GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 6th MARCH 1883.

GENERAL REMARKS.—Rain has fallen in almost all reporting districts in the North-Western Provinces and Oudh, as also in Bengal, in several districts of the Punjab and in Assam. There has also been slight rain in a few places in the Central India and Rajputana States and at Mercara and Hyderabad. Elsewhere there has been little or no rain to report. No report has been received from the Madras Presidency.

Agricultural prospects on the whole continue good throughout the country. The *rabi* harvest is in progress in the Bombay and Bengal Presidencies and in the Central Provinces. In the Patna division of Bengal the poppy crop has been greatly injured by the recent rains, and in some districts of the North-Western Provinces and Oudh some injury has been sustained by the mustard and oil-seed crop, though a good harvest is still expected. In Coorg the threshing of rice has been nearly completed.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—(Mar. 7th)		
Kurrachee	Drizzling rain in Kurrachee and Manjhand.	River at Kotri on 2nd 2 feet 3 inches against 4 feet 8 inches on same date last year; small-pox still prevalent in Kurrachee, 55 fresh cases, 14 deaths from 23rd February to 2nd March, total to latter date 201 cases, 75 deaths, remaining sick 30; disease also in Malir 3, Sehwan 2, Dadu 2, Tatta 1, and Keti 4 cases, respectively; fever in 7 talukas; cattle disease in 8 talukas; wheat, red rice, and *bajri* in Kurrachee 24, 32, and 34 lbs., in Sehwan 30, 38, and 46 lbs., in Ghorabari 20, 44, and 44 lbs., and in Sajawal 36 and 44 lbs., respectively.
Hyderabad	Slight drizzle reported in four talukas.	*Rabi* crops in fair condition; dust-storm in Kandiaro on 2nd; small-pox in 7, fever in 6, and cattle disease in 4 talukas; wheat 24, *bajri* 40, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad	. . . .	*Rabi* crops are being reaped; small-pox in Dhandhuka; *bajri* 31½ and wheat 7 lbs. per rupee.
Baroda	. . . .	*Rabi* crops fair; cotton-picking in progress; small-pox prevailing in the town and taluka of Naosari; cattle disease in the Kadi and Patan talukas; *bajri* 30 and common rice 25½ lbs. per British rupee.
Surat	. . . .	*Rabi* harvest continues; fever in Bulsar, Pardi, and Mandvi; 14 deaths from small-pox in Surat; *jowari* 41 and *nagli* 51 lbs. per rupee.
Nasik	. . . .	Harvesting *rabi* continues; cattle disease in Sinnar; small-pox in Chandor taluka; wheat 25½, *bajri* 36, and rice 45 lbs. per rupee.
Colaba (Bombay)	. . . .	Average abnormal temperature 1° warm; vapour in air in excess of normal; wind normal except on the 6th, when abnormal wind was northerly.
Poona	. . . .	Harvesting of *rabi* progressing; *bajri* 43 and *jowari* 59 lbs. per rupee, in Poona *bajri* 37 and *jowari* 46 lbs. per rupee.
Ahmednagar	. . . .	*Rabi* crops almost harvested; *bajri* maximum 60 lbs. per rupee in Jamkhed, minimum 42 lbs. in Kopargaon; *jowari* maximum 72 lbs. per rupee in Jamkhed, minimum 48 lbs. in Akola.
Sholapore	. . . .	*Rabi* harvest nearly completed in some places, in others in progress; weather hot; *jowari* 69 lbs. 20 tolas, and *bajri* 57 lbs. 16 tolas per rupee.
Dharwar	. . . .	Wheat and gram being harvested; late *jowari* good; scarcity of drinking water in Nargund petha; fever in 2 talukas; rice minimum 26 and *jowari* 52 lbs. per rupee.
Kanara	. . . .	Second crop rice plants in ear on coast; sugarcane harvest completed; small-pox in Karwar and Sirsi; fever subsiding; cattle disease in Hallial; common rice in Karwar 14 seers per rupee; in district average 15½ seers per rupee; weather hot.
Rajkot	. . . .	Weather cool; general health good; *bajri* 29 and *jowari* 36 lbs. per rupee.
		General Remarks.—*Rabi* harvest in general progress; fever, small-pox, and cattle disease in a few districts.
Bengal—(Mar. 7th)		
Chittagong	6·22	Heavy rain on 3rd, with storm damaging spring crops; prices steady; cow-pox still continues; a few cases of cattle disease reported.
Dacca	·93	Pressing of sugarcane in full progress; prospects of *boro* paddy and other standing crops good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
24-Pergunnahs (Alipore)	·73	*Rabi* crops being gathered, and sugarcane pressed; lands being ploughed for early crops; price of common rice stationary; public health generally good.
Moorshedabad	·02	Winter crops satisfactory, and being cut in some places; *boro* paddy cultivation proceeding; land being prepared for *bhadoi* paddy; a few cases of small-pox reported in some places; cholera still lingers in thana Shahanagore.
Rajshahye	. . . .	Very slight rain; prospects of spring crops continue favourable; ploughing being vigorously carried on; public health generally good.
Burdwan	2·85	Sugarcane and *rabi* crops being cut; fever and cholera reported from various parts of the district.
Rungpore	·04	Prospects of crops favourable; early rice being sown in some places; public health good.
Bhagalpur	·41	Prospects good; *rabi* harvest has commenced in places; lands being prepared for early sowings of paddy.
Purneah	·08	Prospects of crops still good; public health good.
Patna	·31	Prospects of *rabi* crops continue good with the exception of poppy; pressing of sugarcane going on; public health good.
Durbhunga	*Nil*	*Rabi* crops being harvested; prices falling; public health good.
Hazaribagh	. . . .	Slight rain in a few places; weather warm and seasonable; *rabi* crops being cut in places; prospects favourable; general health good.
Cuttack	·51	Weather hot and cloudy; late rice being threshed; *rabi* crops being gathered; sugarcane being pressed; spring rice promising; public health generally good; cholera reported to have appeared in some places in Kendrapara sub-division.
		General Remarks.—There was more or less rain in most parts of these provinces during the week; in Behar slight showers fell only in a few parts; the rain was rather heavy for the season in some of the districts, particularly in Chittagong, where a storm also occurred damaging the standing crops; the rain has much facilitated ploughing for the autumn crops, which is generally being pushed on with vigour; prospects of all cold-weather crops and of spring rice continue to be generally favourable, except poppy in the Patna division, which is said to have been greatly injured, especially in the district of Sarun, by previous rain; harvesting of cold-weather crops is in progress, and that of sugarcane is still proceeding; cholera and small-pox reported from some districts, but no where in an epidemic form; fever still lingers in a few districts, but it has much decreased.
N.-W. Provinces and Oudh—		
Benares (March 6th)	. . . .	Weather cloudy with occasional slight showers; crops very good; but fine weather required; health good; prices steady.
Allahabad („ 7th)	. . . .	A little rain in three tahsils with hail in one here; poppy and mango crops have suffered; *rabi* crops being cut; mustard crops have been much injured by blight from cloudy weather and wheat and gram a little; people healthy; prices steady.
Gorakhpur („ 5th)	. . . .	Weather cloudy; crops promising, except oil-seeds; prices stationary.
Jhansi („ „)	. . . .	Weather still cloudy; very slight injury to wheat by blight is reported from pargana Jhansi; gram is unirrigated, land is being cut for irrigation; supplies sufficient; prices fluctuating; small-pox still lingering; cattle disease continues.
Agra („ 6th)	No rain	Weather cloudy during the week; continued cloudy weather slightly injurious to standing crops; well irrigation continues; small-pox in three parganas; general health good; prices rising slightly.
Bareilly („ „)	·25 on 4th	No injury from hail; weather still cloudy and threatening injury to *rabi*.
Meerut („ „)	Meerut . ·30 Hapur . ·40 Mowana . ·10 Ghaziabad . ·20	Weather unsettled during past week; showers on nights of 28th and 3rd; dry crops much benefited; no damage; health good; prices steady.
Kumaon („ „)	Plenty timely rain	Crops much better; general health good; cattle disease continues; prices unchanged.
Lucknow („ „)	No rain	Cloudy weather continues; wind variable; condition of people and crops good; small-pox and measles in the city disappearing.
Partabgarh („ „)	Slight rain during the week. ·30	No damage to crops; peas have been gathered, and barley is now being cut; health good; prices stationary.
Sitapur („ „)	Slight rain on 4th	Irrigated crops suffering from *girwi*; prospects still on the whole fair; slight rise in price of *arhar* and *bajra*.
Fyzabad („ „)	·1 at Sadr	Cloudy weather, injurious to the crops; mustard and oil-seeds injured; health good; prices stationary.
Rae Bareli (Mar. 5th)	·60	Weather cloudy; wind variable; *rabi* crops continue good; condition of people normal; prices unchanged.
Cawnpore („ 6th)	Derapur . ·10 Bilhaur . ·10	Hail-storm at Cawnpore and Derapur on the 5th; health generally good; small-pox prevalent in Cawnpore; prices slightly risen.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—*contd.*		
Farukhabad (Mar. 6th)	Slight shower on 1st	Weather seasonable, sometimes cloudy; a little hail at Muhammadabad; health of the district on the whole good; but small-pox is still prevalent in some places; prices steady. *General Remarks.*—There have been showers of rain in almost all repo ting districts, with hail in Allahabad, Cawnpore, and Bareilly; in a few districts the crops, particularly mustard and oil-seeds, have been injured by blight, but a good harvest is still expected; the general health is good; small-pox is disappearing in Lucknow, it continues in Cawnpore, Farukhabad, Agra, and Jhansi; cattle disease is still reported from Moradabad, Jhansi, and Kumaon; prices are fluctuating in a few districts, but are generally steady.
Punjab—(Mar. 6th)		
Delhi	·40	Small-pox in city and district continues; state of crops good; prices rising slightly.
Hissar	Slight drizzle	Harvest prospects excellent; health good; prices fluctuating.
Umballa	. . . .	Health good; *rabi* crops generally poor, yield expected to be below average; rain wanted; prices stationary.
Jullundur . . .	. . . .	Health and harvest prospects good; prices stationary.
Amritsar . . .	. . . .	Health and harvest prospects good; prices steady.
Lahore	. . . .	Health and harvest prospects good; price of wheat falling and of others stationary.
Ferozepore . . .	Slight rain	Health and harvest prospects good; prices rising.
Sialkot	·40 at Zafarwal	Health and harvest prospects good; prices fluctuating.
Rawalpindi . . .	·25 rain and 5 inches snow at Murree.	A few cases of cattle disease in the Pindigheb tahsil and of fever in Fatehjang and Kahuta tahsils; *rabi* prospects good; prices fluctuating.
Peshawar . . .	·30	Health and harvest prospects good; prices fluctuating.
Mooltan	Drizzle at Sadr	Health and harvest prospects good; prices fluctuating.
Dera Ismail Khan . .	Slight rain	Health and harvest prospects fair; prices steady.
		General Remarks.—The health and harvest prospects of the Province are generally good, except in the Umballa district where the yield is expected below average, and where rain is needed.
Central Provinces—		
Nagpur (Mar. 7th)	. . . .	Weather hot, occasionally cloudy; prospects good; harvest completed; health good; cattle disease in Nagpore and Umrer; prices steady.
Jubbulpore . . .	. . . .	Weather cloudy and cool; reaping continues; prospects favourable; wheat 20 and rice 15 seers per rupee; health good.
Saugor (Mar. 5th)	. . . .	Weather cloudy, getting hot; prospects excellent; prices steady; health good.
Seoni („ 6th)	. . . .	Weather cloudy and close; cutting of *rabi* crops continues; fever increasing; wheat 19½ and rice 19 seers per rupee.
Hoshangabad („ „)	. . . .	Weather cloudy and warm; reaping continues; health good; wheat 16, rice 11, and *jowar* 19 seers per rupee.
Raipur („ 3rd)	. . . .	Weather warm; prospects favourable; reaping continues; common rice 32 and wheat 24 seers per rupee.
Sambalpur („ 1st)	. . . .	Weather variable and unhealthy; sugarcane lands being prepared; fever prevalent; common rice 56 seers per rupee.
Khandwa . . .	. . . .	Weather getting warm; preparation for *kharif* sowings commenced; 356 cases small-pox, 41 deaths; rice 15, wheat 16, and *jowar* 24 seers per rupee.
		General Remarks.—Weather warm; reaping continues; prospects favourable; health variable; prices steady.
British Burma—(Mar. 3rd)		
Akyab	. . . .	Thirty-six deaths from cholera in one township and five in another, five from small-pox in one township, otherwise public health good.
Rangoon . . .	. . . .	Two deaths from cholera and one from small-pox, otherwise public health good.
Bassein . . .	. . . .	Public health good.
Prome	. . . .	Public health good.
Amherst (Moulmein) .	·27	Total rainfall to date ·27; public health good; both in Moulmein and district.
Toungoo . . .	. . . .	Three deaths from small-pox in one township, otherwise public health good.
		General Remarks.—Some cholera in Akyab district, public health otherwise generally good.
Assam—		
Gauhati (Mar. 6th)	·50	Weather seasonable; high wind prevailing; public health good; land being ploughed for *aus*; gathering of mustard in progress.
Sylhet („ 7th)	2·44	State and prospects of crops good; public health generally good.
Cachar . („ „)	4·55	Weather rainy; common rice 26¾ seers per rupee; one death from small-pox from Katigora reported.
Dibrugarh („ „)	1·25	Weather rainy; mustard being harvested; pressing of sugarcane going on; lands being ploughed for *aus*; small-pox reported from Dumduma.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—(Mar. 7th)		
Mercara . . .	·66	Threshing of rice nearly completed; slight fall in price of coffee; price of food grains stationary; prospects of season good; fever and small-pox prevalent in North Coorg and in Mercara taluk.
Berar and Hyderabad—		
Amraoti . (Mar. 7th)	. . . .	Weather clear and warm; threshing in progress; prospects good; wheat 16 and *juari* 26 seers per rupee.
Akola . („ „)	. . . .	Reaping of *rabi* crops continues, outturn good.
Hyderabad („ „)	·44	Melon crops in 3 talukas partially injured by rain; *rabi* and *tabi* crops in good condition; small-pox prevails in 2 talukas; prices—wheat 17, coarse rice 11, white *jowari* 25, yellow *jowari* 30¾, and *tur* 24½ seers per halli sicca rupee.
Central India States—(Mar. 7th)		
Indore	. . . .	Health good; weather changeable; agricultural prospects favourable.
Morar (Gwalior) . .	. . . .	Health and prospects good; weather cloudy.
Sutna	·02	Health and prospects good.
Neemuch . . .	No rain	High winds yesterday; gram being reaped; public health good.
Goona	. . . .	Health and crops good; wheat 23 seers 8 chittacks per rupee.
Bhopal	. . . .	Weather seasonable; crops and public health good.
Agar	. . . .	Health and prospects good.
Nowgong . . .	. . . .	Weather cloudy; prospects of *rabi* favourable; prices steady; health good.
Manpur	. . . .	Prospects good; heavy westerly wind blowing; health good.
Rajputana—		
Abu (Mar. 7th)	·48	Weather cloudy and windy; health good.
Sirohi („ 4th)	. . . .	Weather cloudy; wells full; health and prospects good.
Marwar („ 2nd)	·12	Weather cloudy; health and prospects good.
Harowtee („ 5th)	·06	Slight injury to standing crops by cloudy weather and showers; health good.
Jhallawar (Feb. 27th)	. . . .	Weather cloudy; health and prospects good.
Ajmere (Mar. 6th)	. . . .	Weather cloudy; gram crop injured by cold wind; small-pox prevalent.
Jeypore („ „)	Slight rain	Weather cloudy; prospects and health good; prices stationary.
Ulwur („ „)	. . . .	Weather cloudy throughout week; wheat and barley crops slightly injured; small-pox continues, otherwise health good.

Trade 545

Imports and Exports from April 1st, 1882, to December 31st, 1882, compared with the corresponding period of the year 1881 547

Statement showing the Quantities and Values of articles imported into British India (from Foreign Countries), which were exempted from customs duty by the Indian Tariff Act XI of 1882, for the ten months from April 1st, 1882, to January 31st, 1883, compared with the corresponding period of the year 1881-82 . . . . . *ib.*

Memorandum on the import of Government Stores from Europe 549

APPENDIX VI.

The Military Budget Estimates, 1883-84—

Minute by Lieutenant-General the Hon'ble T. F. Wilson, C.B. 551

FINANCIAL STATEMENT.

I.—Preliminary.

Preliminary.

1. No legislation will be undertaken in connection with the financial arrangements for the year 1883-84. Under these circumstances the law does not permit of the Financial Statement being made in the Legislative Council. That Statement must take the form of a written Minute which will be published in the *Gazette of India*.

Law bearing on Financial Statement.

2. It may perhaps be as well that, at the risk of repeating what has often been said before, I should explain the precise condition of the law bearing upon the present issue.

3. Section 19 of 24 & 25 Vic. Cap. 67 (the Indian Councils Act, 1861) is conceived in the following terms :—

"No business shall be transacted at any meeting for the purpose of making "Laws and Regulations" (with the exception of the amendments of the Rules for the conduct of Business) "other than the consideration and enactment of "measures introduced into the Council for the purpose of such enactment."

It results, therefore, that as no legislation is proposed in connection with the financial arrangements for the year 1883-84, the Financial Statement cannot be made in the Legislative Council without a contravention of the law which governs the proceedings of that Council. This, as was explained by Lord Northbrook in 1873,* "is not a mere technical or "formal difficulty, for not only are the words of the "Act in themselves explicit, but in order to prevent any possible misconception, "it was explained by the Secretary of State, in the Despatch No. 14 of the 9th "of August 1861, with which the Act was transmitted to India, that one object "of the nineteenth Section of that Act was that this (*i.e.*, the Legislative) "Council should not 'interfere with the functions of the Executive Government, "and occupy its time with matters which are not directly and immediately "connected with the special duties assigned to it'—that is to say, the con-"sideration and enactment of Laws and Regulations."

* Legislative Council Proceedings of March 5th, 1873.

4. I regret that the condition of the law precludes the possibility of any discussion on the existing financial situation in the Legislative Council. The law on the subject is, however, explicit and must of course be obeyed. The Government has no discretionary power in the matter.

Figures in conventional sterling.

5. Except in cases where the words "true sterling" are entered in a parenthesis after any figure, all the figures in this Statement are, as usual, given in "conventional sterling," that is to say, £1 = Rs. 10. On the occasion of the last Financial Statement (para. 1) I explained the reasons which render the continuance of this system, for the present at all events, desirable.

6. The explanations in this Statement are given upon the figures as arranged in Appendix I.

II.—Changes in the forms of the Accounts and Estimates.

Changes in the forms of the Accounts and Estimates.

7. Judging from the remarks which are frequently made both in and out of Parliament, it would appear that the Accounts and Estimates of the Government of India are regarded by many people as a financial puzzle, which none but experts can hope to understand. It not unfrequently happens that those who cannot understand them rush to the conclusion that the figures, in the form in which they are presented to the public, are wrong and misleading; that there is something radically unsound in Indian financial affairs; that the surpluses are no surpluses at all, but that they would [illegible] the figures properly [illegible] be turned into deficits; in fact, that [illegible] Financial Statement

is merely a more or less dexterous manipulation of figures, and not an accurate indication of the financial situation of the Government of India.

Present system is scientifically sound.

8. I should be the last to wish to under-rate the difficulties connected with the administration of the Indian finances. Our standard of value is unstable. Our Opium revenue is precarious. The tax-paying community is poor and incapable of bearing any heavy burthens. War and famine are constantly recurring evils. The comparative absence of private capital throws upon the State many onerous duties which in other countries can be more advantageously performed through the agency of private enterprise. All this is true enough. But it is wholly erroneous to suppose that the difficulties of Indian financial administration, considerable though they be, are in any way connected with questions of technical finance. The issue is, in fact, a false one. The machinery for the conduct of our technical finance is remarkably good. I believe it may challenge comparison with that of any other Government in the world. The Accounts and Estimates represent truly and accurately the money received and spent by the Government. The surpluses are real surpluses, and the deficits are real deficits. The figures present neither an optimist nor a pessimist view of the financial situation. They give the bald and true facts of the situation as they stand, without exaggeration in one direction or another.

But is not generally understood.

9. But however scientifically sound and accurate may be our system of Accounts, nothing is more certain than that the public finds great difficulty in understanding the figures which are published on the occasion of the annual Financial Statement. In proof of this assertion I need only mention that a leading London newspaper, in reviewing the Budget last year, made a mistake of about £2,000,000, owing to a misapprehension of the true meaning of the Estimates as they were presented to the public.

Some reforms are desirable.

10. It is manifestly the duty of the Government to do all that it can to ensure a comprehension of its Accounts and Estimates. At the same time it is to be remembered that the financial transactions of the Government of India are very large and complicated. Those of the English Treasury are, relatively speaking, much more simple. No one can hope to gain a thorough insight into the true meaning of the Indian Accounts and Estimates unless he is prepared to devote a certain amount of time and trouble to the task. The most that the Government can do is to facilitate their comprehension to the utmost by arranging the figures in the most simple and concise form of which the circumstances admit.

And also possible.

11. The whole of this question has been fully considered within the last few months, and it has been found possible to re-arrange the figures in such a manner as to maintain intact our present system, which, as I have already said, is everything that can be desired from a departmental point of view, whilst at the same time I trust that the Accounts and Estimates in their new form will be more easily comprehensible to the public than appears heretofore to have been the case.

Description of existing system.

12. Before proceeding any further, it will be desirable that I should describe the forms in which the Accounts and Estimates have heretofore been presented to the public.

13. Up to the present time the ten following documents have been appended to the Financial Statement:—

Documents heretofore attached to the Financial Statement.

Statement I.—Revenue and Expenditure of the Government of India in India and in England.—This Statement gives the whole of the Revenue, whether Imperial, Provincial, or Local, under 29 major heads, and the whole of the Expenditure, whether Imperial, Provincial, or Local, under 37 major heads of Account.

Statement II.—Revenue and Expenditure of the Government of India in India and England.—The only difference between this Statement and *Statement I* is that the Revenue from *Productive Public Works* is shown separately, instead of being amalgamated with other Revenue connected with Public Works as is done in *Statement I*. A corresponding separation is made on the Expenditure side of the Account. It is on the figures, as arranged in this Statement, that the explanations given at the time of the Budget by the Financial Member of Council have heretofore been based.

Statement III.—Revenue and Expenditure of the Government of India in India and in England in the three Divisions, Imperial, Provincial, and Local.—This Statement gives the same figures as in *Statements I* and *II*, but arranged so as to show to what extent the Revenue and Expenditure are respectively Imperial, Provincial, and Local.

Statement IV.—Receipts and Disbursements of the Government of India in India and England.—This Statement gives the joint cash account of the Home and Indian Treasuries.

Statement V.—Revenue and Expenditure of the Government of India in India.—This Statement gives in detail the Revenue and Expenditure exclusive of all transactions in England.

Statement VI.—Revenue and Expenditure of the Home Treasury of the Government of India.—This Statement gives the detail of the Revenue and Expenditure in England.

Statement VII.—Receipts and Disbursements at the Treasuries of the Government of India in India.—This Statement shows what portion of the total sums given in *Statement IV* are received and disbursed in India.

Statement VIII.—Receipts and Disbursements at the Home Treasury of the Government of India.—This Statement shows what portion of the total sums given in *Statement IV* are received and disbursed in England.

Statement IX.—Closing Balances of the Provincial Governments.—*Statement VII* gives the closing balance of the Imperial and Provincial Governments collectively. *Statement IX* shows how much of this amount is reckoned at the credit of each Provincial Government.

Statement X.—Statement showing the net Revenue and Expenditure of India.—This Statement was published for the first time in March 1882.

Reasons why the Accounts are difficult to understand.

14. The difficulty of understanding the Indian Accounts and Estimates seems to arise mainly from two causes. In the first place they are too bulky. In the second place, the development of Provincial and Local Finance has given rise to the necessity of adjusting entries, which to those who are not fully acquainted with the somewhat complicated detail of the arrangements made between the Imperial and Provincial Governments are, without doubt, rather difficult to understand.

Bulkiness of Accounts and Estimates.

15. As regards the bulkiness of the published Statements, it is to be observed that under Mr. Wilson's classification in 1861 the Revenue was shown under 15, and the Expenditure under 23 major heads of Account. The Commissioners in their report of 1864 somewhat expanded this classification, and in 1866 Mr. Massey, adopting generally the proposals of the Commissioners, showed the Revenue under 20, and the Expenditure under 32 heads.

16. Since 1866 new administrative wants have sprung up, with the result that, in order to keep pace with those wants, it has from time to time been necessary to open new heads of Account. The passing of the Registration Acts led to the opening of a new head, entitled *Registration*, on both sides of the Account. The policy of financial decentralisation and the incorporation into the General Accounts of Local Revenue and Expenditure necessitated a new head of Account under the title of *Provincial Rates*. In 1870 the heading *Minor Departments* first made its appearance. The expenditure under this head had formerly appeared under *Administration*. With the adoption of the policy of

lending Officers to Native States, the necessity arose of opening a new head of Account, entitled *Civil Furlough Allowances*. The major head of *Famine Relief and Insurance*, which is now divided into three sub-heads, *viz.*, *Relief*, *Protective Works*, and *Reduction of Debt*, was opened as a necessary result of the famine policy of 1877 and 1881. It was also, from time to time, found necessary to add new heads of Revenue under the titles of *Medical*, *Stationery*, and *Superannuation Contributions*. But it is under Public Works that the greatest development has occurred. The single head *Public Works* on either side of the Account was all that was required in 1861. Exclusive of Capital Expenditure on *Productive Public Works*, which stands outside the Ordinary Account, and exclusive of the grants for *Protective Works* under *Famine Relief and Insurance*, we have now in *Statement II* no less than 9 figures on the Revenue, and 11 figures on the Expenditure side of the Account, representing Public Works transactions.

17. In all, Mr. Massey's 20 figures on the Revenue side of the Account had increased in March 1882 to 36, and his 32 figures on the Expenditure side of the Account had increased to 49.

Requirements of the public.

18. There is not one detail which is at present given in our Statements of Account, which, for departmental purposes, could be spared. On the other hand, it is impossible not to recognise that the Statements give more detail than is generally required by the public. What I conceive is mainly required by Parliament and by the public is to present the Accounts and Estimates in a form sufficiently concise and simple to be easily understood by those who do not make a special study of Indian Finance, but whose general knowledge of financial subjects enables them readily to understand an Account presented in a clear form. Full details should indeed, as at present, be published, but in a separate form.

How they may be met.

19. The only way in which we can attain the conciseness and simplicity required by the public, and at the same time meet the necessities of administrative and departmental convenience, will be to push the grouping of the heads one stage further than the "major heads" which have heretofore been shown in the documents appended to the Financial Statement. To make any material alteration in our major heads would either render an accurate comparison with the figures of past years impossible, which would be very objectionable, or it would involve the re-compilation of the Accounts of past years, which would be a very laborious process. With one exception, of slight importance, no such alteration is either desirable or necessary.

Division of one major head only.

20. The exception to which I allude, is in respect to the heading on the Expenditure side of the Account, which has up to the present time been entitled *27. Allowances and Assignments under Treaties and Engagements*. In the classification adopted from 1861 to 1866, the charges under this head were treated along with refunds, and charges for the collection of Revenue, as direct charges against Revenue. This is also where they are placed in the existing General Account (No. 2 of the Finance and Revenue Accounts); and their close connection with this group is shown in two recent instances, namely, the Excise compensations paid in Bombay, and the payments under the Salt Treaties. Both of these are payments on account of Revenue, and are productive of a corresponding increase of Revenue. They are, therefore, not properly accounted for unless they are grouped as direct charges against Revenue. But such a payment as the yearly allowance of the Ex-King of Oudh, which also goes under this head, cannot properly be considered as a charge against Revenue. It may be more properly regarded as a purely political charge. We propose, therefore, in the future to break up the existing major head into two portions. One of these portions, entitled *Assignments and Compensations*, will be grouped under *Direct Demands on the Revenue*. The other, entitled *Territorial and Political Pensions*, will be grouped under *Miscellaneous Civil Charges*. With this exception no change will be made in the existing units of Account.

New classification.

21. I now invite attention to Appendix I attached to this Minute. This Appendix contains the six following documents:—

(1) General Statement of Accounts and Estimates.
(2) Abstract A, Details of Revenue.
(3) Abstract B, Details of Expenditure.
(4) Abstract C, Details of Receipts and Disbursements other than Revenue and Expenditure.
(5) Abstract D, Provincial and Local Balances.
(6) Abstract E, Net Revenue and Expenditure.

For the future these six Statements will take the place of the ten Statements heretofore published.

The General Statement.

22. Any one who wishes to see at a glance the nature of the whole of the financial transactions of the Government of India for the years under review need only look at the General Statement. He will there see the total Revenue and Expenditure,—whether Imperial, Provincial, or Local, and whether in India or in England,—grouped under a few main heads. He will also see the whole of the cash transactions, which stand outside the Revenue and Expenditure Account. He will also see the opening and closing balances of the Government, whether in England or in India. Thus, for instance, looking to the Accounts for the year 1881-82, it will be seen that the Revenue amounted to £73,695,806, and the total Expenditure charged against Revenue to £71,113,079, thus leaving a surplus of £2,582,727; that the total Receipts, including not only Revenue, but the net receipts on account of *Debt, Deposits, and Advances*, and the gross receipts of the Secretary of State on account of Bills drawn on India, amounted to £93,516,749; that the total Disbursements, including not only Expenditure charged against Revenue, but also Capital Expenditure on *Productive Public Works* and Disbursements on account of *Debt, Deposits, and Advances* and of Council Bills, amounted to £93,871,777; that the opening cash balance in England on April 1st, 1881, amounted to £4,127,749; that the opening cash balance in India on April 1st, 1881, amounted to £13,371,101; that the Secretary of State drew Bills on the Indian Treasury amounting to £18,412,429 between April 1st, 1881, and March 31st, 1882, and that Bills amounting to £18,336,997 were paid during the same period; that the closing cash balance in England on March 31st, 1882, amounted to £2,620,909; and that the closing cash balance in India on March 31st, 1882, amounted to £14,522,913. These are the leading financial features of the year.

Details in General Statement.

23. We have carefully considered the extent to which it will be desirable to give details in the General Statement. I may observe that in the main Statement attached to the Finance Accounts of the United Kingdom, the Revenue is shown under ten heads, and the Expenditure, excluding *Interest on Debt*, which for special reasons has eight heads to itself, is shown under fourteen heads. We have roughly taken the Statement issued by the English Treasury, which is an admirable composition of its kind, as a model for our guidance.

Principal Heads of Revenue.

24. The first entry in the General Statement on the Receipt side of the Account is *Principal Heads of Revenue*. This group contains eleven items (*vide* Abstract A), of which five only are shown separately in the General Statement. These are—

Land Revenue.
Opium.
Salt.
Stamps.
Excise.

25. These are the main heads of Indian Revenue. They have, following the English system, been arranged in what may approximately be considered the order of their relative importance. The remaining items grouped under *Principal Heads of Revenue* are classed in the General Statement under *Other Heads*. This entry includes the following heads :—

Provincial Rates.
Customs.
Assessed Taxes.
Forest.
Registration.
Tributes from Native States.

Any one who wishes to see the detail under these heads has only to turn over the page and look at Abstract A, to which he is referred in the first column of the General Statement.

Post Office, &c.

26. The next item is *Post Office, Telegraph, and Mint.* These are given in one figure in the General Statement, but are separated in Abstract A.

Receipts by Civil Departments.

27. The next entry in the General Statement is *Receipts by Civil Departments*, a term borrowed from the English Finance and Revenue Accounts. On turning to Abstract A it will be seen that this group includes the following heads of Account :—

Law and Justice.
Police.
Marine.
Education.
Medical.
Scientific and other Minor Departments.

Miscellaneous.

28. The entry *Miscellaneous* in the General Statement includes—

Interest.
Receipts in aid of Superannuations, &c.
Stationery and Printing.
Miscellaneous.

The details of each item are given in Abstract A.

Productive Public Works.

29. It will be borne in mind that in *Statement II*, under the old classification which is now to be superseded, the Revenue from Productive Public Works was shown separately from other Public Works Revenue, and that an analogous separation was made on the Expenditure side of the Account. It is very desirable to maintain this distinction. It has, therefore, been maintained in the General Statement. It is, of course, to be borne in mind that the word "Productive" has, for the purposes of the present argument, a technical signification. It is not to be inferred that a work not classed as Productive is entirely unremunerative. What is meant is that only Capital Expenditure on works classed as Productive is allowed to stand outside the Ordinary Account. Borrowing in respect to the construction of these works is permissible. Expenditure on all works not classed as Productive is charged to Revenue.

Revenue from Productive Public Works.

30. It will be seen on referring to Abstract A that the entry in the General Statement entitled *Revenue from Productive Public Works*, includes the following items :—

State Railways (*Gross Earnings*).
Guaranteed and Subsidized Railways (*net Traffic Receipts*).
East Indian Railway (*net Traffic Receipts*).
Irrigation and Navigation (*Direct Receipts*).
Madras Irrigation and Canal Company (*net Traffic Receipts*).
Portion of Land Revenue due to Irrigation.

Receipts on account of Public Works not classed as Productive.

31. The entry in the General Statement entitled *Receipts on account of Public Works not classed as Productive*, includes the following items :—

State Railways.
Subsidized Railways.
Irrigation and Navigation.
Military Works.
Civil Buildings, Roads, and Services.

Other Public Works.

32. Up to the present time the receipts and expenditure connected with *Military Works* and *Civil Buildings, Roads, and Services*, have appeared under the head *34. Other Public Works.* This heading was first adopted in February 1880. The entry does not carry its own meaning with it, and on that account appears to be objectionable. As a matter of fact the money is spent partly on *Military Works*, which receive a fixed annual grant of £1,000,000, and partly on *Civil Buildings, Roads, and Services*. Under these circumstances the most simple plan appears to be to adopt a nomenclature in the Accounts which carries its own signification with it.

Receipts by Military Departments.

33. The next item in the General Statement, namely, *Receipts by Military Departments*, is divided, in Abstract A, into three heads, *viz.* :—

Army.
Military Operations in Afghanistan.
Military Operations in Egypt.

The two last items are, of course, exceptional, and only appear in the Accounts and Estimates of the years when Military Operations were conducted in Afghanistan and Egypt respectively.

Expenditure.

34. I now turn to the Disbursement side of the Account. Here again the Expenditure has been grouped under a few main heads, the detail being given in Abstract B, to which a reference is made in the first column of the General Statement.

Interest.

35. The first entry is *Interest.* It is to be borne in mind that this entry only gives the Interest charged to Ordinary Debt, that is to say, it is exclusive of the amount of Interest charged to Productive Public Works. This latter charge appears lower down in the General Statement, being included in the group entitled *Expenditure on Productive Public Works* (*Revenue Account*). The single head of *Interest* in the General Statement is, in Abstract A, divided into two heads, *viz.* :—

Direct Demands on the Revenue.

Interest on Ordinary Debt (*excluding that charged to Productive Public Works*),
Interest on Deposits.

36. The next entry is *Direct demands on the Revenues.* This entry, as will be seen by reference to Abstract B, includes the following items :—

Refunds and Drawbacks.
Assignments and Compensations.
Charges in respect of Collection, viz. :—
Land Revenue.
Opium (*including cost of production*).
Salt (*including cost of production*).
Stamps.
Excise.
Provincial Rates.
Customs.
Assessed Taxes.
Forest.
Registration.

The whole of these items are payments on account of Revenue, that is to say, they are, to a greater or less degree, productive of a corresponding increase of Revenue. They are, therefore, properly grouped under *Direct demands on the Revenues.*

Post Office, &c.

37. The next entry is *Post Office, Telegraph, and Mint.* Following the course adopted on the Revenue side of the Account, the Expenditure under these three heads is shown in one figure in the General Statement. The detail is given in Abstract B.

Salaries and Expenses of Civil Departments.

38. The next entry in the General Statement is *Salaries and Expenses of Civil Departments.* A reference to Abstract B will show that this entry includes the following items :—

General Administration.
Law and Justice.
Police.
Marine (including River Navigation).
Education.
Ecclesiastical.
Medical.
Political.
Scientific and other Minor Departments.

Miscellaneous Civil Charges.

39. The next entry is *Miscellaneous Civil Charges.* A reference to Abstract B will show that this entry includes the following items :—

Territorial and Political Compensations.
Civil Furlough and Absentee Allowances.
Superannuation Allowances and Pensions.
Stationery and Printing.
Miscellaneous.

Famine Relief and Insurance.

40. The next entry is *Famine Relief and Insurance.* Up to the present time the expenditure on *Protective Works*, whether on Railways or Canals, has been shown in one figure. In future it is proposed to show the expenditure on Railways and that on Irrigation separately. The entry *Famine Relief and Insurance* in the General Statement, is, therefore, in Abstract B divided into the following sub-heads:—

Famine Relief.
Protective Works, Railways.
Protective Works, Irrigation.
Reduction of Debt.

Productive Public Works (Revenue Account).

41. The next entry is *Expenditure on Productive Public Works (Revenue Account).* This answers to the entry *Revenue from Productive Public Works* on the Revenue side of the Account. A reference to Abstract B will show that the details are given under the following heads :—

State Railways (Working and Maintenance).
Guaranteed and Subsidized Railways (Interest and Profits).
East Indian Railway (Interest and Profits).
Irrigation and Navigation (Working and Maintenance).
Madras Irrigation and Canal Company (Interest, &c.).
Interest on Debt incurred for Productive Public Works :—
Railways.
Irrigation.
Miscellaneous Public Improvements.

42. The next entry is *Expenditure on Public Works not classed as Productive.* This answers to the entry *Receipts on account of Public Works not classed as Productive* on the Revenue side of the Account. A reference to Abstract B will show that the details are given under the following heads :—

State Railways (Capital Account).
State Railways (Working and Maintenance).
Subsidized Railways.
Southern Mahratta Railway.
Frontier Railways.
Irrigation and Navigation.
Military Works.
Civil Buildings, Roads, and Services.

Army Services.

43. The next entry, *Army Services*, is divided into three heads in Abstract B, *viz.* :—

Army.
Military Operations in Afghanistan.
Military Operations in Egypt.

The last two items are, of course, exceptional.

Gain by Exchange.

44. The next entry is *Exchange on Transactions with London.* Up to the present time one item, entitled *Gain by Exchange*, has been entered on the Revenue, and another item, entitled *Loss by Exchange*, has been entered on the Expenditure side of the Account. As regards the item *Gain by Exchange*, I beg to refer those who wish to gain a thorough knowledge of what this entry means to the Report of the Comptroller-General on the Accounts of 1880-81, which was published in the *Gazette of India* of March 4th, 1882. For my present purposes it will perhaps be sufficient to say that every rupee entered under *Gain by Exchange* represents merely the recovery of an amount which has been already charged under *Loss by Exchange*, and which has, therefore, to be written back. There is, I need hardly say, no real gain, using the term in its ordinary signification.

Loss by Exchange.

45. The true meaning of the entry *Loss by Exchange* has been very frequently explained (see especially para. 80 of the Financial Statement for 1881-82). But so long as we continue to employ the words heretofore used, so long will a large body of the public continue to think that the whole amount of this adjustment is really money lost to the tax-payers. To describe fully what this entry means would involve an amount of writing which would be quite inconsistent with the brevity necessarily required in an item of Account. But if we cannot describe what is meant in the body of the Accounts, we can, at all events, avoid the use of words which are misleading. To speak of the total amount entered under *Loss by Exchange* as money lost, is, of course, wholly erroneous, for under any reasonable hypothesis in respect to the relative value of gold and silver, only a portion of the amount can be considered as a real loss. We propose, therefore, for the future, in so far as the published Accounts are concerned, to get rid of the item *Gain by Exchange* on the Revenue side of the Account altogether, to discontinue the use of the word "Loss," and to insert a net figure on the Expenditure side of the Account, under the head of *Exchange on Transactions with London.*

Provincial Surpluses and Deficits.

46. Following the order of entries on the Disbursement side of the General Statement, the next items are the two adjusting entries, namely, *Provincial Surpluses, that is, Allotments to Provincial Governments unspent by them,* and *Provincial Deficits, that is, Portion of Provincial Expenditure defrayed from Provincial Balances.* For the moment I postpone my observations in respect to these two entries.

Total Expenditure charged against Revenue.

47. After these entries the *Total Expenditure charged against Revenue* is given.

Productive Public Works, Capital Account.

48. Immediately under this item comes the *Expenditure on Productive Public Works (Capital Account).* This is the same entry which has formerly

figured in *Statement II*, under the head of *37. Productive Public Works.* The detail of this entry is given at the end of Abstract B under the following heads:—

State Railways.
East Indian Railway.
Irrigation and Navigation.
Madras Irrigation and Canal Company's Undertakings.
Miscellaneous Public Improvements.

Debt Heads. **49.** I have, so far, dealt only with the Revenue and Expenditure portions of the General Statement. I now proceed to deal with the Debt heads.

Receipts. **50.** The Receipts under *Debt, Deposits, and Advances* are given under the following heads:—

Permanent Debt (*net Incurred*).
Unfunded Debt (*net Incurred*).
Deposits and Advances (*net*).
Loans to Municipalities, Native States, &c. (*net Recoveries*).
Capital of Guaranteed and Subsidized Companies (*net Receipts*).
Remittances (*net*).
Secretary of State's Bills drawn.

Disbursements. **51.** Analogous entries are given in respect to the Disbursements on the other side of the Account. Full details in respect to the *Debt, Deposit, and Advance* Accounts will be found in Abstract C, which contains, indeed, more detailed information than has heretofore been given in *Statements IV, VII*, and *VIII* of the old classification.

Opening and Closing Balances. **52.** The General Statement closes, on the Receipt side of the Account, with the balance at the commencement of the year in England and in India, and on the Disbursement side of the Account, with the balance at the close of the year in England and in India.

Provincial and Local Balances. **53.** Abstract D gives the *Provincial and Local Balances.* This Account contains, in a somewhat condensed form, the same information as was given in *Statement IX, Closing Balances of the Provincial Governments* under the old classification.

Net Revenue and Expenditure. **54.** Abstract E gives the *Net Revenue and Expenditure.* It contains the same information as was given in *Statement X* of the old classification, but arranged in a somewhat more precise form.

Adjusting entries. **55.** I have so far stated what it is proposed to do with a view to making the Accounts and Estimates more simple and concise. I now propose to deal with the question of the adjusting entries entitled *Provincial and Local Surpluses and Deficits*, which, as I have already mentioned (para. 14) do not appear to be readily understood.

Explanation of entries. **56.** The nature of these entries has frequently been explained before, but it will perhaps be as well that I should endeavour to explain them again. Under the Provincial system of Finance, the Government of India either makes allotments to Provincial Governments, or else hands over to them, in whole or in part, certain branches of the Revenue. If in any one year a Provincial Government spends less than its income, the amount by which it under-spends its income constitutes virtually a debt due by the Government of India to that Provincial Government. If, on the other hand, a Provincial Government, having a balance at its credit, spends in any one year, in addition to the income of that year, a portion of the accumulated balances of former years, then the debt due by the Government of India to that Provincial Government is by so much reduced. It would, of course, be very easy to present an Account which should show nothing but Imperial Revenue and Expenditure, and such an Account would, no doubt, be much more readily understood by the public than one which

embodies Imperial, Provincial, and Local Revenue and Expenditure. But it has been held, and I venture to think rightly held, that the adoption of this course is open to very great objection. It would not present an accurate picture of the sums received and spent by the Government in India. Thus, to take a single instance, under this system the Stamp Revenue for the year 1881-82 would appear as amounting only to £576,252 (see Appendix I. Abstract A), but, as a matter of fact, the Revenue derived from Stamps amounted to £3,381,372, of which £576,252 was Imperial and £2,805,120 was Provincial and Local. If, therefore, we want to show the total amount received and spent by the Government in India, and if at the same time we want to show in the same Account the net result of the year's finance to the Imperial Government only, it is absolutely necessary to make use of two adjusting entries. The *Provincial Surpluses*, that is to say the amounts by which the Provincial Governments have underspent their income and which, as I have already said, constitute a debt due from the Government of India to the Provincial Governments, must be added to the total expenditure. On the other hand, the *Provincial Deficits*, that is to say the portion of Provincial expenditure which has been defrayed from the accumulated Provincial balances of past years, and which, by so much, diminishes the debt due from the Government of India to the Provincial Governments, must be deducted from the total expenditure. This is done in the two adjusting entries which appear on the Disbursement side of the Account in the General Statement.

57. It is very possible, however, even with this explanation, and in spite of the explanatory language now employed for the first time in the General Statement,—to which I invite a reference,—that the matter will not be very readily understood. I have, therefore, appended to this Minute a memorandum (Appendix IV) which deals with the question at greater length, and which may possibly serve to render it more clear to the few people who are interested in the subject. Further, it will be seen on reference to Abstracts A and B of Appendix I that a separation is made between the Imperial Revenue and Expenditure on the one hand, and the Provincial and Local Revenue and Expenditure on the other hand. It will be seen that the Imperial Revenue and Expenditure in England and in India are shown separately, as was the case in *Statements V* and *VI* heretofore published. The whole of the Provincial and Local Revenue and Expenditure is in India, at least the few English items are brought on the Indian part of the Accounts. No such separation is, therefore, necessary. In *Statement III*, formerly published, the Provincial Revenue and Expenditure was shown separately from the Local Revenue and Expenditure. It has been thought, however, unnecessary to continue this separation so far as the Accounts and Estimates attached to the Financial Statement are concerned. It will be seen that in Abstracts A and B no such separation is made. A reference to the columns showing Imperial Revenue and Expenditure alone in Abstracts A and B will show, that although, of course, the several items are different to those shown in the General Statement—Provincial and Local Revenue and Expenditure being included in the latter,—*the net result is the same as that given in the General Statement after the adjusting entries have been made.* Thus, looking at the Accounts for the year 1881-82, the *Total Revenue* is given in the General Statement as £73,695,806, and the *Total Expenditure charged against Revenue* is given as £71,113,079, leaving a surplus of £2,582,727. In Abstract A the Imperial Revenue only is given as £54,618,853, and in Abstract B the Imperial Expenditure charged against Revenue is given at £52,036,126, thus leaving, as in the General Statement, a surplus of £2,582,727.

Adjustments in former Statement III. **58.** A further change has been made which will, I trust, help towards the ready comprehension of this subject. If reference be made to *Statement III*,

published on the occasion of former Financial Statements, in which a distinction is made between Imperial, Provincial, and Local Revenue and Expenditure, it will be seen that the following entries appear on the Expenditure side of the Account :—

Add—

Contributions to Imperial.
,, ,, Provincial.
,, ,, Local.

Deduct—

Imperial Allotment.
Contributions from Imperial.
,, ,, Provincial.
,, ,, Local.

To be discontinued.

59. These adjustments are, without doubt, somewhat complicated and difficult to understand. For the future we propose to get rid of them altogether by passing all adjustments between Imperial and Provincial through the Land Revenue head, that is to say, they will be treated as additions to or subtractions from the Provincial share of the Land Revenue. It will be seen, on referring to the end of Abstract B, that no such entries appear as those which I have quoted from *Statement III* of the old classification.

Fallacy of leaving Adjusting Entries out of account.

60. I am aware that it may,—and by those who are resolved to take an ultra-pessimist view of the financial position of India, very probably will,—be said that the surplus of £59,800 shown, for instance, in the Revised Estimates for 1882-83, is fictitious, and that the correct view of the situation is to take no account of the adjusting Entries and thus show a deficit of £1,465,600.

	£
Revenue	67,913,900
Expenditure	69,379,500
Deficit . .	1,465,600

I can only say that any such statement would be wholly incorrect. As I have already said (para. 8), I am very far from wishing to under-rate the difficulties connected with the administration of the Indian Finances. It is not the duty of the Government, nor is it my duty, to take either an optimist or a pessimist view of the situation, but to lay before the public the facts of the situation as they stand, without exaggeration either in one direction or the other. But I may say that, whatever be the real difficulties connected with the financial administration of India, nothing could be more incorrect than to say, that because the Imperial and Provincial Revenue, taken together, falls short of the Imperial and Provincial Expenditure, taken together, in 1882-83 by £1,465,600, that, therefore, there is anything unsound in the financial situation, or that the surplus on Imperial Account does not in reality exist. On the contrary, so far as this particular argument is concerned, the fact that the Provincial Governments have been able to accumulate considerable sums in past years, and are now able to spend those sums, to a certain extent, on works of public utility, is in itself exceedingly satisfactory. The fallacy of this argument will perhaps become apparent if we look at the converse case presented in the Accounts of 1881-82. The true Imperial Surplus in that year, as appears from the General Statement and from Abstract B, is £2,582,727. But, under the assumption that the adjusting entries should be left out of account, the Surplus would be £4,102,519, that is to say £2,582,727 on Imperial and £1,519,792 on Provincial and Local Accounts. So, again, if we look at the Accounts for the last eleven years, that is to say, from 1871-72 to 1881-82, both inclusive (see Appendix III), it will be seen that there

	£
Revenue (Abstract A) . .	73,695,806
Expenditure (Abstract B) .	69,593,287
Surplus . .	4,102,519

have been six years in which the Revenue exceeded the Expenditure, the combined surpluses amounting to £11,494,784. Further, that there have been five years in which the Expenditure exceeded the Revenue, the combined deficits amounting to £12,760,621. The net result of the eleven years is, therefore, a deficit of £1,265,837, a result which, I may observe, cannot be considered as otherwise than satisfactory when it is remembered that during these years two severe famines and one costly war took place, and that the Expenditure includes nearly £1,500,000 as an insurance against future famines. But if we exclude the adjusting entries, we should arrive at a wholly different result. The eleven years would then show a net surplus of £2,041,494, that is to say, this incorrect mode of treatment would show a result of £3,307,331 better than the reality (see the end of Abstract B in Appendix III).

Conclusion.

61. Such, therefore, are the steps we propose to take with a view to facilitate the comprehension of the Indian Accounts and Estimates. It will be seen that the bulk of the published Statements is very considerably diminished, and yet I venture to think that all the details that are really necessary have been given. I need hardly say that for those who require to go into further detail, the Finance and Revenue Accounts (generally known as the Yellow Book), which have always been published, will be available, as well as the Appropriation Audit Report of the Comptroller General, which is published for the first time this year (see *Gazette of India* of March 17th, 1883).

62. The discussions which will, without doubt, ensue in connection with the Financial Statement now published, will probably show whether the object we have had in view has been attained. It is very possible that neither the officers of the Financial Department nor myself are good judges of what will and what will not be readily understood by the public. It is not impossible that our own familiarity with the subject, and the fact that it is our special business to be constantly dealing with these figures, leads us to suppose that the whole subject is more easy of comprehension than is really the case.

Old classification published.

63. With a view to enabling the nature of the changes now made to be more readily understood, I have annexed to this Minute (Appendix II) the Accounts for the year 1881-82 as well as the Estimates for the years 1882-83 and 1883-84 in the forms heretofore published.

Accounts of former years.

64. With a view, also, to enabling comparisons to be more easily made with former years, I annex to this Minute the Accounts from the year 1871-72 arranged according to the new classification (Appendix III).

Appendices.

65. It has heretofore been the custom to publish as Appendices to the Financial Statement, a series of commercial and statistical tables. These will, as heretofore, be published, (see *Gazette of India* of March 17th, 1883) but they will not be appended to the Financial Statement. They will be published separately. In future years the only Statements which will ordinarily be annexed to the Financial Statement will be—

(1) The General Statement.
(2) Abstract A, Details of Revenue.
(3) Abstract B, Details of Expenditure.
(4) Abstract C, Details of Receipts and Disbursements other than Revenue and Expenditure.
(5) Abstract D, Provincial and Local Balances.
(6) Abstract E, Net Revenue and Expenditure.

Services rendered by various officers.

66. I cannot close these remarks without expressing my cordial thanks, on behalf of the Government of India, for the assistance rendered by Mr. Cave

Browne and Mr. Waterfield at the India Office, and by Mr. Westland and Mr. Barbour in India, in dealing with this complicated subject. Should the object we have in view be attained, and the Accounts and Estimates of the future be more readily comprehensible to the public than heretofore, the credit will be mainly due to the labours of these gentlemen.

III.—Accounts for 1881-82.

Accounts, 1881-82.

67. The Accounts of the year 1881-82 show the following result:—

	£
Revenue	73,695,806
Expenditure	71,113,079
Surplus	2,582,727

Remarks on the Accounts.

68. The year 1881-82 was in every respect one of remarkable prosperity. Almost every branch of Revenue yielded a sum largely in excess of the Estimates. The net *Opium* Estimate (£6,500,000) was exceeded by £1,305,000, of which £1,099,400 was due to excess Revenue and £205,600 to relatively low Expenditure consequent on a rather short Opium crop in Behar. *Salt* gave (net) £164,400 in excess of the Budget, and £220,400 in excess of the Revised Estimate. *Excise* gave £398,400 (net) in excess of the Budget Estimate. The import duties were abolished on March 10th, and allowance was made in the Revised Estimates for a falling off in *Customs* Revenue during the last three weeks of the year on that account. This falling off was, however, more than counterbalanced by the excess receipts from the export duty on rice, which yielded £104,100 more than the Budget Estimate. Owing to a large demand for timber, *Forests* gave (net) £117,800 in excess of the Budget Estimate. A large premium (£155,300) was realised on the Government loan of £3,000,000, which was taken up at an exceptionally high figure (105$\frac{5}{16}$). *State Railways* yielded (net) £119,100 in excess of the Budget, and £101,100 in excess of the Revised Estimates. *Guaranteed and Subsidised Railways* (*net Traffic Receipts*, after deduction of *Interest and Profits*) yielded no less than £722,700 in excess of the Budget, and £136,700 in excess of the Revised Estimates. The *East Indian Railway* (*net Traffic Receipts*) gave £461,900 in excess of the Budget, and £151,900 in excess of the Revised Estimates.

Extraordinary Receipts and Expenditure.

69. It is true that the surplus of the year was swelled by some extraordinary receipts. The portion, which remained to be brought to account during the year, of the *English Contribution for the Afghan War*, exceeded the net War expenditure of the year by £380,600 (see para. 70 of the Financial Statement for 1882-83 and para. 196 of the Appropriation Audit Report for 1881-82). Also the *Salt* Revenue during the last three weeks of the year was exceptionally high. I shall presently allude more specifically to this subject (see paras. 112—115). On the other hand, some very heavy extraordinary payments were made and the Expenditure under *Exchange* was largely in excess of the Estimates. The amount (£670,000) contributed by the Provincial Governments to the Afghan War Expenditure was repaid to those Governments by the Government of India. Special payments, amounting in all to £360,000, were made in connection with the renewal of the Provincial contracts (see paras. 64 and 70 of the Financial Statement for 1882-83). The Expenditure under *Exchange*

exceeded the Estimate by no less than £493,700. This excess was mainly due (1) to the fact that a large demand for bills sprung up at the end of the year, which enabled the Secretary of State to draw £1,212,400 (true sterling) in excess of his requirements for 1881-82, and (2) to the fact that the average rate obtained on the whole of the remittances (£18,412,429, true sterling), was 1*s.* 7·895*d.* against an Estimate of 1*s.* 8*d.*

70. On the whole, it may be said that, if the exceptional expenditure as well as the extraordinary items of Revenue be excluded from the account, the surplus would appear largely in excess even of the high figure (£2,582,727) which it actually attained.

71. For further details in connection with the Accounts of 1881-82, I beg to refer to the Comptroller General's Appropriation Audit Report published in the *Gazette of India* of March 17th, 1883.

IV.—Effect of abolishing the Import Duties.

Effect of abolishing the Import Duties.

72. It is of course too early yet to gauge the full measure of the advantage which India will ultimately derive from the abolition of the import duties, but the figures annexed to this Minute (Appendix V) are of some interest.

73. Exclusive of Government stores the imports of merchandise in the ten months from April 1st, 1882, to January 31st, 1883, amounted to £41,945,202, being £2,775,718 in excess of the imports for the corresponding period of 1881-82 (£39,169,484). The exports amounted to £65,770,066, being £1,324,783 in excess of the corresponding period of the year 1881-82 (£64,445,283).

Import of articles exempted from duty.

74. I append also (Appendix V) a Statement showing the quantities and values of those articles imported into British India, which were exempted from Customs duty last March, during the ten months ending January 31st, 1883, compared with the corresponding period of the year 1881-82.

Increase of Imports.

75. The articles in which an increase is shown in both quantity and value are 40 in number, the most important being Twist and Yarn, which have increased 11·59 per cent. in quantity and 7·5 per cent. in value; Grey Piece-goods, which have increased 1·92 per cent. in quantity and 2·0 per cent. in value; Coloured Piece-goods, which have increased 29·43 per cent. in quantity and 29·47 in value; Hardware and Cutlery, which have increased 22·88 in value; Copper, which has increased 32·07 in quantity and 31·01 in value; Iron, which has increased 34·12 in quantity and 37·59 in value; and Raw Silk, which has increased 43·80 per cent. in quantity and 52·28 per cent. in value. The increase in some minor articles of trade, such as Corals, Jewellery, Brass, Paints and Colours, Shells and Cowries, and Umbrellas are satisfactory indications of general prosperity.

Decrease of Imports.

76. The articles of trade in which a decrease is shown are 14 in number, the most important being White Piece-goods, which have decreased 18·35 per cent. in quantity and 10·88 in value; Silk Piece-goods, which have decreased 25·26 in quantity and 24·89 per cent. in value; and Tea, which has decreased 15·30 per cent. in quantity and 12·72 per cent. in value.

77. The total value of the articles of trade in which there has been an increase is £28,517,941, and of those in which there has been a decrease, £5,499,360; so that, of all articles affected by the remission of the duties, those in which the trade has increased represent a value of more than five times as great as that of the articles in which there has been a decrease. If we balance one set against the other, the total increase in the value of merchandise im-

ported during the ten months is 7·26 per cent. It is, of course, impossible to say with accuracy how far this increase is due to the abolition of the duties and how far it would have taken place had the duties been maintained. All that can be said with certainty on this subject is that the abolition of the duties must have contributed to increase the volume of trade.

General result.

78. Considering the low rate of exchange, which has, of course, operated unfavourably to imports, and considering the Egyptian complications, which not only for some time interrupted trade but, by creating a demand for Government transport, kept freights during part of the year at a higher level than they otherwise would have been, the result may be considered as satisfactory. In a slow-moving country such as India, it was not to be expected that the full advantage to be derived from the abolition of the import duties would be immediately obtained, or that consumption would increase at once in the ratio known to European countries.

79. The relief afforded to trade in general owing to the cessation of all the embarrassment and delay consequent on the levy of duties at the custom-house, cannot be represented in any arithmetical form. It is, however, a very important factor in the consideration of the question. The complaints on various petty matters, which were so frequently addressed to the Government whilst the duties were levied, have now almost entirely ceased.

Effect on Indian goods.

80. Independently of the question of the effect of the abolition of the import duties on the volume of the trade, it is desirable to examine whether the abolition has exercised any appreciable effect upon the import trade in those articles which compete with Indian-made goods of similar kinds.

Cotton goods.

81. Of such articles the most important are Cotton Twist and Cotton Piece-goods. In respect to these articles there has been a general increase, both in the quantity and the value of the imports, except under the head of White Piece-goods.

Twist.

82. The Twist which is imported from Europe does not compete with Indian Twist. For years past the great bulk of the Twist imported has been of counts much higher than any that can as yet be made in the Indian mills, which limit themselves to the production of Twist of counts not exceeding 32 (Mule) and 20 (Water). All such kinds of English Twist were freed from duty in March 1878.

Piece-goods.

83. Of the Grey Piece-goods imported, those classes which compete with Indian-made goods were also exempted from duty in March 1879.

84. White Piece-goods are hardly produced at all as yet in India, except experimentally in one or two of the Bombay mills. As I have already mentioned, there has been a large decline in the imports of this class of goods.

85. The Piece-goods classed as "Other sorts" are not made in India.

86. The remission of the customs duties last year did not, therefore, in any way affect Indian mills, which have had to work without the protection of $3\frac{1}{2}$ per cent. on Twist since March 1878 and of 5 per cent. on Grey Piece-goods of counts below 30*s*, since March 1879. As was pointed out in the Financial Statement of last year (paras. 210 and 211), the duty which was abolished last March really protected one class of Manchester goods against another, and even to some slight extent protected English goods against those manufactured in India. The duty forced trade into an artificial channel by stimulating the consumption of the coarser kinds of goods and discouraging the use of medium and finer classes to the extent of a differential rate of 5 per cent. I believe I am correct in stating that since the remission of the duty consumers have everywhere shown a tendency to go back to the old styles of cloth.

Export of Cotton goods.

87. The export of Indian-made Cotton Twist and Piece-goods has increased very largely as compared with the corresponding period of 1881-82. The export of Twist has increased by 44·9 per cent., namely, from 26,346,556 lbs. to 38,179,998 lbs., the increase in the China trade being especially remarkable. Piece-goods have increased to the extent of 31·3 per cent., namely, from 25,484,391 yds. to 33,454,359 yds. I am informed that eight new mills are in course of erection in Bombay, and will commence work during the current year. The prosperity of the mill-owners depends of course to a large extent upon the course of prices. Prices have fallen during the year, with the result that if we look not at the quantities, but at the values, we find that the value of Twist exported has only increased by 29 per cent. and that of Piece-goods by 20 per cent. It is, however, abundantly clear that the Indian cotton trade has in no way been detrimentally affected by the measures taken last March.

Raw Silk.

88. The import of Raw Silk has very largely increased as compared with the corresponding period of last year, although prices have been fully maintained. It is to a great extent of Chinese origin imported into Bombay for the silk mills and for hand-loom weaving, and into Burma for hand-loom weaving only. Bengal is the only Province of India where the silk-producing industry is conducted on any extensive scale. For many years past it has been in a declining condition. China silk competes with it not only in the European market but in India itself. Bengal has never been able to send any considerable quantity of silk to Bombay, which is supplied almost wholly from sources external to India. But with Madras, Bengal has formerly done a considerable trade, and this trade appears to be declining. On the other hand, the export of raw silk from Bengal to foreign countries has again given some signs of returning vigour, having increased from 281,966 lbs. to 372,072 lbs., which is, however, still below the figure of the corresponding ten months of 1880-81 (398,323 lbs.).

Sugar.

89. Last year, when the import duties were abolished, some apprehension was expressed lest their abolition should injuriously affect the sugar industry of India, and it was urged that that industry stood in need of protection. Without going into the question of the principle involved in this argument, it will be sufficient for me to say that the experience of ten months has shown that no injury to the sugar industry of India has resulted from the abolition of the duties. For all practical purposes it may be said that all the sugar imported into India is refined or crystallized sugar, which is brought from Mauritius and China to Bombay. Refined sugar is only produced to a very small extent in Bengal, the North-Western Provinces, and Madras. It is almost all used for local consumption by Europeans. In the places where such sugar is consumed no sugar has as yet been imported from abroad. The Indian export trade in sugar is carried on mostly from Madras. By far the greater portion is unrefined sugar, that is to say, molasses, jaggery, etc. The removal of the duty, therefore, did not affect Indian sugar at all, and in fact could not have done so. It appears also from the Trade Returns that, whilst the import of refined sugar has decreased from 666,587 cwt. to 519,367 cwt., that is to say by 22 per cent., the export from India of unrefined sugar has increased from 758,054 cwt. to 1,069,509 cwt., that is to say by 41 per cent. Further, the export of refined sugar, which was only 15,580 cwt. in 1880-81 and 29,008 cwt. in 1881-82, increased in 1882-83 to 98,273 cwt. Again, if we look at the internal trade of India, the exports of refined sugar from Bengal to Bombay have increased from 29,465 cwt. in the whole of the year 1881-82 to 61,682 cwt. in the ten months ending January 31st, 1883.

Tea.

90. Tea is one of the articles which was relieved from duty last March. The imports, however, have not increased, but have, on the contrary, fallen off from 2,393,413 lbs. to 2,027,119 lbs., a reduction of 15¼ per cent. Much of the tea imported into India is intended for trans-frontier consumption in Central Asia. The import trade has, without doubt, been a good deal checked by the heavy duties which are imposed by the Russian Government.

Tobacco.

91. The import of Tobacco has increased from 1,146,803 lbs. to 1,316,350 lbs., an increase of 14¾ per cent., which is very possibly due to the reduction of the duty. This increase of imports has not, however, resulted in any reduction in the consumption of Indian tobacco, the demand for Indian cigars being not only undiminished but increasing.

Importations of silver.

92. A very noticeable feature in the transactions of the year is the large amount of treasure imported (*vide* Appendix V). During the ten months ending January 31st, 1883, the value of the exports of merchandise exceeded that of the imports by £22,153,355. The debt thus due from Europe to India was paid (1) by the net importation of treasure to the extent of £11,193,922, of which £4,394,651 was gold and £6,799,271 silver, and (2) by drafts of the Secretary of State on the Indian Treasury to the extent of £12,804,500, thus leaving a balance of £1,845,067 remitted to India in apparent excess of the trade requirements of the ten months.

93. During the corresponding period of 1881-82 the excess of exports over imports was £23,524,590, the net imports of treasure amounted to only £7,061,635, of which £4,214,855 was gold and £2,846,780 silver, and the amount of Secretary of State's Bills paid was £17,381,100, leaving a balance of £918,145 remitted to India in apparent excess of the trade requirements of the ten months.

94. Attached to Appendix V will be found a few observations upon the progress made in the policy of purchasing Government Stores in India instead of in England. As I have before pointed out it will not be possible to make any very serious impression on the amount of stores imported from England until iron work and machinery, equal in quality and not superior in price to that manufactured in England, can be made in India.

V.—Effect of reducing the Duty on Salt.

Effect of reducing the Duty on Salt.

95. It will be remembered that prior to March 10th, 1882, the duty levied on Salt in Bengal was R2-14 a maund. Elsewhere, except in Burma and the trans-Indus districts of the Punjab, duty was levied at the rate of R2-8 a maund. On March 10th, 1882, the duty was reduced to an uniform rate of R2 a maund all over India, except in Burma and the trans-Indus districts of the Punjab, where no change was made.

96. The main points to be considered in connection with the reduction of the duty are (1) whether the retail price of Salt has fallen, and (2) whether consumption has increased.

Fall of retailed price.

97. As regards the first point, there can be no doubt whatever that, generally speaking, the reduction has, to a greater or less extent according to the circumstances of each locality, reached the consumer. The following table shows the retail price per maund of Salt (1) in the second half of February 1882, that is to say, immediately before the reduction of the duty; (2) in the first half of June 1882, that is to say, about three months after the reduction; and (3) in the first half of January 1883, that is to say, about 10 months after the reduction.

The figures give the average price struck on the totals for all the districts in each province.

Comparative price lists.

Provinces.	Second half of February 1882.	First half of June 1882.	Fall in prices per maund in June 1882, as compared with February 1882.	First half of January 1883.	Fall in prices per maund in January 1883, as compared with February 1882.
	R a. p.	R a. p.	R a. p.	R a. p.	R a. p.
Madras	3 2 5	2 10 4	0 8 1	2 9 8	0 8 9
Bombay	2 15 5	2 10 6	0 4 11	2 9 1	0 6 4

Central India Agency	4 1 3	3 9 6	0 7 9	3 6 6	0 10 9

Average fall of price.

98. It will be seen that, with the single exception of the small province of Coorg, prices fell materially within the first three months after the reduction of duty, and that ten months after the reduction, prices had reached a still lower level. In Coorg only have prices slightly increased since the first fall after the reduction, but they are still about 4 per cent. lower than they were just before the reduction. Mysore also shows, comparatively speaking, only a small fall in price, *viz.*, from R4-2-1 to R3-12-11, or 7·74 per cent. In the other provinces the fall ranges from 12·66 per cent. in Oudh to 23·8 per cent. in Bengal. As the reduction of duty was about 30 per cent. in Bengal as compared to 20 per cent. elsewhere, it was, of course, to be expected that the fall of price would be proportionately great in that Province.

Official reports.

99. The testimony of official reports confirms the conclusion to be drawn from the price lists. Thus, to quote one of many such reports, the Deputy Commissioner of the Sonthal Pergunnahs, writing very shortly after the reduction of duty says—

"The most important change is that in the retail price of common eating Salt. The "reduction of duty reached the masses to a certain extent before the close of the year "under report (1881-82). It has since reached them even more perceptibly. This reduc- "tion in cost may have an important effect upon this district, for it may lead to a very "considerable expansion of the fishing industries, and thus provide occupation for the "surplus population and for the agricultural population when work on the land is slack. "One consignment of coarse salt has, I hear, been already sent to Sahibgunge for fish- "curing purposes. * * * * Salt-fish, properly prepared, "would be an important and valuable addition to the food-supply of this district."

"A large future," the Lieutenant Governor of Bengal observes in reviewing this report, "lies before this (the fish-curing) industry."

Publicity.

100. It will be remembered that some special measures were adopted with a view to ensuring publicity being given to the reduction of the duty. These

measures appear to have been generally attended with success. In Behar, especially, a recent report says "the news that the Salt Tax had been reduced " * * * is said to have spread with unexampled quickness."

Increased consumption.

101. I now turn to the question of increased consumption. The following table shows the consumption during the eleven months from March 1st, 1882, to January 31st, 1883, compared with the corresponding period of the year 1881-82. The figures for Burma are excluded, as no change was made last March in the rate of duty levied in that province. I may remark, however, that the consumption in Burma has up to the present time been less in 1882-83 than it was in 1881-82.

Comparison of 1881-82 and 1882-83.

In thousands of maunds (0000 *omitted*).

Province.	Consumption, March 1st, 1881, to January 31st, 1882.	Consumption, March 1st, 1882, to January 31st, 1883.	Percentage of increase + or of decrease —.
	Maunds.	Maunds.	
Bengal	8,207	8,723	+ 6·29
Inland Customs	6,178	6,112	— 1·07
Bombay	4,361	4,695	+ 7·66
Sindh	148	166	+12·16
Madras	5,604	6,405	+14·29
Total	24,498	26,101	+ 6·54

Increases and Decreases since 1873.

102. The following figures show the increase or decrease for the eleven corresponding months of each year, from 1874-75, as compared with the previous year:—

					Maunds.
March 1st,	1874,	to January 31st,	1875		+288,000
"	1875	"	1876		+ 77,000
"	1876	"	1877		+498,000
"	1877	"	1878		+491,000
"	1878	"	1879		+367,000
"	1879	"	1880		+1,724,000
"	1880	"	1881		—690,000
"	1881	"	1882		+1,016,000
"	1882	"	1883		+1,603,000

Difficulty of making accurate comparisons.

103. So many changes have been made since 1873 that it is difficult, by any comparison with past years, to arrive at a thoroughly accurate conclusion as to the extent to which consumption has been stimulated by the reduction of the duty. Of course, under normal circumstances, as the population grows the consumption of Salt will also increase, if no disturbing elements, such as a change in the rate of duty or a famine, intervene. This normal growth of consumption has generally been taken at rather less than 1 per cent. It is, however, to be observed that the large increase in 1879-80 (1,724,000 maunds) followed on a year of relatively low consumption and was again followed by a year of relatively low consumption. On the other hand, 1881-82 was a year of high consumption, the increase being 1,016,000 maunds over 1880-81. It is, therefore, especially satisfactory to note that, in spite of the high consumption in 1881-82, the year 1882-83 shows an increase of no less than 1,603,000 maunds. There can be no doubt that a very considerable portion of this increase is due to the reduction in the duty.

104. If we turn to the details of each province, some remarkable differences in the rate of increase are observable.

Madras.

105. The largest increase (14·29 per cent.) is shown in Madras. This was to be expected. As I mentioned in the last Financial Statement (para. 199) the people of Southern India require more Salt than the more Northern populations, whose principal food consists of wheat and pulses. Moreover, the people in Madras have, in quite recent times, been accustomed to a lower rate of duty. In view to the abolition of the Customs Line the duty in Southern India was raised in December 1877 from Re. 1-13 to R2-8 a maund. In consequence, consumption was, without doubt, curtailed. It was to be expected that, so soon as the duty was reduced, the people would readily go back to their old rate of consumption.

106. The reduction of duty is not, however, the sole reason why the increase is so large in Madras. In the first place a great deal has been done within the last year or so to improve the organisation of the Salt Department in the Madras Presidency, with the result that illicit consumption has probably been to some extent checked. And, in the second place, Madras Salt has been for some years displacing the Salt supplied from Pooree. The figures given in the margin show that the quantity of Salt supplied from the Pooree warehouses has been steadily falling off for the last four years, and that the falling off in 1882 has been especially remarkable.

	Maunds.
1879-80	308,384
1880-81	241,559
1881-82	163,932
1882-83 (ten months)	90,722

Sind.

107. The increase in consumption in Sind has been nearly as great as in Madras, *viz.*, 12·16 per cent. The total consumption in this province is, however, small. A portion of the increase is probably due to Sind Salt having to some extent taken the place of Rock Salt in the Lower Punjab.

Bombay.

108. The increase in Bombay, though considerable (7·66 per cent.) falls far short of that in Madras and Sind. A portion of this increase is, without doubt, due to Bombay Salt having to some extent displaced Sambhur Lake Salt in Northern and Central India.

Bengal.

109. Bengal shows an increase of 6·29 per cent. I have already mentioned (para. 106) that the territorial area supplied from Bengal has, in one quarter, been restricted, owing to Madras having, to some extent, taken the place of Pooree Salt. On the other hand, the abolition of the differential rate of duty on sea-borne Salt has, of course, placed that Salt in a better position to compete with Sambhur Lake Salt in the North-West Provinces and Oudh. An indication of the extent to which this displacement has taken place is given in the following figures, which show the quantity of Cheshire Salt imported by rail into the North-West Provinces and Oudh during the last four years:—

	Maunds.
1879-80	32,306
1880-81	27,405
1881 82	31,957
1882-83 (six months only)	107,589

There was also during the year, for the first time, an importation of Cheshire Salt,—to the extent of about 10,000 maunds,—into the Central Provinces.

Inland Customs.

110. The only quarter where a decrease is shown is under the head of "Inland Customs." This is mainly Sambhur Lake Salt, which supplies Northern India. The territorial area heretofore supplied from this source has been much restricted. As I have already mentioned (paras. 108-109) Bombay Salt from the west, and Cheshire Salt from the east, have both pushed their way into the territory heretofore supplied mainly from the Sambhur Lake. Under these circumstances, the fact that there has only been a decrease of 1·07 per cent. on the Salt sold by the Inland Customs Department shows that the people, within the more limited area now supplied by that Department, have increased their consumption. This was to be expected, for it is certain that the abolition

of the Customs Line in 1878 resulted in a great rise of price in the Native States of Rajputana, and that the people of those States, in consequence of the enhanced price, curtailed both their own personal consumption and that of their cattle. It was, therefore, to be expected that, with a reduction of duty, a tendency would be shown to revert to the old rate of consumption. The Governor-General's Agent reports that "there is no doubt whatever that the "late reduction has reached the consumer and, generally speaking, I may say "that he has benefited exactly to the extent of the reduction made in the duty."

Financial effect of reduction.

111. Turning to the financial effect of the measure, it is to be observed that an increase of consumption to the extent of 1,603,000 maunds represents, at Rs. 2 a maund, an additional revenue of £320,600. To the extent of this sum, therefore, it may be said that the loss of revenue consequent on the reduction of duty (£1,400,000) has been recouped by the increased consumption of eleven months.

Comparison with Estimate.

112. Regarding the matter from the point of view of the anticipations framed last March, it is to be observed that, in order to arrive at a proper appreciation of the facts of the case, it is necessary to consider the figures for the years 1881-82 and 1882-83 together. The duty, it will be remembered, was lowered on March 10th, 1882. The immediate effect of the reduction was to give a great stimulus to clearances of Salt in Bengal, and, although to a less degree, to wholesale purchases elsewhere. The market became over-stocked, and consequently during the early months of the current financial year, the revenue suffered. It follows, therefore, that the revenue of 1881-82 was disproportionately increased, and that of 1882-83 disproportionately diminished, by the course of trade during the last three weeks of March 1882.

113. The gross revenue for 1881-82, after making what was at the time considered a reasonable allowance for a reduction of the revenue during the last three weeks of the year, was, in framing the Revised Estimates, taken at £7,213,000. The actual receipts were £7,375,620, being £162,620 in excess of the estimate.

114. The gross Revenue for 1882-83 was estimated last March at £6,049,000. It is now estimated at £6,128,700, being £79,700 in excess of the Budget Estimate. This figure does not, however, accurately represent the full amount by which the Revised exceeds the Budget Estimate of Revenue. The Expenditure under *Salt* is now taken at £139,600 less than the Budget Estimate. To the extent of £59,000 this large decrease of Expenditure is due to the following cause. At the commencement of the financial year a system prevailed in Northern India under which Salt was conveyed by the Government from the Salt sources to certain depôts. The charges likely to be incurred on account of transport from the sources to the depôts appeared on the Expenditure side of the Estimates of 1882-83, and, inasmuch as the cost of transport was added to the selling price of Salt at the depôts, an analogous amount appeared on the Revenue side of the Estimates. During the year the depôt system was abandoned, with the result that both the Revenue and Expenditure under *Salt* were reduced to the extent of £59,000. The real excess of Revenue over the Budget Estimate is, therefore, not £79,700, but (£79,700+£59,000) £138,700.

115. Taking the two years together, therefore, the result is that the Estimate of gross Revenue framed last March stood at £13,262,000, and that the Estimate now stands at £13,504,320, being £242,320 in excess of the Original Estimate. To this figure, however, it is, as I have already explained, necessary to add a sum of £59,000, thus bringing up to £301,320, the true figure by which the Salt Revenue has exceeded the Estimate framed last March.

Results satisfactory.

116. Very rapid advance in this, or in any other matter, is not to be expected in India. But on the whole it may be said that the results obtained so far in

connection with the reduction in the duty on Salt are satisfactory. The progress in the direction of increased consumption has been greater than was anticipated at the time the Budget Estimate was framed last March. Should the same rate of increase continue the Revenue, at the reduced rate of duty, will in less than three years from the present time stand at the same figure as it did prior to the reduction of the duty.

VI.—Revised Estimates for 1882-83.

Revised Estimates for 1882-83.

117. Up to the present time the Estimates for the year about to expire, which are presented at the time the Financial Statement is made, have been termed the Regular Estimates. I have been unable to discover how or why the word "Regular" came to be adopted. It was used by Mr. Laing in 1861. It was not used on the occasion of the Financial Statement of 1862, but it reappeared in 1863, and its meaning was explained by Sir Charles Trevelyan in a foot-note. Since 1863 the word has always been used.

118. There does not appear to be any reason for continuing the use of a word, which can only be understood by those who know the technical meaning attached to it, when another word; which any one can understand, is available. For the future, therefore, the word "Revised" will be used instead of "Regular."

119. I proceed to deal with the Revised Estimates for the year 1882-83.

General Situation in March 1882.

120. The financial year which is about to close has presented many remarkable features. At the commencement of the year the salient points of the financial situation were as follows. The country had at length recovered from the disastrous effects of the famine of 1877-78. The return of peace enabled the Government to turn its attention to those fiscal and domestic reforms, the consideration of which had necessarily been postponed during the continuance of the Afghan war. A large surplus was available. A favourable opportunity presented itself, therefore, for the execution of certain fiscal reforms, the desirability of which had long been recognised. With the exception of the duty on wine, spirits, malt liquor, arms, ammunition, opium, and salt, the whole of the import duties were abolished. A large reduction was effected in the duty on salt. Some substantial relief was afforded to the agricultural classes in the North-Western Provinces and Oudh.

Dangers peculiar to Indian finance.

121. Hardly had effect been given to these important and beneficial reforms, when it became apparent that three out of the four peculiar dangers to which the finances of India are exposed would, to a greater or less degree, have to be encountered in the immediate future. These dangers are war, a diminution of the Opium revenue, an increase of expenditure on account of charges payable in sterling, and famine. In respect to every one of these dangers,—including, in the particular instance in point, war,—it may be said that their occurrence is governed by causes over which the Government of India can exercise little or no control. On the other hand, the entire brunt of bearing three out of four of these risks falls on the Imperial Government of India.

The Provincial system.

122. In connection with this last remark I wish for one moment to digress, in order to show the bearing of the Provincial system of finance upon the points immediately under discussion.

Its many advantages,

123. The policy of financial decentralisation, which was not the least of the numerous benefits conferred by Lord Mayo and Sir John Strachey on India, has been productive of the most beneficial results. In the remarks I am about to make I wish it to be clearly understood that I am very far from wishing to say anything in the slightest degree condemnatory of that policy. On the contrary it is, as is well known, a policy which commands the entire approval of the present Government, and with which, I may perhaps be permitted to say, I heartily sympathise. The advantages of the system far outweigh any

And one disadvantage.

of its disadvantages. On the other hand it cannot be denied that this very desirable reform has been unavoidably accompanied with one disadvantage, and it is to this disadvantage that, for reasons which I will presently specify, I now wish to allude.

Developments of the policy.

124. It will be remembered that the original policy of decentralisation has received further development on the two occasions,—first in 1877, and again in 1882,—when the quinquennial contracts between the Imperial and Provincial Governments terminated.

Arrangements under contracts of 1882.

125. On the occasion of the last Financial Statement (paras. 38—64) I explained fully the precise terms of the new Provincial contracts. It may, however, be convenient that I should again explain the general nature of the arrangements resulting from those contracts.

126. The Provincial Governments now receive the whole of the Revenue under heads which produce about £4,000,000 a year, half of the Revenue under heads which produce about £8,000,000, a larger or smaller percentage on heads (chiefly Land Revenue) which produce about £23,000,000, and an almost nominal share in Revenues which produce about £7,600,000. On the other hand, the Provincial Governments administer the Expenditure wholly under heads for which the grants amount to about £15,000,000, and to a very small extent under heads for which the grants amount to about £4,000,000 a year. In other words, about three-fifths of the Revenue of British India, amounting roughly to £42,000,000, and about one-fourth of the Expenditure, amounting roughly to about £19,000,000 a year, have, under the contract of 1882, been provincialised; that is to say, the Provincial Governments have to a greater or less extent, according to the circumstances of each head, an interest in and responsibility for their administration.

Stability is essential to the system.

127. It is essential to the proper working of the Provincial system of finance that an element of stability should, to as great an extent as possible, be imported into the arrangements between the Imperial and Provincial Governments. Unless the latter are assured that any increase of revenue consequent on improved management, or any savings which may accrue from economical administration, will remain at their own disposal, but slight inducement will be offered to them to improve the management of their resources or to exercise economy in their administration. Accordingly, in concluding the contracts of 1882, the assurances previously given to the effect that the Imperial Government would not call on the Provincial Governments for any pecuniary assistance, save on occasions of very great and extraordinary emergency, were ratified and to some extent emphasised. The money (£670,000) contributed by the Provincial Government towards the expenses of the Afghan war was at the same time repaid.

Famine the only danger to which Provincial finance is exposed.

128. It thus happens that, of the four dangers to which I have alluded above, one only,—famine,—can, save under very extraordinary circumstances, affect Provincial finances. I am far from condemning this arrangement. On the contrary, I think it is, on the whole, the best of which the circumstances of the case admit. It is the Provincial Governments, and not the Government of India, who are brought in immediate contact with the people. They supervise the whole of the ordinary administrative work of the country. Through their instrumentality, or through agency working in close connection with their officers, most of the smaller, and some of the larger, public works are executed. It is a distinct advantage that, should any sudden emergency arise, such as war, a diminution of the Opium Revenue, or a further depreciation in the value of silver, the Provincial Governments should be able to feel that the progress of any administrative reforms they may have undertaken, or the execution of any public works for which Provincial funds are available, will not be checked. On the other hand, it cannot be denied that, whilst the probability of any such

emergency arising has in no degree diminished since the adoption of the Provincial system of finance, the power of the Government of India to cope with an emergency is to some extent impaired by reason of the pledges taken towards the Provincial Governments.

No further imperial grants can be made.

129. I make these remarks for the following reasons. All the new contracts have now been finally concluded. I mentioned in the last Financial Statement (para. 45) that some questions still remained outstanding with the Madras Government. These have now been settled. Under these circumstances it is very desirable that it should be fully understood that no further changes can be made in the terms of the several contracts. The Government of India, on its side, will adhere strictly to the principles laid down in the Resolution of September 30th, 1881. On the other hand, it must call upon the Provincial Governments to abide with equal strictness to their portion of the contracts. The contracts have not been made in any illiberal spirit. Each Provincial Government starts with a balance at its credit and with a normal revenue in excess of its normal expenditure. Under these circumstances the Provincial Governments must look solely to the gradual development of their own resources, and to economy in their own administration, to provide whatever further funds may be required for services classed as Provincial. The Government of India cannot entertain any further proposals for increased Imperial grants on account of those services. It may be, and probably is, the case that in almost every Province of India the funds available are not commensurate with the work which sooner or later will require to be done. That is the normal condition of a country whose necessities are great, whilst the tax-paying power of its population is small. Under these circumstances, progress in many directions will possibly be comparatively slow, and it is inevitable, under all the conditions of Indian Government, that it should be slow. But what I particularly wish to point out is that the Government of India cannot at present make any further grants from Imperial funds in order to ensure more rapid progress. Indeed, in some respects it may be said that the Provincial Governments are in a better position to provide whatever funds may be required than is the case with the Imperial Government. For the reasons which I have already given an element of stability is imported into Provincial finance which Imperial finance cannot at present possess. Not only do the three points to which I have alluded constitute dangers which are wholly borne by the Imperial Government of India,—not only does the fourth danger (famine) materially affect Imperial as well as Provincial finance,—but if any further fiscal reforms are to be made,—and there are several which it would be very desirable to make,—any loss of money which may accrue from their execution must be borne by the Imperial Treasury.

Altered situation during the year.

130. To return from this digression. I have said (para. 121) that hardly had the large fiscal reforms of last year been carried out when it became apparent that three out of the four dangers to which the finances of India are specially exposed would have to be encountered in the immediate future.

Egyptian Expedition.

131. In the first place, we have had a war. The cost of the Indian Contingent which was sent to Egypt is now estimated at £1,297,000. Her Majesty's Government has intimated its intention of repaying £500,000 (true sterling) of this amount to the Government of India. This sum of £500,000 will be brought to credit at once. A corresponding reduction will take place in the Secretary of State's drawings for 1883-84. The net cost of the Egyptian Expedition to the Indian Treasury will, therefore, be £797,000.*

* This is the net figure which appears in the Revised Estimates for 1882-83, but in 1883-84 there will be a diminished charge under *Exchange* by reason of the reduction of £500,000 (true sterling) in the amount of the Secretary of State's drawings. The diminution of expenditure under this head may at present rates be calculated at about £115,000. It may be said, therefore, that the ultimate net charge which will fall on the Indian Revenues by reason of the Egyptian Expedition is £682,000 (Rs. 68,20,000).

Opium.

132. Turning to Opium, I give below the net Revenue for the last four years:—

		£
1878-79		7,701,000
1879-80		8,252,000
1880-81		8,451,000
1881-82	Revised Estimate	7,838,000
	Actuals	7,805,000

133. The fluctuations in the Opium Revenue from month to month, and indeed, from week to week, are so considerable that it is very difficult to make any very close estimate even for the short period of the present financial year which remains to expire. According to the best estimate that can be framed, however, the net Revenue will probably amount to £7,217,000, being £33,000 less than the Budget Estimate. The deficiency is due to the Expenditure being greater by £95,000 than was anticipated last March. This excess expenditure is partly due to the fact that the Opium crop in Bengal was a good one, and that, therefore, more money than was expected had to be paid for crude Opium, and partly to the fact that 2,000 maunds of Malwa Opium were purchased for the manufacture of Excise Opium. The excess expenditure is partly balanced by an increase of Revenue to the extent of £62,000 over the Budget Estimate.

Competition of the Chinese drug.

134. It will be seen, therefore, that the estimated net Revenue from Opium for the current financial year is less by £1,234,000 than the actual receipts of 1880-81, less by £621,000 than the Revised Estimate for 1881-82, and less by £588,000 than the Actuals of 1881-82. There can be little doubt that the main cause of this progressive diminution is to be found in the increased competition of the indigenous Chinese drug, to which I alluded in the last Financial Statement (paras. 143—145). The falling-off in the Opium Revenue has not seriously disturbed the finances of the year. The net Budget Estimate will probably be nearly realised. What, however, I wish to point out is, that in former years Opium has very often yielded a large sum in excess of the Estimate, and has thus enabled the Government to meet any unforeseen demands which might be thrown upon it during the course of the year. Nothing of this kind has occurred during the current year. On the contrary, the Opium Revenue is, as I have already mentioned, likely to fall below the Budget Estimate of £7,250,000 by £33,000. I shall presently revert to this question in dealing with the Budget Estimate for the year 1883-84 (paras. 195—207).

Exchange.

135. Turning to the question of Exchange, it is to be observed that the Budget Estimate provided for the sum of £15,342,000 (true sterling) being remitted to England, and that the rupee was taken at 1*s.* 8*d.* During the last three weeks of March 1882 bills to the extent of £908,000 (true sterling) in excess of the requirements of the year 1881-82 were placed on the market. This amount was taken in deduction of the drawings for the current year, which were thus, so far as this transaction only is concerned, reduced to £14,434,000 (true sterling).

Serious inconvenience due to instability in the value of the rupee.

136. At no period has the inconvenience to India of having to make a large annual payment in sterling been more apparent than during the current year. I will not now attempt to discuss whether it is to the advantage of India that the value of the rupee expressed in sterling should be low, that is to say lower than it used to be when the relative values of gold to silver were as 1 to 15½. That is a subject on which a great deal might be said. But it is not the fact that the value of the rupee is, comparatively speaking, low that causes inconvenience. It would be possible, although it might be exceedingly troublesome, to adjust the Indian fiscal system to a rupee of any value. What causes inconvenience alike to Government and to trade is that the value of the rupee is unstable. It is impossible to state accurately in Indian currency what the annual liabilities of the Government of India are. Those liabilities have

to be calculated afresh every year according to the variations which take place in the relative value of gold and silver, and a calculation which will hold good for even one year is exceedingly difficult to make. In March 1882 the value of the rupee was taken at 1*s.* 8*d.*, and at the time this estimate was made it was a reasonable one, based on the facts of the past and present. The value of silver was then about 52*d.* an ounce, which corresponds with a value of 1*s.* $8\frac{6}{16}$*d.* to the rupee. But since then the value of the rupee has been as high as 1*s.* $8\frac{5}{16}$*d.*, and as low as 1*s.* $7\frac{1}{16}$*d.* The average price obtained for the bills, amounting to £14,184,000 (true sterling), placed on the market up to March 9th, 1883, has been 1-$7\frac{3}{32}$*d.* When the Budget was framed it was thought that a debt of £14,184,000 (true sterling) would be liquidated by a payment of ₹17,02,03,000. It has actually cost ₹17,43,81,000 to liquidate that debt. It is sufficient to state these facts in order to show the grave inconvenience to the Government which results from the unstable value of the rupee.

Southern Mahratta Railway and Famine Insurance.

137. It will be desirable that I should explain in this place two financial transactions of the year which are intimately connected with each other and with the Expenditure under *Exchange*. The first relates to the transactions of the Southern Mahratta Railway Company. The second to the application of the annual grant of £1,500,000 under *Famine Relief and Insurance*.

138. The Southern Mahratta Railway was commenced by the Government as a famine work in April 1879, and work was afterwards recommenced by Government in November 1881. Up to the end of 1881-82 £394,000 had been spent on it, of which £291,000 had been charged to the Protective grant. A further sum of £369,800 was provided in the Budget Estimates for 1882-83 from the Protective grant for expenditure on this line.

139. In the summer of 1882 the line was handed over to a private Company. Capital to the extent of £1,724,600 (true sterling) has already been raised in London and paid to the Home Treasury of the Government of India. Of this amount about £550,000 is due to the Government for work already done, the remainder being intended to provide funds for the continuation of the works. The amount to be re-credited to the Protective grant during the present year is estimated to be £270,000, besides the expenditure incurred this year, and whatever is repaid will be credited to the head of *Famine Relief and Insurance* and become available for the construction of Protective Works, in addition to the annual grant of £750,000. Further, the original allotment of £369,800 made in the Budget from the Protective grant for expenditure on the Southern Mahratta Railway became available for expenditure on other Protective Works. The Public Works Department was, however, unable to spend the large sum of money which thus became available on Protective Works during the year. Their total net expenditure on these works in 1882-83 is now estimated at only £144,200. It was thought undesirable not to utilise at once the large sum of money belonging to the Famine Insurance grant which was thus available. A transfer of £605,800 will, therefore, be made to the Account of the Commissioners for the Reduction of Debt, thus increasing the amount available during the year for reducing debt to £1,330,200. A demand for money having recently sprung up, and the Secretary of State having already drawn the total sum required for the annual expenditure in England, it is contemplated to remit home an additional sum of about £1,000,000 (true sterling) during 1882-83, to invest this sum, and to apply it, as opportunity may offer, to the reduction of sterling debt in England. The Commissioners have been consulted on the subject, and approve of this arrangement. A separate account of the transaction will be rendered to them. The cost of the bills drawn in order to carry out this transaction will be debited to the Account of the Commissioners for the Reduction of Debt. In 1883-84 a reduction will be made in the amount available for ***Reduction of Debt***, and a corresponding increase in the amount available for ***Protective Works***, that is to say, the former having, in 1882-83, been increased

Reduction of Debt

to £1,330,200 will, in 1884-85, be reduced to £131,700 and the latter having, in 1882-83, been reduced to £144,200, will, in 1884-85, be increased to £1,355,800. It is estimated that the direct expenditure on *Famine Relief* in 1882-83 and 1883-84 will be £25,600 and £12,500, and consequently the aggregate expenditure on *Famine Relief, Protective Works*, and *Reduction of Debt* will be £1,500,000 in each of the years 1882-83 and 1883-84.

140. So far I have only dealt with the transactions of the Southern Mahratta Railway Company mainly in so far as they affect the Revenue and Expenditure of the year. I now turn to the consideration of the transactions in so far as they have affected the Ways and Means of 1882-83.

141. As the capital of the Company was paid to the Home Treasury of the Government of India, it was necessary, in order to enable the Company to proceed with its works, to provide funds for the Company from the Treasuries of the Government of India. A sum estimated at £480,000 (£400,000, true sterling) had to be so provided. For this, of course, no provision had been made in the Estimate of Ways and Means for the year. The Secretary of State, therefore, undertook to reduce his drawings during 1882-83 by an amount of £400,000 (true sterling), but he did not reduce his drawings by the total amount of the paid up capital of the Company. The balance of the money paid by the Company to the Secretary of State in excess of £400,000 (true sterling) was used to strengthen the Home cash balance, and thus enable the Secretary of State to purchase the Madras Irrigation and Canal Company's undertaking. It results, therefore, that, inasmuch as the Government of India has to supply funds for the Company in India at a rate of exchange of 1*s.* 8*d.*, every £1 paid to the Company in India involves a payment of R12, of which R2 appears as expenditure under *Exchange*. As a matter of fact the total expenditure under *Exchange* is, on this account, increased by £126,500 in 1883-84.

Result of these Operations.

142. I trust that I have made these operations clear. They are somewhat complicated. The general result, so far as the drawings and the expenditure under *Exchange* of the year 1882-83 are concerned, is as follows: (1) The Secretary of State's drawings for the year 1882-83 are now estimated at £15,042,000 (true sterling), of which £14,184,000 (true sterling) had been drawn up to March 9th; (2) the expenditure under *Exchange on Transactions with London* is now estimated at £3,116,000, being £341,000 in excess of the Budget Estimate; (3) a further sum, estimated at £227,000, representing *Exchange* on the remittance home of the sum of £1,000,000 (true sterling) will be charged against *Appropriation for the Reduction of Debt* (*vide* Abstract C).

	£	£ (True Sterling)
Original Estimate		15,342,000
Deduct:—		
(1) Excess drawings in 1881-82 in round figures	900,000	
(2) Reduction by Secretary of State on account of Southern Mahratta Railway transactions	400,000	
Total deductions	1,300,000	
Add:—		
(1) Remittance on account of Debt Commissioners	1,000,000	
Net deduction		300,000
Revised Estimate of drawings		15,042,000

Budget Estimates, 1882-83.

143. The Budget Estimates for 1882-83 was as follows:—

	£
Revenue	66,078,000
Expenditure	65,793,000
Surplus	285,000

Revised Estimates, 1882-83.

144. I have already mentioned (para. 131) that net Expenditure to the extent of £797,000, for which no provision was made in the Budget, was incurred during the year on account of the Egyptian Expedition. Also that the Expenditure under *Exchange* is now estimated at £341,000 in excess of the Budget Estimate

(para. 142). In spite, however, of the Egyptian expenditure, of the heavy charge for *Exchange*, and in spite of the fact that the net *Opium* Revenue is expected barely to come up to the Estimate (para. 133), the Revised Estimate shows a small surplus of Revenue over Expenditure. It is as follows:—

	£
Revenue	67,914,000
Expenditure	67,854,000
Surplus	60,000

Reasons of surplus.

145. This satisfactory result is mainly due to two causes. In the first place the harvests were everywhere good, and the country has generally been in a prosperous condition. In the second place, in view of the large fiscal reforms which were carried out last year, it was thought advisable to frame all the Estimates of Revenue and Expenditure with even more than the usual caution. Otherwise it would not have been prudent to have undertaken those reforms.

Increases of Revenue.

146. Almost every branch of Revenue shows an increase over the Budget Estimate, whilst many branches of Expenditure show a diminution as compared with the Budget.* Thus the net *Land Revenue* (including *Portion of Land Revenue due to Irrigation*) shows an improvement of £172,000, of which £60,000 is on account of increased Revenue, and £112,000 on account of a diminution in Expenditure. *Forests* (net) show an improvement of £107,000; *Excise* (net) of £288,000; *Customs* (net) of £91,000; *Salt* (net) of £219,000, of which £80,000 is for excess Revenue, and £139,000 for diminished Expenditure; *Stamps* (net) of £68,000; *Railways* including those classed as Productive Lines (*State, Guaranteed* and *East Indian*) of £225,000, net; and *Irrigation and Navigation* (net) of £53,000 on the Ordinary and £17,000 on the Productive Account. The *Marine* Expenditure (net) is £104,000, the *Army* Expenditure (net) £74,000, and the Expenditure (net) under *Law and Justice* £121,000, less than the Budget Estimate.

Diminutions of Expenditure.

Exceptional receipts.

147. The Revenue of the year has been swelled by two exceptional receipts. In the first place, certain remissions of *Land Revenue* were contemplated in the Bombay Presidency last year, and in order to meet the loss on Imperial account involved in those remissions, a sum of £251,000 was credited to the Bombay Government in the Accounts of 1881-82. The amount remitted has, however, turned out to be less by £101,000 than was anticipated. This amount has, therefore, been again brought to the credit of the Imperial Government.

Patwari Fund.

148. In the second place, the balance of the Patwari Fund in the North-West Provinces, amounting to £199,000, has been brought to the credit of the Imperial Government. Under the arrangements made last year in connection with the abolition of the Patwari cess (see Financial Statement for 1882-83, paras. 59—

* In considering these figures it is to be borne in mind that the total amount by which the Revised Estimate, whether of an item of Revenue or of Expenditure, differs from the Budget Estimate, does not necessarily go to swell or diminish the Imperial surplus. Thus, to take a single example, an excess in gross Revenue of £284,900 under *Excise* means that the Imperial Government expects to receive £142,450 and the Provincial Governments £142,450, more than was originally estimated. So also, to take an example on the Expenditure side of the Account, almost the whole of the amount by which the Expenditure under *Land Revenue* falls short of the Estimate, benefits the Provincial Governments only. The figures given above, therefore, must only be taken as a general indication of the reasons why the Imperial Revenue has more than balanced the Imperial Expenditure. I have not thought it necessary to state in detail to what extent the excess of Revenue or diminution of Expenditure benefits the Imperial and Provincial Governments respectively.

I may mention in connection with this point that the Increase and Decrease columns, which formerly appeared in *Statements I* and *II* under the old classification of the Accounts and Estimates (see Appendix II, pages 68 to 71) are not given in Abstracts A and B of the new classification (see Appendix I, pages 54 to 59). It will be readily seen that they could not conveniently be given. This is, without doubt, a disadvantage, but the new classification is so superior to the old classification in all other respects as to make its adoption desirable. As both the old and new classifications are published this year (see para. 63 of Financial Statement), the inconvenience will not be felt immediately.

63), the Imperial Government has to bear the charges formerly paid from the Patwari Fund. The balance of the Fund was devoted to meeting charges connected with Surveys and the preparation of a Record of Rights in permanently-settled districts, and the charges on these accounts are being met at the cost of Imperial Revenues, which are recouped by receiving a credit of the balance of the Fund.

149. Both of these are extraordinary items of Revenue which will not recur in future years.

Increases of Expenditure.

150. On the other hand, the Expenditure under a few heads has exceeded the Budget Estimate, and some extraordinary expenditure has been borne which will not recur in future years.

151. The Expenditure under *Interest on Debt* is now calculated at an increase in all of £119,000, the increase being partly due to an arrear payment to the Maharaja of Patiala and partly to the charge for temporary loans in England in excess of the Budget Estimate; of this increase £71,000 appear in the Ordinary and £48,000 in the Productive Account. *Stationery and Printing*, owing mainly to unusually heavy purchases of stock, has cost £56,000 (net) more than was anticipated. The cost of *Administration* has exceeded the Estimate by £74,000, and that of *Superannuations* (net) by £79,000.

152. It was thought desirable to complete the *Frontier Railways* as soon as possible. An additional grant of £60,000 in excess of the Budget allowance was, therefore, made under this head during the year. The *Southern Mahratta Railway* has cost £33,000 (interest charge), and *Subsidized Railways* have cost £21,000, in excess of the Estimate. *Civil Buildings, Roads, and Services* are now estimated at £51,000 in excess of the Estimates. The excess is mainly due to additional grants having been made during the year for the extension of the Salt works at Uru in the Bombay Presidency, and for the erection of Government offices and clerks quarters at Simla. The construction of these buildings will lead to a diminution in the present annual charge on account of rent for the houses now hired.

VII.—The Wheat Trade.

The Wheat Trade.

153. The principal feature of the financial situation of the moment is that during the past year there has been a still further fall in the value of the rupee. The highest price obtained by the Secretary of State during the year 1882-83 for his Bills was 1*s.* $8\frac{3}{16}$*d.* on April 5th. The lowest price was 1*s.* $7\frac{1}{16}$*d.* on December 20th and 27th. The balance of trade between Europe and India was to an unusual extent settled by importations of silver, especially during the early months of the financial year. (See Appendix V.)

Value of Silver.

154. Some temporary and adventitious causes may possibly have tended to depreciate exchange during the year. But, in the main, the value of the rupee expressed in sterling must, of course, depend on the relative value of gold and silver. The highest price realised for silver in the London market during the year 1882 was $52\frac{7}{16}$*d.* per oz. corresponding to a rupee of 20·289*d.*; the lowest 50*d.* corresponding to a rupee of 19·3467*d.*; the average was $51\frac{5}{8}$*d.* per oz. corresponding to a rupee of 19·9755*d.** On the whole the general tendency has been downwards.

* *The Statist.* Financial and Commercial History of 1882.

Importance of removing obstacles from trade.

155. The only way in which it is within the power of the Government of India to meet the difficulties attendant on a depreciation in the value of the rupee is to free trade so far as is possible from all obstacles, and especially to do all in its power to develop the export trade.

The Wheat Trade.

156. A great deal has already been done in this direction. The import duties have been almost entirely abolished. The export duty on rice remains. It would be most desirable that this duty should be removed. The financial situation does not, however, for the present permit of its abolition. Something, however, may be done in the way of encouraging the export trade in food grains, and especially in wheat.

Its recent development.

157. This trade may, for all practical purposes, be said to date from the year 1873, when the export duty was removed. In 1881-82 nearly a million tons (19,863,520 cwt.) were exported. The export during the current year (1882-83) will probably be about 14,000,000 cwt.,—a figure which, although below the exceptionally large export of 1881-82, is still 100 per cent. in excess of that of 1880-81. The great strides made in this trade during the last few years are to a great extent due to railway extensions in India and, so far as the great exports of 1881-82 are concerned, to deficient crops in the United States.

Markets for Indian Wheat.

158. For all practical purposes it may be said that the whole of the Indian wheat trade is with Europe. In 1881-82 only 310,000 cwt. out of 19,863,000 cwt. were shipped to other than European markets. The largest market for Indian wheat—as for most of the other staple products of India—is England. Out of the total quantity exported in 1881-82, England took nearly one-half, and has taken about the same proportion during the current year. France took 5,308,000 cwt. last year (1881-82) and has this year (1882-83) taken over 3,000,000 cwt. out of the 11,828,000 cwt. already exported. Indian wheat also goes to Belgium, Holland, Italy, and Egypt. But shipments to Egypt are only nominally for that country. Ships go to Port Said "for orders," and the exports recorded in our trade returns as going to Egypt are mostly intended for some Continental market.

Production of wheat in England.

159. The total production of wheat in the United Kingdom is estimated by Sir James Caird at 12,000,000 quarters, or rather over 53,000,000 cwt. (2,650,000 tons). The yield is said by Sir James Caird to be decreasing. He estimates that from 1873 to 1877 the average yield was $2\frac{1}{2}$ quarters to the acre, and in 1879 not more than 2 quarters. In former years the yield has reached $3\frac{1}{4}$ quarters and more to the acre. He thinks that there is a decrease in fertility. The area under wheat is also diminishing and land is being used for more profitable crops, for dairy-farming, for grazing, and for market-gardening. Looking to the increase of population and to the general tendency to devote land to other uses than the growth of wheat, it may be anticipated that the demand for wheat in England from other countries will increase in the future.

Imports into England from Foreign countries.

160. During the calendar year 1882, the English market was supplied with wheat from abroad to the extent shown in the following table:—

	Cwt.
Russia	9,571,021
Germany	3,083,921
Turkey and Roumania	721,030
Chili	1,656,361
Australia	2,475,127
B. N. America	2,684,828
United States	35,059,623
Egypt*	174,862
India	8,477,479
Other Countries	267,370
TOTAL	64,171,622

161. In addition to this amount of wheat, wheat-flour to the extent of 13,028,705 cwt. was supplied to the English market from foreign countries during the year 1882, of which the United States furnished 7,777,262 cwt.

The United States.

162. The total imports of wheat and wheat-flour were, therefore, 77,200,327

* The low imports from Egypt were due to the war. The average imports from that country to England are considerably higher than the figure given above.

cwt., of which the United States supplied nearly 43,000,000 cwt., or about 56 per cent. of the whole. It is clear, therefore, that the United States is the most formidable rival with which India has to compete in the supply of wheat to the English market. Wheat flour has not as yet been exported from India.

Its advantages.

163. In this competition the United States possesses many natural advantages over India, which are, however, to some extent counterbalanced by one important disadvantage.

Relative production of the two countries.

164. Looking first to the advantages, it is certain that the United States can supply a much larger total quantity of wheat for export than can be supplied by India. Sir James Caird, addressing the Statistical Society on November 15th, 1881, said :—

"In a single year the United States increased their acreage by an extent equal to our (the English) total growth. In the 20 years from 1840 to 1860 their wheat production rose from 10 to 20 million quarters. In the 20 years from 1860 to 1880 it grew from 20 to 60 million quarters, and their extent of good wheat land is practically unlimited. The two great corn products of that country are wheat and Indian corn, in regard to the first of which this country, and Western Europe generally, will become increasingly dependent on America, and the price of wheat here will be chiefly ruled by the production there."

Acreage under cultivation in India.

165. In the Statistical Abstract of the United States for 1881, it is stated that in 1880 the area under wheat was 37,986,717 acres, the total production amounting to 271,531,624 cwt. or over 62 million quarters (over 13½ million tons).

166. It is difficult to state accurately either the acreage under wheat in India or the total outturn of the crop. Our agricultural statistics are still very defective for most provinces, and there are none at all for Bengal. According to the figures given in the Administration Reports of the different Provinces, there were, in 1880-81, 19,474,594 acres under wheat. These figures are, however, inclusive of 1,000,000 acres in Bengal, which is simply a guess, and is probably very wide of the mark. We shall probably not be far wrong if we take 21 millions as the total present acreage. The great wheat fields are in the Punjab, where also the quality is the best, the North-West Provinces, Oudh, and the Central Provinces. Bombay, Berar, and Bengal also grow wheat extensively, though in smaller quantity.

Outturn per acre.

167. The outturn per acre varies enormously according to the province and soil, and according to whether the field is irrigated or not. It is difficult to attain accuracy on this point, but it would seem that for all India the average yield cannot be taken, on a liberal estimate, at more than 700 lbs. to the acre, which is less than half the produce of English (from 1,500 to 1,600 lbs.) and considerably less than that of the American wheat fields (850 lbs.).* At this rate of yield the total outturn would be about 6½ million tons, of which it may roughly be said that about one million tons are available for export.

Capability of increased production.

168. The question of the extent to which the amount of wheat available for export could be increased without trenching on the food supply of the people or materially enhancing prices is one of great difficulty. Some remarks bearing on the subject will be found in the Report of the Famine Commissioners, Part I, para. 158. Some high authorities are of opinion that, under favourable conditions as regards the prospect of a market, it would be possible within a few years to double the amount of wheat available for export, that is to say, to increase it to about 40,000,000 cwt. There can be no doubt that very large quantities of land are awaiting cultivation, especially in the Punjab, Burma, Assam, and the Central Provinces, but of course a good deal of this land is not suitable for

* In some places in America 25 bushels to the acre and more have been taken off an acre, but this quantity is greatly in excess of the average yield. The average outturn in 1880 for all the United States was 799 lbs. to the acre, but this was a small yield. In 1877 it was 848 lbs. A yield of 850 lbs. to the acre is probably a fair general average.

As regards the figure given above for India (700 lbs.), it is to be borne in mind that it purports to give the *average* yield per acre. In some districts the yield is certainly in excess of this figure, and on all *irrigated* land the yield is largely in excess of 700 lbs.

the cultivation of wheat. In the eastern districts of the Central Provinces the new lines of railway will now open out a very large tract of wheat-producing country, which up to the present time has been unable to find a market for its surplus produce owing to defective means of communication.

169. Any opinion on this subject can be little more than conjecture. All that can be said with certainty is that, on the one hand, the Indian outturn is capable of very considerable increase, and that the growth of the population in India is proceeding at a relatively slower rate than that of the United States, with the result that the proportionate amount of any increased production required for home consumption is less in the former than in the latter country. On the other hand, the processes of American are superior to those of Indian agriculture. The land in the North-Western and Western States is unexhausted and is of very great natural fertility. The acreage available for further cultivation is described on high authority as being "practically unlimited." The yield per acre in the United States is larger than in India. Under these circumstances it may be regarded as certain that, although the Indian supply of wheat available for export may be very considerably increased, the American supply may be increased to a still greater extent.

Ocean freights.

170. A further advantage possessed by the United States over India is in the matter of ocean freight. This advantage is not so great as might be the case under different conditions as regards the fiscal laws of the United States. The heavy duties levied by the United States Government on imported foreign goods naturally check the imports into America from Europe, with the result that, in the comparative absence of a demand for freight from Europe to America, shipowners are obliged to recoup themselves by charging relatively high freights from America to Europe. The disadvantage under which America labours by reason of this condition of things is artificial and not natural. It is imposed by the fiscal law and would be removed were that law changed. In spite, however, of the present condition of the United States Customs Tariff, proximity to the English market, together with the fact that Indian shipping has to pay Canal dues, is sufficient to turn the scale in favour of the United States. The distance from New York to Liverpool is 3,073 miles. The distance from Calcutta to London by sea is 8,083 miles; from Bombay to London 6,274 miles; from Kurrachee to London 6,080 miles. Dues are levied on passing through the Suez Canal at the rate of 10*fcs.* 50*c.* per registered ton.

Comparative freights.

171. The charge for steamer freight from New York to Liverpool is very variable. The rates in 1881 and 1882 were, on an average for the year:

	1881.	1882.
To Liverpool	15*s.* 2*d.*	12*s.* 2*d.*
„ London	16*s.* 11*d.*	16*s.* 0*d.*

172. In January of the present year the rates were, to Liverpool 21*s.* 9*d.*, and to London 22*s.* 9*d.* per ton. Freights seem generally to rule high in January. Comparing the rates from New York to Liverpool for 1882 with Indian rates, we find that during the year 1882 the average charge from Kurrachee to London was £1-18-9 a ton; from Bombay to London £1-15-2¼; from Calcutta to London £2-2-11.* Taking the average American rates of 1882 as the basis of comparison, New York may be said to possess an advantage over Kurrachee to the extent of about 26*s.* 7*d.* or 22*s.* 9*d.* a ton, over Bombay of 23*s.* 0¼*d.* or 19*s.* 2¼*d.*, and over Calcutta of 30*s.* 9*d.* or 26*s.* 11*d.*, accordingly as the Indian rates are compared with the New York rates to Liverpool or to London. On the other hand, Indian rates compare favourably with freight from San Francisco to the United Kingdom, which in 1881 averaged £3-3-11½ a ton. Last year, of the whole import of wheat into the United Kingdom from the United States, 42 per

* The rates stated here for Bombay and Kurrachee are for the ton of 20 cwt., the rates quoted in commercial circulars being for the ton of 16 and 18 cwt. respectively.

cent. was shipped from the Pacific seaboard; in 1881 it was 31 per cent.; in 1880 only 18 per cent.

Railway communication.

173. The United States possess a further advantage in facility of inland communication. The American railway system has been very rapidly extended during the last few years. No less than 105,000 miles of railway are now open. This rapid progress is due to the vigorous commercial enterprise of the people of America, and to the large amount of capital seeking investment in American undertakings. It is in this respect more than in any other that India presents a remarkable contrast. Local capital is either not available or seeks, generally speaking, for more profitable investments than Indian Railways afford. English capital has only recently begun to turn its attention to Indian Railways, and can as yet scarcely be persuaded to dispense with Government assistance. The development of the country has up to the present time mainly devolved on Government, and, as a necessary result of this state of things, progress has been relatively slow.

Railway rates in the United States;

174. In the matter of railway rates also American is at a great advantage as compared to Indian wheat. So far back as 1876 the rate from Chicago to New York, a distance of 960 miles, was on an average 17 cents a bushel, or £1-5-6 per ton for the whole distance. In 1878 and 1879, the published tariff rate was 20 cents per 100 lbs. (18*s.* 4*d.* per ton) for the whole distance, but under stress of competition wheat was carried from time to time in 1879 to New York at 18, 15, and even as low as 10 cents per 100 lbs., or 9*s.* 2*d.* per ton for the whole distance. Sir James Caird in his evidence before the Royal Agricultural Commission in December 1881, said that the rate had been reduced as low as ¼*d.* per ton per mile. This rate is equal to £1 per ton for the whole distance. The writer of an interesting pamphlet recently published in India* gives 14·5 cents a bushel as the latest rate he has seen quoted. This is equal to £1-1-9 per ton for the whole distance. In the official Report on the Foreign Commerce of the United States for the fiscal year ending June 30, 1882, by the Chief of the Bureau of Statistics, the following figures are given as the average through rates in 1881 from Chicago to New York:—

* *Indian Wheat versus American Protection; or, The influence on English Trade and American Protection of the Development of India.*

	Cents per bushel.	In sterling per ton.
By lake and canal	8·6	12*s.* 11*d.*
By lake and rail	10·4	15*s.* 7*d.*
By rail entirely:		
(1) During the season of navigation only	11·7	17*s.* 6*d.*
(2) During the year . . .	14·4	21*s.* 7*d.*

175. The competition of water carriage has evidently a marked effect on rail rates in America. In India, although about 20 per cent. of the wheat brought to Calcutta is still brought down the river in boats, this traffic does not in the least regulate the railway rates.

176. I have been informed on good authority that wheat is now carried from St. Louis, down the Mississippi, all the way through to Liverpool, for 14 cents a bushel, which is equal to 4*s.* 7¼*d.* per quarter or £1-1-1½ per ton. Mr. Leyland, owner of the Leyland line of steamers trading between Boston and Liverpool, told the Royal Commission on Agriculture that the custom is to take the wheat at Chicago (about 1,500 miles from Boston) and deliver it at Liverpool at a through rate, including everything. This rate in 1881 averaged 10*d.* a bushel of 60 lbs. or £1-11-1⅓ per ton, of which two-fifths went to the ship and three-fifths to the railway, the division being made by arrangement.

177. Turning to India, we find that the rate charged in March 1883 by the East Indian Railway from Delhi to Howrah, a distance of 954 miles, is Rs. 71 per 100 maunds, which, at an exchange of 1*s.* 7½*d.*, is equal to £1-11-5 per ton. *and in India.*

178. From Lahore to Kurrachee, a distance of 821 miles, the rate is 12 annas 3 pie per maund, equal to £1-13-11¾ per ton for the whole distance.

179. From Delhi to Bombay, over the Rajputana Railway, a distance of 889 miles, the rate until very recently was 13 annas 6 pie per maund, equal to £1-17-5¼ per ton for the whole distance.

180. From Jubbulpore to Bombay, a distance of 616 miles, the rate is 10 annas 5 pie per maund, equal to £1-9-8½ per ton for the whole distance; that is to say, it costs considerably more to carry a ton of wheat 616 miles over the Great Indian Peninsula Railway, than it does to carry the same quantity 960 miles over the American line.

181. A comparison of rates from other stations would produce similar results. But it is unnecessary to go further. It is abundantly clear that the Indian are much higher than the American rates.

Management of the trade.

182. In the detailed management of the trade also America has the advantage over India. There is far less handling of the wheat between the field and the hold of the ship in the former than in the latter country. The wheat is brought from the field into store-houses, and thence shot in bulk into the wagons, which are either brought alongside the ship or to warehouses which lie close to the ship. In India, on the other hand, wheat is brought from the field to a central station, say Cawnpore, is there bought by one trader (perhaps the agent of the shipping firm, perhaps another intermediary) from another trader, who has bought it from the cultivator. It is stored and bagged, then carted to the railway station, unloaded, stacked at the station, and again unstacked to be loaded into the wagons. On arrival at the port of shipment it is unloaded, stored, perhaps bought and sold once more, then carted to the shore and put on board either from a jetty or from a boat.

Price of Indian wheat.

183. Indian wheat is quoted in the London market at a lower price than American or Australian wheat. The average comparative prices during the year 1882 were as follows:—

	Per Quarter.	
	s.	*d.*
American, best	48	9
Calcutta, Club No. 1	43	1
Australian, best	50	5

Mixture with dirt and other grains.

184. I am informed that the relatively low price of Indian wheat is not so much due to its quality, which is generally very good, but to its admixture with dirt and other inferior grains. At present shippers pay for the conveyance of about 5 per cent. of dirt to England.

185. The admixture of inferior grains with the wheat is, I believe, due to the fact that cultivators often grow other grains in the same field as wheat as a resource in the event of the failure of the wheat crop. This practice tends to keep down the price of Indian wheat.

Advantages of India over America.

186. Against this long list of disadvantages under which the Indian agriculturist labours as compared with his American competitor, must be balanced one advantage, which is very considerable. India enjoys free trade, whilst America labours under all the disadvantages of a Tariff designed to protect indigenous manufactures.

American protection.

187. The disadvantage under which America labours by reason of its protective Tariff is very great. The fiscal laws of the United States oblige the American agriculturist to sell in the cheapest and to buy in the dearest market. For all woollen,* cotton, linen and silk manufactures, for iron and steel, for leather, for earthenware and crockery, for tin plates and ware, for hemp and jute fabrics, and for window glass, the American agriculturist has to pay from 20 to 77 per cent. extra—the average being 43 per cent.,—as the cost of protecting indigenous manufactures. An able writer on economic subjects* has estimated that the agriculturists of the United States paid $400,000,000 (£82,192,000) a year as the cost of protection, and ten years ago it was stated on high authority (Mr. D. Wells) that the average purchasing power of labour in the United States had been depreciated to the extent of 19½ per cent. between 1860 and 1873.

* *The Western Farmer of America.* Mr. A. Mongredien.

Free trade in India.

188. India on the other hand labours, for the purposes of the present argument, under no artificial disadvantages imposed by fiscal legislation. The Indian producer of wheat is absolutely free to exchange his exportable produce to the best possible advantage with the products of foreign countries.

Importance of the subject.

189. I have dwelt at some length on this subject not only on account of its intrinsic importance, but because I shall be glad if I succeed in drawing the attention of those who have a more intimate practical acquaintance both with the trade and the conditions of Indian agriculture than any to which I can pretend, to the necessity of exertion with a view to strengthening by all possible means the position of Indian wheat in the English market. I have not discussed the question of the relative cost of production in India and in the United States, because, independently of the somewhat difficult economic issues involved in this question, it is very difficult to obtain facts of a sufficiently reliable nature to permit of any very accurate general conclusion being drawn from them. I may say, however, that there is reason to suppose that the prime cost of production in India is less than in the United States.

Reduction of Railway Rates.

190. It remains for me to state the measures which have been adopted by the Government with a view to facilitating the export of wheat to Europe. In the first place the through rate for wheat conveyed from Delhi or Agra to Bombay has, in communication with the Agent of the Bombay, Baroda and Central India Railway, been reduced from 13 annas 6 pie to 11 annas a maund, and for other grains and seeds of the same class to 11½ annas a maund. The reduction in the case of wheat will, therefore, be 18·5 per cent. on the present rates. It will, no doubt, be followed by a corresponding reduction on the East Indian line. For the future it will be possible to lay down wheat coming from about Delhi or Agra to Calcutta or Bombay at a price of Rs. 4-4-3, or, at an exchange of 1*s.* 7½*d.*, £0-6-11¼ per ton less than has heretofore been the case. To state the case in another way, the lowering of the rates is equivalent to a reduction in price of slightly over 1*s.* 6*d.* per quarter of wheat in the London market.

Minimum loads.

191. In the second place, the restriction as regards minimum loads has been abolished on the Rajputana and Bombay, Baroda and Central India Lines.

Facilities at Stations and Ports.

192. In a letter recently issued from the Public Works Department, giving effect to this decision, the following passage occurs:—

"In conclusion, I am to draw general attention to the fact that every expansion of the "export trade will bring to bear a heavier strain upon the facilities for handling, warehousing, "removing, and shipping produce at the Railway Stations and Ports. These facilities are "believed to be even now in many cases inadequate, and their improvement will, His

* The duty on Wool has within the last few weeks been reduced, and that on Cotton Goods and Metals has been increased.

"Excellency the Governor General in Council trusts, engage the serious attention of the "several local authorities at an early date."

I trust that this very important branch of the subject will receive the serious attention which it deserves.

Improved communications.

193. Turning to the question of improved communications, it is to be observed that during the last two years the Railway policy of the Government of India has been unsettled. I do not think that is any matter for surprise or for regret. In inaugurating a policy under which Railways were, to some extent at all events, to be constructed through the agency of private enterprise, it was almost inevitable that there should be a period of transition during which it would be exceedingly difficult to adhere to any fixed policy. It was easy to declare beforehand the broad aim which the Government sought to attain, namely, the construction of Railways through the agency of unaided private enterprise, but experience alone could show how far that aim was attainable. We have now had two years' experience of the private enterprise policy. During that time a certain number of facts have been accumulated, which, we think, are sufficient to enable us to lay down a definite policy, at all events for the immediate future, say, for five years. We have, therefore, very recently addressed the Secretary of State on the subject, but I am not as yet in a position to state what the final decision of the Government will be.

Progress in the construction of Railways.

194. In the meanwhile I may as well state very briefly what have been the main facts as regards Railway construction during the last two years. At the commencement of the year 1881-82 there were 9,619 miles of Railway open to traffic, and 646 miles under construction, making a grand total of work either completed or in hand of 10,265 miles. At the commencement of the year 1882-83 there were 9,961 miles of line open for traffic and 1,302 under construction, making a grand total of 11,263 miles either completed or in hand. During the year 1882-83, 290 miles were opened to traffic, and the commencement of 1,194 miles of new line was authorised. The present position, therefore, is that we have 10,251 miles of line open to traffic, and 2,332 miles either under construction or sanctioned for commencement in 1883-84. It is expected that 719 miles will be opened for public use during the year 1883-84, leaving 1,613 miles for completion in 1884-85 and subsequent years. Comparing, therefore, the commencement of the year 1881-82 with the commencement of 1883-84, it will be found that the amount of line either open or under construction has in two years been increased by 2,318 miles. An immense deal, of course, remains to be done, and I trust it may be possible in the future to push forward the construction of Railways at a more rapid pace than in the past. At the same time it may be held that the progress during the last two years has, on the whole, been fairly satisfactory.

VIII.—Budget Estimates, 1883-84.

Budget Estimates, 1883-84.

195. I have already mentioned (para. 133) that the net Opium Revenue for 1882-83 is now estimated at £7,217,000. I pointed out on the occasion of the last Financial Statement (paras. 139 and 140) that during the four years 1878-79, 1879-80, 1880-81, and 1881-82, the annual sales of Bengal Opium had been in excess of the annual production, and, further, that these large sales had only been possible by reason of the exceptionally good crops of 1875-76 and 1876-77, which had enabled a very strong reserve to be constituted. I alluded to the fact that since 1878 the reserve had been steadily diminishing in quantity. I added—

Opium.

"This process of depletion cannot continue indefinitely. An exceptionally good crop "may, indeed, again replenish the reserve. But we cannot rely on a fortuitous circum-

"stance of this sort. An average crop, or, at all events, a succession of average crops, "will oblige us to resort to one of two alternatives. We shall be forced either to in- "crease the production, or to diminish the amount offered for sale."

Notification of June 28th, 1882.

196. The final result of the Opium crop is known about the month of June or July. The outturn of "provision" Opium—that is to say, Opium for export to China—in 1881-82 was 54,039 chests. The number of chests offered for sale in 1881-82 was 56,400. It was, therefore, thought desirable to reduce the number of chests to be offered for sale in 1883-84. Accordingly, on June 28th, 1882, the year's notice required by custom was given to the effect that from August 1883 (inclusive), the number of chests offered for sale would be reduced from 4,700 to 4,450 a month—a reduction at the rate of 3,000 chests in the year. It follows that during the year 1883-84 there will be four monthly sales of 4,700 chests each, and eight monthly sales of 4,450 chests each. In all 54,400 chests will be offered for sale in 1883-84, being 2,000 chests less than in 1882-83.

Reduction of duty on Malwa Opium.

197. Turning to Malwa Opium, it will be remembered that on June 28th, 1882, the duty was reduced by Rs. 50 a chest.

198. It is under these circumstances that we have to consider the Opium Estimate for the coming year.

Opium Estimate for 1883-84.

199. It is to be remembered that a reduction in the number of chests of Bengal Opium offered for sale should, all other things being equal, enhance the price which is realised on the diminished number of chests which are sold. But the reduction in quantity during 1883-84 (2,000 chests) may not be sufficient to exercise any appreciable effect on prices. It would not, therefore, be prudent to rely on a rise of price.

200. Also it is to be remembered that a diminution in the export of Bengal Opium to China will probably lead to a corresponding increase in the export of Malwa Opium. But here again it would not be prudent to rely on any compensating action of this sort in framing the Estimate for the coming year.

Revenue.

201. After a full consideration of the details of the question it has, therefore, been decided to take the gross Opium Revenue for 1883-84 at £9,200,000, being £362,000 less than the figure shown in the Revised Estimates for 1882-83.

Expenditure.

202. I turn now to the question of Expenditure. The expenditure under this head depends almost entirely on the yield of the poppy crop in Bengal and the North-West Provinces. As I have already mentioned (para. 133), the expenditure during the current year has been, relatively speaking, somewhat high (£2,345,000), owing partly to the fact that the outturn of both the Patna and Benares Agencies was somewhat above the average of past years, and partly to the fact that 2,000 maunds of Malwa Opium were purchased during the year to be manufactured into Opium for sale in India, thus allowing the reserve of Bengal Opium, which has heretofore been exclusively supplied for sale in India, to be strengthened to a corresponding extent.

Crop of 1882-83.

203. The accounts received up to the present time as regards the crop in the Benares and Patna Agencies, especially in the latter, are unsatisfactory. The total outturn of the two Agencies is at present estimated at not more than 47,000 chests. Much reliance cannot, however, be placed on any estimate formed at this period of the season. All that can be said with certainty is that the total crop will be considerably below the average, and that the final results are more likely to prove worse than they are to prove better than present Estimate.

Estimate of Expenditure.

204. The bad consequences of a short poppy crop do not make themselves felt immediately. The immediate effect of a partial failure of the crop is to strengthen the financial position by diminishing Expenditure. The ultimate effect is, probably, to weaken the financial position by diminishing the Revenue. It is

probable that the Expenditure in 1883-84 will fall short of that in 1882-83 by £270,000, but, in framing the Estimates, it has not been thought prudent to rely on so large a reduction of Expenditure. The Expenditure has, therefore, been taken at £2,165,000, being £180,000 less than that shown in the Revised Estimate for 1882-83.

Net Revenue.

205. The net Opium Revenue has, therefore, been taken at £7,035,000, being £182,000 less than the Revised and £215,000 less than the Budget Estimate of 1882-83.

	£
Revenue	9,200,000
Expenditure	2,165,000
Net Revenue	7,035,000

Number of chests for sale.

206. In recent years it has been the custom to give a full year's notice of any change which is contemplated in the number of chests of Bengal Opium offered for sale. The necessity of giving so long a notice is inconvenient from the point of view of the Government. It will also be possible to abridge the period without causing any inconvenience to the trade. But we are pledged not to make any change in the existing system without giving a full year's notice. The present system will, therefore, remain in force until the end of March 1884. For the future the following plan will be adopted: The yield of the Opium crop is always known accurately about the month of June or July. When it is known, the number of chests to be offered for sale during the next calendar year will be publicly notified. A formal notification giving effect to this change of system will issue immediately.

Summary of position.

207. It may be convenient to those who are interested in the Bengal Opium trade that I should summarise the main facts of the present situation. They are as follows:—

(1) 4,700 chests of Opium will be offered for sale each month from April to July 1883 (both months inclusive).

(2) 4,450 chests will be offered for sale each month from August 1883, to March 1884 (both months inclusive).

(3) For the future the system of giving a full year's notice of any change in the number of chests to be offered for sale will be abandoned. The quantity to be sold in one calendar year will be publicly notified about the month of June or July of the preceding year.

(4) It is the intention of Government to reduce the number of chests, which will be offered for sale in 1884-85, below the quantity fixed by the notification of June 28th, 1882 (4,450 chests a month), but I am unable at present to state the precise amount of the reduction. A notification giving this information will issue so soon as the final results of the present Opium season are known, that is to say, about the beginning of July 1883.

(5) It is at present estimated that the total outturn of the Patna and Benares Agencies for the current year will be not more than 47,000 chests of "provision" Opium, that is to say, Opium for export to China. But any estimate which can at present be framed must necessarily be very unreliable.

(6) The Opium reserve will, on December 31st, 1883, stand at 13,859 chests.

Exchange.

208. I now turn to the question of *Exchange*. There is at present every reason to suppose that there will be a considerable demand for money during the early months of 1883-84. The export of wheat will, not improbably, be stimulated by the reduction in the Railway rates to which I have already alluded (Part VII). Under these circumstances it is quite possible that a higher average rate for Bills may be realised in 1883-84 than has been realised in 1882-83 (1*s.* 7·52*d.*). On the other hand, the Secretary of State's drawings for 1883-84 are now estimated at £16,300,000 (true sterling), being £958,000 (true sterling) in excess of the Budget Estimate for 1882-83 £15,342,000 (true sterling). The future of silver is also uncertain. Under

these circumstances. it would not be prudent to take a higher figure than 1*s.* 7½*d.* as the value of the Rupee. Taking the Rupee, therefore, at 1*s.* 7½*d.*, the Expenditure under *Exchange on Transactions with London* for 1883-84 is estimated at £ 3,548,000, being £ 773,000 in excess of the Budget, and £ 432,000 in excess of the Revised Estimates for 1882-83.

Other Estimates of Revenue.

209. The other Estimates have been cautiously framed. *Land Revenue* (net) is taken at £50,000, and *Forests* (net) at £76,000 less than in the Revised Estimates of 1882-83. *Excise* (net) is taken at a figure (£9,000) very slightly in excess of the Revised Estimate for the current year. *Customs* (net) are also taken very slightly (£3,000) in excess of the Revised Estimates, although owing to a reduction of establishment consequent on the abolition of the import duties, the expenditure will be £13,000 less than in 1882-83. *Salt* (net) is taken at £9,000 less than during the current year, an increase of expenditure to the extent of £47,000 being anticipated. This is a very low estimate and will probably be exceeded. *Stamps* (net) are taken at £34,000 more than the Revised Estimate, which allows for less than the normal growth of Revenue. The *Mint* receipts (net) are taken at £37,000 less than the Revised Estimate in order to allow for a probable diminution in the imports of silver, on which the receipts under this head mainly depend. *Railways* (*State*, *Guaranteed* and *East Indian*, net) have been taken at £209,000 over the Revised Estimates. The Estimate is a moderate one. *Railways* (*Ordinary*) have been taken at £40,000 less than the Revised Estimate.

Expenditure.

210. On the Expenditure side of the Account, full provision has been made for all wants that can now be foreseen. The extension of the Railway system necessitates heavy Expenditure under *Telegraphs*. An increase of £85,000 over the Revised Estimates for the current year is allowed under this head. Allowance is also made for increased Expenditure under *Scientific and other Minor Departments* (£44,000 net), *Law and Justice* (£91,000 net), Police (£78,000 net), *Education* (£61,000 net), *Medical* (£24,000 net), *Territorial and Political Pensions* (£55,000), *Miscellaneous* (£84,000 net), *Subsidized Railways* (£30,000), and *Southern Mahratta Railway* (£52,000).*

211. On the other hand, in respect to three large items, the Expenditure of 1883-84 will fall below that of 1882-83. There is a diminution of £188,000 under *Refunds and Drawbacks*. This is due to the cessation of the large remissions of Land Revenue in Bombay and to the fact that the refunds under *Customs* will be much less in 1883-84 than they were in 1882-83. The Expenditure on *Frontier Railways* has now nearly ceased, thus reducing the Expenditure by £214,000 as compared with the Revised Estimates of 1882-83. The Expenditure under *Irrigation and Navigation* (*Ordinary*) is taken at £116,000 less, and that on the *Productive* account at £23,000 more than the Revised Estimate. The reduction under *Irrigation and Navigation* (*Ordinary*) is principally in Provincial Expenditure and but slightly affects the Imperial Surplus or Deficit. Under this head also the charge of £50,000 for payment of interest to the Madras Irrigation and Canal Company, which is shown in the Budget Estimate of 1882-83, disappears now that the works of the Company have become the property of the Government. Under *Civil Buildings, Roads, and Services* there is a reduction of £119,000 below the Revised Estimate for 1882-83. *Marine* also shows a reduction of £30,000; *Stationery and Printing* of £32,000; *Political* of £69,000.

212. I append to this Statement (Appendix VI) a minute by my hon'ble colleague, General Wilson, which gives full explanations as regards the Military Expenditure of the year.

* See note to para. 146 of this Statement. It is to be borne in mind that in some cases the increase of Expenditure does not affect Imperial Finance, as the charges are Provincial.

Opium.

213. It will be remembered that when, in 1880-81, the net Revenue derived from Opium amounted to £8,451,000—the largest sum ever realised—and when, in spite of this fact, the net Revenue for 1881-82 was taken in the Budget Estimates at only £6,500,000, this latter Estimate was severely criticised, both in and out of Parliament, as being too low. At the time when the Estimate was framed, I freely admit that it was almost certain that the net Revenue for 1881-82 would amount to more than £6,500,000. As a matter of fact, it amounted to £7,805,000. Further, as a matter of technical finance, it may very fairly be said that it is not right to deliberately under-estimate any item of Revenue. But that was not the really important point of issue. It makes little practical difference whether the Estimates are framed on the basis of a surplus of £500,000 and on an estimated net Revenue from Opium of £6,500,000, or whether they are framed on the basis of a surplus of, say, £1,500,000, and a net Revenue from Opium of £7,500,000. The really important question to decide, in March 1882, was this,—to what extent was it safe to take off taxes in reliance on a higher net Revenue than £6,500,000 from Opium?

Connection between Opium and Salt.

214. In the Financial Statement of last year (para. 192) I gave the following answer to this question:—

"If we abandon a source of Revenue which involves a permanent and absolute loss "of money, and which, moreover, from whatsoever reason, it would be difficult, in the "event of the Opium Revenue failing, to restore to its former position, then the course "would be open to great objection. If, on the other hand, we reduce a duty with a fair "hope that the reduction will increase consumption, and thus, after a while, recoup us for "any loss, and if, moreover, the duty can, without any great fiscal disturbance, be re-imposed in the event of the Opium Revenue falling off, then the reduction of taxation "would be unobjectionable. The Salt Duty falls within the latter of these two categories.

"It has been decided, therefore, to estimate the net Opium Revenue in 1882-83 at "£ 7,250,000, and simultaneously to afford some substantial relief to the tax-payers in the "shape of a reduction of the Salt Duty. * * * * * If any unforeseen circumstance, such as a heavy fall in the value of silver, takes place, and if at the "same time the reduction of the Salt Duty does not result in any considerable increase "in the consumption of salt, it would be open to us to return temporarily to a higher rate "of duty."

Salt a fiscal reserve.

215. It will be seen, therefore, that the intention, under certain contingencies, of using the Salt Duty as a fiscal reserve was distinctly indicated.

216. The loss of Revenue involved in reducing the Salt Duty (£1,400,000 a year) has, as I have already mentioned (para. 111), been already recouped by increased consumption to the extent of £320,600, a result more satisfactory by £302,000 than that which was anticipated last March. But in view of the facts (1) that the net Opium Revenue of 1883-84 is taken at £215,000 less than that of 1882-83 (Budget Estimate); (2) that the Expenditure under *Exchange* is estimated at £773,000 more than in 1882-83 (Budget Estimate); and (3) that, as is pointed out by General Wilson (see his Minute in Appendix VI), the savings in Military Expenditure in India have been to a great extent swallowed up by an increase of £100,000 (true sterling) on account of non-effective charges in England,—it would have been no matter for surprise if the Government had been obliged to resort to an enhancement of the rate of duty on Salt in order to balance the Revenue and Expenditure of the year 1883-84.

No increase of taxation necessary.

217. We are, however, fortunately under no such necessity. Not only are we able to balance our Revenue and Expenditure, but we are able, without any increase of taxation and without in any way starving the public services or checking the progress of Public Works of utility, to provide an adequate surplus in order to meet any of the numerous unforeseen contingencies which so frequently arise in India.

Budget Estimates, 1883-84.

218. The Budget Estimates for the year 1883-84 are as follows—

	£
Revenue	67,274,000
Expenditure	66,817,000
Surplus .	457,000

Reasons of Surplus.

219. This satisfactory result is due (1) to the fact that the Indian Revenue is more elastic than is very generally supposed; (2) to the fact, to which I have already alluded (para. 145), *viz.*, that, in view of the large fiscal reforms undertaken last year, it was thought desirable to frame the Estimate of every item of Revenue and Expenditure with even more than usual caution; and (3) to the fact that, in carrying out those reforms, we were aware that the heavy charge for *Frontier Railways*, for which provision was made in 1882-83, would be greatly diminished in 1883-84 (see para. 249 of the Financial Statement for 1882-83). Allowing for an additional grant of £60,000 made during the year, the estimated Expenditure on these Railways is £282,000 in 1882-83. In 1883-84 it will only be £68,000.

Postponement of further fiscal reforms.

220. On the other hand, the high Expenditure under *Exchange* and the diminution of the Opium Revenue have rendered it necessary to postpone the execution of those further fiscal reforms which, under more favourable conditions in respect to these two important points, might otherwise have been feasible. We have not thought it desirable to adhere, on grounds of financial necessity, to the high rates hitherto charged on the Rajputana-Malwa Railway for the conveyance of food-grains. We are fortunately in a position to give effect to a very salutary measure of reform in reducing those rates. But the consideration of any further measures of fiscal reform must be postponed. Last year a favourable opportunity presented itself for the execution of some very large and beneficial improvements in the fiscal system. This year the state of the case is different. The financial position is perfectly sound, but the situation is one in which great caution is required. We have to look, not only to the circumstances of the immediate moment, but also to the contingencies which may arise in future years.

Famine.

221. Against one, and perhaps the most serious, of these contingencies—I mean famine—we are insured to the extent of £1,500,000 a year.

Exchange.

222. As regards the possibility of any further fall in the value of silver, all that can be said is that financial equilibrium has been more than secured on the basis of an estimated value to the rupee (1*s*. 7½*d*), which cannot be considered as erring on the side of optimism.

Opium.

223. Opium constitutes the chief danger of the immediate future. I have for a long time past been inclined to take a somewhat desponding view of the future of the Opium Revenue, and recent events have confirmed the views which I had heretofore held. Considering (1) that the crop is singularly precarious, (2) that the indigenous drug of China is daily becoming a more serious competitor to Indian Opium, and (3) that the Indian Revenue depends in no slight degree on the domestic legislation of a foreign country (China),—it can scarcely, in my opinion, be doubted that the yearly Revenue which India derives from Opium will, in all probability, show a tendency to fall off in the future. For reasons which I have already stated (paras. 203-204), it is almost certain that, although the Opium Estimate of 1883-84 has been taken at £215,000 below the Budget and at £182,000 below the Revised Estimate for 1882-83, the Estimate for 1884-85 will have to be taken at a still lower figure.

Financial situation, 1884-85.

224. I will not venture to predict what may be the financial situation at the commencement of the year 1834-85. All that can now be said on this subject is that we commence the year 1833-84 with a surplus of £457,000 in hand; that the Estimates for 1883-84 have been very cautiously framed; that the material prosperity of the country is increasing, and, unless famine should intervene, will continue to increase, with the result that the Revenue from *Excise*, *Salt*, *Stamps*, *Railways, &c.*, is steadily growing; and, lastly, that by the reduction of the Salt Duty, the financial position has been much strengthened, and a fiscal reserve constituted which, should the occasion unfortunately arise, can be used in case of necessity. So long as the value of the rupee and the Opium Revenue continue liable to such fluctuations as those which we have recently witnessed, the financial situation of India must always contain some special elements of instability; but I see no reasons for taking any desponding view of that situation at present. On the contrary, there is every reason to believe that the country will be well able to cope with whatever financial difficulties the future may have in store.

IX.—The License Tax.

The License Tax.

225. In making the Financial Statement last March, I summed up the attitude of the Government in respect to the License Tax in the following words (para. 251):—

"We recognise the evils of the present tax. We recognise that in its present form "it cannot be incorporated into the permanent fiscal system of the country. Beyond this "we do not at present go. We reserve to ourselves complete liberty of action in the "future, either to propose the abolition of the License Tax, to recast it, or even, should "such a course appear desirable when the financial arrangements for the year 1883-84 "come under consideration, to allow it to continue in existence in its present form for a "while longer."

Situation of the Government.

226. I quote these words now in order to show that the hands of the Government are perfectly free in dealing with this question. We have recognised that the tax is objectionable, and that it cannot in its present form be incorporated into the permanent fiscal system of the country. But beyond this we have given no pledges whatever, whether in respect to the nature of the changes which will eventually be made in the existing laws regulating this subject, or in respect to the time when they shall be made.

No present change.

227. In the Financial Statement last year (para. 245) I alluded to the defects in the existing system under which the License Tax is levied. I need not, therefore, repeat what I then said. I will only say that, after full consideration, the Government has decided not to propose any change in the existing system for the present.

228. Nothing can be more undesirable in India than to introduce frequent changes in the fiscal system. The evils arising from the present system under which the License Tax is levied are emphatically such as it would be preferable to endure, rather than to remedy, unless some remedy can be applied with a reasonable confidence that no further change will in the immediate future be necessary. There are, moreover, some special considerations which point to the desirability of making no changes in the fiscal system at present. The financial year which is about to close has presented features which are altogether abnormal, and, even if this had not been the case, the experience of a year is not sufficient to enable any very correct judgment to be formed as to the ultimate effect of the large fiscal reforms which were carried out in March

1882. The future of Silver and of Opium is also very uncertain. On every ground, therefore, the present moment is a time when great caution should be exercised. Under these circumstances the Government, after full consideration, is of opinion that the wisest course to adopt will be to make no changes in the existing fiscal system, but to allow more time to elapse with a view to watching the effect of those reforms which have been already effected.

Government reserves its freedom of action.

229. It will, of course, be clearly understood that, in dealing with the License Tax, the Government reserves to itself complete liberty of action in the future, and that I can give no definite pledge as to the course which will be eventually pursued.

X.—Stock Notes and Post Office Savings Banks.

Stock Notes and Post Office Savings Banks.

230. It will be remembered that about a year ago two schemes were introduced with a view to affording safe investments to the poorer classes. The first was the issue of Stock Notes. The second the establishment of Post Office Savings Banks.

Stock Notes.

231. Projects analogous to that of the Stock Note scheme had frequently been discussed in previous years, and various opinions, both official and unofficial, had been expressed on the subject. It was thought that the experiment was worth trying. In one District of the Central Provinces, in a portion of the North-West Provinces and Oudh, and in the whole of the Punjab, the right of selling Stock Notes was in the first instance temporarily reserved to monopolists. In the remaining provinces sales were effected only through the Civil Treasuries. More recently, in addition to the Civil Treasuries, the agency of the Post Office has been employed in the sale of the Notes. The result has been that Stock Notes to the value of £162,900 have been sold during the year. It is no matter for surprise that sales to a larger amount should not have been effected. The idea was a novel one, and it was not to be expected that, in a country like India, it would readily take root. Although more than 20 years have elapsed since Currency Notes were introduced into India, a very large part of the population still fails to appreciate their utility. Moreover, although the original plan was very carefully elaborated, experience alone could show whether all the details of the scheme were suitable to the circumstances of the country. Shortly after the issue of the Notes, many useful criticisms were made in connection with the scheme. It was, however, not thought desirable to effect any immediate changes in the plan which was originally adopted. A year has now nearly elapsed since the first issue of the Notes. The various suggestions and criticisms which have been made will, therefore, shortly be considered with a view to deciding whether any modifications in the details of the existing scheme are necessary or desirable.

232. Prolonged experience can alone show whether the scheme will ultimately take root in the country. In the meanwhile all that can be said is that it is worth while to continue the experiment.

Post Office Savings Banks.

233. Post Office Savings Banks were opened over a portion of India on April 1st, 1882. Owing to the vested rights of the Bank of Bombay, it was not possible to introduce the scheme in the Bombay Presidency, and in the Madras Presidency it was only introduced in the rural districts, to the exclusion of the large towns. Nor was the scheme introduced in the Presidency town of Calcutta. Arrangements have now been made with the Bank of Bengal and with the Bank of Bombay, which will allow of the introduction of the scheme into Calcutta and into the Bombay Presidency.

234. The results attained over the limited area in which Post Office Savings Banks have been opened are as follows. In the nine months ending December 31st, 1882, 31,698 accounts were opened, of which 2,928 were by Europeans and Eurasians and 28,770 by Natives of India. The balance in deposit on December 31st was £207,876.* It is worthy of observation that 91 per cent. of the depositors were Natives and only 9 per cent. Europeans and Eurasians. In the case of District and Presidency Savings Banks the proportion, taking the figures of the year 1881-82, was 62 per cent. of Native, and 38 per cent. of European and Eurasian depositors.

235. It is satisfactory to note that the establishment of Post Office Savings Banks has not led to any diminution in the deposits heretofore made in the District and Presidency Banks. The net operations of those Banks during the nine months ending with December 31st, 1882, show an increase of the balance in deposit of £60,500 over the balance on April 1st, 1882.

236. If we add together the amount of Stock Notes issued during the first nine months of the current financial year and the amount deposited in the Savings Banks, we arrive at a total of £431,300. From the point of view of comparison with some European countries, this amount is no doubt small in proportion to the population. But I do not think that any one acquainted with the condition of society in India would have expected more rapid progress.

	£
Stock Notes	162,900
Post Office Saving Banks	207,900
District and Presidency Saving Banks	60,500
TOTAL	431,300

XI.—Ways and Means.

Ways and Means.

237. In the Financial Statement of last year (para. 267) I stated that if no loan for Productive Public Works were raised during the year, the balance on March 31st, 1883, would probably be £10,848,000.

Drawings of 1882-83.

238. This estimate was based on the assumption that the Secretary of State would draw Bills to the extent of £15,342,000 (true sterling) on the Indian Treasury in the course of the year 1882-83.

239. I have already explained (para. 142) that, on the one hand, the Secretary of State's drawings were diminished by £1,300,000 (true sterling), owing to the large drawings in March 1882, and owing to the transactions connected with the Southern Mahratta Railway Company, and that, on the other hand, it is proposed to draw an additional £1,000,000 (true sterling), in order to reduce sterling debt in England. Thus the total amount of Secretary of State's drawings during the year 1882-83 will, it is estimated, be £15,042,000 (true sterling).

240. The balances have been increased during the year by the excess of revenue over expenditure beyond the amount for which credit was taken in the Budget, and also by a loan of £2,500,000 (nominal) which, as it was taken up at an average price of Rs. 98-14·7, yielded £2,472,979.

241. On the other hand, the balances have been diminished by the abnormal expenditure on account of the Egyptian expedition amounting, in India, to £1,179,200 and by the high expenditure under *Exchange* due to the fall in the value of the rupee.

Balance on March, 31st, 1883.

242. The net result of all these operations is that the balance on March 31st, 1883, is now estimated at £13,840,000.

Ways and Means, 1883-84.

243. I now turn to the question of the Ways and Means for the year 1883-84.

* On March 3rd, 1883, the balance in deposit in the Post Office Savings Banks amounted to £248,000. Information as regards the classification of depositors is not at present available for any date later than December 31st, 1882.

Publicity as regards Loan operations.

244. Complaints are occasionally made in India on the ground that the Government does not keep the public sufficiently informed in respect to its intentions in the matter of loan operations. I beg to assure those who are interested in this subject that the Government is fully alive to the desirability on every ground of announcing its intentions on this subject at as early a date as possible. We have no wish whatever to keep the public in suspense in this matter a day longer than is necessary. On the other hand, I must again draw attention to the remarks I made on the occasion of the last Financial Statement (para. 271). The operations of the Government of India are so large and varied, and so many unforeseen circumstances are liable to arise during the year, that to estimate in advance the cash requirements of the Government for twelve months must always be a matter of very great difficulty. Indeed, I may go further and say that, even under normal circumstances, it is quite impossible for the best-informed person to say how far the Estimates of the Revenue and Expenditure of the year are likely to be realised until about the end of the month of September, by which time it may be said that the general result of the harvest, which depends mainly on the south-west monsoon, can be stated with some sort of accuracy. I conceive that nothing would be more calculated to exercise a disturbing influence on the market than that any premature announcement should be made of the intentions of the Government, and that subsequently there should be a change in those intentions I may add that the uncertainty in connection with the probable cost of the Egyptian Expedition, which, of course, depended largely on the course of events in Egypt, rendered any early announcement of the final intentions of the Government last year especially difficult.

Statements published in the Gazette.

245. In connection with this subject I should wish to draw attention to the Statements published in the *Gazette of India* about the 10th of each month, and which give, under a few main heads, the latest information in the possession of the Government as to the Revenue and Expenditure up to the last day of the month immediately preceding. An examination of those Statements will give an approximate idea of the extent to which, as the year goes on, the Estimates of Revenue and Expenditure are being realised. It is possible that the form in which these Statements are published might be improved. So far as I am aware they have not up to the present time attracted much attention, but if the result of these remarks should be to attract greater attention to them in the future, and if it be found that, in its present form, the monthly Statement is not readily comprehensible, the possibility of improving the form will be considered.

Loan in 1883-84.

246. It will be necessary to raise the usual loan for Productive Public Works in the course of the year. The present intention of the Government is to borrow £2,500,000 in India. The rate of interest will, as usual, be 4 per cent. Full particulars as regards the date on which tenders will be accepted, &c., &c., will be issued on or about July 16th.

247. In dealing with the amount of the Secretary of State's drawings (para. 208) and with the loan operations, which are contemplated during 1883-84 (para. 246) I speak subject to the usual reserve, that is to say, that the announcements I now make—

"are subject to modification as the year goes on; the Government must not be understood to pledge itself that the Secretary of State will raise by Bills the exact amount "stated; or that the amount stated will be borrowed during the year; or that it will be "borrowed in India or England, as the case may be."

248. Whilst making this reserve, I may add that it is absolutely certain that the loan of £2,500,000, to which I have already alluded, will be contracted.

The only possible modification is, that in the event of any unforeseen contingency arising, such as war or famine, it might be necessary to borrow more. I have at present no reason whatever to believe that it will be necessary to borrow more than £2,500,000. But it must be clearly understood that the Government reserves complete liberty of action to itself in the event of any contingency arising which cannot now be foreseen.

Balance on March 31st, 1884.

249. The balance on March 31st, 1884, is estimated at £11,697,000, but this is a very low Estimate and, unless anything unforeseen occurs, it will probably be exceeded.

XII.—Conclusion.

Summary of Financial Statement

250. It may be convenient that I should summarize the main features of the present Financial Statement. They are as follows:—

Forms of Account.

(1) The forms in which the Accounts and Estimates are now presented to the public have been revised and simplified (paras. 7—66).

Accounts of 1881-82.

(2) The Accounts of 1881-82 show a surplus of £2,582,727 (paras. 67—71).

Trade of 1882-83.

(3) The volume of the import trade in those articles relieved from duty in March 1882 has in the ten months, from April 1st, 1882, to January 31st, 1883, increased by about 7¼ per cent. (paras. 72—94).

Price of Salt.

(4) There has been a general fall in the retail price of Salt since the duty was reduced. The amount of the fall in the different provinces ranges generally from about 13 to 23 per cent. (paras. 95—100).

Consumption of Salt.

(5) The consumption of Salt since the reduction of the duty has increased by about 6½ per cent., representing a revenue of about £320,000 (paras. 95—116).

Egyptian Expedition.

(6) The net cost of the Egyptian Expedition during the year 1882-83, after deducting the £500,000 (true sterling) contributed by the English Government, is estimated at £797,000 (para. 131).

Opium, 1882-83.

(7) The net Opium Revenue of 1882-83 is now estimated at £7,217,000, being £33,000 less than the Budget Estimate (para. 133).

Exchange, 1882-83.

(8) The Expenditure under *Exchange* during 1882-83 is now estimated at £341,000 in excess of the Budget Estimate (para. 142).

Reduction of Debt.

(9) A sum of £1,000,000 (true sterling) will be remitted home during the year 1882-83 and will be applied to the reduction of Sterling debt in England (para. 139).

Surplus, 1882-83.

(10) The Revised Estimates for 1882-83 show a surplus of £60,000 (para. 144).

Railway rates.

(11) With a view to stimulating the export trade, the through railway rates on wheat and other grains and seeds from Delhi and Agra and Bombay have been reduced by 18½ per cent., equivalent, so far as wheat is concerned, to a reduction of *1s. 6d.* per quarter in the London market. This step will no doubt be followed by corresponding reduction of rates on the East Indian Line (paras. 153—194).

License Tax.

(12) No further fiscal changes are proposed in connection with the financial arrangements of the year 1883-84. The License Tax remains unchanged (paras. 225—229).

Opium, 1883-84.

(13) The net Opium Revenue for 1883-84 has been taken at £7,035,000, being £215,000 less than the Budget Estimate of 1882-83 (para. 205).

Bengal Opium.

(14) The amount of Bengal Opium which will be offered for sale up to the end of March 1884 will be regulated by the terms of the Notification of June 28th, 1882. The amount which will be offered for sale from April to December 1884, both months inclusive, will be notified about the beginning of July 1883 (paras. 206—207).

Exchange, 1883-84. (15) In the Estimates for 1883-84 the value of the rupee has been taken at 1*s.* 7½*d.*, and the Expenditure under *Exchange* at £773,000 in excess of the Budget Estimate for 1882-83 (para. 208).

Surplus, 1883-84. (16) The Budget Estimates for 1883-84, which have been very cautiously framed, show a surplus of £457,000 (para. 218).

Drawings, 1882-83. (17) The Secretary of State's drawings during 1882-83 are now estimated at £15,042,000 (true sterling) (paras. 142 and 239), of which £14,184,000 (true sterling) had been drawn up to March 9th, 1883.

Drawings, 1883-84. (18) The Secretary of State's drawings during 1883-84 are estimated at £16,300,000 (true sterling) (see para. 208).

Loan of 1883-84. (19) The usual loan for Productive Public Works will be contracted in India during the year 1883-84. The amount, unless any unforeseen contingency should arise, will be £2,500,000. The rate of interest will be 4 per cent. Further particulars in connection with the loan will be issued on or about July 16th, 1883 (paras. 246—248).

Cash Balance, March 31st, 1883. (20) The cash balance on March 31st, 1883, is estimated at £13,840,000 (para. 242).

Cash Balance, March 31st, 1884. (21) The cash balance on March 31st, 1884, is estimated at £11,697,000 (para. 249), but this is a very moderate Estimate, and it will probably be exceeded.

Opium prospects, 1884-85. (22) The accounts of the Opium crop in Bengal and North-West Provinces are unsatisfactory, and it is probable that in 1884-85 the Opium Estimate will have to be taken at a lower figure than that shown in the Budget Estimates for 1883-84 (para. 223).

E. BARING.

Calcutta, March 15, 1883.

,,	X.—Statement showing the net Revenue and Expenditure of India	527

The following refunds are in the above Revised Estimates for 1882-83 and Budget Estimates for 1883-84 charged, according to the old practice, against the General head "Refunds and Drawbacks." In the new classification, not being Revenue Refunds, they are charged against the specific heads concerned :—

REVISED.—Law and Justice, £43,400; Minor Departments, £100; Police, £3,800; Marine, £200; Education, £300; Medical, £1,300; Superannuation, £400; Stationery and Printing, £300; Miscellaneous, £78,000. Total, £127,800.

BUDGET.—Law and Justice, £43,300; Minor Departments, £300; Police, £2,400; Marine, £300; Education, £800; Medical, £1,400; Superannuation £100; Stationery and Printing £100; Miscellaneous, £77,700. Total, £126,300.

In other respects the totals of the Major Heads in the old and new classifications agree.

*The Estimates in this Statement of the amounts to be supplied to the Home Treasury by Bills in 1883-84 are the best that can now be made; but they are subject to modification as the year goes on; the Government must not be understood to pledge itself that the Secretary of State will raise by Bills the exact amount stated.

Abstract of the above showing how the Ways and Means are provided.

J. WESTLAND,
Comptroller General.

D. BARBOUR,
Secretary to the Government of India.

APPENDIX IV.

MEMORANDUM ON PROVINCIAL AND LOCAL SURPLUSES AND DEFICITS.

APPENDIX IV.

Memorandum on Provincial and Local Surpluses and Deficits.

I observe, both from the debate in the House of Commons on the Indian Financial Statement, and from the comments in the English and Indian Press, that some difficulty is experienced in fully understanding the adjusting entries which appear in the Indian Accounts and Estimates of Revenue and Expenditure under the head of "Provincial and Local Surpluses and Deficits." This is no matter for surprise, for the entries represent, in fact, transactions which are somewhat complicated, and which it is, not unnaturally, difficult for any one not thoroughly conversant with all the details of the Indian financial system to understand fully.

The following illustration may perhaps serve to place the matter in a clear and intelligible light:—

A has three sons, B, C, and D. A, B, C, and D keep their balances at one banker, and the whole are merged in one account standing in A's name. On January 1st, 1882, the total balance standing to A's credit was £200,000, which was divided thus:—

	£
Belonging to A	100,000
,, B	50,000
,, C	30,000
,, D	20,000
TOTAL	200,000

A estimates his total income for 1882 at £120,000. His expenditure he estimates as follows:—

	£
A's personal expenditure	50,000
Allowance granted by A to B	25,000
Ditto A to C	15,000
Ditto A to D	10,000
Leaving a surplus belonging to A of	20,000
TOTAL	120,000

On January 1st, 1882, B gives A notice that, besides spending his allowance for the year (£25,000), he wishes to draw on his balance of £50,000 to the extent of £10,000.

C at the same times gives notice that during the year he will spend exactly the amount of his allowance, and will neither draw on his balance of £30,000, nor increase it during the year.

D at the same time gives notice that during the year he will only spend £9,000, out of his allowance of £10,000, thus increasing his balance, which stood on January 1st, 1882, at £20,000, by £1,000.

The joint Revenue and Expenditure Account of A, B, C, and D for the year will, therefore, stand thus:—

REVENUE.	£	EXPENDITURE.	£	£
A's income	120,000	A's personal expenditure		50,000
		B's expenditure—		
		Allowance for the year	25,000	
		Add drawn from balance	10,000	
				35,000
		C's expenditure		15,000
		D's expenditure—		
		Allowance for the year	10,000	
		Deduct saving during the year	1,000	
				9,000
		Surplus		11,000
				120,000

And the joint Cash Account of A, B, C, and D will stand thus :—

Cr. | *Dr.*

	£		£	£
Balance on January 1st, 1882 . .	200,000	Expenditure during 1882—		
A's income for 1882	120,000		£	
	320,000	A . .	50,000	
		B . .	35,000	
		C . .	15,000	
		D . .	9,000	
				109,000
		Balance on December 31st, 1882		211,000
				320,000

It is clear that the Revenue and Expenditure Account given above does not accurately represent the result of the year's finance to A considered by himself. A is to receive altogether £120,000 during the year, of which he has alienated £50,000 to B, C, and D, leaving £70,000 for his own expenditure. As a matter of fact, he only intends to spend £50,000 during the year, thus leaving himself a surplus of £20,000, and not of £11,000, as shown above. The difference of £9,000 arises from the following facts :—(1) That on the Expenditure side of the Account a sum of £10,000 appears, being the amount in excess of his allowance (£25,000), which B proposes to expend in the year; and (2) that on the Revenue side of the Account full provision is made for the annual grant of £10,000 to D, whereas on the Expenditure side of the Account provision is only made for an expenditure of £9,000 on the part of D. If, therefore, we wish to arrive at a knowledge of A's surplus for the year, we must add to the £11,000 given above the amount of £10,000 by which B has drawn on his balance, and we must deduct £1,000, being the amount by which D's expenditure (£9,000) for the year is less than his annual income (£10,000). This sum of £1,000 really constitutes a debt due by A to D. When these adjustments have been made, we arrive at A's true surplus, thus :—

	£	£
Surplus as shown above		11,000
Add expenditure of B in excess of annual grant	10,000	
Deduct amount by which D's revenue is in excess of his annual income	1,000	
Total *addition* . . .		9,000
A's surplus . . .		20,000

Turning to the Cash Account given above, it is clear that, regarding the joint accounts of A, B, C, and D together, the balance during the year has been increased by £11,000, *viz.*, from £200,000 to £211,000. But the distribution of the balance at the close of the year between A, B, C, and D will be different to what it was at the commencement. A's and D's balances will have increased, as they will have spent, the former £20,000 and the latter £1,000 less than their income for the year. B's balance will be reduced, as he will have spent £10,000 more than his annual income. C's balance will have remained unchanged, as he will have spent the exact amount of his annual income. I will presently show how the balance of each will stand.

Now, A is under an obligation to produce a Revenue and Expenditure Account for the year, which shall show (1) the total amount he receives, including the grants made, or, which is the same thing, the revenues alienated, to B, C, and D; and (2) the total amount of expenditure incurred by A, B, C, and D. It is also necessary to show in this Account the net result of the year's finance to A only; who is the most important partner in the concern, leaving the net results of the year's finance to B, C, and D to be shown in separate accounts.

This object is effected by compiling the account in the following manner :—

Revenue.	£	£	*Expenditure.*	£	£
A . .	70,000		A . .	50,000	
B . .	25,000		B . .	35,000	
C . .	15,000		C . .	15,000	
D . .	10,000		D . .	9,000	
		120,000			109,000
Deduct the amount by which B has exceeded his income for the year, *i.e.*, B's *deficit*					10,000
Add the amount by which D's income for the year has exceeded his expenditure, *i.e.*, D's *surplus*					1,000
Total *deduction* . . .					9,000
Leaving A's expenditure, inclusive of the grants made during the year to B, C, and D					100,000
A's surplus is, therefore, ...					20,000
					120,000

Turning to the Cash Account, the joint balance will, as I have already shown, be increased during the year from £200,000 to £211,000. The separate Accounts will stand thus :—

A's Cash Account.

Cr.	£		Dr. £
Balance, January 1st, 1882 .	100,000	Expenditure, 1882 . . .	50,000
Revenue, 1882	70,000	Balance, December 31st, 1882 . .	120,000
	170,000		170,000

B's Cash Account.

Cr.	£		Dr. £
Balance, January 1st, 1882 .	50,000	Expenditure, 1882	35,000
Revenue, 1882	25,000	Balance, December 31st, 1882 .	40,000
	75,000		75,000

C's Cash Account.

Cr.	£		Dr. £
Balance, January 1st, 1882 .	30,000	Expenditure, 1882 . . .	15,000
Revenue, 1882	15,000	Balance, December 31st, 1882 .	30,000
	45,000		45,000

D's Cash Account.

Cr.	£		Dr. £
Balance, January 1st, 1882 .	20,000	Expenditure, 1882 . . .	9,000
Revenue, 1882	10,000	Balance, December 31st, 1882 .	21,000
	30,000		30,000

If A be regarded as the Government of India, B, C, and D as the Provincial Governments, B's deficit of £10,000 as the entry "Provincial and Local Deficits," and D's surplus of £1,000 as the entry "Provincial and Local Surpluses," a correct idea will be gained of the precise nature of the adjusting entries which appear in the Accounts and Estimates of the Government of India under the head of "Provincial and Local Surpluses and Deficits."

E. BARING.

*Memorandum on the Import of Government Stores from Europe.**

1. As regards Government stores, the returns for the ten months ending January 31st, 1883, compared with the corresponding period of the year 1881-82, show reductions, to a greater or less extent, in the following articles:—

Apparel.
Carriages and carts.
Drugs and medicines.
Hardware and cutlery.
Instruments and apparatus.
Leather and leather-goods (boots, shoes, &c.)
Malt liquor.
Machinery and mill-work.
Railway plant and rolling-stock.
Parts of ships.
Woollen piece-goods.

In malt liquor and leather and woollen-goods the reductions are particularly noticeable. In these cases and of all the others above mentioned, except machinery and railway material, the reductions are certainly due to the substitution of Indian goods of similar kinds for articles heretofore imported from Europe.

2. On the other hand, there have been increases, more or less large, in the following articles:—

Arms and Ammunition and Military Stores.
Chemical products.
Coal.
Cotton piece-goods.
Flax goods (canvas, &c.)
Spirits and wines.
Metals of all kinds.
Paper and stationery.
Telegraph materials.

With the exception of paper and stationery these are either goods of a class not now made in the country, or they are required at places where Indian goods cannot be laid down as cheaply as imported goods. For instance, English coal is cheaper at Kurrachee than Indian coal. The cotton piece-goods imported are generally of a kind not yet made in India.

3. The increase in paper and stationery is more apparent than real. The Superintendent of Stationery for two or three years bought his paper and stationery in the market under orders from the Government of India, and his purchases appeared during that time under the head of General Trade, not under Government Stores. This practice having been stopped and, paper and stationery now coming from the Store Department of the India Office, the European supplies of the Stationery Office now appear under Government Stores. Some progress is being made in the manufacture of paper in India, but it has as yet unfortunately been only found possible to make the coarser kinds of paper used by the Government.

4. The total of the whole imports of Government Stores for the ten months compared with the corresponding period of 1881-82 show a reduction of from £1,806,552 to £1,744,747, or £61,805. Some gradual progress is thus being made in the direction of substituting Indian-made articles for those of English manufacture; but it will not be possible to make any very sensible impression upon the total amount of stores imported from England until iron work and machinery, equal in quality and not superior in price to the English articles, can be manufactured in India.

March 1st, 1883. E. BARING.

* On this subject see also General Wilson's Minute (Appendix VI., p. 116).

APPENDIX VI.

THE MILITARY BUDGET ESTIMATES, 1883-84.

MINUTE

BY

LIEUTENANT-GENERAL THE HON'BLE F. T. WILSON, C.B.

APPENDIX VI.

The Military Budget Estimates, 1883-84.

Minute by Lieutenant-General the Hon'ble T. F. Wilson, C.B.

The estimated net cost of the army in India for the financial year 1883-84 is £11,194,000, being £95,700 less than what it was for the current year.

In the face of the reductions carried out in the native army last year, this result may at first appear disappointing, but examination of the different items will remove this idea, and show that there is no cause for other feeling than that of satisfaction with the accounts generally.

In considering the subject, it must be kept prominently in view that, although a large reduction in the number of regiments was made during the past year, still no reduction in the total number of fighting men was effected. On the contrary, the reverse is the case; for, while the number of corps was reduced, the strength of those to be maintained was increased:—infantry from 712 to 832 of all ranks in each of the corps, other than the five Goorkha regiments, which, with the sanction of the Secretary of State, are maintained at an extra strength of 912 of all ranks:—and cavalry from 457 to 550, with the exception of the Madras Cavalry, which remains unchanged.

Thus the total establishment of the three native armies in India is 111,411, or 436 men *in excess* of what it was before the reduction of the regiments took place.

The previously existing total number of British officers has been maintained much as before by the addition of one to each regiment of cavalry and infantry, whereby only ten regimental officers, excluding medical officers, have been reduced.

Thus the changes have resulted in a very small reduction in the strength of officers, and a material increase in the aggregate numbers of the rank and file of the regiments retained, while a large saving, estimated altogether at £103,183, has been effected. As foretold last year, however, a considerable portion of these savings has been absorbed by the payment of gratuities, compensation, and pensions to officers and men of the corps reduced. The compensation and gratuities have been paid, and there will be no further claims to meet on this account; but the pensionary charges have been largely increased. This abnormal charge will gradually be reduced as the pensioners decrease; still for some years to come there will undoubtedly be a large sum needed to meet the item No. 18, "Military Pensions."

The economical effects of the reforms carried out would have been more apparent but for two accidental and not to be foreseen circumstances.

The first refers to the settlement between the India Office and the War Office for non-effective charges which have gradually fallen into large arrears, with the result that the Secretary of State has now decided to pay off the amount due by spreading the payment of it over a number of years, commencing with an instalment of £100,000 as a first annual payment.

Secondly, a large increase has been required to Grant No. 10, consequent upon the unpleasant discovery that for some time past the ammunition factory at Kirkee has been turning out imperfect ammunition, large quantities of which have been condemned, and to meet the loss we have had to materially increase the outturn of the ammunition factories in order to complete the reserves.

Thus, had it not been for the arrears due to the War Office, and the defects discovered in the ammunition manufactured at Kirkee, a much larger saving would have been exhibited,—a saving which has been effected in conjunction with changes resulting in increased efficiency and strength.

There has been no change in the number of regiments and batteries on the establishment of the British troops in India, but there is a trifling increase in the total strength of men.

Going further into detail, I would observe that in Grant No. 5, "Remount and cattle supplies and service," there is an increase of £59,196. This is due to the unusually large number of horses required to meet annual waste and complete the reserve, an exceptionally small number of remounts having been purchased during the current financial year. We were too sanguine last year, and should have bought more horses, but it was a fault on the right side, and the keep of these extra horses for the better part of a year has been saved.

There is also an increase in Grant No. 6, "Clothing." This is caused by the provision of a large sum (£16,300) which will become due to Messrs. Cooper and Allen, local contractors, for their first supply of country-made boots for the army. This payment will, however, cause a corresponding decrease in the home charges.

Grants 3 and 9, "Regimental pay, allowances and charges" and "Medical establishment, service and supplies," must be considered together, because, while the former shows a decrease of very nearly £255,000 lakhs, the latter records an increase of £70,467, the saving on both Grants combined being £184,519,— a result mainly due to the reduction of regiments and establishments and the Army Medical Department. The complete introduction of the station hospitals in place of the regimental hospitals has also contributed to this very large decrease in military expenditure.

Under the head of Grant 10, "Ordnance establishment, stores and camp equipage," there is an increase which is accounted for by the necessity for replacing the faulty ammunition manufactured at Kirkee, and to which reference has already been made. There is also an increase of £11,000 for camp equipage in Bengal and Madras. In Madras, however, the increased charges for camp equipage are counterbalanced by the abolition of the depot at Nagpore, and reductions in the Gunpowder Factory at Madras and the depot at the Mount. The increase includes £5,800 provided for the purchase, in the local market, of canvas for the Ordnance Department, Bombay. There will be a corresponding decrease in the home indent.

The excess over last year's budget estimate in Grant 13, "Sea transport charges," is chiefly due to an increase of £5,800 in the charges for the Indian trooping service, the estimate for 1882-83 having proved too low.

The saving in Grant 4, "Miscellaneous Services," would have been larger but for the necessity which has arisen for providing for a camp of exercise at Bangalore,—a measure which has been strongly urged upon the Government of India by the local Commander-in-Chief and the Commander-in-Chief in India, it being considered very desirable to give the Madras army the advantage of instruction in field duties and some of the more important operations which would devolve upon officers, soldiers, and departments under the conditions of war.

In Grant No. 15, "Volunteers," provision is made for the additional sum of £3,362. This increase is a welcome one, being rendered necessary by the considerable increase to the number of volunteers in India which has taken place during the past year.

Under the head of Grant 17, "Retired Officers," there is a small increase made in order to provide for the possible payment to officers in India of commuted pensions. But it must be remembered that, whilst this increases expenditure in India, it proportionably decreases home charges.

Grant No. 18, "Military Pensions," exhibits increased expenditure. This is on account of pensions due to the Afghan war, and the recent large reductions in the native army.

Such briefly are the principal variations in the items of military expenditure in India, the net decrease on the whole being, as compared with the estimates of last year, £95,700.

Efforts to reduce military expenditure in India have not been confined to the native army. The number of siege guns to be maintained has been reduced by 45 pieces, with a corresponding reduction of 179 bullocks required for their transport. The ordnance depots at Peshawar, Belgaum and Nagpore have been abolished, while large reductions have been effected in the depot at St. Thomas' Mount, Madras.

In the explanation relative to military expenditure in India, which I gave last year, I referred to the intention to immediately extend to the other presidencies the station hospital system, by means of which one British hospital takes the place of several in a cantonment. This measure, which has been found to work admirably, has, during the past year, been further developed, with the result that the Army Medical Department has been further reduced, the strength in officers being now 300 as compared with the old establishment of 373 officers exclusive, in both cases, of the administrative grades.

The Subordinate Medical Department has also been reduced by ten assistant apothecaries, and there are other contemplated changes which are calculated to further reduce expenditure; but their financial effects cannot, at present, be estimated. Reductions in the same direction will follow in the Bombay and Madras establishments.

The married establishment of British soldiers has been fixed at—

Warrant officers	All.
Non-commissioned officers	All.
Royal Artillery	8 per cent. for 5 years, then 6 per cent.
Infantry	4 per cent.

A considerable portion of the reduction on this account has already taken place.

The estimate provides for the following sanctioned changes:—

(*a.*)—Increase in the establishment of non-commissioned officers in heavy and field batteries.

(*b.*)—Grant to quartermasters and riding-masters of British troops of the increased allowance due to the changes in their relative rank.

(*c.*)—Improvement in the position of the native non-commissioned officers by the grant to them of good-conduct pay.

(*d.*)—Formation of two army hospital corps for Madras and Bombay, similar to the one adopted in Bengal; and the appointment of an apothecary to supervise the detailed administration of the Bengal army hospital corps.

(*e.*)—A considerable increase in the amount of practice ammunition for all the troops, European and native.

In addition to the above, the new transport scheme, which has been fairly started in all three presidencies, has been provided for.

The late war in Afghanistan forcibly brought to light many imperfections in our old system of transport, with its attendant enormous expenditure consequent on the want of a proper organisation during a period of peace, and

incapability of rapid expansion when war took place. For some time past this subject has been under the consideration of the Government, and during the past summer the Secretary of State has sanctioned proposals which provide for the equipment of the troops protecting the various frontiers with half transport on service scale, also for certain forces which will be held ready for local service or despatch to a distinct point, the approximate numbers of which are in all 46,000 men.

Under this scheme the country is divided into circles, each with a depot centre, where a certain amount of transport is to be kept on a peace footing, capable of expansion in time of war. Training depots are provided for at the largest stations in India, where detachments will be sent, so that officers and men may go through a course of transport training.

Power is given to mobilise forces as follows within the provincial areas:—

	Men.
Punjab	10,000
Bengal	10,000
Bombay	8,000
Madras	5,000

Arrangements are being made by which the resources of the country in transport will be known, so that it will be easy, at short notice, to supplement the transport in time of need to meet the requirements of war.

The total approximate amount of transport to be maintained in India will be as follows:—

Elephants	600
Camels, Government	396
„ hired	2,500
Mules, Government	8,100
Pack bullocks	1,000
Army transport carts	1,300

Equivalent to a maundage of 51,000 maunds.

A permanent staff for the supervision of the above is provided as follows:—

Bengal.

1 Deputy Commissary-General, Transport.
1 Assistant Commissary-General, Transport.
2 Deputy Assistant Commissaries-General, Transport.
2 Deputy Assistant Commissaries-General, Transport, 2nd class.
5 Sub-Assistant Commissaries-General.

11 Commissioned officers.

Madras.

1 Assistant Commissary-General.
2 Deputy Assistant Commissaries-General.
2 Sub-Assistant Commissaries-General.

5 Commissioned officers.

Bombay.

1 Assistant Commissary-General.
1 Deputy Assistant Commissary-General
2 Sub-Assistant Commissaries-General.

4 Commissioned officers.

The following subordinate establishment has also been provided:—

Bengal.

1 Deputy Assistant Commissary.
5 Conductors.
7 Sub-Conductors.
10 Sergeants.

23 Total.

Madras.

2 Conductors.
3 Sub-Conductors.
5 Sergeants.

10 Total.

Bombay.

1 Conductor.
1 Sub-Conductor.
3 Sergeants.

5 Total

Provision has been made for the cost of this establishment, for equipment, repairs to buildings, allowances to regimental transport staff, pension to inferior servants, &c. The total cost will be about £280,000 per annum.

The old movable column system has been abolished, as it was found an expensive and comparatively useless arrangement. The carriage kept up under that system could not be readily mobilised, and the new transport service will be much more efficient and less expensive.

Consequent on there having been a surplus of mules over requirements, the transport service has been started (since the conclusion of the Egypt war) with selected animals throughout, and both they and their equipment are in first rate order.

An efficient ambulance service in connection with the transport service is being organised in each of the presidencies, which will, it is hoped, provide the army with a percentage of sick transport and equipment on a sounder footing than hitherto and at no additional cost to the State.

The introduction of the new transport service into the Madras and Bombay presidencies has been rendered an easy matter owing to the cordial co-operation of the local authorities in meeting the wishes of the Government of India.

The new scheme, though not at the time nearly completed, has had full trial during the late war in Egypt, for while only in course of formation, it was called upon suddenly to supply carriage for 13,201 fighting men and followers and 5,915 animals, with officers and drivers complete. These proceeded to Suez at the worst period of the monsoon weather, in August and September of last year; and whilst in Egypt the entire success of the new pattern saddle, the completeness of the supervision provided, the advantage of trained attendants, and of regiments being instructed in loading and packing were fully exemplified.

For some time past the Government of India has recognised the need of applying a remedy to the stagnation in promotion which existed in the cavalry cadres of the three presidencies, and the consequent supersession in substantive rank of the local cavalry officers by the staff corps and general lists. To this end the Secretary of State has recently sanctioned measures for ameliorating the position of the cadre officers of the local cavalry lists suffering from

retarded promotion, especially in the junior grades, by allowing all the option of receiving staff corps rates of promotion with staff corps rates of pay on their waiving their claims to the higher cavalry pay when unemployed; those who accepted the above condition being also allowed to attain to colonel's allowances after 38 years' service. These measures have been recently introduced, and have removed all legitimate grounds of complaint, but the additional cost will hardly fall short of £7,000 yearly.

For this change, and all other changes enumerated above, full provision has been made in the estimate.

The fact that next year is leap year calls for a passing remark. The increase on this account for the extra day's pay and rations for British troops, and for the extra forage for horses, &c., is estimated roughly at about £6,000.

Turning to the home charges—

The estimate provides for £195,800 on account of changes which have been made under the orders of the home authorities. This sum is in excess of the budget estimate for 1882-83; the increase, however, being largely met by reductions aggregating £175,600, leaves a net increase of £20,200 as compared with the budget estimate of 1882-83.

The large decrease in the home charges which it was anticipated would result from the policy of substituting, as far as possible, local stores and supplies for articles hitherto imported, has been fully realised. The saving on this account is £124,100. In this direction of late years much has been done. The expenditure for home stores, including freight, which was in 1877-78 £1,154,460, is now estimated for the coming financial year at £504,800. Within the past five years reduction has been effected in this one account to the extent of £649,660.

The economy effected in the above item is, however, nearly all absorbed by the arrangement made at home to commence to liquidate the large arrears due to the War Office for non-effective charges, and £100,000 has this year been set aside as a first annual instalment of the debt.

Last year I pointed out that the charges for retired pay for officers of the Indian army would annually increase until the year 1897 is reached, and this year's estimate makes increased provision on this account. Indeed, these non-effective home charges and their annually increasing cost forcibly remind us of what was said by the Secretary of State for War in the House of Commons on the 24th June 1881, that it would not be before 1893 that the heavy dead weight which was due to that service would begin to diminish, and that meanwhile it would increase, and the automatic increase of pensions would continue whatever economies might be effected.

Such briefly are the remarks I desire to make on the Military Budget Estimate for the year 1883-84. Fully recognizing my responsibility for military expenditure, I have not accepted them without much criticism and examination, and they have caused me anxiety. But on the whole I am satisfied with them, because they maintain the British army at its normal strength in batteries and regiments, and they provide for an addition to the aggregate strength of the army, have provided each regiment with an additional British officer, and have effected a change in organisation which has brought about the elimination from the ranks of the Bengal army of the non-fighting classes, while adding to the establishment of the regiments retained men of the warlike classes. This has been done, and improvement in establishments has been gained at a considerable reduction of expenditure, while, consequent on the liberal concessions sanctioned by the Secretary of State to the men discharged, and the care exhibited by the military authorities, the changes have been carried into effect

without difficulty, and have been accepted by the army without a murmur, and without any of the disquieting effects which were by some anticipated.

Finally, I would say that, if Government are asked what proof they have that the efficiency of the army has been improved, and that the reduction of cadres has not gone too far, and too much reduced our military establishment, I reply, that, while we have reduced the number of our regiments, selecting in Bengal some of those which were almost wholly recruited from the least warlike of the classes in India, we have materially added to the strength of those maintained, have increased the European element in each, and made them capable of proceeding on service without extraneous aid from transfers to them; and that although the demand for Native troops for Egypt came to us at quite the most inconvenient moment it could have done, in July last, just as the reductions sanctioned by the Secretary of State had been carried out and the Government were some 7,000 men short of establishment, no difficulty was found in furnishing the required number of troops, and within eleven days of the receipt of the order directing sea transport to be engaged, the first detachment had sailed from Bombay, and was quickly followed by forty-six transports with troops, horses, followers, and land transport fully complete; and if another 5,000 men had been needed, the Government of India could without difficulty have provided them. This, I think, furnishes a satisfactory reply to those who have asserted that the reductions carried out last year went too far, and dangerously weakened our military strength in India.

(Sd.) T. F. WILSON.

ROSS WILLIAM.
The 14th March 1883.

R. A. SARGEAUNT, *Major, R.E.,*
Offg. Under-Secretary.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

APPROPRIATION REPORT ON THE ACCOUNTS OF 1881-82.

GENERAL VIEW.

THE following abstract exhibits in a condensed form the results which are the subject of this report, the figures being pounds (£ 1 = Rs. 10) with the last two figures cut off for shortness' sake; thus 727,8 reads seven hundred and twenty-seven *thousand*, eight hundred pounds.

Receipts. Budget.	Receipts. Accounts.	Revenue and Expenditure Account.	Outgoings. Budget.	Outgoings. Accounts.
		A Interest	4,247,0	4,558,1
51,570,0	53,654,4	B Principal Heads of Revenue	8,519,1	8,220,1
1,537,0	1,489,7	C Post Office, Telegraph and Mint.	1,765,0	1,771,7
1,396,0	1,513,1	D Civil Administration .	11,111,0	11,038,5
1,325,0	1,707,2	E Miscellaneous . .	3,816,9	4,044,6
		F Famine . . .	1,500,0	1,500,0
9,380,0	10,782,1	G Productive Public Works .	9,680,0	9,649,0
665,0	727,8	H Public Works not classed as Productive.	7,168,0	6,393,5
3,875,0	3,821,5	K Military . . .	18,730,0	18,861,1
		L Exchange . . .	3,063,0	3,556,7
		M Provincial Surplus + or Deficit — . .	−707,0	+1,519,8
		Imperial Surplus . .	855,0	2,582,7
69,748,0	73,695,8	TOTAL .	69,748,0	73,695,8

Receipts. Budget.	Receipts. Accounts.	Other Transactions.	Outgoings. Budget.	Outgoings. Accounts.
855,0	2,582,7	Imperial Surplus as above.		
...	...	N Productive Public Works Capital Expenditure.	4,873,0	3,311,4

		Do. March 31st	11,990,0	17,143,8
37,875,0	39,902,5	GRAND TOTAL	37,875,0	39,902,5

2. The details of all these figures will be found in the four statements attached to this Report, namely:—

1. General Statement of Estimates and Accounts.
2. Abstract A, shewing details of Revenue.
3. Abstract B, shewing details of Expenditure.
4. Abstract C, shewing details of Other Transactions.

3. I have first a few general remarks to make under the two heads "Comparson with the year 1880-81," and "Comparison of Accounts with Budget Estimates," and I shall then take up the figures, according to the sections lettered A, B, C, &c., in the above abstract.

Comparison with the year 1880-81.

4. A comparison of the accounts of 1881-82 with those of 1880-81 shows the following figures in the Revenue side:—

	1880-81.	1881-82.	Difference. + or —
Principal Heads of Revenue .	52,702,3	53,654,4	+ 952,1
Post Office, Telegraph and Mint	1,647,3	1,489,7	— 157,6
Civil Administration . .	1,468,2	1,513,1	+ 44,9
Miscellaneous . . .	1,985,9	1,707,2	— 278,7
Productive Public Works . .	9,381,8	10,782,1	+1,400,3
Public Works not classed as Productive.	745,2	727,8	— 17,4
Military—			
Ordinary Account . .	924,1	814,0*	— 110,1
War Account . . .	3,297,6	3,007,5	— 290,1
	72,152,4	73,695,8	+ 1,543,4

(* Assuming for reasons afterwards to be explained that all in excess of Budget estimate belongs to war account.)

5. The increase under Ordinary Revenue is mostly under Land Revenue and Excise, due in the latter case to a real increase of revenue, and in the former rather to collections of 1880-81 coming into 1881-82. Post Office, Telegraph and Mint all give worse revenue. The difference under Miscellaneous is chiefly an exceptional item that came into 1880-81. Under Productive Public Works a great increase of Railway receipts (see comparison with Budget) is the cause of the difference. In the war account the difference is chiefly that between the two portions of the English contribution brought to account in each year, *viz.*, 2,695,0 in 1880-81 and 2,305,0 in 1881-82.

6. The comparison on the expenditure side is as follows:—

	1880-81.	1881-82.	Difference. + or —
Interest	4,083,2	4,558,1	+ 474,9
Principal Heads of Revenue .	8,169,0	8,220,1	+ 51,1
Post Office, Telegraph and Mint	1,766,0	1,771,7	+ 5,7
Civil Administration . .	10,567,6	11,038,5	+ 470,9
Miscellaneous . . .	3,823,2	4,044,5	+ 221,3
Famine	34,5	1,500,0	+1,465,5
Carried forward .	28,443,5	31,132,9	+2,689,4

	1880-81.	1881-82.	Difference. + or —
Brought forward .	28,443,5	31,132,9	+2,689,4
Productive Public Works . .	9,259,4	9,649,0	+ 389,6
Public Works not classed as Productive—			
Ordinary Account . .	5,099,1	6,168,9	+1,069,8
War Account . . .	2,293,6	224,7	—2,068,9
Military—			
Ordinary Account . . .	16,717,7	16,459,0*	—258,7
War Account . . .	11,368,5	2,402,1	—8,966,4
Exchange	2,716,8	3,556,7	+ 839,9
	75,898,6	69,593,2	—6,305,4

(* Taking all excess over Budget as due to War.)

7. The expenditure under every head is more than in 1880-81. Under Interest we have a real increase in interest charges of about 130,0, debt, funded and unfunded being increased in 1880-81 by nearly three millions more than were spent in Productive Public Works, and a casual increase of 86,0 by our including two years' charges for interest on Savings Banks. The rest of the increase (about 220,0) comes against this head mostly by transfer from "Productive Public Works." The increase against "Ordinary Revenue" is under "Salt" and "Forests" and is in both cases more than covered by the corresponding receipts. Under "Civil Administration" we have heavy charges for Census (158,6), and there have been heavy political charges which, it may be hoped, will not recur. Of the increase under "Miscellaneous" half is against the item of Stationery and half is due to the transfer to this head of Miscellaneous Refunds, hitherto charged as Refunds of Revenue. The increase under Famine represents the new policy of Famine Insurance. Under "Productive Works" the diminution in the rate of charge for interest meets the normal growth of that item, but the progress of State Railways brings a larger amount of charges, and the great increase of revenue on lines already open has entailed increase of maintenance charges, and still more of the amount of profits returnable to the Guaranteed Companies. Under "Non-Productive Works," the increase is wholly ascribable to the Local Governments being encouraged to expend, instead of accumulating, their balances, and does not affect the Imperial account. The increase in "Exchange" is due to the increase of drawings from £15,239,7 in 1880-81 to 18,412,4 in 1881-82.

Comparison of Accounts with Budget Estimates, 1881-82.

8. Compared with the Budget estimate we find the following differences in the various sections of the account:—

	Better.	Worse.
A Interest	...	311,1
B Principal heads of Revenue . .	2,383,4	...
C Post Office, Telegraph and Mint .	...	54,0
D Civil Administration . . .	189,6	...
E Miscellaneous	154,5	...
F Famine	...	...
G Productive Public Works . . .	1,433,1	...
H Public Works not classed as Productive	837,3	...
K Military	...	184,6
L Exchange	...	493,7
TOTAL	4,997,9	1,043,4
Combined Surplus	3,954,5	

9. Of these C, and D are a number of details which do not require special remark. E contains one big item on the receipt side, 155,3 premium on issue of a four per cent. loan, a charge of 99,1 for refunds taken in the Estimates under head B, and a number of smaller details.

10. Of A 86,0 is due to the additional year's charge for Savings Bank interest, and the rest may be taken against G as due to the fact of the interest charge against Productive Public Works being taken at 4 per cent. instead of 4½; in other words half per cent. interest on £48½ millions was taken in the Budget against "Productive Public Works," but carried on the accounts under "Interest on Ordinary Debt." Under B, Principal heads of Revenue, the opium account which, according to the then practice, was taken at net receipts 6,500,0, gave us 1,305,0 better, and Excise Revenue, estimated at about the same as 1880-81, produced 396,3 better; Land Revenue was 160,0 better, and Forests 104,4 better; the other increases are spread over nearly all the heads, and the account also profits by the transfer to other heads of 147,6 of Refunds.

11. Productive Public Works give 1,433,1 better than estimate. A somewhat larger difference than this (1,483,8) occurs under Railway receipts alone, but the other heads of receipt and all the heads of charge are a little worse than estimate, and the loss is only met by the saving of 220,0 under interest charge, just alluded to as due to the alteration in the rate of interest debited against Productive Works. Of the great increase in the revenue of the Railways, the Great Indian Peninsula Railway has the largest share.

12. The next two figures give Non-Productive Works better by 837,3 and Military worse by 184,6, but these figures include a transfer, not contemplated in the estimates, of 559,7, deducted from the expenditure under the former and added to that under the latter. Neglecting this we get 277,6 better under Non-Productive Works and 375,1 better under Military. Of the 277,6 one-half may be put down as mostly due to increased receipts under Rents and under Tolls and Ferries, and the other half as mostly due to savings in expenditure upon Irrigation Works.

13. The 375,1 better in Military is only part of the real improvement over the estimates, for the prospects of war expenditure, as judged in March 1882, were so much better than the estimates framed in March 1881, that 695,0 of receipts on account of the war contribution from England, which had come into the Budget of 1881-82 to balance the war expenditure, was transferred into the accounts of 1880-81.

14. The comparison may be stated in detail as follows :—

	Better.	Worse.	
Ordinary account of the Army .	...	409,5	
Military operations in Afghanistan—			
a.—Expenditure as originally estimated . .	1,479,6		Net 224,9 better.
b.—By inclusion of Frontier Railway expenditure of former years . .	...	559,7	
c.—By exclusion of English contribution . .	...	695,0	

There is no doubt that the 409,5 excess in Ordinary Military expenditure is really War expenditure not separable from the ordinary account, and assuming this to be the case, we find the War expenditure, apart from Frontier Railways, to be 1,479,6—409,5, or 1,070,1 better than estimate. As we lost 695,0 of this improvement by the transfer of this amount of receipts to 1880-81, there remains net improvement [illegible] as above given; the 559,7 being a mere transfer, which,

as it is not reckoned on the better side under "Frontier Railways," so is not reckoned on the worse side here.

15. The difference in Exchange is due to the heavy drawings of the Secretary of State. The extremely favourable state of the market enabled him to issue Bills for an amount far in excess of the requirements of the year; for besides the ordinary transactions of the year he repaid debt to the extent of over three millions, while reducing his cash balance only by one and a half.

16. The summary therefore of the whole account is—

	Compared with Budget. Better.	Worse.
Opium (net revenue)	1,305,0	
Excise Revenue	396,3	
Land Revenue	160,0	
Forest Revenue	104,4	
Other Principal Revenue Heads . .	270,1(*a*)	
Civil Administration, Receipts and Expenditure	238,1(*a*)	
Premium on issue of Loan . . .	155,3	
Railway Receipts (Productive Works) .	1,483,8	
Military Expenditure on Account of the Kabul War (net)	375,1	
Exchange	...	493,7
Other smaller differences (net) . .	...	39,9(*a*)
	4,488,1	533,6
Combined Surplus	3,954,5	

(*a*) These figures are shown as they would stand if there had been no difference between Accounts and Estimates in the manner of charging refunds.

The distribution of this 3,954,5 between Imperial and Provincial belongs to a future section of the report. It is sufficient here to say that in the three cases shewn in italics the figures chiefly affect the Provincial Account, and in the other cases it is chiefly the Imperial Surplus that is bettered.

17. I now proceed to take up the accounts in detail section by section.

SECTION A—INTEREST.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
4,083,2	EXPENDITURE . .	4,247,0	4,532,0	4,558,1

18. Compared with 1880-81, there are the following increases: 120,0 being the interest on about 3,000,0 of new debt, 85,0 owing to the inclusion of two years' interest on a large part of the Savings Bank Deposits, 200,0 owing to the smaller charge placed against the Productive Public Works Account. The increase over the Budget is 311,1 and is practically the two items last noticed:—

1.—Interest on Ordinary Debt.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	INDIA—			
3,365,9	Total Interest	3,576,7	3,553,8	3,497,9
2,037,9	DEDUCT—charged to Productive Public Works	2,209,4	1,973,1	1,986,2
1,328,0	Charge under Ordinary . . .	1,367,3	1,580,7	1,511,7
2,341,2	ENGLAND	2,469,7	2,506,3	2,512,4
3,669,2	Total	3,837,0	4,087,0	4,024,1

19. The first line contains the total charge for interest paid in India, and the Budget estimate was thus calculated—

Interest on Total Debt in India on 31st March 1881	3,559,3
ADD—for probable new Loan in 1881-82	60,0
DEDUCT—Interest paid in England on Rupee Loan of 22nd April 1854	44,7
TOTAL .	3,574,6

The difference of 2,1 between this and the figure above stated arises from the figures for March 31st, 1881, being here taken from the actual account, whereas at the time of the estimate they were not precisely ascertainable.

The payments made against this estimate amount to 3,512,7.

The principal disturbing element in the interest payments is the amount of payments due on March 15th, which are not demanded till April. The following comparison is made of these payments:—

	1881.	1882.
Coupons paid in April and May	53,6	59,0
Interest drafts of which advices received in April . . .	204,3	229,3
TOTAL .	257,9	288,3

These figures shew that under this head 30,4 more have been postponed from 1881-2 to 1882-3 than were postponed from 1880-1 to 1881-2.

But the actuals fell behind the Budget chiefly in respect of the provision made for interest upon the new Loan. The loan issued during the year was taken as part of the loan of 1st May 1865, of which the interest-payment dates are 1st November and 1st May, and the only interest charge upon it, payable within the year, was the abatement allowed for the interval between the date of payment, chiefly in August, and 1st November, the charge involved being only a small part of the Budget allowance of 60,0.

These two circumstances account in the gross for the difference between the actual interest charge, and that appropriate to a whole year, though there are of course minor variations between the annual amount of interest and that actually paid on each loan. (See Financial and Revenue Accounts, No. 28.)

The 3,512,7 which is thus explained as the amount of interest paid during the year is reduced to 3,497,9 (the charge which actually appears under this head) by a recovery of

SECTION A—INTEREST.

14,8, being the interest upon about 440,0 of securities held by Government on its own account. About half of this was received in repayment of a debt due by the Calcutta Municipality and about half in the lapse of the assets by the Nizamat Fund. While they are thus held by Government the interest received on them is taken by deduction from the charges.

20. The explanation appropriate to the figures taken in the next line—the interest charge under Productive Public Works—will be given under its proper head.

21. The *English* debt on March 31, 1881 was £71,334,7 bearing interest 2,846,5 (Finance and Revenue Accounts, 1880-1, No. 28). But out of this part belongs to the Account of Productive Public Works, being loans issued in redemption of East India Railway Annuity (interest 204,6) and East India Railway debentures (interest 145,5).

This leaves interest 2,496,4 to be provided in the ordinary account; and so far as we can follow the English estimate it was made up of the following:—

Annual interest charge on English Debt, as on March 1881 . . .	2,496,4
ADD—Charge on Rupee Loan of 22nd April 1854, above mentioned .	44,7
DEDUCT—Savings due to the anticipated discharge during 1881-82 of nearly 4½ millions, chiefly East India Bonds	70,4
TOTAL ESTIMATE .	2,470,7

The charges exceeded this by 41,7, of which 35,0 was due to interest on a new 3½ per cent. Loan which was provided for under Productive Public Works, but was by a different treatment charged under Ordinary. The rest consists of interest on a Temporary Loan (which is more than covered by receipts on account of investment of cash balance) and of some arrear payments.

2.—Interest on Deposits.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	INDIA—			
889	On Special Loans	88,0	89,9	89,2
30	On Treasury Notes	4,8	5,1	3,0
2,007	On Service Funds	209,8	211,6	212,9
969	On Savings Banks Deposits . .	83,1	112,2	212,7
239	On Miscellaneous Accounts . .	21,6	23,5	21,5
6	ENGLAND	1,7	2,7	7
4,140	TOTAL .	409,0	445,0	534,0

In the above statement the interest payments are classified in the same way as we classify the obligations on which the interest is paid.

22. The first Indian item shews a considerable saving. The mass of the payments under it are allowances to the dependents of the Oudh Royal family, paid by way of interest on loans received from the King of Oudh in 1820 to 1830. The payments made on this account were 72,8 this year against 78,5 in 1880-81.

23. The Treasury note item is a small one and appears to have been over-estimated.

24. The payments on *Service funds* were highly in excess of estimate; in fact part of the estimate made under the last head should have been taken under this.

25. Under *Savings Bank* interest, we had in the first place an extra charge of a year's interest on Presidency Savings Banks deposits which was provided for neither in the Budget nor in the Regular estimates. Hitherto the practice has obtained of charging this interest in the year succeeding that for which it was due, while in the District Savings Bank the more correct course was followed of charging the interest and adding it to Savings Bank Deposits in the same year in which the credit was given in the detailed Savings Bank accounts. To correct the procedure in this respect the interest for 1881-82 was allowed to be charged off and credited to Savings Bank Deposits, as on 31st March, and was brought on a debit of 85,9 in addition to the payments provided for in the estimates.

26. In the English amount one of the two items included in the estimate remained unadjusted during the year.

SECTION A—INTEREST.

Even this, however, leaves a charge of 126,8 to be taken against an estimate of 83,1, and this excess is due chiefly to the recent rapid development of the Savings Banks. The balances in these Banks were :—

	31st March 1880.	31st March 1881.	31st March 1882.
Presidency Savings Bank . . .	1,598,6	2,225,6	2,312,1
District Savings Bank . . .	436,3	703,4	726,2

This sudden expansion was the effect of new rules issued in December 1879, increasing the rate of interest and giving greater facilities, in many ways, to depositors. Part of these facilities were withdrawn by a resolution of 20th October 1880, and the rate of interest was reduced in May 1881, but these steps did not produce the anticipated effect of lessening deposits; and the balance has been maintained at the high figure reached before the reduction of interest.

The estimates failed to take sufficient account of this increase of the deposits and provided 83,1 only, while the payments reached 126,8. The short estimate was chiefly in respect of the Bombay Banks, where the balance on which the interest was paid amounted in one year from 1,067,0 to 1,551,1.

SECTION B.—PRINCIPAL HEADS OF REVENUE.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
52,702,3	RECEIPTS . . .	51,570,0	53,156,0	53,654,5

27. The improvement compared with last year is due chiefly to Land Revenue collections of 1880-81 postponed to 1881-82; but there is also a large improvement in the Excise Revenue. Compared with Budget estimates, Opium produced about 1,100,0 more, Excise nearly 400,0 more, and Forests 100,0 more.

I.—Land Revenue.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
	Gross Revenue—			
89,2	India	77,4	95,0	95,0
609,3	Central Provinces . . .	607,0	607,3	613,7
899,1	Burmah	1,120,0	1,140,0	1,052,3
374,8	Assam	387,0	387,6	379,4
3,751,8	Bengal	3,754,4	3,765,0	3,794,4
5,658,8	North-West Provinces .	5,909,0	5,800,0	5,838,3
2,090,1	Punjab	2,048,7	2,100,0	2,095,3
4,673,4	Madras	4,791,5	4,739,1	4,688,9
3,763,8	Bombay	3,800,0	3,815,0	3,881,9
21,910,3	TOTAL . .	22,495,0	22,449,0	22,439,2
	Deduct transferred to Productive Public Works Account—			
65,1	North-West Provinces . . .	66,9	87,0	87,2
161,2	Punjab	16,8	31,6	33,3
552,1	Madras	600,0	539,0	334,5
18,9	Bombay	23,3	21,4	36,2
797,3	TOTAL .	707,0	679,0	491,2
21,113,0	LAND REVENUE "ORDINARY" .	21,788,0	21,770,0	21,948,0

28. The following explanation is given with reference to the first or gross total, as the deductions, which are not specifically separate from the rest of the Land Revenue are explained under the account of Productive Public Works.

The accounts of 1880-81 shew 21,910,3, the collections having been short of the normal amount, partly on account of remissions in the North-West, and partly owing to partial postponement of collections in the months February and March 1881, during which the subordinate revenue officers were engaged on the Census. Both of these causes would operate towards increasing the figures of 1881-82 at the expense of those of 1880-81, but the facts shewed that there was less postponement than was estimated, and that accordingly the year 1880-81 produced more, and 1881-82 less, than was anticipated when the estimates were made in March 1881.

This explanation particularly accounts for the falling-off in Madras, and partly also for that in the North-West, though the original estimate in this last appears to have been too high, the normal Land Revenue of the province being only about 5,750,0.

A similar explanation accounts in a small degree for the falling-off in Burmah, but the loss here was chiefly owing to the cultivators being unable, in the face of very low prices, to realize their crops at the usual time.

An improvement of four lakhs in Bengal is attributed to enhanced collections from Government estates. Bombay shews eight lakhs better than Budget, chiefly due to instalments due in Gujerat in April 1882 being received in March.

In the Punjab the estimates shew an excess of 46,6. The greater part of this is due to "Water Advantage Rate," the estimate of which (21,9) was made under "XXVIII—Irrigation." The rest of the increase is under "Miscellaneous Collections."

The improvement under "India" is due to the revenue of the ceded districts in Southern Afghanistan, namely Pishin and Sibi.

SECTION B.—PRINCIPAL HEADS OF REVENUE.

II.—Opium Revenue.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	1881-82. Accounts.
7,683,6	Bengal	5,640,0	7,476,0	7,465,3
2,526,2	Bombay	2,891,4	2,218,2	2,184,7
201,2	Excise	216,4	191,5	192,0
69,0	Miscellaneous	15,2	14,3	20,4
10,480,0	TOTAL	8,763,0	9,900,0	9,862,4

29. The Budget estimate was made at a time when the orders of the Secretary of State directed that the net figure should be taken at 6,500,0. The estimated expenditure being 2,263,0, the revenue was taken at 8,763,0, which, after the detailed estimates for other provinces, left 5,640,0 for Bengal.

The Bengal Estimate was therefore stated as 56,400 chests at Rs. 1,000 bringing in 5,640,0; the real expectation being at least Rs. 1,200 and the estimate being short stated with reference to the policy of Opium-estimate then prescribed by the Secretary of State, as above explained.

The following figures compare the successive years :—

	Chests sold.	Average price.	Produce, Rs.	Added to Stock,* chests.	Balance in Stock,* March 31, chests.
1876-77	47,240	1,270	6,000,0	68,051	71,315
1877-78	49,500	1,266	6,269,3	67,167	88,982
1878-79	55,500	1,225	6,798,6	43,140	76,622
1879-80	59,100	1,170	6,914,2	49,961	67,483
1880-81	56,400	1,362	7,683,6	52,969	64,052
1881-82 Budget	56,400	1,000	5,640,0	...	...
1881-82 Actual	56,400	1,324	7,465,3	49,732	57,384

* The last two columns refer to Stock for export only, and exclude three or four thousand chests produced annually for consumption in India.

The price fell off a little in the beginning of the year, being Rs. 1,330, 1,282, and 1,264 in the first quarter, against an average of about 1,400 in the next preceding three months. In July and August it rose to 1,405 and 1,389, from September to January it was between 1,344 and 1,323, and in the last two months it was only 1,288 and 1,257, so that it was the last months of the year chiefly that fell short of the high figures of 1880-81. The Revised estimate was 7,476,0, and, being framed when most of the circumstances affecting the actuals were ascertainable, was closely followed by the final accounts.

It will be seen that to the extent of 6,668 chests, the opium sales were fed by drawing upon accumulated stock.

30. For Bombay an average crop was expected, and the following figures compare the facts :—

	Chests.	Rate.†	Amount.
1876-77	49,136	600	2,948,2
1877-78	45,830	600	2,749,8
1878-79	36,807	650	2,393,0
1879-80	46,211½	650 & 700	3,141,1
1880-81	36,069½	700	2,526,2
1881-82 Estimate	41,292	700	2,891,4
1881-82 Actuals	31,196	700	2,184,7

† Opium which passes the scales at Ajmere pays Rs. 25 more.

Up till December the estimate was justified by the rate at which chests were brought for export, but from that month a heavy falling-off commenced. The figures of the various months compare as follow :—

	1879-80.	1880-81.	1881-82.	
Till November inclusive, eight months	2,052,1	1,425,4	1,591,0	These figures include 1 or 2 of Miscellaneous Revenue.
December	368,3	275,2	164,6	
January	438,0	277,2	201,4	
February	200,4	290,7	130,0	
March	149,7	257,9	101,7	
TOTAL	‡	2,526,4	2,188,7	

‡ Total not shewn as there was a write-back after March.

And the Regular estimate which was made in March, reduced the estimated revenue to 2,218,2, which it will be seen was nearly but not quite realized; the falling-off in March

SECTION B.—PRINCIPAL HEADS OF REVENUE.

1882, being, it will be seen from the figures just given, more marked than that in earlier months.

31. The revenue on Excise opium—(that is the credit of Rs 7¼ per seer as the cost price of opium supplied for local consumption, the cost by the sale proceeds being taken as excise revenue), fell short of estimate by almost exactly the amount included in the estimate on account of sales in the Punjab (25,0). The plan of selling Government opium in that province was discontinued and no sales were made.

32. The *Miscellaneous Revenue* was a little better than estimate.

III.—Salt Revenue.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	1881-82. Accounts.
1,629,7	NORTHERN INDIA SALT DEPARTMENT	1,665,5	1,894,2	1,898,1
	SEA-BORNE SALT.			
19,4	Burmah	18,1	18,5	14,8
2,275,0	Bengal	2,272,7	2,284,0	2,371,6
18,3	Madras	20,0	9,1	5,7
2	Bombay	2	3	5
	GOVERNMENT SALT.			
1,541,1	Madras	1,550,0	1,446,0	1,452,6
26,5	Bombay	25,2	30,0	33,6
	EXCISE ON LOCAL MANUFACTURE.			
4,1	Burmah	4,4	5,0	4,9
109,7	Bengal	110,0	100,0	97,3
2,5	Madras	15,2	15,0	12,3
1,469,1	Bombay	1,451,0	1,387,0	1,458,8
20,4	MISCELLANEOUS	20,7	23,9	25,4
7,116,0	TOTAL	7,153,0	7,213,0	7,375,6

33. Under the first head the estimates were made at a time when the salt revenue was temporarily failing, as explained in last year's appropriation report. The estimates then made were for an improvement of ten lakhs over the expected returns of 1880-81. The revenue, however, very speedily recovered, and the original estimate of 1,665,5 was in March 1882 raised to 1,879,0, or, adding a new item of 51,0 on account of recoveries of freight charges, 1,930,0. But before the year closed the duty was reduced, and the effect of the reduction, for three weeks of March, was estimated at about 3½ lakhs, leaving the final estimate 1,894,2. This estimate, it will be seen, was very accurately realized.

34. The estimate made for *Sea-borne Salt* in Bengal was a repetition of the expected receipts of 1880-81; throughout the year the importations were slightly better, and promised an improvement of about 80,0. In the last month the reduction of duty was completely counteracted by the stimulus which the reduction gave to clearances, and thus both the Budget and the revised estimates were more than covered.

The importations of salt in Burmah and Madras fell somewhat below expectation, but the amounts in any case are small.

35. Madras deals chiefly in *Government Salt*, that is, in purchasing and re-selling salt locally manufactured. The Budget estimate was based, as is usual in such cases, upon the actual outturn of the previous year 1880-81. The consumption is, however, somewhat falling off owing to the substitution in the western districts of salt which pays duty in Bombay, and in March 1882 the revised estimate shewed 1,474,0, which in view of the reduction of duty to be made in that month (March 8) was reduced to 1,446,0. It will be seen that the realizations were somewhat short of this.

36. Under *Local Manufacture*, the chief figure is that of Bombay which very closely followed estimate; in fact the whole difference from last year's figure is somewhat less than the loss accruing in March from the reduction of duty. The falling-off under this head in Bengal is a continuance of a decrease, which has shewn itself of late years in the manufacture of salt in Orissa.

37. The *Miscellaneous* figures are chiefly warehouse rents, fines and forfeitures.

SECTION B.—PRINCIPAL HEADS OF REVENUE.

IV.—Stamps.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
2,186,1	Court Fees	2,214,7	2,262,1	2,301,5
1,048,4	Other Stamp Duties	1,063,9	1,052,0	1,064,9
16,1	Miscellaneous	11,4	13,9	15,0
3,250,6	TOTAL	3,290,0	3,328,0	3,381,4

38. The improvement under this head is general, both from the actuals of 1880-81 to the Budget of 1881-82, and from the latter to the Actuals of 1881-82. Each province shews a slowly progressing revenue.

V.—Excise.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
2,493,4	Liquors and Drugs	2,395,4	2,720,7	2,745,7
628,4	Opium	622,5	663,8	665,6
13,4	Other Receipts	13,1	26,5	16,0
3,135,2	TOTAL	3,031,0	3,411,0	3,427,3

39. The Budget estimate was for the most part a reproduction of the expected figures of 1880-81, save that a slight falling-off was anticipated in Burmah, owing to the restriction of opium vend in that province. But in the first place the actuals of 1880-81 slightly exceeded in every province the anticipations framed in March 1881, and the improvement in the excise revenue, alluded to in last year's report, has continued through the year. In nearly every province this improvement is manifest, and is attributed either to general prosperity and good harvests, or to increased competition at auction sales of excise monopolies, which is only another form of increased public demand.

VI.—Provincial Rates.

1880-81. Accounts.	GENERAL RATE ON LANDS.	Budget.	1881-82. Revised.	Accounts.
40,9	Central Provinces	40,4	41,2	40,0
51,2	Burmah	78,4	83,4	74,9
29,2	Assam	34,5	34,5	32,2
684,8	Bengal	682,6	676,6	681,8
535,2	North-West	541,4	545,0	554,3
255,0	Punjab	250,6	257,5	256,3
384,1	Madras	403,4	419,6	401,8
222,8	Bombay	224,6	222,8	229,7
2,203,2	TOTAL	2,255,9	2,280,6	2,271,0
	OTHER RATES.			
6,5	India	6,2	5,5	5,6
14,6	Central Provinces	14,3	14,3	16,4
2,2	Burmah	2,3	2,3	3,2
38,6	Bengal	38,2	37,4	42,6
340,0	North-West	343,1	350,0	337,4
169,0	Madras	201,6	192,4	217,0
2,3	Bombay	1,4	2,5	2,3
573,2	TOTAL	607,1	604,4	624,5
2,776,4	TOTAL BOTH	2,863,0	2,885,0	2,895,5

40. The first set of these figures shews the general rate levied, mostly for Public Works, but in some cases also for primary education. These rates are all of a "local" character, that is, intended for expenditure within the area whence they are obtained. The second set of figures contains several small items; the large figure in the North-West being the Putwari cess, since abolished, and that in Madras being the Village Service cess.

The actuals for the most part closely follow the estimates. A slight falling-off in Burmah and Assam is explained by the similar reduction in the figures of Land Revenue, as the collections of Land Revenue and Land Rates are made together. In Madras the Village Service cess produced more than expected, as in some districts the demand, temporarily suspended, was re-imposed; and in Bombay an enhancement of rates came into operation in some of the districts and increased the revenue over the Budget estimate.

SECTION B.—PRINCIPAL HEADS OF REVENUE.

VII.—Customs.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	IMPORTS.			
141,4	Burmah	156,7	153,6	152,7
727,3	Bengal	682,6	644,6	617,3
159,9	Madras	149,0	145,7	143,8
751,2	Bombay	674,0	578,0	648,5
1,779,8	TOTAL	1,662,3	1,521,9	1,562,3
	EXPORTS.			
436,4	Burmah	415,8	446,6	487,4
179,9	Bengal	160,0	200,0	204,9
84,5	Madras	70,0	60,0	49,9
30,7	Bombay	18,1	22,7	25,8
731,5	TOTAL	663,9	729,3	768,0
28,3	MISCELLANEOUS	40,8	38,8	31,1
2,539,6	TOTAL	2,367,0	2,290,0	2,361,4

41. The Budget estimate allowed for a falling-off, in Bengal and Bombay, below the figures of 1880-81. Till the end of November the revenue, on the whole, was equal to that of 1880-81, but the import duties began to fall off towards the end of the year, both by the continued substitution of duty-free for duty-paying cotton goods, and because there was an expectation of reduction of duty, and a consequent postponement as far as possible clearances at the Customs House. The general abolition of import duties, which came into effect on 10th March, necessarily added to the loss.

42. There was, however, an abundant rice harvest and the low prices favored export; and the increase of revenue under this head fully made up for the loss on imports.

43. The following figures continue the classification of net revenue presented in last year's report. It will be seen that three-quarters of the reduction of revenue occurs under the head of Cotton Goods, arising, as just explained, from the fact that a continually increasing proportion of the imports under this head has been of the kinds exempted from duty:—

	1880-81.	1881-82.
IMPORTS.		
Cotton Goods	717,2	559,5
Liquors	378,9	405,7

152,3	Bombay	165,0	161,8	182,8
224,5	Other Provinces	227,0	243,5	242,3
1,6	England	1,9	2,0	2,2
709,3	TOTAL	770,0	820,0	874,4

45. The revenue in the Central Provinces came up to Budget estimate, although at the time of the Regular estimate it was thought that there would be very considerable unrealized outstandings. The improvement, as compared with 1880-81, is in timber removed by Government Agency the revenue from which increased from 6,2 to 29,7.

In Burmah, the operations of the department greatly extended towards the end of the year, and special expenditure was sanctioned to meet the high demand for timber. High prices ruled in the market, and there were also higher realizations in sale of drift and waif wood. A reduction of duty from 7 per cent. to 1 per cent. on foreign timber brought down the Salween did not produce a loss of revenue, as the estimated revenue had been realized before it was brought into operation.

The falling-off in revenue in the North-West is chiefly owing to failure to dispose of a large stock of timber in the School Circle. The demand for Public Works, in the Oudh Circle, has also fallen off, but on the other hand there has been an increase both of Revenue and of Expenditure in the Oudh Circle.

In Bombay there was at the end of the year an unusual demand, at very high prices, for timber and sandal-wood. This demand came too late even for inclusion in the Revised estimate and produced a considerable excess over the estimated revenue.

In the other provinces the operations are of a more regular character and are less affected by market fluctuations. They do not therefore shew, in the actual figure, any great variation from the estimates, but there is a general improvement in Bengal and in Madras owing to increased sales of smaller produce.

X.—Registration.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
281,2	TOTAL	290,0	280,0	284,7

46. The figures in every respect closely follow those of last year.

XI.—Tributes from Native States.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
742,2	TOTAL	705,0	721,0	706,9

47. The figures under this head have little variation, except as some State falls into arrear or makes up an arrear. The final figures follow the Budget very accurately. Under "India General" there is a reduction of 5,0 owing to a new arrangement by which that amount of Land Revenue, hitherto accounted for to Oodeypore, is now taken (under its proper head) in lieu of a tribute due from Oodeypore. Bombay however shews nearly the same amount of excess, owing to arrear collections from Kathiawar Chiefs.

The figures of last year were unduly swollen by a capitalized payment of 30,0 received from the Maharaja of Dhar.

SECTION B.—DIRECT DEMANDS ON THE REVENUE.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
8,169,0	EXPENDITURE	8,519,0	8,554,7	8,220,1

48. But for a change of accounting by which 147,6 of Refunds passed in the accounts to other heads, the expenditure would be 8,367,7, and this figure should be used in the general comparison. Compared with last year the bulk 120,0 of the increase is under "Salt," where the introduction of a new depôt system involved considerable expenditure in construction of depôts, and large advances for carriage and freight of salt conveyed to them. Forests also shew an increase of 100,0 mostly covered by enhanced revenue. The expenditure was within Budget estimate, except under Salt, where most of the expenditure on depôts, just referred to, was not provided for.

SECTION B.—DIRECT DEMANDS ON THE REVENUE.

3.—Refunds and Drawbacks.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
46,8	Land Revenue	47,5	59,0	48,0
140,6	Salt	34,2	46,8	45,3
34,2	Stamps	35,2	36,9	37,7
62,4	Customs	20,8	37,3	73,2
30,6	Assessed Taxes	22,8	25,7	28,9
31,7	Other Revenue Refunds	63,9	102,0	39,3
46,1	Law and Justice	44,0	46,8	...
76,8	Miscellaneous Refunds	81,6	68,5	...
469,2	TOTAL	350,0	423,0	272,4

49. Refunds is an item so liable to be affected by unexpected large payments, arising from administrative measures, that the Budget estimate has for some years been fixed by a definite rule based upon the experience of past years, but having no precise appropriation to the various kinds of charges. It is assumed that any special excess over this is not unlikely to be met by the special *per contra* credit arising from the same circumstances, and it is only towards the end of the year that it can be stated with any degree of accuracy whether any such special claims have fallen upon Government.

Special claims of this nature arose in Madras where 2,2 of water-rates improperly collected had to be refunded, and in Bombay a repayment had to be made under the treaty made with Portuguese India. These Goa refunds are responsible for the divergence under "Customs" and "Other Revenue Refunds," as part of what had been provided for in the revised estimates under "Other Revenue Refunds" was more specifically charged under "Customs Refunds."

The charges under the last two heads have been transferred to the heads 19—Law and Justice, and 31—Miscellaneous, as the Secretary of State has directed that only Revenue Refunds be charged against the major head 3—Refunds and Drawbacks.

4.—Assignments and Compensations.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
284,0	India	306,2	305,4	268,6
8,0	Central Provinces	7,5	7,4	7,7
...	Burmah	...	...	...
3,4	Assam	3,0	2,8	3,3
5,8	Bengal	11,3	16,0	16,4
7,5	North-West Provinces	7,5	7,5	7,2
22,2	Punjab	22,7	22,0	22,1
143,6	Madras	114,2	119,0	121,3
740,5	Bombay	734,7	763,6	747,8
1,215,0	TOTAL	1,207,1	1,243,7	1,194,4

50. Under India the payment is all but entirely the salt compensations to Native States. These fell short of estimate by 6,2, an amount due to Maharaja Holkar not charged within the year, and by 10,4, over-estimate of the Royalty payable to Jeypur and Jodhpur. Two miscellaneous compensations, aggregating 3,9, were also not paid within the year.

The inequality of the figures against Bengal is due to the fact that no payment was made in 1880-81, and two payments were made in 1881-82, of the yearly compensation, 5,0, for the resumption of the Bhootan Dooars.

5.—Land Revenue.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
74,8	India	96,4	89,7	73,5
73,9	Central Provinces	75,6	74,0	74,1
173,1	Burmah	189,0	207,5	194,1
89,1	Assam	88,3	88,9	83,4
322,7	Bengal	310,0	311,6	310,2
658,2	North-West Provinces	650,0	652,5	647,1
231,4	Punjab	228,7	227,3	231,6
712,8	Madras	728,1	722,7	723,8
647,0	Bombay	665,0	662,2	665,4
2,983,0	TOTAL INDIA	3,031,1	3,036,4	3,003,2
7	Add England	9	6	6
2,983,7	TOTAL	3,032,0	3,037,0	3,003,8

SECTION B.—DIRECT DEMANDS ON THE REVENUE.

51. Under India, the Budget estimate for Revenue Surveys included charges 22,4 for survey parties working in Burmah, which in the accounts were taken under British Burmah. Allowing for this the actuals closely followed the estimates.

Under Central Provinces the estimates were also closely followed.

Under Burmah we must first, for the comparison with Budget, deduct the survey charges just alluded to, leaving 171,7, expenditure against 189,0 estimate, or a saving of 17,3. Of this amount 7,2 is under the head of "Commission on Revenue Collections," and is in part owing to the short collections explained on the Revenue side; it was necessarily followed by increase of charges in 1882-83. Further, an item of 7,1 was provided in the Budget as a "Reserve" and was not expended.

In Assam there is a saving of 4,9, of which 2,5 is on Commission and is explained in the same way as under Burmah, and 1,2 was a provision for anticipated survey charges which was not eventually required.

In Bengal the Actuals very closely follow Budget, but the coincidence is the result of a balance of differences. 6,4 was short spent, being malikana (proprietory allowance) not claimed within the year, while on the other hand Collectors and their establishments cost 4,9 more than Budget, in which a deduction for "Probable Savings" was made but found to be excessive. Another increase of 1,6 under "Management of Government estates" is covered by the enhanced collections reported on the revenue side.

In the North-West the Actuals follow, and are slightly within the Budget.

In the Punjab there is a slight excess in the expenditure, of which nearly half is in an item recoverable in the form of fees.

The Madras accounts show expenditure slightly less than estimates. The difference is mainly under two heads, first a saving of 6,0 in allowances to village officers, where the Budget appears to have presumed too rapid an extension of the operations under the Village Service Act, and secondly, an excess expenditure of 3,2 for Revenue Surveys, only partly met by a supplemental grant of 1,5 over the Budget.

The Bombay expenditure closely follows the estimates, a small saving in balances in the Collector's establishments being counterbalanced by increase of allowances given to Revenue Survey Officers in Sindh.

6.—Opium.

1880-81, Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
1,909,2	BENGAL— Payments to cultivators and manufacturing charges	2,124,7	1,939,1	1,931,4
117,4	Other charges	135,6	119,8	123,0
2,2	PUNJAB, BOMBAY AND ENGLAND	2,7	3,1	3,0
2,028,8	TOTAL	2,263,0	2,062,0	2,057,4

52. The first of these charges necessarily depends upon the amount of opium produced, but as each year includes payments on account of two seasons, no very accurate correspondence can be found between the produce of each season, and the amount of each year's expenditure. Part of the increase in 1881-82 over the previous year is due to the raising of the price paid to cultivators in the Benares Agency from Rs. 4-8 to Rs. 5, with effect from tember 1880.

The charges were well within the Budget estimate, which, being fixed at a time when the profits of the crop are absolutely unknown, is taken at an amount sufficient to provide for a moderately good crop.

53. The saving of 12,5 under other charges is chiefly under the head of "Commission," estimated at 23,4 but only 16,0 spent. There were also other savings in salaries and establishment charges.

7.—Salt.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
135,9	Northern India Salt Department	154,3	277,0	240,0
6,2	Burmah and Bengal	5,6	5,2	4,1
140,6	Madras	142,5	140,0	132,8
90,8	Bombay	125,6	121,8	109,3
363,5	TOTAL	428,0	544,0	486,2

SECTION B.—DIRECT DEMANDS ON THE REVENUE.

54. Compared with the rate of expenditure in 1880-81, the estimates of the Northern India Salt Department provided nearly 30,0 additional for manufacture of salt at Sambhur, Didwana, and Pachbadra. This arose from the development of the depôt system by which the salt is manufactured and conveyed at Government expense to sale-depôts in the consuming districts, instead of this work being done by the wholesale merchants. It was only during the course of the year that the system was fully developed, and it was necessary to add to the original estimates, first a moderate amount for construction of depôts, and secondly, a very large amount for charges of carriage and freight from the salt sources to the depôts. These charges are ultimately recovered as part of the sale price of the salt, but necessarily, in the first year, the recoveries are far short of the outlay.

In the revised estimate 122,3 was added on this account to the original estimate of 154,3, giving total of 276,6 (taken as 277,0). However, the expenditure against this 122,3 was only 56,2 in Sambhur, 8,2 for the Punjab mines, and 10,7 for Pachbadra; total 75,1.

Against the original 154,3 the expenditure was 164,9, and the excess is almost exactly accounted for by the following principal items:—

(1) Excess expenditure almost entirely in connexion with the introduction of the depôt system. Sambhur 4,2 against estimate 1, for construction, and 11,2 against 7,2 for Miscellaneous; Punjab mines 11,4 against 2,4 for construction; Neemuch, a new depôt, 1,5 unprovided for in estimates; total excess 18,6.

(2) On the other hand, manufacture at Pachbudra cost only 1,7 against an estimate of 8,5.

In other respects the estimates were fairly followed.

55. In Madras there is short expenditure of 97. The main part of this, 88, was on the charge for purchase and freight of salt (726 against estimate 814), a charge which necessarily varies according to the favorableness of the season for manufacture. In other charges, on the one hand there was saving of 73 on the provision for petty construction which was taken rather high at 186; on the other hand there was an excess expenditure of 55 in reorganizing the preventive establishments.

56. The *Bombay* estimates provided 45,0 new charges, in connexion with the Goa Treaty, more than half of which was for purchase of salt. The expenditure on this account was only 17,5.

On the other hand, heavy purchases of salt, at the end of the year, caused an excess expenditure under other heads of 6,2, which was of course met by increased revenue from sales. A preventive line on the Kathiawar frontier, not provided for in the Budget estimates, and sanctioned by the Government of India, only at the end of the year, cost 2,3.

8.—Stamps.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
56,8	INDIA— Charges for sales (chiefly Discount)	59,9	58,6	59,0
19,1	Other expenditure	14,1	18,8	18,8
31,6	ENGLAND	40,0	31,6	32,8
107,5	TOTAL	114,0	109,0	110,6

57. The excess in "Other expenditure" is due to an error in the estimates; 6,5 were taken as a deduction from expenditure under "India" on account of value of stamped paper supplied to Madras, without being brought upon the Madras estimates.

The English charge is for stamped paper, and the supply was somewhat curtailed owing to the preparation of new patterns: the prices paid were also somewhat lower.

9.—Excise.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
95,4	TOTAL	99,0	99,0	96,9

58. Except in two respects, the charges, which are mostly for establishments, closely follow the figures of last year and the estimates. In the North-West there were heavy contingent charges arising from the system of direct management there adopted, and an increase in the discount on opium sales, which necessarily corresponds to increased sales. These

charges were met by an increased grant of 20 by the Local Government. In Madras also the charge for purchase of arrack for sale in the town of Madras exceeded the Budget provision.

10.—Provincial Rates.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
46,4	TOTAL .	48,0	49,0	53,2

59. The increase over last year's figures and over the Budget estimate occurs almost entirely in Bengal, and is due to the payments of local cesses on Government estates, which are largely recoverable from tenants, having greatly exceeded the recoveries effected.

11.—Customs.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
25,6	Burmah	27,6	26,2	25,9
69,8	Bengal	70,0	69,5	68,6
22,2	Madras	24,0	23,1	23,3
81,3	Bombay	84,4	77,2	77,3
0	England	0	0	0
198,9	TOTAL .	206,0	196,0	195,1

60. In Burmah the Budget provided for some new establishments which were not entertained, and in Bengal there was a small saving in the charges for the preventive establishments.

The chief part (5,9) of the saving in Bombay is owing to the withdrawal of the preventive lines on the frontier of Portuguese India, after the conclusion of the Goa Treaty.

12.—Assessed Taxes.

1880-81. Accounts.		Budget.	1881-82. Revised	Accounts.
21,2	TOTAL .	15,0	14,0	13,1

61. The charges incurred were everywhere within estimate. The decrease in expenditure, as compared with last year, arises from the reduction of establishments after the revisions of assessment made in 1880-81.

13.—Forests.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
49,5	Central Provinces	70,1	59,3	49,6
71,2	Burmah	101,0	129,9	115,0
67,9	North-West Provinces	85,5	94,5	91,5
111,9	Bombay	120,0	117,8	115,0
161,4	Other Provinces	789,2	193,3	181,2
4,1	England	5,2	5,2	5,3
466,0	TOTAL .	571,0	600,0	557,6

62. The Central Provinces Budget provided for charges connected with the supply of fuel to the Holkar State Railway, a scheme which was afterwards abandoned, as also a special purchase of machinery which was not made.

In Burmah the increase of expenditure arises from extended operations referred to on the revenue side.

In the North-West a considerable increase over Budget estimates was sanctioned for settlement of claims of certain contractors, which however was not all spent.

In Bombay the original estimate appears to have been too high, and though there was unanticipated expenditure at the end of the year in meeting the high demand for timber, the whole expenditure fell considerably within the estimate.

Under other provinces the saving occurred chiefly in the Punjab, and is stated to arise from economical working of the Department. Bengal and Madras are chiefly responsible for the excess as compared with 1880-81, which in both cases is attributed to extension of sales, the revenue having also increased by 12,4 and 7,0.

14.—Registration.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
173,3	TOTAL . .	186,0	178,0	179,4

63. On the Burmah estimates there was a saving (11 against 20) owing to the Budget providing for certain re-arrangements of expenditure that were not fully carried out. A similar considerable saving (234 against 290) occurred in Bombay, where provision was made for new charges in connexion with the Deccan Agricultural Relief Act, which turned out to be in excess of requirements. In the North-West Provinces, on the other hand, there was an excess expenditure of 30 (315 against 285), which occurred entirely under Record Fund; it was met by and is due to increased receipts and better working of the system it represents.

SECTION C.—POST OFFICE, TELEGRAPH AND MINT.

1880 81. Accounts.		Budget.	1881-82. Revised.	Accounts.
1,647,3	RECEIPTS . . .	1,537,0	1,510,0	1,489,7

64. In all three departments there has been less revenue in 1881-82 than in 1880-81. The falling-off in Actuals, as compared with Budget, is chiefly under Mint, the importation and coinage of silver being less than usual.

XII.—Post Office.

1880-81. Accounts.	IMPERIAL POST OFFICE.	Budget.	1881-82. Revised.	Accounts
638,0	Sale of Postage Stamps . . .	639,4	590,0	592,2
199,6	Parcel and other Postage collected in Cash	237,6	252,0	242,0
51,6	Money Order Fees	54,0	89,6	71,7
151,5	Other Receipts	58,2	68,4	70,7
1,040,7	TOTAL .	989,2	1,000,0	976,6
25,9	DEDUCT—Accounted for to other Governments	257	28,2	313
1,014,8	NET RECEIPTS .	963,5	971,8	945,3
3,8	ADD—District Post	35	4,2	4,6
1,018,6	TOTAL .	967,0	976,0	949,9

65. The falling-off in Stamp Sale Receipts is partly accounted for by certain small items formerly paid in Stamps, coming during 1881-82 under the class of Cash Realizations; but there has been a real falling-off in revenue. Under Money Order Fees it is sufficient to say that the amount remitted rose from 4,570,9 in 1880-81 to 5,733,5 in 1881-82. Under "Other Receipts" a large falling-off was estimated in Bullock Train Collections, as it was intended to abolish the Calcutta Agency. This step, however, was not carried out.

XIII.—Telegraph.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
452,9	Indian	391,9	378,0	376,6
86,2	Indo-European	89,1	98,0	92,6
539,1	TOTAL .	481,0	476,0	469,2

66. Under Indian the Budget anticipated a decrease of message revenue owing to the cessation of the Afghan War, and the estimate would have been fully realized or nearly so but for certain recoveries from Railways not made within the year.

67. The difference between Budget and Actuals in Indo-European is due to larger receipts in England, while the competing line *vid* Suez was interrupted (July and August 1881), and also to earlier settlement of accounts with the Indo-European Company.

XIV.—Mint.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
76,1	Seignorage on Silver	72,6	34,1	43,4
	Gain on Copper Coinage	6,0	15,0	
13,4	Other Receipts	10,4	8,9	13,2
89,5	TOTAL .	89,0	58,0	70,6

68. The first two items here are extremely irregular, the first depending upon the importation of silver, and the second upon the absorption of copper coin. The estimate was made for an average importation, but as a matter of fact the imports were very short indeed. Some importations into Calcutta, at the very end of the year, brought an unexpected increase over the revised estimate.

The importations of silver have been in recent years—

	Net Importation.	Silver Coinage.
1878-79 . . .	3,970,7	7,210,8
1879-80 . . .	7,869,7	10,257,0
1880-81 . . .	3,892,6	4,249,7
1881-82 . . .	5,379,0	2,186,3

SECTION C.—POST OFFICE, TELEGRAPH AND MINT.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
1,766,0	EXPENDITURE .	1,765,0	1,811,0	1,771,7

69. Compared with last year there is more expenditure on Telegraph, but less in Post Office. On the other hand, Post Office has exceeded its estimates, but the other two departments shew a saving.

15.—Post Office.

1880-81. Accounts.	IMPERIAL POST OFFICE.	Budget.	1881-82. Revised.	Accounts.
27,9	Chief Post Office	29,6	30,1	30,7
523,9	Presidency and District Offices . . .	548,2	571,8	577,6
392,0	Conveyance of Mails	296,0	308,9	308,6
34,3	Other Charges	33,2	35,5	26,7
978,1	TOTAL .	907,0	946,3	943,6
91,0	ADD—District Post Office .	90,9	105,0	107,5
1,069,1	TOTAL INDIA .	997,9	1,051,3	1,051,1
106,4	ENGLAND .	100,1	98,7	96,8
1,175,5	TOTAL .	1,098,0	1,150,0	1,147,9

70. There is an excess of expenditure under all the Indian heads. In the first two it was owing to additional establishments entertained during the year which were not sufficiently provided for in the estimates. The excess on charges for conveyance is connected with the increase in Bullock Train receipts, and like it is due to the non-abolition of the Calcutta Agency. The other charges contain some items which were taken in the estimate as chargeable to the War in Afghanistan.

Under District Post Office the chief increase is 11,1, new charges in connection with local postal service at Quetta.

71. In England there was a saving of 8,3 in the cost of stamps, against an additional payment of 5,0 under the postal arrangement with the English Treasury.

16.—Telegraph.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	INDIAN TELEGRAPH.			
	Capital Account.			
44,1	India	72,4	59,2	57,0
53,3	England	67,0	67,3	49,1
	Revenue Account.			
304,4	India	321,0	330,7	317,8
6,0	England	6,0	6,0	6,9
	INDO-EUROPEAN TELEGRAPH.			
60,4	India	66,2	66,0	67,3
29,6	England	29,4	37,8	38,1
497,8	TOTAL .	562,0	567,0	536,2

72. Under Indian Telegraph Capital Account the Revised Estimate was less than the Budget owing to recoveries expected from the Ceylon Government on transfer to them of the Ceylon Lines. The recovery in the accounts was 6,9. The English figure, chiefly purchase of stores, was reduced by postponement of certain payments.

In the Revenue Account the Revised Estimate provided for increases of pay due to the introduction of a revised scale of salaries; but the accounts shewed savings under other heads.

73. Under Indo-European the Indian figure was in excess of Budget owing to an arrear charge of the Marine Department on account of repairs of the Telegraph Vessel *Patrick Stewart*. The English figure was increased by a payment to be made to the Eastern Telegraph Company under the "*Common Purse*" arrangement—practically a refund of the excess receipts on the Revenue side.

SECTION C.—POST OFFICE, TELEGRAPH AND MINT.

17.—Mint.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
43,9	Calcutta Mint	44,7	39,9	40,6
44,7	Bombay Mint*	40,5	31,3	27,9
3,4	Stores from England	19,8	22,8	19,0
92,0	TOTAL	105,0	94,0	87,5

* Includes 5 or 6 at Madras.

74. The saving in both the Mints is due to slackness of work. As mentioned on the Revenue side, the estimates were framed for a larger importation of silver than actually occurred, and the provision made for the engagement of temporary or extra establishments and for consumption of stores was greater than required.

SECTION D.—RECEIPTS BY CIVIL DEPARTMENTS.

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
1,468,2	RECEIPTS	1,396,0	1,426,0	1,513,1

75. The principal improvement over 1880-81 under receipts is about 40,0 under Minor Departments, which is made up of several details. The receipts under all the heads were better than estimate.

XV.—Law and Justice.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts
268,2	Fees, Fines and Forfeitures	268,2	269,0	271,6
246,6	Jail Manufactures	265,8	235,1	262,3
173,0	Other receipts	130,0	138,9	143,6
687,8	TOTAL	664,0	643,0	677,5

76. The figures of the year fairly followed the Budget estimates. Bengal and North-West both showed short realizations arising from too sanguine estimates of jail receipts, but in the other provinces the realizations more than covered the estimate.

Compared with last year the chief difference in "other receipts" is under the head "Unclaimed property," under which there were, in 1880-81, extraordinary receipts both in Madras and in Bombay.

XVI.—Police.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
130,5	Fees, Fines and Forfeitures	129,8	134,3	136,7
111,3	Other receipts	106,2	107,7	111,3
241,8	TOTAL	236,0	242,0	248,0

77. Half the receipts (130,5 last year and 136,7 this year) are under the head of "Fees and Fines," which for the most part means Cattle Pounds. The realizations in almost every detail differ only slightly from those of last year and from those of the estimate. The only difference worthy of note is a realization of 5,6 from the Berars, being half of the amount due on a settlement of account in connection with the charges of the Thuggi and Dacoity Department.

XVII.—Marine.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	MARINE DEPARTMENT.			
94,5	Dockyards and Seagoing Vessels	65,6	77,4	106,6
	CIVIL DEPARTMENT.			
	(Ports, Light Houses and River Navigation.)			
17,6	Burmah	20,0	18,3	17,7
127,6	Bengal (chiefly Hooghly Pilotage)	117,5	104,4	108,2
1,7	Madras	1,9	2,4	1,1
5,1	Bombay	5,0	3,5	4,5
246,5	TOTAL	210,0	206,0	237,9

78. Under the first head, it is in the Dockyard chiefly that the increase occurs. It is due to large demands on the dockyards by other Departments, and is partly counter-balanced by increased expenditure.

In Burmah the failure was chiefly in the estimate of the earnings of a new steamer supplied to the Arracan Division.

In Bengal the receipts of Pilotage dues fell short, owing to the reduction of the rates by 15 per cent. in August 1881. Port dues at Calcutta were made over to the Port Commissioners in November, 1881, causing a further falling-off in the revenues and also in the corresponding expenditure.

SECTION D.—RECEIPTS BY CIVIL DEPARTMENTS.

XVIII.—Education.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
107,6	Fees	102,7	109,3	116,9
62,6	Other Receipts	40,3	69,7	72,4
170,2	TOTAL	143,0	179,0	189,3

79. A great part of the increase over Budget under "Other Receipts" is due to the inclusion within the accounts of the transactions of the Government Book Depôts at Madras and Bombay, whose accouuts have hitherto been kept outside. The increase was 8,0 in Madras and 15,6 in Bombay, counterbalanced by expenditure of 8,8 and 9,7. There is also a special recovery of 3,0 in Bengal, on account of lands occupied by a scientific institution.

Fees generally showed considerable increase, and especially in Bombay there has been great activity in establishing new schools and in contributing towards them.

The revenue through these causes somewhat exceeded that of last year, notwithstanding that the latter contained some exceptional items.

XIX.—Medical.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	INDIA—			
16,5	Hospital Fees	18,3	15,9	15,6
24,8	Other Receipts	19,4	23,1	19,9
2,1	ENGLAND	4,3	4,0	4,0
43,4		42,0	43,0	39,5

80. The falling-off in Budget, as compared with last year's figures, is chiefly ascribable to a special arrear recovery in Madras, which occurred in 1880-81. The Actuals of 1881-82 have very closely followed the estimates but for a falling-off under Hospital Receipts in Calcutta, arising from a reduction of the rate of recovery from the Port Funds on acccount of Sick seamen in hospital.

The English item under this head appertained to the Royal India Lunatic Asylum. The Budget included a special item of 2,5, sale proceeds of land required by a Railway Company, but, the claim going to arbitration, only 1,8 were received.

XX.—Scientific and other Minor Departments.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	CINCHONA PLANTATIONS—			
14,9	England	38,0	43,7	43,7
17,6	India	16,9	18,9	20,9
	INLAND LABOUR TRANSPORT—			
9,5	Fees	12,7	9,9	8,8
6,3	MATHEMATICAL INSTRUMENT DEPARTMENT	4,0	8,8	10,6
30,2	OTHER ITEMS	29,4	30,6	36,9
78,5	TOTAL	101,0	113,0	120,9

81. The increase in the first item is owing partly to Cinchona sales held over from last year, and partly to a larger supply than was expected being sent to England for sale. In India the supply of Cinchona febrifuge to the public and other Departments is increasing, so that the accounts produced 20,9 against an estimate of 16,9.

The Inland Labour Transport fees arise in connection with the supply of coolie labour to the Assam Tea Districts. The estimate was based upon realizations in 1879-80, but the emigration appears to be falling off.

The Mathematical Instrument Department had to meet unusual demands from other Departments, and especially one at the end of the year for 3,5 from the Public Works Department.

The "other items" are very miscellaneous and call for no remark.

SECTION D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
10,367,6	EXPENDITURE	11,111,0	10,959,0	11,038,5

82. The increase over last year's expenditure is under Marine 70,0, Education 82,0, Political 120,0 (representing certain expenditure which in 1880-81 was charged as War expenditure), and Minor Departments 160,0 (chiefly the compilation of the Census).

SECTION D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

The last two increases were not sufficiently provided for in the estimates, but under the other heads there were savings sufficient to cover this excess.

18.—General Administration.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	GOVERNMENTS AND SECRETARIATS.			
357,3	India	340,6	328,5	320,0
14,8	Central Provinces	14,9	15,0	14,2
16,5	Burmah	17,3	16,2	15,8
13,2	Assam	13,3	13,3	11,9
60,8	Bengal	60,7	60,9	60,3
44,4	North-West	46,7	44,7	44,4
40,9	Punjab	42,3	44,2	42,9
71,2	Madras	69,8	70,8	71,8
97,4	Bombay	97,4	99,8	97,1
716,5	TOTAL	703,0	693,4	678,4
	REVENUE CONTROL AND FINANCIAL OFFICES.			
82,5	India	84,5	81,0	82,3
26,8	Central Provinces	26,7	26,9	26,3
24,7	Burmah	28,4	25,3	26,2
9,1	Assam	14,4	10,1	9,8
122,3	Bengal	124,3	124,5	122,4
103,2	North-West	103,3	103,2	104,1
79,0	Punjab	80,2	80,1	81,1
62,1	Madras	65,7	65,0	64,9
65,3	Bombay	68,6	65,8	67,4
575,0	TOTAL	595,9	581,9	584,5
240,6	ENGLAND	220,1	226,7	231,4
1,532,1	TOTAL OF ALL	1,519,0	1,502,0	1,494,3

83. Under the first head, Governments and Secretariats, there is a saving, first in the Household charges of the Governor-General, which were 15,2 in 1880-81 and 9,6, against an estimate of 16,0, in 1881-82. Tour expenses, that is, charges connected with the removal to and from Simla, were 71,7 against an estimate of 76,3. Again under "Legislative Council," the expenditure was 15,9 against a grant of 21,1, the expenditure under this head varying according to the number of official Additional Members. The saving in Assam is nominal only and is due to salaries not drawn within the year.

None of the other Indian figures seem to call for any remark.

84. The English charges exceed estimate, first, by outfit allowances of a Member of Council and by a payment to the Admiralty of 5, for the vessel in which Earl Lytton returned to England, and secondly, by the cost of Currency Notes, 8,7, which were budgetted for under the head of "Stationery and Printing."

19.—Law and Justice.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	COURTS OF JUSTICE AND LAW OFFICERS.			
15,1	India	16,5	14,3	13,9
68,0	Central Provinces	69,9	67,6	68,0
83,5	Burmah	87,7	84,6	84,4
49,5	Assam	44,8	49,5	47,8
693,9	Bengal	699,7	698,9	728,8
391,9	North-West	394,4	389,7	392,2
207,1	Punjab	215,0	213,7	217,0
368,0	Madras	373,1	369,8	368,0
426,2	Bombay	431,9	424,9	426,5
2,303,2	TOTAL COURTS OF JUSTICE	2,333,0	2,313,0	2,340,6
145,5	Port Blair Settlement	161,4	150,4	139,3
515,3	Jail Charges	555,8	475,1	469,1
230,4	Jail Manufactures	282,0	227,5	225,9
...	Refunds	...	...	48,5
18,9	Other Charges	17,4	14,7	9,1
3,268,3	TOTAL	3,349,6	3,180,7	3,232,5

SECTION D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

85. Under "Courts of Justice" the payments are mostly salaries and establishments, and the estimates are usually closely followed in the accounts.

"India" shows a figure small enough to be affected, as in this case it is, by the reduced salaries drawn when officers of lower military rank are appointed to the offices. The apparent increase over estimate in Assam is due to an arithmetical error in the estimate. In Bengal the explanation is the same as in the case of Land Revenue, an over-estimate of the deductions accruing in consequence of absentees. In the other provinces the expenditure was within the estimates.

86. The cost of the Port Blair Settlement depends very largely upon the supplies made to it by the Commissariat Department, which for various reasons were unusually small in 1881-82.

A diminution in the number of new convicts diminished also the charges for passage money.

The saving under Jails was very general, and is in every province attributed to the low prices of food-grains; and in some also, in part, to a reduction in the number of prisoners.

Under Jail Manufactures the saving is in Burmah, which estimated 18,0 for new machinery which it did not get, and Bengal, which estimated highly both for machinery and for raw material, but on the whole spent only 71,0 against an estimate of 110,6.

87. The Estimate for "Refunds" was made under Head 3 but the charge in the accounts has been brought over to this head as explained in para. 49.

20.—Police.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
34,9	India	33,7	33,4	35,4
117,9	Central Provinces	121,0	118,7	118,7
174,8	British Burmah	205,9	190,9	191,7
80,2	Bengal	84,2	82,1	89,1
401,8	Assam	410,0	413,2	408,7
591,0	North-West Provinces	609,0	600,0	597,4
282,9	Punjab	286,0	281,8	283,6
424,4	Madras	415,5	416,0	413,1
416,3	Bombay	411,7	414,9	416,2
2,524,2		2,571,0	2,551,0	2,553,9

88. These charges are almost entirely establishment charges, and are therefore easily within control of estimates. There appears a small excess in "India General," owing to an arrear payment on account of Kandahar Railway Police, and in Assam owing to a debit for accoutrements supplied by the Military Department, which had not been sufficiently provided for in the estimate. Bombay shews expenditure 416,2 against estimate 411,7, the excess being caused chiefly by a contribution for Railway Police sanctioned for the first time in 1881-82.

21.—Marine.

MARINE DEPARTMENT.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
249,4	Dockyards and Sea-going Vessels	245,4	243,4	269,1

CIVIL DEPARTMENT.

Ports, Light-houses, and River Navigation.

1	Central Provinces	...	1	...
84,3	Burmah	50,7	30,7	40,2
108,6	Bengal	121,7	109,7	105,5
9,4	Madras and Punjab	9,9	6,1	6,2
7,1	Bombay	4,4	4,0	4,6
252,7	ENGLAND	302,9	226,0	197,8
351,6	TOTAL	735,0	620,0	593,4

SECTION D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

89. The excess under the first head is greater than the figures shew, as charges on account of Marine pensions, 12,7, though included in the estimates, were in the accounts, under orders from the Secretary of State, removed to the head of "Pensions." The increase of charges is mostly on account of Dockyard work, building and repair of ships, the total of which is 82,5 against an estimate of 64,8. This expenditure is met by increased receipts from other Departments on account of the work done. Under "Miscellaneous" there is also a large increase of expenditure, 48,9 against 10,5, of which the chief items are 14,0, an Abyssinian Expedition charge written off under orders of the India Office, and 4,0 on account of a steamer transferred from the Indian Troop transport service. Other heads shew a saving in consequence of several ships being unemployed during the year.

90. In *Burmah*, the saving of 10,5 arose from provision being made in the estimates for the expense of a steamer which was not ready in time.

In Bengal there were savings of about two lakhs, one the provision for a new Pilot brig which was not turned out, the other the consequence of the transfer to the Calcutta Port Commissioners of the charges and receipts on account of Port approaches, *i.e.* Hooghly river. The increase of shipping caused an extra charge of 5,8 for Pilotage, which of course was met by increased receipts.

In Madras, also, a saving occurred by the transfer of Port charges to a Port Fund.

91. Of the saving in England 40,0 is due to "Pensions" transferred to another head in the accounts, and 65,1 to charges, chiefly part of the cost of a new troopship, remaining unpaid at the end of the year.

22.—Education.

1880-81, Accounts.		Budget.	1881-82. Revised.	Accounts.
13,7	India	14,5	14,3	14,8
53,7	Central Provinces	55,4	55,0	56,8
27,0	Burmah	39,5	31,0	32,4
21,3	Assam	26,6	22,8	22,5
256,9	Bengal	272,0	269,7	279,6
161,8	North-West Provinces	165,0	164,5	163,7
104,6	Punjab	111,4	108,1	110,1
146,4	Madras	152,5	163,7	170,4
212,7	Bombay	220,7	227,5	227,9
4	England	4	4	3
998,5	TOTAL	1,058,0	1,057,0	1,078,5

92. The increase in the Central Provinces is caused by the writes-off of old outstandings on account of Government Book Depôt. In Burmah the estimates appear to have been generally too high and were not worked up to, and the same remark applies to Assam.

In Bengal the Budget was exceeded chiefly owing to the omission from the Budget estimates of new expenditure arranged for in the Public Works Department on account of pupils in the Howrah Engineering College. The estimates for Government Colleges and Schools were also slightly exceeded.

A good deal of the increased expenditure in Madras and Bombay (8,8 in Madras and 9,7 in Bombay) is the expenditure of the Book Depôts newly brought with the corresponding receipts into the accounts. In Madras, also, the "local" charges for education were generally insufficiently provided for.

23.—Ecclesiastical.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
158,6		159,0	160,0	162,1

93. The increased expenditure is in small amounts in different provinces, and is due to an over-estimate in the Budget of the "Savings" arising from absentees.

24.—Medical.

234,8	Medical Establishments	243,8	240,5	242,4
208,7	Government Hospitals	214,8	208,1	205,8
216,0	Other Charges	231,9	221,9	227,5
659,5		690,5	670,5	675,7
7,2	England	7,5	7,5	7,5
666,7	TOTAL	698,0	678,0	683,2

94. In all the details above stated the actuals very closely follow the estimates. There was a saving in Bengal and in the North-West, which was, however, compensated by excess

SECTION D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

expenditure in Madras and Bombay. The excesses were due in the case of Madras to grants made to Municipalities, and in the case of Bombay to short estimating.

25.—Political.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
284,3	Political Agents and Establishments . .	276,7	291,7	279,5
10,0	Political Subsidies	132,1	212,1	180,5
20,6	Charges on account of Khyber Tribes .	22,8	25,1	13,0
7,1	Ex-Amir of Kabul and Kabul Refugees . .	20,9	19,2	24,1
41,4	Durbar presents	20,2	24,8	31,5
81,5	Other Charges	63,0	63,3	94,9
444,9	TOTAL INDIA .	535,7	636,2	623,5
86,3	ENGLAND . .	26,3	26,8	25,8
531,2	TOTAL . .	562,0	663,0	649,3

95. Under the first head there was a saving in "India" of over 20,0, of which half occurred in the provision made for charges of Political officers, and half in the non-payment of a charge for the protection of communications in Biluchistan.

Against this there was, however, an additional charge of over 10,0 in Madras owing to the creation of the new appointment of Resident at Mysore, and Bombay shows extra charges of about 5,0 in connection with the administration of two villages acquired near Aden.

96. The succeeding heads represent charges arising out of the War in Afghanistan, and were not sufficiently known at the time of framing the estimates.

Under Durbar presents, both the Governments of India and of Bombay found unexpected demands and had to spend 19,4 and 6,1 against estimates of 11,6 and 2,6.

Under "Other Charges," part of the increase is in charges for entertainment of Chiefs, in which the Government of India spent 9,8 against a Budget provision of 6,0, and the Government of Bombay spent 2,2; and part of it is due to charges taken against this head which had been estimated under "Political Agents."

26.—Scientific and other Minor Departments.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
119,7	Survey of India	129,0	133,5	135,0
19,2	Geological Survey	20,0	19,9	19,9
37,7	Other Scientific Departments . . .	45,0	46,3	46,5
54,1	Cinchona and Botanical Gardens . .	57,7	58,0	59,8
52,5	Other Agricultural Departments . .	56,8	59,9	61,0
30,2	Census	71,6	150,5	158,6
23,2	Other Statistical Charges	24,8	23,6	24,8
34,7	Emigration and Miscellaneous . . .	33,8	34,7	34,8
371,3	TOTAL INDIA . .	438,7	525,5	540,4
29,8	ENGLAND . .	19,3	21,5	20,6
401,1	TOTAL . .	458,0	547,0	561,0

97. The charges under Survey of India exceeded the estimate by 6,0, of which amount 1,4 is due to excess work coming upon the Mathematical Instrument Department at the end of the year and is made up for by receipts. As regards the rest there has hitherto been some difficulty in apportioning the estimates and expenditure correctly between the Revenue and the Topographical Branches of the Survey and between the Government of India and other Governments. A better system is now being adopted under which the expenditure will be capable of a more close comparison, without confusion between the various heads under which it comes. In the present case some of the charges entered in the estimates as belonging to the Revenue Branch appear to have been taken against the Topographical.

Under Other Scientific Departments there was an excess of 1,4 under "Repairs of Monuments of Antiquity," a department which was practically organised during the year.

Under Other Agricultural Departments the Industrial Exhibition held in Calcutta caused a slight excess of expenditure.

The Census expenditure was altogether under-estimated, and in every province it was found necessary to continue, for a much longer time than originally anticipated, the charges incurred in the compilation. Bengal was worst, having spent 61,5 against an estimate of 18,5.

SECTION E.—MISCELLANEOUS.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
1,985,9	RECEIPTS	1,325,0	1,643,0	1,707,2

98. The accounts differ from those of 1880-81, chiefly by the abnormal receipt, in 1880-81, of 294,2 on account of Nizamat Stipend Fund. Compared with Budget we have 220,0 better under "Interest," of which three quarters is the premium on the loan of three crores raised in India, an unexpected receipt of 40,0 for contributions to pensions, and an exceptional receipt of 70,0 by realization of Local Fund investments under Miscellaneous.

XXI.—Interest.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	INDIA :—			
250,6	Currency Investment	249,9	249 9	249,9
354,8	Loans to Municipalities, &c. . . .	370,1	368,8	358,0
	Premium on issue of Loan . . .	...	153,4	155,3
72,7	Other Receipts	48,0	65,9	77,3
	ENGLAND :—			
23,9	Investment of Cash Balance . . .	10,0	54,0	54,3
171,9	Premium on Loans	...	...	...
1,8	Other Receipts	...	...	2,1
875,7	TOTAL .	678,0	892,0	896,9

99. The interest on the currency investment is accurately calculable.

100. On Loans to Municipalities and Native States the following are the chief differences, as compared with Budget estimate: India —3,6, owing to the Jodhpore Durbar making large repayments of its loan out of the royalty due to it under the Salt Treaties.

Punjab —54, owing to the half-yearly payment from the Lahore Municipality not being recovered till April.

Madras —52, owing to the gradual repayment of outstandings due on account of the famine.

Bombay +45, owing to better recoveries from the Sindh landholders.

101. The high premuim realized on the issue of the four per cent. Loan of 1881-82 was certainly not expected at the time of the Budget, and no estimate of it was made.

102. Under "Other Receipts" there is a considerable increase in Madras, on arrears of revenue, and both in Madras and in other provinces the receipts of interest on investments of Local Fund balances were greater than estimated.

103. Unusually large remittances were made during 1881-82 from India to England, partly in order to meet the discharge of East India Bonds on 30th November and partly because the state of trade was such as to create a large demand for Council Bills. Thus the Home Balances stood at an unusually high figure, and the result is shewn in the high revenue from interest received on it.

XXII.—Receipts in aid of Superannuation, &c.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
149,5	Subscriptions to Military Funds, India .	153,2	143,2	136,1
25,2	Appropriation from old Military Funds .	25,5	24,7	28,2
37,9	Other items	36,9	40,2	86,0
103,4	Subscription to Widows, and Military Funds, England	99,4	103,9	106,0
316,0	TOTAL .	315,0	312,0	356,3

104. The Fund subscriptions in England are increasing and in India they are falling off. The excess in the actuals, under the head "Other Receipts," is due to an exceptional receipt, at the end of the year, of 41,7 from the Puttiala State on account of Public Works officers employed on the Sirhind Canal Works.

SECTION E.—MISCELLANEOUS.

XXIII.—Stationery and Printing.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
62,5	TOTAL .	61,0	60,0	57,8

105. These are mainly sale-proceeds and press receipts. It was almost entirely in the Punjab that the receipts fell short of the estimate (8,1 against 18,4). 2,2 of this is due to a misclassification in the estimate of an item which belongs to "Stamps," but the mass of it (5,9) is a falling-off in Jail Press receipts, owing to the withdrawal during the year of business connected with the Post Office. In other provinces the receipts more than covered the estimate.

XXIV.—Miscellaneous.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	INDIA.			
63,1	Unclaimed Deposits and Bills . .	50,8	56,5	67,1
54,5	Rents	63,0	62,9	60,3
12,1	Premium on Bills	10,8	13,2	12,8
294,2	Nizamat Deposit Fund	...	...	...
212,4	Other Items	140,4	233,2	240,5
	ENGLAND.			
68,6	Sale of Land	...	...	...
26,8	Other Items	6,0	13,2	15,5
731,7	TOTAL .	271,0	379,0	396,2

106. Under the Indian heads above specified the receipts follow the estimate as closely as can be expected in items of a somewhat fluctuating nature. The bulk of the excess of 100,6 in the residual item arises from sales of investments of Local Funds, 61,2 in the Punjab and 8,4 in Madras. As the investments when made had been charged off on expenditure, the sales had to be brought in as receipts; but such transactions are now taken to advance heads.

The excess over Budget in England is mostly met by a corresponding excess in the payments, being prices levied from contractors but afterwards remitted.

SECTION E.—MISCELLANEOUS CIVIL CHARGES.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
3,823,2	EXPENDITURE .	3,816,9	3,839,3	4,044,5

107. The excess over Budget estimate under this head is chargeable chiefly to an item of 90,4 paid in winding up claims on the Bengal Medical Retiring Fund, but not provided for in the estimates. The expenditure, however, exceeded estimate in other respects both under "Superannuation Allowances," and also considerably under "Stationery."

27.—Territorial and Political Pensions.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
155,2	India	162,6	167,5	156,9
47,0	Central Provinces	43,2	40,2	39,5
...	Burmah	...	...	...
3,8	Assam	3,9	3,6	3,1
106,2	Bengal	106,8	96,7	100,7
107,7	North-West Provinces	112,5	107,5	105,2
47,9	Punjab	48,3	46,0	46,1
108,0	Madras	110,6	107,7	105,5
83,1	Bombay	86,9	98,0	94,0
658,9	TOTAL India	674,8	667,2	651,0
24,9	England	61,1	21,1	31,3
683,8	TOTAL .	735,9	688,3	682,3

108. In India an item of 7,8, on account of Kabul Refugees, was included in the estimate, the payment of which has been alluded to under "22, Political." In Central Provinces the payments fell short of estimate owing to the death of Raja Janoji of Bhonsla, the principal local pensioner. The amounts saved in the North-West Provinces are for the

SECTION E.—MISCELLANEOUS CIVIL CHARGES.

most part merely awaiting claim, and those in the Punjab are lapses. In Madras there were savings, chiefly arising from lapses. In Bombay there were similar lapses, but there was on the whole an excess charge, owing to the grant of an allowance of 6,0 to the Ex-Wali of Kandahar, and to the re-grant, with arrears, of a lapsed pension of Ameer Sing, deceased in 1879.

109. The charges included in the English estimate were 21,1, allowance of Maharaja Dhuleep Singh, which was paid, and 40,0, an intended advance to him which was not made. Besides this, 10,2 was charged for allowances connected with the settlement of the Nizamat Stipend Fund, which in the Budget estimate were entered as chargeable against India.

28.—Civil Furlough and Absentee Allowances.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
217,5	England	230,0	218,0	217,7
6,2	India	4,0	5,0	4,9
223,7	TOTAL .	234,0	223,0	222,6

110. The saving in England was on account of Military officers in Civil employ. In India absentee allowances are charged to the head to which the officer's salary, when on duty, is charged, so that the figures under this head represent only the absentee charges for officers who have been lent to Native States.

29.—Superannuation Allowances and Pensions.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	CIVIL, INCLUDING MARINE.			
48,2	India	44,8	42,1	51,2
14,2	Central Provinces	15,4	14,1	15,0
12,1	Burmah	12,6	14,5	14,2
4,5	Assam	5,5	5,5	4,8
119,3	Bengal	97,4	95,0	95,1
110,1	North-West Provinces	107,9	103,0	104,4
61,7	Punjab	46,7	52,4	53,8
92,1	Madras	28,5	37,0	85,4
134,2	Bombay	105,6	106,1	114,1
596,4	TOTAL CIVIL .	514,4	519,7	538,0
	DONATIONS TO CIVIL FUNDS.			
41,1	Bengal Civil Fund	40,5	40,5	42,8
71,9	Madras Civil Fund	74,9	75,1	75,1
30,9	Bombay Civil Fund	31,8	31,9	32,1
	MILITARY AND MEDICAL FUNDS.			
15,4	India	17,3	15,1	106,6
14,4	Madras	16,3	15,2	15,2
9,4	Bombay	12,6	8,5	5,4
779,5	TOTAL INDIA .	707,8	706,0	815,2
1,371,0	England	1,356,0	1,367,0	1,367,1
2,150,5	TOTAL .	2,063,8	2,073,0	2,182,3

111. The estimates for Civil pensions are made by the rule of reckoning up the actually existing pensions, but the comparison of the above figures shews that lapses and deaths in 1881-82 did not provide for the new grants during that year. Most of the provinces shew an insufficient estimate, but as the pensions are transferred from one province to another, at the wish of the pensioner, the cases of over-estimate and under-estimate must in some measure be taken against each other. On the whole account, however, the provision was short by about four per cent., 514,4 against 538,0.

112. The donations to Civil Funds are mostly the additional grant of 4 per cent. interest on their balances. The calculation for the Bengal Civil Fund was short.

113. Under Military and Medical Funds there is a great excess charge, arising from steps being taken at the end of the year to meet the claims of subscribers to the Bengal Medical Retiring Fund by returning to them their subscriptions. The amount thus returned was 90,4, which was not provided for in the estimates. The saving in Bombay arose chiefly from short claims for passage allowances.

114. The excess of 11,1 in England is almost entirely one of arrangement of account [illegible] pensions, 33,2, being brought under this head from "Marine" and Military pensions, 22,0, being taken from it to "Army."

SECTION E.—MISCELLANEOUS CIVIL CHARGES.

30.—Stationery and Printing.

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
	PRINTING ESTABLISHMENTS.			
84,1	India	72,4	83,0	82,3
5,7	Central Provinces	5,3	5,7	6,0
8,4	Burmah	13,1	11,3	11,7
2,1	Assam	2,4	2,1	2,2
29,2	Bengal	25,4	30,9	28,7
17,9	North-West Provinces	32,2	32,0	34,7
21,4	Punjab	23,5	24,2	25,0
24,4	Madras	25,9	23,8	24,2
24,5	Bombay	24,7	25,9	25,3
227,7	TOTAL PRINTING	224,9	238,9	240,1
	STATIONERY.			
142,0	Bengal	148,1	146,4	146,5
14,5	Madras	14,1	36,1	37,6
26,2	Other Provinces	37,3	26,9	23,0
...	Store adjustment	...	—13,9	...
74,6	England	87,6	127,6	118,7
257,3	TOTAL STATIONERY	287,1	323,1	325,8
485,0		512,0	562,0	565,9

115. The printing charges in more than one province exceeded the estimates. In India the excess is greatest, and was due to failure to provide adequately for the extra establishments which the pressure of work caused to be retained during the year. But Bengal, North-West and Punjab all shew excesses of the same kind. To some extent the excess is connected with the Census work.

116. Stationery for general use is purchased in Bengal and in Madras, and is imported from England; in Bengal the purchases were within estimate. In Madras they considerably exceeded owing to the system of local purchase being made to supplant in part that of indent on the India Office. Notwithstanding the falling-off in the demand from Madras, the indents on the India Office so far exceeded anticipation as to produce an excess over estimate of 31,1.

The "Store adjustment" figure in the revised estimate was an error; the adjustment ought necessarily to have been as much on one side as on the other.

31.—Miscellaneous.

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
16,4	India	17,3	17,5	22,0 + 27,9
5,7	Central Provinces	5,9	5,8	5,6 + 3,7
10,9	Burmah	11,9	15,5	14,4 + 1,3
7,7	Assam	7,3	7,8	7,2 + 1,2
43,6	Bengal	36,3	40,4	39,6 + 39,4
16,9	North-West Provinces	21,0	20,0	18,3 + 6,9
21,2	Punjab	25,3	20,0	15,1 + 4,4
87,7	Madras	88,0	109,8	95,5 + 6,8
39,2	Bombay	38,0	34,2	30,4 + 7,5
249,3	TOTAL INDIA	251,0	271,0	248,1 + 99,1
30,8	England	20,0	22,0	
				44,2
280,1	TOTAL	271,0	293,0	391,4

117. The charges taken under this head are Petty Local Fund establishments (under which Madras shews a large charge of 58,5), Rents, Rates and Taxes, Remittance of Treasure, Donations for charitable purposes, and a number of other items.

The second figure stated in the accounts column is the amount of "Miscellaneous Refunds" which has been brought over from Head 3 (vide para. 49), and of which the corresponding estimate will be found under that head; consideration of these is excluded in the following remarks.

Under India an abnormal charge of 5,4, connected with the occupation of Kandahar, accounts for the excess of actuals over the estimate.

SECTION E.—MISCELLANEOUS CIVIL CHARGES.

The excess in Burmah is accounted for by increase of Treasury remittances and by a revision of the scale of rewards for destruction of wild animals.

In Bengal an unexpected charge, in connexion with the Port Canning Estate, is chiefly accountable for the excess.

In Madras 6,7 were spent upon special enquiries, one regarding land tenures, and one regarding Rumpa affairs, for which no provision had been made, and 2,6 in writing-off a famine loan granted to a zemindar.

Half the saving in the Punjab is due to the corresponding charges being more accurately taken under more definite heads.

118. In the English accounts there is an expenditure of 44,2 against an estimate of 20,0. 6,0 of the difference is a *per contra* entry, in remission of fines noticed on the receipt side; but the chief difference lies in the adoption of a system of insurance on stores shipped for India, of which the receipts and charges are both to be taken under this head.

SECTION F.—FAMINE RELIEF AND INSURANCE.

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
34,5	EXPENDITURE . .	1,500,0	1,500,0	1,500,0

119. This head represents a policy introduced for the first time in the estimates of 1881-82.

The grants under it are necessarily exactly worked up to, if by reason of actual famine they are not exceeded. Half is devoted to famine relief and reduction of debt. The charges under the first were fortunately very small, and under the second the money was duly transferred to the account of the Commissioners for the Reduction of Debt, and partly used by them. The other half, reserved for Public Works of a protective character, was somewhat underspent, but the charge was brought up to the estimate by an adjustment which has the practical effect of enabling the estimated expenditure to be carried forward into next year.

32.—Famine Relief.

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
34,5	. . . . .	*Nil* .	23,0	34,8

120. The expenditure classified as famine relief is in the following provinces: Bengal —12,3, North-West Provinces 2, Punjab 3, and Madras 46,4, England 2; total 34,8.

The smaller figures we may dispose of at once. The North-West item and the English item are both arrear payments of allowances earned by officers in connexion with the Madras famine, and the Punjab item is the excess cost of certain Public Works in the Hazara district in 1878-79, which should have then been charged off.

The Bengal item is the difference between certain recoveries of Famine advances of the 1874 famine 16,2, and an expenditure of 3,9 in the relief of Hill tribes suffering from distress on the eastern frontier of Bengal. The Government of India sanctioned 5,0 for the purchase of rice for distribution among them.

The Madras expenditure is in connection with the famine of 1877-78, and is for the most part the write-off of payments then treated as advances but now pronounced irrecoverable. These writes-off amount to—weavers' advances, 14,2; seed-grain advances, 3,6; loans for "land improvement," 4,9; irrecoverable excess of value of famine cloths, 23,7; total 46,4. There are a number of smaller items but they balance each other, being 12,8 on each side of the account.

33.—Protective Works, Railways.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
Nil.	. . . . .	574,0	574,0	614,6

121. The Budget grant for Protective Works was only a guess and expressed the policy of Government in setting apart 750,0 for Protective Works each year. The appropriation of the grant to special works was accomplished only at a later date, and was as follows for Protective Railways:—

	Estimate.	Actuals.
Southern Mahratta Railway	315,0	290,1
Rewari-Hissar Railway	207,7	162,2
Stores	51,3	162,3
TOTAL . . .	574,0	614,6

122. The savings on the first head are due to the supplies of stores from England falling short of the estimate. A similar explanation applies in part to the Rewari-Hissar Railway, the work preparatory to which was not accomplished so quickly as expected.

SECTION F.—FAMINE RELIEF AND INSURANCE.

123. The charge for stores is an adjustment made under Financial Department No. 4876, dated 11th November 1882, and No. 612, dated 1st February 1883, in order to bring up the expenditure on the whole to the allotted amount of 750,0, that is, the Government, which actually possesses railway stores, and has charged for them under the account of Productive Public Works Capital, transfers them to Protective Works, and deducts the expenditure from Productive Public Works Capital. The effect of this transfer is that expenditure can go on next year to the amount of the stores thus set apart without trenching upon the new year's grant of 750,0, and that short expenditure of one year can be made up by excess expenditure the next year without going beyond the money limit of 750,0. The value of stores transferred in excess of calculated requirements for 1881-82 was 111,0, and those stores will be brought into use in 1882-83 without further demands on the Treasury.

The expenditure for Railways 614,6 and Irrigation 135,4 thus together make up the total allotment of 750,0.

34.—Protective Works—Irrigation.

Nil		153,0	153,0	135,4

124. The following is the expenditure on Protective Works—Irrigation.

		Outlay before 1881-82.	Outlay during 1881-82, Budget.	Actual.	Remaining to be spent.
	N. W.-PROVINCES.				
1	Betwa Canal	17,9	25,0	16,6	266,8
	PUNJAB.				
2	Swat River Canal	133,9	40,0	40,7	180,0
	BOMBAY.				
3	Nira Canal	80,8	62,0	53,8	263,1
4	Mhasnad Tank	37,6	17,5	15,9	128,0
5	Gokak Canal	24,8	2,5	2,4	10,7
	MADRAS.				
6	Survey, &c., for Canal Irrigation to Gopalpur . .		6,0	6,0	
			153,0	135,4	

125. There was a failure to work up to the estimate in the case of No. 1 owing to alteration in the site of the head works and to difficulty in obtaining land. In No. 3, it is due to delay in the settlement of claims to compensation for the land required for the project.

35.—Reduction of Debt.

Nil	750,0	750,0	715,2

126. The operation of the remaining account "Reduction of Debt" is that the balance of 750,0, after providing for actual famine relief, is placed in a separate account at the credit of the Commissioners for the Reduction of Debt. This balance in the year amounted to 715,2. The Government had already directed the following reductions of debt:—

			Paid off.
4 per cent. Loan of 1871 . . .	203,1	payable on 13th February 1882.	171,6
5 per cent. Debenture of 1867 . .	600,3	„ 1st June 1882.	...
4 per cent. Sicca Loan, 1824-25 .	31,6	„ 27th March 1882.	2,1
„ „ 1828-29 .	6,3	„ „	4
	841,3		174,1

and to the extent to which the debt is actually paid off it reclaims the money from the Commissioners' account. The actual payments made up to March 31st were 174,1 as above detailed, and thus at the closing of the accounts 541,1 of the expenditure taken under this head remained at the credit of the Commissioners.

SECTION G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS.

127. As the charges taken under interest belong to more than one of the heads of this account, we may shew the results of the Productive Public Works policy by a slight rearrangement of the figures, thus—

	State Railways.	Guaranteed Railways.	East India Railway.	Irrigation.	Madras Irrigation Company and Harbour.	TOTAL.
Specific Revenue .	2,556,5	3,615,6	3,261,7	865,8	—88	10,290,8
Land Revenue .	...	...	...	491,2	...	491,2
TOTAL REV. .	2,556,5	3,615,6	3,261,7	1,357,0	—88	10,782,0
Specific Expenditure	1,686,4	3,679,9	1,437,6	455,6	50,5	7,310,0
Interest on Capital .	1,160,5	...	434,2	726,4	17,9	2,339,0
TOTAL EXPTRE. .	2,846,9	3,679,9	1,871,8	1,182,0	68,4	9,649,0
Net Gain or Loss according to accounts	—290,4	—64,3	+1,389,9	+175,0	—77,2	+1,133,0
DEDUCT—Exchange	...	—736,0	—374,4	...	...	—1,110,4
Net Gain or Loss including Exchange	—290,4	—800,3	+1,015,5	+175,0	—77,2	+22,6

The Exchange is reckoned on the Guaranteed and East India Railways on the whole expenditure, in these cases in sterling. Properly speaking, we should on the same account reckon a charge against all the heads for current expenditure on stores, and against State Railways and Irrigation for so much of the interest as represents capital expenditure on stores; but I have not ventured upon this refinement.

SECTION G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS.

1880-81.		1881-82.		
Accounts.		Budget.	Revised.	Accounts.
9,381,8	RECEIPTS. .	9,380,0	10,558,0	10,782,0

128. Railway receipts were under every head much better than estimate, namely, State Railways, 136,0; Guaranteed, 885,0; and East India, 462,0 The principal increase under Guaranteed was on the Great Indian Peninsula Railway, net 775,0; the increases on other lines were mostly swallowed up by the increase of expenditure on the Sindh, Punjab and Delhi Railway. Under Irrigation, direct receipts were better, but indirect (Land Revenue) worse.

XXV.—State Railways—Gross earnings.

129. In the following statement the particulars are given both of revenue and of expenditure of State Railways, because it is most convenient to consider them together, and because the figures thus better compare with those of the next head, Guaranteed Railways. The amount stated in the Capital column includes the whole Capital expenditure upon the line concerned, whether wholly open or not; but it so happens that the Nagpur and

SECTION G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS.

Chattisgarh Railway is the only case in which the Capital represents any considerable expenditure beyond that on line already opened.

130. *Rajputana-Malwa Railway.*—The opening of the Neemuch-Nasirabad section of the line on December 1, 1881, completed the through communication between the North-West and Bombay, and the lines hitherto known as the Holkar, Sindia-Neemuch and Neemuch-Nasirabad were amalgamated into one system with the Rajputana line. The increase of line and development of traffic caused an addition of 180,0 in the revised estimate, and this was more than realized.

The increased traffic necessitated increased expenditure, but besides this heavy expenditure was called for to repair serious damage caused by the rains, and to strengthen a portion of the Holkar Railway.

131. *Sindia Railway.*—At the time of the estimates the line had not been opened throughout and the estimate was framed for a proportional increase of traffic. This, however, was not realized, but the decrease in traffic was accompanied by a considerable decrease also in expenditure.

132. *Wardha Coal Railway.*—There was an increased output of coal, consequently increased revenue, as also increased expenditure. The chief increase in the expenditure is, however, due to new pumping engines recently obtained.

133. *Punjab Northern Railway.*—The only experience of this line being that of a period of high war traffic, it was very difficult to say what the normal traffic of the line would be. The estimates no doubt were too highly framed, but then the traffic was greatly affected by a sickly season in the Punjab, and by the want of confidence engendered by the Railway having at the beginning of the year to refuse considerable amounts of traffic for want of rolling-stock. The Budget estimate of 450,0 was accordingly reduced in the Revised to 317,5, and a little more than this was realized.

The saving in expenditure, 286,8, against estimate, 340,0, is due to the diminished traffic, and to endeavours to economize the working.

134. *Indus Valley Railway.*—The traffic was somewhat less than estimated, but the recovery of some outstandings brought up the receipts. The increase of 15,0 in expenditure is owing to extra mileage run.

135. *Dhond and Manmad.*—There is no gross account in this line, the net earnings being received from the Great Indian Peninsula Railway who work the line. They were not quite so much as anticipated.

136. *Nagpur and Chattisgarh.*—Heavy grain traffic in the last quarter of the year brought in increased receipts. The expenditure had been somewhat over-estimated, and it was found possible to work the increased traffic with fewer trains.

137. *Rangoon and Irrawaddy.*—There was a steady improvement of traffic which it was found possible to meet without increase of expenditure.

138. *Calcutta and South-Eastern.*—The receipts are better than estimate, but are not yet enough to cover the maintenance charges.

139. *Nalhati.*—The line only just pays its way, and it was a little better than estimate.

140. *Tirhoot.*—The Budget estimates were very accurately followed.

SECTION G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS.

141. *Northern Bengal Railway.*—There was a considerable increase over the estimates in the goods traffic, and there was a small decrease in the expenditure.

142. *Patna-Gya Railway.*—There was a small improvement in traffic, but the expenditure exceeded estimate by 5,1, owing chiefly to heavy charges for hire of rolling-stock from other lines.

143. *Muttra-Hattras Railway.*—The estimate of traffic was not quite realized. The charges were somewhat exceeded owing first to repairs to rolling-stock, and second to the debitting against this line of part of the charges for general administration.

144. *Cawnpore-Furrakhabad Railway.*—The traffic on this line, of which this was the first complete year, rapidly developed and increased by 50 per cent. on estimate. Nevertheless the charges only slightly exceeded estimate.

145. *Ghazipur-Dildarnagar and Achneyra-Muttra Railway.*—In these cases the estimates were only tentative, and in the first case they were not realized.

XXVI.—Guaranteed and Subsidized Railways, Net Traffic Receipts.

Accounts, 1880-81.			Guaranteed Interest, 1881-82.	Guaranteed Railways.	Budget, 1881-82.			Revised, 1881-82.			Accounts, 1881-82.			Percentage of maintenance.

2,013,5	1,510,2	503,3	553,9	Sind, Punjab and Delhi	1,430,0	1,030,0	400,0	1,500,0	1,205,0	295,0	1,515,2	1,197,3	317,9	79'0
377,3	240,1	137,2	204,2	South-Indian	385,0	245,0	140,0	377,5	257,5	120,0	364,4	236,8	127,6	64'9
7,882,3	4,987,6	2,894,7	3,271,8	Total	7,490,0	4,760,0	2,730,0	8,262,5	4,772,5	3,490,0	8,425,7	4,810,2	3,615,5	57'2

146. *Bombay-Baroda and Central India Railway.*—The traffic receipts were estimated at 1,030,0 against 888,8 in 1880-81, as an improvement was expected in consequence of the opening of the Rajputana Railway. The increase was still greater than expected. The Budget expenditure of 530,0 included 50,0 for the completion of the Nerbudda bridge. When this was found not to be required the Revised estimate was reduced, but heavy renewals at the end of the year brought the expenditure to 513,5.

147. *Eastern Bengal Railway.*—The traffic was exceptionally heavy and gave a large increase over estimate. The Revised estimate of expenditure included a large amount set aside for heavy repairs and renewals, which were not fully utilized.

148. *Great Indian Peninsula Railway.*—There was an extraordinary increase of traffic on this line, due in a large measure to the development of the wheat export trade in 1881, a trade which was largely encouraged by short crops in Europe and America. The expenditure was less than estimate, but the reduction is more nominal than real, and occurs chiefly in the Suspense transactions.

149. *Madras Railway.*—The revenue is steadly increasing. The expenditure fell short of estimate chiefly in consequence of delay in arrangements for the construction of 100 new wagons.

150. *Oudh and Rohilkund Railway.*—Both revenue and expenditure slightly better than estimate. Increase of expenditure, compared with 1880-81, due to heavy repairs.

151. *Sind, Punjab and Delhi Railway.*—The high figures of 1880-81 were due to the War traffic, and for 1881-82 only ordinary rate of revenue was estimated, which has been more than covered. The expenditure has exceeded estimate partly owing to heavy renewals and repairs, but chiefly, as the Accountant General, Public Works Department, reports, owing to inefficient and extravagant management.

152. *South India Railway.*—For proper comparison of accounts with Budget, 13,9 should be added on both sides being cost of carriage of Revenue stores. With this addition the revenue and expenditure are both a little worse than estimate.

XXVII.—East India Railway, Net Traffic Receipts.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
4,252,8 + 18,7	Traffic Receipts	4,250,0	4,600,0	4,710,5 + 29,6*
1,482,3 ...	Deduct Expenditure	1,450,0	1,490,0	1,448,8 + 29,5
2,770,5 + 18,7	Net Earnings	2,800,0	3,110,0	3,261,7 + 1

* Includes 2 in England.

SECTION G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS

The figures separately stated with a + are arrear adjustments belonging to the account of the line as a Guaranteed Railway.

153. The Budget estimate of receipts was placed at 4,250,0, the same as the expected receipts of 1880-81, because there was a slight downward tendency in the revenue, and it was not possible to say whether it would not be still more marked by the opening of the Rajputana Railway towards Bombay. The traffic till the end of December showed so much increase that the revised estimate was taken at 4,600,0, and would have been taken higher but for fears, which proved unfounded, that a reduction of third-class fares, made on 1st January 1882, would prejudice the receipts. That month itself, however, showed an immense increase, owing to a special fair held at Allahabad, and the year terminated with 4,710,3.

The expenditure was first estimated at 1,450,0, and in the revised at 1,490,0. The increase anticipated in the Revised was not, however, actually spent, a result partly owing to materials required for repairs not being available.

XXVIII.—Irrigation and Navigation, Direct Receipts.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	Imperial—			
36,8	North-West Provinces	35,0	52,2	49,1
198,5	Punjab	246,9	208,0	233,0
14,7	Madras	13,0	12,7	15,2
15,6	Bombay	20,3	21,6	24,5
265,6	Total Imperial	315,2	294,5	321,8
	Provincial—			
101,5	Bengal	120,0	107,2	125,5
271,6	North-West Provinces	303,3	401,8	418,3
373,1	Total Provincial	423,3	509,0	543,8
5	England	5	2	2
639,2	Total	739,0	803,7	865,8

154. The falling-off in the Punjab is only apparent and is due to the transfer of Water-advantage rates to the head of Land Revenue, under Productive Public Works.

The revised estimate in Bengal anticipated short collections owing to prevalence of low prices. In the case of the North-West the two figures, Imperial and Provincial, form a single account, and the combined increase was owing to the transfer from Ordinary to Productive of the Eastern Jumna Canal, and also to arrear collections and increased demands.

XXIX.—Madras Irrigation and Canal Company, Net Traffic Receipts.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
8,9	Earnings	9,4	7,2	7,6
16,5	Working Expenses	25,7	17,6	16,5
—7,6	Net Earnings	—16,3	—10,4	—8,9

XXX.—Portion of Land Revenue due to Irrigation.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
65,1	North-West Provinces	66,9	87,0	87,2
161,2	Punjab	16,8	31,6	33,3
552,1	Madras	600,0	539,0	334,5
18,9	Bombay	23,3	21,4	36,2
797,3	Total	707,0	679,0	491,2

155 The increase in the North-West is due to the transfer of the Eastern Jumna Canal from Ordinary to Productive; that in the Punjab to the transfer to this head of Water-advantage rates hitherto taken as direct receipts.

The very great decrease in the Madras figures is due to the fact of the Board of Revenue, on whose report the deduction is taken, having this year excluded the receipts which are due to old works not included in the list of Productive Works.

SECTION G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (REVENUE ACCOUNT.)

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
9,259,4	EXPENDITURE .	9,680,0	9,673,0	9,649,0

156. Under this head we have first a payment of Guaranteed Railways profits, exceeding the estimate by 160,0, the direct consequence for the most part of better revenue. Both State Railways and Irrigation cost for maintenance and working a little more than estimated; due in the first case to increase in receipts. These increases were compensated for, so far as the account of Protective Public Works is concerned, by a reduction, in the rate of interest charged against the account, from 4½ to 4, the amount of the reduction being 220,0.

36.—State Railways, Working and Maintenance.

157. The figures and explanations under this head have already been given in connexion with the expenditure.

37.—Guaranteed and Subsidized Railways, Interest and Profits, &c.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	GUARANTEED INTEREST—			
7,4	India	4,8	6,2	7,0
3,254,5	England	3,267,0	3,265,0	3,264,8
	MOIETY SURPLUS PROFITS—			
...	Bombay, Baroda and Central India . .	45,0	86,4	86,4
35,7	Eastern Bengal Railway . . .	55,4	57,9	57,9
55,9	Great Indian Peninsula Railway . .	65,0	186,9	186,9
...	Sind, Punjab and Delhi Railway . .	0	2,1	2,1
57,6	LAND AND CONTROL . . .	78,8	85,5	74,7
3,411,1	TOTAL . .	3,516,0	3,690,0	3,679,8

158. The Guaranteed interest payments exactly agree with Budget, 2,2 being transferred from England to India. The details of Railways may be seen in the figures shewn on the Revenue side.

In the surplus profit figures, the Bombay, Baroda and Central India figures exceeded estimate chiefly in consequence of the appropriation of 50,0 from profits to the Nerbudda Bridge not being required. The estimate for the Great Indian Peninsula Railway was made at a time (February 1881) when there had been a sudden collapse in the revenue by the line, which immediately thereafter recovered itself, and appeared in the large profits —payment made in December 1881 for the half-year ending June 1881.

The increase in the charges for Land and Control are due to land required in Bombay for the new Byculla Station, and to land required for the extension of the Oudh and Rohilkund Railway. For both of these additional grants were made during the course of the year.

38.—East India Railway, Interest and Profits.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	ENGLAND—			
262,0	4 per cent. on the deferred annuity . .	262,0	262,0	262,0
711,2	Annuity of 1,179,0; unredeemed portion .		...	949,8
19,3	One-ninth of the redeemed portion paid to Sinking Fund	974,9	975,4	26,6
8	Contribution to Management . . .		...	1,0
	Interest on Debentures of East India Railway .	145,5	...	...

...	Payment for Land	...	...	1,1
123,0	. . . . .	204,6	199,6	199,3
1,116,3	. . . . .	1,587,0	1,437,0	1,438,7

SECTION G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (REVENUE ACCOUNT.)

159. There is a saving in the contribution to Provident Fund in 1881-82, because on alteration from half-yearly to yearly payments only one half-year's payments comes into the year's accounts.

The payments against the estimate of 145,5, for interest on Debenture Stock, will be found under the head of 41—Interest.

The payment for Land is an arrear charge belonging to the East India Railway as a Guaranteed Railway.

39.—Irrigation and Navigation (Working and Maintenance).

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	1881-82. Accounts.
	IMPERIAL—			
76,2	Punjab	90,9	90,9	85,3
87,0	Madras	69,7	76,4	73,0
19,8	Bombay	30,0	23,7	22,2
183,0	TOTAL	190,6	191,0	180,5
	PROVINCIAL—			
99,2	Bengal	90,5	94,5	104,1
143,2	North-West Provinces	144,9	167,5	170,9
242,4	TOTAL	235,4	262,0	275,0
1	ENGLAND	0	0	2
425,5	TOTAL	426,0	453,0	455,7

160. In the Imperial portion the revised estimate provided a considerable sum for repairs in Madras of damage caused by the cyclone of November 1880, and the increased charge was just met by savings in Bombay.

The short outlay, as compared with the Revised estimate, is on the Bari Doab and Western Jumna Canals in the Punjab, and in the Godaveri Delta system in Madras, and is ascribed to lateness of sanction of estimates.

161. Under Provincial, there is on the whole an excess of expenditure over estimate of 39,4. Of this amount 17,3 represents the Eastern Jumna Canal transferred to the category of Productive Public Works only after the Budget estimates were framed, and the rest is explained as the cost of repairs not foreseen at the time of the estimates, and only partly allowed for in the Revised estimates.

40.—Madras Irrigation and Canal Company (Interest, &c.)

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	1881-82. Accounts.
50,0	Interest	33,2	50,2	50,0
5	Land and Control	—2	—2	5
50,5		33,0	50,0	50,5

162. At the time of the estimates the purchase of the undertaking by the Secretary of State was in contemplation, and interest was therefore provided for only part of the year. The purchase was not, however, effected.

41.—Interest on Debt incurred for Productive Public Works.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	1881-82. Accounts.

	INTEREST ON OTHER CAPITAL—			
	East India Railway Commutation Stock—			
2	Rupee	...	...	4
156,0	Sterling	204,6	204,6	203,6
	East India Railway Debentures—	...	145,5	145,5
88,0	3½ per cent. E. I. R. Annuity Redemption Stock	...	3,8	3,7
	India 3½ per cent. Stock	35,0	...	...
	TOTAL	2,449,0	2,327,0	2,339,0

SECTION G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (REVENUE ACCOUNT.)

163. The charges placed against State Railways, Irrigation and Public Improvements are reckoned as follows:—

	State Railways.	Irrigation.	Public Improvements.	Total.	Interest. Rate per cent.	Interest. Amount.
Capital Expenditure during 1880-81 .	2,553,6	614,5	70,0	3,238,1	4½	145,7
Capital Account at end of 1880-81 .	28,047,0	17,257,7	414,3	45,719,0	4½	2,057,3
Capital transferred from Ordinary, 1881-82	21,5	619,1	...	640,6	...	...
Capital Expenditure during 1881-82 .	1,635,2	565,8	68,9	2,269,9	4	90,8
Capital Account at end of 1881-82, being the sum of the last three lines	29,703,7	18,442,6	483,2	48,629,5	4	1,945,2

(All the above figures will be found in Finance and Revenue Accounts, No. 4.)

Now, the charge for interest is reckoned upon the amount of the Capital account at the end of the year, less half the amount spent during the year (which is a little more convenient than saying interest upon Capital account at beginning of year, *plus* half interest upon amount spent during year.) We thus get for 1880-81, 2,057,3—72,8=1,984,5, and for 1881-82, 1,945,2—45,4=1,899,8; composed, if the reckoning be made in detail upon the figures above given, as follows:

	State Railway.	Irrigation.	Public Improvements.	Total.
1880-81	1,204,7	762,7	17,1	1,984,5
1881-82	1,155,5	726,4	17,9	1,899,8

These figures do not represent any particular part of the interest charges paid by Government, but only the portion of the general interest charge which may be reckoned as paid on debt incurred for Productive Public Works. Till 1880-81 this was reckoned at 4½ per cent., but from 1881-82 the reckoning has been changed to 4 per cent. on the ground that the mass of the Indian debt now bears that rate of interest. But there is one loan, specially reserved for Railway construction, on which Government has still to bear 4½ per cent. interest, namely the Indore State Railway loan of £1,000,0, and the extra half per cent., or 5,0, must be charged on this account even after the general rate is reduced to 4. Accordingly it will be seen that the 1,155,5 above stated, when it passes into the account, becomes by this addition 1,160,5.

164. The figures against the East India Railway in the first section of the account are the calculation at contract rates (4½ per cent. interest) on the amount advanced by Government under the heads Capital, Capital Advance, Stores, and Stores Advance.

The difference between the Budget estimate and the actual result in this first part of the account is simply the reduction of the rate of charge from 4½ to 4 per cent, carried out under the orders of 10th February 1882. But for this the charge would have almost exactly tallied with the estimate.

165. The figures in the lower portion of the account differ from estimate chiefly in consequence of some changes of accounting. The interest on East Indian Railway debentures was provided under the head, 38-East India Railway, but it has been determined that the proper place for it in the accounts is 41,-Interest. On the other hand the 3½ per cent. stock, raised in England to meet the discharge of the debentures, is to be treated as ordinary debt; the interest will be treated as that on ordinary debt, but as the payment on discharge is taken as an advance on Capital account (Head 53), it is practically removed to the Protective Public Works Account of interest by being carried into the East India Railway figure, 81,0, shewn in the first part of the account. The 3½ per cent. redemption stock was not provided for in Budget, as it was sanctioned by Act of Parliament only in August 1881. It involves a reduction of the annuity charge under East India Railway.

SECTION H.—RECEIPTS ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
745,2	RECEIPTS	665,0	688,0	727,8

166. Of the amount on the Budget estimates about 50,0 was, in the accounts transferred with the Eastern Jumna Canal to the Productive head. But this 50,0 and as much more was made up by better receipts of rents, and especially Tolls and Ferries, under the heads of Military Works and Buildings and Roads.

XXXI.—State Railways.

167. This head is blank in the accounts of 1881-82, as the revenue from the two lines charged under "Frontier Railways" have been compiled with the Indus Valley and the Punjab Northern lines respectively; and no lines had yet been opened which had been charged either as Protective or as "Ordinary" Railways. The head will be opened in the accounts of 1882-83.

XXXII.—Subsidized Railways.

	1881-82. Budget.	1881-82. Revised.	Accounts.
BENGAL CENTRAL RAILWAY	0,0	2,3	2,3

168. This is a small receipt of interest on the money deposited by the Company in England and is taken against the charge of interest on advances to them.

XXXIII.—Irrigation and Navigation.

1880-81. Accounts.		1881-82. Budget.	1881-82. Revised.	Accounts.
5+ 0	India . . .	4+ 0	4+ 0	3+ 0
0+ 1,8	Burma . . .	0+ 3,6	0+ 2,8	0+ 3,2
...	Assam . . .	...	0+ 2	0+ 2
1,4+ 66,9	Bengal . . .	1,0+ 68,3	1,5+ 70,2	1,3+ 71,3
3+ 90,4	N. W. P. . .	0+ 67,7	0+ 11,7	1+ 11,8
10,4+ 1,3	Punjab . . .	10,2+ 2,3	11,0+ 2,0	13,6+ 2,9
1,6+ 12,2	Madras . . .	1,6+ 11,5	2,6+ 11,5	3,1+ 12,6
11,1+ 0	Bombay . . .	13,4+ 0	15,1+ 0	10,8+ 0
25,3+172,6	TOTAL .	26,6+153,4	30,6+ 98,4	29,2+102,0
197,9		180,0	129,0	131,2

169. In the above sets of figures the first is Imperial and the second Provincial with a very small item, in Bengal, of Local. In all these cases the accounts have fairly followed and are a little better than the estimates. The decrease in the North-Western Provinces is not real, being due to the transfer of the Eastern Jumna Canal to the Productive Account, where its revenue, 73,9, will be found to have given a corresponding increase over estimate.

XXXIV.—Military Works.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
20,2	India	22,4	22,5	27,2
2,1	Madras	2,1	2,8	4,7
11,1	Bombay	8,9	11,7	12,1
2,7	Other Provinces	2,2	2,3	6,3
36,1	TOTAL .	35,6	39,3	50,3

170. The increase under India is ascribed to the value of sheet iron received from the Field Engineer Park, Thull Brigade, and to increases in rents of buildings and in sale of old materials. Rents and sales also account for the increase in Madras. Under other Provinces, Burmah, where Military works are provincial, gave an increase, in the accounts, of 1,8, chiefly by the sale of dismantled Military buildings in the Rangoon district.

SECTION H.—RECEIPTS ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE.

XXXV.—Civil Buildings, Roads, and Services.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	IMPERIAL—			
16,8	India . .	16,7	19,2	23,3
13,8	England . .	12,5	13,7	13,6
30,6	TOTAL .	29,2	32,9	36,9

44,6+ 104,3	N.-W. P. . .	10,0+ 99,2	13,1+ 108,2	20,9+ 105,8
2,3+ 60,0	Punjab . .	2,1+ 53,9	2,4+ 62,5	2,6+ 62,4
19,8+ 54,2	Madras . .	13,0+ 47,6	17,0+ 56,6	26,4+ 59,9
63,7+ 30,1	Bombay . .	61,6+ 29,8	65,6+ 51,8	65,0+ 42,6
154,3+ 326,3	TOTAL .	117,2+303,0	129,7+355,1	153,5+353,6
511,2	TOTAL ALL .	449,4	517,7	544,0

171. Under Imperial the chief items of difference are +10,9 in Bengal, largely due to receipts by sale of old materials in dismantling the Financial Offices and the buildings on the site of the new Military Account Offices in Calcutta, and the Chandmari Building at Howrah, and to large recoveries of deferred College Fees; +2,5 in Madras, rents of buildings, sale of old materials and deferred College Fees; —5,0 in Bombay, owing to the transfer to the Civil Department of realizations by sale of Esplanade Lands.

The English Receipts of fees at the Royal Engineering College were increased by new regulations which disallowed deferred payments.

172. The Provincial and Local Receipts have been shewn in two figures, of which the first represents the share of the Public Works Department and the second that of Civil Officers.

Under the first the differences are +7,0 in Bengal, chiefly by the receipt from the Northern Bengal Railway of 7,8, the traffic receipts of the service between Kawnia and Doobree; +10,9 in North-Western Provinces, chiefly by receipts of the Roorkee workshops which brought in 1882 more than the revised estimate; +13,4 in Madras, chiefly by the disposal of stock at the Presidency workshops.

173. The receipts "in charge of Civil Officers" are almost all "Tolls and Ferries," indeed if we except those of the "Bhabar Improvement Fund" in the North-Western Provinces (about 2,0 a year); some miscellaneous receipts of Local Funds in Madras; and an exceptional receipt in Bombay by the sale of a road to the Bombay-Baroda Railway; everything else may be called "Tolls and Ferries." These, it will be seen, were somewhat more productive this year than last year (the actual figure, *i. e.*, 287,5 against 276,6), but the estimates were too safely made, especially in the North-Western Provinces, the Punjab and Madras.

SECTION H.—EXPENDITURE ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
7,392,7	EXPENDITURE . .	7,168,0	6,730,0	6,393,5

174. The mass of the saving under this head is due to a transfer from Frontier Railways to "War Operations" of 460,0 of expenditure incurred upon the abandoned portion of the Kandahar Railway. Besides this there was a saving of about 140,0 in the expenditure on irrigation. Under Buildings and Roads excess expenditure in Public Works Department was made up for by the inability of the Bengal Civil officers to work up to their sanct[illegible]

SECTION H.—EXPENDITURE ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE.

42.—State Railways Capital Account.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
	IMPERIAL—			
0	Punjab Northern Railway	118,1	0	0
0	Bhopal Railway	70,0	70,0	70,0
22,1	Director General's and Store-keeper . .	23,2	23,9	22,8
29,6	Other Establishments	35,0	8,5	8,4
...	Calcutta Docking Company . . .	12,0	...	0
4,9	Other Charges	33,7	30,7	20,2
56,6	TOTAL .	292,0	133,1	121,4
	PROVINCIAL—			
12,2	Diamond Harbour Railway . . .	75,0	100,0	91,8
0	Dinagepur Railway	44,4	25,0	20,3
4,7	Various Railway Surveys	5,6	20,2	11,0
3,5	Other Charges	0	2,7	3,2
20,4	TOTAL .	125,0	147,9	126,3
77,0	TOTAL BOTH .	417,0	281,0	247,7

175. The saving in the revised estimates for Imperial, as compared with the Budget, was due (1) to the transfer of part of the Punjab Northern Railway works (118,1) to the Productive Account; (2) to savings in establishment, 26,5, and to a contemplated purchase of the Calcutta Docking Company's estate (12,0) not being carried out. The Budget included a Reserve of 20,0, which was during the year appropriated to surveys for new lines. On the other hand, the Provincial estimate was raised from 125,0 to 147,9, chiefly to provide for additional works on the Sunapur-Diamond-Harbour Railway.

Neither the Imperial nor the Provincial estimate thus altered was worked up to. The saving arose from short expenditure of the grant for the Railway just mentioned and for the Dinagepur Railway. Also, under Provincial, a refund to this head was made, first of the charges for survey of the Bengal Central Railway by the Company which took over the works, and second of the similar charge of the Southern Mahratta Railway, which was passed over to Protective Works.

43.—State Railways Working and Maintenance.

176. This head is as yet blank for the reason stated upon the Revenue side.

44.—Subsidized Railways.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
0	BENGAL CENTRAL RAILWAY .	0	39,0	17,5

177. The transactions of this Company were not arranged for at the time of the Budget estimates. The revised provided 4,3 for interest on advances, and 34,7 for outlay on taking up land. Of this last amount only 13,2 were spent by the end of the year.

45.—Frontier Railways.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
786,0	Kandahar Railway . . .	386,0	428,7	420,9
1,021,5	Punjab Railway, Northern Section .			
—208,6	Stores, India			
694,7	Stores, England	404,0	340,0	363,5
2,293,6	TOTAL . .	790,0	768,7	784,4
	Deduct transferred to War Account	...	560,0	559,7
	NET .	790,0	208,7	224,7

178. The last item must for the present be left out of the account.

179. Taking up the others; the Budget provision was made for the Kandahar Railway and for the Punjab Northern beyond Pindi; and the estimate was increased by 160,0 in the course of the year, chiefly with a view to early completion of the works. The expenditure on the whole was somewhat more than the originally intended 790,0, but in making up the

account it comes out less 784,4 because of considerable transfers of stores, originally charged against this head, for use on Protective Railways. This transfer gives a credit to this head by debit to Protective Works.

180. The last entry represents a transaction not contemplated at the time of the Budget, namely, the abandonment of the upper section of the Kandahar Railway and the charging off as War losses the whole of the final expenditure incurred upon it as well as losses and depreciation of stores. A minus entry is therefore brought into this Account, which removes from the Public Works Accounts all expenditure incurred upon this section of the Railway as well as some similar losses on the Punjab Northern.

46.—Irrigation and Navigation.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
5,5+ 0	India	12,2+ 0	8,9+ 0	7,3+ 0
0+ 42,7	Burmah	0+ 42,7	0+ 37,1	0+ 49,8
0+ 2,8	Assam	0+ 15,9	0+ 3,1	0+ 3,6
40,8+144,4	Bengal	85,0+309,7	85,0+281,8	77,7+262,1
1,0+ 44,2	N.-W. Provinces	1,8+ 48,4	6+ 21,5	6+ 21,6
59,5+ 1,1	Punjab	49,0+ 1,7	49,0+ 1,6	35,5+ 1,7
145,3+ 30,7	Madras	169,7+ 32,8	174,0+ 32,8	154,1+ 25,2
185,8+ 0	Bombay	157,0+ 0	183,4+ 0	150,7+ 0
5,3+ 0	England	1+ 0	0+ 0	... ...
443,2+265,9	TOTAL	474,8+451,2	500,9+377,9	425,9+364,0
709,1		926,0	878,8	789,9

181. In the above table the first set of figures is the Imperial expenditure and the second is the Provincial with a very small addition of Local.

In the Imperial column the revised estimate anticipated excess expenditure of 4,3 in Madras, due to repairs required after the Cyclone of November 1880, and of 26,4 in Bombay owing to additional grants for works in Sind.

The expenditure in all provinces fell short of the grants made, but in Bombay the saving is due chiefly to reduction in the proportion of Establishment charges debited to "Imperial."

In the Provincial Expenditure there is, in Burmah, a considerable increase, due to charges for clearing creeks and improving water communication, provided for under Buildings and Roads having been taken in the accounts under this more appropriate head. In Bengal the saving is chiefly in the non-utilization of grants for the Calcutta Canals; and in the North-Western Provinces, it is owing to the transfer of the Eastern Jumna Canal (Expenditure 17,3) to the Productive class.

47.—Military Works.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
639,9	India	720,7	733,4	714,7
27,8	Central Provinces	35,0	35,0	30,9
49,4	Burmah (Provincial)	50,2	50,1	50,5
9,3	Assam	15,0	30,2	22,0
4,4	Bengal	6,0	19,2	14,4
6,1	North-West Provinces	2,0	3,2	2,8
36,2	Punjab	55,0	63,5	63,7
52,6	Madras	47,0	48,7	49,0
143,5	Bombay	130,0	145,2	122,5
969,2	TOTAL	1,060,9	1,128,5	1,070,5

182. The original grants for the year, 1,060,9, were increased by the balance out of the yearly allowance of one crore, imperial, which had come over unspent from 1880-81. The permitted expenditure is therefore measured rather by the revised than by the

original estimates. They include in Assam additional grants for Military buildings at Kohima, and in Bombay additional grants for the barracks at Colaba and Wanowri.

There was generally a saving, ascribed to failure to work up to the estimates in the following particulars:—

India, saving of 31,7 on grants for original works; Central Provinces, Sitabuldi Fort, and Kamptee Barrack, No. 8; Assam, Military communications and frontier outposts; Bombay, hospital for British Infantry at Ahmedabad.

48.—Civil Buildings, Roads, and Services.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
108,4	IMPERIAL— India	160,4	208,4	204,1
65,7	Bengal	77,7	147,8	138,0

185,4+ 6,2	Burmah	412,5 + 25,1	408,0 + 18,1	317,8 + 19,1
87,1+ 24,2	Assam	125,1 + 33,7	104,8 + 29,1	99,4 + 28,5
467,1+389,5	Bengal	530,0 + 477,4	661,9 + 400,1	668,7 + 397,0
401,0+ 42,0	North-West Provinces	431,1 + 41,4	432,4 + 50,7	444,2 + 42,4
261,0+ 3,6	Punjab	305,5 + 3,8	303,3 + 3,9	303,0 + 4,2
181,8+305,1	Madras	158,7 + 382,3	182,9 + 358,2	149,6 + 373,9
427,4+ 4,3	Bombay	465,0 + 5,0	488,9 + 19,2	481,9 + 17,5
2,101,4+804,6	TOTAL	2,516,0+1,003,1	2,680,5 + 914,0	2,562,2 + 918,4
2,906,0		3,519,1	3,594,5	3,480,6
3,343,8	TOTAL	3,974,1	4,193,5	4,043,2

183. Under Imperial the revised estimate for India included the new buildings at Simla transferred from Punjab, while additional grants for the Koshalgarh-Thull road, and for grants towards the Simla Water Works, prevented a reduction in the total Punjab grant. The Bengal estimate was nearly doubled by additional grants made for the new Treasury Buildings, the new Central Press, and the new Military Account Offices; and there were smaller additional grants elsewhere. The additional grants in Bengal were not fully worked up to, and of the rest of the saving it is necessary to refer only to one item of 4,9 in the Punjab, which it was found had been provided already in the Home estimates.

184. The Provincial and Local figures I have separated into two parts, the first representing works in charge of the Public Works Department and the second those under the charge of Civil Officers.

In the first of these there is a large saving in Burmah, of which no explanation is given except that the officers could not work up to their estimates.

In Bengal, Madras, and Bombay very large sanctions were added by the Government after the Budget estimates were passed, but in Madras they were not worked up to.

Under Works in charge of Civil Officers, the difference is almost entirely in Bengal, where only 397,0 was spent aginst 477,4 estimated. The estimates, which are chiefly those of District Road Fund, seem to have provided for more expenditure than the Committees could really overtake.

MILITARY SERVICES.

1880-81, Accounts.		Budget.	1881-82. Revised.	Accounts.
4,221,7	Receipts .	3,875,0	3,541,0	3,821,5
28,086,2	Expenditure .	18,730,0	18,730,0	18,861,1
23,864,5	Net Expenditure	14,855,0	15,189,0	15,039,6

185. It will be found when we come to consideration of the detail that it is not possible to separate the receipts from the expenditure, because, especially in the War part of the account, the receipts are repeatedly merely *per contra* entries of the expenditure.

186. Taking them thus in the gross, the estimates have been fairly followed. The revised estimate and the actual figures, however, differ from the Budget estimates in two essential matters. First, they include 559,7 of expenditure which was not provided for in the Budget, and comes into the revised estimate and the accounts by a deduction under another head, so that instead of being respectively 324,0 and 174,6 worse than the Budget estimates, they are really 235,7 and 385,1 better. Moreover, there is still further a saving in the expenditure, as compared with the estimates, of 695,0, although this saving is prevented from appearing in the net figures, because it has been thrown back from the receipts of 1881-82 into those of 1880-81. There is therefore, on the whole, a real saving on the anticipated Military net expenditure of 1,080,1, which may be described as arising chiefly from the ampleness of the provision of 1,940,0 *plus* 270,0 made for winding up the War accounts (see Financial Statement of 25th March 1881, para. 15). In the accounts as actually made up, this real saving is thus shewn:—

(1). By increased receipts in 1880-81 . . .	695,0
(2). By saving on the grant for Frontier Railways, 1881-82	559,7
TOTAL .	1,254,7
(3). By apparent excess against the Military estimates	174,6
NET .	1,080,1

SECTION K.—RECEIPTS BY MILITARY DEPARTMENTS.

XXXVI.—Army.

1880-81. Accounts.	INDIA—	Budget.	1881-82. Revised.	Accounts.
525,1	Commissariat	510,3	567,8	657,7
80,9	Clothing	71,7	83,7	90,7
51,6	Ordnance	66,5	72,3	102,9
179,5	Other Receipts	128,5	178,7	242,1
837,1	TOTAL INDIA	777,0	902,5	1,093,4
87,0	ENGLAND	37,0	66,5	68,3
924,1		814,0	969,0	1,161,7

187. The increase in Commissariat recoveries is due to the recovery of the value of stores supplied to officers and others during the Kabul War, and to the sale of elephants and cattle on the reorganization of the Transport Department.

Under Clothing there were larger issues on payment, and there were special recoveries, first from Her Majesty's Government for clothing supplied to troops proceeding to South Africa, and secondly, from Native Governments supplied from the Madras stores.

The Ordnance recoveries were increased by sales to Native States and local authorities and by sales of condemned stores.

SECTION K.—RECEIPTS BY MILITARY DEPARTMENTS.

Under "Other Receipts" the increase is chiefly due to the item of 89,1 under Miscellaneous in the "India" portion of the accounts which represents recoveries of amounts entered as expenditure in the former year's accounts, but which would appear to have been rather of the nature of advances. There were also some arrear adjustments under "Transport Service" giving accounts 20,0 against estimate 13,4.

188. Of the excess receipts in England, 17,0 is only nominal and appears also in the expenditure side. Of the rest 7,5 are for value of clothing brought with troops from India, and 5,9 on account of the Indian Troop Service.

XXXVII.—Military Operations in Afghanistan.

1880-81. Accounts.	INDIA—	Budget.	1881-82. Revised.	Accounts.

—33,8	Unaudited Expenditure . . .	...	—7,1	+33,8
16,717,7	TOTAL .	16,459,0	17,119,0	17,216,2

190. The small increase under Staff is due to excess expenditure in telegrams and to the staff of the Quetta district not provided for in the estimates.

In Regimental pay there was a saving owing to the reduction of the number of Royal Artillery from 86 to 77 batteries, and to the absence of the 14th Hussars in South Africa. The number of officers on leave was also unusually great during the year. On the other hand, part of the saving was spent in the increase of pay to officers and non-commissioned officers under the Royal Warrant of 25th June 1881.

SECTION K.—ARMY SERVICES.

Under Commissariat there is a very large increase, which must be attributed, in a general way, to War expenditure, as will be more fully explained in the remarks made under that head.

The increase under Ordnance is due to a large quantity of copper supplied to the Dumdum factory by the Calcutta Mint, and there were also heavy charges for stores and arms supplied to the Indian troops at Malta and Cyprus.

Under other non-effective charges the increase over estimate is chiefly under Sea Transport (expenditure 125,9 against estimate 47,2). It was partly due to the employment of hired transports in the Burmah and other reliefs, and in withdrawing the troops *vid* Kurrachee from Afghanistan; and to arrear adjustments in connection with the Indian Troop service, which, as mentioned on the receipt side, have also brought in unexpected receipts.

The increase in Pensions and other non-effective charges is due to the new admissions to the pension lists not provided for in the estimates.

191. As regards the English accounts the saving in Regimental pay is the balance between a saving of 35,0 under Home charges and an increase of 16,0 in furlough allowances due to the large number of officers going to England on furlough after the Afghan War. Both of these are made up for in other parts of the account, for the first is due merely to the transfer of certain charges to the non-effective list, and the second, as already explained, has caused a saving in India.

The increase in Transport charges is the same as has been referred to on the receipt side as occurring on both sides of the account. The decrease in stores and in miscellaneous represents chiefly postponed payments.

Under non-effective charges there is the increase of 35,0 by transfer, as just mentioned from the effective charges, but there is an equal decrease owing to the Retirement Scheme not being taken advantage of to the extent anticipated.

50.—Military Operations in Afghanistan.

1880-81. Accounts.	INDIA—	1881-82. Budget.	1881-82. Revised.	1881-82. Accounts.
	Commissariat	2,271,0	1,895,1	1,366,0
	Other Military Charges			281,5
	Civil and Telegraph Charges			258,1
	Public Works Charges	...	560,0	571,5
10,452,8	TOTAL AUDITED	2,271,0	2,455,1	2,477,1
845,1	ADD—Unaudited expenditure			
	DEDUCT—Expenditure already brought to account	...	—845,1	—845,1
11,297,9	TOTAL INDIA	2,271,0	1,610,0	1,632,0
70,6	ADD—England	...	1,0	13,0
11,368,5	TOTAL	2,271,0	1,611,0	1,645,0

This and the corresponding head upon the receipt side shew the winding up of the accounts of the Afghan War. The Budget estimates anticipated the following:—

(1). An estimate, considered to be liberal but having no pretensions to accuracy, of actual net expenditure in the last month or two of military occupation and till the troops were finally withdrawn	1,940,0
(2). Compensation to be paid to camel-owners	270,0
(3). Expenditure upon Frontier Railways	790,0
TOTAL	3,000,0

The last item was in the Budget estimates taken under the Public Works heads, and the first two were taken as Receipts 61,0, and Expenditure 2,001,0 giving for the Indian account, total receipts 61,0, total expenditure 2,271,0, net expenditure 2,210,0.

SECTION K.—ARMY SERVICES.

192. The expenditure on War account fell off much more rapidly than was expected and the accounts, made up for nine or ten months, gave the following revised estimate as against the 2,210,0 just mentioned:—

Receipts		267,0
Expenditure audited and brought to account in 1881-82	1,895,1	
Deduct portion of this which had been incurred before 1881-82, and had been charged off in the accounts, before audit, in 1880-81	845,1	1,050,0
Actual Net War Expenditure		783,0
Less than Estimate (2,210,0)		1,427,0

193. This apparent falling-off must be taken against the excess in the Ordinary Expenditure where the greater part of the following differences is specifically ascribable to the War accounts:—

	Estimate.	Revised Estimate.
Commissariat Expenditure	2,384,4	3,009,0
Deduct Receipts	510,3	567,8
NET	1,874,1	2,441,2
More than estimate		567,1

and the same may be said of other heads.

The Financial Statement of 8th March 1882, para. 85, states as follows:—

"It has, in fact, been found impossible to distinguish accurately between Ordinary and War Expenditure. Orders were issued in the course of last autumn that from January 1st, 1882, the charges on account of the troops beyond the frontier should be treated as Ordinary, only special charges, such as compensation for loss of camels, &c., being classified as War Expenditure. It cannot be doubted that a great deal of the expenditure debited to the Ordinary account really belongs to the War. The Military estimate must, in fact, be treated as a whole. The division into Ordinary and War Expenditure does not pretend to any great accuracy."

We obtain therefore a more correct view of the Revised Estimate of War expenditure by assuming as War expenditure the whole excess over Budget under the ordinary head of Army, that is 660,0 expenditure less 155,0 receipts, or 505,0 in the net expenditure.

The figures as finally made up do not differ materially from the Revised Estimates, if we exclude the special recovery of about 89,1 referred to in para. 187 and are—

	Revised Estimate.	Account.
In *War Account*, excluding 560,0 (actual 559,7) of Public Works charge which belongs to a separate account	1,895,1	1,917,4
Deduct, as before, amount already brought to account	845,1	845,1
War expenditure of 1881-82	1,050,0	1,072,3
Deduct War receipts	267,0	354,8
Net War Account	783,0	717,5
In Ordinary Account—		
Excess of ordinary expenditure over estimates	660,0	757,2
Excess of ordinary receipts over estimates	155,0	347,7
Net	505,0	409,5
Total net War expenditure against the War estimate of 2,210,0	1,288,0	1,127,0

Difference 161,0 or 71,9 besides the 89,1 already alluded to.

194. We have now to note the remaining part of the War estimate of 790,0 on account of Frontier Railways.

The estimate was first of all raised to 950,0 by an addition of 160,0, of which the object was to enable the works on the Punjab Northern Railway to be carried out as speedily as possible. And the actual expenditure incurred against the estimate was about 784,4 as detailed under the head "Frontier Railways," the saving on the estimate of 950,0 being

SECTION K.—ARMY SERVICES.

due to large transfers of stores bought for these works to other Railways, and chiefly to the two now reckoned as "Protective Works."

The 790,0 originally provided was therefore nearly spent; but meantime another determination was come to, with reference to these Frontier Railways, namely, that as the upper section of the Kandahar Railway had been abandoned, the capital expended upon it and some other charges should no longer be regarded as expended upon "Frontier Railways," but be treated as a War loss and passed over to the accounts of the War. The amount thus passed over to be charged off as a War loss was 559,7. This expenditure had already come into the accounts under "Frontier Railways," chiefly in 1880-81, and it was accordingly now deducted from "Frontier Railways" and added to "Military Operations in Afghanistan;" it accounts for the "Public Works Charges" item in the above summary of the War expenditure.

195. As explained in last year's report, the English contribution of five millions sterling to the War was so taken in the Budget estimates of 1881-82 that the three millions credited in the estimates would exactly meet the provision for War expenditure above noted in paragraph . The revised estimates, based on the same principle, reduced to 2,305,0 the portion of the contribution to be credited in 1881-82, and as the actual credits of 1880-81 were fixed, upon this estimate, at 2,695,0, we must necessarily in the accounts of 1881-82 adhere to the credit of 2,305,0. But it will be seen that the real extent to which War items have affected the actuals of 1881-82 is as follows:—

Under "Frontier Railways," actual charges of the year . .	784,4	
DEDUCT—transfer of former years' expenditure to "Military Operations"	559,7	
NET CHARGE . .		224,7
Under "Army Ordinary" estimated excess above taken at .		409,5
Under "Military Operations" Expenditure, including the above transfer of 559,7	1,645,0	
DEDUCT—receipts	354,8	
		1,290,2
Total expenditure for comparison with the credit, on account of English contribution, of 2,300,0		1,924,4

196. So that, in the result, the War account has contributed 380,6 (namely 375,0 under Military operations proper, and 5,6 under Frontier Railways) towards the surplus of the year.

SECTION L.—EXCHANGE ON TRANSACTIONS WITH LONDON.

XXXVIII & 51.

1880-81. Accounts.		1881-82. Budget.	Revised.	Accounts.
3,088,0	On Secretary of State's Bills . . .	3,439,8	3,645,2	3,798,5
36,3	On other Transactions	35,2	39,8	56,0
3,124,3	TOTAL . .	3,475,0	3,685,0	3,854,5
	DEDUCT—			
	On Guaranteed and Subsidized Companies' Transactions—			
57,4	Capital Transactions . . .	57,5	42,2	38,5
103,1	Revenue Stores	96,2	85,1	67,7
68,0	On Capital Transactions, East India Railway	150,0	102,2	46,7
179,0	On Miscellaneous Transactions . .	108,3	161,5	144,9
407,5		412,0	391,0	297,8
2,716,8	NET EXCHANGE .	3,063,0	3,294,0	3,556,7

197. The loss on Secretary of State's Bills was calculated for £17,200,0 of Bills raised at 1*s.* 8*d.* The great demand for Bills at the end of the year raised the issues to £18,412,4, and the average rate being 19·895 pence the gross charge became 3,798,5.

Under "Other Transactions" an excess charge is attributable chiefly to an arrangement by which the Indian Treasuries were made to supply the Treasure Chest at Hongkong, the Secretary of State being reimbursed by the English Government. This has the effect of transferring to "Other Transactions" what would otherwise be dealt with as "Secretary of State's Bills."

198. The Exchange on Capital transactions of Guaranteed Railways is the difference between the £100 shewn on our accounts as the effect of a transaction of Rs. 1000, and the £91⅛ at which the same transaction is to pass on the Companies' accounts, when their contract rate is 1*s.* 10*d.* A reference to the net transactions in India, under Section S will shew that the Railways estimated net receipts (excluding the Oudh and Rohilkhund Railway on which there is no Exchange transaction) of 638,2, whereas the actuals amounted only to 433,6. There was necessarily a corresponding diminution in the portion taken to Exchange.

The Revenue Stores adjustment is the further amount which the Railway Companies have to pay when they take over stores held on Capital account at 22 pence (mostly) and use them for Revenue purposes on which they are not entitled to better than the current Exchange. As the falling-off in receipts in Capital account is due mostly to the smaller demand for these stores-transfers, we find here also a smaller receipt under Exchange.

199. The Capital transactions in England by the East India Railway are brought on the Indian Books at 20 pence the rupee, so that the Capital outlay in England estimated in the Budget at 750,0 brought "Gain by Exchange" of 150,0 as a recovery of the "loss" charged on the Council Bills with which that 750,0 would be supplied. The revised estimate reduced these Capital transactions to 515,0 with a proportionate reduction of Exchange, and as they really amounted to 475,7 (net) the exchange came to only 95,1. We had, however, to write back an excess credit in last year's accounts of 48,4 and thus reduced the figure to 46,7.

200. Under "Miscellaneous Transactions" there was an increase both in Bombay and in Madras owing to realization from Native States of the price of Railway stores supplied to them.

SECTION M.—PROVINCIAL ADJUSTMENT.

201. I have already shewn, para. 16, by what detailed improvements the original combined Imperial and Provincial Surplus, 148,0 of the Budget was increased by 3,954,5. It remains to show how these results were distributed between the Imperial and the Provincial shares of the accounts. Reverting for a moment to the details of the 3,954,5, we can construct the following table :—

	Imperial.	Provincial.
Surplus or deficit, according to Budget . . .	855,0	—707,0
Sum of the three figures printed in Italics in para. 16	...	904,5
Sum of the other figures, excluding the 39,9 "smaller differences"	+3,583,6 —493,7	
The smaller differences, 39,9, are shewn by the detailed accounts to be thus distributed . . .	332,2	+292,3
Total, being surplus on the Revenues of 1881-82 .	3,612,7	489,8

202. But the surplus as thus brought out was still further altered by grants made to Provincial Governments ; first, of 670,0 which had been resumed from them in 1879-80 and 1880-81, under the strain of the Afghan war, and of 360,0 with reference to the revision of provincial contracts. See para. 64 of the Financial Statement, March 8, 1882. Both these special grants and the original Provincial Allotment, in the present form of the accounts, take the shape of a transfer to the provincial account of what would otherwise be Imperial Land Revenue, and the sum of the two grants, 1,030,0, being a deduction from the Imperial and an addition to the Provincial share of revenue, alters the surpluses just stated from 3,612,7 Imperial and 489,8 Provincial to 2,582,7 Imperial and 1,519,8 Provincial. The former appears as surplus in the revenue account, the latter is charged off the revenue account and credited to the account of deposits.

SECTION N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNT).

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
3,656,5	EXPENDITURE .	4,873,0	3,691,0	3,311,4

203. In addition to the usual 2½ crores for State Railways and Irrigation Works we had on the Budget estimates 860,0 of expenditure on East India Railway and 1,405,0 for purchase of the Madras Irrigation Company's undertaking. The last arrangement dropped for the time and disappears from the revised estimates.

204. The State Railway portion of the 2½ crores was duly spent, but a saving of 20 lakhs came on by the necessity of transferring this amount of stores against the grant for Protective Works. The irrigation portion was underspent, so that in all only 2,201,0 went against the annual 2,500,0. Of the East India Railway estimate of 860,0 only 456,0 were required, but a further charge of 386,0 in continuation of the purchase of the line comes against this head.

52.—State Railways.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
1,177,3	INDIA— Rajputana	560,7	626,4	613,5

...	Amritsar-Patankot	...	20,0	20,2
—33,9	BOMBAY	20,0	3,3	2,5
2,630,4	TOTAL .	1,714,1	2,003,1	1,897,8
...	ADD—Reserve	85,9	...	...
76,8	DEDUCT—Excess Credits Store Account .	...	66,2	262,6
2,553,6	TOTAL .	1,800,0	1,936,9	1,635,2
570,7	Out of which in England	458,0	445,0	439,3

205. When the accounts for 1880-81 were closed it was found that there had been short expenditure, chiefly in England, of 92,7, and this amount therefore became available for addition to the original estimates. Moreover, under orders by the Secretary of State the Jhelum-Pindi, and Lala-Musa-Miani sections of the Punjab Northern Railway were transferred, with their grant of 111,9, from the Ordinary to the Productive category. With these additions a total grant of 2,004,6 was admissible for Railways. The revised estimates showed additions to the expenditure on the Rajputana, Chattisgarh, Tirhoot Extension, and Indus Valley lines, but on the other hand estimated for only 20 out of 30 lakhs expenditure on Rangoon-Sittang line, the saving being caused both by delay in supply of sleepers from the Forest Department and by difficulty in finding labour. The estimates on the whole were short of the 2,004,6, chiefly because of the necessity for transferring stores to "Protective Railways" in order to fully utilize the grant under that head. This trans-

SECTION N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNT).

fer in the end was even more than anticipated, and the deduction made from Capital expenditure was thus increased from 66,2 to 262,6.

206. Of the expenditure provided for in the Revised estimates, there were considerable savings on the Punjab Northern line (41,4), due chiefly to transfer of stores to other sections, and on the Tirhoot extension (16,8), due to delay in supply of stores, and to an amount reserved for payment to the Marine Department for steamers under construction not having been transferred. These amounts and some smaller savings, added to the credit received from Protective Works, made up the total short expenditure of 301,7 as compared with revised, or 164,8 as compared with original estimate.

53.—East Indian Railway.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
...	Redemption of Annuity . . .	...	500,0	586,3
418,4	Other Capital transactions . .	860,0	535,0	455,2
418,4	TOTAL .	860,0	1,035,0	1,041,5

207. The first of these transactions is explained under the head of Interest on Debt for Productive Public Works, para. 165.

The second represents the capital expenditure, chiefly purchase of stores in England; it was very much over-estimated by the Company.

54.—Irrigation and Navigation.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
82,1	BENGAL— Soane Project	67,5	67,5	71,2
45,1	Orissa Project	37,5	52,5	33,3
23,0	Midnapur Series	10,0	20,0	11,1
172,9	N.-W. PROVINCES— Lower Ganges Canal . .	162,6	129,0	108,4
23,5	Other Works	37,4	31,0	23,8
286,2	PUNJAB— Sirhind Canal	330,0	332,2	315,1
—85,9	Less Contributions	—105,4	—110,3	—129,4
50,3	Other Works	105,4	59,2	42,1
11,1	MADRAS	5,0	35,9	39,5
	BOMBAY—			
1,8	Deccan	22,0	22,0	14,4
4,4	Sind	8,0	8,0	36,3
...	RESERVE	78,9	...	...
614,5	TOTAL .	758,0	647,0	565,8
0	Purchase of Madras Irrigation Company's undertaking	1,405,0	0	0
614,5	TOTAL .	2,163,0	647,0	565,8

208. The revised estimates show, as compared with Budget—(1) The transfer of the Swat River Canal Works, in Punjab, out of this head to Protective; (2) Additional works in Madras; (3) Anticipations of short expenditure in other respects. The expenditure was for the most part even less than anticipated in the Revised estimates, which is attributed chiefly to delay and alterations in designs, or delay in taking up land, and in Bengal to fever keeping back the works on the Soane Canal.

The last item anticipated an arrangement with the Madras Irrigation and Canal Company for the purchase of their undertaking, which, however, was not accepted by the Company within the year. The item, therefore, dropped out of the revised estimates.

55.—Miscellaneous Public Improvements.

1880-81. Accounts.		Budget.	1881-82. Revised.	Accounts.
70,0	Madras Harbour	70,0	72,0	68,9

209. This is the whole expenditure on the Madras Harbour Works for 1881-82, no part being charged to Ordinary.

SECTION O.—PERMANENT DEBT.

NET INCURRED . .	522,0	—573,0	—466,9

210. In India the Budget provided for raising a new loan of three crores, which was duly notified on 27th June and tendered for on 25th July. It was issued as part of the four per cent. loan of 1865, and was taken up at an average rate of Rs. 105-2·8 annas, giving a premium of 155,3. The price was a purely speculative one, based on anticipations that tenders would be made, as in the 1880-81 case, from Europe. When it was found that the whole burden of the loan would fall on the Indian market, the price went below par within a month of its issue; it then slightly recovered, and was quoted about 101 till the end of the year.

No discharge of loans was anticipated in the Budget, but when it was found that the provision of 750,0 for Famine Relief and Reduction of debt was not required for the former, notifications were issued for the discharge of the reduced four per cent. loan of 1881 (203,1) on 13th February, and of the first two Sicca Rupee loans (37,5) on 27th March. The payments made before the end of the year amounted to 171,6 and 2,5 respectively.

211. The Home estimates provided for the discharge of East India Bonds, 4,487,2, falling due on 30th November 1881, and 65,0 India five per cent. stock, and these payments were duly made as far as they were claimed by the holders.

The loans to be raised were estimated at 700,0, balance of the 3½ per cent. loan of December 1880, and 1,405,0, required for the purchase of the Madras Irrigation Company's undertaking. The receipts against the former were only 618,2, as 81,8 came in before March 31st, and the arrangement by which the second was required did not come off. On the other hand, by an arrangement not included in the estimates and sanctioned by Act of Parliament in August 1881, 586,3 was received by the issue of 3½ per cent. stock, and spent on the redemption of East India Railway annuities. The receipt of 1,205,6 accordingly represents this 586,3 plus the receipts against the estimate of 700,0.

SECTION P.—UNFUNDED DEBT.

ENGLAND—			
Incurred	2,003,8	1,504,0	1,254,0
Discharged	6	5	1,250,6
NET INCURRED	2,003,2	1,503,5	3,4
NET INCURRED	1,836,0	1,841,0	335,8

212. The change in the Indian figures was entirely in Savings Bank Deposits. The Budget anticipated thatthe reduction in the rate of interest from $4\frac{1}{8}$ to $3\frac{3}{4}$, and the withdrawal of some of the favorable conditions recently granted to depositors, would result in a net reduction of Deposit Balances by 377,0. The event shewed, however, that the high figures reached in 1880-81 were not only maintained but added to by 99,0.

213. The English estimates provided for a temporary loan of £2,000,0 for the discharge of the four millions of Bonds falling due on 30th November. However, the high Council Bill drawings reduced the necessity to £1,250,0, and even this was paid off before the year was out.

SECTION Q.—DEPOSITS AND ADVANCES NOT BEARING INTEREST.

	Budget.	1881 82. Revised.	Accounts.
INDIA—			
Receipts	24,968,0	18,970,9	20,994,8
Payments	25,764,0	17,092,6	19,337,7
NET	—796,0	+1,878,3	+1,657,1
ENGLAND—			
Receipts	3,0	16,5	22,5
Payments	2,503,0	1,818,8	1,820,6
NET	—2,500,0	—1,802,3	—1,798,1
NET OF BOTH	—3,296,0	+76,0	—141,0

214. In India the difference in the accounts as compared with Budget is +2,453,1 and is composed chiefly of two items—(1) An increase of provincial Balances by 1,519,8, against an estimated decrease by 707,0; (2) The 715,2 received by the Famine Commissioners for reduction of debt, according to a procedure not settled at the time of the estimates. The first of these is explained under the head of "Provincial Surplus" (Section M above). The second necessarily comes as a gross receipt under this head, because the charges taken against it being discharge of permanent debt are shewn under that section.

215. In the English accounts the difference +701,9 lies chiefly in the treatment of the English contribution for the Afghan War. In the Budget we expected to bring to credit 3,000,0 made up of the actual receipts of 500,0 from the English Exchequer and 2,500,0 charged *per contra* to a suspense account, as explained in last year's report. But as 695,0 of this last were taken into the accounts of 1880-81, the net charge under this section fell short by that amount.

216. There have been during the year vast credits to advances in the Military Department, namely, about 1,000,0, being the amount originally debited under that head but really representing unaudited expenditure. These are prevented from appearing in this final account as a net credit because of the *per contra* entry we make in debiting advances and crediting expenditure for the adjustment of the unaudited expenditure under "Army."

SECTION R.—LOANS TO MUNICIPALITIES, NATIVE STATES, &c.

	Budget.	1881-82. Revised.	Accounts.
Net India Figure . . .	102,0	170,0	195,2

217. The recoveries were better than anticipated, owing to more speedy repayments by some Native States under "India."

ENGLAND	—1,004,2	—796,0	—852,5
	—516,0	—441,0	—502,4

218. Most of the Railways shew smaller receipts in India than estimated, which, as the receipts mostly mean transfers to credit of Capital for stores held on Capital account, and issued for Revenue consumption, indicate less expenditure than anticipated in Budget.

The English figures are the difference between receipts of capital from the Companies concerned, and issues for expenditure, chiefly in procuring stores, paying establishment and occasionally paying off debentures The final figures differed from the estimate chiefly by an extra receipt of 200,0 on account of the Oudh and Rohilkund Railway.

SECTION T.—REMITTANCES.

	Budget.	1881-82. Revised.	Accounts.
Money Orders (net)	0	18,0	19,4
Other Local Remittances (net)	—15,0	3,3	—129,5
Other Departmental Accounts (net) . . .	74,1	—2,8	73,1
Accounts between Civil and other Departments (net)—			
Post Office	0	0	—64,5
Telegraph	0	0	— 3,5
Marine	0	0	39,6
Military	0	0	202,1
Public Works	0	841,5	769,5
Remittances in India	872,9	0	0
Remittance account between England and India (net) .	—82,0	—66,9	—28,7
TOTAL (NET) .	850,0	793,1	877,5

219. These figures all practically shew the outstandings in account. None of them are of any importance, except the figures against Post Office, Military and Public Works. The first of these is the result of a write-back of 65,0, wrongly credited in 1880-81. The figure against Military means that the Military accounts have during the year brought up their account of receipts from the Civil Department, by 202,1, but the amount by which they were in arrear was already taken into account in 1880-81, by charging off a certain amount as unaudited expenditure.

220. The Public Works figure is thus explained. The cheques of the Public Works Department, which were outstanding on March 31st, 1881, amounted to 384,8, but they were then kept under a special Suspense account, in the section of Advances and Deposits. The account was however, in the course of the year, transferred to the account between Civil and Public Works Department, and thus we have in that account the excess credits representing cheques, outstanding on March 31st, 1882, without having the debits on account of cheques outstanding on March 31st, 1881, and paid in 1881-82. Public Works expenditure was very active in March, and the outstanding cheques have been ascertained to be at least 581,7. The rest of the credit was expected as the net transactions between the departments in 1880-81 was a debit of 139,1; but the account is being investigated in detail, and in fact the change of procedure regarding cheques, above alluded to, is one of the preparations for that investigation.

SECTION U.—SECRETARY OF STATE'S BILLS.

221. The amount estimated for in the Budget was £17,200,0, being Rs. 20,640,000 at Exchange 20*d*. The actual drawings exceeded this by £1,212,4, the excess being due chiefly to the strong demand for Bills at the end of the year, which the flourishing state of the Indian Treasuries rendered it advisable to meet as far as possible.

The Bills drawn during the year are thus arranged by month of allotment:—

	£	Rs.	Rate in pence.
March 1881	205,8	2,47,8	19·94
April ,,	1,491,7	18,00,0	19·89
May ,,	1,357·4	16,50,0	19·74
June ,,	1,352,1	16,55,0	19·61
July ,,	868,8	10,61,4	19 64
August ,,	1,648,1	19,94,3	19·83
September,,	971,4	11,76,5	19·82
October ,,	1,087,5	13,12,3	19·89
November,,	1,686,1	20,35,0	19·88
December,,	1,415,3	17,04,0	19·93
January 1882	2,358,2	28,27,5	20·02
February ,,	1,278,1	15,29,3	20·06
March ,,	2,691,9	32,17,8	20·08
TOTAL	18,412,4	2,22,10,9	19·89

And the payment account is as follows:—

	£	Rs.
Bills outstanding, March 31st, 1881	1,396,1	16,78,8
Drawn in 1881-82	18,412,4	2,22,10,9
TOTAL FOR PAYMENT	19,808,5	2,38,89,7
Paid in 1881-82	18,337,0	2,21,28,0
Outstanding, March 31st, 1882	1,471,5	1,761,7

SECTION V.—CASH BALANCE.

	Budget.	1881-82. Revised.	Accounts.
Opening Balance	16,510,0	17,498,8	17,498,8
Closing Balance	11,990,0	17,251,0	17,143,8
Net Decrease	4,520,0	247,8	355,0

222. The result, in the accounts, better on the whole than the Budget by over four millions (4,165,0), is attributable chiefly to—

	Balance, Better.	Balance, Worse.
Imperial surplus of the year increased from 855,0 to 2,582,7	1,727,7	
Temporary Loan in England not raised	...	2,000,0
Savings Banks deposits not reduced	476,0	
Provincial balances increased instead of diminished	2,226,8	
Charge to Suspense, on account of English contribution to Afghan war, reduced	695,0	
Amount set apart for reduction of debt, not utilized	541,1	
Total	5,666,6	2,000,0
Net increase explained out of 4,165,0	3,666,6	

So that a number of smaller differences explain the remaining increase of half a million.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXAMINATION FOR CLERKSHIPS IN THE ESTABLISHMENTS OF THE SECRETARIATS OF THE GOVERNMENT OF INDIA.

No. $\frac{10}{380-390}$.

Extract from the Proceedings of the Government of India, in the Home Department (Public),—under date Fort William, the 12th March 1883.

READ the undermentioned papers on the subject of the examination in the clerical establishments of the Secretariat Offices of the Government of India and the Departments directly attached thereto :—

Home Department Resolution No. 31—1298-1308, dated 31st August 1882.

Home Department Notification No. 1836, dated 24th November 1882.

Letter from the Officiating Secretary to the Board of Examiners, No. 28, dated 21st February 1883, and enclosed list of candidates who appeared at the examination held in January 1883 and the number of marks gained by them.

Reports by the Examiners and by the Registrar to the Calcutta University on the Papers set and the results of the Examination.

RESOLUTION.

THE Governor General in Council regrets to learn that, although 43 candidates presented themselves for Examination for Clerkships in the Upper Division and 157 for Clerkships in the Lower Division, no candidate has succeeded in passing for the Upper and only two for the Lower Division.

2. The Registrar of the University, to whom the selection of Examiners and supervision of the Examination papers was entrusted, reports that, in his opinion, the standard set for the Upper Division was not higher than that of the ordinary B. A. Examination, while the standard for the Lower Division was about equal to that of the F. A. Examination. The character of the papers was, however, designedly different from those usually set at the University Examinations, being shaped to test intelligence rather than acquirements.

3. It appears to be the general opinion of the Examiners that the class of candidates which came forward was not, taken as a whole, equal to that which presents itself at the University Examinations. It may be hoped that as the intention of Government to adhere to the system of filling up vacancies in its offices by competitive examination becomes better known, well educated young men will be more ready to avail themselves of the door thus opened for them into the public service.

4. The most discouraging feature in the Examination was the inability of the great majority of the candidates to draft a proper letter, or make anything like an intelligent précis of official correspondence. These are subjects that no doubt are only to be thoroughly mastered by daily practice, but more might be done in schools to impart at least the elements of letter-drafting and précis-writing.

5. While accepting the opinion of the Examiners as to the character of the papers set, the Governor General in Council is of opinion that the style and scope of the Examination may in some respects be open to re-consideration. This is a matter to which early attention will be given. Any revised rules that may be adopted will be published so as to give ample time for their study by all intending candidates.

6. The list of candidates with their marks will now be printed and circulated to the Heads of the Offices interested in the examinations, in order that appointments may be found without delay for the two candidates who have passed for the Lower Division. No appointment should be made to that Division in any office until it has been ascertained that these candidates are provided for. For the rest it is considered desirable that Heads of Offices should be at liberty to fill up existing vacancies by selecting from the list those candidates who have done well in several subjects, though they failed to pass the tests completely. This will, however, be a matter entirely within the discretion of the Heads of Offices. Meantime the orders in the Home Department Resolution No. 31—1298-1308, dated the 31st August 1882, restricting the power of appointing outsiders without examination and of promoting clerks from the Lower to the Upper Division, must for the current year remain temporarily in abeyance. But no clerk should be admitted or promoted without some sort of departmental examination as a test of efficiency.

ORDER.—Ordered, that a copy of this Resolution (with a copy of the list referred to) be forwarded for information and guidance to the several Departments of the Government of India and to the Heads of Offices under the Home Department noted on the margin, and that the Resolution be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY CONSTRUCTION.

PROGRESS OF INDIAN RAILWAYS DURING THE YEAR 1882-83.

No. 251 R.C., dated Fort William, 13th March 1883.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 171 R. C., dated 22nd February 1883.

OBSERVATIONS.—The Resolution now read again dealt with the Administration Report of Indian Railways for the year 1881-82, and set forth in brief and general terms the progress in construction and traffic working of railways during that year. Now that the official year 1882-83 is about to close, a short review of railway administration during the last twelve months may prove of some interest. General results may be seen from the following figures:—

	End of year		Increase.
	1881-82.	1882-83.	
	Miles.	Miles.	Miles.
Lines open to traffic	9,961	10,251	290
„ under construction	1,302	2,332	1,030
TOTAL SANCTIONED	11,263	12,583	1,320

Of the length now under construction it is anticipated that at least 719 miles will be opened for traffic during the year 1883-84.

2. Although the financial results of traffic working during the financial year are not yet known with exactness, they can be foreseen very approximately, and it is estimated that (excluding lines in Native States for which figures are not available) they will be—

	₹
Gross receipts	15,97,28,000
Working expenses	8,57,10,500
NET RECEIPTS	7,40,17,500

These net receipts will give an average return on the capital cost (including the cost of stores, &c., in suspense) of all open lines of 5·07 per cent.

3. The following railway projects have been taken up by Private Companies:—

	Length undertaken.
(1).—Southern-Mahratta	435 miles, with probable extensions of 413 miles.
(2).—Bengal and North-Western	455 „
(3).—Rohilkhund and Kumaon	62 „
(4).—Baidyanath-Deoghur	6 „
(5).—Burdwan-Cutwah	40 „
(6).—Baidyabutty-Turkessur	22 „

and negotiations are on foot for—

	Miles.
(1).—Nilgiri	12
(2).—Nagpore-Bengal	482
(3).—Palamow-Baroon	61
(4).—Bhopal-Jhansi-Gwalior and Jhansi-Cawnpore	381
(5).—Kissenganj-Kotechandpur	19
(6).—Rawalpindi-Murree	46
(7).—Beypore-Gudalur	65
(8).—Shoranur-Cochin	59
(9).—Ranaghat-Bhugwangola	92

RESOLUTION.—The Governor General in Council has perused these remarks with much interest, and observes that the length of railways open to traffic has doubled during the last ten years, and that, notwithstanding the large addition of comparatively new lines on which the traffic cannot as yet be fully developed, the financial returns are very satisfactory. The general improvement is most encouraging, and indicates that, with care in the selection of route, economical but substantial construction, and careful management of working, railway enterprize in India will become extremely profitable.

2. The commencement which has already been made by private enterprize is satisfactory, and His Excellency in Council feels sure that it is only necessary for the merits of this class of investment to become more fully known to attract sufficient capital for the construction of an additional three or four thousand miles of railway communications.

ORDER.—Ordered, that this Resolution be published in the *Gazette of India*, and that copies be forwarded to the Secretary of State.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab, Public Works Department.
The Chief Commissioners, Central Provinces, Assam and British Burma, Public Works Department.
The Resident at Hyderabad, Public Works Department.
The Agents to the Governor General for Rajputana, Central India, and Bilúchistan, Public Works Department.
The Director General of Railways.
The Accountant General, Public Works Department.
The Consulting Engineers to the Government of India for Guaranteed Railways at Calcutta, Lahore and Lucknow.

Ordered also, that this Resolution be communicated to the Governments and Officers marginally noted for information.

W. S. TREVOR, *Colonel, R.E.*,
Secretary to the Government of India.

Executive Engineer, Meerut Division, Ganges Canal, reports that "the river fell seriously by January 5th, and all rajbahas had to be closed for 25 per cent. of their ordinary time. Matters got very serious on January 20th, the demand being greater than the supply. On 25th rain fell all over the division and all demand ceased. 500 cubic feet were run in rajbahas into escapes and village tanks for the last five days of the month. The rabi irrigation finished on the 25th January and it is believed to be a little more than last year."

Executive Engineer, Bulandshahr Division, reports that "a storm of wind and rain passed along the line of railway on the 10th, with heavy rain at Kot and Sonauta; again heavy rain on the 25th and 26th, which put an end to all demand."

Executive Engineer, Narora Division, Lower Ganges Canal, reports that "clouds and a fall of about two inches of rain on 26th and 27th prevented any stirring demand."

Executive Engineer, Mainpuri Division, reports that "all demand ceased after the 25th, as there was an average of about two inches of rain all over the division on that and the succeeding two days."

Executive Engineer, Etáwah Division, reports that the decrease of 5,976 acres on the area irrigated during the corresponding period of last year is probably merely due to the fact that the last "shudkars" were sent in at the beginning of a running week. There is apparently no climate reason for any falling off in area, nor was there any deficiency of supply.

Executive Engineer, Eastern Jumna Canal, reports that "the decrease on last year's area is entirely due to the very low supply in the Jumna up to the heavy rain of the 25th and 26th. Canal was closed on the evening of the 25th.

Executive Engineer, Agra Canal, reports that the area irrigated is somewhat more than that shown for the corresponding period of 1882, but the total area irrigated will probably be a little below that of last rabi, as the heavy rain at the end of January has quite stopped new irrigation.

Executive Engineer, Rohilkhand Canals, reports that water was in steady demand for rabi crops till heavy rain of 25th, when all demand ceased. About 2,000 acres of sugar paleo was done during the month in addition to the rabi.

Executive Engineer, Bhognipur Division, reports that the weather was cloudy at intervals during the month, culminating in heavy general rain on 25th and 26th, which stopped all demand for irrigation. Supply fluctuated a good deal during month; otherwise more irrigation would have been effected.

No remarks from the other divisions.

Note.—For 11,104 as total allotted discharge in December's statement for upper and lower Ganges Canals read 9,525.
Besides the above, 2,125 acres under sugarcane were irrigated in the Rohilkhand Canals simultaneously with the rabi.

Allahabad,
The 2nd March 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 13th MARCH 1883.

General Remarks.—The prospects of the *rabi* harvest are good in every district of the *Punjab*, excepting Umballa, where the outturn is expected to be below the average; a little rain has fallen in most districts. *In the North-Western Provinces and Oudh* there has been heavy rain in the northern tracts, and all districts have reported rainy or stormy weather; the *rabi* harvest has commenced and prospects are fairly good, though the crops have been somewhat injured in most districts by hail, blight or insects. *In Bengal* there has been a little rain in several parts, and some damage has been done to the standing *rabi* crops and to the mango and mahua blossoms; on the other hand, the rain has been generally very good for the ploughing of fields and for the sowing of the *aus* rice crops; prospects of the spring rice are generally very promising, and harvesting of *rabi* crops and sugarcane is progressing satisfactorily.

In the *Central India* and *Rajputana States* some rain has fallen in several parts, and crop prospects, though good, have been slightly injured in a few places by cold, wet, cloudy weather and high winds. In the *Central Provinces* there have been hail-storms and rain; harvesting of *rabi* crops is progressing and prospects are favourable.

In the *Bombay Presidency* the harvest has been completed in some districts, and is in progress in others. So also in *Berar*. In the Nizam's Territories, the slight rain which fell has partially injured the *rabi* and melon crops. In *Mysore* standing crops are in good condition, paddy has been harvested in parts; slight rain occurred in several districts. In *Coorg* threshing of rice has been completed, and rain has proved beneficial for the coffee blossom.

In the *Madras Presidency* some rain occurred in several districts; standing crops in a few places are suffering from insects and deficiency of moisture, but on the whole, they are in fair condition; harvest operations are in progress in all districts.

The reports from British Burmah make no mention of crops; some showers are reported from three districts. In Assam two districts report rain; ploughing and sowing of *aus* lands have commenced; mustard is being gathered and sugarcane pressed.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Mar. 7th)		
Bellary	...	Standing crops, cotton and *cholum* diseased in parts, others generally good; harvest paddy, dry grains and sugarcane, yield average.
Kurnool	...	Standing crops affected by blight in parts, elsewhere in good condition; harvest dry grain, outturn below average; cattle disease in parts.
Ganjam	·28 (ayerage of five stations.)	Standing crops, cotton thriving; fever, small-pox, and cattle disease continue.
Kistna	...	Standing crops, paddy and dry grains affected by blight and grubs in parts, elsewhere in good condition; harvest dry grains, outturn below average; small-pox continues; cattle disease abating.
Chingleput (Madras)	...	Standing crops affected by insects in parts, elsewhere in good condition; harvest paddy, yield below average; small-pox and cattle disease in parts.
Coimbatore	...	Standing crops in good condition; harvest paddy and dry grains, yield average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore	...	Standing crops in good condition; harvest paddy and dry grains, yield below average; cholera abating.
Madura	...	Standing crops withered in parts; harvest paddy and dry crops; cholera and fever in parts.
Malabar	·30 (average of one station.)	Harvest second crop paddy continues; preparation for third crop paddy progressing; small-pox in all taluks; fever in parts; cholera and cattle disease slight.
Travancore	...	Cultivation progressing; fever continues. *General Remarks.*—No rain except in Ganjam and Malabar; general prospects good.
Madras—(Mar. 14th)		
Bellary	·94 (average of three stations.)	Standing crops cotton and *cholum* diseased in parts, elsewhere generally good; harvest paddy, dry grains and sugarcane, yield average.
Kurnool	1·54 (average of four stations.)	Standing crops affected by blight in parts, elsewhere in good condition; harvest dry grains, outturn below average; cattle disease in parts.
Ganjam	1·12 (average of 15 stations.)	Standing crops cotton and *ragi* thriving; fever, small-pox, and cattle disease continue; cholera in one taluk.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—*contd.*		
Kistna		Standing crops generally fair, but in parts suffering from insects; harvest chillies, pulses and castor, outturn below average; cattle disease abating.
Chingleput (Madras)		Standing crops affected by insects in parts, elsewhere in good condition; harvest paddy, outturn below average; small-pox and cattle disease in parts.
Coimbatore	·41 (average of three stations.)	Standing crops in good condition; harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore		Standing crops in good condition; harvest paddy and dry grains, outturn below average; cholera abating.
Madura	·20 (average of one station.)	Standing crops withered in parts; harvest paddy and dry grains; fever in parts.
Malabar	·94 (average of seven stations.)	Harvest second crop paddy over; preparation for sowing third crop paddy progressing; small-pox in all taluks; fever in parts; cholera and cattle disease slight.
Travancore	·10	Fever continues.
		General Remarks.—No rainfall in Kistna, Chingleput, and Tanjore; general prospects good.
Bombay—(Mar. 14th)		
Kurrachee	Light rain in Tatta and neighbourhood.	River at kotri on 8th 2 feet 8 inches against 4 feet 2 inches on some date last year; small-pox in Kurrachee, 20 fresh cases, 5 deaths from 3rd to 6th instant, total to latter date 311 cases, deaths 80, remaining sick 134; disease also in districts, 49 cases, 3 deaths in 8 villages; fever in 10 talukas; cattle disease in 4 talukas; wheat, red rice, and *bajri* in Kurrachee 24, 32, and 36 lbs., in Manjhand 32, 40, and 48 lbs., in Tatta 24, 36, and 42 lbs., and in Mirpur Batoro 20, 36, and 42 lbs. per rupee respectively.
Hyderabad		*Rabi* crops flourishing; weather unsettled; small-pox in 7, fever in 6, and cattle disease in 5 talukas; wheat 25, *bajri* 39, *jowari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad		Reaping of *rabi* crops continues; small-pox in Dhandhuka; *bajri* 32 and wheat 27½ lbs. per rupee.
[illegible]		*Rabi* crops fair; cotton-picking in progress; public health fair except in Rani Mahals in Naosari division; small-pox prevailing in the town and taluka of Naosari; *bajri* 30 and common rice 25½ lbs. per British rupee.
Surat		*Rabi* harvest continues; small-pox in Surat, daily average deaths 12; *jowari* 42 and *nagli* 54 lbs. per rupee.
Nasik		Harvesting *rabi* continues; cattle disease in Sinnar; wheat 28½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay)		Average abnormal temperature 2° cool from 9th to 12th, *nil* on all other days; vapour in air normal on 7th, and 8th, afterwards largely in defect of normal; wind normal from 7th to 10th, afterwards abnormal wind was northerly and strong on 11th and 12th.
Poona		Harvesting of *rabi* nearly completed; *bajri* 44 and *jowari* 60 lbs. per rupee; in Poona *bajri* 37 and *jowari* 46 lbs. per rupee.
Ahmednagar		*Rabi* crops almost harvested; *bajri* maximum 60 lbs. per rupee in Jamkhed, minimum 40 lbs. in Kopargaum; *jowari* maximum 72 lbs. per rupee in Jamkhed, minimum 54 lbs. in Sangamner; small-pox in Sheogaon, Kopargaon, and Nagar; measles in Kopargaon.
Sholapore		*Rabi* harvest nearly completed throughout; *jowari* 69 lbs. 7 tolas, and *bajri* 55 lbs. 24 tolas per rupee.
Dharwar		Wheat and gram being harvested; reaping of late *jowari* commenced scarcity of drinking water in Nargand; fever in 2 talukas; and cattle disease in 1 taluka; small-pox in Kod taluka; rice minimum 26 and *jowari* 52 lbs. per rupee.
Kanara		Second crop rice plants in ear; small-pox in Karwar and Sirsi; cattle disease in Hallial and Honore; fever subsiding; common rice in Karwar 13½ lbs. per rupee; in district average 15½ lbs.; weather cloudy.
Rajkot		Weather cool; general health good; cholera appeared in Khakrochi under Malia; *bajri* 29 and *jowari* 36 lbs. per rupee.
		General Remarks.—*Rabi* harvest completed in some districts, in progress in the rest; scarcity of drinking water in Nargand; fever, small-pox, and cattle disease in a few districts.
Bengal—(Mar. 14th)		
Chittagong	·16	Heavy rain on the 7th; prospects of crops unfavourable; prices unchanged; a few cases of cholera in the town; cow-pox still reported.
Dacca		Harvesting of mustard and safflower continues; wheat and barley are also being gathered; sugarcane-pressing almost completed; prospects of *boro* paddy and other standing crops good.
24-Pergunnahs (Alipore)	·49	Prospects of *rabi* crops fair; they have been somewhat injured by rain; lands are being ploughed; price of common rice stationary; public health generally good.
Moorshedabad	*Nil*	Winter crops being cut in some places; prospects on the whole satisfactory; *boro* rice promising; lands are being prepared for *aus* rice; small-pox reported from a few places.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Rajshahye	·73 Nattore ·42	Rain will facilitate ploughing; sowing of paddy proceeding vigorously; spring crops being harvested, outturn generally good: public health generally good.
Burdwan	·75 Cutwa 1·21 Raneegunge ·14	Weather cool with occasional showers; sugarcane and *rabi* crops being cut; mango blossoms injured by rain and wind; a few cases of cholera reported.
Rungpore	*Nil*	Prospects of crops favourable; harvesting of sugarcane, mustard, &c., still continues; cholera reported from Kurigram, otherwise public health good.
Bhagalpur	*Nil*	Prospects of crops good; *rabi* crops are fast ripening, and will soon be harvested, a good outturn expected.
Purneah	·03	Prospects of crops very fair; harvesting of mustard and tobacco progressing; public health fair.
Patna	*Nil*	Harvesting of *rabi* crops continues; pressing of sugarcane rapidly going on; public health good.
Durbhunga	*Nil*	*Rabi* crops being harvested; fields being prepared for paddy; prices stationary; public health good.
Hazaribagh		Weather cold and cloudy; heavy rain and hailstorms throughout the district; *rabi*, *mohua*, and mango crops have suffered from the rain and storms; general health good.
Cuttack	·74	Weather hot and sometimes cloudy; reaping of rice completed with fair outturn; *rabi* crops being gathered; spring rice growing well; cases of cholera reported from Kendrapara sub-division, otherwise public health good.
		General Remarks.—There has been rain this week also in several parts of the province; in some districts the rain was unusually heavy for the time of year, and attended by high wind and hail, causing some damage to the standing *rabi* crops and to the mango and *mohua* blossoms; on the other hand, the rain has been generally very good for the ploughing of fields, and for the sowing of the *aus* rice crop, which has commenced in some districts; prospects of *boro* or spring rice are generally very promising; harvesting of *rabi* crops is rapidly progressing; sugarcane harvest still continues, and is generally yielding a good outturn; sporadic cases of cholera and small-pox are reported from some districts, and fever still lingers in a few districts; general health, however, for the whole province is good.
N.-W. Provinces and Oudh—		
Benares (Mar. 13th)	Benares ·40	Slight hail in Dehat and Amanab, no damage done; crops good; prices steady.
Allahabad („ 15th)		Weather cloudy with variable wind and low temperature; harvest progressing; prices falling slightly.
Gorakhpur („ 12th)	Seasonal showers during the week.	Weather uncertain; early crops being reaped; small-pox in several parts of the district and cattle disease in one tahsil; prices stationary.
Jhansi („ „)	Occasional slight showers.	Weather continues cloudy; hail is reported from the northern portion of pargana Jhansi; enquiry as to the injury done by hail and blight is in progress; condition of crops in other parganas is good; prices stationary; health good; cattle disease disappearing.
Agra („ 13th)	Slight rain on 11th in 2 parganas.	Insects reported to have appeared on crops owing to continued cloudy weather; small-pox in three and fever in four parganas; general health good; prices stationary.
Bareilly („ „)	Heavy rain with insignificant hail on 11th and 12th.	Injurious to *rabi* and very bad for fruit crops; now clear.
Rae Bareli („ 12th)	Slight rain now and then.	During the last week weather cloudy and threatening; hail in three tahsils; but no damage reported as yet; small-pox in two tahsils; prices steady.
Meerut („ 13th)	Meerut ·80 Hapur ·3 Baghpat 1·40 Marwana ·70 Ghaziabad 1·00 Sarahana 2·10	Weather unsettled; heavy storms on 12th and 13th; health good; prices unchanged.
Kumaon („ „)	Heavy rain and hail	Weather cold; crops good, require the sun; health good; prices unchanged.
Lucknow („ „)	Lucknow ·11 Maliabad ·16 Mohunlaljunge *nil*	Prospects of crops good; but slight injury to wheat by blight reported from some parts of the district; people healthy; small-pox in the city disappearing.
Partabgarh („ „)	Slight shower on 10th at Sadr and also at Kunda.	Barley being reaped; general health good; slight fall in prices.
Cawnpore („ „)	Average rainfall ·80	Ripening crops injured by hail in places; the cloudy weather has caused mildew; small-pox severe in town; prices nearly stationary.
Sitapur („ „) Farukhabad („ „)	Average ·40 Occasional showers	Slight blight in three tahsils; price of grain, especially gram, rising. Weather cloudy; hail has fallen, but only slight, damage is yet reported; prices steady; small-pox still continues.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—*contd.*		
Fyzabad (Mar. 13th)	·20	Peas, wheat, and barley are being cut; health good; prices stationary. *General Remarks.*—There have been heavy falls of rain in the northern districts, and all districts report rainy or stormy weather; hail has fallen in eight of the reporting districts; the *rabi* harvest has commenced and prospects are fairly good, though the crops have been injured in most districts by hail, blight, or insects; small-pox has appeared in Gorukhpore and Rai Bareli, severe in Cawnpore town, and continues in Farukhabad, Agra, and Lucknow; otherwise the general health is good; cattle disease is disappearing in Jhansi, but has appeared in Gorukhpore; prices as a rule are steady.
Punjab—(Mar. 13th)		
Delhi	Nearly 2·0	Small-pox abating; harvest prospects good; prices almost stationary.
Hissar	·20 at Sadr	Weather very cloudy; health good; crops are thriving and prospects of harvest excellent; prices fluctuating.
Umballa	·30	Health good; the *rabi* crops are generally poor and a yield below the average is expected; prices steady.
Jullundur	·50	Health and harvest prospects good; prices stationary.
Amritsar	·10	Health and harvest prospects good; slight rise in prices.
Lahore	Slight drizzle	Health and prospects of crops good; prices stationary.
Ferozepore	Sight rain at Sadr, Moga and Jallalabad.	Health and condition of crops good; slight fall in prices.
Sialkot	·50	Health and condition of crops good; prices stationary.
Rawalpindi	·20 in district, 2 feet of snow at Murree.	Fall in prices.
Peshawar		Health and harvest prospects good; prices stationary.
Mooltan	·20 at Sadr	Health and crop prospects good; prices steady.
Dera Ismail Khan		Slight rain, but more wanted; health good; *rabi* prospects fair prices stationary. *General Remarks.*—The health and harvest prospects good except in Umballa, where the *rabi* yield is expected to be below the average.
Central Provinces—		
Nagpur (Mar. 14th)		Weather somewhat cloudy; prospects good; health generally good; cattle disease in Nagpur; prices steady.
Jubbulpore	·21	Weather cloudy; harvesting *rabi* progressing; prospects good; wheat 20 and rice 15 seers per rupee; health good.
Seoni (Mar. 13th)	·02	Weather cloudy; cutting of *rabi* progressing; threshing commenced fever prevalent; ten cases small-pox, three deaths; prices stationary.
Hoshangabad	·07	Weather cloudy and seasonable; harvesting of *rabi* progressing; small-pox prevalent; wheat 10, rice 11½, and *jowar* 19 seers per rupee.
Raipur (Mar. 10th)	1·51	Heavy hailstorm on 7th; standing crops damaged; cattle disease in places; prices stationary.
Sambalpur („ 8th)	·37	Occasional storms; sugarcane-planting in progress; fever still prevalent; common rice 56 seers per rupee.
Khandwa	Slight rain	Weather cloudy; preparation for *khurif* sowings progressing; 429 cases small-pox, 45 deaths; prices stationary.
Saugor (Mar. 12th)	·17	Weather cool; prospects good; reaping progressing; health good; prices stationary. *General Remarks.*—Rain with hailstorms in Raipur, Bhandara, and Balaghat; slight rain in five other districts; harvesting *rabi* continues; prospects favourable; small-pox and fever prevalent in a few districts, otherwise health generally good; prices steady.
British Burma— (Mar. 10th)		
Akyab	1·35	Total rainfall to date 1·35 inches; three cases small pox in town; four deaths from cholera in one township; seven from small-pox in two townships, otherwise public health good; slight cattle disease in one township.
Rangoon	·14	Total rainfall to date ·14 inches; one death from small-pox, otherwise public health good.
Bassein		One death from cholera in town and one in one township, otherwise public health good; slight cattle disease in one township.
Amherst (Moulmein)	*Nil*	Total rainfall to date ·27 inches; two deaths from cholera in Moulmein town, otherwise public health in Moulmein and district good.
Toungoo	·03	Total rainfall to date ·03; two deaths from small-pox in one township, otherwise public health good. *General Remarks.*—Public health generally good.
Assam—		
Gauhati (Mar. 13th)		High winds prevailing; weather getting hot and dry; sowing of *aus* paddy commenced; gathering of mustard nearly over; public health good.
Sylhet	*Nil*	Cultivation for spring sowings proceeding; *boro* paddy promising well; public health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Assam—*contd.*		
Cachar	1·00	Weather warm; common rice 26⅝ seers per rupee; public health good.
Dibrugarh	2·37	Weather seasonable; high winds prevailing during the week; mustard being harvested; pressing of sugarcane going on; lands being ploughed for *aus* paddy; no further report of outbreak of small-pox received from Doomdooma.
Mysore and Coorg— (Mar. 7th)		
Bangalore		Paddy and sugarcane being harvested; standing crops in good condition; prospects favourable.
Mysore	·21 to ·80	Dry crops mostly harvested; season prospects and public health good. *General Remarks.*—Standing crops reported in good condition and prospects of season in all districts favourable; general health good; prices of grains in the Mysore State rule easy; prices—rice from 12 to 15 seers, *ragi* 32 to 48 seers, and horsegram 34 to 50 seers per rupee.
Bangalore (Mar. 14th) / Mysore		Crops in good condition; paddy harvested in parts; prospects favourable.
Mercara (Mar. 14th)	·54	Threshing of rice crop completed; price of coffee rising, brisk demand for native product in local market; no change in price of grains; heavy shower which fell in parts of North and South Coorg has proved beneficial for the coffee blossom; prospects continue good; fever and small-pox still prevalent in North Coorg and Mercara taluk. *General Remarks.*—Slight rain has fallen in several parts of the Mysore State; ·46 at Shimoga, ·4 at Chickmagalur; *kartick* paddy in good condition; coffee-picking in the Kadur district progressing favourably; prospects good; public health satisfactory; prices unaltered.
Berar and Hyderabad—		
Amraoti (Mar. 14th)		Weather clear and warm; threshing in progress; prospects good; prices—wheat 16 and *juari* 26 seers per rupee.
Akola („ „)		Reaping of *rabi* crops continues, outturn good.
Hyderabad („ „)	·47	Rain has partially injured the *rabi* and melon crops; small-pox has assumed a serious form; cholera prevailing slightly; prices—wheat 17¼, coarse rice 11, white *juari* 25, yellow *juari* 29, and *tur* 24¾ seers per current sicca rupee.
Central India States— (Mar. 14th)		
Indore		Weather cloudy and abnormally cool for this season; rain occasionally threatening which if it fall will do much harm to the opium crop; health good.
Morar (Gwalior)	·69	Health and prospects good; weather cloudy and injurious to crops.
Sutna	·19	Health and prospects good.
Neemuch	·50	Public health good.
Goona		Health and crops good; wheat 24 seers per rupee.
Agar		Health and prospects good.
Bhopal		Weather seasonable; prospects good.
Nowgong	·20	Weather cloudy; prospects of *rabi* crops favourable; prices steady; health good.
Manpur	*Nil*	Opium harvest nearly at an end; wheat and gram crops finished; health good.
Rajputana—		
Abu (Mar. 13th)		Weather cloudy.
Sirohi („ 11th)		Tanks and wells full; health good; crop prospects not so good, owing to cloudy weather; prices rising slightly.
Marwar („ 9th)	·21	Weather still cloudy; tanks all empty; water drained from wells; health and prospects good; prices rising.
Harauti („ 10th)	Deolee 1·08 Kotah ·45 Tonk ·16 Shahpura ·22	Two heavy falls of hail; opium crops injured; weather cloudy; health good.
Jhalawar („ 7th)	·08	Weather cloudy and windy; health and prospects good.
Ajmere („ 13th)	·02	High and cold winds prevalent which are slightly injuring crops; health fair.
Jeypore („ „)	·11	Thunderstorm on Sunday; prospects and health good; prices a little higher.
[illegible] („ „)	Light showers in eight tahsils.	Weather continues unsettled; prices steady; small-pox still about, otherwise health good.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN THE NORTH-WESTERN PROVINCES FOR 1881-82.

Nos. 96—110 I., dated Fort William, the 13th March 1883.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Secretary to the Government of the North-Western Provinces and Oudh, No. 635 I., dated 7th March 1883, and enclosure, being the Revenue Report of Irrigation Works in the North-Western Provinces for 1881-82, and a Resolution of His Honor the Lieutenant-Governor reviewing the report.

OBSERVATIONS.—The Resolution of the Local Government reviews very fully the results of the year 1881-82, and shows to what an extremely satisfactory position the Irrigation Works of the North-Western Provinces have attained. The net revenue returned 6·13 per cent. on all capital invested up to the end of the year, while the Productive Works returned from 28½ to 3½* per cent. on the Capital expenditure incurred upon them.

	Percentage of net revenue of 1881-82 on Capital outlay to end of year.
Canals—	
Upper Ganges... ...	6·40
Lower „ ...	4·75
Eastern Jumna ...	28·46
Agra	3·48

2. The irrigated area exceeded the largest area previously attained by 179,298 acres. The irrigation of indigo exceeded the area of 1880-81 by 124,626 acres or 61 per cent., and although it is stated that this extraordinary increase has been detrimental to the extension of the growth of sugarcane, the irrigation of the latter crop increased by 29,526 acres, or 21·8 per cent. over that of the previous year. The area of wheat irrigation increased also from 545,651 acres in 1880-81 to 727,428 acres in 1881-82, or 33·3 per cent. The total area of "rabi" crops irrigated during 1881-82 exceeded that of the previous year by 177,815 acres, or 17¼ per cent., and although this large increase was mainly due to the early cessation of the autumn and the entire failure of the winter rains, still the marked increase in the irrigation of the better classes of both spring [illegible] crops points [illegible] to a great increase in the prosperity

of the cultivating community. The increase in the area of double cropped land, from 13½ per cent. of the total area irrigated during 1880-81, to 18½ per cent. in 1881-82, is, however, to be regretted unless these lands are manured.

3. The irrigating duty done and water-rate earned by each cubic foot per second of water entering the canal head were as follows :—

Canal.	1881-82.		1880-81.		1879-80.		1878-79.	
	Acres.	₹	Acres.	₹	Acres.	₹	Acres.	₹
Upper Ganges	213	550	173	436	189	460	239	579
Lower „	168	371	...	...	...	...	...	...
Eastern Jumna	228	668	233	664	231	671	248	741
Agra	148	415	135	367	64	186	127	356

The steadiness of the duty and value of water obtained on the old established Eastern Jumna Canal is remarkable, and the Agra Canal appears to be gradually improving in these matters.

4. The maintenance charges are given below for each of the four main canals and for the whole area irrigated :—

Canal.	Maintenance charges per acre irrigated.	
	1881-82.	1880-81.
	₹	₹
Upper Ganges	1·14	1·33
Lower „	0·86	0·75
Eastern Jumna	0·74	0·92
Agra	1·59	1·55
Whole area	1·06	1·10

5. The gross receipts under the head of Navigation amounted to ₹29,512, and the net revenue to ₹5,870 during 1881-82 against ₹31,649, and ₹5,721, the gross and net revenue of 1880-81.

6. The cost of collecting the canal revenue, ₹3·06 per cent. on the gross collections, including all charges, is very moderate, and the nominal balance remaining to be collected at the end of the year (₹1,386 out of a net demand of ₹47,57,271 on account of occupiers' and owners' rates) is extremely satisfactory.

7. The Government of India has much pleasure in noticing that careful observations are being made on the effect of drainage in checking the spread of "reh" and in keeping down the spring level of canal irrigated land, and that extended experiments are to be made on the reclamation of "reh" infected lands by the establishment of plantations.

ORDER.—Ordered, that a copy of this Resolution, and of the Report and Resolution by the Local Government, be forwarded to the Secretary of State, and to the Finance and Commerce and Revenue and Agricultural Departments of the Government of India for information.

Also, that a copy of this Resolution be forwarded to the Government of the North-Western Provinces and Oudh, Public Works Department, for information and guidance, and to the Local Governments and Administrations noted in the margin, in the Public Works Department, for information, and to the Foreign Department for communication to the Government of Mysore.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chief Commissioners, Central Provinces, British Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General, Central India and Rajputana.

Also, that this Resolution, and the Resolution of the Local Government, be published in the Supplement to the *Gazette of India*.

HENRY A. BROWNLOW, *Colonel, R.E.,*
Deputy Secy. to the Govt. of India

No. 3534I., dated Allahabad, the 28th December 1882.

RESOLUTION—By His Honor the Lieutenant-Governor, North-Western Provinces and Oudh.

READ—

Chief Engineer's (Irrigation Works) Revenue Report for the year ending 31st March 1882.

RESOLUTION.—The capital expenditure on Irrigation Works in the North-Western Provinces during the year under review was ₹16,24,785, of which a sum of ₹1,72,844 was expended on the Betwa Canal—a "Famine Protective" work chargeable to Imperial Funds. The total outlay on Capital Account to the end of 1881-82 was ₹6,65,84,271, *viz.* :—

	₹
Productive Works, Upper Ganges, Lower Ganges, Agra, and Eastern Jumna Canals	6,36,10,638
Minor Irrigation and Survey Works, chargeable to Provincial Funds	25,95,576
"Famine Protective" Works (Betwa Canal), chargeable to Imperial Funds	3,78,057
GRAND TOTAL .	6,65,84,271

2. The gross assessment of the year, including ₹9,49,631, the share of enhanced land revenue due to Canals, was ₹61,09,073; the working expenses, ₹20,26,323, and the net revenue ₹40,82,750, or 6·13 per cent. on the capital invested in "Productive" and "Minor" Irrigation Works and Surveys, and also on Famine Protective Works, or excluding the latter 6·16 per cent. The interest charges on capital (which during the year was reduced from 4½ to 4 per cent.) was ₹24,53,561; and deducting this amount from the net revenue, the assessments of the year exhibit a clear surplus of ₹16,29,189 after paying expenses under all heads. In the previous year the surplus was ₹8,58,645 and in 1879-80 ₹2,57,267.

3. The total interest charges from the commencement of irrigation operations (on the Eastern Jumna Canal) in 1830 to the end of 1881-82 amounted to ₹4,49,36,060, and the total net receipts realized during the same period to ₹3,77,66,938. Thus the accumulated balance of interest charges remaining unpaid at the end of the year was ₹71,69,122. The balance in 1880-81 was ₹84,08,747 and in 1879-80 ₹87,61,044.

4. The actual direct income collected in 1881-82, which includes part of the assessment of the previous and the uncollected balances of past years, amounted to ₹57,42,154. Of this sum ₹9,49,631 was realised on account of share of land revenue due to canals, and ₹45,27,608 was on account of occupier's rate. The balance remaining to be collected at the end of the year after remissions amounting to ₹2,664 was only ₹1,316. The outstanding balance at the commencement of the year was ₹87,544. With the exception of a small sum of ₹159, the whole of this amount was realised in 1881-82. The demand under owner's rate amounted to ₹2,33,591, of which ₹2,33,257 were collected and ₹264 remitted, leaving an uncollected balance of ₹70. The outstanding balance from 1880-81 was ₹14,720, the whole of which was collected.

After paying all expenses, including the heavy interest charge of ₹24,53,561, the actual surplus of net receipts amounted to ₹12,62,270, less an adjustment of ₹22,645 on account of owner's rate collected by the Civil Department in past years, leaving a balance of ₹12,39,625; by which amount the balance of interest charges for 1880-81, mentioned in preceding para., has been reduced.

In the previous year the net surplus receipts were ₹3,52,297, and in 1879-80 ₹9,22,889; but as pointed out at the time this latter amount was unusually high, as it included the collections for "rabi," 1878-79, a year of drought.

5. The working expenses, which include maintenance and improvement of works, establishment, tools and plant, refunds, and leave and pension allowances, are compared below :—

Year.	₹
1879-80	18,39,611
1880-81	19,06,112
1881-82	20,26,323

There has been a decrease of ₹25,506 on maintenance, but an increase of ₹22,734 on account of leave and pension allowances, and of ₹ 1,22,983 for establishment. This latter increase, however, is more apparent than real, and is due chiefly to the capital outlay being ₹5,35,750 less than that in 1880-81, and to the rapid expansion of irrigation; thus throwing a considerable portion of the charges for establishment, formerly debited to Capital, on to Revenue. As a matter of fact, the percentage of establishment on direct assessments and maintenance of works, is nearly the same in 1881-82 as in 1880-81, *viz.*, 16·30 per cent. against 16 per cent. In 1879-80 this charge was 24·10 per cent., but a large decrease in establishment, amounting to ₹2,17,106, took place in the succeeding year, thus reducing the percentage to that shown above.

The cost incurred by the Civil Department in collecting the canal water-rate was ₹1,32,240, which amount includes all charges, *viz.*:—

	R
Patwaris' fees	20,352
Lamardars' fees	1,04,595
Establishment and contingencies	7,293
TOTAL	1,32,240

or 3·06 per cent. on the gross collections. The cost in 1880-81 was only given for the Upper Ganges Canal where the percentage was 3·30. There is no information as regards previous years.

6. The area irrigated in 1881-82 was 1,915,949 acres, against 1,732,696 acres in 1880-81, and 1,400,405 acres in 1879-80. The largest area hitherto recorded was in the excessively dry year of 1878-79, when 1,736,651 acres were watered. On the Upper and Lower Ganges alone 7,301 villages were supplied with water in 1881-82 from 29,248 separate outlets. In the previous year these numbers were 5,926 and 24,339 respectively. This increase of 1,375 new irrigating villages during the year is due almost entirely to the extension of the distributing system on the Lower Ganges Canal, which although being rapidly developed will not be finally completed for some years.

7. The principal irrigated crops, with their acreage, weight of produce, and value are shown in the subjoined table:—

No.	Name of crop.	Acres.	Produce in maunds.	Value in rupees.
1	Wheat	727,430	91,66,123	2,60,70,987
2	Indigo	319,627	79,907	63,92,640
3	Barley	261,687	34,67,402	72,64,139
4	Sugarcane	165,019	62,70,722	1,07,78,476
5	Inferior cereals	125,612	8,16,478	17,56,118
6	Rice	107,967	10,82,609	30,87,461
7	Pulses	82,374	7,41,366	15,84,641
8	Cotton	64,162	3,84,972	14,28,780

The total value of crops raised with canal water was ₹6,06,25,647. In 1880-81 the value was ₹5,60,95,157, and in 1879-80, ₹4,96,35,163.

The average water-rate per acre irrigated was—

Upper Ganges Canal	3·27 kharif. 2·14 rabi.
Lower Ganges Canal	2·41 kharif. 2·11 rabi.
Agra Canal	2·99 kharif. 2·70 rabi.
Eastern Jumna Canal	4·12 kharif. 2·10 rabi.
Rohilkhand Canals	·78 whole year.
Bijnor Canals	1·57 ditto.
Dun Canals	2·96 kharif. 1·15 rabi.
Bundelkhand Lakes	2·42 whole year.

8. The results brought out in the above review of the entire system of irrigation works in the North-Western Provinces are very satisfactory; and an analysis of the financial condition of the four Productive Works shows that they are on a sound basis.

9. The Upper Ganges Canal, which commenced irrigating in 1856, has a length of 445 miles of main line and 2,543 miles of distributaries. The capital outlay on it to the end of the year was ₹2,73,93,062. The net profits and percentage on this outlay for the last six years are exhibited below:—

Year.	Net profits.	Percentage.
	R	
1876-77	18,58,155	6·29
1877-78	21,94,179	7·18
1878-79	26,92,664	8·54
1879-80	20,12,627	6·18
1880-81	14,00,777	5·14
1881-82	17,53,631	6·40

The apparent decrease in 1880-81 and 1881-82 is caused only by the transfer in the former year of the Cawnpore and Etáwah Branches from the Upper to the Lower Ganges Canal.

10. The Lower Ganges Canal has at present 531 miles of main line and 1,623 miles of distributaries, leaving about 900 miles still to be completed.

The capital outlay on the works has been ₹2,49,07,925; and the net profits and percentage since the opening of the canal in 1879 are as follows:—

Year.	Net profits.	Percentage.
	R	
1878-79	58,845	0·33
1879-80	46,632	0·29
1880-81	11,87,124	4·76
1881-82	11,82,646	4·75

The sudden increase in 1880-81 was caused chiefly, as explained above, by the transfer of the two terminal divisions of the Upper Canal.

11. The Agra Canal opened in 1874 has a length of 140 miles of main canal, but as yet only 348 miles of distributaries. The capital outlay to the end of 1881-82 was ₹84,66,394, and the net profits and percentage—

Year.	Net profits.	Percentage.
	R	
1876-77	30,150	0·39
1877-78	2,74,015	3·40
1878-79	2,39,351	2·94
1879-80	—23,994	—0·28
1880-81	2,65,001	3·15
1881-82	2,94,749	3·48

The distributing system of this canal is still incomplete. When the full allowance of distributaries as on other canals is provided, it is anticipated that a return of 6 per cent. of direct revenue will be realised on the capital.

12. The Eastern Jumna Canal is 130 miles in length, with 618 miles of distributaries. The canal was originally constructed in the 17th century during the reign of Shah Jahan, and was restored and re-opened by the British Government in 1830. The capital outlay on it, ₹28,43,257, therefore, includes only the cost of restorations and distributaries.

The net profits and percentage were—

Year.	Net profits.	Percentage.
	₹	
1876-77	5,86,270	22·97
1877-78	6,25,485	23·94
1878-79	8,05,588	30·63
1879-80	7,35,863	27·01
1880-81	7,13,640	25·56
188 82	8,09,183	28·46

13. The Minor Irrigation Works are the Rohilkhand, Bijnor, and Dún Canals, and the Bundelkhand Lakes.

The capital outlay on the Rohilkhand Canals to the end of 1881-82 was ₹15,88,763. Including direct and indirect revenue as on other canals, the income was ₹1,17,280 or ₹29 less than the working expenses. The annual interest charge at debit of the canal was ₹63,550; there was therefore a distinct loss on these works; which in one form or another have been in existence for upwards of 60 years, but which are obliged to be maintained owing to the large amount of land revenue dependent on them. The water-rate charged is very low, amounting on an average to less than 8 annas an acre for the whole year.

The capital account of the Bijnor Canals was ₹69,963, and the net profits during the year ₹9,978, or 14 per cent. on the capital.

The capital of the Dún Canals was ₹6,37,142 and net revenue ₹28,815 (or 4·52 per cent). which more than covers the interest charge of ₹24,895.

₹82,916 had been expended up to the end of 1881-82 on the Bundelkhand Lakes; the net profit during the year was ₹2,446, which does not cover the interest of ₹2,995 charged on the capital.

14. The following table shows the net profits and percentage on total capital outlay (including Productive, Minor, Famine, and Survey Works) of all the Irrigation Works in the North-Western Provinces, including the indirect return or the enhanced land revenue due to canals. The table also shows the net profits and percentage of direct returns, *i.e.*, water-rate and miscellaneous revenue on account of navigation receipts, water-power, &c..—

Year.	Capital at end of year.	Profit from Direct Income.		Profit from Total Income.	
		Amount.	Percentage.	Amount.	Percentage.
	₹	₹		₹	
1875-76	3,98,56,300	15,03,069	3·77	24,26,186	6·08
1876-77	4,20,12,822	15,82,422	3·77	25,76,406	6·10
1877-78	4,34,66,488	21,52,911	4·95	31,55,858	7·26
1878-79	4,46,21,616	27,50,736	6·16	38,28,437	8·57
1879-80	4,60,85,3[illegible]0	18,40,294	3·99	28,06,240	6·09
1880-81	6,45,61,716	25,88,194	4·01	35,38,941	5·48
1881-82	6,65,84,271	31,38,119	4·71	40,82,75	6·13

15. The receipts for navigation amounted during the year to ₹29,512; water-power realised ₹57,860; plantations, ₹1,10,597; and miscellaneous items, ₹37,815. The operations under "Navigation" and "Plantations" will be reviewed in their separate reports.

16. As regards the question of the rise in the spring level of water in wells owing to the introduction of canals, the only data as yet obtained are on the Agra Canal. These show that within the last four years the spring level has been raised 5·70 feet in a width of 1,500 feet on either bank, and 4·60 in a similar width, extending up to 3,000 feet from the canal. In the western depression a natural hollow which runs at a lower level than, and parallel to, the canal at an average distance of three miles, the rise is so inappreciable that it has been determined to postpone the construction of the drainage cut originally estimated for,

on the supposition that there might possibly be a sensible rise of spring level. Surface percolation has shown itself in excess on the upper portion of the Lower Ganges Canal, where it runs in heavy embankment through the lowlying valley of the river. The damaged land has been taken up by the Irrigation Department, and drainage cuts are being made, and other remidial measures adopted as usual.

The number of miles of drainage cuts actually constructed up to end of 1881-82 were—

	Miles.	Per mile of Canal.
Upper Ganges Canal ..	850	1·90
Lower Ganges Canal	252	·47
Agra Canal	10	·06
Eastern Jumna Canal	261	2·00

Complaints have been made on the Upper Ganges ond Eastern Jumna Canals that the country is being overdrained, and that the pasture lands are suffering in consequence. More drainage cuts will undoubtedly have to be constructed in certain places, but it will be necessary to act with caution, so as to avoid any possible damage, as is now alleged to occur, to pasture lands.

17. With the exception of a few parganas where the returns had to be sent back for explanation, a map has been prepared by the Department of Agriculture and Commerce, North-Western Provinces and Oudh, showing the extent of "*úsar*" in every village of the Duáb and in a part of Rohilkhand. Elaborate measurements have been made by the same department in 65 villages in the Akrabad pargana, at the lower end of the Upper Ganges Canal, with the view of ascertaining whether "*reh*" is increasing. The Director reports that "the change, if any, is very slow, and trustworthy results cannot be expected from the measurements of only a few years."

The officer of the Department of Agriculture and Commerce in charge of the Agricultural experiments in connection with the deterioration of soil by "*reh*," &c., states that in consequence of the plantations at Sikandara Rao, on the Upper Ganges Canal, having shown that where canal water and silt were available a "*kikar*" plantation could be raised in bad "*úsar*," it was decided to recommend the preservation of a large area of "*úsar*" land for arboricultural purposes, and to limit operations to land irrigable from canals. A previous experiment had shown that the system of watering by hand was too expensive, and that the young trees did not thrive so well as when canal water was used.

It is further added that, "although it does not appear that flooding land with canal water, and leaving it to be absorbed by the soil, or evaporated, does much good to bad '*úsar*;' considerable benefit results from allowing water carrying silt to flow over the ground, so that the silt may be deposited. There are some small plots of *úsar* between a new channel and the Etawah Branch of the Ganges Canal, which a year ago were covered with efflorescence, but are now covered with silt, with *dub* grass growing on it."

18. Silting operations were first commenced on the Eastern Jumna Canal by the officers of the Irrigation Department in 1855; since which time these works have been continuously carried on. It is, however, only within the last ten years that funds have been freely allotted for the vigorous prosecution of these important reclamations on all the main canals.

As a general rule, the work has been confined to the land within canal boundaries, although in some cases outside tracts have thus been reclaimed and brought under cultivation.

There are now many miles of the canals covered with fine plantations of trees, some of which are upwards of twenty years old, grown on these silt banks, as also some acres of thriving wheat crops growing on the spots which four or five years previously were barren *úsar*.

ORDER.—Ordered that the above Resolution be submitted to the Government of India for information, and that it be published in *North-Western Provinces and Oudh Gazette*.

Ordered also, that it be circulated as usual to other Governments and Departments.

J. G. FORBES, *Lieut.-Colonel, R.E.*,
Joint Secretary.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

THROUGH RATES FOR GRAINS FROM DELHI AND AGRA TO CALCUTTA AND BOMBAY.

No. 162 R. T., dated Fort William, the 2nd March 1883.

From—Colonel W. S. Trevor, R.E., Secretary to the Government of India, Public Works Department,

To—The Secretary to the Government of Bombay, Public Works Department.

I am directed to acknowledge the receipt of your letters specified in the margin, communicating the views of the Government of Bombay, and forwarding communications from the Bombay Chamber of Commerce and the Agent, Bombay, Baroda and Central India Railway, on the subject of through rates for grain from Delhi and Agra to Calcutta and Bombay.

No. 1476, dated 22nd July 1882.
No. 2056, „ 20th October 1882.

2. As the questions involved in a due consideration of this subject are of not merely individual, but general, application, His Excellency the Governor General in Council considers it necessary to take the present opportunity of explaining fully the principles according to which, in the opinion of the Government of India, Railway rates and fares should be regulated. This course is the more desirable in view of the probable extension of Railway enterprise in India with a minimum of State support and control, and of the need of some assurance to the promoters and proprietary of such private lines in respect of the attitude which will be assumed by the State towards them.

3. As regards rates in general, the fundamental aim of the management of a Railway obviously should be to attract the maximum quantity of traffic the line can carry, at the best rates obtainable. These rates must be determined in each case. All rates will be in one sense special, though they may be capable of classification into groups, and each rate will depend on what the article will bear, what quantity of it is obtainable, and what is the approximate cost of hauling it. In other words, as correctly remarked in your letter under reply, "the cost of carriage is one of the limits within which rates may vary, the tax which the trade will bear being the other." But, in determining any particular rate, the whole circumstances of the traffic must be considered, the empty as well as the full running, the intermissions according to season, if any, and the competition, if any, of other modes of conveyance. Hence, though every rate must contribute to the general remunerativeness of the line as a whole, more profit may accrue out of one rate than another, a particular rate may be remunerative only indirectly, by filling rolling stock which would otherwise inevitably run empty in one direction, or, in other words, it may yield less than the average cost of carrying a unit of goods.

4. Two points of importance in working on such principles may here be incidentally mentioned. The theory of equal mileage rates, whether compulsory or not, has been repeatedly condemned by competent authorities—by the Royal Commission of 1867, the Joint Committee of 1872, and Mr. Ashley's Committee of 1881—while telescopic rates, that is, rates varying inversely as the distance, are recognized as legitimate in all cases where the favored traffic would be lost without such rates, and as financially feasible, owing to the lower proportionate cost of the longer lead.

5. Under conditions perfectly simple, where one Railway alone commands a province or given area, the proprietors obtain, under management such as has been described, the full advantage of their monopoly, the full possible amount of profit on their capital, except in so far as the State may interpose in the interest of the public, as, for instance, for the purpose of fixing maxima fares and rates for the conveyance of the poorer classes of passengers and of indispensable articles, such as salt, coal and food grains. The public at large, on the other hand, not unfrequently suffer severely in the cost [illegible] of Railway accommodation, even where rates may not be so excessive as to check materially, or to extinguish, its profitable use. But where the [illegible] monopoly, and competition of other Railways or modes of transit has to

be faced, the basis on which calculation of rates must proceed is materially changed. Capital cost of construction, gradients, cost of fuel and carrying capacity may, indeed, be borne in mind as elements affecting the profit earned, but the rates must eventually be governed, not by any arbitrary standard of profit to which it is thought fair to attain, but by the necessity of attracting traffic to the line. The Railway which has, for whatever reason, cost most to construct, or which has the steepest gradients, or the dearest fuel, or other natural disadvantage in comparison with its rival, will necessarily go to the wall, and suffer in dividend—possibly so far as to do little more than cover its working expenses. From this follows, moreover, that in any case when through traffic passes over more than one Railway, and the different administrations do not mutually agree upon any other method, the receipts from such traffic should be divided according to mileage run

6. It may next be considered whether these principles of action in cases where competition exists are affected by the State being either the proprietor, or vested with a certain interest in and control over one or more of the conflicting Railways. Clearly, they are not. The State ought not, and often could not, interfere to redress the inequalities of nature, of construction, or of management, and to put all upon a theoretically fair and equal footing. It cannot legitimately make a common purse among its Railways in order to support one at the expense of another, or still less, to drive an independent competitor from the field. Rival routes must be left alone, each to get the highest traffic it can upon the principles above set forth. The net result will be the greatest aggregate of traffic upon all combined which is consistent with a profit, the maximum of accommodation to traders and the public, and of gain to both producers and consumers, and the highest possible development of the resources of the country. Under only one class of circumstances will the State be justified in using such influence as it may in any case possess, namely, where competitive rates are unreasonably or unnecessarily lowered through either ignorance, recklessness, or idle rivalry, on the one hand, or the indifference which the security of a Government guarantee may induce, on the other.

7. From the preceding observations it will have been perceived that His Excellency the Governor General in Council, while recognizing the soundness of many of the views which have been put forward by His Excellency the Governor of Bombay in Council, by the Chamber of Commerce, or the Agent, Bombay, Baroda and Central India Railway, is unable to meet the wish that the rate for grain traffic by the Calcutta route should be arbitrarily fixed by Government at the same amount as the rate *viâ* Rajputana, or at a lower amount proportioned so as to equalise the cost of coal. His Excellency in Council prefers to adopt the alternative recommendation of the Bombay Government in your letter under reply—"That a minimum rate should by fixed for the Bombay route, without reference to the East Indian charge."

8. What the rate on the Rajputana Railway ought to be, in accordance with the general principles enunciated, may next be examined. The rates per maund actually in force are those shown marginally. His Excellency the Governor General considers that there is reason to believe that a rate considerably lower would more than cover the outlay incurred in the particular case, and might possibly even yield a greater sum as net profit, through the larger dealings which may be expected. A reduction would thus be desirable, on sound commercial principles, irrespective of what might be the article concerned. But in this case strong additional reasons for such a course may be derived from the fact that the reduction will be in favor of grain for export, chiefly wheat. His Excellency the Governor General in Council is strongly impressed with the ability of India to furnish a much larger share than she now does of the vast quantity of this commodity required in Europe, and is determined that no legitimate efforts on

For grain booked through.	Baroda Railway charge.		Rajputana Railway charge.		Total.	
	As.	P.	As.	P.	As.	P.
From Delhi	4	6	9	0	13	6
„ Agra	4	11	8	6	13	5
„ Bandikui	4	10	8	2	13	0
„ Ajmere	6	0	6	7	12	7
„ Chitrasani	6	0	2	10	9	4

the part of the State shall be wanting for the purpose of securing it. Independently of the direct gains from an increased aggregate of paying traffic, which have been mentioned in para. 6, the very important effects of an increase of exports upon the rate of exchange, and the reflex chain of advantages indirectly produced thereby, cannot be overlooked.

9. His Excellency the Governor General in Council is accordingly prepared to concur in a reduction of the through rates between Delhi and Bombay to 11 annas for wheat and 11½ annas for other grains and seeds of the same class, other stations being treated proportionally, the Rajputana A class scale being applied, and the proceeds divided according to mileage. This rate is apportioned between the Rajputana and Baroda Railways on the mileage principle, and it will be shaded off, for stations south of those named, on the principle, already applied, of giving greater favor to the longer leads. The opportunity may also be taken to abolish the restriction of the minimum load to which the through rates will apply. If the Agent, Bombay, Baroda and Central India Railway, consents to these reductions, the necessary month's notice may be issued at once, and the Manager, Rajputana-Malwa Railway, informed by telegraph accordingly. Finally, in full concurrence with the representation contained in the letter dated 12th April 1882, from the Secretary to the Bombay Chamber of Commerce, as to the prejudicial effects of frequent changes and uncertainty, it seems desirable that the rates should be maintained until the 31st March 1884, any alteration which experience may shew to be necessary after that date being notified to the public not less than two months previously.

10. If the Agent of the East Indian Railway considers that any change in the existing rates for grain or coal, or as to the restriction of minimum loads, would now be desirable, His Excellency the Governor General in Council will be prepared to give full consideration to any proposals he may submit.

11. While thus disposing of the particular case under reference, His Excellency the Governor General in Council desires to take this opportunity of making publicly known the principles upon which the Government of India will be guided generally in dealing with Railway rates. Subject to interposition such as has been described in para. 6, His Excellency in Council considers that Agents and Managers of Railways may, subject to general rules which will be communicated hereafter, be left as free as possible to fix, upon these principles, such rates as may seem most advantageous for their respective lines. To adopt the words of an able and exhaustive essay on the subject by Mr. T. H. Farrer—

"They may not be able to say exactly what is the cost and profit of each particular transaction; what is its share in the Capital account or in the expense of working; just as a manufacturer cannot say what is the exact cost of each parcel of goods he sends out. But they know generally whether a particular traffic brings them in a profit or not, and if it does not, they soon find out the truth, and cease to carry it."—*The Fortnightly Review*, August, 1882.

All Agents and Managers will now be invited to examine carefully their rates with the view of seeing how far they may be capable of modification, and especially, whether the rates on grain and other leading articles of export might not be reduced with advantage. The coaching traffic, and especially the fares for 3rd class passengers, might also be re-considered in the same sense.

12. In conclusion, I am to draw general attention to the fact that every expansion of the export trade will bring to bear a heavier strain upon the facilities for handling, warehousing, removing, and shipping produce at the Railway Stations and Ports. These facilities are believed to be even now in many cases inadequate, and their improvement will, His Excellency the Governor General in Council trusts, engage the serious attention of the several local authorities at an early date.

The Governments of Madras, Bengal, North-Western Provinces and Oudh, the Punjab, Public Works Department.
The Chief Commissioners of the Central Provinces, Assam and British Burma.
The Resident at Hyderabad.
The Agents to the Governor General for Rajputana, Central India, and Biluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways.

Copy forwarded to the local Governments, Administrations and Officers noted in the margin for information.

Copy also forwarded to the Publisher of the *Gazette of India* for publication in the Supplement to the *Gazette of India*.

Calcutta, 2nd March 1883.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

PROCEDURE REGULATING THE SUBMISSION BY PUBLIC BODIES OF ADDRESSES TO THE GOVERNMENT OF INDIA.

Extract from the Proceedings of the Government of India, in the Home Department (Public),—No. 12—408-424, under date, Fort William, the 16th March 1883.

RESOLUTION.

Inconvenience having been found to result in some cases from the absence of any distinct rules regulating the submission by public bodies of addresses to the Government of India, the Governor General in Council considers it desirable to prescribe a procedure for general observance.

The following rules are in accordance with principles laid down by the Government* of India in 1872:—

* Letter to British Indian Association, Calcutta, No. 2001 of 31st October 1872.

I.—An address, the sole or principal object of which is to promote or oppose a measure of Imperial legislation, or one which bears immediately upon general questions of Imperial policy, may be submitted direct to the Governor General in Council.

II.—When the object of an address is to induce the Governor General to give his assent to, or to withhold his assent from, a law passed by a Provincial Legislature, it should be transmitted through the Local Government concerned.

III.—An address intended to obtain the reversal of an executive act, or one which bears directly upon the executive action of a Local Government, should be transmitted through the Local Government in respect of whose action complaint is made. This procedure should be followed in all cases in which the jurisdiction to be exercised by the Government of India is of an appellate character or necessarily involves a reference to the Local Government.

IV.—In the case of an address relating to a law passed by a Provincial Legislature, it will be convenient that a copy of the address should simultaneously be sent to the Governor General. In other cases it will be at the option of the writers to send direct to the Government of India duplicates of representations submitted to the Local Government.

ORDER.—Ordered that a copy of this resolution be forwarded to the Government of Bombay with reference to the letter from that Government, No. 11, dated 3rd January 1883, and to the other* Local Governments and Administrations for information and publication in local Gazettes;

* Madras. Bengal. N. W. Provs. & Oudh. Punjab. Central Provinces. British Burma. Assam. Coorg. Hyderabad.

that a copy be forwarded to the several Departments of the Government of India for information and guidance; and

that the Resolution be published in the Supplement to the *Gazette of India* for general information.

(True Extract.)

A. MACKENZIE,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 20th MARCH 1883.

GENERAL REMARKS.—Slight rain is reported in most districts of the Madras Presidency, also in Sind and the Southern Mahratta Country of the Bombay Presidency. In Bengal, the North-Western Provinces, and the Punjab hot settled weather with westerly winds has generally set in, though a few local falls of rain and hail are reported. The same applies to the Central Provinces, Rajputana, and the Central India States. In Mysore and Coorg timely showers have benefited the coffee blossom.

Agricultural prospects continue generally favourable. Throughout Northern India the *rabi* harvest is rapidly progressing, and in Southern India it has been completed. In Bengal the poppy and mustard crops will probably be short, owing to the heavy winter rains, and other crops have here and also in the North-Western Provinces partially suffered from the same cause. Hailstorms also have done serious injury in many places throughout India, both to the standing crops and to the mango and *mahua* blossom. Sugarcane planting is everywhere in progress, and in Bengal jute and early rice is being sown. Prices show a slight tendency to fall. The public health is generally good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Mar. 21st)		
Bellary	·26 (average of 2 stations.)	Standing crops generally good, but cotton diseased in parts; harvest sugarcane and dry grains, yield average.
Kurnool	·53 (average of 5 stations.)	Standing crops affected by blight in parts, elsewhere in good condition; harvest dry grains, outturn below average; small-pox and cattle disease in parts.
Ganjam	·56 (average of 11 stations.)	Standing crops cotton and summer *ragi* thriving; fever, small-pox, and cattle disease continue.
Kistna	. . . .	Standing crops in parts affected by grubs and blight, elsewhere in good condition; harvest dry grains and castor, outturn below average; small-pox and cattle disease in parts.
Chingleput (Madras)	. . . .	Standing crops good; harvest paddy, outturn below average; small-pox and cattle disease in parts.
Coimbatore	·32 (average of 5 stations.)	Standing crops good, but cotton in one taluk requires rain; harvest paddy and dry grains, outturn average; fever, small-pox, cholera, and cattle disease in parts.
Tanjore	1·10 (one station)	Standing crops good; harvest paddy and dry grains, outturn below average; cholera abating.
Madura	·40 (average of 3 stations).	Standing crops failed in parts; harvest paddy; fever and slight cholera in parts.
Malabar	1·33 (average of 12 stations).	Sowing of third crop paddy completed; small-pox general; fever and slight cholera in parts.
Travancore	1·53	Ploughing commenced; small-pox and fever continue.
		General Remarks.—No rain in Kistna and Chingleput; general prospects good.
Bombay—(Mar. 21st)		
Kurrachee	·20 (average of 12 stations); greatest fall in Jati 1·05; least Johi ·02.	River at Kotri on 15th 2 feet 9 inches against 3 feet 4 inches on corresponding date last year; small-pox in Kurrachee; 56 fresh cases, 17 deaths from 7th to 17th instant, total to latter date 367 cases, 97 deaths, remaining sick 146, also 122 cases, 5 deaths, in the districts; fever in 9 taluks; cattle disease in 4 taluks; wheat, red rice and *bajri* in Kurrachee 24, 32, and 34. Kotri 30, 32, and 50, Sakro 16, 34, and 48, and Jati 20, 34, and 38 lbs. per rupee respectively.
Hyderabad	Rain in 4 talukas—average fall 31 with hail in Tandoo Allahyar.	*Rabi* crops flourishing; outturn of cotton crop reported to be 13 annas in the rupee; small-pox in 8, fever in 6, and cattle disease in 6 talukas; wheat 24, *bajri* 39, *jowari* 48, red rice 28 and white rice 22 lbs. per rupee.
Ahmedabad	. . . .	Reaping of *rabi* crops continues; public health good; wheat 27½ and *bajri* 31 lbs. per rupee.
Baroda	. . . .	*Rabi* crops fair in Amreli; reaping of wheat completed and sugar prospering; fever prevailing in Rani Mahals; small-pox in the town and taluka of Nausari; cattle disease in Kadi and Pattan talukas; *bajri* 30 and common rice 25½ lbs. per British rupee.
Surat	. . . .	*Rabi* harvest continues; small-pox in the city, average daily deaths 8; *jowari* 41 and *nagli* 54 lbs. per rupee.
Nasik	. . . .	Weather occasionally cloudy; harvesting *rabi* continued; small-pox in Nasik and Trimbak; wheat 28½, *bajri* 36, and rice 25 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Colaba (Bombay)	. . . .	Average abnormal temperature 1° warm from 14th to 16th, *nil* on 17th and 18th and 1° cool on 19th and 20th; vapour in air in excess of normal on 15th, normal from 15th to 18th, and in defect of normal on all other days; abnormal wind southerly on 14th and northerly on 20th; wind normal from 15th to 19th.
Poona	Dust-storm and slight shower in Poona.	*Bajri* 44 and *jowari* 57 lbs. per rupee; in Poona *bajri* 37 and *jowari* 45 lbs. per rupee.
Ahmednagar	. . . .	*Rabi* harvesting finished; *bajri* maximum 60 lbs. in Jamkhed, minimum 42 lbs. in Kopargaon, *jowari* maximum 72 lbs. in Jamkhed; minimum 54 lbs. in Sangamner.
Sholapore	·14	*Rabi* harvest almost completed; a few cases of small-pox in Karmala taluka and Sholapur city; *jowari* 69 lbs. 34 tolas and *bajri* 55 lbs. 25 tolas.
Dharwar	Rain in 3 talukas, maximum Ranibennur 2·50	Wheat and gram being harvested; reaping of late *jowari* in progress; scarcity of drinking water in Nargund petha; fever in two talukas, small-pox in Kod taluka; rice minimum 30 and *jowari* 49 pounds per rupee.
Kanara	Partial rain above Ghât.	Second crop harvest on coast; preparing of ground for monsoon crop above Ghât; small-pox in Sirsi, Sidapur and Karwar; fever less, cattle disease slight in two talukas; rice common Karwar 13¼, district average 15 seers per rupee; weather hot.
Rajkot	. . . .	Weather warm; general health good; cholera continues in Khakrocht under Malia; *bajri* 29 and *jowari* 36 lbs. per rupee.
		General Remarks.—Slight rain in parts of Sind and of Southern Mahratta Country; *rabi* harvest in progress; scarcity of drinking water in Nargand; some injury to crops by locusts in Ratnagiri, in Satara locusts coming from west and settling in jungles of Jaoli taluka; fever, small-pox and cattle disease in a few districts.
Bengal—(Mar. 20th)		
Chittagong	*Nil*	Weather bright and seasonable; prospects of crops not good; prices steady; cholera, small-pox and, cattle disease continue.
Dacca	*Nil*	Weather hot; sugarcane still being pressed; harvesting of mustard seed and safflower continues; prospects of *boro* paddy and other standing crops good; jute, *til* and early rice being sown.
24-Pergunnahs (Alipore)	*Nil*	Harvesting of *rabi* crops nearly finished, yield estimated at about from 12 to 14 annas; low lands being prepared for *amun* paddy; price of common rice stationary; public health generally good, though isolated cases of cholera reported from Bussirhat and Barrackpore sub-divisions.
Moorshedabad	1·65	Winter crops being cut, and generally reported to be good; ploughing for *aus* crop going on everywhere; except a few cases of small pox here and there, health of district generally good.
Rajshahye	*Nil*	Outturn of *rabi* crops generally satisfactory; ploughing and sowing of early paddy proceeding vigorously public health fair.
Burdwan	Burdwan ·22 Cutwa ·35 Raneegunge 1·06	*Rabi* crops nearly harvested; cases of cholera reported.
Rungpore	*Nil*	Weather hot during the day, cool at night; early rice being sown; prospects of tobacco and ginger good; harvesting of sugarcane, mustard, and in some places of wheat continues; cholera reported from south of district.
Bhagalpur	*Nil*	Prospects good; *rabi* harvest in progress; outturn poor in Muddehpoorah sub-division, but promising well elsewhere; public health good.
Purneah	*Nil*	Prospects of crops good; *toorg* oilseed harvested; tobacco being cut; public health good.
Patna	*Nil*	Harvesting of *rabi* crops in progress; pressing of sugarcane continues; public health good.
Durbhunga	*Nil*	Local winds blowing; weather getting warm; *rabi* harvest beginning; prices stationary; public health fair.
Hazaribagh	*Nil*	Weather warm and seasonable; harvesting of *rabi* crops going on; small-pox reported from a few places; general health good.
Cuttack	0·01	Weather hot; ploughing commenced; wheat being reaped; *dalua* rice in ear; public health good; cases of cholera reported from the interior.
		General Remarks.—There was some rain in Burdwan and Moorshedabad and a light shower in Cuttack during the week, but none in the other reporting districts; *rabi* harvest is in full progress and is generally expected to turn out fair, though in some places the crops have been damaged by the late heavy rain; mustard is said to have fallen below the average in some districts, and poppy will give a short crop in Behar; mango and *mahua* also are said to have been more or less injured by rain and hail in some districts; pressing of sugarcane is rapidly being completed, and is generally reported to have yielded a good outturn; ploughing is vigorously proceeding, and sowing of autumn crops has commenced in some parts; *boro* or spring rice is promising; sporadic cases of cholera and small-pox reported from some districts, and fever, though diminished, still lingers in a few districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—		
Benares (Mar. 20th)	No rain	Barley being cut; prospects good; prices steady.
Allahabad („ 21st)	No rain	High wind; hot weather setting in; *rabi* crop in great part cut; prices slightly falling; grain exported to east; health good.
Gorakhpur („ 19th)	. . . .	Weather clear at close of week; crops being reaped; some small-pox and cattle disease; prices stationary.
Jhansi („ „)	Occasional showers during the week.	Injury by hail is reported from all parganas except Jhansi; and enquiry as to its extent is in progress; gram is being cut; wheat and barley are ripening; prices fluctuating; small-pox amongst children continues; cattle disease continues.
Cawnpore („ „)	No rain, except 6 at Rasulabad.	Weather clear with high wind; sowing of sugarcane and extra crops begun; small-pox in Cawnpore; general health good; prices stationary.
Agra („ 20th)	No rain	Barley and *sarson* has begun to be cut; wheat being irrigated; small-pox in five and fever in three parganas; general health good; prices stationary.
Bareilly („ „)	. . . .	*Rabi* harvest begun, outturn excellent; weather getting hot.
Meerut („ „)	. . . .	Weather clear and settled; heat increasing; crops flourishing and beginning to ripen; health good; prices steady.
Kumaon („ „)	. . . .	Weather fine; crops doing well; health good; cattle disease continues; prices unchanged.
Rae Bareli („ 19th)	. . . .	During the last four days high westerly wind blowing; weather clear; *rabi* crops ripening; small-pox in two tahsils; prices slightly rising.
Lucknow („ 20th)	No rain	Wind strong from the west; prospects of crops good; but slight injury to wheat by blight reported from some parts of the district; people healthy; small-pox in Malihabad.
Partabgarh („ „)	. . . .	Slight fall in prices; wheat being reaped; weather seasonable; small-pox reported from Kunda tahsil.
Sitapur („ „)	. . . .	Warm west wind rapidly ripening crops, the condition of which has much improved; no further reports of blight; fall in prices of most grains, but gram 23 seers.
Fyzabad („ „)	No rain	Wheat and barley are being cut; health good; prices almost stationary.
Farukhabad („ „)	. . . .	Clear sunshining; weather seasonable; prices steady; health on the whole good, but slight fever prevalent in the Chibramau and Sadr tahsils. *General Remarks.*—The weather has become suddenly warmer, and high west winds have set in several districts; the harvest is progressing well, and prospects are good; in Jhansi considerable damage has been done by hail; small-pox and cattle disease continue in several districts, otherwise the general health is good; prices are fluctuating in a few districts, but there is no marked change.
Punjab—(Mar. 21st)		
Delhi	·1	Small-pox abating; harvest prospects good; prices stationary.
Hissar	1·2 at Sadr	Health good; grain crop in three tahsils of the Hissar district and in the Dhawali tahsil of the Sirsa district injured by hail; prices stationary.
Umballa . . .	*Nil*	Health good; yield of the *rabi* crop expected to be below the average; prices stationary.
Jullundur . . .	*Nil*	Health and harvest prospects good; prices steady.
Amritsar . . .	*Nil*	Health and harvest prospects good; prices stationary.
Lahore	Slight rain	Health and harvest prospects good; prices fluctuating.
Ferozepore . . .	Sadr . ·1 Muktsar . ·4 Jelalabad . 1·4	Health good; some damage has been caused by hail to the crops in the Moga and Muktsar tahsils; prices fluctuating.
Sialkot	1·8	Health and condition of crops good; prices slightly fluctuating.
Rawalpindi . . .	1·50 in district and 2 inches of snow at Murree.	A few cases of fever in the Kahuta tahsil; *rabi* prospects good; slight rise in prices.
Peshawar . . .	. . . . .	Health and harvest prospects good; prices fluctuating.
Mooltan	*Nil*	Health and condition of crops good; prices steady.
Dera Ismail Khan . .	*Nil*	Health good; *rabi* prospects fair; prices steady. *General Remarks.*—Health and harvest prospects generally good; but crops in parts of the Hissar and Ferozpur districts have been injured by hail.
Central Provinces—		
Nagpur (Mar. 21st)	. . . .	Hot, occasional clouds; *rabi* harvested; prospects good; small-pox slight in Nagpur and Ramteak tahsils; cattle disease prevalent; prices steady.
Jubbulpore . . .	. . . . .	Cloudy, cool; harvesting of *rabi* continues; prospects good; health good; prices stationary.
Saugor (Mar. 19th)	. . . .	Seasonable; crops excellent; *rabi* harvest in progress; health good; prices steady.
Seoni („ 20th)	. . . .	Cloudy, very hot; prices stationary.
Hoshangabad („ „)	. . . .	Seasonable; harvesting of wheat in progress; small-pox prevalent; wheat 18, rice 10¾, *jowar* 19 seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provs.—*contd.*		
Raipur (Mar. 17th)	·33	Cloudy; considerable damage to standing crops by hail of previous week; cattle disease prevalent; rice 32 and wheat 24 seers per rupee.
Sambalpur („ 15th)	1·55	Sugarcane planting in progress; fever continue; common rice 56 seers per rupee.
Khandwa . . .	. . . .	Days warm; nights and mornings pleasant; preparations for *kharif* sowings progressing; 283 cases of small-pox, 52 deaths; wheat 16, rice 15 and *jowar* 24 seers per rupee. *General Remarks.*—Hailstorms in Chanda and Mandla and rain in four other districts; *rabi* harvested in few districts, in others nearly so; standing crops damaged in places where hail fell, otherwise prospects good; health unchanged; prices steady.
British Burma— (Mar. 20th)		
Akyab („ 17th)	*Nil*	Total rainfall 1·35 inches; three deaths from cholera and one from small-pox in town; sixteen deaths from small-pox in district; cattle disease in one township.
Rangoon . . .	*Nil*	Total rainfall ·14 inch; 8 cases of small-pox; 3 proved fatal, otherwise public health good.
Bassein . . .	. . . .	Four deaths from cholera in town, otherwise public health good.
Prome	. . . .	Public health good.
Amherst (Moulmein) .	*Nil*	Total rainfall ·27 inch; public health in Moulmein and district good.
Toungoo . . .	*Nil*	Total rainfall ·03 inch; 4 deaths from small-pox in one township, otherwise public health good. *General Remarks.*—A little small-pox and cholera, otherwise public health good.
Assam—		
Gauhati (Mar. 20th)	No rain	Weather getting hot; sowing of *aus* crop commenced; gathering of mustard over; public health good.
Sylhet . .	No rain	The outturn of *aman* and *sali dhan* this year was as follows: *aman* 12 to 14 annas and *sali* 10 to 13 annas of the yield of 1881-82; ploughing for *aman* and *sali* going on, sugarcanes are still being pressed; prospect of *boro* crops good; deaths from cholera and small-pox reported from Sunamganj and Karunganj sub-divisions.
Cachar	·06	Weather very warm in the day but cool at night; common rice 26⅝ seers per rupee; general health good.
Dibrugarh . . .	·28	Weather cloudy; crushing of sugarcane commenced; mustard harvested; ploughing for *ahu* going on; district healthy.
Mysore and Coorg—		
Bangalore . . .	·05	Crops in good condition; prospects satisfactory.
Mysore . . .	1·55	Crops in good condition; prospects satisfactory.
Mercara . . .	·66	Blossom showers all that could be wished in South Coorg, more needed in Mudegerinad; *vishaka* crop in the Surlabina coming into ear; slight fall in price of food grain; small-pox prevalent. *General Remarks.*—Rain has fallen in several parts of the province; crops in good condition; prospects good; public health satisfactory; prices unaltered.
Berar and Hyderabad- (Mar. 21st		
Amraoti . . .	. . . .	Weather hot; threshing still continues; wheat 16 and *jowari* 26 seers per rupee.
Akola	. . . .	Threshing of *rabi* crops in progress; prospects good.
Hyderabad . . .	. . . .	Heavy hailstorm dearing the week; *mohowa* crop injured; dry crops in some villages damaged; *rabi* reaping commenced in some talukas; small-pox and cholera still prevalent; prices: wheat 17½, coarse rice 11⅓, white *juari* 25¼, yellow *juari* 13¾, *tur* 23¼ seers per current *sicca* rupee.
Rajputana—		
Abu (Mar. 21st)	. . . .	Weather clear and seasonable.
Sirohi („ 18th)	. . . .	Weather cloudy and sensibly warm; wells full; health and crops good.
Marwar („ 16th)	. . . .	Weather cloudy and warm; tanks all empty; water obtainable from wells; small-pox prevails; crops ripening; prospects good; prices rising slowly.
Meywar („ „)	Some rain	Wells and tanks fair; health very good; crops good.
Harowtee („ 17th)	. . . .	Weather cloudy and warm; gram being harvested; high winds; health good.
Jhallawar („ 19th)	·39	Weather cool; crops damaged by hail in many villages.
Ajmere („ 20th)	. . . .	Weather seasonable and cold; winds caused loss to crops; small-pox prevalent.
Jeypore („ „)	. . . .	Prospects and health good; prices stationary.
Ulwur („ „)	Rain in three tehsils	Barley harvesting continues; health good; prices steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States—(Mar. 21st)		
Indore		Weather warmer; health good; agricultural prospects generally favourable.
Morar (Gwalior)		Health and prospects good; some damage has been done to the crops by the late rain; weather changeable.
Sutna		Health and prospects good.
Sehore		Weather seasonable; prospects and public health good.
Neemuch		Weather seasonable; public health good.
Goona		Health and crops good; wheat 23 seers per rupee.
Agar		Health and prospects good.
Nowgong	·3	*Rabi* crops are being reaped.
Manpur	*Nil*	Prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad		Reaping of *rabi* crops nearly over; public health good; wheat 27½ and *bajri* 32 lbs. per rupee.
Baroda		Harvesting of *rabi* crops in progress; fever and small-pox prevailing in the Nausari taluka; *bajri* 30 and common rice 25½ lbs. per rupee.
Surat		*Rabi* harvest nearly completed; small-pox in the city, daily average deaths 7; *jowari* 42 and *nagli* 51 lbs. per rupee.
Nasik		*Rabi* harvesting nearly completed; hot in afternoon; small-pox continues in Nasik; wheat 28½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay)		Abnormal temperature rose from 2° cool on 21st to 3° warm on 26th and then fell to *nil* on 27th; vapour in air slightly in defect of normal; wind normal on 21st, 22nd, and 27th; abnormal wind northerly from 23rd to 26th.
Poona		Public health good; *bajri* 44 and *jowari* 57 lbs. per rupee; in Poona *bajri* 37 and *jowari* 48 lbs. per rupee.
Ahmednagar		*Rabi* crops harvested; *bajri* maximum 60 lbs. in Jamkhed, minimum 42 lbs. in Kopargaon; *jowari* maximum 72 lbs. in Jamkhed, minimum 54 lbs. in Akola.
Sholapore		*Rabi* harvest almost completed; small-pox prevails in a few villages in Karmala taluka only; *jowari* 69 lbs. 28 tolas and *bajri* 55 lbs. 9 tolas per rupee.
Dharwar	·52 in Hubli	Harvesting of late crops in progress; scarcity of drinking water in six villages of Nargund; fever in two and small-pox in one taluka; rice minimum 30 and *jowari* 49 lbs. per rupee.
Kanara		Second crop harvest continues on coast; small-pox in Sirsi and Sidapur, subsiding in Karwar; fever and cattle disease slight; common rice in Karwar 23½, district average 15⅞ seers per rupee; weather hot.
Rajkot		Weather warm; general health good; small-pox at Rafla under Bantwa; *bajri* 29 and *jowari* 36 lbs. per rupee.
		General Remarks.—***Rabi*** **harvest generally over; scarcity of drinking water in parts of Dharwar; locusts in parts of Ratnagiri and Belgaum, and also in the hills in Satara; fever, small-pox, and cattle disease in a few districts.**
Bengal—(Mar. 27th)		
Chittagong	·05	Weather seasonable; prospects of crops somewhat improving prices stationary; cases of cholera and small-pox reported; cattle disease getting worse.
Dacca	*Nil*	Weather hot; cutting of sugarcane completed; harvesting of mustard seed and safflower continues; wheat and barley being gathered; prospects of standing crops good; *til* and *aus* rice being sown.
24-Pergunnahs (Alipore)	*Nil*	There are no crops on the ground; lowlands being prepared for late rice; price of common rice stationary; public health generally good; isolated cases of cholera reported from Basirhat and Barrackpur sub-divisions.
Moorshedabad	*Nil*	*Boro* rice doing well; winter crops being harvested; ploughing *aus* crops going on; small-pox reported from Harkurpara, Sagowas, Jellinghee, and Dowlatabad, and cholera from Burwa.
Rajshahye	*Nil*	Ploughing and sowing of paddy continues; public health fair.
Burdwan	*Nil*	Nothing to record regarding crops; cholera still reported in localities; fever lingers.
Rungpore	*Nil*	Weather hot; prospects of standing crops favourable; *aus* being sown; cases of cholera reported from Kurigram sub-div., otherwise public health good.
Bhagalpur	*Nil*	*Rabi* being harvested with good results; sugarcane being planted; fields being prepared for early rice, for which, and for sowing indigo, rain is needed.
Purneah	*Nil*	Prospects of crops fair; yield of *rabi* about eleven annas; reaping progressing; high lands very dry; public health fair; fever still lingers.
Patna	*Nil*	West wind prevailing; harvesting of *rabi* crops continues; public health good.
Durbhunga	*Nil*	*Rabi* being harvested; paddy fields being prepared; mango promising; prices stationary; public health good.
Hazaribagh	*Nil*	Weather fair and bright; *rabi* crops cut and harvested; *mohua* crop doing well; prices steady; general health good.
Cuttack	*Nil*	Weather clear and warm; wheat and other standing crops doing well; ploughing commenced; public health generally good; scattered cases of cholera and small-pox reported.
		General Remarks.—There was no rain during the week, except insignificant showers in Chittagong and Gya; ploughing is generally proceeding, and in some parts sowing of autumn crops and indigo, and planting of sugarcane are going on, but rain is wanted in some of the districts; in Darjeeling and Jalpaiguri rain is much needed for tea, which is said to be backward; spring rice generally doing well, and prospects of *mohua* and mango crops are said to be uncertain in some parts, but promising elsewhere; *rabi*

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		harvest is still in progress, and is generally expected to yield a fair average outturn, in spite of the damage caused by the late rain and hail in some localities; isolated cases of cholera and small-pox are reported from several districts, and fever still lingers in Nuddea and in two or three other districts; cattle disease is said to be getting worse in Chittagong.
N.-W. Provinces and Oudh—		
Benares (Mar. 27th)	No rain	Weather hot; wheat slightly injured by high winds; harvest operations commenced; sugarcane being planted in Chandauli.
Allahabad („ 28th)	No rain	Crops nearly all cut; prices falling slightly; a little small-pox in city and district, otherwise health good.
Gorakhpur („ 26th)		Weather clear and hot; harvesting in progress; health good; slight cattle disease; prices stationary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 3rd APRIL 1883.

GENERAL REMARKS.—During the week under report there has been slight rain in most districts of the Punjab, in two or three districts of Central and Eastern Bengal, in Assam, and in South Coorg. Light showers also fell in three districts of the North-Western Provinces and Oudh, in two districts of the Madras Presidency, and at Bhopal. Elsewhere there has been no rain to report, and dry, hot weather has generally set in.

In the Madras Presidency cotton, sugarcane, and dry grains are still being harvested, and general prospects are good. In the Bombay Presidency the *rabi* harvest is generally over. In the Punjab crops are ripening and harvest prospects are good, except in Umballa, where the *rabi* is expected to be below the average. In the North-Western Provinces and Oudh the *rabi* crops are either being cut or have been harvested in most districts, and prospects are generally good. In the Central Provinces the harvest is almost completed, and threshing is well in hand. In Bengal the *rabi* harvest is still progressing generally with a fair outturn; the crops on the ground are doing well, though in North Bengal and in a few other parts rain is said to be much wanted. From Burma the reports of the paddy crop are favourable. In Berar the threshing of *rabi* has been completed, while in the Nizam's territories the *rabi* crops are still being reaped. In the Central India States and in Rajputana the *rabi* crop has been generally a good one, and prospects are favourable.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(April 4th)		
Bellary ...	·75 (one station)	Standing crops generally good, but cotton diseased in parts; harvest dry grains, sugarcane, and cotton, yield average.
Kurnool ...	.....	Standing crops in good condition; harvest cotton, yield below average; small-pox and cattle-disease in parts.
Ganjam ...	.....	No report received.
Kistna ...	.....	Standing crops affected by blight and grubs in parts, elsewhere in good condition; harvest dry grains, outturn below average; small-pox in parts.
Chingleput (Madras) ...	.....	Standing crops in good condition; harvest paddy, outturn below average; small-pox and cattle-disease in parts.
Coimbatore ...	.....	No report received.
Tanjore ...	.....	Standing crops in good condition; harvest paddy and dry grains, outturn below average; cholera abating.
Madura ...	.....	Harvest paddy; standing crops paddy failed in parts; cholera in parts.
Malabar ...	.....	Third crop paddy growing; small-pox general; fever and slight cholera in parts.
Travancore ...	·05	Preparations for cultivation commenced; fever and small-pox continue.
		General Remarks.—No rain, except in Bellary and Travancore; general prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—(April 4th)		
Kurrachee ...	.....	River at Kotri on 1st, 2 feet 7 inches against 3 feet 4 inches on same date last year; *rabi* harvesting going on; fever in seven talukas; cattle-disease in six talukas; small-pox prevalent in following localities in Kurrachee—Bagdadi lines, old town, and Rambagh quarters, 60 fresh cases, 10 deaths from 18th to 31st March, total to latter date 427 cases, 109 deaths, 128 remaining sick; also 22 cases in eight villages in district; wheat, red rice, and *bajri* in Kurrachee 25, 32 and 34 lbs., in Dadu 32 and 50 lbs., in Tatta 24, 32 and 40 lbs., and in Mirpur Botoro 20, 36 and 40 lbs. per rupee, respectively.
Hyderabad ...	.....	*Rabi* harvesting continues; small-pox in seven, fever in four, and cattle-disease in three talukas; wheat 24, *bajri* 39, *juari* 48, red rice 30, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Reaping of *rabi* crops over; public health good; wheat 27½ and *bajri* 32 lbs. per rupee.
Baroda ...	.....	Harvesting of *rabi* completed in some places; slight fever in Naosari and Kadi divisions; small-pox in Naosari and Baroda cities; cattle-disease in Kalol and Sidhpur; *bajri* 30 and common rice 25¾ lbs. per rupee.
Surat ...	.....	*Rabi* harvest mostly completed; preparations for *kharif* commenced; small-pox in Surat, daily average deaths 5; *juari* 42 and *nagli* 52 lbs. per rupee.
Násik ..	.....	*Rabi* harvesting almost completed; 6 persons died from cholera in Násik, most of them attacked in neighbouring villages; wheat 28½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay) ...	.....	Abnormal temperature rose from 1° cool on 28th to degree warm on 31st, and then gradually fell to 2° cool on 3rd; vapour in air normal; abnormal wind northerly on 31st and 1st; wind normal on all other days.
Poona ...	.....	Public health good; *bajri* 42 and *juari* 56 lbs. per rupee, in Poona *bajri* 37 and *juari* 48 lbs. per rupee.
Ahmednagar ...	.....	*Bajri*—maximum 57 lbs. per rupee in Sheogaon, minimum 39 lbs. in Sangamner; *juari*—maximum 72 lbs. per rupee in Parner, minimum 54 lbs. in Akola; cattle-disease in taluka Parner.
Sholapur ...	.....	*Rabi* harvest almost completed; small-pox continues in Kurmala taluka; *juari* 69 lbs. 38 tolas, and *bajri* 56 lbs. 10 tolas per rupee.
Dharwar ...	.....	Harvesting of late crops in progress; scarcity of drinking-water in six villages of Nargund; fever and small-pox in one taluka; rice minimum 30 and *juari* 45 lbs. per rupee.
Kanara ...	.....	Second crop harvest continues; preparing grounds for monsoon crop above ghát; small-pox in Sirsi and Sidhapur; fever and cattle-disease partial; common rice in Karwar 13¾ seers per rupee, in district, average 15⅓ seers per rupee; weather hot and cloudy.
Rajkot ...	.....	General health good; weather warm; some cases of measles in Rajkot; small-pox in Rajula, Und, and Bantwa; cholera in Katda Nayani, Und, and Lodhika thanas, 19 cases, 8 fatal; *bajri* 29 and *juari* 37 lbs. per rupee.
		General Remarks.—*Rabi* harvest generally over; scarcity of drinking-water in parts of taluka Nargund in Dharwar; locusts in parts of Belgaum, Ratnagiri, and Satara, in which last district they are stated to be troubling cattle; fever, small-pox, and cattle-disease in a few districts.
Bengal—(April 4th)		
Chittagong ...	*Nil*	Weather fine and seasonable; prospects of crops improving; prices steady; cattle-disease and small-pox still continue; public health generally good.
Dacca ...	·06	Harvesting of *rabi* crops continues; prospects of standing crops good; early rice and *til* being sown.
24-Pergunnahs (Calcutta)	Alipore, ·42	No crops on the ground; low lands being prepared for *amun* paddy; price of common rice stationary; public health good, though isolated cases of cholera reported from Barrackpore and Basirhat subdivisions.
Moorshedabad ...	*Nil*	Prospects of crops good; harvesting of winter crops continue, and land being prepared for *aus* rice; health generally good, except a few cases of small-pox and cholera.
Rajshahye ...	·81; Nattore, 83	Hailstones on 29th, did slight damage; ploughing and sowing of paddy and jute continue; slight cholera here and there.
Burdwan ...	*Nil*	Weather hot; outturn of sugarcane very fair; cholera reported from various parts of the district.
Rungpore ...	*Nil*	Weather hot, rain wanted; prospects of crops favourable; early rice still being sown; public health good.
Bhagálpur ...	*Nil*	*Rabi* harvest continues with excellent results, but outturn of peas poor; *mohwa* and mango blossoms suffered from cloudy weather in beginning of March; rain much needed for rice and indigo sowings; public health good.
Purneah ...	*Nil*	Prospects of crops very fair; *kaon* millet and *bhadoi* paddy being sown; mango crop promising; health good.
Patna ...	*Nil*	Prospects of crops good; *rabi* harvest in progress; public health good.
Durbhunga ...	*Nil*	Weather cloudy with lightning in the north; prospects of crops fair; health also fair; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bengal—*contd.*		
Hazáribágh ...	Slight shower on night of 2nd.	Weather fair and seasonable, very high winds; *mohwa* crop being gathered; general health good.
Cuttack ...	*Nil*	Weather hot; ploughing commenced; *dalua* rice in ear and in some places being cut; wheat being reaped; cases of cholera reported; public health generally good.
		General Remarks.—Slight rain fell in parts of Central and Eastern Bengal attended by hail in Rajshahye, Pubna, and Furreedpore; ploughing and sowing making good progress, and crops on the ground doing well, but in North Bengal and a few other parts rain is said to be much wanted; *rabi* harvest is still progressing, generally with a fair outturn; sporadic cases of cholera and small-pox reported from several districts, and fever lingers in Nuddea.
N. W. Provinces and Oudh—		
Benares (April 3rd)	No rain	All crops good average, except mustard; no sickness; prices steady; bazars well supplied.
Allahabad („ 4th)	No rain	Crops harvested, average outturn 14 to 16 annas, except *sarson* which is only 7 annas; prices of *rabi* products falling slightly.
Gorakhpur („ 2nd)	.....	Weather fine; harvesting in progress, outturn good except for barley and oilseeds; sporadic small-pox and cattle-disease prevalent; prices stationary.
Jhánsi („ „)	.....	Weather seasonable; harvesting in progress; slight injury is reported from hail, investigations as to its extent are still in progress; health good; cattle-disease of a mild form continues; prices fluctuating.
Agra („ 3rd)	Slight hail and rain on 2nd.	*Rabi* harvest progressing; small-pox in five and fever in three parganas; general health good; prices steady.
Bareilly („ „)	.....	Harvest proceeding; prices stationary; condition of people and cattle good.
Meerut („ „)	No rain	Weather cool; health good; crops ripening; harvest promising.
Kumaun („ „)	.....	Clouds gathered but have gone off, giving only a sprinkle of rain; crops ripening; barley being reaped in warm valleys; prospects fair, but a fall of rain would be beneficial; health good, but *mahamari* reported in two villages; prices rising.
Lucknow („ „)	No rain	Strong west wind; prospects of crops good; harvesting of *rabi* going on; people healthy; small-pox in Maliabad disappearing.
Partabgarh („ „)	.....	Prices stationary; barley and wheat cut; general health good.
Sitapur („ „)	.....	The *rabi* outturn promises to be a good average; supplies plentiful; prices slightly fluctuating; small-pox in Sitapur tahsil.
Fyzabad („ „)	No rain	Prospects of crops good; prices stationary; public health good.
Rae Bareli („ 2nd)	.....	Weather seasonable, heat increasing; harvesting of *rabi* crops going on; small-pox abating; condition of cattle good; prices stationary.
Cawnpore („ 3rd)	No rain	Weather clear; small-pox in town and in two parganas; indigo, sugarcane, *ghuran*, and extra crops being sown; markets well supplied with food-grain; prices almost stationary.
Farukhabad („ „)	.....	Weather seasonable; prices steady; health of the people good, though small-pox still prevails in some parts; harvest nearly over.
		General Remarks.—A little rain has fallen in Kumaun, Agra, and Jhánsi, with slight hail in two latter districts; the *rabi* crops are either being cut or have been harvested in most districts; prices are normal; prospects and health are generally good.
Punjab—(April 3rd)		
Delhi ...	·10	Health fair; reaping commenced; prices stationary.
Hissar ...	No rain	Weather cloudy; health good; crops ripening; prices almost stationary.
Umballa ...	No rain	Health good; *rabi* harvest expected to be below the average; standing crops somewhat injured by recent wind; prices stationary.
Jullundur ...	No rain	Health and crop prospects good; prices stationary.
Amritsar ...	·50	Health and harvest prospects good; prices steady.
Lahore ...	Slight rain	Health and state of crops good; prices steady.
Ferozepore ...	·10 at Sadr	Health and harvest prospects good; slight rise in prices.
Sialkot ...	·20 at Zafarwal	Health and condition of crops good; slight fall in prices.
Rawalpindi ...	Slight rain	A few cases of fever in Kahuta tahsil; state of crops good; prices stationary.
Peshawar ...	·10	Health and *rabi* prospects good; prices stationary.
Mooltan ...	Drizzle at Sadr	Health and condition of crops good; slight fall in prices.
Dera Ismail Khan ...	Slight rain	Health good; harvest prospects fair; prices almost stationary.
		General Remarks.—Health and harvest prospects are generally good; most districts have had slight rain during the week.
Central Provinces—		
Nagpur (April 4th)	.....	Weather warm; *rabi* harvested; health unchanged; prices falling.
Jubbulpore ...	.....	Weather hot; reaping progressing; threshing begun; prospects good; small-pox slight; prices steady.
Saugor (April 2nd)	.....	Crops excellent; harvesting almost finished; winnowing in progress; health good; prices falling.
Seoni („ 3rd)	.....	Weather very hot; threshing and winnowing progressing; health good; prices of wheat fallen, rice stationary.
Hoshangabad („ „)	.....	Weather hot and windy; winnowing progressing; fever prevalent; 144 cases of small-pox; wheat 16 and rice 10¾ seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces— *contd.*		
Raipur (March 31st)	.....	Weather warm; health good; prices rising.
Sambalpur („ 29th)	.....	Weather sultry, with thunderstorm at close of week; sugarcane-planting nearly completed; fever and ague diminishing; rice 56 seers per rupee.
Khandwa ...	.....	Weather hot; prospects good; 199 cases of small-pox, 23 deaths; prices of wheat fallen, *juar* and rice stationary. *General Remarks.*—Weather warm and dry; harvesting of *rabi* almost completed; threshing well in hand; prospects favourable; small-pox in few districts, otherwise health generally good; prices show a tendency to fall.
British Burma— (March 31st)—		
Akyab ...	*Nil*	Total rainfall 1·35 inches; 11 cases of cholera in town, of which 10 fatal; 1 death from small-pox in district, otherwise public health good; slight cattle-disease in one township.
Rangoon ...	*Nil*	Total rainfall ·14 inches; 6 deaths from small-pox and 1 from cholera, otherwise public health good.
Bassein ...	.....	Eight deaths from cholera in one township, otherwise public health good.
Prome ...	.....	Public health good.
Amherst (Moulmein) ...	*Nil*	Total rainfall ·27; 1 death from cholera in Moulmein, otherwise public health in Moulmein and district good; cattle-disease in one township.
Toungoo ...	.....	Total rainfall ·03 inch; public health good. *General Remarks.*—Sharp cholera in Akyab, but as yet limited in extent, with this exception and slight small-pox, public health is good; cattle-disease insignificant; reports of paddy crop favourable, more extended and detailed enquiries being made.
Assam—		
Gauhati (April 3rd)	1·14	Weather warm in the day but cool at night; cholera still in Gauhati; sowing of *aus* crop in progress.
Sylhet („ 4th)	3·49	Cultivation going on; more rain wanted in south-west; cholera and small-pox still reported; *boro* paddy promising well.
Cachar („ „)	4·02	Common rice 22¾ seers per rupee; much small-pox prevails in the south of the district, but only 2 deaths are reported; a few cases of cholera with 1 death reported.
Dibrugarh ...	0·27	Weather seasonable; ploughing for *aus*; sugarcane crushing in progress; cholera and small-pox reported.
Mysore and Coorg— (April 4th)		
Bangalore ...	.....	Crops in good condition; prospects favourable.
Mysore ...	Tumkur, ·11	Crops in good condition; prospects favourable.
Mercara ...	.....	Heavy shower of rain in South Coorg, was useful for coffee blossoms, but more rain is needed in North Coorg; prices of food-grains falling; small-pox prevalent. *General Remarks.*—Crops in good condition; planting of sugarcane continues in some districts; prospects favourable; public health good; no material change in prices.
Berar & Hyderabad— (April 4th)		
Amráoti ...	.....	Weather hot; ploughing operations in progress; wheat 16 and *juari* 26 seers per rupee.
Akola ...	.....	Threshing of *rabi* completed; preparations for *kharif* sowings commenced.
Hyderabad ...	.....	*Tabi* crops prospering; *rabi* reapings continue; small-pox still prevalent; cholera increasing; prices—wheat 16¾, coarse rice 10½, white *juari* 24¼, yellow *juari* 28¾, and *tur* 23 seers per current sicca rupee.
Central India States— (April 4th)		
Indore ...	.....	Weather seasonable; the *rabi* crop generally has been a good one; health good.
Morar (Gwalior) ...	.....	Health and prospects good; weather hot and cloudy.
Neemuch ...	.....	Weather seasonable; public health good; wheat crops gathered; grain being gathered.
Goona ...	.....	Weather warmer; health and crops good.
Bhopal ...	·39	Weather seasonable; crops and public health good.
Agar ...	.....	Opium being collected; agricultural prospects and public health good.
Sutna ...	.....	No rain; cholera at Rewah.
Rutlam ...	.....	No report received.
Nowgong ...	.....	Weather hot; *rabi* crop is being reaped; prices steady; health good.
Manpur ...	.....	No rain; prospects good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Rajputana—		
Abu (April 4th)	.....	Weather pleasant and seasonable.
Sirohi („ 1st)	.....	Weather warm and seasonable; wells full; health good; barley and corn nearly all cut.
Marwar (March 30th)	.....	Weather partially cloudy, heat increasing; tanks all empty, water obtained from wells; small-pox prevails; crops good; prices stationary.
Meywar („ „)	.....	Weather seasonable; wells and tanks fair; health good; crops being harvested.
Harowti („ 31st)	.....	Weather hot, high winds; wheat being harvested.
Jhallawar („ 28th)	.....	Northerly cool winds; health good.
Ajmere (April 3rd)	.....	Weather seasonable; harvest proceeding.
Jeypore („ „)	.....	Harvesting commenced in some districts; prospects and health good; prices lower.
Ulwur („ „)	.....	*Rabi* crops being harvested; small-pox in three tahsils; wells failing.
Nepal (March 29th)		
Katmandu ...	*Nil*	Weather rapidly becoming warm; prospects good.

Bari Doab Canal. 1st Division	4·9	3·0	3,073·60	689	...	...	Gurdáspur	3·4	1·48	10,619	Wheat	125,834	1,535 cubic feet per second entered the head of the Bari Doab Canal. General rain having fallen, the canal was closed at noon on the 29th January. There is a falling off of 38,988 acres. The area irrigated as compared with the same month of last year. The decrease is almost entirely in wheat and barley, and is due to the heavy September rain having permitted of the cultivation of mixed crops which require but little water. In those portions of the canal where the rainfall was much greater than here decrease whilst at the tails of the branches where the rainfall was much less, there is a very considerable increase in irrigation.

PUBLIC WORKS DEPARTMENT.

IRRIGATION BRANCH.

IRRIGATIONS OPERATION OF THE NORTH-WESTERN PROVINCES FOR THE KHARIF SEASON 1882-83.

No. 618 I., dated Camp, 3rd March 1883.

RESOLUTION—By the Government of the N.-W. P. and Oudh.

Read—

Statements A, B, and *C*—15, showing irrigation operations for kharif, 1882-83, of canals in the North-Western Provinces.

OBSERVATIONS.—The kharif season of 1882-83 (from 1st April to 30th September 1882) was not very favorable for canal irrigation owing to the early setting in of the rains. In the beginning of June heavy rain fell in almost all districts, but the break in September caused a demand for water on the Eastern Jumna and Upper Ganges Canals.

2. The returns, however, show an increase of 33,385 in acreage, and of R1,64,584 in assessments over the totals of last year. The total area irrigated during the season under review was 739,410 acres, or 7,825 acres more than the highest ever recorded, *viz.*, in 1877, a year of drought, when the irrigated area exceeded the highest previously attained by 229,960 acres.

The following statement shows in detail the areas of the principal crops irrigated during the last four years:—

TABLE I.

	1879.	1880.	1881.	1882.
	Acres.	Acres.	Acres.	Acres.
Sugarcane	165,661	135,292	164,569	197,978
Rice	75,903	135,570	101,755	96,357
Bajra and juar	6,635	43,266	4,141	5,104
Maize	17,265	89,274	22,376	33,411
Other food-grains	12,535	9,207	6,887	5,982
Fodder crops	5,996	7,924	4,554	9,930
Fibres	59,580	63,680	63,247	49,722
Dyes	185,195	194,983	319,992	316,872
Miscellaneous	26,871	20,943	18,504	24,354
TOTAL	555,641	700,139	706,025	739,410

Sugarcane has far exceeded the area of last year, and the increase is fairly distributed over all divisions. Rice is slightly under the average of the last three years. The chief falling off is on the Rohilkhand Canals.

The increase in food-grains is due to the large area under maize, which cultivators were compelled to irrigate owing to the break in the rains in September. The increase in this crop alone is 11,000 acres.

3. The items given below exhibit the aggregate differences in the chief crops as compared with the prevous year:—

	1881-82.	1882-83.
	Acres.	Acres.
Sugarcane	164,569	197,978
Food-grains	135,159	150,784
Dyes, fibres and others	406,297	390,648
TOTAL	706,025	739,410

The rise in the acreage of sugarcane is alone equal to the total increase in the irrigated area on canals, whilst that in food-grains is counterbalanced by a

decrease in dyes, &c. The falling off, however, in the latter is not due to any appreciable diminution of the area under indigo, the total under which is 316,903 acres against 319,040 acres last year.

4. Table II compares the irrigated areas of the two years, 1881 and 1882, by canals :—

TABLE II.

Canals.	1881.	1882.	More.	Less.
	Acres.	Acres.	Acres.	Acres.
Upper Ganges	296,554	335,570	39,016	...
Lower Ganges	204,572	199,115	...	5,457
Agra	56,497	52,263	...	4,234
Eastern Jumna	104,197	112,483	8,286	...
Rohilkhand	35,922	32,663	...	3,259
Dún	5,315	5,520	205	...
Bijnor	2,894	1,678	...	1,216
Hamírpur Lakes	45	76	31	...
Jhánsi	29	42	13	...
TOTAL	706,025	739,410	47,551	14,166

The increase on the Upper Ganges Canal is in the four upper divisions, *viz.*, the Northern, Meerut, Anúpshahr and Bulandshahr, which, in round numbers, have extended their irrigation by 8,000, 17,000, 5,000, and 10,000 acres, respectively, over the figures of last year.

On the Lower Ganges Canal the falling off is entirely in the two old divisions, the Cawnpore and Etáwah, owing to short supply in the river in the early part of the season. The new divisions taken by themselves show a slight increase, 74,800 acres against 66,527; and this might have been greater had there been more water available for the tail portions.

The principal crops in these new divisions compare as follows :—

Crops.	1880.	1881.	1882.
	Acres.	Acres.	Acres.
Sugarcane	2,739	6,652	9,415
Indigo	13,171	51,855	56,720
Cotton	1,220	250	80
Others	11,587	7,770	8,585
TOTAL	28,717	66,527	74,800

This clearly shows that the tendency is for sugarcane and indigo to increase. Cotton apparently is unable to obtain a footing.

There is a slight falling off on the Agra Canal, the decrease being about equal to that in cotton alone. There is, however, an increase in sugarcane, but almost the same decrease in indigo.

On the Rohilkhand Canals there is a rise in sugarcane and a falling off in rice, and, on the whole, there is a slight decrease. This is due to there being no demand for water for late kharif rice sowings.

On the Eastern Jumna Canal the increase is due to sugarcane.

5. Table III shows the assessment on account of occupier's rate for the last four years :—

TABLE III.

	1879-80.	1880-81.	1881-82.	1882-83.
	₹	₹	₹	₹
Upper Ganges	12,01,470	9,09,785	9,69,853	11,01,884
Lower Ganges	31,072	4,15 906	4,92,948	5,11,884
Agra	69,478	98,055	1,68,898	1,57,621
Eastern Jumna	3,99,739	3,99,757	4,29,219	4,55,995
Rohilkhand	20,106	46,857	33,527	32.800
Dún	19,219	17,115	15,752	16,839
Bijnor	1,146	4,781	5,378	3,019
Bundelkhand	469	479	131	116
TOTAL	17,42,699	18,92,735	21,15,706	22,80,290

The rate per acre is ₹3·08, and is therefore better than that of last year, which was slightly under ₹3. This is due to the increase in the better class of crops, notably sugarcane.

ORDER.—Ordered, that copies of this Resolution be submitted to the Government of India for information; that it be circulated as usual to other Governments and Departments; and that it be published in the Government Gazette.

By order, &c.,

J. G. FORBES, *Lieut.-Col., R.E.,*

Joint Secy. to Govt., N.-W. P. and Oudh,
Public Works Dept. (Irrigation Branch.)

The 26th February 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 10th APRIL 1883.

General Remarks.—Slight rain has fallen in a few districts in the Madras Presidency, in the Punjab, in British Burma, and in parts of Bengal proper. There has also been some rain in Mysore and Mercara and in Cachar. Elsewhere there has been no rain to report during the week.

The harvest of summer *ragi, cholum,* and paddy continues in nearly all the districts of the Madras Presidency and prospects are good, except in Madura, where the standing crops are reported to have failed in parts. In the Bombay Presidency the *rabi* harvest is over; sugarcane is being planted in parts; scarcity of drinking-water still prevails in some places in Dharwar. Locusts have reappeared in the Dekkan districts, and measures for their destruction have been commenced in Satara. In the Bengal Presidency the *rabi* harvest is for the most part over, with generally a fair outturn; rain is much wanted throughout Bengal proper for general ploughing and for sowing of autumn crops and also for standing crops in Orissa. The *rabi* harvest is in active progress throughout the North-Western Provinces and Oudh, and has been nearly completed in some places. Prospects are good; but rain is wanted in Kumaun for late *rabi* and for *kharif* sowings. Harvest operations have commenced in two districts of the Punjab, and prospects are generally good. In the Central Provinces harvest prospects are good, and in one district the *rabi* outturn is reported to be above the average. In Assam ploughing and sowing is reported to be in progress. In Mysore and Coorg paddy and sugarcane has been more or less harvested in all districts, and in the Nizam's territories reaping is still in progress. In the Central India States and in Rajputana the harvest is in progress and prospects are good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(April 11th)		
Bellary ...	.....	Standing crops generally good, but cotton diseased in parts; harvest sugarcane, Bengal gram, and white *cholum*, yield average.
Kurnool ...	·16 (one station)	Standing crops in good condition; harvest cotton, yield between 6 and 12 annas; small-pox and cattle-disease in parts.
Ganjam (April 3rd)...	.....	Standing crops, cotton, and summer *ragi* thriving; fever, small-pox, and cattle-disease continue.
Ganjam („ 10th)...	02 (one station)	Standing crops cotton; sugar and *ragi* thriving; harvest summer *ragi*, outturn average; fever, small-pox, and cattle-disease continue.
Kistna ...	.....	Standing crops good, but castor, cotton, and paddy diseased in one taluk; harvest Bengal gram, &c., outturn ⅜ to ¾; small-pox and cattle-disease in parts.
Chingleput (Madras) ...	.....	Standing crops in good condition; harvest paddy, outturn half; small-pox and measles prevail; cholera and cattle-disease in parts.
Coimbatore (April 3rd)	.....	Standing crops in good condition, but cotton in one taluk requires rain; harvest paddy and dry grains; cholera, fever, and cattle-disease continue, fever more general.
Coimbatore („ 10th)	·6 (average of eight stations).	Standing crops in good condition, but cotton in one taluk requires rain; harvest paddy and dry grains in parts; cholera, fever, and cattle-disease continue, fever more general.
Tanjore ...	.....	Standing crops in good condition; harvest paddy, *ragi, cholum,* and gingelly seed, yield below average; cholera in parts.
Madura ...	·6 (one station)	Standing crops failed in parts; harvest paddy; fever and cholera in parts.
Malabar ...	·6 (average of six stations).	Third crop paddy progressing in parts; cholera and fever in parts.
Travancore ...	·05	Preparation for cultivation progressing; small-pox and fever prevail. *General Remarks.*—General prospects good.
Bombay—(April 11th)		
Karachi ...	*Nil*	River at Kotri on 8th, 3 feet 2 inches against 5 feet 7 inches on same date last year; small-pox decreasing, but prevalent in the following quarters of Karachi—Bagdadi lines, old town Machi Miani, and Rambagh, 21 fresh cases, 3 deaths from 1st to 9th instant, total to latter date 454 cases, 112 deaths, remaining sick 76; disease also in five villages in districts—10 cases, 5 deaths; fever in eight talukas; cattle-disease in two talukas; wheat, red rice, and *bajri*—in Karachi 24, 32 and 34, in Sehwan 30, 38 and 46, in Sakro 16, 34 and 48, and in Jati 20, 40 and 40 lbs. per rupee, respectively.
Hyderabad ...	.....	*Rabi* harvesting in progress; weather unseasonably sultry, storm apparently brewing; small-pox in eight, fever in nine, and cattle-disease in seven talukas; wheat 25, *bajri* 38, *juari* 48, red rice 30, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Planting of sugarcane and sowing of maize commenced; small-pox in Parentij taluka; cattle-disease and cholera in Sanand, 1 cholera case fatal; wheat 28 and *bajri* 31 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Baroda ...	.....	Extracting of opium juice in progress in Kadi division; sugarcane in good condition; small-pox in mild form in Baroda city; cattle-disease in Kalol and Sidhpur; *bajri* 30 and common rice 24½ lbs. per rupee.
Surat ...	.....	*Rabi* harvest completed; small-pox in Surat, Balsar and Pardi, daily average deaths 9 in Surat; *juari* 41 and *nagli* 51 lbs. per rupee.
Násik ...	.....	Cholera continues in Násik and neighbouring villages, deaths in Násik 17, in villages 29, one fatal case in Dindori taluka out of 3 attacks; weather very warm; wheat 28½, *bajri* 36, and rice 25 lbs. per rupee.
Colaba (Bombay) ...	Thunder, distant lightning, and a few drops of rain on the night of 9th.	Average abnormal temperature 1° cool from 4th to 6th, *nil* on 7th, and 1° warm from 8th to 10th; vapour in air slightly in defect of normal; wind normal from 4th to 7th, afterwards abnormal, wind southerly.
Poona ...	.....	Public health good; *bajri* 43 and *juari* 55 lbs. per rupee, in Poona *bajri* 37 and *juari* 52 lbs. per rupee.
Ahmednagar ...	.....	Threshing of *rabi* crops in progress; cattle-disease in Parner, Shrigonda, and Karjat talukas; *bajri*—maximum 60 lbs. per rupee in Jamkhed, minimum 39 lbs. in Sangamner; *juari*—maximum 72 lbs. per rupee in Jamkhed, minimum 57 lbs. in Shrigonda.
Sholapur ...	.....	*Rabi* harvest completed in all talukas except Madha; small-pox disappearing; a few cases of cattle-disease in Karmala taluka; *juari* 69 lbs. 8 tolas and *bajri* 56 lbs. 9 tolas per rupee.
Dharwar ...	.....	Harvesting of late crops and cotton-picking in progress; scarcity of drinking-water in nine villages of Nargund; fever and small-pox in one taluka; rice minimum 30 and *juari* 45 lbs. per rupee.
Kanara ...	.....	Second crop harvest continues; preparing ground for monsoon crop; planting sugarcane in above-ghát talukas; small-pox in four talukas and one petta, cattle-disease and fever in two; common rice in Karwar 13½ seers per rupee, in district average 15½ seers per rupee; weather hot and cloudy.
Rajkot ...	.....	General health good; weather very hot; some cases of measles in Rajkot; cholera continues in Katda Nayani, Und, and Lodhika thanas; *bajri* 29 and *juari* 36 lbs. per rupee.
		General Remarks.—*Rabi* harvest over; scarcity of drinking-water in parts of taluka Nargund in Dharwar; locusts in Belgaum, Ratnagiri, and Satara, measures for their destruction commenced in last district; fever, small-pox, and cattle-disease in a few districts
Bengal—(April 11th)		
Chittagong ...	.....	Weather hot, with foggy mornings; rain wanted; prices unchanged; cholera broken out in several places; cattle-disease not yet ceased.
Dacca ...	.....	Weather hot; harvesting of mustard, safflower, and pulses continues, sessamum and early rice being sown; prospects of standing crops good; rain wanted.
24-Pergunnahs (Calcutta)	*Nil*	No crops on the ground; price of common rice stationary; public health good, but cases of cholera reported from Barrackpore and Bassirhat sub-divisions.
Moorshedabad ...	*Nil*	*Boro* paddy doing well; winter crops still being cut; ploughing for *aus* paddy going on; public health on the whole good.
Rajshahye ...	.....	Weather hot; rain wanted; paddy and jute being sown; some cholera in the district.
Burdwan ...	*Nil*	Weather hot; *rabi* crops good; sugarcane average crop; cholera still reported.
Rungpore ...	.....	Weather hot; prospects fair; rain wanted; *aus* paddy being sown; harvesting of *rabi* crops and sugarcane going on; public health good.
Bhagálpur ...	*Nil*	Prospects good; *rabi* harvest nearly finished, outturn generally good; mango promises well, but rain now wanted; small-pox spreading, but not in an epidemic form.
Purneah ...	*Nil*	Prospects of crops continue fair; *bhadoi* crops still being sown; public health good.
Patna ...	*Nil*	Weather hot, with west wind; harvesting of *rabi* crops going on; public health good.
Durbhunga ...	*Nil*	*Rabi* harvest progressing, outturn fair; prices stationary; health good.
Hazáribágh ...	*Nil*	Weather warm, high west wind blowing; *rabi* crops nearly all harvested and stored; *mohwa* being gathered; mango promises well; general health good.
Cuttack ...	*Nil*	Weather hot; *dalua* rice being reaped; sugarcane being planted; ploughing has commenced; scattered cases of cholera reported; general health good.
		General Remarks.—Slight rain fell in parts of Bengal proper on night of 2nd, accompanied with strong wind and heavy hail-storm in some places, hail said to have caused some damage to tea in Darjeeling, elsewhere no damage reported; more rain much wanted throughout Bengal proper for general ploughing and for sowing of autumn crops, also for standing crops in Orissa; spring rice being harvested in Chota Nagpore and Sonthal Pergunnahs; *mohwa* being gathered and yielding a good outturn; on the whole *rabi* harvest for the most part finished, generally with a fair outturn; sporadic cases of cholera reported from several districts and of small-pox from some in Nuddea; fever still lingers.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
...res (April 10th)	No rain	Crops cut, outturn good, save mustard; no sickness of men or cattle; prices steady.
Allahabad („ 11th)	No rain	Heat increasing rapidly; slight small-pox and fever and a few cases of cholera in one village; prices easy.
Gorákhpur („ 9th)	.....	Weather fine; harvest nearly completed, outturn generally good; health fair; prices stationary.
Jhánsi („ „)	.....	Weather clear and hot; crops nearly all cut; prices stationary; health generally good; cattle-disease of a mild nature continues.
Agra („ 10th)	No rain	Heat increasing; *rabi* harvest progressing; small-pox in five and fever in two parganas; general health good; prices stationary.
Bareilly („ „)	.....	Harvest nearly half completed; heat increasing considerably; prices slightly falling; health of cattle and people continuing good.
Meerut („ „)	No rain	Weather getting hotter; health good; crops being harvested.
Kumaun („ „)	No rain	Rain wanted for late *rabi* and for *kharif* sowings; harvest commenced; health good, but *mahamari* in three villages; cattle-disease still prevalent; prices stationary.
Lucknow („ „)	No rain	Strong west wind; prospects of crops good; *rabi* harvest progressing; condition of people and cattle good.
Partabgarh („ „)	.....	Prices stationary; harvest nearly over, outturn fair; general health good; cattle-disease in a mild form in three tahsils.
Sitapur („ „)	.....	General health good; supplies plentiful; prices rising.
Fyzabad („ „)	No rain	Strong west wind; harvesting of *rabi* going on; heat increasing; small-pox in parts of tahsil Fyzabad; condition of cattle good; prices stationary.
Rae Bareli („ 9th)	.....	Weather seasonable; *rabi* harvesting in progress; health of men and condition of cattle good; prices steady.
Cawnpore („ 10th)	No rain	Small-pox in town, milder in pargana Bilhaur; *rabi* harvest continues; indigo, sugarcane, and extra crops being sown; cattle-disease in Bilhaur; prices almost stationary.
Farukhabad („ „)	.....	Weather getting warmer; prices steady; health of people fair; crops nearly all cut.
		General Remarks.—No rain during the week; weather seasonably hot; harvesting in progress; cattle-disease continues in Jhánsi, Kumaun, Cawnpore, and Partabgarh, and *mahamari* in three villages in Kumaun; small-pox in Fyzabad, Agra, Allahabad, and Cawnpore, but the general health is good and prices steady.
Punjab—(April 10th)		
Delhi ...	No rain	Health fair; small-pox continues; reaping commenced; prices falling.
Hissar ...	No rain	Weather seasonable; general health good; crops being harvested; prices fluctuating.
Umballa ...	No rain	Health good; *rabi* harvest expected to be below the average; prices stationary.
Jullundur ...	No rain	Health and crop prospects good; prices steady.
Lahore ...	No rain	Health and crop prospects good; prices stationary.
Ferozepore ...	No rain	Health good; *rabi* harvest expected to be above the average; prices falling.
Sialkot ...	·3 at Pasrur	Health and condition of crops good; prices stationary.
Rawalpindi ...	·1	Fever in Kahuta tahsil continues; prices steady.
Amritsar ...	.....	Health and harvest prospects good; prices steady.
Peshawar ...	.....	Health and harvest prospects good; prices stationary.
Mooltan ...	Drizzle at Sadr	Health and crop prospects good; prices fluctuating.
Dera Ismail Khan ...	·1	Health good; crop prospects fair; prices steady.
		General Remarks.—Health and harvest prospects generally good; harvesting in progress in the Delhi and Hissar districts.
Central Provinces—		
Nagpur (April 11th)	.....	Weather hot during day; crop prospects very good; small-pox and cattle-disease still prevail; prices steady.
Jubbulpore („ 10th)	.....	Weather hot during day; reaping and threshing of *rabi* crops in progress; prospects favourable; health good; rice 16 and wheat 20 seers per rupee.
Saugor ...	.....	Crops excellent; *rabi* harvest nearly finished; winnowing continues; prices falling; health good.
Seoni ...	.....	Weather seasonable; *rabi* outturn above average; health good; wheat 21 and rice 19 seers per rupee.
Hoshangabad (April 10th)	.....	Weather seasonable; winnowing in progress; fever prevailing, 88 cases small-pox; prices slightly fallen.
Raipur („ 7th)	.....	Days hot, nights pleasant; health good; prices steady.
Sambalpur („ 5th)	.....	Weather warm; sugarcane planting nearly completed; health good; prices stationary.
Khandwa ...	.....	Weather hot; prospects good; 399 cases small-pox, 41 deaths; wheat 17, *juari* 26, and rice 16 seers per rupee.
		General Remarks.—Weather hot, but seasonable; prospects of crops good; prices easy; health generally good.
British Burma—(April 7th		
Akyab ...	*Nil*	Total rainfall 1·35 inches; 34 cases of cholera in town, of which 21 fatal; 3 deaths from cholera and 5 from small-pox in district.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*		
Rangoon ...	4·39	Total rainfall 4·53 ; 1 death from small-pox, otherwise public health good.
Bassein ...	.....	Three deaths from cholera in town and 6 in one township, otherwise public health good ; cattle-disease in one township.
Prome ...	.....	Public health good.
Amherst (Moulmein) ...	·77	Total rainfall 1·04 inches ; 2 cases of cholera in one township, otherwise public health in Moulmein and district good.
Toungoo ...	·98	Total rainfall ·98 inches ; 3 deaths from small-pox in town.
		General Remarks.—Public health generally satisfactory, a little cholera and small-pox here and there; cattle-disease sporadic and trifling.
Assam—		
Gauhati (April 11th)	No rain	Rain wanted for sowing *ahu* ; weather close and oppressive ; cholera not increasing.
Sylhet („ „)	*Nil*	*Boro* paddy promising well ; cultivation going forward ; more rain wanted ; tea backward ; cholera and small-pox about.
Cachar („ „)	1·0	Weather intensely hot ; the river Barak has never been so low at this season ; public health indifferent ; many cases of small-pox, but not fatal ; common rice 21 3/16 seers per rupee.
Dibrugarh („ „)		Weather warm; ploughing for *ahu* ; small-pox still reported from North Lakhimpur sub-division ; cholera has broken out in the Sadr sub-division.
Mysore and Coorg—(April 11th)		
Bangalore ...	.....	Paddy and sugarcane continue to be harvested ; prospects favourable.
Mysore ...	·20	Prospects favourable.
Mercara ...	·02	Want of rain for coffee blossoms much felt in North Coorg ; small-pox and fever prevalent in the Mercara and Naujarajapatana taluks
		General Remarks.—Crops in good condition throughout the province ; paddy and sugarcane more or less harvested in all districts ; general health and prospects good ; average ruling prices—rice 12 to 15 seers, *ragi* 30 to 50 seers, and horse-gram 35 to 50 seers per rupee.
Berar & Hyderabad—(April 11th)		
Amráoti ...	.....	Weather rather hot ; ploughing operations in progress ; wheat 16 and *juari* 26 seers per rupee.
Akola ...	.....	Weather rather clear and hot ; preparations for *kharif* sowings continue.
Hyderabad ...	.....	*Tabi* crops prospering ; *rabi* reapings continue ; small-pox and cholera prevail ; cattle-disease prevalent in one taluka ; prices—wheat 16¾, coarse rice 10¾, white *juari* 24, yellow *juari* 27¼, and *tur* 24¼ seers per current sicca rupee.
Central India States—(April 11th)		
Indore ...	.....	Weather much warmer ; winds variable ; health and agricultural prospects favourable.
Morar (Gwalior) ...	.....	Health and prospects good ; weather warm.
Sutna ...	.....	Weather hot ; health and prospects good.
Rutlam ...	.....	*No report received.*
Neemuch ...	.....	Weather seasonable ; public health good ; wheat and grain crops gathered.
Goona ...	.....	Harvesting in progress ; few cases of small-pox, otherwise health good ; wheat 24 seers per rupee.
Bhopal ...	.....	Weather seasonable ; crops and public health good.
Agar ...	.....	Health and prospects good.
Nowgong ...	.....	Weather seasonable ; public health good.
Manpur ...	.....	Health and prospects good.
Rajputana—		
Abu (April 11th)	.....	Weather warm, seasonable, and windy.
Sirohi („ 8th)	.....	Weather seasonable ; wells full ; health good ; yield of barley and corn satisfactory.
Marwar („ 6th)	.....	Tanks all empty, water only obtained from wells with difficulty ; small-pox and other abnormal sickness prevalent to some extent ; crops ripening and in some districts being harvested ; heat increasing ; prices rising slowly.
Meywar („ „)	.....	Tanks and wells fair ; health very good ; crops being harvested.
Harowti („ 7th)	.....	Harvest nearly completed ; heat increasing ; health good.
Jhallawar ...	.....	No report received.
Ajmere (April 10th)	.....	Heat increasing ; crops nearly cut ; harvest above average.
Jeypore („ „)	.....	Harvesting progressing favourably ; health good ; prices steady.
Bhurtpore ...	.....	No report received.
Ulwur (April 10th)	.....	Weather seasonable ; harvesting continues ; small-pox reported only in one tahsil.

E. C. BUCK,

Executive Engineer, Meerut Division, reports that the rajbahas were run as escapes for a few days. No new irrigation was effected, all demand having ceased since 25th January, and that the 633 acres new irrigation belong really to an omission from January's estimate.

Executive Engineer, Bulandshahr Division, reports that no irrigation took place during the month, that the increase of 5,627 acres are arrears altered by comparison with the final measurements now going on, and that the wheat area shews a steady increase.

Executive Engineer, Narora Division, reports that the heavy rain of 26th and 27th January, 1883, rendered all new irrigation unnecessary. Unusual freedom from frost in December is the reason that notwithstanding the opening of new distributaries, the total irrigation has somewhat fallen off as compared with last year.

Executive Engineer, Mainpuri Division, reports that there was no demand till about the 20th of the month owing to the rain which fell on 25th January and succeeding days.

Executive Engineer, Cawnpore Division, reports that the heavy rains of the 2 th and 26th January have practically closed all demand for water for the season for all rabi crops except poppy, and what slight demand there has been during the current month on account of the latter crop has been confined to the Fatehgarh district, where the rainfall was lighter than lower down, the irrigation up to date is approximately the same as that of last year.

Executive Engineer, Etawah Division, reports that the decrease in area as compared with the corresponding period of last year, *viz.*, 12,925 acres, is chiefly due to a large area of arhar crop having been sown in kharif which otherwise would have been under rabi.

Executive Engineer, Bhognipur Division, reports that there was only a slight demand for water during the latter half of the month, and that very little new irrigation was effected.

Executive Engineer, Eastern Jumna Canal, reports that the decrease from last year is all in wheat that would have taken water in December and January had the supply been sufficient.

Executive Engineer, Agra Canal, reports that no new irrigation was effected during the month, and that measurements are expected to shew about the same area as in the preceding year.

Executive Engineer, Rohilkhand Canal, reports that there was no demand for water during the month except slightly in the Kicha Canal. Owing to the heavy rain at end of January very little canal water was taken for sugar paleo.

Note.—Besides the above, 250 acres under sugarcane were irrigated in the Rohilkhand Canals simultaneously with the rabi.

Allahabad,
The 22nd March 1883.

W. P. V. HÖRST,
Offg. Asst. Secy. to Govt., N.-W. P. and Oudh, P. W. D., Irrigation Branch.

	Acres.
Area irrigated in kharif 1881-82	856,631
Ditto ditto 1882-83	869,395
Net Increase	12,764

* Includes 12 acres supplementary irrigation not included in the returns for kharif crop of 1881-82.
† These figures represent the correct rain-fall during kharif, 1881-82, and differ from those shown in the returns for that crop submitted last year.
‡ These figures are approximate, as the Superintending Engineer reports that the whole of the measurement papers had not been received by Executive Engineers.
§ These figures differ from those shown in the returns for kharif 1881-82, in consequence of the omission of Gurgaon from this return, in which district no irrigation is shown.

C. W. ODLING,
Under-Secy. to the Govt. of Bengal, P. W. Department.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 17th APRIL 1883.

GENERAL REMARKS.—With the exception of slight showers in two districts of the Punjab and the North-Western Provinces and in four districts of Bengal, there has been no rain in Northern India nor in the Central India States. In the Bombay and Madras Presidencies there has been some rain in a few places, and a slight fall is also reported from two districts of Rajputana and from Mysore. In Assam the rainfall has been more or less general throughout the province.

In the Madras Presidency standing crops are generally good; cotton, sugarcane, and dry grains are still being harvested and a fair yield is expected. In the Bombay Presidency land is being prepared for *kharif* sowings in parts, and planting of sugarcane still continues in one or two places. In Bengal the *rabi* harvest is almost over, and has yielded a fair crop; tea prospects are reported as backward owing to drought, and rain is wanted in Bengal proper for *boro* paddy, indigo, and other crops on the ground. In the North-Western Provinces the *rabi* harvest is almost completed, and the outturn is stated to be satisfactory; the new grain is coming into the markets and the price of barley has fallen. In the Punjab the *rabi* harvest is either commencing or in progress, and generally with good prospects. Prospects are also good in the Central Provinces, where the harvest is practically over, and the grain is being prepared for the markets. In Assam ploughing for *ahu* still continues. In Mysore and Coorg standing crops are in good condition, and in the Nizam's territories preparations of *kharif* sowings are in progress. In Rajputana and the Central India States the prospects of the crops are good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(April 18th)		
Bellary ...	·22 (average of three stations).	Standing crops generally good; harvest sugarcane, wheat, and cotton, outturn average.
Kurnool ...	.....	Standing crops in good condition; harvest cotton, yield between 6 and 12 annas; small-pox and cattle-disease in parts, latter more general.
Ganjam ...	·6 (one station)	Standing crops cotton and *ragi* thriving; fever, small-pox, and cattle-disease continue.
Kistna ...	.....	Standing crops generally good, but castor, cotton, and paddy diseased in parts; harvest Bengal gram, later maize, *cumboo*, *cholum*, cotton, paddy, &c., outturn one-eighth to three-quarters; small-pox and cattle-disease in parts.
Chingleput (Madras) ...	.....	Standing crops in good condition; harvest paddy, outturn half; small-pox and measles prevail; cholera abating; cattle-disease in parts.
Coimbatore ...	.....	Standing crops, except cotton in parts of one taluk, require rain; harvest paddy, outturn average in one and above average in three taluks; cholera, fever, and cattle-disease continue; fever more general.
Tanjore ...	.....	Standing crops in good condition; harvest paddy, *cholum*, *ragi*, ground-nut, gingelly seed, *volagu*, black gram and horse gram, outturn below average; cholera continues.
Madura ...	·9 (one station)	Standing crops failing in parts; harvest paddy; fever and cholera continue in parts.
Malabar ...	9·3 (average of eleven stations).	Third crop paddy progressing in parts; cholera in one taluk and small-pox in all.
Travancore ...	.....	Cultivation in progress; fever continues.
		General Remarks.—No rain except in Ganjam, Bellary, Madura, and Malabar; general prospects good.
Bombay—(April 18th)		
Karachi ...	.....	River at Kotri on 16th, 3 feet 8 inches against 8 feet 4 inches on same date last year; *rabi* harvesting continues; fever in seven talukas; cattle-disease in two talukas; small-pox prevalent in the following localities in Karachi—Bagdadi lines, old town Machi Miani, Rambagh, and Dadu Bazaar quarters, 15 fresh cases, 3 deaths from 10th to 14th instant, total to latter date 469 cases, 115 deaths, remaining sick 85; also 39 cases, 5 deaths in 8 villages in districts; wheat, red rice, and *bajri* in Karachi 24, 32 and 34, in Kotri 30, 32 and 50, in Ghorabari 20, 44 and 44, and in Shahbandar 22, 44 and 44 lbs. per rupee respectively.
Hyderabad ...	.....	*Rabi* harvesting nearly completed; weather continues unseasonably sultry; small-pox in seven, fever in four, and cattle-disease in five talukas; wheat 24, *bajri* 38, *juari* 48, red rice 28, and white rice 22 lbs. per rupee.
Ahmedabad ...	.....	Planting of sugarcane and sowing of maize progressing; cattle-disease and cholera in Sanand; wheat 27½ and *bajri* 31 lbs. per rupee.
Baroda ...	.....	Harvesting of *rabi* nearly completed; small-pox continues in Naosari and Baroda; *bajri* 31¼ and common rice 24¼ lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Surat ...	.....	Preparations of *kharif* continue; small-pox in Balsar, Pardi, and Surat, daily average deaths 4; *juari* 42 and *nagli* 52 lbs. per rupee.
[illegible] ...	.....	Weather very warm, thermometer 97°; cholera continues, deaths in Násik 20 and taluka 32, it has appeared in Sinnar and Igatpuri talukas, 2 and 4 fatal cases respectively; wheat 28½, *bajri* 33½, and rice 25 lbs. per rupee.
Colaba (Bombay) ...	.....	Average abnormal temperature 1° warm from 11th to 16th, and 4° warm on 17th; vapour in air in excess of normal from 11th to 15th, afterwards in defect of normal; abnormal wind southerly from 11th to 16th, and northerly on 17th; distant lightning on the morning of 13th.
Poona ...	Duststorm and slight shower on 14th.	*Bajri* 42 and *juari* 54 lbs. per rupee, in Poona *bajri* 37 and *juari* 48 lbs. per rupee.
Ahmednagar ...	·03 in Nagar	Threshing of *rabi* crops in progress; cattle-disease in Nagar, Parner, and Karjat talukas; 4 deaths from cholera in taluka Parner; *juari*—maximum 72 lbs. per rupee in Parner, minimum 51 lbs. in Akola; *bajri*—maximum 54 lbs. in Shrigonda, minimum 42 lbs. in Kopergaon.
Sholapur ...	.....	Cattle-disease in Sholapur town and in three villages in Karmala taluka; *juari* 66 lbs. 9 tolas and *bajri* 55 lbs. 34 tolas per rupee.
Dharwar ...	.....	Harvesting of late crops and cotton picking in progress; scarcity of drinking-water in nine villages of Nargund; locusts in Dharwar; small-pox in one taluka; fever in two talukas; rice minimum 30 and *juari* 45 lbs. per rupee.
Kanara ...	.....	Second crop harvest continues; planting sugarcane; preparing ground for monsoon crop; small-pox in three talukas and one petta; cattle-disease subsiding; fever in two talukas; common rice in Karwar 12½ seers per rupee, in district average 15 seers per rupee; weather warm and cloudy.
Rajkot ...	.....	General health good; weather seasonable in Rajkot; measles in Rajkot town; cholera continues in Katda Nayani, Und, and Lodhika thanas; *bajri* 29 and *juari* 36 lbs. per rupee.
		General Remarks.—Heavy rain in Athni taluka of Belgaum district, slight in three other talukas of that district and in Nagar, Poona, and Jacobabad; locusts in Ratnagiri, Belgaum, Dharwar, and Satara; scarcity of drinking-water continues in portions of Nargund taluka of Dharwar; fever, small-pox, and cattle-disease still in a few districts.
Bengal—(April 18th)		
Chittagong ...	*Nil*	Weather dry and hot; prospects of crops generally good, but rain much wanted; prices steady; general health good; cattle-disease abating.
Dacca ...	*Nil*	Weather hot and dry; harvesting of pulses, safflower, and mustard continues; prospects of standing crops not good for want of rain; *sessamum*, early rice, and jute being sown.
24-Pergunnahs (Calcutta)	.....	No crops on the ground; low lands being prepared for *amun* paddy; public health on the whole good.
Moorshedabad ...	*Nil*	*Boro* rice doing well; fields being prepared for *bhadoi* crop; cutting of winter crops finished; public health on the whole good; cases of small-pox and cholera reported from some places.
Rajshahye ...	*Nil*	Weather hot, and no sign of rain; rain much wanted for *boro* rice and for sowing of *aus* rice; cholera reported, but not increasing.
Burdwan ...	*Nil*	Weather hot and dry; rain wanted; cholera abated.
Rungpore ...	·26	Weather hot; prospects of crops good; more rain wanted; sowing of *aus* paddy still going on; public health good.
Bhagálpur ...	*Nil*	Prospects good; fields being ploughed for paddy, which is now being sown on low lands; prices rising slightly; general health good; small-pox decreasing.
Purneah ...	*Nil*	Early crops sown, but threatened with loss for want of rain; public health good.
Patna ...	*Nil*	Harvesting of *rabi* crops about to be completed; public health good.
Durbhunga ...	*Nil*	*Rabi* harvest good; prices stationary; public health generally good.
Hazáribágh ...	*Nil*	Weather hot; no crops on the ground; mango promises well; cattle-disease reported; general health good.
Cuttack ...	*Nil*	Weather hot and cloudy; ploughing in progress; *dalua* rice and wheat being harvested; sugarcane being planted; public health generally good.
		General Remarks.—Slight rain fell in Rungpore, Darjeeling, Jalpaiguri, and Cooch Behar on the 13th, and did some good; want of rain felt throughout Bengal proper, especially for cultivation of autumn crops in Darjeeling; tea prospects backward, owing to drought; *boro* paddy, indigo, and other crops on the ground are also in want of rain in some places; *rabi* harvest almost over, and has yielded a fair crop on the whole in Chota Nagpore and Sonthal Pergunnahs; [illegible] cutturn generally good; sporadic cases of cholera reported from several places, and of small-pox from some in Nuddea; fever and cholera again increasing, and in Chittagong hill tracts fever prevalent.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares (April 17th)	No rain	A few isolated cases of cholera in the city and environs; crops good, except mustard; sugarcane planting going on.
Allahabad („ 18th)	.....	Settled hot weather; slight small-pox as before; prices steady [illegible] in *bajri*.
Gorakhpur („ 16th)	.....	Weather fine; harvest nearly completed, outturn generally good; some small-pox prevalent; prices falling.
Jhánsi („ „)	.....	Weather seasonable; winnowing and threshing of crops in progress; supplies sufficient; prices stationary; small-pox still prevalent.
Agra („ 17th)	No rain	*Rabi* harvest continues; small-pox in five and fever in two parganas; general health good; prices stationary.
Bareilly („ „)	No rain	Harvest approaching completion; prices tending to fall; health of people and cattle continues good.
Meerut („ „)	No rain	Heat increasing, strong westerly wind, duststorm on 14th, no hail; health good; harvest in full progress; new barley in the market, price fallen to 35 seers; wheat stationary.
Kumaun („ „)	No rain	Wheat crop somewhat injured; general health good; cattle-disease continues; prices rising.
Lucknow („ „)	No rain	Strong hot west wind; *rabi* outturn satisfactory; on the whole general health good.
Partabgarh („ „)	.....	Prices have undergone but slight alterations; harvest over; sugarcane being planted out; general health good.
Sitapur („ „)	.....	All the crops are nearly cut, except in *tarai* lands; prices fluctuating; small-pox in three tahsils.
Fyzabad („ „)	No rain	Harvesting going on; prospects good; public health good; prices stationary.
Rae Bareli („ 16th)	.....	Weather seasonable; *rabi* harvesting continues; small-pox and fever still lingering; supplies abundant; prices stationary.
Cawnpore („ 17th)	No rain	Small-pox in town and in two parganas; *rabi* nearly harvested; extra crops, sugarcane, and indigo being sown; markets well supplied with food-grain; prices stationary.
Farukhabad („ „)	.....	Weather seasonable; prices steady; small-pox still prevalent in mild form; cattle-disease reported from three tahsils; crops nearly all cut.
		General Remarks.—Slight showers of rain fell in Aligarh and Saharanpur; small-pox is somewhat more prevalent, and a few cases of cholera are reported from Benares; cattle-disease has appeared in three tahsils in Farukhabad, and fever in parts of Rae Bareli, Aligarh, and Agra; except in Kumaun where there is a rise, prices are stationary, but the general prospects and public health are good.
Punjab—(April 17th)		
Delhi ...	.....	Health fair; small-pox continues; reaping in progress, average yield expected; prices fluctuating.
Hissar ...	.....	Health good; harvesting in progress; prices almost stationary.
Umballa ...	.....	Health good; harvest expected to be below the average; prices stationary.
Jullundur ...	.....	Health good; harvesting commenced; prices stationary.
Lahore ...	Slight rain	Health and harvest prospects good; slight rise in prices.
Amritsar ...	.....	Health and harvest prospects good; prices steady.
Ferozepore ...	.....	Health good; harvesting commenced; prices fluctuating.
Sialkot ...	.....	Health and condition of crops good; prices stationary.
Rawalpindi ...	.....	Fever in Kahuta and Fatteh jang continues; a few cases of disease among sheep and goats in Pindi Gheb and Murree; prices steady.
Peshawar ...	.....	Health good; harvest commenced; prices fluctuating.
Mooltan ...	.....	Health and crop prospects good; prices steady.
Dera Ismail Khan ...	·2	Health good; crop prospects fair; prices almost stationary.
		General Remarks.—There has been slight rain in the Lahore and Dera Ismail Khan districts; health and harvest prospects generally good; harvesting has commenced in most districts.
Central Provinces—		
Nagpur (April 18th)	.....	Weather hot and cloudy; harvesting almost completed; small-pox and cattle-disease in places; prices steady.
Jubbulpore ...	.....	Weather getting warmer; threshing and winnowing in progress; prospects and health good; prices stationary.
Saugor ...	.....	No report received.
Seoni ...	.....	Weather cloudy and hot, with occasional duststorms; threshing and winnowing progressing; health good; prices of wheat fallen; rice risen.
Hoshangabad (Apl. 17th)	.....	Weather seasonable, with high winds; winnowing in progress; 19 cases of small-pox, 4 deaths; prices stationary.
[illegible]pur („ 14th)	.....	Weather very warm; all crops gathered in; small-pox in Ding tahsil; prices falling.
Sambalpur („ 12th)	.....	Weather hot; sugarcane coming on well; fever and ague prevail; prices stationary.
Khandwa ...	.....	Weather hot; prospects good; 219 cases small-pox, 29 deaths; prices steady.
		General Remarks.—Weather hot; crop prospects good; small-pox slightly prevalent; fever in Sambalpur; prices steady.
British Burma—(April 14th)—		
Akyab ...	*Nil*	Total rainfall 1·35 inches; 54 cases of cholera in town, of which 22 fatal; 7 deaths from cholera and 7 from small-pox in districts, cattle-disease [illegible].

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—*contd.*		
Rangoon ...	*Nil*	Total rainfall 4·53 inches; 6 deaths from small-pox, otherwise public health good.
Bassein ...	.....	Public health good in town; 38 deaths from cholera in district; cattle-disease in three townships.
Prome ...	.....	Public health good.
Amherst (Moulmein) ...	1·65	Total rainfall 2·69 inches; public health in Moulmein and district good; 272 deaths of cattle in three townships.
Toungoo ...	1·28	Total rainfall 2·26 inches; 3 deaths from small-pox in town, otherwise public health good.
		General Remarks.—Cholera prevalent in Akyab town and slightly in part of Kyoukphyoo, Thonegwa, and Bassein, and more small-pox in Akyab, Kyoukphyoo, Rangoon, and Toungoo, otherwise public health good; cattle-disease considerable in Amherst, slight in Akyab, Pegu, Bassein, and Henzada; weather hot, but seasonable.
Assam—		
Gauhati (April 17th)	1·32	Weather getting warm; cattle-disease reported from subdivision; no cholera during the week; weather favourable for *ahu* crop.
Sylhet („ 18th)	·22	Rain wanted now for *boro* paddy and to help ploughing; cholera, small-pox, and cattle-disease reported.
Cachar („ „)	*Nil*	Weather very hot; public health still indifferent; many cases of small-pox and cholera, but not fatal; no cattle-disease reported; common rice 22¾ seers per rupee; rain is very much wanted for ploughing and for tea.
Dibrugarh („ „)	Occasional showers; 3·33.	Ploughing for *ahu*; cholera in North Lakhimpur and neighbourhood of Dibrugarh; small-pox abating.
Mysore and Coorg—(April 18th)		
Bangalore ...	.....	Standing crops in good condition; prospects favourable.
Mysore ...	·11 at Tumkur	Standing crops in good condition; prospects favourable.
Mercara ...	·48	More rain much needed in North Coorg for coffee blossom; the *vysakh* rice crop has come into ear in the Surlabinad; price of food-grains stationary; small-pox prevalent in the Naujarajapatna taluk and fever in Mercara taluk.
		General Remarks.—General health and prospects good; no material change in prices.
Berar & Hyderabad—(April 18th)		
Amráoti ...	.....	Weather hot; ploughing operations in progress; wheat 16 and *juari* 26 seers per rupee.
Akola ...	.....	Weather rather hot; preparations for *kharif* sowings are going on.
Hyderabad ...	.....	No report received.
Central India States—(April 18th)		
Indore ...	.....	Weather seasonable; health good.
Morar (Gwalior) ...	.....	Weather warm; health good.
Sutna ...	.....	Weather hot; health good.
Rutlam ...	.....	No report received.
Neemuch ...	.....	Weather seasonable; public health good.
Goona ...	.....	Weather warm; small-pox still continues; wheat 24 seers per rupee.
Bhopal ...	.....	Weather seasonable; health and prospects good.
Agar ...	.....	Weather seasonable; public health good; opium has been collected.
Nowgong ...	.....	Weather cloudy and hot; public health good.
Manpur ...	.....	Weather hot; prospects good.
Rajputana—		
Abu (April 18th)	.....	Weather warm and seasonable.
Sirohi („ 15th)	.....	Weather seasonable, heat not excessive; wells full; health good; small-pox in some villages; crop prospects good.
Marwar („ 13th)	.....	Tanks all empty; water obtained from wells with difficulty; health good, though small-pox and other abnormal sickness prevail to some extent; crops being cut; weather partially cloudy, heat intense; hot winds commenced; prices stationary.
Meywar („ „)	.....	Tanks and wells fair; health good; crops harvested; weather cloudy.
Harowti („ 14th)	.....	Days hot, nights cold; prices steady; health good.
Jhallawar („ 11th)	.....	Hot and sultry; health good.
Ajmere („ 17th)	.....	Harvest progressing satisfactorily; weather seasonable.
Jeypore („ „)	Drops	Full average harvest expected; wheat selling at 15½ and barley at 19 seers per rupee; health good.
Bhurtpore ...	.....	No report received.
Ulwur (April 17th)	Slight rain	Harvest continues; health good; wheat 20, barley 27½, *bajri* 25, *juari* 28½, and gram 28½ seers per rupee.
Nepal—(April 12th)		
Katmandu ...	*Nil*	Prospects good; weather sultry.

E. C. BUCK,
Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House, Simla, on Thursday, the 19th April, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble J. W. Quinton.

SUCCESSION CERTIFICATE BILL.

Major the Hon'ble E. BARING moved for leave to introduce a Bill to amend the law relating to certificates granted under Act XXVII of 1860 (*an Act for facilitating the collection of debts on successions, and for the security of parties paying debts to the representatives of deceased persons*). He said:—

"Article 12, Schedule I, of the Court-fees Act, VII of 1870, provides, among other matters, for the levy of a fee of two per cent. on the amount or value of the property in respect of which a certificate is granted under Act XXVII of 1860. The following note is appended to the article:—

'The person to whom any such certificate is granted, or his representative, shall, after the expiration of twelve months from the date of such certificate, and thereafter whenever the Court granting such certificate requires him so to do, file a statement on oath of all monies recovered or realized by him under such certificate.

'If the monies so recovered or realized exceed the amount of debts or other property as sworn to by the person to whom the certificate is granted, the Court may cancel the same and order such person to take out a fresh certificate and pay the fee prescribed by this schedule for such excess. In default of filing such statement within the time allowed, the Court may cancel the certificate.'

"In the course of the discussions in the Legislative Council which preceded the passing of the Probate and Administration Act, V of 1881, a proposal was made by Mr. Pitt-Kennedy that Act XXVII of 1860 and the Court-fees Act should be amended so as to require, from any one obtaining a certificate under the former Act for the recovery of any portion of the estate of a deceased person, payment of a court-fee at the rate of two per cent. on the entire value of the estate. A circular was thereupon addressed to Local Governments calling for opinions on this proposal. The replies show that the weight of authority is altogether against its adoption; but many of them call attention to the fact, already more than once brought to the notice of the Government of India, that the requirements of the note in the Court-fees Act, to which I have referred, are, as a rule, neglected or evaded; that persons taking out certificates do not file the statements required by it; that the Courts have no proper means of compelling them to do so; and that large amounts of debts are thus collected under certificates obtained for trifling sums. Various suggestions have been made for enforcing compliance with the provisions of the note, but there are objections to any device for securing the fee which involves the imposition on the person obtaining the certificate of a duty to be performed after he has obtained the certificate. The great mass of the people who take out certificates are so indolent or careless or unintelligent,

that there is little hope of getting them to comply with the provisions of such a law; and the consequence is that, if it is not allowed to remain a dead-letter, as the present law has been, public officers will be constantly compelled to inflict penalties on large numbers of persons, many of whom have been guilty of no deliberate wrong. The simple plan is that already adopted without any warrant of law by some of the officers consulted, namely, to require each applicant for a certificate to file with his application a schedule of the debts in respect of which the certificate is required, and to amend Act XXVII of 1860 so as to make the certificate good only for the debts entered in the schedule, at the same time allowing the certificate-holder, if he afterwards finds that he needs a certificate for other debts, to obtain an extension of the certificate on paying the additional duty and (if the Court requires him to do so) giving additional security. The only objection that has been taken to this arrangement is that taken by the Calcutta High Court in their Registrar's letter No. 54, dated 10th January, 1880. They fear that 'improper use' might be made of the schedule 'by fraudulent debtors whose debts were not in the knowledge of the applicant at the time (he filed the schedule), or in some way prejudice might arise.' Now, there is little doubt that a fraudulent debtor would take the point referred to, and that he would thereby put the certificate-holder to the trouble of explaining his omission to enter the debt in his original schedule; but there would be no great hardship in this, and there would, on the other hand, be a certain compensating advantage, inasmuch as (as observed in one of the replies to the circular) the fear of this would stimulate applicants for certificates to be careful in compiling their schedules. Assuming that the law is to be amended in the manner proposed, a further question arises as to what debts the applicant for a certificate should be bound to include in his application. Should he be bound to include—

(*a*) all debts known to him to be outstanding, including those which could be realized equally well without a certificate; or

(*b*) only those debts which he chooses to include, because he believes he cannot realize them without a certificate?

"The former, it is believed, would be more in accordance with the views of those who framed the existing law; but it appears to the Government that it would be sufficient to adopt the second mode of valuation, and allow the applicant to take out a certificate in respect of such debts only as he thinks fit. No doubt, a larger revenue might be obtained by insisting on the other mode of valuation; but it is apprehended, having regard to the class of people who take out these certificates, that any system requiring the applicant to give a complete list of debts would, if it was to be thoroughly enforced, necessitate proceedings of an inquisitorial nature for which no sufficient machinery exists, and which it would not be worth while to undertake for the sake of the additional revenue to be obtained. The rule which it is now proposed to lay down, while it dispenses with all proceedings of an inquisitorial or penal nature, may reasonably be expected to lead to some slight increase of the revenue under this head, inasmuch as the certificate being expressly limited in its operation to the debts specified in it, the necessity of including in it all debts except those due from persons standing in some peculiarly friendly or confidential relation will be brought home to the applicants, and debtors will probably become alive to the risk they run in paying a debt which is omitted from it. The additional revenue realised will not, as I have already observed, be as large as if the alternative mode of valuation were adopted, but this is a result which, for the reason I have already stated, the Government is prepared to accept. The present Bill has been prepared for the purpose of carrying out these views. The effect of it, if it becomes law, will be that every applicant for a certificate under Act XXVII of 1860 will be required to state in his application the debts in respect of which he desires the certificate. It will be in his option to include what debts he pleases. He will pay duty only in respect of the debts which he elects to include, and the operation of the certificate will be limited to those debts. If he subsequently desires to include other debts, he can have the certificate extended to them on paying the additional duty. The note appended to article 12 of the schedule to the Court-fees Act will not apply to him. For the rest, the amendments made by the Bill in Act XXVII of 1860 and in the

Probate and Administration Act, 1881, are of an unimportant nature, and merely such as are necessitated by the above alterations in the substance of the law."

The Motion was put and agreed to.

Major the Hon'ble E. BARING also introduced the Bill.

CIVIL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble MR. ILBERT asked for leave to postpone the motions relative to the Bill to amend the Code of Civil Procedure, 1882.

Leave was granted.

BURMA LABOUR LAW, 1876, REPEAL BILL.

The Hon'ble SIR STEUART BAYLEY moved that the Bill to repeal the British Burma Labour Law, 1876, be taken into consideration. He said that, when he had the honour to introduce this Bill, he explained that the law was practically a dead-letter, and no operations had ever been effected under it, but that it was found to interfere with the free flow of labour from Madras to British Burma. The Chief Commissioner of British Burma had asked the Madras Government that the law should be repealed, and the latter had readily acceded to the proposal. The Bill was one of the shortest, consisting of but one section, and it was not thought necessary to refer it for the consideration of a Select Committee.

The Motion was put and agreed to.

The Hon'ble SIR STEUART BAYLEY also moved that the Bill be passed.

The Motion was put and agreed to.

LITTLE COCOS AND PREPARIS ISLANDS LAWS BILL.

The Hon'ble MR. ILBERT moved that the Bill to amend the law in force in the Little Cocos Island and Preparis Island be taken into consideration. He said that the Bill had been published and circulated. All the replies to it had been received, and they contained nothing to show that any amendment was required in the Bill as it had been introduced.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill be passed.

The Motion was put and agreed to.

The Council adjourned to Thursday, the 3rd May, 1883.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 9th March, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble R. Miller.
The Hon'ble Kristodás Pál, Rai Bahádur, C.I.E.
The Hon'ble J. W. Quinton.

INLAND STEAM-VESSELS BILL.

The Hon'ble MR. ILBERT introduced the Bill to amend the law relating to the Survey, and the Examination and Grant of Certificates to Engineers, of Inland Steam-vessels, and to provide for certain other matters relating to those vessels, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir Steuart Bayley, the Hon'ble Messrs. Reynolds and Miller and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *Gazette of India*, and in the *Fort St. George Gazette*, the *Bombay Government Gazette*, the *Calcutta Gazette* and the *British Burma Gazette* in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

STEAMSHIPS BILL.

The Hon'ble MR. ILBERT also introduced the Bill to amend the law relating to the Survey of Steamships and the Grant of Certificates to Engineers of those ships, and moved that it be referred to a Select Committee consisting of the Hon'ble Sir Steuart Bayley, the Hon'ble Messrs. Reynolds and Miller and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the *Gazette of India*, and in the *Fort St. George Gazette*, the *Bombay Government Gazette*, the *Calcutta Gazette* and the *British Burma Gazette* in English and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble MR. ILBERT also moved that the Bill to amend the Code of Criminal Procedure, 1882, so far as it relates to the exercise of jurisdiction over European British subjects, and Statement of Objects and Reasons, be published in the *Gazette of India*, and in the local official Gazettes in English and in such other languages as the Local Governments might think fit. He said:—

"This publication is a necessary stage—and it clearly ought to be an early stage—in the progress of a Bill; but, under the Rules of Business as they stood before the recent alteration, the Council could not have ordered the publication of a Bill until a motion that it be referred to a Select Committee or some equivalent motion had been put and carried. However, under the new rule which was passed the other day, the Council may direct the publication of a Bill at any time after leave to introduce it has been granted. The effect of passing this motion, which I now make, will be that this Bill will be published in the usual manner, and that the various Local Governments will have the same opportunity of expressing their opinions on the provisions of this Bill as they have of expressing their opinions on the provisions of any other Bill.

"I give these explanations for the purpose of correcting some misstatements which have been made with respect to the course which the Government have adopted, and proposed to adopt, in dealing with this measure. It has been alleged that we are pushing the Bill through the Council with unusual and improper haste. There is no foundation for this statement. The Government never intended to pass the Bill into law during the course of the present Calcutta session. They have dealt, and they always intended to deal, with this measure in accordance with the ordinary rules of business; and, in dealing with it, they have not departed from the usual course of procedure, except in one particular, namely, that, in order to give the public the earliest possible notice of the nature of their proposals, they sent copies of the Bill and the accompanying papers to some of the leading Journals before any formal order for publication of the Bill had been made by this Council.

"To substantiate this statement let me recapitulate shortly the several stages through which this measure has passed, both before and since its introduction as a Bill into the Council. It originated with a proposal for legislation which was made by the Government of Bengal to the Government of India in the month of March, 1882. That proposal was, in the month of April last, communicated in the ordinary way to other Local Governments for their opinions. On receipt of those opinions, the Government of India considered whether legislation should be undertaken, and, if so, what form it should take. Having come to a conclusion on these points, they submitted their proposals—the proposals which are embodied in the present Bill—to the Secretary of State in Council. The then Secretary of State, Lord Hartington, informed us that these proposals had been very carefully considered by him in Council, that he agreed in the conclusions at which we had arrived, and that he sanctioned the introduction of a Bill embodying the proposals which we had submitted. Accordingly, the Home Department issued instructions to the Legislative Department to frame a Bill, and the Bill, when framed, was placed in charge of the Legal Member of Council, who, I believe, always takes charge of Bills amending the Procedure Codes. I obtained leave to introduce the Bill on the 2nd of February, I introduced it in the following week, and the papers containing the opinions of Local Governments were, I believe, sent to the newspapers within three days after the introduction of the Bill. Since then the Bill has not been carried through any further stage.

"It has been also alleged that the Bill originated in the opinion of an adviser not sufficiently acquainted with the circumstances of Indian life, the reference being obviously to myself. Now, I do not wish to disclaim or lessen in any way my share of responsibility for this measure, but to say that it originated in any opinion given by me is to say what is not in accordance with the facts. The letter of Sir Ashley Eden was received by the Government of India before I landed in this country. It was sent round to the various Local Governments before I took my seat as a Member of this Council, and I never heard anything about the subject at all until after the replies of the Local Governments had been received by the Government of India. My duty then was simply to form the best conclusion I could after seeing what had been written on the subject, and hearing what was said on the subject, by persons who had an acquaintance with the country which I never affected or claimed to possess. The conclusion to which I came on the materials before me was, that we ought to legislate, and that we ought to legislate on the lines on which this Bill has been framed. That opinion I still hold. But the Bill is the Bill, not of the Legal Member of Council, but of the Government of India, and, that being so, it will, I think, be more meet that I should, on the present occasion, leave to the Head of the Government the task of explaining the policy of what is a Government measure.

"Accordingly, I shall confine myself exclusively to the legal aspect of the measure. But I do not intend to waste your time by reference to any of the so-called legal arguments purporting to show that we have no power to alter the law in the mode in which we propose to alter it. I do not anticipate that my honourable friend Mr. Evans will venture to use any such argument. He is much too good a lawyer to do so. For he knows as well as I do that about the legal power of the Legislative Council to pass this Bill there is not, and cannot be, any question.

"What I propose to do is to give you a dry simple statement shewing the jurisdiction which is, under the existing law, exerciseable by the Courts of this country in cases affecting European British subjects, and the mode in which it is proposed to alter that law by the present Bill. It is necessary that I should do this, because the scope and effect of the Bill have been much misunderstood or misrepresented, and I observe that an important London paper has alleged that we are running atilt against a rule which, as a matter of fact, we do not propose to touch, the rule, namely, which limits the extent of the criminal jurisdiction exerciseable by Magistrates in the mufassal over European British subjects.

"Let me begin by explaining what is meant by a European British subject. The term 'European British subject' is defined by the Criminal Procedure Code (section 4) to mean—

> '(1) any subject of Her Majesty born, naturalized or domiciled in the United Kingdom of Great Britain or Ireland, or in any of the European, American or Australian Colonies or Possessions of Her Majesty, or in the Colony of New Zealand, or in the Colony of the Cape of Good Hope or Natal:
>
> (2) any child or grandchild of any such person by legitimate descent.'

"It will be seen that the definition is somewhat arbitrary and artificial. It includes persons who are neither European nor British. It excludes persons who may be in all essential characteristics Englishmen, but who are not of legitimate descent.

"Such being the European British subject, let us see what is the nature and extent of the jurisdiction exerciseable over him in this country in civil and criminal cases.

"First, then, as to the jurisdiction exerciseable over European British subjects in civil cases. That jurisdiction is precisely the same as that which is exer-

ciseable in the case of persons not being European British subjects. Section 10 of the Civil Procedure Code enacts that—

'no person shall, by reason of his descent or place of birth, be in any civil proceeding exempted from the jurisdiction of the Courts.'

"No person is exempted from that jurisdiction by reason of his being a European British subject; no person is disqualified for exercising that jurisdiction by reason of his not being a European British subject. A Native Judge has the same civil jurisdiction over a European British subject as any other Judge, and may exercise that jurisdiction in such a way as to affect not only his property, but his reputation and his person. He can give judgment against him in a suit for fraud or libel; he can send him to prison for debt; can punish him for contempt of Court; and can issue a warrant for his arrest in case of his non-attendance as a witness.

"So much as to jurisdiction in civil cases. Next, as to jurisdiction in criminal cases. I will deal first with the jurisdiction of the High Courts, including in that expression, not only the High Courts at the Presidency-towns of Calcutta, Madras and Bombay, but the High Court at Allahabad and the Chief Court of the Panjáb at Lahore. The criminal jurisdiction of these Courts is unlimited. No person is exempted from it by reason of race or place of birth. No person is disqualified for exercising it by reason of race or place of birth. Any person may exercise the jurisdiction, whether he is a European British subject or a Native of India. And a Judge of the High Court, whether he is a European British subject or not, is by virtue of his office a Justice of the Peace within and for the whole of British India.

"Then, as to Presidency Magistrates. Here, again, there is no exemption, no disqualification, based on race or place of birth. Any Presidency Magistrate, whether a Native of India or not, can try or commit for trial any European British subject, and can pass any of the following sentences:—

(1) Imprisonment for a term not exceeding two years, including solitary imprisonment;
(2) Fine not exceeding one thousand rupees;
(3) Whipping.

"Lastly, as to the criminal jurisdiction of ordinary Magistrates and Judges in the mufassal. Here there are distinctions between cases affecting European British subjects and other cases, both as to the extent of the jurisdiction which may be exercised, as to the privileges of persons subject to that jurisdiction, and as to the persons qualified to exercise the jurisdiction.

"As to the extent of the jurisdiction. A Magistrate cannot sentence a European British subject to more than three months' imprisonment, or Rs. 1,000 fine, or both. A Court of Session cannot sentence a European British subject to more than a year's imprisonment, or fine, or both. And neither a Magistrate nor a Court of Session can sentence him to the punishment of whipping.

"Then, the European British subject has certain special privileges as to the mode of trial, the right of appeal, and the right to apply for release from custody.

"He may claim to be tried by a mixed jury or a mixed set of assessors, not less than half the number of jurors or assessors being either Europeans or Americans, or both Europeans and Americans.

"If he is convicted on a trial held by an Assistant Sessions Judge or a Magistrate, he may appeal either to the High Court or to the Court of Session at his option. He can appeal against small sentences of fine or imprisonment from which there is no right of appeal in ordinary cases, and if he is unlawfully detained in custody he can appeal to the High Court for an order directing the person detaining him to bring him before the High Court.

"And lastly, he cannot be tried by any Magistrate unless the Magistrate is a Justice of the Peace, a Magistrate of the first class and a European British subject; he cannot be tried by any Sessions Judge unless the Judge is a European British subject; and he cannot be tried by any Assistant Sessions Judge unless the Judge is a European British subject, has held the office of Assistant Sessions Judge for at least three years, and has been specially empowered by the Local Government to try European British subjects.

"The privilege of being tried by a mixed jury, or mixed assessors, belongs to all Europeans and Americans; the privilege of being tried by a European British subject belongs to the European British subject alone. Now, of all these various rules, the only one which we propose to alter is that which relates to the race qualification of the Judge. We have left untouched the limitations on the sentences which may be inflicted by the Judge. We have left untouched the right to trial by a mixed jury or by mixed assessors; we have left untouched the right to apply for release from illegal custody. The single alteration which we propose to make is this. We propose to substitute, for the disqualification arising from race, a qualification depending on tried personal fitness. We propose to say that a very small number of specially selected Native Magistrates may exercise that limited and qualified jurisdiction which can at present be exercised only by persons who fall within the extremely arbitrary and technical definition of European British subjects."

The Hon'ble MR. QUINTON said:—"It cannot be denied by the most earnest opponents of the present Bill that there is a strong array of official opinion in support of it. The measure which it embodies originated with the Government of Bengal. The Governments of Bombay, Madras, the North-Western Provinces and the Panjáb, the Chief Commissioners of the Central Provinces, of British Burma and of Assam, and the Resident at Haidarábád, who is *ex officio* Chief Commissioner of the Haidarábád Assigned Districts, have all written in no qualified terms expressing their approval of it on the grounds of public policy and administrative convenience.

"It is unquestionable that the Bill, if passed into law, will deprive the European British subject in the interior of being tried in certain cases by a Magistrate or Judge of his own race. I say 'in certain cases,' for, as the law at present stands, there is nothing, should he be unfortunate enough to be committed to the High Court, to prevent his being tried by a Native Judge of that tribunal. Whether this partial deprivation of a peculiar privilege be one which State policy and the interests of good administration demand, is the question this Council has now to determine—a question which the heads of all the Local Governments have answered in the affirmative.

"The policy of the British Government in India for many years has been to throw open to Natives of the country, proved to possess the necessary qualifications, offices in the public service which were at first reserved exclusively for Englishmen. The progress of education, the gradual adoption among the better classes of Natives of India of European standards of honour, integrity and truthfulness, the increase of intelligent interest in public affairs exhibited by the leaders of Native society, have all tended to break down the barriers which obstructed their advancement to the higher appointments of the administration. Successive opportunities of such employment have of late years been afforded to Native gentlemen, which have placed within their reach seats on the benches of the High Courts, and admission to the Covenanted and Native Civil Services. This last privilege will, except in cases of manifest incapacity, lead to the bench of the Sessions Court and to the magisterial and executive charge of districts.

"It is scarcely needful for me before this Council to dwell on the importance of this charge. District-officers have been rightly called the eyes and ears of Government. They are in their districts the outward and visible representation of British authority,—often but a dim and distant shadow,—and upon their efficiency, and on the respect and confidence they inspire, depend the reputation, the influence, and, perhaps in the last resort, the existence, of British rule in India. They are entrusted with weighty judicial and executive functions, and have in their hands powers which may affect the welfare and happiness of hundreds of thousands of human beings; for they, and they only, can adequately

represent and secure a hearing for the wants of their people. Similarly, Sessions Judges preside over the administration of criminal justice in areas co-extensive with, or larger than, those of districts, and have powers of trying all offences, even of a capital nature, committed by persons residing within their jurisdiction.

"To these high offices, for reasons of State policy which cannot now be questioned, Her Majesty's Government has thought it good that Natives of India should be admitted; and the Bill before the Council is only the natural outcome and complement of that policy. It simply invests the holders of them, when they happen to be other than Europeans, with powers hitherto inseparable from these offices.

"It is much to be regretted that this cannot be done without depriving Englishmen in India of a privilege, however small, which they have hitherto possessed, but that it must be done, sound policy and good administration alike seem to me to require.

"With what fairness can Government, which has held out to Natives prospects of reaching the highest posts in the public service, which induced and encouraged them to incur the labour and expense of qualifying for such appointments, turn round upon those persons now, who have satisfied all the requirements for high office, and say—'We make you Sessions Judges and Magistrates of districts, but we find you wanting, by reason of your descent, in the qualities essential to the discharge of a portion of the duties which devolve upon you in those capacities, and for the performance of those duties you must give place to others junior to you in the service'?

"Is such treatment likely to conciliate or win public esteem and confidence for Sessions Judges and Magistrates, to strengthen their hands in the execution of their offices, or to promote that good feeling and cordiality between European and Native Civilians which are indispensable to their working efficiently together? It is obvious that it must produce effects the direct opposites of these.

"No, My Lord. I believe it is now too late to stop short. We cannot retrace our steps, and, as the change now in contemplation must be made sooner or later, and, when it is made, appears fated to arouse passions which we all deplore, the sooner it is made the better.

"The warmth of feeling which has been called forth by the publication of the Bill, and the excitement to which it has given rise, seem to me very disproportionate to the results which may be reasonably expected to flow from it. The number of Native Civilians employed under each Local Government is very small; the localities where there are persons likely to be affected by the Bill are not numerous. Years must elapse before the few Native officers to whom the Bill refers can reach the qualifying offices or prove their fitness to be nominated as Justices of the Peace; and the Local Governments have, under these circumstances, full opportunity for giving effect to the proposals under the most favourable conditions. Notwithstanding all this, it has been assumed, in the vehement discussions which have taken place outside this Council chamber, that the present proposal is one to subject European residents in the interior of the country to the jurisdiction of all Native Magistrates—an assumption altogether unfounded. No Deputy Magistrate, no Honorary Magistrate and no Extra Assistant Commissioner, which classes comprehend nearly the entire Native Magistracy, can be nominated under the Bill.

"Similarly, much of the heated declamation which has been resounding in our ears can only spring from the idea that all distinctions of law between Europeans and Natives of India are to be abolished; but what are the facts?

"The Bill leaves altogether unaltered the main provisions of the law, that for heinous offences European British subjects must be tried before the High Court, that for grave offences meriting a punishment of imprisonment of less than one year's duration they are to be tried before the Court of Session, and

that the accused, if he pleases, can require that half the number of the jury or assessors at such trials shall be Europeans or Americans. The only change made is, that a Magistrate trying a European British subject for petty offences or enquiring into graver charges against him, and that a Sessions Judge presiding at his trial on such charges, shall not of necessity be a European, though such Magistrate, unless a Magistrate of the district, must have satisfied Government of his ability to discharge the duties of a Justice of the Peace.

"It is difficult to find any intelligible reason why an officer of sufficient judicial ability to be appointed a Presidency Magistrate should, when promoted or even transferred to a district beyond the Presidency, forfeit powers which he had been found to exercise in a satisfactory manner; or why a Native gentleman who has proved his fitness for the Bench of the Sessions Court should be declared disqualified from presiding at a trial of a European British subject, when the accused can have the advantage of a number of his countrymen on the jury or among the assessors.

"In several districts of the Lower Provinces of Bengal, where the cry of opposition has been loudest, and where the Bill, if it passes, is likely to have the most extensive operation, trials before Courts of Sessions are by jury.

"The arguments which might justly have been urged a quarter of a century ago, arising from the inaccessibility of Courts in the interior, and their seclusion from the fierce light of public opinion, were discussed and answered in the debate in this Council in 1872, in the speech of Lord Napier of Merchistoun, quoted on a previous occasion by the hon'ble and learned member who introduced this Bill; and, if anything further were wanted, I have but to point to the countless letters and telegrams in the columns of the newspapers arriving every day from different parts of the country, as evidence that, where Europeans in India are concerned, things cannot now be done in a corner."

The Hon'ble KRISTODÁS PÁL said:—"My Lord,—I think I would best consult the interests of the Bill if I should say as little as possible on the subject. I am convinced that I cannot do better than leave it to your Lordship, as the responsible head of the Government, to enunciate the reasons and policy of this measure. I cannot, however, allow this occasion to pass without saying that I look upon this Bill as a legitimate and logical development of the progressive policy which characterises British rule in this country, and that, its principle being sound, just and righteous, my countrymen feel a deep interest in it.

"None, my Lord, can regret more than I do the ebullition of feeling which this Bill has caused. Considering the innocuous character of the Bill, I confess I did not expect it, nor did the Government, I believe, anticipate it. Had it not been for the great and important principle at stake, I would have been the first to counsel the withdrawal of the Bill, rather than oppose the wave of feeling which has risen against it. I have too strong a faith in the character of John Bull to believe for a moment that he will carry to the bitter end his opposition to a noble attempt to establish that equality in the eye of the law which the history of his own country, and the teachings of his own political system, so loudly proclaim. I was young when the hurricane of the Sepoy Revolt burst over the country in 1857, but I well recollect how feelings were torn asunder by the sad events of those days, how furious was the rage of denunciation, and how terrible the voice of vengeance. And yet, when the storm of the Mutiny subsided, the feeling also subsided, and not a few of those who had stood forth as uncompromising enemies of the Natives now stepped forward as zealous champions of their cause. It has been my good fortune to work with many of them, and to profit not a little by their advice, assistance, co-operation and example. Who could for a moment say that the Anglo-Indian of the Mutiny days was the Anglo-Indian of the succeeding days of peace and progress? This is my experience of the character of honest John Bull.

"Pride of race—I use the phrase in no offensive sense—is a commendable feeling. It is an honest and honourable pride. It has been the mother of

good deeds, valiant acts, patriotic exertions and national glory. But there is a higher and nobler pride, that of fostering human happiness under beneficent law, raising the weak and lowly to the level of the strong and high, and making equal law and equal justice the basis of political paramountcy in the world. It is to that noble feeling I appeal. All Englishmen, whether in India or in England, I humbly think, should rejoice that, within the century and a quarter they have ruled India, they have effected such a complete revolution in the Indian mind, both intellectual and moral, that Indian Magistrates are found fit to be trusted with the administration of the laws of the land, not only over their own countrymen, but also over the members of the ruling race. This is a work of which England may justly feel proud—this is a consummation over which all Englishmen may well rejoice."

The Hon'ble MR. MILLER said:—"My Lord, I can hardly imagine a subject likely to be brought up for discussion in this Council concerning which I should speak with greater unwillingness than this Bill. If there ever was a matter to which the proverb 'Least said soonest mended' applied, it is this one. To speak will lead to misunderstanding, and so also will the keeping silence. To the best of my judgment I choose the lesser evil, for there have been misunderstandings enough, for which, however, I cannot feel that I, or those for whom I speak, are in any way to be held responsible.

"No subject for many years has evoked in India so deep or such united feeling on the part of the European community as this Bill. In the presence of a feeling so strong, and I cannot help saying also so powerful for mischief, it is an infinite pity that a measure of this nature, which deeply affects the material interests, as well as the sentiments, of Europeans, should have been introduced without any attempt made beforehand to ascertain their views.

"The disappointment on our part would have been excited under any circumstances, but recent events intensify and attract attention to it; for we have of late been hopeful that the former policy on the part of Government, of relying solely on information derived through official channels, would be relaxed, and that the views of the non-official community would be sought for and weighed more than has been hitherto the custom, and we have been encouraged to form opinions, and at times even taunted with having none.

"The fact that a measure on which, if on no other, the European community in, and connected with, India think strongly and think together, should have been introduced without a word of warning, leads reasonably and properly to disappointment, and tends to throw discredit on the profession of Government when they say they wish to know our views.

"But, from what I and many others have seen of your Lordship and of your Lordship's Government, we are led to believe this must have arisen from some misapprehension; and that, when it is made plain that on this subject the interested class, whom alone the proposed alteration of the law would practically affect, not only have an opinion, but are practically unanimous in it, as regards this measure,—when this, the true state of affairs, is discovered,—the Government may see their way to withdraw their calamitous proposal.

"On this subject I can confidently say the European non-official community think together. I only wish there were less positive proof. I wish it were still a matter of opinion, and that the opinion alone could be accepted; for the very fact of asking the public in a public way to state their views is injurious to the best interests of India. There is hardly another subject which could call the widely scattered, in places solitary and isolated, Europeans in this country so unanimously together as a proposal to subject their personal liberty to Native tribunals in the Mufassal; for the proposal threatens them in all ways—their liberty, their reputation and the stability of their property. The trade organizations in all parts of the country agree in this view: from Karáchi, from Bombay, although the planting interest is entirely absent in those parts of India; in Madras and Rangoon the same response is made; and in Bengal and in Southern India the Europeans in the Mufassal speak practically as one man.

"It seems to me to be altogether a fallacious argument to say that the proposal is at most a trifle. In the first place, it is not a trifle to deprive the European of his most cherished right. The first sign of an inclination on the part of Government to deprive him of his right to be tried by a fellow countryman excites him far beyond what actual immediate danger justifies; and it is not a trifle to stimulate feelings of distrust and indignation in the minds of Europeans in the country against the Government; for this indignation and distrust is not brought into effect directly against the Government, as would be the case in England, but affects rather the country itself and the Natives.

"If means were being sought to stir up and inflame those race antipathies which it is the noble ambition of your Lordship's administration to efface, a more effective one than this 'trifle' could not be found. It is not a trifle; for, if by mischance a Native Sessions Judge or a Native District Magistrate were to misjudge an European and condemn him to imprisonment on grounds which were afterwards proved to have been erroneous, it is perfectly certain that more positive, immediate, I may say, instantaneous, harm would be done to this country than could be repaired in half a dozen years. It is not a trifle; for one of the most common crimes, I will not say one of the ingrained customs, of this country is the fabrication of false evidence in the Courts of law. Perhaps, the hon'ble and learned member who introduces the Bill may think I am only uttering one of the common Anglo-Indian fossilized prejudices; but I would appeal to universal Indian experience to bear me out. False evidence is cheap. One single miscarriage of justice through the medium of false evidence sworn before a Native Magistrate will do more infinite mischief, by driving English workmen and English capital out of the country, than the united efforts of Government and of all the guarantees they can offer can repair in a quarter of a century.

"If a trifle, then, why in the name of common sense provoke all their animosity for the sake of it? It is difficult in a matter like this to appeal to experience that is purely English. This country is full of anomalies, and it is difficult for the English mind, unaccustomed to the facts of Indian life, to discover how it is that a practice which is submitted to without demur in a Presidency-town should be so bitterly resisted in the Mufassal. The answer is simple. A public opinion, a Press and legal assistance are at hand here. There, there is nothing but a Judge to condemn and a jail to confine. English enterprise—and on this side of India at least there is very little enterprise of any kind except English—is largely concerned, and English capital largely invested in this country, especially in Bengal. The indigo factories, the tea gardens, and the consequent inducement to that migration of population which is so urgently needed in parts of India, mills and mines, are all supported by English capital, and the tendency has been to increase this. It has begun to be recognized by European capital that India most wants to buy what England most wants to sell, namely, material for increasing the trading power of the country; and a stimulus has lately, under the auspices of your Lordship's Government, been given to the inward flow of capital.

"But there is one thing that European capital will not do. It will not entrust itself to Native Indian management. It is hopeless and useless to say this is the result of prejudice. Possibly it is prejudice. But the result of the prejudice is a tangible factor, which cannot be denied, cannot be ignored, and which must in fact be acknowledged. Capitalists will not entrust their money to Native management, and they are satisfied the feeling is well founded. I will not give reasons for this, for I do not wish to give unnecessary offence, but I ask your Lordship to take note of it.

"Capital employed in the Province is invested on the faith of European agency, but such agency is expensive and is not employed in greater strength than the circumstances of the case render positively necessary. A practice exists in the Mufassal—I am not drawing on my imagination, I am not uttering an Anglo-Indian prejudice, I am stating a fact which is known to every zamíndár as well as to every raiyat, to every official European equally as to non-officials who ever engaged in litigation, that the practice of bringing false

charges to injure rivals or to gratify a grudge is a common practice. This is a fact of which European capital has to take account before it allows itself to be locked up in India, and capital reflects that, if an European manager is removed from the charge of the enterprise on which he is employed in the Mufassal at a critical moment and imprisoned on a false accusation, the loss and damage may be overwhelming.

"No Native criminal tribunal in the Mufassal can, under these circumstances, command the confidence of our employés. Anything that touches the personal safety of our European employés in the Mufassal reflects back again on us, and, if it threatens their safety, it deters the inflow of capital. It is said this is all prejudice. We think it to be fact. Capital is sensitive, and, when you deprive the investor of one of the safeguards on which he mainly relies, namely, the right on the part of his employés to be tried by one who, whatever may be his knowledge of the criminal law, is at least a fellow-countryman and capable of understanding, as one of ourselves, our own feelings, it is of no sort of use to assure that capitalist that what he looks upon as a safeguard is only an 'anomaly'.

"It is only eleven years ago since Sir James Stephen addressed this Council on the same subject that is now before us; and, in allusion to the law which had then been decided upon, but which it is now proposed to alter, he used the following words:—

'I need not remind the Council of the extreme warmth of feeling which discussion upon a measure of the nature excited at no distant date, nor need I insist on the great importance to the Government of the country of the existence of harmony between the Government and the general European population.'

"These words still hold true. In what respect have circumstances changed since they were spoken? Is a compromise in itself more objectionable now than it was then; or are the facts which rendered the whole law a tissue of compromise in any manner or in any degree of manner different?

"The Europeans who have capital in this country do not think so, and they look in vain to anything that has been stated in advocacy of the Bill for reasons which justified a change in the law. A compromise the whole law is, and a compromise it must remain until the conditions of daily life in this country render a simpler law admissible.

"Is this compromise,—the least objectionable, the least actively offensive, of any that are to be found within the four corners of the statute-book—highly valued by the section to whom it applies? We have the traders' and planters' association from every part of India answering with one voice. I think it is a most regrettable thing, the idea of being called upon to answer the question had ever to be proposed to them; but of the fact of their reply there is no sort of doubt.

"My Lord, the exasperation of race that is now going on is terrible and deplorable. Enough harm has been done, and yet the exasperation is increasing every day. It has not done so yet, but it is leading to a sense of insecurity. If the Government depart from Calcutta to Simla, leaving the population of Bengal 'to stew in the juices of mutual animosity' engendered by this most unfortunate proposition, the mischief, which will not be prejudice, but a fact, not imaginary but tangible, may become beyond repair; and I call upon those of your Lordship's Council who have served their years in the country, and who have more than a theoretical knowledge of the people, to tell your Lordship frankly that I have not overstated the case. And of yourself, I would earnestly beg, in the interest of that concord between the races which you have so much at heart, to withdraw this Bill, which satisfies no one, and which, with the smallest amount of good, does almost the largest possible amount of harm."

[The spectators present here applauded the last speaker by loud clapping of hands.]

His Excellency THE PRESIDENT said:—"It is a rule of this Council, and of all legislative assemblies in the world, that those persons admitted as spectators

should not applaud on either side any of the sentiments delivered, and it is my duty to enforce that rule. I am quite sure that those gentlemen who have applauded on this occasion did so from forgetfulness, but it is a rule which must be observed; and, although sentiments are felt on one side or the other, they must not be expressed."

The Hon'ble MR. EVANS said that the motion for publication was purely formal. It was only a strong sense of public duty, and a strong conviction that the present deplorable state of things ought to be put an end to at once, that led him to speak at this stage of the Bill. The question raised by this Bill, as stated by the hon'ble mover, was whether they "could with safety, and ought in justice, to re-open the settlement or compromise of 1872." Mr. Ilbert had admitted, practically, that he was bound to show three things—

(1) necessity for disturbing the settlement of 1872;
(2) that the new settlement proposed was a durable and stable one; and
(3) that the new scheme was one conducive to the "effectual and impartial administration of justice."

He (MR. EVANS) emphatically denied that any one of these propositions was made out. There was no administrative necessity; there was no element of finality or durability in the proposal made, and he challenged any one to say that justice would be "more effectually or impartially administered" under the scheme proposed by this Bill.

In order to explain the compromise of 1872, he was obliged to take the Council back to 1857, to show how the matter really stood; and how and why the settlement of 1872 was come to.

In 1857, European British subjects in Bengal had the right to have their criminal cases (with a few small statutory exceptions) tried by the old Supreme Court. This led to grave inconvenience in bringing down prisoners and witnesses from very remote places on trifling charges.

All persons in India were now in civil cases subject to the ordinary Courts, and no person was exempt from the jurisdiction of any Civil Court, by reason of birth or descent. The Penal Code was then about to be passed, making one body of criminal law applicable to all Her Majesty's subjects in India. And it was proposed, as a complement to the Penal Code, to introduce a Criminal Procedure Code on the same broad principle, enacting that no person should, by reason of birth or descent, be exempted from the jurisdiction of any Criminal Court. This would have swept away at one stroke the right or privilege of European British subjects to have any special tribunals, or special privilege as to the constitution of the tribunals, by which their liberties and their lives could be declared forfeited. There was a great outcry against the proposal and violent public feeling. Meetings were held, and a petition, signed by 1,100 European British subjects in Bengal, was presented to the Legislative Council. They objected to all the proposed tribunals, as incompetent, and to those presided over by Natives, as utterly unsafe.

Debate of 1857.

Sir A. Buller, a Judge of the old Supreme Court, spoke in Council in March, 1857, advocating a compromise. He admitted the grave inconvenience of bringing all charges against European British subjects to be tried by the Supreme Court. But urged that this practical difficulty could be met by the practical remedy of making them triable only by the Sessions Courts—not by the Magistrates' Courts or the Subordinate Courts presided over by Natives.

Sir A. Buller urged that they were practical men, living in a land full of anomalies, which they must deal with practically. He said the Magistrates' Courts, though they gave the Natives far better justice than they ever had before, would give the European British subjects far worse justice than they

had been used to. He did not think it was right to give poorer justice to the European British subjects to avoid an anomaly, if they could give them as good justice as before, without hardship to the Natives. As to the Native tribunals, he thought the European British subjects were right in objecting to them on the additional ground of race antagonism.

The Chief Justice, Sir James Colville, supported him, and drew attention to the well-known habit prevailing among Natives in the Mufassal, of endeavouring to get rid of rivals by deliberately framed false criminal charges, supported by false evidence, and said the combination of executive and judicial functions in the person of the Magistrates prejudiced and biased their minds, and rendered the Magistrates' Courts in India very unsatisfactory tribunals.

Sir B. Peacock, the Legal Member of Council, said that though he had introduced the Bill he would consider the arguments. No division was ever taken on this question.

The Mutiny broke out with all its horrors, and race feeling rose to a fearful pitch. The Court of Directors withdrew the question from the Council, and it was resolved to continue the former system of having European British subjects tried solely by the Supreme Court.

Debate of 1859.

In 1859, there was, however, another debate, which showed that Sir Barnes Peacock had been taught by the Mutiny the danger of carrying abstract principles to their logical conclusion in India, without regard to consequences. Sir Barnes Peacock inserted in the Code a provision disabling Natives in the Mufassal from even committing European British subjects for trial. Mr. Harington (a most able and experienced Civilian) thought this unnecessary. He said he had never advocated the *trial* of European British subjects by Natives, but he thought they might be allowed to commit; and he taunted Sir Barnes Peacock with having at first advocated the sweeping Bill of 1857, and having now gone to the opposite extreme. Sir Barnes Peacock replied that he had never committed himself to it, and that, even if he had done so, it was unfair of Mr. Harington to remind him of it. After the Mutiny he claimed the right to change his mind, and boldly avowed he had done so. Sir Charles Jackson, a Judge of the old Supreme Court, agreed with Sir Barnes, and pointed out the practical necessity of providing special tribunals for this particular class of persons, and showed the utter fallacy of arguing that because Natives were allowed to act as Justices in Calcutta, and to commit Europeans, therefore, it was practically safe to let them do so in the Mufassal. The Criminal Procedure Code of 1861 was eventually passed, leaving criminal jurisdiction over European British subjects practically as it was before.

Code of 1861.

Years rolled on, the echoes of the Mutiny grew fainter, and, in 1871, a revised Criminal Procedure Code was being prepared by Sir J. F. Stephen.

State of things in 1871.

He was in Calcutta at that time, and knew both Sir J. F. Stephen and Mr. Stewart, and, speaking from memory, without any notes of what passed, he would give the Council his impression of the state of things that led to the settlement of 1872. The influx of a poorer class of Europeans from England and Australia had rendered it an intolerable inconvenience to send them all for trial to the High Court in Calcutta for petty offences, and even gave practical immunity for petty crimes. The moderate and sensible men among the European British subjects fully recognised the necessity for giving some jurisdiction to some Mufassal Courts, and the Government pressed urgently for it.

The amount of jurisdiction proposed to be given to the Mufassal Courts over European British subjects was three months' imprisonment to be inflicted by a Magistrate's Court, and one year to be inflicted by a Sessions Court.

The European British subjects could not successfully object to the jurisdiction of the Sessions Judge, provided he was a European, as his duties were purely judicial. But they could well object to the jurisdiction of the Magistrates' Courts, for the reason touched on by Sir James Colville in 1857, that is, the combination of executive and judicial functions in the same person. The Magistrate was head of his district, had to keep the peace, to see that crime and lawlessness was detected and put down, to hold secret inquiries, to act as practical head of the Police, to decide on ordering prosecutions to be instituted, and then, when his mind had been thoroughly saturated and biased by the result of secret inquiries and police reports, to try the accused.

Further, Sir J. F. Stephen was very anxious to introduce by his new Code summary trials, as in Petty Sessions in England, in which there should be no regular record of evidence, save such précis of it as the Magistrate might record in his judgment.

Sir J. F. Stephen justly feared a strong onslaught by the European British subjects on Magistrates' justice. He knew, and all knew, that the finances of India could not afford the severance of the executive and judicial functions of Magistrates, which the interests of justice loudly called for.

The European British subjects were likewise entitled to object to summary trial without a proper record of the evidence, as tending to nullify in practice the much prized right of appeal to the High Court in all cases, which they possessed and still possess.

But there was, further, the danger, nay the certainty, of a fierce agitation by the European British subjects against being subjected to the criminal jurisdiction of Natives in the Mufassal. Any proposal to do this would (it was well known) revive the fire of race hatred and the memories of the Mutiny, which had been waning and dying out slowly, and do much to interrupt cordial relations between Natives and Europeans, and between the European community and the Government of India.

Sir J. F. Stephen was quite willing to concede that European British subjects should not be tried by the ordinary Native Deputy Magistrates, and in this all responsible Government officials agreed with him, and still agree. But Natives had begun to enter the Covenanted Civil Service, and the European British subjects utterly objected to entrust their personal liberty to Natives, whether covenanted or uncovenanted.

This was the problem which Sir J. F. Stephen and Sir John Strachey, and the other experienced men who made the settlement of 1872, had to decide—"Was it worth while, for the sake of asserting the principle (if principle it be) that all Covenanted Civilians should be empowered to try Europeans as soon as they became full-power Magistrates, to risk the explosion which would inevitably have ensued, and which would have done incalculable mischief. Bearing in mind that it was admittedly impossible, and politically dangerous, to carry out in its integrity, in the Mufassal, the broad principle that no man should be exempted from the jurisdiction of any Criminal Court by reason of birth or descent; and, further, bearing in mind that every one connected with Government was agreed that it was necessary to sanction a similar anomaly in the case of Uncovenanted Magistrates, and to enact in effect that full-power Uncovenanted Magistrates, who were Europeans, might try the European British subjects, but that the Uncovenanted Magistrates, who were not Europeans, should not have that power. The strong practical intellects of Sir J. F. Stephen and Sir John Strachey perceived that, to risk such evils to avoid this petty anomaly, which caused no practical inconvenience, after sanctioning so many departures from the only broad principle which could be appealed to, would indeed be to strain at a gnat after swallowing many camels. They knew also the strong practical objections which exist to entrusting this jurisdiction to Natives.

Compromise of 1872.

Accordingly, they informally proposed to the European community, through the non-official members, that, if they would consent to submit to the jurisdiction of the Magis-

trates' Courts and to the summary trials without opposition, they (Sir J. F. Stephen, Sir J. Strachey and others) would agree that no Natives, not even Covenanted Civilians, should have power to try European British subjects. The European community, to whom the proposals were informally made, assented, and the arrangement was embodied in the report and resolution of the Select Committee.

This arrangement was come to, so far as he remembered, during the interregnum between the lamented death of Lord Mayo and the arrival of Lord Napier of Murchistoun, when Sir J. Strachey, as senior member of the Council, practically officiated as Viceroy, and it had Sir J. Strachey's fullest approbation, as appears by his remarks in the debate of 1872.

It was a wise, a statesmanlike compromise, and he felt well assured that the present Government of India, had they had the least idea of the lamentable results that would arise from endeavouring to upset it, would never have brought in this unfortunate Bill.

The debate of 1872 had been entirely misunderstood by Mr. Ilbert in his speech introducing the Bill, and Mr. Ilbert had unconsciously misrepresented the attitude of Sir J. F. Stephen and Sir J. Strachey in that debate.

All the opponents of the compromise in that debate admitted the principle, that only Natives who had become Europeanised in thought, and thoroughly acquainted with European manners and customs, could be permitted to try Europeans. So that a great portion of the proposals in the present Bill were directly opposed to the opinions of the eminent authorities who were appealed to, and relied on in support of it. In particular, so much of the present measure as provided that all Sessions Judges, whether Covenanted Civilians or not, should try European British subjects, was opposed to all authority.

Subordinate Judges from the Uncovenanted Service were now being promoted for their legal ability and aptitude in trying civil cases to be Sessions Judges. Many of them were men of high caste, saturated with caste prejudice, and had never been brought into social contact with Europeans, and were totally ignorant of their manners, customs and habits of thought. This was also the case with the Natives now being admitted into the Covenanted Service under the new statutory rules, without competition and without going to England.

The Commander-in-Chief, in that debate in 1872, although he advocated the admission of Europeanised Native members of the Covenanted Service, yet was altogether opposed to the trial of Europeans by the Magistrates' Courts in the Mufassal, and had moved an amendment to confine the jurisdiction over European British subjects to the Sessions Courts, as suggested in 1857 by Sir A. Buller. The silence of Mr. Stewart, the non-official member, during the debate on the compromise, was due to a desire not to say things which are best left unsaid unless there is necessity, and to the assurance of Sir J. F. Stephen that a majority of the Council would stand by the compromise, and it was, he believed, the effect of the compromise which led Mr. Stewart to go against the Commander-in-Chief in the division on the subsequent amendment.

He made these observations as they were necessary to a correct understanding of the nature of the settlement of 1872 now sought to be re-opened. He did not put forward that compromise as anything legally or morally binding on the present Government; but he thought it was hard on the European British subjects to take away by a separate Act that concession by which their acquiescence in many of the provisions of the Code had been obtained, leaving in the Code provisions and powers which they were not prepared to entrust to any Native Magistrate in the Mufassal. He thought in fairness such a proposal should only be brought on when there was a general revision of the Code.

The power to direct prosecutions on suspicion and then try the case summarily, without record of evidence and without (in a large class of cases) any right in the accused to cross-examine after charge framed, unless the witnesses

happened to be present in Court, were instances of powers which European British subjects were not prepared to entrust into the hands of Natives.

He hoped it was not likely that any Local Government would be so indiscreet as to appoint a Native Magistrate to any district where Europeans were strong and numerous, (a fact, if he was right, which went to show how useless the Bill was); but these powers in the hands of Natives would render the position of the lonely pioneers of European enterprise in remote places untenable and unsafe.

The next question was—

What was the necessity for reopening this burning question? None of the Local Governments consulted had complained of any administrative inconvenience. The reason there was no complaint was not far to seek. Only 11 Natives had entered the Covenanted Civil Service, by competition in England, from 1864, when the first of them arrived in India, to the present day, and he had the authority of the *Statesman* for saying that the import had now ceased, owing to a change in the rules at home. Of these eleven one had left the service under circumstances which he need not advert to; one had gone to Madras and was dead. The remaining nine were thus distributed:—two were in Bombay; one, a young Parsee, a very junior officer, was in the North-Western Provinces; and the remaining six were in Bengal. There were none in the rest of India.

Necessity.

The Circular inviting confidential opinions from the Local Governments was sent out on the 28th April, 1882, when Mr. Rivers Thompson was Lieutenant-Governor of Bengal, and it was singular that that circular was not sent to Bengal, and that no opportunities had been given to the Government of Bengal to consult its officers and the High Court on the subject.

He spoke subject to correction by His Honour the Lieutenant-Governor, who was present, but so far as he (as an outsider) had been able to gather, the opinion of the bulk of the Bengal officers and of the High Court was against the measure, and, so far as he could learn, no administrative necessity had arisen in Bengal, or was likely to arise. It was impossible to allege the existence of administrative necessity in the rest of India arising from the presence of three men only, one of whom only would, so far as he could learn, be immediately affected by it and have the power conferred on him of trying European British subjects. The statutory Native Civil Service had very recently been created, and it would be years before the question of investing them with the power became a practical one.

As to stability and durability—

Stability and durability.

The settlement proposed had no single element of stability or durability. It proceeded on the principle (if it could be said to have any real principle in it) of allowing the Local Governments to determine the fitness of individuals to be Justices of the Peace (Justices of the Peace alone being empowered to try European British subjects), while the area of selection was to be restricted and not left open as in the Presidency-towns, where any fit person might be selected.

Having enunciated this principle of personal fitness (to be judged by the Local Government), the hon'ble and learned mover found himself face to face with this difficulty. Everyone was agreed that it was not desirable to vest Uncovenanted Native officers with this power. They, therefore, must remain disqualified.

But, as the law now stood, Government was empowered to invest any Uncovenanted Europeans with the power, and had largely done so. There were now from 20 to 30 Uncovenanted European Deputy Magistrates, with first class powers in Bengal, who were Justices of the Peace, and had power to try European British subjects. The Uncovenanted Europeans were fit, and, so far as could be learnt, had exercised their powers impartially and efficiently, but it was an anomaly.

This difficulty was solved by disqualifying all Europeans who were not Covenanted Civilians from being Justices of the Peace in the Mufassal, and practically confining, with a few exceptions, the office of Justice of the Peace to ordinary Covenanted Civilians, whether Native or European, and to the Native Civilians admitted under the new statutory rules.

What principle was there in this? certainly not the principle of *fitness*, for no allegation was made against the fitness of the class it was proposed to exclude, that is, Uncovenanted Europeans. There was a difference of race and moral standard. The effect of it was to disqualify the Uncovenanted Natives. This was a fact. It could not be got rid of. This Bill attempted to hide or disguise the unpleasant fact by disqualifying the Uncovenanted Europeans against whose fitness there was no complaint. Thus, an apparent symmetry was produced at the expense of depriving Government of the services of a class of men who have been admitted as Justices of the Peace since the thirty-third year of His late Majesty, King George the Third, to the acknowledged advantage and convenience of the public service.

But his hon'ble and learned friend said there was a principle in this. His hon'ble and learned friend had apparently discovered that there was no privilege of European British subjects as to tribunals to be considered, but a "class of offences" which, from "the circumstances in which they were usually committed" by European British subjects, required to be dealt with by the higher class of Magistrates only. And it was to be presumed that it was this discovery which he considered justified him in disqualifying all Uncovenanted European British subjects from trying so "troublesome and difficult" a class of cases.

The only answer to be made to this was, that it had no basis of fact There was no "class of offences," but there was a class of persons always liable to be accused of crimes, and who sometimes, but rarely, committed crimes.

Individuals of this class were, owing to the circumstances of the country, often "difficult and troublesome" to try. From the nature of things they must be far more "troublesome and difficult" for a Native to try than for an European to try. This class of persons was at present entitled to special tribunals, or to a special constitution of the tribunals by which they are to be tried.

This Bill attempted to disguise the fact—to allow this class to retain all its anomalous privileges as to tribunals (except the one now in question), and to justify such retention, not on the real ground, but on an imaginary ground, that is, that the offences this class commit are of such a character that Government is justified in enacting for the more "effectual and impartial administration of justice" that none but Covenanted Civilians shall try them, with a few exceptions based on no principle.

The Native Press utterly declines to accept this as final, and many of the Native papers, as the *Amrita Bazár Patrika* of March 1st, give it but very faint support, on the ground that the other anomalies are much more objectionable and inconvenient.

There can be no element of stability or durability in such an illusory settlement as this.

Effectual and impartial administration of justice.

The object of these proposals was said by his hon'ble and learned friend to be the effectual and impartial administration of justice. On this point it was enough to say that the proposal was to disqualify a class of men against whose effectual and impartial administration of justice no complaint had been made, and to substitute a class (the Native Statutory Civil Service) whom Mr. Duthoit, Judicial Commissioner of Oudh, declared, in his confidential communication, to be utterly unfit to hold the scales of justice impartially, in cases where Europeans are concerned, and to be often saturated with caste and class prejudices, and who were not necessarily at all Europeanised. Even the *Statesman* (15th February) condemned this class as inferior to many of the Native Deputy Magistrates. Tried by this test, this measure fails on the face of it.

Many of the supporters of this measure were not prepared to go further than Sir Barrow Ellis' amendment in 1872, that is, in effect, to invest with these powers only the nine Covenanted Civilians elected by competition in England; but his hon'ble and learned friend had confessed, as he (MR. EVANS) understood him, that it would be mere tinkering to stop there, and that the Government would not be justified in re-opening the settlement of 1872, unless they could go further and propose a permanent and durable settlement of the broad question.

Satisfactory tribunal.

There was another test which he would suggest when any change in a tribunal was proposed,—that is, that the tribunal, as reconstituted, should, if possible, have the respect and reverence of the class from which the accused are drawn, and should (if possible) be regarded by the accused and his class as a satisfactory tribunal. This is a cardinal point in the administration of criminal justice. It would be waste of words to demonstrate that the proposed measure utterly fails to stand this test.

He failed to see any sufficient reason for proceeding with so unnecessary and useless a Bill on the face of so strong and intense a feeling as existed, a feeling in which the whole European community in India were practically unanimous.

He was not oppressed by the wonderful "unanimity" of the confidential answers of the Local Governments consulted. Bombay stood in a very peculiar position, with comparatively a small Mufassal, and a small European population in it. The voice of experience in Madras was against it. Even the Governor thought it was a pity to introduce it now. Sir A. Lyall said it would not for many years become a practical question in the North-Western Provinces. The others had nothing to do with it as a practical question, as a measure which would come into immediate operation.

A number of one-sided extracts from the debate of 1872 were sent with the letter of Sir A. Eden and Mr. Gupta's note, and these gentlemen had, he ventured to think, given opinions without sufficient consideration on points which to them must have seemed more abstract than practical. He excepted Mr. Elliot in Assam, who pointed out the need of caution, and Mr. Howell in the Birárs, who showed the grave nature of the issue raised. But it was sufficient to say that all who had given opinions in favour of the change were mistaken as to the feelings it would arouse, and had apparently made no enquiries among the class to be affected.

The voice of Bengal was absent. He could not accept Sir A. Eden's letter as a demand by the Government of Bengal for legislation. Considering the circumstances under which it was written—on the eve of departure, and without any consultation of officers or of the High Court—he looked on it as the individual opinion of Sir A. Eden, suggesting a consideration of the subject at a fitting time, and recording his own opinion. He knew there were in it the words "the time has come." But on the whole he thought it was more a record of individual opinion than a demand for immediate legislation.

Sir A. Eden's views on the subjection of Europeans to Mufassal Courts had never been in harmony with that of the bulk of Europeans in Bengal, official and non-official, as appears by what took place in 1857, when he came into collision with the Judges of the Supreme Court. But he had too great a respect for Sir A. Eden's tact and administrative ability to think that he would have initiated legislation on this subject without trying to ascertain the views of his officers and the High Court and the European community. So much for the "consensus" of opinion.

Then it was said, how can Europeans object to Native Magistrates in the Mufassal and yet suffer them in the Presidency-towns? The power and influence of the European community—the blaze of publicity—the Press—the Bar—the presence and powers of the High Court—are sufficient answers. Besides, the Presidency Magistrate's functions are strictly judicial, and the

practice of deliberately attempting to ruin rivals or enemies by cunningly concocted false charges, which is still as common as ever in the Mufassal, is practically unknown in Calcutta.

Argument to show the difference between the Presidency-towns and the Mufassal was unnecessary. His hon'ble and learned friend had just explained to them that in the Presidency-towns no person was, by reason of birth or descent, exempted from the jurisdiction of any criminal tribunal, and he had just read a long list of the anomalous exemptions accorded to Europeans in the Mufassal. It was not proposed to abolish any of these exemptions, except the one dealt with by this Bill. No responsible adviser of His Excellency, who had any knowledge of the country, could be found, who would propose the abolition of these exemptions or the extension to the Mufassal of the broad principle that Europeans should be subject to all the Cri minal Courts in the Mufassal exactly the same as Natives are. So long as this was so, it was waste of time to combat any argument drawn from a fancied similarity, between the Presidency-towns and the Mufassal.

Then there was the alleged slur on Natives; but he denied that any set of judges, any more than assessors or jurymen, were entitled to complain of the privilege of the accused as to his tribunal as a slur on them. If there was to be any question of slur, the large class of Uncovenanted Europeans who were disqualified by this Bill might well complain. He himself, though a Justice of the Peace in England, and now qualified to be a Justice of the Peace in Bengal, Bihár and Orissa, would be disqualified by this Bill.

But the question before them that day was not a pure matter of argument. The reality and intensity of the feeling against the Bill was patent, and was one of the main points they had to consider as practical legislators.

He felt it his duty to offer some remarks on the reasons for this at the risk of giving pain.

First.—There was a reason, of which all would admit the weight. It was most desirable that a Criminal Judge should be able to put himself in the place of the accused, so as to judge of the probability or improbability of his having committed the alleged offence. This was desirable everywhere, but especially in India. Criminal trials here generally proceeded entirely on oral evidence. The lamentable untruthfulness and untrustworthiness of the bulk of Native oral evidence had been repeatedly commented on by the Privy Council, and was well known to all. It was, therefore, particularly necessary that the Judge should be in a position to try such evidence by the test of its probability or improbability. But, if he was alien in thought and moral standard, and ignorant of the manners, customs and habits of the accused, how could he put himself in his place?

It was to this power in the Judge, of putting himself in the place of the accused, that the lonely planter in the Mufassal, confronted with a false charge and false witnesses, and far away from help, mainly trusted for protection.

He might be told that defect was exhibited by Europeans in trying Natives. It was so, but that was no reason for introducing the same defect into the trial of Europeans. We had given the Natives an administration of justice immeasurably superior to anything they ever had before. The unswerving uprightness, probity and intense desire to do impartial justice shown by European Judges had been an education to the people of the country, and they constantly showed their appreciation of it by asking to have their cases transferred from Natives to Europeans.

The second factor was race antagonism. This feeling, which had been fanned into a fierce flame by the horrors of the Mutiny, was slowly dying out, but it was most unwise to stir the embers while so many of the generation who went through the Mutiny were still alive. The vitality of that feeling had been lamentably illustrated by the outbreak with which this Bill had been greeted.

The third and most serious consideration was that dwelt on by his hon'ble friend Mr. Miller. The Europeans did not trust the Natives as they trusted fellow Europeans. He knew many upright and honourable Natives. But the broad fact remained that the bulk of the Anglo-Saxon race in India looked upon the Natives as men bred in a degrading idolatry, and surrounded from their infancy by influences most adverse to truth, uprightness, honour and every quality which Englishmen most revere, and which they demand especially in a Criminal Judge. They think that many centuries of Christianity, and of free political life, have given them a moral fibre not to be found among Natives, especially Natives of Bengal.'

Can it be wondered at (unless Christianity is a sham, and the belief in national character a delusion) that they refuse to recognise as an Englishman a Native who has spent two or three years in England.

When passed, the effect of this Bill would be to establish tribunals for Europeans which they objected to and refused to respect. There was a vast difference between civil and criminal law. Broadly speaking, the one affects the purse, the other the person. We might be willing to have Natives educated at the expense of our purses; we were not willing to have them educated at the expense of our persons. Every conviction of a European in the Mufassal under these circumstances would be looked on as unjust, and would revive the bitter and violent animosities which they all knew were raging around them that day.

Some said the agitation was a mere flash, and referred to the Black Act of 1836 in Macaulay's time; but a reference to Trevelyan's life of Macaulay would satisfy anyone that the circumstances were widely different, and that no inference could be drawn from the one to the other. That was a Calcutta agitation; this was universal over India. That was about appeals being transferred from the Supreme Court to the Sadr; this was a far graver matter. Besides he thought any Government which proposed to deal with the present European community as "a mere handful of settlers," whose protests might be treated with contempt, would be forgetting the difference between 1836 and 1883.

Was this Bill likely, in any view of it, to remove any evils comparable in magnitude to those it was creating and would create?

This measure would have the effect of giving the power to Uncovenanted Subordinate Judges, when promoted to be District Judges, to try Europeans, though they might be utterly ignorant of their thoughts, ways and customs.

It would give this power to nine Covenanted Civilians who had been to England, but whom the Europeans in India declined to accept as Englishmen.

It would give this power to the new Native Statutory Civil Service who are declared by Mr. Duthoit to be utterly unfit, and who also are, or may be, Uneuropeanised and ignorant of Europeans. These persons may or may not form a useful machinery for governing Natives, selected, as they often are, on account of the influence and social position of their families. But they are quite unfit to be Criminal Judges over Europeans.

It was a measure which had exasperated Europeans to the highest degree, and had interfered with their growing cordial relations with the Natives and destroyed the harmony between the European British subjects in India and the Government, and would do so to a much greater extent before it was passed. It was a measure which provided a machinery for producing periodical outbursts of race feeling whenever a European was convicted by a Native in the Mufassal—outbursts which would do immense harm and might lead to disastrous results.

It was a measure for which there was no necessity and one which touched almost the only point which was capable of uniting the whole of the Europeans in India as one man against the Government.

It was a measure which could, in any view of it, do little or no practical good, while it had already done and would do incalculable harm.

It was a measure which Government would never have introduced had they known the strength of the feeling against it.

He, therefore, implored the Government to show the truest form of courage by confessing an error of judgment and withdrawing the Bill at once.

The Hon'ble MR. THOMAS said:—"My Lord, the hon'ble and learned member on whom, by force of his position, has devolved the duty of being the mover of this Bill, has stated emphatically, and re-asserted it on behalf of the Government, that the only object of its introduction is 'to provide for the impartial and effectual administration of justice.' It is a high claim,—a claim so high that every Briton is predisposed, without a thought, to bow to it instinctively, for a love of impartial and effectual justice is ingrained in him. Impartial and effectual justice is just what is in the very nature of every Briton to give to everyone within his power the wide world over. There is a danger, therefore,—a serious danger,—that, heralded with so high a claim, this Bill may be accepted without sufficient examination; and for that very reason it is the more desirable and necessary that it should be stripped of any adventitious advantage it may derive from such heraldry. For we all love justice, and an equal love of justice will surely be conceded to those who, like myself, may venture to traverse this Bill. Presuming that so much will be conceded, we shall commence our examination of the Bill on more even terms, and, bearing in mind that the test by which we are invited to try this Bill is, that its object is 'to provide for the impartial and effectual administration of justice,' I will ask, first, what, in prosaic business detail, are the actual particulars in which the dispensation of justice to British subjects is to be improved, so that it shall be more effectual, more impartial, than it has been heretofore? and what the means by which it is to be effected? The answer is supposed to lie in the Bill: there we find that it is by the entrusting of it to Natives of Hindustan that it is to be better done than when it was entrusted to Englishmen. Natives of Hindustan, Foreigners and strangers,—strangers in great part, some more, some less, some altogether—strangers to the social customs, the nice ideas of chivalry and honour, the thousand and one Western strains of thought and surroundings which underlie the springs of action of the British subject; some only partially acquainted with the very language of the Englishman; men who, at best, and but limitedly, have mixed only with one class of European, the educated and more refined class,—they are to be entrusted with the trial of Europeans, the majority of whom are likely to come from classes of which they know practically nothing, whose only English, too, is an English sufficiently different from anything they have seen in a book, or heard from the lips of any educated European; sufficiently different to throw them out completely, to utterly prevent their getting sight of the point which shall show them the animus which is its gist, the depth and tenor of the provocation which is its justification or its palliation; men who, from want of converse with them, are incapable of appreciating the weight to the individual of the punishment they are called on nicely to apportion; men who have never been on board a ship in their lives; men—Brahmins for instance—whose very religion makes it a sin for them to experience a sea voyage, a sin for which they will be excommunicated; men who are under every possible disadvantage in forming any adequate conception of the necessity, for crew and passengers and cargo, that the commander of a vessel, leagues at sea, without Police or Court within months of him, should be complete master; the necessity—the absolute necessity—that his word should be law; men without a conception of the hardships of the sea, of the numerous petty means of tyranny open to a captain,—how can such men weigh rightly the use and abuse of power at sea? How can such men judge rightly between rough men of few words—rough captain and rougher seamen, using, too, a nautical jargon that is worse than Greek to them? And yet we are invited to pass this Bill, in the expectation that the administration of justice to British subjects will, in the hands of such men, in the hands of Natives, be more effectual, more impartial, than if it is left, as heretofore, to Englishmen.

"All this, I may be told, applies equally to the trial of Natives of this country by Europeans, as it does to the trial of Europeans by Natives. But, I venture to say, it does not. Europeans in India are compelled to learn the languages of the country; they have to learn them before they are even appointed in England; they have to still further qualify in them in this country before they can be promoted: the Natives, who are to try Europeans, are not so compelled. It is specially provided by Statute that the great and increasing majority of them are to be appointed without such examination. Again, Europeans in this country pass their lives among the classes they have to try, the criminal classes of all shades, the labouring classes, the agricultural classes, as well as the better classes; learning their patois, their habits of thought, and their religion or their superstition; learning everything that underlies their springs of action; walking his fields with the farmer, the jungles with the junglemen; listening to their tales of joy and grief; sympathising with and labouring for them; present at their festivities; leading their combined action for any good; hunting, shooting, fishing with them; carried by them by day and night in travel; ever accessible to them in camp or Court; speaking direct as man to man with them; caring, aye, and exerting themselves to the sacrifice of health and even life, for them in famine; and walking daily amongst them, seeing to their village sanitation and the provision of medical treatment when they are dying around them of cholera; making it the one object of their lives to sympathise with and work for them. Such, my Lord, is the life of a district officer. By such means does he qualify himself to enter into the case of the Natives committed to his care. It is no fancy sketch. I have been through it myself, and it is being gone through every day in India by hundreds. Such are the means by which Englishmen have qualified, and continue to qualify, themselves to do justice to the people among whom they live. Will anyone assert the same, or anything approaching the same, of the Natives of this country that are to be entrusted with jurisdiction over British subjects? Have they lived among captains and seamen, soldiers and engine-drivers, mechanical engineers and surveyors, planters and merchants? What have they in common? They are absolutely a sealed book to them, and will be, for they shun them. Only the better class of Englishmen do they know anything about—only the educated official whom they have to meet in business. Of that class only, from whom will never come the subjects of trial, have they any knowledge at all; and even that knowledge is very superficial, and is only what the European chooses to give them, not what they search for for themselves, as we do among them. They do not court knowledge as a duty with a view to be in a position to do justice as the European does; they do not throw open their houses to us as we do to them. Their very religion forbids it; their very religion disqualifies them for ever having an intimate knowledge of the inner life of the European; and, if the fact is so even with the better classes of Europeans in all but the Presidency-towns, and to a large extent even there, it is still more so in connexion with the classes of Europeans from whom criminal cases are likely to come. For that class of Europeans they studiously avoid, not only on religious grounds, but also because they are afraid of them. The courteous Asiatic does not understand their rough ways; and there is no reason why they should ever understand them, for there is nothing to bring them into every-day contact with such men. They do not seek to know anything about them, and yet they wish to try them. It is surely irrational! And apart from not seeking, as a duty, to comprehend the habits of thought of the classes they may have to try, there is nothing accidental even to throw them together. They have no subjects of common interest.

"But I will withdraw the statement that, disqualified though they are, and, in accordance with all their preferences, will continue to be, they irrationally wish ignorantly to try Europeans,—I will withdraw it because it is not mine, but an imputation of their own countrymen, an imputation cast by a very few, who grasp at power, an imputaton that I believe to be utterly without foundation among the masses. My belief is, and I speak from some little experience of Mufassal life, that the very great majority of Native officials in the Mufassal,—and it is only the Mufassal that the Bill deals with,—the very great, the almost unexceptional, majority would infinitely prefer not to have the

white elephant that the Bill proposes to give them. It is only just to say that they are conscious of their disqualifications to try British subjects, and do not want to have to do what they cannot do to their own satisfaction; they are conscious that the Englishman is far more competent to try his fellow rightly, and they would infinitely prefer to leave the difficult task to him; they are content to be left to try only their own countrymen whom they do understand.

"But we have not yet got to the bottom of the incongruity; there is still a lower depth, and one that touches Englishmen, as indeed it touches all manly men, very home. I allude to the wives and daughters of our land. If the Native who is to try has but a very partial knowledge even of the better classes of Englishmen with whom his business compels him to mix outwardly, and a much less, if any, right knowledge of the lower class of Englishmen from whom he is free to keep away, still less has he any knowledge of the ladies, of the wives and daughters of their families. And yet he is to try them; for the term British subject, be it remembered, includes both sexes, and the English lady as well as the British sailor and the British soldier is to be subjected to the jurisdiction of Asiatics. A false complaint lodged by her ayah or Indian lady's maid, by her tailor that sits daily in her verandah, by any one of the household servants, grooms or coachmen, whom, as mistress of the house, she has to order on her husband's behalf,—a false complaint by any irrepressibly obtrusive hawker, who comes unbidden into the very verandah in which she is sitting and will not leave it,—a false complaint by any outside petty cobbler who has been paid his due, but thinks to get twice his due by means of vociferating clamour amounting even to menace, in a manner quite inconceivable to, and incredible by, those who do not know this country,—a false complaint by any of these may any day subject English ladies and English women to be tried by Foreigners. These are no ideal pictures. They are every-day circumstances of middle class Mufassal life, unexperienced, perhaps, by the well-to-do, but well known to their poorer unofficial brethren. Patience outlives the provocations, and nothing comes of them, because there is the certainty of a fair trial in the background, and the Court is the Court of a countryman. But when it comes to be known, as it will be known if this Bill passes, that anyone can summon an English lady before a Native, and that, right or wrong, she will, in 99 cases out of 100, pay any fine rather than appear, and it is borne in mind that, even if she does appear and answer to the charge, the complainant has more than satisfied himself with the sweets of the annoyance he has caused,—when this comes to be known, there is hardly room to doubt that complaints of this sort will become distressingly numerous. The position of English ladies and English women, left alone in their houses while their husbands are in Court, or camp, or office, or workshop, will be very distressing even in the bare contemplation. The security, and the feeling of assurance of security, which they now have, in trial by a British Magistrate, will be gone from them, and they will be subjected to the jurisdiction of Asiatics.

"I have cursorily alluded to the falsity of the complaints; but only most cursorily, both because I took it for granted that the proneness to false complaints in the Mufassal was well known, and also because I shrunk from dwelling on that side of the question—I shrunk from it, because unwilling to make unkindly imputations. But now that it has been stated by one hon'ble member that such is not his experience in the Mufassal, and the hon'ble and learned member to my right (Mr. Evans) has advanced opposite experience, I feel bound to say that my experience of the Mufassal, extending as it does over nearly a quarter of a century, is entirely in accords with that of Mr. Evans, that false complaints and false evidence are common in the Mufassal. I speak not of what may be called exaggerations and hard swearing; I speak of deliberate machinations, that are perfectly staggering and appalling to the European; of rehearsals held in the presence of all the witnesses, that they may be thoroughly tutored in all details; of dress rehearsals, so to speak, held just before the trial, and in the very precincts of the Court to refresh memory. I could instance a case in which a poor man was hired to take a blow from a billhook, and all the witnesses were present to see and testify to the blow in all detail, only instructed to substitute an European for the Native striker of the blow. I could produce volumes of such evidence, but time will not allow. And I have no desire to do more than is absolutely necessary to bring that side of the question forward, and have only been constrained, as I have said, by the conflict of opinion.

"And why, let me ask for Britons, as they will ask,—why are they to be thus subjected to the jurisdiction of Asiatics? Not on account of any necessity of the case; not because it cannot be helped; not because the Natives wish it, but because—yes, that is what we are asked to expect—because the justice thus provided through the medium of the Asiatic will be more impartial, more effectual, than that dispensed by the Englishman himself; that is what the proposal comes to; that is what the Bill says in effect; and my business is with the Bill, the people to be tried by it, the people to be empowered by it. The only object of the Bill is 'to provide for the impartial and effectual administration of justice,' and that is the test by which I am invited to try it. If it be said that I rather overstrain the argument by applying the claim of impartial and effectual justice to the people to be tried by the Bill, and not, as was meant, to the magistrates and judges who are to administer it, then I plead in answer that such words should never surely be said with reference to any but the persons who are to experience in their proper persons whether the justice meted out is or is not impartial and effectual; that they have no applicability to anyone else, least of all to the mere machinery, the judges and magistrates, who only give life and existence to the Bill, and are merely the means by which the more impartial and effectual administration of justice is to be provided.

"Whatever may have been said elsewhere on the other phases of the Bill as it affects Natives, by removing an anomaly and a stigma, it cannot be that the claim by which we are invited to try the Bill, that of providing impartial and effectual justice, can have been put forward with reference to anything but the quality of the justice administered to the people who sought it, that is, to the complainant and accused. The question of anomaly and personal stigma is perfectly distinct. We shall come to that separately hereafter, but at present we have only to do with the claim that the Bill 'provides for the impartial and effectual administration of justice.'

"To the Englishman at home, who knows not this country, it may even seem that it does so provide; but when the Bill is examined in the light of the experience of those who have spent their lives in the study and the service of this country and its people, who can throw upon the Bill the light of actuals rather than of theories, it is then that it becomes apparent that the circumstances of the position afford no real foundation for the expectation that the administration of justice to British subjects will be either more effectual or more impartial for being entrusted to Foreigners and strangers rather than to fellow-countrymen—to Natives rather than to British subjects.

"But this, I may be told, is my idea—only my idea. Let the Native speak for himself. I shall quote, my Lord, from the *Madras Native Opinion*, a newspaper edited by a Brahman of considerable culture, a Native who has the interests of Natives, the interests of his country, very much at heart. He writes in a leading article of that paper, dated 14th February, 1883:—

'Let us take, for instance, the case of a Deputy Magistrate of the first class who is called upon to try a case between two Europeans, one, say, a Covenanted Civil Servant, and th eother a merchant or a planter. The case may be one of assault or defamation, and have arisen out of some episode at a ball, a club-room or a dinner party. Now, if the Deputy Magistrate happens to be a Brahman (as almost all of those on the Madras establishment are) who has not been in Madras, and whose knowledge of English is but limited, what a predicament the poor man is sure to be in? He cannot possibly understand the allusions which will be made, and the conventional terms used in such a case, and he cannot very well engage an interpreter to explain what is meant! We leave our readers to imagine what the result will be, and what satisfaction the Magistrate's decision is likely to cause to the litigant parties.'

"And in a subsequent issue the same Native editor says—

'We must not lose sight of the fact that, while nothing is easier than for the European to obtain evidence or information on such matters in Native society as he might not know, the

Native Magistrate is very differently placed. The *Munshí* and clerks of an Anglo-Indian Magistrate are Natives of the country, and if they are not able to supply it themselves they can easily obtain for their master any information the latter may need in connexion with the disposal of cases. Now, to whom can the Native Magistrate turn when he has an Englishman brought before him?'

"And this Native editor is not alone in his opinion of the unfitness of his countrymen to try British subjects; but I must revert to the objection that, if it is right in theory for Europeans to try Natives, it is right also for Natives to try Europeans; and again I will say that, in my humble opinion, it is not so, because the case is not parallel. It is not as if Englishmen were asking to have authority to try Natives, as Natives are asking for jurisdiction over British subjects. The whole history of our Law Courts in India shows the fallacy of such an argument. Englishmen have no desire to try Natives because they are Natives. Indeed, they would never have tried them at all if they had been capable of trying themselves, and our whole aim ever since we came to this country has been steadily in the direction of fitting them to try their own countrymen; and as we have found them more and more qualified, so we have gone on extending their jurisdiction over their countrymen, or, in other words, resigning to them more and more of the judicial work in connexion with their own countrymen that we had in earlier years to do for them.

"Thus falls to the ground the argument that, if Englishmen try Natives, so, in fairness, ought Natives equally to try Englishmen; for, as we have seen, the Englishman does not want to try Natives, and is getting rid of the duty and consigning it to their countrymen as fast as he legitimately can. The Native also, with a few exceptions, does not want to try Englishmen, and is not qualified to try them even if he wished to.

"Once more, this same history of our legal dealing with India, if examined a little more closely, will fully explain the seeming anomaly of British subjects being exempted from Native jurisdiction, the seeming anomaly of which so much has been made. When we came to this country, did we find equitable law courts in which Englishmen and Natives could alike obtain equal justice? did we upset them and introduce this anomaly in favour of our countrymen? No. We found Surája Dowla, and the Black Hole, and the like of that. There was no such thing as law and justice. The land was a land of violence, of systematic and periodical marauding, of constant blackmail, of daily uncertainty of life and property, in short, of all the many forms of anarchy and misrule and lawlessness which I may not stay to dwell upon. It is matter of history, and it still lives in proverbs, customs, castes, tenures, structures, which point to the then every-day existence of a state of things for which there was no remedy but to sweep it clean away. It was for us, a mere handful of strangers, to introduce law and order, and to import into this country as much justice as was possible in the circumstances. We were too few in number to give to every Native with our own hands as good justice as we were accustomed to in the land from which we came; but we were enough to mete it out to our own countrymen, from whom there probably was not more than a case or two in a decade; and not only were they entitled to have no less a scale of justice than we were able to give them, but in the earlier days it was more, perhaps, to the interest of the Native than of any one else that Britons should be tried by Britons, who had both the courage and the mind to enforce law and order on their own countrymen, and to put down with a strong unwavering hand any disposition to take advantage of being members of the dominant race. Other than Britons there were none in the early days, because all other Europeans were deported. Thus it came about that Britons in India have till now been under the jurisdiction of Britons, and there was, and is still, *no necessity* for their being under any other jurisdiction.

"With the Natives, however, the necessities of the case were very different. It was impossible that the few and far between Englishmen should, in their own person, try all the teeming millions of Natives over such wide areas. The attempt would have been too extravagantly quixotic. They did the closest they practically could to it. In short, they aimed at the same thing for both; they aimed at giving the Native, as they gave their countrymen, the very best justice in their power to give; and while they gave the Briton the same as he had been accustomed to in the land of his nativity, they gave the Native of India a very great deal better than he had ever seen or heard or dreamt of before. And this they did by keeping the graver cases in their own hands, by deciding the intermediate cases on reports accompanied by the record, and leaving only minor cases to the decision of Natives. Then they fostered education, and they imposed examinations on candidates for public service, and subsequently they enhanced the scope of those examinations; and as they gradually qualified the Native for the right exercise of power, they entrusted him with more and more of it, till now we have Natives on the High Court Benches. I confess it puzzles me, my Lord, to see how anyone can say that the tendency of legal administration in India has not been uniformly and without anomaly in the simple and single direction of giving the best form of justice possible in the circumstances to all classes, Briton and Native alike. With Britons we started at the top, because, from the paucity of their numbers, it was possible to do so. With the Natives this was impossible, because of their countless numbers, and their unmanagable areas, compared with the mere handful of Englishmen that have governed this vast Empire. So we started as near as we could to the same point, and, keeping it ever in view, progressed steadily as circumstances allowed, always towards the same end. The progress has ever been upwards and the principle uniform. There has been no anomaly whatever, and there is no anomaly now in the sense urged in favour of this Bill. But to turn round now and progress downwards, by placing the British subject under a tribunal of less competency to do him justice than he already enjoys, and we have readily at command, and to do that for no better reason than to remove a fancied anomaly, that would be an anomaly indeed.

"'The anomalous nature of present arrangements' is one of the reasons put forward for the introduction of this Bill. Rightly examined, the anomaly lies, not in Natives having less jurisdiction out of Presidency-towns than they have in them, but in their having jurisdiction over British subjects anywhere. The anomaly lies in having made an exception of Presidency-towns. The anomaly lies in having, in Presidency-towns, departed from the simple principle on which we had uniformly proceeded, of ever giving to both races the best justice practicable in the circumstances, in proceeding downwards instead of upwards. Remove that anomaly, and the position is logical and clear. But to set up that anomaly, and to base on it the claim to surround it with so many more anomalies that it shall cease to stand out singly as a marked anomaly, is to lead us blindly into a maze of anomalies in which we can never see our place to stop.

"If we must needs turn aside to such trifles as anomalies, and legislate on what I will take leave to call such very secondary grounds, then, to be consistent, we ought rather to wipe out this first great anomaly, have done with the whole side issue, and revert to first principles—logical principles. But there is no need for this, and all I wish to say on this point is, do not let us bring the existence of one anomaly forward as a reason for justifying the creation of more.

"I submit, my Lord, that if we want to avoid anomalous positions and preserve logical action in the future, there is no point at which we can so safely call a halt as where we now are. The hon'ble and learned mover of the Bill, in summing up the principles which have guided the framers of the Bill, says—and I cordially agree with him in the principle—'that, if this question is re-opened, it ought to be settled on a permanent and stable foundation.' I agree with him, because it is a corollary that, if it cannot be 'settled on a permanent and stable foundation,' it ought not to be re-opened. I submit, my Lord, that there is no landmark that can be called permanent about the position which the Bill takes up. It gives Natives the same jurisdiction over British subjects as Englishmen exercise over the same class of criminals, but that is not the same jurisdiction as is exercised over Natives; it is a modified quantity of jurisdiction amounting only to imprisonment for one year in the Mufassal; and, while the distinction in the quantity of punishment awardable to British subjects and Natives is maintained, it cannot be said that the Bill has brought us to the point

to which it is claimed to have brought us, that of impartiality, of the removal of race distinctions, and specially of finality. Sir Ashley Eden—though I doubt whether he used the words advisedly—certainly does use the words 'full powers', and that means the powers of life and death, of transportation for life, of imprisonment for 14 years. When the Native Judge in the Mufassal exercises such powers over the British subject, then we shall have removed 'race distinctions'; then we shall have arrived at impartiality and finality. But not till then. If the advocates of the Bill are not prepared to go as far as that, then admittedly they are not prepared to conduct us to what alone will justify the re-opening of this question, a settlement 'on a permanent and stable foundation'.

"Again, there is no element of finality that I can trace about the person selected for the exercise of jurisdiction over British subjects.

"There is no such self-evident cause as can stand as a landmark why others should not equally be selected. Indeed, for my part, I think a Deputy Magistrate who has been for years associated with Europeans, who has had a long magisterial training as a Tahsíldár Magistrate, who has his judgment mellowed by years, who, at the very outset of his career, had to pass qualifying examinations, and who has eventually been promoted for tried efficiency, is eminently better qualified to exercise such powers than a young man under 25, appointed without like examination, without trial, and without magisterial training or converse with British subjects; and such are the Native Civil Servants constituted under the statutory rules. If, then, the Native Deputy Magistrates, who are in hundreds all over the Presidencies, are obviously preferable to one of the classes named in the Bill, it follows that the settlement made by the Bill is not 'on a permanent and stable foundation.' I do not see how anyone, be he Native or European, can well think that this will be a final settlement. On the contrary, well nigh everyone outside these walls seems to look upon it as a mere beginning, as the opening of a door, as the introducing of a principle; and that is why there is so much agitation and anxiety about it—and that is why I, for one, my Lord, have indented so largely on your Lordship's patience. What I feel is, that this Bill will lead us into a hazy illogical position, with no distinct landmark to stop at; whereas, if we stand where we are, we have a defined line and a reason for it in Presidency-towns. If once we leave them and go half way down hill on the road to inferior justice for British subjects, we can never stop till we reach the bottom; and that bottom, where is it? It is deeper down even than our own Native Courts. It carries us into Native Courts in Foreign States. When once we have admitted that in our own Courts Natives are to try Britons, we can no longer insist that in Foreign Courts Britons shall not equally be tried by Natives; and so we shall have created another anomaly that will have to be wiped out. We shall not have arrived at finality; we shall have to go on and rescind the Act, not so long ago enacted, by which Britons were exempted from Native jurisdiction in Foreign States.

"Once more, the same hand that sweeps away anomalies and partialities so as to lead us to a settlement that shall be final, introduces, by the same stroke of the pen, an incongruity and a piece of race partiality that, to my thinking, is more glaring than any which it removes. The effect of the amendment of section 443, by the elision of the words 'and an European British subject', is, not only to admit the Native to jurisdiction over British subjects, but by race distinction to bar the Briton, so that, if, for instance, the learned and hon'ble member to my right (Mr. Evans),—distinguished member though he is of the Calcutta Bar; if the Lord Chief Justice himself—were to elect to offer their services gratuitously for the trial of their countrymen in Calcutta or elsewhere in India, as they might do, and as so many do in England, they would find that, by the Bill we are asked to pass, they would be legally disqualified by reason of their race. In spite of their having the highest possible qualifications, in legal knowledge, in knowledge of the classes to be tried, to wit, their fellow countrymen, they would be legally barred by race distinction—barred solely because they are Britons, barred in the interests of the more effectual and impartial justice to be administered by Natives, stigmatised—if we are to use such a poor argument at all—stigmatised, in order that no stigma may be cast

on Natives; and this, we are told, is an element of finality. The barring of the Briton is to be final.

"But casting to the winds such very secondary ideas as legislating for a stigma, neither is it convenient in practical every-day work that every Briton, simply by reason of his being a Briton, should be barred from jurisdiction over Britons. At certain ports, far distant from the seat of any Magistrate, it is convenient that the master attendant should have jurisdiction in trifling cases over the seamen frequenting the port. That will not be possible when all Britons are legally disqualified by the proposed amendment of section 443.

"As the word 'stigma' has been forced upon us, and we are called on to consider it in the course of this discussion, let me take the opportunity, before parting with the word, to say that, in considering their *circumstantial* disqualifications for trying Britons, I cast no manner of stigma on Natives—no more, in fact, than if the Commander-in-Chief, there, were to stigmatise me as unfit to command a brigade, or even a company. And even if it were a sort of fancied stigma not to be allowed to try a class of cases you were not calculated to be exactly the best man to understand; even if it were a hardship equal to being tried by a man who was not calculated to understand your case, and the hardships on both sides being equal—which, of course, they are not and never can be,—we were cast on the horns of a dilemma and had to choose between them, there still need not be a moment's hesitation about the choice, for the persons affected by the one hardship are in thousands, if not tens of thousands; whereas those affected by the other fancied hardship may be numbered on the fingers. On the principle, therefore, of the greatest good of the greatest number, there should not be a moment's hesitation about abandoning a Bill that legislates for the few against the many.

"To sum up the above objections and apply them to the Bill. Not only does this Bill not 'contain in itself', as is claimed for it by the hon'ble and learned mover, 'the elements of stability and durability,' but it is pregnant with exactly the opposite elements, and, therefore, by the corollary of that very proposition, this question ought not to be re-opened.

"Looking once again at the reasons given for the re-opening of the question, I find it is commended to us on the ground that 'the time has come.'

"It is a set phrase, 'the time has come;' but there may be two views about its applicability. The time when we are doing all we can to induce English capital to come to this country seems scarcely the time to scare it away with inferior justice to the Englishman. Tell the English capitalist, who is prepared to send his sons and his money out to this country to be large employers of labour in coffee, tea, or cinchona estates; in gold, iron and other mines; in cotton or jute mills and so forth,—tell him that, if any one of the several hundred men, women, and children employed by his son lodges a complaint against him, 'the time has come' for his son to be tried by a Native,—I have a shrewd suspicion that he will have very different ideas about the time. He will not stay to ask what like the Native is, whether qualified or not. He will be apt, I think, to have strong opinions—some might call them prejudices—which we will have to put up with if we want him to bring his capital, for in that, at least, he is master of the situation. He will turn his back on us and send his sons and his capital elsewhere. And in the main he will be in the right; for, whether the planter gets justice or not at the hand of the Native Magistrate is rather a secondary consideration; the mere fact of his having, on some trifling charge, had to appear before and be tried by a Native Magistrate, of the same caste and family, perhaps, as one of his own writers or contractors, will so lower him to their own level in the eyes of his two or three hundred coolies, that he will not be able to command their respect any more. It can answer no useful end to judge of these things by European ideas; we must take them as we find them in this country; and such, I am convinced, would be the effect on the mind of the Indian coolies and their maistries. I am convinced of this; because I have moved not a little amongst planters and their labourers, and made it my duty to acquaint myself with their position, as much as with that of any

other farmers and their men; and now it is equally my duty to represent their interests here to the best of my poor ability; for their interests are the interests of the country, and it will be a dark day, indeed, for India if British energies, British intelligence, and British capital leave it in disgust. In a less degree, also, it will be an evil day for India if British energies, intelligence, and capital are discouraged from continuing to flow into it. It is a consideration of no small moment that the planters of Assam, of the Nilgiris, of the Wynaad and other places, with the lákhs of rupees that they bring into this country, should not be discouraged, which, I am convinced, they will be if this Bill passes. I specially allude to planters, because, settling, as they do, in isolated positions, each a lone man among a hundred, they are specially trusting in, and specially entitled to, the best justice we can give them, a style of justice that shall give them a feeling of security.

"One word more about the time having come from another point of view. If any of the above reasons for not subjecting Britons to Native jurisdiction have any weight, and had weight to sway the majority in 1872, surely they can only have *increasing* weight as the number of British subjects in the country increases; and in that sense the time, instead of having come, is, if anything, more remote than it was in 1872.

"When this matter was discussed in 1872, there were no Native gentlemen in this Council. Now there are four hon'ble members, and they are called upon to decide with us on the liberties of the British subject. The appeal to try this question by 'impartial justice' is addressed to them as well as to us; and there is a side of the case which specially addresses itself to them. They are better able, perhaps, than we are to appreciate the value to them of the special concessions made to them,—concessions made, some of them, in the very face of Western notions of justice,—concessions simultaneously denied to our own countrymen. I will touch with a word only, lest I should offend, such things as dancing girls, child marriage, child widowhood for life, plurality of wives, exemption on account of rank from appearance in Court, exemption on account of sex from appearance in Court—exemptions that we do not accord to our own Princes and our own ladies. Natives are the best judges of the value to them of these and like privileges, and, accordingly, they have been allowed, and rightly allowed, to be the judges: their voices have ever prevailed; their wishes have ever been scrupulously regarded, the only test applied being, will it do any positive injury to anyone else to concede these privileges? If it will not, then, by all means, let us liberally concede them. This has been the principle that has guided the concessions to Natives. Is it not fair to let the same equitable principle govern the grant of concessions to Europeans? Britons are the best judges of the value to them of the privilege of being tried by Britons, a privilege of which they seem to think so much; and if it will not do any positive injury to anyone else to let them have the privilege, then, by parity of treatment, by all means let them have the privilege. This view of the case will, probably, commend itself to the minds of Natives as an impartial one. Again, what would Natives think if, with the cry of justice to a class amounting to one half of India—the down-trodden females—in the interests of morality or any such like cry which an English philanthrophist might raise, we ran a tilt at their time-honoured institutions? I imagine they would say at once that it was legislating for an idea, was uncalled for and provocative. By parity of reasoning, the great mass of Englishmen look upon this attack on their privileges as equally uncalled for. If the attack is not justifiable in the one case, neither is it, I submit, in the other. Far, far be it from us to disturb the mind of the Asiatic with even the breath of a suspicion of any interference with his time-honoured valued privileges that do no positive injury to anyone else. By parity of treatment, far be it from him to deal by us otherwise than as we have dealt by him.

"While I have contended above that trial of Briton by Briton is only a natural sequence of the impartial effort to give to Briton and Native alike the best justice in our power to give, here, I have called it, for argument's sake alone, a privilege, and even as a privilege have shown, I think, that it has a

claim to be honoured; a claim, too, based strictly on the very test by which we are invited to try the Bill, that of impartiality.

"But what I have said above has been simply comment on the reasons given for introducing the Bill. The reasons for not going on with it, though few and simple, are, to my mind, more forcible.

"The first reason is of itself enough to throw out any Bill. It is not wanted. With the exception of a fanciful few, fidgetting impatiently after an idea, nobody wants the Bill. Nobody, European or Native, wants the Bill for any practical good that it will do him.

"On the other hand, there are very large numbers who, whether rightly or wrongly is a secondary matter here, are nevertheless, as a matter of fact, vehemently, aye vehemently, opposed to the Bill, and they come of a class, too, on whom all the best interests of India are immeasurably more dependent than they are on any other class. It is an obvious fact of which we cannot but take count, and their vehement feeling in the matter has led to the rousing and bringing prominently forward of the very feeling which the Bill was meant to lay—race antagonism—feeling given expression to in the Native Press, and thus disseminated, in much more violent and provocative language than Britons have indulged in. Now that it has been unmistakeably seen that the Bill has roused and keeps on intensifying the very feelings it was meant to allay, the Bill, if it is to be consistent with its aim, ought, I submit, to be withdrawn.

"That it is wanted for administrative convenience, as has been alleged, is a mere loose statement, which five minutes reference to the criminal statistics of the country would conclusively falsify. Theoretical positions may be set up, but so absolutely is fact against theory in this matter that I will not waste time on it.

"Though I have urged above that, in effect, the Bill does not give what it professes to give, I never meant to imply that, in theory and in the minds of the framers, it was not honestly, generously intended and expected that it should and would give it. Who would doubt it? Not doubting it, I venture to urge that the same soul of honourable, generous impartiality which lay behind the idea that prompted the Bill, should equally impel the advocates of this Bill to abandon it, now that it is unmistakeably clear that the Bill will not forward, but will positively thwart, their liberal intentions. I am not one of those who cannot admit honourable, high-minded intentions in those who think differently; nay, rather, I venture to make an appeal to those very intentions to which I pay all honour. If it is manly in an individual to admit a well-intentioned error, and he only rises in our estimation for the generosity of the admission—and none but the mean-spirited will impute it to weakness—may not a Government also, conscious of its stength, do the same with advantage, advantage both to its own credit and, what is of much more importance, to the interests of the great country committed to its charge? By the introduction of this Bill, the Government has made it abundantly plain that it entertains the most liberal intentions towards the Natives of India; that it has placed beyond a doubt; that surely will henceforth be accepted on all hands without a question; and that having been demonstrated, surely the Government is in the best possible position for saying in effect, if not in word, to the peoples of India—'Though we entertain these unquestionable sympathies, yet, in the course of the ventilation which this Bill has undergone, we have come to know that the passing of the Bill will not compass for you the advantages we had aimed at, but will, on the contrary, injure you seriously, by rousing a deep feeling of race antagonism in a class on which all your best interests are immeasurably dependent for justice, intelligence, capital, energy, progress in civilization, commerce, agriculture and all the material elements, of peace, plenty and health. Though in an infinitesimally minor degree, the Government itself also is not without indebtedness to the martial loyalty of the class that strengthens Her Majesty's forces in India by the supply of some ten thousand volunteers of all arms. We have accordingly resolved, in the best interests of the very people for whom this Bill was introduced, to abandon

it.' If the Government can do this of its own motion, it will, I submit, take a high stand indeed in the calmer judgment of posterity; and it can well afford, in its conscious strength, to think cheaply of any such petty charge as having yielded to clamour; for, in the eyes of the wise and generous, it will be judged to have yielded, not to clamour itself, but to the light cast by the expression of feeling elicited by the ventilation of the Bill, or, to speak more correctly, not to have yielded a jot, but adhered, under the new light thrown, to its own previously expressed intent of allaying race antagonisms.

"If the Government can do this, not in Council here, but of its own motion, then a thousand times *bis dat qui cito dat*. The sooner it does it, I submit, the better. If the Bill is understood to be only postponed till November, then the deplorable—the very deplorable—feelings that have been roused on both sides will only smoulder deeper and wider till the November discussion fans them again into flame; and then, if the Bill is carried by the Government, voting as a Cabinet, and not individually, as on the discussion of this point in 1872, the feeling will not pass away with the passing of the Bill, but will sullenly live for years to come and burst out afresh whenever a case in point arises. I hardly like to dwell on the depth and growing intensity and breadth of the feeling of race antagonism that has been raised. I only feel bound to touch the warning note, that it is a matter worthy of the gravest consideration of Government.

"The Government has only very recently taken additional steps for the better ventilation of Bills, with the avowed intention of availing themselves, in the interests of the country, of the better light shed by such increased ventilation. Here, then, in the deep and widespread agitation and vehement expression of strong feelings, is the very light they have courted. Will they cast aside the very light they have courted on the very first exhibition of it? Will they not rather recognise that it is the very light they courted, and, in consonance with their own previously expressed policy, rather use it in the best interests of the country? Surely they are in an advantageous position for doing so without risk of being misunderstood.

"Both in respect of having unmistakeably demonstrated their liberal intentions towards Natives, and in respect of having expressed a desire, for the public good, to obtain and be guided by the views of the people legislated for, and also in respect of both acts being quite recent, the Government are surely in the best possible position for promptly withdrawing this Bill of their own motion. Indeed, if they do not, they will even seem to stultify their own professions.

"Yet another course is open to the Government, a medium course that will probably satisfy the moderate minded on both sides, giving the Native the coveted brevet rank, and still practically retaining to the Briton his freedom,—a course also that will lead us into no illogical positions, and meet all fancied administrative difficulties—that of making the jurisdiction proposed to be given to Natives permissive only on the Briton positively waiving his right to be tried by a Briton. But in such case it would have to appear on the first summons that the Briton had the right, and he would have to endorse his election to appear or not to appear before a Native, and the jurisdiction should not be extended beyond the cases now contemplated. But this is only suggested as a compromise not without dangers; and the much more satisfactory and manly course would be to abandon the Bill.

"Having taken upon me to tender this my humble opinion of the best course to be pursued with this Bill, I wish to submit that it is in no spirit of factious opposition to the Government; indeed, I knew not till very recently that the Bill was to be regarded as a Cabinet measure, if indeed it is to be so regarded, as the hon'ble Law Member tells us to-day, and herein I must plead my newness to the rules of this Council. I thought it was put forward as an important measure on which the Government were anxious, as in 1872, to obtain the unfettered opinions of everyone present; and if I have erred in too candidly submitting mine, I trust it may be

recognised that I have been influenced by no spirit of factious opposition; far from it. I have said what I have said only in true loyalty to the Government. Being called here, I felt bound, on a point of such vital interest to the country, to place my views, for whatever they might be worth, at the service of Government. If they were worth nothing, the labour was mine only, and they could be cast aside. If they were worth anything, and served by a feather's weight even to influence the decision of Government, then I should rejoice indeed to have spoken freely, as I feel earnestly, in behalf of what I humbly believe to be the best interests of the country in which I have spent my life, and which I have as truly at heart as the liberal-minded framers of the Bill. In this light, and aiming in effect at the same final ends as do the framers of the Bill, I shall trust, though a seeming opponent, to be eventually recognised as a true co-adjutor."

The Hon'ble MR. REYNOLDS said:—"My Lord, I shall not detain the Council with more than a very few remarks, but I wish to take this opportunity of expressing my cordial approval of the principle of this Bill. That principle is clearly explained in the Statement of Objects and Reasons, and has been further explained to-day by the hon'ble member in charge of the Bill. It is simply this, to do away with all judicial disqualifications which are based upon mere distinctions of race. What we have to look at in a Judge or a Magistrate is, not his colour, but his character; not his pedigree, but his ability and his integrity. I was a member of the Select Committee last year on the Bill to amend the Code of Criminal Procedure. The question of the exceptional position of European British subjects under the criminal law was raised in the course of the discussion upon that Bill; but it was brought before the Council in a form, and at a stage of the proceedings, which precluded us from taking it into consideration, except at the risk of deferring the passing of the Bill to another session, and thus delaying the introduction of those useful reforms which have now become law in the amended Code of Criminal Procedure. But a promise was then given by the Government that the matter should not be lost sight of; and I presume that the Government had this promise in mind when it was determined to introduce the present Bill.

"I not only accept the principle of the Bill, but I entirely approve of the system on which it is proposed to carry that principle into effect. This is a Bill for levelling up, not for levelling down. It does not take away from Englishmen the cherished right of being tried by their peers, but it declares that a Magistrate shall not be precluded from being deemed the peer of an Englishman merely because he happens to be a Native. In the criticisms which have lately been poured out upon the Bill, it has been confidently asserted that this is a measure for removing a mere sentimental grievance; for dealing with a difficulty which may arise at some future time, but which has not yet assumed a practical shape. The authors of those criticisms must have been imperfectly acquainted with the facts of the case. In August last, Mr. Romesh Chunder Dutt, a Covenanted Civil Servant, was appointed to officiate as Magistrate and Collector of Balasore, and he has now been again appointed to officiate as Magistrate and Collector of Bákirganj. Mr. Dutt is an officer of some distinction in the service to which I have the honour to belong. He stood second in his year at the final examination in England; he is a barrister-at-law; he has filled subordinate appointments with credit; and he has written ably and successfully on economic questions in Bengal. It is something more than a sentimental grievance that such a man, who is thought competent to hold the chief executive charge of a district, should remain under a legal disqualification for exercising the powers of a Justice of the Peace. Such a disqualification hampers the Government in the selection of its officers, and weakens the hands of justice, and I should rejoice to see it removed from the Statute-book.

"If, therefore, the motion before us to-day, instead of being merely a motion for the publication of papers, had been a motion to refer the Bill to a Select Committee, I should have had no hesitation in voting in favour of it. I do not say that I am entirely satisfied with the provisions of the Bill. I feel consi-

derable doubt whether the first section has not been too widely drawn, and whether it would not have been better to restrict the operation of the measure to officers, whether Covenanted Civilians or not, who might be actually appointed to be Sessions Judges or District Magistrates. But points of this kind do not touch the principle of the Bill, and the Select Committee would be the proper place for their consideration.

"It is, of course, a further question whether, in view of the determined opposition which this measure has encountered, it would be prudent in the Government to make any further attempt to pass it into law. It appears to me that this is primarily a question for the Executive, but I imagine it is quite within the competence of this Council, as a legislative body, to say that, though the abstract principles of a measure may be equitable and right, it would be impolitic and inopportune to make them part of the law of the land. That, however, is not a question which we are called upon to consider to-day. If the present ferment should subside; if the passions which have been aroused, and the misrepresentations which have been made, should disappear before a calm consideration of what the Government really proposes to do, and what the effects of its legislation are likely to be, I should gladly give my vote, when the time comes, for passing into law a measure based upon the principle of this Bill. But if, on the other hand, postponement and reflection should intensify the feeling which undoubtedly exists to-day; if it should be made clear that the deliberate verdict of the European community in India is opposed to any such legislation as this; if the appeal to Philip sober, which is now to be made, should be dismissed on the merits of the case,—the Government would undoubtedly incur a serious responsibility by asking this Council to pass the Bill."

The Hon'ble DURGÁ CHARAN LÁHÁ said:—"My Lord, this Bill, in my humble opinion, is a move in the right direction, and I deeply regret the feeling which it has evoked.

"It seems to me absurd to suppose that the Native officers who were deemed qualified to hold the responsible post of Magistrate and Judge, and to sit in judgment upon millions without distinction of rank, were not competent to exercise jurisdiction over European British subjects in criminal matters.

"As to race prejudice, which has been already referred to, I for one think that it has little or no existence in fact. With the progress of English education and increased intercourse with Europeans, I am glad to say this feeling has no place in the minds of educated Natives, and that any apprehension as to failure of justice in their hands appears to me wholly groundless.

"What is this change, after all, that the Government propose to introduce? It is to give the same powers to a few selected Native Civilians that Englishmen holding the same position already possess. These Native gentlemen have had to pass the same examinations, and are considered by Government competent to perform the same executive duties, as their brother Civilians. If we refuse to put them on an equality as regards judicial powers, we shall, I maintain, be casting an unnecessary slur upon them, and lower them in the eyes of the people whom they have been deputed to rule. Much better, I say, not have introduced them into the service at all, than, once having done so, impugn their probity by saying 'You shall perform all the duties belonging to the office of an ordinary Civilian, except that of having judicial powers in criminal cases over any European.' We must remember that it is only proposed to invest those Native Civilians who have proved themselves to be of unexceptionable probity with the power in question, and, looking at the safeguards that are to be maintained against any possible failure of justice, can any Englishman honestly say that he is afraid that his countrymen will run any greater risk of being unfairly treated at the instance of a Native Judge than they will at that of a fellow-countryman? A Native Civilian would naturally be always most careful and anxious to see that no injustice should happen in the case of a European, as he would know that he would be accused of race hatred or incompetence should any fault be found with his judgment.

"It has been said that the passing of the amendment will prevent the introduction of British capital and enterprise into this country. I cannot bring myself to believe that anything of the kind will ever happen. The same argument was employed when Act XI of 1836, bringing our European fellow-subjects within the jurisdiction of the Mufassal Civil Courts of the East India Company, was passed, and we now see how the predictions then made have been wholly falsified.

"The Government of this country has, I am aware, my Lord, been of a most liberal and lenient description for many years past; and all educated Natives are, I am sure, deeply sensible of the great debt of gratitude they owe to the English nation for the conciliatory spirit which has been shown by the rulers of this country, when they might, with impunity, have acted in so very different a manner. The aim and object of the English Government has, I believe, been to make the people of this great Empire loyal and contented subjects of our Most Gracious Queen; and this object has hitherto been gained by the wise policy pursued by your Lordship and your predecessors, of treating all Her Majesty's subjects, whether Natives of this country or Europeans, as far as has been possible, with equality."

The Hon'ble SAYYAD AHMAD KHÁN said:—"My Lord, as this is probably the only opportunity which I shall have of expressing my views on this important measure, I am anxious to offer a few observations. I am aware, my Lord, that this Bill has been the subject of much discussion by the public Press, and has given rise to excited agitation among the non-official section of the European and Eurasian community, who feel that their liberties are imperiled by the proposed law. I have not the smallest wish to assign unworthy motives to the agitation; and far be it from me to say that the views which that agitation represents should not be duly considered by the legislature. Never has the Indian legislature been more anxious to consult the views and feelings of the public regarding legislative measures than the present Government of India. With every wish that the views put forward by the European and Eurasian community should be duly considered, I confess, my Lord, I cannot help feeling deep and sincere regret at the attitude which the agitation against this Bill has adopted. Vehement and somewhat unmeasured language has been used by the agitators against my countrymen. I sincerely deplore this circumstance, as much for the sake of the leaders of the agitation themselves as for the sake of the feelings of my own countrymen. And here, my Lord, permit me to express a sincere hope that my countrymen will in no part of India follow the example of those who think that the vehemence of public demonstrations is the best way of submitting arguments and claims for the consideration of the legislature. The people of India, strongly as they feel in favour of the justice, the wisdom and the expediency of this Bill, need no demonstration in favour of the measure; and, if I know the views of the leaders of Native society, I cannot be far wrong in prophesying that the people of India will not resort to any public demonstrations in support of this Bill. They are content to leave the measure to be decided upon its own merits. As a Native of India myself, with every wish for the success of this Bill, I hope my countrymen will adhere to their present determination to watch the progress of this Bill with calm and respectful silence.

"My Lord, it is not unintelligible to me that the non-official European and Eurasian community, separated as they are by the distance of time and space from those influences which secure the progress of political thought in England, should in the circumstances of India attach exaggerated importance to distinctions of race and creed; that they should upon such occasions emphasise the fact of their belonging to the ruling race; that they should claim for themselves especial provisions in the general law of the land. My Lord, all this is intelligible to me; but, at the same time, I cannot help feeling that a good deal of the opposition offered to the Bill arises from inadequate information in regard to the history of Indian legislation in matters of a similar nature, and from a misapprehension of the small change which this Bill proposes to make in the existing law. My Lord, I do not claim to be an authority on questions of constitu-

tional law; but I may safely doubt the legal accuracy of the contention, which has been put forward elsewhere against this Bill, that the European and Eurasian subjects of the Queen Empress in India have any such constitutional rights as would place them above the jurisdiction of the Indian legislature. As an humble member of the Indian legislature myself, I would repudiate any such limitation. We derive our powers from the great Parliament of England; and, so long as we do not exceed those powers, it seems to me erroneous to doubt the legislative authority of this Council in all matters connected with India. History repeats itself, and we have in the present agitation against this Bill a repetition of the arguments and sentiments employed by the alarmists of many years ago, when Native Judges presiding in the Courts of the East India Company were empowered to try civil suits to which Europeans and Eurasians were parties. My Lord, I hope I may, without fear of contradiction, say that the exercise of civil jurisdiction by Native Judges in cases to which Europeans are parties has not given rise to any injustice, not even to complaint on the score of national differences. The truth is, that the fears of the alarmists of those days were unfounded, and their prophecies were bound to prove false. At this moment, throughout British India, Native Judges exercise civil jurisdiction over Europeans in a manner which certainly is not open to the charge of being influenced by race distinctions. But then, my Lord, it is sometimes urged that civil jurisdiction is vastly different to criminal jurisdiction; that the former affects property only, but the latter affects personal character and liberty; and that, whilst the European and Eurasian community may be willing to subject themselves to the civil jurisdiction of Native Judges, it does not follow that they should do the same in criminal matters. My Lord, I confess I am unable to see the reason upon which such distinction is based. The decrees of Civil Courts can reduce a man from opulence to poverty, and there are some branches of civil jurisdiction which not only relate to personal relations, but include the power of personal arrest, and, in the interests of justice, authorize a procedure similar to that provided for Criminal Courts. The process of arriving at conclusions as to the facts of civil cases is much the same as in criminal cases. The same law of evidence in India regulates the investigation of truth in Civil and Criminal Courts. The judgments of Civil Courts may stain the reputation and ruin the character of parties nearly as much as sentences passed by Criminal Courts; and it seems to me that there is no substantial foundation for drawing a distinction in principle between judicial powers of the two classes of Courts, or for attaching greater importance to one class of jurisdiction than to the other. If probity, justice and absence of race bias are found among Native Judges in civil matters, it is difficult to perceive why the same qualities should not mark their administration of criminal justice in cases in which Europeans and Eurasians are concerned. As I understand the existing law, all Native Magistrates already exercise jurisdiction in criminal matters in cases in which Europeans are complainants and seek redress from the Courts as injured parties. I have never yet heard that European British subjects have any objection to resort to Native Magistrates for redress; indeed, they do so without any hesitation. If this is so, there seems no reason why the same confidence should not be shown to those tribunals in cases in which complaints are brought against European British subjects. Counter-charges are not uncommon in criminal cases. Magistrates competent to give redress ought to be competent also to award punishment; and it seems unreasonable and unfair for any section of the community to say 'We will go to Native Magistrates for redress, but we will not submit to be tried by them.' Indeed, my Lord, it is hardly necessary to say that, even under the existing law, Natives of India exercise a good deal of criminal jurisdiction over European British subjects. Even outside the Presidency-towns, I believe it is not a rare occurrence that European British subjects, appearing as defendants before Native Magistrates, waive the exceptional privilege accorded by the existing law. There is no judicial disqualification based on race distinction in the powers of the Native Judges of the High Courts and Magistrates in Presidency-towns; and I need have no fear of contradiction in saying that Native officers, when entrusted with criminal jurisdiction over European British subjects, have performed their duty with honesty and efficiency, and without any bias arising from distinctions of race or creed. Indeed, my Lord, in educated minds, employed in the solemn and sacred duty of administering justice, the claims of humanity at large to the protection of law, and the dictates of conscience, leave no room for any other considerations. In the neighbouring island of Ceylon, which forms a part of the vast Empire of Britain, I believe I am rightly informed, Native Magistrates and Judges exercise criminal jurisdiction over European British subjects. Judicial disqualifications based on race distinctions are unknown in that country. Yet British capital and British commercial enterprise, far from being driven from that island, have had considerable scope in that colony. The interest of coffee-planters in Ceylon is, so far as I know, in no sense inferior to the interest of indigo-planters in Bengal; and the people of Ceylon are in no sense less Asiatic than the people of India. Nor would their staunchest patriot in Ceylon claim for his countrymen a higher position in the scale of civilisation than he would concède to the people of India. Yet the existing law of British India in regard to criminal jurisdiction over European British subjects is behind the law of Ceylon, and, my Lord, I do not think it unreasonable for the people of India to feel that the time has arrived when the necessity of improving the law has become urgent.

"So far, my Lord, I have endeavoured to show that the proposed law is no innovation in principle, that the fears of the opponents of this measure are exaggerated and ill-founded, and that the example of Ceylon furnishes a practical illustration of the argument that the removal of judicial disqualifications, based entirely on race distinctions, will not be attended by any injury to the sacred cause of justice. And, my Lord, I may here repeat that the scope of the Bill seems to have been greatly misunderstood by the promoters of the agitation against it. As I understand the Bill, it does not propose to invest every Native Magistrate with power to try European British subjects. It is only in the case of those Natives of India whose recognised probity and ability have enabled them to achieve positions in the Judicial Service equal in rank to English officers of the higher order that the Bill proposes to remove judicial disqualifications based on race distinctions. The number of such Native officers is very limited; and the Bill cannot, therefore, in any reasonable sense, be regarded as precipitate or calculated to cause any serious practical change in the present machinery of the administration of justice.

"But, my Lord, putting aside these considerations, it seems to me that there is much fallacy in the argument which attaches so much significance to race distinctions. What the people obey in countries blessed with a civilised Government is, not the authority of individuals, but the mandates of the law. So long as the law is just, impartial and humane; so long as the proper administration of that law can be secured, the nationality of those who carry out the law should be of no consequence even to sentimentalists. What requires respect, submission and obedience is the authority of the law, and not that of individuals, and even those who regard the people of India as not entitled to equality with themselves might, if they only consider the question calmly, feel that Native Magistrates are only the servants of the State, charged with the duty of carrying out the behests of the law. It is the duty of the State to provide for the proper administration of the law. To secure this object, the State has to choose the best available agency, and it seems a somewhat untenable and unjust proposition for any subjects of the State to insist that, in the choice of officers, Government shall confine itself to any particular race or section of the community. The whole question raised by the Bill, in my humble opinion, practically amounts to what I have just said. It is a matter the principle of which requires no new decision. The question was discussed and it was decided, and decided nobly, when the magnanimity and justice of England accorded to the people of India rights of employment in the service of the State on the same footing as Englishmen themselves. That noble decision has, in recent years, received practical effect, and administrative expediency requires the moderate change which this Bill proposes.

"But, my Lord, this Bill has in its favour considerations of a higher order than even administrative expediency. I allude to those noble principles of freedom, justice and humanity which have their home nowhere as much as in the bosoms of the nation which first came forward to release the slave from his thraldom; which first announced to the people of India that, in matters of constitutional rights, distinctions of race and creed should have no place in the eye of the law. Never in the history of the world has a nation been called upon to act up to its principles more than the British in India. The removal of disabilities under which certain sections of the community laboured in England in regard to constitutional rights sinks almost into insignificance in comparison to what England has already done in India. The history of Indian legislation is the history of steady progress, of well-considered reforms, of a gradual and cautious development of the noble principle that between British subjects the distinctions of race, colour, or creed shall make no difference in legal rights; that whilst, on the one hand, British rule enforces submission, and expects loyalty and devotion from the people of India, on the other hand, it accords to them rights and privileges of equality with the dominant race. My Lord, I am convinced that it is on account of these noble principles, remarkable alike for their justice and for their wisdom, that the British rule has founded itself upon the hearts and affections of the people—a foundation far more firm than any which the military achievements of ancient conquerors could furnish for the domination of one race over another. History teaches the lesson that nothing is more destructive to the prosperity of a country than that race distinctions should be maintained between the rulers and the ruled. No one can be more anxious than myself that friendly feelings should grow even more than they have already done between the English nation and the Natives of India. Providence has thrown the two races together in a political and, I hope I may also say, social union, which will grow firmer and closer as time goes on. My Lord, if I believed that the legislative measure incorporated in the Bill will prove destructive to the growth of friendly feelings between the two races, I should have deprecated the introduction of the measure. But I can take no such view. I am strongly convinced that, so long as race distinctions find a place in the general law of the land, so long will there exist obstacles to the growth of true friendly feelings between two races. The social amenities of life arise from political equality, from living under the same laws, from being subject to the same tribunals. The caste system in India would, perhaps, never have held its ground so long, if the legislators of old had not framed one law for the Bráhman and another for the Súdra. Whatever the exigencies of former times may have been, I hope, my Lord, that a century and a half of British rule has brought us to that stage of civilisation when there is every reason for minimising race distinctions, at least in the general law of the land. My Lord, I, for one, am firmly convinced that the time has come when the entire population of India, be they Hindú or Muhammadan, European or Eurasian, must begin to feel that they are fellow-subjects; that between their political rights or constitutional status no difference exists in the eye of the law; that their claims to protection under the British rule in India lie, not in their nationalities or their creeds, but in the great privilege, common to all—the privilege of being loyal subjects of the august Sovereign whose reign has brought peace and prosperity to India, and made it a place suitable for commercial enterprise, and for the pursuit of the arts and sciences of civilisation. My Lord, as this is probably the last occasion on which I shall ever address the Legislative Council of India, I cannot conclude my observations without saying that your Lordship's administration is to be heartily congratulated upon having brought forward a measure which, I am convinced, will go a great way to remove invidious race distinctions, and ultimately promote good feeling, mutual respect and sympathy between the rulers and the ruled in this land of many races and many creeds."

The Hon'ble MR. HUNTER said:—My Lord, after very careful consideration, I feel constrained to support this measure. In doing so, however, I hope that I shall not disregard either the expressions of disapproval which have

reached us from without, or the arguments which have been so skilfully arrayed against the Bill in Council to-day. I agree with the opponents of the measure, that there is a body of personal law peculiar to European British subjects in this country—a law which accords to them highly-prized exemptions and privileges. I agree that there is likewise a personal law peculiar to certain classes of our Native subjects—a law which is equally valued by them. I agree that, as we have respected the exemptions and privileges secured to our Native subjects by their personal law, so we are bound to respect the exemptions and privileges enjoyed by European British subjects under their personal law. I am prepared to go further, and to maintain that, in the early days of English rule in India, the personal laws of the various classes formed the main body of law administered in our Courts. The history of Anglo-Indian legislation is the history of the absorption of these personal laws peculiar to classes into a common system of law applicable to all. By this process of absorption, the personal law of each class has been gradually but steadily curtailed. It is this process of absorption which supplied what the Marquis of Wellesley termed the "active principle of continual revision" that struck him as the salient feature of the Bengal Regulations in 1805. During the last 80 years the process has gone on at an accelerated pace, until the special privileges now left to the Natives of this country, and the peculiar exemptions still claimed by European British subjects residing within it, are a mere fragment of the privileges and exemptions which those classes severally enjoyed when Lord Wellesley delivered his Discourse. At each important stage in the process, there has been an outcry from the class whose personal law it has curtailed. Indeed, no class of men can be expected to part with their special privileges without opposition. It seems to me that a Government is bound to listen with great respect and sympathy to such an opposition, and that it ought to refrain from such changes, except when they are, clearly demanded by the common weal. But when such a change becomes really necessary for the better administration of the country, then I hold that Government is bound to make it; however much it may regret that it has to purchase a benefit for the whole body of its subjects, at the cost of the natural resentment of a section of them.

The curtailment of class distinctions which this Bill will effect is no isolated act. It forms one of a long series of measures absolutely inevitable in moulding the laws of the various races, from which our administration of justice in India started, into a common body of law applicable to them all. Permit me for a moment to remind the Council how this process has affected our Hindú and Muhammadan subjects. The Charter of 1753 expressly exempted suits between Natives from the jurisdiction of the English tribunals, then styled the Mayor's Courts.* The Governor General guaranteed in 1772 their own laws to the Natives, and provided that Maulvís and Bráhmans should attend the Courts to expound those laws † By the Statute‡ of 1781, the British Parliament secured the Hindús and Muhammadans, not only in their law of inheritance, succession, &c., but also in "all matters of contract and dealing between party and party." The same Statute guaranteed to them their domestic law of the *patria potestas*, and the punitive sanctions of caste. It provided that no act done, and therefore no penalty inflicted, in consequence of caste rules should "be held and adjudged a crime, although the same may not be justifiable by the laws of England."

I shall not detain the Council by a further enumeration of the guarantees granted to the Natives of this country, or of the legislative process by which those guarantees were one by one infringed. The Natives still retain a large portion of their domestic law and certain privileges, such as the exemption of women of position from appearing personally in Court. But in the ordinary affairs of business they have been brought under English-made law. The

‡ 21 Geo. III, c. 70.

Maulví or Bráhman assessor has no longer a place in our Courts. For Native law and usage in dealings "between party and party," we have imposed the Code of Civil Procedure and the Contract Act. We have weakened the *patria potestas* by curtailing the punitive powers of the head of the family, especially in regard to the female members. We have undermined the sanctions of caste by treating as offences the graver penalties inflicted for breaches of its rules, notwithstanding our express pledge to the contrary. We accepted the system of the Muhammadan criminal law; we have substituted for it a system of criminal law of our own. Special classes have had their ancient privileges curtailed in a special degree. The Hindú law accorded to the Bráhmans a status which enabled them to exercise spiritual powers, yielding lucrative temporal results. We no longer permit the employment of these spiritual powers for compulsory purposes. If a Bráhman erected a *kurh*, and some credulous old woman killed herself thereon, our regulation law tried him for murder. If he enforces a debt, or extracts a charity, by fasting outside a man's door, the English Magistrate locks him up in jail. We have deprived the sanctity of Brahmanhood of much of its pecuniary value, and subjected its spiritual terrors to the Penal Code.

In all this the Government has done wisely and well. In doing so, however, it has had again and again to encounter a clamorous but quite natural opposition from those whose ancient privileges or personal law it curtailed. I shall not cite instances where the gain to the community at large was beyond question, but one in which the necessity for a change seemed doubtful to many. There are no branches of the Native law more solemnly guaranteed to the Hindús than those which deal with marriage and inheritance; and there is no principle more clearly established than the deprivation of rights to family property in the case of a Hindú becoming a convert to another religion. Yet a series of *Lex Loci* Acts, initiated in 1832, and ending within our own experience, have repeatedly interfered with the most cherished feelings of the Natives in these matters. In each case since 1842, the Natives have struggled against the change. With them, inheritance is not a mere question of gain or loss in this world, but involves the safety of the souls of their ancestors, and their own happiness or misery in the future life. They have pleaded Parliamentary guarantees, the solemn declarations of the Indian Legislature, the established usage of a century of British rule. With one temporary exception, they have pleaded in vain.

The personal law and exemptions peculiar to European British subjects in India have undergone scarcely less important curtailments. The legal status of the non-official Englishman in India commences, for practical purposes, with the Charter of 1813.* During the preceding half century, the English non-official in rural Bengal had passed through various stages, as an interloper, a licensed adventurer, a subordinate agent of the East India Company, and a partner, recognised or unrecognised, of its servants in their private trade. He might execute a bond making himself amenable to the Company's Civil Courts, and after 1787 he had to do so before he was permitted to reside in the interior. In criminal matters he was subject only to the Supreme Court and Her Majesty's Justices of the Peace in Calcutta. He practically, therefore, remained outside the Company's system of administration, as an unmalleable unit of sturdy independence and growing importance in whatever district he settled, disliked and often unfairly treated, but very difficult to reckon with. In matters of criminal jurisdiction he was under the surveillance of the rural police instead of being amenable to the rural Courts. As late as 1817 a Regulation was passed requiring the police to submit yearly to the Magistrate of the district a list of all Europeans residing within it. Indeed, until the Government passed to the Crown, each police-inspector had to report the arrival of every non-official European who came within his circle.

The Charter of 1813 threw open the Indian trade to private enterprise, and at the same time created a jurisdiction over the Europeans

* 53 Geo. III, c. 155.

who might embark in the business. It provided that every British subject living at a distance of more than ten miles from the Presidencies should be amenable to the Civil Courts of the East India Company in like manner as Natives of India. It also empowered the Governor General to appoint Justices of the Peace from among its Covenanted Servants, or other British residents, with petty criminal jurisdiction over British subjects, not exceeding a fine of Rs. 500, or in default two months' imprisonment. As the number of Europeans increased in India, the powers of the Justices of the Peace were extended by a Statute of George IV.* All powers, whether civil or criminal, were exercised only by Europeans, because at that time the Natives of India had been excluded from the higher judicial offices which they held in the early days of the Company, and had not yet been incorporated as a branch of its Uncovenanted Civil Service. But when the Company withdrew from its trade after 1813, it set itself to the task of improving its rural government. By a series of measures between 1821 and 1836, it increased the powers of its Native Judges, and admitted the Natives of India to a large share of the civil judicial administration. It followed that if Natives were to do the staple work of civil justice, they must exercise jurisdiction over the whole body of inhabitants within their district. By a series of laws in 1836, 1839 and 1843, their jurisdiction was therefore extended over European British subjects. It was enacted in comprehensive terms that, thenceforth, no person should, by reason of place of birth, or by reason of descent, be in any civil proceeding exempted from the jurisdiction of any of the Company's Civil Courts.

The European community bitterly resented these laws, and opposed every effort to bring them under the jurisdiction of the country tribunals, as distinguished from the Supreme Court in Calcutta. The most important of them, they stigmatised as the Black Act. "The Black Act," writes an eye-witness, Mr. William Tayler, an eye-witness not at all likely to favour Bengal officialism, "was the cause of an agitation which may fairly be said to have convulsed Indian society for a time. Several barristers took the lead; public meetings were called; scurrilous articles filled the columns of the daily journals. One impassioned orator hinted that Mr. Macaulay [the Legal Member of Council] ought to be lynched at the very least." My Lord, it marks the difference between Englishmen in India at that time and at the present day, that although their feelings on questions of class privilege remain equally strong, the articles in the public journals are no longer "scurrilous"; their public meetings cannot fairly be described, in Mr. Tayler's words, as "fierce and uproarious"; and their resistance is not now confined to Calcutta, but, with the extension of British enterprise, is diffused over many districts. The jurisdiction of the Company's Civil Courts and of the Native Civil Judges, which Englishmen so loudly opposed fifty years ago, has done more than any other series of administrative measures to protect British capital, and to render British enterprise possible in rural India.

During the same fifty years, the special privileges of European British subjects in matters of criminal jurisdiction have also been curtailed. Perhaps the most important attempt under the Company in this direction was that of Lord Dalhousie's Government. In 1849, it prepared a draft Act declaring that all British subjects, resident outside the towns of Calcutta, Madras and Bombay, should be thenceforth amenable to the Magistrates and Criminal Courts of the East India Company; save, only, that no such Magistrate or Court should have the power to sentence any of Her Majesty's natural-born subjects to death.† It made no proviso as to the Magistrate being a Justice of the Peace. On the contrary, it expressly stated that "the word Magistrate, as used in this Act, shall be understood to mean every officer, however styled, who has power to exercise any or all of the powers of a Magistrate."‡ I need

* 9 Geo. IV, c. 74, sections 92, 97, 113, 121, 124.

† Draft Act read for the first time in Council on the 26th October, 1849, section 1.

‡ *Idem*, section 6.

hardly point out that the Bill now before the Council has a very much narrower scope. Lord Dalhousie approved of the proposed extension of the criminal jurisdiction over European British subjects, but thought that the measure should be postponed till the amending of the criminal law was effected by the Penal Code. His view prevailed. Shortly after the country passed to the Crown, the Penal Code became law, and the question of jurisdiction could be considered on its own merits. This was last done on the revision of the Code of Criminal Procedure in 1872. Before that year, the Natives of India had been admitted, by open competition in England, into the Covenanted Civil Service; and, in the natural course, would rise, as Magistrates and Judges, to the highest posts in the administration of criminal justice in their respective districts. The question which had to be decided in 1836, with regard to granting civil jurisdiction over European British subjects, came up for consideration in 1872 with regard to criminal jurisdiction. The Legislature, in 1872, determined to give a substantial jurisdiction over European British subjects to full-power Magistrates, being Justices of the Peace, and to Sessions Judges, provided that such Magistrates and Sessions Judges outside the Presidency-towns should themselves be European British subjects. By a narrow majority, the Legislature abstained from giving these powers to the Native members of the Covenanted Civil Service. How narrow the majority was, may be estimated from the circumstance that, if a single one of its members had voted the other way, the minority would by the President's casting vote have become the majority.

My Lord, I think that the Legislature decided wisely in 1872; but that we should decide wrongly if, in 1882, we supported its decision. The circumstances of the country at large, and of the special class of public servants to whom jurisdiction will be given, have altered during the ten years. The administrative necessity for the change, which was then remote, has now arrived, and will soon become urgent. Even before 1872, criminal jurisdiction over British subjects had been given to Native Magistrates in Calcutta, and both Hindú and Muhammadan gentlemen have exercised these powers in the Calcutta Courts. But it was not considered safe to entrust the same powers to Native Magistrates in the districts, because it was feared that public opinion, which would check any miscarriage of justice in Calcutta, might not act with equal force upon District Magistrates. I think that this was a good argument in 1872. But new enterprises have since then brought an influx of Englishmen into the interior, and created an amount of independent English opinion in the districts which could not have been anticipated in 1872. I, for one, read with pleasure the telegrams which have poured into *The Englishman* during the past month, from every part of Bengal where Englishmen reside. Those telegrams show that our non-official countrymen are strongly opposed to the measure which I advocate. But they also show that Englishmen in the interior have now the means of expressing the public opinion of their class with such promptitude and with such force as to constitute the strongest possible guarantee against the abuse of magisterial powers, whether vested in European or in Native hands. Not only is English public opinion in the districts stronger, but English public opinion in Calcutta acts much more directly upon the District Magistrates. Since 1872, the length of railways open in India has increased from a little over 5,000 to close on 10,000 miles. The number of private telegrams sent has increased from 600,000 to 1,337,526. The number of post-offices and letter-boxes has, during the same period, multiplied from under 5,000 to more than 11,000; and the number of letters, newspapers, &c., from 89 millions to 158 millions. Districts formerly isolated have now speedy and constant communication with the capital. Nor is it too much to say that English public opinion in the remote province of Assam can now be brought to bear as powerfully and as immediately upon the central Government, as the English public opinion of Calcutta could twenty years ago.

The circumstances of the special class of public servants, to whom it is proposed to give jurisdiction, have also changed. In 1872, the Native Covenanted Civilians appointed by open competition in England were untried men, who had yet to prove their fitness for the offices entrusted to them. They have,

during the past ten years, abundantly proved it. They have established their reputation as painstaking, impartial officers, and in a special manner they have shown their capacity for sound judicial work. Nevertheless, if a distinct administrative necessity had not arisen, I should decline to support a change which must be painful to an important section of the community. But such a necessity has now arisen. The Council has before it the reports from the various Local Governments in favour of this measure. I shall not, therefore, say more with regard to them, than that they present to my mind an overwhelming preponderance of opinion which it is difficult for the central Government to disregard. But I shall show, by one or two individual instances, the way in which the present anomalous state of things works in the rural districts. The Native Civilians have now reached a stage in their service when they must become, in the natural course, District Magistrates and Sessions Judges. We have guaranteed to them equal rights with their English brethren, yet they must be excluded from those offices in the more eligible districts where English private enterprise exists, and they must be turned out of those offices in any district into which English private enterprise comes. Let me illustrate this by two examples; one taken from Bengal, the other from Bombay. On the 17th January last, a Native Civilian was, in the ordinary course, appointed Joint Magistrate, with powers of a Magistrate of the first class, at the important station of Dháká. On the 23rd January, he received a letter from the Secretary to the Bengal Government, cancelling the appointment and transferring him to a less eligible district, on the ground that the opening out of the Dháká and Maimansingh Railway was bringing a number of Europeans into the Dháká district. The gentleman thus disqualified had won the second place in his year, by open competition in England, from among several hundred candidates; he is an English barrister, and he had proved his fitness for the post from which he was turned out by twelve years of service. In the Bombay Presidency, a Native Civilian holds the important office of District and Sessions Judge of Kanára. His head-quarters are at Kárwár, the coast terminus of the railway which, some time ago, was proposed to be constructed from the Dhárwár cotton country. If this scheme should be revived and the railway sanctioned, the Sessions Judge of Kanára would, under the exigencies of the existing law, have to be turned out of his district. Let us see what this practically means. The gentleman in question is Mr. Tagore. After a distinguished education, both here and in England, he has given about twenty years of unblemished service to the Government, and has established a high reputation as a Judge. He is a near relative of our late colleague, the Mahárájá Sir Jotíndra Mohan Tagore, who, during an unusually prolonged period, assisted this Council in making the laws of India. The well-earned encomiums in which your Excellency expressed your sense of the services thus rendered are still fresh in our memories. Yet we are told that we must not entrust to a member of the same noble house, notwithstanding his training in England and his twenty years of proved integrity as a Judge, the power of sentencing a European British subject to a short term of imprisonment. This, too, although the European British criminal has the right of immediate appeal from any sentence of imprisonment, however brief, and from any fine, however small. If it were necessary I could multiply examples. Unfortunately, the time has come when such examples will year by year multiply themselves, unless the existing law is changed.

Since this Bill was introduced, I have taken occasion to consult several of the leading Native Civilians who were appointed by competition in England. They complain that under the present law they will be excluded, as Magistrates and Sessions Judges, from the advancing districts into which British enterprise comes; and that they will be condemned to backward or remote districts where they will have less opportunity of distinguishing themselves, or of proving their fitness for higher offices. They urge that in Bengal, for example, this means that they will be shut out, as Magistrates and Judges, from the healthy Province of Bihár, and condemned for the most part of their career to the miasmatic Delta. The pleasant regions of Tirhut and Patna will be denied to them: the swamps of Bákirganj and Noakháli will be perma-

nently at their disposal. They contrast this state of things with the long series of declarations by Her Majesty's Government presented to Parliament, beginning with the Queen's Proclamation to the Chiefs and people of India in 1858, and ending with the Despatch of the Secretary of State, dated the 10th July, 1879. They rebut the plea that it is not essential that the Magistrate of the district should have power over Europeans if his Joint-Magistrate has these powers, by bringing forward a long list of districts in which there is no Joint-Magistrate. They expose the fallacy of the argument that in cases where a Sessions Judge has not these powers a European criminal can easily be transferred to another district. In the Bombay case which I have cited, a European criminal, together with the prosecutor and witnesses, would either have to be sent several hundred miles by sea to the Presidency-town, or the whole party would have to be marched inland, under guard, nearly 100 miles, in part across a tract malarious during the rains, to the head-quarters of one of the adjoining districts. The present law not only acts as a disqualification to the Native Judge, but it operates as a hardship to English criminals, prosecutors and their witnesses. The fact is, as shown by the Dháká case, that the Native Magistrate and Judge must either have jurisdiction over Europeans, or they must go elsewhere. They urge that Government will have to regulate its appointments, not by the merits of an officer, nor by his general fitness for a district, but by his power to deal with a small exceptional class of cases occurring within it. Yet by the orders of repeated Secretaries of State, orders formally placed before Parliament, the Native officers thus disqualified will in time form a substantial proportion of the whole Covenanted Civil Service. They point out that this is not only an injustice to themselves, but also a source of weakness to the Administration.

The admission of the Natives to the Covenanted Civil Service was one of the results of the Queen's Proclamation when Her Majesty assumed the Government of India. In that Proclamation she commanded that her subjects, "of whatever race or creed, be freely and impartially admitted to offices in [her] service, the duties of which they may be qualified, by their education, ability and integrity, duly to discharge." The Covenanted Native Civilians have now reached a point in Her Majesty's service when the Government must decide whether it will or will not grant them criminal jurisdiction over European British residents, as the Company had in 1836 to decide whether it would grant civil jurisdiction over such residents to the Uncovenanted Native Servants. The Government has in 1882 simply reached the same conclusion as that at which the Company arrived in 1836. But the present Bill provides the most ample safeguards against the abuse of the powers which it confers—safeguards so ample, stringent and complete as to destroy any further analogy between the action of the Legislature in 1836 and in 1882. For the present, I shall only deal with the case of Covenanted Civilians who have entered the service by competition in England. They are the class to whom the Bill is chiefly directed; they are the only class in regard to whom the Local Governments appear to have yet been consulted. So far as a scrutiny of the Civil List enables me to form an opinion, there are not above two or three Native officers, with the exception of those in the regular Covenanted Service, on whom any Local Government would confer the powers granted by this Bill for many years to come. At any rate, the Council has no evidence before it with respect to the other classes mentioned in the Bill. And I, for one, am not prepared to support, by speech or vote, the curtailment of privileges on which my countrymen set a high value, without clear evidence that the sacrifice is demanded on behalf of good administration and the common weal. Such evidence may be forthcoming at the proper stage, when the Bill reaches the Select Committee. But, meanwhile, I speak only of the principal class of Native public servants whom the Bill will affect, namely, those who have won their positions by open competition in England.

I beg the opponents of this measure to consider the very limited powers which the Bill conveys, and the stringent safeguards which it provides against their abuse. The Native members of the competitive Covenanted Service are a select body of men, who have won their way into public employment by exceptional exertion, and by exceptional abilities. In youth they so far overcame the inertia of the climate, and the prejudices of their race, as to set forth to a country on the other side of the globe, on the chance of securing an honourable career by open competition. Most of them had already earned distinctions at Indian Colleges and Universities. In England they had to partially re-educate themselves on a Foreign model. They had to compete in an examination framed to suit an educational system different from that on which they had been trained, and they won their appointments from among a crowd of competitors. Many of the Native Civilians thus selected are more English in thought and feeling than Englishmen themselves. After their arrival in India they have to pass through further tests, and to prove their fitness by years of faithful service, before they can receive the powers which the Bill confers. Even then, it is only if the Local Government is satisfied of the fitness of the individual officer that the powers are granted to him. And what, precisely, are these powers? The highest are those granted to Magistrates of districts and Sessions Judges, officers of about 13 to 25 years' standing. A District Magistrate can sentence a Native of India to two years' imprisonment, with fine, or, in cases of cumulative sentences, and on default of payment of the fine, to four years. This Bill would only empower him to sentence a European British subject to a term not exceeding three months. A Sessions Judge may sentence a Native of India to death or transportation for life. This Bill empowers him to sentence European British criminals to only one year. A Native criminal can appeal only to certain Courts, and only against sentences of a certain degree of severity. The European criminal by this Bill is allowed the right of appeal to either the District Court or the High Court at his own option; and he may exercise that right against a sentence of a Magistrate or Sessions Judge, however small—against a fine of one rupee, or a single day's imprisonment. The European British subject is further protected by his race privilege of the writ of *habeas corpus*, and in any case important enough to come before the Sessions Judge, by trial by jury. Nothing can be further from the truth than the statement that this Bill disregards the different degrees in which the force of public opinion acts as a check upon miscarriages of justice in Calcutta and in the rural districts. A Native Magistrate sitting in Calcutta can at present sentence European British subjects to two years' imprisonment, and to a fine, with a right of appeal only from sentences of a certain gravity. This Bill confers on the same officer, if he is promoted to be Magistrate of a district, the power of sentencing a European British subject to only three months' imprisonment, with the privilege of appeal from every sentence, however small.

I would ask the opponents of the measure whether they seriously believe that these safeguards are not ample for the purposes of justice. If they can suggest further safeguards, I feel sure that this Council will impartially listen to their proposals. I know it is hard for any class of men to part with its special privileges. The hardship is sometimes a matter of fact, and sometimes a matter of feeling. The class affected always believes that the hardship is one of fact. Whether Europeans or Natives, they plead the same argument of the thin end of the wedge, and of the total abolition of their class privileges which the change, however small, foretells. This argument was never better set forth than by the Hindús on the passing of the *Lex Loci* Act. They then expressed their belief "that the security in person, property and religion, hitherto ensured to them, thus undermined in one instance, would be eventually denied to them altogether." The forty years which have passed since these words were uttered have abundantly falsified the predictions which they conveyed. Nor have the apprehensions of the European community, on the passing of the Black Act in 1836, been more fully justified. The civil jurisdiction then granted to Native Judges seemed to our countrymen to destroy the sole securities which they possessed for their capital invested in the rural districts, and to threaten the extinction of British enterprise in Bengal. Europeans would be deterred thenceforth from settling in India, and it was vainly attempted to combat this statement by quoting Mr. Mill's evidence before the Committee of the House of Commons. The fifty years which have since passed, and the immense development of British enterprise under the protection of the rural Courts of Bengal,

now supply an unanswerable refutation of such fears. Even the abolition of the Grand Jury in the Presidency-towns in 1865 sufficed to awaken serious apprehensions. "On the abolition of Grand Juries," said the circular issued by the Landholders' Association, "there would be no protection to gentlemen from being accused of crimes of which they were entirely innocent, whenever the local Magistrate was supposed to be inclined to believe in such charges, and of being put upon their trial whenever a credulous or prejudiced Magistrate would be found." A correspondent in the *Englishman* predicted that, now that the Grand Jury was doomed, the right of calling a public meeting through the Sheriff "would be the next old institution voted effete." Another begged his countrymen to "beware of the doctrinaire dissectors. Cry out in time," he said, "and that lustily, or we may expect the fate of the eviscerated cat, whose personal objections to the operation are disregarded in the promotion of experimental science." The Public Meeting in Calcutta condemned by a formal resolution "the proposed abolition of Grand Juries in the Presidency-towns; and on the contrary was of opinion that the institution should be extended to the Courts proposed to be established in the interior of India." One speaker regarded the abolition of the Grand Juries as "the thin end of the wedge" * * * "which threatens to bring down and destroy the whole fabric of our constitution". The *Englishman* newspaper, which has so ably brought to a focus the opposition to the Bill now before the Council, quoted with approval, in 1865, Sir Eardley Wilmot's protest against "any interference with this 'bulwark of the nation.'" My Lord, there have been individual miscarriages of justice since the abolition of the Grand Jury, as there were when it still flourished. But I feel sure that the English citizens of Calcutta, old enough to remember the state of things before 1865, will agree with me that the abolition of the Grand Jury has been a boon to the English community of the city, and a source of strength to the working of the whole jury system in the Presidency-towns.

I believe that the apprehensions now expressed with regard to the present measure will, ten years hence, be found to have been equally groundless. Meanwhile, we ought not to forget that those apprehensions spring from natural feelings of alarm in the minds of an important section of the community. If we can in any way allay those apprehensions, or conciliate those feelings, I think we are bound to do so. The honour of this Council, or the honour of the Government, is not involved in any hard-and-fast resistance on points of detail. Or, rather, the honour of the Government is involved in carrying out a measure which must necessarily be painful to an important class with the utmost consideration that it can show to their feelings. But with regard to the principle involved, I think the time has come when the Indian Legislature is bound to declare itself. At such a crisis, party spirit must run high. Several months will, however, elapse before the Bill can pass into law. During the interval the Council will have time to candidly listen to every argument, and to seriously consider every suggestion. If, in the heat of the discussion, fair arguments give place to ungenerous aspersions, our duty seems equally clear. We must meets obloquy with patience, and, assured of the justice of the measure, we must wait for time to dispel the apprehensions of our countrymen at present, as time has disproved their apprehensions in the past.

The Hon'ble RÁJÁ SIVA PRASÁD said:—"My Lord, this is the grandest concession to India. I would have called it the coping stone of the liberal policy of the Liberal Government of Her Most Gracious Majesty, whose worthy representative, the liberality incarnate, my Lord, you are; but no one can say to what a height the building is destined to reach during your Excellency's incumbency. So I content myself by simply saying that the measure will be a magnificent addition to the list already long. The distinction of race in the Indian Criminal Procedure was one of the remaining mementos of the narrow policy of an honourable body of monopolist traders, though it might have suited or become a necessity at the time; but now it will be simply incongruous with advanced liberal ideas and the progress of the age. The concession is most unexpected and little asked for, and so the most valuable. I cannot conceal from your Excellency that the Indian branch of the Aryan race has been the

most intolerant towards their conquered, and had no distinction between a conquered and a slave. Up to this time the Súdras, the remnants of the conquered aborigines, who form the mass of the population, are looked down upon by the military, and the then ruling class of Kshatryas, and the sacerdotal Bráhmans, as worse than slaves. The very name Dás, a corruption of Dasyu, means a slave or thief. Prohibition to wear the sacred thread has been for the poor Súdras a lasting mark of humility and subjection. Manu says, if any Súdra takes into his head to speak Sanskrit or to teach that language, 'scalding oil' is to be poured into his mouth; nay, 'on killing a cat, a weasel, a peacock, a frog, a dog, a lizard, and an owl or a crow, a Bráhman should expiate himself by the same penance which he has to undergo for killing a Súdra'—chapter XII, stanza 132. Further, 'having slandered a Bráhman, a Kshatriya becomes liable to a fine of 8,000 *kauries* (shells) amounting to less than rupee one and a half, but a Súdra merits death'—chapter VIII, stanza 267. Let us see how the Muhammadans treated their conquered. They did not regard the Hindús even as men; hence to massacre them, to enslave their wives and daughters, to plunder their property, to demolish their temples, to deface the images, to force beef down their throats by violence, are the subjects which fill the so-called histories of the time. Even so good-natured a writer as Amír Khusro was, alludes to the Hindús in such contemptuous terms as 'raven-faced' and 'raven-like in nature' (*Zigh-rú va Zagh Manish*). The administration of the civil and criminal justice was completely in the hands of the kázís, and no Hindú could possibly aspire to be a kází. No matter whether either or both parties were Muhammadans or Hindús, the judgment was invariably pronounced according to the Muhammadan law or Shara. The same Amír Khusro relates in his Teríkhi Alai that Alá-ud-dín Khilji once sent for a kází and asked him what was written in the Code of Muhammadan law regarding the Hindús. The kází answered that the 'Hindús were' Zimmis (condemned to pay the *Jizya* tax); if asked silver, they ought to pay gold with deep respect and humility; and if the collector of taxes were to fling dirt in their faces, they should gladly open their mouths wide. God's order is to keep them in subjection, and the Prophet enjoins on the Faithful to kill, plunder and imprison them, to make them Mussulmáns or to put them to the sword, to enslave them, and confiscate their property. Abu Hanífa alone permits the levying of the Jizya, but the remaining successors of the Prophet have uniformly laid down that the Hindús ought to be made Mussulmáns, otherwise lose their heads.' The Emperor smiled, and remarked that he did not know what the Code might prescribe, but that he had issued an edict that only so much grain, milk and other articles of consumption as would suffice for a year should be left to Hindús, and that they should in no case be allowed to lay by any money. Akbar was the only Emperor who raised the Hindús and kept down the race distinction as low as he could, but that was a matter of necessity. He had seen how his father was driven out from India. He could not reckon on receiving any succour from Central Asia. His only hope for his Empire was with the Hindús, and the Hindús well supported him. Now the days have come that a Hindú is appointed by your Excellency Chief Justice, or Kázíul-Kuzáat, of the metropolis of the Indian Empire. We Hindús do not consider the British as our conquerors. We do not only acknowledge the divine right of our sovereigns, but find divinity in their person. I will never forget what the Pandits of Benares spoke to Sir William Macnaghten. I was then a boy reading in the Sanskrit College. Lord Auckland came with Sir William. His jamadár, being a Muhammadan, was stopped at the gate. Sir William asked the Pandits how it was that the English were allowed and the Muhammadans not. The Pandits quoted Bhagavat Gita that 'Rulers are divine.' Leaving aside the divinity for the present, is it not a fact that we sought the protection of the British? Jagat Seth Mahtábrai, one of the ancestors of the humble speaker, was one of those three who invited Clive to Murshidábád and helped him to establish the British supremacy in Bengal at the sacrifice of his own life. The idea of any restoration of a Kshatriyan Empire is as far from the bosom of a Hindú, as the idea of restoration of the Roman Empire in the family of Romulus, driving out all the 'barbarian' races across the Danube, is from the bosom of an Italian. Taimuri dynasty was gone; the choice lay between the bloody Muhammadans from the North-West, like Nádir Sháh, who massacred Delhi, or

Ahmad Shah Abdali, who massacred Mathura, and the freebooter Pindari Mahrattas. India threw herself under the protection of the British like a sheep running from a tiger and a wolf to her shepherd. We look to our Sovereign Kaisar-i-Hind, not only as Divine ruler, but as our own mother. We take her as our own, and I leave it to the generous Christian feelings of the British nation whether we are still to be treated as a conquered and subjugated race. The *Indian Daily News* says very sensibly that 'we shall rise above class questions and race questions, and confess, even if it be with some natural reluctance, that the change in the law which is now proposed is practically inevitable. Besides, we have to consider whether determined and narrow adhesion to exclusive privileges is not the most dangerous policy the European community could adopt. For the sake of England in India, and in order to further strengthen and cement the union between the two countries, is it not necessary that Englishmen should give the highest proof in their power of the thoroughness with which they adopt India, and take upon them the defence and advancement of her interests?' The *Statesman* takes the same just and impartial view of the question. Though there is no doubt that a very strong feeling, whether right or wrong, but almost universal, exists against the Bill in the European quarters, as a gentleman was just the other day saying, wherever he went he was asked 'Have you seen that infernal Bill.' They take it as certain that all their countrymen who have to appear before a Native Magistrate will be sent to jail, and the reason they assign for it is the 'widening,' as they are pleased to think, of the breach between the Natives and Europeans. Some say that there is neither newspaper nor High Court with astute barristers in the Mufassal; but I do not know if there is any place in India now beyond the pale of the newspaper influence, or where barristers cannot go; the wire has brought the High Court within an easy reach of everybody. As for a Native's sending a European or his wife to jail, there is no fear of that. If there is any fear, the fear is for his unjust acquittal. Mr. Duthoit, the Judicial Commissioner of Oudh, who is no mean judge of Native character, truly says: 'I do not mean that they (Natives) would be likely, as a rule, to press hardly upon Europeans; I think, on the contrary, that they would, as a rule, unduly favour the Europeans.' Woe to the Native who has a European before him to judge! His position will be most unenviable, and fool he must be if ever he takes into his head not to ask for transfer of the case to some other tribunal or not to acquit the culprit totally. So, whatever the Europeans may have to say against the Bill, they cannot show any good cause for its condemnation, except the domineering race pride, or, as Mr. W. B. Jones says, the 'unreasonable class prejudice,' which cannot brook any idea of equality; but is such a pride to be encouraged? Does it not widen the gulf which we are trying to bridge over? Will it not keep the wound fresh which we want to heal up? The Government is bound to exonerate the integrity of Her Imperial Majesty's Proclamation of 1858. It is true that the Natives will not gain much by this concession. At the same time, it is also true that not the least harm will be done to the Europeans. It may do, I am afraid, some harm to the Natives. This new power may stand, to a certain extent, as a bar in the way of their promotion to a District Magistracy or a Sessions Judgeship; nay, some alarmists see a greater harm looming at a distance; they argue in this way, that, if the Government has broken the acknowledged privilege or personal law of their own countrymen, the Britons, like a straw, how can they be expected to maintain very long our own privileges and personal laws, which, though dear to us, but often approach absurdity in the eyes of the advanced civilisation. Simply an incongruity will be removed. Our European brethren ought to have a little faith upon their European Governors, and to be sure that these Governors will never appoint any one Justice of the Peace unless they know him to be the fittest man before whom, if occasion arises, a European can stand to be judged. Hear what Sir Alfred Lyall says:—

'No European officer is appointed to be a Justice of the Peace or Magistrate of a district or Sessions Judge, until he has been found to be, by experience and character, fitted to exercise the powers and perform the duties which are attached to these offices. During the period that ordinarily elapses before any officer can attain to the position of Magistrate of a district or Judge, or is appointed to be Justice of the Peace, ample opportunities are afforded of forming an opinion as to his qualifications for the offices in question; and he is not appointed to them if he has shown himself to be unfit to perform the duties and exercise the powers belonging to them. The interests of the European British subjects and of the administration would be sufficiently provided for, if the general restriction, under which no one who is not himself an European British subject has jurisdiction over an European British subject, being removed, power be left with the Local Government to appoint Justices of the Peace those Native members of the Covenanted Civil Service who have proved their fitness to exercise the jurisdiction. The Local Government would then apply the test of personal fitness to each particular case for Native as well as for European members of the Covenanted Civil Service.'

"The worth of the argument or analogy brought forward by my hon'ble colleague, the learned Dr. Hunter, that, if so many privileges of the Natives have been destroyed, why not this privilege of the Britons also is to follow suit, I leave to your Excellency to judge. However, I do not know if the Britons also burnt their widows like the Hindús, or killed their infant daughters like them.

"Now, so far, whatever I have said, I have said as a representative of the Native community at large, and have echoed India's voice; but, if your Excellency allow me to express my own individual opinion, may I ask whether this feeling, right or wrong, is to be totally derided and set at nought? I would rather join with the Commissioner of Coorg in saying that 'the provisions of the present law on criminal procedure, which limit jurisdiction to try, for criminal offences, European British subjects to persons who are themselves European British subjects, are wise, and should, for political reasons, be maintained.' I would rather agree with the Hon'ble D. F. Carmichael in saying that 'after all, there is such a thing as *privilege;* this one is highly valued by those who possess it, and certainly does no harm to the Native population; while its surrender would, in my opinion, cause great exasperation.' I would rather coincide with the Hon'ble W. Hudleston in saying 'that the proposed extension of jurisdiction would be impolitic, and is not expedient; I am confident it would raise an outcry that would aggravate race friction far more than the removal of the already existing disability attaching to a small number of officials would allay it.' I would rather side with the Right Hon'ble the Governor of Madras, on whom, if my memory does not fail me, almost the whole brunt of all the Parliamentary debate fell when he was Under Secretary for India under His Grace the Duke of Argyll, when he says such weighty words as 'it is perhaps a pity that a question was raised just now which affects so few people.' There is much truth in Sir James Stephen's remark that 'in countries situated as most European countries are, it is no doubt desirable that there should be no personal laws; but in India it is otherwise. Personal, as opposed to territorial, laws prevail here on all sorts of subjects, and their maintenance is claimed with the utmost pertinacity by those who are subject to them. The Muhammadan has his personal law, the Hindu has his personal law. Women who, according to the custom of the country, ought not to appear in Court are excused from appearing in Court; Natives of rank and influence enjoy, in many cases, privileges which stand on precisely the same principle; and are English people to be told that, whilst it is their duty to respect all these laws scrupulously, they are to claim nothing for themselves? That whilst the English Courts are to respect, and even to enforce, a variety of laws which are thoroughly repugnant to all the strongest convictions of Englishmen, Englishmen who settle in this country are to surrender privileges to which, rightly or otherwise, they attach the highest possible importance? I can see no ground or reason for such a contention. I think there is no country in the world, and no race of men in the world, from whom a claim of absolute identity of law for persons of all races and all habits comes with so bad a grace as from the Natives of this country, filled as it is with every distinction which race, caste and religion can create, and passionately tenacious as are its inhabitants of such distinction.' I would rather allow the incongruity to remain untouched, at least for the present, as greater incongruities remain. For instance, a rich Bábú's European coachman can keep as many arms as he likes unchallenged; but the Bábú Sahib, or, if he is so fortunate as being dubbed with some title, his son and brother, have to go every year to the Magistrate's Court for the renewal of the license with his menial servants, and suffer all the indignities and annoyances inseparable from such a procedure. My

countrymen (advanced and anglicised) will call me a traitor to my country. The Native newspapers will vilify me; but if the Hon'ble the Law Member is not afraid of the British lion, wagging his tail and roaring, why am I to care for the bellowings of a few Indian sheep? However, for the present I only desire the Select Committee, when formed, to take both sides of the question into their serious consideration. It is possible that the Select Committee may add some more sugar to the pill. The Committee may think fit to strike off section 2 altogether, or go further, and, striking off clauses (*c*) and (*d*) in section 1, change 'invested with the powers of a Magistrate of the first class' for 'District Magistrates or Cantonment Magistrates or Sessions Judges or equal to them in rank as Deputy Commissioners in Non-Regulation Provinces.' I reserve my vote in favour or against the Bill till it comes to that stage. This moment my head, under the dictates of prudence, is in its favour; but my heart—a true heart of a true Native, labouring under a sense of deep obligation and sincere respect to the British nation for all the good it has done to my dear country—is against it.

"Ignorant people—I mean ignorant of facts, though otherwise well educated—may charge me with flattery; but a life's experience cannot be forgotten. How much I value the goodwill of the European British subjects; how much I appreciate their services to the country, and how far I look to them for the protection of our life and property and the advancement of our welfare, the mention of one single incident, I think, will amply suffice. It was, if my memory does not fail me, the evening of the 4th June, 1857, when the alarm gun had been fired, all the non-combatant Europeans with their families had assembled in the mint at Benares. A few European gunners were blowing up on the parade some Native regiments of infantry and cavalry for refusing to lay down arms and mutinying. The time was critical. I was with the Governor General's Agent, Mr. Henry Carr Tucker, at the Mint. The runaway mutineers, many wounded and many with arms, were passing by the gate of the Mint towards the Burna Bridge. Not more than a dozen or two of the European soldiers were protecting the gate, pointing their guns towards the road. The hope of all of us was centred in them. Benares has a population of some two hundred thousand souls, but they all were utterly useless at the moment. The shops and houses were all closed, and the streets deserted. We were not so much afraid of the mutineers for our lives as of the city ruffians. The European soldiers were daily passing up the country by bullock-train, in batches, to join General Havelock's army. These few soldiers were detained from the preceding day's batch. That day's batch had not arrived. With what anxiety we were expecting it I have no words to describe; every moment was precious. We would have offered each soldier's weight in silver had they been procurable. Mr. Tucker thought that they might have been waylaid by the mutineers and wished me to ride down to Rájghát to look after them. How happy I felt when I saw there the bullock-carts full of European soldiers just arriving, I have again no words to describe. This handful of Europeans saved Benares. Such incidents can be multiplied by scores and hundreds But I do not feel myself justified in further encroaching on your Excellency's valuable time."

The Hon'ble SIR STEUART BAYLEY said:—"The motion before the Council is not one which, under ordinary circumstances, would require any expression of opinion from me; but, owing to the course the discussion has taken, and to the direct personal appeal that has been made to me, I feel bound to express my own views on the subject. And, first, I think it is due to our colleague, Mr. Ilbert, that it should not be supposed that he is the prime mover and originator of the Bill. Those who have read the papers of the case must be aware that the Bill had its origin in a suggestion made in March last by the Government of Bengal, when Sir A. Eden was at the head of the Local Government. That suggestion was circulated in the ordinary way for the opinion of other Local Governments, and on finding that there was a general agreement among them as to the expediency of legislation, and that in this opinion the Secretary of State concurred, the duty of framing and introducing the Bill devolved, as a matter of official routine, on my hon'ble friend. I make these remarks, because much of the odium with

which he has been assailed seems to be based on the supposition that the Bill is in its main principle the outcome of his own reforming zeal, whereas, whatever be the merits or demerits of that principle, the responsibility should in justice be far more widely distributed.

"After the clear statement of the legal aspects of the case which we have heard from the member in charge of the Bill, I need not go over the same ground; but I may say that the aspect in which I have all along regarded the Bill is, that its main and important object, its substantive principle in fact, is to allow Native Civilians who may rise to be Sessions Judges or District Magistrates to exercise the powers which the law vests in District Judges and District Magistrates as such, and that they should not be disqualified from exercising those powers on the score of birth-place or nationality. The other or permissive provisions in regard to Assistant Commissioners and Magistrates of the first class I understand to be an adjunct to the main principle of the Bill, a fringe or margin as it were, and intended only to meet special cases, which the Local Government might otherwise be at a loss to provide for without serious inconvenience; and from this point of view the measure seems to me to be just and reasonable. Given the education which has enabled a Native to succeed in entering the Civil Service is not the fact of his having served with sufficient credit to be appointed to a District Magistracy or Sessions Judgeship,—a grade, be it remembered, that he cannot even temporarily reach till after an apprenticeship of some eleven or twelve years, and permanently not in less than eighteen years,—is not this as good a guarantee as can reasonably be desired of that man's fitness, honesty and practical ability? and in that phrase I include, not merely natural ability, but the assimilation, by practice and study, of the full legal and juridical ideas which guide our Courts. I think we have here all the guarantee that can reasonably be expected that the principles of our law will be properly applied, and this is all we have a right to demand. It seems to me that the exercise of these powers is the necessary corollary of the admission of Natives to the Civil Service. Practically, I hold that, when Government committed itself to the one step, it committed itself to the other; the question was only one of time, and the present Bill gives expression to that principle with as little alteration of existing arrangements, and with as careful a regard to the safety of the important interests concerned, as any Bill framed with this object could have attained. Before it can pass, however, the Bill will have to be criticised in ordinary course by the Local Governments (to whom only the preliminary principle of the Bill was referred in the first instance), and its working can be carefully examined and discussed, and the opinions of the Local Governments and their officers, as well as of others, will be fully weighed and considered before any action is taken. Now, there are two aspects from which the Bill is assailed. One is that Native gentlemen, no matter what their qualification, must be taught to remember that they are of a subject race, and, as such, unfit to try any members of the dominant race. On this argument I am unwilling to dwell. It has been developed into what our American cousins call 'spread-eagleism.' I have absolutely no sympathy with it, and the frequent recourse to such an argument is not creditable to our national character. But there is another aspect to the case of the opposition which I think deserves most attentive consideration; and this is the real danger in which the isolated European, living in the Mufassal, runs from having false cases trumped up against him. It is right that I should state publicly that this danger is a very real and very serious one; for, probably, no member of this Council has had the same experience as I have of the lives led by planters in the Mufassal. My own experience has given me a strong feeling on this matter, and anyone who knows the extreme bitterness with which disputes about land are fought out in the Mufassal, and the unscrupulous methods to which recourse is had in conducting these disputes before the Court,—methods to which a planter cannot have recourse,—will understand how precarious his position may become, and how essential to him it is that the law should be well and wisely administered. So far, then, as the argument against the Bill is based on a fear that these dangers are perceptibly increased, and that under the new Bill the law will be less well and less wisely administered than at present, I consider the objections deserve a most careful

examination. As I have already said, my own opinion is that, in respect to Native Civilians who have reached the position of District Judge or District Magistrate, we have the best possible guarantee of their qualifications, and the other provisions of the Bill do not take effect *proprio vigore*, but merely give Local Governments the power of selection in special cases. But I imagine that what has really excited the feelings of the European population in this matter is, not so much the actual extension of power contemplated in this Bill, but the apprehension that it is only a stepping-stone to a larger measure which would really do what many speakers and writers seem to think this Bill will do, namely, place all Europeans quoad jurisdiction exactly in the same position as Natives of the country. The actual scope of this Bill has been clearly explained by Mr. Ilbert, and, so far from its being a stepping-stone to a larger measure, I can certainly say for myself, and, I believe, for the Government of India at large, not only that there is no such intention, but that the proposal itself would be regarded as dangerous and uncalled-for. No, so far as we are concerned, what Mr. Ilbert said on the score of the finality of this Bill is, I know, strictly correct, and I hope that there may be no further misapprehension on this point.

"And now I have a few words to say in regard to the agitation which has sprung up in opposition to this measure. I confess that I failed to foresee either the extent or the depth of feeling which the measure has aroused among the European population; and it is only fair to add that I think the Viceroy had a clear right to expect from the Local Governments, or, in regard to Bengal, from myself, a more decided warning than he received of the spirit which the proposal would arouse. I cannot, looking at the evil effects which have ensued, and must ensue, from the agitation going on, but deeply regret that I failed to gauge accurately the feelings of the great body of my countrymen, and of even my many personal friends among the planting community. I confess I had hoped that twenty-five years had really done something to obliterate the feeling of race antagonism, of bitterness and hatred, which was familiar to us a quarter of a century ago. It seems that I was in error, and I deplore, as we all must deplore, the palpable evidence that I was mistaken. Nor am I prepared to say, in response to the challenge of my hon'ble friend Mr. Evans, that he has in any way exaggerated the depth and earnestness of the feeling which this Bill has evoked, or the probability of its continued ill effects. It is one thing, however, to oppose this measure on the ground that it threatens rights dear to Europeans, and that it jeopardises the liberty and property of the European community in the Mufassal. I believe the fear to be ill-founded, but at least the objections on this score deserve to be anxiously considered and to be treated with all respect. But when the ground is changed, and rhetorical appeals are made to race hatred; when bitterness and vituperation directed against the whole body of Native officials take the place of calm reasoning, then I say that those who employ these weapons incur a very serious responsibility. It is by the use of these weapons that the old sore is re-opened and embittered, and that the healing influences of the past quarter of a century are nullified and destroyed in an hour. I have expressed my own regret that I did not foresee that this would take place, and I look forward with still deeper regret to the continuance of a state of things which by action and re-action must continue to keep the sore open. I wish it were in any way possible for the Government directly, and at once, to close the question one way or the other; but it is not easy to see how this can be done without incurring still more serious evils; and I can only hope that, so long as the question must remain open, it will be discussed candidly and fairly, without threats and without vituperation, with as little appeal as possible to the passions of race hatred and race contempt, and with the moderation which persons who really have reason on their side generally find to be the most successful weapon in their armoury. To such arguments the Government will give full and fair consideration."

Lieutenant-General the Hon'ble T. F. WILSON said:—"My Lord, with regard to the measure which is now before this Council, I occupy a position totally different from that of every other member of your Excellency's Government, inasmuch as I have alone, from the commencement of its consideration, been compelled by my convictions to take the very unusual course of opposing those with whom I have the honour to be associated. It will be within the recollection of your Excellency that I availed myself of the first opportunity I could of recording my dissent from the views of the other members of the Government. And on a later occasion, when the matter came under the discussion of the Government, I entered at some length into an explanation of the views which I entertained, and, with your Excellency's permission, my dissent from the recommendations made to the Secretary of State was duly recorded.

"It is not necessary for my immediate purpose that I should enter upon this occasion into any detailed explanation as to why I hold the opinion I do; it will suffice for the object I have in view, that I should honestly and frankly declare that the opinion which I held more than six months ago I maintain as strongly to-day. I am opposed to the measure that has been brought forward by the Government. But whilst sympathising with those who are anxious that this measure should not become law, and thus bring about the changes which the Bill will produce,—whilst sympathising with them, still I must, in the strongest manner I can, condemn the violent language which has been used towards the Government. I desire further to condemn, in the strongest terms I can command, the malicious and scandalous personal attacks which have been made upon my hon'ble colleagues, and more especially upon your Excellency the Viceroy, in your great and high position as the representative of the Queen in India. Sympathising as I do with the opponents of the measure, and anxious as I am that the Bill should not become law, I must say that I hold in contempt many of the measures which have been resorted to in order to increase outside agitation. My Lord, there is no member of your Excellency's Government, there is not a person who is sitting round this table, who is more anxious and desirous than I am to receive outside criticism, for I think that, in these days of enlightenment and with the spread of education, the more the Government court publicity with regard to their intentions to alter the laws of the country, the better for the Government, and the better for those it governs; and when that criticism comes to us from a largely increasing population of Englishmen residing in the Presidency-towns, and others far away in remote districts of the country in pursuit of their several avocations, distinct, separate and independent of the Government,—I say, when such criticism and advice is presented to us through the medium of a temperate and discriminating Press,—it is indeed valuable, as making known to those who are entrusted with the government of the country, the wishes, the hopes, the fears, and all the general requirements of those who are committed to our charge; and it does something even more than this, for it, in some small degree, relieves those who are entrusted with high office of some of the heavy responsibilities which are inseparable from such position.

"The Government has been urged to-day, by several hon'ble members who have spoken, to withdraw this Bill. Now, I have considerable experience of the Government of India, for it has been my privilege to serve under eleven Viceroys and Governors General, and I have seen other cases, during that long period, when the Government have stood very much in the same position towards the British public of India as they stand to-day; but never have I seen such violence and unnecessary agitation as has been imported into the discussions on this measure; and I desire to say that, anxious as I am, in what I believe to be the interests of this vast country, that the proposed measure should not become law, still I am bound to add that, in my opinion, no Government ought to yield to the violence and hysterical excitement which now rages around us. In the presence of this it seems to me that there is but one course which Government can safely adopt, and that is to ascertain further the views and opinions of many more of the officials who are spread over the country. The time which this will occupy, will permit of passion cooling down, and we shall then be able to ascertain to a greater extent than we have already done the opinions of the various classes on the question now under consideration. These measures will enable those who like to change their opinions to do so, if further information should tend to that end.

"My Lord, there is another feature in connection with this great controversy which has given me, individually, great pain; because, if I am anything at all, I am a soldier in every feeling and idea; and those feelings have been wounded by the miserable and pernicious advice which I have seen tendered by some irresponsible persons to the volunteers in India. It is known to your Lordship, and it is known to my hon'ble colleagues, that, as the head of the Military Department, I take a keen interest in the volunteers in India. But, apart from the official position I hold, it would be strange, indeed, if I were not a friend of the volunteers in this country. During by far the most eventful period of my life, I was closely associated with a body of volunteers, who took a prominent part in one of the most protracted and deadly struggles which has taken place during the past century, and they materially helped to write one of the most brilliant pages in our Indian military history. For these reasons I am, indeed, pained to read of the unpatriotic course which has been recommended to the volunteers. Can any volunteer in his senses suppose that his resignation, or that of any number of his comrades, will have any influence on this Council? No. This Council will do as it has ever done. It will act fearlessly; it will ascertain all the facts of the case; it will seek further information, and it will decide as it thinks best for the interests of those who are committed to its care. But it has been said that the recommendation has been made with a view, not so much to embarrass or intimidate this Government, as to show to the House of Parliament in England the necessity of reversing hereafter any decision in favour of the measure which may be arrived at by the Indian Government. Now, if there is one thing which would rivet fast the whole thing, it would be procedure such as this. I cannot conceive anything more wild. But, my Lord, I hope that time will bring reflection, and that calmer, wiser and more patriotic counsels will prevail. I hope that the volunteers of India, mindful of those responsibilities which they have voluntarily taken upon themselves, will remain, as heretofore, faithful citizen soldiers of the Queen Empress of India.

"In conclusion, I will only say that, as regards the measure which is now under consideration, I maintain, as I have always maintained, distinct opposition to it; and, believing it to be impolitic, I hope it will not become law. To this extent I sympathise—I repeat, I sympathise—with those who hold similar views. Beyond this I cannot go, for I desire to separate myself from the unnecessary violence and agitation that has taken place outside this Council chamber."

The Hon'ble MR. GIBBS said:—"My Lord, it must be remembered that we are not now discussing or defending the principle of the Bill. That will form the subject of a future debate; but as member in charge of the Home Department, and, therefore, intimately connected with the general administration of justice in the Empire, it has been considered right for me to offer some explanation regarding the introduction of this measure, specially as it has, simple though it be, raised a perfect tempest among the European community.

"In so doing, I fear I may repeat some of the arguments used by those who have preceded me, but this I cannot help, nor do I think in such an important matter it is to be regretted.

"First, I think some explanation is required to show why the Government has remained silent up till now. The rules of this Council have been, as is well known to the members, recently amended with the object of giving greater publicity to measures. When leave for this Bill to be introduced was asked for, as the new rules were not in force, it could not be published, and, in consequence, the only way the Government could inform the public of its purport was by sending it by administrative order to the public newspapers. It has not yet been published in the *Gazette*, as my hon'ble and learned colleague's motion to-day shows; and, until this is done, no opinions of Local Governments and Administrations can be called for on it. Now, in accordance with the usual custom, such will be called for, and, when submitted, be laid before the Select Committee on the Bill. It is only, therefore, to-day that we have had the

opportunity of saying anything about the matter. The opinions already published were invited, not on the Bill, but on a proposal submitted by the Government of Bengal, and which, as usual in such cases, was forwarded to the other Local Governments and Administrations for opinion, on receipt of which, as they were nearly unanimous in favour of the Bengal proposal, concurring as they did in the opinion so clearly given by Sir Ashley Eden in submitting his proposal to the Government of India (Bengal letter 1411 T. of 30th March, 1882, paragraph 4), the Bill was drafted, and leave to introduce it applied for.

"We have been accused of not consulting the present Lieutenant-Governor of Bengal. The fact is, the measure, as it came from Sir Ashley Eden, was couched in the usual terms, and was taken as the opinion of the Government of Bengal, and, as such, was, according to custom, sent to the other Local Governments and Administrations for an expression of their views.

"The measure in itself is required for the furtherance of justice and the convenience of all parties. That sooner or later such a change would have to be made has long been foreseen, and I venture to think that the time has now come when, certainly as far as Sessions Judges and Magistrates of the district are concerned, the alteration is called for to meet the actual requirements of one part of the Empire, as well as the contemplated future requirements of other parts. I will explain how this is so. At Kárwár, in the Bombay Presidency, there is now a Sessions Judge, Mr. Tagore, who was the first successful Native candidate for the Covenanted Civil Service, of which he has now for eighteen years been a member, and for some eight or more years he has exercised, with credit to himself, the duties of District Judge and Sessions Judge.

"Then, in the Bengal Presidency, there are four gentlemen of the Covenanted Civil Service rapidly approaching their promotion to be District Magistrates or Sessions Judges, one of whom, Mr. Dutt, was gazetted in Wednesday's *Gazette* as promoted to the former grade.

"I have not obtained information as to the other divisions of the Empire, but I have, I consider, shown from the above that the time has come when a change should be made to render present and impending incumbents fitted for the full duties of their appointments; and the requirement is one of increasing importance, as year by year Native members of the Covenanted Civil Service will arrive at, or come nearer and nearer to, the appointments of Sessions Judge and District Magistrate. As regards the Natives themselves, it is a measure of simple justice, in so far that the policy which was laid down by the wisdom of Parliament a quarter of a century ago admitted Natives to the Covenanted Civil Service, and by so doing not only intended, but clearly made it manifest, that they should have therein the same powers as their European *confreres*, which they will not have unless the law is amended. Surely, then, we cannot now, in the year 1883, be said to be pushing on a new measure 'with indecent haste simply to please the Natives of the country.' The entire general question is not now before us, but it has been one of long standing, from the time of Lord Macaulay to the present. In 1872 the latest step was taken. It is called 'a compromise,' not, so far as I can learn, a compromise between Natives and Europeans, but between the members of the then Government or, perhaps, of the Select Committee on the Bill; but even this showed that some change in the present direction was then felt to be required; and I remember, with reference to this, when a Judge of Her Majesty's High Court at Bombay in 1870, I minuted in favour of such a change as is now proposed, basing my opinion mainly on the inconvenience of the law as it then stood. At that time there was no Native Civilian actually in a position to require such powers, whereas now the case is the reverse. Two officers actually require them, while others will do so very shortly; and surely any unbiased person would admit that the time has arisen for going beyond the 'compromise' of 1872.

"Let me explain more fully what I mean by the 'inconvenience' argument. Take Kárwár for example, where Mr. Tagore is Sessions Judge, in the neighbourhood of which large railway-works are about being commenced. If a European commits a crime which requires more punishment than the District

Magistrate can award, and which is three months' imprisonment and fine of Rs. 1,000, he must be committed to the Sessions Court, whose powers extend to one year's imprisonment and fine; but the Sessions Judge there could not try him, and an application would have to be made to the High Court to order his commitment elsewhere. He could thus be sent to Belgaum or Dhárwár, for example, each about 80 to 100 miles distant; this would be a troublesome journey at any time; but, for some months of the year, one generally dangerous to the health of all parties, Europeans especially. Surely this would be a matter of great inconvenience, not to say danger, expense and delay to all concerned.

"In the case of the District Magistracy, present arrangements also must cause great inconvenience. They are to some extent subversive of discipline by putting a junior officer by reason of his birth only, for one particular purpose, over the head of his superior in all other matters. No gentleman can arrive at the high position of Magistrate of the district under 10 to 12 years' service; and, considering that he would not even then be appointed to that post unless the Government thought him fitted for it (I have known European members of the Civil Service whom Government declined to place in such a position),—surely, I say, under these circumstances, the measure we propose is so far merely the natural and logical result of the policy which has been laid down for more than 25 years since Natives of India were first admitted into the Covenanted Civil Service of the State.

"From the extraordinary excitement which has been raised, a stranger would be led to suppose that the majority of the Europeans in India were constantly before the Criminal Courts in serious and intricate cases, whereas, so far as my own experience goes, there are very few cases in which Europeans come before them, and those of a simple nature—petty thefts or assaults.

"All cases in which one year's imprisonment does not suffice must now go to the High Court of the Province, and this Bill makes no alteration in this law. I fail, therefore, to find any reason why objection should be made, or why a 'European British subject' should not be tried by an officer who can now try any other European, be he French, German, Italian or otherwise, not to mention those Englishmen who are not what is technically called 'European British subjects,' or an American, who might be placed before him.

"I do not now stop to consider separately the Native members of the Civil Service appointed under 33 Victoria, for, while I have some doubts whether they constitute a separate body, they are, when once admitted into the Service at the end of their term of probation, for all administrative purposes, members of the Covenanted Civil Service of India, equally with those who are appointed from home. I will, therefore, now proceed to consider the three classes of first class Magistrates on whom it is proposed that Government should confer the powers of a Justice of the Peace when necessary. These are—

"(*a*) Members of the Covenanted Civil Service;

"(*b*) Assistant Commissioners in Non-Regulation Provinces; or

"(*c*) Cantonment Magistrates.

"The proposed measure being intended to contain the entire law regarding the trial of Europeans in the Mufassal, as regards the powers to be given to the local officers, the Bill makes no difference between Europeans and Natives, just as it makes no distinction when it confers, by the previous section, Justice of the Peace powers '*ex-officio*' on all Sessions Judges and District Magistrates. It, therefore, only differs from the present law by permitting Government to confer the powers of a Justice of the Peace on Native members of the classes I have named. As this power is only permissive, we are again thrown back on the questions of convenience and fitness to exercise the powers, and these must be left to the Local Governments to decide.

"Now, I will give an instance in point:—Take Calicut or any other large seaport on the coasts of India not being a Presidency-town. Unless Government have the power of appointing a Civilian of less standing than a Magistrate of the district to hear such cases, a captain who had a complaint to make

against any of his crew might have to go some 60 miles for justice, leaving his ship lying in the roadstead in charge of a junior officer and a weakened crew, although there might be a Native Civilian on the spot as able and as capable of dealing with European crews and captains as is Mr. Dossabhoy Framjee in Bombay. Surely this is a case of inconvenience demanding a remedy.

"As regards Assistant Commissioners in Non-Regulation Provinces, the special provision is merely intended to be used to prevent inconvenience to the parties, and will probably be seldom resorted to; while, as regards Cantonment Magistrates, they are, as a rule, European Military officers, and are merely included here to complete the law as to Justices of the Peace in the Mufassal.

"Having thus, I trust, shown that there are causes of an administrative character which call for the change in the law, I may, my Lord, express my inability, perhaps from being of a somewhat unsentimental disposition, and preferring as a rule to be guided by common sense, to understand why all this commotion should have arisen about this measure—a measure which, even if the Bill became law to-morrow, and if the Local Governments were at once to confer on every Native gentleman of the classes mentioned in it the power of a Justice of the Peace—a course not at all probable,—would add but a very small number to the list of those who could try Europeans for petty offences in the Mufassal. From a return I called for, I find the entire number in the whole of India would be about twenty, while in Bengal *alone* there would be but nine, and all these members of the Civil Service.

"Much less can I understand why your Lordship should be looked upon as the leader of 'an anomalous, unconstitutional and illegal confiscation of the chartered rights and privileges of Englishmen,' or why my hon'ble and learned colleague, on whom the wrath of the European public seems to have fallen with redoubled violence, so much so that it was even suggested that he was not a worthy representative of the *alumni* of the two great English Universities, should be the victim of so much abuse, as if he alone, under your Lordship's guidance, were the sole author of the proposal, and his colleagues, including myself, were no parties to the discussion which led to it.

"Neither can I understand why the European gentry of the City of Calcutta, who have for years been subject to the Court of a Native Magistrate who can pass on them heavier sentences than, should this Bill become law, could be passed by any Sessions Judge, much less a Magistrate, in the Mufassal, should now rise to prevent their neighbours on the opposite side of the Circular Road or other parts of the Mufassal from being placed, not on a par with them, but from being saved from some of the inconveniences and trouble and expense I have above alluded to.

"I am not sure that the great bulk of the European and Eurasian population of Bengal, who are most interested in this matter, know the meaning of the term 'European British subject.' It is a mere legal creation of the Indian Criminal Procedure Code; colour has nothing to do with it; a perfectly white person may not come within its definition, while a decidedly dark one may. It simply means that the person was either himself born in England, or that his father or grandfather, from whom he may be legitimately descended, was so born; but it goes no further. If the family has been settled for four generations in India, although father, grandfather and great-grandfather may have married European ladies, the representative of the fourth generation ceases to be a 'European British subject' within the meaning of the Procedure Code and is amenable to all Criminal Courts presided over by Natives or Europeans, as the case may be, exactly as any one of his Native fellow-subjects, or any European of another nationality.

"And this, my Lord, brings me to the consideration of the articles in the Press, and the letters and speeches with which the daily newspapers have teemed during the last month or so. No one respects more than I do the right of any person or class of persons to bring forward their grievances and demand redress, and, therefore, I have read carefully this varied literature, to see what reasons it

contained to lead me to the conclusion that the proposed measure was uncalled-for or could only be injurious ; but, my Lord, though I found in those letters and speeches and articles warm eloquence, much invective, more assertions, and some insinuations, I could find no reason to show that the view I took from the first as to the advisability of this step was wrong. I venture to think that, while all must admit the meeting of the 28th to have been an extraordinary expression of strong feeling, it was, like the articles and letters in the Press, confined to feeling only; and when a cause appears supported mainly by invective instead of calm and dignified reasoning, its importance diminishes and its significance fades.

"But we are bound, my Lord, to respect the feelings of all the races under our Government, though we are equally bound to analyse those feelings and to judge calmly and dispassionately of them, and to bear in mind that the other races may also have feelings to be equally consulted and respected; and this we shall do most carefully when the reports and objections, which will doubtless be sent in during the next six months, come to be considered by the Governor General in Council.

"My learned colleague has explained the legal effects of the proposed measure, and I have endeavoured to show that, while it is the logical outcome of the policy of the last quarter of a century, there are also causes of an administrative nature requiring its introduction ; and there I would leave it, merely adding that although the Magna Charta has been freely alluded to, and the right which is supposed to belong to every British subject, of being tried by his peers, made the most of, I know not how the former can affect the matter, or where the latter right will be found granted to Europeans in India. In Calcutta it has long ceased, if it ever existed, and those very gentlemen who spoke so energetically about it have never possessed it; so that I think the issue must be, as it ought to be, confined to the simple one of whether the measure is required for the due administration of justice or not ? And on this I have already shewn my reasons for holding that it is an alteration of the law which the circumstances of the time have rendered justifiable."

His Excellency THE COMMANDER-IN-CHIEF said :—"My Lord, I ask permission to say a few words on this occasion, because I have been challenged to give my free and unrestrained opinion on the policy of the Government, and because unworthy attempts have been made to intimidate me from doing my duty in regard to the matter before us.

"At the outset I beg to say that, in dealing with the question of the proposed amendment of the Criminal Procedure Code, I confined myself entirely to the practical bearings of the case. The sorrows of Native officials, the symmetry of the law and philosophic theories have no special attraction for me, for I do not believe that the world can be ruled by logic alone. What I had to consider was this. Did the Government service require any change, and, if so, to what extent was change needed?

"I will say frankly that I should have been very glad if matters could have been left as they are. I have been long enough in India to have a very vivid recollection of the storm created by the so-called Black Act, and, having this before my mind, I proceeded to examine the question.

"Well, having been satisfied by the representations of the Home Department that it was necessary to remove some of the disabilities of the Native Members of the Civil Service, who must sooner or later be appointed to the charge of districts or to be Sessions Judges, I made up my mind to support the proposals of the Government so far as they were applicable to these two offices, and to these only.

"My reasons for going so far are these :—

"Though the principle involved is, no doubt, a large one and of considerable importance, yet it must be patent to anyone who cares to look into the matter that its practical application must for a considerable time be small.

I looked upon the change as a very tentative measure, which in its operation could be carefully watched, and which would, in a legitimate way, give us an opportunity of testing the merits and qualifications of this class of Civil Servants.

"If, unfortunately, it should turn out that officers of this class could not be trusted with extended powers, the Government of the day would be obliged to reconsider the whole position, and perhaps retrace their steps. It is obvious that a Native Magistrate or Judge who exercised his functions in a tyrannical or unjust manner would not hold his office very long. Again, the proposed change seemed to me to be in the nature of what is called a permissive Bill. The Supreme Government gives power to certain classes of its officers, but it cannot appoint these officers. It is only Local Governments that have the power of appointment, and we may rely on their not appointing to such offices any but men of the highest character and qualification; for the stronger sympathies of the Governors will naturally lie on the side of their own countrymen.

"In point of fact, I looked on the amendment of the law as a very safe experiment, and an experiment that might well be tried when its provisions would only apply to one or two individuals. I knew there would be opposition to any change, but I believed that, when my countrymen understood the case in all its bearings, they would see that it was a safe way of introducing a change which the bitterest of its opponents admit to be a question of time.

"That my expectations and forecast have been utterly wrong I freely admit, but I am not prepared to admit that the objections which have been put forward by those who oppose our proceedings are founded either on reason or common sense.

"I have hitherto attempted to restrict my observation to my own personal connexion with the measure under discussion, but there is one other point on which I have something to say. Very wicked and criminal attempts have, as you know, been made in some of the newspapers to excite animosity against the Government in the army. My Lord, I cannot trust myself to speak on proceedings of this nature. I am aware that the army may, and perhaps does, take a keen interest in a question that is engrossing the thoughts of the public; but I feel confident that the army knows its duty, and that it is thoroughly loyal to its Sovereign and to its salt.

"Soldiers have their feelings like other people—feelings that we all respect; but they also know that, if they have a grievance to redress, there is a legitimate way of putting it forward through their officers and those placed in authority over them. But what are we to say of persons who make use of such tactics in support of their arguments? They must, indeed, be in a bad way when they resort to such a course.

"It is possible that the reference to Cantonment Magistrates in the Bill may have misled people into the belief that the Government proposes to appoint Native Civilians to such offices. This would be an entire misapprehension.

"The following extract from a note which I received two days ago from the Secretary in the Legislative Department explains more clearly than I can why reference has been made to this class of officials in the Bill.

'With regard to Cantonment Magistrates, they were put in because they would not ordinarily be Covenanted Civilians, Native Civilians or Assistant Commissioners, and it was thought necessary that power should be given to appoint a Cantonment Magistrate, who would be almost certain to have to deal with European British subjects, a Justice of the Peace. Military officers who are Cantonment Magistrates can, under the present law (Act X of 1882, section 22), be appointed Justices of the Peace if they are, as I suppose they always are, European British subjects.'

"It will, then, be seen that the Government does not intend to make any real change in the system under which Cantonment Magistrates are usually military officers.

"If the reference to Cantonment Magistrates had not been made in the amendment, the effect would have been that any person, even a person who was

not an European British subject, might have been made a Cantonment Magistrate, and it was to avoid this difficulty that the point was raised in this form."

His Honour THE LIEUTENANT-GOVERNOR said:—My Lord, I must apologise to the Council for being obliged to trouble them with a few remarks at this late hour, but the desire which I share with the other members of Council to hear the address of your Excellency compels me to be very brief. I feel, however, that I could scarcely remain silent, even if I wished to do so, after the several appeals which have been made in the course of the debate to the Government of Bengal, and after recent events which have testified in so prominent a manner the strong expression of public opinion in this City and the Province. At the same time, I confess, I feel I am in a position not altogether satisfactory regarding this proposed legislation; and if I had not received so late as yesterday evening from your Excellency an assurance that the motion now before the Council was of a purely formal character which pledged no one to the principle of the Bill, but, what is of more importance to me, that it is the intention of the Government of India to refer the Bill as drafted for the renewed consideration of Local Governments, I would not have hesitated to take this opportunity to state at length, and with such ability as I possess, the conviction which I entertain that this measure is unnecessary in the present condition and constitution of the Native Judicial Covenanted Service in Bengal, and that it is inopportune, having regard to the many claims which demand the most cordial relations between the Government and the European community in India. In saying that, I am not in an altogether satisfactory position, I allude to the fact to which reference has been made, that I have had no opportunity personally of consulting the officers of Government or recording my own views upon this change in the law; though at the same time I am aware that the Government of India had received from Sir Ashley Eden a communication which favoured the view of withdrawing restrictions which now exist against Native Judges and Magistrates in the matter of the trial of European British subjects. Any defects or omissions in that respect will now be removed or remedied; and, as I shall have the opportunity of referring to the experienced officers of Government for their opinion, I think it the wiser and more appropriate course, and a course in which I am justified by the temper and excitement around us, if I reserve my own judgment till I have received those opinions. Whatever value may attach to my own views of the question—and those views I will say have not been formed or expressed only recently—they may be modified, or they may be removed, or they may be strengthened by the result of the inquiry. But whatever the result may be, they shall be communicated to your Excellency's Government with the utmost unreserve. Ample and exhaustive as was the speech of my hon'ble and learned friend Mr. Evans, with a great deal of which I sympathise, there are a great many facts which I could bring forward to support his contention that there is no administrative difficulty in connexion with the matter, and I should have been inclined to challenge more strongly than he did the competency of the Native to try European British subjects. But this is not the occasion on which I shall press those views. It is right, however, that, before I conclude my remarks, I should say a few words as regards the attitude of resentment which has characterised the public meetings and public utterances in connexion with this Bill. No man could deprecate more strongly and earnestly than myself the wild, extravagant and very dangerous sentiments to which the excitement round about us has given occasion. And I am sure no Englishman, Scotchman, or even Irishman, in his lucid moments, will think that the cause he advocates will be advanced or promoted by the threats levelled at the Government by certain writers and comments in the Press. If the Bill is not to be withdrawn—and this suggestion has come from a good many quarters—I sincerely trust the suspension of the measure for some months will induce a calmer judgment. No Government can deal with legislation, or with the withdrawal of legislation, in the presence of a popular phrenzy. Still I shall be wanting in my duty if I failed

to press on the Government that I hope that, in their absence from personal contact with the public feeling, they will not allow themselves to think that the calm which I hope will supervene is an indication of apathy or indifference. If it be the opinion of the Government of India that this is a case of temporary excitement, which will soon die out, I am sure they are mistaken; for I feel that, in the whole of my experience in India, this is unmistakeably the strongest and most united and unanimous expression of opinion of public discontent that I have ever known, and that the last state will be worse than the first. I could wish for myself that the Bill could be withdrawn, and I do so, not only for myself, but as expressing the opinion of a great many who have spoken to me on the subject, even though they support the principle of the Bill. I believe that such difficulties happen to all Governments, and that the oldest and most English course is the wisest and safest. It is in the knowledge of all of us that such a course has been adopted in many cases, in our home Parliamentary experience, and it has not unseldom been the case also in India; and, if I may venture to allude to the fact, I think your Lordship's reputation in this country as a Viceroy, who has endeavoured earnestly and honestly to promote the political and educational development of the people, will not be affected if you see your way to withdraw the Bill."

His Excellency THE PRESIDENT said:—"I am very sorry that I should feel it my duty to detain the members of this Council yet a while after the lengthened and able discussion to which we have listened for so many hours; but I feel bound to make some statement, before this discussion closes, of the grounds upon which the Government have proceeded in introducing this Bill, and to explain the reasons which led them to think that it was a right and a reasonable measure. The observations which I wish to make now will be, as far as possible, of a strictly practical character. I do not intend or desire to enter into needless controversy, for I wish to reserve to myself the freedom carefully to weigh and consider the arguments which have been adduced in the course of this debate on both sides of the question at issue. It has been to me a source of regret that I have not had an opportunity before to-day of explaining the course which the Government has pursued; but that I have not had an earlier opportunity of doing so has not been my fault. It was the intention of the Government to have taken a discussion upon this Bill upon the 23rd of February. We never had the least intention of hurrying this measure through the Council, or of proceeding with it further than the stage which I described when it was brought in as the second reading stage during the present Calcutta season; but we did propose, and it was necesary that we should propose, as the rules stood when this Bill was brought in, that it should have been referred to a Select Committee before we left here, with a view to its being afterwards circulated and published as the rules required. But when my honourable friend Mr. Evans and Mr. Miller became acquainted with the intention of the Government to take a further stage of this Bill on the 23rd of February, they represented that they were somewhat taken by surprise by that proposal. Not that I understood them to make any complaint of want of good faith on the part of the Government; but they urged that they did not expect any such discussion to come on on that date. In consequence of those representations, I had an interview with my hon'ble and learned friend Mr. Evans, on the 19th of February, and I then said to him that I was anxious that this discussion should take place, because I felt that it was only fair to the Government that they should have an early opportunity of explaining at greater length than had been explained by my hon'ble and learned friend Mr. Ilbert, when he brought in this Bill, the objects of this measure, and the reasons which had induced them to submit it to this Council. I said to my hon'ble and learned friend, Mr. Evans—'You may perhaps object to a discussion in the nature of a second reading, but it is possible for us, under the present rules, to take a formal discussion upon a reference of this Bill to Local Governments; that would afford a sufficient opportunity for the statement that I propose to make, and would not involve a discussion upon the principle of the Bill.' My hon'ble and learned friend took time to consider whether he could agree to that proposal or whether he must

adhere to the objection previously urged on his own behalf and on that of Mr. Miller to the discussion on the date proposed, and on the next day he informed me that he could not waive that objection. I then had to choose between putting my hon'ble and learned friend and Mr. Miller at some disadvantage, and putting myself and the Government at some disadvantage. I chose the latter alternative. It has been one of the many accusations made against the Government, that they delayed a farther explanation on this subject: those who have used that argument will now have an opportunity of judging of the justice of their charge. I may as well also say, as my hon'ble and learned friend is here, and will bear me out, that, when I saw him on the 19th of February, I explained to him that the Government had no intention of passing the Bill during the present session; to that my hon'ble and learned friend assented. I was, therefore, somewhat surprised when I saw next day a statement in Reuter's telegram, that something had been said in the House of Commons, which appeared to imply that this measure was going to be pressed forward now; and I immediately explained to the Secretary of State that that statement was not correct. It was founded on an entire misapprehension of the intentions of the Government. It would have been totally inconsistent with the declared policy of the present Government of India, if they had thought of unduly pressing forward this measure, and of not affording the fullest opportunity to the public and those interested in the matter to consider it. My hon'ble friend Mr. Miller touched upon that point, and he seemed, I thought, somewhat to complain that the public had not been consulted in this case in the manner in which we professed to consult them in respect to our legislative measures. Now, that charge —if it was meant as a charge—is founded on a mistake. The Government never professed that they would submit their Bills to the public before being brought in. No Government ever did or could do such a thing. All that we said was that when our measures were brought in and published, the public should have the fullest opportunity of considering them; and that we ourselves desired to consider any representations which might be made to us upon any proposals for legislation which we might so submit. To that course we have strictly adhered in this case, and have acted in perfect and absolute accordance with all our professions in respect to giving the public full time to consider our legislative proposals.

"I thought it necessary to make these observations, in order to clear away some misapprehensions and misrepresentations which have surrounded this matter for some time.

"And now I will proceed to state very briefly the history of this transaction. Something was said upon the occasion of the introduction of this Bill by Sir Jotíndra Mohan Tagore about an undertaking which had been given him last year to the effect that this subject would be considered by the Government of India. What took place on that occasion was this. When the Criminal Procedure Code was before the Council last year, one of my hon'ble colleagues,—I cannot exactly remember which,—who was a member of the Select Committee on that Bill, came to me and said that Mahárájá Jotíndra Mohan Tagore had told the Select Committee that he intended to raise the question of the powers of Native Magistrates to exercise jurisdiction over European British subjects. That was at a time when the Bill had nearly reached its last stage, and my hon'ble colleague said, with perfect justice, that it would be entirely impossible to take up a question of such magnitude upon that stage of the Bill; and he said to me—'I think, if you were to speak to the Mahárájá and tell him that, if he did not bring this matter forward now, the question would be considered by the Government, he probably would not press his notice of amendment.' I replied 'I will consult my colleagues'; and I did consult the members of the Executive Government at that time, and it was with their full consent that I told Mahárájá Jotíndra Mohan Tagore that the subject in which he was interested should receive the full consideration of the Government. Of course, by so saying, I gave no pledge whatever to the Mahárájá as to what would be the decision at which the Government would ultimately arrive. All that I did say was—and that promise I and my colleagues intended to keep—that we would consider this question after the new Criminal Procedure Code had passed. But, before we had taken any steps whatever to fulfil that pledge, we received from

Sir Ashley Eden a letter which is contained in these papers, and that letter winds up as the summary of the opinion of Sir Ashley Eden with these words:—

'For these reasons Sir Ashley Eden is of opinion that the time has now arrived when all Native members of the Covenanted Civil Service should be relieved of such restrictions of their powers as are imposed on them by Chapter XXXIII of the new Code of Criminal Procedure, or when at least Native Covenanted Civilians who have attained the position of District Magistrate or Sessions Judge should have entrusted to them full powers over all classes, whether European or Native, within their jurisdictions.'

"That opinion was expressed to us by the Lieutenant-Governor of Bengal; it was a clear and distinct opinion. There is not one word in Mr. Cockerell's letter from which I have quoted which indicated any probability that a proposal of that kind would be received, I will not say with resentment, but even with disapproval by any portion of the community. Now, it is not necessary that I should recall to the recollection of this Council who was the person who made that recommendation. You all know that Sir Ashley Eden had been for five years Lieutenant-Governor of Bengal; you all know that he was a man of large experience, and that he was intimately acquainted with the feelings of the European population; and certainly there was ample proof that he had their respect and confidence in the remarkable ovations which he received just before he left the country. Sir Ashley Eden did not accompany that letter by any other communications upon the subject, and, therefore, I had no doubt whatever that it contained his deliberate opinion and advice to the Government of India. My hon'ble and learned friend Mr. Evans says that Sir Ashley Eden only wanted to put his opinion on record; and he did not at all mean that anything should be done about it now. He only desired to say what he should like to see done at some future opportunity. But, in the first place, he says distinctly, in the summing-up of his letter,—'the time has now arrived for the change,' and, in the next place, it must be borne in mind that, if Sir Ashley Eden did not mean that the question should be taken up at an early date upon his proposal, he had a perfect opportunity of saying so; because, by a singular coincidence, marking the high respect entertained for that distinguished man by Her Majesty's Government, he went straight from the Government of Bengal to the Council of the Secretary of State at home; he was a member of that Council when our proposals were submitted to and sanctioned by the Secretary of State; and, therefore, if we had misinterpreted his views as my hon'ble and learned friend appears to think, or, if we had acted hastily on his opinion, he would undoubtedly have said so; and I cannot for a moment think that my noble friend Lord Hartington would not have communicated the fact to me: he did not do so. I should like to say one other word about Sir Ashley Eden. In the earlier stages of this controversy, before a large number of persons took to using strong language, they used language of a milder kind, and they talked about this Bill as an ideal and sentimental measure. Now, I must say that, if ever I came across a man in my life who was not remarkable for the sentimental side to his character, that man was Sir Ashley Eden. I do not think that I ever knew a man less likely to be led away by vague sentiment or mere theory than Sir Ashley Eden. Then, what did Government do? If they had been so very keen to carry out this proposal; if they had been so very ready to proceed rashly in this matter, they would have had a very fair ground for acting at once, in the mere fact that a man so experienced as Sir Ashley Eden had recommended them to take that action. But they did nothing of the kind; they consulted the Local Governments on the subject, and the opinions of those Local Governments are before this Council. I have heard it said that those Local Governments felt themselves bound to give opinions which they thought would be agreeable to the Government of India. Well, really, it is needless on behalf of the Local Governments that we consulted—of men so eminent as those who fill the office of heads of those Governments—for me to reply to a charge of that description. The question was very carefully considered by those Governments, and their opinions are, with the single exception of the Local Government of Coorg, in favour of amending the present law. It is quite true that the Government of Madras were divided among themselves, and that the opinion given in favour of the Bill was only decided

by the casting vote of the Governor of that Presidency. It is also true that another gentleman, Mr. Howell, has given an opinion which, if not absolutely clear, must on the whole be regarded as unfavourable to this proposal, but he reported as Commissioner of the Birárs to the Resident at Haidarábád, who advocated the principle of this Bill; and, therefore, I am strictly correct in saying that all Local Governments, with the exception of Coorg, were in favour of an alteration of the law. My hon'ble and learned friend Mr. Evans said that the only Local Government that is really concerned with this question at all is the Government of Bengal. But it was the Government of Bengal which started the question. I do not observe, however, that the European community in other parts of India appear inclined to admit that they have nothing to do with this subject; and I venture to think that all Local Governments have an interest in this matter, and are entitled to speak upon it. Can it be supposed that those distinguished men—many of them personal friends of my own—who are at the head of Local Governments; if they had anticipated—I will not say danger, but—serious inconvenience, would not have advised me privately that this was a measure that ought not to be pressed forward? There are, doubtless, in these papers differences of opinion between different Local Governments, as to the extent to which this measure should go, just as there have been differences among members of the Executive Council on the same subject. My hon'ble and gallant friend the Commander-in-Chief says that, though he supports the measure, he would confine it to District Magistrates and Sessions Judges. Sir Charles Aitchison, on the other hand, went further than any other head of a Local Government; and the measure as produced and brought forward by the Government of India is one which has struck a mean between these different proposals and which, on the one hand, does not go so far as Sir Charles Aitchison recommended, and, on the other, goes somewhat further than the recommendations of some other Local Governments. Indeed, as a matter of fact, the measure was drawn up mainly in accordance with the amendments of the Code suggested in Sir Alfred Lyall's letter. Now, what was the next step taken with regard to this question? The next step taken was that the Government of India sent a despatch to the Secretary of State, Lord Hartington, last September, containing their proposals and forwarding the papers now before the Council. Lord Hartington must have received that letter late in September. It was upon the 7th of December that, in an answer to that letter, he stated that he had very carefully considered our proposals in Council, and that he gave them his sanction. My hon'ble and learned friend Mr. Evans alluded to the fact that this circular to Local Governments was not sent to the Government of Bengal. The course taken on the occasion was in accordance with the practice generally pursued; and it is a perfectly reasonable and intelligible practice, followed by all the departments of the Government of India, that, when one Local Government originates a proposal on which the Government desires to consult other Local Governments, the original proposal is sent round to those Governments, but not sent back to the Government from which it, in the first instance, emanated. The Bill was prepared and drafted in strict accordance with the proposals sanctioned by the Secretary of State. Leave was given to introduce it on the 2nd of February. It was brought in on the 9th of February; and the papers, containing the opinions of Local Governments, were circulated to members of Council and given to the public at the earliest possible opportunity. I believe I am right in saying that they were circulated to members of Council on the 12th February.

"That is the history of this transaction up to the introduction of the Bill. And I turn now to consider what was the state of things in respect to the position of Natives of India in the Civil Service of the Crown, with which we had to deal. I am dealing now solely with the case of the Covenanted Civil Servants. I leave aside the question of the non-regulation Provinces, which is not material to the present argument. I say nothing of Cantonment Magistrates, because my hon'ble and gallant friend the Commander-in-Chief has explained that Cantonment Magistrates are almost invariably military officers, and that no Native gentlemen are likely to be appointed to positions of that kind. The question, therefore, we have to consider here relates to the Native members of the

Covenanted Civil Service, because it must be borne in mind that, although, in departmental practice, it has been the custom to describe the members of the Covenanted Civil Service admitted under Lord Lytton's rules as members serving under the statutory rules, they are under those rules themselves—rules approved by the Secretary of State, Lord Cranbrook, and laid before Parliament—admitted to employment in Her Majesty's Covenanted Civil Service. These are the words of the rule as sanctioned by the Secretary of State and by Parliament; and, therefore, the persons with whom we have to deal are the members of the Covenanted Civil Service. Our proposal, I would just point out, is a very much narrower one than that which was made in the year 1857, and to which Mr. Evans alluded. In that year there were no Native members of the Covenanted Civil Service. The proposal of 1857 would have subjected European British subjects to the jurisdiction of all the Mufassal Courts of every grade. The present Bill does not go nearly so far. Well, what is the state of things with which we have to deal now? I have said that in 1857 there were no Native members of the Civil Service at all. They have come in since;—first, by competition, having gone home and competed on equal terms with Englishmen, Irishmen and Scotchmen, and won their way in that competition into the Civil Service; and recently under the new system inaugurated in the time of Lord Lytton. The time has now arrived when some of these gentlemen have risen to high judicial positions. Mr. Tagore is one, and I have been informed that Mr. Dutt has also been raised to a similar office. Therefore, they are now beginning to reach these positions, and the number of those who fill such appointments must gradually and steadily increase. Mr. Miller asks in what have the times changed since 1872? They have changed in this respect, that some of these Native gentlemen have acquired these important positions, and others will go on rising to them in increasing numbers in coming years. But the great change which has taken place in regard to this question from an administrative point of view has been that which was made by Lord Lytton's Government in 1879. That change was made by the express order of the Government at home: indeed, after the reiterated orders of successive Secretaries of State. I am not about to express any opinion as to the mode in which these gentlemen are now admitted into the Covenanted Civil Service under the rules of 1879. It may be that these rules can be improved. Nothing is more probable than that experience may show that they are capable of amendment. But what we have to consider is, what is the position in which these rules place the gentlemen admitted under them? and what will be the effect of them as time goes on? These gentlemen will rise in the Covenanted Service year by year, and they will be entitled to hold higher and higher offices as they advance, until ultimately they will attain to the highest judicial offices below the High Court. Now, it has been contended that the Local Governments, when they spoke of Covenanted Civilians, only meant those who had got in by competition. I have no reason to suppose that that is the case with any of the opinions which have been expressed, because the words 'Covenanted Civil Service' cover all the members of that Service. The Hon'ble Mr. Evans quoted Mr. Elliott, the Chief Commissioner of Assam, and he said that Mr. Elliott only proposed that these powers should be conferred upon persons who had got into the Covenanted Service by competition. Mr. Elliott no doubt drew a distinction between the two classes; but he said that he would extend the powers to the second class when they became District Magistrates or Sessions Judges. Now, it seems clear to me that, as these gentlemen in the Civil Service rise to the higher appointments, especially to the appointments of District Magistrates and Sessions Judges, increasing administrative inconvenience must ensue unless these additional powers are conferred on them. If they are to hold these offices, it appears to me that inconvenience of a serious kind must arise as time goes on; indeed, I shall have to show that it has arisen already. The Hon'ble Mr. Evans has said that what we ought to do is to give the best justice we can to everyone in the country without giving rise to administrative inconvenience. I entirely concur in that opinion, and I say administrative inconvenience has already begun to be felt, and it will increase. That being the state of things with which we had to deal, some of these gentlemen being already in high administrative positions, and a still

larger number coming on from below, we felt it our duty to see in what way we could best remove this administrative inconvenience, and, I must also say, the injustice to suitors which would be caused by dragging them long distances over the country.

"I turn to consider what is the scope of the Bill. I have shown you that the extent of our Bill is very much less than that of the Bill of 1857. It is very much less than that of the Bill brought in by Lord Dalhousie's Government in 1849. We have confined it to the strict necessities of the case, and the result of it would be that, if it were passed to-day, it would at once confer jurisdiction over European British subjects upon only two persons in India; and the number who would rise to that position during the next few years might not exceed four or five. That statement supplies, as it seems to me, the strongest argument against the proposal of the Government. It is said, why do this now when it will only affect Mr. Tagore and Mr. Dutt? Why do this now, when, if there is administrative inconvenience, it is only in one or two places? and I admit that I am bound to meet that objection, and to explain why the Governmnet think that this is a convenient opportunity for making the change.

"But, before I do so, I must point out that, of course, that argument cuts both ways. If the scope of the Bill is so very small, then it seems not altogether reasonable that it should have been encountered by such violent opposition. In stating the reasons why it appears to me to be desirable to make this change now, rather than to postpone it until the appointment of a much larger number of these gentlemen to high judicial positions, I desire to deal with this question strictly from a practical point of view. I am not going upon this occasion to enter into any examination whatever of any claims which these Native gentlemen may have to exercise this jurisdiction; but, at the same time, I cannot but ask members of this Council to consider whether—I do not speak now of justice or generosity—it is politic, if there be not an overwhelming necessity, for us to impose on these gentlemen restrictions which sensitive men would naturally feel? These men, it must be admitted, are the pick and cream of our Native Civil Service; those who are now in this position, or are about to enter into it, have won their way through a keen competition at home, and secured their position through their own ability. Under Lord Lytton's system, by which, for the future, at least one-sixth of the whole Covenanted Service will in course of time consist of Natives, we shall have to rely more and more, year by year, on the devotion and loyalty of these gentlemen. I think the question of policy is not undeserving of the consideration of this Council; but I pass from it to the practical question. My hon'ble friend Mr. Gibbs has shown you to-night that the idea that administrative inconvenience may arise is not an imagination or a theory; he has pointed out to you what are the circumstances in regard to Mr. Tagore, the Sessions Judge of Kárwár; and he has explained that, if certain railway works which, he says, are likely to commence there are opened, they will bring European British subjects in considerable numbers into that district. If these persons are not tried by the Sessions Judge, they will either have to be sent by sea to Bombay, or have to march 80 or a 100 miles through a district which at many times of the year is very injurious to health. This constitutes a real administrative inconvenience, and it implies, not only an inconvenience to the administration of justice, but also a considerable hardship to the suitors and witnesses concerned. And it is surely clear that, though there is not at the present moment an irresistible necessity for introducing this measure, as Lord Lytton's system developes an irresistible necessity will arise. When you have one-sixth of the Civil Service composed of Natives, it will be impossible to maintain the present restriction. Therefore, what we had to consider was—is it better to wait until this necessity becomes overwhelming and irresistible, or is it better to introduce the system now? I confess it appears to me that it is far wiser, and far more in the true and substantial interests of those over whom this jurisdiction is exercised, that it should be introduced now, when the persons who would obtain the powers are very limited in number; when the circumstances under which they enter the Civil Service insure their ability and character; and when all their proceedings can be carefully watched. Being few in number, it will be easier now than afterwards for

the attention of the Local Governments and the public to be directed to their proceedings; and, being the men they are, it seems to me that they would be likely to set a good example and give a good tone to those who come after them. I hold it, therefore, to be wiser to introduce the measure now gradually, cautiously and tentatively, than to wait till the change is forced upon us by necessity, and the powers which are now to be given only to a few men have to be given suddenly to a very much larger number of Native Civil Servants. This is the ground upon which I thought that the time had come when this change could best be made. The truth is, that the opposition to this Bill is in reality, not so much an opposition to this particular measure, as an opposition to the declared policy of Parliament about the admission of Natives to the Covenanted Civil Service. That policy has been a deliberate policy; it commenced many years ago, and has been enforced steadily from time to time. It is not a policy of my invention or of the invention of the present Government at home or here; it is the policy of Parliament. What does Lord Cranbrook say upon that subject, writing to Lord Lytton's Government on the 7th of November, 1878? He says—

'The broad policy was laid down by Parliament so long ago as 1833, that no Native shall, by reason of his religion, place of birth or colour, be disabled from holding any office; and Her Majesty's gracious proclamation in 1858 announced her will that, as far as may be, 'our subjects of whatever race or creed be impartially admitted to offices in our service, the duties of which they may be qualified by their education, ability and integrity duly to discharge'.'

"And he goes on to say—

'Since that period several of my predecessors in office, and especially Lord Halifax, Sir Stafford Northcote, the Duke of Argyll and Lord Salisbury, have pressed upon the attention of the Government of India that the policy of Parliament, enforced as it was by the Royal proclamation, was not to remain a dead-letter, and two Acts of Parliament were passed to give further effect to it. But, as your Excellency justly observes, all endeavours hitherto to deal with this question on a satisfactory basis have proved unsuccessful. It is gratifying to observe that your Lordship's elaborate treatment of the subject will enable a practical course to be taken, that will prove, it may be hoped, both beneficial to the State and satisfactory to the natural aspirations of the educated Natives of India.'

"That is said, not by me, but by Lord Cranbrook; and I cannot doubt that, if that policy is now applied under the rules laid down by Lord Lytton's Government in 1879, and is carried out as he proposed, an alteration of the law in the direction in which this Bill goes is inevitable at no distant time. The Government of India have not the power, if they had the inclination, which certainly I have not, to withdraw from that policy; and Lord Cranbrook very distinctly tells us that, in his judgment, Parliament will not withdraw from it. Lord Lytton's original proposal was that, when he established a separate Native Service, permission to Natives to compete for the Civil Service in England should be withdrawn. What Lord Cranbrook says on that subject is this—

'But your proposal of a close Native Service, with a limited class of high appointments attached to it, and your suggestions that the Covenanted Civil Service should no longer be open to Natives, involve an application to Parliament which would have no prospect of success, and which I certainly would not undertake. Your Lordship has yourself observed that no scheme could have a chance of sanction which included legislation for the purpose of repealing the clause in the Act of 1833 above quoted; and the obstacles which would be presented against any attempt to exclude Natives from public competition for the Civil Service would be little less formidable.'

"Therefore, it appears to me to be evident that the intention of Parliament has been to admit Natives more and more largely into the Covenanted Service; that steps were taken in 1879, after a considerable delay and frequent injunctions from the Secretary of State, to carry out that intention more fully; and that the result has been, as I have stated, that we have now to deal with a state of things in which, before many years have elapsed, it will be, as I have said, simply impossible, on account of administrative inconvenience, to withhold powers of this description from the higher ranks of the Covenanted Native Service. The Hon'ble Mr. Evans has said that he could not admit the force of the argument that because Presidency Magistrates had power to try Europeans, therefore, similar powers should be given to Native Magistrates in the Mufassal. I admit

a considerable portion of the argument of my hon'ble friend, but he must allow me to say that the fact that Natives of India have been trying Europeans for a considerable number of years in Calcutta and Bombay is a conclusive argument against the theory that Englishmen have a constitutional right to be tried by Englishmen only. No one is more convinced than I am of the advantage of having a case argued before a Magistrate by trained lawyers; and I would not for a moment think of underrating its importance. Nevertheless, I was rather struck with what I saw in a Bombay newspaper this morning. It certainly did seem rather curious, after all that has been said on this subject, to find that certain European gentlemen, composing what is called the Salvation Army, are being tried at this moment in Bombay by Mr. Dossabhoy Framjee. Their religious feelings are very intimately involved in the case which is being tried by that Native Magistrate. I did not intend to have said anything about the past history of this question, because, as I have mentioned before, my main object has been to explain the reasons which have induced the Government to bring in this Bill. But Mr. Evans has spoken with personal knowledge of what was called the compromise of 1872. On that point I would say this. There may have been a compromise between the members of the European community and the members of the Select Committee. Of that I know nothing, although I have not the least doubt that the Hon'ble Mr. Evans has stated exactly what occurred; but it is perfectly obvious that that compromise cannot have been a compromise with the Government; because, if it had been, then Lord Napier of Merchistoun, Lord Napier of Magdala, Sir Richard Temple, Sir George Campbell and Mr. Barrow Ellis could never for a moment have given their support to an amendment inconsistent with it. My hon'ble friend Mr. Ilbert, in the speech with which he commenced this discussion, pointed out that all the safeguards now possessed by Europeans, and all the special privileges now enjoyed by them, were left standing by this Bill, except the single one of being exempted from the jurisdiction of Magistrates who are not European British subjects. This Bill does not touch the rest of these safeguards; and the Government has not the least intention of submitting any proposals now or hereafter, certainly not as long as I am here, with the view of interfering with those privileges. But there is another matter which I look upon as in some respects a more important safeguard, and that is the power of supervision exercised by the High Court over all the Courts below. What would be the result if a Native Magistrate trying an European acted towards him in an unjust manner? If the case came before the High Court, or if they even heard of it, they would be able to call for the proceedings, and the consequence would be to deprive that gentleman of the position which he might have so abused. That is the history of this measure, and of the grounds upon which it was introduced, and of the extent to which it goes. I know very well that a great deal has been said, as is always said when changes are introduced, about this being the thin end of the wedge. I can only say that, so far as this question is concerned, it is not the thin end of the wedge, and that this measure represents the final views of the present Government in respect to changes regarding this portion of the Criminal Procedure Code. Passing from the history of the course we have taken and the motives which have actuated us, I may now state that we are perfectly ready to listen to reasonable remonstrances, to statements of fact and to legitimate arguments. But neither this nor any other Government that will ever exist in India will, I hope, listen to violence, to exaggeration, to misrepresentation and, least of all, to menace. It is perfectly natural that those whose interests are affected by this Bill, that those who would lose under it a privilege to which they evidently attach a great value, should bring their views on the subject before the Government, and should press them earnestly upon their attention. I should be the last man to complain of that being done, and I should be the last man not to give to such representations the fullest and most careful consideration; and those who are animated by the dread, which has been expressed in many quarters, of the results of this measure, may rely upon it that a fair representation of their opinions, supported by good arguments, will be listened to with the greatest attention. It is, of course, true that in this, as in every other, question with which the Government of India has to deal, it is obliged to take a wider view than that confined exclusively to the interest of any single class of the community; but it is also

true that any special class of the community, which is specially affected by any particular measure, has a right to bring its views before the Government, and to expect that those views will be fully and carefully examined. I will not allude on this occasion to the character of a great deal of the opposition which has sprung up to this Bill, or to the means by which that opposition has been to a great extent conducted; I will say nothing of the charges which have been made against myself, or of the systematic misrepresentation of my feelings and objects in regard to this and other measures. I pass that by; but I can truly say that it is a source of deep regret to me and all my colleagues to observe the difference which has in this matter sprung up between the Government and, I admit, a very large portion of the European community, especially on this side of India. I do not know whether anything that I can say will tend to mitigate the bitterness of the controversy or to induce calmness; but if the vehemence of feeling is due in any degree to a misapprehension as to the scope of the Bill or the course which the Government intended to pursue in regard to it, or to a fear that we have ulterior designs which we never have entertained, then it is possible that this discussion may have done good. It is only right that it should be remembered that the Government never had the smallest idea of hurrying this Bill through the Council. They proposed to deal with it deliberately, and to afford the amplest opportunity for the representation of opinion in regard to it. It will be observed that it was before any such representations had reached the Government, and, therefore, before it had been in their power to consider them, that the proceedings which have been adverted to were adopted. This Bill will now, in accordance with the usual practice, be sent to the various Local Governments, and they will have an opportunity of recording their views upon it. These views will be sent up in due course, after careful examination by the Local Governments into all the circumstances of the case, for the consideration of the Government of India; and we shall then give to the observations of the Local Governments and of the public which may have reached us in the meantime, the fullest weight and the most deliberate consideration. I frankly say that with those who desire, if any such there be, to retain the distinction which this Bill proposes to remove, merely because it is a race distinction, I have no sympathy whatever. To arguments which are inconsistent with the declared policy of the Crown and of Parliament it would be contrary to my duty to listen; but to fair reasons, urged in a manner to which the Government can give heed, the ears of myself and my colleagues will always be open on this and every other question. I observe that the opponents of this Bill speak of appealing to the House of Commons. I am the last man in the world to object to such a course being taken. To the decision of the House of Commons both parties to this controversy must bow. I do not think I have anything more to add now by way of explanation of the views of the Government. I have kept myself clear of controversy, because I wish to hold myself perfectly open to consider the arguments adduced on both sides in this debate. If I had thrown myself into this controversy, it might fairly be objected that I had not reserved to myself real freedom to consider those arguments. I have shown that this measure was recommended to the Government by Sir Ashley Eden, the Lieutenant-Governor of Bengal; that its principle has been approved by all the other Local Governments in India, with the exception of that of Coorg; and that it has been very carefully considered by the late Secretary of State for India, Lord Hartington, in Council and sanctioned by him. I have recalled to the recollection of the Council the circumstances in which we stand at this moment, and those in which we shall stand in no distant future, with respect to the position of the Native members of the Covenanted Civil Service. I have pointed out how very limited the immediate effect of the Bill will be, and have stated the reasons which induce me to think that it is wiser to make the proposed change now, when it can be brought into operation gradually and cautiously, than to wait until administrative necessities and justice to suitors compel the Government to introduce it suddenly and extensively. Lastly, I have expressed the perfect readiness of the Government to consider and to weigh any remonstrances which may be made against this Bill, provided they are supported by arguments which

are consistent with the policy of Parliament. The Government do not propose to take any further steps in this matter now, and ample time will thus be afforded for the deliberate examination by Local Governments, by the Government of India and by the Government at home of any representations which may be made to them in connection with this measure."

The Motion was put and agreed to.

SUCCESSION CERTIFICATE BILL.

Major the Hon'ble E. BARING asked for leave to postpone the motion for leave to introduce a Bill to amend the law relating to certificates granted under Act XXVII of 1860 (*An Act for facilitating the collection of debts on successions, and for the security of parties paying debts to the representatives of deceased persons*).

Leave was granted.

Major the Hon'ble E. BARING also asked for leave to postpone the introduction of the Bill, and the motion that the Bill and Statement of Objects and Reasons be published in the *Gazette of India* and in the local official Gazettes in English and in such other languages as the Local Governments might think fit.

Leave was granted.

The Council adjourned to Monday, the 12th March, 1883.

R. J. CROSTHWAITE,
Additional Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 9th March, 1883.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Monday, the 12th March, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.SI.., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble Kristodás Pál, Rai Bahádur, C.I.E.
The Hon'ble Mahárájá Luchmessur Singh, Bahádur, of Darbhangá.
The Hon'ble J. W. Quinton.

BENGAL TENANCY BILL.

The Hon'ble SIR STEUART BAYLEY moved that the Bill to amend and consolidate certain enactments relating to the Law of Landlord and Tenant within the territories under the administration of the Lieutenant-Governor of Bengal be referred to a Select Committee consisting of His Honour the Lieutenant-Governor, Major the Hon'ble E. Baring, the Hon'ble Messrs. Ilbert, Reynolds and Evans, the Hon'ble Kristodás Pál, the Hon'ble the Mahárájá of Darbhangá, the Hon'ble Mr. Quinton and the Mover.

He said that the Council were aware of the circumstances under which his hon'ble colleague, Mr. Ilbert, had introduced the Bill on the 2nd of March, and he (SIR STEUART BAYLEY) could only congratulate the Council and himself that his enforced absence from here had transferred to Mr. Ilbert's hands the duty which he had so admirably performed. After the clear and elaborate statement which Mr. Ilbert had made on the 2nd March, as to the necessity for legislating, and on the principles of the Bill, SIR STEUART BAYLEY did not at present propose to say anything more on the subject, but he would reserve to himself the right to answer the objections which may be made in the course of the debate, which objections, he had no doubt, would be numerous. But he had just one word to say pertinent to the motion before the Council. He was at liberty to say that it was the intention of His Excellency the Viceroy to appoint to this Council a representative of the planting interests in Bihár, Mr. Gibbon, and on his being gazetted, and if he agreed, and if the Council agreed, he would be appointed to the Select Committee, and that hereafter, when vacancies occurred in the Council, as would be the case next year, it would probably be expedient to strengthen the Committee by the appointment of

additional members who might fill those vacancies. Although the Bill will now be referred to a Select Committee, the Committee would not meet till next November, but during the Simla session criticisms would be received from the Bengal Government, and from the associations and individuals concerned; and those criticisms, when received, would from time to time be circulated to the members of the Committee for their consideration, and he hoped that, when the Council re-assembled in Calcutta, they should, by this means, clear a good deal of ground, and enable the Council to set to work at once.

His Highness the MAHÁRÁJÁ OF DARBHANGÁ then said:—"My Lord, it is not without considerable diffidence that I submit my views on the Bill which affects all classes of people.

"It is now more than six years that it was proposed by Sir Richard Temple to change the present law of landlord and tenant, and as the Government has already made up its mind to change the law, it would be useless for me to say that this Bill ought not to be introduced. But I might safely say that, as far as Bihár is concerned, no change in the present law is needed: neither the raiyats nor the zamíndárs have asked for a change, and that in itself is sufficient proof that no change is needed. The zamíndárs certainly do not wish to get any further facilities for the collection of their rents, and the tenants also do not complain of any oppression by the zamíndárs.

"A great deal has been said about the oppression of zamíndárs in Bihár, and I doubt not that in Bihár there are a few bad zamíndárs as well as a few bad raiyats. But it is most unjust to think that all the Bihár zamíndárs, as a class, are oppressive. That there was a great deal of oppression in former days I do not deny, but Mr. Reynolds, after his last tour, was able to say that things have quite changed of late.

"Illegal distraint used in former days to be common, but that is now almost a thing of the past. The zamíndárs now have sufficient knowledge of law to know that by illegal distraint they render themselves liable to criminal prosecutions, and the raiyats also know how to protect themselves, and they are not now at all likely to let a zamíndár distrain their crops illegally. Besides, though the former system of distraint was certainly illegal, it was not necessarily oppressive. The Government itself, as the guardian of two of the largest proprietors in Bihár, was obliged to have recourse to this illegal system of distraint up to 1876. In the Darbhangá Ráj, when under the Court of Wards, it used to be considered the proper thing to distrain the raiyats' crops without serving them with formal notices. It was in 1876, however, that steps were taken to introduce a system of legal distraint, and I am happy to say that the system of illegal distraint has now entirely disappeared throughout Bihár, and this is simply owing to the good example set by Sir Richard Temple and my hon'ble friend Sir Steuart Bayley. It would therefore be unjust now to call the zamíndárs of Bihár oppressive, and I hope I may be excused for having gone out of the way to say a few words in justification of the zamíndárs of Bihár, who have already been more than sufficiently abused in the report of the Rent Commission for carrying on a system of distraint which, though illegal, was not oppressive, and which the Government itself was carrying out until lately.

"I will now say a few words on the subject of occupancy tenures in Bihár. The zamíndárs, as a body, are not averse to the cultivators acquiring this right. It gives the raiyats a permanent interest in their lands, and they are, therefore, more likely to increase the value of their lands. But the Bill does not create this right in favour of the actual cultivators. On the other hand, it distinctly says that the sub-lessees, who after all are the actual cultivators of the soil, are not to acquire rights of occupancy. The actual cultivator is not to acquire the right unless he happens to pay in his rent direct to the zamíndár, and he is to be perfectly at the mercy of his middleman. This seems to me to be perfectly anomalous, and it would be a better proposal that a raiyat who is not an actual cultivator should not be allowed to acquire right of occupancy. Unless some such provision is made, we are bound to create a set of occupancy

tenants, who are not the actual cultivators, but middlemen, and these middlemen would be in a far better position to oppress the cultivator than the much abused zamíndárs. The zamíndárs have to deal with those raiyats whose names are registered in the village papers, but these middlemen will have to deal with people who have in most cases no documentary evidence to prove that they are the actual cultivators. Then there is another provision of the Bill which concerns the zamíndár more directly—I mean the provision which debars the raiyats from contracting against their rights of occupancy. Such contracts are but seldom made. A zamíndár might especially wish to have a piece of land all to himself, though it might not necessarily be his *zarat* or *khámár* land. I might be a jungle or a preserve, and supposing he was to lease out a part or the whole of this plot, on condition that at some future time it is to be given back to him, is he to be prevented from the use of his land for ever? Then, again, zamíndárs very often plant treés on their lands, and lease out the ground to raiyats to grow crops for a certain number of years, and, in most cases, at very low rates, on the condition of regaining possession of the lands when the trees grow up, and the raiyats gladly take such lands on short leases. Are these raiyats supposed to acquire rights of occupancy? Then, again, why provide for a right of occupancy against any contract to the contrary? Such a provision does away with the freedom of parties to contract. Parties understand their own interest better, and it is idle for the legislature to affect to protect their interests. To secure some personal benefit, a raiyat may very well give up his rights under the law, but if the provisions of the Bill are passed into law they would not be able to secure such advantanges for themselves.

"I am glad to see that the Bill proposes to do away with the law which entitled the tenants to acquire rights of occupancy only when they could prove that they were in the possession of an identical piece of land. There would be little harm done to the zamíndárs if, where raiyats occupy different lands in different years, the right of occupancy is allowed to spring up in respect of a particular quantity of land held for a certain number of years. But the Bill goes on further, and provides that if a raiyat occupies a very small quantity of land, and in respect of that quantity acquires a right of occupancy, such right would attach to all land which he may hold within the estate for however short a period. This is certainly unfair.

"About the proposed facilities for the collection of rents, I must confess that the position of the zamíndárs would be much worse if the proposed changes are carried out. The Rent Commission had proposed to abolish the system of distraint altogether. The new Bill has effected a compromise in this respect between the suggestion of the Rent Commission and the existing law; but I am confident that the proposed mode of distraint through the Civil Court, and the deposit of the proceeds for a month, would frustrate the very object of distraint, which is only had recourse to as a mode of speedy realization of rents. The present mode of distraint is the best and most speedy way of collecting rents. The proposed law, however, in a way abolishes distraint altogether. It burdens the zamíndár with the cost of an application to the Civil Court on stamp-paper, as well as with the expenses of paying lawyers; whereas now he has practically no expenses to incur. Illegal distraints are no doubt objectionable, but, as I have already said, it is only a very short time ago that the Government even used to resort to this illegal system in managing the Court of Wards' estates. This shows clearly that though illegal the distraint never operated as a hardship. It would, therefore, be most undesirable to change the present law, especially as the raiyats and zamíndárs have begun to know the law, and there has been absolutely no complaint by the raiyats that this instrument is used by the zamíndárs illegally, or as a means of oppression. It has been said that the law of distraint is an off-shoot of the English law. It may be so. But then how is it that you find in Nipál, which has had less to do with Foreigners than any other State in India, that distraint has been carried on for certainly more than a hundred years?

"Now I come to the most important point of the Bill—I mean the question about the enhancement of rents. The Bill proposes fixing tables of rates for

each pargana. This may have been quite possible before the time of the Permanent Settlement, but I doubt if it is possible to do anything of the sort now. It is hardly possible to find two fields in the same village of exactly the same quality of land, and parties will never cease to question the correctness of classification of lands. I know of a pargana where the rate for some of the villages is two rupees, whereas the rate for similar lands in another village is only two annas. Instead, therefore, of deputing officers to draw up tables of rates, would it not be better that the law should fix a certain proportion of the average produce as the zamíndár's rent.

"Now as to the question of transfer of occupancy holdings. The zamíndárs ought to be thankful for getting the right of pre-emption. But it is not always that the zamíndár is in a position to buy occupancy holdings, and in such cases would it not be advisable to give a *khúdkásht* raiyat the right of pre-emption in preference to an outsider, and immediately after the zamíndár? This might in some cases prevent an out-sider coming in who has got no common interest with the villagers, and who does not necessarily care for the good-will of the village community.

"Here I might also mention the fact that though the zamíndárs have been allowed the right of pre-emption, still they are not allowed to buy on the same conditions as raiyats. A raiyat who buys an occupancy holding, and who does not wish to cultivate himself, can lease it to one who cannot acquire rights of occupancy; but if the zamíndár leases out any such holding the cultivator at once acquires rights of occupancy.

"About the survey of *khámár* lands I have to make only a few observations. Such surveys would cost a great deal of money, which the raíyáts or the zamíndárs might eventually have to pay, and even then I do not see what good the raiyats or the zamíndárs are ever likely to get. No doubt it would be a first-rate thing to have proper records-of-rights, but it would be impossible to have proper records-of-rights by having a mere survey of a village.

"These are some of the observations which a cursory reading of the Bill suggests, but this is not the time to enter into all its details.

"In conclusion I beg leave to make the following observations:—The Bill was originally intended to give relief to the zamíndárs as well as to the raíyáts. Sir Richard Temple and Lord Lytton thought that the zamíndárs should get further facilities for the collection and realization of rents, but the proposed Bill does not give the zamíndárs any facilities for the realization of rents. Now as to concessions to the raiyats I have very little to say. It is the zamíndárs' interest to make any fair concessions to their raiyats. All that a zamíndár needs is a law which secures him his rents and provides him with modes for speedy realization of the same, but I am obliged to say that if the procedure as laid down in the Bill is to become law, the zamíndár's position is sure to be much worse than what it is now, and I can safely state, before concluding, that Bihár zamíndárs are quite satisfied with the existing law, and do not wish for the change contemplated."

The Hon'ble KRISTODÁS PÁL said:—"I wish to begin with a personal explanation, for which I crave your Lordship's indulgence. It may be supposed that, as I have the honour to sit in this Council under your Lordship's orders, with the suffrage of the landholders, it is my duty to look to the interests of the landholders alone. But such is not the case. I cannot divest myself of my natural sympathy with the millions who till the soil and constitute the backbone of the nation. Indeed, I would not be true to myself, to my cherished convictions, and to my humble labours for the promotion of my country's welfare, if I were to shut my eyes to the interests of one party for the sake of the other. All that I want is justice and fair play to both. No good landlord, I submit, my Lord, is blind to the interests and happiness of his tenantry. In fact, rightly understood, the interests of the two are interwoven with those of each other. A prosperous and contented tenantry is a blessing to the landlord and to the country at large. In considering the vitally important question

before us, happily we have not to deal with a *tabulá rasa*, and are not left to our own unaided judgment. Both the landlord and tenant in Bengal have their charter of rights, and if we rightly interpret that charter we cannot go far wrong. This charter is none other than the Permanent Settlement Regulations. I consider it my duty to call the attention of your Lordship and the hon'ble Council to the main points of that charter, and to invite your unbiassed decision upon those points.

"Before I proceed to discuss the Bill, I desire to offer my hearty acknowledgment of the ability, industry and thorough mastery with which the learned Law Member has grappled with this intricate and complicated subject. The Bill is, doubtless, the work of many hands, but he has accomplished his task in a few weeks which might baffle the efforts of many an expert in as many years. But I hope he will pardon me if I say I cannot accept all his conclusions and endorse all the views and opinions he has expressed on the subject. My Lord, the papers on the Bill have been before us for nine days, and I am free to confess that, consistently with my other avocations, I have not been able to give it that close attention which I ought to have given. I am, therefore, likely to make statements and remarks from an imperfect study of the Bill, for which I hope I will be excused. In submitting the Bill to the Council, the hon'ble and learned Law Member reviewed the whole question from the days of the Permanent Settlement, and in following his example I am afraid I shall also have to traverse a wide area. I may be tedious in my statements and observations, but I hope the Council will bear with me kindly.

"I think we ought to consider, in the first place, who are the zamíndárs who come within the scope of the Bill; what was their position originally; what functions did they perform in the administrative and social economy of the country, and how far were they useful to society and to the State? To ascertain the position of the zamíndárs, it is not necessary for me to go back to the ancient history of India—I mean to the days of Hindú supremacy. It is enough for us to know that when the Muhammadans took over this country, they fully recognised the position, the status and rights of the proprietors of the soil. It is true that the revenue demand was variable, but the rights and status of the zamíndárs were not at all interfered with. Before, however, I proceed to point out the position of the zamíndárs at the date of the Permanent Settlement, I will quote here the opinion of an eye-witness of the settlement as to the state of the country when the Permanent Settlement was effected, and the eminent service which that settlement rendered to the national Exchequer. I will read to the hon'ble Council the opinion of Mr. James Pattle, one of the best fiscal officers of the East India Company, who before his retirement held the hon'ble office of member of the Board of Revenue. Mr. Pattle writes:—

'The country brought under the Decennial Settlement was for the most part wholly uncultivated. Indeed, such was the state of the country from the prevalence of jungle infested by wild beasts, that, to go with any tolerable degree of safety from Calcutta to any of the adjacent districts, a traveller was obliged to have at each stage four drums and as many torches; besides, at this conjuncture, public credit was at the lowest ebb, and the Government was threatened with hostilities from various powerful Native States. Lord Cornwallis's great and comprehensive mind saw that the only resource within his reach in this critical emergency was to establish public credit and redeem the extensive jungles of the country. These important objects, he perceived, could only be effected by giving to the country a perpetual land assessment made on the gross rental with reference to existing productiveness, and, therefore, promising to all thos who would engage the encouragement of an immense profit from extending cultivation. Admitting the sacrifice was very great, I think it cannot be regretted when it is considered what difficulties it conquered, and what prosperity it has introduced. For my part, I am convinced that our continuance in the country depended on the adoption of that measure, and that our stability could not otherwise have been maintained. This was my opinion at that time, and it has remained unaltered.'

"This is the opinion of an eye-witness of the Permanent Settlement as to the state of the country when that settlement was effected, and also when it was in operation for some time. And it was his deliberate opinion that the Permanent Settlement enabled the Government of the day to keep the British power in the country. It may be said—and it is sometimes said—that the Per

manent Settlement was financially a mistake, but in those days it saved the public treasury. The Company's treasury was on the verge of insolvency; their territories were threatened by powerful enemies; on one side an adventurous European rival was plotting, and on the other mighty Native Chiefs were arrayed against the Company; it was then a question of the continuance of English supremacy in the East; on the other hand the land-revenue, on account of varying assessment, could not be regularly collected. It was at this juncture the Permanent Settlement was made.

"Ninety years have elapsed since this settlement was concluded. Within that period we have seen what changes, what commercial and material changes, have taken place, and how the jungle which then covered the land has been removed and cultivation has been introduced; what financial prosperity has since succeeded the insolvency to which Mr. Pattle referred, and how active has been the national industry. I will not say that these results have been achieved wholly through the agency of the Permanent Settlement, but I do not hesitate to say that it has contributed greatly to the consummation of the changes which we now contemplate with so much satisfaction. It is well known that one of the charges brought against the Bengal land system is that it has involved the Government in an unnecessary sacrifice of prospective revenue. But, my Lord, if an examination of the development of the finances of these Provinces were made, it would be seen that in no other Province has the public revenue progressed so satisfactorily as in Bengal, and that whatever sacrifice was made by the Permanent Settlement of the public demand in Bengal has been more than made up by the enormous indirect increase of the revenue from many sources. This was particularly pointed out in the Duke of Argyll's despatch on the Road Cess.

"I now come to the position of the zamíndárs before or at the time of the Permanent Settlement. The name of Mr. Francis is well known in history as one of the colleagues of Warren Hastings in the administration of India. When he was in this country, the question of the land settlement occupied the attention of the Government, and enquiries were set on foot as to the position of the persons who were then known by the name of zamíndárs. Mr. Francis in a Minute, dated 22nd January, 1876, or rather in a note to that Minute, wrote:—

'The inheritable quality of the lands is alone sufficient to prove that they are the property of the zamíndárs, taluqdárs and others, to whom they have descended by a long course of inheritance. The right of the Sovereign is founded on conquest, by which he succeeds only to the state of the conquered Prince; unless, in the first instance, he resolves to appropriate or transfer all private property, by an act of power, in virtue of his conquest. So barbarous an idea is equally inconsistent with the manners and policy of the British nation. When the Moguls conquered Bengal, there is no mention, in any historical account, that they dispossessed the zamíndárs of this land, though it is frequently observed that where they voluntarily came in and submitted to the new Government, they were received with marks of honour, and that means were used to gain and secure their attachment.'

"These were the men whom the British Government, on the first acquisition of this country, found in possession of the land. Mr. Francis admits that the Muhammadan Government always recognized their position and rights, and in fact did all they could to gain and secure their attachment. I do not know whether many members of this Council have read that curious book called, I believe, the 'Four great zamíndárs of Bengal', by Mr. Rouse. It is now out of print, but it is a very interesting and useful book. It contains good deal of information about the Permanent Settlement, about the status of landlords in those days, and gives a very interesting history of the four great families of zamíndárs in Bengal, namely, Burdwan, Dinájpur, Nattore, and Kishnagur. It also gives some account of some minor zamíndárs. I allude to this book only to show that in the days of the Permanent Settlement there were men in possession of large properties or estates, and that they were considered absolute proprietors of the soil. Now, in what light were these zamíndárs regarded by the authors of the Permanent Settlement? Were they regarded as proprietors

of the soil or not? Here is the opinion of Sir John Shore, afterwards Lord Teignmouth:—

'I consider the zamíndárs as the proprietors of the soil, to the property of which they succeed by the right of inheritance, according to the laws of their own religion; and that the sovereign authority cannot justly exercise the power of depriving them of the succession, nor of altering it when there are any legal heirs. The privilege of disposing of the land by sale or mortgage is derived from this fundamental right, and was exercised by the zamíndárs before we acquired the Díwání.'

"I will give an extract from the Minute of Lord Cornwallis, dated the 18th September, 1789. He says:—

'Mr. Shore has most ably, and, in my opinion, most successfully, in his Minute, delivered in June last, argued in favour of the rights of zamíndárs to the property of the soil. But, if the value of permanency is to be withdrawn from the settlement now in agitation, of what avail will the power of his arguments be to the zamíndárs for whose rights he has contended?'

"Again, His Lordship writes:—

'Although, however, I am not only of opinion that the zamíndárs have the best right, but from being persuaded that nothing could be so ruinous to the public interest, as that the land should be retained the property of Government, I am also convinced that, failing the claim of right of the zamíndárs, it would be necessary for the public good to grant a right of property in the soil to them, or to persons of other descriptions. I think it unnecessary to enter into any discussion of the grounds upon which their right appears to be founded.'

"So that Lord Cornwallis was deliberately of opinion that the zamíndárs were the proprietors of the soil, and that, even if their rights were questioned, still, as a matter of policy, proprietary rights should be conferred upon them. The zamíndárs before the Permanent Settlement were not only proprietors of the soil, but they actually exercised powers which legitimately belonged to the State or Sovereign; they levied duties on internal commerce, a power which, as far as I am aware, no private landlord is allowed to exercise in any civilised country. But in those days, as I have observed, the zamíndárs actually exercised that sovereign power. Lord Cornwallis justly held, on grounds of public policy, that such power should be withdrawn from the zamíndárs, and in his Minute, dated 3rd February, 1789, he wrote:—

'I admit the proprietary rights of the zamíndárs, and that they have hitherto held the collection of the internal duties; but this privilege appears to me so incompatible with the general prosperity of the country, that, however, it may be sanctioned by long usage, I am convinced there are few who will not think us justified in resuming it.'

"And so this power was resumed—I do not say unjustly; I admit that it was very properly resumed. But I mention it to show that the zamíndárs not only exercised the powers of landlord, but even, to some extent, the sovereign power. Lord Cornwallis, as the hon'ble Council is aware, fixed the revenue demand at ten-elevenths of the gross rental, and, by way of compensation to the zamíndárs, surrendered the waste-lands to them. The Government has always recognised the right of the zamíndárs to the waste-lands, and the assurance given to them in the days of the Permanent Settlement was repeated in the subsequent Regulations. Thus, I find the following in the preamble to Regulation II of 1819:—

'It appears to be necessary, in order to obviate all misapprehension on the part of the public officers and individuals, * * * formally to renounce all claim on the part of Government to additional revenue from lands which were included within the limits of estates for which a Permanent Settlement has been concluded, at the period when such settlement was so concluded, whether on the plea of error or fraud or on any pretext whatever."

"Section 31 of the same Regulation states that—

'Nothing in the present Regulations shall be considered to affect the right of the proprietors of estates for which a Permanent Settlement has been concluded, to the full benefit of all waste-lands included within the ascertained boundaries of such estates, respectively, at the period of the Decennial Settlement, and which have since been or may hereafter be, reduced to cultivation.'

"I will not allude here to the assumption sometimes made that the waste-lands should be treated in the same way as lands settled at the time of the

settlement. It should be remembered that these waste-lands were howling wildernesses at the time, and that it was left entirely to the discretion of the zamíndárs to settle them in any way they might think proper. To that question I will not advert at present. I have said that the waste-lands were given to the zamíndárs by way of compensation for the exorbitant assessment of the Permanent Settlement. The Council was doubtless well aware that the assessment was so heavy that most of the first zamíndárs, with whom the settlement was made, were literally swept away under its effects. The great house of Nattore, which, I believe, used to pay 52 lákhs of rupees of revenue, was broken up completely under the crushing effects of the heavy assessment of the Permanent Settlement. The house of Dinájpur suffered similarly, and so did the house of Bírbhum and many other families. The Burdwan house was also tottering, and was only saved by the introduction of the patní system. I cannot do better than read to the hon'ble Council the remarks which no less an authority than Sir George Campbell has made on this subject in the Bengal Administration Report for 1872-73. He says:—

'The Government demand was then one which left a margin of profit, but small compared with that given to zamíndárs in modern days. There was wide-spread default in the payment of the Government dues, and extensive consequent sales of estates or parts of estates for recovery of arrears under the unbending system introduced in 1793. In 1796-97, lands bearing a total revenue of sikká Rs. 14,18,756 were sold for arrears of revenue, and, in 1797-98, the revenue of land so sold amounted to sikká Rs. 22,74,076. By the end of the century the greater portions of the estates of the Nadiyá, Rajsháhí, Bishanpur, and Dinájpur Rájás had been alienated. The Burdwan estate was seriously crippled, and the Bírbhúm zamíndárí was completely ruined. A host of smaller zamíndárs shared the same fate. In fact it is scarcely too much to say that within the ten years that immediately followed the Permanent Settlement a complete revolution took place in the constitution and ownership of the estates which formed the subject of that settlement.'

"Now, what do these startling statements show? The Permanent Settlement, as I have shown from a quotation from Mr. Pattle, was intended to benefit the landlords as well as the State. The State derived immediate benefit by the replenishment of the treasury. The landholders, however, at the time suffered extremely. In fact, as this statement shows, most of the original zamíndárs were swept off the face of the earth by the tremendous sacrifices they were called upon to make at the time the Permanent Settlement was established. Most of the present zamíndárs have come in by investing their capital, and they have done so in perfect reliance upon the good faith of the Government.

"I have shown that the waste-lands were made over to the zamíndárs by way of compensation. Now, how were the waste-lands brought into cultivation? My object is to show what functions the zamíndárs have performed in the social economy of the country. The zamíndárs in the first place invited tenants, because in those days it was the land which sought the tenant and not the tenant who sought the land. They established villages at their own expense, and they appointed the village smith, the village barber, the village priest and other members of the village establishment, by giving them rent-free lands. They made takkáví advances to the raiyat for the cultivation of the land; they charged no rent whatever in the first instance, and subsequently levied a progressive rent as cultivation advanced, and in this way they reclaimed the jungle which covered the greater part of Bengal in the days of the Permanent Settlement. You may now go to any part of the country, and you will be struck by the smiling fields and the teeming populations which meet your eye in every direction. But, in 1793, you could hardly go a few miles from Calcutta without drums and torches to keep away wild beasts. Those who brought about these changes certainly deserved the thanks of the public.

"Now, what have the zamíndárs done in other respects? Have they been content only with the introduction of cultivation and the reclamation of waste-lands? No. As population has increased, as cultivation has extended, as civilisation has advanced, the zamíndárs have risen to the requirements of the time, and have also assisted in the execution of public works, in accordance

with the spirit of progressive time. Go through the villages and you will generally find in most of them large tanks. I am sorry to say that tanks now-a-days are not dug with the same zeal as heretofore. But you will find many old tanks dug by the zamíndárs, and there was a double motive in the execution of this work. In the first place, water was necessary for cultivation in times of drought, and, secondly, it was necessary for drinking purposes. The zamíndár wanted to foster the settlement of raiyats, and, therefore, he opened these tanks; he had also partly a religious motive in providing drinking water for the people. As this hon'ble Council knows well, among the Hindús religion supplies a strong impulse for many of their acts, and the digging of tanks was one of these. Then, as the country advanced in prosperity, there was necessity for roads, and the zamíndárs were not remiss in making them. They, in co-operation with their tenants, laid out large sums of money in making roads through different parts of the country. I will give you the example of one district only—the district of Huglí. The list which I hold in my hand does not comprise all the roads made in the district within the last few years, but it gives a good account of what has been done. These roads were made at the time of the Ferry Fund Committees which existed before the Road Cess Committee was constituted. The following is a list of the roads and bridges referred to:—

Names of the Roads and Bridges.	Lengths.	By whom constructed.
Bhastara to Tribany	16 miles	Zamíndár of Bhastara.
Jonye to the Surussutty	8 do.	Ditto of Jonye.
Jonye to Connaghur	7 do.	Ditto ditto.
Biddabatty to Gobindpore . . .	7 do.	Singoor zamíndárs.
Biddabatty to Huripal	25 do.	Zamíndárs and F. F. Committee.
Chinsurra to Dhoneakhally . . .	25 do.	Ditto ditto.
Huglí to Dwarbasiny	12 do.	Ditto ditto.
Pandua to Calna	18 do.	Ditto ditto.
Howrah to Jugutbullubpore . . .	12 do.	Ditto ditto.
Metalling of the road from Serampore to Salkea.	13 do.	Ditto ditto.
The Bally Tension Bridge . . .	...	Ditto ditto.
Two bridges on the Dhoneakhally road .	...	Ditto ditto.
Three bridges at Nosorye, Tribany and Satgan.	...	Zamíndár of Noapara.

"Now, what has been done in Huglí has been more or less done in other districts in Bengal. If the Council will refer to the Famine Report of Sir R. Temple, they will see that the zamíndárs gave, free of cost, all the lands required for roads and tanks which were constructed during the scarcity of 1873-74. In fact, the question arose whether the Government could take over lands free of all consideration, and the learned Advocate General was of opinion that it could not. But the zamíndárs in a body refused to receive a pice for the lands they gave for those purposes.

"Now, have the zamíndárs done anything for education, in the way of establishing or promoting the establishment of schools? I have been just reading the last report of the Director of Public Instruction, Bengal, and I find that

the total amount of private contributions was nine lákhs last year, including both endowments and private subscriptions. The statement is this:—

	Government Institutions.	Aided Institutions.	Unaided Institutions under regular inspection.	Total.
	Rs.	Rs.	Rs.	Rs.
Endowments	65,015	64,332	32,957	1,62,304
Subscriptions	14,870	6,19,205	1,11,838	7,45,913
Grand total .	...	...	...	9,08,217

"Any one who knows the sources from which these contributions usually come will admit that the bulk of it came from the pockets of the zamíndárs. In the same way, in 1881-82, the total expenditure on dispensaries was Rs. 3,74,000, and the subscriptions from the Native community amounted to Rs. 1,20,000, and it may be also said that the bulk of this money came from the zamíndárs. I ought to have said, while noticing the support which the zamíndárs have been giving generally to education, that some of the most munificent benefactions in the cause of education have come from the zamíndárs. Take, for instance, the magnificent Tagore Law Professorship Endowment at a cost of three lákhs of rupees, which was founded by the late Hon'ble Prasanna Kumar Tagore, the illustrious uncle of my friend Mahárájá Sir Jotíndra Mohan Tagore. My friend the Diggiapattí Rájá has given, I believe, Rs. 1,20,000 for the Rajsháhi College; munificent donations have also been given for the Ravenshaw College at Cuttack, and for the Berhampore and Kishnagur Colleges by other zamíndárs; and I say it with much pleasure that one of our hon'ble colleagues, the Hon'ble Durga Charan Láhá, has given Rs. 50,000 towards the cause of education. I could mention many more names, but it is not necessary. I cannot, however, refrain from alluding to the many magnificent benefactions given by my friend the Mahárájá of Darbhangá, and I think it is not too much to say that the zamíndárs generally have not been deaf to the call on their purses in the cause of education. Then there was one branch of education which the zamíndárs from the first encouraged with the greatest liberality—I mean Sanscrit learning. I believe hon'ble members were aware that rent-free lands to the extent of more than a crore of rupees were assigned by the zamíndárs, of their own free-will, for the support of men professing Sanscrit learning. The great house of Nadiyá gave away in this way, I believe, the bulk of its property. These were voluntary contributions. But the zamíndárs were also subject to compulsory contributions for public purposes. I may mention, first, the dâk cess. It is not necessary for me to go into the question of the dâk cess, whether the zamíndár was liable to render postal service or not. It is enough, for my present purpose, to say that they were required to pay the cess. Then the zamíndárs were also liable to pay the road and public works cesses, and with them their raiyats are also liable, and the amount thus contributed by the zamíndárs annually comes to 35 lákhs of rupees. Then the zamíndárs construct embankments voluntarily, for the protection of their raiyats, and they are also liable to an embankment cess for those embankments which are maintained at their expense by the State. They are also called upon to perform certain official services. Whenever troops march through their estates they are required to provide supplies for them; whenever public officers pass their way, they also do their best to send provisions to them; whenever heinous criminal offences were committed within the limits of their estates they were required to report the same to the Police. In the days of the salt monopoly of the East India Company, the zamíndárs were made liable for the illicit manufacture of salt on their estates. Whenever statistical or economical enquiries are made the zamíndárs are required, through the Police and the Magistrates, to make reports, and

whenever any great public work has to be done their services are put into requisition. Take, for instance, the census operations. I appeal to His Honour the Lieutenant-Governor to say whether the Government could have carried out the census work at double the cost which was incurred if the zamíndárs had not freely offered their own services, and those of their servants, in furtherance of this great work. And they perform these public services ungrudgingly; they fully acknowledge that property has its rights as well as its duties. Then, again, the public seem to think that they have a claim on the purses of the zamíndárs for all public purposes, for whenever there is any call for money, who is it that is first appealed to? It is the zamíndár. Take, for instance, the calls made here for contributions for the relief of the sufferers from the Crimean war, the Scotch famine, the Irish famine, the Lancashire distress, and many other funds. If you examine the list of contributions, you will find that zamíndárs have always headed it; even for race stands, agricultural shows and other objects their purses have been taxed. The district officers do not hesitate to appeal to the zamíndárs whenever they have a public object in view. And in times of difficulty the zamíndárs have loyally, willingly and cheerfully placed their services at the disposal of Government. Take, for instance, the Sepoy Mutiny. Happily, the flame of the Mutiny did not extend to Bengal Proper, but it did spring up in parts of Bihár, and the Government have heartily acknowledged the loyal services which the Bihár zamíndárs rendered in that crisis. In Bengal, too, they did some service in their own way by supplying elephants and other things for which the Government applied to them. Even in fiscal emergencies the Government has not hesitated to appeal to the zamíndárs, relying on their loyalty, and with the greatest alacrity they have responded to the call. I am personally acquainted with the circumstances of one case. In 1878, there was a financial pressure, and Sir John Strachey, who was then the Finance Minister, wanted temporary accommodation to make the two ends meet. He did not desire to raise a public loan, he simply wanted a temporary accommodation, and he spoke to Sir Ashley Eden and asked him if he could secure some lákhs of rupees in that way. I was taken into confidence, and I know that several of my zamíndár friends willingly came forward with the required help. So whenever there has been any occasion for help, and whenever any appeal has been made to the zamíndárs, they have not hesitated to render every assistance in their power to the State. I may also cite the Minute of Sir R. Temple as a testimony to the services which the zamíndárs rendered to their tenantry during the great famine of 1873-74. I wish I had before me a copy of that Minute to read to the Council a few extracts from, but I am sorry to say I have not got it. I dare say that Minute has been read by most hon'ble members, and they doubtless recollect that the zamíndárs, as recorded in that Minute, remitted lákhs of rupees of their rent, suspended the payment of rent, gave takkáví advances, and afforded charitable relief to their tenantry in that crisis without any grudge, and Sir R. Temple justly complimented the zamíndárs by saying that they had nobly redeemed their character as landlords. Apart from these facts, I may tell you that, whatever disputes may here and there exist or arise between zamíndárs and raiyats, the raiyat generally looks up to the zamíndár as a protector against oppression and injustice. If a policeman troubles him he goes to the zamíndár; if a private individual assails him he goes to the zamíndár; if there is a quarrel between the raiyat and his brother, his sister or his uncle, he goes to the zamíndár for an amicable settlement of the quarrel. In fact, whenever the raiyat is in difficulty he looks up to the zamíndár for assistance, for advice, and for arbitrament. But while the zamíndár performs these functions I hope the Council will kindly bear in mind that the zamíndár does not get all the profits from the land in the shape of rent. The road cess returns show that there is a long chain of sub-infeudation in the country, and that the profits from land are largely intercepted by middlemen. When the Permanent Settlement was first made these middlemen were not in existence, except the dependent taluqdár, the istimrárdár and the mukarrarídár. But as I have shown, the pressure of the assessment was so severe that even the big house of Burdwan was tottering, and for his sake the patní system was introduced, and from that time sub-infeudation commenced. A large number of tenure-holders sprung up under

this system, and they gradually intercepted the profits from the land. I do not say that this is to be regretted, for the more wide-spread are the profits from land the better for the country, but this fact should be borne in mind, because it was generally thought that all the profits from land were monopolized by the zamíndárs. On this point Sir R. Temple, in the Administration Report of Bengal, for 1875-76, wrote:—

'The material advancement of the sub-proprietors, the raiyats and the peasantry in Eastern Bengal has been mentioned with satisfaction on former occasions. A remarkable illustration has been afforded by the detailed inquiries which are being made for the valuation of the lands in the deltaic district of Bákirganj. It appears from the road cess returns that the rent-roll payable to the intermediate tenure-holders is often twelve, twenty or fifty times the rent paid to the superior landlord. It seems probable that not less than a crore of rupees (assumed as equal to one million sterling) are annually paid in rent in this district, and that the value of the agricultural produce of the district can hardly be less than five millions sterling annually, and may be much more. The returns, moreover, while they show the prosperous condition of the tenure-holders and other middlemen, show also how the profits of the land are slipping out of the hands of the zamíndárs, who have permanently alienated their interests in the soil, and, in many cases, have fallen into the position of needy annuitants.'

"So that the zamíndár did not monopolize the profit from the land which constituted rent.

"Now, I have gone to this length to show who the zamíndárs were, what functions they performed in the social and administrative economy of the country, and what services they have rendered to society and to the State, only with a view to impress upon the members of this hon'ble Council the propriety of showing some consideration to men who were so useful to the country. I do not believe that those who perform such important functions will not receive due consideration at the hands of this Council in dealing with the law of landlord and tenant. If they have performed such useful and beneficent functions, have they no claim to your generous consideration; and are they not entitled to have their rights duly recognised by the State and the legislature? The hon'ble and learned Law Member, in introducing the Bill, said that the zamíndárs were in no sense absolute proprietors of the soil; that, according to the definition of owner in certain English Statutes, he apprehended that the zamíndárs were no better than managers or trustees or limited owners of the land. I will, with your Lordship's permission, read one short extract from the hon'ble member's speech. He said:—

'In the first place, the term, as applied to land, has no technical meaning in English law, and if you were to ask an English lawyer what were the rights in the soil of a proprietor of land, he would probably tell you that you were using loose and popular language, and would beg you to make your meaning more precise and clear. In the next place, the term was freely applied to the zamíndárs of Bengal and other persons of the same class in Regulations and other official documents of a date anterior to 1793, and, therefore, could not possibly be taken as indicating or, to use a technical term, connoting rights created at that date. And, thirdly, the term, though, as I have said, it has no technical meaning in England, has acquired a very definite meaning in the settlement literature of British India. It means, in those parts of India which are not permanently settled, the person who, whatever may be his rights on the soil, has the right of having a settlement made with him, the person, namely, whom, for purposes of land-revenue, and for those purposes only, the Government find it convenient and advisable to treat as owner or proprietor of the land. Such a recognition, of course, is not inconsistent, and was never supposed to be inconsistent, with the existence of any number of other rights in any number of other persons. All such rights are simply left outstanding. The use of the term proprietor in this sense is closely analogous to the use of similar terms in English statute-law. Here, for instance, is a definition of owner taken from a recent English Act, the Public Health Act of 1875:—"Owner means the person for the time being receiving the rack-rent of the lands or premises in connection with which the word is used, whether on his own account or as agent or trustee for any other person, or who would so receive the same if such lands or premises were let at a rack-rent."'

"I appeal to this hon'ble Council to consider whether, when Lord Cornwallis and Sir John Shore effected the Permanent Settlement, they understood the words 'proprietor of the soil' in that sense. I have already read to the Council extracts from the Minutes of Sir John Shore and Lord Cornwallis, giving their opinion on the status of the zamíndár at the date of the Permanent Settlement, and I will now confine myself to the one point raised

namely, the legal position of the zamíndár. I dare say the hon'ble and learned Law Member will acknowledge the high authority I am going to cite. I allude to the opinion of Lord Lyndhurst,—Vol. I, Moore's Indian Appeals, p. 348—

'It is to be gleaned from these Regulations that the proprietors of lands in India had an absolute ownership and dominion of the soil, that the soil was not vested generally in the Sovereign, that proprietors did not hold it at the will of the Sovereign, but held the property as their own. * * * I think it is impossible to read those articles without coming to the conclusion that the zamíndárs and taluqdárs were owners of the soil, subject only to a tribute, and that it was the object of the Regulation to make that tribute fixed and permanent.'

"My Lord, I am no lawyer, and am, therefore, bound to accept the interpretation of the law as it may be given by the learned Law Member; but, in the face of this opinion from no less an authority than Lord Lyndhurst, I hope I may be excused if I refuse to accept even the high authority of my learned friend. If Lord Lyndhurst holds that the zamíndárs are the actual and absolute proprietors of the soil, I appeal to the Council to consider whether many of the provisions contained in the Bill are consistent with that reading of the law. For, if I understand the Bill aright, it proceeds wholly on the assumption that the zamíndárs are not owners of the soil, and, therefore, they must submit to a redistribution of property, as it were, under the operation of the proposed law. From 1793 to this day, the zamíndárs have been recognized by the Government over and over, by solemn Regulations and Acts, and also in solemn State papers, as proprietors of the soil. Even Act X of 1859 did not do away with the material incidents of proprietary right, though it recognised the occupancy-right of the tenant under the twelve years' rule; it did not take away the right of enhancement of rent, of eviction of the raiyat, and many other rights inherent in an absolute proprietor of the land. But, after the lapse of ninety years, the zamíndárs are now told, by no less an authority than the learned Law Member of your Excellency's Council, that they are not proprietors of the soil, that they were hitherto labouring under a huge delusion, and that they must prepare their minds to surrender their rights as soon as they can, that there is another class waiting to participate in the land with them; that in fact there is to be a redistribution of the landed property. I hope this hon'ble Council will seriously consider the effect of these propositions, for if I read the Bill aright it amounts to this.

"Now I come to the necessity for legislation. I at once concede that there is necessity for legislation. There has been for many years necessity for legislation. I regret much that it has taken the Government so long a time to give that relief which both the zamíndár and the raiyat have stood much in need of for so many years. From 1871 Government has been promising to simplify the law for the recovery of rent. It is well known to this Council that it was no part of the obligations of the zamíndárs to collect the road cess and public works cess for the Government. But Sir George Campbell, when he imposed the road cess, succeeded in getting the assent of the zamíndárs to collect the cess on behalf of the Government, on the understanding that the law for the recovery of rent would be simplified without delay. The zamíndárs had felt the delay in the recovery of rents as a great grievance, and they said that if the Government would give them the *quid pro quo*, they would undertake the duty of collecting the cesses. It is to be borne in mind that the zamíndárs received no remuneration whatever for the collection of the cesses either by way of percentage or in any other form; and I do not know whether any commercial community would undertake such a duty without charging commission of some kind. But the zamíndárs did not take any remuneration. They were only buoyed up by the hope that the law for the recovery of rents would be simplified. When Sir George Campbell left the arena no change was made. He made promises, but no change was effected. He made inquiries and intended to do something, but nothing was done. Then came Sir Richard Temple. He, too, saw the propriety of changing the law of procedure for the recovery of rent. He also prepared a draft Bill, but nothing was done. Then came Sir Ashley Eden. During the first two years of his rule he was very active in this

matter. He actually caused a Bill to be introduced into the Local Council, but that Bill was dropped on the plea that the whole rent-law should be dealt with. From that time rose the cry for a general revision of the rent-law. Heretofore, the complaints were about the recovery of rent and the settlement of rent, but now came the cry for a general revision of the rent-law, a comprehensive revision of the substantive rights of landlords and tenants. Against such a general revision the zamíndárs protested. There was not the faintest echo from the raiyats in any part of the country to the cry raised by the Government that there should be a general revision of the substantive law. And yet the Bengal Government thought it necessary to appoint a Commission to prepare a draft Bill for the general revision of the rent-law. The Commission was fairly constituted, and I must do them the justice to say that they performed their work with great intelligence, ability and zeal. But, my Lord, I cannot help saying that the Bengal Rent Commission did not work in the way in which Commissions of a similar kind worked in England, and, as far as I am able to judge from the papers submitted by them, they have not given sufficient data for the conclusions arrived at by them. They made no statistical enquiries; they made no local enquiries; they sat in their own chambers; they called for official reports, and from the depth of their own consciousness they evolved their theories and propositions. Ransack their reports, ransack the voluminous literature which they have produced, and find out if you can any information as to what extent evictions were resorted to in this country. That was one of the first propositions they were charged with enquiring into. It was said that evictions were on a large scale resorted to in Bengal; but where were proofs in support of such a statement? They ought to have given some figures showing the current of evictions district by district; but where were they? On the contrary, is it not a fact that evictions were rarely resorted to by the landlord, and that the Courts were most reluctant to order eviction? Then there was the question of the transferability of occupancy tenures. On this point have the Rent Commission given any details? Of course, they say that this right is recognized in some parts of the country; but where are the facts and figures? Were not the records of the Courts open to the Commission? and could not they give facts and figures, extending over some years, to show that to this extent the custom has prevailed?

"Now, with regard to the enhancement of rents. Is it a fact that the enhancement of rents is going on under the provisions of Act X of 1859? It is generally believed that these provisions have brought enhancement of rent to a deadlock. I, for one, would have been glad to receive some statistics on this point—how far enhancement has been stopped by the present provisions of the rent-law; how far the rates have been altered, that was to say the rates at which the rent was paid before and is now paid; in what proportion rents have been increasing, and so forth. Enquiries of this kind have been lately made in some districts for the collection of tables of rates; but the papers produced by the Rent Commission offered little information on the subject. I think that if a Commission of this kind had been appointed in England, they would have given fully the facts and figures on which their conclusions were based.

"But the Rent Commission of Bengal, I am sorry to say, did not furnish us with such facts and figures as would fully bear out their own conclusions and opinions. That Commission, I believe, was appointed with the view of securing to the Bengal raiyat what were popularly called in England the three F's. Now, it is worthy of consideration whether the three F's, consistently with the economic conditions of this country, have not already the fullest operation here. Fixity of tenure. The twelve years' rule, under Act X of 1859, has practically given fixity of tenure to the bulk of the agricultural population of this country. Some estimate it at ninety per cent. I cannot of course be positive about the figure; but, from all I have seen and heard, I hold that the right of occupancy in Bengal is enjoyed by the vast majority of these tenants. In Bihár, too, though the raiyat does not fully appreciate the right, the right is practically enjoyed by the raiyat as appears from the report of Mr. Finucane, and it is for the Council to consider how the occupancy-right in Bihár is to be secured by law. The fact remains that it is already in operation. Fair rent. Now I invite hon'ble

members to enquire and say whether the rents now levied in Bengal are not fair; whether the raiyats in any district now pay rents which may be called rack-rents, I mean in any district in Bengal Proper. So that you have now fixity of tenure, and fair rent. As for the third F, free sale, I admit that it is not common; that the custom obtains only in some districts, and that there even it is not fully recognized. It is a question whether the right of free sale should be fully recognized in the interest of the raiyat, and whether it would be quite consistent with the rights of landlords. I will return to this question hereafter.

"I now come to the Bill itself. I have already said that the Bill has been prepared with great ability and care, but I do not quite understand the primary object of the Bill. Is it to prevent dispute and litigation and to promote peace and harmony amongst zamíndárs and raiyats by reasonable, fair and equitable provisions, or is it to redistribute rights in land, to promote and foster litigation, and set class against class? I should be very sorry to believe that the authors of the Bill had the latter object in view. I repudiate any such notion; but at the same time, when I read the Bill and contemplate its tendencies, I cannot help feeling that, however opposed such a tendency may be to the views and wishes of the hon'ble authors of the Bill, it will be practically difficult to control that tendency of the Bill, so long as the provisions contained in it are allowed to have full play. I was in hopes that it would be in my power to propose a compromise which might be acceptable to both zamíndárs and raiyats, and thus to contribute in some way to the promotion of that peace and harmony on which I lay great stress. But the present Bill, I am sorry to observe, is so one-sided that I cannot entertain any hope of proposing any such compromise. Indeed, there could be no compromise without concession on both sides, but the Bill leaves little room for compromise. I do, however, entertain the hope that when the Bill will be considered in Select Committee, with the light of public criticism and public representations, the Committee will take into consideration outside views, and deal with an even hand with both classes which are interested in and affected by it. After giving, as I have said, rather an imperfect perusal to the Bill, I find that its tendency is to drive both the raiyat and the zamíndár into Court at every stage and to foster litigation all round. In the first place, it is proposed to make a distinction between *khámár* and raiyatí land. Now, as far as Bengal Proper is concerned, I can say that there has been made no attempt whatever to absorb raiyatí land into *khámár* land. The enquiries which I have made on the subject have satisfied me that the absorption of the raiyatí land does not apply to Bengal Proper, nor has there, I believe, been any complaint on the part of the raiyats that they cannot obtain land from the zamíndár because he has absorbed the raiyatí land into *khámár* land. When such is the case, is it desirable to throw the country into the ferment of expensive and harassing litigation, by ordering a survey and measurement and registration of these lands? I believe the most important principle of legislation is, that it should be made to meet the actual needs of the country. Now the question is this, whether there is any actual necessity for the measurement, survey and registration of these lands in Bengal. Well, if the power is meant to be permissive, then it is not intended to apply it to Bengal Proper, because such necessity does not exist here.

"Then comes the question of occupancy-right. Now it is not my intention to go into the history of that question. That history has been repeated times without number, and the question has been discussed threadbare. It is enough for my purpose to recognize the position that Act X of 1859 gives the right of occupancy to the raiyat who holds the same land for twelve years consecutively. I accept that position. I have already said that the occupancy-right has already extended to the majority of raiyats in Bengal, and the question is, is it necessary to extend this right further, and to give a construction to the law which would practically give the raiyat the right to claim all land as occupancy holdings, provided he occupies any one spot for twelve years? The present law is, that the right of occupancy shall accrue upon the same land. The provision of the proposed Bill is, that the right of occupancy shall accrue upon all lands which a raiyat might hold in the same village, or estate, if he

has twelve years' possession of any particular plot; so that the effect would be that the raiyat who might hold two cottahs of land in village A for twelve years will thus acquire the right of occupancy in two hundred bighás of land in villages B, C and D, though he might have had possession of the same lands for only three or four months or years. I say the extension of the right of occupancy in this form is not consistent with the principles of the rent-law of 1859, nor consistent with the proprietary rights of zamíndárs. It has been said that this provision has been rendered necessary by the recourse some zamíndárs have to shifting raiyats from plot to plot, from land to land, in order to destroy the accrual of the right of occupancy. But, as far as Bengal Proper is concerned, I am not aware of a single instance in which the zamíndár has sought to defeat the right of occupancy in this way. Those who have written on the subject, including no less an authority than Sir George Campbell, have readily admitted that this practice is not known in Bengal Proper, and yet it is to be extended to Bengal Proper under the present Bill. Now, I have said that this Bill will drive the raiyats and zamíndárs to Court at almost every step. How do I establish my position? If a raiyat is allowed to acquire an occupancy-right by the accumulation of time, if he holds different plots of land at various periods, there will be so many disputes about the calculation of periods that nothing will be practically decided without recourse to Courts.

"Then comes the question of rent. In every case the settlement of rent will be practically subject to litigation. Whether it is settled by the Court or by a special revenue-officer, it will be a legal proceeding in some form or another. Nothing can be done, as the system has been devised, by private arrangement between the zamíndár and raiyat. If the zamíndár and raiyat come to a private understanding and enter into a contract, they must go to the revenue-officer as the keeper of their conscience. If they don't come to a private understanding, they must go to Court. So they cannot act as free agents or free men; they must have recourse to litigation.

"Next comes the question of the realization of rent. Of course, if there are arrears, there must be litigation, and so on through all stages, even in matters of minor dispute. We will have, if I may be permitted to observe, a Pandora's box in the name of peace and harmony.

"I have said that the practical effect of this Bill will be the redistribution of property. If any one will carefully read through the Bill, he will see that it takes away some of the most important incidents of proprietary right. In the first place it abolishes the right of contract as regards occupancy-right. Now, what is the ground upon which this extreme proposition is based? The hon'ble and learned Law Member has produced what he thought was a horrible *kabúliyat*, and asked the Council to consider whether the legislature could conscientiously protect such a thing. I have not seen the original of that *kabúliyat*, but will consider it in the form of the translation in which it is given in the statement of the hon'ble member. I have compared it with the *kabúliyats* and *pattás* given by Government in *khás* estates, and also with the form of *kabúliyat* which the Government had at one time held up as a sample for landlords, and which the Government used to sell to the general public. I do not know whether that form is now for sale, but I find, from a notification by Government in 1875, that a form of *kabúliyat* was printed and sold for public use by the Government, and in comparing this form with the condemned form which the hon'ble member has laid before the Council, I find that there is not very material difference, except upon one point. Now, I will briefly dwell upon this subject. The first point in the *kabúliyat* to which the hon'ble member took objection was the monthly instalments. He said that 'monthly instalments were oppressive. They drive the raiyat to the money-lender before the harvest, and they enable zamíndárs to worry the raiyats by bringing suits every month, and saddling the raiyat with costs.'"

His Honour THE LIEUTENANT-GOVERNOR enquired whether this form was issued from the Bengal Office.

The hon'ble speaker stated that they were sold in the Bengal Office.

The MAHÁRÁJÁ OF DARBHANGÁ said that they were circulated in Court of Wards' estates.

The speaker continued:—"Now, if the hon'ble member had enquired, he would have known that Government revenue was formerly paid in monthly *kists*, and throughout the country rent was paid in monthly instalments, and that, subsequently, it was divided into quarterly instalments, and that in many parts of the country it is still paid in monthly instalments. So that this is no new condition, but even the payment of quarterly instalments might drive the raiyat to the money-lender, as he could not always pay before the harvest.

"I should mention that these monthly *kists* have been recognized in this country for a long time, and that even Suvankar, the Cocker of Bengal, has given, in one of his arithmetical tables, the calculation of monthly *kists*, so common was the practice. In the Government *kabúliyat*, I find that the first condition was 'in default of instalments, monthly interest at the.....per centum you shall pay.' Now this is important, because it is a sample pattá which is prescribed by the Government, and the first condition is, that if there was default so much interest must be paid. It is not necessary to go into this point at any length, but I will observe that Regulation XI of 1793, admitting this usage, imposed these *kists*, and severe penalties for default were prescribed in section two. I have said that the same condition is prescribed in the Government form of pattá. But what does the Government do in its own estates? What is the practice of Government in its own *khás maháls*? I will read some passages from the forms of leases prescribed by the Board of Revenue:—

* * 'pay the Government revenue *kist* by *kist*, according to instalments noted at the foot of this engagement. If I fail to pay the full amount of one instalment, or a part thereof, due within the year, Government shall have power, on its own authority, without the interference of Courts, to cancel any lease even before the close of the year'—*Vol. II, page 131, Form 16.*

"So here we see that the Government tells the tenant, 'if you fail to pay monthly revenue *kists*, the Government will have power, on its own authority, and without the interference of Courts, to cancel your lease even before the close of the year.' Then, again, Vol. II, page 138, 'pay the revenue *kist* by *kist* according to the kistbandí noted at the foot of this agreement.' So that the horrid private pattá which contains the condition about monthly instalments is not singular or *unique*.

"The next point is, 'if I fail to pay rent on a due date, I will pay interest at the rate of two pice in the rupee until the date of realization.' The remark of the hon'ble member was that thirty-one per cent. was charged in the *kabúliyat* he had read out. It was well known that this was what was usually considered or called a penal sum, and that the Courts never decreed that rate of interest, the law allowing only twelve per cent. per annum, and such a clause, the hon'ble member knows, finds place in bonds in England; here the zamíndár charges interest if the raiyat wilfully defaults. What does the Government do in its own *khás maháls* if the raiyat defaults? Here is a provision in Form 25, page 141: 'If I default * * * I may be ejected at the will of the Collector.' The zamíndár is content with interest, which the Court will never decree at more than twelve per cent. per annum; but under the form quoted, the Government, in case of default, has taken power to eject a tenant without the intervention of the Courts.

"I would ask the Council to compare the terms of the *kabúliyat* taken from Government raiyats on Government estates upon the same points. I would refer to the Board's Rules again: the tenant engages—'I shall not ask for any abatement of revenue in consequence of inundations, drought or any other calamities, and no such requests if preferred will be listened to.'—*Board's Rules, Vol. II, page 131, clause 6, Form 21.* Again, 'I shall not raise any objection to the full and punctual payment of the said revenue on the score of inundations, &c., or other accidents affecting the value of the said land or the outturn thereof, and I shall raise no claim to abatement on any such account.'—*Form K, clause 5.* It will be seen that no deduction is to be allowed to a

Government tenant even in case of diluvion. And these were *kabúliyats* which the Government obtained from tenants on their own estates.

"The next objection is that the raiyat is not allowed to enjoy the value of trees, or to cut down trees. Now, similar rules will be found in Government Forms. Thus—'I shall not sell or cut any trees on the estate whether bearing fruits or not.'—*Form 16.* I presume that the raiyat who executed the private *kabúliyat* must have been a new comer; and, if he was a non-resident raiyat, I do not see any reason why the proprietor should be debarred of the right of making a contract with him that he should not be entitled to the right of occupancy. If this is considered objectionable, landlords will be able to accomplish their object in a different way, that is to say, by taking terminable leases for, say, ten years, and renewing the same at the end of ten years; and so defeat the accrual of the right of occupancy. In this *kabúliyat*, I see the zamíndár has gone straight to his work; but I hope it will not be supposed that, because there may be some instances of new raiyats who may enter into an engagement claiming no right of occupancy, for the simple reason that they have no just claim to such right, therefore, the right of occupancy is not allowed to accrue in this country. On the contrary, as I have shown, since Act X of 1859 came into operation, the right of occupancy has extended to some ninety per cent. of the raiyats throughout the country. But how does the Government meet such cases in the *kabúliyats* which it takes from its own tenants? The tenant declares 'in the event of my dying during the continuance of the term of this engagement, the Government shall have power to settle the mahál with any one.'—*Form 16.* In this private *kabúliyat*, the right of the heir is recognized, but in the Government instrument that right is not recognized. Then the hon'ble and learned Law Member comments on that clause of the *kabúliyat* in which the raiyat engages to pay the road and other cesses. Of course, I do not know what the words in the original *kabúliyat* imply, but no Court of Justice will decree the full amount of the road cess against the raiyat. As regards the dâk cess, it is payable by the zamíndár. But if the hon'ble and learned Law Member will refer to section 12 of Act VIII of 1862, he will find that private contract in this matter is allowed, so that the zamíndár is perfectly within the law if he makes a contract between himself and his raiyats providing that they would pay their share of the dâk tax. With regard to trees, I find that only one-fourth of the value of the wood is to be given to the raiyat under the private *kabúliyat*. What is the provision in the Government *kabúliyat* on this point? Form 16 says, 'I shall not cut or sell any tree on the estate whether bearing fruit or not.' So under this stipulation the Government tenant will not get even one-fourth of the value of the wood, which the zamíndár allows under the *kabúliyat* before the Council. Then there is Form 22 in which an option is given to the raiyat to enjoy the right of cutting trees or not, and in Form 23 it is stated: 'I am entitled to take and enjoy the fruit only of the existing trees or of such trees as may be planted by me.' Comments on these conditions are superfluous. I shall not pursue the subject further. I have shown that the conditions contained in the *kabúliyat* quoted by the hon'ble and learned Law Member are much the same as those in the Government sample Form advertized in 1875, and that the conditions of the *kabúliyats* taken by Government from its own raiyats contain similar, if not harder, conditions. If such is the case—if Government itself, in its own wisdom, has thought fit to prescribe such *kabúliyats*—I ask whether they are of such an outrageous nature as not to justify the protection of the law. I submit that, if it be considered right and just that the raiyat and zamíndár may enter into a contract with regard to the disposal of land on permanent or temporary lease, that the raiyat may enter into a contract in all other matters affecting his own interests, and that a coolie in Bengal may enter into a contract for the sale of his labour in the wilds of Assam, I do not see any good and valid reason why the zamíndár and raiyat should be debarred of the right to enter into a contract of this kind, because the matter relates to the right of occupancy in the soil. Surely, this matter ought to be dealt with in the same way as other matters of contract affecting the rights of landlord and tenant.

"I now come to the question that the proprietor has a natural right to elect his own tenant. This right is admitted by the hon'ble and learned Law Member. He says that, in order to secure that right, we propose to give the zamíndár the right of pre-emption; that is to say, if the occupancy-tenant should wish to sell his tenure or to mortgage it, the zamíndár shall have the right to pre-emption in regard to it, and that, if the zamíndár and the raiyat should fail to come to any settlement as to price, they shall go to the Court for such settlement. Here, again, both the zamíndár and raiyat are driven into Court for the settlement of their differences. Now, apart from that, let us consider what will be the economic effect of a provision like this. If, as I have ventured to show upon the authority of Lord Lyndhurst, the zamíndár is the actual and absolute proprietor of the soil, is it right that, when one class of his tenants should leave his land, he should be made to pay a fine for securing his proprietary right in the same? Why should he be made to purchase what ought to belong to him as a matter of right? Even admitting, for argument's sake, that the zamíndár's power of ownership is limited, that he must not absorb into his own *khámár* what is raiyatí—admitting that to be the case—I ask, why should the zamíndár be compelled to purchase his own land again in order to exercise the right of ownership over it? I think that the provision contained in the Bill of the Hon'ble Mr. Reynolds was more equitable. While conceding the right of transferability to the raiyat, he would not take away from the zamíndár the right of proprietorship; I believe his Bill provided that no occupancy tenure should be transferred without the consent of the zamíndár. I say such a provision would not clash against the leading principles of the Bill, while it would secure the right of the zamíndár to elect his own tenant. I leave it to the Council to imagine what the position of a zamíndár would be if this provision were put into force by the raiyats in any large number of cases. Take, for instance, the case of a person purchasing an estate for two lákhs of rupees on a calculation of so much annual return. Well, he calculates the interest and makes a simple money investment upon a certain percentage of profit. He holds this estate for five years. After that, when this Bill becomes law, a number of occupancy-tenants come in and tell the zamíndár, 'We have sold our holdings to such and such persons for so much; if you will pay us the price we will sell the lands to you, otherwise you must forego your right.' Of course the zamíndár, in order to keep away inimical tenants, would, if he had the means, buy up the tenures. But what is his position? He has, firstly, paid the full price for the estate, and now he must pay again for these lands if he wishes to exercise the right of pre-emption. What return does he get? *Nil.* As the Bill provides, he must let out the land at the same rate and, perhaps, even less. Now, I wish to ask the Council whether such a provision is fair, just or equitable.

"With regard to enhancement of rent, I confess I do not clearly understand the very complicated provisions which have been made on this subject. As far as I understand the Bill, it appears that, as a rule, the maximum of rent shall not exceed twenty per cent. of the gross produce. Tables of rates are to be prepared, and, if applicable, they shall be the guide. If not, the proportion theory shall, to a certain extent, be resorted to, and then the maximum of twenty per cent. should be adhered to, that was to say, as regards occupancy-tenants. Now, as regards the tables of rates, I hope the enquiries made by the Bengal Government will satisfy the Council that it will not be worth while to go to the trouble and expense of preparing these tables of rates. I am indebted to the courtesy of His Honour the Lieutenant-Governor for copies of the reports of Mr. Finucane and Bábú Párbati Charan Rai. In the report of Mr. Finucane, this is the conclusion he arrives at with reference to the tracts he enquired into:—'The rate varies from four to one hundred and odd.' So that the ascertainment of a uniform rate of rent which will apply to all holdings is impracticable, and yet the Bill contains provisions for an enquiry into rates, and I believe the cost of the enquiry is to be borne by both zamíndárs and raiyats. I do not see the necessity for such an enquiry, nor the justice of charging the zamíndárs and raiyats with the cost. With regard to the enquiry of Bábú Párbati Charan Rai, I find that he reports that the rate of rent has not varied from the days of the Permanent Settlement in certain tracts which he has enquired into.

Now, here is one proof also of the moderation with which the zamíndárs in some districts have treated the question of rent. Then, as to the twenty per cent. maximum, it is quite true that I, in another capacity, had recommended twenty-five per cent., but I confess I am not prepared to accept the recommendation of His Honour the Lieutenant-Governor for twenty per cent. The proportion of rent in Bengal has varied very much. At the time of the Permanent Settlement, as I find from a Minute by Sir John Shore, it varied from one-half to three-fourths of the value of the gross produce. At the present day, the proportion has been considerably reduced by rise in the value of produce. In the Eastern districts, I am inclined to think this proportion of rent may not be unacceptable, but in the Western districts it will be strongly objected to. There, I believe, the proportion is not less than one-third. In Bihár, it is much higher, and varies, I believe, from seven to nine annas in the rupee. Therefore, the twenty per cent. maximum, if sanctioned by law, will be a source of gross injustice to many zamíndárs in these parts. When I recommended twenty-five per cent. I did not for a moment suspect that the Government would go lower down, and I observe that the Rent Commission accepted my recommendation. But it is necessary for me to add that most of the zamíndárs did not agree with me, and did not consider twenty-five per cent. fair or just. The rules which provide for the settlement of rent of the ordinary raiyat, or the tenant-at-will, will be practically a bar to enhancement. The rules have been so framed that either the ordinary raiyat or the tenant-at-will will become, by force of circumstances, an occupancy-raiyat, or will leave the land with both his pockets or hands full. Now, from the time of the Permanent Settlement, a broad distinction had always been made between *khudkásht* and *paikásht* raiyats, that was to say, between resident raiyats, and tenants-at-will. But this Bill makes away with that distinction by importing certain ideas which are entirely foreign to the land-system of this country, and which I cannot help saying have been apparently borrowed from the Irish land-law. In the first place, the ordinary raiyat or tenant-at-will, according to the customs of this country, is not entitled to compensation for improvements. This question of improvements is a very large one. In this country, if a raiyat wishes to make any substantial improvements for the purpose of cultivation or manufacture, he generally takes a long lease, and secures his right, and then makes the improvements he needs. That has been the general practice. Ordinarily few improvements are needed for the cultivation of the soil. Nature has been so bountiful that if you merely scratch the soil in many parts of the country mother earth will yield her fruit. But this Bill introduces the novel idea of compensation for improvements. Now, what are the improvements that a tenant-at-will generally makes? I should feel obliged if any hon'ble member present would kindly enlighten me on this subject. As far as I am aware, irrigation is very little needed in Bengal Proper. Embankments are here and there needed, but for the most part they are made by the zamíndár. Would you consider those little ridges which separate the fields one from the other as improvements? and would you like to give to the raiyat a new handle for litigation, by inciting him to find out improvements which had never before entered his unsophisticated mind? I again say that, by bringing in this chapter of improvements, you will simply drive the raiyat and the zamíndár to the chapter of litigation. That is one of the weapons placed in the hands of the tenant-at-will to use against the zamíndár, because, if the zamíndár must pay for improvements before he can enhance the rent of a tenant-at-will, he must perforce desist.

"But this is not all. If the tenant-at-will should refuse to pay the enhanced rent, the zamíndár must pay him ten times the amount of the proposed annual enhancement by way of compensation for disturbance, or forego the right. The tenant-at-will will, by this unnatural process of law, become an occupancy-tenant.

"Now, what right has the tenant-at-will, who is a creature of to-day or yesterday, to demand from the zamíndár a compensation for disturbance as it is called? He will have the right to relinquish the land if he chooses, but the zamíndár will not have the right to eject him. This provision I say is open to

three objections. In the first place, the rich zamíndár, who alone can pay the value of improvements and compensation, will be subjected to so much fine if he wishes to keep the land in his own possession and prevent the tenant-at-will from acquiring occupancy-right. The poor zamíndár, who cannot pay, will be obliged to put up with this forced occupancy-right, and in every case the zamíndár and the raiyat will be driven to litigation. Now, it is well known to the hon'ble Council that, as matters go, there are abundant causes of dispute between the different classes of the agricultural community, and is it right and proper that this new idea should be forced into the unsophisticated minds of our raiyats? The practical effect of the provisions I have commented upon will be the destruction of proprietary right, and the deterioration of private property.

"I have already alluded to the distinction which has been made between *khámár* and *raiyatí* land, and I only wish to draw your attention to the provisions of the Permanent Settlement Regulations, giving the zamíndár the right of disposing of his lands, with the exception of dependent, istimrárí and mukarrarí, in the best way he might think fit. Section 52, Regulation VIII of 1793, says:—

'The zamíndár, or other actual proprietor of land, is to let the remaining lands of his zamíndári or estate, under the prescribed restrictions, in whatever manner he may think proper; but every engagement contracted with under-farmers shall be specific as to the amount and conditions of it; and all sums received by any actual proprietor of land, or any farmer of land, of whatever description, over and above what is specified in the engagements of the persons paying the same, shall be considered as extorted, and be repaid with a penalty of double the amount. The restrictions prescribed and referred to in this section are the following.'

"This clause to my mind proves two things. In the first place, the zamíndár had an absolute right to dispose of all lands, except independent taluqs, in the best way he could, and, in the next place, it recognised the right of the zamíndár to enter into contract. In fact, from 1793 to 1859, I find repeated enactments in which the zamíndárs are exhorted to enter into contracts with the raiyats, and if the interchange of pattás and kabúlyats had been regularly enforced by Government, there would by this time have been such a record-of-rights as would have prevented the necessity of over-riding contracts.

"Now, I have said that rack-renting, as it is generally understood, is not known in Bengal Proper. If the country had been so rack-rented as has been represented, there could not have been so much prosperity as the Government has from time to time testified there is. I find that Sir Ashley Eden, on assuming the reins of the Bengal Government in 1877, made a tour through the Eastern districts, and in a memorable speech he then said:—

'Great as was the progress which I knew had been made in the position of the cultivating classes, I was quite unprepared to find them occupying a position so different from that which I remembered them to occupy when I first came to the country. They were then poor and oppressed, with little incentive to increase the productive powers of the soil. I find them now as prosperous, as independent, and as comfortable as the peasantry, I believe, of any country in the world; well-fed, well-clothed, free to enjoy the full benefit of their labours, and able to hold their own and obtain prompt redress of any wrong.'

"Similar testimony with regard to other parts of Bengal is, I believe, to be found in the Administration Reports of the Bengal Presidency. I need hardly remind the Council that, when Sir Ashley Eden left the country last year, he, in defence of his excise policy, made this broad statement, that the development of the excise revenue was the best test of the growing prosperity of the agricultural population; and I ask whether this prosperity could go on if the raiyats had been handicapped, or if they had been depressed by rack-renting, as is sometimes alleged? I am afraid I have trespassed upon the time of the Council very long, but I hope I may be permitted to notice a few other points.

[At this stage the Council adjourned for lunch, and on their re-assembling the hon'ble member continued his remarks as follows:—]

"My Lord, when I closed I had alluded to the question of rents in Bengal. I said that it could not be rightly urged that, as far as Bengal Proper

was concerned, it was rack-rented. Now, it may be interesting to enquire what is the condition of the peasantry in the other Provinces of India, and such an enquiry may throw considerable light on the present subject. I hold in my hand a pamphlet on the effects of periodical revision of the land-tax in India. It is from the pen of a well-known Indian publicist and sincere well-wisher of this country, Mr. John DaCosta, who was senior member of the late firm of Messrs. Ashburner and Co., and with whom I have had the privilege of being long associated in the work of Indian reform. Mr. DaCosta, in referring to the Madras Presidency, says:—

'Beginning with Madras, the last Administration Reports from that Presidency show that the arrears of revenue, annually recovered by the sale of land, steadily increased from Rs. 31,880 in 1865, to Rs. 665,091 in 1879. This rapid rise, showing the growing difficulty of collecting the land-revenue, indicates the impoverishment of the cultivating classes.'

"Then, with reference to Bombay, he says:—

'If we next turn to Bombay we find that, in consequence of unsatisfactory reports regarding the collection of the land-revenue in that Presidency, the Secretary of State has quite recently sent out orders authorising a reduction of twenty per cent. in assessments in the Sholapur district. That the assessments there have long been excessively oppressive may be seen from a Minute of the Government of Bombay indicted about seven years ago, in which it is recorded that 'the Government had read with much concern the opinion expressed by the Collector of Sholapur as to the undue pressure of the revised rates, in consequence of which a large quantity of land had been put up for sale in default of revenue, much of which found no purchasers.'

"A reference to the Bombay Revenue Commissioners' reports will show, moreover, that 10,880 acres of cultivated land in Surat, and 25,035 acres in the fertile Province of Guzarát, were abandoned in 1872 and 1873, when the revised assessments were enforced; and that, while the unfavourable year 1871-72 was followed by two exceptionally propitious seasons, the depression of the people, as manifested by the relinquishment of their fields, had continued. From the same causes the revenue collected in the Northern Division in 1874 decreased, although the rates had been enhanced; and official reports of the same period from Puna state that 'the amount of land-revenue unrecovered was very considerable, and that, in order to realise the amount actually recovered, it was found necessary to sell up many occupancies.' Further, a memorial was addressed to the Viceroy in 1875 by some 3,000 landholders in the Bombay Presidency, complaining that the demand made upon them for land-revenue was out of proportion with the productive value of the land; and that, owing to their inability to satisfy it, many had been deprived of their estates, cattle and other moveable property, while their tenants and cultivators were on the verge of starvation. These reports materially help to account for the appalling severity of the famine which shortly afterwards devastated the Bombay Presidency, showing, as they do, that the very life-blood of the people had been sucked in the process of raising the land-revenue.

"Next, I turn to the North-Western Provinces. You know how harassing a process a settlement work is, and how much the people suffer as long as its operations go on. Mr. DaCosta quotes the following from an official memorandum of Sir Auckland Colvin, who writes:—

'Settlement-operations have now, in one district or another, extended over nineteen years. By the time the settlement of Banda falls in and is disposed of, twenty-six years will have elapsed from the date on which the two first districts were placed in the hands of a Settlement-officer. Others were begun twelve years ago and are not yet sanctioned; one of these is not even yet completed. These facts are significant to those who know what the settlement of a district means; the value of property depreciated, until the exact amount of the new assessment is declared; credit affected; heart-burning and irritation between landlord and tenant; suspicions of the intention of the Government; hosts of official underlings scattered broadcast over the vexed villages. . . Nothing can equal the injury inflicted by a slow uncertain settlement, dragging its length along, obstructed by conflicting orders, harassed by successive administrations, and finally threatened with annihilation at the moment when it seemed to have nearly finished its course. Little wonder that we hear of the land needing rest.

'Who have hitherto been connected by so kindly a bond in one of the greatest political dangers of the day. * * * The Commissioner of Allahabad, adverting about the same time to the depressed condition of the Futtehpore district, stated that 'the imposition of a ten per cent. cess in addition to the ordinary land-tax fell heaviest on the villages which were least able to bear it, that many villages broke down, and many more were threatened with ruin.' * * * From the District Collector's report it appeared, moreover, that many landlords who had failed to pay up the revenue were imprisoned; their personal property was sold, and their estates were attached for arrears of revenue. * * *

'The Collector of Cawnpore, referring to the revised settlements, stated:—'The margin left for the cultivator's subsistence is less than the value of the labour he has expended on the land. This district has the benefit of water-communication by both the Ganges and the Jamna; it is intersected by the East Indian Railway, and partly traversed by the Ganges canal; yet the land is only worth five years' purchase, and the state of the average cultivator is one of hopeless insolvency and misery.' The Lieutenant-Governor, in his Administration Report published in 1873, said that, while travelling, he was forcibly struck with the wretched condition of the Lallatpur district 'in which many estates were so depopulated, and so much land had fallen out of cultivation, that the assessment has become very severe.'

"The extracts which I have read from this pamphlet unmistakeably show what is the condition of the tenantry in the other Provinces of India. One fact is well known to this hon'ble Council. Relief Acts have been enacted by this Council for the benefit of agriculturalists of the Dekkhan and of Jhánsí; but happily things have never come to anything like that state in Bengal, so as to require exceptional legislation. On the contrary, as I have shown from the words of Sir Ashley Eden, and as is evident from the annual Administration Reports of Bengal, the prosperity of the agricultural population of this Province has gone on uninterrupted, from year to year, since the revolution of prices commenced in 1853, or since the Crimean war. Now, if the condition of the tenantry of Bengal is so prosperous, it cannot be reasonable to suppose that the land-law has pressed upon the springs of industry. I think, my Lord, it would be interesting if we could know what proportion does the revenue levied upon the peasantry of Madras, Bombay and the North-Western Provinces bear to the value of the gross produce of the soil. Is it one-half, or one third, one-fourth, or what? I have no accurate information on the subject, but an enquiry into the matter may clear up doubts which exist upon the subject. I, however, know this much, that while the enhancement of rent has come to almost a deadlock on private estates in Bengal, under the working of the proportion theory of the High Court, the enhancement on Government estates in *khás mahál* has been going on of late years at a tremendous rate. I find that within the last few years—I cannot give the exact period—there has been an increase of rent in Chutiá Nágpur estates from hundred to three hundred per cent; in Tipperah I hear that the increase is much higher, and matters are much worse in Chittagong. In Jalamati, in the district of Mednípur, the increase has, I believe, been from sixty to eighty per cent. On the other hand, the Government expenditure on improvements in the *khás mahál,*—I believe it was stated in an official paper sometime ago—has been very limited. And while I speak of the Government estates, I think it right to point out that, while the Government goes on increasing the rent on its own estates, and while the Government imposes such hard *kabúliyats* upon its own tenants, the Government enjoys peculiar facilities for the settlement and recovery of its own rents. It is well known that the Government employs almost the same agency as the private zamíndár employs for the management of its estates. The tahsíldárs of Government estates generally come from the same class that supplies the *náibs, gumáshtas* and other ministerial officers of the zamíndár's private establishment. But while the Government manages its own estates through these men, it is not content with the ordinary powers which a private landlord enjoys; takes advantage of exceptional powers for the realization of its own rents. Now, it ought to be borne in mind that the Government exercises a prestige, by virtue of its position, which the private landlord can never command. First, there is always a sort of intimacy between the Police and the revenue establishment of the Government, which is unseen by the outside public, but which is fully felt by those coming within the operations of the revenue establishment. Notwithstanding all these advantages, which the private landlord cannot claim, the Government has a summary procedure for the settlement of rent, and a summary procedure for the recovery of rent. Now, I ask, if the Government considers it necessary to have recourse to all these

exceptional methods for the management of its own estates, is it not manifestly its duty to give similar facilities to the private zamíndár, who is bound to pay in the revenue under the stern sunset law? That is to say, if the zamíndár fails to pay in revenue before sunset on a particular day, he is liable to be sold out at once. Therefore, is it not fair that the zamíndár should have the same facilities for the settlement and realization of rent? It may be said that the Government cannot place the same confidence in the servants of the zamíndár as it can in its own servants. Now, the Bill prescribes certain forms in which the zamíndárí accounts are to be kept and receipts are to be given, and if, with all these safeguards, the zamíndár's servants should still commit fraud and wrong, cannot they be checked by the imposition of penal damages on the zamíndárs in any case in which they may abuse their powers? If, by taking such precautions, the procedure for the settlement and recovery of rent could be assimilated, whether the demand be for Government or for the private landlord, is a point deserving of the fullest consideration of this Council. With regard to the realization of rent the hon'ble and learned Law Member has said that it is not practicable to secure the ends of justice by a summary method. Now, the Government has, from the days of the Permanent Settlement, always recognised its duty to be to help the zamíndár in the realization of rent. So long ago as 1795 the Government thus declared:

'Government not admitting of any delay in the payment of the public revenue receivable from proprietors and farmers of land, justice requires that they should have the means of bringing their rents and revenues with equal punctuality, and that the persons by whom they may be payable, whether under farmers, dependent taluqdárs, raiyats or others, should be enabled, in like manner, to realize the rents and revenues from which their engagements with the proprietors or farmers are to be made good. Increased punctuality on the part of landholders in the discharge of their duties was now expected, and justice required that they should have the means of obtaining the rents due to them even more now than in 1795.'

"From 1793 to 1859, there was a double procedure, a summary procedure and a regular procedure through the Civil Courts, and it was left to the option of the landlord and tenant to have recourse to either. This subject was thoroughly discussed when Act X of 1859 was passed into law, and Sir Barnes Peacock then raised the question that the Civil Courts ought to be invested with jurisdiction, and he proposed to take away the jurisdiction of the Revenue Courts. The majority of the members of the Council were opposed to the change, and Mr. Currie openly declared that, if the jurisdiction was transferred to the Civil Courts, he would rather abandon the Bill than submit to it. Sir Henry Ricketts, Mr. Harington and other members were also opposed to it. Well, the law was passed leaving the jurisdiction to the Revenue Courts intact; but, in 1869, Sir William Grey carried out the transfer of jurisdiction to the Civil Courts. I by no means take objection to this transfer of jurisdiction. I think that, with their legal training, the Judges of the Civil Courts are admirably fitted to decide questions of right and title which are involved in the trial of rent-suits. But, if it be not deemed desirable that the jurisdiction should again be transferred to the Revenue Courts, surely the Government ought to consider whether the procedure cannot in some way be simplified. The proposals made by the hon'ble and learned Law Member will not remove the complaint of delay to any material extent. Now, knowing the origin of the proposal for a change in the land-law, namely, the complaint of the landlords of delay in the trial of rent-suits, and remembering also the promise which Sir George Campbell gave when charging the zamíndárs with the collection of the road cess for the simplification of the procedure for the realization of rent, and the repeated efforts made by successive Lieutenant-Governors in that direction, I think it is very disappointing that the zamíndárs should be told at this time of day that they cannot expect a summary procedure for the realization of rent, and that it is not practicable to do so consistently with the ends of justice. I have just now told you that in the *khás maháls* Government has a summary procedure of its own, and, surely, what is good for the *khás maháls* should be equally good for the estates of private landlords. If justice is not sacrificed by the summary procedure applicable to the *khás maháls*, why should it be held that justice will be sacrificed by extending the same procedure to private estates? If there be any loop-hole through which the ends of justice may

be defeated, by all means stop those loop-holes; but do not summarily reject the prayer of the landlords for a summary trial of rent-suits.

"I think, my Lord, I have touched upon the salient points of this Bill. There are many other points on which I cannot dwell at present for want of time. Perhaps they may be best considered in Select Committee; but there is one other point I should like to notice. Whatever difference of opinion may exist as to the different provisions of this Bill, I am glad to say that I am at one with the hon'ble and learned Law Member upon this, that we take our common start from the Permanent Settlement Regulations. I believe his object is to bring back the landlords and tenants in Bengal to the *statu quo* which existed at the time of the Permanent Settlement, and I should be very glad to see it restored. In fact, I look upon the Permanent Settlement Regulations as the Magna Charta of the rights of zamíndárs and raiyats, and I would earnestly wish that that charter should be respected by both parties.

"The two main questions which underlie the scheme of legislation before us, are, what is the position of the resident raiyats and of the tenants-at-will, and what are the rights of the zamíndárs?

"Upon these two important points I will, with your Lordship's permission, read two extracts: one from Harington's 'Analysis', and the other from a Minute of Mr. Seton-Karr, late a Judge of the High Court. I find these passages in Harington's 'Analysis', pages 422-23, Volume 3:—

'Those who cultivate the lands of the village to which they belong, either from length of occupancy or other cause, have a stronger right than others, and may, in some measure, be considered as hereditary tenants; and they generally pay the highest rents. The other class cultivate lands belonging to a village where they do not reside; they are considered as tenants-at-will; and, having only a temporary, accidental, interest in the soil which they cultivate, will not submit to the payment of so large a rent as the preceding class; and, when oppressed, easily abandon the land, to which they have no attachment."

"It will thus be seen that there was a broad distinction drawn between the *khudkásht* and *paikásht* raiyats, and that, in the days of the Permanent Settlement, the former paid more than the latter. Again, he says:—

'It would be endless to attempt the subordinate variations in the tenures or conditions of the raiyats. It is evident that, in a country where discretion has so long been the measure of exaction, where the qualities of the soil and the nature of the produce suggest the rates of the rents, where the standard of measuring the land varies, and where endless and often contradictory customs subsist in the same district and village, the task must be nearly impossible.'

"In other words there was no fixed law or custom for the determination of rent, which was left entirely to the discretion of landlord and tenant. With regard to the rights of the landlords, Mr. Justice Seton-Karr, to whom I have alluded, does not take an exaggerated view. This is his rendering of the Permanent Settlement Regulations on this subject:—

'The zamíndár, at first sight, appears certainly possessed of very high privileges and powers. He is at liberty to impose rents on every bíghá of land included in the area on which the revenue for which he is responsible is assessed. He can, *proprio motu*, and without having recourse to an action at law, dispossess all persons who set up rent-free grants of a date subsequent to December, 1790. The lands of all raiyats who die without heirs, or who abscond, revert to him. He has the undoubted privilege of levying and assessing rents at a higher rate on the better qualities of land, and on some of the more valuable kinds of produce. His title to demand rents from tenants who are mere occupiers without any title, is, it has been judicially held, barred by no length of time, not even by sixty years' abstinence from demand, inasmuch as the mere liability for rent is held to be a constantly recurring cause of action. As regards his distinct proprietory right in some of the very products of the land, there is, in all the ordinary pattás which the zamíndár issues to raiyats, an invariable restriction against the cutting of trees by the raiyat, which might even seem to imply that the right to the timber and the fruit trees belongs, not to the raiyat, but to the zamíndár. Tanks are not usually dug, nor are new roads cut, without his permission; and the former are sometimes excavated at his expense. This is one of the few instances in which I have known zamíndárs lay out any money on the land. The motive, however, is generally a pious one. The theory that the rent-bearing area of the estate is not to be reduced without his permission is, in this and other instances, namely, in the excavation of tanks and the formation of roads, openly recognised. The zamíndárs' right to rent includes not only agricultural produce, leviable in kind or in money, but rents from fisheries in running streams and in marshes; from the actual produce of the forest; and from the very droppings of the trees.'

"This is the interpretation of the Permanent Settlement law by a learned Judge of the High Court, who was by no means a friend of the zamíndár, and I ask whether the rights and privileges which the Permanent Settlement Regulations conferred on the zamíndárs are respected in the Bill before us. I ask whether, while professing to restore the *statu quo ante*, which existed at the time of the Permanent Settlement, my hon'ble and learned friend has not practically gone in the opposite direction. This is not the first attempt which officers of Government have made to legislate in a direction not quite consistent with the guarantees of the Permanent Settlement. But the Government has always scrupulously respected the solemn compact entered into by it with the landholders of the country. In 1819, I find the Government, through no less a personage than Mr. Holt Mackenzie, himself a high authority on the Revenue law of Bengal, Secretary to Government, declared as follows, in a letter, dated the 22nd of April, 1819.

'But it is the firm determination of Government to maintain inviolate the rights and privileges bestowed on the zamíndárs by that settlement, notwithstanding any errors or abuses that may now be discovered to have been practised, and although the profits of any one from his estate should be many lákhs and his jama only a few rupees, yet Government will on no pretence break its agreements.'

"In the words of Mr. Holt Mackenzie I appeal to your Lordship, and I am confident that when the whole question is considered by your Lordship and this hon'ble Council, the rights and privileges conferred and guaranteed by the Permanent Settlement, both on the zamíndárs and raiyats, will be preserved intact and inviolate. I observe that, at the present stage, the Bill is to be referred to a Select Committee, and I confess I do not quite understand my position with respect to the Bill. I have said there is necessity for legislation on the subject, at the same time, I have denied the necessity for a general revision of the rent law. On the other hand, I see that the Bill, in its skeleton form, has received the assent of the Government of Bengal, the Government of India and Her Majesty's Secretary of State. I see that the Bill, as laid before the Council, contains provisions which are repugnant to the principles of the Permanent Settlement, and which I, therefore, consider it my duty to oppose. But the question is whether, the Bill having already received, as regards its main principles, the assent of Her Majesty's Government, it will be open to the Select Committee to consider those provisions which constitute the leading principles of the Bill, and whether the Government will be prepared to make any changes in the substantive part of the Bill, when, by the rules of the Executive Council, which require the previous assent of the Secretary of State to any project of legislation, the members of this Council are practically precluded from considering any fundamental principles of a Bill so sanctioned. I, for my part, do not see any advantage, so far as these main points are concerned, of referring the Bill to the Select Committee.

"Of course, as regards details, the Select Committee will be the proper body to settle them. Be that as it may, I take it that when a Bill of this momentous nature is submitted to public criticism, the Government will not decline to consider any representations or suggestions which may be reasonable or just, though such suggestions may be opposed to their previous conclusions. I feel grateful to your Lordship that arrangements have been made for giving a wide publicity to this Bill, and for inviting public opinion upon it; but I think the public ought to receive an assurance that their criticisms and representations will not be thrown away, because the leading principles of the Bill have already been discussed and determined upon by the Government of India and the Secretary of State. If the Select Committee be tied as it were hand and foot in regard to the fundamental principles of the Bill, then public discussion will be of little advantage, for whatever the public may say or write, and however reasonable their suggestions may be, the Select Committee will not be at liberty to make material alterations in the Bill.

"And now, my Lord, in bringing to a close my wearisome address, for which I apologize to the Council, I venture to express a hope that, as this is a measure of the greatest importance to both landlords and tenants in this Province, the

like of which had never before, I may say, engaged the attention of the legislature since 1793, that this hon'ble Council will not seal with its sanction this Bill, without giving to it a patient, attentive and full consideration, and that it will not consider the object of the Bill as merely an attempt to adjust the relations between landlord and tenant, but also as a matter involving deep economic problems, as a matter involving the sacred question of the plighted faith of Government, and as a matter involving the prosperity and happiness of sixty millions of the population of Bengal."

The Hon'ble MR. EVANS said:—"I do not propose to detain the Council at any great length on this question, and I am glad to find that the Hon'ble Mr. Kristodás Pál is at one with me on at least one subject, and that is the necessity for legislation. I do not think that anyone who has seriously and attentively considered this subject, and has seen how matters were going on, can help feeling that there is a necessity for legislation. When it is found, as I myself have found, that the Law Courts have come to a dead-lock, and that they can do nothing with the cases for enhancement and settlement of rents that come before them; that such enhancements are introduced by illicit means, where the zamíndárs are strong and the raiyats weak, and that just demands are resisted where the zamíndárs are weak and the raiyats strong, then it is evident that a very serious state of things has arisen—a serious state of things for the Government of the country, and a serious state of things for the landlords themselves. The mass of the raiyats in this country are ignorant people, as a rule, incapable of combination, except on a very small scale, although they have begun to show, in some parts of the country, that they are learning the advantages of combination, and can combine in an effectual manner against the landlords. If you find, on the one hand, the landlords beginning to use other than legal pressure to enforce their claims, and the tenants beginning to combine to resist, by means other than legal, those claims, you have a state of things which might, if left alone, develop into a serious danger. We all know there is nothing more troublesome or difficult to manage, when once it has begun, than an agrarian agitation, and, therefore, I think that, in the interests both of the landlords and the raiyats, legislation of some kind is clearly necessary.

"The landlord has great difficulties in enhancing and settling his rents, and difficulties of various sorts in the collection of them. Therefore, as everyone seems agreed on the necessity for legislation, the question really resolves itself into one of the length to which legislation should go. The hon'ble member who last spoke has said that this matter was formerly discussed, and it was felt there was necessity for some legislation for the benefit of the zamíndár, and that successive Governments found themselves unable to give the relief wanted for various reasons. He also said there were two points on which legislation was required, namely, for the recovery of rent, and the settlement of rent. But there, my Lord, is the hitch. How are you to settle the rents unless you get at the rights of the parties? And that is why each Lieutenant-Governor found himself unable to settle the rents. They could not settle the rents until they found some proper method of settling them, and they could not give the zamíndár summary power to recover rents till it was settled what the rents were. The zamíndárs, no doubt, would be glad if they could have a summary procedure, which enacted that the tenant was to be sold up for whatever the zamíndár considered to be his rent. But it was impossible for a Government which had the charge of all these millions of raiyats to grant that boon—a boon which might in the end turn out to be an exceedingly fatal one to the zamíndár himself. Therefore it is that Commissions have been issued, and all this mass of evidence before us now has been collected. I quite agree that the work of these Commissions is wanting in statistics. I cannot, however, go with my hon'ble friend as regards the want of statistics about the question of transferability, because we find pages 365 to 373 all taken up with divers transferable tenures, and the districts in which they are transferable and the number of transfers which are registered. There are a certain number of valuable statistics in regard to transfers; on other points there are no statistics. This is a great disadvantage. But this is not to be imputed to any fault of the Commission, because, as a

matter of fact, there was no means of procuring these statistics. The statistics as to the occupancy of the lands are to be found nowhere except among the zamíndárs themselves, and if there is any body which can give these statistics, it is the Zamíndárs' Association. Well, now, this being so, the question has been forced before the Government, after careful consideration, how are rents to be settled? And here I may observe that my hon'ble friend Mr. Kristodás Pál appears to assume, with regard to the great bone of contention, the position of occupancy raiyats, that Act X of 1859 has practically accorded that right to a large proportion—he thinks ninety per cent.—of the tenants of Bengal. If that is so, there can, as already stated, be very little reason for extending it further. But what is the fact?

"If ninety per cent. of the tenants in Bengal have got the occupancy right, the fact remains that they cannot prove it, and it would be ruin to most of them to try to prove it. Now, of course, if you get a class of men and give them certain rights, but place them in such a position that, having those rights, and knowing that they have them, yet they are unable to enforce them, there arises a very lamentable position. If a man has a right and cannot press it, what will he do? If there are many of them, they will create disturbances. Therefore it is that, looked at from this point, the Bill appears to be a Bill, not for overturning the Permanent Settlement, but for securing to the ninety per cent. of the raiyats in Bengal some means of getting the benefit of this right of occupancy declared by Act X, and being able to assert it. I saw in a letter not very long ago, in one of the newspapers, a statement by a zamíndár that most of the raiyats on his estates had morally a right of occupancy. That is a curious expression. It means they had got it, but had not got it; and that, practically, is no doubt the state of affairs described by my hon'ble friend to-day. There is the moral possession of a right of occupancy, unaccompanied by an actual or fructuous possession of it. Now, if this is the state of the case, it is not really so great a blow to the zamíndárs as we have been led to suppose, to pass a law by which the difficulties of proof should be minimized, by which the onus of proof should lie less heavily on these tenants, and by which they may be able to get a more effectual enjoyment of this already existing moral right. I understood my hon'ble friend the Maháráját of Darbhangá to say that, as a matter of fact, he thinks it would not be a bad thing that raiyats should have some sort of fixity, and I think that is the feeling of a great many zamíndárs. If they could get a fair settlement of their rents, and get rid of all the litigation in which they are at present involved, they would not look upon such extension of the right of occupancy as is given by the Bill with any great alarm. Now, this being the case, we are invited by my hon'ble friend to consider this matter as if it were some interference with the Permanent Settlement, and the first thing he asks us to consider is the position of the zamíndár and raiyat, and he lays claim on behalf of the zamíndárs it, is that, antecedently to the Permanent Settlement, the zamíndárs were absolute owners of the land; that they were subject to payment of revenue to the Government, but that they were absolute owners, and that this right was not then created but confirmed, and exists to this day, and that Act X of 1859 was a serious interference with that right. I cannot agree with that view of the matter. As regards the position of the zamíndárs before the Permanent Settlement, I would refer to a Minute of Lord Cornwallis.

'Under the former practice of annual settlements, zamíndárs who have either refused to agree to pay the rents that have been required, or who have been thought unworthy of being entrusted with the management, have, since our acquisition of the Díwání, been dispossessed in numberless instances and their lands held khás, or let to a farmer; and when it is recollected that pecuniary allowances have not always been given to dispossessed zamíndárs in Bengal, I conceive that a more nugatory or delusive species of property could hardly exist.'

"Well, it was so; it was a delusive possession of property. However, I think it is quite clear that, whoever they were, they were not absolute owners, even taking it from the point of view as between themselves and the Government. But I do not really care to discuss that matter, because, whatever was their position as between themselves and the Government before the Permanent

Settlement, it is clear that, as between themselves and the Government, the Government did give over this right of making any further demands upon them and constituted them, so far as Government was concerned, absolute owners. That was the position in law. I have no doubt at all that a very large number of them were hereditary zamíndárs, and many of them were members of the old princely houses, who had originally (as ruling chiefs) rights in the land; I agree that it was a hereditary interest, and an interest which would pass to their children. But this did not at all conclude the question whether the raiyats had any interest. The fact is, that land is capable of having a number of interests in it. As between the Government and the zamíndár, if the Government surrenders its rights in the land to the zamíndár, the zamíndár becomes the actual proprietor of that land so far as the Government is concerned. But when we come to the question whether the raiyats had anything to say in reference to this land, that is another thing altogether. What do we find was the old customary land-law of India? I am quoting from memory now, but even Menu lays down that ownership in land arises from the reclamation of land, and I think you will find that even that right of ownership was not a full and absolute dominion, but that a right, subject to the rights of Government and some other persons, did arise on the reclamation of land, according to the old custom of Hindustan, and so we find it to be the feeling of the country to this day.

"Zamíndárs held certain large estates, and under them were the raiyats, and the raiyats from time to time reclaimed jungle and then held lands under the customary law of India. What was that customary law? The first thing was that, having been recognised as raiyats, they had a right to sit there at pargana rates. That right did not interfere with the right of property of the zamíndárs. The right of the zamíndár was absolute as between himself and the Government. But those rights did not cover all the rights in the land, as other people also had rights in that land. My hon'ble friend has relied on a passage from a judgment of Lord Lyndhurst. Now this passage which has been read comes from the well-known case of *Freeman* v. *Fairlie*. It was a suit brought in the year 1828. The decision in it was that land in Calcutta descended as a free-hold inheritance to the heir, and did not pass to the personal representative. That was the point Lord Lyndhurst had to consider, and his remarks were all made in reference to it. It appears that one Susannah Oldham died, leaving three houses in Calcutta. These three houses she bought from different people. But, as was the custom in those days, she got a pattá from the Collector of Calcutta. She died and left an executor, and differences having arisen between this person and those interested, the question arose whether the houses passed to the heirs or the personal representatives, whether this was real estate or whether it was personal estate. They went before the Master and the Master made his report, and it was decided that the English law applied, and that it went as a free-hold inheritance. This is a very interesting question, but has really nothing to do with the question now under discussion.

"It was contended in that case that no interest which could be held in land in India could be said to amount to an estate in fee simple according to English law, although English law had been introduced to some extent into Calcutta, and it was said that all holdings under the East India Company were too precarious to constitute so high an interest as an estate in fee simple, for various reasons which may be read at length in the report.

"It was *a propos* of these contentions that Lord Lyndhurst remarked that a perusal of the Bengal Regulations had led him to the conclusion that the interest of the zamíndárs in land under those Regulations was an absolute proprietorship and not such a precarious or temporary interest as had been suggested. His object was to show that, if such an interest was vested in an Englishman in a place where English law applied, it would be an estate of inheritance in land descendible to the heir, and not something in the nature of a chattel interest divisible among the next-of-kin. If Lord Lyndhurst had before him a question as to the relative position of zamíndár and raiyat in a zamíndárí, his decision would have been entitled to the highest respect,

and the hon'ble and learned mover might well be uneasy if he had gone against so high an authority. But in truth the passage cited is only another instance of the danger of citing isolated passages from judgments without considering the point discussed in those judgments.

"In the *résumé* given by Mr. Justice Seton-Karr of the position of the landlord, just read by my hon'ble friend, he points out that the zamíndár has a right to the rent which is barred by no length of time. Here is a curious thing. If you have an absolute ownership, and if another person holds possession for twelve years, it becomes his own, because he has adverse possession. But the rule laid down by Mr. Seton-Karr was that, if it be in the possession of a raiyat, and the raiyat cultivated it, not alleging himself to be a zamíndár, he does not hold adversely. Now, although he sits there for sixty years, his title is not adverse, and the landlord does not lose his right even though he may omit to collect the rent. What is the reason? That originally the status of the raiyat and the zamíndár did not depend on contract at all. There was one person who engaged with the Government for the land and obtained an assignment, temporary or permanent, of the right of Government to obtain revenue from every bíghá of cultivated land not specially exempted by a grant from the ruling power; then squatters came and squatted; they never dreamt of saying they were zamíndárs, but simply raiyats; if the landlord came and asked for rent they would pay what their neighbours paid; if they reclaimed the land, they would ask to pay less, and generally would be allowed to pay less; but if they took possession of cultivated land, they would have to pay the pargana rate or go away. But it was not possible to say that these persons were anything else but raiyats. Tenancy in England was by contract, and if a person comes and sits on your land and cultivates it, and has not made an express or implied contract, his possession is adverse to the landlord, and after twelve years he becomes owner of the land free of any obligation to pay anything to anyone. But this is not the case here. I know that Sir Barnes Peacock and other great authorities, who have taken a strictly English view of the question, have said that the relations between the zamíndár and the raiyat are similar to those of landlord and tenant in England. But many of the Judges—Messrs. Steer, Jackson, Seton-Karr and others—held that the relation of zamíndár and raiyat could be established independent of any contract. If that is so, it throws great light on the subject, and I think there are many other things which point to the conclusion that permanent cultivation of land in India by a person other than a zamíndár was sufficient evidence of a raiyati holding according to custom.

"There has been much confusion arising out of the use of the term 'actual owner' or 'actual proprietor of the soil.' In many zamíndáris there is a zamíndár, a patnídár, a durpatnídár, and under them a *jangalburí* or an occupancy raiyat. Each one of these is an actual owner or proprietor of such interest as he has in the soil.

"But say the opponents of the Bill—how about the waste-lands? There were no raiyats on the waste-lands. The zamíndárs by the Permanent Settlement became, as to the waste-lands, owners of their own former rights (if any) *plus* the Government rights, and as no one else had any rights they must have become absolute owners in the fullest sense, and able to do what they liked with their own.

"The answer is that the position of the waste-lands was not changed by the Permanent Settlement, save so far as the rights of Government were transferred to the zamíndárs. If, therefore, before the Permanent Settlement raiyats who reclaimed or settled on waste-land acquired any rights, raiyats who did the same thing after the Permanent Settlement would acquire the same rights and occupy the same status as they would have acquired or occupied had they settled before the Permanent Settlement.

"No doubt the incidents of a customary holding may be varied by actual contract (unless prohibited by law). But all original contracts which I have seen between zamíndárs and raiyats about to reclaim waste-lands have been contracts whereby the raiyats have obtained a right to sit at lower rates, either

permanently or for a time, than the ordinary rates prevailing on the neighbouring cultivated lands. I have never seen or heard of any case in which a raiyat undertook to reclaim waste-lands on worse terms than the customary terms on which permanent tenants of adjacent cultivated lands were then holding.

"But I have seen and I have heard of many cases in which, from the power of the zamíndár and the weakness and ignorance of the raiyat, the successors of those who had reclaimed land on specially favourable terms since the Permanent Settlement have been unable to enforce or maintain those terms and have been reduced to the level of ordinary raiyats.

"It may be taken that all land reclaimed since the Permanent Settlement has been reclaimed either on the old customary terms without a written engagement, or on a written engagement more favourable to the raiyat than the customary terms.

"I will only make one or two further remarks. The most effective part of the hon'ble member's on-slaught on this question was his attempt at what I may call the *argumentum ad Governmentum*, in which he said that the Government had treated the raiyats on their khás maháls or Crown lands just as the zamíndárs had treated them, or rather worse, and that they had declined to recognise in the raiyats any higher rights than the zamíndárs had recognised, and that they had mercilessly enhanced their rents and evicted them if they did not consent.

"It is no argument to say that the Government in various departments have done the same thing. In speaking of the Government, it must be remembered that there are many departments of the Government. From one point of view, you may have the Government sitting here consulting for the general good of the country and taking broad views of the question. On the other hand, there is a department which represents the Secretary of State, who represents the positive right of the Government in their property, just as in the case of Crown lands in England. When you deal with the Government in this capacity, I am sorry to say they don't seem to be the same kind of people as the Government of India in its broader capacity. I have seen the same thing at home. I have seen what I considered to be very hard and unjust conduct on the part of the Commissioners of Woods and Forests—conduct which was worse than would be expected of any private proprietor. They are in the nature of a Corporation, which has to preserve the rights of the Crown, and they come to look on every body else as natural enemies, who are endeavouring to deprive the Crown of its rights; and I have seen a good deal of the same sort of thing in India, and I am quite prepared to believe it is true, as many of the Government officials must know, that these officers often think it their duty to exact as much as they can. I am only suggesting this as an explanation of what has been said of the dealing of officials in Government and Court of Wards' estates. Suppose there is a substratum of truth in the figures brought forward by the hon'ble member, and it should be proved that enhancements to the extent of one hundred per cent. have been made on these unfortunate Government estates, I think the Board of Revenue, on learning of the existence of such things, would put a stop to them. But if the state of things is as has been stated to the Council it is certainly very deplorable. But it furnishes an argument against my hon'ble friend. If the Government officials, who have no personal interest in them, would do such frightful things by abusing the special summary powers entrusted to them, how much more will the managers of zamíndárs do them?

"I have not had time to go through the details of the Bill; but I think several grave and serious questions arise in reference to it. The question of compensation for disturbance and other important questions require serious consideration, and I offer no opinion upon them at present. The practical working of the different clauses of the Bill have to be considered.

"But the great thing is to try and secure, as nearly as possible, absolute data on which to proceed. I do not believe in the beneficial effects of any form of words, unless you have facts to act on. I believe that, before the present

state of things can be set straight, a full record-of-rights will have to be undertaken. I know that is not a thing which my friend will be pleased to hear. But I do say that nearly one-half the litigation in Bengal arises from the impossibility of ascertaining facts. You cannot get at the rights of any question unless you can get at the real facts. Any number of papers may be produced,—jamabandís, jama-wásil-bákis and the like,—but they are frequently worth nothing. I don't say the zamíndárs have anything to do with the presentation in Court of untrustworthy documents; many of them are very respectable people, but the *náibs* or managers think nothing of fabricating a set of papers. Now, the records being untrustworthy and the oral evidence very worthless, it is very difficult for the Courts to decide the points which come before them. I believe most of the litigation will be rendered unnecessary if you can get in Bengal a real record-of-rights, and if you get rent receipts of a trustworthy character. All these things will practically diminish litigation, and then, if you get a settlement of rents by establishing tables of rates or otherwise, which would last for a considerable time, I do not think the zamíndárs will have any great difficulty in recovering rents, for the rent will be definitely settled. Under these circumstances, there will be very little use in false evidence, and judgment will be given, and in a month or so the holdings in default will be put up for sale. I think improvements can be made, for I think zamíndárs should have all reasonable facilities for the recovery of rent which can be given to them without causing oppression to the raiyats. If anybody can show any way of giving increased facilities in this respect, I think the zamíndárs ought to have the benefit of it.

"The Government demand is constant and inexorable, and the Government have kept in their own hands a summary and effectual process for realizing it from the zamíndár. The Government is bound, if possible, to enable the zamíndár to realize the assessment promptly from the actual cultivator. Had the Government from the first insisted that an authentic Government record of rights and rates should be kept up, and that a reliable system of recording payments should be enforced, there would be no difficulty in complying with the demand of the zamíndár; and it would be the clear duty of Government to do so. But unless the Government will resolutely determine to face this matter, it will never be able to do equal justice to the zamíndár and the raiyat: to give the raiyat proper protection is one duty; to give the zamindár the power to realize punctually from the raiyat that rent or revenue which the Government exacts so punctually from the zamíndár is another duty. Neither of these duties can ever be effectually performed without an authentic record of rates and payments, and if this Bill be not supplemented by vigorous executive action in this direction, it will join the long list of Acts and Regulations of high-sounding promise and little performance of which raiyat and zamíndár have been the subject."

The Hon'ble Mr. THOMAS said:—"My Lord, I had wished to speak generally in support of the Bill, from experience of like tenures in other parts of India; but, looking to the lateness of the hour and the number of speakers yet to follow, I think I shall best consult the convenience of this Council by forbearing to do so: but with reference to the quotation made by the Hon'ble Kristodás Pál with a view to show the pressure of land assessment in the Madras Presidency, from which I come, I may be allowed to say just the one word that his figures are not normal figures, and refer to the great famine time, and the uncollected arrears are the arrears mostly of men and families who had died of famine, and have no sort of relevancy to the normal pressure of the assessment there."

The Hon'ble MR. REYNOLDS said:—"I desire to thank Your Excellency's Government for the introduction of this Bill. I think it superfluous to enter upon any discussion as to the acknowledged and proved necessity for legislation upon the rent question, after a perusal of the papers which have been laid before us in connection with the Bill. It is conclusively shown by those papers that this necessity has been recognized by the Government, by the Courts of law,

by the officers engaged in revenue and administrative duties, by the zamíndárs and other rent-receivers, and by the cultivators and other rent-payers. The Bill before the Council is the result of long deliberation and patient enquiry; it is an honest attempt to hold the balance impartially between interests which, though they are really identical, are apt to come into apparent conflict at various points of contact, and the authors of it have resisted the temptation to legislate upon new lines, or to put forward new theories of the rights of the different classes of the agricultural population. I cannot agree with the Hon'ble Mr. Kristodás Pál in the estimate which he has passed upon the Bill. I have studied the rent question in Bengal for nearly as many years as he has; I have studied it, not merely in books, but by practical experience of its working, and I have striven to make myself acquainted with its real facts and bearings; and I say with confidence, that the feature which I most admire in the Bill is the eminently conservative and constitutional character of its main principles. In some points of detail I venture to think that this character has not been maintained, and I shall not shrink from noticing these points in their proper place. But, taking the Bill as a whole, it is essentially a measure framed in accordance with the ancient prescriptive law of the country, and, as such, it ought to be acceptable to those who think that the most useful, and certainly the safest, province of legislation is to formulate and crystallize those principles which have been tested by long experience, and accepted by general consent. I think it useless to speculate upon the question whether, in ancient times, the right of property in the soil was vested in the Sovereign, in the zamíndár, or in the raiyat. That question has been discussed with more learning than I could bring to bear upon it by my hon'ble friend Mr. Evans, and I imagine he would agree with me in thinking that the expression 'right of property', when used in such a connection and employed in its modern and European sense, is altogether misleading, and connotes an idea entirely foreign to the age and the country. But there are two great principles which underlie the question of agricultural tenancy in these Provinces,—principles which took their rise in a remote antiquity, which, though they may not have been formally embodied in any statute, are written in the hearts of the people, which were not affected by the legislation either of 1793 or of 1859, and which have survived the lapse of years and the rise and fall of dynasties. These two principles are, first, that the resident raiyat cannot be ejected from his holding in the village lands so long as he pays the established rent, and, second, that it is the right and the duty of the ruling power to determine the rent payable by the raiyat to the zamíndár. I observe with much satisfaction that not only are these principles recognized in the present Bill, but that the Bill is based upon them, and that its provisions are such as naturally spring from the acceptance of them.

"Chapter II of the Bill is of comparatively little importance in Bengal Proper; but in Bihár it will be extremely valuable, if full use is made (as I trust will be the case) of the power to make a survey and register of *khámár* lands.

"In Chapter III, section 15 reproduces the present law regarding the presumption arising from twenty years holding at an unchanged rent. This presumption was first introduced by the Act of 1859, and I have always thought that it bore somewhat hardly on the landlord, and especially on two classes of landlords who seem entitled to favourable consideration,—landlords who have dealt leniently with their tenants in past years, and landlords who have purchased their estates at sales for arrears of revenue. I was at one time disposed to recommend that the presumption should be removed altogether; but I have since seen reason to modify this view, and I am now content that the section should stand, as it will always be in the power of the landlord to apply, under chapter XII of the Bill, for the preparation of a record-of-rights on his estate. It has, I think wisely, been determined to limit the sections regarding registration to tenures. There is no doubt something attractive in the proposal of the Rent Commission (which was retained in the Bill prepared by the Government of Bengal) to extend the same procedure to occupancy holdings. But the country is not ripe for this. There is no agency for carrying the measure into effect, and the law would be either a dead letter, or would be worked to the prejudice of ignorant and helpless cultivators.

"The short chapter on patní tenures contains nothing which seems to call for remark. The sale procedure, as specified in the schedule, will doubtless come under the consideration of the Select Committee. The law on this matter needs amendment on various minor points, and the Bengal Government Bill contains a number of useful suggestions and recommendations.

"Chapter V, which is really the keystone of the Bill, deals with the important subject of the occupancy-right of the tenant, and of the landlord's right of pre-emption. It avoids the fatal mistake committed in Act X of 1859 (or at least in the interpretation of that Act which has generally been accepted), of limiting the right to those particular fields which may have been held in continuous possession. It defines the settled raiyat as the tenant who has held raiyati land for twelve years in any village or estate; and it declares that such settled raiyat shall have a right of occupancy in any raiyatí land held by him in that village or estate. It may be objected that the proposed definition is at once too wide and too narrow: too wide, because the cultivation of land in the same *estate* was never held to confer the position of a khudkásht raiyat: and too narrow, because a much shorter term than twelve years might reasonably be taken as evidence of settled occupation. The definition may in some measure be looked upon as a compromise: and the correspondence shows that it is not the definition originally proposed by the Government of India. But what we have to consider is the practical effect which this or any other definition will produce. Assuming the proposition (which indeed cannot be controverted) that the resident raiyat has a right of occupancy in the village lands, what is the definition which will secure this right to the greatest number of those who ought to possess it, and extend it to the smallest number of those who are not entitled to enjoy it? I must own that I am not at present prepared to suggest a better definition than that provided by the Bill, and those who object to it may fairly be asked what they would propose to substitute for it. This, however, will certainly be one of the points upon which the Bill will be attacked: and it will be the duty of the Select Committee to see that the definition is not narrowed down by any limitations which would deprive it of its due significance or its proper effect.

"There is, however, one section in this chapter against which I feel bound to record an emphatic protest. Section 48 provides that the occupancy-right may be acquired by grant from a proprietor or permanent tenure-holder. I think I can understand the reasoning which may have led the framers of the Bill to insert this provision, but the section is, nevertheless, of a revolutionary and dangerous character, and any extension of the occupancy-right which may result from it would be too dearly purchased. It is practically an admission of the vicious principle that the occupancy-right may be made a matter of bargain or contract between landlord and tenant. The occupancy-right cannot be granted by the landlord, for it is not his to grant: it is essentially inherent in the status of the resident cultivator.

"Of the incidents of the occupancy-right, the only one which calls for notice is that which makes the right transferable. It seems probable that the right was not originally transferable; but the custom of transfer has become common, and it is for the advantage of both parties that the right of transfer should be formally legalized. The landlord's interests are sufficiently protected by the power of pre-emption which the Bill gives him. It has been said that the result of a general power of transfer will be, that the land will pass out of the hands of the cultivators into the possession of middlemen and mahájans. But experience does not justify this apprehension. The transfers which already occur every year may be counted by thousands; but the purchasers of the holdings are men of the same class as the sellers. There are at least two classes of occupancy-raiyats who possess and have long possessed an acknowledged and recognized right of transfer: the guzashtádárs of Shahábád and the thání raiyats of Khurda in Púri. It is certain that with neither of these classes has the power of transfer had the effect of making the lands pass out of the hands of *boná fide* agriculturists.

"The sections regarding the right of pre-emption must be taken in connection with those relating to merger, and the Bill seems to me somewhat defective in that it fails to explain clearly the nature of the landlord's title in a holding which he may have purchased. The draft Bill of the Bengal Government contained an express provision that the doctrine of merger should not operate to convert a holding, when purchased by the landlord, into *khámár* land. The present Bill provides that, if the landlord lets the land, he must let it as an occupancy holding; but the Statement of Objects and Reasons explains that, if he pleases, he may keep the land in his own hands, and cultivate it by his servants or labourers. This is a serious departure from the rule of the old Regulations. By Regulation VIII of 1793, the zamíndár was not only permitted, but required, to let the lands of his estate; he had no power to hold them himself. If, indeed, a zamíndár may hold raiyati land in this way as long as he pleases, it is practically equivalent to the conversion of the land into *khámár*. Section 56 of the Bill will undoubtedly be evaded: and the whole question of the exact nature of the landlord's rights in a purchased holding ought to be carefully considered by the Select Committee.

"By chapter VI, the maximum rent of an occupancy-raiyat is not to exceed one-fifth of the value of the gross produce in staple crops. It ought to be clearly understood that this is a limit and not a standard: for, in the Eastern districts, any such standard as one-fifth would involve an enormous enhancement. I am also inclined to think that the period of ten years provided by section 78 is too short. The Famine Commission suggested thirty years. This is possibly too long; but, if it takes twelve years for a raiyat to become settled, twelve years is surely not too long for him to remain free from claims for enhancement, and the Select Committee might consider this point. The provisions regarding a table of rates appear reasonable and fair; but I doubt whether any extensive use will be made of them. Careful enquiries on this subject have lately been made by the Government of Bengal in a number of selected areas, and the general results tend to the conclusion that tables of rates based upon classifications of soil cannot ordinarily be prepared in the Lower Provinces. I anticipate that the provisions of chapter XI will be found more generally useful than those which relate to the preparation of a table of rates.

"I should be glad to see the provisions of section 79 extended so as to correspond with those of section 74. If a raiyat is paying more than the established rate, this ought to be a legitimate ground for an application for reduction. I have noticed the references to this point in the correspondence, and I am aware that the omission is not an oversight; but I think the matter calls for further consideration.

"In section 81 it is to be noticed that, though at present the landlord's share is in some cases nine-sixteenths of the *grain*, the whole of the straw and chaff belong by custom to the tenant. To give the landlord half the gross produce would, therefore, be giving him a larger share than he is entitled to.

"The prices spoken of in section 83 are market prices; but it is to be observed that section 75 refers to the price at which the raiyat sells his crops, and this is a very different thing from the market price. I presume the tables mentioned in section 83 are intended to assist the Courts in determining cases in which the limit referred to in section 75 comes into play; but if this is the intention, it would be well to insert words to keep in mind the fact that the price at which the raiyat sells his crop will ordinarily be fully twenty per cent. below the quoted market price of that crop in the bázár.

"The above remarks refer mostly to matters of detail; but my objections to chapter VIII are of a different character. I must own that this is the part of the Bill which I least like or approve. Short as it is, it probably contains more innovations than the rest of the Bill put together. I object strongly to the title of the chapter. The ordinary raiyat in Bengal is the occupancy-raiyat; and it is a dangerous novelty to countenance language which implies that the status of the non-occupancy-raiyat is the rule, and that occupancy-raiyats form an exceptional and privileged class. The clause relating to compensation for

improvements is an innovation, but a comparatively harmless one, as a non-occupancy-raiyat would never make improvements, unless he were protected by a lease. But the proposed compensation for disturbance introduces an entirely new element into the agricultural laws of the country. We have not the least experience to show how this provision would work in India, and the principle of it seems to me to be objectionable. Either the landlord has the right to eject the tenant or he has not. If he has the right, he should not be required to pay compensation for exercising it; if he has not the right, no money payment ought to be sufficient to give it him. Section 91 refers to the limit fixed by section 119, which provides that the rent of an ordinary raiyat or under-raiyat shall not exceed five-sixteenths of the value of the gross produce of the land. I question the wisdom of attempting to fix by law the limit of an under-raiyat's rent. Such a law is certain to be disregarded, for it is not the interest of either party that it should be observed. But the provision which puts the non-occupancy-raiyat on the same level as the under-raiyat, and on a different level from the occupancy-raiyat, as regards the rent which he may be called upon to pay, is open to far more serious objection. It is an unconstitutional proposal; for it implies that the occupancy-raiyat is entitled to hold at a privileged rate of rent, and this is not, and never has been, the law of Bengal.

"I am fully alive to the difficulties which surround both these questions,—the question of the under-raiyat, and the question of the non-occupancy tenant. I am aware that the state of things has entirely changed since the days when the paikásht raiyat could practically dictate his own terms; and I do not object to a reasonable modification of the law to suit the altered condition of affairs. But I disapprove of any infringement of the sound principle that no raiyat, whether he has the occupancy right or not, can be required to pay more than the established rate of rent; and I therefore think that, in areas in which a table of rates is in force, it should be applicable to both classes of raiyats alike.

"In chapter IX, the provisions of section 98 regarding the instalments of a raiyat's rent seem to me to be sound in principle, but to require some verbal modification. As the Hon'ble Mr. Kristodás Pál told us in his speech, monthly instalments of rent are in accordance with the custom of the country, and should not be interfered with; but interest should not be chargeable, nor should a suit lie for arrears, unless default continues for at least three months. This is the practice of the Government in regard to its own revenue. In all the dowls of the Permanent Settlement which I have seen, the revenue is made payable in monthly kists; but no measure for enforcing payment can be taken except at the quarterly days of payment. The provisions of this Chapter regarding receipts and deposits of rent seem to me to be excellent. I am inclined to doubt the expediency of retaining section 114; and I should prefer to make the division absolutely final. Indeed, the provisions of sections 114 and 115 seem to me to be inconsistent with each other. Section 118 does not go nearly far enough. It is not sufficient to say that the danabandí papers shall be filed in the Collector's office. It should be declared that these papers are to be produced on the trial of any suit for arrears of the rent of the land, and that the suit shall be decided only in accordance with the entries in the papers.

"In chapter X, the wording of section 133 requires modification. There seems to be a confusion between revenue-free land and rent-free land. I know of no reason why a landlord should not measure revenue-free land if he is in receipt of the rents. On the other hand, he ought to be allowed to measure rent-free land if it is within the limits of his revenue-paying estate. The sections regarding the appointment of a manager on behalf of joint-owners have my full approval, except that I would suggest the omission of the word 'jointly', in section 148. I see no harm in allowing the management to be restored to the owners in all cases in which it is shown that the estate will be managed by them without inconvenience to the public or injury to private right.

"Chapters XI and XII appear to me to contain excellent provisions for settling disputes and avoiding litigation. I trust and expect that these provisions will be extensively made use of.

"The chapter on distraint is of no great practical importance in Bengal Proper, where distraint is comparatively seldom resorted to; but in Bihár it will be of great value and use: and I attach special importance to sections 185 and 186. I have heard to-day with a good deal of surprise that illegal distraint does not exist now-a-days in Bihár. The fact is flagrant and notorious. The abuses and oppressions which have been and are still committed in Bihár under colour of the law of distraint require to be put down with a strong hand: and nothing short of an express declaration that they are offences punishable by the criminal law will be sufficient to suppress them.

"In the remaining chapters of the Bill I find nothing which appears to me to call for special remark. In what I have said, I have commented with some freedom on what seem to me to be errors or omissions in the Bill. But I must repeat that, upon the whole, I look upon this as an excellent measure, broad and liberal in its scope, constitutional in its principles, impartially fair to the different classes whom it affects, and calculated to apply a practical remedy to the evils of which landlords and tenants alike have lately complained. If there are any members of the landlord class who consider that the Bill unduly interferes with their incomes or curtails their privileges, I believe they might safely be challenged to point to any essential part of the Bill (I do not speak of every point of detail) which touches any receipts to which they are justly entitled, or any privileges which they have not usurped. I repeat that this Bill is (in all its main features) a constitutional Bill: its object is to establish on a settled foundation, and to express in unmistakeable language, principles which have always been part of the unwritten agricultural law. It is the special duty of the Government to undertake this legislation, not merely in the general interests of the country, not merely for the sake of public peace and public prosperity, but because the system by which the old law of tenancy has of late been overridden and partially obliterated has been, in some measure, the unforeseen and unintentional effect of our own legislation in the past. There can be no more striking instance of this than the example afforded by Act X of 1859. That Act was intended to be the agricultural charter of the raiyat. It has been twisted and perverted into a means of overthrowing the very rights which it was its object to establish, and this has largely been done by decisions of our own Courts of law. A day may come when the present Bill will be unsuited to the altered circumstances of the country. The Government will have the same power then, as it possesses now, of legislating for the protection and welfare of the dependant taluqdárs, raiyats and other cultivators of the soil, and this power it will not hesitate to use when the occasion shall arise. But for the present, and under the conditions which prevail to-day, the Bill before the Council appears to me substantially to provide a remedy for acknowledged evils, a redress of agrarian abuses, and a recognition of prescriptive rights, and I shall heartily and thankfully give my vote for referring it to a Select Committee."

The Hon'ble DURGÁ CHARAN LÁHÁ said:—"I will make a few remarks, confining myself to some of the principal changes contemplated by this Bill.

The object of chapter II seems to be to restrain the practice said to be prevailing in Bihár of converting raiyatí lands into khámár or zirat lands. I must say that, if it exists, it is only confined to that Province. In Lower Bengal, I am prepared to say, there is no desire on the part of landholders to increase the area of khámár lands. On the contrary, the landlords here retain with reluctance raiyati lands in khás possession, simply because they cannot find tenants for them.

"The provisions in chapter V relating to occupancy rights are entirely new, and I must say that these changes are most objectionable. The existing law or custom does not support them, nor are they based upon the enactments which were superseded by the Act of 1859.

"Under existing law, a tenant with a right of occupancy has the right of holding his tenure so long as he continues to pay his rent, which, however, is liable to enhancement or reduction to fair and equitable limits under certain

conditions. On failure of payment of such rent, he is liable to eviction under a decree of Court. He does not appear to have ever enjoyed a status higher than this. But it is now proposed to confer on him the status of a permanent tenure-holder, without fixity of rent, at the cost of the rights of the zamíndár. The right of pre-emption reserved for the latter will not serve the purpose of restraining transfers to objectionable tenants, because, in point of fact, it will involve an unnecessary outlay, for which he can never expect anything like an adequate return. Again, a settled raiyat, as described in this chapter, may have a right of occupancy in any land in the village without any reference to the period of his occupation, and in spite of any contract under which he held it.

"These and other provisions in this chapter introduce a radical change in the established law, and are calculated to create an unnecessary conflict in the relations existing between landlord and tenant.

"In chapter VIII, which deals with the ordinary raiyat, the Bill confers on him a status which is entirely novel. The result of the extension of his right—one which is not unforeseen by the framers of the Bill—will be the multiplication of subordinate tenures, which would have the effect of defeating the very object for which the provisions have been made. But it is stated that the Government will put down the evil by future legislation. To my mind it seems to be more judicious not to allow the mischief to arise, than to create complications, and then to find means to check them.

"Then as to the question of enhancement of rent. The Bill lays down that it is to be effected either under a table of rates, or, where there is no such guide, at the discretion of the Court at fair and equitable rates within certain limits, or by contract to be approved by a revenue-officer. As to the first course, I submit it will be impracticable, and, even if practicable, it will never be a safe and satisfactory guide. As to enhancement at the discretion of the Court, the matter remains exactly where it now is, with the addition of a restriction to the exercise of such discretion. And as to the last of these means, the validity of a contract being made conditional on the approval of a Government officer, a private settlement between landlord and tenant becomes at once a matter of considerable difficulty.

"In section 93 of the Bill the provision for compensation for disturbance is quite foreign to this country, and its propriety is questionable.

"The effect of this innovation will practically be to preclude the landlord from all possibility of obtaining from the tenant a fair share of increment in the value of produce.

"The subject is so vast and complicated that I cannot hope to do full justice to it. I have barely touched upon a few of the salient points embraced in the Bill, in order to show that the Bill, as it has been framed, is repugnant to the spirit and letter of the Permanent Regulations, which had guaranteed the rights of both zamíndárs and raiyats, and to actual facts. It gives no practical facility for the recovery of rent, nor satisfactory means for enhancement, where enhancement may be fair, reasonable and perfectly justifiable. On the other hand, it enacts provisions intended, no doubt, for the benefit of the raiyat, but which, in course of time, will be found to operate prejudicially to the interest of the actual cultivators of the soil.

"In conclusion, I am inclined to think that this Bill will, in practice, do more harm than good, by destroying good feeling between the zamíndár and the raiyat, and putting them perpetually at logger-heads. When such is manifestly the tendency of the Bill, a departure from the existing law in a way that will unsettle the relations between landlord and tenant cannot but be regarded as an experiment of questionable character and doubtful efficacy."

The Hon'ble MR. HUNTER said:—"My Lord, at the present stage of the Bill, I intended to say only a few words, and from a special point of view.

The hour is now so late that I shall probably consult the wishes of the Council, if I curtail even those few words within the narrowest compass. I agree with the general objects of the Bill; but there are three points which I hope the Select Committee will carefully consider. These are, first, that attempts to interfere by statute, as opposed to custom, between tenants-at-will and the laws of supply and demand have seldom been successful. Second, that, although we may declare that rents shall not exceed five-sixteenths of the produce, the laws of supply and demand will, in the case of the tenants-at-will, be too strong for a hard-and-fast line of this sort. Third, that the compensation for disturbances, amounting to ten times the enhancement of the rent, is excessive, and, as such, is unjust. I had intended to insist on these points at some length, but my hon'ble friend Mr. Reynolds has already dealt with certain of them; the debate has been unusually prolonged; and the hour is very late. With regard to the general principle, I shall at present only say that the legal difficulties and supposed guarantees which seemed to some thinkers to stand in the way of this measure have been effectually disposed of by the speech of the hon'ble and learned member who introduced the Bill. The instructions of the Court of Directors before the Permanent Settlement, and the express words of that Settlement, prove to my mind that the Government of that day neither intended to make a contract with the landholders which should prevent it from afterwards securing the rights of the tenants, nor made any such contract. Even if such a contract had been made, the hon'ble and learned member has shown that it could not interfere with the rights of the tenants who were no party to it. But after these and all other legal difficulties have been cleared away, the Bill has still to be discussed and judged of on other and quite different grounds. For this Bill is in reality an attempt to counteract by legislative devices a fundamental economic change which has taken place in the relation of landlord and tenant in Bengal. It is by economic tests that the measure must now be tried, for by its economic results it will hereafter be justified or condemned. This law endeavours to reinstate the cultivators in a security of tenure somewhat similar to that which they enjoyed at the time of the Permanent Settlement. The Permanent Settlement found two classes of cultivators in possession of the soil, one of which was protected in its possession by customary rights, the other by economic laws. The first class was the *khudkásht* or resident cultivators. The Permanent Settlement reserved the rights of this class, but omitted to define them. After two-thirds of a century had passed, Act X of 1859 endeavoured to discharge the duty thus left unfulfilled, and the present Bill completes the task which Act X began. The other class of cultivators at the time of the Permanent Settlement were the *Paikásht*, non-resident or migratory tenants, who held land in a village other than that in which they lived. These men, although possessing few rights, were at that time protected by economic laws more powerful than any legal system. There was then more land in Bengal awaiting cultivation than there were people to cultivate it. The demand was by the landlord for cultivators, not by the cultivators for land: and the cultivators had necessarily, under such circumstances, the best of the bargain. The charge of enticing away tenants by offers of land at low rent was frequently brought by one landholder against another, and had to be decided by the English head of the District. The increase of population during the past century has reversed this state of things. The population in many parts of Bengal has outgrown the soil. It is no longer the landlord who stands in need of tenants, but the tenants who are competing against each other for land. The same economic laws of supply and demand which protected the tenant at the time of the Permanent Settlement, place him, in many Districts, at the mercy of the landlord to-day.

"The present law endeavours to redress this state of things. To the *khudkásht* or resident tenants, who were protected by usage at the time of the Permanent Settlement, it gives the protection of a Code of clearly defined liabilities and rights. For the *Paikásht* or tenants-at-will, who were protected by the economic law of supply and demand at the time of the Permanent Settlement, it creates certain legal safeguards which it hopes will save them from the extreme pressure of competition. In doing so it attempts to set up a breakwater between the operation of supply and demand and a

portion of the cultivating classes. No one can read the elaborate evidence which has been submitted to the Council with regard to the state of the agricultural population in Bengal, without feeling that the Government is called to make this attempt. But no one can study the history of similar efforts to interfere, not by customary usage, but by statute, between economic laws and their economic results, without seriously asking himself whether such an attempt is likely to be successful. My hon'ble friend Mr. Kristodás Pál has shown how much can be said against such an attempt. Legal restrictions which curtail the landlord's power over his estate tend to render him averse to investing capital in the improvement of his land. Nor must it be forgotten that, in Lower Bengal itself, the circumstances of districts differ so widely as to make any single rule inapplicable to all. In Bihár and other overcrowded tracts, the tenant is at the mercy of the landlord. In Chittagong and some other districts, there is still a surplus of lands for the cultivators to pick and choose among at their pleasure. The Commissioner of Chittagong, in a recent report, describes the practice there in vogue as a system which 'checks all disposition to rack-rent, and enables the cultivator to take up as much or as little land as suits him.' I trust that the economic difficulties of the measure will be clearly realized, and that the Select Committee will give a fair and patient consideration to the arguments of the landholding classes whose rights will be curtailed by the Bill."

The Hon'ble Rájá SIVA PRASÁD said :—" My Lord, I know I am not a good speaker or a scholar. I have not read that logic which enabled Archbishop Whately to prove that Napoleon Bonaparte was not born; or enabled Doctor Ballantyne to prove that the moon moved on its axis against all the mathematics of Dr. Kaye. I crave your Excellency's indulgence if my ideas are crude or my arguments confused. Nay, I may be here and there, perhaps, strictly speaking, out of order, but as I have been an observer of facts my whole life, I base what I am going to say on my personal experience. I have yet only glanced over the Bill, but taking the lucid introductory speech of the hon'ble Law Member as an index or key of the voluminous records connected with the subject, and of the conclusions arrived at by the highest authorities, I had better dwell upon the speech first, and then the Bill.

" The speech commences with the refutation of some imputations. I have not heard of any 'imputation' of the Government being 'actuated by a spirit of mischievous and restless activity', or 'being influenced by political or party considerations'; but I have heard of another kind of imputation, that the Government, being sorry to find their demand limited for ever by the Permanent Settlement, is now going to limit the demand of zamíndárs also, solely out of revenge. I know there is not a particle of truth in it. I can swear to the purest motives and the highest principles of the Government, but I must own that any condemnation of voluntary rack-rent in one Province comes with very bad grace from those who are forcing an over rack-rent in another. Those who are acquainted with the system of the Government revision of settlements in the unpermanently settled Provinces do not stand in need of any elucidation; but for others I may be allowed to give one or two examples. I have a village, Gangrain, in the Gorakhpur district. The Settlement-officer fixed the rate of rent according to his whims and fancies, or according to some averages supplied to him by the Board of Revenue, and fixed the Government demand on the total of that rent. The Settlement-officer went away, and the Government sanctioned the settlement. But my tenants refused to pay me at that rate, left the land, and ran away with heavy arrears. For several years nearly half the village, some five or six hundred acres, remained uncultivated. At last I reduced the rate and the fellows have come back and are cultivating, though I pay to the Government the same amount which was fixed,—very punctually. I have heard, though I will not vouch for its exact authenticity, that a zamíndár in the Allahabad district, finding the rates fixed by Sir Auckland Colvin, when he was Settlement-officer there, unrealizable, and being thus unable to pay the Government demand, made a bequest of that village in favour of Sir Auckland and left it. The case came to the notice of the

authorities when steps were taken for the recovery of the Government revenue, and then, perhaps, the rates were modified. I suppose it was Dr. Irvine who reported through Mr. Court, the then Collector, to the Government, that in the three trans-Jamna parganas of the Allahabad district he seldom met three men of whom one was not lame, on account of eating *khisári*, a very inferior pulse, better food than which the tenant could not afford to have on account of the high rate of rent. The Government modified the settlement and lowered its demand. I do not think the Doctors find that disease here in Bengal or Bihár. Numerous instances can be quoted like the above, but I wish not to be misunderstood; it is far from my intentions to oppose any measure which aims at limiting the rack-rent by making the produce or the value thereof as an ultimate standard. What I intend to show is simply this—that it would behove the Government better if the Government were to apply the principle first in the Provinces where Government is an interested party and shares in the rise or fall of the rent: for instance, let the Government rule in the unpermanently settled Provinces that no Court is to give a decree for any arrears of rent which the tenant proves to exceed, say, half the estimated value of the estimated average produce for a certain number of years; and at the same time declare that the Government demand is never to exceed so much per cent. of the actual assets of the zamíndárs. Then, and only then, would the Government be justified in coming forward in the permanently settled Provinces and telling the zamíndárs, 'Friends, you also cannot go beyond that'.

" Going to extremes is often to be deprecated. To say that zamíndárs had no existence at all, and are the British Government's creation, is simply to expose one's own ignorance of the country and its history. Still the copper-plates are dug up, granting villages in perpetuity, with their boundaries and all within them — *jalkar, bankar, díh, dábar, &c.*—the inscriptions generally ending with the threat that, if any one resumes the land, he will live sixty thousand years a worm in hell. Now, if these grantees had no proprietary right in the soil, what right had they? If they were not zamíndárs, what were they? Could they be farmers or officials? Farishta writes :—'Ala-ud-din Khiljí resumed all religious endowments and rent-free tenures, and confiscated all property in the soil (*har dehe ki dar vakf ya dar inam ya dar milk i kase bud hama ra khalisa kard*)'. *Milk* means property and *malik* proprietor. Farishta goes on further to say that the 'Emperor took half the produce of the soil from everybody, whether he was a Mukaddam or Chaudharí. The Chaudharís and Mukaddams, who once rode state horses, wore princely arms, dressed sumptuously and pursued the games like the Nobles, had at last been reduced to such extremities under this Emperor's rule, that their women were obliged to go out and work for their bread'. Chaudharí and Mukaddam of that time seem to be synonymous words for zamíndár. Fíroz Shah Tughlak writes in his memoir of 'the portion mulcted at the delivery of the *landlord's* shares by the cultivator, and its attestations by some official'. Firoz Shah took only a tithe of the produce of land. I well remember to have read somewhere that when Humáyun marched down from Agra his baggage was plundered by the zamíndárs in the Gangetic Doáb. The Hon'ble East India Company itself had at one time purchased the zamíndárí of the Twenty-four-Parganas from the Emperor of Delhi. Are the zamíndárs like the Mahárájás of Bardwan, Dumráon, Darbhangá and Bettiah, or Rájás of Majhauli, Manda, Bejaypur, and a thousand others of the British creation? They have still many sanads and farmáns of the Muhammadan Emperors in their possession. Many will quote books that those Emperors had all along been acknowledged as the lords of land; but they forget that in the same sentence they are acknowledged as the lords of the persons and possessions of their subjects. So with this theory the Government will have the same right to interfere with one's lands as with his person or other personal property.

" Let us see how this movement began, and how it ends. The hon'ble the Law Member says:—'What then are the facts with which we have to do, and what are the evils for which legislation is required?' Let us see what are 'the facts'. Sir Ashley Eden says:—'In Bihár what is most wanted is some ready

means of enabling the raiyat to resist illegal distraint, illegal enhancement and illegal cesses, and to prove and maintain his occupancy-right'. Sir Richard Temple intended 'to introduce a Bill to define the principles on which the rights of occupancy raiyats and tenure-holders should be forced, to simplify the procedure for realizing the arrears of rent in undisputed cases and to make the interest of an occupancy raiyat liable to sale for default in paying rent, and transferable by private agreement'. In the Bengal Council it was 'recognised that the legislature would have to alter the law with reference to ejectment, distraint, instalment and deposit of rent, and possibly sub-letting'. The Commission propose 'to create a new class of subordinate occupancy raiyats by providing that a tenant who had held for three years and less than twelve years should be protected from ejectment at the will of his landlord.' Also that 'limits were to be set to the rack-rent' and to what an occupancy raiyat 'might demand from an under-tenant'. Sir Ashley Eden writes in his letter of the 15th July, 1880, that 'he would like to see the Bengal raiyats, as a class, secured in the enjoyment of those rights which the ancient land law and custom of the country intended them to have, protected against arbitrary eviction, left in the enjoyment of a reasonable proportion of the profits of cultivation, and, in short, placed in a position of substantial comfort, calculated to resist successfully the occasional pressure of bad times'. He wrote to the British Indian Association in December, 1880, that 'protection against arbitrary evictions must certainly be given to every settled cultivator who pays the established rent', and that 'a substantial tenantry, free from debt, and in a position to stay and bear the pressure of occasional bad seasons, is what Bengal requires. The Lieutenant-Governor desires, therefore, to see the occupancy tenure made the rule and not the exception; but at the same time he would have it kept as far as possible in the hands of *boná fide* cultivators, and sub-letting by occupancy tenants should be discouraged, if it cannot be altogether prevented'. The most important conclusions at which Sir Ashley Eden arrived, as given by Mr. Justice Cunningham in his Minute, are 'that the rents of Bengal were and must, in existing circumstances, continue to be customary, not competitive'; and 'to guard against the conversion by the landlord of raiyatí land, that is, land over which occupancy-rights exist, or can be acquired, into 'khámár''. 'Khámár' lands appear to have been originally merely the surplus unreclaimed lands of the village which the landlord was allowed, during the continuance of his revenue engagement with Government, to cultivate for his own benefit, but which became 'raiyatí' as cultivators settled on them'. The Famine Commission say that 'measures should be framed to secure the consolidation of occupancy-rights, the enlargement of the numbers of those who hold under secure tenures, and widening the limits of that security, together with the protection of the tenant-at-will in his just rights and strengthening of his position by any measure that may seem wise and equitable'. The hon'ble the Law Member does not find, in any of the Regulations of 1793, words which can throw the whole of the then vast area of the unreclaimed land of Bengal into the category of khámár or private land; and so he has framed his definition so that the existing stock of khámár land cannot hereafter be increased. Now I ask him, in the name of justice, if the whole outcome of all these wishes, suggestions, reports and proposals is to culminate in depriving the zamíndárs of the right of increasing their khámár land by acknowledged legitimate means and by most ancient customs or usages, and conferring the right of occupancy even on 'squatters and nomads', because the price of land and 'the disturbance money' are just the same to a zamíndár? There will be no ejectment, and any man would acquire occupancy-right if he has pluck enough once to plough and sow the land; but the zamíndár will never, even if he pays all the gold and silver of the world. Leave the custom and usage aside, no one had even thought hitherto of such an innovation. The Government tells the zamíndárs: 'Keep so much land and no more; this is enough for you; let the others take the rest; they are in greater need than you are'. I think, if the principle is fair and equitable, it would be better to plunder all the banks and distribute the money to the poor and the needy.

"The hon'ble the Law Member says that in Bengal the raiyats are strong and the zamíndárs weak, but in Bihár the zamíndárs are strong and the raiyats weak; whereas in Bengal the raiyats combine to resist the payment of rent, in Bihár the zamíndárs destroy all the tenures and all the rights of the tenants and turn their land in'zarat or khámár, or, in other words, Bihár is groaning under rack-renting and acts of lawless and high-handed oppression. My Lord, for seven years I have had to look after the affairs of Bettiah, which is one of the largest zamíndáris in Bihár, and I am in a position to assure your Excellency that I have not found a stronger set of raiyats, happier or better off, in any part of the country, from Kashmír and Rájputáná down to Púna and Haidarábád; and I am almost sure that a Briton by birth and stuff, Mr. T. M. Gibbon, C.I.E., will corroborate the truth of my assertions. I have seldom seen a more generous hearted zamíndár than the Maharájá of Bettiah. Though he has received no decoration yet from the Government, neither the Star of India, nor the Lion and Sun of Persia, to adorn his breast, but it is adorned with a heart which melts like wax for the poor. One day, nay it was about midnight, some ejected tenants came and cried out *duhai* at the gate; he begged of me to enquire about them. Mr. Gibbon told me that they were great *badmáshes*, and were legally and deservedly ejected. But the Maharájá insisted upon their immediate re-instatement, and told me that a Rájá's first duty is to protect his tenants '*Rájá ká pahlá dharma prajápálanu hai.*' The difference, in my humble opinion, between a Bengal and a Bihár zamíndár is simply this—that the Bengal zamíndárs are now highly educated, and the poor Bihár zamíndárs, with very few exceptions, are still what they were. So the Persian saying '*Yake nuksáni máyah dígre shimátati hamsáyah*' (on one hand the loss of property, and on the other the abuse of neighbour) is fully applicable to them. His Highness the Maharájá of Benares has a large property (I beg pardon—I am not sure whether a zamíndárí can be called any longer a property under the hon'ble and the learned Law Member's new definition) in Bihár, and so my many other friends of Benares have, and yet the same law is proposed for Bengal and Bihár. We have a saying, '*take ser bhájí take ser kháját*' (two pounds of cake for two pice, so two pounds of salad too). Though the hon'ble the Law Member may say '*chu az kaume yake bedánshí kard na kihrá manzilat mánad na mih rá*' (if one man in a nation commit a crime, neither low nor high are to be spared; all are to be punished); if a villager killed a soldier, the whole village is to be executed, as the Russians, I hear, are doing now.

"Now I have purchased some thousands of acres of waste-land in fee-simple under Lord Canning's Resolution, and spent much money in bringing parts of it under cultivation. What will be the fate of that land, or, I may say, my own and my children's, under this Bill? The registered kabúliyats of my tenants, under the name of 'contracts', will be null and void. I will not be able to eject them, and for any enhancement I must be prepared to spend in litigation a sum the interest of which will far exceed the amount of such an enhancement. I wonder if it is known to the Government what was the cost or how much money was cast away in the great rent case of 1865. I shall feel extremely obliged if the hon'ble the Law Member would be pleased to give a short definition of the treacherous English word 'fee-simple', and a short construction of the sanad signed by a Secretary to the Government, as he has given of the words zamíndár and landlord, and of the proclamation of Lord Cornwallis. Lord Canning may be laughed at very shortly, as Lord Cornwallis is now; but allow me, my Lord, to put here on record the motive with which that great statesman was actuated. During the Mutiny of 1857 he had seen how useful and valuable these Britons were to the State. Lord Canning had seen how a Venable had held the district of Azamgarh single-handed for the State, and driven out the mutineers from it; and how many others like him had done the same in other parts of the country. He wished to increase their number. He asked men like Mr. Glyn to take land and settle in the country. They refused, under the plea that, with such a system of settlement and the rent-law, they could not persuade themselves to acquire land in India and invest their capital in improvement. Lord Canning resolved then and there to open a way for the

acquirement of land in fee-simple, though, as soon as he had breathed his last, the policy was changed. I am sorry I was not living at the time of Lord Cornwallis; but if the science of spiritualism has any truth in it, his spirit may be smiling on our incapacity to understand how he had found the body of Bengal and Bihár zamíndárs, and the very constitution of zamíndárí, far more useful to Government than ever Lord Canning found the whole body of Oudh taluqdárs or all the Venables of the world. He lost no time to make a settlement with them on such a permanent basis as to secure a permanent safe basis for the future operations of the Government, which has extended its dominion beyond Attock (Atak), falsifying the very name of the place, which means 'stop'. I shall find myself much mistaken, and shall have to revise my history of Hindustan, if the zamíndárs of Bengal and Bihár, as a body, are not as loyal subjects of their Kaisar-i-Hind as any crowned head in the world, from Noah up to this moment, can boast of. I have seen with my own eyes some zamíndárs of the Benares Province placing flower wreaths on the tomb of that great and good man, Lord Cornwallis, even now. I am fortunate at present to find my waste-land situated beyond the pale of the jurisdiction of this Bill, otherwise I would have had to deplore that the land was mine on the 2nd of March, but it passed over to others on the 3rd, without any fault of mine; however, the principle of the Bill seems to be contagious. It will be better for me to look after my property before it is too late. What course is left to me to follow? I am bewildered. The only course open before my eyes just now is simply to serve notices of ejectment on all my tenants before the end of this month, which is fixed by the law as the last month for the purpose in the year, and allow the whole land again to revert to its pristine condition of groaning under a thick forest haunted by the wild beasts; but allow me, my Lord, to declare most sincerely that it will be worse than death to me ever to think of your Excellency's illustrious and endeared name to be associated with any measure which may convert the land now smiling under luxuriant crops into a gloomy forest, while the policy of Lord Cornwallis has turned, as acknowledged by the hon'ble the Law Member himself, the wastes and ancient forests of Bengal and Bihár into culturable land.

"The only nail which the hon'ble the Law Member has hit on the head is a frank acknowledgment of 'the misapplication of English analogies to Indian facts'. He says that the 'Bengal zamíndár is not a landlord, or land-owner, in the English sense of the word'. I say that the money paid by an Indian tenant is not rent in the English sense of the word. For the meaning of 'rent', Malthus is no authority for us Indians, though he may be for an English Chief Justice of the High Court, like Sir Barnes Peacock.

"The word rent is misapplied in India. It is a tax on produce in its true sense and meaning. Under the sacred laws of *Manu*, acknowledged to be the most ancient, 'the King (Rájá) took one-sixth of the fruits of soil (produce); but when it was of bad quality his share was limited to one-twelfth. On the cattle, gems, gold and silver he levied one-fiftieth, and on the produce of trees, flesh, meat, honey and the like accumulations of nature and of art, a sixth. Besides this all the artisans and labourers worked for him gratis one day in the month. He was entitled to five per cent. on all debts admitted by the defendants on trial, and ten per cent. on all denied and proved'. In this so complete a list of taxes, if one is a tax, then all the others also are taxes, and if one is rent, then all the others also are rent. The famous Káli Dás says in his *Raghuvans—Shashthánsam vali magrahít*, that is, the Rájá took the one-sixth of the produce as his tax. It is out of this tax, or the share of the State, that all the tenures, zamíndárí, mukarrarí khám, khálisa, raiyatwári, khont, mustájiri, jágír, muáfi, krishnárpan, &c., &c., have been created. Under the Slave Dynasty this tax was raised to one-fourth of the gross produce. Alá-ud-din Khiljí assessed it at one-half. Sher Sháh reverted to one-fourth, but Ákbár took one-third. In many places it is still divided half and half between the proprietor and the cultivator, or the zamíndár and the tenant. In Benares it is called *adhaiyá*, which means half and half, and this proportion has been acknowledged as customary by Lord William Bentinck in his celebrated circular. The question is, whether there is a proprietary right

(*Svatva* or *Hakki Milkiyat*) possible in land or not. In England, William I conquered the land and distributed it amongst his feudal chiefs. So when the Aryans came here from the North-West and vanquished the non-Aryans (Aborigines), their Sovereign apportioned the land amongst his followers, as is written in the Vedas: 'Indra the lord conquered and drove out the Dasyus and Rakshasas and gave their land to the white-faced followers'.

"The hon'ble the Law Member says, 'that the great mass of the Bengal raiyats were, at the time of the Permanent Settlement, in the enjoyment of certain customary rights, which at least included the right of occupancy in the land conditionally on the payment of the rate of rent current and established in the locality, and, I may add, the right of having that rate of rent determined by the State'. May I be allowed simply to ask if it is not so now? Are there not fixed-rate and occupancy-tenants? Nay, are they not growing? Just the other day seven paikásht (non-resident) tenants have acquired occupancy-right in my village, Bodarvar, by lapse of time, simply through a mistake of mine in the calculation of years. The tenants in Jaunpur district have now become mostly fixed-rate. The hon'ble the Law Member quotes the Court of Directors' instructions to the Indian Government 'not to depart from our inherent right as Sovereigns, of being the guardians and protectors of every class of persons living under our Government'. May I be allowed simply to ask if any zamíndár class of persons has ever asked or expected from the Government more than the mere protection of his rights and privileges, or of his property and life, and why the zamíndárs are denied the protection? The hon'ble member further quotes the declaration of the Governor General in Council: 'It being the duty of the ruling power to protect all classes of people'. That is our Magna Charta, and the zamíndárs can well claim that protection.

"The hon'ble the Law Member says that 'no one can acquire the status of settled raiyats, and the occupancy-right which is attached to it, unless he has been a landlord, or he and his ancestors before him have been land-holders for at least twelve years in the same village or estate. Thus mere squatters and nomads are effectually excluded', but I may be allowed respectfully to ask, will the zamíndár be allowed to eject the squatter or the nomad? Under what section? It may be said under the 'disturbance money' section. Well and good! There the zamíndár is to pay for his own land to an occupancy-tenant, who does not pay his rent and falls into arrear, in the shape of price: here a *badmásh* comes and clandestinely ploughs and sows a piece of land, upsetting all the plans of the zamíndár, and receives money from him in the shape of disturbance money, for restoring the zamíndár's land to the zamíndár. I have heard of the right of the sword, but this will form the right of the plough. Some fifty of my tenants left my village, Bodarvar, in Gorakhpur, with heavy arrears, after they had taken crops home. When I went to the village to arrange about the land they had left, I found all the land cultivated by other, say fifty, men—many of them being relatives and friends of those who had run away. I was willing to settle with them on the same terms as their predecessors enjoyed, but they refused to register their *miádi* kabúliyats. I, of course, ejected them through the proper channel, though the process cost me some thousand rupees; but, under this Bill, I would have been obliged to pay those ejected tenants a couple of thousand rupees more, in the shape of the disturbance money, or engaged *lathiwálás* to stop them by force from ploughing and sowing, and bribing the policemen, at the risk of my going to jail. But what else could be done? Land is dear, it is a second wife, and many Hindús have become Muhammadans for it. There is, perhaps, Rájá Salámát Sháh at Azamgarh of this description, and many more may be found.

"The hon'ble the Law Member has given, as a sample, some kabúliyat and pattá in his speech; but, if there are Shylocks in India, there are also wise Judges, who know what is lawful and what is unlawful before they enforce any contract. I can show a hundred kabúliyáts and pattás which I have given to my tenants-at-will in Benares, with occupancy-right, which they call istimrárí.

"The hon'ble the Law Member talks of the wants commonly known in England and Ireland as the three Fs,—fixity of tenure, fair rent and free sale. Leaving the question of sale just now aside, and seeing that the tenants of twelve years have fixity of tenure and 'fair and equitable' rent, I simply remind him here that he has completely overlooked an Indian tenant's wants, which may be called the four Ss,—supply of water, supply of seeds, supply of bullocks and saving from the Court expenses. We have a saying:—*Gráma samípe labdhvá kúpam-gráminah kin gaṇayati bhúpam* (a villager who has a well near his land does not care for a king). If one tenant is ruined by a marriage, I can point out one thousand ruined by Court expenses. Just the other day one of my tenants, Debi, refused to pay me one-and-half anna acreage for half a bíghá rent-free land. I applied for recovery and obtained a decree against him for Rs. 3-11, as follows:—

	Rs.	A.	P.
Amount sued (acreage for three years)	0	2	3
Arzidavi	0	6	0
Talbáná	1	8	0
Mukhtárnámá	0	8	0
Copy of decree	0	8	0
Petition for it	0	1	0
Petition for the execution of decree	0	1	0
Mukhtárnámá for it	0	8	0
Interest	0	0	9
Total Rs.	3	11	0

The land was put up for sale, but as the man came to his senses, and fell upon my feet, I allowed him to remain.

All the three supplies depend upon good rent law; no bank of any kind in the world can do that.

"The hon'ble the Law Member says, 'that the powers of transferring and sub-letting, which the Bill recognises, may in time lead to a state of things in which the great bulk of the actual cultivators would be, not occupancy-raiyats, but under-raiyats, with but little protection from the law, is indeed within the range of possibility; but if such a state of things would ever arise we may rest assured that the Government of the day will know how to deal with it'. I may be pardoned if I say that I cannot accept such an assurance. This is the first time I have ever heard of such a legacy. At any rate it is very curious, and indeed very bold. At the instance of the present Lieutenant-Governor, to impose some discouragement on sub-letting, the maximum rent for sub-tenants or under-raiyats not having a right of occupancy appears to be fixed at five-sixteenths, or about thirty per cent.; but what protection has been devised if the occupancy-tenant takes every year a heavy nazráná (premium), besides the legal rent, from his sub-tenant under the threat of ejectment? The pleaders cannot increase their legal fee or *mehantána*, but who can prevent them from taking a tenfold shukrána (*douceur*)? The real cultivators of the soil under the Bill will till the land at a rack-rent as sub-tenants, and a new class of under-proprietors of the baniyá class will spring up as occupancy-tenants at the expense of the poor zamíndárs. The hon'ble the Law Member disclaims any merit for the originality of his proposals; but, in my humble opinion, limiting khámár and giving occupancy-right to 'squatters and nomads' is certainly very original. He says: 'We have endeavoured to hold an even hand between the two parties, and to define and adjust their rights in such a way as may be most conducive to the common interests of both'. I beg pardon; I cannot see the truth of the statement, and I leave it to the judgment of those who do not belong to any party. I have a village, Khanavan, in Benares, three fourths of which are under general law and one-fourth under a special law. Well, in the time of Lord William Bentinck special settlement was made of this one-fourth. The zamíndár and the tenants appointed arbitrators, and the arbitrators fixed the rate of rent for ever, without any right of enhancement on any account to the zamíndár, and gave the right of occupancy and transfer to the tenants. Now, what is the consequence? Four-fifths of the land have come into my possession by right of purchase, and only one-fifth remains in the hands of others, a baniyá class of people, who also have come in possession of that by right of purchase. The descendants of the original tenants are tilling the land as sub-tenants. I have given occupancy-right to all my tenants in the three-fourths of the village, but will not give in this one-fourth.

"The hon'ble the Law Member ends his very long, exhaustive and most elaborate speech with a declaration that whatever has been 'endeavoured by the present Bill to do, is so to legislate for her as to preserve whatever is best in the spirit of her ancient institutions'. If the hon'ble the Law Member be good enough to acknowledge that the words 'for tenants' were simply, by an oversight or mistake, left out after the word 'best', I shall not speak further, otherwise it will be like the Benavá Fakír, who learnt only the first half of a verse from the Koran, that is, 'Don't pray', and ignored totally the other half, that is, 'when you are drunk'. I cannot say what may be the meaning of the word justice in the English sense, or the sense of the hon'ble the Law Member, but I can vouchsafe the meaning of the Arabi word *A'dl*, which means to mete out equally; or *insáf*, to make half and half. The hon'ble the Law Member acknowledges that formerly 'resident or chhaparband (owner of a hut) tenants were not ejected except for arrears of rent'; but he ignores totally the acknowledged right and power of the zamíndárs to allow or refuse residence. No man could come and live in the village without the permission of the zamíndár. In the Wájib-ul-'arz (agreement) it is specially mentioned that the zamíndár would not allow any thief or bad character to reside in his village. Had the zamíndár not power of refusal, this paragraph would have been superfluous. Now, if a zamíndár gives permission to a man to build a hut, which is, as a rule, done after taking some *nazráná*, (present), and cultivate without any written contract, it will be preposterous to think that the man could be ejected at the zamíndár's will; but now the Bill allows every one to build a house anywhere he likes—in a field or a pasture—and even claim compensation for it, which will be of no earthly use to the zamíndár. The fact is, that there was no period in history in which, with the zamíndárí (including jágír, muáfi and mustájirí, &c.) system, the system of khám, khálisa or assámívár had no existence, and so there was no period in which, with the occupancy-tenants (including fixed rate, rent-free, &c.), the tenants-at-will had no existence. The mistake, in my humble opinion, is simply in the endeavour to make occupancy-right universal and tenants-at-will an impossibility. Leaving possibility or impossibility aside just now, I beg simply to assure your Excellency that what the hon'ble the Law Member is pleased to call India's ancient institution has in no period of history, as far as my knowledge goes, and in no part of the country, as far as I have seen, ever been dreamed of even. Now to the Bill:—

"My Lord, I have had time merely to glance over it. The sin lies in two ways: firstly, in commission, and secondly, in omission; but before going into the details of the Bill, which I would rather leave to some future period, I may be allowed to state that, if the object of the Bill is to improve land and agriculture, or ameliorate the condition of the agriculturists and promote the well-being of the cultivators of the soil, the Bill does not go very far; it totally fails, rather, in many instances; it takes an opposite direction and makes the case worse.

"Allow me first to say a few words about the omissions. I am surprised to find that not a single provision has been made in the Bill to supply the crying wants of the tenants. They want wells, and how does the law stand now? If I dig a well at a cost of two hundred rupees, which can irrigate 24 bíghás belonging, say, to 24 tenants, I ask them to pay me the legal interest on the capital laid out, in the shape of an enhancement of a rupee per bíghá. They refuse to pay, simply because, if they accept an enhancement, they shall have every year to pay, but otherwise they hope sooner or later to have the water for nothing, by bribing the *patwárí* and my *karanda* with a couple of rupees. The only course open to me is to serve on them notices of enhancement and fight out 24 cases up to the Board of Revenue on appeal, which will not cost, at the lowest computation, less than a thousand rupees. Now, if the law be framed so that a zamíndár, before digging a well, may apply to the district officer for permission, supplying him with a plan and estimate and a list of the tenants, their land, rent and the amount of enhancement, which is not to exceed the legal interest on the capital laid out, or to fall more than a rupee per bíghá, the district officer, after giving due notice to the tenants and enquiring into their

objections, if any, may give permission to dig; and when it is reported complete to his satisfaction he may order the patwárí to add the enhancement to the rent in the village-records. I am sanguine that thousands of wells will at once be dug where wanted. It is now commonly said that the zamíndárs have not done their duty, but no one has taken the least notice yet how the law operates now. For the supply of seeds and bullocks, if I advance any money, I shall have to go to the Civil Court, and after all the trouble and expense, if I am so fortunate as to obtain a decree, there will be no property against which it can be executed. I cannot understand, if the Government recovers its advances as arrears of revenue, why the zamíndárs are not allowed to recover their advances as arrears of rent, provided that the interest and instalment does not exceed the limit assigned by the Government and the transaction is duly registered. If it is allowed, the cultivators of the soil will at once be placed above the want of any bank or banker. It has become the fashion of the day to vilify the bankers as takers of fifty per cent. interest. I may be allowed to explain how I take this fifty per cent. from my tenant. He wants, suppose, a maund of seed (wheat) in November, when it sells, say, at a quarter of a maund per rupee, so I give him a loan of my wheat, which is worth four rupees at the time, on a promise that he is to pay me back a maund and half (fifty per cent. more) in kind. He returns me my wheat in May, when, generally speaking, it may be selling at half a maund per rupee, so I receive two rupees worth for what was worth four rupees at the time I lent. It may be asked then, why the zamíndár lends. He lends only because in the long run he has the satisfaction to find that his grain-pits contain ten thousand maunds when he had commenced the business with only one. Besides this, if he had not lent the seed, perhaps the land would have remained uncultivated, for a tenant cannot be expected to keep and preserve such a small quantity as a maund is for seed all the year round against fire, thief, mice, white-ants, the little urchins and hungry old bags of the family. To go to the town, often fifty miles distant from his house, to borrow money from some bank, even at five per cent. interest, to purchase seed from the bázár and bring it home on the head of a hired cooly, will simply be ruinous. I do not see any provision has been made for saving the tenants from the expenses of the Court; nay, I see even an application for distraint shall be liable to the same court-fee which would be payable in a suit instituted for the recovery of the arrear therein claimed (clause (2), section 167). However, the most curious feature of the Bill is, that the Local Government may suspend the provisions of sections 166 and 184; though it does not seem why. It seems inexplicable that, if the movement commenced to facilitate the recovery of rent, why it ends with the throwing of difficulties in distraint. Sir Ashley Eden's beau-ideal tenantry of Bengal can only be hoped for, under such a Bill, when the millennium comes under the prophecies.

"It is quite unnecessary to search out for antediluvian proofs, or prehistoric customs and usages. I mean the procedure followed under the Native rulers before the Hon'ble the East India Company acquired the sanad of Díwání. The Government proclaimed its intention to protect and maintain the existing rights, privileges, customs and usages, as found or acknowledged, and let it do so now. Any demur on the part of the Government to fulfil this promise, or at least expectation, will be fraught with mischief.

"The Bill aims, as I think I have said already, at making the occupancy-right universal (sections 45, 49 and 56), and ejectment, except for arrears in rare cases, practically impossible (section 149), by limiting the khámár and zarat land to its present extent and preventing its future growth (chapter II), and by making all private contracts against these drastic measures null and void. My Lord, may I be allowed to ask if, in any period of the historic age, in any part of the country, under any kind of rule, such a limit was ever put to the acquirement of the khámár and zarat land? The zamíndár has a right to let out his land at any rent, whether one-half or one-quarter of the would-be so-called pargana rate to A or B. But if this A or B relinquishes the land, or runs away with arrears, or even for five rupees arrears the zamíndár pays ten rupees for the land which, at any rate, was once his own, at the sale for a

decree, the land cannot be again his. Any man may come, cultivate it, build on it, and make it his own; but it cannot revert to the poor zamíndár, its rightful owner (section 56), because it is out of the khámár and zarati entered in the register now to be made. It was the tyrant Alá-ud-dín Khiljí only who, professedly to keep the people living from hand to mouth, had ordained that no one was to possess any land beyond a certain extent, and that no one was to possess more cattle than a fixed number; but in the 19th century, in the reign of our Most Gracious and Beloved Kaisar-i-Hind, Victoria (God bless her), a Bill is brought before your Excellency's Council, the effect of which will be that, if I purchased a piece of waste-land under Lord Canning's Resolution and brought it under cultivation at a heavy expense, it was mine on the second of this month, but will not be mine on the third. I should have to add a codicil to my will, and all my plans will be castles in the air. Sir Richard Garth, who is truly called Chief Justice, may well denounce such a policy in the strongest term—a 'spoliation'. But I may be allowed again to ask, if a zamíndár enters in the village-records all the land in the names of his relatives and confidential men, how the law can prevent him from reaping the advantages of khámár or zarati, though the law may promote litigation, fraud and perjury to its fullest scope, which is the tendency, I am grieved to say, of this age of high education and new civilization? What will be the result of all this (I do not know really what to call, but let me call) drastic measure? A new set of petty sub-proprietors, as I have already said, generally of the baniyá class, will arise. The so-called tenants of to-day will all become pakka (strong) proprietors, only to transfer their land to baniyás, pocketing all the money which now may find its way to a certain extent to the purse of the natural and lawful proprietor, the zamíndár, and still of as little use to the State in the time of need as a straw. Your Excellency told the taluqdárs of Oudh, just the other day, 'that the primary and essential condition of agricultural prosperity is the well-being of the cultivators of the soil; the promotion of that well-being the Government has very earnestly at heart, and it attaches to it an importance of the highest kind.' Now, my Lord, most respectfully I beg to ask, does the Bill in any way ameliorate the condition and promote the 'well-being' of the cultivators of the soil, who will always be, generally speaking, sub-tenants and form the mass of rural population? The Bill limits the rent demandable from an under-tenant or an under-raiyat (section 119). Will that do any good to the poor under-tenants? It is just like sending the paper horses, which the Lamas do according to M. Hacq, for the sick and the weary travellers. Now, suppose I am a tenant, and I have a sub under me for whose land, suppose, the Bill limits the rent to Rs. two. I tell him, 'My friend, the law does not allow me to demand from you more than Rs. two in the shape of rent, but unless you pay me Rs. three more annually, as a nazráná, in advance, I will not allow you to cultivate my land. Go away to some other place.' Now, what will the poor sub-tenant do? He must pay whatever I ask for. The law may go further and give occupancy-right to the sub-tenants too, and make it criminal for the tenants to take more than what may be fixed by law. But how can the law prevent the tenant from colluding with the zamíndár and relinquishing the land or having it sold for arrears, solely to ruin his sub-tenants? The law may make the tenure of a sub-tenant as secure and profitable as that of a tenant, but then he also may have a sub-tenant, and so on, till the cultivator of the soil will have only enough to live from hand to mouth, and to whom an occupancy-right or any right will be quite worthless. The cultivators of the soil in India, who form the mass of the population, are generally labouring classes, and Providence has ordained that they are to earn their bread by the sweat of their brow; to place them above want is, in my humble opinion, above any human power. I have heard of more poverty and misery in Europe, even in England, than in India. However, worse than this limitation of the khámá and zarati land is to make null and void any contract between a tenant and a zamíndár (sections 45, 47 and 49). India has been famous for the honour of her contract. It will be a pity to teach her now that a man's contract is nothing; that even legal contracts are good for nothing. This very Council passed Act

X in 1859, under which, having full faith and confidence in the Acts of the Government, suppose I let out ten bíghás of land to A—never mind for the consideration passing between me and A, whether to my loss or profit, or A's loss or profit, but it was agreed upon that after five years the land will again be at my disposal, and it will rest with me to re-let it or not. The agreement, pattá and kabúliyat, have duly been registered and they were as legal and binding documents, at least in my humble opinion, as the Government promissory notes are, or a treaty between the British Government and any independent Chief of India, on the 2nd of this month; but on the 3rd, if the Bill passes, they are a mere piece of waste-paper. I am quite bewildered what history will have to say of such transactions. I know of a Commissioner of a revenue division, who was writing a history of India, but when he came to the transaction between Clive and Amín Chand he tore up all what he had written, saying that he could not perpetuate such a blot on the character of his countrymen. Reduce the twelve years period for the growth of occupancy-right to twelve days; reduce the rent from Rs. twelve to twelve annas—anything may be done, but for goodness sake do not repudiate legal contracts so publicly and without any tangible excuse. The Canal Bill, or whatever its true designation may be, brought forward by the brother Stracheys, which proposed to levy a compulsory rate of water and revive a modified *begar* system, and which consequently was vetoed by the then Secretary of State till those two objectionable sections were removed, was nothing compared to this Bill, limiting the *khámár* and *zarati* land, and making null and void legal contracts. I do not find in the long and exhaustive speech of the hon'ble the Law Member anyone or anybody, whether Sir Ashley Eden, Sir Richard Temple, Sir George Campbell, the Rent Commission or the Famine Commission, proposing this kind of drastic measure.

"I never doubt for a moment the power of your Excellency's Council or the legality of its acts. The Council can repeal all the Regulations of 1793 if they like, and make even the Permanent Settlement itself a matter of history; but the question is simply this, whether it is wise and politic to enforce such measures, the need and necessity of which are not at least apparent to those who are mostly affected by them. Let us see what Sir James Stephen said on the 6th April, 1871, at Allahabad, on the occasion of passing the Local Rates Bill. He said:—

'We are not a representative Government. With every wish on the part of every member of the Government to use his powers for the benefit of those whose interests they affect, it is impossible not to feel at every turn how great are the differences between the governors and the governed, and how supremely important it is for all parties that, whatever else the people of the country may feel about their rulers, they should feel perfect confidence in their good faith and in their scrupulous observance of their promises. A really representative Government may deal with the pledges of their predecessors in a very different way from a Government like ours. If Parliament, representing as it does the views and feelings of the population of the United Kingdom, should see fit to re-open the question of the Scotch and English Church Establishments, it would be absurd to say that they were debarred from doing so by the Act of Queen Anne. They are themselves the representatives of the descendants of those by whom the Act of Union was passed, and they have the same moral right to undo what their predecessors did in a matter affecting the English nation for the time being, as a man has to reconsider resolutions which he has made at any particular period of his life as to his own subsequent conduct, in matters in which he has entered into no contract with others. We, on the other hand, are in a position more nearly resembling that of a person who has made a contract to his release from which the consent of the other party is necessary.'

"It is true that there is no contract or compact here concerned as between two Powers, like Russia and China; and I am not one who always brings forward the common phrase 'Permanent Settlement' as a great bugbear. I know very well that it settles only the Government demand, and no question of Government demand or revenue law is just now before us. I own that it is the great duty of the legislature to protect the just rights of the tenants and promote the welfare of the cultivators of the soil; but at the same time the duty is not a bit less to protect the just rights of the zamíndárs. We, zamíndárs, do not want the rights of an English landlord, whatever he may be—a lion or a bull—we are zamíndárs; and let us have a zamíndár's right. The

Government proclaims by tomtom or, at any rate, gives us to understand that every one's right is to be protected. Now, is the right which has been enjoyed by the zamíndárs, at least for the last ninety years, which has been acknowledged from time to time by the law and by all the Courts of British India, and on the faith of which acknowledgment millions and millions of money have changed hands, no right at all? One has a kabúliyat duly executed and registered under section 7, Act X of 1859, that never any occupancy-right is to accrue in the land: or, according to the established custom and usage, has entered some land relinquished by his tenants in his own name, as sír or khámár or zarat in the village-records, for which he pays revenue, and now and then lets it out wholly or partly to the villagers from year to year. Now this Bill in one breath makes the kabúliyat null and void, and the zamíndár's sír, khámár or zarati land becomes the property of a ploughman, only because it was not held by the zamíndár continuously for twelve years. Act X of 1859 can be repealed, but how on earth all the contracts entered into under it can be made null and void and all the decisions of the Court upset? When the Government makes legal, private contracts null and void, how it can be expected to respect long its public contracts?

This is, perhaps, the last time in my life that I shall have the honour of speaking anything in the Viceregal Council, and I am very sorry indeed that I have not been fated, like my hon'ble friend Mahárája Sir Jotíndra Mohan Tagore, to thank your Excellency for the fulfilment of a 'pledge'; but the onerous duty which I have to discharge, though sad and painful, compels me to warn that, if such a Bill passes, it will shake the faith and confidence of the people, not only of British India, but of all the Foreign States, in the Government to its foundation. I sincerely hope no one may have ever to say what the 'vakíl' of the then Mahárájá of Jaypur had said to General Ochterloney, when he handed over the Jaypur State to the tender mercies of Scindhia, that the conscience of the Government is subservient to the exigencies of the time. Englishmen have an adage that 'necessity has no law', and so the Muhammadans, '*gar Zarurat buvad ravá báshad*'; but we Hindus have a different kind of belief. Our great and famous Rájá of Ujjain, Bhartrihari, says: 'Let the people praise or abuse, let wealth come or go, let death approach this moment or remain far away, great men never depart from the path of justice.' (*nindantu níti nipuná yadi vá stuvantu,—Lakshmí samá visatu gachhatu vá yatheshṭam adyaiva vá maraṇa mastu yugántare vá—nyáyat pathah pravichalanti padam na dhíráh*). I am not an alarmist. I never doubt the prowess of the British nation, or the proverbial loyalty and submission of the Indians. If to-day the Government orders a general confiscation, even of the moveable property, I am certain that the loyal zamíndárs of Bengal and Bihár will bring all they possess, except what they may conceal underground, on their heads and shoulders to the treasury. But I may be allowed, my Lord, to repeat here the words of the erudite Sir James Stephen that 'whatever else the people of the country may feel about their rulers, they should feel perfect confidence in their good faith and in their scrupulous observance of their promises.' In conclusion I may be allowed, my Lord, to hope that I may not be misconstrued. It is only a sense of duty, and a deep sense of duty, which has compelled me to occupy so much of the time of the Council."

The Hon'ble MR. HOPE said:—"As this Bill comes under the broad designation of a revenue Bill, and as I may, perhaps, to a certain extent claim to be considered a revenue expert, I should, under ordinary circumstances, think it my duty to enter into the question which it deals with at some length. But, considering that the Bill relates to only one Province of British India, and that Province is represented by so numerous and able a body of members in this Council, I do not feel myself called upon to offer more than a few very general observations. As regards the Bill itself, in its general lines, I have very little to say; except that, though I approve of it so far as it goes, I must confess I should have been glad if it had gone somewhat further in the direction of ascertaining and recording, not

merely rights, but equitable and fair rates of rent, which would have been useful as a standard for all classes of landlords and tenants to refer to; and if it had cast aside altogether the idea of determining the raiyat's status according to the time for which he may happen to have held his land, an idea which has done so very much harm in the past in these Provinces. Still I am well aware there are excellent reasons for bringing forward the present proposition in the form in which it stands. I can only say that, such as it is, it will command my cordial and, if necessary, my active support. There is, however, one class of argument which has been brought forward by those who do not regard the Bill with favour, to which I must for a few moments give more detailed notice. The Hon'ble Kristodás Pál, if I rightly understood him, endeavoured to fortify the position of the Bengal zamíndárs, by asserting that their tenants were, through their means, in prosperous circumstances, and by contrasting the good condition of the cultivators of Bengal with the wretched condition of the cultivators in Bombay and other parts of British India. I think I may leave the condition of the raiyats in Bengal to the Bengal members who will follow me, and who will, if they feel inclined, offer proof of what I consider to be notorious, namely, the wretchedness of the raiyats of that Province. But as regards the condition of the raiyats in the Bombay Presidency, which the hon'ble member has described as being wretched in the extreme, I must emphatically deny that any such terms, or any such description, can be applied to them. If the means were here at hand, I could show with the greatest readiness, from the most ample statistics, reaching back for a number of years both of trouble and of plenty, that the Province has gone on increasing in wealth and prosperity during the last fifty years in which British rule has been gradually consolidated and elaborated. This growth and prosperity I could prove, not merely as regards the Presidency generally, but as regards particular districts. Taking even the districts to which the Dekkhan Agriculturists Relief Act applies, it would be easy to show that these very districts have largely increased in population, cattle, cultivated land, wells and other substantial signs of wealth. Taking the districts of the Presidency generally, they pay larger stamp and excise revenue than any other portion of British India, and taking even the four Dekkhan districts under the Act, they were able, when the famine came upon them, to send large sums in ornaments from their savings to the Mint, and they thus offered the best evidence which any unprejudiced man could desire of having been long rising under a beneficial system of assessment. But how, then, it may be asked, can these assertions be reconciled with the fact of the Dekkhan Agriculturists Relief Act, and the outcry about the over-assessment of the land-revenue in those parts? In the first place, the Dekkhan Riots Commission only declare that in these districts one-third of the population were in serious debt at all. Moreover, the bulk of those said to be in debt were not resident in any of those districts or taluqás which had been subject to the revision of assessment referred to in the extracts which the hon'ble member has read. I altogether deny that the revenue assessments are high. So far from reaching forty per cent. of the gross produce, as the hon'ble member supposes, they have been found to be only on an average from one-eighth to one-sixteenth of that produce. I would, moreover, state that the assessments are not based on the barbarous and unsound system of taking a fixed proportion of the gross produce, because in the Bombay Presidency we are fortunate enough to have a classification of lands, which renders any such rule-of-thumb method unnecessary. Whatever hardship or oppression may have been caused by the assessment has not been owing to the severity of it, but to certain incidents in the mode of its collection,—incidents which, I am glad to say, have considerably altered since I first alluded to them in this Council. If we now turn from this fact of light assessment to seek the causes of the indebtedness of the raiyat, I would point out that one of the principle of them is one which renders the analogy, which the hon'ble member has attempted to draw, altogether a false one. One of those causes is, that the land of the Bombay raiyat has been for the last thirty years transferable, while the land of the Bengal raiyat is not, or is not recognised to be so. In consequence of this transferability, the raiyats were of course able to borrow, and during certain prosperous times in 1865 they were tempted to borrow beyond all reason. When the times changed, the meshes of legal entanglement did not permit them to recover themselves. What, then, it may next be asked, have you to say about the throwing up of land? I reply that we in Bombay are fortunate enough to have still remaining to us that customary law of India which the Bengal zamíndárs have overridden, and that the status of a raiyat over there does not depend either on contract or on the period of his occupation of the land. A raiyat there may, by giving notice, throw up his land when prices are lower or drought has weakened his cultivating powers, and may take it up again in better times, without any loss of status in consequence of not having held it during the intervening years. In short, we have an elastic system, which enables him to vary his responsibility at will, and to contract his operations in any year owing to famine or other causes. But, then, it may be asked, what is the cause of this outcry in Western India? That outcry, I reply, is essentially a *zamíndár's* outcry, and has been raised by two well-known classes of persons. In the first place, there are various petty Native chiefs within British territory who systematically take rents far above those fixed by the revenue survey and assessment, and they dislike that assessment, because it is a just standard, according to which they are periodically pressed by their own raiyats to moderate their demands. Again, there is a class of superior holders, who take from their tenants a certain share of the produce, and who, according to the customs of the country, pay the Government revenue out of their share. Consequently, they of course are anxious to see that revenue reduced to the lowest possible amount: and even though it were abolished altogether, these are the men who would be the gainers, and not the raiyats whose advocates they pretend to be. These, then, are the causes which give rise to this outcry. And in this fact, that the outcry is a zamíndárí outcry, is, perhaps, to be found the real reason why certain members of this Council have testified their great sympathy with the circumstances of the raiyats in a far distant Province—a Province whose prosperity they have no eyes to see, and of whose circumstances they are profoundly ignorant. But the point in the argument of the hon'ble member, if I rightly understand it, is somewhat of a *tu quoque* nature. Supposing, he says, that our zamíndárs' rents are rather high, the rents received by Government are high also, and as we are more or less in the same position, you should give us the same facilities you have yourselves to recover these rents. This argument is partly a retort, and partly an appeal for stronger powers and a simple procedure for recovery of zamíndárs' rents. So far as it is a retort, it is, as I have amply shown, incorrect in fact, and devoid of application. So far as it is a basis of appeal, I would beg to point out that in the Western Presidency these powers, which he covets, are used where the assessment has been carefully graduated in accordance with the capabilities of the soil after a careful survey and record-of-rights; where there is a complete recognition of the customary tenure of India, and a system which has the elasticity to adapt itself to variety of seasons and means, and where, moreover, the assessment, which is fixed under this system, has been fixed for thirty years.

In Western India, I am glad to say that a large and increasing number of chiefs and landholders, who have sufficient enlightenment to recognise the advantages of this system, have called in the Revenue and Survey Department to survey their lands and fix their rents for them, have agreed to abide by their decision, and have introduced rates accordingly. Assistance to recover these rates is readily obtainable from Government. I would recommend the same course to the zamíndárs of Bengal; and when next they desire to come before the Government asking for additional powers to recover their dues, they had better accompany their request with the other, that these rents may be fixed on scientific principles for a term of years. I think, my Lord, that this is all that it is necessary for me to say regarding the Bill in its present form; but I may repeat that it will receive my hearty support."

The Council adjourned to Tuesday, the 13th March, 1883.

D. FITZPATRICK,
Secretary to the Govt. of India,
Legislative Department.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Tuesday, the 13th March, 1883.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Major the Hon'ble E. Baring, R.A., C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Rájá Siva Prasád, C.S.I.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble Sayyad Ahmad Khán Bahádur, C.S.I.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble Kristodás Pál, Rai Bahádur, C.I.E.
The Hon'ble Mahárájá Luchmessur Singh, Bahádur, of Darbhangá.
The Hon'ble J. W. Quinton.

BENGAL TENANCY BILL.

[The adjourned debate on the Bill was resumed this day.]

The Hon'ble MR. ILBERT said:—"My Lord, I propose to leave to my hon'ble friend Sir Steuart Bayley, in whose charge the Bill is, the task of replying generally to the arguments which have been urged against it; and the very able speech of my hon'ble and learned friend Mr. Evans has relieved me from the necessity of dealing with such of those arguments as appear to be of a specially legal character. I do not intend to pursue further the discussion as to the precise position and rights of raiyats and zamíndárs, respectively, at the time of the Permanent Settlement. The interest of that discussion is mainly antiquarian; and the most important of the practical questions connected with it are, how far we have redeemed the pledge given to the raiyats in 1793, and whether what we now propose involves any violation of the contract entered into with the zamíndárs at the same time. I have endeavoured to answer both those questions to the best of my ability, and after listening very carefully to what my hon'ble friend Mr. Kristodás Pál had to say on the subject, I cannot help thinking that the argument based on the breach of contract is an argument on which he himself does not rely, and which, in fact, he does not even seriously urge. I may, however, be permitted to take this opportunity of removing some of the misconceptions which appear to be entertained as to the meaning of one or two expressions which I used in the course of my introductory speech. When I compared the use of the term 'proprietor' in Indian revenue language, to the use of the word 'owner' in English statutory language, I did not mean to suggest that the position of the former was or might be that of a mere agent or trustee. I merely meant to point out that in the one case, as in the other, the legislature had pitched upon one of several persons having an interest in land, and treated him as an owner or proprietor for certain State purposes, without entering into the question of the interests of other persons. Still less did I mean to suggest, as the

Hon'ble Rájá Siva Prasád thought I suggested, that the zamíndár is not entitled to call himself proprietor, or to speak of his interest as his property. My hon'ble friend, as every other zamíndár, was fully entitled to describe himself as proprietor of his interest in the land, and to speak of that interest as his property; but that fact does not exclude the co-existence of any number of other interests of any number of other persons in the same land. I am afraid, from the way in which the hon'ble member spoke of the Bill, that he is irreconcilably opposed to its principles, as well as to its details. But, however that may be, I can assure him that any suggestions which he may make for the improvement of the provisions of the Bill will receive most careful consideration from the Select Committee. I entirely concur with him as to the expediency of affording every facility to the landlords for making improvements upon their lands, and I understand that for this purpose he suggests, among other things, that when a landlord has made, or has proposed to make, an improvement, such as a well, he should be enabled to go to the Collector or some other officer and obtain from him a certificate showing the description of well he has made, or is about to make, the area likely to be improved and the probable expenditure on the improvement (the hon'ble member will correct me if I am wrong); and that, upon the strength of that certificate, he should be entitled to make a corresponding increase in his rents. I think this a very useful suggestion, and it is one which is well worthy of consideration.

"Just one word about the *pattá*. I have not seen the Government form of pattá to which the hon'ble Mr. Kristodás Pál has referred, and I daresay my hon'ble friend the Lieutenant-Governor will have something to say about it. But, of course, I never intended to suggest that each and all of the stipulations contained in the *kabúliyat* which I read out were illegal or unfair. On the contrary it was obvious enough that the zamíndár had taken a common form, and had engrafted on it some variations of his own, and it was those variations that were open to objection. It is all very well to say that stipulations for the payment of interest at an exorbitant rate, or for the payment of cesses imposed by the landlord, are stipulations which no Court would enforce. But it is precisely this fact which makes them so mischievous. These stipulations are, in fact, attempts on the part of the zamíndár to make the raiyat pay, under colour of a contract, what no Civil Court would ever force him to pay."

Major the Hon'ble E. BARING said:—"My Lord, before proceeding to comment on the important question upon which this Council is now called upon to deliberate, I should wish to make one preliminary observation. It is, I am aware, difficult to argue the issues involved in the discussion on this Bill, without appearing a partisan of either the zamíndárs or the raiyats. For my own part, however, I altogether deprecate any such inference. My wish is—and I am sure the wish of the Government collectively is—to preserve an attitude of strict impartiality, to consider carefully the arguments which may be advanced, whether in support of this Bill or in opposition to it, and ultimately to assist this Council in arriving at such decisions as may be most conducive to the public welfare and most just to the conflicting interests involved.

"My hon'ble friend Mr. Kristodás Pál commenced the able and interesting address which he delivered to the Council yesterday, by saying that he must not be regarded solely as an advocate of the zamíndárs, for that his sympathies and convictions were quite as much with the raiyats as with the zamíndárs. I was glad to hear that statement of my hon'ble friend, but I must confess that, although I listened with great attention to my hon'ble friend's speech, I did not hear any arguments advanced from the point of view of the raiyat. I do not at all complain of this. On the contrary, I think it is a matter of congratulation both to the Government and to this Council that the views of the zamíndárs should be so ably and fully represented in this Council, as they are by my hon'ble friend. On the other hand, I trust my hon'ble friend will not be surprised if to some extent I take up the converse of his situation, and that he will not think, if I dwell more specially on those views which are especially associated with the interests of the raiyats, that I have any bias in the matter. I have no such bias. The reason why on the present occasion I dwell more

especially on the claims of the raiyats is, because the superior education of the zamíndárs, and the fact that their interests are ably represented both in and out of this Council, enables them to bring forward their views to greater advantage than the circumstances of the case permit to the raiyats. It is, therefore, desirable that the arguments from the raiyats' point of view should be fully and publicly stated and examined.

"My hon'ble colleague Mr. Ilbert, in moving for leave to introduce this Bill, explained the circumstances under which the present Government has thought it its duty to undertake a general revision of the rent law in Bengal. It is not necessary, therefore, that I should dwell on those circumstances. I will only make one observation on the past history of the case.

"In the course of the discussions on this Bill, it may perhaps be said—and, indeed, outside the walls of this Council room it has already been said—that your Excellency's Government, finding the relations between the zamíndárs and raiyats in an unsatisfactory condition, resolved, *proprio motu*, to initiate legislation, with a view to placing those relations on a more satisfactory footing. A statement of this sort would very inaccurately represent the facts of the case. Whatever may be the individual views held by members of the present Government upon the important political, social and economic problems involved in the legislation now proposed, nothing is more certain than that those individual views have in no way contributed to raise the issues now under discussion, nor have they accelerated or retarded by one day the advent of the time when the reform of the land laws of Bengal must, perforce, have been undertaken.

"In order to appreciate the reasons, whether remote or immediate, which have rendered legislation on this subject an unavoidable necessity, it is necessary to look back to a time when the *personnel* of the Indian Administration—whether that of the India Office, of the Imperial Government of India, or of the Local Government of Bengal—was different to that which at present exists.

"The facts which the present Government of India found in existence were, first, that, after some tentative efforts at partial legislation, a Commission had been appointed as a preliminary measure to a general revision of the rent law of Bengal; and, secondly, that the majority of the Commission, backed by the concurrent testimony of a long array of high authorities in past years, were of opinion that such a revision should be undertaken. Lastly, the Government of Bengal urged that a general revision of the rent law should be undertaken, and submitted a draft Bill having that object in view. Under these circumstances, I venture to think that it would have been a dereliction of duty on the part of the Government, if we had declined to undertake the onerous and responsible task which now lies before us.

"Independently, however, of this issue, which is one of comparatively minor importance, it remains to be considered whether the Government—in which term I include both the Government of Lord Lytton, which appointed the Rent Commission, and the present Government, which has to deal with its report—is justified in undertaking a legislative measure of such importance.

"It appears to me desirable that this question should be further examined, especially as the necessity of any general revision of the rent law has been denied by my hon'ble friends the Mahárájá of Darbhangá and Mr. Kristodás Pál.

"The necessity for legislation is urged from two quarters. The zamíndárs wish for certain amendments in Act X of 1859, their main grievance being that the existing law does not give sufficient facilities for the enhancement and recovery of rent. The grievances of the raiyats may conveniently be summed up in the phrase—borrowed from the discussions on the reform of the Irish land laws—that they desire, in a greater or less degree, the attainment of the three Fs.

"I am aware that my hon'ble friend the Mahárájá of Darbhangá stated yesterday that the zamíndárs of Bihár do not require any legislation at all. At the same time I think I shall be right in saying that very recently the desirability of amending the law in the sense of giving greater facility for the recovery and enhancement of rent was not generally disputed, and that even now a very large body of opinion is in favour of such legislation. I need not,

therefore, discuss this branch of the question. But the necessity of any further considerable revision of the law beyond what is necessary to facilitate the recovery and enhancement of rent is disputed. It is alleged that the present system of land tenures in Bengal has not hampered the prosperity of the Bengal peasantry; that no sufficient evidence exists which would justify a general revision of the rent law, and that, before any such revision is undertaken, further detailed enquiry is necessary.

"Then there is another argument to which allusion has not been made in this Council, but which I have seen frequently stated outside the Council. It is well known that the advocates of legislation adduce the riots in Pabná and elsewhere as a proof of the necessity for legislation. To this it is replied that these riots were caused by Government officials. As regards this statement, I will only say that there is a strong presumption that it is unfounded. I have certainly never seen any evidence in support of its correctness, and I observe that Sir George Campbell, speaking some while after the riots, said that he 'believed, speaking generally, it is certain that the law was, and, so far as the original matter of dispute goes, still is, with the raiyats.'

"I confess that an argument of this sort reminds me of those well-known lines in 'Rejected Addresses' which, I remember, have once before been quoted in this Council—

'Who makes the quartern loaf and Luddites rise?
Who fills the butchers' shops with large blue flies?'

"And then the author goes on to say that the Emperor Napoleon I was responsible for these things. To the best of my knowledge and belief, the officials in Pabná and elsewhere were no more responsible for the disturbances some few years ago than Napoleon I was for the flies in the butchers' shops, and they are, perhaps, less responsible than that potentate was for the high price of the quartern loaf.

"Turning now to the question of the prosperity of the peasantry, I wish to remind this Council that my hon'ble friend Mr. Kristodás Pál cited the rapid growth of the Excise revenue as a proof of the growing prosperity of the people. No doubt the Excise revenue has of recent years grown rapidly, and the growth of this revenue is an indication of increasing prosperity. But my hon'ble friend must pardon me if I say that this fact does not prove his case. The question to be decided, for the purposes of the present issue, is not whether the peasantry of Bengal are prosperous or the reverse. Prosperity is a relative term. The question at issue is, whether the existing laws regulating the system of land tenures in Bengal hinder the peasantry of that Province from being as prosperous as they otherwise would be.

"It may tend towards the elucidation of this question if I give some figures with a view to showing the measure of agricultural wealth possessed by the population in the principal Provinces of British India, more especially as this is a point to which my hon'ble friend Mr. Kristodás Pál alluded in the course of his very able and interesting speech of yesterday. In the Central Provinces, the yearly value of the crop, per head of population, is Rs. 21·6; the payments for purposes of Government and irrigation, per head, amount to Re. ·72; the balance is Rs. 20·9. In Bombay, the yearly value of the crop is Rs. 22·4; the payments Rs. 2·2; the balance Rs. 20·2. In the Panjáb, the yearly value of the crop is Rs. 18·5.; the payments Rs. 1·4; the balance is Rs. 17·1. In Madras, the yearly value of the crop is Rs. 19·0; the payments Rs. 1·7; the balance Rs. 17·3. In Bengal, the yearly value of the crop is Rs. 15·9; the payments Re. ·81; the balance Rs. 15·1. In the North-Western Provinces and Oudh, the yearly value of the crop is Rs. 16·4; the payments amount to Rs. 1·6; balance Rs. 14·8. It would be easy to show that, of the total payments, including rent, made by the people of each Province of India, a great deal less finds its way into the Government Treasury in Bengal than elsewhere. Thus, in Bombay, where the land-tenure is nearly all raiyatwárí, eighty-eight per cent. of the payments made are devoted to purposes of Government, being either paid into the Treasury as revenue, or devoted to the support of establishments required for public purposes. In Madras, where about four-fifths of the country is under the raiyatwárí tenure, the proportion is sixty-nine per cent. In

the North-Western Provinces and Oudh, under a zamíndárí system and temporary settlements, the proportion is sixty per cent. In the Panjáb, where there are a very large number of cultivating proprietors, the proportion is fifty-four per cent. In Bengal, under the Permanent Settlement, the proportion is believed not to exceed thirty-three per cent. This, however, is not the point with which I am immediately concerned. What I wish to show is the degree of agricultural wealth possessed by the several populations. I am aware how dangerous it is to place implicit reliance on statistical calculations of this sort. Notably, in this instance, it is to be observed that the produce of the cultivated area is not the only source of income to the cultivators. Milk, ghí, curds, hides, wool, live-stock and fuel have to be taken into account. For instance, the value of stock, dairy and forest produce in the Panjáb has been calculated at no less than twelve crores of rupees annually. At the same time, when we find that statistics, worked out without reference to any particular result,—for these calculations were not made with special reference to the measure now under discussion—lead to the same conclusion as those which would result from general knowledge of the subject, and from *à priori* inferences, it is, I think, impossible not to attach some importance to them. What, therefore, is the conclusion to which these figures point? They show, in the first place, that, under certain conditions, the raiyatwárí and zamíndárí tenures are consistent with an equal degree of agricultural wealth. Thus the agricultural wealth of the Central Provinces stands at the top of the list. The reason is obvious. In the Central Provinces, there is no keen competition between cultivators for land, but rather there is competition between landlords to get cultivators. But if we find a combination where the zamíndárí system exists, accompanied with great pressure of the population on the soil, but unaccompanied with any sufficient protection afforded to the cultivator against the landlord, it is there that we should expect to find the least degree of agricultural wealth; and that is precisely what we do find. The degree of agricultural wealth in the North-Western Provinces and Oudh and Bengal is considerably less than that of the other Provinces of India, and the North-Western Provinces and Oudh are in a slightly worse position than Bengal, because we know that the pressure of the population on the soil in those Provinces is somewhat greater than is the case in Bengal.

"I have so far compared the agricultural wealth of Bengal and other Provinces. I now proceed to institute a comparison between different portions of the Province of Bengal itself. The circumstances incident to the tenure of land, and consequently the degree of agricultural prosperity attained in different parts of the Province, present some wide differences. Thus, in the Chittagong Division, we are told by the Commissioner that the landlords 'stand in awe of their raiyats'. In some other districts, Dinájpur for instance, there is evidence to show that 'the demand for raiyats by zamíndárs is more than the demand for the lands by raiyats'.

"Of course where any real competition for raiyats exists, the latter, if they are unduly pressed, move off to other estates. In other districts, where this state of things is reversed, and the congestion of the population leads to excessive competition for land, there is abundant evidence to show that, under the existing condition of the law, the agricultural prosperity of the country is hampered. Perhaps the best way of bringing this point out clearly will be to compare the condition of different parts of the Province, which present dissimilar features in respect to the system of land tenures.

"Many official reports might be quoted to show the prosperous condition of the people of Bákirganj and the adjoining district.

"Thus an official report written in 1868 speaks of the cultivators of the Bákirganj district as 'litigious' and 'very easily excited.' But the report goes on to say—

'Nothing strikes one more in going through a village in this district than to see substantial homesteads, well-kept gardens, well-stocked poultry and farm-yards. It is no uncommon thing for the substantial howaldars of this district to keep their own poultry, not only for sale, but also for home consumption.' Then again 'I do not think the raiyats of any other district would have borne the heavy losses in cattle, from the murrain which has raged here to a most appalling extent, so well as the Bákirganj raiyats have done. I have sometimes been really surprised to see how easily the raiyats have replaced their losses by the purchase of more

cattle. * * * * In the steady social advancement of the people, in their independence and substantial comfort and well-being, Bákirganj, a district comparatively unknown, neglected and despised, is about the best illustration of the blessings enjoyed under our rule.'

"Many passages from recent reports might be quoted in corroboration of this description. Thus, in the annual report on the Dháká Division for the year 1877-78, the following passage occurs :—

'The great and astounding calamities which followed the cyclone have been met and tided over; the soil is fertile; the people self-relying, industrious and perfectly able to defend their own'.

"Why is it that, in Bákirganj and in some of the adjoining districts, such a remarkable degree of prosperity exists? The reason is not far to seek. 'Bákirganj,' an official report says, 'is essentially a district of peasant proprietors.'

'Almost all the actual cultivators,' another report says, 'have to a certain extent a proprietary right in the land they cultivate'.

"I do not say that this is the only reason why these districts are exceptionally prosperous. I am aware that the rise of the jute industry has poured considerable wealth into these districts. But when this wealth accrued, what was the first use to which it was turned? The cultivators knew well enough that the acquisition of a proprietary right in the soil was essential to their permanent welfare, and, accordingly, we find that the first use to which they turned their newly acquired wealth was to take every opportunity of acquiring such right. The statistics of registration show that, in the three years, 1877-78, 1878-79 and 1879-80, no less than 342,596 perpetual leases were executed in Bengal, by far the greater portion of which were executed in the districts of Jessore, Bákirganj, Farídpur, Noakhálí and Chittagong.

"I turn now to Bihár, and the contrast is indeed remarkable. There we find a peasantry which is described by Sir Richard Temple, speaking with all the weight of his great experience, as 'in a lower condition than that of any other peasantry with equal advantages which he had seen in India'. I see no reason to suppose that this description is in any way exaggerated. It is corroborated by the late Colonel Hidáyat Alí, himself a zamíndár, well acquainted with the habits and customs of the people of Bihár, and whose opinion is stated, on reliable authority, to be unprejudiced and valuable. 'The raiyats of this Province', he says, 'namely, the heads of families, and even the women and the male adult children of the agricultural classes, though they labour hard, are yet in a state of almost utter destitution, and that owing to the heavy assessments laid on them'. Let any one look at tables giving the average monthly wage of an able-bodied agricultural labourer, which are periodically published in the *Gazette*. He will find that the average wage in the Patna district is from Rs. 3 to Rs. 4 a month; in the Gya district, from Rs. 2-8 to Rs. 3; in the Shahábád district, Rs. 4; in the Darbhangá district, Rs. 2 to Rs. 3. Elsewhere in the rural districts of Bengal, we find the wage of the agricultural labourers ranging from a minimum of Rs. 5 in the Murshidábád district, to somewhat over Rs. 9 in Bákirganj, Maimansingh, &c., the usual rate being about Rs. 7 or Rs. 7-8. These, I think, are very eloquent facts. If any further evidence be needed, it is sufficient to compare the remarkable recuperative powers shown after the disastrous cyclone by the cultivators of Bákirganj and the adjoining districts, with the feeble powers of resistance against famine shown by the peasantry of Bihár in 1874. Those who were concerned with the administration of India in that year are not likely to forget the fearful rapidity with which, in spite of every effort of the Government, scarcity was with the utmost difficulty prevented from turning into widespread mortality from starvation in those poverty-stricken districts. What is the reason of this condition of things? It is thus stated by two very able officials, Messrs. Geddes and MacDonnell, in their report of January 7, 1876:—

'The whole conditions of agricultural industry in Bihár,' they say, 'are such as to render it precarious. There is no sufficient certainty as to tenure. It is impossible for the population to fall back this year solely on accumulated reserves, whether of grain, of property, of money or of credit. * * * The people who plough and sow, and who ought to reap, have not a reasonable assurance as to the fruits of their industry'.

"It is well known that in Bihár a large quantity of land is held under what is termed the *bhaoli* or métayer system of tenure. All who are conversant with questions of this sort know, generally, what there is to be said for and against this system of tenure. It has found an apologist in one of the most able economic writers of the century. I observe, however, in a series of articles republished from the *Hindú Patriot*, and in which the cause of the zamíndárs is defended with remarkable ability, that it is stated that 'the *bhaoli* tenant is as much secured in the possession of his holding as the métayer tenants are in Continental Europe'. A description is then given of the métayer tenancy in France. This description is taken textually from the pages of Arthur Young, who was a very acute observer on agricultural matters. It describes, not the métayer tenancy which now exists in some parts of Europe, but that which existed in France before the Revolution. It was in respect to this tenancy that Arthur Young said that :—

'there is not one word to be said in favour of the practice, and a thousand arguments that may be used against it. * * * * * Wherever this system prevails it may be taken for granted that a miserable and useless population is found'.

"It was strongly condemned by one of the greatest French administrators—Turgot. Mill has, indeed, defended the métayer system, but then, after alluding to the alleged prosperity of the people of Italy, where this system of tenure exists, he says :—

'I look upon the rural economy of Italy as simply so much additional evidence in favour of small occupations with permanent tenure'.

"Now, in the first place it is to be observed that Mill's account of Italian prosperity under the métayer system, which was based on the account given by Sismondi, is now believed to have been incorrect. It was refuted in a report by Mr. Herries on the land-tenures of Italy, which was laid before Parliament in 1871. And, in the second place, permanent tenure, which, as Mill says, will always generate considerable agricultural prosperity, even under the disadvantages of the peculiar nature of the métayer contract, is exactly what the Bihár tenant has not got. This is what the Bihár Committee said on this subject :—

'An examination of the *jamabandí* papers of Bihár estates has shown that, while sixty per cent. of the present raiyats have held some land in the villages in which they reside for more than twelve years, less than one per cent. of them hold at present the same area of land which they held twelve years ago. * * * This is an evil which is due to the general failure on the part of the landholders to comply with an obligation which the law has, from the earliest period of our rule, imposed upon them, namely, that of giving pattás to their tenants, specifying the boundaries and areas of their holdings'.

"The meaning of this is, I conceive, that the intention of the legislature in 1859, which was to facilitate the acquisition of occupancy-rights, has been completely defeated. But the whole of the report of the Bihár Committee should be read, in order to gain an accurate idea of the evils of the *bhaoli* system. It is shown by the report of that Committee that, when the raiyats decline to accept the zamíndár's terms as to the share of the produce, the zamíndár declines to make the appraisement. Further, when the appraisement is made, the zamíndárs do not allow the raiyats to take away the grain. 'It will be seen', the Committee says, 'that the zamíndárs of South Bihár practically take by way of rent as much of the crop as they choose to claim'.

"I think, with such facts as these before us, it is impossible to deny that the relative prosperity of the people of the Eastern districts in the one case, and the relative depression of the agricultural classes in Bihár in the other case, must to a very great extent be traced to the different systems under which land is held in those districts of Bengal.

"It is said that sufficiently detailed enquiry has not yet been made, and that sufficient evidence has not yet been accumulated, as to the necessity of any general revision of the rent law of Bengal. I am unable to admit the validity of this contention. Abundant evidence might be cited to show that in some parts of Bengal greater facilities are required to enable the zamíndár to recover the tenant's rent. As, however, this point is not, generally speaking, disputed, I need not dwell on it any longer. Looking at the question from the raiyats' point of view, we have the concurrent testimony of a large number of

experienced officials, both past and present. We have the further testimony of a Committee composed of experienced gentlemen, both official and non-official, on the condition of the affairs of Bihár. We have the very able report of the Rent Commission. We have the concurrent testimony of four successive Lieutenant-Governors. We have, moreover, as regards the levy of illegal cesses, the results of very careful enquiries instituted by Sir George Campbell in 1872, supplemented in many cases by abstracts of oral evidence, and a large quantity of documentary evidence.

"It will be borne in mind that, as could readily be shown by reference to contemporaneous literature, one of the chief objects of the authors of the Permanent Settlement was to prevent the levy of *abwábs*, or illegal cesses. Nothing is more clear than that this object has not been attained. I should like to read to the Council a list of the cesses which were reported by the Commissioner of the Presidency Division, in 1872, to be levied in the Twenty-four Parganas. They are no less than twenty-seven in number. They are as follows:—

(1.) *Dák kharcha.*—This cess is levied to reimburse the zamíndárs for amounts paid on account of zamíndárí dák tax. The rate at which it is levied does not exceed three pice per rupee on the amount of the tenants' rent.

(2.) *Chánda*, including *bhikya* or *maugon.*—A contribution made to the zamíndár when he is involved in debt requiring speedy clearance. It will be seen, therefore, that if, as my hon'ble friend (Mr. Kristodás Pál) says, the raiyat goes to the zamíndár when he is in difficulties, it sometimes happens that when the zamíndár is in difficulties he goes to the raiyat.

(3.) *Parboony.*—This is paid on occasions of pujá or other religious ceremonies in the zamíndár's house. The rate of its levy is not more than four pice per rupee.

(4.) *Tohurria*,—a fee paid on the occasion of the audit of raiyats' accounts at the end of the year.

(5.) Forced labour or *begár.*—This labour is exacted from the raiyats without payment.

(6.) *Marucha* or marriage-fee,—paid on the occasion of a marriage taking place among the raiyats. It is fixed at the discretion of the zamíndár.

(7.) *Ban-salami*,—a fee levied on account of the preparation of gur or molasses from sugarcane.

(8.) *Salami*, including all fees paid on the change of raiyats' holdings, and on the exchange of pattás and kabúliyats.

(9.) *Khárij Dákhil*,—a fee commonly, at the rate of twenty-five per cent., levied on the mutation of every name in the zamíndár's books.

(10.) Taking of rice, fish and other articles of food on occasions of feasts in the zamíndár's house.

(11.) *Battá* and *Multá Kumrae.*—The former is charged for conversion from Sikká to Company's rupees; the latter on account of wear and tear of the same.

(12.) *Fines.*—These are imposed when the zamíndár settles petty disputes among his raiyats.

(13.) *Police Kharcha*,—a contribution levied for payment to police-officers visiting the estate for investigating some crime or unnatural death.

(14.) *Junmojattra* and *Rash Kharcha* are exceptional imposts, levied on occasions of certain festivals.

(15.) *Bardari Kharcha*,—a fee levied at heavy rates by a farmer taking a lease of a mahál.

(16.) *Tax or income tax*, levied by a few zamíndárs, to be reimbursed for what they pay to Government on account of this tax. (The list, from which I quote, was, it will be remembered, prepared in 1872 when the Income Tax was in existence.)

(17.) *Doctor's fees.*—This is levied exceptionally by a few zamíndárs on the plea that they are made to pay a similar fee to Government.

(18.) *Tautkur.*—A tax of four annas levied from every weaver for each loom.

(19.) *Dhaie mahál*,—a fee levied from every wet-nurse carrying on her profession on the zamíndár's estates.

(20.) *Anchora salami*,—a fee levied by persons carrying on an illicit manufacture of salt.

(21.) *Halbhangun*,—a fee paid by a raiyat on his ploughing land for the first time in each and every year.

(22.) *Mathurí jama*,—a tax levied on barbers.

(23.) *Shashum jama*,—a tax levied on muchís for the privilege of taking hides from the carcasses of beasts thrown away in the bhagar of a village.

(24.) *Punniah Kharcha.*—The contribution made by the raiyats on the day the *punniah* ceremony takes place.

(25.) *Bastu pujá Kharcha*,—a contribution made for the worship of *bastu purush* (god of dwelling-houses) on the last day of the month of *pous.*

(26.) *Rashad Kharcha*,—a contribution levied to supply with provisions some district authority or his followers making a tour in the interior of the estate.

(27.) *Nazráná*, or presents made to the zamíndár on his making a tour through his estates.

"I took this list at hazard from a number of others given in the reports addressed to Sir George Campbell in answer to his enquiry in 1872. It does not appear to represent an exceptional case. In some districts, fewer cesses are levied; in others, the evil has apparently attained even larger dimensions. Indeed, a case is cited in Orissa, as an example of the credulity of the raiyats, where the fixing of a line of telegraph posts was made an excuse for the levy of an additional cess.

"It is sometimes said that the raiyats themselves have not asked for any legislation. That statement is not correct. The raiyats have in some cases petitioned Government, and, if they have not come forward more fully on their own behalf, the reason is not far to seek. The Collector of Bhágalpur reported on the 15th May, 1872, that—

'if a formal enquiry were instituted, it would be almost impossible to make any raiyat come forward to divulge what he had paid; it is only incidentally that we come to hear of the exactions.'

"And, in forwarding the reports of 1872 to Sir George Campbell, the member in charge of the Board of Revenue (Mr. Schalch),—whose views, generally, were certainly not unfavourable to the zamíndárs—expressed himself in the following terms;—

'Even when the raiyats are aware of their rights, they very naturally prefer to bear the almost insupportable burden of oppression, rather than to follow a course of opposition which would probably result in even greater oppression,—nay, even in utter ruin.'

"I do not think that, under these circumstances, it can be any matter of surprise that the raiyats in some parts of Bengal have not spoken out more plainly than has been actually the case. Rather I think it a matter of surprise that they have spoken out so clearly as they have done.

"It appears to me, therefore, that the evidence upon which the necessity for a revision of the rent law is based is sufficiently conclusive.

"I now turn to the consideration of a wholly different point.

"It has been urged that legislation of the nature now proposed is contrary both to the spirit and to the express terms of the Permanent Settlement; in fact, that it involves a breach of the contract made in 1793 between Lord Cornwallis, on behalf of the British Government, and the zamíndárs. So much has already been written and said on this subject that I will not attempt to discuss it at any length. Nevertheless, the imputation of breach of faith is so serious, and the moral obligation on the part of the British Government to adhere scrupulously to any solemn pledges given to the Natives of India, of whatsoever class, appears to me to be so binding, that I should wish to state, as briefly as possible, why I consider that the argument adverse to the present Bill, based on the supposition that it involves a breach of contract, is wholly untenable.

"I do not know that the spirit in which, as it appears to me, the British Government should approach the question of dealing with the Permanent Settle-

ment has ever been more clearly and comprehensively treated than by Sir James Stephen in his speech on the Local Rates (North-Western Provinces) Bill in 1871, and I wish to dwell briefly on Sir James Stephen's opinions, because, if I understood rightly, they were, I think, somewhat misapprehended by my hon'ble friend Rájá Siva Parsád in the address he delivered to the Council yesterday. Arguments had at that time been advanced to the effect that, as no one generation of law-givers can irrevocably bind another to a certain course of conduct, it was idle to object to any law on the ground that it was a violation of the pledges given at the Permanent Settlement.

"Sir James Stephen said that he had heard these arguments with regret all the more 'because they undoubtedly have a certain *substratum* of truth.' 'The objection to the theory', he added, 'of which they are applications is, not that it is false, but that it is partial, that it applies to legal right and wrong, and does not deal with the question of moral right and wrong.'

"Sir James Stephen then pointed out that it was specially to be borne in mind, in considering the moral justice of making any change in the terms of the Permanent Settlement, that the Government of India was not a representative Government. 'A really representative Government', he said, 'may deal with the pledges of their predecessors in a very different way from a Government like ours.'

"I think these observations of Sir James Stephen must command universal assent. Occasions may arise in India, as elsewhere, when it becomes both necessary and desirable for the legislature of one period to modify, or even deliberately to reverse, the measures adopted at some previous period. But certainly, in dealing with so solemn a compact as the Permanent Settlement, the very strongest possible necessity would have to be shown in order to afford a moral justification for any legislation which might involve a violation of previous engagements. We are fortunately not called upon to decide whether in the present instance a sufficiently strong case exists for any modification in the terms of the Permanent Settlement, for I venture to think that it may be conclusively shown that the legislation now proposed is in strict conformity both with the letter and the spirit of the engagement taken by Lord Cornwallis.

"I say both the letter and the spirit, because high legal authorities differ in their opinion as to whether, in endeavouring to arrive at a decision as to the intentions of the legislature of 1793, we are confined to the text of the Statutes, or whether we may seek for a further exposition of those intentions in contemporaneous official literature. On a point of this sort the opinion of a layman is of little value. But I may perhaps be permitted to quote what so high a legal authority as Sir James Stephen said as to the latitude allowable in construing the text of the Permanent Settlement:—

'When I say,' he said, 'that in my opinion the Permanent Settlement ought to be scrupulously observed, both in letter and in spirit, I do not mean to exclude the right on the part of the Government, which is essential to the true interpretation of all such transactions, to take into consideration the gradual alteration produced by time and circumstance, and the influence of surrounding facts. A great public act like the Permanent Settlement is not to be interpreted, and can never have been meant to be interpreted, merely by reference to the terms of the document in which it is contained. Its meaning must be collected from a consideration of the circumstances under which, and of the objects for which, it was made; and in considering what is, and what is not, consistent with its terms, we must look at the gradual changes which have occurred in the condition of the country since it was enacted. This is the only way in which it is possible to understand fully transactions of this kind, and it is peculiarly necessary in the case of a transaction which, however important, neither is, nor professes to be, a complete and exhaustive statement of the relations between the Government and its subjects. The Permanent Settlement regulates only one branch of one part of those relations, and it must be interpreted by reference to others.'

"Whether, however, we look for the intentions of the legislature solely in the text of the Regulations, or whether we admit contemporaneous literature as evidence of those intentions, it appears to me that, in so far as the immediate point under discussion is concerned, we arrive at the same conclusion.

"Looking first at the precise words which the legislature employed, the text of Regulation I of 1793 (clause 1, section 8) is sufficiently clear. It reserves to the Government full powers to interfere 'for the protection and welfare of the dependent taluqdárs, raiyats and other cultivators of the soil.'

"It has, however, been urged that Regulation II of 1793, which was passed on the same day as Regulation I, qualifies the reservation in section 8 of Regulation I. This argument is based upon the fact that the preamble to Regulation II of 1793, after dwelling on the expediency of abolishing the Courts of *Mál Adálat* or Revenue Courts, and transferring the trial of suits which were cognizable in those Courts to the Courts of *Díwání Adálat*, goes on to say that—

'no power will then exist in the country by which the rights vested in the landholders by the Regulations can be infringed or the value of landed property affected.'

"I must confess that I altogether fail to see how the language thus used in Regulation II qualifies the legislative power expressly reserved by Regulation I on behalf of dependent taluqdárs, raiyats and other cultivators of the soil. If the whole of the preamble to Regulation II of 1793 be read, the intention of the legislature becomes perfectly clear. Prior to 1793, rent and revenue suits had been tried in what were then known as the *Mál Adálat* or Revenue Courts. In these Courts Collectors of Revenue presided as Judges. It was pointed out in the preamble to the Regulation that—

'the proprietors can never consider the privileges which have been conferred upon them as secured whilst the Revenue-officers are invested with these judicial powers * * * * * * The Revenue-officers must be deprived of their judicial powers.'

"Further, these officers were to be rendered 'amenable to the Courts of Judicature.'

"When this was done, the Regulation went on to indicate:—

'No power will then exist in the country by which the rights vested in the landholders can be infringed or the value of landed property affected.'

"In point of fact, it is quite clear that the sole intention of the legislature was to give further security to the zamíndárs in respect to the permanency of their revenue assessment by a separation of judicial and executive functions, instead of allowing them to be united in the same individuals as was heretofore the case. The explicit reservation made in Regulation I of 1793 does not, therefore, appear to be in any way qualified by the provision enacted in Regulation II.

"I have so far dealt only with the text of the Regulations of 1793, and I have endeavoured to show that full power to legislate, with a view to the protection of the interest of the raiyats, was expressly reserved by the legislature. If, however, we admit contemporaneous official literature as evidence of the intentions of the legislature, the case becomes even stronger. In the well-known letter to Lord Cornwallis of the 19th September, 1792, the Court of Directors express themselves as follows:—

'But as so great a change in habits and situation can only be gradual, the interference of Government may, for a considerable period, be necessary to prevent the landholders from making use of their own permanent possession for the purpose of exaction and oppression. We therefore wish to have it distinctly understood that, while we confirm to the landholders the possession of the districts which they now hold and subject only to the revenue now settled, and while we disclaim any interference with respect to the situation of the raiyats or the sums paid by them, with any view of an addition of revenue to ourselves, we expressly reserve the right, which belongs to us as Sovereigns, of interposing our authority in making, from time to time, all such regulations as may be necessary to prevent the raiyats being improperly disturbed in their possession, or loaded with unwarrantable exactions. A power exercised for the purpose we have mentioned, and which has no view to our own interests, except as they are connected with the general industry and prosperity of the country, can be no object of jealousy to the landholders, and, instead of diminishing, will ultimately enhance, the value of their proprietary rights. Our interposition, where it is necessary, seems also to be clearly consistent with the practice of the Mogul Government, under which it appeared to be a general maxim that the immediate cultivator of the soil, duly paying his rent, should not be dispossessed of the land he occupied. This necessarily supposes that there were some measures and limits by which the rent could be defined, and that it was not left to the arbitrary determination of the zamíndár, for otherwise such a rule would be nugatory; and in point of fact the original amount seems to have been annually ascertained and fixed by the act of the Sovereign.'

"Again, somewhat later, but before Regulation I of 1793 was passed, the Court of Directors expressed themselves as follows:—

'In order to leave no room for our intentions being at any time misunderstood, we direct you to be accurate in the terms in which our determination is announced * * * * You

will, in a particular manner, be cautious so to express yourselves as to leave no ambiguity as to our right to interfere from time to time, as it may be necessary, for the protection of the raiyats and subordinate landholders, it being our intention, in the whole of this measure, effectually to limit our own demands, but not to depart from our inherent right as Sovereigns, of being the guardians and protectors of every class of persons living under our government.'

"Whether, therefore, we look to the letter of the Regulations of 1793, or whether we look to contemporaneous official literature for a further indication of the intentions of the legislature of that period, it is abundantly clear that power to legislate, in order to define the relations between the zamíndárs and the raiyats, was expressly reserved at the time the Permanent Settlement was made.

"I now turn to another cognate point. It is admitted on all sides that the *khudkásht* or resident raiyats had certain rights at the time of the Permanent Settlement. A great deal of learning and research has been devoted to enquiring into the precise nature of those rights. I do not propose to discuss this point. But I wish to say something about the rights of a certain important class of cultivators which accrued subsequent to the passing of Regulation I of 1793. At the time that Regulation was passed, a large tract of waste and unoccupied land existed in Bengal. These lands were not assessed to the payment of revenue. The whole of the rents payable in respect to these lands was left to the zamíndárs, under the terms of Lord Cornwallis's settlement. 'The rents of an estate', Lord Cornwallis said in his Minute of February 3rd, 1790 'can only be raised by inducing the raiyats to cultivate the more valuable articles of produce, and to clear the extensive tracts of waste-land which are to be found in almost every zamíndárí in Bengal.'

"It has been argued on high authority that, under the Permanent Settlement, the zamíndárs were left free by the legislature to let these unoccupied lands to raiyats upon whatever terms they thought proper; that, in respect to these lands, they had almost as much freedom as English landlords; and that the terms upon which these lands were let were a matter of contract regulated by the ordinary principles of demand and supply.

"It would perhaps constitute a sufficient reply to this argument to say that the reservation made in section 8 of Regulation I of 1793, which I have already quoted, expressly declares that, if necessary, legislation will be undertaken with a view to the 'protection and welfare of the dependent taluqdárs, raiyats and other cultivators of the soil'. No class of cultivator was excluded.

"But I venture to think that the argument admits of a further answer. It implies that the authors of the Permanent Settlement deliberately intended to introduce freedom of contract as the economic basis on which the relations between the zamíndárs and the raiyats in respect to a very large class of lands was to rest.

"Now all the evidence which has come down to us goes, I venture to think, to show that the authors of the Permanent Settlement never intended anything of the kind. Lord Cornwallis, in his Minute of February 3rd, 1790, after speaking of the privileges enjoyed by the raiyats in certain parts of Bengal, goes on to say:—

'Whoever cultivates the land, the zamíndárs can receive no more than the established rent, which, in most places, is fully equal to what the cultivator can afford to pay. To permit him to dispossess one cultivator for the sole purpose of giving land to another would be vesting him with a power to commit a wanton act of oppression from which he would derive no benefit.'

"Moreover, section 5 of Regulation IV of 1793, which was passed less than a year after the Permanent Settlement, prescribes that, after the completion of certain formalities, 'pattás according to the form approved, and at the established rates, will be immediately granted to all raiyats who may apply for them.'

"The 'established rates', it is to be observed, apply under this Regulation to all raiyats. No exception is made in respect to raiyats who cultivate, or to raiyats who might subsequently cultivate, the lands unoccupied at the time of the Permanent Settlement. And yet it is surely not unreasonable to suppose that, if the legislature had intended to deal specially with the raiyats cultivating those lands, which then formed so large a proportion of the culturable area of Bengal, its intention would have been expressly stated. Lord Cornwallis and

his contemporaries were not ignorant of the fact that rents in Bengal were universally settled with reference to general or local usage, and that freedom of contract, in the sense in which we employ that term, did not exist. On the contrary, abundant evidence might be adduced to show that they were fully aware of it. Indeed, perfect freedom of contract was expressly excluded from the legislation of 1793. Section 65 of Regulation VIII of 1793 runs as follows:—

'No proprietor of land or dependant taluqdár shall contract any engagement with any under-farmer, or authorize any act contrary to the letter and meaning of this Regulation.'

"It does not, therefore, appear to me that, in respect to the unoccupied, any more than in respect to the occupied, lands, it can be contended that the Permanent Settlement placed the zamíndár in the position of the English landlords, free to regulate their relations with the raiyats without reference to customs. As Mr. O'Kinealy has said:—

'All that the Permanent Settlement did, all that the great founder of the settlement ever intended it should do, was to give zamíndárs, subject to custom, a perpetual lease of the lands at a fixed assessment, and subject to the restriction of State intervention if the conditions of their leases were violated to the injury of the raiyats.'

"I have said that Lord Cornwallis and his contemporaries did not intend to introduce freedom of contract as the economic basis which was to regulate the relations between landlord and tenant in Bengal. I may add that, had they endeavoured to do so, they would almost certainly have failed in the attempt. It is sometimes said that an Act of Parliament can do anything. It would be more correct to say that an Act of Parliament may prescribe that anything shall be done. However omnipotent may be the voice of the legislature, whether of England or of India, there is one thing that cannot be accomplished, whether by an Act of Parliament or by an Act of the Indian legislature. The habits of thought and customs of a vast population cannot be changed by any legislative enactment.

"What has been the result of endeavouring to plant freedom of contract in respect to land on the uncongenial soil of Ireland? It is told by the Bessborough Commission, in words that would apply with but little change to Bengal.

'That condition of society', the Commissioners say, 'in which the land suitable for tillage can be regarded as a mere commodity, the subject of trade, and can be let to the highest bidder in an open market, has never, except under special circumstances, existed in Ireland. The economical law of supply and demand was but of casual and exceptional application. It is generally admitted that, to make it applicable, the demand must be what is called 'effective'; in this instance it may be said that, whatever was the case with the demand, the supply was never effective. In the result, there has, in general, survived to him (the Irish farmer), through all vicissitudes, in despite of the seeming or real veto of law, in apparent defiance of political economy, a living tradition of possessory rights, such as belonged, in the more primitive ages of society, to the status of the man who tilled the soil.'

"Again, the legislature of 1793 endeavoured to introduce into Bengal written engagements between landlord and tenant, but failed in the attempt. Neither can this be any matter of surprise. I conceive that, generally speaking, the Bengal raiyats, like the Irish cultivator, regarded a written agreement, not as a means of acquiring something which he did not possess, but as a recognition that he might be called upon to sacrifice something which was already in his possession,—not as prolongation of his yearly tenancy, but as abridgment of the traditional tenancy which allowed him to hold his land as long as he paid the customary rate of rent.

"We know now a great deal more about the historical development of the idea of property in land than was known to Lord Cornwallis and his contemporaries. The researches of Sir Henry Maine, M. de Laveleye and other eminent men have thrown a flood of light on the subject. We know that the separate ownership of land is an economic idea of relatively modern growth; that in almost all countries the soil originally belongs to communities; and that, as society has advanced, a natural movement has taken place from common to separate property in land as in chattels. Without attempting to discuss the precise status of the cultivators of Bengal at the time when English rule was established, this much at all events may, I venture to think, be said with con-

fidence, that the disintegration of the small societies holding land in common, which existed in other parts of India, and which still exist amongst the Slavonic races of Europe, was almost complete in Bengal. On the other hand, the idea of individual property in land, in the sense in which we are accustomed to employ the term in England, had not nearly been attained. An intermediate stage had been reached. Community of property no longer existed, but perfect freedom of contract in respect to the land was wholly foreign to the ideas of the people. Custom and not contract regulated the relations between zamíndárs and raiyats before the Permanent Settlement, at the time of the Permanent Settlement and subsequent to the Permanent Settlement; and custom, and not contract, regulates, to a very large extent, those relations still, and would, without doubt, regulate them to even greater extent, if the legislature of 1859 had not imported into the country the alien theory of prescription.

"I should certainly be the last to press for the interference of the State in the regulation of any matters which can, without detriment to the public welfare, be left to settle themselves without any such interference. I dislike State interference, and regard with some apprehension the modern tendency, not only in India, but in England, to call in the aid of the State on occasions when it appears to me to be scarcely necessary. I should be the last also to say anything which might appear adverse to the application of sound economic principles to the solution of Indian questions. But I conceive that nothing is more likely to check the advance of sound economic knowledge in India than the misapplication of the canons of political economy. To quote a single trite instance of such a misapplication. If scarcity arises in any district of India, the surplus food from other districts will, provided there be roads, be poured into that district, in order to meet the demand. That is what political economy means when it says that the supply will follow the demand. But, if no roads exist, the supply will not, and cannot, follow the demand, and mortality from starvation will ensue, as it has before ensued. So also, when political economy speaks of freedom of contract, it means that free choice, dictated by intelligent self-interest, is the most efficient agent in the production of wealth. There are, according to the Famine Commissioners, 9,752,000 tenants in Bengal, of whom 2,789,000 pay a rent of from Rs. 5 to 20, and no less than 6,136,000 pay a rent of less than Rs. 5, which latter rate, I may observe, implies a holding of from two to three acres. Can anyone who is acquainted with the facts say, in respect to the majority of these tenants, that their education, their knowledge of law and the circumstances under which they till the soil are of a nature to admit of that free and intelligent choice which is in the essence of the economical, as it is of the legal, theory of freedom of contract? I venture to think that any such contention cannot be maintained. The mass of the raiyats are uneducated. In Bihár, with its population of 22½ millions, less than one and three-quarters per cent. of the population can read and write, and elsewhere in Bengal the proportion is under four per cent. Many raiyats are ignorant of their legal rights, and others, when cognisant of those rights, are afraid to make any attempt to enforce them. Agriculture forms, and must continue to form, their only means of gaining a livelihood.

'The raiyats', the Rent Commissioners say, 'cultivate for subsistence, not with the immediate view to profit. * * * There is no wages fund, there are no labourers paid from capital. There are practically no manufactures, no non-agricultural industries, no great cities of work where a surplus rural population can find employment.'

"Under these circumstances, it is idle for the present generation to think of establishing freedom of contract as the economic basis on which the relations between landlord and tenant in Bengal can be made to rest. The legislature must recognise the facts with which it has to deal, and the leading fact with which it has to deal is, that custom, and not contract, has in the main governed the relations between the zamíndárs and raiyats in Bengal from time immemorial, and that custom, and not contract, must in the main continue in the future to govern those relations.

"If the practical aspects of the situation are such as to necessitate the rejection of the theory of freedom of contract, and to force on the Government the obligation of interfering by legislative enactment in order to regulate the

incidents of land tenure in Bengal, it is on every ground desirable that that interference should be effectual to remedy the evils which it is intended to cure. Whether that interference will be effectual,—whether, on the one hand, due facilities will be given to the zamíndárs to make good their equitable rights; whether, on the other hand, tardy effect will now to a sufficient degree be given to the original intention of Lord Cornwallis and his contemporaries, in the sense of maintaining the raiyats in the enjoyment of their customary rights,—must mainly depend on the decisions which this Council will ultimately take. The Bill introduced by my hon'ble colleague Mr. Ilbert will, should it be passed into law, do much towards the accomplishment of these objects. It would, in my humble opinion, have done more, and it would have given greater hope of finality in the settlement of the difficult question now under discussion, if the land, and not the status of the tenant, had been taken as the basis of the recognition of the right of occupancy.

"But even as the Bill stands, it proposes a large and beneficial measure of reform. I hope and believe that it will be very generally regarded in this light, and that, both in and out of this Council, it will be discussed with the calmness and deliberation that the importance of the subject demands.

"In the remarks which I have addressed to the Council, I have confined myself to certain specific points. I trust that I have shown, first, that, so far as the present Government is concerned, it would not have been performing an act of public duty if it had declined to undertake a general revision of the rent law of Bengal; secondly, that, whether from the point of view of the zamíndárs or from that of the raiyats, the evidence upon which the necessity of a general revision of the law rests is conclusive; thirdly, that the legislation now proposed involves no breach of the contract made with the zamíndárs at the time of the Permanent Settlement, but may rather be regarded as the tardy fulfilment of the pledges given to the cultivating classes in 1793; fourthly, that the contention that freedom of contract must, under the terms of the Permanent Settlement, regulate the relations of the zamíndárs and the raiyats in respect to the lands unoccupied in 1793 cannot be maintained; fifthly, that custom, and not contract, has from time immemorial regulated the incidents connected with the tenure of land in Bengal; and lastly, that in view of all the circumstances with which we have to deal, the recognition of this fact should be made the basis of any measure which is now passed into law.

"I leave the discussion of the further very numerous points which arise in connection with this Bill to a later stage of the proceedings, when they will, without doubt, receive ample treatment at the hands of other and more competent authorities than myself."

His Honour THE LIEUTENANT-GOVERNOR said:—"It was impossible to listen to the admirable statement of the hon'ble member on the introduction of this Bill, or to the later speeches addressed to this Council on the subject, without feeling what must be felt by anyone, even the least conversant with the voluminous literature and controversies on the question, that we are approaching the public discussion and, I hope, the equitable settlement of a large question which intimately affects the interests of a great majority of the people of this Province. I am quite well aware that your Lordship's rule has been signalized by the consideration of many other very extensive reforms of political and administrative importance, and that these questions are still pending a solution; but though of the Local Self-Government scheme it may be asserted that it is taken up chiefly by the highly educated classes, and is with them rather a measure on which hopes and expectations are founded, and though we may lose our tempers over amendments of the criminal procedure to which the mass of the community is profoundly indifferent, here we are face to face with a problem in which nearly the whole of Bengal as an agricultural population is directly interested, and in which, therefore, to use the words of my hon'ble friend Mr. Kristodás Pál, the solution 'involves the life-problem of the people' of the country.

"Most who have preceded me have spoken as to the necessity for legislation. The statement made by the hon'ble and learned member in his opening address, the remarks which fell from the Hon'ble Kristodás Pál and the facts brought

forward by the hon'ble member Major Baring confirm that necessity; and, if anything further was needed, it would be found in the annexure to the Government of Bengal's letter of the 21st July, 1881, which shows that, for the last ten years at least, a general revision of the substantive portions of the rent law has been regarded as inevitable, and has been advocated by every section of the agricultural community, including prominently the British Indian Association, which represents the zamíndárs of Bengal. This call for a revision of the Rent Code has, I admit, not found expression only among those who cláimed for the raiyat a clearer and wider declaration of his rights and privileges, but has been pressed as often and as strongly by those who demanded, in the interests of the zamíndárs, a simple procedure for the collection of rents, and the abrogation of sections which interfered with enhancement. Before Act X had been very long in force, in 1864, Sir B. Peacock raised objections to section 6 of that Act, on the ground that, in these permanently-settled districts, the rights of occupancy had been improperly enlarged; and, in the amendment to the law proposed by Sir William Muir a year or two later, the same objection was taken, in the view that the law of 1859 was unreasonably adverse to the proprietors of the North-Western Provinces. The demand, too, upon Government to reopen and examine the question as a whole is enforced again, not by isolated facts of a similar character from one part of this vast Province, but upon different and varying facts of a disturbing kind from every part of the Province. If the raiyats of the Eastern districts have learnt (mainly, I insist, by the exactions and oppressions practised upon them) the power they possessed in unions and combinations to resist the encroachments of the landlords and their agents, and have carried their opposition so far as to justify the plea of the zamíndárs that the refusal to pay the ordinary and regulated rents required the intervention of the legislature; if the agrarian disturbances in Bákirganj, Maimansingh, and notably in Pabná, disclosed the strained and hostile relations which existed between landlords and tenants, calling for special police arrangements for the preservation of the peace, what are we to say to the gross abuses which prevailed throughout Orissa, where specially, by the exaction of illegal cesses, the raiyats are described as the most impoverished and oppressed tenantry in India? and what are we to say to the systematized ignoring and nullification of the law in Bihár, because the cultivators were ignorant of their rights, and were subjected to the universal jugglery with holdings in the jamabandí papers, thus leading to the continual shifting of the raiyats from their lands, to prevent the accrual of the right of occupancy? In that part of the country, too, the peculiar system of ṭhíkádárí assignments, and the quasi-feudal compulsion of indigo cultivation, gave additional cause for fear, inasmuch as all official enquiries tended to show that the whole conditions of agricultural life in Bihár were precarious in the extreme, notwithstanding the existence of a large and industrious population, of a fertile soil and of many advantages of climate and position; so that, as the official report of the day said, 'the people who plough and sow, and who ought to reap, have not a reasonable assurance as to the fruits of their industry.' All these were indications of a kind demanding the interference of the Executive Government, and we find through the whole of this period, which extended to some ten or twelve years, that successive Lieutenant-Governors of this Province, brought to deal with the excited state of the country which these revelations disclosed, attempted, each in his turn, to provide by legislation for a modification of the evils. There is little doubt that radical remedial measures would have been adopted at a much earlier period, if many disturbing circumstances in the country, and especially the famine in Bihár and other places, had not necessarily diverted immediate attention from the subject; and when at last, in Sir Ashley Eden's administration, recourse was had to legislation, and then mainly in relief of the zamíndár for the speedier recovery of his rents, it was found that, in every different branch of this large and complicated subject, the controversies were so great, and the differences of opinion were so wide, that nothing satisfactory could be effected without a thorough re-examination of the questions connected with ejectment, distraint, instalments and deposits of rent, transferability of tenure and the numerous incidents involved in subletting. It was thus clear that the matter of the entire revision of the existing

Rent Code had to be faced. Hence the Commissions in Bihár and, at a later period, in Bengal, and the amalgamation of the two proceedings with the one report upon which the late Lieutenant-Governor based his proposals, and upon which the Government of India submitted their views to the Secretary of State. The outcome is the Bill which we are now called upon to consider. I am sure no one, even looking at the mass of correspondence and reports which these volumes contain, can fail to see that it has been examined and discussed and reviewed, both officially and non-officially, with an industry, research and ability which few subjects have ever received even in this country. Official investigations have throughout been assisted very much by the independent labours of the Famine Commission, and, if I may be allowed to express now my hearty general concurrence in the measure presented to us, it is in the conviction that, while the right of the occupancy raiyat is maintained on the prescription which the twelve years' rule of Act X of 1859 established, provision has been made to enable the raiyat to maintain that right, to be certified exactly of the amount which he has to pay for it, to resist illegal distraint, illegal cesses and illegal enhancements, not simply by the clearer declarations of the law, but by the power which the Bill confers to secure the survey of every estate and the record of every right upon it.

"I think we all agree that it would be impossible, on an occasion like this, to enter upon any minute examination of the details of this measure.

"It is a large, bold and comprehensive measure; but it has yet to undergo, I am glad to know, the careful scrutiny of a Select Committee, and perhaps what is of more importance, before it reaches the Select Committee it has to pass the ordeal of a more thorough criticism at the hands, not only of the experienced and able officers of Government, but of those who directly are interested in the land, and whom it will more immediately concern. If the general principles of the Bill be accepted, and the vote of to-day will affirm that point, I have no doubt, when the Select Committee begin to consider it in November next, and further, when the Select Committee have finished their labours, we shall find the Bill changed and improved very much in its diction, definitions and, possibly to some degree, in its principles, by the attention which a wide collective opinion will bring to bear upon its contents. I am not careful, therefore, to follow the example which some of the previous speakers in Council have set, of examining the precise details of its sections and chapters; and I will limit my observations to the two principal features which seem to me to mark, in an especial manner, this new legislation, namely, the resolution of the Government to give a clear and established prominence to the fixity of tenure, including, thereby, a limitation of rents, and the freedom of transfer, and, secondly, to secure that result, not by the declarations of the law alone, but by the power also of enforcing those declarations by executive action. Perhaps the principle of the position which the proposed Bill has now most prominently asserted is that the raiyat with the right of occupancy must hereafter be regarded as a co-partner in the land which he occupies and cultivates. To the extent of his holding, he is to enjoy powers and privileges which, whatever the past policy or practice in different parts of the country may have been, the zamíndár will be bound to respect. The practical enforcement and recognition of this position will depend, not only, as heretofore, upon what the law declares (for experience has too clearly shown that is insufficient), but upon the executive ascertainment and record of the fact. I can quite imagine that it may be difficult for the zamíndár to accept this proposal without demur, for his claim has always been to an absolute propriet orship, in which the right is put forward in one shape or another to do what he likes with his own. But, subject to the conditions that we are dealing here with the raiyat whom, in my judgment, the old Regulations of 1793 alone attempted to protect, who rejoiced then in the name of the *khudkásht* raiyat, and who was established as the resident raiyat with the right of occupancy in the Act of 1859, I believe myself that such a raiyat has as strong a claim to the help of the Government and of the law to maintain and secure him in his position as long as he pays his rent, as the zamíndár has to be maintained and secured in his estate as long as he pays his revenue. The contention of the Government here is, I think, unassailable. It is supported by the positive declaration of the Regulation of 1793 which affirmed the Permanent Settlement; it is

proved by its survival through all the controversies and struggles of more than half a century, up to 1859, and this against the always increasing predominance of the zamíndárí influence, and, I may truly add, of the culpable negligence of the Government throughout that period: and it is established definitely, notwithstanding the strongest opposition from the zamíndárs all over the country, by the substantive declarations of Act X of that year.

"It seems to me that it would be utterly unreasonable to attempt now to go behind the law of 1859. If, as your Lordship is aware, I have contended strenuously in the past discussions on the subject, that the legislators of 1859 were justified, under all the circumstances of the case, in fixing the status of a raiyat with a right of occupancy by the twelve years' prescription, and that it would be unreasonable and inequitable to extend the benefits and privileges of the right of occupancy to every raiyat in the country, on the theory that Act X was a mistake, and that the intentions of Lord Cornwallis and his advisers included all raiyats in their benevolent protection, I am equally urgent in the present case that we cannot go back upon any discussion as to whether the occupancy right and such privileges as it carries with it must be limited, by the supposed intention of Lord Cornwallis and the Regulations of 1793, to the few *khudkásht kadimí* raiyats of that day, and those who can now establish themselves as their direct descendants: our new point of departure must be the law of 1859. The despatch of the Government of India showed that their aim was, in recognition of the constitutional claims of the raiyats, to provide that 'the great body of cultivators shall be restored to the position which they held under the ancient law and custom of the country,' and it is seen from the reply which the Secretary of State has given to that despatch that the object could be attained by the maintenance of the principle of the twelve years' rule, as supporting the distinction deeply rooted in the feelings and customs of the people, not only in Bengal, but in most parts of India, between the resident or permanent, and the non-resident or temporary, cultivator. In the justice and wisdom of this decision I most cordially concur; because, whether we look at the case from the position of the Government in 1793, or the position of Government in 1859, the rule laid down in the last-named year has always appeared to me a just and equitable adjustment of the question, though I am ready to admit that, in some respects, it must be regarded as a compromise. I suspect that our judgment is warped too frequently in this matter by the tendency of looking upon present circumstances from the stand point of a very remote and different period. It has been urged more than once in this debate, and it is beyond dispute, that the position of landlords and tenants was in 1793-94 altogether different from that of the present day. In Lord Cornwallis' time, there was more land than there were people to till it. The competition was among the landlords for tenants, and not among the tenants for land. Under such conditions, every cultivator was welcome to clear the wastes. He was welcome, further, to remain upon his holding as long as he pleased; and, so far from eviction and enhancement being in vogue, the rivalry between landlords was to attract people to their zamíndárí by more favourable terms than were recognized under the pargana rates. As the Permanent Settlement receded, and the pressure of population upon the soil increased, this condition of things was very gradually reversed. The peace and order of British rule helped to promote the change. In Bengal (the Lower Provinces), wars, and even violent disturbances, have for long ceased. Pestilences and famines are yearly brought more under control, and the result has been an enormous increase of the population. According to the computations of the last census, it may be said that during the last century the population of Bengal has increased three-fold. But all this while the actual area of the land has stood still, and the surplus population, dependent almost entirely upon agriculture for its livelihood, has been forced either to fall back on inferior soils, or to crowd each other within the old margin of tillage. Both these processes have taken place, and both processes have led, by the operation of economic laws, to an increase of rent. As far as can be ascertained, the Government of the country never took any practical steps to act up to its earlier reservations in favour of the cultivator. Indeed, such interference as it did exercise was in the direction of the right of the landlord to enhance rents (Regulation V of 1812), and by the sale laws of 1841 and 1845 to declare his power of eviction of all but the

settled resident cultivators. It was only when, some twenty-five years ago, the oppressions of the landlords threatened an agrarian revolution that the Government stepped in by a legislative enactment to arrest the natural increase of rent in Bengal, and the result was the land law of 1859.

"It is the fashion now-a-days to disparage the value of Act X of 1859; though, when it was passed, it was recognized as the Magna Charta of the raiyats. It is talked of now as a very inadequate instalment of what was due to the peasantry; and its imperfections and defects are imputed to its limitation of the benefits of the right of occupancy to a particular class of tenants, while the zamíndárs have always condemned and opposed it as an infringement of the Permanent Settlement. Here again, it seems to me, we ignore the position and circumstances with which the Government and the legislature had to deal when it undertook the rent legislation of that year. The fact is that, whereas ninety years ago the State divested itself of most of its rights as landlords, and created a proprietary body, and although it very carefully reserved to itself the power to take such measures as might seem expedient for the protection of the raiyats, no kind of attempt was made to act upon that reservation by a positive definition or declaration of the right till 1859. In that interval of sixty-six years, that is, between 1793 and 1859, while the proprietary body grew in strength and prospered in wealth, village communities perished, the 'pargana rates' (by which the assessment of the resident cultivator's rent was limited) disappeared, and almost every vestige of the constitutional claims of the peasantry (if ever such existed beyond a small privileged class) was lost in the usurpations and encroachments of the landlords. In that interval, all that Government had ever done was to confirm and consolidate the position of the zamíndárs as absolute owners of the land. They had done so by their legislation and by their executive orders and arrangements. The zamíndárs were made every year more and more responsible for the peace and order of the districts in which their estates were situated. They had to supply provisions for the military expeditions and marches of troops passing through their properties; they had to maintain at their own cost the rural constabulary required for the public tranquillity; they were chargeable at their own expense for the performance of many duties which, if they relieved the Government, enhanced the zamíndár's influence and independence; and, while the zamíndár's power grew and strengthened, the rights of the cultivators of the soil gradually diminished, and almost disappeared. This is no exaggeration of the state of things upon which the rent law of 1859 supervened. Feudalism on the one side, serfdom on the other, was the problem Government had to deal with, and that in a case in which its most solemn pledges had been given for securing to the cultivators their rights and the enjoyment of the fruits of their industry. I cannot describe the position more effectively than in the words which Sir William Muir used, when considering the amendment of the law some six years later.

'There is', he wrote, 'a very general consent that in the Native state of things, the resident raiyát, simply as such, is throughout the Continent of India possessed, as a rule, of a right of hereditary occupancy at the customary rates of the vicinity. This may easily be conceived as the normal condition of the cultivator, where there is no proprietary right, properly so called; or where the zamíndár and village communities possess (as under Native rule) the proprietary right only in their own fields, and the remainder have merely the right of management. But the question arises whether such a condition is compatible with the system under which we have recognized a proprietary right in the zamíndárs over the entire area of their estates, or have conferred it upon strangers. It is true that the proprietary right has nowhere been created without the stipulation that all other rights existing by the custom of the country shall be maintained. Everywhere the subordinate rights in the soil have been strictly guaranteed. But it is conceivable that a right immediately accruing from the simple occupation of land,—when that land is claimed by no proprietor,—should not accrue, at least so simply and easily, where a proprietary title in the land already vests in another. The change of circumstances would naturally require, at any rate, a longer and stronger prescription. From the proprietor's point of view, it has been urged that no hereditary title can accrue at all by prescription subsequent to the creation of his property. From the raiyat's point of view, it is urged that the title of the resident cultivator is one of the subordinate rights which the Government has bound itself to maintain, as before, inviolate. Every shade of opinion exists between these extreme views. The doubt and difficulty surrounding the question has arisen from the natural endeavour of the British Government to combine the benefits of a full pro-

prietary title with the maintenance of the rights of cultivators as customary throughout the country.

'In the course of time this question was answered, but very indefinitely, by enactments recognizing the privilege of hereditary occupancy, as created, no longer by simple residence, but by residence of *long* duration. Long residence was held to confer the old hereditary right of the country. But no attempt was made till the passing of Act X of 1859 to define by law what precise length of residence was requisite for the purpose.

'The first draft of that Act contained a provision which constituted *three* years as the term of prescription for a resident raiyat.* The section was criticised on the one hand as too narrow, because confining the privilege to 'resident' raiyats; on the other as too wide, because not requiring a longer period to establish the prescriptive right. A general consent of opinion was found to prevail, both in the North-Western Provinces and Bengal, that twelve years would be a more appropriate term; and that was, accordingly, adopted in section 6 absolutely and without reference to residence.'

* 'Resident raiyats cultivating land not previously in their occupancy shall not acquire a right of occupancy in such land until rent shall have been paid by them for the same—for a period of three years.' (Section V of Bill read a first time on 10th October, 1857.)

"Now this twelve years' prescription was no arbitrarily selected period. It was originally proposed that a three years' rule should be made as the term of prescription for a *resident* raiyat. It is observable that the search was always for that which would most fairly and accurately describe the resident raiyat, because it was to the resident raiyat, and to him alone, that any ancient privileges and rights appertained. But the enquiries of the time most clearly established that a twelve years' prescription would more appropriately define the class to whom the benefits should be declared by the law. I think, therefore, myself we should have committed a great error if we had given up this rule of twelve years. It has now been in force for nearly a quarter of a century, and is generally understood and accepted, and we cannot lightly ignore what I believe to be the long recognised custom of the country, sanctioned by the policy and laws of the Government.

"Frequently we have heard in the course of this discussion that the zamíndár considers it a great grievance that facilities should be afforded for the accrual of the right. Now, I have never been able to understand on what motive, except that of an immediate temporary gain, the zamíndárs have insisted on any right of unlimited enhancement, or of the prevention of the growth of the right of occupancy. Certainly, it is a very short-sighted policy, and whenever it has been practised by the high-handedness of the zamíndár, it has found its retribution in a hostile tenantry, in combinations and leagues to repudiate rents altogether, and, when times of scarcity or famine come, in the utter ruin and desolation of the peasantry, on whose exertions depend the effective cultivation of the soil and the payment of the rent to which the zamíndár looks for his income. Let me read to you the description of a peasantry whose rights in these directions have been respected. We had to make enquiries the other day into the question of the preparation of the table of rates, and through the courtesy of the Mahárájá of Dumraon, one of the areas selected was a portion of his property in the Shahábád District. Regarding this, the Collector of the District, Mr. Nolan, wrote as follows:—

'The peculiarity of the selected tract is, that it is cultivated by raiyats of whom a considerable proportion have these *guzastha* rights, while nearly all have occupancy rights, and that the same leniency of the landlord which permitted such privileges to grow up and continue has prevented him from generally enhancing rents on other lands. It is not, therefore, a good example of the general condition of the district, and I objected to its selection for these enquiries, on the ground that it was not typical, and that there was no prevailing rate. But, if in these respects it affords less information than could be wished, its condition is worthy of the attention of the framers of the Bill on other grounds. It is the object of some of the framers of the present Bill to secure for the raiyats of Bengal, as a body, rights of occupancy at moderate rents, which, they contend, would insure superior cultivation through the improvements to be expected from those who enjoy security of title, a certain prosperity in ordinary times, with the credit necessary to enable cultivators to tide over periods of famine, without becoming a burden on the taxes, and which would also, it is urged, tend to give to the tenants the independence and manliness of character generally found among peasant proprietors. On the other hand, there are many who believe that low rents and security end in sloth, the sale of the land to speculators, and in the end to sub-letting at a rack-rent. It would be most important to ascertain whether, in the selected tract, the conditions which it is proposed to create elsewhere have led to the results anticipated by the one school or the other.

'I think that there can be no doubt on such a question. Sub-letting is not unknown in Bhojpur, and some of the cultivators are in debt; but these are exceptional cases. The general rule is that the raiyats cultivate their own lands with their own small capital, and, where they sell their holdings, it is to others of their own class. Their industry is marked and has resulted in the clearing of the jungle with which much of the land was covered fifty years ago, and the creation of a cultivated area as well planted with fruit trees, as well irrigated from wells, and as well fenced, as any I have seen in India. No one can encamp for a day in the tract without being struck with its exceptional prosperity, which contrasts strongly with the backward state of three parts of the district in which rents are high and occupancy rights unknown. The credit of the cultivators is so good that, as you informed me, they generally borrow at the rate of twelve per cent., that is, on as good terms as their landlord. There would, therefore, be no anxiety whatever as to their surviving without assistance a period of ordinary famine. As to their character, the objection I generally hear to it is that it is *too* manly and independent. The Bhojpur wrestlers have a name throughout the country, and every man carries the large Bhojpur *láthi*, which he can use with great skill. They are equally ready to defend themselves in law Courts with which the complication of rights inseparable from any system where the majority possess interest in land has rendered them familiar. I have always found them open, communicative, ready to deal or to serve, and their honesty is proved by the low rate of interest demanded from them; but they have another side of their character for any one who attempts to oppress them.

'I think that these facts should be brought to the notice of Government as having a certain bearing on the general policy of the Bill. In the area to which your enquiries are confined, it would, I submit, appear that rights of occupancy at easy rents have been followed by comparative industry and prosperity, and with their usual effects in the moral character of those who enjoy them.

'With regard to your remark that the low rents may be due to mismanagement, I may say that it has been the misfortune of the Indian raiyats that so many have considered the raising of rents a proof of business ability. In this instance, the raiyats have not, as in most estates, been transferred from one purchaser at an auction sale to another, until they fell into the hands of some speculator in land who could enhance the old rents to excess. They remain under the Dumraon family, who have owned the land for centuries. That such a family, wealthy even with existing rents, should have allowed them to remain at a rate consistent with the happiness and prosperity of the dependents, I consider a proof of excellent management, and presume it was under such an impression that Government conferred titles on the late Mahárájá and the present manager. I think the Rájá must be better off, surrounded by contented and loyal peasantry, than he would be if his family increased their income at the expense of alienating the feelings of their tenantry, as others have done. I do not say this as imputing an opposite view to you, but because I think it of real importance that, in any public correspondence, conduct which contributes to the happiness of the country should be recognized. The opinion of the older families, as to whether they should respect their own good traditions in this respect, may be represented as wavering under the influence of the example of the new auction purchasers, and an impression that Government regarded their leniency as weakness and mismanagement would have a bad affect.'

"I cannot help thinking that there is a great deal in this rather long extract which I have read from a district report, which is pregnant with facts which the zamíndárs of the country would be wise to lay to heart. If they do so, we may realize the hope of a successful adoption and practical application of a measure which, in its primary object of securing fixity of tenure on reasonable and equitable rents, will give to the country a contented, peaceable and thriving agricultural community.

"Now, my Lord, to come to my second point. I am free to confess that, in my belief, the enactment of even such a liberal measure as that now before your Lordship's Council will not produce these desirable results, if unsupplemented by executive action of a kind to which I think hardly sufficient attention has been paid in the course of this debate. I am very glad to find from Mr. Evans' remarks that he is quite in accord with me on this matter. If there be any who think that the rights of the many millions of people who subsist on the soil of Bengal can be defined and secured by the enunciation of inflexible rules of law; if there be any who, heedless of the lessons of the past, trust for the welfare of the community to the resolutions of this Council alone, I certainly am not of them. Rather, I am among those who believe that, in such a momentous undertaking as this Council is now concerned with, the battle is but half won when the legislators' work has been successfully accomplished He only reaps the full fruits of victory who pushes his advantage; and, unhappily, the history of this Council is not free from cases, where legislative successes not followed up by executive action have resulted in administrative failure. By the Bill now before us, the declaration of liberal principles in dealing with rent, and the recognition of tenant-right, have been carried, if I do not say too far, certainly as far as the circumstances of the case demand; but I have no

hesitation in asserting that, if the Government of Bengal were to rest satisfied with the sanction which the Bill, when passed into law, will confer on these principles, this controversy would in a very few years be re-opened afresh, with far slighter chances of a peaceable solution than now exist. We cannot alter the state of the country, nor amend the abuses of generations, by a stroke of the pen. The utmost that this Council can do is, by wise legislation, to create a tendency towards improvement, which, if followed up by well directed and persistent executive action, may, in course of time, lead to better things. This Bill undoubtedly possesses potentialities for good. But so did Act X of 1859 in the opinion of all the able men who assisted at its enactment. If this Bill, a quarter of a century hence, is not to be exposed to the animadversions levelled to-day at Act X, then the Government of Bengal must adopt active measures to enforce its provisions. It must, by a detailed record of rights and liabilities of all interested in the land, provide against the continuance and renewal of abuses which now weigh on the springs of industry and check the prosperity of this Province. Such a record-of-rights is no new panacea for the agrarian difficulties by which we are now surrounded, neither is it an untried experiment. In his Minute of the 8th December, 1789, Sir John Shore recommended such a procedure to Lord Cornwallis, who, though acting, as all know, from the most benevolent motives, unfortunately rejected the counsels of his sagacious adviser. That Lord Cornwallis's rejection of Sir John Shore's advice was unfortunate most men now admit; for, wherever circumstances have since permitted of the enforcement of the principles then advocated by Sir John Shore, whether in permanently or temporarily settled estates, such enforcement has been followed by complete success. Wherever it has been ignored, difficulties and troubles have been the consequence. I find some apposite illustrations of these circumstances in the papers now before the Council. For instance, in a letter from the Collector of Gházipur, dated 15th December, 1881 (written in answer to some enquiries originated by the Revenue and Agricultural Department of the Government of India), the following important passage occurs:—

'We have had a record of-rights (in the Gházipur district) for the last forty years, which, though prepared with extreme haste, has been throughout that period the touchstone of all rights. So far as tenant-right is concerned it is incontrovertible, for there is nothing to produce to contradict it. Both zamíndárs and tenants appeal to it on all occasions as to the ultimate criterion of the rights. With regard to village boundaries, the details of the plan then adopted left an opening for a good deal of vexatious litigation, which is not quite yet extinct. As to proprietary right, the record is not very full, although it was in this direction that the greater number of contests arose during its preparation. On the other hand, the said record, prepared by Messrs. C Raikes and W. Vynyard in 1840-41, has been *the salvation of the tenants' rights*, especially of those who claim to hold at fixed rates.'

"That, my Lord, is evidence of undoubted authenticity. Comparing the state of affairs in Gházipur, a permanently-settled district, as described by that evidence, with the state of affairs in the adjoining district of Sáran, as described in the rent papers, the difference at once challenges our attention, and proclaims the efficacy of the procedure which can compass such admirable results.

"Nor is the testimony of facts wanting in Bengal itself to the same effect:

'Had a work of the sort', says Sir Henry Ricketts, referring to the settlement of Katak, 'never been accomplished, there might be misgivings and hesitation before commencing such an undertaking. But such a work has been accomplished, and the success has been greater than was expected, even by those who expected most. Previously to the settlement of Katak, the Province deteriorated each year, the people were discontented and embarrassments and difficulties increased. Since the settlement, the Province has flourished, the inhabitants have been among the most peaceful and well disposed of our subjects; there has been less agitation than in any other part of the Empire. Let Bengal be treated in precisely the same manner, and there is no reason why there should not be the same result.'

The passage I have now quoted was written twenty years ago; and it was written by a gentleman, one of the ablest revenue-officers in the country, who was the author of the settlement and who had a parental fondness for his work. But there was the fatal fault in Katak, that no proper provision was made for the maintenance of the record, and the result was what we find described in the 9th paragraph of the Government of Indias' despatch of the 21st March, 1881, namely, the loss of all the advantages by the utter failure to keep up the records in order and accuracy.

"If it be, as it ought to be, an admitted principle of revenue administration in India, that the rights of the several classes interested in the soil shall be expressly declared and recorded by some method or other, in documents accessible to all, then it must be confessed that the revenue administration of this Presidency is defective. Settlement proceedings, involving records-of-rights, secure in many portions of India that essential condition of agricultural prosperity, but there is no such assurance in Bengal. Having rejected the wise counsels of Sir John Shore, to which I have already alluded, the framers of the Permanent Settlement sought to secure the objects at which he aimed—objects recognized by them, as well as by him, to be of the utmost importance—by inculcating the necessity of an interchange of lease and counterpart between zamíndár and raiyat. How far they were successful, even when an interchange was effected, the case 'from real life' cited by my hon'ble friend Mr. Ilbert, when introducing this Bill, will satisfy the Council; and I am afraid what he has brought forward is only illustrative of what takes place in many portions of this Province. This is how the case stands—I quote from the report of a respectable pleader, himself a zamíndár, which the Council will find among the Bihár papers:—

'The law entitles the Bihárí raiyat to a pattá and receipts, yet he seldom, if ever, gets any. The law declares the exaction of *abwábs* as illegal, yet how numerous and heavy are the *abwábs* that we zamíndárs exact from him.'

"My hon'ble friend Major Baring gives us a very instructive list of the irregular cesses levied in Bengal. The quotation proceeds—

'His hereditary tenures are altogether exempted by law from liability to enhancement yet how, at each stage in the transfer of the zamíndárí, and how easily, when he sets up his head against us, we, without regard to law and justice, add something to it every year. The law protects him against ejectment, yet how often without any (effective) opposition from him, or without resorting to law and procedure, we turn him out of his and his father's land. It is illegal and a criminal offence to extort rent from him by duress, yet our *gumáshtas* (agents) and *harabils* (runners) sit at the door of his house preventing egress and ingress, and deprive him of the use of the village well (the writer might have added of every other convenience of life) until he pays off our rent. How frequently, for the same purpose, we bring him to our Kachahrí and detain him there against his will till he satisfies our demands.'

"Such, from the lips of a Native zamíndár, appears to be a faithful account of what happens in many portions of Bihár, where no written contracts are exchanged; and, if Bengal claims exemption from such an indictment, I would point to a register of petitions from raiyats to Government (a copy of which I hold in my hand), showing that every form of complaint of oppression and illegalities has been represented to Government from every part of the country.

"I might, with extracts of a similar character, detain this Council for many hours longer, but each later fact would be in substance but a repetition of each earlier one, and all would point to the same conclusion, namely, that no matter how excellent and liberal the rights provided for by a law may be for such a population as we have to take count of, it cannot be doubted that, until a record-of-rights shall have been completed, the peasantry will, to use Sir John Strachey's words, 'remain the victim of chicanery and oppression, and that our Courts will be systematically made use of for the perpetration of injustice.' 'We shall probably,' says Sir George Campbell in 1873, 'have the whole of the real question in our hands, if we make an attempt to settle any considerable part of it; and we shall scarcely be able to stop till we have made a settlement of Bengal, adjusted and recorded all rights and all incidents of tenure, and created a machinery for perpetuating and continuing the record-of-rights and keeping accounts by public officers under a system such as the framers of the Permanent Settlement designed, but their successors wholly abandoned,—a very long, difficult and expensive, but a necessary, process it will be.' Long it undoubtedly will, and expensive it may, be, though not so expensive as some may think. But the duration and the cost will be as nothing compared with the manifold blessings such a measure would confer on this Province. It will be a permanent possession, restoring peace and preserving peace; for, thenceforward, all will know that nothing can be gained by disagreement. Your Lordship will, therefore, understand what high value I place on those provisions of the Bill which provide for a field survey, a settlement of

rents and record-of-rights, and how anxious I am that those provisions should be hedged round with no needless limitations.

"So far, my Lord, I have dealt with the main points of principle to which in my opinion especial attention is necessary. I have not attempted to enter upon any discussion of the details of the Bill. In my judgment, the Select Committee must do that after the full consideration the measure will receive during the next few months. But I cannot help saying that, as at present advised, I am unable to accept the provisions of chapter VIII of the Bill, which bears upon the question of compensation for improvements and for disturbance. I think, too, though I myself have suggested a twenty per cent. limitation, that it may be impossible to enforce a uniform limitation of that kind in all parts of the Province, and the proposal, I understand, is only suggested tentatively, and will come up for the full deliberation of those who will have to consider the Bill in Select Committee. So also with the chapter dealing with the procedure for the realization of rents; it requires in my opinion very much more examination than it has yet received. In India, it is said, as in Ireland, it has been too much the custom to assume that the landholder is exclusively to blame for the existing state of things as regards the generally unsatisfactory condition of the agricultural districts; but, while the wrongs of the raiyats are freely discussed, the case of the landlord is hardly ever thought of; and yet there is a zamíndárí side to the question, which it is impossible to ignore. I know that the landlords of these Provinces have been very often to blame; many of them deal harshly with their tenants, and but few have done much to improve their estates. From all, however, that has come out in the published papers, it is certain that remedial measures in the interests of the tenants must be accompanied by some provisions to secure the interest of landlords as well. The existing system of coercive processes, and the agency through whom they are served, requires thorough reform. The execution of decrees for instance, which is a most important part of the process for realizing the demand, is inefficiently directed. The whole of this branch of the subject is of extreme importance, both from the zamíndár's and the Government point of view. The Government is the possessor of large estates of its own, which it manages through its own officers, and any means to facilitate the collection of rent will be of great advantage. But the importance of the matter goes further, and it is one which has an especial interest for the Financial Member, that the Government depends for its revenue upon the punctual payment of the rent to the zamíndár. If we cannot give facilities for the realization of one, we incur some risk of losing the other.

"It remains to me, my Lord, to refer to one other point, and that is the statements which my hon'ble friend Mr. Kristodás Pál made yesterday in reference to the kabúliyat to which the Hon'ble Mr. Ilbert took exception in his opening speech. I understood my hon'ble friend to say that the kabúliyat which fell under censure was simply a reproduction of the form of kabúliyat which the Government used on its own estates, and that, at any rate, any censure which might be passed on the zamíndár must fall in the same measure on the shoulders of the Government and its officers. I am not here to defend the Government, as an immaculate body which is above suspicion, much less to defend all the mistakes of my predecessors. But I really do not think, when we come to examine the matter, that my hon'ble friend has in this instance made out any case for condemnation of Government. I may say that, before this subject was referred to in this Council, I had heard something about it from an anonymous petition which I received on the subject. As a rule I do not deal with anonymous petitions, except to throw them into the waste-paper basket; but the statements made on this occasion were so very definite with reference to the alleged malpractices of an officer of Government in his dealings with his raiyats, that I thought it my duty to ask the Collector of the Twenty-four Parganas whether there was any truth in the charge which the anonymous writer had brought to notice, namely, that a criminal information had been laid against the agent of the zamíndár on a charge of cheating, and that several cases were pending in the Courts regarding these particular

kabúliyats. The reply which I got from the Collector was that the statements were quite true, and that the raiyats had a strong case. It was alleged that the kabúliyat given to the raiyats was entirely different from the arrangement which had been made between the parties pending the exchange of agreements; that this charge had been tried and had fallen through; but, as the writer of the anonymous petition said, not from entire disproof of the correctness of the charge of cheating, but from want of sufficient proof for a conviction.

"Now, as regards the Hon'ble Mr. Kristodás Pál's statement in respect to the condemned kabúliyats, that they differ in a small degree only from similar documents issued by the Government, I have taken some pains to ascertain what the facts were. The facts are these: Sir R. Temple having wished to encourage the exchange of pattás and kabúliyats, and to facilitate the general registration of such documents, caused a form of pattá to be prepared which would contain all the ordinary stipulations in such cases, together with those of an exceptional nature. A printed form, general in its application, it was thought, would save all parties a great deal of trouble, and would secure other advantages. The form was not put forward as a perfect form, which the Government, if it could have its way, would have always enforced. The object was chiefly to facilitate registration, and as such a form must provide for a diversity of customs in various districts, it consequently embraced some provisions which were contradictory; and when his hon'ble friend quoted the eleventh provision in the form as being discreditable to the Government, he ought in fairness to have stated that an alternative provision was before his eyes. The Government was only anxious that whatever provisions were adopted should be expressed in the document, so as to induce a freer recourse to registration. I have before me a translation of the form of kabúliyat which the Government issued, and all I can say is that if anything can be different from the form of kabúliyat which my hon'ble friend Mr. Ilbert read out, it is this document. To make this clear to the Council I will read out this translation:—

'*Kabúliyat.*

To the noble (landlord's name).

I (tenant's name) son of inhabitant of village , execute the following kabúliyat:—

In the district subdivision tháná within the confines of your honour's estate situated in the village I acknowledge to hold a plot of land measuring bighás in extent as specified below, and to be responsible for the payment of an *annual* rent of rupees in the instalments specified below. For the privilege of cultivating (this land) during the period specified below I, of my own free will, execute this kabúliyat and agree to perform the undermentioned stipulations except those that have been excepted. To this I shall not object. If I do, my objection shall not be admitted.

Duration (or term) of kabúliyat.

Conditions.

(1) I will pay each month interest on arrears at the rate of per cent.
(2) I will maintain the boundaries.
(3) I shall enjoy the produce of the trees.
(4) I will not fell trees without permission.
(5) I will not alter the (character of the) land by excavation or otherwise.
(6) The landlord shall be at liberty to measure and charge rent at current rates for excess lands.
(7) Should the measurement show that I hold less land (than specified in this kabúliyat) I shall be entitled to abatement of rent.
(8) The landlord shall not be at liberty to measure during the currency of the lease.
(9) I shall not dispose of or mortgage my jote.
(10) The jote, on my decease, shall descend to my heirs.
(11) On my death, the landlord shall dispose of the jote or make any other arrangement he pleases.'

"It will be observed that Nos. 6 and 8, and Nos. 10 and 11, are mutually contradictory.

"It will be observed, further, that the rate of interest is left to be filled up as might be agreed in each case; that all payments are to be *annual*; and that it is only from month to month that interest on arrears is stipulated for. I understood from my hon'ble friend that in the Government form of pattá the Government declined to entertain applications for remission on the ground of

diluvion. The seventh clause of the Government kabúliyat expressly contains a stipulation for abatement of rent where measurement shows a diminution in the area of the land held, and the tenth is in direct contradiction to the contents of my hon'ble friend's kabúliyat. But I have to go further. This is the form of kabúliyat which Sir Richard Temple introduced in 1876, with the view of securing wider registration; but the success of the measure was not very great, and I understand that, in 1878, this form of kabúliyat was entirely abandoned. The form of kabúliyat for rights in Government and wards' estates which was adopted in 1876 remained in force for two years. It was superseded in 1878 by two forms which were then sanctioned by the Board of Revenue; these forms are quite unexceptionable and are in force now. They correspond in no sense with the document adduced in the case which has given rise to this discussion, and if anyone wishes to study them, or better, if any zamíndár wishes to see what a model form of kabúliyat should be, he will find it recorded under Nos. 23 and 24 at page 58 of the Board of Revenue's manual. It is impossible for anything to differ more widely from the indefensible document which was brought forward yesterday; and I may add that within the last few weeks we have issued, through the Board of Revenue, strict orders showing that the right of occupancy is to be strongly protected, and, with the permission of the Council, I will read the circular. It runs thus:—

'I am to remind you that it is no longer open to a manager or to local officers to discuss the policy of allowing raiyats to acquire a right of occupancy in their holdings. The policy has been fully adopted by the legislature and the Government that it is good that raiyats should have the right of occupancy. If the raiyats of the estate do not understand the right of occupancy used in its legal sense, the sooner they cause it to be explained to them the better. The Board expect that the officers engaged in the present settlement proceedings will take the opportunity to dispel their ignorance of legal rights, and they desire that you will take care that no misunderstanding on this subject is allowed to exist among managers of estates in your division. It should be made a distinct instruction to them that there is to be no attempt to discourage the growth of legal occupancy rights; and that, when they have accrued, they must be fully recognised in all zamíndárí papers.'

"The only other question I have to refer to is the question to which my hon'ble friend Mr. Kristodás Pál has referred as to the management of Government estates. Here I cannot appear as the defender of all that has been done in the past. I believe myself that there is a great deal in our khás mahál administration which is capable of improvement, and, therefore, I have interested myself in the subject and have called for a special report from the Board of Revenue on the subject. Indeed, in the case of one large Government estate, to the charge of which I have recently appointed a Covenanted Civilian, I am trying, by way of experiment, to learn whether we cannot introduce a better system of management, by spending more money in the opening out of more roads in the backward parts of the estate, and by inducing immigration to promote the extension of cultivation. The subject has received my personal and careful attention. But my friend went on to say that the khás management of Government maháls in Tipperah and Chittagong and Mednípur was so bad as to create a scandal. I am not aware of the particular cases he referred to in Tipperah and Chittagong; but if he will bring them to my notice afterwards, I shall investigate the matter. I am however acquainted with the circumstances of the cases which occurred in Mednípur. They refer to two temporarily settled estates in which the last settlement was made about forty years ago. After regular settlement proceedings, the rents were enhanced in these two estates to the extent of fifty per cent., and the raiyats objected. This happened three or four years ago. Some people have taken exception to the settlement as exorbitant and unjust to the tenants. But, having regard to the long interval since the last settlement, and to the enormous rise in the value of produce in that period, the revenue authorities maintain that the new demand is not unreasonable. The raiyats, however, would not pay at the enhanced rate and, thereupon, the Government proceeded in the matter constitutionally and according to law, and not as has been done by some zamíndárs without any reference to law. The Government sued the raiyats in the Munsif's Court and obtained decrees: appeals were made to the Subordinate Judge's Court and were dismissed. The raiyats again went up from that decision on special appeal to the High Court, and the order of the

Lower Courts was again confirmed. So far it may be assumed that the action of the Government had justice and moderation on its side. I understand that the raiyats in these two Parganas spent a lákh of rupees in contesting what seemed a moderate enhancement; and it may be thought that, after the decision of the High Court was given against them, they would have submitted. But that was not the case. We have had to send a special officer to ascertain the circumstances under which the raiyats refuse to pay the rent which is now legally demandable from them, and the matter is still under enquiry. In the meantime, to show the leniency with which these raiyats have been treated by the Government, I may mention that one and a half year's rent of the whole body of the raiyats has been remitted; but not satisfied with this concession, they claimed the remission of three years' rent. So far from a case being made out, of oppression and hardship or abuse of the law, I most positively affirm that our revenue-officers have acted here, not only in strict accordance with the law, but with moderation and indulgence. But the result remains that even after the enhancement, the rents of these estates were under the prevailing rates of rent paid by neighbouring raiyats. And as regards the recusancy of the raiyats, it is only another argument in favour of giving the Government, as well as the zamíndár, some assistance in realizing the rates of rent which the Courts have finally decreed."

The Hon'ble SIR STEUART BAYLEY said:—"My Lord, in replying to the objections which have been offered to this Bill in its present stage, I may as well begin by saying that it is my intention only to reply at present to objections offered on the ground of the principles of the Bill, not to points of detail. In the first place, time would not permit, on such a long and elaborate Bill, of my entering into criticism of its details; but, more than that, I wish it to be distinctly understood that, on many points of detail, the provisions of the Bill are only put forward tentatively, in order to elicit criticism, and that we are quite prepared to reconsider and amend them in Committee, on sufficient cause being shown. I may, moreover, say that I came here unprepared to throw a doubt on the intelligence of my audience, by again examining the necessity of the introduction of some such Bill as the present one. I fully endorse every word my hon'ble friend Mr. Ilbert said on this score in his opening speech, and if there is anyone still unpersuaded of the necessity of legislation by the arguments he has used, neither would he be persuaded though one rose from the dead. Certainly nothing that I can say would convince him. Yet we are told that in Bihár neither landlords nor raiyats want legislation; that in Bengal landlords do indeed want it, but not for these objects; that landlords and raiyats are on most friendly terms; that there is no rack-renting, no eviction, no enhancement; that the zamíndárs have peopled the jungles, dug tanks once upon a time and had made roads; that they subscribe largely to education, to dispensaries and to other charitable objects; that the Bihár zamíndárs gave land free for road making, and behaved well to their riayats in the famine, for which they received the eulogium of Sir R. Temple. Well, though some of these facts require considerable modification, I am not going to traverse this description of the typical zamíndár. I have to oppose their interests in the interests of a more helpless class; but this line of policy can be justified without vilifying the zamíndárs. I have no doubt they merited Sir Richard Temple's somewhat generous compliments as much as I did myself, or as a good many other officers of Government did. I have no doubt that as a class they are just what their environments make them, and there are many good ones among them. I know that their liberality and usefulness are great, but while I am far from saying they make a bad use of the money they collect from the raiyats, I do wish that the sums thus extracted should be regulated by law and not left to the arbitrary discretion of the zamíndár. No, if the zamíndár is as considerate and merciful as he is said to be by my honourable friend, then this Bill can have no terrors for him. The law is a terror to evil-doers, not to them that do well. If they neither enhance the rents of their tenants exorbitantly, nor threaten them with eviction in case of their refusal, the prohibition against such practices cannot affect them; but, unfortunately, all landlords are not of this type, and, certainly, all landlords' agents are not so, and I shall, in the course of my speech, I fear,

bring ample evidence that there are landlords who require to be restrained. As I have said, I am not going over the ground which has been already fully occupied in Mr. Ilbert's speech, as to the demand which the landlords themselves made for legislation. I need only refer on this point to the memorandum published as Appendix I to the Bengal Government Report. But to show that the state of things is not quite as Arcadian as has been described, Mr. Thompson has told us that he has a list of no less than 89 petitions addressed by raiyats to the Government of Bengal in the last three years, complaining of acts of oppression on the part of zamíndárs. Most of these petitions are complaints of undue enhancement of rents; others of the exaction of illegal abwábs; others of measurement by an illegal standard; others of dispossession of occupancy-rights. We have been told that there are no evictions in Bengal. Though eviction through the Courts is not frequent and, consequently, statistics are not forthcoming, our police registers tell a very different tale. In one district, a Magistrate (Mr. Edgar) tells me he compiled from these registers a list of no less than 500 such complaints in two years, and the complaints to the Bengal Government of dispossession of occupancy-rights mean the same thing. Eviction in itself is of little value. It is of value as a weapon for enforcing enhancement. I also have a list of applications for the quartering of additional police during the same period, on account of disputes between landlord and tenant. They amount to 16. These applications were all made by the Magistrates; they came from Bákirganj, Jessore, Kalna, Faridpur, Mednípur, Maimansingh, Noakháli, Nadá, Pabná, Rajsháhi, Tipperah, and Orissa; they cover a force of 410 constables, besides officers, all applied for for the purpose of keeping the peace between zamíndárs—and in zamíndárs I must include the Government itself—and their raiyats. It will be noticed that none of these come from Bihár, not, I fear, because there is less oppression in Bihár than in Eastern Bengal,—in fact we know the case is the very reverse of this,—but because the oppression has been so effectual that the raiyats are incapable of resisting, and there is no fear there of disturbance. In one part of the country, we have disputes requiring an armed force to prevent their culminating in disturbances; in another, we have a peasantry too helpless to resist oppression, and in both, I say, there is urgent demand for legislation which shall enable such a state of things to cease.

"The two main objects of the Bill are described to be, in the words of Mr. Ilbert,—

'(1) to give reasonable security to the tenant in the occupation and enjoyment of his land; and

(2) to give reasonable facilities to the landlord for the settlement and recovery of his rent.'

"The objections taken in regard to the manner in which the first of these two objects is dealt with in the Bill group themselves naturally round—

(1) the extension of the right of occupancy;
(2) the limitations to enhancement;
(3) the transferability of the raiyatí tenures;
(4) the overriding of contract.

"The objections taken to the extension of the right of occupancy are, mainly, that this extension goes beyond what was the customary right at the time of the Permanent Settlement; that it certainly goes beyond what Act X of 1859 defined to be the right; that it will, taken in connexion with the power to transfer, do no good to the cultivating classes, while it will do unwarrantable injury to the zamíndár. I am not going at any length into the question of the position of the resident raiyat at the time of the Permanent Settlement. After the admirable exposition of the question which we, or at least some of us, enjoyed yesterday from my hon'ble and learned friend Mr. Evans, this is not necessary. I was in hopes that this controversy was settled, but after what we have heard from the hon'ble gentleman opposite, from Rájá Siva Prasád, as to the indefeasible rights of property conferred on zamíndárs by the Permanent Settlement, I feel bound to touch on the argument. While it is admitted that raiyats who received pattás at the Permanent Settlement (or who otherwise had their rents at the time fixed), and their representatives, had the right of occupancy, by which I mean the right to hold on undisturbed so long as they paid established rates (I am not here referring to the question of enhancement), it is asserted that outside that class, the raiyats had no rights at all, except those which they derived from the zamíndár. It is singular that this controversy should still be deemed an open one. Only the other day, in studying the literature connected with this subject, I came across a paper published as an Appendix to the Select Committee's Report of 1832, written by Mr. Campbell of the Madras Civil Service. He says, after noting that the partial extension of the permanent zamíndárí system to Madras had not in that Presidency succeeded in materially impairing the prescriptive rights of the tenants, that 'in Bengal, on the contrary, though a mass of evidence exists in support of similar right on the part of the cultivators in 1793, and though some of the oldest servants of the Company, such as Mr. Harington, Mr. Colebrooke, with many of their most distinguished civil officers examined before the Committee, have most strenuously advocated them, there are others of great experience who declare that the raiyats in Bengal have no rights and never had any.' This was published fifty years ago. The description of the controversy might equally be applied at the present day.

"But can anyone who has read the papers circulated with this Bill resist the light thrown upon the question in those papers, especially by the annexures to the Report of the Rent Commission, and by the researches of Messrs. Mackenzie and O'Kinealy?

"These gentlemen give in every instance their authorities, and there is an overwhelming balance of testimony in favour of their view, that all resident raiyats once admitted to the village, whether before or after the Permanent Settlement, had a right of occupancy in their lands so long as they continued to pay the established rent, and they had a right to have that rent fixed by the ruling power. The position of the raiyats and zamíndárs after the Permanent Settlement is clearly declared in Regulation VIII of 1793, sections 7 and 8, and Regulation VII of 1822, section 4. Their rights were the old customary rights, except where changed by the Regulation. That is, in addition to the old customs, they were bound to confine their contracts to the terms of the Regulations (section 65, Regulation VIII of 1793). They must frame their leases conformably to the circumstances of the estate and submit them for the Collector's sanction; none else were valid (section 58, Regulation VIII of 1793); they could make no lease for more than ten years, could not exact more than the customary rate of rent (section 7, Regulation IV of 1794), or for doing so were liable to a penalty of three times the amount (Regulation VIII of 1793, section 55). The raiyats on the other hand had a right to perpetual renewal at the customary rate (Regulation XLIV of 1793) wherever and whenever they were once let in as cultivators of the village. The only power to eject was that afforded by the sale law of 1822 to auction-purchasers in regard to unprotected tenancies, and this, though renewed in 1845, was taken away by Act X of 1859. They quote, as their authorities, Sir John Shore, Lord Cornwallis, Mr. Colebrooke, the Government letter of 7th October, 1815, Mr. Sisson's letter of 2nd April, 1815, Lord Moira, Mr. Holt Mackenzie's Evidence of 1832, and Mr. Harington's *passim*, and they show that, whatever the practical result of Regulation V of 1812, which was admittedly a new departure, the intention, as shown by the preamble and by the Sadr Court's circular of 1816, was expressly to maintain existing restrictions as to the rights of raiyats to a renewal of their pattás at the established rates. They also show that these views were in the main held by the great majority of the Judges on the Bengal rent case, especially by Messrs. Trevor, Campbell, Norman, Kemp, Morgan and Seton-Karr.

"I feel confident that no one who has carefully studied their notes, and certainly no one who, as I have done, has gone back and studied the original references themselves, can doubt that they have made good their propositions. I will content myself with showing that this view has been also consistently maintained by the Court of Directors and by the Secretary of State. One hon'ble gentleman yesterday expressed a wish that he had been born in Lord Cornwallis's time. I was almost tempted to re-echo the wish, for I am sure he would have had a much more correct appreciation of what the Perma-

nent Settlement did and did not do for the zamíndárs than that which he put forward yesterday. The first quotation I will read is from the Court's letter of the 19th September, 1792, the early part of which has already been quoted by Major Baring. It runs thus :—

'Our interposition, where it is necessary, seems also to be clearly consistent with the practice of the Mogul Government, under which it appeared to be a general maxim that the immediate cultivator of the soil, duly paying his rent, should not be dispossessed of the land he occupies. This necessarily supposes that there were some measures and limits by which the rent could be defined, and that it was not left to the arbitrary determination of the zamíndár, for otherwise such a rule would be nugatory; and, in point of fact, the original amount seems to have been annually ascertained and fixed by the act of the Sovereign.'

"My next quotation is from the Government letter addressed to the Court of Directors on 7th October, 1815—

'We consider it as a principle equally applicable to all the Provinces immediately dependent on this Presidency, and we believe we might safely add to the whole of India, that the resident raiyats*

*(1815.)

(and recollect that Sir J. Shore defined a *resident* cultivator as anyone who cultivated the land in the village in which he lived)

have, by the Government letter of 1815, an established permanent hereditary right in the soil which they cultivate so long as they continue to pay the rent justly demandable from them with punctuality. We consider it equally a principle interwoven with the constitution of the different Governments of India, that the quantum of rent is not to be determined by the arbitrary will of the zamíndár, but that it is to be regulated by specific engagements, or, in the absence of such engagements, by the established rates of the parganas or other local divisions.

* * * * *

'With these impressions respecting the rights of the peasantry, such parts of the provisions contained in Regulation XLIV of 1793 and XLVII of 1803 as declare that pattás shall not be granted to raiyats or other persons for a term exceeding ten years, appear to be fundamentally erroneous. The natural and obvious tendency of that rule was to limit and restrict those rights which the peasant possessed in a much more extended sense by virtue of the constitution of the country itself.'

"In reply to that letter, the Court of Directors, writing on 15th January, 1819, went into the whole question. They began by saying that, 'though the use of the terms 'actual proprietors', 'landed estates' and 'under-tenants', has contributed to impair and, in many cases, to destroy the rights of individuals, yet it is clear that the rights which were actually conferred on the zamíndárs, or which were actually recognised to exist in that class by the enactments of the Permanent Settlement, were not intended to trench upon the rights which were possessed by the raiyats.' They quote Lord Cornwallis's Minute, their own order of 1792, the distinct provisions of Regulations I of 1793 and VIII of 1793, and then ask, how it is 'that our institutions are so imperfectly calculated to afford the raiyats in practice that protection to which on every ground they are so fully entitled, so that it too often happens that the quantum of rent which they pay is regulated neither by specific engagements nor by the established rates of the parganas, but by the arbitrary will of the zamíndárs.' They quote with approval the statement of Mr. Cornish, Judge of the Patna Court of Circuit, to the effect that—

'the raiyats conceive they have a right to hold their lands so long as they pay the rent which they and their forefathers have always done. The zamíndárs, although afraid to avow, as being contrary to immemorial custom, that they have a right to demand any rent they choose to exact, yet go on compelling them to give an increase, and the power of distraint vested in them by the Regulation soon causes the utter ruin of the resisting raiyat.'

"They then say—

'We fully subscribe to the truth of Mr. Sisson's declaration that the faith of the State is to the full as solemnly pledged to uphold the cultivator of the soil in the unmolested enjoyment of his long established rights as it is to maintain the zamíndár in the possession of his estate, or to abstain from increasing the public revenue permanently assessed upon him.'

"They then condemn Regulation V of 1812 as a very '*imperfect corrective*' of the evils which it was intended to remedy, and especially condemn it in reference to the construction put upon it that it gave zamíndárs power to demand from the raiyats any rent they think proper, without regard to the customary rate of assessment in the pargana.

"The discussion goes off into the measures requisite to avoid a repetition of these evils in the temporarily settled Provinces, and finally led to the enactment of Regulation VII of 1822 and to the draft Regulation drawn up by Mr. Harington in 1826. But I have quoted enough to show the opinion arrived at by the Court of Directors in the early part of the century, after a discussion scarcely less exhaustive than that recently accorded to the question of the raiyats' rights in Bengal. Before leaving this part of the question, I will ask you to hear the conclusion come to by the Secretary of State after perusing the discussions of the Bengal Rent Commission. He says :—

'Whatever may have been the exact position, actual or legal, of the bulk of the Bengal raiyats prior to the Permanent Settlement, there can be no doubt, after the exhaustive investigation which the question has now undergone, that their customary rights at least include the right of occupancy, conditional on the payment of the rate current and established in the locality.'

"To this extent His Lordship authorized us to endeavour to restore the raiyats to their original position, and it is to this aim that those portions of the Bill which deal with the growth and incidence of the occupancy-right is devoted. I have left untouched the argument derived from Regulation II of 1793 and the quotation of the preamble 'that no power will then exist', &c.; because this has already been disposed of by my hon'ble friend Major Baring, but I may point out that in quoting the preamble of Regulation II of 1793 my hon'ble friend opposite, Rai Kristodás Pál, omitted to quote that part which would have upset his view of the complete and absolute proprietary right of the zamíndárs before and after the Permanent Settlement. It said :—

'The property in the soil was never before formally declared to be vested in the landholders, nor were they allowed to transfer such rights as they did possess, or raise money upon the credit of their tenures, without the previous sanction of Government. With respect to the public demand upon each estate, it was liable to annual or frequent variation at the discretion of Government. The amount of it was fixed upon an estimate formed by the public officers of the aggregate of the rents payable by the raiyats or tenants for each bíghá of land in cultivation, of which, after deducting the expenses of collection, ten-elevenths were usually considered as the right of the public, and the remainder the share of the landholder. Refusal to pay the sum required of him was followed by his removal from the management of his lands, and the public dues were either let in farm or collected by an officer of Government, and the above-mentioned share of the landholder, or such sum as special custom, or the orders of Government might have fixed, was paid to him by the farmer or from the public treasury.'

"So much for the Permanent Settlement. The question remains—Are we, as a high authority tells us, unwarrantably extending the right of occupancy as settled and defined by Act X of 1859? In the first place, I may observe that, if the present discussion has brought out nothing else, it has very prominently made manifest the fact that Act X neither did nor was intended to settle and define the right of occupancy. It is admitted by the same high authority that the Act of 1859 did not affect the right of raiyats to establish, by custom or otherwise, a permanent title. It only fixed a period of prescription. In other words, it was an additional and not an exclusive enactment. The history of Act X of 1859 is very clearly summarised in the Minute of Mr. Justice Cunningham. He says—

'No one can understand the true position of the several parties to the controversy, who has not studied the original frame and language of that Bill. Its object was, not to codify the law, but to amend one particular branch of it,—that relating to the recovery of rent. At the same time it was thought expedient, as its mover* explained, 'to re-enact in a clear and distinct form the provisions of the existing law connected with rent suits, and sections 3, 4 and 5 accordingly set forth what had been the law since the time of the Permanent Settlement'.

*Mr. Currie, 10th October, 1857.

'Section 3 provided that 'hereditary raiyats' at fixed rates were entitled to pattás at those rates; 'all other raiyats and cultivators' were entitled to pattás *at the rates established in the pargana for similar lands, or, if no such rates could be discovered, at the customary rates for similar lands, in the vicinity.*

'Section 4 provided that 'every resident raiyat and cultivator has a right of occupancy', except in the cases (1) of *sír*-lands leased for a term, or year by year, and (2) lands sub-let by an occupancy-tenant to a resident cultivator.

'Section 5 reserved express agreements as to rent, clearing leases and right of re-entry and provided that resident raiyats cultivating lands not previously in their possession, without a pattá, should not acquire a right of occupancy till they had paid rent for three years.

'The Select Committee reported that no alteration in the principles of the Bill was necessary; but they recommended, in the case of raiyats at fixed rents, that twenty years' holding at fixed rates should raise a presumption of having held from the time of the Permanent Settlement; in the case of other raiyats the Committee reported that they were entitled to hold at pargana rates'; that this had been admitted to mean 'customary and fair rents'; that 'khudkásht raiyats were spoken of as possessing rights of occupancy', and that 'khudkásht' was held synonymous with 'resident'; but that it had been pointed out that 'residence' is not always a condition of occupancy, and it appears that after much inquiry, it was prescribed by an order of the Government of the North-Western Provinces in 1856, as most consistent with general practice and recognized rights, that a holding of the same land for twelve years should be held to give a right of occupancy. We have followed this precedent.

'This was the origin of the rule that twelve years' continuous holding creates a right of occupancy.

'It was, however, from the twelve years' rule that the most serious consequences to the raiyat's position resulted. This appears to have been adopted, not only without due consideration of its necessary results, but under actual misapprehension of the real purport of the rule which the Select Committee considered themselves to be adopting. The admitted law was that all resident raiyats had rights of occupancy; but then it was found that some non-resident raiyats had such rights, and it was proposed to meet these cases by adopting a rule in force in the North-Western Provinces, that an ousted tenant could, by a summary process, recover possession by showing twelve years' occupation. The effect of converting this rule into a general definition of occupancy-rights was that on the one hand many undoubted occupancy-tenants found their title endangered by not being able to prove twelve years' continuous occupancy, and, on the other, that tenants not otherwise entitled to occupancy-rights were able to claim them wherever they could show residence for the required period. The results were, in the language of the Lieutenant-Governor of the North-Western Provinces, 'wholesale enhancement of rents and ejectment of raiyats who had a customary claim to occupancy.'

"My answer then to the question must be that we have undoubtedly gone behind the letter of Act X; nay, more, we have endeavoured to undo some of the injury which that Act unwittingly brought about, but we have on this point of occupancy-rights carried out, as nearly as circumstances permitted, the intentions which the framers of Act X deliberately and expressly set before themselves. We have not got rid of the twelve years' prescription, though in the opinion of some of us the maintenance of a fixed period of prescription is neither historically correct, nor practically convenient; in fact, as Mr. Cunningham has said, 'you can never have peace between two parties, one of whom will, at a certain period, become entitled to a privilege at the expense of the other'; but we have got rid of the anomaly by which a resident cultivator would be ousted from his prescriptive rights by the mere device of his landlord shifting him from one patch of cultivation to another. We are told that the practice of shifting cultivators is not common in Bengal, but so convenient a device is not likely to be long left a monopoly in the hands of the zamíndárs of Bihár, where it is common, and we are legislating for Bihár as well as for Bengal. Allow me to quote to you the resolution arrived at on this point by a meeting of landholders in the Shahábád district on the 30th October, 1880. They resolved, with reference to the original proposal to confer modified rights of occupancy on three years' raiyats, that—

'This concession is strongly deprecated. At present land-owners prevent the growth of occupancy-rights by granting leases for five years only, *or by changing* lands, or by managing so that a raiyat shall never hold at the same rent for twelve years.'

"Now what Mr. Cornish said in 1815, that the raiyats conceive they have a right to hold their land so long as they pay the rent, is equally true of the present day. Mr. MacDonell, writing of Darbhanghá, says—

'Illiterate, and in the hands of the zamíndár as far as accounts go, the raiyats cannot prove the status required of them, though the universal sense of the Province believes this status to exist. Our registration offices show that these occupancy or kashtkari rights are now mortgaged; our Civil Court records and our registration offices show that they are sold.'

"Mr. Edgar, writing of Bihár generally, says—

'I hold that the vast majority of raiyats in Bihár have, at the present moment, strong occupancy-rights in the land which they cultivate; that these rights are based, in the first instance, on the living custom of the country, a custom which no Court of law could ignore, if it was properly pleaded before it * * I freely acknowledge that this right has, in many cases, been destroyed by the illegal action of the zamíndár, most of them acting through thikádárs, whether European or Native; that great sweeps of land, once held by raiyats with rights of occupancy, have been turned into indigo zarats; that lands have been arbitrarily

taken from one raiyat and given to another; that holdings have been changed at the pleasure of the zamíndárs.'

"But over three-fourths of the land of the Province, he says unhesitatingly, occupancy-rights are the rule. Are we to allow such rights to be broken by the simple device above alluded to, or by what Mr. McDonell declares to be equally frequent, 'the manipulation by patwáris of the village jamabandís to prevent the identification of the plot held this year with the plot held five years ago,' or by the custom confessed to, with cynical naïvete, by the Shahábád landholders, in the paper from which I have already quoted, namely, that 'all lands becomes *zarat* (or private land), when taken into the landlord's hand'? No. The evidence throughout these papers is overwhelming that there is a strong and increasing tendency among landlords to break down occupancy-rights by every possible device, and we are bound to do our best to protect these rights; and the provision formulated by the Secretary of State for giving these rights to every cultivator who has held land for twelve years within the same village or estate, is quite the minimum protection that can either be accepted for the rights that have been acquired in the past, or to enable the raiyat to have some fixity of tenure in the future.

"On the economical side of the question I need not detain you long. The argument of the opposition on that point is more directed against the transferability, than against the accrual, of these rights, though I have seen references to Mr. Ross's Minute of 6th March, 1827, arguing that by protecting raiyats you do not make the ground more productive, but only increase the number of mouths deriving subsistence from it. Well, I think Major Baring has sufficiently answered the point, and you have heard also what the Lieutenant-Governor has said about the condition of the *guzashtadárs* of Bhojpur; but I may also add the following testimony from the Famine Commission to the same effect. They say—

'In the case of these large cultivating classes, security of tenure must have its usual beneficial effect, and, as a rule, the cultivators with occupancy-rights are better off than the tenants-at-will. Whenever enquiry has been made, it has been found that in all matters relating to material prosperity—such as the possession of more cattle, better houses and better clothes—the superiority lies on the side of the occupancy-tenants, and the figures in the preceding paragraphs also show that as a rule they hold larger areas of land. Where the sub-division of land among tenants-at-will is extreme, any security of tenure which defends a part of the population from that competition must necessarily be to them a source of material comfort and of peace of mind such as can hardly be conceived by a community where a diversity of occupation exists, and where those who cannot find a living on the land are able to betake themselves to other employments. It is only under such tenures as convey permanency of holding, protection from arbitrary enhancement of rent and security for improvements, that we can expect to see property accumulated, credit grow up, and improvements effected in the system of cultivation. There could be no greater misfortune to the country than that the members of the occupancy class should decrease, and that such tenants should be merged in the crowd of rack-rented tenants-at-will who, owning no permanent connection with the land, have no incentive to thrift or improvement.'

"This, I think, is the view that all sensible men must take of the benefits given by fixity of tenure, and all the best zamíndárs to whom I have spoken take the same view. I quite believe what the Mahárájá of Darbhangá told us yesterday, that good landlords do not, as a rule, object to a raiyat being secure in his tenure, and it may safely be said that the power of ejectment is valued, mainly, if not entirely, as a means of extorting enhanced rent, and to this desire, having otherwise provided a reasonable means and measure of legitimate enhancement, the Government should, I think, make no concession.

"And this brings me to the question of limitation of enhancements. To those who wish that enhancements should be left to the discretion of the parties, in other words that there should be neither restriction of ground, nor limitation in amount of enhancement, the Bill will certainly not be satisfactory.

"We are told that enhancements do not take place in Bengal. I can only say that the experience gained by Government officers in managing Wards' estates is the reverse of this. I could easily show from a recent resolution of the Board of Revenue that the great difficulty the Government officers have in these estates is to collect rents, because these rents all include illegal abwábs and undue enhancement. Witness Salkhira, with an arrear of 6½ lákhs against a rental of

Rs. 3,50,000, and in Kassimbázár and in Chándal in Máldah. But without going further into this question as it exists in Bengal, I do not think anyone can doubt the frequency of excessive enhancement in Bihár; and in the face of these facts, if we accept the view of the authors of the Permanent Settlement, that the resident raiyat had a right to hold his land at rates not higher than the pargana rates, the necessity of some limitation is apparent. Whether, before Act X of 1859, the landholders had any legal right to enhance on the ground of increase in the value of produce, has been shown to be exceedingly doubtful; but any way the right to enhance on certain grounds was allowed by that Act, and the present Bill, so far as the grounds on which enhancement can be demanded, makes no material alteration in them: we have, it is true, not confined ourselves to the rule of proportion which the majority of the Judges of the High Court accepted as the best means of giving effect to the intention of Act X, but we have maintained that rule as a maximum. The real innovation which we have introduced is the limitation we have applied to the enhancement of money rents. These are, in regard to occupancy-raiyats, that the enhancement shall not do more than double the old rent (this does not refer to area, but to rates); that the enhanced rate shall not exceed twenty per cent. of the gross produce; that the rent shall not be enhanced a second time within ten years. To all those provisions objections have been taken. It is urged that, if a raiyat's land can bear a rent enhanced more than one hundred per cent., there can be no reason why the landlord should not get it. There *is* a very good reason—a reason which is constantly preached and very generally (I wish I could say universally) practised in framing revenue rates in temporarily settled provinces,—and that is, that a great and sudden increase to this extent means such a great and sudden diminution in the cultivator's income, as must, in most cases, destroy his means of proper cultivation, in other words, must injure the agricultural prosperity of the country.

"Then, in regard to the other, and probably the very much more important, limitation of the enhanced rent to a fixed proportion of the gross produce of the soil, there are very numerous objections taken. Some of these, I confess, are not quite easy to answer. Mr. Ilbert explained last week that the limit of twenty per cent. had been substituted at the last moment for twenty-five per cent. at the request of the Government of Bengal. This exact percentage is for the moment tentative. I can only say that twenty-five per cent., besides being the *reba* of the Muhammadan administration, was the percentage suggested by the British Indian Association in 1875, and that twenty per cent. was the limit suggested by the landholders of Eastern Bengal, and in that part of the country the landholders at present, as a rule, get nothing like that proportion. But the objection to the special fraction taken as the percentage is of less importance than the objection, on principle, to taking a percentage of the gross produce at all, as a test of the rent rate. It is obvious that, in fixing a rent rate for special fields, not the gross produce, but the nett produce should be the test. Expenses of production vary enormously, and, whereas on some soils twenty per cent. of the gross produce may be the true economic rent, in others it may be really a beneficial rent, and in others again it may be a rack-rent or more, trenching on the actual labour-wage of the cultivator. This objection, which would be fatal to a scheme for actually deciding the rent of each holding by this standard, and which is fatal in my opinion to the proposal made yesterday, that a fixed proportion of the gross revenue should be substituted for the table of rates, is not of the same force when the percentage is taken, not as a standard, but as the maximum. Our scheme starts from existing rents, which shall, in the absence of evidence to the contrary, be taken as fair and equitable, and the twenty per cent. maximum is itself balanced by other limitations, such as doubling the present rent, and by the proportion-rule in those cases where increase of prices is the ground of enhancement. There is yet another ground of objection, namely, that the use of this test will work very unequally in different parts of the country: whereas, in some parts of the country, money rents expressed in staple produce do not at present exceed ten to fifteen per cent. of the gross produce, we know that in other parts of the country they rise as high as thirty per cent. In fact, we were told yesterday, what I hope is only true of produce and not of money rents, that in

Bihár they range from forty to sixty per cent. of the gross produce. Well we do not propose to bring down existing rents anywhere by the application of this standard, a decision quite in accordance with the existing law on the subject, and with the distinctly declared intention of Sir A. Eden, but we do definitely say that there shall be some security that the rents of occupancy raiyats shall not be enhanced beyond a point which shall leave them no margin whatever, and the percentage test is the proposal which has found most favour as the means for giving effect to this decision.

"If I am told that no such minimum at all is required, the description of the Bihár peasantry as given in the Hon'ble Major Baring's speech is surely a sufficient answer. There we have the fact stated that over a great part of the country rents have been doubled in sixteen years. But, as Mr. Ilbert said, an ounce of fact is worth a ton of theory. The hon'ble gentleman yesterday quoted from a paper by Mr. Finucane, who has been deputed to prepare experimental tables of rates on the Nurhan Property in South Tirhút. Allow me to refer also to the same paper. He says:—

'Take the instance of village Jaezootee. The present proprietor of this village, Bábú Nandan Lál, has inherited it from his adoptive father, Bábú Bri Behari Lál, who was in possession when the Permanent Settlement of the mahál was made in 1247 F. S. (1840 A. D.). The area then under cultivation was 106 bíghás, the then gross rental, which was taken as the basis of settlement, being Rs. 151, and the average all round rate being Re. 1-7 per bíghá. The Government revenue was fixed on the basis of half assets: and, as the settlement records, which I have examined, show, the very moderate amount thus fixed was objected to by the present proprietor's father, on the ground that the rental of Rs. 151 taken as the amount of assets, was more than the raiyats really paid. The objection was, however, overruled, and the settlement was accepted in 1247 F. S. (1840 A. D.).

'(*a*.) After the lapse of forty-three years, what do we find in this village? We find that the area under cultivation has decreased by four bíghás, while the rental is now* almost exactly six times the rental of 1247 F.S. (1842 A. D.). In other words, the average rates all round have been enhanced by *five hundred per cent. in forty-three years*, the rise in prices during the same period being at most *seventy-three per cent.* There is reason to believe that the state of things existing in Bábú Nandan Lál's property is not very materially different from what exists in other properties in the Darbhangá, Muzaffarpur and other North Gangetic districts of Bihár.'

* Area under cultivation in 1847, 106 bíghás.
Area now under cultivation shown in the jamabandí, 102 bíghás.
Rental in 1247 F.S., Rs. 151.
Present rental, Rs. 905.

"And how is this brought about? He gives the history of recent enhancements in various villages, of which I will read only the three first,† beginning with Tubka Khás.

† Tubka Khás, Tubka Maghribi, Mahomedpur Sunhara.

'TUBKA KHÁS.

'2. *Past history of the village.*—The jeṭh raiyats say that Máhtáb Singh was ṭhíkádár in the time of Ram Narain Singh, who was the present minor's grandfather. He took half an anna karcha (*abwáb*) on the old rates. He was succeeded by Bechuklal Misser, ṭhíkádár, who incorporated with the rent the half anna taken as karcha by his predecessor, and then realized an anna in the rupee as karcha on his own account. Bechuklal's lease having been renewed, he similarly again incorporated previous karcha with the rent and levied an anna per rupee as karcha in addition. On the expiration of Bechuklal Misser's lease, the village was leased to the Dalsing Serai Factory in 1270 F. S. (1863 A. D.). The first lease to the factory was for seven years. This lease was renewed for a further period of seven years, and was again renewed for a term of nine years, which term will not expire before 1292 F. S. (1885 A.D.).

'The factory enhanced the rates by one and a half-annas in the rupee during the currency of its first lease in 1275 F.S. (1868 A.D.), and again enhanced the rents by half an anna in the rupee last year. This so-called enhancement consisted in simply ordering the patwárí to enter the amount as a demand in the village papers against each raiyat.

'TUBKA MAGHRIḄI.

'3. *Past history.*—The mauza was leased to Bekram Lal from 1250 to 1256 F.S. (1843 to 1849 A.D.). The rates prevailing in this period are not known. From 1257 to 1274 F.S. (1850 to 1867 A.D.) it was leased to Máhtáb Singh. He raised the rates by four annas per bighá in 1257 F.S. (1850 A.D.).

'From 1275 to 1283 F.S. (1868 to 1876), the village was leased to Dalsing Serai Factory. This lease was renewed for a further period of nine years, which will expire in 1292 F.S. (1885 A.D.).

'The factory raised the rates by one and a quarter annas in the rupee in 1275 F.S. (1868 A.D.). In 1284 F.S. (1877 A.D.) part of the village was again given in lease to the Dalsing

Serai Factory and the rest was leased to Tirguman Misser and Medini Thákur, who are themselves raiyats.

'The factory has, during the currency of its last lease, demanded an enhancement of a half anna in the rupee, and entered this demand in the jamabandí.

'MAHOMEDPORE SUNHARA.

'5. *Past history.*—This village was leased to Dalsing Serai Factory for three years, 1267 to 1269 F.S. (1860 to 1862 A.D.), at Rs. 850. The jeth raiyats say that the rates then were from Rs. 2-8 to 8 annas.

'From 1270 F.S. to 1276 F.S. (1863 to 1869 A.D.) it was leased to Behari Raout at a jama of Rs. 1,151. During this period the thíkádár raised the jeth raiyats' rates by eight annas per bíghá in 1275 F.S. (1868 A.D.), and the raiyats' rates by four annas.

'From 1277 to 1285 F.S. (1870 to 1878 A.D.), the lease to Behari Raout was renewed for nine years, at a jama of Rs. 1,660. During the currency of this lease, the thíkádár again raised the jeth raiyats' rates eight annas and the raiyats' rates twelve annas per bíghá. In 1285 F.S. (1878 A.D.), finding he could not realize rent at the above rates, Behari Raout reduced them by two annas and three pies per bíghá. From 1286 to 1292 F.S. (1879 to 1885 A.D.), the village was again leased to Behari Raout at Rs. 1,900. He has this year relinquished the lease, being apparently unable to realize his enhanced rents. His relinquishment has been accepted. The present jama, inclusive of Tola Jagarnathpore, is Rs. 2,889. It thus appears that the reserved rental payable by the thíkádár to the proprietor has been more than doubled in the course of twenty years. Further, excluding Tola Jagarnathpore, for which the materials for comparison are not available, it appears, as already noted, that the mufassal jama of the remaining portion of this mauza was Rs. 1,648 in 1275 F.S. (1868 A.D.), while in 1279 F.S. (1872 A.D.) it was raised to Rs. 2,500, and was reduced in 1285 F.S. (1878 A.D.) to Rs. 2,435; in other words, an increase of fifty per cent. was made in the gross rental in the course of the past fifteen years, the cultivated area remaining the same, or rather having decreased by two bíghás.'

"And this is the conclusion he comes to as to the average enhancements in this part of the country:—

'That, while the average rise in prices of staple crops for the past forty-five years have been only seventy-three per cent., the increase in rent rates in these villages has been respectively one hundred and eighty-eight and one hundred and sixty-four per cent.

'That, as regards all the villages in this tract appertaining to the Narhan Estate, there has been an average increase on rates of one hundred and thirty-six per cent. during the past forty-five years, the rise in prices or staple products during the same period being only seventy-three per cent.'

"Recollect these are increases on rent *rates*. The actual increase in the rental, allowing for increased cultivation, is much greater. In the two villages for which data of comparison are available, he shows that in one, while cultivation has extended by forty-seven per cent. in the last half century, the rental has increased by three-hundred and twenty-one per cent. In the other, where cultivation has increased by thirty-nine per cent., the rental has increased by two hundred and sixty-nine per cent.

"I will give one more instance from another part of the country. Two years ago, Mr. Edgar had occasion to make an inquiry of a similar nature, but for a different object, in the west of the Champáran District. This is what he says in his report:—

'Tuppeh Dohosoha was settled in perpetuity in 1850. The area of the five maháls at the time of settlement was ascertained to be 15,888 bíghás, of which 9,690 bíghás were cultivated or temporarily fallow. The rental was then calculated to be Rs. 17,342, of which one-half, or 8,671, was fixed as the Government demand. After the conclusion of the settlement, the Bábú seems to have begun enhancing the rents, and the process was carried on so effectually through thíkádars, that in the road-cess returns of 1873-74, the rental of the five maháls was shown as Rs. 86,175, that is, five times the settlement rental and ten times the Government demand. The cultivated area at that time had risen to 10,827 bíghás.'

"In other words, in less than a quarter of a century the rental had been increased to five-hundred per cent.; the cultivated area had increased by about eleven per cent. The same report says that there was no real change in the condition of the land between those years, and the same means of irrigation as existed in 1872 had been in existence at the time of settlement. We have been told that similar enhancements have been made in Government estates in Chittagong, Chutiá Nágpur, &c. I am informed that in regard to Chittagong this is a mistake. The rent rates of the raiyats have been actually reduced, though owing to increase of area the *revenue* assessed upon the taluqdárs or contractors has been increased. The Chutiá Nágpur increased rates, I am informed, have not as yet been sanctioned, but I am not here to defend the system of management in

Government estates. It has, doubtless, been bad in the past, though since Sir George Campbell's time not nearly so bad as has been stated. Anyway, in regard to enhancements, the raiyats of Government estates will have the same protection as other raiyats, and what I hope I have succeeded in showing is that, if the occupancy-right is to be of any value at all, it must be protected by some limitation of the maximum amount of enhancement. With the method of enhancement and the table of rates I shall deal at a later period of my reply.

"Turning now to the question of the transferability of occupancy-rights, we are told that this is an innovation which will ruin the landlord while it will do no good at all to the cultivator. In the first place, as the Commission have shown, the transferability of occupancy-rights is in most parts of the country an absolute fact. It is stated then that the registers of the Courts show it to be so in every district, save Sáran and Champáran. Mr. MacDonnell, in a paragraph which I have already quoted, says the same. His testimony, it is true, refers to Bihár. Let me quote then from Bábú Parbati Rai, on special duty in Murshidábád. He says:—

Transfer of occupancy-rights prevailing custom in the selected tract.

'Another circumstance brought to light in the course of the present enquiry also deserves mention in this report. It is often alleged on behalf of the zamíndár that the proposal to make occupancy-rights transferable is an innovation. But without going to discuss what the custom in other places is, I beg to state that the custom of buying and selling *jotes* is here very general, and that the zamíndárs themselves also put up such *jotes* for sale at execution of rent decree. Bábú Bepin Behárí Mookerjea, Munsif of Kandi, to whose kind assistance I am greatly indebted for several things in connection with the present enquiry, tells me that it is seldom that the zamíndárs object in Court to the transfer of jotes by raiyats. I have, in paragraph 6 of this report, spoken of raiyats having more than one *jote* in their possession. The jamawásil papers of Gopináthpur show that this custom of buying and selling *jotes* has been very general in the pargana. But though custom is thus in favour of the raiyat, a legal enactment declaring its validity will, no doubt, be productive of very great advantage, as it will prevent the litigation that occasionally crops up at present. The fear that is generally entertained that the effect of making the right of occupancy transferable will be that all such *jotes* would gradually pass into the hands of the money-lenders is, so far at least as this part of the country is concerned, quite unfounded. On the other hand, I find as a fact that all old *jotes* which have changed hands are still in the possession of cultivating raiyats.'

"I have a good deal of evidence to show that so strong is the belief in the inherent right of the actual cultivator to a possessory status in the soil, that even korfa or sub-tenants' holdings are frequently brought to sale in execution of a decree. I have by me a statement from a single Munsifí in Central Bengal, showing that in the last six years no less than 40 of these holdings have been sold in execution, with a rental value varying from Rs. 38 to a few annas, and bought in for substantial sums, in many cases equal to ten, twelve, and even fifteen times the rental. Moreover, there is ample testimony to the effect that the tendency to recognise occupancy-tenures as transferable is increasing, and the real question was whether the facts, as they stand, were to be ignored or recognised. Mr. Field points out that:—

'Alienability is in every country, sooner or later, annexed to everything that is made the subject of property, and that here, in Bengal, this tendency has spontaneously shown itself in a very marked manner in respect of these very holdings.'

"It is also clear that transferability is the only alternative to unlimited sub-letting, a practice which we cannot, in face of universal custom, forbid, but which we should be very glad to discourage. Nor can it be really doubted, except by those who look upon human nature in Bengal as guided by quite other motives than those which influence human nature elsewhere, that the desire to acquire land can only have free play when there is a power to transfer, and that in the end the capacity for saving must thus be stimulated. But if, as I have shown, occupancy-rights are every day, and all over the country, put up for sale, surely the legal recognition of this fact gives the landlord the best security for, and the best means of recovering, his rent. The power to transfer gives a value to the right of occupancy which is always available as a means of enforcing payment to the landlord; and though it opens up undoubtedly some room for letting in hostile or objectionable tenants, we have done our best to guard against this by giving the landlord the right of pre-emption at a fair rate, to be fixed, if necessary, by the Court. And let me here point out that the

right of pre-emption is not the dead loss to the landlord that has been represented. If the right of occupancy is of any value, it will not be of less value to the incomer than to the outgoer. In other words, the practical operation will be, that the landlord will recover the price he has paid in the shape of a bonus or premium from the incoming tenant whom he prefers to the private purchaser. Mr. Field, in discussing the argument in favour of transferability from facility of execution of decree, says:—

'The strongest point of the complaints urged against the proposed rent-law procedure is concerned, not with the delay in obtaining a decree, but with the delay and difficulty in getting the decree executed once it has been obtained. The experience of the Courts entirely corroborates this. The average raiyat is too poor for process against his moveables to be productive of much result. His cattle are easily got out of the way, or, if attached, are made the subject of false claims by third parties. He seldom or never possesses immoveable property. To take him on body warrant is merely to add to costs, the chance of realizing which is thereby diminished. If the raiyat's holding were saleable in execution, and would fetch at least sufficient to satisfy the decree and costs, the landlord's execution difficulties would at once disappear.'

"We have, accordingly, made the occupancy-right saleable in execution of a decree, as well as transferable and heritable, but we have not made it saleable by the landlord summarily and without decree. This was proposed tentatively as a privilege which might be granted to those exceptional landlords who keep their books and accounts in such a way as to satisfy the Board of Revenue, but it became obvious on consideration that such a privilege must either be accorded to all landlords or to none; and it must be admitted that, in the present state of affairs, neither are the landlord's accounts so accurate and trustworthy, as a rule, as to make it safe to bring the occupancy-right to sale on their *ex parte* evidence without hearing the raiyat, nor is he in such a position (as the patní holder generally is) as to be able to save himself from injustice, or to obtain redress for it afterwards, under the *patní* procedure. Whether the right of occupancy thus made transferable will remain for many generations in the hands of the same class as now possess it, is a subject on which many persons are disposed to prophesy. I don't know, and, therefore, I won't prophesy; but certainly no arguments which have hitherto been brought forward have convinced me that this cause *alone* will bring about any great revolution in the position of the occupiers of the soil. In the meantime we shall, I think, with fixity of tenure, fair rents, and the power to transfer, have given to the present generation some security for enabling them to maintain their position as cultivators, to do justice to the soil and to be able to resist the pressure of one or two bad seasons; and, in doing this, I verily believe, we are really doing the zamíndár more good than if he were left the absolute master of an impoverished, hopeless and therefore thriftless, tenantry.

"I come now to another point to which very great objection is taken, namely, the overriding of contracts, or rather the provisions preventing a raiyat from contracting himself out of his status. We cannot of course prevent a raiyat making what contract he likes, nor can we prevent his adhering to it, only we say that in certain cases the Court will not give effect to such contracts.

"Mr. Ilbert dealt with the matter in his opening speech, and explained the general considerations which led the Commission, the Government of Bengal and the Government of India to decide that this provision was absolutely necessary. We do provide for moderate enhancements being arranged by private contract, because we do not wish to force all such cases into Courts; but we do not allow any force to contracts which would deprive the raiyat of his occupancy status and make him liable to arbitrary ejectment or arbitrary enhancement. Mr. Ilbert read out a specimen of the kind of document by which, he said, we could not allow the provisions of our legislation to be overridden. I may mention that this was not a single or a solitary document. In the case in which this document was put in, I am informed that the zamíndár's agent urged in its behalf that 1,000 or 1,200 raiyats had given similar *kabúliyats*, and I wish to draw attention to the fact that these details overriding the law are only entered in the *kabúliyat* which remains with the zamíndár. They are not entered in the counter-part pattá which remains with the raiyats. Allow me to offer a few more reasons to the same effect as Mr. Ilbert's patta. One of the causes of the Pabná riots was the endeavour on the part of the landlords to force from

the raiyats *kabúliyats* which, besides incorporating illegal *abwábs* in the rents, provided for the landlord changing arbitrarily the legal standard of measurement, and for his ejecting the raiyat in case of the latter having the misfortune to quarrel with him. Is it possible for us, where the pressure of population on the land is so close, where no other occupation is available, where a raiyat must cultivate or starve, where there is no sort of equality in wealth, or intelligence, or position,—is it possible, I say, for us to allow our Courts to treat such documents, made in direct contravention of the law, as contracts made on equal terms between the parties? Then look at the quotation I have read already from the proceedings of the landholders' meeting held at Arrah. At present, they say, land-owners prevent the growth of occupancy-rights by granting leases for five years, or by changing lands, or by changing the assessment. And how is the assessment changed? Mr. Finucane's report has shown us. One year one anna is added to the rupee of rent as 'kharcha', an illegal *abwáb*. The next year that is incorporated in the rent: after a few years' rest another kharcha of two annas is added, and that is similarly incorporated, or in some cases even this process is not gone through. 'This so-called enhancement consisted simply in ordering the patwárí to enter the amount as a demand in the village papers against each raiyat.'

"The hon'ble gentleman opposite endeavoured to show that the Government had adopted or permitted equally oppressive contracts. We have heard the Lieutenant-Governor's reply to this, and it is clear that the hon'ble gentleman mistook altogether the nature of some of these forms, and that the pattá which Government allowed to be sold for convenience sake at registration offices, was by no means so oppressive as he would have us believe. A gentleman once undertook to compile a dictionary, and he had in the course of it to explain the word 'crab'. He described it as a red fish that walks backward. Fortunately, he showed his description to a scientific friend before publishing it. His friend said it was excellent, admirable, perfect; only, unfortunately, the crab was not a fish, it was not red, and it did not walk backwards. Similarly, the Government pattá did not, as the hon'ble gentleman opposite seemed to suppose, provide either for preventing the accrual of occupancy-rights, or for ejectment, or for oppressive interest. But, even if he had made out his case, I should still hold that it would be an argument rather for than against overriding of contract. As Mr. Evans pointed out yesterday, if these things are done in opposition to the well-known principles and wishes of the Government by their own officers, what will not be done by the unsupervised ámlá of zamíndárs? If these things are done in the green tree, what will be done in the dry?

"I will show you what will be done by reference to another *kabúliyat*, appertaining to the estate of one of the most enlightened landholders in the country, but which positively bristles with provisions for evading or nullifying the law, and this is the point I wish to enforce—not that such contracts are oppressive, but that they are a deliberate attempt to override the law.

"It is to this effect:—

'I, *A. B.*, by profession a *jotedar*, do execute this kabúliyat in respect of a temporary *jote jama*. I held a temporary *jote* comprising 109 bíghás, 19¾ cottas of land, at a *talab jama* of Rs. 167-12-11,* inclusive of *Batta* and *Isswar Britti*, or charges for religious expenses. The term of the aforesaid *jote* having expired, I applied to obtain the land under a fresh settlement. According to my application, you have inducted me as a *temporary*† *raiyat* for a term of five years, extending from the year 1287 to 1292, on following terms, into the aforesaid *jami jama*, as per boundaries given below, measuring 109 *bíghás*, at a rental of Rs. 182, minus Rs. 12-5-10, kept apart as *hajut*; that is, at a rental of Rs. 170-4, added to Rs. 7-15-14, the amount of *Batta* and *Isswar Britti*, at the rate of 3 pie per rupee, according to the custom of the pargana—in all at a total rental of Rs. 178-3-17-1 cowri. I engage myself to hold the land on payment of the rent fixed, year by year, according to the *kists* specified below, and by keeping intact the borders and boundaries of the land, as they have been since before. I shall not make any plea of payment of rent without producing printed rent-receipts. Should I make any such plea, *it would not be admissible*. Should I fail to pay rent according to the *kists* fixed I must pay interest at the rate of five per cent. per mensem. In case I do not pay rent at the

* These are abwábs, and to avoid the penalty imposed by section 11, Act VIII of 1869, they have been included in the rent.

† To destroy any claim to be an occupancy-raiyat.

proper time, you shall be competent to resort to legal means, and realize the same with interest, costs and damages, by bringing a suit; and I shall pay the same without any objection. It is further stipulated that should the rent due by me fall into arrear at the end of the year, you shall be competent to eject me from the *jote jama* and bring it under *your khás* or direct possession *without the help of the Court;* and none of the terms herein stipulated shall be sufficient to prevent you from doing so; that I shall not be competent to *relinquish* the *jote* as long as the term fixed herein does not expire; that in case I do relinquish the *jote* before the term expires, I shall have to pay rent for the entire period, and then relinquish the *jote*; that whenever, within the term specified herein, you may be pleased to have the land measured, I shall cause the measurement to be made, and shall, without any objection, pay rent for the quantity of excess of land over and above the rent already fixed, according to the rate of rent for the different sorts of land found to be in excess; that in case the land be found by measurement to be less in quantity, I shall be entitled to an abatement of rent, according to the rate aforesaid; that I shall not be competent to make any objection regarding inundation, drought or any objection as to the land being *patit*, or waste, or covered with sand, or occupied by *khâls* and so forth; nor shall I be competent to claim abatement of rent within the term fixed herein; that I shall not be competent to let out the land to anybody under a *durjote*, or to transfer it in any way; that in case I do let out the land, or transfer it, you shall be at liberty to take at once *khás* possession of the land herein mentioned; that after the expiration of the term fixed, I shall not retain any concern whatever with the land; that you shall then be competent to resettle the land with me, or to let it out to anybody as you may please; that whenever you should find it necessary to take any portion of the land into your *khás* possession, I shall give up that portion without any objection, and get abatement of rent; and that I shall pay separately the new cess already imposed by Government, as well as that which it may impose hereafter. On these conditions, I execute this *kabúliyat* for the temporary *jote*. Dated the 1287.'

If a raiyat is now ejected, except under an order of Court, he has a possessory action under section 9 of the Specific Relief Act. This is to get rid of the Act.

This is to get rid of section 20, Act VIII of 1869,—allowing a tenant to relinquish.

To destroy right of occupancy accruing: he had already held it previously.

By sections 52 and 55 of the Permanent Settlement, the landlord enforcing this would be liable to pay three times the amount, and by section 11 of Act VIII of 1869 (B. C.), he is liable to pay twice the amount.

"Can anyone say that, in the face of such endeavours as these to override the law by means of contract, the legislature has any choice but to maintain the law in spite of the so-called contracts.

"The objections with which I have been dealing hitherto apply mainly to the provisions of the Bill concerning the occupancy-tenant; but we have heard some very strong objections to the protection given to the non-occupancy, or, as the Bill calls them, ordinary, raiyats Under existing law, raiyats not having a right of occupancy are entitled to pattás at such rates as may be agreed upon between them and the persons to whom the rent is payable. The term of such pattás is exclusively at the discretion of the landlord, and such a raiyat cannot against the will of his landlord, retain possession of land in which he has not a right of occupancy; but, if he has entered into possession otherwise than for a specific term, or, having entered for a term, has held over with the consent of his landlord, express or implied, he cannot be ejected without service upon him of a reasonable notice to quit. His rent can only be enhanced after service upon him of a notice of enhancement, served by order of the Collector. If, after such a notice has been served upon him, such raiyat elect to remain in possession of the land, he cannot be compelled to pay more than a reasonable rent therefor. (I am taking this statement of the law from Mr. Field's Digest). The alterations which the Bill proposes to make in the law are these. Subject to the general maximum, we leave the rate of rent to be fixed by contract; we leave the raiyat subject to enhancement without a suit, but we provide that, if in consequence of his refusal to accept the enhancement the landlord wishes to eject him, he shall pay him compensation for disturbance. The compensation to be made will be in proportion to the enhancement demanded, so that, if the enhancement is moderate, the raiyat will probably prefer to pay it; if it is excessive, the landlord will have to pay for ejecting him. The object is two-fold—to keep the landlord to reasonable enhancement, and to prevent his making use of his power to enhance as a means for ousting the raiyat so as to prevent his acquiring a right of occupancy. I was quite prepared for strong opposition on this point. It is in principle a return to the modified rights of occupancy which the Commission proposed to give to the three years' tenants; in other words, it aims at giving some security of tenure under which occupancy-rights can grow up to all cultivators. It is admittedly an innovation or experiment which has never been tried in India, and at first sight is open to the charge brought

against it of being an invasion of the landlord's rights. Now it is pointed out in Mr. Ilbert's speech that a high authority has computed that 90 per cent. of the raiyats of Bengal have occupancy rights. The Bihár Commission computed that between sixty and seventy per cent. were in a condition which would enable them to claim occupancy-rights under the present Bill. Still there is an important residuum, and the question at issue is—does public policy require us to protect the position of this residuum at the expense of the powers now held by landlords? The reasons which led the Government to answer this question in the affirmative may be gathered from the following extracts from their despatch No. 16 of last October to the Secretary of State. They said, with reference to the very subject—'We have first to consider the proportion of cultivators whom the scheme leaves unprotected', and, after referring to the figures quoted above, the despatch goes on—

'The proportion is at best conjectural, and we are not concerned to insist on its accuracy; but the important point to be remembered is that the number of unprotected raiyats, whatever it may be at the moment when legislation is completed, will, under your Lordship's scheme, be thereafter a constantly increasing number. Every acre of land which becomes vacant, whether by purchase or pre-emption on the part of the landlord, by death without heirs, or by abandonment of the occupant, falls out of the protected class, and instantly becomes a subject for a renewal of the evil contest. The landlord's interest is immediately concerned in preventing the settlement on such land of any existing cultivator of the estate or village, and in defeating, as regards tenants from outside, the accrual of occupancy-rights by twelve years' prescription on such land; the old series of litigation, enhancement and ejectment will recommence, and in the course of another generation the percentage of land thus acquired will be sufficient to render necessary a re-opening of the whole question, and will inevitably involve fresh interference on the part of Government.

'In the meantime, it is abundantly manifest that the position of this unprotected residuum will be infinitely worse than that of unprotected raiyats under the existing law. At present, the landlord can effectually prevent the accrual of occupancy-rights by merely shifting his tenant from one patch of cultivation to another; under the proposed rule it will be incumbent on him to turn the tenant out of the village altogether, out of his house and homestead as well as out of his land, and we have every reason to believe that this power, which, even as a threat *in terrorem*, would be productive of the worst consequences, would in many cases be actually put in force.'

"And they added—

'fence round the twelve years' rule as we may, any rule which makes it to the interest of the landlord to prevent the growth of prescriptive rights leaves of necessity to him both the power and the inducement to put such pressure on his raiyats as cannot fail to become intolerable.'

"They explained, therefore, to the Secretary of State that it would be in their opinion necessary, in introducing a modified twelve years' rule, to combine it with a system of compensation for disturbance to unprotected raiyats.

"There is another point to be considered. It is admitted that the definition in Act X does not override occupancy-rights which may have accrued by custom outside that Act. I have quoted from Messrs. McDonnell and Edgar, and might adduce much similar testimony as to the general existence in some parts of the country of a customary right of occupancy quite independent of any fixed limit of time. I have given the evidence supplied from one Munsifí in Central Bengal of the transferability of the rights of korfa raiyats,—evidence consisting of the fact that no less than 40 such holdings have, in the course of the last few years, been brought to sale in execution of decree, and fetched very substantial prices, as much as ten and fifteen years purchase of the rental. I have here a table supplied from another Munsif in Jessore, showing that in his Court, in the course of two months, some 35 under-tenures, many of them technically korfa tenures, and all coming under the ordinary head of non-transferable rights, had been sold.

"Now, if such under-tenures can be sold for substantial sums in execution of decree, does it not follow that the holder has in them a property worth protecting? And, if we are to carry out the accepted policy of establishing 'the occupancy-tenure on a broad and permanent basis,' of securing 'a substantial tenantry free from debt and in a position to save and bear the pressure of occasional bad seasons,' are we not justified in taking steps to protect within reasonable limits the non-occupancy-tenant from arbitrary evictions, and so to render possible the accrual of full occupancy-rights which the law aims at? As

to the special method by which this should be done, there may well be differences of opinion. Whether you can, by fixing a nominal maximum of rent, practically diminish the value of the power of sub-letting is, I confess, questionable; and whether, in the case of non-occupancy-raiyats, competition will not overcome legislative restrictions on rents is no less doubtful. I admit also that compensation for disturbance is untried and may be open to objection, but while we must affirm the principle of giving this class a reasonable measure of protection, the particular method of arriving at this result is a subject for discussion in Select Committee, and it is one on which we shall be particularly glad to receive suggestions.

"While dealing with this question of ordinary raiyats, it behoves me to say something on the subject of sub-letting. We have been asked to prohibit sub-letting, and have been told that in the extension of sub-letting lies a danger which may involve a new departure in another generation or two, as a new class of *rack-rented* raiyats grows up on the soil; but it is impossible, as has been pointed out, to ignore the universal custom of sub-letting, or to change the status of all existing occupancy-raiyats and their sub-tenants. We have done what we can to discourage this habit. In the first place, by making occupancy-rights transferable, we take away one of the great inducements to sub-letting. In the second place we put a limit on the rent which can be legally demanded from a sub-raiyat, and so leave but a margin of about ten per cent. between what the raiyat has to pay his landlord and what he can receive from his sub-raiyat. Ordinarily, therefore, it would be better worth his while to cultivate himself, or to sell, than to sub-let. In the third place, we make it part of the law that the tenant should obtain his landlord's permission before sub-letting; otherwise the sub-tenant's crop is liable to the landlord's distraint, and this right the landlord is not likely to abandon. Whether these provisions will really check the habit of sub-letting, I cannot say. I am quite sure direct prohibition would be ineffectual, and I am also quite sure that the question is one which depends on economic causes, and which legal checks can only very partially regulate; but it seems to me that, until the difference between what he receives from his under-tenant and what he pays to his superior landlord becomes so large as to enable the occupancy-raiyat altogether to divorce himself from the soil, the custom of sub-letting will not be encouraged, for the occupancy-raiyat can, in the present state of affairs, find no other means of occupation; in the meantime, therefore, the tendency of our legislation will be to keep the great bulk of the occupancy-raiyats on the soil, but more able to subsist comfortably and to resist adverse circumstances than at present: anyway, I don't think legislation can wisely go further in this direction than we are doing, and, as Mr. Ilbert said in his opening speech,

'sufficient for the Statesman if he can grapple with the problem of the day; for the distant future he must leave posterity to provide.'

"And now I come to the point against which the main attack of the opposition is addressed, namely, that while we have done everything to increase the security of the raiyat, we have done nothing to carry out the two objects for which legislation was originally demanded, namely, to facilitate the recovery of his rents by the zamíndár, and to give him a sure and satisfactory method of enhancement. Many of the objections were answered in advance by Mr. Ilbert. He has shown what we have done and why we have been unable to do more. In the matter of procedure for recovery, he showed that there was no royal road to the discovery of facts; and by shortening the code of procedure you do not shorten procedure itself; that you cannot, without danger of gross injustice, shift in these cases the burthen of proof, and that the real reason why rent suits take time is that there are generally substantial issues to be tried, and substantial injustice, especially in executing *ex parte* decrees, to be guarded against. What we have done is to give a modified power of distraint, which is really a form of attachment before judgment, and should in very many cases take the place of a suit altogether. Doubtless, as has been urged upon us, many zamíndárs would wish to be able to exercise this power of distraint directly and of their own authority, instead of through the intervention of the Court. This is what is now very generally practised in Bihár, and it has been defended by certain

zamíndárs in the papers before us, as well as in this Council, as being less tedious and less expensive to the raiyat than the regular process. Doubtless a creditor might say, it would be much shorter, and perhaps less expensive to his debtor, to take the purse out of his pocket than to sue him for the debt, but neither the law nor the debtor look at the matter from this point of view. The law calls it robbery, and the debtor is likely, either to resent it by violence, or by getting the law to enforce the penalty for robbery. In other words, we cannot allow one of two disputants to be the judge in his own cause,—no, not even judge in a Court of first instance, and though his decision be open to appeal, for this is the plain meaning of giving him summary powers of distraint and leaving the raiyat to contest it by suit. In ordinary suits, where distraint through the Courts is not had recourse to, Mr. Ilbert has described the procedure, based very much on that of the Small Cause Courts, and abolishing all unnecessary delays, and disallowing appeals in petty cases, and has explained our readiness to consider in Select Committee any further simplification, should such simplification appear consistent with justice to both parties.

"But it is not merely a shortened procedure; it is a summary procedure, which is wanted,—a procedure, in fact, which will give the landlord the benefit of the presumption in his favour, and place on the raiyat the onus of proving that the presumption is erroneous.

"Now, there are only two forms of summary procedure—one through the intervention of our Courts, the other through executive authority, like the certificate or patní procedure.

"Summary procedure through the executive authorities has long been tried in India. There are numerous examples of failure. Up to 1859, a zamíndár could enforce payment of rent either by distraint or summary suit before the Collector. This was discontinued by the framers of Act X. The raiyat had no remedy but by a regular suit, and this, the framers of the Act declared, was 'almost tantamout to refusing him any remedy at all'. The abolition of these summary powers was objected to then by the British Indian Association, much on the same grounds as those now put forward (as indeed were all the restrictions on the zamíndár's power, including that of arresting their raiyat); but these objections were deliberately overruled. The question of a summary procedure through the executive authorities was then definitely settled in the negative, after an experience dating back to 1799. Nor has summary procedure through the Court been found more satisfactory. I believe the experience of the proceedings under section 530 of the old Procedure Code fully justifies this assertion. The hon'ble gentleman opposite now asks that we should give to the zamíndárs the same summary procedure (that of the Certificate Act) which the Government use in recovering public demands. In the first place, let me point out that under this Act, in Government estates, the Collector is himself the Court, and may be trusted to decide with reasonable fairness between the manager of the estate and the raiyat, and only with his sanction, after hearing objections, can a certificate be executed. What similar security can zamíndárs offer? But I will, in answer to the hon'ble gentleman's demand for this procedure, quote no less an authority than that of Rai Kristodás Pál, Bahádur, himself. When it was proposed to apply this procedure to the recovery of arrears of rent due on estates under the Court of Wards, speaking in the Bengal Council, he said—

'That would be opposed to right principle. Rent-suits sometimes involved questions of right and other complicated matters which were best left to the Civil Courts. It was observable that the certificate of the Collector under this Bill, in respect of this class of cases, would not be absolute but conditional, and that liberty was given to the aggrieved party to apply to the Civil Courts for redress within a year of the making of the certificate. If, then, it was considered necessary that the ultimate remedy should be sought for in the Civil Court, he did not see the necessity of providing for that class of cases the summary procedure of a certificate; it would only lead to additional expense, trouble and harassment, and he considered it much better that the procedure should be simplified, and suits for recovery of rent dealt with by the Civil Court at once, than that the certificate procedure should be first gone through as provided in this Bill, and the same thing should be gone over again in a regular way before the Civil Court.'

"I think the objection is sufficient, and I wish no better justification for our refusal, either to imperil justice by the adoption of a summary procedure

without redress, or, by giving the redress of a regular suit, to open the way to 'additional expense, trouble and harassment'. I am grateful to my friend for the plume which wings my shaft. At the same time I must admit that we are bound to provide the speediest and easiest method of recovery that can be devised, provided it is quite consistent with the security and protection of the raiyats; and, if anyone can devise a more expeditious method, which shall not jeopardize greater and more important objects, I shall be very glad indeed to receive the suggestion. And now, is it the case that we have done nothing to enable zamíndárs to obtain readily a reasonable enhancement of their rents?

"In 1867, again in 1875, and still at the present day, the landlords have complained that, though Act X of 1859 gives them the power to enhance, yet, owing to defects in procedure, they cannot put that power into effective action. So far as enhancement through the Courts on the ground of increased value of produce goes, they say the law is a dead letter. We have to admit that to a great extent this is true. The application of the law requires the Courts to ascertain a series of economic facts, concerning which it is impossible for the landlord to put before them in most cases the requisite evidence. Well, we have made a real endeavour to grapple with this problem. We have provided a scheme by which tables of rates corresponding to the old pargana rates should be fixed by the Revenue authorities, and we have provided for the Civil Courts applying these tables to the individual suits brought before them. In other words, the economic questions which have paralysed their action hitherto will now be solved for them by the Revenue authorities, and all they will have to do will be to apply them, or to decide upon special pleas put forward to show why they should not be applied. But we are told that these tables of rates will be unworkable. I think in some parts of the country it will be found that the existing rates are so multifarious, and depend so little on the quality of the soil or value of nett produce, and so much on other considerations, that the preparation of those tables will be difficult, if not impossible. In other parts of the country, there will be much less difficulty in their preparation. But the scheme is admittedly experimental. I hear that Mr. Finucane finds pargana rates, never changed since the Permanent Settlement, still existing in parts of Jessore, as Mr. Westmacott found them still existing in Dinájpur. Preliminary enquiries are now being conducted by experienced officers under the instruction of His Honour the Lieutenant-Governor, and, when the Select Committee meet in November, we shall be in a better position than we are now to judge of the chances of success. If it succeeds, there cannot be a doubt that the solution of the vexed problem will afford the zamíndárs a far more satisfactory method than they have ever had before, of legally obtaining a fair share of the increased produce, or increased value of the produce, of the soil, and they at least will have little cause to complain. If it fails, we provide another method on which they can fall back, and that is the regular settlement of rents by a revenue-officer, the procedure for which will be found in Chapter XI. This procedure is not applicable, it is true, to single suits; it only provides for those cases where large numbers of tenants have to be dealt with; but it is these cases that most require to be provided for, and which most lead to disturbance. Here again I may say that we are most anxious to receive criticism and suggestions.

"I feel that, both in this matter and in that of a speedy recovery of arrears really due, the zamíndárs are entitled to ask of us whatever assistance consistent with the interests of justice it is in our power to give them, and it is a matter of regret to me that the inherent difficulties of the problem are so great as to render a thoroughly satisfactory solution of them impossible. I have alluded to various abuses to which the raiyat is liable, but I am not at all insensible to the other side of the question, and I hope that further discussion may enable us to hit on some method of improving on the proposals of the Bill in this respect. I have now said all I have to say in reply to the objections taken to the leading principles of the Bill. I have purposely passed over many objections taken to minor points, and I feel that an apology is due for having, as it is, trespassed so long on the time and attention of the Council. But there is one subject in connexion with the history of the Bill on which, though it

has not been mentioned either in Mr. Ilbert's opening speech, nor in the course of the debate, except cursorily by His Honour the Lieutenant-Governor, I have still a few words to say. It refers to Bihár. Now, though the origin of the Bill, as regards Bengal, was the demand of the zamíndárs for greater facility to collect rents and to enhance;—a demand which, as soon as it was looked into, showed also the necessity of simultaneously securing greater fixity of tenure and limitations to enhancement; in regard to Bihár the genesis of the Bill was different. There the primary object was to secure the tenant in the rights which were fast slipping from his grasp, and the facilities required by the landlords were a secondary object. If we look to the draft Bills forwarded by the Bihár Committee at Bankipore, this difference is very apparent, and I may be asked, what has become of the suggestions of the Bihár Committee? Well, their work was referred to the Rent Commission, which remorselessly eliminated many of their suggestions. They refused to deal with the filing of zamíndárí accounts, to exclude from evidence the loose sheets that now take the place of village-records; they refused to make the interchange of pattás and kabúliyats compulsory, though they partly provided for this by making a decree take the place of a pattá; they refused to insist on counterfoil receipt-books; in other respects, they conceived that the measures proposed for Bengal would suffice for Bihár, except in regard to bhaoli rents, for which they made specific provision. The Government of Bengal, acting on Mr. Reynolds' suggestions made specific provision for measuring and recording zarât, and preventing the growth of occupancy-rights therein, and also for preventing raiyati land being further absorbed into zarât. It followed the North-Western Provinces rules as regards appraisement and division of the crop, and allowed commutation of grain into cash rents at the request of the raiyat. It also provided a rule, which the Government of India have tentatively eliminated, for restricting thíkádárs from enhancing, a restriction which can easily be evaded, and finally it vested possession of the crop in the raiyat, so as to make the common restraint and interference with it on the part of the landlord criminal trespass. They also proposed to have a cadastral survey and record-of-rights undertaken experimentally in the Patna Division, and this subject, as we have heard, is now under the Lieutenant-Governor's consideration.

"It will be seen, therefore, that while some of the special sections intended for Bihár have been made general, some of the general sections have been so altered as to be made applicable to Bihár. Thus the provision for measuring and recording the zamíndárs' private lands has been made permissive for the Lieutenant-Governor to introduce into those districts where it appears needful; the maximum limit of produce rents in staple crops has equally been made of general application. On the other hand, the general provisions about making receipts full and complete in themselves has been accepted as sufficient to meet the requirements of Bihár. So also has the principle of allowing distraint only through the Court. This, and the provision for vesting the possession of the crop in bhaoli land in the tenant (which is merely a distinct statement of the existing law, I believe), will do much to remove the special evils of the illegal distraint on crops, which, I am afraid, in spite of what was said yesterday, is still very common in Bihár. I must not detain you longer on this subject.

"What has now to be done is this. The Bill is to be referred to a Select Committee at once, but we do not propose that the Committee should meet till the Council re-assembles in November. In the mean time, there will be ample time for discussion, and we hope, before that time comes, to receive the matured opinion of the Government of Bengal, and its most experienced officers, and of the various associations and individuals interested in the subject. We cannot have too much light. You may have heard of a comparison in which, in the present state of medicine, nature and the disease are likened to two men fighting, and the doctor to a blind man who strikes in with a stick, but whether he helps nature or helps the disease is a matter of accident. Of course such a comparison is most unjust, but I have often thought that, if not applicable to medicine, it was not wholly inapplicable to such legislation as introduced the twelve years' rule of Act X. At least, we must endeavour to avoid that error; we must get as much light and as much criticism on the Bill as we can. I hope

that during the Simla sessions much of this criticism will be digested and considered by the Government, and that, when the Select Committee meet in November, much of the ground will have been cleared, and we shall be able to throw overboard at once any provisions which may be decisively and on good grounds condemned as useless and unworkable.

His Excellency THE PRESIDENT said:—"The full discussion which this question has received, and the able speeches which have been made by those hon'ble members who have addressed the Council, leave me but little to say. And yet I should not like to allow this debate to close without making some observations on the subject, which has engaged the attention of the Council for the last two days. I need say nothing in regard to the history of this question down to the present time. That history has been very fully laid before the Council by my hon'ble and learned friend Mr. Ilbert, by Major Baring and other hon'ble members. And they have shown that the direct intervention of the Government of India has only been called forth at the last stage of these proceedings, after every point connected with the matter has been examined, considered and threshed out by one of the most complete enquiries that any question, I believe, has ever undergone in this or in any other country. As far as the present Government is concerned, they took no official steps in the matter until they received the letter of Sir Ashley Eden in June, 1881. And, indeed, for myself, all I had done in regard to it up to that time was to commence a study of the voluminous literature already accumulated on the subject. When that letter of June, 1881, was received, containing the clearly expressed and matured views of the Government of Bengal, it then became our duty to take up the question, carefully to consider all the information which was supplied to us and to determine the course which we should take. Now it seems to me that it cannot by any possibility be denied that, after the long discussions which have taken place on this subject, extending over many years, over the tenures of office of successive Viceroys and Lieutenant-Governors of Bengal, the time has fully come when it is absolutely necessary in the interest of all parties that a settlement should be arrived at. That some legislation on this subject is required has long been admitted by the zamíndárs, and it was not denied yesterday by my hon'ble friend Mr. Kristodás Pál, in his able speech. Legislation on this subject is necessary. But I strongly hold that you cannot legislate on one part of a question of this kind alone. Various attempts to do so have been made, but I am of opinion that the Select Committee on Sir Ashley Eden's Bill of 1878 were perfectly right when they came to the conclusion that they were unable to deal with one part of the question, and that no satisfactory solution could be found unless it was taken up as a whole. That decision was approved by the Government of Lord Lytton, and the Rent Commission was issued, and I can only add my testimony to the ability, the zeal, the industry and the intelligence with which the members of that Commission discharged their duty. As has been truly said, we have in this case to deal with very different states of things in different parts of Bengal. In some parts of the Province the raiyats are strong and the landlords are weak; in other parts of the Province there is an opposite state of things, inasmuch as the raiyats are weak and the zamíndárs are strong. And that very diversity of circumstance of itself seems to show that if you are to treat on this subject, you must deal with it for Bengal as a whole. You must look to the interests of both zamíndárs and raiyats; you must consider what is the position of the landholders, and what is the position of the tenantry. You are bound to consider broadly and generally the interests of both parties to this great controversy. But then the preliminary objection is often taken that, on a wide view of this question, the Government and the legislature have no right to interfere between the zamíndárs and the raiyats in Bengal. Now, I was much struck by the line which was adopted by my hon'ble friend Mr. Kristodás Pál in regard to this branch of the question. He did not urge directly that the Government (and by the Government I mean both the Executive Government and the legislature—the Government in its largest sense) is not entitled, in consequence of the Permanent Settlement, to deal with the question at all. He approached very nearly at times, in his speech, to that assertion, but I observed

that he never actually made it, and I was not surprised that one so skilful as he is, and so practised a debater, should have steered clear of that assertion. He knows the question well, and he must feel the force of the arguments which can be, and which have, in the course of this discussion, been ably urged to show that the claim which has been set up by and on behalf of the zamíndárs, to the effect that the legislature and the Government are debarred by the agreement of 1793 from interfering on behalf of the cultivators of the soil, is not tenable. The clause of the Permanent Settlement which bears on this subject has been read to this Council more than once in the course of this discussion, but, nevertheless, I must read it again, because it is of the greatest importance that in a matter in which there is even an insinuation that a question of good faith is involved, there should be no mistake whatever. These are the words which have already been quoted in this Council, and which it is essential that this Council, in dealing with this question, should bear in mind—

'It being the duty of the ruling power to protect all classes of people, and more particularly those who, from their situation, are most helpless, the Governor General in Council will, whenever he may deem it proper, enact such Regulations as he may think necessary for the protection and welfare of the dependent taluqdárs, raiyats and other cultivators of the soil, and no zamíndár, independent taluqdár or other actual proprietor of land shall be entitled on this account to make any objection to the discharge of the fixed assessment which they have respectively agreed to pay.'

"Now, as it seems to me, nothing can be clearer or more precise than that language. In those days, in many public documents, clearness and precision of language was frequently wanting; but I do not think that the most able draftsman in the world could easily have devised language which is more perfect and more absolutely clear than that which is contained in this passage. And it appears to me that that passage dispels at once all idea that the Permanent Settlement prevents the Government from coming to the assistance of the tenants. I hold, on the contrary, that it shows that the Government, in 1793, gave to the raiyats and all the cultivators of Bengal a distinct and binding assurance that they should look to them for protection and for the promotion of their welfare. It appears to me that under these words the Government gave a distinct pledge that they would protect the raiyats and promote their welfare. My hon'ble friend Mr. Kristodás Pál said, in the course of his speech yesterday, that he regarded the Permanent Settlement as the charter of the landlords and tenants in Bengal. I am willing to accept that statement; but if it is so, it is a charter given by the Government to the landholders on the one hand, and to the tenants on the other. Now let us for a moment look at the mode in which the engagements of that so-called charter have been fulfilled. From the moment when it was promulgated, the zamíndárs and other landholders of Bengal, as a class, obtained substantial benefits, which have subsequently been growing in value and importance from year to year; while, on the other hand, the cultivator of the soil received nothing but an assurance which, for long years of gradual depression, through what His Honour the Lieutenant-Governor of Bengal called to-day the culpable negligence of the Government, has been permitted to be wholly barren. Act X of 1859 was an honest attempt to give effect to that assurance. It was an attempt wholly unjustifiable, if the contention that the Government is precluded from interfering between landlord and tenant is a sound contention. But it is obviously clear that the Government and the legislature who passed Act X of 1859 did not for one moment admit any contention of the kind. That Act has undoubtedly done good, and I am not in the least inclined to decry it; still less am I inclined to think lightly of the purpose and intention of those who framed and passed it. But that Act has failed to fulfil all the objects for which it was introduced, because its authors did not foresee the mode in which their intentions might be set aside and rendered nugatory. I have heard it stated that the late Mr. O'Connell is reported to have said that he could drive a coach-and-six through any Act of Parliament. Whether he could perform that feat or not I cannot say; but I will say this, that a coach-and-six has been driven, at all events, through the intentions of the Act of 1859, and that measures have been devised for evading what I cannot doubt to have been the object with which that Act was passed.

"But it has been suggested that we have no right to touch this question; because the zamíndárs have been called proprietors and owners of the soil, it has been contended that it follows necessarily that they have a full and absolute right in the property, and that no one else has any interest in the soil at all. On the meaning of the words 'proprietors and owners', this question very largely depends. My hon'ble friend Mr. Kristodás Pál, and still more Rájá Siva Parsád, if I followed him, appeared to contend that no man could be called a proprietor who had not the most absolute and complete right to do in every respect whatever he pleased with the land. That certainly is not the notion which we entertain of an owner or proprietor of land in England. A great deal has been said about the zamíndárs having been made proprietors after the English fashion. If that is so then I must point out that the vast majority of land in England is held by people who are owners in only a limited sense, who cannot sell or mortgage the land without the sanction of somebody else, and who very often cannot sell or mortgage at all. And it is quite a mistake to suppose that, because a man who has a limited interest in land is called a proprietor and owner, therefore he becomes an absolute proprietor and owner, and is given an absolute fee-simple right to the land to do what he likes with it. So far as I am able to judge by all the evidence which I have seen on this complicated and much contested question of land-tenures in India, I am led irresistably to the conclusion that there never has been in India an absolute owner of the soil in whom every possible kind of right of property is vested. It appears to me indisputable that the raiyats and cultivators of the soil have always had, or at least a great proportion of them have always had, rights in the soil more or less perfectly secured to them according to the circumstances of the time and the position of the parties, that rights of this description have been at all times recognised, and that they have never been abandoned by those who believed that they possessed them. And it must be remembered that, if it be true that ninety per cent. of the tenants in Bengal are occupancy-tenants now, or, to take the lower estimate which I have seen put forward upon good authority, that seventy per cent. only of them are now occupancy tenants, it is perfectly clear, at least as regards nine-tenths or seven-tenths of the landlords of Bengal, that they are not absolute owners in the sense in which the words have been used by the opponents of the Bill in the course of this discussion. And, as I have spoken of the position of the zamíndárs, I should like, in passing, to say that no man can recognise more fully than I do the truth of what was stated by the Mahárájá of Darbhangá yesterday, whose presence in Council, I am sure, we all welcome, when he said, in modest terms, that the landholders of Bengal were not all bad landlords; I have not the slightest intention of asserting that they are, and if you want any proof to the contrary, you will find it in the facts brought forward by the Lieutenant-Governor of Bengal in regard to the estates of the Mahárájá of Dumraon.

"It is not a question of the personal character of individual zamíndárs, but it is a question of what are the rights of two parties—both having some rights in the land—the stronger of these two parties, the zamíndárs, in many instances, resisting the rights of the other, who, on account of their weakness, are entitled to receive protection from the Government. Now the Hon'ble Kristodás Pál, in speaking on the Bill, described it as a measure which involved the redistribution of property. I confess it seems to me that, looking at the past history of this matter, looking at the gradual lessening of the rights of the raiyats since the Permanent Settlement, looking at the extent to which their position has, from a great variety of circumstances, been weakened since that date, and at the manner in which they have lost rights, which, to my mind, it is clear that they originally possessed, it would be much more true to say that this Bill is a Bill for the restoration, rather than for the redistribution, of property. But it does not go so far; we do not propose to restore to any portion of the cultivators of the soil the position in which they would now stand, if the system which was in force at the time of the Permanent Settlement had been unaltered down to the present time. What this Bill does is to leave the landlord, broadly speaking, all the advantages which he has acquired during these ninety years. It leaves him the rent which he now receives. All it says to him is 'Your power of enhancement and eviction shall be, to a limited degree, brought back in the future to the position in which it stood ninety years ago'. To my mind, then, so far as regards any question of right, we have to-day a most plain right—a right which was asserted and exercised in 1859—to deal with this question, if we consider it necessary, for the purpose of protecting the interests and promoting the welfare of the cultivators of the soil. And we propose to take steps for that purpose which will fall very far short of restoring the cultivators of the soil to the position in which they originally stood. To attain this end, so far as can now be done, is the principle and the main object of the Bill which we are now considering. I will now pass, therefore, from the point which is really the only point under discussion at this stage, namely the principle of the Bill, and I will consider, as briefly as I can, some of its leading provisions more in detail.

"And, first, with regard to the question of occupancy raiyats. All that this Bill will really do, will be to render more effectual what was the true object and intention of Act X of 1859. As I have said, I do not believe that the framers of that Bill anticipated the mode in which the proposal which they then made would be evaded, and I feel no doubt whatever that, if they were here to-day to speak, they would accept, upon this point at all events, the legislation which we are now proposing as the most effectual means of carrying out their original intention. I was very much struck yesterday by a reference which was made by my hon'ble friend Mr. Evans to a letter, which I think he said he had seen in a newspaper, from a Bengal zamíndár, in which the writer said that he recognised that the great body of the raiyats had a moral right of occupancy in their holdings. The law cannot deal with a purely moral right; but the moment you get so far as to say that a man has a moral right to an occupancy tenure, you are very near the day when the legislature will say 'We will convert that moral right into a legal one'; and that is all we propose to do here now. It is admitted, upon all hands, that Act X of 1859 was intended to preserve all customary rights, and the twelve years' rule was introduced for the purpose of giving rights over and above those which existed under the customary rules. In fact, the twelve years' rule was not intended, whatever may have been its practical effect, to exclude from the right of occupancy any *khudkásht* raiyats, or, as they were called 'resident' raiyats, but, on the contrary, to bring within the benefits of that right certain other tenants, not resident raiyats, who, under the original definition of the Bill, would have to be excluded. Unfortunately, as I have said before, this Act has been so worked, that what was meant to give additional security has had the contrary effect, and has deprived many resident raiyats of what would have otherwise been their clear rights. Now, for my own part I confess that, in considering this question, I cannot altogether divest myself of the fear that, so long as you have a fixed limit of time at the expiration of which the raiyat will obtain a right of occupancy, there will be more or less danger of a continuance of the proceedings which have been resorted to under Act X of 1859. My own view on this subject has been very ably stated by Mr. Justice Cunningham in his Minute on the Rent Bill. Mr. Cunningham says:—

> 'But this happy state of things becomes impossible when the legislature enacts that, at the end of a stated period, the tenant shall change his status, and the landlord lose a considerable portion of his rights. The two parties are throughout necessarily at arms length, and, as soon as the period approaches, the landlord naturally does something to prevent the accrual of the prescriptive right, and is always on the look-out to prevent the growth of occupancy-rights, and to destroy them where they now accrued.'

"That was the reason, the desire to avoid that source of differences and possibilities of contention, which led me, in common with my colleagues, to submit to the Secretary of State the proposal which is contained in our despatch of March last. Lord Hartington did not approve of our proposal on that point, and preferred that the Bill should be framed in the manner in which it has been drawn up and is now before the Council. I certainly do not doubt that the Bill in this shape will have a very beneficial effect. I am not at all sure that it may not, in the first instance, go nearly as far as the proposal which we made; and all I have to say on the subject is, that it will be the duty of the Government very carefully to watch the proceedings taken under this Bill, if it becomes law, in order to see that the process of shifting raiyats from village

to village, from field to field, does not spring up under this measure; and to stop what will be any clear and distinct evasion of the intention of this law.

"Now, passing from the subject of occupancy-rights, I have a few words to say on those provisions of the Bill which render void any contracts inconsistent with the general scheme of the measure. When you have to deal with a matter in which the practice of contracting out of the law (legally contracting, I admit) has been very largely resorted to, so as to show that those who have the power have not the inclination to conform to the obvious intentions of the legislature, it becomes a very serious question, at all times and in all countries, to what extent the legislature should allow their intentions to be overridden by an arrangement between two parties who stand towards each other in such very different relations in point of strength and position as the raiyat and the zamíndár. I will give you an instance drawn from my own experience. Some years ago, an Act of Parliament was passed in England, on the subject of giving compensation for improvements to English tenants. It was wholly a permissive Act; it showed clearly the mind of the legislature, but it was left to the parties, or really to one of the parties concerned,—the landlord,—to decide whether he would be bound by the Bill or not. The majority of English landlords, the majority even of those who supported the Bill, proceeded at once to render it inoperative, and it had very little practical effect; so little that I was one of the very few people who did act under it. And what was very much like some of the proceedings complained of in some Government departments here, the Government themselves, under their own Bill, gave notice to all their tenants that they would have nothing whatever to say to the Bill. What has been the consequence? why, at the present moment Parliament is about to take up this question again, and to pass a Bill which will make it compulsory upon both parties to enter upon these arrangements, and will prevent them from contracting themselves out of them. The general principle of making the Bill compulsory on both parties is pretty well agreed upon on both sides of the House of Commons. The case here is very similar. We have parties contracting out of the provisions of the law, and if that law is to have any effect at all the only process by which it can be made effectual is to say to these parties, 'You shall not be permitted to contract yourselves out of the law'. Surely it is high time to do so when we find men contracting themselves out of this and many other laws which impose cesses upon landlords, and which forbid the imposition of illegal cesses upon tenants, such as *abwábs* and other forms of illegal taxation. Upon this point I can only say that we are acting upon principles generally recognized in cases where the legislature finds itself in the position of having no alternative except to make the provisions of the law imperative upon the two contracting parties; for it is useless to pass this or any other measure unless it is determined that its provisions shall be enforced, and that the parties shall not have the power of escaping from them.

"Something has been said about the conduct of Government officials in Court of Wards" estates and in other estates. His Honour the Lieutenant-Governor has told you to-day of the orders which have been recently issued on that subject, and I can only say that these orders are entirely approved of by the Government of India, and that we have taken steps of a similar kind in regard to the other parts of India.

"Now, with respect to the question of transferability. The evidence appears to me, I confess, to be overwhelming, that in the greater part of Bengal the practice of transfer exists under a custom which the Courts have recognised. The Government of Bengal in one of the papers—I think it is the letter of Sir Ashley Eden—says 'that the weight of opinion received is in favour of recognising in the law what is an almost universal custom of the province,' that is the custom of transfer. If it is an almost universal custom in the Province it is only right that it should be recognised, and it appears to me that it is in the interests of the zamíndárs that it should be recognised in the mode in which we propose to recognise it; because where this custom exists now the landlord can put in no claim for pre-emption. If we are going to reduce the right of anybody in regard to transfers, we are going, practically, to limit the right of

the tenant, and not of the landlord, by giving the latter a power to come in and say: 'I claim to buy what you want to transfer,' and at a price to be settled by a Court instead of at the highest price which the tenant would otherwise obtain. There is a great deal to be said against giving the landlord this power, on the ground that the Court might adjudicate a price very much below the price which the tenant could get under the existing custom.

"The Hon'ble Kristodás Pál seems to think that the result of these provisions will be to force both parties into Court; but they may agree out of Court if they like. Would my hon'ble friend prefer that the landlord should be obliged to give whatever any other person offered the tenant for the holding? That is an amendment which may be considered in Committee, but it would not, in my judgment, be in favour of the landlord. It appears to me, I must say, that it would not be fair to the landlord to proceed in that way, because it would be very easy for the tenant to have a collusive sale and to get some friend to come forward and pretend that he was willing to buy at a very high price his occupancy-tenure, and thus to make it almost impossible for the landlord to exercise his right of pre-emption; and besides this, I am told that it happens in many parts of the country, that neighbours who are not on good terms with a zamíndár are often ready to pay a fancy price in order to annoy the landlord. This, I think, ought to be prevented, even at some risk of diminishing the rights which exist in many parts of the country under the custom of the present day, and we ought, therefore, to give the landlord the right of pre-emption at a rate to be fixed by the Court. If it is true that the system of transfer, as the Bengal Government has stated, is an almost universal custom of the Province, this provision is rather in favour of the zamíndár than otherwise, and I observe that the Mahárájá of Darbhangá was inclined to take that view.

"Passing from that point, I come to the question of enhancement. Now, the position of the law with regard to enhancements is this. The Hon'ble Kristodás Pál has told us that enhancements are now practically at an end, and it is, I believe, generally admitted that, under the law as it stands at present, it is extremely difficult for a landlord to get even a just and reasonable enhancement. Notwithstanding that absolute right of property which we hear so much about, the landlord cannot now enhance, except under certain conditions laid down in the Courts. The practical effect of our proposal would be, I believe, to make just and reasonable enhancements more easy and not more difficult to obtain than at present; and I know very well that many persons who feel very strongly on the subject take objection to the Bill as now framed, because they think that it will have the effect of rendering it practically easier to enhance than at present. At the same time we do take, and deliberately intend to take, ample provision against unfair and unjust enhancement, against rack-renting and against depriving the tenant of his fair share of the produce. That we deliberately intend to do; but we are ready to render it easier than at present for the landlord to secure such enhancement as the law declares to be right. I won't detain the Council now with any remarks upon the subject of the tables of rates. The Hon'ble Kristodás Pál seemed to deprecate that part of the Bill. It will, no doubt, receive the careful attention of the Select Committee, and by the time the Select Committee meets we shall have a great deal of practical evidence upon it, and it will then be for the Select Committee to consider how far the principle can be applied. I think the principle would be useful, but it is not essential to the system of the Bill. It may be applied to one part of the country and not to another. I said just now that we did not intend to permit the rents of these occupancy tenants to be unduly enhanced, and that is why we have fixed a maximum. The question of the amount of that maximum is undoubtedly an important one, requiring the consideration of the Select Committee. The difference between twenty and twenty-five per cent. is not very great; and the Lieutenant-Governor has before him evidence which shows that twenty per cent. is as far as we ought to go.

I come now to what the Bill calls the ordinary raiyat. We have thought it right to give a man in that position a certain amount of

security, a very much less amount of security than is given to the occupancy tenant, but still some degree of security, and we propose to give it in two ways: first, by fixing a maximum similar to, but higher than, that fixed for occupancy tenants; and, secondly, by providing compensation for him in certain ways. I must say that I have found it by no means easy to get a clear idea of what is the position of these tenants at present. Mr. Field, in his Digest, that very able work for which we owe him so many thanks, and of the accuracy of which we have so many proofs,—lays it down, in the 51st article ——

'The rent of a raiyat not having a right of occupancy can be enhanced only after service upon him of a notice of enhancement in the manner provided by article 45. If after such a notice has been served upon him, such raiyat elect to remain in possession of the land he cannot be compelled to pay more than a reasonable rent therefor.'

"Well, reading that, you would suppose that the intention was that this tenant should have the right to sit on the land at a reasonable rent; but on the other hand the landlord has power to give him notice to quit, and if he does the tenant has to go; so, while it would appear that the law recognises, to a certain extent, the right of the tenant-at-will to sit on the land at a reasonable rent, it gives him no practical means of securing that right. I am not inclined to put this man in a worse position than he is in now, or than the law intends him to be in, and it appears to me, therefore, that it is quite impossible for us to overlook his position and leave him altogether under the operation of a law which, as far as I can understand, is very vague and uncertain. The tenant in this position is regarded and spoken of as a tenant-at-will, and I believe the Courts regard him in that light; but at the same time I am, I think, right in saying that the idea of a tenant-at-will is a purely English idea, and that, according to indigenous Indian ideas, no person can strictly be described as a tenant-at-will. Now, with regard to compensation, we propose to give him compensation of two kinds—compensation for improvements and compensation for disturbance. As to compensation for improvements I have little to say; because if a tenant makes *bonâ fide* improvements which add to the letting value of the land, and, therefore, enables the landlord to obtain more money for that land, then I say here, as I have always held at home in regard to my own tenants, that it is only common honesty that that man should be compensated for those improvements. It is, of course, necessary that the improvement should be a *bonâ fide* substantial improvement, and not anything of a purely temporary character, or which forms part of the ordinary processes of good husbandry. I am told that there are banks made between one field and another, and *kacha* wells which are made one year and renewed the next; but these are not permanent improvements, and it will be for the Select Committee to decide for what improvements compensation should be paid. All that I say is, that when a man leaves my land he is entitled to be paid for anything he has done from which, when he leaves, I shall reap benefit. As regards compensation for disturbance the main objection urged against it is that it is unknown in India. I do not deny that that is a *primâ facie* objection to the system, and if those who do not like it will produce before the Select Committee any better proposal that gives fair and reasonable protection against arbitrary evictions, all that I can say is that we shall be perfectly willing to consider it, and that if it is better than our plan, and more in accordance with Indian customs, we shall accept it. But I must say that the argument that it is a system unknown in India does not lie altogether in the mouth of those who have been arguing in the course of this discussion in favour of the theory that the land-owners of Bengal are land-owners after the English fashion, and that the tenants in Bengal are tenants-at-will according to the English meaning of the term. You cannot introduce English arguments into one part of this controversy, and then object to their importation into another part; if any other plan can be suggested more in accordance with the habits of the people than that proposed it will be fully considered. But I am most desirous that something should be done for this class of men which will render real the security which the law appears at present to contemplate. The Hon'ble Kristodás Pál appeared to think, if I did not misunderstand him, that the class of persons to whom I am now alluding were in the same position as the *paikásht* raiyats. It seems

to me that the position of the two is very different. What I understand by a *paikásht* raiyat is a raiyat who had less security and, therefore, paid less rent. Now, the position of these tenants is that they have less security and pay more rent. That has come about through the operation of those economic laws to which the Hon'ble Mr. Hunter alluded yesterday. When the *paikásht* raiyat paid less rent the land was looking for tenants, now the tenants are looking for land, and that is why, instead of paying less rent, they have to pay more. But that only brings them more and more into the category of cottier tenants, and any one who has studied the land question in any part of the world knows that a system of cottier tenants holding at competition rents is the worst land system that can be conceived. The Select Committee should bear in mind how desirable it is that we should not permit, under this Bill, a future up-growth of tenants of this description; that is one of the points which the Select Committee should keep carefully before them. These men may be few in number now, but, as Sir Steuart Bayley said, there are reasons why under this Bill they may increase, and, if they increase largely, the result will be that this Bill will not prove a settlement, but that thirty or forty years hence we shall have to go further still. I do not think I need trouble the Council with any further remarks on the details of this Bill. All the matters which are really matters of detail are matters for the Select Committee. The Government invites the assistance of the Council, of the Select Committee, of the parties interested; of their representative associations, and of the public, in regard to this measure. They will on their part give their fullest and best consideration to any suggestions which may be made. We are about to give eight months for the consideration of this important subject, which is ample time, considering how long the matter has been under consideration. I have no doubt at all that the Bill is capable of improvement in many respects, and our only wish is that it should be made, during its passage through this Council, as good as possible for the purpose for which it is intended. I hope that all those who are interested in the matter, and who have studied it, will aid the Government and this Council by giving them their opinions during the time which will elapse before we resume the consideration of the Bill. I have only further to say that the desire of the Government in introducing this measure is to bring to a close a long continued controversy, to carry on and to complete the work of 1859, and to redeem, as far as it is still open to them, the assurance given to the cultivators of the soil in 1793. All the changes which have taken place in the agricultural condition of Bengal—the great increase in the area of cultivation, the growth of the population, the substitution of English for Native ideas on the subject of landed property, the advancing prosperity of the country—have tended to raise the rents of the landlord, and many of them to weaken the security and reduce the status of the raiyat. All these advantages gained during the last ninety years will remain to the zamíndárs; broadly speaking we do not touch them, but, starting from what we now find, we have endeavoured to make a settlement which, while it will not deprive the landlords of any of these accumulated advantages, will restore to the raiyats something of the position which they occupied at the time of the Permanent Settlement, and which we believe to be urgently needed, in the words of that settlement, for the protection and welfare of the taluqdárs, raiyats and other cultivators of the soil, whose interests we then undertook to guard, and have, to our shame, too long neglected."

The Motion was put and agreed to.

The Council adjourned *sine die*.

CALCUTTA;

ADMINISTRATION REPORT OF THE INDO-EUROPEAN TELEGRAPH DEPARTMENT FOR THE YEAR 1881-82.

No. 104T, dated Simla, the 17th April 1883.

From—The Government of India, Public Works Department,

To—The Director-in-Chief, Indo-European Telegraph Department.

I am directed to acknowledge the receipt of your letter No. 415 of the 7th September 1882, submitting the Administration Report of the Indo-European Telegraph Department for the year 1881-82, and in reply to state that the Government of India reserves its review thereon until the Report for the current year has been received, the submission of which should be expedited.

No. 415, dated 7th September 1882.

From—Lieut.-Col. J. U. Bateman-Champain, R. E., Director-in-Chief, Indo-European Government Telegraph Department,

To—Secretary to the Government of India, P. W. Dept.

ADMINISTRATION REPORT, 1881-82.

I beg to forward for the information of the Government of India my annual report of the working of the Indo-European Telegraph Department during the year ending the 31st March 1882.

Capital.

2. The total Capital outlay incurred up to the 31st March 1881 was shown in my last year's report at £1,154,429-4-9. This sum was subsequently slightly altered and was shown in the accounts presented to Parliament as £1,154,443-4-10.

Capital Account, Appendix A.

3. By the operations of the year 1881-82 this figure was reduced by £7,597-10-3, nearly the whole of which is made up of the balances of suspense heads written off. Full particulars are given in Appendix A attached to this report, and it now appears that the Capital (subject possibly to some slight modification) stood on the 31st March 1882 at £1,146,845-14-7.

Reduction of £7,597-10-3 in Capital during 1881-82.

Revenue.

4. The traffic receipts for last year were entered in Appendix B as £88,078-17-7. Those of 1881-82 amount to £82,431, showing a falling off of £5,647-17-7. Part of this decrease is to be ascribed to an apparent diminution of the traffic, the entire earnings of the common purse having been £8,512 less than in the previous year. The cause of this diminution will be examined a little further on under the head Traffic. It suffices to observe here that our share of this decrease amounted to about £1,600.

Revenue Account, Appendix B.

Diminution of traffic receipts.

5. The remainder of the falling off, about £4,000, was mainly due to the conditions of exchange. In 1880-81, the Department realized 1,115,879 francs of its traffic balances in India at 8 annas to the franc, and we took credit for the realization at 10 rupees to the pound sterling. In the year now on record, although the distribution of traffic was such that we carried a greater share, the payment therefor had to be obtained principally in Europe and the amount realized in India was only 741,431 francs or about 374,448 less than in 1880-81. Had this difference of 374,448 been credited to us in India, we should have received 1,87,224 rupees or £18,722, while in England at the exchange of 25 francs to the sovereign we took credit for only £14,979, incurring in this way a comparative loss of £3,744.

Loss by exchange transactions.

6. The total receipts would be increased by the sum of £898 were we allowed to take credit for extra departmental work performed by the cable ship *Patrick Stewart*.

Earnings of cable ship.

7. The expenditure brought to account in 1881-82 against this branch of the service amounted to £84,606 which includes a sum of Rs. 48,045 chargeable to last year, and which according to telegraphic advice from the Examiner, it was thought at the time of compiling the administration accounts had been passed for that year. It therefore formed part of the debit against the Department

Expenditure during 1881-82.

in my last administration report; but as it was not included in the finance charges it could not be inserted in the Parliamentary paper; and this and one or two unimportant corrections caused the departmental expenditure for 1880-81 to appear in the administration accounts as £73,113-2-10, while in the Parliamentary accounts it is given as £68,128-9-3.

Comparison with 1880-81.

8. The principal differences between the items of expenditure of 1881-82 and those of 1880-81 may be summarized thus—

	More in 1881-82. As compared with previous year.	Less in 1881-82. As compared with previous year.
	£	£
Repairs	496	...
Establishment	...	778
Tools and plant	2,605	...
Cable steamer	10,936	...
Stores, suspense heads	4,882	...
Agencies	...	995
Stores for Turkey	...	959
	18,919	2,732

9. If out of the entry "cable steamer" the sum of £4,804 (being the item mentioned just above as 48,045 rupees) had been charged to 1880-81 as was done in my annual report, this increase of £10,926 would show as £1,228" only, an increase which is not, I think, very remarkable when the great amount of repairs to the cables described further on is considered.

10. The next entry "stores (suspense head) £4,882 is thus explained. Last year these store transactions were shown under the revenue account, and it so happened that our revenue in 1880-81 was credited with this amount. This year, in accordance with the resolution of the Government of India, dated Simla, the 5th May 1882, all suspense accounts have been dealt with under Capital only, and the expenditure in this case shows an apparent though not a real increase.

Expenditure during year.

11. On the whole the expenditure for 1881-82 has been heavier than usual both in the Gulf and, to a less degree, in Persia. During the season under review the breaks on the old Gutta Percha cable were unprecedentedly numerous, while in Persia the amount of rain and snow which fell in the winter was extraordinary. Little by little and at the smallest possible cost we are gradually replacing the weak sections of the cable by fresh material, and as the greater part of the line seems sound we have reason to hope that the interruptions may diminish in frequency and the heavy charges for repairing operations may be reduced.

Breaks on Gutta Percha cable unusually numerous.

Observations on financial conditions of the Department.

12. In a letter which I had occasion to submit not many weeks ago to the Government of India in reply to some remarks on my last year's report, I explained by reference to the conditions under which the Department was first organized and under which its operations have been maintained and extended, the improbability of our ever realizing substantial profits on the capital invested. The Indo-European system was established at a time when communication with Europe was demanded at any cost, and anticipating no competition by the Red Sea, engagements were entered into which under present circumstances severely weight us from a financial point of view. During the year under review owing to political complications and breaks on the Eastern cables the utility or rather the absolute necessity of the Teheran route has been most clearly demonstrated; and if the actual money receipts have been less than could be wished, the services rendered to the State have, it will be admitted, been exceptionally valuable.

Lines, Maintenance and Repairs.

Repairs to land line in Persia.

13. After the excessively severe winter of 1880-81 many repairs and some changes here and there in the route followed by the Persian line were needed and were carried out with but small expenditure of stores. The details of these operations though fully described in the annual report addressed to me from Teheran are of no special interest.

Revival to some extent of acts of wilful damage in Fars.

14. Wilful damage to the poles and insulators in the Province of Fars has, I regret to say, shown some signs of revival. The severe rule of the late Prince Governor Ferhad Mirza has been replaced by the milder sway of the present representative at Shiraz of His Royal Highness the Zil es Sultan, and the result has been unsatisfactory so far as regards the safety of our wires among the mountains.

Firman by His Majesty the Shah.

15. During the year His Majesty the Shah issued a special Firman regulating the system under which the local authorities are to be held responsible for acts of wilful damage in their districts, and if

the rules laid down by this Firman were but duly enforced we should have less grounds than we now seem to have for complaint.

Length of Persian Section.

16. The length of our lines in Persia is practically unaltered since my last report. This division extends from Teheran to Bushire, a distance of 792 miles. The poles carry three wires, but as one is set apart for the use of the local Persian Administration, I do not include it as part of our system, although in cases of interruption it is handed over for our traffic during certain hours in the day and so contributes to the strength of our communication. Our own wires between Teheran and Bushire, being double, are 1,584 miles in length.

Lengths of the several Gulf Sections.

17. As a result of the repairing operations in the Gulf our cable sections have during the year undergone some slight alterations, and the length now submerged and used for traffic is as follows :—

Gutta Percha Cable.

	Naut. miles.
Fao to Bushire	152·41
Bushire-Jashk	504·91
Jashk-Gwadur	273·00
Gwadur-Manora	271·14
Manora-Karachi	17·31
(3 cables, each 5·77 knots)	
Total Gutta Percha cable ...	1,218·77

India Rubber Cable.

	Naut. miles.
Bushire to Jashk	498·50

giving a total of 1,717·27 nautical miles of cable in use.

18. The Gutta Percha sections were laid in 1863. The India Rubber in 1869.

Diversion of part of the Mekran Land Line.

19. The land line along the coast of Mekran, which has rendered very valuable service during the past year, has, owing to a diversion effected between Gwadur and Ormara, been lengthened by 4½ miles and is now 683·5 miles long, carrying two wires aggregating 1,367 miles. The diversion above referred to consisted in the removal of 16½ miles of posts and wire from the sea shore to a more suitable position further inland. The new line covering 21 miles. The work was skilfully carried out by Mr. Newnham, the Assistant Superintendent in charge of this subdivision.

Faults on the cable sections.

20. During the year there were no less than 22 faults in the submarine cables, 21 of which occurred on the Gutta Percha sections and only one on the India Rubber. In repairing these 22 faults 47·44 knots of cable were expended, and in carrying out the operations the *Patrick Stewart* was at sea with the cable staff under Mr. Mance for no less than 100 days. Mr. Mance's report for the year is, as usual, attached, and it supplies full and interesting information as to the electrical condition of the lines, with other details.

Satisfactory insulation.

21. It is gratifying and encouraging to notice that notwithstanding the increasing age of the cables the average insulation on the 31st March 1882 was even higher than at the close of the previous year.

Causes of breaks.

22. Mr. Mance also observes that of the 1,699·96 knots of main cable (which with 17·31 of harbour cables gives the 1,717·27 noted above) so much as 1,434·35 knots are as originally laid and have been untouched for repair. Wherever the line is resting on an even bottom of sand or mud the iron guard wires are in excellent condition and "apparently good for another 50 years." Unfortunately weak points are to be found wherever the cable does not lie fairly on the bottom, or where it is unprotected by the soft nature of its bed, and thus during an exceptionally severe season like that of 1881-82, the violent action of the waves causes exceptionally numerous breaks.

Manufacture of cable at Manora.

23. The cable staff when not employed at sea has been busy at the Manora works where no less than 42·2 miles of new cable were turned out between October and the 31st March. Mr. Mance, in para. 33 of his report, shows that in this manufacture alone some 68,000 rupees were saved to the Government by our being in a position to make for ourselves on the spot instead of purchasing fresh cable in England.

INTERRUPTIONS.

Interruption of long duration on the Post Office cable near Lowestoft.

24. The total interruptions to traffic on the Teheran route during 1881-82 amounted to 80 days 15 hours 46 minutes. This is made up of 79 days 11 hours 16 minutes on the Indo-European Company's section between London and Teheran, and 11 days 20 hours 1 minute on our Persian line between Teheran and Bushire, less a deduction of 10 days 15 hours 31 minutes when both the Company's line and our own were broken together. The extraordinary duration of the principal interruption on the Company's wires broken in the North Sea close to Lowestoft was due partly to the inefficient but exceedingly economical system under

which the British Post Office maintains its seventy or eighty cables, and partly to the want of some international law to compel fishing vessels to move off from the locality of a fault so as to allow a cable vessel (when found) to operate. I reported to you very fully at the time on the lamentable and almost inexplicable waste of time which occurred last winter in carrying out a simple piece of cable work thirty miles from shore, and I need only repeat here that the break, caused by carelessness on the part of a cable vessel on the 28th October, was not mended till the 31st December. It was broken again on the 14th January 1882, and mended on the 27th of the same month. I must here observe that even while the Lowestoft cable was broken, a good deal of traffic found its way by the continental wires to our Gulf lines and so to India.

Interruption of both cables of the Eastern Company.

25. Another remarkable interruption which, though not occurring on the Indo-European line, directly affected its working, was that of the two Aden-Bombay cables in the months of June and July 1881. The accident was briefly referred to in my last annual report, and was fully described in my letter No. 2288 addressed to yourself and dated the 8th September. The circumstances were as follows. In March 1881 our gutta percha cable between Jashk and Bushire failed, but as the *Patrick Stewart* was then on the point of proceeding to Bombay to undergo some important alterations deemed necessary for her safety in a heavy sea, I decided not to re-call the ship but to postpone repairs, and to trust to our remaining India rubber cable which I knew to be able to carry all the traffic we were likely to have. At the end of May some violent tempests took place in the Indian Ocean, and early in June, other breaks developed themselves in the gutta percha cables between Karachi and Jashk. These were of minor importance, as one through conductor still remained in the India rubber cable between Bushire and Jashk, and the land line thence to Karachi. Just at the same time one of the Eastern cables gave way near Bombay, and on the 13th July the second also ceased working, so that of the four lines connecting India with Europe, only the one through conductor just referred to remained available. On the 10th August the Eastern Company succeeded in repairing their cables, but in the meantime for nearly a month the capacity of our unsupported line had been heavily taxed. The success of the several measures which have of late years been adopted to improve the working of the Mekran land line enabled the Department to carry the traffic with no serious delays : and I am not aware that any grave inconvenience was felt by the public in consequence of this combination of accidents to the normal system of communication.

All traffic thrown on one of our P. G. Lines.

Good service rendered by the staff during the emergency.

26. In reporting these events to the Government of India, I took occasion to acknowledge the excellent behaviour and the untiring exertions of the staff both in Persia and in the Persian Gulf, and I pointed out the impossibility in a small Department like our own of reinforcing at short notice remote but important stations, so that the serious perhaps dangerous consequences of a total block of telegraphic communication between India and Europe could only be avoided by the cheerful performance of extra day and night duties while the emergency lasted.

27. For the serious interruptions above mentioned this Department was not in any way responsible, but during the year 1881-82 our own lines were broken as follows :—

Breaks on Persian Section.

In Persia all three wires were out of order and communication entirely suspended for 2 days 14 hours 8 minutes. In the previous year the total interruptions on this section amounted to 7 days 19 hours and 55 minutes.

The interruption of two wires only in 1881-82 were 4 days 3 hours 10 minutes as compared with 8 days 12 hours 45 minutes, and of one wire 33 days 2 hours 55 minutes as compared with 13 days 4 hours 9 minutes.

28. Of the total interruptions of all 3 wires, 19 hours 12 minutes, were caused by a heavy flood which completely swept away our Office and part of the line at Koom.

Total break of cables in the Gulf.

29. On the Persian Gulf cables the breaks were exceedingly serious, but through communication was stopped for only 9 days 12 hours. This however was the first occasion since 1873, with the exception of 4 hours in 1877, when our Gulf lines were completely *Hors de combat*.

Breaks on the several cable sections.

30. The interruptions on the various sections were as follows :—

	Days.	Hours.
Faô-Bushire cable (G. P.)	37	11
Bushire-Jashk („)	219	3
Bushire-Jashk (I. R.)	12	4
Jashk-Gwadur	127	16
Gwadur-Karachi	163	5

31. The 22 faults which have been cut out during the year are thus distributed— Number of faults.

	Faults.
Faô-Bushire cable	3
Bushire-Jashk (G. P.)...	9
„ „ (I. R.)...	1
Jashk-Gwadur	6
Gwadur-Manora	3
Total ...	22

32. Besides these faults in the main cables 8 showed themselves in harbour near Karachi and were duly repaired. Minor faults in the Harbour cables.

33. The length of time during which some of the sections lay unmended is due to the fact I have stated above, *viz.*, that the *Patrick Stewart* was in dock at Bombay from the 21st March 1880 till the 23rd June, and also because to attempt cabling operations in the height of the monsoon is very objectionable if it can possibly be avoided. So long as one circuit is available, it is unnecessary and unwise to risk inflicting extensive damage by lifting a cable and attempting to repair it while a heavy sea is running. Causes of delay in mending some of the breaks.

34. On the Mekran land line the total interruptions were 3 days 6 hours and 40 minutes in duration. Breaks on Mekran line.

Traffic.

35. The tariffs and regulations of the London International Convention remained in force during the year. One slight modification was, by general consent, introduced in connection with rectifying messages Article XIX, but it did not come into operation till the 1st April 1882. London Convention in force.

36. The aggregate traffic carried on the cis-Indian lines by the parties to the Common Purse was slightly less in bulk and value than during 1880-81. Usually one might look for an annual increase due to the natural development and growth of telegraphic business, but it must be remembered that in 1880-81 telegrams to India—official, Press and commercial—were exceptionally heavy in consequence of the Afghan War. If due allowance be made for this, it will be found that the traffic of 1881-82 was satisfactory, and showed a fair advance on that of the years prior to 1880-81 (see Table A.) Total traffic.

37. The standard division of the Common Purse receipts during normal working was founded on the old distribution of traffic was 65·64 to the Eastern Company's route and 34·36 to the Teheran route. The following table shows how the traffic has been actualy carried since the beginning of the agreement :— Division of Common Purse receipts.

	By Eastern route.	By Indo-European.
1878-79	77·87	22·13
1879-80	75·68	24·32
1880-81	75·46	24·54
1881-82	69·64	30·36

The causes which enable the Eastern Company to obtain so large a share of the work were amply stated in my last year's Report. This year (1881-82) one might have anticipated that owing to the disaster to the Post Office cable which, as before stated, was broken down for six weeks, the Eastern Company's proportion would be larger than ever : but the double break between Bombay and Aden during which about 15,600 messages were transferred to our lines, and other difficulties partly due to pressure of business and which necessitated additional transfers to our hands of some 10,000 messages, more than counterbalanced losses arising from the casualty on the Indo-European Company's Section. Transfer of messages from Eastern to Indo-European.

38. These transfers moreover led to an increase in our traffic from as well as to India, for it is noticeable that whenever there is a rise in the number of messages sent out by Teheran, there is a corresponding rise in the homeward business.

39. During 1881-82 efforts were made by the Indo-European Route to attract custom by advertising and by the appointment of Agents at Calcutta, Glasgow, &c. Advertising and Agents.

40. The traffic *vid* Turkey was very small, amounting altogether to only 0·48 per cent. of the total business. Traffic by Turkish route.

41. The number of paid messages of all kinds transmitted during 1881-82 over the Persian Gulf Section was 79,003 containing 1,065,520 words. In the previous year we carried 50,059 containing 924,292 words. Number of messages.

42. The average length of each message was much less than in 1880-81 being 12$\frac{3}{7}$ words against 16$\frac{1}{4}$. The decrease is to be ascribed to the Government messages having been shorter, to the transferred traffic having been largely composed of trans-Indian telegrams which are usually more closely compressed than those for India, and lastly to the continued efforts of Merchants to reduce the number of words they send. Press messages at reduced rates are not included in the above calculation. Average length of message.

43. Besides the paid traffic we transmitted 563 free news messages containing 36,823 words to the Political Resident, Bushire. News messages to Political Resident, Bushire.

44. The tables annually sent in to this Office by the Traffic Manager at Karachi are usually correct and easy to comprehend. From them I am enabled to give in my Administration Report the average speed of transmission over our lines and indeed from the United Kingdom to India. This year, on verifying the Traffic Manager's figures, errors have been discovered (arising apparently from the use of a wrong divisor) which render the returns untrustworthy, and I have therefore sent them back to Karachi, and requested the Traffic Manager to send on to you, direct, the tables after revision, so that they may be attached as usual to this Report.

45. It seems however that the mean rate of transmission between the United Kingdom and Calcutta during 1881-82 was 2 hours 31 minutes, and from the United Kingdom to Karachi 1 hour 9 minutes. This is not quite so fast as last year, but if allowance be made for the unfavourable conditions which prevailed during so many weeks, the rate will not be thought discreditable. The mean speed of the Eastern Company from London to Calcutta was 4 hours 11 minutes.

46. The percentages of errors according to the return submitted by the two Directors are decidedly satisfactory. Accuracy of the signalling.

On the Teheran-Bushire Section	0·06
On the Bushire-Karachi Section	0·291

But I should note that the extra traffic forced on to our lines during the Eastern Company's break is not taken into account, as the pressure of work on the staff was on that occasion so great that these statistics had to be for a while neglected.

47. The following table shows how the traffic actually carried by the Indo-European Department has steadily increased since 1877— Growth of traffic over the I E lines.

	Number of messages.	Number of words.
1877-78	29,363	601,523
1878-79	35,645	701,826
1879-80	42,487	872,796
1880-81	50,059	924,292
1881-82	79,003	1,065,520

So that notwithstanding our serious interruption we transmited 36·64 per cent. more messages and 13·25 per cent. more words than in the previous year.

Inspections.

48. At the beginning of the official year 1881-82 I had but just returned from a prolonged inspection of the whole line from Teheran to Bushire and thence to Fão and Karachi. I made no tour during the year under review.

49. Colonel Smith was incapacitated by dangerous illness during a great part of the season, but Captain Wells, R. E., Assistant Director, inspected the line from Teheran to Bushire in the spring of 1881. He travelled over it again in the winter of that year, but more rapidly than he intended, having been re-called by news of Colonel Smith's critical condition at Teheran. Captain Wells was able during the year to make one or two tours in Persia away from the line, and has sent me in some very interesting and valuable reports. One of these describing a trip round lake Neris has been sent to India. The others shall follow when copied. Inspection of the Persian Section.

50. Captain Wells was well satisfied with the general condition of our lines and Offices in Persia.

51. In the Gulf, Captain Gabler, the Acting Deputy Director, visited all the cable stations in November and reports that the Offices were in good condition. Inspection of Gulf Stations.

ESTABLISHMENTS.

52. No changes were made in the establishment of the Persian Division excepting the usual transfers and acting appointments rendered necessary by the granting of one or two furloughs. In May 1881 Sergeant Hockey died at Abadeh. This Non-Commissioned Officer was one of the original detachment which proceeded to Persia from Chatham in 1863.

Serious illness of Colonel Smith, R. E.

In February 1882 Colonel Smith, the Director, whose invaluable services have been given to the Persian Telegraph also since 1863, was attacked by very serious illness which culminated in abscess of the liver, and which for many weeks caused the deepest anxiety. I am now able to state that this excellent officer is convalescent, and after three months' leave to Europe has recently returned to duty. During his absence, which was not however till the beginning of 1882-83, his place was occupied by Captain Wells, R. E.

53. In the Persian Gulf the abolition of Henjam station has enabled us to pension off Mr. Scroggie, and to reduce the number of Assistant Superintendents from 4 to 3. The number of clerks has been kept at 6 below its sanctioned strength, and there have also been minor reductions which have been reported as they occurred.

DEPARTMENTAL STEAMER.

54. I attach as usual a tabular statement of the work done during the year by the *Patrick Stewart*. At the commencement of the official year the ship was lying off Bombay ready to be docked and to have bilge keels fitted. This measure having been decided on to diminish the excessive rolling of the vessel in a heavy cross sea. The alteration was entirely successful, and Commander Bishop, Captain Gabler and Mr. Mance have all expressed to me their gratification at the change effected.

Improvement of the *Patrick Stewart*.

STORES.

55. The principal items of expenditure under the head of Stores during the year was in the Gulf Section as follows :—

	Rs.
Purchase of stores in India	9,998
London stores, including freight and landing charges ...	53,864
Military (Marine) Department on account of steamer *Patrick Stewart* including coal and provisions	96,749
Stores from other Departments	4,369
	1,64,980

The value of manufacture outturn, principally cable, was Rs. 66,671.

56. In the Persian Section the expenditure on account of stores was very small.

MISCELLANEOUS.

57. Captain Wells, to whose lot it fell to draw up the annual report of the Persian Section, and Captain Gabler, who acted during the year for Mr. Ffinch as Deputy Director of the Persian Gulf, both acknowledge the good conduct and the general efficiency of their subordinates. Captain Gabler specially mentions Mr. Newnham for the improvements he has introduced on the Mekran Land Line a part of our system which has been of peculiar use during 1881-82. Captain Wells expresses his thanks more particularly to Mr. Daniell whose long experience of Persia was of great service to the Assistant Director when he was suddenly called on to assume charge, and he also draws my attention to the zealous aid he received from Messrs. Fahie, Fargues, and Whittingback.

Services of staff.

58. Messrs. Mance and Herbage have, as always, performed their arduous duties in the most satisfactory way and have largely contributed to the efficiency of the Department. I have again to mention the uniform courtesy and kindness shown to our Officers and men in Persia by His Excellency the Mukbbar-ed-Dowleh.

59. Colonel Smith, Captain Gabler, Captain Wells, and Mr. Brasher at the Head Quarters Office, have each done their utmost to maintain and raise the credit of the service, and to them, as well as to the rest of the staff, I am very grateful. As I write the Indo-European line is carrying the entire traffic between Europe and India, China, Australia and Africa. The war in Egypt has for many weeks past prevented all telegraphic communication between Alexandria and Suez, and it is a great satisfaction for me to be able to conclude this Report by stating that all our lines and cables are now in excellent order and the Department will, I confidently hope, continue able to fulfil its duties until the Eastern Company is once more in a position to co-operate.

Condition of Departmental lines in September 1882.

APPENDIX A.

INDO-EUROPEAN GOVERNMENT TELEGRAPH DEPARTMENT.

SUMMARY OF EXPENDITURE ON CAPITAL ACCOUNT TO 31ST MARCH 1882.

APPENDIX E.

The work done by the *Patrick Stewart* during the year is detailed below—

DATE. From	DATE. To	
1881 April 1	1881 April 20	Lying at moorings in Bombay harbour.
" 21	" 21	Hauled into dock.
" 22	June 16	In dock having bilge keels fitted ; sundry alterations and additions for improvement of ventilation carried out ; ballast restored and engines thoroughly overhauled.
June 17	" 17	Hauled out of dock.
" 18	" 18	Coaling ship, taking in stores, &c., for conveyance to Karachi, and preparing ship for sea.
" 19	" 22	Proceeded with the Superintendent of Marine and Dockyard Officials on a short trial trip to test engines and endeavour practically to try the steadiness of the vessel after having the bilge keels fitted on, ballast restored. At 1 p. m. on the 19th left for Karachi.
" 23	July 25	Lying at moorings in Karachi harbour.
July 26	Aug. 16	Left Karachi for Persian Gulf and repaired faults in Jashk-Bushire and Gwadur-Jashk sections of cable, and returned to Karachi.
Aug. 17	Sept. 17	Lying at moorings in Karachi harbour.
Sept. 18	Oct. 8	Proceeded to Persian Gulf and repaired cables and returned to Karachi.
Oct. 9	Nov. 2	Lying at moorings in Karachi harbour ; 1st and 2nd were employed discharging ballast to lighten the vessel preparatory to beaching ship for cleaning purposes.
Nov. 3	" 5	Employed in cleaning, scraping and painting ship's bottom ; on the night of the 5th hauled off.
" 6	" 8	Made fast to mooring where she remained until 8th taking in coals ; cable preparing for sea, &c.
" 9	" 11	Left to complete repairs to Karachi-Gwadur section of cable and returned to Karachi.
" 12	" 18	Lying at moorings in Karachi harbour ; employed in coaling ship, &c.
" 19	" 21	Left fixed moorings and anchored in a position favourable for swinging the ship to adjust the compasses, &c.
" 22	" 29	Proceeded to Persian Gulf on annual tour of inspection with Deputy Director ; reliefs and stores for stations calling on the way up the at Ormara, Gwadur, Charbar, Jashk, Henjam and Cassab, visiting also Mussendom inlet.
" 30	Dec. 1	Anchored at Lingah to meet the mail steamer which was bringing up the cable staff from Karachi to repair both sections of the cable which had broken since leaving Karachi.
Dec. 2	" 2	Left for repairs about 90′ west of Lingah.
" 3	" 4	Repaired India Rubber Section.
" 5	" 7	Arrived on 5th and anchored off Bushire.
" 8	" 9	Employed in picking up cable off Reshire and left for Faô.
" 10	" 10	Left Faô for fault.
" 11	" 12	Repaired cable, &c. ; left for Bushire.

APPENDIX E—*concluded.*

Date. From	Date. To	
1881 Dec. 13	1881 Dec. 14	Arrived at Bushire and employed picking up cable off Reshire and anchored off Bushire Residency.
„ 15	„ 15	Left Bushire for fault about 24" south and repaired it.
„ 16	„ 16	On passage to 4th fault off Lingah.
„ 17	„ 18	Repaired cable and anchored off Lingah for mails, &c.
„ 19	„ 19	Arrived at Henjam and employed taking in for conveyance to Karachi, the old wooden station house, leaving again late in afternoon for Jashk.
„ 20	„ 20	Arrived at Jashk.
„ 21	„ 23	On passage from Jashk to Karachi.
„ 24	1882 Feb. 8	Lying at moorings in Karachi harbour, employed taking in stores, &c., preparatory to leaving for Bombay.
1882 Feb. 9	„ 12	Left for Bombay with public followers, passengers and Government stores, arriving there on the afternoon of the 12th.
„ 13	„ 16	Employed discharging stores and cleaning ship.
„ 17	„ 25	Conveying in two trips the 20th Regiment N. I. and families from Bombay to Vingorla.
„ 26	„ 28	Lying at moorings in Bombay, preparing for dock.
Mar. 1	Mar. 1	Vessel hauled in dock.
„ 2	„ 5	Cleaning, scraping and painting ship's bottom.
„ 6	„ 6	Hauled out and embarked stores, troops, &c.; left for Karachi.
„ 7	„ 8	On passage to Karachi.
„ 9	„ 9	Arrival at Karachi.
„ 10	„ 14	Lying at moorings in Karachi harbour.
„ 15	„ 19	Left for Persian Gulf to repair 2 sections of the cable, *viz.*, Jashk and Bushire and Bushire-Faô sections; on the way up called at Ormara, Gwadur, Charbar and Jashk, arriving at latter place at daylight on 19th, leaving again for position of 1st fault on evening of same day.
„ 20	„ 20	On passage.
„ 21	„ 23	Employed on repairs which were completed same day, and proceeded to Bushire, arriving there on the evening of the 23rd.
„ 24	„ 24	Left for position of 2nd fault.
„ 25	„ 26	On repairs, completing them late on the afternoon of the latter day, when vessel returned to Bushire.
„ 27	„ 27	Arrived at Bushire.
„ 28	„ 29	At anchor off Bushire.
„ 30	„ 31	Having embarked Her Majesty's Political Resident, passengers, &c., left for Karachi, calling for political purposes at Baharein and Muscat, at Jashk, for passengers, stores, &c.; arriving at Karachi in the morning of 8th April 1882.

J. U. BATEMAN-CHAMPAIN,
Lieut.-Col., R. E.

APPENDIX F.

INDO-EUROPEAN TELEGRAPH DEPARTMENT.

ADMINISTRATION REPORT, 1881-82.

Karachi, 19th May 1882.

The last year has been one of unprecedented activity in the Engineering Branch. The repairs effected have been double those of any previous year, while, in addition to the ordinary engineering work carried out on board the *Patrick Stewart*, over forty miles of new cable have been manufactured in the new factory at Manora, thereby dispensing with the necessity for obtaining it from England, and at the same time, effecting a large saving to Government.

ELECTRICAL CONDITION OF THE CABLES.

2. As will be seen from Appendix A, the insulation of the main cables, notwithstanding their increasing age and the large number of joints inserted in some of the sections, remains very satisfactory, the average insulation being, if anything, higher than that shown at the end of the previous year.

FAULTS.

3. The large number of faults which occurred during 1881-82 may be partly accounted for by the unusually heavy weather which prevailed on one or two occasions during the year. The break on the Fao cable was preceded by a gale at the northern end of the Gulf, and the cables between Karachi and the entrance to the Gulf were broken in as many as ten places within a period of two or three days towards the end of May, in consequence of the exceptionally heavy swell caused by a cyclone 500 miles to the southward. On this occasion, the tides in the Karachi harbour, influenced by the enormous body of water driven to the northward, rose 20 inches beyond the normal height. These ten faults were all total breaks, one being in the Bushire-Jask section, six in the Jask-Gwadar, and three in the Gwadar-Karachi cable. Most of these had to stand over for repairs until the termination of the monsoon which set in shortly afterwards. In Appendix E, a comparative statement is given of the number of faults which have occurred in the various sections during the last twelve years. The 22 faults which occurred during 1881-82 were distributed in the following manner:—

	Faults.
Fao-Bushire cable	3
Bushire-Jask gutta percha	9
Bushire-Jask India rubber	1
Jask-Gwadar gutta percha	6
Gwadar-Karachi	3

4. In nineteen cases out of the 22, the break was evidently caused by the decay of the iron-guards at points where the cable was resting in short suspensions, in consequence of irregularities in the bottom. In four instances the copper conductor parted without rupturing the percha; but, in the majority of cases, the breaks were complete. On one occasion the broken tooth of a saw fish was recovered, firmly fixed in the percha of the core, the insulation of which, however, still remained perfect at that point.

INTERRUPTIONS.

5. The various sections were interrupted for the following periods:—

	Days.	Hours.
Fao-Bushire cable	37	11
Bushire-Jask gutta percha	219	3
Bushire-Jask India rubber	12	4
Jask-Gwadar	127	16
Gwadar-Karachi...	163	5

6. The lengthy interruptions on the Bushire-Jask section may be explained by the absence of the repairing steamer in Bombay, the numerous faults, and the occasional postponement of repairs until a more convenient period, if, at the time of the interruption, the alternate circuits happened to be working well.

7. The lengthy interruptions on the cables between Jask and Karachi were principally due to the impossibility of working during the worst of the monsoon, without a very considerable sacrifice of cable and partly, to the fact that, in repairing the last fault near Karachi, the stock of cable ran short, and the steamer had to return to head-quarters in order to allow of the Engineering staff manufacturing a few miles to complete the repairs.

8. Notwithstanding the numerous interruptions, the possession of a duplicate line has enabled us to maintain perfect communication for 355 days out of the 365, while, for a period of three months, two through circuits have been available between Bushire and

Karachi. On each of the three occasions when the Mekran Coast land lines have been totally interrupted for short periods, the parallel cable circuit has been in good order, and thus prevented a total interruption. On the other hand, the land lines have worked in the most satisfactory manner when communication between Jask and Karachi by cable has been interrupted.

9. There was a total interruption on the cables for 9 days 10 hours, in consequence of both sections between Bushire and Jask breaking down at the same time. This is the first time, for nearly thirteen years there has been a total interruption on the Gulf lines, the last having been in April 1869.

10. Communication *viâ* Turkey was suspended for 37 days in consequence of the interruptions on the Fao cable.

Repairs to Cables.

11. The unavoidable absence of the repairing steamer in Bombay, for alterations and docking, until the middle of June, was the cause of considerable delay in the repairs of the cables on the Mekran Coast, as the monsoon had set in before it was possible to commence work, and some of the repairs had eventually to be postponed until October, by which time the heavy sea had, to a great extent, subsided. Attempts, however, were made to proceed with the work, and two faults were cut out towards Jask where the influence of the monsoon is not so strongly felt, but on arriving at the locality of the next fault, off Charbar, the swell was so heavy that it was deemed advisable to return to Karachi and await finer weather.

12. Eighteen distinct repairs were carried out during the year. To effect this work, the *Patrick Stewart* made five voyages from Karachi, and the Engineering staff were absent from head-quarters for 100 days. In cutting out the 22 faults, 47·44 knots of cable were expended. The average per fault being 2·15 knots.

13. Notwithstanding the increasing age of the cable, this compares favourably with the average of the preceding twelve months, especially when it is considered that during the past year, whenever it has been possible to connect two previous repairs by a moderate expenditure, it has been the practice to pick up the intervening cable and replace it with new, the extent of these renewals being usually regulated by the quantity of good cable remaining on board or in stock.

14. As a set-off against the cost of repairs, upwards of 89 miles of gutta percha core, fit for manufacture into new cable, have been overhauled and repaired during the year, and brought on charge at a value of Rs. 15,600; and Rs. 2,898 have been realized by the sale of old iron wire stripped from the useless cable recovered during sea work.

Mechanical condition of the Cables.

15. The present length of the cable sections is 1,699·96 knots, and of this, 1,434·35 knots are original cable, in which no repairs have been effected. Wherever the line appears to be resting on an even bottom of sand or mud, the iron is in excellent condition and apparently good for another 50 years, but unfortunately, weak points occur wherever the cable is unprotected by mud, the sheathing being then, as a rule, badly corroded. The hemp serving (originally saturated in brine) between the core and iron wire in the old stock cable bears the test of time in a most satisfactory manner, and the mechanical condition of the core of the main cable, both gutta percha and India rubber, appears unaltered. The outer tape serving, with which the cable has been recovered during the last few years before being re-submerged, appears to answer its purpose perfectly. The cable in stock, being mostly new, is in perfect condition.

16. Two miles of old gutta percha disused double shore end cable were recovered during the year from the shallow water off Bushire. The core of this piece appeared to have deteriorated in several places from the growth of fungi, or the attacks of some marine animalcule. Specimens of the faulty core have been sent to England for examination. No such deterioration has been observed in core recovered from deeper water, the only difference noticeable being the inferiority of old gutta percha to new, for jointing purposes. That some change takes place in gutta percha, even when carefully submerged, is more than probable, but the alteration in the core of a carefully laid telegraph cable is so slow, so difficult to detect (unless under very exceptional circumstances) that, for all practical purposes, we may assume it to be imperishable.

17. The old cable recovered at sea and brought back to Manora was useless except for the sake of the old iron and the core. The weak places in the sheathing will not stand turning over, and no amount of repairs would make it reliable for bad weather. With our present machinery available, it is found much easier, and in the end cheaper, to strip and remake all the long pieces into new cable, and this plan will be adopted for the future.

HISTORY OF THE CABLES DURING 1881-82.

Fao-Bushire, 152·41 knots.

18. Three faults have been removed from this section, which has been interrupted for 37 days 11 hours. All the defects occurred within a few miles of each other, at the northern end of the Gulf where the bottom is extremely irregular, being deeply scored by the powerful current proceeding from the Shat-el-Arab. In effecting the last repairs the cable was slightly shortened and a more regular line of soundings selected.

19. The course of the cable has been inspected from the Fao Office, through the date gardens, across the maidan and extensive mud flat, down to the sea in the Khor Abdulla, a distance of nearly five miles. Although the cable was put down more than 18 years ago, and the mud is covered for miles by the sea at every high tide, the cable trench can be distinctly traced across the plain, down to low water mark. The fishermen report that beyond this point they sometimes feel it with their feet while fishing, but it appears to have settled down in the mud, sufficiently far to be protected from injury.

Bushire-Jask, old cable, 504·91 knots.

20. The diversion of the cable from the Island of Henjam (a work carried out just before the commencement of 1881-82) has so far been productive of good, no interruptions having occurred in that locality during the year. Nine faults have been removed from this section since the 1st April 1881, making 31 during the last three years. It is a somewhat hopeful feature that there is now apparently a slight tendency in the number of faults to decrease. Notwithstanding the several repairs, the section was available for traffic for nearly five months. The insulation is somewhat lower than that of the other sections, but practically the electrical condition of the cable may be considered perfect.

Bushire-Jask India rubber cable, 498·5 knots.

21. One fault only has occurred in this section. At the time of the break the *Patrick Stewart* had left Karachi on inspection duty, with only gutta percha cable on board. The Engineering staff left by the next mail steamer, joined the cable ship in the Gulf on the 2nd of December, proceeded at once to the spot, and effected the repairs two days afterwards by the insertion of a short piece of gutta percha cable. The insulation of this section is higher than last year, an improvement probably due to the ends having been renewed in the cable houses. The India rubber cable is at present our most reliable section.

Jask-Gwadar cable, 273 knots.

22. Six faults have been removed from this cable. They occurred almost simultaneously, at various points, at the time of the cyclone, and the section has given no trouble since the restoration of communication. Fortunately, the land line remained in perfect working order during the whole of the interruptions which, in consequence of the monsoon, lasted 127 days.

Gwadar-Manora cable, 271·14 knots.

23. Although equally exposed to the force of the cyclone, this section was only broken at three points. In restoring communication, the faults nearest Karachi were repaired last, and on arriving at the final break it was found that insufficient cable remained to properly complete the repair. The work was, therefore, postponed until additional cable could be manufactured, but being close to Karachi, had anything occurred to interfere with the working on the second circuit, communication on the cable could have been at any time restored within 24 hours, by the insertion of a piece of shore end or India rubber cable.

Harbor cables, 1, 2, and 3.

24. These have been reported faulty on eight occasions, and repaired without difficulty. Two faults were caused by Buglas dragging their anchors during a gale; two by the teredo; two by white ants; and the remainder through the perishing of the gutta percha in dry soil near the cable boxes.

25. Sixty yards of culvert have been constructed in camp to connect box one with the pipe under the Sind Railway; the cables can now be drawn through pipes or culverts the whole distance from the Karachi Office to the maidan on the far side of the Sind Railway; any disturbance of the ground at this portion of the route will thus be avoided, and future repairs will be effected with much less difficulty than has hitherto been the case.

26. The section in the Harbor cables at Manora, which has been so repeatedly damaged by white ants, has been bridged over by a short land line.

Cable Land Lines and Cable Houses.

27. The land lines between the offices and cable houses with Johnson and Phillips fluid insulators, continue to give satisfaction, and are decidedly preferable to ordinary cables laid in dry ground, where their decay is merely a question of two or three years. Some ozokerit core, recommended specially for this work, is under experiment at Manora, and up to the present has given satisfactory results. Should it really possess the superiority claimed for it, it might be desirable to revert to underground cables made from this core, in substitution of the present land lines.

28. A new passage is being cut in the face of the cliff at Bushire, in order that the cables may pass direct at the water level to a subterranean chamber, immediately under the cable house, with which it communicates by means of a well. The cable ends will be much less liable to perish under these conditions, and their renewal can be effected in any weather.

29. The cable houses in the East Bay at Gwadar has also been greatly improved; the sea cable is brought in at the bottom of a deep well, immediately underneath the cable house, and, as the slack is always covered with water, there is no chance of its perishing. It is worthy of mention that, although the well is situated only a few yards from high water mark, it is found to yield an excellent supply of sweet water.

EXPENDITURE OF CABLE.

30. The usual statement of cable in stock is given in Appendix D.

31. We commenced the year with 30·8 miles of spare main cable at Manora; but as this had either been submerged, or in the tanks for more than 17 years, it had so far deteriorated that it could only be handled with the greatest care, and laid during the finest weather. In submerging this old stock, every precaution was taken to give plenty of slack, and subject it to as slight a strain as possible. Once safely down in the mud it may last as long as the best, but had it been kept much longer in stock, it would have been impossible to lay it at all. In addition to this old stock, about 2½ miles of old shore end cable has been expended, and also about 14 knots of the new main cable manufactured at Manora during the latter part of the year. The total expenditure has been 47·44 knots, more than double that of any previous year, although the average amount expended per fault is rather under the average for the previous twelve months.

32. No India rubber cable has been expended. Four miles have been manufacturede during the year; our stock of this cable has, therefore, been increased to that extent.

MANUFACTURE OF CABLE.

33. The cable staff have been actively employed in the manufacture of new cable during the latter portion of the year, upwards of 42·2 miles having been turned out of the factory at Manora since October last. The cost of this 42·2 knots, after including the extra labour employed, the value of the core and other materials expended, was Rs. 58,000. To have obtained an equal quantity from England would, in all probability, have cost not less than Rs. 1,26,000. Had we not been in a position to manufacture for ourselves, it would have been absolutely necessary to have obtained and kept in stock a still larger quantity, so that the saving to Government, by the introduction of the cable machinery, during the past year alone, may be taken at Rs. 68,000, enough to more than twice defray the yearly cost of the whole cable Engineering Establishment.

34. As future repairs will, in consequence of the increasing age of the cable, partake more and more of the nature of renewals, we must anticipate that the expenditure of cable will be equally heavy for several years, and that the cable factory will continue to be in frequent request. The rapid succession of breaks and the consequent expenditure of cable, rendered it at one time extremely doubtful as to whether it would be possible to keep pace with the requirements. To meet the emergency, an additional number of lascars were entertained as a temporary measure, and by dividing the cable staff, the manufacture of cable was continued without interruption during my absence with the remainder of the staff repairing the cables at sea. The machinery and new factory are all that can be desired, and have been found to answer our requirements admirably; and the native men and boys have, with but little trouble, been taught to attend to the different machines in a very efficient manner. The rate of manufacture is from ¾ to one knot per diem, in addition to other current work in the tank sheds; but a larger amount could be turned out on an emergency. Attempts are being made to utilise jute and country-made taping, for serving the outside of the cable, but the quantity of taping obtainable is not equal to our requirements, and cannot therefore be relied on at present.

35. The expenditure during the last four years has been as follows:—

	Knots.
During 15th year	10·7
„ 16th „	18·0
„ 17th „	22·5
„ 18th „ (1881-82)	47·4

MANORA.

36. The following improvements have been effected. The arrangements for distributing fresh water direct from the water boat at the Telegraph Bunder to the reservoir near the tank shed, and thence to the different bungalows, have been rendered more effective, and labour saved thereby.

37. A new well has been sunk in the centre of the works for the purpose of supplying the core tanks and factory engine with water, and as the water is raised by a small centrifugal pump, driven from the cable machine shafting, a great amount of hand pumping is dispensed with.

38. The taping machinery was transferred to the factory end of the tank shed as soon as the manufacture of cable was commenced and connected by shafting with the cable machine, in order that the taping and sheathing might proceed simultaneously.

39. A new kitchen has been erected to replace the old lascars' cook-house, which was removed to make room for the cable factory.

40. The storage accommodation for cable core has been increased and improved.

41. The accommodation for native subordinates has been slightly increased.

42. The large quantity of cable material, which is now occasionally on hand, renders it imperatively necessary to provide more store accommodation in the vicinity of the factory. Our old boat-house is conveniently situated in this respect, and with very little alteration will make an excellent godown. A new boat-house is in course of erection on a more convenient site nearer the water; and as the greater portion will be constructed from the old wooden bungalow brought from Henjam when that station was abandoned, the expense will be inconsiderable.

43. The roof of the tank-shed has been thoroughly repaired, and the whole of the European quarters maintained in perfect condition by the Public Works Department.

"PATRICK STEWART."

44. The addition of bilge pieces to this vessel has entirely prevented the excessive rolling, of which we had formerly to complain.

ELECTRICAL—WORKING—TESTING.

45. No change has been made in the system of testing, but every effort has been made to improve the carrying capacity of the line. The diversion on the land line, the extensive introduction of fluid insulators, the substitution of relays of low resistance, and the use of Leclanche batteries at the land line stations have all contributed to the excellent working obtained during the time both the Eastern cables and one of our own circuits were interrupted. The introduction of additional Brown Allan relays with translation at Jask has nearly doubled our speed of working on the circuit which consists entirely of cables, so that with both lines in working order, upwards of 1,500 messages of the average length can be transmitted daily.

46. As the peculiar sensibility of the Brown Allan relay rendered it unsuitable for the ordinary translation arrangements hitherto in use in connection with submarine cables, new systems had to be designed to overcome the difficulty; this has been successfully accomplished by slightly modifying the existing apparatus and changing the connections.

47. A Brown Allan relay, with the new translation between a cable and land line, was fortunately introduced at Jask a fortnight before the occurrence of the break on the Eastern cables, and to this change in the system of working must be attributed the successful manner in which the whole of the India and Far East traffic was transmitted by a single wire.

GENERAL REMARKS.

48. The manufacture of cable was still in progress at the close of the official year, and although in consequence of the exceptionally large expenditure, the stock of cable shewn as in hand is a few miles less than at the commencement of 1881-82, there was sufficient core and wire remaining at Manora to more than make up the difference, so that at the present moment, so far as the stock of cable is concerned, we are in a much stronger position than we were at this period last year. Twenty-two weak places have been removed, and the cable in stock is nearly all new. There is no doubt that a considerable number of the breaks were precipitated by the unusually heavy swell experienced on one or two occasions, and this being the case, we may reasonably hope for a smaller number of interruptions during the current year.

49. It will be obvious that if the Government possessed but one cable in the Persian Gulf, the transmission of traffic at this stage in the life of the cables could not always be relied on, and it would be imperatively necessary to lay another; but being in possession of a duplicate line, with a repairing steamer always on the spot, it becomes possible, as the records of the last few years will show, to maintain constant communication either by one circuit or the other. As time passes, the Electrical and Engineering records of the Persian Gulf cables will form a most instructive chapter in the History of Submarine Telegraphy. Our cables have already outlived younger lines and attained their 18th year of existence. No test could be more severe than that afforded by the experience of the last twelve months. The breaks occurred at a most unfavourable time, and yet, with the exception of a short period of nine days, perfect communication has been maintained. We have considerably strengthened the line by the numerous repairs effected; we have established a factory and proved the possibility of manufacturing cable for ourselves as fast as we require it, thus enabling Government to effect costly renewals at one-half the expense they might reasonably have expected to incur. We have improved our system of signalling, thereby doubling the carrying capacity of the line, and while the generally accepted idea that the life of a cable cannot be expected to last beyond 15 or 20 years, may still hold good with many existing lines, we are entering on our 19th year with the encouraging hope that the Persian Gulf cables have still a long career of usefulness before them.

HENRY C. MANCE,

Engineer and Electrician,
Persian Gulf Telegraphs.

APPENDIX A.

Statement showing insulation of the Persian Gulf Cables during March 1882.

Statement showing the differences between figures in the Capital and Revenue Accounts accompanying the Administration Report of the Indo-European Telegraph Department for 1881-82 and those in the Capital and Revenue Accounts for that year submitted by the Examiner of Telegraph Accounts.

Items.	As per Administration Report.	As per Annual Accounts.	Difference. More.	Difference. Less.	Remarks.
	Rs.	Rs.	Rs.	Rs.	
Capital outlay to end of the year 1881-82.	1,14,68,457	1,14,61,572	6,885	...	This difference is made up of the following items:—
					Rs. 3,500 Amount deducted in the capital account of the Indo-European Telegraph Department for 1879-80 submitted by the Examiner of Telegraph Accounts, on account of value of a steam launch transferred to the Public Works Department in 1876-77.
					„ 3,896 Amount deducted in the Capital account of the Indo-European Telegraph Department for 1880-81, submitted by the Examiner of Telegraph Accounts, on account of value of a cable-covering machine twice debited to Capital in 1879-80.
					Rs. 7,396 Total deduction.
					„ 511 Amount of difference between the total charges on account of the I. G. S. "Patrick Stewart" during 1879-80, shown in the Capital account of the Indo-European Telegraph Department for 1879-80 which appears on page 43 of the Home Accounts for that year, and the total of such charges shown in the London Office accounts for 1879-80 received in this Office, the latter being in excess.
					Rs. 6,885 Net difference.
Revenue Receipts— Earnings of the I. G. S. "Patrick Stewart".	8,978	7,257	1,721	...	Rs. 8,978 was the amount of earnings first reported by the Deputy Director, Persian Gulf Telegraphs. It was subsequently altered to Rs. 7,257.
Revenue Expenditure during 1881-82.	8,46,058	8,46,807	...	749	Difference due to value of printed forms being deducted by the Director-in-Chief, but included in the Revenue Account submitted by this office.

W. PALMER,
Examiner of Telegraph Accounts.
