospects of *rabi* favourable; prices stationary.
Hoshangabad („ „)	. . . .	Weather cloudy and cool; prospects of crops good; few cases of small-pox, but public health good; wheat 16 seers per rupee.
Raipur („ 13th)	. . . .	Weather cloudy; threshing of *kharif* crops continues; slight cattle disease; health good; rice 32 seers per rupee.
Sambalpur („ 11th)	. . . .	Weather cloudy; prospects of crops and health good; rice 55 seers per rupee.
Khandwa („ 16th)	. . . .	Weather clear and pleasant; *rabi* crops thriving; small-pox reported; prices stationary.
		General Remarks.—Weather cool and cloudy with slight rain in a few districts; threshing of *kharif* crops progressing; reports continue to be favourable as to condition of *rabi* crops; public health good; prices unchanged.
British Burma— (Jan. 13th)		
Akyab	*Nil*	Three deaths from small-pox and seven from cholera in district; otherwise public health good; slight cattle disease; reaping nearly finished.
Rangoon . . .	*Nil*	Two deaths from cholera; otherwise public health good; reaping finished.
Bassein . . .	*Nil*	Three deaths from cholera in town and two in district, otherwise public health good; reaping nearly over.
Prome . . .	*Nil*	Three deaths from cholera in district, otherwise public health good; reaping going on.
Amherst (Moulmein) .	*Nil*	Thirty-four cases of cholera reported from district, otherwise public health both in Moulmein and district good; reaping almost finished, yield good.
Toungoo . . .	*Nil*	Three deaths from cholera in town and three in district, otherwise public health good.
		General Remarks.—Public health good except in parts of Hanthwaddy, Thonegwa, and Amherst districts, where a good many deaths from cholera have occurred; crops good; reaping nearly over.
Assam—		
Gauhati (Jan. 16th)	·05	Weather seasonable; harvesting of *sali* paddy nearly over; public health good
Sylhet . („ 17th)	. . . .	*Sali* and *amun* crops harvested; prospects of winter crops, sugarcane and linseed good; cholera reported from Sunamganj and Karimganj.
Cachar . („ „)	*Nil*	No change in weather; reaping of *sali* crops finished; 7 deaths from cholera reported from Halia Kandi; common rice $21\frac{5}{16}$ seers per rupee.
Dibrugarh („ „)	0·14	Weather cold and seasonable; mustard promises well; public health good.
Mysore and Coorg— (Jan. 17th)		
Bangalore . . .	. . . .	Crops in good condition; harvest operations continue; prospects fair.
Mysore	. . . .	Crops in good condition; harvest operations continue; prospects fair.
Mercara . . .	*Nil*	Coffee-picking continues, outturn generally short; no market for native coffee; harvesting of rice still in progress; slight fall in price of food grains; health good except in parts of Nanjarajapatna taluk.
		General Remarks.—Crops in the province in good condition; cutting of sugarcane commenced; harvest operations continue active; prospects favourable; public health satisfactory; no material change in prices.
Berar and Hyderabad- (Jan. 17th)		
Amraoti	. . . .	*Rabi* crops in good condition; wheat 16 and *jowari* 26 seers per rupee.
Akola	. . . .	*Rabi* crops progressing favourably.
Hyderabad . . .	. . . .	*Rabi* crops flourishing; sowing of *tabi* crops continues; cholera still prevailing; cattle disease ceased; prices—wheat $16\frac{3}{4}$, coarse rice 11, white *jowari* $25\frac{3}{4}$, yellow *jowari* $32\frac{1}{4}$, and *tur* $25\frac{1}{2}$ seers per halli sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.

Executive Engineer, Meerut Division, reports that there was a very full demand for the standing sugar crop, and that this prevented progress in new irrigation, as the area under sugarcane is nearly 43,000 acres.
Executive Engineer, Rohilkhand Canal, reports that there was no rain, and that there was a fair demand for rabi crops.
No remarks from other Divisions.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 12th January, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore Bahádur, K.C.S.I.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Áhmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble R. Miller.

CENTRAL PROVINCES LOCAL SELF-GOVERNMENT BILL.

The Hon'ble MR. CROSTHWAITE moved that the Reports of the Select Committee on the Bill to make better provision for local self-government in the Central Provinces be taken into consideration.

The Motion was put and agreed to.

The Hon'ble Mr. CROSTHWAITE also moved that to clause (*a*), section 34 of the Bill, the following words be added, namely:—

> "and as to the number of the representative members for each circle or group of circles, and as to the number of the representatives of the mercantile classes or professions, to be elected or appointed to each local board or district council;".

He said that the amendment was merely a verbal one. The Committee had thought that the section as worded sufficiently provided for the determination of the number of members for each circle or group, and for the number of representatives of the mercantile classes, by the Chief Commissioner. But, as there seemed to be a little doubt on the subject, they thought it better to make the matter clear by adding the words which he had read to clause (*a*) of section 34.

The Motion was put and agreed to.

The Hon'ble Mr. CROSTHWAITE also moved that the Bill, as amended, be passed. He said:—

"In asking the Council to pass this Bill, I think it necessary to take the opportunity of explaining the plan and the principles on which it has been framed more fully than I have yet done, with the object of making the intention of those who have framed the law clear and intelligible to those who will have to work it. I wish to premise my remarks by reminding the Council and the public that this Bill is intended for the Central Provinces only; that it is not intended to be a model for other Governments to follow; and that, in framing it, we have looked exclusively to the condition and needs of the Provinces to which it applies.

"The first thing we had to settle was the constitution of the boards and councils. We began by recognising the principle that the village is the unit of all administration in this part of India. Whether in the management of the revenue, the police or education, nothing much can be done unless there is an organisation, minute and spreading enough to reach and deal with each individual village. Under the ancient system of the country, each village managed its own affairs; and although there is little trace in the Central Provinces—which, compared with other parts of India, are distinctly a new country—of those complicated village-communities which still thrive in Northern India, yet the system of village-management was, until a comparatively recent date, complete. Every village had its headman or patél, who, without having any greater rights in the land than the other villagers, acted as their guide, agent and leader. By the Mahrátha revenue-system, under which the village-community was jointly responsible for the whole revenue, and all details of assessment were left to the villagers themselves, the people were forced to act together under their headmen, and to arrange their own affairs.

"During the later period of the Mahrátha power, and in the earlier years of British rule, the headman became a contractor and farmer of the revenue. Still he remained a distinct power in the village, and retained somewhat of his official character. Under the terms of our last settlements, he has, in most cases, become the owner of the land; and, if it were not for the provisions of the Central Provinces Revenue Act, which was passed in 1881, his position and duties as headman would be in danger of becoming merged and lost in his newer and larger character of landowner.

"The provisions of the Revenue Act enable the Government to select in every village one of the resident landowners, or, if the landowners are absentees, some suitable resident, to be the mukaddam, as he has been called in that Act, or headman of the village; and this mukaddam, both in the manner of his appointment and in the duties required of him, represents the patél of forty or fifty years ago as nearly as the change in his relations to the villagers, caused by the creation of a proprietary right in the soil, will permit.

"Believing that the scheme of self-government will have much greater vitality if it can be founded on some indigenous institution, which the people can understand and are accustomed to, we decided on taking the village and the mukaddam or headman as the basis of our scheme and building up from this foundation.

"The nomination of the mukaddams is a matter outside this Bill, and I presume that, under the provisions of the Revenue Act, each village already has its mukaddam. The first step, then, for the enforcement of the present measure, is to arrange the villages into circles, the size of which will depend on a variety of circumstances, and may be varied from time to time; the next to choose, or to allow the mukaddams themselves to choose, a representative mukaddam for each circle. These representative mukaddams will form the hearts of the local boards.

"By this plan, which, I may perhaps be allowed to say, has been adopted at my suggestion, several advantages are gained. First, we secure to the board the advantage of local knowledge of all parts of the area under its jurisdiction; secondly, without directly choosing the electors, we obtain a manageable constituency or electoral body, to which we may be able to leave the choice of members; thirdly, we get, as members of the board, the men who can best aid us in the execution of small local works; and fourthly, we connect the boards intimately with every village, and secure the presence in every village of a person who is represented on the board, who may look forward to becoming a member of the board, and who may fairly be expected to aid the board in the

performance of its duties, and in the course of time will, I hope, come to regard himself as part and parcel of the governing body of the country.

"To this scheme it has been objected that the mukaddam is not a representative of the villagers, who are mostly his tenants, and whose interests are not identical with his.

"To this, I reply that the cesses which make up the greater part of the fund at the disposal of the local boards and district councils are paid by the owners of land, and that it is right, therefore, that those owners should be largely represented. Secondly, I do not think that, in the matter of the duties which the local boards will have to administer, the interests of the two classes—landlords and tenants—are divergent. Anything which tends generally to the wealth of the country benefits both classes. In educational matters, the landlords are perhaps inclined to be retrogressive, but hardly more so than the peasantry themselves; and, as I will show hereafter, we have taken precautions against any tendency to neglect primary education. Lastly, it is practically impossible at present to have a system of election under which each village should elect its own representative. As it is, I believe we are going quite as far as anything that has been done in England in the way of making the local boards representative bodies: and at present, while I think that it is in every way a good thing to take this step, I think also it is inexpedient to go further. When the people are ready for more, they will make themselves heard.

"After the appointment or the election of the representative mukaddams, the next step is to select members to represent the professional, mercantile or trading classes. The number of such representatives must vary with the character of the population in each locality. We have, therefore, left it to the Chief Commissioner to decide how many of these representatives there shall be.

"The method of election or appointment is also left to the Local Administration. I conceive that it will probably be convenient at first to appoint some of the leading chaudhrís or trade-masters, and that hereafter the election of the representatives may be entrusted to them.

"It has been represented to the Select Committee by my friend the Hon'ble Rájá Siva Prasád that clause (*b*) of section 4 is so worded as to exclude traders resident within a municipal area from sitting on local boards. It will be noticed that this criticism does not apply to clause (*b*) of section 5. On a district council, traders who reside within municipalities may sit. The intention in excluding municipal residents from local boards is to prevent the predominance of urban interests and to maintain the rural character of the boards. The head-quarters of a sub-division are generally at or within a municipality, and the largest bankers generally reside there. If these bankers were eligible, they would certainly be elected, and the tendency would be to give an undue influence to the residents at the head-quarters, which, I think, has been a very common fault in the existing committees.

"The larger traders can, whenever it is advisable, be nominated by the Government.

"The third element in the board is the Government nominees. In clause (*c*), section 4, power is given to the Chief Commissioner to appoint members equal in number to one-third of the board. This power has been taken for several reasons. In the first place, it appears the best method of dealing with the question of official members. It leaves considerable discretion to the Chief Commissioner, who may appoint no official members, or may appoint as many as one-third of the whole board. Secondly, it enables the Chief Commissioner to appoint persons of eminence who may not be eligible or may not have been elected under the other clauses—a large non-resident landowner for example. Thirdly, it will enable the Chief Commissioner to secure to some extent the representation of an influential minority, say (to take a case not probable in the Central Provinces) of a large body of European planters.

"With what I have already said, there will be no difficulty in understanding the constitution of the district councils, as laid down in section 6 of the Bill. They are intended to represent and to unite the local boards, and to be controlling and consultative, rather than executive bodies, which, while

leaving most of the executive work to the local boards, will have the power of executing under their own immediate supervision large and important works affecting the whole district. The relation of the local boards to the district councils is one of subordination, especially in financial matters. We are of opinion that no other relation is possible at present, but no doubt every care will be taken by the district councils to refrain from unnecessary interference, and to leave local boards to manage their own affairs. As the district council will not meet very frequently, and as a majority of two-thirds of the whole council is required in order to overrule a board, there need not be much apprehension of constant or vexatious meddling.

"I apprehend that the council and the boards will work very much through committees. To attain success, this appears to be the best plan. There will be a financial committee, an engineering committee and a committee for education.

"We have found in the Central Provinces a system of this kind already in force for the management of schools, and at the request of my friend Mr. Colin Browning, the very able Director of Education in the Central Provinces, who in a quiet, unostentatious manner has done very signal service to the cause of education in that part of India, we have recognised the existing school committees and given them a place in the Bill (section 16). As the history of these committees shows what has been done, and suggests what can be done, by working through the people themselves, I will read what Mr. Browning says about them:—

"'Every Government school, of whatever kind,—whether middle class or primary,—has a school committee. Each school committee consists of not less than four members. They are usually nominated by the Deputy Commissioner. The school committee members are asked to visit their school once a month collectively, and one individual member, chosen by rotation, visits, or should visit, the school weekly. The school committee members sometimes examine the boys; but the members are often illiterate and unable to examine the scholars. Still, they see those that are present, inquire regarding absent boys, settle matters of discipline, and arrange within certain limits what rate of fee scholars shall pay, and what boys shall be free scholars. The school committees are especially useful in providing suitable accommodation for their schools and in repairing school-houses. Several schools have adopted a certain uniform. This uniform the school committees give to the poorer boys at their own expense. School committees are indispensable for the proper conduct of schools. They not only represent our wishes to the people, but the wishes of the people to us. It is often by their influence that many scholars attend school.'

"Mr. Browning adds that the great use of school committees is undeniable. I need only add that they are entirely unpaid, and that the number of gentlemen serving on these committees is between three and four thousand. This is certainly a fact that affords great encouragement to those interested in the success of the present measure.

"Turning now to the conduct of business, it will be seen that the election of a chairman has, as we explained in our former report, been left to the members of the local bodies. The Hon'ble Rájá Siva Prasád (of whose valuable advice we have lately had the advantage) urged the Select Committee to leave the boards and councils free to elect an outsider to the chair. There may, doubtless, be advantages in this plan; but I think the result would be this, that, the election of the District Officer being possible, the boards would naturally cling to him, and we should have much trouble in getting them to exert their own powers and to walk alone. I do not think this would be a fair way of working the experiment at the outset.

"Under the Bill as it stands, there is nothing to prevent a weak board, mistrustful of its own powers, from asking the Government to nominate an official whom it may appoint as its chairman. But the strain is not put upon it of passing over or refusing to elect an influential official, who, if eligible, would certainly be proposed for election. The way in which the Bill will work is not very different from the plan which Sir A. Lyall proposes to follow in the North-West. He proposes to let the members of the board meet and decide for themselves whether they will elect their own chairman from among them-

selves, or leave the appointment to the Government. In the latter case, the District Officer will ordinarily be appointed.

"The control sections of the Bill are perhaps the only part of the measure which has evoked any hostile criticism. They are thought by some writers in the public Press to be too strong and to be inconsistent with the freedom or independence of local bodies.

"It is said by one writer that 'the local boards and district councils will thus be absolutely at the mercy of the Deputy Commissioner. It will be impossible for them to do anything against his wishes.'

"I do not think that the gentleman who brought this accusation could have understood this portion of the Bill. The Deputy Commissioner has a very limited power of interference.

"He can object to an estimate; but the Commissioner has to decide on his objection, and will doubtless take care to let the board or council be heard before coming to a decision. He can inspect works and call for reports, but no local body which is conscientiously doing its duty need fear enquiry. He can suspend the execution of an order or resolution, if he thinks anything is being done to cause injury or annoyance or lead to a breach of the peace, and in very extraordinary emergencies he can step in and execute a work which would properly belong to the board or council. But these powers can only be exercised subject to the check of immediate report to the Commissioner, and in some cases to the Chief Commissioner.

"The larger powers of providing for the performance of a duty in respect of which a board or council has made default can only be exercised by the Chief Commissioner; while the extreme measure of suspending a council or board in case of incompetency, default or abuse of powers can only be exercised with the approval of the Governor General in Council.

"I think, then, that such criticisms as those I have quoted are unfair, and show the inability of the writer to understand that impatience of reasonable and constitutional control is more likely to wreck the policy of extending self-government than any official interference.

"Your Excellency has already explained to the public—I think in answering an address at Lahore—that the powers of control proposed to be taken by the Government are no greater than those retained in similar matters in England. And to this it has been replied that there is public opinion in England, and that the people there are strong enough to resist official or officious interference. It is, no doubt, true that there is more danger of undue official interference in India; but, at the same time, the very weakness of the people and their want of independence renders control more necessary. And it must not be forgotten that, if there is not much strength as yet in public opinion, there is, vested in the Local Administration and in your Lordship's Government, a powerful control over the district officials which will, no doubt, secure a discreet and moderate use of the law.

"It must be remembered that the funds which are to be entrusted to these local bodies will not consist merely of local rates, but will be supplemented very largely from the Provincial revenues—in other words, from the proceeds of general taxation. It must be recollected, also, that their duties are of such a nature that the due performance of them is necessary for the wealth and prosperity of the whole country. Control, therefore, is essential; and in the provisions of this Bill I think we have safely steered between the danger of encouraging a fretting constant meddling that would degrade and disgust the boards, and that of entire abstinence from interference which would leave inexperienced boards to destroy themselves.

"As to the duties of district councils and boards, section 9 is sufficiently explicit. It has been the desire of the Select Committee to follow the wishes of the Government by giving to the boards every work on which they can be fitly employed; and, if sufficient funds are forthcoming, I do not think the energies

of our boards will be allowed to rust for lack of work. I have only to notice, in respect of the power of exception reserved to the Chief Commissioner by section 9, that this power is not given with the object of allowing him to interfere from time to time by taking special works out of the hands of the local bodies, but in order that works like railways, large provincial roads, great irrigation works and the like, which cannot profitably be administered by local authorities, may be retained under the immediate management of Government.

"And as to this matter of the duties of the boards, I anticipate that, when the officers in charge of districts realize the nature of the organization which is sought to be established and kept alive by the provisions of the measure now before the Council, they will not fail to perceive the advantage of utilizing the local boards, and the individual members of them, in many ways not laid down in the law, and quite outside of the scope of this Bill. They will seek from them information regarding the state of the people, and the agricultural conditions of the country. They will use them as mediums for explaining and making known to the people the wishes and intentions of the Government, and they will go to them for aid in all matters of local administration, including the revenue and the police. The organization which we contemplate, reaching, as it will, to every village, will, I have every hope, be found adapted to all these ends. In fact, I anticipate that, even if from want of money the energy of the board may not be fully occupied in the execution of works of improvement, it may still find ample and useful employment in many ways, and that there need be no fear of the new institutions expiring from want of occupation.

"It remains for me to say a few words as to the financial part of the scheme and the sources of supply enumerated in section 23 of the Bill. As I have already suggested, the greatest difficulty in the way of working the scheme will be the scanty supply of money. The school-cess of the whole Province is less than a lakh and a half of rupees, the road-cess is no greater; and these two cesses will form the bulk of the funds which the district councils can absolutely call their own. The area of the Provinces, excluding feudatory States, is roughly 84,000 square miles, and the population is about 10 millions. The councils must, therefore, depend in a great measure on the contributions made to the fund by the Administration. These contributions can be made, and no doubt will be made, for fixed periods of years, so that the councils will be able to adopt something better than a hand-to-mouth policy. But they cannot be of a very large amount, and the danger that I apprehend is, not that the members of the boards will neglect their duties, not that they will be controlled into a state of apathy by official meddling, but that they will find themselves helpless for want of money. I hope that this may be remedied in part by the generosity of private individuals, who wish to benefit their fellow countrymen, and who will work through the agency of the boards. We have a good deal of money in the Central Provinces, and the spirit to use it well is not wanting. At the present moment, the municipality of Jabalpur is constructing a very fine work for the supply of water to the city and cantonment, and that they have been able to do this is entirely due to the extraordinary munificence of Rao Seth Gokul Dáss, a well-known banker, who, when I was Commissioner of Jabalpur, came forward to aid us in carrying out this noble work. I am quite sure that his example will be followed by others.

"The various sources of income, which are enumerated in section 23, we have formed into a fund, in the disposal of which we have left the councils unfettered, except in one matter. It has been provided that the amount expended from the district fund in any financial year on primary education shall not be less than the estimated net proceeds for that year of the rates levied for the maintenance of schools.

"The school-cess is levied on the land, and it was intended for, and in the Central Provinces has always been duly appropriated to, rural primary schools.

"So far as regards the practice hitherto followed, this restriction on the discretion of the councils will make no change. But, on the representation of Mr. Browning, and in view of the repeated declarations made by the Secretary

of State and the Government of India as to the appropriation of this cess, we have thought it best to provide, by law, against its application to other purposes.

"The only other matter which I need notice is in connection with section 34, which empowers the Chief Commissioner to make rules for a great many matters, and I have no doubt it will be thought by some that many of these matters are very important, and ought not to have been left to rules. It is, however, of the first importance in a measure of this kind,—especially as it is in some ways a new and experimental measure,—to leave great discretion to the authorities who have the working of it, in order that they may, by practice, arrive at the best methods of giving it effect.

"Of this I am quite sure, that every endeavour will be made in framing the rules to follow the spirit of Your Lordship's policy, and that the Government may confidently rely on the loyal co-operation of every officer connected with the Central Provinces Administration in giving effect to the law.

"In conclusion, I have only to ask the Council to pass the Bill, and to express my earnest hope that it may benefit the people of the Central Provinces, and, if possible, increase that loyalty to the British Government for which they are now conspicuous."

The Hon'ble SAYYAD AHMAD KHÁN said:—"My Lord, I intend to vote in favour of the passing of this Bill, but, in explanation of my vote, I am anxious, with your Lordship's permission, to make a few observations on some features of this Bill. My Lord, I am one of those who believe that the success of local self-government will, in a great measure, depend upon the amount of independent power to be conferred upon the local boards and the district councils. Indeed, I am convinced that it may be safely laid down as a general rule, that the greater the powers conferred upon these bodies the greater will be the cordiality, earnestness and industry with which the work will be performed by the members. Holding such views, it would be only natural for me to dissent from such provisions in the Bill as are intended to authorise interference on the part of the district authorities. But, my Lord, I wish to offer no opposition, as I am aware that this Bill relates only to the Central Provinces, that those Provinces are among the least advanced parts of British India, and I feel that in this circumstance is to be found justification for exceptional treatment. There is another important matter in this Bill to which I assent with a similar qualification. I refer to the provisions in this Bill regarding the constitution of local boards and district councils. Upon this question, which appears to me to be one of the most important in the entire scheme of local self-government, there appear to be two prevalent opinions Some people think that the local boards and the district councils should consist of entirely separate sets of members; the other opinion is the one which has been adopted in this Bill in section 6, clause (*a*), which provides that the district council shall consist of 'representatives of groups of circles within the district, one or more for each group, being a member or members of, and elected by, the local board for that group.' I understand the effect of this provision to be, that, as far as clause (*a*) is concerned, none but members of local boards are to be eligible to the district councils. Now, my Lord, my knowledge of the people leads me to believe that, in such parts of India as the North-Western Provinces and Oudh, persons of social standing and respectability would not be willing to serve on local boards subject to the authority and control of the district council. And, if the local boards are to be the only bodies from which the representatives of the landed interest are to be elected for the district councils, there will be a great risk of losing the services of many men whose presence might prove of great use and valuable assistance in the work entrusted to the district councils. My own feeling is, that perhaps the best and safest rule for the constitution of the district councils would be to provide that all the members of the local boards should also be members of the district councils; in other words, to remove the distinction between the positions of members of the local boards and members of the district councils. Such a course would attract the best class of the people to serve both on the local boards and the

district councils; the local boards would discharge their duties as if they were sub-committees of the district councils; every member of the local board would have a voice in the deliberations of the district council itself; and there would be no room for those petty jealousies which will attend the election by the local board of a member for the district council. If such a provision as I have ventured to suggest were adopted, the district councils would of course be numerically larger than under the provisions of the Bill now before us; but I do not think the district councils would be too bulky for working purposes, and I am convinced that the chance of securing well-attended meetings will certainly be greater in proportion to the number of which the district council is composed. My Lord, I should have considered it my duty to have dwelt more fully on these considerations had I been prepared to oppose any provision in this Bill. But, as I have already said, I regard the Central Provinces as requiring an exceptional treatment, and in a matter of this kind it is no doubt safer to rely upon the advice of the local authorities. I am all the more unwilling to offer any definite opposition to the Bill, as under its provisions the landed interest is to be represented in the local boards by mukaddams, or executive headmen of villages, appointed under the Central Provinces Revenue Act of 1881. Such men will, no doubt, be persons of position and influence, and the remarks which I have ventured to make have, perhaps, not the same force in regard to the Central Provinces as they might have had if the Bill now before the Council related to my part of the country.

"But, my Lord, far more important than any of the points I have noticed are the provisions contained in clause (*b*) of section 4, and the corresponding clause in section 6 of the Bill. These clauses reserve to the Government the power to appoint members of the local boards and the district councils not exceeding one-third of the whole number. I regard this provision in the Bill with unqualified satisfaction, and, as this is the first occasion on which the subject of local self-government has come before the legislature, I cannot avoid expressing a hope that the provision to which I have alluded is an indication of the policy which Government intends to pursue in regard to legislation for other provinces also. How far the Government should control the constitution of local boards and district councils is a matter of principle by no means peculiar to the Central Provinces. It is, indeed, a matter which goes to the very root of the entire scheme of local self-government for which the country is indebted to your Lordship's Administration. To that noble scheme I am proud to give my hearty, though humble support, for I rejoice to feel that I have lived long enough to see the inauguration of the day when India is to learn at the hands of her rulers those principles of self-help and self-government which have given birth to representative institutions in England, and have made her great among the nations of the world. My Lord, I sincerely believe that all the intelligent classes throughout India sympathise with the feelings which I have expressed, that they feel grateful to the Government for the privileges which the scheme of local self-government will confer upon them, and that the effect of those privileges will be to enhance the popularity of the British rule, and to inspire feelings of loyalty and devotion among the vast population of British India. The more real those privileges are, the more beneficial will be the results. Having such views and feelings as these, I cannot possibly have sympathy with those who deprecate the withdrawal of Government from the direct management of local funds and local affairs; and it is natural for me to wish, as a matter of principle, that the local boards and the district councils should consist, as far as possible, of persons whom the voice of the people has elected as their representatives. But, my Lord, I feel that I am not acting inconsistently with my feelings and views in cordially supporting those provisions of this Bill which reserve to Government the power of appointing one-third of the members of the local boards and district councils. I am convinced that no part of India has yet arrived at the stage when the system of representation can be adopted, in its fullest scope, even in regard to local affairs. The principle of self-government by means of representative institutions is perhaps the greatest and noblest lesson which the beneficence of England will teach India. But, in borrowing from England the system of representative institutions, it is of

the greatest importance to remember those socio-political matters in which India is distinguishable from England. The present socio-political conditon of India is the outcome of the history of centuries of despotism and misrule, of the dominancy of race over race, of religion over religion. The traditions and feelings of the people and their present economic and political condition are in a vast measure influenced and regulated by the history of the past: the humanizing effects of the British rule have not yet demolished the remembrance of the days of strife and discord which preceded the peace brought to India by the British supremacy. India, a continent in itself, is inhabited by vast populations of different races and different creeds: the rigour of religious institutions has kept even neighbours apart: the system of caste is still dominant and powerful. In one and the same district the population may consist of various creeds and various nationalities; and, whilst one section of the population commands wealth and commerce, the other may possess learning and influence. One section may be numerically larger than the other, and the standard of enlightenment which one section of the community has reached may be far higher than that attained by the rest of the population. One community may be fully alive to the importance of securing representation on the local boards and district councils, whilst the other may be wholly indifferent to such matters. Under these circumstances, it is hardly possible to deny that the introduction of representative institutions in India will be attended with considerable difficulty and socio-political risks. In a country like England, where the distinctions of race no longer exist, where the differences of sectarianism in religious matters have been mitigated by the advance of toleration, the matter does not present such difficulties. The community of race and creed makes the English people one and the same nation, and the advance of education has rendered smaller differences wholly insignificant in matters connected with the welfare of the country at large. Christian constituencies do not object to return Jews to represent their interests in Parliament, and, indeed, for socio-political purposes, it may be said that the whole of the population of England forms but one community. It is obvious, of course, that the same cannot be said of India. The system of representation by election means the representation of the views and interest of the majority of the population, and, in countries where the population is composed of one race and one creed, it is no doubt the best system that can be adopted. But, my Lord, in a country like India, where caste distinctions still flourish, where there is no fusion of the various races, where religious distinctions are still violent, where education in its modern sense has not made an equal or proportionate progress among all the sections of the population, I am convinced that the introduction of the principle of election, pure and simple, for representation of various interests on the local boards and the district councils, would be attended with evils of greater significance than purely economic considerations. So long as differences of race and creed, and the distinctions of caste, form an important element in the socio-political life of India, and influence her inhabitants in matters connected with the administration and welfare of the country at large, the system of election, pure and simple, cannot be safely adopted. The larger community would totally override the interests of the smaller community, and the ignorant public would hold Government responsible for introducing measures which might make the differences of race and creed more violent than ever. My Lord, I have dwelt upon this matter at such length in order to explain why I, a sincere admirer of the representative system, have given my cordial support to such provisions of this Bill as appear to militate against the system of election, pure and simple. Government, in reserving to itself the power of appointing one-third of the members of the local boards and district councils, is adopting the only measure which can be adopted to guarantee the success of local self-government, by securing and maintaining that due and just balance in the representation of the various sections of the Indian population which the system of election, pure and simple, would fail to achieve."

The Hon'ble MR. HUNTER said:—"My Lord, I congratulate your Lordship's Government on the passing of this Act. It is the first legislative expression of that policy of local self-government with which your Excellency's name will be for ever identified in India. It is, however, only in regard to the educational sections of the Bill that I shall venture to detain the Council with a few remarks. Those sections had to accomplish two objects. They had, in the first place, to conserve the popular element in the existing educational mechanism of the Central Provinces. They had, in the second place, to guard against placing restrictions on the further development of popular instruction, or hampering the action of the Education Commission now sitting. The Bill has been carefully considered by the members of the Commission, and I have the pleasure to say, on their behalf, that it seems to accomplish both these objects. The unit of educational administration in the Central Provinces—indeed, I believe, the smallest administrative unit of any kind—is the school committee. One thousand of these useful little bodies are at present at work in those Provinces. The quotations made by the member in charge of the Bill, from the able report by my friend Mr. Browning, render it unnecessary for me to describe the action of such committees. Their origin dates from the formation of the Education Department itself; and whenever a new school is established, a new school committee is appointed. There is, therefore, a widespread system of school boards in the Central Provinces—a system which has the accumulated experience of twenty years of actual work, and which has within itself the elements of a natural and necessary growth, in proportion to the spread of intelligence and education. The present Bill organises these educational administrative units into a part of a complete system of local administration. The school committees consist of not less than four members, of whom the mukaddam, or village-head, is almost always one. The Bill provides that the district council shall, as far as practicable, conduct the management of the schools through these school committees. The mukaddams, and probably other members of the school committees, will have seats in the local boards; while the local boards will be represented in the district council. The school committee is, therefore, the pre-existing unit of local administration, whence some of the most important members of the local board will be drawn; and there is a perfect chain of responsibility through the local board to the district council.

"The only other aspect of the Bill with which I shall detain the Council is in regard to educational finance. Two of the financial difficulties which arise in Indian Provinces with regard to the education of the cultivators may be stated as follow. First, the difficulty of securing that funds specially raised for primary education shall be entirely spent on primary education, to the exclusion of higher classes of schools. Second, the difficulty of securing that funds specially raised from the cultivators shall be entirely spent on the education of the cultivators, to the exclusion of the town or municipal schools. The present Bill provides for the first difficulty. All funds raised for primary education in a district, although paid at first into a common fund, shall be expended solely on primary education; or rather, a sum at least equal to the educational funds raised, shall be thus spent. With regard to the second difficulty, the Bill is silent. For that difficulty does not yet arise in the Central Provinces, outside municipalities and cantonments; that is to say, within the area over which the Bill has jurisdiction. The difficulty may arise hereafter in the Central Provinces, as it has done in other parts of India; but it is so complicated by local considerations and local claims, that the Bill wisely refrains from entering on a thorny question which has not yet arisen in the particular area with which it deals. That question, however, will require a definite legislative answer in some other parts of India; and it is now receiving the attention of the Education Commission. The present Bill preserves the existing popular element in the educational system of the Central Provinces. It provides for the strict application of funds raised for primary instruction, to the purposes for which they are levied; and it in no way fetters the Education Commission in its efforts to still further develope popular education."

The Hon'ble RÁJÁ SIVA PRASÁD said:—"My Lord, after the able and lucid exposition of the principles on which the Bill is based by the

Hon'ble Member in charge of it, I have very little left to add. However, I am very glad to find that the Hon'ble and learned Dr. Hunter has spoken so strongly in favour of the Bill, especially so far as the education of the people is concerned, and with those remarks I fully concur. As to the self-government scheme, the whole country, from the Himalayas to Cape Comorin, has already responded in terms of unqualified approval, but I do not agree with the Hon'ble Member in charge of the Bill in the mode of the selection of chairman. The result of the limitation of power of the district councils and local boards in making selections from among themselves will be quite different from what he expects. Many good and fit Natives, who would have offered themselves as candidates for chairmanship, may not accept a membership. Still, I do not like to interfere in any way with the wishes and plans of the Local Governments. Self-government does not abolish the Local Governments, and they are, after all, the best judges in such matters."

The Hon'ble MR. ILBERT said the Council had been reminded that day that the importance of this measure consisted in its being the first attempt to embody in a legislative form the principles laid down by the Government of India in its Resolutions on the subject of local self-government, and it had been explained on a previous occasion that this circumstance was due to a mere accident. But he could not help thinking that it was a happy accident which entrusted the task of preparing and introducing and explaining this measure to a gentleman who, from his thorough knowledge of local circumstances and local requirements, and his genuine and sympathetic appreciation of Native character, was so eminently qualified to perform the task as his hon'ble friend Mr. Crosthwaite. His hon'ble friend had so fully explained the provisions of the Bill and its general objects that he had left little for MR. ILBERT to add, either for the purpose of meeting criticisms or for the purpose of removing misapprenhensions; and, of course, anything he could say would not carry with it the weight which necessarily attached to a person who spoke with a local experience which Mr. ILBERT could not pretend to possess. He was necessarily compelled to approach this subject from an English point of view, and to look at it with the light of such knowledge as he happened to possess of the working of local representative bodies in England. But that the knowledge and experience derived from these sources was altogether inapplicable to similar institutions in India was a proposition which he was not prepared to admit. If it could not tell the Government what they were able to do or what they ought to do, it might be useful for the purpose of telling them what mistakes they ought to avoid. He had read a good many reports on the working of local representative bodies in India, and as he had read them he had often been reminded of the aphorism of Artemus Ward that "after all there is a good deal of human nature in man." What he meant was that, in spite of the enormous differences between the Englishman and the Hindu, and between England and India,—differences which no Indian statesman would be likely to minimize or overlook,—yet there were certain broad principles of policy which were as applicable here as they were applicable there, and which an Indian could not any more than an English statesman afford to disregard. One was often tempted to suspect that, where the attempts to introduce or develop self-government had failed in India, the failure might be traced to causes which would have produced the same effects in England. Suppose, for instance, that a statesman had to frame or give effect to a scheme for entrusting new or extended powers to local representative bodies in England. What would be the main considerations which he would endeavour to keep in view? In the first place, he would bear in mind that the main object of local self-government was to enlist on the side of the Central Government local knowledge and popular sympathies, and, even if he could be assured that that object could not be attained without the risk of sacrificing a certain amount of administrative efficiency, he would still be prepared to make the sacrifice. Then he would recognize the necessity of building on and developing existing institutions. Instead of creating new authorities or new machinery, he would do his best to utilise the authorities which were already in existence and the machinery with which the people were familiar. Again, he would take care

that the work which was entrusted to local bodies should be work of a kind to which they were accustomed, as to which their special knowledge and experience would be valuable and in which they would be likely to take an interest. The main function of a local representative body, especially of a local body in a rural district, was to provide in a simple way for petty local wants. These were the things about which the members of such bodies knew, about which they really cared and which they were likely to do well. If they were required to carry out works which were conceived on an Imperial or Provincial scale, they would be discredited; if they were fettered with elaborate formalities, they would be disgusted.

Then, in dealing with the question of finance, an English statesman would recognise the importance of appropriating local taxes to local purposes. The British rate-payer liked to see what became of his money, and strongly objected to its being spent outside his parish or union: if he was told that he would reap the benefit of the expenditure in an indirect manner, he was apt to be incredulous and dissatisfied. It was possible that the Indian rate-payer might be influenced by similar feelings. Then, care would be taken to leave a considerable amount of discretion to local boards, both as to the works on which the money placed at their disposal was to be spent, and as to the mode in which those works were to be carried out. Unless such discretion were given, all real responsibility for, all genuine interest in, local work was made impossible, and the body which had been called into existence for the purpose of assisting the Government with its knowledge and experience was reduced to the level of a mere collecting and spending machine.

Lastly, whilst allowing great latitude as to matters of detail, he would, as to matters of principle, reserve large and strong powers to the Central Government, taking care, of course, that these powers would not take the form of vexatious or arbitrary interference, but should be exercised with reference to general principles and for assignable reasons.

Such were among the most important of the considerations which would be applicable to any experiment in the direction of extending self-government in England; whether, and how far, like considerations were applicable to similar experiments in this country, and, if they were applicable, whether the failure of some of those experiments could in any measure be attributed to a disregard of them, he would leave to those who had more knowledge of India than himself to say.

The only one of these considerations on which he wished to touch further to-day was that which related to the matter of control, and he wished to refer to that for two reasons:—first, because, as his hon'ble friend Mr. Crosthwaite had remarked, it was the feature of the Bill which had evoked most criticism; and secondly, because it was a point on which direct appeal had been made to English precedents. Some of the official critics of the Bill seemed to have feared that its effect would be to take away Government control, whilst there was another class of critics who apparently thought that the existence of such control was incompatible with the existence of local self-government at all.

The Government of India did not share the apprehensions of the first class of critics, and they did not agree with the views of the second. Nothing was further from their intention than to place local representative bodies in a position of absolute freedom from Governmental control. What was proposed was not to remove such control, but to alter its character, to substitute for dictation from within control from without, and to take care that this control should be exercised with reference to fixed and general principles and for definite and intelligible reasons. Control in this form, so far from being incompatible with, was an essential feature of, any good system of local self-government. Take, for instance, the system which prevailed in England; not a model system by any means, but a system under which a great deal of useful work was done in a very creditable manner; and consider the relations in which local bodies in that country stood to the Central Government. The most important of the local representative bodies in England were the town councils and local boards

in towns, the boards of guardians and the newly established school boards These were the bodies which, in the language of modern Acts of Parliament, were usually referred to as the "local authorities." They represented the local, as distinguished from the central, element in the Government of the country; and their most important functions were to supervise the relief of the poor, to look after schools and roads and to provide for the maintenance of the public health. In the discharge of each of these functions, their proceedings were controlled by some department of the Central Government. Thus, school boards acted under the control of the Education Department; town councils, local boards and boards of guardians, in their capacity of sanitary authorities, acted under the control of the Local Government Board. He would not refer to the relations which existed between the school boards and the Education Department, except for the purpose of remarking that the section of the present Bill giving power to suspend a district council or local board in case of default was modelled on a section of the English Elementary Education Act of 1870 (section 63), which gave a similar power to the Education Department in the case of a defaulting school board. But MR. ILBERT would take his illustrations mainly from the important Public Health Act of 1875, which regulated the powers and duties of local authorities when exercising sanitary functions. The department of the Central Government which was charged with the control of local sanitary authorities was known as the Local Government Board; but it was not a board at all in the sense of being a deliberative or consultative body—it was simply a department of the State consisting of a President and a Secretary who sit in Parliament, and change with the Government of the day, and of a large permanent staff consisting of secretaries, assistant secretaries, inspectors and other officers. If reference were made to the Public Health Act, 1875, it would be found that the powers of control and supervision which were conferred by that Act on the Local Government Board were numerous and extensive. The sanction of the Board was required for loans and leases. It regulated the terms on which money was to be borrowed and lands let out on lease. Its approval was required for all bye-laws. Its sanction was required for appointments to all offices which were not wholly paid for out of local rates. It prescribed the form in which local authorities were to keep their accounts. It appointed auditors to audit their accounts; and these auditors not only had power to check the accuracy of the figures, but were required to disallow every item of account which was contrary to law, to surcharge the same on the person making or authorising the making of the illegal payment, and to charge against any person accounting the amount of any deficiency or loss incurred by the negligence or misconduct of that person. Its inspectors were entitled to attend any meeting of the local authority. The Board might direct its officers to hold local enquiries as to the mode in which the Act was carried out, and might in appropriate cases charge the expense of the enquiry on the local rate. And lastly, if the local authority made default in the performance of its duties, the Local Government Board might take effectual steps for enforcing and securing the performance of that duty. The section which conferred that power was so important, and bore so directly on the proposals contained in the present Bill, that he would take the liberty of reading it to the Council.

Section 299 of the Public Health Act, 1875, was as follows:—

"Where complaint is made to the Local Government Board that a local authority has made default in providing their district with sufficient sewers, or in the maintenance of existing sewers, or in providing their district with a supply of water, in cases where danger arises to the health of the inhabitants from the insufficiency or unwholesomeness of the existing supply of water, and a proper supply can be got at a reasonable cost, or that a local authority has made default in enforcing any provisions of this Act which it is their duty to enforce, the Local Government Board, if satisfied, after due enquiry, that the authority has been guilty of the alleged default, shall make an order limiting a time for the performance of their duty in the matter of such complaint. If such duty is not performed by the time limited in the order, such order may be enforced by writ of mandamus, or the Local Government Board may appoint some person to perform such duty, and shall by order direct that the expenses of performing the same, together with a reasonable remuneration to the person appointed for superintending such performance, and amounting to a sum specified in the order, together with the costs of the proceedings, shall be paid by the authority in default; and any order made for the payment of such expenses and costs may be removed into the Court of Queen's Bench and be enforced in the same manner as if the same were an order of such Court."

He made these references to English legislation for the purpose of showing that there was ample English precedent for the powers proposed to be conferred by the present Bill on the Local Government and its officers. The Government of India did not say that the precise powers which were in the present Bill were necessary or applicable under all circumstances or in all parts of India. It was enough to say that they appeared to be required in the Central Provinces, and he hoped and believed that, in the form in which they were given, they would be found to be sufficient.

The Hon'ble MR. GIBBS said:—

"At the last meeting of the Legislative Council at Simla, at which I was unfortunately not able to attend, the Hon'ble Mr. Plowden made some observations on the policy of this Bill, founded on his experience of thirty years as a member of the Civil Service, and, in the course of his speech on that occasion, he alluded to the fact that he was in my absence the senior representative of the Civil Service in the Council. I am not only the senior member here, but with the exception of one member in the Madras Presidency, I believe I am the oldest representative of the Civil Service in India; and it is in that character that I wish to make a few observations on the present occasion. My opinion of the necessity for local self-government is not an opinion recently formed or merely formed on the question being brought forward by your Lordship. I have long seen that such a necessity must arise, and that it was merely the natural outcome of that system of education which has been going on under the auspices of the British Government for between forty and fifty years. I have for many years watched the progress made by the Natives of this country to render themselves capable of taking part in the Government, and done my best to hasten on that end, whenever I had the opportunity, specially by trying, and sometimes with success, to increase the power and independence in municipalities and other local bodies in Western India. Particularly I may allude to the Municipality and Port Trust in the city of Bombay. I am sure that no true friend of the Natives of this country can hold any other opinion than that it would be for the good of the empire when the people of the country become fitted to take a more direct part in its government. This has to a certain extent been going on for many years, by the employment of so many Natives, some in important, but the majority in subordinate, official positions under Government; but the present movement is of very much greater importance than anything that has yet been attempted, for it will enable the independent gentry of the country not merely to join the Government in carrying on the administration of the Empire, but in their own individual capacity to step in and relieve the ordinary Government of much of its work.

"I feel sure that the leading people can, and will, do much to carry out the policy now proposed, but at the same time I feel equally certain that the success of that policy will depend almost as much on the District Officers and their conduct towards the boards as it will on the boards themselves. It will require judicious care and assistance, and not dictation, on the part of the District Officers to assist the gentlemen who form the boards, especially at the commencement, to carry out their onerous duties with success.

"As regards the powers of control given under the Act, I feel quite sure, although no one could be better pleased than myself to avoid such clauses, that no real friend of the people could object to such control at the first, because its real object is to ensure the success of the Act, which, without it, might, and would probably, fail. I feel quite certain, however, that, when it is found that the boards can act alone, such control will be reduced, and eventually perhaps almost entirely removed.

"As an example of what I mean, I would point to large bodies, such as some of the larger municipalities of the Bombay Presidency, and especially to the Municipal Corporation of the City of Bombay. I have no doubt that, if

any measure for amending the Acts under which those bodies work were now under consideration, the control at present insisted on might be considerably reduced and modified.

"I am aware that this is a special Bill for a special province, and, therefore, I will say nothing as to its details beyond expressing my conviction that the great local experience of the Hon'ble Member in charge will have provided for all that is possible to ensure success, and I trust most sincerely that it will prove a blessing to the province to which it applies.

"Your Excellency has been congratulated on the passing of this measure to-day; I will rest content with congratulating myself that I have had the honour and satisfaction of forming one of the Council and the Government who have initiated so far successfully the important policy of local self-government in India."

His Excellency THE PRESIDENT said:—

"I really have nothing to add to the remarks which have been made by previous speakers in the course of this discussion. The Bill before us is, as has been pointed out, a Bill relating to the Central Provinces only, and, consequently, it is framed in accordance with the special circumstances which prevail in that district.

"The Government do not put this Bill forward as a model measure which they would recommend to be followed by all the other Local Governments throughout the country. It might almost be said that the Central Provinces is one of the least advanced districts in India, to which a system of local self-government can be considered to be at all applicable. It is, therefore, natural that a measure to be applied to a district of that description should be framed in a manner which might not be suitable to the circumstances of districts of a much more advanced description, and I desire that it should be distinctly understood that this Bill relates to the Central Provinces, and the Central Provinces only. It is a measure which we have reason to believe is well suited to the circumstances and people of those Provinces, but, doubtless, many of the provisions which find a place in this Bill will not be considered by the heads of Local Governments in other parts of India either necessary or suitable for the populations under their charge. That being so, there is really very little necessity for me to make any remarks upon the details of this Bill. They have been ably explained by my Hon'ble friend Mr. Crosthwaite, and commented on with his full knowledge of such questions by my Hon'ble and learned friend Mr. Ilbert; and I do not think, therefore, that there are any matters upon which any further explanation with respect to the views, intentions and objects of the Government can be required from me.

"I will, however, make just one remark upon a single point of detail, alluded to by my Hon'ble friend who introduced this discussion. He spoke of the section of the Bill—section 34—which relates to the framing of rules by the Chief Commissioner, and he said that some persons might think that a very wide discretion was left to the Local Government in respect to the framing of those rules. Now, it is very important that all persons who have to consider Bills of this description should bear in mind that the provisions which are contained in measures which will form part of the law of the land are hard-and-fast provisions which cannot be altered without referring again to the Legislature and passing a new Act. Now, in a matter of this kind, particularly at its commencement, it is very undesirable to lay down more hard-and-fast rules than are necessary. What you want is that the system should be elastic; and that you should ascertain by practical experiment what modes of self-government are most suited to the requirements and idiosyncrasies of the people in different parts of the country; for, if you tie the hands of the Government too tight by the regulations of an Act of the Legislature, that elasticity which is so desirable in order to arrive at the system best suited to fulfil the wishes and meet the requirements of the country will be altogether lost, and the Government will find itself bound,

whether the measure is in practice found to be suitable or not, to enforce the provisions of the law, or else to go through the long and complicated process of again referring the matter to the Legislature. But those who are inclined to think that these rules are all too elastic, should bear in mind that we have, in this Bill, in fulfilment of the promise made in the Resolution of the Government, issued a short time ago, in respect to rules of this description, distinctly laid down that the rules issued under section 34 shall be published beforehand in draft and left for the consideration of the public for a certain period, in order that, if any objections are felt to them, those objections may be fairly represented to the Local Government.

"And, certainly, if ever there was a case in which we may trust implicitly that the rules which will be made—I hope speedily—under the Bill about to become law, will be those best suited to carry out the provisions of this measure in a friendly spirit towards the spread of self-government, it is this; because it is due to Mr. Morris, whose time in the Central Provinces, I regret to think, is drawing to a close, but who nevertheless will have an opportunity of making the rules under this Bill, that I should say again, what I said on the occasion of a previous discussion at Simla, that there is no civil servant in India who has shown himself, long before this question was taken up by the present Administration, more desirous of applying largely and wisely the principles of local self-government than Mr. Morris. The best thanks of the Government are due to that distinguished public servant for this part of his policy, as well as for the ability with which he has so long administered the Central Provinces over which he has been placed; and I feel the most entire confidence that, in entrusting the initiation of the system established by this Bill to his hands, we are leaving it to one who fully and heartily approves of the principles of the Government on this subject as laid down in their Resolutions on local self-government."

The Motion was put and agreed to.

EXPLOSIVES BILL.

The Hon'ble MR. ILBERT moved that the Bill to regulate the manufacture, keeping, sale, conveyance and importation of explosives be referred to a Select Committee consisting of Lieutenant-General the Hon'ble T. F. Wilson, the Hon'ble Mr. Hope, the Hon'ble Durgá Charan Láhá, the Hon'ble Messrs. Reynolds and Miller and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

The Council adjourned to Friday, the 26th January, 1883.

R. J. CROSTHWAITE,
Additional Secretary to the Government of India,
Legislative Department.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN RAJPUTANA FOR THE YEAR 1881-82.

Nos. 25—33 I, dated Fort William, January 23, 1883.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 3061 S, dated 28th November 1882, from Secretary to Agent, Governor General, and Chief Commissioner, Rajputana, and its enclosures, the Revenue Report and Memorandum thereon by Officiating Chief Commissioner.

OBSERVATIONS.—The total Capital outlay on these works, including all direct and indirect charges, to the end of the year under review, amounted to R15,09,379; the gross revenue assessed on irrigation during the year to R94,511, and the total working charges to R 63,307. The net profit on the works therefore amounted to R31,204, or 2·06 per cent. on Capital outlay to the end of the year.

2. The gross revenue exceeded that of the previous year, 1880-81, by R15,077, and that of 1878-79, the highest previously recorded, by R4,294; but more than 90 per cent.* of this revenue is derived from book credits allowed for water share of land revenue and share of assessment on lands irrigated from wells dependent on the works at Ajmir and Merwara. The revenue from the large new tanks, lately constructed by the British Government, is as yet quite insignificant, amounting only to R 6,092 for 1881-82. The increase during the year was principally due to a larger supply of water in the tanks.

	R
* Water share of revenue on old and small new tanks	62,490
Share of "Chahi" assessment	25,929
	88,419

3. The working expenses of the year, including indirect charges, exceeded those of the previous year by ₹ 22,672, the increase being due to considerable repairs and improvements of old tanks.

4. Of the total Capital invested in these works, 53 per cent.† has been sunk in the large new reservoirs, which are really "Protective" works. As these works are never likely to afford any profit on Capital outlay from "direct" irrigation, and the water can be made to go much further by storing it up for the improvement of the supply in the neighbouring wells, instead of running it off for the irrigation of the crops lying immediately under the tank, the measures which have lately been taken in this direction have the full approval of the Government of India.

	₹
† Old and small new tanks	7,09,364
Large new tanks	8,00,015
	15,09,379

5. The average rainfall recorded during 1881-82 was 17·64 inches in Ajmir and 20·34 inches in Merwara, but the tanks were filled during July and August 1881, during which months there were seven falls, exceeding 2 inches in 24 hours in Ajmir, and four such falls in Merwara.

6. The new tanks appear to have raised the surface level of the water in wells, within a distance of one mile, from 2 to 5 feet, and to have increased the average capacity for irrigation from 5 acres to about $5\frac{1}{3}$ acres per well.

7. A very good idea of the real value of these irrigation works is afforded by the statement of value of crops dependent upon them, which is given in paragraph 19 of Mr. Fitzgerald's excellent report. It is there shewn that crops, valued at very nearly 5 lakhs of rupees, were raised during 1881-82 by means of these tanks, of which the total capital cost amounts to only 15 lakhs of rupees.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Agent, Governor General, and Chief Commissioner, Rajputana, for information and guidance.

Also that a copy of the Resolution and of the Report be forwarded to the Governments of Madras, Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab, in the Public Works Department, for information.

Also that a copy of the Resolution and of the Report be forwarded to the Revenue and Agricultural Department, and to the Department of Finance and Commerce, for information.

Also that the Resolution and Memorandum by the Agent, Governor General, together with the statement of general financial results, compiled by the Examiner of Public Works Accounts, be published in the Supplement to the *Gazette of India*.

Ordered further, that a copy be forwarded to Her Majesty's Secretary of State for India for information.

H. A. BROWNLOW, *Col., R. E.*,
Deputy Secretary to the Government of India.

Memorandum by COLONEL *C. K. M.* WALTER, *Officiating Chief Commissioner, Ajmere-Merwara, on the Ajmere and Merwara Irrigation Revenue Report, 1881-82, dated 28th November 1882.*

The result of the working of the tanks in the year under review shows a falling-off on that of the previous year, the net revenue of the works in operation by assessment being 2·08 per cent. against 3·13 in the previous year, in excess of all charges exclusive of interest.

2. The area irrigated is 21,192 acres against 18,167 in the previous year, while the area cropped without actual irrigation, both in rear and front of the tank embankments, increased from 6,227 acres to 8,506. The total area that the tanks directly protected is 29,698 acres against 24,494 in the preceding year. The assessment includes a credit of ₹26,849 on account of the increase of land revenue due to tanks. Calculating that this sum represents enhanced

land revenue on 12,000 acres, the total area, the irrigation of which wholly or partially depended on the Government tanks, may be stated at 38,000 acres, which is nearly 56 per cent. of the entire area recorded at the last revenue settlement under heads Chahee (well irrigated), Talabi (tank irrigated) and Abi (submerged) in Ajmere and Merwara combined.

3. The new tanks in operation with their combined capacity of 694 million cubic feet above sluice level held on 1st November a supply of 253 million cubic feet, the loss during October having reduced it by about 40 million cubic feet. There was no irrigation of the kharif to speak of. The supply held by these tanks on the 1st April 1882 was 62 million cubic feet. Out of the quantity lost between 1st November 1881 and 1st April 1882, only about 91 million cubic feet was utilized for irrigation of single crop area of nearly 1,300 acres; the quantity used per acre was thus 70,000 cubic feet, or a depth of 1′ 7″ inclusive of loss in ducts and channels. The number of waterings varied from 3 to 5, and complete irrigation was supplied. The earliest date of irrigation for rabi was 11th October in the case of the Bulad tank, and the latest date 16th November in that of the Rajaosi. The latest up to which irrigation was given for rabi was 31st March.

4. Notwithstanding that there were showers in December and January, the quantity of water used per acre was considerably high. The quantity issued for irrigation does not appear to have been carefully recorded, nor does the information regarding the number of waterings appear to be accurate, the number having been given differently for the same area in different places. For instance, in para. 23 of the Assistant Commissioner of Ajmere's Report, the number of waterings given from Bir is stated to be three, while in the separate general statement A, classifying irrigated areas according to crops, the number is entered as five. In this statement the area watered five times from Ladpura tank is given as 104 acres, while in the statement of actually irrigated areas 77 acres, out of the 104 acres figures as cultivated in bed of the tank without irrigation.

5. The new tanks, with a capital of ₹7,05,655, inclusive of indirect charges, assisted the irrigation of crops valued at ₹31,304. The average incidence of water-rate, assessed at ₹5,726, is 18·29 per cent., maximum 39·28 and minimum 10·23.

6. The old tanks and the small new tanks, with a capital of ₹6,96,189, helped the irrigation of crops valued at ₹4,56,193, the incidence of the assessed rates amounting to ₹58,569, being nearly 13 per cent. The actual incidence ranges from 7·15 to 22·73 per cent. Jalea, the largest of the new tanks, stored the largest supply since its completion, and though an event not falling within the period under review, it may be mentioned here that during the last rain its weir discharged for several days.

7. The returns from the new tanks in operation by collections amounted to a deficit of ₹4,801, besides the interest charge amounting to ₹26,410. The returns from the old tanks and small new tanks by collections amounted to ₹23,432, or 3·4 per cent. on Capital outlay. The revenue due to the old tanks being almost wholly a part of the land revenue assessment is treated only in the Administration Accounts of the Public Works Department. It is not therefore found useful to shew returns by the direct and indirect revenue separately.

8. The working charges amounted to ₹63,307 against ₹37,963 in the previous year. Out of the total excess of ₹25,344, the share due to repairs and extensions is ₹22,604. The total expenditure under this head amounted to ₹35,448 against the limit of ₹34,000 recommended by the Irrigation Committee, and since sanctioned by the Government of India in para. 22 of their orders on the Committee's report. The above-mentioned limit includes ₹25,000 for the old tanks, but the actual expenditure of the year under review is ₹31,444. The Officiating Commissioner explains in para. 3 of his report, that a sum of ₹14,500 was utilized in carrying out certain improvements and rather extensive repairs.

9. Regarding the non-completion of the branch Bulad duct and the non-clearance of the Ladpura duct, named Gungwana, animadverted on in the Commissioner's Report; paras. 61 and 66, as well as the irrigation of the Dilwara Bir, referred to in the Assistant Commissioner of Merwara's Report, para. 5, a further enquiry will be made.

10. The establishment charges of the year under review were not adjusted in accordance with the orders of the Government of India on the Irrigation Committee's Report. Had this been done, the charge would have been lower by about ₹4,000, and the percentage of establishment charges to expenditure on works and repairs 36 instead of 49. The necessary adjustment will be carried out when preparing the Administration Accounts for the year 1882-83.

11. The report has been, as ordered by the Government of India, drawn up in the form of that of the North-Western Provinces so far as possible; the orders having been received after the year had been closed, information on all heads was not available, and the Commissioner promises that in future years the report will be more complete.

12. It appears that the water-supply of the year was generally plentiful, more so than usual; that it was fully utilized from the old tanks; and that the duty obtained from the new tanks was much lower than the circumstances appear to have permitted. The Officiating Chief Commissioner, however, notes with satisfaction that the tanks of Bulad, Bir and Jalea did not run dry, before the commencement of the following rains, as much importance is set on the retention of a certain supply permanently.

IRRIGATION BRANCH.

ADMINISTRATIVE ACCOUNTS FOR THE YEAR 1881-82.

No. 1.—General Abstract of Financial results, showing the estimated cost of construction of Irrigation and Navigation Works, the Capital outlay thereon, the revenue derived therefrom, the working expenses and the interest on the debit incurred in respect of those works for and to end of 1881-82.

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS OF FASL RABI IN THE PUNJAB FOR 1882-83 UP TO 30th NOVEMBER 1882.

Canal Division.	Water distributed during November 1882. Depth in Canal at Regulating Gauge. Full supply.	Actual throughout.	Gross Consumption, cubic feet per second. Estimated full supply.	Actual average throughout.	Navigation return canal. Principal items of Traffic. Up.	Down.	Land irrigated (approximate). Zila.	Acres.	Rainfall. Average.	During month.	Chief crops (approximate). Name.	Area in acres.	Remarks.
Bari Doab Canals. 1st Division	4·9	4·20	3,073·60	860	...	...	Gurdáspur	7,104	0·20	...	Wheat	84,277	The amount entering the Bári Doáb Canal Head was 2,533 cubic feet per second. The area irrigated up to date is greater than that of same period of last year by 12,708 acres, but is still far below that of 1880-81, which was 167,364 acres; the main reason for the comparative slackness of demand appears to be that the very heavy rain of the middle of September enabled the cultivators to plough and sow without the aid of irrigation, and they hold off from the Canal in the hope that timely rain will carry them through.

D. M. BARBOUR,
Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,
STATISTICAL BRANCH;
Calcutta, 22nd January 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 23rd JANUARY 1883.

GENERAL REMARKS.—There has been no rainfall to report in the Bombay and Bengal Presidencies, British Burma, Mysore and Coorg, and the Nizam's Territories, while what has fallen elsewhere has been slight.

The prospects of the cold-weather crops continue generally favourable. But in parts, notably in the western districts of the North-Western Provinces and Oudh, and throughout the Punjab, the absence of winter rains is telling severely on the crops on unirrigated land.

The mustard crop is reported to be doing badly in several districts of the North-Western Provinces, and in Saran, in the Bengal Presidency, it has also been much injured by blight.

Harvest operations are still progressing in the Madras Presidency, with an outturn below average in four districts. In Mysore and Coorg reaping of rice crops still continues. In British Burma and Bengal the crop has been nearly all gathered in, the average outturn in the latter province being fair. The harvesting and pressing of sugarcane continue generally throughout India.

Since the information above summarised was received, later accounts have come in showing the prevalence of cloudy weather and good rain over all the more northern and north-western parts o the country.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Jan. 24th)		
Bellary		Standing crops generally good; harvest paddy, dry grains, tobacco, and sugarcane, yield average.
Kurnool		Standing crops in good condition; harvest horse-gram, outturn below average; cattle disease in parts.
Ganjam		Standing crops dry grains, cotton, and sugarcane thriving; harvest dry grains and sugarcane, yield average; fever and small-pox continue; cholera and cattle disease in one taluk.
Kistna		*Standing crops affected by grubs in one taluk, elsewhere promising*; harvest paddy and dry grains, outturn below average; fever and cattle disease general; small-pox increasing; water two feet over anicut.
Chingleput (Madras)		Standing crops generally good; harvest paddy, yield below average; small-pox and cattle disease in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains, yield average; fever, cholera, and cattle disease in parts.
Tanjore	·10 (average of one station.)	*Standing crops good; harvest paddy and ragi*, outturn below average; cholera more generally prevalent.
Madura		Standing crops generally withering in parts; harvest paddy and dry crops in parts; cholera in parts.
Malabar		Harvest second crop paddy continues; fever and cholera in parts; small-pox slight.
Travancore		Harvest progressing; fever and small-pox continue.
		General Remarks.—No rain except in Tanjore; general prospects good.
Bombay—(Jan. 24th).		
Kurrachee	*Nil*	River at Kotri on 20th, 2 feet 10 inches, 1 inch lower than last year; 49 cases small-pox in Kurrachi; since outbreak of disease on 3rd December, 14 deaths, 21 persons remaining sick on 19th, disease confined to Bagdadi lines, residence of Mekranis; a few cases also in Sehwan and Kotri talukas; fever in 10 talukas; harvesting of *sareh* and *jumloo* in Jati commenced; wheat, red rice, and *bajri* in Kurrachi 24, 32, and 33 lbs., in Kotri 32 and 50 lbs., in Tata 24, 38, and 44 lbs., and in Mirpur Batoro 22, 40, and 42 lbs. per rupee respectively.
Hyderabad		*Rabi* crops fair; weather unseasonably mild; small-pox in Hyderabad and fever in 6 talukas; cattle disease in Kaudiaro and Nowsharo; wheat 26, *bajri* 39, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		*Rabi* crops thriving; small-pox in Dhandhuka; wheat 28 and *bajri* 33 lbs. per rupee.
Baroda		*Rabi* sowing completed; cotton-picking commenced; cattle disease in Kadi taluka; *bajri* 30½ to 31 lbs. and rice 26⅞ lbs. per British rupee.
Surat		*Rabi* crops thriving; cotton-picking continued; fever in Pardi and Mandir; 5 or 6 deaths daily from small-pox in city; *jowari* 40 and *nagli* 61 lbs. per rupee.
Nasik		Weather still muggy; *rabi* crops good; cattle disease in Sinnar and Dindori talukas; wheat 25¼, *bajri* 36, and rice 25 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Colaba (Bombay)		Average abnormal temperature 3° warm, vapour in air slightly in excess of normal; wind normal, except on 18th and 19th, when abnormal wind was southerly.
Poona		*Rabi* crops good; *bajri* 45 and *jowari* 55 lbs. per rupee; in Poona *bajri* 41 and *jowari* 46 lbs. per rupee.
Ahmednagar		*Rabi* crops generally good; *bajri* maximum 54 lbs. per rupee in Parner, minimum 48 lbs. in Akola; *jowari* maximum 72 lbs. per rupee in Parner, minimum 60 lbs. in Akola.
Sholapore		Harvest of late crops commenced in some places; *jowari* 72 lbs. 28 tolas, and *bajri* 58 lbs. per rupee.
Dharwar		Early crop harvest continues; cotton blighted in 8 and wheat in 6 talukas; other late crops good; cholera continues in Gadag, 4 out of 5 cases fatal; fever and ague in 3 talukas; cattle disease disappeared; rice minimum 26 and *jowari* 52 lbs. per rupee.
Kanara		Sowing for second crop continues; sugarcane harvest on coast; garden produce healthy; fever in 2 talukas; small-pox 1 death in Sirsi; common rice in Karwar 13 seers per rupee, in district average 15¾ seers per rupee; weather fair.
Rajkot		Weather cold; general health good; cholera continues slightly in Navanagar and Morvi, it has also appeared in 3 villages of Poribandar; *bajri* 28 and *jowari* 35 lbs. per rupee.
		General Remarks.—*Rabi* crops doing well; fever, small-pox, and cattle disease in several districts.
Bengal—(Jan. 24th)		
Chittagong	*Nil*	Weather fine and cold; state and prospects of crops good; harvesting of *amun* nearly finished; cholera and cattle-disease not yet ceased; several cases of small-pox reported.
Dacca	*Nil*	Harvesting of *amun* paddy nearly completed, yield average; winter crops doing well.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice and sugarcane going on; outturn estimated at about from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; general health good; cholera disappearing.
Moorshedabad	*Nil*	Harvesting of *amun* still going on; outturn good where the crop has been cut; except a small area in thana Mirzapore, where cholera has broken out; public health generally good.
Rajshahye	*Nil*	Weather cloudy; winter crops promising well; fever prevalent; cholera reported in Bagmaree thana.
Burdwan	*Nil*	Harvesting of late rice over; average outturn about 8 annas; prospects of winter crops fair; fever prevalent; cholera lingers.
Rungpore	*Nil*	Weather cloudy; prospects of crops favourable; cholera prevalent in some parts.
Bhagalpur	*Nil*	Prospects of *rabi* crops good; rice harvest nearly completed, generally with a fair outturn; mustard and *kurti* being cut, former a full crop, latter rather poor.
Purneah	*Nil*	Late rice harvested; rain would benefit *rabi* crops; public health good.
Patna	*Nil*	Prospects of *rabi* crops favourable; public health good.
Darbhunga	*Nil*	Rice being thrashed; *rabi* crops promising; prices stationary; public health generally good; fever in south of district.
Hazaribagh	*Nil*	Weather cold and cloudy since 22nd; prospects of crops good; oilseeds and pulses being collected; sugarcane being pressed; general health good.
Cuttack	*Nil*	Reaping of late rice and *rabi* crops in progress; wheat and *dalua* rice progressing well; public health good.
		General Remarks.—No rainfall reported from any part of the province during the week; there was a light shower in Calcutta last evening; weather generally reported to be colder than before; rice harvest almost entirely gathered in with fair outturn on an average, though it has not turned out as well in some places as was expected; harvesting and pressing of sugarcane becoming general; prospects of all cold-weather crops continue to be generally reported on very favourably; pulses and oilseeds are being gathered in some places; in Sarun mustard is said to have been much injured by blight; fever and cholera, though generally much abated, are still prevalent in some places; small-pox has appeared in a few districts.
N.-W. Provinces and Oudh—		
Benares (Jan. 23rd)	No rain	Weather slightly cloudy; mustard damaged by insects; *rabi* prospects good; no sickness; prices stationary; if cloudy weather continues wheat crops will be attacked with rust.
Allahabad („ 24th)	A little rain during the week, but hardly measurable.	Crops flourishing, only a little injury to *sarson* (mustard crop); general health good, only a little small-pox of a mild type; prices stationary.
Gorakhpur („ 22nd)		Weather bright; linseed very generally attacked by insects; staple *rabi* crops good; prices stationary.
Jhansi („ „)	Slight showers on the 21st.	Weather still cloudy; *rabi* prospects good; prices stationary; small-pox amongst children continues.
Agra („ 23rd)	·30 in one pargana on 22nd instant.	Well irrigation continues; small-pox in five parganas; general health good; prices almost stationary.
Bareilly „ „)	No rain	Weather cloudy; crops good, but rain wanted; everything else normal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh – *contd.*		
Meerut (Jan. 23rd)	No rain	Rain wanted; health good; prices unchanged; supplies ample.
Kumaon („ „)	No rain	No report of fatal deaths from typhus, about 8 persons died from fever, enquiry being made from what kind of fever, otherwise general health good; sky cloudy; crops on the point of being injured from want of rain; cattle disease continues; rise in prices during this week.
Lucknow („ „)	. . . .	Wind westerly; clouds about, but no rain; crops excellent where irrigated, poor on dry lands; prospects favourable; small-pox continues in the city.
Partabgarh („ „)	. . . .	Weather cloudy, but no rain; the cloudy weather may do harm to *rabi* crops; irrigation ceased; prices falling; general health good, but in two villages in Kunda tahsil slight cases of cholera.
Sitapur („ „)	No rain	Weather cloudy; general health good; prices on the whole stationary.
Fyzabad („ „)	No rain	Weather cloudy; prospects good; irrigation going on; health good; prices steady.
Rae Bareli („ 22nd)	. . . .	Cloudy weather during the last few days, but no rain; *rabi* crops except mustard looking well; no sickness among men and cattle reported; prices stationary.
Cawnpore („ 23rd)	No rain	Weather cloudy now and then; irrigation going on; prospects good; health good; prices slightly fallen.
Farukhabad („ „)	. . . .	Weather alternately cloudy and clear; state of crops fair, but rain greatly needed; small-pox reported as prevailing in Chibramau pargana.
		General Remarks.—Weather cloudy except in Gorakhpur; slight rain in Allahabad, Jhansi, Aligarh, and Agra; prospects good on the whole, but rain wanted especially in the up-country districts; mustard doing badly in several districts and linseed suffering from insects in Gorakhpur; general health good, but small-pox reported from Lucknow, Allahabad, Farukhabad, Agra, and Jhansi, and cholera in two villages of Partabgarh; prices on the whole stationary.
Punjab—(Jan. 23rd)		
Delhi . . .	. . . .	Health fair; small-pox in the city and district; harvest prospects good; prices almost stationary.
Hissar . . .	. . . .	Rain much wanted for the *barani rabi* crops; small-pox in Rohtak decreasing; prices stationary.
Umballa . . .	. . . .	Health good; *rabi* crops suffering from want of rain; prices of food grains stationary, of gram falling.
Jullundur . . .	. . . .	Rain much wanted; health good; prices stationary.
Amritsar . . .	. . . .	Rain much wanted; health good; *rabi* harvest prospects fair; prices almost stationary.
Lahore . . .	. . . .	Health and harvest prospects good; but rain much wanted; prices fluctuating.
Ferozepore . . .	. . . .	Health good; harvest prospects fair; but rain is much wanted; slight rise in prices.
Sialkot . . .	. . . .	Rain wanted; health good; prices stationary.
Rawalpindi . . .	Slight rain in the district and 5 inches snow in Murree.	Seasonal fever in the Fatteljang and Kahuta tehsils; cattle disease continues in the Murree tehsil; *rabi* harvest prospects good, but more rain is wanted; prices almost stationary.
Peshawar . . .	. . . .	Health good; rain much wanted for the *rabi* sowings; prices almost stationary.
Mooltan . . .	. . . .	Health and harvest prospects good; but rain wanted; prices almost stationary.
Dera Ismail Khan . .	. . . .	Weather occasionally cloudy; health and harvest prospects fair but rain much wanted; prices steady.
		General Remarks.—Rain is much wanted throughout the province health and harvest prospects are fair.
Central Provinces—		
Nagpur (Jan. 24th)	. . . .	Weather cloudy; *rabi* prospects good; public health good; prices slightly risen.
Jubbulpore („ 23rd)	. . . .	Weather cloudy; *rabi* crops in good condition; prospects favourable; health good; prices stationary.
Saugor („ 22nd)	. . . .	Weather cloudy and unfavourable to crops; slight damage caused by frost in places; health fair; prices steady.
Seoni („ 23rd)	·20	Weather cloudy; slight damage to *rabi* crops sown earlier, those sown later benefited; prices slightly risen.
Hoshangabad („ 23rd)	. . . .	Weather cloudy and cool; prospects of crops good; an average outturn expected; fever prevalent; wheat 17 seers per rupee.
Raipur („ 20th)	. . . .	Weather slightly cloudy; threshing of *kharif* crops almost finished; *rabi* doing well; slight cattle disease; health good; prices stationary.
Sambalpur („ 18th)	. . . .	Weather clear; prospects of crops and health good; rice 56 seers per rupee.
Khandwa („ 23rd)	. . . .	Occasional clouds with slight rain; *rabi* prospects good; small-pox reported; wheat 16 seers per rupee.
		General Remarks.—Weather cloudy and cool; threshing of *kharif* crops approaching completion; prospects of *rabi* crops favourable; public health good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma— (Jan. 20th)		
Akyab	. . . .	Eight deaths from cholera in two townships, otherwise public health good; cattle disease slight; reaping nearly over.
Rangoon . . .	. . . .	Three deaths from cholera, otherwise public health good; crops reaped.
Bassein . . .	. . . .	Two deaths from cholera in town and 5 in district; otherwise public health good; slight cattle disease in one townsbip; reaping finished in a few places.
Prome . . .	. . . .	Public health good; reaping finished.
Amherst (Moulmein) .	. . . .	Public health and health of cattle in Moulmein and district good; reaping almost finished.
Toungoo . . .	. . . .	Public health good.
		General Remarks.—With the exception of some cholera, public health good; harvest nearly over.
Assam—		
Gauhati (Jan. 23rd)	*Nil*	Weather seasonable; public health good; reaping of *sali* paddy over, crop an average one; lands being broken up for *aus*.
Sylhet . („ 24th)	*Nil*	Paddy harvest outturn below the average of last three years; cholera still prevalent; prospects of winter crops good.
Cachar . („ „)	*Nil*	Weather cold; outturn of *sali* and *asra* crops little less than that of last year; common rice $21\frac{5}{16}$ seers per rupee; 5 deaths from cholera reported from Katigara.
Dibrugarh („ „)	0·31	Weather rainy and cold; mustard promises well; cholera reported from the Sadr sub-division.
Mysore and Coorg— (Jan. 24th)		
Bangalore . . .	. . . .	Crops in good condition; prospects favourable.
Mysore . . .	. . . .	Crops in good condition; prospects favourable.
Mercara . . .	. . . .	Picking of coffee nearly completed; reaping of rice crops still continues; fever prevalent in Nanjarajapatna taluk; slight fall in price of food grains during the week.
		General Remarks.—The crops in the province are in good condition; *kartik* paddy, horse-gram, *sassamum*, *avare*, etc., are being harvested; *vysakh* paddy was sown in some places; prospects fair; slight fall in prices; *ragi* at Bangalore 34 seers per rupee, at Mysore 28 seers, at Shimoga 28 to 60 seers, and at Chitaldroog 40 to 60 seers per rupee; public health good.
Berar and Hyderabad (Jan. 24th)		
Amraoti . . .	. . . .	Threshing in progress; *rabi* crops thriving; wheat 16 and *jowari* 26 seers per rupee.
Akola . . .	. . . .	Prospects of *rabi* favourable.
Hyderabad . . .	. . . .	*Rabi* crops flourishing; sowing of *tabi* crops continues in some talukas, and weeding commenced in others; weather cloudy; cholera slightly prevalent; prices—wheat 16, coarse rice 11, white *jowari* 26, yellow *jowari* 31, and *tur* $25\frac{3}{4}$ seers per halli sicca rupee.
Central India States— (Jan. 24th)		
Indore . . .	Slight rain on 21st	Weather cloudy and warm for the season; health and prospects good.
Morar (Gwalior) .	. . . .	Weather cloudy; health and prospects good.
Sutna . . .	. . . .	Weather cloudy; health and prospects good.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 26th January, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble T. C. Hope, C.S.I. C.I.E.
The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore Bahádur, K.C.S.I.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble R. Miller.

INDIAN RAILWAY ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. ILBERT presented the Report of the Select Committee on the Bill to amend the Indian Railway Act, 1879.

ELEPHANTS PRESERVATION ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. GIBBS moved that the Bill to amend the Elephants Preservation Act, 1879, be taken into consideration.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS also moved that, for the enacting clause of the Bill, the following be substituted, namely:—

"For section 4 of the said Act the following shall be substituted, namely:—

Rights of Government with respect to certain elephants and tusks.

"'4. Every wild elephant captured, and the tusks of every wild elephant killed, by any person not licensed under this Act, shall be the property of Government.'"

He said that, as the Bill was originally drafted, there was some doubt attaching to the enacting clause, and it was thought better to make the section perfectly clear. In consequence, the clause which he now moved to introduce was proposed to be substituted for the enacting clause of the Bill.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

The Council adjourned to Friday, the 2nd February, 1883.

R. J. CROSTHWAITE,
Additional Secretary to the Government of India, Legislative Department.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REGARDING SUGAR IMPORTED FROM MAURITIUS INTO THE BOMBAY PRESIDENCY AND ITS COMPETITION WITH INDIAN SUGARS.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department,—Circular No. 3 A., dated Calcutta, the 23rd January 1883.

AGRICULTURE.

Read the following letters:—

Letter to the Government of Bombay, No. 615A., dated the 26th June 1882.
„ Chief Commissioner, Central Provinces, No. 614A., dated the 26th June 1882.
Letter to the Secretary, Bombay Chamber of Commerce, No. 1002A., dated 23rd October 1882.

Read also replies thereto:—

Letter from the Chief Commissioner, Central Provinces, No. 2646—134, dated 19th July 1882.
Letter from the Government of Bombay, No. 6378, dated 15th September 1882.
„ Secretary, Bombay Chamber of Commerce, dated 16th November 1882.

RESOLUTION.

IN Resolution No. 505, of 30th May 1882,* on the sugar industry in India, the Government of India noticed the extent to which the Bombay Presidency is still supplied with sugar from Mauritius, despite the increasing production of Northern India and Bengal. In separate communications addressed to the Government of Bombay, to the Chief Commissioner of the Central Provinces, and to the Bombay Chamber of Commerce, the Government of India enquired what classes of sugar are mainly imported from Mauritius, whether they compete with the Indian article or are put to special uses, and to what extent the cost of Railway carriage prevents the sugar-producer of Northern India from successfully competing with the importer by sea.

* Published in the Supplement to the *Gazette of India*, dated 10th June 1882.

2. The replies of the Governments consulted, as also that of the Bombay Chamber of Commerce, have now been received, and are published for information. They show that the imports of sugar into the Presidency fall broadly into two classes: (1) refined sugars, and (2) *gur*, a compost of sugar and molasses. The first class is almost exclusively supplied by Mauritius; the second mainly by sea-board from Madras. Such *gur* as comes from Northern India competes less with the refined sugars of Mauritius than with the shipments of *gur* from Madras. The imports from Mauritius meet a distinct demand for crystallised sugars, which at present Indian manufacturers make very little attempt to supply, and therefore a reduction of railway freight, although it might enable the *gur* imported by rail to compete on more favourable terms with that coming from Madras, would not divert the trade in refined sugars from Mauritius to Northern India. Meanwhile, the demand for *gur* throughout India fully equals, it is believed, the supply, and this is probably one of the causes which retards the development of sugar refining in the Bombay Presidency and elsewhere. The area under sugarcane in the Bombay Presidency and in the Central Provinces is, however, increasing, and the time may, it is trusted, be confidently anticipated when the indigenous article will displace to a great extent the refined sugars of various qualities at present imported by sea from Mauritius and China.

ORDER.—Ordered that the above Resolution and the papers read in the preamble be published in the Supplement to the *Gazette of India*, and be forwarded to the Local Governments and administrations noted in the margin, for information, in continuation of the Circular from this Department, Nos. 20A—430-440, dated the 16th May 1882.

Government of Madras.	Chief Commissioner, Central Provinces.
„ Bombay.	„ Assam.
„ Bengal.	„ British Burma.
„ N.W. Provinces and Oudh.	„ Coorg.
„ Punjab.	„ Ajmere.
	Secy. for Berar to Resident at Hyderabad.

No. 614, dated Simla, the 26th June 1882.

From—T. W. HOLDERNESS, Esq., Offg. Under-Secy. to the Govt. of India,
To—The Chief Commissioner of the Central Provinces.

WITH reference to the return of sugar production in the Central Provinces furnished with your Secretary's letter No. $\frac{282}{141}$, dated the 7th July 1879, and to paragraph 10 of the Government of India's despatch, forwarded by my endorsement No. $\frac{20A}{430-440}$, dated 16th ultimo, I am directed to invite attention to the fact that in the North-Western Provinces the average selling price of coarse sugar or *gur* is about ₹ 5-8-0 per cwt., and to request that very early information may be given as to the selling price of *gur* imported into the Central Provinces from Northern India. The price of *gur* manufactured from sugar grown in the Central Provinces appears from the returns lately furnished by you to be considerably higher than the average market prices in the North-Western Provinces and Oudh. The object of this inquiry is, I am to explain, to ascertain to what extent the cost of railway carriage enters into the price of sugar in different parts of India.

No. 615, dated Simla, the 26th June 1882.

From—T. W. HOLDERNESS, Esq., Offg. Under-Secy. to the Govt. of India,
To—The Secretary to the Government of Bombay.

WITH reference to the return of sugar cultivation in the Bombay Presidency, furnished under your letter No. 1033I. of the 10th December last, and to paragraph 10 of the despatch to the Secretary of State, forwarded under my endorsement No. $\frac{20A}{430-440}$, of the 16th ultimo, I am directed to request that you will be good enough, with the permission of His Excellency the Governor in Council, to furnish this Department with very early information on the following points.

2. It is observed that the price of sugar in the Bombay Presidency is variously stated for the several districts from ₹ 7 to ₹ 17 a cwt. I am to ask whether these figures represent in all cases the price of *coarse* or undrained sugar. In the North-Western Provinces the ordinary selling price of this description of sugar, locally known as *gur*, is about ₹ 5-8 the cwt., and I am to enquire whether any information is available as to the selling price of *gur* imported into the Bombay Presidency from Northern India. I am to explain that the object of this enquiry is to ascertain to what extent the cost of railway carriage enters into the price of sugar in different parts of India.

3. I am at the same time to ask for any information available as to the quantity of sugar imported into Bombay from Mauritius, the quality of the imports, the average market price, and the classes of consumers. The Government of India would also like to know whether the Mauritius sugar competes with Indian grown sugars in the native markets of the Bombay Presidency, or whether it is mainly put to any special purpose for which Indian sugars are not adapted.

No. 1002, dated Simla, the 23rd October 1882.

From—F. L. PETRE, Esq., Offg. Under-Secy. to the Govt. of India,
To—The Secretary, Bombay Chamber of Commerce.

THE Government of India is anxious to ascertain how far the cost of carriage by rail enters into the price of the various sugars which are exported from the North-Western Provinces and Oudh to Bombay, as compared with the freight on competing sugars, of a nearly similar quality, imported into Bombay from Mauritius or China. It has been ascertained that the chief exports of raw sugar from the North-Western Provinces to Bombay are made from the Benares block of the railway, and the Government of India wishes to be able to compare the cost of carriage of the sugar so imported with the cost of freight for similar sugar imported from China or the Mauritius. I should be greatly obliged for any information you may be able to give me on this point, and information based on actual transactions would be specially valuable.

2. I should also be thankful for any information you may be able to give me as to the ruling prices in Bombay of the sugars imported from the North-Western Provinces and of those imported from Mauritius or China, which come most nearly into competition with the North-Western Provinces products.

No. 2646—134, dated Nagpur, the 19th July 1882.

From—C. W. IMRIE, Esq., Offg. Asst. Secy. to the Chief Commr., Central Provinces,
To—The Secretary to the Government of India.

WITH reference to your letter No. 614A., dated 26th ultimo, inquiring as to the selling price of *gur* imported from Northern India, I am directed to submit a list of the prices at which *gur* is selling in the Central Provinces according to the latest information available.

These are as under:—

	Per maund.		Per cwt.		
	₹	a.	₹	a.	p.
Saugor	5	10	7	11	0
Jubbulpore	5	0	6	13	3
Seoni	6	3	8	7	3
Betul	6	0	8	3	0
Chhindwara	5	0	6	13	3
Narsingpur	5	0	6	13	3
Hoshangabad	6	0	8	3	0
Nimar	7	8	10	4	0

It will be noticed that the price increases with the distance from the North-Western Provinces by rail; and from the large importations of *gur* by the East Indian Railway, it would appear that the above prices may be taken as those at which the imported *gur* finds a sale.

No. 6378, dated Bombay Castle, the 15th September 1882.

From—J. MONTEATH, Esq., Actg. Under-Secy. to the Govt. of Bombay, Revenue Dept.,
To—The Secretary to the Government of India.

WITH reference to Mr. Officiating Under-Secretary Holderness' letter No. 615A., dated 26th June last, requesting to be furnished with early information on certain points relative to the selling price of sugar in the Bombay Presidency, &c., I am directed to forward, for submission to the Government of India, the accompanying copy of a report* by the Commissioner of Customs, Opium and Abkari, which contains the information required by the Supreme Government.

* No. 5419, dated 30th August 1882.

No. 5419, dated Poona, the 30th August 1882.

Report by—C. B. PRITCHARD, Esq., Commr. of Customs, Opium and Abkari, Bombay.

WITH reference to the foregoing,* the undersigned has the honour to state that when the price of sugar is quoted for various ports of the Bombay Presidency at rates ranging from R7 to R17 per cwt., some of the quotations must be for coarse undrained sugar (*gur*), others for refined sugar, and others again must be averages struck from the prices of refined and unrefined sugar. R7 is somewhat below the present average price of *gur* in the city of Bombay, while R17 fairly represents the price of refined sugar.

2. *Gur* was formerly sent in large quantities from Northern India to Bombay for Guzerat, but since the opening of the Rajputana Railway it has been sent direct, and very little if any now comes to the city of Bombay; when it used to be brought by this route, its price in Bombay ranged from R6 to R10 per cwt. *Gur* is largely imported into the city of Bombay from the Madras Presidency, from coast ports in this Presidency south of Bombay, and by land from Kolhapur. The present price of this *gur* may be quoted from R6½ to R10 per cent., but as will be seen from the following table the average declared value in the years 1879-82 was over R9 per cwt.

3. Imports of *gur* from coast ports, including Madras Presidency—

YEAR.	Quantity.	Declared Value.
	Cwt.	*R*
1879-80	187,238	17,68,021
1880-81	194,739	18,90,484
1881-82	185,848	17,43,946

4. The imports of Mauritius and China sugar in the same period were as follows:—

		1879-80.	1880-81.	1881-82.
	Mauritius.			
Sugar, refined	Cwts.	504,553	742,892	602,967
	R	82,03,073	1,19,34,726	95,41,495
„ unrefined	Cwts.	1,293	2,229	1,218
	R	4,768	8,921	4,601
	China.			
Sugarcandy	Cwts.	21,488	27,911	26,507
	R	5,85,999	6,50,528	5,72,821
Sugar, soft, refined	Cwts.	52,849	112,882	89,465
	R	8,74,990	18,75,432	14,72,318

* *Sic* in orig.

5. In addition to the above there have been importations of refined sugar to the following extent:—

		1879-80.	1880-81.	1881-82.
From Calcutta	Cwts.	98,075	27,387	30,265
	R	14,93,788	4,48,087	4,86,490
From Coast Ports	Cwts.	17,460	3,811	16,425
	R	1,48,310	63,389	2,43,426

6. Of the imports from Mauritius only, a very small portion is *gur*. This is inferior in quality to Indian *gur*, its present selling price ranging from R3-2 to R3-12 per cwt. Four qualities of refined Mauritius sugar are recognized in the Bombay market. Prices during 1881-82 may be quoted at from R18-8 for the first to R14-4 for the fourth quality; at present the prices are from R16-12 to R13 per cwt.

7. The prices of China refined sugar (soft) in 1881-82 may be quoted at from R15 to R17-10 per cwt., present prices ranging from R14-8 to R17. The price of China sugarcandy was from R20 to R25 per cwt. in the year 1881-82, present prices ranging from R20 to R22 per cwt.

8. It is not practicable to separate the re-exports of Mauritius sugar from Bombay from the aggregate re-exports of sugar of all kinds. The total re-exports are stated below:—

Re-exports to Foreign Countries, chiefly Persia, Turkey in Asia, Arabia, Zanzibar, Mozambique, Ceylon and Aden.

		1879-80.	1880-81.	1881-82.
Sugar, refined	Cwts.	48,296	109,443	69,843
	R	8,26,849	19,37,846	12,37,024
„ unrefined	Cwts.	155	. . . .	. . . .
	R	1,575	. . . .	. . . .

Re-exports to Coast Ports, chiefly to Karachi and the Cutch and Kattywar Ports.

		1879-80.	1880-81.	1881-82.
Sugar, refined	Cwts.	207,971	293,542	234,004
	R	34,49,117	49,99,354	39,67,512
„ unrefined	Cwts.	933	1,094	345
	R	10,943	4,135	4,082

9. The Hindus formerly had a prejudice against Mauritius refined sugar on account of the use of blood in the refining process, but this prejudice has been overcome or forgotten, and Mauritius sugar is now used by all sections of the community. Mauritius sugar cannot be said to be used for any special purposes to the exclusion of Indian sugar, but it is preferred for the purpose of making sweetmeats, being found when boiled down to be more free from foreign substances than Indian sugar.

Dated Bombay, the 16th November 1882.

From—D. WATSON, Esq., Acting Secretary to the Bombay Chamber of Commerce,
To—The Officiating Under-Secretary to the Government of India.

I HAVE the honour to acknowledge the receipt of your letter No. $\frac{1002A.}{42-21}$ of 23rd ultimo, asking particulars of the cost of freight on sugar from Mauritius

and China to this port, as compared with the rates charged by the railways for the carriage of Indian sugar from the North-Western Provinces to Bombay.

In reply, I am requested by the Committee of the Chamber to say that sea-freights are of course liable to considerable fluctuation, but that the average cost of carrying one bag of sugar, weighing 1 cwt. 2 qrs. from Mauritius to Bombay, may be taken at 10 annas, while from China to Bombay it may be taken at ₹ 1-9. The average fluctuations are, we believe, from 8 to 12 annas from Mauritius, and ₹ 1-6 to ₹ 1-12 from China, while in both cases I give you the medium rate. The present charges by railway for the same weight of bag from the several stations on the other side of India are, I understand, as follows:—

By rail from	R	a.	p.
Benares to Bombay	3	2	8
Allahabad to Bombay	2	13	6
Mirzapore ,,	3	0	2
Delhi ,,	4	3	0
Lucknow ,,	3	6	2

The prices at present ruling here for the different sorts of sugar are as follows:—

Bengal.

Casi	No. 1	₹ 24	per	168 lbs.
,,	,, 2	,, 22—23	,,	,,
,,	,, 3	,, 20—21	,,	,,
,,	,, 4	,, 18-8 to 19-4	,,	,,
Domo		,, 15—18	,,	,,
Khujooria	,, ,,	,, 17—18	,,	,,

Cossipore refined crystals ₹17 per cwt.

Mauritius.

Small white dry crystals, Nos. 1 to 3,		₹ 16-12	to 15-12	per 112 lbs.
Large ,,	,, ,,	,, ,, 17	to 15-8	,, ,,
Soft white	,, ,,	,, ,, 15	to 13-8	,, ,,

China.

No. 1	₹ 5-8	to 5-10	per 28 lbs.
,, 2	,, 4-8	to 5	,, ,,

The Committee are informed that the chief advantage which the Mauritius sugars have over the Indian sugars is that they are much more highly crystallised, which makes them more suitable for native confectionery of all kinds. In preparing sweetmeats the sugar has to be washed, and in this process, in its present form, the Indian sugar wastes about 5 per cent. more than the Mauritius. China sugar is not highly crystallised, but it is whiter and sweeter than the Indian sugar, and consequently commands a comparatively higher price.

The Committee are informed that the Cossipore Sugar Factory at Calcutta is the only factory on the Mauritius system whose produce is known in this market. It is of a highly crystallized character, but being manufactured from inferior dates and not from the usual canes, it is said to be deficient in sweetness or saccharine matter, consequently it does not command as good a price as the Mauritius sorts. The quantity, however, of this description of Cossipore sugar sent here is very insignificant.

ALEXANDER IZAT,
Offg. Under Secretary.

[illegible] Home Department.
[illegible] 1st February 1883.

were to apply for a grant under the Code, the application must be rejected on the ground that the school is 'unnecessary,' unless indeed the school was established only for pauper children who could find admission into none of the existing schools. But pauper education is a field of enterprise which the teacher of a private adventure school is unlikely either to enter or to succeed in.

Unlikely to arise in small.

In smaller stations, now without schools, but with a sufficient number of European children of school-going years, it is true that a private adventure school could not be excluded from the benefit of the Code as 'unnecessary.' Yet the fact that schools of this class in such stations have been shortlived and conspicuously inefficient; and, on the other hand, the fact that every school which has had, or promises to have any permanence, and approaches to any degree of efficiency, is and has been under a committee of management; are strong arguments for concluding that there is a cause of failure inherent in private adventure schools, which prevents both their permanency and their efficiency, and therefore for discouraging their establishment. This cause is simply that it will never pay any man or woman with the qualifications of a good teacher to establish or maintain them.

Improvement of such schools under the Code doubtful.

17. It is contended, however, that private adventure schools may become profitable and efficient if they are admitted to the benefit of the Code,—not, perhaps, as efficient as they would be under a committee of management, but efficient enough to justify Government in paying them for such education as they can supply. It certainly may happen that in the smaller mofussil stations there may be an absence of united effort on the part of the residents to establish a school, and for such stations a private adventure school may be thought better than none. But this case will, in our opinion, be better dealt with by the local Governments, as provided in article 31 or 36 of the Code, than by encouraging the establishment of schools which, during the time of their existence, will impart (as we believe) an inferior education, while they may bar the way to better. For, even admitting all that the advocates of the opposite view can claim, we hold the possible exclusion of a moderately good school in isolated cases (for such cases will admittedly be rare) to be a lesser evil than the encouragement offered to the indifference or supineness of residents in the smaller stations, if aid is given to schools which, but for that provision, might soon give place to better.

Again, as regards the possibility of profit, it will be remembered that the grant is not a net gain to a school, but involves a very considerable expenditure in fulfilling the conditions on which it is given. The receipt of a grant does not involve any great addition to income, since most private adventure schools are so poorly equipped and conducted, that to carry them on under the regulations of the Code would very largely reduce the net profit to be derived from the grant. For all these reasons, we are opposed to the extension of the grant-in-aid system to any school which is conducted as a private adventure school. We do not think the Resolution requires the inclusion of such schools.

Arguments for not excluding private adventure schools as such.

18. On the other hand, some of us hold that article 13 (*b*), which excludes private schools as such, is inconsistent with the principles laid down in paragraph 18 of the Resolution. This consideration, however, need not be insisted on, as we have been directed to submit reasoned opinions. Taking the arguments adduced in support of the disputed article, some of us contend that they are inconclusive. It is evident that general arguments applicable only to a majority of private schools cannot logically be applied to particular cases, which in common fairness must be dealt with according to their individual merits. It is also evident that arguments for excluding private schools on the ground that they are inefficient, or unnecessary, or unsuited to particular localities, are either irrelevant to article 13 (*b*) or, if relevant, prove that it is superfluous; for every such case will be completely met under the ordinary operation of the examination tests and of articles 6 (*e*, 13 (*c*), *d*, *e*, and *f*) and 39. Similarly, any

contention that private adventure schools are unlikely to arise goes to prove that is it unnecessary to insist on specially excluding them. The real question at issue is, whether an efficient private school should be excluded from the benefits of the Code simply because it is carried on with a view to private emolument. The argument for their exclusion asserts that such schools can hardly be said to exist in India; but as a matter of fact some of them, *e.g.*, the Calcutta High School and D'Cruz's Bengal Academy, have proved their efficiency by their success at the University examinations, and notwithstanding the detailed statement which has been laid before us by one of our number, it is not clear that some of those which now exist are not fairly efficient. At all events, this point cannot fairly be settled without a thorough and detailed application of the tests provided in the Code, and a fair comparison of these with other European schools. The argument from the practice prevailing in other countries loses much of its force when it is noted that these countries are well supplied with public schools, properly so called, whereas in India all the schools for Europeans, with the single exception of the Kurseong Government school, are really private, though only a few are private adventure schools. In our opinion, any argument that can be adduced for aiding an efficient denominational school can with equal justice be urged in favour of an efficient private adventure school of the same class. It has been stated, further, that the majority of these schools have prevented the establishment of more efficient schools, that their recognition would tend to strengthen this mischievous tendency, and that their exclusion is necessary in order to enforce the principle that aided schools must be carried on with exclusive reference to the interests of the scholars. These considerations are far too general to be safely applied to individual cases. It is admitted, however, that difficulties of the kind referred to may arise in connection with private adventure schools, as they have arisen, and may again arise, in connection with denominational schools; but they are at best matters of detail, which may be safely left to the ordinary working of the Code under the Education Department. Certainly, efficient schools cannot fairly be charged with exerting a prejudicial influence on the interests of education, or with neglecting the interest of their scholars; and it is contended that any mischievous tendency which private adventure schools may show is much more likely to be checked by bringing them under the Code than by excluding them from its operation. Even in the supposed case in which a moderately good private adventure school stands in the way of the establishment of a more efficient school of a less private character, it is open to the Department, as soon as satisfactory evidence is adduced, to declare the existing school unsuited to the locality under article 6 (*e*), and encourage the establishment of the proposed new school. In such a case it would be, to say the least, very remarkable if the indifference and supineness of parents should induce them to sacrifice the interests of their children by persisting in sending them to a school which the reports of the Department show to be less efficient than another equally convenient school. The argument that the pecuniary interests of the teacher of a private adventure school must tend to make him reduce his expenditure on the school to the lowest possible point compatible with efficiency, is irrelevant in any case in which the tests of efficiency are satisfied, and this is the only case under discussion. If it is suggested that private adventure schools must charge high fees, facts can be quoted to show that, in some cases at least, the fees charged in them have been 25 per cent. under those charged in other schools that are eligible for aid under the Code. But the suggestion has little force in view of the fact that no free limit is proposed in the Code. The only remaining argument for the exclusion of these schools is based on the impropriety and impolicy of giving Government aid to what is a purely private adventure. It would probably be difficult to support this contention as a general proposition, or as a portion of an argument which admits the propriety of aiding denominational schools; but the question really turns on the extent to which the private adventure provides a public advantage, and as efficient private schools must be admitted to do this, the impropriety and impolicy of aiding them is not evident. The argument has no force except in the case in which the school shows a surplus after affording reasonable salaries to those employed

in it. It is well known that denominational schools do not as a rule show such a surplus; and if the salaries of ₹500 or ₹700 (with a house) paid to the head-masters of some aided denominational schools be regarded as reasonable, it is difficult to see how any question of excessive profit could ever arise. Those who would exclude private adventure schools practically admit that the objection on the score of profit has no foundation in fact. The small number of such schools in India, and their want of permanence, go to prove that they have not been profitable; but in any case excessive profit is fully met by articles 6 *f* and 40.

Arguments for the recognition of private adventure schools.

19. Passing now to more direct arguments for allowing private adventure schools to come under the Code, we note at the outset that no special provision is required to secure this; all that is needed is that they should be examined and reported on by the Department, and that those which are found to satisfy the various tests should, as in the case of other efficient schools, be allowed to claim grants. In this way the Department will obtain a full and trustworthy report on each case, and be enabled to take action on ascertained facts; inefficient and unnecessary or unsuitable schools will be condemned, while any school that may be found efficient will be recognised as doing a public service, instead of being placed in a position that may reasonably suggest a grivance. The recognition of those schools has also the advantage of securing for the Department an opportunity of obtaining a more complete acquaintance with the means and methods of European education in India than can be expected if such schools are excluded. Again, the great object of Government is to secure efficient instruction for every European child; and as a means of securing this, it is proposed to aid schools that give a sufficient and suitable secular education. For this purpose it is a matter of little importance whether the school in which the child is efficiently instructed is private or public; the point of real importance is to see that the work is actually done, and if this is secured, there is neither impropriety nor impolicy in allowing an efficient private school to earn the same grant as is allowed to an efficient denominational school of the same class. The form of management is at best a question of machinery, which should never be permitted to usurp the place of the great object aimed at by Government. "Free trade" in education is the only consistent policy, unless Government is prepared to take the work entirely into its own hands. Further, it should be noted that, according to the report of the Committee of Enquiry, dated the 15th May 1880, schools of this class were alone available for Europeans at 11 mofussil stations, and were in existence at several other stations, as well as in Calcutta. Some of them, however, were not private adventure schools; but no detailed information is given with regard to them. The majority of them may have been very inefficient, as not a few denominational schools also appear to have been; but the latter are expected to improve under the operation of the Code, and a similar hope may reasonably be entertained with regard to the former. The contention that private adventure schools are unnecessary in large stations, because these are supplied with sufficient and suitable schools of a public character, rests on exceedingly uncertain grounds. In Calcutta, for example, the statement cannot be admitted, if due regard be had to distance, the climate, and the rate of fees. An efficient private adventure school, with upwards of 150 scholars and a low scale of fees, is a stubborn fact that cannot be disposed of by the assertion that the school is, or ought to be, unnecessary. It is not impossible, nor even improbable, that similar cases may arise in some of the larger towns in the plains; and as regards hill stations, local necessity is of little importance whether the school is private or otherwise. At all events it is wiser policy to await the development of facts. Private adventure schools afford a means, though it may not be the best, for the extension of educational facilities; and unless there is some probability of other schools being established at an early date to take their place, the proposed exclusion of private schools must tend to circumscribe the efforts of Government to bring about such an extension. It is doubtful how far Government can directly undertake the work at present, and if the suggested application of article 31 be made in favour of denominational schools, the exclusion of private adventure schools may be

impolitic, as tending to force all European children into denominational schools. The proposal to overcome the difficulty by extending the operation of article 36, labours under the grave objection that it would remove children from the immediate care of their parents and guardians at a very tender age. It has been suggested also that efficient private adventure schools might be admitted to the benefits of the Code, if they were placed under the charge of a committee in terms of article 12, the teacher, who is really the proprietor, becoming a salaried officer; and this proposal is supported by a statement of reasons for preferring a school under a committee. Were general arguments of the kind adduced regarded as relevant to a discussion of individual cases, it would be easy to construct a counter-statement of probabilities; but it is more important to observe that the Code lays down no condition as to the mode of appointing a committee, and that at present it is impossible to devise satisfactory conditions. The suggested transfer will be either a fact or a fiction; if it is a fact, the private adventure school is not recognised in any form; if it is a fiction, the school may indeed be recognised, but in a way that evidently encourages dishonesty. The latter case has not been found to be imaginary in England; and the danger of such a development adds force to the contention that no antecedent conditions as to the form of management should be laid down, but that the Department should be left free to recognise any efficient school, denominational or other, whatever form of management it may have. It might still further be urged that the recognition of private adventure schools, by opening up a field for an independent career, would encourage capable men to adopt the profession of teacher; while the operation of the Code might be entirely relied on to remedy defects and check abuses. The probability that such cases will not arise is of no avail against facts, if they should arise; and Government can well afford to wait for and watch the facts. If they do not arise nothing is lost; if they do, something may be gained. In any case it is urged that, whatever may be the final decision as to private adventure schools, they should not be excluded from the operation of the Code until they are fully examined and reported on, and that they should in the meantime be allowed to earn grants under the ordinary rules, as appears to have been the case hitherto in at any rate one instance.

No probationary period for schools.

20. The English Code (article 7 N. B. 2*a*) provides that no grant shall be made to any school for the first twelve probationary months. In view of the large number of stations in India which at present have no school for European children, we think that the great object of the Resolution will be best secured by requiring no probationary period before a school may receive a grant. We therefore recommend (article 18) that if any school has, at the time of the Inspector's first visit, been open for less than a year, it shall receive a proportionate amount of the grants payable to schools that have been open for a whole year. This provision will reduce the initial difficulty usually experienced in establishing schools in India, and stimulate efforts towards a speedy supply of the pressing want of European schools. In no case, however, should a grant be given for any period prior to the date of application.

Grants determined by results.

21. The third leading principle mentioned above, *viz.*, that all aid shall be given on the system of payment-by-results, has been applied to every grant proposed in the Code, with some slight exceptions which, we trust, will commend themselves to His Excellency the Governor General in Council. The grants for attendance and instruction in day and night schools, the grants for pupil teachers and training colleges, and the grants for scholarships, are in every case determined by results alone, and we have provided for reducing and even for entirely withholding them when the Department is dissatisfied with the results. Building grants are to be determined by the circumstances and requirements of each locality, and by the suitability of the proposed school as tested by these.

Grants to boarding establishments.

22. It may be doubtful whether the grant recommended in the case of boarding schools (article 35) is covered by the terms of paragraph 18 of the Resolution; but it depends

wholly on results, and we are unanimously of opinion that it should find a place in the Code. Boarding schools are a necessity in India to so large an extent that, apart from Calcutta and the larger European stations, half the children of school-going age must go to a boarding school if they are to go to school at all. The Resolution points out (paragraph 4) that boarding schools at a distance are the only available means of education for 608 children of school-going age, who live in stations where no school can be established because of the small number of children at each station. There are also 1,083 children in some larger stations where schools might be established, but where at present there is no school. This being so, we think it desirable in the interests of education that the domestic arrangements of boarding schools should be brought under supervision, as well as their arrangements for tuition; and indeed in many cases the two are so closely connected, that it would be practically impossible to separate them. The best mode of securing this object is to attach a grant to the boarding establishment as such, as proposed in articles 34 and 35. We have reason to believe that the proposed inspection of boarding schools will be regarded by the public as a boon.

Exceptions.

23. The proposed grants which do not come under the principle of payment-by-results, are those recommended in articles 31, 36, and 37.

Article 31.

24. Article 31 provides that a special grant may be given by the Department to a school in a place where there is a small or poor European population, provided that the Inspector reports favourably of the school. This corresponds to article 19 *d* of the English and Scotch Codes, and is intended to facilitate the establishment and maintenance of schools in small stations, and in the poorer districts of large towns.

Article 36.

25. The grant under article 36 is a maximum grant of R5 a month, to be paid on account of the boarding charges of any child residing in a place where there is no school of a standard suited to his requirements, provided that the Magistrate certifies, after enquiry, that the child's parents or guardians are too poor to pay the full boarding charges. We do not regard this grant as being opposed to the views of Government with reference to charitable scholarships (paragraph 20); we recommend it rather as a means of providing suitable elementary education for children in small stations, which will prove better and cheaper than the establishment of small local schools. With the proviso that the grant shall be made only on the production of a Magistrate's certificate, for scholars reading in standards I—VII, we see no reason to anticipate that it will be liable to abuse.

Article 37.

26. The grant recommended in article 37 is a maximum grant of R5 a month, on account of the boarding charges of scholars in free schools or orphanages, with the proviso that the amount of the grant shall never exceed half the total cost of their maintenance. This grant, though not falling under the principles enunciated for our guidance in paragraph 18, appears to us to be in harmony with the general scope of paragraphs 10—13. We recommend it as a convenient mode of giving larger grants to these deserving and indispensible schools, without altering in their favour the rates proposed for attendance and instruction. It introduces an eleemosynary element, but only under strict conditions, and with a view to maintaining in efficiency a most important class of schools, which support and educate many hundreds of poor and neglected children, and which would otherwise be in chronic difficulties under the regulations laid down in the Code. In England, the necessary provision for the maintenance and education of such children would be made under the Poor Law.

Inspection.

27. The principle that every aided institution must be subject to the inspection of the Education Department, and must submit to the required tests and examinations, is expressed

in article 6 (*b*), which prescribes that no grant shall be made on account of any school that is not subject to the inspection of the Department, and in article 10, which prescribes that in general no grant shall be paid except on a report by the Inspector. A slight exception to this is that in article 27 we propose to accept the University Entrance examination as an alternative in the final examination of high schools; but this must be combined with the Inspector's report. We have provided that the Inspector shall make an annual inspection and examination of each aided school, giving the managers previous notice of the date of his visit (article 8); but he may visit a school at any other time without notice (article 9). At every visit without notice, he is to note in the log-book any particulars that require the attention of the managers (article 46); and all such visits must be borne in mind in reporting on the organization and discipline of the school (article 21). These visits would also have a special bearing on the grants to boarding schools recommended in article 35.

The Inspector should be a European.

28. For the successful working of the system, we are unanimously of opinion that an officer should be specially deputed for the supervision of European education, and that this officer should in every case be a European. Although we have endeavoured to make as precise as possible the tests that should be applied in determining the grants, much must still be left to the judgment of the inspecting officer, and it is of the last importance that he should command the entire confidence of parents, teachers, and managers. This can be secured only by the appointment of a European officer of high standing and great experience; who should, however, be assisted in dealing with the lower schools and classes by an officer of lower standing.

Non-Europeans in European schools.

29. While deeply convinced of the necessity of providing separate schools for European children, as explained in paragraph 6 of the Resolution, we have not understood the principles there enunciated as requiring, nor do we recommend, that non-European children should be entirely excluded from the schools under the Code. The practice prevailing in European schools, and the social affinities of the race, might supply strong reasons for admitting Armenians to all the advantages of the Code. Native Christians, and even Hindus and Mahomedans of the higher classes, largely avail themselves of European schools; and Burmese pupils have of late years frequented some of the Calcutta schools. We see no reason for suggesting that this privilege should be entirely withdrawn, or that any steps should be taken to bring about its withdrawal. All that appears to us to be necessary is to secure that the schools recognised by the Code shall be attended mainly by Europeans. This could not be secured with a minimum limit of twelve European scholars in average daily attendance (article 6*d*), unless there was also a maximum limit for non-European scholars. We therefore recommend (article 6*c*) that no grant should be made under this Code on account of any school in which the majority of the scholars are not Europeans. Any tendency to increase the number of non-European scholars unduly will probably be checked by the action of parents and guardians. Further enquiry may show that the maximum limit for non-European scholars in any school might be very considerably reduced.

More equitable distribution of grants.

30. Having thus explained the general conditions on which we recommend that Government should aid any school under the Code, we pass on to explain the mode in which the system of payment-by-results should be worked, the standard of education that should be required in the different classes of schools, and the scales of remuneration suited to each class. This will show how we propose to bring about a more equitable distribution of grants than at present prevails; but we must repeat that the scales of remuneration which we propose are intended to serve merely a provisional basis for a thorough and detailed examination and revision of the various schools, and that an equitable distribution of the grants cannot be fully secured until this investigation has been completed.

31. It will be convenient to refer first to the standards of examination which are given in Schedule I. We have divided the subjects of instruction in elementary schools into seven standards in accordance with the proposals recently submitted to Parliament by the Committee of Council on Education, but with such modifications as we think necessary in order to adapt them to the circumstances of European education in India. We assume that from two to three years will be required to enable a child to pass the first standard, that in ordinary circumstances he will pass that standard when he is seven or eight years of age, and that he will pass the seventh standard before completing his fifteenth year. We propose that, if he wishes to carry his education beyond this stage, he should go through a two years' course of special preparation for the University Entrance examination, though with the low standard which that examination requires in English and arithmetic, so much time can hardly be said to be necessary at present. For those who do not wish to study for the Entrance examination, we propose as an alternative two standards, one adapted for girls' schools and the other for boys' schools. The latter has been drawn up with the object of giving effect to the views of Government (paragraphs 18 and 20) as to the great importance of a sound commercial or mechanical education; but schools for this purpose have practically to be created in India.

The standards of examination.

32. Aided schools are divided into three classes, according to the highest standard taught in them (article 15). Schools that do not give instruction above Standard IV are classed as primary; those that give instruction above that standard but not above Standard VII, as middle; and those that give instruction up to the final standard of the Schedule, as high. But we have made a distinction between schools and departments of schools; a middle school may contain a primary department giving instruction in Standards I—IV, as well as a middle department giving instruction in Standards V—VII; while a high school may include a primary and a middle department, in addition to a high department preparing pupils for the final examination of the schedule. This is in our opinion a much better and more convenient arrangement than the alternative method of treating each department as a separate school.

Classification of schools.

33. The subjects of instruction in Standards I—VII are divided, as in the English and Scotch Codes, into elementary, class, and special subjects (article 17), the term "special" being substituted for "specific." Of these, only elementary and class subjects are recognised in primary schools or departments. The explanation of these terms is given below:—

Classification of subjects.

Elementary subjects are obligatory on all scholars in a primary or middle school or department; and no scholar will be regarded as having passed by any standard if he does not pass in two of these subjects.

Elementary subjects:—

Reading.	Arithmetic.
Writing.	

Class subjects must be taught to every scholar in a class, understood as meaning all scholars reading the same standard in elementary subjects. The selection of class subjects rests to some extent with the managers; under the conditions, however, that two class subjects must be taught in every school teaching above Standard II, and four in every school teaching above Standard IV (article 16), and that English is obligatory in all boys' schools and needlework in all girls' schools, from Standard III to VII inclusive. The examination in class subjects will be conducted individually; but the grant will depend on the proficiency of the classes taken as a whole, and will be paid for every scholar in a class if half of those presented for examination in it satisfy the Inspector (article 22 *b*).

Class subjects:—

English.	History.
Needlework	Mathematics.
Geography.	Elementary science.

Special subjects are entirely optional, and scholars presented for examination in them will be examined individually, the grant being paid only for those who pass. The European language may be either Latin, French, or German.

Special subjects:—

An Indian vernacular.	Botany.
A European language.	Drawing.

34. The English Code treats English literature, mathematics, and physical geography as specific subjects. We have, however, preferred to place them among class subjects, as being more in accordance with the existing practice of European schools, the studies in which are arranged mainly with reference to the Entrance examination of the University. This arrangement is equally suitable for those who do not carry their studies beyond Standard VII. The subject of needlework is restricted to girls' schools, in which it is virtually made obligatory throughout, as in the new English Code. Some of us were disposed to place an Indian vernacular among the class subjects for boys' schools, which would not only be in harmony with the practice of most European schools, but would also give fitting prominence to a branch of knowledge of special importance in Indian life. We propose, however, that it may be taken up either as a class or as a special subject, the decision in the case of each school resting with the Department.

Remarks on the class subjects.

35. We have not followed the English Code (article 19 *c*) in limiting the number of class subjects to two. We are strongly of opinion that such a limitation would be prejudicial to the interests of sound education; in elementary education the basis of instruction should gradually be made broader as the standard rises. It should also be borne in mind that the actual difference is not so great as it appears to be, since some of the class subjects of Schedule I may be taken up under the English Code as specific subjects. Further, it is not unlikely that the provisions of the English Code will in this respect be modified, when it is extended so as to include secondary education. Four class subjects in addition to reading, writing, and arithmetic, can hardly be regarded as too many for a pupil of eleven or twelve years of age. This amount of work is indispensable for those who are to prepare for the University; it is in accordance with the practice of the best European schools; and is also in agreement with the standards in force for native schools. We propose that in every case class subjects should be taught continuously throughout the school, so that the scholars should advance regularly from standard to standard as in elementary subjects (article 24 *a*). The plan of allowing a school to be arranged, for the teaching of class subjects, in classes different from those determined by the elementary subjects, does not appear to us to be conducive either to thorough instruction or to regular progress. The English Code also makes it a condition of a grant for class subjects, that half the scholars in all the classes taken together shall satisfy the Inspector. We think it a more fair and reasonable plan that each class should be treated by itself.

Variations from the English Code in the class subjects.

36. It will be noted that, while the English Code recognises ten, and the Scotch Code fourteen, specific subjects, we propose as special subjects only an Indian Vernacular, Latin, French, German, botany, and drawing. The first and the last are not recognised in England and Scotland. We regard Greek, chemistry, and electricity and magnetism, as unsuited to scholars in the middle departments of schools in India. We have combined portions of the English courses in mechanics, and in light and heat, to form one of two alternative courses in elementary science, which we think should be taken as a class subject; the other course being a combination of animal physiology and the outlines of zoology. We have united English literature with grammar, and physical with political geography, and have placed these also among class subjects. Mathematics again, we consider, finds its proper place in Indian education as a class subject. In this way we obtain a comprehensive scheme of education, which we believe to be better adapted to develope the mental faculties than one of more limited range. The limitation of the range of study finds its true place at a higher stage of mental development than is usually found in scholars between the ages of ten and fifteen.

Remarks on special subjects.

37. We should, however, explain that we have been compelled to omit domestic economy from the course. We fully recognise the great importance of this subject, and

Domestic economy.

should most gladly have recommended its adoption, but we are not aware of the existence of any manual on the subject suited to India; and though we believe there are many teachers, perfectly competent to give instruction in it, we prefer to postpone its introduction until some suitable text-book is produced, which may serve as a guide both to the teacher and to the Inspector. We are therefore content with recommending that for the present it should be included in the course for training colleges, in which it will be taught, by means of systematic lectures, to those who will hereafter be employed as teachers.

The final standard of high schools.

38. We have already indicated our opinion that, as a final standard for European high schools, that of the Entrance examination is too low. The standard in English is determined mainly with reference to students whose vernacular is not English; and though fairly suited to them, it entirely fails to give a sufficient stimulus to the study of this subject in European schools. The standard in arithmetic should also be raised so as to include the whole subject; in a well conducted school the present standard can easily be reached by pupils in Standard VII. For the present, however, we propose to accept the Entrance examination, without any addition in the form of optional subjects; but unless in the meantime the University raises its standard, it will be necessary to reconsider this subject when, under the operation of the Code, the standard of education in European schools begins, as we are convinced it will, to rise. The alternative standard which we have proposed includes, in boys' schools, the substitution of a modern European language for Latin or an Indian vernacular; an extension of the arithmetical course, with the addition of book-keeping; and the introduction of political economy and commercial geography. Mechanical drawing, elementary physics, and elementary chemistry, are also included as optional subjects. In girls' schools a third language (which may be either French or German), or alternatively, a course of elementary physics, is substituted for the mathematics and book-keeping of the boys' course; and commercial geography and political economy are replaced by general and physical geography and a sketch of European history. The optional subjects are drawing, the theory of music, and botany. We have marked our preference for the alternative standard by proposing a higher grant for those who take it up. We trust that this will be an inducement to managers of high schools to open classes for a practical and commercial education.

The course in girls' schools.

39. We have arranged the standards so as to enable girls' schools to take up needlework as a class subject up to Standard VII, without seriously reducing their range of study, or placing them at any disadvantage as compared with boys' schools. We propose that no grant should be given to any girls' school for a class subject unless needlework is taken up (footnote § to Schedule I); and as all schools teaching above Standard II must teach class subjects (article 16), this secures for needlework the first place among them. The same result will be obtained in schools teaching the first two standards, which will probably, as at present, take up two or three class subjects. The standard in arithmetic is modified in the English and Scotch Codes by directing that the work of girls shall be adjudged more leniently than that of boys. We see no need of this in the first three standards, and in Standard IV and upwards we prefer a definite limitation of the course to an indefinite direction to the Inspector. A further modification is that in the middle standards for girls we have made mathematics a special subject. Needlework practically replaces it as a class subject; but the two are not on a footing of equality. A more satisfactory arrangement would be to combine needlework with domestic economy, when suitable text-books in the latter subject are produced. The introduction of French and German into the list of special subjects is intended mainly for the benefit of girls, for whom the grammatical study of an Indian vernacular is less important than it is for boys. There is, however, nothing in the Code or the Schedules to prevent girls from taking up an Indian vernacular if it should be preferred. We have not thought it necessary to insist on needlework above Standard VII.

Number and duration of school meetings.

40. We have made it a condition of earning the full grant, that a day school shall have held 200 full school meetings during the year; and we have provided for a proportionate reduction in the case of a school which has held less than 200 meetings (article 18). This latter provision will enable the Department to meet the case of newly established schools, and also that of unavoidable interruptions to school work. At the same time, the penalty involved will check any tendency to the undue multiplication of holidays. We have defined a full school meeting as a period of four hours of secular instruction on the same day, in which period may be included half an hour of the time allowed for recreation (article 19). The number and duration of school meetings are practically the same as in the English and Scotch Codes, which require 400 morning and afternoon meetings of two hours each, and admit five or ten minutes of the time for recreation to be included in each period of two hours. Having regard to the circumstances of hill schools, and the many breaks that are apt to occur in small schools during the rains, we cannot recommend a higher number of meetings than 200, which, however, we regard as a reasonable and easily attainable limit. The number which we propose allows twelve weeks in each year for vacations, and also one whole holiday or two half holidays a week in addition to Sundays. The duration of a full school meeting is largely determined by the fact that, in many parts of the Bengal Presidency, schools must, for a great part of the year, meet in the early morning and be dismissed by 10 o'clock. The distinction between morning and afternoon meetings can hardly be said to exist in many schools. To meet cases in which it is recognised, and also the case of half holidays and of days when a full school meeting cannot be held, *e.g.*, during the rains, we recommend (article 19 *a*) that two periods, each comprising not less than two hours of secular instruction in school, whether on the same or on different days, may be counted as one full attendance.

Grants given on the terms specified in the Resolution.

41. In accordance with the terms of the Resolution (paragraph 18), the grants-in-aid have been determined "with reference to the attendance and individual proficiency of the scholars, and the completeness of the educational appliances and discipline of the institution aided."

The attendance grant.

42. The attendance grant for all day schools is regulated by article 20. We have followed the English and Scotch Codes in making it depend on the average daily attendance, mainly with a view to secure greater regularity. We have provided that attendance grants shall not be given for any scholar under three or over eighteen years of age (article 19 *b*). The rates proposed may appear to be high; but we have graduated them with general reference to the actual state and requirements of European education, and with a special view to help the smaller schools and schools for infants. A lower attendance grant might have been found sufficient, had it been possible for Government to adopt the principle of compulsory education for all children residing within a reasonable distance of an efficient school. The rates proposed will, we trust, tend indirectly to secure the advantages of compulsion; and this tendency might be greatly strengthened if measures were taken by Government, the Railway Companies, and other large employers of European labour, to induce parents in their service to send their children to school.

The instruction grant in primary and middle schools or departments.

43. The instruction grants for scholars presented for examination in Standards I—VII are specified in article 22. These grants may be earned by scholars between the ages of six (article 22, *note* 1) and eighteen (article 19), who have made 120 full attendances during the school year; it being understood that no scholar shall be allowed to earn a grant in any subject unless the time-table of the school, which must in every case be approved by the Department (article 13 *d*), has provided for continuous instruction in that subject throughout the year (article [illegible] 2). The number of attendances prescribed is somewhat less than that [illegible] English and Scotch Codes, but the difference appears to us to be fully [illegible] by the circumstances of European life in India.

44. It will be observed that the minimum limit of age at which a scholar may be examined by the ordinary standards has been fixed at a point lower than that adopted in the English Code, or even than that contemplated in the recent proposals of the Committee of Council. We consider that a strict limitation as to age, however well meant, is apt unnecessarily to repress clever children, while it gives no corresponding advantage to dull children. A clever child of seven years of age might, under the English Code, be presented for examination by Standard II; and we can see no advantage in preventing him from being examined by Standard I at the age of six. We would rather encourage his presentation at an early age, and provide for the case of sickly or backward children, by empowering the Inspector to refuse to examine by standards any child under eight years of age (article 22, *note* 1), and by allowing for each such child a uniform grant of ₹18 a year (article 20). The last-mentioned grant will be allowed only if the children have been taught as a separate school or department, in a room properly constructed and furnished, and by a special teacher of their own.

The minimum limit of age.

45. As already stated, we have based the instruction grants on the number of passed scholars who have made 120 full attendances during the school year. We have discussed the alternative plan of basing these grants on the average daily attendance during the same period and requiring that every scholar whose name has been on the roll for six months should be presented for examination. We have, however, come to the conclusion that, for the present, the interests of education will be best served by insisting on a minimum of attendance as a condition of earning an instruction grant, and requiring, as in article 25, that every scholar who has made the prescribed number of attendances shall be presented for examination in elementary and class subjects. Having regard to the present condition of European education in India, we are convinced that the pressure and emulation resulting from this latter plan will be found to be most helpful, and that the method we have adopted is the one best calculated to bring about speedy improvement. The other method will find its proper place, as in England, after the system of payment-by-results has been fully established, and the schools have been brought into a more satisfactory condition. The plan we propose has also the advantage of dealing more liberally with the schools, and of giving greater importance to regularity of attendance and progress. It is, moreover, the plan that has been carried out in England and Scotland since the passing of the Elementary Education Acts.

Instruction grants based on a prescribed number of attendances.

46. It is very undesirable to introduce any provision that may seem to encourage the practice, so common in India, of transferring pupils from one school to another on insufficient grounds; but in the circumstances of European life in India transfers must frequently be made, and it is only fair and reasonable that under proper safeguards, this should be recognised in the Code. When good reasons can be adduced, parents and guardians will seldom hesitate to state them, and school managers cannot reasonably refuse to admit their force. We have therefore provided (article 22, *note* 3) that any pupil, transferred from one school to another in the course of the school year, may earn a grant for instruction in the second school, provided that the total number of his attendances is not less than 120, and provided that his transfer is certified in his "scholar's register" (article 42), as having taken place with the consent of the managers of the school from which he has been transferred. This makes it the interest of the school to which he is transferred to obtain this certificate, and will thus tend to bring to the notice of the Department all cases of improper transfer. The financial interests of Government are protected by the proviso that in no case shall attendance for the same period be reckoned twice.

Provision for transfer of scholars in cases of necessity.

47. We propose that it should be a condition of earning any instruction grant whatever, whether for elementary, class, or special subjects, that every scholar for whom a grant is made shall have satisfied the Inspector in at least two elementary

Restrictions on the instruction grants.

subjects (article 23 *a*). This should make progress in the elementary subjects the first care of both teacher and scholar. As a further safeguard for securing that the elementary subjects taught in a school shall have the greatest prominence, we propose that, unless 60 per cent. of the whole number of scholars presented in these subjects obtain passes, only half grants shall be allowed for class, and no grant at all for special subjects; and that if less than 40 per cent. pass in elementary subjects, no grant at all shall be allowed even for class subjects (article 23 *b* and *c*). Further, if any scholar fails in the same elementary subject in two successive years, we propose that no grant should be paid on his account for class or special subjects (article 24 *c*). These provisions should make the elementary subjects the most important in every school, and give the class subjects a higher rank than the special.

48. We attach great importance to a well regulated system of promotion in schools, but we do not consider it desirable that this matter should be introduced into the Code otherwise than indirectly. We propose therefore to allow a pupil who has passed in only two elementary subjects in any standard, to be presented in the same standard again in the following year, and to earn grants in any of the subjects in which he may have failed in the previous year (article 24 *c*). If there were no such provision, as is the case in the English and Scotch Codes, the pecuniary interests of the managers must act in favour of promoting such scholars; whereas the permission to earn a grant in any subject in which the scholar may have failed in the previous year, combined with the condition that two successive failures in the same elementary subject disqualify a scholar from earning a grant for class and special subjects (article 24 *d*), will probably make it the interest of the managers, as it is the real interest of the scholar, that he should not be promoted. On the other hand, we think it most important that an effort should be made to counteract the tendency to be satisfied with mediocrity, which is so apt to arise among teachers under a system of payment-by-results, and which so often mars the interests of really clever scholars. We propose, therefore, that up to and including Standard IV, managers shall be allowed to present scholars for examination in two successive standards in the same year; and that, for every scholar who passes in all the elementary subjects, instruction grants may be given in each standard (article 24 *b*). After passing by Standard IV, such scholars will find sufficient scope for their energies in special subjects. These provisions should fully protect the interests of both dull and clever scholars; while the interests of Government also are fully secured, since no scholar can earn a grant twice in the same subject.

Promotion of scholars.

49. In high schools the scholars in the primary and middle departments may earn instruction grants at the same rates as scholars in primary and middle schools; but in the high department we recommend that there should be special rates (article 27 *a* and *b*). The proposed rates may appear by comparison to be high; but if allowance is made for the fact that they really cover the work of two years, for the greater costliness of maintaining the higher standard of work, and for the small number of scholars that are likely to earn grants, it will be found that the rates are not extravagant. We recommend that, before an instruction grant can be claimed for any scholar in a high school, he shall have passed Standard VII, and after doing so, shall have made 250 full attendances (article 26), and have passed in at least three of the compulsory subjects prescribed for the final examination of Schedule I. The first condition will secure that only deserving scholars shall be recognised in the high department, and will be a check on unwise promotion. The second will secure that every scholar in a high department shall go through a two years' course of study. The third is intended to be a liberal concession to the schools; but it insists that, even in case of partial failure, a considerable amount of work shall have been done. The graduation of the rates should secure that efficiency in the compulsory subjects shall be the first care of the managers, and the same result should be obtained indirectly by the last clause of article 27;

High schools.

while in article 28, the case of a scholar who fails to pass by the full standard is provided for in such a way that no instruction grant can be earned twice in the same subject.

Grant for organization, discipline, &c.

50. The grant for the completeness of educational appliances and for discipline is regulated by article 21 (*c*), which provides on this account a maximum yearly grant of R3 for each scholar, an amount which will only be given in cases of exceptional merit. This is intended as a substitute for the 'special merit' grant recently proposed in England; and, when taken in connection with the reduction provided for in article 39, will give a sufficiently wide range for the discrimination of schools. Clauses (*a*) and (*b*) of the same article offer grants for singing and for drill or gymnastics.

Mode of paying the grant.

51. The mode of paying the grants is explained in articles 29 and 30. At his annual visit, the Inspector will calculate the amount to which the school is entitled according to the proposed rates for the year then ended, and this amount is to be paid to the school, less the amount of any provisional grants that it may have received from Government during the year. Article 18 provides for a proportionate reduction in the case of a school that has not held the prescribed number of meetings at the time of the Inspector's visit. The method of provisional grants has been proposed in reference to the Indian custom of paying salaries monthly, and with the object of enabling the managers to carry on the school during the following year. We recommend that provisional grants should be paid monthly, for both instruction and attendance. The former has been fixed at one-twelfth of the full amount earned for instruction during the previous year, according to the Inspector's report; the latter at one-twelfth of the yearly rate for attendance, for every scholar in average daily attendance during the month for which the bill is drawn. If a school has not been open for a full year, the provisional grants for the second year are to be calculated on a corresponding principle (article 29, *note*). The proposed method of payment will facilitate the introduction of the new system of grants, and will undoubtedly prove a boon to the schools, without involving any serious risk of loss to Government. If the standard of education rises, as under the Code we hope it will, every good school ought to have a balance in its favour at the close of the year; but if this should not be the case, article 30 provides that any deficit shall be made good by deduction from the provisional grants payable in the following year or otherwise.

Night-schools.

52. We do not anticipate that there will be any great demand for grants to night-schools; but some schools of this class already exist in connection with the railway workshops, and others may be established in some of the larger towns. They are required only for those who cannot attend a day-school, and therefore we propose that the managers of any night-school applying for a grant should be required to certify that the scholars admitted to it are "beneficially and necessarily" employed during the day (article 32). We further propose that these schools should be confined to Standards I—VII, and that primary night-schools should earn grants only in elementary subjects, and middle night-schools in elementary, and at most in two class subjects (article 33 *e* and *f*). These recommendations are based mainly on the small amount of time that can be devoted to instruction in such schools. Primary night-schools will probably be found only in the larger towns; middle night-schools may be established in connection with large workshops, especially for the benefit of apprentices who enter the workshop at an early age, and desire to carry on their education. The need of primary night-schools should gradually disappear under the operation of the Code.

Grants to night-schools.

53. We have adopted a considerably higher limit, as to both the number of school meetings and the number of attendances, than that prescribed in the English and Scotch

Codes. In England and Scotland the limit is determined by the consideration that night-schools can be held with advantage only during winter. In India there can be no hardship in requiring them to meet three times a week for rather more than half the year, and in requiring each scholar to be present at 50 meetings of one hour each. The instruction grants for night-schools are fixed at the same rates as those for day-schools: but the attendance grant is a uniform grant of R4 in primary schools, and of R3 in middle schools, for every scholar in average attendance throughout the school year (article 33).

54. To European schools established by Government, as contemplated in paragraph 21 of the Resolution, the provisions of the Code will apply as fully as to any aided school. The salary of the teachers will be governed, partly at least, by ordinary departmental rules; but it would be desirable to enforce in any such rules the condition that a part of the salary should be determined by the results of examination. Care would, it may be presumed, be taken to prevent an excessive proportion of the amount set apart for European education being given to such schools.

Scholar's register.

55. To enable the Inspector to trace easily the school history of each scholar, it is provided that, on his admission to a school, he shall deposit with the principal teacher a "scholar's register," showing his age, attendance, and proficiency at every stage (article 42), and certifying, in the case of his being transferred from one school to another, that he has been transferred with the consent of the managers of the former school (article 22, *note* 3). The "scholar's register" is intended to serve the same purpose as the "child's school book" in England and Scotland, and much care will be needed in order to render it thoroughly effective. As far as possible, a certificate of age should be required; a mere declaration by a parent or guardian has not been found to work well in England and Scotland. If sufficient care is taken, the "scholar's register" may become a powerful check on any tendency to too frequent transfers. The form proposed for the "scholar's register" is given in Appendix I of the Code.

Number of teachers.

56. We have not proposed any definite rule as to the number of teachers to be employed in a school. It would not be difficult to lay down such a rule on abstract principles; but we think it better that this question should be deferred until some experience has been gained of the working of the schools under the Code, and the scholars have been classified on a uniform system. We therefore suggest that it should in the meantime be left to the Education Department to determine whether the staff of teachers in any school applying for a grant is sufficient (article 13 *e*); and to enable the Department to do so, that every application should state the class of the school, the number of scholars in each standard, and the names and qualifications of the teachers (article 7 *a*, *b*, and *d*). As a large number of the schools that are likely to come under the Code are conducted on the continental method of having a separate teacher for each class, we might have suggested a limit for the number of scholars in a class; but probably it is advisable that this, too, should be left for future regulation. The only point on which we have insisted is that the staff, as to number and qualifications, shall be approved by the Department, and that no teachers shall be recognised in day-schools except certificated teachers or pupil-teachers.

Registers and accounts.

57. A complete record of the working of each school is provided for in articles 43—46. The principal teacher is required to make a weekly entry in the log-book, showing the visits of managers, the admission or withdrawal of scholars, the progress of the various classes, changes in the staff, and other facts relating to the school or its teachers; and no entry once made in the log-book may be removed or altered except by a subsequent entry. All changes in the staff must be at once reported to the Department for sanction, otherwise the school does not satisfy the conditions of article 13 (*e*), and cannot receive a grant. Records of the daily attendance of scholars must be made regularly, and accounts of income and expenditure must be kept by the managers, regularly audited, and

submitted to the Department annually (article 14 *b*). The Education Department will thus be provided with complete information as regards every school.

Accommodation.

58. We have laid down limits of accommodation for both day and boarding schools. In the former we require that an area of 12 square feet shall be provided in each class-room for every scholar in average daily attendance, and that this limit shall be raised to 16 square feet if more than one class is taught in the same room at the same time (article 13 *c*). This is practically twice the area required by the English and Scotch Codes; but it is necessitated by the conditions of climate in India, which render the maintenance of effective discipline much more difficult than in England or Scotland. We have ascertained that the area specified is already provided in most of the more efficient schools. In boarding schools we recommend that an effort should be made to regulate the sleeping space allotted to each boarder, by requiring in every case a certificate from some competent medical authority that it is sufficient for the purposes of health. But we are of opinion that the space assigned to each boarder should not be less than 40 square feet and 400 cubic feet if he is under 12 years of age, or 48 square feet and 480 cubic feet if he is above 12. We are aware that the space allotted to each boarder in some boarding schools is considerably less than this; but we are strongly of opinion that the interests of good health and thorough discipline in the dormitories cannot be properly secured with a smaller space than that recommended by us.

Reduction of grants.

59. The total amount of the grants proposed for the maintenance of schools in Chapter II, Sections II—IV, may be reduced by an amount varying from one-tenth to one-half for faults of instruction, discipline, or registration on the part of the teacher, or (after six months' notice) for failure on the part of the managers to provide efficient instruction or proper apparatus, or to remedy any serious defect in the premises (article 39). The total amount of the grant may also be reduced by the excess of the attendance and instruction grants (articles 20, 21, 22, 26 and 27) above the income of the school from all sources other than Government grants (article 38). The reduction clause in the English and Scotch Codes (article 32 *a*), corresponding to article 38, is limited by the condition that the grant shall not be reduced below 17*s*. 6*d*. for every scholar in average attendance throughout the year; but the circumstances of the schools that are likely to come under the Code are so varied that we are unable to recommend the adoption of any minimum below which the grant shall not be reduced. It appears to us to be a sound principle that the amount of Government aid should not, except in extraordinary cases, exceed the amount contributed from private sources, including fees; and we understand that this principle is regularly applied to grants-in-aid at present. In any case, the article as it stands allows the income of a school from sources other than Government to be doubled; and we are of opinion that this will be found sufficient for all practical purposes, until, if it should be thought necessary to adopt a minimum, fuller information may supply the data for a satisfactory decision. The operation of the article will, however, be seriously modified, if not neutralised, unless steps are taken to separate boarding and tuition fees, which in many schools are at present charged in one consolidated fee. We ought also to explain that, in our judgment, the grant for pupil-teachers, as indicated by the place assigned to it (article 50), should not for the present be brought under the operation of the article on reduction, as is the case in the English and Scotch Codes. That is a reasonable course when the pupil-teacher system has been thoroughly established: the case is entirely different in India, where the system will need every advantage that can reasonably be allowed to it in order to secure its speedy and successful adoption. The reduction of the grant to high schools has been already referred to.

Scholarships.

60. Proceeding now to the subject of scholarships (Chapter VII), we propose that only two grades should be recognized: one adapted to scholars who are reading in Standard IV,

and are therefore preparing to leave the primary school or department; the other adapted to those who are reading in Standard VII, and are therefore preparing to leave the middle school or department. The scholarships are termed respectively primary and middle; the former being open to all scholars who are under 11 years of age, the latter to all who are under 14. The primary scholarships are of the value of ₹5 a month, and are tenable for three years in a middle school or department; the middle scholarships are of the value of ₹8 a month, and are tenable for two years in a high school if the scholar elects to read for the final examination of Schedule I, or for five years in a technical school, if the scholar prefers a technical education. The scholarships are open to any candidate, wherever educated; but we propose that no scholarship should be tenable in any school unless it is certified by the Department as efficient, and is therefore open to inspection. This is the course followed with regard to scholarships tenable in schools for natives. The limits of age have been so fixed that a capable and deserving boy may earn a scholarship at each stage of his school course, reaching the Entrance Examination at 16; after which his requirements are sufficiently provided for by the ordinary college scholarships. In accordance with paragraph 20 of the Resolution, we have restricted scholarships to boys; but there is nothing in the Code to prevent girls from competing at the examination, *honoris causâ*. The scholarships are to be awarded entirely by competitive examination, marks being assigned on the scale proposed in article 107. We propose that the schools shall, for the purposes of this examination, be arranged in circles or groups; that a certain number of scholarships shall be assigned to each circle; that the examination shall be held simultaneously at selected centres towards the close of the year; and that the managers of every school shall be at liberty to send to the examination as many candidates as they think proper. We further propose that a scholarship may be transferred from one school to another with the sanction of the Department, and should be liable to reduction or forfeiture in cases of misconduct, continued absence, or failure to pass by the prescribed standards. We have proposed the grouping of schools in circles, partly in order to secure a satisfactory distribution of scholarships, but chiefly in order to meet difficulties likely to arise from the dependence of the school year on the date of the Inspector's visit. The Inspector would probably visit all the schools in a circle about the same time; but he could hardly arrange to visit all the schools in a province within a period that would make a simultaneous scholarship examination a fair comparative test.

Technical scholarships.

61. The provision that a middle scholarship may be held in a technical school is in accordance with the suggestion made in paragraph 20 of the Resolution, that a certain number of scholarships should be reserved for lads desirous of receiving technical instruction. Further facilities of the same kind might be secured by offering scholarships, tenable in technical institutions of a higher class, to candidates passing the final examination from high schools. In Lower Bengal some provision of this kind already exists, in connection with the Government Engineering College at Sheebpore, near Calcutta. In addition to a similar privilege enjoyed by 40 native students, 30 European and Eurasian apprentices of the "mechanical apprentice" class are boarded and educated in that institution on payment of a monthly charge of ₹5; the extra cost, amounting to ₹15 a month, being defrayed by Government. Twenty stipends of ₹10 and of ₹6 a month, tenable for a year and a half during the last (or purely practical) portion of the course, are also awarded to those apprentices, European and native, who have made the best use of their time in the earlier portion. Ten special scholarships of ₹10, ₹15, and ₹20, open to Europeans as well as to natives, are awarded, on the result of the Entrance Examination, to students intending to join the engineer class of the college. Four graduate scholarships of ₹50, and ten of ₹30 each, are also awarded to those European and native students of the college who pass with the greatest credit at the final University examination for engineers. They are tenable for one year, provided that the students are continuously employed during that period in practical work.

General statement of provisions with regard to teachers.

62. We proceed to explain our recommendations with regard to the teachers that are to be recognised in schools under the Code. The Resolution refers to the difficulty that is likely to "arise in applying the system of payment-by-results from the want at present of properly trained teachers in many schools" (paragraph 19), and directs us to devote special attention to the introduction of an efficient pupil-teacher system (paragraph 24). We have made provision for a thorough classification of the teachers at present employed in the schools (Chapter IV), for securing that those who are hereafter employed shall be properly qualified (Chapter IV), and for developing what will, we trust, form an efficient pupil-teacher system (Chapter III).

Teacher recognised in the Code.

63. The Code recognises none but certificated teachers and pupil-teachers on the staff of any day-school; but other persons may be employed in a night-school with the approval of the Department (article 13*e*). The assistant teachers recognised in article 79 of the English and Scotch Codes are, we think, properly placed among certificated teachers (articles 60, 61, 70, and 71). The stipendiary monitors recognised in the English and Scotch Codes (article 70 *i* and *k*) can hardly be regarded as efficient teachers, and therefore are not recognised in this Code. If the system which we propose should not meet every case that may arise, we do not think it would be more likely to do so by accepting as teachers children of 12 years of age, who have passed the examination in reading, writing, and arithmetic by Standard IV.

Certificates.

64. We recommend that there should be three grades of certificates, determined partly by examination and partly by service, and that there should be a strict limitation as to the position for which any certificate qualifies its holder (article 57). Our recommendations in the latter respect are more elaborate than the provisions of the English and Scotch Codes; but as the range of education in the schools, and, consequently, of the qualifications required in the teachers, is much wider than in England and Scotland, where secondary education has not been brought under the Code, we think it is fairer to the teachers, and will be more conducive to the interests of education, that the certificates should be more strictly defined.

Provisional certificates.

65. Putting aside for the present the arrangements for pupil-teachers, which will be explained separately, we propose that in determining the certificate to which any applicant is entitled the Department shall be guided by the examinations he has passed and the training he has had as a teacher; and that, if the latter has been too short to give assurance of his fitness, he shall undergo probation for a longer or shorter period, receiving in the meantime a provisional certificate of the grade to which he is entitled by examination. This provisional certificate consists in entering his name in a register kept for such cases by the Education Department; and with the limitation stated in article 57 (*d*), it qualifies the teacher for holding the position to which he would be entitled under a permanent certificate of the same grade.

Examinations.

66. The ordinary examinations for teachers' certificates should ultimately be those held in connection with training colleges, as in England and Scotland; but in the absence of such colleges we propose that the Department should avail itself as far as possible of the University examinations. This affords a convenient test of qualifications for regulating the various grades of certificates; and at the same time secures a greater degree of simplicity and uniformity in the educational system than could otherwise be attained. Moreover, in the case of high schools it is eminently desirable that the principal teacher should have received a University training; and we have accordingly proposed that no certificate of the highest grade should be granted to any one (except as provided in article 67)

who is not a graduate. For the present, the First Examination in Arts may be accepted as serving the same purpose in the case of female teachers. It may be observed that, under the regulations of the Calcutta University, a teacher can be admitted to any examination without going through a course of study in an affiliated college.

Probation.

67. We propose that in all cases, except those provided for in articles 79 and 80, a longer or shorter period of probation should be required as a condition of obtaining a permanent certificate of any grade. This period consists of service with credit (article 60, *note*) for a certain number of years, during which the Inspector will report annually upon the work of the teacher. An unfavourable report from the Inspector will render the teacher liable to a further year of service. This secures that the probation shall be undergone in a school open to inspection. We assume as a general rule that, for certificates of the same grade, the higher the qualifying examination the shorter the period of probation should be; and that for certificates of different grades, the higher the grade the longer the probation. When training colleges are established, the period of probation for certificates of the lower grades may fitly conclude with an examination on school management, similar to that which students in training colleges will have to pass (Schedule III).

General statement of the scheme for awarding certificates.

68. Taking the case of male teachers, we may state our scheme briefly as follows:—The Entrance examination with three years' probation, or the First Arts examination with probation for two years, qualifies for a permanent third grade certificate (articles 61 and 62); two years' service with credit under that certificate, with further probation for two years after passing the First Arts examination, or three years' service with credit after obtaining a degree from a University of the United Kingdom or India, qualifies for a permanent second grade certificate (articles 63 and 64); and three years' service with credit under the latter certificate, with two years' further probation after graduating, qualifies for a permanent first grade certificate (article 65). To meet special cases, *e.g.*, the case of teachers specially brought to India to take charge of high schools, we propose that the Department should be empowered to give provisional certificates of the first grade to any graduate of a University of the United Kingdom who is over 25 years of age, but that this certificate should be made permanent only after three years' service with credit.

The scheme for female teachers is parallel to this, but the highest examination required is the First Examination in Arts.

Cases specially provided for.

69. Cases which are not directly included in the foregoing statement are separately provided for. For example, no reference is made in that statement to teachers holding certificates from the Education Department of the United Kingdom, nor does it provide for the case of the great majority of teachers in the schools connected with the Church of Rome. These and similar cases are provided for by the general rule laid down in article 58, it being understood that the Department is at liberty to require candidates for certificates to undergo examination if that should be deemed necessary.

Classification of present teachers.

70. The classification of the teachers at present employed in the schools will be secured by the rules laid down in articles 67 to 69 and 75 to 77. We propose to recognise the principal teacher of a high school as entitled on application to a first grade certificate, provided that the school is efficient, and that [illegible] has been in charge of it for the three years immediately preceding the date of application. Shorter service will entitle the candidate to a provisional first grade certificate, which shall be made permanent on the completion of the period of three years, provided that the Inspector reports favourably of the school. Corresponding provision is made for the principal teachers of middle schools. Teachers

holding a lower position will receive provisional certificates, to be determined in each case by age, character, qualifications, and period of service, provided that the candidate is an efficient teacher serving in an efficient school. We propose that these clauses should be in force only for two years after the Code comes into operation. This will afford ample time to any one who wishes to apply for a certificate.

Teachers passing through a training college.

71. It will be observed that, in dealing with the case of teachers passing through a training college, we attach great importance to the training, which a candidate may have had as a pupil-teacher; and that we regard such training as a reason for reducing some of the periods of probation which we have required in the case of other candidates for certificates. This course appears to us to be not only reasonable in itself, but also fitted to secure for the training colleges their legitimate place in the system of European education.

Objections to the scheme.

72. It is not unlikely that doubts may be felt whether our proposals will work satisfactorily when brought to the test of practice, especially in view of the high qualifications that we demand, and the small number of Europeans who prosecute their studies beyond the Entrance examination. And it may appear also that, as pupil-teachers are to be introduced only into "the larger elementary schools" (paragraph 19 of the Resolution), and as the only other teachers we recognise in day-schools are certificated teachers (article 13 *e*), we exact too much in practically requiring all the teachers of primary schools to have passed the Entrance examination. We admit that these objections have force, and that if carried out very stringently, our proposals might perhaps seriously injure some schools. But we regard the scheme as laying down the lines on which any permanent progress in European education must be made. The conditions required in the case of high and good middle schools are certainly attainable, and are not higher than those required in the corresponding schools for natives. And if the conditions are somewhat stringent in the case of primary schools, it must be remembered that these are precisely the schools that suffer most from inefficient management, and that one of the first steps for their improvement must be to secure for them a more efficient class of teachers. Much caution will, no doubt, be required on the part of the Inspector to prevent any avoidable harm during the period of transition; present teachers should not be rashly removed; the better prospects that teachers will have under the operation of the Code will probably induce larger numbers than hitherto to qualify themselves for employment. Certainly, the qualifications prescribed are not in themselves too high, nor are they higher than the parents and guardians of the scholars generally desire. Our proposals will also, we trust, give a much needed stimulus to the demand for higher education among Europeans in India. It would be a great mistake to limit our proposals by the results of the very unsatisfactory system which we desire to replace.

Pupil-teachers: conditions of engagement.

73. The scheme which we propose for the introduction of the pupil-teacher system is drawn up on the lines of that now in force in England and Scotland. We require that the candidate for employment shall be 14 years of age; shall have passed Standard VI; shall produce certificates of health, physical fitness, character, and conduct; and shall satisfy the Inspector that he possesses aptitude for teaching. The school in which he is employed must be thoroughly efficient, and likely to be maintained during the period of an engagement duly entered into between the candidate and the managers (article 47). The pupil-teacher is to be under engagement for three years, in the first of which he shall be required to teach in the school classes for two hours a day, and in the last two years for three hours; and he shall receive throughout his engagement an hour's special instruction each day, from a teacher holding a certificate of the first or second grade (article 49). The candidate must be approved by the Department; but the Department, though it prescribes the form of agreement (Appendix II), is in no way a party to his engagement (article 48). At the end of each year of

his engagement, he must be presented to the Inspector for examination in the subjects prescribed in Schedule II, producing on each occasion the certificates prescribed in Note (1) apppended to that Schedule; and if he passes in the compulsory subjects prescribed for that examination, the grant specified in article 50 will be paid on his account, he himself receiving one-half of the whole amount earned, in addition to the salary specified in his agreement. This grant, however, may, on the report of the Inspector, be reduced by an amount not exceeding one-third (article 51). If the pupil-teacher fails to pass in the compulsory subjects, he must be presented again for examination by the same standard (article 52); and if he fails a second time in these subjects or in the art of teaching, he shall cease to be recognised as a pupil-teacher (article 53), and therefore can form no part of the staff of an aided school (article 13 *e*). We have provided in Appendix II for a new memorandum of agreement on change of managers; but this provision would, as we are advised, be unnecessary in the case of any school registered under Act XXI of 1860, or incorporated under Act VI of 1882 (section 26.) We think it very desirable that every school under a committee should register or incorporate itself under one or other of these Acts, not only for the reason above given, but also because it would in that case have a legal status for the recovery of debts. The registration, we desire to point out, would be much facilitated if it could be effected without the payment of any fee.

Reasons for preferring a short engagement and a comparatively small amount of work.

74. We have recommended a much shorter period of engagement than that recognised in England and Scotland, and have also materially reduced the amount of time to be devoted to teaching. At the outset, a longer period of engagement would probably act as a deterrent both to the candidates and to their parents and guardians; but apart from this, we regard a three years' engagement as quite sufficient to secure satisfactory results, and we depend mainly on the subsequent training and periods of probation to develope fully the skill of the teacher. The limitation of the amount of work to be done by the pupil-teacher is based on the conviction that the permanent interests of education as well as the personal interests of the pupil-teacher are seriously prejudiced by the practice of requiring him to teach for five hours a day. A boy or a girl of 15 has not the strength required for this, and in addition for a vigorous prosecution of the studies prescribed. If the pupil-teacher's strength is overtaxed by teaching, his studies suffer, and he is less likely to turn out a good teacher. We believe too that if we were to require a full day's teaching, and thus to prevent the pupil-teacher from joining the higher classes during any part of the day, we should find it exceedingly difficult to establish the system. And we understand that, even in the far more favourable climate of England and Scotland, experience points very decidedly to the necessity of shortening the time that pupil-teachers must devote to teaching. It should be noted too that the diminution of the time spent in teaching has enabled us to insist on a higher standard of qualification.

The rates proposed for pupil-teachers.

75. The rates which we have proposed in article 50 are very much higher than those that now prevail in England and Scotland, but they are really lower in the aggregate than those that were allowed during the period in which the pupil-teacher system was being established. They are no doubt very liberal; but we do not think they are more liberal than is necessary for giving the system an opportunity of establishing itself. In fixing the relative proportions of the rates, we have endeavoured to emphasize the great importance of the art of teaching, and the necessity of regular and well marked progress in it. The provision of article 51 will be specially valuable in carrying out this principle, by reducing the grant when the pupil-teacher does not show complete efficiency; and the provision that he himself is to receive half the amount of the grants earned should stimulate his application to study.

Prospects of the proposed pupil-teacher system.

76. The foregoing remarks show that we are not insensible to the difficulties of establishing an efficient pupil-teacher system. The few prizes that are within the reach

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 30th JANUARY 1883.

GENERAL REMARKS.—During the week under report there has been abundant rain in the North-Western Provinces and Oudh and a good deal has also fallen in the Punjab, where it was badly wanted. Rain in varying quantities has also fallen in most parts of the Bombay and Bengal Presidencies, in the Central Provinces, Assam, Rajputana, and in the Central India States. In the Madras Presidency it has fallen in three districts only. In British Burma, Mysore and Coorg, and the Nizam's territories there has been no rainfall to report.

With the more or less general rain which has fallen during the past week, agricultural prospects have improved everywhere.

In Bengal the rice harvest still continues in some places, and in British Burma and Coorg it has closed. The coffee crop in Coorg has turned out much below estimate, and the prices have fallen heavily in the home market.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Jan. 31st)		
Bellary	·07 (average of one station.)	Standing crops generally good; harvest paddy, dry grains, and sugarcane, outturn average; cholera in one taluk.
Kurnool		Standing crops in good condition; harvest dry grains, [illegible] average; cattle disease in parts.
Ganjam	·33 (average of three stations.)	Standing crops dry grain, cotton, and sugarcane thriving; harvest paddy and red grain, outturn average; fever and small-pox and cattle disease continue.
Kistna		Standing dry crops affected by grubs and blight in parts, elsewhere promising; harvest paddy and dry grains, yield below average; small-pox prevalent; fever more general; cattle disease abating; water 1 foot over anicut.
Chingleput (Madras)		Standing crops in good condition; harvest paddy, outturn below average; small-pox and cattle disease in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, cholera, and cattle disease in parts.
Tanjore		Standing crops good; harvest paddy and *ragi*, yield below average; cholera increasing and severe.
Madura		Standing crops withering in parts; harvest paddy and dry crops; cholera in parts.
Malabar	·15 (average of one station.)	Harvest second crop paddy progressing, outturn fair; fever and cholera in parts; small-pox slight.
Travancore		Harvest progressing; fever and small-pox continue.
		General Remarks.—No rain, except in Ganjam, Bellary, and Malabar; general prospects good.
Bombay—(Jan. 31st).		
Kurrachee	Slight showers of rain at Kurrachee, Sehwan, and Manjhand.	Weather colder; river very low on 28th, 2 feet 8 inches, being 1 foot less than on corresponding date last year; 8 fresh cases of small-pox in Karachi during week, 3 deaths, total to 24th 57 cases, 17 deaths, remaining sick 24, 5 cases in Sehwan; cattle disease in 5 talukas; wheat, red rice, and *bajri* in Karachi 24, 32, and 33 lbs., in Dadu 32, *nil*. and 48 lbs., in Sakro 16, 34, and 46 lbs., and in Jati 20, 36, and 40 lbs. per rupee, respectively.
Hyderabad	Sharp thunderstorm at Mirpur Khas on 24th, rain in torrents for 2 hours.	*Rabi* crops fair; small-pox in Hyderabad and Guni; fever in 8 and cattle disease in 3 talukas; wheat 26, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		Standing crops suffered by rain on the 25th; small-pox in Dhandhuka; wheat 29 and *bajri* 32 lbs. per rupee.
Baroda	·67	*Rabi* crops generally prospering; cotton somewhat injured by rain; fever in parts of Naosari and Kari Division; *bajri* 30½ and common rice 26 lbs. per British rupee.
Surat	·70	Slight damage to crops, and fever in some talukas; small-pox in city; *jowari* 39 and *nagli* 52 lbs. per rupee.
Nasik	Slight showers of rain on Thursday night and Friday last. No rain in Zeola, Nandgaon, and Maligaon. Igatpuri 1·02.	Weather cleared up; *rabi* harvest commenced; last unfavourable weather slightly injured crops in Dindori and Nasik; wheat 25½, *bajri* 36, and rice 25 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Colaba (Bombay)	·12 on morning of 26th.	Abnormal temperature 1° warm on 24th, 3° warm on 25th, 3° cool from 26th to 28th, and 1° cool on 29th and 30th; vapour in air slightly in excess of normal on 24th and 25th, afterwards largely in defect of normal; abnormal wind southerly on 24th and 25th, from due west on 26th and afterwards northerly; strong wind from morning of 25th to morning of 26th, commencing from south and south-west and changing to west and south-west.
Poona		State of crops good; *bajri* 44 and *jowari* 55 lbs. per rupee; in Poona, *bajri* 37 and *jowari* 45 lbs. per rupee.
Ahmednagar	*Nil*	*Rabi* crops generally good; harvesting commenced in 8 talukas; *bajri* maximum 54 lbs. per rupee in Parner, minimum 45 lbs. in Akola; *jowari* maximum 72 lbs. per rupee in Shrigonda, minimum 54 lbs. in Akola.
Sholapore	·02	Standing crops healthy; *rabi* harvest commenced; *jowari* 72 lbs. 39 tolas, and *bajri* 57 lbs. 10 tolas per rupee.
[illegible]		*Kharif* harvest nearly completed; cotton suffering from blight in 8, and wheat in 5 talukas; other late crops good; cholera disappeared from Gadag; fever and ague in 3 talukas; cattle disease re-appeared in 1 taluka; rice minimum 26 and *jowari* 40 lbs. rupee.
[illegible]		Second crop rice plants healthy; small-pox in 1 taluka and [illegible] 2; common rice in Karwar 12½ lbs. per rupee, in district [illegible] 15 lbs. per rupee; weather fair.
[illegible]	·14	Weather very cold; general health good; cholera [illegible] in Navanagar and Morvi; *bajri* 29 and *jowari* 36 lbs. [illegible] *General Remarks.*—Some rain in most districts, injurious in few places; *rabi* generally doing well; fever, [illegible] cattle disease in several districts.
[illegible] 30th)		
[illegible]	*Nil*	Weather variable, days warm, nights cool; harvesting of *amun* paddy over, average outturn; prospects of winter crops promising, but rain wanted; prices stationary; cholera, cattle disease, and small-pox not yet ceased.
Deesa	·26	Harvesting of *amun* paddy nearly completed, yield average; prospects of winter crops continue good; *boro* paddy being sown.
[illegible]nnahs (Alipore)	·12	Harvesting of late rice and sugarcane going on, yield estimated at about from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; cholera still prevails in some parts of the district.
[illegible]ebad	·05	Harvesting of *amun* almost over; cold-weather crops continue satisfactory; a few cases of cholera reported from outpost Mohimapore.
[illegible]	·14	
Burdwan	Nattore ·70 ·07 Cutwa ·21 Culna ·05	Rain beneficial to winter crops; public health fairly good. Some of the cold-weather crops being harvested; fever less prevalent; a few cases of cholera reported.
Rungpore	·50	Prospects of *rabi* crops favourable; ploughing for *aus* crop commenced; cholera still prevalent in some parts of the district.
Bhagalpur	·39	Prospects of crops good; mustard spoilt by caterpillars in some places.
Purneah	·96	Prospects of *rabi* crops good owing to rain; public health fair.
Patna	·33	Prospects of *rabi* crops continue favourable; reaping of mustard going on; public health good.
Durbhunga	1·68	Winter rice harvested; *rabi* crops not benefited by rain; lands being prepared for indigo; public health generally good.
Hazaribagh	·9	Weather very cold since latter part of week; wheat and other standing crops promise well; general health good.
Cuttack	*Nil*	Harvesting of late rice nearly completed, and that of *rabi* in progress; *dalua* rice growing well; public health good.
		General Remarks.—There was been rain in most parts of the province during the week; prospects of *rabi* crops continue generally satisfactory, but the rain is said to have damaged some of these crops, specially mustard, in some parts of Behar; harvesting of *rabi* crops has commenced in some districts, and that of sugarcane is becoming general; sugarcane harvest is generally expected to yield well; late rice is still being harvested in Orissa and a few other low-lying tracts; fever and cholera have generally much abated, but in Nuddea numerous deaths from fever still reported; sporadic cases of small-pox reported from a few districts.
N.-W. Provinces and Oudh—		
Benares (Jan. 30th)	Benares 1·50 Chandauli 1·20	No damage to crops; no sickness; prices steady.
Allahabad („ 31st)	There has been good rain all over the district.	The *sarson* has been injured and the grain in an advanced state, but all over dry tracts, effect beneficial; prospects very good; health good; prices slightly fallen.
Gorakhpur („ 29th)	Storm and heavy fall of rain, 2·80 on 26th.	Dry weather now required; edible crops good; oilseeds injured by insects; prices stationary.

of teachers trained in India, compared with the valuable prizes that may reasonably be looked forward to by really capable lads who obtain appointments under Government, may for some time make it difficult to secure the services of the best scholars as pupil-teachers. We trust, however, that the proposals we have made will be found sufficiently attractive to give the system a fair start. The offer of free tuition and a small salary during the most expensive period of school education will, it may be hoped, prove an inducement to capable scholars to enter upon a career, the emoluments of which are certain to rise as the demand for trained teachers increases under the operation of the Code. At the same time, we have followed the English Code in the provision that at the close of their engagement pupil-teachers are perfectly free in their choice of employment (article 56); but we are not without hope that many of those who begin will be disposed to continue as teachers.

The connection between the two classes of teachers.

77. The means by which we propose to connect the pupil-teacher system with that for certificated teachers, are indicated in articles 60, 70, and 79. It will be observed that we propose to make the successful completion of a three years' engagement as pupil-teacher practically equivalent, for the purposes of a teacher's certificate, to passing the First Arts Examination; and that we give an advantage also to pupil-teachers who pass with credit through a course of one or two years in a training college. We have suggested this from a conviction of the great value of such a training, and with the view of retaining as teachers those who have been trained.

Scheme for aiding training colleges.

78. To complete the pupil-teacher system, and at the same time to give effect to the suggestion conveyed in the closing sentence of paragraph 24 of the Resolution, we have drawn up a scheme for aiding training colleges (Chapter V), and have worked out the details of a two years' course (Schedule III) on the model of the courses prescribed in England and Scotland. The course is so arranged that it can to a large extent be made to suit an Arts College; and in this way it will be possible to secure a collateral advantage for the training colleges without sacrificing anything of their efficiency. If hereafter it should on any grounds be found advisable, the approximation to the First Arts course may be made still closer. How far the scheme is likely to be utilised we have no means of forming an opinion, but there is reason to hope that it will be accepted by some of the leading denominations at no distant date.

Grants to training colleges.

79. The rates of grant proposed in article 91 appear at first sight to be higher than those sanctioned in England and Scotland; but in reality it will be found that they are not so. The amount paid annually in England and Scotland is £50 for each male and £35 for each female student in continuous training throughout the year, provided that the total grant does not exceed 75 per cent. of the actual expenditure of the college. We calculate that the average annual grant for each student in continuous training throughout the college year of eight months (article 95) will probably be less than R500, which does not exceed the average for England and Scotland. Even if it should, any excess may, in our judgment, be well allowed if it helps to bring about the establishment of training colleges. The proposal in article 92, the mode of payment recommended in articles 93 and 94, and the exceptions referred to in the latter part of article 95, are all intended to facilitate the opening of such colleges.

University education.

80. The reference to the higher education of Europeans in paragraph 5 of the Resolution may require that we should offer some definite recommendation on the subject. The arguments in favour of separate institutions for Europeans do not appear to us to apply with any great force to the higher or University education. As a matter of fact, few, if any, of the colleges in which Europeans study are confined to them exclusively, and we see no reason to think a change in this respect necessary. That being so, we are of opinion that any aid given by

Government to the higher education of Europeans should be regulated by the ordinary grant-in-aid rules in force in the various provinces. The case of any college confined to Europeans exclusively would be sufficiently met by allowing a fixed grant on account of each student who passes the First Arts, B.A., or M A. examination.

Building grants.

81. A scheme for providing "greater facilities for the education of the poorer classes of European children" would not be complete unless provision were made for grants on account of school buildings. We have therefore added a chapter on building grants (Chapter VI), in which we propose that grants should be given in aid of the erection, enlargement, and furnishing of schools, of carrying out extensive repairs, and, in special cases, of paying debts incurred before the Code comes into operation in erecting or extending school buildings (article 96). We have felt some hesitation in recommending grants in the last two cases, but we do so because it is a matter of notoriety that many schools are in a state of chronic embarrassment owing to old debts and the difficulty of meeting the expense of repairs. Much of the difficulty, we are aware, has arisen from the unsatisfactory way in which accounts have been kept and dues realised, and if the provisions of article 14 (*b*) are carefully carried out, it will, no doubt, disappear under the operation of the Code; but we think it most important that the schools should have a fair start under the new system, and to secure this we recommend that the grants provided for in 96 (*b* and *c*) should at the outset be allowed. There will be no difficulty in selecting the cases that really need and deserve this aid.

Rules for building grants.

82. In the varying circumstances of the stations in which school buildings are likely to be required, it is impossible to find any general rule that will be suitable to all; some stations can help themselves to a much greater extent than others, while in many small stations, with a very fluctuating European population, it would probably be unwise to erect any school building. For the purposes of this chapter, therefore, we recommend that the local Government should take cognisance of the circumstances of each station and determine the rates of grant accordingly. No grant should be given for any school building unless the European population for whom it is intended is sufficiently large to justify the expense (article 99*a*), regard being had, among other circumstances, to the requirements of the different religious denominations of the locality. If the circumstances are such as to justify the expense of erecting or extending a building, we propose that a grant should be made, not exceeding two-thirds of the total estimated cost in places where large private contributions cannot be looked for, or not exceeding one-half in places where the people may reasonably be expected to help themselves. These grants being maximum grants, it will be in the power of the Department to fix the amount of the actual grant according to its own judgment.

Conditions of building grants.

Other conditions of building grants.

83. The remaining articles in this chapter are only such as are required to secure that the school buildings shall be properly maintained, and be always available for school purposes. We have also provided for the refund of the Government grant in the event of the building ceasing to be used as a school within three years of the date of payment. These recommendations are based largely on the present rules for building grants in Bengal.

No accurate estimate of the cost of the scheme can be framed at present.

84. The only other duty assigned to us in the Resolution was to frame, as well as we could on the information placed before us, an estimate for each province of the cost of the scheme adopted by us. Taking the total number of scholars in the several departments of the schools for which returns have been received, and assuming that a certain proportion would pass by the various standards proposed, we might without difficulty construct an estimate; but after careful

consideration we have come to the conclusion, as already indicated, that such an estimate would, in the present condition of European schools, be of little practical value. The returns are at best very incomplete; we have no means of knowing how many of the 5,000 children who, as stated in paragraph 3 of the Resolution, are at present receiving no instruction, are likely to be sent to school; and the absence of any trustworthy classification of the scholars makes it impossible to form any but an arbitrary estimate of the proportion of passes. In these circumstances, we recommend that the framing of the desired estimate should be deferred until all the schools in the various provinces have been thoroughly inspected and examined according to the prescribed standards. This alone will supply the data for an accurate estimate of the operation of the Code as regards existing schools; and by affording time for observation, it may incidentally throw light on the probable increase in the number of schools and scholars.

85. We cannot conclude this report without giving expression to our very deep feeling of sorrow at the early and lamented death of our colleague, the Very Rev. Father Van Impe, whose warm interest in, and devotion to, the work on which we have been engaged contributed, we fear, to that sad event.

86. We have also to express our deep sense of obligation to Mr. A. W. Garrett, Inspector of Schools, Presidency Circle, and to Mr. A. M. Nash, who succeeded him in that office, for the very valuable assistance they have afforded us in the discharge of our onerous duties. By their kindness and courtesy we have been enabled to test our conclusions by reference to several of the European schools under their inspection, and we have particularly to acknowledge the help given by Mr. Nash in working out the system of grants.

A. W. CROFT.

E. LAFONT, S. J.
JAMES ROBERTSON.

CALCUTTA,
The 17th July 1882.

DRAFT CODE OF REGULATIONS FOR EUROPEAN SCHOOLS AS FINALLY ACCEPTED BY THE GOVERNMENT OF INDIA.

CHAPTER I.

PRELIMINARY.

1. A sum of money is annually granted by local Governments and Administrations for European education in India. This grant is administered by the Education Department of each local Government or Administration, hereinafter called the Department.

2. The object of the grant is to aid local exertion in maintaining efficient schools for European children, and training colleges for teachers in such schools.

3. The term European is used in this Code to signify any person of European descent, pure or mixed, who retains European habits and modes of life; but the Local Governments shall in all cases of doubt decide the proper application of the term. The term scholar is used to signify European scholar.

4. Aid to maintain schools is given by monthly and annual grants to the managers, conditional upon the attendance and proficiency of the scholars, the qualifications of the teachers, and the state of the schools.

5. Every school aided by Government under the provisions of this Code shall be conducted in accordance with the following regulations (Elementary Education Act, England, 1870, section 7):—

"(*a*) It shall not be required, as a condition of any child being admitted into or continuing in the school, that he shall attend or abstain from attending any Sunday school or any place of religious worship, or that he shall attend any religious observance or any instruction in religious subjects in the school or elsewhere, from which observance or instruction he may be withdrawn by his parent, or that he shall, if withdrawn by his parent, attend the school on any day exclusively set apart for religious observance by the religious body to which his parent belongs.

"(*b*) The time or times during which any religious observance is practised, or instruction in religious subjects is given, at any meeting of the school, shall be either at the beginning or at the end, or at the beginning and the end of such meeting, and shall be inserted in a time table to be approved by the Educational Department, and to be kept permanently and conspicuously affixed in every school-room; and any scholar may be withdrawn by his parent from such observance or instruction without forfeiting any of the other benefits of the school.

"(*c*) The school shall be open at all times to the inspection of the departmental inspector, so, however, that it shall be no part of the duties of such inspector to enquire into any instruction in religious subjects given at such school, or to examine any scholar therein in religious knowledge, or in any religious subject or book."

6. No grant is made for or in respect of—

(*a*) any instruction in religious subjects;
(*b*) any school which is not subject to the inspection of the Department;
(*c*) any school in which the majority of the children attending the school are not European;
(*d*) any school with an average daily attendance of less than 12 European scholars;
(*e*) any school which the Department declares to be unnecessary, or unsuited to the requirements of the locality;
(*f*) any school the income of which from all sources is sufficient, in the opinion of the Department, to maintain it in efficiency.

7. No school shall be placed on the list of those to which grants may be made, until an application is sent to the Head of the Department of the province in which the school is situated. The application shall contain the following particulars, according to a form supplied by the Department:—

(*a*) Class of school.
(*b*) Names and qualifications of the teachers.
(*c*) Constitution of the committee of management.
(*d*) Number of scholars in each standard (Schedule I).
(*e*) Scale of fees.
(*f*) Probable income from all sources other than the grant.

The Inspector shall thereupon visit and report on the school.

8. If the application is approved, the Department will inform the managers from what date the school will be regarded as coming under the Code, and in what month the Inspector will make his annual visit. The month will remain unaltered, unless the Department informs the managers of a change. Notice of the day of the Inspector's annual visit will be given beforehand to the managers.

9. The Inspector may visit an aided school at any other time without notice.

10. No grant is paid except on a report from the Inspector, unless some unforeseen cause makes it impossible for him to visit and report upon the school.

11. (*a*) The managers of a school must appoint a correspondent with the Department, and must give notice to the Department of any change of correspondent.

(*b*) Teachers cannot act as correspondents for the schools in which they are employed, nor can they be recognised as members of its committee of management, without the special sanction of the Department.

12. By managers are meant those who have the financial and general control of the school. The committee of management must consist of not less than three members.

CHAPTER II.

Grants for the Maintenance of Schools.

Section I.—*Preliminary.*

13. Before any grant is made to a school the following conditions must be satisfied:—

(*a*) That the school is conducted in accordance with article 5.

(*b*) That the school premises are healthy, well lighted, drained, and ventilated, are properly furnished and supplied with suitable offices, and contain sufficient accommodation for the scholars attending the school. For the present 12 square feet in each class-room will be required for every scholar in average daily attendance,* or if more than one class is taught in the same room, 16 square feet.

(*c*) That the time table is approved by the Department. The time-table should show the hours allotted to instruction in elementary, class, and special subjects (Schedule I), to the additional subjects of article 21, and to the training of pupil-teachers. No change can afterwards be made without the consent of the Department.

(*d*) That the staff of teachers is sufficient, and the teachers approved by the Department. The recognised classes of teachers in day schools are pupil-teachers (Chapter III) and certificated teachers (Chapter IV). Other persons may be employed as teachers in night schools.

(*e*) That the principal teacher is not allowed to undertake duties unconnected with the school which occupy any part whatever of the school hours, or of the time appointed for the special instruction of pupil-teachers.

14. Every school receiving a grant shall comply with the following conditions:—

(*a*) Due notice shall be given to the Department of any changes in the school staff and management (article 45), which occur in the course of the year.

(*b*) All returns called for by the Department shall be duly made; the admission, daily attendance, and withdrawal of the scholars shall be registered by, or under the supervision of, the principal teacher; accounts of income and expenditure shall be kept by the managers, regularly audited, and submitted to the Department annually.

(*c*) The income of the school shall be applied to educational purposes recognised by the Department.

15. Schools and departments of schools aided under this chapter shall be classed as Primary, Middle, or High, according to the highest standard of instruction (Schedule I) taught in them.

Those teaching to a standard not above IV shall be classed as Primary; those teaching to a standard above IV and not above VII as Middle; those teaching to either of the final standards of the Schedule shall be classed as High Schools.

Note.—If from any cause the managers of a school desire to change its class, they must submit a fresh application under article 7.

16. The subjects of instruction in aided schools shall be as follows:—

(*a*) In the primary and middle departments, the elementary, class, and special subjects of Schedule I.

(*b*) In the high department, the subjects prescribed for the final examinations (A and B) of Schedule I.

In primary schools and departments teaching above Standard II two class subjects must be taught. In middle schools and departments four class-subjects must be taught.

* The average daily attendance for any period is found by adding together the attendances of all scholars for that period and dividing the sum by the number of full meetings within the same period; the quotient is the average daily attendance.

17. In primary and middle schools and departments the following order of instruction must be observed:—

Elementary subjects (reading, writing, and arithmetic) must be taught to every scholar in a school.

Class subjects must be taught to every scholar in a class.

Special subjects may be taught to individual scholars.

Note.—All scholars reading the same standard in elementary subjects form one class.

Section II.—*Grants to Day Schools.**

18. A school which has held not less than 200 full school meetings during the year may receive aid under this Section.

If a school has held less than 200 full school meetings during the year, a proportionate reduction shall be made in the grants payable under this Section, and in the number of attendances required under article 22.

Note (1).—The school year is reckoned as ending with the last day (inclusive) of the month preceding that fixed for the Inspector's annual visit (article 8).

Note (2).—School meetings held before the school comes under the operation of the Code (article 8) will not be counted for the purposes of this article.

19. By a "full school meeting" is meant a period of four hours of secular instruction on the same day, in which period may be included not more than half an hour of the time allowed for recreation. A "full attendance" is an attendance at a full school meeting.

(*a*) Two periods, each of not less than two hours of secular instruction in school, whether on the same or on different days, may be counted as one full school meeting.

(*b*) Attendances may not be reckoned for any scholar under three or over eighteen years of age.

20. For every scholar in average daily attendance during the school-year, the following attendance grants may be claimed by the managers:—

	Rs.
For the first 25	12 per scholar.
For the next 25	9 „
For the next 50	6 „
For every additional scholar	3 „

For children who are not presented for examination by standards, a uniform attendance grant shall be made at the rate of Rs. 18 for each child not above eight years of age at the end of the school year, provided they are taught as a separate school or department of a school, by a teacher of their own, in a room properly constructed and furnished for their instruction. Of this grant Rs. 3 will be withheld in the case of girls, if satisfactory instruction is not given in needlework.

21. The managers may also claim the following sums for each scholar in average daily attendance:—

(*a*) Annas 8 (or Re. 1), if singing by ear (or from notes) is taught throughout the school to the satisfaction of the Inspector.

(*b*) Annas 8, if systematic training in drill or gymnastics is given to boys above eight years of age without extra charge.

(*c*) A sum not exceeding Rs. 3, at the discretion of the Inspector, for discipline, organization, apparatus and method of instruction.

The Inspector will bear in mind, in reporting on the organization and discipline of a school, the results of any visits without notice (article 9) made in the course of the year. To meet the requirements respecting discipline, the managers and teachers will be expected to satisfy the Inspector that all reasonable care is taken in the ordinary management of the school to bring up the children in habits of punctuality, of good manners and language, of cleanliness and neatness, and also to impress upon the children the importance of cheerful obedience to duty, of consideration and respect for others, and of honour and truthfulness in word and act.

22. For scholars who are presented for examination by Standards I to VII of Schedule I, and who have made 120 full attendances during the year, the managers may claim the following instruction grants:—

(*a*) Each elementary subject, Re. 1 for every scholar passing in that subject.

(*b*) Each class subject, Re. 1 for every scholar in a class reading that subject, if 50 per cent. of those presented for examination satisfy the Inspector.

(*c*) Each special subject, Re. 1 for every scholar passing in that subject.

[illegible] applies to [illegible] standards described in Schedule I are taught. For special rules for [illegible] connected [illegible] 84–87.

Note (1).—No child under six years of age shall be presented for examination by standards; and it shall be in the discretion of the Inspector to refuse to examine any child under eight years of age.

Note (2).—No scholar shall be examined in any subject unless the timetable has provided for continuous instruction in that subject throughout the year.

Note (3).—When a scholar has been transferred from one school to another in the course of the year, his attendance at the former school will not be counted unless his scholar's register (article 42) shows that he has been transferred with the permission of the managers of that school; but in no case shall attendance for the same period be reckoned twice.

Note (4).—The results of the examination of each scholar shall be communicated to the managers.

23. (*a*) No instruction grant may be claimed under article 22 on account of any scholar who fails to pass in two elementary subjects.

(*b*) No grant may be claimed for class subjects under article 22 (*b*), if the number of passes in elementary subjects fall below 40 per cent. of the whole number of scholars presented in those subjects. If the number of such passes fall below 60 per cent., the grant shall be reduced by one-half.

(*c*) No grant may be claimed for special subjects under article 22 (*c*), if the number of passes in elementary subjects fall below 60 per cent. of the whole number of scholars presented in those subjects.

24. (*a*) Any scholar presented for examination must be presented under the same standard in all subjects.

(*b*) Any scholar who passes in all the elementary subjects of Standards I, II or III, may be at once presented for examination by the next higher standard, and may earn separate grants for passing in each standard.

(*c*) If a scholar fails in one elementary subject only, he may be presented for examination in the following year either by the same or by the next higher standard; but no scholar can earn a grant twice in the same subject in any standard.

(*d*) If a scholar fails in two successive years in the same elementary subject, no grant shall be given on his account for class or special subjects.

25. If a scholar who has made the prescribed number of attendances is (without a reasonable excuse) withheld from examination in elementary or class subjects, the school shall receive no grant on his account.

26. Scholars in high schools, who have attended 250 full school meetings after passing by Standard VII, may be presented for final examination by the standard in schedule I. The examination will be held at the times and places indicated in Chapter VII for the scholarship examination.

27. For scholars passing by this standard, the managers may claim the following instruction grants:—

(1) Rs. 80 for every scholar passing in three subjects.
(2) Rs. 120 „ „ „ four „
(3) Rs. 160 „ „ „ all „
(4) Rs. 25 for each pass in an optional subject.

No grant can be claimed for optional subjects for any scholar who fails to earn a grant in the compulsory subjects.

28. A scholar who does not pass in all the compulsory subjects may be again presented for examination in the following year. If he then passes, the managers may claim on his account the full grant payable under article 27, less any amount that may have been earned by him in the preceding year.

29. After each annual visit of the Inspector (article 8), the school shall receive monthly during the following year—

(*a*) a *provisional* attendance grant, calculated at one-twelfth of the rates fixed in article 20, for each scholar in average daily attendance during the preceding month;

(*b*) a *provisional* instruction grant, calculated at one-twelfth of the instruction grant earned for the preceding year under articles 22—28.

Note.—If a school has been open for less than twelve months (article 18), the denominator of the fraction in (*b*) shall be the number of months during which the school has been under the Code.

30. At the end of each year, when the annual visit (article 8) is paid by the Inspector, the school shall receive the amount of the annual grants earned for attendance and instruction under articles 20—28, less the total amount of the provisional grants received during the course of the year under article 29. But if the amounts received under article 29 exceed the amounts earned under articles 20—28, the excess shall be deducted from the first or (at the discretion of the Department) any subsequent grants payable in the following year under article 29, or be otherwise refunded to the Department.

31. A special grant, to be determined by the Department, may, on a favourable report from the Inspector, be made annually to schools in places where there is a small or poor European population.

Note.—This grant shall not be taken into account in making reductions under Section V.

SECTION III.—*Grants to Night Schools.*

32. Grants may be given to night schools for boys, [illegible] the scholars admitted to the school are certified by the managers to be [illegible] necessarily employed during the day.

33. The rules for grants to day schools (Section II) shall apply also to night schools with the following changes:—

(*a*) By a "full school meeting" is meant a period of not less than one hour of secular instruction.

(*b*) The number of full school meetings in the year must be not less than 80, and of full attendances qualifying for an instruction grant not less than 50.

(*c*) The attendance grants shall be at one-third of the rates prescribed in article 20.

(*d*) The number of class and special subjects to be taught in each school shall be determined by the Inspector. For the purpose of calculating the grants all such subjects shall be treated as special subjects.

(*e*) Any scholar who has passed by Standard V may, with the sanction of the Inspector, substitute for the full course prescribed for day schools, a special course consisting of arithmetic and one or more of the following subjects:—

Mathematics, Elementary Science, Drawing } of Standards VI and VII.

Mathematics, Mechanical Drawing, Elementary Physics, Elementary Chemistry } of Standard B.

To such scholars the provisions of article 24 (*a*) shall not apply.

SECTION IV.—*Grants to Boarding Schools.*

34. Grants may be given under this Section to boarding establishments, in addition to the grants payable under Section II to the day schools with which they are connected.

35. A yearly grant not exceeding Rs. 3 may, on the report of the Inspector, be made for each boarder, according to the average number in residence during the year, if the organization, discipline, sanitation, and domestic arrangements are satisfactory.

Note.—The sleeping space allotted to each boarder must be declared by competent medical authority to be sufficient for the purposes of health. In administering this article, the Department will endeavour to secure a provision, for each child under 12, of not less than 40 superficial feet and 400 cubic feet, and for each child above 12, of not less than 48 superficial feet and 480 cubic feet. When a boarding school is hereafter erected with the aid of a building grant (Chapter VI), the internal space provided for each boarder must be in accordance with the measurements stated in this article.

36. A special grant, to be fixed by the Department, may be made to boarding schools in aid of the boarding charges of children residing in places where there is no school of a standard suited to their requirements, provided that the Magistrate of the district certifies, after enquiry, that the parents or guardians of such children are too poor to pay the full boarding charges. The amount of this grant shall not exceed Rs. 5 a month on account of each such boarder.

Note.—No grant shall be made under this article on account of scholars reading beyond Standard VII.

37. A special grant may be made to free schools and orphanages in aid of the boarding charges of scholars educated therein, provided that the amount of such grant does not exceed (*a*) one-half of the total cost of their maintenance, (*b*) the rate of Rs. 5 a month for each boarder.

SECTION V.—*Reduction of Grants.*

38. If the amount earned under Sections II and III exceeds the income of the school from all sources other than the grant, it shall be reduced by the amount of that excess.

Note.—In calculating the income of the school under this article, boarding fees shall not be included.

39. The total amount of the grant may, upon the Inspector's report, be reduced by not less than one-tenth nor more than one-half for faults of instruction, discipline, or registration on the part of the teacher, or (after six months' notice) for failure on the part of the managers to provide efficient instruction according to the regulations of the Department, to remedy any defect in the premises that seriously interferes with the efficiency of the school, or to provide proper furniture, books, maps, and other apparatus of instruction. If the Inspector, at a visit without notice not less than six months after intimation has been given of the requirements of the Department, reports that they have not been carried into effect, a deduction may be made from the next grant to the school.

40. If the income of any high school from all sources is large enough, in the opinion of the Department, to render the full grant, claimable under Section II, unnecessary for the efficient maintenance of the school, a reduction shall be made in its amount. The proportion of the full grant that may be claimed shall be fixed from time to time by the Department, and shall be notified beforehand to the managers.

Note.—The operation of this Article is limited to a term of three years from the date on which the Code comes into force.

41. Any grant [illegible] the Inspector's report, there appears to be any [illegible] *prima facie* [illegible] such instance an enquiry shall be made by the Department, the result [illegible] communicated to the managers.

L

Section VI.—*Registers.*

42. Every scholar in a school receiving grants must be provided with a "scholar's register" (*see* Appendix I), showing his age, attendance, and proficiency at every stage of his school course. This register must be deposited with the principal teacher on admission to the school, and must be shown to the Inspector when required.

43. In every school receiving grants, the managers must provide out of the school funds—

(*a*) the Code for the year;
(*b*) registers of attendance;
(*c*) a diary or log-book, stoutly bound, and containing not less than 300 ruled pages;
(*d*) a portfolio to contain official letters, which should be numbered (1, 2, 3, &c.) in the order of their receipt.

44. The principal teacher must, at least once a week, make an entry in the log-book showing the visits of managers, the admission or withdrawal of scholars, the progress of the various classes, and other facts concerning the school or its teachers, such as commencements of duty, cautions, illness, &c., which are likely to be required for future reference.

Every entry in the log-book must refer to facts; general expressions of opinion are to be excluded. No entry once made in the log-book may be removed, nor may it be altered otherwise than by a subsequent entry.

45. The summary of the Inspector's report after his annual visit, and any remarks made upon it by the Department, when communicated to the managers, must be immediately copied *verbatim* into the log-book. The names and standing (*Certificated Teacher of the——grade*, or *Pupil Teacher of the——year*; *see* Chapters III and IV) of all teachers to be continued on, added to, or withdrawn from, the school staff, as determined by the Department upon the Inspector's report, shall at the same time be entered and signed by the correspondent (article 11 *a*). This entry settles the school staff for the year. Any subsequent change in the staff must be recorded in the log-book, and reported to the Department (article 14 *a*) for sanction.

46. The Inspector will examine the log-book and portfolio at every visit, and will report whether they have been properly kept. He will specially refer to the entries made pursuant to article 45. At every visit paid without notice, he will make an entry in the log-book of such particulars as require the attention of the managers.

CHAPTER III.

Pupil Teachers.

47. Pupil teachers are boys or girls employed to serve in a day-school on the following conditions:—

(*a*) That the school is—

(1) held in suitable premises;
(2) well supplied with books, apparatus, and furniture;
(3) under a duly certificated teacher (article 49);
(4) properly organized and efficiently instructed;
(5) under good discipline;
(6) likely to be maintained during the period of engagement.

(*b*) That the pupil teachers—

(1) are not less than 14 years of age at the date of their engagement;
(2) have passed Standard VI of Schedule I at the date of their engagement;
(3) produce certificates of health, physical fitness, character, and conduct.

(*c*) That the managers enter into an agreement in the terms of the memorandum prescribed in Appendix II.

The Inspector will test the aptitude of the candidates for pupil-teacherships by hearing them give a reading lesson and requiring them to set copies, and he will pay special attention to distinctness of utterance.

48. If all the foregoing conditions have been satisfied, and if the pupil teacher is approved by the Department, the engagement is complete. The Department is not a party to the engagement, but confines itself to requiring that the pupil teacher shall be presented to the Inspector year by year, at the time fixed by his notice (article 8), for examination by the prescribed standards (Schedule II).

49. Every pupil teacher shall be required to undergo a course of three years' instruction, and to pass the examinations specified in Schedule II. During the first year he shall teach daily for two hours in the school classes, and during the last two years for three hours, and he shall also receive one hour's special instruction daily from a teacher holding a certificate of the first or second grade (article 57).

50. For each pupil teacher passing with credit in the subjects specified in Schedule II, the managers of the school shall receive the following sums:—

	Rs.
For the compulsory subjects	60
„ each optional subject	20
„ the art of teaching—	
in the first year	50
„ second year	80
„ third year	120

Half the amounts earned under this article shall be paid by the managers to the pupil teacher, in addition to any salary specified in the memorandum of agreement.

51. The amounts stated in the preceding article are maximum grants, to be given only if the results of the examination are thoroughly satisfactory; and they may be reduced, on the report of the Inspector, by an amount not exceeding one-third.

52. No grant shall be paid on account of a pupil-teacher who fails to pass in the compulsory subjects of Schedule II. He will be re-examined by the same standard in the following year.

53. If a pupil teacher fails twice during his course in the compulsory subjects or in the art of teaching, he shall cease to be recognised as a pupil teacher.

54. If in the course of any year a vacancy occurs in the office of pupil teacher, notice of the vacancy must be at once given to the Department; and pending a permanent appointment under the terms of articles 47 and 48, temporary arrangements may be made by the managers of the school to fill the vacancy.

55. The number of pupil teachers to be employed in any school shall be determined by the Department.

56. At the close of their engagement pupil teachers are perfectly free in the choice of employment. If they wish to continue in the work of education, they may, under the conditions of article 60, become teachers in primary or middle schools or departments, or may be admitted into training colleges (Chapter V).

CHAPTER IV.—Certificated Teachers.

Section I.—*Preliminary.*

57. Certificates are of three grades, and may be either permanent or provisional. A provisional certificate consists of an entry of the teacher's name in a register kept by the Department.

(*a*) A first grade certificate qualifies the holder to be the principal teacher in a high school.
(*b*) A second grade certificate qualifies the holder to be the principal teacher in a middle school, or an assistant teacher in a high school.
(*c*) A third grade certificate qualifies the holder to be the principal teacher in a primary school, or an assistant teacher in a middle school or department.
(*d*) A provisional third grade certificate qualifies the holder to be the principal teacher of a primary school, only if (*a*) he has completed his engagement as a pupil teacher, or (*b*) has passed with credit the first year's examination at a training college, or (*c*) has served with credit for two years as an assistant teacher.

Note.—In cases of emergency, persons may be temporarily recognised as teachers who do not hold the certificates required by this article.

58. Teachers at any stage shall be entitled to receive certificates from the Department, provided they satisfy the Department that they have received a training and passed examinations equivalent to those required under the following articles.

Example.—A holder of a second class certificate from any of the Education Departments of the United Kingdom shall be entitled to receive a permanent certificate of the second grade.

Note.—In administering this article, it shall be in the power of the Department to hold examinations for the purpose of testing the qualifications of applicants for certificates.

59. A certificate may at any time be suspended, reduced, or cancelled, but in every case the Department shall give the teacher an opportunity of explanation.

Section II.—*Male Teachers.*

60. A pupil teacher who has passed the final examination specified in Schedule II shall receive a provisional certificate.

After not less than [illegible] with credit, his certificate shall be made permanent.

Before completing [illegible] provisional certificate must be exchanged for a permanent certificate, or in case [illegible]

(1).—"A year's service with credit" in this and the following articles implies two favourable reports from the Inspector with an interval of a year between them.

(2).—Service in more than one school will not be recognized by the Department, unless the change has been made with the sanction of the Inspector.

61. Any one who, without having served an engagement as a pupil teacher, has completed his 17th year, and has passed the Entrance Examination, or the alternative examination for high schools under Standard B of Schedule I, may, on the recommendation of the Inspector, receive a provisional third grade certificate. After three years' service with credit his certificate shall be made permanent.

62. Any one who has completed his 18th year and passed the First Arts Examination, may, on the recommendation of the Inspector, receive a provisional third grade certificate. After two years' service with credit, his certificate shall be made permanent.

63. Any holder of a permanent third grade certificate, who has served with credit for two years under that certificate, and has also passed the First Arts Examination, shall be entitled to a provisional second grade certificate. After two years' further service with credit, his provisional certificate shall be made permanent.

64. Any graduate of a University of the United Kingdom or India, who has completed his 22nd year, may receive a provisional second grade certificate. After three years' service with credit, his certificate shall be made permanent.

65. Any holder of a permanent second grade certificate, who has served for at least three years with credit under that certificate, and who is also a graduate of a University of the United Kingdom or India, may receive a provisional first grade certificate. After two years' service with credit, his certificate shall be made permanent.

66. It shall be open to the Department in exceptional cases to grant a provisional certificate of the first grade to any graduate of a University of the United Kingdom who has completed his 25th year. After three years' service with credit, his certificate shall be made permanent.

67. Any person who, at the date on which this Code comes into operation, is actually employed as the principal teacher of a high school recognised by the Department as efficient, and who has been so employed for the three years immediately preceding that date, shall be accepted by the Department as qualified to be the principal teacher in a high school, and shall, on application, be entitled to receive a certificate of the first grade.

68. Any such person whose period of service as principal teacher at the date on which this Code comes into operation shall have been more than one year, but less than three years, shall, on application, receive a provisional certificate of the first grade. After completing the period of three years as principal teacher, and on obtaining a satisfactory report from the Inspector, his certificate shall be made permanent.

69. Any other person who, at the date on which this Code comes into operation, is actually employed as a teacher in any school recognised by the Department as efficient, shall, on producing certificates of character and qualification, and on satisfying the Department of his efficiency as a teacher, be entitled to receive a provisional certificate—

(*a*) of the third grade, provided—
  (1) that he is over 20 years of age;
  (2) that he has been employed as a teacher for a continuous period of not less than three years:

(*b*) of the second grade, provided—
  (1) that he is over 25 years of age;
  (2) that he has been employed as a teacher for a continuous period of not less than five years, and has served for not less than three years of that period as a teacher in the middle department of a school.

After two years' service with credit, his certificate shall be made permanent.

Note.—All applications for certificates under articles 67, 68, 69, 75, 76, and 77 must be made within two years from the date on which this Code comes into operation.

SECTION III.—*Female Teachers.*

70. A pupil teacher who has passed the final examination specified in Schedule II, shall receive a provisional third grade certificate.

After not less than two years' service with credit, her certificate shall be made permanent. Before completing her 25th year, her provisional certificate must be exchanged for a permanent certificate, or is *ipso facto* cancelled.

71. Any one who, without having served an engagement as a pupil teacher, has completed her 17th year, and passed the final examination for high schools specified in Schedule I, may, on the recommendation of the Inspector, receive a provisional third grade certificate. After three years' service with credit, her certificate shall be made permanent.

72. Any holder of a permanent third grade certificate, who has served with credit for two years under that certificate, and has also passed the Entrance Examination, shall be entitled to a provisional second grade certificate. After two years' further service with credit, her provisional certificate shall be made permanent.

73. Any person who has passed the First Arts Examination, and has completed her 22nd year, may receive a provisional second grade certificate. After three years' service with credit, her certificate shall be made permanent.

74. Any holder of a permanent second grade certificate, who has served for at least three years with credit under that certificate, and who has passed the First Arts Examination, may receive a provisional first grade certificate. After two years' service with credit, her certificate shall be made permanent.

75. Any person who, at the date on which this Code comes into operation, is actually employed as the principal teacher of a high or middle school recognised by the Department as efficient, and who has been so employed for the three years immediately preceding that date, shall be accepted by the Department as qualified to be the principal teacher in a high or middle school, and shall be entitled on application to receive a certificate of the corresponding grade (article 57).

76. Any such person whose period of service as principal teacher at the date on which this Code comes into operation shall have been more than one year, but less than three years, shall receive a provisional certificate of the corresponding grade (article 57). After completing the period of three years as principal teacher, and on receipt of a satisfactory report from the Inspector, her certificate shall be made permanent.

77. Any other person who, at the date on which this Code comes into operation, is actually employed as a teacher in any school recognised by the Department as efficient, shall be entitled, at any time within two years from that date, on producing certificates of character and qualification, and on satisfying the Department of her efficiency as a teacher, to receive a provisional certificate of the corresponding grade (article 57).

This certificate shall be made permanent after one year's further service with credit, or in the case of any person who, at the date on which this Code comes into operation, has not completed three years' service as a teacher, after two years' further service with credit.

78. It shall be open to the Department in exceptional cases to grant provisional certificates of the first or second grade to persons not entitled to such certificates under any of the foregoing rules.

SECTION IV.—*Teachers passing through a Training College.*

79. Any student who has been admitted to a training college after completing his engagement as a pupil teacher, and who has passed the first year's examination of the college, shall be entitled to receive a permanent third grade certificate. After passing the second year's examination of the college, he shall receive a provisional second grade certificate.

80. Any student of a training college who, without having completed an engagement as a pupil teacher, has passed the first year's examination of the college, shall be entitled to receive a provisional third grade certificate. After passing the second year's examination of the college, he shall receive a permanent third grade certificate.

81. After two years' service with credit, the provisional certificates granted under articles 79 and 80 shall be made permanent, and the permanent third grade certificates granted under the same articles shall be exchanged for provisional certificates of the second grade.

82. Any holder of a provisional second grade certificate under the preceding article shall, after two years' service with credit under that certificate, receive a permanent certificate of the second grade.

CHAPTER V.

TRAINING COLLEGES.

SECTION I.—*Preliminary.*

83. A training college includes—

(*a*) A college for boarding, lodging, and instructing candidates for the office of teacher.

(*b*) A practising school, in which such candidates may learn their profession.

84. No grant shall be made to a training college, unless the Department is satisfied with the premises, management, and staff.

85. The grant to a practising school shall be made under the conditions specified in Chapter II.

SECTION II.—*Admission to Training Colleges.*

86. Candidates for admission to a training college are selected by the authorities of each college on their own responsibility, and are admissible to the college provided that they produce satisfactory certificates of moral character,

No grant will be payable to a training college on account of any student who on [illegible] does not satisfy the following conditions:—

[illegible] that he is at least 17 years of age.

[illegible] state of his health is satisfactory, and that he is free from any infirmity [illegible] defect likely to interfere with the profession of a teacher.

[illegible] a declaration signifying his *bonâ fide* intention to follow the profession of a teacher.

[illegible] passed the final examination for high schools specified in Schedule I, [illegible] pupil teacher's in Schedule II.

SECTION III.—*Examinations.*

88. Every student admitted to a training college under the conditions specified in article 87, who has been in residence for eight months of the year, and who has spent in that year at least 75 hours under proper supervision in the practising school, shall be presented at the close of the year for examination by the standards fixed, for first and second year students respectively, in Schedule III.

89. The yearly examinations will be conducted by the Department. After each examination the names of the successful candidates will be arranged in two divisions, the first in order of merit, the second in alphabetical order.

90. The place taken by each student in the examination will be recorded on the certificates granted by the Department under articles 79, 80.

SECTION IV.—*Grants.*

91. The managers of a training college shall be entitled to a grant of Rs. 750 for each student passing the annual examination in the first division, and of Rs. 500 for each student passing in the second division.

92. On the recommendation of the Inspector, a grant not exceeding Rs. 100 may be made on account of a student who fails to pass the annual examination; but this grant will not be made more than once for the same student.

93. The managers shall receive monthly a provisional grant of Rs 35 for each student on the rolls during that month.

94. After the annual examination, the managers shall receive the amounts payable under articles 91 and 92, less the amounts actually paid under article 93.

If the amounts paid under article 93 exceed the amounts payable under articles 91 and 92, the excess shall be deducted from the first or (at the discretion of the Department) any subsequent grants payable in the following year under article 93, or be otherwise refunded to the Department.

95. The amounts specified under article 91 will not be payable on account of any student who has resided for less than eight months during the year.

Exceptions to this rule may, at the discretion of the Department, be made in special cases, provided that no grant will be payable for any student who has resided for less than six months, or who has spent less than 75 hours under proper supervision in the practising school. In the case of students so excepted, a reduction not exceeding Rs. 200 will be made in the amount of the grant.

CHAPTER VI.

BUILDING GRANTS.

96. Grants may be given under this Chapter to managers of schools, in aid—

(*a*) of erecting, enlarging, or furnishing school buildings;
(*b*) of executing extensive repairs;
(*c*) in special cases, of paying off debts incurred in erecting or enlarging school buildings.

Note.—Expenditure in the purchase of buildings may be treated as expenditure on the erection of buildings.

97. Except in the case provided for in article 96 (*c*), no grant shall be made in consideration of former expenditure on school buildings.

98. For the purposes of this Chapter local Governments will divide stations into three classes:—

A.—Stations in which the maximum grant shall not exceed one-half of the total cost.
B.—Stations in which the maximum grant shall not exceed two-thirds of the total cost.
C.—Stations in which, from the fluctuating number of European children, the erection of permanent school buildings is undesirable. In these stations the amount actually paid as rent will be considered in determining the special grants that may be allowed under article 31.

99. Before a grant is sanctioned for the erection of school buildings, the Department must be satisfied—

(*a*) that the European population of the locality is sufficiently large to render the existence of the school necessary, and to give a reasonable probability of its permanence;
(*b*) that the school is suited to the requirements of the locality;
(*c*) that the school is likely to be maintained in efficiency;
(*d*) that the site, plans, estimates, and specifications are suited to the school, and the title and trust deeds in due form.

100. The trust deed must declare the building to be granted in trust for school purposes only. It must also provide for the legal ownership of the premises, for the proper maintenance of the building, and for the inspection and management of the school.

Note.—This article does not preclude the managers from using the building for other purposes when not required for the purposes of the school.

101. The grant is not paid until—

(*a*) a report is received from the Executive Engineer, Public Works Department, certifying that the building has been completed in accordance with the sanctioned plans and specifications;
(*b*) a certificate is received from the managers, setting forth that the funds in their hands will, when added to the grant, be sufficient to meet all claims and to close the account; and
(*c*) the trust deed is duly registered, and a copy lodged with the Department.

102. The trustees must undertake to refund the amount of the grant if the building ceases to be used as a school within three years from the date of payment.

103. All applications for grants must be submitted to the Department not later than the 1st of October in any year.

CHAPTER VII.

SCHOLARSHIPS.

104. Scholarships are of two grades, primary and middle; the number of each grade will be determined by the local Government. Boys only are eligible for scholarships, which will in every case be awarded after a competitive examination.

105. Primary scholarships are of the value of Rs. 5 a month, and are tenable for three years in a middle school, or in the middle department of a high school. Middle scholarships are of the value of Rs. 8 a month, and are tenable for two years in a high school, or for five years in a technical school. Scholarships are tenable only in schools recognised by the Department as efficient.

106. Candidates for primary scholarships must be under 11 years of age, and for middle scholarships under 14 years of age, at the date of examination. The selection of the candidates from each school shall be left to the managers of the school.

107. The examination for primary and middle scholarships shall comprise the subjects of Standards IV and VII respectively. Marks shall be awarded to the several subjects of examination as follows:—

Primary Scholarships.

English ..	Grammar and Composition	100	200
	Explanation of passages	50	
	Dictation	50	
Arithmetic			200
Geography			100
Total ...			500

Middle Scholarships.

English, including Grammar and Composition	250
Second Language	150
History	75
Geography	125
Arithmetic	125
Geometry and Algebra	200
Elementary Science	75
Total ...	1,000

108. For the purposes of this Chapter, each province will be divided into circles, and a certain number of scholarships allotted to each circle, to be competed for by candidates from schools situated in that circle. In November of each year (or some other month to be fixed by the Department), the examination shall be held simultaneously at certain centres previously selected. The examination papers shall be the same for all centres.

109. A scholarship may be reduced or withdrawn in cases of misconduct, of continued absence, or of failure to pass by the prescribed standards.

110. A scholarship may be transferred from one school to another with the sanction of the Department.

CHAPTER VIII.

REVISION OF THE CODE.

111. Subject to the confirmation of the Governor General in Council, the local Government may cancel or modify any articles of this Code, or may introduce new articles.

112. The schedules and notes appended to the Code shall have the same effect as the articles of the Code, and shall be subject to the provisions of article 111.

SCHEDULE I.

STANDARDS OF EXAMINATION (PRIMARY).

Subjects.	Lower Division.		Upper Division.	
	Standard I.	Standard II.	Standard III.	Standard IV.
	Elementary Subjects.			
(1) Reading* ...	To read a short paragraph from a book not confined to words of one syllable. *Accuracy of pronunciation to be considered.*	To read a short paragraph from an elementary reading-book.	To read a passage from a more advanced reading-book, or stories from English or Indian history. *Spelling to be tested.*	To read a short passage of prose or poetry from a more advanced reading-book.
(2) Writing† ...	To copy in manuscript characters a line of print; to write from dictation a few common words.	To write a passage of not more than three lines from the same book, slowly read over once, and then dictated word by word. *Before examination, the passage shall be read over again.*	To write six lines from one of the reading-books of the standard, slowly read over once, and then dictated a few words at a time.	To write eight lines from a reading-book slowly read over once, and then dictated in sections.
		Copy-books to be shown.	Copy-books to be shown, with improved writing.	Copy-books to be shown, with improved writing.
(3) Arithmetic‡	Notation and numeration up to 1,000. Simple addition and subtraction of numbers of not more than three figures. In addition, not more than five lines to be given. Multiplication table to 6 × 16.	Notation and numeration up to 100,000. The first three simple rules, and division by numbers not exceeding 12. Multiplication table to 12 × 16. Anna table to 100 annas.	The four simple rules. Addition and subtraction of English and Indian money. Multiplication table to 16 × 16. Pence table to 120 pence.	A.—The compound rules, and reduction in all weights and measures of common use. B (for boys only).—Easy examples of G. C. M. and L. C. M. Easy fractions, with denominators not over 20.
	Class Subjects.			
(4) English ...	To recite 10 lines of easy poetry, and to know their meaning.	To recite 20 lines of poetry, and to know their meaning. To point out nouns and verbs in the passages read or written.	To recite with intelligence and expression 30 lines of poetry. To point out nouns, verbs, adjectives, adverbs, and personal pronouns in the passages read or written.	To recite 40 lines of poetry, and to explain the words and allusions. Easy parsing; to point out the subject and predicate in a simple sentence; to form simple sentences illustrating the use of the parts of speech named in Standard III.
(5) Needlework‖ (for girls only).	Hemming; plain knitting with two needles.	Seaming; knitting with two needles, plain and purled rows alternately.	Frilling and pleating; plain knitting with four needles.	Stitching and sewing on strings; knitting with four needles, plain and purled rows alternately.
(6) Geography	.....	To name the points of the compass in the school room, and on a local or district map. Explanation of simple geographical terms by reference to a map.	The outlines of the geography of India by book and map. To draw on the slate a ground-plan of the school-room, showing the position of the furniture.	The outlines of the geography of Asia, and of the British Isles, by book and map. To draw a ground-plan of the school compound and the principal objects in it, with its approaches.
(7) Object Lessons.	Common objects; colour.	Common objects; their colours, shapes, and uses.	Habits and uses of domesticated animals.	General comparison of animals, vegetables, and minerals; common substances used in arts and manufactures.

N.B.—The clauses in italics apply to all succeeding standards.

* Reading with intelligence will be required in all the standards, and increased fluency and expression in successive years. In Standard III and upwards, two sets of reading-books should be provided, of which one should be historical or biographical. The Inspector may examine in any of these books, and may test the intelligence of the reading by questions on the meaning of what is read.

† The writing of Standards I and II may be on slates or paper, at the discretion of the Inspector. In Standards III and upwards it must be on paper.

‡ (*a*) The Inspector may examine scholars in arithmetic in any standard lower than that in which they are presented, and in mental arithmetic suited to their respective standards. The object of the exercise in mental arithmetic is to encourage dexterity and correctness in computation; and to anticipate, by means of rapid and varied oral practice with small numbers, the longer problems which have to be worked out in writing. Such exercises should from the first deal with compounds as well as with abstract numbers.

(*b*) In those schools in which arithmetic is taught up to the fourth standard in a different order from that here prescribed, the subjects in the first three standards may, with the previous sanction of the Inspector, be re-arranged accordingly.

‖ No grant will be given for a class-subject in any standard unless in boys' schools English, and in girls' schools needle-work

In each standard a simple garment must be shown as having been made by the pupils required in that and lower standards.

SCHEDULE I.

STANDARDS OF EXAMINATION (MIDDLE).

Subjects.	Standard V.	Standard VI.	Standard VII.
	Elementary Subjects.		
(1) Reading	To read a passage from a more advanced book. Allusions to be explained in the case of passages previously read. *Reading may be tested by passages from a newspaper, or from a book not comprised in the school course.*	To read a passage from a more advanced reading-book. Allusions to be explained in the case of passages previously read.	To read a passage from Shakspeare or Milton, or from a standard history of England or India.
(2) Writing	To write from memory the substance of a short story read out twice; spelling, hand-writing, and correct expression to be considered. (At the discretion of the Inspector, dictation may be substituted for the story.) Copy-books to be shown.	To write a short narrative or letter; spelling, hand-writing, and composition to be considered. Copy-books and exercise-books to be shown.	To write a letter or narrative, or a short essay on some subject comprised in the school course for the year. Exercise-books to be shown.
(3) Arithmetic. A.—For boys	Vulgar fractions (simple); proportion (simple); practice. *Progressive exercises in mental arithmetic.*	Vulgar and decimal fractions; proportion; interest.	Discount and stocks; exchange; averages and percentages; the metric system.
B.—For girls	G. C. M. and L. C. M.; vulgar fractions (simple); proportion (simple). *Progressive exercises in mental arithmetic.*	Vulgar fractions; proportion; practice; decimals (simple).	Vulgar and decimal fractions; proportion; interest.
	Class Subjects.*		
(4) English	To recite 60 lines of poetry or 30 lines of prose, and to explain the allusions.	To recite 80 lines of poetry or 40 lines of prose from a standard writer, and to explain the allusions.	To recite 100 lines from Shakspeare or Milton, or 50 lines of prose from a standard writer, and to explain the allusions.
	To parse and analyse a simple sentence, and to know the method of forming English nouns, adjectives, and verbs from each other.	To parse and analyse a short complex sentence, and to know the meaning and use of Latin prefixes in the formation of English words.	Grammar and analysis of sentences. Prefixes and terminations; easy derivations from Latin and Greek.
(5) Needlework (for girls only).	Herring-boning, and marking on coarse material; knitting socks or stockings; plain darning and mending stockings; patching old garments.	Gathering; stroking; setting-in; sewing on buttons and button-holing; knitting a full-sized stocking; improved darning and mending; cutting out plain under-garments.	Running tucks; whipping; setting-on frills; marking on finer materials; knitting a stocking with thickened heels; Swiss darning; cutting out any garment which can be made by children at this standard.
(6) Geography (including physical geography).	The outlines of the geography of Europe; special knowledge of the geography of India. To draw outline maps of the British Isles and India. Latitude and longitude; day and night.	The outlines of the geography of the world; special knowledge of the geography of the British Isles; maps of the great continents, of the British Isles (with greater detail), and of India; showing ranges of mountains, rivers, principal towns, and railways. General circumstances which determine climate; the seasons.	Special knowledge of European geography, with maps of the several European countries, showing the principal towns, rivers, and ranges of mountains. General arrangement of the planetary system; phases of the moon.
(7) History	The outlines of the history of India (British period).	The outlines of the history of India from Akbar. The outlines of the history of England from Elizabeth to Victoria.	The outlines of the history of India from the Mogul period, and of England from the Norman conquest.

N.B.—The clauses in italics apply to all succeeding standards.

* The [illegible] for a class-subject [illegible] standard, unless [illegible] English, and in girls' schools needle-work [illegible]

MIDDLE—*continued.*

Subjects.	Standard V.	Standard VI.	Standard VII.
(8) Mathematics.*	(1) Geometry; Euclid to I, 21	(1) Geometry; Euclid to the end of Book I. (2) Algebra; addition, subtraction, and multiplication.	(1) Geometry; Euclid, Books I and II. (2) Algebra; the first four rules, resolution into factors, H. C. D. and L. C. M.
(9) Elementary science.†	(*a*) General comparison of the chief divisions of the animal kingdom; *or* (*b*) gravitation, weight, and specific gravity.	(*a*) Distribution of animals; the races of mankind; *or* (*b*) the common pump, barometer, and thermometer; pulleys and levers.	(*a*) The build of the human body; names, positions, and functions of the organs of alimentation, circulation, and respiration; *or* (*b*) elementary properties of light and heat; construction of the steam-engine.
	SPECIAL SUBJECTS.		
(10) An Indian vernacular.‡	(1) To read and translate into English a passage selected by the Inspector from the book or portion of the book read during the year.	(1) Improved reading and translation into English. Translation into the vernacular of short and easy sentences selected by the Inspector.	(1) To read and translate a passage from a book not comprised in the school course. To translate, in writing, a short passage from an easy English reader.
	(2) To write the letters of the alphabet, and words of one or two syllables.	(2) To write, from the dictation of the teacher, an easy passage from the book or portion of the book read during the year.	(2) To write, from the dictation of the Inspector or teacher, a passage from a book not comprised in the school course.
	(3) Inflections of nouns and regular verbs.	(3) Inflections; easy syntax.	(3) Grammar.
(11) A European language.	*A.—Latin.* Grammar to the end of regular verbs. Translation of easy sentences into English. *B.—French or German.* Grammar to the end of regular verbs. Ten pages of an easy reader. To write from dictation a few common words.	*A.—Latin.* Irregular verbs and leading rules of syntax. Knowledge of a first reading-book; translation of simple English sentences. *B.—French or German.* Inflexions and easy syntax. Improved reading and translation. Twenty pages of a conversation book approved by the Inspector. Dictation.	*A.—Latin.* Grammar; Cæsar de Bello Gallico, Book I. Somewhat longer sentences to be translated from English. *B.—French or German.* Grammar; reading and translation of a text-book approved by the Inspector. Oral translation of easy sentences, with tolerable correctness of pronunciation. Easy letter-writing.
(12) Botany§	Characters of the root, stem, leaves, and parts of the flower, illustrated by specimens of common flowering plants. The phenomena of the movements of plants by twining, climbing, and catching hold of objects by tendrils or other contrivances.	The phenomena of the ripening of the flower into fruit. The various forms of fruits, and the structure of seeds, *e.g.*, a bean, and a grain of wheat or rice. The various contrivances to effect distribution. The phenomena of germination. The comparison of a fern and a moss with a flowering plant.	Structure of wood, bark, and pith; cells, vessels, and tissues. Functions of the stem, root, and leaves. The food of plants, and the manner in which a plant grows. The elements of classification according to natural characters, illustrated by familiar plants.
(13) Drawing.	Easy outlines (free-hand), straight and curved.	More difficult outlines. Shading.	Easy linear perspective, and drawing from models.

* In girls' schools mathematics may be taken up as a special subject.

† Instruction in the science subjects should be given mainly by experiment and illustration. If these subjects are taught to children by definition and verbal description only, such instruction will not be accepted as qualifying for a grant.

‡ An Indian vernacular may be taken as a class or as a special subject, the decision resting with the Department in the case of each school.

§ The instruction in botany shall be given, as far as possible, with the object of cultivating the scholar's powers of observation.

SCHEDULE I.

STANDARD OF EXAMINATION (HIGH).

(FINAL EXAMINATION.)

FOR BOYS ONLY.	FOR GIRLS ONLY.
Compulsory Subjects.	
1. English:—The matriculation standard, with the addition of a manual of English literature.	1. The same.
2. French *or* German.	2. The same.
3. Arithmetic and Book-keeping.	3. Arithmetic.
4. Mathematics:—Algebra as far as quadratic equations; Wilson's Geometry, Books I—V (new edition); Mensuration.	4. Elementary Physics, or a third language (French *or* German).
5. Political Economy. Commercial Geography.	5. A general sketch of European History. General and Physical Geography.
Optional Subjects.	
6. Mechanical Drawing	6. Free-hand Drawing.
7. Elementary Physics	7. Music (as in the final examination for pupil teachers, Schedule II).
8. Elementary Chemistry	8. Botany.

SCHEDULE II.

STANDARDS OF EXAMINATION FOR PUPIL TEACHERS.

Subjects of Examination.	End of first year.	End of second year.	End of third year.
Compulsory Subjects.			
1. English, including reading, writing, grammar, composition, and the explanation of passages.	1. Standard VII of Schedule I.	1. Recapitulation of the subjects of the first year, with the addition of a manual of English literature.	1.* The matriculation standard, with the addition of a manual of English literature.
2. A second language, namely, Latin or an Indian vernacular.	2. Ditto	2. A selected portion of the matriculation course for the following year.	2.* The matriculation standard.
French or German (*for girls only.*)	Ditto ...	A course prescribed by the Department.	
3. History and Geography.	3. Ditto	3. Recapitulation. A selected portion of the matriculation course in physical geography.	3.* The matriculation standard.
4. Mathematics :— (*a*) Arithmetic. (*b*) Geometry and Algebra.	4. Ditto	4. (*a*) The whole. (*b*) Euclid, Book III; Algebra, to simple equations.	4.* (*a*) The whole. (*b*) The matriculation standard.
or (*b*) Needlework (*for girls.*)	Ditto ...	(*b*) To cut out and make parts of any plain garment in common use. Knitting.	(*b*) The same.
Optional Subjects.			
1. Music	Notation; the treble and bass staves, and the relation between them. Time, simple common and simple triple The scales, major and minor, with the intervals (major and minor, perfect or other) found in both.	1. Notation; the alto and tenor staves, and their relation to the treble. Time, compound common and compound triple. Chromatic intervals of the minor scale. Transposition from one key to another, and from one variety of time to another (as from $\frac{3}{8}$ to $\frac{3}{4}$).	1. Classification of intervals, as perfect and imperfect, consonant and dissonant. Resolution of individual dissonant intervals. Rudiments of harmony; positions of chords, progression, inversion, discord of the dominant seventh in its direct form only.
2. Drawing	2. Standard VII of Schedule I.	2. Linear perspective and drawing from models.	2. The same; blackboard drawing.
3. An Indian vernacular (if not taken up for the second language).	3. Ditto	3. A selected portion of the matriculation course for the following year.	3. The matriculation standard.
Art of Teaching.			
	To teach a class to the satisfaction of the Inspector.	The same, and to show increased skill in instruction and discipline. To write notes of a lesson on some common object.	The same. To answer questions on the methods of teaching reading, writing, and arithmetic. The form of school registers, the mode of keeping them, and of making returns from them.

Note (1).—At the end of each year's course, the following certificates must be presented before admission to the examination :—

1. A certificate from the medical officer of the school that the pupil teacher has not suffered any failure of health likely to incapacitate him for the profession of a teacher.
2. A certificate of good conduct from the managers.
3. A certificate of punctuality, diligence, obedience, and attention to duty from the principal teacher.

Note (2).—Pupil teachers who have passed the Entrance examination of the University will not be examined in the subjects marked. *

SCHEDULE III.

TRAINING COLLEGES FOR MEN.

Subjects of Examination.

I.—Reading and Repetition from Memory.

First Year.

To read with distinct utterance, due attention to punctuation, and just expression.

Each student must have learned at least 200 consecutive lines of poetry from one of the works appointed for the year in English Literature, some of which he will be called upon to repeat at the annual examination of the Training College.

Second Year.

Candidates will be expected to show improvement in the higher qualities of reading, such as expression, modulation of voice, and the correct delivery of long or involved sentences.

Each student must have learned at least 100 consecutive lines of poetry and 100 consecutive lines of prose from the works appointed in English Literature, and will be called upon to repeat some part at the annual examination of the Training College.

II.—Penmanship.

First Year.

1. To write a specimen of the penmanship used in setting copies in text hand and small hand.
2. To write a passage from dictation.

Second Year.

As in the first year, but defects more severely visited with loss of marks. Also, to set copies upon the black-board.

Note.—In examining the papers of the candidates attention will be paid to the character of the handwriting and the accuracy of the spelling.

III.—School Management.

First Year.

1. To answer questions on the best methods of instruction in reading, spelling, writing, arithmetic, and other common subjects of elementary education, both generally and with special reference to the development of the intelligence of children.
2. To answer questions on the art of oral teaching generally.
3. To write notes of a lesson for a primary school, and to teach a class.

Second Year.

1. To teach a class in the presence of the Inspector, in any standard up to VII.
2. To answer questions in writing on the following subjects:—
   (*a*) The different methods of organising an elementary school.
   (*b*) The form of school registers, the mode of keeping them, and of making returns from them.
   (*c*) The mode of teaching geography, history, and grammar, both generally and with special reference to the development of the intelligence of children.
3. To answer questions on the principles of education.

IV.—English Literature, Grammar, and Composition.

(Text-books in prose and poetry will be appointed from year to year.)

First Year.

1. To answer questions on the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry taken from one of the appointed text-books; or
   To write an essay on a given subject.
3. Précis writing.

Second Year.

1. To answer questions on the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry.
3. To write an essay on a given subject.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Jhansi (Jan. 29th)	1·40	Prospects of *rabi* crops very good; prices of food-grains almost stationary; small-pox of a mild type continues; cattle disease disappearing.
Agra („ 30th)	Rain in all parganas from 1·30 to 2·20.	Small-pox in four parganas; general health good; prices almost stationary.
Bareilly („ „)	Average rainfall during the week 3·00.	The rain has been general throughout the district and most opportune; *rabi* prospects all that could be desired; health good.
Meerut („ „)	Meerut . 2·30 Hapur . 2·50 Mowana . 5·00 Beghpat . 3·00 Ghaziabad . } 2·20 Sirdhana . }	The rain has been beneficial to the crops; health good; prices easier.
Kumaon (Feb. 1st)	Most copious rain, also snow, and in some places heavy.	The statement made last week to the effect that eight persons had died from typhus, incorrect; four deaths apparently from typhus during this week, otherwise general health good; cattle disease continues; prices unchanged.
Lucknow (Jan. 30th)	Lucknow . 5·20 Maliabad . 5·20 Mohunlalgunj 2·50	Prospects of crops favourable; general health good; small-pox abating in the city.
Partabgarh („ „)	. . . .	The rain during the week has done good to the crops; weather fine clear; prices almost stationary; health good.
Sitapur („ „)	Average rainfall throughout district over 4·00.	Light hail in parts, but no damage caused; general health good; prices stationary.
Fyzabad („ „)	Sadr . . 4·00 Akbarpur . 1·90 Bikapur . 4·20 Tanda . 2·20	Prospects good everywhere, except where damages have been caused by hail; extent of damage not yet known.
Rae Bareli („ 29th)	Sadr . . 2·50 Digbijaiganj . 3·10 Dalmau . 2·30 Salon . 2·90	Crops flourishing; health of men and cattle good; prices almost stationary.
Cawnpore („ 30th)	Average rainfall 1·90	The rain has been beneficial to crops; prospects good; sowings completed; health good; prices unaltered.
Farukhabad („ „)	Rainfall on 25th and 26th from ·60 to 2·00.	The rain has vastly improved the prospects of the season; effects are still visible, but no rain expected; no further report about spread of small-pox. *General Remarks.*—There has been a copious fall of rain ranging from ·60 to 5·20 inches throughout the Provinces, the effect of which has been most beneficial; some damage to crops from hail is reported from Fyzabad, but the prospects of the *rabi* crops are generally very good; the general health is good, the small-pox epidemic in Lucknow is abating; small-pox continues to be reported from Agra and Jhansi; prices on the whole are stationary.
Punjab—(Jan. 31st)		
Delhi	1·40	Small-pox continues in the city and district; harvest prospects good; prices almost stationary.
Hissar	Rain throughout the district.	Harvest prospects much improved; small-pox continues in Rohtak; health elsewhere good; prices falling.
Umballa . . .	2·20	Harvest prospects much improved; health good; prices stationary.
Jullundur . . .	2·42	Health good; prices steady.
Amritsar . . .	2·50	*Rabi* harvest prospects improving; prices of wheat and gram falling, of other grains stationary.
Lahore	1·60	Health and harvest prospects good; slight rise in prices.
Ferozepore . . .	Rainfall good throughout the district.	Health good; *rabi* harvest prospects improved; prices fluctuating.
Sialkot	3·00	*Rabi* assured; health good; prices falling.
Rawalpindi . . .	Nearly 3·00 in the district, and 22 feet of snow at Murree.	Fever continues in the Kahuta tehsil, and cattle disease in the Murree and Fattehjang tehsils; *rabi* harvest prospects good; slight fall in prices.
Peshawar . . .	1·70	Health and harvest prospects good; prices stationary.
Mooltan	1·00	Health and harvest prospects good; prices stationary.
Dera Ismail Khan . .	Slight rain	Health and harvest prospects fair; prices almost stationary. *General Remarks.*—Good rain has fallen throughout the province, and the harvest prospects have improved; the general health of the province is good.
Central Provinces—		
Nagpur (Jan. 31st)	·24	Weather clear; prospects good; public health good; prices slightly fallen.
Jubbulpore („ 30th)	·40	Weather cloudy and cold; prospects favourable; *rabi* crops in good condition; health good; wheat 20 and rice 15 seers per rupee.
Saugor („ 29th)	·61	Weather cool and clear; health fair; prices stationary.
Seoni („ 30th)	·96	Weather cloudy; public health good; prices stationary.
Hoshangabad („ „)	·15	Weather cloudy and cool; health good; small-pox prevalent; wheat 17 and rice 11 seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—*contd.*		
Raipur (Jan. 27th)	·22	Weather cloudy and threatening; *rabi* crops threatened by cloudy weather; slight cattle disease
Sambalpur („ 25th)	. . . .	Weather clear and cold; prospects and health good.
Khandwa („ 30th)	·20	Weather very cold; prospects good; small-pox prevalent; prices steady. *General Remarks.*—Weather cloudy and cool, with slight rain in most districts; *rabi* crops promise well; although slight damage has been caused by rain in a few districts; public health generally good; prices steady.
British Burma— (Jan. 27th)		
Akyab	. . . .	Ten deaths from cholera in two townships; small-pox in one township, otherwise public health good; slight cattle disease in one township; reaping over.
Rangoon	. . . .	Three deaths from cholera and one from small-pox, otherwise public health good; crops reaped.
Bassein	. . . .	Two deaths from cholera in one township, otherwise public health good; crops reaped.
[illegible] . . .	. . . .	Public health good; reaping finished.
[illegible] (Moulmein) .	. . . .	Eleven cases of cholera in one township and one in another, otherwise public health good both in Moulmein and district; 56 deaths of cattle reported from one township; reaping finished.
[illegible] . . .	. . . .	Three deaths from small-pox and four from cholera reported from one township, otherwise public health good. *General Remarks.*—Some cholera here and there, otherwise public health good; a little cattle disease.
[illegible] (Jan. 30th)	·42	Weather seasonable; public health good; lands being ploughed for *aus*.
[illegible] („ 31st)	·13	Prospects of winter crops good; transplantation of *boro* paddy still going on; ploughing for spring sowings has commenced; cholera is still reported and small-pox.
[illegible] („ „)	1·18	Weather very cold; reaping of winter crops progressing; common rice 21 ⅝ seers per rupee; no cholera reported.
[illegible] („ „)	1·11	Weather cold and seasonable; no further report of cholera received; mustard promises well.
[illegible] and Coorg— (Jan. 31st)		
[illegible] . . .	. . . .	Crops in good condition; prospects fair.
[illegible] . . .	. . . .	Crops in good condition; prospects fair.
[illegible] . . .	. . . .	Reaping of rice crops completed; threshing has commenced; prospects of coffee-planters disappointing; prices fallen heavily in home market, and crops turned out much below estimate; season sickly; fever prevalent in South Coorg and Nanjarajapatna taluk. *General Remarks.*—Standing crops in the Province in good conditions; harvesting operations continue in active progress; prospects fair; public health good; prices unaltered.
Berar and Hyderabad— (Jan. 31st)		
Amraoti . . .	. . . .	Threshing of *kharif* crops continues; reaping of *rabi* crops commenced; wheat 16½ and *juari* 26 seers per rupee.
Akola	. . . .	*Rabi* crops thriving; prospects favourable.
Hyderabad . . .	. . . .	Reaping of *rabi* crops commenced; *tabi* crops flourishing; cholera disappearing; prices—wheat 16½, common rice 11, white *juari* 25, yellow *juari* 31, and *tur* 29½ seers per halli sicca rupee.
Rajputana—		
Abu (Jan. 31st)	·40	Cold severe weather, windy and cloudy; health good.
Sirohi („ 28th)	·30	Wells full; health and prospects good.
Marwar („ 26th)	·66	No water in tanks; health and prospects good.
Harowti („ 27th)	Deoli . ·29 Kotah . ·48 Tonk . ·54 Shahpoora . ·50	Slight hail at Kotah and Tonk; prospects improved; weather clear, crisp, and cold; health good.
Jhallawar („ 24th)	·20	Weather windy and cloudy; small-pox of a mild type prevalent.
Ajmere („ 30th)	·28	Fever and small-pox prevalent; cold severe.
Jeypore („ „)	1·22	Crops looking well; prices stationary; health good.
Ulwar („ „)	. . . .	Rain general throughout State, has done much good; prospects and health good.

V.—Geography.

First Year.

1. The elements of geography, mathematical and physical.
2. To draw a map of the four quarters of the globe, of each country in Europe, and of India (those of England and India in greater detail).
3. The physical and political geography of Europe.
4. The physical and political geography of India in detail.

Second Year.

1. The geography, physical, political, and commercial, of Great Britain and its dependencies.
2. To draw maps readily and correctly upon the black-board.

VI.—History.

First Year.

1. General outlines of English history.
2. General outlines of Indian history.
3. The history of India; British period in greater detail.

Second Year.

1. General outlines of the history of Greece and Rome.
2. Elementary questions on Political Economy.

VII.—Mathematics.

First Year.

1. Arithmetic, including mental arithmetic.
2. Algebra, as far as the theory of quadratic equations.
3. Geometry; easy problems on the geometry of the point, straight line, and circle. (Wilson, Books I—III; edition of 1881.)
4. Mensuration of plane surfaces, including the theory of surveying with the chain.

Second Year.

1. Algebra, as far as the binomial theorem.
2. Geometry; easy problems in the geometry of the point, straight line, and circle, including proportion. (Wilson, Books I—V; edition of 1881.)
3. Plane Trigonometry, as far as the solution of triangles.

VIII.—A Second Language (Latin or an Indian Vernacular.)

First Year.

1. Passages for translation into English from two books to be named beforehand. Questions on grammar and idiom.
2. Easy passages of English to be translated into the second language.

Second Year.

1. Passages for translation into English from two books to be named beforehand. Explanation of passages; questions on grammar and idiom.
2. Translation of a passage from an author not previously named.
3. Translation from English into the second language.

Note.—The foregoing eight subjects are compulsory. Any of the following may also be presented.

IX.—Music.

First Year.

1. Notation; the treble and bass staves and the relations between them.
2. Time; simple common and simple triple.
3. The scales, major and minor, with the intervals (major and minor, perfect or other) found in both, and the chromatic intervals found in the latter.
4. Transposition from one key to another and transcription from one variety of time to another (as from $\frac{3}{2}$ to $\frac{3}{4}$).

Second Year.

1. Notation; the alto and tenor staves, and their relations to the treble and bass.
2. Time; compound common and compound triple.
3. Classification of intervals, as perfect and imperfect, consonant and dissonant.
4. Resolution of individual dissonant intervals.
5. Rudiments of harmony, positions of chords, progression, inversion, discords by suspension (on fundamental basses only), the discord of the dominant seventh (in its direct form only).

X.—Drawing.

First Year.

Free-hand drawing, from copies and models.

Second Year.

Practical geometry, perspective, and projections.

XI.—A Third Language.

1. For candidates who have taken Latin:—an Indian Vernacular, French, German, or Greek.
2. For candidates who have taken an Indian Vernacular:—Latin, French, German, or Greek.

Subjects of examination in the first and second year as under VIII.

XII.—Physics.

The subjects of the First Arts Course of the Calcutta University.

TRAINING COLLEGES FOR WOMEN.

Subjects of Examination.

I.—Reading and Repetition from Memory.

First Year.

To read with distinct utterance, due attention to punctuation, and just expression.

Each student must have learned at least 200 consecutive lines of poetry from some work selected by the authorities of the College, with the approval of the Inspector; a part of which she will be required to repeat at the annual inspection of the Training College.

Second Year.

Candidates will be expected to show improvement in the higher qualities of reading, such as expression, modulation of voice, and the correct delivery of long or involved sentences.

Each student must have learned, in addition to what she has learned in the first year, at least 100 consecutive lines of poetry and 100 consecutive lines of prose from works selected by the authorities of the College, with the approval of the Inspector; and she will be required to repeat some part at the annual inspection of the Training College.

II.—Penmanship.

First Year.

1. To write a specimen of the penmanship used in setting copies in text hand and small hand.
2. To write a passage from dictation.

Second Year.

As in the first year, but defects more severely visited with loss of marks. Also, to set copies upon the black-board.

Note.—In examining the papers of the candidates, attention will be paid to the character of the hand-writing and the accuracy of the spelling.

III.—School Management.

First Year.

1. The methods and principles of elementary teaching, both generally and with special reference to the development of the intelligence of children.
2. To write notes of a lesson for a primary school, and to teach a class.
3. To answer questions on the form of school registers, the mode of keeping them, and of making returns from them.
4. Special questions on the following subjects will be inserted in the papers for those candidates who desire to obtain special certificates as teachers of infants:—
   (*a*) The method of teaching infants and of conducting an infant school.
   (*b*) Notes of object lessons, such as common domestic processes, functions of the human body; common plants, animals, and minerals, their appearance and use.

Second Year.

1. To teach a class in the presence of the Inspector.
2. To answer questions in writing on the following subjects:—

(*a*) The different methods of organizing an elementary school.
(*b*) The form of school registers, the mode of keeping them, and of making returns from them.

IV.—English Literature, Grammar, and Composition.

(Text-books in prose and poetry will be appointed from year to year.)

First Year.

1. To answer questions in the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry taken from one of the appointed text-books; or
To write an essay on a given subject.
3. Précis writing.

Second Year.

1. To answer questions on the language, style, and subject-matter of the books appointed for the year.
2. To turn into prose a passage of poetry.
3. To write an essay on a given subject.

V.—Geography.

First Year.

1. The elements of geography, mathematical and physical
2. To draw a map of the four quarters of the globe, of each country in Europe, and of India (those of England and India in greater detail).
3. The physical and political geography of Europe.
4. The physical and political geography of India in detail.

Second Year.

1. The physical, political, and commercial geography of Great Britain and its dependencies.
2. To draw maps readily and correctly upon the black-board.

VI.—History.

First Year.

1. General outlines of English history.
2. General outlines of Indian history.
3. The history of India, British period in greater detail.

Second Year.

A special period of English history.

VII.—Arithmetic.

The whole subject, with special reference to the methods of teaching it.

VIII.—Needle-work.

First Year.

1. To cut out and make parts of any plain garment in common use.
2. Knitting.

Second Year.

Domestic needle-work in all its branches.

IX.—Domestic Economy.

First Year.

1. Rules for the preservation of health.
2. Clothing.
3. Food, and its preparation.

Second Year.

In addition to the subjects of the first year:—
4. Household accounts and management.
5. Sick-room management.

Note.—The foregoing nine subjects are compulsory. Any of the following may also be presented.

X.—Music.

First Year.

1. Notation; the treble and bass staves, and the relation between them.
2. Time; simple common and simple triple.
3. The scales, major and minor, with the intervals (major and minor, simple or other) found in both, and the chromatic intervals found in the latter.
4. Transposition from one key to another, and transcription from one variety of time to another (as from $\frac{3}{2}$ to $\frac{3}{4}$.)

Second Year.

1. Notation; the alto and tenor staves, and their relations to the treble and bass.
2. Time; compound common and compound triple.
3. Classification of intervals, as perfect and imperfect, consonant and dissonant.
4. Resolution of individual dissonant intervals.
5. Rudiments of harmony; positions of chords, progression, inversion, discords by suspension (on fundamental basses only); the discord of the dominant seventh (in its direct form only).

XI.—Drawing.

First Year.

Free-hand drawing, from copies and models.

Second Year.

Perspective; landscape drawing.

XII.—Second Language. (French, German, Latin, or an Indian Vernacular.)

First Year.

1. Passages for translation into English from two books to be named beforehand. Questions on grammar and idiom.
2. Easy passages of English to be translated into the second language.

Second Year.

1. Passages for translation into English from two books to be named beforehand. Explanation of passages; questions on grammar and idiom.
2. Translation of a passage from an author not previously named.
3. Translation from English into the second language.

XIII.—Mathematics.

First Year.

1. Algebra, as far as simple equations.
2. Geometry; the first two books of Euclid.

Second Year.

In addition to the subjects of the first year—
1. Algebra; ratio and proportion.
2. Geometry; the third and fourth books of Euclid.

Page 4.

Certificate in accordance with Article 22, *Note* 3 *of the Code* :—"When a scholar has been transferred from one school to another in the course of the year, his attendance at the former school will not be counted unless his scholar's register shows that he has been transferred with the permission of the manager of that school.

Certified* that _____ has been withdrawn from the _____ school with the consent of the managers.

_____ Head Master.

* This certificate is to be repeated in the above form for every subsequent transfer

residing at _____

was born at _____

on the _____ day of _____ 18_____, as certified by _____

Signed _____

(1) _____

(1).—To be signed by the principal teacher, the secretary, or one of the managers of the school.

N.B.—This book, on the child's admission to an aided school, is to be given to the teacher, who will keep it, and at the end of every school year make an entry of the child's attendance (after 3 years of age). At each annual examination, the Inspector will make an entry showing the subjects in which the child has been examined, and those in which he has passed. The book will be given back, duly made up, when the child leaves the school.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

CORRESPONDENCE RELATING TO THE EDUCATION OF EUROPEAN AND EURASIAN CHILDREN IN INDIA.

No. 2
56—66.

Extract from the Proceedings of the Government of India, in the Home Department (Education),—under date Fort William, the 8th February 1883.

READ again—

Home Department Resolution No. 8, dated the 8th October 1881, reviewing the subject of the education of European and Eurasian children in India, and appointing a Committee to prepare a draft Code for regulating the grant of Government aid to European and Eurasian schools.

Despatch from Her Majesty's Secretary of State for India, No. 27, dated 23rd February 1882, approving of the proposals set forth in the foregoing Resolution.

Letter No. 4461, dated the 20th July 1882, from A. W. Croft, Esq., submitting the draft Code drawn up by the Committee appointed in the said Resolution, together with an Explanatory Report.

Home Department letter No. 484, dated the 20th September 1882, thanking the Committee and inviting them to re-consider certain points in the draft Code.

Letter No. 2, dated 22nd December 1882, from A. W. Croft, Esq., in reply to the foregoing, with revised copy of the draft Code.

RESOLUTION.

IN paragraph 22 of the Resolution of the 8th October 1881, the Governor General in Council appointed a Committee* to draft a Code for regulating the conduct of European education in the Bengal Presidency so far as this is dependent upon Government support. The Committee were instructed to consider, in accordance with the general principles laid

President:

* A. W. Croft, Esq., Director of Public Instruction, Bengal.

Members:

The Venerable Archdeacon Baly.

The Very Reverend Father Van Impe, Rector of St. Xavier's College.

The Reverend J. Robertson, Principal of the Free Church College, Calcutta, and late Principal of the Doveton Institution.

down in the Resolution, the conditions upon which Government aid should be given to European schools, the mode in which the system of payment by results could best be introduced and worked, the standard of education to be required in the different classes of schools, the scales of remuneration suited to each class, the manner in which the Government scholarships should be distributed and awarded, the development of a system of pupil teachers, and the establishment of training colleges. They were directed, in framing their proposals, to bear in mind the wish of the Government of India that the total extra expenditure to be thrown on the Provincial Governments by any revised arrangements should not aggregate more than one lakh of rupees per annum over the whole of the Bengal Presidency.

2. The Report of the Committee, with the draft Code prepared by them, was received by the Government of India in July last, and has been carefully considered by the Governor General in Council. The cordial thanks of Government have already been conveyed to the Members; and regrets expressed at the untimely death of the Very Reverend Father Van Impe, whose place upon the Committee was ably filled by the Reverend Father Lafont.

3. The Committee have dealt with the whole subject referred to them in a most complete and satisfactory manner, and have taken much pains to consult, in the course of their deliberations, not only the principal educational officers of the different provinces but also the managers of all the leading European schools. They have borne in mind the financial restrictions imposed upon them, and endeavoured, in framing their proposals, to effect as little disturbance as possible in the amounts of existing grants. They believe that the sysem of grants suggested in the Code, if applied to existing primary and middle schools, would not at the outset raise the Government expenditure by more than 10 per cent. At the same time, they are conscious that no very certain conclusion can be come to on the subject of expenditure until the application of the standards has been tested by actual experience. They propose, therefore, that the Code should not be brought into full operation immediately, but that for two years the schools affected by it should be examined under the proposed standards and the amounts that would be earned under the Code recorded, existing grants being, for the meantime, maintained. In the light of the information thus accumulated, the rates and rules embodied in the draft Code should, it is suggested, be eventually revised.

4. The Governor General in Council fears that if the introduction of the Code as a whole is postponed absolutely for two years, nothing will be done in that time to establish schools in stations where they are now required; while the introduction of a system of training pupil teachers will be undesirably delayed. He would be glad, therefore, if the Local Governments interested could see their way to introducing and working in actual experiment the provisions of Chapter III of the Code, regarding pupil teachers; of Chapter VI, regarding building grants; and of Chapter VII, regarding scholarships. They might also, it is thought, apply the provisions of the Code, with any desired modifications, in the case of new schools. If this is done, the Committee's suggestion may be acted upon for the next two years in the case of all existing schools.

5. In paragraph 7 of their Report the Committee go on to explain the details of the draft Code. The Governor General in Council will here only notice those points upon which the orders or remarks of Government seem to be called for. In the absence of any indication to the contrary the proposals of the Committee may be deemed to have been accepted by the Government of India.

6. The Committee have adopted in Article 3 of the Code the definition of the term "European" followed in the Government

Resolution of the 8th November 1881, but they anticipate difficulty in applying the definition in particular cases. These difficulties may be met by adding to this Article the words—"The Local Governments "shall in all cases of doubt decide the proper application of the "term."

7. The conscience clause, embodied in Article 5 of the Code and explained in paragraph 10 of the Report, is accepted by the Governor General in Council as generally sufficient.

8. In paragraphs 11 and 12 of the Report is discussed the question whether all schools are to be eligible for grants irrespective of their status or financial position. The Committee rightly hold that no school should get a grant that can do without it, and this general principle is enforced in clause (f) of Article 6 of the Code; while, to meet the case of high schools that may require aid to some though not to the full extent contemplated by the ordinary rules, provision is made in Article 40 for a reduction in the grant earned in such schools when the income from all sources is large enough in the opinion of the Department to render the full grant unnecessary for efficient maintenance. The Committee are not themselves altogether satisfied with this rule, and the objections to any such plan of determining grants with reference to expenditure in the manner proposed are forcibly stated by one of their Members in paragraph 12 of the Report. The Governor General in Council requested the Committee to re-consider this question, but they have failed to discover any more satisfactory rule than that adopted in the Code. His Excellency in Council is disposed to agree with the view taken in paragraph 10 of the Committee's further letter upon this subject (No. 2 of the 22nd December 1882), that the best way of meeting the difficulty eventually will be found in the imposition of a fee-limit, and the attention of the Department should be given to the determination of such fee-limit in the case of high schools. Meantime, a Note will be appended to Article 40 of the Code to the effect that—"The operation of this Article is limited to a term of three years "from the date on which the Code comes into force."

9. The Local Governments are requested to keep the Government of India informed of any rules they may lay down, or orders they may give, regarding the disallowing of schools by the Department under Article 6 (*e*) of the Code, on the ground of their being unnecessary or unsuited to the requirements of the locality.

10. The Committee, by a majority, decided that private adventure schools should be excluded from the benefits of the Code. The Governor General in Council is not prepared, in the present state of European education in the Bengal Presidency, to place a special ban upon schools of this class. If they fulfil the requirements of the Code, he would be willing to give them grants. The Government is bound to avail itself at present of every educational agency that may offer itself, provided the education afforded by it is satisfactory. Clause (*b*) of Article 13 of the Code as drafted,—"That the school is not carried on with a view to private emolument,"—will, therefore, be omitted.

11. In paragraph 28 of the Report, the Committee advocate the appointment of a special European officer to have the supervision of European education throughout Upper India. As the cost of the measures proposed will fall upon the various Local Governments concerned, it is not practicable for the Government of India to give effect to this suggestion. Each Government must be left to make its own arrangements for inspection, but the advisability of entrusting this duty to a carefully selected European officer in each province should be borne in mind; and it will be very useful if the inspecting officers of the different provinces communicate freely with

one another directly and meet occasionally to discuss and settle any points of importance that may arise.

12. The special attention of Local Governments is invited to the proposals of the Committee in paragraph 29 of the Report, regarding the proper mode of dealing with the case of non-European pupils in European schools. The point is one on which full report will be expected hereafter. It should be considered whether the required majority of European pupils should not be raised to two-thirds of the whole number of pupils. Meantime, the rules suggested are provisionally accepted by the Government of India.

13. The Committee's proposals regarding the standards of examination meet with the approval of the Governor General in Council except in the case of the final standard of high schools. The University Entrance Examination is admittedly not a proper standard for schools of this class, and the Government of India direct that it be excluded from the Schedule of Standards of Examination and from Article 27 of the Rules. The final standard for high schools will be that shewn as Standard B in the Code submitted by the Committee.

14. The Committee's original proposals regarding night schools (paragraphs 52 and 53 of their Report) appeared to the Governor General in Council to be somewhat too limited in scope. The revised rules proposed in their letter of the 22nd December last are accepted by the Government of India.

15. In the matter of scholarships, the Government of India would be glad to see provision made by Local Governments for the grant of scholarships to be held in colleges of technical instruction by lads passing with credit the final standard of examination in high schools. This is the more necessary now that the University Entrance Examination has been rejected as a final standard for such schools.

16. The Governor General in Council accepts the proposals of the Committee regarding the qualifications of teachers as modified by their letter of the 22nd December.

17. A copy of the draft Code, as finally accepted by the Government of India, is appended to this Resolution.

ORDER.—Ordered, that a copy of this Resolution, together with a copy of the papers noted on the margin, be forwarded to all Local Governments and Administrations in the Bengal Presidency for information and guidance, to the Public Works Department for information, and to the Foreign Department for information and communication to the Chief Commissioner of Ajmere and the Agent, Governor General, Central India.

From the President of the Committee on European and Eurasian education, No. 4461, dated the 20th July 1882.
Report of the Committee, dated 17th July 1882.
To the President of the Committee on European and Eurasian education, No. 484, dated the 20th September 1882.
From ditto, No. 2, dated the 22nd December 1882.

Ordered also, that these papers be published in the Supplement to the *Gazette of India*.

(True Extract.)

A. MACKENZIE,
Secretary to the Government of India.

No. 4461, dated Calcutta, the 20th July 1882.

From—A. CROFT, Esq., President of the Committee appointed under Home Department Resolution No. 8, dated 8th October 1881,
To—The Secretary to the Government of India, Home Department.

I HAVE the honour to submit the report called for in your No. 280, dated the 29th April last, together with the draft Code for regulating the conduct of European Education in the Bengal Presidency, which has been drawn up by the Committee appointed with that object under Home Department Resolution No. 8, dated 8th October 1881.

REPORT OF THE COMMITTEE APPOINTED TO DRAFT A CODE FOR REGULATING THE CONDUCT OF EUROPEAN EDUCATION IN THE BENGAL PRESIDENCY.

Introduction.

IN accordance with the Resolution of the Government of India in the Home Department, No. 8, dated Simla, the 8th October 1881, we have the honour to submit, for the consideration of his Excellency the Governor-General in Council, the accompanying draft of a Code for regulating European education in the Bengal Presidency, so far as it is dependent on Government support.

Explanation of the delay in submitting the draft Code.

2. We regret that, owing to a variety of causes, it has been found impossible to complete our deliberations within the time specified in the Resolution. The delay has been largely occasioned by the necessity of supplementing by more detailed enquiries the information placed before us, and by the great difficulty we have experienced in obtaining replies to the circulars issued.

The difficulty of drafting a Code in present circumstances.

3. In framing the draft Code and appended schedules, we have turned to account all the information that we could obtain in India, and have also freely availed ourselves of the results of recent experience in England and Scotland. But the problem of European education in India is complicated by special difficulties which have no existence in England. In elementary education, for example, it is necessary to provide for a double system of money tables, weights, and measures; for the history and the special geography of India in addition to that of England; and for an Indian vernacular. Rules must also be laid down for secondary education; and this must be done in such a way as on the one hand to develope commercial education, which can hardly be said to exist at present, and on the other, to supply a suitable connection between the elementary school and the University. The varying principles on which grants have hitherto been given have to be replaced by a system of payment-by-results, without doing any avoidable harm to existing schools. In framing this system, it is necessary to take into account the different circumstances of boarding as well as day schools, of schools in the hills as well as those in the plains, and of the large schools in the Presidency towns as well as the small schools in the mofussil. The system must also provide for the maintenance of indigent children in free schools and orphanages. Moreover, provision must be made for adding 50 per cent. to the number of children at present under instruction, and for supplying additional school accommodation in the smaller stations, without adding finally more than Rs. 1,00,000 a year to the present Government expenditure.

Tentative character of the proposed scale of grants.

4. We have received returns from 70 schools, showing 6,600 scholars on the rolls. Taking these returns as a guide, we have calculated the amounts of the grants to be given for attendance and instruction, in such a way as to disturb the existing grants as little as possible. We must, however, point out that these returns are not sufficiently accurate to furnish data for a final settlement of the grants, or for an estimate of the probable cost to Government. None of the schools have as yet been examined by the proposed standards, and in very few schools does the course of instruction exactly correspond to that now laid down. The returns can give at best only the teacher's estimate of the knowledge possessed by each scholar; and in many cases they merely show the number of children in each class of the school, without any attempt at classification by standards. The scale of grants proposed in the Code can therefore be regarded only as tentative and experimental; at the same time we believe that it will serve as a basis for determining the rates that may finally be adopted. We are disposed to think

that if the proposed rates were applied to existing primary and middle schools, the additional expenditure, if any, that would fall on Government, would not at the outset exceed 10 per cent. The case of high schools is considered in a later paragraph.

Means adopted to obtain the opinion of experts.

5. The standards of examination which we proposed to adopt were sent to the Directors of Public Instruction in the different provinces to which the Code is intended to apply, as well as to the managers of all European schools in those provinces, with the object of obtaining an expression of their views upon our proposals. We also took the opportunity of consulting those educational officers from Bombay and Madras who were present in Calcutta during the cold weather as members or the Education Commission. The majority of those whom we consulted approved entirely of the standards proposed, and all were willing to accept them with modifications. Of the many valuable suggestions that we received, the most important have been adopted. In the Central Provinces, indeed, it was represented that the standards were uniformly too high; but on a careful examination of those proposed by the Inspector General of Education, we found that the main difference lay in the introduction of an initial standard of examination below that which we have adopted as standard I. We hold, however, to the opinion that no advantage is likely to result from the individual examination of children at so early a stage of their school career. For children at that stage, we are of opinion that grants should be determined solely by attendance, organization, and discipline; and we have accordingly proposed in their case a higher rate of attendance grant.

The mode of introducing the Code.

6. We are unanimously of opinion that if the Code in its present form is approved by His Excellency the Governor-General in Council, it should not be brought into full operation immediately. We recommend that, in the first two years, the schools should be examined under the proposed standards by an Educational officer specially deputed to that duty, and the amounts that would be earned under the Code recorded for future guidance; but that during that period no change should be made in the grants now enjoyed by the schools. The information obtained during this period of transition will enable the Education Department to determine the sufficiency and suitability of the rates here tentatively proposed, and to modify them in any way that experience may show to be necessary; while the schools will have time allowed them to work up to the proposed standards. The revised rates may then be finally introduced, and grants made to schools in strict accordance with them; with the possible modification, should such a course be found desirable, that in the third year half the grants should be made on the old, and half on the new system, the full introduction of the Code being postponed to the fourth year. This appears to us to be the only satisfactory method of removing the uncertainty that must otherwise attend the introduction of the new system, and of securing that "no avoidable harm is done to existing schools." In the words of the Resolution (paragraph 19), "the system must be introduced gradually, with such temporary modifications and adaptations as will enable all really sound institutions to bear the change without injury. As time goes on and the standard of education rises, the conditions of the grants may be modified and made more stringent."

7. Having thus explained our view of the practical value of the scheme which we have the honour to submit, we now proceed to explain in detail the principles by which we have been guided and the methods by which we propose to give effect to them.

The definition of the term "European."

8. We have adopted, with a few verbal modifications, the definition of the term "European" given in the note appended to paragraph 6 of the Resolution. We anticipate, however, that there will be difficulty in applying the definition to particular cases. We were at first disposed to recommend that the term should be applied only to those children whose parents (or one of whose parents) use a European language as a vernacular; but on reconsideration we found that, apart from the general difficulty of applying such a test, it might have the effect of excluding from the benefits of the Code a certain number of children, specially those of unknown parentage, in free schools and orphanages, for whom the Government of India intended that provision should be made. On the other hand, it should be understood that the definition, as it now stands, does not clearly exclude such classes as the "Feringhis" of Chittagong, the "Portuguese" of Bombay, or the Indo-Chinese of Calcutta, who can hardly be regarded as having been contemplated in the Resolution. These classes would be largely, if not entirely, eliminated by the application of the language test.

The scope of the resolution.

9. As explained in the Resolution (paragraph 19), "the chief object to be kept in view is the provision of greater facilities for the education of the poorer classes of European children." This is to be secured by a more equitable distribution of grants-in-aid, by the award of scholarships, and by providing a larger supply of efficient teachers; and the only conditions laid down (paragraph 18) are (1) that the system shall be one of strict religious neutrality; (2) that all schools which give a sufficient and suitable secular education shall be eligible for aid; (3) that aid shall be given on the system of payment-by-results; and (4) that every aided institution shall be freely open to the inspection of the Government educational officers.

The conscience clause.

10. The Resolution does not appear to contemplate any application of the principle of religious neutrality beyond requiring that no school shall be disqualified for a grant-in-aid because of the religious denomination to which it belongs. This would probably be sufficient for all practical purposes in these places in which schools suited to the various denominations actually exist, but it does not meet the case of those places in which there is room for only one or two schools, and in which, therefore, children of one denomination will have to attend schools of another. In the last-mentioned case it appears to us only reasonable that an institution aided by the State should be subject to a conscience clause; and the existence of such a clause in all aided institutions will probably tend to give increased facilities for education. We have therefore recommended (article 5) that every aided institution shall be conducted in accordance with a conscience clause similar to that which is enforced in every public elementary school in England and Scotland, and in every Irish National school. We do not recommend that the managers of every aided school should be required to give facilities, on the school premises, for the religious instruction of scholars whose parents object to that given in the school. In schools established wholly or for the most part by Government such facilities might well be required, as is the case in the "vested" schools of Ireland; but a school built mainly by voluntary subscriptions, like the "non-vested" schools, must in fairness be left in this respect entirely under the control of its managers. We think it sufficient that no scholar shall be required to attend any religious service, or to receive any religious instruction, against the expressed wish of his parents or guardians. But to give greater prominence to the principle of religious neutrality, as well as to make it clear that grants are given only on account of "a sufficient and suitable secular education," we have inserted in article 6 the declaration that no grant is given for or in respect of any instruction in religious subjects. A similar declaration will be found in article 7 (*a*) of the English and Scotch Codes. We have reason to believe that the proposed conscience clause will be generally acceptable.

The eligibility of all schools that give a sufficient and suitable secular education.

11. The principle of the eligibility of all schools that fulfil the condition of giving a sufficient and suitable secular education is enunciated in the Resolution in connection with the requirement of religious neutrality, and appears to us to have been intended to prevent the exclusion of any school on religious grounds, rather than to secure the inclusion of all schools that satisfy the condition. However this may be, we are of opinion that the principle should not be adopted without limitations of a somewhat stringent character. There are certain schools which, owing to their high rate of fees or the possession of substantial endowments, are, or ought to be, independent of Government support; and in view of the strong tendency in this country to lean as much as possible on Govern-

Exceptions. Schools with a large income from fees or endowments.

ment, we think it desirable that such schools should be excluded from the operation of the Code. We have, therefore, introduced into article 6 the limitation that no grant shall be made in respect of any school, the income of which from all sources is sufficient, in the opinion of the Education Department, to maintain it in efficiency. But as it is evident that there are high schools which may require aid in varying degrees, we have provided in article 40 that such schools shall not receive the full grants to which they would otherwise be entitled under the Code, but only such a proportion of the full grants as the Department may think necessary in order to maintain them in thorough efficiency. We admit that we are not entirely satisfied with this method of fixing the grants to high schools, the working of which may not be free from difficulty; but after careful consideration of the arguments adduced in the next paragraph, we have found ourselves compelled to introduce some such condition as this, on account of the large amounts that might otherwise be claimed by flourishing schools in Calcutta, which stand in no real need of such assistance. Under the conditions of a fixed total grant for European education, the admission of such schools to the full benefit of the Code could only have the effect of largely reducing the amount available for grants to small and poor schools, and of developing high education at the expense of primary and middle.

The corresponding limitation in the English and Scotch Codes is that, in any school receiving aid, the ordinary fee for instruction must not exceed nine pence a week (English Code, article 4; Scotch Code, article 6 *d*); but with our present information we are unable to recommend the introduction of a fee limit.

Objection to the proposed method of determining grants to high schools.

12. One of our number is unable to concur in the recommendation of this mode of determining the grants to high schools, and desires to place his views on record, so that they may be taken into consideration in the final settlement of the question. Exception is taken to the proposed method, because it introduces a principle that has been carefully excluded in determining the grants to primary and middle schools. Grants earned by the latter are limited only by their income from all other sources (article 38); grants to high schools are similarly limited, but are finally determined by expenditure (article 40). The question of efficiency need not be considered in this connection, as that is equally secured by either method. But it is contended that the principle of basing grants on expenditure has a tendency to encourage and develope small schools, by making it possible to maintain schools with a comparatively small number of scholars; and that it fails to supply the stimulus to the formation of large schools which is secured by allowing a grant to increase with the income from other sources, that is, practically, with the number of scholars. A more serious objection is that the want of any uniform rule as to the rate of expenditure in the different high schools will cause great difficulty, and probably much uncertainty, in its application. This principle regulates the present grants to colleges in Lower Bengal, and in one case it has necessitated the substitution of estimated for actual expenditure. It will be practically impossible to obviate this awkward result in the case of Roman Catholic schools, the establishments of which, as a rule, provide only a subsistence allowance for their teachers. The full force of this objection may be seen by comparing the tuitional expenditure of such schools as Bishop Cotton's School, Simla, the Naini Tal Diocesan School, St. George's College, Mussoorie, the Allahabad High School, and St. Francis de Sales' School, Nagpore, in which the monthly expenditure varies from R14-12-5 to R3-13-4 for each scholar. The application of this principle will also cause grave irregularities in the rates of the grants allowed to the various schools. If carried out on the basis of actual expenditure, it will seriously reduce the grants to most Roman Catholic high schools; and if the expensive establishments of many of the hill schools are admitted to be necessary, it will allow these schools to draw full grants, while it reduces the grants to schools of precisely the same class in Calcutta. The principle therefore, it is urged, practically subsidises hill schools as opposed to Calcutta schools. If high schools were opened, as they should be, only where a number of scholars sufficient to justify the expense could be collected, the principle would be found to subsidise hill schools as opposed to schools in the plains, and thus to be inconsistent with the principle laid down in paragraph 15 of the Resolution. If it is contended that the proposed method is needed in order to secure the grants necessary for the maintenance of all high schools outside Calcutta, it is replied that these schools have been unnecessarily multiplied, that they have been opened at places where there is not a sufficient amount of local support, and that the supposed necessity is the direct result of the principle objected to, which facilitates the multiplication of small schools. The method proposed in the Code does not recognise the superior merit of either self-denial or success; it discourages a successful school, and encourages one that is less successful. It must thus tend to create uncertainty and dissatisfaction, and as the Department is not likely to allow any discussion of the reduction adopted for a particular school, this tendency will be greatly increased in any disputed case. In short, the proposed method leaves the present anomalies and inequalities in the mode of aiding high schools practically untouched, and affords no prospect of a final settlement of the question. If the condition of a fixed total grant for European education makes it impossible to admit all high schools to the benefits of the Code, it is contended that it would be more just and reasonable to adopt some method of eliminating schools that are intended for the better classes, and therefore charge high fees. The most direct method of securing this is to insist on a fee limit, as in England and Scotland, and to refuse grants to any school in which the monthly boarding fee exceeds R24, and the monthly tuition fee exceeds R2 in the primary, R4 in the middle, and R6 in the high department. If the amount to which high schools would thus be entitled should still absorb too large a proportion of the total grant, a further reduction might be secured by cutting off grants for attendance, as less necessary in those schools, and allowing grants for passes alone. This method would secure uniformity in all aided schools, and by tending to reduce high fees would give greater facilities for the education of the children of the poorer classes. Schools for the higher classes may be left to themselves, as in England and Scotland. But whatever method is finally adopted, it is contended that until fuller information is obtained than is at present available, it would be better to continue the present mode of aiding high schools than to introduce an exceptional method based on an uncertain principle.

Unnecessary schools.

13. We are all agreed in thinking that where there are more schools than can reasonably be expected to be maintained in efficiency, the interests of education require that there should be some means of reducing their number; and when there is a tendency to multiply small schools for any purpose, denominational or other, an effort should be made to check this tendency. This is partly secured in England and Scotland by article 7 (*b*) of their Codes; but as the purpose we have in view is somewhat wider, we recommend that the limitation should be expressed as in article 6 (*e*) of the draft Code:—"No grant is made for or in respect of any schools which the Department declares to be unnecessary, or unsuited to the requirements of the locality." This limitation is all the more important in view of article 6 (*d*), which fixes the minimum of scholars constituting a school at 12.

Private adventure schools.

14. Further, we are of opinion, though on this point we have been unable to arrive at a unanimous conclusion, that as in England and Scotland, no school carried on with a view to private profit should be eligible for aid under the Code, and accordingly we have introduced this limitation into article 13 (*b*), which corresponds to article 17 (*b*) of the English and Scotch Codes. Its introduction is held to be justified, partly by the practice prevailing in other countries, but mainly by the considerations that efficient schools of this class can hardly be said to exist in India; that the majority of those that do exist have acted prejudicially to the interests of education by preventing the establishment of more efficient

schools; and that the recognition of them in the Code would only increase this tendency, and thus help to defeat the great purpose of providing facilities for the extension of efficient education. On the other hand, it is contended that the proposed limitation excludes good and bad alike; that it may prevent the opening of schools by private persons in some stations in which there is at present no school, and in which there is little probability of a school being opened at an early date under the management of a committee; and that it seems to traverse the principle laid down in paragraph 18 of the Resolution, that Government "will not insist on any particular form of management." But those of us who support the view which has been embodied in the Code are so deeply impressed with the mischievous tendency of such schools as a rule, with the impropriety and impolicy of giving Government aid to what is a purely private adventure, and with the necessity of enforcing in every possible way the principle that schools, if aided by Government, must be carried on with exclusive reference to the interests of the scholars, that notwithstanding the considerations above adduced, we cannot recommend the recognition of any school conducted with a view to private emolument or profit. To give full effect to that principle, indeed,

Teachers as managers.

no teacher should be allowed to be a manager of the school in which he is employed; but this regulation would interfere so seriously with the arrangements of some of the best schools, that it would be impossible to enforce its adoption in every case. We recommend that, except with the consent of the Department, teachers should not be allowed to be members of the committee of management (article 11 *b*), which should in every case consist of at least three members (article 12). We have also added the condition that the income of every aided school must be applied solely to educational purposes recognised by the Department (article 14 *c*). These last two provisions will be governed by the admission or the exclusion of private adventure schools.

As, however, the opinions of the Committee are equally divided on the question of admitting private adventure schools to the benefits of the Code, we have thought it advisable to enter upon a fuller statement of the grounds for supporting or opposing that policy.

15. In the first place, it not contended that inefficient and unnecessary private adventure schools ought to be placed under the Code. Nor, again, is it contended that an efficient and necessary private adventure school, which is carried on at a profit, or allows its principal teacher an income, after payment of all expenses, equal to the salary which he might fairly claim if the school were under a committee of management, should be entitled to claim a grant. The only condition, therefore, under which a private adventure school, being both efficient and necessary, can claim a grant, is that its income does not suffice to maintain the proper standard of efficiency, unless the principal teacher, who is its proprietor, carries it on at a loss to himself. Those of us whose opinion is now being stated think it doubtful whether such a school exists, or is hereafter likely to exist, in the Presidency of Bengal. But admitting the supposition that under the operation of the Code such schools may be called into existence, and also allowing the justice of aiding them, we are decidedly of opinion that the aid given should be given under the regulation of the Code which places the school under a committee of management, the principal teacher and his assistants (if any) becoming thenceforth their salaried officers. Our grounds for this opinion are as follows:—

Conditions under which private adventure schools could be recognised.

(1.)—It is impossible for the Department to exercise the regular supervision and control which the school would have under a local committee of management. The Inspector makes one visit of inspection, and at most one or two visits of surprise, during the year. The school accounts are inspected only once a year. But a school under a local committee is frequently visited by one of the members, or by the secretary of the committee; its accounts and attendance registers are made up, examined, and checked monthly; the recovery of unpaid fees is more easily made; and complaints made by parents more satisfactorily settled by a committee of management than by a teacher carrying on the school for his own profit.

Better supervision under a committee.

(2.)—A teacher of a school under a committee of management occupies a much more independent position towards his scholars and their parents than the teacher of a private adventure school. In private adventure schools, children are often withdrawn on unfounded charges of unjust or severe punishment, or for having been put down in their class, or because other children are thought unduly favoured, or on account of a private disagreement, entirely unconnected with the school, between the teacher and the parents. The proprietor and teacher of a private adventure school has to keep the parents in good humour, and he cannot enforce either strictness of discipline, or regularity and punctuality in payment and attendance. Every one acquainted with the working of European schools in India, especially in the smaller stations, knows to what an extent these evils exist even when there is a committee of management. But in this case they are greatly kept in check, and are sooner corrected, by the influence which the managers can bring to bear upon the parents.

Greater independence.

(3.)—Schools under a committee of management are maintained, not by fees alone, but also by local grants and voluntary contributions, wherever such are needed. Private adventure schools are without this source of income, and therefore can fulfil the conditions of the Code (if they can fulfil them at all) only in an inferior degree, and at a higher cost to the parents of their scholars. Further, the teacher of a private adventure school has too strong a pecuniary interest to get the most out of the school with the least possible expenditure, since it comes out of his own pocket. His assistants, if he has any, have lower salaries and lower qualifications than those of schools conducted by a committee, and in the smaller Indian stations he has to charge higher fees than many of the parents can afford to pay. But the committee of a school under management has neither the same necessity nor the same strong individual interest to attain the maximum of income from fees and the minimum of expenditure; it is therefore able both to lower the fees to the level of the means of the parents, and to maintain a higher standard of efficiency.

Larger income and greater efficiency.

(4.)—The teacher of a private adventure school carried on at a loss—the only case in which a private adventure school can be brought under the Code—would not, it may be presumed, object to place his school under a committee of management. As the salaried officer of a committee responsible to public opinion, and subject to the supervision of the Department, his income would be at least as large, and much less precarious. Refusal could only arise when there was a dislike to inspection and control, which would also make the teacher unwilling to put his school under the Code at all. We cannot recall the case of any salaried teacher in a school under a committee, who, without some special and personal reason, has given up his position to undertake a private adventure school; nor of any teacher of a private adventure school who has not been willing to exchange it for a salaried teachership (principal or assistant) in a school under management.

Teachers unlikely to object.

16. We have assumed above, for the sake of the argument, that private adventure schools which are both efficient and necessary may be called into existence under the operation of the Code. We must, however, express our conviction that this assumption rests on exceedingly doubtful grounds. For instance, in all the larger stations of the Presidency, no private adventure schools are any longer needed. Calcutta, Allahabad, Lahore, Cawnpore, Lucknow, Agra, Jubbulpore, Nagpore, Simla, Murree, Naini Tal, Darjeeling, Mussoorie, are already supplied with sufficient and suitable schools of a public character for European children of the middle and lower classes, except, indeed, those of the pauper class. If a private adventure school were now started in any one of these stations, and

Private schools unnecessary in large stations.

APPENDIX II.

I.—FORM OF MEMORANDUM OF AGREEMENT (ARTICLE 47*c*).

MEMORANDUM OF AGREEMENT between[1] _____

_____

_____

hereinafter called *the Managers*, on behalf of the Managers of the _____ School, and[2] _____ hereinafter called *the Surety*, the[3] _____ of[4] _____ hereinafter called *the pupil-teacher*.

The Managers, for themselves, their executors, administrators, and assigns agree with the Surety, h—[5] executors, administrators, and assigns as follows:—

1. The Managers agree to engage the pupil-teacher to serve under a certificated teacher, during the usual school hours, in keeping and teaching the said school for two hours daily during the first year, and for three hours daily during the remainder of the engagement. Sunday is expressly excluded from this engagement.

2. This engagement shall begin on the first day of[6] _____ 18—, and, subject to the proviso in paragraph 5, shall end on the last day of[7] _____ 18—;[8] but if the pupil-teacher shall, with the consent of the other parties hereto, pass the Entrance examination of the Calcutta University next preceding the last mentioned date, this engagement may end on the 31st day of the month of December next following such examination, provided the pupil teacher then enters a training college.

3. The pupil teacher shall be paid as wages[9] _____ per _____ in the first year, and this sum shall be increased by _____ per[10] _____ in each subsequent year of the engagement; but such increase may be stopped, at the discretion of the Managers of the said school for the time being, for the unexpired remainder of any year after receipt of notice from the Department that the pupil teacher has failed to pass the examination or to fulfil the other conditions required of a pupil teacher, according to the standard of the preceding year, as prescribed in the articles of the Code of the Department applicable to the case.

4. The Managers shall also pay to the pupil teacher one-half of the amount received from the Department on his account under the provisions of article 50 of the said Code. This payment shall be over and above all payments made as wages under paragraph 3 of this agreement.

5. *Provided* always, that if the pupil teacher fails to pass an examination for any year as specified in paragraph 3 of this agreement, this engagement shall, on the application of the Managers and with the consent of the Department, end on the last day of _____ 18—.[11]

When this engagement is so extended, the course of study and the wages of the pupil teacher in the remainder of the year succeeding that in respect of which the pupil teacher failed, shall be the same as in the last mentioned year; and that year shall not be reckoned in calculating any payment to be made under paragraph 7 of this agreement.

6. The pupil teacher, while the school is not being held, shall receive without charge, from a teacher holding a certificate of the first or second grade, special instruction for at least one hour a day. Such special instruction, and any instruction in secular subjects given to the pupil teacher during school hours, shall be in the subjects in which the pupil teacher is to be examined during this engagement pursuant to the said articles.

7. The pupil teacher shall be liable to dismissal without notice for idleness, disobedience, or immoral conduct of a gross kind respectively; and this engagement shall be terminable on either side by a written notice of six months, or in lieu of such notice by the payment on either side of a sum equal to half the wages payable under paragraph 3 to the pupil teacher for the year in which the engagement is terminated; such payment to be recoverable as a debt by the party entitled to receive it, and to be over and above the settlement of all other accounts between the parties.

8. The pupil teacher enters into this engagement freely and voluntarily on h— [12] part and with the privity and consent of the Surety.

9. [13] The Surety agrees with the said managers, their executors, administrators, and assigns to clothe, feed, lodge, and watch over the pupil teacher during the continuance of this engagement in a manner befitting the same.

Signed [14] this _____ day of _____ 18—,

_____ in presence of _____

_____ in presence of _____

_____ in presence of _____

N.B.—1. This memorandum must be executed *by all the parties named in it*, viz.:—

Managers.
Surety.
Pupil teacher.

[1] Names, &c., in full of a quorum of the Managers.

[2] Name, &c., in full of father or other Surety of the pupil-teacher.
[3] Father, or as the case may be.
[4] Name in full of the pupil-teacher.
[5] His or her.

[6] The month defined by article 8.
[7] Preceding month.
[8] Three full years.

[9] The sum to be inserted must be fixed at the discretion of the parties, having in view the local rate of wages, and the advantages of the school as a place wherein to learn the business of a teacher.
[10] Month, or as the parties may agree.

[11] One year later than the second date in paragraph 2.

[12] His or her.

[13] This paragraph may be modified if the pupil teacher is treated as a boarder.

[14] All the parties named must sign, but need not do so together. Each signature should be written in a separate line, and must be attested by that of a witness who sees it made. The same witness may attest more than one signature.

2. If it be executed with blanks still remaining in it, they cannot legally be filled up afterwards except as part of a new agreement requiring a new stamp.

3. The memorandum when executed should be deposited with the school papers (article 43 (*d*). The Surety should have either an executed duplicate (which requires a second stamp) or a certified copy. The agreement exists only between the persons who sign it. If any of them are changed (*by removal of managers or otherwise*) a new agreement in the following form should be executed.

II.—FORM OF NEW AGREEMENT ON CHANGE OF MANAGERS.

MEMORANDUM OF AGREEMENT between[1] _____

within and hereinafter described as *the Surety*;[2] _____

_____

the persons within described as *the Managers*;[3] _____

_____

and[4] _____

_____

hereinafter described as *the Managers*.

1. The said Surety and the said[2] _____

_____

hereby mutually rescind the within written Agreement, and agree that the same shall be henceforth determined, and of no further force as regards the future.

2. The said Surety and the said Managers hereby mutually agree to adopt and enter into an Agreement in the same words and to the same effect as the within written Agreement for the unexpired term thereof; and that the like obligation and responsibility shall exist and be of force between them in like manner and to all intents and purposes as if the name of the said[5] _____

had been inserted therein and signed thereto, instead of the name of the said[6] _____

_____

Signed[7] this _____ day of _____ 18—,

_____

No. 484, dated Simla, the 20th September 1882.

From—A. MACKENZIE, Esq., C.S., Secretary to the Government of India, Home Dept.,

To—A. W. CROFT, Esq., President of the Committee on European and Eurasian Education.

I AM directed to acknowledge receipt of your letter No. 4461 of the 20th July 1882, submitting the Report of the Committee appointed under the Resolution of the Government of India in the Home Department, No. 8 of the 8th October 1881, together with a draft Code for regulating the conduct of European education in the Bengal Presidency. In reply, I am to convey to you, and to the gentlemen associated with you on the Committee, the cordial thanks of the Governor General in Council for the admirable Code and very complete Report submitted to Government. His Excellency in Council feels especially indebted to the non-official members of the Committee for the ungrudging manner in which they consented to give up to this work so much of their valuable time; and he trusts that they may have the satisfaction of finding their labours productive of real and lasting benefit to that section of the community on whose behalf they were undertaken. The ready way in which you yourself, already burdened with heavy official duties, accepted the task of presiding over and assisting the deliberations of the Committee, is highly appreciated by the Government of India. Thanks are also due to Messrs. Garrett and Nash, whose services are referred to in paragraph 86 of the Committee's Report.

2. The Governor General in Council heard with great regret of the death of the Very Reverend Father VanImpe, one of the members originally appointed to the Committee, and he is now much grieved to learn that that sad event was in all probability hastened by the devotion with which that gentleman entered upon the work, of which the outcome is now before Government.

3. The Governor General in Council has carefully considered the Report and draft Code, and hopes shortly to be able to publish, for the information and guidance of the Local Governments, the orders of the Government of India upon the important subject with which the Committee had to deal.

Taken as a whole, the Code appears to be complete in itself, and well calculated to find acceptance not only with the Local Governments, but also with those who are directly engaged in the work of European education. There are, however, one or two minor points in which the Government of India feel disposed to modify to some extent the proposals adopted by the Committee, but before finally accepting these modifications, they consider it due to the members to consult further with them as to the best mode of giving effect to the wishes of Government.

4. The first point is that discussed in paragraphs 11 and 12 of the Report. The Governor General in Council, while altogether concurring in what is said in the former paragraph regarding the propriety of limiting the application of the grant-in-aid system in the case of high schools, which owing to large fees or substantial endowments ought to be independent of State aid, is not altogether satisfied with the manner in which this limitation is regulated under Rule 40 of the Code. The arguments advanced in paragraph 12 of the Report against the proposal to determine the grants in such cases by reference to expenditure, appear to His Excellency in Council to carry great weight. He would wish the Committee to re-consider this matter, and endeavour to devise some means of regulating the grants which shall not take away all stimulus to improvement of income. It has been suggested, for instance, that it would be better to omit Rule 40 entirely, and to add to Rule 38 a clause providing that "the amount earned may be reduced by the department to a maximum representing *any lower proportion of the said income* of the school, when it appears that this can be done without detriment to the efficient maintenance of the school."

5. The proposals regarding night schools (paragraphs 52 and 53 of the Report,—Rules 32 and 33 of the Code) appear to the Governor General in Council rather too limited in scope. The Government of India would be glad

to encourage a higher standard of study in such schools for lads engaged in trades. The Committee may be able to modify the Rules slightly so as to provide for this.

6. So again as regards scholarships, some provision appears desirable, as suggested by the Committee, for the grant of scholarships to boys in high schools to be held in Colleges of technical instruction. It would be well to suggest the amount of these in the rules, as the arrangements in force in connection with Seebpore may not be known to Local Governments outside Bengal.

7. In respect of the qualifications of teachers, discussed in paragraphs 62 to 72 of the Report, the Governor General in Council is disposed to think that too great prominence is given to University qualifications, and that the rules in the Code are unnecessarily complicated. I am to suggest, for the consideration of the Committee, whether they might not be recast and simplified, so as to provide for the grant of certificates to teachers—

(1) who, on the Code coming into operation, have been rendering successful service for a certain number of years, and satisfy the Inspectors of their competence to teach up to the standard required;

(2) who pass an examination to be held by the department for each grade of certificate required, or produce proof of educational requirements equivalent to this standard;

(3) who hold certificates from home;

(4) who produce qualifications as pupil teachers, or

(5) who have passed through training colleges.

The certificates given under (1), (3) and (5) might probably be 'permanent;' those under (2) and (4) 'provisional.'

The subject is one upon which the Government of India would be ready to defer to the final conclusions of the Committee, but the rules as they stand appear open to criticism on the grounds stated, and the Governor General in Council hopes the Committee may see their way to simplifying them on some such plan as that above suggested. The demand for University qualification appears particularly doubtful in the case of female teachers.

8. I am to request that the Committee may be moved to consider the foregoing points at a very early date, and to make any modifications in the draft Code that they may eventually consider desirable.

No. 2, dated Calcutta, the 22nd December 1882.

From—A. W. CROFT, Esq., President of the Committee on European Education,

To—The Secretary to the Government of India, Home Department.

I HAVE the honour to acknowledge the receipt of your letter No. 484, dated Simla, the 20th September 1882, conveying the views of His Excellency the Governor General in Council on the Draft Code for regulating the conduct of European education in the Bengal Presidency, and referring certain points for the further consideration of the Committee.

2. The Committee are requested to consider—(1) a suggestion for regulating the grants to high schools in certain cases by reference to income; (2) the encouragement of a higher standard of study in night schools; (3) the definition of the value of scholarships to be held in colleges of technical instruction; (4) the simplification of the rules for granting certificates to teachers. All these points have received the careful consideration of the Committee, and I have now to submit the results of their deliberation.

3. With regard to the first suggestion, that some means should be devised of so regulating the grants in the case of certain flourishing schools as not to

remove all stimulus to improvement of income, it seems to the Committee desirable to enter into some general explanation of the relative importance of the three considerations of efficiency, income, and expenditure, in determining the amount of grants-in-aid. It will of course be admitted that the most important determining element is that of efficiency. This is the governing principle of the Draft Code, subject to the single limitation (article 38) that the amount of the grant is not to exceed the income of the school from all other sources. In the special cases which are referred to in article 40, and equally in those to which article 6 (*f*) is intended to apply, a further consideration, that of expenditure, is by implication involved. Under article 6 (*f*) a school is not entitled to a grant if its income from all other sources is sufficient, in the opinion of the Department, to maintain it in efficiency. The "opinion of the Department" must be guided in such cases by a comparison of the income of the school with its necessary expenditure. Similarly, in applying article 40, or any method of reduction that may be substituted for that of the article, it would be necessary for the Department to make the same comparison of income and expenditure, in order to settle the preliminary question whether any reduction at all should be enforced. Thus considerations of expenditure are, as it appears to the Committee, equally involved both in article 40 and in that which, in the 4th paragraph of your letter, is proposed as a substitute for it.

4. A further but separate question is the amount of reduction to be made, and the method of effecting it. The amount of reduction—in other words, the fraction to be applied, under article 40, to each school to which that rule may be held to be applicable—will necessarily vary according to the estimated necessities of the school. This will consequently demand a much closer and more detailed comparison of income and expenditure than was necessary in order to determine the preliminary question whether article 40 (or any similar rule of reduction) should be enforced at all. The Committee venture to submit that such detailed comparison would be required in precisely the same degree, whether under article 40, or under the addition to article 38 which is proposed in substitution of it. In either case the object of applying the fraction would be the same, namely, to reduce the amount earned under the ordinary rules to an amount not more than enough to maintain the school in efficiency. Under one method this is to be effected by applying a variable fraction directly to the amount earned; under the other by applying a variable fraction to the income of the school. Under both alike the value of the fraction could be determined only by a comparison of the income of each school with the expenditure adjudged to be necessary for the maintenance of an efficient establishment; and the fraction would therefore be determined in each particular instance by the financial circumstances of the school.

5. It is admitted that the determination of the fraction in each case will present elements of difficulty. This difficulty could be removed only by fixing the fraction once for all in the Code, and applying it alike to all schools which might be declared liable to reduction, without regard to their varying financial condition. We do not, however, understand that such was the intention of His Excellency in Council; nor do we think that the time has yet come for the adoption of this method. We have therefore assumed that the fraction is to be settled by the Department from time to time, say for a term of three or five years, with reference to the financial circumstances of each school.

6. Such being the case, it remains to be considered what method of reduction should be applied. The Committee have considered with great care and in all its bearings the suggestion made in the 4th paragraph of your letter. That suggestion is, in effect, that in the case of those schools to which a reduced grant is to be given, the amount of the grant shall be determined by, and shall vary with, the income of the school, and not with the amount that might be claimed by the school under the ordinary rules, as proposed in article 40 of the Draft Code. It is clear that, under such a mode of determining the grant, the schools would have an immediate and strong incentive to increase their income; and it

may be readily admitted that the larger the income, the greater will generally be the efficiency of the school. But the Committee would beg to submit that there are other elements in the case which need consideration. The proposed change does not appear to give enough prominence to the question of efficiency, as determined by the results of examination. For, in every case to which the rule would apply, the amount that the school could earn in attendance and instruction grants would be greater than the maximum grant allowed by the rule; and the school would, therefore, always receive this maximum grant. In other words, the grant to the school would be a fixed fraction of its income, whatever the result of the examination might be. If the income of the school remained the same, or varied slightly from year to year, no improvement, and equally no deterioration, in the efficiency of the teaching, would have any effect upon the amount of the grant. True, the two conditions of income and efficiency are generally found to vary in a direct and not in an inverse ratio; and thus, it may be urged, the end will be attained whichever be adopted as the determining condition. But though increase of income follows increased efficiency, it does not follow it so directly that it can be adopted with equal advantage as the measure of the grant. To make our meaning clear by an example:—A high school in Calcutta has a fee-income, say, of Rs. 1,800 a month; and its unreduced earnings under the Code would amount to Rs. 600 a month, and could hardly, at the worst, fall below Rs. 400 a month. The Department, after consideration of the circumstances of the school, decides that it can be maintained in efficiency with a grant of Rs. 200 a month, and accordingly applies, under article 40, the fraction $\frac{1}{3}$. Under the stimulus of the system of payment introduced by the Code, the normal earnings of the school rise in successive years to Rs. 750 and Rs. 900; and it accordingly receives a grant for those years of Rs. 250 and Rs. 300. In this way a direct and strong incentive is applied, tending to increase the efficiency of the school; since increased efficiency at once makes itself felt in the amount of the grant. But if the income of the school be taken as the standard, and with the same object as before, one-ninth of the income be taken as the fraction, the school would gain no profit from its increased efficiency. It would doubtless become more popular, and would thus gain in the amount of its fee-receipts; but the gain would be slow, and could under no circumstances be expected to advance at such a rate as to make up to the school the amount it would earn, as above explained, under article 40. And at the same time, since the school at its worst would, *ex hypothesi*, earn more by the results of examination than the amount judged to be necessary for its requirements, no reduction in efficiency would directly affect the grant. No doubt any tendency to deterioration would be in a great measure checked by the publicity of the Inspector's reports and the emulation of rival schools; but the Committee think it highly desirable that, for the present at least, schools should not be deprived of that additional incentive to exertion which lies in the direct dependence of the grant on the quality of the work turned out.

7. The position will probably be made clearer if the Committee explain what are the circumstances of those schools to which alone, so far as they are able to judge, any rule of reduction would now, at any rate, be likely to apply. The schools in question are St. Xavier's and the Doveton in Calcutta. The fee-income of St. Xavier's is Rs. 1,750 a month, and its probable earnings under the Code would be approximately Rs. 675 a month. The fee-income of the Doveton School is Rs. 2,100 a month, and its probable earnings Rs. 600. Each receives from Government a fixed grant of Rs. 200 a month, and with this assistance it is found that they can maintain themselves in efficiency. It is doubtful whether under a strict application of article 6 (*f*), these schools would be eligible for grants; but if they were admitted, and if it be assumed, for the sake of illustration, that under article 40 the fraction fixed on for each was one-third, the grants claimable by the two schools would be Rs. 225 and Rs. 200 a month respectively; and would rise or fall yearly, within moderate limits of variation, in direct proportion to the number of scholars, and to the efficiency of each school as tested by examination. The Committee are disposed to believe that in present circumstances such a mode of determining the grant would be both satisfactory in itself, and also acceptable to the schools concerned.

8. It is true that there is and can be no fixed rule by which to determine what is the cost of an establishment necessary for the efficient maintenance of a school of any class; and this difficulty presents itself in a striking light in the two schools just named. But the Committee would submit that considerations of expenditure must arise under any system whatever, in which it is necessary to determine what grant is required in order to maintain a school in efficiency. The only way to avoid it is to give to each school the full amount that it can earn under the Code; and this, however desirable it may be, is incompatible with the condition of a total grant of limited amount, as laid down by the Government of India in paragraph 23 of their Resolution.

9. The Committee have had under consideration another suggestion which they think deserving of mention, though they are unable to recommend its adoption. It has been suggested that the difficulty might be met by some such addition to article 38 as the following:—"If in the opinion of the Department a school does not require the full grants specified in Sections II and III, the total amount earned may be reduced to a sum representing a proportion of the said income of the school, provided always that this reduction does not bring the grant for each scholar who satisfies the prescribed conditions below one-fourth of the ordinary rates." This is an adaptation of article 114 of the new English Code, and might be worked so as to affect both income and efficiency; but it leaves the "proportion" indefinite, and it also appears to lack simplicity.

10. It should, however, be stated that article 40 and the proposed modifications of article 38 are alike open to the objection that, as a school advances in efficiency and success, and therefore may be held to require less help from Government, it will, nevertheless, receive a larger grant. Perhaps the only satisfactory way of meeting this difficulty will be found in the imposition of a fee-limit; and the Committee are inclined to think that some adaptation of the principle laid down in the English Code may be found to be quite feasible. For instance, it has been suggested that for article 40 the following might be substituted:—"If in a school the ordinary monthly fee for tuition from each scholar exceeds Rs. 2, Rs. 4, or Rs. 6 in the primary, middle, or high department respectively, the Department may reduce the amount earned under Sections II and III by 25 per cent. for every rupee of that excess, provided always that this reduction does not bring the total annual grant for each scholar in average attendance throughout the year below Rs. 6." The Committee, however, feel that with the information at their command they cannot at present make any definite recommendation as to a fee-limit; and they are by no means of opinion that the limits above suggested are those that would be suited to the circumstances of all schools throughout Bengal, though they would probably cover the two exceptional cases to which reference has been made. They therefore think it better for the present to adopt the simpler, though somewhat exceptional, method embodied in article 40. That article is not proposed as expressing the judgment of the Committee as to the ultimate mode of determining the grants to high schools; it is merely a provisional method of getting over an admitted difficulty. Regarding it, therefore, in the light of a temporary expedient affecting at most only two schools, the Committee are agreed in preferring it to the alternative suggested in paragraph 4 of your letter. It appears to them to have the merit of greater simplicity, and to be equally fitted to secure efficiency. The temporary character of the article might be indicated by a note limiting its operation to three (or five) years from the date on which the Code comes into force.

11. In paragraph 5 of your letter the Committee are requested to modify the rules applying to night schools, so as to encourage a higher standard of study in them. We have therefore substituted the following for article 33 of the Code:—

33. The rules for grants to day schools (Section II) shall apply also to night schools, with the following changes:—

(*a*) By a "full school meeting" is meant a period of not less than one hour of secular instruction.

(*b*) The number of full school meetings in the year must be not less than 80, and of full attendances qualifying for an instruction grant not less than 50.

(*c*) The attendance grants shall be at one-third of the rates prescribed in article 20.

(*d*) The number of class and special subjects to be taught in each school shall be determined by the Inspector. For the purpose of calculating the grants all such subjects shall be treated as special subjects.

(*e*) Any scholar who has passed by Standard V may, with the sanction of the Inspector, substitute for the full course prescribed for day schools, a special course consisting of arithmetic and one or more of the following subjects:—

Mathematics, Elementary Science, Drawing } of Standards VI and VII.

Mathematics, Mechanical Drawing, Elementary Physics, Elementary Chemistry } of Standard B.

To such scholars the provisions of article 24 (*a*) shall not apply.

12. We do not recommend any change in the number or length of the school meetings. The number of meetings actually held in the schools with which we are acquainted is less than the number required; but we are of opinion that satisfactory results can be obtained only by an increase in the time given to teaching.

13. In clause (*d*) of revised article 33 we have practically repeated article 13 (*d*) in a different form. In all night schools the construction of a suitable time-table presents great difficulties, owing to the limited time that can be devoted to teaching. We therefore think that the managers should have the assistance of the Inspector in framing a proper course of study.

14. In 33 (*e*) we have provided for a bifurcation of studies above Standard V. At this stage, scholars in night schools will have the option either of continuing their general studies, leading up eventually to the University examination, or of entering upon a special course of elementary scientific training, bearing more or less directly upon their daily occupations. We believe that the latter course will be found specially suited to the requirements of those schools (and they are the only night schools known to exist in India), in which the majority of the scholars are apprentices in railway or other workshops. The former course will probably be found better adapted to schools in large towns, where the scholars are employed in offices during the day. If schools of this class are hereafter established, it may be found desirable to provide for a special course of commercial training in them. We trust that these modifications will meet the views of His Excellency the Governor General in Council.

15. In paragraph 6 of your letter it is suggested that provision should be made for the grant of scholarships to boys in high schools, to be held in Colleges of technical instruction; and that the value of these scholarships should be inserted in the Code. The Committee would beg to point out that, though the institution of such scholarships is eminently desirable, the rules for the award of them do not appear to come within the sphere of the Code. At present all scholarships, whether technical or other, that are awarded on the results of the University Entrance Examination, the final standard of high schools, are open to Europeans and Natives alike; and it does not appear desirable to make any distinction between these two classes of scholars. Additional scholarships might, perhaps, be provided for scholars passing by Standard B of high schools, who, not having passed the Entrance Examination, would be ineligible for scholarships under the existing rules; but we are of opinion that the terms on which they are given should be published in the rules of the Colleges in which they are made tenable, rather than in the Code. We would also point out that the rules for the award of scholarships in the Seebpore Engineering College, the only technical College in Bengal, have already been referred to in our report (paragraph 61). It may be added that in any College affiliated to the University, all candidates for a degree must under existing regulations have passed the Entrance Examination; though students are occasionally admitted to the full course of instruction in a technical College without aiming at a University degree.

16. The last point referred to the Committee for consideration is the simplification of the rules for granting certificates to teachers. We have carefully

considered the suggestions made in paragraph 7 of your letter, and in accordance with them have added the following note to article 58 :—

In administering this article, it shall be in the power of the Department to hold examinations for the purpose of testing the qualifications of applicants for certificates.

With this addition to the Code, provision is made for all the five cases referred to in your letter.

17. The rules in Chapter IV appear somewhat complicated, but we believe they are not unnecessarily so. By an addition to article 69, noted below, six of the rules (articles 67, 68, 69, 75, 76, and 77), are declared to be in their nature temporary, and they may be struck out of the Code after it has been in operation for two years. The remaining articles in Sections II and III of that Chapter will probably be very much simplified, if not altogether cancelled, when training colleges have been established, and have proved themselves capable of turning out a sufficient number of trained teachers. At present we are unable to recommend any simplification of the rules; since we consider it a matter of great importance that, at the outset, they should be as definite and comprehensive as possible, in order that teachers may know exactly under what conditions they will be entitled to certificates.

18. With reference to the opinion expressed in the 7th paragraph of your letter, that too great prominence has been given to University qualifications, we beg to express our belief that it will ultimately be found advantageous to require every teacher to undergo a course of instruction in a training College. At the same time, we would venture to submit that, until such Colleges are established on a sure basis of efficiency, the University Examinations appear to be the most suitable, if not the only satisfactory, means of testing the qualifications of teachers. The University system of examination is well known; its certificates are highly valued, and would probably carry more weight with the public than any granted after a departmental examination. The new courses in Arts prescribed by the University afford, the Committee believe, a guarantee of sound knowledge, and of a fairly high standard of general culture, in those who may hereafter pass its examinations. These qualifications may not indeed counterbalance the want of a special training adapted to the calling of a teacher; yet, until the means for such special training exist, they supply, the Committee believe, the best attainable substitute; and meanwhile, the knowledge that University degrees and the certificates granted by a training College are equally recognised by Government as qualifying for the profession of a teacher, may serve to mark the importance which Government attaches to that profession, and thus to facilitate and hasten the establishment of training Colleges. We may, however, point out that we have provided for those cases in which candidates for certificates are unable to appear at the University Examinations, by giving the Department power to hold examinations for such certificates. This provision will render University certificates in the case of female teachers unnecessary; but at the same time it appears desirable to the Committee to hold out some inducement to female students to enter the University, by giving them the prospect of a useful and honourable career.

19. In addition to what has been stated above in paragraphs 11 and 16, the Committee have made the following alterations in the Draft Code :—

(1) The following note has been added to article 31 :—

This grant shall not be taken into account in making reductions under Section V.

(2) The note to article 38 has been omitted, and the following substituted :—

In calculating the income of the school under this article, boarding fees shall not be included.

(3) The words "in the same school" have been expunged from article 60, and the following note has been added :—

Service in more than one school will not be recognised by the Department, unless the transfer has been made with the sanction of the Inspector.

(4) The words "at any time within two years from that date" have been omitted from article 69, and the following note added :—

All applications for certificates under Articles 67, 68, 69, 75, 76, and 77 must be made within two years from the date on which this Code comes into operation.

20. A copy of the Code in which the foregoing alterations have been inserted is submitted herewith.

FORT WILLIAM,
The 9th February 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 6th FEBRUARY 1883.

GENERAL REMARKS.—Slight rain has fallen in several districts of Bengal, as well as in Sindh and in most parts of the Madras Presidency. Elsewhere there has been scarcely any rain worth noting.

Oil-seed crops have been somewhat damaged in Bengal by wet weather, and in two districts of the North-Western Provinces by blight and insects. In the Cawnpore and Agra districts, and in a few places in the Bombay Presidency, some injury has been caused by frost. In the Punjab some districts need more rain. On the whole, however, agricultural prospects are generally good throughout the country, and have been much improved by the recent rain.

Harvest operations are still progressing in the Madras Presidency with an outturn which promises on the whole to be an average one. In Coorg the threshing of rice continues. In the Bombay Presidency, the Berars and the Nizam's Territories the harvest of winter crops has commenced.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 7th)		
Bellary		Standing crops generally in good condition; harvest paddy, dry grains and sugarcane, outturn average.
Kurnool		Standing crops generally in good condition; harvest dry grains, yield below average; cattle disease in parts.
Ganjam	·42 (average of three stations.)	Standing crops *cumbu* cotton and sugarcane thriving; harvest horse-gram, outturn average; fever, small-pox, and cattle disease continue.
Kistna	·58 (average of one station.)	Standing crops paddy and dry crops affected by grubs and blight in parts, elsewhere promising; harvest paddy and dry grains, yield about average; small-pox and fever continue; water one foot over anicut.
Chingleput (Madras)		Standing crops in good condition; harvest paddy, outturn below average; small-pox in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, cholera, and cattle disease in parts.
Tanjore	·28 (average of six stations.)	Standing crops in good condition; harvest paddy and *ragi*, yield below average; cholera continues.
Madura	·28 (average of two stations.)	Standing crops withering in parts; harvest paddy and dry crops; cholera in parts.
Malabar	1·20 (average of one station.)	Harvest second crop paddy, yield fair; fever and cholera in parts; small-pox slight.
Travancore	·90	Harvest progressing; fever and small-pox continue.
		General Remarks. No rain in Bellary, Kurnool, Chingleput, and Coimbatore; general prospects good.
Bombay—(Feb. 7th).		
Kurrachee	Showers of rain general in the district during week ending 29th January. Mandora ·55, Tatta ·16, Mugalbhin ·30, Keti Bandar ·62	River low on 4th, 2 feet 4 inches against 3 feet 5 inches on corresponding date last year; small-pox increasing in Karachi; 64 fresh cases, 7 deaths from 25th January to 3rd February, 64 patients remaining sick on latter date, 1 case in Schwan also, and 2 in Sajawal; fever in 10 talukas; cattle disease in 4 talukas; wheat, red rice, and *bajri* in Karachi 24, 32, and 34 lbs. per rupee, in Schwan 32, 38, and 48 lbs., in Ghorabari 20, 44, and 44 lbs., and in Shahbandar 22, 44, and 46 lbs. per rupee respectively.
Hyderabad	Rain of 14th very unevenly distributed. Hyderabad ·92, Mirpur ·78, Dehra Mohbat ·50, Guni ·46, Badin ·30, Shahdadpur ·25, Tando A'dam ·24, Sakrand ·21, Hala ·15, Tando Alahyar ·12, Tando Bago ·10, Moro, fair showers. Naushahro, few drops. Kandiaro, *nil.*	Frosts have since done great damage to *rabi* crops; small-pox in Hyderabad, Moro, and Naushahro; fever and colds general, but of mild type; cattle disease in Kandiaro and Badin; wheat 26, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		*Rabi* crops thriving; small-pox in Dhandhuka; wheat 29 and *bajri* 32 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Baroda		*Rabi* crops in good condition; cotton-picking in progress; public health generally good; common rice 27 and *bajri* 30¼ lbs. per British rupee.
Surat		Cotton-picking continued; slight small-pox in city; *jowari* 39 and *nagli* 52 lbs. per rupee.
Nasik		Weather very muggy again; *rabi* harvest commenced; fever in Dangi villages; wheat 25½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay)		Average abnormal temperature 2° cool from 31st to 2nd, afterwards 1° warm; vapour in air largely in defect of normal from 31st to 2nd; normal from 3rd to 5th, and in excess of normal on 6th; wind normal except on 31st and 1st, when abnormal wind was northerly.
Poona		Reaping of *rabi* crops commenced; *bajri* 14 and *jowari* 59 lbs. per rupee; in Poona *bajri* 37 and *jowari* 48 lbs. per rupee.
Ahmednagar		*Rabi* crops generally good; harvesting of *rabi* in progress; *bajri* maximum 54 lbs. per rupee in Parner, minimum 45 lbs. in Kopargaon; *jowari* maximum 72 lbs. in Parner, minimum 52 lbs. in Sheogaon; cattle disease in Karjat.
Sholapore		Reaping of *rabi* crops commenced; *jowari* 73 lbs. 4 tolas and *bajri* 57 lbs. 6 tolas per rupee.
Dharwar		Harvesting of early crops nearly completed, and that of wheat just commenced; wheat blighted in 5 and cotton in 9 talukas; other late crops good; fever in 3 talukas; no cattle disease; rice minimum 26 and *jowari* 52 lbs per rupee.
Kanara		Second crop rice plants healthy; weeding and transplanting; sugarcane harvest on coast; small-pox in Sirsi; fever in 2 talukas; common rice in Karwar 14 seers per rupee, in district average 15½ seers per rupee.
Rajkot		Weather cold; general health good; cholera continues slightly at Navanagar and Morvi; *bajri* 29 and *jowari* 3[illegible] lbs. per rupee.
		General Remarks.—Rain in Sind; *rabi* crops injured by frost in a few places; harvesting of *rabi* commenced generally; fever, small-pox, and cattle disease in several districts.
Bengal—(Feb. 6th		
Chittagong	*Nil*	Weather cold till 3rd instant, since which seasonable; prospects of crops fair; rain would be beneficial; prices somewhat higher; cholera and cattle disease still continue.
Dacca	0·02	Prospects of winter crops satisfactory; *boro* paddy being sown; cutting of sugarcane continues.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice and sugarcane nearly finished, yield estimated at from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; public health good; cholera and fever have much abated.
Moorshedabad	0·07	*Amun* still being harvested in some places; winter crops doing well, except that damage by insects to peas and linseed is reported from Jungipore sub-division; cholera prevalent in thanas Shahanagore and Manullabazar.
Rajshahye	*Nil*	Weather cold; prospects of crops generally favourable; outturn of rice crop an average one; general health fair.
Burdwan	0·07	Weather very cold; cold-weather crops being reaped; prospects tolerable; public health fair.
Rungpore	0·01	Prospects of crops favourable; cholera still prevalent in south of district.
Bhagalpur	0·14	Prospects of crops favourable; rain generally beneficial.
Purneah	0·05	Prospects of crops good; public health improving.
Patna	*Nil*	Winter rice harvested; prospects of *rabi* crops good; public health good.
Durbhunga	*Nil*	In the east late rain benefited wheat and barley, but partly injured mustard and linseed; prices stationary; public health generally good.
Hazaribagh	*Nil*	Weather cold and clear; prospects of cold-weather crops good; a few cases of small-pox reported; general health good.
Cuttack	*il*	Reaping of late rice nearly completed; *rabi* being gathered; public health good.
		General Remarks.—Slight rain again reported this week from many districts, and an enormous fall of snow from Darjeeling; the weather has become very cold since the rain; the cold-weather crops generally continue to do very well, but in some places some of these crops, particularly oil-seeds, have been somewhat damaged by rain and cloudy weather; in parts of Behar oil-seeds and poppy are said to have been a good deal spoilt; harvesting of late rice still continues in a few parts, and that of sugarcane is proceeding; *boro* or spring rice being sown; fever and cholera, though still prevalent in some places, have generally abated; sporadic cases of small-pox reported from a few districts.
N.-W. Provinces and Oudh—		
Benares (Feb. 6th)	No rain	Mustard much damaged by insects; health good; prices falling slightly.
Allahabad („ 7th)	No rain	Weather very cold with strong west wind; prospects excellent; health good; prices nearly stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Gorakhpur (Feb. 5th)	. . . .	Dry weather and west wind; crops little injured by late storm, and promise well; prices stationary.
Jhansi („ „)	. . . .	The late fall of rain has greatly benefited *rabi* crops, and no damage was done by the hail; wheat in ear and gram in flower; prices fluctuating; health generally good; cattle disease of a mild form continues.
Agra (Feb. 6th)	No rain	*Arhar* slightly injured by frost; small-pox in five parganas; general health good; prices steady.
Bareilly („ „)	No rain	Weather cold; health good; *rabi* crops excellent.
Meerut („ „)	. . . .	Weather clear and cold; occasional attacks of small-pox still reported; prices of barley and gram fallen one seer; crops flourishing.
Kumaon („ „)	. . . .	Weather fine; crops much better; general health good; cattle disease continues; prices unchanged.
Lucknow („ „)	. . . .	The recent rain has been beneficial to crops; prospects good; prices almost stationary; public health good; small-pox in Lucknow city abating.
Partabgarh („ „)	No rain	Crops promise well; prices steady; health good; a few cases of small-pox reported in Kunda tahsil.
Sitapur („ „)	. . . .	Weather clear with strong west wind; very cold now; rain of last week has improved prospects; general health good; small-pox still reported in tahsils Biswan and Misrik; prices almost stationary.
Fyzabad („ „)	No rain	Prospects good; sugarcane in mill; public health good.
Rae Bareli („ 5th)	. . .	Prospects of *rabi* crops good; mustard greatly injured; health of men and condition of cattle good; prices almost stationary.
Cawnpore („ 6th)	No rain	Prospects good; slight damage to *arhar* and gram from frost; general health good; prices nearly stationary.
Farukhabad . . .	. . . .	Crops much improved by late rain; health of people fair; prices steady.
		Summary.—No rain during the week; there has been much damage to mustard in Benares and Rae Bareli, while *arhar* and gram have been slightly damaged by frost in Cawnpore and Agra, small-pox is abating in Lucknow city, and a few cases are reported in Partabgarh, Sitapur, Agra, and Meerut, but general health and prospects are good.
Punjab—(Feb. 6th)		
Delhi	. . . .	Small-pox continues in the city and district; harvest prospects good; slight rise in prices.
Hissar	. . . .	Health good; harvest prospects much improved; prices falling.
Umballa . . .	. . . .	Health good; harvest prospects much improved; but more rain wanted; prices stationary.
Jullundur . . .	. . . .	Health good; prices steady.
Lahore	. . . .	Health and harvest prospects good; prices stationary.
Ferozepore . . .	. . . .	Health and harvest prospects good; prices stationary.
Sialkot	. . . .	Health and harvest prospects good; prices falling.
Rawalpindi . . .	·20	Cattle disease continues in the Murree tahsil; and fever in the Fattehjang tahsil; *rabi* harvest prospects good; prices almost stationary.
Peshawar . . .	. . . .	Health and harvest prospects good; prices stationary.
Mooltan	. . . .	Health and harvest prospects good; slight fall in prices.
Dera Ismail Khan . .	. . . .	More rain wanted; health and harvest prospects fair; prices steady.
		General Remarks.—The harvest prospects throughout the province have much improved through the good fall of rain in the previous week, but more rain is still wanted in some districts; the general health is good.
Central Provinces—		
Nagpur (Feb. 7th)	. . . .	Weather clear; prospects and public health good; prices falling.
Jubbulpore („ 6th)	. . . .	Weather clear and cold; *rabi* crops thriving and in good condition prospects favourable; health good; prices unchanged.
Saugor („ 5th)	. . . .	Weather clear; health good; prices steady.
Seoni („ 6th)	. . . .	Weather cold; *rabi* crops promising; prices falling.
Hoshangabad („ „)	. . . .	Weather clear and cold; *rabi* crops in good condition; health good; wheat 15 and rice 11 seers per rupee.
Raipur („ 3rd)	. . . .	Weather cloudy and cold; prospects good; fever and cattle disease slightly prevalent; rice 31 and wheat 26 seers per rupee.
Sambalpur („ 1st)	·21	Weather cloudy; prospects and health good.
Khandwa („ 6th)	. . . .	Weather chilly and windy; *rabi* being reaped; small-pox prevalent; wheat 16 and rice 15 seers per rupee.
		General Remarks.—Weather clear and cold; *rabi* crops thriving; prospects favourable; small-pox prevailing in some districts; prices easy.
British Burma—		
(Feb. 3rd)		
Akyab	. . . .	One death from cholera in town and six in district; otherwise public health good; reaping finished.
Rangoon . . .	. . . .	Public health good.
Bassein . . .	. . . .	Three deaths from cholera in town, eight in district; otherwise public health good.
Prome . . .	. . . .	One death from cholera in town; otherwise public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*		
Amherst (Moulmein) .	. . . .	Sixteen cases of cholera reported from district; otherwise public health good, both in Moulmein and district; seventeen deaths of cattle reported from one township; otherwise public health good.
Toungoo . . .	. . . .	Two deaths from small-pox reported from one township; otherwise public health good.
		General Remarks.—Excepting some cholera, public health good.
Assam—		
Gauhati (Feb. 6th)	No rain	Weather seasonable; public health good; lands being ploughed for *aus*.
Sylhet („ 7th)	*Nil*	State and prospects of crops generally good; cholera reported from Habiganj and South Sylhet.
Cachar . („ „)	*il*	Weather unusually cold; reaping of winter crops not yet completed; common rice 24$\frac{5}{8}$ seers per rupee; public health good.
Dibrugarh („ „)	·27	Weather fine; mustard doing well; small-pox reported from north Lakhimpur Sub-Division.
Mysore and Coorg—		
(Feb. 7th)		
Bangalore . . .	. . . .	Crops in good condition; season prospects favourable; health good; rice 11$\frac{3}{4}$, *ragi* 34, and horse-gram 30$\frac{1}{4}$ seers per rupee.
Mysore	. . . .	Crops in good condition; season prospects favourable; health good; prices about the same as in Bangalore.
Mercara . . .	. . . .	Threshing of rice crop continues; no improvement in prospects of coffee planters; prices of food-grains falling; fever prevalent in parts of South Coorg and Nanjarajapatna taluk.
		General Remarks.—Public health good and prospects of season favourably reported from all districts; pasturage and water-supply ample; *hallar* horse-gram and *karka* sugarcane, paddy, &c., harvested; prices rule easy.
Berar and Hyderabad—		
Amraoti (Feb. 7th) .	. . . .	Reaping of *rabi* crops continued; wheat 16 and *jowari* 26 seers per rupee.
Akola	. . . .	*Rabi* crops thriving; prospects good.
Hyderabad (Feb. 8th)	. . . .	Reaping of *rabi* crops continues; *tabi* crops thriving; fever in some places; no cattle disease; prices—wheat 16$\frac{1}{2}$, coarse rice 11, white *juari* 24$\frac{3}{4}$, yellow *juari* 31 and *tur* 25$\frac{3}{4}$ seers per halli sicca rupee.
Central India States—		
(Feb. 7th)		
Indore . . .	. . . .	Weather slightly warmer; health good; prospects favourable.
Morar (Gwalior) . .	. . . .	Weather seasonable; health and prospects good.
Sutna	. . . .	Weather cold; prospects good.
Neemuch . . .	. . . .	Weather seasonable; crops doing well; public health good.
Goona . . .	. . . .	Crops and health good; wheat 22 seers 8 chittacks per rupee.
Bhopal	. . . .	Weather cool; crops and public health good.
Agar	. . . .	Health and prospects good.
Nowgong . . .	·02	*Rabi* prospects favourable; prices steady; health good.
Manpur . . .	. . . .	Health and prospects good.
Rajputana—		
Abu (Feb. 7th)	. . . .	Weather cold; health good.
Sirohi („ 4th)	. . . .	Weather much warmer; *kharif* crops promising extremely well; wells full; health good.
Marwar (Feb. 2nd)	. . . .	All tanks empty; water obtained from wells; health and prospects good; prices rising; cold intense.
	44	Hail in parts; weather very cold.
Jhallawar (Jan. 31st)	No rain	Health good; prospects excellent.
Ajmere (Feb. 6th)	No rain	Crops looking well; prices stationary; health good.
Jeypore („ 6th)	. . . .	Frost has damaged to some extent gram and *arhar* crops; cattle disease reported in two tahsils, and small-pox in three; wheat 19$\frac{1}{2}$, barley 30, and gram 29$\frac{1}{2}$ seers per rupee.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 2nd February, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Mahárájá Sir Jotíndra Mohan Tagore Bahádur, K.C.S.I.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble R. Miller.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble MR. ILBERT moved for leave to introduce a Bill to amend the Code of Criminal Procedure, 1882, so far as it relates to the exercise of jurisdiction over European British subjects. He said:—"The effect of the existing law on this subject is summed up in a section of the new Criminal Procedure Code (413), which directs that

"'No Magistrate, unless he is a Justice of the Peace, and (except in the case of a Presidency Magistrate) unless he is a Magistrate of the first class and an European British subject, shall inquire into or try any charge against an European British subject.'

"Now, there is no restriction on the nationality of a Presidency Magistrate; Natives of India may hold, and have held, that office. The result of the law, therefore, is that, within the limits of the Presidency-towns, jurisdiction over European British subjects may be exercised by any person who happens to be a Presidency Magistrate, whether he is a European British subject or not; but that, outside these limits, in any part of the Mufassal, that jurisdiction cannot be exercised by any of Her Majesty's Magistrates, however complete may have been his training—however long may have been his judicial experience—however high may be his rank in the service—unless he happens to be a European British subject.

"Such is the existing law, and it was settled in this form in the year 1872, after a very remarkable debate, which resulted in a very remarkable division. The Select Committee on the Bill which afterwards became law as the Criminal Procedure Code of 1872 had adopted a resolution in which they recorded their opinion 'that the jurisdiction of Magistrates and Sessions Judges who are Justices of the Peace might with advantage be extended in the case of European British subjects.' It will be observed that there was nothing in the resolution which implied that the exercise of this jurisdiction in future was to be confined to persons who are themselves European British subjects. Such a limitation was,

however, inserted in the Bill as finally settled by the Committee; but, when it was brought before the Legislative Council, Sir Barrow Ellis (I shall take the liberty of referring to him and others by the titles which they now bear) moved an amendment which would have had the effect of striking out the limitation. It would appear that the limitation to which he objected had in fact been introduced in pursuance of some kind of bargain or compromise between members of the Committee holding different opinions on the subject. Repeated references were made in the course of the debate to the existence of this compromise. Thus, Mr. Chapman, whilst expressing his agreement with much that had fallen from Sir Barrow Ellis, said that he felt himself unable to support the amendment for the very plain and conclusive reason that he, as member of the Select Committee, considered himself bound to adhere to the pledge he had given to the European community that, under the altered law, an Englishman should retain his privilege of being tried by an Englishman. Again, Mr. Inglis said that he did not intend to go into the question on its merits, as he considered that he was bound by the terms of the recommendation which he had signed with other members of the Committee. My eminent predecessor, Sir James Stephen, who was in charge of the Bill, declared in the most emphatic terms that he could not undertake to justify on principle the terms of a compromise. And Sir J. Strachey, who also supported the proposals, admitted that the provisions of the Bill represented a compromise which was open to criticism of every kind. The amendment moved by Sir Barrow Ellis was put to the vote, and was lost on a division by a majority of 7 to 5. But the minority on the division included the majority of the Executive Council. It consisted of the then Viceroy, Lord Napier of Murchistoun, the then Lieutenant-Governor of Bengal, Sir G. Campbell, his immediate successor, Sir R. Temple, the then Commander-in-Chief, Lord Napier of Magdala, and Sir Barrow Ellis. Each of these distinguished members of the Government of India not only voted but spoke in support of Sir Barrow Ellis's amendment and against the proposals that are embodied in the existing law. And I shall make no apology for quoting today some of the arguments which they used, and some of the opinions which they expressed.

"Sir Barrow Ellis said that, in making the invidious distinction which was now proposed, if we excluded any Justices of the Peace from the exercise of certain powers, we were really casting a stigma on the whole educated Native population of India. He might also urge that there would be considerable inconvenience in having such a distinction. But he preferred to put it on the broad ground that, if you had Native Covenanted Civil Servants, you ought not to bar them from exercising the powers of a Civil Servant, among which powers is the jurisdiction of a Justice of the Peace over European British subjects, By Act II of 1869 Natives might be appointed Justices of the Peace, and on what ground, he would ask, was it proposed to restrict their powers as Justice of the Peace?

"Sir George Campbell was of opinion that the Council should adhere to the decision which had been come to by the passing of Act II of 1869, namely, that a Justice of the Peace must be either a European British subject or a Covenanted Civil Servant. To reopen that question, and to limit the powers that might be exercised by any Justices who were Covenanted Civil Servants, appeared to His Honour to be somewhat invidious, and would be, as it were, setting themselves against the policy hitherto pursued. Viewing the matter in that light, he should be inclined to vote for the motion before the Council.

"The Commander-in-Chief said that the Native members of the Covenanted Civil Service having been to Europe, having become acquainted with European feelings, ideas and customs, and having qualified themselves to take their places with European members of the Civil Service, His Excellency would frankly accept them as real members of the Covenanted Civil Service, and allow them to exercise all the functions which the European members exercised.

"Lord Napier of Murchistoun said that his vote would be given in conformity with the opinion which had been expressed by the Commander-in-Chief. His Excellency thought that the restriction would embody a stigma on the

Native community in general. It was equivalent to stating that, under no circumstances, as far as the administration of the law was concerned, could the Native attain to that degree of impartiality and courage which would justify the Government in reposing in his hands the power of trying European British subjects. He thought that by the restriction we, in effect, said to the European—'You are not to be tried in the Mufassal by the agency by which you are tried in the High Courts and in the Courts of the Magistrates in the Presidency-towns with the general approval and sanction of the European and Native communities.' It was saying, in effect, that the Native who had attained to the position of a Sessions Judge was not competent to try a European British subject, but that he might try him when he became a Judge of the High Court and sat beside a European Judge. His Excellency could not but help thinking that there was practically no greater disparity in permitting these Native Civil Servants to try a European British subject, than in permitting Native Justices in the Presidency-towns to try him. There appeared to His Excellency to be no such broad distinction whatever between the conditions of society and of public opinion in this respect between the Presidency-towns and the Mufassal. There were now a great number of public-spirited men and a great deal of public spirit all over the provinces. Communications by rail, the dissemination of newspapers both in English and the Vernacular, and a great variety of other circumstances had destroyed that distinction which formerly existed between the Presidency-towns and the Mufassal. His Excellency did not himself consider that there was the slightest possibility that, in the rare case of a Civil and Sessions Judge trying a European British subject in the Mufassal, there would be an abuse of justice.

"Sir Barrow Ellis said that he desired to add his testimony to the efficiency with which Native Magistrates had performed their duties in the Presidency-towns, in the administration of justice to both Europeans and Natives, and he had no hesitation in saying that they had performed their duties with as much credit and efficiency as the European Magistrates. And, if they had done that, he saw no reason why Natives in the position of Covenanted Civil Servants or Sessions Judges should not be equally competent to administer justice to the European in the Mufassal. His Hon'ble friend Mr. Stephen had remarked that in this matter we were not to consult the feelings of the Judge, but of those who were to be subjected to the jurisdiction. In answer to that, Mr. Ellis would say that he saw no reason why that which did not hurt the feelings of Europeans in the Presidency-towns should hurt them in the Mufassal.

"And, finally, Sir Richard Temple said he thought that the inference was undeniable that, if the Natives were eligible to all the great offices of the administration, it seemed improper and unreasonable to say that they should not sit as Judges over Europeans in the Mufassal for offences of the trivial nature over which it was proposed to give Justices of the Peace cognizance.

"However, as I have said, these views, though they commended themselves to the majority of the Executive Council, did not commend themselves to the majority of the legislature, and the amendment proposed by Sir Barrow Ellis was lost.

"It was not to be expected that a decision which avowedly proceeded on the terms of a compromise, and against which such a formidable weight of official authority was arrayed, should be accepted as a permanent settlement of the question. It has not been so accepted. Whenever proposals have been made for amending the Criminal Procedure Code, the attention of the Government has been directed to the anomalous position in which Native members of the Covenanted Civil Service have been left by the legislation of 1872. In the early part of last year, Mr. Gupta, a Native member of the Bengal Civil Service, submitted to the Lieutenant-Governor of Bengal a note in which he pointed out that the existing law, if maintained, would give rise to an invidious distinction, and to very practical inconveniences in the case of those Natives of the country who might expect in course of time to attain to the position of a District Magistrate or of a Sessions Judge. I may add that the anomalous nature of the present arrangements could not be better illustrated than by Mr. Gupta's own case. He officiated for some time as Presidency Magistrate here in

Calcutta, and, while so officiating, he had, under the law as it stands, full powers over European British subjects, even in comparatively serious cases, and exercised those powers to the satisfaction of the Local Government and the public. On his removal to a more responsible appointment in the interior, he ceased to be qualified to deal with even the most trivial cases affecting Europeans. Mr. Gupta's proposal was that the law should be amended by extending the jurisdiction over European British subjects to Natives of this country holding the office of a District Magistrate or of a Sessions Judge, and he suggested that the amendment might be made in the Bill which has since become law as the Criminal Procedure Code of 1882. However, that Bill had then nearly reached its final stage, and it was obvious that a question which was of such importance and difficulty, and about which it would be impossible to take action without consulting both Local Governments and the Secretary of State, could not with propriety be raised at so late a stage of the discussion on the Bill. In this, as in other matters, the Government had, as was pointed out last year by my friend Major Baring, to choose between, on the one hand, passing the new Code, with the amendments which had been generally accepted,—amendments which were of considerable importance,—or, on the other hand, postponing the Code, with all its improvements of form and substance, until all possible amendments of the law had been got together and considered.

"Of these two courses, the Government adopted—and, I think it will be generally agreed, wisely adopted—the latter, taking care, however, to make it clear that, whilst re-enacting, for the purpose of consolidation, certain provisions of the existing law, they were not to be considered as expressing an opinion that these provisions might not with advantage be amended.

"This was Sir Ashley Eden's own view, and accordingly he postponed the submission of Mr. Gupta's note to the Government of India until the new Criminal Procedure Code had become law. But, when he did submit it, he accompanied it with a strong expression of opinion as to the expediency of altering the law in the direction indicated by Mr. Gupta. He remarked that, as a question of general policy, it seemed to him right that Covenanted Native Civilians should be empowered to exercise jurisdiction over Europeans as well as over Natives who are brought before them in their capacity as Criminal Judges. Now that Native Covenanted Civilians might shortly be expected to hold the office of District Magistrate or Sessions Judge, it was also, as a matter of administrative convenience, desirable that they should have the power to try all classes of persons brought before them. Moreover, if this power was not conferred upon Native members of the Civil Service, the anomaly might be presented of a European Joint Magistrate who is subordinate to a Native District Magistrate or Sessions Judge being empowered to try cases which his immediate superior cannot try. Native Presidency Magistrates within the Presidency-towns exercised the same jurisdiction over Europeans that they do over Natives, and there seemed to be no sufficient reason why Covenanted Native Civilians, with the position and training of District Magistrate or Sessions Judge, should not exercise the same jurisdiction over Europeans as is exercised by other members of the service.

"For these reasons, Sir Ashley Eden was of opinion that the time had arrived when all Native members of the Covenanted Civil Service should be relieved of such restrictions of their powers as are imposed on them by Chapter XXXIII of the new Code of Criminal Procedure, or when at least Native Covenanted Civilians who have attained the position of District Magistrate or Sessions Judge should have entrusted to them full powers over all classes, whether European or Native, within their jurisdiction.

"Before taking any further action in the matter, the Government of India considered it desirable to ascertain the views of Local Governments and Administrations as to the expediency of the amendments suggested by Sir Ashley Eden; and accordingly they addressed a circular letter to the several Local Governments, inviting a confidential expression of opinion on those suggestions. The result was remarkable. There was an overwhelming consensus of opinion that some change in the law was required, and that the time had come for removing the present absolute bar on the investment of Native Magis-

trates in the interior with powers over European British subjects. As to the precise extent to which the law should be modified, there was, as might naturally be expected, some difference of opinion; but it was generally admitted that a Native Civilian in the position of a District Magistrate or Sessions Judge should have equal powers with his European colleagues, and there was a very strong body of opinion that there should be no distinction made between Native and European members of the Covenanted Civil Service at any step in respect of their judicial powers, provided that they were individually found qualified to exercise those powers.

"Under these circumstances, it has become abundantly clear that the existing law cannot be maintained, and the only question which we have to consider is not whether the law should be altered, but how it should be altered. In approaching this question, there is one consideration of which we must not lose sight, and of which it is not likely that we should lose sight, and that is, that this is a subject with respect to which it is eminently undesirable to avoid constant tinkering of the law. The settlement arrived at in 1872 may not have been satisfactory,—I do not myself think that it was satisfactory,—but, such as it was, we should not be justified in reopening this difficult question unless we saw our way to a solution which should be, I will not say final—for nothing in legislation is absolutely final—but which should contain in itself the elements of stability and durability. Can we find any such solution? If we look the question fairly in the face, and endeavour to realise distinctly the object at which we ought to aim and the facts with which we have to deal, I think that we can. As to the object at which we ought to aim, there will be no difference of opinion. It is simply the effectual and impartial administration of justice. And as to the facts with which we have to deal, no one who has studied the statistics and reports of the cases involving charges against European British subjects can fail to be struck with two things—first, that, as compared with the great mass of ordinary criminal business, they are exceptionally rare, and secondly, that they are exceptionally troublesome and difficult. To what conclusion do these two peculiarities point? They appear to me to show that, in the interests of the effectual and impartial administration of justice, it is not necessary, and that, in the same interests, it is not desirable, to clothe all Magistrates indiscriminately with the power of dealing with these cases. As we are justified in excluding from the jurisdiction of inferior Magistrates as such the cognizance of the graver classes of offences, so we should be justified in excluding from their jurisdiction the cognizance of a class of offences the trial of which, from the circumstances under which they are ordinarily committed, presents features of exceptional difficulty. It involves no disrespect to the magisterial or judicial office to say that an officer who may be fully competent to dispose of a common case of theft or assault may not be competent to dispose of a class of cases which, as will be admitted by all impartial persons, are apt to put an exceptionally severe strain on the judicial qualities of tact, judgment, patience and impartiality. We are, therefore, I conceive, fully justified, on principles of general applicability, in confining the jurisdiction exercisable in this particular class of cases to a specified class of Magistrates; and the further question which we have to determine is, how this class is to be defined. My answer is, that the line ought to be drawn with reference to the presumable fitness of the Magistrate, and with reference to that alone, and that we ought not to base any difference which we may think fit to make [illegible] on particular classes of Magistrates on race distinctions, which are as far [illegible] as may be from any fair reference to any.

"[illegible] principles by which we have been guided in framing the proposals which I am now asking leave to lay before the Council. We are of opinion that the time has come when the settlement which was arrived at in 1872 may well be reopened and ought in justice, to be reconsidered; we are of opinion that if it is reopened, it ought to be settled on a permanent and stable foundation; and, finally, we are of opinion that no change in the law can be satisfactory or stable which fails to remove at once and completely from the Code every trace of racial disqualification which is based merely on race distinctions.

"Accordingly, we propose to amend the law, first, by repealing the words which confine the exercise of jurisdiction over British subjects to persons who are European British subjects themselves; secondly, by declaring that every District Magistrate and Sessions Judge shall be, by virtue of his office, a Justice of the Peace, and, as such, capable of exercising jurisdiction over European British subjects; and thirdly, by empowering Local Governments to invest with the office of Justice of the Peace, and consequently with jurisdiction over European British subjects, any person who, being either

(*a*) a member of the Covenanted Civil Service,

(*b*) a member of the Native Civil Service constituted under the statutory rules,

(*c*) an Assistant Commissioner in a non-regulation province, or

(*d*) a Cantonment Magistrate,

is for the time being invested with the powers of a Magistrate of the first class, and is, in the opinion of the Lieutenant-Governor, fit to be entrusted with those further powers. We propose to make no distinction in the law between European and Native officers. We consider that the care exercised in the selection of officers for the Covenanted Service, both in Regulation and Non-Regulation Provinces, together with the subsequent training that they receive, warrants our amending the law in the manner proposed. As a fact, no officer would be eligible until he had passed all the departmental examinations and been in training long enough to show the superior authorities whether he would be likely to use any powers conferred on him with proper discretion. These proposals will completely remove from the law all distinctions based on the race of the Judge. The limitations remaining on the jurisdiction of particular classes of Magistrates will be based, not on any difference of race, but simply on differences of training and experience.

"These, then, are our proposals. I repeat that, in making them, the only object which we have in view is to provide for the impartial and effectual administration of justice. It is by that test that we desire our proposals to be tried. If they are tried by that test, I am not without a confident hope that they will commend themselves both to the European and to the Asiatic subjects of Her Majesty as reasonable and just."

The Hon'ble MR. EVANS said that he was not well acquainted with the rules of debate in the Council, but wished to know whether the principle of this measure should be debated on this occasion, when leave was asked to introduce a Bill, or whether the measure should be debated at a later stage. Most of the non-official members of the Council were in the same position as himself, and had heard today, for the first time, what the proposed measure was. It was, no doubt, one which had been often debated and was a vexed question. As had been pointed out, it was settled by a compromise in 1872, and MR. EVANS would also point out that there was nothing which was more dear to any man, and more especially to an Englishman, than his liberty, and nothing which he was more jealous of than any change in the tribunal which could deprive him of that liberty in a moment. He might also point out that, when an Englishman came into a tropical country, a sentence of imprisonment on him in certain seasons and places meant almost certain death. He did not propose now to discuss the principles of the settlement which it was now proposed to come to. He thought that the able speech in which it was introduced and the grave matters which were set forth in it deserved full consideration, and he did not think he would be justified in propounding any views of his own on the subject at once. But time should be given to the non-official community, considering that the question of the tribunal was one of the greatest importance—far greater than any question concerning the law of property and other such matters. Under these circumstances, he would ask His Lordship if he considered it was convenient to debate the principle of the Bill on the motion for leave to introduce it, then that the motion should be postponed so as to give time to the non-official English community in India, which was scattered far and wide in the various provinces, to make their voices heard, or, at any rate, that it should be postponed today, as he felt he could not give full consideration to it that day.

His Excellency THE PRESIDENT said :—"Nobody is pledged in the smallest degree by the introduction of this or any other Bill, and it would be obviously very unfair that Hon'ble Members of Council should be called upon to express an opinion on the principle of a Bill which they have not seen. Nothing could be more lucid than the statement made by my hon'ble and learned friend who proposes to introduce the Bill, but, until the Bill itself is in the hands of the public, it would be unfair both to them and to the Government that any opinion should be expressed upon it, or that any discussion should take place upon the measure in this Council.

"No one knows better than my hon'ble and learned friend Mr. Evans how difficult it is to understand a Bill, even with the clearest explanations of its provisions, until you have the Bill itself before you; and the public are sometimes perhaps a little too much inclined to criticise by anticipation measures of which they know nothing and have seen nothing; and I myself should not be in the smallest degree inclined to give any sort of encouragement to a procedure which, as I have said, is unfair both to the Government and to the public.

"I need not, I am sure, say that the Government has no desire to push this matter forward without giving full time for its consideration.

"The proper occasion, I think, for discussing the principle of the Bill will be on its reference to a Select Committee.

"I look upon that stage of the procedure as standing in the place of what is called 'the second reading' in Parliament at home. In the House of Lords, a Bill is often brought in and put on the table without saying a word; in the House of Commons, this is not the case, but the occasions on which discussions arise on the introduction of a Bill are rare, and debate on the principle of the measure takes place on the second reading.

"What I would, therefore, suggest would be that leave should now be given to bring in this Bill; that it should be brought in at the next meeting of the Council, and then published; and that due time should be given, before the motion is made for its reference to a Select Committee, in order to enable Members of Council to consider it when they receive it in print, and to be prepared to discuss it fully after they have acquired a perfect knowledge of its provisions."

MAHÁRÁJÁ SIR JOTÍNDRA MOHAN TAGORE having asked permission to address the Council on the subject of the Bill, His Excellency the President remarked :—

"Although, according to strict rule, the Mahárájá has lost his turn for speaking, I am sure that this Council would wish me to give him leave to address them. And, in doing so, I should like to take the opportunity of expressing the great regret I feel that this, I believe, is the last occasion on which we shall have the presence in the Council of our hon'ble colleague Mahárájá Sir Jotíndra Mohan Tagore. During the long period of his service in the Legislative Council, the Mahárájá has distinguished himself by his fairness, his enlightened views and his remarkable courtesy towards all the Members of this Council.

"The Government of India have derived very great advantage from the presence of my hon'ble friend in the Council, and it is a source of deep regret to me that the fair rule of giving a chance to others to take their place in this Council, and, therefore, of not unduly prolonging the presence in it of any one particular member, added to the Mahárájá's own desire to be relieved of duties which clash with his other engagements, have necessitated his retirement, and occasioned the great loss to the Council which must result from his absence from it."

The Hon'ble MAHÁRÁJÁ SIR JOTÍNDRA MOHAN TAGORE said :—"My Lord, I have listened with great interest to what has been said by my hon'ble and learned colleague opposite, and, as this may be the last occasion, as Your Lordship has observed, on which I shall have the honour of addressing this Council, I beg leave to take this opportunity of offering, on behalf of my countrymen, their grateful thanks to Your Excellency for redeeming the promise, which was held out to them during the last session of the Council, to amend that portion of the Criminal Procedure Code which relates to the trial of British-born subjects. Although it is impossible to say anything with regard to the details of the Bill before it is introduced, the very fact that something will be done now to remove the anomaly which has been a source of standing complaint with my countrymen from a very long time is in itself a matter for congratulation. Knowing the broad and statesman-like views which have always characterised Your Lordship's government, we have every reason to hope that legislation in this direction will be of a piece with those other great measures of reform,—among which I may name the repeal of the Vernacular Press Act, and the Act which, for the first time, has introduced the principle of self-government in this country,—which we feel sure will mark Your Lordship's administration as an epoch in the annals of British India; and I am free to confess, my Lord, that, on this closing day of my humble career in this Council, I feel an honest pride that I have had the good fortune to occupy a seat here while these great measures have been either passed or initiated under the auspices of Your Excellency's liberal government.

"And I take this opportunity, my Lord, to tender my own most hearty and grateful thanks for the very kind manner in which Your Excellency has been pleased to speak of my humble services in this Council."

The Motion was put and agreed to.

UNIVERSITIES DEGREES BILL.

The Hon'ble MR. GIBBS introduced the Bill to authorize the Universities of Calcutta, Madras and Bombay to grant certain honorary degrees, and moved that it be circulated for the purpose of eliciting opinion thereon.

He said the short history of the measure was this. In the Bill which became law a short time ago for the establishment of the University in the Panjáb, permission was given to that University to confer certain honorary degrees. It would also be in the recollection of the Council that an Act conferring power on the University of Calcutta to grant honorary degrees generally was passed in 1875 very hurriedly through the Council, to confer the honorary degree of Doctor of Laws on His Royal Highness the Prince of Wales. Under that Act the University also, some short time afterwards, conferred a similar distinction on three eminent scholars, two of whom were Natives, namely, Rajendralál Mitter, K. M. Banerjí and Monier Williams. Some time after, the Secretary of State addressed a despatch to Government, asking them to abstain from conferring these honorary degrees. It seems, however, to the Government of India that the time has now arrived when the Universities in this country have attained to a status and position which would warrant this power being exercised by them; and the Calcutta University, on being unofficially consulted, was of opinion that the measure which the Government proposed to introduce was one worthy of acceptance. It would repeal the Act of 1875 and limit honorary degrees being conferred by the University of Calcutta, as well as by other Universities, to that of Doctor of Laws, which was generally the honorary degree conferred by the older Universities of Oxford, Cambridge and Dublin; and, in accordance, he had now to introduce the Bill, leave to do which was obtained in Simla, to grant this power to the Universities of Calcutta, Madras and Bombay, the two latter of which did not hitherto possess it.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS also moved that the Bill and Statement of Objects and Reasons be published in the *Fort St. George Gazette*, the *Bombay Government Gazette* and the *Calcutta Gazette* in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

LITTLE COCOS AND PREPARIS ISLANDS LAWS BILL.

The Hon'ble MR. ILBERT moved for leave to introduce a Bill to amend the law in force in the Little Cocos Island and Preparis Island. He said that these two islands, as members of the Council might be aware, lay to the north of the Andaman group, between that group and the projection of land which was formed by the mouths of the Irrawaddy. The Little Cocos Island used to form

a portion of the territories administered by the Chief Commissioner of the Andamans and the Nicobars, and, as such, was a portion of the scheduled districts contained in the Scheduled Districts Act. For administrative purposes, it was thought advisable a short time ago to transfer the Island to the administration of the Chief Commissioner of British Burma, and to attach it to the District of Hanthawaddy, in British Burma. It was considered necessary to withdraw the Little Cocos Island from the operation of the Scheduled Districts Act, and to make the law the same as in that portion of British Burma. These objects would be effected by the present Bill, and it would take effect retrospectively from the date from which they were transferred to the administration of the Chief Commissioner of British Burma. But, considering the nature of the population of the Islands, he did not think that a retrospective measure would involve any serious risk of interfering with vested rights. He had turned for information on this subject to a copy of the *Gazetteer* of Dr. Hunter, from which high authority he learnt that the inhabitants of Little Cocos, at the date when the *Gazetteer* was published, consisted of a few wild pigs and a good many birds. But he had just been informed by His Excellency the Commander-in-Chief that there were also a lighthouse-keeper and eleven chaprásis.

The Motion was put and agreed to.

NIZÁMAT ACT REPEAL BILL.

The Hon'ble MR. ILBERT also presented the Report of the Select Committee on the Bill to repeal Act XXVII of 1854.

AGRICULTURAL LOANS BILL.

The Hon'ble MR. CROSTHWAITE moved that the Hon'ble Rájá Siva Prasád and the Hon'ble Mr. Thomas be added to the Select Committee on the Bill to consolidate and amend the law relating to loans of money for agricultural improvements.

The Motion was put and agreed to.

The Council adjourned to Friday, the 9th February, 1883.

R. J. CROSTHWAITE,
Additional Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 2nd February, 1883.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 9th February, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding.*
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A, C.S.I, C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D, C.I.E.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble R. Miller.
The Hon'ble Kristo Dás Pál, Rai Bahádur, C.I.E.

NEW MEMBER.

The Hon'ble Kristo Dás Pál, Rai Bahádur, took his seat as an Additional Member.

NIZÁMAT ACT REPEAL BILL.

The Hon'ble MR. ILBERT moved that the Report of the Select Committee on the Bill to repeal Act XXVII of 1854 be taken into consideration. He said that the object of the Bill was to repeal formally an Act which, in consequence of arrangements recently made with the Nawáb Názim of Bengal, had become unworkable. The Bill was approved by the Local Government; it had been duly published in the *Calcutta* and *Bengálí Gazettes*, and the Council had received no objections or suggestions for amendment. Under these circumstances, the Committee recommended that the Bill be passed in the form in which it was introduced.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill be passed.

The Motion was put and agreed to.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble MR. ILBERT also introduced the Bill to amend the Code of Criminal Procedure, 1882, so far as it relates to the exercise of jurisdiction over European British subjects. He said that the step which he was then taking was purely formal. He would not invite the Council to discuss the principle of the Bill until full time had been given for its consideration by the outside public.

LITTLE COCOS AND PREPARIS ISLANDS LAWS BILL.

The Hon'ble MR. ILBERT also introduced the Bill to amend the law in force in the Little Cocos Island and Preparis Island, and moved that it be circulated for the purpose of eliciting opinion thereon.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *British Burma Gazette* and the *Andaman and Nicobar Gazette* in English, and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

The Council adjourned to Friday, the 16th February, 1883.

R. J. CROSTHWAITE,
Additional Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 9th February, 1883.

Printed and published for the GOVT. OF INDIA at the OFFICE of SUPDT. GOVT. PRINTING, 168, Dharamtollah Street, Calcutta.

SUPPLEMENT TO

The Gazette of India.

Nº 7. } CALCUTTA, SATURDAY, FEBRUARY 17, 1883.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS OF FASL RABI, N.-W. PROVINCES, 1882-83, UP TO 31st DECEMBER 1882.

Canal Division.	Zone.	Water distributed during December 1882. Depth in Canal Gross Consumption, cubic feet per second. Gauge in feet. Full supply.	Actual average throughout.	Allotted discharge.	Total area of irrigation during cutrent fasl.	Total area for the corresponding period of last year.	Land irrigated (approximate). Wheat.	Barley.	Gram.	Other food-grains.	Miscellaneous.	Total.	Rainfall. Total from 1st October to 31st December 1882.	Rainfall. Average of ten previous years for the same period.	Remarks.
															Cubic feet per second.
															Supply—
															Entering head of Ganges Canal 6,247
															„ Lower Ganges Canal 2,343
															8,596
															Expended—
															Ganges Canal 4,589
															Lower Ganges Canal 3,263
															7,852
															Escaped—
															Anúpshahr Division 23
															Bulandshahr ditto 55
															Narora ditto 21
															Mainpuri ditto 1
															Cawnpore ditto 337
															Etáwah ditto 3
															Bhogaipur ditto 27
															Percolation from Naora Division 274
															Ditto Mainpuri „ 23
															744
															8,596
															Executive Engineer, Meerut Division, reports that "the canal supply was most plentiful up to 16th December; after that 160 cubic feet had to be closed off from the rajbahn heads to pass water down the canal. Owing to the cultivators giving water to old sugarcane to preserve it from frost, the *rabi* irrigation did not make so much progress as might have been expected, and at end of the month there was a large amount of rabi crop awaiting 'kor' or first watering."
															Executive Engineer, Eastern Jumna Canal, reports that "the Jumna supply is far short of the demand for water, and crops are very much in want of water."
															No remarks from other divisions.

FORT WILLIAM,
The 16th February 1883.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

GENERAL.

APPOINTMENTS TO THE ENGINEER AND UPPER SUBORDINATE ESTABLISHMENTS.

Nos. 241—51G., dated Fort William, the 14th February 1883.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Home Department Circular No. $\frac{21}{746-753}$, dated 10th April 1879.

Public Works Department Resolution No. 1516—28G., dated 11th November 1882, and Despatches from the Secretary of State quoted in the preamble, also Secretary of State's Despatch No. 52 P. W., dated 28th September 1882, approving of the above Resolution before issue.

Read—

Letter from the Secretary to the Government of Madras, Public Works Department, No. 3351 W., dated 19th December 1882, asking for definite orders as to future appointments to the Engineer and Upper Subordinate Establishments.

RESOLUTION.—The Circular of the Home Department quoted in the preamble, in furtherance of the views of Her Majesty's Government, enjoined the reservation of appointments in the uncovenanted service generally for natives, but made an exception in favor of certain Departments and amongst others, of the Public Works Department.

2. Prior, however, to the issue of this Circular, the Secretary of State had, in his Despatch, No. 41, dated 10th August 1876, followed by other Despatches quoted in the preamble of Resolution No. 1516—28G., dated 11th November 1882, impressed upon the Government of India that, as the European portion of the Superior Public Works Establishment was now recruited from the Royal Indian Engineering College at Coopers Hill, the appointments from the Indian Engineering Colleges should be closely reserved for natives, and that, without the sanction of the Secretary of State, no Europeans other than Royal Engineer Officers should, in future, be appointed in India to the Engineer Establishment. At the same time his Lordship gave it to be understood that he did not intend these orders to affect the classes formed at the Thomason College for the education of Non-Commissioned Officers and Soldiers of the British Army, or of Europeans and Natives, for the Subordinate Establishment of the Department.

3. The purport of the above orders was, so far as appointments from the Thomason College are concerned, summed up in Resolution No. 1516—28G., dated 11th November 1882, which directs that, commencing with the students entering the College in the year 1883, the number of appointments to the Engineer Establishment, guaranteed from time to time to that institution, shall be given in the first instance to persons of pure Asiatic origin who qualify under the usual conditions.

4. It is necessary, however, in view of the orders by the Secretary of State already quoted, and of the uncertainty in regard to this matter which the letter from the Government of Madras shows to exist, to lay down the following rules for future guidance in making appointments to the Engineer and Upper Subordinate Establishments:—

1.—Without the sanction of the Secretary of State, no permanent appointment of Europeans, except of Royal Engineers, or as provided in Rule 2, shall be made to the Engineer Establishment.

2.—Subject to any guarantee that may have been already given, the appointments made to the Engineer Establishment from the Indian Engineering Colleges shall be reserved for persons of pure Asiatic origin who qualify according to the College Standard. If, however, a sufficient number of Natives do not pass the test, the appointments will be open to European or Eurasian competitors at the same examination.

3.—Appointments shall not be made under Rule 2 in excess of the numbers guaranteed from time to time. The numbers guaranteed for the years 1885 and 1886 are shown in the margin.

	1885.	1886.
Madras	1	1
Bombay	1	1
Bengal	1	1
Thomason College	3	4
	6	7

4.—Appointments in the Subordinate Establishment shall be open, under the same rules as heretofore, to Non-Commissioned Officers and Soldiers of the British Army, and to Europeans and persons of mixed descent as well as to Natives.

ORDER.—Ordered, that this Resolution be communicated to the Local Governments and Administrations marginally noted, and the Director General of Railways; also that it be published in the *Gazette of India* and all local official Gazettes.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab, in the Public Works Department.
The Chief Commissioners of the Central Provinces, British Burma, Assam and Coorg.
The Agents, Governor General, for Central India and Rajputana.

G. H. D. WALKER,
Offg. Under-Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 13th FEBRUARY 1883.

GENERAL REMARKS.—There has been no rainfall to report in any part of the country except in three districts of the Madras Presidency, in two of the Bengal Presidency, and at Dibrughar in Assam.

Agricultural prospects continue generally good everywhere. More rain is however still needed in some districts of the Punjab. In Sarun, in the Bengal Presidency, the poppy crop is said to have been almost entirely damaged by the recent rains.

Harvest operations in progress in the Central Provinces, and in Bombay and Madras Presidencies. In Coorg the threshing of rice and *ragi* crops still continues, and a slight rise in price of coffee in the local market is reported.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 14th)		
Bellary		Standing crops cotton diseased in parts, others generally in good condition; harvest paddy, dry grains, and sugarcane, outturn average.
Kurnool		Standing crops generally in good condition; harvest dry grains, yield below average; cattle disease in parts.
Ganjam		Standing crops cotton thriving; harvest sugarcane, outturn average; fever, small-pox, and cattle disease continue.
Kistna		Standing crops paddy and dry grains affected by grubs and blight in parts, elsewhere promising; harvest paddy and dry grains, yield below average; small-pox continues; fever more general; cattle disease in parts.
Chingleput (Madras)		Standing crops in good condition; harvest paddy, outturn below average; small-pox and cattle disease in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, cholera, and cattle disease in parts.
Tanjore	·58 (average of ten stations.)	Standing crops in good condition; harvest paddy and dry grains, yield average; cholera abating.
Madura	2·50 (average of seven stations.)	Standing crops withering in parts; harvest paddy and dry crops; cholera and fever in parts.
Malabar	·10 (average of one station.)	Harvest second crop paddy continues; fever and cholera in parts; small-pox slight.
Travancore		Harvest progressing; fever and small-pox continue in parts. *General Remarks.*—No rain except in Tanjore, Madura, and Malabar; general prospects good.
Bombay—(Feb. 14th).		
Kurrachee	*Nil*	Small-pox in Kurrachee, 15 fresh cases, 18 deaths from 4th to 10th February, total to latter date, cases 136, deaths 42, remaining sick 53; disease also in Dadu 1, Sehwan 4, Kotri 1, and Keti 1 case respectively; fever in 9 talukas; cattle disease in 4 talukas; river on 11th 1 foot 11 inches, against 3 feet 1 inch on same date last year; wheat, red rice, and *bajri* in Kurrachee 24, 32, and 36 lbs., in Manjhand 32, 40, and 48 lbs., in Sakro 16, 34, and 48 lbs., and in Sajawal 36 and 48 lbs. per rupee respectively.
Hyderabad		*Rabi* crops untouched by frost are reported fair; small-pox and fever in 5 and cattle disease in 3 talukas; wheat 26, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		*Rabi* crops thriving; wheat 28½ and *bajri* 32 lbs. per rupee.
Baroda		*Rabi* crops in good condition; cotton-picking continuing; wheat ready for sickle in parts of Kadi division; small-pox in parts of Naosari division; cattle disease in Kadi and Patan talukas; *bajri* 30 and rice 26¼ lbs. per British rupee.
Surat		Cotton-picking continued; small-pox in city and Chorasi; fever in some talukas.
Nasik		Weather as in the commencement of hot season; harvesting *rabi* continued; wheat 25½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay)		Average abnormal temperature 1° warm from 7th to 10th, afterwards *nil*; vapour in air in excess of normal on 7th and 8th, afterwards slightly in defect of normal; abnormal wind northerly on 11th and 12th; wind normal on all other days.
Poona		Reaping of *rabi* progressing; small-pox in 6 talukas; *bajri* 44 and *jowari* 60 lbs. per rupee; in Poona *bajri* 37 and *jowari* 48 lbs per rupee,
Ahmednagar	*Nil*	*Rabi* harvest in progress; *bajri* maximum 54 lbs. per rupee in Parner, minimum 45 lbs. in Kopargaon; *jowari* maximum 75 lbs. per rupee in Shrigonda, minimum 54 lbs. in Akola; fever in a few villages in Sheogaon taluka; cattle disease in 2 villages in Karjat taluka.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Sholapore		Reaping of *rabi* crops in progress; *jowari* 73 lbs. 8 tolas and *bajri* 57 lbs. 21 tolas per rupee.
Dharwar		Harvesting of early crops nearly completed; that of late crops commenced; cotton suffering from blight in 10, and wheat in 3 talukas; other late crops good; fever and ague in 3 and cattle disease in 1 taluka; rice minimum 26 and *jowari* 52 lbs. per rupee.
Kanara		Second crop rice plants healthy; sugarcane harvest continues; small-pox in Sirsi; fever in 2 talukas and 1 petta; cattle disease in 1; common rice in Karwar 14 seers per rupee; in district average 15½ seers per rupee; weather fair and hot.
Rajkot		Weather cold; general health good; cholera disappeared from Navanagar and Morvi; *bajri* 29 and *jowari* 35 lbs. per rupee.
		General Remarks.—*Rabi* generally good; harvesting in progress; locusts in Chandgad Mahal of Belgaum; fever, small-pox, and cattle disease in several districts.
Bengal—**(Feb. 13th)**		
Chittagong	*Nil*	Weather bright and cold; prospects of winter crops fair; prices stationary; cholera and cattle disease not yet ceased.
Dacca	*Nil*	Harvesting of mustard seed commenced; other winter crops promising; *boro* paddy being sown.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice and sugarcane nearly over, yield estimated at from 12 to 14 annas; *rabi* crops doing well; price of common rice stationary; public health good; cholera and fever have abated.
Moorshedabad	*Nil*	Winter crops doing well, except in some places where rain is wanted; cholera still prevalent in thanas Shahanagore and Manullabazar, and outpost Mohimapore, but has somewhat abated; small-pox reported from Dowlatabad.
Rajshahye	*Nil*	Weather getting warmer; prospects of *rabi* crops generally favourable; *ganja* being reaped, it will be a fair crop; general health fair.
Burdwan	0·5	Weather cool; winter crops being harvested; prospects tolerable; public health fair.
Rungpore	*Nil*	Prospects of cold-weather crops favourable; land being prepared for autumn crops; cholera still somewhat prevalent in south of district.
Bhagalpur	*Nil*	Prospects fair; *rabi* crops near the town damaged by insects, good elsewhere; public health good.
Purneah	*Nil*	Prospects of crops continue good; public health improving.
Patna	*Nil*	Prospects of wheat, barley, and gram good; late rain has caused some injury to *massoor*, pulse, and peas; public health good.
Durbhunga	*Nil*	Rice crop harvested; prospects of *rabi* crops favourable; prices stationary; public health good.
Hazaribagh	0·2	Weather cold and seasonable; late rain said to have done some injury to standing crops; a few cases of small-pox still reported; general health otherwise good.
Cuttack	*Nil*	Reaping of late rice completed, except in a very few places; *rabi* crops being gathered; public health generally good.
		General Remarks.—Slight rainfall reported from Burdwan and Hazaribagh, but none from the other reporting districts; prospects of standing *rabi* crops continue generally favourable, but the late rainy weather has caused some injury to these crops, especially oilseeds in some places; poppy is said to have been almost entirely lost in Sarun; sugarcane harvest is proceeding, and is generally yielding a good outturn; mustard and other *rabi* crops have commenced to be gathered in some districts; *boro* or spring rice is still being sown; fever and cholera have generally abated, but the latter is said to be still prevalent in places in Moorshedabad and Rungpore; cases of small-pox reported from a few districts.
N.-W. Provinces and Oudh—		
Benares (Feb. 12th)	No rain	Weather growing warm; prospects for *rabi* crops good; peas being cut; no sickness; prices steady.
Allahabad („ 14th)	No rain	Crops beginning to ripen; prices falling slightly.
Gorakhpur („ 12th)		Weather fine; crops promising; demand for labour; prices stationary.
Jhansi („ „)		*Rabi* prospects good; crops flourishing; prices fluctuating; small-pox amongst children still continues; cattle disease in a few villages of pargana Jhansi continues.
Agra („ 13th)	No rain	*Arhar* and gram slightly injured by frost; small-pox in 4 parganas; general health good; prices stationary.
Bareilly („ „)		Weather cold and seasonable; crops excellent; health good.
Meerut („ „)		Weather clear but less cold; high westerly wind; crops flourishing; health good; supplies sufficient; prices stationary.
Kumaon („ „)		Weather fair; crops doing very well; general health good; cattle disease continues; prices stationary.
Lucknow („ „)		Prospects of crops excellent; prices stationary; general health good; small-pox in the city abating.
Partabgarh („ „)	No rain	Prospects of crops continue favourable; sugarcane in mill; prices almost steady; health good; a few cases of small-pox in Kunda tahsil.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Sitapur (Feb. 13th)		Weather clear during week; crops promise well; general health good; prices steady.
Fyzabad („ „)	No rain	Crops promise well; public health good; condition of cattle good; prices almost stationary.
Rae Bareli („ 14th)		Weather clear and cold; aspect of *rabi* crops promising; health of men good; condition of cattle normal; prices unchanged.
Cawnpore („ 13th)	No rain	Prospects good; *arhar*, gram, and *sarson* slightly damaged from frost; sowing of melon begun; health good; prices steady.
Farukhabad („ „)		Weather seasonable; crops promise fair; markets well supplied; condition of the people good; small-pox is lingering in one tahsil.
		General Remarks.—There has been no rain during the week; the prospects of crops are good, but some slight damage has been done by frost in Cawnpore and Aligarh; small-pox is abating in Lucknow and is still lingering in Partabgarh, Farrukabad, Agra, and Jhansi, otherwise the general health is good; cattle disease is reported from Moradabad, Kumaon, and Jhansi; prices are steady as a rule, but are falling in Allahabad.
Punjab—(Feb. 13th)		
Delhi		Small-pox continues in the city and district; harvest prospects good; prices almost stationary.
Hissar		Health good; crops flourishing; prices falling.
Umballa		Good *rabi* crops flourishing, average yield expected; prices stationary.
Jullundur		Health good; prices falling.
Amritsar		Health good; crops progressing favourably; prices steady.
Lahore		Health and harvest prospects good; prices fluctuating.
Ferozepore		Health and harvest prospects good; prices steady.
Sialkot		Health and harvest prospects good; prices falling.
Rawalpindi		Slight fever in the Attock and Kahuta tahsil; cattle disease abating; *rabi* prospects good; slight fall in prices.
Peshawar		Health and harvest prospects good; prices stationary.
Mooltan		Health and harvest prospects good; prices steady.
Dera Ismail Khan		Health and harvest prospects fair; rain wanted; prices almost stationary.
		General Remarks.—The harvest prospects throughout the province promise well, although rain is wanted in some districts; the general health continues good.
Central Provinces—		
Nagpur (Feb. 14th)		Weather warm; prospects of crops good; public health good; prices steady.
Jubbulpore („ 13th)		Weather cool; *rabi* crops in good condition; prospects favourable; health good; prices stationary.
Saugor („ 12th)		Weather cool and clear; *rabi* slightly injured by frost; health good; prices stationary.
Seoni („ 13th)		Weather cloudy and warm; pulses being reaped; fever increasing; wheat 19 seers per rupee.
Hoshangabad („ „)		Weather seasonable; *rabi* harvest commenced; a few cases of small-pox, otherwise public health good; prices steady.
Raipur („ 10th)		Weather clear; *rabi* prospects good; slight cattle disease; health good; rice 34 seers per rupee.
Sambalpur („ 8th)		Weather clear and cold; prospects of crops and health good; rice 56 seers per rupee.
Khandwa („ 13th)		Occasional winds; *rabi* reaping in progress; small-pox reported; prices stationary.
		General Remarks.—Weather getting warm; *rabi* harvest in progress; slight cattle disease and fever in two or three districts; public health good; prices steady.
British Burma— **(Feb 10th)**		
Akyab		One death from cholera and one from small-pox in town; eight deaths from small-pox in district; cholera reported from one circle, otherwise public health good.
Rangoon		One death from small-pox, otherwise public health good.
Bassein		Three deaths from cholera in town, otherwise public health good.
Prome		One death from cholera in district, otherwise public health good.
Amherst (Moulmein)		Two deaths from cholera in district, otherwise public heath good both in Moulmein and district; no cattle disease reported.
Toungoo		One death from small-pox in district, otherwise public health good; crops reaped and housed.
		General Remarks.—Public health generally good.
Assam—		
Gauhati (Feb. 13th)	*Nil*	Weather seasonable; public heath good; lands being ploughed for *aus*; mustard being gathered.
Sylhet („ 14th)	*Nil*	Ploughing for *aman* has begun; prospects of *boro* paddy generally good; a few cases of cholera and small-pox here and there.
Cachar („ „)	*Nil*	Weather rapidly getting warmer; reaping of winter crops finished common rice 26⅝ seers per rupee; public health good.
Dibrugarh („ „)	·25	Weather fine; mustard doing well; no further report of small-pox received from North Lakimpur Sub-division.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg— (Feb. 14th)		
Bangalore		Crops in good condition; prospects fair.
Mysore		Crops in good condition; prospects fair.
Mercara		Threshing of rice and *ragi* crops not completed; slight rise in price of coffee in local market; further fall in price of food grains; fever and small-pox prevailing in Yedenalknad and North Coorg, *General Remarks.*—The crops in the province are in good condition; agricultural operations continue in active progress; prospects fair; public health good; prices unaltered.
Berar and Hyderabad- (Feb. 14th)		
Amraoti		Threshing nearly finished; *rahi* crops being reaped; wheat 16 and *jowari* 26 seers per rupee.
Akola		*Rabi* crops in good condition; reaping commenced.
Hyderabad		*Rabi* crops in good condition and in some places being reaped; *tahi* crops prospering; small pox and fever prevail in some places; no cattle disease; prices—wheat 16¾, coarse rice 11, white *jowari* 26, yellow *jowari* 31, and *tur* 26¼ seers per halli sicca rupee.
Central India States— (Feb. 14th)		
Indore		Weather warm but seasonable; health and prospects good.
Morar (Gwalior)		Health and prospects good; weather seasonable.
Sutna		Health and prospects good.
Neemuch		Weather seasonable; opium and gram crops in places are reported to have slightly suffered from extreme cold in last fortnight; public health good.
Goona		Health and crops good; wheat 23 seers per rupee.
Bhopal		Weather cool; crops and public health good.
Nowgong		Health good; prices steady; *rabi* prospects favourable.
Manpur		Health good.
Rajputana—		
Abu (Feb. 14th)		Weather cloudy; health good.
Sirohi („ 11th)		Wells full; health and prospects good.
Marwar („ 9th)		Wells resorted to; health good; prospects much improved since the recent rain.
Harowtee („ 12th)		Weather seasonable; prospects of crops and health good.
Jhallawar („ 10th)		A little damage to crops by frost; small-pox in some parts.
Ajmere („ 13th)		Slight fever prevalent; prospects excellent; weather getting warmer.
Jeypore („ 13th)		Health and prospects good; weather seasonable; prices steady.
Ulwur („ „)		Prospects of wheat-barley continue favourable; *arhar* destroyed entirely, and gram partly by frost.

STATISTICAL BRANCH;
Calcutta, 20th February 1883.

D. M. BARBOUR,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REVIEWING THE ANNUAL REPORT OF THE GEOLOGICAL SURVEY OF INDIA AND OF THE GEOLOGICAL MUSEUM, CALCUTTA, FOR 1882.

No. 66S.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department, dated Calcutta, the 16th February 1883.

Surveys.

Read—

The Report of the Geological Survey of India and of the Geological Museum, Calcutta, for the year 1882, received with the Superintendent's letter No. 39, dated 29th January 1883.

RESOLUTION.

The following field-work was done by the Department during the year:—

Mr. Hughes was engaged in investigating the new coal-field of Umaria at the west end of the South Rewah Gondwaná basin, within 34 miles of Kutni station on the East Indian Railway. Borings to test the depth of the seams and the quality of the coal were made with highly favourable results by the local authorities. Mr. LaTouche was employed in examining the cretaceous coal-field of Darangiri in the Garo Hills. Mr. Foote has been engaged in the districts of Madura and Tinnevelly, principally in completing his map of the coastal region; he also made a traverse across part of the Mysore gold-fields later on in the season. Mr. Bose has been continuing his work in Khandesh for another season, reporting on the cretaceous rocks of the Narbada valley. Mr. Hacket surveyed parts of the Arvali range in Southern Meywar, and also examined some intricate features along the Vindhyan boundary to the north-east of Neemuch. Mr. Fedden surveyed a large area along the coastal region of Kattywar from Bhávnagar to Madhapur. Mr. Blanford reported upon the coal deposits to the west of Sibi. Mr. Greisbach, on his return from England, was employed in the high Himalayas in continuation of his previous explorations. Mr. Oldham, after accomplishing his tour with the Manipur-Burma Boundary Commission, explored the Naga Hills and returned *viâ* the Assam valley.

2. The more detailed examination of the coal and iron beds of Central India, in connection with various railway projects is one of the chief features of the past season's work. The coal measures of Umaria in South Rewah, within easy distance of the East Indian Railway, have been very favourably reported on, and if these expectations are realized, a very extensive field has been opened to enterprise. First class iron ores abound in the same locality, and the railway extensions which are under contemplation will, if carried out, render the country easily accessible to the practical miner. The borings in the Shahpur field in the Central Provinces, which were brought to a close in October last, were less successful, and so far no valuable seams in the Sathpura region have been discovered. In the Garo and Jaintia Hills similar investigations for coal were conducted, and some considerable beds have been traced and mapped. The assistance the Geological Department can afford the Department of Public Works when new railway lines are under consideration, has long been recognised, and arrangements have now been made to ensure that the Geological Department should be invariably consulted in regard to all projected lines which would pass through mineral tracts.

3. Important work, though of a more purely scientific interest, was also accomplished in Manipur, the middle Himalayas, and the North-West Frontier by Messrs. Oldham, Greisbach and Blanford. The great services done by the last-named officer in the cause of Indian Geology are fittingly recognised in the Report in connection with his enforced retirement from the service through ill-health.

4. Two parts of the Memoirs, and Volume XV of the Records, of the Geological Survey were published during the year. They contain as usual a large number of interesting and valuable papers on Geological and other kindred subjects.

5. The Department continued under the charge of Mr. Medlicott, and the Government of India desires to record its sense of the zeal and ability with which it continues to be administered.

ORDER.—Ordered, that the above Resolution be communicated to the Superintendent of the Geological Survey, for information and communication to the officers of the Department, and also that it be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS OF FASL RABI IN THE PUNJAB FOR 1882-83 UP TO 31st DECEMBER 1882.

CANAL DIVISION.	WATER DISTRIBUTED DURING DECEMBER 1882. Depth in Canal at Regulating Gauge. Full supply.	Actual throughout.	Gross Consumption, cubic feet per second. Estimated full supply.	Actual average throughout.	NAVIGATION RETURN CANAL. Principal Items of Traffic. Up.	Down.	LAND IRRIGATED (APPROXIMATE). Zila.	Acres.	RAINFALL. Average	During month.	CHIEF CROPS (APPROXIMATE). Name.	Area in acres	REMARKS.
Bari Doab Canal— 1st Division	4·9	3·6	3,073·60	774	...	...	Gurdáspur	9,358	0·94	...	Wheat	117,334	The amount entering the Bari Doab Canal Head was 1,713 cubic feet per second. Compared with the same period of last year, there is a decrease of 21,819 acres; again, as compared with December 1880-81, there is a falling-off of 59,268 acres. The decrease during the present season is said to be due to the heavy rainfall in the middle of September last, which rendered the cultivators somewhat in an unusual area of grain, which does not require irrigation; and to the wheat market being very dull, there was no inducement to largely sow this class of crop. The falling-off is entirely in the Lahore and Amritsar Districts.

Offg. Under-Secretary.

FORT WILLIAM,
The 23rd February 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 20th FEBRUARY 1883.

GENERAL REMARKS.—Very little rain fell anywhere during the past week, being confined to slight falls in two districts of the Bengal Presidency and of the North-Western Provinces and Oudh, in a few places in the Punjab, and at Dibrugarh in Assam.

Agricultural prospects continue generally good throughout the country. In the eastern parts of Bengal and in the Umballa district in the Punjab more rain is still wanted; and some damage to standing crops from the recent rain is reported from Behar: locusts have re-appeared in one district in Bombay and cotton-blight is apprehended in Dharwar.

In the Bombay Presidency and in the Central Provinces the *rabi* harvest is in places completed, and in others still in progress, and cotton-picking continues. In the Madras Presidency the harvest still continues in all districts except Travancore where it has closed. In Bengal the sugarcane harvest is in full swing, and is generally expected to yield a good outturn. In Coorg rice and *ragi* crops are being threshed, and an improvement is also reported in the coffee-market.

Sporadic cattle disease is reported in a number of districts throughout India, and is especially severe in the Amherst district of British Burma.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 21st)		
Bellary		Standing crops cotton and *cholum* diseased in parts; others generally in good condition; harvest paddy, dry grains, and sugarcane, yield average.
Kurnool		Standing crops affected by blight in parts, elsewhere in good condition; harvest dry grains, outturn below average; cattle disease in parts.
Ganjam		Standing crops cotton thriving; fever, small-pox, and cattle disease continue.
Kistna		Standing crops paddy and dry grains affected by grubs and blight in parts, elsewhere promising; harvest paddy and dry grains, outturn about average; small-pox continues; fever and cattle disease abating.
Chingleput (Madras)		Standing crops in good condition; harvest paddy, yield below average; small-pox and cattle disease in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains yield average; fever, cholera, and cattle disease in parts.
Tanjore		Standing crops in good condition; harvest paddy and dry grains, outturn below average; cholera abating.
Madura		Standing crops withering in parts; harvest paddy and dry crops; cholera and fever in parts.
Malabar		Harvest second crop paddy continues; small-pox in all tracts; fever and cholera in parts.
Travancore		Harvest over; fever and small-pox in parts.
		General Remarks—No rain any where; general prospects good.
Bombay—(Feb. 21st)		
Kurrachee		Fall in river on 14th 3 feet 10 inches against 3 feet 3 inches on same date last year; small pox increasing in Kurrachee, 28 fresh cases, 6 deaths from 11th to 14th February, total to latter date 164 cases, 48 deaths, remaining sick 54; fever in 8 talukas; slight cattle disease in three talukas; crops in Manjhand and Kurrachee damaged by frost; wheat, red rice, and *bajri* in Kurrachee 23, 32 and 33 lbs., in Kotri 30, 32, and 50 lbs., in Tatta 24, 36, and 44 lbs., and in Mirpur Batoro 22, 37, and 42 lbs. per rupee respectively.
Hyderabad		*Rabi* crops in fair condition; small-pox in 6, fever in 9, and cattle disease in 2 talukas; wheat 25, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		*Rabi* crops thriving; wheat 20 and *bajri* 32 lbs. per rupee.
Baroda		*Rabi* crops fair; cotton picking in progress; small-pox in parts of Naosari division; *bajri* 30 and common rice 25¼ lbs. per British rupee.
Surat		Cotton-picking continued; *rabi* crops harvesting; small-pox and fever in some places; *nagli* 51 and *jowari* 41 lbs. per rupee.
Nasik		Harvesting of *rabi* continues; cattle disease in Peint; wheat 25½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay)		Abnormal temperature *nil* on 14th, 18th, and 19th and 1° warm on all other days; vapour in air in excess of normal from 15th to 19th and in defect of normal on 14th and 20th; abnormal wind southerly on 16th and 17th, northerly on 19th and 20th; wind normal on all other days.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Poona		*Rabi* reaping nearly completed; small-pox continues; *bajri* 44 and *jowari* 50 lbs. per rupee, in Poona *bajri* 37 and *jowari* 46 lbs.
Ahmednagar		*Rabi* harvest in progress; *bajri* maximum 60 lbs. per rupee in Jamkhed, minimum 45 lbs. in Akola; *jowari* maximum 72 lbs. in Jamkhed, minimum 54 lbs. in Akola; cattle disease in 2 villages of taluka Karjat and in 1 of taluka Akola.
Sholapore		*Rabi* harvest in progress; *jowari* 72 lbs. 25 tolas and *bajri* 57 lbs. 31 tolas per rupee.
Dharwar		Harvesting of early crops almost completed, that of wheat and gram commenced; cotton improving in 2 and still suffering from blight in 8 talukas; other late crops good; fever in 3 and cattle disease in 1 taluka, rice minimum 26 and *jowari* 54 lbs. per rupee.
Kanara		Rice plants healthy; weeding and transplanting on coast; small-pox subsiding in Sirsi; fever in 2 talukas; common rice in Karwar 14 seers per rupee, in district average 15¾ seers; weather fair.
Rajkot		General health good; weather cold; 2 cases of cholera in Navanagar; *bajri* 29 and *jowari* 36 lbs. per rupee.
		General Remarks.—*Rabi* generally good; harvest in progress; cotton suffering from blight in Dharwar; locusts in Chandgad Mahal of Belgaum; fever, small-pox, and cattle disease in several districts.
Bengal—(Feb. 20th)		
Chittagong	*Nil*	Weather fair; rain wanted; prospects of spring crops fair; prices stationary; small-pox still continues.
Dacca	*Nil*	Harvesting of mustard seed continues; sugarcane being cut; prospects of winter crops good; sowing of *boro* paddy completed.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of late rice finished, that of sugarcane going on, yield estimated at about from 12 to 14 annas; *rabi* crops doing well; fever and cholera abating.
Moorshedabad	*Nil*	*Boro* rice is being sown; winter crops doing well, and a fair harvest expected; cholera has abated; small-pox reported from Dowlutabad.
Rajshahye	*Nil*	Weather getting warmer; prospects of crops generally favourable; *boro* paddy being transplanted; public health fair.
Burdwan	·46	Weather hotter; prospects of crops fair; public health indifferent.
Rungpore	*Nil*	Prospects of crops favourable; harvesting of mustard seed, sugarcane, and ginger began; cholera less prevalent.
Bhagalpur	*Nil*	Prospects of crops good, but much damage from caterpillars reported near Peerpointee; general health good, but some small-pox reported.
Purneah	*Nil*	Prospects of crops good; public health improving.
Patna	*Nil*	Prospects of *rabi* crops continue good; public health good.
Durbhunga	·13	Tobacco and *rahar* crops said to have been injured by late rain; wheat and barley ripening; prices rising slightly; public health good.
Hazaribagh	*Nil*	Weather—days warm, nights cool; prospects of crops favourable; a few cases of ordinary fever and small-pox reported; general health good.
Cuttack	*Nil*	Weather seasonable; reaping of late rice completed, with an average outturn of 13 annas; *dalua* rice and wheat progressing well; public health good.
		General Remarks.—There was a little rain in Burdwan and Durbhanga during the week, but none in the other reporting districts; weather generally getting warm; rain wanted in parts of Eastern Bengal; *rabi* crops generally reported to be favourable, except that in some places in Behar they are said to have been somewhat damaged by recent rain; sugarcane harvest is in full progress, and is generally expected to yield a good crop; some of the earlier *rabi* crops, especially mustard, have begun to be reaped; sowing of *boro* rice still proceeding; both fever and cholera have abated, but in Nuddea mortality from fever is still reported to be very considerable; a few sporadic cases of small-pox reported from some districts, and of cattle disease from a few.
N.-W. Provinces and Oudh—		
Benares (Feb. 20th)	No rain	Prospects for *rabi* crops good; no sickness; prices steady.
Allahabad („ 21st)	Slight shower in Phulpur.	No rain elsewhere; little damage to wheat from frost; prices slightly rising; health good.
Gorakhpur („ 19th)		Weather fine; crops promising; pulses being gathered; labour in demand; prices stationary.
Jhansi („ „)		Weather cloudy; prospects of crops excellent; gram beginning to ripen; prices fluctuating; small-pox continues; cattle disease decreasing.
Agra („ 20th)	No rain	Weather cloudy since Thursday; *arhar* and gram injured by frost; small-pox in three parganas; general health good; prices rising slightly.
Bareilly („ „)		Weather cloudy and threatening rain or hail; everything normal.
Meerut („ „)		Weather cloudy and close; rain expected; cane sowings commenced; health good; prices steady.
Kumaon („ „)	No rain	Weather cloudy; crops good; general health good; cattle disease continues; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—*contd.*		
Lucknow (Feb. 20th)	No rain	Sky cloudy; wind easterly; prospects of crops good; prices steady; general health good; small-pox in Lucknow abating.
Partabgarh („ „)	. . . .	Clouds come and go; crops flourishing; peas ripening; sugarcane in mill; no material change in prices; health reports good, but small-pox lingers in Kunda tahsil.
Sitapur („ „)	No rain	Weather has been cloudy for four days; prospects still good; general health good; supplies ample; prices almost stationary.
Fyzabad („ „)	Slight rain in week	Prospects of crops continue good; sugarcane in mill; general health good; prices steady.
Rae Bareli („ 19th)	. . . .	Sky cloudy during the last three days and wind shifting; further rain would be injurious to the standing crops; slight small-pox in tahsil Rai Bareli; general health good; prices steady.
Cawnpore („ 20th)	No rain	Weather cloudy; some damage to gram and *arhar* from frost; prospects good; health generally good; prices nearly stationary.
Farukhabad („ „)	. . . .	Weather seasonable; slight clouds; health on the whole good, but small-pox has not quite died out in Chibramau tahsil; crops prospering; prices have slightly risen.
		General Remarks.—There has been slight rain in Allahabad and Fyzabad, and most districts report cloudy weather; the prospects of the *rabi* crops are good; some damage has been done by frost in Agra and Aligarh; the general health is good; small-pox continues to be reported from a few districts, but is abating in Lucknow; cattle disease continues in Kumaon, Moradabad, and Jhansi; prices as a rule are steady.
Punjab—(Feb. 20th)		
Delhi	. . . .	Small-pox in city and district continues; prices fluctuating; harvest prospects good.
Hissar	. . . .	Health good; *rabi* crops thriving, but injured slightly by blight in some places; prices fluctuating.
Umballa . . .	. . . .	Health good; state of *rabi* crops improved, but more rain wanted; yield expected to be somewhat below average; prices stationary.
Jullundur . . .	Slight rain	Health good; prices steady.
Amritsar . . .	. . . .	Health and harvest prospects good; prices steady.
Lahore	. . . .	Health and harvest prospects good; prices stationary.
Ferozepore . . .	. . . .	Health and harvest prospects good; prices rising.
Sialkot . . .	Slight rain	Health and harvest prospects good; prices stationary.
Rawalpindi . . .	1·5	Two feet nine inches snow at Murree; a few cases of cattle disease in the Murree and Pindigheb tahsils, and of fever in the Attock and Fatteh jang tahsils; *rabi* prospects good; prices falling.
Peshawar . . .	Slight rain	Health and harvest prospects good; prices steady.
Moultan . . .	. . . .	Health and harvest prospects good; prices stationary.
Dera Ismail Khan . .	Very slight rain	Health and harvest prospects fair; prices steady.
		General Remarks.—The health of the Province is good, and the harvest prospects promising; rain is wanted in the Umballa district.
Central Provinces—		
Nagpur (Feb. 21st)	. . . .	Sultry and cloudy; *rabi* crops good; harvesting and weather likely to be excellent; health good; small-pox prevalent; prices falling.
Jubbulpore („ 20th)	. . . .	Weather cloudy and close; prospects favourable; *rabi* in good condition, and reaping of wheat commenced; health good; wheat 20, and rice 15 seers per rupee.
Saugor („ 19th)	. . . .	Weather cloudy and close; public health good; no epidemic.
Seoni („ 20th)	. . . .	Weather cloudy, hot; cutting of wheat begun; fever prevalent; prices stationary.
Hoshangabad („ „)	. . . .	Days hot, nights cool; *rabi* being harvested; public health good; small-pox prevalent; wheat 16, and rice 11, seers per rupee.
Raipur („ 17th)	. . . .	Nights cool, days getting warm; prospects favourable; wheat in places ready to be cut; health good; prices stationary.
Sambalpur („ 10th)	. . . .	Weather clear; prospects and health good; rice 50 seers per rupee.
Khandwa („ 20th)	. . . .	Weather clear; *rabi* reaping completed; small-pox prevalent; prices steady.
		General Remarks.—Weather clear and getting warm; *rabi* being harvested; prospects favourable; small-pox prevalent in a few districts, otherwise public health good; prices stationary.
British Burma—(Feb 17th)		
Akyab	. . . .	Two deaths in town and seven in district from cholera, and eight deaths in district from small-pox, otherwise public health good; cattle disease severe in one township.
Rangoon . . .	. . . .	Four deaths from cholera and two from small-pox, otherwise public health good.
Bassein . . .	. . .	Public health good.
Prome . . .	. . .	Public health good.
Amherst (Moulmein) .	. . .	Public health good both in Moulmein and district; two hundred and twenty-four deaths of cattle reported from two townships.
Toungoo . . .	. . . .	Public health and health of cattle good.
		General Remarks.—Some cholera, otherwise public health good; cattle disease in two or three districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Assam—		
Gauhati (Feb. 20th)	*Nil*	Weather seasonable; public health good; lands being ploughed for *aus*; mustard being gathered.
Sylhet („ 21st)	*Nil*	Ploughing for spring sowings going on; *boro* paddy being transplanted; sugarcane harvest said to be good; cholera in Habiganj and South Sylhet.
Cachar . („ „)	. . . .	Weather getting warmer; outturn of winter crops much below that of last year for want of rain; three deaths from small-pox from Katigara, and three from Hailakandi reported; no cholera reported.
Dibrugarh („ „)	·09	Weather seasonable; sugarcane being crushed; prospects good mustard promises well.
Mysore and Coorg—(Feb. 21st)		
Bangalore . . .	. . . .	Crops in good condition; prospects fair.
Mysore . . .	. . . .	Crops in good condition; prospects fair.
Mercara . . .	. . . .	Threshing of rice and *ragi* crops continues; *vysakh* crop thriving; coffee market improving; prices of food grains falling; fever and small-pox in North Coorg and Padinalknad taluk.
		General Remarks.—The crops in the Province are in good condition; sowing and harvesting operations continue; prospects fair; public health good; prices unaltered.
Berar and Hyderabad (Feb. 21st)		
Amraoti . . .	. . . .	Harvest of *rabi* crops continues; prospects good; wheat 16 and *juari* 26 seers per rupee.
Akola	. . . .	Prospects favourable; reaping of *rabi* crops commenced.
Hyderabad . . .	. . . .	*Tabi* sowings concluded; reaping of *rabi* crops continues; small-pox prevails; a few cases of cholera are reported; prices—wheat 16¾, coarse rice 11, white *juari* 25¾, and *tur* 26¾ seers for halli sicca rupee of 16¾.
Central India States—(Feb. 21st)		
Indore . . .	. . . .	Weather fine and clear; health good.
Morar (Gwalior) . .	. . . .	Health and prospects good; weather cloudy.
Sutna	. . . .	Health and prospects good.
Neemuch . . .	. . . .	Crops are said to have suffered slightly, as reported last week; weather cloudy; public health good.
Goona	. . . .	Health and crops good; wheat 23 seers 3 chittacks per rupee.
Bhopal	. . . .	Weather cool; crops and public health good.
Nowgong . . .	. . . .	Weather cloudy; prospects of *rabi* favourable; prices steady, health good.
Rajputana—		
Abu (Feb. 21st)	. . . .	Weather windy and cold; health good.
Sirohi („ 18th)	. . . .	Weather pleasantly cool and cloudy; health and prospects good; wells full.
Marwar („ 16th)	. . . .	Weather cold; health and prospects good; water obtained from wells.
Harowtee („ 19th)	. . . .	Weather cloudy and colder; slight damage to grain; health good.
Jhallawar („ 14th)	. . . .	Weather cloudy and milder; crops promising.
Ajmere („ 20th)	. . . .	Slight fever still prevalent; grain crops slightly injured through cold.
Jeypore („ „)	. . . .	Weather cloudy; prices firm; prospects favourable; health good.
Ulwur („ „)	. . . .	Passing clouds; wheat and barley likely to suffer if no change in weather.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 16th February, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble C. H. T. Crosthwaite.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Áhmad Khán Bahádur, C.S.I.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble R. Miller.
The Hon'ble Kristodás Pál, Rai Bahádur, C.I.E.

INDIAN RAILWAY ACT, 1879, AMENDMENT BILL.

The Hon'ble MR. ILBERT moved that the Report of the Select Committee on the Bill to amend the Indian Railway Act, 1879, be taken into consideration.

He said that the object of the Bill was to make two or three minor amendments in the Indian Railway Act of 1879. The Bill as originally introduced was confined to three points:—first, the sanction required for the first opening of a railway or part of a railway for the public conveyance of passengers; secondly, the inspection of the railway which had been opened; and thirdly, the powers of Railway Authorities to impose fines on their servants. Since the Bill was circulated, several valuable suggestions had been made as to further points in which the Act might be amended. However, the Committee thought that, as the extension of railways in this country would probably necessitate before long a general revision of the Act and the preparation of a Bill to meet the growing wants of the country, it would be expedient to confine themselves to matters with which the Bill before them was concerned, and to leave suggestions on other points to be considered when the whole law relating to Indian railways was dealt with. Accordingly, the Committee had made only such amendments in the Bill as they deemed necessary or desirable in order to give better effect to the present intentions of the legislature. These amendments were briefly as follows:—

(1) The Committee had enabled the Governor General in Council to appoint officers, either by name or by virtue of their office, to be inspecting officers under the Act.

They had drawn section 5 B so as to render it unnecessary for the Governor General in Council specially to appoint an officer to inspect any particular railway; and, as it might, in some cases, be desirable that sanction should be obtained at once to the opening of a railway, and that the inspecting officer's report should be communicated by telegraph, they had omitted the provision requiring that officer's report to be in writing.

(2) They had given the Governor General in Council power to confer, in any particular case or class of cases, on the inspecting officer the power to sanction the opening of a railway or portion of a railway. As the Bill was drafted, this power had to be conferred in each particular case, and they considered that it would be more convenient to enable a general power to be conferred on the inspecting officer for dealing with any particular class of cases, such as minor additions to, or extensions of, a railway.

(3) They had reserved to the Governor General in Council a power to review any sanction given by an inspecting officer, and to cancel or modify it.

(4) To meet a case when it was desirable to sanction the opening of a line subject to conditions which were to be complied with by a Railway Administration, they had expressly declared that the sanction might be absolute or subject to conditions. They had accordingly provided that, when a conditional sanction was granted for the opening of a railway and the conditions were not complied with, the sanction should at once be deemed to be void, and that the railway should not be used until sanction was again obtained.

(5) To provide for the case where, after sanction had been given for the opening of a railway, an alteration was made in it by the Administration, they had prohibited the use of any portion of a railway so altered as to interfere with the safety of passengers, until formal sanction had been obtained for the opening of the portion for the public conveyance of passengers.

(6) They had conferred upon officers appointed to inspect railways the additional power of inspecting the rolling-stock used on a railway.

The Committee had made no alteration in the section of the Bill which related to the powers of Railway Authorities to fine their servants. The effect of that section, as it was originally drawn and as it now stood, would be to give Railway Authorities in India the same powers with respect to the infliction and recovery of such fines as was given to Railway Companies in England by English legislation.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

MERCHANT SHIPPING BILL.

The Hon'ble MR. ILBERT also presented the further Report of the Select Committee on the Bill to amend the law relating to Merchant Shipping. He said:—

"I should like to take this opportunity of explaining the reasons which have induced the Committee to make a considerable change, not in the substance, but in the form of the Bill.

"The Bill, as originally introduced, repealed and re-enacted, with certain amendments, two of the later Indian Merchant Shipping Acts, Act IV of 1875 and Act XIII of 1878.

"When the Bill was before the Select Committee, it was decided that it would be advisable, for the convenience of persons connected with Merchant Shipping, to make the Bill more of a consolidating measure, and accordingly it was expanded into Bill No. II, which repealed and re-enacted not only Act IV of 1875 and Act XIII of 1878, but also the unrepealed portions of Act I of 1859 (the principal Indian Merchant Shipping Act), Act XIII of 1876,

and Act VII of 1880, chapter III. Bill No. I consisted of 31 sections: Bill No. II consisted of 157 sections, and was in appearance, though not in reality, a somewhat formidable measure. Now I fully admit the great practical convenience of being able to find the whole of the Statute Law on a given subject within the four corners of a single Act, and accordingly I think that the rule which we have adopted in India of repealing old law and re-enacting it with the necessary amendments, instead of passing a series of amending Bills, is a sound general rule to follow. It is a rule which cannot, under ordinary circumstances, be followed in England, for reasons which any one who is acquainted with English Parliamentary procedure will readily appreciate. But those reasons do not apply out here, and, as I have said, it is a useful general rule to observe.

"On the other hand, there is another sound general rule which has to be borne in mind, and that is, that in subjects like Merchant Shipping it is desirable to make the Indian Statute Law correspond as closely as possible to the English Statute Law. It is very inconvenient for a merchant or a seaman to find himself under one shipping law in London and under a totally different shipping law at Calcutta. Accordingly in dealing with those branches of Merchant Shipping Law which are not regulated by Act of Parliament, and with respect to which we have power to legislate for ourselves, we have always taken care that our legislation shall conform as closely as circumstances will admit to Imperial legislation, and whenever any important amendment of the law has been made in England, we have usually followed suit at no distant interval out here.

" But if we were to pass the consolidating Bill which was prepared last year, we should not be bringing our Indian Merchant Shipping Law into harmony with English Merchant Shipping Law. On the contrary we should be enacting for Indian ports certain provisions which have been repealed as to, and are no longer in force in, English ports. The provisions to which I refer are contained in Act I of 1859, and relate to the subjects of advance notes, of arrest without warrant, and of imprisonment for desertion.

"These sections were copied from corresponding enactments in the English law. But those corresponding enactments, or as much as remained of them, were deliberately repealed in 1880 by the English Parliament by an Act which extends only to the United Kingdom and leaves the Indian law untouched. So that if we enacted them here, we should be departing from instead of following the English law. And although it is perfectly true that when in the process of consolidation we re-enact any particular enactment, merely for the purpose of simplifying the form of the law, we are not to be taken as expressing any opinion in our legislative capacity as to the intrinsic merits of that enactment; yet I think it might be urged with some show of reason that, having regard to the obvious desirability of making the English and the Indian Merchant Shipping Acts harmonious, we ought not to re-enact for India what has been repealed for England without justifying the difference which we should be thus maintaining between the laws of the two countries. Whether the alterations recently made in the English Merchant Shipping Law as to desertion are or are not beneficial, and whether similar alterations ought not to be made in the Indian law, are questions on which I shall be fully prepared to express my opinion when the time for discussing them arrives; but until that time does arrive, I think we had better avoid any form of legislation which would afford an opportunity for raising these difficult questions. Accordingly, we have thought it more prudent to steer quite clear of these delicate topics by cutting down our Bill to its original form of an amending Bill.

"There are two further considerations which reconcile me to the abandonment of last year's project of consolidation. The first is, that I shall probably have, before the end of the present winter session, to propose some further amendments of the Merchant Shipping Law, so that our consolidating Act would be swiftly followed by an amending appendix. The second is, that the consolidation which would have been effected, if the Bill had become law in last

year's form, would have been a very incomplete—I might almost say illusory—consolidation of the existing Merchant Shipping Law. It would only have consolidated so much of that law as is contained in the Indian Statute-book: it could not have comprised any part of the English Merchant Shipping Acts. But the Indian Merchant Shipping Law is a mere fringe on the English Merchant Shipping Law, much as under the old system in England the rules of equity were a fringe on the rules of common law, and the scattered enactments which make up this fringe are hardly intelligible without a reference to the still more numerous and scattered enactments which make up the body of the garment.

" However, as I said before, I fully admit the inconvenience of having to search for the law up and down a large number of Acts; and although we do not at present see our way to removing this inconvenience by consolidation, yet I think we may find a practical, even if it be a temporary, remedy for it by bringing together in the form of a digest the various enactments, whether contained in the English or in the Indian Statute Book, which make up the sum total of the Indian Merchant Shipping Law. I hope that we may with the help of the Legislative Department be able to prepare some such digest as this before the end of the current year, which is the date at which we propose that this new Bill should come into force."

BENGAL PILOTS BILL.

The Hon'ble MR. ILBERT also presented the Report of the Select Committee on the Bill to give power to arrest persons whose evidence is needed under Act XII of 1859.

RULES OF BUSINESS.

The Hon'ble MR. ILBERT also moved that the following amendments be made in the Rules for the conduct of the legislative business of the Council of the Governor General, namely:—

(1) That after Rule 17 the following be inserted, namely:—

" 17A. The Council may, at any time after leave to introduce a Bill has been granted, direct that the Bill be published in such manner as the Council thinks fit."

(2) That in the fourth paragraph of the 24th Rule the word "and" be omitted, and that the following be added to that paragraph, namely:—

"and the date on which the publication has taken place, or, where publication in more than one Gazette or in more than one language is ordered, the date on which the publication in each such Gazette and each such language has taken place."

(3) That to the 24th Rule the following paragraphs be added, namely:—

" When the Committee recommend the republication of a Bill which was originally ordered by these Rules or by the Council to be published in more than one Gazette or in more than one language, they shall, in the absence of anything to the contrary in their report, be taken to recommend that the Bill be republished in every such Gazette and every such language.

" If the Committee are of opinion that it is unnecessary to republish the Bill in any such Gazette or in any such language, they shall, in their report, state the grounds of their opinion."

(4) That after the 29th Rule the following be inserted, namely:—

" 29A. Notwithstanding anything in the foregoing Rules, it shall be in the discretion of the President, when a motion that a Bill be taken into consideration has been carried, to submit the Bill, or any part of the Bill, to the Council section by section. When this procedure is adopted, the President shall call each section separately, and, when the amendments relating to it have been dealt with, shall put the question 'that this section, or (as the case may be) this section as amended, stand part of the Bill.'"

He said that the object of the first amendment was to supply what appeared to be an omission in the rules. Under the rules as they stood, there was

no provision made for the publication of a Bill, for the introduction of which leave had been asked, until a motion had been made, after the introduction of the Bill, that it be referred to a Select Committee, taken into consideration or circulated for opinion. As the principle of the Bill might be discussed when any such motion was made, it was considered desirable that the Council should be enabled to have the Bill published as soon as leave to introduce it was granted, so that the public might have an opportunity of giving their opinions as to its provisions, and members of Council might be in a better position to discuss its principle and provisions, when the time for discussion arrived. With respect to the last three of the amendments, he had on a previous occasion explained pretty fully the reasons which induced the Government to propose them, and the objects aimed at by each of them, and he did not think it necessary that he should recapitulate to-day what he had said before. These amendments had been for some time before the public, they appeared to have received general approval, and he had not received any suggestions for their modification. Under these circumstances, all that was necessary was that he should formally move that they be taken into consideration and the rules be passed.

His Excellency THE PRESIDENT said:—"Before I put the amendment I should like to point out that the present arrangement is rather more anomalous even than my hon'ble and learned friend has stated it to be; because, under Rule 22 of the existing Rules, 'the Governor General, if he see fit, may order the publication of a Bill, together with the Statement of Objects and Reasons which accompanies it, in such Gazettes and languages as he thinks necessary, although no motion has been made for leave to introduce the Bill.' So that you can publish a Bill before introducing it, but you cannot publish it, under the Rules, immediately after leave is given to introduce it, but must wait until it has actually been introduced. I think that sufficiently shows that it is by an accidental omission in the Rules that such an anomaly exists, and that it is quite right that it should be removed."

The first amendment was put and agreed to.

The second and third amendments were also put and agreed to.

The Hon'ble KRISTODÁS PÁL said:—"My Lord, before the last amendment is put to the vote, I wish, with Your Lordship's permission, to make a few general remarks. In the first place, I desire to express my high appreciation of the enlightened and liberal spirit in which changes in the Rules of Business of this Council have been proposed to-day. The primary object of these changes, as the hon'ble and learned Member has explained, is to afford the public a better and fuller opportunity to discuss the measures laid before this hon'ble Council. I will not go over the grounds which have been already traversed by the hon'ble and learned member in proposing the changes in question, but I submit that the public feel deeply grateful to Your Excellency's Government for the steps that are being taken to give a wide publicity to legislative measures, to enlist the co-operation of the Press in their discussion, to educate and strengthen public opinion, and thus to legislate in the broad light of day.

"While upon this subject I venture to invite the attention of Your Excellency and of the hon'ble Council to some points connected with the Rules of Business of this Council. Rule 9 provides that, after a motion is made, the debate shall be opened by the junior member, who shall be followed by the other members in consecutive order. Although I am the youngest member of this hon'ble Council, and have had no experience of the working of its rules, still it strikes me that this rule is a source of much practical inconvenience. It may happen that, after the mover of a motion has spoken, the junior member may quite concur with him, and may have, therefore, little to add to what has been already said; but after hearing other members, who may object to the motion, he may wish to answer them, but under this rule he will be tongue-tied. He must speak first, or not at all. Practically, therefore, the junior member and those immediately above him are put under a bann. I am not aware of any

legislative assembly, society or corporate body which has such an inexorable rule. I think this rule requires amendment.

"The next point is the publication of a Bill when material alterations have been made in it by the Select Committee to which it may have been referred. Already a motion has been carried to-day that, if in any case the Select Committee should recommend the publication of the amended Bill, it should be published for general information. I make no doubt that the Select Committees will act in the spirit in which the new rule has been made; but supposing that in any case a Select Committee should act otherwise, surely any member of the Council ought to be at liberty to move that an amended Bill should be published for the reason stated. I think it necessary to mention that considerable dissatisfaction is now and then produced in the public mind on the score of scant opportunities allowed to the public for the discussion of a Bill at the last stage, though radical alterations might have been made in it at that stage. The rules of the old Legislative Council, better known as Lord Dalhousie's Legislative Council, were more liberal in this respect. Rule 85 of the old Council ran as follows:—

Re-publication for general information.

"'LXXXV. Any member may likewise move in Council that the draft be republished for general information, on the ground that the amendments which may have been adopted are of so new and important a nature that the Act ought not to be passed without being previously published for general information; and, if the motion be carried, the amended Bill shall be published, and notice may be given of a day on which the third reading and passing of the Bill will be moved.'

"I would humbly recommend the adoption of this rule and extend it to Bills when they have been subjected to material alterations by a Select Committee."

The hon'ble speaker then proceeded to point out the absence of a rule to permit private individuals to be heard by counsel in respect of private or personal Bills as under Rule 29 of the old Legislative Council.

The Hon'ble MR. HOPE said he thought the Hon'ble Member was out of order in speaking upon points which were not then before the consideration of the Council.

His Excellency THE PRESIDENT:—"Strictly speaking, no doubt, the Hon'ble Member is out of order in referring to portions of the Rules not before the Council. I was going to make that remark myself afterwards; but I thought that, as this is the first occasion on which we have had the pleasure of hearing the Hon'ble Member addressing us in this Council, I should be acting in accordance with the wishes of the Council if I did not interrupt him. Strictly speaking, Mr. Kristodás Pál can only speak on the motion before the Council at this moment; but of course it is open to him to make suggestions to Government on the points on which he desires to represent his views. If my hon'ble friend Mr. Hope presses his objection, I must rule in his favour; but I was anxious to hear what my hon'ble friend Mr. Kristodás Pál had to say."

The Hon'ble MR. HOPE remarked that there was considerable inconvenience in discussing in the Council matters which were not before it for discussion.

His Excellency THE PRESIDENT:—"Then, if objection is taken, I must rule my hon'ble friend out of order. At the same time, I hope that he will do us the favour of indicating his views to the Government on the points to which he desires to draw attention, and I can assure him that they shall receive full consideration."

The Hon'ble KRISTODÁS PÁL explained that, before venturing to address the Council, he had consulted the hon'ble and learned Law Member, who had advised him not to move substantive amendments, but to confine himself to general remarks and suggestions for the consideration of the Council.

The Hon'ble MR. ILBERT said he thought what he intended to say to the hon'ble member was this—that although in his opinion it would be out of order to move any substantive amendment of which notice had not been given, he thought there would be no objection to suggestions being made and general outlines given of proposed alterations, not with the object of inviting discussion, but that they might be moved and discussed on some future occasion.

The fourth amendment was then put and agreed to.

The Hon'ble MR. ILBERT gave notice of his intention to propose a very minor amendment of the rules, which had been necessitated by the recent changes in the arrangement of the tables. Under the existing rules, it was provided that the Commander-in-Chief should sit on the right of the President, and the Governor or Lieutenant-Governor should sit opposite to the President. There was some little inconvenience in giving strict effect to that rule under the existing arrangements, and as a matter of fact the rule had not been observed. Accordingly, he would suggest that the rule should be modified in this way, namely, by substituting for Rule 5 the following:—

"That the Governor or Lieutenant-Governor and Commander-in-Chief should sit on the right of the President; the Legal Member should sit wherever it might be convenient; and, subject to these provisions, the Members should sit according to seniority, the Junior Member sitting to the left of the President."

His Honour THE LIEUTENANT-GOVERNOR said that, while deprecating the wrath of the Hon'ble Mr. Hope and the risk of being called to order by the President, he wished to say one word. He thought it would be a very salutary change if the rule requiring members to speak without rising from their chairs be altered, so as to provide that hon'ble members should speak standing instead of sitting.

His Excellency THE PRESIDENT said he must rule that His Honour the Lieutenant-Governor was out of order. A rule which applied to the junior member of the Council was equally applicable to the Lieutenant-Governor.

The Council adjourned to Friday, the 23rd February, 1883.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 23rd February, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble Sayyad Áhmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble R. Miller.
The Hon'ble Kristodás Pál, Rai Bahádur, C.I.E.

MERCHANT SHIPPING BILL.

The Hon'ble MR. ILBERT moved that the Reports of the Select Committee on the Bill to amend the law relating to Merchant Shipping be taken into consideration. He said that he explained at the last meeting of the Council the reasons which had induced the Select Committee of this year to make a change in the form of the Bill, and that the Bill which he was now asking the Council to take into consideration was substantially the Bill which was agreed to by the Select Committee of 1881; that was to say, it was the original Bill *plus* the substantial alterations and additions which were made by the Select Committee of last year *minus* the additions which were made for the purpose of consolidation. The original Bill made two or three amendments in the existing Merchant Shipping Law. The most important of those amendments were these: First, provision was made for the appointment of an officer who was called the Port Inspector, and who, in addition to performing the duties now performed by the Health Officer, was entrusted with the duty of inquiring into any complaints which on the arrival of a ship in port might be made by any of the crew against the master or against any others of the crew. Secondly, addition was made to the class of cases in which Marine Courts of Inquiry were to be held. Thirdly, power was given to the Local Governments to fix a scale of provisions for less than which a master was prohibited from contracting with any lascar or Native seaman; and, lastly, a provision was inserted in the Bill to the effect that, when the service of any lascar was to end at any port not in British India, the agreement between him and the master should invariably stipulate for his return to British India, and not merely for his employment on board some vessel bound to such other port as might be agreed on, possibly not in British India.

That was the Bill as originally introduced. The Select Committee of 1882 agreed on sundry amendments and additions which he would notice. The most important of the amendments were as follows:—

(1) To meet a doubt that had arisen, it was provided, in section 5 of the Bill, that nothing in the Bill should apply to any ship belonging to or in the service of the Government of India.

(2) Clauses (*a*) and (*c*) of section 6 were made to apply only to cases where material damage had been caused; and, at the suggestion of the Board of Trade, the application of clauses (*d*) and (*e*) of that section had been limited to British ships.

(3) At the suggestion of the same Board, power had been given, in section 9 of the Bill, to the Court making an investigation to inquire into charges against masters, mates or engineers, whether they were certificated or not. It had also been provided that, in every case in which any charge of incompetency, misconduct or wrongful act or default arose, the Court should, before the commencement of the inquiry, furnish the master, mate or engineer concerned with a copy of the report or statement of the case upon which the investigation had been directed.

(4) In section 13, sub-section (1), the Court had been required, on the recommendation of the Board of Trade, in cases involving any question as to the cancelling or suspension of the certificate of a master, mate or engineer, to constitute as its assessors two persons having experience in the Merchant Service.

(5) In section 19 it had been provided that the certificate granted in lieu of a cancelled or suspended certificate should be of a grade lower than the one cancelled or suspended; and, in accordance with the opinion expressed by the Local Governments, they had been empowered to grant under that section certificates without being advised by the Court to do so.

(6) In section 20 it had been made clear that the Local Government could not cancel or suspend, in the cases mentioned in that section, certificates granted under the Merchant Shipping (Colonial) Act, 1869.

(7) At the request of the Bengal Government, the officer to be appointed under section 28 of the Bill as introduced (now section 31) had been called the Health-Officer, and he had been given the powers conferred on a Shipping Master by Act I of 1859, section 71. Clause (*b*) of that section of the Bill had also been modified so as to confine the power of medically examining persons on board to the medical examination of seamen or apprentices.

He would explain that, in the Acts relating to Merchant Shipping, "seaman" included an officer. Those were the amendments. The additions were three in number:—

(1) In section 34 power was given to the Local Governments of fixing, with the previous sanction of the Governor General in Council, the fees payable by candidates for examination for certificates as masters or mates.

(2) In section 35 Local Governments were given the power, conferred on the Board of Trade by section 134 of the Merchant Shipping Act, 1854, of requiring the further examination of persons reported by the examiners to be qualified for certificates.

(3) The punishment which could be awarded under section 79 of Act I of 1859 for misconduct endangering the safety of a ship or of any person on board was imprisonment for two years. The corresponding provision (section 239) of the Imperial Merchant Shipping Act, 1854, allowed such offences to be punished with fine or imprisonment or both, and there was no reason why the punishment should be necessarily more severe under our law. Accordingly, section 36 of the Bill provided a penalty of fine which might extend to Rs. 1,000, or imprisonment which might extend to two years, or both.

That was the Bill as settled by the Select Committee of 1882, and that was the Bill as it now stood. All he needed to add was that they had considered the provisions of an Imperial Act which had been passed in England since the beginning of last year and which was called the Merchant Shipping (Colonial Inquiries) Act, but that it did not appear to necessitate any change in the form or substance of the present Bill.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

BENGAL PILOTS BILL.

The Hon'ble MR. ILBERT also moved that the Report of the Select Committee on the Bill to give power to arrest persons whose evidence is needed under Act XII of 1859 be taken into consideration. He said that this was a small Bill, which was merely supplementary to the Bill which had just been passed by the Council. It re-enacted in a separate measure one of the sections which was repealed by the Bill which was just passed. The only alteration made in the form of the Bill as approved by the Select Committee of last year was that, inasmuch as they had postponed the coming into operation of the other Bill to the beginning of next year, so they had postponed to the same date the commencement of this small supplementary measure.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

The Council adjourned to Friday, the 2nd March, 1883.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 2nd March, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding.*
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D, C.I.E.
The Hon'ble Sayyad Áhmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble R. Miller.
The Hon'ble Kristo Dás Pál, Rai Bahádur, C.I.E.
The Hon'ble J. W. Quinton.

NEW MEMBER.

Hon'ble J. W. Quinton took his seat as Additional Member.

BENGAL TENANCY BILL.

The Hon'ble MR. ILBERT moved for leave to introduce a Bill to amend and consolidate certain enactments relating to the Law of Landlord and Tenant within the territories under the administration of the Lieutenant-Governor of Bengal. He said:—

"MY LORD,—I ought to explain that I am not, strictly speaking, the Member in charge of this important Bill, and that it is only through accidental circumstances that the onerous task of justifying its introduction and explaining its main provisions has devolved on me instead of on my honourable friend Sir Steuart Bayley, who is in every way so far more competent to perform this task.

"The first question with which I have to deal is whether any necessity exists at all for undertaking a general revision of the rent-law? The Rent Bill has so long been a household word in Bengal, the defects of the existing law have been pointed out so repeatedly, so persistently, and from so many different quarters, that there will be many to whom it will doubtless seem that this question is one which it is idle to ask and unnecessary to answer. And yet the question has been asked. We have been told that in undertaking our present task we are undertaking a work of supererogation. The suggestion has been made that in taking it up we have been actuated by a spirit of mischievous and restless activity, prompted, I presume, by the desire of finding some occupation for that superabundant leisure with which it is well known that the Government of India is endowed. Nay, it has even been hinted that our wish has been to imitate similar legislative achievements of the British Parliament, and that the Bengal Bill not only follows the lines, but was suggested by the introduction, of the recent Irish Land Act.

"So far as these hints convey any imputation of being influenced by political or party considerations they are easily disposed of by reference to a few simple dates. The present Bill, as everybody knows, is based on the recommendations of the Bengal Rent Commission. That Commission was appointed under Lord Lytton's Government in the month of April 1879, and had nearly concluded its labours at the time when England was in the throes of the last general election; it presented its report just eleven days after Your Excellency took your seat as Viceroy, and it was only in compliance with the pressing and urgent request contained in Sir Ashley Eden's letter of July 1881 that the Government of India considered the question of legislation at all.

"But the truth is that if there ever was a measure against which the charge of unnecessary, precipitate or premature legislation could not, with any decency, be brought, it is this. If we trace it to its ultimate origin, we shall find that it embodies an endeavour to redeem a pledge which was given at the time of the permanent settlement, and which has never been adequately redeemed. If we examine its immediate causes, it will be easy to show that for the last twenty years there has been a persistent demand for a revision of the existing law, not merely on points of detail, but on points of principle; not merely as to procedure, but as to substantive rights; that this demand has grown in urgency with each succeeding year; that the subject has occupied the attention of successive Lieutenant-Governors of Bengal; that attempts have at various times been made to dispose of it by legislation in the Bengal Legislative Council; and that each unsuccessful attempt has shewn the futility of any settlement which should deal only with procedure, and should leave the substantive rights of landlord and tenant untouched.

"What then are the facts with which we have to deal, and what are the evils for which legislation is required? Broadly stated, they are these. We have a population of some sixty millions, mainly deriving their means of subsistence, directly or indirectly, from the soil; the great majority, directly, as cultivators; a small minority, indirectly, as rent-receivers. The mutual rights of these two classes, the rent-receivers and the cultivators, are uncertain and obscure; the machinery for ascertaining and enforcing those rights is insufficient and defective; and the result is friction, which has taken different forms in different parts of the province. In Behar, where the landlords are strong and the tenants are

weak, we have rack-renting and acts of lawless and high-handed oppression on the part of the landlords: in Eastern Bengal, where, comparatively speaking, the landlords are weak and the tenants strong, we have combinations of the tenants to resist the payment of rent. This is what Sir Ashley Eden said a few years ago of Behar, in a letter which he wrote as Lieutenant-Governor, pointing out the urgent necessity for some reform in the law:—

"In Behar what is most wanted is some ready means of enabling the ryot to resist illegal distraint, illegal enhancement, and illegal cesses, and to prove and maintain his occupancy rights. Apart from the backwardness and poverty of the ryot, there are many points in the existing system of zemindari management in Behar which seem to call for speedy amendment. The loose system of zemindari accounts, the entire absence of leases and counterparts, the universal prevalence of illegal distraint, the oppression incident to the realisation of rents in kind, the practice of amalgamating holdings so as to destroy evidence of continuous holding, are evils which necessarily prevent any possible development of agricultural prosperity among the tenant class, and place them practically at the mercy of their landlords, or of the *Thikadars* (or lessees) to whom ordinarily their landlords from time to time transfer their rights."

"And here is a picture, drawn about the same time, of the way in which the law was working, or failing to work, in other parts of the province:—

"It is to be borne in mind (I am quoting from the Bengal Administration Report of 1875-1876), that the last Rent Act for Bengal (VIII of 1869) clearly lays down the conditions under which alone the rent of an occupancy ryot can be enhanced. But it does no more than this. It does not prescribe any rule, nor even any principle, upon which the enhancement is to be determined. The consequence is that whenever a dispute arises, the parties cannot form any idea as to how it will be decided. The courts do not, indeed cannot, know how to decide; and the end is that no real decision can be attained. It follows, then, that no enhancement is lawfully adjudged, and consequently the landlord is strongly tempted to obtain by illegal means what he regards as his due. This again produces resistance on the part of the ryot; and if many ryots are implicated, then some union or other combination is formed, which ends in a general withholding of rents by the tenantry, and an attempt at forcible exaction of it by the landlord,—in all which there lie the germs of agrarian disturbance."

Rack-renting here, land-leagues there. We have, indeed, in the existing state of things all the elements of agrarian misery and agrarian disturbance.

"I have broadly classified the persons interested in the soil as rent-receivers and cultivators. Let me try and explain somewhat more fully the position and proportionate numbers of the persons who make up these classes. For this purpose, I cannot do better than quote a few paragraphs from a minute which has recently been published by my friend Mr. Justice Cunningham:—

"The classes interested in the soil in India (he says) are (1) the Government, (2) the proprietors or revenue-payers, and (3) tenants or rent-payers. This last class contains a great variety of holders, and is itself divided into two main divisions, *viz.*, (*a*) tenure-holders, who represent every intermediate interest between a proprietor and the ryot; and (*b*) ryots, who represent persons originally let into occupation for the immediate purpose of cultivation, and who, to a great extent, are still the actual cultivators of the soil, though korfas or sub-ryots are not uncommon. Each of these divisions, again, presents numerous varieties. 'Tenure-holders' range from a holder, who may be to all intents and purposes an owner, subject merely to a fixed and unalterable rent-charge, to holders who have merely a precarious leasehold interest. 'Ryots,' too, vary greatly in the character of their interest, some having a right to sit at fixed rents and to be altogether exempt from enhancement; some to sit at rents which are enhanceable only under certain prescribed restrictions, some being mere tenants from year to year. The under-ryots may, as a rule, be said to be tenants from year to year.

"The numbers of these various classes are, speaking roundly, as follows:—

"There are 130,000 revenue-payers, who pay the Government a land-revenue of about 3½ millions sterling and enjoy a rental officially returned at something over 13 millions sterling. This 3½ millions of revenue is only half a million larger than that fixed at the time of the Permanent Settlement, *viz.*, 3 millions. It is reckoned, that, as the zemindar's share was fixed at one-tenth of the gross proceeds of the rent "the net rental" (*i.e.*, share available for the proprietors after payment of revenue) at that time must have been between £300,000 and £400,000. While the Government revenue, accordingly, has increased only by half a million the landlord's share has risen from, say, £350,000 to 9½ millions sterling. But this rental of 13 millions is only an official return for road cess purposes, and is believed by many good judges to represent very inadequately the whole amount which in one way or another the proprietors receive. One writer reckons the entire amount paid annually by the occupants of the soil at between 25 and 30 millions sterling.

"This rental is paid from a cultivated area of, say, 55 millions of acres, an area about one-sixth larger than that of the United Kingdom, which has 47½ millions of acres under crops

and pasture. The agricultural rental of the United Kingdom, however, is estimated at 67 millions sterling.

"The class intermediate between proprietors and ryots, *viz.*, tenure-holders, numbers about 750,000, the annual income in the great majority of instances, £20,000, being below £ 10.

"Below this superstructure of revenue-payers and intermediate landlords come the occupants of the soil, the "ryots," about 10 millions in number. The following figures show their general condition :—

Ryots paying over	Rs. 100	25,000 or say $\frac{1}{400}$ of the whole.
„ between	„ 50—100	120,000
„ „	„ 20— 50	680,000
„ „	„ 5— 20	2,800,000
„ under	„ 5—	6,200,000

"It thus appears that there are 9 millions of ryots paying a rental below £2 per annum and of these more than 6 millions pay under 10 shillings, a rental which implies a holding between 2 and 3 acres in extent.

"Taking another principle of classification, we may divide the persons with whom we have to deal into rent-receivers and rent-payers. The zamindar belongs to the first class, the middleman both to the first and the second, the occupier to the second alone. And in ordinary legal parlance we describe members of the first class as landlords, and members of the second class as tenants, applying to them terms borrowed from English Law. Now the most fertile source of confusion and mistake in India has been the misapplication of English analogies to Indian facts. Because we have described the Bengal zamindar as a landlord, many people unacquainted with his true position have jumped to the conclusion that he is a landlord, or landowner, in the English sense of the word. Nothing can be further from the truth. Among many differences between the English landowner and the Bengal zamindar, there are two which at once strike an Englishman who has had any practical acquaintance with the management of English estates.

"In the first place, every body knows that a large portion of the money paid by an English tenant to an English landlord as rent, represents interest on capital which has been expended on farm-buildings, drainage, and the like. But what proportion of the money paid as rent by the ordinary Bengal ryot represents interest on capital?

"In the next place, the English landlord knows pretty accurately, or if he does not his agent knows for him, who his tenants are, what rent they pay, and where their lands lie. But these are just the facts which the zamindar complains that both he and his agent have so much difficulty in finding out, and which he is always asking us to try and help him to find out. Imagine an English landlord coming to Parliament and asking it to help him in making up a proper rent-roll.

"No; the English landlord is one thing, the Bengal zamindar is another. A revenue-payer we found the zamindar, a rent-receiver we made him; but a landlord or a landowner in the English sense of the word, neither we nor his own efforts have ever succeeded in making him.

"I said just now that the ultimate origin of the present measure might be traced back to the time of the Permanent Settlement. At that time, as now, there were three main classes interested in the soil of Bengal—the State, the revenue-payers or zamindars, and the cultivators or ryots. I am omitting, for the sake of simplicity, the persons holding intermediate interests between the zamindar and the ryot. Much learning has been devoted to ascertaining the precise position and rights of the zamindar and the ryot at the time of the Permanent Settlement, but amidst the controversies which have for the last century raged and are still raging on this subject, one point may be taken as conclusively proved, namely, that the great mass of the Bengal ryots were at the time of the permanent settlement in the enjoyment of certain customary rights, which, at least, included the right of occupying the land conditionally on the payment of the rate of rent current and established in the locality, and, I may add, the right of having that rate of rent determined by the State. Now, what the authors of the permanent settlement did was this. They settled and defined the mutual rights of the State and the revenue-payers or zamindars. They did not settle, define or ascertain the mutual rights of the zamindars and the ryots. They settled

and defined the mutual rights of the State and the zamindars by declaring that the amount of revenue payable by the latter, which had formerly been fluctuating, or fixed for short terms of years, should be fixed for all time, and should not be increased by reason of any increase in the area under cultivation. And at the same time, and as part of the same settlement, they formally declared that the zamindars should be deemed to be the proprietors of the soil, whatever that expression might mean; in other words, as I shall show hereafter, they transferred to the zamindars those indefinite proprietary rights in the soil which had formerly been claimed by the State. But they did not settle or define, they did not even ascertain, the rights of the ryots or occupying cultivators. The legislation of 1793 left those rights outstanding and undefined, and by so leaving them it tended to obscure them, to efface them, and, in too many cases, ultimately to destroy them. That both the Court of Directors in England, and the Governor General in Council here, were aware of the possible consequences of their legislation, we well know. Immediately before the Permanent Settlement was made, the Court of Directors, in conveying instructions to the Government here with respect to it, wrote as follows :—

"In order to leave no room for our intentions being at any time misunderstood, we direct you to be accurate in the terms in which our determination is announced. * * * * You will, in a particular manner, be cautious so to express yourselves as to leave no ambiguity as to our right to interfere, from time to time, as it may be necessary, for the protection of the raiyats and subordinate landlords, it being our intention, in the whole of this measure, effectually to limit our own demands, but not to depart from our inherent right as sovereigns, of being the guardians and protectors of every class of persons living under our Government."

"In conformity with these instructions a formal declaration was made expressly saving the right of the Government to legislate for the protection of persons having interests in the soil below those of the zamindars. This declaration was embodied in Article VII of the Proclamation of the 22nd of March 1793, relative to the limitation of the public demand upon the lands, was repeated in section 8 of Regulation I of 1793, and was as follows :—

"To prevent any misconstruction of the foregoing Articles (the Articles, namely, under which the amount of revenue was permanently fixed), the Governor General in Council thinks it necessary to make the following declarations to the zamindars, independent talukdars and other actual proprietors of land:

"*First*, it being the duty of the ruling power to protect all classes of people, and more particularly those who from their situation are most helpless, the Governor General in Council will, whenever he may deem it proper, enact such Regulations as he may think necessary for the protection and welfare of the dependent talukdars, ryots and other cultivators of the soil; that no zamindar, independent talukdar, or other actual proprietor of land shall be entitled on this account to make any objection to the discharge of the fixed assessment which they have respectively agreed to pay.

"Again, it was enacted by the 67th Section of Regulation VIII of 1793 (a Regulation re-enacting with modifications the rules for the Decennial Settlement) that proprietors should be bound by the restrictions in their kabooleuats, and the 9th of these restrictions, as stated by Harington (Vol. II, page 255) was

"That implicit obedience be shown to all Regulations which have been or may be prescribed by Government, concerning the rents of the raiyats and the collections from undertenants and agents of every description, as well as from all other persons whatever."

"The duty was admitted, the power was asserted, but more than half a century elapsed before the legislature took any effective steps to discharge their obligation. And when they did take those steps, their benevolent intentions were marred, and to a great extent frustrated by circumstances which were never foreseen or contemplated at the time of legislation.

"In 1859 was passed Act X of that year, which was entitled "An Act to amend the law relating to the recovery of rent in the Presidency of Fort William in Bengal."

"The most important of the provisions of that Act were as follows :—

"(1). Ryots who hold at fixed rates of rent which have not been changed from the time of the Permanent Settlement (1793) are entitled to hold for ever at those rates. If the rent

has not been changed for 20 years it is to be presumed that it has not been changed since 1793.

"(2). Ryots having rights of occupancy but not holding at fixed rates are entitled to leases at fair and equitable rates, the rates previously paid to be deemed fair and equitable unless the contrary be shown in a suit.

"(3). Every ryot who has cultivated or held land for 12 years has a right of occupancy in that land so long as he pays his rent, but this rule does not apply to certain private or domain lands let by the proprietor for a term or year by year. The accrual of the occupancy right may also be barred by a written contract.

"(4). The rent of a ryot having a right of occupancy can only be enhanced (*a*) if the rate of rent is below the prevailing rate payable by the same class of ryot for similar land in adjacent places; (*b*) if the value of the produce or the productive powers of the land have been increased otherwise than by the agency or at the expense of the ryot; (*c*) if the quantity of land held by the ryot is proved to be greater than he has paid for.

"(5). Ryots not having rights of occupancy are entitled to leases only at such rates as they and their landlords may agree upon.

"(6). A ryot is liable to ejectment if in arrear of rent at the end of the year, but if he is an occupancy ryot, or holds under an unexpired lease, he can only be ejected by a judicial decree or order.

"(7). The produce of land is hypothecated for its rent and may be distrained before it is stored, but only in respect of arrears of one year."

"Act X of 1859 was a useful and beneficial Act, and if, as must be admitted, its working has not been successful on some important points, this failure is attributable not to any defect in the fundamental principles on which the Act was based, but mainly to defects of language and expression. The circumstances under which the Act was introduced, and the changes which it underwent during its passage through the Legislature, have recently been submitted to a very careful examination, and the result of this examination has been to bring out clearly two points—

"(1) that the Bill as originally introduced was not intended to codify the law of landlord and tenant in Bengal, but to amend one particular branch of it—that relating to the recovery of rent; and

"(2) that the provisions of the Act which have given rise to most controversy and difficulty were introduced into it by way of after-thought, and that the most important of them was based on a misconception of existing facts.

"The expression 'fair and equitable rates,' the twelve years' rule, and the enhancement rules, do not appear in the original draft of the Bill: they were introduced into it by the Select Committee. The Committee explained in their report that they had substituted for the phrase 'parganah rates,' that is to say, rates current in the parganah or locality, the phrase 'fair and equitable rates,' and that they had laid down some rules by which the fairness of the rate might be ascertained. As to the twelve years' rule, the Committee explained that the term "resident ryot," which had been used in the original Bill to designate the class of persons who were to enjoy occupancy rights, had been objected to by the North-West Board of Revenue as too narrow. In the North-Western Provinces occupancy-rights were undoubtedly possessed in some cases by tenants who were not resident in the village, and to such cases it had been usual to apply a twelve years' rule of prescription. In order to meet this objection, the Select Committee dropped the phrase "resident," and adopted as the test of occupancy the holding of the same land for 12 years. The intention was evidently to enlarge the class of occupancy ryots, and not to exclude any who otherwise under the broad term of "resident ryot" would have belonged to it.

"The alterations made by the Committee appear to have been treated as little more than verbal emendations, and were not much discussed in Council.

"It was out of the enhancement rules that the first serious difficulty arose. No special procedure for securing the easy adjudication of enhancement cases was prescribed, and it was apparently thought that the general rules embodied in the Act would sufficiently guide the discretion of the Revenue Courts in fixing "fair and equitable rents." The Act, however, had to be interpreted by the Appellate Courts of the Presidency, and difficulties soon

began to manifest themselves. In the case of Hills *v.* Ishwar Ghose, which was decided in 1862, the Chief Justice of Bengal, Sir Barnes Peacock, laid down the doctrine that the absolute increase in the value of the produce and also the portion of it due to the tenant's expenditure of capital or labour being ascertained, the landlord was entitled to the rest as economic rent. He took his stand on the celebrated definition of rent given by Malthus. "Rent," said Mr. Malthus writing in England, and rent, repeated Sir Barnes Peacock, delivering judgment in Calcutta, "is that portion of the value of the whole produce which remains to the owner of the land after all the outgoings belonging to its cultivation of whatever kind have been paid, including the profits of the capital employed, estimated according to the usual and ordinary rate of agricultural capital at the time being." In reply to the possible objection that this definition of rent ignored the distinction between an occupancy ryot and a tenant-at-will, he denied the right of the former to have his rent "fixed at a lower rate than that which a tenant not having a right of occupancy would give for it."

"This decision did not commend itself as sound to those who were best acquainted with the true position and rights of the Bengal ryot, and three years afterwards it was overruled by the High Court in what is popularly known as the Great Rent Case of 1865. I need not recapitulate the findings of the Judges on the numerous issues raised in that trial. Suffice it to say, that the majority of the Court altogether repudiated the definition of economic rent, and the theory that rent ought to be fixed by competition, as inapplicable to the customs and conditions of the country, and that they held the words "fair and equitable" rent to mean "that portion of the gross produce calculated in money to which the zamindar is entitled under the custom of the country"; and to be equivalent to "the varying expressions pergunnah rates, rates paid for similar lands in adjacent places, and rates fixed by the law and usage of the country." They further held that in cases where the enhancement of what once was a "fair and equitable rent" was sought on the ground of the produce having increased in value, the rule of proportion should be applied, that is to say, the former rent should bear to the enhanced rent the same proportion as the former value of the produce bore to the increased value. From these conclusions the Chief Justice, as is well known, dissented and upheld the doctrine of an "economic rent" as laid down by him in Ishwar Ghose's case. But the rulings of the majority of the Judges became and are now the law of the land. Meanwhile the Government of the North-Western Provinces had discovered that the rule, which had been introduced by amendment into Act X of 1859 for the purpose of covering the special case of occupancy-tenants who were not resident in the village, had most injuriously affected the position of the resident occupancy-ryot. The latter, in place of falling back on the broad plea of occupancy, was now compelled to prove a continuous occupation of specific fields for an uninterrupted term of 12 years. It was found that the rule denied occupancy rights to tenants whose very designation in the rural tongue stamped them as occupancy-tenants. "I am informed by those qualified to judge," wrote the Lieutenant-Governor of the North-Western Provinces—

"that the effect of the Act in many districts of the North-Western Provinces has been wholesale enhancement of rents or ejectment of ryots who had a customary claim to occupancy, and who, under the law as it previously stood, would probably never have been molested."

"The question was referred by the Local Governments to the Government of India, was fully discussed between the latter and the High Court of Bengal, and brought out the valuable truth that Act X of 1859 was not intended to be an exhaustive statement of the rights of tenants, and that, its provisions notwithstanding, any claims to occupancy rights founded on the custom of the country as to residency might be successfully maintained. The discussion seems to have merged in the more pressing question of the law of enhancement, and with the decision of the latter in the Great Rent Case, the project of amending the occupancy sections of the Act to meet the difficulties complained of in the Upper Provinces was for a time laid aside.

"I must touch very lightly on the history of the Rent Law during the

interval between the Great Rent Case in 1865, and the appointment of the Rent Commission in 1879. The chief landmarks of this period are the passing of the Bengal Act of 1869, the Pubna riots of 1873, followed by the passing of Sir Richard Temple's Agrarian Disputes Act in 1876, the successive attempts made in the Bengal Council to amend the law as to the recovery of rent, and, concurrently with all these, repeated and unceasing complaints of oppression and exaction in Behar.

"The Bengal Act VIII (B. C.) of 1869 repealed, in all districts to which it was extended by the Local Government, Act X of 1859, and transferred the trial of rent and enhancement suits from Collectors to the Civil Courts. The substantive law of Act X of 1859 was, with some unimportant exceptions, embodied in the repealing Act, which was expressly confined to an amendment of the existing law in respect of procedure and jurisdiction, although the debate on the Bill brought out numerous admissions as to the necessity which existed for revising the substantive law of 1859.

"The period of seven years which followed the passing of the Act of 1869 was marked by incessant efforts on the part of landlords to obtain higher rents, and by determined opposition on the part of the tenantry, more especially in the Eastern districts, to what they conceived to be unjust and unauthorised demands. In the Eastern districts the rapid growth of the jute trade, and the improvement of communications, had placed the cultivator in a position of comparative affluence. This accounted at once for the anxiety of the landlord to share these profits, and the resolve of the tenant to retain them.

"The administration reports of the years 1871—1876 are filled with accounts of illegal exactions on the part of zamindars, of the frequent reprisals of their tenants, of the formation of agrarian leagues, and of the anxious efforts of the Executive to avert breaches of the peace. The disturbances which, in 1873, broke out in the Pubna District in Eastern Bengal, were but a symptom, though in an exceptionally acute form, of what was taking place in other parts of India. The Pubna riots arose immediately out of what has always been a fertile cause of similar disturbances—the sale and break-up of an old estate. The estate of the Nattore Rajah came into the market, and was bought by five zamindars, each of whom tried to make the best of his bargain by raising his rents. The landlords were Hindus, the tenants were Mahomedans, and religious differences fanned the flame of opposition by the latter to the demands of a new and rent-raising landlord. Short measurements, illegal cesses, the forced delivery of agreements to pay enhanced rents, were the main grievances which the cultivators banded themselves together to resist. The disturbances which ensued were put down with the strong hand—there were 242 arrests and 99 convictions in the sudder sub-division of Pubna; but the inquiries which the Government made into the cause of the outbreak brought into very clear light the substantial character of the tenants' grievances, and the need of applying a drastic remedy.

"The Pubna riots took place in the last year of Sir G. Campbell's Lieutenant-Governorship, and the first two years of his successor were fully occupied with the Behar famine. This explains why Sir R. Temple's Agrarian Disputes Act, though closely connected with the disturbances of 1873, did not become law until 1876. The intention of the Act was to meet apprehended agrarian disturbances by transferring, in special localities and for a limited period, the entire jurisdiction in matters of enhancement and arrears from the Civil Courts to the Revenue authorities. It was merely a temporary measure to be put in force on application by persons interested, and owing to causes on which I need not dwell, it was never brought into actual operation. But Sir R. Temple always intended to supplement it by permanent legislation, and in August 1876 proposed to introduce a Bill to define the principles on which the rights of occupancy-raiyats and tenure-holders should be fixed, to simplify the procedure for realising arrears of rent in undisputed cases, and to make the interest of an occupancy-raiyat liable to sale for default in paying rent, and transferable by private agreement.

"These proposals had not, however, been fully considered when Sir R. Temple, early in 1877, made over charge to Sir Ashley Eden, and it was then arranged that the larger amendment of the law should be deferred, and a Bill providing only for the realisation of undisputed arrears introduced at once.

"When, however, the Bill was introduced into the Bengal Council, it was found that it was impracticable to limit its scope to procedure only. The discussion as to the transferability of the right of occupancy had materially advanced, and it had been recognized that the legislature would have to alter the law with reference to ejectment, distraint, instalments and deposits of rent and, possibly, sub-letting.

"It began to be apparent that many of the proposed provisions would eventually prove to be intimately connected with other portions of the law not ostensibly affected by it, and in February 1879, a majority of the Select Committee recommended that the whole subject of a revision of the Rent Law should be once for all fairly faced.

"This proposal was supported by Sir Ashley Eden, and in April 1879, the Government of India sanctioned the formation of a commission to prepare a digest of the existing statute and case-law, and to frame the draft of a consolidating Bill.

"Meanwhile a separate discussion had been going on with reference to the abuses which I have already mentioned as prevailing in the relation between landlords and tenants in Behar. As far back as the year 1868, the late Lord Lawrence, who was then Governor General, had recorded a minute relating to the depressed state of the peasantry in Behar, in which he had said that he believed "that it would be necessary for the Government, sooner or later, to interfere and pass a law which should thoroughly protect the raiyat and make him what he is now only in name, a free man, a cultivator with the right to cultivate the land he holds, provided he pays a fair rent for it." Again, in the years 1875 and 1876, when the condition of Behar came under consideration, it was acknowledged that some remedies must be applied. Two years later the Lieutenant-Governor, Sir Ashley Eden, appointed a Committee of experienced Behar officials to advise on the matter; and on the 8th of March 1879, they submitted their report, proposing so many changes of the existing law that they did not consider that the requirements of the case could be properly met by a mere amending law. They were of opinion that the whole Rent Law should be recast.

"Thus two independent Committees arrived simultaneously at the same conclusion, namely, that the time for a complete revision of the existing law had arrived.

"The Rent Commission was appointed in April 1879, about a month after the presentation of the report on Behar, and that report was referred to the Commission for consideration.

"The Members of the Rent Commission were Mr. Dampier, Member of the Board of Revenue, as President; Mr. Field, who was then District Judge of Burdwan and is now one of the Judges of the High Court; Mr. Harrison, who was then Secretary to the Board of Revenue; Mr. Mackenzie, who was then Secretary to the Government of Bengal, and is now one of the Secretaries to the Government of India; Mr. O'Kinealy, who was then Legal Remembrancer, and is now officiating as a Judge of the High Court; and three Native gentlemen, Babu Mohini Mohun Roy, Babu Peary Mohun Mookerjee, and Babu Brojendro Kumar Seal.

"Their instructions were—

"(1) to prepare a careful analysis and digest of the existing Rent Law, as contained in the Acts and Regulations concerned with this subject, and in the decisions of the Courts since the passing of Act X of 1859, and

"(2) after considering the suggestions for amendment that had been put forward of late years, to endeavour to prepare a Draft Bill embodying such additions to the substantive law, and such improvements in the law of procedure, as might be found advisable.

"The digest was first compiled by Mr. Justice Field, and was submitted in August 1879.

"The Draft Bill and an elaborate report explaining fully the alterations which the Commission proposed to make in the existing law, and the reasons for proposing them, were submitted in June 1880, and were published in 1881.

"Never had the relations of landlord and tenant in Bengal, rarely has any subject of legislation been so thoroughly, so patiently, so exhaustively examined as by the Bengal Rent Commission. They have thrown a flood of light on the past and present legal and economical position of the raiyat; they have ascertained the existing law on a most complicated and difficult subject; they have determined the main lines on which any amendment of that law must proceed. Their minute and careful inquiries have placed beyond question or doubt the broad and important fact to which I referred in the opening part of my speech, namely, that whatever may have been the position, actual or legal, of the bulk of the Bengal raiyats before the permanent settlement, their customary rights at least included the right of occupancy conditional on the payment of the rate of rent current in the locality, and the right of having that rent fixed by Government. And whatever may be the precise form that may be assumed by any legislation for the purpose of declaring, confirming or restoring those rights, that legislation must inevitably build on the foundations which have been laid, and follow the lines which have been traced, by the Rent Commission. To each and all of the Members of the Commission the thanks of the Government and of the public are unreservedly due; and if there is any one member of the Commission to whom those thanks are due in a special manner, that member is Mr. Justice Field. Before the Commission had begun their labours, he had, by his admirable edition of the Bengal Regulations, shown himself to be a past master of the subject with which the Commission would have to deal. The popular view of the Bengal Rent question has long been the same as that which used to be entertained about the Schleswig-Holstein controversy, namely, that it was one of those subjects which no ordinary person can understand. But before any person commits himself to an expression of that opinion, I would advise him to procure and read Mr. Field's admirable Introduction to the Regulations of the Bengal Code. He will find in that Introduction a concise and lucid exposition, expressed in language which is as intelligible to the amateur, as it is to the expert, not only of the existing rights of landlord and tenant in Bengal, but of the circumstances out of which those rights arose, and the mode in which they have been altered by administration, by legislation, and by changes in political and economic conditions. Mr. Field's digest, which collects the whole of the statute law and the case law connected with the subject of landlord and tenant in the Lower Provinces of Bengal, at once took its place as an authoritative statement of that branch of the law, and as we are not, by our present Bill, attempting the ambitious task of framing a complete code of the law of landlord and tenant, it is a great satisfaction to me to think that we already have, and shall continue to have, in this digest the best possible substitute for such a code. And, lastly, it is no secret that we are indebted to Mr. Field's pen, not only for the draft Bill which was submitted by the Commission, but for their elaborate and admirable report.

"That report has long been before the public, and I may assume that my audience are familiar with its contents. I will, therefore, simply summarise the most important of the proposals of the Commission.

"The 12-years' rule under which an occupancy-right is acquired by prescription was retained, but it was proposed to create a new class of subordinate occupancy-raiyats by providing that a tenant who had held for 3 years and less than 12 years, should be protected from ejectment at the will of his landlord, that he should be entitled to claim abatement of rent like occupancy-raiyats, that his landlord should not be able to enhance the rent at his pleasure, and that if the ryot thought the rent demanded unreasonable, he might give up the land and demand compensation for disturbance and for such improvements as he might have effected. These provisions, it was hoped, would, by protecting this

class of tenant from eviction, eventually enable them to secure the full occupancy-right. This right, as regarded its incidents, was more fully and clearly defined by the Commission than it had been previously either by statute law or by case law. An attempt was also made to distinguish the occupancy-raiyat from the tenure-holder, by restricting the area which could be let as an occupancy-holding to 100 bighas. The occupancy-raiyat was declared to have the right of transfer by sale, gift, or devise, subject to certain conditions as to the landlord's consent, but he was not to be allowed to mortgage. He was exempted from ejectment for arrears of rent, as henceforth the landlord's remedy was to lie in the sale of the holding. He was to be allowed the benefit of all improvements, and full liberty to deal with the land as he thought best; but limits were to be set to the rack-rent he might demand from an under-tenant.

"Other recommendations of the Commission applied to all classes of tenants, irrespective of their status or rights. Thus the right to erect a brick or other house upon his holding, irrespective of the landlord's permission, was given to every raiyat, distraint of crops as a mode of recovering rent was abolished, and stricter provision was made for the giving of receipts and the maintenance of zamindari accounts.

"As to enhancement of rent on occupancy-holdings, the substantive law was, in the main, retained; but a proviso was added in virtue of which an increase in the letting value, due neither to the landlord nor to the tenant, was to be equally shared between them. It was further proposed that the enhanced rent, when obtained on the ground of increase of value of the produce, should not be more than double the former rent, and that no enhanced rent should exceed one-fourth of the average annual value of the produce of the land.

"As to procedure in enhancement suits, the Commission proposed to require the landlord, when suing on the ground of an increase in prices, to proceed in the Collector's Court, but to leave him, in other cases, the option to elect the Civil Court or the Collector's Court, unless the latter Court had been generally or specially vested by competent authority with sole jurisdiction. Power was given to the Collector in dealing with such suits to prepare a table-of-rates, or an enhanced rent-roll, or to effect a complete re-settlement of the estate, as the circumstances of the case might require. The table-of-rates was intended to show the different classes of land prevailing in the estate or locality, with the prevailing rates of rent, and the enhanced rates warranted by the law. In drawing up this table the Collector was to be guided by the representations of both parties; it was not to take effect until it had been duly published, and it was to hold good for ten years.

"If the landlord failed to effect a settlement with the tenants on the basis of the table-of-rates, the Collector might go a step further and prepare an enhanced rent-roll or jummabundi, showing not merely enhanced rates of rent, but the actual rent at these rates which each tenant was to pay. This rent-roll was to hold good for ten years.

"In exceptional cases, where a new landlord, on coming into possession, was prevented, by a combination among his tenants, from ascertaining the holdings or even the names of the latter, the Collector might prepare a complete rent-roll by means of proceedings which, practically, involved a settlement of every holding of the estate.

"Finally, in making proposals for an abbreviated procedure in rent-suits, the Commission recommended that certain portions of the Civil Procedure Code should not be extended to rent-suits at all; that the right of appeal in petty cases should be abolished, and that, in all cases, the summons should be for the final disposal of the suit. In making these recommendations, the Commission expressed their conviction of the extreme danger of summary methods of justice, and their inability to propose a revival of the "summary-suit" system of the old Regulations.

"The Commission's Report seems to have reached the Government of Bengal in June 1880. On the 15th of July in the same year it was forwarded

by Sir A. Eden to the Government of India, with a letter in which he expressed his opinion that the Report and Bill, "however open to modification in details, presents, on the whole, a reasonable basis for legislation." Sir A. Eden's own views are very clearly stated in this letter. He considered that "a general revision of Act X of 1859 was urgently called for in Bengal," and that "in the interests of the Government, of the land-owners themselves, and of the agricultural community at large, it was very desirable, even at this late day, to define and strengthen the position of the great mass of cultivators." "He would like," the letter continues—

"to see the Bengal ryots, as a class, secured in the enjoyment of those rights which the ancient land law and custom of the country intended them to have, protected against arbitrary eviction, left in the enjoyment of a reasonable proportion of the profits of cultivation, and, in short, placed in a position of substantial comfort, calculated to resist successfully the occasional pressure of bad times. He would, at the same time, not seek in any way to diminish or encroach upon the existing emoluments of zemindars or other rent-receivers. On the contrary, he would like to help them to realise their rents more punctually; and even where these are now excessive, he would not seek to interfere to lower them. He would substitute for the present large and uncertain power of enhancement which the law seems to give to landlords, but which they are quite unable to utilise, a reasonable system of regulating rents, under the control and direction of Government officers, such as the universal custom of India originally favoured and recognised. The zemindars will thus be admitted to share in the growing prosperity of the country upon fair terms; and though they will not have all that they claim in theory, they will have a great deal more than they are now able actually to enjoy in practice. They will cease to feel the irritation of unsuccessful desire, while their tenants will cease to look upon them as their natural foes."

"These words were repeated in a letter which was addressed in December 1880 by Sir A. Eden to the British Indian Association, and in which he asked for an opinion on the proposals of the Rent Commission. After quoting them as an exposition of his general policy he went on to say—

"The chief point to be kept in view is the establishment of the occupancy tenure upon a broad and permanent basis. Protection against arbitrary eviction must certainly be given to every settled cultivator who pays the established rent. No ryot should be evicted from his fields on any ground save persistent failure to pay a fair and reasonable rent. A substantial tenantry, free from debt, and in a position to save and bear the pressure of occasional bad seasons, is what Bengal requires. The Lieutenant-Governor desires therefore to see the occupancy tenure made the rule and not the exception; but at the same time he would have it kept as far as possible in the hands of *bonâ fide* cultivators, and sub-letting by occupancy tenants should be discouraged, if it cannot be altogether prevented."

"He added that he did not—

"look upon the occupancy tenant as entitled to sit at any specially *privileged* rate of rent, but only at the established rates ruled to be equitable for the classes of land held by him and approved by the Revenue authorities. This being the case, all that the Government desires to do is to protect him against arbitrary ejectment, and provide by law that the amount of his rent shall not exceed fair and equitable limits, open to authoritative revision from time to time."

"Meanwhile, Mr. Reynolds had, with the assent of the Government of India, been placed on special duty to revise the Bill. Mr. Reynolds' work was accomplished in the winter months of 1880-81. His revised Bill was then submitted to district officers and to various Associations for opinion, and in July 1881, Sir A. Eden was able to communicate his matured proposals to the Government of India. The extent to which public opinion had been taken on the Bill, as originally prepared by the Rent Commission, and as redrawn by Mr. Reynolds, is shown in the bulky volumes which were submitted by the Government of Bengal to the Government of India, and which we now propose to publish. No less than sixty-four reports, memorials, and notes,—many of them of great length—had been received and carefully considered. "There was hardly a principle or a section," the Government of Bengal was able to say, "that had not formed the subject of comment or controversy."

"With Sir A. Eden's letter was forwarded, not only Mr. Reynolds' Bill, but also a revised draft of that Bill, embodying the amendments which had commended themselves to the Lieutenant-Governor. The accompanying letter

explains the main points on which this revised draft, which may be described as Sir A. Eden's Bill, differs from the Bill of the Rent Commission, and the reasons for these divergencies. In summarizing the contents of this letter, I cannot do better than avail myself of Mr. Justice Cunningham's minute. The conclusions at which Sir A. Eden had arrived were:—

"1. That from 1863 the necessity of a radical revision of Act X of 1859 had been admitted on all hands; that since the Pubna riots in 1873 this necessity had been recognised as urgent, and that the landlords had been as forward as any class in pressing for a change in the law. § 12.

"2. That Act X of 1859, while opening the door to certain classes of ryots who had no claim to occupancy rights, had on the whole operated to the detriment of the entire body, especially in Behar, where "only the more powerful ryots had succeeded in resisting the landlords' encroachment," where occupancy rights had to a large extent disappeared, and the rents of the great mass of tenantry had been enhanced to twice their former amount within the last 16 years. § 22.

"3. That the rights originally conferred on the zemindars, whatever else they might have been, were not those of "absolute proprietorship," the Government prescribing a fixed rental to be adjusted by itself according to recognised rules, stringently forbidding any other exaction on the part of the landlords, taking numerous precautions for the protection of the ryots "*in their possessions*," and reserving to itself the right of future interference, should it ever be necessary, on their behalf, without such interference giving rise to any claim on the part of the zemindars for abatement of revenue. § 20.

"4. That the rents of Bengal were and must, in existing circumstances, continue to be "customary," not "competitive," in the sense of the word employed by economists,—the real competition being that arising from the necessity of large numbers who must live off the land, and have no alternative but starvation; that it was the duty of the State to regulate this customary rate, and so to fix the extent of beneficial interest left to the ryots, and thus, in the words of a distinguished Revenue Officer, to recognise "the ryot's right, founded on the most ancient authentic records and uninterrupted prescriptive usage, through a succession of Governments, native and foreign, from ancient times to our own, to have their payments fixed by the authority of Government." § 26. § 28.

"5. That these occupancy rights belonged by the old law and custom to the gross mass of the resident ryots, as laid down by the highest authorities, *e. g.*, Mr. Holt Mackenzie in 1832 and Sir William Muir, who says, "I am satisfied that the khudkast or resident ryot cultivator of Bengal was the ordinary type of hereditary or proprietary ryots common throughout India. In fact, it appeared to be admitted by the chief spokesman of the zemindars that khudkast ryots of all degrees always had an occupancy right." § 30. Page 48.

"6. That the present time afforded the best opportunity for legislation.

"The means by which Sir A. Eden proposed to meet these obligations were—

"1. To give to all "resident" ryots occupancy rights, putting a liberal construction on the word "resident."

"2. To provide for enhancement of occupancy tenants' rates, by preserving the existing rules as to enhancement, but making those rules workable by having an official table of the rent and prices drawn up in each district, by which claims to enhancement can be adjusted by specially appointed tribunals. There would, in fact, be a sort of rent-settlement conducted by local officials of experience, by which the customary rates in each locality would be ascertained and declared. § 29. § 14.

"3. To provide that the rents, thus declared just and equitable, should be binding on the landlord, no private contract being allowed to supersede them. § 24.

"4. To guard against the conversion by the landlord of ryotee land, *i.e.*, land over which occupancy rights exist, or can be acquired, into "khamar," nij-jote or sir land, over which the landlord's proprietary rights exclude the growth of any subordinate interests. "Khamar" lands appear to have been originally merely the surplus unreclaimed land of the village, which the landlord was allowed, during the continuance of his revenue engagement with Government to cultivate for his own benefit, but which became "ryotee" as cultivators settled on them. § 25.

"These proposals involved several material departures from the recommendations of the Rent Commission. The most important change related to the definition and status of the occupancy-ryot. The Commission had recommended the retention of the 12 years' rule as given in Act X of 1859, but proposed to create an intermediate group of tenants possessing inferior occu-

pancy-rights, with a view of bridging over the gulf between the 12-year occupancy-tenant and the mere tenant from year to year or at will. These recommendations were, as already shown, the result of a compromise between those members of the Commission who wished to retain the letter of Act X of 1859, and those who wished to give effect to its undoubted intention. Sir A. Eden, as he told the British Indian Association, was for placing the occupancy-tenure on a broader and more permanent basis. He thus had to go back to the old phraseology of "resident ryot," and to find in a satisfactory definition of this term the solution of the question. In his Bill a resident ryot was one who had resided for three years in a village, and a right of occupancy was conferred on every resident ryot in all lands held by him within that village, or within a certain distance of his home.

"The Table-of Rates was the second important point in which Sir A. Eden's Bill departed from the Rent Commission's proposals. Discarding the Rent Commission's scheme of concurrent jurisdiction, Sir A. Eden fell back upon the old principle of the pargana rate. As he had restored the "resident" ryot to his ancient position, so he proposed to restore the "pargana rate" as the true index to the ryot's rent. The preparation of these Tables-of-Rates and authorised Tables-of-Prices was to be entrusted to specially qualified revenue-officers. Sir A. Eden thought he saw his way to providing—

"an agency which should in the course of a reasonable number of years determine the equitable rates of rent payable in all districts of Bengal, with due regard to existing rents, the increased value of produce, and other things. There can be no doubt, as already remarked, that in most districts these operations would largely increase the incomes of the zamindars. The ryots would, however, be protected by all the reservations and limitations suggested by the Rent Commission; the enhancements would be moderate, and at the same time authoritative; and the general result should be the removal of much cause of friction as between landlord and tenant, and the establishing of the beneficial interest of the occupancy ryot, and consequently of the agricultural prosperity of Bengal, upon a definite and permanent basis."

"A third material question on which Sir A. Eden saw cause to differ from the Rent Commission related to the power of distraint. In the interest of the landlords he considered that distraint should be retained in a modified form. He proposed to make distraint throughout a process of the Court, to confine the right to distrain to one year's rent, and, in the absence of a written contract or an order of enhancement, to the amount payable as rent in that year. The ryot was to be allowed to guard against it by depositing the rent claimed or security for it in the Treasury. The right was further fenced in by restrictions as to co-sharers and unregistered landlords, and by provisions for the gathering and storing of distrained crops and for raising the distraint at any time before sale by payment under protest of the sum claimed into the Collector's Court. Distraint would thus practically take the form of a summary suit, and yet be open to less objection than any form of summary suit followed by an ordinary decree.

"In addition to distraint Sir A. Eden proposed to give assistance to landlords in realising their rents in three other directions—

(1) by the establishment of special Rent Courts;
(2) by adopting the abbreviated Small Cause Court Procedure of the Rent Commission;
(3) by conceding in certain cases summary sale without decree.

The last privilege was to be granted only by special order of the Government to a proprietor on proof that a proper system of accounts and registration was kept up on his estate. And Sir A. Eden was not inclined to grant it readily. "Summary sale without decree," he wrote, "after service of a notice, which, however 'duly' proved, the ryot probably never saw, would mean to him utter ruin without warning and without remedy. The Lieutenant-Governor would never consent to such procedure as of general or ordinary application."

"This, then, is the position in which the Government of India found the Bengal rent question when they took it up after the receipt of Sir Ashley Eden's letter of July 1881. The subject had engaged the unremitting attention

of three Lieutenant-Governors; it had been thrashed out as few subjects have ever been thrashed out before; there was a general concurrence of opinion both as to the nature and magnitude of the evils which had to be dealt with, and as to the necessity for dealing with them in a general and comprehensive manner: and lastly, the lines on which remedial legislation must proceed had been clearly marked out.

"Nor was it by the Government of Bengal alone that the necessity for legislation had been insisted on.

"Holding an independent inquiry, the Famine Commission had come practically to the same conclusions, and made substantially the same recommendations as the Government of Bengal. "The Commission have received a large amount of evidence," they report—

"remarkable in its weight and unanimity, to the effect that in the Bengal Province the relations of landlord and tenant are in a specially unsatisfactory condition. We feel no doubt that the condition of the rent law and the way in which it is administered in Bengal are, as it was described to us by a high official of the province, a very grave hindrance to its agricultural prosperity, and that large portions of the agricultural population remain, mainly owing to this cause, in a state of poverty, at all times dangerously near to actual destitution, and unable to resist the additional strain of famine."

"And in speaking of the necessity for legislation and of the kind of legislation that is required, they go on to say—

"We can feel no doubt that in all the provinces of Northern India, and particularly in Bengal, it is the duty of the Government to make the provisions of the law more effectual for the protection of the cultivators' rights. This opinion is primarily based on the historical ground that they have a claim, as a matter of strict justice, to be replaced, as far as possible, in the position they have gradually lost; but it may also be supported on the economical ground that in the case of these large cultivating classes security of tenure must have its usual beneficial effect; and that, as a rule, the cultivators with occupancy-rights are better off than the tenants-at-will. Wherever inquiry has been made it has been found that in all matters relating to material prosperity, such as the possession of more cattle, better houses, and better clothes, the superiority lies on the side of the occupancy-tenants, and the figures in the preceding paragraphs also show that as a rule they hold larger areas of land. Where the subdivision of land among tenants-at-will is extreme, and in a country where agriculture is almost the only possible employment for large classes of the people, the competition is so keen that rents can be forced up to a ruinous height, and men will crowd each other till the space left to each is barely sufficient to support a family; any security of tenure which defends a part of the population from that competition must necessarily be to them a source of material comfort and of peace of mind, such as can hardly be conceived by a community where a diversity of occupations exists, and where those who cannot find a living on the land are able to betake themselves to other employments.

"It is only under such tenures as convey permanency of holding, protection from arbitrary enhancement of rent, and security for improvements, that we can expect to see property accumulated, credit grow up, and improvements effected in the system of cultivation. There could be no greater misfortune to the country than that the numbers of the occupancy class should decrease, and that such tenants should be merged in the crowd of rack-rented tenants-at-will, who, owning no permanent connection with the land, have no incentive to thrift or to improvement. It is desirable for all parties that measures should be framed to secure the consolidation of occupancy-rights, the enlargement of the numbers of those who hold under secure tenures, and the widening the limits of that security, together with the protection of the tenant-at-will in his just rights and the strengthening of his position by any measure that may seem wise and equitable."

"After what I have said it must be abundantly clear that there is an urgent need for legislation, and that the two main objects at which our legislation should aim are:—

1st, to give reasonable security to the tenant in the occupation and enjoyment of his land; and
2ndly, to give reasonable facilities to the landlord for the settlement and recovery of his rent.

"That both of these are legitimate objects of legislation no one will be found to deny. But we have been told that whilst there is no reason in the world why we should not effect the one, there is a serious obstacle in the way of our effecting the other. We may legislate to enlarge the powers of the landlord, but

we cannot legislate to enlarge the rights of the tenants. And why? Because we are barred from doing so by contract, the contract, namely, with the zamindars which was embodied in the permanent settlement. Now, far be it from me to enter into any minute or exhaustive inquiry into the meaning and effect of the numerous documents which, together, make up what is known as the permanent settlement. The time allotted to the performance of business in this Council is not long enough—life itself would hardly be long enough—for the due performance of such a task. I am quite aware that my Hon'ble Colleague, Mr. Kristodás Pál, and myself might bombard each other for many a long summer day with rival extracts from the literature of 1793, without making a single step in advance. And if I were rash enough to embark on such a controversy, I should throughout it be haunted by an uncomfortable consciousness of the presence of that worthy and portly nobleman, whose picture hangs on our Council-room wall, and who would seem to be looking down with an amused and complacent smile on our persistent and futile efforts to make out what on earth he meant. All that I can venture to do is, to state, as briefly as possible, the impression which the main features of the controversy have produced on one to whom the subject is comparatively fresh, and who has endeavoured to approach it with that impartiality which ought to be the characteristic of a well-balanced and ignorant mind. Now I will not pause to consider how far a Government can, by entering into a contract, prevent itself and its successors for all time from doing that which, in the interests of the general welfare of the community, might apart from contract be justifiable and necessary. It is not necessary that I should do this, because, whilst fully admitting the existence of a contract, and its binding character, there is no great difficulty in shewing that this so-called obstacle to legislation for the protection of the tenant is no obstacle at all, that it is a mere phantom barrier which, the moment that it is approached, dissolves into thin air.

"What was the contract embodied in the Permanent Settlement? Who were the parties to the contract, and what was its intention and effect?

"The main features of the case admit of being very simply stated. Before 1793 the zamindars were, as they are now, the persons responsible to the Government for the payment of the land revenue in cases where that revenue was not collected directly from the cultivator. The amount of land revenue which each zamindar had to pay, and for the payment of which the Government held him responsible, was fixed by contract or arrangement between him and the Government. Such contracts were termed settlements. They sometimes related only to the revenue of a particular year, but it was found in practice more convenient to make them for a term of years. Before 1793 there had been two or three quinquennial settlements, and in 1793 there was in force a decennial settlement, or settlement for a term of ten years. The Government agreed with the zamindars that this settlement should be made permanent, and that no addition should be made to the amount of revenue by reason of any future increase in the area under cultivation. In other words, the Government fixed in perpetuity that which had previously been fixed either for a single year, or for a term of years. The Permanent Settlement then was simply a contract between the Government and the zamindars as to the amount of land revenue payable by the latter to the former. The parties to the contract were the Government on the one hand and the zamindars on the other. The ryots were not consulted about the arrangement, and were in no sense a party to it, and according to the most ordinary principles of contract it could not affect any right which they then had or might thereafter acquire.

"But then it was said that at the time of the Permanent Settlement, and as part of the same arrangement, a formal declaration was made declaring the property in the soil to be vested in the zamindars; that throughout the Regulation of 1793, which confirmed and gave effect to the Permanent Settlement, the zamindars are described as the 'proprietors' or 'actual proprietors' of the land, and that this declaration and description are inconsistent with the notion of proprietary rights in the land being vested in any other class of persons. As to the use of the term 'proprietor' no serious argument can be based upon it. I have heard of the magic of property. But I never understood that there was any such magic in the phrase 'proprietor' as to wipe out any rights qualifying those of the person to whom the phrase was applied: and it would be specially difficult to show that it had any such effect in the Regulation of 1793."

"In the first place, the term, as applied to land, has no technical meaning in English law, and if you were to ask an English lawyer what were the rights in the soil of a proprietor of land, he would probably tell you that you were using loose and popular language, and would beg you to make your meaning more precise and clear. In the next place, the term was freely applied to the zamindars of Bengal and other persons of the same class in Regulations and other official documents of a date anterior to 1793, and therefore could not possibly be taken as indicating, or to use a technical term, connoting rights created at that date. And thirdly, the term, though as I have said, it has no technical meaning in England, has acquired a very definite meaning in the settlement literature of British India. It means, in those parts of India which are not permanently settled, the person who, whatever may be his rights in the soil, has the right of having a settlement made with him, the person, namely, whom, for purposes of land revenue, and for those purposes only, the Government find it convenient and advisable to treat as owner or proprietor of the land. Such a recognition of course is not inconsistent, and was never supposed to be inconsistent, with the existence of any number of other rights in any number of other persons. All such rights are simply left outstanding. The use of the term "proprietor" in this sense is closely analogous to the use of similar terms in English statute law. Here, for instance, is a definition of "owner" taken from a recent English Act—the Public Health Act of 1875:—"'Owner' means the person for the time being receiving the rack-rent of the lands or premises in connection with which the word is used, whether on his own account, or as agent or trustee for any other person, or who would so receive the same if such lands or premises were let at a rack-rent." In this case, the legislature has said: We intend to impose certain sanitary duties on the owners of lands and houses. We will not inquire too closely which of several persons ought, as between themselves, to perform those duties. It is sufficient for our purposes to find out who gets the rent; we will treat that man as owner for the purposes of the Act. We will make him primarily responsible for the performance of duties imposed on owners by the Act, and leave all questions between him and third persons untouched. And this is precisely the policy which the East India Company adopted in Bengal before the date of the Permanent Settlement. They found a number of persons claiming interests in the soil. Which of those persons had the best claim, as against the others, to be considered true owner of the soil, was a theoretical question of enormous difficulty. But which of those persons ought, for land revenue proposes, to be dealt with as owners of the soil, and primarily liable for land revenue accordingly, was a practical question, which admitted of a practical solution. The East India Company settled it in Bengal by selecting the zamindars as the persons to deal with, and they christened them landholders or proprietors accordingly.

"What then is the meaning of the formal declaration referred to in Regulation II of 1793, that the property in the soil was vested in the landholders, and of the statement in the same Regulation, that the property in the soil had never before been formally declared to be so vested?

"Here again, if we bear in mind what is so often insisted upon by the zamindars, that the Permanent Settlement was a contract, that is to say, an arrangement between two parties, the Government on the one hand and the zamindars, and that this declaration was embodied in and formed part of that contract, there is no real difficulty in coming to a conclusion as to what it really meant. In dealing with persons who had interests in the soil, the Government claimed rights over them in two capacities. It claimed to be both supreme Government and supreme landlord. In one capacity it was dealing with subjects; in the other capacity it was dealing with sub-proprietors or tenants. But it was never very easy to say either what its rights as supreme landlord comprised, or at what point the line was to be drawn between its rights as landlord and its rights as Government. As to the first question, it

is of course obvious that the rights of a supreme landlord may be of the most limited nature. According to the theories of English law all English land is held mediately or immediately of the Crown, and therefore, says Blackstone, "the sovereign only hath *absolutum et directum dominium* in the land." But we all know that this absolute and direct ownership or proprietary right is of the most shadowy character. And as to the second question, I need only remind an Indian audience of the eternal controversy whether that share of the produce which is payable to the Government in districts not permanently settled ought more properly to be denominated revenue or rent. Now it was this second question which the Government endeavoured to solve in making the Permanent Settlement. It said to the zamindars, we will not only fix for ever that share of the produce for the payment of which you are to be held responsible, but we will give up to you our claim to be considered your landlords. What you pay us shall be revenue not rent. As between ourselves you and not we shall be deemed to be the proprietors of the soil.

"But there were three things which the Government did not do by the Permanent Settlement. It did not divest itself of its general right—a right which belonged to it not as landlord but as Government—to make from time to time such laws and adopt such administrative measures as it might think expedient for the general welfare of all classes of its subjects: it did not define the nature and extent of the proprietary rights which it gave up to the zamindars; and it did not include in its grant any proprietary or *quasi*-proprietary rights belonging not to itself, but to some other class of persons. Before the settlement the zamindars, when not cultivating themselves, occupied a middle position between the Government, with substantial but ill-defined proprietary rights over them, and the great mass of cultivators with substantial but ill-defined proprietary rights under them. After the settlement they were freed from the one, but they remained subject to the other.

"Nor is there any ground for the suggestion that the occupancy rights which at the time of the Permanent Settlement were—I will not say saved, for they required no express saving but—left outstanding, included only the rights of those ryots who happened to be in occupation at the date of the settlement. If there was at that time—as it seems abundantly clear that there was—an established custom or usage under which the resident ryots, that is to say, the great mass of the cultivators—for an agricultural population is essentially stationary in its habits—under which the resident ryots were entitled to hold at fixed rents, that custom or usage would, according to the ordinary principles applicable to the interpretation of statutes, be unaffected by the legislation of 1793, and would protect not only those who had taken up lands before that date but those who might take up lands at any subsequent date.

"We have, indeed, been told that it was part of the bargain between the Government and the zamindars that the latter should not only be exempted from payment of revenue for lands which were then waste, but which might subsequently be taken into cultivation, but should be given full and absolute discretionary powers as to the mode of dealing with such lands, unqualified by any village custom or local usage. But it would require extremely strong and clear words to make an enactment conferring such powers,—an enactment which would be inconsistent with all Indian notions as to the rights of a reclaiming occupier in the land which he brings under cultivation, and which would throw into, and keep permanently in, the category of khamar or private land the whole of the then vast area of the unreclaimed land of Bengal. It would require, I say, very strong and clear words to effect such a revolution, and I cannot in any of the Regulations of 1793 find words on which such a construction could reasonably be placed.

"And even if any such right had been conferred, it would have been controlled and qualified by the express reservation of a power to legislate from time to time for the protection of the cultivators of the soil.

"No, in construing the documents connected with the Permanent Settlement as in construing other documents of a like nature, general words must be read with reference and subject to specific rights and customs, and a bargain between two parties must not be treated as affecting the rights of any third party. Construed in accordance with these principles, the Permanent Settlement did not, of its own operation, prejudicially affect any rights of the existing generation of cultivators, any custom or usage tending to protect the rights of future generations of cultivators, or any power of the Legislature to interfere from time to time for the protection of those rights.

"We may, therefore, I hold, proceed fearlessly and with a clear conscience to legislate in such manner as may seem most conducive to the interests both of landlord and of tenant, undeterred by any phantom which would bid us turn aside from the path of equal justice, and bearing in mind that if we interpose to strengthen the powers of the landlord, we should not be doing equal justice if we did not at the same time take steps to maintain, to secure, and to fortify the rights of the tenant.

"Our first object then must be to take care that the Bengal raiyats, as a class, shall be (I am using Sir Ashley Eden's words) "secured in the enjoyment of those rights which the current law and custom of the country intended them to have, protected against arbitrary eviction, left in the enjoyment of a reasonable proportion of the profits of cultivation, and, in short, placed in a position of substantial comfort, calculated to resist successfully the pressure of bad times."

"To protect the raiyats as a class. But how is that class to be defined? I have often asked that question, and the answers which I have received remind me of the well-known answer which is said to have been given by a Cambridge under-graduate to a Board of Examiners who pressed him sorely to define the centre of a circle. He traced a circle with his finger in the air pointed to the middle of it, and said "there." We all know in a general way what is meant by the expression "raiyat": we all know in a general way what we mean when we speak of the resident or settled raiyat, or of the resident or settled cultivator; but we cannot give any precise definition of the class without running a serious risk of including some whom we ought to exclude, and of excluding some whom we ought to include. An element of arbitrariness is necessarily inherent in every definition which we can possibly frame. We have seen that the authors of the Act of 1859, both when they spoke of a resident raiyat, and when they laid down the rule as to 12 years' occupancy, did not mean to create new rights, but to describe existing rights, and that neither the phrase which they rejected, nor the rule which they ultimately adopted, precisely hit the mark. We are in the same difficulty now as the Legislature were in then, and, whilst admitting that the definition which was then adopted is imperfect, and that any definition which we can devise now must be to some extent artificial, our object should be so to frame our legislation as to depart, as little as possible, from the notions and distinctions which are already established in the country and familiar to the people.

"Now we find that there are two distinctions long and deeply engrained in the mind of the agricultural population of Bengal. The one is the distinction between the khudkasht raiyat and the paikasht raiyat, the cultivator who, wherever may have been his place of residence, whatever may have been the length of time during which he had held any particular piece of land, was recognized as being in some sense permanently settled in a particular locality, and as having substantial, though imperfectly defined rights in the land situate within that locality; and on the other hand, the cultivator who was never fully recognized as properly belonging to or sharing the rights of the agricultural community, and always retained the character of an outsider, or almost an interloper.

"The other is the distinction between that portion of the land which, under whatever circumstances it was acquired or appropriated, and by whatever denomination it was known, whether as sír, khamar, nij-jote or zeraat, was recognized as being in a special and exclusive sense the private property of the zamindar, as distinguished from all the rest of the cultivated or cultivable area, which may be called raiyati land, and in respect of which the zamindar's rights were merely to receive a share of the produce or its equivalent in money.

"The first distinction is a distinction between two classes of cultivators; the second distinction is a distinction between two classes of land.

"Now, the legislation of 1859 proceeded on the first of these distinctions, and endeavoured, though as we have seen with imperfect success, to define and protect the rights of the khudkasht or settled raiyat. But there is a great deal to be said for basing legislation on the second of these distinctions. We might, I think, very fairly say to the zamindars—"This private, sir, or khamar land is, and shall be, your own in a special and exclusive sense. You may do as you like with it: keep it in hand, or let it out precisely as you please. Of this land you shall be not only the actual, but the absolute or exclusive proprietor. But as to the raiyati land, there your proprietary rights are, and shall be, limited by the rights of the occupying cultivators. You shall have your due share of the produce, but we will adhere to the old law and custom of the country, and prevent you from interfering with the occupier as long as he pays rent at the established rate." The great advantage of basing the law on this distinction would be, that it would entirely get rid of the elements of irritation and conflict necessarily inherent in any rule which declares that rights shall be acquired by occupation during a specified period of time. It will be seen from the papers which we shall lay before you, that the Government of India one time proposed to legislate on these lines, but in deference to very high authority, and to the suggestion that such legislation would involve too serious a departure from the principles contained in the Act of 1859, we have ultimately determined to embody in our Bill the twelve years' rule, with modifications which I will presently explain.

"I am now in a position to describe the principal provisions of the Bill which I am asking for leave to introduce. The Bill will be accompanied by a popular commentary in the shape of a full Statement of Objects and Reasons, and therefore I need not do more than dwell on its more important features.

"In the first place it is not intended, and does not profess, to be a complete or exhaustive code of the law of landlord and tenant. It is merely a Bill to amend and consolidate certain enactments relating to that subject. It does not attempt to embody all the rules of the common law or the results of judicial decisions, and it expressly saves custom.

"The most important sections of the Bill are those which relate to the raiyat with occupancy-rights, but before reaching that point the Bill deals with two other subjects to which I must shortly refer.

"The first of these is the distinction between the khamar or private land, and raiyati land or land destined for occupation by raiyats.

"The importance of this distinction arises chiefly from the circumstance that raiyats occupying land of the latter class will, under the Bill, enjoy a much larger measure of protection than those occupying land of the former class. Bearing this in mind, and having regard to the efforts made by landlords in some parts of the country under the existing law to get into their own hands as large an amount of the raiyati land as possible and convert it into khamar land, we have framed our definition so as to make it clear that the existing stock of khamar land cannot hereafter be increased, and have further enacted that all land which is not khamar land shall be deemed to be raiyati land, and that all land shall be presumed to be raiyati land until the contrary is proved.

"In Bihár, owing to the large extent of the khamar, or, as it is there termed, "zeraat" land, and the persistent efforts made by the landlords and their lessees to increase its extent, the question is one of cardinal importance. Accordingly we have further provided for making, in some parts of the province, a complete survey and record of the existing khamar or zeraat, in order to preclude all possibility of future disputes on the point.

"Next in order comes a chapter dealing with the class of persons who are described in the Bill as tenure-holders, and who are practically middlemen between the zamindar or principal rent-receiver and the cultivator. They do not, as a rule, cultivate the land themselves, but collect the rents and pay over to the superior proprietor an annual sum which may be either fixed or liable to enhancement

from time to time. There may be several degrees of such middlemen, each receiving rent from a person below him and paying rent to a person above him. And the amount of rent payable by them is determined by considerations similar to those which apply to the rent payable by an occupancy ryot.

"In dealing with this class of persons we have followed very closely the recommendations of the Rent Commission. They proposed to enact that in the cases where the rent of a tenure or under-tenure is liable to enhancement (there are many cases in which it is not so liable), it may be enhanced up to the limit of the customary rate payable by persons holding similar tenures or under-tenures in the vicinity, or where no such customary rate exists, up to such limit as to the Court may appear fair and equitable, but so that the profit of the tenure-holder shall not, in the absence of special circumstances, be more than thirty per cent. of the balance which remains after deducting from the gross rents payable to him the expenses of collecting those rents. And to prevent the power of enhancement from working hardship they proposed to provide that the enhanced rent should not in any case be more than double the previous rent, that the enhancement might, in certain cases, be made to take effect gradually, and that rent once enhanced should not be altered for ten years unless on account of alluvion or diluvion.

"On these and other points we have adopted their proposals, with certain modifications of detail. Thus we have declared a permanent tenure to be heritable, devisable and transferable, and we have enacted that the holder of such a tenure shall not be ejected by his landlord except under a decree of Court passed on the ground that he has broken a condition, on breach of which he is, under a written contract between himself and his landlord, liable to be ejected. It will be borne in mind that his interest is liable to sale, and in some cases to sale by a summary process. Lastly, we have provided for the registration in the landlord's register of all successions to and transfers of these kinds of interest.

"The best known and most important of these intermediate interests are those known as patni tenures. They are held at a rent fixed in perpetuity, but, in case of default, they are, under one of the old Regulations, liable to summary sale by a special process. We have devoted a special chapter to this class of tenures, but in dealing with them we have left the law substantially unchanged. We have not overlooked the various proposals which have been made for the amendment of the summary sale procedure, but we have thought that as they touch only matters of detail relating to an institution of a very special nature, they would be best considered at the Select Committee stage of the Bill, when it is hoped that it may be found possible to simplify the form of the Bill, without materially changing its substance. In the mean time we have thrown the existing enactments into a schedule.

"We now come to the raiyat. I have said that there is considerable difficulty in defining the raiyat, and there is one particular class of raiyats, namely, those holding at fixed and unalterable rates, whom we have found it convenient to take out of the category of raiyats and include in the definition of tenure-holders. We have done this mainly for convenience of drafting, but we believe that the effect of our having done it will be of little practical importance, inasmuch as these tenants are to all practical intents and purposes on the same footing as tenure-holders.

"Setting these aside, who is a raiyat? We have been unable to frame more than a negative and incomplete definition of him. We propose, following the Bill prepared by the Rent Commission, to limit the term to tenants who hold land for purposes of agriculture, horticulture or pasture, or who have come into possession for such purposes. We are quite aware that cases may occur near the line of separation between the different classes interested in the land, in which a doubt will arise whether a tenant is a tenure-holder, a raiyat, or a person holding under a raiyat. We believe, however, that this distinction is generally well understood, and that, save in exceptional cases, no difficulty will arise. However this may be, no complete definition has as yet been

suggested which would not be certain to give rise to difficulties greater than those which it is intended to remove. If anybody can suggest a better definition than ours, we will gladly adopt it.

"I have said that one of the objects of our legislation is to give reasonable protection to the raiyats as a class, and in particular to recognise and confirm that right of occupancy conditional on payment of rent at the established rate which formerly appertained to the khudkasht, settled or permanent raiyat. Who then is the settled raiyat? We have seen that the Act of 1859 adopted as a test for determining this question the occupancy of land for twelve years. It has been held by the highest judicial authority that the provisions of the Act, with respect to the establishment of the right of occupancy, should be construed as cumulative and not as exhaustive, or exclusive of all other modes of establishing that right; but as a matter of fact the Act has come to be regarded as a Code complete in itself and as superseding all other modes of establishing the right. Its effect has consequently been to injure seriously the rights of the old established raiyats by throwing on them the burden of proving, not merely that they have held for 12 years in the village or estate, but further, that they have so held in every one of the particular fields or plots in respect of which they claim to have rights of occupancy, a burden which it need hardly be said it is impossible for them, in the absence of any trustworthy agricultural records, to discharge. And as regards the acquisition of rights of occupancy by new comers, a matter which is always regarded as absolutely necessary for the prosperity of the agriculturist class in this country, it becomes almost impossible under a law which enables the landlord to prevent it by the simple device of shifting the tenant from one holding to another before the period of twelve years has run out.

"It is unnecessary that I should state on the present occasion the various remedies which have been proposed for these evils. They will be found described and discussed in paragraph 61 of one of the despatches which will be published—the despatch of the Government of India to the Secretary of State, dated 21st March, 1882. It is enough to state the amendment of the law which we have, after a very full discussion of the question, resolved to propose. That amendment follows, with certain modifications, a suggestion of the Famine Commissioners, and consists in making the acquisition of the status of the khudkasht raiyat, or as he is termed in the Bill, the "settled raiyat," depend not on the holding of one and the same plot of land for twelve years, but on the holding of any raiyati land (whether the same or not it does not matter) in the same village or estate for a period of twelve years whether before or after the passing of the Act. The raiyat may, by ceasing for one year to hold land as a raiyat in the village or estate, lose the status so acquired, but while it continues to adhere to him, he will, notwithstanding any contract to the contrary, be deemed to have acquired a right of occupancy in any raiyati land held by him as a raiyat in the village or estate after this day—the 2nd of March 1883. No one can acquire the status of settled raiyat, and the occupancy-right which is attached to it, unless he has been a landholder, or he and his ancestors before him have been landholders for at least twelve years in the same village or estate. Thus mere squatters and nomads are effectually excluded. I should add that, in order to obviate the effect which the minute partitions of estates, so common of late in certain parts of the country, would have in reducing the area in respect of which a settled raiyat of an estate would enjoy his status as such, it is in effect provided that the estate shall, for the purposes of this portion of the Act, be taken to be the estate as it would have existed if no partition had taken place since the 1st of January 1859. All these provisions apply only to raiyati land, not to khamar land.

"And we preserve the rights of existing occupancy-tenants by providing that every raiyat who, immediately before the commencement of the Act, has, by the operation of any enactment, by custom, or otherwise, a right of occupancy in any land, shall, when the Act comes into force, become an occupancy-raiyat of that land for the purposes of the Act.

"Now we do not anticipate that these provisions will increase materially the area at present subject to occupancy rights; indeed, if the statement which has been made by a high authority, that 90 per cent. of the raiyats in Bengal already have that right, is correct, any such increase would scarcely be possible; but what we hope for is, first, that a stop may be put to the vigorous efforts which are at present being made by landlords in some parts of the country to withdraw land from the operation of the right by preventing the natural growth of a fresh occupancy-right in the place of an old right which has determined, and secondly, that where occupancy-rights do, as a matter of fact, exist, the proof of their existence may be a matter of less difficulty than it is at present to the ignorant and helpless raiyat.

"It will be observed from what I have said that a right of occupancy is to be acquired by a settled raiyat holding raiyati land "*notwithstanding any contract to the contrary.*" We consider it essential to carry the enactment to this extent. To quote again from the despatch of the Government of India to which I have just referred: "such is the power of the zamindars, so numerous and effective are the means possessed by most of them for inducing the raiyats to accept agreements which, if history, custom and expediency be regarded, are wrongful and contrary to good policy, that to uphold contracts in contravention of the main purpose of the Bill would be in our belief to condemn it to defeat and failure. It is absolutely necessary that such contracts should be disallowed, and in this conclusion we have the support not only of the Bengal Government but also of the almost unanimous opinions of the Bengal officers."

"I was not a party to this despatch, but I desire to express my entire concurrence with the opinion therein expressed as to the absolute necessity of preventing our legislation from being overridden by contract. We are fully justified in directing our Courts not to enforce contracts, the clear and manifest intention of which is to defeat the intentions of the Legislature. On a matter of this kind an ounce of fact is worth a ton of theory, and I will try to give you an ounce of fact—a sample ounce—in the form of a so-called contract which, as I am credibly informed, has been imposed by a Bengal zemindar on a Bengal raiyat:—

"(1) *Translation of the Kabuliyat said to have been executed.*

To

Zemindar.

I, son of resident of Pergunnah Sub-Registry and Police Station of cultivator, do hereby execute this kabuliyat.

I take the lease of bighas of land, more or less, and yielding different rate of rents of village and mentioned in the schedule below,

* * * * * * * *

* an annual jama of Rs. I will pay the rent at your cutcherry at * according to monthly* equal instalments noted at the foot. If I fail to pay the rent on due date, I will pay interest at the rate of† two pice per rupee per mensem till date of realisation. I will not raise any objection to the payment of rent on the score of inundation, drought, fallows or any other cause. I will not delay to pay the rent. I will cultivate the land with my own hands, keeping the boundary intact in accordance with Your Honour's wish. You and your heirs are at liberty to enter into possession of the land if it is required by you and them. I and my heirs will never acquire a right of occupancy in the land. I will not sub-let, establish hts or bazars, erect buildings, excavate tanks, make brick-fields, plant bamboo clumps‡ and gardens, settle with korfa ryots, or transfer or alienate the lands. If I do any of these acts I and my heirs and assigns will be responsible for any damage

* Monthly instalments are oppressive. They drive the raiyat to the money-lender before the harvest, and they enable zamindars to wrong the raiyat by bringing suits every month and saddling the raiyat with costs.

† *i. e.*, 6 annas per rupee per annum, or $\frac{6}{16} \times 100$ per cent. = 31 per cent. nearly.

‡ Bamboo clumps are real "necessaries" for a raiyat.

that may thereby accrue. I and my heirs will pay, in addition to the rent, Road-cess,§ Public Works cess,‖ zemindari dak-cess,¶ and any other cess which Government may levy in future, together with any cess** which you may levy. I and my heirs shall enjoy the fruits only of existing and future trees on the land (*i.e.*, such trees as I and my heirs may plant, or may have been already planted by me at your instance, and such as may be planted hereafter at the instance of you and your heirs). I will not cut any trees whatever. If required by you and your heirs you are at liberty to cut trees on payment of one-fourth of the price of the wood.†† I will not raise any objection for abatement of rent on that score. If I do any damage to the existing bamboo clumps I and my heirs will be responsible. I will pay every kowri of the rent by the end of Chaitra. If I and my heirs fall into arrears, you and your heirs are at liberty to enter into khas possession, and will make a separate settlement as you and your heirs think fit, and I and my heirs will not raise any objection. I and my heirs will not claim any compensation‡‡ that may be awarded under Act X of 1870 and under any other law. To the above effect I execute at my free will this kabuliyat.

"(2) *Pottah.*

Rent roll of raiyat, of village * pergunnah* of zemindari lot bearing Touzi No. * zillah * annual jama * * paddy, &c., village *, land * rent and paddy, &c.

You shall enjoy the land paying rent from Punya day to the end of the year, and having rights as per kabuliyat.

§ By section 21, Act X of 1871, the raiyat is only bound to pay half the road cess. This is to exact the whole from him.

‖ This is to avoid section 5, Act II of 1878, which only throws one-half Public Works cess on the raiyat.

¶ By section 3, Act VIII of 1862, all the dak cess is payable by the zamindar. By this he throws them on the raiyat.

** See sections 52, 55, Regulation VIII of 1793, and section 11, Act VIII of 1869. The imposition of such cesses is absolutely illegal.

†† ¼th as wood. Not the value, or even ¼th the value, of the tree.

‡‡ *i. e.*, if the land is taken up for public purposes, the zamindar is to get the price paid by Government; the raiyat nothing.

N.B.—The kaboolyut is given by the raiyat and remains with the zamindar. The pottah is given by the zamindar and remains with the raiyat. This *latter* document gives no details, so that the ignorant tenant never has an opportunity of understanding the nature of his rights and obligations; all these are only entered in the *kaboolyat*, which is in the custody of the zamindar.

"This is the kind of document—contract I cannot call it—by which we do not intend that our legislation should be overridden.

"So much as to the mode in which the occupancy-right is to be acquired. Next as to the incidents of the right when obtained. The most important of these are collected and enumerated in one of the sections of the Bill, which provides that they shall attach to the tenancy notwithstanding any contract to the contrary. They are briefly as follows:—

(1) the raiyat may use the land in any manner which does not render it unfit for the purposes of the tenancy;
(2) he may make improvements on it as provided by the Bill;
(3) he must pay rent at fair and equitable rates as determined by the Bill;
(4) he cannot be ejected except under a decree passed for breach of certain conditions, or for using the land in such a way as to render it unfit for the purposes of the tenancy;
(5) he may sub-let the land;
(6) his interest is to be transferable, subject to certain rights reserved to the landlord; and
(7) his interest is to descend as if it were land.

"It will be seen that these rights include the rights commonly known in England and Ireland as the three F's., fixity of tenure, fair rent and free sale. I will touch first on the last of these three rights—the right of transfer.

"The question whether the right of occupancy should be made by express enactment freely transferable everywhere, as it is at present held to be by custom throughout a very large portion of the area to which the Bill applies, has been most fully and carefully considered. It has to be looked at from two points of view, namely, first, from the point of view of the landlord, and secondly, with reference to the interests of the tenant.

"From the former point of view the question presents comparatively little difficulty. The landlord is concerned only to see that we do not allow an objectionable tenant to be forced on him against his will, and this we can readily guard against by giving him a right of pre-emption, or something equivalent to a right of pre-emption in every case of transfer. We have accordingly provided that in cases of voluntary sale, gift or bequest, the landlord shall have a right to purchase at a price to be fixed by the Civil Court; that in the case of a sale in execution of a decree, when the landlord and any other person bid the same amount, the landlord shall have the right of pre-emption; and that when an order is passed for foreclosing a mortgage of an occupancy-right, the landlord shall be allowed an opportunity of paying in the amount of the mortgage debt and taking the place of the mortgagee. The only doubt that has been felt about these provisions is whether, in the case of a voluntary sale, the landlord should not be required, if he exercised his right of pre-emption, to pay the price at which the raiyat has actually agreed to sell the occupancy-right instead of a price to be fixed by the Court; but on considering the difficulties by which the right of pre-emption would be clogged in cases of collusion between the vendor and purchaser, and in cases in which a spiteful neighbour might be willing to pay an exorbitant sum for an occupancy-right with a view to harassing the landlord, we have thought it best to put the case of voluntary sale on the same footing as those of gift and bequest.

"Looking at the question of transferability next from the point of view of the occupancy-raiyat's interest, the local Government and the Government of India have come to the conclusion that, in the absence of evidence of any evil consequences which have already followed from such transfers, or which may be anticipated as likely to occur in the near future, it would be unwise to oppose the growth of the very strong tendency towards transferability which the prevailing customs show to exist in rights of this class in almost all parts of the country. The existence of such a tendency indicates what, indeed, is clear from other evidence, that those most concerned regard the quality of transferability as an important incident of the right, and it cannot be doubted that the enactment of a law absolutely forbidding transfer would, even if it saved existing customs, be regarded as a hardship. I may add that if the custom of transferability is so widely established as is stated by some very competent authorities, the operation of a law of this sort would be so limited as to be of but little importance.

"That the powers of transferring and sub-letting which the Bill recognises may in time lead to a state of things in which the great bulk of the actual cultivators would be not occupancy-raiyats but under-raiyats with but little protection from the law, is indeed within the range of possibility; but if such a state of things should ever arise we may rest assured that the Government of the day will know how to deal with it. There is nothing in the present Bill which ought in any way to hamper them in doing so—nothing to affect the principle that, in an agricultural country like India, the great mass of the actual cultivators of the soil, whoever they may be, and however they may have come into the possession of the land, must be protected by the law.

"It may be asked, what happens if a landlord, by way of pre-emption or otherwise, acquires an occupancy-right in his own land. The answer is, any tenant who subsequently takes the land from him is to have a right of occupancy in it. There is nothing in the Bill to prevent a landlord so acquiring an occupancy-right in land from keeping the land in his own hands and cultivating it by his servants or by hired labourers. All we propose to enact is that if he chooses to let it to a tenant that tenant shall at once acquire an occupancy-right. We consider this necessary in order to guard against the possibility of a landlord buying up on a great scale the occupancy-rights existing on his estate with a view to putting non-occupancy raiyats on the land. To a landlord who buys an occupancy-right, as contemplated by the pre-emption sections of the Bill, merely with a view to excluding an intending purchaser whom he objects to have as his tenant, there would be no appreciable hardship in the restriction.

"So much for free sale: now as to fair rents. It will be remembered that

under Act X of 1859, there were, putting aside the question of alterations in area, which we deal with separately, only two grounds on which the rent of an occupancy-tenant could be enhanced:

1st, that the rate of rent was below the prevailing rate payable by the same class of raiyats for land of a similar description and with similar advantages in places adjacent; and

2nd, that the value of the produce or productive power of the land had been increased otherwise than by the agency or at the expense of the raiyat.

"And we have seen that in the Great Rent Case the Court ruled that where enhancement was claimed on the second of these grounds, the rule of proportion should be observed, namely, that the enhanced rent should bear to the previous rent the same ratio that the increased value of the produce or productive power bears to the value or power at the time when the previous rate was fixed.

"Now, whatever may be said for the rule of proportion on theoretical grounds—and there is much to be said for it—there is a general admission that in practice it has proved unworkable by the Courts. It has proved unworkable, because it throws on the Court in each individual case the necessity of undertaking elaborate and laborious inquiries into economical questions with which the Court is altogether incompetent to deal, and which have reference not merely to the present time but also to past and possibly very remote times, for which no such evidence as could be acted on by a Court of Justice is likely to be forthcoming. Moreover, it necessitates enquiries, which are of such a nature that they could with advantage be undertaken only generally on a great scale and once for all, being instead of this undertaken over and over again in a most imperfect and unsatisfactory manner in individual cases.

"The result of this is that though the right of the landlord to enhance is distinctly recognized by the law, and though definite rules are laid down for its enforcement, the law has become to a great extent a dead letter.

"The most important object of our proposals on this head is, while guarding and limiting the right to enhance in certain respects, to put it on such a footing that it will be readily enforceable in practice; and the chief means adopted for attaining this object is that of separating off the statistical and economical inquiries of a general nature, to which I have just referred, and providing for their being undertaken once for all on a large scale by Revenue-officers.

"We begin by providing that, except on account of an addition to the area of a holding by alluvion, a money-rent payable by an occupancy-raiyat shall not be enhanced except by a decree of a Civil Court, or by an approved and registered contract.

"I will speak first of enhancement by contract. We consider, for reasons which I have already mentioned, that it would be destructive of the objects of the Bill if occupancy-tenants were left perfectly free to deprive themselves by contract, or, I should rather say, by instruments having the external form of contracts, of the right to hold at fair and equitable rates secured to them by the law.

"But, on the other hand, we believe that there are cases in which both landlord and tenant are willing to agree to a reasonable enhancement of rent, and we think it hard that in such cases they should be driven against the will of both into a law-suit. We have accordingly adopted a middle course by providing that a money-rent payable by an occupancy-raiyat may be enhanced by a contract in writing, approved of and registered by a Revenue-officer appointed by the Local Government in this behalf, we have directed that a Revenue-officer shall not approve or register such a contract until he has satisfied himself that it is fair and equitable, and we do not allow him to register any contract, by which a raiyat engages to pay a rent more than six annas in the rupee higher than the existing rent, or more than one-fifth of the estimated annual value of the gross produce of the land.

"Passing now to enhancement by decree of a Civil court, we proceed on the assumption that there are, at least in some parts of the country, certain rates of rent generally recognized as the rates payable by occupancy-tenants for the various classes of land held by them. Where this is the case we presume that it would not be very difficult for a Revenue-officer to ascertain those rates, and then, starting from them as a basis, and taking into account such changes in the productive powers of the soil and in the prices of produce as may have occurred since they were fixed, to prepare tables of the enhanced rates which, subject to allowance in exceptional cases, might fairly and equitably be demanded by the landlord for each class of land under the existing conditions. The Revenue-officer might further show in his tables the average gross produce of each class of land and its estimated value. Supposing this to be done, the Civil Courts would be relieved almost entirely of those economical and statistical enquiries which at present are involved in enhancement suits. They would accept the rates and produce statistics shown in the tables as *primâ facie* correct for all lands of the class to which the tables referred, and might restrict themselves to considering the comparatively simple and limited questions as to whether the particular lands in question in the suit belonged to the class alleged, and whether there were any exceptional circumstances connected with them which would require the rent to be fixed at a different rate from that set down in the table.

"We are, of course, well aware that there would be many parts of the country for which, owing to the non-existence of recognized rates of rent, or to the great varieties of the soil, no such tables could be prepared, and further, that even where it is possible to prepare such tables, their preparation must be a work of time. Accordingly, we have drawn our Bill so as to provide for two possible classes of cases, and for two kinds of enhancement suits,—suits to enhance money-rents where a table of rates has been prepared, and suits where a table of rates has not been prepared.

"It will be convenient to deal, first, with the latter set of provisions. The cases in which a suit may be brought to enhance the money-rent of an occupancy-holding situated in a tract for which a table of rates has not been prepared are in the main the same as those provided for in Act X of 1859, the only difference of sufficient importance to call for notice here being that, for the purpose of estimating the increase in the productive powers of the land, or in prices on which a right to enhance depends, the Court is not compelled, as under the present law, to look to the time at which the rent was fixed; but when that time cannot be ascertained (as it frequently cannot), or when the productive power and the prices prevailing at that time are undiscoverable, may take, for the purposes of comparison, any other time which may appear to it fair and equitable.

"We have endeavoured to supply a defect in Act X of 1859 by fixing the limits up to which the Court is to enhance in cases in which the enhancement is claimed on the ground of an increase in the productive powers of the land or of prices. We provide that if the increase has been effected wholly by the agency or at the expense of the landlord, he shall be entitled to the whole benefit of it; that if it has been effected partly by the agency or at the expense of the landlord and partly by the agency or at the expense of the tenant, the benefit shall be divided between them in such shares as, having regard to all the circumstances of the case, the Court thinks fair and reasonable; and that, if it is not proved that the increase has been effected by the agency or at the expense, either of the landlord or of the tenant, each of them shall be entitled to one-half the benefit: provided in this last case that the enhanced rent shall not bear to the previous rent a higher proportion than the increased productive power, or increased prices, bear to the former productive powers or former prices, as the case may be. Thus the rule of proportion, instead of being as it is at present, under the decision in the Great Rent Case, the measure of enhancement in all cases, will merely supply a maximum limit in one of three possible cases. As it is not apprehended that landlords will often seek to press their rights of enhancement to the full extent, it seems unlikely that it will give rise to any considerable difficulty.

"And, lastly, we have fixed a maximum beyond which rent cannot be enhanced in any case. My honourable colleague, Mr. Kristodas Pal, has, in one of his published papers, remarked on the necessity of allowing the raiyat a sufficient margin for cultivation and maintenance, and has expressed an opinion that if the landlord's share of the gross produce were fixed at more than one-fourth, or 25 per cent., it would trench upon the very means of subsistence of the raiyat—would, in fact, be a starvation rent. Now it is not for the interest either of landlord or of tenant that starvation rents should be recoverable, and accordingly we have limited the share of the gross produce which the landlord can take by means of an enhanced rent. We had originally proposed, following the recommendations of the Rent Commission, to fix the maximum limit at one-fourth, or 25 per cent.; but my friend, the Lieutenant-Governor, has recently obtained evidence tending to show that this limit would in some parts of the country be ruinously high, and accordingly we have, at his instance, altered it to one-fifth, or 20 per cent.

"Coming next to the scheme for enhancement by means of a table of rates, we have empowered the local Government to direct a revenue officer to prepare for any local area, with the aid of assessors, a table showing for each class of land comprised in that area the rate of rent fairly and equitably payable by occupancy-raiyats, the average gross produce of the land, and the average value of that produce. The land is to be classified according to the nature of the soil, situation, means of irrigation, and other like considerations, and in fixing the rates for each class regard is to be had

(*a*) to the rates of rent ordinarily payable by occupancy-raiyats for land of that class at the time the table is prepared,

(*b*) to the value of the average gross produce of land of that class, and the cost of raising that produce about the time those rates were fixed, or, where these matters cannot be ascertained for that time, about such other time as it may be fair and equitable to take for the purpose of comparison,

(*c*) to the value of the average gross produce and the cost of raising that produce at the time the table is prepared, and

(*d*) to the following rule, namely, that where the rate of rent for any class of land is raised on account of an increase in the value of the produce, the new rate shall not bear to the old rate a higher proportion than the increased value of the produce bears to the former value.

"And no rate is to be fixed so as to exceed the share of the gross produce to which I have already referred.

"The table will be in force for such period not less than 10 or more than 30 years as the Local Government may direct, and while it remains in force it will be conclusive evidence

(*a*) that, except in two exceptional classes of cases, the rates shown in it for each class of land are the fair and equitable rates payable for land of that class by occupancy-raiyats within the local area to which the table applies; and

(*b*) that the statistics of gross produce and value given in the table are correct.

"The Bill lays down rules for the guidance of a Court in suits instituted to enhance the rent of an occupancy-raiyat in a local area for which a table of rates has been prepared, and a glance at these rules will show what an important simplification of the work of the Court will be effected by the table. The general rule is that the Court shall enhance up to the rate shown in the table for the class of land in question, or, where maximum and minimum rates are shown for land of that class, as will occasionally be the case, to such rate not higher than the maximum or lower than the minimum, as it thinks fit. It is only in certain exceptional cases that the Court will be required to go behind the rates. Those exceptional cases are of two classes:

"The first class comprises cases which may be described, with sufficient accuracy for my present purpose, as cases in which, owing to some improvement having been effected or having taken place in reference to the land since the commencement of the tenancy, the land has been raised from a lower to a higher class of the table. In these cases the benefit of the improvement is appropriated to landlord or tenant or apportioned between them on the principle which I have already referred to as applicable in other enhancement suits.

"The other class of exceptional cases in which the Court will have to go behind the rates are cases in which the raiyat proves that by contract, or by custom, or on some equitable ground, he is entitled to hold at a rate lower than that fixed by the table for land of the class to which his belongs; and in cases of this class the Court is required to fix the rent at the lower rate at which the raiyat proves that he is entitled to hold.

"I need only add that all suits for enhancement, whether under a table of rates or otherwise, are made subject to the three rules already referred to under the head of tenures, namely, that a rent shall not be enhanced so as to be more than double the previous rent; that the Court may order the enhancement to take effect by degrees for any number of years not exceeding five; and that when rent has been enhanced it shall not be again enhanced for 10 years. We consider that rules to this effect are necessary for the purpose of preventing sudden and ruinous enhancements, and vexatiously frequent alterations of rent.

"How far it will be possible to give effect to the provisions with respect to the preparation of a table of rates I will not venture to predict. The members of the Rent Law Commission appear to have entertained great hopes of those provisions being largely used, and they seem to have thought that in some cases, if the rates were once settled by authority, landlords and tenants would soon be able to adjust their differences. On the other hand, the result of recent inquiries would seem to show that in some parts of the country at least the rates vary so much from holding to holding as to render the preparation of a table impossible or practically useless. It must, however, be pointed out that it will not follow that because a table of rates has not been or cannot be prepared for a local area, the landlords of that area will necessarily be reduced to the ordinary procedure by Civil suit. They will, in many cases, be able to invoke the aid of a Revenue-officer for the settlement of their rents under certain provisions of the Bill which I will notice in their proper place.

"The provisions for the enhancement of the rent payable by an occupancy-tenant are balanced by certain provisions for its reduction. The cases in which a claim for reduction is allowed are, with certain modifications of detail which it is unnecessary for me to notice, the same as under the existing law, that is to say, a reduction can be claimed only where there has been a decrease of productive power or of prices, and such cases are so rare that it has been thought unnecessary to lay down any elaborate rules for their treatment. We therefore simply provide that when a case for reduction is made out, the Court may direct such reduction as it thinks fair and equitable.

"On a comparison of the provisions for enhancement with the provisions for reduction, it might be said that they have a somewhat one-sided appearance. The landlord can use the table of rates for the purpose of levelling up, the tenant cannot use it for the purpose of levelling down. But it must be remembered that the principle on which the Bill is framed is to proceed as far as practicable on the basis of existing rents, and that nothing is further from our intention than to bring about a general reduction of rents. Whether under exceptional circumstances, and in special areas, such for instance as the area in Behar, where we learn from recent reports that the average rates all round have been enhanced by 500 per cent. in the last 43 years, whilst the area under cultivation has actually decreased, and the rise in prices during the same period has been at most 73 per cent., it may not be necessary to take steps, if not for a reduction, at least for a readjustment of the rates of rent, is a separate and difficult question on which I will not enter now. But I repeat that proposals for a general reduction of rents form no part of the Bill.

"These are the most important of the proposals of the Bill with respect to the rent of occupancy-tenants. I will not touch on the provisions which relate to the regulation and commutation of rent payable in kind, important as those provisions are, or on the sections which relate to the rights of a settled raiyat in his bastu or homestead land, but will pass on at once to the chapter dealing with what are called in the Bill ordinary raiyats, that is to say, raiyats holding raiyati land, but not having a right-of-occupancy in respect of it. If we are to accept as approximately accurate the statement, for which I believe my Honourable Colleague Mr. Kristodás Pál is responsible, that some 90 per cent. of the raiyats of Bengal already have occupancy-rights, this class will not be numerous. Now, under the existing law as stated in Article 51 of Mr. Field's Digest, the rent of a raiyat belonging to this class can be enhanced only after service of a notice of enhancement; and if after receiving this notice, the raiyat elects to remain in possession of the land, he cannot be compelled to pay more than a reasonable rent for it And the principle on which we have proceeded in dealing with tenants of this class is that, while it is desirable to interfere as little as possible between them and their landlords, they should not be exposed to arbitrary rack-renting and eviction at the hands of their landlords, and that the acquisition by them of the status of settled raiyats should be facilitated in every reasonable way.

"We accordingly provide that, subject to a certain maximum, which has been fixed for the rents of all raiyats and under-raiyats, and to which I shall presently refer, an ordinary raiyat shall pay such rent as may from time to time be fixed by agreement between him and his landlord; but in order to check extravagant enhancements by the landlord, we provide that if the landlord proposes an enhancement of the rent to which the raiyat does not agree, the landlord shall not eject him without paying him, besides any amount that may be due to him as compensation for improvements under the provisions of the Bill, a further sum by way of compensation for disturbance equal to a certain multiple of the yearly increase of rent demanded. *Ten* times the increase is the amount provided for in the Bill as it stands; but it need hardly be said that a figure of this sort is at this stage of a Bill entered only tentatively and subject to future consideration. The object in view is to fix a multiple of the increase high enough to deter the landlord from making an extravagant demand, but not so high that the raiyat would be induced by the prospect of obtaining it to refuse to accede to a reasonable enhancement.

"In addition to this we provide that a landlord shall not eject an ordinary raiyat except

(*a*) for arrears of rent;
(*b*) on the ground that the raiyat has used the land in a manner which renders it unfit for the purposes of the tenancy, or that he has broken some condition on breach of which he is under the terms of a written contract liable to be ejected; or
(*c*) that he has refused to agree to an enhancement of rent on which the landlord insists.

"It is in this last case that the provision as to compensation for disturbance will apply.

"I spoke just now of a maximum rate for the rent of all tenants whether raiyats or holding under raiyats. I have explained that a raiyat is to be entitled to sub-let. We are well aware of the evils incidental to sub-letting, and of the risk that a tenant holding at favourable rates may, by sub-letting, convert himself into a rack-renting middleman. But the Government of Bengal did not see its way, and we do not see our way, to an absolute prohibition of sub-letting, or to such an upsetting of existing notions as would be involved in conferring the rights which are generally recognized as attaching to the raiyat, on the khorfa or under-raiyat, who appears to be little better than a labourer, paying himself out of the produce of the field which he tills, and making over all the rest of that produce to the landlord. Sir Ashley Eden preferred to content himself with imposing some discouragement on sub-letting by limiting the money-rent of all raiyats and under-raiyats not having a right-of-occupancy to a maximum which

he suggested might be fixed at 35 per cent. of the gross produce. This maximum was fixed with reference to the 25 per cent. maximum in the case of occupancy raiyats; but as we have, at the instance of the present Lieutenant-Governor, proposed to lower the latter maximum to 20 per cent., so we propose to fix the maximum for ordinary raiyats at five-sixteenths or about 30 per cent.

"I have now touched on the most important of these provisions of the Bill which relate specially to particular classes of tenants; but before leaving this part of the subject I ought to say a few words about the subject of tenant's improvements, since the right to make improvements has been expressly mentioned as one of those rights which is attached to the status of an occupancy-raiyat.

"The question as to the right of a raiyat to make improvements and to claim compensation for them on ejectment will, if the proposal to make occupancy-rights freely saleable in execution of decree is adopted, be of less importance in Bengal than in some other parts of British India. The great mass of the raiyats having a right of occupancy and not being liable to be ejected except under peculiar circumstances of rare occurrence, and the question of compensation adjusting itself when an occupancy-right is sold in execution of a decree, claims for compensation for improvements will be comparatively few. But the importance from an economical point of view of encouraging improvements is so great in this country that special provision has been made for the matter to meet the case of ordinary raiyats, and such cases as may from time to time occur of occupancy-raiyats being ejected from their holdings.

"The principle on which the sections of the Bill relating to this subject proceed is that that party to a tenancy whose interest in the land preponderates should have the preferential right to improve and take the full benefit of his improvements; but that if the party having this preferential right is unable or unwilling to avail himself of it, it should be open to the other party to make an improvement and reap the benefit of it.

"We accordingly confer on an occupancy-raiyat the preferential right to improve, and provide (subject to one exception to be presently noticed) that if he does not avail himself of this right, and the landlord desires to have any improvement made, he may call upon the raiyat to make it, and that, if the raiyat does not within a reasonable time comply with the request, the landlord may make the improvement himself. We enact what may be termed the inverse of these provisions for the case of the ordinary raiyat, that is to say, we give the preferential right to the landlord, and allow the raiyat to improve only if the landlord, on being requested by the raiyat to make an improvement, neglects within a reasonable time to do so.

"We have, however, made an exception to these rules in the case of one sort of improvement, namely, a dwelling-house for the raiyat and his family. We consider that this is an improvement which every raiyat, an ordinary as well as an occupancy raiyat, should be entitled to make; and we further consider that it is not an improvement which a landlord should be empowered to force on a raiyat against his will. As regards this improvement, accordingly, we provide simply that any raiyat may make it, no right to make it, whether preferential or otherwise, being conferred on the landlord. When a landlord makes an improvement under these sections he will be entitled to reap the immediate and full benefit of it in the shape of an enhancement of the rent under the provisions of the Bill relating to that subject. When a raiyat makes an improvement under these sections he will, if ejected, be entitled, subject to certain exceptions which I need not notice now, to receive compensation for it. An occupancy-raiyat will further, while he continues to hold, reap the full benefit of his improvements, inasmuch as his rent cannot be enhanced on account of an improvement made by him. An ordinary raiyat, under similar circumstances, may possibly not be able in all cases to retain the full benefit of his improvements, but the check placed on the landlord by the provisions to which I referred just now will, as a rule, amply protect him in the enjoyment of that benefit.

"We do not think that a raiyat should be allowed to contract himself out of his right to make improvements of the class specified in the Bill, and

accordingly the Bill makes void all stipulations in contracts providing either that a landlord may prevent a raiyat from improving or eject him for improving, or that a raiyat when ejected shall not be entitled to compensation for improvements.

"The remainder of the Bill is mainly concerned with provisions which apply to all classes of tenants alike.

"The object of some of the most important of these is to remove fertile causes of, or pretexts for, dispute and litigation between landlord and tenant, by providing means for ascertaining and determining the amount of rent payable by the latter to the former, and the dates at which instalments of rent are payable.

"We empower the Board of Revenue to fix the instalments in which rents are to be paid. This power is of considerable importance in the case of raiyats' holdings. Much of the harassment to which the raiyats are subjected is said to arise from the number of instalments in which their rents are payable, and to remedy this the Board is empowered, subject to certain reservations regarding agreements entered into, and customs prevailing before the commencement of the Act, to fix the instalments in which the rents of raiyats are to be payable, so that there may not be more than four in each year.

"We require every landlord to give to a tenant paying him rent a receipt containing much fuller details than those prescribed by the existing law, and to keep a counterpart of every receipt so given, and we provide that when a receipt does not contain the requisite particulars, it shall be deemed to be an acquittance in full up to date.

"We require every landlord to furnish to his tenant for each agricultural year a detailed statement of the account between them for that year, and to keep a counterpart of every statement so furnished.

"And, following the existing law as to receipts, we impose penal damages for refusal or neglect to give receipts or furnish accounts, and make it an offence punishable with fine to neglect to keep a counterpart as required by the Act.

"We believe that if these provisions are fully enforced, much advantage will result to both parties. Not only will the tenants be supplied with proper evidence of the payments made by them and of the state of their accounts, but the landlords, if they keep their counterpart statements in a proper manner, will find them useful as evidence before the Courts.

"Among the commonest defences to a suit for arrears of rent are that the tenant has already tendered his rent, and that it has been refused, or that the tenant did not know who was entitled to the rent.

"Under the existing law there is but one case in which a tenant can deposit his rent in a public office, so that the deposit may operate as a payment to his landlord, namely, when he is prepared to declare solemnly that he has tendered the rent to his landlord and that the landlord has refused to receive it.

"It has been found, however, that this affirmation has become a mere form, and we have thought it better to allow the tenant to deposit his rent whenever he has reason to believe that the landlord will not receive it. We also think it advisable that a tenant should be allowed to deposit his rent in two other cases, namely—

(1) when it is payable to co-sharers jointly, and he is unable to obtain their joint receipt, and no person has been empowered to receive the rent on their behalf; and

(2) when the tenant entertains a *bonâ fide* doubt as to who is entitled to receive the rent.

"This extension of the right to deposit rent necessitates our conferring on the officer empowered to receive deposits a certain discretion not allowed by the present law. He is accordingly given a discretion to refuse the deposit if he does not think the circumstances of the case warrant its being made, and a further discretion to pay away the deposit, if he thinks fit, to such one of several

rival claimants as may seem to be entitled to it, but subject of course to the right of any person actually entitled to it to recover the amount from the person to whom it is so paid. As regards this last point, however, I should state that the officer will have power to retain the deposit if he thinks fit, pending the decision of the Civil Court as to the person entitled to it, and this latter course is doubtless that which he would adopt in all cases in which there might be any reasonable doubt as to the person entitled.

"There are a large number of other provisions which fall within this part of the Bill, such as the provision for the division or appraisement of crops where rent is paid in kind, the provisions for measurement of the land and the like; but I need not refer to them now, as they will be found in most cases to follow closely the proposals of the Rent Commission, although in one or two cases we have generalized provisions which had been made specially applicable to Behar.

"Passing over this class of provisions, I proceed to the further proposals which we have made for supplementing, by the action of the executive authorites, the powers of the Court with respect to the settlement of rents.

"I have already expressed my apprehension that in many parts of the country the framing of a table of rates will be impossible. I should add that in many instances the mere framing of a table of rates will not suffice to settle the disputes between landlords and tenants. In either case the only satisfactory remedy may be a settlement of individual rents by a Revenue-officer, conducted somewhat in the same manner as in a Government estate at present, and with a view to provide such a remedy we have inserted in the Bill a chapter which is entitled *of the Settlement of Rents by a Revenue-officer*.

"There is, however, one cardinal difference between the provisions of this chapter and those of the existing settlement law which should be noted at the outset. Under the existing settlement law, when a settlement-officer has, after the most careful and protracted inquiry, settled the rents of an estate, and his proceedings have been scrutinized and checked by the superior Revenue authorities, every individual rent fixed by him is liable to be called in question in the Civil Courts, and that not merely on the ground of error in respect of some matter such as the status of a tenant or the validity of an alleged lease, falling most appropriately within the cognizance of a Civil Court, but also on the ground of an error as to the quality of the soil, the estimated amount of the produce, or some other similar matter with which the Revenue authorities conducting their inquiries on a great scale are far more competent to deal than any Civil Court trying a suit relating to a single holding can possibly be; in other words, an important portion of the work, after being done by those authorities who are most competent to perform it, is liable to be pulled to pieces by another set of authorities who are far less competent to perform it. The enormous amount of unnecessary expense, trouble and vexation which this system entails on all concerned, can be estimated from the fact stated by the Board of Revenue in referring to a recent settlement, that out of 2,391 decisions in suits brought to contest the Settlement Officer's rates 2,202 were absolutely adverse to the plaintiffs. An attempt has been made to avoid this in the Bill by distinguishing, among the various questions which may arise in a settlement of rents, those which the Revenue authorities are most competent to determine, and those which a Civil Court is most competent to determine, making the decision of the Revenue authorities final on the former, and providing that the latter may ultimately be brought for decision before the Civil Court.

"The procedure of this chapter, besides being available for the purpose of Government settlements, may be made applicable by the Local Government—

(*a*) When a large proportion of the tenants or of the landlords desire that it should be applied, and

(*b*) When a resort to it is likely to settle or avert a serious dispute existing or likely to arise between landlords and tenants generally.

It is applicable to tenants of any class, but would probably be made use of chiefly for settling the rents of occupancy-tenants.

"When the rents to be settled are rents which are liable to enhancement or reduction by a Court, they will be *fixed* according to the principles embodied in the Bill, and so that no rent shall exceed the maximum prescribed in cases of enhancement. When, on the contrary, the rents are not of this description, they will be merely ascertained and recorded as rents are ascertained and recorded under Regulation VII of 1822.

"The Revenue-officer having settled the rents will prepare a jamabandi, showing the status of each tenant, the land held by him, the name of his landlord, whether the rent has been fixed or ascertained, and the amount of the rent fixed or ascertained. This jamabandi will be published, and, after an opportunity for urging objections against it has been allowed, will be submitted to the higher Revenue authorities with the objections and a report setting forth the ground on which the Revenue-officer has proceeded. If ultimately sanctioned by the Local Government, it will be again published, and will then continue in force for ten years.

"While it remains in force it will be conclusive (except as I will presently explain) as to the rents payable by those tenants whose rents are shown in it as fixed. As regards rents shown in it merely as ascertained, and as regards all other matters contained in it, it will be merely presumed to be correct until the contrary is proved.

"It will be observed that in thus empowering a Revenue-officer to fix rents so as to bind the parties, we necessarily empower him to decide certain questions, as *e.g.*, that of the status of a tenant, which more properly appertain to the jurisdiction of the Civil Courts, and ought not to be finally decided by any other authority. It is not, however, intended that the Revenue-officer should finally decide such questions. He may, if he thinks fit, when such a question arises, abstain altogether from deciding it, and refer it to a Civil Court, or leave it to be raised before a Civil Court in a suit instituted by any party interested.

"In most cases he would probably decide the question on such evidence as might be readily available; but whenever he takes this course, his decision will be liable to be challenged in a Civil Court on the ground—

(*a*) that the tenancy does not exist, or that the tenant is not liable to pay rent, or

(*b*) that the tenant belongs to a class different from that to which he is shown in the jamabandi to belong, or

(*c*) that the land comprised in the tenancy is different from or more or less than that shown in the jamabandi, or

(*d*) that a rent different from that shown in the jamabandi has been fixed by contract.

"We believe that this list exhausts all the matters in regard to which a Civil Court may be regarded as a better tribunal than the Revenue authorities, and if this is so, the determinations of the Revenue authorities in regard to all other matters may safely be made final and conclusive.

"We have by a separate chapter given to a Revenue-officer, acting under instructions from the Local Government, the narrower power not of fixing and settling rents, but merely of ascertaining and recording within a specified area existing rights and rates of rent, in other words of framing what is known in other parts of India as a record-of-rights. The Local Government may apply the provisions of this chapter not only in cases in which it may empower a Revenue-officer to settle rents, but also in any other case in which the Governor General in Council may sanction the application of its provisions.

"I now come to that part of the Bill which deals with the procedure for the recovery of rents, and in touching on this subject I cannot express too emphatically my concurrence with the opinions expressed by the Rent Commission as to the extreme danger of summary methods of justice. "In order that justice may be done," they remark—

"truth must be elucidated; and the elucidation of truth, especially in this country, and for reasons which we need not here dwell upon in detail, requires time and patience. Any attempt to abridge judicial inquiry by arbitrary and abnormal presumptions in favour of either party, which by precluding the production of evidence may enable Judges to arrive at rapid conclusions, is, to our minds, retrogressive and unsafe. The history of the judicial administration of this country for the last half century is a continuous record of the abandonment of a system of procedure under which rights were hastily and perfunctorily adjudicated upon, the person defeated and dissatisfied being left to a "regular suit" to right himself, if wronged by an irregular proceeding which too often saddled him with the burden of proof that should have been laid on the shoulders of his adversary, and thus unfairly diminished his chance of ultimate success. We entirely agree in the wisdom which has abolished this system, we will not say, of administering justice, but of choking-off litigation; and we cannot recommend the adoption of any summary procedure for rent suits which would involve even a partial renewal of it."

"There is no royal road to the discovery of facts, and most short cuts are mere delusions. Let me illustrate this from an episode in the history of modern Roman law as practised in Germany. The ordinary procedure for determining rights of possession was found to be tedious, and another form of procedure was devised which was supposed to be more expeditious and was called summarium. This again was denounced as dilatory and was superseded by another still more summary form of procedure, which was christened 'summariissimum.' The great jurist Savigny tells us that he once took part as judge in a trial which was being conducted according to the form of procedure known as summariissimum. At the time when he sat this trial had lasted some twelve years. Several faculties of jurists had delivered their opinion about it, and how much longer it was likely to last it was impossible to say.

"I have studied most, if not all, of the numerous suggestions which have been made for abbreviating the procedure in rent suits, and I must say that the result is not encouraging. Most of the suggestions are open to one or more fatal objections: either they are based on an obvious fallacy, or they sacrifice substantial justice to despatch, or they proceed on an imperfect and erroneous diagnosis of the disease.

"The fallacy to which I refer is the fallacy of supposing that by shortening your code of procedure you shorten the procedure itself. The Code of Civil Procedure contains a number of provisions which may be useful in certain contingencies, but which are not required, and therefore are not applied in ordinary cases. By striking out these provisions from a code of procedure for any special subject, such as rent suits, you materially shorten your law, but you do not shorten by one jot the length of a trial in ordinary cases, and you create opportunities for doubt and delay in exceptional cases.

"The second objection applies to all those numerous suggestions which, however ingeniously they may be disguised, substantially involve a shifting of the burden of proof. Take a common rent suit. A, the landlord, says that B, the tenant, owes him so much money as rent. B says he does not, and the Judge has to decide which is right. Now it would be extremely convenient to A if he could have the money which he claims until B proves that it is not due. Possession we all know is nine points of the law, and the advantages of possession, in cases of disputed rights, have always been appreciated. I was shown the other day a document which forms an amusing illustration of the importance which is attached to possession not merely in rent-suits but in other forms of litigation. It was a notice of appeal in a fine case, and it ran as follows:—

"Your Honour may be right, I may be wrong; I may be right, and Honour wrong: let Honour give me back the fine, and then at Day of Resurrection, when all hearts will be open, if I am wrong, I will most gladly, Sir, return your Honour the money."

"The appellant in this case has translated into his own artless language the same thought which consciously or unconsciously lies at the root of all proposals to shift the burden of proof in disputed rent cases.

"But the truth is that most of the panaceas which have been suggested for

protracted rent suits proceed on an imperfect diagnosis of the disease. They do not go to the root of the matter. The reason why rent suits are apt to be long and troublesome is not because the procedure is defective, but because the rights involved are obscure and uncertain, and the facts are difficult to ascertain. No amendments of procedure will cure these evils. What are the features of an ordinary rent suit? There is nothing mysterious or exceptional about it; nothing which requires the application to it of principles different from those which are applicable to an ordinary demand. It is desirable that not only rent suits but all kinds of suits should be as short and simple as is compatible with the due administration of justice: it is not desirable that a rent suit more than any other suit should be simplified at the expense of justice. Take the course of an ordinary suit for arrears of rent. A sues B for a specified sum of money which he claims to be due from B to A. He must, as in the case of other money claims, satisfy the Court on three points: first, that the amount which he claims is actually due; secondly, that he is the person entitled to the money; and thirdly, that the defendant is the person liable to pay the money. The defendant either appears and pleads or he does not. If he appears, he usually raises one of three pleas: either that the amount claimed is excessive, or that the amount claimed has already been paid in whole or in part, or that the plaintiff is not the person entitled to the amount claimed. Now as to the first plea I believe there is no reason for doubting that it is often well founded, and that a suit for arrears is in many cases a suit for enhancement in disguise. But if a landlord wishes to avoid being harassed either with this plea or with the plea of payment, the remedy is in his own hands. He should keep his accounts and receipts in such form and with such regularity as would justify a Court in accepting them as evidence without suspicion. As for the plea under which a landlord's title is disputed, there is no doubt that it raises very difficult questions, but I suppose no one would seriously argue that a defendant is not justified in raising it, when it can be raised in good faith, and it is quite certain that no tinkering of the Code of Civil Procedure will facilitate the proof of a landlord's title. There is indeed one mode in which that proof might be facilitated, and it is a mode which we have been recommended by high authority to adopt, and that is, the establishment of a general register of titles. Such a register, if it is to be of much use and to effect much more than is effected under the present system of registration, must, I take it, include all subordinate interests in land. But the preparation of such a register would be an expensive and tedious as well as a formidable task, and I do not know that either landlords or tenants have expressed any strong desire that it should be undertaken, or would welcome the increased taxation which it might not improbably involve.

"So much for the cases in which the defendant opposes and defends his case. But he very often allows judgment to go by default, and in such cases the plaintiff complains that when he comes to apply for execution he is stopped by the plea that the summons in the suit has not been duly served. Well it is very hard on a plaintiff that he should be stopped by a plea of this kind, when it is put in merely for purposes of delay. But it is equally hard on a defendant that he should be sold up without an opportunity of making his defence. In all matters relating to the service of legal notices and processes in this country, there is, I fear, a great deal of negligence and dishonesty, but there is no reason why we should assume that this negligence or dishonesty is always on the side of the defendant, and there is no sound reason why the rules as to the mode of effecting service which have been found necessary and sufficient in other cases should be dispensed with in the case of rent-suits.

"I have touched on these points not for the purpose of showing that the existing procedure is incapable of improvement—for we propose to make certain improvements in it—but for the purpose of guarding against any exaggerated notions of what may be accomplished in that direction, and of showing that what is really wanted in the interest of the landlord is not so much the simplification of judicial procedure as the extra-judicial ascertainment and simplication of rights.

"What then are the remedies which we propose to give to the landlord for the recovery of undisputed rent?

"In the first place, we allow him to exercise the power of distraint in a modified form. The chapter relating to this subject may be said to be the result of a compromise. The Rent Commission, concurring with the Behar Rent Committee, proposed to abolish the existing law of distraint as an offset of English law, of which the efficiency was impaired by the legislation of 1859, and which had been abused in Behar and not always applied in a regular manner in other parts of the country. To this strong objections were urged, and the procedure provided by this chapter was then devised by the Government of Bengal as being likely to secure to the landlords most of the advantages afforded by the existing law, without exposing their tenants to the evils now complained of.

"The modified power of distraint which it is now proposed to allow can be used by any landlord of a raiyat or under-raiyat for the recovery of an arrear of rent which has not been due for more than a year. It extends, as a rule, to all the produce of the holding, including what may have been grown by and be the property of a sub-lessee of the tenant, and it may be exercised, though the produce has been stored, provided it has not passed out of the possession of the cultivator. The landlord cannot himself interfere with the produce to be distrained, but must apply to a Civil Court to distrain it. The Court, after a brief examination of the case, will depute an officer to distrain and sell the produce, and nothing will stay the sale except the payment into Court of the amount of the demand. Any sum paid into Court will be retained for one month, with a view to the possibility of the owner of the distrained property claiming damages as for a wrongful distraint, and on the expiration of that period it will be paid to the landlord.

"We have inserted in this chapter sections directed against illegal distraint and interference with crops. One of these sections provides in effect that any person who, otherwise than in accordance with the provisions of the Bill, or some other enactment for the time being in force, distrains any produce of a tenant's holding, or interferes with the harvesting of a crop, shall be deemed to have committed criminal trespass within the meaning of the Penal Code, and further imposes a penalty which may extend to three months' imprisonment or two hundred rupees fine, on any person who benefits by, or is interested in, the commission of any such offence if, having reason to believe that the offence was likely to be committed, he has not used all lawful means in his power to prevent its commission.

"Coming now to the procedure in an ordinary suit, we have endeavoured to embody in the Bill all those modifications of the ordinary procedure proposed by the Rent Commission and the Government of Bengal which seem likely to expedite, in any material way, the disposal of suits between landlords and tenants.

"We have provided that, in such suits, service may be effected by registered letters; that the summons shall, as a rule, be issued for the final disposal of the case; that no written statement shall be filed without the leave of the Court; that the provisions of the Code of Civil Procedure relating to interrogatories, discovery and affidavits shall not apply; that whether an appeal lies or not a single memorandum of the substance of the evidence, such as is prescribed by the Code for unappealable cases, shall suffice; that as a rule execution may issue on the oral application of the decree-holder at the time the decree is passed, and that the sections of the Code which enable a judgment-debtor to obtain a suspension of an order made for the sale of his immoveable property, and certain sections which provide for the transfer of decrees to the Collector for execution, shall not apply.

"We have also taken away the right of appeal in petty cases involving no question of title or of a right to enhance or vary rent.

"I should observe that the final jurisdiction in this class of cases will be exercised only by specially selected officers, and that a power of revision is reserved to the District Judge.

"Then we have added a new section, which is intended for the benefit of a landlord in a suit for an arrear of rent, when, as sometimes happens, the defendant admits that the arrear is due, but pleads that it is due not to the plaintiff but to some rival claimant. In such a case it seems only reasonable that the tenant should pay the amount of the rent into Court, and the Bill accordingly provides that the Court shall refuse to take cognizance of his plea unless he does so.

"We have also framed a section relating to relief against forfeitures, which is based on a similar section in a recent English Act, the Conveyancing and Law of Property Act, 1881. It enacts that a suit for ejectment of a tenant, on the ground of his having forfeited his interest by breach of a condition or the like, shall not be entertained unless the landlord has given the tenant an opportunity of paying compensation and remedying the breach when it admits of remedy, and that when a decree is passed in such a suit it shall not be executed until the defendant is allowed a similar opportunity of repairing or atoning for his wrongful act.

"We hope that when the measure comes to be fully discussed other expedients for simplifying the procedure in rent-suits may be discovered, but with the exception of those to which I have referred, none have been suggested which the Government of India would be prepared to accept. As to the possibility of devising any effectual procedure analogous to that employed in the case of negotiable instruments under Chapter XXXIX of the Code of Civil Procedure, or any other form of summary or provisional remedy, the whole history of such remedies both in this country and elsewhere is, as I have already remarked, against it.

"A summary form of procedure can scarcely help a plaintiff unless his case is of the simplest description, admitting of being answered only in the simplest way, and he comes into Court armed with documentary evidence of so trustworthy a character that the presumption against any defence being possible is extremely strong.

"In such cases the Court may very properly, and with great advantage to the plaintiff, be empowered to decline to hear the defendant and decide against him summarily and provisionally unless he pays the amount of the claim into Court or gives security for it. But what advantage could be hoped for from a procedure of this description in rent-suits in Bengal, which admit of the most varied and complicated defences, in which the evidence on both sides is usually of the most worthless character, and charges of forgery and perjury are almost common forms in the pleadings? If the Legislature consented to provide such a procedure for rent-suits, it would probably feel bound to surround it with so many safeguards that the plaintiff would gain nothing by adopting it; and even if such safeguards were dispensed with in the Act, the Courts would naturally be so cautious about refusing leave to defend or requiring security from a penniless raiyat, that the so-called summary remedy would cease to be summary, and, like the summary suits of former days in some parts of India, become as lengthy and complicated as an ordinary suit.

"The truth really is that facilities for recovering rents in Bengal should be sought for, not so much in novel forms of procedure as in a trustworthy record of tenancies and their incidents, and a simple mode of adjusting rents, in other words, by going to the root of the disputes which, though they may not always come to the surface, are believed to underlie a very large proportion of the contested rent-suits.

"If this view is correct, the provisions of the Bill with respect to the preparation of tables of rates, settlement of rents, and framing of records of rights, and those which relate to receipts and accounts, may reasonably be expected to remove most of the difficulties of which the landlords now complain.

"I am drawing to a close of my summary of the Bill, and the only other part of its provisions on which I need touch is that which relates to the sale of transferable holdings in execution of a decree for arrears of rent. The peculiar feature of the new procedure prescribed by Chapter 15 of the Bill is that tenures

sold in execution of decrees for arrears of rent accruing on them will be put up in the first instance subject to incumbrances, and, if the amount then bid is sufficient to liquidate the arrear, will be sold subject to incumbrances. If, on the other hand, the amount bid is not sufficient to liquidate the arrear, they will be put up and sold with power to avoid incumbrances.

"These provisions will apply of their own force only in the case of tenures; but as there are in some parts of the country occupancy holdings of great extent, and in most respects similar to tenures to which it would be reasonable to apply the same rules, the Local Government is empowered to extend the system to occupancy holdings in any part of the Province it thinks fit.

"Such, then, are the outlines of the Bill which I ask leave to introduce. We claim no merit for originality in our proposals; we are but building on the foundations which others have laid, following the lines which others have traced. And it would be presumptuous to suppose that in trying to work out a problem of exceptional difficulty and complexity, we have not fallen into errors of omission, inaccuracy, or inconsistency. The Bill will be carefully scrutinized in many quarters, and I have no doubt that the aid which we shall receive from our critics will materially assist us in removing blemishes of this kind. But whatever degree of perfection we may be able to give to the form of our work, we cannot, I fear, flatter ourselves with the hope that our substantial proposals are such as are likely to meet with universal acceptance. We find ourselves in the presence of conflicting claims; claims which, if pushed to their extreme on either side, must produce, have produced, bloodshed, anarchy, and misery. We have endeavoured to hold an even hand between the two parties and to define and adjust their rights in such a way as may be most conducive to the common interests of both and to the welfare of the country at large. But that either claimant should accept with equanimity anything less than what he conceives, rightly or wrongly, to be his due, it would be inconsistent with what we know of human nature to expect. Nor, again, do we suppose that by this or any other legislation which we can devise, we are likely to settle, permanently and once for all, the eternal question of landlord and tenant. We find ourselves face to face with patent and glaring evils, evils which are crying out for a remedy; we have endeavoured to apply such a remedy as appears suitable to the present circumstances of the case, but we know well that we cannot absolutely prevent the recurrence of similar evils in the future. Sufficient for the statesman if he can grapple with the problem of to-day: for the distant future he must leave posterity to provide. And as we cannot foresee the distant future, so we cannot recall the distant past. We cannot, if we would, restore the zamindar and the raiyat to the positions which they occupied at the time of the permanent settlement. The India of to-day is a different country from the India of 1793, and requires different legislation. The utmost that we can endeavour to do, and what we have endeavoured by the present Bill to do, is so to legislate for her as to preserve whatever is best in the spirit of her ancient institutions."

His Excellency THE PRESIDENT said:—"I believe it will be in accordance with the general understanding, and I think it will be the best course which I can suggest to my hon'ble colleague for the Council to pursue, that, after the very able statement of my hon'ble and learned friend, no discussion should take place upon this question at present; because it is obvious that in a matter of this magnitude members of Council would naturally desire to have time to consider that statement, and the Bill with which it is connected, and therefore what I would propose is this—that we should, when the motions now before the Council with regard to this measure have been passed, take the further consideration of it on Monday, the 12th, and, if it should be necessary to adjourn the debate, on Tuesday, the 13th of this month. The delay till Monday will give sufficient time, considering how fully the Bill has been discussed and how long the matter has been before the public, to enable us to take the further discussion of this Bill on that day, it being clearly understood that no other steps will be taken upon it now, so that the public may have ample time—some eight

months—to consider the whole question and make all representations to the Government before the Bill goes before a Select Committee.

"The only other remark which I would desire to make is this. The Government propose to give to members of Council, and to the public at once, all the papers connected with this case. As a rule, the Secretary of State objects to the publication in India of despatches to and from himself, but I have obtained Lord Kimberley's permission in this case, regarding it as one of exceptional importance, to publish at once, and without waiting for their being published in England, the despatches which have passed between the Government of India and the Secretary of State on this question; so that the papers which will now be given to the public will be full and complete.

"If my hon'ble colleagues accept the proposal which I have made, no further discusssion will take place now. The Bill will be published, and we will take up the question again on Monday, the 12th of March."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also introduced the Bill.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *Gazette of India*, and in the *Calcutta Gazette* in English and in such other languages as the Local Government might think fit.

The Motion was put and agreed to.

INLAND STEAM-VESSELS BILL.

The Hon'ble MR. ILBERT also moved for leave to introduce a Bill to amend the law relating to the Survey, and the Examination and Grant of Certificates to Engineers, of Inland Steam-vessels, and to provide for certain other matters relating to those vessels. He said:—

"A case having occurred in Bombay which showed that the Bombay law relating to the survey of steamships was not in harmony with the English law on the subject, it was thought desirable to amend the Bombay law. When, however, the question of legislation came to be considered, it appeared that there were no less than seven local Acts relating to steamships. Bombay, Bengal and Burma each had its special law regulating the survey of these ships, while there was no law on the subject in the Presidency of Madras. The multiplicity of laws relating to the survey of steamships, it was thought, could not but be inconvenient to ship-owners whose ships traded between different Provinces. For instance, Act XVI of 1871, which is in force in Burma, requires every steam-vessel plying on any of the rivers or waters of British Burma, except steam-vessels plying between a port in British Burma and a port not in British India, to be surveyed twice a year. In the same way, the Bombay Act II of 1864, as amended by Bombay Act IV of 1873, requires every British steam-vessel not holding a Board of Trade, British Indian or Colonial certificate, carrying passengers between any port of the Presidency of Bombay and any other port, to be surveyed twice a year; and the Bengal Act V of 1862, as amended by Act I of 1868, also requires the survey twice in every year of all steam-vessels plying on any of the rivers or waters within the province of Bengal, except steam-vessels which may ply between some port within that Province and some port not in British India. Under these laws, a steam-vessel which was surveyed in Bombay might, apparently, be required to undergo a fresh survey on arrival in Calcutta, and another survey on arrival at a port in Burma. As legislation is necessary, it is, therefore, clearly expedient to have one uniform law relating to the survey of steam-vessels applicable to the whole of British India.

"Besides providing for the survey of steam-vessels, the local Acts provide also for the examination of, and the grant of certificates to, engineers, and for holding investigations into explosions occurring on board steam-vessels. In these matters uniformity in the law is desirable.

"After consulting the Local Governments concerned, the Government of India decided to legislate so as to provide one law relating to the survey of sea-going steamships, the examination and grant of certificates to engineers of those ships, and the investigation into explosions occurring thereon. It was, however, found at the same time necessary to legislate in like manner for steam-vessels plying on rivers and inland waters, inasmuch as the provisions of the local Acts related, to a certain extent, to those vessels as well as to sea-going vessels, and it was considered advisable to deal with sea-going and inland steam-vessels in separate Bills—the Inland Steam-vessels Bill and the Indian Steamships Bill—so as to keep the law relating to merchant shipping—a law liable to be affected by legislation in England—entirely separate from the law regulating inland steam-vessels, which is a matter solely within the scope of Indian legislation.

"The Inland Steam-vessels Bill, which I now ask leave to introduce, will repeal the seven local Acts, relating to steamships which are now in force, and it will be drawn so that it may be brought into operation at the same time as the Indian Steamships Bill.

"The Bill will provide for the whole of British India a law regulating the survey of steam-vessels plying on inland waters; the grant of certificates to masters and engineers of those vessels; inquiries into casualties; and the suspension and cancellation of masters' and engineers' certificates.

"In its main provisions the Bill will follow the existing law so far as it goes. The points in which it is proposed to change the law, and which require notice, are briefly as follows: It is proposed to extend the term, for which the certificate of survey is to last, from six months to one year; but the Local Government will be enabled, under certain circumstances, to cancel or suspend a certificate of survey. To meet local requirements, power will be given to Local Governments to exempt any specified class of inland steam-vessels from all or any of the provisions relating to survey.

"The Bill will provide for the grant, without examination, of a certificate as engineer to a person who possesses a certificate granted under the Imperial Merchant Shipping Act, or an equivalent certificate, and will also provide for the grant of certificates of service to engineers who have served for a certain time in certain steamships, or have obtained the rank of first class assistant engineer, in Her Majesty's service. With regard to investigations into casualties, and the cancellation and suspension of the certificates of masters and engineers, the Bill will in the main follow the Merchant Shipping Act, 1883, which has recently been passed.

"It is further proposed to make provision in the Bill to regulate the carriage of dangerous goods on passenger steamers and to prevent accidents from fire. The Governor General in Council will be empowered to declare what shall be deemed to be, for the purposes of the Act, dangerous goods, and persons will be prohibited from taking those goods on board except under certain conditions. The Local Government will also be enabled to make rules for the protection of inland steam-vessels from danger by explosion or fire."

The Motion was put and agreed to.

INDIAN STEAMSHIPS BILL.

The Hon'ble MR. ILBERT then moved for leave to introduce a Bill to amend the law relating to the Survey of Steamships and the Grant of Certificates to Engineers of those ships. He said:—

"This Bill, as I have already pointed out when asking leave to introduce the Inland Steam-vessels Bill, will provide for the whole of British India one

law regulating the survey of sea-going steamships, the examination of, and grant of certificates to, engineers of these ships, and investigations into explosions occurring thereon. It is proposed to follow the English law with respect to the class of steamships for which certificates of survey will be required; to extend the term of those certificates from six months to one year; and in other respects to re-enact, with a few unimportant modifications, the existing law."

The Motion was put and agreed to.

The Council adjourned to Friday, the 9th March, 1883.

R. J. CROSTHWAITE,
Additional Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 2nd March, 1883.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY CONSTRUCTION.

ADMINISTRATION REPORT OF INDIAN RAILWAYS FOR THE YEAR 1881-82.

No. 171 R. C., dated Fort William, 22nd February 1883.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 053 C. of the 18th January 1883, from the Director General of Railways, submitting the Administration Report of Indian Railways for the year 1881-82.

RESOLUTION.—On the 31st March 1881 the total length of railways in India open to traffic was 9,595 miles; on the 31st March 1882 the open mileage was 9,963½, an aggregate length of 368½ miles having been opened during the year 1881-82. The mileage open at the end of the two calendar years was as follows:—

	December 1880.	December 1881.
State lines	2,735·75	3,286·50
Native States	297·75	446·25
East Indian	1,504·25	1,506·75
Guaranteed lines	4,581·00	4,590·25
Lines under modified guarantee	30·00	50·00
TOTAL	9,148·75	9,879·75

The average length open throughout the calendar year 1881 was 9,637½ miles, upon which the traffic work performed was equivalent to 2,626 millions of passengers, and 2,340 millions of tons of goods, carried one mile.

The general financial results of working this traffic were—

	₹
Gross earnings	14,32,30,801
Working expenses	7,07,12,465
NET PROFITS	7,25,18,336

These net profits give an average return on the total Capital cost of all open lines, ₹1,34,73,90,895, of 5·38 per cent., as compared with 4·97 per cent. earned in the year 1880 on a total Capital of ₹ 1,28,56,91,292.

These results His Excellency the Governor General in Council considers highly satisfactory.

2. The report now read has been compiled, as regards lines open to traffic, up to the end of the calendar year 1881, and the following statement gives the

lengths of all railways in India constructed, in progress, and under survey on the 31st March 1882:—

Gauge.	Railway.	Total length open on 31st March 1882.	Under construction.	Under survey or not yet commenced.	REMARKS.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces, Assam and British Burmah.
The Resident at Hyderabad.
The Agents to the Governor General for Rajputana, Central India, and Biluchistan.
The Directors General of Railways, Telegraphs, and the Post Office.
The Accountant General, Public Works Department.
The Consulting Engineers to the Government of India for Guaranteed Railways at Calcutta, Lahore, and Lucknow.

ORDER.—Ordered, that this Resolution be communicated to the Local Governments, Administrations and Officers marginally noted, for information.

Ordered also, that this Resolution be communicated to the various Departments of the Government of India for information, and be published in the Supplement to the *Gazette of India* for general information.

W. S. TREVOR, *Colonel, R.E.*,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 27th FEBRUARY 1883.

GENERAL REMARKS.—Rain has fallen in several districts of the Bengal Presidency, in a few places in the North-Western Provinces and Oudh, in Assam, in two places in the Punjab, and at Morar in the Central India States. Elsewhere there has been no rainfall to report during the past week.

Agricultural prospects continue generally good everywhere. More rain is, however, still needed in the Umballa district of the Punjab. In the Madras Presidency, the harvest continues with a short outturn in four districts. The *rabi* harvest, which is in general progress throughout the Bombay Presidency, has been completed in some places; blight is reported from some talukas and locusts have appeared in Ratnagiri. In the North-Western Provinces and Oudh, slight damage has been caused to crops in a few districts by blight and insects, while in others injury is apprehended from the continuance of the present cloudy weather. Owing to the damage caused by previous rain in the Bengal Presidency, it is believed that the poppy crop in Behar will not be satisfactory; tobacco is said to be doing well, and the harvesting of sugarcane and of mustard and the other earlier *rabi* crops is progressing. In the Central Provinces, the *rabi* harvest continues, and threshing has commenced in some places. The threshing of rice and *ragi* crops still continues in Coorg, where the coffee market is also now reported to be firm.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 28th		
Bellary		Standing crops cotton and *cholam* diseased in parts, others generally good; harvest paddy, dry grains, and sugarcane, yield average.
Kurnool		Standing crops affected by blight in parts, elsewhere in good condition; harvest dry grains, outturn below average; cattle disease in parts.
Ganjam		Standing crops cotton thriving; fever, small-pox, and cattle disease continue.
Kistna		Standing crops dry grains affected by grubs in parts, elsewhere promising; harvest paddy and dry grains, outturn below average; small-pox continues; fever and cattle disease generally abating.
Chingleput (Madras)		Standing crops affected by insects in parts, elsewhere in good condition, harvest paddy, yield below average; small-pox and cattle disease in parts.
Coimbatore		Standing crops in good condition; harvest paddy and dry grains, yield average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore		Standing crops in good condition; harvest paddy and dry grains, outturn below average; cholera decreasing.
Madura		Standing crops withering in parts; harvest paddy and dry crops; cholera and fever in parts.
Malabar		Harvest second crop paddy continues; preparations for third crop paddy progressing; small-pox in all talukas; fever in parts; cholera slight.
Travancore		Preparation for cultivation commenced; fever continues.
		General Remarks.—No rain any where; general prospects good.
Bombay—(Feb. 28th)		
Kurrachee		River at Kotri on 15th 3 feet 10 inches against 3 feet 2 inches on same date last year; small-pox continues increasing in Kurrachee; 72 cases, 13 deaths from 15th to 22nd instant, total to later date 236 cases, 61 deaths, remaining sick 105; disease also in Kotri and Keti, 2 cases at each place; fever in 8 talukas, cattle disease in 3 talukas; wheat, red rice, and *bajri* in Dadu 40 and 50, in Sakro 16, 34, and 48, in Jati 20, 36, and 40, and in Shahbandar 22, 44, and 44 lbs. per rupee respectively.
Hyderabad		*Rabi* crops in fair condition; sky cloudy; small-pox in 6, fever in 5, and cattle disease in 4 talukas; wheat 25, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		*Rabi* crops thriving; wheat 28 and *bajri* 32 lbs. per rupee.
Baroda		*Rabi* crops fair; cotton-picking in progress; small-pox prevailing in parts of Naosari taluka; *bajri* 30 and rice and cotton 25½ lbs. per British rupee.
Surat		*Rabi* harvest continues; fever in Bulsar and Pardi; small-pox in Surat, daily average 10 deaths; *jowari* 42 and *nagli* 53 lbs. per rupee.
Nasik		Hot season commenced; harvesting *rabi* continues; cattle disease in Peint; small-pox in Nasik; wheat 25½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay)		Average abnormal temperature 1° warm on 24th and 25th, *nil* on all other days; vapour in air in defect of normal on 21st and 22nd, afterwards in excess of normal; wind normal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Poona		Harvesting of *rabi* progressing; small-pox continues; *bajri* 44 and *jowari* 59 lbs. per rupee, in Poona *bajri* 37 and *jowari* 46 lbs. per rupee.
Ahmednagar		*Rabi* harvest nearly finished; *bajri* maximum 60 lbs. per rupee in Jamkhed; minimum 45 lbs. in Akola; *jowari* maximum 78 lbs. in Shrigonda, minimum 54 lbs. per rupee in Akola; cattle disease in 2 villages of taluka Karjat.
Sholapore		*Rabi* harvest continues; *jowari* 70 lbs. 7 tolas and *bajri* 57 lbs. per rupee.
Dharwar		Harvesting of early crops altogether completed, that of wheat and gram in progress; cotton improving in 4 and still suffering in 6 talukas; late *jowari* good; want of drinking water in Nargund; fever in 3 talukas, and cattle disease in 1 taluka; rice minimum 26 and *jowari* 49 lbs. per rupee.
Kanara		Second crop rice plants thriving on coast, weeding continues; sugarcane harvest nearly completed on coast; small-pox in Karwar; fever in 2 talukas; common rice in Karwar 14 seers per rupee, in district average 15¾ seers per rupee; weather hot.
Rajkot		Weather cool; general health good; slight small-pox in Sangad; *bajri* 20 and *jowari* 36 lbs. per rupee.
		General Remarks.—*Rabi* harvest in general progress; cotton improving in some talukas of Dharwar; blight continues in others; locusts in Ratnagiri; fever, small-pox and cattle disease in several districts.
Bengal—(Feb. 28th)		
Chittagong	·78	Weather seasonable till 25th, since which rainy; prospects of spring crops fair; prices have somewhat risen; public health generally good; a few cases of cattle disease reported.
Dacca	·03	Sugarcane being cut; harvesting of mustard seed continues; prospects of *boro* paddy and winter crops good.
24-Pergunnahs (Alipore)	2·18	Harvesting of late rice finished; sugarcane still being cut, yield estimated at about from 12 to 14 annas; *rabi* crops continue fair; price of common rice stationary; fever and cholera have much abated.
Moorshedabad	*Nil*	Prospects of winter crops good; *boro* rice cultivation commenced; average price of rice 22 seers per rupee; a few cases of small-pox in thanas Dowlattabad and Gowas.
Rajshahye		Very slight rain on 25th; prospects of crops continue favourable; public health fair.
Burdwan	·9	Sugarcane and *rabi* crops being cut; cholera reported from several thanas.
Rungpore	·08	Prospects of crops favourable; sugarcane and mustard still being harvested; public health good.
Bhagalpur	*Nil*	Prospects of crops good; public health good.
Purneah	·02	Prospects of crops continue good; health good.
Patna	*Nil*	Prospects of wheat, barley, and gram good; reaping of mustard, pea, and *mussoor* proceeding; public health good.
Durbhunga	*Nil*	*Rabi* crops ready to be cut; tobacco being cut; prices stationary; public health good.
Hazaribagh	*Nil*	Weather cold and seasonable; wheat, barley, and other cold-weather crops being cut at places; fever and small-pox still prevalent in certain thanas, otherwise general health good.
Cuttack	·18	Weather cloudy; *rabi* crops being gathered; wheat and *dalua* rice growing well; public health good.
		General Remarks.—There was rain in several of the reporting districts during the week, but it was no where so heavy as in Calcutta and the adjacent places; prospects of *rabi* crops continue to be generally good, though they have been somewhat damaged by rain in some places; in Behar poppy crop will not be satisfactory, it having been seriously damaged by previous rain, especially in the district of Sarun; tobacco crop is generally reported to be doing well; sowing of spring rice is still going on; harvesting of sugarcane continues, and that of mustard and other earlier *rabi* crops is progressing; fever and cholera, though much diminished, are still reported from a few districts, as also sporadic cases of small-pox and cattle disease.
N.-W. Provinces and Oudh—		
Benares (Feb. 27th)	Very slight rain on 25th instant.	Weather cloudy; prospects good; health good; prices steady.
Allahabad („ 28th)	No more rain	*Rabi* harvest commenced; prospects very favourable; health good; prices slightly fallen.
Gorakhpur („ 26th)		Weather fine; crops ripening well; mustard and oil-seeds injured; labour in demand; prices stationary.
Jhansi („ „)		Weather cloudy; *rabi* prospects continue good; there is some fear of injury from blight should the weather continue cloudy; prices almost stationary; small-pox amongst children; cattle disease continues.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—*contd.*		
Agra (Feb. 27th)	No rain	Weather cloudy now and then during the week; well irrigation going on; small-pox in 5 parganas; general health good; prices rising slightly.
Bareilly („ „)	. . . .	Weather cloudy; everything normal.
Meerut („ „)	. . . .	High winds; weather cloudy; health good; prices unaltered.
Kumaon („ „)	. . . .	Weather cloudy; general health good; crops good; cattle disease continues; prices unchanged.
Lucknow („ „)	No rain	Weather fine, with passing clouds; wind variable; prospects of crops good; prices steady; general health improving in city, small-pox and measles having greatly abated.
Partabgarh („ „)	Slight rain during week.	Cloudy weather injurious to the crops; barley and peas ready for scythe; prices steady; general health good, but small-pox lingering in Kunda tahsil.
Sitapur („ „)	No rain	Wind variable during week and cloudy; slight damage from blight reported in two tahsils; general health good; prices almost stationary.
Fyzabad („ „)	·20 at Akbarpur and slight rain in 3 other tahsils.	Weather cloudy; wheat and barley somewhat injured by insects at Bikapur tahsil, and in other three, prospects good; prices almost stationary.
Rae Bareli („ 26th)	Sadr ·10	Weather cloudy; prospects of crops continue good; general health good; prices stationary.
Cawnpore („ 27th)	No rain	Weather clear; crops flourishing; some small-pox about; prices stationary.
Farukhabad („ „)	. . . .	Weather seasonable; health good, but small-pox is still reported as prevailing in the district; prices steady.
		General Remarks.—There has been slight rain in Benares, Fyzabad, Rae-Bareli and Partabgarh, and almost all stations report cloudy weather; prospects are still favourable, but in a few districts slight damage has been caused by insects and blight, and in others injury is apprehended from the continuance of the present cloudy weather; the general health is good, but small-pox has appeared in the Cawnpore district and is lingering in a few other places; cattle disease continues in Kumaon and Moradabad; prices as a rule are stationary.
Punjab—(Feb. 27th)		
Delhi	. . . .	Small-pox in city and district continues; state of crops good; slight rise in prices.
Hissar	. . .	Health and harvest prospects good; crops thriving; prices falling.
Umballa	. . .	Health good; *rabi* crops improved, but more rain wanted, yield expected to be somewhat below average; prices of food grains—gram and wheat rising, others stationary.
Jullundur	. . . .	Health good; prices steady.
Amritsar	. . . .	Health and harvest prospects good; prices steady.
Lahore	. . .	Health and harvest prospects good; prices fluctuating.
Ferozepore	. . .	Health and harvest prospects good; prices fluctuating.
Sialkot	·30 at Zafferwal.	Health and harvest prospects good; prices stationary.
Rawalpindi . . .	Slight rain.	A few cases of cattle disease in Pindigheb, Murree, and Gujar Khan tahsils, and of fever in the Attock and Kahuta tahsils; *rabi* prospects good; prices falling.
Peshawar	. . . .	Health and harvest prospects good; prices falling.
Mooltan	. . . .	Health and harvest prospects good; prices steady.
Dera Ismail Khan . .	. . . .	Health and harvest prospects fair; prices almost stationary.
		General Remarks.—The health of the province is good and the harvest prospects promising; but more rain is needed in the Umballa District.
Central Provinces—		
Nagpur (Feb. 28th)	. . . .	Weather somewhat cloudy; harvest continues; health good; cattle disease in Nagpur tahsil.
Jubbulpore („ 27th)	. . . .	Weather cloudy and cool; prospects favourable; reaping continues; prices stationary; health good.
Saugor („ 26th)	. . . .	Weather cloudy and cool; prospects good; health good; prices unchanged.
Seoni („ 27th)	. . . .	Weather cloudy; wheat being cut; fever declining; prices steady.
Hoshangabad („ „)	. . . .	Weather cloudy and warm; harvest continues; small-pox 24 cases; wheat 16, rice 11, and *jowari* 19 seers per rupee.
Raipur („ 29th)	. . . .	Weather warm; prospects good; reaping commenced in places; health good; common rice 32 and wheat 24 seers per rupee.
Sambalpur („ 22nd)	. . . .	Weather clear, getting warm; prospects good; health good; common rice 56 seers per rupee.
Khandwa („ 27th)	. . . .	Weather clear with occasional clouds; reaping continues; 340 cases small-pox, 65 deaths; prices steady.
		General Remarks.—Weather warm and occasionally cloudy; harvesting continues; threshing in some places; prospects favourable; public health good, except in Nimar and Hoshangabad, where small-pox prevails; prices stationary.
British Burma—(Feb. 24th)		
Akyab	. . . .	Three deaths from cholera in one township and twenty from small-pox in another township, otherwise public health good; cattle disease in one township.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*		
Rangoon . . .	. . . .	Two deaths from cholera and two from small-pox, otherwise public health good.
Bassein . . .	. . . .	Two deaths from cholera in one circle, otherwise public health good; cattle disease in two townships.
Prome	. . . .	One death from cholera in town, otherwise public health good.
Amherst (Moulmein) .	. . . .	Public health good both in Moulmein and district; crops stored; grain about average, but measures short.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

ESTABLISHMENT OF FUEL AND FODDER RESERVES.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department,—dated Calcutta, the 1st March 1883.

CIRCULAR No. 16A.

AGRICULTURE.

Read the following papers annexed as appendices A to D:—

Extract from the Famine Commission's Report, Part II, Chapter VI, Section 2, paragraphs 8 to 10, page 179.

Extract from Review of the Forest Administration in the several Provinces under the Government of India for the year 1880-81 by the Officiating Inspector General of Forests to the Government of India.

Chapter VIII, page 26, of Manual of the more deadly forms of cattle disease in India, 1871.

Extract from Report on the Forests of Khurdah, Orissa, by J. S. Gamble, Esq., Officiating Conservator of Forests, Bengal, for the year 1881-82, page 12, paragraphs 44, 45 and 46.

Extract from Appendix A to the above Report, by W. C. Taylor, Esq., Deputy Collector, on the Khurdah Sub-Division, for the year 1872-73.

Extract from the Revenue Administration Report of the North-Western Provinces and Oudh, for 1877-78, Chapter I, Section IV, paragraph 8.

Extract from the Report on the Revenue Administration of the North-Western Provinces and Oudh, for 1880-81, Chapter I, Section IV, paragraph 19.

Extract from a note by Mr. William Crooke, Manager of the Awa Estate under the Court of Wards, dated the 22nd November 1881.

Punjab Revenue Administration Report for 1877-78. Extracts from the Lieutenant-Governor's Review thereof.

Extract from the Punjab Revenue Administration Reports for 1878-79 and 1879-80.

Extract from a Report on the revised Land Revenue Settlement of the Rohtak district, 1873—1879 (pages 76-77).

Extract from Note by the Settlement Officer in the Gurgaon district, dated December 1882.

Letter from the Resident at Hyderabad to the Deputy Commissioner of Ellichpur (Berar) quoted in the Review of the Inspector General of Forests on the Forest Administration in the several Provinces of India during 1880-81 (page 11).

Extract from letter No. 143-8—9 (Settlement), dated 22nd December 1880, from the Chief Commissioner, British Burma.

Extract from letter No. 5517, dated 13th April 1881, from the Chief Commissioner, British Burma, paragraph 2.

Report on a visit to the English and Scotch Forests by the Professors and Students from Nancy Forest School, by M. Boppe, Inspector of French Forests.

OBSERVATIONS.—The attention of the Government of India has lately been called by various reports and statistical returns from the Upper Provinces to the growing decrease in the area of grazing lands and wooded tracts in many parts of Upper India. These remarks have special reference to the Provinces of the Punjab, the North-West and the Central Provinces, inclusive of the Berars. The grazing land in these Provinces has not only diminished in area, but has also deteriorated in quality and changed in character, the latter result being partly due, as will be presently explained, to the excessive grazing which the reduction in area has made necessary. The Government of India is aware that efforts have been made both by the Local Governments and district officers, especially in the Punjab, to meet the difficulty; but it appears necessary that more systematic measures and arrangements should be undertaken than have yet been

instituted in any Province. The Famine Commissioners have not omitted to give prominent notice to the subject in Part II of their Report quoted in Appendix A.

2. The decrease of the area of culturable waste is a natural consequence of the increasing numbers of the agricultural population, by whom a continually extended area of arable land is required for the plough. The argument indeed has been brought forward that the grazing lands and jungles, of which the cattle of the country have been deprived by the encroachments of agriculture, can be profitably and efficiently replaced by fodder crops, and that such has in fact been the case in many countries in which agriculture is more fully developed. But it is doubtful how far it is wise to allow this argument to be applied at present to the Upper Provinces of India. The one fact that these regions are subject to droughts of a character unknown in the Western hemisphere, places them on an entirely different footing from those civilised countries with the agricultural system of which we are most familiar. In a season when a failure of the monsoon causes the destruction of crops which supply food for men, those crops also upon which cattle depend are equally liable to perish. It is only in tracts which are thoroughly irrigated that any safe reliance can be placed upon a supply of artificially-raised fodder, or that a system of stall feeding can be expected to preserve the lives of the cattle. Tracts so protected form at the present time a small proportion of the agricultural area of Northern India.

3. The history of the famines and droughts which have occurred during the present century, and especially in late years, is replete with painful accounts of the wholesale destruction of cattle by starvation and the failure of the fodder supply. It may be doubtful whether the loss which the agricultural population has thus sustained has always been fully appreciated. At a time when they have been deprived by a failure of the rains of a great portion of the produce of one or more seasons, they have also had taken from them, in the destruction of their plough-labour, the means of recouping their loss in succeeding years. The late famine of 1877 has furnished many examples of this kind. Accounts have reached the Government of India of the serious deterioration of the agricultural prosperity of many tracts which, there is every reason to believe, would now be in a flourishing condition if the cattle could have been saved. On the other hand, instances have been brought forward in which the existence of a sufficient area of grazing land has, in districts most affected by the drought, both preserved the cattle and secured the agricultural population from prospective loss.

4. It is desirable at this point to explain that the term "grazing land" as herein used is not to be restricted to land which provides nothing but the ordinary pasture of a grass plain. Such land is often affected just as seriously by a drought as the unirrigated area of cultivated land. Grazing land is here intended to include those wooded tracts and jungles which provide bushes, trees, and herbs from which cattle can obtain a plentiful supply of fodder, even at times when the grass on open ground is dried up and destroyed. There are many trees and many bushes which, drawing upon a supply of moisture below the surface of the earth, can maintain their life and vigour when the shallow-rooted crops and grasses are parched and withered. And this is not all. It has also been ascertained that the grass itself which, on an exposed surface, would succumb to the drought is, in the cooler atmosphere occasioned by the shade and protection of trees and shrubs, saved from destruction.

As, moreover, there is, apart from the question of fodder, a distinct agricultural advantage in maintaining throughout the plains of Upper India a supply of wood for fuel and domestic purposes, the term used in the following paragraphs of this Resolution to designate grazing lands will be that of Fuel and Fodder Reserves.

5. A further effect of the absence of proper food after a period of drought is that the cattle, which have been starved for weeks, feed too greedily on the

young shoots of the millets that are sown with the first showers of rain or on the coarse grass that springs up on the return of the monsoon. The excess of food to which they have been unaccustomed induces a rapidly fatal disease (described in Appendix B) which has carried off thousands of animals in many parts of India.

6. In Appendix C instances are quoted in which cattle perished in large numbers from want of fodder in the droughts of 1877 and 1880; while, on the other hand, cases are noted in which they were saved by being fed on bushes and leaves of trees. In Rohtak, for example, no less than 250,000 beasts are said to have died, or about one-half of the whole cattle of the district. This was in 1877. In 1880, 15,000 cattle are reported to have perished in the district of Jhansi, while many others were only preserved by the bushes in the ravines or by fodder obtained from trees. In the same year large numbers of cattle were in the Allahabad Division kept alive by being taken to the forest tracts of Banda, while throughout the division all the available trees were stripped of their leaves. "There is no need," writes the Commissioner in quoting from his district reports, "to multiply these extracts, all of which tell precisely the same story."

7. The examples to which reference has now been made are sufficient proof of the necessity of taking some action for the protection of the cattle of the country against drought. The facts brought forward seem to prove that at present the agricultural population will not or cannot themselves take sufficient precautions to provide against exceptional occurrences. They trust to accident or to assistance from the Government. But in this matter little or no help can be afforded, unless systematic arrangements are made in advance, and continuously maintained, under which a supply of fodder in a year of drought may be secured. It is necessary, therefore, to consider in what form, system and continuity can be most advantageously established; and it is on this point that the Government of India is mainly desirous of obtaining the advice and co-operation of Local Governments.

The general outlines of the scheme which commends itself to the Government of India as most likely to secure the desired results, and which from enquiries already made appears likely to meet with the most general acceptation, will be briefly described in the following paragraphs.

8. The general control and administration of the measures with which this Resolution is concerned should, in the opinion of the Government of India, be primarily in the hands of the local officers, *viz.*, the Commissioner, the District Officer and his subordinates in charge of sub-divisions. The official channel through which the Local Government would communicate with the divisional and district officers would be the Agricultural Department which would be responsible for providing the Government with advice and information, and for maintaining continuous action. The actual management of the lands set apart for the supply of fodder and fuel would be placed in the hands of Forest officials, who alone can be expected to establish and maintain without interruption a scientific system of treatment.

9. In order to satisfy the above conditions, it would be necessary, in each district or division in which operations are likely to be sufficiently extensive to require scientific management, that an officer of the Forest Department should, when financial circumstances admit of this being done, be placed under the orders of the district or divisional officer. He would work entirely under the orders of the Civil Officer, who would, however, refer questions of a professional or technical character for the advice of the chief Forest Officer of the Province or Circle. In many districts the necessary staff exists already, but in others new posts will have to be created.

It must not, however, be expected that arrangements can be made, financially or otherwise, under which every district or division can in every part of the Upper Provinces in which the measure would be useful, be supplied with a

separate Forest Officer for the work contemplated. It would, indeed, be extremely unwise to enter upon any expensive organisation until much more experience and information has been acquired. It is only, therefore, for those regions in which grazing lands are disappearing at a rapid rate, or in which history has shown that drought causes extensive destruction of cattle, that any application for the services of special officials could at present be entertained. It will probably be considered sufficient if at first a Forest official is attached as assistant to the Commissioner in one or two of the divisions in each province in which protection is most required.

10. In the meanwhile the serious duty will devolve upon the district officers of ascertaining how far the cattle need protection, and the extent of land, whether the property of Government or purchasable from land-owners at a reasonable price, which can be made available for Fuel and Fodder Reserves. For this purpose an analysis of every district should be made by the local officials which will show its need for protection against drought, and the extent to which land is available for Fuel and Fodder Reserves. They may also be directed to enquire how land can be most advantageously secured for the required purposes in districts where a sufficient quantity of Government land is not available, how far the landholders themselves or Local Boards will be able to co-operate with the Government in the matter, and at what cost suitable areas can be procured.

11. The Agricultural Department will probably at present be most usefully employed in ascertaining by actual experiment, and in consultation with the Forest Department, what are the best means of bringing waste lands into a condition in which they can most economically provide a supply of fodder in a year of drought, and in what way they can in ordinary years be most profitably employed. The Department would also superintend, in correspondence with Commissioners, the analysis required by the preceding paragraph, and would review for the Local Governments the reports received from each Division. The same Department may also ascertain whether any system of stacking hay or storing fodder can be established, or whether it may not be useful to close grazing reserves for a portion of the year, especially when other fodder, such as the stubble of newly-reaped crops, is available. For if grass reserves are only thrown open when no other food is available, the grass will have the requisite opportunity to make head, and will thus provide a much more ample supply of fodder than if exposed continually to desultory grazing. Enquiries of this kind will fall within the scope of the Agricultural Department.

12. This Resolution is not the place in which the treatment of land required for conversion into Fuel and Fodder Reserves can be considered in any detail. But the opportunity may be taken to give expression to the opinion of the Government of India that little real good can be effected unless the reserves are, at any rate for some years, brought under the control of Government, and systematically protected against the invasion of goats, cattle, and fire. It appears to be a matter susceptible of proof that a protected area will, besides giving security in a year of drought, afford over a certain number of years a considerably larger amount of fodder than an unprotected area of equal extent. It seems probable that the difference is sufficiently great to admit of a hope that Fuel and Fodder Reserves can, in a large number of instances, be made financially successful. The importance of this view deserves some further examination of the question. The following illustrations may therefore be adduced in support of the view which has now been brought forward. In his Administration Report for 1879-80 the Inspector General of Forests shows in the following words the results of protecting grazing land:—

"In all except the most arid tracts, or where denudation has been complete and of long standing, mere protection, aided by sowing and planting in suitable places, has the effect of gradually clothing the ground with trees and shrubs. What happens is this:—the old stumps and roots in the ground produce shoots; seeds which have been lying in the soil, and seeds brought by the wind, germinate; the shoots and seedlings which without protection would have been destroyed by the fire or eaten by the cattle, grow up; and wherever there are sufficient

remains of the old forest growth in the ground, the result is most remarkable. The difficulty consists in this—that new reserves must be formed, and that, during the first few years, this unavoidably entails some restrictions in the matter of grazing. At first the protection of the areas selected must be absolute, and the people in the vicinity can neither be permitted to burn the grass, nor graze their cattle in these areas. But the grass which grows up abundantly can be cut, and thus furnishes abundant cattle fodder until the forest is sufficiently advanced to admit of grazing."

13. In Ajmir the results of enclosing areas, hitherto barren, with the object of securing fodder for cattle in times of drought, are already remarkable:

"After five years' conservation there is much in these forest reserves to encourage us; the appearance of the hills and country-side in these tracts is quite altered. The people even have begun to recognise the advantage to be obtained by the experiment we have introduced. We have been blessed with another year of plentiful rainfall; the undergrowth has become in places in Merwara nearly impenetrable, and in the ravines and valleys I have been surprised to see the number of fine young trees springing up. Our great enemy now is fire"—*Ajmir Forest Report, 1879-80.*

Grazing is strictly prohibited, but the villagers are allowed to cut and carry of the grass on pack animals. The cash receipts are at present small, but the benefits which the people indirectly enjoy from these reserves are very considerable.

14. Again, in the North-Western Provinces, various experiments have, for three years, been conducted by the Agricultural Department, with the view of reclaiming *usar* or *reh* land, *i.e.*, land rendered more or less uncultivable by the excess of salts in the soil. It has been found that the simple expedient of enclosure is more efficacious than any other operation. The natural grasses which, so long as the land is accessible to cattle and goats, are nibbled down as fast as the young shoots appear, spread in the enclosed areas at a rapid rate over the worst land. After two years, experimental cuttings gave a result of 20 maunds of good hay per acre—an outturn which on a square mile would suffice to feed 1,000 cattle for three months, exclusive of the bushes and trees which, there is good reason to believe, can be grown when once the grass is well established.

15. The terrible devastation caused on unprotected land by sheep, and the impossibility of recovering forest and undergrowth once lost so long as the land is exposed to the grazing of sheep, is forcibly brought out in a late report by M. Boppe, Inspector of French Forests, on the forests of Scotland, from which extracts are quoted in Appendix D. His remarks on the greater value of land for purposes of grazing after enclosure are, in connection with the suggestions made in paragraphs 11 to 13 of this Resolution, especially deserving of notice. The present barren condition of the greater part of the waste lands of Scotland is attributed by M. Boppe almost entirely to one animal—the sheep. There is very strong ground for believing that the goat, which may be said to take the place of the sheep in India, has been the one chief cause of the present bareness of large tracts of country in Northern India.

Extensive areas now bare are known to have been once covered with a rich growth, if not of forest still of scrub and grass that would, if not destroyed, have formed a rich pasturage; animals may not have been the original cause of the disappearance of the vegetation, but they have been the constant cause which prevents renewed growth. No more striking instance, indeed, of the effect of the natural recovery which ensues when goats and cattle are excluded can be found than in a comparison between those hills in Ajmere which have for four years only been enclosed, and those which have remained open to goats and cattle during the same term. The first are covered with an almost impenetrable thicket chiefly composed of shoots edible by cattle. The second are practically devoid of all vegetation, and appear to be mere heaps of rock and stone.

16. If the conclusions indicated by the facts and arguments adduced in the preceding paragraphs can be accepted, the objection which has not unfrequently been brought forward to the occupation of grazing lands on the score of the inconvenience suffered by the adjacent population in being deprived of their cattle pasture is greatly diminished. The occupation is only temporary. The inconvenience which is temporarily occasioned to the agricultural population is due to their own action in diminishing the efficiency of their grazing lands by an improper use of them. The Government proposes to do no more than restore, and, if possible, to increase, the efficiency which has been lost. The measure contemplated will, it is believed, result in a future supply of fodder which will be far larger and far more certain than that of which the owners of the cattle have been deprived. In this view it may be even found desirable to attach for conversion into fuel and fodder reserves, land which has been broken up under the plough, but which as fodder reserves would be more profitable in preserving cattle from starvation, than in growing crops which are subject to failure in a year of drought.

ORDER.—Ordered, that the above Resolution be communicated to the Local Governments and Administrations noted in the margin, with a request that the Government of India may be furnished with their views and opinions.

Government of the North-Western Provinces and Oudh.
" " Punjab.
Chief Commissioner of the Central Provinces.
Secretary for Berar to the Resident at Hyderabad.

Ordered also, that copies be forwarded to the Local Governments and Administrations noted in the margin, and to the Home Department for information.

Government of Madras.
" Bombay.
" Bengal.
Chief Commissioner of British Burma.
Chief Commissioner of Assam.
" " Ajmere.
" " Coorg.

Ordered also, that a copy be published in the Supplement to the *Gazette of India*.

APPENDIX A.

Extract from the Famine Commission's Report, Part II, Chapter VI, Section 2, paragraphs 8 to 10, page 179.

Village forests.

8. There is a chapter of the Forest Act purporting to promote the formation of village forests by the assignment of small forest areas to the use and management of village communities. Such areas have been assigned in most parts of India where forests exist, a portion sufficient for the wants of the people being always marked off and assigned to the villages before the superfluous area was taken up as a Government reserve; but we have not learnt that much has been done in the direction of managing or conserving these tracts, and it is probable that the measure is not easily applicable to localities distant from the existing forest tracts. In the Hazara district of the Punjab the village forests are managed, under the control of Government, in the interest of the people to whom they belong, and are open to the villages concerned for the supply of their requirements. In the Kolar district of Mysore an arrangement has been made voluntarily by the ryots, with the encouragement and assistance of the district officer, under which considerable areas of poor land within the limits of villages have been set apart as forest land, to be managed by the patels and village community under simple rules of conservancy, the villagers planting them with trees, and the village servants protecting them from mischief, while the people of the village are allowed in return to take brushwood and timber, and to pasture their cattle within them. In Madras also a somewhat analogous system has been established since 1859, when the Jungle Conservancy Fund was instituted for similar objects, and has subsequently been brought into operation in all districts. On the other hand, in the Central Provinces, where extensive tracts were at the time of settlement assigned as village forests for the benefit of the agricultural communities, it is stated that the proprietors have so far misused their position as to keep these tracts for their private profit, by selling the produce and forcing their tenants to resort exclusively to the Government-protected forests for such timber and fuel as they require. This is in direct violation of their engagements, by which the proprietors are bound to allow their cultivators to take from these forests without charge all wood required for agricultural purposes, and to permit them to graze their cattle in them without payment.

Importance of extending the system of village forests.

9. We have evidence from all parts of India that the mischievous practice of indefinite trespass on the public forests has sprung up from short-sighted eagerness for immediate profit and ignorance of the conditions under which alone the reproduction of forests is possible; and the public interest evidently requires that any reasonable privilege of this kind, which it would be harsh to abolish, should be enjoyed only within defined limits and under salutary rules. Village communities may thus be brought to avail themselves of forest produce in a manner consistent with its reproduction, and not with a license recklessly destructive of the public property, and we think it probable that some of the least productive tracts now under the plough might be managed with greater benefit to the community as protected forest for village uses than as arable land.

General objects to be arrived at.

10. So far any immediate advantage is to be sought from the extension of forest in respect to protection against drought, it will, in our opinion, be mainly in the direction of the judicious enclosure and protection of tracts such as have just been alluded to, from which improved and more certain pasture may be secured for the cattle of the vicinity, a supply of firewood secured which may lead to a more general utilisation of animal manure for agriculture and a possible addition made to the power of the subsoil to retain its moisture, and to the prospect of maintaining the supply of water in the wells. In all cases existing communal rights of pasturage should receive careful attention, and, as far as possible, efforts should be made to extend facilities of this description, and to add to their value by a suitable system of protection. As to the protection of the higher hill slopes from denudation, it may confidently be stated that they will, in any case, be more useful if kept clothed with wood than subjected to the wasteful and destructive process by which they are brought under partial and temporary cultivation, and that, whether the expectation of an improved water-supply as a consequence of such protection is fully realised or not, there is on other grounds sufficient reason for arranging for the conservation of such tracts where it is practicable.

Extract from Review of the Forest Administration in the several Provinces under the Government of India for the year 1880-81 by the Officiating Inspector General of Forests to the Government of India.

Fodder and Fuel Reserves.—The establishment of combined fodder and fuel reserves was referred to in last year's review, and a good tride in advance has been made during the last 12 months.

In addition to the Ajmere and Merwara reserves mentioned in last year's review, a fodder and fuel reserve has been established near Amraoti. In the North-Western Provinces a scheme is under discussion for taking up 106 square miles of usar (saline) land, with the view of transforming the several blocks into grass and fuel reserves. Experiments in this direction were commenced some two years ago by the Agricultural Department of the Province, but it is now proposed that the Forest Department shall take over the work.

The Government of Madras, it is believed, has this subject now under consideration, and salutary measures are likely to be adopted shortly.

The Punjab possesses some 15,000 square miles of so-called Rákh lands scattered over the various districts. Only a small portion of this area has as yet been definitely set aside for the supply of fodder and fuel, but it is hoped that the work will be rapidly advanced now, by deciding what areas are to be maintained permanently for fodder and fuel and what parts shall be thrown open for the extension of cultivation. The system of district forest officers will, in the Punjab more than anywhere else, facilitate the solution of the questions involved, and the sooner it is introduced into that Province the better.

Generally speaking, the establishment of fodder and fuel reserves is of the utmost importance in the dry districts of the North-Western, Central, and Southern India, and the subject cannot be pressed too strongly upon the attention of Local Governments, whose duty it is to prevent or reduce the mortality of cattle during years of famine, apart from the fact that the increase in the supply of fuel must ultimately restore manure to its legitimate use, instead of its being burned, as at present, over large stretches of country.

APPENDIX B.

Chapter VIII, Page 26, "The more deadly forms of cattle disease in India," Manual by Mr. J. H. B. Hallen, *1871.*

Hoven.

"It is a common disease among cattle, and results from irregular feeding, such as eating of food to which the animal has been previously unaccustomed. After the first shower of the early rains, when succulent shoots spring up, cattle, which have been starved for weeks, are apt to overfeed themselves and become attacked with Hoven. Several animals of a herd may thus be seized, and the affection may almost appear epizootic or plague-like."

APPENDIX C.

Bengal.

Extract from Report on the Forests of Khurdah, Orissa, by J. S. Gamble, Esq., *Officiating Conservator of Forests, for the year 1881-82, page 12, paragraphs 44, 45 and 46.*

Grazing.—The present unsatisfactory state of the Khurdah forests, specially on the level lands near the villages, is principally due to unrestrained and indiscriminate grazing. No charge for grazing has been as yet made either for cattle belonging to ryots of the estate or to cattle from outside. Every village possesses a certain amount of cattle, partly bullocks used for cultivation and carts and for the production of manure, partly buffaloes used for carting and to provide milk and ghee, and the forest officers estimate the total number of head of cattle at present grazing in the Khurdah forests at not less than 50,000 belonging to ryots and 12,000 to 15,000 belonging to outsiders. The damage done by this large number of cattle is very great, and any measures taken with the object of regenerating or improving the crop of forest, must be taken with especial consideration of the necessity for the restriction of grazing on these areas.

As already explained, the condition of the Khurdah forests is for the most part that of scrub jungle cut and hacked and browsed over indiscriminately. In some parts scarcely a tree, seedling or shoot, shows itself above ground, but it is eaten down, and in this way proper reproduction is almost impossible; and when it is considered that the lands near the villages are exposed both to continual cutting for firewood and to constant grazing, it is easy to understand that, without some strong measures, the condition of these lands is not likely to improve. Perhaps the most destructive enemies in the way of grazing are the herds of goats which, especially in zillahs Kohori and Banpur, have rendered parts of the country almost bare, with the exception of a few round thorny masses of twigs. These goats are the property of goat-herds from the Ganjam District of Madras, who have settled themselves in Khurdah and have done a great amount of damage by travelling from mouzah to mouzah and eating off the jungles. When the scrub available in one mouzah is exhausted they proceed to another, at the same time abandoning any cultivation they may have had. It does not appear to me that any harm would be done by the exclusion, at any rate for a considerable period, of these herds of goats which are really more damaging than even the buffaloes of the estate. Next to goats these latter are the most destructive, for besides what they devour, they do considerable damage by trampling or knocking down saplings. The question of the closing of areas against grazing and the means to be taken to exclude foreign cattle will be subsequently treated of."

Extract from Appendix A to the above Report, by W. C. Taylor, Esq., *Deputy Collector, on the Khurdah Sub-Division for the year 1872-73.*

The amount of cultivation in Panchgarh was also a surprise to me. I found every beegah of culturable land cultivated up to the foot of the hills. The country is covered with granite and gneiss rocks, mostly quite bare of jungle, and the people are already in distress for firewood, both in Panchgarh and Kuspala; the preservation of the jungles has not been commenced a day too soon.

The soil is all the old undulating alluvium with ghooting lime in large quantities; of grazing ground for the cattle there is none left; and I left strict orders to stop part of the *toila* or dry cultivation at the base of the hills, so as to allow grazing room for cattle. The ryots all complained bitterly of want of grazing ground and of the destruction of the jungles, although it is they who have recklessly cut down or rooted up everything. There is a little jungle on the boundary between Patboudh and Khandhara, with a good many sâl saplings, and this is the land that the ryots of Khurdah and Khandhara were fighting about. The Commissioner has awarded the tract to Khurdah, and with a little judicious management, and preserving tracts of hill and jungle here and there, the supply of firewood and bamboos will in a few years be sufficient for the wants of the people, and the sâl preserves will be of great value, but unless the country is looked after, very great distress will be caused by the reckless destruction of jungle made by ryots who are not restrained. There is still plenty of large jungle on the hills at the trijunction of Ranapur, Nyagarh and Khurdah, but these jungles being at some distance from the principal villages, the ryots are too lazy to go far for their wood, and continue to root up every stick they can find close to their houses. I have made two sâl preserves in Panchgarh and one in Mainbandh, and one in Kusfala, and the result even of two or three years' preservation is wonderful.

The trees, though apparently saplings, are sprouts from the roots of old forest trees and grow much faster than saplings would grow.

North-Western Provinces and Oudh.

Extract from the Revenue Administration Report for 1877-78, Chapter I, Section IV, paragraph 8.

There were, as might have been expected in a year of drought, few outbreaks of any specific disease among cattle during the year. But they suffered from the scarcity of fodder

consequent on the drought, and the loss of valuable farming stock during 1877-78 must in many districts have been enormous. When all hope of rain had been abandoned in September, cattle were sold and slaughtered for the mere value of the hides. No attempt has been made to compute the number of animals that perished or were consigned to the shambles.

Extract from the Report on the Revenue Administration for 1880-81, Chapter I, Section IV, paragraph 19.

PARAGRAPH 19.—The usual forms of cattle disease were more or less prevalent, but there was no serious outbreak, except in the Allahabad and Jhansi Divisions.

The extensive failure of the fodder supply predisposed the cattle to disease, added to which there was a deficient supply of wholesome water for drinking purposes. The Collector of Bandah writes:—"In reality the cattle died as much from starvation and bad food as from any actual disease. The failure of the rains caused failure of all fodder, and in December the cattle were being fed on chopped leaves mixed with a little *bhusa*. In many villages the wells dried up, and there was not enough water for both men and beasts. The cattle therefore got insufficient water or the shallow foulness of a half dry pool."

The Commissioner of Jhansi writes as follows:—"Cattle disease was very prevalent in sLalitpur, where the large number of 27,900 head of cattle are reported to have died. The tock of the district, however, is very large, and of this number some 12,000 are reported to have died of old age, &c. It was bad also in Jalaun, where the deaths are estimated at over 9,000 head. I fear this is an under-estimate. A great part of the district was utterly without fodder for the cattle. I saw large herds of starving beasts, great numbers of whom must have succumbed before the rains produced wholesome pasturage. Bhusa was selling at three times the ordinary price, and it was only well-to-do people who could afford to buy it.

"Luckily the drought seemed to suit some of the bushes that flourish in ravines, and on these and the leaves of trees cattle dragged on a wretched existence. At the beginning of the drought many people drove their cattle off to Chirkhari and other places where fodder was to be had, and so saved their lives; but I fear the loss from starvation was very considerable and will be long left. In Jhansi disease only prevailed in one pargana, but where it did prevail proved very fatal. It seems to be useless to attempt to introduce the European mode of treatment. Segregation is impossible for people who as a rule have but one cattle-shed and like their beasts to be so near them at night that they can hear their slightest movement and prevent the ever-dreaded cattle thief."

The following extract from the Allahabad report describes the state of things in that division:—"In the two Bundelkhand districts disease among cattle was especially rife. Elsewhere the mortality from this cause was not so great as had been anticipated from the extensive failure of the fodder supply.

"From the other districts, Jaunpur excepted, large numbers of cattle were taken for pasturage to the forest tracts in Banda, and although the deficiency in food was thus to a certain extent met, the want of water, owing to the wells having dried up, gave rise to great difficulties and tended to the spread of disease. The mortality in the Hamirpur district was very great, amounting, it is believed, in two parganas to one-half of the entire stock. Everywhere disease was engendered and aggravated by the want of green grass and other nutritious food, added to which there was a deficient supply of wholesome water for drinking purposes.

"The people as usual resorted to the leaves of trees, and to such an extent that in some portions of the Allahabad District, all available trees were stripped of their leaves.

"Remedial measures, such as the segregation of infected cattle, were suggested to the people, and in some instances insisted on. But, as a rule, the people were indifferent to the adoption of such precautionary means, and in a year like the one under report, when the failure of fodder was on so extensive a scale, it was almost impossible to secure the isolation of diseased cattle and to provide for their being properly treated. The heavy mortality in the Banda District may be accounted for by the presence of a large number of cattle from surrounding districts. Altogether, the past year has been a very trying one to cattle."

There is no need to multiply these extracts, all of which tell precisely the same story. It is useless to prescribe green food when none is to be had, or to advise segregation when it cannot be carried out. The people, too, generally look on these outbreaks as the visitation of God, and trust much more to "puja" and the purohits' incantations than to anything else. One point the Board desire me to notice. The Collector of Banda writes that in the Karwi sub-division the Government forests provided pasture-grounds for many cattle who might otherwise have succumbed. The possibility of doing more in this direction with a view to providing pasturage in seasons of severe drought is a question which deserves consideration.

Extract from a Note by MR. WILLIAM CROOKE, *Manager of the Awa Estate under the Court of Wards, dated the 22nd November 1881.*

The condition of the cattle during the hot weather, until the rains produce a scanty crop of grass in the usar plains and barren land, is miserable in the extreme. Numbers die

every year of sheer starvation, and numbers from disease induced by indigestible fodder. Last year (1880) nearly every acacia tree in this part of the country was stripped for fodder, and I have even seen the people chopping up green branches an inch thick, and feeding cattle on them for the sake of the scanty sap and bark.

The state of things which I have described above is that of ordinary years, and the want of fodder is, of course, greatly aggravated in years of famine. Large herds of cattle are kept on the Jumna ravines and in the grass lands at the other side of the river. When the supply fails there, in season of drought, enormous herds of cattle are driven into the Duab, and the want of fodder is thus intensified. In the famine of 1877-78 thousands of these cattle died in Agra and Etah Districts.

PUNJAB.

Revenue Administration Report for 1877-78. Extracts from the Lieutenant-Governor's Review thereof.

3. In the Punjab, where the number of cattle maintained is very large, specially in the grazing districts—Cis-Sutlej and the Bari districts north of the Ravi—the failure of grass produces effects almost as calamitous as scarcity of food-grains used by men.

35. As has before been noted, the failure of grass caused very great mortality among cattle, and disease was unusually prevalent.

In the Jhelum District, the loss from drought was estimated at from one-quarter to one-half the total number of cattle. From Umballa it was reported that almost two-thirds of the cattle died, though it is difficult to believe that this statement is not an exaggeration. In the Hissar and Delhi Divisions the loss was also great, and it was estimated that nearly half a million of cattle died. It will be some years, even under the influence of favourable seasons, before the country recovers from this serious diminution of agricultural wealth.

The Revenue Administration Report of 1878-79 at page 18 mentions that the quinquennial statement, comprising the period from 1868-69 to 1873-74, exhibits a decrease of 448,795 in the number of cows and bullocks in the Punjab, and an increase of 56,591 in the number of ploughs.—"The increase in ploughs is, however, naturally progressive, being the result of extended cultivation, while cattle are subject to extraordinary diminution in specially bad years."

Revenue Administration Report for 1879-80.

Page 22.—"The cattle disease and deficiency of pasture of the last few years seem to have had a marked effect on the stock of the country."

Extract from a Report on the revised Land Revenue Settlement of the Rohtak district, 1873—1879 (pages 76-77.)

"The extensive breaking-up of land which has taken place since 1840 has greatly restricted the grazing grounds of the villages; the present fodder supply grown in the fields is not much more than sufficient for the yearly consumption of the cattle, and leaves but a small margin out of which to provide for against seasons of drought; and in many canal estates difficulty is already being experienced on this score. But few decent-sized stretches of village jungle now exist anywhere. It is most important that these should not be reduced any further now, and that the remaining village jungle lands should be protected."

Extract from a Note by Settlement Officer, Gurgaon district, dated December 1882.

"Before the famine of 1877-78, it was estimated that there were in the district nearly 140,000 plough cattle. At the very lowest estimate 40,000 of these must have disappeared in that year, and the bad years that followed."

BERAR.

Letter from the Resident at Hyderabad to the Deputy Commissioner of Ellichpur (Berar), quoted in the Review of the Inspector General of Forests on the Forest Administration in the several Provinces of India during 1880-81 (page 11).

The Officiating Resident desires to acknowledge the ready and liberal spirit in which the Conservator of Forests and Forest Officers generally responded to applications made to them by civil officers during the anxious months of July and August, when the rains having failed, the people were in difficulties about fodder for the cattle.

BRITISH BURMA.

Extract from letter No. 143-8—9 (Settlement), dated 22nd December 1880, from the Chief Commissioner, British Burma.

33. The need of cattle grazing reserves has been already recognised by the Government.

The cost of cultivation is enormously augmented by the death, annually, of large numbers of plough buffaloes and bullocks. The people for the most part take little care of their animals after ploughing and harvest are over. Hard work is exacted from them; and then they are left to shift for themselves as best they can. Frequently they lack both shelter and water. The settlement officers have been instructed to allot grazing reserves in *kwins*, where all the available land has not yet been taken up for cultivation, and to protect the reserves from encroachment by suitable demarcation and by record in the settlement papers. The Chief Commissioner hopes to be able to report good progress in this important matter next year.

Extract from letter No. 5517, dated 13th April 1881, from the Chief Commissioner, British Burma, paragraph 2.

2. It is essential also that the trees and undergrowth on grazing grounds be protected from injury and destruction. Unless this is done under a rule having the force of law, many of the grazing grounds will in a few years be laid bare, and the tracts will be practically useless for the purposes originally intended. Recent reports received by the Chief Commissioner especially bring to notice the encroachments and the serious destruction of 'jungle' upon grazing grounds in the Hanthawaddy district of the Pegu Division. There can be little doubt but that similar destructive process is or hereafter will be in operation on other grazing grounds. It will be observed that the Chief Commissioner proposes to prohibit the removal of grass from grazing grounds during the months of December to May inclusive.

This period comprises the dry season, when grass is comparatively scarce, and when it is gathered and conveyed to large towns for sale. It is necessary that such grass should be left on the grazing grounds for the use of cattle driven thereupon. In the rainy season, when cattle are busy in the fields, villagers must be allowed to cut or remove grass from grazing grounds, and during that season grass will reproduce itself promptly enough.

APPENDIX D.

Report on a visit to the English and Scotch forests by the Professors and Students from Nancy Forest School, by M. BOPPE, *Inspector of French Forests.*

The total area of Scotland is about 20,000,000 acres, hardly one-quarter of which may be reckoned as arable, forest or pasture land, the remainder being occupied by the lakes, rivers, peat-mosses, moorlands, bare rocks, and mountains. It is surprising then to find that against such a vast area of uncultivated ground, only 734,490 acres, according to the official returns of 1872, are classed as woodlands.

There is every reason to suppose that, at a remote period, both the highlands and lowlands of Scotland were covered by dense forests, which were successively destroyed by the fire and steel of conquerors and during the anarchy existing under the old feudal system, as well as by the fearful storms which at almost regular intervals sweep over certain districts. So complete, indeed, was this devastation, that, in 1707, all that remained of the grand old Caledonian forests were a few shreds, and those in a most deplorable condition.

From the union of the two kingdoms dates a period of political calm, during which, time and the marvellous timber-producing properties of the soil and climate would have done much to repair the ruin, had not the sheep, arch-enemy of all forest vegetation, been allowed to retain his footing in the forests.

The noblemen and great landed proprietors of Scotland at last felt the necessity of doing something to restore the parks and woodlands in the immediate vicinity of their mansions, and by the introduction of plantations to vary the sombre monotony of the boundless heather. It was also necessary on these bare moors, where grazing and shooting form the main sources of revenue, to furnish shelter for the cattle, sheep, and deer. Their example was soon followed by the smaller proprietors, and, under the wise patronage of the "Select Society" of Edinburgh founded in 1754, the area of forest land augmented rapidly, so that in 1812 Scotland possessed, besides 500,000 acres of natural forest, about 400,000 acres of plantations.

The year 1815 marks a pause in the work of replanting which had been so vigorously begun. We do not pretend to enter here into the various causes which led to this economical phenomenon, but it is certain that the laws of 1686, on the constitution of landed properties in Scotland, exercised a baneful influence on the rational cultivation of the soil. The Scottish Parliament in vain sought to counteract the Draconian regulations of these laws, the principal effect of which was to cause the proprietors to look on themselves as only life-tenants of the entailed estates, and consequently to take but a very slight interest in the improvement of the soil and the augmentation of its pecuniary value.

From the moment the planting ceased the area of woodland diminished, and necessarily so, for in any forest where sheep have free entrance, the removal of a tree, whether by the axe of the woodcutter or by the violence of the wind, causes an empty space which can only be refilled by resorting to artificial means. It is thus that the returns of 1872, as compared with those of 1812, show a diminution of some 200,000 acres in the area of forest land in Scotland. Whether it was a portion of the old natural forests, or the newly-planted ones that had disappeared during this period of 60 years, the documents extant do not show. There is, however, good reason to suppose that both suffered equally in this respect. For, on the one hand, the

construction of the Highland Railway necessitated the employment of a large number of sleepers, which could be procured from the woods of from 50 to 80 years of age, along the line of route; and, on the other hand, the increased facilities of transport, and the scarcity of wood in England, gave an unexpected value to certain tracts covered with birch, and so tempted many of the proprietors to cut down the old forests composed of this species.

In 1870, the work of replanting seems to have recommenced with increased ardour, and on all sides may be seen young plantations vigourously striving to fill up the gap which separates them from those of half a century's standing.

* * * * * * * *

As foresters of the Continental school, accustomed to live among forests regularly managed and having for their sole object the production of timber, we had no little difficulty in understanding the widely different motives which actuate forest cultivation in this country. Everywhere we found the forests fenced in on all sides with walls and hedges; and, as a matter of fact, the forester or agent generally carries the keys of the gates in his pocket. We learnt that these costly enclosures were erected, not for the purpose of keeping out the cattle and deer, as in the Jura, but for the purpose of keeping them in; it appeared to us like shutting up the wolf in the sheep-fold.

We were also struck by the monotonous regularity in the height and age of the trees, unmistakeable sign of their artificial origin and want of methodical management. The forest, here left to its own devices, continues growing just as the hand of man has planted it; the undergrowth is constantly grazed down by the sheep and cattle, and nature, in spite of the immense resources at her disposal, is quite powerless to modify the work of the planter, or repair the errors committed by woodcutters.

When, under such circumstances, the time arrives for the trees to be cut down, or should they be uprooted by a hurricane, the forest disappears in its entirety, owing to the total want of young growth which is necessary as a link between the old forest and the new one which ought to be created. Such, at least, appears to us to be the case in all the forests that we visited in the valley of the Tay and its tributaries, and further north, near the foot of Cairngorm.

Not far from a mansion to which are attached some of the pleasantest recollections of our tour, we saw the remains of a noble forest, which some 20 years ago had been cut down and converted into railway sleepers. The sight of the huge stumps, blackened by time with their gnarled roots twisting themselves over the ground, gave us the idea of some vast charnel-house. This scene of utter ruin was indeed a sad spectacle, though the present proprietor is doing his best to again cover his estate with timber; with a better system he might have been spared both time and expense. It is easy in Scotland to perpetuate a forest by natural means, and of this a practical proof was given us in two forests which we visited; the one near Grantown, in Strathspey, the other at Beauly. In these the results obtained under the skilful and intelligent direction of the gentlemen who manage these forests for their employers form a striking example of what may be done in the way of reproducing forests by natural means. In fact, nothing had been neglected which even the most critical forester could desire; the gradation of age was here complete, and the reservation of especially vigorous trees, of known pedigree, duly carried out.

The *modus operandi* here pursued consists simply in the exclusion of the sheep and deer, in the judicious thinning out of the growing crop, and in the removal of the mature seed-bearing trees, by successive fellings, as the young forest grows up and acquires more vigour.

Nevertheless, we would not have it be supposed that the sheep need be absolutely debarred from all grazing in the forest; it is only in those portions where the undergrowth is very young that the damage caused is irreparable. We feel convinced that if, every year, certain portions of the forest best capable of supporting it were marked out for grazing, the quality of the pasture would be greatly improved, and the heather would quickly disappear under the cover.

It is an established fact, beyond all contradiction, that on any soil, whatever its geological origin, a complete covering of forest vegetation will kill the heather as soon as the trees reach the age of between 30 and 40 years. Suppose then that 120 years be the term fixed for the existence of the trees in any portion of the forest, and that the trees of 100 years of age and over are reserved, there would still be one-half of the forest always open to the sheep, and the other closed. But, at the same time, it is certain that this open half, owing to its superior quality, will furnish pasturage for at least twice as many head of cattle or sheep as the same quantity of moorland.

Although, under ordinary conditions, the generation of a forest will be sufficiently assured by the exercise of a discreet control over the grazing, something more than this must be done if it is desired to turn the land to the best possible account. It is therefore a matter of regret that nothing has yet been done to place forest management in Scotland on a sound economic basis.

The productive powers of the soil and of the climate have been made use of by able and intelligent planters, who have thereby enabled nature herself to accumulate a considerable store of timber; but all this wealth is exposed to the carelessness of some and to the ignorance of others, until the hand of a forester manages it properly and places it on the only sound economic principle of all agricultural and forest property,—*a constant annual revenue and a constant improvement in production.*

FORT WILLIAM,
The 9th March 1883.

R. A. SARGEAUNT, *Major, R.E.,*
Offg. Under-Secretary.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

ANNUAL REPORT ON THE OPERATIONS OF THE POST OFFICE OF INDIA, 1881-82.

No. 1142, dated Fort William, the 2nd March 1883.

RESOLUTION.—By the Government of India, Department of Finance and Commerce.

Read—

Report on the operations of the Post Office in India for the year 1881-82.

RESOLUTION.—The administration of the Post Office has continued to be marked by steady progress.

2. From 1st January 1882, money order exchanges were introduced with Victoria, Tasmania, China, Japan, the Straits Settlements, and Mauritius; and a new parcel post exchange came into operation with China. The reduction of the registration fee on inland book and pattern packets from four to two annas, which was sanctioned in 1879, took effect from the 1st August 1881, and represents from a financial point of view the most important event of the year. A new system was introduced under which the postage on newspapers to be transmitted by the inland post can be prepaid in cash; and a reduced rate of postage of $\frac{1}{4}$ anna only was at the same time allowed for all light newspapers posted under this system. Telephone offices under the charge of the local postmasters were experimentally established at Hazaribagh and False Point, and a set of rules was framed for working the telephone through the agency of the Post Office. Rules for the guidance of the public and the Postal Department, in regard to the important subject of Post Office Savings Banks, were prepared, but as Savings Banks were not opened until April 1882, a description of the measure and its results will find a place in the report for next year.

3. The number of Post Offices in existence at the close of the year was 4,819, as compared with 4,521 at the end of the previous year; and of letter boxes 7,190, as compared with 6,720, the number at the close of 1880-81. The number of village postmen was increased from 2,833 at the close of 1880-81 to 3,241 at the close of the year under report. A special and satisfactory feature of this development has been the increased employment of village schoolmasters in postal work.

4. The total number of articles given out for delivery during the year was 169,160,000, an increase of upwards of 6½ per cent. on the previous year's returns. The highest percentage of increase, 13 per cent., is found under book and pattern packets; while the smallest percentage, about 5 per cent., is under newspapers. The number of paid letters given out for delivery was 99,144,000, an increase of 3·19 per cent.; of unpaid letters, 28,747,000; of post-cards, 21,953,000; of newspapers, 12,526,800; and of book and pattern packets, 2,387,000. Post-cards, which were introduced into India about four years ago, have rapidly increased in popularity, and show an increase of 48 per cent. during the year. It is remark-

able that this rapid increase has not been accompanied by any decrease in the number of letters. The number of registered letters has increased by 20 per cent., and contrary to expectation this increase has been simultaneous with a rapid increase in money order business. The decrease of 4 per cent. in the number of unpaid letters is a satisfactory feature, although the number of unpaid letters sent through the post, 28,747,000, is still very large. Including money orders, 171,804,000 articles were sent out for delivery. Of this number the proportion of articles delivered at once was about 96½ per cent.; but the greater part of the remainder were subsequently disposed of, as the percentage of articles ultimately deposited as dead amounts to only ·36 on the total, or under ½ per cent.

5. It appears from the table given in paragraph 20 of the report that the average of letters and other articles per head of the population of British India is only ·67. The Post Office is used most extensively in Scinde and Bombay, while Behar and Central India are most backward in this respect. It is shown that these figures correspond to a great extent with the development of commerce and education in the different Provinces of the Empire. Bengal, including Behar and Eastern Bengal, takes only the eighth place, and the Director General attributes this in some measure to the restrictions imposed by the Zemindary Dak Act.

6. The parcel post continues to maintain a rapid rate of development, the number of foreign parcels received by the Post Office having increased 300 per cent. since 1873-74.

7. A new Dead-Letter Office was opened at Karachi for the Province of Scinde, and a new Railway Mail Service Enquiry Office at Ajmere. The proportion of articles undisposable and deposited as dead continues to diminish in a satisfactory manner, the total number of articles having fallen from 673,108 in 1880-81 to 621,451 in 1881-82.

8. The gross value of ordinary postage labels sold was Rs. 45,93,551, a fall of Rs. 4,26,935, as compared with the previous year's receipts. The value of service postage labels sold was Rs. 13,91,105, an increase of Rs. 57,559. The sales of half-anna envelopes and half-anna labels constitute more than half the receipts under ordinary postage labels. The fall in the receipts under ordinary postage labels is shown to be merely nominal, being counter-balanced by increased receipts in cash. Up to the year 1880-81 the tendency was for the receipts in cash to diminish, but owing to an alteration by which money order fees and parcel postage are now credited in cash instead of in stamps, the tendency since 1880-81 has been towards an increase in the proportion of cash receipts and a decrease in the proportion of stamp collections.

9. Satisfactory expansion has again been recorded in the issue and payment of money orders, a branch of Postal business which was taken over from the Treasuries by the Post Office in January 1880. Compared with the previous year, the value of inland money orders issued has improved to the extent of Rs. 1,16,23,447, or more than 25 per cent.; while the commission realised is larger by Rs. 1,43,097. The number of money orders issued was 2,157,796 and the average amount of each Rs. 26-8, thus making an aggregate of about 5¾ crores of rupees. The statement showing the issues and payments in the several Postal circles discloses certain remarkable peculiarities. In Madras, the Punjab, Behar, and Rajputana, the value of the applications for money orders nearly corresponds with the value of the money orders paid. In Eastern Bengal, the Central Provinces, British Burma, Scinde, Central India, and Assam, the value of applications is greatly in excess of payments; while

in Bengal, the North-Western Provinces, Oudh, and Bombay, payments are greatly in excess of applications.

In Foreign money orders a small, but not unsatisfactory, increase is recorded. But the value of the orders issued in India to all countries amounted to £103,251 only; while the value of Foreign money orders paid in India was only £8,183. The average rate of exchange was, for outward and inward transactions, 1*s.* 7*d.* 2·4*f.*, as compared with 1*s.* 7*d.* 3·48*f.* in the previous year.

Exchanges with Ceylon, the Straits, China and Japan, and the Mauritius are effected in Indian currency. The exchange with Ceylon, begun in October 1880, shows a considerable development.

10. The value-payable post from a small beginning is with a reduced rate of commission rapidly developing into an important branch of postal business. The number of articles sent under the system in 1881-82 was 99,416, an increase on the previous year of 101 per cent., and the value of the articles Rs. 10,80,543, as compared with Rs. 5,76,574 in 1880-81. The amount of commission realised was Rs. 19,838, an increase of 48 per cent. on the previous year's receipts. The value of articles sent through the post under insurance was Rs. 7,65,23,221, which, as compared with the previous years, gives a slight decrease of 2·8 per cent. The insurance fees reached Rs. 1,90,980, and the losses amounted to Rs. 13,083.

11. The number of complaints from the public fell from 6,463 to 5,433, the decrease having taken place mainly in Bengal. A large proportion of the decrease in Bengal took place in Calcutta, and is ascribed by the Post Master General to increased efficiency due to a revision of the establishment of the Calcutta Post Office, and to the exertions of the Presidency Post Master. Of the complaints made, 273 related to the loss of articles posted in registered letters or parcels, and in only 51 instances was blame ascribed to members of the Postal Establishment. A remarkable instance of the carelessness with which valuable property is sometimes sent through the post and the temptations to which Postal servants are thereby exposed, is given in the report. A registered letter received in a damaged condition through the flimsiness of the envelope was found to contain 270 currency notes for Rs. 1,000 each, which had been sent uninsured.

12. The number of highway robberies, 31, shows a satisfactory decrease on the number, 49, recorded in the previous year. Nine of these robberies took place in the North-Western Provinces and seven in Rajputana, in addition to three attempts.

13. The total strength of the Postal establishment in India is stated to be 33,568 persons, as compared with 31,053 persons in the previous year.

14. The revenue from the purely Postal branch of the Department amounted to Rs. 87,04,259, an increase of Rs. 1,70,664 on the receipts of the previous year, and the expenditure to Rs. 79,58,765, an increase of Rs. 5,44,640. The receipts from the non-Postal branches amounted to Rs. 6,07,483, and the disbursements to Rs. 6,23,697.

The net result of the operations of the purely Postal Department was a surplus of Rs. 7,45,494, as compared with Rs. 11,19,470 in 1880-81, notwithstanding the reduction of the registration fee and of the postage on light newspapers. But the addition of items chargeable against the Post Office, which

do not appear in the regular accounts of the Department, converts this surplus into a net deficit of Rs. 5,61,647.

15. The thanks of the Government of India are due to Mr. Hogg for his able administration of the Department.

16. The work done by the officers* of the Department mentioned in paragraph 58 of the Report also deserves public acknowledgment.

* Mr. Fanshawe.
Lala Doulat Ram, Rai Bahadur.
„ Ramoutar Sing.
Babu Herambo Chunder Mukerji.

ORDERED, that this Resolution be communicated to the Director General of the Post Office of India, and that the Report and the Resolution be published in the Supplement to the *Gazette of India*.

D. M. BARBOUR,
Secretary to the Govt. of India.

ANNUAL REPORT

ON THE

OPERATIONS OF THE POST OFFICE OF INDIA

FOR THE YEAR

1881-82.

No. 11009, dated 30th December 1882.

From—F. R. HOGG, Esq., *Director General of the Post Office of India,*
To—*The Secretary to the Government of India,* DEPARTMENT OF FINANCE.

I HAVE the honour to submit the Annual Report on the operations of the Post Office of India during the year 1881-82.

2. The following eight countries joined the "Universal Postal Union," *viz.*:—Chili, Paraguay, Guatemala, Hayti; Barbadoes, St. Vincent, the United States of Columbia and Hawai.

3. Money Order exchanges were introduced with the countries of Victoria, Tasmania, China (including Japan), the Straits Settlements and Mauritius, with effect from the 1st January 1882.

4. A new parcel post exchange was arranged with China, which also began to work from the 1st January 1882.

5. The subsidy for the maintenance of weekly communication with the United Kingdom and foreign countries is paid by the British Government, and all the sea postage realised by the Indian Post Office is credited to Great Britain as a set-off against the subsidy. The revenue of this service falls short of its cost and India's share of the net loss since the year 1869-70 is shown in the margin.

Communication by Sea between India and Europe by means of the contract services of the Peninsular and Oriental Steam Navigation Company.

YEAR.	Net loss on the foreign mail service charged against India.	REMARKS.
	£	
1869-70	73,110	Adjusted amounts. The increase in 1876-77 and following years was caused by the reduction of postage carried out on 1st July 1876, when India entered the Union. The increase in 1879-80 is due to the reduction of postage introduced from 1st April 1879 under the Convention of Paris.
1870-71	69,150	
1871-72	68,110	
1872-73	61,072	
1873-74	54,770	
1874-75	57,170	
1875-76	53,125	
1876-77	66,685	
1877-78	70,749	
1878-79	71,051	
1879-80	88,160	The final calculation of the sums properly belonging to these years not having been received from London, the amounts shown have been estimated.
1880-81	71,051	
1881-82	**70,000**	

6. It was finally settled that the weekly contract steamer carrying the foreign mail should quit Bombay on Friday evenings during the fair season and on Tuesday evenings during the south-west monsoon.

7. Alluding to the disturbance caused to the Marine Post Office by the imposition of quarantine at Suez, the Post Master General of Bombay reports as follows:—

"The regular working of this branch of the service had been greatly interfered with during

the year by the quarantine restrictions at Suez. It was the object of the Post Office to prevent the mails from being brought into Bombay unsorted, but the uncertain action of the Egyptian authorities rendered it very difficult to make the necessary arrangements before hand. Finally, it was decided to limit the sea sorting to the voyage between Aden and Bombay and to utilize double sets for this purpose. The mail officers and their staff had to work under great disadvantages, as the space for sorting was limited and the work had to be done under great pressure and therefore without sufficient check. But the mails were always brought into Bombay disposed of, though the number of mistakes was necessarily larger than usual owing to the conditions under which the work had to be done."

8. Below will be found a list of Local Steam Services that existed at the close of the year:—

By the British India Steam Navigation Company.

(1.) Weekly communication between Calcutta and Rangoon *vid* Chittagong, Akyab, Kyouk-Phyoo, Sandoway and Bassein.	No. 1. Under a new contract with the local administration, Kyouk-Phyoo is now a weekly port of call throughout the year and Sandoway a weekly port of call during the fair season.
(2.) Weekly communication between Calcutta, Rangoon and Moulmein.	
(3.) Five-weekly communication between Rangoon, Penang and intermediate ports, the vessels running in connection with lines Nos. 1 and 4.	
(4.) Weekly communication between Moulmein and Singapore *viâ* Penang and Malacca.	No. 4. Fortnightly communication only is provided under the contract, the additional trips being performed by the Company on its own account.
(5.) Fortnightly communication between Madras, Rangoon and intermediate ports on the north-east coast.	
(6.) Weekly communication between Calcutta and Bombay, touching at intermediate ports on the Coromandel and Malabar coasts.	
(7.) Semi-weekly communication between Bombay and Karachi, with a weekly continuation to the Persian Gulf.	
(8.) Fortnightly communication between Aden and Karachi.	No. 8. Communication once in four weeks only is provided under the contract, the additional trips being performed by the Company on its own account.
(9.) Four-weekly communication between Calcutta and Port Blair with extensions to Camorta and Rangoon.	No. 9. This line is under the control of the Military Department, the consideration given being not in the form of subsidy but of guaranteed rates for the transport of Government stores.
(10.) Fortnightly communication between Rangoon, Tavoy and Mergui.	Nos. 10 and 11. Under contract with the local administration.
(11.) Weekly communication between Rangoon and Moulmein.	

By the Irrawaddy Flotilla Company.

(12.) Weekly communication between Rangoon, Mandalay and intermediate ports, with a monthly extension to Bhamo. Subsidy Rs. 5,000 per mensem.	Nos. 12 to 16. These lines are under the control of the local administration, the Post Office contributing Rs. 500 per mensem towards the subsidy for No. 13, and Rs. 125 per mensem towards the subsidy for No. 14.
(13.) Semi-weekly communication between Rangoon and Bassein. Subsidy Rs. 1,500 per mensem.	
(14.) Daily communication between Prome, Thyetmyo and Allanmyo. Subsidy Rs. 500 per mensem.	
(15.) Weekly communication between Rangoon, Pantanaw and intermediate ports.	
(16.) Semi-weekly communication between Henzada and Bassein.	

By other Agencies.

(17.) By the Burmese Steam Tug Company. Fortnightly communication between Moulmein, Tavoy and Mergui. Subsidy Rs. 1,500 per mensem.	No. 17. Under the control of the local administration.
(18.) By Apear & Co. (of Calcutta) and Jardine, Matheson & Co. (of Hong-Kong). Monthly communication between Calcutta, the Straits and Hong-Kong, the dates of departure being regulated primarily with reference to the Calcutta opium sales. No subsidy.	
(19.) By the Euphrates and Tigris Steam Navigation Company. Weekly communication between Busreh and Bagdad.	No. 19. Under the control of Her Majesty's Secretary of State for India; the subsidy is £300 per mensem. Steamers run in connection with line No. 7.
(20.) By the Peninsular and Oriental Steam Navigation Company. Fortnightly communication between Calcutta and Galle, touching at Madras.	Nos. 20 and 21. These are non-contract lines maintained by the Company on its own account in connection with the China and Australian mail services. The Post Office pays by weight for the conveyance of mails forwarded by these non-contract services.
(21.) By the Peninsular and Oriental Steam Navigation Company. Fortnightly communication between Bombay and Galle.	

NOTE.—Nos. 1 to 8 are under the control of the Indian Post Office, by which a subsidy of Rs. 7,25,000 per annum is paid.

9. A service by sea worked by local native boats is maintained by the Government of Ceylon between Point Calimere on the Indian side and Kankesanturai on the Ceylon side.

10. In the year 1879 the registration fee on inland book and pattern packets was reduced from 4 annas to 2 annas. This reduction was extended to all classes of articles, both inland and foreign, with effect from the 1st August 1881, and represents in a financial point of view the most important event of the year.

11. A new system was started, under which the postage on newspapers to be transmitted by the inland post can be prepaid in cash. And a reduced rate of postage of $\frac{1}{4}$ anna only was at the same time allowed for all light newspapers, not exceeding three tolas in weight, posted under this system.

12. Envelopes embossed with a $4\frac{1}{2}$-anna stamp, and two new postage labels of the value of 3 and $1\frac{1}{2}$ annas, were introduced, mainly for the prepayment of foreign correspondence.

13. A set of rules were framed for working the telephone through the agency of this Department; and telephone offices, under the charge of the local postmasters, were experimentally established at Hazaribagh and False Point.

14. Much consideration was devoted to the important subject of Post Office Savings Banks, and sets of rules were prepared for the guidance of the public and the instruction of the Department. But it was not till April 1882 that post offices were opened for the receipt of savings as deposits. Thus a description of the measure, together with a statement of its working results during the first 12 months, will find a place in the report for next year.

15. An increase was given to the pay of post masters, principally in the Province of Bengal, in the North-Western Provinces and in Oudh, the total cost of which exceeded Rs. 4,000 a month.

SECTION I.—POST OFFICES, LETTER-BOXES AND VILLAGE POSTMEN.

16. In Appendix No. I will be found for each postal circle the number of post offices, letter-boxes and village postmen existing at the close of the year under report as compared with the numbers of the previous year. An abstract is given on the margin. It exhibits great progress. Much has specially been done in the direction of entrusting schoolmasters with postal work. The Post Master General of Bengal states that "it is quite impossible to satisfy all the applicants who would like to have schoolmaster post offices in their villages."

	No. at close of 1880-81.	No. at close of 1881-82.	Increase.
Post Offices	4,521	4,819	298
Letter-boxes	6,720	7,190	470
Village Postmen	2,833	3,241	408

SECTION II.—POSTAL LINES.

17. Statistics relating to postal lines for each postal circle are contained in Appendix No. II. A summary for the whole of India is given on the margin. Extension has taken place under every head except that of "sea," the total increase being 917 miles.

YEAR.	Railway.	Mail cart, horse and camel lines.	Runners and boats.	Sea.	TOTAL.
	Miles.	Miles.	Miles.	Miles.	Miles.

SECTION III.—CORRESPONDENCE.

18. The correspondence returns are shown in Appendix No. III, of which an abstract appears on the margin. Each heading exhibits satisfactory growth. Comparing the newspaper statistics for the first six months with the corresponding period of the previous year, there appears a fall of 0·32 per cent. A similar comparison for the second half of the year gives an increase of 10·34 per cent. This sudden rise in the latter half of the year is doubtless due to the new system of paying newspaper postage in cash, coupled with the reduced rate for light papers introduced in November 1881. It may also be partially attributable to the repeal of the Vernacular Press Act in January 1882.

Year.	Letters (including Post-cards).	Newspapers.	Parcels.	Book and Pattern Packets.	Total.
1880-81 . .	143,538,105	11,942,304	1,080,868	2,105,579	158,666,856

Percentage of increase.	6·66	4·89	6·59	13·38	6·61

19. Letters and post-cards are subjected to a further analysis on the margin. The most noticeable point is the very large increase in the number of post-cards, the introduction of which into India dates only from July 1879. It is satisfactory to notice that the great and rapid popularity of post-cards has not been followed by any fall in the number of letters. Last year's report recorded a large decrease in registered letters to the extent of 10¼ per cent. But the reduction of the registration fee from four annas to two annas in August 1881 has now produced an increase of no less than 19·76 per cent. Contrary to expectation this increase in the number of registered letters has not affected the growth of the money order branch of this Department as a later section will show.

20. A census having been taken during the year under report, it is interesting to compare the extent to which the post office is used in the several parts of India, and the average correspondence per head to the population of each locality. A table follows in which this information is exhibited:—

Average of letters and other articles per head of population.

Postal Circles.	Population per census of February 1881.	Letters and Post-cards given out for delivery during 1881-82. Number.	Letters and Post-cards given out for delivery during 1881-82. Average per individual.	Articles other than Letters and Post-cards given out for delivery during 1881-82. Number	Articles other than Letters and Post-cards given out for delivery during 1881-82. Average per individual.	Total. Number.	Total. Average per individual.	Remarks.
Sind . .	2,413,823	3,375,311	1·39	336,921	·14	3,712,232	1·53	Excluding Beluchistan.
Bombay . .	23,166,845	28,918,475	1·25	2,777,363	·12	31,690,838	1·37	Including Baroda and Native States.
Punjab . .	22,712,120	19,486,151	·86	2,502,831	·11	21,988,982	·97	Including Native States and Khyber troops.
Bengal . .	38,232,204	24,085,255	·63	2,897,161	·08	26,982,416	·71	
Assam . .	4,881,426	2,709,134	·56	557,329	·11	3,266,463	·67	
British Burma. .	3,736,771	1,961,796	·52	546,797	·15	2,508,593	·67	
North-Western Provinces .	33,461,878	18,825,214	·56	2,244,228	·07	21,069,442	·63	Including Rampore and Native Garhwal.
Madras . .	46,382,151	25,353,787	·53	3,508,692	·07	28,862,479	·60	Including Hyderabad, Mysore, Travancore, Cochin and Coorg.
Central Provinces .	14,221,184	6,820,599	·48	653,949	·05	7,474,548	·53	Including Berar.
Eastern Bengal .	8,838,001	3,513,464	·40	430,179	·05	3,943,643	·45	
Oudh . .	11,387,741	4,234,287	·37	674,807	·06	4,909,094	·43	
Rajputana . .	10,729,114	3,513,751	·33	324,615	·03	3,838,366	·36	Including Ajmere.
Behar . .	22,416,656	6,834,521	·30	795,257	·04	7,629,778	·34	
Central India .	9,261,907	2,669,531	·29	361,846	·04	3,031,377	·33	
Total . .	253,891,821	152,296,276	·60	18,611,975	·07	170,908,251	·67	As no census figures are available for Beluchistan, the correspondence returns relating to that province have been omitted.

21. While the population of Sind is smaller than that of any other postal circle, its commerce is extensive. To this cause must be ascribed the comparatively high average per individual of the correspondence in that province. The natural average of the Punjab is increased by its numerous hill stations and by the presence of a large body of European troops. Recruits for the native army are also to a considerable extent drawn from the Punjab, which doubtless adds to the correspondence of that province. Bengal has the advantage of a presidency town containing the largest European population to be found in India; yet its correspondence per head is only about half that of Bombay. If to Bengal be added the postal circles of Behar and Eastern Bengal, the average per head of correspondence of all kinds falls to ·56, and Bengal would then occupy only the eighth place on a list of twelve circles. As pointed out in a later section, the restrictions imposed by the Zemindari Dâk Act tend to hinder the expansion of postal operations in the country which comprises the Lieutenant-Governorship of Bengal. In Assam the army and police contain numerous foreigners, and the European population of the province is also extensive. These causes, together with the use of imported labour, all add to letter-writing in a province where the education of the masses is very backward. The relatively high average of British Burma is due mainly to its commerce. Although education is far more advanced in that province than in any part of India proper, correspondence is not popular with the Burmans, who have never yet learned to appreciate the Post Office. When dealing with the Post Office in his report for the year 1880-81, the Chief Commissioner remarks that "nearly all the letters belong to the large seaport towns, and barely one letter in two hundred passes through the district post." It should be remembered that the correspondence returns given in this report are necessarily limited to articles delivered by post offices wholly or partially under the control of this Department. But besides Imperial Post Offices and District Post Offices under the management of officers of the Post Office, India contains several postal organisations in Native States and some postal systems in British territory, the control of which is entirely independent of the Imperial Post Office. Letters and other articles delivered under these organisations and systems find no place in the correspondence returns of this Department. This, of course, diminishes the real average per head in Rajputana, Central India and other similar places.

22. Another table is added which gives for each locality the percentage of population able to read and write. The figures are restricted to those entered in the census as "not under instruction and able to read and write," to the exclusion of the number recorded simply as "under instruction." Rajputana and Central India have been wholly omitted, as the necessary statistics for those postal circles are very imperfect. Without placing implicit reliance on the accuracy of these statistics, the results shown are nevertheless interesting.

Percentage of population that are able to read and write.

Postal Circles.	Population per census of February 1881.	Number entered in the census of February 1881 as able to read and write.	Percentage that can read and write.	Remarks.
British Burma . . .	3,736,771	733,568	19·63	
Bombay (including Baroda and Native States) . .	23,166,845	998,435	4·30	Excluding Baroda and Native States, the percentage is 4·45.
Madras (including Hyderabad Mysore, Travancore, Cochin and Coorg) . .	48,382,151	2,066,022*	4·27	Excluding the population of Travancore and Cochin, the percentage is 4·55.
Bengal	38,282,204	1,384,442	3·61	
Sind (excluding Beluchistan)	2,413,823	79,832	3·30	
Eastern Bengal . . .	8,838,601	280,781	3·17	
Carried over .	124,819,795	5,543,080	.....	

* The enumeration under this head for Cochin and Travancore not taken.

Postal Circles.	Population per census of February 1881.	Number entered in the census of February 1881 as able to read and write.	Percentage that can read and write.	Remarks.
Brought over .	124,819,795	5,543,080	.....	
Punjab (including Native States and Khyber troops)	22,712,120	585,213	2·57	Excluding the Native States, the percentage is 2·60.
North-Western Provinces (including Rampore and Native Garhwal)	33,461,878	815,400	2·43	Excluding Native States, the percentage is 2·46.
Oudh	11,387,741	251,496	2·20

	233,900,800	7,884,254	3·37	

* The enumeration under this head not taken in Feudatory States.

23. Foreign correspondence is included in the general correspondence returns; but it is separately dealt with in the subjoined statement. As regards the exchange with the United Kingdom, each heading gives an increase; while the increase of letters sent from India is very large. It may be interesting to add that 50,911 post-cards were sent from India to the United Kingdom against 33,425 received in the opposite direction. As the statistics of exchanges with foreign Europe are taken only once every two years, the figures for the year under report are the same as those for the previous year.

Foreign Correspondence.

		Estimated aggregate Numbers.		
		1880-81.	1881-82.	Percentage of Increase.
Despatched from India to the United Kingdom.	Letters (including Post-cards) .	2,242,289	2,687,915	19·8

* Ceylon retains its own collections, and no share is allowed to the Indian Post Office.

	No. of foreign parcels.
1873-74	21,923
1874-75	25,563
1875-76	35,819
1876-77	45,357
1877-78	59,183
1878-79	69,763
1879-80	73,211
1880-81	80,257
1881-82	**88,840**

25. From the marginal figures, it will be seen that the foreign parcel post continues to maintain a rapid rate of development.

26. The correspondence entered on the margin of paragraph 18, was disposed of in the following manner, which shows that the proportion of articles delivered to the whole was about 96½ per cent. :—

Sent out for delivery (including 2,645,129 Money Orders)	171,804,952
Received back undelivered	5,991,997
Balance actually delivered	165,812,955
Sent to Dead Letter Offices	2,400,603
	168,213,558

NOTE.—Of the number received back undelivered, some are subsequently delivered under re-issue, the remainder being sent to Dead Letter Offices.

27. *Dead Letter Offices.*—A new Dead Letter Office was opened at Karachi for the Province of Sind and a new Railway Mail Service Enquiry Office at Ajmere. Statistics relating to the working of the several Dead Letter Offices and Enquiry Offices are given in Appendix No. IV of which the following is

an abstract. The proportion of articles undisposable and deposited as dead continues to diminish :—

Dead Letters.		Number.		Percentage.	
		1880-81.	1881-82.	1880-81.	1881-82.
Total number of articles received in Dead Letter Offices		3,301,154	3,124,540		
	1880-81. 1881-82.				
Deduct—					
Articles issued by Dead Letter Offices for delivery to the addressees or senders and received back again as undeliverable	170,308 153,868				
Articles transferred to other Dead Letter Offices	766,296 756,286	936,604	910,154		
Net receipts to be disposed of by the Dead Letter Offices		2,364,550	2,214,386	100	100
Articles disposed of by the Dead Letter Offices, less the proportion of articles returned undelivered.	Disposed of by redirection to addressees	341,308	353,509	14·43	15·96
	Disposed of by return to senders	1,350,134	1,239,426	57·10	55·97
Articles undisposable and deposited as dead		673,108	621,451	28·47	28·07

28. *Postage Labels.*—Statistics relating to the sale of postage labels appear in the Appendices numbered V and VI, of which an abstract is given below. Notwithstanding the great success of inland post-cards, the demand for half-anna envelopes continues still to increase, the number sold during the year having risen from 37,898,120 to 42,717,382. As was to be expected, the reduction of the registration fee has augmented the sale of two-anna labels and diminished that of four-anna labels.

ORDINARY POSTAGE LABELS.		½-anna Post-cards.	1½-anna Foreign Post-cards.	½-anna Envelopes.	1-anna Envelopes.	¼-anna Envelopes.	½-anna labels.	1-anna labels.	2-anna labels.	3-anna labels.	4-anna labels.	6-anna labels.	8-anna labels.	12-anna labels.	1-rupee labels.	Gross Value.

29. Although there has been a fall of ₹4,26,935 in the gross value of ordinary postage labels sold, this fall has been more than made up by increased cash receipts. Attention is invited to the following table, which exhibits the proportion of revenue collected in stamps and cash for the last eight years. There is a steady diminution in the proportion realised in cash, coupled with an augmentation in that derived from stamps up to the year 1880-81, when the cash proportion rises and the stamp proportion falls. This change is still more marked in the year under report. It is due, as explained in previous reports, to an alteration under which money-order fees and parcel postage are credited in cash instead of in stamps. And the recently introduced plan of prepaying newspaper postage in cash must tend still further to swell the cash receipts at the expense of stamp collections.

	1874-75	1875-76	1876-77	1877-78	1878-79	1879-80	1880-81	**1881-82**

30. Last year's report referred briefly to a revision of postage labels of all denominations. This revision consisted in an extension to Indian postage stamps of the system of manufacture employed for the new English 1*d.* stamps, at a considerable saving of cost, with special precautions designed to guard against fraud. The size of the labels were also increased to that of the English pattern, and a five-pointed star substituted as a water mark for the previously existing elephant's head. New colours were adopted as shown in the margin. The 12-anna stamp was abolished, and two new descriptions of label introduced of the value of 1½ anna and 3 annas respectively. And the cost of manufacture was reduced from 1*s.* 0½*d.* to 6¼*d.* per 1,000. During the year under report, the new stamps were not received in the country.

Value of postage label.	Colour of postage label	Remarks.
½ anna . . .	Deep green.	The colours chosen for the ½-anna, the 9 pie and the 2-anna stamps were made to harmonise with the colours used for stamps of corresponding values in countries belonging to the Universal Postal Union.
9 pies . . .	Carmine.	
1 anna . . .	Purple brown.	
1½ annas . . .	Green brown.	
2 ,, . . .	Bright blue.	
3 ,, . . .	Orange.	
4 ,, . . .	Olive green.	
6 ,, . . .	Citron.	
8 ,, . . .	Purple.	
1 Rupee . . .	Grey.	

SECTION IV.—DISTRICT POST.

31. The district post was originally designed to supply the need for establishing official communication between the head-quarters of each district and the police and revenue stations in the interior. Funds for this purpose have always been provided either by the imposition of local cesses or by grants from Imperial revenue. Year by year the Imperial Post advances more and more into the interior of the country. It takes over and improves the old district post establishments, and applies the funds thus liberated towards further rural post extension. One common method of utilising district post money is by the employment of itinerant postmen who collect and deliver correspondence at outlying villages. Another method is the opening of small post offices under the management of local residents. Such is the course followed in most parts of India. But in Bengal the proceeds of the zemindari dâk cess can only be expended on runners' lines or on post offices at police stations. Thus it is impossible to spend the money provided for district post expenditure in the way best calculated to improve the working of that organisation. Progress

under such a system can hardly be expected. For every step of the Imperial Post in the direction of taking over zemindari dâk burdens reduces by so much the income available for district post expenditure. This Department is thus offered no inducement to take over and improve the district post establishments in Bengal. Other minor difficulties also exist which hamper the administration of the district post in Bengal and tend to retard postal progress. A great deal of attention was bestowed on this subject by the Post Master General, Bengal, who proposes fresh legislation, the main features of which are the stereotyping of the existing rate of cess, the abolition of the present dual system of control and the removal of the prohibition against the employment of rural postmen out of the cess. The question is one of no small importance to the inhabitants of Bengal.

32. At the instance of the Chief Commissioner of British Burma, the management of the district post in portions of the Pegu and Irrawaddy Divisions was taken over by the Deputy Post Master General working under the orders of the local administration. This change was followed by the opening of 23 new post offices and 74 letter-boxes and by the entertainment of 22 village postmen. Early in the year the district post throughout the North-Western Provinces was subjected to a thorough revision.

33. Figures relating to the district post will be found in the following statement. But owing to the absence of a central office of account and to the difference of system followed in the several localities concerned, the statistics cannot be relied on as complete.

District Post.

Postal Circles.		Number of District Post Offices and Receiving Offices.	Number of District Post Village Postmen and Postmen.	Number of District Post Letter-Boxes.	Distance in miles of District Post Lines.	Expenditure.	Grant from Imperial Revenue.	Local Cess.	Articles received from the Imperial and District Posts for delivery by the District Post.	Articles posted in the District Post for despatch to the Imperial or District Post.	Articles returned by the District to the Imperial Post undelivered.	Percentage of those returned on the total number received for delivery by the District Post.

(a) Excluding one post office excess shown in 1880-81.
(b) Including 11 miles of district post lines less shown in 1880-81.
(c) Including 16 post offices, 4 village postmen, 6 letter-boxes, and 105 miles of district post lines of Coorg Anchè Post.
(d) Includes ₹5,700 on account of Coorg Anchè Post.
(e) Includes ₹4,792 on account of Coorg Anchè Post.
(f) Including one village postman less shown in 1880-81.
(g) Including one village postman less shown in 1880-81.
(h) Includes ₹54,036 erroneously shown in 1880-81 as grant from Imperial Revenue.
(i) On purely district post establishment ₹39,653 in 1880-81 and ₹91,016 in 1881-82, besides an annual subsidy for the Dera Ismail Khan and Chichawatni hill-cart line of ₹18,466.
(j) The post offices and lines in Hanthawaddy, Tharawaddy, Amherst and Shwegyeen districts were placed under control of this Department during the year.
(k) The distance in the rainy season was 917 miles in 1880-81 and 946 miles in 1881-82.
(l) Including ₹2,604 contribution from Frontier Police Funds.

SECTION V.—MONEY ORDERS.

Inland Money Orders.

34. In January 1880 the business of issuing and paying money orders was taken over by the Post Office. This transfer was immediately followed by a very large accession of business. Satisfactory expansion has now again to be recorded, as the marginal abstract will show. Compared with the previous year, the value of inland money orders issued has improved to the extent of ₹1,16,23,447 or more than 25 per cent., while the commission realised is larger by ₹1,43,097 than it was in 1880-81. ₹26-8 is the average amount of each order, and the aggregate of all the 2,157,796 orders issued falls not far short of $5\frac{3}{4}$ crores of rupees. The number of money order offices has been increased from 5,201 to 5,421, being an addition of 220 offices. A statement, showing the issues and payments in the several postal circles, is given below :—

Inland Money Orders.	Total number of Money Orders issued.	Total value of Money Orders issued.	Commission realised.
	No.	₹	₹
During the year 1878-79, being the last complete year prior to transfer to the Post Office	245,468	89,24,722	1,05,873
During the year 1880-81, being the first complete year subsequent to transfer to the Post Office	1,604,174	4,57,08,580	5,35,976
During the year 1881-82	**2,157,796**	**5,73,32,027**	**6,79,073**
Percentage of increase over the year 1880-81	34·51	25·43	26·70

Foreign Money Orders.

New South Wales, South Australia, Western Australia, Queensland } with effect from the 1st April 1881.

Victoria, Tasmania, Mauritius, Straits Settlements, China and Japan } with effect from the 1st January 1882.

35. Nine new exchanges have come into force during the year, as indicated in the margin.

36. Detailed below will be found the transactions with those foreign countries whose exchanges take place in sterling money. It will be seen that the orders issued by India largely out-number its payments, and that there is a satisfactory increase under both headings :—

SECTION VI.—INSURANCE AND VALUE-PAYABLE.

Insurance.

40. Although there has been a considerable increase in the value of articles sent in insured letters, the value of parcels insured has diminished, as the subjoined statement will show, the net result being a decrease of 2·84 per cent. This fall is due to the operation of the partial insurance system, under which risks arising out of highway robberies in Native States are not accepted by the Post Office.

Year.	Value insured.			Insurance fees.
	Letters.	Parcels.	Total.	
	₹	₹	₹	₹
1877-78, last quarter being the commencement of the system	6,66,320	18,60,191	25,26,511	13,230

Total	10,404 12 10	13,083 13 11

41. Losses of all kinds connected with the insured mail, as well as the recoveries and other deductions, are shown on the margin.

Value-payable.

42. Under the system termed "value-payable," the Post Office receives articles undertaking to recover from the addressee on delivery and remit to the sender a sum of money under certain limits and restrictions. Owing to a change of system no figures were available when last year's report was written; but statistics have since been obtained and are given below. From a small beginning the system is rapidly developing into an important branch of postal business.

	Number of articles sent under the value-payable system.	Value declared for realisation.	Commission.
		₹	₹
1877-78 (from the commencement of the system in December 1877) 4 months	413	6,721	195
1878-79	7,408	1,32,109	3,942
1879-80	25,589	3,49,857	11,498
1880-81	49,389	5,76,574	13,413
1881-82	**99,416**	**10,80,543**	**19,838**
Percentage of increase over the year 1880-81	101·29	87·41	47·90

Note.—On the 1st August 1880 the rate of commission for value-payable articles was reduced to the money order scale being about one-half that of the previous scale.

SECTION VII.—MISCELLANEOUS.

43. *Security taken from Post Office servants.*—As explained in previous reports, security is taken from postal servants under a system of subscription controlled departmentally. A statement showing the operations of the security fund is given below :—

Receipts and charges of the Security fund.

Total balance	1,81,880	2,10,015

44. *Complaints from the public*, which came to the notice of the heads of the several postal circles, fell from 6,463 to 5,433. This decrease of 1,030 complaints took place mainly in Bengal. In Calcutta alone there was a diminution of 583 complaints, which the Post Master General ascribes to increased efficiency due to the extensive revision of the Calcutta Post Office establishment referred to in last year's report, and to the exertions of the Presidency Post Master.

45. An analysis of complaints relating to the loss of articles posted in registered letters or parcels is given below. The total number of such complaints fell from 295 to 273, and in only 51 instances was blame ascribed to members of the postal establishment:—

	Registered letters.		Parcels.		Total.	
	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.
I.—Cases in which the enquiry showed either that no loss had occurred, or that the loss had not occurred through the fault of postal officials.	79	81	49	82	128	163
II.—Cases in which the postal establishment was proved to be in fault, or in which there was strong ground for believing it to be so.	26	26	33	25	59	51
III.—Cases in which no definite conclusion was arrived at	48	25	60	34	108	59
Total	153	132	142	141	295	273

Class I includes 8 insured cases under the head of registered letters, and 18 insured cases under the head of parcels.
Class II includes 8 insured cases under the head of registered letters, and 8 insured cases under the head of parcels.
Class III includes 8 insured cases under the head of parcels.

46. Appendix No. VIII contains a statement of offences punishable by law committed by postal officials. An abstract is given below. It shows a further diminution of crime.

	1880-81.	1881-82.
Number of legal convictions	194	159
Number of cases punished departmentally	67	58
	261	217

47. Illustrative of the temptation to which postal servants are sometimes exposed through culpable carelessness on the part of the public, the following case may be instanced. A registered letter having reached Jessore in a damaged condition, was there examined by the superintendent of the division and found to contain 270 currency notes for ₹1,000 each, the total value being ₹2,70,000. These heavy and valuable enclosures had been put in an envelope made of thin Bally paper, and posted without the protection of insurance, the only precaution taken being the addition of a piece of paper containing an inventory of the notes. A curious instance of swindling by means of the Post Office has been reported to me also from Bengal. Under the assumed name of a non-existing firm, a man advertised from Barrackpore for a large number of clerks, specifying the salaries that would be given, and enjoining applicants to enclose one anna for a reply. Hundreds of applications, together with the stamps, were received by the advertiser. These applications were all answered by the one stereotyped reply "writing not approved" enclosed in a half-anna envelope. The man is said to have made from ₹15 to ₹18, before the imposture was discovered. He further imposed upon credulous correspondents by undertaking to get them desirable appointments, if a sum of money was paid to him in advance. From one Bengali, certainly, he obtained a remittance of ₹35. The offender was prosecuted and punished.

Postal Circles.	1880-81. Number of Highway Robberies.			1881-82. Number of Highway Robberies.

	Total	17	6		14	4

Total (British) 17, besides 6 attempts. Total (Foreign) 14, besides 4 attempts.

50. In the North-Western Provinces cases (9 in number), convictions were obtained in four instances and the greater part of the stolen property was recovered. In the Rajputana cases (7 robberies and 3 attempts), convictions were obtained in five instances, but no property was recovered. In the Punjab cases (3 in number), no convictions were obtained, and portions only of the plundered mails were recovered. In the Central India cases (3 in number), there were no convictions, and the amount of property recovered was very small. In the remaining cases (9 robberies and 7 attempts), there were only two instances of conviction, but the mail plundered was for the most part recovered.

51. One of the Punjab robberies was attended with the murder of the runner who carried the mail. In the Beluchistan case, the horseman conveying the mail was killed and a similar calamity befell a mounted escort in one of the Rajputana instances. Another runner lost his life in the Terai districts of the North-Western Provinces by an unfortunate accident. He was mistaken for a thief, and shot dead by the jemadar in charge of the Sultanpur Police Station.

52. *Numerical strength of the Postal Establishment.*—The strength of the postal establishment is given in the marginal abstract. Details for each postal circle will be found in Appendix No. IX.

Postal Officials.	1880-81.	1881-82.
Superintendents and Inspectors of Post Offices	264	283
Postmasters, Sub and Branch Post Masters	4,223	4,501
Clerks	4,048	5,220
Postmen and other servants	7,489	8,108
Road Establishment	12,217	12,308
Village Postmen	2,812	3,148
Total	31,053	33,568

SECTION VIII.—NON-POSTAL BRANCHES OF THE DEPARTMENT.

53. *Government Carrying Agency.*—This agency is commonly known by the name of the Government Bullock Train. During the year, the branch line to Gwalior was abolished. At the termination of the year the service consisted of a main line,—Calcutta to Hajishah (rail), and onwards to Peshawar (bullock train), with branches to Simla (bullock train) and Ludhiana to Lahore *viâ* Ferozepore (bullock train).

54. *Passenger Services* on mail cart lines under the control of this Department were lessened by the reduction of the section between Hajishah and Attock, the transfer of the Kohat and Khushalgarh Line to local management, and the introduction of contract arrangements on the Bareilly and Ranibagh Road. Thus the two following passenger service lines alone remained at the close of the year under review:—

	Miles.
Attock to Peshawar	45
Umballa to Simla	96

SECTION IX.—FINANCIAL RESULTS.

55. Notwithstanding the reduction of the registration fee and the introduction of a cheaper rate of postage for light newspapers, the receipts of the Department have improved by ₹1,70,664, while the purely Postal Department has yielded a net revenue of ₹7,45,494. Disbursements have increased to the extent of ₹5,44,640. The rapid rate at which the Department is expanding, the heavy pecuniary responsibilities it undertakes, especially in its money order and insurance branches, and the growing tendency to impose on the Post Office fresh classes of business, necessarily lead to additional expenditure. But this expenditure is not to be regretted if it adds to the use which the public derive from the Post Office. Owing to railway extension, there has been a large diminution in receipts under the head of Non-postal Branches. Below is given a review of the financial results of the year:—

	1880-81.	1881-82.
Purely Postal Service.	₹	₹
Receipts including sale of Service Postage Stamps	85,33,595	87,04,259
„ excluding „ „ „	71,92,446	73,15,330
Disbursements	74,14,125	79,58,765
Net revenue including sale of Service Postage Stamps	11,19,470	7,45,494

	1880-81.	1881-82.
	₹	₹
NON-POSTAL BRANCHES.		
Bullock Train.		
Receipts	10,04,299	3,70,269
Disbursements*	9,66,150	3,57,887
Surplus ..	38,149	12,382
PUNJAB MILITARY VAN DÂK.		
Receipts	2,51,137	39,586
Disbursements	3,33,059	68,182
Deficit .	81,922	28,596
PASSENGER SERVICE ON MAIL CART LINES.		
Receipts	2,03,294	197,628
Disbursements	2,03,294	197,628
Contract subsidies to local steamers employed to a large extent on general and military considerations but paid entirely through the Post Office as a matter of convenience.		
Disbursements	7,09,281	7,12,000

These results may be summarised briefly as follows :—

	1880-81.	1881-82.
	₹	₹
A net revenue in the purely Postal Department of	11,19,470	7,45,494
A net surplus in the Bullock Train Department of	38,149	12,382
A net deficit in the Punjab Military Van Dâk of	—81,922	—28,596
	10,75,697	7,29,280

56. On the margin is entered a list of items chargeable against the Post Office, which do not appear in the regular accounts of the Department. Compared with the previous year, this list shows a decrease of Rs. 1,05,449. If these items be added to the disbursements already dealt with, the working of the purely Postal Department shows a deficit of ₹5,61,647, instead of a surplus ₹7,45,494.

	1880-81.	1881-82.
	Rs.	Rs.
Cost of stationery supplied by the Superintendent of Stationery	1,04,748	1,33,107

SECTION X.—GENERAL REVIEW OF PROGRESS.

YEAR.	Comparison of number of letters and newspapers (those of 1855-56 being represented by 100).	Comparison of revenue from private correspondence (that of 1855-56 being represented by 100).	Comparison of expenditure (that of 1855-56 being represented by 100).
1855-56, first complete year of new rates	100	100	100
1867-68, thirteenth ditto	207	237	161
1868-69, fourteenth ditto	228	258	182
1869-70, fifteenth ditto	253	246	190
1870-71, sixteenth ditto	257	235	175
1871-72, seventeenth ditto	269	272	173
1872-73, eighteenth ditto	279	279	177
1873-74, nineteenth ditto	328	284	184
1874-75, twentieth ditto	348	305	189
1875-76, twenty-first ditto	352	326	191
1876-77, twenty-second ditto	368	345	196
1877-78, twenty-third ditto	387	378	206
1878-79, twenty-fourth ditto	394	390	222
1879-80, twenty-fifth ditto	428	417	234
1880-81, twenty-sixth ditto	476	452	252
1881-82, twenty-seventh ditto.	**507**	**459**	**270**

57. A comparison of correspondence, revenue and expenditure for the year 1855-56 and from 1867-68 onwards is given on the margin. The year 1855-56 was the first complete year after the introduction of the low rates of postage under the Act of 1854.

SECTION XI.—NOTICES OF POST OFFICE OFFICIALS.

58. Special thanks are due to Mr. Fanshawe, Post Master General, Bombay, for the care and ability with which he framed the rules for the working of the Post Office Savings Banks; to Lala Doulat Ram, for placing the Umballa and Simla line in a state of high efficiency; to Lala Ramoutar Sing, for successful sorting arrangements in the Railway Mail Service; and to Babu Herambo Chunder Mukerji, for exceptionally good work in connection with district post in Eastern Bengal.

APPENDIX No. I.

Statement showing the number of Post Offices and Letter Boxes opened and Village Postmen entertained during the year 1881-82 and the total number that stood at the end of the official years 1880-81 and 1881-82.

Column 2.—These figures represent the net proceeds of the sale of ordinary postage stamps after deducting the sale discount.

Column 3.—The great differences observable in this column are due mainly to changes of system in the treatment of official correspondence, which was charged at full letter rates up to 1865-66, at the same rates as ordinary correspondence (letters and newspapers, &c.,) from that year on to 1872-73, after which a low privileged rate of 1 anna for each letter not exceeding 10 tolahs (about 4 ozs.) was conceded, thus reducing immensely the postage income.

Column 8.—The figures in this column are useful as showing the revenue undisturbed by the changes of system in respect of official correspondence explained in the note referring to column 3.

Column 12.—The figures in this column show the proportion of the cash collections in column 4 to the total postal revenue of columns 2, 3 and 4. The comparison commences with the year 1872-73, when the official postage rate was reduced (see note on column 3) and the whole collected in stamps.

Columns 21 to 26.—Three digits are omitted from the figures in these columns.

Columns 27 and 28.—These figures cannot be given prior to 1873-74, owing to a difference in the system of statistical record.

Column 29.—The registration of newspapers only commenced in the year 1871-72 and ended in 1877-78.

* (a.) Revised so as to include letters to Gibraltar, Malta, and places east of Suez.

* Being the adjusted amounts properly debitable to each year.

† The amounts shown are estimated.

Director General of the Post Office of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR 1881-82.

Nos. 64—77 I., dated Fort William, the 8th March 1883.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 253 I—A, dated 15th February 1883, from the Government of Bengal, and its enclosure, *viz.*, the Revenue Report of Irrigation Works in Bengal for 1881-82, and a Resolution of His Honor the Lieutenant-Governor reviewing the report.

OBSERVATIONS.—The total Capital outlay, including indirect charges incurred up to the end of the year, amounted to ₹ 5,48,10,043, divided as follows :—

	R
Productive Public Works	5,24,57,980
Imperial Ordinary Works	8,30,624
Provincial Works	15,21,439
TOTAL	5,48,10,043

2. The following statement shows the revenue assessed during 1881-82 and the three previous years :—

CANALS.	ASSESSMENTS.			
	1881-82.	1880-81.	1879-80.	1878-79.
	R	*R*	*R*	*R*
Orissa	3,02,874	2,65,777	2,73,805	2,43,873
Midnapur	2,92,009	2,64,205	2,70,985	1,77,970
Hidgellee	46,484	55,207	45,781	60,793
Sone	7,62,294	6,33,752	5,56,072	5,90,465
Sarun	4,317	...	...	...
TOTAL	14,07,978	12,18,941	11,46,643	10,73,101

The steady increase in revenue derived from the larger systems of canal irrigation is very satisfactory. The decrease on the Hidgellee Tidal Canal is due to a falling-off in navigation receipts caused by an accumulation of silt in No. II range of the canal. The question of provision of effective dredging plant should be decided at an early date.

3. The working expenses, including indirect charges, amounted to—

CANALS.	WORKING EXPENSES.			
	1881-82.	1880-81.	1879-80.	1878-79
	R	*R*	*R*	*R**
Orissa	3,45,067	3,21,955	3,83,561	2,53,435
Midnapur	2,38,590	1,98,043	1,62,025	1,83,206
Hidgellee	29,984	26,520	44,355	24,571
Sone	4,90,193	5,04,208	3,84,523	3,92,734
Sarun	45,799	...	...	...
TOTAL	11,49,633	10,50,726	9,74,464	8,53,946

* The working expenses of 1878-79 given in the Revenue Report for that year did not include Indirect charges, and have been increased 6 per cent. to assimilate them to those of 1879-80 and 1880-81. In each of these two years, Direct charges bore to Direct *plus* Indirect, the ratio of 100 : 106.

The increase in expenditure on the Midnapur Canal is due to a large outlay on special repairs of steamers and dredgers employed on the canal, and to an increase in charges for establishment and leave and pension allowances.

The heavy expenditure on the Sarun Irrigation Scheme was apparently due to clearance of silt and maintenance and repairs of head sluices.

4. The net assessed revenue, after deduction of all working expenses, amounted to—

CANALS.	NET ASSESSED REVENUE.			
	1881-82.	1880-81.	1879-80.	1878-79.
	R	*R*	*R*	*R*
Orissa	—42,193	—56,178	—1,09,756	—9,562
Midnapur	53,419	66,162	1,08,560	—5,236
Hidgellee	16,500	28,687	1,426	36,222
Sone	2,72,101	1,29,544	1,71,549	1,97,731
Sarun	—41,482	...	...	...
TOTAL	2,58,345	1,68,215	1,72,179	2,19,155

In spite of the adverse effect of the heavy repairs expenditure on the Sarun Scheme, it will be seen that the net assessed revenue from all works has increased by more than ₹90,000 over that of the preceding year, while that from the Productive Public Works amounted to ₹2,99,827, was in excess of that of the previous year by ₹1,31,612, and returned 0·55 per cent. on the capital invested in these works up to the end of the year.

5. The interest charges on the Productive Public Works amounted, however, to ₹ 20,75,188 for 1881-82, and when they are taken into the account there was a deficit of ₹17,75,361, the deficit of the previous year having been ₹21,06,543.

6. The areas irrigated during 1881-82 and previous years were as follows :—

CANALS.	ACRES IRRIGATED.			
	1881-82.	1880-81.	1879-80.	1878-79.
Orissa	132,278	117,221	109,038	111,250
Midnapur	104,434	103,862	100,178	58,731
Sone—Kharif	119,379	134,208	41,132	99,964
Sone—Rabi	36,795	50,290	62,266	77,430
Sone—Perennial	21,891	23,127	27,158	19,624
SONE TOTALS	178,075	207,625	130,556	197,018
GRAND TOTALS	414,787	428,708	339,772	366,999

Of the area irrigated on the Orissa Canals during 1881-82, 5,067 acres were under perennial and "Rabi" crops, the area under these crops during the previous year having been 5,050 acres. The continuous decrease in the perennial and "Rabi" irrigation of the Sone Canals is very noticeable.

7. While the total area irrigated from the Productive Works has decreased by 13,921 acres as compared with the area of 1880-81, the gross revenue from these works has increased by ₹ 1,84,720* over that of the previous year. The decrease in area has occurred entirely on the Sone Canals, and it is on these canals also that the main increase in revenue is found. It is due mainly to Demand Statements of the previous year

	Increase. *R*
* Orissa Canals	37,097
Midnapur	27,804
Sone	1,28,542
TOTAL	1,93,443
Deduct—Hidgellee	8,723
NET INCREASE	1,84,720

which reached the Collector during 1881-82, having been included in the assessments of the latter year and partially to old leases for irrigation having fallen in, and been renewed on more favorable terms, and to the rate for rice irrigation having been increased to ₹ 3 per acre.

8. The "duty" obtained from the water in irrigation of rice, 108 acres on the Orissa and 76 to 93 acres on the Sone Canals, is very good. There must, however, be some mistake in the data from which the duty obtained on the Midnapur Canals was deduced. 489 acres of rice irrigation per cubic foot per second of discharge at the head of a canal seems an extremely improbable area to attain, because it would take 5⅓ months of very careful watering, allowing no waste whatever and giving only 4 inches in depth to the growing crop, to make the water go even once round this large area, supposing that the cultivators looked after the distribution for 12 hours of each day. If the distribution were not looked after, the waste and depth of water poured on the land and consequently the time required for one watering would be indefinitely increased. But in the Superintending Engineer's report it is stated that there was no strong demand for water until the 20th August, and that it began to decrease again on the 8th of October.

Canals.	1881-82.	1880-81.	1879-80.
	₹	₹	₹
Orissa	83,206	71,402	98,075
Midnapur	1,20,706	93,099	1,05,518
Hidgellee	45,848	53,338	44,918
Sone	93,116	61,145	39,859
TOTALS	3,42,876	2,78,984	2,88,370

9. The navigation receipts of 1881-82 are compared in the margin with those of the two previous years, and the steady growth of the navigation revenue is satisfactory.

10. The balances of irrigation revenue outstanding at the end of the year were very large,* but it is explained that, on the Orissa Canals, the delay in collection was due to special causes not likely to recur again, and the realization of the canal demand is evidently attended with peculiar difficulty on the Sone Canals. The conditions of collection appear, however, to assimilate very closely on these canals to those prevailing on the canals of the North-Western Provinces, where a nominal balance of only ₹1,386 remained uncollected at the end of 1881-82 out of a total demand of 45½ lakhs of rupees.

	₹
* Orissa Canals	1,19,812
Midnapore ,,	1,31,703
Sone ,,	4,36,849
TOTAL	6,88,364

11. The cost of collecting the irrigation revenue, which however includes the cost of measuring and assessing the irrigated areas, is compared in the margin with that of the two previous years. It is explained that the work of assessment was very heavy during 1880-81 and 1881-82, but that the expenditure incurred on the Sone Canals in connection with the new five-year leases has made subsequent reductions possible, both of temporary and permanent Establishment, which will have a favorable result in future. On the Orissa Canals the Deputy Superintendent and his Office form a charge which would remain almost the same for a much larger area of irrigation, so that the completion of the distributary system would produce a considerable decrease in percentage of cost of Revenue Establishment.

Canals.	Percentage of cost of collection on receipts. 1881-82.	1880-81.	1879-80.
Orissa	22·40	17·20	19·60
Midnapur	13·36	11·96	10·60
Sone	18·92	27·09	23·96

ORDER.—Ordered that copies of this Resolution, and of the Report and its accompaniments be forwarded to the Secretary of State, and to the Finance and Commerce, and the Revenue and Agricultural Departments, for information; also that a copy of this Resolution be forwarded to the Government of Bengal for information and guidance.

Also that copies of this Resolution and of the Report be forwarded to the Local Governments and Administrations noted in the margin, in the Public Works Department, for information.

The Governments of Madras, Bombay, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces and British Burma.
The Resident, Hyderabad.
The Agents to the Governor General, Central India and Rajputana.

Also to the Foreign Department for communication to the Resident at Mysore, and Chief Commissioner, Coorg.

Also that this Resolution, the Resolution of the Government of Bengal and the Chief Engineer's Report, with a few selected statements, be published in the Supplement to the *Gazette of India*.

HENRY A. BROWNLOW, *Colonel, R. E.*,
Deputy Secretary to the Govt. of India.

Resolution on the Canal Revenue Reports for 1881-82, and Note by the Chief Engineer for Irrigation Works, No. 203IA, dated Calcutta, the 1st February 1883.

READ—

The Canal Revenue Reports for 1881-82, and the Chief Engineer's Note on the same.

The capital invested (direct charges) in Irrigation Works in Bengal up to the end of the year 1881-82 amounts to ₹5,48,10,043, divided as follows:—

	₹
Productive public works	5,24,5[illegible],980
Imperial ordinary works	8,30,624
Provincial works	15,21,439
TOTAL	5,48,10,043

The receipts from the projects classed as productive public works for the year and the two immediately preceding are shewn in the statement below:—

	Receipts, 1881-82.	Receipts, 1880-81.	Receipts, 1879-80.
	₹	₹	₹
Orissa Canals.			
Water-rates	1,24,290	1,78,047	1,57,747

TOTAL	47,294	54,487	45,781
Sone Canals.			
Water-rates	6,08,930	3,78,266	4,44,716
Navigation	93,116	61,145	39,859
Miscellaneous	39,246	39,233	47,013
TOTAL	7,36,292	4,78,644	5,31,588
GRAND TOTAL	12,56,809	10,19,371	10,94,112

The outstanding balances on account of water-rates compared with those the year previous are as follows:—

	1st April 1881.	1st April 1882.
	R	*R*
Orissa	43,586	1,14,142
Midnapore	92,974	1,31,701
Sone	4,64,261	4,36,849
TOTAL .	6,00,821	6,82,692

The results of the year's operations shew (including interest and all indirect charges) a deficit of ₹19,22,213 against ₹23,06,111 in 1880-81; or, excluding interest, but including all indirect charges, a profit of ₹1,52,975 against a loss of ₹31,353 in the previous year. This comparatively favourable result is partially due to the rate of interest payable to the Supreme Government on works executed from loan funds having been reduced from 4½ to 4 per cent., but it is also largely owing to increased receipts from the Sone canals. The net receipts for the year from the Western Main Series of the Sone Project—the capital expenditure on which has been ₹1,59,92,879—were ₹2,76,564, against interest charges amounting to ₹6,04,022; so that on parts of the irrigation works the returns have begun to bear a very appreciable ratio to the burden they cause to the provincial finances.

The collections in Midnapore and Orissa were not satisfactory, mainly owing to the low prices for rice which continued to prevail. Since the close of the year under review considerable progress has been made in realizing the arrears in Orissa, but in Midnapore the difficulties which impeded collections are only just beginning to be surmounted. The Chief Engineer adverts at length to certain cases in which the collection establishments in this district were charged with oppressive acts in realizing the water-rates due. The matter was brought to the personal notice of the Lieutenant-Governor when on tour and a searching enquiry by the Collector and Superintending Engineer followed. The allegations made were completely disproved; but in the mean time collections almost ceased and low prices, the prevalence of malarious fever, and the time taken up in issuing leases in place of those which expired, have militated against the realization of the arrears which had accumulated. The system which was last year introduced in Shahabad, under which an experienced Deputy Collector was placed in direct charge of the collecting department, has been specially successful, having received much personal attention and supervision from the Collector of the district; the amount received during the year for water-rates was ₹5,30,706, against ₹3,09,980 in that preceding, and for the first time since irrigation operations were commenced there is a decreese in the balance remaining to be collected at the close of the year.

The working expenses, direct and indirect, amounted to ₹11,03,834, against ₹10,50,728 in 1880-81; the excess is wholly in Orissa and Midnapore, there having been a decrease—notwithstanding the increased receipts—of ₹14,015 in the charges on account of the Sone Canals; heavy floods in Orissa which necessitated special repairs to the embankments on the Byturnee river, and larger expenditure on the dredging plant used on the Midnapore Canal were the chief causes of the increase.

The areas irrigated year by year since 1879-80 are shewn below—

		1879-80.	1880-81.	1881-82.
ORISSA	Khureef . . .	105,186	112,171	126,611
	Rubbee . . .	3,616	4,877	5,403
	Perennial . .	236	173	264
	TOTAL .	109,038	117,221	132,278
MIDNAPORE	Khureef . . .	100,054	103,862	104,149
	Rubbee . . .	124	.....	285
	TOTAL .	100,178	103,862	104,434

		1879-80.	1880-81.	1881-82.
SONE	Khureef . . .	41,132	134,208	119,389
	Rubbee . . .	62,266	50,290	36,795
	Perennial . .	27,158	23,127	21,891
	TOTAL .	130,556	207,625	178,075
GRAND TOTAL .		339,772	428,708	414,787

The decrease in the irrigated area occurs wholly in Behar, there being a slight increase due to revision of existing leases in Midnapore and Orissa. The falling off in the area watered by the Sone Canals may, for the most part, be ascribed to seasonable rainfall which, in Shahabad, was 6·17 inches in the khureef season, and 1·41 inches in the rubbee season, more than in the previous year. The decline in rubbee irrigation is, however, partially due to the substitution of khureef for rubbee crops wherever irrigation can be secured, and is observable, though in a less degree, in Orissa.

Considerable progress, more especially in the Arrah Division, has been made in procuring leases for a term of years. Up to the close of the year, agreements for five years had been entered into for 43,240 acres. It is to the extension of this system that relief must be looked for in the mass of detail which necessarily attends the issue of upwards of 100,000 separate demands. The Lieutenant-Governor recognises the improvement which, it is on all sides admitted, has been made in the assessments; there is, however, still much room for progress, more especially in securing the attendance of the *putwaris* and villagers interested when the measurement is being made. In the Nasrigunge sub-division, the Sub-divisional Officer, Mr. C. Taylor, has made a substantial advance in this direction—95 per cent. of the measurement papers in that subdivision being attested by the *putwaris*.

The navigation receipts of the year, amounting to ₹3,42,876, exhibit a gratifying excess of ₹63,892 over that preceding: this increase occurs chiefly in the receipts from the canals comprising the Sone Project, but with the exception of the Tidal Canal there has been development everywhere. The receipts from the transport service, which are included in the above figures, reached ₹91,606 against ₹67,387 in 1880-81. It is contemplated to gradually transfer this service to private enterprise, and a beginning has already been made, the Calcutta Steam Navigation Company having, from the 1st January of the current year, taken over the steamers on the Midnapore Canal.

The *tollage* collections since 1876-77, the year in which traffic was commenced on the Sone Canals, are shewn in the statement following:—

Toll collections.

	Orissa.	Midnapore.	Hidgellee.	Sone.	Total.
	R	*R*	*R*	*R*	*R*
1876-77	22,881	67,651	44,572	4,852	1,39,956
1877-78	33,884	1,06,917	60,971	26,774	2,28,506
1878-79	57,042	77,340	59,723	29,332	2,23,437
1879-80	62,389	91,861	44,918	27,604	2,26,772
1880-81	41,297	77,143	53,338	39,819	2,11,597
1881-82	53,219	98,060	45,848	54,143	2,51,270

The results of the year's working are the most successful yet experienced, and though up to the present time irrigation works in Bengal have failed to defray the charges for interest payable to the Government of India, the returns are increasing, and warrant the expectation that eventually the Orissa and Sone Canals will cease to be a burden to the province. Estimates for extending the distributary system in Orissa have been submitted to the Government of India,

and as at present 106 of the 214 miles of canal in that province are absolutely without any means of distributing the water they carry over the country they are supposed to irrigate, it is hoped that sanction will not be withheld. If accorded, it may reasonably be expected that the new distributaries will be as successful as those now existing, in which case the receipts will suffice to cover the interest charges on the entire capital expended. The Sone Canals require time to develop; the largest proportion of the revenue is at present derived from the Arrah Canal and its branches, and there is no reason why irrigation should not be equally developed in the remaining canals as their advantages become better known.

The thanks of the Lieutenant-Governor are due to Mr. P. Nolan, Collector of Shahabad, for the great improvement made in the realizations in Shahabad, and to Baboo Chunder Narain Singh, Deputy Collector, under whose immediate supervision the collections were made. His Honor's acknowledgments are also due to Lieutenant-Colonel Heywood, R E., Mr. J. C. Vertannes, and Mr. R. H. Rhind, Superintending Engineers, for the efficient administration of their circles throughout the year, as well as to Mr. Odling who has most successfully managed the Arrah Division of the Sone Circle.

By order of the Lieutenant-Governor of Bengal,

H. C. LEVINGE,

Secretary to the Govt. of Bengal,
P. W. Dept.

REVENUE REPORT.

Note by H. C. LEVINGE, ESQ., C.E., *Chief Engineer, on the Canal Revenue Reports for the year 1881-82.*

The capital outlay (direct charges) on Irrigation Works in Bengal during the year 1881-82 amounted to . ₹20,22,177

During the seven previous years the outlay was as follows :—

	₹
1874-75	49,85,345
1875-76	41,97,442
1876-77	33,92,789
1877-78	24,08,969
1878-79	28,32,279
1879-80	18,48,281
1880-81	19,11,430

2. The total capital (direct charges) invested up to the end of the year 1881-82 was ₹5,48,10,043 as follows :—

	₹
Productive public works	5,24,57,980
Imperial ordinary works	8,30,624
Provincial works	15,21,439
TOTAL	5,48,10,043

The expenditure on Provincial works, as shewn above, is exclusive of the outlay of ₹2,81,851 on the Eden (Joojooty) canal, which was written back during the year under review from the head "Works for which capital and revenue accounts are kept" to "Works for which neither capital nor revenue accounts are kept."

3. The particulars of the above outlay are given below :—

	Outlay. During the year.	Outlay. To end of the year.
CAPITAL OUTLAY (DIRECT CHARGES).		
PRODUCTIVE PUBLIC WORKS.	₹	₹
Orissa Canals	3,33,011	1,95,59,532
Midnapore Canal	1,11,390	78,32,317

Orissa Coast Canal	15,603	15,881
TOTAL	19,810	41,623
GRAND TOTAL	74,612	21,22,210

5. The total capital, inclusive of indirect charges invested up to the end of 1881-82, was therefore ₹5,69,32,253 as follows:—

	₹
Productive Public Works	5,44,44,979
Imperial Ordinary Works	9,24,212
Provincial Works	15,63,062
TOTAL	5,69,32,253

6. The following statement shows the total receipts, working expenses, and charges for interest in respect of Productive Public Works for the year 1881-82, as compared with the five previous years:—

PARTICULARS.	1881-82.	1880-81.	1879-80.	1878-79.	1877-78.	1876-77.
	₹	₹	₹	₹	₹	₹
Receipts from *all* sources	12,56,809	10,19,375	11,03,781	8,59,071	4,94,772	3,29,760
Working expenses (direct charges).	10,43,134	9,93,448	9,21,763	8,05,610	7,02,857	5,97,960
Net revenue	2,13,675	25,927	1,82,018	53,461	—2,08,085	—2,68,200
Charge for interest	20,75,188	22,74,758	22,04,767	21,20,416	20,03,270	18,78,189
DEFICIT	18,61,513	22,48,831	20,22,749	20,66,955	22,11,355	21,46,389
Indirect charges debitable to revenue.	60,700	57,280	53,966	44,529	36,506	29,089
TOTAL DEFICIT	19,22,213	23,06,111	20,76,715	2,11,484	22,47,861	21,75,478
Rate per cent. on capital outlay.	3·53	4·33	4·01	4·26	4·92	5·02

7. The total charge for interest for the year 1881-82, which was calculated in accordance with the resolution of the Government of India, Nos. 55-66A.G., dated 26th January 1882, at the rate of 4 per cent. in lieu of 4½ per cent. as heretofore, amounted to ₹21,51,958, *viz*:—

	₹
Productive Public Works	20,75,188
Imperial Ordinary Works	33,225
Provincial Works	43,545
TOTAL	21,51,958

The amount for Productive Public Works (₹20,75,188) is payable by the Government of Bengal to the Imperial Treasury.

8. The following statement shows the total accumulated debt on account of interest and unpaid working expenses, amounting up to the end of the year 1881-82 to ₹ 2,21,33,793, inclusive of indirect charges debitable to revenue.

Particulars.	Productive Public Works.	Irrigation and Navigation, Imperial.	Irrigation and Navigation, Provincial.	TOTAL.
	₹	₹	₹	₹
Receipts from all sources	60,01,269	...	14,397	60,15,666

Deficit	2,13,21,015	2,95,969	1,19,198	2,17,36,182
Indirect charges debitable to revenue	3,96,052	...	1,559	3,97,611
TOTAL DEFICIT TO END OF 1881-82	2,17,17,067	2,95,669	1,20,757	2,21,33,793
Rate per cent. on capital outlay	39·88	32·02	7·72	38·87

9. The total expenditure on Irrigation, Navigation and Agricultural Works during 1881-82 amounted to ₹ 56,44,291, distributed as follows:—

	₹
38. Productive Public Works—	
Capital account—Imperial	11,56,556
33. Irrigation and Navigation—	
Productive Public Works—	
Revenue account—Provincial	10,41,204
Irrigation and Navigation Works—	
Provincial	25,73,077
Agricultural Works—	
Imperial	7,76,566
Provincial	45,954
Total Imperial and Provincial	55,93,357
Tuccavee outlay	17,965
Contributions	32,969
TOTAL OUTLAY	56,44,291

10. The total receipts of the year aggregated ₹19,67,821 as follows:—

	₹
Productive Public Works—	
Provincial	12,55,099
Irrigation and Navigation Works—	
Provincial	6,99,149
Agricultural Works—	
Imperial	13,273
Provincial	300
TOTAL RECEIPTS	19,67,821

In addition to the above amount a sum of ₹1,710 was credited to Productive Public Works, as received in England by the Secretary of State on account of the leasehold property of the late East India Irrigation and Canal Company.

11. The following statement shows the areas irrigated and assessed as compared with those of the five previous years:—

YEAR.	ORISSA CANALS.				MIDNAPORE CANAL.				SONE CANALS.				TOTAL.

High Level, 1st Range . .	33	...	117	18,185	62,600	44,730	14,023	15,588
Ditto 2nd „	12½	...	...	...	1,20,000	...	182	283
Ditto, 3rd „	17	...	...	...	67,500	...	1,745	1,839
TOTAL .	162½	62	627	3,13,865	5,17,600	1,81,315	1,17,221	1,32,278

It will be noticed that 62 per cent. of the area for which distributaries have been provided has been leased, and that on the Machgong canal 93 per cent. of the area so commanded has been irrigated. The higher percentage is consequent on the perfect system of drainage and protection from flood afforded in connection with this canal, and there is every reason to believe that so soon as the whole of the area commanded possesses the same advantages, the proportion irrigated will be similar. Estimates for the drainage and protective works required for the whole canal system have been submitted to the Government of India, and the Commissioner of Orissa, in paragraph 9 of his report, calls attention to the necessity for their sanction at the earliest possible date.

16. The following statement shows the areas irrigated, and the rainfall in each of the years commencing from 1872-73 :—

Year.	Khureef.	Rubbee.	Perennial.	Total.	Rainfall.
	Acres.	Acres.	Acres.	Acres.	Inches.
1872-73	3,799	941	13	4,753	73·00
1873-74	9,104	3,291	176	12,571	40·31
1874-75	19,740	2,454	267	22,459	64·00*
1875-76	13,991	4,102	314	18,109	70·00*
1876-77	26 069	3,991	321	30,382	44·26*
1877-78	95,088	3,071	336	98,495	47·94*
1878-79	1,05,500	5,517	233	1,11,250	61·98*
1879-80	1,05,186	3,616	236	1,09,038	60·85*
1880-81	1,12,171	4,877	173	1,17,221	85·10*
1881-82	1,26,611	5,403	264	1,32,278	62·89*

* These are the mean of observations at Cuttack and Marsaghai.

There has therefore been an increase on the previous year's irrigation of 15,057 acres, of which 14,440 acres were under khureef and 617 acres under rubbee crops. This excess was mainly due to the assessments being revised with the aid of the cadastral survey maps. A part of it must, however, be credited to improved drainage arrangements, three important channels having been completed in connection with the Kendrapara Canal Embankments for the protection from flood of the country commanded by the High Level Canal, Range 1, are in progress, and some extension of the area leased may be expected to follow, but no further important development of irrigation can be reasonably expected until the works alluded to in the previous paragraph have been sanctioned and completed ; it is hopeless to expect cultivators to incur liabilities for water-rates on land liable to inundation from river floods or by reason of defective drainage.

17. The tendency to substitute khureef for rubbee cultivation which is so marked in Behar, is also observable in Orissa, the Deputy Revenue Superintendent remarking that the ryots on the Machgong and Taldandah canals "utilize all but the very highest lands for rice, and that those on the highest level have now to be resorted to for rubbee."

18. The Commissioner alludes to the commencement of a new industry in Orissa, a wealthy Mohamedan gentleman having established an indigo factory at Kendupatna on the Kendrapara Canal. The crop is raised with the assistance of canal water, water-rates being paid by the proprietor, who also supplies the seed. The area so cultivated was 132 acres against 37 in the year previous, and the ryots are reported to be satisfied with the payments they receive.

19. The area irrigated without permit is reported as 4,831 acres by Executive Engineers and as 3,558 acres by the Deputy Superintendent. No explanation of the difference is given, but it is probably owing to the Engineers includ-

ing all cases reported by them as such, whilst in only 92 out of 172 cases notified could sufficient evidence be procured to warrant water-rates being charged. The season was on the whole favourable to irrigation, the rain not commencing till late in June, and though the rainfall for the khureef season was 4·53 inches in excess of the average for a period of 26 years, there was a deficiency in October, to which the Superintending Engineer attributes the very large increase in unauthorized irrigation, the Deputy Superintendent observing that the canal supply was at that time eagerly sought for and he believes thoroughly appreciated. The percentage of lift irrigation was 6·20 against 5·88 during the previous year.

20. The actual realizations during the year on account of water-rates and miscellaneous receipts amounted to R1,38,233 against a budget estimate of R2,46,000 and a regular estimate of R1,46,000, the deficiency of R1,07,767, as compared with the budget estimate, was due to difficulties in collection. The total assessments by the Deputy Superintendent, including R45,597, the balance brought forward from the previous year, were R2,59,646. The Deputy Revenue Superintendent states that up to the end of July of the current year R65,115 of the R1,19,812 outstanding at the close of 1881-82 had been collected, and that the delay was due to special causes, the chief of which, the revision of existing leases by the cadastral survey maps, will not recur; other difficuties were, the Deputy Revenue Superintendent not having powers under Act VII of 1880, and the low price of rice, which was commented on at length in last year's report. The remissions for the year were R4,579 against R19,818 in that preceding. Of the amount remitted, R1,401 only were on account of assessments of the year, and there were no cases of demands lapsing under the law of limitation.

21. The Government of India, in the resolution reviewing the revenue report for 1880-81, drew attention to the high cost of collecting the canal revenue in Bengal; the percentage on the collections for the Orissa canals was in that year 17·20, for the period now under review the percentage is 22·4. The actual cost of the establishment employed was R30,408 against R32,445 in the year preceding, and the percentage calculated on the assessments is 11·7 against 12·7. The local officers have been consulted as to the feasibility of effecting any reduction in these charges. After full enquiry a report has been submitted, in which it is stated that it will probably be possible to reduce the total cost of the establishment employed to R28,000 per annum so soon as all the assessment work in connection with the cadastral survey maps has been finished, and there is reliable data for future leases; this has now been nearly accomplished, and some saving in the former expenditure has already been effected. On this subject Mr. Wylly, whose opinion is endorsed by the Collector and Commissioner, observes—"The collection charges for 1881-82 were very high when compared with actual relizations, but it should be remembered that the assessment work during both 1880-81 and 1881-82 was extremely heavy, and that the deficiency of actual realizations cannot be attributed to any fault on the part of the establishment. The fairest estimate of our work must be based on actual assessments until such times as large areas have been assessed for long periods on data that requires no revision." It must be remembered that a large increase in the area irrigated would not result in a proportionately increased charge for collecting the increased revenue. The Deputy Superintendent and his office establishment represents a nearly fixed charge, and if distributaries for irrigating the 336,285 acres commanded by existing canals, but to which water cannot be conveyed for want of minor channels, were completed, a large reduction in the percentage of expenses to receipts might be confidently looked for.

22. The average duty of water used for khureef irrigation is reported by the Superintending Engineer to have been 107·94 acres per cubic foot, against

160·49 acres for the preceding year. Particulars for each main canal are given in the following table extracted from his report:—

Name of Canal.	Effective average discharge in cubic feet.	Total for each main canal.	Area of Khureef leased.	Total area for each main canal.	Average duty of each cubic foot.	Average duty of each main canal.
	C. ft.	C. ft.	Acres.	Acres.	Acres.	Acres.
Kendrapara	375		49,350		131·60	
Pattamoondi	129		12,491		96 83	
Gobri	117		4,196		35 86	
		621		66,037		106·34
High Level, 1st Range	99		15,518		156·74	
		99		15,518		156·74
Taldandah	155		10,998		70 95	
Machgong	279		32,012		114 73	
		434		43,010		99·10
Total	1,154	1,154	1,24,565	1,24,565	107·94	107·94

The reduction in the duty can only be ascribed to the comparatively deficient rainfall during the khureef season, 52 inches against 67·95 inches in 1880-81. For the canals furnished with distributaries it averaged 119 acres pe cubic foot, but a considerably increased duty may reasonably be expected when these canals are provided with escapes, so that the discharge can be more accurately regulated, and when a larger leased area enables the discharge entering at the head to be more fully utilized.

23. The following table gives in a succinct form the results of the crop experiments carried out during the year:—

Nature of Crop.	Irrigated.		Unirrigated.		Difference.		Value.
	Paddy.	Straw.	Paddy.	Straw.	Paddy.	Straw.	
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	
MAHANUDDY DIVISION.							
Sarud	35·71	57·28	32·34	57·65	+3·37	—0·37	
Beyali	21·98	45·18	23·30	49·24	—1·32	—4·06	
Beeri	5·47	12·68	6·25	11·26	—0·78	+1·42	
Class of land.	**BARAHMINI-BYTURNI DIVISION.**						
First Class	24·65	27·90	16·55	18·47	+8·10	+9·43	
Second Class	22·75	22·55	13·65	13·35	+9·10	+9·20	
Third Class	21 21	18·42	10·75	10·75	+10·43	+7·67	

The difference of yield in favour of irrigated crops is in both divisions in advance of what was last year obtained, but the average value of this excess is estimated by the Executive Engineers at from ·54 to ·81 of a rupee per acre under the average increased value caused last year by irrigation.

24. The total navigation receipts from the Orissa canals during the year amounted to R83,206, of which R53,219 were from tolls on boats, and R29,987 earnings of the transport service. The collections for previous years were:—

	Tolls.	Transport service.	Total.
	R	R	R
1872-73	10,044	*Nil.*	10,044
1873-74	18,577	„	18,577
1874-75	21,412	„	21,412
1875-76	16,377	„	16,377
1876-77	22,881	„	22,881
1877-78	33,844	„	33,844
1878-79	57,042	„	57,042
1879-80	62,389	35,686	98,075
1880-81	41,297	30,105	71,402

There has therefore been a considerable increase in the tollage receipts, whilst the steamer proceeds have slightly fallen off. The above figures are based on actual collections, the income earned for the year has been R57,146 on account of tollage, and R30,445 from the transport service; some details regarding the former are given in the subjoined table, which includes figures for the previous year:—

Name of Canal.	Miles open.	Tollage.		Number of boats.		Tonnage.		Value of cargo.		Tollage per mile of canal	
		1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82	1880-81.	1881-82.	1880-81.	1881-82.
	Miles.	R	R	No.	No.	Tons.	Tons.	R	R	R	R

25. In the following table, showing increase or decrease compared with the previous year, the traffic is divided between private and on account of Government, and it will be noticed that the total tollage is 36·48 per cent. and the tonnage 59·71 per cent. in excess:—

Sub-head.	Government traffic.	Private traffic.	Total.
Tollage . . . . . R	+10,832	+4,444	+15,276
Number of boats . . . . . No.	+1,799	+1,397	+3,196
Tonnage . . . . . Tons.	+20,543	+23,116	+53,659
Value of cargo . . . . . R	+13,430	+708,384	+7,21,814
Tollage per mile of canal . . . R	+66·66	+27 35	+94·01

26. The private traffic classified according to articles carried is shown below:—

	Tonnage.			
	1880-81.	1881-82.	Increase.	Decrease.
	Tons.	Tons.	Tons.	Tons.
Articles of food	16,122	24,542	8,420	...
Stimulants	42	32	...	10

Passengers	...	...	...	...
Empty boats	...	...	...	...
Total	26,801	31,920	9,000	3,881
Increase	...	...	5,119	

Generally traffic has increased over the whole of the canal system in Orissa, the exception is the High Level Canal, on which there has been a small decline in the goods transported on private account. Satisfactory results cannot be expected from this line of navigation until the canal is extended to Bhuddruck. The Kopali aqueduct has, however, been completed, and it is expected that through traffic will be commenced in the course of the current month, in future years a substantial accession to the income hitherto derived from tolls on that canal may therefore reasonably be hoped for.

27. The cost of the navigation establishment employed during the year was R8,085 or R584 in excess of the previous year's expenditure; the increase was owing to the opening of the terminal lock of the Kendrapara extension canal. The charge per mile open is R49·75 per mile against R51 in 1880-81. As a percentage upon the collections, it was 15·19 per cent. against 18·16 per cent. in the previous year.

28. The net revenue derived from the Government transport service for the year was R8,893 against R11,662 in 1880-81. The cause of this falling off was an increase in the working expenses from R18,443 to R21,094 consequent on two steamers being employed instead of one, whilst there was a slight decrease of R118 in the receipts. The Superintending Engineer, in explanation of this reduction, observes that severe competition existed, two steamers belonging to private companies having commenced running. Some particulars of the traffic will be found in the following statement:—

	Traffic, 1881-82.									Traffic, 1880-81.

29. The miscellaneous revenue for the year and that preceding is shown in the table below. There has been a decrease of R4,676 in receipts, mostly in the item English leasehold property belonging to the late East India Irrigation and Canal Co.

Head.	Year.		Difference.	
	1880-81.	1881-82.	Increase.	Decrease.
	R	R	R	R

Total	20,329	15,653	334	5,010
Decrease	...	...	...	4,676

30. The Superintending Engineer, in paragraphs 40 and 41 of his report, gives tables showing the progress made with plantations, from which it appears that there are now 36,223 trees more than 12 feet high, 22,120 between 4 and 12 feet high, and 43,666 under 4 feet in height growing on canal lands; a considerable proportion of these are cocoanut, jack, betel and other fruit-bearing kinds. The total expenditure on plantations on both capital and revenue accounts to date aggregates R97,197, for which 102,009 trees of the sizes mentioned above have been reared.

31. The receipts since 1872-73 are shown in the table following:—

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	₹	₹	₹	₹
1872-73 . . .	19,071	10,044	7,508	36,623
1873-74 . . .	17,112	18,577	7,816	43,835

33. The floods of the year in the Mahanuddy and Brahminee rivers were moderate, but a large tree passing over the Mahanuddy weir overturned six of the piers which separate the folding shutters, causing an extra expenditure of ₹14,695; the Byturnee and Burrah weirs were also injured by the highest flood, which has occurred since they were commenced, 11 years ago, and which breached the protective embankment on the left bank of the Byturnee river. From the following table it will be seen that the cost of maintaining head works and distributaries has been in excess of that incurred in the year preceding, whilst there has been a considerable saving in the expenditure on main canals.

Increase .	.....	.....	15,548	.....

34. The total result of the year's working has been a loss, direct charges only of ₹25,786 reckoned on the income earned, calculated by actual realizations the loss has been ₹1,05,111. But these figures are altogether misleading, as a test of the cost of, and probable profit derivable from, irrigation canals in Orissa; what has been constructed is a fragment only of the magnificent scheme designed by Colonel Rundall, R. E., the first Irrigation Chief Engineer of Bengal, and the receipts are burdened with the cost of maintaining head works and canals capable of supplying water to three times the area for which distributaries have yet been sanctioned: every year shows more clearly that if the works are carried out in their entirety, the ultimate returns can differ but little from those anticipated by the eminent Engineer to whom as Chief Engineer of the late East India Irrigation and Canal Company they owe so much.

MIDNAPORE CANAL.

37. The area irrigated in 1881-82 was 104,434 acres against 103,862 in the previous year, the small increase was wholly due to revision of existing leases. The following table extracted from the Superintending Engineer's report gives some particulars of the area irrigated and commanded, contrasted with similar data for the year preceding:—

PARTICULARS.	Totals as provided in sanctioned estimates.	Midnapore Weir, Ranges Nos. IV & V.		Panchcoorah Weir, Range No. III.		Tidal Ranges, Nos. I & II.		TOTALS.	
		1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.
Length of distributaries & branch canals . miles	299·12	215·47	228·74	31·00	35·25	18·00	18·00	267·47	281·99

38. The statement below shows the rainfall compared with the average and that of the previous year:—

STATION.	Rainfall, 1881-82.	Rainfall, 1880-81.	Average.	REMARKS.
Midnapore	70·32	49·91	55·31	Average of 13 previous years.
Panchcoorah	78·42	55·68	50·23	Ditto of 12 ditto.
Contai	100·44	87·46	70·87	Ditto of 12 ditto.

N. B.—The figures given by the Superintending Engineer are taken, those of the District Canal Superintendent being for the calendar year.

It will be noticed that the rainfall of the year was in excess of that of 1880-81, and very considerably above the average; at Midnapore 52·56 inches of rain fell in June, July, and August, whilst during September and October

the fall was normal. Regarding this period the Executive Engineer observes that the first noted increase in the demand for water was during the week ending the 27th of August, and from that time it increased steadily till the 8th October, when it began to decrease. There was, however, according to the Deputy Revenue Superintendent, the greatest pressure between the 15th of October and the 15th of November when "lessees who had previously refused water were glad to get a flooding, but subsequently refused to sign the usual receipts for water, hoping thus to establish grounds for remission." The Superintending Engineer observes that in the early part of the season "the ryots very frequently took the canal water, not that it was actually needed for irrigation purposes, but on account of its fertilizing properties as explained in last year's report."

39. That the rainfall for the year was abundant may be inferred from the small quantity of water utilized, which is given in paragraph 11 of the Superintending Engineer's report, on an average from June to October, as 323 cubic feet per second for the area irrigated from the Midnapore weir against 638 cubic feet per second for the previous year; for the area commanded by the Panchcoorah weir the figures are 23 and 72. The duty calculated from these data would be 287 acres per cubic foot of discharge in the one case and 489 acres per cubic foot in the other. The Superintending Engineer is however of opinion that any attempt to calculate the duty for the irrigation season under review can only be inaccurate and misleading, the reason given being that water was frequently used rather on account of the fertilizing properties of the silt contained in it than for irrigation, and occasionally with the object of applying for remission of water-rates in case a supply was not forthcoming. These reasons are not altogether conclusive, as, though the minimum duty of water is the fact of the greatest importance, statistics on the subject in years of average and abundant rainfall are also required. Instructions regarding more frequent actual measurements of discharges were given in January, and this year's observations should, in point of accuracy, be an improvement on past results.

40. The balance due at the commencement of the year on account of water-rates was ₹ 92,974, of which ₹ 78,536 were assessments of 1880-81 and ₹ 14,438 outstandings remaining from former years: the amount assessed in 1881-82 was ₹1,56,590 water-rates of the year, and ₹829 on account of the previous year's irrigation, the total amount for collection was therefore ₹2,50,393, of which ₹1,18,588 were recovered and ₹184 remitted, leaving ₹1,31,703 for collection in 1882-83. The cost of collection was ₹17,172 or 13·36 per cent. on the recoveries under the heads water-rates and miscellaneous against 11·96 per cent. in the year preceding. The following table shows in a concise form the demands and recoveries for each of the last five years, the miscellaneous income recovered by the Deputy Canal Revenue Superintendent is included.

YEAR.	Amount earned as water-rates during the year.	Total demand under all heads.	Cash received under all heads.	Remission.	Total.	Balance.	Cost of collection.	Percentage of cost on total demand.	Percentage of cost on recoveries.
	₹	₹	₹	₹	₹	₹	₹	₹	₹
1877-78	29,960	1,00,372	63,159	5,899	69,058	31,314	14,098	14·04	20·41
1878-79	88,777	1,31,932	93,262	5,399	98,655	33,277	14,802	11·22	15·00
1879-80	1,51,587	1,99,854	1,41,632	638	1,42,270	57,584	15,015	7·51	10·60
1880-81	1,55,730	2,31,116	1,22,489	6,823	1,29,312	1,01,804	14,650	6·33	11·96
1881-82	1,56,990	2,71,001	1,28,529	3,688	1,32,197	1,38,804	17,172	6·33	13·36

41. The very heavy balance remaining to be collected at the close of the year is a matter of grave importance, more especially as the collections since the close of the year have not been favourable, and the Commissioner, in his letter reviewing the Deputy Superintendent's revenue report, does not speak hopefully of present prospects. The chief cause of the falling-off in revenue is ascribed to the low price of grain which was commented on in last year's

report. Another reason was an agitation on various grounds against the establishment employed on collections, which resulted in several petitions being presented to His Honor the Lieutenant-Governor on the 9th of September, on the occasion of his visiting the Midnapore canal. An exhaustive enquiry was held by the Collector of Midnapore, the Superintending Engineer being also present, which conclusively proved that the malpractices complained of did not exist, the true grievance being the difficulty unfortunately really felt by the ryots in paying the amounts due. The Collector's remarks on this subject, paragraphs 20 and 21 of his report, are quoted below:—

"20. The charges of fraud, cruelty, and oppression, which were brought against canal officials, having been shown to be without foundation, it will be asked how it came to pass that the ryots assembled in such large numbers to make known their grievances, and it will necessarily be concluded that there must be some real or supposed ground for complaint."

"21. The explanation no doubt lies in the fact that the price of paddy is exceptionally low this year, so that the crop, out of which the cultivator pays his water-rate, is much less valuable than it has been for several years past. He has consequently found it more difficult than usual to meet the demands of his landlord and of the Canal Department. At the same time he feels the aggravation of deriving very little benefit from irrigation this year, the rainfall having been so ample. Koilash Chunder Roy states—'This year we do not require water and we wish to have the rent remitted.' Bissonath Bhunjo says—'I have paid canal rates for 10 or 12 years. This year paddy is cheap, hence we feel the rate to be oppressive.' Even in the present season, however, canal irrigation has been of some use, many of the ryots having taken water after these petitions were presented."

From the date of the presentation of these petitions collections were practically suspended, and though Sir Ashley Eden did not feel himself justified in sanctioning any extensive remissions, the best time of the year for recoveries had passed away and the ryots were perhaps even less able to pay than before. The orders passed are contained in the following extracts from a letter* addressed to the Commissioner of Burdwan by order of the Lieutenant-Governor:—

* No. 191 I, dated 30th January 1882.

"3. The Collector has held an exhaustive enquiry into the complaints thus made, every facility having been given to the petitioners to substantiate the charges so freely preferred. The result of this investigation has been that in one case only could it be discovered that any real grounds for complaint existed; in this solitary instance some bamboos had been sold for an inadequate price. The most prominent mover in the agitation admits that he has no personal knowledge of any oppression on the part of the canal officials, and the petitioners examined were unable to adduce any instance of cruelty or oppression; indeed, it appears they were for the most part ignorant of the contents of the petitions they had signed, their feeling in the matter being that the proceeds of their crops had been sensibly less than in the five or six preceding years, whilst the same water-rates were charged, notwithstanding a fairly abundant rainfall.

"4. The certificate procedure, which is specially complained of as having been conducted in the harshest and most oppressive manner, turns out to have been worked in the most lenient way, consistent with compulsion being used at all, and it is certain that only a nominal proportion of the heavy arrears, which had accumulated at the commencement of the present financial year, would have been realized without pressure. The facts regarding the certificate procedure are given in the 7th and 8th paragraphs of the Collector's letter, and shortly summarized, are as follows:—Of the Rs. 24,248 realized by certificate in 1880-81, Rs. 21,249, or seven-eighths of that amount, were paid up on the service of the first notice, and Rs. 1,919 on the issue of notice to sell attached property, whilst Rs. 12 only were realized by its actual sale, and Rs. 679 by arresting defaulters, no one of whom was sent to jail. From April to August, inclusive, of the current year, Rs. 42,103, have been realized by certificate procedure, of which Rs. 25,484 were paid before any notice was given, Rs. 12,765 were received on the issue of notices, and the remaining Rs. 3,854, realized by compulsory processes of various descriptions, which were not, however, of a very rigorous description—one man only having been sent to jail—and Rs. 47 obtained by the sale of property. No costs at all were incurred when payment was made before the issue of notices, and when, as occurred in an overwhelming majority of cases a first notice only was issued, the total costs in each case were two annas; no ploughs or implements of agriculture were sold.

"5. The conclusion come to by the Collector that there has been a minimum of hardship and expense to the defaulters appears to be amply justified and, as remarked by him, the certificate procedure was only resorted to because collections could not be made without some such stimulus. The real ground of complaint is, as pointed out by the Collector, the exceptionally low price of paddy, which the cultivator feels the more keenly, as the benefit derived from irrigation has, owing to the abundant rainfall, been less marked than usual.

The village headmen, whose allowance has been stopped since five-year leases were introduced, have taken a leading part in bringing forward complaints, but the stoppage of this allowance can scarcely be considered as a grievance affecting the general body of the ryots, though several witnesses asked that it might again be allowed.

"6. The leases at present in force having been granted in 1879 or in previous years, satisfactory evidence of the incidents connected with their signature is naturally wanting; when they were signed, water was urgently required for the crops, and this fact tends to the conclusion that in taking them the ryots only suffered compulsion from their own necessities. It is reported that water was largely used during the current year from the middle of October to the 15th of November; villages which had not hitherto taken water using it, but refusing to sign the usual receipt for water in the hope that by not doing so they would establish grounds for remission.

"7. The Lieutenant-Governor desires me to say that the petitioners have, in his opinion, entirely failed to establish the justice of their complaints, which seem to have been recklessly made without any sort of foundation. The cultivators have, for their own interests, entered into an agreement to take canal water for five years at exceptionally favourable contract rates; Government has always fulfilled its part of the contract, and there is no reason for exempting the lessee from performing his.

"8. His Honor has directed water-rates to be remitted where crops have this year suffered from inundation or have been destroyed by the flood which breached the Cossye embankments, but in other cases the water-rates due, must, if the ryots will not otherwise pay, be collected by process of law."

A commission of half an anna per rupee has since been sanctioned as remuneration to headmen where they give assistance in procuring leases or in realizing water-rates, and ₹ 16,159 water-rates on crops injured by floods of the Cossye river remitted: it is hoped with these concessions the Collector of Midnapore who is now paying special attention to the subject, will be able to effect an improvement in the collections.

42. The crop on irrigated and unirrigated land was weighed in 907 places, the result showing that the produce of irrigated land exceeded that of unirrigated by an average of 1·21 maunds of paddy and 2·06 maunds of straw per acre for the area commanded by the Midnapore weir; the difference is about one-fifth of that usually experienced and the comparatively unfavourable crops had doubtless considerable influence in bringing about the agitation against paying water-rates, to which reference has already been made. The advantage to irrigated crops was more considerable on the area irrigated from the Panchcoorah weir, but this commands a much smaller tract of country. Over a period of nine years the average extra produce due to irrigation is $5\frac{3}{4}$ maunds of paddy and $14\frac{1}{2}$ maunds of straw per acre on which the water-rate charged, *viz.*, ₹ 1-8 per acre, must be considered moderate.

43. The amount credited as navigation revenue during 1881-82 was Rs. 1,20,706, which is in excess of the receipts under this head for any year since the canal was opened. This sum includes Rs. 22,646 steamer earnings, so that the income due to tolls on boats was Rs. 98,060.

44. The two following tables extending over ten years, give the usual details regarding the traffic on the canal, and description of goods carried:—

Cooking utensils and domestic implements	2,533	1,951	1,766	2,135	2,782	3,677	4,633	5,021	4,376	4,566
Miscellaneous	16,630	16,366	65,629	67,021	67,604	79,311	79,518	94,737	88,846	94,978

Compared with the previous year there has been an increase of 27 per cent in the toll collections, of 13·8 per cent in the tonnage of the boats, and of 21·8 per cent in the passengers carried (excluding those conveyed by the Government transport service). Turning to the different kinds of goods transported, it will be noticed that the chief increase has occurred in the items "Articles of food," and Miscellaneous," whilst there has been a considerable decrease in "Staples of manufacture." With these exceptions the tonnage of goods carried during the year and that preceding does not materially differ.

45. The usual annual closure of the canal for silt clearing was restricted to range V, between Lutchmutpore and Midnapore, a distance of 5 miles, which was closed from the 1st to the 28th February 1882; this, however, caused but little inconvenience, the Government transport service was not interrupted, arrangements being made for conveying 1st and 2nd class passengers by road, and the proximity of the temporary terminus to Midnapore allowed the canal to continue to be used for the transport of merchandize with but small extra expense. The Narainghur navigable distributary was closed from the 1st to the 4th April 1881 and from the 1st to the 28th February 1882. The increased tollage is doubtless very largely owing to ranges I to IV of the main canal having been kept open throughout the year.

46. Five steamers were employed during the year on the Government transport service between Calcutta and Midnapore. From the 1st of April until the 15th of September the service was bi-weekly, and a halt for the night was made on the way, a tri-weekly service was instituted from the 16th September, the stoppage at night being discontinued, and from the 15th December a steamer started daily, Sundays excepted, the through journey taking 15 to 16 hours. The results of the extended accommodation provided have been very encouraging, the average number of passengers carried monthly having to the end of the year increased four-fold; in paragraph 19 of his report the Superintending Engineer remarks that the passenger traffic is still increasing and that there are twice as many passengers as we can carry with our present flotilla. The service has since the 1st of December of the current year been made over to a private company, who propose to import sufficient steamers to accommodate all the traffic which is still capable of very considerable development, 202,029 passengers having in the year under review being conveyed in native boats from Oloobariah to Midnapore in addition to 54,465 carried by Government steamers.

47. The following table shows the details of the steamer traffic compared with the two previous years:—

Years.	Passengers.										Goods.			Total amount realized.	Working expenses.	Profit.	Loss.
	First class.		Second class.		Intermediate class.		Third class.		Total.								
	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.	Number.	Amount.	Parcels.	Cargo.	Amount.				
		₹		₹		₹		₹		₹			₹	₹	₹	₹	₹
1879-80	63½	398	95½	278	668	544	21,777½	8,964	22,598	10,181	548	2,023	1,153	13,608	18,235	...	4,567
1880-81	138	1,111	341	800	56	34	21,377	8,279	23,912	10,244	264	01,433	1,881	12,108	9,803	2,306	
1881-82	277½	2,360	644½	1,837	104	52	54,465½	16,577	55,511	20,827	3734	5,704½	2,793	22,646	17,577	5,069	

48. The total realizations for the year under the head "miscellaneous revenue" amounted to ₹12,226, of which ₹2,285 were collected by the Executive Engineer, and the remainder ₹9,941 by the Deputy Superintendent of canal revenue; the assessments for the revenue controlled by the latter officer, compared with 1880-81, were as follows:—

	1881-82.	1880-81.
	₹	₹
Land rent	5,666	6,277
Fruit	36	40
Fisheries	626	565
Koyali	1,534	730
Grass	4	3
Miscellaneous	3,056	2,447
Total	10,922	10,062

There has been a decrease under the head 'land rent' owing to ₹. 750 having been remitted on lands inundated by floods of the river Cossye.

49. The revenue receipts and working expenses since 1872-73 are shown in the statement below:—

REVENUE RECEIPTS.

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	₹	₹	₹	₹

Total working expenses	86,998	1,20,557	1,30,427	1,67,399	1,71,279	2,03,814	1,72,836	1,54,403	1,89,220	2,28,474

50. The net revenue for the year was ₹21,600, against ₹27,246 in 1880-81, increased receipts, amounting to ₹33,608, being more than balanced by an increased expenditure of ₹39,254. The excess in the working expenses is mainly due to special repairs to the Lutchmutpore lock on which ₹18,000 were spent, and to repairs to steamers and dredgers, costing ₹26,000. The increased revenue is almost wholly from navigation tolls and is ascribed by the Superintending Engineer to the canals being kept open throughout the year by constant dredging. It has been previously noted that the partial closure had very little effect on the canal traffic.

51. The cost of maintenance for the past five years of the canal and distributaries is shown in the following table:—

MAIN CANAL.

	Length of canal open.	Cost of maintenance.	Cost per mile.
		R	R
1877-78	48	77,521	1,615
1878-79	48	59,787	1,246
1879-80	48	56,943	1,186
1880-81	48	80,990	1,687
1881-82	48	85,910	1,790

Distributaries.

	Length of distributaries open.	Cost of maintenance.	Cost per mile.
	Miles.	R	R
1877-78	255	22,726	89
1878-79	254	20,903	82
1879-80	254	16,159	63
1880-81	267	20,140	75
1881-82	282	11,854	42

Further details regarding the expenditure on maintenance will be found in the Superintending Engineer's report, from which the following table showing the cost of dredging for the last two years has been extracted:—

Names of Dredgers.	Number of days at Work.		Quantity of work done.				Cost of working the dredgers during the year.		Rate of excavation per 1,000 cubic feet.	
			Per day,		During the year.					
	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.
			C. ft.	C. ft.	C. ft.	C. ft.	R	R	R	R
"Hector"	147	144	3,046	4,090	447,800	589,000	6,464	4,570	14·4	7
"Princess Louise"	...	20	...	5,000	...	100,000	...	1,648	...	·16
"Ajax"	226	234	7,012	6,524	1,584,750	1,526,720	12,842	11,801	8·1	
"Combination"	194	201	1,516	1,204	294,118	242,000	2,632	3,600	8·9	14
Total	567	599	4,048	4,103	2,326,668	2,457,720	21,938	21,619	9·4	8·8

An improvement in the cost per 1,000 cubic feet of earth dredged will be noticed, and still better results are anticipated this year.

52. The total expenditure on plantations to date has been Rs. 10,121, and the number of trees planted 8,357, of which 2,006 trees are now more than 12 feet high, 1,511 are above 4 feet in height, and the remainder seedlings.

HIDGELEE TIDAL CANAL.

53. The capital, interest, and revenue accounts, are given below:—

I.—CAPITAL ACCOUNT.

	Outlay during 1881-82.	Outlay to end of 1881-82.

54. The revenue account calculated on the earnings of the year is shewn below:—

Expenditure.	Amount.	Earnings.	Amount.
I.—Works and Repairs.	R		R
Works (extensions and improvements)	1,147	Navigation	45,338
Maintenance and repairs	18,331	Miscellaneous	1,146
Establishment	4,497		
Tools and plant	1,834		
TOTAL WORKS AND REPAIRS	25,809		
II.—Revenue Management.			
Navigation establishment	2,869		
TOTAL WORKING EXPENSES	28,678		
PROFIT	17,806		
TOTAL	46,484	TOTAL	46,484

55. The receipts exhibit a decrease, compared with the previous year, of ₹7,193. This decline is wholly attributable to the falling-off in navigation tolls, there being a slight increase of ₹297 in the revenue classed as miscellaneous. The canal was not closed during the year, but the Superintending Engineer observes that the silt in the neighbourhood of the Kalinuggur lock in Range II had a prejudicial effect on the traffic. This was more especially felt during the season of low tides in the cold weather. In April and May the tides are higher, and boats cannot avail themselves of the alternative river route.

In October, November and December the navigation receipts were Rs. 4,026, against Rs. 8,991 during the corresponding period of 1880-81.

56. Particulars regarding the traffic since 1872-73 are given in the following tables, from which it will be seen that the chief decrease has occurred in the items "Articles of food" and "Building Materials." The falling-off in the former article was largely owing to the dulness in the rice trade in the beginning of the year.

The net revenue, ₹18,616, is ₹10,281 less than that realized in the preceding year, mostly owing to the falling-off in revenue, the working expenses showing only a small excess.

58. It is a question whether effective dredging plant should not be provided, as, though the first cost would be heavy, the traffic is very largely dependent on a sufficient depth of water being maintained in the canal for large boats to ply throughout. The revenue from tolls on boats is, as matters stand, capable of considerable development; and when the Orissa coast canal is completed, it will also be affected by any hindrance to the navigation of the tidal canal, of which it is a continuation. The net revenue has for some years been in excess of the working expenses, though not sufficient to cover interest on the capital expended on construction. There is, however, every reason to believe that when the canal is connected with Balasore this end will be attained.

SONE CANALS.

59. The capital, interest, and revenue accounts of these canals are given below:—

I.—CAPITAL ACCOUNT.

HEADS OF ACCOUNT.	Outlay during 1881-82.	Outlay to end of 1881-82.

TOTAL .	7,36,292	24,09,522	TOTAL .	7,36,292	24,09,522

60. The total debt on account of interest, after crediting the net revenue amounted for the year to R6,38,524, and up to the end of the year to R71,84,323.

61. The expenditure and earnings for the year 1881-82 are given below:—

Expenditure.		Earnings.	
I.—Maintenance and Repairs.	R		R
Works	2,60,891	Water-rates	6,29,739
Establishment . . .	63,943	Navigation	93,309
Tools and Plant . . .	3,198	Miscellaneous . . .	39,246
TOTAL MAINTENANCE .	3,28,032		
II.—Revenue Management.			
Irrigation Establishment . .	1,14,283		
Navigation ditto . .	13,678		
TOTAL .	1,27,961		
III.—Refunds of Revenue. .	1,329		
TOTAL WORKING EXPENSES .	4,57,322		
PROFIT .	3,04,972		
TOTAL .	7,62,294	TOTAL .	7,62,294

62. The lengths of canals and distributaries in operations in the Sone system, and the areas commanded and irrigable, are shown in the following table:—

Name of Canal.	Navigable canal.	Branch canal.	Distributaries.	Area under command.	Area which can be irrigated.		Total area which can be irrigated.
					Khureef.	Rubbee.	
	Miles.	Miles.	Miles.	Acres.	Acres.	Acres.	Acres.
Eastern Main and Patna Canal . .	86¼	...	304¾	307,610	112,640	151,200	263,840
Arrah Canal	65	70½	445	441,500	132,800	170,200	311,000
Western Main and Buxar Canal . .	65½	36½	284½	546,814	135,840	210,600	346,440
TOTAL .	216¾	110	1,034¼	1,295,924	381,280	540,000	921,800

Notwithstanding the addition during the year of 112¾ miles to the lengths of branch canals and distributaries open, the area irrigable remains the same as in the previous year, being dependent on the maximum supply which can pass down the canals. The increased length of distributaries will, however, contribute to the spread of irrigation, especially in years of average rainfall, as only a portion of the irrigable area requires water yearly. The area commanded by village channels is also important, as, till they are provided, it is hopeless to expect steady irrigation. In years of abnormally low rainfall, the cultivators will go to considerable expense in the construction of temporary channels to irrigate crops which would otherwise entirely fail; but they are not willing to do this if even an indifferent crop can be realized without. Where, as in the Jugdispore estate, the country is fully commanded by village channels, almost the whole of the rice crop is irrigated yearly, the cultivators having begun to look on artificial irrigation as one of the ordinary incidents of agricultural operations.

63. The progress made in the construction of village channels is shown in the following table:—

	Total length of village channels completed.	Area commanded.	Number of outlets.	Number of permanent outlets.
	Miles.	Acres.		
Arrah Division . . .	688	105,199	2,277	59
Buxar Division . . .	293	73,826	897	10
Eastern Sone Division . .	163	33,469	1,576	3
TOTAL .	1,144	212,494	4,750	72

Of the 1,144 miles of channels in existence, 106 miles have been constructed by Government officers under the provisions of Part V of Act III (B.C.) of 1876, the cost of construction having been deposited by the persons interested. Further particulars of interest regarding village channels will be found in paragraph 15 of the Superintending Engineer's report.

64. The area on which water-rates were assessed during the year is given below, compared with 1880-81:—

Year.	Khurreef. Acres.	Rubbee. Acres.	Sugar-cane. Acres.	TOTAL. Acres.
1880-81 . .	134,208	50,290	23,127	207,625
1881-82 . .	119,389	36,795	21,891	178,075
DECREASE .	14,819	13,495	1,236	29,550

Separated by divisions, the areas are as shewn in the following statement which extends over three years:—

Year.	Eastern Sone Division.			Arrah Division.			Buxar Division.			Total.			
	Khureef.	Rubbee.	Sugar-cane.	Khureef.	Rubbee.	Sugar-cane.	Khureef.	Rubbee.	Sugar-cane.	Khureef.	Rubbee.	Sugarcane.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
1879-80 . .	5,089	12,462	2,003	27,840	41,859	15,060	8,203	7,045	10,095	41,132	62,266	27,158	130,556
1880-81 . .	17,510	10,378	1,775	74,537	31,796	15,897	42,161	8,116	5,455	1,34,208	50,290	23,127	207,625
1881-82 . .	21,381	7,004	701	72,239	21,917	14,402	25,769	7,874	6,788	1,19,389	36,795	21,891	178,075

There is therefore a decrease of 29,550 acres compared with the previous year, but an increase of 47,519 acres compared with 1879-80. The falling off in both khureef and rubbee is considerable, and may be mostly ascribed to the seasonable rainfall, though the latter crop has been affected by other causes, which will be detailed further on.

65. The following tables show the mean of rainfall observations at sub-divisional head-quarters division by division, for the months in which it is most required during the khureef and rubbee season:—

KHUREEF SEASON.

Months.	Eastern Sone Division.			Arrah Division.			Buxar Division.		
	1879-80.	1880-81.	1881-82.	1879-80.	1880-81.	1881-82.	1879-80.	1880-81.	1881-82.
	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.
August	8·53	15·39	13·49	12·02	14·82	15·67	9·62	7·88	14·28
September	11·35	2·24	4·55	17·59	3·60	4·12	20·43	2·23	2·72
October	4·38	4·91	3·87	4·81	4·14	6·78	3·84	3·87	5·31
Total .	24·26	22·54	21·91	34·42	22·56	26·57	33·89	13·98	22·31

RUBBEE SEASON.

Months.	Eastern Sone Division.			Arrah Division.			Buxar Division.		
	1879-80.	1880-81.	1881-82.	1879-80.	1880-81.	1881-82.	1879-80.	1880-81.	1881-82.
	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.
October	4·38	4·91	3·87	4·81	4·14	6·78	3·84	3 87	5·31
November	0·00	0·12	0·00	0·00	0·39	0·00	0·00	0·85	0·00
December	0·00	0·00	0·00	0·00	0·01	0·00	0·00	0·01	0·00
Total ...	4·38	5·03	3·87	4·81	4·54	6·78	3·84	4·73	5·31

It will be noticed that in the khureef season the rainfall was more than that of the previous year by 4·01 inches in the Arrah and 8·33 inches in the Buxar Division; during the rubbee season the excess was 2·24 and 0·58 inches. There was also an excess in the Eastern Sone Division for both seasons, which had but little effect on the total area irrigated owing to the gradual spread of khureef irrigation in that division.

66. The decline in rubbee irrigation appears, however, to be steadily progressing independently of the rainfall, and to be mainly due to khureef crops supplanting rubbee wherever irrigation is possible. The following extract from a report by Lieutenant-Colonel Heywood, R.E., on the Commissioner's Administration Report explains in some detail the reason of the falling off in irrigation during the year:—

"4. In Shahabad the Commissioner remarks:—'There has been during the year a diminution in the area irrigated, which was 184,124 acres in 1880-81 and only 148,448 acres in 1881-82. This decrease is remarkable, as the rainfall of the year was 42 inches, against 49 inches in the previous year. Half the *rubbee* crop was lost for want of moisture, and it might have been expected that there would have been a great demand in respect to it. It has been alleged that irrigation has become unpopular owing to the defects in the assessments and the corruption of the subordinate employés.' The figures given by the Commissioner as 'areas irrigated' do not altogether agree with those shewn in the Superintending Engineer's Revenue Report for the year 1881-82, and in the statement in paragraph 2; but this does not affect the question, which is undisputed, that there is a decided diminution in the year under review as compared with the previous year. It is not quite clear, however, to what rainfall he refers when he states that 'the rainfall of the year was 42 inches against 49 inches in the previous year.' The rainfall that best presents the demand for irrigation is the average rainfall all over the Shahabad district. A reference to the Superintending Engineer's Reports for 1880-81 and 1881-82 shews that the average fall of 12 stations in the Shahabad district for the two years was as follows:—

	Inches.
1880-81	38·80
1881-82	41·44

"According to this statement the rainfall in 1881-82 was in excess of that of 1880-81, instead of being 7 inches less. It must be noted also that a large yearly rainfall does not necessarily mean an absence of demand for water. It depends very much on when the rain falls. With reference to this point the Superintending Engineer remarks in his report for 1881-82:—'The year was on the whole one of more than average rainfall, favourably distributed, especially as regards the khureef crop. The rain in October, moreover, fell mostly in the first-half of the month, when it is required not only for the rice crops, the ears of which are then developing, but also for the rubbee, which can scarcely be sown without the ground being watered naturally or artificially. The fact of there having been a plentiful rainfall at the time of sowing would account for the ryots not applying for water for rubbee at the commencement of the season, and as they are generally reluctant to take water late if it can be avoided, preferring to take their chance of rain, this would partially explain the failure of crop alluded to above. These, however, are not the only reasons. There is little doubt that since the introduction of canals into Shahabad not only the irrigated area, but also the area of actual cultivation of rubbee crops, has been steadily decreasing. There is a growing tendency to substitute the more valuable khureef crops on lands which had hitherto always been under rubbee, trusting entirely to the supply of canal water. Many of these lands are not well suited for dhan, and are not favourably situated for receiving the supply of water necessary for this kind of crop.

"5. As regards the remark of Mr. Dé, Sub-Divisional Officer of Sasseram, that 'a conviction is gaining ground that for rubbee crops canal water is not equal to well or rain irrigation, that is a question that can only be decided by more careful experiments than have ever hitherto been attempted. Any comparison between the two systems, simply based upon the outturn of neighbouring fields, is apt to be misleading, as the cultivators are very apt to damage their own crops by irrigating too freely, out of carelessness or laziness—a mistake which is not likely to occur when the water has to be lifted from a well by manual labour."

As regards the defects in assessment, the Commissioner in the same report remarks that "the Collector says that administration has improved in this respect, although much still remains to be done, and that therefore such complaints would not explain a decrease."

67. The crops grown by the aid of canal water are shown for the last two years in the following statement, extracted from the Superintending Engineer's report:—

Name of Crop.	Eastern Sone Division.		Arrah Division.		Buxar Division.		Total.	
	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.	1880-81.	1881-82.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Khureef	16,870	21,381	72,446	71,417	41,859	25,579¾	131,175	118,377¾
Indigo	320	...	615	487	21	58¼	956	545¼
Gardens	35	...	3	...	...	...	38	...
Bhadoi	285	...	1,473	335	281	131	2,039	466
Sugarcane	1,775	701	15,897	14,402	5,455	6,788	23,127	21,891
Rubbee	8,474	5,141	30,843	21,142	7,891	7,661¼	47,208	33,944¼
Gardens	19	21	...	1	6	10¾	25	32¾
Opium	1,885	1,842	953	774	219	202	3,057	2,818
Total .	29,663	29,086	122,230	108,558	55,732	40,430¾	207,625	178,074¾

68. Of the 178,075 acres irrigated, leases had been granted for 120,544 acres, the remainder being either hot weather irrigation, for which separate

permits are not issued, or areas irrigated in excess of application. The proportion of flow to lift irrigation was 94 to 6 per cent. against 92 to 8 per cent., in the previous year.

69. The whole of the three-years' leases expired in June of the year under review, the system, as explained in last year's report having been superseded by leases for five years of block of not less than 50 acres, without reference to crop, at a uniform rate of ₹2 per acre. The result has been that 43,240 acres were leased for five years during the year, the system having been specially successful in the Arrah Division, in which leases for 33,942 acres were granted. The rate for rice has been increased to ₹3 per acre for annual leases, which has had a tendency to induce the ryots to contract for long terms, and it is hoped that in a few years the greater part of the irrigation will be on this system.

70. Calculations regarding the duty of water during the year are given in some detail in paragraph 12 of the Superintending Engineer's report; for the whole system, calculated on the quantity of water *entering* the canals, of which careful daily observations were taken, the duty is 76 acres per cubic foot per second for the khureef season and 43 acres per cubic foot per second for the rubbee season. In the Main Western Series, which comprises the major part of the irrigation, the duty is 93 acres per cubic foot per second for the khureef season and 55 acres per cubic foot per second for the rubbee season. The discharge observations for the branch canals and distributaries were not made so frequently, and the results are very divergent. Attention will in future be directed to the large proportion of the discharge not accounted for in detail. A record was as usual kept of observed discharges of the river Sone; the lowest during 1882 was 1,611 cubic feet per second against 681 cubic feet per second in 1881.

71. The balance of assessments of former years remaining to be collected on the 1st of April 1881 was ₹4,64,261, the demand for the year was ₹6,29,739, making a total of ₹10,94,000; of which ₹6,03,930 was collected and ₹53,221 remitted, leaving ₹4,36,849 to be realized in the current year. Of the remissions ₹15,952 appertain to the assessments of 1877-78, in which year a large proportion of the rubbee crop was destroyed by insects, the demand for water-rates on which had for some years been suspended. Of the collections ₹73,224 were realized in Gya and Patna against ₹68,286 in 1880-81, and ₹5,30,706 against ₹3,09,980 in Shahabad.

72. As explained in paragraph 78 of last year's report, some alterations in the arrangements for collections in Shahabad were made in February 1881. The system then introduced has been adhered to throughout the year, Baboo Chunder Narain Sing, Deputy Collector, remaining in direct charge under the general control of the Collector of the District. The labour attending the collections is described in the following extract from the Collector's report:—

"8. The realization of the demand assessed by the canal officers is entrusted to the Collector, who has under him for the purpose a deputy, two sub-deputies, and forty tehsildars. The work is one of peculiar difficulty. The assessments upon some 150,000 to 200,000 acres have to be levied direct from the cultivators, who may number 50,000 to 100,000. The law contemplated applications from ryots for a definite quantity of land; but under the rules they apply for water for such an area "more or less," and the actual amount irrigated is afterwards measured up, and the demand fixed being independent of the applications. The demand therefore is the result of a measurement to the correctness of which the ryot may or may not assent, and though when aggrieved he has every opportunity to object, he often prefers, the amount being small, to show his discontent by the simple method of not paying when called on. The collecting department has then to deal with 50,000 to 100,000 debtors, against some of whom the claims are bad or doubtful, while very few have given any formal or binding assent to the justice of the demand. The collection of water-rates under the measurement system is thus much more difficult than that of rent, the amount of which is fixed beyond dispute, or of any other demand with which I have had to deal. My predecessor and I have given constant and close attention to the subject, but without obtaining results with which we are altogether satisfied.

"9. The bulk of the demand is collected without coercive measures, the tehsildars going to the village calling the putwari and ryots and getting them to pay there and then. For this the putwari gets a small commission, and to enable him to draw it without trouble I have during the year authorized the tehsildars to pay him on the spot from the collections.

"10. Failing voluntary payments the tehsildars have now been all entrusted by me with the power to distrain. This system was introduced by slow steps, being applied first only in a few selected tehsils, and the order giving the authority explaining fully the law of the distraint. It was successful in every case, and there was only one complaint of its abuse, a criminal charge which the Magistrate found to be quite without grounds. The power was sparingly used, there having been altogether only 68 cases of distraint.

"11. Distraint does not apply to arrears due for more than a year, and for these, when payment is refused, certificates are necessary. Two thousand one hundred and seventy-two certificates were issued for Rs. 20,318, not a large proportion of a demand of nearly ten lakhs. Only Rs. 9,007 was realized on the certificates. The unsatisfactory result of the realization of certificates was due partly to their being issued only in the worst cases, and partly to the fact that they were for the most part made out towards the close of the year."

73. The difficulties enumerated apply even more fully to the assessments than to the collections, and it is to the extension of the long lease system which is spreading fast that relief from the task of making each year upwards of 100,000 separate demands must be looked for: even then collections must be yearly made from each ryot, so that a thoroughly effective system and an efficient establishment is indispensable. Considerable progress has been made, the water rates collected during the year being ₹1,59,214 in excess of any year to date, and the balance remaining to be collected at the end of the year for the first time exhibiting a decrease. The very small proportion of the demands realized by compulsory process is satisfactory.

74. The cost of the revenue establishment, compared with 1880-81, is shown in the following table:—

	1880-81.		1881-82.	
	Amount.	Percentage on collections.	Amount.	Percentage on collections.
	₹		₹	
Permanent and temporary establishment, such as zilladars, ameens, &c.	54,454	14·40	57,237	9·47
Establishment employed under Collectors	25,850	6·83	21,556	3·56
Headmen's fees	22,171	5·86	35,490	5·86
TOTAL	1,02,475	27·09	1,14,283	18·92

The increase, compared with the year preceding, of ₹11,808 in the total cost of the establishment employed is due to the increased expenditure on headman's fees, a moiety of which depends directly on the realizations. Notwithstanding this increase the percentage of expenses to collections has fallen from 27·09 per cent. in 1880-81 to 18·92 per cent. in 1881-82. A specially satisfactory result is the decrease amounting to Rs. 4,294 in the cost of the establishment employed under the Collector. There is an increase of Rs. 2,783 in the establishment employed on assessment and distribution, but in paragraph 14 of Superintending Engineer's report it is explained "that a fair comparison cannot be made, as heavy expenditure has been incurred in connection with the new five-year leases, and considerable reductions have in consequence been made in the temporary and permanent establishments during the current year, which will show favourably in next year's report." For the reasons given above the cost of measurement cannot be stated. Cadastral maps were, however, more largely used than previously; orders have since been issued rendering their use compulsory, even if for the satisfaction of the ryots; the areas are also measured with a chain. There has been considerable difficulty in

procuring the attendance of the putwaris at measurements; but the matter is being pressed, and in the Nasrigunge sub-division, Mr. Taylor, sub-divisional officer, succeeded in obtaining their signature to 95 per cent. of the measurement papers.

75. The number of complaints received during the year by Executive and Assistant Engineers was 5,896. Of these, 4,944 were disposed of, and 952 were pending at the close of the year. The balance was chiefly in the Ramnugger sub-division of the Arrah division, in which there were a large number of remission applications consequent on sugarcane being damaged by flood water after the measurement had been made.

76. The usual crop experiments were carried out, the results showing that rice watered by the canal yielded on the average $1\frac{6}{40}$ maunds of grain and $2\frac{14}{40}$ maunds of straw more than that grown on lands otherwise irrigated. A table, given by the Superintending Engineer, showing the results of experiments carried out by the Opium Department on the produce of poppy irrigated from wells and from the canal, appears to show that the salts contained in well water have a beneficial effect on that crop. Orders have been issued to permit well water to be carried across distributaries when required for the irrigation of poppy fields.

77. The following statement shows the navigation receipts of the canals since 1876-77 when they were first opened for public traffic:—

Year.	Eastern Main Series.			Western Main Series.			Total.	Tollage omitting steamer traffic.
	Number of miles open.	Receipts from tollage.	Receipts from steamers.	Number of miles open.	Receipts from tollage.	Receipts from steamers.		
		₹	₹		₹	₹	₹	₹
1876-77	...	...	...	86¾	4,852	...	4,852	4,852
1877-78	86¼	9,401	...	86¾	17,373	...	26,774	26,774
1878-79	86¼	18,570	...	86¾	10,762	...	29,332	29,332
1879-80	86¼	14,112	5,046	96¼	13,492	7,209	39,859	27,604
1880-81	86¼	27,327	8,512	130½	12,482	12,814	61,145	39,819
1881-82	86¼	29,199	11,012	130½	24,944	27,961	93,116	54,148

78. The assessed tollage for each canal for the past six years is shown in the table below:—

Year.	Eastern Main and Patna Canals.			Western Main Canal.			Arrah Canal.			Buxar Canal.			Total.		
	Private tolls.	Government tolls.	Total.	Private tolls.	Government tolls.	Total.	Private tolls.	Government tolls.	Total.	Private tolls.	Government tolls.	Total.	Private tolls.	Government tolls.	Total.
Assessment.	₹	₹	₹	₹	₹	₹	₹	₹	₹	₹	₹	₹	₹	₹	₹
1876-77	...	...	...	57	1,622	1,679	753	3,850	4,603	...	...	...	810	5,472	6,282
1877-78	2,778	7,083	9,861	1,194	2,711	3,905	7,174	5,460	12,634	...	...	...	11,146	15,254	26,400
1878-79	13,762	4,911	18,673	1,008	160	1,168	6,720	2,424	9,153	...	...	...	21,490	7,495	28,994
1880-80	13,555	313	13,868	1,417	150	1,567	10,707	1,133	11,899	...	...	...	25,739	1,595	27,334
1880-81	26,529	942	27,471	2,247	215	2,462	6,847	1,358	8,205	316	82	398	35,939	2,597	38,536
1881-82	27,377	1,746	29,123	2,209	2,159	4,368	15,875	523	16,398	3,417	1,055	4,472	48,878	5,483	54,361

There was, compared with the previous year, a satisfactory increase, amounting to ₹12,939, in the tollage on private traffic. The improvement was general, except on the Western Main Canal, on which there was a small decrease of ₹38. The closures during the year were, however, short, from the 1st to the 13th of April for the canals included in Western Main Series, and from the 9th to the 19th of April for the canals in the Eastern Main Series, whilst during 1880-81 the Western Main Series was closed from the 19th April to the 30th June.

79. Further particulars regarding the traffic over the whole system are given in the following table:—

	1876-77.	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.
Number of miles open at the end of the year . . . Miles	84	171	174	182½	216¾	216¾
Toll collections . . . Rs.	4,852	26,774	29,332	27,604	39,819	54,143
Rate of toll per mile . . Rs.	58	156	168	151	183	249
Boats, including empties . . No.	2,421	8,693	6,876	6,942	7,482	10,688
Measured tonnage of boats, including empties . . . . Tons	26,040	81,897	66,389	66,286	69,597	1,13,971
Estimated value of cargo . . Rs.	1,04,399	12,79,257	26,98,541	34,82,626	33,73,946	44,53,586

The chief point to notice is the increase in the toll collections per mile of canal open which is rapidly approaching the amount earned on the older canals.

80. The nature of the cargo carried is shown in the following statement which deals with private traffic only:—

	1876-77.	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.
	Tollage.	Tollage.	Tollage.	Tollage.	Tollage.	Tollage.

Stimulants	14	367	747	793	1,648	1,853
Clothing	10	47	316	214	279	111
Staples of manufacture . . .	2	554	2,673	4,257	8,495	11,320
Building materials	75	782	2,884	2,346	2,989	2,538
Live-stock	...	...	...	...	...	...
Fuel	...	177	147	171	153	276
Cooking utensils and other domestic implements	...	225	740	53	...	...
Bamboos and bullahs . . .	284	3,823	9,245	9,503	3,291	8,681
Miscellaneous					10,849	8,261

The very large increase in the tollage on bamboos and bullahs is due to the supply required for building purposes in Arrah and Patna being now conveyed by the canals instead of as formerly by river.

81. There is an increase of ₹3,060 in the cost of the navigation establishment for the year compared with that preceding, owing to the full complement of tindals and lascars having been entertained for the locks on the Buxar Canal. Any further development of traffic can, however, now be met with little or no increased expenditure.

82. The operations of the Steam Transport Service on the Sone Canals were extended during the year, a steamer plying twice a week between Buxar and Sasseram in addition to the former lines between Arrah and Dehree and Dinapore and Baroon. Cargo-boats on the Buxar and Patna Canals were also tried, and were found to be useful for Government traffic and in keeping the rates for conveyance by boat charged by private owner within moderate limits. With the exception of the S. S. *Sir Arthur Cotton*, which was transferred to the Midnapore Canal during the year, the whole of the steamers running were built in the Dehree Workshops. They are all iron-boats, two of them having side paddles and two paddles at the stern. The former have so far been found to be the most economical, but have less carrying power both for goods and passengers. During the year 52,565 passengers were carried and ₹7,516 received for freight of goods and parcels, the total receipts having been, according to the Examiner, ₹38,973; whilst the expenditure was ₹34,445. The profit, ₹4,528, though considerably in excess of the ₹2,103 received in the year preceding, is perhaps the least of the advantages Government and the public derive from these increased facilities for communication. The third class fares are low, averaging $\frac{1}{4}$ of an anna per mile, and the towns served are remote from railways and have no other means of communication than those afforded by these steamers and common roads.

83. The miscellaneous revenue has remained almost stationary, there being a considerable decrease of R2,500 in the receipts from fines under Act III (B.C.) of 1876, which is compensated for by an increase of R2,704 under the head land rent. Details of these receipts are given below :—

	1880-81.	1881-82.
	R	*R*
Miscellaneous receipts by sale of water	112	502
Water-supply to towns	79	192
Receipts from plantations	117	60
Ditto from other canal produce	3,719	2,929
Rents of buildings	5,483	5,726
Ditto of lands	7,059	9,763
Ditto of fisheries	302	151
Fines	3,579	1,079
Profits on sales from workshop manufacture	7,662	9,713
Miscellaneous and other receipts	11,121	9,131
TOTAL	39,233	39,216

It may be here mentioned that the Shahabad Sugar Company, Limited, formed for the purpose of manufacturing sugar at Nasrigunge, found themselves unable to continue their business and went into liquidation ; the motor turbine was purchased by Government and has been leased to a new company which is understood to be prospering, the former failure being due to causes not affecting the industry when conducted on a proper basis. There are also three small flour-mills which have been fairly successful, and it is intended to establish others.

84. The receipts and working expenses under all heads for the last three years are shown in the following statement :—

	1879-80.	1880-81.	1881-82.
	R	*R*	*R*
Receipts—			
Water-rates	4,44,716	3,78,266	6,03,930
Navigation receipts	39,859	61,145	93,116

Navigation ditto	10,483	10,618	13,678
Refunds	1,945	1,637	1,329
TOTAL	3,57,297	4,72,570	4,57,322
BALANCE NET REVENUE	+1,74,291	+6,074	+2,78,970

Compared with the previous year, there has been a large increase in the receipts and a small decrease in the working expenses. The expansion in the revenue has already been adverted to; the reduction in the working charges is mainly owing to there not having been a long closure for silt clearing, whilst in 1880-81 the canal was closed for 2⅓ months and R57,534 expended in removing 91¼ lakhs of cubic feet of silt.

85. The expenditure for the year on the Sone weir amounted to *R* 35,566, and on the head locks, buildings, tramway, and subsidiary works to *R* 8,943, making a total of *R* 44,509 against *R* 41,266 in the year previous. The

expenditure per mile on the remaining works for the last two years is shown in the statement below :—

Name of Canal.	Name of Division.	Number of miles.	Cost per mile. 1880-81.	Cost per mile. 1881-82.
			R	*R*
Eastern Main	Eastern Sone	7¼	3,106	2,323
Western „	Arrah	9	8,967	4,044
	Buxar	12¾	324	219
Buxar	Do.	44	...	173
Patna	Eastern Sone	79	404	377
Arrah	Arrah	65	457	396
Doomraon Branch	Do.	40¼	160	195
Behcea „	Do.	30¼	187	219
Chowsa „	Buxar	39½	142	84
Bhojpore Main Distributary	Do.	42½	105	78
Distributaries	Arrah	445	65	51
	Buxar	43¾	53	60

The distributaries in the Buxar Division include only those taking off from the Western Main Canal, the others being still repaired from capital ; in the Eastern Sone Division a part of the cost of maintaining distributaries was also charged against the original estimates.

86. Details regarding the dredging plant employed on the canals and dredger work executed during the year will be found in the Superintending Engineer's report. The small dredgers designed by Mr. Fouracres have continued to work satisfactorily, the cost of excavating and discharging silt into the river not generally exceeding *R* 2-8 per 1,000 cubic feet. Where the silt was carried by manual labour to the top of the spoil bank, the cost of removal has to be added.

The expenditure on weed-clearing for each canal for the past two years is shown below :—

	1880-81.	1881-82.
	R	*R*
Eastern Main Canal	2,705	1,845
Patna „	7,647	3,690
Western Main „	6,270	6,272
Arrah „	7,198	9,292
Buxar „	...	18
Buxar distributaries	...	46
TOTAL	23,820	21,163

The weed-rake designed by Mr. Fouracres, which was alluded to in the last report, has not yet been brought into use as it was found to require steam-power and a steamer was not available. A side paddle steamer has lately been indented for from England.

87. The progress made in plantations is shown in the following table. The results represent an expenditure of *R* 40,282 to date :—

Name of division.	Trees 12 feet and above.	Saplings between 4 and 12 feet.	Seedlings below 4 feet.	TOTAL, 1881-82.
Eastern Sone	24,377	25,233	66,651	116,261
Arrah	14,982	9,458	18,167	42,607
Buxar	4,287	7,034	8,278	19,599
TOTAL	43,646	41,725	93,096	178,467

89. These works which are simply canalized *nullahs* have been in operation since October 1880, but little advantage has, however, been taken of them as yet, owing to seasonable rainfall. The primary object of the canals was to supply water for the manufacture of indigo, a gross revenue of *R* 23,000 being guaranteed by the planters concerned, in consideration of their receiving water free for the manufacture of indigo and the right to irrigate specified portions of their lands without the payment of water-rates. The area actually irrigated during the year under review was 666 acres, mostly *cheena*. Questions have arisen as to the precise extent of the guarantee,

or rather as to the advantages claimable under it without payment, which have interfered with the realization of the amount due. The matter is at present under consideration, and some alterations in the rules passed under Act III (B.C.) of 1876 will probably be necessary. There is, however, no reason to doubt that all outstandings will eventually be recovered.

90. The present position of these canals is not fortunate: one of the head sluices was carried away by a high flood of the river Gunduck which underscoured its foundations, and the expenditure on maintenance and repairs reached ₹44,240 against ₹4,367 actually collected. Flow irrigation is not practicable, and it is only in seasons of scant rainfall that the cultivators will go to the expense of lifting the water. The object with which the canals were constructed has, however, been attained, and the canals in times of scarcity will prove a boon to the district which is thickly populated and possesses no other irrigation works.

CALCUTTA CANALS AND NUDDEA RIVERS.

91. Capital and revenue accounts of these works are not kept; their revenue administration is under the direction of the Board of Revenue, whilst improvements and maintenance are controlled by the Superintending Engineer, South-Western Circle. During the year under review the new lock at Chitpore was under construction, as well as new bridges to carry the Dum-Dum, Manicktollah, Ooltadangah, and Narkaldangah roads over Circular Canal; and the canal between Halsee Bagan and the Sealdah Railway bridge was widened. On these works ₹7,27,206 were expended.

92. The earnings of, and expenditure on, these works for the past two years is shown in the table following :—

	1880-81.	1881-82.
	R	*R*
REVENUE REALIZED—		
Calcutta Canals	4,14,145	4,82,466

Calcutta Canals	(—)4,15,624	(—)5,71,835
Nuddea Rivers	(+)1,10,787	(—) 56,089
TOTAL	(—)3,04,837	(—)6,27,924

The reason of the increase of receipts from the Circular canals is stated to be "that the export of rice, wheat, and jute from Calcutta, which largely increased in 1878-79, after the Madras famine, fell off largely the next year, the result probably of the reaction after the brisk trade of the year before. In 1880-81, however, the export trade in these staples again revived, and, except in wheat, was nearly as large as that in 1878-79." The decrease in the earnings of the Nuddea rivers was owing to their comparatively unfavourable state for the passage of boats, notwithstanding a considerably increased expenditure on training works.

General Remarks.

93. The result of the year's operations on Productive Public Works has been excluding interest and receipts and charges in England, a profit of R2,13,895 against a budget estimate of R2,95,464, the net revenue during 1880-81 having been R22,305. The total receipts were R55,099 in excess of the estimate; but the working expenses owing to damages caused by high floods in Orissa and to special repairs to the Midnapore weir and Lutchmutpore lock exceeded the provision made by R1,10,196. The receipts from the Sone canals were R1,86,292 more, and the working expenses R5,778 less, than the budget estimate. The financial results calculated by earnings instead of actual collections are shown below:—
