

SUPPLEMENT TO

The Gazette of India.

Nº 1. } CALCUTTA, SATURDAY, JANUARY 5, 1884.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

DEFINITION OF THE TERM "PILGRIM-SHIP" AS USED IN THE SPECIAL QUARANTINE REGULATIONS ISSUED BY THE OTTOMAN BOARD OF HEALTH.

Dated Therapia, the 13th October 1883.

From—His Excellency the EARL OF DUFFERIN,

To—His Excellency the MARQUIS OF RIPON, Viceroy and Governor General of India.

Some doubt having arisen as to the exact meaning of the words "pilgrim-ship" which appear in Article 2 of the Special Quarantine Regulations issued by the Ottoman Board of Health, I requested the British Delegate to obtain a precise definition of that term, and I have now the honor to transmit to your Excellency

Dr. Dickson, No. 79, October 10th, 1883.

a copy of a despatch I have received from Dr. Dickson, explaining the interpretation which his Board gives to the expression.

No. 79, dated Constantinople, the 10th October 1883.

From—DR. E. D. DICKSON,

To—His Excellency the EARL OF DUFFERIN, K.P., &c., &c.

I received from Mr. Wyndham, in the month of June, the despatch, herewith enclosed, from Captain Moncrieff, No. 35, dated the 5th of June last, and to which I was not able to reply sooner. For, notwithstanding that I repeatedly requested the Board of Health to draw up a definition of the term "pilgrim-ship," and to specify the number of pilgrims that might embark upon a vessel proceeding into the Red Sea by way of Bab-el-Mandeb, without rendering that vessel, in accordance to Article 2 of the "Reglement spécial de quarantine applicable au pélirinage de 1883," liable to the special restrictions of that réglement, I failed in my purpose, chiefly owing, I believe, to Dr. Bartoletti's unwillingness to give precision to these two points. On the 25th ultimo, however, (Dr. Bartoletti being absent from the Board in consequence of a severe illness) I made another attempt, which this time proved successful.

The Board, considering that vessels from cholera-smitten ports, which offer the greatest facilities for the propagation of the malady—apart from vessels

having cases of cholera on board—are those which make short voyages and those which are overcrowded, has determined that all vessels under 100 tons burden, arriving in the Red Sea with passengers on board, shall be reckoned as "pilgrim-ships," whatever the number of passengers they might carry, but that vessels above 100 tons, with passengers on board, will not be reckoned as "pilgrim-ships" if the number of their passengers do not exceed the rate of one person for every 100 tons of registered tonnage, and this even when such passengers are in reality *pilgrims*. Moreover, *steam packets* carrying European passengers and *non-Mussulman* natives of Asia and of Africa, are not included in the category of "pilgrim-ships."

I would respectfully suggest that this information be communicated to the Government of India and to Her Majesty's Consul at Jeddah.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXECUTION OF DEEDS, CONTRACTS, &C., BY FOREST OFFICERS.

Extract from the Proceedings of the Government of India, in the Home Department (Judicial),—No. 1689, dated Calcutta, the 28th December 1883.

READ again—

Home Department Resolution No. 23—1411-23, dated the 15th October 1878, on the subject of the execution of deeds, contracts, &c., by Forest Officers.

Read also—

Letter from the Government of Madras, No. 1488, dated the 29th November 1883, on the same subject.

RESOLUTION.

In exercise of the power conferred by the thirty-third and thirty-fourth of Vic., Cap. fifty-nine, Section two, the Governor General in Council is pleased, in modification of Home Department Resolution of the 15th October 1878 read in the preamble, to declare that the undermentioned classes of contracts referred to in the twenty-second and twenty-third of Vic., Cap. forty-one, Section two, may be executed as follows in the territories under the administration of the Government of Madras :—

Contracts and other instruments in matters connected with the administration of forests and with the business of the Forest Department generally.

By Collectors to the extent and within the limits prescribed for Conservators by the Madras Government in Notification dated the 27th June 1879.

By Deputy, Assistant and Sub-Assistant Conservators to the extent and within the limits defined in the same Notification.

No. 1890.

ORDER.—Ordered, that this Resolution be communicated to the Government of Madras for information, with reference to the letter thence, No. 1488, dated the 29th November 1883, and that it be published in the *Supplement to the Gazette of India*.

(True Extract.)

A. MACKENZIE,
Secretary to the Govt. of India.

C. W. ODLING,
Under-Secy to the Govt. of Bengal, P. W. Dept.

The 13th December 1883.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 1st JANUARY 1884.

GENERAL REMARKS.—There has been slight rain during the week in parts of the Madras Presidency, Mysore, Punjab, Oudh, and Assam; none has fallen elsewhere. In one district of Madras (Bellary) the standing crops are reported to be poor, and in another (Chingleput) they have been partially injured by past heavy rain, but prospects on the whole continue good in Madras and Mysore. In Bombay prospects are generally fair. Blight has, however, damaged the *rabi* crops in parts of three districts, and the condition of cotton and the later sown crops in Sholapore is unfavourable. Cotton-picking and harvesting of the *kharif* are in progress in Berar and Hyderabad, and the *rabi* promises well. In Central India and Rajputana prospects continue satisfactory, but rain is needed for the *rabi* in some States. Rain is also needed in the North-Western Provinces and Oudh, where a change of weather appears to have set in. In the Punjab and Central Provinces the *rabi* crops are doing well, and prospects are favourable.

Rain is much wanted for the *rabi* in Bengal, especially in Behar; and the yield of the rice harvest, which is still in progress, does not exceed half the average outturn, except in Eastern Bengal, Orissa, and parts of Chota-Nagpore. In Burma harvesting is well advanced with prospects of a good outturn.

Cholera still lingers in parts of Southern India and has made its appearance in Bengal and British Burma. Small-pox and fever are also more or less prevalent.

Prices continue high in Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras (Jan. 2nd)—		
Bellary		Standing crops poor; harvest—paddy, *ragi*, and horse gram, yield fair; *cholum*, *cumbu*, pulse, and *chil* seeds below average; 58 deaths from cholera.
Kurnool		Standing crops good; harvest—paddy progressing, yield above average.
Ganjam		Harvest—paddy two taluks, yield average; fever and small-pox slight in one taluk.
Kistna		Standing crops generally good; harvest—paddy, yield below average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)		Standing crops generally good, but partially injured in two taluks by excessive rain; harvest—*kar*, paddy, yield half; small-pox in one taluk; cattle-disease slight in parts; 55 deaths from cholera.
Coimbatore	·12 (in one station)	Standing crops generally good; harvest—paddy, *ragi*, and *cumbu*, yield about average; fever and cattle-disease in parts; 106 deaths from cholera.
Tanjore	1·52 (average of 14 stations).	Standing crops good; harvest—paddy in parts, yield average; cholera severe, 479 deaths.
Madura	·83 (average of 7 stations).	Standing crops fair; harvest—dry crops, yield below average; cholera abating in Madura town, elsewhere slight.
Malabar		Second crops being harvested; small-pox in 9 taluks and fever in 3, eight deaths from cholera.
Travancore		Paddy ripening; 4 deaths from cholera and 5 from small-pox. *General Remarks.*—General prospects good.
Bombay—(Jan. 2nd)—		
Kurrachee		Fever generally prevalent; cattle-disease in 3 talukas; small-pox in Kurrachee, also in parts of interior; wheat, red rice, and *bajri* in Kurrachee 24, 28 and 34, in Manjband 22, 30 and 40, in Tatta 24, 28 and 36, and in Sujawal 24, 28 and 24 pounds per rupee respectively.
Hyderabad		Small-pox continues in 8, fever in 6, and cattle-disease in 6 talukas; wheat 25½, *bajri* 36, *jowari* 40, red rice 24, and white rice 20 pounds per rupee.
Ahmedabad		Standing crops healthy; fever in Dholka and Viramgaum; *bajri* 29¼ and wheat 26 pounds per rupee.
Surat		*Rabi* crops healthy; fever in some talukas; *jowari* 40 and *nagli* 48 pounds per rupee.
Nasik		*Kharif* crops harvested; *rabi* crops healthy; public health generally good; slight fever in Kalwan and Peint; small-pox in 3 villages; wheat 34, *bajri* 31, and rice 24 pounds per rupee.
Colaba (Bombay)		Temperature unusually cool; vapour in air defective; wind normal.
Poona		Standing crops good; prices—*bajri* 39 and *jowari* 47, in Poona *bajri* 32 and *jowari* 39 pounds per rupee.
Ahmednagar		*Bajri* threshing continues; *rabi* sowing finished, except in Akola; young crops good, except *jowari*; locusts in Shrigonda and cattle-disease in Rahuri; *bajri*—maximum 54 pounds per rupee in Jamkhed, minimum 36 in Parner; *jowari*—maximum 72 in Jamkhed, minimum 44 in Sheogaon.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Sholapore		Prospects of late crops and cotton unfavourable; prices of common staple articles of food rising; *jowari* 48 and *bajri* 49 pounds per rupee.
Dharwar		Harvesting of rice crop in progress and that of early *jowari* commenced; cotton suffering from blight in four talukas; wheat withering in Hubli; other late crops good; slight fever and ague in five talukas; cholera reappeared in a village of Ranibennur taluka, out of eleven cases, four fatal; small pox in two talukas; scarcity of drinking-water in some villages of Navalgund; no cattle disease; rice 25 to 42 and *jowari* 56 to 88 pounds per rupee.
Kanara		Sowing for second crop completed in Karwar; rice plants healthy; sowing continues along the coast; much fever in Hallial and Mundgod; small-pox subsiding; cattle-disease in Honawar and Karwar; common rice in Karwar 12, average in district 15½ seers per rupee; weather cold.
Rajkot		General health good; weather cold; some cases of small-pox in Rajkot town; *bajri* 30 and *jowari* 38 pounds per rupee. *General Remarks.—Rabi* crops generally good; blight continues in parts of Dharwar, Belgaum, and Kaladgi; prospects of late crops in Sholapore unfavourable; cholera in parts of Tanna, Satara, and Dharwar; fever in 13 and cattle-disease and small-pox in 10 districts.
Bengal—(Jan. 2nd)		
Chittagong	*Nil*	Weather seasonable, cool, and fair; harvesting of *amun* nearly finished with a good outturn; winter crops doing well; prices steady; public health good.
Dacca	*Nil*	Harvesting of paddy nearly completed; cutting of sugarcane continues; *boro* paddy being sown; prospects of winter crops favourable.
24-Pergunnahs	*Nil*	Paddy crop being harvested, outturn expected to be from eight to ten annas; state of the cold-weather crops has been improved by the late rain; price of common rice 16 to 24½ seers per rupee; public health generally good.
Moorshedabad	*Nil*	Weather very cold; harvesting of *amun* going on, outturn estimated at from six to eight annas; *rabi* crops doing well; harvesting of *kulai* has commenced in some parts of the district; average price of ordinary rice 15 seers per rupee; public health good.
Rajshahye	*Nil*	Weather cool and seasonable; prospects of winter crops generally favourable; public health fair.
Burdwan	*Nil*	Weather seasonable; outturn of *amun* one-third of a full average crop; prospects of *rabi* a little more than half of a full average crop.
Rungpore	*Nil*	Cutting of paddy continues; prospects of *rabi* crops good; prices of food-grains stationary; fever prevalent in the Nilphamaree subdivision; four deaths from cholera reported in the Municipality of Rungpore.
Bhagulpore	*Nil*	Prospects of crops not good; rice harvest nearly finished, average outturn reported to be 6 annas in the Sudder and Banka Subdivisions, and 8 annas in the Muddehpoorah and Soopole Subdivisions; *rabi* wants rain very much, though it still promises fairly well; barley is still being sown with the help of irrigation; price of rice 14 seers per rupee.
Purneah	*Nil*	Paddy nearly all harvested; *rabi* crops still suffering from want of rain; price of common rice 16 seers per rupee; public health good.
Patna	*Nil*	Reaping of paddy nearly completed; poppy growing splendidly; much rain wanted for *rabi* crops; public health good.
Durbhanga	*Nil*	*Rabi* drying up for want of moisture; rice crop will be about 6 annas; prices rising slightly; small-pox spreading in the Sudder Station.
Hazareebagh	*Nil*	Weather cold and seasonable; prospects of *rabi* crops fair on irrigated lands, elsewhere they are suffering much from want of rain; high prices still continue; small-pox still prevalent in the Sudder Station; public health generally good.
Cuttack	*Nil*	Weather cold and cloudy; reaping of late rice going on with prospect of an average outturn; *rabi* crops doing well; sugarcane being harvested; *aslus* rice being transplanted; price of rice 18 to 24 seers per rupee; public health good. *General Remarks.*—No rain has again fallen during the week in any part of the province; rain is still much wanted for the *rabi* crops in Behar; elsewhere they are reported to be fair; the rice harvest is still proceeding, but the average outturn in most parts of the province will be very short, being variously estimated at from four to eight annas, and even less than four annas in some localities; the outturn is expected to be fair only in Eastern Bengal (Furreedpore and Mymensingh excepted), and in Orissa and parts of Chota Nagpore; high prices continue to prevail throughout the province, though in some places the market has been a little lower owing to the appearance of the new rice; fever is still prevalent in several districts, and cholera has made its appearance in a few places, and small-pox in Durbhanga and Manbhoom.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. Provinces and Oudh—		
Benares . (Jan. 1st	No rain	Prospects of *rabi* crops fair, except crops in Chandauli tahsil; in places where irrigation is impracticable, crops will suffer unless rain falls soon; health of man and cattle good; bazars well supplied; prices falling.
Allahabad („ 2nd)	. . . .	Weather cold and dry; rain much wanted for unirrigated crops; prices rising slightly.
Gorakhpur (Dec. 30th)	No rain	Irrigation actively carried on, but crops poor; fever in north and small-pox throughout the district; prices steady.
Jhansi . („ 31st)	. . . .	Weather clear and seasonable; *rabi* crops doing well, but rain is much needed; prices rising slightly; health of people and cattle good.
Agra . (Jan. 1st)	No rain	Irrigation going on where practicable, but rain much needed in unirrigated tracts; health good; prices steady.
Bareilly . („ „)	. . . .	Rain much wanted; prices steady; cattle healthy; fever among people diminishing.
Meerut . („ „)	Slight rain on 30th December.	Weather cloudy; health good; crops flourishing; prices steady.
Kumaun . (Dec. 31st)	Slight rain and hail	Weather clear again; crops require more rain in some places; general health good; cattle-disease continues; prices stationary.
Lucknow (Jan. 1st)	. . . .	Weather very cold; no rain; sky cloudy; prospect of crops favourable; high land *rabi* crops suffering; rain urgently needed; condition of people and cattle good; markets well supplied; prices stationary.
Partabgarh („ „)	No rain	Weather occasionally cloudy; irrigation going on; prices show slight changes; sugarcane is being pressed; small-pox in tahsil Kunda; general health good.
Sitapur („ „)	0·3 in tahsil Misrikh	*Arhar* injured by frost in tahsil Sitapur; markets well supplied.
Fyzabad („ „)	No rain	Irrigation going on; prospects fair; public health good; condition of cattle fair.
Cawnpore („ „)	. . . .	Weather slightly cloudy and for past two days high east wind; rain much needed for *rabi* crops; small-pox still continues, but the general health is good, and no sickness among cattle; prices stationary.
Rai Bareilly (Dec. 31st)	No rain	Sky cloudy on 27th and 31st; *rabi* prospects fair; general health good; markets well supplied; prices almost steady.
Farukabad (Jan. 1st)	. . . .	Weather seasonable; sky clear; rain wanted; small-pox in Tirwa and Kanang tahsils, more virulent in the former than in the latter; crops hopeful.
		General Remarks.—Slight rain has fallen in Kumaun, Meerut, Saharunpore and Sitapur, and cloudy weather is reported in several other districts; rain is still generally needed for the *rabi* crops; the public health is fair, but small-pox and fever continue in places; prices are on the whole steady.
Punjab—(Jan. 2nd)—		
Delhi	Slight rain	Health good; prices steady.
Hissar	. . . .	Health good; prices steady.
Umballa . . .	·1	Health and *rabi* prospects good; prices falling.
Jullundur . . .	·6	Health good; prices steady.
Lahore . . .	·2	Health and crop prospects good; prices stationary.
Ferozepur . . .	. . . .	Health good; prices fluctuating.
Sialkot . . .	. . . .	Health and crop prospects good; prices rising.
Rawalpindi . . .	Slight rain	Health and condition of crops good; prices falling.
Peshawar . . .	·2	Crop prospects good; prices fluctuating.
Mooltan . . .	. . . .	Health good; crops flourishing; prices steady.
Dera Ismail Khan .	. . . .	Health good; crop prospects fair; prices stationary.
Amritsar . . .	. . . .	Health good; prices fluctuating.
		General Remarks.—Slight rain in a few districts; health and crop prospects generally good.
Central Provinces—		
Nagpur . (Jan. 2nd)	. . . .	Weather clear and cold; *rabi* crops progressing favourably; health good; prices stationary.
Jubbulpore („ 1st)	. . . .	Weather clear and cold; *rabi* prospects good; cotton-picking in progress; health good; prices unchanged.
Saugor (Dec. 31st)	. . . .	Weather very cold; *rabi* prospects generally favourable, although crops are drooping in places from want of moisture; health good; prices stationary.
Seoni . . .	. . . .	Weather cold and clear; rain wanted for *rabi*; fever decreasing; prices stationary.
Hoshangabad . .	. . . .	Weather seasonable; prospects fair; cotton-picking in progress; fever prevalent; wheat 16, *jowari* 24, and rice 11 seers per rupee.
Khandwa . . .	. . . .	Weather clear and chilly; prospects good; *jowari* 25¼, wheat 17⅛, and rice 16 seers per rupee.
Raipur . . .	. . . .	Weather cold and cloudy; paddy and cotton being threshed, *rabi* prospects favourable; public health good; prices stationary.
Sambalpur (Dec. 29th)	. . . .	Weather unusually cold; *rabi* prospects good; fever prevalent; common rice 31⅓ seers per rupee.
		General Remarks.—Weather cold; *rabi* prospects favourable; health good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—(Dec. 29th)—		
Akyab . . .	*Nil*	Total rainfall from 1st January to date 190·58; public health and health of plough cattle good; reaping in progress; reaping wages from Rs. 11 to 13 in Koladan and Rs. 11 to 20 in Writtoung East per *doon*; price of paddy in Koladan from Rs. 19 to 20 per 100 baskets.
Rangoon . . .	*Nil*	Total rainfall from 1st January to date 84·23; five fatal cases of small-pox, otherwise public health good; small quantity of new paddy arrived; price Rs. 80 per 100 baskets.
Bassein . . .	*Nil*	Total rainfall from 1st January to date 106·32; public health good; reaping going on; price of paddy from Rs. 70 to 90 per 100 baskets.
Prome . . .	*Nil*	Total rainfall from 1st January to date 53·48; public health and health of cattle good; harvest operations progressing; no reports received of any further destruction of crops; price of paddy Rs. 85 per 100 baskets.
Kyoukphyoo (Dec. 22nd)	*Nil*	Total rainfall from 1st January to date 163·82; public health and health of cattle good; reports of crops and area reaped not yet received.
„ („ 29th)	*Nil*	Total rainfall 163·82; public health and health of cattle good.
Sandoway . . .	. . . .	Report not received.
Hanthawaddy . .	. . . .	Public health and health of cattle good; crops good, and reaping has commenced in some parts of Tante, Tamanaing, and Hlaing townships; price of paddy from Rs. 80 to 100 per 100 baskets.
Pegu .(Dec. 22nd)	*Nil*	Total rainfall from 1st January to date 128·34; small-pox and measles still prevalent in Pegu; small-pox also reported from Syriam, otherwise public health good; slight cattle-disease in Kyouktam and Mayinzaya; two deaths reported from former; paddy being reaped; outturn good; price of paddy from Rs. 80 to 95 per 100 baskets.
„ .(„ 29th)	*Nil*	Total rainfall from 1st January to date 128·34; four deaths from cholera in Syriam, and slight fever and measles in Paunglin and Syriam, otherwise public health good; cattle healthy; reaping still progressing; price of new paddy Rs. 80 per 100 baskets.
Tharrawaddy . .	*Nil*	Total rainfall from 1st January to date 106·27; public health and health of cattle good; condition of crop being reaped good; about 54,923 acres have been reaped in Sanywe, Gyobingouk, Minhla, and Tapun townships; wages of reaping 8 annas per man per day; price of paddy from Rs. 95 to 100 per 100 baskets,
Thonegwa . . .	*Nil*	Total rainfall from 1st January to date 94·64; one death from small-pox in Donabyoo, otherwise public health good; cattle healthy; reaping progressing; reaping wages one basket of paddy per man a day; price of paddy from Rs. 90 to 100 per 100 baskets.
Henzada . . .	*Nil*	Total rainfall from 1st January to date 86·83; public health and health of cattle good; reaping progressing; wages of reaping one basket of paddy per man per diem or Rs. 3 an acre; price of paddy from Rs. 75 to 100 per 100 baskets.
Thayetmyo . . .	*Nil*	Total rainfall from 1st January to date 48·65; public health good; cattle disease still prevalent all over the district; harvest reaped; price of paddy Rs. 100 per 100 baskets.
Shweygyin . . .	*Nil*	Total rainfall from 1st January to date 139·68; two deaths from small-pox in Kwindala Circle, otherwise public health good; cattle healthy; reaping progressing; price of new paddy Rs. 80 per 100 baskets.
Amherst (Moulmein) .	*Nil*	Total rainfall from 1st January to date 166·28; public health and health of cattle good; reaping almost finished; prices of paddy not settled; in Moulmein public health good; cattle healthy; total outturn of paddy for year 27,300 baskets; decrease as compared with previous year 4,400; about 10 000 baskets sold; average price Rs. 83; about 17,300 baskets stored by cultivators at their homes; quality of paddy generally good.
Toungoo . . .	*Nil*	Total rainfall from 1st January to date 79 88; public health good.
Tavoy . . .	*Nil*	Total rainfall from 1st January to date 195·44; public health and health of cattle good; about one-half of the crops have been reaped.
Mergui .(Dec. 22nd)	*Nil*	Total rainfall from 1st January to date 175·94; public health good; cattle healthy; two-thirds of the crops have been reaped; price of paddy Rs. 70 per 100 baskets.
		General Remarks.—Some cholera in Pegu, and small-pox in Rangoon, Pegu, Thonegwa, and Shweygyin; cattle disease in Pegu and Thayetmyo, otherwise public health and health of cattle good; harvest well advanced.
Assam—(Jan. 2nd)—		
Gauhati . . .	*Nil*	Nights and mornings foggy and cool; reaping of *sali* crops in progress; public health fair.
Sylhet . . .	*Nil*	Reaping of *sali* and *amun* crops nearly finished; public health good.
Cachar . . .	·09	Weather cloudy; more than half of *sali* crops reaped, and reaping of *asra* crops nearly finished; common rice 12⅛ seers per rupee; a few cases of small-pox reported.
Dibrugarh . .	*Nil*	Public health good; *sali dhan* being reaped with fair outturn.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—(Jan. 2nd)—		
Bangalore	. . . .	Standing crops in good condition; *kartik* paddy harvested in some parts; prospects favourable; public health good.
Mysore	·12	Standing crops and general prospects good.
Mercara	*Nil*	Total for past year 141·79; picking of coffee continues; rice harvest proceeding; yield in most places good.
		General Remarks.—Standing crops in good condition; harvesting continued throughout the province; prospects of season and public health good; average prices of rice 15, *ragi* 35, and horse-gram 38 seers per rupee.
Berar & Hyderabad—(Jan. 2nd)—		
Amraoti	. . . .	Weather clear and cold; cotton-picking and *kharif* harvesting progressing; *rabi* prospects good; wheat 16 and *jowari* 26 seers per rupee.
Akola	. . . .	*Kharif* crops being harvested; *rabi* crops in good condition.
Hyderabad	No rain	Weeding of *rabi* and *tabi* crops continue; no sickness; prices—wheat 15½, coarse rice 12¼, white *juar* 22¼, yellow *juar* 29¾, and *tur* 22⅓ seers per current sicca rupee.
Central India States—(Jan. 2nd)—		
Indore	*Nil*	Health good; prices steady.
Morar (Gwalior)	*Nil*	Total rainfall 18·57; health good; rain wanted for *rabi* crops.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVIEW OF THE ADMINISTRATION REPORT OF IRRIGATION WORKS IN THE MADRAS PRESIDENCY FOR THE YEAR 1882-83.

No. 3I., dated Fort William, 3rd January 1884.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Administration Report of Irrigation Works in the Madras Presidency for 1882-83.

OBSERVATIONS.—During the year under review the Madras Irrigation Company's Canal was purchased by Government and placed under the charge of an Executive Engineer of the Irrigation Department, as a separate division, entitled the "Kurnool Canal Division." The amount provided in the Home estimates for the purchase of the Canal was ₹1,76,35,000, and the work has been included in the list of Productive Public Works, but as yet it does not even pay its working expenses.

2. The Madras Water-supply and Irrigation scheme and the "Buckingham Canal" (a tidal navigation channel connecting the navigable canals of the Godavari and Kistna Deltas with the town of Madras) have been added to the list of "Works for which Capital and Revenue Accounts are kept." These now amount to five in number, the expenditure on the three* originally included in this list being met from Imperial, and that on the other two from Provincial Funds.

* Chambrambakam Tank.
Palar Anicut.
Pelandorai Anicut.

3. The direct capital outlay is compared below with the allotments for 1882-83:—

	No. of Works in each class.	Grant for 1882-83.	Expenditure, 1882-83.
		R	R
Productive Public Works	7	1,87,17,461	1,86,15,996
Irrigation and Navigation Works for which Capital and Revenue Accounts are kept	5	2,56,345	57,135

The grant for the year under head of Productive Public Works includes the sum of R1,76,35,000 provided for the purchase of the Madras Irrigation Company's Canal. The short outlay of the year under this head (R1,01,465) amounts to about 10 per cent. of the grant for outlay in India, and is mainly due to unadvoidable hindrances of work in the Godavari and Kistna Deltas.

The short outlay on Irrigation and Navigation Works for which Capital and Revenue Accounts are kept is due to a readjustment of the Capital Account and a credit of the amount charged to Public Works in excess of the normal value of work done on the Palar Anicut system during the late famine.

4. The acquisition of the Kurnool Canal has raised the capital outlay invested in Productive Public Works to a very considerable extent, and has materially reduced the returns yielded by this class of works in Madras. The total capital outlay incurred on Productive Public Works up to the end of 1882-83 (including indirect charges) amounted to R3,99,05,524; the gross revenue due to the new works (including share of enhanced land revenue) to R36,00,628; the maintenance charges, including indirect charges and those for collection in the Civil Department, to R10,71,970; and the net revenue to R25,28,658, yielding 6·34 per cent. on the total capital outlay to the end of the year. But if the outlay on the Sangam Anicut Works (which have not yet commenced to earn revenue) and the amount paid for the Kurnool Canal be excluded from the account, the net returns would be 12 per cent. on the capital outlay against 13¾ per cent. obtained during the previous year.

5. The capital outlay (direct and indirect) incurred to the end of the year on Irrigation and Navigation Works for which Capital and Revenue Accounts are kept amounted to R98,89,078; the gross revenue, including share of land revenue due to the works, to R3,13,196; the maintenance charges of all kinds to R2,75,206; and the net revenue to R37,990; yielding 0·38 per cent. on the total capital expenditure to the end of the year.*

*IRRIGATION AND NAVIGATION WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

	No. of Works.	Capital Outlay to end of 1882-83.	Gross Revenue.	Maintenance Charges.	Net Revenue.	Per cent.
		R	R	R	R	
Imperial	3	28,04,582	1,56,808	94,939	61,869	2·20
Provincial	2	70,84,496	1,56,388	1,80,267	−23,879	−0 34
TOTAL	5	98,89,078	3,13,196	2,75,206	37,990	0·38

6. The gross area irrigated by Productive Irrigation Works during 1882-83, including that watered by the old works, amounted to 1,757,579 acres. The area irrigated by the other Irrigation Works, including those for which neither Capital nor Revenue Accounts are kept, amounted to 2,615,590 acres.

The corresponding areas for 1881-82 were 1,781,798 and 2,401,632 acres, respectively.

7. The area occupied for irrigation on the Godavari Canals amounted to 528,149 acres, the area taken up during 1881-82 having been 523,992 acres; but of the former area only 504,213 acres were effectively irrigated, the effective irrigation of the previous year having been 521,149 acres. The

irrigation of sugarcane has increased from 2,265 acres in 1880-81 to 6,667 acres in 1882-83; any large increase in the cultivation of this crop would interfere seriously with the canal clearances which are necessarily carried out just at the time when labor is largely in demand for cutting and pressing the cane.

The total income derived from these canals (excluding that from old works) amounted to R16,59,129; the maintenance charges to R4,48,101; and the net revenue to R12,11,028; yielding 10 99 per cent. interest on R1,10,20,241, the capital outlay to the end of the year.

The navigation receipts and charges of 1882-83 are compared below with those of previous years:—

	Receipts.	Charges.	Excess Charges.	Excess Income.
	R	R	R	R
Average of 5 previous years	50,548	68,038	17,490	. .
1881	55,670	79,610	23,940	. .
1882-83	62,955	55,767	. .	7,188

The change from the system of keeping the navigation accounts by the calendar year to that of accounting by the official year is satisfactory. The rates of license fees were increased from January 1st, 1882, as shown below:—

	Old Rates, per ton of 50 c. ft.	New Rates, per ton of 75 c. ft.
	R	R
Cargo boats	2	3½
Passenger boats, 1st class	4	7
2nd „	3	5

The rates on rafts were reduced from R1 per 1,080 square feet of raft (for all kinds) to annas 4 per 100 square feet of raft for teak timber and annas 2 per 100 square feet for poles and bamboos.

The river began to rise on the 12th of June 1882, and did not again fall below the crest of the anicut until 23rd February 1883. An unusually high flood, rising to about 14 feet on the crest of the anicut, occurred on the 21st July 1882, and very heavy rain fell in the delta during the first week of October, considerable damage having been caused both by the river floods and the local rainfall.

8. The area irrigated on the Kistna Canals during 1882-83 was 261,158 acres, being 25,869 acres less than that of the previous year.

The total revenue (exclusive of that derived from old works) amounted to R9,30,768; the maintenance charges to R3,47,851; and the net revenue to R5,82,917, or 9·2 per cent. on R63,30,628, the capital outlay to the end of the year.

The navigation receipts and charges are compared below with those of previous years:—

	Receipts.	Charges.	Excess Charges.	Excess Income.
	R	R	R	R
Average of 5 previous years	19,379	32,421	13,042	. . .
1881	21,788	68,384	46,596	. . .
1882-83	39,559	62,683	23,124	. . .

The heaviest flood on record occurred in July 1882, rising to 20½ feet on the anicut crest; the highest flood previously recorded having been 19½ feet on the 20th July 1874. The river remained at a height of 10 feet or more on the

anicut for nearly three weeks, and much damage was done by the flood. In September there was a heavy local fall of rain, and another fall in the end of November, both of which breached the Ellore Canal. The rainfall of November also damaged the Commamur Canal seriously and caused considerable loss of crops.

9. Acres 63,653 were irrigated by the Penner Anicut Works, being 6,446 acres more than the area irrigated last year.

The total revenue credited to works executed by the British Government amounted to R1,29,974; the maintenance and collection charges to R26,843; the balance net revenue amounting to R1,03,131, or 6·19 per cent. on R16,65,159, the capital outlay to the end of the year.

The highest flood ever recorded in the Penner occurred on 30th November 1882, during which the river rose to the height of 19·3 feet on the crest of the anicut; the highest flood previously registered having been 18·37 feet on October 26th, 1874. This flood did a considerable amount of damage to the weir and under-sluices, and the local rainfall injured the irrigated crops in some places.

10. Acres 892,871 were irrigated by the Kavari Delta Works, the corresponding area of the previous year having been 897,221 acres.

The total revenue credited to works executed by the British Government amounted to R7,06,533; the maintenance and collection charges to R84,261; and the net revenue to R622,272, or 54 per cent. on R11,50,238, the capital outlay to the end of the year.

On the 23rd July 1882, a flood occurred in the Kavari, which rose to the height of 13·20 feet on the floor of the Kavari dam, being within 0·05 feet of the highest recorded flood, but the duration of the flood of 1882 was much greater than on any previous occasion. The season was favourable for the crops.

11. The area irrigated from the Srivaikuntham Anicut amounted to 19,546 acres; the total revenue due to new works to R98,201; the maintenance and collection charges to R25,183; and the net revenue to R73,018, or 5·56 per cent. on R13,12,135, the capital outlay to the end of the year. The supply in the Tambrapurni river was good, and no complaints were made of want of water.

12. Fair progress was made with the works of the Sangam Anicut, although they were delayed in the beginning of the year by insufficiency of labor. R5,65,000 were expended during 1882-83, and the outlay to the end of the year amounted to R8,02,073, out of a sanctioned expenditure, including all charges, of R35,69,049.

13. The gross revenue of the Kurnool Canal amounted to R76,023, and the maintenance charges to R1,39,731, leaving an excess of charges over income of R63,708.

The works were transferred to Government on the 6th July 1882, and on the 19th the Sunkesala Anicut was breached and seriously injured by a high flood in the Tungabhadra, which rose to within 0·30 feet of the level of the highest recorded flood. The work had stood well for 14 years, and was believed to be safe from all flood action. When the river fell, a temporary dam was constructed in front of the breach to maintain the irrigation, but this dam was itself carried away by an unusual flood at the end of November. The canal supply therefore failed; navigation was stopped for two months, and most of the irrigated crops would have withered but for local rain which saved them from drying up.

Water rates have been reduced, in order to induce the cultivators to convert their dry into irrigated land, and a further reduction is allowed of 50 per cent. during the first 5 years, and of 25 per cent. during the second 5 years, on all lands which have not been cultivated during the last 10 years. For blocks

of unoccupied waste land, taken up for irrigated cultivation and not less than 50 acres in extent, water is to be supplied free of charge for 5 years, and at half rates for the succeeding 5 years.

14. Owing to a misunderstanding of the figures submitted, the average water rates per acre of irrigated land were incorrectly given in para. 13 of the Review of Irrigation Operations during 1881-82. Even in the report now under review, the areas and water revenue are not shown separately for the first and second crop rice on the Godavari, Kista, and Penner Works.

Statements of areas irrigated and revenue derived similar to those given on pages 33, 36, 39 of the Report for 1882-83, should in future be given for all Productive Works and those for which Capital and Revenue Accounts are kept. The rates per acre on the works for which the above-mentioned returns are given vary considerably, as shown below:—

System.	Water Rate per Acre.	
	1st crop.	2nd crop.
	R	*R*
Kavari	2·98	2·40
Srivaikuntham	5·80	3·30
Chambrambakam	3·08	2·77
Palar	2·60	2·20
Pelandorai	2·43	2·15
Madras Irrigation	2·18	1·66

15. The irrigation from the Chambrambakam Tank amounted to 12,763, and that from the Palar Anicut to 66,212 acres—figures corresponding very closely to those of the previous year. The former work yielded 4·52 and the latter 4·22 per cent. net returns on the capital outlay; the returns of 1881-82 having been 4·83 and 3·89 per cent. respectively.

The working expenses of the Pelandorai Anicut exceeded the income by R42,491, or—10·97 per cent. on the capital outlay to the end of the year. The area irrigated from the work amounted to only 3,386 acres, but it is hoped that after the distributaries have been improved the irrigation and revenue will increase.

The Madras Water-supply and Irrigation scheme irrigated 7,435 acres of first crop and 2,985 acres of second crop rice, and the net revenue amounted to R34,985, or 2·05 per cent. on R17,09,997, the Capital outlay to the end of the year.

On the Buckingham Canal the working expenses exceeded the income by R58,864, but the year was unfavorable for navigation owing to very low water in the canal during the dry months and obstructions afterwards caused by the heavy floods of November 1882.

16. The direct outlay during 1882-83 upon irrigation works for which neither Capital nor Revenue Accounts are kept amounted to R15,67,318 against a final grant of R13,52,652. Of the total outlay, R2,29,994 were expended on extensions and improvements; R6,436 were allotted to meet old maintenance charges of works for which Capital and Revenue Accounts are kept, and the balance was expended on maintenance and establishments. The grant for the year was R2,76,560 and the expenditure R5,55,410 in excess of the grant and expenditure of 1881-82.

2,525,794 acres of first crop rice were irrigated from these works, yielding an irrigation revenue of R69,60,841; the average incidence of irrigation revenue being R2·75 per acre; 675,416 acres of second crop rice were also watered yielding an irrigation revenue of R13,92,589 at an average rate of R2·06 per acre.

The total outlay of all kinds during the year was 18·47 per cent. of the irrigation revenue derived from the works.

17. The direct outlay upon agricultural works during the year amounted to R5,67,993 against an allotment of R6,22,383, the outlay and grant of 1881-82 having been R3,48,579 and R3,74,588 respectively.

18. R64,253 were expended on the surveys and preparation of designs for Protective Irrigation and Navigation Works, and in February 1883 the estimates for the Rushikulya Irrigation scheme in Ganjam, amounting to R28,60,239, including all charges, were provisionally sanctioned by the Government of India.

19. The year 1882-83 was one of exceptionally heavy rainfall during both monsoons, and the floods in the Kistna and Penner rivers were the highest on record; while those of the Kavari and Tungabhadra rose to within 0·05 feet and 0·30 feet of the highest previously registered.

The rainfall of the year averaged 35·00 inches for all districts, the average of 1881-82 having been 29·27 inches.

20. The sanction of the Secretary of State was received to proceed with the Bill for the enforcement and control of statute labor in maintenance of minor irrigation tanks, and a draft Act for the management of Irrigation and Navigation Works in the Madras Presidency was under consideration during the year.

ORDER.—Ordered, that a copy of the Resolution be forwarded to the Government of Madras for information.

Also that a copy of the Resolution be forwarded to the Local Governments and Administrations marginally noted for information.

The Governments of Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab, in the Public Works Department.
The Chief Commissioner, Central Provinces.
The Agent to Governor General for Rajputana.

Also, that a copy be forwarded to the Publisher of the *Gazette of India* for publication in the Supplement to the Gazette.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY ACCOUNT.

RAILWAY TRANSACTIONS FOR THE YEAR 1883-84.

No. 5R.A., dated Fort William, 4th January 1884.

OBSERVATIONS—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 190 A.—G., dated 27th June 1883.

OBSERVATIONS.—Up to the 31st March 1883, the net amount advanced to the Guaranteed Railways (excluding the East Indian Railway) on account of guaranteed interest, less net revenue, the share of surplus profits paid to the Companies, &c., was . . .

£
24,773,000

The net amount advanced to the East Indian Railway up to the 31st December 1879, when the Railway was purchased by the State, on account of guaranteed interest, the share of surplus profits paid to the Company, &c., was 3,517,000

The net profits accruing to the State from the East Indian Railway from the 1st January 1880 to the 31st March 1883 amount to 4,389,000

The net revenue from the East Indian Railway up to 31st March 1883 consequently amounts to 872,000

The net charge on account of Guaranteed Railways and the East Indian Railway up to 31st March 1883 may consequently be stated at 23,901,000

	R
or, allowing for exchange at contract rates, about . . .	**26,00,00,000**

The net charge for interest, less traffic receipts, on account of State Railways classed as Productive Public Works up to the 31st March 1883, amounts to 4,51,14,967

The total Capital outlay on Guaranteed Railways, State Railways classed as Productive Public Works, and the East Indian Railway up to 31st March 1883, was as under:—

	R
Guaranteed Railways	72,75,42,464
State Railways	31,35,44,573
East Indian Railway	31,82,61,420
TOTAL .	1,35,93,48,457
or if the premium paid on the purchase of the East Indian Railway, or be added	6,55,00,000
to	1,42,48,48,457

The net revenue realized from these Railways in 1882-83 was as under:—

	R
Guaranteed Railways	3,58,11,717
State Railways	1,11,21,460
East Indian Railway	2,77,90,436
TOTAL .	7,47,23,613

This net revenue amounts to 5·50 per cent. on the total Capital outlay of R1,35,93,48,457, or to 5·24 per cent. on the total Capital outlay, *plus* the premium paid to the East Indian Railway Company on the purchase of that Railway.

The payments made to the Companies during the year on account of their share of surplus profits and contributions to the Provident Funds were as under:—

	R
Eastern Bengal	7,63,596
Bombay, Baroda and Central India	8,35,075
Great Indian Peninsula	32,67,233
East Indian	24,71,542
	73,37,446

Deducting this sum from the net revenue, the balance, R6,73,86,167, amounts to 4·96 per cent. on the Capital outlay of R1,35,93,48,457, or 4·73 per cent. on the Capital, *plus* the premium paid to the East Indian Railway Company on the line being purchased.

If to the Capital cost of the railways the amount of interest advanced to the Companies in past years, *viz.*, R26,00,00,000, and the net charge for interest on the Capital outlay on State Railways, less net traffic receipts, *viz.*, R4,51,14,967, be added, a total of R1,66,44,63,424 will be arrived at; the net

revenue of R7,47,23,613 would yield a return of 4·49 on this amount. Again, if the Capital be further increased by the premium paid on the purchase of the East Indian Railway, R6,55,00,000, to R1,72,99,63,424, the net revenue would amount to 4·32 per cent. on the enhanced Capital.

Deducting from the net revenue of R7,47,23,613, the payments made to the Companies of R73,37,446 on account of surplus profits, &c., the balance, R6,73,86,167, would amount to 4·05 per cent. on the Capital outlay, *plus* the balance of interest charges, or R1,66,44,63,424; or to 3·90 per cent. on the Capital outlay, *plus* the balance of interest charges, *plus* the premium paid to the East Indian Railway, or R1,72,99,63,424.

ORDER.—Ordered, that the foregoing Observations be communicated to the Local Governments and Administrations and the Officers noted in the margin, and the Department of Finance and Commerce for information.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab, in the Public Works Department.
The Chief Commissioners of the Central Provinces, British Burma, Assam, and Coorg.
The Agents to the Governor General for Central India and Rajputana.
The Director General of Railways.

Ordered also, that it be published in the *Gazette of India*.

Public Works Department letter to the Consulting Engineer for Guaranteed Railways, Calcutta, No. 1157R.T., dated 20th October 1883, and enclosure.

Read also—

Letter from the Consulting Engineer for Guaranteed Railways, Lahore, No. 2542G., dated 22nd October 1883.

RESOLUTION.—The overcrowding of the platforms of important railway stations at train times by persons who are non-travellers has frequently been found to interfere with the proper working of such stations, and in view to lessening the inconvenience, both to the public and to the station staff, the railway authorities have in some cases introduced a system of issuing platform tickets, on payment of a nominal fee, by means of which persons desiring to see

their friends off, or to meet them on arrival, can obtain admission to the railway platform.

2. The experiment has been tried with success at the Lahore station of the Sind, Punjab, and Delhi Railway, and it is believed that the system is being adopted at certain large stations on other railways; but as doubts have been raised as to the legal right of the railway authorities to issue such passes, His Excellency the Governor General in Council is pleased to rule that, in future, when the railway authorities desire to exclude all but ticket-holders from railway platforms, the intention shall be duly notified in the railway time-tables, and a printed notice to that effect, specifying the place where such tickets are obtainable and their cost, shall be drawn up with reference to sections 3 (*c*) and 41 of the Indian Railway Act No. IV of 1879, and posted up in a conspicuous place outside the station.

3. Such a notice, His Excellency the Governor General in Council is advised, would be a sufficient "warning off" to justify the officers of a railway in preventing any person from entering a railway platform without a ticket, and in proceeding against him, if necessary, under section 41 of the Act above quoted.

4. It will be distinctly understood that the Government *of India* considers a restriction of the nature herein referred to as undesirable, excepting where there is well established and absolute necessity for it, and that every facility should be given for obtaining tickets of admission, not only before the departure, but also before the arrival, of a train.

ORDER.—Ordered, that this Resolution be communicated to the Governments, Administrations, and Officers noted in the margin for information and guidance; also that it be published in the Supplement to the *Gazette of India*.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

IRRIGATION OPERATIONS OF FASL RABI IN THE PUNJAB FOR 1883-84. UP TO 31st OCTOBER 1883.

CANAL DIVISION.	WATER DISTRIBUTED DURING OCTOBER 1883. Depth in Canal at Regulating Gates. Full supply.	Depth in Canal at Regulating Gates. Actual throughout.	Gross Consumption, cubic feet per second. Estimated full supply.	Gross Consumption, cubic feet per second. Actual average throughout.	Navigation. Return Canal. Principal items of Traffic. Up.	Navigation. Return Canal. Principal items of Traffic. Down.	Land irrigated (approximate). Zila.	Rainfall. During month.	Rainfall. Average.	Chief crops (approximate). Name.	Chief crops (approximate). Acres.	Remarks.
Bari Doab Canal. 1st Division	4·9	4·63	} 3,073·60	1,292	. . .	. . .	Gurdáspur	. .	0·45	Wheat . . .	4,364	On the Bari Doáb Canal in addition to the rabi irrigation, a great deal of water is given to the autumn crops. It is too soon yet to forecast the prospects of the rabi which so far look promising. The rain in the middle of November may, however, cause a cessation of demand and a consequent falling off in the returns.
2nd Division, Main Branch, Lower	4·6	3·40		954	. . .	. . .	Amritsar	. .	0·4	Barley . . .	17,773

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN RAJPUTANA FOR THE YEAR 1882-83.

No. 10 I., Fort William, January 7, 1884.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter No. 2886 S., dated 9th November 1883, from Secretary to Agent, Governor General and Chief Commissioner, and its enclosures, the Revenue Report and Memorandum thereon by Chief Commissioner.

OBSERVATIONS.—The Chief Commissioner's note on the operations of 1882-83 gives the figures of chief interest in connection with these works, and shows decidedly satisfactory results for the year.

2. The gross assessed revenue was the highest hitherto attained; the working expenses were reduced from Rs. 61,343, the average of eight preceding years, to Rs. 48,779, and the net revenue returned 3·55 per cent. on the capital outlay to the end of the year on irrigation works of all descriptions; the corresponding return of 1881-82 having been 2·06 per cent.

3. The reduction in maintenance charges is especially satisfactory, but the Government of India concurs with the Chief Commissioner in considering the cost of revenue collection on the large new tanks very high, and hopes that a considerable reduction may be found possible under this head. Good cause should be shown for maintaining these charges at a higher proportion than 10 per cent. on the revenue of the year, in all cases where it is proposed to exceed this allowance, which should also cover the cost of measuring and assessing the irrigated land.

4. The returns from these works are, as usual, unfavourably affected by those from the large new tanks, by reason of which more than half of the capital outlay returned only 0·62 per cent., while the balance (cost of the old and small new tanks) returned 6·99 per cent. But even these large new tanks have shared in the general prosperity of the year, and have for the first time yielded a small percentage of net revenue in excess of working expenses. The Commissioner of Ajmere-Merwara takes a hopeful view of their future, considering that in course of time irrigation from these works will gradually spread, and that they will ultimately prove to have been a profitable investment.

5. The rainy season of 1882-83 was favourable for cultivation. The tanks received a good supply of water during July and August, and were again replenished in September. The Jalia new tank, which is unfortunately situated below a number of others, and can only be filled by their surplus water, overflowed during the year for the first time since its completion in 1878.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Agent, Governor General and Chief Commissioner, Rajputana, for information and guidance.

Also, that a copy of the Resolution and of the Report be forwarded to the Governments of Madras, Bombay, Bengal, North-Western Provinces and Oudh, and the Punjab, in the Public Works Department, for information.

Also, that a copy of the Resolution and of the Report be forwarded to the Revenue and Agricultural Department and to the Department of Finance and Commerce for information.

Also, that the Resolution and Memorandum by the Agent, Governor General, together with the statement of general financial results compiled by the Examiner of Public Works Accounts, be published in the Supplement to the *Gazette of India*.

Ordered further, that a copy be forwarded to Her Majesty's Secretary of State for India for information.

H. A. BROWNLOW, *Colonel, R.E.*,
Depy. Secy to the Govt. of India.

Memorandum by Colonel E. R. C. Bradford, Chief Commissioner, Ajmere and Merwara, on the Ajmere and Merwara Irrigation Revenue Report, 1882-83,—dated 1st November 1883.

The capital expenditure received during the year an addition of R28,832, chiefly on account of the Chitar and Sikalao tanks and of the Jalia tank, the embankment of which was raised when it was lower than the masonry face wall. The total outlay on Capital Account to the end of 1882-83 was R15,38,211, inclusive of indirect charges other than interest. This sum represents nearly six times the land revenue assessment of the khalsa portion of Ajmere and Merwara.

2. The gross assessment of the year, including R25,929, the share of enhanced land revenue due to tanks, was R1,03,374, the maximum ever attained; the working expenses, R48,779, and the net revenue R54,595, or 3·55 per cent. on the capital invested in works of all descriptions. Taking the old tanks and the new small ones as a separate group, the net revenue was 6·99 per cent. against 4·6 per cent. of the year preceding. Similarly the large new tanks, the outlay on which represents nearly $\frac{8}{15}$ths of the total capital outlay, returned a net percentage of only 0·62.

3. The actual credits received during the year 1882-83 amounted to R1,38,902; the working expenses, inclusive of R4,571 on account of adjustments for previous years, to R53,350; and the net revenue was R53,350, or 5·56 per cent. on the capital outlay. The working charges due to the year under review amounted, as already mentioned, to R48,779. This compares very favourably with the average, R61,343, of the previous eight years. The revenue collection charges for the new large tanks varied from 10·33 per cent. in the case of Makrera to 37·91 per cent. in that of Ladpura. Even in the case of Rajosi, where irrigation may be said to have reached the maximum limit, the incidence was 36·72 per cent on collection. This appears to be rather a high charge.

4. The watered area was 27,462 acres against 21,192 acres of the preceding year. Notwithstanding that the rainfall was unusually abundant, the kharif area cropped without irrigation decreased from 6,022 acres in the previous year to 2,683 acres of the year under review. The maximum area of kharif cropped without irrigation was 6,912 acres in 1876, when there was no break in August extending over 10 days or so; and the monsoons ceased on the 20th September, and the later showers were not so heavy as to be damaging to the crops. Thus in the absence of tanks, should there be either a break longer than 10 days or so, or should the rains cease before the latter part of September—and both these events are rather a rule than exception in Ajmere and Merwara—the kharif crop on a large area suffer seriously.

5. An area of acres 2,362 was cultivated without irrigation in the beds of small tanks chiefly during the rabi season; and the total areas cropped in rear and front of the tanks was 32,507 against acres 29,698 in the preceding year.

6. The new large tanks in the two districts held on the 1st October and 1st November a supply of about 700 and 620 millions cubic feet, respectively, above sluice level, compared with their aggregate capacity of about 840 millions cubic feet: the deficiency was in the Bir and Makrera tanks, which, however, stored the largest supply ever noted. The most important event in this connection was the overflowing of the Jalia tank. It is satisfactory to know that this much-abused tank has at length filled once. When full, the capacity above sluice is 370 million cubic feet. It is hoped that by careful conservancy and by regulating the sluice irrigation proportionately to future collections, the water level of this tank may be kept up generally to sluice level by 1st July every year. At this level the capacity is 26 millions cubic feet and the depth at dam is 15 feet, so that the spring level of wells existing, and which may be hereafter sunk below the bund, shall be maintained at a high level even in bad seasons. Orders on this subject were issued in October 1882. The exact point at which sluice irrigation should cease has not yet been finally settled. Tables are under preparation intended to show for all large tanks below which the extension of cultivation is likely, if encouragement be given in the matter of well-sinking, how far it is possible to irrigate certain constant areas by sluice flow, and at the same time to reserve a sufficient head before the dams to maintain spring levels below.

7. The incidence of water-rates appears to have varied very considerably. In the case of the Ajmere new tanks the average incidence on the gross value of crops was 11·26 per cent., while in the case of the Merwara tanks it was 32·57. This approaches to nearly a third of the gross value of produce. In special cases, 40·24 per cent. went to cover the water-rates in the case of the Makrera tank, while in the case of the Bir tank the incidence was only 6·60 per cent. In the case of the Balad and Jalia tanks it was, respectively, 29·45 and 37·49 per cent.; generally the incidence appears to be higher in Merwara than in Ajmere.

8. The total sum of water-rates assessed in connection with all tanks was R77,445, and the approximate value of the gross produce of the area irrigated and protected was R5,41,949; the average incidence was therefore only 14 per cent.

9. On the whole, and although the variation in water-rates is not fully accounted for, the results in the year under review are, generally speaking, progressive and satisfactory.

ADMINISTRATIVE ACCOUNTS FOR THE YEAR 1882-83.

No. 1.—General Abstract of Financial Results showing the estimated cost of construction of Irrigation and Navigation Works, the Capital outlay thereon, the revenue derived therefrom, the working expenses and the interest on the debt incurred in respect of those works for and to end of 1882-83.

Wm. GOODENOUGH BAYLY,
Examiner of Public Works accounts, Rajputana.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 8th JANUARY 1884.

GENERAL REMARKS.—There has been slight rain in four districts of the Madras Presidency and at Bangalore, Rawalpindi, Kyoukphyoo and in three of the Eastern districts of Bengal; none has fallen elsewhere.

Harvesting continues in the Madras Presidency and Mysore, and standing crops are in good condition. *Rabi* prospects are generally favourable in the Bombay Presidency, but the river continues low in Sindh, and the area under *kharif* in Kurrachee has been smaller than usually owing to scarcity of water.

In the Berars cotton-picking and the *kharif* harvest are approaching completion. Excessive cold has slightly damaged the crops in parts of Hyderabad.

In Central India and Rajputana prospects remain favourable; but rain is needed in parts for the *rabi*. In the Punjab, North-Western Provinces and Oudh, and Central Provinces prospects are good; but the crops are generally in need of rain.

In Bengal the rice harvest is nearly completed, and except in Eastern Bengal, Orissa, and a few other places has yielded a very short outturn. Rain is much required for the *rabi* crops in Behar and Chota Nagpore, elsewhere they are in fair condition. In Assam and British Burma reaping is still in progress, and prospects are satisfactory.

The public health remains unchanged, fever and small-pox being generally prevalent, but the former is abating, and the latter severe only in one district of the North-Western Provinces.

Prices continue high in Bengal, and are rising slightly in some parts of the North-Western Provinces.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras (Jan. 9th)—		
Bellary		Standing crops poor; harvest—paddy, *ragi*, horse gram, and green gram, yield fair; *cholum*, *cumbu*, and oilseeds, below average; 29 deaths from cholera.
Kurnool		Standing crops good; harvest—paddy, yield above average.
Ganjam		Standing crops good; fever and small-pox slight in one taluk.
Kistna		Standing crops generally good; harvest—paddy, yield below average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)	·53 (average of 7 stations).	Standing crops generally good, but partially injured by worms in one taluk; harvest—*kar* paddy and *vadasamba* paddy, yield half; small-pox prevalent; 47 deaths from cholera.
Coimbatore	·39 (average of 5 stations).	Standing crops generally good; harvest—paddy, *ragi*, and *cholum*, yield average; *cumbu* below average; fever, small-pox, and cattle-disease in parts; 132 deaths from cholera.
Tanjore	·52 (average of 11 stations).	Standing crops good; harvest—paddy, *ragi*, and *varagu*, yield below average; cholera severe, 1,263 deaths.
Madura	·34 (average of 6 stations).	Standing crops fair; harvest—paddy, and dry crops, yield about average; cholera abating in Madura town, elsewhere slight.
Malabar		Second crop being harvested; small-pox and fever slight; 6 deaths from cholera.
Travancore		Harvesting of paddy begun; cholera in parts, 4 deaths. *General Remarks.*—General prospects good.
Bombay—(Jan. 9th)—		
Kurrachee		River at Kotri on 5th, 3 feet 8 inches against 3 feet 4 inches on same date last year; fever generally prevalent; cattle-disease in 8 talukas, loss of 157 cows and bullocks, 168 buffaloes, and 30 sheep and goats. Small-pox in Kurrachee, 15 fresh cases, 3 deaths; total cases 23, deaths 4; disease also in 20 villages in districts, 177 fresh cases, 16 deaths, 87 remaining sick; estimated area of past *kharif*, including *barani* 2,69,918 acres, or 49,354 acres less than last season, assessment Rs. 9,816 less, average realizations about 10 annas 10 pies in the rupee, decrease owing to low inundation and scanty rainfall; prices of wheat, red rice, and *bajri* in Kurrachee 24,30 and 32, in Sakro 16, 28 and 42, and in Jati 20,32 and 40 pounds per rupee respectively; prices of red rice and *bajri* in Kotri 28 and 34 lbs. per rupee respectively.
Hyderabad		Small-pox in 9, fever in 10, and cattle-disease in 4 talukas; wheat 26, *bajri* 36, *jowari* 42, red rice 24, and white rice 20 pounds per rupee; days hot; no signs of rain.
Ahmedabad		Crops thriving; slight fever in Viramgaum and Dholka; *bajri* 30 and wheat 26 pounds per rupee.
Baroda		Fever in Visenagar and Attarsumba mahals of Kadi division, also prevalent in Naosari division; small-pox in a mild form at Manikwar and Vizapur; cotton, sugarcane, and *rabi* crops in good condition; pressing of sugarcane going on in Naosari; prices—*bajri* 31½ and rice 23 to 25½ pounds per British rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Surat		*Rabi* crops healthy; fever in Pardi and Mandvi; *jowari* 39 and *nagli* 46 pounds per rupee.
Nasik		*Rabi* crops good; public health on the whole good; small-pox in 3 villages of Dindori and a few cases of fever; *bajri* 31, rice 24, and wheat 34½ pounds per rupee.
Colaba (Bombay)		Abnormal temperature 3° cool to 3° warm; vapour in air defective; abnormal wind easterly.
Poona		Standing crops good; cattle-disease in Bhimthadi taluka; prices—*bajri* 38 and *jowari* 46, in Poona *bajri* 35 and *jowari* 40 pounds per rupee.
Ahmednagar		*Bajri* threshing continued; *rabi* sowing finished; young crops good; *jowari* unhealthy; *bajri*—maximum 48 pounds per rupee in Akola, minimum 39 in Nagar; *jowari*—maximum 60 in Akola, minimum 46 in Sheogaon.
Sholapur		Prospects of outturn of cotton and *rabi* crops, especially *jowari*, still unfavourable owing to excessive rain of September and October last, and cold of subsequent season; *jowari* 45 and *bajri* 47 pounds per rupee.
Dharwar		Harvesting of rice and early *jowari* in progress; cotton suffering from blight in 6 talukas; wheat withering in 2 talukas; other late crops good; slight fever in 4 talukas; cholera in a village of Ranibennur, no fresh cases, 2 fatal; small-pox in 2 talukas; scarcity of drinking water in some villages of Navalgund; rice 25 to 44 and *jowari* 56 to 88 pounds per rupee.
Kanara		Preparing ground for second rice crop above Ghat; small-pox continues in Honawar and Kumpta; 2 deaths in Supa; fever continues in Halial and Mundgad; common rice at Karwar 12 seers; average in district 16 seers per rupee.
Rajkot		General health good; weather cold; no fresh cases of small-pox reported; *bajri* 31 and *jowari* 36 pounds per rupee. *General Remarks.*—River low in Sindh; outturn of *kharif* crops in Kurrachee less favourable than last year; *rabi* prospects unchanged; fever general; slight cholera in parts of Tanna and Dharwar; small-pox and cattle-disease in a few places.
Bengal—(Jan. 9th)		
Chittagong	*Nil*	Weather seasonable; reaping of *amun* nearly completed; prospects of winter crops fair; prices stationary; public health good.
Dacca	*Nil*	Prospects of crops good; *boro* paddy being sown; sessamum and *kalai* and *mug* pulses being gathered; harvesting of late paddy nearly completed; cutting of sugarcane continues.
24-Pergunnahs	*Nil*	Harvesting of late paddy still going on, yield estimated at from eight to ten annas; prospects of winter crops good; price of common rice varies from 15 to 17¾ seers per rupee; public health generally good.
Moorshedabad	*Nil*	Weather cold; *amun* still being harvested; *rabi* crops thriving well everywhere; public health generally good.
Rajshahye	*Nil*	Weather cool and seasonable; cutting of *amun* continues, outturn varies, but is generally poor; prospects of winter crops generally favourable; price of rice 10 to 16 seers per rupee; fever and cholera reported from Panchpur, Durgapur, and Manda.
Burdwan	*Nil*	Weather seasonable; prospects of *rabi* not more than half a full average crop; public health good.
Rungpore	*Nil*	Weather seasonable; harvesting of *amun* still going on, outturn moderate; prospects of *rabi* crops fair; prices stationary; fever lingering in certain quarters.
Bhagulpore	*Nil*	Rain much wanted for *rabi* crops; outturn of rice crop in thana Colgong varies from 2 to 4 annas, but in the rest of the sudder sub-division from 4 to 8 annas; in Banka the outturn is 6 annas, and in Soopole and Muddehpoorah 7 or 8 annas; new rice 13 seers 14 chittacks per rupee; public health good.
Purneah	*Nil*	Rain wanted for *rabi* crops; common rice (new) sells at 16 seers per rupee; general health good.
Patna	*Nil*	Harvesting of paddy still continues; *rabi* doing fairly where irrigation is practicable; public health good.
Durbhanga	*Nil*	*Rabi* wants moisture urgently; rice nearly harvested with less than half a full return; prices steadily rising; small-pox not abating; fever decreasing.
Hazareebagh	*Nil*	Weather cold and seasonable; prospects of *rabi* crops not favourable in most of the thanas of the district; prices stationary; general health good.
Cuttack	*Nil*	Weather seasonably cold; reaping of rice still going on; *rabi* crops being gathered, and sugarcane being pressed; prices unchanged; public health good. *General Remarks.*—There was no rain during the week, with the exception of slight showers in Noakhally, Backergunge, and the Chittagong Hill Tracts on the 1st instant; the *rabi* crops in Behar and Chota-Nagpore are suffering much from want of rain, except where irrigation is available, and are consequently expected to be very deficient, but in the rest of the province they are generally reported to be in fair condition; the rice has been mostly harvested and has generally yielded a short crop, except in Eastern Bengal and Orissa and a few other parts of the province, where the outturn has been fair; prices continue to rule very high throughout the province, though the appearance of new rice in some places has lowered the market a little; fever, though abated, is still reported from several districts, but the general health is fair.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares (Jan. 8th)	No rain	Weather not so cold; peas, mustard, and gram have flowered, and wheat and barley heads are forming, but without rain the crops will not be very good; isolated cases of small-pox are reported in the city; bazars well supplied; prices rising; health of cattle good.
Allahabad („ 9th)	No rain	Rain is much needed on dry uplands; irrigated crops and those on *mar* soil doing well; health good; prices stationary.
Gorakhpur („ 6th)	No rain	Irrigation actively carried on; fever in north and small-pox prevalent; prices steady.
Jhansi („ 7th)	No rain	No rain has fallen during the week; *rabi* prospects still fair, though rain is much needed; prices almost stationary; health of people and cattle good.
Agra („ 8th)	No rain	Irrigation continues; unirrigated tracts suffering; health good; prices steady.
Bareilly („ „)		Rain much wanted; prices slightly tending to rise; health of cattle and people good, with exception of slight fever here and there.
Meerut („ „)	No rain	Rain wanted much for unirrigated crops; health good; prices steady.
Kumaun („ „)	No rain	Crops not injured; general health good; cattle-disease continues; prices stationary.
Lucknow („ „)	No rain	Weather clear; prospects of crops fair; crops doing well, except in unirrigated tracts; condition of people good and of cattle normal; markets well stocked; prices steady.
Partabgarh („ 6th)	No rain during the week.	*Rabi* crops being irrigated; peas, *arhar*, and *sarson* blossoming; prices almost steady; small-pox reported from certain villages in Kunda; health otherwise good.
Sitapur („ 8th)		Clear and cold during week; rain much wanted; small-pox reported in tahsils Sitapur, Sidhouli, and Biswan.
Fyzabad („ „)	No rain	Prospects fair; condition of people and cattle good.
Rai Bareilly („ 7th)		Weather seasonable; no rain, but occasional clouds; *rabi* crops look well; cases of small-pox reported by tahsildar of Salon; markets well stocked; prices slightly rising.
Cawnpore („ 8th)	No rain	Weather cold and clear; *arhar*, sweet potato, and *brinjal* slightly injured by frost; small-pox continues; no sickness among cattle; markets well supplied.
Farukabad („ „)		Weather seasonable; clear sky; small-pox in Kanauj and Kaimganj, in Tirwa in a virulent form, attended with mortality. *General Remarks.*—No rain has fallen, it is much needed in several districts for the unirrigated *rabi* crops; small-pox is reported in nine districts, and has assumed a virulent form in Farukabad, otherwise the public health is fair; the markets are sufficiently supplied and prices steady or slightly rising.
Punjab—(Jan. 9th)—		
Delhi		Rain wanted; health good; prices steady.
Hissar		Prospects unchanged; prices steady; health good.
Umballa		Rain much wanted; health and crop prospects good; prices stationary.
Jullundur		Rain much wanted: *rabi* crops under irrigation; health good; prices stationary.
Amritsar		Rain wanted; health good; prices fluctuating.
Lahore		Health and state of crops good; prices stationary.
Ferozepur		Health good; prices fluctuating.
Sialkot		Health and crop prospects good; rain wanted; prices rising.
Rawalpindi	Slight rain	Health and crop prospects good; prices rising.
Peshawar		Rain wanted; small-pox decreasing; prices falling.
Mooltan		Crops and health good; rise in price of gram, *bajra*, and Indian corn; price of other food-grains stationary.
Dera Ismail Khan		Health good; prospects fair; prices steady. *General Remarks.*—Rain generally wanted; health and crop prospects good.
Central Provinces—		
Nagpur (Jan. 9th)		Weather clear and cold; *rabi* crops thriving; health good; cattle-disease slight; prices stationary.
Jubbulpore		Weather clear and cold; cotton-picking completed; rain needed to improve *rabi* crops; health good; wheat 25 and rice 15 seers per rupee.
Sangor (Jan. 8th)		Weather very cold; *rabi* crops favourable, except on high lying lands where moisture is deficient; health good; prices stationary.
Seoni		Weather cold and clear; rain wanted for *rabi* crops; fever decreasing; prices stationary.
Hoshangabad		Weather seasonable; prospects fair; *tilli* and cotton partly damaged by frost; fever prevalent in Harda and Seoni; wheat 18, rice 11, and *jowari* 24 seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Cen. Provinces—*contd.*		
Raipur . . .	. . . .	Weather clear and cold; *rabi* crops promising; public health good; prices are steady.
Khandwa . . .	. . . .	Weather chilly; cotton-picking commenced; prospects good; *jowari* 12½, wheat 18, and rice 15 seers per rupee.
		General Remarks.—Weather cold; prospects of *rabi* crops good, except in some districts of the Jubbulpore division, where rain is needed; health good.
British Burma—(Jan. 5th)—		
Akyab . . .	*Nil*	Public health good; cattle healthy, except in Nimbya where 5 buffaloes died; about one-third of the crops have been reaped; reaping wages from Rs. 15 to 20 per *doon;* price of paddy in the district from Rs. 20 to 22 per 100 baskets.
Rangoon . . .	*Nil*	Sixteen fatal cases of small-pox, otherwise public health good; small supplies of paddy arrived; price from Rs. 80 to 85 per 100 baskets.
Bassein . . .	*Nil*	Public health good; slight cattle-disease in Bassein township; reaping about three-fifths finished; reaping wages one basket of paddy per man per day; price of paddy Rs. 70 per 100 baskets.
Prome . . .	*Nil*	Public health and health of cattle good; crops reported in good condition everywhere; four-fifths of the harvest in the district have already been gathered; price of paddy Rs. 75 per 100 baskets.
Kyoukphyoo . .	·02	Public health and health of cattle good; reaping of crops progressing.
Sandoway . . .	*Nil*	Public health and health of cattle good; agricultural prospects not unfavourable; reaping wages Rs. 2 per acre in northern township.
Hanthawaddy . .	. . . .	Public health and health of cattle good; reaping progressing; price of paddy from Rs. 85 to 100 per 100 baskets.
Pegu . . .	. . . .	No report received.
Tharrawaddy . .	*Nil*	Public health good; three deaths of cattle in Gyobingouk township; conditions of reaping crop good; about 117,995 acres have been reaped in Sonywe, Gyobingouk, Minhla, and Tapun townships; wages of reaping 8 annas per man per day; price of paddy from Rs. 95 to 100 per 100 baskets.
Thonegwa . . .	*Nil*	Public health good; 10 deaths of cattle in the Pyapon township; reaping progressing in all parts of the district; reaping wages one rupee or one basket of paddy per diem; price of paddy Rs. 95 to 100 per 100 baskets.
Henzada . . .	*Nil*	Public health and health of cattle good; reaping nearly finished; price of paddy from Rs. 70 to 80 per 100 baskets.
Thayetmyo . . .	*Nil*	Public health good; cattle-disease not extinct; price of paddy Rs. 100 per 100 baskets.
Shweygyin . . .	*Nil*	Public health fair; cattle healthy; price of paddy Rs. 65 per 100 baskets.
Amherst (Moulmein) .	*Nil*	Public health and health of cattle good; reaping finished; price of paddy dependent on Moulmein market, cultivators holding out; in Moulmein public health and health of cattle good; *shanjale* paddy price steady, about 500 baskets sold during the week at Rs. 900 per 100 baskets; no sales of *kyoukyi* paddy yet, about 12,300 baskets left in cultivators' hands.
Toungoo . . .	*Nil*	Public health and health of cattle good.
Tavoy . . .	*Nil*	Public health and health of cattle good; reaping and gathering of the crops in progress; average price of paddy Rs. 60 in town and Rs 55 in the district.
Mergui . . .	. . . .	No report received.
		General Remarks.—Public health good; cattle-disease in Akyab, Tharrawaddy, Bassein, Thonegwa, and Thayetmyo; in other districts health of cattle good; harvest operations still going on.
Assam—(Jan 9th)—		
Gauhati . . .	*Nil*	Mornings and nights cool and foggy; reaping of *sali* paddy in progress; public health and prospects of mustard fair.
Sylhet . . .	*Nil*	Reaping of *amun* and *sali* crops finished; transplanting of *bura* continues; public health good on the whole.
Cachar . . .	*Nil*	Weather very cold; reaping of *sali* and *asra* crops finished; common rice 12⅓ seers per rupee; health good.
Dibrugarh . . .	*Nil*	Weather cool; harvesting *sali dhan;* prospects of winter crops good; public health good.
Mysore and Coorg—(Jan. 9th)—		
Bangalore . . .	·09	Crops in good condition; *kartik* paddy and gram being harvested.
Mysore . . .	*Nil*	
Mercara . . .	. . . .	Weather cloudy, with high winds; picking of coffee and rice harvest still continues; fever prevalent in parts of Nanjarajapatna taluk.
		General Remarks.—There has been slight rain in the eastern side of the province; crops everywhere in good condition; prospects good; health fair; prices satisfactory.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Berar & Hyderabad—(Jan. 9th)—		
Amraoti . . .	. . . .	Weather cool; cotton-picking and *kharif* harvesting nearly completed; *rabi* crops in good condition; price of wheat 16 and *jowari* 26 seers per rupee.
Akola . . .	. . . .	Cotton-picking and *kharif* harvesting progressing; *rabi* prospects good.
Hyderabad . . .	No rain	*Rabi* and *tabi* crops prospering; excessive cold has slightly damaged wheat, white *juar*, and gram; fever and ague prevail in one taluka, climate good in others; prices of wheat 15½, coarse rice 12, white *juar* 21, yellow *juar* 28½, and *tur* 22½ seers per current sicca rupee.
Central India States—(Jan. 9th)—		
Indore . . .	*Nil*	Health good; prices steady.
Morar (Gwalior) . .	*Nil*	
Sutna . . .	*Nil*	Health and crop prospects good.
Neemuch . . .	*Nil*	
Goona . . .	*Nil*	
Nowgong . . .	*Nil*	Few showers of rain required for *rabi;* health good; prices of food-grain stationary.
Bhopawar (Manpur) .	*Nil*	Crop prospects good.
Sehore . . .	*Nil*	Weather clear; crop prospects and public health good.
Rajputana—		
Abu . (Jan. 9th)	. . .	Weather cold and seasonable.
Marwar . („ 4th)	. . . .	Two months' water in city tanks; wells almost full; health and crop prospects good.
Harowtee („ 7th)	. . . .	Weather cloudy; health good; prices stationary.
Jhallawar („ 4th)	. . . .	*Rabi* prospects and health continue good; weather seasonable.
Ajmere („ 8th)	*Nil*	General health good.
Jeypore „)	. . . .	*Rabi* crops doing fairly, but needing rain; prices steady; health good.
Ulwur („ „)	. . . .	Rain wanted for *rabi*; health good.

T. W. HOLDERNESS,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 4th January, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble Durgá Charan Láhá.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble Mahárájá Luchmessur Singh, Bahádur, of Darbhangá.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble R. Miller.
The Hon'ble Amír Alí.
The Hon'ble W. W. Hunter, LL.D., C.I.E.

UNIVERSITIES HONORARY DEGREES BILL.

The Hon'ble MR. GIBBS moved that the Report of the Select Committee on the Bill to authorize the Universities of Calcutta, Madras and Bombay to grant certain honorary degrees be taken into consideration. He said, in making the Motion, that the Select Committee had considered the letters which were received from the various Governments forwarding the opinions of the Universities concerned, and, in accordance with those recommendations, they had made some slight alterations in the Bill so as to simplify the procedure. The Syndicates of those various Universities were not composed of the same number of Fellows, and consequently the concurrence of four Members of the Syndicate, in reference to the conference of an honorary degree, would not work. The Bill had now been amended so as to require that two-thirds of the other Members of the Syndicate should concur with the Vice-Chancellor. The recommendation would then go to the Senate, which would finally submit it to the Chancellor for approval. The only other point which required notice in the new Bill was, that they had retained in the Bill the words of the original Calcutta Bill which was passed to enable that University to confer the degree of Doctor in Law on the Prince of Wales. They had received one criticism on this phrase to the effect that "eminent position" must mean "eminent position in society," whereas they considered that the term would include a person eminent in position as regards

literature, science or art; the Committee considered no better term could be found, and the original phraseology was therefore maintained.

The Motion was put and agreed to.

The Hon'ble MR. GIBBS also moved that the Bill as amended be passed.

The Motion was put and agreed to.

AGRICULTURISTS' LOANS BILL.

The Hon'ble SIR STEUART BAYLEY moved for leave to introduce a Bill to amend the law relating to loans of money by the Government to agriculturists. He said that the Act which he was asking the Council to amend was known as the Northern India Takkáví Act. The Act was a very small one; and its whole essence consisted of one section, which said that—

"The Local Government may, from time to time, with the previous sanction of the Governor General in Council, make rules as to loans to be made to owners and occupiers of arable land, for the relief of distress, the purchase of seed or cattle, or any other purpose not specified in the Land Improvement Loans Act, 1883, but connected with agricultural objects."

The loans were to be recovered as arrears of land-revenue. The object of the amending Bill was in the first place to correct a small omission which was made in the original Act. The omission was this, that, although the loans themselves were recoverable as arrears of revenue, no arrangement was made for the recovery of interest on those loans. It was proposed to provide for this. The second point was that the Act, which extends at present only to Northern India, might, at the option of other Local Governments, be extended to the provinces under their jurisdiction. The third point was to provide that loans given on the joint security of village-committees, or to other agricultural associations of the same kind, might be collected on the joint responsibility in the same way as in the Agricultural Improvement Loans Act. These were all the proposals of the amended Bill, and he now asked leave to introduce it.

The Motion was put and agreed to.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble MR. ILBERT moved that the Bill to amend the Code of Criminal Procedure, 1882, so far as it relates to the exercise of jurisdiction over European British subjects be referred to a Select Committee consisting of the Hon'ble Mr. Gibbs, the Hon'ble Sir A. Colvin, the Hon'ble Messrs. Evans, Quinton, Gibbon, Miller and Amír Alí and the Mover, with instructions to report in a week. He said:—

"This Bill, in the form in which it is technically before the Council, and apart from the modifications to which I shall refer later on, consists substantially of two enactments, one direct, the other indirect or permissive. The first of these enactments (I refer to them in the order of their importance, not in the order in which they stand in the Bill) declares that every person who occupies the position of District Magistrate or Sessions Judge shall, as such, be qualified to exercise jurisdiction over European British subjects. The second or permissive enactment gives a discretionary power to Local Governments to confer this jurisdiction on such other persons as may be considered fit to exercise it, provided that they have already certain specified powers, and have attained to some one of certain specified ranks in the service. The Bill was framed on the assumption, which I believe to be correct, that the total number of persons whom it would be necessary to invest with these powers would not be large, and that the Local Governments might fairly be trusted to exercise a wise and sound discretion in their selection, but that it might be desirable to confine the range of selection within certain limits. The particular limits suggested were, of course, arbitrary, and were obviously open to further consideration. In so far as they operated to take away the power of appointing unofficial Europeans to be Justices of the Peace, I think that they were defective and required amendment. The Bill did not enlarge in any respect the very limited jurisdiction now exercisable over European British subjects by Magistrates and

Courts outside the Presidency-towns, a jurisdiction which may be roughly compared to that exercised in England by Magistrates in petty sessions; and its practical effect has been not unfairly described by saying that it proposed to 'invest a very small number out of the ablest, the most experienced and the most distinguished of our Native Magistrates and Judges with an infinitesimal jurisdiction over European British subjects.'

"Such were the provisions of the Bill as introduced; and, as to its principle, I do not know that I can describe it better than by repeating what I said on a previous occasion, namely, that it aims at the removal of a disqualification based on race, and the substitution of a qualification based on personal fitness. It is not, and was never described by any member of the Government as being, the abolition of race-distinctions for judicial purposes. Such a description would have been obviously inconsistent with the retention of those privileges which Europeans now enjoy, and which we never proposed to take away. Nor, again, is it accurate to say that we have ever announced the policy that race-distinctions in the bestowal of administrative offices shall cease. The Bill would not prevent, and was never intended to prevent, the element of race from being taken into consideration, among other elements, in weighing the qualifications of a Magistrate or Judge. It merely declares that the simple fact of race, or I should be more accurate in saying that the simple fact of not belonging to an artificially defined and circumscribed category of human beings, that this fact, standing alone and apart from all other considerations, shall not constitute an absolute disqualification for the performance of certain important magisterial judicial functions. The argument that race-distinctions rest on certain physical and moral characteristics, and that we can neither create nor remove them by legislation, is really beside the mark. Nobody ever contended that we could. What we do contend is that, in selecting an official to hold a post, to perform duties or to exercise powers, the first thing to look to is his personal fitness; that the fact of belonging or not belonging to a particular race is not conclusive evidence of unfitness; that the line which parts fitness from unfitness does not coincide with the boundary which parts the European British subject from members of a less favoured class; and that, for the purpose of considering whether a man is or is not qualified to be a Justice of the Peace, we ought to be absolved from the necessity of ascertaining whether his parents were or were not lawfully married. In short, the principle of the Bill is the removal not of race-distinctions, but of race-disqualifications, which is a very different matter.

"This, then, was the Bill which was, in pursuance of the Resolution of the 9th of March last, published and circulated in the usual way for the opinions of Local Governments and others. When those opinions were received, it became our duty to consider them, and to see how far it would be possible to give effect to them consistently with our paramount duty of maintaining what His Excellency the Viceroy has referred to as 'the declared policy of the Crown and of Parliament'—the paramount duty of observing what I may describe as the constitutional enactments and constitutional pledges by which we are bound.

"Of those constitutional enactments and pledges, the most important for our present purpose are to be found in the Charter Act of 1833 and in the Queen's Proclamation of 1858. The Charter Act of 1833 enacts that—

'No Native of the said territories' (that is to say, the territories then under the Government of the East India Company) 'nor any natural-born subject of Her Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office or employment under the said Company.'

"And the Queen's Proclamation of the 1st November, 1858, says—

'It is our further will that, so far as may be, our subjects of whatever race and creed be freely and impartially admitted to offices in our service, the duties of which they might be qualified by their education, ability and integrity duly to discharge.'

"Now, I read the second of these two instruments as confirming and supplementing the first. The first removes a legal obstacle by invalidating disqualifications based exclusively on religion, place of birth, descent or colour; the second imposes a positive obligation by directing that, so far as may be, the persons whose disabilities had thus been removed not only may, but shall, be admitted freely and impartially to offices in the public service, subject only to the test of fitness.

"Of course, I do not overlook the force of the qualifying words 'so far as may be.' They justify the Government in declining to apply the general principle laid down by the Proclamation in such a manner, to such an extent, or under such circumstances as might endanger the supremacy of the British Government, impair the efficiency of the administration, or imperil the lives, liberties or property of any class of British subjects. Thus, they are merely a qualification of a general rule: the burden of proof is on those who allege that special circumstances exist which make the general principle inapplicable.

"Now, it is the overlooking of this that appears to me to constitute a weak point in many of the arguments advanced against the Bill. For instance, His Honour the Lieutenant-Governor of Bengal has urged the withdrawal of the Bill 'in the conviction' as he says, 'that it is not necessary for the judicial work of this country.' And the English Judges of the Calcutta High Court, in their very able minute, have argued that, unless we can show that our proposals will tend to make the administration of justice more impartial and effectual than it is at present, the ground is cut from underneath our feet. I believe that our proposals would have that tendency, but it is unnecessary for me to press that point. All that I need say is that the line of argument which I have indicated appears to me to be based on a misconception of the point of view from which we approached, and from which I contend that we ought to approach, the subject. We start from the assumption, not that legal disabilities ought to be retained until the necessity for removing them has been proved, but that we ought to remove them unless and except so far as their retention is shown to be necessary. And the question which we had to consider in framing the Bill was whether the mode and extent of removal which we proposed would or would not interfere with the effectual and impartial administration of justice.

"Now, I can quite understand the possibility of arguing that the Charter Act or the Queen's Proclamation ought not to be construed or applied in the way in which I have contended that they ought to be construed and applied. What I find much greater difficulty in understanding is how it can be seriously argued that in dealing with the subject we are entitled to disregard these instruments altogether. And yet we have been told on high authority that they have no practical bearing on the question before us. We have been told that the Proclamation has no legal force whatever; that as a ceremonial, it may have been proper; but that, in any other point of view, it is a mere expression of sentiment and opinion, worth as much as the sentiments and opinions expressed would have been without it, and no more. We have also been told that the Charter Act has no force beyond the legal effect of its words; that it has a legal value, but no other value; and that it would be absurd to suppose that Parliament can impose on any one, and in particular that it can impose on any body having legislative power, a moral obligation to take some principle as a guide for legislation, and to embody it in definite enactments from time to time, irrespectively of all other considerations. These statements appear, to me to involve a grave misapprehension both as to the constitutional relations between the Government of the United Kingdom and the Government of this great dependency, and as to the principles of construction which ought to be applied to documents of the class to which the Charter Act and the Queen's Proclamation belong. That we have been placed under any obligation, moral or otherwise, to pass any particular enactment at any particular time, irrespectively of all considerations, is what no one has suggested. But I should have thought it was clear beyond all manner of doubt that it is within the competency both of Parliament and of the Crown to indicate in more or less general terms the line of policy which the Government of India is to adopt with respect to any particular subject, and to impose on this Government the obligation of observing that policy. Such an indication of policy is, I take it, to be found both in the Charter Act and in the Queen's Proclamation. Their general effect, as I construe them, is to lay down a clear and distinct principle for the guidance of

this Government, and to leave a wide discretion as to the time, mode and extent of applying that principle.

"And when construing such documents I do not think that we should be justified in explaining or refining them away as a subtle judge or advocate would explain or refine away an inconvenient enactment. On the contrary, our duty is to place on them a broad and liberal interpretation, and to use our best endeavours to ascertain and observe their spirit as well as their letter. Of the Queen's Proclamation I will say nothing, except that, so far from treating it as a mere expression of sentiment and opinion, I regard it as one of the most solemn and formal pledges which was ever given by a ruler to her subjects. About the Charter Act, since its meaning and object have been seriously questioned, it is, I fear, necessary that I should say something more, in order to explain the circumstances under which it was passed, the nature of the policy to which it was intended to give effect, and the mode in which effect has from time to time been given to that policy.

"At the time when the Charter Act of 1833 was passed, the independent British settler, the forerunner of the modern planter, existed only by sufferance in this country. He was regarded as an interloper, and was not allowed to reside in India except under a special license. It was well known that one of the main objects of Lord William Bentinck's policy was to alter this state of things. He was anxious to facilitate the admission of settlers into the interior, to give them the right to settle there, but to couple with that right as a necessary and indispensable condition the liability to be governed by the same laws and to be under the jurisdiction of the same Courts as the Natives of the country. It was in accordance with, and in furtherance of, this policy that the Charter Act of 1833 was passed. As we know, it considerably enlarged the powers of the Governor General in Council for making laws and regulations which were to be binding on all the Courts of the country, but restrained him from making any law or regulation which should empower Courts other than those chartered by the Crown to sentence British subjects or their children to death, or should abolish the Courts so chartered. And it contained the section, which I have already quoted, removing disabilities based on creed or colour.

"Now, this Act was followed by a further despatch from the Court of Directors to the Governor General in Council, explaining very fully the provisions of the measure and conveying orders as to the mode in which effect was to be given to those provisions. The despatch to which I refer is dated the 10th December, 1834, and is of such great importance as a contemporaneous and authoritative exposition of the policy of the Act, and of the way in which it was intended by its framers that it should be worked, that I shall make no apology for reading to you some of the passages which bear most directly on the position of British-born subjects under the then new law.

'58. With regard to British-born subjects,' says the despatch, 'when the Act says that you shall not pass laws making them capitally punishable otherwise than by the King's Courts, it does by irresistible implication authorise you to subject them in all other criminal respects, and in all civil respects whatever, to the ordinary tribunals of the country. We know not indeed, that there is any crime for which under this clause they may not be made amenable to the country tribunals, provided that the law, in giving those tribunals jurisdiction over the crime, shall empower them to award to it some other punishment than death.

'59. From these premises there are some practical inferences to which we must call your attention. First, we are decidedly of opinion that all British-born subjects throughout India should forthwith be subjected to the same tribunals with the Natives. It is, of course, implied in this proposition that, in the interior, they shall be subjected to the Mufassal Courts. So long as Europeans penetrating into the interior held their places purely by the tenure of sufferance, and bore in some sense the character of delegates from a Foreign power, there might be some reason for exempting them from the authority of those judicatures to which the great body of the inhabitants were subservient. But now that they are become inhabitants of India, they must share in the judicial habitudes as well as in the civil rights pertaining to that capacity, and we conceive that their participation in both should commence at the same moment.

'60. It is not merely on principle that we arrive at this conclusion. The 85th clause of the Act to which we have before referred, after reciting that the removal of restrictions of the intercourse of Europeans with the country will render it necessary to provide against any

mischiefs or dangers that may thence arise, proceeds to direct that you shall make laws for the protection of the Natives from insult and outrage, an obligation which in our view you cannot possibly fulfil unless you render both Natives and Europeans responsible to the same judicial control. There can be no equality of protection where justice is not equally and on equal terms accessible to all.'

"And then in some later paragraphs the despatch goes on to comment on section 87, the section relating to race-disabilities, and what it says about that section is this:—

'103. By clause 87 of the Act it is provided that no person, by reason of his birth, creed or colour, shall be disqualified from holding any office in our service.

'104. It is fitting that this important enactment should be understood, in order that its full spirit and intention may be transfused through our whole system of administration.

'105. You will observe that its object is not to ascertain qualification, but to remove disqualification. It does not break down or derange the scheme of our Government as conducted principally through the instrumentality of our regular servants, civil and military. To do this would be to abolish or impair the rules which the Legislature has established for securing the fitness of the functionaries in whose hands the main duties of Indian administration are to be reposed—rules to which the present Act makes a material addition in the provisions relating to the College at Haileybury. But the meaning of the enactment we take to be that there shall be no governing caste in British India; that whatever tests of qualification may be adopted, distinctions of race or religion shall not be of the number; that no subject of the King, whether of Indian or British or mixed descent, shall be excluded either from the posts usually conferred on our uncovenanted servants in India, or from the Covenanted Service itself, provided he be otherwise eligible consistently with the rules, and agreeably to the conditions, observed and enacted in the one case and in the other.

'106. In the application of this principle, that which will chiefly fall to your share will be the employment of Natives, whether of the whole or the mixed blood, in official situations. So far as respects the former class, we mean Natives of the whole blood, it is hardly necessary to say that the purposes of the Legislature have in a considerable degree been anticipated. You well know, and indeed have in some important respects carried into effect, our desire that Natives should be admittted to places of trust as freely and extensively as a regard for the due discharge of the functions attached to such places will permit. Even judicial duties of magnitude and importance are now confided to their hands, partly no doubt from considerations of economy, but partly also on the principles of a liberal and comprehensive policy. Still a line of demarcation, to some extent in favour of the Natives, to some extent in exclusion of them, has been maintained. Certain offices are appropriated to them; from certain others they are debarred; not because these latter belong to the Covenanted Service and the former do not belong it; but professedly on the ground that the average amount of Native qualifications can be presumed to arise to a certain limit. It is this line of demarcation which the present enactment obliterates, or rather, for which it substitutes another wholly irrespective of the distinction of races. Fitness is henceforth to be the criterion of eligibility.'

"Here, then, was a sufficiently clear and distinct enunciation of the general policy which the Government of India was expected and intended to follow. On the successive steps which have been taken from time to time to give effect to that policy, I must touch very briefly. The first of those steps was the passing of Lord Macaulay's famous Black Act of 1836. With the circumstances that attended the introduction and passing of that Act all the readers of Macaulay's life are familiar. The controversy which raged around the measure resembled in many of its features the controversy which has raged around the present Bill, and particularly in the predictions which were then so confidently made, and which have been so signally falsified by the event, that, if the measure became law, India would be deserted by British capital. Lord Macaulay's Act has now for nearly 40 years maintained a peaceful and useful existence on our Statute-book, and I am not aware that a single British planter or merchant is a penny the worse for its existence.

"Lord Macaulay's measure applied only to the Civil Courts. But he left on record an opinion that similar legislation ought to be applied to the Criminal Courts, and in 1843 the Indian Law Commissioners submitted proposals for this purpose. These proposals were considered and commented on by the Judges of the Supreme Court and others, but no steps were taken to give legislative effect to them until 1849. In that year, Mr. Drinkwater Bethune, who was then Legal Member of Council, prepared and published with Lord Dalhousie's assent the drafts of three Bills, one of which proposed to make all persons amenable to the criminal jurisdiction of the Company's Magistrates

and Courts outside the Presidency-towns, subject only to the reservation that no such Magistrates or Courts should have power to pass a sentence of death on any of Her Majesty's subjects born in England, or on the children of such subjects. There was no restriction of this jurisdiction to Justices of the Peace. The three Bills met with much opposition, and were eventually withdrawn, for reasons explained by Lord Dalhousie in a minute from which I will quote.

'I am most clearly of opinion,' he says in his minute of 19th April, 1850, 'that the tim has come when the exemption in question ought to be abolished, and that British subjects should now be brought within the jurisdiction of Criminal Courts in the Mufassal, as they have long since been brought under the jurisdiction of the Civil Courts there. But, after an anxious examination of the subject, I must declare that I am not prepared to place the British subject under the criminal law which is now administered in those Courts, or to deprive him of his privilege of being judged by English law' (not, mark, English Judges) 'until we can place him under a criminal law equally good, or at all events as good as the circumstances of India will admit of. This is very far from being the case at present. The criminal law administered in the Mufassal is in substance the Muhammadan law, modified from time to time by the Regulations and expounded by the decisions of the Sudder Court.'

"Accordingly, he urges the great importance of pressing on the completion and passing of the Penal Code with such amendments as should be found necessary.

'I cannot,' he says, 'conceive it probable that a Code prepared by men so eminent, judged and approved by so many men of learning and experience, should appear to the Legislative Council so bad in itself, and so incapable of amendment, that they should advise its rejection altogether. If such, however, should be the case, the responsibility of the Governor General and the Legislative Council will be at an end. We have proclaimed to all India by the publication of the draft Acts that it is our conviction that British subjects should be placed within the jurisdiction of the Mufassal Courts, and that we have resolved so to enact. We cannot, without discredit and loss of public confidence and respect, abandon that resolution; we ought not to abandon it. There is no discredit in delaying the passing of the Act for the purpose of providing any possible guarantee by the enactment of a fitting criminal law for the liberty and property of British subjects when placed under the operation of the Act. But we must not, by relinquishing our intentions, give others reason to believe that we have been scared from our right determination by public outcry, still less that we may have allowed ourselves to be driven from the enforcement of our conscientious conviction of what is right and necessary by difficulties which we encountered in the way. The establishment of the same criminal law generally in the Indian Empire is a wholesome measure, and it must now be accomplished.'

"In 1853, the Charter of 1833 was renewed, and by the Statute passed for that purpose Her Majesty was empowered to appoint in England a new Commission to revise the work of the former Indian Law Commissioners; and to this body the Penal Code and the question of a Criminal Procedure Code, which had been so long pending, were referred. The Commissioners accordingly prepared a draft which eventually, and after undergoing various modifications, became law as the Criminal Procedure Code of 1861, and as the basis of our existing Criminal Procedure Code. By section 5 of this draft it was proposed to enact that—

'No person whatever shall by reason of place of birth or by reason of descent be in any criminal proceedings whatever excepted from the jurisdiction of any of the Criminal Courts.'

"In fact, to apply to the Criminal Courts the enactment which Lord Macaulay had applied to the Civil Courts. The Commissioners said in their notes:—

'We assumed that the special privileges now enjoyed by European British subjects were to be abolished. In the system which we propose, all classes of the community will be equally amenable to the Criminal Courts of the interior.'

"They proposed, however, to give the High Court and Sessions Court exclusive jurisdiction (1) in offences reserved in the schedule of offences appended to the Bill as triable only by such Courts; (2) in theft and receiving when the property was worth over Rs. 500; and (3) in all cases against public servants of certain classes. This last exemption, making a distinction in favour of the official classes, was obviously a weak point in the Commissioners' proposals, and was made the subject of the most effective attacks which were directed against them in the subsequent debates in the Legislative Council.

"These debates, which took place in the years 1857, 1859, and 1861, have already been referred to by my hon'ble friend Mr. Evans and others, and I

should not be justified in occupying your time by dwelling further upon them. Suffice it to say, that they were interrupted by the Mutiny; that, although Sir Barnes Peacock in introducing the Bill supported the principle of the section which I have quoted, and said he could not understand on what grounds it could be contended that any one class of persons should be exempt from the jurisdiction of any of the Courts of the country, yet after the Mutiny he saw cause to change his mind. The Code as it finally passed in 1861 left matters relating to the jurisdiction over European British subjects very much as they were before, except that it restricted the jurisdiction then exercised in certain cases over European British subjects in the interior by Native Magistrates and others not being Justices of the Peace. Such was the conclusion arrived at in 1861, and under the circumstances of the case, when the terrible events of the Mutiny were still fresh in men's memories, when it yet remained to be seen what would be the effect of introducing English substantive law and English rules of procedure into the Criminal Courts of the interior, I do not say that it was an unreasonable, and it certainly was a very intelligible, decision.

"The Penal Code had become law in the previous year as Act XLV of 1860, and, by the enactment of this Code and of the Procedure Code of 1861, the most forcible of the objections which had on previous occasions been urged against extending the criminal jurisdiction of Courts in the interior over European British subjects, the one objection to which Lord Dalhousie attached weight, was removed in the way in which Lord Dalhousie had contended that it ought to be removed.

"The Code of 1861 was amended in various ways by Acts passed in 1861, 1862, 1866, and 1869, and it was clear that it was susceptible of considerable improvement. Accordingly, the Secretary of State in 1869 referred the condition of the Code and its revision to the Law Commissioners at home, and they reported in favour of bringing all classes of persons under its provisions. This, of course, was tantamount to a recommendation that European British subjects should be brought under the jurisdiction of the Criminal Courts of the interior, to which alone the Criminal Procedure Code then applied.

"The report to which I have referred was made in 1870, and in the same year Sir James Stephen revised and re-arranged the Code of 1861, and introduced the measure which subsequently became law as the Code of 1872. The Bill, as first introduced, did not substantially affect the jurisdiction over European British subjects, and it was only at a later stage that the amendments were introduced by which it was proposed to extend the powers of Criminal Courts in the interior over that class of Her Majesty's subjects. And it was in connexion with this proposal that the compromise, to which so much reference has been made, was entered into. There is nothing on record to show the persons with whom, or the manner in which, the compromise was arrived at, but I have no doubt that the accounts of it which have been since given by Sir James Stephen, Mr. Evans and others are substantially accurate. It appears to have been some kind of informal arrangement or understanding to which at least some members of the Select Committee on the Bill were parties. Two things are clear about it, first, that it was not regarded as binding on the Select Committee as a whole, because one of the members of that Committee voted against the proposals which it embodied, and secondly, that the Executive Government were not a party to it, because the majority of them voted against the proposal. But I need hardly say that, even if the agreement had been as formal as it was informal, it would not have tied the hands of subsequent Governments or have prevented them from passing such enactments as might from time to time be required in the interests of justice, good administration, and sound policy.

"Now, to a compromise, as such, in a matter of this kind, I have no manner of objection. It is reasonable enough in legislation, as in other matters, when you can't get all that you wish, to take what you can get and make the best of it. The main question is whether and how far the particular compro-

mise arrived at is likely to produce inconvenient consequences hereafter, either by abandoning a principle which ought to be maintained or in any other way. And, looked at from this point of view, the compromise of 1872 does appear to me to have been open to somewhat serious objections. I don't say this for the purpose of condemning the compromise, which was, as Sir John Strachey frankly admitted, open to criticisms of every kind, but for the adoption of which at that particular time there may have been strong reasons of a practical nature. But I say it rather for the purpose of showing how difficult it is to make any arrangement on a subject of this kind to which valid objections cannot be taken.

"The chief objections to which the arrangement of 1872 appear to me to have been open are three. First, that, although put forward as a compromise, an attempt was made to defend it on principle, and that the arguments by which it was so defended are unsound and fallacious. Secondly, because the form which the compromise assumed, and the grounds on which it was supported, were not wholly consistent with the principles in accordance with which we are bound to govern India. Thirdly, that it contained the seeds of practical difficulties which were certain to mature at no very distant date.

"One of the main arguments by which the compromise was supported was that in this country, as distinguished from England, personal, as opposed to territorial, laws prevail on all sorts of subjects, and that their maintenance is insisted on with the utmost pertinacity by those who are subject to them. The Muhammadan, it was said, has his personal laws, and the Hindú his. Now, it is perfectly true that we have undertaken to apply the rules of Muhammadan or Hindú law, as the case may be, to questions regarding succession, inheritance, or marriage or caste, or any religious usage or institution. But have we ever undertaken that a Muhammadan shall be tried by a Muhammadan or a Hindú by a Hindú? And, if not, how can the argument be used to justify the disqualification of a Native for exercising jurisdiction over an Englishman?

"The whole of the argument sounds to me very much like the echo of a past controversy. There had been, not many years before 1872, a time when the Englishman and the Native of India were under different systems of criminal law, owing to the fact that the criminal law administered in the Courts of the Presidency-towns was English law, whilst the criminal law administered in the Courts of the interior was in the main Muhammadan law; and, when this was the case, the Englishman might very reasonably object, and did object with great vigour, to being placed under a criminal law which was not his own. But the Penal Code of 1860 and the Criminal Procedure Code of 1861 had effaced, and it was their main object to efface, these distinctions, and by the passing of these Codes the argument based on difference of laws was deprived of all its significance.

"Very similar considerations apply to an argument which, if I remember rightly, was not used in 1872, but on which a good deal of stress has been placed since—the argument based on the fact that special tribunals for Europeans exist in countries such as Turkey, Egypt, China, and Japan. It is perfectly true that such tribunals do exist, and that we reserve to them jurisdiction over our fellow-subjects. But why? Because, with all the respect that is due to the Governments of those countries, we have not as yet sufficient confidence in their system of administration to place complete reliance on their judicial officers, who are neither appointed, removed, nor controlled by us, and because the criminal law and the criminal procedure which they administer are not in accordance with the principles observed in English Courts of law. But does any one of these considerations apply to those of Her Majesty's Courts which are presided over by Natives of India? The Judges are appointed by us; they are removable by us; their proceedings are subject to our control and supervision in the minutest particulars; the law which they administer is not Foreign law, but English law; and the Codes in which the law is embodied are the work of English lawyers, and are, to quote Lord Dalhousie's language, founded on the principles and instinct with the spirit of the common law of England.

"I have said that the general line of argument by which the 1872 compromise was supported does not appear to me to be wholly consistent with the principles which are laid down in the Act of 1833, and which I hold that we are bound to maintain. Do not let me be misunderstood on this point. I do not mean to suggest that there is any technical inconsistency between anything contained in the Charter Act and the Queen's Proclamation on the one hand, and any of the provisions of the Criminal Procedure Code on the other hand. If there had been any such inconsistency, of course the latter provisions would not have been allowed to become law. But I do say that the framers of the 1872 Code sailed near the wind. To disable a man on grounds of race from performing an important part of the duties ordinarily attached to an office approaches perilously near to debarring him from holding the office, and certainly places great practical difficulties in the way of his admission to the office.

"Observe that up to 1872 the controversy had been, not whether a European British subject should be triable by a Judge of a particular race, but whether he should be triable by a particular class of Courts—the Courts of the interior—as distinguished from the Courts of the Presidency-towns; that the question of race, when it arose at all, only arose incidentally, and that it was only by indirect means that the jurisdiction of Natives over European British subjects was either limited or excluded. The legislation of 1872 gave jurisdiction to the country Courts, but expressly took it away from the Native Judges of those Courts as Natives. It removed the line by which jurisdiction over European British subjects had previously been limited, and drew it between other points. And in so doing it seems to me to have drawn the line precisely at the place where the authors of the Act of 1833 intended that it should not be drawn, and to have emphasized and accentuated the race-disabilities which it was the object of the Charter Act to remove.

"One of the most unfortunate results of the particular form which the compromise of 1872 assumed, and of the particular arguments by which it was defended, was that it attached, or at least materially helped in attaching, an entirely new meaning to that well-worn phrase, the right to trial by peers. We have been repeatedly informed that the Englishman enjoys an undeniable and indefeasible right to be tried by a Judge or Magistrate of his own race, and that this is what is meant by the right to trial by peers which is supposed to be guaranteed by Magna Charta. Now, I do not propose to discuss the precise meaning of the famous passage which declares that no free man is to be imprisoned, and so forth, *nisi per legale judicium parium suorum vel per legem terræ*. Those who are curious on the subject cannot do better than turn to the very instructive passage in Sir James Stephen's History of the Criminal Law of England, in which he argues that the right to trial by peers was confined to that limited class of persons who were vassals of the King's Courts, and that the only right which was guaranteed to ordinary free Englishmen was the right to trial by the law of the land, that is to say, by the ordinary course of justice. If I were disposed to approach the subject merely from an antiquarian point of view, I might say with perfect accuracy that Magna Charta has as much to do with the Bill now before us as Domesday Book has to do with the Permanent Settlement. But I do not think that great constitutional enactments such as Magna Charta, and, I may add, the Charter Act of 1833, ought to be dealt with in any such spirit. What is more to the purpose is to ascertain how they have in practice been understood and acted upon.

"It has been confidently asserted, and I find the assertion repeated over and over again in the papers relating to the Bill, that as a matter of law an Englishman has a constitutional right to be tried in criminal matters by a Judge of his own race, and that as a matter of fact this right has always been enjoyed by Englishmen settled in India. Now, I must take leave to deny both these propositions.

"As to the argument based on constitutional right, it seems to be a plant of very recent growth even in India, for in the earlier stages of the controversy

the right which was supposed to be guaranteed by Magna Charta and to be affected by such measures as those prepared by Mr. Drinkwater Bethune, was this right to trial by jury, which is a very different thing.

"And outside India, in other parts of the world inhabited by men of English race or descent, I am not aware that this argument is ever used or recognized. I have made some inquiries on the subject, and I find that in no British colony is there any distinction between Europeans and Natives with respect to the jurisdiction exerciseable over European British subjects, or persons belonging to any similar class. There is the same law for both Europeans and Native, and if a Native is appointed to administer the law, he has exactly the same amount of jurisdiction as a European. For instance, in the neighbouring island of Ceylon, where, as in India, we have English settlers in the midst of a Native population, there are Native judicial officers qualified to exercise, and exercising, criminal jurisdiction over European British subjects. And in the colony of Hongkong I am told that there is at least one Chinaman who has acted successfully as a Magistrate.

"That is how the matter stands outside India, and in India itself it would be easy to disprove the assertion that European British subjects have never been subject to Native criminal jurisdiction in places outside the Presidency-towns. But in order to do this fully it would be necessary to refer to a good many Acts and Regulations with which I do not propose to weary you. Inside the Presidency-towns, Magistrates and Judges have never been subject to any disqualification or disability, and Natives of the country have always been eligible to be appointed, and have been freely appointed; Justices of the Peace and Presidency Magistrates with jurisdiction over European British subjects as well as over others. So that this new-fangled theory about the meaning of trial by jury squares neither with the law nor with the facts, and I cannot help thinking that the arguments by which the 1872 compromise was helped out were mainly responsible for its invention.

"And, lastly, it appears to me that the particular compromise then entered into contained within itself the seed of future difficulties, which has since borne fruit. It is perfectly true that, if the proposal to confer jurisdiction on District Magistrates and Sessions Judges as such, the proposal which was lost by so narrow a majority, it is true that, if this proposal had been carried, its immediate practical effect would have been *nil*, because, as my hon'ble friend Mr. Hunter has pointed out, at the time when the Code of 1872 became law, there were only four Native members of the Civil Service, none of whom had risen to the post of District Magistrate or Sessions Judge, and three of whom were youths of a few months' standing. But there were such men in the service, Natives of India who had entered the service under the Statute which had founded the competitive system. Another Statute had been passed for the express purpose of admitting Natives of India to posts which had been previously confined by law to the Covenanted Civil Service, and it was well known to be the settled policy of the Government of India to encourage and facilitate the admission of Natives of India to such posts. Under these Statutes, and in pursuance of this policy, the numbers of the Native members of the service has since 1872 increased from 4 to 33, and some of them have already attained to the rank of District Magistrate and Sessions Judge. Thus, the question which might in 1872 have been shelved as being of mere theoretical importance, has now, to quote again Mr. Hunter's language, 'acquired present and practical bearing.'

"Another circumstance has taken place since 1872 which has a direct bearing on this question, and it is a circumstance immediately connected with the passing of the Code of 1882. Before that year the criminal procedure of the Courts in the Presidency-towns and the criminal procedure of the Courts outside those towns were regulated by different Acts or sets of Acts. There were the High Court Criminal Procedure Act and the Presidency Magistrates Act, applying exclusively to the Courts in the Presidency-towns (or almost exclusively, for the High Court at Allahabad was an exception), and there was the Criminal Procedure Code, applying exclusively to the Courts outside these towns. In the former of these Acts there was no trace or vestige of any race disability, for a High Court Judge or a Presidency Magistrate, whatever may be his race, whether he is a European British subject or not, has jurisdiction over European British subjects. Whilst in the Criminal Procedure Code there was the marked and stringent exclusion of Natives of India as such from exercising this jurisdiction.

"Now, it was felt at the time when the last Code was under discussion that the old distinction between the Presidency-towns and the Mufassal, the distinction which plays so important a part in the earlier days of British Indian history, had to a great extent disappeared, and that the system of criminal procedure obtaining in all the Criminal Courts of the country could with advantage be brought under, and regulated by, one and the same law. Accordingly, the two sets of Acts, the Acts which ignored the race-disability, and the Acts which maintained them, were brought together. The High Court Procedure Act and Presidency Magistrates Act were repealed, and the new Criminal Procedure Code was applied to the Presidency-towns as well as to the Mufassal. This process naturally brought into still greater prominence what Sir Ashley Eden described as an anomaly, and made it only natural to inquire, whether, when other distinctions between town and Mufassal were being removed, this distinction should not be removed also, and whether the rule of giving powers according to personal fitness should not be applied to all parts of the country.

"This was the rule which we sought to apply by the Bill which was introduced last February. We sought to apply the principles laid down by the Charter Act and Queen's Proclamation, by removing, so far as existing circumstances would admit, the distinction drawn by the Code of 1872 between European and Native Magistrates and Judges with respect to their powers over European British subjects. And we sought to apply those principles in the most cautious and guarded manner. The Bill has been written and spoken about as if it had proposed to confer on every Native Magistrate and Judge unlimited powers over every British subject, and much of the language used about the measure is intelligible on no other hypothesis. Nothing can be further from the truth. The power to be conferred was of the most limited extent, and was so fenced and hedged about by numerous restrictions in the form of powers of control, powers of supervision, powers of transfer, rights of appeal, and the like, as to render any risk of injustice practically impossible. Nor were the powers to be conferred on all Magistrates and Judges. The Bill proposed to confer them absolutely on District Magistrates and Sessions Judges only, but it empowered Local Governments in their discretion to extend the powers to other officials belonging to certain specified classes. It thus gave to a sound principle a limited application in the first instance, and provided for its gradual extension if and as its extension should be found practicable or desirable.

"However, when the opinions on the Bill came in, we found that on the one hand fears were expressed lest the discretionary powers which we proposed to give Local Governments should be unwisely and lavishly exercised, and that on the other hand the majority of Local Governments would be unwilling to exercise them at all. Under these circumstances, we came to the conclusion that it would be better to drop a provision which had excited unnecessary apprehensions, and which was likely to remain for some time a dead-letter. By so doing we gave up the attempt to apply the principle of selection by fitness in the precise manner and to the precise extent which we had originally contemplated, but we did enough to meet the immediate necessities of the case, and to maintain a principle which had been directly attacked and which it was our duty to uphold. The Bill as thus modified would enable us to give effect to the suggestion out of which these legislative proposals originated, namely, that when Native officials had risen to high and responsible posts in the public service they ought to be given equal power with their English colleagues of the same rank, and it would maintain the principle that, where

personal fitness had been established, race ought not to operate as a disqualification.

"And the test of fitness which it would impose is a test to which no reasonable person could object on the ground of insufficiency. For to say that a Native of India who has been entrusted with the powers exercisable by a District Magistrate or Sessions Judge, who has risen to the position of being the chief executive officer or the chief judicial officer in an area the average population of which in Bengal is about a million and a half, to say that such a person cannot be trusted to exercise with justice and discretion the very limited jurisdiction which is exercisable over European British subjects outside the Presidency-towns, is to say that no Native of India, however long and complete may have been his training and experience, however high and responsible may be his position in the public service, is fit to exercise that jurisdiction. And that is a proposition which few will be bold enough to maintain.

"This, then, was the form to which, in deference to expressions of opinion to which we had undertaken and were bound to give the fullest consideration, we were prepared to reduce a measure originally limited in its scope. And we were prepared to furnish an additional safeguard against the possibility of any risk of injustice by increasing the facilities already provided by the law for obtaining a transfer of the proceedings, or, as it would be called in England, a change of venue, in any case where such a transfer might appear to be desirable in the interests of justice. The provisions suggested for that purpose by the Chief Justice of Madras would be available for all persons, Europeans and Natives alike.

"Such were the modifications which, as has been already announced by His Excellency the Viceroy, we were and are prepared to recommend for adoption by the Select Commitee to which this Bill is to be referred. However, since that announcement was made, it has been strongly pressed upon us by persons whose opinion is entitled to great weight that, however moderate and cautious our proposals might be, yet there was a certain risk of an explosion of race-feeling taking place when the new law came to be put into force. And however much we might deplore and condemn the spirit which renders such a risk possible, yet we felt it to be our duty to minimise that risk by any means which might appear to be practicable and justifiable. Accordingly, we have agreed to accept a suggestion which has been made to us with this view, and which would have the effect of slightly extending the system of trial by jury. The suggestion is that a European British subject, when brought for trial before a District Magistrate or Sessions Judge, should have the right, if he thinks fit to claim it, to be tried by a jury, such as is provided for by section 451 of the Criminal Procedure Code, subject to two conditions—first, that no distinction is to be made between European British Magistrates and Judges, and secondly, that the punitory powers of District Magistrates over European British subjects are to be doubled, that is to say, are to be extended to imprisonment for six months or a fine of two thousand rupees. The punitory power of other Magistrates, that is to say, the power to imprison for three months or impose a fine of one thousand rupees, will be left untouched, and in cases tried before them the right to a jury will not be given.

"The adoption of this suggestion will maintain a complete equality between European and Indian District Magistrates and Sessions Judges, and may at the same time provide in certain cases a useful safety-valve against such a risk as that to which I have referred.

"The practical effect of adopting the suggestions will, I believe, be slight. As to trials before District Magistrates, two things must be borne in mind; first, that the total number of criminal charges against European British subjects in the Mufassal is small, and secondly, that the total number of cases of any kind tried by District Magistrates is very small indeed. From these two premises it is not difficult to draw a conclusion. As regards trials before Sessions Judges, it will be remembered that all such trials must under the existing law be either by jury or with the aid of assessors; that any Local Government may by executive order direct that the trial of all offences,

or of any particular class of offences, before a Sessions Judge shall be by jury; and that such orders have been applied to many parts of India, including some of the most important districts of Bengal and the whole of Assam.

"The question as to the merits or demerits of the system of trial by jury whether generally or as applied to British India is a large question into which it is not necessary for me to enter now. Whatever is to be said for or against the system, it must be admitted that it already exists in British India—that it is an institution to which Englishmen are by long custom and not without good reason attached, and of which no Government would wish to deprive them without strong and sufficient cause. But I need hardly say that its maintenance, either in its existing form or with the extension which we propose to give it, is dependent on the assumption that it is capable of being so worked as not to cause any failure of justice or other grave evil, and that an instrument of justice which is intended and ought to be a terror, will not be converted into a source of impunity to evil-doers.

"And this leads me to say one word in conclusion about a subject to which frequent reference has been made in connexion with this measure. I mean the necessity of maintaining what is called prestige. This is not the time nor the place for discussing the '*arcana imperii*,' and I do not propose to inquire in what sense it is true that British supremacy in India was obtained by, or rests on, the sword. I believe that in a far truer sense our empire is an empire of law. 'The secret of our strength in India,' it has been well said, 'is that we have endeavoured truly and indifferently to do justice, according to the best of our skill and understanding, to all sorts and conditions of men.' It is not on the enjoyment of legal privileges that British authority in India rests: it is not by the removal of such privileges that British authority will be affected. What will affect it will be anything which weakens the conviction that we are resolved and able to administer equal and impartial justice for the benefit of and against all classes of Her Majesty's subjects."

The Hon'ble MR. HUNTER said:—"My Lord, I understand that in voting for the Motion now before the Council, hon'ble members express at this stage their approval of the general principle affirmed by the Bill. The important amendments which have just been indicated in the speech of my hon'ble and learned friend, are not yet before the Council in a substantive form. With regard to them, therefore, I shall make only two observations at present. On the one hand, I acknowledge that, as a whole, they will render the Bill a more acceptable measure. On the other hand, I deeply regret that one of those amendments, by extending to European British subjects, and to them alone, the jury-system in trials before Magistrates, gives a fresh recognition to race-distinctions in matters of judicial procedure. But the question immediately before those members who agree with me on the main issue, is not whether they dislike the proposed amendments, or how far they think them capable of improvement by the Select Committee, but whether the proposals are of such a character as to justify them in withholding their vote from the general principle affirmed by the Bill as it lies on the table to-day. In my judgment the proposed amendments do not justify that course; and I observe that influential organs of Native opinion recognise the mistake which that course would involve. My hon'ble friend, Mr. Amir Ali, will doubtless acquaint the Council with the views of the Muhammadan community in this matter. Among other less homogeneous sections of the Indian races, opinion has scarcely yet matured, but I believe that the view which will ultimately prevail is that arrived at by the *Indian Spectator*, the leading Native newspaper in Bombay—

'Those of our countrymen,' says this Native journalist in his last issue, 'who will calmly survey in all its bearings the present aspect of the controversy, will, we are sure, find fair cause for congratulation in the settlement of this needlessly prolonged discussion. * * * District Magistrates and Sessions Judges, Europeans and Natives alike, are now on a par as to criminal jurisdiction. This substantive grievance has at last been redressed.'

"The last sentence expresses my own view. In 1872, this Council, in the absence of any representative of either the Hindu or the Muhammadan com-

munity, affirmed by a very narrow majority, a distinction based upon race, between judicial officers belonging to the same service—officers filling the same appointments, and exercising in all other respects the same jurisdiction. I hope that to-day the Council will, without a division or by a large majority, affirm the opposite principle. I do not disguise, and I do not underrate, the importance of the concession by which alone that unanimity could have been attained. But I think that the public agitations and painful personal estrangements of the past year will not have been encountered in vain, if the Council affirms by its vote to-day that the European and Native servants of the Crown in India, holding the important offices of District Magistrate and Sessions Judge, shall henceforth exercise the jurisdiction pertaining to their office without distinctions between them based on race or creed. Such an affirmation will be in strict accordance with the Queen's Proclamation when Her Majesty assumed the government of India. The intention of that Proclamation has always seemed to me to be as clear as simple and noble words can make it. But doubts have lately been expressed as to its binding effect. The present Bill will set at rest those doubts, so far as concerns the impartial admission of Her Majesty's Indian subjects, irrespective of colour or creed, to discharge the duties of offices to which they have been duly appointed, and which they are admitted, apart from race-distinctions, to be admirably fitted to fill."

The Hon'ble MR. AMÍR ALÍ said:—"My Lord, I wish to make a few remarks on the Motion before the Council, as I feel it will not be right on my part to give a silent vote upon it without explaining to some extent my own views and the views of my community with regard to this measure. We have been for some months past living in an atmosphere of misconception. People who at any other time would have been most unwilling to impute improper motives to their worst enemies have not hesitated to accuse of dishonesty every individual who happened to disagree with them in respect of the merits of the measure in question; and, though the controversy has now assumed a new phase, the uncharitableness which has hitherto characterised the discussions has, I fear, not quite ceased yet. I may, therefore, be allowed to state that the views which I entertain on this subject, and which I take this opportunity of expressing in Council, are not the result of anything that has transpired within the last twelve months, formed in the heat of controversy and likely therefore to be biassed. My Lord, those views were first placed before Government in the year 1879. I was holding then the office of Chief Magistrate of Calcutta, and in that capacity my opinion was asked by Lord Lytton's Government upon the Bill which now forms the Code of Criminal Procedure. I ventured to point out then, what I have repeatedly urged since, that the invidious distinction created by the disability clauses of the Code, so far as they affected the higher judicial offices, was a mistake both from an administrative as well as a political point of view; and though, at that time, as far as I know, there was no non-European District Magistrate or Sessions Judge, yet it seemed to me that the time was not far distant when there would be several such officers, and that it would give rise to considerable inconvenience if the disability clauses were allowed to remain unmodified on the Statute-book. My Lord, the difficulty which I apprehended in 1879 clearly made itself felt in 1883—sufficiently clearly to induce the Government, acting in conformity with the principles laid down by a succession of Viceroys and Secretaries of State, to bring in a Bill to remove, within a very limited extent, the disabilities under which non-European officers laboured, and to place them, for certain purposes, on a footing of equality with their European fellow-officers. This measure gave rise to a most vehement opposition on the part of the Anglo-Indian community. Nobody, as far as I know, in our community quarrels with them for their opposition, but we cannot help regretting that men who ought to have known better, and who certainly owed some gratitude to the people of India, should so far forget themselves as to indulge in language alike discreditable to themselves and their community, and which had the effect of converting this legal controversy into a race-difficulty. So far as we were concerned, we hailed with satisfaction the introduction of this measure as the first *bonâ fide* endeavour on the part of the British Government

to give practical effect to the policy and principle enunciated in 1833, and emphatically re-affirmed by Her Majesty in Her Proclamation. It will, I hope, not be considered inappropriate by the Council if I say here that I read with considerable surprise the other day that, in Sir Fitzjames Stephen's opinion, the Queen's Proclamation 'was a mere expression of sentiment and opinion,' and nothing more. It is somewhat strange that a writer of his eminent ability should stoop, however unconsciously, to such a misrepresentation regarding the character of this great public document, when Her Majesty's own words are on record to falsify the assertion. Mr. Theodore Martin gives the history of the Proclamation in the following words:—

'The Act for the better Government of India had become law on the 2nd of this month (August 1858), and the Proclamation had to be settled, which was forthwith to be issued by the Queen in Council, setting forth the principles on which the government of that country was for the future to be conducted. The draft of this document was transmitted from England to Lord Malmesbury, the Minister in attendance on Her Majesty, and laid by him before Her upon the 14th. It did not seem to the Queen to be conceived in a spirit, or clothed in language, appropriate to a State paper of such great importance."

"And then follows Her Majesty's letter to Lord Derby, conveying Her instructions for the preparation of the Proclamation:—

'The Queen has asked Lord Malmesbury to explain in detail to Lord Derby her objections to the draft of the Proclamation for India. The Queen would be glad if Lord Derby would write it himself in his excellent language, bearing in mind that it is a female Sovereign who speaks to more than a hundred millions of Eastern people on assuming the direct government over them, and after a bloody civil war, *giving them pledges which her future reign is to redeem, and explaining the principles of her Government*. Such a document should breathe feelings of generosity, benevolence and religious toleration, and point out *the privileges which the Indians will receive on being placed on an equality with the subjects of the British Crown*, and the prosperity following in the train of civilization.'

"These words of Her Majesty leave no possible room for doubt as to the character of the pledges given by her to her Indian subjects. The further remark of Sir Fitzjames Stephen, that the Proclamation has no legal force whatever, may be technically correct from the standpoint of a *special pleader*; but it must be remembered that that it was a solemn Act of State, prepared by Her Majesty's Government, guaranteeing in the most formal manner the rights and privileges of the people of India upon the same basis as those of Her Majesty's British subjects, and it will require greater casuistry than ever Sir Fitzjames Stephen can bring to bear on the subject before the people of India will be convinced that Her Majesty's solemn words have no legal value or force when the rights of the different communities subject to her sway are weighed in the scales of justice. My Lord, it has been urged by some people that the measure in question would have had the effect of depriving European British subjects of a cherished privilege to be tried by their peers. I may be allowed to say that no person—certainly no person who is not an Englishman—can be more anxious than I am to see Her Majesty's European British subjects secure in the enjoyment of any legislative privilege which they possess, and which does not conflict with the just interests of Her Majesty's other subjects. It seems to me, however, that the argument to which I have referred is based on a misconception. If people will insist on looking at a thing upside down, it must necessarily appear wrong. Such seems to me to be the view entertained by those people who consider that the effect of this measure would be to deprive European British subjects of a privilege which they now possess. Your Lordship's Government did not propose to take away any privilege from the European British subject, or to lower their status in any shape or degree. What the Government proposed to do was to raise the status of a few specially qualified officers, whom the Local Governments thought were fitted to hold certain high offices, and who had proved their capacity to hold such offices by the probity of their conduct and their intellectual attainments—in fact, to assimilate them for certain purposes under the Criminal Procedure to European subjects. Sir Fitzjames Stephen himself had in the year 1872 declared certain people, who were neither born in the British Isles nor were the descendants of persons born in the British Isles, to be European British subjects within the meaning of the Act. The present measure was not intended

to have any such far-reaching or extravagant effect. It simply meant to declare that whenever a Native of India attained a high position in the judicial service he should be raised to the status of a European British subject for the purpose of discharging certain duties which European British subjects alone could under Sir Fitzjames Stephen's Code discharge. My Lord, it is on these grounds and for these reasons that the Muhammadan community—I may say the Native community at large—have supported the measure. The interest which we have taken was no doubt of a theoretical character, and therefore we would be glad if any satisfactory and practical solution can be provided for the difficulty which has unfortunately arisen between Government on one side and the Anglo-Indian community on the other. The proposed arrangement, however, owing to the vague and somewhat inaccurate manner in which it was put before the public, has naturally excited some alarm in the minds of the Natives of India, and the question has assumed a greater practical importance. I perfectly admit that by the arrangement in question the principle of the Bill has been thoroughly maintained with the acquiescence of the Anglo-Indians, which by removing the bitterness of the controversy constitutes no small gain to the cause of good government. At the same time, I cannot conceal from myself the fact that, unless it is carefully safeguarded, a machinery which is devised for securing the safety of European British subjects may be turned into an engine for the denial of justice to the Natives of India. It will be the duty of the Select Committee to devise sufficient safeguards against such an undesirable contingency which would be prejudicial to the best interests of the Natives and Foreigners alike. In view of the extension of the jury-system to Europeans and the expectant attitude of the Native community, it is a matter well worthy of the consideration of Government whether the jury-system or the right to claim a commitment to the Court of Sessions on the lines of the recent Summary Jurisdiction Act in England, if necessary in especially selected tracts, may not with advantage be extended to the Natives of India. The time when this matter should engage the attention of Government is one for their consideration, but I trust that an enquiry how far the boon can be granted may not be long deferred. I desire to take this opportunity to mention that I shall make certain proposals in Select Committee which are in *pari materia* with the proposed arrangement, and do not affect the European British subject, but are intended simply to ensure efficient administration of justice. I refer especially to certain modifications in section 526 of the Code. I trust that the suggestions I intend to put forward will be accepted by the Committee, as I feel sure that they will to a large extent satisfy the Native community, and at the same time place the administration of justice upon such a basis as would command the confidence and approbation of all classes of Her Majesty's subjects."

The Hon'ble MR. MILLER said:—"I have listened attentively to the statement made by the hon'ble and learned mover, and I fail to find anything in what he has said to induce me to change my opinion that the wisest and most statesman-like course would have been to have dropped this Bill long ago. Still I would at this stage do nothing to bar a settlement of the question; and, if it were possible now to refer the Bill to a Select Committee on a clear understanding of the principles on which the question is to be discussed, I should be willing to support that course, leaving details to be settled in Committee; but I would state, in the clearest manner possible, that if there is, as I fear is the case, reason to believe there is any double meaning possible in the terms of settlement which have been announced to the public, the difficulties which have been encountered will be tenfold increased, and I cannot support the Motion that the Select Committee be directed to report in a week, unless the clearest agreement has been come to. It will not be possible otherwise to report promptly, and if it be attempted it will only lead to worse mischief."

The Hon'ble MR. GIBBON said:—"My Lord, I am not prepared to support the Motion that the Bill as it now stands shall be referred to a Select Committee; certainly not with instructions that the Committee report in a week. In an important matter such as this is, we would require to have the proposals of the Government fully laid before us. We require time to consider the provisions of the measure more carefully than we have as yet been able to do. Until now we have had before us only the Bill as originally proposed, with the concessions your Lordship, in our meeting of the 7th December, declared yourself ready to make to public opinion. Until now we have had no declaration from Government as to any further concessions it was ready to make. We had the newspaper reports of an agreement come to with the public; but I venture to say that, on comparison, it will be found that the statement now made by the hon'ble mover of the Bill is very different from the agreement published. I am ignorant of the rules of your Lordship's Council, but it seems to me that the Committee is called upon to draft a Bill, not to amend or report upon one. To draft a Bill we require to review the whole Criminal Procedure as far as it relates to Europeans: we not only require to examine the measure as it relates to the punishment to be meted out to criminals, but require to review the relations existing between a District Magistrate and his subordinates, his power of transferring a case from one file to another. Why should the European British subject be allowed trial by jury before a District Magistrate and not before his subordinate? Are we to understand that the District Magistrate is not to try minor cases? I am not prepared to send the Bill in its present form to the Select Committee, nor to see it reported on in a week."

The Hon'ble RAÍ KRISTODÁS PÁL said:—"My Lord, I approach this subject with a mingled feeling of satisfaction and sorrow—satisfaction because the settlement referred to concludes a message of peace with a body of gentlemen who, however misguided and maddened on the present occasion, are undoubtedly important factors in the cause of the advancement and regeneration of this country, and sorrow because, unless carefully safeguarded, it may open a wide door to injustice. I love peace, but honour more, and justice above all. It is not my object to dwell on the history of the present scheme of legislation, on the bitter feelings and animosities which it has evoked, on the gradual minimization of the effect of the Bill, small by degrees and beautifully less, or on the influence which the angry discussions of the past ten months may have on the political prospects of the people. I say—let bye-gones be bye-gones. My present concern is to consider how far the proposed settlement will secure the interests and ends of justice. The primary object of your Lordship's Government in the proposed legislation has been to wipe out the brand of race-disqualification in the judiciary within certain limits in the trial of European British subjects. And that object, I am happy to observe, has been steadily kept in view, and for it our grateful thanks are due to your Excellency's Government. I must at the same time confess that the scope of the original Bill, itself a small measure, has been materially reduced by the modifications proposed from time to time. As far as I understand these modifications, both the Native and European Sessions Judges and the Native and European District Magistrates will be so far placed on a footing of equality that they will exercise equal jurisdiction over European British subjects in matters criminal. This equalization, however, has been attained not by extension, but by reduction, of power; by taking away the power of independent action of European Magistrates, and not by adding to the power of Native Magistrates. In so far, I am constrained to say, the solution of the difficulty has been achieved by an unsatisfactory process. The anomaly of race-distinction is doubtless removed as between Magistrates, but it is effected not by adding to the power of Native Magistrates, but by changing the *venue*. Race-distinction becomes most obtrusive only in the trial of a certain class of cases, and those cases are practically transferred from the file of the Native Magistrate to that of his juniors the Joint-Magistrate. Thus, the race-distinction is made more pointed and painful. If the Native Magistrate be invested with a power which he will not be called upon to exercise, that power to all intents and purposes will be an unreality. Doubtless, the European Magistrate will stand in the same position, but to him it will be obvious that it is an administrative or political exigency, and not a question of colour. It is proposed to safeguard the extension of the jurisdiction of the Native British Sessions Judge and the Native District Magistrate by giving the European subject the right to claim trial by jury in all cases. This

is a right, I am quite aware, inherent in the Englishman, and an assembly of English legislators cannot but sympathise with it. I am also an advocate of jury-trial for my countrymen, and am of opinion that the jury-system ought to be extended throughout the country. But there are cases in which Englishmen in their own country cannot claim the benefit of a trial by jury, and even if the proposed modifications should pass into law, the European British subject, when brought before a European Assistant or Joint Magistrate charged with offences of a certain class, will have no right to claim a trial by jury. The question is whether, when similarly charged before a District Magistrate, whether a European or a Native, he should consistently be permitted to demand a jury. This provision will introduce a new anomaly. In seeking to abolish one anomaly we will create another. Under the proposed settlement, the European District Magistrate will lose a power which he has exercised since the Act of 1872 without any complaint on the part of the European British subjects, while the Native Magistrate will be constantly put in mind that his power has been circumscribed because he is a Native. It may also lead to administrative inconvenience, which is worthy of serious consideration. Then, under the Act of 1872, one great reproach to the administration of criminal justice in this country, as far as the trial of the European British subject was concerned, that of dragging for trial the complainant and the accused with the whole host of their witnesses to the Presidency capitals at great inconvenience, expense and hardship, was removed because it vested the District Sessions Judge with jurisdiction with or without a jury. Under the proposed settlement, in every case before a Court of Sessions the European British subject shall have the right to claim a trial by jury. In a district where a sufficient number of Europeans and Americans may not be found to constitute a jury, the result, I take it, will be to transfer the case to a district where a jury may be available. In this way the old scandals of trials at inconveniently distant places will, I fear, be revived. Many a poor complainant may think it better to put up with the wrongs they may have sustained rather than face the hardships and expenses of a journey miles and miles away from their homes for the sake of possible redress. In this respect the proposed settlement may lead to a denial of justice. In this respect it will manifestly be a retrograde move. It will, in fact, put back the clock of improvement introduced in 1872. There is another point urged by some of my countrymen, namely, the imminent risk of failure of justice in the case of a European British subject at the hands of a European jury under the peculiar constitution of Anglo-Indian society, and a small jury of those persons. I shall briefly touch upon this point. There have undoubtedly been cases on record in which there have been egregious failures of justice. I will not say that good men and true, when sworn in as jurors, will break their oath, and amidst large communities of men of the same race and religion engaged in different occupations and not bound by near kinship or absolute identity of profession or interest it is certainly easy to empanel a jury of good men and true; but amidst a small and sparse European population in the outlying districts of India, and particularly in critical times of excited feelings, in a small jury of these persons the risk of failure of justice is one which no Legislature should overlook. It is observable that the British Legislature has found it sometimes necessary to suspend jury-trials in Ireland. Under these circumstances, my Lord, I cannot look upon the settlement without grave misgivings. My humble belief is that it will add to the difficulties of a fair, speedy and honest administration of justice, and thus prove injurious to the people. I shall, however, propose no amendment or specific Motion now. Bearing in mind the singleness of purpose which has led your Lordship to this project of legislation, the anxiety which your Lordship has evinced to remove race-disqualifications in the discharge of judicial duties, and the earnestness with which your Lordship has sought to give effect to the noble behests of Parliament and our gracious Queen-Empress, I feel I should pause and consider. I would, therefore, reserve my objections to the details of the settlement till I see the amendments take a definite shape at the hands of the Select Committee. In the spirit of the eloquent peroration of my hon'ble and learned friend the mover of the Bill, I would venture to remind the Hon'ble Council

that the stability of the British Empire in India rests on the adamantine rock of justice, and I earnestly hope that that truism will not be lost sight of by the Select Committee in framing their amendments. In conclusion, I wish to make one remark. I have no objection to the Motion that the Select Committee should report upon the Bill within one week. But I venture to express a hope that after the Bill is recast by the Select Committee it will be forwarded to the Local Governments and local officers for an expression of their opinion as to how far its provisions will be conducive to administrative convenience and to an efficient administration of justice. Great apprehensions are widely entertained that the Bill framed on the basis of the settlement will be unworkable and will defeat the ends of justice. For this reason I think it is highly desirable, my Lord, that the opinion of the local officers, who are in the best position to form a just estimate of the practical tendency of the Bill, should be taken on this vitally important point. As the Bill has been allowed to hang on for the last ten months, surely it will not prejudice any interest to delay its passing for two months more."

The Hon'ble MR. EVANS said:—"My hon'ble friend Mr. Miller has alluded to a misapprehension or misunderstanding regarding the settlement which I had thought had been finally concluded by this matter. That misunderstanding was in the first instance more extensive. It has now been narrowed down to a point which I have had but very little time to consider, in fact only a few hours, and which, therefore, I should not be inclined to pass any hasty opinion upon. I will only say that it does not, so far as I have yet been considering it, appear to me personally to be of primary importance, but the whole value of the modification by way of settlement which we are discussing to-day appears to depend upon whether or not they are accepted by the European community. I have had no time—a few hours only have elapsed since the matter has arrived at this stage—and I have had no opportunity of consulting the European community or their leaders upon it, and my view is, as I have said, that the advisability of sending the question into Select Committee on the lines indicated by the hon'ble mover of the Bill appears to depend upon the acceptance of those terms by the European community, and I feel I shall do no good by making any observations upon it at present. I shall, therefore, feel very much obliged to your Lordship if your Lordship will adjourn this debate. I do not know whether I shall be in order in formally moving an adjournment, but, if your Lordship will adjourn the Council meeting, I hope some settlement will be arrived at which will prove satisfactory."

His Excellency THE PRESIDENT said:—"I feel some hesitation in complying with the proposal which has been made by my hon'ble and learned friend, because the effect of that proposal will be to shut myself, and those of my hon'ble colleagues who may desire to speak on this occasion, out of the debate until the day to which the Council may be adjourned. I am always, however, most anxious to treat every member of this Council with the utmost consideration and courtesy. My hon'ble and learned friend says that he has not had time to consider a question which has arisen while he has been absent from Calcutta. Under these circumstances, it seems to me that I should not be justified, in courtesy to my hon'ble and learned friend, in asking him to address the Council at the present moment, but, in agreeing now to an adjournment of the Council, I do so without prejudice, without in any way committing myself with regard to the point to which Mr. Evans has alluded. I agree, therefore, to the adjournment of the debate till Monday next at half-past 11."

The Council adjourned to Monday, the 7th January, 1884.

D. FITZPATRICK,

Secretary to the Government of India,
Legislative Department.

ADMINISTRATION REPORT OF THE INDO-EUROPEAN TELEGRAPH DEPARTMENT FOR THE YEAR 1882-83.

No. 7T., dated Fort William, the 5th January 1884.

OBSERVATIONS.—By the Government of India, Public Works Department.

Read—

Letter from the Director-in-Chief, Indo-European Telegraph Department, No. 175, dated 23rd August 1883.

OBSERVATIONS.—The capital expenditure to end of the year under review amounted to £1,144,148-7-9, showing in comparison with that to end of the preceding year a small reduction, chiefly due to recoveries of instalments of the Persian debt.

2. The receipts amounted to £99,358-14-8. They were greater than in any previous year, and £15,000 in excess of the revenue of the preceding year.

3. The expenditure on maintenance and working, on the other hand, was less by £12,000, and the net revenue earned was £26,867, or nearly 2·35 per cent. on the total capital outlay to end of the year. These figures are exclusive of the value of work done by the steamer *Patrick Stewart*, and of free messages which are calculated at £500 and £3,426-4 respectively.

4. The satisfactory increase in revenue is due, in a great measure, to the war in Egypt, but also to a breakdown which occurred in the Red Sea route. The reduction of expenditure is due to a good season which necessitated less expenditure on repairs. The causes which thus raised the net revenue are ephemeral, but the steady growth of business on the Indo-European and Red Sea routes is very satisfactory. The total business has increased in five years from £427,180 to £545,043.

5. The state of the cables is encouraging on the whole notwithstanding their great age. The cable factory at Manora has been very succesful and a considerable economy to Government.

6. The utility of the Mekran Coast line has been fully established by the fact that at one time it carried the whole traffic when the three cables were simultaneously interrupted.

7. The Government of India desires to express its satisfaction with the excellent work done by the staff and with the general efficiency of the service as disclosed by the report on the operations of the year.

8. The figures quoted in the report relating both to the Capital and Revenue Accounts differ somewhat from those in the annual accounts submitted by the Examiner of Telegraph Accounts. The causes of such discrepancies, which are unavoidable, have been generally explained in para. 8 of the Resolution on the Administration Report for 1880-81, and need not be repeated here.

9. The differences between the two sets of figures are brought out in the following statement:—

	As per Administration Report.	As per Administrative Accounts.	Difference.	
			More.	Less.
	£	£	£	£
Capital outlay to end of 1882-83	1,144,148	1,161,605	. . .	17,457
Revenue receipts for 1882-83	99,358	103,018	. . .	3,660
„ expenditure for 1882-83	72,491	53,956	18,535	. . .

The difference under total Capital outlay to end of the year is chiefly due to the balance of stores of the Persian Gulf section being transferred to Capital, and the necessary adjustment not having been made in the Administration Report. The difference of £3,660 under Revenue is due partly to different figures having been reported to the Examiner under Receipts on account of Persian Debt, and partly to the earnings of the *Patrick Stewart* not being included in the report. The difference under Revenue Expenditure is chiefly due to the transfer of the balance of stores of the Persian Gulf section to Capital.

10. The figures of the Administrative Accounts, as shown in the preceding paragraph, are compared in the following statement with those of the Finance Accounts:—

	Administrative Accounts.	Finance Accounts.	Difference.	
			More.	Less.
	£	£	£	£
Capital outlay to end of 1882-83	1,161,605	1,161,605	. . .	. . .
Revenue receipts for 1882-83	103,018	124,248	. . .	21,230
„ expenditure for 1882-83	53,956	104,011	. . .	50,055

The difference under Revenue Receipts may be explained as follows:—

	£
Items affecting earnings as distinguished from realizations which are not recognized in the Finance Accounts but have to be included in the Administrative Accounts	+97,615
Items affecting realizations as distinguished from earnings which are recognized in the Finance Accounts but have to be excluded from the Administrative Accounts	—119,985
Items of corrections between Capital and Revenue	+1,140
Net Total	—21,230

while the difference under Revenue Expenditure may be explained as follows:—

	£
Items not recognized in the Finance Accounts	+31
Items in connection with settlements of accounts as distinguished from expenditure which are charged in the Finance Accounts against Revenue but have to be excluded from the Administrative Accounts	—30,703
Items of corrections between Capital and Revenue	—19,383
Net Total	—50,055

Order.—Ordered, that a copy of this Resolution be forwarded to the Director-in-Chief, Indo-European Telegraph Department, for information and guidance.

Also, that copies of the Report and Resolution be forwarded to the Department of Finance and Commerce, Military (Marine), Home, and Revenue and Agricultural Departments for information.

Also, to the Government of Bombay and to the Director General of Telegraphs in India for information, and to the Publisher of the *Gazette of India* for publication in the Supplement to the *Gazette*.

Ordered further, that the Report and Resolution be forwarded to the Secretary of State for the information of Her Majesty's Government.

W. S. TREVOR, *Colonel, R.E.*,
Secretary to the Government of India.

No. 175, dated 23rd August 1883.

From—Colonel J. U. Bateman-Champain, R. E., Director-in-Chief, Indo-European Govt. Tel. Dept.,

To—Secretary to the Government of India, P. W. Dept.

ADMINISTRATION REPORT, 1882-83.

I beg leave to submit my annual Report on the administration of the Indo-European Telegraph Department for the year ending the 31st March, 1883.

Capital.

2. In para. 3 of my last year's Report the Capital of the Persian and Persian Gulf Telegraph system was entered as £1,146,845-14-7. These figures showed a diminution, when compared with those of the previous year, in consequence of my having, in obedience to the Orders of the Government of India, followed a new method in dealing with certain charges for stores. I was obliged, however, when preparing the Parliamentary accounts for the year, to revert to the old system which had not been altered by the Finance Department, so that our Capital is shown in the Parliamentary paper for 1881-82 to have stood on the 31st March 1882 at £1,151,042-1-6. The circumstances have been explained in my letter to you, No. 171 of the 11th instant.

Capital Account, explanation of. An apparent discrepancy in last year's figures.

3. On the 31st March 1883 our Capital Account was £144,148-7-9, showing a reduction of £6,893-13-9 when compared with the Parliamentary account for the previous year. The causes to which this reduction is due are clearly shown in Appendix A.

Reduction of Capital by £6,893-13-9.

Revenue.

4. Owing to the military operations in Egypt, the Eastern Company's section was out of order from the 10th July 1882 till the 28th September, the result being a great additional amount of business by way of the Persian Gulf. The receipts of this Department during the year 1882-83 were therefore larger than in any other year since the lines were made, amounting to no less than £99,359, or £15,000 more than in the preceding twelve months.

Revenue Account.

Increase of £15,000 over receipts of 1881-82.

5. The department received from the Common Purse £6,909, more than in 1881-82, and it earned £2,697 for the transmission of messages to and from South Africa, while the Suez line was interrupted. The

Explanations of increase.

remainder of the increase must be attributed to the general augmentation of traffic between Europe and India, partly, no doubt, due to the war.

Earnings of Department not shown under Revenue.

6. Besides the sums earned by the telegraph lines, the value of work done during the year for other Departments by our steamer, the *Patrick Stewart*, was about £500, so that the actual earnings of the Department were close upon £100,000. I may also observe that the Gulf cables transmitted 509 free news messages for the information of the Political Officers of the Persian Gulf, which would, were they paid for, increase our earnings by R34,262.

Expenditure reduced by £12,000 as compared with 1881-82.

7. On the other hand, the expenditure brought to account in the year under notice amounted to only £72,491, showing a reduction of about £12,000 when compared with that shown in my Administration Report for 1881-82. The principal savings were on account of—

	£
Cable Steamer	7,105
Repairs to lines, &c.	3,185
Tools and Plant	1,251

Possibility of figures being corrected hereafter.

8. As, however, the Persian Gulf and Persian expenditure accounts are controlled at Calcutta, and only abstracts furnished direct to Head-quarters, I am as yet unable to say whether all the above savings are real, or whether there may be outstanding items to be brought forward hereafter.

Lines Maintenance and Repairs.

State of the Persian line.

9. The general state of the Teheran-Bushire line is practically the same as it was during the preceding year. The season was, however, less trying and the repairing operations of less importance.

Projected change of route near Teheran.

10. It has long been known that the Persians intend to divert the present road between Teheran and Koom (about 100 miles) to a better watered and more populous country west of the salt desert. This change will necessitate a shifting of that portion of our line; and every preparation for the work has been made by us: for some reason, however, the construction of the post-houses, &c., along the newly selected route has been postponed, and it is impossible to say when the alteration will be carried out.

11. Meanwhile the length of our Persian line and the number of wires remain as at the date of my last Report.

Wilful damage not at all serious.

12. The amount of wilful damage during 1882-83 was not serious. The recent arrangement regarding compensation for such injury was strictly enforced, and we have at present no cause to complain of the behaviour of the villagers or of the wandering tribes who gave so much trouble in former days.

Adjustment of wilful damage debt.

13. At the close of the financial year there remained due to us under this head by the Persian authorities a balance of 1,560 krans, which has since been recovered by Her Majesty's Minister. The Government of the Shah has been given to understand that in future any unadjusted item due for wilful damage will, at the end of the year, be deducted from the Jashk Royalty.

Present mileage of Persian Gulf cables.

14. As regards the Persian Gulf, or submarine branch of the Indo-European system, the lengths of the several sections of cable differ but very slightly from those given in last year's statement. A little more "slack" has been allowed during the repairing operations, so that the measurements are now as follows—

Gutta Percha Cable.

	Nautical miles.
Fao to Bushire	152·58
Bushire to Jashk	505·84
Jashk to Gwadur	273·28
Gwadur to Manora	271·45
Manora to Karachi, three harbour cables, each 5·77	17·31
Total Gutta Percha Cable	1,220·46

India-Rubber Cable.

Bushire to Jashk	498·72

giving a total of 1,719·18 nautical miles of cable in use, as compared with 1,717·27 at the end of the last official year.

Utility of Mekran Coast Telegraph.

15. The length of the Mekran Coast line is the same as shown in para. 19 of my last year's Report. The value of this line as a link in our through system was very clearly manifested in 1882-83. The submarine lines in the Persian Gulf are beyond the influence of the monsoon and can be reached throughout the year, but while the monsoon lasts, it is hardly possible to repair

a fault which may occur on the Jashk-Gwadur-Karachi Cable. It so happened that during the Egyptian war, when all the Eastern traffic was passing by the Indo-European route, the Manora Cable broke down, yet we were able, by means of the Mekran Coast line, to carry on the duties without appreciable inconvenience to the public, although the messages numbered from 800 to 1,000 per diem.

Amelioration of Land Line.

16. The section has been greatly improved of late, and every effort is made to render it thoroughly reliable by the gradual substitution of fluid insulators for those originally in use, and by other inexpensive but beneficial measures.

Mr. Mance's report on condition of the cables.

17. The condition of the cables is very fully and clearly described in Mr. Mance's report which, according to my usual custom, I attach to my own.

18. The whole of Mr. Mance's paper will be highly interesting to Electricians and Telegraph Engineers, but perhaps the following are the points to which I should here direct your particular notice.

19. The Persian Gulf lines may be looked upon as about the oldest system of ocean cables in existence, and when it is seen that since 1863 less than one per cent. per annum of the length first laid has been expended in repairs, it will be admitted that great praise is due to those who selected the route and designed the form of cable.

20. The general electrical condition of the several sections is about the same as last year.

Cause of faults during 1882-83.

21. Sixteen faults developed themselves as compared with 22 in 1881-82. Of these, no less than ten were due to corrosion of the iron covering wires, three to faults in manufacture, and three to pure accident.

Expenditure of cable in repairs.

22. In the repair of these 16 faults Mr. Mance expended 34·66 miles of gutta percha cable, and 1·03 mile of India-rubber cable, an amount considerably less than that used in the preceding year: and it is satisfactory also to note that a very large proportion of the faulty cable picked up is in a condition to allow of its being restored at Manora, and rendered almost as good as new material.

23. Generally speaking, the Electrician's report for 1882-83 is even more encouraging than usual. It is specially worthy of note that those pieces of the cable which have been raised from where the surrounding conditions are most favourable appear to be as perfect as when they left the manufacturer's hands twenty years ago.

Work done at Manora Cable Factory.

24. Our Cable Factory at Manora has been of great service. The machinery works well and turned out no less than 30 miles of new cable, while 17 miles more were supplied with fresh outer covering. It is estimated that some 50,000 rupees were thus saved to Government during the year on record.

Interruptions.

Total interruptions on Company's line.

25. The aggregate of the total interruptions on the Indo-European route *vid* Teheran in 1882-83 was 36 days 9 hours 11 minutes. The most serious break occurred in October on the Company's section when a violent snow-storm utterly destroyed 250 miles of the line between Jitomir and Odessa, and the Company's normal route was thus for 25 days completely *hors de combat*. The accident happened on the 15th of the month, but from the 28th the Company were allowed to make use, for a certain number of hours per diem, of some of the Russian Crown lines, so that the total break lasted practically only 12 days. The remaining 13 days the line was considered partially interrupted.

On our Persian line.

26. Our own Persian line was broken down entirely for only 28 hours 31 minutes. This was caused by the collapse from heavy rain of a part of the Shiraz Office, the property of the Persian Government.

In Gulf.

27. In the Persian Gulf a serious interruption of the through communication took place in March, when both the cables between Bushire and Jashk were simultaneously broken down for 5¾ days. The Mekran Coast line was totally interrupted for altogether 36¼ hours, traffic passing by the cable.

In Turkey.

28. The interruptions on the Turkish route amounted in all to 61 days, and on the Black Sea, owing to the war, to 80 days.

Partial interruptions.

29. By the term "partial interruptions" is meant breaks on one or more wires of a system which still has an alternative conductor left for the traffic. As a rule, they do not appreciably affect the through working. During 1882-83 the partial interruptions on the Company's section lasted

On Company's line.

but a few hours, during which time a duplicate wire was borrowed and used.

In Persia and Gulf.

30. On the Teheran-Bushire line the partial interruptions amounted in all to 23 days 17 hours, and in the Persian Gulf division to somewhat less than 95 days.

31. The Suez route was either partially interrupted or defective in one or more of its cables sections for nearly the entire official year.

Traffic.

Tariffs, &c.

32. The tariffs and regulations of the London International Telegraph Convention remained in force during 1382-83.

New system of settlement of accounts with Indian Department. Consequent loss in receipts of this Department.

33. From the month of June the settlement of accounts between the Indian and the Indo-European Telegraph Departments was made according to the market value of the balances, instead of, as previously, by transfer of the actual amount collected. The effect of the alteration was a diminution of the receipts of this Department by about £1,400.

Steady growth of traffic.

34. Taking one year with another, the value of the traffic transmitted by the several lines connecting Europe and India has steadily grown, the receipts during the year under report being £29,939 more than in 1881-82. The following table shows the total receipts of the Common Purse between the Companies and this Department from the date we joined.

TOTAL VALUE OF COMMON PURSE.

	£
In 1878-79	427,180
1879-80	480,309
1880-81	523,616
1881-82	515,104
1882-83	545,043

The mean growth is thus shown to have been as nearly as possible 5 per cent. per annum, which is the rate of increase which was anticipated at the time when the idea of the Common Purse was first entertained.

Proportion of traffic actually carried compared with previous years.

35. The standard division per cent. of these Common Purse receipts being 65·64 to the Eastern route and 34·36 to the Indo-European routes, the proportion of traffic actually carried has been as follows:—

	By Eastern.	By Indo-European.
1878-79	77·87	22·13
1879-80	75·68	24·32
1880-81	75·46	24·54
1881-82	69·64	30·36
1882-83	51·57	48·43

Traffic *vid* Turkey.

36. The Turkish route, which was certainly worked much better than in the previous year, carried only ·069 per cent. of the messages.

Summary of traffic.

37. The paid traffic carried by the Indo-European route may be summarized thus:—

	1882-83.		1881-82 for comparison.	
	Messages.	Words.	Messages.	Words.
Government	2,026	88,032	1,443	62,615
Commercial and Private	134,916	1,656,990	77,472	943,325
Press to "Times"	57	90,033	88	59,580
	136,999	1,830,055	79,003	1,065,520

The work actually performed by this Department being almost double that of the preceding year.

Reasons why our work was so unusually heavy during year.

38. The main cause of this extraordinary rise in the traffic over our system was of course the long continued interruption of the Suez route referred to in para. 4 of this letter, but it was not only while the war lasted that more than the normal proportion of messages were transmitted *viâ* the Persian Gulf. In fact, for several months both before and after the war in Egypt, the working of the Red Sea system was more or less defective and thousands of despatches were, during the year, transferred by the Eastern to the Indo-European route for transmission to their destination.

Efforts to attract business to the Indo-European route.

39. Moreover greater efforts were made to attract business by means of advertisements, the employment of Agents, the establishment of special wires to Manchester and Liverpool, and the opening, towards the close of 1882, of offices at those important mercantile centres. These arrangements are carried out by the Indo-European Telegraph Company, and the results, so far as one can yet judge, have been satisfactory. Our traffic, which at Manchester and Liverpool had almost disappeared, rose to an average of about 200 messages a month from the former and 60 from the latter city. The new Agency at Glasgow has also been fairly successful. The measures adopted in India also by the Company have likewise been attended by

good results. At Calcutta, where an Agent was appointed, the traffic increased more than 100 per cent., but this was not by any means wholly due to the Agency, seeing that at Bombay and Madras, where there are none, the business increased by 56 and 8 per cent., respectively. The far East traffic also increased by about 35 per cent. No doubt the fact of it being generally known that the Red Sea cables were in a somewhat imperfect condition helped to draw customers to the Indo-European route, and some of those who had habitually used the Suez line continued to direct their messages *vid* Teheran even after the conclusion of the war in Egypt.

Speed of transmission.

40. As regards the average rate of transmission allowance must be made for comparatively slow working, while both the Red Sea cables and one of our own were simultaneously out of order, the consequence being that the entire volume of the traffic had to be sent through the Mekran Land line. While this state of affairs lasted, the speed between London and Calcutta was 12 hours 58 minutes per message. During ordinary working the mean speed was 1 hour 54 minutes; and, taking the year as a whole, the average was 4 hours 28 minutes.

The speed *vid* Turkey was 14 hours 6 minutes.

41. I must point out that during July, August, and September the strain on the capacity of the staff was excessive, and we were unable to obtain the services of extra clerks except for the traffic office at Karachi. It was therefore impossible to keep up the usual statistics which indicate the precise speed of the several sections during those three months.

Accuracy.

42. The errors made on the Teheran-Bushire section were 0·075 per cent., those in the Persian Gulf 0·425. But the checks in the former case had to be suspended during the pressure of extra work, while at Karachi the temporary engagement of a few additional writers enabled Mr. Herbage to report on the entire year. No help whatever could be had in Teheran, and consequently a fair comparison cannot be made, as a greater number of errors would certainly be made during the time when the labour was greatest.

Press of work during the interruption of the Suez line.

43. During the 81 days of the interruption of the Eastern route, no less than 63,933 messages of 777,193 words were despatched between Karachi and Bushire, an average of 790 messages per diem. The greatest number received and sent in one day was 1,223, and the greatest number when only one line was available was 847.

The Indo-European system is capable of carrying the whole of the Eastern traffic.

44. The experience thus gained has clearly proved that under our present conditions of working the Department is capable of carrying by its two cables in the Gulf and its double line in Persia the entire traffic between the East and West (which averages from 26,000 to 27,000 messages a month) with accuracy and at a fair rate of speed.

Inspections, &c.

Conference at Paris in October and November 1882.

45. It was my intention to ask leave last autumn to visit the lines and stations under my charge; but in October I was instructed to attend a Conference which met at Paris to consider the best means of protecting submarine cables from wilful and careless damage. This Conference lasted till November, and there was at one time a probability of its having to re-assemble. There being no special need for my presence in Persia or the Gulf, I put aside the idea of leaving Europe for another year. I have already written to you for permission to carry out the deferred inspection this cold season. My Report on the Cable Conference was submitted on the 10th November 1882 to the Right Honourable the Secretary of State, and was subsequently forwarded for the consideration of the Government of India.

Inspections of Persian lines.

46. The Teheran-Bushire line was inspected by Captain Wells, R. E., in September and October 1882; and Colonel Smith, on his return to Persia from sick leave, began another tour to Bushire in March 1883. Both lines and offices were in good order, with the exception of the building at Shiraz which required extensive repairs. These repairs were to be carried out by His Excellency the Mukhbar-ed-Dowleh by the Shah's authority during the summer.

Inspection of Gulf lines.

47. Mr. Ffinch visited the Gulf section in February and March, and reports that the buildings, establishments, and instruments were found in a satisfactory state.

48. With the exception of the offices at Bushire, the buildings in the Gulf section are the property of the Government of India, and the repairs to them are executed by this Department.

Establishments.

The resignation of Dr. Wills.

49. The only specially noteworthy change which has been made in the Persian establishment was the reduction of our Medical Staff when Dr. Wills resigned the service.

Change in the Gulf establishment.

50. The Gulf establishment was slightly modified and is now as follows :—

1	Deputy Director,	12	Second grade Clerks,
1	Engineer and Electrician,	12	Third ditto,
1	Traffic Manager,	12	Fourth ditto,
2	Superintendents,	8	Fifth ditto,
5	Assistant Superintendents,	1	Chief Mechanician,
8	First grade Clerks,	1	Mechanician.

The modification introduced enabled us to effect a material saving, and at the same time to improve the prospects of those employés who remain some years in the service.

Departmental Steamer.

51. The usual tabular statement of the work done by the vessel is attached to this Report.

The *Patrick Stewart*.

The *Patrick Stewart* is now a very steady ship and is doing the work of the Department most satisfactorily.

Stores.

Expenditure of stores in 1882-83.

52. The principal items of expenditure under this head during 1882-83 were as follows :—

	Rs.	A.	P.
Purchase of stores in India	10,815	0	5
London stores, including freight and lading charges	86,038	10	9
Military (Marine) Department on account of steamer, including coal and provisions	25,592	14	9
Stores for other Departments	9,012	8	7
Total	1,31,454	2	6

The value of manufacture outturn, principally cable, was Rs. 45,486-10-4.

53. As usual, very little was expended under this head in the Persian division.

Miscellaneous.

Good conduct of staff.

54. It was my pleasant duty, during the past year, to represent to the Government of India the admirable behaviour of the Departmental Officials on the occasion of the collapse of the Eastern Company's system, which happened at the very hottest and most trying time of the year. The well earned gratuities granted to the signallers in return for their exertions have been highly appreciated, and my best thanks are due to the Government of India for granting these rewards.

His Excellency the Mukhbar-ed-Dowleh

55. Colonel Smith writes in his annual report that "an episode of the year, very gratifying to myself and conducive to our cordial relations with the Persian Government, was the appointment of His Excellency the Mukhbar-ed-Dowleh to the Order of the Indian Empire. The honour conferred upon him is greatly valued by His Excellency, and I know that it has afforded pleasure to His Majesty the Shah also."

56. Colonel Smith expresses his obligations to Captain Wells, who officiated for the Director during his absence on leave, and to the other members of the Persian Telegraph staff.

57. In like manner, Mr. Ffinch refers with praise to the conduct of the Persian Gulf employés. Colonel Smith, whose health has, I am rejoiced to say, been completely restored, resumed charge of the Persian section in August 1882, relieving Captain Wells, the Assistant Director. The latter Officer has, I am sorry to say, been also obliged, since the beginning of the present official year, to come to England on medical certificate. Mr. Ffinch was in England on furlough at the date of my last report, but returded to Karachi in November 1882.

Services of the several officers of the Department.

58. I beg leave once again to express my obligations to the above-mentioned officers for their unwearied and successful efforts to carry on the work of their respective sections; and I desire also to lay stress on the very valuable services rendered by Mr. Mance, whose appointment during the past year to the Order of the Indian Empire was highly gratifying to all in the Department. The good fortune which has hitherto attended Mr. Mance's repairing trips is in a great measure due to Commander Bishop's professional ability and energy, and it is my duty to record my sense of that Officer's exertions. I wish also to mention Mr. Brasher, the Director of Traffic in London, Mr. Herbage at Karachi, the Superintendents, Assistant Superintendents, and Junior Officers of all ranks, for their constant and laborious attention to their several duties throughout what may fairly be called a most prosperous year for the Department.

APPENDIX A.

INDO-EUROPEAN GOVERNMENT TELEGRAPH DEPARTMENT.

Summary of Expenditure on Capital Account to 31st March 1883.

APPROXIMATE

prepared partly from telegrams.

PERSIAN GULF SECTION.

Statement of Work done by the "Patrick Stewart" during the year 1882-83.

DATE. From 1882.		DATE. To 1882.		PARTICULARS.
April	1	April	8	On passage from Bushire after cable repairs; arrived at Karachi 8th.
,,	9	June	7	Lying at moorings in Karachi harbour.
June	8	,,	12	Left Karachi to repair two faults in Jashk-Bushire section of Gutta Percha cable.
,,	13	,,	28	Repairing cable; returned to Karachi morning of 28th June.
,,	29	July	21	Lying at moorings in Karachi harbour.
July	22	. . .	. .	Left Karachi.
,,	24	August	7	Repairing cables; returned to Karachi afternoon on 7th.
August	8	,,	28	Lying at moorings in Karachi harbour.
,,	29	. . .	. .	Left Karachi.
,,	30	September	2	Repairing cable; returned to Karachi.
September.	3	October	7	Lying at moorings in Karachi harbour.
October	8	. . .	. .	Left Karachi.
,,	17	November	2	Repairing cable; returned to Karachi on the 2nd November.
November.	8	,,	14	Lying at moorings in Karachi harbour.
,,	15	. . .	. .	Left Karachi for Bombay.
,,	18	December.	2	At Bombay docked ships &c., and left for Karachi.
		,,	5	Arrived at Karachi.
		1883:		
December 1883.	6	February	6	Lying at moorings in Karachi harbour.
February	7	. . .	. .	Left Karachi.
,,	8	March	12	Repairing cable and on annual inspection of the Gulf Stations, &c.
		,,	13	Arrived at Karachi.
March	14	,,	27	Lying at moorings in Karachi harbour, cleaning ship, overhauling engines, &c.
,,	28	,,	31	Left for Jashk and Persian Gulf to repair faults in cable.

B. FFINCH,
Deputy Director, Persian Gulf Telegraphs.

KARACHI,
15th June 1883.

APPENDIX F.

Note by H. C. Mance, Esq., Engineer and Electrican, Persian Gulf Telegraphs, on Indo-European Telegraph Department Administration Report, 1882-83, dated 20th May 1883.

The total length of the Persian Gulf cables at the close of the official year was 1,701·87 nautical miles. As the Gutta Percha sections which form the principal portion of the line were manufactured in 1863, they are now 20 years old.

2. In considering this report, it should be borne in mind that we are dealing with the oldest system of ocean submarine cables in existence, a system, moreover, on which up to the present, comparatively speaking, little has been expended in repairs or renewals, the amount of spare cable required since 1863 for the purpose of replacing defective portions being less than one per cent. per annum on the quantity originally laid.

THE ELECTRICAL CONDITION OF THE CABLES

3. Is shewn in Appendix A. There is in this respect no material alteration in any of the cables excepting in the case of the Gwardar-Manora section, the insulation of which commenced to fall towards the end of the year. This is probably due to deterioration in the shore end at Manora, which will shortly be renewed.

4. The harbour cables tested slightly better than they did the previous year; notwithstanding the very numerous joints they contain, the insulation per knot has remained fairly constant during the last ten years.

Faults and Interruptions.

5. The 16 faults were distributed over the whole line in the following manner, the particulars being, as usual, given in Appendix B:—

Fao-Bushire cable	4
Bushire-Jashk Gutta Percha	8
Bushire-Jashk India Rubber	1
Jashk-Gwadar cable	2
Gwadar-Karachi	1

In addition to the above, four faults (three of which were due to the attacks of the Teredo) were cut out of the harbour cables.

6. The various sections have been interrupted for the following periods:—

	Days.	Hours.
Fao-Bushire cable	25	19
Bushire-Jashk Gutta Percha	66	19
Bushire-Jashk India Rubber	5	13
Jashk-Gwadar cable	17	23
Gwadar-Karachi	39	9

7. **The Gwadar-Karachi cable, which is the nearest section to Head-quarters, was interrupted for 39 days for a single fault; an attempt was made to repair it early in August, but the heavy swell running at the time rendered it necessary to defer operations till the termination of the monsoon three weeks later on.** The distance of the Fao cable from Head-quarters (nine or ten days' journey) must always prove a cause of delay in repairing breaks on this section; in this case other important work had to be done by the repairing steamer on her way up the Gulf. Communication on the Jashk-Gwadar cable might have been restored sooner but for our anxiety to save as much as possible of the value shore end cable. Finding, however, before the completion of the repairs that the single line was scarcely able to dispose of the exceptionally heavy traffic passing during the interruption on the Eastern Company's cables in Egypt, a temporary office was opened from a boat in the west bay some two miles from shore, and the strain on the other circuit to a considerable extent relieved thereby. Both cables were totally interrupted between Bushire and Jashk for the last 5 days 13 hours of the official year; fortunately the Eastern lines were at this time in good working order.

8. That the periods of interruption compare favorably with the previous year will be gathered from an inspection of the following comparative statement:—

	During.		
Aggregate interruptions on all cable sections	1881-82	559	Days.
	1882-83	156	ditto.
Communication by one or more lines maintained between Karachi and Bushire	1881-82	355	ditto.
	1882-83	359	ditto.

Repairs of Cables.

9. In executing the various repairs 59 miles of cable were lifted, the average amount disturbed for each fault being about 3¾ knots. The India Rubber and Gutta Percha cables were both repaired off Tumb Island during the year. The ground in this locality is so rocky that it was found impossible to hook the cables anywhere near the faults, and the cables had to be secured a considerable distance to the eastward and westward of the breaks. In repairing the Gutta Percha cable on this occasion over 14 knots had to be distributed, while the fault in the India Rubber necessitated the picking up of over 8 miles, although the position of the defect was known within a few fathoms, and the cable on either side of the break was in splendid order.

10. **Notwithstanding the fact that 4 miles of shore end had to be abandoned in the west bay at Gwadar in consequence of being too deeply silted up with sand for recovery, upwards of 28 knots** of cable (40 per cent. on the amount disturbed) were picked up during the year sufficiently good for re-submersion; this is a much larger percentage of re-usable cable than from our experience of the last three or four years we have been led to hope for.

Efforts will be made to recover some of this.

B. F.

11. The Karachi harbour cables gave much less trouble during the year, having been faulty on four occasions only. Three of the defects were caused by the Teredo in old cable, which had been submerged in the creeks for more than 15 years.

Expenditure of Cable and Cable remaining in Stock.

12. Appendix D shows the expenditure of cable and quantity remaining on hand at the end of the year. The total issue from stock was 34·66 knots of Gutta Percha, and 1·03 knots of India Rubber, representing an average of 2·23 knots expended for each repair. The average per fault during the two previous years was 2·20 knots. This will be considered satisfactory when it is remembered that with succeeding years the repairs must partake more and more of the nature of renewals for a considerable distance on either side of the faults. That the issue from stock has not been larger during the past year is due to the encouraging fact that so much of the cable picked up has been fit for re-use. The expenditure necessary to maintain the different sections during the past two years has been as follows:—

Knots of cable issued from stock for repairs during	Fao-Bushire section, 152 knots.	Bushire-Jashk cable, 506 knots.	Bushire-Jashk I. R. cable, 499 knots.	Jashk-Gwadar cable, 273 knots.	Gwadar-Manora cable, 271 knots.
1881-82	4 knots	28·6	1·0	8·5	5·5
1882-83	6 knots	20·0	1·0	7·0	1·7

13. We had at the close of the year 25¼ knots of good Gutta Percha cable mostly of our own manufacture and 17¼ miles of India Rubber; total 42½ knots. This is about 6 miles less than the quantity with which we commenced the year, but the difference has already been more than replaced by the manufacture of several miles of new cable put in hand immediately on the return of the engineering staff from the last repairing expedition at the close of the year.

Extracts from the History of the Cables during 1882-83.

Fao-Bushire Gutta Percha section, 152·58 knots.

14. **Three out of the four faults which occurred in this section were owing to defective manufacture; the fourth was caused by a buglas (Native Indian vessel) anchored near Bushire. Two of the manufacture faults were very minute at the time of their removal, but as the vessel was on the spot and the section is the furthest from Head-quarters, it was thought advisable to cut them out, and this was done successfully with a very small sacrifice of cable.**

Bushire-Jashk Gutta Percha Cable, 505·84 knots.

15. There is again a slight decrease in the number of faults which have occurred on this section. Last year a decrease from 11 to 9 was reported. During 1882-83, eight only have required removal, and only six of these were due to decay. **This our longest section has always given us more than a proportionate amount of trouble. It is encouraging to note that the cost of maintenance has been less than either of the three previous years.**

Bushire-Jashk India Rubber Cable, 498·72 knots.

16. **One fault only has occurred in this section—the cable north of the greater Tumb Island was found to be resting across a deep depression fully 100 yards in breadth;** under such conditions an interruption becomes simply a question of time. In effecting the repairs the cable was taken a short distance to the northward in the hopes of obtaining better bottom, but the whole of the ground in that locality is more or less unfavorable for cables, and at the same time difficult to avoid. The unexpected interruption of this section, which occurred on the 26th March, a few days after the occurrence of a break on the Gutta Percha cable, interrupted communication with England *viâ* the Persian Gulf until the arrival of the cable steamer on the ground a week later on.

Jashk-Gwadar Gutta Percha Cable, 273·28 knots.

17. **The two faults in this section were in the shore ends at Jashk and Gwadar. The main cable has not been disturbed. In each case the fault was about 4 miles from shore. The Jashk fault gave no trouble, but the cable in Gwadar Bay is silted up with sand, and at present unrecoverable. A heavy monsoon swell was running into the Bay at the time these repairs were commenced, but having secured the cable beyond the fault a fresh piece of cable was laid in shore for 2½ miles into smooth water, and the end buoyed at a point beyond which the ship could not proceed with safety. A working party was then left with boats to continue the grappling in search of the shore end cable, while the Persian steamer proceeded up the Gulf to repair other sections. The shore end was found to be silted up throughout the entire length, and on the return of the vessel an additional 2 miles of cable were laid by means of boats to connect the buoyed end to the shore.** Previous to this, however, in fact as soon as the second cable beyond Jashk had been repaired, communication through this section had been established from a temporary office arranged in a boat anchored to the end of the cable.

Gwadar-Karachi Cable, 271·45 knots.

18. A total break occurred on this section in Sonmianee Bay, about 46 miles from Manora, in July last during the monsoon. An attempt was made to repair it early in August last, but the unfavorable state of the weather compelled the postponement of the work until the conclusion of the monsoon. The work might possibly have been effected earlier with some

sacrifice of cable, but there being two Land Line circuits available at the time, and the fault being so close to Karachi, it was obviously the more prudent plan to defer the operations until the sea became calmer and the weather more favorable.

Harbour Cables 1, 2 and 3.

19. The maintenance of these cables costs practically nothing, as only short pieces of old stuff useless for sea work are employed. The total renewals rendered necessary by the four faults which occurred required rather less than one knot of short pieces of cable. During the year the whole of the ends have been cut or renewed at the ten cable boxes between Manora and Karachi.

Cable Land Lines and Cable Houses.

20. No change has been made during the year of any importance. A land line has been erected between Manora office and the beach to be used in the event of the underground cable failing at a time when it might be inconvenient to repair it. The tunnel in the face of the cliff at Bushire has been completed, and the cables now pass direct from the sea to the bottom of a well in the cable house The ozokerit core which was under experiment at Manora at the time of the last report has not given sufficiently satisfactory results to justify its superseding the present cable house land lines insulated with the fluid insulators. The cable ends have been renewed at Bushire, Jashk, and Gwadar by the insertion of short pieces of cable between the cable houses and high-water mark.

For the Cable Land Lines Johnson and Phillips' fluid insulators are used.
B. F.

Mechanical Condition of the Cable.

21. 1,230·58 knots of the original cable still remain undisturbed; 185·18 knots are made up of original cable which has been moved for the purpose of effecting diversions since the opening of the line, and 286·11 knots represents the extent of the repairs which have been effected from time to time in the entire length of 1,701·87 knots. The cable picked up during the past year has been less decayed than that recovered during the previous two years, having in all probability been resting on more level ground, protected by a slight covering of mud. Under such conditions the cable seems as perfect as the day it left the Factory in England. All the breaks, excepting those caused by buglas' anchors, have taken place at suspended spans, where the cable is invariably thickly covered with shells and sea weeds. That the number of faults due to decay of the iron guards has not increased must be considered encouraging. Faults of manufacture (which remain dormant for years), injuries by saw fish or other marine enemies, and defects caused by fouling of anchors, may occur at any time, but the breaks due to decay must be the truest indication of the general deterioration of a cable. The following number of faults throughout the whole line have been attributed to decay during the past five years:—

Year	1879	1880	1881	1882	1883
Number of faults due to decay	3	9	12	21	10

The decrease during 1883 should lead us to hope that the deterioration is not so general or so rapid as last year's experience may have led us to infer.

22. The Gutta Percha core recovered is good enough when in long lengths for remanufacture into cable, but the joints in old core, although practically perfect and strong enough for any purpose, do not retain the high insulation resistance they offer when first made. The result is that cables will gradually test lower as the core gets older and fresh joints are introduced from time to time during repairs. The insulation of the cables might, however, be one hundred times less than it is at present without prejudicially affecting the working and the contingency of the insulation ever falling so low as this is too remote to suggest the least anxiety.

23. Old Gutta Percha core after it has been relaid some time is found to almost invariably "blow" during a joint, and to give more trouble than new, but this difficulty disappears if the cable is taken back to Manora and spliced up there. Joints made in the factory at Manora with old cable never blow, but let the same piece of cable be inserted in the line for 6 or 12 months, and then re-lifted for another splice, the odds will be greatly in favor of bubbles developing themselves before the joint is completed.

24. No cases of marked deterioration of Gutta Percha when properly submerged have been observed beyond those forwarded to England for examination just previous to the last report. The faults in the core submitted were pronounced to be due to simple oxidization where exposed to the action of the water, and it is rather singular that at almost the same time two other cases of a similar nature should have been submitted to the same authority from two different parts of the world, namely, the Red Sea and Pernambuco.

25. Our faith in the imperishability of Gutta Percha under water is thus to some extent shaken, but the evidence before us, although conclusive on this point, at the same time teaches us that if submerged in water, and at the same time *well protected by some covering*, good Gutta Percha is practically imperishable.

26. The India Rubber core recovered appears in perfect order, but if the ends of any of the pieces of Rubber cable are left dry for a short time, minute faults are very liable to develop themselves, and great care has to be observed to prevent this.

Manora and Manufacture of Cable.

27. The cable machinery at Manora has worked in a most satisfactory manner. 30 miles of new cable were manufactured during the year, and 17 miles of old cable received a fresh covering of tapes to replace the original outer serving. 20 knots of old core after careful examination and repair were utilized in the making of new cable, the remaining 10 miles being made up from new Gutta Percha core obtained from England. The saving to Government by making their own cable during the past year has probably not been less than ₹50,000.

28. A considerable quantity of old cable core which may eventually prove of use to the Department has been overhauled and jointed up into long lengths. In the execution of this work over 400 Gutta Percha joints were made by the jointer during the year.

29. The new boat-house commenced during the previous year has been completed; with this exception there has been no addition or alteration at Manora.

"Patrick Stewart."

30. The cable steamer made six voyages during the year on cable duty. During these expeditions she was absent from the head-quarters with the Engineering staff for 115 days, and traversed over 8,000 miles.

Electrical Working, Testing.

31. Beyond a few minor improvements in the translation at Jashk no changes have been made; during the interruption of the Eastern Telegraph Cables in Egypt from the 10th July to the end of September, the whole of the combined traffic between England and India was transmitted by the Persian Gulf lines, and for several days by a single cable between Burhire and Jashk. The tests taken for the purpose of localizing faults have been as usual accurate, the average difference between the assumed and actual distance of a fault having been the same as last year, ·7 of a knot.

General Remarks.

32. When a cable arrives at anything like the age of the Persian Gulf system and interruptions in consequence of the decay of the outer guards occur so frequently as they have done during the past two years, it becomes necessary to consider which is the most advisable course to pursue out of those open for adoption, either to—

1. Lay a new cable or
2. Simply effect such repairs as are necessary, at the same time taking the opportunity to renew the cable for moderate distances when it appears in very bad order.

The question is simply one of cost, provided always that by the adoption of the cheaper policy the communication is sufficiently reliable to meet the requirements of the service in a satisfactory manner.

33. Up to 1881 the second alternative has been in a measure forced upon us from the fact of our having a considerable quantity of old cable in stock, which would simply have decayed in the tanks at Manora had it not been necessary to expend it. It is only within the last two years that the manufacture and expenditure of new cable has been resorted to.

34. If any section in the Persian Gulf system can be said to be approaching this critical age it is the Gutta Percha cable of 506 knots between Bushire and Jashk. This piece has given far more trouble than any other, and the expenditure of cable on its account has been exceptionally heavy during the last two years.

35. During this short period the average annual cost of repairs and renewals with new cable on this section has been about ₹45,000; it should be mentioned, however, that there was a considerable decrease in the expenditure last year, and that a still smaller expenditure is anticipated for this in consequence of so many weak places having been removed.

36. As the interest at 4 per cent. on the outlay necessary to lay a new section of this length would not be less than ₹60,000 per annum, it seems desirable to persevere in our present policy, the more especially as we shall be [illegible] within the next ten years to incur the heavy [illegible] new cable which is now inserted will be in [illegible] at that time and will consequently reduce the cost.

37. From the experience of the past two years, there is every reason to hope that the number of breaks will decrease, and that less trouble and expense will be necessary in maintaining the lines. Weak places which unprotected by mud have been exposed to the action of the water since the first submersion of the cable may naturally be expected to give out within a few years of each other. We may be passing through an era of such faults. Up to the present we have shewn that we are quite able to cope with them, and the records of last year compare so favorably with the preceding one that still better results may fairly be anticipated for the future.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

CIVIL WORKS.

Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN BENGAL FOR 1882-83.

No. 13 I., dated Fort William, the 9th January 1884.

RESOLUTION.—By the Government of India, Public Works Department.

Read—

Letter No. 2188 I., dated 29th November 1883, from the Government of Bengal, and its enclosure, *viz.*, the Revenue Report of Irrigation Works in Bengal for 1882-83, and a Resolution of His Honour the Lieutenant-Governor reviewing the Report.

OBSERVATIONS.—The total capital outlay, including indirect charges incurred up to the end of the year, amounted to R5,86,67,167, divided as follows :—

	R
Productive Public Works	5,53,23,367
Imperial Ordinary Works	9,21,312
Provincial Works	24,22,488
TOTAL .	5,86,67,167

2. The following statement shows the revenue of all kinds assessed during 1882-83 and the three previous years :—

CANALS.	ASSESSMENTS.			
	1882-83.	1881-82.	1880-81.	1879-80.
	R	R	R	R
Orissa	3,38,323	3,02,874	2,65,777	2,73,805
Midnapur	3,20,900	2,92,009	2,64,205	2,70,985
Hidgellee	45,032	46,484	55,207	45,781
Sone	6,20,354	7,62,294	6,35,752	5,56,072
Sarun	18,027	4,317	...	...
TOTAL .	13,42,636	14,07,978	12,18,941	11,46,643

The revenue of the Hidgellee Tidal Canal still continued to decrease owing to the want of dredging plant, which does not appear to have been yet provided.

The decrease of revenue on the Sone Canals is apparently due to a marked decrease in the areas of sugarcane, hot weather, and "rabi" crops watered from the canal, the area irrigated under five year leases, at presumably lower rates per acre, having increased largely.

3. The working expenses, including indirect charges, amounted to—

CANALS.	WORKING EXPENSES.			
	1882-83.	1881-82.	1880-81.	1879-80.
	R	R	R	R
Orissa	3,55,280	3,45,067	3,21,955	3,88,561
Midnapur	2,46,502	2,38,590	1,98,043	1,62,025
Hidgellee	41,897	29,984	26,520	44,355
Sone	5,49,774	4,90,193	5,04,208	3,84,523
Sarun	34,948	45,799	...	...
TOTAL .	12,28,401	11,49,633	10,50,726	9,74,464

The increase in working expenses occurs on all canals except the Sarun Irrigation Works, but the only serious increase is that on the Sone canals, and is mainly due to extensive silt clearances which were necessary in the first five miles of the Main Western Canal. It is stated that the causes which have led to an increase in the working expenses are not likely to recur.

4. The net assessed revenue, after deduction of all working expenses, therefore amounted to—

CANALS.	NET ASSESSED REVENUE.			
	1882-83.	1881-82.	1880-81.	1879-80.
	R	R	R	R
Orissa	—16,957	—42,193	—56,178	—1,09,756
Midnapur	74,398	53,419	66,162	1,08,960
Hidgellee	3,135	16,500	28,687	1,426
Sone	70,580	2,72,101	1,29,544	1,71,549
Sarun	—16,921	—41,482	...	...
TOTAL .	1,14,235	2,58,345	1,68,215	1,72,179

The decrease in amount of net revenue is due chiefly to a considerable decrease of revenue and increase of expenditure on the Sone Canals. But the assessed revenue of these canals during 1881-82 was abnormally increased as explained in the review of last year's operations, by credits on account of demand statements for 1880-81, which only reached the Collector during 1881-82. The assessments of 1882-83 correspond pretty closely with those of 1880-81, and compare favorably with those of previous years.

5. The interest charges on the capital cost of the Productive Public Works amounted to R21,15,505 for the year, and the net revenue of the four Productive Works, excluding the Sarun Provincial scheme, fell short of these charges by R19,84,349, the corresponding deficit of the previous year having been R17,75,361.

6. The areas irrigated during 1882-83 and previous years were as follows :—

CANALS.	ACRES IRRIGATED.				
	1882-83.	1881-82.	1880-81.	1879-80.	1878-79.
Orissa	133,028	132,278	117,221	109,038	111,250
Midnapur	101,939	104,434	103,862	100,178	58,731
Sone . Kharif . .	142,550	119,389	134,208	41,132	99,964
Rabi . .	15,999	36,795	50,290	62,266	77,430
Perennial . .	15,275	21,891	23,127	27,158	19,624
TOTAL .	173,824	178,075	207,625	130,556	197,018
GRAND TOTAL .	408,791	414,787	428,708	339,772	366,999

The conversion of "rabi" and "perennial" into "kharif" irrigation steadily continues on the Sone Canals.

7. The duty obtained from the water in the irrigation of rice varied from 144 acres per cubic foot per second on the Midnapur Canal to 86 or more probably 90 acres, on the Orissa Canals; 64 acres of sugarcane and rice and 40 acres of "rabi" crops were irrigated per cubic foot per second on the Sone Canals.

8. The navigation receipts of 1882-83 are compared in the margin with those of the three previous years. The decrees of revenue on the Sone Canals was caused by the silt clearance of the Main Western Canal already alluded to, which necessitated a three months' closure.

CANALS.	1882-83.	1881-82.	1880-81.	1879-80.
	R	R	R	R
Orissa . . .	1,08,473	83,206	71,402	98,075
Midnapur . . .	1,46,922	1,20,706	93,099	1,05,518
Hidgellee . . .	43,694	45,848	53,338	44,918
Sone	71,205	93,116	61,145	39,859
TOTAL .	3,70,294	3,42,876	2,78,984	2,88,370

9. The balances of irrigation revenue outstanding at the end of 1882-83 are still very large,* but show a marked improvement on those of the previous year (R6,82,692).

* Canals of—	R
Orissa	1,21,647
Midnapur	1,42,476
Sone	3,11,665
TOTAL	5,75,788

10. The cost of measuring and assessing irrigated areas and of collecting the canal revenue is compared below with that of previous years.—

CANALS.	PERCENTAGE OF EXPENDITURE ON AMOUNTS COLLECTED.			
	1882-83.	1881-82.	1880-81.	1879-80.
Orissa	15·80	22·40	17·20	19·60
Midnapur	16·51	13·36	11·96	10·60
Sone	18·69	18·92	27·09	23·96

11. Some of the facts noticed in the report point very clearly to the desirability of introducing a rate, similar to the owner's rate of Upper India, into Bengal. The value of the crops raised by canal irrigation in Orissa during 1882-83 is estimated at 18·71 lakhs of rupees. The water-rate assessed during the year amounted to R1·97 lakhs, or 10·5 per cent. of the value of crops raised; the canals having been worked at a total loss to Government during the year of R8·07 lakhs.* Therefore, as stated by the Chief Engineer in para. 17 of his Report, the price charged for the water cannot be said to exceed the value of the benefits conferred by it on the irrigating community, and yet cultivators hold back from renewing irrigation leases offered on even more favorable terms, because "rents having been generally enhanced between 1876-77 and 1880-81, when high prices prevailed, the cultivator now finds considerable difficulty in paying both the high rent and water-rate." A clearer case for the imposition of an owner's rate could hardly be stated.

* Excess of working expense over revenue (para. 4 *ante*)	R
	16,957
Interest charges of the year	7,89,681

ORDER.—Ordered, that copies of this Resolution and of the Report and its accompaniments be forwarded to the Secretary of State, and to the Finance and Commerce and the Revenue and Agricultural Departments for information.

Also, that a copy of this Resolution be forwarded to the Government of Bengal for information and guidance.

Also, that copies of this Resolution and of the Report be forwarded to the Local Governments and Administrations noted in the margin, in the Public Works Department, for information.

The Governments of Madras, Bombay, North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces and British Burma.
The Resident, Hyderabad.
The Agents to the Governor General, Central India and Rajputana.

Also to the Foreign Department for communication to the Resident at Mysore and Chief Commissioner, Coorg.

Also that this Resolution, the Resolution of the Government of Bengal, and the Chief Engineer's Report, with a few selected statements, be published in the Supplement to the *Gazette of India*.

HENRY A. BROWNLOW, *Colonel, R.E.*,
Deputy Secy. to the Government of India.

Resolution on the Canal Revenue Reports for 1882-83 and the Chief Engineer's note on the same, No. 2132IA., dated Calcutta, the 22nd November 1883.

READ—

The Canal Revenue Reports for 1882-83 and Chief Engineer's note on the same.

THE expenditure (direct charges) on irrigation works in Bengal, chargeable to Capital account, has up to the end of 1882-83 amounted to Rs. 5,65,06,409, divided as follows:—

	R
Productive Public Works	5,33,17,265
Imperial Ordinary Works	8,27,724
Provincial Works	23,61,420
TOTAL	5,65,06,409

The receipts from the canals, classed as Productive Public Works for the last three years, are shown in the statement below:—

	Receipts, 1880-81.	Receipts, 1881-82.	Receipts, 1882-83.
	R	R	R
Orissa Canals.			
Water-rates	1,78,047	1,24,290	1,80,325
Navigation	71,402	83,206	1,08,473
Miscellaneous	20,329	15,655	31,209
TOTAL	2,69,778	2,23,151	3,20,007
Midnapore Canal.			
Water-rates	1,12,960	1,18,588	1,04,060
Navigation	93,099	1,20,706	1,46,922
Miscellaneous	10,407	10,780	17,028
TOTAL	2,16,466	2,50,074	2,68,010
Hidgellee Tidal Canal.			
Navigation	53,338	45,848	43,694
Miscellaneous	1,149	1,446	1,338
TOTAL	54,487	47,294	45,032
Sone Canals.			
Water-rates	3,78,266	6,03,930	5,66,465
Navigation	61,145	93,116	71,205
Miscellaneous	39,233	39,246	47,007
TOTAL	4,78,644	7,36,292	6,84,677
GRAND TOTAL	10,19,375	12,56,811	13,17,726

The balances of water-rates outstanding at the close of each of the last three years were as follows:—

	1st April 1881.	1st April 1882.	1st April 1883.
	R	R	R
Orissa Canals	43,586	1,14,142	1,21,647
Midnapore Canal	92,974	1,31,701	1,42,476
Sone Canals	4,64,261	4,36,849	3,11,665
TOTAL	6,00,821	6,82,692	5,75,788

The gross receipts (R13,17,726) were R 60,915 in excess of those of any year to date. The net revenue was, however, excluding interest, only R 1,24,273, against R 1,52,977 credited in 1881-82. This comparatively unfavourable result was due to increased working expenses, consequent on extensive silt clearing operations having been carried out in the Main Western Canal, and to heavier expenditure on the transport service in Orissa. The charge for interest on the capital invested, payable to the Imperial treasury, was R 21,15,505, and the total deficit, taking these charges into account, was R 19,91,232, against R 19,22,211, the loss incurred in the year previous.

The low price of produce which was noticed in last year's report continued to exert an unfavourable influence on the collections on account of water-rates. The progress made, however, in the Orissa and Sone circles was satisfactory, the receipts from the former being the highest yet realized, and in the latter the arrear balance having been reduced by R1,34,154. The falling off in the irrigation revenue derived from the Midnapore Canal was partly due to the cause mentioned above, but defects in administration had, it is to be feared, no small share in bringing about this result. Revised rules under Act III (B.C.) of 1876 are now under consideration, and the present Deputy Superintendent is reported to have remedied the faults of system which the difficulty in realizing the assessments has brought to light. The Lieutenant-Governor trusts that the Collector of Midnapore will not cease to devote his personal attention to this important matter. It is clear that postponement of demands justly due only intensifies the difficulties of eventually collecting them, and there is reason to believe the reluctance to pay evinced by the cultivators was partly owing to payment of the full amount due not being pressed when they were best able to meet the demand.

The areas irrigated year by year since 1880-81 are shown below:—

		1880-81.	1881-82.	1882-83.
		Acres.	Acres.	Acres.
Orissa	Khureef	112,171	126,611	129,385
	Rubbee	4,877	5,403	3,245
	Perennial	173	264	398
	TOTAL	117,221	132,278	133,028
Midnapore	Khureef	103,862	104,434	101,939
Sone	Khureef	134,208	55,355	65,514
	Rubbee	50,290	36,795	15,999
	Perennial	23,127	21,891	15,275
	Hot weather irrigation	.....	20,794	2,481
	Five years' lease	.....	43,240	74,555
	TOTAL	207,625	178,075	173,824
	GRAND TOTAL	428,708	414,787	408,791

The area under irrigation was substantially the same as in the preceding year, though the rainfall was on the whole more favourable. The canals comprising the main western system of the Sone project were closed during the hot weather of 1882 to admit of their being cleared of silt; as a consequence irrigation was temporarily suspended, and the hot-weather irrigation, which in the previous year amounted to 18,499 acres, was lost. The decline in rubbee irrigation, which has been noticed in previous years, continued, whilst there has been a steady increase, mainly in Behar, in the areas leased for a term of years.

In both Midnapore and Shahabad the Collectors draw attention to the excessive labour involved in collecting small sums of variable amount from large numbers of people. In the latter district approximately 84,000 separate demands were made. Some relief may be expected from the five-year-lease system, but this will have more effect in facilitating the assessments, which are in corresponding detail, than in lessening the difficulties attending the collections, which must continue so long as individual ryots are dealt with,

and in the present state of village organization in Bengal combined action does not appear to be practicable.

The receipts under the head Navigation amounted during the year to R3,70,294 against R3,42,876, received in 1881-82. The increase occurred wholly in the revenue derived from the Orissa and Midnapore Canals, there having been a falling off in the traffic on the Sone Canals, due to those belonging to the main western system of that project having been closed for three months for silt clearance. The figures given above include R1,14,403, the gross receipts from the transport service.

The service on the Midnapore Canal was transferred to a private Company from the 1st of December, and it is intended to withdraw the Government steamers from the Orissa and Sone Canals, so soon as efficient arrangements for a service, at sufficiently short intervals, can be made by private enterprise.

The tollage collections since 1876-77 are shown below:—

	Orissa.	Midnapore.	Hidgellee.	Sone.	TOTAL.
	R	R	R	R	R
1876-77	22,881	67,651	44,572	4,852	1,39,956
1877-78	33,844	1,06,917	60,971	26,774	2,28,506
1878-79	57,042	77,340	59,723	29,332	2,23,437
1879-80	62,389	91,861	44,918	27,604	2,26,772
1880-81	41,297	77,143	53,388	39,819	2,11,597
1881-82	53,219	98,060	45,848	54,143	2,51,270
1882-83	66,736	1,06,157	43,694	39,304	2,55,891

The results of the year, though not so satisfactory as that immediately preceding, are far from disappointing. There has been a considerable increase in the gross revenue, and the working expenses have been enhanced by causes not likely to recur. Owing to the extension of the distributary system in Orissa, which has lately been sanctioned by the Secretary of State, there will, in any case, be a considerable increase in the irrigable area, and the cost of maintaining the head works and canals, which forms more than half of the total expenditure, will be met by correspondingly increased receipts.

By order of the Lieutenant-Governor of Bengal,

H. C. LEVINGE,
Secretary to the Government of Bengal,
Public Works Department.

REVENUE REPORT.

Note by H. C. LEVINGE, ESQ., C.E., *Chief Engineer, on the Canal Revenue Reports for the year 1882-83.*

THE capital outlay (direct charges) on irrigation works in Bengal during the year 1882-83 amounted to Rs. 16,96,366.

During the previous eight years the outlay was as follows:—

	R.
1874-75	49,85,345
1875-76	41,97,442
1876-77	35,92,789
1877-78	24,08,969
1878-79	28,32,279
1879-80	18,48,281
1880-81	19,11,430
1881-82	17,40,326

2. The total capital (direct charges) invested up to the end of the year 1882-83 was Rs. 5,65,06,409 as follows :—

	R
Productive Public Works	5,33,17,265
Imperial ordinary works	8,27,724
Provincial works	23,61,420
TOTAL	5,65,06,409

3. The particulars of the above outlay are given below :—

	Outlay.	
	During the year.	To end of th e year.
CAPITAL OUTLAY (DIRECT CHARGES).	R	R
PRODUCTIVE PUBLIC WORKS.		
Orissa canals	3,64,960	1,99,24,492
Midnapore canal	1,21,782	79,54,099
Hidgellee tidal canal	.....	17,72,699
Sone canals	3,72,543	2,36,65,975
TOTAL	8,59,285	5,33,17,265
IRRIGATION AND NAVIGATION WORKS.		
IMPERIAL.		
Tirhoot project (in abeyance)	.....	5,31,425
Hooghly do. (ditto)	.....	1,42,426
Damudur do. (suspended)	(—)2,900	1,53,873

Ditto, 3rd do.	19	.....	.....	.....	57,500	.....	1,839	1,585
Total	164½	62	625½	358,163	507,600	181,315	132,278	133,028

There is a small increase, compared with the preceding year, in the length of navigable canal open, consequent on the extension of the high level canal to the town of Bhuddruck. The length of distributaries is, however, less by 1¼ miles than that shown in the last return, it having been found that the figures therein given for the Machgong and Taldandah canals were not accurate. There is a material increase in the area protected from flood, the embankments on the rivers Brahminee and Beropa, by which a large proportion of the country irrigated by the high level canal, first range, was liable to inundation, having been completed. Of the area provided with distributaries, 63¼ per cent. has been assessed with water rates, while the percentage on the area commanded by the canals was 26¼.

16. The table following shows the areas irrigated and the rainfall for the last ten years :—

Year.	Kharif.	Rabbi.	Perennial.	Total.	Rainfall.
	Acres.	Acres.	Acres.	Acres.	Inches.
1873-74	9,104	3,291	176	12,571	40·31
1874-75	19,740	2,454	267	22,459	64·00*

1882-83	128,530	4,100	398	133,028	58·98†

* Mean of observations in Cuttack and Mansaghai.
† Ditto at 13 stations.

The total area irrigated during the year was in excess of that preceding by 750 acres. The increase is wholly in kharif crops, there having been a falling-off in rabi, due to the stoppage of irrigation operations during the progress of some main drains between the distributaries of the Kendrapara canal. The revised estimate for the Orissa scheme provides for the thorough drainage of the area commanded, and a considerable increase in irrigation is expected when these works are completed. The year generally was one of abundant rainfall well distributed. The Superintending Engineer notices that in July and October, the critical months, the fall was 1·92 and 3·38 inches in excess of the fall during the previous year; as a consequence there was very little unauthorized irrigation, only 76 acres having been reported as having been surreptitiously watered, against 4,831 acres in 1881-82.

17. The budget estimate of receipts on account of water-rates and miscellaneous receipts was Rs. 2,46,000, and the revised estimate Rs. 1,96,000, whilst the actual realizations amounted to Rs. 2,11,584. The total demand made by the Deputy Revenue Superintendent was Rs. 3,26,044, of which Rs. 1,92,174 was realized, and Rs. 9,758 remitted, leaving a balance of Rs. 1,24,112 against Rs. 1,19,812 due at the commencement of the year. Of the amount unrealized on the 1st of April 1883, Rs. 41,724 was collected before the end of May. The low price of rice, which was noticed in last year's report, continued and had a very depressing influence on the collections, rents having been generally enhanced between 1876-77 and 1880-81, when high prices prevailed, and the cultivator now finds considerable difficulty in paying both the high rents and the water-rates. There has been a satisfactory decrease, compared with the preceding year, of from 22·48 to 15·8 per cent. in the percentage of collection expenses to actual receipts. The actual expenditure was Rs. 34 in excess, so that this result is wholly due to improved receipts. The high cost of irrigation management in Bengal has formed the subject of a special report to the Government of India, but it may be here noticed that Rs. 56,920 in excess of the previous year's realization have been collected at practically no extra expense, and that the only feasible method of reducing the cost is to increase the demand by increasing the area irrigated.

The estimate lately sanctioned by the Government of India for extending the distributary system will enable this to be done, and allow of those canals which are at present nearly useless for want of distributing channels contributing some return on the capital expended. The greater part of the five-year leases in the province expired on the 1st of November 1882. The rates hitherto in force have, however, been continued to April 1888, some concession being made to holders of five-year leases who also irrigate rabi crops. There is a disposition on the part of the cultivators not to renew their engagements so long as the rainfall is favourable. Up to the 1st of October leases for 14,758 acres only had been entered into. The matter is noticed at some length by the Commissioner, who apparently favours differential rates according to the quality of

the land. There can be little doubt that the water-rate does not exceed the value of the benefit conferred even on those lands least requiring irrigation, and the higher lands for which increased rates would be paid have already been largely leased up to the end of the period for which the present rates have been sanctioned. The Deputy Revenue Superintendent notices that the swamp lands lately drained have been rented out by the zemindars at high rents. It does not appear, however, to be feasible, until the expiry of the current settlement, to secure for Government, at whose cost the drainage has been executed, any part of the enhanced value of this land.

18. The following table gives some particulars of the duty obtained from the water from the various canals. Allowance being made for that escaping, it will be noticed that there has been a considerable improvement during the year, which is ascribed to the more favourable rainfall:—

Name of Canal.	Effective average discharge in cubic feet.	Total for each main canal.	Area of kharif leased.	Total area for each main canal, including branches.	Average duty of each cubic foot of water.	Average duty of water for each main canal, including branches.
	C. ft.	C. ft.	Acres.	Acres.	Acres.	Acres.
Kendrapara	302		53,455		177·00	
Pattamoondi	83		11,939		143·84	
Gobree	127		3,915		30·82	
		512		69,309		135·36
High level 1st range	91		13,840		152·08	
		91		13,840		152·08
Taldandah	154		10,323		67·03	
Machgong	266		33,415	43,738	125·62	
		420				104·13
Total	1,023	1,023	126,887	126,887	124·03	124·03
1881-82	1,154	1,154	124,565	124,565	107·94	107·94

The duty calculated on the water entering the canals is 86 acres per cubic foot, but a portion of this supply is admitted for purposes of navigation.

19. Details regarding the crop experiments will be found in paragraphs 30 to 32 of the Superintending Engineer's report. The average value of the increased produce due to irrigation was Rs. 0·2 per acre less than in the previous year.

20. The total receipts under the head Navigation during the year amounted to Rs. 1,08,473, of which Rs. 66,736 represents tolls on boats and Rs. 41,737 earnings of the Government transport service. The receipts on this head for ten years are shown below:—

	Tolls.	Transport service.	Total.
	R	R	R
1873-74	18,577	Nil.	18,577
1874-75	21,412	„	21,412
1875-76	16,377	„	16,377
1876-77	22,881	„	22,881
1877-78	33,844	„	33,844
1878-79	57,042	„	57,042
1879-80	62,389	35,686	98,075
1880-81	41,297	30,105	71,402
1881-82	53,219	29,987	83 206
1882-83	66,736	41,737	1,08,473

There has been a satisfactory increase in the receipts both from tolls and from the transport service. The actual earnings, Rs. 1,10,129, were slightly in excess of the above figures which are based on actual receipts.

21. The following table gives some details regarding the tollage assessed during the year compared with 1881-82:—

Name of Canal.	Miles open.	Tollage.		Number of boats.		Tonnage.		Value of cargo.		Tollage per mile of canal.	
		1881-82.	1882-83.	1881-82.	1882-83.	1881-82.	1882-83.	1881-82.	1882-83.	1881-82.	1882-83.

Total	65,639	86,493	23,891	3,037
Increase	...	20,854	...	...

24 The same satisfactory development in the navigation revenue which was noticed last year has continued, notwithstanding diminished receipts on account of Government traffic. The increase has occurred chiefly on the Kendrapara canal, but in a less degree over the entire system except the Taldandah canal, a portion of which has been thrown open free of toll, so as to give facilities for the loading and unloading of goods.

25. The cost of the navigation establishment employed on the locks was Rs, 8,329 against Rs. 8,085 in the previous year, the mileage charge being Rs. 50·6 against Rs. 49·75 in the year preceding, and the percentage on the tollage receipts Rs. 12·51 against Rs. 15·19. A sum of Rs. 5,249, debitable to the transport service, is shown under the head of Navigation Establishment in the accounts.

26. The net earnings of the transport service were Rs. 3,267 against Rs. 8,893 realized in 1881-82. The decrease was due to a second steamer, for which there was scarcely sufficient work, being employed on the Chandbally line up to January 1883, and afterwards on the high level canal; the latter line having only been so lately started was not sufficiently known to secure a paying traffic. Besides the direct receipts, Rs. 15,778 was received as tollage on these steamers. The total receipts were Rs. 41,737 against Rs. 29,987 during the previous year. Some further details regarding the traffic are given in the table below :—

	Traffic, 1881-82.									Traffic, 1882-83.

27. The miscellaneous revenue received during the year was Rs. 15,554 in excess of that realized in 1881-82. This increase was chiefly due to the sale of some English leasehold property acquired by the late East India Irrigation and Canal Company. The usual particulars regarding these receipts will be found in the statement following :—

Source of Revenue.	Year in which received.		Difference.	
	1881-82.	1882-83.	Increase.	Decrease.
	R	R	R	R

30. The floods of the year, except in the river Salindee, were moderate and the expenditure on maintenance was Rs. 7,449 less than in 1881-82. The decrease would have been greater but for the maintenance of the Kendrapara extension canal, the Páttia weir, and some drainage lines which for the first time have been debited to revenue. Details showing the expenditure by main heads of works are given below :—

32. The result of the year's working has been a loss of Rs. 3,216 calculated on earnings, and Rs. 21,532 calculated on actual realizations. Last year the figures were Rs. 25,786 and Rs. 1,05,509, so that there has been a decided advance in the financial returns from the project, the receipts from which are nearly half a lakh of rupees in excess of any year to date.

MIDNAPORE CANAL.

36. The rainfall for the last four years in shown in the statement below:—

Station.	Fall in 1879-80.	Fall in 1880-81.	Fall in 1881-82.	Fall in 1882-83.	Remarks.
Midnapore .	38·11	59·91	70·32	66·04	Average of 14 previous years, 56·07.
Panchcoorah .	36·02	55·68	78·49	51·59	Average of 13 previous years, 50·29.
Contai . .	47·91	87·46	100·44	61·01	

The total fall at Midnapore and Panchcoorah was somewhat above the average, but in June, July, and August it was very deficient, being 50 per cent. at the former place and 300 at the latter less than in the previous year. The leases for 23,913 acres expired on the 31st of March 1882, and the deficiency compared with the previous year of 2,510 acres in the leased area is attributed to the non-renewal of some of these. The Superintending Engineer reports that the cultivators were disposed to delay leasing their lands in the hope that the water-rates would be lowered, whilst the Collector states that one reason of the backwardness evinced in the matter was the inability of the Engineers to supply water sufficiently quickly, early in the season. On this subject the Superintending Engineer states that from the weekly irrigation notes furnished by the Executive Engineer and his subordinates, he finds that irrigation commenced on the 20th of June, and that by the 29th of July 80,000 out of 88,000 acres leased under the Midnapore weir had received its first watering.

37. The Superintending Engineer, in paragraphs 12 and 13 of his report, narrates the steps taken to obtain more accurately the duty of the water utilized from the canal. In addition to the sluice observations, from which the duty was calculated in former years, the duty has been calculated from the discharges over the first falls on the Midnapore canal and Narainghur distributary. The results are given as 144 acres per cubic foot per second of discharge for the area irrigated from the Midnapore weir, and 85 acres for that irrigated from the Panchcoorah weir. The reason of the difference is explained by the Superintending Engineer as follows:—

"The great difference in the duty of water on the areas commanded by the two weirs is due to different descriptions of land irrigated by them. Under the Midnapore weir, the lands are generally high, with small embankments or "ails" round different plots, and the rice plants growing on it require only a depth of six to seven inches of water. Under the Panchcoorah weir, the lands are without these small embankments mentioned above, and consist usually of long stretches of low-lying lands, with small grambherries, or regulating embankments dividing the different levels, and the rice plants growing on such lands require generally from 1½ to 2½ feet of water. Hence the smaller duty of water for the irrigated area under the Panchcoorah weir, as compared with that under the Midnapore weir."

38. The duty given above is calculated on the average of the discharges over the whole of the kharif season, but the Superintending Engineer remarks

that in his opinion "in calculating the duty of water on a canal used principally for irrigating kharif crops in lower Bengal, we ought to take into consideration only the quantity used for the first watering of the plants." This opinion is illustrated by the results obtained in the commencement of the season, when, as already stated, the rice crops could not be irrigated as quickly as was desired. The daily average discharge for 40 days over the Midnapore canal weir No. 1 was 864 cubic feet per second, and the area irrigated 80,000 acres, so that the duty for that period was 92 acres per cubic foot per second only.

39. The total demand for the year under the head Water-rates was Rs. 2,86,347, of which Rs. 1,31,701 was the balance at the commencement of the year, and Rs. 1,54,646 the current demand. Of this amount, Rs. 1,04,060 was collected, and Rs. 39,811 remitted, leaving Rs. 1,42,476 due at the end of the year. The following table shows for five years the demands and recoveries made by the Deputy Canal Revenue Superintendent yearly, miscellaneous revenue received by that officer being included:—

Year.	Amounts earned as water rate during the year.	Total demand under all heads.	Cash received under all heads.	Remission.	Total.	Balance.	Cost of collection.	Percentage of cost on total demand.	Percentage of cost on recoveries.
	R	R	R	R	R	R	R		
1878-79 .	88,777	1,31,932	93,262	5,893	98,655	33,277	14,802	11·22	15·00
1879-80 .	1,51,587	1,99,854	1,41,632	638	1,42,270	57,584	15,015	7·51	10·60
1880-81 .	1,55,730	2,31,116	1,22,489	6,823	1,29,312	1,01,804	14,650	6·33	11·96
1881-82 .	1,56,590	2,71,001	1,28,529	3,668	1,32,197	1,38,804	17,172	6·33	13·36
1882-83 .	1,55,246	3,04,486	1,13,150	42,536	1,55,686	8,800	18,683	6·13	16·51

40. The increased percentage of the cost of collecting to the gross receipts is a consequence of the falling off of the latter, which is explained by the Collector, in commenting on the increased balance at the close of the year, as follows:—

"The inefficiency thus indicated has arisen, I think, from several causes. The task of collecting a comparatively small demand from a large number of cultivators is in itself one of no ordinary difficulty. To collect Rs. 1,000 at the rate of Re. 1-8 an acre, or 8 annas a *beegah*, is a much more difficult matter than to collect the same amount at the rate of Re. 1-8 or Rs. 2 a *beegah*, and the cost of an establishment sufficient to secure thoroughly satisfactory collections would be prohibitive. Under the somewhat lax supervision of Baboo Jadunath Mookerjee, far too much was left to local subordinates. Mr. Roberts was earnest in his endeavours to improve the administration of the department, but I failed to convince him of, or induce him to recognize, the necessity of improvements in the machinery of control, without which it was impossible for him or any one else to keep his subordinates in check. Hitherto there has been no register showing the total demand against each lessee, the demand of each year being shown in a separate register, and consequently it was practically impossible for either the deputy superintendent or myself, on inspecting a *tahsildar's* office, to test his work, and very difficult for the *tahsildar* himself to carry on his work properly, putting pressure on the right persons. This faulty system has been remedied since Mr. Ghose took charge, and revised rules, providing among other things for the necessary change in the form of the registers, are being submitted for approval."

41. Revised rules under Act III (B.C.) of 1876 are now under consideration, and it is hoped that with the change in the administration referred to by the Collector, the current year may show an improvement in the collections. The low price of rice, which is not referred to by the Collector, exerted an unfavourable influence on the canal revenues.

42. The usual crop experiments were carried out in 1,186 places, the results showing a difference in favour of irrigated crops of 3·35 maunds of paddy and 3·80 maunds of straw in the localities irrigated from the Midnapore weir, and 9·58 maunds of paddy and 13·84 maunds of straw in those irrigated from the Panchcoorah weir.

43. The receipts of the year under the head Navigation amounted to Rs. 1,46,922, of which Rs. 1,06,157 was received from tolls on boats and

Rs. 40,765 from the transport service. Particulars regarding the traffic and tollage are given in the two following tables, which extend over ten years :—

44. There has been, it will be noticed, a steady increase in the traffic under the heads Articles of food and Miscellaneous. The decrease in the number of passengers carried by boat is due to the increasing use made of the steam transport service. There was little interruption to the traffic from closures for silt clearance, range V, from Midnapore to Lutchmutpore, only having been closed from the 25th January to the 15th of February 1883.

45. The steam transport service between Calcutta and Midnapore was maintained throughout the year, a steamer being run daily each way, Sundays excepted. For the first eight months of the year the service was managed by Government, but from the 1st of December it was taken over by the Calcutta Steam Navigation Company, who pay Rs. 1,000 per mensem to Government in lieu of tolls and as hire of the steamers. Owing to the more frequent running, a fair comparison between the results of this traffic and that of previous years is not possible; but the following table, extracted from the Superintending Engineer's report, gives particulars of the number of passengers and weight of cargo carried :—

Months.	Passengers. First class.	Second class.	Third class.	Total number.	Goods.	Remarks.
1882.					Mds.	
April	51	69	11,382	11,502	408	Under the Department Public Works.
May	67	189½	14,056	14,312½	238	
June	39	153	14,100	14,292	345	
July	30	94	14,837	14,961	258	
August	26	87	14 566	14,679	324	
September	26	155½	15,648	15,829½	260	
October	76	201½	15,226	15,503½	356	
November	36	192	15,660	15.888	242½	
December	24	81	7,812	7,917	470	
1883.						
January	33	114	7,264	7,411	438	Under the Calcutta Steam Navigation Company.
February	21	67½	6,200	6,288½	165	
March	12	103	9,090	9,205	241	
Total	441	1,507	145,841	147,789	3,745½	

There has been no real decrease in traffic. The reason of the apparent falling off is explained at page 11 of Superintending Engineer's report attached.

46. The gross earnings of the service were Rs. 40,765, and the working expenses Rs. 26,097, so that there was a clear profit of Rs. 14,668, which, however, should be diminished by Rs. 4,520 paid during the current year on account of repairs, leaving a balance of Rs. 10,148.

47. The amount realized during the year under the head Miscellaneous Revenue amounted to Rs. 17,028, of which Rs. 9,095 was collected by the Deputy Revenue Superintendent, and the remainder, Rs. 7,933, by the Executive Engineer.

48. The receipts on revenue account and working expenses for the last 10 years are detailed in the subjoined tables :—

REVENUE RECEIPTS.

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	R	R	R	R
1873-74	35,823	34,104	2,711	72,638
1874-75	67,015	44,886	4,316	1,16,217
1875-76	52,791	51,810	6,508	1,11,109

Total Working Expenses	1,20,315	1,30,427	1,67,399	1,71,279	2,03,814	1,72,836	1,54,403	1,89,220	2,28,474	2,38,077

Leave and pension allowances are not included in the above statements. Adding Rs. 8,425 on this account, the net revenue for the year was Rs. 21,508. This comparatively unfavourable result is not due to any diminution in the earning power of the canal, but to the large balance of water rates unrealized at the close of the year from causes which have already been alluded to.

49. The following table gives the cost of maintaining the canal and distributaries for the last five years :—

Year.	Main Canal. Length of Canal.	Total cost of Works.	Rate per mile.	Distributaries. Length of Distributary Channels.	Total cost of Works.	Rate per mile.
		R	R		R	R
1878-79	48	59,787	1,246	254	23,736	[illegible]
1879-80	48	36,943	1,186	254	16,140	[illegible]
1880-81	48	78,275	1,688	267	20,140	[illegible]
1881-82	48	88,910	1,790	277	11,884	[illegible]
1882-83	48	1,01,821	2,121	277	20,407	73

50. The Superintending Engineer enters into some detail as regards the constant increase in the cost of maintaining the canal. It is no doubt due to the more extensive employment of dredgers for silt-clearing in place of closing the canal, which, with the daily steam service, would be productive of great inconvenience to the public, besides leading to a loss in the tollage receipts. The reason given for the increased cost of repairing distributaries is not satisfactory. In Orissa, under almost similar circumstances, the cost is only Rs. 42 per mile.

51. The table below gives some particulars as to the cost of dredging, which was considerably more than in the previous year, both in amount and rate. The Superintending Engineer's explanation is subjoined. The long lead caused by the port authorities prohibiting the discharge of silt into the Hooghly river had no doubt a prejudicial effect on the cost of this work, and its withdrawal, together with the increased number of hopper barges available, will, it is hoped, lead to more satisfactory results this year:—

Names of Dredgers.	Number of days at work.		Quantity of work done.				Cost of working dredger during the year.		Rate per 1,000 cubic feet.

"The progress in the dredging operations during the year under review has, I regret to observe, not been so satisfactory as in the previous year, owing partly to the want of hopper barges. Of the ten hopper barges ordered for the Midnapore canal from the Seebpore workshops, the Executive Engineer reports having received only six in last January, two since then, and two still remain to be supplied. In addition, some six hopper barges were lent from the Circular and Eastern Canals division, but these had to be considerably altered before they could be used. Ten more hopper barges have been since sanctioned, and these are promised by the Seebpore workshops to be delivered by the end of the current year. The dredging of the Oolooberriah reach of the canal was further retarded by the restriction placed by the Port Commissioners on the silt being thrown into the Hooghly river. This necessitated our taking the barges to the Damooda river, a distance of nearly eight miles, for the discharge of the silt. This restriction has since been removed, and the progress has been more satisfactory. The bucket dredger, which is employed in dredging the channel through the shoal on the Roopnarain river, in front of the Kantapookur lock, can only dredge in six feet of water, and as she is working in a tidal river her outturn of work is necessarily restricted to the few hours that there is a depth of six feet or less of water over the channel through the shoal. Since the number of barges has been increased this year, the progress made by the dredger has been more satisfactory; the Bruce's hydraulic dredgers averaging an outturn of 62,174 cubic feet per week, and the bucket dredger, 20,860 cubic feet per week, or, say, an average of 10,362 cubic feet per day for the former and 3,960 cubic feet per day for the latter."

HIDGELLEE TIDAL CANAL.

53. The returns from this canal depend entirely on the tolls received from boats and miscellaneous revenue, there being no irrigation from it.

The revenue from navigation for the year amounted to Rs. 43,694, against Rs. 45,848 in 1881-82. This decrease of Rs. 2,154 was chiefly due to a closure from the 15th of January to the 31st of March 1883. The canal is unprovided with dredging plant, and at present the only means of removing the silt is by closing it. A supplementary estimate providing for this want and for a lock at Kalinugger, 150 feet long, in place of the present one, which is 100 feet in length only, is under preparation.

54. Details regarding the traffic for the last ten years are given in the tables which follow :—

Comparison of Traffic.

Particulars.	1873-74.	1874-75.	1875-76.	1876-77.	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.

The decrease in the weight of the articles carried is partly owing to allowance not having been made in former years for the displacement caused by the boat itself. The tonnage of loaded boats was only about 1 per cent. less than in the previous year.

55. The receipts and working expenses of the canal for the last ten years are given below :—

Revenue Receipts.

Year.	Water-rates.	Navigation.	Miscellaneous.	Total.
	R	R	R	R
1873-74	2,598	27,978	639	31,215

56. The net revenue derived from the canal has decreased from Rs. 17,310 in 1881-82 to Rs. 3,135 in the year under review. This falling-off is almost entirely owing to the heavy expenditure, Rs. 21,755, on silt clearance.

SONE CANALS.

57. The capital, interest, and revenue accounts of these canals are given below :—

I.—Capital Account.

Profit	90,513		
TOTAL	6,20,354	TOTAL	6,20,354

59. The following table shows the lengths of canals and distributaries open, and area commanded and irrigable:—

Name of Canal.	Navigable canal.	Branch canal.	Distributaries.	Area under command.	Area which can be irrigated.		Total area which can by irrigated.
					Kharif.	Rabi.	
	Miles.	Miles.	Miles.	Acres.	Acres.	Acres.	Acres.
Eastern main and Patna canal	36½	.....	311	307,610	112,640	151,200	263,840
Arrah canal	74	70½	469½	441,500	132,800	178,200	311,000
Western main and Buxar canal	68½	77½	305	546,814	135,840	210,600	346,440
TOTAL	218½	148	1,075½	1,295,924	391,280	540,000	921,280

60. During the year two miles of navigable canal and 41¼ miles of distributaries were opened. The area irrigable remains the same, being, as remarked in last year's report, dependent on the supply of water available from the river Sone.

61. The progress made in village-channel construction is shown in the statement following:—

	Total length of village channels completed.	Area commanded.	Number of outlets.	Number of permanent outlets.
	Miles.	Acres.		
Arrah Division	702	114,794	2,247	201
Buxar ,,	302	94,435	1,017	85
Eastern Sone Division	182	86,079	1,683	12
Total, 1882-83	1,186	245,308	4,950	248
Total, 1881-82	1,144	212,494	4,750	72

The channels were mostly constructed by the persons interested, 128 miles only out of the 1,186 miles open having been carried out by Government officers under the provisions of Part V of Act III (B.C.) of 1876.

62. The area under irrigation assessed with water-rates during 1882-83 is shown in the table following, contrasted with the previous year:—

Crop.	1881-82.	1882-83.	Increase.	Decrease.
	Acres.	Acres.	Acres.	Acres.
Kharif	55,355	65,514	10,159	.....
Rabi	36,795	15,999	.....	20,796
Sugarcane	21,891	15,275	.....	6,616
Hot-weather irrigation	20,794	2,481	.....	18,313
Five years' lease	43,240	74,555	31,315	.....
TOTAL	178,075	173,824	41,474	45,725

There was, therefore, a decrease in the irrigated area of 4,251 acres. This falling-off is however more apparent than real. The canals comprising the main western system having been closed during the hot weather, water could not then be given. During the previous year there were 18,499 acres of hot weather irrigation from these canals. The increase in the area under five years' leases more than compensates for the decline in rabi and sugarcane irrigation.

63. The area irrigated in each division for the last three years is shown in the table below:—

Year.	Eastern Sone Division.					Arrah Division.					Buxar Division.					Total for all Divisions.					
	Kharif.	Rabi.	Sugarcane.	Five years' leases.	Hot weather.	Kharif.	Rabi.	Sugarcane.	Five years' leases.	Hot weather.	Kharif.	Rabi.	Sugarcane.	Five years' leases.	Hot weather.	Kharif.	Rabi.	Sugarcane.	Five years' leases.	Hot weather.	Grand Total.

The rainfall for the year was less than usual, but it was very favourably distributed for the rabi crops, there being good rain in November and a further fall of 1½ inches in January, which is not shown in the above statements. The decline in rabi irrigation is adverted to by the Collector of Shahabad, who

states that the ryots prefer well-water for that crop, as it is warmer. However this may be, the character of the season was probably the chief cause of the decrease which occurred.

65. In the table following the crops grown by the aid of canal-water for the last two years are shown :—

Name of Crop.	Eastern Sone Division.		Arrah Division.		Buxar Division.		Total.	
	1881-82.	1882-83.	1881-82.	1882-83.	1881-82.	1882-83.	1881-82.	1882-83.

* Acres. Rice 59,645; Rabi 7,455; Sugarcane 7,455 } approximately.

66. The area actually under lease was 148,533 acres, the remaining 25,291 acres being either hot-weather or irrigated in excess of permits. The area under five years' lease increased during the year from 42,810 to 76,305 acres. The proportion of flow to lift irrigation was as 95 to 5; last year it was as 94 to 6.

67. The Superintending Engineer, in paragraph 14 of his report, gives calculations on the duty of water used. By omitting sugarcane in the kharif season, and taking the months of maximum discharge only, he arrives at a duty of 46·7 acres per cubic foot of discharge for the main western series during the kharif season, and 43·7 acres per cubic foot for the rabi. For the main eastern series the figures would be 31½ and 46·6 acres. Adding the sugarcane in the kharif season, and taking the average discharge from July to October for the kharif season, and from December to March for the rabi season, the duty was 64 acres per cubic foot in the khureef season, and 40 acres in the rabi season. The reasons given for the omission of sugarcane in the kharif season do not appear to be satisfactory, as water is more required then by sugarcane than in the rabi, in which it is included; sugar manufacture commences in December.

68. There was a balance of Rs. 4,36,849 due on account of water-rates at the commencement of the year. The demands received which fell due within the year amounted to Rs. 4,62,301, making a total of Rs. 8,99,150, of which Rs. 5,66,465 was collected, and Rs. 21,020 remitted, the balance on the 1st of April of the current year being Rs. 3,11,665. The Collector of Shahabad gives the following table, which shows the satisfactory progress made during the last two years in reducing the heavy balance of arrears which had occurred in that district up to the end of the year 1880-81 :—

Year	Demand.			Remission.	Net demand.	Collection.	Balance.	Percentage of collection to current demand.
	Arrear.	Current.	Total.					
	R	R	R	R	R	R	R	
1877-78	66,056	1,02,509	1,68,565	35,715	1,32,850	51,611	81,239	50·3
1878-79	81,340	5,94,616	6,75,956	10,424	6,65,532	3,64,106	3,01,426	61·0
1879-80	3,01,719	4,13,711	7,15,430	10,024	7,05,406	4,05,094	3,00,311	97·9
1880-81	3,00,311	4,50,412	7,50,723	11,193	7,39,530	3,08,225	4,31,305	68·4
1881-82	4,31,305	5,41,533	9,72,838	52,427	9,20,411	5,30,706	3,89,705	98·0
1882-83	3,89,705	3,61,402	7,51,107	15,970	7,35,137	4,79,586	2,55,551	138·9

The balance in the Gya district is slightly less than at the commencement of the year, but in Patna there was an increase of Rs. 10,286, a result which the Commissioner does not consider to be satisfactory. The Collector of Patna gives various reasons, chiefly defects in the demand statements, for this want of success, but they apply equally to Gya, where fair progress has been made.

69. The delay in submitting demand statements is again brought to notice by the Commissioner. It was never expected that the whole of the assessment papers would be completed by the dates mentioned in the rules which were fixed early in the season, as payments cannot be enforced until one month after the water-rates become due; there does not, however, appear to be any reason why the whole of the sugarcane and five-year lease assessments and 50 per cent. of the demand statements for other crops should not be submitted by the date fixed, and the Superintending Engineer will be requested to take measure to secure this end. The Collector of Shahabad again notices the difficulty of collecting small sums of variable amount frequently disputed from large numbers of people. There were approximately 84,000 separate demands made in that district. The year's results appear to show that with good arrangements it is possible to accomplish what is desired.

70. The cost of the revenue establishment employed is shown below for the years 1881-82 and 1882-83 :—

	1881-82.		1882-83.	
	Amount.	Percentage on collections.	Amount.	Percentage on collections.
	R		R

O

72. The large number of five-year leases in the Arrah division has begun to exercise an appreciable effect in reducing the cost of the establishment employed on assessments, but it will be some years before full advantage of that system is apparent. The excessive number of complaints, 11,997, which were received during the year, exerts a very prejudicial effect on the working expenses. It is not however easy to devise any remedy; they must be enquired into, and as unfortunately in some cases remissions are made of just dues, it is altogether to the interest of the cultivator to lodge an objection so long as it can be done free of cost.

73. Crop experiments were carried out as usual. Details regarding them will be found in paragraph 21 of the Superintending Engineer's report. The average produce of rice lands irrigated from the canals was $1\frac{6}{10}$ maunds of grain and $1\frac{4}{10}$ maunds of straw in excess of those otherwise irrigated.

74. The following statements show the navigation receipts and the assessed tollage divided between Government and private traffic since the canals were opened in 1876-77:—

Year.	Eastern Main Series.			Western Main Series.			Total.	Total Tollage only.
	Number of miles open.	Tollage receipts.	Transport service receipts.	Number of miles open.	Tollage receipts.	Transport service receipts.		
		R	R		R	R	R	R

75. The decreased tollage, Rs. 12,316, received during the year, is to a large extent attributable to the long closure of the canals comprising the main western system from the 19th of April to the 20th of June.

76. Further statistics, comparing the traffic on the canals during the year with those preceding, will be found in the following table:—

	1876-77.	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.

78. The Superintending Engineer notes that there has been a slight increase in the quantity of rice imported, and a falling-off of $2\frac{1}{2}$ lakhs of maunds in the wheat traffic. The following table of the principal items of traffic, compared with 1881-82, is extracted from his report:—

	1881-82.	1882-83.
	Mds.	Mds.
Articles chiefly imported—		
Salt	1,30,564	95,416
Rice	43,122	47,196
Stimulants	50,601	43,591
Articles chiefly exported—		
Wheat	3,58,974	1,35,096
Other articles of food (including sugar)	1,42,009	1,27,981
Staples of manufacture (including linseed)	4,41,148	3,57,457

79. The cost of collecting tolls and working the locks was Rs. 13,442, against Rs. 13,173 in the previous year.

80. The receipts from the steam transport service were Rs. 31,901, and the expenses Rs. 25,990, leaving a net profit of Rs. 5,911. Though there was a falling-off in the gross receipts compared with 1881-82, due to the long closure of the Arrah and Buxar canals, the net receipts were Rs. 1,888 in excess of those recovered during that year. The number of passengers carried during the year was 44,635, whilst Rs. 5,413 was received from the carriage of parcels and goods. The Superintending Engineer notes that the number of passengers carried was in round numbers 40,000, and the mileage run 25,000 miles, which gives 1·7 passengers per steamer a mile—a figure which, considering that there is communication only twice a week in the Arrah and Buxar canals, and once in the Patna canal, compares favourably with the East Indian Railway on which in 23 weeks ending the 16th of June last, the passengers carried per train-mile were 3·2. Four steamers, the *Umpire*, *Buxar*, *Bunas*, *Koel*, continue to be employed, one being held in reserve; and there are two cargo boats.

81. The miscellaneous receipts during the year amounted to Rs. 47,007, or Rs. 7,761 more than was received in 1881-82. The chief increase occurred under the head "Profit on outturn from workshops," on which account Rs. 19,259 was credited to revenue.

82. The receipts and working expenses for the last three years are shown below:—

	1880-81.	1881-82.	1882-83.

Maintenance	3,57,839	3,28,032	4,02,841
Irrigation Establishment	1,02,476	1,14,283	1,05,883
Navigation ditto	10,618	13,678	19,880
Refunds	1,637	1,329	1,237
	4,72,570	4,57,322	5,29,841
NET PROFIT	6,074	2,78,970	1,54,836

83. The increase in working expenses is mainly due to extensive silt-clearing operations in the first five miles of the main western canal, which were carried out at a cost of Rs. 79,729, being Rs. 52,614 more than was expended on that work in the previous year. The decrease in revenue is due to the falling-off in the irrigation and navigation revenue, which has already been commented upon.

84. The cost of maintaining the Sone head works amounted to Rs. 29,201, or Rs. 2·35 per foot run, against Rs. 44,509 expended in the previous year.

85. The expenditure per mile on the canals and distributaries for the last two years is shown below :—

Name of Canal.	Name of Division.	Number of miles.	COST PER MILE.	
			1881-82.	1882-83.
			R	R

Distributaries	Arrah	459½	51	57·6
	Buxar	45¾	60	96
	Eastern Sone	311	Mainly charged to Capital.	43

The variations in cost, with the exception of the main western canal, to which reference has already been made, are not such as to call for remark.

86. The Superintending Engineer, in paragraph 8 of his report, enters somewhat fully into the subject of dredging, and expresses a hope that with the plant lately sanctioned it may in future be possible to dispense with long closures. The main western canal was closed from the 19th of April to the 20th of June 1883, and during that period 10,877,582 cubic feet of silt removed at an average cost of Rs. 6-5-11 per 1,000 cubic feet. The shutters of the head sluices were cut in half in 1882, with the object of diminishing the influx of silt, water being drawn off from the upper surface of the pool only, the measure the Superintending Engineer gives reasons for believing to have been successful, the quantity of silt has, he calculates, been reduced by one-half.

The following table gives the cost of dredging during the year 1882-83, eight Fouracre's and two English dredgers having been employed :—

	Cubic feet.	Cost.	Rate.
		Rs.	Rs. A. P.
Eartern main canal and head lock	3,026,104	10,108	3 5 5
Patna canal (English dredger)	638,469	3,775	5 14 7
River Sone	341,675	595	1 12 0
Western main canal	1,643,768	3,709	2 4 0
Head lock	219,340	602	2 12 0
Arrah canal	187,939	1,278	6 12 0
TOTAL	6,057,295	20,067	... ..

The cost of repairing the dredgers is, however, not taken into account, and it is stated that at present silt removed by dredging costs on an average Rs. 2-12 per 1,000 cubic feet more than when removed by hand. It appears possible by more careful arrangements to increase the outturn from the dredgers by about 30 per cent., and during the current year it is expected that a considerable reduction in the cost will be effected.

87. The cost of weed-clearance in each division for the last three years is shown below. The decrease during the year was owing to the long closure of the main western canal and its branches :—

	1880-81.	1881-82.	1882-83.
	Rs.	Rs.	Rs.
Eastern Sone	10,352	5,535	7,721
Arrah	13,468	15,564	6,627
Buxar	...	64	29
TOTAL	23,820	21,163	14,377

SARUN CANALS.

88. The capital, interest, and revenue accounts of these canals, which have been constructed from provincial funds, are given below :—

Grand Total	34,948	80,747	Grand Total	34,948	80,747

89. The receipts, according to the above account, were Rs. 16,921 less than the working expenses, on which account there is a debit balance to date of Rs. 48,323. There are, on the other hand, outstanding arrears of Rs. 25,199. The revenue derived from these canals depends, in fact, on the annual guarantee of Rs. 23,000. The amount collected on outside irrigation is insignificant; Rs. 1,796 only were received by the guarantors on this account in the year under review. The guarantee is in consideration of water supplied for indigo manufacture and irrigation, no exact account of which has yet been kept. The Superintending Engineer remarks on the labour and cost of recovering water-rates under Act VII of 1880, but it is probable that when the cultivators find that payment is exacted, they will obtain water after regular application, and thus avoid the heavy costs which appear to be inseparable from the certificate procedure.

90. The rules under the Irrigation Act are now being considered with a view to the imposition of a higher rate in the case of unauthorized irrigation.

91. The following account of the Sarun canals, given by the Superintending Engineer, is of interest:—

"The Sarun canal works have in effect thrown a nearly perennial discharge of Gunduck water into four old delta river channels traversing the Sarun district, the supply of which was cut off by the embankments of the Gunduck. In the Sadowa dehat a considerable area of rice lands can be irrigated by flow by a process of backing up the canal water into the natural drainage channels, and by careful management. This is effected without damage to the country generally. In all the other dehats irrigation is only carried out by lifting water to heights, which vary from 8 to 10 feet in the upper reaches of the rivers, to 15 to 20 feet lower down; it is also of very great benefit to the indigo interests by insuring a timely supply of good water for manufacture. The Sarun irrigation works have placed a supply of water within the reach of the people, and the rules provide for the execution by Government of dams and channels to bring the water on the fields, on a guarantee of interest on the cost of the work and of the cost of repairs by persons benefiting from them. There is no attempt at any system for distributing the water; there are at present no distributary channels and no dams for raising the water to the level of the country for irrigation by flow. The revenue of the canals cannot materially increase until these privileges are more largely availed of; they are as yet imperfectly understood. An attempt is being made to make them better known, and estimates of one or two of the most promising distributary channels are being worked out."

92. The area irrigated during the year was 1,741 acres against 666 irrigated in the year preceding. These figures do not, however, include indigo irrigated by the guarantors.

The statement below gives some particulars of the extent to which the different channels were worked. Any calculation as to the duty of the water

is out of the question until more exact particulars of the use to which it is put can be obtained:—

CALCUTTA CANALS AND NUDDEA RIVERS.

93. The revenue administration of these works rests with the Board of Revenue, whose report has been separately reviewed in a Government Resolution which appeared in the *Calcutta Gazette* for the 24th October 1883. Capital and revenue accounts are not at present kept, but orders for the transfer of the Calcutta canals to the class "irrigation and navigation works for which capital and revenue accounts are kept" have been issued, and statements dividing the expenditure accordingly have been prepared and are now under consideration.

94. The following statement gives details of the receipts and working expenses of the works in question for the last two years:—

	1881-82.	1882-83.

The Board of Revenue attribute the increased receipts to more careful measurements of the boats plying on the canal, in the number of which there was a slight decrease, and to a revision in the rates of tolls. The new scale is, however, substantially the same as that hitherto in force, the charges made being the introduction of a minimum toll of 4 annas per boat, and charging return boats at half rates.

GENERAL REMARKS.

96. The net income received during the year from the canals in Bengal which have been constructed by Imperial funds amounted to Rs. 1,55,279, against a budget estimate of Rs. 1,40,000. The receipts were Rs. 1,03,246 in excess of the estimate, but on the other hand, the working expenses exceeded the provision made by Rs. 87,967. The excess receipts are due to the progress made in collecting the arrears of water-rates in the Sone circle, the balance at the close of the year being Rs. 3,11,665, against Rs. 4,36,849 outstanding at its commencement.

The increased working expenses are due to an extension of the Orissa transport service, and to heavier establishment charges than was anticipated having been incurred in the Sone circle.

97. The statement below shows the financial results calculated by earnings :—

	₹

													1,652	9,102		
Upper Ganges.	4·74	3·30	1,300	793	·8	·5	Saháranpur	10,648	264	466	159	2,854	14,391	6,174	11,965	Executive Engineer, Northern Division, Ganges Canal, reports that the demand was not very heavy till the end of the month, when wheat began to spring up. Irrigation is progressing fast, and the Deobund branch would, I presume, a large area. The river met all demands on it.
	8·50	7·56	1,300	1,044	·5	·7	Muzaffarnagar	17,665	2,330	1,071	2,837	5,740	29,643	21,851	50,320	Executive Engineer, Meerut Division, Ganges Canal, reports that there was a heavy demand all through the month for standing sugar crops and for rabi irrigation.
					·8	·8	Meerut	69,248	8,836	461	8,164	2,631	89,340	3,678	60,484	Executive Engineer, Bulandshahr Division, Ganges Canal, reports that there was a strong demand throughout the month for first watering and "paleo."
					·6	·6	Bulandshahr	53,988	12,534	921	11,346	9,559	88,348	43,866	72,176	Executive Engineer, Aligarh Division, Lower Ganges Canal, reports that the demand for paleo was not great and ceased altogether about the 15th.
					·9	·4	Aligarh	31,103	10,329	819	726	16,676	59,653	89,907	78,173	For first waterings the demand was fairly brisk after the 8th and increased to a high extent towards the end of the month.
					·4	·7	Muttra	3,101	2,517	3,138	4,462	14,705	27,223			Executive Engineer, Muttra Division, Ganges Canal, reports that there was no rain during the month, and that water was in great
					·6	·6	Agra	6,204	1,239	743	1,916	4,684	14,786	5,501	13,788	demand for all rabi crops.
					·8	·8	Etah	16,421	5,518	131	1,452	7,151	30,673	18,328	16,840	Executive Engineer, Mainpuri Division, Lower Ganges Canal, reports that there was a slack demand for water during the first half of the month, but it increased steadily towards the end. The decrease as compared with last year is due to the general lateness of the season; the deficiency will be more than made up during December.
					·8	·8	Mainpuri	18,551	7,916	441	1,135	4,326	32,369	47,080	48,975	Executive Engineer, Bhognipur Division, Lower Ganges Canal, reports that there was a great demand for water during the first half of the month, but it increased steadily towards the end. The decrease as compared with last year is due to the general lateness of the season; the deficiency will be more than made up during December.
					·9	·9	Fatehgarh	7,636	3,268	20	1,839	870	13,633	26,853	28,737	Executive Engineer, Eastern Jumna Canal, reports that the increase over last year is almost entirely in wheat; it is due to the light rainy season, and is greatest in Meerut. Rain on the 10th and 11th closed the demand for ten days: except in Meerut, the canal was closed for three days.
					·6	·6	Etáwah	19,922	6,182	159	292	3,756	30,311	9,528	22,591	Executive Engineer, Agra Canal, reports that there was a great demand for paleo owing to the dry season, and that more than 100,000 acres have been irrigated.
					1·0	·9	Cawnpore	17,124	23,827	214	2,254	1,764	46,183			Executive Engineer, Rohilkhand Canals, reports that water was in great demand early in the month for rabi paleo. Slight rain on the 11th seemed to lessen the demand. There is only a partial demand as yet for the first regular rabi watering. The supply in all the rivers is very low, not much more than half the usual rabi supply.
					·9	·4	Delhi	7,916	3,896	3,473	262	82	82			Executive Engineer, Delhi Canals, reports that there was a good demand for paleo up to the 10th November, when rain fell and all demand ceased.
					·9	·4	Gurgaon	2,340	5	1,942	67	9,130	26,357	1,223	1,312	No remarks from the other divisions.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 15th JANUARY 1884.

GENERAL REMARKS.—During the past week slight rain fell in four districts of the Madras Presidency, at Bombay, at four stations in Central India and Rajputana, and in parts of the Punjab and North-Western Provinces.

The standing crops in Madras and Mysore are generally favourable, and harvesting is still in progress. In Bombay the *rabi* crops of six districts have been injured by heavy rain late in the season, blight, and other causes, but prospects are on the whole fair. Cotton-picking continues in Berar, and the *rabi* crops are doing well. In Hyderabad some damage has been caused by excessive cold. Prospects are generally favourable throughout Central India and Rajputana, though rain is much needed for the *rabi* in some places.

The same remarks apply to the Punjab and North-Western Provinces and Oudh where a few showers would be beneficial to the unirrigated crops. No actual loss has however resulted yet from the absence of rain, and the prevalence of cloudy weather gives indications of an early fall. In the Central Provinces the prospects of the *rabi* crops continue favourable except in parts of the Jabalpur division where they are suffering from want of moisture.

In Bengal the prospects remain unchanged. No rain fell during the week, and the *rabi* in Behar and Chota Nagpore is suffering from want of moisture. Elsewhere the crops are in fair condition. The rice harvest is nearly over.

In Assam the winter crops promise well. The outturn of the paddy harvest in Cachar has been much below the average owing to the floods of last year.

In Burma the reaping of the rice crop is approaching completion, and agricultural prospects are on the whole favourable.

The public health is generally good, though small-pox and fever exist in most provinces, and cholera is severe in the Tanjore district of the Madras Presidency.

Prices continue high in Bengal in spite of the appearance of new rice in the markets.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras (Jan. 16th)—		
Bellary		Standing crops poor in three taluks, fair elsewhere; harvest—paddy, *ragi*, horse gram, and pulse, yield fair; *cholum*, *cumbu*, and oil-seeds, below average; 28 deaths from cholera.
Kurnool		Standing crops good; second crop paddy being sown; cattle-disease disappearing.
Ganjam		Standing crops good; harvest—pulse and sugarcane in one taluk, outturn above average; fever and small-pox slight in one taluk.
Kistna		Standing crops generally good; harvest—paddy, yield below average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)	0·3 (average of 1 station).	Standing crops generally good, but *cholum* injured by excess of rain in parts; harvest—*kar* paddy and *vadasamba* paddy, yield half; small-pox prevalent, except in two taluks; 55 deaths from cholera.
Coimbatore	·49 (average of 4 stations).	Standing crops good; harvest—paddy, *cholum*, *ragi*, and *cumbu* yield about average; fever and cattle-disease in parts; 208 deaths from cholera.
Tanjore	·27 (average of 2 stations).	Standing crops good; harvest—paddy, *ragi*, *varagu*, dye roots, yield below average; cholera severe; 1,465 deaths.
Madura	·1 (average of 1 station).	Standing crops fair; harvest—paddy and dry crops, yield about average; cholera abated in Madura town, elsewhere slight.
Malabar		Second crop being harvested; small-pox and fever slight.
Travancore		Paddy being harvested; small-pox in parts; four deaths from cholera.
		General Remarks.—General prospects good.
Bombay—(Jan. 16th)—		
Kurrachee		River at Kotri on 9th, 3 feet 7 inches, 4 inches higher than on corresponding date last year; fever in 9 talukas; loss of 110 buffaloes, 55 cows and bullocks, 20 sheep and goats in Nurpur, Botoro, and Sujawal; small-pox increasing in Kurrachee, 3 fresh cases, 1 death since 5th; total 26 cases, 5 deaths; disease also in 23 villages in districts, 49 fresh cases, 6 deaths, 70 remaining sick; *rabi* crops coming on; prices—wheat, red rice, and *bajra* in Karrachee 26, 32 and 32; in Dadu 28, 0 and 40; in Ghorabari 20, 28 and 32; and in Shahbandar 22, 32 and 36 pounds per rupee respectively.
Hyderabad		Small-pox in 8, fever in 4, and cattle-disease in 5 talukas; wheat 25, *bajri* 37, *jowari* 41, red rice 22, and white rice 20 pounds per rupee.
Ahmedabad		*Rabi* crops thriving; cattle-disease in Paruntej; *bajri* 30½ and wheat 26 pounds per rupee.
Surat		*Rabi* crops healthy; fever in Jalalpur and Pardi; *jowari* 39, and *nagli* 48 pounds per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Nasik		*Rabi* crops good; public health on the whole good; *bajri* 31, wheat 34½, and rice 24 pounds per rupee.
Colaba (Bombay)	·03 on the 15th	Abnormal temperature 0° to 2° cool; vapour in air slightly defective; abnormal wind southerly; distant lightning on 15th.
Poona		*Rabi* crops good; prices—*bajri* 37 and *jowari* 45; in Poona *bajri* 32 and *jowari* 40 pounds per rupee.
Ahmednagar		*Rabi* sowing finished; *rabi* crops good, except *jowari* which is unhealthy; *bajri*—maximum 48 pounds in Rahuri, minimum 42 in Nagar; *jowari*—maximum 60 in Newasa, minimum 44 in Karjat.
Sholapur		Prospects of *jowari* and cotton unfavourable owing to late excessive rain and severe cold; *jowari* 43 and *bajri* 46 pounds per rupee.
Dharwar		Rice and early *jowari* being harvested; cotton suffering from blight in 6 talukas; wheat withering in 3 talukas; other late crops good; cholera disappeared; fever in 3 talukas; small-pox in 2 talukas; scarcity of drinking-water in some villages of Navalgund; rice 25 to 41 and *jowari* 56 to 88 pounds per rupee.
Kanara		Sowing second rice crops above ghat; plants healthy on coast; small-pox in Honawar and Kumpta, 1 case in Bhatkal; fever in Haliyal and Mundgod; cattle-disease in Karwar, Kumpta, and Honawar; common rice at Karwar 12 seers; average in district 16½ seers per rupee.
Rajkot		General health good; weather cold; fever continuing in some parts; *dajari* 32 and *jowari* 38 pounds per rupee.
		General Remarks.—*Rabi* crops suffering slightly from different causes in parts of Sholapur, Satara, Dharwar, Belgaum, Kaladgi, and Broach, prospects otherwise good; slight cholera in parts of Kolaba and Kaladgi; fever, cattle-disease, and small-pox in a few districts.
Bengal—(Jan. 16th)		
Chittagong	*Nil*	Weather fine and cold; harvesting of *amun* nearly finished; average yield expected; winter crops doing well; prices steady; general health good.
Dacca	*Nil*	Winter crops promising; *mug* and *kalai* being gathered; *seesamum* being harvested; pressing of sugarcane begun; public health good.
24-Pergunnahs	*Nil*	Prospects of winter crops good; yield of late paddy estimated at 8 to 10 annas; harvesting of paddy nearly finished in all the sub-divisions except Bussirhaut; price of common rice 14 to 16 seers per rupee; public health generally good.
Moorshedabad	*Nil*	Weather cold; harvesting of *amun* almost over; *rabi* crops promising; public health good.
Rajshahye	*Nil*	Weather seasonable; cutting of *amun* continues; prospects of winter crops favourable; cholera reported from three villages.
Burdwan	*Nil*	Weather seasonable; rain wanted for *rabi* crops; [illegible]; public health good.
Rungpore	*Nil*	Weather seasonable; prospects of *rabi* crops fair; prices stationary.
Bhagulpore	*Nil*	Rain much wanted for *rabi* crops; price of new rice 13 seers 14 chittacks per rupee; general health good.
Purneah	*Nil*	Rain required for *rabi* crops; price of common rice (new) 16 seers per rupee; public health better.
Patna	*Nil*	*Rabi* crops fair; *rahar* and castor promise well; cutting of sugarcane in progress; public health good.
Durbhanga	*Nil*	Paddy harvest nearly reaped; outturn poor in most places; *rabi* crops withering for want of moisture; small-pox prevalent in the town of Durbhanga.
Hazareebagh	*Nil*	Weather clear and cold; prospects of *rabi* crops not [illegible]; common rice in the Giridi sub-division selling at 13 to [illegible] per rupee; small-pox still reported from the sudder station; health generally good.
Cuttack	*Nil*	Weather somewhat warm; harvesting of rice nearly complete; crops gathered and threshed; price of rice almost [illegible]; public health good.
		General Remarks.—There has been no rain during the week in any part of the province; the prospects of the *rabi* crops are generally fair, except in Behar and Chota Nagpore, where they are, for the most part, still suffering much from want of moisture. The *amun* harvest has been mostly reaped, and has generally proved a very short crop, though in some parts of the province the outturn has been fair; the gathering of pulses and the cutting and pressing of sugarcane have begun in some districts; fever still prevails in some localities, and there is small-pox in Durbhanga, Hazareebagh, and Manbhoom, but the general health of the whole province is good; high prices prevail in all parts, and in some districts they are reported to be still rising, notwithstanding the appearance of new rice into the market.
N. W. Provinces and Oudh—		
Benares (Jan. 15th)	No rain	Crops will probably suffer from want of sufficient rain; isolated cases of small-pox in the city; bazars well supplied; prices of wheat slightly rising; of other food-grains falling.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N.-W. P. & Oudh—*contd.*		
Allahabad (Jan. 16th)	. . . .	Rain urgently needed in dry lands; health good; prices rising slightly; *rabi* doing well in irrigated and alluvial tracts.
Gorakhpur („ 13th)	No rain	Crops below average; small-pox frequent; prices steady.
Jhansi . („ 14th)	No rain	*Rabi* prospects continue to be good; rain much wanted; health of people and cattle good; grazing scarce; prices stationary.
Agra . („ 15th)	. . . .	Very slight shower this morning at Sadr, and clouds still hanging over; rain very probable; irrigation going on; health good; prices steady.
Bareilly . („ „)	. . . .	Rain needed; crops so far flourishing; cattle in good condition; fever declining; markets stationary.
Meerut . („ „)	No rain	Weather cloudy; health good; prices steady; supplies sufficient.
Kumaun . („ „)	No rain	Crops want rain; general health good; cattle-disease decreasing; prices stationary.
Lucknow („ „)	No rain	Weather clear; easterly wind in the greater part of the week; state of crops good; the crops on unirrigated and high land need rain very much; condition of people good and of cattle normal; markets properly stocked; prices stationary.
Partabgarh („ „)	. . . .	Irrigation of *rabi* crops continues; barley and wheat making head; prices slightly fluctuating; small-pox still lingering in Kunda tahsil; general health good; rain urgently required.
Sitapur („ „)	. . . .	Wind variable with occasional clouds; rain everywhere required; scarcity of fodder in Biswan; small-pox in several places; prices steady.
Fyzabad („ „)	No rain	Irrigation of *rabi* crops going on; sowing of poppy seed nearly finished; condition of people and cattle fair.
Rai Bareilly („ 14th)	. . . .	Weather seasonable; no rain during the week, it is much needed for unirrigated crops; small-pox reported from 2 tahsils; markets well stocked; prices steady.
Cawnpore („ 15th)	. . . .	Occasional clouds, but no rain; barley and wheat running into ear, and mustard, *arhar*, &c., have flowered; small-pox continues in almost all the parganas; cattle doing well; prices stationary.
Farukabad („ „)	. . . .	Weather seasonable and occasionally cloudy; fever in one tahsil and small-pox in three.
		General Remarks.—No rain has fallen during the week, excepting slight showers at Agra and Aligarh; cloudy weather is reported in several districts; small-pox continues in places, but the general health is fair; cattle-disease is decreasing in Kumaun; prices are on the whole steady.
Punjab—(Jan. 16th)—		
Delhi . . .	. . . .	Health good; rain much wanted; crop prospects doubtful; prices stationary.
Hissar . . .	. . . .	Health good; prices steady.
Umballa . . .	. . . .	Health and *rabi* prospects good; rain much wanted; prices stationary.
Jullundur . . .	. . . .	Health good; rain much wanted; prices fluctuating.
Amritsar . . .	. . . .	Health good; rain wanted; prices fluctuating.
[illegible] . . .	·2	Health and *rabi* crops good; slight fall in prices.
[illegible] . . .	Slight rain	More rain wanted; health good; prices stationary.
[illegible] . . .	·1	Health and harvest prospects good; prices stationary.
[illegible] . . .	Slight rain	Health and *rabi* prospects good; prices fluctuating.
Montgomery . . .	. . . .	Slight small-pox still prevalent; rain wanted; prices stationary.
	Slight rain at Sadr station.	Health good; crops flourishing; prices falling.
Dera Ismail Khan .	. . . .	Health good; crops suffering from want of rain; prices rising.
		General Remarks.—Rain generally wanted; health and crop prospects good.
Central Provinces (Jan. 16th)—		
Nagpur . . .	. . . .	Weather somewhat cloudy; *rabi* crops in fair condition; public health good; prices stationary; cattle-disease slight; 579 bags of grain exported.
Chanda . . .	. . . .	Weather clear and cold; rain much needed for *rabi* crops; health good; wheat 25 and rice 14 seers per rupee.
Bhandara (Jan. 15th)	. . . .	Weather cloudy; a few showers of rain wanted; plants are stunted in places from want of moisture; health good; prices steady.
Balaghat . . .	. . . .	Weather cold and cloudy; rain wanted for *rabi* crops which are suffering; prices stationary.
Hoshangabad . .	. . . .	Weather clear and pleasant; prospects of crops good; cotton-picking in progress; *thur* damaged by frost; fever prevalent in Harda and Seoni tahsils; small-pox, 8 cases; wheat 18, rice 11, and *jowari* 24 seers per rupee.
Khandwa . . .	. . . .	Weather occasionally cloudy; *thur* slightly damaged by frost; prices steady; *jowari* 22½ seers per rupee.
Raipur . . .	. . . .	Weather cool and pleasant; *rabi* promising; gram and linseed flowering; public health good; prices rising; trade dull; common rice 23 and wheat 24 seers per rupee.
		General Remarks.—Weather cool; prospects of *rabi* crops uncertain in some districts of the Jubbulpore division where plants are suffering from want of rain, in other divisions prospects are favourable; health good; prices steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provs.—*contd.*		
Sambalpur ..(Jan. 17th)	. . . .	Weather cold and clear; threshing of *dehan* and pressing of sugarcane in progress; public health good; prices steady; common rice 31⅓ seers per rupee.
British Burma— (Jan. 16th)—		
Akyab . . .	*Nil*	Public health and condition of cattle good; about three-fourths of crop has been reaped; reaping wages Rs. 16 to 21 per *dun*, about 6½ acres; price of paddy Rs. 21 to 25 per 100 baskets.
Rangoon . . .	·29	25 deaths from small-pox; price of paddy Rs. 85 to 90 per 100 baskets; total rainfall for the month ·29.
Bassein . . .	·05	Public health good; slight cattle disease in Lemyethna, Kyoupy and Yegiji townships; reaping about four-fifths finished; price of paddy Rs. 70 to 80 per 100 baskets; total rainfall for January ·05.
Prome . . .	*Nil*	Public health and health of cattle good; reaping over; price of paddy in district Rs. 65, in town Rs. 67 annas 8 per 100 baskets.
Amherst (Moulmein) .	. . . .	Public health and health of cattle good; reaping finished, threshing and winnowing progressing.
Toungoo . . .	·8	Public health good; reaping progressing rapidly; total rainfall for January ·8.
Tavoy . . .	. . . .	Public health and health of cattle good; harvesting in progress; price of paddy Rs. 55 in district, 60 in town per 100 baskets, but not many sales as yet.
Mergui . . .	. . . .	Report for week ending 29th December 1883.—Public and cattle health good; two-thirds of crop reaped; price of paddy, Rs. 70 per 100 baskets.
		Report for week ending 5th January 1884—same as above.
Kyoukphyoo . .	*Nil*	Public health and health of cattle good; area of crop destroyed by cyclone in Ramri township ¼, in Myebon $\frac{1}{10}$, in An $\frac{1}{10}$, and in Cheduba ½; total rainfall for the month 0·02 inch.
Sandoway . . .	*Nil*	Public health good; agricultural prospects favourable; reaping of late crop continuing; 3,650 baskets or about 84 tons paddy damaged by rain of 17th November.
Hanthawaddy . .	. . . .	Public health and health of cattle good; reaping progressing; price of paddy Rs. 75 to 100 per 100 baskets.
Pegu . . .	·02	Report for week ending 5th January.—Small-pox prevalent; confluent in some cases, but generally mild; no cattle-disease reported; showers in Kyanktan, but no damage reported; reaping well forward; price of new paddy Rs. 75 to 80 per 100 baskets.
		Report for week ending 12th January.—Small-pox of mild type still prevalent in district, one case in town, but no deaths reported; cattle healthy; reaping nearly finished; price of paddy Rs. 75 to 80 per 100 baskets; total rainfall for January ·02.
Tharrawaddy . .	·40	Five fatal cases of cholera reported from Sanywe township, otherwise public health good; health of cattle good; about 166,800 acres have been reaped; reaping wages eight annas per man per day; price of paddy Rs. 50 to 100 per 100 baskets; total rainfall for January ·40.
Thonegwa . . .	·10	One death from small-pox reported from Akyaw circle, otherwise public health good; cattle disease slight in Pyapon township; reaping progressing; price of paddy Rs. 85 to 90 per 100 baskets; total rainfall for January ·10.
Henzada . . .	*Nil*	Public health and health of cattle good; reaping finished; price of paddy Rs. 75 to 85 per 100 baskets.
Thayetmyo . .	·5½	Public health good; slight cattle-disease still prevailing; reaping finished; reaping wages four annas per man per day; price of paddy Rs. 100 per 100 baskets; total rainfall for January ·5½ inches.
Moulmein Town .	·29	Public health and health of cattle good; prices of paddy Rs. 65 to 80 per 100 baskets; total rainfall for January ·29.
Shweygyin . .	·11	Fever prevalent in town, otherwise public health and health of cattle good; price of paddy Rs. 65 per 100 baskets; total rainfall for January ·11.
		General Remarks.—With the exception of slight small-pox of a mild type in Rangoon and Pegu, public health good; health of cattle also good; reaping approaching completion; prospects on the whole favourable; paddy market not yet fairly opened.
Assam—(Jan. 16th)—		
Gauhati . . .	[illegible]	[illegible]
Sylhet . . .	[illegible]	[illegible]
Cachar . . .	*Nil*	Weather very cold; outturn of *sali* and *asra* crops about one-fourth less than that of last year, owing to the flood in August, and untimely rains in December; common rice 15½ seers per rupee; health good.
Dibrugarh . .	*Nil*	Weather cool; harvesting of *sali-dhan* nearly finished; prospects of winter crops good; small-pox still in the station.
Berar & Hyderabad— (Jan. 16th)—		
Amraoti . . .	. . . .	Weather cloudy with slight rainfall; *rabi* prospects good; wheat 16 and *jowari* 26 seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Berar & Hyderabad— *contd.*		
Akola . . .	. . . .	Cotton-picking and *kharif* harvesting nearly completed; *rabi* crops in good condition.
Hyderabad . . .	No rain	*Rabi* and *tabi* crops prospering; excessive cold has slightly damaged white *juar* and chilli crops; no sickness; prices—wheat 15, coarse rice 12, white *juar* 20, yellow *juar* 28, and *tur* 22 seers per current sicca rupee.
Mysore and Coorg— (Jan. 16th)—		
Bangalore . . .	. . . .	Prospect of season favourable; crops in good condition; paddy and horse gram being harvested.
Mysore . . .		
Mercara . . .	No rain	Picking of coffee nearly completed; rice harvest continues; fever prevalent in parts of Nanjarajapatna taluk.
		General Remarks.—State of crops in all districts reported favourable; harvesting in active progress; prospects good; public health fair; prices unaltered.
Central India States— (Jan. 16th)—		
Indore . . .	1·4	Health good; prices stationary; rain very seasonable.
Morar (Gwalior) . .	*Nil*	Health good; weather seasonable.
Sutna . . .	*Nil*	Health and crops prospects good.
Sehore . . .	*Nil*	Weather clear; prospects of crops and public health good.
Neemuch . . .	. . . .	Public health good; crops thriving; weather seasonable.
Goona . . .	. . . .	Health and crop prospects good.
Agar . . .	*Nil*	Health and crop prospects good.
Nowgong . . .	*Nil*	Rain required for *rabi*; health fair; prices stationary.
Bhopawar (Manpur) .	*Nil*	Prospects good.
Rajputana—		
Abu . (Jan. 16th)	Showers of rain on 15th January.	Weather cloudy and mild.
Marwar . („ 11th)	. . . .	Weather mild; prospects and health good; prices stationary.
Harowtee . („ 14th)	. . . .	Crops fair; rain much needed; weather warm; some cases of small-pox, otherwise health good.
Ajmere . („ 15th)	·20	Weather cool and cloudy; health good.
Jeypore . („ „)	Slight rain	Sky overcast; rain expected; prices steady; health good.
Ulwur . („ „)	. . . .	Rain much wanted for crops on high land; health good; prices steady.
Jhalrapatan . („ 11th)	. . . .	Health and prospects good; weather seasonable.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Monday, the 7th January, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble Mahárájá Luchmessur Singh, Bahádur, of Darbhangá.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble R. Miller.
The Hon'ble Amír Alí.
The Hon'ble W. W. Hunter, LL.D., C.I.E.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The adjourned debate on the Bill was resumed this day.

The Hon'ble MR. EVANS said:—"My Lord, I have great pleasure in stating that the point upon which I found some misapprehension had arisen, and which, as I said, was not one of primary importance, has been cleared up, and no misapprehension exists at present; and I am very happy to say, as I understand the matter, there is no doubt that a settlement has been arrived at in this matter which will, I sincerely trust, be satisfactory, and which ought to have the effect of putting an end to the bitterness of this controversy. Had it been proposed to proceed with the Bill as it stands, as apart from the settlement to which I shall presently refer, I should have felt bound to oppose to the utmost of my power the proposal to refer it to a Select Committee. Many reasons for this position have been given by me in Council in March, and fuller and more detailed reasons are to be found in the local opinions, the minutes of the High Court in Calcutta, Sir Fitzjames Stephen's letters, and a recent most able and exhaustive minute by Mr. Justice Field. It is unnecessary for me to recapitulate them, though later on I shall also have some remarks to make on the speeches made in this debate. I need only say that they are weighty, and touch matters which the European community regard as of vital importance to themselves. The opposition aroused by what European British subjects considered an unnecessary attack on their rights—their most valuable and necessary rights—was of a most strong and

serious character. I, in common with many, had hoped that, on receipt of the local opinions of the most experienced officers in India adverse to proceeding with the Bill, the Government would have withdrawn it, and I still think that that would have been the wisest course. But the Government of India resolved to cut down the Bill so as to give jurisdiction over European British subjects to such Natives only as should attain the position of Sessions Judge or District Magistrate. Of this the public was first informed by Lord Northbrook's speech in November, and it was formally announced by His Excellency in the first meeting of the Legislative Council after the return of the Government to Calcutta. By this resolution the practical evils of the Bill were much lessened. The proposal, to quote the hon'ble mover's speech in introducing the Bill, to 'completely remove from the law all distinctions based on the race of the Judge,' was abandoned. That scheme was based on the 'disqualification,' to use my hon'ble friend's word, in the future of the bulk of the European uncovenanted servants of the Crown from exercising powers which they had long been exercising to the benefit and satisfaction of the State, in order to do away with an invidious distinction between them and the bulk of the Native uncovenanted servants who had never exercised these powers, and as to whom it was almost universally recognised that it would not be to the interest of the State that they should be empowered to exercise these powers; and also by disqualifying the whole European non-official community from exercising powers which they similarly had long exercised to the admitted benefit and satisfaction of the State, in order to do away with the invidious distinction between them and the non-official Native community, as to whom it had never even been suggested that it was desirable they should exercise these powers. This scheme has received the assent of no single responsible person, so far as I can recollect, whose opinion was taken, and the hon'ble and learned mover has himself in this debate admitted it to be 'defective.' I can only marvel how such a scheme originated, or how it passed the Indian Council, and how it came to be laid before this assembly. Not only was this wild scheme abandoned, but also all attempts to empower any other Native officers, except District Magistrates and Sessions Judges, was also abandoned. The Government should, it would seem, then have abandoned the Bill, for the hon'ble learned mover said, in introducing it, that 'no change in the law could be satisfactory or stable which did not remove at once and completely from the Code every judicial disqualification based merely on race-distinctions,' and said Government would not be justified in re-opening this difficult question and the settlement of 1872, unless it saw a way to a solution which contained within itself the elements of stability and durability. And he deprecated constant tinkering of the law on such a subject. But this limited Bill was still open to the grand objection—that the class affected had an intense repugnance to having their guilt or innocence decided by a Native Sessions Judge or District Magistrate, and had good and weighty grounds for the objection. The Government of Bombay had come to the conclusion that it was necessary on this account to give the European British subject a right to a jury before a Native Sessions Judge, and had said that Government must recognise the fact of the unwillingness of Europeans to be tried by Native Magistrates, and the evils that would arise from trying to force them to be so tried, and that the Europeans honestly believed in the reasonableness of the objection. It was obvious from the first that this curtailed Bill could never be accepted by the European community. The Government insisted on proceeding with it, and the class to be affected by it doggedly resisted. They were animated by the same spirit which has always caused the English race to resist to the utmost all attempts by the Government of the day to encroach on what they believed to be their right and liberties. Things came to a deadlock, and the tension became extreme and threatened grave consequences to the country. It became apparent to me, and I think to every one who had adequate means of information, that the situation had become extremely dangerous, and was becoming more perilous every day. Under this crisis I thought it to be my duty to endeavour to bring about some solution of the question. Therefore, I took it upon myself, after making such enquiries as I could, to make certain proposals to the Government—proposals which were not accepted. But though they were rejected, counter-suggestions emanated from Government, which resulted in the present arrangement. I distinctly wish to state that no proposal or suggestion of any kind emanated in any way from the Defence Association, of which I am not a member. But, when these proposals were laid before the Defence Association, it appeared that the bulk of the European community which they represented were, notwithstanding the irritation created by this measure, the same sensible, moderate, loyal Englishmen as they had been in 1872. In 1872, the European British subjects, in view of the grave administrative inconvenience then existing, agreed for the public good to give up to a certain extent their right to trial by jury, provided that the persons to try them without jury were European British subjects like themselves. When the Government now determined to re-open that settlement and to give jurisdiction to certain Natives in the two classes of District Magistrate and Sessions Judge over European British subjects, the natural result was that they were entitled to fall back on their valued privilege of trial by jury. It was felt that the proposed arrangement in effect gave them back this privilege. The main point that they had fought and struggled for was the right to be tried by their own fellow-countrymen, that is, that their own fellow-countrymen should decide whether they were guilty or not guilty. This right or privilege was secured to them by this arrangement, for they became entitled to trial by jury when claimed before the District Magistrate as well as before the Sessions Judge, and they rightly felt that they had substantially gained what they were fighting for; that it would not be right to incur the grave evil to the country which might result from the prolongation of the contest for any object that was not of paramount importance to them. The Government went further and gave them what they had not struggled for. They gave them back the privilege of trial by jury, not only in case of their being tried by the Natives, introduced into these two classes, Sessions Judges and District Magistrates, but in case of their being tried by any member of these two classes, whether Native or European. The jurisdiction of the District Magistrate was enlarged from three to six months' imprisonment, apparently to avoid any anomaly, but this did not hurt the European British subject, as he could now claim a jury before the District Magistrate.

"No one can rejoice more sincerely than I do that a settlement has been come to, and no one can wish more heartily that it should be speedily carried through, and that the present lamentable tension should at once cease. The settlement has cost me much time and labour, besides the anxiety and harassment which awaits any one who interferes as a volunteer to compose so bitter a dispute. All that remains to be done is for the Select Committee to see to the framing of the necessary sections to carry out the arrangement, and to see to the subordinate amendments and alterations which may be necessary to harmonize the new clauses with the Code; and I do not think that any difficulty ought to arise in carrying out the work, and see no difficulty in reporting on Friday week. No one can deplore more than myself the bitterness of the controversy, but I hope and trust it will cease from this day. I have all along felt assured that the object which His Excellency had in view was the good of the country. I have never doubted this, though I have thought he was grievously mistaken. I have always thought that, if His Excellency had known how real and sincere and important a fact the repugnance of the European community was, he would not have introduced this Bill. I am confirmed in this view by the manner in which he has dealt with the matter since this fact has become manifest to all. I am satisfied by inference from facts which have come under my observation that, by some misfortune which I am not able to explain, the warning which ought to have been transmitted to this country from the Indian Council or from the Secretary of State for India did not arrive before the introduction of the Bill. If so, this was a grave misfortune, but it is one which no one in this country is responsible for. Here I wish I could stop, but I cannot pass without a word about the previous speeches in the debate, lest my silence be misconstrued. The hon'ble mover in his speech stated that the principle of the Bill could not be better described than in saying it aimed at the '*removal of all*

disqualifications based on race, and the substitution of a qualification based on personal fitness.' He also said that 'it was never described by any Member of Government as the abolition of race-distinctions for judicial purposes.' But turning to his own speech in introducing the Bill, I find the words—'These proposals will completely remove from the law all distinction based on the race of the Judge.' Now, as to the matter of disqualification. The Natives are not disqualified from any office which we are now concerned with. They can be made District Magistrates and Sessions Judges. The so-called office of Justice of the Peace has long ceased to be an independent office. It has become in the Mufassal a mere formula for conferring magisterial jurisdiction over British subjects. That this is so is clear from the fact that the term could be cut out of the Code and the jurisdiction given to the Magistrates by other words without any mention of the office, without any one being, as my hon'ble and learned friend put it, a penny the worse. The hon'ble and learned mover is, I think, aware of this, because he expressly says later on in his speech that Native Magistrates are not disqualified by the Act of 1872 from holding an office. It is not any such disqualification, that is, a disqualification for an office, which he seeks to remove, but a 'disqualification to perform a part of the duties ordinarily attached to the office.' How do the facts stand? The Magistrates in the Mufassal are of three grades. The general limitations on the powers of the different grades are in respect of the class of offence or the amount of punishment. Certain Magistrates of the 1st class are called District Magistrates. Now, European British subjects are entirely exempt from the jurisdiction of the Magistrates of the 2nd and 3rd classes, and, besides this, when brought before a Magistrate of the 1st class, they are entitled, as the privilege of the accused, to claim that the 1st class Magistrate who is to try them should be not only a Magistrate of the 1st class but also a Justice of the Peace and an European British subject. This right is guaranteed to them by legislative enactment. This is the special privilege of the accused which he is entitled to in a Magistrate's Court. In the Sessions Court he has the privilege of claiming that he should be tried by a European British subject, and in the Assistant Sessions Judge's Court by an Assistant Judge who is an European British subject and is of three years' standing. Now, is it not surely playing with words when my learned friend describes a Bill for taking away this special privilege of the accused to claim that the Native Magistrate shall be an European British subject, when he describes such a Bill as 'merely declaring that the simple fact of belonging to an artificially defined circumscribed category of human beings—that this fact, standing alone, apart from other considerations, shall not constitute an absolute disqualification for the performance of certain important magisterial functions? The Magistrate, whether Native or European, is a Magistrate with the full powers of his grade and the full pay, but there is a special class who can claim the privilege of appearing before a certain class of Magistrates. The expression 'artificially defined circumscribed category of human beings' is a roundabout expression which would fit most legally defined classes whose members have, as members of such class, a right to any privileges, because legal definitions have generally to be more or less artificial, and a defined category of human beings is, I take it, in plain English, a special class. I fear it will turn out that even His Excellency belongs to an artificially defined circumscribed category of human beings, not only as British subject, but as a peer of the realm. In this latter capacity he has also a right to a special tribunal of his own peers in certain cases. The analogy would be more complete if some portion of the Judges in England were ordinarily peers, and if an Act had been passed altering the present law and enacting that no English Judge who was not a peer could try a peer without his consent. Would it be fair to describe such a law as imposing on the other English Judges a disqualification for the performance of certain judicial functions—to ignore the privilege of the peer and treat it as a matter of 'removing a disqualification' from the other Judges arising solely from their not belonging to an artificially defined circumscribed class of human beings, that is, of peers? The burden of proof, I take it, is on him who wishes to take away from any class a legal right they possess, and it cannot be got rid of by involving the matter in a cloud of words. The so-called principle of the Bill seems

founded on a misconception. But the matter does not stand there. The hon'ble mover says his object is to declare that this fact alone, apart from other considerations, should not disqualify from exercising certain powers. There are other considerations of the utmost weight and gravity to be found in the local opinions, which the hon'ble mover does not seem affected by. I will only mention one, the opinion of Mr. Badshah, a Native Covenanted Civilian and Assistant Magistrate of Goalundo, who wrote—

'To equalize rights, to remove the irritation and friction which attend their inequality, is certainly high and noble policy. But if the privileges of a class are infinitesimal, if they injure no person and irritate a very small body of men, if their removal is associated with the degradation of justice and tends to bring judges into contempt, it is still higher policy to let alone the privileges, so that the sacred name of justice may not be sullied nor judges become the targets for universal ridicule and abuse. It has been the aim and object of every civilised nation to secure their judges from attacks on their impartiality. I cannot suppose that the present Government of India, if they were informed of all the facts, would depart from the declared policy of the civilised world.'

"Now, as to the Charter Act and the Queen's Proclamation. I desire to treat both of them with all respect, and I have always regarded the Queen's Proclamation as a solemn declaration of policy. The Charter Act removed any disability that there might be on Natives from holding any place, office or employment, and the Proclamation announces it to be the will of Her Majesty that 'so far as may be' all her subjects may be freely and impartially admitted to all offices in her service. As I have pointed out, the so-called office of Justice of the Peace is not now really a substantive office. The substantive office is that of Magistrate. Then, there is no contravention either of the Act or Proclamation in the special privilege claimed. If the Justiceship of the Peace were really an office, it has never been open to Natives in the Mufassal; and, if this were a violation of the Act and Proclamation, it would be strange to find that the Government of India had been during all these years violating the Act and Proclamation, and that this fact had now been discovered by my hon'ble and learned friend for the first time since the introduction of the Bill. The hon'ble and learned mover expressly admitted this, and could say nothing more than that the Act of 1872 went perilously near to an infringement of the rule.

"How, then, about the fallacy which, he says, underlies the reasonings of the Lieutenant-Governor and the High Court? He says that the general rule is that the Native is not to be disqualified for the office, and is to be freely and impartially admitted. If he is not disqualified, and is admitted to the office, as it seems conceded, the rule is not infringed, and we are not called to justify an infringement by proof of an exception; and the fallacy is imaginary. With regard to a large portion of the hon'ble mover's speech which dealt with the old struggle as to subjecting the British subject to the country or local Courts, he has answered it himself by showing that struggle then was not whether, if the European was subjected to the local Courts, he should be tried by a Native or European, but whether he should be at all subjected in any shape to the local Courts. This was never accomplished till 1872, and the European British subjects then stipulated that, as they consented not only to be subject to local Courts, but to give up their rights to a jury in Magistrates' cases, they should be allowed a special privilege as to the constitution of the tribunal. Most of the old discussions have, therefore, no bearing, as they were addressed to a totally different point. Throughout his speech I find no indication of his recognition that the European British subject had any right to object to privileges being taken away, or had any voice in the matter. He treats his legislation as necessitated by the Charter Act and the Proclamation, and he seems to treat the concessions of right of trial by jury as a safety-valve attached to the Act in cases of accidents, which he will remove as an exception if it does not work satisfactorily, and meanwhile will sit upon to show how necessary it is. This is not my view. I hope it will work satisfactorily so far as it is required to work, but I regard it as an integral part of the settlement, and consider that, if it was objected to, the whole Bill would have to go, and the European British subjects would be entitled to revert to the *status quo ante* and to resist as vigorously as ever any invasion of their rights. They will not, I am certain, surrender the

right to a jury, except on the same terms as in 1872, or on terms which would equally secure their just liberties.

"There is one observation of the Hon'ble Dr. Hunter which I must allude to. He says he understands that hon'ble members who approve of this Bill going into Select Committee approve of the principle of it. This may ordinarily be the case, but not in the present instance. A settlement of this sort is the resultant of opposing forces. I no more affirm my learned friend's principle than I expect him to affirm mine. I only assent to this Bill going into Select Committee to procure a settlement of a question which it is plain to see will produce most serious results if the controversy is continued.

"My learned friend Amír Alí states the object of the Bill very differently from the hon'ble mover. He says the object of the Government was to 'raise the status of a few specially qualified officers; in fact, to assimilate them for certain purposes under the Criminal Procedure Code to European British subjects.'

"Another statement of the hon'ble mover I must mention. He has said that 'he need hardly say that the maintenance of trial by jury either in its existing form or with the proposed extension is dependent on an assumption as to its working.' This language has given rise to great mistrust and alarm. It has been taken to point to a decision on the part of the hon'ble mover not only to ignore the settlement now arrived at, but also, to deprive European British subjects and also Natives of the existing right to trial by jury. This mistrust and alarm he has aggravated by another statement that Magna Charta might be said to have as much to do with the Bill as Domesday Book with the Permanent Settlement.

"It has been laid down by high authority that the right to trial by jury was part of the unwritten law of the realm confirmed to the subject by Magna Charta under the description of 'legem terræ,' and it was described by Sir William Jones in his celebrated charge in 1792 as one of the three anchors which preserve the Constitution from shipwreck.

"I do not wish to discuss the question, but only to say that I both trust and believe that the Government has no intention of interfering with a right which is specially valuable to Englishmen living under a despotic form of Government.

"I understand that now the hon'ble and learned mover did not very clearly recognize the settlement, because at the time he made his speech it was difficult to do so. My hon'ble friend Kristodás Pál has paid the European community a compliment by recognising them as important factors in the advancement of the country. I have always been on friendly terms with the Native community, and have always sought to do individuals of that community a good turn when I could. I don't think I have done them a bad turn, unless they consider my opposition in this case one. But my hon'ble friend is hard to please. He is not content that Native and European District Magistrates are placed on the same platform, and that a Native District Magistrate should enjoy all possible dignities of the office, and be entitled to preside as judge at the trial of a European. He wishes that he should act as jury too. My hon'ble friend forgets that the ancient common law form of trial, the 'legem terræ' of Magna Charta, was a trial by a judge holding office from the Crown and a jury not nominated by the Crown, and that the jury, who were always the judges of fact, were liable to challenge by the accused, to a certain number of challenges without cause shown, besides challenges with cause. Now, a summary trial is a case in which the Magistrate is judge and jury. As a judge he is a nominee of the executive, and it is difficult for the accused to object to the judge, except on very special cause. But if the Magistrate wants to act as juryman too, I may fairly challenge him, and I never yet heard of a man insisting on his right to try the accused as a juryman in spite of the accused's reluctance. As to the latter part of his speech, I read it as meaning that he fears that this Bill as modified will be less satisfactory to the Native community than the present state of affairs, that is, than the compromise of 1872. If he is serious in this, and can persuade His Excellency on the final debate to withdraw the Bill in toto, I shall certainly not object, for it is not as an improvement on the present state of things but as a settlement of strife that I support the modified Bill; and if he can get the strife ended by an amicable withdrawal of the Bill, no European will object. But I doubt if he is serious in this idea, and I think, when it is known that the proportion of Magistrates' cases tried by District Magistrates in Bengal is ·7 as against 93·3 tried by his subordinates, his fears of inconvenience will abate. I should be very glad if the District Magistrate tried none at all. As the head of the executive—the superintendent of the police—receiver of private reports, &c., he is a very undesirable person to exercise judicial functions, and his executive duties are always heavy. I reiterate my sense of relief at the settlement of the question, though it is clear to my mind that it was a grievous mistake to raise the question by introducing this Bill."

The Hon'ble MR. THOMAS said:—"My Lord, I came into this Council Chamber on Friday last prepared to vote for the Bill going to Committee, because I thought there had been a Concordat, under the shadow of which we might still hope for peace for this troubled land, and I thought we had only to agree together to leave it to the Committee to work out an amicable *modus vivendi*. I thought, too, in doing so, to abstain from any discussion that might tend to prolong the lamentable controversy that has so angrily agitated the country to a state critically bordering on convulsion. But I am distressed to hear how the speech of the hon'ble and learned mover re-opens old sores, re-asserts things that have been answered *ad nauseam*, insists on prominence for the principles that have caused all this grievous agitation, and makes light of those which have instantly brought back peace. There is also a ring of uncertainty and unfinality about the future which fills me with grave misgivings, and about which I would fain be reassured by your Lordship. The speech of the hon'ble and learned mover is, then, my apology for any discussion at all on an occasion on which I had fondly hoped that we had at last met together to close deep sores, and not *infandum renovare dolorem*.

"We all know, my Lord, that one has only to confidently assert a matter often enough to get the great majority of the world to unconsciously accept it as true, and, the assumption once accepted, then it is easy to build up a splendid edifice upon it, and the majority gaze only at the splendid edifice that catches the eye, and forget the buried false foundation. Thus the hon'ble and learned mover has asserted over and over again, and has built up his present speech on it, as he has built up the whole measure, and has harped and re-harped on it in varied strains till all the Native Press have chimed in, and he and they doubtless believe it to be a great uncontrovertible truth, that the Criminal Procedure Code imposed on the Natives of India restrictions and disqualification based on race-distinctions; and yet, to my simple thinking, it is not the true state of the case for all that; and I find that the Hon'ble Justice Field, in a minute which was in the hon'ble mover's hands before this his last re-assertion of the old error disposes of the matter in words which, with your Lordship's permission, I will read:—

'Now, I venture to take exception to the form of expression here used, as involving a serious fallacy which has since permeated and coloured, not only the utterances of public officers, but also the arguments advanced by the Press and the public. In the first place, the new Code of Criminal Procedure did not *impose* any restrictions. It left the law in this respect in precisely the same condition in which it had been since Englishmen first came to India. Then, when we speak of '*restrictions*' on the power of judicial officers and '*judicial disqualifications based on race-distinctions*,' we use an erroneous form of expression, which has the effect of putting the burden of proof upon the wrong side. It lies upon those who seek to impose *restrictions* or *disqualifications* upon any race or class to prove by the most cogent arguments the necessity for their imposition. Even when the question is whether *restrictions* or *disqualifications* shall be maintained, a very slight *primâ facie* case for their removal may fairly cast on those who advocate their maintenance the burden of showing that the ends of justice or public policy require that they should be maintained. But in the present case the question is one not of *disqualification* but of *qualification*: it is not whether *restrictions* or *disqualifications* shall be removed, but whether the personal law of a particular race shall be abrogated—whether a right which has always been enjoyed by a particular class shall be taken away. And it lies upon those who assert the

affirmative of this proposition to prove it. It appears to me so necessary that the absolute accuracy of this view should be understood by all parties to the controversy, that, at the risk of being tedious, I shall submit at some length the grounds and authorities upon which it is based.'

"And after referring to those authorities the Hon'ble Mr. Justice Field says again:—

'That Englishmen should be tried by their own countrymen was at the same time part of this personal law and a natural incident of their settlement in, and occupation of, the country. It is not, therefore, an accurate use of language to speak of this right, which is a portion of their personal law, and the natural outcome of the circumstances under which they acquired the country, as a *restriction* or *disqualification* upon members of the other races, whom they have permitted equally with themselves to enjoy their own personal law in all matters in which they valued it, and in which its enjoyment was not opposed to natural justice, or was not inconsistent with the position which the British had necessarily to take up in the country. * * * * * There can be no doubt that, by stating the question for discussion in what I think I have shown to be an erroneous form, and thereby casting the burden of proof upon the wrong side in the controversy, not only have feelings been unnecessarily embittered at the outset, but the right determination of the true question at issue has been rendered more difficult.'

"Again, the hon'ble and learned mover makes a very sweeping and telling proposition which I wish to take the liberty to quote, and make bold to confront with an ugly fact—

'And this test of fitness which it would impose is a test to which no reasonable person could object on the ground of insufficiency. For to say that a Native of India who has been entrusted with the powers exercisable by a District Magistrate or Sessions Judge, who has risen to the position of being the chief executive officer or the chief judicial officer in an area the average population of which in Bengal is about a million and a half,—to say that such a person cannot be trusted to exercise with justice and discretion the very limited jurisdiction which is exercisable over European British subjects outside the Presidency-towns, is to say that no Native of India, however long and complete may have been his training and experience, however high and responsible may be his position in the public service, is fit to exercise that jurisdiction.'

"And now for my fact: one is enough. I do not say *ab uno disce omnes*—far from it. But I do say that one fact is quite enough to show that such very sweeping assertions had better have been left unsaid, and that there is much—very much—to be said on the other side, which for my part I came here on Friday prepared to leave unsaid, in order that we might all unite to endeavour to bring back peace to this land. I could name date and place and individual, but they must be too well known to need that, and it is enough for my purpose that the bare fact should be given. A certain Native who fully answers the test to which we are told 'no reasonable person could object on the ground of insufficiency' had brought before him the case of a man who, wholly unprovoked, ripped open a child, tore out its entrails, devoured them before the eyes of his still living victim, was apprehended actually red-handed, attempted no denial, and pleaded only the deliberate fulfilment of a vow to a goddess. For this wilful murder this gentleman who satisfies every reasonable test passed a sentence of three months' imprisonment, and the High Court had to annul the sentence and to send an English Judge to try the case *de novo*, and he, of course, condemned the murderer to the extreme penalty of the law. And yet we are told 'no reasonable person' could object to this gentleman's fitness to try him. My Lord, I repeat that I came here on Friday fully resolved to recur to none of these things; but the sweeping assertions of the hon'ble mover have compelled me to do so in defence of the position that the Englishman is not unreasonable in wishing to retain in this foreign land his personal right to be tried by his peers.

"The hon'ble and learned mover will pardon me if I refer once again to his speech, and he will believe me that, in a matter that concerns crucially the well-being of the Empire, I am too deeply moved to think of anything but the Empire. He will pardon me that it chances to be his individual words that in all personal good feeling I still cannot help endeavouring to confute as dangerous. He says our Empire is an Empire of law. He makes light of prestige, and his policy is to level it. What does history, the logic of facts, say to this? Was there ever a nation

that maintained its supremacy by the righteousness of its laws? When the Gaul was at her gates, did it avail the Mistress of the World to plead the goodness of her laws before her late subject-races? Her code of jurisprudence was much more in advance of the world and her times than ours is of India, and yet Brennus took no note of it. I will admit that England is the nation in all the world that proudly and justly claims to have most largely supplemented the paucity of her legions by the righteousness of her rule; but I hold that this theory is in great peril of being very much overstrained—that it is dangerous to make light of prestige. Prestige is to power as a reflector is to a light. It economises its force; and, if prestige be thrown away by levelling down, the battalions will have to be doubled to make up for it; for after all they are 'the last logic of nations,' and it is on them only that the law takes its stand. Sir Fitzjames Stephen has some incisive words on this point, and the explanation of the intense feeling that has been exhibited by Europeans lies, I think, not a little in the recognition of the danger of such levelling down policy. It were better, far better, never to have stirred these embers at all, and to have let European and Asiatic walk peacefully side by side in the places they had grown quietly to recognise.

"I cannot but think, too, that a very serious mistake underlies the words in which the hon'ble mover introduces the proposal for trial by jury; and if I am wrong, I should like to be corrected. He says—'It has been strongly pressed upon us' and 'we have agreed to accept the suggestion which has been made to us;' whereas the newspapers stated confidently that the suggestion came from Government and had been accepted by the representatives of the people: and they gave the text of the Concordat, and the Hon'ble Mr. Evans now confirms this impression; and it was because I thought it came from Government that I came here last Friday prepared to support it, as a possible opening for a peaceful solution of the present position. If it comes not from Government, and the Government is not prepared to let the Bill stand or fall on this issue, then it alters the whole aspect of affairs. If the Government will put this principle forward as its own,—this principle of the Englishman retaining his personal right to trial by his peers, whether by jury or as now,—the principle with which I am mainly concerned,—the principle to which the Englishman tenaciously clings and will never yield if he can possibly help it; if the Government will distinctly pledge itself to pass the Bill with this principle maintained or to abandon the Bill, then I for one will give my vote for the Bill going to Committee. But if it will not do so, if I am to understand, as I do from the hon'ble mover's words, that the principle is one outside the Government proposal and accepted only at the suggestion of others, and that, too, on the condition of its being found practically workable; and that, in the event, either in Committee now or in the working experience of after years, of its being found to be accompanied by administrative difficulties, then it will be dropped out and the rest of the Bill passed without it; then, my Lord, the position would be a very different one, and I could not but oppose the Bill.

"There are other things, too, in the hon'ble mover's speech that fill me with grave misgivings. The same mouth that originally introduced this Bill with such a promise of permanency speaks now only of 'meeting the immediate necessities of the case,' and says we are not bound by the pledges given in 1872—the pledges of the principle of trial by his peers on which the Englishman withdrew his objections. Am I to understand that, if, on the Government pledge of reverting to trial by jury, the Englishman withdraws his objections now, and as a compromise accepts all the other parts of the Bill, that pledge is not to be permanent? I hope your Lordship will be able to assure us to the contrary. I hope your Lordship will be able to assure us both that the principle of the Englishman retaining his personal right to trial by his peers will be an integral part of the Bill, without which it shall not become law, and that it shall be so passed only with the view of its being a permanent settlement. If the Government can give no such assurances, then I submit that it would be well to abandon the Bill, and let us revert to the position in which we all got along very hap-

pily until disturbed by these proposals to legislate for a mere theory unaccompanied by any practical want. If the Government can give no such assurances, it will certainly leave the European community in at least a permanent state of feverish unrest, if not in active agitation; for I ought not to conceal from your Lordship that outside these walls there is, as far as can be ascertained in the limited time allowed, much deep-felt anxiety on these points. And as to the Natives, it is already apparent that they do not view the Bill with satisfaction. It has only served to whet their appetites for fresh demands; this much is evident from the speeches of the two hon'ble Native members of this Council who have already spoken, and from the Native Press. If, then, neither Europeans nor Natives are satisfied with the Bill, and it is not only not wanted administratively, but may even create administrative difficulty, what is it that we are to gain by the passing of it? Is it the credit of the Government that is to be saved by persistence in the creation of a political sore that will go on festering in the hearts of both sides to break out at intervals as cases occur? Surely, the credit of the Government will stand a great deal higher if it has the manliness to abandon the Bill. Seeing also the administrative uncertainties which surround the working of the jury-system, in the difficulty of foreseeing through the next few decades the lines of the spread of the European community in India, it would surely be safer and more statesmanlike to abide by the present system, which works well, and has satisfied every one, at least till such time as a change is positively required not by theory, but by the practical pressure of actual circumstances; and such is certainly not the case now. In brief, my Lord, my individual opinion is that I have seen no reason in all the months that have passed to change the views which I submitted to your Lordship's judgment in March last; and everything that has happened from that day to this has, to my thinking, only testified to the correctness of those views; for the deep abiding anxiety of the European and the portentous spread of race-antagonism has fully justified my warning; and I am still unhesitatingly of opinion that the best course for the country would be, as I then said, to withdraw the Bill, or, failing that, to adopt the compromise which I then proposed. Still, looking to the agitated state of the country, I am prepared, if the Government still wishes to persevere with their measure, and can give us the assurances which I ask, to abstain from opposing the action of Government, in the hope that a *modus vivendi* may yet be worked out by that means. But if the Government can give no such assurances, then I think it wiser to walk in the tried paths to which no practical objection has yet been made than to take all uncalled-for a dangerous plunge into what bids fair to be a sea of troubles in search of what, to my humble thinking, is a mere Utopia. And, even if the Government can give the assurances of principle and permanancy which I ask, still my abstention from opposing the measure will not be because my own judgment approves it, but in deference, for peace sake, to the proposal of the Government accepted by the European portion of the community. I need hardly add, my Lord, that, even so consenting, I must demur to the Committee being directed to report in a week. I see that supporters of the Bill, as well as opponents, deprecate the pressure of such haste, and I see the Hon'ble Mr. Evans asks for the postponement of a report till Friday week."

The Hon'ble SIR A. COLVIN said:—"I do not propose to detain the Council long, or to examine very closely the merits of a controversy which I am glad to think is now drawing to a close. But, before proceeding with what I have to say, I would pause to remark that I entirely disagree with the Hon'ble Mr. Thomas when he says that the speech made by the Hon'ble Mr. Ilbert on Friday last was in any way calculated to re-open that controversy. As I understood the remarks made by Mr. Ilbert and by Mr. Evans, they were both careful, while professing their willingness to meet on common ground on which they agreed to maintain what they considered to be the fundamental principles of public policy which they respectively affirmed. In plainly stating that policy, as they understood it, while they wished to abstain from further controversy, they equally refrained from saying anything which

might prejudice their case should unhappily the time arise at which it might become necessary to re-state it. They were careful, in other words, to maintain intact communication with their several bases. The Hon'ble Mr. Thomas has further asked several questions and pressed for a variety of assurances to which I consider it is not my business to reply. Had similar observations fallen from the Hon'ble Mr. Evans I might have had something to say; but the Hon'ble Mr. Evans has maintained a guarded and discreet silence, and I shall follow his example.

"The constitutional and legal aspects of the question before us I leave to others more competent to discuss them, and the whole matter indeed has been so thoroughly thrashed out that I am perfectly aware that I can throw no new light upon it. But what I propose is to explain the reasons why the settlement which has been come to commends itself to me, and why I accept it as a settlement which I consider should bring about a satisfactory conclusion of the issue which has been raised. The cardinal point to which the Government has throughout these discussions attached importance is the necessity for removing from the Statute-book the absolute disability under which the Natives of India rest, of exercising in any circumstances whatever jurisdiction over European British subjects in criminal cases in the Mufassal. As that point has been practically conceded, I will only say that I entirely agree with those who through good report and evil report have steadfastly adhered to it. The extent to which that disability is to be removed is to me matter of secondary importance. What, in my opinion, is of vital importance is that Natives of India should not, merely because they *are* Natives of India, be absolutely and under every circumstance disabled from exercising that jurisdiction. That a man who has been a Sessions Judge, or who has for years been in administrative charge of a district, and has given ample proof of his integrity, his independence and his ability, be he European or be he Native, is equally qualified to exercise that jurisdiction, and especially in view of the safeguards with which it is by the law even as it stands surrounded, is amongst my most absolute convictions. On this point, as on many others connected with this matter, there have been great misapprehensions. It has been represented, for example, that this jurisdiction was to be conferred on all Native Magistrates; and then it was argued that because all Native Magistrates were unfit to exercise this jurisdiction, therefore every Native Magistrate must be unfit; and that is a fallacy which has attracted much approval. The truth seems to be that the time has gone past when the Government can profitably discuss the question. It was open to the Government of India in times past to say to the Natives, 'We will not admit you to the higher offices; we will accentuate race-distinctions; we will keep you wholly in a subordinate position.' But, happily, the Government of India did not say that. On the contrary, its policy has ever been to give to the Natives of India every encouragement in their efforts to improve themselves, and to assist them in their onward progress. The Government has always given them its warmest support and sympathy, and in the most solemn way has pledged its word, and at its word they have taken it; taken it at its word in a manner which had taken some of us by surprise. So that I look, my Lord, upon this measure as on a bill which has fallen due, and which the Government is bound immediately to honour. Now, I believe, that the main secret of our security in India lies in the confidence among its people that we shall, in all circumstances and at all costs, maintain inviolable the pledges which we have given them, and that not only in the letter but in the fullest sense of the spirit of those pledges. Hence, much as I regard and value the desires and wishes of my countrymen, I value more their national honour. I think that there are moments when, misled by prejudice or carried away by passion, they lose sight in public affairs for a moment of those principles which in their private life and in their ordinary transactions form their habitual rule of conduct, and I believe that at such times it is the special duty of the Government, at whatever temporary risk of reproach or unpopularity, to stand between them and the consequences of their misapprehensions, and to hold high the inviolability of its pledges—the ark of its

covenant with the people of India. The best answer which could be given to the attacks which assaulted the Government in former days, when civil jurisdiction was given to Natives in India, was the honourable and patient answer which they gave by living down the attacks which were made upon them: and I look to them now again similarly to justify the confidence which the Government for a second time proposes, in pursuit of its engagements, to place in them, and to furnish a similar answer to the charge that the jurisdiction now to be conferred upon them is one which they are incapable of exercising. I myself know a score of men, neither Sessions Judges nor District Magistrates, but men of intelligence, independence, and integrity, plain country gentlemen, who are as competent to exercise this jurisdiction as the hon'ble member in charge of the Bill himself.

"This point settled, then, this cardinal point secured, it is the desire of the Government that material safeguards should be given to European British subjects; and I may say at once on this point that it seems to me very natural and reasonable that, in face of the new departure, European British subjects should wish to assure themselves of these safeguards; that they should come to the Council and say—'We understand that you wish to adopt a policy with which we do not sympathise; we are prepared to admit that you consider it necessary, and we for our part do not propose longer to obstruct it; but from our point of view we ask that you should secure to us our personal safety.' I think that, under the circumstances, that was an argument which might be fairly expected from the lips of our fellow-countrymen in India; and I am of opinion that, so far as safeguards can be given without insuperable administrative inconvenience or prejudice to the ends of justice, it is the duty of the Government to give them. In serious cases I think it natural that European British subjects should wish to safeguard themselves when they rightly or wrongly consider that their personal safety is in question. My hon'ble friend (Mr. Kristodás Pál) cursorily remarked the other day on what he considered might be some of the inconveniences attaching to the Bill. As I assent to the measure in its proposed form, I am bound to show that justice in my opinion will not be prejudiced if it becomes law. My remarks, like those of my hon'ble colleague, will be summary, but I am unwilling to leave his comments wholly unanswered. The first point raised by Mr. Kristodás Pál was with regard to distance. He argued that, because a man formerly had to go possibly 1,000 miles to the High Court, he would be similarly inconvenienced now by having perhaps to go 50 or 60 miles. Well, there is a river in Monmouth and a river in Macedon; and that is about the measure of the similarity. In former days a man had to go far away to the High Court; now he would have to go at furthest to the Sessions Judge's Court, and would suffer no great inconvenience from the distance. That argument I believe was a mere flower of rhetoric, one of those flowers which overlaid the whole of my hon'ble colleague's argument, rather than a serious objection, seriously urged; and I do not think that he would be inclined to press it. Next, he spoke of the consequences which might arise in times of great excitement. But contingencies of that sort were provided for by the provisions of the existing law, which in certain cases such as these give to the High Court power to transfer cases from one to another Court. Then my hon'ble colleague said that to give the Judge the power to sentence, and to a jury the power to convict, was to give to the one the shadow and to the other the substance. But the power of sentencing seems to me a very substantial shadow, a shadow so substantial that it may hang over a man for the term of his natural life, a shadow the substance of which I, for one, am not in the least inclined to test. The hon'ble member then spoke of anomalies. I consider this very dangerous ground to tread, and I decline to follow him on it further than to say that in the honourable path of progress and of endeavour on which the Natives of India have embarked, they will, in my opinion, find more assistance in divesting themselves gradually of anomalies peculiar to themselves than in pausing to contemplate those which are incidental to their relations with their fellow-subjects. Then my hon'ble friend alluded to the miscarriage of justice through the partiality of jurors. Well, that, of all points, seems to me to be

one which those who ask for this safeguard must see to. If the juries abuse their powers, so much the worse for the juries; but I understand that there is a body of gentlemen here in Calcutta whose business it will be in future to look uncommonly sharp after us all, and especially after the working of this Bill, and, if I might give them a friendly word of advice, it would be to look especially sharp after the juries.

"My Lord, I need not detain the Council longer; I think I have now said what I had to say; and I will only add, in conclusion, that the Government, in my opinion, have maintained, and have been most careful most effectually to maintain, the cardinal position which from the first they announced their intention to maintain, and that the safeguards which have been agreed to are quite compatible with that resolution. And, finally, I would express my belief that, if the reasonable remonstrances which your Lordship spoke of on the 9th March last, and which have been now addressed to us by the Hon'ble Mr. Evans, had been addressed to the Government at an earlier stage with the moderation, prudence and sagacity which our hon'ble colleague has evinced, much of the controversy might have been avoided, and the untenable position which the opponents of the Bill had taken up might, at a far earlier moment, have been abandoned."

His Excellency THE COMMANDER-IN-CHIEF said he wished to re-affirm what he had stated in the first instance, namely, that he entirely agreed in the principle of the Bill, and he was glad to find it was to be proceeded with. His Excellency thought from the first, like his hon'ble friend Sir Auckland Colvin, that every safeguard which the Legislature could give ought to be given; and His Excellency the Viceroy was aware that from last August he (THE COMMANDER-IN-CHIEF) was willing and ready to extend the jury-system. In the course of his speech his hon'ble friend Mr. Evans alluded to two points on which His Excellency would like to say a few words. He had expressed his surprise that a dangerous measure like this should pass at all through the Councils of India and the Secretary of State. As regarded the Council of the Government of India, every member of it was present, and could answer for himself; but with regard to the Council of the Secretary of State for India, His Excellency had something to say. It had been frequently asserted that the members of that Council had disapproved of the measure and had warned the Secretary of State of its dangers, and it had been further asserted that these warnings had been communicated to the Government of India.

The speeches of the late Secretary of State on this question had, no doubt, been widely read. In these speeches Lord Hartington had publicly declared that the members of his Council unanimously approved of the principle of the Bill, and also that they unanimously approved of the despatches which authorized the Government of India to proceed with it, both in its original and its amended form.

It was true that his Lordship in his latest speech on this subject had to some extent qualified his original statement. He had admitted that some of the members of his Council warned him that the question raised in the draft Bill was one which had created much political excitement in former times, and it was suggested to him that this warning should be unofficially communicated to the Government of India.

This statement explained perhaps the rumours that had reached us regarding the opinions and warnings of the Secretary of State's Council, but they did not justify the assertion that the Council opposed legislation and warned the Secretary of State of its dangers.

However this might be, His Excellency could positively affirm that no caution or warning of any kind, public or private, official or unofficial, ever reached the Government of India from the Secretary of State. That was all he wished to say on the subject.

His Honour THE LIEUTENANT-GOVERNOR said that on the present occasion the remarks which he had to make must necessarily be very few. He wished particularly to express his congratulations to the Government and the gratification which he himself felt at the settlement which had been effected in

regard to this Bill, and which was likely to bring to an end a controversy which had disturbed and distracted the province of Bengal to a degree which he had never before experienced in this country. He did not pretend to say that if this Bill stood on its original basis, or if it went forth now to the Select Committee without the proviso and safeguards which the negotiations of these few days had brought about, he should be prepared for a reference of the Bill to a Select Committee. But, when the Government had come forward with a proposal which had very much modified the form in which the Bill was originally framed, and when they had, in addition to that, agreed to the insertion of a proviso which gave satisfaction to the non-official Europeans in the country generally, he did not think any one would be justified—and certainly he should not in his position be justified—in withholding his support to the vote that the Bill should be referred to a Select Committee. Now, there was little doubt in His HONOUR'S mind that, if the Council was discussing for the first time a Bill of these proportions in this novel shape,—and practically they were considering it for the first time,—he had very little doubt that they would not have proceeded with it further without referring it for the opinion of the higher judicial officers of the country and also of the local district officers. But it came before them now under extraordinary circumstances, and therefore had to be dealt with in an extraordinary way. It was a positive novelty in that it introduced for the first time into this country the system of jury-trials in the magisterial Courts—a novelty, he supposed, in any country, and which certainly was more than unusual in India, where the provision of a jury was always a difficult matter, and in many instances almost an impossibility. It revolutionized completely our criminal procedure, by making it the law that the Magistrate and the Collector of the district, if a European accused was brought before him, should have recourse to a jury to try him. Now, the Bill in its new shape was not before the Council, and they could only judge of it by the general statements which had been made in this Council and out of doors. But he thought they might say this—that, so far as he knew, it would make very little difference in the administration of justice in this province, and from the day of its publication would practically be a dead-letter in Bengal. It was a great thing to his mind that the present law was not changed, and that the Joint Magistrate of the district and other European officers who had criminal jurisdiction over European British subjects could take up cases against Europeans. Now, HIS HONOUR had stated elsewhere—and all experience proved the correctness of that opinion—that the Magistrate and Collector of the district, the gentleman on whom they were now conferring these powers, hardly ever took up cases connected with criminal trials against any one. As the hon'ble member, Mr. Quinton, had said on a previous occasion, the Magistrate and Collector of the district was a kind of superior person; he was the eyes and ears and hands of the Government, and was responsible to the Government for everything which went on in his district; he had to submit reports on railway-accidents, the state of the crops, the condition of education, the management of dispensaries, and, in fact, everything connected with the executive management of the district. The Government looked to him to give any information which was required. He was the officer entrusted with the important charge of the revenue-administration of the district. And with all this the practice had grown up—a practice which had removed the Magistrate and Collector very much from the administration of judicial work—that the whole of the criminal administration of the district fell to the hands of the Joint Magistrate, and the figures which represented this state of things HIS HONOUR was in a position to quote, because they were brought to notice in a paper which had recently been published. It was there seen that, in 1882, of the whole of the criminal cases in Bengal which came under trial, 99·3 per cent. were tried by Joint Magistrates and their subordinate officers; and ·7 per cent. represented the proportion in Bengal, with a population of 69 millions, of cases of a criminal character which came before the Magistrate and Collector of the district. It would be difficult indeed to say what decimal would represent the proportion of criminal cases against European British subjects which would come before Native Magistrates under this Bill.

There were 45 or 46 districts in Bengal, and the Government had at the present time possibly to provide districts for two Native gentlemen; and HIS HONOUR could say that it would be almost impossible to realize the chance of any case of a criminal nature in which a European British subject was concerned coming before one or either of those gentlemen. In the first place, the Government would take care that no Native would be appointed Magistrate and Collector of a district in which there was not a European Joint Magistrate capable of taking up such cases, and in such districts the Magistrate and Collector would never think of calling up such cases for trial before himself. If, through absence, sickness, departure on leave, or other circumstances of that kind, of the Joint Magistrate, it fell frequently to the Magistrate and Collector to take up criminal cases, and it became the fashion to have recourse to juries, there would be serious risk of the whole thing breaking down. But his belief was that the Magistrate and Collector of the district would never have to deal with the cases for which the Bill was intended to provide, and consequently the proposed settlement would under existing arrangements leave things very much as they were at present. The fact was that, in conferring this power on the Magistrate and Collector, the Government was conferring it on the wrong person. It was the man who was coming up in the lower classes of the service, the Joint Magistrate, in regard to whom the difficulty would arise from his position of possibly having to deal with European cases, and they would not, under the Bill as it stood, be able to take judicial cognizance of such cases. It was there where the shoe would pinch; it was not with regard to the Magistrate and Collector that, in his belief, any difficulty would arise.

Another observation which HIS HONOUR wished to make was with reference to a remark which fell from the hon'ble member in charge of the Bill, who said that, in giving these powers to the Magistrates and Collectors of districts, they were giving them to specially selected officers; and if it was conceded that the District Magistrate and Collector was one who had shown, by long administrative ability and capacity, his fitness to take charge of a district with its large responsible functions, then on what ground was it just or reasonable to withhold from him those powers, those smaller powers, which they were now asked to give him? But the fact was that, in Bengal at least, the Government had no manner of power of selection in the appointment of Magistrates and Collectors of districts. A man rose to that appointment, not by ability, but, as soon as a vacancy arose, by seniority. The fact was that a civilian rose to that position after many years of labour and exertion, and he looked to, and felt himself entitled to, and claimed, promotion as of right. HIS HONOUR did not allude to the cases of men who were utterly bad, or utterly incompetent, and who would have no such chance; but, taking the general run of men, it was totally out of the power of the Lieutenant-Governor of Bengal to refuse to a civilian, when his turn of promotion came, promotion to a district magistracy. He had been thirty years in Bengal, and he knew only of one case in Bengal where such a procedure was ever adopted of refusing a civilian such promotion, and that case was one of an unfortunate officer who himself readily acceded to the justice of the refusal. He was intelligent and active, but came to trouble from a stroke of the sun, and, though he diligently performed his duties to the end of his service,—the sedentary duties which were required of a Joint Magistrate in the trial of cases,—he accepted the position that he was not fit to succeed to the charge of a district. Of course, there were Magistrates *and* Magistrates. There were three grades of Magistrates in Bengal, and the Lieutenant-Governor had the power, which HIS HONOUR had himself exercised, of refusing to allow promotions from one grade to another to an inefficient officer. But, if he held back promotion to an officer when it came to his turn to succeed to a magistracy, not only the officer himself, but the whole service, would resent the act as an unjustifiable exercise of power.

HIS HONOUR had always regretted that the rejection or the adoption of this Bill had been regarded as a political test of a standing or a

falling India. He had seen it stated in Native newspapers that the rejection of the Bill implied that the government of 250 millions of people could not be carried on except at the point of the bayonet. As regarded the 250 millions, he would observe that, if we were to substract two hundred and forty-nine millions from the two hundred and fifty, it would leave a large margin to represent those who had ever heard of this Bill, or who ever cared for it, or who, if they did, would not much rather that it should be withdrawn. As regarded the bayonet theory, he did not believe that a shot in anger had ever been fired in Bengal, except perhaps in some local disturbances, since the days of Clive; and the military force that was now maintained in this province for the subjugation of 69 millions constituted in numbers what would make up the population of a fifth rate town or of a large village. Taking the argument in its figurative sense, HIS HONOUR would ask his hon'ble friend Raí Kristodás Pál whether Bengal did not enjoy a greater freedom of action and more liberty of speech and of writing (which, he was afraid, often degenerated into license) than the Natives of Bengal had ever before enjoyed, or could possibly hope to enjoy under any other rulers. Then, with reference to Her Majesty's Gracious Proclamation of 1858, HIS HONOUR would be the last person in the world to depreciate it or ignore it. He agreed with his friend Mr. Ilbert that the ostentatious use of the word *prestige* was unnecessary and obnoxious. Still the fact of our dòmination could not be ignored, and, when our rule was loyally acknowledged, it could best be established by the indifferent and impartial administration of justice to all sorts and conditions of men. He was not aware that any one would deny this; and, as regarded the plea now prominently put forward in respect to the Proclamation,—an argument which, if he remembered rightly, was brought forward at the eleventh hour,—he would again appeal to his friend Raí Kristodás Pál, with whom he had been associated more or less for the last thirty years in public business, whether since 1858 the policy of that declaration had not been honestly and honourably carried out in the liberal advancement of the Natives of the country. Their position in every High Court in India, their position as Judges in the Mufassal, their wider employment in every post and department of the public service, proved this; but, where the Proclamation was pleaded as justifying the right of giving to Natives the powers of Justices of the Peace for the sake of trying Europeans, it seemed to HIS HONOUR that this was just one of those cases which the conditional clause of the Proclamation itself excluded as dealing with a question of great delicacy and demanding the most cautious and statesmanlike discretion. For his own part, he did not hesitate to say that, in the condition and circumstances in which Europeans were placed in this country, they had a right to claim the maintenance of a privilege, which they had enjoyed since 1773, either in the form of a trial by jury or, by what was substituted for it in 1872, by a trial before their own countrymen. It was because, without any reference to, or consultation with, them, that this privilege was ordered to be suddenly surrendered, that all the acrimony and animosity of the last six months was due. If the European community had been asked and consulted as regarded this measure even in its original form, or if the Bill in the modified character which the Council had now to consider with the additional safeguards now accepted, had ever been suggested to them, he did not believe that any reasonable European would have hesitated to agree to it.

His Excellency THE PRESIDENT said:—"I am glad that the time has at length arrived when it will be possible for me to express more fully than I have hitherto done the views which I entertain in respect to the measure which we are now considering. I may, I fear, have to make a somewhat large demand upon your patience, but I trust that you will accord to me the indulgence which the importance of the subject demands. On the 7th of December last, at the first meeting of the Council after the Government returned to Calcutta, I explained the modifications which we had submitted to the Secretary of State and which had been approved by him. Upon that occasion I purposely abstained from anything in the nature of argument, and gave to the Council a bare statement of facts. I must now enlarge and supplement that statement, and

explain what course the Government has taken, and the grounds on which they have taken it. In doing so, however, I do not propose to go over again the ground which I traversed in my speech on the 9th of March last year. I then explained how the question, with which we are now dealing, was raised in 1882, and I need not touch again upon that point. We were bound, as we considered, to answer the questions put to us at that time, and we could only do so in accordance with the established policy of the Crown and Parliament, upon which I shall have something to say before I conclude. We might, perhaps while admitting the claim put forward at that time, have tried to postpone the period for its practical acknowledgment; but I explained, in March last, my reasons for thinking that it was wiser to deal with the subject at once, and I have nothing now to add on that point to what I then said. The Bill was therefore introduced, and the first question to which I desire to address myself is the consideration of what was the principle of the measure. That principle is stated in the Statement of Objects and Reasons which was published at the same time as the Bill, and in that statement I find the principle of the Bill declared to be 'to remove from the Code at once and completely every judicial disqualification which is based merely on race-distinctions.' My hon'ble and learned friend, Mr. Evans, has contended, I know, that the fact that under the Act of 1872 a Native Magistrate is precluded from exercising jurisdiction over a European British subject does not constitute a disqualification to hold the office, but it does constitute a disqualification to discharge some of the duties of the office, and to remove that disqualification was the object of the Bill introduced last February. I quite admit that we have not been able, for reasons which I shall give before long, to apply this principle to the full extent which we first intended, and which was covered by the words 'at once and completely.' But to the principle of removing these disqualifications, as far as present circumstances would admit, we have always steadily adhered. Such, then, being the declared principle of the Bill,—to remove judicial disqualifications based merely on race-distinctions,—I now come to review as briefly as I may the circumstances which have taken place since last March. It will be in everybody's recollection that, from the commencement of the controversy which was created by the introduction of this Bill, the opposition has been to the principle of the Bill and the policy upon which it is founded. In many writings, and in not a few speeches, I have observed that some of the most fundamental principles of just and righteous government have been ridiculed and denounced; it would be unjust to hold the opponents of this Bill responsible for the language of some of their number, but, at the same time, the existence of such sentiments and their public avowal is a circumstance which the Government, in considering how to deal with this question, could not overlook. The one demand made upon the Government from February to December was that the Bill should be withdrawn, and the theory put forward was that an Englishman had an inalienable right to be tried on criminal charges by European British Magistrates and Judges. It is now said that that claim meant that he should be tried by a mixed jury, but that view of this matter never was put forward until now, and the claim made was distinctly made in the form and words which I have just read. No doubt, it was sometimes said that the claim to be tried only by a European was a claim to be tried by a man's peers, and anybody who has any acquaintance with the meaning of that expression is, of course, aware that it does not relate in the smallest degree to the race of the Judge before whom the person charged with an offence may be brought. Trial by peers refers to jury-trials, and not to the race of the Judge presiding over the Court before which the accused person is brought up for trial. My hon'ble and learned friend, hoping doubtless to get a rise out of me, alluded jocosely to the fact that I was a peer, and could only be tried, if I chose to claim the right, by the House of Lords. Well, I can only say that, if I were to commit a felony,—and I can assure my hon'ble and learned friend that I have no present intention of doing so,—I should certainly not claim to be tried by that illustrious body. And then my hon'ble and learned friend says, supposing that by the law in England only Judges who were peers could try peers, would such a law be considered to imply any

disrespect to other Judges or to cast a slur upon them? I venture to think that it is highly probable that, if Lord Coleridge was the only Judge that could try a peer, his colleagues on the Bench would be likely to think that an invidious distinction; but I will tell my hon'ble friend one thing of which I am perfectly sure, and that is that, if such a system were to be by some extraordinary process set up in England, the people of England would not endure it for a single week.

"That, therefore, was the fundamental principle of the Bill and the policy on which it was founded, and consequently, when the Government came to consider last August, after the various reports of the Local Governments had come in, the course which they should take with regard to the Bill, they held that they were bound to uphold the policy and to maintain the principle thus distinctly impugned. I said, in March last, that to arguments which were inconsistent with the declared policy of the Crown and of Parliament, it would be contrary to my duty to listen. To this declaration the Government, last August, determined to adhere. We decided, therefore, not to withdraw the Bill, and, having come to this decision, we had then to consider two questions: to what extent the principle of the Bill should be applied, and whether we could offer any additional securities to Europeans against any possible miscarriage of justice. In considering the extent to which the Bill was to be applied, we took note that a considerable misapprehension appeared to exist as to what was the real scope of the original Bill—a misapprehension which seemed to me not to be altogether absent from the mind of my hon'ble and learned friend Mr. Evans to-day. But, in order to show what the scope of the Bill was, I cannot do better than refer to the language which was used in the debate of the 9th March last by my hon'ble friend Sir Steuart Bayley. On that occasion Sir Steuart Bayley used the following words:—

'The aspect in which I have all along regarded the Bill is that its main and important object, its substantive principle in fact, is to allow Native Civilians who may rise to be Sessions Judges or District Magistrates to exercise the powers which the law vests in Sessions Judges and District Magistrates as such, and that they should not be disqualified from exercising those powers on the score of birthplace or nationality. The other or permissive provisions, in regard to Assistant Commissioners and Magistrates of the 1st class, I understand to be an adjunct to the main principle of the Bill, a fringe or margin as it were, and intended only to meet special cases, which the Local Government might otherwise be at a loss to provide for without serious inconvenience.'

"That is not a description of the Bill in its present condition, and after it has been amended and its scope reduced, but it is a description of the Bill given last March when it was before the Council in its original shape. When we came, therefore, to consider the question, we felt that what Sir Steuart Bayley called 'the main and important object and substantive principle of the Bill' stood upon a different footing from that which he described as a 'fringe,' and it certainly seemed to me and others in the light of the controversy which had sprung up, and of the great dislike and fear of the extent of this Bill which were widely entertained, that those who were opposed to it might fairly ask that anything in the nature of a discretionary power vested in the Executive Government should be removed by the Bill. When we became aware of the strength of the feeling this question had originated, it seemed but a reasonable concession to make to those who entertained that feeling that there should be nothing in the measure of a discretionary nature, but that the Act to be passed should distinctly and clearly lay down what was the extent of the jurisdiction to be given. Besides that, as my hon'ble and learned friend Mr. Ilbert said, none of the Local Governments who were opposed to the withdrawal of the Bill, with the exception of the Government of the Panjáb, appeared to desire to have this discretionary power conferred upon them. Under these circumstances, we determined to withdraw this discretionary power, to give up what Sir Steuart Bayley called the 'fringe.' It is quite true, as I have already intimated, that in so doing we became unable to apply the principle of the Bill to the full extent which we originally contemplated, but we upheld that principle in itself and gave almost as much practical effect to it as would have been given to it in the Bill as originally introduced. We therefore did not hesitate

to remove from the measure everything in the nature of an executive discretion. We then came to consider a very important point, and one which we have had always in view, and which has guided us very much in our recent action, namely, whether there were any additional securities beyond those which the present law afforded which could be given to European British subjects against those miscarriages of justice which they appeared to fear; and we were of opinion that there was a suggestion made by that distinguished person, Sir Charles Turner, the Chief Justice of Madras, which would go a very considerable way in that direction, while at the same time it would effect a positive amendment of the law as it stands. In order to make perfectly clear the nature of Sir Charles Turner's proposal, I would ask you—though the extract is a little long—to allow me to read to you what he said in the memorandum which he wrote in reference to the Bill. In the seventeenth paragraph of that memorandum he said:—

'In order to allay whatever apprehension is seriously entertained to the fitness of the officers on whom jurisdiction would be conferred, I have considered whether it might not be desirable to give to every European British subject the same option in respect of the presiding Judge or Magistrate as he at present enjoys to a qualified extent in respect of jurors and assessors. I have come to the conclusion that it would be unbecoming to the dignity of the judicial office that this option should rest with those who are subject to the jurisdiction, and that a safeguard reasonably sufficient might be provided by rendering more effectual a provision of the existing Code. The 526th section, Code of Criminal Procedure, enacts that, whenever it is made to appear that a fair and impartial inquiry cannot be had in any Criminal Court, or that some question of law of unusual difficulty is likely to arise, the High Court may transfer a case to another Court or to itself. I would authorize the High Court to make the transfer if it is made to appear 'that it is expedient for the ends of justice.' And I would supply a defect in the Code by directing that in any case in which prior to the commencement of the hearing the Government, the complainant, or the accused shall notify to the Court its or his intention to make an application under section 526, the Court shall adjourn the hearing for such reasonable time as may be required to enable an application to be made and an order obtained thereon.'

"That was, in Sir Charles Turner's own words, the nature of his proposal, and those were the reasons which he gave in its favour. They appeared to us to be very good reasons, and the proposal commended itself to our judgment in a high degree, because it would enable a transfer to be made without casting upon the Magistrate, from whom the case was to be transferred, any such reflection as might seem to be involved in the statement necessary under one of the sub-sections of the present Code, that 'a fair and impartial inquiry cannot be had,' when a Court has to say that it might be thought to imply some distrust of the Magistrate trying the case; and, therefore, we considered that upon that ground, among others, it was desirable that the discretion of the High Court in this matter should be increased, that some such words as those suggested by Sir Charles Turner, namely, 'that it is expedient for the ends of justice' should be introduced. Then, it seemed only proper that, when an application of this kind was made, the case before the Court below should be suspended for a reasonable time. Not to do that appeared to make the application almost a farce, and we very readily adopted this amendment as in itself desirable quite apart from anything relating to this particular Bill. The amendment would also be equally applicable to everyone, and not confined to any particular class of Her Majesty's subjects. These were the modifications which recommended themselves to the Council last August, and with these modifications the Bill was, as hon'ble members are already aware, sent home to the Secretary of State and was approved by him. This was the state of things when the Government re-assembled in Calcutta on the 1st of December. Up to that time none of the opponents of the Bill had approached the Government with any proposal whatever for its further modification or for the granting of any additional securities to those who would be affected by it. As I have said, the one simple and unvaried demand had been that the Bill should be withdrawn. But, when we arrived here in Calcutta, my hon'ble and learned friend Mr. Evans, with that public spirit for which he is distinguished, intimated to the Government that he thought that he saw a further alteration of the measure which might be possible, and which might put an end to the controversy which had raged so long. My hon'ble and learned friend no doubt

still maintained that the Bill had better be withdrawn, but he made a suggestion which I do not think he will object to my stating to this Council. That proposal was that the sections of the Code which create the legal disqualification of Native Magistrates to try European British subjects should be removed, but that every European British subject brought before a Native Magistrate should be given the right to claim a transfer to a European Magistrate. I think that is a correct statement of the proposal of my hon'ble and learned friend. Any proposal coming from Mr. Evans naturally demanded the utmost consideration from Government. It was the first proposal of the kind which had reached our ears, and we consequently gave to it a most full and careful deliberation. It seemed, however, to us that it was a proposal which we could not accept, because it appeared to take away with one hand what it gave with the other. It gave the appearance of removing the legal disqualification, but it accompanied it with a right on the part of the accused person to set up that disqualification again by claiming to be tried by a Judge of his own race, and it also seemed to us to be objectionable because it admitted distinctly the principle that a European British subject had a right to refuse to be tried by a Native Magistrate or Judge; and, lastly, we thought with Sir Charles Turner, as stated by him in the passage which I have read, that such an option on the part of the accused would be unbecoming to the dignity of the judicial office; and under these circumstances we felt ourselves obliged—I can truly say with great regret—to refuse to accept the proposal which my hon'ble and learned friend Mr. Evans with the most friendly intention to both sides had offered to our consideration.

"But the fact that an important Member of this Council and a decided and undoubted opponent of this Bill had proposed an arrangement to the Government which he thought might lead to a settlement of the difficulties which had arisen, raised at once for our consideration the question whether there was anything in the way of additional security which we could give to those who would be affected by this Bill without any sacrifice of principle, with a view to allay the fears which we knew to be largely entertained, and thus to enable the Bill to be passed with such a degree of general acquiescence as would prevent its being made even after it became law the battle-field of contending parties. It was our duty to take into serious consideration the chances of such a settlement which the opening made by Mr. Evans' proposal gave us, and we entered upon the examination of that subject with a very earnest desire to satisfy all that was just and reasonable in the wishes of those who objected to the measure, and to find, if possible, a mode by which we might, consistently with the principles we determined to uphold, arrive at a pacific solution of the question. The only proposal which seemed in any way to fulfil the conditions which I have described of being not contrary to the principle of the Bill, and yet one which might be accepted by those who were opposed to us, as giving them legitimate security, was one which had been made in the month of May by the Government of Bombay, and under which a right to claim a jury would be given to Europeans in serious cases, summary jurisdiction over Europeans being left as it is at present. The proposal was made by the Government of Bombay in their report upon the present Bill, and had been considered by the Government of India in August last, and I do not wish to deny that it had for me at that time an undoubted attraction, perhaps natural enough, because, having lived all my life in England, I have an Englishman's feeling on the subject of a jury. It did not, however, at that time commend itself to the approval of the majority of my colleagues, and we had nothing before us whatever to lead us to suppose that if such a proposal had then been made by us it would have been accepted as a satisfactory settlement of the question by the opponents of the Bill, they having up to that time declined to accept any arrangement, except a complete withdrawal of the measure, and never having in any form or through any person approached us with anything in the nature of a proposal for a compromise or for a modification of the Bill. Under these circumstances, a suggestion of this kind was made by my hon'ble colleague Sir Auckland Colvin to my hon'ble and learned friend Mr. Evans, and the upshot of what passed between them is stated in the words which I shall here read to the Council. The Government undertook—

'to agree in Select Committee on the basis of the modifications approved in the Secretary of State's despatch to the right bei ng given to European British subjects, when brought for trial before a District Magistrate or Sessions Judge, to claim trial by jury such as is provided for by section 451 of the Criminal Procedure Code, subject to the following conditions:—

'(1) No distinction to be made between European and Native District Magistrates and Sessions Judges.

'(2) Powers of District Magistrates under section 446 of the Code to be extended to imprisonment for six months or fine of two thousand rupees.'

"There was in this undertaking no sacrifice whatever of the principle of the Bill. It distinctly lays down as a condition of the acceptance by the Government of such a proposal in Select Committee, and the extended right to a jury-trial that no distinction should be made between European and Native District Magistrates and Sessions Judges. Both under the arrangement will be placed in all respects on the same footing. All judicial disqualifications of Native Magistrates and Judges of those grades will be removed. Europeans will be liable to appear equally in their Courts, and will be dealt with by them precisely in the same manner. The principle of the Bill will thus be entirely maintained. This arrangement also gives no sanction to the theory to which I have already referred, that an Englishman possesses everywhere an inalienable right to be tried only before a Magistrate of his own race, a right which, as my hon'ble friend Mr. Ilbert explained in his speech, is not recognised in other dominions of the British Crown,—in Ceylon or in China for instance,—and which no Government since the passing of the Act of 1833, which distinctly contravenes any such claim, has ever been known to admit. But it was an arrangement which, as it seems to me, ought to be satisfactory to Englishmen in India, for it gives them in all serious cases a judicial security to which they are accustomed at home, which is peculiarly English in its character, and upon which they have been brought up to set a very high value. Mr. Kristodás Pál, however, urged on Friday last certain objections against this arrangement. He spoke of it, in the first place, as involving a reduction of the power of Magistrates, and seemed to think that some slur was cast upon a Magistrate if he was required to try a case with the assistance of a jury. I cannot with my English experience for a moment admit that such is the case. It is notorious that, both in England and in India, it is the higher Magistrates who try cases with a jury. Criminal trials before the High Courts of India are by jury. The higher Magistrates in England try by jury, and in the case of Justices of the Peace at home, when they sit in the higher capacity of Justices in Quarter Sessions, they try by juries, it being in their lower capacity in Petty Sessions that they try cases without them. To be required to try with a jury does not imply any diminution of the status of the Judge or Magistrate; indeed, it rather implies the contrary; and, as a matter of fact, Mr. Kristodás Pál should remember that, under the arrangement proposed in this agreement, the powers of District Magistrates over European British subjects will be materially increased and not diminished. Again, Mr. Kristodás Pál spoke of the possibility of a failure of justice resulting from this system. Such a failure of justice would, undoubtedly, be an intolerable evil; but I need scarcely say that, if I anticipated that this arrangement would result in any such failure of justice, I should never have been a party to it. I do not think that such fears are well-founded. Of course, if hereafter it should turn out that serious failures of justice or other grave evils arise out of the system about to be established, it will be the duty of the Government of the day to apply adequate remedies to those evils when they appear; but, as I have said, I do not anticipate that those evils will be created, and I have the utmost confidence that Local Governments and their officers will do all in their power when this Bill becomes law to secure the honest and effectual working of this extension of jury-trials. This is the desire which I and my colleagues entertain, and I am sure that this course will be taken by all Local Governments throughout the country.

"Then Mr. Kristodás Pál said that numerous transfers to distant places will be necessary under this arrangement. My hon'ble and learned friend Mr. Evans, I think, made some remarks upon that point to-day. It does not seem to me probable that that will be the case. There is no intention of altering the present arrangement for the trial of petty cases by Magistrates below the rank of District Magistrates, or of adopting the suggestion of Mr. Gibbon, the other day, that a general right should be given to Europeans of trial by jury in all cases. Summary jurisdiction will remain as it is at present, and care will be taken not to render the jury-system ridiculous by applying it to every petty case. In all cases tried before a District Magistrate the right to claim a jury will be given, but it must be borne in mind, in reference to this question of frequent transfer, that those will almost invariably hereafter be cases for which the proper punishment is from 3 to 6 months, and which under the present law would have to be sent to the Sessions Judge, and, therefore, though it should be found occasionally necessary to transfer those cases to some more distant officer, nothing more will occur than would occur now, when District Magistrates are debarred from dealing with such cases at all, and are obliged under any circumstances to transfer them to the Sessions Court. These are subjects, however, which I have no doubt will engage the attention of Local Governments, and it will be their duty to do everything in their power to prevent anything in the nature of inconvenience to suitors.

"But there are aspects of this case looked at from the point of view of the Native community upon which Mr. Kristodás Pál scarcely touched, and on which I desire to make a few observations; and at the outset I must say that, if the proposed amendment had given to one class of Her Majesty's subjects a privilege from which the rest of those subjects were wholly debarred, and to which the law afforded them no means of ever attaining, the objections to it would have been very serious, but, as hon'ble members are aware, that is not the case. It must be remembered, in the first place, that the amendment, while it takes nothing away from the Natives, gives to the Europeans in jury-districts little or nothing which they do not now possess. As summary cases will in practice be disposed of by Justices of the Peace below the rank of District Magistrates, and as the cases which will be dealt with by District Magistrates will generally be those which will fall within the category of the more extended powers with which they are to be invested,—cases which at the present time go to the Sessions Judge,—the Europeans will in the great majority of cases in jury-districts obtain no novel right to a jury-trial at all. Practically, therefore, in these districts this arrangement will leave things very much as they are so far as regards the question of right to trial by jury; though the arrangements under which that trial will be conducted may be of a somewhat different character from the present arrangements. In non-jury districts, the amendment will no doubt at present introduce a distinction, but the distinction is one which, as we all know, can be removed without fresh legislation in any district and at any time if the Local Government should think it fit to do so by extending the general jury-system. My hon'ble friend Mr. Amír Alí touched upon this subject, but I did not understand him to say that he proposed to move any amendment regarding it in the Select Committee on the Bill, and I should deprecate his doing so. As I have alluded to remarks which fell from Mr. Amír Alí, I may say, with respect to certain amendments which he announced his intention of submitting to the Select Committee, that I am sure the Select Committee will receive with careful attention anything which he may bring under their notice, but I cannot, of course, express any opinion on the part of Government in regard to proposals which are not at present before us. I was glad, however, to observe that he said that what he had to propose would not affect the European British subject, because of course it must be clearly understood, with respect to that branch of the question, that the Government are altogether bound by the agreement which has been made through the instrumentality of Mr. Evans, and by that agreement they intend to abide. But Mr. Amír Alí alluded specially to certain amendments which he intended to suggest in section 526 of the present Code. That is the section affected by Sir Charles Turner's proposals, and I am quite sure that the Select Committee will be very glad indeed

to have the assistance of my hon'ble and learned friend in amending that section with the object of extending the powers of the High Court in regard to transfer. I am afraid that, in touching upon the points specially alluded to by Mr. Amír Alí, I have somewhat wandered from the question with which I was dealing when I first referred to this matter, and I will now go back to it.

"Native opinion is, I know, averse to such distinctions as those which will be made in non-jury districts. The feeling is very natural, but I would ask those who entertain it to remember that the measure which we are now, I trust, about to pass will vindicate a principle of the greatest value to Her Majesty's Native subjects, will remove a disqualification very distasteful to some of the highest Native Magistrates and Judges of the land, and will constitute a substantial, if but a limited, advance in the application of the just and wise policy inaugurated in 1833 and confirmed in 1858. If, to obtain these results in a manner calculated to give them the solid security afforded by the acceptance of the general body of the European community, the Government has consented to grant to those who are directly affected by the change of the law now about to be made a safeguard specially suited to their feelings and consonant with their traditions, it has surely acted wisely in the interests of all parties concerned. One side has gained a reaffirmation and extension of a great principle, which has been violently assailed and bitterly opposed, and the other has received a concession calculated to allay all that is reasonable in fears which have no doubt been widely felt. It seems to me that we may find in these considerations the true justification of the course which the Government has taken.

"Before I pass to another topic of great importance, I would just say one word in respect to some observations which fell from my hon'ble friend the Lieutenant-Governor. He spoke of the principles on which men were promoted to the highest posts in the Civil Service; and he said that those promotions were practically made by seniority. Well, I should be the last man to deny the claims of seniority; they are great, and constitute a very important element in the consideration of questions of promotion, but at the same time they ought not to constitute the sole, or even the ruling, principle in respect to such promotions. In the despatch from the Court of Directors, to which reference was made on Friday by my hon'ble friend Mr. Ilbert, it is laid down distinctly that fitness is henceforth to be the criterion of eligibility. I think that that is a sound principle, though I admit that great weight ought to be given to the claims of seniority, and I can assure my hon'ble friend the Lieutenant-Governor and others that, so long as I hold office, they will always have my warm support in any case in which they think it necessary to disregard the claims of seniority in favour of considerations of fitness.

"And now, before I conclude the observations I have to make upon this occasion, I wish to explain to this Council the view which I entertain of the policy by which the Government has been guided in the introduction and conduct of this measure; and, in the first place, I desire to point out to hon'ble members that this policy is not, as it is often represented to be, something entirely novel, which has been invented by myself or sent out brand new from England. It is, on the contrary, a policy which was introduced half a century ago, when Europeans were first admitted without restriction to this country. It was a great conception of a great Government, of which, be it remembered, men such as Lord Grey, Lord Palmerston, Lord Russell, Lord Lansdowne, and the late Lord Derby were members. It was clearly enunciated in Parliament and confirmed by both Houses; it was explained and commented on in the despatch from the Court of Directors to which my hon'ble friend Mr. Ilbert alluded on Friday; and, finally, it received a solemn confirmation in the Queen's Proclamation of 1858. In the Act of 1833 and in that Proclamation we have then, as it seems to me, two great instruments embodying a clear and definite policy, from which, as I hold, it is not open to any Government of India to depart. The Charter Act of 1833 was so called, because it prolonged for a

limited period the charter of the East India Company, but it seems to me that it deserved the name much more because it conferred a Great Charter upon the people of India. The Proclamation of the Queen, issued at a moment so important and so critical as the assumption by the Crown of England of the direct government of the British dominions in India, explained the principles upon which that government was to be conducted, and gave pledges to Her Majesty's Indian subjects which it has ever since been the duty of Her Majesty's representatives to redeem. Those who know anything of the intention with which that Proclamation was prepared know very well that its authors regarded it as having in view the objects which I have described, and to look at it in any other light would be altogether inconsistent with the great and noble purposes with which it was issued. I know that the view which I hold upon the subject of the character of this document has recently been repudiated by a learned Judge in England, Sir Fitzjames Stephen, who has spoken of it in these words:—

'The Proclamation has no legal force whatever. The Act of Parliament has no force beyond the legal effect of its words. Neither can bind the Indian Legislative Council, which ought to be guided in the exercise of its discretion solely by its own opinion of the merits of the measure submitted to it, and the extent of its legal authority.'

"And then mark this language—

'As a ceremonial, the Proclamation may have been proper, but in any other point of view it is a mere expression of sentiment and opinion, worth as much as the sentiments and opinions expressed would have been without it, and no more.'

"We did not require one of Her Majesty's Judges to tell us in these days that a Royal Proclamation has not the force of law; but when Sir Fitzjames Stephen goes on to maintain that a Proclamation issued by the Sovereign of England and of India is only a ceremonial, and is worth no more than the sentiments which it expresses are worth by themselves,—that is, that it was a mere formal utterance of sentimental phrases of no binding force or practical effect whatever,—I cannot too emphatically express my dissent.

"To me it seems a very serious thing to put forth to the people of India a doctrine which renders worthless the solemn words of their Sovereign, and which converts her gracious promises, which her Indian subjects have cherished for a quarter of a century, into a hollow mockery, as meaningless as the compliments which form the invariable opening of an Oriental letter. Sir Fitzjames Stephen, it seems to me, is not consistent, for he admits, in the course of the document from which I have quoted, that the Proclamation binds the Government of India in regard to the Native Princes and States, but, in regard to Her Majesty's own immediate subjects, it is, according to his view, of no force whatever. It gives no pledge, and it lays down no principle. But, if it binds the Government towards the Princes of India, it binds it to the people of India as well. The document is not a treaty—it is not a diplomatic instrument; it is a declaration of principles of Government which, if it is obligatory at all is obligatory in respect to all to whom it is addressed. The doctrine, therefore, to which Sir Fitzjames Stephen has given the sanction of his authority I feel bound to repudiate to the utmost of my power. It seems to me to be inconsistent with the character of my Sovereign and with the honour of my country, and, if it were once to be received and acted upon by the Government of England, it would do more than any thing else could possibly do to strike at the root of our power and to destroy our just influence, because that power and that influence rest upon the conviction of our good faith more than upon any other foundation, aye, more than upon the valour of our soldiers and the reputation of our arms. I have heard to-day with no little surprise a very different argument. The Hon'ble Mr. Thomas, in a speech in which he did his utmost to stir up the bitterness of a controversy which was approaching a settlement and to fan again the dying embers of race-animosity, has asked—Was there ever a nation which retained her supremacy by the righteousness of her laws? I have read in a book, the authority of which the Hon'ble Mr. Thomas will admit, that 'righteousness exalteth a nation,' and my study of history has led me to the conclusion that it is not by the force of her armies or

by the might of her soldiery that a great empire is permanently maintained, but that it is by the righteousness of her laws, and by her respect for the principles of justice. To believe otherwise appears to me to assume that there is not a God in Heaven who rules over the affairs of men, and who can punish injustice and iniquity in nations as surely as in the individuals of whom they are composed. It is against doctrines like this that I desire to protest, and it is against principles of this description that the gracious Proclamation of the Queen was directed. So long, then, as I hold the office which I now fill, I shall conduct the administration of this country in strict accordance with the policy which has been enjoined upon me by my Queen and by Parliament. Guided by this policy, it has been the duty of the Government to refuse with firmness what could not be given without an abandonment of principle. But we have not allowed anything which has passed in the heat of this prolonged controversy to deter us from seeking up to the last moment for a solution of the question at issue which could be honourably accepted by ourselves and by our opponents alike. In doing so, we have, I believe, better consulted for the real advantage of all races and classes in the country than if we had rested the reform we are now about to make upon the insecure foundation of a mere exercise of power. And it is in this belief that I now ask you to remit this Bill to a Select Committee, who will consider the amendments which may be proposed, and mould them into the shape best suited to carry out the objects which it is desired to attain. I have one word more to say. I quite accept the proposal of my hon'ble friend Mr. Evans that the Select Committee should report on Friday, the 18th of this month."

The Motion referring the Bill to a Select Committee was then put and agreed to.

The Council adjourned to Friday, the 11th January, 1884.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

The 18th January, 1884.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 18th January, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. J. Reynolds.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble Amír Alí.
The Hon'ble W. W. Hunter, LL.D., C.I.E.

MADRAS PARTITION DEEDS BILL.

The Hon'ble MR. ILBERT moved that the Bill to give effect to certain unregistered instruments of partition relating to immoveable property in the Madras Presidency, and to remove doubts as to the titles conferred thereby, be taken into consideration. He said:—"This is a measure to remove doubts as to the legal effect of certain partition, deeds which have been executed in the Madras Presidency. It would have to be worked by the High Court of Madras, and the Bill which is now before the Council was framed in exact accordance with the draft which was submitted by the Judges of that Court. The Judges have considered the Bill, and have suggested one or two minor amendments, which appear to us to be reasonable and desirable to adopt. These are the amendments which appear on the notice-paper to-day."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that, in section 1, clause (*b*), after the word "transferee" the words "for value" be inserted.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that, in section 2, line 9, for the words "joined in the transfer" the words "directly or indirectly caused such privation of right" be substituted; in line 10, for the word "the" the word "his" be substituted; and in lines 10 and 11, the words "if any, in the hands of the heirs of the sharer" be omitted.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill as amended be passed.

The Motion was put and agreed to.

SUPPLEMENT TO

The Gazette of India.

№ 4. } CALCUTTA, SATURDAY, JANUARY 26, 1884.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked*

RAILWAY CONSTRUCTION.

Fort William, January 24, 1884.

RAILWAY SURVEYS.

Chittagong to Assam.

RESOLUTION.—With a view to investigating the best route for railway communication with Assam, a survey party was sent during the cold season of 1881-82 to examine the route across the Garo hills from Mymensingh to the valley of the Brahmaputra near Gauhati. As the result of this reconnaissance was not favorable, it was arranged, on the suggestion of the Chief Commissioner of Assam, that a route from Comillah through Cachar across the North Cachar hills to the upper portion of the Brahmaputra valley should be examined during the cold season of 1882-83; and at the same time a railway survey was ordered from the port of Chittagong *viâ* Comillah to Daudkhandi on the Megna. Owing, however, to changes in the channels of the rivers, it was reported that Daudkhandi would be difficult of approach for steamers, and the Government of Bengal recommended that Chandpore on the Megna should be selected, instead of Daudkhandi, as the terminal station of the line. The Chittagong survey has accordingly been directed on that point, necessitating an extension of the Comillah-Cachar line southwards to a place named Laksham on the Chittagong-Chandpore line.

2. The reports of these several surveys and reconnaissances have been received, and the results may be summarized as follows:—

Chittagong to Chandpore and Comillah.

The report and estimate of the Chittagong Railway deals with the line to Chandpore, 111¼ miles, and the Laksham-Comillah section of the Cachar line, 17¼ miles, making a total of 128½ miles. The total estimated cost, Rs. 1,08,25,000, gives the average cost per mile of construction at Rs. 84,240. This rather high a rate for a metre gauge railway is necessitated by heavy banks and the provision of head-way for boat traffic at bridges. The greater portion of the country traversed is flooded in the rainy season. The Fenny is the only large river crossed, and for this, 20 spans of 100 feet each on wrought iron cylinder foundations have been provided, but the exact site of the bridge requires further investigation.

3. The gross traffic receipts have been put at Rs. 18,48,000, or about Rs. 275 per mile per week, which, allowing 50 per cent. for working expenses, would give a return on capital outlay of about 8½* per cent., irrespective of any traffic derived from extensions to the north-east.

* The Financial Department of the Government of Bengal estimate this at 10 per cent.

Comillah to Silchar.

4. The total length of this section is 175 miles, and the estimated cost of construction amounts to Rs. 1,40,58,000, or at the average rate of Rs. 80,425 per mile. The largest river on this length is the Gumti, for which

six spans of 60 feet each have been provided. This and the other navigable streams which are crossed afford highways of trade at right angles to the line, and thus will become important feeders.

5. There is little information available on which to base really reliable estimates of traffic, but the Engineer-in-Chief roughly calculates on a return of 6 per cent. on the capital outlay, on the supposition that the line terminates at Cachar, and would increase this to 7·85 per cent. if the extension northwards were carried out.

Badapur to Dibrugarh with branch to Gauhati.

6. A reconnaissance only has been made of this portion, but it would appear that the best alignment obtainable will, on leaving the Cachar district, cross the Barak river either at Badapur, 18 miles by road from Silchar, or at the Telyn Tila, near Baleeghat within 4 miles of Silchar. The line would then pass up the Jatinga valley on the left bank of the river to a point near Doolaigam, where it would cross to the right bank. On leaving the Jatinga the line would run *viâ* the Mahur river down the Towee branch into the Mupa valley: it would thence pass round the flank of the Sandrong hill and enter at the head of the Dijakho valley by a tunnel, and on, *viâ* the Langladisa valley, to Lumding. The cost of this hill section is estimated at Rs. 1,30,000 per mile, or Rs. 1,33,90,000 in all.

7. At Lumding the proposed line bifurcates—one branch running down the Dimapur valley into Upper Assam to Dibrugarh, a distance of 197 miles, the cost of which is estimated at Rs. 80,000 per mile, or a total of Rs. 1,57,60,000; and the other going into the valley of the Brahmaputra to Gauhati, *viâ* Roha, a distance of 122 miles, estimated to cost Rs. 97,60,000, at the same rate. If however, the branch were taken to Nowgong, a distance of 59 miles, it would similarly cost Rs. 47,20,000.

8. The distances and estimated cost on the metre guage of the various lines, making up one project for the opening up of Sylhet, Cachar and Assam, and their connection with the Megna at Chandpore and with the sea at Chittagong, are therefore as follows:—

	Miles.	Rs.
(1) Chittagong to Chandpore	111¼	94,66,000
(2) Laksham-Comilah-Silchar	192	1,54,17,000
(3) Badapur, on the Silchar line, to Lumding ...	114	1,42,70,000
(4) Lumding to Dibrugarh	197	1,57,60,000
Total length Chittagong and Chandpore to Dibrugarh	614¼	5,49,13,000
Adding—		
(5) Branch from Lumding to Gauhati ...	122	97,60,000
Total ...	736¼	6,46,73,000

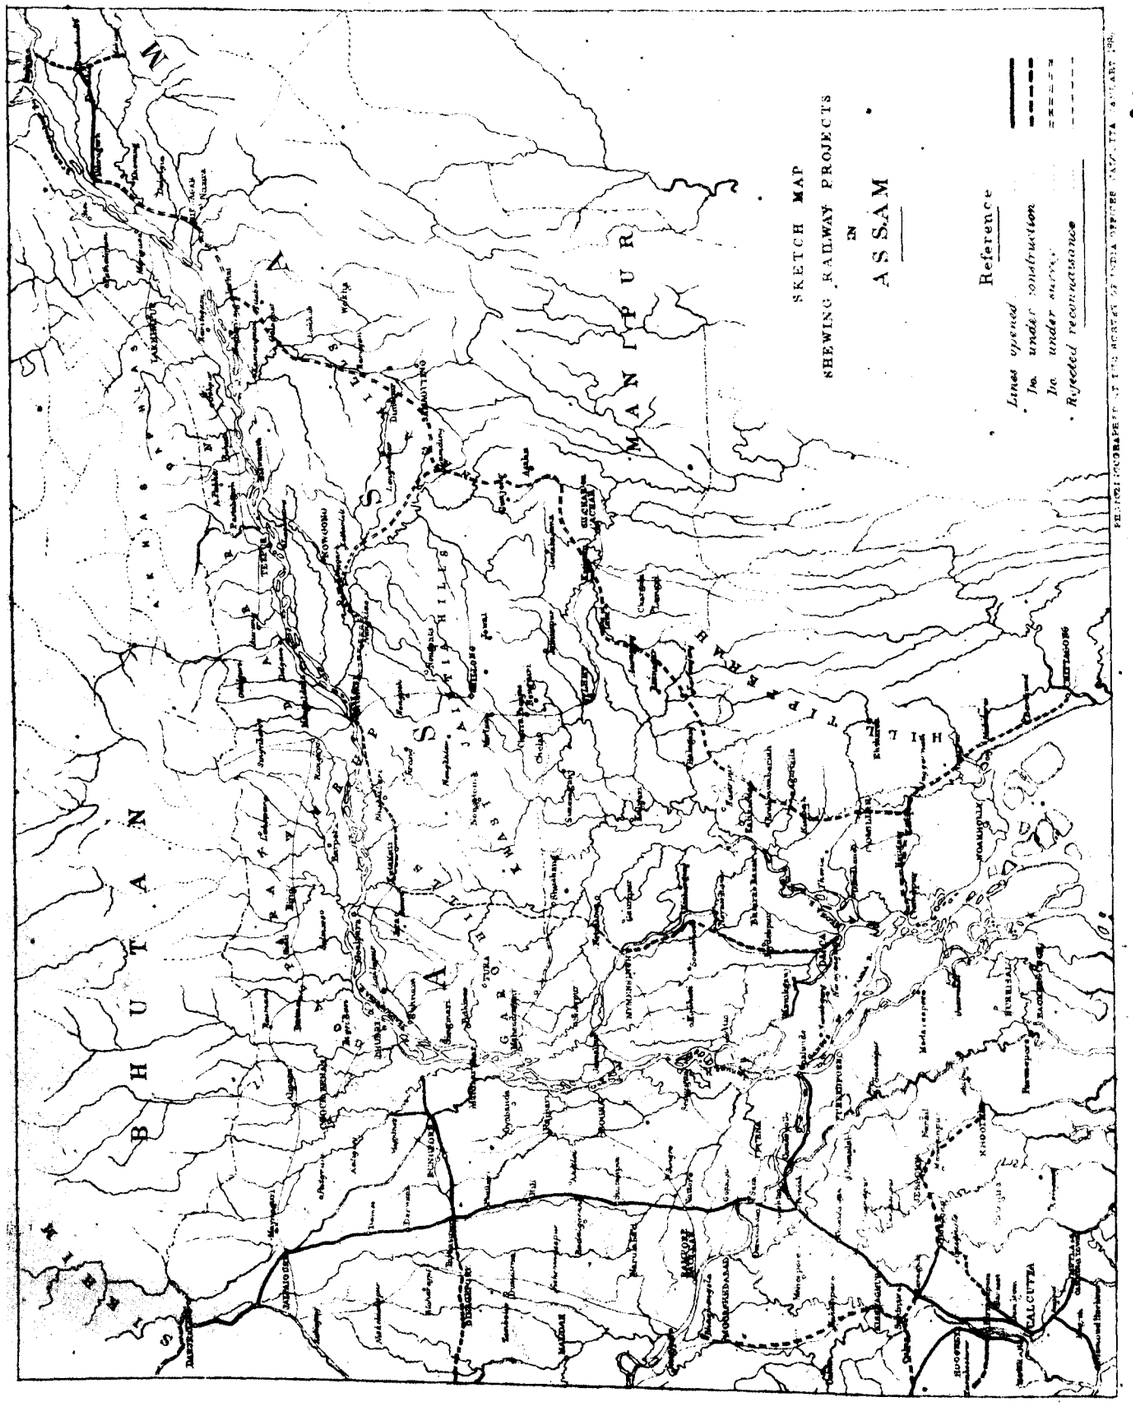
The particulars of five different schemes which have been put together by Mr. Buyers, with the object of facilitating a discussion of the whole question, will be found among the papers. With regard to these, it appears sufficient for the present to observe that, in view of the existing facilities for trade afforded by the Brahmaputra, the question of a railway between Gauhati and a point on the left bank of that river, opposite Dhubri, may well lie over for the present, and that if railway communication with Nowgong, or a point beyond it on the river, opposite Tezpur, should hereafter be desired, it can probably be most readily afforded by a branch of the Lumding-Gauhati line taking off from Roha or its vicinity.

9. Reliable estimates of traffic are, in this case, as in that of the others, not as yet available, but it is estimated that the 433 miles on this section from Badapur to Gauhati and Dibrugarh will, in themselves, pay 1·74 per cent., and one per cent. more from local goods traffic, and carriage of coal arising out of the sections between Badapur and the coast.

General remarks.

10. From the preceding remarks, it will have been observed that the financial prospects of the undertaking, as a whole, cannot be estimated with any precision. The rough estimates, which have been made, are, however, for the most part, based on present trade returns; whereas the opening of railway communication invariably leads to the creation of new traffic. Bearing in mind that the line will have the advantage of using excellent and cheap coal from the Makum coal-field, the estimates of 5·38 per cent. as mean net profit is perhaps not unreasonable.

11. The most important point brought out by the examination of the country that has been undertaken is, that a practicable route can be found across the North Cachar hills into Assam; and there appears little reason to doubt that a railway following this route and serving, as it would, the important districts of Sylhet and Cachar, has enormous advantages over a railway simply running down the valley of the Brahmaputra, parallel throughout its length to a navigable river and commanding only a narrow tract of country.



12. That the sections from Chittagong and Chandpore to Silchar will prove very remunerative, appears to be clearly established. The undertaking, as a whole, is estimated to yield 5·38 per cent. Before, however, any final opinion can be pronounced upon this point, it is necessary to have careful reconnaissances of the lines from Lumding to Gauhati and Dibrugarh, and further inquiry into the traffic they are likely to obtain and to develop. Three survey parties are, during the present cold season, engaged upon this duty, as also one on the further examination and location of the line between Badapur and Lumding.

13. The success of the Engineer-in-Chief, Mr. J. W. Buyers, and his party in having found out a passage for a railway through the North Cachar hills is highly satisfactory, and their labors are fully appreciated by the Government of India.

ORDER.—Ordered, that the above remarks, together with a sketch map and the reports and estimates referred to, be published in the *Gazette of India* for general information.

W. S. TREVOR, Colonel, R. E.,
Secretary.

Enclosure No. 1 to P. W. D. Resolution No. 59 R. C. of 1884.

Enclosure No. 2 to P. W. Dept. Resolution No. 59 R. C. of 1884.

Extract from Note prepared in the Financial Department of the Government of Bengal, No. 337½ T-F, dated 31st May 1882.

3. The estimate of receipts framed by Mr. Hœrnle and Mr. Warden is Rs. 16,85,500 and Rs. 16,61,724 respectively; but in matter of detail the figures vary considerably, as shown below—

Goods traffic.	Mr. Hœrnle's estimate.	Mr. Warden's estimate.
	Rs.	Rs.
Rice	5,28,000	2,72,000
Jute	60,000	2,08,000
Salt	10,000	10,000
Tea	1,00,000	23,000
Tobacco		20,000
Piece-goods...		8,000
Other goods		1,00,000
Local goods	5,00,500	65,000
One-half of the Dacca and Naraingunge traffic which would eventually pass through Chittagong...	...	4,45,724
Total ...	11,98,500	11,51,724
Ferry receipts	...	1,50,000
Passenger traffic	4,87,000	3,60,000
Grand Total ...	16,85,500	16,61,724

4. Mr. Hœrnle supposes that of the total quantity of *rice* assumed to be available for export from Tipperah, Noakholly, and Chittagong, one-third, or 45,27,429 maunds, will be carried by the railway to Chittagong from an average distance of 90 miles, the freight chargeable being one-fourth pie per maund per mile, the rate adopted on the Northern Bengal State Railway.

	Mds.
Tipperah	71,83,914
Noakholly	63,56,396
Chittagong	41,976
Total ...	1,35,82,286

The Assistant Director considers that this estimate cannot be accepted so far as it concerns the Noakholly district, as the crop there is chiefly grown near the mouth of the Megna, and would certainly not be sent north, to be brought south again by the railway. He also states that the Noakholly rice, being an early crop, can be safely carried to Chittagong in native boats, and that it is not likely that the railway would take more than that grown in its immediate vicinity, which may be estimated at 5,00,000 maunds with a lead of 50 miles. The Director, however, thinks that much of the rice from Noakholly would find its way, if good feeder-roads are constructed to the railway near the river Fenny. It is observed that the Commissioner states that all the rice exported by water to Chittagong comes from the islands at the mouth of the Megna, and the tracts on its banks. The general crop of the mainland is later, and does not come in the market till the water-route to Chittagong has been closed to country boats. He estimates that 10,00,000 maunds of this crop go to Calcutta, Naraingunge, and elsewhere in consequence. Mr. Warden further estimates that 23,00,000 maunds of rice will come from Hill Tipperah, with an average lead of 80 miles. This, at the rate of one-fourth pie per maund per mile, would give about Rs. 2,40,000.

5. Mr. Hœrnle assumes that one-third the quantity of *jute* (6,86,059 maunds) exported last year from Naraingunge to Chittagong will be carried by the railway for a distance of 125 miles, at two-fifths pie per maund per mile. Mr. Warden quotes the Commissioner's figures to show that the export of jute from Chittagong to England was 12,24,000 maunds during 1880-81, and he estimates that 10,00,000 maunds will be attracted to the railway, which over 125 miles at two-fifths pie per mile per maund, less 20 per cent. for baling, would yield

Rs. 2,08,000. According to the Internal Trade Report for 1880-81, however, the quantity of jute shipped for England in that year was 5,96,152 maunds (437,989 cwts.) against 5,19,596 maunds (381,743¾ cwts.) in 1879-80 and 4,33,537 maunds (318,517¼ cwts.) in 1878-79.

6. Regarding the local traffic, Mr. Warden points out that on the Northern Bengal line the local goods traffic is only 9·82 per cent. of the goods receipts, or about Rs. 10 per mile per week, at which rate the income under this head should not be more than Rs. 65,000.

7. The estimate framed by Mr. Hœrnle does not provide for anything for the traffic between Dacca and Naraingunge and Calcutta, a portion of which would be diverted to the proposed line. Mr. Warden assumes that one-half of this trade will eventually pass through Chittagong, and he puts down the receipts at Rs. 4,45,724.

8. No allowance has been made by Mr. Hœrnle for ferry receipts; but Mr. Warden estimates that one-half lakhs may be expected under this head.

9. As regards the passenger traffic, Mr. Warden considers that the average receipts on the State Railways in Bengal during the first-half of 1881 (Rs. 56 per mile per week) should be accepted for this line, instead of Rs. 75, the rate assumed by Mr. Hœrnle.

10. It is assumed in the consideration of this project that there is no probability of Naraingunge being able to compete with Chittagong as a port for sea-going vessels. Even if a survey were to show that large vessels could find sufficient water at all times to navigate the Megna, the passage through the islands and up the river must always be a dangerous one, while pilotage and other charges would be heavy. Chittagong, on the other hand, lies practically on the sea-face; the port can be easily made by vessels coming up the Bay; and the charges will always be moderate.

11. The receipts to be expected may be considered under five heads—

(*a*)—Goods traffic from the districts actually traversed and Hill Tippeerah.

(*b*)—Goods traffic represented by existing trade with other districts.

(*c*)—Trade to be diverted from Calcutta to Chittagong.

(*d*)—Passenger traffic.

(*e*)—Ferry receipts.

12. (*a*). *Goods traffic from the districts actually traversed and Hill Tipperah*:—Mr. Warden's estimate of the local, as opposed to the through, traffic may be accepted. He appears, however, to have much under-estimated the quantity of produce which may be expected to follow the line to Chittagong for exportation. The Commissioner points out that a large quantity of rice now goes to Naraingunge and Calcutta, because the means of easy communication with Chittagong are not available. The returns show that Noakholly in 1880-81 sent to Calcutta 3,16,154 maunds of rice and 17,420 maunds of linseed. The imports of produce, other than jute, from the Dacca district to Calcutta amounted to 7,47,976 maunds, and these figures undoubtedly include much that was received from Tipperah and Noakholly. It is well known that the districts to be traversed by the line have enormous crops of rice which are frequently left uncut for want of means of transport, and there can be no doubt that, with the improvement of communications, jute cultivation will be largely undertaken. Regard being had to the great productiveness and populousness of the country, it seems reasonable to assume that, with a proper system of feeder-roads leading to the line of rail, the local traffic in rice, or, if jute cultivation is undertaken, as would probably be the case, in rice and jute, and in general produce, would be at least 50,00,000 maunds, with an average lead of 60 miles, giving receipts amounting, in round numbers, to four lakhs of rupees.

On the other hand, Mr. Warden appears to have over-estimated the trade to be expected with Hill Tipperah. The exports will consist largely of cotton and other hill produce. If the export and return trades are both considered, the receipts may be taken at one lakh of rupees. The receipts under the first head may, therefore, be estimated to amount to—

	Rs.
Local traffic	65,000
Through traffic from the three districts	4,00,000
„ from Hill Tipperah	1,00,000
Total ...	5,65,000

13 (*b*). *Goods traffic represented by existing trade with other districts.*—The total trade Chittagong with Dacca district (Naraingunge) during 1880-81 was—

Imports from Naraingunge.

	Mds.
Sea-borne trade	7,73,525
By country boats	14,341
Total ...	7,87,866

Exports to Naraingunge.

Sea-borne trade	43,066
By country boats	4,508
Total ...	47,574
GRAND TOTAL ...	8,35,440

The principal articles comprising this trade are—

Imports.

	Mds.
Jute	6,86,059
Gram	11,496
Rice	7,262
Oils	4,319
Mustard seed	26,019
Refined sugar	3,228
Tobacco	16,308

Exports.

Raw cotton	17,033
Hides	1,098*
Salt	19,727

* 8,787 in number.

It may quite safely be assumed that five-sixths of this trade will take to the rail. The condition of the Megna river is such as to render communication with Naraingunge difficult and uncertain for large vessels, while smaller craft are unable to effect the passage during a great part of the year. It appears, moreover, that the railway could compete favorably even in regard to rates of freight with the native brigs, in which the bulk of the produce is conveyed. The gross earnings from the goods traffic at 11 pies per ton per mile, the rate adopted on the Dacca-Mymensingh line, would therefore be at least Rs. 1,84,000.

Besides the direct trade with the Dacca district, Chittagong has transactions with Backergunge, Furreedpore, Jessore, and Calcutta. Much of the traffic with Backergunge would probably adhere to the water-route during the calm season, though some of it would take to the rail at Daoodkandy. The Calcutta trade is carried by steamers which call regularly at the port; but it is possible that the rapidity of despatch, and the comparative safety which the rail would afford, would operate to attract a portion of this, especially the *tea*, to the land-route. The total quantity of goods carried from and to these districts, registered during 1880-81, was as follows:—

DISTRICTS.	Imports into Chittagong in 1880-81.	Exports from Chittagong in 1880-81.	Total in 1880-81.
	Mds.	Mds.	Mds.
Backergunge	99,152	1,121	1,00,273
Furreedpore	7,989	...	7,989
Jessore	16,830	...	16,830
Calcutta	34,721	25,340	60,061
Total ...	1,58,692	26,461	1,85,153

The receipts from this source may quite safely be taken at Rs. 16,000. The estimate under the second head (*b*) is therefore Rs. 2,00,000.

14. (*c*). *Trade to be diverted from Calcutta to Chittagong.*—The total trade of the districts of Dacca, Mymensingh, Backergunge, Noakholly, Tipperah, Cachar, and Sylhet with Calcutta in the principal staples of traffic, registered during 1880-81, was as follows:—

Imports into Calcutta.

There is at present some difficulty in the way of sending tea to England from Chittagong, as will be seen from the following extract from the Report on the Internal Trade of Bengal for 1879-80, page 107, paragraph 277:—

"The Collector of Customs states that direct shipments from this port to England having fallen off when the means are ready at hand in the vessels loading jute for the United Kingdom, is perhaps owing to producers of tea being unable to wait for their money long enough to admit of their sending it direct to the United Kingdom for sale. The District Officer of Chittagong, however, points out that the reason why the experiment of sending tea to foreign ports direct from Chittagong was not repeated in the past year seems to lie in the fact that tea requires to go through the hands of skilled brokers, who are not to be found here, and that it cannot be sent direct to a foreign market by the manufacturer with any chance of success."

For the present, therefore, all the *tea* from Sylhet and Cachar must be left out of consideration.

The great bulk of the *rice* trade of Calcutta with Eastern Bengal comes from Backergunge. It is improbable that any of this would be attracted to the rail, and the same may be said of *salt* which goes back in the boats which bring down rice. The Dacca figures include much *rice* taken from the Tipperah marts to Naraingunge, and allowance has been made for all the rice now exported from this district and Noakholly otherwise than to Chittagong. All the figures under *rice*, therefore, and those under *salt* for Backergunge, will also be excluded. On the other hand, it is reasonable to suppose that a very large proportion of the *jute* now sent from the Dacca and Mymensigh districts to Calcutta for shipment will be sent by rail to Chittagong. It is worthy of note that, while the jute trade between Dacca and Calcutta decreased from 25,90,896 maunds in 1877-78 to 19,10,027 maunds in 1880-81, the trade between Dacca and Chittagong increased in the same period from 4,53,824 maunds to 6,86,059 maunds. Moreover, as the trade of Chittagong increases, there will be a proportionate increase in the quantity of salt brought by in-coming ships and sent by rail for distribution through the great mart of Naraingunge. It would probably be quite safe to estimate that 20 lakhs of maunds under these two staples will be attracted to the rail. Of the remaining articles it may perhaps be estimated that one-third would be diverted to the proposed line. The portion of the existing trade of Calcutta with eastern districts which would be attracted to the line would represent in round numbers 21¾ lakhs of maunds carried over the whole length. This would give, at the rate of 11 pies per ton per mile, say, Rs. 5,70,000.

An error is to be noted in Mr. Warden's figures. He has taken 15,14,007 to represent the *number of maunds of hides* exported to Calcutta from Dacca and Naraingunge, whereas this represents *the number of hides* only. At the conventional rate of eight pieces to the maund, the weight is only 1,89,251 maunds.

15 (*c*). *Passenger traffic.*—The comparative density of population per mile in the districts traversed is according to the late census—

Northern Bengal State Railway.

Julpigoree	201·65
Dinagepore	367·83
Rungpore	601·48
Bogra	490·55
Rampore Beauleah	567·46

Proposed Railway.

Chittagong	441·11
Noakholly	500·17
Tipperah	609·93

The people of the districts to be traversed are in very easy circumstances, and a large passenger traffic may be expected. Mr. Warden's estimate of Rs. 3,60,000 errs, if at all, on the side of caution.

16 (*d*). *Ferry receipts.*—It is assumed that Mr. Warden's estimate of Rs. 1,50,000 under this head is correct.

17. The estimates under the five heads are therefore—

	Rs.
Goods traffic from the districts actually traversed and Hill Tipperah	5,65,000
Goods traffic represented by existing trade with other districts...	2,00,000
Trade to be diverted from Calcutta to Chittagong ...	5,70,000
Passenger traffic	3,60,000
Ferry receipts	1,50,000
Total ...	18,45,000

It may be assumed that the line will be worked in connection with the Dacca and Mymensingh Railway, so that the working expenses will not exceed 50 per cent. The net receipts would thus be Rs. 9,22,500, or 10·01 per cent. on the outlay.

This estimate takes no account of the great increase in trade which must follow upon the opening of the Dacca-Mymensingh Railway, a large part of which must, if this line is constructed, follow it to Chittagong. It also leaves out of consideration the future opening up of Sylhet, Cachar, and the hill districts by a line of railway and the possibility of future extension southwards to Arrakan. It may be assumed that the construction of the railway would have an important effect in developing the tea industry, and that the slopes of the hills from Sylhet to Chittagong, which would be skirted by the line, would ultimately be covered with gardens. This would bring a large traffic. The estimate, however, deals only with the existing produce so far as it is known. It is sufficient to show that, from the outset, the undertaking would be financially a success. The railway would run from a great trade centre to a cheap and accessible port, through an exceptionally fertile tract, now for the most part deprived of the means of communication, and bounded on the one side by a difficult coast, and on the other by a line of low hills well suited to tea cultivation. It would appear probable that, if this line is constructed, Chittagong will become the port for the whole of Eastern Bengal. Among the many indirect administrative advantages to be anticipated from it, an important one would be the facility of introducing labor into British Burma. This is the chief want which all administrators in Burma have to contend against, and to meet which every kind of expedient has been attempted.

Enclosure No. 3 to P. W. D. Resolution No. 59 R. C. of 1884.

No. 1939, dated 13th September 1883.

From—Lieut.-Col. J. M. McNeile, R.E., Secy. to the Chief Commr. of Assam, P. W. Dept.,

To—Secretary to the Government of India, P. W. Dept.

I am directed to forward the enclosed report on the exploration of the North Cachar Hills during the season 1882-83, by the Engineer-in-Chief, together with a note recorded by the Officiating Chief Commissioner on the same.

2. The maps referred to are forwarded in separate covers.

Report by J. W. Buyers, Esq., M.I.C.E., Engineer-in-Chief, Assam Railway Survey, on the Exploration of the North Cachar Hills during the season 1882-83.

Instructions.

In letter No. 878 R. C., dated Simla, the 5th October 1882, from the Secretary to the Government of India, in the Public Works Department (Railway Construction), to the Chief Commissioner of Assam, in the Public Works Department, instructions were conveyed to me to make a preliminary survey for a railway from the neighbourhood of Comillah to Cachar, and a careful reconnaissance from Cachar across the North Cachar Hills into Upper Assam.

Subject of report.

2. The following report will be confined to the latter portion of the above programme, and to discussion of the various schemes for railways into Assam, and their relative merits, which naturally fall under treatment in connection with it, the Comillah-Cachar line being left to be dealt with separately when the plans and estimates connected with that project are ready. As these will take some time to prepare, it has occurred to me that an earlier decision may be come to regarding a programme for next season's operations if the two are treated independently.

Preliminary work.

3. In accordance with the above instructions, I left Shillong in the end of October, and proceeded in the first place to Dacca, and thence to Comillah, but it was the beginning of January 1883 before I was able to enter upon the exploration of the North Cachar Hills, the interval being spent in examining the country between Comillah and Cachar. With regard to the railway between these two points, I merely here briefly note that we have succeeded in locating a line, which is believed to be the best that can be obtained, with the exception of at two or three points, where, in crossing low ranges of hills, covered with dense jungle, great obstacles were presented to the survey; while the lateness of the season and the state of the weather precluded improvements being attempted which no doubt could otherwise have been made. I do not anticipate that there will be anything when the Comillah-Cachar project is completed which will lead me to modify any views that may herein be expressed.

Preliminary remarks.

4. While making the exploration, I have kept steadily before me, and endeavoured fully to carry out, the instructions contained in the letter quoted above; thus, the hope of discovering coal or iron has led me over country which I should not have traversed had it simply been a question of finding the easiest route for a railway across the hills, and has prevented me examining personally so much of the plains as I should otherwise have done. The maps accompanying this report show the general course of the line which I recommend across the hills, with its extensions into the Assam valley.

In such a country it is sometimes impossible to decide, without a detailed survey, which of two lines is the best, and I have therefore shown by a dotted red line two pieces of alternative which may be an improvement, and which, were a detailed survey undertaken, I should also run.

Description of route.

5. Starting from the Cachar line, it will be noticed that the Barak river may be crossed either at Badarpur, 18 miles by road, west of Silchar, or at the Telyn Tila, near Baleeghat, within 4 miles of Silchar. At the former crossing a range of hills terminates on the south bank of the river in a rocky spur on which the Badarpur fort, as it is styled, is situated. The approach to the bridge on that side would follow the spur, and be perfectly safe from any flood that might occur. The north bank consists of sandy loam mixed with clay, but there is a long straight stretch of river here, and it shows no sign of erosion, and a short way up stream there is another range of low hills, which approach within about 300 yards of the river.

I had hoped to have been able to get some borings taken in the bed at this point, but Mr. Moore was unable to get them put in hand before the floods came down and effectually prevented anything being done. We are therefore unable to say if the rock extends across the bed of the river any distance, or if it would be met with at any moderate depth, or, indeed, what the nature of the foundations, except that of the south abutment, may be. All that is visible elsewhere is sand and clay, and it is probable that the foundations of the piers, if not of the north abutment, will have to be carried to a very considerable depth. The width of the river here is 680 feet between banks near top, but in very high floods, the water tops the banks and spreads over all the low ground, and the country then presents the appearance, in many places, of a sea. Such a flood has lately occurred, doing great damage and causing much suffering, I understand, though it does not appear to have reached the height of a flood which occurred about fifty years ago. The worst features apparent in this crossing are that the river has scoured a narrow channel, about 30 feet deeper than the bed over the rest of the section, in front of the spur, and at the same time has cut away the bank both above and below the spur, so that in heavy floods a great eddy is produced which would severely test No. 1 pier, even if 250 feet spans were adopted, unless special precautions were taken. The fall of the river is 6 inches per mile from sections taken one mile up and one mile down stream, and probably about 750 lineal feet waterway will be required.

At the Telyn Tila crossing there is also on the south side a range of low hills, which terminate on the bank of the river, and re-appear on the north side at a short distance off; it has in this respect, therefore, much the same general features as the Badarpur crossing. When I saw it early in January there was too much water in the river to enable me to judge of the nature of the bed, but later in the season, when the water was lower, I asked Mr. Moore to examine it, and he reports that the rock doubtless extends 150 feet across the river on the south side, measuring from the edge of the water at the level it then stood, and that it does not present the objectionable features of the Badarpur crossing, the section being much more uniform, and the depth of water nowhere exceeding 25 feet at the time of examination. The width of the river here being 650 feet at level of highest ordinary flood, the above measurement gives rock for at least 290 feet across, and the waterway required will of course be considerably less than at the Badarpur crossing, but this will be partly counterbalanced by the bridge across the Jatinga, which, in all probability, will be necessary if this crossing be adopted. Another point in its favour is that the railway would have to traverse a less extent of low ground between the river and the North Cachar Hills, and would by so much be safer against floods. The one objection to it is that it increases the through distance between Assam and all the country below Badarpur by about 12 miles, though it effects a small saving of about 3 miles in total mileage to construct if the line is extended into the station of Silchar, which would be increased to 6 or 7 miles if the short branch from Telyn Tila to Silchar were not made; but if, on the contrary, the Cachar line stopped short at Badarpur and the Assam line crossed the Barak there, there would be a saving of about 12 miles in favour of the Badarpur crossing: little stress can, however, be laid on this point, for an extension towards Silchar would, there can be little doubt, soon follow.

In the absence of borings, I am unable to decide absolutely, but, judging from present information, there appears little doubt but that the Telyn Tila crossing will be the one to adopt, and in that case I should not recommend the short branch into Silchar of 3 or 4 miles being made, for that station, as the late floods have proved, is not well placed, and little, if any, addition to the traffic can be expected from it. At the most, I should only lay a line along the existing road from Telyn Tila, and be prepared for its being occasionally submerged. This is, however, a point which may be discussed more fully in connection with the Comillah-Cachar project. Mr. Moore had no time to run an alternative line round by Telyn Tila into Silchar, but there are no difficulties on it.

If the Badarpur crossing be adopted, the line will have to traverse some low ground, chiefly near the Hingjiriah Nullah, before entering a valley near the village of Gurrurbethur, which leads up to a point where the low range of hills forming an offshoot from the main range, and closing the Jatinga valley in on this side, may best be crossed. This range is generally 300 feet and upwards in height, and in places of considerable breadth, but there is here a very narrow depression, only about 120 feet above the plains, through which a deep cutting, with perhaps a short tunnel, will give entrance to the right side of the Jatinga valley, which the line would keep throughout.

If the Telyn Tila crossing be taken, the line will traverse a country more broken by low hills, and, after passing the Murwatea garden, enter the Jatinga valley by a gap in the spur of the Barail range, and continue along the left bank of the river, probably to about opposite the position of Doolaigam, as shown on the map.

A peculiarity of the Jatinga valley, and especially of the section just above the junction of the Kayeng, *viz.*, that while along the left side there are considerable stretches of comparatively level ground, on the right the hills almost invariably descend right down to the river's edge, may at first sight offer temptations to try the former, but as the head of the valley is approached, it is seen that, even with very heavy gradients, there is little hope of being able to take advantage of but an inconsiderable amount of this good ground.

Excluding the head of the valley, the chief exception to this feature is a section of about 5 miles immediately below the Kayeng, in which the valley closes in on both sides of the river, and this is, on the whole, perhaps the most difficult portion of the route.

The watershed at the extreme head of the Jatinga may be taken at 2,150 feet above mean sea-level, but there is another point about two miles lower down the valley, between the Jatinga and the Aboijee, a tributary of the Dyung, which is 150 feet lower. Without entering into particulars, I may briefly state that, whichever of these two watersheds were crossed, by utilising the valley of the Kayeng, a line could be taken along the side of the hills on the right bank of the Jatinga, with a ruling gradient of probably 1 in 70 above the junction of the Kayeng, whereas if the left bank were followed, unless the base could be extended by running up side valleys to a much greater extent than appeared to me practicable, gradients of from 1 in 40 to 1 in 50 would be required.

In the former case the line would gradually and steadily work up along the side of the hills, while in the latter the bulk of the incline would be concentrated in about 12 miles at the head of the valley, and with stiffer gradients only about 5 miles of the good ground above the junction of the Kayeng would be taken advantage of.

In making a detailed survey, and in the event of deciding in favour of the Telyn Tila crossing of the Barak, I should try if a line along the left bank could be lengthened by running up side valleys towards the head of the Jatinga, not so much with a view to take advantage of a short stretch of comparatively easy ground, as to avoid bridging the Jatinga river; but, supposing these gradients could not be materially reduced, I should elect to bridge the river and cross to the right bank, but any idea of running along the left bank might be abandoned if the Badarpur crossing were adopted, for it could only be attained at the cost of bridging the Jatinga, and the advantages are not sufficient to compensate for this, for I have not the slightest expectation that the gradients can be reduced to be quite as favourable as those obtainable along the right bank.

To attempt to ease the gradients on the left side by starting from a point low down the valley, and running up along the spurs thrown out from the Barail range, would entail, it seemed to me, very heavy works indeed.

The slopes of the hills on the right bank above the junction of the Kayeng are less broken and of a totally different character from those on the left, as also are the summits of the hills themselves.

The Barail range on the south has a very varied and broken outline, rising into sharp peaks, whereas the range to the north has a very even contour. The block of hills between the Jatinga and Kayeng partakes of the characteristics of the Barail range.

Below the Kayeng there does not appear to be any difficulty about gradients, though otherwise, as I have already noted, this section contains probably the most difficult portion of the work, and the mean gradient may be taken at 1 in 150.

There is no other route for a railway into the North Cachar Hills to compare with the Jatinga; but from the above remarks it will be seen that I am not quite certain as to the best alignment into and along the valley, the question depending in a great measure on the crossing of the Barak, and requiring more time for its settlement than with the work before me I was able to devote to it, while in part it can scarcely be settled without a detailed survey. The best alignment is probably that which crosses the Barak at Telyn Tila, and, after following the left bank of the Jatinga to near Doolaigam, then crosses to the right bank.

After examination of the country I came to the conclusion that the best line, after leaving the Jatinga, was to be got by the head of the valley of the Mahur river. The lowest point on the ridge between the peak of Kamaigaju and Asalu, along which the path from Nowgong and Gunjong to Asalu runs, is at the base of the spur on which the village of Hasonghaju is situated, and the height here is almost the same as that of the Jatinga watershed; a depression at the west edge of the base of the Hasonghaju spur being slightly under 2,000 feet, and one at the east edge being slightly over 2,100 feet.

To gain this, two routes are available from the Jatinga Valley—the one which I think will prove the easiest is shown by the full red line, while the alternative is shown by the dotted line. The former crosses the Jatinga-Abhoijee watershed, and, winding round the Haflong spur, follows first the left and then the right bank of the Dyung. The other crosses the watershed at the extreme head of the Jatinga, and winds round the spurs thrown out from the north face of the Barail range. It would from the map appear as if the latter would be the shorter route, but I much doubt if this would be found to be the case, for the ground is so much broken up by spurs and ravines that a line would be a succession of sharp curves. The work on it would apparently be much heavier, though probably the gradients on the whole would be easier; however, on the other line, there would not, I think, be any necessity to introduce a more severe gradient than 1 in 70. I indicate this alternative, as it may be worth trying, if a detailed survey is made.

The ridge at the depressions on each side of the base of the Hasonghaju spur is very narrow, and may be cut through upwards of 100 feet below its summit by a very short tunnel. The line would then run down the Towee branch of the Mahur, and, in order to descend into the bottom of the Mahur valley before the Jadu is reached, with a gradient

of 1 in 70, either the base must be extended by winding the line, or else the ridge at the head must be cut through at a lower level: the latter will probably be the cheapest. After the Jadu is passed, the fall of the Mahur valley as far as the railway will traverse, it may be taken approximately at 1 in 100. For a hill country the ground is generally very easy; there are long stretches of level ground along the side of the stream, but in a few places the hills approach the edge, and the line would have to take the slopes.

The ridge separating the Mahur from the Mupa at the point the railway would cross, it is less than 200 feet above the valley at Kalasoni-nolai, or 100 feet above the valley where the Terandui is shown joining the Mahur, and may be taken at 870 feet above mean sea-level. Immediately to the west this ridge rises between 400 and 500 feet, and attains its highest elevation in the peak called Dokharangpha.

The line would follow the Mupa valley for a short distance, and, after crossing the stream and passing round the flank of the Langdreng Hill, under the peak marked Machan, would enter the head of the Dijakho valley by a tunnel. This short section of 5 or 6 miles will contain the heaviest work north of the head of the Mahur valley. The watershed at the head of the Dijakho is about 850 feet above sea-level, or very nearly the same as the level of the watershed between the Mahur and the Mupa; but, as the line has to descend to the Mupa river, and after crossing there is not space to rise to the crest of the watershed, I calculate on piercing it with a tunnel at a level of about 700 feet. The sides being very abrupt, the tunnel will not be long. If this is done, the mean gradient from this point to the Langting river at Gandangbra will be about 1 in 130, and the rise from that to the crest of the watershed between the Lamung and Langladisa, north-east of the village of Gireso, almost exactly the same, the level of the point where this would be crossed being slightly over 700 feet.

After a rather sharp descent for about a couple of miles from this watershed, the line would run along the bottom of the Langladisa valley, which has a mean fall of nearly 1 in 200, if the map is correct, but I believe that the Lumding is not quite correctly shown, and that the junction of the Langladisa should be farther north, and if this is the case, the fall will be still easier.

The gradients noted above are dependent on the correctness, first of the levels, which have been obtained from aneroid readings and are liable to error, but as great care has been taken with them as under the circumstances was practicable, and it is believed that they may be accepted as fairly accurate; and second, of the distances which have been scaled from the map and one-fourth added to allow for curves: this allowance of one-fourth being the result of experience gained from running a short length of trial line in the Garo Hills last year.

The first is as likely to affect the gradient one way as the other, that is, to ease it as to stiffen it, for it is evident that the difference of level between any two points may be lower than the difference taken just as readily as it may be higher; but, as regards the second, if one-fourth is too much to add to the scaled distance, the result will be to make the gradients more severe.

I do not think there will be any serious amount of tunnelling with the employment of sharp curves. It has already been noted that a short tunnel may be necessary to effect an entrance into the Jatinga valley, if the Badarpur crossing be adopted, and also through the watersheds at the head of the Mahur and the Dijakho. I also calculate on taking off about 100 feet from the crest of the Jatinga-Aboijee watershed by a cutting with a very short tunnel in the centre. If the watershed at the extreme head of the Jatinga were crossed on the alternative line, a heavy cutting, with a tunnel about 300 yards long, will be necessary to take off about 150 feet from the summit on account of the configuration of the valley of the Dilan, the name given to the tributary of the Dyung, immediately east of the watershed, the slopes at the head of which are very abrupt and in parts precipitous. There may also be a little in the way of tunnelling through spurs in the Jatinga valley, and possibly at one point in the Mahur valley just above the junction of the Terandui (as shown on the map) where the Mahur passes through a short gorge. There will, however, as might be expected, be a large amount of rock cutting, and the heaviest portion of this will be in the southern section. There are no formidable streams, and all have rocky beds and high banks where the railway would cross. The Jatinga alone, if bridged, might require more than 100 feet waterway. There may, however, be some considerable viaducts spanning ravines; these would be chiefly confined to the Jatinga valley.

On the entire route through the hills only sandstone and shale, with occasional conglomerate drift in some of the rivers, is met with; the sandstone generally is not of good quality where exposed.

Coal, iron, and limestone do not exist near the line, and the North Cachar Hills appear destitute of minerals, but limestone is found in a narrow belt west towards the Kopili river. Mr. LaTouche, of the Geological Survey, informs me that the sandstone of the Barail range and of this section of the North Cachar Hills is of late formation, the same as the Sewaliks, and that no coal has yet been found in it. The same formation was found to extend across to the isolated range of hills north of the Langkher (Langpher of map) river.

Estimate of cost of hill section.

The heaviest section of the work lies in the ascent up the Jatinga valley, and there is a short section of about 5 miles in the crossing of the Mupa valley which would probably cost about the same per mile. I do not think for a metre-gauge line, judging from the work in the Garo Hills, that less than Rs. 1,80,000 per mile can be taken for these two sections, which amount to 37 miles.

The section from the Jatinga watershed into the head of the Mahur valley, 23 miles long, I estimate at Rs. 1,30,000 per mile: a portion of the Mahur valley of 5 miles, and the section from the head of the Dijakho to the watershed above the village of Gireso, amounting in all to 23 miles, at Rs. 1,00,000 per mile, and another portion of the Mahur valley of 9½ miles, and the Langladisa valley of 10 miles, at Rs. 80,000 per mile. The above gives a total for the hill section of 102½ miles, and a mean cost of nearly Rs. 1,32,000 per mile.

The following table shows this more clearly :—

	Miles.	Miles.	Rate per mile.	Amount.
			Rs.	Rs.
Near Panighat to Jatinga-Aboijee watershed ...	31½	37	1,80,000	66,60,000
Mahur-Mupa watershed to head of Dijakho ...	5½			
Jatinga-Aboijee watershed to junction Mahur and Towee	23	23	1,30,000	29,90,000
Lower portion Mahur valley	5	23	1,00,000	23,00,000
Head Dijakho to watershed above Gireso ...	18			
Upper portion Mahur valley	9½	19½	80,000	15,60,000
Langladisa valley	10			
Total		102½	...	1,35,10,000

Mean cost Rs. 1,31,805 per mile.

This is very nearly the same rate per mile that the line through the Garo Hills came to. There is no section of the North Cachar Hills route anything like so difficult as the Sameseri gorge in the Garo Hills, but there can be no doubt that labour will be more expensive in the North Cachar Hills than in the Garo Hills, both owing to the greater distance from which it must be brought and the higher price of provisions, and this must be kept in view in making an estimate.

The estimate of course is only a rough one, made, in a measure, by a mental comparison of the different sections of the route with the trial section laid down, and carefully estimated for in the Garo Hills; such being the case, it will be sufficiently close if the mean cost be taken at Rs. 1,30,000 per mile.

Doubtless, a saving both in length and cost might be effected by the adoption of heavier gradients, but it did not appear to me that this would be sufficiently great to render such advisable, and to what extent can only be decided when a detailed survey is made.

Narrative of exploration.

A brief account of my explorations may not be uninteresting, and, in order to illustrate this, and give an idea of the extent of the country examined, I have laid down on the map the routes traversed by myself and Mr. Todd, Assistant Engineer, and have distinguished my own routes by a full and Mr. Todd's by a dotted blue line, where these diverge from the route which I have above recommended that the railway should follow. After examining the Jatinga valley and the country as far east as the head of the Mahur, I proceeded to see if a feasible route could be found into the hills, through a depression which I had been told existed in the Barail range to the east of the peak of Mahadeo. I had no difficulty in finding the point, which is on the flank of Mahadeo near the head of the Miliki or Chikirdung river, but it proved to be nearly 3,400 feet high, and the view down the Miliki valley showed the approach on that side to be very difficult, the summit could only be surmounted by very severe gradients on both sides, and I had no hesitation in at once deciding against this route when the infinitely more easy one by the Jatinga valley existed. East of this the Barail range begins to trend more north, and naturally fixes the boundry beyond which it is useless to carry any exploration, and it is soon seen that the valley of the Mahur is the most eastern route feasible.

I therefore proceeded to examine that, but made a divergence to the peak of Kuilong, on the report of limestone existing there, and under the hope that coal might possibly be found with it, being joined at this time by Mr. LaTouche, of the Geological Survey, who had marched across the hills from Cherra Punji, and who accompanied me for the next three weeks. The limestone was found only to consist of a very thin deposit, left by water trickling over the rocks, the source could not be seen, but Mr. LaTouche believed it to lie in thin layers among the shale of which the ridge is composed.

Returning to the Mahur valley, I followed it down to its junction with the Dyung, detaching Mr. Todd to examine the country between the Mahur and its tributary, the Moti, where I had not been able to see it.

Down to the junction of the Moti the Mahur valley continues generally very fairly easy, but below that point the river runs for a great portion of its course through gorges, and the ground becomes very bad, the last three miles above the junction of the Dyung especially being excessively difficult.

It will be seen from the map that the Dyung has a most tortuous course before it issues into the plains near the junction of the Lumding. The line recommended by Mr. Luttman-Johnson, Deputy Commissioner of Sylhet, followed the Dyung, and to this fact especially was due the greater length of his route when compared with the one which I have recommended: the two, treated in the same manner, that is by the addition of one-fourth to the scaled distance giving respectively 120 and 102½ miles.

Disappointed in the country in this direction, I struck across to the Langting river, and thence almost due north by the route shown, passing the upper village of Gireso, and descended to the Lumding by its tributary, the Langladisa; I found that a line could be taken from the mouth of the Mahur by this route, which would be shorter than if the Dyung were followed, and a considerable portion of it presented no difficulties, the valley of the Langladisa especially being particularly easy from two miles below the watershed. I determined to return by the Langladisa and to try to find a line which should avoid the bad portion of the Mahur, and effect, if possible, a still further saving in distance, but before doing so I went across what may be termed the head of the Dimapur valley to the range of hills north of the Langkher. The country between the Lumding and Langkher is undulating, covered chiefly with forest and long grass, but not generally with any dense undergrowth, and is quite uninhabited. It does not present any engineering difficulties. The result of my return journey is expressed in the route which I have recommended, which fulfills the objects I had in view. From the Kuilong peak I had seen what appeared a dip in the watershed between the Mahur and Mupa valleys east of Dokharungpha, but it was only by following the top of the ridge that I was enabled to hit it off, the heavy jungle concealing it from the valleys. This proved more favourable even than I had anticipated, being only 200 feet above the level of the Mahur valley, as I have already noted, and easy of approach, while the rest of the ridge varies from 500 to 700 feet above the valley.

From the Mahur valley I made my way west to Gunjong, crossing part of the country already traversed by Mr. Todd. The valleys of the Moti and its tributary, the Delan, are much more broken and difficult than that of the Upper Mahur, and frequent perpendicular scarps of rock give them quite a distinct character. There would not be much difficulty in carrying a line along the side of the ridge west of the Moti from the peak of Kamaigaju until Gunjong is approached, but north of this the difficulties are very great. This is the route Mr. Luttman-Johnson laid down on the map.

This terminated my examination of the country east of the Dyung river, and I then decided to explore the country between the Dyung and the Kopili. I had little expectation of being able to find a good line in that direction, for the views that I had been able to obtain of the Dyung and its tributaries from the west had been sufficient to show that it would be a very difficult matter to get a line, either by the Dyung itself or across its tributaries farther west, from the head of the Jatinga.

The journey across to the Kopili showed more clearly the difficulties of this line of country.

The Dyung and its tributary, the Delaima, with the smaller streams running into them, have cut very deep gorges, which it would be impracticable to cross, except at a prohibitory cost, while to double round their heads would entail such an enormous addition to the mileage that there is no conceivable traffic that would justify the extra outlay due to that alone, even if the difficulties that would then be encountered were less than they are.

The bed of the Dyung river on the path from Gunjong leading west to the Khasi Hills is about 1,900 feet below Gunjong, and still more below the ground to the west.

Any line in this direction would have to go nearer the Kopili than the Dyung, and it would be much cheaper to drive a tunnel through the range separating the Jatinga from the head of the Kopili than to take the line up to the head of the Jatinga and back round the head of the Delaima and its tributaries.

But no coal has been found of any value to render a route in this direction a matter for consideration. Mr. LaTouche came across a small outcrop a few inches thick, but full of sulphur, in the Dyung, and I visited a somewhat similar outcrop already known to exist in the valley of the Langdeksha, a small stream running into the Dyung from the west, but these are valueless, and not a vestige of any other minerals was found. Limestone, however, extends across the Kopili at the hot springs, by the Phulong peak into the head of the valley of the Langyen, but, though limestone is a great desideratum in Assam, it would not pay to make a railway for this alone.

Limestone from Sylhet will probably form one of the chief items of freight on the line I have recommended across the North Cachar Hills.

The country between the Kopili and Dyung constitutes a series of steps: along the Korongma ridge it is about 3,000 feet high, and it rises towards the south; immediately north of the Korongma ridge it drops to a little over 2,000 feet; then north of the Langyen to a

general level of about 700 feet, and finally, after one more drop, it sinks nearly to the level of the plains above the junction of the Dyung and the Kopili ; but this is by no means the level ground to be expected from the map, on the contrary, it is very much broken up, and for the most part consists of a mass of low hills intersected by small watercourses. It will from the above be seen that any line in this direction would have to rise to a much higher level than the line east of the Dyung.

From Gunjong I went to the hot springs on the Kopili, and thence followed that river down to the junction of the Dyung.

The hot springs are about 2,200 feet above mean sea-level, and the Kopili falls about 1,400 feet in the next 10 miles. The belt of limestone which intrudes from the Jaintia Hills here divides the sandstone on the south from the crystalline rocks which extend north as far as the plains.

At the mouth of the Dyung I first learnt that some coal had been found a few years previously in the Langdeksha valley east of the route I had followed.

As it appeared to me most important thoroughly to satisfy myself regarding the existence of coal in the North Cachar Hills, I arranged that Mr. Todd should examine the Dimapur valley below the point I had reached and as far as Dimapur, and that he should thence proceed to Nowgong by the line of the old road running west through the hills by the Jamuna valley, and determined myself to return and make a further exploration of the hills after examining the country north of the Dyung to a point that would connect with Mr. Todd's line of march.

The season was too far advanced for me to do both, but from what I had seen of the head of the Dimapur valley, I did not anticipate that any engineering difficulties would be met with lower down.

In accordance with this programme, I went nearly as far north as Doboka, and thence returned to the junction of the Lumding and Dyung by the line of country a railway would follow from the Langladisa valley to Nowgong.

From this point I worked my way across to the Kopili hot springs by the route shown. I had anticipated some difficulty in the tract marked dense jungle on the map, especially as portions of the streams appeared to have been left unsurveyed on this account ; but the dense jungle proved a myth, and the jungle here cannot be compared with that east of the Dyung. With the exception of the small outcrop in the Langdeksha, I could not see a trace of coal anywhere, and I think, as a result of our exploration, it can safely be affirmed that it does not exist at least in any quantity in the North Cachar Hills.

Mr. LaTouche had in the meantime been examining the Jaintia Hills between the Kopili and the Mahtedu river, which passes Jowai. I had intended returning to Shillong by the head of the Lubah valley, to see if it were feasible to carry a railway up that way, in case Mr. LaTouche had succeeded in discovering coal in that direction, but illness prevented me carrying out this plan. I saw enough, however, of the country south-west of the hot springs to satisfy me that it would be a very difficult matter to get a line through it.

Mr. LaTouche has only found two or three small outcrops of coal in tributaries of the Kopili, but he states that there is no coal-field, and that the country by the Lubah is excessively difficult. The absence of coal renders a personal visit therefore useless.

The nearest coal-field to the North Cachar Hills appears to be at Lakadong, east-north-east of Jaintiapur : this, I understand, has an area of about one square mile, with a thickness of seam varying from 4 to 8 feet, but the coal from here has not been able to compete at Sylhet with Raniganj coal brought up by steamer. Its chances in this respect might be improved if the coal-field were systematically worked, and a tramway laid down to a point where the coal could be put into boats, and it might then be employed on the Chittagong-Cachar line, but if that line is extended into Assam, it would, no doubt, take the Makum coal in preference.

It will be seen that near the junction of the Lumding and Langladisa the line which I have recommended bifurcates, one branch running down the Dimapur valley into Upper Assam, and terminating at Dibrugarh ; and the other going down the Assam valley *to Gauhati ;* and thence on to a point on the Brahmaputra opposite Dhubri.

Mr. Todd reports that there are no engineering difficulties, that he could see, along the Dimapur valley, as far as he traversed it, and that it presents much the same general features as the portion at the head, which I have myself seen, on the whole more level, but covered in the same way with forest. He had considerable difficulty in making his way along, as there are no tracks, and none of the men with him knew practically anything of the country. It would have been impossible for him to keep to the route laid down for the railway, on account of the want of water, as the small streams had dried up, and even such a stream as the Langkher we found dry for some miles of its course in the middle of March, a condition apparently unprecedented, judging by the astonishment of the coolies ; but he crossed the route at two points and found a distinct watershed, as the map shows. North of Dimapur the valley is fairly well known.

The other branch, as already noted, I examined to near Doboka. The line could keep to high ground until it approaches the Dimaru river, but beyond that it would enter low ground, which is submerged to a considerable depth, and especially near Doboka, in the rains, and heavy embankments will be required.

From Doboka the line might generally follow the old road into Nowgong, the alignment of which, Mr. Todd says, is good, if it is desired to serve that station.

I trust that I have now succeeded in establishing not only that the connection across the North Cachar Hills is preferable to either connection with Mymensingh, but also that the Assam Valley line should in any case be carried round by the Dimapur valley. The position of the connection will be further strengthened when the question of traffic is discussed.

Probable fiscal results.

It is desirable to form some estimate of the financial prospects of the line, but the question is beset with difficulties, owing to the fact that Assam is provided with excellent water communication, and any attempt to forecast the influence of the railway on this is little more than speculation.

The following, derived from the tables in page 3, para. 7 of the Report on the riverborne trade of the Province of Assam during the year ending 31st March 1882, shows the weights of the chief articles imported and exported from the Brahmaputra valley by river during the years 1880-81 and 1881-82:—

Description.	1880-81.	1881-82.
	IMPORTS.	
	Tons.	Tons.
Cotton twist (European)	186	237
,, piece-goods (European)	698	760
Gram and pulse	3,652	4,083
Rice	15,017	16,439
Brass and copper	265	234
Iron	912	816
Other metals	755	828
Oils	1,489	1,500
Ghi	195	194
Provisions (other kinds)	534	457
Salt	10,277	8,946
Sugar	1,951	1,497
Tobacco	884	764
Total	36,815	36,755
	EXPORTS.	
Rubber	287	306
Jute	2,194	4,134
Lac (stick)	405	914
Mustard and rape-seed	31,677	25,522
Silk	13	24
Tea	11,245	10,695
Tea-seed	87	30
Total	45,908	41,625

In the tables from which the above are extracted, only the value of cotton piece-goods is given, but in para. 26, page 10 of the Report, it is stated that the officially-assumed value is Rs. 75 a maund, and the weight has thus been procured.

Under the head of "Imports" liquors have been omitted, but there is no means of arriving at the weight ; the mean value for the two years under review is nearly 4 lakhs of rupees.

Under "Exports" timber has been omitted for the same reason ; the mean value for the two years is about 7¾ lakhs.

A great falling off appears in the export of mustard and rape-seeds during 1881-82, which is accounted for by the failure of the mustard crop.

In a normal year the total weight of imports of the Brahmaputra valley may probably be taken roughly at 39,000 tons, and of exports, excluding timber, which may safely be omitted, as the railway cannot expect any material quantity of it, at 48,000 tons.

The population of the Brahmaputra valley, omitting all hill districts, is, according to the last census, 2,249,185 divided into 932,961 living north of the Brahmaputra, and 1,316,224 living south, and the railway will have to deal chiefly with the requirements of the latter.

The following shows the distribution according to districts :—

Districts.	North of Brahmaputra.	South of Brahmaputra.
Goalpara	243,031	227,115
Kamrup	353,432	291,528
Darrang	273,333	...
Nowgong	...	310,579
Sibsagar	...	370,274
Lakhimpur	63,165	116,728
Total ...	932,961	1,316,224

If the total imports and exports, say 87,000 tons, were distributed simply according to the ratio of the population north and south of the Brahmaputra, the trade due to the respective sides would be approximately 36,000 and 51,000 tons ; but inasmuch as probably four-fifths of the tea interest lies south of the river, the true result will be very different, and, making allowance for this, it will probably be nearer the mark if 28,000 tons be taken for the total imports and exports of the north side of the Brahmaputra, and 59,000 tons for those of the south side ; the two items tea and rice alone accounting for about 5,500 tons out of the 8,000 subtracted from one side and placed on the other.

IMPORTS.

Cotton twist and piece-goods.—These are now carried entirely by steamer, and of course come from Calcutta. Gauhati and Jorhat are nearly equidistant from Chittagong by a line through the North Cachar Hills, and the railway could lay these down at the above points as cheaply at least as the steamer, and much more expeditiously.

Gram and pulse.—These not being commodities produced in the country through which the Chittagong-Cachar line will run, no traffic can be expected from this source through the North Cachar Hills, but they will no doubt prove an article of traffic from Northern Bengal along the Assam Valley line.

Rice.—A considerable traffic may be expected from this, and reference on this head may be made to Section IV, para. 19 of the Trade Report already quoted.

This shows the average selling price during 1880-81 and 1881-82 in various districts with which the railway is concerned, as follows :—

	Per rupee. Seers.	Chs.
1880-81.		
Tipperah	34	0
Sylhet	21	12
Cachar	20	8
Upper Assam	12 to 14	2 to 5
1881-82.		
Tipperah	35	3
Sylhet	32	15
Cachar	24	10
Upper Assam	15 to 15	0 to 11

If rice sells at Comillah for 35 seers per rupee, it will cost, delivered at Jorhat, taking the rates for carriage from those of the Rajputana-Malwa line for food-grains, one rupee for 23 seers ; when rice is 25 seers per rupee at Badarpur, it will stand at 19 seers per rupee at Jorhat.

The report states that Sibsagar and Lakhimpur are the main rice-importing districts of the Assam Valley, and the above figures show how large a margin there is for the profitable importation of rice into Upper Assam through the North Cachar Hills, so that the railway will probably absorb almost the whole of this traffic.

Metals.—These could no doubt be laid down by railway from Chittagong at as cheap a rate as by steamer from Calcutta.

Ghi.—The same report, para. 9, states that this is an article produced in Sylhet for which there is a great demand in Assam, but the quantity at present imported is not very large.

Provisions.—In as far as these are European provisions, a considerable proportion will doubtless come through Chittagong, and thereby benefit the line, and the same may be said of liquors. Some may also come from Calcutta, and in that case the Cachar line, with only one break between Goalundo and Chandpur, would naturally be preferred to the Dhubri route, for Upper Assam at least.

Salt.—A trade is already done at Chittagong in this commodity from Europe, vessels bringing it as ballast and returning with jute. This trade is still in its infancy, but the increased importance of Chittagong as a port, consequent on the construction of the railway, will doubtless stimulate the import, and Upper Assam, at least, will probably draw all its supplies through the North Cachar Hills. At the Rajputana Railway rates, salt can be carried from Chittagong to Gauhati or Jorhat for about 9 annas per maund.

Sugar.—This may form an article of import from South Sylhet where the cane is already extensively cultivated.

Tobacco.—This is principally imported from Rangpur, and would therefore come through Dhubri along the Assam Valley line, and not across the North Cachar Hills.

Lime.—An extensive trade may spring up in this from Sylhet. At present the trade is practically *nil*, the returns showing only about 120 tons imported into the Brahmaputra valley during 1881-82. There is a difference of about one rupee per maund between the price of lime on the south and north sides of the Khasi Hills. The reduction in cost in the Assam Valley consequent on the connection by railway with Sylhet will no doubt stimulate the demand.

EXPORTS.

Jute.—This is almost entirely grown in Goalpara. The distance to Chittagong will probably preclude the railway through the North Cachar Hills obtaining any share of it, and if taken by railway at all, it will naturally go by boat to Dhubri, and there be put into wagons for conveyance to Calcutta, so that none of the Assam system would benefit by it, for it is obvious that it would seldom pay to put it into the train, to be almost immediately transhipped at the Brahmaputra. Some of this jute may find its way by boat to the Mymensingh line.

Rubber and lac.—These are small items, and will not affect the railway much, but it is probable that the line to Chittagong will get a fair share of the traffic.

Mustard and rape-seed.—In the report Kamrup, Nowgong and Darrang are said to be the great mustard-growing districts of Assam. The railway could carry the produce of the two first-named districts to Chittagong for 8 or 9 annas per maund, and, so far as these are articles of export, it may expect to get a fair share of the trade.

Tea.—The Cachar planters with whom I have conversed on the subject of the export of tea have, without exception expressed, the opinion that the interest of the agents and brokers in Calcutta is too great to permit of the diversion to the port of Chittagong of any of the trade that passes through their hands without a sharp struggle, and that it is only the tea that is consigned direct to agents at home that would, for some time at least, take that route.

The same will doubtless apply in the case of Assam, but it may with some confidence be anticipated that if it be found that tea can be shipped cheaper through Chittagong than it can through Calcutta, the interests of the shareholders will at no distant date triumph over those of the Calcutta agents and brokers.

But in order to compete with the steamers, whether on the Brahmaputra or on the Surma, the railway must carry tea at a lower rate than the Northern Bengal Railway does, and then it is only through Chittagong that it will probably be able to compete successfully.

It is unfortunate for the railway that the tea should be ready for the market at the very time when the rivers are at their best. I have no means of deciding what proportion of the tea is consigned direct to England. To a certain extent time is money, and if the railway can deliver the tea in Calcutta in a shorter time than the steamers can, and in as good condition, preference will naturally be given to it, even though the rates for carriage be not less. There must be a certain number of gardens which, from their position, will find it pay to use the railway, even in consigning to Calcutta.

Coal.—The requirements of the railway alone will create a large demand for the Makum coal, while it may be considered certain that the wants of the planters and others in Sylhet and Cachar will be met from the same source. The import of coal into the Surma valley during 1881-82 amounted to about 750 tons : this is not a large amount, but it will no doubt increase. The Makum coal can be delivered at Badarpur probably for Rs. 12 per ton, and at Chittagong for about Rs. 18, taking freight at one-sixth of a pie per maund per mile. A considerable traffic will be thrown on to the section between Dibrugarh and Badarpur to meet the requirements of the Chittagong-Cachar line.

Proceeding on the above considerations, I have attempted to form an estimate of the ton mileage of goods which may fairly be expected within a year or two of the opening of the line between Cachar, Dibrugarh and Gauhati, and the following abstracts give the results of my calculations. As it may be useful in showing the direction of the traffic, I have divided the whole line into three sections, *viz.*, (1) from the Lumding junction to Dibrugarh, (2) from the Lumding junction to Gauhati, (3) from the Lumding junction to Badarpur: the first two represent the Assam Valley portion of the line, and the third the North Cachar Hills connection. It will be noticed that the extension from Gauhati to opposite Dhubri has been omitted; the calculations therefore deal with the modified form of scheme No. 4.

Estimate of goods ton mileage for twelve months.

IMPORTS—UP.

Description.	Lumding to Dibrugarh, ton miles.	Lumding to Gauhati, ton miles.	Lumding to Badarpur, ton miles.	Total ton miles.
European twist and piece-goods ...	62,000	12,200	57,000	131,200
Gram and pulse	310,000	244,000	...	554,000
Rice	1,550,000	180,000	1,368,000	3,098,000
Metals	124,000	18,000	114,000	256,000
Ghi	7,750	4,500	11,400	23,650
Provisions (other kinds)	23,250	6,100	22,800	52,150
Salt	852,500	135,000	798,000	1,785,500
Tobacco	77,500	61,000	...	138,500
Lime	15,500	6,100	17,100	38,700
Sundries	155,000	122,000	114,000	391,000
Total ...	3,177,500	788,900	2,502,300	6,468,700

EXPORTS—DOWN.

Description.	Lumding to Dibrugarh, ton miles.	Lumding to Gauhati, ton miles.	Lumding to Badarpur, ton miles.	Total ton miles.
Rubber	15,500	4,500	17,100	37,100
Lac (stick)	62,000	9,000	57,000	128,000
Mustard and rape-seed	465,000	1,080,000	1,710,000	3,255,000
Tea	465,000	45,000	399,000	909,000
Coal	197,000	...	114,000	311,000
Sundries	155,000	122,000	114,000	391,000
Total ...	1,359,500	1,260,500	2,411,100	5,031,100
Grand Total, up and down ...	4,537,000	2,049,400	4,913,400	11,499,800

The mean gross receipts on the Northern Bengal Railway during the year ended 31st December 1881 for carrying one ton of goods one mile was 11¼ pie. If 11 pie be taken, the yield of the above will be—

	Rs.
Lumding to Dibrugarh	2,59,932
„ Gauhati	1,17,414
„ Badarpur	2,81,497
Total ...	6,58,843

Passenger receipts I would take on the first two sections at Rs. 35, and on the third at Rs. 25, per mile per week. These will yield as under :—

	Rs.
Lumding to Dibrugarh	3,58,540
„ Gauhati	2,22,040
„ Badarpur	1,48,200
Total ...	7,28,780

Combining the two, the gross receipts from goods and passengers will stand as follows :—

	Goods. Rs.	Coaching. Rs.	Total. Rs.
Lumding to Dibrugarh ...	2,59,932	3,58,540	6,18,472
„ Gauhati ...	1,17,414	2,22,040	3,39,454
„ Badarpur ...	2,81,497	1,48,200	4,29,697
Total ...	6,58,843	7,28,780	13,87,623

Considering the low price at which Makum coal will stand over the system, and its good quality, it will be ample if 50 per cent. of the gross receipts be allowed, even in the first instance, for working expenses. The capital outlay, net profit, and dividend will then stand as under :—

	Capital outlay. Rs.	Net profit. Rs.	Dividend. Rs.
Lumding to Dibrugarh ...	1,57,60,000	3,09,236	1·96
„ Gauhati ...	97,60,000	1,69,727	1·74
„ Badarpur ...	1,42,70,000	2,14,849	1·50
Total ...	3,97,90,000	6,93,812	1·74

The mean dividend of sections 1 and 2, which may be called the Assam Valley portion of the line, is 1·88 per cent., while the dividend on the whole is 1·74 per cent. as above. The length of the respective sections are 197, 122 and 114 miles, and an analysis of the above abstracts shows that section No. 3, the North Cachar Hills section, is strong in goods traffic, as might be expected, when that being dealt with consists simply of the imports and exports of the Brahmaputra valley; and the argument has been that the bulk of these, in as far as they are carried by the railway, will pass through Chittagong, and therefore over the North Cachar Hills section, the exports converging and the imports diverging at the Lumding junction. But No. 3 section will probably be weak in passenger traffic, though it will no doubt form the main through passenger route between Upper Assam and Calcutta. I have therefore only taken it at Rs. 25 per mile per week. In fixing the rates from which the passenger traffic returns have been derived, I have been guided by the consideration that the Northern Bengal Railway gross receipts from passenger traffic appear to amount to about Rs. 46 per mile per week.

The above estimate of goods traffic does not take account of the petty movements of the internal trade of the Assam Valley, nor of the carriage of coal from Dibrugarh to Badarpur for the Chittagong-Cachar line, for which credit should be given; and if allowance is made for these, the dividend will probably not fall far short of 3 per cent. It must also be noted that the import and export trade has been taken simply as it at present exists; this may fairly be expected to increase in the interval before the system of railways can be completed, but no calculation can be based upon it.

A return of 3 per cent. will not pay the interest on the capital expenditure; but if, instead of treating the Assam system independently, it be considered in conjunction with the Chittagong-Cachar line, and viewed in regard to the benefits it will confer on the latter, its position will be considerably strengthened. If the net profit, which the Chittagong-Cachar line will derive from the increased traffic thrown upon it from the Assam line, were credited to the latter, the result would be, from my calculations, an increase of about 1 per cent. in its dividend; and the Assam line may fairly lay claim to this; for, without the connection of the two systems, the Chittagong-Cachar line would not get a particle of traffic from the Brahma-

putra valley. This too does not take any account of the saving in the working expenses of the Chittagong-Cachar line, due to its being enabled to get cheaper coal from Makum through the connection. I am not yet in a position to show the financial results which may be expected from the traffic on the line lately surveyed between Comillah and Cachar, but it traverses a rich country through Tipperah and Sylhet. In the Progress and Administration Report of the State Railways in Bengal for 1881-82, page 14, it is stated that the line from Chittagong to Daudkandi is expected to pay 10 per cent. on the capital outlay. Without committing myself to any precise figure for the extension from Comillah to Cachar, it can safely be predicted that it will pay well even if not connected with the Assam Valley, but that the effect of this connection will be to make it pay better by increasing the traffic and reducing the price of fuel. If credit then be afforded to the Assam line for this increment of traffic alone, it will yield a total dividend of about 4 per cent. if my calculations be not far astray.

It cannot, of course, be expected that the current of trade will be at once diverted into a new channel as regards the means of conveyance, and to a new port, and I should therefore allow about a couple of years after the opening of the railway for the attainment of the above results.

If the section from Gauhati to Dibrugarh by the Dimapur valley only be made, I should put the passenger traffic at Rs. 30 per mile per week. This, calculated in the same manner as above, will give a net yearly profit of Rs. 2,48,820, which on the capital outlay of Rs. 2,55,20,000 will yield a dividend of 0·97 per cent.; and, considering that the goods traffic, as already explained, would be comparatively small, I do not anticipate that the total return would amount to more than 1·50 per cent. Therefore I think that the connection with the Cachar line will materially promote the prosperity of the entire undertaking.

Even if the Assam Railway were not directly remunerative during the first few years of its existence, the indirect returns which it must yield are surely sufficiently great to justify the outlay on its construction. On the one side there is Assam, with its rich waste lands and its demand for labor, and on the other Bengal, with districts which would gladly spare some of their superabundant population The benefits which the railway would confer in facilitating free intercourse between the two sides are simply incalculable, and while the valley portion of the line would chiefly carry the immigrants, the North Cachar Hills section would do its duty in stimulating the flow by lowering the price of food, and in increasing the wealth of the Province by providing a fresh outlet for its trade.

It is impossible to foretell how rapidly the above processes will go on, and by increasing the population, wealth, and consequent requirements of the Province, re-act upon the prosperity of the railway; but there can be no doubt, for one thing, that the effect of reducing the journey between Dhubri and Dibrugarh from nearly a fortnight to two or three days, and of substituting a means of conveyance which Natives like for one which they generally abhor, will be very great, and if two years may be expected to see the railway returning 3 or 4 per cent., it will not be very long before its prosperity is thoroughly assured.

The extension of railways to Assam must be a natural sequence to the completion of the railway systems of Northern Bengal to Dhubri: otherwise the latter will not reap the full benefits of which they are capable. The mutual relations of the Assam and Cachar lines have already been discussed.

Though I advocate the connection across the North Cachar Hills, I would not recommend that the construction be taken in hand until the line on the south side has been pushed up to Cachar, and on the north side as far as the head of the Dimapur valley. This will enable labor to be imported more readily for the work, and may have the effect of reducing the cost of the hill section to somewhat under my estimate.

Detailed surveys of the North Cachar Hills and of the Assam Valley above Gauhati, at least, are much to be desired, and it is only by this means that the accuracy of my rough estimate can be tested. It is quite possible that the plains portion of the line may be done for Rs 70,000 per mile,—though I have given my reasons for assuming a higher figure. The effect of this would be to reduce the capital outlay from Rs. 3,97,90,000 to Rs. 3,64,90,000, and to increase the percentage of net earnings on goods and coaching shown at 1·74 per cent. to 1·90 per cent.

If the alternative line on the branch from the Lumding junction to Gauhati were found to be the best, the Dimapur valley route would probably be only 40 miles, instead of 52 miles longer than the Trunk Road route, and this would reduce the capital outlay by nearly ten lakhs of rupees below the figure which I have taken in the previous calculations; or, in other words, the capital outlay on the modified form of scheme No. 4 would be reduced from Rs. 3,97,90,000 to Rs. 3,88,50,000.

I have only further to express my acknowledgments to Mr. Soppitt, Sub-Divisional Officer, North Cachar Hills, for the valuable assistance rendered to me in my explorations, and to Mr. Todd, Assistant Engineer, whose services were most useful: the latter was the only Engineer who accompanied me into the hills.

Mr. LaTouche, of the Geological Survey, carefully examined the country for minerals and will no doubt submit a report on his work to his own Department.

CACHAR STATE RAILWAY.

REPORT AND ESTIMATE.

Instructions.

The survey for a line of railway from the neighbourhood of Comillah to Cachar was undertaken under instructions contained in letter No. 878R.C., dated Simla, the 5th October 1882, from the Secretary to the Government of India in the Public Works Department (Railway Construction), to the Chief Commissioner of Assam, in the Public Works Department, which also directed an exploration to be made of the North Cachar Hills for the purpose of deciding whether it was feasible to extend this line into the Assam Valley. My report on the latter portion of this programme was forwarded with my No. 582, dated 24th July 1883.

Object of the Railway.

2. The entire scheme comprises in addition a line from the port of Chittagong to Comillah, 98 miles long, with a branch, 31 miles long, from Leksham, 17 miles south of Comillah, to Chandpur, on the bank of the Megna, near the confluence of the Ganges or Padma, and is designed to furnish railway communication to the country east of the Megna, which has been styled the granary of Bengal, and to the districts of Sylhet and Cachar, apparently in no way inferior in point of natural fertility, which are now included in the province of Assam, and which are besides the centres of a large and valuable tea interest.

Trade of the country at present carried by water.

3. It may be said that the trade of the above districts is at present practically entirely carried by water, and inasmuch as the railway will serve large and fertile tracts in which water carriage is only available for about six months of the year, there can be no doubt that it will have a wonderful effect in promoting the prosperity of the country, by developing trade and facilitating travel, and that financially it will prove a remunerative undertaking.

Importance of Chittagong as a Port.

4. That the port of Chittagong is rapidly rising in importance is amply proved by the value of its sea-borne trade having increased from Rs. 6,89,360 during 1860-61 to Rs. 1,43,43,927 during 1880-81, notwithstanding that it labors under the very serious disadvantage, that native boats will only brave the dangers of the approach by the Megna, the principal highway for its internal traffic, during the four months from December to March. The railway will, in a great measure, obliterate this disadvantage, and by creating a steady flow of traffic will effect an enormous expansion in the trade of the port, which in its lower pilotage and port dues has an advantage over Calcutta, which, combined with its position, apparently destines it to become the chief port not only for Eastern Bengal, Sylhet, and Cachar, but also for the Assam Valley.

Strength and distribution of survey party, and general remarks on alignment.

5. The staff placed at my disposal permitted the formation of three divisions, each under one Executive Engineer with two Assistant Engineers, but the late season at which the men drafted from the South Mahratta Railway arrived,—the last not reaching the ground until the beginning of February, coupled with the fact that survey operations cannot on account of rain be extended, as a rule, beyond the beginning of April,—curtailed field work generally to between three and four months. In expectation of the latter contingency, strenuous exertions were necessary to accomplish the location of the line, and it is believed that, if construction is begun at no distant date before pillars and marks are obliterated or destroyed, sufficient has been done to render any farther preliminary work unnecessary, and that the improvements which can be effected in the alignment may well be reserved until such time. I may, however, note that, though I settled the general course, I have not been able to go over the line since it was located, my time after the beginning of January being fully occupied in the exploration of the North Cachar Hills, as detailed in the report on that part of the project. The alignment, on the whole, throughout Sylhet and Cachar follows fairly closely that recommended by Mr. Luttman-Johnson, late Deputy Commissioner of Sylhet; and in fact the physical features of the country, with hills and uncultivated wastes on the one hand, and low ground intersected by large rivers on the other, restricts it generally to a comparatively narrow belt. But thanks are due to Mr. Johnson for having indicated this route, as valuable time has thereby been saved. The following description of the route follows the order of the divisions, starting from Comillah:—

ROUTE.

SECTION I.

Mile 0 to 60½.

Connection with Chittagong line made at Comillah.

6. The first proposal was that the line from Chittagong should pass through Comillah and have a terminus on the east bank of a branch of the Megna at Daudkandi, and it was considered that the best point for a line to Cachar to strike off from this might be a few miles west of Comillah; but after seeing the country I decided in favor of placing the junction at Comillah itself, and this decision was so far fortunate that it saved labor being wasted, for the branch to Daudkandi was eventually abandoned for one some miles farther south from Leksham to Chandpur. My chief reason for selecting Comillah was that it placed the alignment towards the north on somewhat higher ground, without extending the length of line, and this alignment now becomes the natural one, if Comillah is to be served, as there can be no doubt that it should be.

Comillah station not included in this section.

7. The survey connects with that made by an independent party from Chittagong at the Daudkandi road on the west side of Comillah. The station site has been fixed a few chains to the south, and therefore does not form a portion of the project under consideration. The Engineer-in-Chief of the Chittagong-Comillah Survey has arranged to place an engine changing station at Leksham, and therefore Comillah will not be so important a railway station as if the branch to Daudkandi had been adopted.

Goomtee River.

8. Leaving Comillah the line crosses the Goomtee, the largest river on this section with a bridge of six 60 feet spans in the second mile. This river is confined between training *bunds* to prevent its inundating the country on either side. These bunds have occasionally given way, and any such occurrence would probably lead to the line being breached; but I understand that proposals have been made to relieve the river by leading off some of its water either north or south. With the construction of the railway the question must at any rate be taken in hand, and something done to secure its safety either in this way or by strengthening the *bunds*.

Nature of country to mile 27.

9. The line hereafter skirts the eastern edge of the alluvial plain of Bengal, which is here bounded by the low hills of Independent Tipperah, and is generally under water during the rains, with the exception of the village sites, which then stand out like islands in a vast sea. It will be seen from the section that between miles 6 and 27 the ground is generally only about 20 feet above mean sea level, though close under the Tipperah Hills, and beyond this, as far as the 49th mile, there are points affected by the Teeta's floods.

Chief points kept in view in making alignment.

10. Chief points kept in view while making the alignment have been to avoid Independent Tipperah, to touch without crossing the Teetas river, and to keep as much as possible out of low ground, especially where inundated by the Teetas.

General direction of line slightly changes at mile 20.

11. At Kusbah, in the 20th mile, where there is a thana, the line turns from nearly a due north to a north-north-east direction.

Country between Kusbah and Akhaoorah.

12. The Howrah, the next most important stream on the division to the Goomtee, is crossed in the 27th mile with seven 40 feet spans at the village of Mogra, and the line then traverses high ground, skirting the eastern edge of a long "bill," and strikes the Teetas river at the village of Akhaoorah, where a station has been placed to secure the traffic carried by the stream.

Nature of country beyond Akhaoorah.

13. Leaving Akhaoorah the line makes a slight curve to avoid very low ground inundated by the Teetas, and thence generally follows, until the Sylhet boundary is reached at mile 40½, fairly high ground forming low flat spurs of the Tipperah Hills, but indented by bays, most

of which are regular bogs and very difficult to cross. The transition from Tipperah to Sylhet is marked by disappearance of the bogs and entry on to better ground. For the last 10 miles the line skirts the Lakipati Hills.

Bridges and stations.

14. Forms attached to the estimates give details of the bridges and stations. The total waterway provided amounts to about 50 lineal feet per mile.

The stations are on an average nearly eight miles apart, and they have been so placed with reference to the streams that the utmost benefit may be got out of these as feeders to the line. Though no large towns are met with, the line traverses a very rich country thickly studded with villages, and it may even pay to interpolate two or three more stations hereafter.

The Teetas river and Akhaoora station.

15. The Teetas would be a very formidable river to bridge, and in the rains it is generally several miles broad, owing to the ground on either side being very little raised above the dry weather channel.

At Akhaoora there is a short length of comparatively well-defined high bank, which has been taken advantage of for the station site; but there are records of a flood having once been over this, though the exact level appears rather vague. The station here will doubtless be an important one from its position with respect to the river, and it is probable that it will also attract traffic from the country west of the Megna by Bhairab Bazaar, especially as the terminus on the Megna has been moved from Daudkandi farther south to Chandpur; but it may pay hereafter to carry a branch line from Nayanpur, mile 14, or Kusbah, mile 20, to the bank of the Megna below the junction of the Teetas, in which case Akhaoora would lose the trade from that quarter. About 7 miles of an alternative line was run between miles 32 and 39 as shown on the plan and section.

SECTION II.

Mile 60½ to 107.

Route across the Khawhee Valley.

16. The line after a short distance turns east and crosses the Sootang river with a bridge of six 40 feet spans in the 62nd mile near Shahazee Bazaar. A station has been placed in the 61st mile as close to the river as practicable, and another at the 65th mile at Shaishtagunj near the Khawhee river, which is crossed with three 60 feet spans. A third station has been placed at Daragaon in the 71st mile, just beyond which there is a bridge of seven 40 feet spans over the Korungee, formed in a great measure by spill water from the Khawhee. The valley between Shahazee and Daragaon is an exceedingly rich one, and this, with another reason to be stated hereafter, will account for the stations being so close to each other. There are a few tea gardens higher up the valley.

Country between the Khawhee and Dhulai Valleys.

17. Between miles 73 and 77 a range of low hills is crossed rising to a height of about 200 feet above mean sea level, clothed with dense jungle, and necessitating heavy banks and cuttings; and between miles 84 and 90 another similar range. Between these two ranges is a narrow valley, the drainage of which is passed by an aggregate of nine 40 feet spans in which at mile 82, near Srimangal, an engine changing station is provided. The run between the Daragaon and Srimangal stations is thus 12 miles, but there is no intermediate point at which a station is wanted, or could be advantageously placed, and this accounts for the Shaishtagunj and Daragaon stations being so close to each other.

Position of engine changing station.

Improvements can probably be made in crossing the two ranges of hills between the Khawhee and Dhulai Valleys.

18. It is believed that considerable improvements can be made in the crossings of both these ranges at certain points. Being covered with dense vegetation, and being also of very uniform height, though much broken up by networks of small watercourses, so that it is impossible to see any distance in any direction, the work of survey was very tedious, and as much was done as in the time was practicable. The courses of certain suggested improvements have been marked on the plan. The reduction of the high bank at mile 77 will depend on its being possible to improve the alignment through the hills. The adoption of more severe gradients would, of course, reduce the quantity of work, supposing the line to be the best obtainable; but as more severe gradients than 1 in 150 are not required elsewhere, this has been taken as the ruling gradient here.

The Dhulai River.

19. The Dhulai river is crossed at Kamalgunj with three 60 feet spans in mile 92, and a large amount of extra waterway has had to be provided to pass the spill water.

The Dhulai Valley.

20. The line now turns more northerly, running down the Dhulai valley and skirting a low range of hills, on which there are three or four flourishing tea gardens.

The Manu River.

21. The largest of the rivers on the division, the Manu, is crossed in the 100th mile with three 60 feet spans near Lalbagh Bazaar, but here again a very large amount of extra waterway is necessary on each side to pass the spill water. This will be discussed more fully hereafter.

Stations at Alinagar and Telegaon.

22. Stations are provided at Alinagar in the 93rd mile, where there is a tea garden, and at Telegaon in mile 101.

Connection with third division.

23. The division, which is nearly 47 miles long, connects with the third division near the Hingajiya police station.

Reasons for route adopted.

24. A glance at the map will almost suffice to show without any detailed description the reasons for the alignment adopted. When the northern extremity of the Lakipati range near Shahazee Bazaar is reached, a course nearly due east becomes at first necessary in order to avoid the Hael Hoar, a large sheet of water, in the Langla Valley, between the two ranges of hills which are crossed, which in the rains extends close up to Srimangal. After passing this, and emerging from the second range of hills, the alignment turns about north-east, and makes for the Hingajiya valley, the reasons for running down which are apparent. A line drawn, for instance, straight from the crossing of the Manu river to Silchar would cross a succession of hills and narrow valleys, covered for the most part with jungle, and would miss the most populous and wealthy portions of East Sylhet.

25. The drainage passed is very heavy; the waterway provided averages 102¼ lineal feet per mile. It will be seen from the map that the hills in this quarter run in parallel ranges north and south, and the line throughout this section crosses the drainage of four distinct valleys, *viz.*, that of the Khawhee, the Langla, the Dhulai, and the Manu, three of which are very long; whereas on the first division the line runs parallel to the main axes of the hills, and consequently crosses a comparatively small amount of drainage, the Goomtee near Comillah excepted.

Highest point attained by line is on this section.

26. The highest point reached by the line is on this section, *viz.*, 152 feet, in the 76th mile, and it will be noticed that the Dhulai and Manu valleys are at a considerably higher elevation than the Khawhee and the Langla, and the influence of the Barak floods is not therefore felt where these are crossed.

Route might have been slightly shortened, but reasons against this.

27. A saving of between two and three miles might have been effected by taking the line direct across the Lakipati hills from near Etakhola at the 54th mile on the first section to Daragaon in the 71st mile, instead of going round the extreme north end by Shahazee; but this would have entailed several miles of line through low hills covered with jungle, whereas, looking to local traffic as a great source of income to the line, my object in adopting the longer alignment was to secure this as far as possible by serving the tracts that would yield it without any great sacrifice of cost in construction; and I further had in view that a short branch north to Habigunj might in the future be desirable, in which case the shorter through line would give the larger branch, and nothing in the end would have been gained as regards the total length.

Tea gardens established and being extended in South Sylhet.

28. There are a number of well-established tea gardens on the low ranges of hills passed, and others are being opened out, which from their position will naturally make use of the railway. South Sylhet promises to become a very favorite quarter for tea, and it has a good reputation for healthiness. The railway will no doubt give a great impetus to the industry, for at present the inaccessibility of the country is a serious drawback.

SECTION III.

Mile 107 to 175.

General direction of line from Hingajiya to Latu and Kurreemgunj.

29. From Hingajiya police station the general course of the alignment continues about 32° east of north running parallel to a low range of hills, off-shoots from which are crossed in two or three places, until Shabazpur, near Latu, on the Purana Kooseeara river in mile 133 is reached, when it turns east-north-east to Kurreemgunj on the Boglia river. Both these rivers are really arms of the Barak.

No large streams between Hingajiya and Shabazpur, but much of ground under water in extraordinary floods.

30. Between Hingajiya and Shabazpur no streams of any great importance are crossed, the largest being the Gongalea in the 112th mile, and the Jooree in the 116th mile, with two 40 and three 40 feet spans respectively. The ground is generally lower than at the side of the Manu river, spill water of which makes its way down the valley into the Hoar Hakalookee, and thence into the Kooseeara river. The alignment curves about considerably to take advantage of the higest ground available, but notwithstanding this, it traverses a considerable extent of ground which is submerged in extraordinary floods. The country is generally thickly populated and well cultivated, and there are a few tea gardens on the hills to each side.

Jalanga Valley and alternative route.

31. Near Shabazpur the line turns up the Jalanga valley among low hills, and crossing the Malyoor Khal, a branch of the Langai, with three 40 feet spans in the 141st mile, and the Langai itself with four 60 feet spans in the 142nd mile, reaches Kurreemgunj, the head-quarter of a sub-division, in mile 144. An alternative line was run between Shabazpur and Kurreemgunj by Latu round the north side of the hills, but the southern alignment has been adopted, as it gives lighter work and easier curves, and is both shorter and better protected from the floods of the Barak. The alignment can be improved near mile 140 and lifted above the influence of the floods by carrying it along the side of the hills.

General course of line beyond Kurreemgunj.

32. From Kurreemgunj to mile 169 the line follows fairly closely the course of the Barak and touches the river at Bhanga Bazaar, mile 151, Badarpur, mile 158, and Salchapra, mile 166, where stations have been placed.

Road between Sylhet and Silchar made use of.

33. Before reaching Badarpur, which is on the boundary of the districts of Sylhet and Cachar, the road between the stations of Sylhet and Silchar is struck, and the line thence adheres to it at intervals for the greater portion of the distance. This road is said to have been laid out with a view to its possibly being utilised at some time for a railway, but the greater portion of it is submerged in very high floods, and there are only three girder bridges across medium streams, the larger ones being unbridged. As there is no wheeled traffic over the road, there can be no objection to taking it up for the railway: it will save some earth-work and cost of land, which, as it generally occupies the best alignment, are worth consideration.

Alternative at Badarpur for extension into Assam Valley.

34. An alternative piece of line has been laid out at Badarpur which must be adopted if the extension across the North Cachar Hills into the Assam Valley by the crossing of the Barak here be determined on.

Road being carried away beyond Badarpur.

35. Beyond Badarpur the alignment leaves the road for a short distance, as this is being encroached upon by the river.

Alignment improved between mile 169 and Silchar.

36. Between mile 169 and Silchar the Barak makes a great bend towards the north, while the road runs fairly direct, but an improvement has been effected in the alignment across a range of hills which terminates on the Barak river at Telyn Tila.

Station site at Silchar.

37. The terminus of the line is at Silchar in mile 175. The station site was selected by me in company with the Deputy Commissioner, and is the best available; it is close to the river and on fairly high ground, though under the influence of extraordinary floods, but there is no site sufficiently extensive for a station which is beyond

this, and there is very little of Silchar which is not liable to be submerged. In the late high floods some of the houses occupied by Europeans were vacated, and the bazaar was, I believe, generally under water. We have records of a higher flood which occurred fifty years ago, but no reliable data as to its height in the neighbourhood of Silchar, as the country is said then to have been a jungle.

Alternative line by Telyn Tila for extension into the Assam Valley.

38. In my report on the exploration of the North Cachar Hills, I have noted that, if the line is extended into Assam, the best crossing of the Barak is probably at the Telyn Tila, near Baleeghat, about 4 miles from Silchar, and not at Badarpur. Mr. Moore had not time to run an alternative line round this way into Silchar, but there are no difficulties in the ground, and it would take off from the line which has been run near mile 169. In this case the terminus of the Cachar line should be placed at Telyn Tila; and if Silchar is served at all, it would, in my opinion, be sufficiently so by a line laid along an existing road, and worked as a small branch. But if this branch be not made, the trade of Silchar will naturally migrate to Telyn Tila, where also safer sites appear to be available for building.

Drainage crossed light on first portion of division and heavy on latter.

39. On the first section of this division, where the alignment runs parallel with the hills, the amount of waterway required is comparatively small; but, as has been noted under Section II, when it turns east, the drainage passed becomes very heavy, and a number of large streams are crossed.

Country under extraordinary floods.

40. The flood level marked on the section is that of 50 years ago, of which vivid recollections are retained; ordinary high floods, such as occur every three or four years, may be taken at about 5 feet below this, and the late flood generally intermediate between the two. It will be seen that almost the entire section is subject to the influence of the Barak floods. South of Shabazpur the line is protected from the direct set of the flood water by the Patharia range of hills, which terminate on the Kooseeara between Latu and Kurreemgunj, but east of this the full force of the Barak floods is encountered, and the water will sweep along parallel generally to the line. A double action is here seen in the streams which drain into the Barak from the south, the natural direction of the currents being reversed and running up the side valleys as the Barak rises to be resumed as the Barak falls. Large "bils" occupy these side valleys, which are filled by the rise of the Barak, apparently quite as much as by the streams which drain into or through them, and the connections between these "bils" and the Barak partake more of the nature of canals than of regular rivers. In extraordinary floods the country must present the appearance of a huge lake with little except the hills standing out of the water. The velocity with which the water moves cannot be very great, except where it meets with, and is confined to, narrow passages among the hills; for old men have told me that in the flood of fifty years ago, marking an era in their lives to which events are referred, they escaped by building "machans" in their villages, when, if their accounts are to be believed, the water must have been 8 or 10 feet deep. The bulk of the people with the cattle then found refuge on the low hills, which are scattered all over the country, and may be said to render it habitable; for, if they did not exist, the cattle at any rate would be periodically swept away, and agriculture on any scale be impossible. That the floods have no great velocity as a rule is farther proved by the fact that they flow over the tops of the girder bridges without apparently injuring them, and the action of the Barak, already referred to, tends to prevent scour in the beds of its tributaries.

Railway embankment considered with reference to extraordinary floods.

41. Formation has only been kept about a couple of feet above the highest recorded flood, and is probably about as safe with this as with any reasonable amount more, unless that flood be exceeded. It is probable that the waterway allowed is sufficient to permit a fair balance of water on each side of the bank, which will not in that case be subjected to pressure due to a head of water on one side only. If, therefore, the water rise over the top of the bank, it will not do so much damage as might at first be expected. The existing road is frequently submerged, and the water flows freely over the top of it, but it does not appear to suffer any material damage thereby, though of course a railway with its loose ballast would not stand the test so well. Any breach in the line would, however, be a serious matter, as it would interrupt the traffic for a considerable time, for on account of the amount of water lying over the country it would scarcely be possible to put in a temporary diversion, and the only way of getting material to make up the gap would be by running it out from high ground. I should feel inclined, in the first instance, to keep formation just above ordinary high flood level for a short distance at various points near some of the low hills, pitching the bank with stone, and to allow the water in extraordinary floods to pass over the line: such would act as waste weirs and relieve the bridges, while, if any damage were done to the line at such points, it could speedily be made good.

Amount of waterway provided per mile of railway.

42. Between miles 107 and 140 the waterway averages about 30 lineal feet per mile, and from mile 140 to the end of the division about 59 lineal feet, the mean for the whole division, being 45·5 lineal feet per mile; this is less than half that allowed on the second division, but on the latter half of the third division there are a great number of deep-cut channels, and it would be fairer to compare the square feet rather than the lineal feet of waterway. As a matter of fact, the cost of bridgework on the third division amounts to more per mile than on either of the other two divisions.

Terminus of line might be fixed at Badarpur if extension is not made into the Assam Valley.

43. If the idea of extending the line into the Assam Valley be for the present abandoned it might well be a matter for consideration whether it might not be advisable to fix the terminus of the Cachar line either at Kurreemgunj or at the outside at Badarpur until the development of the country justified an advance. Beyond Badarpur the country is comparatively sparsely populated, while it is about the most expensive section of the whole line to construct, and the amount of extra traffic to be got from it is not commensurate with the cost, for it is probable that every particle of tea, for instance, that would be got by taking the line into Silchar would also be got by staying short at Badarpur.

A branch to Fenchugunj will probably be easy and profitable.

44. A branch line from Kalaoora to Fenchugunj, about 15 miles north-north-west on the Kooseeara, should prove profitable, as it would top the centre of Sylhet and the traffic borne on the Kooseeara, and it would not apparently be an expensive line to make steamers make their way to Fenchugunj all the year round.

WATERWAYS.

Calculations for waterways.

45. A peculiar feature of the country generally may be seen from the sections, *viz.*, that the ground falls from the banks of the rivers. In many cases the main channels are not equal to carrying off the full discharge; the result is that a large amount of water breaks over at occasional low points, and spills over the country. As the waterway of the main channels cannot profitably be increased, provision has to be made to pass this spill water where the ground is low, though there may be no regular channel, and we have thus a number of long low bridge openings which go to swell the lineal feet of waterway per mile to what may at first sight appear an exorbitant amount. The Manu at mile 100 in Section II may be taken as an example. Here it will be seen that the waterway of the regular channel cannot profitably be extended, for even in extraordinary floods the water does not top the banks at the line crossing. The Manu has a catchment of 1,026 square miles, which by Colonel Dickens' formula will give a discharge of 149,556 cubic feet per second, but the main channel by calculations derived from cross sections and declivity of bed can only discharge 20,040 cubic feet per second, leaving to be discharged as spill water 129,516 cubic feet per second, if Colonel Dickens' formula were applicable. But from the best data we can get it is not, and for such rivers a co-efficient of 300 instead of 825 multiplied by M $\frac{3}{4}$ is nearer the mark, which will give a total discharge of 54,384 cubic feet per second; this still leaves a large amount, *viz.*, 34,344 cubic feet per second, which passes over the country on each side, and the flood levels given show that a large amount does so pass. We have allowed 9,560 square feet waterway in the spills, which with the above discharge will give a velocity of 3·6 feet per second. If the above be correct when the flood stands at the level shown on the section, the highest of which record was obtained, it travels at a mean velocity of about one foot per second; that it cannot move with any great velocity is abundantly apparent from the ground which shows no signs of erosion, such as it would unmistakeably do if the velocity were great. The lowness of the co-efficient, notwithstanding the heavy rainfall, may be attributed to dense jungle covering considerable portions of the areas holding up the water, to the large numbers of "bils," often choked with rank vegetation, and in parts to the nature of the soil; while it also appears to be greatly affected by the length and configuration of the valleys. The co-efficient varies from 300 for large areas to 550 for small ones. To restrict the waterway to any great extent would throw villages under water which at present stand barely clear, and would besides, of course, necessitate more expensive foundations.

Borings in beds of streams not quite satisfactory.

46. The borings taken have not been quite satisfactory, as, owing to the absence of tubing, they could not be got deep enough. Generally speaking, the foundations appear better on the first two divisions than on the third, where, after passing through a thin stratum of clay, only fine river silt was met with, as far as the tool could be got.

Adoption of larger spans may in some cases be advisable.

47. It is possible that at some of the streams it may be found advisable to use larger spans than those adopted if the foundations are bad, but any such alterations are not likely materially to affect the estimates. The girders have to be kept well up to permit the passage of boats.

STREAMS REGARDED AS FEEDERS TO THE RAILWAY.

Considerations taken into account in fixing station sites.

48. It has already been remarked that station sites have been fixed as closely as possible with reference to streams in order that the railway may reap all the benefits possible from these natural highways of trade. But between Comillah and Shabazpur, a distance of 133 miles, there are only three streams, the Goomtee, the Teetas, and the Manu, which are navigable for any but very small boats for more than six months in the year. During the remaining six months boats can get fairly close to all the stations. The traffic on the Goomtee will of course go to the Comillah station on the Chittagong section; the Teetas will be served by the station at Akhaoorah, and the Manu by that at Telagaon. Between Shabazpur and Silchar all the stations are close to the Barak or its arms, the Boglia and Kooseeara, which are navigable all the year round by boats, though steamers can only get above Fenchugunj or Chatak during the rains. Most of the side streams, however, run nearly dry.

Feeder roads desirable.

49. From what has been said it will be seen that, in order that the country may reap the full benefits of the railway, it will be necessary to make feeder roads to most of the stations. An unmetalled road running from Comillah towards Brahmanbarea on the Teetas, and generally close to the line, will be useful, but the country generally is singularly destitute of roads, and trade on any considerable scale must come to a stand for half the year in those districts which are not near rivers navigable all the year round. It may be said that all the portion of Sylhet traversed by the railway as far as Shabazpur, with the exception of a narrow belt within reach of the Manu, is in this predicament. The next largest river to the Manu on this section, *viz.*, the Khawhee, had not more than 15 inches depth of water at Lashkarpur when I crossed it in the beginning of December, and only small boats lightly laden could get along; while in none of the other streams was anything larger than a dug-out to be seen in motion. The result must be that the bulk of the crops maturing in the cold weather are kept back from the market for weeks, or even months, to the loss of the cultivators.

FINANCIAL PROSPECTS.

No data available on which to base trustworthy estimates of goods traffic.

50. No data available on which to base any reliable estimate of the goods traffic that may be expected. The exports and imports of the Surma Valley are registered at Bhairab Bazaar on the Megna, and practically all the foreign trade of Sylhet and Cachar, as far as it is necessary to consider it with reference to the railway, is carried by water past this point; but the returns treat of the trade of the Surma Valley as a whole, and do not show how much is due to the country south of the Barak traversed, and more especially affected by the railway. An approximation might possibly be arrived at by taking the proportions of population and area of cultivated land, but this would apply only to Sylhet and Cachar, and would not include Tipperah, the trade of which is not registered, and therefore such calculations would not help much in forming an estimate of the total goods traffic. As a proof of how purely conjectural such an estimate would be, some figures from two notes on the Chittagong-Daudkandi project—the one prepared by Mr. Hœrnle, Officiating Assistant Secretary to the Government of Bengal, Public Works Department, and the other by Mr. Warden, Assistant Director of Railways, North-Eastern System, and in each of which an attempt is made to estimate the probable goods traffic during twelve months on that section—may be quoted:—

	Mr. Hœrnle's estimate.	Mr. Warden's estimate.
	Rs.	Rs.
Rice	5,28,000	3,01,297
Jute	60,000	4,05,917
Local goods	5,00,500	65,000

Mr. Toynbee, late Magistrate and Collector of Tipperah, was of opinion that, owing to the absence of trustworthy data, any calculations must be simple speculations. I shall not in face of the above venture to work out any results which I can only offer as a speculation, and which therefore cannot have more value than if I fix off-hand a certain percentage of dividend.

Bengal Government estimate of dividend from Chittagong-Daudkandi line, and deductions therefrom.

51. In the Bengal Administration Report on Railways for 1881-82, page 14, it is stated that after careful investigation it is estimated that a line from Chittagong to Daudkandi will pay a dividend of 10 per cent. In Mr. Warden's note quoted above a dividend of 7¼ per cent. is worked out, taking working expenses at 60 per cent. of the gross earnings, and of 9 per cent., taking working expenses at 50 per cent.; and Mr. Warden states that the latter figure may safely be assumed if the Chittagong-Daudkandi line is worked in connection with that from Naraingunj to Mymensingh, which line, I may mention, is now under construction. Working expenses on the larger scheme from Chittagong to Cachar may reasonably be expected not to exceed 50 per cent. It will therefore be safe to say that if the Chittagong-Comillah Section, with branch to Chandpur, can be taken to yield a dividend of 9 per cent., the extension between Comillah and Cachar will not yield less than 6 per cent.; and in fact, looking at the richness of the country alone and the well-to-do condition of the people, I have no hesitation in venturing the assertion that, irrespective of the correctness or incorrectness of the estimate of 9 per cent. for the Chittagong-Comillah line, the section between Comillah and Cachar is sure to return 6 per cent. within 3 or 4 years at the outside of the opening.

Comillah to Akhaoora Section will probably pay as well as section south of Comillah.

52. I can see no reason why the section from Comillah to Akhaoora should not pay as well as that south of Comillah. The country traversed is rich and populous, and a large trade may be expected from the tracts drained by the Teetas, even if my expectation be not verified that traffic will find its way up the Teetas to Akhaoora from the districts west of the Megna.

Population of districts served by the railway.

53. The population of Tipperah by the census of 1881 was 610 to the square mile, while that of the three sub-divisions of Sylhet through which the railway passes, *viz.*, Habigunj, South Sylhet, and Kurreemgunj, was 400, and the south-western angle of Sylhet as far as Daragaon bears a population of 750 to 800 to the square mile of cultivated area. The total population of Sylhet by the last census was 1,969,009, of which the three sub-divisions noted above contained 1,139,687. Cachar is a comparatively new country, but it has much rich soil lying waste, and the effect of the railway must be greatly to hasten the growth of population. The people throughout appear well-to-do, and they are said not to be wanting in enterprise, and in consequence a very large passenger traffic may confidently be expected, which the demand of the tea gardens for labor will increase.

Prospects of passenger traffic.

54. The Officiating Deputy Commissioner of Sylhet has prepared a note on the prospects of the railway, as far as his district more particularly is concerned, to which I would refer. He states that the boat journey from Cachar to Goalundo at present occupies about 20 days, and that it costs from Rs. 4 to 5 per head, while the return journey takes much longer, and I presume costs more. The railway supplemented by steamer ferry will be able to take passengers from Silchar and land them at Goalundo or *vice versâ* for Rs. 5 per head in less than 30 hours. Such facilities for travel as the railway then will afford will give a vitality to the country which it is impossible to estimate, and the tedious boat journey will at once become a thing of the past.

Articles which will probably form the bulk of the goods traffic.

55. The articles of export which will probably form the bulk of the down railway traffic are tea, paddy, and, chiefly from Tipperah, jute; while the up traffic will consist mainly of European piece-goods, oils, sugar, tobacco, salt, and garden stores generally.

Rice.

56. The Officiating Deputy Commissioner of Sylhet calculates (see Appendix A to his note) that there are 69,00,186 maunds of agricultural produce available yearly for export from his district, but the returns from Bhairab Bazaar do not show anything approaching this quantity as actually exported. Paddy constitutes the chief item under this head, but the quantity of this annually exported varies enormously, depending, of course, on the

state of the markets. In 1880-81 the total export of paddy from the Surma Valley amounted to only 1,63,260 maunds; in 1881-82 it rose to 10,51,860 maunds, and in 1882-83 to 24,94,025 maunds; but throughout 1880-81 and the first four months of 1881-82 rice was cheaper in Dacca than in Sylhet, and there was therefore naturally no export in that direction, but with a reversion in rates, due to an abundant harvest in Sylhet, a large export business set in. The above will help to show how difficult it must be to frame an estimate, even where there are some data to go upon, which shall possess any real value, while were the data better than they actually are, the railway will place the districts which it will traverse in so much better a position for getting their produce to market that a very considerable allowance might safely be made for increase in the traffic. The effect of the establishment of railway communication with the port of Chittagong will no doubt be to create a large and probably steady export trade in that direction both from Tipperah and Sylhet. The Commissioner of Chittagong in his No. 117 Ct., dated the 11th February 1882, to the Secretary to the Government of Bengal, Public Works Department, states his belief that, with the steady flow of traffic which the railway will produce, mills for husking rice will be established in Chittagong, which by doing thoroughly what is at present badly done in the villages will fit the grain for the home market, and thereby add greatly to the export trade of the port in this commodity. Comparing the quotations for rice in Rangoon and Tipperah published in the *Gazette of India* during the last twelve months, it would appear that a large and profitable trade may be done through Chittagong, and on my march I found the same prices ruling in South Sylhet as in Tipperah; but as Cachar was approached the prices rose, and there will be a point in Sylhet where it will probably be as profitable, if not more so, to export to Cachar instead of to Chittagong. There is also a large and steady demand for rice in Upper Assam, which, if the Cachar Railway were extended, would in all probability be best met from Sylhet and Tipperah.

Tea.

57. In my Cachar Hills report I have noticed the difficulty there is in determining what amount of tea will be taken by the railway, and the same difficulty meets one here. As regards consignments to Calcutta, to which the bulk of the tea will at first continue to go, it may be noted that the rate of freight by steamer is one rupee a maund from Cachar. On the Northern Bengal Railway the through rate from Siliguri to Damukdia is 15 annas a maund; the distance is less than that from Silchar to Chandpur, which may be taken at 223 miles; but the above includes apparently the ferry charge at Damukdia. At any such rate the railway would have no chance; but if a mean through rate of, say, nine annas a maund between Cachar and Chandpur were established (equal to 0·5 pie per maund of tea per mile), and thence an additional one of seven annas by steamer direct to Calcutta, it is very probable that the steamers would be driven out of the field above Chandpur for the Cachar trade; for though the through rate of carriage would not be less than it is at present, the time occupied in transit would be considerably reduced, while the service would be regular and could be depended on. Through Chittagong the railway will be able to supply the markets in Sylhet and Cachar with some of the chief items of import at a lower rate than the steamers can, either through Calcutta or Naraingunj; and if the latter are deprived of a large proportion of their upward freight, they will not be in a position to lower their rates for the downward, which consists in a large measure of tea. I have no doubt that the railway will get all the tea produced in South Sylhet, whether this be consigned to Calcutta or Chittagong, though as yet it bears but a small proportion to that produced in Cachar; but, as I have already noticed, the cultivation is extending in this quarter, and will do so more rapidly with a railway.

The produce of the gardens, which is consigned direct to agents abroad, will doubtless pass along the railway and through Chittagong; if a half pie per maund rate be adopted, it will be carried through from Cachar to Chittagong for eleven annas a maund. The fact that tea can be carried to Chittagong at a lower rate than to Calcutta and without any transhipment, combined with the other fact that Chittagong is the cheaper port, will probably in course of time force the trade into that route, notwithstanding the opposition of those interested in preventing it.

Oilseeds and Sugarcane.

58. Oilseeds and sugarcane appear to be cultivated pretty extensively in South Sylhet, but they do not make any figure among the exports of the district. As the soil, however, seems well suited for their growth, it is probable that with ready access to a market—for these are crops which come to maturity when the rivers are dry—the cultivation will extend, and that in course of time they will form considerable items in the traffic returns.

Cotton Piece-goods.

59. Cotton piece-goods imported into the Surma Valley are now almost exclusively carried by steamer. During 1881-82 only about 12 per cent. of the total import under this

head was carried by country boat; and as the steamers cannot reach the populous tracts of Tipperah and South Sylhet which the railway will traverse, it appears certain that these will be supplied by the railway. For the reason also that steamers cannot get above Fenchugunj on the Kooseeara and Chatack on the Surma except during the rains, the requirements of North-East Sylhet and Cachar will be met for the most part also by the railway.

Oil.

60. Kerosine oil forms quite a considerable item among the imports into this part of the country: being burned to the exclusion of the ordinary vegetable oils, it is found for sale in every petty bazaar, while heaps of small tin lamps form a conspicuous feature in many a village shop.

Sugar, Tobacco, and Salt.

61. Sugar and tobacco figure largely among the imports into the Surma Valley, the first chiefly in the form of *gur*. Salt to meet the wants not only of the people of the districts traversed by the railway, but also of the bulk of Sylhet, will, no doubt, come through Chittagong and be conveyed by the railway to different stations, whence it will be distributed by boats. At present the Naraingunj market, through which Sylhet and Cacher appear chiefly to draw their supplies, is largely supplied from that quarter, and the drawback in the navigation has already been noticed.

Miscellaneous goods.

62. In addition to the above, there will be a large miscellaneous traffic, among which gram and pulse, which figure among the imports into the Surma Valley during 1882-83 for nearly 9,000 tons, may hold a conspicuous place.

Reasons for the Railway paying.

63. I think enough has been said to show without figures that the railway is bound to pay: it cannot do otherwise, passing as it does for the greater part of its course through such a wealthy and populous country, badly furnished with the means of communications for six months of the year, and in which at all times journeying is tedious, where in other parts rich waste lands invite population, and the valuable tea industry creates special demands and encourages trade. Every one who has passed through the country will, I am confident, endorse this opinion.

Percentage net profits on line from Chittagong to Silchar.

64. The length of line from Chittagong to Comillah is, I understand, 98 miles, and of the branch from Leksham to Chandpur 31 miles—total 129 miles. If the net profit on the capital outlay on this mileage be taken at 9 per cent., and on the 175 miles, say, of the section from Comillah to Silchar at 6 per cent., the mean net profit will be 7·27 per cent.; but it must be remarked that in Mr. Warden's calculations no allowance is made for any extension of the line north of Comillah, which, of course, will have the effect of throwing a much heavier traffic over the scheme with which he was dealing than he took into account.

Effects of extension into the Assam Valley considered.

65. Allowing, however, the above figures to stand, it becomes interesting to enquire what will be the effect upon them of an extension of the line into the Assam Valley.

I am now in a better position to calculate this than I was when I wrote the report on the North Cacher Hills Exploration, as the estimate for the Comillah-Cachar Section is now ready, and I must base my calculations upon this, as I do not know how much the section south of Comillah is, as the result of the late surveys, estimated to cost. It is probable, however, that the figure so arrived at may be extended without any material alteration to the whole.

Taking the same tonnage adopted in my calculations for estimate of goods ton mileage at page 16 in the Report on the Exploration of the North Cachar Hills, and eliminating those items which will not probably add anything to the traffic, I arrive at the following estimate of the additional traffic which during twelve months will be thrown on to the Comillah-Cachar Section through its connection with Assam :—

Goods traffic.	Up. Tons.	Up. Miles.	Ton miles.	Total.
European twist and piece-goods ...	500	171	85,500	
Rice	12,000	130	1,560,000	
Metals	1,000	171	171,000	
Provisions	200	171	34,200	
Salt	7,000	171	1,197,000	
Sundries	1,000	171	171,000	32,18,700
Down.				
Rubber	150	171	25,650	
Lac (stick)	500	171	85,500	
Mustard and rapeseed	15,000	171	2,565,000	
Tea	3,500	171	598,500	
Coal	1,000	30	30,000	
Sundries	1,000	171	171,000	3,475,650
Total ...	...	...	...	6,694,350

The above at 11 pies per ton per mile will yield Rs. 3,83,530.

Additional coaching gross receipts taken at Rs. 15 per mile per week, which, as this will be the main passenger route between Upper Assam and Calcutta, does not seem too much to allow on 175 miles, will amount to Rs. 1,36,500, and the total of the two to Rs. 5,20,030. If working expenses be taken at 50 per cent., the net return will be Rs. 2,60,015, which on a capital outlay for the 175 miles of Rs. 1,40,58,349 will yield a net profit of 1·85 per cent.: this added to 6 per cent. will raise the net profit on the section to 7·85 per cent.

In the report on the North Cachar Hills Exploration, page 17, I showed a net profit of 1·74 per cent. on a capital outlay of Rs. 3,97,90,000 for 433 miles of railway between Badarpur, Dibrugarh, and Gauhati, making no allowance for local goods traffic or carriage of coal for the Chittagong-Cachar line. Allowing for these, it does not seem too much to anticipate a net profit of 2·75 for that section, and we shall have, if the above be accepted, the following results for the working of the line from Comillah to Dibrugarh with branch to Gauhati :—

Badarpur to Dibrugarh and Gauhati ...	433	miles at	2·75 per cent.
Comillah to Cachar	175	„ at	7·85 „
Total ...	608	miles =	4·22 per cent. mean net profit.

If the section south of Comillah be included, and 1·85 be added to the net profit of 9 per cent. estimated to be earned thereon, we have—

Chittagong to Comillah and Chandpur ...	129	miles at	10·85 per cent.
Comillah to Cachar	175	„	7·85 „
Badarpur to Dibrugarh and Gauhati ...	433	„	2·75 „
Total ...	737	miles =	5·38 per cent. mean net profit.

Remembering that 9 per cent. is the lowest estimate of the Bengal Government (that I have seen at any rate) for the section south of Comillah with working expenses taken at 50 per cent. of the gross earnings, and that, as I have already remarked, the effects of the extension of the line north of Comillah were not considered in arriving at that percentage, the above estimate would appear to be within rather than over the mark; and I also consider the estimate of the probable additional traffic to be derived by the Cachar line from its connection with the Assam as a moderate one, for it is based on present trade returns, and makes no large account for carriage of tea.

Assam and Bengal Sections considered separately.

66. It may be useful to separate the section of line within the province of Assam from that in Bengal, and to show, on the above data, approximately the results of the working of each.

Assam Section.

Of the Comillah-Cachar line, 135 miles nearly out of 175 are within the province of Assam. Taking, then, the same items and same tonnage of goods traffic as have been adopted in paragraph 65, but multiplying by 131 instead of 171 miles, the result is a total of 5,512,350 ton miles, which at 11 pies per ton mile will yield a gross return of Rs. 3,15,812. Coaching on 135 miles at Rs. 15 per mile per week will yield Rs. 1,05,300: total gross earnings will then be Rs. 4,21,112, or total net earnings, allowing 50 per cent. for working expenses, Rs. 2,10,556. This on a capital outlay of Rs. 1,12,46,407 for the 135 miles in question gives a net profit of 1·87 per cent. to be added to 6 per cent., and we then have for the whole system of railways within the province of Assam the following results :—

	433	miles at	2·75 per cent.
	135	„	7·87 „
Total ...	568	miles =	3·97 per cent. mean net profit.

Bengal Section.

67. The length of the system in Bengal is 169 miles, but for the reason, already noted, that I am ignorant of the estimated cost of the portion south of Comillah, I can only base a calculation of the probable addition to the net profit on these 169 miles due to the connection with Assam on the 40 miles in Tipperah north of Comillah, the estimated cost of which I know. For these 40 miles I get a total of 1,194,000 ton miles, rice and coal being omitted, as they are not estimated to be carried over this section, which at 11 pies per ton mile will give Rs. 68,406 gross earnings; coaching at Rs. 15 per mile per week will give Rs. 31,200; total gross earnings will then be Rs. 99,606, and net earnings, after deducting 50 per cent. for working expenses, Rs. 49,803, which on a capital outlay of Rs. 28,11,942 represents 1·77 per cent., and the results of the working of the Bengal Section will then stand as follows :—

	40	miles at	7·77 per cent.
	129	„	10·77 „
Total ...	169	miles =	10·06 per cent.

Were the estimate for the total cost of the line south of Comillah the same per mile as that for the 40 miles north, the addition of 1·77 per cent. would be slightly in excess, as the bulk of the passenger traffic with Assam will pass through Chandpur, that is, over 88 miles, and not over the whole section.

Working expenses reduced by the connection of the Assam Valley and Cachar.

68. As regards working expenses, which have been taken at 50 per cent. of the gross earnings, it must be remarked that, if the Chittagong-Cachar line can be worked for this when unconnected with the Assam line, the effect of the connection will be to still farther lower the percentage, chiefly by the supply of cheaper fuel, but also in some measure by the economy due to the working of a larger system under one management.

Working results from lines in Assam not connected by a line across the North Cachar Hills compared with the previous.

69. The working results of railways within the province of Assam, supposing the Assam Valley line not to be connected with the Cachar line, may now be investigated and compared with the above. In the report on the North Cachar Hills Exploration (page 18), I have given my opinion that the Assam Valley line without such connection would not return a dividend of more than 1·5 per cent. The distance from Dibrugarh to the left bank of the Brahmaputra opposite Dhubri is 389 miles by the Trunk Road, and we should then have 389 miles line in Assam Valley at 1·5 per cent., 135 miles line in Cachar at 6·00 per cent., giving a total of 524 miles of line yielding a mean net profit of 2·66 per cent. on the capital outlay. If the Assam Valley line follows the Dimapur Valley route, the results will be as follows :—

	441	miles at	1·5 per cent.
	135	„	6·0 „
Total ..	576	miles =	2·56 per cent. mean net profit.

If the line be not carried below Gauhati, the following figures show the result :—

By Trunk Road.

	267	miles at	1·5 per cent.
	135	„	6·0 „
Total ...	402	miles =	3·01 per cent.

By Dimapur Valley.

	319	miles at	1·5 per cent.
	135	„	6·0 „
Total ...	454	miles =	2·84 per cent.

These results are to be compared with 568 miles yielding 3·97 per cent. in paragraph 66, never losing sight at the same time of the other advantages of that scheme, both political and economical, which have not been reduced, and some of which cannot be reduced to figures, but which have in various places been urged.

Note on Estimate.

The total length of line from Comillah to Silchar is 174·8 miles, the total estimated cost of which, including indirect charges, amounts to Rs. 1,40,58,349, which gives a rate of Rs. 80,425 per mile. Excluding indirect charges, the total estimate is Rs. 1,33,88,904, and the rate per mile Rs. 76,596.

Preliminary Expenses.

2. The estimate for this, at the rate of Rs. 1,000 per mile, is based on the assumption that the work done this season is sufficient if construction is put in hand within a year or two

Land.

3. This is taken at a mean rate of Rs. 100 per acre throughout—a rate given by Mr. Luttman-Johnson, the late Deputy Commissioner of Sylhet.

Earthwork.

4. The width of formation both in banks and cuttings has been made 16 feet. I have thought it advisable in a country with such a heavy rainfall to keep formation wide in banks, but no increase has been made in cuttings, the material of which is good. The slopes of banks are taken at 2 to 1, and of cuttings at from 1 to 1 to 2 to 1. The rates vary on the three divisions, being determined chiefly by the mean height and depth of banks and cuttings, and they include turfing. The rate on the second division may appear too low to cover the cost of the heavy cuttings, but the quantities in these cuttings have been taken out full, whereas a large amount will be led out into bank, so that in execution, though the rate per 1,000 cubic feet may be exceeded, there will appear a saving in the total quantity of work and in the value. It is hoped that these cuttings will yield some laterite which will go to reduce the ballast estimate.

Bridges.

5. With trivial exceptions, these consist of girders resting on brickwork. At the Cachar end especially the severe earthquakes which are sometimes experienced render the adoption of arching objectionable. Good clay can be got, and wood fuel is abundant on the ranges of low hills. It is possible that in some places we may get block laterite.

Level Crossings.

6. This is a small item. The number of level crossings is rather under the average of most lines if turn still be omitted. A large number of the bridge openings can be used as under-crossings.

Fencing.

7. Wire fencing on iron standards has been estimated for right through, with the exception of in the crossings of the low ranges of hills in the second division.

Ballast.

8. Burnt clay ballast is provided for on the first two divisions, and laterite on the third. The hills on the second division may yield some laterite, but little is visible.

Permanent-way.

9. The estimate provides for 41½ lbs. steel rails on transverse wooden sleepers, and is based on the supposition that all the rails and fastenings will come through Chittagong, and that the permanent-way will be laid telescopically.

Stations and Offices.

10. These do not call for any special remark beyond that, on account of the country being flooded during the rains, station sites frequently fall in high banks, and the cost of all buildings is considerably increased.

Workshops and Stores.

11. The Engineer-in-Chief of the Chittagong-Comillah line has provided Rs. 4,00,000 in his estimate for workshops at Chittagong, and it is estimated that another two lakhs of rupees will fit them for the work of the whole line to Cachar. If the Comillah-Cachar Section were debited with its proper share in proportion to the mileage, the rate per mile would be increased by a farther sum of Rs. 800, and the Chittagong-Comillah estimate be relieved of a corresponding charge. The effect of this then would be to raise the total rate per mile of the estimate, excluding Indirect Charges, from Rs. 76,596 to Rs. 77,396.

Staff Quarters.

12. No provision has been made in this estimate for quarters and offices for the Manager, Engineer, and Locomotive and Traffic Superintendents, which, it is presumed, will be at Chittagong; but quarters have been provided at Srimangal and Silchar for Locomotive Foremen and District Traffic Superintendents.

Station Machinery.

13. Engine sheds are provided at Srimangal and Silchar. The estimates give all details.

Plant.

14. The rate for this has been taken from that allowed on the Dacca-Mymensing line.

Rolling Stock.

15. The provision of Rs. 9,000 per mile should suffice.

Establishment.

16. This has been taken at 10 per cent. on all items except rolling stock and permanent-way.

Abstract of estimate of cost 174·8 miles.

Items.	Cost per mile of line.	Total of items.	Total of main heads.	Remarks.

J. W. BUYERS, M.I.C.E.,

Engineer-in-Chief, Assam Railway Surveys.

Note by Guilford Molesworth, Esq., dated 20th October 1883.

The general direction of the proposed railway from Comillah to Silchar is determined to a very great extent by the ranges of low hills which have to be rounded, but Mr. Buyers appears to have obtained a very good line of railway involving difficult works only in a few places where some of these small ranges have to be crossed, and in the approach to Silchar.

The line will, however, be expensive, owing to the necessity for keeping above flood level, which is some feet over the surface of the ground almost

The large allowance necessary for waterways also adds considerably to the cost. The total length from Comillah to Silchar is 175 miles, and the probable cost per mile is estimated as follows:—

	Rs.
Preliminary Expenses	1,000
Land	2,588
Earthwork	11,172
Minor bridges	3,303
Large „	8,357
Level-crossings, &c.	319
Fencing	1,934
Ballast	4,779
Permanent-way	18,131
Stations and Offices	3,523
Workshops	1,200
Staff quarters	2,384
Station machinery	2,209
Plant	2,200
Rolling stock	9,000
Establishment	4,497
Total ...	76,596

The principal rates on which these estimates have been based are—

Land	Rs. 100 per acre.
Earthwork	„ 6-8 to 7-8 per 1,000 feet.
Concrete	„ 28 per 100 feet.
Brickwork	„ 40 „ 100 „
Ditto in walls	„ 45 „ 100 „
Ditto in arching ...	„ 50 „ 100 „
Well sinking	„ 8 to 12 per lineal foot.
Ballast	„ 9-8 per 100 feet.
Timber	„ 4-8 „ cubic foot.
Sleepers	„ 3-4 each.
Girder work	„ 250 to 320 per ton.

The rate for earthwork appears to be high.

The rates for concrete and ballast also appear to be high; the other rates appear to be reasonable.

The cost of workshops appears to be underestimated, and it will probably be necessary to add Rs. 1,200 per mile to the estimate under this head; the amount of Rs. 9,000 per mile estimated for rolling stock will probably not be required for the first opening of the line, though it may be required after the line has been opened for traffic for some time; for a commencement, however, I think the Rs. 7,000 per mile should suffice.

The alignment throughout seems to have been carefully considered, and with good results. It is not quite apparent, however, why so sudden a curve has been made in the line where it crosses the Goomptee River.

I have marked on the plan in pencil two alternative lines which would appear to be more direct, and which might be considered with the view of ascertaining whether there are any local objections to the adoption of one of them.

At the 23rd mile there seems to be no necessity for a curve. I have marked a line in pencil on plan which might possibly be worth consideration.

Some very rugged country is passed between miles 73 and 77, between miles 84½ and 90, and between miles 135 and 140, and it will probably be possible [illegible]

great reduction cannot be expected; the deepest cutting in these points is somewhat more than 60 feet, but the material will probably be soft and inexpensive.

I approve of the suggestion of Mr. Buyers to keep the formation in the first instance just above ordinary flood level for a short distance at various points near some of the low hills; pitching the banks with stone, and to allow the water in extraordinary floods to pass over the line so as to act as waste weirs and relieve the bridges.

If any damage were done to the line at such points, it would be speedily made good again. In such cases I think it would be desirable to use heavy cast-iron sleepers. The question of providing sufficient waterway is, on account of the irregularity of the spills of the rivers, a very difficult one.

I think it possible that in the 3rd Division some of the curves may be avoided by keeping so closely to the trunk road, and if the ground will permit of it, it would appear that a continuation of the straight line at mile 174 would be preferable as giving a straight run into the terminus, and at the same time avoiding expensive house and garden property.

The bridge drawings may be accepted for the purposes of the *estimate*, but before the bridges are absolutely constructed, it will be necessary to reconsider carefully the question of the spans in each case so as to determine the economic ratio of superstructure to pier, and this cannot be done until the depth of foundations has been determined in each case by boring. I think it very probable that in some cases, especially in the Goomptee River, it will be desirable to increase the spans.

I think also at the Goomptee, the number of spans should be increased so as to afford more waterway. I think it will probably be necessary to protect some of the bridges with loose stone. I do not quite approve of the return walls shewn in some of the designs; they are expensive, and the pressure of the earth between them, as well as the surcharge of the trains, is apt to burst them.

I should prefer in such cases to adopt either splayed wing or return walls, hollow and closed above with arching or corbelling; for the purposes of estimate, however, the drawings will suffice.

Taking everything into consideration, the high rates in some instances, and the reduction that may be made at the first opening in the item of rolling stock, and allowing for some addition for workshops, I am of opinion that the line ought to be constructed for about Rs. 72,000 per mile exclusive of the indirect charges, making a total of say 126 lakhs of rupees for the length of 175 miles between Comillah and Silchar.

Between the 65th and 93rd mile, I think it would be desirable, if possible, to arrange a redistribution of the stations, so as to have the passing places somewhat nearer together, also between the 101st and 125th mile.

Extract from a Note by G. L. Molesworth, Esq., dated 24th October 1883.

The report of Mr. Buyers on the exploration of the North Cachar Hills is very satisfactory; it shows beyond a doubt that these hills may be surmounted at a reasonable elevation about the level of the adjacent plains, and that there are no serious engineering obstacles to the construction of a railway through these hills which will give a very direct line into Assam. From an exploration of this kind, however, it would be premature to give any decided opinion on the estimate until the detailed survey has been further advanced; there is, however, sufficient ground for pushing forward with the surveys and sections of the line that has been explored. Two crossings of the river Barak have been suggested—one at Badarpur and the other at Telyn Tila; the latter appears to have some advantages in an engineering point of view, but the saving should be very marked, to weigh against the shortening of the railway as a through line by the adoption of the Badarpur crossing. The advantages of the Telyn Tila crossing appear moreover to be neutralized to a certain extent

by the necessity for an expensive crossing of the Jutingi River which the Badarpur crossing avoids. I lean therefore to a preference of the Badarpur crossing.

After passing through the Cachar Hills, it would be well to consider whether a route which I have roughly indicated in blue on the map might not, with advantage, be taken.

This line would cross the Dhansari River a little to the north of Dimapur; and if the map be correct, would keep on a water-shed avoiding a number of streams which flow from the hills situated on the north-west of Dimapur.

This line would serve impartially both sides of the valley; and, judging by the configuration of the map, this valley must contain excellent sites for tea plantations which would probably be developed by the construction of a railway through the valley.

Enclosure No. 4 to P. W. D. Resolution No. 59 R. C. of 1884.

	Total ...	...	...	558	...	4,97,90,000	

Note.—In all the above I have assumed the rate for the sections of line in the plains at Rs. 80,000 per mile, with the exception of the section from Mymensing to Shushang, Durgapur, which I have taken at Rs. 1,00,000 per mile, Colonel Lindsay's estimate. In my Garo Hills report, I took the same at Rs. 70,000 per mile, but when I wrote it, I was ignorant that a survey had been made for a line from Goalpara to Gauhati along the trunk road generally, and that the estimate for this was Rs. 81,000 per mile. The Dacca-Mymensing line, which passes through an easy country, is also estimated to cost about the same per mile, so that it is not safe to assume less than Rs. 80,000.

J. W. BUYERS,
Engineer-in-Chief.

Enclosure No. 5 to P. W. D. Resolution No. 59 R. C. of 1884.

No. 4338 R., dated 11th December 1883.

From—The Secy. to the Govt. of Bengal, P. W. Dept.,

To—The Secretary to the Government of India, P. W. Dept.

In forwarding herewith the estimate for the Chittagong State Railway between Chittagong and Chandpore with branch to Comillah, together with note thereon and report by Mr. Bell, Engineer-in-Chief, I am directed to state that the Lieutenant-Governor suggests that publicity be given to the project by the publication of the papers.

Mr. Rivers Thompson visited Chandpore and Comillah during a recent tour, and found that the people of the Tipperah and Noakhally districts, where traffic is now limited to very difficult water communication, are extremely desirous for the construction of this line of railway, and the connection of their districts with the seaport of Chittagong. Further, the Lieutenant-Governor is of opinion that the interests of that port, which is very rapidly developing, are very closely connected with the completion of this line.

I am to state that certain important points require further investigation, such as the location of the line across the Fenny river, and the alternative route down the Huldah valley, as both the Commissioner of the Division and Mr. Rennie, the Executive Engineer who carried out the survey of the present line, are strong advocates for the change; though Mr. Bell is doubtful whether the Huldah valley route should be adopted.

The estimate now submitted, though requiring several minor alterations, may be accepted as fairly correct; it amounts to Rs. 1,12,27,802, the length of the line being 128½ miles; the mileage cost is therefore Rs. 87,335.

The traffic prospects of the line will not be affected by the change in the direction from Daudkandy to Chandpore, and as the Financial Department of this Government when reviewing the project showed that a return of 10 per cent. on the capital outlay of Rs. 92,15,000, as originally estimated for the line to Daudkandy, might be expected, a return of not less than 8 per cent. may be fairly anticipated on the capital of the altered line.

CHITTAGONG STATE RAILWAY.

REPORT BY ENGINEER-IN-CHIEF.

Character of the project.

1. Instructions were received by me early in December last (1882) to start a party at once on the survey and final location of a line of railway from Doudkandy, on the Megna, through Comillah, to Chittagong, and Mr. W. C. Rennie was appointed as the Executive Engineer in charge of the party. As I had some reason to doubt the suitability of Doudkandy as the northern terminus, Mr. Rennie was directed to proceed to Chittagong and start a general survey of that place and the vicinity, so as to enable me to fix on the site for the terminus there. Mr. Rennie reached Chittagong on the 17th December, showing great energy and zeal in getting together the many things required for a survey party. I reached Chittagong *viâ* the Megna river from Dacca on the 3rd January, and having determined the starting point, work was commenced forthwith, and carried on with unusual vigour, the whole being satisfactorily completed by the middle of April. Leaving Chittagong, I went up to Doudkandy, and after examining the river and making local enquiry, I arrived at the conclusion that the channel up to Doudkandy is now silting up, and that it could not be depended on much longer for the class of boat or steamer that we should expect to see at a railway terminus. I then examined the river down stream for any other suitable point, and eventually decided on recommending Chandpore on the main stream of the Megna and at the mouth of the small river Dakateea. I proposed to run the line from there to Laksham, and join there into the line between Chittagong and Comillah. This was approved by the Director General of Railways, and this is the project for which an estimate is herewith submitted. The total length of line is 128½ miles. I may mention that at the same time a survey was started under Mr. J. W. Buyers, for a line from Comillah through Cachar into Assam, and this also has, I understand, been completed this season.

Chandpore.

2. The position of Chandpore for the terminus, on the Megna, appears likely to be very advantageous. It is close to the junction of the Pudda and Megna rivers, and so near to the route of the existing steamer service between Dacca and Goalundo, that a detour of about half an hour in time will enable steamers to call there and take up and drop passengers for Chittagong or Cachar. Had Doudkandy been adopted as the terminus, a separate service would have

been necessary from Naraingunge, and have involved considerable delay to passengers going either north or south. There was no apparent or, indeed, actual reason for going to Doudkandy other than that the high road ended there on the river. The place itself is quite insignificant, and has no trade at all. On the other hand, Chandpore is a busy growing place, doing already a fair business in rice, jute, and betelnuts, and on the Dakateea river there are two well-known "hâts," *viz.*, Hazigunge and Chitosee. The ground at Chandpore is low, and much of it is flooded for some two or three feet in the height of the rains, but this is the case with any place on the river between Naraingunge and the sea. The village sites are all raised artificially.

Details of the survey.

3. Between Chittagong and Chandpore, the line has been staked out and lockspitted for the whole distance; pegs being put in at distances of 500 feet apart, and every alternate peg (*viz.*, at the 1,000 feet) being built in with brickwork forming a bench mark. Between Laksham and Comillah, 17 miles, as time would not allow of more, a trial section only has been run alongside the road; but as the line cannot well deviate to any great extent from the vicinity of the road, the section given may be assumed to be quite accurate enough for the purposes of an estimate. As will be seen from the data given at the end of the estimate, the line consists of long straight lines joined by curves of large radius. The line is graded level for a very large proportion of the whole distance, but the grade of 1 in 300, which has been taken for approaches to bridges, may in one or two instances be considered long enough to constitute the ruling grade of the line for loads. The tangent points, intersections of tangents, and centres of curves, have been well defined with pegs and masonry pillars.

Description of the line.

4. The country traversed by the line may be considered to be flooded more or less for its whole extent in the rainy season, and for this reason, and on account of the necessity of providing headway for boat-traffic at nearly all bridges, the bank averages throughout about seven feet in height. The bridging is consequently costly, and the line is by no means a cheap one, the cost per mile coming out with indirect charges to Rs. 87,335. The terminal or general station at Chittagong has been placed (near the top of the Madun Bari road), so as to serve both the town and civil station, and to allow, if needed hereafter, an extension to Akyab. A branch line has been provided down to the port sites for staff quarters, and shops will be found on and at the base of the low hills near the station. Leaving Chittagong, the line passes for the whole distance up to the Fenny river through a densely-populated strip between the hills and the sea. The people are congregated in homesteads surrounded by a thick growth of palms and by innumerable tanks. There are no well-defined village centres. After crossing the Fenny river the country is rather more open all the way to Laksham, but the country is fully cultivated, being almost one great sheet of rice-fields. Laksham, which is on the Dakateea river, is a thriving village which, when the railway is made, will become a very important centre for the rice trade. From Laksham to Chandpore the line follows the Dakateea river, passing through a very rich and populous country, and through Hazigunge, a well-known mart for rice and betelnuts. Between Laksham and Comillah the country is fairly open. At Bagmara it crosses the Dakateea river, and will there, where a station has been placed, get a good traffic from the north-east of the Tipperah district. Many important navigable "khals" are crossed along the line, and care has been taken to place stations near these as far as possible; but the country is more or less under water, and traversable by boats for at least three months in the year. The soil along the whole line is a light alluvial sandy silt, and the foundations of all bridges on the line will be on no better material. For brick-making nothing could be better.

5. Mention has been made in the last paragraph of the crossing of the Fenny river. This is the only really important work on the line. It appears more than probable that the crossing selected on this survey will have to be abandoned, as the river is seriously eroding the right bank above the road about 1,500 feet above the site selected for the railway crossing. It was not possible, with the very limited staff available, to carefully survey this river last season, but information, recently obtained, shews that a somewhat prolonged investigation will be needed in order to satisfactorily establish the proper point for crossing. It seems likely that it will be advisable to go up-stream about a mile or more, and cross both the Mutiari and Fenny rivers at some point where their banks are stable, and where the tidal action is less severe. The index map shews, in a dotted line, the probable location of the detour that this will involve, if the location of last season is otherwise adhered to. It must be borne in mind that the coast at this point is peculiarly liable to cyclonic storm, and that both wind and wave have to be considered in determining the site for, and design of, the bridge across this river. The tide rise at ordinary springs at the crossing selected on this survey is about 14 feet, and with a south-west gale this may be considerably increased.

Waterway of bridges.

6. The determination of the waterway of bridges between Chittagong and the Fenny river has been arrived at without difficulty. That of the Fenny is professedly a mere approximation. The river must be chiefly studied before any design can be put forward for other purpose than an estimate. Between the Fenny river and Laksham the determination of waterway is an almost insoluble problem. The rivers appear to spill into others across country according to the local rainfall or to the spill flood of the Megna; and to make matters still more difficult, the Goomtee, which flows past Comillah, is said to spill over southwards into

the little Fenny river and Dakateea. I have been content for the present to estimate for what appears to me to be very ample waterway on this section; but it may be possible to revise this with some amount of accuracy during the progress of the works. My allusion to the Goomtee would not be complete without reference to the fact that its course from the hills to the Megna is defined and confined by high embankments; that these are being constantly injured by floods; that they are under the charge of Tipperah State; and that everything points to the necessity for a careful study of the river and a systematic maintenance of the embankments. A breach of these at Comillah would destroy the town, and whatever it might occur, would do an immense amount of injury to the locality.

The Hulda Valley.

7. Since the completion of the survey I have received a note from the Commissioner of the Chittagong Division (Mr. Lowis), urging the claims of the Hulda valley as a route for the railway in preference to the line along the sea coast between Chittagong and the Fenny river. The adoption of this route would involve, in the first place, the crossing of the watershed between the Fenny and the Hulda rivers. On the maps this looks a rather formidable matter, and the information I have been able to collect on this point is rather contradictory. There appears to be no greater prospect of local traffic on the line *viâ* the Hulda valley than on that by the coast, and as the bulk of the traffic of the line will be essentially a through traffic, it seems to be advisable to take the shortest and cheapest route to Chittagong. The line along the coast seems to me to be more likely to fulfil these conditions than one along the Hulda valley. The river is said to be navigable by fairly large boats as far as Narainke Hât throughout the year (see index map), and in the rains the valley is traversable in all directions. This advantage, together with a fairly good road up as far as Ramghur, shews the valley to be not so badly off as regards communication with Chittagong. In course of time, if the railway is extended to Akyab, it may possibly be worth while to throw out a branch up the valley from near the crossing of the Kaornafulli river; but it is more than doubtful, with the facility for boat-traffic that the river affords, whether this would be a paying scheme.

Present communications.

8. On the section between Chittagong and the Fenny river, the country between the hills and the sea is a narrow strip, averaging perhaps not more than a mile and-a-half in width. The tract is rich and thickly populated, and I think sends all its produce by boat along the coast to Chittagong. This route is, however, restricted to the open season, say between the months of November and February inclusive, and during the rest of the year is closed by bad weather, or the dread of it. The high road from Chittagong to Comillah passes through this tract, but it is unmetalled and not in good order for cart-traffic, and at any rate the carts on it are very few indeed. The railway would, I think, get all, or nearly all, the traffic on this section. Between the Fenny river and Laksham the country is extremely well served by water communication. A great deal of the produce appears to go down the little Fenny river to Chittagong in the open season, and after that the trade is closed, or some of it is diverted to the Dakateea river, and finds its way *viâ* Chandpore to Calcutta through the Sunderbuns, or *viâ* Goalundo. The Megna river and the Bay of Bengal shew such bad weather between March and October, that the trade of Chittagong is practically restricted to the other months of the year. The railway would not only greatly improve matters in this direction, but would divert to the benefit of the cultivators the produce which, as already noticed, has to find its way to Calcutta. The ramifications of the Dakateea river, which can command a great part of the large rice-producing district of Noakholly, should bring an immense amount of produce to the railway at Laksham for conveyance to Chittagong or to the north. Over the whole of the country through which the line will pass there is a splendid natural system of cross communication by khals, and which will be in effect "feeder roads" to the railway.

Chittagong.

9. I have provided money in the estimate for sidings, jetties and warehouses along the river at the port of Chittagong. It appears to be absolutely essential that in order to compete with the boats, the railway should be able to bring produce right alongside the ships. If the trade increases to the extent I believe it will on the opening of the railway, the sum I have provided for accommodation at the port will have to be very largely increased, but the sum now given will suffice for a beginning. When I was there in January last there were fourteen large sea-going ships, including two steamers, lying in or off the port, and accommodation for loading and unloading, say eight vessels at one time, should at least be provided ere long. Under the present conditions of the rice trade at Chittagong, it would be necessary to deliver rice at the warehouses of the traders in the first instance, and to take it up again ready bagged and cleaned for shipment. Opinions differ as to the probability of business being done in future in shipping ready bagged rice from the interior. In any case, it is clear that the railway is not likely to carry rice in bulk. I was greatly impressed with the capabilities and evident future of Chittagong as a terminus for a railway for Eastern Bengal produce. A recent survey of the port by the Marine Department shews that "a draught of 22 or 23 feet by steam vessels, or vessels towed in moderate weather, may during the height of spring tides cross the bar at any season of the year;" and further on the report says: "Chittagong port is the second in importance and prosperity of the ports of Bengal, and affords fairly easy access and safe anchorage to ships of 20 feet, and at spring tides of even 24 feet draught." The river at Chittagong is considerably wider than the Thames at London Bridge, and vessels can lie up close alongside the right bank in the port.

Prospects of the line.

10. The fiscal aspect of this project has been fully dealt with recently in a memorandum by the Honourable Mr. Macaulay, Secretary to the Government of Bengal. I have no further light to throw on this in the shape of statistics; and though I am not prepared to endorse the figure of profit which is anticipated for this line, I consider it nevertheless, especially if regarded as a portion of a trunk line into Cachar and Assam, to be one of the most promising projects now under consideration. The line will serve a rich and very populous country: it will give what is urgently needed an all the year round communication with a large market and sea-port, and cannot fail to be very remunerative to the State, and very useful to the trade of Eastern Bengal.

DACCA;
The 23rd August 1883.

H. BELL,
Executive Engineer in Charge.

CHITTAGONG STATE RAILWAY.

Abstract Estimate of Cost.

ITEMS.	AMOUNT FOR EACH DIVISION. 1st Division, 41,667.	2nd Division, 37,878.	3rd Division, 49,015.	Totals.	Totals of main heads.

Total length of line, 128½ miles. Estimated cost per mile, Rs. 87,335.

DACCA;
The 23rd August 1883.

H. BELL,
Engineer-in-Charge.

Note on Estimate.

Divisions.

The first division comprises the first 41½ miles from Chittagong with branch to port and terminal works. The second division extends up to Laksham, about 38 miles, and includes the bridge over the Fenny river. The third division, 49 miles, includes the length from Laksham to Chandpore and from Laksham to Comillah. The head-quarters of the first division would be at Chttagong, of the second division at or near the Fenny river, and of the third division at Laksham.

Preliminary expenses.

This amount is that of the estimated cost of the survey of 1882-83, which will not be expended, leaving a balance for completion of location Laksham to Comillah when necessary.

Land.

The rate for this is increased over that which was put for the Dacca-Mymensingh, and which would have been exceeded if land had not been given free by two zemindars. The land on the first 40 miles, which is thickly covered with small homesteads, will moreover be probably very expensive.

Rates.

The rates throughout this estimate assume the line to be carried out departmentally, *i.e.*, by petty contracts, and not on one large contract. A great deal of the labour, more especially for skilled work, must be imported; but I am hopeful that we may induce the hill tribes to give us a help at earthwork during part of the working season.

Earthwork.

I have put all slopes at two to one, and have estimated for turfing these as an essential work in view of the heavy rainfall and flooded lands.

Minor bridges.

These are estimated from average types drawn out in all detail. Most, if not all, of the bridgework must be of brick, though we may possibly get some stone (schist) in the first 40 miles. I propose to have no arched bridges, except a few culverts on the line, as the foundations are bad throughout.

Large bridges.

Borings have been taken for the Fenny and little Fenny river bridges only, showing in each case sandy silt to a depth of over 40 feet in the beds. The Fenny river bridge is put in at a lump sum, based on a drawing and details for a bridge of 20 spans of 100 feet on wrought iron cylinders lined with masonry inside and hearted up with concrete; but, as I have mentioned in the report, this will probably be altered to two bridges over the two rivers Mutiari and Fenny, so I have not given details. I expect that the figure given will cover cost of the two bridges higher up stream.

Level crossings.

These have not been located but entered arbitrarily at the rate of one per mile. There will be many crossings under the line at bridges, and therefore this should amply suffice.

Fencing.

I have shown the line as partly fenced only. It is advisable, perhaps necessary, to fence the line from Chittagong up to the Fenny, as the line is near the main road, and the country is densely populated. If, however, the traffic is rigorously restricted at first to slow speed, this item might be cut out altogether until the line comes under a heavy traffic and speed is necessarily increased.

Ballast.

It seems more than probable that we may get some stone ballast at various places along the line, *viz.*, along the Seetakoond range at Dewangunge from the hills near there, and the Lallmai hills. Elsewhere the ballast must be of *jhama* brick.

Permanent-way.

The rates for iron-work in this are based on actuals Dacca and Mymensingh State Railway, and assume their being landed at Chittagong. Sleepers I expect to get from the Hill Tracts and of various kinds of hard wood, but I should indent for, say, 30,000 creosoted pine from Europe, as they are particularly useful for temporary works during construction, and if rectangular are fairly durable and are considerably cheaper at first cost than indigenous wooden sleepers.

Stations and offices.

The estimate for these is not based on actual drawings, but on cost of similar works on the Dacca and Mymensingh line. The estimate will be very near the mark.

Workshops, &c.

The same remark applies to this item.

Staff quarters.

Ditto ditto.

Station machinery.

This is a fairly approximate estimate, but is not based on designs for station yards, which cannot well be got out at present.

This covers a sum for engineering plant, which assumes that the work will be carried out departmentally.

Plant.

A sum of two lakhs has been entered under this head for the provision of steamers and flats for ferry service between Chandpore and Naraingunge.

Steam ferry.

Same amount per mile as for Dacca-Mymensingh State Railway.

Rolling stock.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RULES FOR THE INTERCHANGE OF ROLLING STOCK.

No. 56 R. T., dated Fort William, the 19th January 1884.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 1002 R. T., dated the 10th October 1882.

Read also—

Letter No. 054T., dated the 11th January 1884, and enclosures, from the Director General of Railways.

OBSERVATIONS.—The rules for the interchange of rolling stock between all connected-broad gauge railways in India, passed by the Conference of Railway delegates assembled at Simla in September 1882, were circulated by the Government of India with Public Works Department Resolution No. 1002 R. T., dated the 10th October 1882. A difference of opinion having arisen as to the proper interpretation of Rules Nos. XX (*d*) and XXI (*c*), the Director General of Railways, under Clause 9 of the orders for the conduct of business at the Railway Conference, invited the opinions of the Agents of the Railway Companies concerned, and the following interpretation of the rules in question has been decided upon :—

"A wagon to be treated as loaded under Rules XX (*d*) and XXI (*c*) must be loaded with three tons or more. If containing a load of less than three tons, the wagon will be treated as returned empty.".

RESOLUTION.—The Government of India trusts that the above decision will be found in practice to meet the requirements of the case.

ORDER.—Ordered, that this Resolution be communicated to the Governments, Administrations and Officers, marginally noted, for information and guidance; and to the Chief Commissioners, Assam and British Burma, the Agents to the Governor-General, Rajputana, Central India, and Biluchistan, and the other Departments of the Government of India for information.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioner, Central Provinces.
The Resident at Hyderabad.
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways.

Ordered also, that this Resolution be communicated to the Secretary of State and published for general information in the Supplement to the *Gazette of India*.

R. A. SARGEAUNT, *Major, R.E.*,
Officiating Under-Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 22nd JANUARY 1884.

GENERAL REMARKS.—Rain has fallen in small quantities throughout the Madras Presidency, the Central Provinces, Central India, Rajputana, and Assam. Slight showers have also occurred in some districts of the Bombay Presidency, Hyderabad, Punjab, and Bengal.

In the Madras Presidency and Mysore, the reaping of paddy and dry grains continues, the outturn being up to the average. Standing crops are in good condition, except in parts of Bellary where they are poor owing to short rainfall and blight, and in Kurnool where they have been injured by unseasonable rain. *Rabi* prospects are generally good in the Bombay Presidency, but the crops in three districts are suffering from blight, and late rains have been injurious to the crops in two others. Prospects continue favourable in Berar, and the crops in Hyderabad have been benefited by a recent fall of rain. In Central India and Rajputana the *rabi* crops are doing well and have been much improved by the general rain. In the Punjab and North-Western Provinces and Oudh rain is much needed for the crops on unirrigated lands. In the Central Provinces prospects are generally good, and are improving in the Jubbulpore Division.

The rain which fell in Bengal was too scanty to affect the crops, and in Behar and Chota Nagpore the *rabi* continues much in need of rain. The rice harvest is still in progress in a few districts, and the outturn has been generally much below the average. Prospects are unchanged in Assam. In British Burma the paddy crop has been nearly reaped, and prices are favourable.

Cholera continues severe in parts of the Madras Presidency, and small-pox and fever are prevalent in many districts throughout the country, otherwise the public health is fair.

Prices are still high in Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras (Jan. 23rd)—		
Bellary	·73 (average of 4 stations).	Standing crops poor in 3 taluks owing to short rainfall and disease harvest—paddy, dry grains, pulse, and oilseeds, yield below average; 13 deaths from cholera.
Kurnool	·37 (average of 8 stations).	Standing crops slightly damaged by unseasonable rain.
Ganjam	·18 (average of 2 stations).	Standing crops good.
Kistna	·7 (average of 13 stations).	Standing crops generally good; harvest—paddy, yield average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)	·85 (average of 5 stations).	Standing crops generally good; harvest—*kar*, paddy and *vadasambu* paddy, yield below average; small-pox prevalent; 98 deaths from cholera; cattle-disease slight in two taluks.
Coimbatore	1·23 (average of 3 stations).	Standing crops good; harvest—paddy and dry grains, yield average; fever and cattle-disease in parts; 192 deaths from cholera.
Tanjore	·12 (average of 2 stations).	Standing crops good; harvest—paddy, *ragi*, *varagu*, and dye roots, yield below average; cholera severe, 1,460 deaths.
Madura	·67 (average of 3 stations).	Harvest—paddy and dry grains, yield about average; cholera abating, 162 deaths.
Malabar	. . . .	Second paddy crop still being reaped; small-pox, fever, and cattle-disease slight.
Travancore	. . . .	Harvest—second crop paddy nearly over.
		General Remarks.—General prospects good.
Bombay—(Jan. 23rd)—		
Kurrachee	. . .	River at Kotri on 19th, 3 ft. 2 inches against 2 ft. 10 inches on same date last year; fever in 9 talukas; cattle-disease in 3 talukas; loss of 80 buffaloes and 55 cows and bullocks in Mirpur Botoro; 3 fresh cases of small-pox in Kurrachee and 1 death since 11th, total 29 cases, 6 deaths; disease in 26 villages in district, 85 fresh cases, 9 deaths, 86 remaining sick; prices—wheat, red rice, and *bajri* in Kurrachee 24, 28 and 32, in Tatta 24, 32 and 36, and in Mirpur Botoro 22, 32 and 32 lbs. per rupee respectively.
Hyderabad	. . . .	Small-pox in 8, fever in 9, and cattle-disease in 6 talukas; wheat 25½, *jowari* 40, *bajri* 35½, red rice 26, and white rice 20 lbs. per rupee.
Ahmedabad	. . . .	Cotton and wheat suffering slightly from cloudy weather and rain in Dholka and Madrisa, other crops healthy; cattle-disease in Parantej; wheat 26¼ and *bajri* 30 lbs. per rupee.
Baroda	In Naosari, ·07; in Tilukiwara, ·25; in Tenor, ·08; and few drops in other places.	Public health fair; fever still prevails in Naosari division; small-pox has abated in Manekwara; cotton, sugarcane, and *rabi* crops in good condition; in some talukas of Baroda division cotton and other crops are somewhat injured by rain which fell on the 16th instant; sugarcane pressing continues in Naosari division; prices—*bajri* 30 to 31¼ and rice 23 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*continued.*		
Surat	. . . .	*Rabi* crops healthy; fever in Pardi; *jowari* 39 and *nagli* 48 lbs. per rupee.
Nasik	. . . .	*Rabi* crops healthy; public health generally good; small-pox in two villages of Nasik and Dindori talukas; *bajri* 31, wheat 31½, and rice 24 lbs. per rupee.
Colaba (Bombay)	. . . .	Abnormal temperature 5° cool to 1° warm; vapour in air defective till 19th, afterwards excessive; wind normal; distant lightning on 16th.
Poona	. . . .	*Rabi* crops good; prices—*bajri* 37 and *jowari* 43 lbs. per rupee; in Poona *bajri* 32 and *jowari* 40 lbs. per rupee.
Ahmednagar	Slight rain throughout the district.	*Rabi* crops good, except *jowari*, prospects of which are unfavourable; *bajri*—maximum 48 lbs. per rupee in Shrigonda, minimum 39 in Kopargaon; *jowari*—maximum 54 lbs. in Sangamner, minimum 40 lbs. in Sheogaon.
Sholapur	·02,	Weather cloudy; prospects of cotton and *jowari* crops unchanged; public health good; *jowari* 44 and *bajri* 46 lbs. per rupee.
Dharwar	Slight rain throughout the district.	Harvesting of rice completed, that of early *jowari* in progress; cotton somewhat benefited by rain, but suffering from blight in 6 talukas; wheat withering in two talukas; other late crops good; fever in 5 and small-pox in two talukas; scarcity of drinking-water in some villages of Navalgund; rice 25 and *jowari* 56 lbs. per rupee.
Kanara	. . . .	Small-pox in Kumpta, Honawar, and Mundgod, 1 case in Akola, 2 deaths in Honawar; fever prevails in Haliyal and Mundgod; cattle-disease in Karwar, Kumta, and Honawar; common rice in Karwar 12 seers per rupee; district average 16¼ seers.
Rajkot	. . . .	General health good; small-pox in Rajkot town; weather cold; *bajri* 30 and *jowari* 36 lbs. per rupee.
		General Remarks.—*Rabi* prospects generally good; slight rain in almost all districts; late crops benefited by it in Dharwar and Belgaum, but somewhat injured in parts of Ahmedabad and Broach; blight continues in parts of Satara, Dharwar, and Kaladgi; cattle-disease in 8, fever and small-pox in 11, and cholera in 3 districts.
Bengal—(Jan. 22nd)		
Chittagong	Traces of rain	Weather variable but cold; reaping of *amun* nearly over; winter crops promising; prices have somewhat risen; cattle-disease reported; general health good.
Dacca	*Nil*	Prospects of crops good; pulses and oil seeds being reaped; pressing of sugarcane continues; public health good.
24-Pergunnahs	*Nil*	Harvesting of late rice still going on in some parts of the district, yield estimated at eight to ten annas; winter crops doing well; price of common rice 15½ to 16 seers per rupee; public health generally good.
Moorshedabad	*Nil*	Weather cold and cloudy; *rabi* crops doing well; *kalai* being gathered, outturn expected to be very good; public health generally good.
Rajshahye	*Nil*	Weather cloudy; prospects of winter crops generally favourable; price of rice 13 to 18 seers per rupee; public health fair; cholera and slight fever reported from some villages.
Burdwan	·13 on 19th	Weather warmer; prospects of *rabi* crops poor; prices steady; public health good.
Rungpore	*Nil*	Weather cloudy; prospects of *rabi* crops generally fair; harvesting of *amun* continues; no unusual prevalence of any disease; prices stationary.
Bhagulpore	·04	Prospects of crops not good; rain much wanted; price of new rice 13 seers 14 chittacks per rupee.
Purneah	·07 on the 18th at night.	Very slight rainfall, not sufficient to benefit the wheat, barley and gram on the ground; common rice (new) 16 seers per rupee; public health good.
Patna	*Nil*	*Rabi* crops appear fair; peas, *rahar*, and castor promising; poppy coming on well; public health good.
Durbhanga	*Nil*	Prospects of *rabi* crops gloomy; prices stationary; small-pox prevalent in the town of Durbhanga, and fever reported here and there in the district.
Hazareebagh	*Nil*	Weather clear and cold; winter crops doing fairly well; pressing of sugarcane begun, outturn seems fair; prices much the same in all thanas except Kodarma and Gowan; public health generally good.
Cuttack	·03	Weather cold; nights and mornings foggy; reaping of *sarad* rice nearly completed; *dalua* rice growing well; *rabi* crops being gathered; prices stationary; public health good.
		General Remarks.—Slight rain fell in some districts during the week, but was not sufficient to do any good to the standing crops; in Behar and Chota Nagpore the *rabi* crops on unirrigated lands are still suffering much from want of rain, but in the rest of the province they are reported to be doing fairly well; the harvesting of late rice is still proceeding on the low-lying lands in some places; the outturn of the crop, though fair in some parts, has been on the whole a great deal below the average; prices continue to rule very high, in spite of the appearance of new rice in the markets; fever is still prevalent in some districts, and cases of cholera and small-pox are reported from a few localities, but the general health of the province is good.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares . (Jan. 22nd)	No rain	Crops doing fairly in irrigated lands, but rain urgently wanted for unirrigated lands; isolated cases of small-pox in the city; prices of food-grain rising slightly as importations into the city have fallen off.
Allahabad („ 23rd)	. . . .	Some clouds during week, but no rain; in irrigated *kachar* and *mar* tracts crops excellent, elsewhere they have suffered much from drought; health good; prices stationary.
Gorakhpur („ 21st)	No rain	Cloudy sky; small-pox prevalent; prices stationary.
Jhansi .. („ 21st)	. . . .	The fall of rain on the 17th has greatly benefited the *rabi* crops; prices fluctuating; health of people and cattle good.
Agra . („ 22nd)	No rain	Irrigation continues; slight small-pox reported in 2 parganas; general health good; prices steady.
Bareilly . („ „)	. . . .	Rain much wanted.
Meerut . („ „)	No rain	Rain much wanted, but crops uninjured so far; health good; prices steady; supplies sufficient.
Kumaun . („ „)	. . . .	Weather fine; rain urgently required; health good; cattle-disease continues; prices stationary.
Lucknow („ „)	No rain	Weather clear; cold decreasing; irrigation being actively pushed on; wheat and barley running to ear, other crops such as *arhar*, gram peas, &c., in flower; crops on unirrigated and high land poor; condition of people normal and of cattle good; markets well supplied; prices steady.
Partabgarh („ „)	. . . .	Weather cloudy during the week, but no rain; wheat, barley, and gram crops comparatively poor, *arhar* doing well; sugarcane being pressed; prices almost steady; small-pox reported from villages in Kunda tahsil; health otherwise good.
Sitapur („ „)	. . . .	Occasional clouds during the week, but no rain; prospects fair; prices steady.
Fyzabad („ „)	No rain	Rain is much needed for unirrigated crops; bazars well supplied; prices steady; condition of people good and of cattle normal.
Rai Bareilly („ 21st)	. . . .	Weather cloudy; east and west wind; *rabi* prospects fair; small-pox continues; markets well-stocked; prices steady.
Cawnpore („ 22nd)	No rain	State of irrigated crops fair, of unirrigated poor; small-pox decreasing and no sickness among cattle.
Fur[illegible]kabad („ „)	. . . .	Weather alternately cloudy and clear; small-pox in three tahsils.
		General Remarks.—No rain has fallen, except in Jhansi and Aligarh, though the weather has been partially cloudy in most districts; rain is needed throughout the provinces; prices are generally steady and the markets sufficiently supplied; small-pox continues in several districts, otherwise the public health is good.
Punjab—(Jan. 23rd)—		
Delhi	. . . .	Health good; rain urgently needed; slight fall in prices.
Hissar . . .	·20	Health good; prices steady.
Umballa . . .	. . . .	Health and crop prospects good; rain much wanted; prices stationary.
Jullundur . . .	. . . .	Health good; *rabi* crops under irrigation; rain much wanted; prices stationary.
Amritsar . . .	. . . .	Health good; rain wanted; prices steady.
Lahore . . .	. . . .	Health and crop prospects good; prices stationary.
Ferozepur . . .	. . . .	Health good; rain wanted; prices steady.
Sialkot . . .	·10	More rain is wanted; health and crop prospects good; prices stationary.
Rawalpindi . . .	Slight fall of rain	More rain is wanted; health and crop prospects good; prices falling.
Peshawar . . .	. . . .	Rain wanted; small-pox decreasing; prices stationary.
Mooltan . . .	. . . .	Health of people and condition of crops good; prices steady.
Dera Ismail Khan .	. . . .	Rain much wanted; health good; crop prospects fair; prices steady.
		General Remarks.—The health of the province with the exception of the Peshawar district is good; crop prospects are generally good; but rain is much wanted, especially in the south-east of the province.
Central Provinces (Jan. 23rd)—		
Nagpur . . .	1·13	Weather clear and cold; recent rain has been beneficial to *rabi* crops which are promising; public health good; prices of *jowari* and gram slightly risen.
Jubbulpore . . .	·76	Weather clear and cold; rain beneficial to *rabi* crops, which are thriving; health good; prices stationary.
Saugor (Jan. 22nd)	1·02	Recent rain will benefit *rabi* crops; cold rather severe; health good; prices steady.
Seoni . . .	. . . .	Weather rainy and cloudy up to 20th; clear and cold since; *rabi* crops improving; prices stationary; health good.
Hoshangabad . .	1·7	Late rain has improved *rabi* crops; cotton-picking continues; prospects favourable; *tili* being harvested; fever prevalent in Harda and Seoni; wheat 18 seers, rice 11 seers, and *jowari* 24 seers per rupee.
Raipur . . .	·14	Nights cool; days getting warm; *rabi* prospects continue favourable; public health good; prices steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provs.—*contd.*		
Sambalpur (Jan. 19th) .	·04	Weather cold and cloudy occasionally; rice thriving and sugarcane pressing in progress; public health good; common rice 35 seers per rupee.
Khandwa . . .	1·29	Weather clear; prospects good; prices steady; *jowari* 22½ seers per rupee.
		General Remarks.—Rain general and beneficial to *rabi* crops; crop prospects in Jabalpore division improving, favourable in other divisions; health good; prices steady.
British Burma—(Jan. 23rd)—		
Akyab (Jan. 19th)	. . . .	Public health good; about ¾ of the crops have been reaped; reaping wages Rs. 2 to 4 per acre; twenty five deaths of cattle.
Rangoon . . .	*Nil*	Total rainfall from 1st January up to date 0·29; six deaths from small-pox and one from cholera; paddy supplies are fair for the season; price Rs. 90 per 100 baskets.
Bassein . . .	. . . .	Public health good; forty-six deaths of cattle; reaping nearly finished; price of paddy Rs. 72 to 85 per 100 baskets.
Prome . . .	*Nil*	Public health good; thirteen deaths of cattle; seven hundred and eighty-two acres in Shwedaung township destroyed by drought; price of paddy Rs. 60 to 70 per 100 baskets.
Hanthawaddy . .	. . . .	Public health and health of cattle good; reaping progressing; price of paddy Rs. 75 to 100 per 100 baskets.
Pegu . . .	*Nil*	Two cases of small-pox of mild type in Pegu town, otherwise public health good; cattle continue healthy; reaping nearly finished; crop reported exceptionally good; price of paddy ranging in different places from Rs. 70 to Rs. 80 per 100 baskets.
Tharrawaddy . .	*Nil*	Total rainfall up to date 0·40; eight fatal cases of cholera reported from Sanywe and Monyo townships; cattle healthy; about 170,441 acres reaped; reaping wages 8 annas per man a day; price of paddy Rs. 55 to 100 per 100 baskets.
Thonegwa . . .	. . . .	Nine deaths from small-pox reported from Donabyoo township, otherwise public health good; cattle-disease in Dedaye township; reaping completed in all townships, except Pyapon; price of paddy Rs. 70 to 95 per 100 baskets.
Henzada . . .	. . . .	Public health and health of cattle good; price of paddy Rs. 75 to 100 per 100 baskets.
Thayetmyo . . .	. . . .	Public health good; cattle-disease not extinct yet; price of paddy Rs. 100 per 100 baskets.
Shweygyin . . .	. . . .	Public health and health of cattle good; harvest ¾ finished; price of paddy Rs. 65 per 100 baskets.
Amherst (Moulmein) .	. . . .	Public health good; cattle-disease reported in Hlaingbue circle, threshing and winnowing progressing; prices of paddy Rs. 60 per 100 baskets; public health and health of cattle good in Moulmein; price of paddy Rs. 65 to 75 per 100 baskets; no sales in town.
Toungoo . . .	*Nil*	Total rainfall from 1st January up to date 0·8; public health good.
Kyoukphyoo . .	*Nil*	Total rainfall from 1st January up to date 0·02; public health and health of cattle good; reaping almost completed; reaping wages Rs. 2 per acre.
Sandoway (Jan. 12th)	. . . .	Public health and health of cattle good; agricultural prospects favourable; reaping of later sown crop nearly completed; opening prices of paddy Rs. 50 per 100 baskets.
„ („ 19th)	*Nil*	Public health good; agricultural prospects favourable; reaping of later sown crop completed; about 13,207 baskets or 327½ tons of paddy damaged by wind and rain of 17th November last; prices of paddy Rs. 60 to 66 per 100 baskets.
Tavoy . . .	. . . .	One death from small-pox, otherwise public health good; harvesting in progress.
		General Remarks.—Fifteen fatal cases of small-pox in Rangoon and the Donabyoo township of the Thongwa district; eight fatal cases of cholera in the Tharawaddy district, elsewhere public health continues good, and cattle are fairly healthy; reaping nearly over; supplies of paddy in fair quantity for the season are coming into the ports, and fetching good prices.
Assam—(Jan. 23rd)—		
Gauhati (Jan. 22nd)	·52	Weather cool and seasonable; harvesting of *sali* crops almost finished; public health fair.
Sylhet . . .	·07	State and prospects of crops good on the whole; a few cases of small-pox and cholera reported.
Cachar . . .	·45	Weather cloudy; reaping of winter crops commenced; common rice 16 seers per rupee; two deaths from small-pox reported from Sadr.
Dibrugarh . .	0·90	Weather cool; prospects of winter crops good; heavy rains on Tuesday night; small-pox in the station.
Berar & Hyderabad—(Jan. 23rd)—		
Amraoti . . .	. . . .	Weather cold and cloudy; cotton-picking almost completed; threshing of *jowari* continues; *rabi* prospects good; wheat 16 and *jowari* 26 seers per rupee.
Akola . . .	. . . .	*Rabi* prospects favourable; threshing of *kharif* continues.
Hyderabad (Jan. 24th)	Average ·34	The rainfall has benefited *rabi* and *tabi* crops; no sickness except fever in one taluka and some cases of cholera in Residency Bazaar; prices of wheat 15, coarse rice 12, white *jowar* 19, yellow *jowar* 24½, and *tur* 21 seers per *kali* sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—(Jan. 23rd)—		
Bangalore		Harvesting of paddy, *ragi*, horse gram, sugarcane, &c., continues public health generally good; prices of rice from 12 to 15 seers, *ragi* 56 to 60 seers, and horse gram 40 to 60 seers per rupee.
Mercara	·10	Picking of coffee and harvesting of rice nearly completed; fever still prevalent in parts of the Nanjarajapatna taluk. *General Remarks.*—Standing crops in all districts reported in good condition; prospects of season favourable.
Central India States—(Jan. 23rd)—		
Indore	0·40	Health good; prices staticnary; agricultural prospects good.
Morar (Gwalior)	0·23	Health good; weather seasonable; prices steady.
Sutna	0·21	Health and prospects good.
Neemuch	0·38	Weather very cold and cloudy; agricultural prospects and public health good.
Goona	0·51	Weather cloudy and cold.
Agar	1·72	Health and prospects good.
Nowgong	0·29	Prospects fair; health good; prices steady.
Manpur		Prospects good.
Sehore	2·5	Weather cloudy; prospects and public health good. There was general rain in the Agency on the nights of the 15th and 16th.
Rajputana—		
Abu (Jan. 23rd)		Weather mild and clear.
Harowtee (" 21st)	Deoli ·90; Tonk ·16; Shahpoora ·21	Prospects fair; weather seasonable; health good.
Jhallawar (Jan. 18th)	1·29	Health and prospects good.
Ajmere (" 22nd)	·03	Slight fever prevalent; crops looking well.
Jeypore (" ")		Weather cloudy; prices steady; health good.
Ulwur (" ")	Drops of rain in places	Health good; prices steady.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

No. 73 R. C.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY CONSTRUCTION.

Fort William, January 29, 1884.

Railway reconnaissances from Mogul Serai to Pooree.

RESOLUTION.—The desirability of a line of railway which would open out the Daltongunge coal-field for the supply of the railways to the north of Mogul Serai has long been recognized. On a full consideration of the question of railway construction throughout India, which took place in 1882, it was evident that a larger project was required, which would afford an outlet to the east as well as the west for the mineral and agricultural produce of the large province of Chota Nagpore, and also that such a project might, with the intervention of the projected Nagpore-Sitarampore Railway, be extended to Cuttack and Pooree, so as to bestow on the vast number of pilgrims who annually visit the latter place the advantage of railway transit and on the province of Orissa that of protection against famine.

2. Arrangements were consequently made in the autumn of 1882 for rapid reconnaissances of the country through which the route for such a railway would probably lie.

3. The result of the reconnaissance of the first section of this project from Mogul Serai to Daltongunge was embodied in a Resolution No. 832 R. C., dated the 24th September last and published in the *Gazette of India*. The length of line to Daltongunge was stated to be 147 miles, and its probable cost, including a bridge over the Soane River, 152 lakhs of rupees; or, if this section is stopped at Gurwah, its length would be reduced to about 130 miles, the cost of which may be roughly estimated at 137 lakhs.

The reports of the investigation of the two next sections have now been received and are published herewith. One of these—the second section of the project, from Gurwah to Chandil on the proposed Seetarampore-Nagpore Railway—traverses the Chota Nagpore province; its approximate length was found to be 195 miles, and probable cost 208 lakhs of rupees.

The third section of the project leaves the proposed Seetarampore-Nagpore line at Kuchai, 25 miles south-west of Chandil, and proceeds thence to the north bank of the Mahanadi, whence a steam ferry would complete the communication with Cuttack; its length is taken as about 182 miles, and probable cost 220½ lakhs of rupees.

The fourth section of the project, from Cuttack to Poorce, was carefully investigated last autumn by the local Engineering staff, on the basis of the canal surveys, with the result of shewing that its probable length *vid* Khoorda would be about 60 miles, and its cost might be roughly placed at about 50 lakhs.

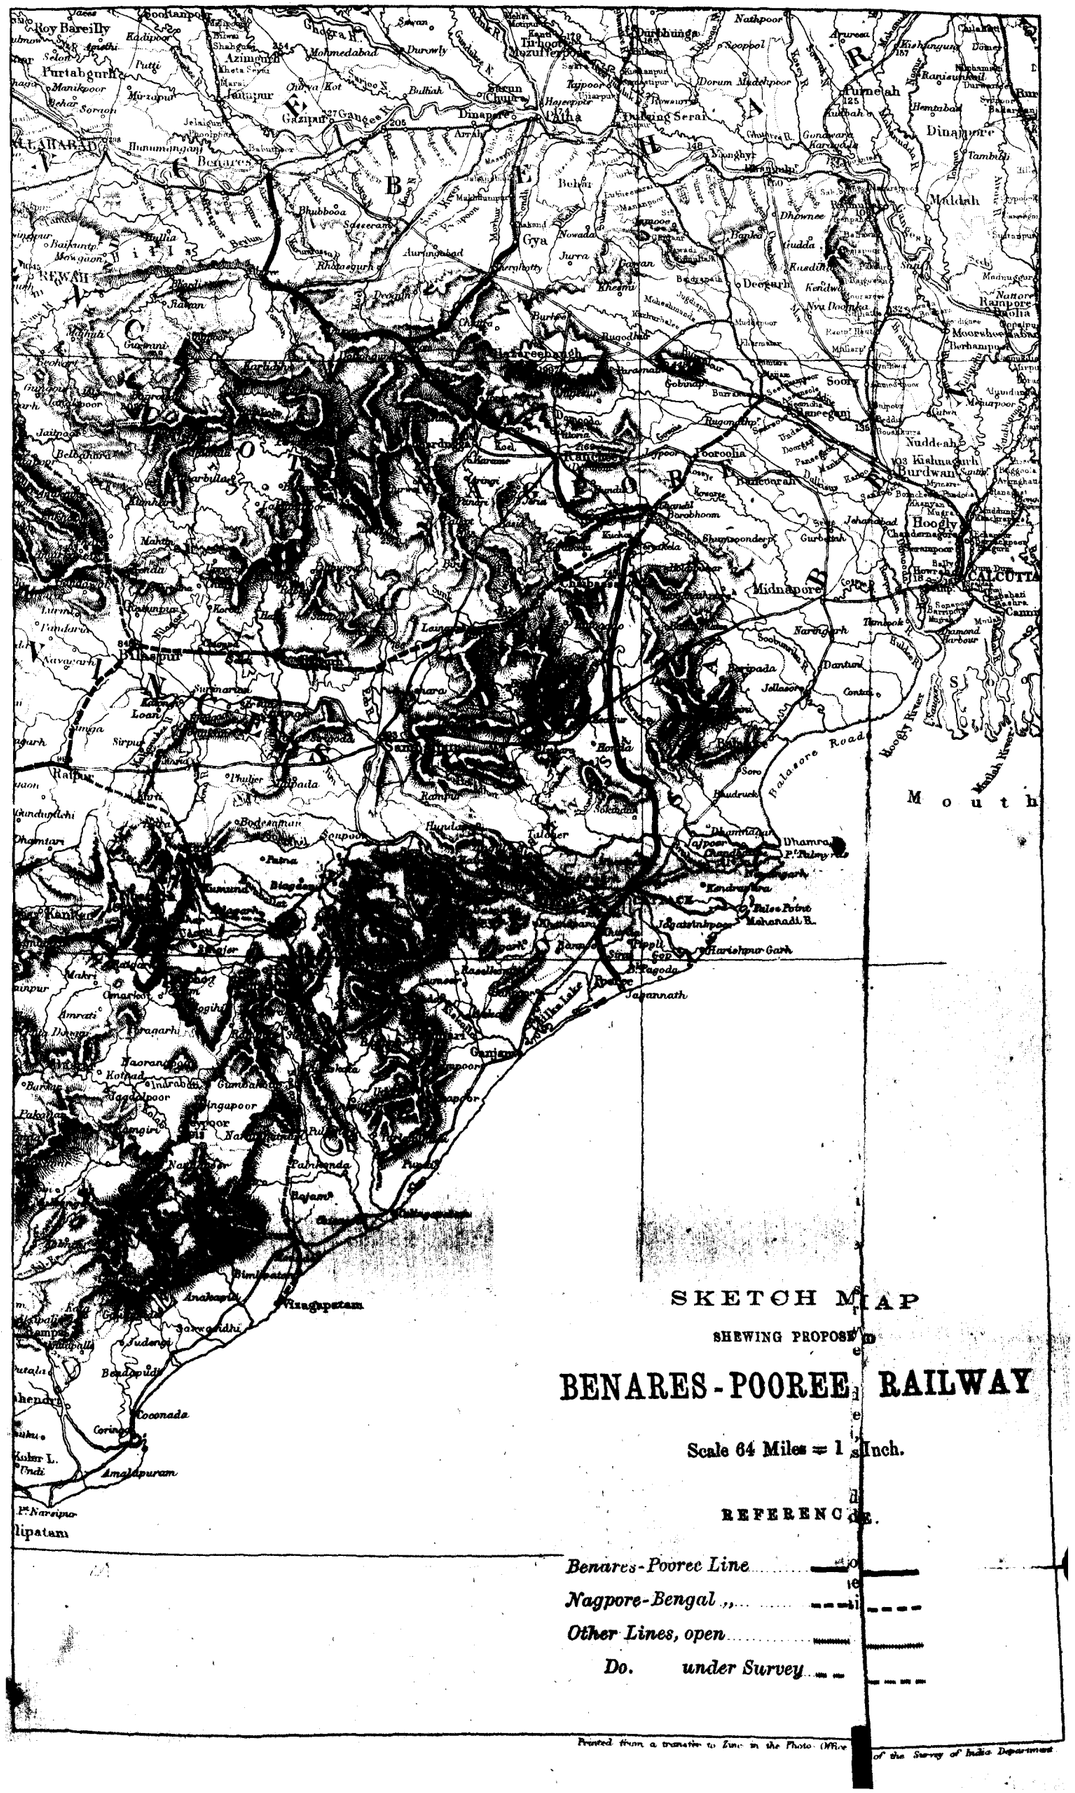
The total length of railway may thus be placed at about 567 miles, and its cost at about 615 lakhs of rupees.

4. The connection of this main line with Gya appearing very desirable, a reconnaissance was also made from Palamow to that place, with the view of ascertaining whether a better route could be found than those which had already been investigated in 1881-82 in connection with the Nagpur-Bengal project. The result was satisfactory, a suitable line being found which it is estimated will be about 85½ miles in length, and cost about 67 lakhs of rupees.

5. The entire system would thus consist of about 652 miles of railway, roughly estimated to cost 682 lakhs of rupees. This estimate for a broad gauge line crossing, as it does, such an exceedingly hilly country can hardly be considered an extravagant one; at the same time, mere rapid reconnaissances are, of course, not to be relied on, and thorough surveys are being actively prosecuted along the entire route during the current season.

6. In respect of traffic, the prospects of the project appear to be extremely encouraging. The Daltongunj and Aurunga coal-fields will be traversed, and a part of the Karanpoora coal-field just reached, thus ensuring profitable working of the Railway itself from Mogul Serai and Gya to Chandil, and also a large traffic in coal for the supply of the Railways which are in connection with Mogul Serai. The produce of Chota Nagpore will obtain the outlets desired. Finally, pilgrims to Poorce from Northern India in general will use the line throughout, while those from Bengal and Western and Southern India will be able to take advantage of the two sections south of Kuchai.

7. The entire line from Mogul Serai to Pooree is now being more thoroughly examined during the present season.



8. His Excellency the Governor General in Council has much pleasure in recording his appreciation of the excellent work done by Mr. Parker and his staff on the Nagpur-Bengal and Benares-Poorce Surveys, in difficult and unhealthy tracts, during 1881-82 and 1882-83.

ORDER.—Ordered, that this Resolution and Index Map together with Captain Laugharne's report, and the note by Mr. Parker, the Engineer-in-Chief, be communicated to the Governments of Bengal and the North-Western Provinces and Oudh, and the Chief Commissioner, Central Provinces, and published in the *Gazette of India* for general information.

W. S. TREVOR, Colonel, R. E.,

Secretary.

Enclosure No. 1 to P. W. D. Resolution No. 73 R. C. of 1884.

Enclosure No. 2 to P. W. D. Resolution No. 73 R. C. of 1884.

Second Report on the reconnaissances for Benares-Cuttack Railway and Gya-Palamow Extension,—January to April 1883.

A preliminary report on the work undertaken was submitted on the 18th May, as soon as I had returned to head-quarters. The present report is submitted, together with plans and revised rough estimates, giving more complete information than could be furnished before any levels or aneroid readings had been plotted.

2. As stated in para. 5 of preliminary report, the first question to consider was the best ascent to the Lohardugga plateau, and it may be as well to premise that the plateau has an elevation of 2,200 feet to 2,300 feet, and Gurwha of less than 600 feet, the necessary rise in the line being therefore 1,600 to 1,700 feet.

3. Several routes were examined: those not found feasible are shewn in blue lines on the Indian atlas sheets, scale four-inches-to-the-mile accompanying, the impracticable portions being marked with blue crosses, thus * * * * and the route proposed being shewn by a continuous red line, while the alternative feasible routes are marked by red dotted lines.

4. Commencing with the most northerly route from Manatu *viâ* Pudma or Lorhursee to Hirlun (or Hurhunj) and Baloomath, it was found that the descent to the Punkee-Lohursee plain could be made either by the Jinjore nulla, the Pudma pass, or the pass from Bunsee Khoord to Sildilia, but that the Seknee, Kosiara, and the Sildag Tal pass were impracticable.

The ascent from this plain to Hurpurj from Lohursee, either by the Amanut river *viâ* Kurkurgarh and Inatoo, or from Pankee *viâ* Tal, Muttodee, and Aboon, or from Lohursee to Baloomath by the Amanut river *viâ* Musaratore is impracticable, the ascent being some 700 feet, and the routes all rising abruptly with no means of extending them to obtain the requisite gradient.

5. Again, on the south the Sahargatia pass and the Bhootia pass, both leading direct from Palamow on to the Lohurdugga plateau, were examined and found quite impracticable, there being a rise of some 1,000 feet in four miles on the latter, and the former being quite as bad.

The only other available route is the line of road through Palamow *viâ* Munkah and Latiahur, ascending to Chandawa, which stands at an elevation of 1,689 feet by the valley of the Ghagree, which is the only opening between the Toru hill on the north and the high range on the south. This route was found practicable, and is described in detail further on.

6. Having reached Chandawa near the head-waters of the Damooda, the next point was to find an ascent to the main plateau. The ground falls again to the Damooda about 100 feet, so that a rise of 600 feet to reach the plateau is still necessary, necessitating, with a gradient of 1 in 100, a rise 12 miles long.

Two passes—the Bohlia and Unjeria—were examined, but found impracticable for want of length, as was also the route *viâ* the Jilling nulla.

7. As the Mahlun pass had been examined last year and reported feasible, this was not examined again, but attention turned to the passes further east, two of which seemed from the maps and information gathered to be worth exploring. Of these, the Rai Bamnee pass of the valley of the Bhur was found to present difficulties of gradient near the junction of the Bhur and Saphi near Sarone, which would be hard to overcome, as well as being a very rockey bad route up to this point.

The second route from Hesalay to Chora seemed better, and, in the preliminary report, was stated as practicable; but since plotting the levels taken over it, it has had to be abandoned.

8. The Mahlun pass then remains as the only practicable ascent, and the line is shewn ascending by that ghat.

9. As there are no great difficulties in taking a line across the Lohardugga plateau, the next point of importance is the descent from it.

The route *viâ* Bandgaon and Chackerdarpur, which would have been the most direct, was found utterly impracticable, there being a fall of 1,640 feet in one mile, and a route rather more to the south, which was examined to try and turn the ghat, was found to be scarcely any better. Aneroid readings over this ghat from Khunti to Chackerdarpur are appended, see sheet 21.

10. Two routes on the east of the plateau—one near the road between Ranchi and Bundhu and the other by the Ranchi river—were also examined without success, but the route *viâ* the Tajna river from Seniguttee to Perihatee, and thence to the plain near Aruki, presented an easier descent, and giving a fair promise of a 1 in 100 gradient has been taken as the only available route, and is described more fully further on.

11. The line shewn down the valley of the Tajna from Perihatee *viâ* Chatumatee and Gitilbera was also examined, but, as mentioned in para. 14 of preliminary report, would scarcely be practicable.

12. The line being brought down to the plain near Arunki or Jarunga would bring it to a level of about 1,050 feet, but a high range of hills to the south separates this plateau from the Chyebassa-Chackerdarpur plain, and as no pass through the hills is available (the one *viâ* Turai

and Kharsawan was examined and found impracticable), the line must be continued along the valley due east towards the Nagpur-Seetarampore line, joining it at Chandil, a distance of 195 miles from Gurwha and 79 from Seetarampore.

13. Having thus briefly noticed the routes examined for the first portion of the line and explained generally the available ghats on, to, and down from the plateau, the route proposed will be described more fully: it has been entered by a continuous red line on the Indian atlas sheets, and also on the tracings from the one-inch maps which accompany, the sections being plotted on a scale of one-inch-to-a-mile horizontal, and 100-feet-to-an-inch vertical, with enlarged plans and section of ghats on a scale of 1,000 feet horizontal and 100 feet vertical.

14. Commencing from Gurwha, which is shewn on the survey maps as having an altitude of 588 feet, the line is brought as direct as possible, consistent with a rectangular crossing of the Koel river, to Daltongunge.

The country for the first 15 miles is believed to be fairly level, and a five feet bank and cutting will probably suffice, the larger waterways are the Dando river, 700 feet wide, and the Juhlee nulla, of 400 feet; the route actually traversed was not over this line, but followed the road by the course of the river (see blue lines on atlas sheets).

15. The crossing of the Koel river will necessitate a bridge of 1,800 feet, built, say, in 12 spans of 150 feet each; the section is shewn on sheet 18, page 8, and the roadway will have to be carried at a height of some 75 feet above the bed of the river which runs in a hollow, some 150 feet lower than the general line of the country on either side.

The bridge will probably have its foundation on rock, and a rate of Rs. 400 per foot run has been estimated for.

16. After rising from this bridge for 1¼ miles, at a gradient of 1 in 100, to Daltongunge (560 feet), the line ascends for three miles at 1 in 122 over ground, which has been estimated at 10 feet banks and cuttings to the 22nd mile near the village of Chiakee; from this latter place, the route lies over a pass between two hills, ascending to a height of nearly 800 feet, and again descending two miles at 1 in 150 to the village of Noolpod Kullen. This portion is intersected with many nullas, and has been estimated as requiring 15 feet banks and cuttings with 40 running feet per mile of minor bridges.

17. From Noolpod Kullen to Chittu-Suthburwah, a distance of six miles, the ground is slightly undulating, and a ten-feet bank for cutting has been estimated for.

18. Beyond Chuttu-Suthburwah there is a depression in the ground which will have to be crossed by a 40-feet bank for half a mile, and there is then a rise, broken by many undulations, necessitating a gradient of 1 in 100 for 5½ miles to near the village of Munka, after which a level length of four miles is reached: ten feet banks and cuttings have been estimated for over this portion.

19. From this point we reach five miles of very bad ground (miles 44 to 49). There is a considerable depression to the Sookree nulla, which will require 400 feet of bridging with embankments of 40 feet, followed by a sudden rise to near Putku, where a 70-feet rock cutting, quarter mile long, will be necessary, the average heights of the banks and cuttings for the five miles being taken at 28 feet.

20. The ground still undulates considerably for the next five miles to Latiahur, and 15 feet banks and cuttings have been allowed.

21. After passing the large village of Latiahur, at an elevation of 1,140 feet, there is a dip to the Oorunga river of some 90 feet, necessitating the line being taken 50 feet above its bed, with a bridge 300 feet long.

22. From the Oorunga river at 55th mile, there is a rise of 400 feet to Keeta at mile 65, and to obtain the requisite gradient, it will probably be necessary to bring the line round, as shewn in plan—see sheet No. 2. These 10 miles have been estimated at 15 feet banks and cuttings with bridges of 60, 100, and 120 feet for the crossings of the Ghatwa, Gewa, and Oorunga rivers, respectively.

23. It is possible that a better route here might be obtained by keeping to the right bank of the Oorunga, but a hill is shewn in maps bordering on the bank, and the ground appears to be much intersected with nullas: time did not allow of its being examined.

24. From Keeta to Chandawa, a distance of seven miles, there is a rise of 239 feet. A line of levels—see sheet No. 6—was run over the road between these two places, but the actual line would probably keep more in the valley curving round the hill, and thus avoid much of the deep cutting; the cost of this portion has been entered at Rs. 80,000 per mile—*vide* detailed estimate, page 9.

25. From Chandawa the line descends for about two miles at 1 in 100 to the Damooda river, crossing 40 feet above its bed with a bridge 160 feet wide, and then running parallel with it to the village of Mahlun, crossing the Saphi river with a bridge similar to the Damooda; 15 feet banks and cuttings with 30 feet per mile of minor bridges have been estimated for over this portion of the line.

26. From Mahlun the line curves round the hill for 2½ miles, at a gradient of 1 in 132, to the village of Kalu, which may be considered the foot of the Mahlun ghat, and where a reversing station will probably be necessary, as it is believed there is not space for a half-mile curve.

27. The line now ascends by the Mahlun ghat, a rise of 500 feet in 10 miles, which necessitates the greater portion of the ascent being made at a gradient of 1 in 100. As this ghat was examined and reported on last year by Mr. Spring, Executive Engineer, enlarged drawings are not again sent up. The cost of the 10 miles has been included in the estimate at Rs. 1,25,000 per mile.

28. Having ascended the plateau the line runs over its slightly undulating surface, which principally consists of rice-fields from mile 92 to 120, with probable banks and cuttings of seven feet, crossing the Koel river on the 106th mile, for which a 360-feet bridge has been allowed.

29. From mile 120 to 126 there is believed to be a broken rocky piece of ground estimated, as requiring 15 feet banks and cuttings, ¼ rock.

30. From mile 126 at Lodma, which has an elevation of 2,325 feet, the line begins to descend the valley of the Gajno river. For the first 14 miles the descent is slight, 1 in 420; but after passing the village of Sinigutu at mile 140, it increases, being 1 in 155 for 2½ miles, and then 1 in 100 to the 150th mile at Pirihatu; these 24 miles have been estimated at eight feet banks and cuttings for the first 14, and 10 feet for the latter 10.

31. We have now to consider the ghat off the plateau, there being a fall of about 525 feet from Pirihatu to the plain at Aruki or Jaranga, and sheet No. 7 shews an enlarged plan and section of this portion of the line.

32. A line of levels was run from near the village of Karapurti at B to the plain at Aruki at I, along the existing track, and is shewn in black in plan and section; there being a fall of 561 feet in six miles renders the direct road impracticable; it therefore remains to be considered whether there is any means of lengthening the ascent so as to get a better gradient, and by carrying the line as shewn in red, it is believed that this can be done. This line gives nine miles of length, and therefore with a gradient of 1 in 100, would give an ascent of 475 feet against 525 feet required, which, with a 25-feet cutting at Pirihatu and a 25-feet bank at debouchment on to the plain, would make up the total necessary.

33. Pirihatu has been taken at 36 feet below the point B, which is well within the difference shewn by aneroid readings. It stands at the head of a deep and narrow ravine which runs under the Kurapurti hill, gradually widening as it descends into a broad valley. Along the side of this ravine the line would have to be carried for three miles until the point C was reached, when it would run parallel to the road to D, crossing it at this point with an elevation of 1,366 feet, or nearly on the same level.

34. From D it is believed that the line might be curved round, as shewn, crossing the main stream at E at an elevation of 1,260 feet, or 57 feet above the actual level of E.

The road would again be crossed at F with an elevation of 1,234 feet against 1,271, or a cutting of 37 feet, and the line passing to the other side of the ridge would rejoin the road near G with an elevation of 1,154 feet against 1,182, or a 28-feet cutting. From G it would follow the curve of the hills for 1½ miles, descending to the plain at J, mile 159, with an elevation of 1,075, necessitating a 25-feet bank.

35. Having thus debouched into the plain of the Karkari river the line passes over fairly easy ground, partially cultivated, crosses that river near the village of Pondechri, with a bridge of 500 feet on mile 68, and gradually descends to the Subarnarikha river, which will require a bridge of 900 feet, and rising slightly from the valley joins the Nagpur-Seetarampore line at Chandil, a distance of 195 miles from Gurwha and 79 from Seetarampore.

36. The proposed line has been taken direct to Chandil crossing the Subarnarikha river, as the range of hills shewn on the south of that river runs too close to admit of the line being taken between it and the river, or of the requisite curve for the junction being obtained.

37. The section of the line through Palamow has been compiled from the mean of aneroid readings taken by two surveyors reduced as frequently as possible by heights given on the survey maps. I have not personally been over this portion of the line, neither have I been over the line from mile 92 to mile 140 at Sinigutu, but Lodma has been fixed from observations made last year.

38. The report is based on actual levels between mile 85 and 72 Keeta, to Chandwa, 82 and 92 Kalu to plateau, 150 and 159 ghat off plateau, and on aneroid readings for the other portions, which must be taken as giving a fair idea of the general character of the ground only and not absolute altitudes.

39. From the table of gradients appended, it appears that out of the total 195 miles on this section of the line, 51 miles are at a slope of 1 in 100, the ascent to the Lohardugga plateau is broken into several portions by the rising ground through Palamow, and the Keeta to Chandawa pass, so that the main ascent is only 10 miles long; but on the descent from the plateau it will be observed that there is a continuous fall of 1 in 100 for 16½ miles.

40. The revised rough estimate for this portion of the line, 195 miles long, amounts to Rs. 20,77,738, or Rs. 1,06,550 per mile.

41. Considering now the second portion of the main line south of the Nagpur-Seetarampore line to Cuttack, it was stated that in the preliminary report, paras. 34 to 38, that three routes had been examined for the descent from the Keonghur plateau. Of these, two were found altogether impracticable and one *vid* Gonagosa to Barrigaon was more promising. These routes are shewn blue on the atlas sheets accompanying.

42. On the march back, levels were taken from Barrigaon to Gonagosa *vid* the road by Gudwa, shewing a rise of 600 feet in a distance of little more than six miles, with a steep ghat near Gudwa of 361 feet in 1¾ miles, there seems no possibility of obtaining 12 miles

length in this direction ; but another route shewn red in the plans was explored by one of the surveyors down the valley of the Kusoi, and aneroid readings as shewn in section sheet 011, 1 taken over it, they give a fair expectation of the requisite gradient being obtainable with more protracted surveys, but, owing to the dense jungle, &c., more precise information could not be obtained in the time at disposal.

43. The following is a description of the route proposed of the lower half of the main line which leaves the Nagpur line just south of the crossing of the Soukna nullah, 104 miles from Seetarampore at an elevation of 615 feet above M. S. L.

44. The Sanjai nullah would be crossed on the 3rd mile with a bridge of 300 feet, and then there is a slight rise in the ground to the 6th mile when a level piece for two miles occurs, the ground again falling to the Jamain nullah, the bridge over which will be 240 feet.

45. From this nullah there is a rise of 70 feet into Chyebassa on the 13th mile, which stands at an elevation of 745 feet above the sea, and is the head-quarters of the Singhbhoom district.

46. From Chyebassa the line passes over slightly undulating country to the 20th mile, where an undulating ascent is met with, until the 39th mile is reached, at an altitude of nearly 800 feet above Chyebassa, or 1,535 feet above M. S. L. This ascent will necessitate gradients of 1 in 100, with about three miles of level intervening at intervals. These 39 miles have been estimated as follows :—

0 to 25	miles	= 10	feet banks and cuttings.
25 to 27	„	= 26	„ ditto.
27 to 36	„	= 10	„ ditto.
36 to 39	„	= 20	„ ditto.

47. From the 39th mile the ground falls some 300 feet to the large village of Jointe on the 50th mile. This village seems thriving and prosperous, and stands on the banks of the Byturnee near its junction with the Kangere just at the borders of Singhbhoom ; five feet banks and cuttings have been estimated for over these 11 miles, with quarter mile rock cutting on the 46th mile.

48. The Keonghur State is here entered, the Kangera river being crossed on the 51st mile, with a bridge of 300 feet, and the Byturnee on the 54th mile, with one of 400 feet, after which the ground rises again 200 feet to near the 62nd mile beyond the village of Gidibash ; these 12 miles have been calculated at five feet banks and cuttings with one mile of 10 feet.

49. From 62nd to 74th mile, there are a considerable number of minor undulations in the ground, but which will not, as a rule, necessitate steep gradients, and 10 feet banks and cuttings will probably carry the line over them with, say, one mile of 10 feet rock cutting.

50. The section up to this point has been compiled from aneroid readings, but, from the village of Baisuli, levels were taken to the 94th mile, both *viâ* Budbeda and Binamunda, and *viâ* Midankalo and Mojarposi, two lines being run between these latter villages. The continuous red line shews the best route, and the levels over it are shewn on a scale of 1,000 feet to an inch horizontal and 100 feet vertical on sheet 13, the rejected lines are shewn dotted in red in plan.

51. These 20 miles will be seen to be very uneven, and, as many of the ridges are of hard rock, the line has been graded with a view to giving as much bank and little cutting as possible. The cost of this portion has been estimated, see page 10, at Rs. 45,000 per mile, with minor bridges at Rs. 6,000 per mile.

52. From the 94th mile, a fall of 130 feet brings us to the Barapento nullah on 97th mile, whence there is again an ascent to mile 104, a ridge above the Masaloi nullah. These 10 miles have been taken at 10 feet banks and cuttings, with 1 mile 20 feet rock cuttings.

53. From the crossing of the Musaloi stream on the 105th mile, with a bridge of 200 feet, levels have again been run as far as the village of Tikaderry on mile 115 ; the ground undulates considerably, and the cost of the 11 miles, 104 to 115, has been estimated at Rs. 60,000 per mile, with minor bridges Rs. 8,000 per mile.

54. The village of Gonagosa, near the 115th mile, may be said to stand at the head of the ghat, the best line of it as yet found is shewn in red, and the section is from aneroid readings. It is anticipated that the cost of the 12 miles, necessary for the descent, will not be less than Rs. 1,25,000 per mile, the gradient is shewn as continuous at 1 in 100 for 13 miles, and the line would cross the Kasu nullah, some 53 feet above its bed, on the 127th mile with a bridge of 100 feet.

55. From the 127th mile the line runs south to the Brahmini, and has been estimated as requiring eight feet banks and cuttings, with light gradients to mile 145.

56. The section across the Brahmini river is given on sheet No. 20 ; the actual channel has a width of 4,480 feet, but the floods rise over the ground on the left bank as shewn by high flood level, and a total waterway of 8,000 feet, at Rs. 700 per foot, to be divided into lengths as found necessary, has been allowed. The bed of this river is sandy, and the main bridge at least will have to be supported on wells.

The formation level has been shewn at 80 feet or 10·75 feet above highest recorded flood.

57. From mile 147 to the left bank of the Mahanuddy, opposite Cuttack, mile 182, the line will probably follow approximately the right bank of the canal as shewn on plan, and five feet banks and cuttings (mostly banks) will suffice for it.

58. The general style of the country through Singhbhoom and Keonghur is undulating, and there is but little cultivation except in the immediate vicinity of the villages ; rice appears the principal article grown the forest sparse in Singbhoom, gradually thickens, towards the south of Keonghur, until the slopes of the plateau are covered with a dense growth, which will effectually preclude the best route off it being found without considerable time and labor being expended in clearing; the ridges crossed almost invariably consist of rock, sometimes washed quite bare, and in laying out a line, care will have to be taken to avoid cuttings as much as possible.

59. A peculiar feature of the Keonghur plateau are the black-looking ridges of loose rounded boulders, some of them low chains of hills, which are quite denuded of soil, and present an appearance of being piled up by artificial means.

60. The revised rough estimate for this portion of the line amounts to Rs. 2,20,47,624, or Rs. 1,21,141 per mile for the 182 miles.

61. The total length of line from Gurwha to Cuttack will then be 195+182=377 miles, and the cost Rs. 2,07,77,378+2,20,47,624=Rs. 4,28,25,002, or Rs. 1,13,594 per mile.

To pay a dividend of 5 per cent. this outlay would necessitate a weekly traffic return of Rs. 218 per mile taking the working expenses at Rs. 50 per cent. on the return.

62. The probable sources of income may be divided into the following heads :—

1st.—Pilgrim traffic.

2nd.—Coal and mineral traffic.

3rd.—Local goods and passenger traffic.

63. As regards the first it is difficult to estimate the number that would travel over the northern portion of the line, but if the statistics collected at Cuttack are to be relied on it appears that 4,50,000 pilgrims proceed per annum from Cuttack to Pooree, and presumably return, the greater part of them come from the direction of the railway from Chyebassa; and taking ⅓ as availing themselves of the line, the weekly receipts from this source per mile on this portion of this railway would be Rs. 75.

64. The second source of traffic would only affect a small portion of the line south of Gurwha, but would probably bring in good receipts on the portion, Benares to Gurwha, the geological resources and conditions of Palamow having been specially reported on by Mr. Ball, it is unnecessary to recapitulate them here.

65. The third source of receipts is also difficult to estimate without the collection of careful statistics, the jungle products of Palamow would of course be exported by the line, but then again would principally affect the Gurwha-Benares portion. The Lohardugga plateau over which the line passes for some miles is a fertile rice and other grain-producing district, which may be anticipated to produce a fair traffic, but the long and steep gradients on and off it would add to the cost of conveyance of imports, though they would not matter if a large export traffic is anticipated in both directions.

The Manbhoom district through which the line runs after descendiug the plateau on the east is mostly fertile, with several large villages apparently in a prosperous condition, which might develope fair traffic. The lower portion of the line Chyebassa to Cuttack is but thinly inhabited, being mostly jungle, except near the villages specially through Keonghur; salt seems to be the principal article of commerce, which is imported from Orissa on pack-bullocks, but there seems to be great expectation in the latter province of the benefits to be derived from the line.

66. Having treated of the main line, it remains to consider the proposed extension from Gya to Palamow. In the preliminary report this extension was mentioned as quite practicable, and it was proposed, after reaching Manatu, to bring it *viâ* Puchma and Lesligunge to join the main line at Baree Khas.

67. Considering, however, the position of the Daltongunge coal-field, and that the valley of the Jinjore is the most open, it is now proposed to bring it as shewn by the continuous red line on atlas sheets, *viâ* Turlee Khas crossing the Amanut river at Seknee Khond and joining the main line at Daltongunge itself, the total length being 85½ miles against 82 in preliminary estimate, but only 1½ miles of increase are due to the change in route, as the line was measured 1 mile short of Gya station.

68. The following is a description of the line. Starting from the Gya station of the East Indian Railway, with a formation level of 356 feet, the line runs through the station crossing the Jumna nullah at the 6th mile, with two spance of 80 feet each, and passes over open country, mostly rice-fields, to the 22nd mile, where it crosses the Grand Trunk Road about one mile west of Shergotty; it then continues with easy gradients up the valley of the Mohur to the 42nd mile over cultivated rice country ; crossing the Daharai, Purna, and Subjai nullahs respectively, with three spans of 100 feet, and two and three spans of 80 feet each.

69. From the 42nd to 45th mile ground is broken and raviny, and 10 feet banks and cuttings have been estimated for over this portion.

70. From the 45th to 51st mile the ground is more even, but covered with sparse jungle ; the Mohur river will be crossed at mile 47, with a bridge of five spans of 100 feet each with foundations on rock.

71. The reconnaissance showed this point to be the best place for crossing, as lower down opposite mile 40, before the broken ground commences, the river is very broad, and higher up at Kairah, a difficult and rocky piece of country intervenes.

72. At mile 51 the ascent to Manatu commences, terminating at the 59th mile; levels were taken over the last seven miles and the eight miles estimated as costing Rs. 70,000 per mile including minor bridges; the ground is very rocky and uneven, and the levels taken are shown on sheet 17, from which it appears the ghât can easily be ascended at a gradient of 1 in 100.

Two rivers requiring bridges of 240 feet and 160 feet are met with on the ascent.

73. From mile 59 the ground gradually falls along the valley of the Jinjore, the first 10 miles are over rather broken ground, for which 10 feet banks and cuttings have been allowed, but for the next 10 miles five feet banks and cuttings will suffice.

74. The Amanut river will be crossed at Selence Khoord, with eight spans of 150 feet each, and the line carried into Daltongunge, where it will join the Benares-Cuttack main line with 10 feet banks and cuttings for the last 6½ miles.

75. With the exception of the seven miles of levels taken over the Manatu ghât the sections for this line are based on aneroid readings only.

76. The total cost of this branch line is estimated at Rs. 66,89,638, or Rs. 78,242, per mile for the 85½ miles. To pay a dividend of 5 per cent. this would necessitate a weekly traffic return of Rs. 150 per mile (taking the working expenses as 50 per cent. on the return as before.)

77. From the accompanying abstracts of some statistical tables of exports and imports kindly furnished by Mr. R. W. Renny, Assistant Commissioner of Palamow, it will be seen that the present traffic on pack-bullocks, may be expected to furnish annual receipts of Rs. 5,732 per mile, or weekly receipts of Rs. 110.

It may reasonably be anticipated that these would be doubled after the line was opened, giving Rs. 220 per mile per week, and adding Rs. ¼ for passenger traffic, we should have a return of Rs. 275 per mile per week, against Rs. 220 earned by the present Gya branch.

78. In addition to the above, a considerable trade in minerals would probably be opened up by this branch. The situation of the Daltongunge coal-fields is entered in the atlas sheets accompanying, from which it will be seen that this line runs through the southern portion of them, enabling the products to be readily conveyed to Gya.

79. This coal-field was reported on most favorably by Mr. Ball, who writes that "no doubt whatever exists as to the excellent quality of the coal in this field, it has been proved both by assays and actual experiments to have great heating power, and to be admirably adapted to steam purposes."

80. From these considerations it may, I think, be safely inferred that the proposed extension of the line from Gya to Palamow would be a financial success, even if the main line from Benares to Cuttack were not carried out.

81. In conclusion, I may mention that a total of about 1,200 miles of country were prospected over for these lines, and 150 miles of actual levels taken on account of work which could not possibly have been performed in the time without the cordial co-operation of all members of my small party.

W. H. PARKER, M. Inst., C.E.,
Superintending Engineer, P. W. Dept.

M. LAUGHARNE, Captain, R.E.,
Executive Engineer, P. W. Dept.,
Benares and Cuttack Railway Survey.

Enclosure No. 3 to P. W. D. Resolution No. 73 R. C. of 1884.

Note by MR. W. H. PARKER, M.I., C.E., *Engineer-in-Chief, Nagpur Railway Surveys, on the report by* CAPTAIN M. LAUGHARNE, R.E., *of the reconnaissance of a portion of the line of Railway proposed between Benares and Cuttack.*

The Government of India, Public Works Department, No. 1015 R C of 9th December 1882, directing that a reconnaissance should be made of the country between Benares and Cuttack for a proposed line of railway, allotted to the Bengal Government that portion of the proposed line between Gurwha, in the Palamow Sub-Division, of District Lohardugga and Cuttack.

2. At a Conference held at Gya, the following resolutions were arrived at—*vide* Government of India's No. 1080 R C of 16th December 1882 :—

A.—To examine the country for a line from Gya to the neighbourhood of Poorce. Westward of the line examined in 1881-82.

B.—To effect a junction between this line and Gurwha.

C.—To ascertain the best ascent available up to the Ranchi plateau.

D.—To continue the line across the plateau, descending, if possible, by Bandgaon and Chackerdarpur. Considerable importance was attached to the discovery of a suitable route in this quarter, but this descent was not to be considered obligatory, in the event of a better line being obtained elsewhere.

E.—In the event only of failure in this direction, the passes on the Lohardugga and Palkot direction, in the direction of Suadi or Laingurh, were to be examined.

F.—The line to be continued by Chyebassa to the north bank of the Mahanuddee, opposite Cuttack.

3. Captain M. Laugharne, R. E., Executive Engineer, and Mr. A. V. Roberts, Assistant Engineer, with a small staff of surveyors, were the officers made available for the work under my directions.

4. Mr. Roberts, who arrived on the 19th December 1882, was directed to start from Lohardugga and examine the route from Lohardugga to Gurwha, *viâ* the Saharghatia pass, returning to Lohardugga by the valley of the Oorunga and the pass on the direct road from Daltongunge to Lohardugga. Both these passes were found impracticable, as explained in Captain Laugharne's report. Mr. Roberts was then directed to examine the direct line of country from Lohardugga to Bandgaon, and thence to Chackerdarpur, which is shewn by the blue line through Bhownro and Muchia, and reported that the descent to Chackerdarpur by this route was also quite impracticable. He was then directed to join Captain Laugharne at Chyebassa, and proceed with him on the reconnaissance of the southern section of the line on to Cuttack.

5. Captain Laugharne, who arrived in Hazaribagh on the 12th January, was deputed first to march over the line between Gya and Palamow by the valley of the Morhur river, sending out detached parties on arrival near Daltongunge to examine the route north of the Oorunga river on the line of the road from Daltongunge to Lohardugga, and after arranging, to connect the line from Gya with one from Gurwha, to examine the ghats ascending the Ranchi plateau.

6. The blue lines on the map shew that Captain Laugharne examined the country most thoroughly with the establishment at his disposal, with the result that the only feasible ascent appears to be *viâ* the Mahlan spur, which was surveyed last year by Mr. F. J. E. Spring, Executive Engineer.

7. The Mahlan hill outlies the northern range of hills on the edge of the Lohardugga plateau, standing out in the valley some distance from the edge of the plateau with which it is connected by a long spur, and, on this account, affords the only reasonable hope of obtaining the length necessary for ascending the required height. The northern slope of the plateau, as a rule, falls abruptly into the valley below, and tributary valleys that run through the hills have all an abrupt fall near these heads. It is unfortunate that, to get at this spur, it appears necessary first to descend the valley of the Deonund.

8. There is a somewhat rough and difficult country to the south-west of Ranchi, the ridge, from which rise the Koel running to the west, Karo to the south, Subarnarikha and other streams flowing to the east, is very high, and there will be something like a ghat descent of 200 or 300 feet from this ; also with the remaining portion of Captain Laugharne's route to Chandil I am not acquainted, but he appears to have done his best to get a southern pass direct to Chyebassa before he adopted the alternative run to Chandil, where he joins the Bengal-Nagpur Railway.

9. The crossing of the Subarnarikha by his line is unavoidable to the best of my knowledge. A range of hills from the west runs up to the edge of the river, and continues for some distance down, and I think that very heavy work, including tunnelling, would be necessary to get through this range.

10. Having joined in at Chandil it is manifestly advisable to avoid extra length in construction to make use of the Bengal-Nagpur Railway, and Captain Laugharne therefore started the southern portion of his reconnaissance from the point where the Nagpur Railway crosses the Chyebassa and Khursawan district road.

11. The great difficulty in the southern portion appears to be in the Keonghur hills bordering the valley of the Byturnee. Captain Laugharne here scattered his parties to endeavour to obtain the best route, but one only appears to be available, and the practicability of this for the curves and gradients prescribed is not to my mind quite clear. Captain Laugharne's estimate of the bridging required for the Brahminee river was framed after consultation with me. The Irrigation Department of Bengal will probably be able to say if this estimate is excessive.

12. The quantities roughly estimated in banks and cuttings are based on experience obtained from the longitudinal section of the Nagpur Railway, and the waterways proposed have been based on the same data. I consider therefore that Captain Laugharne's estimate may be accepted as a very fair approximation of the probable cost of this line.

13. It seems hopeless at present to estimate the probable returns of the traffic, as this line runs in a direction in which local traffic only can be expected, which, with the exception of the pilgrim traffic, does not exist at all ; though, as Captain Laugharne shews in his report, a good deal of traffic may be developed when the line is made. The estimate of the returns on the Gya Extension does not appear to be too sanguine, judging from the present receipts of the Patna-Gya Railway, to the prosperity of which an important addition would be made.

14. Judging from the nature of the country traversed by the reconnaissance party, if it is intended that the survey should be carried out, it will be necessary to make a preliminary survey with a strong staff for at least one season, as a good final location with the information available appears hopeless to effect. It is clear to me that the Mahlan pass is the only pass on the north side of the country by which an ascent can be effected, but it is very desirable to have a considerable amount of trial survey executed to obtain, if possible, a line with better gradients and less work than is shewn on the sections now submitted.

15. As regards the descent of the plateau on the south side, if it is desired to find to pass, at least a survey party would, I consider, be well employed during one working season in thoroughly examining the range between the pass opposite Chackerdarpur and the Subarnarikha, and I am by no means hopeful of finding any such pass.

16. From Chyebassa to Cuttack one route only appears to be feasible, and on that route the portion descending from the Keonghur plateau to the plains of the Brahminee valley appears to be somewhat difficult to work out ; nor is it fairly established in my mind that this descent is practicable at 1 in 100.

17. The work done by the small establishment employed will, I trust, be considered to have been efficiently performed. Captain Laugharne and all employed under him appear to have worked with great zeal and intelligence, and to have done their best to examine and overcome in a thorough manner all the difficulties encountered on the route.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Circular No. 13E.

Extract from the Proceedings of the Government of India, Revenue and Agricultural Department, under date Calcutta, the 28th January 1884.

MUSEUMS AND EXHIBITIONS.

RESOLUTION.

READ the following Prospectus of the International Health Exhibition to be held in London during the current year:—

International Health Exhibition, London, 1884.

Patron:

HER MOST GRACIOUS MAJESTY THE QUEEN.

President:

HIS ROYAL HIGHNESS THE PRINCE OF WALES, K.G.

Executive Council:

(Appointed by His Royal Highness the President.)

Chairman:—HIS GRACE THE DUKE OF BUCKINGHAM AND CHANDOS, G.C.S.I.

Vice-Chairman:—SIR JAMES PAGET, *Bart.*, F.R.S.

EDWARD BIRKBECK, ESQ., M.P.
GEORGE BUCHANAN, ESQ., M.D., F.R.S.
SIR F. PHILIP CUNLIFFE-OWEN, K.C.M.G., C.B., C.I.E.
SIR JOSEPH FAYRER, K.C.S.I., M.D., LL.D., F.R.S.
The MARQUIS OF HAMILTON.
ERNEST HART, ESQ.
SIR JOHN LUBBOCK, *Bart.*, M.P., F.R.S.
SAMUEL MORLEY, ESQ., M.P.
G. V. POORE, ESQ., M.D.
SIR JOHN ROSE, *Bart.*, G.C.M.G.

Secretary:

EDWARD CUNLIFFE-OWEN, B.A.

HEALTH:

Food, Dress, the Dwelling, the School, and the Workshop.

EDUCATION:

Apparatus used in Primary, Technical, and Art Schools.

It is proposed to hold, during the year 1884, an International Health Exhibition, which shall also illustrate certain branches of education, and which will occupy the buildings at South Kensington erected for the International Fisheries Exhibition.

The object of the Exhibition will be to illustrate, as vividly and in as practical a manner as possible, FOOD, DRESS, the DWELLING, the SCHOOL, and the WORKSHOP, as affecting the conditions of healthful life, and also to bring into public notice the most recent APPLIANCES for ELEMENTARY SCHOOL TEACHING and Instruction in Applied Science, Art, and Handicrafts. The influence of Modern Sanitary Knowledge and Intellectual Progress upon the welfare of the people of all classes and all nations will thus be practically demonstrated, and an attempt will be made to display the most valuable and recent advances which have been attained in these important subjects.

The Exhibition will be divided into two main sections,—Division I, Health; Division II, Education; and will be further sub-divided into six principal groups.

In the First Group, it is intended specially to illustrate the Food Resources of the world, and the best and most economical methods of utilising them. For the sake of comparison, not only will specimens of food from all countries be exhibited, but the various methods of preparing, cooking and serving food will be practically shown. The numerous processes of Manufacture connected with the preparation of articles of food and drink will thus be exemplified; and, so far as the perishable nature of the articles will admit, full illustrations will be given of the various descriptions of foods themselves.

In the Second Group, Dress, chiefly in its relation to health, will be displayed. Illustrations of the clothing of the principal peoples of the world may be expected; and a part of this

Exhibition, which, it is anticipated, will be held in the galleries of the Royal Albert Hall, will be devoted to the History of Costume.

In the Third, Fourth and Fifth Groups will be comprised all that pertains to the healthful construction and fitting of the Dwelling, the School and the Workshop, not only as respects the needful arrangements for Sanitation, but also the Fittings and Furniture generally in their effect on the health of the inmates. The most improved methods of School Construction will be shown, and the modes of combating and preventing the evils of unhealthy trades, occupations, and processes of manufacture will form portions of the Exhibition.

The Sixth Group will comprise all that relates to Primary, Technical, and Art Education, and will include Designs and Models for School Buildings; Apparatus and Appliances for Teaching; Diagrams, Text-books, &c. Special attention will be directed to Technical and Art Education, to the results of industrial teaching, and to the introduction of manual and handicraft work into schools.

CLASSIFICATION.

DIVISION I.—*Health.*

Group 1—FOOD.

CLASS 1. Selected Displays of Unprepared Animal and Vegetable Substances used as Food in various countries. Stuffed Specimens of Animals, Birds, &c. Models, Drawings, and Illustrations of the same.
„ 2. Prepared Vegetable Substances used as Food, including Tinned, Compressed, and Preserved Fruits and Vegetables. Bread, Cakes, and Biscuits of all kinds.
„ 3. Prepared Animal Substances used as Food in a preserved form—Tinned, Smoked, Salted, Compressed, and Prepared Animal Foods of all kinds. Food produced by Insects, such as Honey, &c.
„ 4. Beverages of all kinds—(*a*) Alcoholic; (*b*) Non-alcoholic; (*c*) Infusions (tea, coffee, cocoa, chocolate, &c.)
„ 5. New Varieties of Food, Food for Infants, Food for Invalids, New Concentrated Foods of all kinds.
„ 6. Cookery practically Demonstrated. Economical Cooking, Workmen's and other Kitchens, Cheap Restaurants, Bakeries, Cafes, Foreign Cookery, &c.*
„ 7. The Chemistry and Physiology of Food and Drink. The Detection of Adulteration, Materials used as Adulterants, Analyses, Food Constituents, and Equivalents, Tables, Diagrams, &c.
„ 8. Diseases due to unwholesome and impropef Food. Drawings and Models of Animal and Vegetable Parasites, &c.
„ 9. Practical Dietetics. Army and Navy Rations, Prison and Workhouse Diet, Foreign Dietaries, &c.
„ 10. Publications and Literature, Models, and Diagrams relating to Group 1.
„ 11. Apparatus and Processes for Conserving, Storing, Conveying, and Distributing Fresh Food of all kinds.
„ 12. Machinery and Appliances for the preparation of Articles under Group 1.

Group 2.—DRESS. (NOTE.—*It is proposed to display the Collections included under this Group in the Galleries of the Royal Albert Hall.*)

CLASS 13. Collections illustrative of the History of Dress, National Costume, &c.
„ 14. Waterproof Clothing, India Rubber, Gutta Percha, &c.
„ 15. Furs, Skins, and Feathers. Dresses for Extreme Climates, &c.
„ 16. Dress for Sport, Hunting Suits, &c.
„ 17. Life-saving Dress. Diver's Dress. Fireproof Dress.
„ 18. Publications and Literature relating to Group 2. Patterns, Statistics, Diagrams, Models.
„ 19. Machinery and Appliances for the Preparation of Articles under Group 2.

Group 3.—THE DWELLING-HOUSE.

CLASS 20. Dwellings, Models, and Designs for the same, and Specimens of Buildings erected in the Grounds. Fittings and Accessories for Dwelling-houses. Completely fitted Apartments.
„ 21. Water Supply and Purification.—Meters, Filters, Water-Fittings, Cisterns, Baths, Lavatory, Apparatus, Sinks, &c.
„ 22. House Drains, their Construction and Ventilation.—Sewer disconnection; Sinks, Traps, Gullies; the Disposal and Utilization of House refuse.
„ 23. Water and Earth Closets, Ash Closets, Commodes, Urinals, Disinfecting Powders and Fluids, Insect Destroyers.

* *Special Notice.*—As Refreshments come within the scope of this Exhibition, all methods of preparing the same, whether by cookery or otherwise, and the display and sale thereof, will be matters of separate arrangement with those wishing to be represented in this section of the Exhibition.

CLASS 24. Grates, Stoves, Kitcheners, Ranges, Boilers, &c., for Domestic Use. Apparatus for Heating and Warming, Smoke Abatement, &c.
" 25. Ventilators, Air-Inlets, and Outlets, Cubic Space of Rooms, Cowls, Air Straining and Cleansing.
" 26. Lighting Apparatus.—(*a*) Electrical Apparatus for Illumination and Domestic Use, Secondary Batteries, Electroliers, Accumulators, &c.; (*b*) Apparatus for Lighting by Gas, Gas Producers, Gas Meters, Gas Fittings, Chandeliers, &c.; (*c*) Oil and other Lamps, and Stoves; Mineral Oil, Wax and other Candles, Vegetable and Animal Oils.
" 27. Fire Prevention Apparatus—Extincteurs, Portable Engines, Domestic Fire Escapes, &c.
" 28. Materials for Sanitary House Construction.—Roofs, Walls, Damp Courses, Solid Floors, Damp Proof Wall Coverings, Cements, &c.
" 29. Materials for Sanitary House Decoration, Non-poisonous Paints and Wall Papers, Floor Coverings, Washable Decoration, &c.
" 30. Objects for Internal Decoration and use in the Dwelling. Fittings and Furniture.
" 31. Personal Hygiene and Care of Sick. Materials for "First Aid" Ambulance Apparatus, Furniture and Appliances for the Sick Room. Bathing Requisites, Detergents, Couches, Beds, Invalid Chairs, &c.
" 32. Publications, Models, Pictures, Diagrams, &c., and Literature relating to Group 3.
" 33. Machinery relating to Group 3.

Group 4.—THE SCHOOL.

CLASS 34. Designs and Models of Improved Buildings for Elementary Schools, Infant Schools and Créches.
" 35. Apparatus and Fittings for Warming, Ventilating, and Lighting Schools, School Latrines, Closets, &c.
" 36. Special School Fittings for Storing and Drying Clothing.
" 37. School Kitchens and arrangements for School Canteens. Methods of warming Children's Meals, &c.
" 38. Precaution in Schools for preventing the spread of Infectious Diseases, School Sanitaria, Infirmaries, &c.
" 39. Special Apparatus for Physical Training in Schools, Gymnasia, Apparatus for Exercise, Drill, &c.
" 40. The Literature relating to Classes 30 to 35. Models, Statistics, Diagrams, &c.

Group 5.—THE WORKSHOP.

CLASS 41. Designs and Models for improvements in the Arrangement and Construction of Workshops, especially those in which dangerous or unwholesome processes are conducted.
" 42. Apparatus and Fittings for preventing or minimising the danger to health from carrying on certain trades. Guards, Screens, Fans, Air-jets, Preservative Solutions, Washes, &c.
" 43. Objects for Personal Use. Mouth-pieces, Spectacles, Dresses, Hoods, &c., for use in certain unhealthy and poisonous trades.
" 44. Illustrations of Diseases and Deformities caused by unwholesome Trades and Professions. Methods of combating these diseases. Preservative measures, &c.
" 45. Sanitary Construction and Inspection of Workshops and Factories. New Inventions or improvements for ameliorating the condition of life of those engaged in unhealthy occupations.
" 46. The Literature of the subjects included under Classes 37 to 41. Statistics, Diagrams, &c.

DIVISION II.—*Education.*

Group 6.—EDUCATIONAL WORKS AND APPLIANCES.

CLASS 47. Créches and Infant Schools.—(*a*) Apparatus and Fittings for Créches and Infant Schools; (*b*) Games, Toys and Kindergarten Amusements; (*c*) Models and Appliances for teaching; (*d*) Examples of School Work.
" 48. Primary Schools.—(*a*) Apparatus and Fittings; (*b*) Models and Appliances for teaching; Text-books, Diagrams and Examples; (*c*) Specimens of work done in Elementary Schools.
" 49. Domestic Economy in Schools for Girls.—(*a*) Models and Apparatus for the teaching of Cookery, Housework, Washing and Ironing, Needlework, and Embroidery, Dressmaking, Artificial Flower-making, Painting on Silk, Pottery, &c.; (*b*) Specimens of School Work.
" 50. Handicraft Teaching in Schools for Boys.—(*a*) Apparatus and Fittings for Elementary Trade Teaching in Schools; (*b*) Specimens of School Work.

CLASS 51. Science Teaching.—(*a*) Apparatus and Model for Elementary Science Instruction in Schools; Apparatus for Chemistry, Physics, Mechanics, &c.; (*b*) Diagrams, Copies, Text-books, &c.; (*c*) Specimens of the School Work in these subjects.
" 52. Art Teaching.—(*a*) Apparatus, Models, and Fittings of Elementary Art Instruction in Schools; (*b*) Diagrams, Copies, Text-books, &c.; (*c*) Specimens of Art Work, Modelling, &c., in Schools.
" 53. Technical and Apprenticeship Schools.—(*a*) Apparatus and Examples used in Primary and Secondary Schools for teaching Handicrafts; (*b*) Models, Plans, and Designs for the fitting up of Workshop and Industrial Schools; (*c*) Results of industrial work done in such Schools.
" 54. Schools for the Blind and for the Deaf and Dumb.—(*a*) Apparatus and Examples for Teaching; (*b*) Specimens of School Work.
" 55. Literature, Statistics, and Diagrams relating to Group 6 and to the Effects of "Cramming" and Overwork on the Young, &c.
" 56. Collective Displays of School Work and Appliances.

*** It is proposed to arrange Collective Exhibits in connection with some of the above classes, illustrating, among other subjects, the Dwellings of the Poor, the care in the Dwelling for the Welfare of the Children and of the Sick, Model Nurseries, Sleeping Apartments, completely fitted Kitchens, fully equipped Gymnasia for adults and for the young, Model Laboratories and Collections for Health-Teaching, Model Schools, Workshops, &c., and also Collections having reference to special trades.

It is also proposed to hold an International Congress in June or July next, on each of the main Sections of the Exhibition—Health and Education.

Lectures will be given, and Conferences will be held, on the various Subjects illustrated in or cognate with the Exhibition; they will be explained by practical Demonstrations and Experiments, and Reports on each group will be issued.

Processes will be shewn in actual operation, and Practical Tests will, from time to time, be made of the inventions submitted to the Juries.

APPLICATION FOR SPACE.

Please allot me in Class_____ (see foot-note A.) for the Exhibition of Articles as under, in accordance with the following Regulations:

Floor Space_____ Feet Square.
Counter Space_____ Feet Run.
Wall Space_____ Feet Square.

Number and description of Articles (see foot-note B.)

*Name*_____

*Address*_____

*Date*_____

To the Secretary,

INTERNATIONAL HEALTH EXHIBITION, SOUTH KENSINGTON, LONDON, S.W.

A.—Applications for Space for Articles belonging to different classes must be made upon separate forms. Additional copies of the Form can be obtained of the Secretary.

F

B.—It is particularly requested that the description be made as complete as possible, as it will form the basis of the Catalogue Entry.

Exihibitors of apparatus requiring the use of water, gas or steam should apply to the Secretary for a special form. See Regulation 29.

REGULATIONS.

1. An International Health Exhibition, under the patronage of Her Majesty the Queen and the Presidency of His Royal Highness the Prince of Wales, will be held in London in 1884.
2. The Exhibition will be opened on Thursday, 1st May, and will continue open for a period of not less than six months.
3. The principal objects to be exhibited are comprised in the classification, which is intended to illustrate chiefly Food, Dress, the Dwelling, the School, and the workshop as affecting the conditions of healthful life, and also the most recent appliances for Elementary School Teaching and Instruction in applied Science, Art, and Handicrafts.
4. Medals in Gold, Silver, and Bronze, and Diplomas of Honour will be awarded on the recommendation of International Juries.
5. No charge will be made for space, but Exhibitors will have to pay every expense of transit, delivery fixing and removing their Exhibits, and erection of counters when required, and they must, either personally or by their agents, superintend the despatch, transmission, reception, unpacking, and installation, and at the close of the Exhibition, the removal of their goods; in default thereof the Executive Council reserves to itself the right of doing whatever may be considered necessary, and at the expense of the Exhibitor. Should any goods be deposited in the Exhibition premises during the absence of the Exhibitor or his Agent, the Executive Council will not be responsible for any loss or damage from whatsoever cause arising.
6. Applications for allotment of space must be made on printed form, which will be supplied on application to the Secretary, International Health Exhibition, South Kensington, S. W., which must be filled up and returned on or before the 1st February 1884. After this date no application can be received.
7. The nature of the articles which it is proposed to exhibit must be fully specified in the Form of Application for space.
8. The applications will be laid before the Council, and the Secretary will, as soon as practicable, notify to applicants their decision with regard to the amount of space, if any, allotted to them.
9. The Council reserve to themselves the absolute right of refusing to admit any exhibit.
10. The Foreign and Colonial Commissioners appointed by their Governments are invited to communcate with the Secretary. They will be charged with the consideration of all questions relative to the distribution of the space allotted to their respective countries, and the Executive Council will place at their disposal all information and plans that may be useful to them.
11. The applicant for space from countries in which no Commissioner has been appointed will correspond directly with the Secretary.
12. The Executive Council will endeavour to obtain, from the various English Railway Companies, special terms for the conveyance of exhibits to and from the Exhibition, and should they succeed in doing so such arrangements will be communicated to intending Exhibitors.
13. All packages containing goods intended for exhibition must have painted on them the distinctive mark I. H. E., together with the name and address of the Exhibitor. Labels will also be forwarded to each Exhibitor.
14. Packages from Foreign Countries must likewise have painted on them the letters I. H. E. They must all be marked in such a way as to show distinctly from whence they come, the name of the country and of the Exhibitor.
15. All cases, counters, platforms, &c., must not exceed the following dimensions without special permission :—

Show-cases and partitions	10 feet	above the floor.	
Counters . . .	3 „	„	„
Platforms . . .	1 foot „		„

16. Exhibitors may place railings around their stands subject to approval; but in every instance the railings must be within the area of the "stand," *i.e.*, the space allotted.
17. The flooring must not be altered, removed, or strengthened for the convenience of arrangement, except by sanction of the Executive Council, and at the expense of the Exhibitor.
18. No Exhibitor will be permitted to display exhibits in such a manner as to obstruct the light or impede the view along the open spaces, or to occasion inconvenience, injury, or otherwise disadvantageously affect the display of other Exhibitors.
19. In order to ensure uniformity of decoration and general good effect, no Exhibitor will be allowed to put up any flags, banners, or other kind of decoration without special permission.
20. Signs or name-boards must be placed parallel with the main passages, that is parallel, with the frontage of the respective stands. These must be black with gold letters, and must be hung subject to the approval of the Council.
21. All hand bills, printed matter, &c., connected with exhibits, for gratuitous distribution, must first receive the approval and permission of the Executive Council, which permission may be withdrawn at any time.
22. Cases must be unpacked as fast as possible and the empty cases taken away by the Exhibitors or their Agents. The Executive Council decline to accept any responsibility with reference to empty cases, which must be at once removed from the building at the expense of Exhibitors.
23. Exhibitors will be required to provide all necessary attendance and to keep their stands and exhibits properly cleaned and in good order during the whole period of the Exhibition.
24. No Exhibitor will be allowed to transfer any allotment, or to allow any other than his own duly admitted exibits to be placed thereon, except by permission of the Executive Council.
25. All goods exhibited must be in the name of the person who signed the application form.
26. Exhibitors are requested to mark the selling price of the articles exhibited, so as to facilitate the judgment of the jury, as well as for the information of visitors.
27. Objects cannot be taken away before the close of the Exhibition, without the special permission in writing of the Executive Council. Special arrangements will be made with regard to perishable exhibits.
28. As refreshments come within the scope and classification of this Exhibition, all methods of preparing the same, whether by cookery or otherwise and the display and sale thereof, will be matters of separate arrangement with those wishing to be represented in this section of the Exhibition.
29. Exhibitors of apparatus requiring the use of water, gas, or steam are requested to make application to the Secretary for a special form which has been prepared for this section of the Exhibition.
30. All stoves, grates, &c., must be arranged with a view to the abatement of Smoke.

31. All fulminating and explosive substances and all dangerous substances are absolutely forbidden to be sent.
32. Spirits, alcohol, oils, essences, corrosive substances, and generally all substances which might spoil other articles or inconvenience the public, can only be received in solid and suitable vessels of small size.
33. The Executive Council reserves the sole right of compiling a catalogue of the exhibits under regulations which will be duly notified. Each nation will, however, have the right to produce at its own expense a catalogue of all the objects in its own section.
34. The Council reserve to themselves the right of causing any of the exhibits to be examined, tested, or analysed for such use as they may think fit.
35. No article exhibited may be photographed, drawn, copied or reproduced in any manner whatsoever, without the special sanction of the Exhibitor and of the Executive Council.
36. The Executive Council will not hold itself responsible for loss or damage occurring to any exhibit from any cause whatsoever, but while declining any responsibility it is the intention of the Council to take such precautions as it deems necessary.
37. No goods can be sent in previous to the 15th March without special permission; after the 15th April no goods will be received.
38. The right to add to, alter, amend, or expunge any of these Rules is reserved by the Executive Council.
39. Both Englishmen and Foreigners in becoming Exhibitors declare by so doing their compliance with the whole of these Regulations, together with such other Regulations as the Executive Council may issue from time to time.
40. The Executive Council reserves the right to remove the objects belonging to any Exhibitor who may not conform to the Regulations.
41. If any damage, or injury shall be caused or occasioned during the Exhibition by any exhibited machine, implement, or article to any visitor or other person, or to any officer, servant, or others then and there employed by the Executive Council of the International Health Exhibition, 1884, then the Exhibitor to whom such machinery, implement, or article may belong shall indemnify and hold harmless the said Council from and against all actions, suits, expenses, and claims on account or in respect of any such damage or injury which may be so caused or occasioned.

ORDER.—Ordered, that the foregoing papers be published for general information in the Supplement to the *Gazette of India*, and that copies be forwarded to the Local Governments and Administrations noted on the margin for publication in the local Gazettes. The Government of India does not purpose forwarding a collection of exhibits to the International Health Exhibition, but the Secretary in the Revenue and Agricultural Department will be glad to give any advice or other assistance in his power to intending Exhibitors.

Madras.	Punjab.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

LIABILITY OF PUBLIC SERVANTS TO DISMISSAL IN CONSEQUENCE OF A RESORT TO THE INSOLVENT COURT, OR OF INDEBTEDNESS.

Extract from the Proceedings of the Government of India, in the Home Department (Public), No. $\frac{2}{77-102}$, under date Calcutta, the 19th January 1884.

READ—

Home Department Resolution No. 109, dated the 12th January 1856.

RESOLUTION.

In the Resolution of January 1856 cited above, Heads of Offices having establishments in the pay of Government were directed to impress upon their subordinates the discredit attaching to a resort to the Insolvent Court, and to warn them that such a proceeding would be considered as of itself constituting a sufficient cause for exclusion from the public service unless it should appear that the embarrassments of the insolvent had been the result of unforeseen misfortunes or of circumstances over which he could exercise no control, and had not proceeded from dissipated and extravagant habits. By a Circular Memorandum, No. 67-2816 to 2821, dated the 19th November 1874, Heads of Departments under the Government of India were requested to hold the Registrar or Head of the Office responsible for reporting to the Secretary in charge or to the Chief of the Department the insolvency of clerks or other assistants.

2. As there is reason to believe that the operation of these orders has to some extent been lost sight of, the Governor General in Council in reproducing them desires to direct the attention of all Local Governments and Heads of Departments to the imperative duty which devolves upon them of taking severe notice of the misconduct of clerks and other employés who allow themselves to fall into embarrassed circumstances. It is no valid excuse for hopeless indebtedness to show that it has been caused by standing security for friends, the plea which is frequently put forward in such cases. Assistants in Government Offices should clearly understand that, if they voluntarily contract debts or obligations which they are unable to meet, they render themselves liable to summary dismissal.

ORDER.—Ordered that a copy of this Resolution be forwarded to

- Madras.
- Bombay.
- Bengal.
- N.-W. Provinces and Oudh.
- Punjab.
- Central Provinces.
- British Burma.
- Assam.
- Coorg.
- Hyderabad.

Local Governments and Administrations for information;

that a copy be forwarded to all Departments of the Government of India; and

- † Superintendent of Port Blair and Nicobars.
- Sanitary Commissioner with the Government of India.
- Surgeon General ditto ditto.
- Director General of the Archæological Survey of India.
- Secretary, Board of Examiners.
- Registrar, Calcutta University.
- Bishop's Chaplain.
- Registrar, High Court.
- Director General of Statistics to the Government of India.

that a copy be forwarded to all Heads of Offices under the Home Department for information and guidance.

It is suggested that a copy of this Resolution should be given to every clerk on first appointment to Government service, and that it be entered in the Order Book of every Government Office.

Ordered further that this Resolution be published in the *Gazette of India* for general information.

(True Extract.)

A. MACKENZIE,

Secretary to the Government of India.

IRRIGATION OPERATIONS OF FASL RABI IN THE PUNJAB FOR 1883-84, UP TO 30th NOVEMBER 1883.

Canal Division.	Water distributed during November 1883. Depth in Canal at Regulating Gauge. Full supply.	Actual throughout.	Gross Consumption, cubic feet per second. Estimated full supply.	Actual average throughout.	Navigation Return Canal. Principal items of Traffic. Up.	Down.	Land irrigated (approximate). Zila.	Acres.	Rainfall. Average.	During month.	Chief crops (approximate). Name.	Area in acres.	Remarks.
Bari Doab Canal. 1st Division	4·9	3·95		1,054			Gurdáspur	10,475	0·23	0·8	Wheat	92,761	Although all the available water in the river was used, still the supply entering the Bári Doáb Canal was 258 cubic feet per second less than during the corresponding month of last year. The demand was considerable, and towards the end of the month, greater than could be supplied. The area up to date is 16,452 acres in excess of last year's returns, and 29,160 above those of November 1881, so far the prospects of the rabi are favorable.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 29th JANUARY 1884.

GENERAL REMARKS.—There has been slight rain in Madras, Sindh, the Punjab, and in one of the Native States of Rajputana during the week. Harvesting continues in Madras, Mysore and Coorg; in four districts of Madras the yield is reported below average and in two districts up to the average; in Coorg coffee has yielded a good crop, but the outturn of paddy has been under the average. Standing crops promise well throughout the Presidency, except in part of the Bellary and Chingleput districts where they have been injured. In Bombay the *rabi* prospects are generally good, but some damage has, from various causes, been done to the crop in parts of seven districts. Cotton-picking is still going on in the Berars, and the prospects of the *rabi* there and in Hyderabad are favourable. In Central India and Rajputana the *rabi* crops continue to do well, except in Sutna and Ulwar where rain is needed. The rain which fell during the week in the Punjab was confined to the districts in the north and west, and the crops in the districts to the south-east of the province are much in want of rain. In the North-Western Provinces and Oudh the weather has been cloudy, but no rain has fallen; and it is urgently required for crops on unirrigated lands. In some districts of the North-Western Provinces the *rabi* crops are in ear.

In the Central Provinces the crops are thriving, and prospects are excellent.

No rain has fallen in Bengal, and the crops on unirrigated lands in Behar and Chota Nagpore are reported to be suffering much from want of rain; in other parts of the province they are fair. Oil-seeds and pulses are being harvested, and sugarcane is being pressed with an average yield. In Assam the prospects of the winter crops continue good, and harvesting has begun in some places. The rice harvest is over in British Burma, and the prices of paddy are favourable.

Small-pox continues generally prevalent, and cholera is severe in the Tanjore district of the Madras Presidency; there is some cholera also in Hyderabad, Bengal, and Burma in a sporadic form.

Prices are stationary, but high in Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras (Jan. 30th)—		
Bellary		Standing crops poor in three taluks, owing to short rainfall and disease, fair elsewhere; harvest—paddy, dry grains, pulse, and oil seeds, yield below average.
Kurnool	·05 (average of 2 stations).	Standing crops good.
Ganjam		Standing crops good; fever and small-pox slight in one taluk.
Kistna		Standing crops generally good; harvest—*cholum*, yield below average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)	1·55 (average of 8 stations).	Standing crops generally good, but slightly injured by excess of rain in one taluk; harvest—paddy, yield below average; small-pox prevalent; 193 deaths from cholera; cattle-disease slight in one taluk.
Coimbatore		Standing crops good; harvest—paddy and dry grains, outturn average, 72 deaths from cholera; fever and cattle-disease in parts.
Tanjore		Standing crops good; harvest—paddy, dry grains, and pulse, yield generally below average; cholera increasing, 2,147 deaths.
Madura		Standing crops fair; harvest—paddy and dry grains, yield about average; cholera abating, 170 deaths.
Malabar		Harvesting of paddy (second crop) continues; small-pox, fever, and cattle-disease slight; three deaths from cholera.
Travancore		Harvesting of paddy (second crop) nearly over; small-pox prevalent in the north and cholera in the south; three deaths from cholera at Trivandrum.
		General Remarks.—General prospects good.
Bombay—(Jan. 30th)—		
Kurrachee	Slight rain on 25th	River at Kotri on 27th, 3 feet 1 inch against 2 feet 8 inches on same date last year; 9 fresh cases of small-pox, 1 death in Kurrachee since 17th; total 38 cases, 7 deaths; disease also in 21 villages in district, 30 fresh cases, 2 deaths, 69 remaining sick; fever in 8 talukas; cattle-disease in 4 talukas with loss of 47 buffaloes, 45 cows and bullocks, and 34 sheep and goats in Mirpur Botoro and Sujawal; prices—wheat, red rice, and *bajri* in Kurrachee 24, 30, and 32, in Kotri 30, 44, and 40, in Sakro 16, 28, and 34, and in Sujawal 24, 26, and 40 pounds per rupee respectively.
Hyderabad		Small-pox in 10, fever in 7, and cattle-disease in 5 talukas; wheat 26, *jowari* 42, *bajri* 36, red rice 25, and white rice 20 pounds per rupee.
Ahmedabad		*Rabi* crops thriving; cattle-disease in Parantej; wheat 26¾ and *bajri* 29¼ pounds per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Baroda		Public health fair; cattle-disease in Mohwa, Palsane, and Navsari Mehal; cotton and *rabi* crops have suffered a little injury in Baroda division; in Navsari division condition of cotton crop is not very satisfactory; *rabi* crops and sugarcane in good condition; pressing of sugarcane going on in Amreli and Kadi divisions; cotton and *rabi* crops in good condition; prices—*bajri* 30 to 31¼ and rice 23 to 24¼ pounds per British rupee.
Surat		*Rabi* crops healthy; fever in Jalalpore and Pardi; *jowari* 39 and *nagli* 48 pounds per rupee.
Nasik		*Rabi* crops good; public health generally good; small-pox in 3 villages of Dindore and villages in Kalwan; *bajri* 31, wheat 31½, and rice 24 pounds per rupee.
Colaba (Bombay)		Abnormal temperature 0° to 4° cpol; vapour in air defective on 29th; abnormal wind northerly on 27th and 29th.
Poona		Standing crops good; prices—*bajri* 37 and *jowari* 42 pounds per rupee; in Poona *bajri* 32 and *jowari* 35 pounds.
Ahmednagar	No rain	Injury to *rabi* crops in some places from mist, in other places they are good, except *jowari*; *bajri*—maximum 48 pounds in Akola, minimum 39 at Nagar; *jowari*—maximum 60 pounds at Akola, minimum 40 at Sheogaon.
Sholapur	No rain	Prospects of cotton and *jowari* crops unchanged; *jowari* 43 and *bajri* 45 pounds per rupee.
Dharwar		Harvesting of rice nearly completed, that of early *jowari* in progress; cotton suffering from blight in 5 talukas; wheat withering in 2 talukas; other late crops good; fever in five and small-pox in 2 talukas; scarcity of drinking-water in some villages of Navalgund; rice 25 to 41 and *jowari* 56 to 88 pounds per rupee.
Kanara		Small-pox in Kumpta, Honawar, Mundgad, Sirsi, and Akola; 3 deaths in Honawar, 4 in Supa, and 1 in Mundgad; fever in Mundgad, but has abated in Haliyal; common rice in Karwar 12 seers per rupee; district average 16¼ seers.
Rajkot		General health good; some cases of small-pox, chicken-pox, and measles; fever continues in some parts; weather cold; *bajri* 31 and *jowari* 38 pounds per rupee.
		General Remarks.—Slight rain in parts of Sindh and in four talukas of Kaladgi; late crops somewhat injured from different causes in parts of Baroda, Broach, Satara, Ahmednagar, Dharwar, Belgaum, and Kaladgi; *rabi* prospects otherwise good; slight cholera in 3 districts; fever, small-pox, and cattle-disease continue in some districts.
Bengal—(Jan. 30th)		
Chittagong	*Nil*	Weather seasonable; harvesting of *amun* completed; outturn average; winter crops doing well; prices stationary; public health good; cattle disease lingers.
Dacca	*Nil*	Winter crops promising; harvesting of pulses and oil seeds going on; pressing of sugarcane continues; sowing of *boro* paddy begun; public health good.
24-Pergunnahs	*Nil*	Harvesting of late paddy nearly finished; winter crops promising well; price of common rice 13 to 16 seers per rupee; public health generally good.
Moorshedabad	*Nil*	Weather clear and cold; *rabi* crops doing well; *kalai* and *til* nearly harvested; public health generally good.
Rajshahye	*Nil*	Weather moderately cool; prospects of winter crops generally favourable; price of rice 13 to 17 seers per rupee; public health fair.
Burdwan	*Nil*	Weather warmer; prospects of *rabi* crops and sugarcane unfavourable; public health fair.
Rungpore	*Nil*	Weather seasonable; prospects of *rabi* crops generally fair; land being prepared for the cultivation of autumn crops; prices stationary; public health good.
Bhagulpore	*Nil*	Condition of *rabi* crops precarious owing to want of rain; outturn of *kurthi* and mustard fair; new rice 14 seers 6 chittaks per rupee.
Purneah	*Nil*	*Rabi* crops doing fairly in the north, but want rain everywhere; rape-seed being reaped; preparation of land for autumn crops and sugarcane progressing; common rice (new) 16 seers per rupee; public health fair.
Patna	*Nil*	*Rabi* crops doing well; cutting of sugarcane still in progress; public health good.
Durbhanga	*Nil*	Prospects of *rabi* crops becoming worse for want of rain; prices falling slightly in Durbhanga during last three days; small-pox not yet abated.
Hazareebagh	*Nil*	Weather cold and seasonable; prospects of winter crops not improved; prices unaltered; small-pox still reported from the Sadr station and the Giridi Sub-division.
Cuttack	*Nil*	Weather seasonable; *sarad* rice being threshed and stored with moderate outturn; *dalua* rice growing well; *rabi* crops being gathered; price of rice stationary; public health good.
		General Remarks.—There has been no rain during the week; the rain which fell in several districts during the previous week was too slight to be of any appreciable benefit to the standing crops; in Behar and Chota Nagpore the *rabi* crops on unirrigated tracts are

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
		still suffering very much from want of rain, but in the rest of province they are said to be in *tolerably fair condition*; in so districts the gathering of pulses and oil-seeds and the pressi of sugarcane *have begun* with prospect of a fair outturn; the *amun* harvest as been nearly completed, but the general *outturn* of the crop has been considerably below the average, except in Eastern Bengal and Orissa where it has been fair; the cultivation of *boro* rice is being carried on; price of rice generally reported to be almost stationary at a very high rate; fever still continues in some districts, and there are cases of cholera and small-pox reported from certain localities, but the general health of the province is fairly satisfactory.
N. W. Provinces and Oudh—		
Benares . (Jan. 29th)	No rain	*Rabi* crop which is now beginning to ripen will be below average; isolated cases of small-pox still reported from the city; prices fluctuating *slightly*.
Allahabad („ 30th)	No rain	Clouds gathered during the week, but no rain fell, its want is much felt; crops in dry tracts are very poor, elsewhere good; prices rising; health fair.
Gorakhpur („ 27th)	No rain	Crops below average; small-pox frequent; prices steady.
Jhansi . („ 28th)	No rain	*Rabi* prospects fair; prices almost stationary; health of people and cattle good.
Rai Bareilly („ „)	No rain	Weather cloudy occasionally during the week; crops on irrigated lands poor; small-pox continues; markets well supplied; prices stationary.
Agra . („ 29th)	No rain	Weather cloudy off and on during the week; irrigation continues; health good; prices steady.
Bareilly . („ „)	. . .	Weather cloudy; rain urgently wanted for unirrigated crops.
Meerut . („ „)	No rain	Weather cloudy and occasionally east wind; crops still good, though rain is wanted; health good; supplies sufficient; prices steady.
Farukabad („ „)	. . .	Weather alternately cloudy and clear; small-pox in two tahsils.
Kumaun . („ „)	No rain	Sky often cloudy; crops will be injured if rain withholds for some time; health good; cattle-disease continues; prices stationary.
Cawnpore („ „)	. . .	Rain wanted for *rabi* crops; prospects of *rabi* on unirrigated land poor, but on irrigated lands fair; small-pox declining; no cattle-disease.
Lucknow („ „)	No rain	*Crops splendid in irrigated* tracts, but poor on unirrigated and high lands; irrigation is being actively pushed on; rain is very much wanted; condition of people and cattle good; markets well supplied; prices steady.
Partabgarh („ „)	No rain	Wheat, barley, and peas running into ear; *arhar* and *sarson* flowering; rain urgently wanted; prices almost stationary; small-pox in Kunda tahsil and in some villages in Partabgarh tahsil.
Sitapur („ „)	*No rain*	Weather cloudy again during the week; small pox abating; markets well supplied.
Fyzabad („ „)	No rain	Weather cloudy during the week; crops doing fairly in irrigated lands; sugarcane being pressed; prices almost steady; small-pox reported from Akbarpur tahsil; health otherwise good.
		General Remarks.—No rain has fallen during the week; the crops are doing well in irrigated lands, but have suffered somewhat from drought elsewhere; the public health is fair, though cases of small-pox continue in many districts; cattle-disease still lingers in Kumaun; prices are generally steady.
Punjab—(Jan. 30th)—		
Delhi	. . . .	Health good; rain urgently required; prices stationary.
Hissar	. . . .	Health good; rain very much wanted; prices steady.
Umballa . . .	·1	More rain wanted; health good; prices stationary; *rabi* prospects good.
Jullundur . . .	·2	Health good; sugarcane being pressed; prices steady.
Amritsar . . .	. . . .	Health good; rain wanted; prices almost stationary.
Lahore . . .	·1	Health and crop prospects good; prices steady.
Ferozepur . .	Between ·2 to ·3	Health and state of crops good; prices fluctuating.
Sialkot . . .	·5	Health and harvest prospects [illegible]; prices steady.
Rawalpindi . .	1·3	Health and crop prospects [illegible]; prices stationary.
Peshawar . . .	4·2	Small-pox decreasing [illegible]ng.
Mooltan . . .	Slight rain	Health and crop prospects [illegible] prices steady.
Dera Ismail Khan .	1·4	Health good; harvest prospects [illegible]air; prices stationary.
		General Remarks.—[illegible]en in most districts to the north and west, but with the exception of the fall in Peshawar it has been slight; crop prospects generally good, but rain is urgently needed in the south-east of the province; small-pox is decreasing in Peshawar; elsewhere the public health is good.
Central Provinces (Jan. 30th)—		
Nagpur . . .	. . . .	Weather clear and cool; *rabi* crops thriving; small-pox prevails slightly; prices stationary.
Jubbulpore . .	. . . .	Weather clear and cold; *rabi* crops thriving; health good; prices stationary.
Saugor . (Jan. 29th)	. . . .	*Rabi* crops excellent; health good; prices steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provs.—*contd.*		
Seoni	. . . .	Weather clear and cool; *rabi* prospects favourable; prices stationary; health good.
Hoshangabad . .	. . . .	Weather seasonable; *rabi* crops promising; slight damage done to crops by late hail; fever prevalent in Harda; wheat 18, rice 11, and *juari* 28 seers per rupee.
Khandwa . . .	. . . .	Weather clear and getting warm; cotton-picking continues; prospects good; *juari* 22½, wheat 15, and rice 12½ seers per rupee.
Raipur . . .	. . . .	Weather getting warm; *rabi* prospects favourable; *tili* and *mung* harvested; prices steady; common rice 23 and wheat 24 seers per rupee; health good.
Sambalpur (Jan. 26th) .	. . . .	Weather seasonable; rice threshing and sugarcane pressing in progress; prospects good; no epidemics; common rice 35 seers per rupee.
		General Remarks.—Weather getting warm; crop prospects generally favourable; health good; prices steady.
British Burma— (Jan. 30th)—		
Akyab . . .	. . . .	Public health and health of cattle good; reaping nearly finished; reaping wages Rs. 2 to 4 an acre; price of paddy Rs. 21 to 28 per 100 baskets.
Rangoon . . .	. . . .	Twenty-five fatal cases of small-pox, otherwise public health good; twelve deaths last week not six as reported; paddy supplies fair; prices Rs. 85 to 90 per 100 baskets.
Bassein . . .	. . . .	Public health good; reaping not quite finished; price of paddy Rs. 80 per 100 baskets.
Prome . . .	. . . .	Public health good; six deaths of cattle reported from Shwele township; reports to hand show that remissions on 862 acres in Shwedaung, 267 in Mabat Haman, and 119 in Padaung have been applied for owing to drought; price of paddy Rs. 70 per 100 baskets.
Amherst . . .	. . . .	Public health and health of cattle good; threshing and winnowing nearly finished; no regular demand for paddy, and prices not settled.
Moulmein . . .	. . . .	Public health and health of cattle good; price of paddy Rs. 70 to 80 per 100 baskets; about 500 baskets sold during week; about 11,500 baskets stored by cultivators.
Toungoo . . .	. . . .	Total rainfall from 1st January up to date 0·8; public health good.
Tavoy . . .	. . . .	Public health and health of cattle good; harvesting in progress; price of paddy Rs. 58 to 62 per 100 baskets.
Kyoukphyoo . .	. . . .	Public health and health of cattle good; price of paddy Rs. 23 per 100 baskets.
Sandoway . . .	. . . .	Public health and health of cattle good; harvest operations completed; paddy prices stationary; weather cool.
Hanthawaddy . .	. . . .	Public health and health of cattle good; price of paddy Rs. 80 to 85 per 100 baskets.
Tharrawaddy . .	. . . .	Twenty fatal cases of cholera reported from Minhla, Menyo, Gyobingouk, and Sonywe townships, otherwise public health good; cattle healthy; about 191,565 acres have been reaped; price of paddy Rs. 55 to 85 per 100 baskets.
Thonegwa . . .	. . . .	Two deaths from cholera and one death from small-pox reported from Pyapon, Myoma, and Donabyoo Myoma circles respectively, otherwise public health good; two deaths of cattle in Pyapon Myoma circle; reaping progressing in Pyapon township; price of paddy from Rs. 80 to 95 per 100 baskets.
Henzada . . .	. . . .	Public health and health of cattle good; price of paddy Rs. 75 to 95 per 100 baskets.
Thayetmyo . . .	. . . .	Public health good; cattle-disease still prevalent; price of paddy Rs. 65 to 100 per 100 baskets.
Shweygyin . .	. . . .	Public health and health of cattle good; harvest nearly finished; price of paddy Rs. 65 per 100 baskets.
Mergui (Jan. 12th) .	. . . .	Public health and health of cattle good; four-fifths of crop reaped; price of paddy Rs. 70 per 100 baskets.
„ („ 19th) .	. . . .	Public health and health of cattle good; four-fifths of crop reaped; price of paddy Rs. 75 per 100 baskets.
		General Remarks.—Twenty-five fatal cases of small-pox in Rangoon; some cholera in Tharrawaddy and Thonegwa; slight cattle-disease in Prome, Thongwa, and Thayetmyo, otherwise public health and health of cattle good; harvest practically over.
Assam—(Jan. 30th)—		
Gauhati . . .	No rain	Weather getting warm; harvesting of *sali* crops nearly finished; public health fair.
Sylhet . . .	No rain	State of winter crops good, except in South Sylhet; a few cases of small-pox reported.
Cachar . . .	No rain	Weather cold; reaping of winter crops continues; common rice 16 seers per rupee; four deaths from cholera and 4 from small-pox in Sadr; 6 deaths from small-pox in Lakhipur, 6 in Hailakandy, and 22 fresh cases in the latter station reported.
Dibrugarh . . .	No rain	Weather cloudy; prospects of winter crops good; small-pox in the station.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Mysore and Coorg—(Jan. 30th)—		
Bangalore	} . . .	Crop in good condition; harvesting of *Kartick* paddy and sugarcane continues; prospects favourable throughout the province; public health good; no material change in prices.
Mysore	}	
Mercara	*Nil*	Coffee-picking nearly over, yield good, and good prices offering; paddy harvest proceeding, outturn slightly under the average; the second crop of beans and pulses in Ramaswamy Kananchobli has failed from previous excessive rain.
Berar & Hyderabad—(Jan. 30th)—		
Amraoti	. . . .	Weather clear; *rabi* prospects good; threshing of *kharif* crops continues; wheat 16 and *jowari* 26 seers per rupee.
Akola	. . . .	Cotton-picking continues; *rabi* prospects favourable.
Hyderabad	No rain	Standing crops prospering; general health good; cholera in Residency bazar much abated; prices of wheat 15½, coarse rice 12, white *juar* 20, yellow *juar* 26, and *tur* 24 seers per current sicca rupee.
Central India States—(Jan. 30th)—		
Indore	*Nil*	Health good; prices steady; weather seasonable and cloudy.
Morar (Gwalior)	*Nil*	Health good; prices steady; weather seasonable.
Sutna	*Nil*	Crops suffering; health good.
Neemuch	*Nil*	Weather clear; crop prospects and public health good.
Goona	. . . .	Weather seasonable; health of men and cattle good.
Agar	*Nil*	Health and prospects good.
Sehore	*Nil*	Weather clear; crops and public health good.
Nowgong	*Nil*	Weather seasonable; health fair; prices stationary.
Rajputana—		
Abu . (Jan. 30th)	. . . .	Weather cold and seasonable.
Marwar . („ 28th)	. . . .	Two months' water in city; tanks and wells almost full; health and prospects good.
Harowtee . („ „)	In Kota, 1·11	Crops fair; weather mild; health good.
Jhallawar . („ 25th)	. . . .	Weather cloudy; health and prospects good.
Ajmere . („ 29th)	*Nil*	Weather cool; prospects fair; health good.
Jeypore . („ „)	*Nil*	Weather cloudy occasionally; prospects fair; prices steady; health good.
Ulwur . („ „)	. . . .	Crops on unirrigated land suffering from want of rain; health good; prices steady.

T. W. HOLDERNESS,
Offg. Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

Nº 6. } CALCUTTA, SATURDAY, FEBRUARY 9, 1884.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

GENERAL.

EQUALISATION OF NUMBERS IN EXECUTIVE AND ASSISTANT ENGINEER CLASSES.

No. 148G., dated Fort William, 1st February 1884.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Paras. 5—8 of despatch from the Right Hon'ble the Secretary of State, No. 18 P. W., dated 22nd March 1883.

OBSERVATIONS.—The portion of the Secretary of State's despatch above quoted deals with the question of the re-adjustment of numbers in the present Executive and Assistant grades necessary to produce a more rapid flow of promotion.

2. The measures therein approved by His Lordship allow, first, the equalisation of the present Executive and Assistant classes: and, secondly, call for a re-adjustment of the numbers in the several Executive grades. The first allows of the promotion of a considerable number to 4th Executive grade; the second would retard promotion to and in the three upper grades, because the proportion allowed in the several grades is less advantageous than the present scale. Again the process of equalising the two classes is, under the orders received, to be spread over two or three years; that is to say, the promotions to the 4th grade allowable by the increase in the total number of Executives are only to be made by instalments.

3. After giving full consideration to the question in the light of recent investigations which have been made into the present condition of the establishment, and as to the further measures necessary to give a fair rate of promotion in the future, the Government of India has decided, under the sanction that has been accorded, to equalise the numbers of Executive and Assistant Engineers at once by making 75 substantive promotions to the 4th Executive grade, and to make 30 promotions from Assistant Engineer 2nd to 1st grade.

4. While, however, allowing 75 substantive steps, as above stated, to be made at once to the Executive class, it is necessary to explain that it is not intended to allow the system of temporary promotions to the 4th Grade to continue on the present system. At present there is a sanctioned scale of 381 Executive Engineers for the whole of India, and this number is constantly maintained by means of temporary promotions to the 4th Grade, which are made in the place of every officer who is absent on furlough or is officiating in a higher class. These promotions are ostensibly made to fill Executive charges; but owing to the sanctioned number of Executive Engineers on many lists being in excess of the Executive charges, the aggregate number of Executives, substantive and temporary, is always considerably in excess of the aggregate number of charges. In fact, these temporary promotions have been allowed in times past as an expedient to compensate for the slowness of substantive promotion; but in any future scheme for ensuring a continued flow of promotion that may be accepted, it is tolerably certain that temporary will find no place as a substitute for substantive promotion. Hence, while increasing the number of substantive posts on R550 and over from 381 to 456, the Government of India sees no necessity for allowing more temporary and substantive *pro tempore* promotions to the 4th grade than will suffice to maintain the present sanctioned number of Executives on each list. For this number being, as explained, on most lists much in excess, and on no list less, than the number of Executive charges, to allow additional temporary promotions for the purpose of maintaining the increased number of substantive posts would be simply to perpetuate the principle of giving temporary in place of substantive steps.

5. In distributing the 75 substantive posts to the several lists, the object has been, so far as possible, to equalise the actual number of Executives and Assistants on each list. The following statement shows the present sanctioned scale, the additional posts in the 4th grade now sanctioned for each list, the scale for substantive sanction as it will then stand, and the total number of Executives to maintain which, temporary (including substantive *pro tempore*) promotions to the 4th grade alone may be made: this number, it will be observed, corresponds with the sanctioned scale prior to the addition of the new posts:—

	Present sanctioned scale.	Additional substantive posts in Executive Engineer, 4th grade.	Total sanctioned substantive scale.	Scale to maintain which temporary promotions may be made.
Madras	35	7	42	35
Bombay	39	4	43	39
Bengal	44	11	55	44
North-Western Provinces and Oudh	52	10	62	52
Punjab	46	10	56	46
Local Administrations	48	8	56	48
State Railways	88	20	108	88
Military Works	29	5	34	29
TOTAL	381	75	456	381

The effect of the promotions allowed on the above basis to the Executive class will be almost wholly to confirm in the 4th grade officers who either are or are liable to be temporary in that grade. The increase in expense will be trifling, if there is any; and so, although the measure goes beyond the letter of the Secretary of State's instructions, which require that the equalisation should be spread over several years, the deviation from the orders is unobjectionable.

6. In making the consequent promotions, however, to the 1st grade of Assistants, which involves an increased expenditure of R100 per mensem for every individual promoted, it has been necessary to observe the orders, and 30 promotions are allowed as the first instalment.

Madras	3	Punjab	3
Bombay	3	Local Administrations	4
Bengal	4	Military Works	2
N. W. P. and Oudh	4	State Railways	7

These 30 steps will be distributed as shewn in the margin.

7. The promotions allowed under these orders will take effect from the 1st May 1883.

ORDER.—Ordered, that this Resolution be circulated for information and guidance to the Local Governments and Administrations and Officers noted in the margin, and that it be published in the *Gazette of India*.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab, in the Public Works Department.
The Chief Commissioners of the Central Provinces, British Burma, Assam, and Coorg.

REVENUE REPORT OF IRRIGATION WORKS IN BOMBAY FOR 1882-83.

No. 47 I., Fort William, February 1, 1884.

RESOLUTION.

Read—

Letter from the Government of Bombay, Public Works Department, No. 2 W. I.—3, dated 7th January 1884, forwarding the above.

OBSERVATIONS.—The capital outlay, direct and indirect, incurred up to the end of 1882-83, on works in operation, amounted to R1,47,45,381; the interest charges during the year to R5,54,836; and the accumulated balance of unpaid interest up to the end of the year to R64,53,038.

2. The assessed revenue of all kinds (direct and indirect) amounted to R2,79,649; the maintenance charges, including indirect outlay, to R1,60,684; and the net revenue to R1,18,965, or 0·80 per cent. on the capital outlay to the end of the year.

3. In the following statement are compared the areas irrigated, gross revenue assessed, *plus indirect receipts of the year*, and the working expenses of 1882-83 and three preceding years:—

Year.	Acres Irrigated.	Revenue Assessed *plus* Indirect Receipts.	Working Expenses.	Net Assessed Revenue.
		R	*R*	*R*
1879-80	21,439	2,01,608	1,25,015	76,653
1880-81	34,495	2,30,652	1,47,995	82,657
1881-82	29,881	2,37,768	1,65,168	72,600
1882-83	28,735	2,79,649	1,60,684	1,18,965

The steady growth of the revenue is satisfactory, but the Supreme Government agrees with the Government of Bombay that there is still considerable room for reduction of working expenses, and hopes that earnest attention may at once be given to this matter.

4. The maintenance charges average R4·6 per acre irrigated (after deduction of R28,236, the cost of maintenance of the Poona water-supply), which is an excessively high rate of incidence; and the following table, comparing the rates per acre irrigated of working expenses of all kinds on some of the canals for 1881-82 and 1882-83, shows how widely these rates vary:—

Maintenance Charges per Acre Irrigated.

Canals.	1881-82.	1882-83.
	R	*R*
Hathmati	3·11	5·39
Jamda	6·51	11·00
Palkher	4·28	4·71
Ojhar	1·80	2·15
Lakh	13·30	14·00
Bhatodi Tank	2·38	2·13
Mutha	*4·83	*3·68
Ekruk Tank	11·47	10·16
Rewari	6·31	3·75
Maini Tank	4·62	5·47
Krishna	3·87	4·68
Average of all works	*4·60	*4·60

The high rate of maintenance on the Jamda Canals during 1882-83 is due to exceptional charges on account of repairs to damage caused by an unusually high flood in the River Girna, which supplies the canal; that on the Lakh Canal and Ekruk Tank is due to the very limited area of irrigation from these works.

* Excluding maintenance charges of Poona water-supply.

5. The following statement, giving the areas of principal crops irrigated during 1882-83 and the three previous years, shows a very satisfactory continuance in the increase of sugarcane and wheat watered from the canals:—

Crops.	1879-80.	1880-81.	1881-82.	1882-83.
Sugarcane	3,375	3,958	4,213	5,011
Rice	1,229	2,202	2,884	1,947
Jowar and bajra	4,078	12,668	7,565	4,902
Wheat	3,138	5,168	5,138	6,617
Pulses	4,882	5,506	5,745	6,685
Other crops	4,737	4,993	4,333	3,573
TOTAL	21,439	34,495	29,878	28,735

6. In the following table the incidence of water-rate assessed per acre irrigated, on some of the principal works, is compared for the three years 1880-81, 1881-82, and 1882-83:—

Water-Rate assessed per Acre Irrigated.

Canals.	1880-81.	1881-82.	1882-83.
	R	*R*	*R*
Hathmati	2·80	1·99	2·80
Jamda	2·90	4·11	4·08
Palkher	4·60	4·65	4·62
Ojhar	2·04	2·01	2·35
Lakh	2·22	2·34	1·85
Bhatodi Tank	3·15	3·79	3·44
Mutha	4·44	6·77	8·82
Ekruk Tank	3·73	3 83	4·01
Rewari	6·20	5·21	3·80
Maini Tank	4·19	4·01	5·51
Krishna	6·85	5·41	7·85
Average of all Works	3·93	4·53	5·57

The general increase in the value of the water-rate assessed per acre is very noticeable in this statement. On the Rewari Canal, where the tendency is markedly in the opposite direction, the uncertainty of the hot-weather supply is apparently the cause of the decrease in the irrigation of the more valuable crops. The Jamda and Lakh Canals also suffered from the failure of the supply in the river during the hot season.

7. The Government of India hopes that it may soon be found practicable to check the great loss of water which now occurs from leakage. The subject becomes all the more important when regard is had to the great value of the small supply available for irrigation during the hot weather on these canals.

ORDER.—Ordered, that copies of this Resolution and of the Report be forwarded to the Department of Finance and Commerce and to the Revenue and Agricultural Department for information.

Ordered also, that copies of this Resolution be forwarded to the Government of Bombay for information and guidance, and that copies of the Report and of the Resolution be forwarded to the Local Governments and Administrations noted in the margin, in the Public Works Department, for information.

Governments of Madras, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners, Central Provinces and British Burmah.
The Foreign Department, for communication to the Resident at Mysore and the Chief Commissioner of Coorg.
The Resident at Hyderabad.
The Agents, Governor General, Central India, and Rajputana.

Ordered further, that this Resolution and the Resolution by the Local Government be published in the Supplement to the *Gazette of India*, and that copies of this Resolution be forwarded to Her Majesty's Secretary of State.

W. S. TREVOR, *Colonel, R.E.*,
Secretary to the Govt. of India.

Annual Revenue Report of the Irrigation Department (excluding Sind) for 1882-83, Parts I and II.

No. 2 W. I.—3 OF 1884.

Public Works Department.
Irrigation.

Bombay Castle,
7th January 1884.

Read—

Memorandum from the Chief Engineer for Irrigation, No. 4572, dated 3rd December 1883. Reports, for the information of Government, that the manuscript of the Annual Irrigation Revenue Report, Bombay Presidency (excluding Sind), for 1882-83, was sent to Press on 1st December 1883, and states that the last of the Examiner's account was received on the 29th October 1883, but for an unavoidable delay in the preparation of two of the Nasik reports the compilation in the Chief Engineer's Office would have been completed ten days earlier.

RESOLUTION.—The total Capital outlay for the year 1882-83 has been R2,76,950, bringing the total Capital outlay to end of the year up to R1,47,45,381.

2. The total number of new works is now 31, two having been added to the list of works in operation during the year.

3. The area irrigated is 28,735 acres. This shows a falling-off of 1,146 acres for the year, due to the favourable rainfall during the rabi season.

4. Notwithstanding this falling-off in acreage, the assessed revenue has continued to rise, being R2,48,714 for the year against R2,12,313 in 1881-82. This is due to the steady increase of the area of permanent irrigation.

5. The total working expenses are R1,60,684 against R1,65,168, or R1,70,045 in 1881-82, including adjustments. There is still room for further improvement in respect of these expenses, and the Chief Engineer for Irrigation should give the subject his close attention. Dealing with averages, it appears that it now costs R4·16 to maintain an irrigated acre, the water-rate on which is R5·61. This can only be regarded as extremely high, though it may be admitted that a much larger area of irrigation might be supervised and maintained at a comparatively small additional outlay. It is hoped that the recent reductions in the water-rates ordered by the Secretary of State for India will lead to a very large increase in the irrigated areas of the various classes of crops.

6. The gross area under command of the works is 412,2 3 acres, and the net irrigable is 297,734 acres; of which latter only 28,735 acres, or 9·6 per cent., were actually irrigated in 1882-83.

7. The project for storage for the Krishna Canal, either at "*Tarla*" or "*Kas*," should be submitted as soon as possible, it being essential for the proper development of the irrigation under that work.

8. Outstandings show a marked increase, being R80,527 against R46,674 in 1881-82. The Revenue Department should be requested to enquire into the cause of this large increase.

9. The Chief Engineer for Irrigation has not commented on the subject of loss of water in the canals from leakage, evaporation and absorption.

The detailed reports of the Executive Engineers however show that attention is being paid to this very important matter, and the results of any investigations that may be made should find a place in the Report for 1883-84.

10. Government hope that careful observations regarding the water level in wells on the line of the Nira Canal are still being recorded, so that the effect of admitting the water next season may be accurately known.

11. Under Part II, which comprises works in operation for which only revenue accounts are kept, a net revenue of R2,00,313 is exhibited, the gross receipts for the year being R4,45,843 and the working expenses R2,45,530.

12. The irrigated area was 138,269 acres. The average water-rate is thus R3·22 and the cost of maintenance R1·77 per acre irrigated.

13. The total revenue credited in the Irrigation Department from *all* works in operation under Parts I and II during 1882-83 amounted to R7,25,492. The working expenses were R4,06,214, leaving a net revenue of R3,19,278.

14. Copies of the Report and of this Resolution thereon should, as usual, be forwarded to the Government of India and the Secretary of State.

C. J. MERRIMAN, *Major-General, R.E.,*
Secretary to Government.

Fort William, February 7, 1884.

RESOLUTION.

Revenue Report of Irrigation Works in the North Western Provinces for 1882-83.

Read—

Letter from the Secretary to the Government of the North-Western Provinces and Oudh, No. 215 I., dated 25th January 1884, and enclosures, being the Revenue Report of Irrigation Works in the North-Western Provinces for 1882-83, and a Resolution of His Honor the Lieutenant-Governor reviewing the report.

OBSERVATIONS.—The review of the year's operations contained in the Resolution by the Hon'ble the Lieutenant-Governor is so complete that it only remains for the Supreme Government to publish it, with the expression of its gratification at the extremely satisfactory results set forth and of its cordial concurrence in the commendations bestowed by Sir A. Lyall on the zeal and ability displayed in the management of the important Irrigation works of the North-Western Provinces during the year under review.

The report contains ample evidence that this management not only secured a substantial pecuniary benefit for the State, but conferred abundant prosperity on the cultivating community dependent on the Government canals. The net revenue of the year under review returned 6½ per cent. on Rs. 676·34 lakhs, the capital invested in canals and irrigation works in operation. 1,974,175 acres of land were watered, of which 671,006 acres were under sugarcane, rice, indigo and cotton, and 995,036 acres under wheat and barley. The value of the crops raised on the irrigated area is estimated on data supplied by the Agricultural Department at Rs. 642·62 lakhs, *i.e.*, at an average rate of Rs. 32·55 per acre, while the occupiers' rate, payable by the cultivator, averaged only Rs. 2·48 per acre, or a little more than 7½ per cent. of the value of the crop. That this rate cannot have pressed hardly on the cultivator is shown by the extremely satisfactory state of the collections. Rupees 63,63,724 were collected during the year, and the balance remaining unrealized at its close amounted to only Rs. 2,401.

ORDER.—Ordered, that a copy of this Resolution and of the Report, and Resolution by the Local Government, be forwarded to the Secretary of State, and to the Finance and Commerce, and Revenue and Agricultural Departments of the Government of India for information.

Also, that a copy of this Resolution be forwarded to the Government of the North-Western Provinces and Oudh, Public Works Department, for information and guidance, and to the Local Governments and Administrations noted in the margin, in the Public Works Department, for information, and to the Foreign Department for communication to the Government of Mysore.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chief Commissioners, Central Provinces, British Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General, Central India and Rajputana.

Also, that this Resolution, and the Resolution of the Local Government, be published in the Supplement to the *Gazette of India*.

W. S. TREVOR, Colonel, R.E.,
Secy. to the Govt. of India.

Enclosure to P. W. Dept. Resolution No. 53 I. of 1884.

No. 3½I., dated 3rd January 1884.

RESOLUTION.—By the Government of the N. W. P. and Oudh, P. W. Dept.

Read—

Irrigation Revenue Report of the North-Western Provinces, for the year ending 31st March 1883, by the Chief Engineer, Irrigation Works, North-Western Provinces and Oudh.

RESOLUTION.—The total outlay on the capital account of canals in the North-Western Provinces and Oudh for and to the end of 1882-83 is shown below :—

	Canal.	Outlay on construction under all heads.	
		During 1882-83.	To end of 1882-83.
		Rs.	Rs.
Productive Public Works.	Upper Ganges	2,77,588	2,76,70,650
	Lower Ganges	9,88,310	2,58,96,243
	Agra	55,737	85,22,131
	Eastern Jumna	65,134	29,08,391
	Total outlay on Productive Public Works ...	13,86,777	6,49,97,415
Minor Irrigation Works.	Dún	246	6,37,388
	Rohilkhand and Bijnor ...	27,523	16,86,252
	Bundelkhand Irrigation Works...	...	82,916
	Bundelkhand Irrigation Survey.	251	1,72,982
	Sardah Canal Survey ...	1,344	25,402
	Cawnpore Branch Extension Survey.	11,605	11,605
	Total outlay on Minor Irrigation Works ...	40,969	26,36,545
Famine Protective Work (charged to Imperial Funds).	Betwa Canal (under construction).	8,95,673	12,73,730
	Grand Total ...	23,23,419	6,89,07,690

2. The gross assessments of the year amounted to Rs. 64,59,183, and the working expenses to Rs. 21,58,131; the net revenue was therefore Rs. 43,01,052, or 6·36 on the capital invested, excluding the expenditure on the Betwa Canal, on which the province does not pay interest. The interest charge on the capital amounted to Rs. 24,96,008; deducting which amount from the net revenue, the assessments exhibit a clear surplus of Rs. 18,05,044 after paying expenses under all heads. The surplus in 1881-82 was Rs. 16,39,289; in 1880-81, Rs. 8,58,645; and in 1879-80, Rs. 3,57,867.

3. The total interest charges from the commencement of irrigation operations in the North-Western Provinces amount to Rs. 4,78,51,263, and the total net receipts realized to Rs. 4,19,72,531, thus leaving a deficit of Rs. 58,78,732. This last year amounted to Rs. 70,88,317 (excluding interest on the Betwa Canal capital), so that a reduction of Rs. 17,09,585 has occurred during 1882-83. In 1880-81 the deficit was Rs. 84,08,747, and in 1879-80 Rs. 87,61,044.

4. The actual direct income realized from all sources during the year was Rs. 63,63,724, and the balance remaining at the end of the year on account of owners' and occupiers' rates was Rs. 2,401 only. After paying all expenses, there was a clear surplus from realizations of Rs. 17,09,585. In 1881-82 the net surplus receipts were Rs. 12,39,625; in 1880-81, Rs. 3,52,297; and in 1879-80, Rs. 9,20,889.

5. The working expenses amounted to Rs. 21,58,131, or Rs. 1,31,808 more than in 1880-81. There has been a decrease of Rs. 707 on Maintenance, and of Rs. 51,665 on Indirect charges, &c.; but an increase of Rs. 7,243 on Tools and Plant; of Rs. 1,15,738 on works (chiefly for the new regulating head of the Upper Ganges Canal) chargeable to Revenue; and of Rs. 61,199 on Establishment. The *percentage* of Establishment on the direct assessments and Maintenance is however actually less than it was in the previous year; it now being 16 per cent., against 16·30 in 1881-82, 16 in 1880-81, and 24·10 per cent. in 1879-80. The measurements were made and the demand statements prepared by the Irrigation Department at the rate of Rs. 1·80 per 100 acres irrigated (*viz.*, Rs. 1·20 for measuring and Rs. ·60 for preparing "jamabandis"), or Rs. ·72 per cent. on the gross demands for occupier's rate. The cost incurred by the Civil Department in collecting the water-rate was Rs. 1,55,868, or 3·45 per cent. on the gross collections, against 3·06 in 1881-82. The cost in 1880-81 was only given for the Upper Ganges Canal, where the percentage was 3·30. There is no information as regards previous years.

6. The mileage of canals, distributaries, and drainage cuts is as follows:—

Canal.	Miles.			
	Main line.	Distributaries.	Drainage cuts.	Total.
Upper Ganges	445	2,561	867	3,873
Lower Ganges	556	1,742	249	2,547
Agra	140	370	17	527
Eastern Jumna	130	618	270	1,018
Rohilkhand	94	225	...	319
Bijnor	19	14	...	33
Dún	...	66	...	66
Total ...	1,384	5,596	1,403	8,383

There has been an increase during the year of 25 miles of Main Canal (Lower Ganges), 159 miles of Distributaries, and 30 miles of drainage cuts.

7. The irrigated area, 1,974,175 acres (or 3,085 square miles), exceeded that of the previous year, which was then the highest on record, by 58,226 acres.

The following table gives the areas of "kharif" and "rabi" crops for five years:—

Year.	Kharif.	Rabi.	Total acres.	Percentage.	
	April to September.	October to March.		Kharif.	Rabi.
	Acres.	Acres.	Acres.		
1878-79	660,026	1,076,625	1,736,651	38·00	62·00
1879-80	557,486	842,919	1,400,405	39·81	60·19
1880-81	700,587	1,032,109	1,732,696	40·43	59·57
1881-82	706,025	1,209,924	1 915,949	36·85	63·15
1882-83	740,390	1,233,785	1,974,175	37·50	62·50

75·1 per cent. of the area watered was irrigated by "flow," and the remaining 24·9 per cent. by "lift" irrigation. Ten years ago these proportions were 69 and 31; since that date, however, the percentage has steadily increased, thus pointing to a greatly improved system of distribution.

8. The percentage of the "double-cropped" area rose from 16·7 in 1881-82 to 17·6 per cent. in 1882-83. The most marked increase is on the Agra Canal (from 8 to 13 per cent.), and on the new divisions of the Lower Ganges Canal (from 22 to 24 per cent.). The natural tendency of cultivators is to overcrop the land on the first introduction of canal water, and it is difficult to check this tendency. As irrigation, however, establishes itself, the double-cropped area gradually diminishes. On the Eastern Jumna Canal there is a slight increase from 5·5 to 6·80 per cent., but on all other canals there is a satisfactory decrease.

9. The subjoined statement compares the acreage of the principal crops irrigated during the last five years:—

Crop.		1878-79.	1879-80.	1880-81.	1881-82.	1882-83.
Kharif ...	Sugarcane ...	148,060	165,661	135,493	165,019	198,323
	Rice ...	80,298	75,903	138,224	107,963	104,046
	Indigo ...	227,238	185,001	195,001	319,627	316,145
	Cotton ...	74,875	57,471	63,574	64,161	52,493
Rabi ...	Wheat ...	537,359	482,703	545,651	727,428	728,385
	Barley ...	266,989	210,959	262,139	261,688	266,651
	Gram ...	35,236	18,988	34,511	49,351	48,400
	Poppy ...	14,613	14,574	17,230	17,140	16,233

There was a remarkable increase in sugarcane, due chiefly to the good prices prevailing in the previous year, but also partly attributable to the extension of irrigation on the Deoban Branch of the Ganges Canal.

The falling off in rice and in indigo is trifling, and is quite accounted for by the small area obtained on the Rohilkhand Canals, where the rainfall was heavy.

The area irrigated under wheat and barley again nearly approached one million acres—the actual number being 995,036, or 1,574 square miles, of which 1,138 were covered with wheat, and the remaining 409 with barley.

During the year 8,769 villages were irrigated from 34,925 outlets in the distributaries of the Upper and Lower Ganges, the Agra and Eastern Jumna Canals. The returns for the minor works have not been given.

10. The total value of the crops raised with canal water during the last three years and the average incidence of the occupier's rate is compared below. The crop value is derived from data supplied by the Agricultural Department:—

Year.	Acres irrigated.	Value of crop.	Occupier's rate.	Value of crop per acre.	Occupier's rate per acre.	Percentage on value of crop.
		Rs.	Rs.	Rs.	Rs.	
1880-81 ...	1,732,696	5,60,95,157	40,48,547	32·37	2.34	7·23
1881-82 ...	1,915,949	6,06,25,647	46,55,775	31·64	2·43	7·68
1882-83 ...	1,974,175	6,42,61,520	48,98,113	32·55	2·48	7·62

11. Owing to the early commencement of the rains, the "kharif" season was not favorable for canal irrigation, but the cessation of the rain in September in the upper part of the Doab created a demand for water on the Upper Ganges and Eastern Jumna Canals. This break was not felt in the Lower Doab, and there was consequently a decreased area irrigated in the Cawnpore and Etawah Divisions of the Lower Ganges Canal.

In the "rabi" season a brisk demand arose on account of the failure of the usual Christmas rains; but when rain fell in January the demand at once ceased.

With the exception of the Agra Canal, where difficulty was experienced in April and May, the supply of water in the canals was equal to the demand, although there was a heavy tax in maintaining the large area under sugarcane, which had been watered in the "kharif."

The entire visible supply of the river Jumna, where it issues from the hills, is divided between the Eastern and Western Jumna Canals at times when the river is low; and the Agra Canal, which has its head 10 miles below Delhi, is then solely dependent on what comes into the bed of the river from affluents (of which the Hindan gives from 40 to 48 per cent. of the available supply) from percolation and leakage from the Jumna Canal dams, and from escape water from the upper portion of the Upper Ganges Canal.

12. The areas irrigated by and the value of each cubic foot entering the canal heads are detailed in the accompanying table :—

Canal.	Area irrigated per cubic foot of water.					Value of each cubic foot of water at occupier's rate.				
	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.
	Acres.	Acres.	Acres	Acres.	Acres.	Rs.	Rs.	Rs.	Rs.	Rs.
Upper Ganges ...	239	189	173	213	232	579	460	436	550	602
Lower Ganges ...	...	...	203	168	180	...	...	424	371	407
Agra ...	127	64	135	148	155	356	186	367	415	451
Eastern Jumna...	248	231	233	228	243	741	671	664	668	717

1878-79 was a year of drought, when a very considerable strain was brought on the irrigating capabilities of the Upper Ganges and Eastern Jumna Canals; and it is satisfactory to note that, without this great strain, the duty done in 1882-83, by each cubic foot of water on these canals, was nearly equal to that obtained in a year of scarcity. Economy, due to better distribution, is thereby indicated, with the prospective result that a still better duty will be attained when next a drought occurs. The returns on the other canals are encouraging, and show a considerable reserve of power. The Lower Ganges Canal, which exhibited a falling off in 1881-82, has improved, and this is doubtless due to irrigation becoming more established. The area obtained for each cubic foot of water on the Agra Canal is still very low, but is steadily improving, and will be materially increased when the minor distributaries are completed.

13. The maintenance charges per acre irrigated are given below :—

Canal.	Rupees.				
	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.
Upper Ganges	·80	1·24	1·33	1·14	1·03
Lower Ganges	...	...	·75	·86	1·11
Agra	1·53	4·18	1·56	1·60	1·47
Eastern Jumna	·70	·90	·92	·74	·83

In 1878-79 the Upper Ganges and Eastern Jumna Canals were not closed for the usual annual repairs, and the expenses in that year were consequently below the normal. The increase over previous years on the Lower Ganges Canal is due to the establishment charges on account of the larger staff required for a running canal, and also to the diminished capital expenditure, which entails a larger proportion of the general establishment charges being debited to Revenue. The maintenance on the Agra Canal shows a satisfactory decrease. Including all the Canals in the Province, the whole maintenance charges exhibit a reduction of Rs. 707 as compared with the charges in 1881-82, whilst in that year they were upwards of Rs. 25,000 less than in 1880-81, since which time the area irrigated has increased by 240,000 acres, and the gross assessments by 10 lakhs of rupees.

All works have been maintained in a thoroughly efficient state.

14. The navigation returns are :—

Canal.	1882-83.			1881-82.		
	Gross revenue.	Working expenses.	Deficit.	Gross revenue.	Working expenses.	Deficit.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Upper and Lower Ganges...	23,835	30,192	6,357	23,931	36,430*	12,499
Agra	4,186	7,486	3,300	5,580	8,161	2,581
Total ...	28,021	37,678	9,657	29,511	44,591	15,080

Comparisons with former years are vitiated, as previous to 1881-82 the profits on the contracts for the supply of materials by the Traffic Department were entered in the navigation returns. These contracts have for the last two years been entirely prohibited, and the department confined to its legitimate work only. In addition, radical changes have been made in the system of account.

As usual, the navigation returns show a deficit, which, however, is Rs. 5,423 less than in 1881-82; the working expenses have also diminished by Rs. 6,913, notwithstanding that Rs. 4,099 were expended during the year in completing the towpaths below bridges on the Lower Ganges Canal.

There was a decrease of about Rs. 1,400 in the revenue of the Agra Canal. This is due, as noted last year, to the receipts in 1881-82 having been abnormally increased by the tollage on the rafts of sleepers sent down the canal for the Muttra-Achneyra Railway.

The gross revenue remains at its usual limit of about Rs. 28,000; which is not likely to increase until all bridges have been raised to the proper height, and a continuous supply run in the Cawnpore Branch. This remodelling will probably be completed by 1885, by which time also it is hoped that the junction between the Western Jumna and the Agra Canals will be finished. New surveys are now being made for the navigable channel between the Ganges and Agra Canals, as it was found that the original line was unsuitable.

A siding from the Sind, Punjab and Delhi Railway to the canal wharf at Muradnagar, near Ghaziabad, was opened during the year; and arrangement made for a siding from the Cawnpore-Achneyra State Railway at Sikandra Rao.

15. The receipts for plantations show an increase of Rs. 44,495 over the returns of the previous year. Under Water power there is also an increase of Rs. 10,534; and under Miscellaneous items of Rs. 6,499.

16. Careful measurements were made of spring levels on all canals, and interesting observations on the spread of *reh* were conducted and are being continued in the Bulandshahr Division. It is therefore hoped that in a few years sufficient data will exist for drawing reliable conclusions on the subject.

On the Upper Ganges Canal the drainage cuts have worked well; a good deal of land has been reclaimed, and highly irrigated tracts have been prevented from becoming waterlogged.

On the Lower Ganges Canal the drains in the lowlying lands of the Ganges Valley have materially reduced the spring level. At the apex of the triangle formed by the junction of the Upper and Lower Ganges Canals *reh* has become apparent. The whole of this land is about to be taken up, and silting operations commenced on a large scale.

On the Agra Canal the observations during the last four years show that the spring levels within 1,000 yards of the canal banks have been raised a little more than 7½ feet. The average depth of walls having been 31·30 feet in 1879, against 23·74 feet in 1883.

On the Western Depression, a natural hollow about three miles from the Agra Canal, there is an apparent rise of 2½ feet during the year, but an actual fall at some places between it and the canal. This rise of spring level is so closely dependent on the rainfall, that it is impossible to tell what is due to it or to the canal until a large series of observations extending over a long term of years have been made.

On the Eastern Jumna Canal, land which had previously been abandoned has now again come under cultivation in the vicinity of drainage cuts.

* Including lock establishment.

17. The following statement summarises and compares the actual net profits and percentage on capital on the four productive works :—

Year.	Upper Ganges.		Lower Ganges.		Agra.		Eastern Jumna.	
	Net profit.	Per cent. on capital.	Net profit.	Per cent. on capital.	Net profit.	Per cent. on capital.	Net profit.	Per cent. on capital.
	Rs.		Rs.		Rs.		Rs.	
1878-79 ...	26,92,664	8·54	33,845	·23	2,39,351	2·94	8,05,588	30·63
1879-80 ...	20,12,627	6·18	46,623	·28	—23,994	—·28	7,35,863	27·01
1880-81	14,00,777	5·14	10,87,121	4·58	2,65,001	3·15	7,13,640	25·56
1881-82 ...	17,53,670	6·40	11,83,905	4·75	2,94,749	3·48	8,09,213	28·46
1882-83 ...	20,05,684	7·24	10,72,107	4·14	3,53,028	4·15	8,26,665	28·42

The falling off on the Lower Ganges Canal is due, as explained above, to the decreased area of irrigation on the Cawnpore and Etawah Divisions.

On all other canals there is a satisfactory increase.

18. Of the minor irrigation works, the Rohilkhand Canals shows a profit of Rs. 11,165 against a loss in the previous year of Rs. 29.

On the Bijnor Canals the net profit was Rs. 4,301, but a sum of Rs. 6,172 was expended during the year in certain remodelling works. In 1881-82 the net profit was Rs. 9,978.

The net income on the Dun Canals was Rs. 25,662, against Rs. 28,815 in 1881-82.

The gross revenue was, however, Rs. 5,544 higher than that of the previous year, but the working expenses were Rs. 8,697 more owing to heavy expenditure on works of improvement.

On the Bundelkhand Lakes there was a loss of Rs. 622, against a loss of Rs. 616 in 1881-82.

19. The final percentage derived in 1882-83 from all the canals in the province, excluding the Betwa Canal, which is under construction, is exhibited and compared with the results of the previous ten years in the following statement :—

Year.	Capital at end of each year.	Net profits.	Percentage on capital.
	Rs.	Rs.	
1872-73	2,97,94,121	16,66,701	5·59
1873-74	3,03,68,119	20,02,479	6·57
1874-75	3,83,63,164	24,89,547	6·49
1875-76	3,98,56,800	24,26,186	6·08
1876-77	4,20,12,822	25,76,406	6·13
1877-78	4,34,66,488	31,55,858	7·26
1878-79	4,46,21,616	38,28,437	8·57
1879-80	4,60,35,380	28,06,249	6·09
1880-81	6,45,61,716	35,38,941	5·48
1881-82	6,62,06,214	40,82,750	6·17
1882-83	6,76,33,960	43,01,052	6·36

20. The Lieutenant-Governor considers that the results attained on the canals in the North-Western Provinces during the year under review are very satisfactory, and that much credit is due to the officers who have ably superintended this important department of the provincial administration.

Order.—Ordered, that the above Resolution be submitted to the Government of India, and that it be published in the *North-Western Provinces and Oudh Gazette*.

Ordered also, that it be circulated as usual to other Governments and Departments.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 5th FEBRUARY 1884.

General Remarks.—There has been some rain during the week in parts of Sindh, the Punjab, the North-Western Provinces and Assam, but except in the Punjab, it has been too slight to be of any benefit.

Harvesting continues in the Madras Presidency and standing crops are generally in good condition; in parts of the Bellary district they are poor owing to disease and insufficient rain, and in Chingleput they have been slightly injured in one taluk by excessive rain. In the Bombay Presidency harvesting of the *rabi* has begun in some places, and the crops promise well, but cotton and *jowari* are reported to be somewhat injured in parts of eight districts. In Berar and Hyderabad cotton-picking is nearly completed, and the *rabi* crops are being weeded and promise a good harvest. In Central India and Rajputana the crops are progressing favourably everywhere except in Alwar, where rain is needed. Rain is urgently wanted in the south-eastern portion of the Punjab; elsewhere in the province the crops are favourable and have benefited by the rain which fell during the week. High west winds have prevailed in the North-Western Provinces, and the crops everywhere stand in need of rain. In the Central Provinces the prospects of the *rabi* are excellent.

In Bengal prospects remain unchanged; the unirrigated *rabi* crops in Behar and Chota Nagpur are suffering from drought; elsewhere the *rabi* crops are fair. Pulses and oilseeds are being gathered and sugarcane pressed with an average outturn. The spring rice crop is reported to be growing well, and the poppy crop in the Patna Division to be promising. In Assam reaping of mustard continues, and the prospects of the winter crops remain favourable. In Burma harvesting is almost over, and the market is favourable to sellers.

Small-pox exists in most provinces and appears to be spreading. Cholera is still severe in the Tanjore district of the Madras Presidency, and is reported to prevail in the town of Darbhanga.

Prices are generally steady and are high in Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 6th)—		
Bellary . . .	. . . .	Standing crops poor in three taluks, owing to short rainfall and disease, elsewhere fair; harvest—wheat and pulse, yield average; paddy, dry grains, and oilseeds below average; nine deaths from cholera.
Kurnool . . .	. . . .	Standing crops good; harvest—horse gram, yield below average.
Ganjam . . .	. . . .	Standing crops good; small-pox slight in one taluk.
Kistna . . .	. . . .	Standing crops generally good; harvest—paddy and cholum, yield average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras) .	. . . .	Standing crops generally good, but slightly injured by excess of rainfall in one taluk; harvest—paddy, yield below average; small-pox prevailing; 84 deaths from cholera.
Coimbatore . . .	. . . .	Standing crops generally good; harvest—paddy and dry grains, yield about average; fever and cattle-disease in parts; 78 deaths from cholera.
Tanjore . . .	. . . .	Standing crops good; harvest—paddy, dry grains, and pulse, yield below average; cholera abating, 1,221 deaths.
Madura . . .	. . . .	Standing crops fair; harvest—paddy and dry grains, yield about average; cholera abating, 152 deaths.
Malabar . . .	. . . .	Harvest of paddy (second crop) continues in parts; small-pox, fever, and cattle-disease slight.
Travancore . . .	. . . .	Harvest of paddy (second crop) nearly over; small-pox prevalent in the north and cholera in the south. *General Remarks.*—General prospects good.
Bombay—(Feb. 6th)—		
Kurrachee . . .	·10 in Kurrachee on 25th January; slight showers in Kotri on 3rd.	River on 3rd, 2 feet 11 inches, being 6 inches higher than on same date last year; 4 fresh cases of small-pox in Kurrachee since 25th; no deaths; total 42 cases, 7 deaths; disease in 18 villages in districts, 32 fresh cases, 4 deaths, 26 remaining sick; cattle-disease in 6 talukas with loss of 25 cows and 10 buffaloes in Sujawal; prices—wheat, red rice, and *bajri* in Kurrachee 24, 30 and 32, in Dadu 28, *nil* and 40, in Ghorabari 20, 30 and 32, and in Jati 20, 32 and 40 pounds per rupee respectively.
Ahmedabad . . .	. . .	Standing crops healthy; cattle-disease continues in Parentej; wheat 27 and *bajri* 30 pounds per rupee.
Baroda . . .	. . . .	Public health fair; slight fever in Kalol Mehal and in Naosari; cotton and *rabi* crops are not in good condition in Baroda and Naosari divisions, in Kadi and Amreli divisions they are good; sugarcane pressing continues in Naosari division; prices—*bajri* 30 to 31½ and rice 23 to 24½ pounds per British rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Surat		*Rabi* crop healthy; fever in Jalalpore and Pardi; *jowari* 40 and *nagli* 52 pounds per rupee.
Nasik		*Rabi* crops good; public health on the whole good; small-pox in 3 villages of Nasik taluka; *bajri* 30, wheat 31½, and rice 24 pounds per rupee.
Colaba (Bombay)		Abnormal temperature 3° cool to 1° warm; vapour in air defective from 30th to 1st; abnormal wind northerly on 4th and 5th.
Poona		*Rabi* crops good; reaping in progress; prices—*bajri* 37 and *jowari* 42; in Poona *bajri* 27 and *jowari* 35 pounds per rupee.
Ahmednagar		*Rabi* crops good, except *jowari* which is failing; *bajri*—maximum 51 pounds in Jamkhed, minimum 39 in Kopargaon; *jowari*—maximum 60 pounds in Akola, minimum 41 in Karjat.
Sholapur		Cotton crop in Sholapur, Barsi, and Karmala talukas inferior; *jowari* crops middling only in Sholapur, Barsi, and Pandharpur talukas, elsewhere inferior; *jowari* 44 and *bajri* 42 pounds per rupee.
Dharwar		Harvesting of rice almost completed and that of early *jowari* in progress; cotton suffering from blight in 5 talukas; wheat injured in 2 talukas; other late crops good; fever in 3, small-pox in 5, and cattle-disease in 3 talukas; drinking-water scarce in some villages of Navalgund; rice 25 to 44 and *jowari* 55 to 80 pounds per rupee.
Kanara		Rice plants thriving on coast; sugarcane is being harvested; fever at Haliyal; small-pox in 4 talukas and 1 petha; cattle-disease in 3 talukas; common rice in Karwar 12 seers per rupee; in district average 15¾ seers; weather fair.
Rajkot		General health good; small-pox in most parts of the province; fever continues; weather cold; *bajri* 32 and *jowari* 42 pounds per rupee. *General Remarks.*—Slight rain in parts of Sind; *rabi* crops generally good, but cotton and *jowari* somewhat injured in parts of eight districts; late crops being reaped in parts of Poona, Kaladgi, and Belgaum; slight cholera in a few villages in Kolaba; fever, small-pox, and cattle-disease in some districts.
Bengal—(Feb. 5th)		
Chittagong	*Nil*	Weather bright and seasonably cold; winter crops doing well; prices steady; fever reported from one thana, otherwise general health fair; cattle disease continues.
Dacca	*Nil*	*Boro* paddy being sown; pressing of sugarcane and harvesting of pulses and oilseeds continue; prospects of crops promising; public health good.
24-Pergunnahs	*Nil*	Harvesting of *amun* nearly finished; yield estimated at 8 to 10 annas; winter crops promising well; price of common rice stationary; public health generally good.
Moorshedabad	*Nil*	Weather seasonable; *rabi* crops getting on well; prospects very favourable; public health good.
Rajshahye	*Nil*	Winter crops generally promising; rain wanted; public health fair.
Burdwan	*Nil*	Prospects of *rabi* crops still continue unfavourable; prices rising public health fair.
Rungpore	*Nil*	Weather seasonable; prospects of crops good; cultivation of land for autumn crops going on; prices stationary; public health good.
Bhagulpore	*Nil*	Prospects of crops not good; new rice 13 seers 14 chittacks per rupee.
Purneah	*Nil*	*Rabi* crops suffering from want of rain; common rice 16 seers per rupee; public health good.
Patna	*Nil*	Prospects of *rabi* crops fair; poppy flowering; public health good.
Durbhanga	*Nil*	No improvement in prospects of *rabi* crops expected unless there be rain soon; early sowings getting into ear; prices continue stationary; small-pox has broken out in the town of Durbhanga and also in the north of the district.
Hazareebagh	*Nil*	Weather cool, with high westerly winds; prospects of *rabi* crops unfavourable; common rice 13 to 15 seers per rupee; small-pox still prevalent in the sudder station; otherwise public health good.
Cuttack	*Nil*	Reaping of *sarad* rice completed, except in some parts of the Kendrapara sub-division; *rabi* crops nearly gathered with favourable outturn; *dalua* rice growing well; common rice 18 to 24 seers per rupee; public health good. *General Remarks.*—No rain fell in any part of the province, but there was a fall of snow in Darjeeling on the 1st instant; the *amun* harvest has been reaped, except in a few very low-lying localities; the pressing of sugarcane and the gathering of pulses and oilseeds are proceeding in some districts, and the results are generally fair; in Behar and Chota Nagpore, and in a few other parts, the prospects of the *rabi* crops on unirrigated tracts continue to be very unsatisfactory owing to want of rain, but in the rest of the province they are fair. *Boro* rice is growing well, and the poppy crop in the Patna Division is promising; cultivation of land for the autumn crops has begun in some districts; prices remain almost stationary throughout the province; small-pox is spreading in Durbhanga, and is still prevalent in the sudder station of Hazareebagh. Cases of small-pox are also reported from Sarun and Manbhoom; cholera is said to be bad in the town of Durbhanga; fever still lingers in a few districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares (Feb. 5th)	No rain	Weather growing warmer; *rabi* crops somewhat dried up, outturn will probably be less than average; isolated cases of small-pox continue in the city; bazars well supplied; prices falling slightly.
Allahabad („ „)		No rain though much wanted; high clouds and west wind blowing; wheat, barley, and gram are coming into ear; health fair; prices mostly stationary; barley risen and *dhan kuari* fallen.
Gorakhpur („ 3rd)	No rain	Crops below average; some small-pox.
Jhansi („ 4th)	No rain	*Rabi* crops doing fairly well; prices stationary; health of people and cattle good.
Agra („ 5th)	No rain	Crops on irrigated lands doing well; irrigation continues; health good; prices steady.
Bareilly („ „)		Rain still holding off; crops on unirrigated lands drying up; high winds.
Meerut („ „)		No rain during past week, but weather cloudy; a few drops yesterday; irrigated crops uninjured, but rain much wanted; health good; supplies sufficient; prices steady.
Kumaun („ „)	Slight rain	Sky somewhat still cloudy; more rain required to save crops from injury; general health good; cattle-disease continues; prices have risen.
Lucknow („ „)	No rain	Weather clear; strong wind blowing throughout the week; crops excellent where irrigated; cultivators busily engaged in watering; rain very much wanted for unirrigated *rabi* crops; condition of people and cattle good; markets well supplied; prices steady.
Partabgarh		*Rabi* crops below average, but irrigation continues; westerly wind injurious to the crops in some places; *sarson* infected with mahu; prices almost steady; small-pox reported from all tahsils, health otherwise good.
Sitapur (Feb. 5th)	No rain	Occasional clouds during the week; strong west wind for some days; prospects fair; prices steady.
Fyzabad („ „)	No rain	Prospects of crop fair; sugarcane being pressed; small-pox reported from Akbarpore tahsil.
Rai Bareilly („ „)	No rain	Wind westerly; *rabi* crops on irrigated land good; small-pox continues; prices almost stationary.
Cawnpore („ „)	No rain	Weather rather getting warm; small-pox still lingering in a mild form and no sickness among cattle; market steady.
Farukabad („ „)		Occasionally cloudy and clear; no rain in any part of the district; high west wind prevails; small-pox greatly abated. *General Remarks.*—Some rain has fallen in Kumaun and Saharanpore, and a few drops in Meerut and Moradabad; rain is still needed everywhere; high westerly winds have prevailed during the week; small-pox continues in several districts; otherwise the public health is good; the markets are sufficiently supplied and prices on the whole steady.
Punjab—(Feb. 6th)—		
Delhi		Some cases of small-pox; rain urgently wanted; prices fluctuating.
Hissar		Health good; weather cloudy; rain expected; prices steady.
Umballa		Health good; *rabi* crops suffering from want of rain; prices stationary.
Jullundur	·5	Health and crop prospects good; prices stationary.
Amritsar	·7	Health good; prices fluctuating.
Lahore		No report received.
Ferozepur		Health and state of crops good; prices rising.
Sialkot	·5	Health and harvest prospects good; prices steady.
Rawalpindi	·5	Health and crop prospects good; prices fluctuating.
Peshawar	·8	Health improving; prices falling.
Mooltan	·2	Health good; crops flourishing; prices falling.
Dera Ismail Khan	·5	Health good; crop prospects fair; prices almost steady. *General Remarks.*—Rain is urgently wanted in the south-east, elsewhere it has been general; health and crop prospects generally good, except in the south-east of the province; prices are on the whole steady.
Central Provinces (Feb. 6th)—		
Nagpur		Weather clear and cool; *rabi* crops promising; small-pox slight; prices stationary.
Jubbulpore		Weather clear and cold; *rabi* crops thriving; prospects good; wheat 24 and rice 14 seers per rupee; health good.
Saugor (Feb. 5th)		Weather cloudy; *rabi* crops excellent; health good; prices steady.
Seoni		Weather cold and cloudy; *rabi* crops promising; prices stationary public health good.
Hoshangabad		Weather clear and getting warm; prospect of crops excellent; cotton-picking finished; fever prevalent; wheat 18, rice 11, and *jowari* 28 seers per rupee.
Khandwa		Weather clear; prospects good; prices steady; *jowari* 22½ seers per rupee.
Raipur		Weather pleasant; prospects favourable; health good; prices have a tendency to fall; rice 25 and wheat 26 seers per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provs.—*contd.*		
Sambalpur		Weather dry and seasonable; rice harvest over; sugarcane pressing in progress; public health good; no epidemics; prices easy; *common rice* 35 seers per rupee. *General Remarks.*—Weather getting warm and dry; *rabi* crop prospects very good throughout the province; health good; prices stationary.
British Burma—(Feb. 6th)—		
Akyab		Three deaths from small-pox in Naaf township, otherwise public health good; sixty-six deaths of cattle in Bathedoung, elsewhere health of cattle good; reaping completed; price of paddy Rs. 25 to 28 per 100 baskets.
Kyoukphyoo		Public health and health of cattle good; three-fourths of crop reaped.
Sandoway		Public health good; threshing not completed; prices stationary; weather cool.
Rangoon		Twenty fatal cases of small-pox, otherwise public health good; paddy supplies large; prices Rs. 80 to 92 per 100 baskets, tendency downwards.
Hanthawaddy		Public health and health of cattle good; price of paddy Rs. 80 to 86 per 100 baskets.
Pegu, for week ending 26th January 1884.		Slight small-pox in Pegu, and *chickenpox* in Kyanktan; two deaths from small-pox, and one from cholera reported, otherwise public health good; cattle healthy; paddy sales brisk; price Rs. 80 to 85 per 100 baskets.
Prome		Public health good; remissions on 510 acres in Shweydoung and 9 acres in Prome have been applied for owing to drought; price of paddy Rs. 80 per 100 baskets.
Bassein		Public health good; forty deaths of cattle; harvest in; price of paddy Rs. 70 to 85 per 100 baskets.
Thonegwa		Public health good; cattle-disease in Dedaye township; reaping completed; price of paddy Rs. 75 to 90 per 100 baskets.
Henzada		Six deaths from small-pox in Henzada town; price of paddy Rs. 75 to 100 per 100 baskets.
Thayetmyo		Public health good; cattle-disease still prevalent; price of paddy Rs. 65 to 100 per 100 baskets.
Shweygyin		Health of people and cattle good; harvest finished; price of paddy Rs. 65 per 100 baskets.
Amherst (Moulmein)		Public health good; 21 deaths of cattle reported from Martaban township; threshing and winnowing finished; prices of paddy not settled yet; in Moulmein town health of people and cattle good; price of paddy Rs. 15 to 80 per 100 baskets; about 500 baskets sold during week.
Toungoo		Public health good; harvest finished; paddy at Rs. 65 per 100 baskets.
Tavoy		Health of people and cattle good; harvest coming to a close; price of paddy Rs. 58 and 62 per 100 baskets.
Mergui (Jan. 26th)		Four-fifths of crop reaped; health of people and cattle good; paddy Rs. 70 per 100 baskets. *General Remarks.*—Small-pox prevalent more or less all over the province, and not yet sensibly abated; in Rangoon a good deal of sickness prevails among cattle; harvest almost over; sales fairly brisk at good prices and supplies, in Rangoon, good for the season.
Assam—(Feb. 6th)—		
Gauhati	·01	Mornings very cold, but days getting warm; harvesting of *sali* paddy over; mustard is being gathered; sugarcane being cut; public health fair.
Sylhet	*Nil*	Cold weather crops well reported on; small-pox has spread to all subdivisions, and is especially prevalent in Sunamganj and Jaintia pergunnahs.
Cachar	·09	Weather cold for the first five days of the week, the weather was cloudy, and rain fell on the last two days; reaping of *kalai* finished, that of mustard continues; four cases of cholera and 14 of small-pox reported from Lakipur, Katigora, Hailakandi, and Sadr stations; common rice 16 seers per rupee.
Dibrugarh	0·38	Weather cloudy; prospects of winter crops good; district healthy.
Mysore and Coorg—(Feb. 6th)—		
Mysore, Bangalore		Crops in good condition; harvesting operations continue; prospects favourable; public health fair; prices satisfactory.
Mercara	No rain	Coffee-pickings and paddy harvest almost completed; health good.
Berar & Hyderabad—(Feb. 6th)—		
Amraoti		Weather cool; *rabi* crops in good condition; cotton-picking nearly completed; wheat 16 and *jowari* 26 seers per rupee.
Akola		Threshing of *kharif* crops continues, *rabi* prospects good.
Hyderabad (Feb. 7th)	*Nil*	Standing crops prospering; weeding of *rabi* crops commenced; general health good; prices—wheat 15, coarse rice 12, white *juar* 17, yellow *juar* 23, and *tur* 23 seers per current sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States—(Feb. 6th)—		
Indore	No rain	Health and prospects good; prices steady.
Morar	No rain	Weather and prospects good; prices stationary.
Sutna	No rain	Health good.
Neemuch	No rain	Weather seasonable; opium and grain crops in progress; public health good.
Goona		Weather clear and cold; health good.
Agar	No rain	Health and prospects good.
Nowgong	No rain	Weather cold; *rabi* crops progressing; health fair; prices steady.
Bhopawar	No rain	Crops thriving; health good; prices moderate.
Sehore	No rain	Weather clear; prospects and public health good.
Rajputana—		
Harowtee (Feb. 4th)		Weather cloudy; high westerly wind; health good.
Jhallawar („ 1st)		Weather seasonable; health and prospects good.
Ajmere („ 5th)	No rain	High winds commencing; weather seasonable, though warmer.
Jeypore („ „)	No rain	High winds since yesterday; prospects fair; prices steady; health good.
Abu („ 6th)		Weather cold and windy.
Ulwur („ 5th)		Rain wanted; health good.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 25th January, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. S. Thomas.
The Hon'ble G. H. P. Evans.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble Mahárájá Luchmessur Singh, Bahádur, of Darbhangá.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble R. Miller.
The Hon'ble Amír Alí.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble H. J. Reynolds.

CRIMINAL PROCEDURE CODE, 1882, AMENDMENT BILL.

The Hon'ble MR. ILBERT moved that the Report of the Select Committee on the Bill to amend the Code of Criminal Procedure, 1882, so far as it relates to the exercise of jurisdiction over European British subjects, be taken into consideration. He said:—

"My Lord, this Bill has been amended by the Select Committee on the lines indicated in the last debate in Council. The effect of the amended Bill, so far as it relates exclusively to European British subjects, is explained in the Report of the Committee, and is as follows:—

"(*a*) the power of appointing Justices of the Peace will remain on its present footing;

"(*b*) all District Magistrates and Sessions Judges will be *ex officio* Justices of the Peace, and will have power to try European British subjects;

"(*c*) District Magistrates will be empowered to pass upon a European British subject a sentence extending to six months' imprisonment or two thousand rupees fine, or both, that is to say, a sentence twice as severe as they are empowered to pass at present, but any European British subject charged before a District Magistrate will have a right to require that he shall be tried by a jury of which not less than half the number shall be Europeans or Americans; or both; and

"(*d*) a European British subject committed for trial before a Court of Session will have a similar right even in those districts where trials before the Court of Session are not ordinarily by jury.

"When a jury is claimed before a District Magistrate, and the Magistrate has reason to believe that a jury composed in the manner required by the law cannot conveniently be constituted to try the case before himself, he may transfer it to another District Magistrate or Sessions Judge. The question as

to the particular Court to which the case should be transferred is one which must obviously be determined with reference to administrative considerations, and to the varying circumstances of different districts. Accordingly, it is left to general rules, which are to be framed by the High Court with the approval of the Local Government. But there is power for the High Court to make special orders in exceptional cases. The Court to which a case is thus transferred is to try it with all convenient speed, and with the same powers and according to the same procedure as the Magistrate from whose Court it is transferred.

"The provisions which I have described relate exclusively to European British subjects, but the amended Bill contains a few other provisions which are of general application. Amongst them are two amendments which we have adopted on the suggestion of Sir Charles Turner, the Chief Justice of Madras. In accordance with his suggestion, we have amended section 526 of this Code by enabling the High Court to make an order of transfer under that section whenever it appears to the Court that such an order is expedient for the ends of justice. The object of the amendment is to make the section somewhat more elastic than it is in its present form. In connexion with the same section I may mention a minor amendment which we have made for the purpose of removing what appears to be an ambiguity in the present wording, by making it clear that the power to order a transfer includes the power to order a committal. We have also adopted the second of Sir Charles Turner's suggestions by requiring the Court below, in cases where it is notified of an intention to apply for a transfer under section 526, to exercise the power of adjournment under section 344. It has been objected to this amendment that it may in some cases enable an accused person to obtain an adjournment on insufficient grounds, and merely for purposes of delay, or for some other improper reason. The objection is not without its weight, but it must be remembered that almost every safeguard which is given to an accused person is liable to a similar objection, and we have endeavoured to frame the section in such a way as to minimize the risk of its being abused. The application for adjournment must be made before the commencement of the hearing. The adjournment need not be granted until the evidence for the prosecution has been taken, and the Courts in granting the adjournment may, under section 344, impose such terms as it thinks fit as a condition of the boon.

"My hon'ble friend Mr. Amír Alí brought forward in Committee certain other amendments, the general object of which was, as he explained to the Committee, to reduce the complication and dangers which may arise under the existing law from Magistrates having to try cases in which they collected evidence for the prosecution, and in a certain sense acted as prosecutors. We fully admit that the combination in the same person of executive and judicial functions is open to serious objection on principle, and we are most anxious to do all that with the limited staff at our disposal we can do to remove or reduce the risk of failure of justice arising from this cause. But at the same time we felt that it would be impossible for us, without further enquiry and consultation with Local Governments and their officers, to insert in the present Bill at this stage any amendment of the Code which would have a wide scope, or might possibly alter to a serious extent the present mode of administering justice in the country. It was for these reasons—reasons the weight of what I am sure that my hon'ble friend fully appreciates—that we were unable to adopt any more than a very small part of the amendments which he has moved. The amendments which were adopted are two. The first enables an accused person, when brought for trial before a Magistrate who has taken cognizance of his case, not on a formal complaint or on a police-report, but on a report from some other person, or on the knowledge or suspicion of the Magistrate himself, to require that his case be transferred to another Court. The second requires a Magistrate, when exercising the power given to him under section 528 of transferring a case from one file to another, to record his reasons in writing. The power is one which is obviously necessary, and the exercise of which forms part of the ordinary administration of justice in the country. But it is given in very general terms, and although it is at present liable to be controlled under the revisional powers given by the existing Code, yet the obligation to record reasons may constitute a further salutary check on any abuse of the power.

"These are the only amendments which the Committee have felt themselves in a position to recommend. I observe that my hon'ble friend the Mahárájá of Darbhangá has given notice of an amendment to the effect that all persons, Native as well as others, should have the right to claim trial by jury. I presume that he has given his notice merely for the purpose of placing on record his opinion as to the mode in which the law ought to be altered, and that he has no intention of seriously pressing his amendment on the Council. If he were to do so, the Government would, of course, be compelled to vote against it under present circumstances, for the same reasons as those which prevented the Select Committee from accepting Mr. Amír Alí's amendment. But I hope he will not do so, for an adverse vote, though given on special grounds, may be misconstrued, and the question is one on which I, for one, should wish to reserve my judgment in the amplest manner."

The Hon'ble MR. EVANS said:—"It is desirable that I should explain how there come to be matters in the Bill as amended which are beyond its original scope. The question on which the Government and the European British subjects were at issue was this. It was proposed to give jurisdiction to officers, not being European British subjects, over European British subjects, contrary to the arrangement of 1872. It is necessary to bear in mind that the European opposition was directed against the admission of officers not European British subjects, and that amendments meeting the case of these few Native officers would have been sufficient. That would have been a small measure. It was the Government that insisted that the European British subject should also have restored to him the right of trial by jury before European District Magistrates and before European Sessions Judges in non-jury districts. If this enlargement of the rights of the European British subject should create any administrative inconvenience, it is the Government, not the European British subject, which is responsible. With regard to section 526A, known as the Turner clause, it was among the modifications approved of by the Secretary of State; I had always thought it of very little use and very unworkable. I suggested that it should be given up in Select Committee. But it was the Government that insisted upon its being retained. If this clause turns out a statutory engine of delay in favour of the long purse, whether European or Native, the responsibility will rest with Government, and not with the European British subject. As regards the other amendments, they were proposed by my hon'ble friend Mr. Amír Alí and accepted by Government. They have nothing to do with European British subjects more than with Natives. They are small attempts to deal with great evils in the Code, which can never be got rid of unless the executive and judicial functions are completely separated—a step which will involve a very serious change in the administration of the country. Whether these small amendments will in practice do more harm or more good, it is for the local officers to say. The responsibility for these clauses also rests with the Government. In the opinion given by that very experienced District Officer, Mr. Edgar, he shows that the good working of the great changes made in 1872 was due to their being made by consent. Sir Fitzjames Stephen and his colleagues were wise in making them by consent, and were justified by the result. I hope that this consent settlement may be equally successful. Its merit is that, however great its imperfections may be, it restores peace. I hope no one will rake up the ashes of this dead fire, and that cordiality will be restored between the Government and the Europeans and between the Europeans and the Natives. Unless these great elements work cordially together for the welfare of the country, its future prosperity will undoubtedly suffer."

The Motion was put and agreed to.

The Hon'ble THE MAHÁRÁJÁ OF DARBHANGÁ said:—"I do not know whether I am quite in order in moving this amendment. I would have much sooner preferred that the Motion should have come from some one of the members who were in charge of the Bill in Select Committee. Objection might certainly have been taken to my amendment if the Bill had now stood in its original shape. This Bill was originally supposed to be a Bill to amend the Criminal Procedure Code as regards the exercise of jurisdiction over European British

subjects. This, in fact, was the name of the Bill when it went to Select Committee. But now I see that it comes out simply as a Bill to amend the Criminal Procedure Code: no special mention is made of European British subjects. I therefore am led to believe that hon'ble members have now a right to discuss any section of the Criminal Procedure Act that they may wish. The Bill, as originally named, intended to do away with race-distinctions altogether. The original Bill has been, therefore, in a way withdrawn altogether. It has been certainly very much modified in Select Committee, and it can be now supposed to be a Bill to give to every European the right of trial by jury in almost every case. My object is certainly not to question the decision of the Select Committee in that respect. I simply wish that this right should be extended to Indian British subjects as well, but with certain restrictions. My amendment does not mean that Natives of India should have in every case the privilege of trial by jury. I simply wish that in all sessions cases the Natives of India should have this privilege; and I do not at present mean to move that they should have the right of demanding trial by jury in cases before the District or any other Magistrates. I am perfectly well aware that it would be necessary to get the opinions of the Local Governments on a general question of this sort. In many places it might be perfectly impossible to get enough proper men to form juries. In other places, on the other hand, it might lead to an increase of expenditure. I simply wish that in every sessions case the accused should have the option of being tried by jury. I do not go so far as to ask the Government to put the European and the Indian subjects on terms of entire equality, as I think a proposal of this sort would not only be unreasonable, but is never likely to be listened to. If the Indians are a conquered race and the Europeans are conquerors, it is preposterous to think that the conquered race and the conquerors can ever legally be put on terms of equality. I do not wish to rob the Europeans of any of their privileges. I have now to move that, after section 2 of the Bill, the following section be inserted:—

"3. To section 269, the following proviso shall be added, namely:—

'Provided that in trials before a Court of Session, if before the first assessor is appointed, the accused requires to be tried by a jury, the trial shall always be by a jury.'"

The Hon'ble MR. HUNTER said:—"My Lord, I entirely sympathise with my hon'ble friend, the Maháráját of Darbhangá, in his desire to see the system of trial by jury extended to the Natives of this country. But I think that the present debate does not afford a suitable occasion for asking the Council to consider so large a proposal. I for one could not give a decision on such a scheme without learning the opinions of the Local Governments; and I think that this view will be shared by those members of the Council who are most anxious to effect the removal of distinctions of race in matters of judicial procedure. The question of the extension of trial by jury has been deliberately placed by the legislature in the hands of the Local Governments. It would be impossible for the Council to re-open this difficult question without referring to those Governments. I shall be glad to see the question thus referred, and I hope that the reference will result in an extended application of the jury-system. But I should strongly object to delay the passing of this Bill until the reference was made. To accept the Maháráját of Darbhangá's amendment would involve such a delay, and would prolong the political agitation which the passing of this Bill is intended to close. If the Maháráját insists on pressing his amendment, I must therefore oppose it. But in the interests of the Native community, I would ask my hon'ble friend not to press his amendment. I think the wisest course for him, and for those of us who sympathise with his views in this matter, is to trust to the well-known desire of your Lordship to extend as soon as possible, and as widely as practicable, the system of trial by jury to all classes of Her Majesty's subjects in India."

The Hon'ble Mr. AMÍR ALÍ said:—"My Lord, though I am inclined to think there are considerable difficulties in the practical working of the present proposal,—difficulties which induced me, I must confess, to refrain from bringing the matter forward in Committee,—I believe the hon'ble the Maháráját of Darbhangá's amendment is perfectly correct in theory; and, therefore, if he presses it, I shall support the amendment. There are many assessor-districts at the present moment quite as advanced and fitted to receive the jury-system as the so-called jury-districts. In their cases, there would be no difficulty whatever. It is only where the people are not sufficiently advanced to understand the nature of a jury-trial, or to appreciate the duties devolving upon jurors, that there may arise some difficulty. But I should think that in such instances the difficulties can be minimised by administrative arrangements. Personally, I am not an ardent advocate of the extension of the jury-system to those parts of the country which are not prepared for it. In those places, a trial by jury is not always to the advantage of the accused; for, while in trial with assessors the accused has a right of appeal to the High Court on law as well as facts, in the case of a conviction by a jury there is no appeal, except on points of law. Considering the difficulties which surround the question, perhaps the Hon'ble Maháráját may be inclined not to press the amendment."

The Hon'ble RAÍ KRISTODÁS PÁL said:—"Bearing in mind what fell from your Lordship the other day, deprecating the raising of the general question of extension of jury-trial for Natives, I thought it proper not to bring forward any amendment or motion on the subject. I would have remained silent if my hon'ble friend the Maháráját of Darbhangá had not brought forward his motion. The subject, however, being mooted in Council, I consider it my duty to support the motion. I need not remind hon'ble members of Council that, in a country where the panchávat-system has been in force from time immemorial, trial by jury cannot be said to be an exotic. The people are familiar with the institution, and, although it has prevailed here under a different name, its practical working has been the same here as in more civilized countries. It is unnecessary for me to dwell on the well-known advantages of the jury-system, but it is not from any sentimental considerations or a regard for tradition that I support the institution. I do hold that jury-trial is really the bulwark of the liberty of the subject, and that it is a material safeguard of the interests of justice. How the jury-system has been working in Bengal is, I believe, well known to the hon'ble members of this Council. I am well aware that many executive officers are not much in favour of trial by jury, but we should not forget that not a few of them are apt to push their vigour beyond the law. The question lately came, I observe, before the Lieutenant-Governor of Bengal in connection with the police administration report, and I will, with the permission of the Council, read an extract from the Resolution of His Honour showing how essential is the jury-system to the interests of justice, even if thereby now and then miscarriages of justice occur. His Honour remarks:—

'The unwillingness of juries to convict in serious cases involving the issues of life and death may sometimes have been the cause of failures of justice, which would not have occurred had the person been tried by a Judge and assessors. What is now complained of is not, it must be remembered, a new thing. It has been a charge against the system of trial by jury from the first; but it by no means follows that the unsatisfactory results in the trial of murder-cases by jury is solely owing to the unwillingness of the jurors to convict in a case in which a capital sentence would probably be passed. It is in the experience of the Lieutenant-Governor that jurors look with much greater strictness into the evidence and to the conduct of the police-officers than unassisted Judges used to do; and it is much better that it should be so, notwithstanding occasional failures of justice. The over-scrupulousness of juries, if such it may be called, should have its effect on the action of the police and upon the investigations made in Magistrates' Courts, with results which can be only beneficial.'

"Such is the opinion of the responsible head of the Bengal Government, and I believe that all right-minded men who value jury-trial will come to the same conclusion. In fact, I look upon the jury-system as a most useful instrument of self-culture and self-discipline in the administration of the affairs of a nation. It has, however, been urged that all parts of the country are not equally ripe for jury-trial, and that, therefore, the time has not yet arrived for the universal extension of the system to the country. Now, my reply is, that when the wilds of Assam have been declared to be fit for jury-trial, there can scarcely be any part of the country in Bengal, Northern India, Madras or Bombay which cannot be said to be sufficiently advanced for the reception of this boon. I am quite aware that there may be backward parts

where jury-trial would not be an unmixed blessing, but as civilization is progressing and education is advancing the people of those districts will gradually acquire that knowledge and experience which will enable them to enjoy the privilege without injury. Then it is contended that, as the motion involves what I may call a big change, it ought not to be passed without reference to the Local Governments. I confess I do not look upon the motion in that light. It is true that it contemplates a material change by converting assessor-districts into jury-districts, but, as I have already said, if the Government of Assam could extend the jury-system to all the territories under it, I do not see why this Council, knowing the position of the different provinces, cannot extend the system of jury-trial to the whole country without further reference to the Local Governments. I go further. I submit that the Bill before us introduces large and radical changes into the system of jury-trial as regards European British subjects; that is to say, it gives European British subjects the right to claim a trial by jury before a District Magistrate, which they had never before enjoyed, and yet it has been considered unnecessary to refer the matter to the Local Governments for opinion. So if, in introducing such a big change in respect to the trial of European British subjects, it has not been considered necessary to consult the Local Governments, surely this Council can consistently take action in this matter without reference to Local Governments. I think it is due to the Mahárájá to point out that his motion does not at all affect the agreement or arrangement made with regard to the trial of European British subjects. As far as I understand him, he leaves that question where it is, and does not wish to interfere with or disturb the arrangement made. He simply asks that the Indian subject tried in a Sessions Court should have the privilege of demanding a jury just as the European British subject would be entitled to do. In this respect he claims an equality between the European and the Native which I do not think will be considered unreasonable. In fact, from what has fallen from the previous speakers, I perceive that their sympathy is with the motion, though they consider that the present time is not quite opportune for pressing it. Then it may be said that this motion does not come quite within the scope of the Bill because it does not form part of the arrangement made with the opponents of the measure. Now, the hon'ble and learned mover of the Bill has already pointed out that the Select Committee had admitted certain amendments which were outside the agreement. In the same spirit this matter may be entertained, though it is outside the agreement. The object of the motion, as I take it, is to improve the administration of justice, and surely whatever may tend to improve the administration of justice deserves the consideration of the Council. How the administration of justice will be improved I think the extract which I have just read from the Resolution of the Lieutenant-Governor clearly explains. I hold that the present motion is quite consistent with the scope of the Bill before us, firstly, because it aims at the establishment of an equality in the eye of the law between the different classes of Her Majesty's subjects, which has been the primary object of the Bill, and secondly, because it is a proposal for the improved administration of justice, which, I submit, is also one of the objects of the Bill. If this motion be carried, I need hardly say that the European British subject will lose nothing, but that the Indian subject will gain a great deal, and this is an important point, worthy of the consideration of the Council. I cannot conclude without saying that my countrymen in all parts of the country lay great stress upon jury-trial; that they have submitted an almost universal prayer that, while the jury-system is to be conceded to the Europeans, it shall also be extended to them without limit or distinction. It pleases me to say, if I may use the expression, that, in carrying on the controversy regarding this Bill, the tone and temper of my countrymen have been most moderate and loyal, and this consideration will, I hope, induce hon'ble members of Council and your Lordship to extend your generous consideration to the one prayer of the Native community on a point regarding which they feel so keenly and earnestly."

The Hon'ble MR. EVANS said:—"The Government of India has already intimated, and apparently on sufficient grounds, that it is not possible for them to consider this important question at this stage. It is therefore, under the peculiar circumstances of this Bill, impossible for me to consider or to vote for any amendment which is not accepted by the Government of India. Everybody knows, as far as we are concerned, that the shape which this Bill now assumes is a matter of consent on both sides, and, if I were to take into consideration any matter which is not consented to by the Government of India, I should feel that I was departing from that arrangement."

The Hon'ble MR. ILBERT said:—"I cannot say that my hon'ble friend the Mahárájá of Darbhangá is out of order in moving the present amendment, and therefore I do not take any technical objection to the motion; nor can I say that it is unnatural that he should give notice of the amendment which stands in his name. But having said thus much, I do not know that I can or need do anything more than repeat the substance of what I have said already. I must under existing circumstances entirely decline to follow my hon'ble friend into the large question which he has raised. My friend the Hon'ble Mr. Hunter has very properly directed attention to the present state of the law on the subject. That law is to be found in the section of the Code of Criminal Procedure which says that the Local Government may, by order in the official Gazette, direct that the trial of all offences, or of any particular class of offences, before any Court of Session, shall be by jury in any district. Whether the amendment which has been brought forward by my hon'ble friend the Mahárájá of Darbhangá is or is not based on a correct theory, and whether it is advisable or practicable to apply to all cases and in all districts the extension of the jury-system which he advocates, or only to particular cases and in particular districts, and, if so, to what particular cases and districts, is a question on which, under existing circumstances, I must decline to pronounce an opinion. I have not sufficient information before me to consider the administrative questions thus raised, and therefore I must content myself by saying that the amendment is one which we cannot possibly accept."

His Excellency THE PRESIDENT said:—"I do not propose on the present occasion to enter into the general question of the merits of the jury-system or the desirability of its wider extension in this country. I desire to join my voice to those of Mr. Hunter and Mr. Amír Alí in asking my hon'ble friend the Mahárájá of Darbhangá not to press this proposal on the present occasion. I think that he will certainly not advance the object that he has in view by taking that course. The question which he has raised is one of great importance; it is one which I readily admit deserves very full and careful consideration; but it would be, in my judgment, impossible for the Government to accept at this, the last, stage of the Bill an amendment which would have so wide a scope as that which has been moved by my hon'ble friend, without having had time to consider the subject in all its bearings, or to consult Local Governments and others whose opinions are to be taken upon a large question of this description. If such a course were open to me upon this occasion, I should like to move what is called in Parliament 'the previous question.' But no such thing can be done in this Council, and I can, therefore, only say the Government is not prepared to express an opinion now. I admit that the fact which the hon'ble gentleman, Mr. Kristodás Pál, has alluded to, that there appears to be a strong feeling in the country in favour of the extension of the jury-system, is a matter which of itself deserves our consideration; but to oblige the Government to vote against this motion at this time would be unduly to prejudice the further examination of the subject. I make no complaint on the score of regularity against my hon'ble friend the Mahárájá of Darbhangá for having raised this question, and thereby drawn additional attention to it; but I confess that I should very much regret that, by dividing the Council, he should force the Government to pronounce an opinion upon it prematurely, and at the time when they have not the necessary information before them to enable them to form a deliberate judgment upon it. That the question is deserving of consideration I entirely admit, but that it would injure the cause which the Mahárájá has at heart if he were to press for a motion on the present occasion, I cannot for a moment doubt."

The Hon'ble the MAHÁRÁJÁ OF DARBHANGÁ here withdrew his amendment.

The Hon'ble MR. ILBERT moved that the Bill, as amended, be passed.

The Hon'ble MR. AMÍR ALÍ said:—"My Lord, I hope I am in order in offering a few remarks on this motion, in explanation of my reasons for not moving any amendments on the basis of the proposals I put forward in Committee. I have carefully abstained from making any suggestion which was likely to disturb the arrangement in accordance with which the Bill has been amended, or to throw any difficulty in the way of an immediate settlement of the question that has engaged public attention for the last eleven months. Personally, my Lord, I think your Lordship's Government ought to be congratulated in having successfully maintained the principle of the Bill with the consent of the European community. It has been said that, in this matter, the wishes of the European community should not have been considered. I cannot bring myself to agree in this view. No Government can wisely overlook or disregard the sentiments of any class of its subjects, and however much inclined I may feel to deprecate the violent expression of these sentiments in this particular case, I cannot help thinking that in the interests of good government they had to be taken into consideration, and such weight given to them as was consistent with the declared policy of British rule and did not conflict with the just rights of the other subjects of Her Majesty. It is, therefore, with a sense of relief that I view the approaching settlement of this question. With reference to the other points, I desire to say just a few words. There were two objects which I had principally in view in the discussions in Select Committee—firstly, to see that the great safeguard which was being provided for the European British subjects of Her Majesty against the illegal exercise of judicial powers may not be turned to the disadvantage of the Natives of India; and secondly, to obtain in favour of the latter certain amendments in those provisions of the Criminal Procedure Code which, owing to the combination of judicial and executive functions in the Mufassal magistracy, press heavily upon all classes of the community, resulting frequently in scandalous miscarriage of justice. My Lord, the dangers and difficulties which arise from the combination of the two functions in the Mufassal are not imaginary. Having these two objects in view, I brought forward certain proposals which have received only a partial recognition. With reference to the view of the majority of the Committee regarding the safeguards against any failure of justice owing to the large extension of the jury-system in European cases, I have not thought it right to dissent from my honourable colleagues, as I felt sure, should the apprehensions which are entertained in certain quarters prove true, it will be the duty of Government to correct the evil by applying the most suitable remedy, and it is to be hoped that in such an eventuality all sections of Her Majesty's subjects in this country would cordially join in urging upon the Government to place the administration of criminal justice upon a more satisfactory footing. As regards the second object, I must express my regret that my colleagues did not see their way toward accepting my proposal in its entirety. The amendment I proposed would not have increased the work in the Sessions Court to any appreciable extent, while it would have secured an important safeguard against the inconvenience and dangers arising from the combination of judicial and executive functions on the part of the Mufassal magistracy. My Lord, the satisfactory administration of criminal justice in the Presidency-towns is a sufficient proof of the wisdom of the policy by which the two functions are kept apart, and I have reason to believe that, were the same system in vogue in the Mufassal, the recent agitation would have lost much of its force. I was, however, met with the objection that the proposal I made involved a degree of change which required a more careful consideration than the Committee were in a position to give in the short space of time at their disposal. The extent, therefore, to which my proposal has been adopted is small,—too small in fact to be of any practical value,—but I regard it as a step towards that disjunction of the executive and judicial functions upon which in future must depend the best security of the people in the administration of

justice. And in view of the recommendation embodied in the report, which I look upon as the most important and valuable concession to the Natives of India, I have thought it right to refrain from bringing forward the proposal in Council. I venture to hope, my Lord, that this recommendation will receive the earnest and early consideration of Government, and I am sure that my countrymen, knowing the anxious desire which animates your Lordship's Government to deal equitably by all classes of Her Majesty's subjects, will rest content for the present with the small modification which has been made in one of the most obnoxious sections of the Criminal Procedure Code. My Lord, it is a distinguishing feature of your Lordship's administration (in saying this, I speak the mind of the Natives of India at large) that for the first time under British rule the wants and wishes of the people have received *due* consideration; and in view of the anxiety prevailing among all classes of the Native community for some substantial improvement in their favour in the criminal law of the country, I trust that the recommendation of the Select Committee will not be allowed to remain a dead-letter."

The Hon'ble RAÍ KRISTODÁS PÁL said:—"My Lord, before the motion is formally put to the vote, I ask your Lordship's permission to say a few words. I feel it would be wrong on my part to raise a fresh discussion upon a subject which has been already discussed threadbare, particularly as the Bill has reached the stage when no discussion will avail one way or another. Remembering also the deliberate decision of Government that the Bill must be based on the lines of the agreement entered into, I could see no room for any substantial amendment which would prove beneficial, and I am confirmed in my opinion by the proceedings of this day. At the same time, in justice to myself, I must candidly confess with due deference that the provisions of the Bill as amended by the Select Committee, as far as I can see, are not calculated to remove the apprehensions which I ventured to express on the last occasion. It cannot be denied that while race-distinction is removed in one direction, that is to say, as regards a very small class of Native officers, it is deepened in another direction, that is to say, as regards the Native population at large, that the anomaly of jury-trial in petty cases, in cases in which a jury is admitted to be ridiculous, remains all the same, if the District Magistrate chooses to try such cases; that the cure of the invidiousness of the law will depend on the forbearance of the Magistrate, if he will not try petty cases, and of the accused, if he will not claim a jury in such cases; that the risk of failure of justice at the hands of a dominant and sympathising jury is not safeguarded in any way, and that the old evils to poor complainants of the transfer of cases to distant Courts, almost amounting to a denial of justice, from districts where a jury may not be available, will be revived in all their rigours. But I will not prolong a dying controversy by raising fresh objections. Your Lordship was pleased to declare, in winding up the debate on the 7th instant, that a failure of justice such as I had apprehended would be an intolerable evil, that if your Lordship had anticipated it, you would not have been a party to the arrangement made, and that should failure of justice or other grave evils hereafter arise out of the proposed system, it would be the duty of the Government of the day to apply adequate remedies. I accept this assurance of your Lordship with due submission.

"My Lord, if I have correctly gauged the opinion of my countrymen on this subject, there seems to be a deep conviction among them that the fiery ordeal through which they have passed during the last ten months has brought forth no adequate result, that if they have gained some slight advantages on the one hand, they have lost much more on the other, that the sudden and sad turn which this business has taken at the last moment has fallen like a thunderbolt upon them, and filled them with gloom and dismay. But I should not despond. The main principles of this Bill, though within very narrow limits, being affirmed, I fervently hope that it will prove the precursor of more substantial and abiding reforms. At some favourable time hereafter, when the present storm of passionate feelings and race-animosities, it is to be hoped, will have passed away, when practical experience will have satisfied even the most thoroughgoing representatives of the domineering class that Native Judges and Magistrates mete out even-handed and uncoloured justice, some hopeful mariner in

charge of the vessel of the State, following the signal planted to-day, may steer his course in the same onward path, and give a wider effect to the high hopes and honourable aspirations with which the controversy of the past few months, I am bound to say, has filled the heart of the nation. It is not necessary for me to formulate these hopes and aspirations. Suffice it to say that the nation anxiously looks forward to the establishment of a complete equality in the eye of the law between all classes of Her Majesty's subjects without distinctions of race and religion, to the unconditional extension to Her Indian subjects of the same jury-trial that has been accorded to her British-born subjects,—for it is the bulwark of the liberty of all subjects,—to the removal of the present barrier to the admission into the Covenanted Civil Service through the door of competition, and of the stigma which unjustly attaches to the statutory civilians, by combining, as I conceive, competition with nomination, and to the development of those solid measures of progress which will raise the Native Indians to the level of the European British subjects. The passage of the Bill marks three distinctive and important points, firstly, that the Queen's Proclamation, the Magna Charta of the people of India, has been vindicated with a force, emphasis and earnestness with which it had never before been vindicated; secondly, that a step, albeit a short one, still a well-defined one, has been taken in putting the higher order of covenanted civilians, both European and Native, on a footing of equality which no future Government will dare retrogress; and thirdly, that, if my countrymen prove equal to the occasion, the onward policy is sure to advance. We are certainly more concerned with the present than with the future; but man does not live for the present alone. His manhood will not progress if he does not think of the future—care for the future—live for the future. Relying on the future, I give my adhesion to the present Bill."

The Hon'ble MR. EVANS said:—"I had not intended to add any observations to those which I have already had the honour to address to the Council to-day, but it is entirely impossible that I should sit silent after the remarks which have been made by the hon'ble Messrs. Amír Alí and Kristodás Pál. I do not intend to follow the last speaker into those matters of controversy which he has freely touched upon, but it is necessary to say one thing most distinctly. I understood the Hon'ble Amír Alí to say that the so-called principle of the Bill was assented to by the European community. I thought I had made it clear on the last occasion—but I will make it clearer now—that I have assented to nothing of the kind, nor have the Europeans generally assented to anything of the kind. They have assented to the passing of this Bill in order to procure peace, but they have retained their own view of their own privileges and rights; and I thought I had made it clear that we no more affirmed the Government view than the Government affirmed our view. My understanding of the settlement is that it is intended to procure peace, and if that stands, well and good. But if my hon'ble friend's countrymen are going to contend that they are entitled to maintain this supposed concession of I know not what principle, and to deprive us of the other portion of the settlement, as he very clearly intimated it is his intention some day or another to do, then I say that the principles of law and natural justice are that, if the settlement is to be ripped up, the parties go back to the *status quo ante*. If any pilot of the future, induced by any such suggestion as this, be so unwise as to guide the vessel of State upon the rock towards which it has lately been steered, then most undoubtedly the Europeans will remember and claim the principles of law and justice; and if any endeavour be made to rip up this settlement, they will take their stand upon the settlement of 1872. God forbid that these things should come to pass. But it is necessary for me to say emphatically that we have not conceded a principle of any kind, or to any extent whatever, but that we hold ourselves free to defend our rights if attacked, and are ready to do so."

His Excellency THE PRESIDENT said:—"I stated so fully my views upon this subject in the course of the discussion which arose upon the motion that this Bill be referred to a Select Committee, that I had no intention when I

came into this room of making any further observations upon the matter. To the views which I then set forth I entirely adhere, and it is quite needless that I should repeat them now. The Hon'ble Raí Bahádur Kristodás Pál has repeated briefly some objections which he raised in the former discussion to the practical working of the arrangements now embodied in this Bill. I replied upon that occasion to the remarks which he then made, and as I have seen no reason since then to modify the views which I expressed, I will not take up the time of the Council by repeating what I said at that time. The hon'ble gentleman has remarked that the long controversy which has existed unhappily now for several months has brought to the Natives of the country no adequate result. From that I must entirely dissent. As I stated on the former occasion, I hold that the results which will be secured by this measure are results of the highest importance to the Native community in this country. I then pointed out how the principle upon which this Bill was founded had been maintained, acknowledged, and secured; how a disqualification strongly felt by some of the highest Native Magistrates and Judges in this country would be by this Bill removed, and how the policy which was laid down fifty years ago, and has been steadily pursued since then by successive Governments, has been once more vindicated and affirmed. I believe that these results are of the highest importance to the countrymen of the hon'ble gentleman, and I also venture to think that, though there may be many who may be inclined to criticise—and it is quite fair that they should criticise—the settlement now made, the general feeling of the Native community is that the Bill does uphold and advance a principle to which they attach the highest importance. I cannot, therefore, agree with the hon'ble gentleman in the opinion that those who have supported this Bill and this policy have lost under the recent arrangements more than they have gained. I must entirely adhere to the opinion which I expressed on the previous occasion, that the gains have been large and important, and that, as I then said, nothing has been taken from the Natives, though an additional safeguard has been given to the European community. I do not wish to prolong this discussion. The last thing that I should desire would be to renew for a moment the controversy of the last few months. I earnestly trust that that controversy may now be brought to a close. I hope and believe that the system established by this Bill will be found to work well, and nothing shall be wanting on the part of the Government to secure its successful operation. I might content myself with these remarks, which I have felt bound to make in order to defend the policy, and to point out the results and the gains, of the measure which is now about to be passed. But I must, before I conclude, say one or two words on the remarks which fell from the Hon'ble Mr. Amír Alí. And, in the first place, while I thank him very much for the manner in which he spoke of the labours of the present Government of India, I cannot take either to myself or to my colleagues the compliment which he was kind enough to pay us. He said that, under this Government for the first time, the desires and wishes of the Natives had received due attention. That is a statement to which I cannot subscribe, when I recollect the many eminent men who have preceded me in the office which I now fill, and when I know how many previous Governments have worked earnestly for the benefit of the people of this country. Each day has its own tasks; the tasks of twenty years ago were not the tasks of the present moment. We have endeavoured to do our duty in the position in which we have found ourselves placed, and we shall continue to do so; but I must deprecate any comparison between the labours of the present Government and the labours of those which have preceded it. With respect to the other remarks of the Hon'ble Mr. Amír Alí, I only wish to say this—the Government naturally attach great weight to the opinions expressed in the report of a Select Committee, composed as the Select Committee on this Bill has been; and when I find that Select Committee saying, in reference to one of the suggestions of Mr. Amír Alí, 'we are fully sensible of the importance of the point thus raised, and we think it well worthy of the consideration of the Government'—it is unnecessary for me to say that such an observation coming from such a source will receive the fullest and most careful consideration of the Government. And now I have no more to say. I rejoice that this question is brought to a conclusion, and I trust that

conclusion is one which, when the heat of this controversy has died away, will enable this measure to work smoothly and satisfactorily. I think that to attain that end was an object which the Government did well to desire. We were not prepared—and we shall never be prepared—to sacrifice the principles for which we have contended, for we believe them to be the true principles of English government in this country; but within the limits of those principles it was our duty to seek for any settlement which would secure a general acquiescence at least in the arrangements which we proposed to make. That object has been attained, and if it is honestly and faithfully kept in view on both sides, it will, I have every confidence, be found that the arrangements now made are consistent alike with the honour of the Government and the advantage of the country."

The Motion was put and agreed to.

EXPLOSIVES BILL.

The Hon'ble MR. ILBERT also presented the Report of the Select Committee on the Bill to regulate the manufacture, keeping, sale, conveyance and importation of explosives.

The Council adjourned to Friday, the 8th February, 1884.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

FORT WILLIAM;
The 9th February, 1884.

MEMO.

Please substitute the accompanying for corresponding page of the Supplement to the "Gazette of India," dated 16th February 1884.

E. J. DEAN.

SUPPLEMENT TO

The Gazette of India.

Nº 7. } CALCUTTA, SATURDAY, FEBRUARY 16, 1884.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 8th February 1884.

PRESENT:

The Hon'ble J. Gibbs, C.S.I., C.I.E., President of the Council of the Governor General, *presiding*.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. S. Thomas.
The Hon'ble Kristodás Pál, Rái Bahádur, C.I.E.
The Hon'ble J. W. Quinton.
The Hon'ble T. M Gibbon, C.I.E.
The Hon'ble R. Miller.
The Hon'ble Amír Alí.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble H. J. Reynolds.

EXPLOSIVES BILL.

The Hon'ble MR. ILBERT asked for leave to postpone the Motion that the Report of the Select Committee on the Bill to regulate the manufacture, keeping, sale, conveyance and importation of explosives be taken into consideration, and the Motion that the Bill be passed. He explained that he had received at a late hour on the previous day some suggestions as to the Bill which it would be desirable to consider before the Report of the Select Committee was taken into consideration by the Council.

Leave was granted.

CHUTIÁ NÁGPUR ENCUMBERED ESTATES ACT, 1876, AMENDMENT BILL.

The Hon'ble SIR STEUART BAYLEY presented the Report of the Select Committee on the Bill to amend the Chutiá Nágpur Encumbered Estates Act, 1876.

The Council adjourned to Friday, the 15th February, 1884.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

FORT WILLIAM;
The 11th February 1884.

SUPPLEMENT TO

The Gazette of India.

Nº 7. } CALCUTTA; SATURDAY, FEBRUARY 16, 1884.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 12th FEBRUARY 1884.

GENERAL REMARKS.—During the past week there has been slight rain in Sindh, in a few districts of the Punjab, and in Assam, Dacca, Chittagong and Pegu.

Harvesting continues in the Madras Presidency and Mysore, the outturn being generally fair; standing crops promise well, except in parts of Bellary and Chingleput, where they have sustained slight injury from disease, excessive rain, &c. In the Bombay Presidency prospects remain unchanged; in Ahmednagar *jowari* has been damaged by excessive moisture, and in Dharwar cotton is suffering from blight in five talukas; elsewhere the *rabi* crops are favourable. In the Berars and Hyderabad harvesting has been completed and the *rabi* prospects are good; rain continues to be much needed in Ulwar, but elsewhere in Rajputana and the Central Provinces the prospects are generally satisfactory. In the Punjab, the districts in the south-east of the province stand much in need of rain, but prospects generally are not unfavourable. In the North-Western Provinces and Oudh some injury has been caused to the crops by frost, and rain is needed everywhere for unirrigated fields. In the Central Provinces the prospects of the *rabi* continue excellent.

In Bengal there has been no change. The unirrigated crops in Behar and Chota Nagpur are much in need of rain, and in Burdwan the *rabi* is expected to be poor. Harvesting of mustard and pulses and pressing of sugarcane continue, and the cultivation of *aus* rice and jute is going on in some districts. In Assam the winter crops are doing well, and the harvesting of mustard is progressing. In Burma prospects are favourable, and there are large quantities of new paddy in the market.

Cholera though abating is still severe in Tanjore, and small-pox is prevalent in most provinces; otherwise the public health is fair.

Prices are steady and high in Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 13th)—		
Bellary		Standing crops poor in four taluks, owing to short rainfall and disease, elsewhere fair; harvest—wheat and pulse, yield average; paddy, dry grains, and oil seeds, below average; 14 deaths from cholera.
Kurnool		Standing crops fair; harvest—horse-gram, yield about average.
Ganjam		Standing crops good; harvest—sugarcane in one taluk, yield average.
Kistna		Standing crops generally good; harvest—paddy and *cholum*, yield below average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)		Standing crops generally good, but slightly injured by excessive rain in one taluk; harvest—paddy, yield below average; small-pox prevalent; 47 deaths from cholera.
Coimbatore (Feb. 9th)		Standing crops generally good; harvest—paddy and dry grains yield about average; fever and cattle-disease in parts; 109 deaths from cholera.
Tanjore		Standing crops generally good; harvest—paddy, dry grains, and pulse, yield below average; cholera abating, 624 deaths.
Madura		Standing crops fair, except in one taluk; harvest—paddy and dry grains, yield about average; cholera abating, 139 deaths.
Malabar		Harvest—second crop paddy continues in parts; small-pox, fever, cattle-disease slight; nine deaths from cholera.
Travancore		Harvest—second crop paddy over; small-pox and cholera in parts. *General Remarks.*—General prospects good.
Bombay—(Feb. 13th)—		
Kurrachee	·32 in Sehwan on 3rd February.	River at Kotri on 9th 5 feet against 4 feet 10 inches on corresponding date last year; *rabi* crops coming on well; fever in 9 talukas; cattle-disease in 9 talukas; loss of 61 buffaloes and 80 cows and bullocks in Mirpur Botoro and Sujawal; 2 fresh cases of small-pox in Karrachee since 2nd, 2 deaths; total 44 cases, 9 deaths; disease in 17 villages in districts, 47 fresh cases, 3 deaths, 40 remaining sick; prices—wheat, red rice, and *bajri* in Karrachee 24, 30, and 32, in Sehwan 32 and 36, in Tatta 24, 32, and 36, and in Shahbandar 22, 32, and 36 pounds per rupee, respectively.
Hyderabad	·35 at Naushuhro and 27 at Sakrand on 3rd February.	Small-pox in 8, fever in 9, and cattle-disease in 7 talukas; sky cloudy; wheat 25½, *jowari* 38, *bajri* 35, red rice 25, and white rice 20 pounds per rupee.
Ahmedabad		*Rabi* crops healthy; cattle-disease in Parentej; slight fever in Viramgaum; wheat 26 and *bajri* 30½ pounds per rupee.
Baroda		Public health good; cotton and *rabi* crops improving in Baroda division, good in Amreli and Kadi, and bad in Naosari division; prices—*bajri* 31 and rice 24 pounds per rupee.
Surat		Standing crops healthy; slight fever in Bulsar and Pardi; *jowari* 40 and *nagli* 46 pounds per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Nasik		*Rabi* crops good; public health good; small-pox in 3 villages of Nasik, and 2 in Kalwan and Dindori tahsils; *bajri* 30, wheat 31½, and rice 24 pounds per rupee.
Colaba (Bombay)		Abnormal temperature 0° to 3° cool; vapour in air defective on 8th and 9th, excessive on 11th and 12th; abnormal wind southerly from 10th to 12th.
Poona		Reaping of *rabi* crops in progress in Indapur; prices—*bajri* 37 and *jowari* 40; in Poona *bajri* 32 and *jowari* 35 pounds per rupee.
Ahmednagar		*Rabi* crops good, except *jowari* which is damaged by excessive moisture; *bajri*—maximum 51 pounds in Jamkhed, minimum 39 in Kopargoan; *jowari*—maximum 54 in Rahuri, minimum 40 in Sheognon.
Sholapur		State of cotton and *jowari* crops unchanged; cotton-picking commenced in Pandharpur, and reaping of *rabi* crops in Malsiras taluka; *bajri* 44 and *jowari* 42 pounds per rupee.
Dharwar		Harvesting of early *jowari* in progress and that of wheat commenced; cotton suffering from blight in five talukas, other crops good; fever in 4, small-pox in 7, and cattle-disease in 3 talukas; scarcity of drinking water in Navalgund taluka; rice 29 to 44 and *jowari* 52 to 79 pounds per rupee.
Kanara		Harvesting sugarcane; second crop rice plants on coasts healthy; cattle-disease in 2 talukas; and small-pox in 4, 1 death in Sirsi; fever in 3 talukas; locusts in 4 villages of Karwar taluka; rice in Karwar 12 seers per rupee; in district, average 16¾ seers per rupee.
Rajkot		General health good; weather cold; small-pox prevailing in the interior; harvesting of wheat commenced; *bajri* 29 and *jowari* 34 pounds per rupee. *General Remarks.*—Slight rain in parts of Kurrachee, Hyderabad, and Shikarpur; *rabi* prospects unchanged; harvesting of late crops in progress in three districts; slight cholera in parts of Tanna and Colaba; fever, small-pox, and cattle-disease continue in several districts.
Bengal—(Feb. 13th)		
Chittagong	·58	Weather seasonable; winter crops promising; prices stationary; public health good; cattle-disease lingers.
Dacca	·49	Prospects of crops good; pressing of sugarcane going on; winter crops being reaped; *boro* paddy thriving; public health good.
24-Pergunnahs	*Nil*	Winter crops promising; public health generally good, though isolated cases of cholera are reported from the Barrackpore and Diamond Harbour Sub-divisions; price of common rice stationary.
Moorshedabad	*Nil*	Weather cold; *rabi* crops doing well; sugarcane promising; *kalai* and *til* being harvested; public health good.
Rajshahye	*Nil*	Prospects of winter crops generally good, but rain wanted; public health generally good.
Burdwan	*Nil*	Outturn of *rabi* crops will generally not much exceed four annas.
Rungpore	*Nil*	Weather seasonable; prospects of crops good; prices stationary; public health good.
Bhagulpore	*Nil*	Mustard and castor seeds have yielded fair outturn; prospects of wheat and barley not good; price of rice 13 seers 14 chittacks per rupee.
Purneah	*Nil*	Prospects of *rabi* crops in the north better than elsewhere, except tobacco which has suffered from want of rain; common rice 16 seers per rupee; public health good.
Patna	*Nil*	Prospects of *rabi* crops in low lands generally fair; public health good.
Durbhanga	*Nil*	*Arhar* and mustard will give a fair outturn; wheat and barley will be poor; rain much wanted for *rabi*; in parts of Tajpore crops said to be as good as in ordinary years; public health much improved; small-pox abating.
Hazareebagh	*Nil*	Weather clear and cold; prospects of *rabi* crops not improved; sugarcane being pressed; prices continue unaltered; small-pox still prevalent in the town of Hazareebagh, otherwise public health good.
Cuttack	*Nil*	Weather seasonable; mornings foggy; *dalua* rice and cotton growing well; *rabi* crops being gathered with fair outturn; exportation of rice going on largely, but prices remain stationary; public health good. *General Remarks.*—There was slight rain in Dacca and Chittagong during the week, but none in the other eleven reporting districts; the *amun* harvest has been completed, generally with a very deficient outturn, except in eastern Bengal and Orissa and a few other parts, where it has been on the whole moderate; the *rabi* crops are generally fair, except, as previously reported, on unirrigated lands in Behar and Chota Nagpore, where they are expected to be very poor; the *rabi* crops in Burdwan also will, it is stated, not exceed an average of four annas; sugarcane is being pressed, and mustard and some of the pulses are being gathered, and a fair outturn of these crops is being realised; spring rice is growing well, and the cultivation of *aus* rice and jute is proceeding in some districts; price of rice continues high in all districts in spite of the influx of new rice into the markets; the general health of the province is pretty satisfactory, though fever still lingers in some districts, and the prevalence of cholera and small-pox is reported from a few localities.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares . (Feb. 12th)	No rain	Crops have suffered slightly from sharp wind; the outturn will prove below the average; isolated cases of small-pox are still reported in the city; prices rising slightly.
Allahabad („ 11th)	. . . .	Weather cold, fine, and dry; unirrigated crops suffering from drought; some injury also from insects and frost; health fair; prices slightly risen.
Gorakhpur („ 10th)	No rain	High winds; small pox prevalent; labour in demand; prices steady.
Jhansi . („ 11th)	No rain	*Rabi* crops doing well; supplies sufficient; prices stationary; health of people and cattle good.
Agra . („ 12th)	No rain	Irrigation continues; health good; prices steady.
Bareilly . („ „)	. . . .	Rain required; prices steady; health good.
Meerut . („ „)	No rain	Rain much needed for unirrigated crops; health good; supplies sufficient; prices somewhat risen.
Kumaun . („ „)	. . . .	No rain during the week, crops suffering for want of it; general health good; prices rising; cattle-disease continues.
Lucknow („ „)	No rain	Cool west wind throughout the week; crops in unirrigated and high land poor, otherwise the prospects good; rain very much wanted; condition of people good and of cattle normal; markets well stocked; prices steady.
Partabgarh („ „)	No rain	Wheat, barley, and *sarson* beginning to ripen; *arhar*, gram, and peas in certain places injured by frost; westerly wind during the week; slight changes in prices; small-pox reported from all tahsils; general health otherwise good.
Sitapur („ „)	No rain	Some harm caused by frost; fodder scarce in some parganas.
Fyzabad („ „)	. . . .	No rain in week; irrigation of poppy crop going on; sugarcane being pressed; small-pox in part of district; condition of cattle good.
Rai Bareilly („ 11th)	No rain	High west wind blowing; crops on irrigated lands doing well; small-pox continues in a mild form; supplies sufficient; prices almost steady.
Cawnpore („ 12th)	No rain	Slight injury to peas, *arhar*, and mustard by frost; general health of people good and no sickness among cattle.
Farukabad („ „)	. . . .	Since the submission of last week's report the sky has cleared up and the wind fallen; small-pox lingers in one tahsil in a mild form; frost has done some injury in one tahsil.
		General Remarks.—No rain has fallen during the week; slight injury has been caused to the crops by frost in several districts; rain is every where needed, except where irrigation is practicable; small-pox continues in places, but seems to be abating; prices are steady or show a slight rise.
Punjab—(Feb. 13th)—		
Delhi . . .	. . . .	Rain urgently wanted; scarcity of fodder; small-pox continues; prices steady.
Hissar . .	*Nil*	Health good; prospects unchanged; prices fluctuating.
Umballa . .	*Nil*	*Rabi* crops suffering from want of rain; health good; prices rising.
Jullundur . .	*Nil*	Health and crop prospects good; prices stationary.
Amritsar . .	·2	Health good; prices almost stationary.
Lahore . .	. . . .	Health and condition of crops good; prices fluctuating.
Ferozepur . .	·7	Health and state of crops good; prices fluctuating.
Sialkot . .	1·5	Health and harvest prospects good; prices falling.
Rawalpindi . .	·8	Health and *rabi* prospects good; prices fluctuating.
Peshawar . .	. . . .	Health and crop prospects good; prices falling.
Mooltan . .	. . . .	Health good; crops flourishing; prices stationary.
Dera Ismail Khan .	. . . .	Health and crop prospects good; prices stationary.
		General Remarks.—Slight rain in a few districts; health good, except in the Delhi District; crop prospects also generally good, except in the south-east, where rain is urgently wanted.
Central Provinces (Feb. 13th)—		
Nagpur . . .	. . . .	Weather clear and cool; *rabi* crops promise well and are ripening; public health good; prices stationary.
Jubbulpore . .	. . . .	Weather changing; *rabi* crops promising; sugarcane-pressing continues; *masur* being reaped; health good; wheat 24, and rice 13 seers per rupee.
Saugor (Feb. 12th)	. . . .	Weather slightly cloudy; *rahar* and *masur* somewhat injured by frost, other crops excellent; health good; prices steady.
Seoni . . .	. . . .	Weather cloudy, but cold; *rabi* prospects favourable; prices stationary; public health good.
Hoshangabad . .	. . . .	Weather clear and cool; *rabi* harvest expected to be good; fever prevalent in Harda; wheat 19, rice 10, and *juar* 28 seers per rupee.
Khandwa . . .	. . . .	Weather clear; prospects good; prices steady; *juari* 22½ seers per rupee.
Raipur . . .	. . . .	Weather occasionally cloudy; *rabi* crops promising; cotton-picking over; pulses being cut; prices show a tendency to rise—common rice 24, and wheat 25 seers per rupee; health good.
Sambalpur (Feb. 9th)	. . . .	Weather cold and cloudy; *rabi* crop prospects good; prices easy; health good; common rice 35 seers per rupee.
		General Remarks.—Weather getting warm and dry; prospects of *rabi* crops very good; health good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—(Feb. 9th)—		
Akyab . . .	. . .	Small-pox increasing in Naaf, Thaayetkonboung circle, 8 deaths; in Alethangyaw, 6 deaths; cattle healthy; paddy Rs. 25 to 28 per 100 baskets.
Rangoon . . .	. . .	Twenty-eight fatal cases of small-pox; paddy supplies large; price of paddy Rs. 75 to 87 per 100 baskets.
Bassein . . .	. . .	Five deaths from cholera in Nyathingyaung; 54 deaths of cattle; price of paddy Rs. 75 to 90 per 100 baskets.
Prome . . .	. . .	Public health goood; 3 deaths of cattle reported; harvest completed; price of paddy Rs. 80 per 100 baskets.
Kyoukphyoo . .	. . .	Health of public and of cattle good; reaping completed; prices of paddy stationary.
Sandoway . . .	. . .	Report not received.
Hanthawaddy . .	. . .	Public health and health of cattle good; price of paddy Rs. 80 to 87 per 100 baskets.
Pegu (Feb. 2nd) .	0·03	Total rainfall to date 0·05; measles and small-pox in Zanigganaing circle; no deaths reported; cattle healthy; harvest over; considerable quantity of paddy exported; local prices Rs. 80 to 85 per 100 baskets.
Do. („ 9th) .	. . .	Report not received.
Tharrawaddy (Feb. 2nd)	. . .	Eighteen cases of cholera reported; cattle healthy; about 219,798 acres have been reaped; estimated outturn about 6,807,580 baskets, of which only 43,700 have been sold; price Rs. 65 to 80 per 100 baskets.
Ditto („ 9th)	. . .	Five cases of cholera reported; cattle healthy; 75,740 baskets of paddy sold during the week; price Rs. 65 to 75 per 100 baskets.
Thonegwa . .	. . .	Four deaths from small-pox in Donabyoo, Myoma circle, and small-pox prevailing in Sheyloung township, but no deaths reported; cattle healthy; price of paddy Rs. 80 to 90 per 100 baskets.
Henzada . .	. . .	Two deaths, out of 10 cases of small-pox in Henzada township; price of paddy Rs. 85 to 100 per 100 baskets.
Thayetmyo . .	. . .	Public health good; cattle-disease still prevalent; price of paddy Rs. 90 per 100 baskets.
Shweygyin . .	. . .	Public health good; cattle healthy; price of paddy Rs. 60 per 100 baskets.
Amherst (Moulmein)	. . .	Public health and health of cattle good; about two lakhs of baskets of paddy sold during the week; price of paddy Rs. 70 to 80 per 100 baskets; in Moulmein town public health and health of cattle good; 500 baskets of paddy sold during week; price of paddy Rs. 80 to 85 per 100 baskets.
Toungoo . . .	. . .	Public health good; price of paddy Rs. 60 per 100 baskets.
Tavoy . . .	. . .	Report not received.
Mergui (Feb. 2nd) .	. . .	Public health good; cattle healthy; crops reaped and housed; price of paddy Rs. 65 per 100 baskets.
		General Remarks.—Small-pox and cattle-disease still prevalent, except in Tenasserim, where public health and health of cattle are both good; some cholera in Tharrawaddy and Bassein; supplies of paddy large and selling well.
Assam—(Feb. 13th)—		
Gauhati . . .	No rain	Mornings cold; days getting warm; mustard being gathered; sugarcane being cut; public health fair.
Sylhet . . .	*Nil*	Field work, ploughing, &c., in progress; transplanting of *boro dhan* nearly finished; public health indifferent.
Cachar . . .	·11	Weather very cold in the first part of the week; more than half of mustard crop reaped; common rice 16 seers per rupee; 13 cases of small-pox reported; few cases of cholera in the town.
Dibrugarh . .	0·64	Weather cloudy; prospects of winter crops good; district healthy.
Mysore and Coorg—(Feb. 13th)—		
Bangalore . . .	. . . . .	Standing crops in all districts reported to be in good condition; harvesting continues; prospects of season favourable; public health generally good, but fever and small-pox prevail in parts; prices remain stationary.
Mercara . . .	. . . .	Paddy harvest nearly over; threshing commenced; coffee being sent to the coast; carriage abundant; fallen and immature coffee being picked for local sale; sellers complain of the prices obtainable for good grains being lower than for many years.
Berar & Hyderabad—(Feb. 13th)—		
Amraoti . . .	. . . .	Weather getting warm; *rabi* crop prospects good; wheat 16 and *jowari* 26 seers per rupee.
Akola . . .	. . . .	*Kharif* harvest completed; prospects of *rabi* crops favourable.
Hyderabad . .	No rain	*Rabi* crops prospering; small-pox prevails in the northern division of the Nizam's Territory; in other taluks general health good; prices of wheat 15¾, coarse rice 11, white *juar* 16¾, yellow *juar* 20¼, and *tur* 21¼ seers per current sicca rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central India States—		
(Feb. 13th)—		
Indore	No rain	Health good; prices of food-grains a little in advance of last week.
Morar	No rain	Health and prospects good; weather seasonable.
Sutna	No rain	Health good.
Neemuch	. . .	Public health good; crops slightly affected by cold.
Goona	. . .	Weather cold; few cases of small-pox reported.
Sehore	No rain	Weather clear; prospects and public health good.
Agar	No rain	Health good; prospects satisfactory.
Nowgong	No rain	Weather cold; health good; prices stationary.
Bhopal	No rain	Prospects good.
Manpur		
Rajputana—		
Abu . (Feb. 13th)	. . . .	Weather cold and seasonable.
Marwar . („ 8th)	. . . .	About one month's water in city tanks; wells almost full; health and prospects good.
Erinpura . („ 10th)	. . . .	Weather seasonable; health and prospects good
Jhallawar . („ 8th)	. . . .	Weather cold; frost done harm to gram and opium in parts.
Ajmere . („ 12th)	No rain	High winds; weather cold and seasonable.
Jeypore . („ „)	No rain	Weather seasonable; prospects fair; prices steady; health good.
Deoli . („ 11th)	No rain	Weather seasonable; prospects fair; health good.
Ulwur . („ 12th)	. . . .	Rain much needed; health good; prices steady.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known.*

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of six Rupees per annum if delivered in Calcutta, or nine Rupees if sent by Post.*

No Official Orders or Notifications, the publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT

DEPARTMENT OF FIN

OF INDIA.

Executive Engineer, Northern Division, Ganges Canal, reports that the demand was heavy throughout the month, that irrigation is still progressing fast, and that the supply in the river is not equal to the requirements.

Executive Engineer, Meerut Division, Ganges Canal, reports that there was a very heavy demand for water for rabi crops during the month; the water passed down the Jani escape for the Agra canal causes heavy tatils on rajbaha heads in this division.

Executive Engineer, Bulandshahr Division, Ganges Canal, reports that the weather was cold and dry and the demand for water great; rabi paleo continued up to the end of the month.

Executive Engineer, Narora Division, Lower Ganges Canal, reports that the demand was very brisk, especially about the 15th December; a week's tatil at the end of the month prevented a larger increase. The supply in the river fell below the requirements on the 4th December, and was 800 feet short at the end of the month.

Executive Engineer, Mainpuri Division, Lower Ganges Canal, reports that there was a steady demand for water throughout the month, but unfortunately the supply was very short, and it was impossible to meet the demand fully; had more water been available the area irrigated would have been very much greater.

Executive Engineer, Bhognipur Division, Lower Ganges Canal, reports that no rain was recorded during the month, and that water was in high demand for all rabi crops.

Executive Engineer, Eastern Jumna Canal, reports that the month commenced with a very light demand, but after the first week the demand was very heavy and the supply insufficient. Crops have not suffered; the increase over last year is entirely in wheat.

Executive Engineer, Agra Canal, reports that sowings continued in some parts up to the end of the month; the area reported is double that of last year, owing to the dry season and new distributaries.

Executive Engineer, Rohilkhand Canals, reports that there was a steady and increasing demand throughout the month, but the supply in the rivers is very much below the average, and that it was necessary to close some of the canals during the early part of the month for clearances, but for which a larger area would have been secured.

No remarks from the other divisions.

Allahabad,
The 30th January 1884.

W. P. VON DER HÖRST,
Offg. Asst. Secy. to Govt., N.-W. P. and Oudh, P. W. D., Irrigation Branch.

(*a*) Exclusive of the Company's share of the earnings of the Bengal Central Railway.
(*b*) Return not received.
(*c*) Total receipts from 1st April 1882 to 15th January 1883.
(*d*) Total receipts from 1st April 1883 to 14th January 1884.
(*e*) Total receipts from 1st April 1882 to 27th January 1883.
(*f*) Total receipts from 1st April 1883 to 26th January 1884.
(*g*) Total receipts from 1st January to 2nd February 1884.
(*h*) Exclusive of mileages of Patna-Gya and Rangoon and Irrawaddy Valley State Railways (57 + 161).
(*i*) Total receipts from 16th October 1882 to 3rd February 1883.
(*j*) Total receipts from 24th June 1882 to 3rd February 1883.

FORT WILLIAM,
The 21st February 1884.

R. A. SARGEAUNT, *Major, R.E.,*
Offg. Under-Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REVIEW OF THE REPORT OF THE GEOLOGICAL SURVEY OF INDIA AND GEOLOGICAL MUSEUM FOR THE YEAR 1883.

Nos. 96 and 97S.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department,—under date Calcutta, the 20th February 1884.

SURVEYS.

READ—

The Report of the Geological Survey of India and of the Geological Museum for the year 1883, received with the Superintendent's letter No. 50, dated the 4th February 1884.

RESOLUTION.

THE following paragraph summarizes the field-work of the Department during the year.

Mr. Griesbach was engaged until late in October in exploring the main Himalayan range, and completed the survey of the Hundes basin to its western limit. He then joined the expedition to the Takht-i-Suleimán, and is still engaged on the North-West Frontier. Mr. Oldham's work lay in the Lower Himalayas, and mainly in Jaunsár, a British district between the Tons and the Jamna which is considered to exhibit the same geological system as the Simla sections. The most interesting result of his investigations was the discovery of two separate and entirely new groups between the tertiary formations of shales and slates and the Krol limestone which surmounts them. It had always been known that a great gap existed here, but before Mr. Oldham's explorations no intermediate deposits had been detected. Mr. La Touche was engaged in prospecting for coal and iron in the upper tertiary rocks forming the hills between Cachar and the Dimapur valley in Assam, but his search was, as was anticipated, unsuccessful. In the course of his work, however, Mr. La Touche traversed some new ground, and a note of his observations was published in the Records for the year. Mr. Foote completed his survey of the coastal region on both sides of Cape Comorin, and the result is published with a large map in Volume XX of the Memoirs. The region has no special geological interest, but Mr. Foote's discovery of a fossiliferous marine sandstone has given a basis for determining the age of the Cuddalore sandstones, which had been previously unknown. Until Mr. Foote's observation is contradicted, the Cuddalore sandstones must rank as post-tertiary or even sub-recent. At the beginning of the current season, Mr. Foote took up the exploration of the ossiferous caves in the Kurnool district, and the work had made some progress, with a fair prospect of success, when it was necessary to depute him to examine the country between Bezváda, Singareni and Hyderabad, with a view to the possible occurrence of coal and iron deposits on a projected line of railway. Arrangements have, however, been suggested to the Government of Madras, which will, it is hoped, permit these interesting explorations to be continued. Mr. Fedden completed his survey of Kattywar by prolonging his work late into the hot weather, and he is now preparing the results for publication. Mr. Bose extended his investigations in Khandesh and Nimár eastwards to Nimawar, and for the current season he is engaged in the hitherto unexplored region of the Upper Mahánadi basin.

2. Mining explorations were made during the year by Mr. Hughes in the South Rewah coal-fields, and by Dr. King on the coal-fields in Eastern Chhattisgarh. In connection with the coal-fields of South Rewah, Mr. Mallet was deputed to enquire into the nature and extent of the iron ores in the north of the Jabalpur district. His report, which is published in Volume XVI of the Records, shows that if the explorations for coal are successful, all the conditions required to carry on an extensive iron manufacture will be thoroughly satisfied.

3. Five parts of the Memoirs and Volume XVI of the Records of the Geological Survey were issued during the year, the former including a full history of Mr. Lydekker's work in the North-West Himalaya completed two years ago, and also an account of Mr. Blanford's examination of the hills in Northern Biluchistan and South-Eastern Afghanistan during the season of 1881-82, Mr. Oldham's observations in Manipur and the Naga Hills, the results of Mr. Foote's survey noticed above, and Dr. Oldham's Catalogue of Indian Earthquakes, edited by Mr. R. D. Oldham. Two parts of the Palæontologia Indica were also issued during the year, and two other parts are almost ready for publication. Mr. Lydekker's memoir above referred to is a scientific work of a very high character, and the Government of India is glad to know that its importance has been fully recognised by the leading Geologists of Europe.

4. The collections in the Geological Museum are reported to be in good preservation. A descriptive catalogue of the systematic series of minerals, and a guide to the economic mineral products, both by Mr. Mallet, were issued during the year. The catalogue of the library, which has been prepared by Mr W. R. Bion, the librarian and registrar, is now in the press.

5. The Government of India has again to acknowledge the zeal and ability with which the Department was administered during the year by Mr. Medlicott.

ORDER.—Ordered, that the above Resolution be communicated to the Superintendent of the Geological Survey for information and communication to the officers of the Department, and also that it be published in the Supplement to the *Gazette of India*.

(True Extract)

T. W. HOLDERNESS,

Offg. Secy. to the Govt. of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 19th FEBRUARY 1884.

GENERAL REMARKS.—Rain has fallen in most Provinces during the week under report, but the fall has been light and partial.

In the Madras Presidency and Mysore the standing crops continue generally in good condition. Harvesting is in progress, the yield being in most districts equal to or below the average. In Bombay the harvesting of the *rabi* has commenced, and prospects are good. The crops in parts of Sindh have benefited by recent rain. In parts of Dharwar there is a scarcity of drinking water. In Hyderabad, Central India, and Rajputana, agricultural prospects continue satisfactory, although some injury has been caused by hail to standing crops in Morar, and rain is needed in Ulwar. In the Punjab, the south-eastern districts require rain; elsewhere the prospects are favourable. In the North-Western Provinces prospects remain unchanged. Rain is much wanted in most districts for crops on unirrigated lands, and some injury has been done by frost. Irrigated crops promise well. In the Central Provinces prospects are excellent.

In Bengal the rainfall of the week has proved beneficial to the *rabi* and moistened the ground for the cultivation of the ensuing rice and jute crops. The *rabi* crops are on the whole in fair condition, except on unirrigated tracts in Chota Nagpur and Behar. Pulses, &c., are being reaped with a fair y[illegible] and the outturn from the sugarcane is also good. In Assam there has been over two inches of rain (accompanied in some cases by hail) in Cachar and Sylhet. Standing crops are doing well, and mustard, sugarcane, &c., are being cut and the land prepared for ensuing crops. In British Burma the rice harvest is over and has proved an abundant one.

Cholera continues severe in Tanjore, and small-pox exists in most parts of India, otherwise the public health is fair.

Prices are generally steady, but have sustained a further rise in parts of Bengal.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 20th)—		
Bellary		Standing crops poor in four taluks, owing to short rainfall and disease, elsewhere fair; harvest—wheat and sugarcane, yield average; cotton, *cholum*, pulse, and oilseed below average; 21 deaths from cholera.
Kurnool		Standing crops fair; harvest—*cholum* and pulse, yield about average.
Ganjam	·39 (average of eleven stations).	Standing crops good.
Kistna		Standing crops generally good; harvest—*varagu* and horse gram, yield below average; paddy being harvested; fever and small-pox prevalent; cattle-disease in places; two deaths from cholera.
Chingleput (Madras)		Standing crops generally good; but slightly injured by excessive rain last month in one taluk; harvest—paddy, yield below average; small-pox prevalent; 59 deaths from cholera.
Coimbatore		Standing crops generally good; harvest—paddy, yield average; dry grains below average; fever in parts; 81 deaths from cholera.
Tanjore		Standing crops good; harvest—paddy, dry grains, and pulse, yield below average; 600 deaths from cholera.
Madura		Standing crops fair, except in one taluk; harvest—paddy and dry grains, yield about average; small-pox prevalent in some taluks; 134 deaths from cholera.
Malabar		Harvest—second crop paddy continues in parts; small-pox, fever, and cattle-disease slight; 29 deaths from cholera.
Travancore		Harvest—second crop paddy over; small-pox, fever, and cholera in parts.
		General Remarks.—General prospects good.
Bombay—(Feb. 20th)—		
Kurrachee	·12 at Gombarse on 16th February.	River at Kotri on 14th 3 feet 9 inches; against 3 feet 10 inches on same date last year; fever in 9 talukas; cattle-disease in 6 talukas; loss of 36 buffaloes and 28 cows and bullocks in Mirpur Batoro and Sujawal; 2 fresh cases of small-pox in Kurrachee since 9th, total 46 cases, 9 deaths; disease in 17 villages in districts, 20 fresh cases, 2 deaths, 43 remaining sick; wheat, red rice, and *bajri* in Kurrachee 26, 30, and 36; in Kotri 34 and 34; in Sakro 16, 28, and 36, and in Mirpur Batoro 22, 32, and 32 pounds per rupee, respectively.
Hyderabad	·29 at Moro and ·50 at Kandiaro on 3rd February.	Rain in Naushahro sub-division has improved the *rabi* prospects; small-pox in 11, fever in 3, and cattle-disease in 7 talukas; sky cloudy; wheat 26, *jowari* 38, *bajri* 33½, red rice 25, and white rice 20 pounds per rupee.
Ahmedabad		Standing crops healthy; cattle-disease in Parantej; slight fever in Viramgaum; wheat 26 and *bajri* 30 pounds per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Baroda		Public health good; crops in good condition everywhere, except in Naosari; prices—*bajri* 31 and rice 24 pounds per rupee.
Ahmednagar		*Bajri*—maximum 51 pounds in Jamkhed, minimum 36 in Newasa; *jowari*—maximum 51 in Akola, minimum 38 in Sheogaon.
Sholapur		Reaping of *rabi* crops commenced in Sholapur, Barsi, and Pandharpur talukas; cotton-picking in Barsi taluka; *bajri* 44 and *jowari* 42 pounds per rupee.
Dharwar		Harvesting of early *jowari* and wheat in progress; cotton suffering from blight in 5 talukas, other late crops good; small-pox in 7, fever in 3, and cattle-disease in 4 talukas; scarcity of drinking-water in Navalgund and Gadag talukas; rice 29 to 44 and *jowari* 52 to 80 pounds per rupee.
Kanara		Harvesting of sugarcane continues; rice plants healthy; locusts from Karwar taluka have gone towards Yellapur; cattle-disease at Karwar; small-pox in 4 talukas, 1 death in Sirsa; fever subsiding; common rice in Karwar 12 seers per rupee; average in district 16 seers per rupee.
Surat		Standing crops healthy; cotton-picking commenced in places; slight fever in Bulsar and Pardi; *jowari* 38¾ and *nagli* 45 pounds per rupee.
Nasik		Reaping of *rabi* crops commenced; public health good; small-pox in 2 villages of Dindori and 3 villages of Peint taluka; *bajri* 30, wheat 31½, and rice 24 pounds per rupee.
Colaba (Bombay)		Abnormal temperature 2° cool to 1° warm; abnormal wind southerly and moist on 19th.
Poona		Reaping of *rabi* progressing; prices—*bajri* 36 and *jowari* 39; in Poona *bajri* 32 and *jowari* 35 pounds per rupee.
Rajkot		General health good; weather cool; small-pox still prevalent in the province; harvesting of wheat and cotton-picking in progress; *bajri* 30 and *jowari* 40 pounds per rupee.
		General Remarks.—Slight rain in parts of Sind, *rabi* crops benefited by it in some talukas of Hyderabad; scarcity of drinking-water in two talukas of Dharwar; standing crops generally good; *rabi* harvest in progress.
Bengal—(Feb. 19th)		
Chittagong	1·63	Weather seasonable; prospects of winter crops continue favourable; prices steady; public health good.
Dacca	1·18	Winter crops being reaped; prospects promising; public health good.
24-Pergunnahs	0·2	Winter crops doing well; price of common rice stationary; public health generally good.
Moorshedabad	*Nil*	Weather bright and cool, except on the 15th when it was cloudy and drizzled a little in the morning, very foggy on the 16th and 17th; state of crops generally good; standing *rabi* crops doing well; health of district good on the whole.
Rajshahye	*Nil*	Outturn of *amun* has not been good; *rabi* crops promising; public health fair.
Burdwan	0·12	No marked change in the prospects of *rabi* crops; the rain believed to have done more harm than good.
Culna	0·94	Prospects of winter crops good; rain wanted for the cultivation of autumn crops; public health good.
Rungpore	*Nil*	Outturn of *rabi* varies from 4 to 10 annas; prospects of wheat and barley good; oil-seeds have been fair; rice 13 seers 14 chittacks per rupee.
Bhagulpore	*Nil*	Winter crops fair, except in the south; common rice 16 seers per rupee; public health good.
Purneah	*Nil*	Prospects of *rabi* crops fair; spring crops promising; public health good.
Patna	*Nil*	Want of rain much felt; outturn of *rabi* will be about 6 annas for the whole district.
Durbhanga	*Nil*	Weather bright and cold; prospects of *rabi* crops still unfavourable; coarse rice 15 seers per rupee; small-pox still lingering in the town of Hazareebagh; general health good.
Hazareebagh	*Nil*	Weather fair; *dalya* rice and cotton growing well; sugarcane being pressed; mangoes in profuse blossom everywhere, but partially damaged by late shower and mists; price of rice unchanged; public health good.
Cuttack	0·26	*General Remarks.*—There was rain in many parts of Bengal Proper and Orissa during the week; it has done good to the standing crops, and has been particularly useful in facilitating the ploughing of land for the cultivation of *aus* rice and jute; the *rabi* crops are in fair condition, except, as previously reported, on unirrigated tracts in Behar and Chota Nagpur and a few other parts, where they have suffered much from want of rain; the poppy crop in the Patna division continues to do well; the earlier *rabi* crops, such as pulses and mustard, are being gathered, generally with fair results; the sugarcane harvest is also yielding a fair outturn; high prices prevail throughout the province, and in some districts they are said to be still rising owing to exportation of rice; general health of the province is pretty good, though there are cases of cholera and small-pox reported from some places, and fever continues in a few districts.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
N. W. Provinces and Oudh—		
Benares (Feb. 19th)	*Nil*	Days warm and nights cold; crops drying up; peas ready to cut in places; isolated cases of small-pox still continue, but the disease is of a mild type; bazars well supplied; prices rising.
Allahabad („ 20th)	*Nil*	Clouds gathered during the week; in dry tracks some injury from frost; no change in prices; some small-pox, otherwise health good.
Gorakhpur („ 17th)	*Nil*	Some clouds; small-pox in 3 tahsils; prices steady.
Jhansi („ 18th)	*Nil*	Prospect of crops fair; *alsi* somewhat dried up; wheat and gram doing well; bazars well supplied; prices slightly fluctuating; health of people and cattle good.
Agra („ 19th)	*Nil*	Heavy clouds have appeared to-day; irrigation continues; slight fever and small-pox in Sadr tahsil; general health good; prices falling slightly.
Bareilly („ „)		Rain much needed; markets steady; health good.
Meerut („ „)	Slight drizzle on 17th in 4 tahsils.	Weather cloudy; rain much wanted for unirrigated crops; irrigated crops in good condition; prices show a slight tendency to rise in tahsils; steady in Meerut; health good; supplies sufficient; grain imported from Punjab.
Kumaun („ „)	*Nil*	Sky sometimes cloudy; crops withering; health good; prices rising; cattle-disease still continues.
Rai Bareilly („ 18th)	*Nil*	Occasional clouds; unirrigated crops suffering from drought; small-pox still lingering; supplies abundant; prices are steady.
Cawnpore („ 19th)	*Nil*	Weather slightly cloudy; slight fever and small-pox prevalent; otherwise health of people good; prices easy, and market abundantly supplied with grain.
Farukhabad („ „)		The weather has been alternately cloudy and fair; there is no small-pox or any other kind of sickness.
Lucknow („ „)	*Nil*	Weather warmer; west wind; wheat, barley, gram, &c., beginning to ripen; peas and *arhar* injured in some places by frost; condition of people and cattle good; markets sufficiently stocked; prices steady.
Partabgarh („ „)	*Nil*	Passing clouds; *rabi* crops beginning to ripen; prices almost steady; small-pox still lingering in Partabgarh and Kunda Tahsils; health otherwise good.
Sitapur („ „)	*Nil*	Occasional clouds during week; general health good; prices steady.
Fyzabad („ „)	*Nil*	Weather clear; easterly wind in the greater part of the week; sugarcane being pressed; crops below average; condition of people and cattle fair.
		General Remarks.—Excepting a drizzle in Meerut and Aligarh no rain has fallen during the week, though the weather has been partially cloudy; in most districts the *rabi* crops are beginning to ripen; small-pox lingers in places, but not in a severe form; markets are well supplied and prices generally steady.
Punjab—(Feb. 20th)—		
Delhi	Slight rain	More rain urgently wanted; small-pox continues; prices rising.
Hissar		Health good; rain very much wanted; prices steady.
Umballa		Health good; *rabi* crops suffering from want of rain; prices stationary.
Jullundur		Health and crop prospects good; prices stationary.
Lahore		Health and condition of crops good; prices stationary.
Ferozepur		Health and state of crops good; prices rising.
Sialkot		Health and harvest prospects good; prices falling.
Rawalpindi	Slight rain	Health and crop prospects good; prices slightly rising.
Peshawar	·2	Health and crop prospects good; prices almost stationary.
Mooltan	·1	Health and condition of crops good; prices steady.
Dera Ismail Khan	·1	Health and crops prospects good; prices falling.
Amritsar		Health good; slight rise in prices.
		General Remarks.—Slight rain in a few districts; small-pox continues in the Delhi district, health elsewhere good; crop prospects generally good, except in the south-east where rain is much wanted.
Central Provinces (Feb. 20th)—		
Nagpur		Weather getting warm; *rabi* crops promising; public health good; prices stationary.
Jubbulpore		Weather clear and cool, *rabi* crops thriving; wheat 25 and rice 13 seers per rupee.
Saugor (Feb. 19th)		Weather cloudy; prospects good; health good; prices steady.
Seoni		Weather cloudy and getting warm; reaping of inferior crops commenced; prospects good; prices steady; public health good.
Hoshangabad		Weather cool and pleasant; *rabi* crops excellent; fever prevalent in Harda; wheat 19, rice 12, and *juari* 28 seers per rupee.
Raipur	·84 with hail on evening of the 15th February.	Prospects favourable; public health good; prices stationary; common rice 24 and wheat 27 seers per rupee.
Sambalpur (Feb. 16th)		Weather cloudy; prospects good; public health good; common rice 35 seers per rupee.
Khandwa		Weather clear and getting warm; prospects good; *juari* 20¾, wheat 17½, and rice 15¾ seers per rupee.
		General Remarks.—Weather warm and dry; prospects of *rabi* crops very good; health good; prices stationary.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
British Burma—(Feb. 16th)—		
Akyab		Public health and health of cattle good; no fresh cases of small-pox in Naaf; price of paddy Rs. 25 to 29 per 100 baskets.
Rangoon		Eighty fatal cases of small-pox; paddy supplies large; price Rs. 72 to 84 per 100 baskets.
Bassein		One death from small-pox and 1 death from cholera in Bassein; slight cattle-disease in Bassein and Thaboung townships; price of paddy Rs. 75 to 85 per 100 baskets.
Prome		Two deaths from small-pox in Prome, elsewhere public health and health of cattle good; 117 acres in Shweydoung reported destroyed by drought; price of paddy Rs. 76 per 100 baskets.
Kyoukphyoo		Report not received.
Sandoway (Feb. 9th)		One fatal case of small-pox in the northern township; cattle healthy; threshing continues; total estimated outturn of paddy in Southern township 50,000 baskets; total sold to date 10,500 baskets at Rs. 55 and Rs. 60 per 100 baskets; price in Central township Rs. 70 per 100 baskets; weather cool.
Do. („ 16th)		Public health good; no fresh cases of small-pox; threshing continues; 80,600 baskets paddy estimated stored in Central township; quality of paddy good.
Hanthawaddy		Public and cattle health good; price of paddy Rs. 80 to 90 per 100 baskets.
Pegu (Feb. 9th)		Measles and small-pox prevalent generally; no deaths from other diseases reported; sales of grain very brisk; price Rs. 80 to 85 per 100 baskets.
Do. („ 16th)	Nil.	Measles and small-pox still continue in the town and suburbs of Pegu, one death reported in former from small-pox, otherwise public health good; health of cattle good; price of paddy Rs. 70 for 100 baskets at Pegu and Payagale railway stations, and Rs. 75 to 85 in district.
Tharrawaddy		Five fatal cases of cholera reported; 191,259 baskets of paddy sold to date at Rs. 65 to 75 per 100 baskets; about 6,616,321 baskets stored away and held by cultivators; health of cattle good.
Thonegwa		Four deaths from small-pox in Myoma circle and one in Thaboung circle, Donabyoo township; cattle healthy; price of paddy Rs. 85 to 90 per 100 baskets.
Henzada		One death out of twenty-four cases in Henzada town; price of paddy Rs. 85 to 100 per 100 baskets.
Thayetmyo		Public health good; cattle-disease still prevalent; price of paddy Rs. 95 per 100 baskets.
Amherst (Moulmein)		Public health good; 12 deaths of cattle reported; price of paddy fallen 5 per cent.; in Moulmein town public health and health of cattle generally good; price of paddy steady; no sales during past week.
Toungoo		Public health good; paddy Rs. 60 per 100 baskets.
Mergui		Report not received.
Shweygyin		Public health good; cattle healthy; paddy Rs. 65 per 100 baskets.
Tavoy (Feb. 9th)		One death from small-pox in town; harvest over; price of paddy same as last week.
Do. („ 16th)	0·62	Total rainfall 0·62; a few cases of small-pox in town and in south-east township, and otherwise public health good; estimated outturn of paddy 1,200,000 baskets, of which 50,000 sold to date at Rs. 60 and 57 per 100 baskets; quality good.
		General Remarks.—Small-pox still very prevalent, chiefly in the town of Rangoon and in Pegu; no cattle-disease to speak of harvest reported to be a good one; supplies at ports in good quantity for the season; prices keeping fairly steady.
Assam—(Feb. 20th)—		
Gauhâti (Feb. 19th)	·52	Weather seasonable; mustard being gathered; sugarcane being cut; lands being prepared for *amun* cultivation; public health fair.
Sylhet	2·18	Mustard being gathered; linseed doing well; fall of rain has done immense good to *boro*, and to preparing land for *amun* and *aus*; small-pox and cholera reported, at Kareniganj; otherwise public health good.
Cachar	Rain with hail on the 18th instant, 2·32.	Weather cold; reaping of winter crops progressing; common rice 16 seers per rupee; 7 cases of small-pox and 8 of cholera reported.
Silchar	·91	Rainy in early part of week; prospects of crops good; public health fair.
Mysore and Coorg—(Feb. 20th)—		
Bangalore (Mysore)		Standing crops in all districts in good condition; harvesting operations continue; prospects favourable; public health satisfactory; prices unaltered.
Mercara	Nil.	Threshing of rice and *ragi* crops continues; picking of coffee nearly completed; fever prevalent in parts of the Nanjarajapatna and Mercara Taluks.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Berar & Hyderabad—(Feb. 20th)—		
Amraoti		Weather occasionally cloudy; *rabi* crops ripening and in excellent condition; wheat 16 and *jowari* 26 seers per rupee.
Akola		*Rabi* crops promise well and are ripening.
Hyderabad	No rain	*Rabi* crops prospering; small-pox still prevails in the northern division of His Highness's territory; in other taluks, general health good; prices—wheat 15½, coarse rice 11, white *juar* 17½, yellow *juar* 22½, and *tur* 21½ seers per current sicca rupee.
Central India States—(Feb. 20th)—		
Indore	0·11	Weather warm and cloudy; health good; no change in prices of grain.
Morar	0·21	Health good; crops have suffered from fall of hail on 17th night.
Sutna	No rain	Health good.
Sehore	No rain	Weather clear; prospects and public health good.
Neemuch		Public health good; crops thriving; weather getting warm.
Goona		Weather cloudy and cold; small-pox continues; crops good.
Nowgong	*Nil*	Weather seasonable; health fair; prices steady.
Bhopawar	*Nil*	Prospects good.
Rajputana—		
Abu (Feb. 20th)	Very slight rain in the night of the 19th instant.	Weather cloudy.
Erinpura („ 17th)		Weather seasonable; health and prospects good.
Marwar („ 15th)		Wells almost full; health and prospects good.
Harowtee („ 18th)		Weather cloudy; high westerly wind; prospects fair; health good.
Jhallawar („ 15th)		Weather cloudy; health good.
Ajmere („ 19th)	Slight rain on 17th	Weather cloudy; health good; prices fluctuating.
Jeypore („ „)	Slight rain	Weather cloudy; more rain expected; crop prospects fair; prices steady; health good.
Ulwur („ „)		Rain wanted; health good; prices rising.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

RESULTS OF THE EXAMINATION FOR GOVERNMENT OF INDIA SECRETARIAT CLERKSHIPS.

No. $\frac{10}{367-76}$.

Extract from the Proceedings of the Government of India, in the Home Department (Public),—under date, Calcutta, the 25th February 1884.

READ the undermentioned papers on the subject of the examination in the clerical establishments of the Secretariat Offices of the Government of India and the Departments directly attached thereto :—

Home Department Resolution No. 26—953 to 963, dated the 19th July 1883.

Home Department Notification No. 1722, dated the 28th November 1883.

RESOLUTION.

THE lists attached to this Resolution show the names of the successful candidates for clerkships in the Upper and Lower Divisions respectively, and the marks obtained by them in each subject. Marks below the minimum allowed to count are not shown.

The Governor General in Council is pleased to direct that the Heads of Offices to which the Resolution of the 19th July 1883

applies, shall fill up vacancies by selecting candidates from these lists in compliance with the terms of the Resolution.

ORDER.—Ordered, that a copy of this Resolution, with a copy of the lists referred to, be forwarded, for information and guidance, to the several Departments of the Government of India and to the Heads of Offices under the Home Department noted in the margin. It will be observed that under paragraph 14 of the Resolution of the 19th July 1883 no candidate should be actually appointed until he produces a certificate from a Government medical officer that he is of good health and a sound constitution. It will also be necessary to ascertain the precise date of birth and present age of each candidate on appointment, the evidence supplied to the Board of Examiners on this point relating merely to the limits of age laid down in the Resolution. This will be done by the Home Department through which the offer of appointments should be made to the selected candidates.

Surgeon General with the Government of India.
Sanitary Commissioner with the Government of India.
Secretary to the Board of Examiners.

Ordered also, that the Resolution with the lists referred to be published in the *Gazette of India*.

(True Extract.)

A. MACKENZIE,
Secretary to the Govt. of India.

DEPARTMENT OF FINANCE AND COMMERCE,
(Statistical Branch.)

D. BARBOUR,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE 3rd QUARTER OF 1883.

No. 172 R. T., dated Fort William, 25th February 1884.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 79 R. T., dated 5th February 1883.

" " " " " 1241 R. T., dated 7th November 1883.

Read also—

Returns of accidents to trains, &c., on the open lines of Railway in India for the quarter ended 30th September 1883.

OBSERVATIONS.—As compared with the corresponding quarter of the previous year, with an increase of 455 miles, or 4·58 per cent. in the mean mileage open, and of 1,023,944 miles, or 12·57 per cent. in the train mileage, the number of accidents to trains, rolling stock, permanent-way, &c., shows an increase of 69, or 10·39 per cent. The following are the Railways on which the numbers chiefly vary :—

	Increase.	Decrease.
East Indian	23	...
South Indian	...	22
Great Indian Peninsula	12	...
Sind, Punjab, and Delhi	27	...
Indus Valley and Kandahar	...	19
Rajputana-Malwa	10	...

2. On the East Indian Railway the number of accidents under "goods trains, or parts of goods trains, engines, &c., leaving the rails" decreased from 9 to 2, but the cattle accidents increased from 18 to 33. The total number of accidents during the quarter under review was 58 as compared with 35 during the corresponding quarter of the previous year.

3. On the South Indian Railway the number of cattle accidents decreased from 64 to 50, and cases of fire in trains from 10 to 4.

4. On the Great Indian Peninsula Railway the increase was chiefly due to an increase from 6 to 21 in the number of accidents under the head "the flooding of portions of permanent-way." The number of accidents under "goods trains, or parts of goods trains, engines, &c., leaving the rails" also increased from 8 to 11; while that under "slips in cuttings or embankments" decreased from 10 to 4.

5. Of the total increase of 27 on the Sind, Punjab, and Delhi Railway, 5 occurred under "trains running over cattle," 7 under "failure of couplings," 5 under "flooding of portions of permanent-way," and 10 under "other accidents."

6. On the Indus Valley and Kandahar State Railway the cases of "failure of machinery, springs, &c., of engines" increased from 10 to 17, but the number of cattle accidents decreased from 71 to 48. The total number of accidents reported during the quarter was 115 as compared with 134 during the 3rd quarter of 1882.

7. On the Rajputana-Malwa Railway the increase was chiefly under "trains running over cattle;" the number of accidents under this head amounted to 52 against 44.

8. The casualties resulting from accidents to trains, &c., were—among passengers, 2 killed and 20 injured against 1 killed; and among servants, 1 injured against 1 killed and 1 injured in the corresponding quarter of the previous year. The increase in the number of casualties to passengers is due to 14 passengers having been injured and 1 killed owing to the down passenger special from Sahebgunge to Nalhati having been wrecked below Murarai Station on the East Indian Railway on the 26th July 1883, and 5 passengers having been injured and 1 killed by a collision on the Indus Valley and Kandahar Railway between No. 13 down mail and No. 4 up goods trains, caused by the carelessness of the drivers and station master.

9. The following table exhibits the number of accidents under the different classes, and the number of persons killed and injured thereby :—

	Number of Accidents	Number of Passengers and others.		Number of Servants.		Total.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Collisions between passenger trains or parts of passenger trains	3	...	...	...	...	...	...
Collisions between passenger trains and goods or mineral trains, engines, and vehicles standing foul of the line	7	1	6	...	...	1	6
Collisions between goods trains, or parts of goods trains	13	...	...	...	...	...	...
Collisions between light engines	3	...	...	...	...	...	...
Passenger trains, or parts of passenger trains, leaving the rails	10	...	...	...	...	...	...
Goods trains, or parts of goods trains, engines, &c., leaving the rails	73	...	...	...	...	...	...
Trains or engines travelling in the wrong direction through points	12	...	...	...	...	...	...
Trains running into stations or sidings at too high a speed	2	...	...	...	...	...	...
Trains running over cattle on the line	291	...	...	...	...	...	...
Trains running over obstructions on the line	23	...	...	...	...	...	...
Trains running through gates at level crossings	5	...	...	...	...	...	...
The bursting of boilers or tubes, &c., of engines	14	...	...	...	...	...	...
The failure of machinery, springs, &c., of engines	47	...	...	...	...	...	...
The failure of tyres	3	...	...	...	...	...	...
Ditto of wheels	2	...	...	...	...	...	...
Ditto of axles	13	...	...	...	...	...	...
Ditto of brake apparatus	1	...	...	...	...	...	...
Ditto of couplings	29	...	...	...	...	...	...
Ditto of tunnels, bridges, viaducts, culverts, &c.	2	...	...	...	...	...	...
Broken rails	10	...	...	...	...	...	...
The flooding of portions of permanent-way	66	...	...	...	...	...	...
Slips in cuttings or embankments	16	...	...	...	...	...	...
Fire in trains	27	...	...	...	...	...	...
Fire at stations or involving injury to bridges or viaducts	2	...	...	...	...	...	...
Other accidents	59	1	14	...	1	1	15
TOTAL	733	2	20	...	1	2	21

10. The number of cases of "goods trains, or parts of goods trains, engines, &c., leaving the rails" increased from 53 to 73, owing chiefly to there having been 23 accidents of this class on the Darjeeling-Himalayan Railway against *nil* in the corresponding quarter of the previous year.

11. There were 291 cases of "trains running over cattle" against 301. Of the total number, 48 occurred on the Indus Valley and Kandahar, 52 on the Rajputana-Malwa, 50 on the South Indian, and 33 on the East Indian Railways. The greater number of accidents on the Indus Valley and Kandahar and Rajputana-Malwa Railways occurred on the unfenced portions of these lines, and on the South Indian Railway the majority of accidents took place on portions where the live fence has not yet fully grown up.

12. The number of cases of "failure of machinery, springs, &c., of engines" rose from 33 to 47, owing principally to increases of 3 on the Sind, Punjab, and Delhi Railway and 7 on the Indus Valley and Kandahar Railway. The number of cases of "failure of axles" also increased from 7 to 13, of which 5 were on the Darjeeling-Himalayan Railway.

13. Out of a total of 29 cases of "failure of couplings," 7 were on the Sind, Punjab, and Delhi Railway and 11 on the Rajputana-Malwa; and, out of a total of 66 cases of "flooding of portions of permanent-way," 21 cases occurred on the Great Indian Peninsula and 35 on the Punjab Northern Railway.

14. The number of "fires in trains" was largest on the Indus Valley and Kandahar Railway, being 13 out of a total of 27.

15. The number of "other accidents" increased from 43 to 59, or by 16, of which there was an increase of 10 on the Sind, Punjab, and Delhi Railway.

16. The casualties to passengers from causes other than accidents to trains, &c., were—

	Killed.	Injured.
From falling between carriages and platforms	1	1
Falling on to the platform, ballast, &c., when getting into or out of trains	1	4
By closing of carriage doors	...	1
Falling out of carriages during the travelling of trains	6	9
Other accidents	1	7
TOTAL	9	22

17. And the accidents to servants in the employ of Railways, or of contractors, whilst performing duties connected directly with the transit of passengers and goods from causes other than accidents to trains, &c., were:—

	Killed.	Injured.
During shunting operations	3	11
Falling off engines, vans, wagons, &c.	4	14
Coming in contact with over-bridges, &c., during the travelling of trains	...	1
Coming in contact, whilst shunting, with vehicles, &c., standing in adjoining lines	1	...
Getting on or off trains, engines, &c.	2	9
Whilst loading, unloading, or sheeting	3	22
Whilst breaking, spragging, or chocking wheels	...	2
Whilst working at cranes or capstans	...	1
Whilst working on the permanent-way or in sidings	4	6
Whilst walking along the line on the way home or to work	2	2
Whilst walking, crossing, or standing on the line	8	6
Whilst passing between vehicles	...	1
Whilst attending to the machinery of engines, cleaning them, &c.	2	1
Whilst attending to gates at level crossings	...	2
Falling or being caught between vehicles and platforms	...	2
Falling off ladders, scaffolds, platforms, &c.	1	2
By falling of lamps, wagon doors, timber, weights, &c.	...	2
Whilst coupling or uncoupling wagons	2	9
Miscellaneous	3	24
TOTAL	35	117

18. Of other persons killed and injured by running trains, &c., 2 were killed and 3 injured whilst passing over the line at level crossings; 22 killed and 12 injured whilst trespassing on the line; 11 killed and 1 injured in the act of committing or attempting suicide; and 7 were killed and 8 injured from miscellaneous causes.

19. The following table shows the total number of persons killed and injured from causes connected with the working of trains as compared with the corresponding quarter of the previous year:—

	3RD QUARTER 1882.		3RD QUARTER 1883.	
	Killed.	Injured.	Killed.	Injured.
Passengers.				
From causes beyond their own control	...	...	2	21
„ misconduct or want of caution	7	25	9	21
Servants.				
From causes beyond their own control	4	13	1	17
„ misconduct or want of caution	39	79	34	101
Others.				
Whilst passing at level crossings	4	1	2	3
Trespassers, including suicides	37	10	33	13
Other persons	5	...	7	8
TOTAL	96	128	88	184

20. In addition to the above, 17 persons are reported to have been killed and 55 injured in yards, workshops, &c., and 43 passengers to have met death in carriages and at stations from causes unconnected with the working of trains.

RESOLUTION.—The attention of the officers concerned should be invited to the number of cases of "goods trains, or parts of goods trains, engines, &c., leaving the rails;" also to the cases of "failure of machinery and couplings" and of "fires in trains."

ORDER.—Ordered, that this Resolution, together with the abstract returns compiled by the Government of India, be communicated to the Governments, Administrations, and Officers noted in the margin for information.

Ordered also, that copies be forwarded to the Secretary of State for the information of Her Majesty's Government.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Assam, and British Burma.
The Residents, Hyderabad and Mysore.
The Agents to the Governor General for Rajputana, Central India, and Biluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways.

Ordered further, that this Resolution, with the abstract returns, be published in the Supplement to the *Gazette of India*.

F. S. STANTON, *Colonel, R.E.*,
Deputy Secretary.

TABLE No. 1.

GENERAL TOTAL.

NUMBER of PERSONS reported during the Third Quarter of 1883, as KILLED or INJURED on the several RAILWAYS open for Traffic in INDIA, distinguishing between PASSENGERS, RAILWAY SERVANTS, and OTHER PERSONS; and distinguishing also, in the case of the two former Classes, between ACCIDENTS happening from Causes beyond their own Control, and ACCIDENTS happening otherwise.

Mean Mileage open.	RAILWAYS.		PASSENGERS.						RAILWAY SERVANTS, OR SERVANTS OF CONTRACTORS.						OTHER PERSONS.								TOTAL ALL CLASSES.

Offg. Under-Secretary.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 22nd February, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding.*
His Honour the Lieutenant-Governor of Bengal, C.S.I., C.I.E.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. S. Thomas.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble R. Miller.
The Hon'ble Amír Alí.
The Hon'ble H. J. Reynolds.

EXPLOSIVES BILL.

The Hon'ble MR. ILBERT moved that the Report of the Select Committee on the Bill to regulate the manufacture, keeping, sale, conveyance and importation of explosives be taken into consideration. He said:—

"When I introduced this Bill last year, I explained that it was based on the English Explosives Act, 1875, but was much shorter and simpler in its details. I justified this difference by reference to the comparatively limited operation which a measure of this description might be expected to have in India, and to the circumstance that the wide differences between various parts of the country made it necessary to provide by a simple power to make rules for many matters which in England would be included in the Act. The papers which have been received since the Bill was introduced have confirmed the views in accordance with which the Bill was prepared, and, indeed, go further, and show that, though an Act of this sort has become indispensable for some purposes and in some parts of the country, the extent to which it is likely to come into practical operation will in all likelihood be for a long time extremely limited. This being so, we have thought it advisable to make the Bill still shorter and simpler by substituting, on some additional points, powers to make rules for direct enactments, and by omitting certain ancillary provisions which can hardly be considered essential to the measure in its reduced form.

"The Bill as amended by the Committee is in all its main provisions a purely enabling measure, and merely empowers the Governor General in Council, or the Local Governments with his sanction, to make rules imposing restrictions and making regulations, and to enforce their observance by fine within certain maximum limits. This power is given both to the Governor General in Council and to the Local Governments, because it seems clear that, while the rules relating to some matters can best be made by a single central authority, the rules regarding others will best be left to the Local Governments. Thus, rules regarding transport by railway can obviously be made only by the Government of

India in consultation with the various railway administrations concerned, while, on the other hand, the rules relating to the storage of explosives in towns can be best dealt with by the Local Governments in consultation with the municipal authorities.

"It will be observed that we have added to the Bill power to make regulations for the 'use' of explosives. We think this additional power may be found convenient in some cases in which it may be necessary to use the more dangerous explosives in mining or quarrying or road-making under superintendence of a less trustworthy character than would be available under similar circumstances in Europe.

"The Bill gives very extensive powers, but I need hardly say that we do not contemplate their being used, except when a real necessity for the exercise of them exists. Nothing, for example, is further from our intention than to impose any stringent system of control over the manufacture and use on a small scale of the fireworks ordinarily used by the Native population. So far as I know, the amount of control at present exercised over their manufacture and use has been found amply sufficient. I say this, not because I have any fear that the powers given by the Bill are likely to be abused, but merely with a view to prevent any misapprehension on the point. And, in order still further to remove any such misapprehension, I propose, by an amendment of which I have given notice, to insert in the Bill a provision expressly enabling the rule-making authorities to make exemptions from the operation of the rules made by them.

"Chapter VII of the original Bill gave the Governor General in Council unrestricted powers with regard to specially dangerous explosives. We have retained this power, but have limited it to the importation, possession and transport of explosives. It may at times be essential for the public safety to act in the case of such explosives at once, and without having to resort to the somewhat elaborate procedure laid down in the Bill for the making of rules under section 5.

"Sections 7, 8 and 9 of the amended Bill are intended to provide for the matters dealt with in Chapter VIII of the Bill, so far as it seems necessary under present circumstances to provide for them.

"Section 7 provides, in the shape of a power to make rules, for the matters of inspection, search, seizure, detention, removal and the taking of samples, and sections 8 and 9 reproduce, with certain modifications, the provisions of sections 34 and 35 of the original Bill, requiring notice to be given of accidents, and conferring power to enquire into them.

"Then, to avoid the inconvenience which might arise from a person being required to take out licenses both under this Bill and under the Arms Act in respect of the same matter, we have provided a means by which a license granted under the Bill may be made to operate likewise as a license under the Arms Act.

"As the Bill has now been reduced to a mere enabling measure, we have thought it better to leave untouched the enactments of a merely local nature contained in the repealing schedule to the original Bill. These enactments are all of the class which it is within the competence of the local legislatures to repeal or amend, and it will thus be fully open to those who are most competent to form an opinion on such a point to determine how far these enactments shall continue to be applied, and how far the provisions of this Bill shall be resorted to in matters covered by both.

"I have given notice of three amendments. The first I have already explained. As to the second, which deals with the liability to forfeiture, it has been represented that this liability may work hardship in cases where it happens that the person who commits the offence is not the owner of the explosive. I do not see any way to make strict proof of ownership a condition precedent to forfeiture, but I propose to make the section a little less stringent by making it

clear that, where forfeiture is adjudicated, it need not extend to the whole of the explosives in respect of which the offence is committed.

"Lastly, the original Bill contained a provision which was based upon a corresponding provision of the English Act, and authorized the arrest without warrant of a person committing an offence likely to cause explosion by fire in or about a place where explosives are manufactured or kept. We had proposed to omit the section from the amended Bill, but it has been pointed out that in certain cases it might be very useful, and, therefore, I propose to restore it."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that in section 5, sub-section (2), after clause (*e*) of the Bill, the following be inserted, namely :—

"(*f*) the exemption absolutely or subject to conditions of any explosives from the operation of the rules."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that in section 10 of the Bill, after the word "committed," the following be inserted, namely :—

"or any part of that explosive, ingredient or substance."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that after section 12 of the Bill, the following section be inserted, namely :—

Power to arrest without warrant persons committing dangerous offences.

"13. Whoever is found committing any act for which he is punishable under this Act or the rules under this Act, and which tends to cause explosion or fire in or about any place where an explosive is manufactured or stored, or any railway or port, or any carriage, ship or boat, may be apprehended without a warrant by a Police-officer, or by the occupier of, or the agent or servant of, or other person authorized by the occupier of, that place, or by any agent or servant of, or other person authorized by, the railway administration or conservator of the port, and be removed from the place where he is arrested, and conveyed as soon as conveniently may be before a Magistrate."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

CHUTIÁ NÁGPÚR ENCUMBERED ESTATES ACT, 1876, AMENDMENT BILL.

The Hon'ble SIR STEUART BAYLEY moved that the Report of the Select Committee on the Bill to amend the Chutiá Nágpúr Encumbered Estates Act, 1876, be taken into consideration. He said :—

"Last year, when I had the honour to introduce the Bill before the Council, I explained that its scope at the time was exceedingly limited. It was simply to amend a defect, which was common to that Act and the Oudh Taluqdárs' Act. It was found, as the Act stood, that should Government have lent money to the estate, yet the owner might claim release of the estate as soon as the scheduled debts were paid off, without any reference to the debt which was incurred to Government. It was to amend that particular defect, and also to amend a small error which had crept in in regard to the time within which mortgages should be given out in the estate, and it was only for these two purposes that the Bill was introduced. It was then referred to the Select Committee last year. In the meantime, two or three memorials from bodies of mahájans (money-lenders) in Chutiá Nágpúr were received, and some attention was called to the fact of this Bill being before the Council in the Native Press. The objections taken generally were not in reference to the particular scope of the amending Bill, which, as I have said before, is an exceedingly small one; they were directed against the policy of the original provisions

of the Act, VI of 1876, and they seemed to be of sufficient force to justify the Select Committee in not going on at once with the Bill; the work of the Select Committee was accordingly postponed until the Government of Bengal had an opportunity of making enquiries and submitting a report on the working of the Act as it stood. This report has now come in, and the objections taken might briefly be summarised as follows. It was complained that it was nowhere laid down clearly, so that people may be aware beforehand, what classes of estates came under the Act. The memorialists also complained that, in the first instance, on an application being made, it was often accompanied by exaggerated statements of income and insufficient statements of liability, and, as it was the interest of the owners no less than of the manager to have the estates brought under the Act, full enquiry was not made, and that, consequently, estates which might be hopelessly insolvent were too readily brought under the scope of the Act, and so protected from the clutches of the creditors. In the course of the proceedings, when the case came before the Courts, it was asserted that the evidence of bonds was not accepted with that stringency which was the rule in ordinary Courts, but the word of the debtor was taken against the creditor, and accordingly the debts were cut down too readily. Then they complained that, even the debts which were cut down were not at once paid, the creditors were liable to be kept waiting for many years—twenty-five years, I think, I recollect in one case. They also complained that there was no power of releasing an estate from the operation of the Act even should it be found that it obviously was an insolvent estate, and that no benefit could be derived from going on. And they pointed out one or two other defects in the law which hampered the liquidator in giving effect to its intentions. One was that he could not sell the estate without the consent of the owner, and another was that he could not give a lease for more than twenty years. I think I have fairly summed up the objections raised; and many of them seemed reasonable. The Government of Bengal directed an enquiry, and the result of the enquiry, which appears to have been carefully and satisfactorily made, has now been circulated with the papers of the Bill. It consists of a report from the Deputy Commissioner, another from the Commissioner, and a letter from the Government forwarding the report of the Board of Revenue; and I think these reports quite justify our action in not going on with this Bill at once but giving time for further enquiry. The general result of the reports is to show that the Act of 1876 practically introduced nothing which was very new. It systematised what was formerly the custom; in fact, since 1832, when the Kol rebellion broke out and caused Chutiá Nágpúr to be taken out of the effect of the ordinary regulation law, landed estates in this district have never been subject to sale in execution of decree, and have, as a political measure, always been exempted from sale. When the Act of 1876 was introduced, it was intended to systematise the procedure, and bring it under control; but some of the estates previously protected from sale were, it is admitted, transferred to the operation of the Act without sufficient enquiry as to the possibility of their ever becoming solvent. But the reports showed that, of late years, full and careful enquiries were made in every instance. They showed that the procedure was very much the procedure of the Civil Courts; that the parties were called together, and it was only when the creditors would not bring their books into Court for examination, that the Court was forced to take the debtor's statement; they showed, no doubt, that the Courts went behind the bond, but that was the principle and essential policy of the Act, and that there was necessity for doing so, because, according to the custom of the money-lenders, after every two or three years a fresh bond was taken, in which interest is added to principal and fresh interest accumulates on both; the process is again repeated, so that ultimately interest is demanded three or four times over on the original sum; and, though the man may have paid the principal with a fair rate of interest, yet in a few years the original amount which had been borrowed was found to have increased four-fold: on the whole, it might be said that the report fully justified not only the policy of the Act but the administration of it. They did, however, admit that there was a good deal in what the memorialists said, and that there were several other points in which the law required amendment. These proposals have been sent up by the Government of Bengal, and the Select Committee have taken

them into consideration, and it was to meet these points that the Committee now proposed to alter the Bill in the way which was shown in their report. The principal recommendations of the local officers are, first, that the Local Government should be empowered by the rules to lay down to what classes of estates the Act should be applicable. It was obviously impossible to do this by law, because, in the first place, as I have said before, the principal consideration will always be political expediency; and, in the second place, because anybody who has read the report will see when you go to reduce it into a system, how very complicated and difficult the matter is, and how inevitably it would lead to frequent tinkerings of the Act in order to cover unforeseen cases. But apparently the general consideration would be the size of the estate, and the Bengal Government say that in general the working of the Act should not be applicable to estates under Rs. 2,000.

"The next proposal in order of time and procedure which the local officers made and which we have embodied in the Bill was that the applicant should file a verified statement of the assets and liabilities of the estate; and a verified statement means, of course, that the applicant would be liable to the penalties for false evidence if the assets and liabilities were wrongly stated. So that there should not be the same probability and risk as heretofore of bringing an estate under the operation of the Act when it was of no use to do so.

"Then, a small point I may mention was the time within which the creditors are to send in their statements. In the first instance it was three months, and under special circumstances claims may be admitted within a further period of nine months. This latter period would now be reduced to six months.

"Then, when the adjudication was made on the claim, we came to a point upon which the objection made seemed really serious. It was that the law contained no provision for the amount decreed being paid off at once. On the recommendation of the Government of Bengal, a provision has now been introduced under which the Government may make loans for the payment of liabilities, to be recovered, with small interest, from the assets of the estate. The delay in this case will be transferred from the creditors to the Government.

"We have not been able to meet a proposal of the local officers, which was not accepted by the Local Government, that an estate should be released at the option of the manager after it has once been brought under liquidation. The objection to that was that it would lead to less caution than was desirable in taking estates under management. It was also clear that under such an arrangement great complications would ensue when leases or mortgages had been given, debts had been cut down and payments had been made, and the confusion would be absolutely bewildering. Neither the Select Committee nor the Local Government saw their way to adopt that, and the result of the Bill as it stands will be that the liquidation, having been once undertaken, must go on till all the debts had been paid off, or the estate sold, or the parties came to some arrangement which the Commissioner considered satisfactory and unobjectionable.

"But here we come to another arrangement. In order to enable them to put an end to the management of an insolvent estate, we have had to amend the Bill in another point, which, as I have explained before, has given rise to some dissatisfaction. In the law as it stands, an estate could not be sold without the consent of the owner. This provision does not occur in any other similar Act, and it seems obviously unreasonable that, where a public officer has been called in to manage an estate, because a man is incapable of managing his own property, that public officer should be unable to sell a portion of the estate to save the rest without the owner's consent. Accordingly, to meet that, we have now given power to sell the estate without the owner's consent.

"There was one more point, on which I have given notice of an amendment, which does not come into the report of the Select Committee; but, with the permission of Your Excellency, I will explain what the amendment is

now, instead of doing so when moving the amendment. Under the Bill as it stands, a lease could only be given for twenty years, and the only alternative was to sell the property with the consent of the owner. The local officers had objected that it was difficult to get a purchaser, because a great number of these estates were not held directly from the Government, but were jághírs, —assignments held under the superior landlord,—and the peculiarity of these tenures is, that in default of direct male heirs they lapsed to the superior landlord, and could not therefore be transferred without the assent of the superior landlord. This leads to a difficulty very obvious and palpable in the way of sales outright, and the custom of the country consequently is, instead of selling, to give permanent leases. The permanent lessee, subject to the payment of rent, was able to protect his interest from sale by his superior landlord under the ordinary law, and he is more able to get a transfer sanctioned and approved of by his superior landlord on paying a *nazráná* than to get his sanction to an outright sale. Accordingly, Mr. Power, who found considerable difficulty in applying the Act to a sale outright, strongly recommended, amongst other things, that the manager should have power to grant permanent leases; and the Government of Bengal, after giving the matter very full consideration, had recommended that it be provided for in the Bill."

The Hon'ble MR. REYNOLDS said:—"I wish to say a few words on this Bill, as I have had some experience of the practical working of the Act both as Secretary to the Government of Bengal and as an officiating Member of the Board of Revenue. The Bill before the Council, which is merely an amending measure, does not raise the question of the principle of legislating with the object of affording special assistance and protection to embarrassed proprietors of land. I am not personally an advocate of such legislation; but the principle having been accepted by the law already in force, it is the object of this Bill to improve the administrative machinery, and to rectify such errors as the experience of the last seven years may have shown to exist in matters of detail.

"But, though the question of principle is not raised by the Bill, either in the form in which it was originally introduced or in the form in which it is now submitted to the Council, some of the papers which have been considered by the Select Committee do raise issues which are of a fundamental character. It is contended in some memorials received from money-lenders of the Chutiá Nágpúr Division, and in some articles which have appeared in the public Press, that the Act is unjustly framed and unfairly administered. The memorialists complain that the laws of evidence, of contract, and of procedure, are ignored; that estates are admitted to protection without due enquiry as to their solvency; that the just claims of creditors are summarily cut down; and that there is unreasonable delay in paying off even those debts which the authorities admit to be valid. These charges really fall under two main heads, one of which touches the principle of the Act, and the other is concerned with its administration.

"As to the former, it appears to be the contention of the memorialists that the duty of ascertaining the claims, and the duty of paying them off, should be assigned to two different sets of officers, that the claims should be ascertained by judicial officers under the strict rules of law which govern ordinary transactions, and that the property should then be handed over to the executive department for the liquidation of the debts. If this had really been the intention of the legislature, the Act of 1876 would have been very improperly described as an Act to relieve certain landholders in Chutiá Nágpúr. Its proper title would have been an Act to enrich certain mahájans. What was the position of these creditors before the passing of the Act of which they now complain? For more than 40 years past they had been restrained from proceeding against landed property, for no sales could take place without the express consent of the Commissioner. If execution of a decree was taken out against a landholder, his estate was sequestrated, and was managed in what was termed the Political Department. The difference is that, whereas this procedure was formerly general, management by Government officers is now confined to those estates which are specially protected under the Act. Against all other landed property the creditor can proceed in the ordinary course of law.

"Then, with regard to the complaint that the managing department goes behind bonds and decrees, it is certainly the fact that this is done, and it was undoubtedly the intention of the legislature that it should be done. The object of the law was to grant equitable relief; and this object would have been defeated if the officer charged with the settlement of the claims had been required to confine himself to ascertaining whether a certain bond had been signed, or a certain decree obtained, and had been precluded from enquiring into the circumstances under which the debt had been incurred, and into the whole series of the transactions between the parties. So far, therefore, as these objections impugn the principle of the Act, I think they admit of a complete answer.

"As regards its actual administration, I am willing to confess that there may have been some grounds for complaint during the first two or three years that the Act was in operation. I do not admit that claims have been unjustly cut down. Some alleged instances of this are put forward in the memorials, and, I suppose, we may fairly assume that these are the strongest instances which would be adduced. But the explanations given in the papers before the Council show conclusively that these cases (to use the words of the Board of Revenue) were not arbitrary reductions of equitable claims, but cases of equitable relief from extortionate contracts. I do not deny that, when the Act first came into operation, some estates, which had no valid claims to protection, were brought under its provisions, and that the enquiries into the solvency of an estate were not always so complete as they should have been before the issue of the vesting order. But I do not think that for some years past any example of mistakes of this kind can be adduced.

"The matters of reasonable complaint which still remain are—first, the delay which takes place in the liquidation of admitted claims; and, secondly, the provision which forbids the sale of an estate without the consent of the proprietor. These will be remedied by the Bill now before the Council. I understand it to be intended that, when the schedule of debts has been finally settled, a loan shall be advanced by Government at moderate interest to clear off all incumbrances, and that the estate shall remain under management till the loan has been repaid. The Bill also gives power to sell the property with or without the consent of the owner, and to withdraw at any time from the management if a satisfactory composition is made with the creditors. These amendments, and the minor improvements which are introduced by the Bill, will, I think, remove all reasonable ground of complaint as regards the working of the measure."

The Motion was put and agreed to.

The Hon'ble SIR STEUART BAYLEY also moved that, after section 6 of the Bill, the following section be inserted, namely:—

Amendment of section 17.

"7. In section 17, for the words 'not exceeding twenty years absolute,' the words 'or in perpetuity' shall be substituted."

The Motion was put and agreed to.

The Hon'ble SIR STEUART BAYLEY also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

INLAND STEAM-VESSELS BILL.

The Hon'ble MR. ILBERT presented the Report of the Select Committee on the Bill to amend the law relating to the Survey, and the examination and grant of certificates to Engineers, of Inland Steam-vessels, and to provide for certain other matters relating to those vessels.

INDIAN STEAM-SHIPS BILL.

The Hon'ble MR. ILBERT presented the Report of the Select Committee on the Bill to amend the law relating to the Survey of Steam-ships and the grant of certificates to Engineers of those ships.

The Council adjourned to Friday, the 29th February, 1884.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

FORT WILLIAM;
The 28th February, 1884.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 26th FEBRUARY 1884.

GENERAL REMARKS.—There has been rain during the week in three districts of the Madras Presidency, in Sindh, in parts of Central India, and the Central and North-Western Provinces, also in parts of Assam and Bengal. The fall generally has been too slight to affect agricultural prospects.

Harvesting continues in active progress in the Madras Presidency and Mysore, and standing crops promise well. In Bombay the *rabi* is being cut, and with the exception of some crops in the Surat and Shikarpur districts which have suffered from insects and blight the prospects are fair. In the Berars, Hyderabad, Central India States, and Rajputana the *rabi* promises well, but in the Ulwar State the crops on unirrigated lands are reported to be withering for want of rain. Rain is also urgently needed in the south-eastern districts of the Punjab; elsewhere in that province the prospects are satisfactory. The rain which fell in the North-Western Provinces during the week under report was slight and insufficient, and the outturn of the *rabi* on unirrigated lands is expected to be below the average. On irrigated lands the crops are fair. A scarcity of fodder is beginning to be felt in two districts.

In Bengal the prospects remain unchanged. The standing crops in Chota Nagpore, Behar, and the Burdwan district, promise a poor outturn; elsewhere in the province they are fair. The preparation of the land for the next rice season is in hand, and the early *rabi* crops are being cut. In Assam the reaping of the mustard crop is nearly over and prospects are good.

No report has been received from British Burma.

Cholera exists in most districts of the Madras Presidency, but is abating. Small-pox is general in the Bombay Presidency and the North-Western Provinces; in other provinces the public health is on the whole good.

Prices are unchanged.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Feb. 27th)—		
Bellary	. . . . .	Harvest—wheat, sugarcane, cotton, *cholum*, pulse, and oil-seeds about average; eighteen deaths from cholera in one taluk.
Kurnool	. . . . .	Standing crops fair; harvest—*cholum* and pulse, yield about average.
Ganjam	1·63 (average of twelve stations).	Standing crops good.
Kistna	·4 (average of three stations).	Harvest—*varigu* and horse-gram, yield below average; paddy being harvested; fever and small-pox prevalent; cattle-disease in places; four deaths from cholera.
Chingleput (Madras)	. . . . .	Standing crops generally good, but slightly injured in parts by excessive rain of last month; harvest—paddy, yield below average; small-pox prevalent; thirty-eight deaths from cholera.
Coimbatore	. . . . .	Standing crops generally good; harvest—paddy, yield average; dry grains about average; fever and small-pox in parts; forty-one deaths from cholera.
Tanjore	. . . . .	Standing crops good; harvest—paddy, dry grains, and pulse, yield below average; 442 deaths from cholera.
Madura	. . . . .	Standing crops fair except in one taluk; harvest—paddy, yield about average; small-pox prevalent in some taluks; seventy-five deaths from cholera.
Malabar	·19 (average of three stations).	Harvest—second crop paddy continues in parts; small-pox, fever, and cattle-disease slight; 52 deaths from cholera.
Travancore	. . . . .	Preparations for cultivation commenced; small-pox, fever, and cholera in parts.
		***General Remarks.*—General prospects good.**
Bombay—(Feb. 27th)—		
Kurrachee	In Kurrachee ·09; average of eight other stations ·08.	River at Kotri on 20th 4 feet 6 inches, against 2 feet 10 inches on same date last year; *rabi* crops in good condition; fever in 5 talukas; cattle-disease in 3 talukas; disease amongst *ticca* carriage horses in Kurrachee, symptoms, running at nose, sore throat, and cough; a few private horses also attacked; 6 fresh cases of small-pox in Kurrachee since 14th, no death; total 53 cases, 9 deaths; disease in 21 villages in districts, 15 fresh cases, 3 deaths, 39 remaining sick; wheat, red rice, and *bajri* in Kurrachee 26, 30 and 36; in Sehwan 32 and 36; in Ghorabari 20, 30 and 32; and in Jati 20, 32 and 40 lbs. per rupee respectively.
Hyderabad	Heavy rain at Kandiaro on 18th and 19th; at Badin ·10 on 3rd, and ·03 at Hydrabad and Dero Mohbat on 15th February.	Small-pox in 9, fever in 8, and cattle-disease in 6 talukas; wheat 26½, *jowari* 38, *bajri* 34½, red rice 26, and white rice 20 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad		Standing crops healthy; cotton-picking commenced in some talukas; slight fever in Viramgaum and Sanand; cattle-disease decreasing; wheat 26 and *bajri* 30 lbs. per rupee.
Baroda		Cotton and *rabi* crops in good condition; general health good; prices —*bajri* 31 and rice 24 lbs. per rupee.
Surat		Cotton-picking commenced in places; cotton and other crops slightly damaged by small insects in Bardoli and Chikhli; crops healthy in other talukas; slight fever in Balsar and Pardi; *jowari* 38 and *nagli* 44 lbs. per rupee.
Nasik		Reaping of *rabi* crops in progress; public health generally good; small-pox in four villages of Nasik, 2 of Sinar, and 4 of Dindori talukas; cattle-disease in parts of Dindori taluka; *bajri* 28, wheat 31½, and rice 24 lbs. per rupee.
Colaba (Bombay)		Abnormal temparature 0° to 2° cool; abnormal wind southerly and moist on 26th.
Poona		Reaping of *rabi* progressing; small-pox in 3 talukas; prices—*bajri* 36 and *jowari* 39 lbs.; in Poona *bajri* 30 and *jowari* 35 lbs. per rupee.
Ahmednagar		Public health good; reaping of *rabi* commenced in some talukas; *bajri*—maximum 51 lbs. per rupee in Jamkhed, minimum 39 in Kopargaon; *jowari*—maximum 51 lbs. in Akola, minimum 32 in Karjat.
Sholapore		Reaping of *rabi* crops general throughout the district; cotton being picked in Barsi, Pandharpur, and Karmala talukas; *bajri* 43 and *jowari* 41 lbs. per rupee.
Dharwar		Harvesting of early *jowari* completed, that of wheat in progress; cotton-picking commenced; smallpox in seven and fever and cattle-disease in two talukas; scarcity of drinking-water in Navalgund and Gadag talakas; rice 29 to 44 and *jowari* 52 to 79 lbs. per rupee.
Kanara		Second crop rice plants healthy; harvesting of sugarcane above ghat; small pox in four talukas, 1 death in Siddapur; cattle-disease in two talukas; fever in Haliyal and Bhatkal; common rice in Karwar 12 seers per rupee; district average 15¾ seers.
Rajkot		General health good; weather warm; small-pox still prevalent in the district; *bajri* 30 and *jowari* 39 lbs. per rupee.
		General Remarks.—Rain throughout Sindh; *rabi* harvest in progress in most districts; late crops slightly injured by small insects in parts of Surat and by blight in parts of Shikarpur; small-pox general; slight cholera in parts of Broach, Colaba, and Ratnagiri; fever and cattle-disease in some districts.
Bengal—(Feb. 26th)		
Chittagong	*Nil*	Weather seasonable; prospects of winter crops continue favourable; prices steady; public health good.
Dacca	0·04	Ploughing going on; winter crops being reaped; prospects continue favourable; public health good.
24-Pergunnahs		Prospects of winter crops promising; price of common rice 1¾ to 16 seers per rupee; public health generally good.
Moorshedabad		Slight rain on the night of 24th and the morning of 25th; crops doing well; public health generally good, except a few cases of cholera reported from thana Jehinghee.
Rajshahye	0·18	Weather seasonable; rain has been beneficial to winter crops, prospects of which are fair, especially in Nattore; ganja is being manufactured; public health good.
Burdwan	0·16	Winter crops are being harvested; generally-speaking, an average of about six annas may be looked for, except in the Cutwa sub-division, where the outturn is very much poorer than elsewhere; public health fair.
Bungpore	*Nil*	Weather seasonable; prospects of cold-weather crops good; land is being prepared for *aus* and jute cultivation; prices stationary; public health good.
Bhagulpore	*Nil*	Mustard crop has yielded a better outturn than was expected, except in the south; *rabi* crops near the Koosi and in pergunnah Chye are very good, but elsewhere they are poor, except where irrigation is available; *cheena* is being sown extensively in some parts; price of rice 13 seers 14 chittacks per rupee.
Purneah	*Nil*	Crops in the south of the district very poor; in the north they are fair; price of common rice 16 seers per rupee; public health fair.
Patna	*Nil*	Prospects of *rabi* crops generally fair; a good deal of small-pox in the sudder sub-division.
Durbhanga	*Nil*	Prospects of *rabi* crops unfavourable; outturn will be about 6 annas for the whole district; harvesting of tobacco and mustard in progress, pressing of sugarcane proceeding; prices stationary; small-pox in the town of Durbhanga has not wholly disappeared.
Hazareebagh	0·70	Weather seasonable; the slight fall of rain had little effect on the standing crops, most of which are being harvested, but it has facilitated ploughing; prices steady; general health good.
Cuttack	*Nil*	Weather warm; nights slightly cold; *dalua* rice and cotton growing well; state of miscellaneous crops good; price of rice stationary, in spite of large exportation; public health good.
		General Remarks.—There has been slight rain in some districts

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
		during the week; this rain and the rain of the previous week have much facilitated ploughing for the cultivation of *aus* and *jute*, and have benefited the standing crops; in Behar rain still holds off, and the *rabi* crops on unirrigated tracts will consequently be very poor; in Chota Nagpore also the *rabi* crops will be very indifferent, and in Burdwan, the outturn is said not to exceed an average of six annas for the whole district; but in the rest of the province the prospects of these crops are generally reported to be fair; sugarcane is being pressed, and mustard and other early *rabi* crops are being gathered; spring rice is doing well, and poppy in the Patna Division promises to be an excellent crop; small-pox is prevalent in the sudder sub-division of Patna and in the town of Hazareebagh, and a few cases of it and of cholera are also reported from several localities, but generally speaking, the public health of the province is good; price of rice is steady and high throughout the province.
N. W. Provinces and Oudh—		
Benares (Feb. 26th)	Slight rain on 24th instant.	Cloudy weather prevailed during latter part of the week; weather fine on 25th and 26th instant; crops are drying up; peas being cut; wheat and barley are ripening; isolated cases of small-pox of a mild form still reported; bazars well supplied; prices falling slightly.
Allahabad („ 27th)	·2 on 24th instant at Sadr and Karchana.	No sensible benefit from rain on 24th instant; harvest of peas and barley begun, and prices thereof fallen; other prices steady; some small-pox.
Gorakhpur („ 24th)	*Nil*	Small-pox prevalent; crops below average; labour in demand; prices steady.
Jhansi („ 25th)	Slight rain on the 24th instant.	Wheat ripening; cutting of gram commenced; crops in pargana Jhansi have suffered slightly from sharp wind; prices stationary; health of people and cattle good.
Agra („ 26th)	Very slight rain on night of the 19th and 23rd instant.	*Rabi* crops ripening; irrigation continues; slight fever, and small-pox continues in Sadr tahsil; general health good; prices steady.
Bareilly („ „)		Rain needed; prices pretty steady; health of men and cattle good.
Meerut („ „)	*Nil*	Weather cloudy; public health good; supplies of food-grain ample, but fodder scarce; prices steady.
Kumaun („ „)	Slight rain on evening of the 24th February.	Crops withering; general health good; cattle-disease continues; prices not changed.
Lucknow („ „)	*Nil*	Weather warm and cloudy; state of crops fair; condition of people and cattle normal; markets well supplied; prices steady.
Partabgarh („ „)		Most of *rabi* crops ready for the sickle; slight rain during the week; small-pox reported from all tahsils; prices almost steady.
Sitapur („ „)	One or two slight showers.	Weather cloudy the greater part of the week; unirrigated crops indifferent; cattle somewhat suffering from scarcity of grass; prices steady.
Fyzabad („ „)	*Nil*	Weather slightly cloudy; sugarcane being pressed; wheat, barley, and peas beginning to ripen; small-pox in parts of district; condition of cattle good; prices steady.
Rai Bareilly („ 25th)	Slight rain on the 24th instant at Sadr.	Weather cloudy; *rabi* crops beginning to ripen; small-pox in mild form continues; supplies abundant; prices steady.
Cawnpore („ 26th)	Slight rain on the 24th instant.	Crops ripening, and general health of people good; prices stationary.
Farukhabad („ „)		Clear, sun shiny weather; condition of the people good; no sickness to speak of; condition of the crops fair; markets well supplied.
		General Remarks.—Slight rain has fallen in several districts, but not enough to produce any appreciable effect; the *rabi* crops are ripening, and in places are ready for cutting; the crops are generally fair, but on unirrigated lands are below the average; fodder is scarce in Meerut and Moradabad, otherwise the markets are well supplied, and prices steady.
Punjab—(Feb. 27th)—		
Delhi		Rain urgently wanted; scarcity of fodder; small-pox continues; slight fall in prices.
Hissar		Health good; rain wanted; prices steady.
Umballa		Health good; crops suffering from want of rain; prices stationary.
Jullundur		Rain much wanted; health and crop prospects good; prices stationary.
Amritsar		Health good; prices fluctuating.
Lahore		Health and crop prospects good; prices stationary.
Ferozepur		Health and condition of crops good; prices almost stationary.
Sialkot		Health and harvest prospects good; prices falling.
Rawalpindi		Health and crop prospects good; prices falling.
Peshawar		Health and harvest prospects good; prices stationary.
Mooltan		Health and crop prospects good; prices falling.
Dera Ismail Khan		Health and harvest prospects good; prices stationary.
		General Remarks.—The health of the province, except in the Delhi District, is generally good; crop prospects also are generally good, except in the south-east where rain is urgently wanted.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provinces—(Feb. 27th)—		
Nagpur		Weather warm and somewhat cloudy; prospects favourable; health good; prices stationary.
Jubbulpore	1·50	Weather changeable and cloudy; hail on 24th; rain injurious to crops and unnecessary.
Saugor (Feb. 26th)		Weather cloudy; prospects favourable; health good; prices steady.
Seoni	·45	Weather cloudy; reaping of pulses progressing; prices stationary; public health good.
Hoshangabad		Weather getting hot, but nights are cool; pulses being harvested; fever prevalent in Harda; wheat 21, rice 11, and *juari* 30 seers per rupee.
Raipur	·36	Weather cloudy; *rabi* crop prospects favourable; linseed being cut; prices rising; rice 24 and wheat 25 seers per rupee.
Sambalpur	·50	Weather getting warm; a thunderstorm occurred on 21st; prospects good; public health good; common rice 35 seers per rupee.
Khandwa		Weather clear; *rabi* crops promising; *juari* 20¼, wheat 16, and rice 13¾ seers per rupee.
		General Remarks.—Weather hot; nights cool; prospects favourable; health good; prices stationary.
Assam—(Feb. 27th)—		
Gauhati	·11	Weather cloudy; cutting of sugarcane nearly over; lands being ploughed for *ahu* cultivation; public health fair.
Sylhet	*Nil*	State and prospects of crops good; public health also good on the whole.
Cachar	·48	Weather cold; reaping of mustard crop nearly finished; common rice 16 seers per rupee; small-pox and cholera abating.
Dibrugarh	*Nil*	Weather seasonable; prospects of crops good; public health good.
Berar & Hyderabad—(Feb. 27th)—		
Amraoti		Weather getting warm; *rabi* crops in good condition; wheat 16 and *juari* 26 seers per rupee.
Akola		Prospects of *rabi* crops good.
Hyderabad (Feb. 26th)	*Nil*	Standing crops prospering; weeding of *rabi* crops continue; small-pox, though it has abated, still lingers in the northern district, in other talukas general health fair; prices—wheat 15, coarse rice 11¼, white *juar* 17½, yellow *juar* 21¼, and *tur* 20¼ seers per current sicca rupee.
Mysore and Coorg—(Feb. 27th)—		
Bangalore		Dry crops in all districts being harvested; standing crops reported in good condition; prospects of season favourable; public health generally good; prices continue to rule easy.
Mercara	*Nil*	Threshing of rice continues, that of *ragi* nearly over; picking of coffee completed; fever still prevalent in parts of the Nanjarajapatna and Mercara taluks.
Central India States—(Feb. 27th)—		
Indore	*Nil*	Weather seasonable; health good; prices steady; agricultural prospects favourable.
Morar	0·4	Health and prospects good; prices stationary.
Sutna	0·52	Health good.
Sehore	*Nil*	Weather clear; health and prospects good.
Neemuch	0·52	Health good.
Goona		Weather seasonable; small-pox continues; crops good.
Nowgong	*Nil*	Prospects fair; health good; prices steady.
Bhopawar	*Nil*	Prospects good.
Rajputana—		
Abu (Feb. 27th)		High wind with heat.
Marwar (" 22nd)		Very little water in city tanks; wells almost full; health and prospects good; prices stationary.
Erinpura (" 24th)		Weather getting warm; health and prospects good.
Harowtee (" 25th)		Weather cloudy and warm; prospects fair; health good.
Jhallawar (" 22nd)		Health and prospects good; weather seasonable.
Ajmere (" 26th)	·07	Heat increasing and clouds still forming up; prospects fair; health good.
Jeypore (" ")	Slight rain	Weather clear; prices stationary.
Ulwur (" ")	*Nil*	Crops on unirrigated land withering; health good.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 29th February, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding*.
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. S. Thomas.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble R. Miller.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble H. J. Reynolds.
The Hon'ble Rao Saheb Vishvanath Narayan Mandlik, C.S.I.

NEW MEMBER.

The Hon'ble RAO SAHEB VISHVANATH NARAYAN MANDLIK took his seat as an Additional Member.

INLAND STEAM-VESSELS BILL.

The Hon'ble MR. ILBERT moved that the Report of the Select Committee on the Bill to amend the law relating to the Survey, and the examination and grant of certificates to Engineers, of Inland Steam-vessels, and to provide for certain other matters relating to those vessels, be taken into consideration. He said:—

"This Bill, as introduced, was little more than a consolidating measure. It brought together the provisions of some seven local Acts with respect to the survey of inland steamers, the grant of certificates to their officers, and investigations into casualties connected with them. The only alteration of importance was the extension of the period for which a certificate of survey is to be in force from six months to one year; and the only addition of importance was a chapter regulating the carriage of dangerous goods on inland steamers on the same principles as those on which the carriage of dangerous goods by railway is regulated under the Indian Railway Act of 1879.

"Since the Bill has been circulated we have received numerous useful criticisms and suggestions from the various Chambers of Commerce, Port Commissioners and other persons, official and non-official, and by their help we have made some changes in the law which will, I hope, prove to be substantial improvements.

"IN the first place, we have altered the procedure for obtaining a certificate of survey. Under the existing law the survey has to be made by two officers, who receive the fees and grant the certificates themselves. Instead of this, we propose to adopt the system now in force under the English merchant shipping law, which is, that the survey should, under ordinary circumstances, be conducted by one surveyor only, and that he should be paid by salary, that the fees should be paid to and accounted for by Government, and that the certificate should be granted by Government on the declaration of the surveyor. As surveys will in future be made only once a year instead of twice, and as we anticipate that they will be made more fully and carefully than at present, we propose to double the rate of fees. But, in order to make the increase of fees press as lightly as possible in the case of small craft, we propose that vessels under 100 tons should pay a fee of Rs. 25 only. The revised scale of fees will be found in the second schedule to the Bill. We have empowered Local Governments to alter this schedule by rules, and we have provided that drafts of any rules which the Local Governments may propose to make for this purpose, or for any other purpose under the Bill, should be published in such a manner as to give persons interested an opportunity of being heard against them before they take effect. Of course, our only object is to fix the fees at such a rate as will prevent the cost of survey from being a charge on the State.

"The Bengal Chamber of Commerce have directed our attention to the great variety of classes to which inland steamers belong. They point out that there are no less than four distinct classes of such vessels, namely: (1) the large river-steamer with its attendant flats; (2) smaller vessels of about 120 tons net register and 80 nominal horse-power; (3) ferry-boats in the Hugli; and lastly (4) steam-tugs, steam-launches, small cargo-boats, tugs and coal-barges plying for hire.

"And they observe that these different classes require different treatment under the law, and that it is impossible to lay down any hard-and-fast rules applicable to all of them. I fully agree with these observations, but I think it will be found that the Bill, as we have now amended it, has become so elastic as to be applicable without hardship or injustice to all the different classes of vessels which will come within its scope. For instance, we fully recognize the fact that all inland steamers do not require a complete survey every year, and that the requirement of such a survey would in many cases entail considerable and needless expense on the owners. Accordingly, we have given the Local Governments power to define by rule the cases in and the extent to which, under ordinary circumstances, a survey may be dispensed with before the grant of a new certificate; and we have no doubt that the power will be exercised in

such a way as to avoid unnecessary interference with vessels which are in a substantially good condition.

"Again, we have recognised, and made provision for, the difference between large and small craft with respect to the numbers and qualifications of the officers whom they may be reasonably expected to carry. Most of the smaller inland steamers ply under the charge of Native serangs and engine-drivers. The Bill as introduced required every inland steamer to carry a certificated master and engineer, and recognised only one class of masters and engineers. It was pointed out that the effect of this provision would be to require all these serangs and engine-drivers to pass the same examinations, and obtain the same certificates, as the masters and engineers of the large river-steamers. This objection is perfectly sound, and, in order to meet it, we have divided the masters and engineers into different classes, and have provided for the granting of different certificates to the members of each class. There will be first-class and second-class masters' certificates, and there will be engine-drivers' certificates as distinguished from ordinary engineers' certificates.

"Then we have divided inland steam-vessels into two classes, those having engines of eighty nominal horse-power or upwards, and those having engines of under eighty nominal horse-power. We have required every vessel of the former class to carry as her master a person having a first-class master's certificate, and as her engineer a person having an engineer's certificate, and every vessel of the latter class to carry as her master a person having at any rate a second-class master's certificate, and as her engineer a person having at any rate an engine-driver's certificate. In order, however, to relieve persons who are duly qualified to act as masters or engineers of inland steam-vessels, but have not certificates of competency under the special law relating to those vessels, from the necessity of taking out fresh certificates under that law, we have placed persons having certificates as masters or engineers under the Indian or Imperial Acts relating to sea-going ships in the same position as persons who have obtained masters' or engineers' certificates under the Bill. And, on the recommendation of the Bengal Chamber of Commerce, we have added a proviso making it clear that one and the same person may be both the master and engine-driver of a steam-vessel of under eighty nominal horse-power.

"The existing law provides for the grant of certificates of service, which are to be given without examination, and are to have the same effect as certificates of competency granted after examination. I believe that these certificates of service were devised for the purpose of meeting a transitional state of things, and that the necessity for granting them has long since disappeared. When the examination system was first introduced, it was very right and proper that old and experienced masters and engineers should be released from the necessity of proving their competency by passing an examination. But all the men who were entitled to these certificates have got them long before now, and it has become unnecessary to do more than provide that the certificates of service already granted shall have the same effect as certificates of competency. We have done this, and have not made any provision for the grant of further certificates of service.

"The English Merchant Shipping Acts contain some useful provisions for regulating the conduct of passengers on steamers, imposing penalties on drunken and disorderly passengers and on persons travelling without tickets, or refusing to produce their tickets, or committing other offences of a like nature. It has been pointed out that there are no similar provisions in the Indian law, and that an addition to that effect would be useful. Accordingly, we have added to the Bill a chapter enabling Local Governments to make rules providing for the cases in which passengers may be refused admission to, or may be required to leave, inland steam-vessels; the payment of fares and the exhibition of tickets or receipts showing the payment of fares; and the regulation generally of the conduct of passengers in inland steam-vessels; and empowering them to impose fines not exceeding twenty rupees for breach of the rules.

"The Bill, as introduced, extended to the whole of British India, including the Madras Presidency. There is a local law of this character at present in force

in Madras, and, as the Madras Government appear to be of opinion that the introduction of such a law is not required, at all events for the present, we have exempted Madras from the immediate operation of the Bill, but have empowered the Governor in Council to extend the measure to that Presidency if at any future time it is found to be required.

"And, lastly, we have reserved to each Local Government considerable powers of exempting certain classes of vessels from the operation of parts of the Bill, or of applying its provisions subject to modifications. As I said before, it is absolutely essential to a measure of this kind that it should be made reasonably elastic. The object which we have kept in view in framing the Bill has been to secure uniformity in matters of principle whilst providing for elasticity and variety in matters of detail; and I have every reason to believe that the result will be a useful and workable law."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

INDIAN STEAM-SHIPS BILL.

The Hon'ble MR. ILBERT also moved that the Report of the Select Committee on the Bill to amend the law relating to the Survey of Steam-ships and the grant of certificates to Engineers of those ships be taken into consideration. He said:—

"This Bill is the twin-brother of the measure which has just passed the Council, and the resemblance between the two is so close as to make a separate description of each unnecessary.

"In this case also we have recast the provisions relating to survey in such a way as to bring them into conformity with the English law. The expediency of making this change has been strongly pressed upon us by the Board of Trade, and I need hardly say that the reasons for making the English and Indian law harmonious in this particular are even stronger in the case of sea-going ships than in the case of inland steamers.

"We have also modified the sections relating to the grant of certificates to officers by omitting the provisions for the grant of further certificates of service, and by legalizing a practice which appears to exist in Bombay of granting certificates for engine-drivers as distinguished from engineers. It seems from the report of Captain Morland, the Port Officer of Bombay, that certificates are issued in that Presidency to Native engine-drivers for working small harbour or coasting steamers; and it is desirable, for reasons to which I have already referred in speaking of the Inland Steam-vessels Bill, that the grant of such certificates should be recognized and controlled by the law. Accordingly, we provide for the grant of such certificates by any Local Government; but, as we do not know whether all the maritime Local Governments wish to impose the obligation of carrying certificated engine-drivers on the small steamers which are at present exempted from the necessity of carrying certificated engineers, we have left it to the Local Governments to decide whether this obligation shall or shall not be imposed.

"There are only two other points to which I need call attention in connexion with this Bill. In the first place, it has been said that, by requiring our own steamers to be surveyed once a year, and by not imposing a similar requirement on foreign steamers, except when carrying passengers between places in British India, we place our own steamers at a disadvantage and tend to divert the passenger-traffic between India and foreign ports to foreign bottoms. Now, even if I admitted, which I do not, that the requirement of periodical survey placed a ship at a disadvantage, it is perfectly obvious that in legislating for foreign vessels we cannot go a step further than is warranted by international law. In the provisions which we have made for their survey we have gone precisely as far as Parliament has considered itself justified in going; and, if we attempted to go any further, we should expose ourselves to the risk

of international complications of a serious kind. However, we have amended that Bill by making it clear that the term 'British steam-ship' includes ships owned by Natives of India.

"Then, it has been suggested that the provisions of the Bill conflict with those of the Native Passenger Ships Act, which also provides for the survey of ships and the grant of certificates of survey. But, if the two measures are carefully compared, it will be found that there is no such conflict as has been supposed. Under the Bill, no steam-ship can enter upon passenger-traffic of any kind, Native or European, without a certificate of survey as specified in the Bill. If the steam-ship carries more than sixty Native passengers, she will come under the Native Passenger Ships Act, and will then require a further certificate under the Native Passengers Act, in addition to the certificate which is required under the Bill. The two measures, therefore, supplement and do not conflict with each other.

"There is, however, a slight inconsistency between the provisions of the Bill which permit the grant of certificates to hold good for one year, and the provisions of section 13 of the Act, which assumes that no certificates granted by the British Indian Government can be in force for more than six months. This inconsistency we have removed by section 40, which amends section 13 of the Native Passenger Ships Act. We have also by the same section added some words to section 13 of the Act to make it clear that the certificate referred to must be one which is in force and applicable to the voyage on which the ship is about to proceed or the service on which she is about to be employed."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that after section 34 of the Bill the following section be inserted, namely:—

Production of certificates.

"35. The provisions of Act I of 1859 (*for the amendment of the law relating to Merchant Seamen*) with respect to the certificates of competency or service of the master and mate contained in section 31 and section 32 of that Act shall apply to certificates of competency granted under this Act in the same manner as if certificates of competency granted to engineers under this Act were specially mentioned and included in those sections."

He said:—"The object of this amendment is to remove a slight discrepancy between the English and the Indian Acts which had escaped the notice of the Select Committee. Under the English law, it is necessary to produce the certificates both of the master and the mate and of the engineer before a port-clearance is granted. The Indian law requires the production of the master's and mate's certificates, but makes no provision for the production of the engineer's certificate. It is obviously desirable to remove this discrepancy between the two laws, and that is what this amendment is intended to do."

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill, as amended, be passed.

The Motion was put and agreed to.

NEGOTIABLE INSTRUMENTS ACT, 1881, AMENDMENT BILL.

The Hon'ble MR. ILBERT also moved for leave to introduce a Bill to amend the Negotiable Instruments Act, 1881. He said:—

"The main object of this Bill is to amend the Negotiable Instruments Act with respect to a small point in which it is not quite in harmony with mercantile practice and mercantile convenience. The point is this. Under the Act, a person who wishes to accept a bill of exchange for honour is required to go through certain formalities in the presence of a notary public. In prescribing these formalities, the Act accurately reproduces the existing law as laid down in the leading text-books. But it appears that in modern mercantile practice the strict observance of those formalities has been found to be unnecessary; and that they

are commonly dispensed with. The truth is that, as often happens, the text-books have not kept quite abreast of the times, and have failed to take note of changes which are apt to take place in mercantile usage when it is not stereotyped by codification. The Council are probably aware that the English law on the subject of bills of exchange has recently been codified by a Statute which became law in 1882, a year after our Indian Act. The Bill for this Statute was framed on the lines of the Indian Act, and, as introduced into the House of Commons, contained provisions similar to those which I have described. But, during the passage of the Bill through Committee, the discrepancy between the usage as stated in the text-books and the usage as actually obtaining was discovered and the provisions were removed. A similar discovery has been made out here. We have received representations from some leading bankers to the effect that the retention in our Statute-book of an enactment requiring the observance of formalities which are unnecessary and have fallen into disuse has caused, and is likely to cause, practical inconvenience. I propose to apply the obvious remedy by amending the Act in such a way as to bring it into conformity with what has recently been declared to be the law in England and appears to be the established usage here. And I propose to take the opportunity of supplying certain defects in the Act with respect to the appointment and control of notaries public, by making it clear that a person may be appointed a notary either by name or by virtue of an office; that he may be appointed for a limited area, and may be removed from his office; and further, that rules may be made for the guidance and control of notaries appointed under the Act, and may, among other matters, fix the fees payable to such notaries."

The Motion was put and agreed to.

The Council adjourned to Friday, the 7th March, 1884.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

The 6th March 1884.

R. A. SARGEAUNT, *Major, R.E.,*
Offg. Under-Secretary.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

ABSTRACT OF THE PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE ACT OF PARLIAMENT 24 & 25 VIC., CAP. 67.

The Council met at Government House on Friday, the 7th March, 1884.

PRESENT:

His Excellency the Viceroy and Governor General of India, K.G., G.M.S.I., G.M.I.E., *presiding.*
His Excellency the Commander-in-Chief, G.C.B., C.I.E.
The Hon'ble J. Gibbs, C.S.I., C.I.E.
Lieutenant-General the Hon'ble T. F. Wilson, C.B., C.I.E.
The Hon'ble C. P. Ilbert, C.I.E.
The Hon'ble Sir S. C. Bayley, K.C.S.I., C.I.E.
The Hon'ble T. C. Hope, C.S.I., C.I.E.
The Hon'ble Sir A. Colvin, K.C.M.G.
The Hon'ble H. S. Thomas.
The Hon'ble Kristodás Pál, Raí Bahádur, C.I.E.
The Hon'ble J. W. Quinton.
The Hon'ble T. M. Gibbon, C.I.E.
The Hon'ble Amír Alí.
The Hon'ble W. W. Hunter, LL.D., C.I.E.
The Hon'ble H. J. Reynolds.
The Hon'ble Rao Saheb Vishvanath Narayan Mandlik, C.S.I.

NEGOTIABLE INSTRUMENTS ACT, 1881, AMENDMENT BILL.

The Hon'ble MR. ILBERT introduced the Bill to amend the Negotiable Instruments Act, 1881, and moved that it be referred to a Select Committee consisting of the Hon'ble Messrs. Gibbs, Evans and Miller and the Mover.

The Motion was put and agreed to.

The Hon'ble MR. ILBERT also moved that the Bill and Statement of Objects and Reasons be published in the local official Gazettes in English, and in such other languages as the Local Governments might think fit.

The Motion was put and agreed to.

The Council adjourned to Friday, the 14th March, 1884.

D. FITZPATRICK,
Secretary to the Government of India,
Legislative Department.

FORT WILLIAM;
The 7th March, 1884.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASONS AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING THE 4th MARCH 1884.

GENERAL REMARKS.—Slight rain has fallen in parts of Sindh, in the northern and western districts of the Punjab, and in several districts of Bengal.

In the North-Western Provinces, Central India, and British Burma local showers have occurred, while in Assam the fall has been general and unusually heavy for the time of year.

In the Madras Presidency and in Mysore harvesting continues, and the standing crops promise well.

In the Bombay Presidency, Berar, and Hyderabad, the *rabi* crops are being reaped and prospects are good. A scarcity of drinking water exists in parts of the Dharwar and Kaladgi districts. In Central India and Rajputana the crops are in fair condition. In the Punjab, with the exception of the districts in the south-east which are suffering from want of rain, prospects are satisfactory. In the North-Western Provinces and Oudh prospects are unchanged, and the weather has been unfavourable, high westerly winds being preval ent. The crops are now ripening and rain is not now required. On irrigated lands a fair yield is expected, but elsewhere the crops are poor. Scarcity of fodder is being felt in some parts. In the Central Provinces prospects are very good.

In Bengal the *rabi* is being reaped, and except in unirrigated tracts in Behar, Chota Nagpore, and the Burdwan district, an average yield is expected. Mustard and sugarcane have given a fair outturn, and the poppy crop in the Patna division has been excellent. The recent light rains have benefited the spring crops. In Assam prospects are favourable, and the land is being ploughed for the next crop.

In Burma the price of paddy remains steady and the ports are well supplied.

Cholera is abating in the Madras Presidency, and small-pox is prevalent in Burma and exists in most other Provinces; in other respects the public health is fair.

Prices are generally steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Madras—(Mar. 5th)—		
Bellary	. . . .	Harvest—wheat, sugarcane, cotton, *cholum*, paddy, and pulse, yield about average; 7 deaths from cholera in one taluk.
Kurnool	. . . .	Standing crops fair; harvest—pulse, yield about average; *cholum* below average.
Ganjam	·1 (one station)	Standing crops good; small-pox slight in three taluks.
Kistna	. . . .	Standing crops generally good; harvest—*viragu* and horse-gram, yield below average; fever and small-pox prevalent; cattle-disease in places.
Chingleput (Madras)	. . . .	Standing crops generally good, but slightly injured in parts by excessive rain of January last; harvest—paddy, yield below average; small-pox prevalent; cholera abating, 29 deaths.
Coimbatore	. . . .	Standing crops generally good; harvest—paddy, yield average; *cholum* below average; fever and small-pox in parts; 52 deaths from cholera.
Tanjore	. . . .	Standing crops good; harvest—paddy, dry grains, pulse, and tobacco, yield below average; cholera abating, 221 deaths.
Madura	. . . .	Standing crops fair; harvest—paddy, yield about average; small-pox prevalent in some taluks; 26 deaths from cholera.
Malabar	. . . .	Harvest—second crop paddy over; small-pox and fever slight; 69 deaths from cholera.
Travancore	. . . .	Harvest—second crop paddy in Trivandrum division, yield below average; 4 deaths from small-pox at Trivandrum. *General Remarks.*—General prospects good.
Bombay—(Mar. 5th)—		
Kurrachee	*Nil*	River at Kotri on 3rd 3 feet 5 inches, against 2 feet 3 inches on same date last year; standing *rabi* crops good; fever in 9 talukas; cattle-disease in 5 talukas; loss of 90 buffaloes and 60 cows in Ghorabari and in Mirpur Batoro; one fresh case of small-pox since 22nd February, no deaths; total 54 cases, 9 deaths; disease also in 23 villages in the district, 59 fresh cases, 7 deaths, 58 remaining sick; prices—wheat, red rice, and *bajri* in Kurrachee 26, 30 and 36; in Manjhand 22, 30 and 40; in Sakro 16, 28 and 36; and in Shahbander 20, 30 and 36 lbs. per rupee, respectively.
Hyderabad	·26 (average in 7 talukas on 18th and 19th Feb.	Small-pox in 11, fever in 8, and cattle-disease in 6 talukas; wheat 26¼, *jowari* 38, *bajri* 34, red rice 25, and white rice 21 lbs. per rupee.
Ahmedabad	. . . .	Reaping of *rabi* crops commenced; cotton-picking in progress; small-pox in Dhandhuka; cattle-disease decreasing; wheat 26 and *bajri* 30 lbs. per rupee.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Bombay—*contd.*		
Baroda	. . . .	Public health fair; cotton and *rabi* crops in fair condition; cotton-picking commenced; prices—*bajri* 31 to 32⅜ and rice 23 to 24½ lbs. per British rupee.
Surat	. . . .	Standing crops healthy; cotton slightly suffered from insects in Bardoli; slight fever in Bulsar and Pardi; *jowari* 37 and *nagli* 41 lbs. per rupee.
Nasik	. . . .	Reaping of *rabi* crops still continues; public health generally good; small-pox in one village of Nasik, 3 of Dindori, and one of Kalwan talukas; *bajri* 28, wheat 34½, and rice 24 lbs. per rupee.
Colaba (Bombay)	. . . .	Abnormal temperature 0° to 2° warm; vapour in air excessive; abnormal winds southerly and strong on 3rd and 4th.
Poona	. . . .	Duststorm in Poona; reaping of *rabi* progressing; prices—*bajri* 36 and *jowari* 38 lbs., in Poona *bajri* 32 and *jowari* 35 lbs. per rupee; small-pox in 3 talukas.
Ahmednagar	. . . .	Public health good; reaping of *rabi* commenced in parts; *bajri*—maximum 49 lbs. per rupee in Jamkhed, minimum 28 in Akola; *jowari*—maximum 51 lbs. in Sangamner, minimum 32 in Akola.
Sholapore	. . . .	Cotton-picking finished in Barsi taluka; *bajri* 42 and *jowari* 41 lbs. per rupee.
Dharwar	. . . .	Harvesting of wheat and picking of cotton in progress; small-pox in 7, fever in 2, and cattle-disease in 3 talukas; scarcity of drinking-water in Navalgund and Gadag talukas; rice 29 to 44 and *jowari* 52 to 80 lbs. per rupee.
Kanara	. . . .	Sugarcane harvest continues; rice plants thriving; small-pox in 5 talukas in Honore, 2 deaths; cattle-disease and fever in two talukas; common rice in Karwar 14½ seers per rupee, in district average 16 seers; weather hot and cloudy.
Rajkot	. . . .	General health good; small-pox still prevalent; weather getting warmer; harvesting of wheat and cotton-picking in progress; *bajri* 31 and *jowari* 39 lbs. per rupee. *General Remarks.*—Slight rain in parts of Hyderabad and Upper Sindh frontier; reaping of *rabi* crops continues in most districts; scarcity of drinking-water in two talukas of Dharwar and one of Kaladgi; slight cholera in parts of Broach and Colaba; fever, cattle-disease, and small-pox in several districts.
Bengal—(Mar. 5th)		
Chittagong	0·02	Days warm, nights and mornings cool; prospects of standing crops favourable; prices unchanged; public health good; cow-pox at Parki and Ukhia.
Dacca	*Nil*	Prospects of crops and public health good.
24-Pergunnahs	*Nil*	Prospects of winter crops promising; common rice from 14 to 16 seers per rupee; health of people generally good.
Moorshedabad	0·18	Weather getting warmer; crops on the whole favourable; in some places they are being harvested; health of district generally good, with the exception of a few cases of small-pox in thana Dowlutabad.
Rajshahye	0·07	Prospects of standing crops fair; the late rain has done good.
Burdwan	*Nil*	Weather perceptibly warmer; *rabi* harvest proceeding; four annas outturn expected for the whole district; public health good; price of coarse rice has fallen at head-quarters.
Cutwa	0·2	
Raneegunge	0·85	
Rungpore	0·06	Weather seasonable; prospects of crops fair; *aus* is being sown in some places; prices of food-grains stationary; public health good.
Bhagulpore	*Nil*	*Rabi* crops excellent in parts of thanas Bhagulpore and, Bihipore, and fair near the Koosi in the north; but elsewhere they are very poor; except in a few irrigated patches; prices stationary; a good deal of small-pox in the town of Bhagulpore.
Purneah	0·08	Mustard harvest very fair; tobacco below the average; wheat and barley fair in the north; common rice 15 seers per rupee; health fair.
Patna	*Nil*	Prospects of *rabi* crops generally fair; gathering of peas, mustard and other crops commenced; small-pox prevailing in the sudder.
Durbhanga	0·22	*Rabi* crops being harvested, outturn generally poor; rain has been of no benefit to the standing crops; prices nearly stationary; fever, and small-pox continue.
Hazaribagh	*Nil*	Weather getting warm; mustard and other oilseeds being gathered; ploughing commenced; small-pox still prevails in the town of Hazaribagh; general health good.
Cuttack	0·02	Weather gradually getting warmer; *dalua* rice and cotton growing well; state of miscellaneous crops good; mango much damaged by mist and rain; price of rice has risen a little; public health generally good. *General Remarks.*—There has been slight rain in many districts during the week; it will facilitate ploughing for the cultivation of early rice and jute, and will do good to *boro* rice and other spring crops, but it will be of little benefit to the *rabi* crops, most of which are being harvested; as previously reported, the *rabi* crops will generally yield a tolerably fair outturn, except in unirrigated tracts in Behar and Chota Nagpur, and in the district of Burdwan, where they will be very poor; mustard has been a very fair crop on the

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
		whole, and sugarcane, which is still being reaped, is also giving a fair return; in the Patna division poppy promises to be an excellent crop; prices remain almost stationary but high throughout the province; public health is generally good, though small-pox is prevalent in the sudder stations of Patna and Bhagulpore, and isolated cases are reported from certain other places.
N. W. Provinces and Oudh—		
Benares . (Mar. 4th)	*Nil*	Hot weather has set in; peas cut; outturn ¾ of average harvest; wheat and barley nearly ripe; the number of isolated cases of small-pox has increased in the city, but decreased in the environs; bazaars well supplied; prices falling.
Allahabad („ 5th)	*Nil*	*Rabi* crops being cut; prices rising slightly; health generally good, but there is some small-pox.
Gorakhpur („ 2nd)	. . . .	Weather close and cloudy, but no rain; small-pox prevalent; outturn fair; prices steady.
Jhansi . („ 5th)	Slight rain and hail in pargana Garotha, and rain on the 24th ultimo	*Rabi* crops ripening; health of people and cattle good.
Agra . („ 4th)	*Nil*	Irrigation going on, fever in one and small-pox in four parganas; prices steady.
Bareilly . („ „)	*Nil*	High winds injurious to crops; general health good.
Meerut . („ „)	*Nil*	Weather cloudy; health good; supplies sufficient; prices stationary; fodder scarce; west wind drying up moisture; unirrigated crops suffering for want of rain.
Kumaun . („ „)	Slight rain	Not enough rain to materially benefit crops; sky still cloudy occasionally; general health good; cattle-disease continues; prices have somewhat risen.
Lucknow („ „)	. . . .	Weather cloudy and hot; state of crops fair; condition of people normal and of cattle fair; markets well supplied; prices stationary.
Partabgarh („ „)	. . . .	*Rabi* crops are being reaped, in general below average; opium is being extracted; *sawan* sowings have begun; small-pox prevalent throughout district.
Sitapur („ „)	. . . .	Strong west winds have injured wheat and grain; scarcity of fodder increases, but prices of grain keeps steady.
Fyzabad („ „)	*Nil*	State of crops fair; peas being cut; condition of people and cattle normal; markets well supplied; prices steady.
Cawnpore („ „)	. . . .	Weather slightly cloudy, but rain would no longer be beneficial as the crops are now ripening; health of people good, but small-pox still lingers.
Farukhabad („ „)	. . . .	Sky clear, now and again obscured by passing clouds; condition of people good; prospects of season fair.
Rai Bareilly („ 3rd)	. . . .	Weather cloudy; high west wind blowing; *rabi* crops ripening; small-pox continues; markets well supplied; prices steady.
		General Remarks.—Slight rain has fallen in Jhansi and Kumaon, but nowhere else; high westerly winds have prevailed, injuring the crops in several districts; rain is much needed in the Northern districts, but would no longer be beneficial, where the crops are most advanced; small-pox continues in many places; prices show slight fluctuations.
Punjab—(Mar. 5th)—		
Delhi	. . . .	Crops suffering from want of rain; fodder scarce; small-pox continues; slight fall in prices.
Hissar . . .	. . . .	Health good; crops perishing through want of rain; prices rising.
Umballa . . .	. . . .	*Rabi* crops suffering from want of rain; health good; prices stationary.
Jullundur . . .	. . . .	Health and crops good; rain wanted; prices steady.
Lahore . . .	Slight rain	Health and condition of crops good; fall in prices.
Ferozepur . . .	·1	Health and state of crops good; fall in prices.
Sialkot . . .	·1	Health and crop prospects good; prices falling.
Rawalpindi . . .	·2	Health and crop prospects good; prices falling; three inches snow at Murree.
Amritsar . . .	. . . .	Health good; rain wanted; slight fall in prices.
Peshawar . . .	·1	Health and crop prospects good; prices falling.
Mooltan . . .	·5	Health and crop prospects good; rise in prices.
Dera Ismail Khan .	·2	Health and crop prospects good; prices stationary.
		General Remarks.—Health good, except in the Delhi district; rain has fallen in a few districts in the north and west; crop prospects generally good, except in the south-east, where rain is urgently required, and the crops are perishing.
Central Provinces—(Mar. 5th)—		
Nagpur . . .	. . . .	Weather hot and cloudy; crop prospects good; minor *rabi* crops being harvested; public health good; prices steady.
Jubbulpore . . .	. . . .	Weather cloudy; hail fell in places on the 4th; *rabi* crops thriving; health good; prices stationary.
Saugor (Mar. 4th)	. . . .	Weather cloudy; prospects favourable; *rabi* harvest commenced in places; health good; prices steady.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Central Provs.—*contd.*		
Seoni . . .	. . . .	Weather cloudy; hail has caused much damage to standing crops; health good; prices stationary.
Hoshangabad . .	. . . .	Weather hot; nights cool; *rabi* crops being cut; fever prevalent in Harda; small-pox, four cases; wheat 21, rice 11, and *jowari* 30 seers per rupee.
Khandwa . . .	. . . .	Weather warm, occasionally cloudy; prospects good; *rabi* crops being reaped; wheat 16, *jowari* 20½, and rice 12½ seers per rupee.
Raipur . . .	. . . .	Weather getting hot; inferior crops being reaped; prices fluctuating; rice and wheat 24 seers per rupee.
Sambalpur . (Mar. 1st)	. . . .	Weather warm; prospects good; public health good; common rice 29¼ seers per rupee.
		***General Remarks.*—Weather hot; nights pleasant; prospects favourable; health good; prices stationary.**
British Burma—(1st March.)—		
Akyab . . .	. . . .	Public and cattle health good; price of paddy Rs. 25 to 30 per 100 baskets.
Rangoon . . .	. . . .	112 fatal cases of small-pox; price of paddy Rs. 80 per 100 baskets.
Bassein . . .	0·72	Total rainfall 0·77; one death from cholera in Lemyethna and one death from small-pox in Bassein town; slight cattle-disease in Lemyethna; price of paddy Rs. 80 to 85 per 100 baskets.
Prome . . .	. . . .	One death from cholera reported from Paukkaung Shwele township and 4 deaths from small-pox in Prome town; cattle healthy; price of paddy Rs. 75 per 100 baskets.
Kyoukphyu . .	*Nil*	Total rainfall 0·02; public health good; health of cattle also good; reaping finished.
Sandoway . . .	. . . .	Report not received.
Hanthawaddy . .	. . . .	Public and cattle health good; price of paddy Rs. 80 per 100 baskets.
Pegu	. . . .	Small-pox of mild type continues in Pegu town and Kyouktan township; cattle healthy; price of paddy Rs. 70 per 100 baskets.
Tharrawaddy . .	*Nil*	Two fatal cases of cholera and four fatal cases of small-pox reported; 510,744 baskets sold at Rs. 70 to 82 per 100 baskets, amount of paddy stored away by cultivators 6,477,836 baskets.
Thonegwa . . .	. . . .	One death from small-pox in Moubin, Myoma circle; three deaths of cattle in Pantamow, Myoma circle; about 690,000 baskets of paddy cropped in Yandoon township, of which 419,000 baskets have been sold at Rs. 80 to 85 per 100 baskets.
Henzada . . .	. . . .	One death out of 43 cases of small-pox in Henzada town; 591,000 baskets of paddy sold to date at Rs. 80 to 85 per 100 baskets.
Thayetmyo . . .	. . . .	Public health good; 89 cases of cattle-disease in two Riparian circles, 29 deaths; disease not extinct elsewhere; price of paddy Rs. 90 per 100 baskets.
Amherst (Moulmein) .	. . . .	Small-pox prevalent among Karens along Siamese frontier, who have excluded visitors; number of deaths unknown; harvest better generally than last year in yield; prices same as last week; demand in town fallen off; in Moulmein town public health and health of cattle good; price of paddy Rs. 80 per 100 baskets; no sales during the week.
Shweygyin . . .	. . . .	Public health good; five deaths of cattle reported; paddy Rs. 65 per 100 baskets.
Toungoo . . .	0·23	Total rainfall 0·34; four deaths from cholera in Zeyawadi township.
Tavoy . . .	0·28	Total rainfall 0·91; small-pox prevalent in town and in south-east and west township; price of paddy Rs. 56 to 59 per 100 baskets; 50,000 baskets still in fields.
Mergui . . .	. . . .	Report not received.
		General Remarks—Small-pox still prevalent throughout the Province and on the Siamese frontier; fatal cases are more numerous in Rangoon than last week, but a slight abatement apparent elsewhere; cholera reported in Tharrawaddy and Toungoo; cattle healthy throughout the province except in parts of Thayetmyo; supplies of paddy at ports good; demand reported weak in Moulmein, but prices keeping fairly steady.
Assam—(Mar. 4th)—		
Gauhati . . .	2·47	Weather getting hot; sowing of *ahu* seeds in progress; cholera in portions of the district.
Sylhet . . .	5·73	Ploughing for *amun* paddy going on; state and prospect good; cholera and small-pox reported from all sub-divisions.
Cachar . . .	1·56	Weather getting warm; reaping of mustard finished; common rice 14½ seers per rupee; five cases of small-pox and five of cholera reported from Sadr and Hailakandi.
Dibrugarh . . .	2·87	Prospects of crops favourable; public health good.
Mysore and Coorg—(Mar. 5th)—		
Bangalore . .	. . . .	Harvesting operations continue; standing crops and prospects of season good; pasturage and water-supply sufficient; public health generally good; prices—rice from 11 to 22, *ragi* 30 to 60, and horse-gram 31 to 64 seers per rupee.
Mercara . . .	. . . .	Picking of coffee crop over; outturn good; but price has fallen considerably; rice crop being threshed out.

Presidency or Province and District.	Rainfall for week preceding.	State of agricultural prospects.
Berar & Hyderabad—(Mar. 5th)—		
Amraoti		Weather warm and somewhat cloudy; reaping of *rabi* crops commenced; wheat 16 and *jowari* 26 seers per rupee.
Akola		*Rabi* crop prospects favourable; linseed and wheat being cut.
Hyderabad	*Nil*	Weeding of *rabi* crops continues; general health fair; prices—wheat 15, coarse rice 12, white *juar* 16, yellow *juar* 20, and *tur* 18 seers, per current sicca rupee.
Central India States—(Mar. 5th)—		
Indore	*Nil*	Weather normal; some clouds gathering, which may affect agricultural prospects; health good.
Morar	*Nil*	Health and prospects good; weather getting warm.
Sutna	*Nil*	Health good.
Neemuch		Weather hot; public health good.
Goona		Weather seasonable; no more cases of small-pox reported.
Agar	*Nil*	Health and prospects good.
Nowgong	0·59	Weather fair; health good; prices stationary.
Manpur	*Nil*	Prospects good; weather getting hot; prices stationary.
Sehore	*Nil*	Prospects and public health good.
Rajputana—		
Abu (Mar. 5th)		High wind; weather seasonable.
Harowtee („ 3rd)	*Nil*	Days warm; nights and mornings cool; crops ripening; health good prices stationary.
Jhallawar (Feb. 29th)		Health and prospects continue good; weather seasonable.
Ajmere (Mar. 4th)	*Nil*	Weather warmer and very often cloudy, with east wind; health good.
Ulwur („ „)		Weather cloudy; health good; prices steady.

T. W. HOLDERNESS,
Offg. Secretary to the Government of India.

FINANCIAL STATEMENT FOR 1884-85.

Preliminary.

Preliminary.

The circumstances under which the Budget for 1884-85 has been framed, have necessarily required exceptional caution. During the year 1883-84 the management of the Indian finances changed hands; a change which, occurring, as it did, in the latter half of the financial year, renders it obviously advisable that, so far as possible, and unless under extraordinary circumstances, the existing order of things should not be materially disturbed, and postpones to a later time the consideration of projects which otherwise might have received present attention. But, apart from this, there is an essential reason why at the present moment the policy of those entrusted with the Indian finances should be still rather a policy of observation than of action. I allude to the effect on those finances of the changes introduced in 1882-83 in the great departments of Customs and Salt. In the course of his Financial Statement for 1883-84, Sir Evelyn Baring observed (para. 220), "The consideration of any further measure "of fiscal reform must be postponed. Last year a favourable opportunity pre- "sented itself for the execution of some very large and beneficial improvements "in the fiscal system; this year the state of the case is different, the financial "position is perfectly sound, but the situation is one in which great caution is "required. We have to look, not only to the circumstances of the immediate "moment, but also to the contingencies which may arise in future years." Further on, he added that "the Estimates for 1883-84 have been very cautiously "framed," and there was "every reason to believe that the country was well "able to cope with whatever financial difficulties the future might have in "store," (para. 224); and again—"On every ground, therefore, the present moment is a time when great caution should be exercised. Under these circumstances the Government, after full consideration, is of opinion that the wisest course to adopt will be to make no changes in the existing fiscal system, but to allow more time to elapse with a view to watching the effect of those reforms which have already been effected" (para. 228).

Changes in administration of finances during 1883-84, and decrease in Opium Estimates for 1884-85, render necessary a continuance of the caution enjoined by Sir Evelyn Baring in the Financial Statement, 1883-84.

2. Sir Evelyn Baring, at the time he wrote, had in his mind, among other subjects, the prospects of the opium revenue during the year 1884-85. It was already known that the crop of 1883-84 was very deficient, and that the receipts from opium during 1884-85 were certain to be short. The estimated net decrease under this head, in 1884-85, as compared with the Revised Estimate of

1883-84, is not less than £1,378,400. In spite of this decrease, however, the general receipts have so expanded as to enable us to meet expenditure and provide a small surplus without having recourse to further taxation. While, therefore, the abnormal condition of that important source of revenue requires this year a continuance of the "great caution" emphatically recommended in 1883-84 by Sir Evelyn Baring, the general forecast of my predecessor has so far been eminently justified. Results have shown that, notwithstanding the large remissions of salt and customs and other revenue in 1882-83, amounting in round figures to three millions (conventional sterling), and in the face of a falling off in the net opium revenue of the ensuing year of £1,378,400 as compared with the Revised Estimate, the revenue and expenditure balance themselves without the necessity of recourse to any starving or material reduction of any of the public services. The immediate cause of these satisfactory results, (which must be sought for, ultimately, in the great reforms in Indian finance introduced and developed by Sir John Strachey, and vigorously carried on by my predecessor), will be fully explained elsewhere in the course of these observations; but it follows from the above remarks that it is not my intention in this my first Statement, and at a time when one of our chief sources of revenue has so largely failed us, to enter into a discussion of any of the problems with reference to the Indian finances which are awaiting early treatment. Questions have arisen, for example, regarding the License Tax and the Stamp Duties, which during the ensuing year will require full consideration. But, for the reasons I have given, it would in my judgment be premature and injudicious to attempt at this moment a solution of any of them. I shall limit myself, therefore, to the customary review of the Accounts of 1882-83, to an analysis of the Revised Estimates of 1883-84 (with such remarks as are necessary to enable the public fully to understand the progress of the finances during the year now closing, and the position at the present moment), and, finally, to the Estimates of 1884-85, with a notice of the considerations on which have been based any considerable modifications under the several heads.

The figures in this Statement are as usual given "in conventional sterling," that is to say, £=₹10, unless where the contrary is expressly stated.

Changes in form of Statements appended to Budget.

3. A few words of warning are necessary here with regard to certain changes of classification which have been introduced into the accounts.

4. It has hitherto been the practice, in the case of State Railways, to show in the Estimates and Accounts *gross earnings* on the receipt side and expenses of *working* and *maintenance* on the expenditure side; while, in the case of the Guaranteed Railways, only *net traffic receipts* were shown on the receipt side, and *interest and profits*, &c., on the expenditure side. When a Guaranteed Railway is purchased by the State it enters into the class of State Railways, and there are obvious difficulties in dealing with it any longer as if it were a Guaranteed Railway.

Changes in Accounts of 1882-83 and Estimates of 1883-84 and 1884-85, made of showing Expenditure and Earnings of Guaranteed Railways purchased by the State.

5. After the East Indian Railway was purchased, it continued, however, to be treated in the Estimates and Accounts in the manner in which Guaranteed Railways are treated, and this plan was followed in the Estimates for 1883-84 published with the Budget Statement of March last. It has since been decided by the Secretary of State that Guaranteed lines purchased by the Secretary of State shall be treated in this respect in future as if they were State Railways, and the Accounts of 1882-83 have been made up in accordance with this order,

which is also followed in the Revised Estimates of 1883-84 and the Budget Estimates of 1884-85. The effect of this change is to augment the total revenue and the total expenditure when a Guaranteed Railway becomes the property of Government, without in any way, of course, influencing the final result.

Changes in headings of Productive Public Works (Revenue Account), Expenditure side.

6. It has also been found desirable to alter the headings on the expenditure side in the group of Productive Public Works (Revenue Account). In future the headings will be as follows:—

Expenditure on Productive P. W. (Revenue Account)—

36.—State Railways (Working Expenses).
East Indian Railway (Working Expenses and Surplus Profits).
37.—Guaranteed Railways (Surplus Profits, Land, and Supervision).
38.—Irrigation and Navigation (Working expenses).
39.—Charges in respect of Capital.
(*a*) Interest on Debt—
State Railways.
East Indian Railway.
Irrigation and Navigation.
(*b*) Annuities in purchase of Guaranteed Railways (including Sinking Funds).
(*c*) Guaranteed Railways Interest.

Budget Estimate of 1883-84 recast according to revised classification.

7. To facilitate comparison, the Budget Estimates of 1883-84 have been recast according to the classification adopted in the Revised Estimates of the year, and are published as Appendix II to this Statement.

Comparative Statement of Revenue and Expenditure from 1871-72 to 1883-84 re-published with certain modifications and brought down to 1884-85.

8. It may also be noted here that with the Financial Statement of 1883-84, a general Comparative Statement of Revenue and Expenditure for the years 1871-72 to 1883-84 was published as Appendix III. Examination of the figures in the Public Works Department which, at the time of the publication of the Statement, was not yet complete, has since rendered it possible to determine how much of the interest on the whole debt of India which was shown in one figure as *Interest on Ordinary Debt* in the Accounts of 1871-72 to 1875-76, (both years inclusive), belongs properly to the head of *Productive Public Works*. It also became possible to settle differences between the Civil and Public Works Accounts in the matter of classification, and to eliminate the debits and their corresponding credits arising out of cross transactions that occurred between Imperial, Provincial, and Local. In view of the above and other alterations, it is deemed necessary to republish the Comparative Statement, classified and arranged according to the plan now adopted in the Accounts, and brought forward to the year 1884-85. The statement is accordingly reproduced as Appendix III.

Accounts for 1882-83.

9. The Accounts of the year 1882-83 have resulted as follows:—

	£
Revenue	70,125,231
Expenditure chargeable thereon	69,418,598
Surplus	706,633

Resume of chief points in Accounts 1882-83.

10. The result cannot be considered as other than most satisfactory, when it is recollected that the surplus on the Budget Estimates of the year was only £285,000, that the Government of India was suddenly called on during the year to bear a heavy expenditure on account of the war in Egypt, and that the item of exchange considerably exceeded the Estimate.

A full explanation of the causes of increase and decrease will be found in the Appropriation Audit Report, to be published in the *Gazette of India* of 15th instant.

It will be sufficient to say in this place that there were large and satisfactory increases under *Land Revenue* £389,047, *Salt* £128,781, *Excise* £278,561, *Customs* 115,119, *Forest* £129,228 in the Civil Branch. Productive Public Works were better on the net account by £86,400; and this improvement was shown, although the amount of Land Revenue due to Productive Public Works was reduced in the actuals from that shown in the Estimates by transferring £215,900 from the Productive head to that of ordinary Land Revenue.

Excluding war expenditure the actual receipts and expenditure connected with the Army closely follow the Estimates.

The ordinary receipts proved to be £139,500 in excess of the Budget Estimate, and the ordinary expenditure to be £10,400 in excess of it.

The expenditure on account of the expedition to Egypt proved to be £1,284,000, and the receipts in connection with it (chiefly the English contribution of £500,000 (true sterling)), £584,700; the net charge in the accounts of the year was therefore £699,300.

Exchange was worse *net* by £306,400, of which £165,300 occurs under Secretary of State's bills and is due to the average rate of exchange falling below 1*s*. 8*d*., the rate adopted in the Budget, and £114,000 is due to transactions connected with the Southern Mahratta Railway.

General Remarks on the Revised Estimates for 1883-84.

Revised and Budget Estimates, 1883-84.

11. The Budget and Revised Estimates for 1883-84 compare as follows:—

	£
Budget* Estimates—	
Total Revenue	69,022,000
Total Expenditure chargeable thereon	68,565,000
Surplus	457,000
Revised Estimates—	
Total Revenue	70,569,900
Total Expenditure chargeable thereon	70,298,500
Surplus	271,400

Surplus of the year reduced by special and temporary causes.

12. It will be seen that the surplus on the Revised Estimates is actually less than the surplus on the Budget Estimates, but the deterioration is only apparent. The Revised Estimates provide for the remittance to the Secretary of State of £1,500,000 (true sterling) in addition to the drawings of the year as originally estimated, and this adds about £346,000 to the expenditure of the year under the head of Exchange; the Revised Estimates also provide for the payment of £1,000,000 (true sterling) to the War Office on account of arrears of non-effective charges connected with the portion of the British Army serving in India; another sum of £1,000,000 added to the expenditure. The expenditure of the year has thus been increased from temporary and special causes by no less than £1,346,000. Apart from these causes the surplus would have been £1,617,400, a very remarkable increase over the surplus of the Budget Estimate, namely, £457,000. It is unnecessary at present to enter at any

* The Budget Estimates with which comparisons are made are the Budget Estimates as recast in the new form; *vide* Appendix II.

length into an explanation of the causes which have led to the claim on account of arrears of non-effective Army charges. Correspondence on the subject is still continuing between the Government of India and Her Majesty's Government, and doubtless in due course will be published. It will be sufficient to explain here that prior to 1822 the East India Company was not called on to pay anything for non-effective charges on account of the portion of the British Army serving in India, but that from 1822 to 1861 the rule which governed the division of these charges between England and India was one of a fixed payment by India to England of £60,000 a year; that from 1861 to 1870 this latter rule was abandoned in favour of a capitation payment; and finally, that in 1870 the principle of a capitation payment was abandoned in favour of a system under which the capitalised value of the share of the pensions chargeable against Indian Revenues is paid by the Indian to the English Treasury. Thus if a soldier is discharged on pension after serving a portion of his time in India, the latter country is held to be liable for a share of his pension, bearing the same ratio to his whole pension that the period of his service in India bears to his whole service, and the capital value of the share of the pension chargeable to India is paid over to the English Treasury, which then becomes liable for the whole pension. The system introduced in 1870 is the system in force at present, and owing to delay at home in preparing the intricate calculations necessary before presenting the final accounts, arrears have accumulated, to the payment of which the million sterling above referred to will be devoted. The calculation of the amount payable by India is necessarily very complicated, as it depends largely on the death rate of special classes, for whom special life tables had not been constructed, and because the Indian Government is entitled to set-offs and credits of various kinds. It was known, therefore, that the calculations were in arrears, and that payments had not been made of the full sums that would ultimately be claimed, but the Government of India was wholly unprepared for the magnitude of the claims, (nearly 2¼ millions true sterling), suddenly made against it.

Proposals have been made to Her Majesty's Secretary of State for India for the payment of the large amount of arrears still outstanding, as well as of current charges, under a system which will not lead to any increase of expenditure over the sum originally provided in the Estimates of 1883-84 on this account. It has been possible to propose an arrangement of this nature, because it is expected that, owing to the short service system, the sums due on account of these non-effective charges will be reduced in future years. No answer to this proposal has yet been received from the Home Government.

Increase of Revenue over Estimate, 1883-84.

13. The increase under almost all the principal heads of revenue during 1883-84 is most satisfactory. Before proceeding to analyse the figures which make up these totals, a general review of the causes of increase will assist in enabling us to understand what the broad results of the year have been. Thus, under the principal heads of revenue, that is to say, under *Land Revenue*, *Opium*, *Salt*, *Stamps*, *Excise*, *Provincial Rates*, and *Forest*, there is an increase over the Budget Estimates of little more than £800,000, indicating a continuance of material prosperity throughout the country; while under *Productive Public Works—(Revenue Account)*, including State Railways, the East Indian Railway, and Guaranteed Railways, the *net* increase amounts to £390,900.

14. Nothing shows more strikingly than the last figures, what an important part the Railway receipts are now taking in the Indian finances, and how largely those finances are indebted to the export trade for the elasticity which has enabled them in 1883-84 to meet an increased expenditure due to special causes of £1,346,000, and, at the same time, to present a surplus of £271,400.

15. The increase in the consumption of salt may be judged from these comparative figures:—

Comparative consumption of salt, 1881-82, 1883-84.

Consumption of Salt during the eleven months from March 1st, 1883, to January 31st, 1884, compared with the corresponding period of the year 1881-82.

Province.	Consumption, March 1st, 1881, to January 31st, 1882.	Consumption, March 1st, 1883, to January 31st, 1884.	Percentage of increase + or of decrease −
	Maunds.	Maunds.	
Bengal	8,207,000	8,850,000	+ 7·83
Inland Customs	6,178,000	6,459,000	+ 4·55
Bombay	4,361,000	4,789,000	+ 9·81
Sindh	148,000	176,000	+ 18·91
Madras	5,604,000	6,800,000	+ 21·34
Total	24,498,000	27,074,000	+ 10·52

16. The following shows the increase or decrease in consumption of salt for the eleven corresponding months of each year from 1874-75, as compared with the previous year:—

General increase and decrease of consumption of Salt from 1874-75 to 1884-85.

	Increase in Maunds.
March 1st, 1874, to January 31st, 1875	+ 288,000
„ 1875 „ 1876	+ 77,000
„ 1876 „ 1877	+ 498,000
„ 1877 „ 1878	+ 491,000
„ 1878 „ 1879	+ 367,000
„ 1879 „ 1880	+ 1,724,000
„ 1880 „ 1881	— 690,000
„ 1881 „ 1882	+ 1,016,000
„ 1882 „ 1883	+ 1,603,000
„ 1883 „ 1884	+ 973,000

Increased consumption of 11 months represents 51 lakhs increased revenue.

This increase o consumption in 11 months of 1883-84 over the corresponding months of 1881-82 represents, at ₹ 2 per maund, an increased revenue of rather more than 51 lakhs of rupees.

17. In his Financial Statement for 1883-84 (para. 111) Sir E. Baring calculated the increased consumption at that date as equivalent to an additional revenue of £320,600, adding that "to the extent of this sum, therefore, it may be said that the loss of revenue consequent on the reduction of duty (£1,400,000) has been recouped by the increased consumption of eleven months." He went on to say (para. 116), "Should the same rate of increase continue, the revenue, at the reduced rate of duty, will, in less than three years from the present time, stand at the same figure as it did prior to the reduction of the duty." The increase, though very considerable, has not been at the rate of 1882-83, but it is still steadily progressive. From the following figures will be seen the net increase taken in the Estimates and the figures of Actuals or Revised Estimates for each year from 1882-83:—

	Estimates, Net revenue.	Actuals.
	£	£
1882-83	5,410,000	5,728,751
1883-84	5,620,700	5,788,300 (Revised Estimates).
1884-85	5,807,200	

Increase taken on the Estimates since 1882-83.

Increase in Estimates of 1884-85 over Estimates 1882-83, £397,200.
Increase in Actuals, 1882-83, over Estimates 1882-83, £318,751.
Increase in Revised Estimate, 1883-84, over Actuals, 1882-83, £59,549.

It will be observed that the increase in the Estimates of 1884-85 over the Estimates of 1882-83, namely, £397,200, is considerably less than the increase (£510,000) worked out in para. 16 from the figures showing the increase in consumption; the difference is due to the fact that the effects of a considerable increase of consumption were discounted in framing the Estimates of 1882-83, and also to the causes explained hereafter in para. 36.

18. It will have been seen that the percentage of increase between the two periods is 10·52; the lowest figure, under Inland Customs, 4·55, and the highest, in Madras, where the percentage of increase rises to 21, or within 3 of the figure necessary to place the revenue at the present rate, on an equality with the revenue leviable under the former duty. The Inland Customs in 1882-83 showed a decrease of 1·07 due to the competition of Bombay and Cheshire salt. In spite of this competition, however, it now shares in the general increase. A glance at the second of the above tables shows that the increase during 1883, though less than that in the preceding year, amounted nevertheless to 973,000 maunds, being equivalent to a revenue of £194,600. It may fairly be assumed, in presence of so constant and large an increase, that the consumption of salt will yield a progressively increasing revenue for some time to come, and holds out the hope that should a further reduction of duty be hereafter made, it may be met as promptly and satisfactorily by a corresponding expansion in the demand.

Ratio of increase in salt consumption in the several Provinces.

19. A comparative statement is subjoined, showing the fall in prices of salt per maund in January 1884, June 1882, and January 1883, as compared with February 1882. With the exception of Bombay and Rajputana, the fall in prices in January 1884 as compared with February 1882 is on the whole sensibly greater than was the fall in January 1883, compared with the same date. It will be recollected that the salt duty was reduced in March 1882.

Price per maund of Salt in the second half of February 1882, and fall in prices in June 1882, and in January 1883 and 1884, as compared with the second half of February 1882.

Comparative prices of February and June 1882 and January 1883 and 1884.

Provinces.	Second half of February 1882.	Fall in prices per maund in June 1882 as compared with February 1882.	Fall in prices per maund in January 1883 as compared with February 1882.	Fall in prices per maund in January 1884 as compared with February 1882.

Comparative increase in receipts under Railways from 1880-81 to 1884-85.

20. Turning to the other source of revenue which has mainly helped to make good any loss that might have been anticipated from the remission of the customs and salt duties, we find a still more satisfactory result in the receipts alluded to in para. 14, *viz.*, the receipts from Railways. There may very well be two opinions as to the extent to which receipts from Railways should be regarded as a source of permanent revenue in India, especially in view of the need of removing all obstacles in the shape of transit charges on the export of our produce; but there can be only one conclusion as to the assistance afforded during the last three years to the resources of the exchequer by the increased activity of that period.

21. To make any attempt to show the progress of the revenue derived from Railways, we must go back to the year 1880-81, as the year 1881-82 was altogether exceptional; and, although slightly anticipating, we must include in our comparison the estimates of the coming year. The transactions of Railways in the Budget Estimate of 1884-85 (as explained in paras. 4 and 5) are shown for the first time in a new form recently prescribed by the Secretary of State, and, in order to make a fair comparison with previous years, the figures of those years have been revised in the new form.

22. The revenue receipts from the East Indian Railway are now shown in the gross under Revenue, and the payments to the deferred annuity-holders on account of surplus profits earned on this Railway, as well as the contribution to the Provident Fund are shown under Expenditure along with the working expenses. In the Budget Estimate of 1884-85, the Revenue transactions of the Eastern Bengal Railway up to the 1st of July, the date of the intended purchase of that Railway, have been shown under Guaranteed Railways, and for the remainder of the year under State Railways.

23. The growth of the Railway Revenue will be best seen from the following figures:—

Net Result to the State from its connection with Railways from the year 1880-81.

	Actuals, 1880-81.	Actuals, 1881-82.	Revised Estimate, 1882-83.	Actuals, 1882-83.	Budget Estimate, 1883-84.	Revised Estimate, 1883-84.	Budget Estimate, 1884-85.

NET LOSS	764,266	64,222	316,400	294,598	345,500	566,370	157,260
NET GAIN TO STATE	—50,612	1,035,342	398,800	419,343	512,900	787,530	1,079,240

State Railways.

24. In the year 1880-81 the net Revenue yielded by the State Railways classed as Productive Public Works fell short of the interest charges on the capital outlay by £543,283. In 1882-83 the deficit was reduced to £114,551. In the Budget Estimate of 1883-84 the charge was placed at £150,300, but owing to the increased prosperity of the year it is now estimated that these Railways will yield a profit in excess of all charges of £75,300. In 1884-85, including the estimated returns from the Eastern Bengal Railway for 9 months of £128,200, it is anticipated that the State Railways will yield a surplus of £156,900.

East Indian Railway.

25. The East Indian Railway in 1880-81 added £1,256,937 to the revenues of the State after meeting all charges. The returns this year were exceptionally favourable, as the payments of only nine months' annuity fell in this year. In the year 1882-83 the returns from this Railway were £828,492. In the Budget Estimate of 1883-84 the returns were placed at £1,008,700, and these have been increased in the Revised Estimate to £1,278,600. The amount of £1,079,600 entered in the Budget Estimate of 1884-85 should be realised.

Guaranteed Railways.

26. In the year 1880-81 the net receipts from Guaranteed Railways fell short of the charges for interest, surplus profits, &c., by £764,266. In 1882-83 the deficit was reduced to £294,598. The net charge on this account provided for in the Budget Estimate of 1883-84 amounted to £345,500, and this has been increased in the Revised Estimate to £566,370; the increase is chiefly due to the falling off in the traffic of the Eastern Bengal Railway, and to a sum of £325,000, the estimated loss on the Indus Flotilla, having been written off to Revenue; but for this special item, the loss would have been reduced to £241,370. It is estimated that the loss in 1884-85 will not exceed £157,260.

Net gain by Railway receipts in five years.

27. Including the estimates of the years 1883-84 and 1884-85, the net results to the State from its connection with Railways, commencing from the year 1880-81, is as under:—

	£
1880-81 Loss	50,612
1881-82 Gain	1,035,342
1882-83	419,343
1883-84 Revised Estimates	787,530
1884-85 Estimates	1,079,240
Net Gain in 5 years	3,270,843

Scheme for railway extension submitted by Government of India to Secretary of State in January 1883.

Appointment of a Parliamentary Committee to enquire into Indian Railways.

28. The Government of India submitted to the Secretary of State in January 1883 its views on the extension of the railway system in India, and proposed for adoption a scheme of works and expenditure calculated to give a great impulse, whether by State or private enterprise, to the construction of railways during the next five years. The appointment of a Parliamentary Committee to examine into the subject has led temporarily to the scheme being put aside; but the Government has lost no opportunity of urging its views on the Secretary of State, and insisting on the great importance which it attaches to a comprehensive and vigorous treatment of the question. It has deputed two carefully selected officers to represent those views before the Committee, and it has every confidence that their representations will receive the attention which the importance of the subject and their own experience deserve. The Government of India is fully alive to the necessity and the advantages, in the interests no less of the State than of the public, of a vigorous policy in regard to its public works. But there are indications that the mercantile public, whose interest in the matter is little less than that of the State, while actively pressing for a policy such as that above indicated, and confident of prospective profits, is disposed to throw the burden and risk of such works as must be undertaken too

entirely on the resources of the Government. These resources are necessarily limited; and if, as is urged, as experience is daily showing, and as from the figures given in the last paragraph is proved to demonstration, the remunerative character of railway enterprise in India, when prudently carried out, is unquestionable, it may be fairly demanded that those whose interests in that enterprise are so considerable should not be backward in acting on the confidence of which they give to the Government reiterated assurances. This view of the question has been forcibly stated in a leading article of the "Economist" in its issue of 2nd February last, in words which may be aptly quoted here at this moment;

Remarks of the "Economist" on the attitude of the mercantile classes.

"But if the new undertakings promise so well, where is the necessity for a Govern-
"ment guarantee? One can understand the Government coming forward in the infancy
"of a railway system, where every thing as regards the future is in a state of complete
"uncertainty, and offering special inducements to investors. In the case of India, how-
"ever, the experimental stage is past. Experience has demonstrated the paying character
"of the Indian railways, and at the present time especially, when the great difficulty is
"not to find capital for sound and profitable undertakings, but to find proper outlets for
"capital, private enterprise ought surely to be sufficient to supply India with the railways
"she needs. It is true that investors have not yet shown a disposition to put their money
"in such undertakings. That, however, is largely because their remunerative character
"has not been sufficiently realised, and in part, also, because the system of granting
"guarantees has created the wrong impression that without a guarantee the venture was
"too risky to be undertaken. Now, however, that Chambers of Commerce, both here and
"in India, are urging the fact that the railways are paying concerns as a reason for the
"State committing itself further to their construction, the idea that they are investments
"involving so much more than the ordinary risk that a Government guarantee is essential,
"should be exploded. And the merchants constituting these Chambers ought really to
"show the courage of their opinions. They can influence the flow of capital to a very
"great extent, and there is the greater reason why they should direct it to Indian railways,
"because from these they, on their own showing, will reap a double gain. The new lines,
"as they rightly point out, will greatly increase the trade of the country, and thus tend to
"the profit of those by whom the trade is conducted, in addition to returning a fair profit
"upon the capital invested in them. Private enterprise, therefore, we think, might do
"and ought now to do, without the State crutch upon which it has hitherto been leaning."

Expenditure on State and Guaranteed Railways during 1883-84, 1884-85.

29. In connection with this subject the subjoined table shows at a glance the capital expenditure of Government and the Guaranteed Railways on the Revised Estimates of 1883-84 and the Budget Estimate of 1884-85. It will be seen that during the ensuing year the State expenditure is estimated at £4,137,500 against £3,497,100 in 1883-84, the expenditure of the Guaranteed and Southern Mahratta Railways being £2,454,000 against £1,860,500; the total estimated expenditure of 1884-85 being £6,591,900 against £5,357,600, in the Revised Estimates of 1883-84. The expenditure of private Companies is given so far as it is known; but the figures for the Companies marginally noted cannot be given, though it would certainly be but a fraction of the totals quoted above.

	Revised Estimate, 1883-84.	Budget Estimate, 1884-85.
	₹	₹
(1) Directly expended by Government.		
On Railways classed as Productive	3,06,98,000	2,15,19,000
On Railways not classed as Productive	—*46,16,000	†3,20,000
On Protective Railways	62,59,000	1,13,86,000
On East Indian Railway (excluding converted annuities)	23,80,000	54,00,000
On Eastern Bengal Railway (excluding debentures)	...	10,00,000
On Western Deccan Railway	2,50,000	17,50,000
	3,49,71,000	4,13,75,000
(2) Expenditure on the responsibility of Government.		
Guaranteed Railways	1,09,34,000	1,44,56,000
Southern Mahratta Railway (Company's Estimates)	76,71,000	1,00,88,000
	1,86,05,000	2,45,44,000
	5,35,76,000	6,59,19,000
(3) Expenditure by Private Companies.		
Bengal Central Railway. Withdrawals in India	20,02,000	70,000
Bengal Central Railway. Withdrawals in England converted at par	9,80,000	5,50,000
	29,82,000	6,20,000

It may not be generally known that there was expended in 1883-84 on Railways no less than £5,357,600, for the interest on which Government is liable, and that the amount to be similarly expended in 1884-85 is £6,591,900. A further sum of £680,000 might be allotted for expenditure on Productive Public Works this year, without exceeding the limits placed on such expenditure by the Home Government, if funds were available. But funds, so far as can be judged at present, cannot be made available without borrowing more than the usual Productive Public Works loan of £2,500,000,—a course which, for sufficient reasons, and in the present state of the money market, is not considered expedient. The grant of this additional sum of £680,000 must therefore await a more favourable moment.

Increase in imports and exports.

30. Closely connected with the expansion of the Railways has been the increase of imports and exports. In Appendix IV will be found tables showing the imports and exports of merchandise during the last ten years, as well as those of gold and silver, and a statement of the coinage of silver at the Mints of Calcutta and Bombay from 1873-74 to 1882-83 and for ten months of 1883-84. These tables show that exports have risen from £60,937,513 in 1878-79 to £83,485,122 in 1882-83; imports having risen from £37,800,594 in 1878-79 to £52,095,711. A remarkable feature in these statements is the large net import

* Excluding expenditure on Surveys and Miscellaneous charges amounting to ₹ 8,70,100.
† Ditto Ditto Ditto Ditto to ₹ 13,47,000.

Increased imports of Gold.

of gold from the 1st April 1879 up to the 31st January 1884, amounting to no less than £19,996,987, the imports of the 10 months of 1883-84 alone being little less than the total imports of the 5 years from 1873-74 to 1877-78.

Wheat and oil seeds.

In Tables II and III, published in the *Gazette of India* of the 15th March, is shown the steady development in the shipments of wheat and oil-seeds. Of wheat, during the 10 months of the current year, 19,500,000 cwts. have been exported, and though, owing to large stocks and low prices in the English market, the trade is less active at present, the year will close with an export of no less than 1,000,000 tons. A table, similar to that given in para. 160 of the Financial Statement of 1883-84, is subjoined, presenting the comparative results of the import of wheat into Great Britain from India and other countries, during the years 1882 and 1883, showing again the increasing extent to which the English market is supplied by wheat imported from this country.

31. The success of the Post Office Savings Banks has been most satisfactory.

Post Office Savings Banks.

On 31st December 1882 there were 2,928 Savings Banks Accounts opened with the various Post Offices by Europeans and Eurasians. On 31st January 1884, 13 months later, there were 7,407 such accounts open. On the same dates the number of accounts opened by Natives of India were 28,770 and 71,651 respectively; on the former date the balance at credit of depositors was £207,876. On the latter date it was no less than £687,122. On 1st instant. the balance was approximately £704,272. About $\frac{5}{6}$ths of the whole balance appertain to the Accounts opened by Natives of India. The system of Post Office Savings Banks was extended to the Presidency Towns on

Extended to Presidency Towns.

1st May last, (to Madras on 1st April), but this extension has not been attended with the increase of deposits which was anticipated. This result is probably due to the fact that greater facilities for the investment of small sums in a profitable manner exist in Calcutta than in the interior of the country. The total number of accounts opened in Presidency Towns is only 3,858, and the total deposits on 29th February only came to £29,257.

The proportion of European and Eurasian investors to Native investors in Presidency Towns is double the proportion which prevails for the whole country.

Scheme of Life Insurance and purchase of Deferred Annuities for postal employés.

A scheme for Life Insurance and for the purchase of Deferred Annuities was introduced during 1883-84 for the benefit of postal employés only. It is too soon yet to form any opinion as to its prospects of success.

District and Presidency Savings Banks.

32. The number of depositors in District and Presidency Savings Banks on 31st March 1883 was 88,836, of whom 68,604 were Natives of India, and 20,232 were Europeans and Eurasians. The total balances of deposits on the same date came to £3,113,700, and as the aggregate balance was reduced between 31st March and 31st December 1883 by £44,700, it would seem that these Savings Banks are being affected by the opening of the Post Office Savings Banks.

Stock Notes.

33. Up to 31st March 1883 the value of Stock Notes issued was £169,200. In 9 months from that date, namely, to end of December 1883, notes to the value of only £21,200 were issued, so that the total amount that had been issued up to the beginning of the present calendar year was £190,400.

Analysis of Figures of Revised Estimate of Revenue and Expenditure for 1883-84.

Receipts

34. Passing from the above general considerations to particulars, it will be seen that the chief items of increase in revenue, as shown in the Revised Estimate, over the figures entered in the Budget, are the following, against each of which a brief explanation is given :—

Opium.

35. *Opium.*—£283,200. The increase is chiefly due to sales of Bengal opium having realised a higher price than the figure taken in the Estimates, namely, ₹1,250 as against ₹1,200 per chest; on the other hand, there may be a slight falling off in the revenue from Malwa opium, owing to exports being below the estimate.

Important financial results of Mr. H. Rivett-Carnac's experiments in the manufacture and preparation of Malwa Opium.

The Government is indebted to Mr. H. Rivett-Carnac, Opium Agent at Benares, for strengthening its opium revenue during the year 1883, and, in a lesser degree, in the previous year, by the manufacture and preparation of Malwa opium into a form suited for local consumption. Mr. Carnac, by his successful experiments in this direction—experiments which deserve the cordial recognition of the Government of India—set free in 1882 1,372, and in 1883, 3,000 chests of provision opium, (or opium that is available for export), at a profit to Government in the former year of ₹1,94,845, and in the latter, of ₹7,56,347. Arrangements of a similar nature have been made during the ensuing year, which may be expected to yield a corresponding profit. It is calculated that so long as the cost of the Malwa drug at 90° consistence, does not exceed ₹413 per maund, and the selling price of provision opium is not less than ₹1,202 for Patna, and ₹1,142 for Benares opium, the scheme for substituting Malwa for Bengal opium for manufacture into excise opium is, financially speaking, likely to prove successful. The Malwa opium was first tried in the North-Western Provinces and in the Central Provinces, in both of which it met with some opposition, but later reports are favourable, the North-Western Provinces Excise Commissioner reporting that "the taste of the people is

"no doubt becoming reconciled to the new drug." The Excise Commissioner, Central Provinces, writes—

"I reported that complaints had been received from some districts in regard to the "quality of the new opium, and also in regard to the weight of the cakes. I then stated "that the complaints as to its quality appeared to be exaggerated, and it would seem "from further information since received from district officers, that this was the case. The "new Malwa opium contains more oil than the Bengal opium formerly supplied. It also "differs from it in flavour, and when the former was recently substituted for the latter "in the North-Western Provinces, complaints (I am informed by the Commissioner of "Excise) were loud, but the people there are becoming accustomed to the taste of the "new drug, and complaints have apparently ceased. Here, too, the probability is that "the people will soon become used to the flavour of the Malwa opium and be satisfied "with it."

The experiment has been since extended to Assam and Burma, but the results have not yet been reported to the Government of India.

Salt. 36. *Salt.*—£100,200. The figures already given showing the increase in the consumption of salt will explain this item. Briefly, the consumption of salt continues in excess of the figure assumed in the Estimates, and there seems every probability that it will continue to do so. The increase of revenue, however, lags somewhat behind the increase of issues of salt from the depôts, as in some places, notably in Madras, a system is in force under which by giving security the payment of the duty can be postponed for six months after date of issue to the wholesale purchaser.

Excise. 37. *Excise.*—£151,500. The increase is due to a prosperous year, and is distributed throughout the various provinces; but the chief items of increase will be found under *Bengal*, the *North-Western Provinces*, and *Bombay*. The Excise administration in the latter province has been singularly successful.

Forest. 38. *Forest.*—£74,100. The increase occurs almost entirely in Burma and Bombay, and is the result of extended operations.

Law and Justice. 39. *Law and Justice.*—£56,000. The marked decrease which occurs under this head is due mainly to the introduction of the recent policy of the Government in discouraging the more remunerative kinds of jail manufacture, which were held to compete injuriously with private local enterprise. The loss is balanced, however, by a similar decrease in expenditure on account of purchase of raw material for manufacture.

Police. 40. *Police.*—£84,600. This increase is a mere matter of account. It occurs in the Punjab and Bombay, and is due to a change of system by which contributions towards municipal police, as well as the cost of that body, are shown under the receipt and charge head of *Police*.

Scientific and other Minor Departments 41. *Scientific and other Minor Departments.*—£ 14,700. Unexpected sales of Cinchona Bark in Madras and in England account for nearly the whole of this increase.

Interest. 42. *Interest.*—£ 139,800. Arrears of interest on the loans to the Bombay Port Trust, previously taken in reduction of capital debt, but now transferred to interest, and interest on investments of cash balances of Famine Insurance money in England.

State Railways. 43. *State Railways.*—Gross earnings, £356,800. This increase is due to the improvement in goods traffic, and is found chiefly in the two Imperial Railways, the *Rajputana-Malwa*, £160,000, and the *Indus Valley*, £182,500. The opening of the *Rewari-Ferozepore* line, and the recent reductions of rates on the *Rajputana-Malwa* line, have swelled the receipts of that line, while the great development of the export wheat trade from Kurrachee has led to the receipts as shown under the *Indus Valley*. The *East Indian Railway* gross receipts increase £375,000. This is mainly due to the export trade, and, partly to some increase in 3rd class passenger traffic.

Guaranteed Railways. 44. *Guaranteed Railways,* net traffic receipts decrease £174,000. The following is an analysis of the increases and decreases which make up the above total:—

	+	—
Eastern Bengal Railway	...	110,000
Madras Railway	15,000	...
Bombay, Baroda, and Central India Railway	130,000	...
Great Indian Peninsular Railway	...	25,000
Oudh and Rohilkhund Railway	71,000	...
Sind, Punjab, and Delhi Railway	...	255,000
TOTAL	216,000	390,000
Decrease		174,000

Eastern Bengal and Sind, Punjab, and Delhi Railways. 45. The decrease in *Eastern Bengal Railway* is owing to a deficient jute crop. The reduction under *Sind, Punjab, and Delhi Railway* is a matter of account the receipts of the Railway itself having been favourable. The deficit is due to the adjustment of the loss on the Company's flotilla, involving a debit of £325,000 against the Revenue Account of the line. But for this, the Revised Estimates would have shown an increase in the Budget of £70,000.

Expenditure. 46. Under *Expenditure* the main heads, with brief explanatory remarks, are these—

Refunds and Drawbacks. *Refunds and Drawbacks.*—Increase, £178,500, due mainly to Madras and Bombay, being, in the former, refunds of water-tax erroneously collected, and payments on account of losses sustained by contractors, amounting to £33,000; in the latter, *Land Revenue* refunds, due to remissions of collections made at enhanced rates, amounting to £120,000; these collections were made in 1880-81 and 1881-82, and are those referred to in paragraph 147 of the Budget Statement for 1883-84. It was expected that they would have been cleared off in 1882-83, but they have fallen to the present year.

Opium. 47. *Opium.*—Decrease, £301,800, owing to the reduced expenditure connected with the short crop of last year.

Marine. 48. *Marine.*—Increase, £131,300. The increase is due partly to the settlement of an outstanding account with Her Majesty's Government, amounting to £36,500; partly to various smaller claims amounting to £83,000, and partly to the purchase by the Indian Marine Department, at a cost of £50,000 (true sterling) of a new steam vessel, the "Golconda," for transport and other services in Indian waters.

Railways. Reduction of Debt. 49. *Famine Relief and Insurance.—Protective Works—Railways.*—Decrease £386,600; *Protective Works, Irrigation*, decrease £52,300; *Reduction of Debt*, increase £441,400. The short outlay under the former head is due to the late date on which sanction was received to commence the construction of the Jhansi-Manakpore, Cuddapah-Nellore, and Bellary-Kistna Railways; the money will accordingly be transferred to *Reduction of Debt* in the Accounts of 1883-84, the lapse being re-allotted in 1884-85 by a corresponding decrease under the head *Reduction of Debt*.

State Railways. 50. *State Railways, working and maintenance.*—Increase, £118,200, due to renewals of vehicles, machinery, and permanent way.

East Indian Railway. 51. *East Indian Railway, interest and profits.*—Increase, £109,100, due to similar causes. The increase under *Guaranteed Railways*, £58,200, is due to the increased amount of surplus profits payable to the shareholders.

Interest on Productive Public Works debt. 52. *Interest on debt for Productive Public Works, Miscellaneous public improvements.*—Decrease, £21,600; this reduction is the result of the interest charge on the Madras Harbour works having been expunged because the past

capital outlay on this Harbour has been transferred to *Civil Buildings, Roads, and Services*, as explained hereafter in paras. 58 and 102; the increase under *Civil Buildings*, &c., is mainly caused by the outlay on the Harbour works being debited to that head. The transfer of the Madras Harbour to a Port Trust is in course of negotiation.

Army. Causes of Increase.

53. *Army.*—Increase, £1,012,400. The increase is due almost entirely to payment of £1,000,000 (true sterling) on account of arrear charges referred to in para. 12. There is also an increase on account of the new scale of pay for British troops serving in India, as explained in the remarks on the Estimates for 1884-85 (para. 103).

Military operations in Egypt.

54. *Military Operations in Egypt.*—Increase, £50,200. Some final debits to this account have fallen into 1883-84.

Exchange.

55. *Exchange on transactions with London.*—Increase, £312,000. The whole increase is practically due to the remittance of £1,500,000 in excess of the amount taken in the Budget. It was expected that the bills of the Secretary of State would be drawn at an average rate of 1*s.* 7½*d.* per rupee. The average rate actually obtained has exceeded the rate taken in the Estimates by a mere fraction.

State Railways Capital Account.

56. *State Railways Capital Account non-productive.*—Decrease, £885,000. The diminution is due to the transfer to *Productive Public Works* of the outlay on certain Provincial Railways as explained in next paragraph.

Adjustments of Account between Capital and Revenue Expenditure during 1883-84, and the financial result.

57. Several important adjustments of a complicated nature connected with the transactions of past years have been carried out in the Revised Estimates of 1883-84. These adjustments have, as far as practicable, been so regulated as to reduce to a minimum the effect on the net financial results of the year; and practically their influence on the surplus of the year has been limited to reducing it by £5,796. The amount of disturbance in the accounts is insignificant in comparison with the magnitude of the adjustments.

58. In the first place the Secretary of State decided that the capital expenditure on the Parbutti-Dinajpore, Diamond Harbour, Cawnpur-Farukhabad, and Kashgunge-Soron Railways, as well as that on the Jumna Bridge, which had been and was being incurred from Provincial balances and charged to the ordinary account, should be transferred to the Capital Account of Productive Public Works. The effect of the adjustments rendered necessary by this order, if taken by themselves, would have been to increase the imperial surplus in 1883-84 by a sum of £852,274, although the increase properly belonged to past years. In the second place, it was decided to write off as ordinary expenditure the outlay on the Madras Harbour Works to the end of 1882-83 (£533,670), which had been charged to the Capital Account of Productive Public Works; and also to write off against Revenue, by a credit to capital, the sum of £325,000, being the loss in past years on the Flotilla of the Sind Punjab and Delhi Railway. The total to be written off in the ordinary expenditure account, therefore, came to £858,070. By carrying out these adjustments in one year, the *net* financial result of the year (1883-84) will be disturbed only to the amount of £5,796, by the inclusion in it of transactions which, properly speaking, belong to previous years.

The alterations in the Revised Estimates of 1883-84 due to these adjustments will be found under the following heads in Abstracts A and B:—

REVENUE FROM PRODUCTIVE PUBLIC WORKS (REVENUE ACCOUNT).

XXVI.—Guaranteed Railways (net traffic receipts).

EXPENDITURE ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE—

41. State Railways (Capital Account).

EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNT)—

51. State Railways.

53. Miscellaneous Improvements.

Budget Estimates, 1884-85.

Estimated Revenue and Expenditure.

59. The Budget Estimates for 1884-85 are as follows:—

Receipt.

	£
Revenue	70,560,400
Expenditure chargeable thereon	70,241,100
Surplus	319,300

Opium.

60. Under the head *Opium* the estimate of receipts for the ensuing year is as low as £8,594,200, being a decrease of no less than £889,000 on the revised estimates of 1883-84. The net receipts of *Opium*, after deducting the cost of production, are estimated at £6,241,300 against £7,619,700 in the Revised Estimates of the preceding year. It has already been explained in the previous part of this Statement, (para. 2), that the failure of the opium crop in 1883 has made it necessary to reduce the number of chests of Bengal opium to be sold during the calendar year 1884. When the Budget Statement of 1883-84 was issued, it was estimated that the crop then being gathered would not give more than 47,000 chests of provision opium; it actually gave 38,214 chests only. At same time the reserve was estimated to stand at 13,859 chests on 31st December 1883, but the actual reserve on that date was only 11,632 chests. Notwithstanding the very large reduction in sales during the calendar year 1884, the reserve on 31st December 1884 is estimated to stand at 2,296 chests only. The present crop promises to be a good one, the latest estimates placing the probable number of chests of provision opium at about 52,000. The number of chests of provision opium sold during 1883-84, namely, 54,400, was 2,000 less than in the previous year. It has already been announced that 3,800 chests of Bengal opium will be sold every month from April to December inclusive, during the present calendar year. The number of chests to be sold in the calendar year 1885 will be announced hereafter, in accordance with the procedure laid down in Notification No. 1418, dated 16th March 1883, published at page 159 of the *Gazette of India* of 17th March 1883, Part I. The number to be sold in the year 1885 will not in any case exceed 50,000, and will probably be somewhat less; any excess of production over sales will be used to strengthen the reserve

Number of chests to be sold from April to December 1884.

Estimated price during 1884-85.

61. The average price of Bengal opium has been taken in the Budget Estimate at ₹1,250 per chest, which, in view of the price obtained at sales during the past year, and the reduced quantity which is to be put on the market during the year 1884-85, may be looked on as moderate. The expenditure under the head of opium is considerably in excess of the previous year, owing to the promise of a better crop. The figure taken is £2,352,900 as against £1,863,500 in the Revised Estimate of 1883-84, and is not only considerably larger than the 1883-84 figure of the Revised Estimates, but in excess of the actuals of many previous years. The intended purchase by Government of 4,000 maunds of Malwa opium, in continuation of the experiment spoken of in para. 35, adds about £120,000 to the Estimates; but this expenditure will be largely covered by the increased export of Bengal opium, set free by Mr. Carnac's Malwa operations.

Disturbance of opium estimates by passing events in China.

62. The opium estimate, though carefully framed, may possibly be to some extent disturbed by aggravation of the disputes at present existing between the French and Chinese Governments; but affairs have not reached a point which would justify us in moulding our estimates with immediate reference to the probabilities of graver complications.

Salt, Stamps, and Forest.

63. Under *Salt, Stamps*, and *Forest*, credit has been taken for a small progressive revenue.

Post Office.

64. The increase under *Post Office* (£47,300) occurs under *postage stamps, postage collected in cash,* and *Money Order fees.*

Telegraphs.

65. Under *Telegraphs* there is an increase of £48,400, being the net result of improvement under *Indian Telegraphs* of £69,100, and of falling-off under *Indo-European Telegraphs* of £20,700. The increase under *Indian Telegraphs* is due, first, to the estimated development in message revenue; secondly, to the anticipated recovery of arrears due by the South Indian Railway; thirdly, to receipts from other Railways and guarantors for extension. Under *Indo-European* Telegraphs the decrease is chiefly due to the following causes:—*firstly*, the liquidation of the Persian debt in 1883-84; *secondly*, payments towards instead of receipts from the common purse, because of the Indo-European route carrying much more than its standard share of the aggregate traffic; *thirdly*, to the Revised Estimate for 1883-84 containing an unusually high balance of arrears for 1882-83.

Mint.

66. The estimate taken under *Mint* represents a normal revenue. The Revised Estimates of 1883-84 were reduced because the silver imports during that year, owing to large drawings by the Secretary of State, fell below the expectations, but receipts under this head depend upon so many causes which it is impossible accurately to forecast at the commencement of the year, that a comparative estimate between any two years supplies a test of but little value.

Interest.

67. Under *Interest* there is a decrease of £137,700, as compared with the Revised Estimates of 1883-84; this is due to the special receipts on this account in 1883-84, noticed in para. 42.

State Railways.

68. Under *State Railways* (*Productive*) there is an increase of £629,600 on the Revised Estimates of the preceding year. Of this sum, £430,000 is taken on the Eastern Bengal Railway, which will become a State line by purchase in the course of the year. The balance, £199,600, is the net result of improvements under the several Railways, with the following exceptions: Wurda Coal State Railway, difference *nil;* Nalhati Railway, decrease £400; the Indus Valley Railway, decrease £40,000; total £40,400. The figures under the Wurda and Nulhati lines call for no special notice. As regards the Indus Valley Railway, it is considered unsafe to base estimates on the large increase in 1883-84, which was due to a sudden and unexpected export trade in wheat having sprung up from Kurrachee. It is difficult to say at present how far a continuance of this trade may be counted on, and therefore it has been considered safer to take a reduced figure for the ensuing year. The increase under the main lines may be ascribed generally to the extension of lines and the expansion of traffic. Under *East Indian Railway* it has been thought prudent to budget for a decrease, as compared with the Revised Estimates of 1883-84, of £180,000; the reason being the indifferent prospects of the year's harvests in parts of India, and the slackening in the export trade owing to low prices in Europe, and large stocks there and elsewhere. Under *Guaranteed Railways net traffic receipts* there is an increase of £248,000. This is chiefly due to the heavy debit of £325,000 in 1883-84 on account of the loss on the Indus flotilla.

State Railways not classed as productive.

69. There is an increase under *State Railways not classed as productive* of £21,200. This increase is the *net* result of transferring the Sonarpore-Diamond Harbour Railway and the Cawnpore-Furrakhabad Extension to the Productive section, combined with an estimated increase of £24,000 on the Rewari-Ferozepore Railway, and a few other changes of minor importance.

70. There is an increase under *Civil Buildings, Roads, and Services* of £73,900, chiefly due to an expected payment of £40,000 for the East Indian Railway Office; £10,000 from the outturn of the Barrakar Iron Works; £5,000 from the Akra Brick Manufactory; £10,000 from the outturn of the Madras Workshop; and sundry minor items.

Expenditure.

71. Turning from Revenue to Expenditure, the following items demand some explanation:—

Interest on ordinary debt.

Interest on ordinary debt, excluding the charge on account of Productive Public Works Debt, (£3,686,800,) being a decrease on the Revised Estimates of £120,800.

The reduction may be said, speaking generally, to be due to the fact that the sums spent on Productive Public Works exceed the net amount borrowed, and that consequently the interest added yearly to the charge under this head on account of money borrowed is less than the total amount transferred on account of interest, to the Productive Public Works head.

Interest on other obligations.

72. *Interest on other obligations.*—Increase, £33,300. The increase is chiefly on account of increased balance of Post Office Savings Banks.

Refunds and Drawbacks.

73. *Refunds and Drawbacks;*—(£220,400,) being a decrease of £154,000 as compared with the Revised Estimates of 1883-84. The decrease is chiefly due to the refunds of 1883-84 being in excess of the normal amount, as explained in para. 46.

Land Revenue.

74. *Land Revenue;*—(£3,340,700,) increase (£98,200,) due to the strengthening of Tahsili and Patwari Establishments, management charges of new estates, extended settlement and survey operations (chiefly in Burma), and transfer from the head "Registration" of Revenue record room charges.

75. With regard to the cost of settlement and survey operations, it may be as well to state briefly here the results of important correspondence which has taken place during the last year between the Government of India and Her Majesty's Secretary of State. It is known that for some time the attention of the Government of India has been seriously drawn to the economic effect of excessive enhancements of land revenue in various parts of India, and recently the Revenue and Agricultural Department have been considering the best method of placing some efficient check on this great evil. At the same time, some of the earlier settlements effected in Northern India have fallen in, others will shortly be lapsing, and the principle on which re-settlement in these and other cases is now to be made has come under the consideration of the Government of India and the Local Governments. As for some years it must be expected that settlements in the various provinces will continue to fall in, and as the operations connected with the revision of settlement, if the system hitherto observed were maintained in its integrity, would lead to the expenditure of a more considerable sum than is now to be expected, and as the prospects of any very considerable increase from the land revenue must always be a matter of interest to those who watch the Indian finances, I give briefly the outline of the arrangements that have been arrived at, of which the effect will be to limit within narrower bounds than has hitherto been the case, the increased assets accruing to Government at periods of re-settlement; and, on the other hand, very considerably to decrease the expenses attendant on survey and settlement. Experience, I

Important effect on survey and settlement estimate of present policy regarding revision of settlements.

hope, may show that we can at a later time go still further in the direction in which the Revenue and Agricultural Department have so far advanced, and that the moderate measures proposed by the Government of India and sanctioned by the Secretary of State, will lead gradually to further developments in the same direction, and thus guarantee to the people immunity on the one hand from the vexations and cost of recurring surveys and settlements, and, on the other hand, from the anxieties, uncertainty, and loss attendant on periodical enhancements of the amount which, under the head of *Land Revenue*, they are called upon to pay to the Government.

Principles adopted for future application.

The substance of the arrangement decided on is briefly, that when once, (as in a very large number of districts is already the case), the land revenue of a district has been equitably assessed on the basis of a careful survey, finality, in some sort, should be given to the assessment. The manner in which this may best be effected in each Province, without undue sacrifice of public interests, is still under consideration, but the principles which at present have been accepted by the Indian and Home Governments may be summarily mentioned. They are: *First*, that all improvements made by landlords or tenants shall be exempted from assessment; *Secondly*, that no reclassification or revaluation of the soil shall be allowed in any case in which the soil has once been properly classed and valued; *Thirdly*, that the existing assessment shall be taken as the basis of revision, and shall be liable to alteration only on two or three carefully defined grounds. These grounds the Government of India is disposed to restrict to increase of cultivation, increase of produce due to improvements executed by the State, and rise of prices. Whether, in view of the varying conditions of the several Provinces, these grounds are in each case the best that can be devised, is a question still under examination here, and on which no opinion need at present be expressed. But whatever may be the outcome of discussion on this point, there can be little doubt that a degree of permanency will be given to the current land assessment in the more populous and advanced parts of the country which it has hitherto lacked. The policy, subject to reserve at present upon one point, has been already accepted by the Government of Bombay; it has been fully accepted by Madras; and other Governments will doubtless fall into the arrangement, so soon as its details, at present under examination with them, have been agreed upon and arranged. Resettlement, finally, will be made on the basis of existing records where, as will be very generally the case under present practice, these have been accurately and carefully kept up; and it will be only in the case of the village survey of the last settlement being so inaccurate as to be useless, or of the records having fallen into great disorder, that resurvey, partial or entire, will be resorted to.

Opium.

76. *Opium.*—The reason of the increase (£489,400) over the Revised Estimates of 1883-84 has already been explained in para. 61.

Salt.

77. *Salt.*—Increase, £42,800. The increase is due to increased provision for preventive establishments in Madras and Bombay, and to arrangements in connection with the Goa Treaty.

Forest.

78. *Forest.*—Increase, £42,200; due to increased operations, and covered by corresponding increase of revenue.

Post Office.

79. *Post Office.*—Increase, £21,600. This is less than the normal increase of this rapidly growing Department, and is less than half the estimated increase in revenue. The increase would have been much larger but for a reduction of the subsidy paid to the British Indian Steam Navigation Company.

Telegraphs.

80. *Telegraphs.*—Increase, £110,400. This net result is brought about as follows:—

	£ +	£ —
Indian Telegraph—		
Imperial—		
In India (*a*)	+92,400	
In England (*b*)	+14,500	
	+106,900	
Provincial—		
In India	.....	−5,100
	101,800	
Indo-European Telegraph—		
In India	+2,200	
In England	+6,400	
	+8,600	
Red Sea and Indian Telegraph Company—	*Nil*	
Net	+110,400	

The increase (*a*) is due to additional provision for lines and establishment, chiefly required in connection with Railway extensions, and the payment of £10,000 to the Postal Department for taking up telegraph duties under recent arrangements.

The increase (*b*) is due to short outlay in England for stores in 1883-84. The remaining items do not call for remark.

Law and Justice.

81. *Law and Justice.*—Increase, £117,400. The apparent increase under this head is, for the most part, the result of the falling off in the Revised Estimates, and is distributed over all Provinces.

Marine.

82. *Marine.*—Decrease, £129,100. The Revised Estimates show an increase from special causes of £131,300. See para. 48.

Education.

83. *Education.*—Increase, £54,700. Increased expenditure under this head is to be expected, and is not unsatisfactory in itself.

Political.

84. *Political.*—Increase, £39,800. Nearly the whole of this increase occurs under the head of "Subsidy to the Ameer of Cabul," the Revised Estimates for 1883-84 containing provision for only a portion of the year, whereas the Budget of 1884-85 provides for a whole year's expenditure.

Scientific and other Minor Departments.

85. Under *Scientific and other Minor Departments* there is a decrease of £11,900. The decrease is due to reduction of expenditure, amounting to £12,300, in Burma.

Stationery and Printing.

86. *Stationery and Printing.*—The increase under this head, £35,200, occurs mainly in England, and arises from the increasing business connected with Railways, Post Office Savings Banks, and Money Orders, and general administrative needs.

Protective Works, Railways.

87. *Protective Works, Railways.*—Increase, £512,700. The increase is due partly to a special addition of £250,000 made to the usual Famine grant by the Lieutenant Governor of the North-Western Provinces for 1884-85 for expenditure on the Jhansi-Manikpur line, which is being constructed from Protective Funds, and partly to short expenditure in 1883-84.

Protective Works, Irrigation.

88. *Protective Works, Irrigation.*—Increase, £19,100. The increase is due to the fact that the estimate must be so framed as to make the average yearly expenditure from 1881-82 exactly £250,000.

State Railways; working expenses.

89. *State Railways (Productive); working expenses.*—Increase £341,700. Of this increase, £200,000 is due to the Eastern Bengal Railway becoming a State Railway by purchase in 1884-85. The rest of the increase represents augmented provision called for (1) to cope with the expected expansion of traffic; (2) to meet additional outlay that will result from railway extensions during the year; (3) to cover expenditure in renewing lines, machinery, and rolling-stock. In the case of the Sindia and Ghazipur-Dildarnugger Railways, some of the increase is due to the new working agreement with the East Indian Railway bringing on 12 months' adjustments in 1884-85 against 9 months in 1883-84.

Guaranteed Railways.

90. *Guaranteed Railways.*—Decrease £111,500. This is due to reduced payments on account of surplus profits to the Eastern Bengal Railway Company and Great Indian Peninsula Railway Company, coupled with an increased payment to the Bombay, Baroda and Central India Railway Company, and to increased charges for land and supervision.

Irrigation and Navigation

91. *Irrigation and Navigation (Productive).*—Increase £43,100. The increase is chiefly due to provision made for the first time for the cost of working the Sirhind Canal, and to general extension of operations in North-Western Provinces and Oudh.

Interest on Debt.

92. *Interest on Debt (Productive).*—The total increase, £200,600, is made up as follows:—

State Railways.

State Railways, £138,200, due to interest being charged on the full amounts of capital laid out in 1883-84 and on half the amount to be laid out in 1884-85, *i.e.*, on increased capital outlay; also to the purchase by the State of the Eastern Bengal Railway.

East Indian Railway.

East Indian Railway, £28,300, due to further capital outlay, and to the purchase of a portion of the annuity during 1883-84 by the issue of India 3½ per cent. stock, the full interest of which is paid during 1884-85.

Irrigation and Navigation.

93. *Irrigation and Navigation.*—Increase £34,100, due to additional capital expenditure.

Annuities, Guaranteed Railways: Purchase.

94. *Annuities in Purchase of Guaranteed Railways (including Sinking Funds).*—Increase, £51,800; chiefly due to provision being made in the Home estimates for a half-year's annuity payable to the shareholders of the Eastern Bengal Railway, which line Government acquires by purchase, in 1884-85.

Guaranteed Railways.

95. *Guaranteed Railways.*—Decrease, £49,600; due to the purchase of the Eastern Bengal Railway by Government.

State Railways (Capital Account).

96. *State Railways (Capital Account).*—Increase, £541,300; due to the adjustment under this head in Revised Estimate of 1883-84 referred to in para.

Subsidised Railways.

97. *Subsidized Railways.*—Decrease, £11,900.

The decrease occurs under (1) Bengal Central Railway, due to the expected completion of the line in June next, and the consequent stoppage of payment of advance interest under the contract with the Company; (2) Nilgiri Railway, the Company not having been floated; and (3) Bengal and North-Western Railway, a smaller sum being necessary this year for purchase of land.

Southern Mahratta Railway.

98. *Southern Mahratta Railway.*—Increase, £3,500.

Increase in paid up capital necessitates increased provision on account of interest.

Frontier Railways.

99. *Frontier Railways.*—Decrease, £50,500.

Orders have recently been issued directing the transfer of all the Frontier Railway store balances on 1st April 1884 to Productive Public Works, under 50, State Railways. The diminution in the provision for 1884-85 is due to the above adjustment having been carried out.

Irrigation and Navigation.

100. *Irrigation and Navigation.*—Decrease, £44,600.

The decrease is thus distributed:—

	£
Imperial Increase	22,100
Provincial decrease	66,000
Local do.	700
Net	44,600

The increase under Imperial is chiefly due to an arrangement having been made with the Madras Government for a yearly increasing grant for that Province.

The decrease under Provincial is made up of an increase of £100 in the Punjab and the following decreases:—

	£
Burma	30,200
Bengal	33,300
North-Western Provinces and Oudh	1,500
Madras	1,100
	66,100

The decrease in Burma is due to the reduction of the Provincial balances, in consequence of which expenditure bas been restricted. The decrease in Bengal is due to less provision having been made for expenditure on Irrigation and Navigation works for which neither Capital nor Revenue Accounts are kept. The decrease in Madras is due to less provision having been made for expenditure on the Madras Water Supply and Irrigation extension system.

Military Works.

101. *Military Works.*—Decrease, £113,500.

The Revised Estimate for 1883-84 is set down at £1,036,500, as follows:—

	£
Fixed Grant for Military works	1,000,000
Add lapse of 1882-83	36,500
	1,036,500

The Budget Estimate for 1884-85 has been arrived at as follows:—

	£
Fixed grant for Military Works	1,000,000
Deduct amount recovered for expenditure under *Civil Buildings, Roads, and Services*	77,000
Budget provision for 1884-85	923,000

The decrease in 1884-85 is principally due to the adjustment of the cost of the Army Head Quarter Offices at Simla, which was originally paid for from the grant for Civil Buildings, Roads, and Services; this grant has now been recouped by deduction from the fixed grant for Military Works.

Civil Buildings, Roads, and Services.

102. *Civil Buildings, Roads, and Services.*—The decrease, £1,082,500, occurs under the following heads:—

	£
(*a*) Imperial	679,400
(*b*) Provincial	351,800
(*c*) Local	51,300

The decrease (*a*) under "Imperial" arises from the fact that the Capital expenditure on the Madras Harbour to the end of 1882-83 was transferred in the Revised Estimate of 1883-84 from Productive Public Works (Capital Account) to Civil Buildings, Roads, and Services, thus increasing temporarily the expendi-

ture under the latter head in 1883-84. The net decrease would have been larger, but for provision, in excess of the normal grant, for Civil Buildings, having been made for outlay on the Government Offices at Simla (£56,400), and the Harnai Road (£85,000), by transfer from the grant for Frontier Railways.

The chief decreases (*b*) under "Provincial" are in Bengal and Burma, where grants have been allotted on a reduced scale, as excess Provincial balances are being exhausted, and it is necessary to work up to the minimum balances fixed by the Secretary of State.

The net decrease (*c*) under "Local" is consequent on Burma, the North-Western Provinces, and Bombay having provided for large reductions of expenditure during 1884-85, while Bengal, the Punjab, and Madras have provided for an increased expenditure.

Army.

103. *Army.*—(£16,098,600.) Decrease, £1,028,000. The apparent large decrease in the cost of the Army is due to the fact that £1,000,000 (true sterling) will be paid in 1883-84 on account of arrears of non-effective charges of British Troops. In communication with the Secretary of State it has been decided that the pay and allowances of the English soldiers serving in India shall in future and from the 1st January 1884, when expressed in sterling, be converted at the rate of exchange fixed annually by Her Majesty's Government for the payment of the troops in the Colonies, the same rate being adopted for home remittances of pay, Savings Bank balances, and other items. All items of pay fixed in sterling will be paid in India at the above exchange; all local allowances will be fixed and paid in rupees. Any money remitted to or from India by or for the soldiers, will be dealt with in the same way, but with effect from the 1st April 1884 only. The result of this arrangement is to increase the Military charges of 1884-85 by about £184,300. The increase caused by this change will depend on the variation in the rate of exchange, but at the exchange of 1*s.* 8*d.*, the present rate, the soldier's pay is increased 12½ per cent. There are no changes of importance in the organization of the Army which materially affect the Estimates of the year 1884-85.

Exchange.

104. *Exchange.*—Decrease, £321,900. The Revised Estimates provide for £17,800,000 (true sterling) being drawn by the Secretary of State in 1883-84 and the Budget Estimates for £16,500,000 (true sterling) being drawn in 1884-85.

There are also the following minor items of gain and loss:—

		Better.	Worse.
		£	£
Public Works, Military and Civil	(gain)	22,400	...
Guaranteed Railways Capital Account	(do.)	4,100	...
„ Revenue Stores	(do.)	...	4,800
Southern Mahratta Railway	(loss)	...	22,000
East Indian Railway	(gain)	49,900	...
Overland Money Orders	(do.)	2,500	...
TOTAL		78,900	26,800

Rate of exchange fixed for 1884-85.

The average rate of exchange for the home remittances has been taken for 1884-85 at 1*s.* 7½*d.* per rupee.

State Railways.

105. *State Railways* (*Capital Account, Productive*).—Increase, £205,800; made up of an increase under the Eastern Bengal of £1,123,700 and a decrease under other State Railways of £917,900. The grant for the year 1883-84 for State Railways was augmented considerably by the inclusion in it of the unexpended portion of the grant for the previous year, amounting to £622,148. This made the amount available for outlay in 1883-84 £2,422,148.

The Revised Estimate for 1883-84 has been further augmented by the transfer to this head of the outlay to end of 1883-84 on the Railways, &c., noted on the margin, in accordance with the orders of the Secretary of State. The sum thus transferred amounts to £852,274. The diminution in 1884-85 is therefore due to the absence of the special items noted above from the grant for that year. The normal grant under this head is £1,800,000. The grant of £2,151,900 for 1884-85 is composed of the following items:—

Muttra-Achneyra—
Farukhabad-Hatras Section
Jumna Bridge.
Northern Bengal State Railway—
Branch from Parbutipore to Dinagepore.
Calcutta South-Eastern Railway—
Branch from Sonarpore to Diamond Harbour.

	£
Railway portion of the annual fixed grant of 2½ millions	1,800,000
Estimated saving on the grant for 1883-84	204,600
Contribution by the Government of the North-Western Provinces and Oudh, from surplus Provincial balances, to cover the probable outlay on Railways in those Provinces, classed as Productive Public Works	132,300
Transfer from Irrigation portion of grant	15,000
TOTAL	2,151,900

Eastern Bengal Railway.

106. *Eastern Bengal Railway*,—Increase, £1,123,700. This line will be handed over to Government on 1st July next, and thenceforward it will be a State property. The provision is thus distributed:—

	£
India	100,000
England	1,023,700
TOTAL	1,123,700

The provision in India is intended to cover the actual charges of the line during the year, including the expenditure on certain works that need to be completed by the date of the opening of the Hooghly Bridge. In England provision has been made for the payment of £150,000 in discharge of debentures of the Eastern Bengal Railway, which fall due on the 19th May 1884, and also for the payment of £873,700 for debentures and debenture-stock which must be taken over as a State liability.

Miscellaneous Public Improvements.

107. *Miscellaneous Public Improvements.*—Increase, £533,100. This represents the amount to the end of 1882-83 which has been transferred to the grant under *Civil Buildings, Roads, and Services*, in the Revised Estimate for 1883-84, on account of the Capital outlay on Madras Harbour Works, and for which no provision exists in 1884-85. In 1883-84 the whole expenditure on Madras Harbour Works to date under this head was transferred from Productive Public Works to "*Civil Buildings, Roads, and Services;*" the revised expenditure figure was therefore *minus* £533,100, and no expenditure is shown in the Budget for 1884-85. Comparison between 1883-84 and 1884-85 is therefore set down at *plus* £533,100.

Caution necessary in examining apparent increase of Expenditure in the Annual Accounts.

Provincial Deficit. Caution in comparison of receipts and expenditure.

108. It will be seen on examination of the figures in "Abstract B, Details of Expenditure," that what is known as "Provincial Deficit," in other words, the amount by which the Provincial Governments expect to draw upon

their balances to meet their expenditure of the year 1884-85, is considerably less than in the Revised Estimates of 1883-84. In connection with this point it may be desirable to add a few words in regard to comments which were made during the course of last year, on the increasing expenditure of the Indian Government. The Provincial system has been, comparatively speaking, for so short a time at work, that even yet it is little understood that State expenditure in India is of three kinds, Imperial, Provincial, and Local, and that while the former may be stationary or otherwise, the latter advance or decrease quite irrespectively of Imperial Expenditure. It is well known that in 1878-79, during the Afghan War, the Government of India, owing to pressure of ways and means, was compelled not only to impose a check on Provincial and Local expenditure, but to appropriate for the time a considerable amount of the Provincial balances lying at the credit of the several Local Governments. With a return of peace and prosperity the Government of India found itself in a position to refund the amount (£670,000) thus temporarily withdrawn; and the Provincial Governments have, during the last three years, spent on various objects connected with their administrations, the large balances which accumulated during the period of enforced saving, as well as the amount (£670,000) refunded to them. This expenditure would have been spread over a longer period had the necessary funds been at their disposal in previous years, so that the Provincial expenditure of 1882-83 and 1883-84 was in its nature altogether abnormal.

Indian expenditure of three kinds, Imperial, Provincial, and Local.

Special reasons for large Provincial expenditure.

Expenditure during the last three years.

109. In future it may be expected that Provincial and Local expenditure will present fluctuations of much less magnitude. In order, however, to guard against results of possible neglect, or of too sanguine expectations, it has been decided to fix a minimum balance for each Provincial Government or Administration. It will not be possible that in each case, (as, notably, in the case of Burma), the Government or Administration should at once be able to attain the minimum figure so fixed; but where, without undue sacrifice, it cannot at once be attained, care will be taken that it shall be reached within the briefest possible period. The following table shows the minimum balance fixed for each Government and Administration, and opposite to each the estimated opening and closing balances of the year 1884-85:—

Minimum Provincial balance fixed for future years.

Local Government or Administration.	Minimum balance.	Opening balance, 1884-85.	Closing balance, 1884-85.
	£	£	£
Madras	200,000	204,000	191,200
Bombay	200,000	300,000	324,100
Bengal	200,000	15,300	164,800
North-Western Provinces and Oudh	200,000	555,000	150,600
Punjab	100,000	163,700	110,500
Central Provinces . . .	80,000	250,400	251,600
British Burma	60,000	25,300	3,200
Assam	50,000	78,100	109,300
Total .	1,090,000	1,597,800	1,314,300

The aggregate Provincial balance at end of 1884-85 is estimated to be in excess of the total of the minimum balances as lately fixed, but in some Provinces the balances will be below the minimum. The orders regarding minimum balances were not anticipated by Local Governments, and, as above explained, it has been considered better to allow their balances to fall temporarily below the minimum than to force them to alter arrangements already made.

110. But apart from the more limited question of Provincial expenditure, it is necessary once more to point out that nothing is more misleading than to judge of increased expenditure without taking into consideration the corresponding increase in revenue. Broadly speaking, a glance at Abstracts A and B will show that the receipts and expenditure of the Government, apart from Public Works, fall under three heads. The first of these are the heads which figure in Abstract A under *Principal heads of revenue*, and in Abstract B under *Direct demands on the revenue*. Expenditure and Revenue under these heads go together; in other words, although there may be increased expenditure, it will be found, after all disturbing elements are eliminated, that it is more than met by increased revenue. The second head is that of *Post Office, Telegraph, and Mint*. Here, while there will always be considerable receipts of revenue, from the nature of the Departments concerned, the expenditure may be necessarily in excess of the receipts. The Post Office, for public convenience, is called upon to administer various branches but indirectly connected with its proper business, which are not directly remunerative, and some of its receipts are credited to heads other than Post Office. Under *Telegraph*, all capital charges are debited to current revenue, and the growth of the Railway system compels an increase of expenditure on the extension of telegraphs which, for some time, cannot be recouped. It is under the groups *Salaries and Expenses of Civil Departments*, *Miscellaneous Civil Charges*, and *Army Services*, as well as under the heads of *Military Works* and *Civil Buildings, Roads, and Services*, that will be found those branches of the administration which yield either no direct revenue at all, or a revenue incommensurate with the charges connected with them. Increased expenditure, therefore, under these heads, is, to speak in general terms, dead-weight; and, so far as it is shown that the expenditure under this section is progressive, the attention of the Government may fairly be called to the unproductive nature of these increasing charges.

Remarks on the caution necessary in comparison of expenditure in successive years.

111. Before entering upon any comparisons of Indian expenditure, two other points which are usually lost sight of should be carefully borne in mind. First, that the expenditure of prosperous years should not be compared, as a test case, with that of famine years, or other periods of depression, when the general administration has necessarily to suffer and be starved. The other is, that estimates of one year should be compared with estimates of another, and not, as is frequently done, estimates of revenue with actuals of revenue, and estimates of expenditure with actual expenditure. In point of fact, the actuals of receipts will generally be found to be higher than the estimates of receipts, so that under this head, to compare the actuals of a preceding year with the estimates of the current year will inevitably bring apparent discredit on the progress of the revenue. Similarly, estimates of expenditure are liberally framed so as to meet all possible charges. The actual expenditure, on the other hand, not unfrequently falls below the estimates. Here, again, therefore, to compare the estimated expenditure of the current year with the actual expenditure of the preceding year, is to compare things that are not in all respects the same.

112. It will be found on examination that the chief heads under which the expenditure of India is increasing are:—

(a) *Exchange.*
(b) *District Administration* (*Land Revenue*).
General Administration.
Stationery and Printing.

Police.
Scientific and other Minor Departments.
(c) *Education.*
Medical.
Public Works.

113. Group (*a*) is absolutely beyond the control of Government. Under group (*b*) the growth of the charges is in part accompanied by increase of revenue and in part due to transfers of account, *e.g.*, in Police, where the expenditure on Municipal Police, formerly excluded from the accounts, is now charged under Police. Under group (*c*) the objects on which the money is spent are of the highest importance, and any judicious increase of expenditure found possible under them may *primâ facie* be pronounced to be a reason for congratulation, and not a foundation for a charge of extravagance.

114. An examination of the total estimated expenditure of 1884-85 as compared with that of 1883-84 will show how cautiously the figures of expenditure require to be examined before any opinion can be formed on the question of prudent or wasteful financial management. The Budget Estimate of 1883-84 showed a total expenditure of £70,064,300, and the Budget Estimate of 1884-85 shows a total expenditure of £70,755,600. The apparent inference is obvious, namely, that the Government of India, in a time of peace and with no special calls on them, have actually increased the public expenditure in one year by no less than £706,300. An examination of the figures will disclose another aspect of the matter.

Illustration of the fallacy of adopting totals as results.

115. In the first place, the Government of India is largely interested in Railways, both as a proprietor and as having guaranteed the interest on capital outlay. The Government of India, having borrowed money for expenditure on Railways and Canals, is bound to pay the interest when it falls due, and is justified in incurring any necessary increase of working expenses due to increased traffic, or a greater demand for water for purposes of irrigation.

Position of Government as Railway proprietor.

116. The expenditure on Productive Public Works (Revenue Account) in the Estimates of 1883-84 is £11,836,400; in the Estimates of 1884-85 it is £12,542,800 showing an increase of £706,400 which, for the above reasons, was wholly unavoidable, and which in fact brought in a greatly increased revenue. The revenue under this head was taken in the Estimates of 1883-84 at £12,355,600, in those of 1884-85 it is taken at £13,631,100, showing an increase of revenue of no less than £1,275,500. The increased expenditure of £706,400, therefore, on superficial examination of which a charge of extravagance might have been brought against the Government of India, is merely one item of a transaction which has on the whole resulted in a profit of £569,100 (£1,275,500—£706,400). Then, again, the Government of India is a large purchaser of opium. In 1883-84 the crop was a bad one, and the expenditure of the Department was estimated at £2,165,300; the coming crop promises to be a good one, and the expenditure of the Department is estimated at £2,352,900, an increase of £187,600.

Results of Productive Public Works (Revenue Account) in 1884-85 as compared with 1883-84.

117. Similar arguments may be applied to the expenditure under *Salt, Stamps, Forest*, and *Post Office*, where it would be seen that an increased expenditure of £77,500 is accompanied by an increased revenue of £433,400. Under *Telegraph* it will be found that there is an increased expenditure of £80,600. This, which seems very extravagant, is simply the cost of constructing Telegraph lines for the Railways that are being made, and the expenditure could not be avoided unless the country was prepared to do without the Railways, and follows on the functions discharged by the State in its capacity of Railway constructor, and proprietor.

Results in other departments analogous.

118. Again, a special addition of £250,000 has been made by a Local Government to the grant for Famine Relief and Insurance during 1884-85. The meaning of this transaction is that in past years the Local Government saved £250,000, and that it is now ready to invest this sum in protection against famine in future years. This swells the expenditure by £250,000, but is in no way connected with the expenditure of administration, properly so called.

119. Adding together the different items above referred to, we get the following result :—

Net result of above considerations.

	£
Excess expenditure on Productive Public Works (Revenue Account) bringing in additional revenue to amount of £1,275,500	706,400
Excess expenditure on opium on account of a good crop	187,600
Excess expenditure under Salt, Stamps, Forests, and Post Office accompanied by additional revenue of £433,400	77,500
Special increase to Famine Grant	250,000
Increased Capital Expenditure on Telegraphs indispensable for working of new Railways	80,600
Amount to be set off, under heads above referred to, against increase of expenditure shown in the Estimates	1,302,100
Deduct increase on totals of Estimates	706,300
Excess of total set-off over increase shown in Estimates	595,800

120. The above remarks obviously do not exhaust the subject; but they are sufficient to show once more that the Government of India, in its character of Railway constructor, and in its control of various industrial or commercial operations, undertakes large, varied, and expensive enterprises, which, although for the most part highly remunerative, necessarily add to the sum total of its expenditure. It constructs railways and telegraphs; conserves or creates forests; makes and excavates salt; provides savings banks; digs canals and tanks; organises and controls mechanical workshops and foundries; prospects for coal; furnishes funds for agricultural or industrial experiments; subscribes to economical exhibitions. It is also the holder of a large opium monopoly, the cost of which varies with the seasons. It is not even completely master of its own expenses, which so far as they are incurred in England may, to a great extent, be said to be beyond its control; the joint partnership of the English and Indian Governments in army charges, for example, being liable, as this Statement has shown, to sudden and unforeseen fluctuations. Apparent increases or decreases of expenditure, again, are often due to adjustments of accounts; and these, owing to the relations of the Imperial and Provincial Governments, are further complicated, and are certain to mislead superficial examination. Finally, much of the misconception constantly met with in criticisms on the expenditure of the Government of India is due to the faultiness or carelessness of method employed by the enquirer, estimates being compared with actuals, prosperous cycles with famine cycles, and disturbing elements being unquestioningly admitted into calculation.

Summary of remarks.

121. There could not be a better illustration of these remarks than that shown by the preceding figures, where in lieu of an apparent increase of £1,302,100 we arrive, on analysis, at what may be termed a true decrease of £595,800. The estimated Revenue on the other hand is £70,560,400 against £69,022,000 in the Estimates of 1883-84. The Budget Estimates of 1884-85, it may be added, show a reduction as compared with those of 1883-84 under the head of *Public Works not classed as Productive* of nearly £1,000,000.

Ways and Means.

122. After providing for the Secretary of State drawing during the current year 1883-84 to the full extent he has announced, namely, £17,800,000 (true sterling), and allowing for the bulk of these drawings being telegraphic, so that we shall have to pay the amounts without the interposition of any interval, the balance in Indian Treasuries on March 31st, 1884, is estimated to stand at £12,440,000. This should give a cash balance of about £12,000,000 during the months of April to July; but after that ensue two or three months during which but little revenue comes in, while the rate of expenditure is not greatly altered. Putting the minimum working balance at £8,500,000, we find it necessary to obtain assistance to the extent of £2,500,000 not later than the end of September; and this must be done either by raising a loan in India or by reducing the amount of drawings, which the Secretary of State estimates to be required in the first half of the year to meet the demands on the Home Treasury. I greatly regret that I am at present unable to announce definitely which of these two measures will be adopted, and I am well aware that much inconvenience will be caused by the continuance of uncertainty on this important subject. I can only add that the announcement will be made at the earliest opportunity after the decision of the Secretary of State has been received. The Estimates, meanwhile, have been prepared on the basis of the procedure recently adopted, that is to say, of a loan in India. The cash balance on March 31st, 1885, is estimated at £11,010,850. The amount available in 1883-84 from the grant under Famine Relief and Insurance for the *Reduction of Debt* is £573,100, but it is not intended to devote this sum to the reduction of the actually existing debt; it will be utilised in increasing the cash balances and so diminishing *pro tanto* the need for further borrowing. In the present state of the money market this money could not profitably be employed in reducing actually existing debt, and the course proposed is in accordance with the procedure for dealing with the Famine grant laid down in Resolution No. 683, dated 3rd February 1882, and published in *Gazette of India* of 4th February 1882.

Estimated Cash Balance on March 31st, 1884, and March 31st, 1885.

Loan of 1884-85.

Reduction of Debt: money how to be employed.

Summary.

123. It will be convenient to give here a summary of the main features of the present Financial Statement:—

(1.) The Accounts of 1882-83 show a surplus of £706,633.

(2.) Provision has been made in 1883-84 for the payment of £1,000,000 (true sterling) on account of arrear non-effective army charges.

(3.) Provision has also been made for drawings by the Secretary of State in 1883-84 to the amount of £17,800,000 (true sterling); being £1,500,000 (true sterling) in excess of the original Estimate of the year.

(4.) The consumption of salt continues to show a satisfactory increase.

(5.) The year 1883-84 has been one of great financial prosperity, and the Revised Estimates show a surplus of £271,400, notwithstanding the additional charges above referred to.

(6.) Railway receipts continue to show progressive increase; and there has been a large development of the trade in wheat.

(7.) No increase, or reduction, of taxation, or change as regards the License Tax, is proposed for next year.

(8.) The surplus of 1884-85 is estimated to be £319,300.

(9.) The net opium revenue for 1884-85 has been taken at £6,241,300, being lower than the Budget Estimate of 1883-84 by £793,400 and lower than the Revised Estimate of 1883-84 by £1,378,400.

(10.) The opium crop of 1883 was unusually short, only 38,214 chests of provision opium having been made as against an estimate of 47,000 chests made in March 1883.

(11.) The opium crop of 1884 promises well, and, it is hoped, may give 52,000 chests of provision opium.

(12.) In any case, not more than 50,000 chests of Bengal opium will be sold in the calendar year 1885, the balance being used to strengthen the reserve, which is estimated to stand at only 2,296 chests on 31st December 1884.

(13.) In the Estimates of 1884-85 the rate of Exchange has been taken at 1*s.* 7½*d.*, and provision made for drawings by Secretary of State to the amount of £16,500,000 (true sterling).

(14.) No decision can yet be announced regarding the customary loan for Productive Public Works. The portion of the grant for Famine Relief and Insurance available in 1883-84 for the reduction of debt will be taken to strengthen the cash balances, and reduce the need for further borrowing.

(15.) The Indian Cash Balance on 31st March 1884 is estimated at £12,440,000 and the cash balance on 31st March 1885 at £11,010,850.

(*a*) The East Indian Railway became a State Railway on 1st January 1880.

(*b*) The East Indian Railway portion of "Land and Control" was not stated separately till 1877-78; and before that year is placed against "Guaranteed Railways."

(*c*) East Indian Railway.

FORT WILLIAM,
DEPT. OF FINANCE AND COMMERCE;
The 14th March 1884.

E. W. KELLNER,
Deputy Comptroller General.

J. WESTLAND,
Comptroller General.

D. BARBOUR,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

APPROPRIATION REPORT ON THE ACCOUNTS OF 1882-83.

GENERAL REVIEW.

THE following abstract exhibits in a condensed form the results which are the subject of this report, the figures being pounds (£1=₹10) with the last two figures cut off for shortness' sake, thus 706,7 reads seven hundred and six *thousand*, seven hundred pounds:—

Receipts. Budget.	Receipts. Accounts.	Revenue and Expenditure Account.	Outgoings. Budget.	Outgoings. Accounts.
		A Interest	4,376,0	4,468,1
49,871,0	50,953,6	B Principal heads of Revenue	9,003,1	8,477,0
1,637,0	1,709,0	C Post Office, Telegraph, and Mint.	1,918,0	1,908,6
1,374,0	1,437,2	D Civil Administration	11,084,0	10,948,0
1,286,0	1,378,5	E Miscellaneous	3,761,9	3,890,4
		F Famine	1,500,0	1,500,0
12,189,4	12,224,1	G Productive Public Works	11,793,4	11,741,7
619,0	830,6	H Public Works not classed as Productive	7,210,0	7,165,7
868,0	1,592,2	K Army Services	16,128,0	17,440,2
		L Exchange	2,775,0	3,081,4
		M Provincial Surplus + or deficit—	—1,990,0	—1,202,6
		Imperial surplus	285,0	706,7
67,844,4	70,125,2	TOTAL	67,844,4	70,125,2

Receipts. Budget.	Receipts. Accounts.	Other Transactions.	Outgoings. Budget.	Outgoings. Accounts.
285,0	706,7	Imperial Surplus as above	...	...
...	830,5	Extraordinary Receipts	...	...
..	...	N Productive Public Works Capital Expenditure.	3,250,0	4,665,1

		Ditto March 31st	12,995,0	18,251,4
32,977,0	38,099,1	GRAND TOTAL	32,977,0	38,099,1

2. The details of all these figures will be found in the four statements attached to this Report, namely:—

1.—General Statement of Estimates and Accounts.
2.—Abstract A, showing details of Revenue.
3.—Abstract B, showing details of Expenditure.
4.—Abstract C, showing details of other Transactions.

3. I have first a few general remarks to make under the two heads "Comparison with the year 1881-82" and "Comparison of Accounts with Budget Estimates," and I shall then take up the figures according to the sections lettered A, B, C, &c., in the above abstract.

Comparison with the year 1881-82.

4. A comparison of the accounts of 1882-83 with those of 1881-82 shows the following figures in the Revenue side:—

	1881-82.	1882-83.	Difference. + or —
Principal Heads of Revenue	53,654,4	50,953,6	—2,700,8
Post Office, Telegraph, and Mint	1,489,7	1,709,0	+219,3
Civil Administration	1,513,1	1,437,2	—75,9
Miscellaneous	1,707,2	1,378,5	—328,7
Productive Public Works	12,260,4*(a)*	12,224,1	—36,3
Public Works not classed as Productive.	727,8	830,6	+102,8
Army Services—			
Ordinary Account	814,0*(b)*	1,007,5	+193,5
War Account	3,007,5	584,7	—2,422,8
	75,174,1	70,125,2	—5,048,9

(*a*) The figure shown here in last year's report was 10,782,1, but the Secretary of State has directed that the figures of East Indian Railway should be shown gross on both sides of the account, instead of net earnings being taken on the receipt side. This adds 1,478,3 to both sides of the account.
(*b*) Assuming as explained last year that all in excess of Budget Estimate belongs to War Accounts.

5. The Financial Statement for 1882-83 announced remissions of revenue, of which the amount may be estimated as follows:—

Abolition of customs duties except on liquors	1,108,0
Reduction of salt duty from ₹2-14 in Bengal and ₹2-8 elsewhere to ₹2 everywhere	1,400,0
Remission of Patwari cess in the North-West Provinces	241,0
TOTAL	2,749,0

6. It will be seen that the revenue of 1882-83 fell short of that of 1881-82 by very nearly this amount. But in carrying the comparison into detail we have a falling-off of 362,8 in Opium Revenue (which had of recent years maintained very high figures), and of 71,9 on Land Revenue (a matter of distribution between successive years), made up for by advance of Revenue of about 225,0 in Salt (apart from the reduction of duty), of 182,3 under Excise, and smaller amounts under Customs and Forests.

7. Under the next head the expenditure side must be taken along with the receipt side, as in the telegraph department certain transactions brought an addition to both sides. The real difference, both sides taken together, is an improvement of 82,4, which for the most part represents the better receipts of seignorage upon the excessive silver importations of 1882-83.

8. The receipts of Civil Departments are a little worse, the difference being mostly composed of a special receipt in 1881-82 of 44,0 by sale of cinchona bark and a falling off in 1882-83 of about 20,0 in the receipts classed under Law and Justice.

9. The receipts under Miscellaneous have fallen off by 328,7, which may be regarded as the amount of four exceptional items that came into the accounts of 1881-82, of which the largest was 155,3 premium on Loans.

10. The revenue upon Productive Public Works has been very nearly maintained at the figure it reached by the high Railway receipts of 1881-82; the difference in fact is more than made up for by the consideration that certain receipts have been transferred to the non-productive head; but there has been no advance in receipts to make up for the necessary advance in charges.

11. The receipts from other Public Works have increased by the accession of 138,8 of State Railway receipts of which the greater part last year was reckoned under the productive category.

12. The receipts on ordinary military account are for the most part merely sets-off against expenditure, and are best considered along with it. On the war accounts of course there is no comparison between the figures of the two years.

13. The comparison of the expenditure side is as follows:—

	1881-82.	1882-83.	Difference. + or −.
Interest	4,558,1	4,468,1	−90,0
Principal Heads of Revenue	8,220,1	8,477,0	+256,9
Post Office, Telegraph, and Mint	1,771,7	1,908,6	+136,9
Civil Administration	11,038,5	10,948,0	−90,5
Miscellaneous	4,044,5	3,890,4	−154,1
Famine	1,500,0	1,500,0	0
Productive Public Works	11,127,3(*a*)	11,741,7	+614,4
Public Works not classed as Productive—			
Ordinary Account	6,168,9	7,165,7	+996,8
War Account	224,7	...	−224,7
Army Services—			
Ordinary Account	16,459,0(*b*)	16,138,4	−320,6
War Account	2,402,1	1,301,8	−1,100,3
Exchange	3,556,7	3,081,4	−475,3
	71,071,6	70,621,1	−450,5

(*a*) Last year shown as 9,649,0, as explained under the receipt figures.
(*b*) Taking all excess over Budget as due to war.

14. The interest charge diminishes in ordinary times, because the amount of debt raised is less than that on which the interest becomes an addition to the Productive account. The difference would have been shown at a higher figure than 90,0 but for an arrear payment of 53,4 made in August 1882.

15. Against Revenue there was somewhat heavier expenditure, the difference lying chiefly in 225,0 spent in opium payments.

16. The Post Office head has been discussed on the Revenue side.

17. Under Civil Administration we have saved the heavy census charges (158,6) of 1881-82, and part of the heavy political expenditure connected with the war in Afghanistan, but have had to meet the ordinary demands for growing expenditure.

18. Under Productive Works we have an increased expenditure of 614,4. Of this, 183,7 represents the additional interest chargeable against this head for capital outlay out of Government funds; 343,9 were caused by the necessity of heavy outlay on Revenue account on the East Indian Railway, and the East Indian Railway and Guaranteed Railway Companies' share of profits (chiefly those of the cold weather of 1881-82) has been 184,8 bigger than the amount paid in 1881-82.

19. The Military Expenditure has been reduced from 16,459,0 to 16,138,4, or to put it more correctly, the net expenditure has been reduced from 15,645,0 to 15,130,9.

20. The charge for exchange follows for the most part the remittances by Council Bills, which were 18,412,4 in 1881-82, but only 14,119,1 in 1882-83. But in regarding the effect on the account of exchange, we must add in 1882-83, 1,027,2 of payments in India remitted through the three new channels of the Southern Mahratta and Central Bengal Railway Companies, and the Hong-Kong Military Treasure Chest.

Comparison of Accounts with Budget Estimates, 1882-83.

21. Compared with the Budget Estimate, we find the following differences in the various sections of the account:—

	Better.	Worse.
A Interest	...	92,1
B Principal Heads of Revenue	1,608,7	...
C Post Office, Telegraph, and Mint	81,4	...
D Civil Administration	199,2	...
E Miscellaneous	...	36,0
F Famine	...	0
G Productive Public Works	86,4	...
H Public Works not classed as Productive	255,9	...
K Army Services	...	588,0
L Exchange	...	306,4
	2,231,6	1,022,5
Combined Surplus	1,209,1	...

22. The greater part of the excess charge for interest is accounted for by two items, an unexpected arrear payment of 53,4 and a payment of 11,5 which came in in anticipation of 1883-84.

23. Of the improvement under Revenue, about 320,0 is nominal only and is caused by a difference of about 200,0 in the amount of Land Revenue transferred to the productive account, and by about 120,0 of Miscellaneous refunds being taken out of the Revenue account. But apart from this we get 173,1 better Land Revenue, 128,8 better Salt Revenue (or rather 228,8, as we must take into account the fact that the arrangements about carriage and freight excluded 100,0 from both sides of the account—compare the figure in para. 6), 278,6 better Excise Revenue; 115,1 better Customs Revenue; 129,2 better Forest Revenue; 85,0 saved by new arrangements regarding Patwaris in the North-West not being brought into operation within the year, and 67,6 saved by delay in reorganisation of salt arrangements in Madras and Bombay, and 160,2 by certain refunds in Bombay not being made within the year.

24. The improvement in Post Office, Telegraph, and Mint is partly better message revenue in the telegraph, but mainly underestimate of the gain arising from an exceptional absorption of copper coin, and sale of Mint stores.

25. Under Civil Administration 63,3 of improvement comes in by what may be considered cautious estimating of receipts which are not steady in character, and 120,9 in marine charges in England not met within the year. The estimates for the maintenance of prisoners were, owing to the cheapness of the season, found to be nearly 100,0 in excess of actual requirement, but a large part of this saving was swallowed up to meet the excessive charge for administration (59,9 over estimate) and under one or two other heads.

26. Productive Public Works gave 86,4 better on the net account, due mainly to improvement in Railway Receipts, the estimates not venturing to repeat the high figures realised in 1881-82, while as a matter of fact the railways continued in most cases to produce high receipts. It must be remembered that the improvement of 86,4 is produced after diminishing the credit of Land Revenue due to irrigation from 685,0 (Budget) to 469,1 (Accounts), and after bringing an additional charge for interest of about 9,9 to the account of irrigation works by the purchase of the Madras Irrigation Company.

27. The account of Public Works not classed as productive improved on the receipt side by 210,3, and on the expenditure side by 43,7; but as these improvements appeared after the addition of 121,3 to receipts and 136,2 to expenditure, by transfers from the productive account, the real improvement for explanation is 89,0 on the receipt side, and 179,9 on the expenditure side. Of the first of these figures 58,8 came in under the Miscellaneous head of Civil Buildings, Roads, and Services, and 16,1 by new Provincial Railways. Of the last figure 150,0 is accounted for by the transfer of works to the Southern Mahratta Railway Company, and though endeavours were made to divert the grants so as to push on more vigorously the construction of State Railways, the excess expenditure which came under the head of Railways was more than recouped by short expenditure under Irrigation, Buildings, and Roads.

28. The difference under Army Services is composed of an improvement in the account of ordinary army expenditure of 129,1 with an addition of unestimated war expenditure, chiefly the expedition to Egypt, of 717,1.

29. The exchange adjustment was increased in consequence of the larger amount of remittances obtained by the Secretary of State by Council Bills and through other channels.

30. The following statement exhibits in a tabular form the leading differences, most of them above alluded to, between the original estimates and the final accounts:—

	Accounts Better.	
	Imperial.	Provincial & Local.
Interest on Debt	—92,1	...
Land Revenue, including that due to Irrigation (see para. 261)	—40,9	214,0
Salt Revenue	226,1	2,7
Excise Revenue	142,6	136,0
Provincial Rates	2	33,8
Expenditure on Patwaris in North-West Provinces saved	...	85,0
Salt Department Re-organization delayed	48,6	19,0

Section A.—INTEREST.

1881-82. Accounts.		1882-83. Budget.	Revised.	Accounts
4,558,1	EXPENDITURE . . .	4,376,0	4,450,7	4,468,1

31. The increase of expenditure over estimate in respect of ordinary debt was due to a heavy arrear payment of 53,4 in India, and in a smaller degree to unanticipated necessity for borrowing both in India and in England. The estimate on account of interest on other obligations was exceeded chiefly by reason of a charge of 11,5 falling due on Sunday, April 1st, having been admitted to payment the preceding day.

1.—Interest on Ordinary Debt.

INDIA—

1881.82. Accounts.	Rate.	Amount of Debt on March 31st, 1882. Principal.	Interest.	1882-83. Budget	Revised.	Accounts

1,511,7	Charged under Ordinary . . .			1,477,3	1,507,7	1,516,3
2,512,4	ENGLAND			2,439,7	2,480,6	2,481,2
4,024,1	TOTAL .			3,917,0	3,988,3	3,997,5

(a) This loan was paid off on June 1st, so that only half a year's interest fell within the year.

32. The estimates under this head are necessarily a matter of calculation upon facts already known; as on the assumption that the amount of arrears handed over from one year to another is about the same, the interest paid each year would be equal to the interest falling due. The only practical uncertainty in this assumption arises in connexion with the 4½ per cent. Loans. There is first the Coupon Loan of 3,130,0, which is mostly held in Europe, and of which the coupons are payable on 15th March; unless the holders send their coupons off in advance of the date of payment, they will not arrive in India till April, and will therefore pass over into the new year of account. As we paid 29,2 in March 1883 against 11,0 in March 1882, the charges of the year 1882-83 ought on this account alone to be 18,2 more than a year's interest. On the other hand, of ordinary 4½ per cent. paper 11,453,2 was held in London on 31st March 1883, against 10,947,7 in March 1882; and as the whole of the interest on this paper necessarily falls on the next year, the transfer of 505,5 during the year relieved March 1883 of interest payments to the extent of 11,4. These calculations would produce on the whole an excess interest payment of 7,8, but as they are really 9,3 less than a year's burden, we have an arrear of 17,1 to be made up in some future year.

33. The *four per cent. Loans* show an increase of 75,5 over Budget Estimate; this is partly caused by payment of about 20,0 in the form of anticipation interest on the new Loan raised in November and December (for which no provision was made in the Estimates);

but mostly by an arrear payment of 53,4 made in August 1882 to the Maharaja of Patiala upon warrants which he had received in June 1881, but held unpaid for over a year.

34. The charge of 10,2, under the *Miscellaneous* head, is the balance of the following transactions:—Discount upon new Loan 27,0, interest upon Stock Notes (see paragraph 258, &c., of Financial Statement for 1882-83) 3,3; total 30,3; less interest on 440,0 of securities held by Government and recredited, 20,1; Net amount 10,2.

As no new loan was provided for in the Estimates, or would have been raised, if the necessity had not arisen for expenditure on the expedition to Egypt, no entries were made on this account in the Budget.

All these differences from the Budget Estimate were known at the time of the Revised Estimates, which it will be seen provided very accurately for the actual expenditure (3,681,6 Revised, against 3,686,1 Actuals), a slight excess under Miscellaneous providing for a small deficiency under interest proper.

35. The *transfer* of part of the interest charge to productive public works is explained in Section G, paragraph 271 below. The amount is the interest on capital found by Government, *plus* the interest charge on the Rupee part of the East India Railway Commutation Stock.

36. In the *English account*, the payment of interest exceeded the Budget Estimate by 41,5; of this amount 21,7 was interest paid on temporary loans received from the Bank of England (see para. 379), and the remainder arose in connexion with the two millions of four per cent. debentures raised in October 1882, which was slightly more costly than the operation originally intended at the time of the Estimates.

2.—Interest on other Obligations.

1881-82. Accounts.	INDIA—	1882-83. Budget.	Revised.	Accounts.
83,2	On Special Loans	90,4	82,7	79,3
3,0	On Treasury Notes	5,0	4,8	2,6
212,9	On Service Funds	223,9	224,6	238,9
212,7	On Savings Banks Deposits	113,4	125,6	128,3
21,5	On Miscellaneous Accounts	24,5	22,9	20,7
7	ENGLAND	1,8	1,8	8
534,0	TOTAL .	459,0	462,4	470,6

37. The interest on *Special Loans* is almost entirely composed of a number of payments made under engagement with the third King of Oudh, which are more in the nature of stipends than of interest payments. These payments have latterly been diminishing in amount, the figures of the past four years being 82,6, 80,0, 78,5, 72,8, and now 69,0. The last of these figures known at the time of the Budget Estimate was 78,5, and the figure taken in the Estimate was 79,6, which in the Revised Estimate was reduced to 72,0. The expenditure has fallen short of this by 3,0. The remaining items under this head are interest in its proper sense, and their amount, 10,3, is more accurately estimated and paid.

38. The estimates under *Treasury Notes* and *Miscellaneous* appear to have been in both cases somewhat in excess; it is partly a question of precision of classification, and the excess went to meet some charges more properly shown under Savings Banks deposits.

39. The payments of interest on the *Service Funds* are:—

1881-82. Accounts.		1882-83. Budget.	Revised.	Accounts.
73,9	Bengal Civil Fund	75,0	75,6	87,5
54,1	Madras „	59,7	59,0	61,2
38,5	Bombay „	40,3	40,5	40,5
41,4	Bengal Uncovenanted	43,5	44,1	44,1
3,2	Bombay „	3,5	3,5	3,5
1,8	Smaller Funds	1,9	1,9	2,1
212,9	TOTAL .	223,9	224,6	238,9

40. The payments are necessarily slightly progressive as the funds are cumulative; the only difference which demands explanation is the excess against the Bengal Civil Fund,

Section A.—INTEREST —*concluded.*

which was caused by certain interest on Treasury Notes, amounting to 11,5, being passed for payment on March 31st, 1883, instead of April 1st, 1883.

The Bombay Fund was surrendered to Government on December 1st, 1882, but the first interest payment affected by the transfer is that due on April 1st, 1883, so that the figures of 1882-83 remain unaffected by the transaction.

41. The Balances of *Savings Banks* Deposits compare as follows with those of the previous years:—

	March 1881.	March 1882.	March 1883.
Presidency	2,225,6	2,312,1	2,363,6
Districts	703,4	726,2	733,0
State Railways	25,2	50,7	71,8
Post Office	...	...	279,7
Regimental	259,4	183,7	168,3
TOTAL	3,213,6	3,272,7	3,616,4
Add "Special Accounts"	76,9	93,1	127,7
TOTAL	3,290,5	3,365,8	3,744,1
One year's interest at 3¾ per cent.	123,4	126,2	140,4

The previous year's figures under this head contained two years' payments in respect of Savings Banks. The Budget did not make sufficient provision for the increase of Balances held on Savings Bank terms. The amount charged during the year was 128,3, the increase over Budget being mostly in Bombay, where the Balance in deposit received great accessions.

42. The difference under *England* arises from the fact that no claims were made against 1,0 provided for interest on the accounts of soldiers returned to England.

Section B.—PRINCIPAL HEADS OF REVENUE.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
53,654,5	RECEIPTS	49,871,0	50,794,9	50,953,6

43. From the comparison between the two years we must exclude the following actual receipts in 1881-82 on account of revenues, which were remitted after that year:—

Salt duty reduced	about	1,400,0
Customs abolished	„	1,108,0
Patwari cess in N. W. P. remitted	„	241,0
TOTAL		2,749,0

and the figures of 1881-82 being reduced by this amount, the four figures in the heading would run thus: 50,905,5, 49,871,0, 50,794,9, 50,953,6.

44. It would thus appear that the revenue of the two years allowing for this difference is very nearly the same. Against a falling off of 362,8 in opium, which represents a real loss of revenue, and of 71,9 in Land Revenue, which is more a question of distribution between successive years, we have a gain of 225,0 in Salt (apart from the reduction of duty), 182,3 under Excise, about 65,0 in Customs, and 63,8 in Forests, all of which may be regarded as establishing for the time a higher scale of annual revenue, accompanied, however, in the case of forests, by corresponding increase of expenditure. Stamps and Registration appear to be at present stationary.

45. The improvement in the Revised Estimate over the Budget figures is less than two per cent. on the whole, and occurs under nearly every one of the heads; it may be taken as representing merely the "safeness" of the Estimate

Section B.—PRINCIPAL HEADS OF REVENUE —*continued.*

The accounts showed figures only very slightly in excess of the Revised Estimates.

I.—Land Revenue.

1881-82. Accounts	Gross Revenue—	Budget.	1882-83. Revised.	Accounts.
95,0	India	91,8	91,4	88,7
613,7	Central Provinces	607,5	605,4	609,7
1,052,3	Burmah	1,110,0	1,155,0	1,057,9
379,4	Assam	388,5	380,0	385,5
3,794,4	Bengal	3,784,9	3,820,0	3,833,7
5,838,3	North-Western Provinces	5,750,0	5,810,0	5,743,8
2,095,3	Punjab	2,086,0	2,062,3	2,076,6
4,688,9	Madras	4,640,0	4,618,0	4,820,9
3,881,9	Bombay	3,713,3	3,690,3	3,728,4
22,439,2	TOTAL	22,172,0	22,232,4	22,345,2
	Deduct transferred to Productive Public Works Account—			
87,2	North-Western Provinces	87,0	87,2	87,3
33,3	Punjab	34,0	38,5	33,8
334,5	Madras	541,0	362,3	314,4
36,2	Bombay	23,0	44,0	33,6
491,2	TOTAL	685,0	532,0	469,1
21,948,0	LAND REVENUE "ORDINARY"	21,487,0	21,700,4	21,876,1

46. *India.*—The variations in these figures chiefly arise in respect of the Quetta Revenues.

47. *Central Provinces.*—The variations here are in the item of advance collections. These were heavier than usual in 1881-82 and warranted a short estimate for 1882-83.

48. *Burmah.*—The shortness of the revenue was due to a combination amongst the landholders of the Hanthawadi and Pegu districts to refuse payment of revenue, with the object of forcing on Government a reduction of assessment. The combination failed, but the arrears did not come in till 1883-84 had begun.

49. *Bengal.*—The Budget Estimate was somewhat moderate, and better collections of arrears produced an excess revenue of 48,8 on the whole; the improvement in the Actuals of 1882-83 as compared with 1881-82 may be considered normal.

50. *North-Western Provinces.*—The figures of 1881-82 were increased by arrear realisations of remissions of previous years; the Revised Estimate was raised in view of the actual progress of collections; but about 70,0 of the Estimate failed to be realised till May and June 1883.

51. *Madras.*—The Estimate here was taken a little over the normal figure, as there was in the beginning of the year an unusual amount of arrear. The arrears increased during the year, and the Revised Estimate was taken still lower; but on the stringent orders of Government to push the collections, they came in very rapidly at the end of the year, and produced about 200,0 more than even the normal revenue.

52. *Bombay.*—The Land Revenue has somewhat varied owing to the orders of the Secretary of State that the new "Survey rates" should not exceed 20 per cent. in certain districts. This and remission of revenue on account of destruction by locusts caused a diminution of nearly 120,0 in the revenue as compared with 1881-82,—a diminution which was overestimated in the Budget and in the Revised Estimates. There was a further difference owing to some exceptional receipts coming into 1881-82.

53. The *transfer* of part of the Land Revenue to the head of Productive Public Works is noticed in that section of the accounts.

54. It remains to notice the distribution of the Land Revenue between the Imperial and Provincial Governments. In 1882-83 for the first time the method was adopted of adjusting the total amount of assigned Provincial revenues to the total of assigned Provincial expenditure by including in the former a calculated proportion of Land Revenue.

Section B.—PRINCIPAL HEADS OF REVENUE —*continued.*

55. The Provincial contracts however are subject to continual petty variations which are made by consent between the Imperial and Provincial Governments concerned, to provide for services or allow for revenues which either arise in the transaction of business and lie outside the contracts themselves, or which, though they were foreseen at the time of the contract, were expressly excluded from it. The contracts themselves also contain one provision which brings in considerable variation, namely, that when the Provincial Government decides to employ its surplus in Productive Capital Expenditure, the amount which it thus sets apart comes back into the Imperial account. This amount has already, by the Provincial adjustment, been written off the Imperial surplus in the same way as if it had been spent on "ordinary" expenditure, and is therefore held in Provincial balance so that it may be utilized for such expenditure without coming in again as a charge against the Imperial Surplus; but when the Provincial Government gives up the intention to spend it on "ordinary" expenditure, this write-off from the Imperial Surplus has to be reversed, as otherwise we would charge off against ordinary revenue, an amount which never has been, and never will be, used for ordinary expenditure. The simplest way of doing this is to deduct the amount from the Provincial and add it to the Imperial share of Land Revenue.

56. The detail of the distribution of Land Revenue between Imperial and Provincial is shown in the following statement in which the transfers are shown + or — in accordance with their effect on the Imperial account:—

	Central Provinces.	British Burmah.	Assam.	Bengal.	North-Western Provinces and Oudh.	Punjab.	Madras.	Bombay
PROVINCIAL PROPORTION	49·2047	32·8367	63·0222	32·2284	25·4542	40·7193	28·9514	59·8216

TOTAL	60,97	1,05,79	38,55	3,83,37	5,74,38	2,07,66	4,82,09	3,72,84

(*a*) For Irrigation 126,2, and for State Railways 20,4.
(*b*) For Amritsar-Patankote State Railway.
(*c*) Ten per cent. on collections from Government estates, which belong to Provincial over and above the provincial share.
(*d*) Repayment to Imperial of Cadastral Survey charges of former years which should have been charged to Patwari Fund, but were borne by Imperial.
(*e*) Special contribution made to the Madras Government to enable it to undertake certain administrative improvements 65,0, less refund to Imperial on account of expenditure upon Local Fund Works 41,0, and Water-works adjustment 1,00. The "Water-works adjustment" is the first annual instalment of 10,0, in repayment to Imperial of 106,5 spent upon Madras Water-works.
(*f*) Of this amount 62,3 is refund of excess allowance made to provincial 251,3 for Land Revenue remissions ordered by the Secretary of State over the actual cost 189,0 of said remissions; and 25,0 is refund of an amount allowed to provincial in 1881-82 for expenditure upon Uru Salt Works, but now withdrawn as these works are to be undertaken from Imperial Funds.

57. The principal items shown in the above account under Miscellaneous arise from two reservations made in the provincial contracts of March 1882, namely, (1) the refund

Section B.—PRINCIPAL HEADS OF REVENUE —*continued.*

from Provincial to Imperial of the amount of reduction effected in Customs Establishments, Provincial Governments having been allowed for the full establishment existing before 1882-83. (2) Repayment to Provincial of Census charges, which were not included in the Provincial Contracts as the census operations were just about to end.

II.—Opium Revenue.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
7,465,3	Bengal	6,768,0	6,883,0	6,890,5
2,184,7	Bombay	2,518,7	2,459,2	2,395,6
192,0	Excise	188,1	193,8	198,9
20,4	Miscellaneous	25,2	25,8	14,6
9,862,4	TOTAL	9,500,0	9,561,8	9,499,6

58. *Bengal.*—The following figures compare the sales and produce of the successive years:—

	Chests sold.	Average price.	Produce, ₹	Added to Stock(*a*) Chests.	Balance in Stock, (*a*) March 31, Chests.
1876-77	47,240	1,270	6,000,0	68,051	71,315
1877-78	49,500	1,266	6,269,3	67,167	88,982
1878-79	55,500	1,225	6,798,6	43,140	76,622
1879-80	59,100	1,170	6,914,2	49,961	67,483
1880-81	56,400	1,362	7,683,6	52,969	64,052
1881-82	56,400	1,324	7,465,3	49,732	57,384
1882-83 Budget	56,400	1,200	6,768,0	...	...
1882-83 Actual	56,400	1,222	6,890,5	54,039	52,681

(*a*) The last two columns refer to stock for export only, and exclude three or four thousand chests produced annually for consumption in India.

59. At the end of 1881-82 the prices realised at the opium sales were falling, namely, January 1,336, February 1,288, March 1,257. During 1882-83 the prices realised at the twelve sales were as follows: 1,241, 1,210, 1,302, 1,260, 1,220, 1,228, 1,207, 1,188, 1,149, 1,186, 1,227, 1,240. It will be seen that there was a sudden depression of price from November till January, which was largely caused by the discovery that some of the opium sold in October was seriously damaged. The November sales were put off for a week to allow of examination of the opium intended for sale, but prices did not recover for the next two months. The average for the whole year was ₹1221-11, being ₹21-11 better than the Budget Estimate, which had been taken at Rs. 1200; this upon 56,400 chests gave an improvement of 122,5.

60. The produce of the year (for export) was 54,039 chests, but of this 2,342 chests were wasted and damaged, so that only 51,697 were really available. The sales therefore drew upon stock to the extent of 4,703 chests. The 2,342 chests returned as wasted and damaged were made up for excise opium after examination and removal of the damaged part of the contents.

61. *Bombay.*—For Bombay the following figures compare the exports:—

	Chests.	Rate. (*a*)	Amount.
1876-77	49,136	600	2,948,2
1877-78	45,830	600	2,749,8
1878-79	36,807	650	2,393,0
1879-80	46,211½	650 & 700	3,141,1
1880-81	36,069½	700	2,526,2
1881-82	31,196	700	2,184,7
1882-83 Estimate.	36,000	...	2,518,7
1882-83 Actuals.	36,327	700 & 650	2,395,6

(*a*) Opium which passes the scales at Ajmere pays R25 more.

62. The rate on Bombay opium which had stood for some time at ₹700 (and 725 for Ajmere weighments) was reduced to ₹650 (and 675 for Ajmere) from 28th June 1882. This reduction necessarily followed the lower range of prices indicated by the sales in Bengal and the diminution in Malwa exports. Exports again became active, and although a little more than the whole number of chests estimated was actually brought forward, the

Section B.—PRINCIPAL HEADS OF REVENUE —*continued.*

reduction of the duty prevented the realisation of the estimated revenue. The months of January and February were rather favourable and caused the Revised Estimates to be placed at a high figure, but March showed a sudden falling off. To a large extent however the chests had actually passed the scales, but were represented by bills outstanding at the end of March, and thus passed into the realizations of next year.

63. *Excise.*—The receipts in each of the provinces concerned exceeded the Budget Estimate. Burmah is the only province which shows a revenue less than last year, and here the reduction was very small, although the number of shops was reduced from 28 to 18. In Assam measures were taken at the end of the year to reduce consumption by raising the price from ₹26 to ₹32 per seer, but the traders in anticipation of the increase took out large stocks and thus caused an increase in the revenue.

64. *Miscellaneous.*—The falling off here is in the recoveries in the Bengal Agencies.

III.—Salt Revenue.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
1,898,1	NORTHERN INDIA SALT DEPARTMENT .	1,729,2	1,570,2	1,569,5
	SEA-BORNE SALT.			
14,8	Burmah	18,5	15,0	12,9
2,371,6	Bengal	1,683,0	1,700.0	1,747,3
5,7	Madras	9,8	4.1	3,3
5	Bombay	2	2,0	1,3
	GOVERNMENT SALT.			
1,452,6	Madras	1,239.7	1,306,3	1,342,8
33,6	Bombay	29,8	30.0	37,4
	EXCISE ON LOCAL MANUFACTURE.			
4,9	Burmah	5,0	3,5	3.5
97,3	Bengal	113,9	73,6	72,8
12,3	Madras	18,3	62.0	42.2
1,458,8	Bombay	1,180,8	1,337,0	1,315,7
25,4	MISCELLANEOUS.	20,8	25,0	29,1
7,375,6	TOTAL .	6,049,0	6,128,7	6,177,8

65. At the beginning of the year, that is, from March 10, 1882, the Salt duty was reduced from ₹2-14 in Bengal and ₹2-8 elsewhere (except in Burmah) to ₹2, which accounts for the general diminution of revenue as compared with 1881-82. The immediate effect of the reduction would be a falling off to the extent of about 1,400,0, but as the comparison between the two years shows a diminution of about 1,200,0, which is composed of 25,0 on account of the depôt plan disappearing from both sides of the account, and 1,175,0 of Salt revenue proper, we must consider the revenue to have advanced, apart from the reduction of duty, by 1,400,0 — 1,175,0, or about 225,0.

66. Of the decrease of Actuals compared with Budget under the first head, 105,6 must be put down as nominal, being due to the abandonment of the depôt plan, by which salt was brought at Government expense to certain central depôts, the outlay being again realised along with the sale proceeds; the corresponding diminution appears in the expenditure. The remainder of the decrease, 54,1, is more than met by the increase under Sea Borne Salt, Bengal, and arises from the fact that Cheshire salt, being relieved of the burden of six annas differential duty, has to some extent taken the place in Northern India of salt supplied from other sources. Notwithstanding this decrease of the area of consumption of Northern India Salt, and a similar encroachment of Bombay salt on the western side, the duty realised by the Northern India Salt Department is a little more than the four-fifths of the realisation of 1881-82 (1,338,0 against 1,667,3) which would correspond to the reduction of duty from Rs. 2-8 to Rs. 2.

67. In *Sea Borne Salt*, Bengal, the reduction of the Budget compared with last year's Actuals compares pretty closely with the ratio of ₹2-14 to ₹2; but the realisations largely exceed. Part of this has already been explained to arise from the extension of the area of consumption, and the rest of it may be explained as the general increase of consumption which has followed the reduction of duty. Burmah showed a large falling off which was due to consumption being supplied out of accumulation of stocks. The stock of salt in that province has decreased in two years from 17,754 to 11,027 tons.

Section B.—PRINCIPAL HEADS OF REVENUE —*continued.*

68. In *Government Salt* the principal figures are those of Madras, and the increase is due in a large degree to administrative measures which have greatly reduced the consumption of illicit salt.

69. In *Excise duty* the chief figures are those of Bombay, where a favourable outturn caused larger exports of salt to other provinces. This has been already alluded to under the first head.

IV.—Stamps.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
2,301,5	Court-fees	2,258,7	2,332,3	2,300,6
1,064,9	Other stamp duties	1,070,8	1,062,5	1,062,6
15,0	Miscellaneous	12,5	16,8	16,5
3,381,4	TOTAL .	3,342,0	3,411,6	3,379,7

70. The revenue under this head is very steady, with a general tendency to improvement, which however has not shown itself this last year. The realisations fell off slightly in the Punjab (attributed to decrease of litigation), and in Madras. The decrease in fact is somewhat larger than at first sight appears, for in Bengal and the North-West some small receipts, which used to be taken in cash, are now arranged for by stamps, and are therefore added to this head, and in Bombay they were redeemed only by a windfall of 7,2 probate duty in a single case. 1881-82 was an exceptional year, and the rate of increase which it showed, 130,8, could hardly be expected to be maintained. The Budget was taken at a moderate figure, and was slightly exceeded.

V.—Excise.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
2,745,7	Liquors and Drugs	2,674,7	2,912,6	2,916,7
665,6	Opium	640,7	686,1	673,5
16,0	Other Receipts	15,6	17,2	19,4
3,427,3	TOTAL .	3,331,0	3,615,9	3,609,6

71. Here every province except Madras shows an increase both over the figures of last year and the figures of the Budget. The Budget Estimate is ordinarily taken at the amount expected to be realised during the year then expiring, so that any increase in the revenue brings in an increase over Budget. An increase may as experience shows be confidently calculated on if the season is one of ordinary agricultural prosperity, and it has been contributed to by administrative measures. The increase was greatest in the North-West (475,2 against 414,7 last year) and in Bombay (701,0 against 660,3).

VI.—Provincial Rates.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
	GENERAL RATE ON LANDS.			
40,0	Central Provinces	37,1	39,9	39,7
74,9	Burmah	81,7	81,4	80,0
32,2	Assam	36,2	36,2	34,1
681,8	Bengal	687,8	693,2	695,3
554,3	North-West	538,3	535,8	545,8
256,3	Punjab	254,2	255,2	256,6
401,8	Madras	401,0	401,0	421,5
229,7	Bombay	226,4	238,5	222,7
2,271,0	TOTAL .	2,262,7	2,271,2	2,295,7
	OTHER RATES.			
5,6	India	5,6	6,0	6,4
16,4	Central Provinces	16,9	14,1	14,9
3,2	Burmah	1,6	1,6	1,5
42,6	Bengal	37,9	40,6	45,2
337,4	North-West	102,9	124,2	100,3
217,0	Madras	220,0	209,2	217,4
2,3	Bombay	1,4	1,5	1,6
624,5	TOTAL .	386,3	397,2	387,3
2,895,5	TOTAL BOTH .	2,649,0	2,668,4	2,683,0

Section B.—PRINCIPAL HEADS OF REVENUE —*continued.*

72. Under the first head, *General Rate*, there is an improvement in Bengal due to revaluations. The largest difference occurs in Madras and was caused by the active measures taken by the Government, as mentioned under Land Revenue, to bring up collections at the end of the year.

73. Under *Other Rates* the Bengal and Madras figures are affected by the same considerations. In the North-West figures we have to note the reduction of revenue caused by the remission of the Patwari cess, which in the Financial Statement was estimated at 240,0, and almost exactly accounts for the difference between the realisations of the two years. The revenue by rates was somewhat over-estimated in the Revised Estimates of the North-Western Provinces; they fell off largely at the end of the year, just as Land Revenue did.

VII.—Customs.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
	IMPORTS.			
152,7	Burmah	96,4	85,0	83,2
617,3	Bengal	137,9	140,0	148,7
143,8	Madras	52,7	50,0	57,0
648,5	Bombay	150,0	142,5	144,5
1,562,3	TOTAL	437,0	417,5	433,4
	EXPORTS.			
487,4	Burmah	458,5	555,0	558,6
204,9	Bengal	162,1	206,7	212,8
49,9	Madras	65,0	35,0	43,8
25,8	Bombay	18,1	24,0	26,4
768,0	TOTAL	703,7	820,7	841,6
31,1	MISCELLANEOUS	40,3	27,1	21,1
2,361,4	TOTAL	1,181,0	1,265,3	1,296,1

74. The Customs duties were abolished from March 10, 1882, with the exception of the import duties on liquors and on arms and ammunition, and the export duties upon rice.

The import duties therefore are now almost entirely liquors, and the exports almost entirely rice; so that the classification of last year may now be discontinued. The net figures after drawbacks and refunds are—

	1880-81.	1881-82.	1882-83.
Imports, Liquors	378,9	405,7	418,4
Exports, Rice	715,5	747,8	814,9

The figures under other heads (mostly refunds) being too small for separate mention.

75. The imports of liquors are increasing, just as the Excise duties on liquors are, and though there were variations in the several provinces, the estimates were on the whole fairly followed.

The increase in the duties on rice marks the expansion of the trade, which has been very marked in recent years.

76. Under *Miscellaneous*, the receipts were mostly overestimated in the Budget, that is to say, the effect of the abolition of much of the business connected with Customs was not sufficiently taken into account. The figure is not an important one.

VIII.—Assessed Taxes.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
536,8	TOTAL	538,0	525,9	517,8

77. No remarks are here called for; there is a tendency to decline in most of the provinces, which is probably due to the absence of systematic re-assessment.

Section B.—PRINCIPAL HEADS OF REVENUE —*concluded.*

IX.—Forest.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
117,3	Central Provinces	100,0	100,0	97,8
223,2	Burmah	175,0	246,3	250,4
106,6	North-Western Provinces	116,0	107,3	101,3
182,8	Bombay	165,0	192,5	209,0
242,3	Other Provinces	250,9	272,7	277,0
2,2	England	2,1	2,8	2,7
874,4	TOTAL	809,0	921,6	938,2

78. Burmah and Bombay are the chief provinces in respect of forest administration. Both of these provinces show extending operations, and the high prices of timber have during the last year or two greatly increased the revenue. The state of the market has been such as to render it advisable, in each of the last two or three years, to push operations towards the end of the year, and thus to bring about a considerable increase over Budget both in revenue and in expenditure. Sales of teak are the chief factor in the increase in Burmah, but in Bombay we have increase not only in the larger timber, but also in sales of railway fuel and sandal-wood.

79. The North-West estimates were the only ones that failed; they estimated for the sale of a large quantity of sleepers that had been for some time in stock, but were not successful in finding a purchaser.

80. Assam and Madras chiefly contributed to the increase in "Other provinces," but sandal-wood sales added to the receipts in Coorg (India) as they did in Bombay.

X.—Registration.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
284,7	TOTAL	284,0	285,4	285,8

81. There is singularly little variation in these figures.

XI.—Tributes from Native States.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
706 9	TOTAL	701,0	707,9	689,9

82. The variations under this head are caused by slight irregularities in the payments, many of which are due at the very end of the year. Last year's figures included an arrear payment of about 6,0; this year's appear to have fallen slightly behind.

Section B.—DIRECT DEMANDS ON THE REVENUE.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
8,220,1	EXPENDITURE	9,008,1	8,735,6	8,477,6

83. The total saving on the Budget is 326,1. Of this, 124,2 is nominal, being merely the transfer to their particular heads of the refunds not coming under Revenue heads. A saving of 160,0 was made in the provision made in Bombay for certain special Land Revenue Refunds, but this also is no real saving, for the payments are only put off to another year. Against this 160,0, however, we had unexpected charges for other refunds, amounting in all to 85,0, so that the expenditure in Revenue refunds was really only 75,0 less than the Budget. Under Salt, the saving is 190,0, of which 100,0 is practically an exclusion from both sides of the account of freight charges recoverable from

Section B.—DIRECT DEMANDS ON THE REVENUE —*continued.*

purchasers, about 200 is short charge for manufacture, and 67,6 may be described the provision made for administrative improvements in Madras and Bombay which were only in course of introduction when the year closed. The same may be said of the 85,0 provided under Land Revenue for the transfer to Government of the pay of Patwaris in Oudh,—see para. 60 of the Financial Statement.

84. The figures thus specifically mentioned amount to 474,2 out of the 526,1 saved in the estimates, and the remainder is made up of a number of items, some of the major heads slightly exceeding and others falling short of the Budget provision.

85. Compared with last year the chief difference lies in 225,4 additional expenditure upon opium, representing a better crop; and 38,7 under Land Revenue. Salt gave an apparent saving of 37,2 and Customs a real one of 40,1. The other differences were small, except that under refunds, the figures of which are rather irregular upon a comparison of years.

3.—Refunds and Drawbacks.

1881-82. Accounts.		1882-83. Budget.	Revised.	Accounts.
48,0	Land Revenue	234,4	169,1	91,5
45,3	Salt	31,1	50,4	53,8
37,7	Stamps	34,2	36,6	36,6
73,2	Customs	40,6	54,9	52,4
28,9	Assessed Taxes	17,5	22,1	21,0
39,3	Other Revenue Refunds	29,0	51,1	61,3
...	Law and Justice	42,5	...	...
...	Miscellaneous Refunds	81,7	...	...
272,4	TOTAL	511,0	384,2	316,6

86. The *Land Revenue* refunds are necessarily incapable of accurate estimate, as their amount depends upon claims which for the most part are not yet brought forward. The Estimates of 1882-83, however, provided for the execution of certain orders issued by the Secretary of State, directing a diminution in the rate of enhancement assessed in some of the districts of Bombay. The whole amount to be thus refunded was estimated at 193,3, but as the proceedings took longer than expected, the Revised Estimates showed only 107,5 falling within the year, and as a matter of fact only 33,1 came into the year's accounts, the rest coming into 1883-84. Excluding these figures, the amount of Land Revenue Refunds becomes—Budget 41,1, Revised 94,7, Actuals 91,5, the increase in the latter figures being caused by special payments in Burmah, Bengal, and Madras. Under *Salt*, the payments in Bengal and in Bombay were under-estimated; and under *Customs*, sufficient reckoning was not made of the refunds which the abolition of the duties would bring in as a matter of closing of accounts; the refunds on piece goods in Bombay were 6,0,—nearly half as much as they were in the whole year 1881-82.

87. The charges under "*Other Revenue Refunds*" were very high, the excess over Budget arising in two ways. First there were excise refunds in Bombay chiefly made under agreement with Native States. These were estimated at 15,9, but came to 36,6. The greater part of the charge should have fallen into 1881-82, but the accounts were not settled in time, and the excess over the Budget Estimate is due to the raising of the pass fees upon which they are calculated. In the North-Western Provinces a charge of 9,7 was brought upon the year by the necessity of refunding the Patwari cess that had been collected after the date—March 10th, 1882—of the orders abolishing it.

88. The refunds under *Law and Justice* and other *Non-Revenue* heads were removed to their special major heads under orders of the Secretary of State received in February 1883; they do not therefore appear in this part of the accounts, in the Revised Estimates and in the Actuals.

Section. B.—DIRECT DEMANDS ON THE REVENUE —*continued.*

4.—Assignments and Compensations.

1881-82. Accounts.		1882-83. Budget.	Revised.	Accounts.
268,6	India	305,7	316,5	286,3
7,7	Central Provinces	7,5	7,3	7,3
..	Burmah	...	...	...
3,3	Assam	2,8	3,3	3,1
16,4	Bengal	11,3	11,3	11,3
7,2	North-Western Provinces	7,8	6,6	6,6
22,1	Punjab	22,3	21,6	21,5
121,3	Madras	116,3	119,4	119,4
747,8	Bombay	749,4	755,7	739,6
1,194,4	TOTAL	1,223,1	1,241,7	1,195,1

89. The figures under "*India*" are almost entirely salt compensations. The Budget figure shows pretty accurately the annual amount of these compensations, and the Revised added to it about 44,0, the amount stipulated for in some new treaties, and a small amount which had remained undrawn in 1881-82. Out of 152,2, the compensations estimated in the Revised on account of Jodhpoor, Jeypoor, Meywar, Sirohi, and Holkar's States, only 124,9 was paid during the year, and the accounts therefore fell short of the estimate.

90. *Bengal* shows its normal figure, the high figure of 1881-82 being due, as explained last year, to two annual payments of 5,0 coming within the year's accounts.

91. *Madras and Bombay.*—The differences here accounted for in the same way as explained in detail under "India," that is, they are due to irregularities in payment, which are not always under the control of Government officers. In Bombay as much as 16,1 remained undrawn at the end of the year.

5.—Land Revenue.

1881-82. Accounts.		1882-83. Budget.	Revised.	Accounts.
73,5	India	31,4	36,7	36,9
74,1	Central Provinces	76,0	75,0	75,2
194,1	Burmah	217,8	224,2	215,5
83,4	Assam	91,3	92,0	91,7
310,2	Bengal	323,8	314,5	328,2
647,1	North-Western Provinces	780,9	678,9	667,2
231,6	Punjab	244,6	241,2	235,1
723,8	Madras	731,9	739,8	740,2
665,4	Bombay	669,3	653,0	652,0
3,003,2	TOTAL INDIA	3,167,0	3,055,3	3,042,0
6.	Add England	1,0	6	5
3,003,8	TOTAL	3,168,0	3,055,9	3,042,5

92. *India.*—The estimate under this head should for purposes of explanation be divided into two parts, namely—

50,4	Survey of India, Revenue Survey	8,3	11,7	11,7
23,1	Other Charges	23,1	25,0	25,2

For the explanations of the figures in the first of these two lines, it is best to refer to those given against "Survey of India," under "Scientific and other Minor Departments," with which they are closely linked. The estimate should have stood at 11,0, but was reduced by 2,7, on account of savings which were not meant to be taken in this particular part of the estimate.

93. The figures shown against the following provinces do not call for remark:—*Central Provinces, Burmah, Assam, Punjab.* The payments are mostly for salaries and have varied only in a small degree from the particulars provided in the Budget.

94. In *Bengal* the estimates appear to have been a little too low, as the expenditure exceeded under most of the heads; the charges being mainly for establishments ought to have been more accurately forecast; the increase was from 323,8 estimated to 328,2 spent. The same remark was made last year, and the mistake arises in part from excessive allowance for "Probable savings," and also apparently from insufficient estimates of expenditure under such heads as "Revenue Survey" and "Government Estates."

Section B.—DIRECT DEMANDS ON THE REVENUE —*continued.*

95. In the *North-Western Provinces* the difference lies chiefly in the provision made for the payment of Putwaris in Oudh, to which allusion is made in paragraph 60 of the Financial Statement for 1882-83. The pay of these men, about 75,0, hitherto paid by zemindars, was to be undertaken by the Government, and allowing for an increase in their number, 85,0 was provided in the estimates. The new law was not brought into operation during the year, and the money therefore remained unspent. Omitting this the figures of 1882-83 run thus:—Budget 695,9, Revised 678,9, and Actuals 667,2, the difference in which comes for the most part under the single head of Revenue Survey, which is explained under "Scientific and other Minor Departments." These Revenue Survey charges came into the Provincial Estimates for the first time in 1882-83, and it is almost entirely in their amount, 26,3, that the difference between the figures of 1881-82 and 1882-83 lies. In *Madras* there is a slight excess caused by the creation of a new district, Anantapur, and by a slight extension of survey operations.

96. In *Bombay* the charges were increased by operations for the destruction of locusts, and by writing off 4,1 out of a claim against the city of Ahmedabad for City Survey, and by expenditure in setting up boundary-marks in Sind; on the other hand, a large reduction was made by the Government directing a new rate of distribution of the charges for village service between this head and that of "Police," the charges of the two years being thus compared:—

	1880-81.	1881-82.	1882-83.
Land Revenue	292,1	300,2	271,0
Police	59,6	57,6	78,7
TOTAL . .	351,7	357,8	349,7

6.—Opium.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	BENGAL—			
1,931,4	Payments to Cultivators and Manufacturing Charges	2,116,3	2,212,7	2,156,0
123,0	Other Charges	131,7	128,6	124,6
3,0	INDIA, BOMBAY, AND ENGLAND . .	2,0	3,6	2,2
2,057,4	TOTAL .	2,250,0	2,344,9	2,282,8

97. The expenditure on opium in Bengal depends entirely upon the amount of the crop, as it consists chiefly of the payment to cultivators for the crude opium. The estimate was taken sufficiently high to provide for an average crop, and did very nearly meet the charges, the crop being, as shown under the revenue side, rather better than the recent averages. The expenditure promised to run somewhat higher at the time of the Revised Estimate, but fell again in February and March.

98. The provision made in the estimates for establishment and miscellaneous charges appears to have been higher than required. The saving was chiefly under the head of "Commission to employés," expenditure 16,6 against estimate 21,5. This "commission" is practically a part of the employé's salary which depends upon the outturn of the season.

7.—Salt.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	Northern India Salt Department—			
165,0	Establishment and Contingencies .	158,7	153,3	138,9
75,0	Carriage and freight . . .	134,0	66,0	33,5
4,1	Burmah and Bengal . . .	5,7	4,1	3,6
132,8	Madras	182,2	157,0	152,3
109,3	Bombay	158,4	115,0	120,7
	England	...	4,0	...
486,2	TOTAL .	639,0	499,4	449,0

99. In the Northern India Salt Department a reduction was shown in both the above divisions of expenditure.

100. In the first division, this reduction is mainly in manufacture charges, which naturally depend greatly on the character of the season. They were taken in the Budget Estimate at 34,0 for Sambhar and 6,2 for Pachbudra, against the actual figures of 1881-82, 19,4 and 4; but the actuals were only 17,6 and 8,1, being 14,5 less than Budget. The saving as compared with last year was in the expenditure on petty construction, and other costs, incurred in 1881-82 in the introduction of the depôt system. The difference under carriage and freight has already been alluded to upon the revenue side, and is due to the abandonment of the depôt plan, which did not, as it was expected to do, tend to the diminishing of the price of salt, and was entirely a source of expense.

Section B.—DIRECT DEMANDS ON THE REVENUE —*continued.*

101. The diminution of the *Bengal* figures was due to reduction in the preventive establishment in Orissa.

102. In *Madras* a systematic reorganisation of the department was intended, and the following new expenditure was included in the estimates, 30,2 for establishments, 6,9 additional for petty construction (that is, 18,4 against past year's actuals, 11,5), and 8,0 additional for purchase of salt from manufactories, giving a total excess in estimated expenditure of 45,1 on this account. The reorganisation was not nearly complete by the end of the year, and thus the expenditure originally estimated at 182,2 was taken in the Revised Estimates at 157,0 and was really only 152,3.

103. In *Bombay* similarly large provision was made in the Budget for new administrative arrangements. Establishments were proposed for the administration of salt in Portuguese India, and for a preventive line on the Kathiawar frontier, but none of these measures were fully carried out within the year. In fact hardly any new expenditure on the preventive line was actually incurred, and of 12,5 provided for petty construction in connection with it only 1,0 were spent. Thus the expenditure was as a matter of fact reduced to very nearly its old limits, and would indeed have fallen within them, had not the season been unusually favourable for the manufacture of Kharagora Salt.

8.—Stamps.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	INDIA—			
59,0	Charges for Sales (chiefly Discount) .	60,7	59,2	59,0
18,8	Other Expenditure	19,3	19,1	19,5
32,8	ENGLAND	39,0	42,6	44,9
110,6	TOTAL .	119,0	120,9	123,4

104. The English expenditure is the only part that calls for remark, and the increase in it was caused by the demands for stores being somewhat larger than usual.

9.—Excise.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
96,9	TOTAL	99,0	95,7	94,4

105. The expenditure, except in one respect, was nearly the same as last year. The difference alluded to is in the expenditure introduced in the North-Western Provinces in 1881-82 by an experimental direct management of the excise farms in two districts,—an experiment which was abandoned in 1882-83. It is in this point also that the principal difference lies between the Budget Estimate and the final outturn.

10.—Provincial Rates.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
53,2	TOTAL	49,0	50,9	53,5

106. The figures of the current year are nearly the same, province by province, as those of 1881-82. The Government of Bengal made a short estimate of 17,8, but its expenditure in both years has been over 23,0.

11.—Customs.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
25,9	Burmah	21,8	20,0	19,6
68,6	Bengal	56.7	58,0	57,8
23,3	Madras	21,0	18,4	18,5
77,3	Bombay	63,5	60,2	61,1
0	England	0	0	0
195,1	TOTAL .	163,0	156,6	155,0

Section B.—DIRECT DEMANDS ON THE REVENUE—*concluded.*

107. The abolition of most of the Customs duties was followed by considerable reductions in the Customs establishments, the precise amount of which it was not possible to forecast with exactitude in the Budget Estimates. The reduction of expenditure is necessarily far from proportionate to the reduction of revenue, both because the retention of the duties on liquors, on salt, and on rice render it necessary to maintain nearly the same organisation of Customs establishments, and because the statistical work of the Customs Department had still to be maintained. The reduction was, however, a little more than had been at first estimated, or rather, the knowledge that the reductions would cause considerable new expenditure for pensions and gratuities prevented the Budget figure being too far reduced. In future the figures should be still smaller, as the figures of 1882-83 are necessarily still affected by the unreduced establishments.

12.—Assessed Taxes.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts
13,1	TOTAL .	15,0	13,8	12,9

108. On these figures no remark is required. Three-quarters of the expenditure, both this year and last year, was in Bengal, which estimated 10.5 and spent 9,6 and 9.5.

13—Forest.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
49,6	Central Provinces	59,0	46,0	41,1
115,0	Burmah	110,0	128,5	121,9
91,5	North-Western Provinces	88,0	87,8	83,8
115,0	Bombay	120,0	120,8	126,2
181,2	Other Provinces	207,8	198,3	189,0
5,3	England	5,2	5,3	5,3
557,6	TOTAL .	581,0	586,7	567,3

109. The *Central Provinces* estimated for expenditure in the preparation of railway sleepers, for which, however, the expected demand was not made. The provision made for salaries was also more than was required. In *Burmah*, as noticed upon the receipt side, a sudden demand for timber set in at the end of the year, and extra expenditure was sanctioned in order to bring timber to market; this brought the Revised Estimate up to 128,5, and the expenditure would have been nearly the same, but that about 5,0 remained undisbursed when the year closed. The addition made to revenue was 75,4 over Budget, whereas that of expenditure, taking the higher figures of the Revised Estimate, was 18,5.

110. The estimates of the *North-Western Provinces* would have been worked up to, but that 3,8 remained due and unpaid on account of current year's operations when the year closed.

111. For *Bombay* the explanation is almost the same as in the case of Burmah, and has been noticed upon the revenue side. The surplus in both of these provinces was the largest that has ever been realised.

112. The savings on the Budget in the "*Other provinces*" accrued in a number of small sums, none of which requires separate mention.

14.—Registration.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
179,4	TOTAL .	186,5	184,8	184,5

113. Under this head Burmah and Assam showed expenditure 1,0 and 2,1 against estimates 2,0 and 2,5. In the first case the saving was due to abolition of registration allowances made to Treasury officers, and in the second to savings in district charges. The charges are mostly commission on fees, but partly also salaries, and it is in Madras that the principal increase of expenditure occurs. The estimates show the following number of offices open in that Presidency—February 1881, 211; February 1882, 252; February 1883, 282. In other provinces the expenditure is stationary.

Section C.—POST OFFICE, TELEGRAPH, AND MINT.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
1,489,7	RECEIPTS	1,637,0	1,652,8	1,709,0
1,771.6	Expenditure	1,918,0	1,932,2	1,908,6
−281,9	Net	−281,0	−279,4	−199,6
−198,0	Post Office (net) . . .	−206,0	−207,1	−216,2
−67,0	Telegraph (net) . . .	−112,0	−135,7	−80,0
−16,9	Mint (net)	+37,0	+63,4	+96,6

114. The working of the Post Office was a little worse than the Estimate. The Telegraph appears a little worse than last year; but as the Capital Expenditure in India was 150,0 against 106,1 last year, there is really an improvement in current expenditure. The Mint was much better than Estimate, owing to the large importations of silver.

XII.—Post Office.

1881-82. Accounts.	IMPERIAL POST OFFICE.	1882-83. Budget.	1882-83. Revised.	Accounts.
592,2	Sale of Postage Stamps	579,2	608,8	608,4
242,0	Parcel and other Postage collected in cash .	267,0	258,3	257,0
71,7	Money Order Fees	89,6	78,6	80,8
70,7	Other Receipts	52,4	54,0	52,2
976,6	TOTAL .	988,2	999,7	998,4
31,3	DEDUCT—Accounted for to other Governments	25,7	25,3	26,8
945,3	NET RECEIPTS .	962,5	974,4	971,6
4,6	ADD—District Post	4,5	5,2	6,2
949.9	TOTAL .	967,0	979,6	977,8

115. The Estimates under the two first heads must be taken together, as small variations in the system of the department sometimes have the effect of transferring sums from one to the other. The totals of the two heads shew the following figures,—834,2 for 1881-82, and 846,2, 867,1 and 865,4 for 1882-83, shewing a considerable increase in the year's revenue. The *Money Order fees* increase with the Money Order work; the Budget figure should really stand at 70,0 as the remaining part, 19,6 was the Estimate of yearly exchange on the issue of Orders payable in England wrongly taken to this head. Thus explained, it will be seen that the Estimate was largely exceeded. The remittances of the last three years compared with the fees are as follows:—

	1880-81.	1881-82.	1882-83.
Inland Orders	4,570,9	5,733,5	6,468,4
Overland and Foreign Orders .	109,4	174,7	213,0
TOTAL . .	4,680,3	5,908,2	6,681,4
FEES . .	51,6	71,7	80,8

Under *Other Receipts* the realizations closely corresponded with the Estimates, which were framed for a reduction of 10,3 in Bullock Train receipts, due to restriction of operations, and of 8,0 in other items.

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*continued.*

XIII.—Telegraph.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
376,6	Indian	438.9	409,5	410,8
92,6	Indo-European	86,1	111.2	134,0
—	Provincial	...	3	5
469,2	TOTAL	525,0	521,0	545.3

116. The message revenue on the Indian lines, trusting to the effect of the revised rates of January 1, 1882, was taken in the Estimates at too great an advance over the former year, and besides this a sum of 18,3 due from the South Indian Railway was not paid till 1883-84. The increase in the Indo-European receipts was due to the interruptions of the Eastern Telegraph Company's line *viâ* Suez, causing a great accession of traffic to the former line. The common-purse arrangement, however, causes a large share of this increase of revenue to pass out again in the form of payments to the Eastern Telegraph Company. A large amount was received also in the form of recoveries from the Persian Government.

XIV.—Mint.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
43,4	Seignorage on Silver	130,0	125,0	108,9
14,0	Gain on Copper Coinage	6,0	6,0	35.0
	Other Receipts—			
9,6	Calcutta	5,7	5,8	8,0
...	Madras	1	4	6
3,6	Bombay	3,2	15,0	33,4
70,6	TOTAL	145,0	152,2	185,9

117. The seignorage on Silver is of course not capable of estimate, as it depends upon the course of trade. This during the year under review was altogether irregular, as the practical suspension of drawings by the Secretary of State during the last half of 1882 caused large imports of Silver, which found their way to the mints, and produced a large revenue by seignorage.

118. The importations of Silver have been in recent years—

	Net Importation.	Silver Coinage.	Seignorage.
1878-79	3,970,7	7,210,8	141,2
1879-80	7,869,7	10,257,0	212,0
1880-81	3,892,6	4,249,7	76,1
1881-82	5,379,0	2,186,3	43,4
1882-83	7,480,0	6,427,4	108,9

119. The *Gain on Copper Coinage* is brought to account upon an examination of the amount actually passed into circulation, the balance of gain on manufacture being held back till the coin so passes out. The statistics of Copper circulation are only now being brought together, and the absorption appears to go on at a rate which was not anticipated in the Estimates. An unusual quantity had passed out in 1881-82, and it was thought that it would be followed by a falling off in 1882-83, but the rate was still kept up, and the net gain brought to account was 35,0.

120. The *Miscellaneous* receipts in the Calcutta Mint came in through the Mint undertaking certain work in connection with the supply of Cartridge metal to the Dum-Dum Factory; in Madras, through the sale of some old Mint materials; Bombay, through the sale of a large quantity of Copper, which when purchased had been charged to the Service head.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
1,771,6	EXPENDITURE	1,918,0	1,932,2	1,908,6

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*continued.*

15.—Post Office.

1881-82. Accounts.	IMPERIAL POST OFFICE.	Budget.	1882-83. Revised.	Accounts.
30.7	Chief Post Office	34,9	36,0	36,2
577,6	Presidency and District Offices	622,8	612,7	614,1
308,6	Conveyance of Mails	283,1	300,8	303,1
26,7	Other Charges	25,4	25,6	30,4
943,6	TOTAL	966,2	975,1	983,8
107,5	ADD—District Post Office	103,2	110,5	108,7
1,051,1	TOTAL INDIA	1,069,4	1,085,6	1,092,5
96,8	ENGLAND	103,6	101,1	101,5
1,147,9		1,173,0	1,186,7	1,194,0

121. The introduction of Post Office Savings Banks, and the rapid extension of money order work throw upon the Chief Post Office and the Presidency and District Offices necessity for increase of expenditure. The estimates were framed to allow of this, and they covered the expenditure fully.

The expenditure for *Conveyance of Mails* seems to have been short-estimated, as it stood at 308,6 last year, 303,1 this year, against 283,1 estimated.

Under *Other Charges*, the increase over estimate was mainly in printing charges.

122. The figures of the department, taken net, and allowing for the mis-classification to the exchange alluded to under Receipts, are—

Actuals. 1880-81.	Actuals. 1881-82.	Budget. 1882-83.	Revised. 1882-83.	Actuals. 1882-83.
+36,7	+1,7	−23,6	−7	−12,2

123. Under *District Post Office* the charges slightly exceeded the estimate, and the *English* charges were also increased over estimate by the demands for stores for India.

16.—Telegraph.

1881-82. Accounts.	INDIAN TELEGRAPH. CAPITAL ACCOUNTS.	Budget.	1882-83. Revised.	Accounts.
57,0	India	84,6	83,4	74,2
49,1	England	77,0	77,0	75,8
	REVENUE ACCOUNTS.			
317,8	India	362,7	356,3	340,3
6,9	England	6,0	8,2	7,4
	INDO-EUROPEAN TELEGRAPH.			
67,3	India	67,6	65,4	62,3
38,1	England	39,1	65,2	63,8
	PROVINCIAL.			
	Bombay	...	1,2	1,5
536,2	TOTAL	637,0	656.7	625.3

124. In the *Capital* Account of the Indian Telegraph in India, the savings of 10,4, as compared with Budget, and 9,2 as compared with Revised, is due mainly to the expenditure of Stores being more largely met from stock than was at first anticipated. The demands for Telegraph construction are increasing with the extension of Railway lines.

125. The figures of England, though within Estimate, largely exceeded those of 1881-82, as heavy demands were made for stores.

126. In the *Revenue* account the Budget Provision included 24,0 for additions to establishments, and provided for the purchase of additional stores, and for maintenance of addi-

Section C.—POST OFFICE, TELEGRAPH, AND MINT—*concluded.*

tional Railway offices; but the Expenditure fell short mainly by reason of these extensions not being fully carried out. In England there was a slight excess of leave allowances, provided for practically by consequent savings in India.

127. In the *Indo-European* Telegraph the Expenditure in India was within Estimate; that in England was increased by the repayments noticed in the remarks on the Revenue.

17.—Mint.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
40,6	Calcutta Mint	63.9	46,6	46,8
27,9	Bombay Mint(*a*)	40.5	35,0	36.5
19,0	Stores from England	3,6	7,2	6,0
87.5	TOTAL	108,0	88,8	89.3

(*a*) Includes a very small amount in Madras.

128. The figures under *Calcutta Mint* are explained by the provision made for the recoinage of old and shroff-marked rupees, which it was intended to collect at the treasuries and to send in to the Mints. A provision of about 2,50 was made for the loss of weight to be made good in this operation, as it was ascertained that the rupees were seriously deficient in weight; but of the amount only 5,8 was used during the year.

129. In *Bombay* there were savings in establishment for which apparently unnecessarily high provision had been made; the charges, however, were higher than those of last year, as the outturn of work was greater.

Section D.—RECEIPTS BY CIVIL DEPARTMENTS.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
1,513,1	RECEIPTS	1,374,0	1,434,2	1,437,3

130. This section of the Revenue Account received last year a special credit of nearly 44,0 by sale in England of cinchona supplied from the Government plantations. This special receipt of 1881-82 and a falling off to the extent of about 20,0 under "Law and Justice" account for the main difference between the two years. "Police" and "Marine" also show a falling off, but in both cases the change involves reduced expenditure. Education shows increasing receipts, and it was under this head and under Marine that the Budget chiefly was exceeded.

XV.—Law and Justice.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
271,6	Fees, Fines, and Forfeitures	265,3	259,3	250,9
262,3	Jail Manufactures	261,0	248,5	246,6
143,6	Other Receipts	132,7	154,2	159,4
677,5	TOTAL	659,0	662,0	656,9

131. The figures of the first of these heads partake largely of the character of casual receipts, the regularity of which from year to year is as it were the balance of many chances. The receipts in the three preceding years were 268,5, 268,2, and 271,6, so that the Budget Estimate of 265,3 seemed a pretty sure one. There has been a falling off, however, in several of the provinces, caused to a small extent in Bengal and in the North-Western Provinces by transfer of certain receipts to "Stamps," and the realisations come to only 250,9.

132. Under *Jail Manufactures* the receipts in Burmah were 7,7 below estimate, and those in the North-West were 11,5. Burmah was largely affected by the issue of orders stopping jail manufactures which competed with private industry, and the same cause may have been operative also in the North-West Provinces. In other provinces the receipts more than covered the estimates.

133. Under *Other Receipts* we had unusually large receipts from lapsed estates under the Administrator-General of Bengal (21,9 against Estimate based on the Actuals of

Section D.—RECEIPTS BY CIVIL DEPARTMENTS—*continued.*

1881-82). Receipts by convict labour also considerably increased and were in part a set off against the loss by the restriction of jail manufactures.

XVI.—Police.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
136,7	Fees, Fines, and Forfeitures	128,8	132,4	132,7
111,3	Other Receipts	119,2	94,8	94.9
248,0		248,0	227,2	227,6

134. The decrease under *Fees, &c.*, compared with last year, is the effect of an arrangement introduced in Bengal for farming out the Cattle Pounds, which principally contribute to the receipts under this head, as the revenue from the farmers represents the net and not the gross income. The receipts in Bengal were therefore 36,6 against 40,7 last year.

135. The decrease under *Other Receipts* is mainly in connexion with the arrangements for Municipal and Cantonment Police; the recoveries from Municipalities during the last three years being as follow:—

	Central Provinces.	Burmah.	N.-W. Provinces.	Madras.	Bombay.	TOTAL.
1880-81	1,3	15,4	11,0	14,2	5,4	47.3
1881-82	8	14,5	11,2	14,4	4,9	45,8
1882-83	2	...	10,4	8,4	5,9	24,9

136. Administrative arrangements are in progress for transferring the cost of such Police from the Municipalities to the Government, and were alluded to in paragraph 65 of the Financial Statement. The effect of these arrangements, so far as regards the head of "Police," is either a reduction of the receipts of Government from Municipalities, or an increase of the Police charges by transfer of them from the Municipalities to the Government. But as the Municipalities were to take over from Government some new charges in lieu of these, the receipts on account of "Police" were retained in the Estimates pending completion of the arrangement.

XVII.—Marine.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
	Admiralty Department.			
106,6	Dockyards and Sea-going Vessels	74,4	99,9	100,9
	Civil Department.			
	(Ports, Light-houses and River Navigation.)			
17,7	Burmah	19,5	20,1	21,2
108,2	Bengal (chiefly Hooghly Pilotage)	82,3	85,5	95,2
1,1	Madras	3,3	1,8	5
4,3	Bombay	3,5	4,3	4,6
237,9	TOTAL	183,0	211,6	222,4

137. The principal item of increase over estimate in the *Marine Department* is the recovery from local funds of the value (10,7) of the Marine Engineer Student Fund [illegible], and in other cases also the receipts for services rendered to other departments exceeded the estimate. In the *Civil Department* [illegible] estimated at 7,9, produced, owing to the activity of trade in the port of Calcutta, 18,6. In the comparison with 1881-82, we have to omit from the receipts of 1881-82 about 16,0 of receipts in connexion with the port approaches of Calcutta, which during the course of that year (November 1881) were transferred to the administration of the Port Commissioners.

XVIII.—Education.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
116,9	Fees	113,2	122,3	123,6
72,4	Other Receipts	63,8	77,5	75,6
189,3	TOTAL	177,0	199,8	199,2

Section D.—RECEIPTS BY CIVIL DEPARTMENTS—*concluded.*

138. The receipts under *Fees* were taken in the estimate at a little better than the anticipated amount for 1881-82; but the steady increase of revenue produced, especially in Bombay, a considerable advance over last year's figures. Under *other receipts* the estimate was also exceeded. The principal increase was in Bombay and chiefly under "Sale Proceeds of Books" (Government Book Depôt) arising from the opening of new schools, and increase of pupils; but the receipts under other heads also show a progressive revenue.

XIX.—Medical.

1881-82. Accounts.	India—	Budget.	1882-83. Revised.	Accounts.
15,6	Hospital Fees	16,1	28,8	16,3
19,9	Other Receipts	22,9	17,7	37,5
4,0	England	2,0	2,1	2,2
39,5	TOTAL	41,0	48,6	56,0

139. The first two figures of the Revised Estimate would be more correctly shown as 16,4 and 30,1, as a receipt of 12,4 was wrongly classified by the North-West Provinces. Thus explained, the figures under *Hospital Fees* require no comment, and the increase under *other receipts* is due to the action of the Government of the North-West Provinces in bringing within their accounts the receipts and charges of certain aided dispensaries hitherto dealt with under Excluded Local Funds. This measure added about 22,0 to the anticipated receipts under this head, against which, however, came a decrease of 2,0 in Madras, an annual contribution not received, and 3,0 in Bombay, the receipts of a hospital which has been removed from the Government accounts.

XX.—Scientific and other Minor Departments.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	CINCHONA PLANTATIONS—			
43,7	England	...	1,4	1,4
20,9	India	19,5	28,8	26,6
	INLAND LABOUR TRANSPORT—			
8,8	Fees	9,9	7,3	6,8
10,6	MATHEMATICAL INSTRUMENT DEPARTMENT	5,3	13,6	8,5
36,9	OTHER ITEMS	31,3	34,0	32,4
120,9	TOTAL	66,0	85,1	75,7

140. The sales of *cinchona* in 1881-82 were England 43,7; Bengal, 18,1; and Madras, 2,8. In 1882-83 the sales in England were limited to 1,4. Bengal realised 15,1, and Madras instituted a system of local sales by auction which realised at three sales 11,4.

The operations under *Inland Labour Transport* were affected by a new Act, I of 1882, regulating emigration in Bengal and Assam.

141. The *Mathematical Instrument Department* received large credits in 1881-82 for instruments supplied to the Public Works Department; the amount has fallen back more nearly to its normal figure, some special receipts taken in the Revised Estimate not having come in within the year.

Under *other items* the changes do not require separate specification.

Section D.—SALARIES AND EXPENSES OF CIVIL DEPARTMENTS.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
11,038,5	EXPENDITURE	11,084,0	11,000,9	10,948,0

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS—*continued.*

142. The relation between these figures is most easily shown in a tabular form—

	Accounts. 1881-82.	Budget. 1882-83.	Accounts. 1882-83.
Increase over 1881-82 in the charges under General Administration; the Estimates provided for only a small part of the eventual increase	...	10,0	70,0
Margin of provision made in the Estimates for Port Blair Settlement and for Jail charges. Prices being low both in 1881-82 and in 1882-83, this margin was in excess of the figures of both years	...	100,0	...
Additional police expenditure estimated and spent in 1882-83, being chiefly 29,0 in Burmah for additions to the police force, and 50,0 in Bengal, which represented the burden taken over from Municipalities, with reference to the policy explained in para. 65 of the Financial Statement	...	80,0	80,0
General increase of educational expenditure, estimated and incurred in 1882-83	...	70,0	70,0
Census charges,—the work was expected to be completed in 1881-82, but considerable charges nevertheless came upon 1882-83	159,0	3,0	29,0
Excess of Political charges in 1881-82 arising for the most part out of the Afghan War	139,0	...	...
Marine charges in England; the saving in 1882-83 mainly arising from postponement of the charges on account of the new Troop-ship *Clive*	198,0	245,0	124,0
Charges common to all three columns	10,542,5	10,576,0	10,575,0
TOTAL	11,038,5	11,084,0	10,948,0

143. The final figures, the charges common to all three columns, brought out in this statement do not very greatly differ; the Budget Estimates showing a certain margin over the figures of the actual expenditure, a mass of small differences balancing each other but amounting on their whole result to only two or three thousandths of the whole.

1,494,3	TOTAL OF ALL	1,504,0	1,577,7	1,563,9

144. Under *Governments and Secretariats*, the Budget Estimate for *India* appears to have been too low, following as it did the actual expenditure of an exceptionally low year. The increase over Estimate was first under Tour expenses; 77,3 against an Estimate of 73,6. The expenditure of 1881-82 had been only 71,7, but it would appear that this figure was attained only because some of the expenditure had passed into the earlier year 1880-81, which showed 90,8. A considerable part of the expenditure occurs towards the end of March, so that it may fall irregularly between two years. Next there was an excess of 4,4 by the appointment of an additional Member of the Executive Council; and in the Legislative Council also there were a larger number of paid Members than had been included in the accounts of the former year or in the Budget. The remainder of the details fairly followed the Budget Estimate. The Revised Estimate was pitched too high; it was based upon a review of current expenditure which showed a strong tendency to exceed Budget Estimate.

145. In other provinces also there is a tendency to exceed Estimate which is explained partly by the cost of acting officers, as acting arrangements increase the cost of departments where the seniors are employed and diminish those of the offices from which the substitutes are taken; but in more than one province there is quotation of special expenditure in the way of furniture, &c., which had not been provided for in the Estimates. The figures of Bombay, it should be remembered, tend to increase, in another way, namely, by the payment of allowances to officers of other provinces passing through on leave,—an increase which is, as far as Estimates are concerned, merely a transfer from other provinces.

146. The charges under the second head, *Revenue Control and Financial Offices*, have followed Estimate a little more closely. The saving under India is more nominal than real, as it partly represents provision made in the head-quarters Estimates for casual charges, which when actually incurred fall into the figures of other provinces. The greatest increase is under Bengal, a province in which, both under this and under other heads, the expenditure appears to have been estimated a little too narrowly.

147. The charges under the head of General Administration, naturally perhaps, show a tendency to increase. I have caused the account in the Finance and Revenue Accounts to be drawn up in a classified form, so as more easily to admit of comparison from year to year, and the following may be given as the totals, for the past four years, of the sections into which the account is divided:—

	1879-80.	1880-81.	1881-82.	1882-83.
Governors and Chief Commissioners	168,6	172,2	165,2	173,2
Councils and Secretariats	543,3	544,3	513,2	544,3
Revenue Boards and Commissioners	305,0	311,6	311,5	315,3
Offices of Account and Finance	245,3	243,8	252,4	257,9
Other charges	16,3	20,4	20,6	23,4

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS.—*continued.*

148. The *English charges* also exceeded Estimate, 249,8 against 217,7, but of this increase 27,8 is due to transfer to this head of the charge for providing Currency notes provided under "Stationery," and the rest is mostly caused by payments for telegrams to India.

19.—Law and Justice.

1881-82. Accounts.	COURTS OF JUSTICE AND LAW OFFICERS.	1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
13,9	India	14,6	13,4	13,5
68,0	Central Provinces	69,4	67,3	68,7
84,4	Burmah	98,1	91,8	94,4
47,8	Assam	51,1	50,1	49,9
722,8	Bengal	736,9	742,0	746,5
392,2	North-West	402,3	391,3	395,5
217,0	Punjab	212,7	218,7	219,1
368,9	Madras	372,4	375,4	377,9
426,5	Bombay	428,5	427,5	431,7
2,340,6	TOTAL COURTS OF JUSTICE	2,386,0	2,377,5	2,397,2
139,3	Port Blair Settlement	154,8	143,3	132,1
469,1	Jail Charges	548,0	472,5	466,3
225,9	Jail Manufactures	252,3	230,3	213,1
48,5	Refunds	...	43,4	39,7
9,1	Other Charges	4,6	4,3	5,4
2	England	1,3	1,4	1,3
3,232,7	TOTAL	3,347,0	3,272,7	3,255,1

149. The charges for Law Courts somewhat exceeded the Estimates—(1) in Bengal, owing to the establishment of some new Courts; (2) in the Punjab, where for part of the year there were two additional Judges in the Chief Court; (3) in Madras, partly owing to a similar temporary employment of an additional Judge, and partly owing to special expenditure on account of the Salem riots and another big case; (4) in Bombay, owing to increase in the salaries of Subordinate Judicial officers, and to heavy payments for acting arrangements during the privilege leave of Judges of the High Court. In most of the provinces the charges for Civil and Sessions Judges somewhat exceeded Estimate, as too high an estimate was taken of the saving caused by furlough arrangements (see on the other hand para. 196). The estimates taken all together were exceeded by only 11,2.

150. The expenditure has increased chiefly in Burmah, Bengal, and Madras. The increase in Burmah arises from improvements in the pay of the subordinate judicial officers. This has been already noted in the case of Bombay and will affect other provinces also, as the arrangements foreshadowed in the Financial Statement, paras. 22, &c. In Bengal it arises from the establishment of new subordinate Civil Courts in the latter end of 1881-82.

151. For the *Port Blair Settlement* and for *Jail charges*, the same explanation holds good, namely, that the prosperity of the season produced low prices, and a low cost of diet.

152. The charges for *Jail Manufactures* were reduced in the same way as the receipts, namely, by a restriction of operations. The figures under this head should in fact be rather taken net than gross, and so taken the comparison is as follows:—

1880-81.	1881-82.	Budget, 1882-83.	Revised, 1882-83.	Accounts, 1882-83.
16,2	36,4	8,7	18,2	33,5

The figures are the balances of rather large transactions, namely, from 200,0 to 250,0 on each side.

153. The *refunds* were estimated at 42,5, but the Estimate was taken, according to the practice in force before the accounts of 1881-82, against the general head of "Refunds."

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS—*continued.*

20.—Police.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
35,4	India	32,6	35,0	34,4
118,7	Central Provinces	131,0	129,3	130,7
191,7	Burmah	221,0	207,7	223,3
89,1	Assam	84,9	83,2	81,8
408,7	Bengal	458,1	456,9	446,1
597,4	North-West	605,8	595,3	596,8
283,6	Punjab	282,2	284,2	282,6
413,1	Madras	406,0	401,0	396,3
416,2	Bombay	413,4	438,9	450,9
2,553,9	TOTAL	2,635,0	2,631,5	2,642,9

154. In India the provision made for police at Quetta and on the Kandahar State Railway was insufficient.

155. In the *Central Provinces* and in *Bengal* the Government took over the charge of Municipal Police, hitherto paid by Municipalities, and the increase in those two provinces is almost entirely attributable to this measure (see Financial Statement, para. 65), the figures of the two years, under District and Municipal Police, being for the Central Provinces, 106,9 and 117,9 and for Bengal 335,1 and 377,8. The increase in Burmah was due both to increases of pay and to additions made to the Police Force. In Assam the figures show a considerable reduction of the force. In the North-West Provinces the actuals deferred only slightly from last year; whereas the Budget made a rather high provision for supplies and services.

156. In Madras the charges for accoutrements were smaller than usual, and a nominal saving of 10,0 was effected by relieving the Police Department of some of their duties connected with salt, against which head a corresponding increase will be found; this measure being connected with the reorganisation of the Salt Department in that province. The charges under Bombay are swollen by the new distribution of charges for Village Service, alluded to under "Land Revenue," and the charge under this head included also some arrear payments. There were also some arrears to be discharged of the Government contribution towards Railway Police, and in one or two cases (*e.g.*, pay of probationers and repairs of a Police Hulk) the Government incurred considerable expenditure for which no provision was made in the estimates.

21.—Marine.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
	MARINE DEPARTMENT.			
269,1	Dockyards and Sea-going Vessels	237,6	217,6	220,6
	CIVIL DEPARTMENT.			
	Ports, Light-houses, and River Navigation.			
...	Central Provinces	1	...	...
40,2	Burmah	40,9	33,4	40,3
...	Assam	6,0	6,0	6,2
105,5	Bengal	82,8	86,5	95,1
6,2	Madras and Punjab	5,2	1,0	9
4,6	Bombay	3,7	9,9	3,3
197,8	ENGLAND	244,7	191,3	123,8
623,4	TOTAL	621,0	545,7	490,2

157. The decrease of expenditure in the *Marine Department* was due to (1) the reorganisation of the Marine Survey Department; (2) the stoppage of ordinary work in the Bombay Dockyard by the preparations for the Egyptian Expedition; and (3) the late arrival of the *Clive* Troopship, for which provision had been made for four months of the year. The decrease would have been more marked, but for excess charges for supply of coals.

158. In the *Civil Department*, the Revised Estimate in Burmah neglected account of

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS—*continued.*

certain debits for repairs and building of vessels that had to come in from the Marine Department, but the figures do not otherwise call for remarks. In Bengal the greater part of the charges relate to pilotage services, and they increased from 62,8 Budget to 68,2 Accounts for the same reason which made the revenue under the same head increase from 77,9 to 88,6. But the account had also to bear a charge of 9,2 for a new pilot vessel, which had not been included in the estimates. Last year's figures in Bengal included part of the time during which the charges on account of Calcutta Port approaches which are now under the Port Commissioners were still borne by Government. The reduction of charges in Madras is due to their transference to the Port fund.

159. The *English* estimates included the following items: Pensions and Absentee allowances 37,0; of which the charges are taken in the next section of the account. Contribution to the admiralty 70,0, of which, for various reasons, 25,8 has remained unpaid within the year, and 136,7 for stores for India, including a large part of the cost of the Troopship *Clive*, of which only 78,1 was spent.

22.—Education.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	1882-83. Accounts.
14,8	India	14,6	14,7	15,1
56,8	Central Provinces	53,8	54,0	57,5
32,4	Burmah	41,6	36,2	32,7
22,5	Assam	26,7	25,0	25,3
279,6	Bengal	296,0	293,5	301,6
163,7	North-West	175,1	166,1	168,4
110,1	Punjab	112,2	111,5	111,4
170,4	Madras	174,3	175,0	183,1
227,9	Bombay	254,3	257,5	250,6
3	England	4	4	3
1,078,5	TOTAL	1,149,0	1,133,9	1,146,0

160. In the Estimates for the *Central Provinces* a deduction of 3,0 was made for charges which it was intended to transfer to Municipal control under the arrangement referred to in paragraph 65 of the Financial Statement. The Chief Commissioner, however, afterwards accepted the charges himself. In *Burmah* the Estimates provided for nearly 10,0 of new expenditure, including 1,2 on inspection, 2,7 on Government schools, 1,8 on grants-in-aid, and other increases. But under the arrangement just quoted, expenditure equal to this increase was transferred to Municipal control, so that the Budget was again relieved to the same extent.

161. The expenditure in *Bengal* is increasing, the last three years showing 248,6, 256,9, 279,6, and now 301,6,—an increase which is confined to no one head, but implies extended operations of the Department. The Budget Estimates did not make full provision for the increase, which this last year was mostly in the form of grants-in-aid, which cost 107,6 against 94,9 last year. The receipts from fees, in Bengal, in the same four years have been 41,4, 43,9, 50,0, and 48,0. In the *North-West Provinces* the expenditure is also slightly increasing; the Budget Estimate provided a large increase under Government Schools and under Grants-in-aid, which was not actually utilised.

162. In *Madras* the expenditure has expanded chiefly under Grants-in-aid, and Payment by Results (Accounts, 1881-82, 46,9; Budget, 1882-83, 43,1; Accounts, 1882-83, 58,4). In *Bombay* the same heads show an increase from 16,6 in 1881-82 to 20,9 in 1882-83, the expenditure on Government schools under Local Funds has increased from 107,0 to 113,6, and Technical Schools, grants-in-aid and other expenditure in Bombay all show increased figures in 1882-83 compared with 1881-82. The Madras Estimates did not provide for these increases and were considerably over-spent, but those of Bombay did. The savings in the Bombay Estimates arise from a grant of 3,5 provided for education of Europeans and East Indians, of which only 8 was spent, and there were some other variations.

163. The expenditure under Education has been slightly swollen by the employment of several of the officers of the Department on the Education Commission.

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS—*continued.*

23.—Ecclesiastical.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
162,1		163,0	163,6	161,4

164. These charges vary from year to year only according to the rank of the chaplains and the furloughs they take.

24.—Medical.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
242,4	Medical Establishments	247,0	244,0	244,4
205,8	Hospitals and Dispensaries	212,9	212,9	207,5
227,5	Other Charges	235,6	233,3	233,6
675,7	TOTAL	695,5	690,2	685,5
7,5	ENGLAND	7,5	7,5	7,4
683,2	TOTAL	703,0	697,7	692,9

165. The figures under *Medical Establishment* vary only slightly. In some provinces there is a slight decrease and in others an increase, owing to small changes in the personnel. Under *Hospitals and Dispensaries*, Burmah and Bengal show a decrease, compared with last year, of 5,1 and of 5,8, both of which represent the transfer of dispensaries to the responsibility of Municipal or other Committees. This is, however, counteracted by an increase of 6,7 in the North-West Provinces, which is less a question of administration than the effect of bringing into the figures a number of dispensaries, which though under Government control were not shown in their gross figures in the accounts. Madras shows increasing figures (58,2 against 55,7 last year), owing to the opening of new dispensaries charged mostly against Local Funds; and in Bombay a reduction of 6,0 occurs chiefly through the Gocul Das Tejpal Hospital being removed from the accounts of Government revenue and expenditure.

166. These various changes in the accounts, which necessarily follow changes in the administration, nearly balance each other, and the Estimates which in some cases included these changes, and in some did not, also on their whole result a little more than cover the expenditure. The net result is to exhibit the process of the removal of dispensaries from Government responsibility to the control of Local Fund Committees (in which case they only pass from the Provincial to the Local column of the accounts), and to that of Municipal or other financially independent bodies (in which case the figures pass altogether out of the account of public revenue and expenditure). To the latter category belong the reductions of 5,1 in Burmah, 5,8 in Bengal, and 6,0 in Bombay; and to the former belongs the increase in Madras.

167. The figures under "*Other Charges*" and "*English Charges*" call for no remark.

25.—Political.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
251,0	Political Agencies	231,5	245,7	249,8
53,5	Charges on North-West Frontier	50,1	49,8	53,6
184,8	Political Subsidies	116,4	76,4	66,7
14,9	Entertainment of Envoys and Chiefs	9,3	13,3	10,1
31,5	Durbar Presents and Allowances to Vakeels, &c.	15,1	15,7	14,3
31,9	Refugees and State Prisoners	27,3	35,3	36,1
55,9	Other Charges	43,0	48,4	47,5
623,5	TOTAL INDIA	492,7	484,6	487,1
25,8	ENGLAND	27,3	26,8	26,7
649,3	TOTAL	520,0	511,4	513,8

168. The principal figures under *Political Agents* are India 150,9 against Estimate 141,6, and Bombay 63,0 against Estimate 56,4. The increase in the first case arose for the most part at Quetta and at Kabul. The charges at the first of these two places had not been permanently fixed at the time of the Estimate, and the appointment of a Resident at Kabul was entirely unprovided for. The excess in Bombay was caused by casual

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS—*continued.*

expenditure sanctioned outside the Estimates. The charges under this head are nearly the same as last year.

169. Under *Political Subsidies* a provision of 100,0 was made pending consideration of the relations with the Amir of Kabul, and the usual payment of 12,1 to the Khan of Khelat made up the total of the Budget Estimate. On the first of these two accounts only 66,0 was paid and on the second only 2,1. Last year's figures under this head included some specially large payments.

170. These were unanticipatedly high charges for the entertainment of Envoys and Chiefs, under both this head and the general one of other charges. The Government are necessarily liable to sudden calls for expenditure which is often of such a nature that they cannot be regulated by Budget limits. Both last year's report and this year's report show that the estimates take too moderate a view of these casual political charges.

26.—Scientific and other Minor Departments.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
135,0	Survey of India	126,0	134,7	137,9
19,9	Geological Survey	20,0	19,9	16,8
46,5	Other Scientific Departments	62,6	58,2	62,2
59,8	Cinchona and Botanical Gardens	59,8	55,8	57,7
61,0	Other Agricultural Departments	79,2	63,4	73,6
158,6	Census	3,4	30,2	28,8
24,8	Other Statistical Charges	33,1	29,8	26,0
34,8	Emigration and Miscellaneous	36,7	48,7	52,8
540,4	TOTAL INDIA	420,8	440,7	455,8
20,6	ENGLAND	21,2	26,0	26,0
561,0	TOTAL	442,0	466,7	481,8

171. With the year 1882-83 a new plan was introduced for the Estimates and Accounts of the *Survey of India*, the Department being brought in the first place under "India" as a whole, and the portion of the charges belonging to Provincial Governments being transferred to the Estimates and Accounts of the province concerned after being first completely made up under India. This new arrangement was introduced both for accuracy of accounting and as a sequence of that part of the new "provincial contracts" which provided that the accounts of Revenue Survey in future should come within the accounts of the province concerned.

172. The following are the figures under this head:—

	Revenue Survey. Budget.	Revised.	Actual.	Scientific Departments. Budget.	Revised.	Actual.
India	11,0	11,7	11,7	133,5	134,7	137,9
Burmah	59,6	59,2	60,8	...	...	...
Assam	5	2,3	2,7	...	...	...
Bengal	7,4	5,7	6,5	...	...	...
North-West Provinces	31,5	27,2	26,3	...	...	...
Punjab	6,8	3,4	4,0	...	...	...
Bombay Forests	...	2,0	1,8	...	...	...
Reduction of Estimate	—2,7	...	...	—4,8	...	...
TOTAL	114,1	111,5	111,8	128,7	134,7	137,9
TOTAL BOTH HEADS				242,8	246,2	249,7

173. Taken as a whole, upon the figures 242,8, 246,3, and 249,7, it will be seen that the Estimates were slightly exceeded; but the excess is largely due to the reduction of Estimate which was made, not with a view of directing any particular reduction of expenditure, but as a difference arising between the local estimates and the gross estimate of the Department, which in the discussion of the arrangements was not settled in time. In fact the arrangements were not definitely laid down till some time after the Estimates were framed, and the first distribution of the Revenue Survey figures was, it will be seen, somewhat in

Section D.—SALARIES & EXPENSES OF CIVIL DEPARTMENTS—*concluded.*

fault in bringing an excessive amount against the North-West Provinces and the Punjab. The arrangements were completed long before the Revised Estimates, which were fairly accurate.

174. There was a saving in the Superintending charges of the *Geological Survey*.

175. The chief feature of difference under *Other Scientific Departments* is the Meteorological Department, which cost 14,9 in 1881-82, but which was taken in the Estimates of 1882-83 at 21,9 as it was intended to widen the scope of its operations. These arrangements, however, were only gradually introduced, and the cost of the whole year was only 18,7. Another department in which special arrangements affected the year was that of repairs to monuments of antiquity; the cost in 1881-82 was only 3,7, but a separate department being temporarily organised, an expenditure of 13,9 was provided for and very nearly all spent. These two charges taken together account for an increase of 17,2 in the Budget over the charges for 1881-82. Against the saving in the actual account of these two departments, there was an expenditure of 1,5 on special astronomical observations, which had not been provided for in the Estimates.

176. Nearly all the provinces show in the Budget Estimates an increased scale of expenditure on *Agricultural Departments*. In India a special provision of 8,1 was made for a scheme of agricultural experiments, which did not meet with the approval of the Secretary of State, and against which therefore no expenditure was incurred.

177. Very little provision was made in the Budget for the *Census* work, as it was expected that the compilation would be complete before the year closed, but considerable expenditure came in, especially in Madras.

178. The increase under the last head was in Burmah, where a system of aided *immigration* introduced by the Chief Commissioner, but not provided for in the Estimates, was taken in the Revised Estimates at 14,4 and actually cost 17,1.

179. The *English* charges were increased by unexpectedly high expenditure incurred in freight of cinchona from India, and in converting it into alkaloids.

Section E.—MISCELLANEOUS.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
1,707,2	RECEIPTS	1,286,0	1,365,0	1,378,5

179*a*. The accounts produced under most of the heads something better than the Estimates. Last year's figures included 155,3 premium on Loans, 54,3 by investment of English Cash Balances, 69,6 by Local Fund investments brought to account, and 41,7 a special recovery from Patiala,—all of which were noted in last year's report. Deducting these special items we have only 1,386,3 to compare with this year's 1,378,5, as near a coincidence as could be expected under so variable a head.

XXI.—Interest.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	INDIA—			
249,9	Currency Investment	250,2	250,2	250,2
358,0	Loans to Municipalities, &c. . . .	349,4	345,6	343,2
155,3	Premium on issue of Loan . . .	...	...	
77,3	Other Receipts	47,4	68,4	76,4
	ENGLAND—			
54,3	Investment of Cash Balance . . .	5,0	11,0	8,7
...	Premium on Loans	...	12,8	12,8
2,1	Other Receipts	...	...	1,6
896,9	TOTAL .	652,0	688,0	693,9

180. The *Currency Investment* was increased by 7,5 (interest 3) on 15th December 1881, and remained at 6,253,8 nominal (interest 250,2) throughout the year.

Section E.—MISCELLANEOUS—*continued.*

181. The balances under Loans to Municipalities, &c., have in the last three years stood as follows:—

	31st March 1881.	31st March 1882.	31st March 1883.
Native States	1,472,9	1,318,3	1,214,7
Presidency Corporations	5,640,8	5,595,8	5,408,7
Mofussil Municipalities	349,9	382,6	383,9
Landholders and others	655,8	659,9	654,1
Local Fund Committees	140,3	108,0	104,1
	8,259,7	8,064,6	7,765,5
Interest received	354,8	358,0	343,2
Percentage reckoned on balance at end of year	4·295	4·439	4·419

The details of these Loans are shown in Account No. 93 of the Finance and Revenue Accounts, and interest has in most cases been punctually realised. The Budget Estimates provide for the realisation of all the interest due, and the receipts fall slightly short, chiefly because in one or two instances repayments of principal made in advance of due date have reduced the amount of interest realisable.

182. The next head is blank, as the Loan of the year was issued at a discount and not at a premium.

183. Under *Other Receipts*, Bengal received an unexpected credit of 4,0 in the adjustment of an arrear account of drainage advances, and Madras realised 21,5 against estimate 10,6 on account of interest on arrears of revenue. Further excess receipts were brought in by Local Fund officers realising arrears which they had for a short time left outstanding.

184. Under *English Receipts*, the Cash Balance stood during the year at a comparatively low figure, and the interest obtained on its investment was much less than in 1881-82, though more than anticipated in the Estimates. The premium of 12,8 obtained on the issue of two millions of 4 per cent. debentures was not taken in the Estimates.

XXII.—Receipts in aid of Superannuation, &c.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
136,1	Subscriptions to Military Funds, India .	135,9	125,8	128,6
28,2	Appropriation from old Military Funds .	30,4	29,8	31,1
86,0	Other Items	40,5	35,9	41,6
106,0	Subscriptions to Widows and Military Funds, England	100,2	101,8	104,0
356,3	TOTAL .	307,0	293,3	305,3

185. The Estimates made in Madras and Bombay for the *Subscriptions to the old Military Funds* do not appear to have taken account of the necessarily diminishing nature of the item. The figures of the last four years have been 173,5, 149,5, 136,1, and 128,6, and a similar decrease should be looked for each year.

186. The *Appropriation* from deposit in aid of charges is now made only in the case of the Bengal Military Orphan Fund, all the others being extinct; it necessarily increases as charges continue to come on the Fund. The *Other Items* stand at about their normal figure, the receipts of 1881-82 having been swollen by an exceptional item mentioned in last year's report. The subscriptions to the Bombay Civil Fund, which was taken over by Government on 1st December 1882, came as new items under this head in the last four months, but the amount added to the accounts in this way was again taken away by an opposite operation, the transfer of the Pension Fund of Local Fund employés to a separate account outside the Government accounts.

XXIII.—Stationery and Printing.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
57,8	TOTAL .	59,0	57,6	57,8

187. The receipts are of a varying nature. Compared with Budget there was a falling

off of 6,0 in the Punjab, chiefly in Jail Press receipts, but this was made up for by an improvement in Bengal and sale proceeds of certain press machinery in "India."

XXIV.—Miscellaneous.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts
	INDIA—			
67,1	Unclaimed Deposits and Bills . .	49,9	60,5	51,6
60,3	Rents	59,4	59,1	60,0
12,8	Premium on Bills	15,1	12,8	10,9
240,5	Other Items	137,6	168,7	173,3
	ENGLAND—			
13,0	Fines and Penalties	...	25,0	11,0
2,5	Other Items	6,0		14,7
396,2	TOTAL .	268,0	326,1	321,5

188. Under *Unclaimed Deposits and Bills*, the figures are in the first place reduced by an order issued by me to take the net credit or debit only into the accounts of Bengal, where the deposit transactions reach very high figures, instead of bringing in a very large revenue by lapses, and showing against it a large charge for refunds. The figures of the last two years have been 48,2 and 42,3 on the receipt side, and 29,2 and 29,7 on the expenditure side; but this year we obtain only 27,5 on the receipt side. The same method will in future be adopted in other provinces. Against this, however, considerable receipts were obtained in Bombay by the application in the Presidency Savings Bank there of the rule elsewhere obtaining, that in certain cases deposits are to be removed from the Savings Bank Books and credited, pending claim, to the Government.

189. Under *Premium on Bills*, the Estimate was placed at a higher figure than last year, but the realisations did not come up to it.

190. Under *Other Items*, the figures are on the whole much the same as those of 1881-82 without the special credit of 69,6, referred to in last year's report as increasing the figures of that year. Burmah obtained a temporary credit of 17,1 outside the Estimates, which, however, it had to refund in 1883-84. In India and Bengal also the Miscellaneous Items exceeded the Estimates, and in the Punjab a new frontier arrangement added 5,6 on account of Khyber pass tolls.

191. The *English* Estimates include no specific receipts on account of fines and penalties; and these necessarily, so far as they are not remitted, come into the accounts as a difference from Estimate. The figures on the expenditure side show that more than half was remitted. The other receipts are mainly recoveries on account of Stores lost (11,3) in transit to India; the charge side also shows a considerable set-off against this, but the recoveries appear to have been unusually high in 1882-83. The system of partial insurance, out of which these receipts arise, was laid down in Financial Despatch of the Secretary of State, No. 316, dated 5th October 1882.

Section E.—MISCELLANEOUS CIVIL CHARGES.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts
4,044,5	EXPENDITURE . . .	3,761,9	3,905,1	3,890,4

192. The reduction of Customs establishments following the abolition of the Import duties brought extra charges for Pensions and Gratuities, which may be estimated at 50,0, and which were, so far as Budget Estimates were concerned, partly provided for by savings under the head of 10, Customs. A further charge of 14,0 under the same head, "Superannuations," is an anticipation of next year's payments. The Estimates under Stationery and Printing were exceeded by 68,0; they had been framed at too low a figure. These three excesses amount to 132,0, the exact amount by which the accounts exceed the Estimates on the whole,

that is, the excesses and the savings under other heads, of which the largest items are in the English accounts, nearly balance. Thus a charge of 44,0 under Territorial Pensions was postponed till 1883-84, and 19,0 was saved in Civil Furlough Allowances, but about 33,0 of new charges were transferred from other heads to Superannuation Allowances, and about 10,0 of charges were added to Miscellaneous, which were met by a similar addition on the receipt side.

193. Compared with last year's accounts, the figures in the first three heads are nearly the same, but last year's accounts showed specially high stationery charges, which are reduced this year by about 60,0; and under Miscellaneous Refunds we have this year only 23,6 against 99,1 in 1881-82.

27.—Territorial and Political Pensions.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
156,9	India	152,2	159,6	163,7
39,5	Central Provinces	31,0	42,2	42,5
...	Burmah	...	...	...
3,1	Assam	3,6	3,0	3,1
100,7	Bengal	102,8	105,5	106,4
105,2	North-West Provinces	110,0	104,4	99,6
46,1	Punjab	46,8	44,2	43,3
105,5	Madras	109,1	106,8	105,4
94,0	Bombay	95,3	91,0	90,5
651,0	TOTAL, INDIA .	650,8	656,7	654,5
31,3	England	65,1	31,3	31,2
682,3	TOTAL .	715,9	688,0	685,7

194. *India.*—The figures of the Actuals were increased by the transfer of an item from the accounts of the North-West Provinces, but besides this there was an actual deficiency in the Estimates caused by taking at too low a figure the pensions connected with the ex-King of Oudh.

Central Provinces.—The figures were increased by an arrear payment in settlement of the pension mentioned in last year's report as having lapsed by death.

Bengal.—The figures here refer for the most part to the Nizamat stipendiary arrangements, and have varied latterly in accordance with arrangements made by the Secretary of State for the transactions of the Nizamat Stipend Fund.

N.-W. Provinces.—Of the amount included in the Estimate, 5,0 was transferred during the year to India; the remaining 5,4 either lapsed or remained in arrear unclaimed at the end of the year.

Punjab.—The falling off here is owing to lapses, mainly that of the pension 2,5 of the Nawab of Tonk.

Madras and Bombay.—The differences here are also accounted for by lapses.

195. *England.*—44,0 provided in the Estimates as an advance to Maharaja Dhulip Sing was not paid till 1883-84. On the other hand, 10,0 payable to the Nawab Nazim Said Mansur Ali was finally charged in England instead of being passed on, as at first intended, in debit to India.

28.—Civil Furlough and Absentee Allowances.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
217,7	England	230,0	215,0	211,0
4,9	India	4,0	1,5	9
222,6	TOTAL .	234,0	216,5	211,9

196. The reduction was mainly owing to smaller payments being claimed on account of officers on furlough, than was calculated in March 1882. The saving in this account is larger

Section E.—MISCELLANEOUS CIVIL CHARGES—*continued.*

than the above figures show, as the furlough allowances of Bengal pilots were taken in the Estimates under "Marine," but passed in the accounts to the present head.

29.—Superannuation Allowances and Pensions.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	CIVIL INCLUDING MARINE—			
51,2	India	46,9	57,4	57·7
15,0	Central Provinces	15,5	14,9	15,1
14,2	Burmah	14,9	21,1	22,5
4,8	Assam	5,8	4,9	5,1
95,1	Bengal	102,8	111,5	118,6
104,4	North-West	112,4	108,0	110,6
53,8	Punjab	52,5	56,1	56,3
85,4	Madras	82,8	85,1	84,3
114,1	Bombay	112,3	118,6	132,4
538,0	TOTAL CIVIL	545,9	577,6	601,4
	DONATIONS TO CIVIL FUNDS—			
42,8	Bengal Civil Fund	42,5	43,7	56,4
75,1	Madras „ „	78,6	80,1	80,1
32,1	Bombay „ „	32,8	29,3	29,3
	MILITARY AND MEDICAL FUNDS—			
106,6	India	17,5	23,6	22,8
15,2	Madras	15,2	15,2	13,2
5,4	Bombay	8,5	8,5	10,5
815,2	TOTAL INDIA	741,0	778,0	813,7
1,367,1	England	1,360,0	1,389,0	1,390,1
2,182,3	TOTAL	2,101,0	2,167,0	2,203,8

197. *Civil.*—The India figure in the Budget Estimates contains only civil charges, but the Revised Estimates and the accounts include the charges of Marine pensions, which before the orders conveyed in the Secretary of State's Despatch No. 374, Financial, dated 23rd November 1882, were reckoned as charges of the Marine Department under 21, Marine. These amount to 14,2 and account for the difference between the two sets of figures. Considerable increases will be observed in Burmah, Bengal, Madras, and Bombay, all of which may be put down to the same cause, namely, the pensions and gratuities granted to the Customs establishments whose services were dispensed with in consequence of the abolition of Import duties. These charges were not provided for under this head, and may be reckoned against the savings effected under head 10, Customs. These charges were for the most part fully provided for in the Regular Estimates, the excess over which in Bombay is due to the writing back to a Savings Bank account of a pension fund for local fund employés, which had in past years been erroneously brought to account under the service head. In the Punjab also there was an excess over Budget Estimate caused chiefly by bringing to debit a capitalization charge that had been under dispute with a Native State.

198. Under *Civil Funds*, the excess in Bengal is, like the corresponding payment under 2, Interest on Service Funds (paragraph 40), an anticipation of a payment which properly falls due in 1883-84; the saving in Bombay is caused by the non-payment of a small charge, which would have been paid in January 1883 but for the transfer of the fund to the Government.

199. Under *Military Funds*, it must be borne in mind that the figures of 1881-82 included a special charge of 90,4 for composition with subscribers to the Medical Retiring Funds.

200. In the *English* figures the accounts differ from the Estimates chiefly by reason of certain changes of classification. The Budget Estimate was 1,360,0 for charges which actually came to 1,357,0. But 35,2 charges were added from Marine, under the despatch above quoted, and 19,2 half a year's charges of the Bombay Civil Fund were

Section E.—MISCELLANEOUS CIVIL CHARGES—*continued.*

also by the transfer of that fund brought against the Government; against this 21,3 was transferred to Army, Non-effective, being Military pensions; so that the actual expenditure came to 1,390,1.

30.—Stationery and Printing.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	PRINTING ESTABLISHMENTS—			
82,3	India	65,2	79,2	77,1
6,0	Central Provinces	5,3	5,8	6,1
11,7	Burmah	12,2	11,4	10,5
2,2	Assam	2,2	2,4	2,4
28,7	Bengal	26,3	26,4	30,8
34,7	North-West Provinces	32,2	32,6	32,4
25,0	Punjab	23,7	24,7	24,1
24,2	Madras	26,6	27,2	30,7
25,3	Bombay	25,5	27,3	27,0
240,1	TOTAL PRINTING	219,2	237,0	241,1
	STATIONERY—			
146,5	Bengal	44,8	59,2	60,0
37,6	Madras	12,7	12,4	18,8
23,0	Other Provinces	32,3	25,3	25,1
118,7	England	131,0	160,5	162,6
325,8	TOTAL STATIONERY	220,8	257,4	266,5
565,9	TOTAL	440,0	494,4	507,6

201. Little can be said regarding the first head of charge, *Printing Establishments*, beyond what was said last year, namely, that there is a tendency on the part of administrative officers to under-estimate their demands upon the presses, and their under-estimate of these demands leads to an under-statement by the presses of their expenditure. Last year the expenditure was 240,1 against Estimates of 224,9, and this year the accounts show 241,1 against an Estimate of 219,1. In both cases it is chiefly under India and Bengal that the excesses have occurred. The large reduction of expenditure estimated for in the first of these two cases was partly the result of a new contract arrangement for form-printing in Calcutta, which was not in the end so successful as at first hoped.

202. In *Stationery*, the Bengal and the English figures should be added together, so as to get a proper comparison, as there has been in recent years more than one alteration in the rules for purchase in India or in England. Thus added we get—

Year.	Bengal.	England.	TOTAL.
1879-80	104,2	94,9	199,1
1880-81	142,0	74,6	216,6
1881-82	146,5	118,7	265,2
1882-83	60,0	162,6	222,6

203. Reduced to terms of the issues from the Bengal Stationery Office we get the following figures—

Year.	Balance April 1st.	PURCHASES. Bengal.	PURCHASES. England.	TOTAL.	Deduct issues.	Balance March 31st.
1879-80	47,9	35,6	105,8	189,3	124,5	64,7
1880-81	64,7	134,6	13,1	212,4	114,5	97,9
1881-82	97,9	143,3	40,6	281,9	174,3	107,6
1882-83	107,6	51,6	111,4	270,6	158,3	112,3

The high issues of 1881-82 were no doubt the reaction after the short issues of the year before; but with the opening of new State Railways and general extension of business and of administration, the consumption of stationery cannot but advance rapidly.

Section E.—MISCELLANEOUS CIVIL CHARGES —*concluded.*

204. The Madras figure was swollen by the addition to it of 6,6 received in debit from England, which, had it not been for a mistake on the part of the Madras authorities, would have been borne upon the English accounts.

31.—Miscellaneous.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
5,1	Allowances, Rewards, &c.	5,2	6,3	7,4
26,9	Remittance charges	30,7	27,4	25,7
5,7	Books and Periodicals	6,5	5,6	5,5
26,9	Charitable payments	29,8	27,3	28,8
11,2	Rewards for destruction of wild animals	11,8	14,0	14,8
87,7	Petty Establishments	85,9	81,4	78,7
2,7	Petty construction and repairs	1,2	4,0	2,8
99,1	Miscellaneous refunds	...	78,0	23,6
81,9	Other charges	81,9	67,2	65,6
347,2	TOTAL INDIA	253,0	311,2	252,9
	ENGLAND—			
11,0	Fines and Penalties remitted	...	8,0	7,9
33,2	Other Items	18,0	20,0	20,6
391,4	TOTAL	271,0	339,2	281,4

205. The excess payments on the first of these accounts were in Bengal and in Bombay, and appear to have been due to short estimating. In Bombay also the charges classified as *Charitable payments* were increased by expenditure in relieving distress caused by floods in Khandesh; but on the other hand there were savings on this account in the North-Western Provinces and in Madras. The enhancements of the rates of *Reward for destruction of wild animals* in Madras raised the charges there from 2,4, Estimate, to 5,0 in the Accounts. The charges for *Petty establishments* are mostly connected with Local funds, the principal portion being in Madras, which showed in its Accounts 51,0 against Estimates 54,8. The difference is to some extent a question of classification, as a small excess appears under the similar charge under "Administration" in Madras, but is mostly due to over-estimates by the Local officers.

206. Under *Refunds*, the Budget Estimate was made under the head 3, Refunds, and amounted to 81,7; the Revised reduced it a little to 78,0, of which the principal shares were Bengal 34,5, North-Western Provinces 15,9, and Bombay 17,2. The Bengal refunds are mostly those of lapsed deposits, which were excluded from the accounts by taking the figures net, as explained in paragraph 188 and a large reduction occurred also in the North-West and in Bombay because the items to which the Estimates referred were more correctly taken in the accounts, in the former case under "Revenue Refunds" and in the latter case under Superannuation Allowances (see paragraph 197).

207. The saving under *Other charges* arises chiefly from Punjab and Madras having provided a sort of Reserve of 11,7 and 17,6 on account of unforeseen charges, against which they had very little expenditure; against which, however, there are excesses in India of 4,3, and in Bengal of 6,5, arising from special commissions of enquiry, Education in the former case, and Village and Railway Police in the second

208. The *English* charges in their excess over the Estimates are to a large extent sets-off against similar excess in the receipt. The entries under Fines and Penalties remitted are explained on the receipt side; of the other charges, 5,2 is on account of Stores lost in transit to India, and, though not included in the Budget Estimate, may be taken as more than covered by the corresponding receipts.

209. The saving on the *whole head* as compared with last year was mainly in the head of Miscellaneous refunds, and is due to the change of practice with regard to refunds of lapsed deposits, and also to two special items which appeared in the Accounts of 1881-82, namely, 26,2 under India, arising out of investigation and settlement of some old accounts, and 6,7 in Bengal on account of a Nazarana payment.

Section F.—FAMINE RELIEF AND INSURANCE.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
1,500,0	EXPENDITURE	1,500,0	1,500,0	1,500,0

210. The formation of the Southern Mahratta Railway Company to take over that line from the Government caused a repayment to Government of 270,0 of past expenditure to take the place of new outlay of 370,0; so that the accounts received in this way a benefit of 640,0 in all. As much as possible of this amount was utilized in pushing on other protective works, but the 750,0 appropriated in the estimates on this account was in the end reduced to net expenditure 134,3, and the balance added to the amount available for the reduction of debt. Famine expenditure came to only 22,1, so that 1,343,6 was available for reduction of debt.

211. It should be recorded here that the Commissioners for the Reduction of Debt received at their meeting of 12th July 1883 the final report of the expenditure of 1881-82, and their proceedings in respect of it were published in the *Gazette of India, August 25th, 1883.*

32.—Famine Relief.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
34,8	Expenditure	...	25,6	22,1

212. The expenditure is composed of 6,3 in Bengal, 1,1 in the North-West for some petty relief works, 13,5 in Madras, brought on the accounts by credit to Public Works Department, so as to write off from the Public Works Accounts the excess over ordinary rates of the expenditure on the Palar Anicut System, and 1,2 spent in Bombay in districts visited by locusts. The expenditure was provided, according to the usual rule in such cases, by appropriating part of the provision under "Reduction of Debt."

33.—Protective Works—Railways.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
290,1	Southern Mahratta Railway	369,8	—[illegible]0,0	—278,3
162,2	Rewari-Hissar Railway	102,7	21[illegible],9	183,
162,3	Stores	— 50,0	— 95,0	—53,4
...	Saugor-Katni-Bilaspur Survey	...	2,2	2,3
...	Jhansi-Bargarh	...	8,0	7,3
...	Cuddapah-Nellore and Adoni-Guntoor	...	2,0	2,1
...	Vizagapatam-Raepur	...	5,0	4,4
...	Western Deccan	...	3,8	3,5
614,6	TOTAL	422,5	—127,1	—129,1

213. The aspect of the estimates was altogether altered by the formation of a Company under contract with the Secretary of State, who took over the works in the Southern Mahratta Railway, so that the Government not only incurred no part of the anticipated expenditure of 369,8, but obtained from the Company a large refund of the expenditure incurred the previous year. The works were made over from October 1, 1882.

214. The works on the Rewari-Hissar Railway were pushed on with greater vigour, so as to utilize as much as possible of the current year's grant. The figures under the account of "Stores" are mainly connected with the Railway, and indicate the transfer of the charge from the general head of stores to the particular head of the railway to which they are appropriated. Difficulty of obtaining labour and delay in arrival of stores from England prevented operations being carried on at the end of the year as quickly as intended, and though the net charge is much the same as in the Revised Estimate (129,6 against 121,9) the work was in a somewhat less advanced condition. The works on this line (89 miles) are nearly complete with the exception of the Hansoti bridge, 13 miles from Rewari, 16 spans of 20 feet girders; it is expected to be opened along with the next section to Sirsa,—a total of 140 miles, about 1st April 1884.

215. The remaining charges are for surveys in anticipation of works.

Section F.—FAMINE RELIEF AND INSURANCE —*continued.*

34.—Protective Works—Irrigation.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
135,4		327,5	271,3	263,4

216. The following is the expenditure on Protective Works, Irrigation :—

1881-82 Accounts.		Outlay before 1882-83.	Outlay during 1882-83. Budget.	Revised	Accounts.	Remaining to be spent
	NORTH-WESTERN PROVINCES—					
16,6	Betwa Canal	34,5	105,0	89,0	87,8	179,0
	PUNJAB—					
40,7	Swat River Canal	174,6	50,0	63,8	58,2	121,8
	BOMBAY—					
53,8	Nira Canal	134,7	58,0	57,0	59,9	203,1
15,9	Mhasvad Tank	53,6	40,0	37,6	37,6	90,4
2,4	Gokak Canal	27,2	17,5	17,5	13,5	—2,8
	MADRAS—					
6,0	Survey, &c., for Canal Irrigation to Gopalpore	6,0	...	6,4	6,4	
	RESERVE		57,0	...	...	
135,4			327,5	271,3	263,4	

217. The outlay on the Betwa Canal fell short of estimate owing to delay in acquiring land from the Native States through which the canal passes. Against this the expenditure upon the Swat River was pushed on. The outlay in Bombay was rather less than the estimate. The amount held in "Reserve" in the Budget Estimates was not utilized during the year, except that a small sum was sanctioned for the investigation of projects in Madras.

35.—Reduction of Debt.

1881-82. Accounts.	Budget.	1882-83. Revised.	Accounts.
715,2	750,0	1,330,2	1,343,6

218. The reduction of the intended expenditure upon protective works set free, for the operations of the Commission for the Reduction of Debt, a much larger portion of the total grant of one and a half millions than was foreseen at the time of the estimates. This larger amount was duly paid over (so as to bring up the total expenditure to 1½ millions), and was applied, after consultation with the Commissioners, to the reduction of sterling debt, being remitted home to the Secretary of State for that purpose.

219. The account of the Commission in India was as follows :—

	Credits. £	Debits. £
At credit of the Account upon April 1st, 1882	541,098	...
Received for the reduction of debt in India in continuation of the appropriation of last year	1,343,555	...
Redemption of Sicca Loan of 1824-25	...	6,197
,, ,, 1828-29	...	4,694
Redemption of 4½ per cent. Loan of 1871 (Reduced 4 per cent. of 1881)	...	22,550
Redemption of Debentures of 1867	...	544,200
Remitted to the Secretary of State by Council Bills and Telegraphic transfers £1,001,393 at average rate 19·576*d.*, being Rs1,22,77,000	...	1,227,700
TOTAL	1,884,653	1,805,341
Balance carried forward to 1883-84	...	79,312
GRAND TOTAL	1,884,653	1,884,653

Of this Balance, part must be regarded as appropriated for the redemption of the balance of the above loans, amounting on March 31st, 1883, to 35,614

220. The Secretary of State applied the £1,001,393, which he had received during the earlier months of 1883-84, to the reduction of sterling debt as follows :—

Purchase of £990,000 India 4 per cent. Debentures	997,681	
,, £3,584 India 4 per cent. Stock	3,712	1,001,393

Section G.—PRODUCTIVE PUBLIC WORKS REVENUE ACCOUNTS.

221. The following is a general statement of the Revenue Accounts :—

	State Railways.	East Indian Railway.	Guaranteed Railways.	Irrigation.	Madras Irrigation Company and Harbour-	TOTAL.
Specific Revenue	2,646,3	4,601,3	7,813,5	931,0	—5,6	15,986,5
Land Revenue	...	...	...	469,1	...	469,1
TOTAL	2,646,3	4,601,3	7,813,5	1,400,1	—5,6	16,455,6
Working Expenses	1,534,2	1,822,2	4,231,4	501,9	...	8,895,8
Surplus Profits, Land and Supervision	...	247,2	558,8	...	1	
Charges in respect of Capital—						
a. Interest on Debt	1,226,7	486,7	...	784,2	20,3	2,517,9
b. Annuities	...	1,216,7	...	...	...	1,216,7
c. Guaranteed Interest	...	...	3,317,9	...	24,9	3,342,8
TOTAL EXPENDITURE	2,760,9	3,772,8	8,108,1	1,286,1	45,3	15,973,2
Net Gain or Loss according to Accounts	—114,6	+828,5	—294,6	+114,0	—50,9	+482,4
Deduct—Exchange	...	313,0	662,0	...	5,0	980,0
Net Gain or Loss including Exchange	—114,6	+515,5	—956,6	+114,0	—55,9	—497,6
Compare last year (*a*)	—290,4	+1,071,4	—717,2	+175,0	—87,2	+151,6

222. State Railways have been more prosperous than last year, owing both to extensions and to development of traffic. The East Indian Railway is a good deal worse; both its traffic fell by 109,2 behind the high figures of 1881-82, and by special expenditure upon renewals of way and of locomotives there was 343,9 increase of expenditure. In Guaranteed Railways the increase of expenditure and heavy renewals ran away with more than the increased receipts, and there is also an arrear charge of 40,0 for interest. Under Irrigation, the revenue has increased somewhat more than the expenditure, but the credit for Land Revenue has been somewhat reduced, and the unprofitable works of the Madras Irrigation and Canal Company with their heavy interest charge are now included under the head instead of being shown in a separate one.

Section G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
12,260,3	RECEIPTS	12,189,4	12,096,0	12,224,1

223. There is little difference apparent in these figures. But taken in detail,

(*a*) These figures are corrected from those of last year's report, where the exchange was wrongly stated. The exchange is now taken in both years at one-fifth of the sterling payments of interest and annuity.

Section G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS—*continued.*

the receipts from State Railways showed a normal progress over last year's figures, taken in the Estimates at 219,3. This amount was nearly realised, but as 121,3 passed over to the non-productive category, only 89,8 was shown in this section of the account. On the East Indian Railway the figures fell off by 109,2 from the high traffic receipts of 1881-82, but the Guaranteed, notwithstanding a falling off in Great Indian Peninsula Railway, showed an advance on the whole. The return from Irrigation was also better than last year. The return under all heads was better than Estimate, and would have shown a much greater improvement than 12,224,1 against 12,189,4, had it not been for a faulty system of calculation of Land Revenue receipts due to Irrigation, which set down, in the Budget, to the account of Irrigation, at least 200,0 more than properly belongs to it.

XXV.—State Railways Gross Earnings—including East Indian Railway.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
2,556,5	State Railways, Gross Earnings . . .	2,775,8	2,583,0	2,646,3
4,710,5	East Indian Railway, Gross Earnings . .	4,426,4	4,571,7	4,601,3

224. It is most convenient to deal with the question of working expenses along with that of traffic receipts, as they are necessarily closely connected. The following statement therefore repeats the comparative information given in last year's report :—

Accounts, 1881-82. Gross.	Accounts, 1881-82. Maintenance.	Accounts, 1881-82. Net.	Capital, 31st March 1883.		Budget, 1882-83. Gross.	Budget, 1882-83. Maintenance.	Budget, 1882-83. Net. 53,6	34,1	19,5	385,8	Patna-Gya . .	52,5	32,5	20,0	30,0	26,0	13,0	30,8	27,1	12,7	68·1
13,2	10,7	2,5	113,9	Muttra-Hattras .	14,0	11,0	3,0	12,5	8,5	4,0	11,7	7,5	4,2	64·1
33,3	22,7	10,6	320,3	Cawnpore-Furrakhabad .	36,0	21,0	15,0	36,5	23,0	13,5	35,5	23,3	12,2	65·6
4,1	3,6	5	72,2	Ghazipur-Dildarnagar .	4,2	3,6	6	4,7	3,8	0	4,9	4,2	7	85·7
2,3	2,1	2	62,0	Achneyra-Muttra . .	8,3	5,0	3,3	7,0	6,2	8	7,1	5,8	1,3	81·7
574,7	343,6	231,1	6,684,9	Total Provincial .	628,7	367,9	260,8	661,0	384,6	276,4	666,5	380,8	285,7	57·1
2,556,5	1,686,4	870,1	29,960,7	Total both .	2,775,8	1,741,0	1,034,8	2,583,0	1,532,6	1,050,4	2,646,3	1,531,2	1,112,1	58·0
4,710,5	1,478,3	3,232,2	...	East Indian Railway .	4,426,4	1,760,4	2,666,0	4,571,7	1,726,5	2,845,2	4,601,3	1,822,2	2,779,1	39·6

225. In its general features we see that on the Imperial lines the gross traffic receipts are nearly the same, but as the figures of last year included the receipts of the Northern section of the Punjab Railway and of the Kandahar line, whereas this year's figures exclude them, there is really an improvement by the amount of these, or 121,3. Besides this, a steady increase in the Rajputana-Malwa traffic has made up for the loss of the war traffic on the Punjab Northern. The Provincial lines also show improved traffic—2,646,3 against last year 2,556,5.

226. Imperial lines show a considerable reduction of expenditure even after allowing for 136,2 spent on the lines above mentioned, the total being 58·3 per cent. of traffic receipts against 67·7 per cent. in 1881-82. The percentage on Provincial lines is also better—57·1 against 59·7.

227. *Rajputana-Malwa.*—The opening of the through line on 1st December 1881 caused a considerable advance to be made in the anticipations of traffic and the Budget Estimate was taken at 1,150,0—650,0 against the figures of 1881-82 which were 1,012,3—581,5. The traffic was diminished by the occurrence of breaches on the Bombay, Baroda, and Central India line, and of the Egyptian war; so that the Revised Estimates of traffic were brought down to 1,100,0, which in the result was more than covered. The expenditure upon the complete line had been, as it turned out, over-estimated, and, partly for this reason, partly from economical working, was after all not very greatly in advance of the figures of 1881-82.

Section G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS—*continued.*

The net earnings increased from 430,8 to 524,6; the percentage of working charge being reduced from 57·4 to 52·9.

228. *Sindia.*—This line has somewhat disappointed expectations. The opening of the through line and the working agreement with the East Indian Railway were considered to warrant the framing of the estimates for 1881-82 at 45,0—30,0; but the experience of that year showed the necessity of reducing the estimate of traffic to 35,0, and working expenses were also brought down to 23,0. These figures have not been quite reached in either case.

229. *Wardha Coal.*—This line shows increasing traffic mainly owing to increased output of coal. The Revised Estimate taken on the improved working of 1881-82 was put at 62,5—48,5 against Budget 52,1—40,1. The result of the year is 67,3 revenue against the 62,5 estimated, and the charges were improved also by the adjustment of 2,4 to debit of Buildings and Roads Branch (Warora Colliery).

230. *Punjab Northern.*—At the time the Budget Estimates were constructed the whole of this line was shown as productive, and the estimate was framed for 375,0—290,0 against Actuals in 1881-82 of 327,0—286,8. In the Revised Estimates the section north of Rawalpindi was transferred to the non-productive class, and the estimates now stood productive 235,0—175,0; non-productive 65,0—85,0. Total 300,0—260,0. The goods traffic on the line was very low,—a fact attributed to the almost complete cessation of grain traffic after a good harvest. The explanation seems doubtful, but, as was remarked in last year's report, there has been as yet no experience as to what should be the ordinary traffic of this line. The outturn was a little worse, both in respect of revenue and in respect of expenditure, than the last estimate.

231. *Indus Valley.*—The Budget Estimates were taken at 520,0—370,0, which was considered to be as high as the falling traffic after the cessation of war traffic would warrant. These figures, however, included the Kandahar line, but the Secretary of State, as in the last case, ordered the separation of this as a non-productive line, the Revised Estimate showed: Indus Valley 478,5—312,5, and Kandahar 41,5—47,5, the same revenue and rather less expenditure. The growth of wheat traffic at the end of the year raised the receipts to 519,3 and also added something to the expenditure.

232. *Dhond and Manmad.*—The net receipts from the working Company were somewhat better than estimate.

233. *Nagpur and Chattisgarh.*—On this line there is both a development of traffic and an increased mileage has been opened. The Revised Estimates therefore raised the Budget from 55,0—40,0 to 82,5—52,5, and the results were better still.

234. *Rangoon and Irrawaddy.*—The Budget took a slight improvement in the traffic figures of 1881-82, and the Revised again slightly improved the Budget. There was a heavy falling off at the end of the year, so that only 158,7 were realised against estimate 165,0. The expenditure was also exceeded 98,8 against estimate 92,0 and Revised 94,0, but the increase is partly nominal as it is due to supply of permanent-way material for temporary use, which will be returned into store when no longer required.

235. *Calcutta and South-Eastern.*—There is here again a division in the Revised of figures joined in the Budget, namely—

	Budget.	Revised.	Actual.
Calcutta and South-Eastern . .	20,0—14,0	16,8—11,8	16,5—8,7
Sonarpur-Diamond-Harbour . .		5,2—3,7	5,5—2,9

so that the outturn was a little better than the estimate.

236. *Nulhati* shows improved working.

237. *Tirhoot.*—The Budget estimate anticipated the opening of certain extensions and was taken at 75,0—42,5 against last year's 57,9—34,9. The traffic was not as great as expected, and there were also delays in opening the extensions; the Revised was taken at 70,0—46,5, increased expenditure being found necessary; and the results were on both sides a little better.

238. *Northern Bengal.*—The traffic on this line continues to expand, and jute and tobacco especially helped forward the traffic receipts. The Budget Estimate 195,0—100,0, about equal to the results of 1881-82, was improved in the Revised Estimate to 220,0—106,0; the increase of expenditure being caused both by increased requirements of traffic and by outlay at the Sara ferry over the Ganges. The result was somewhat better.

239. *Patna-Gya.*—The working of this line was transferred to the East Indian Railway from January 1, 1883, and the Revised Estimate included three-quarters of the year only, as

Section G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS—*continued.*

the East Indian Railway are to pay half-yearly and their first payment is not due within 1882-83. The return of the line was therefore 39,8 —27,1 against Budget 52,5 —32,5.

240. The four small lines in the North-Western Provinces give, Budget 62,5 —40,6. Revised 60,7 —41,5, Actuals 59,2 —40,8.

East Indian Railway.

241. The estimate was framed for a considerable reduction in the traffic, as it was not considered safe to estimate for the continuance of the very large grain traffic of 1881-82, in which year also a periodical fair at Allahabad had brought a considerable accession of receipts. The returns of the year were however favourable, and had the traffic not suddenly fallen off in the beginning of 1883, would have reached the figure of 1881-82. It fell behind by eleven lakhs only.

242. On the expenditure side, large additions were made to the ordinary annual expenditure of about 1,490,0; and 276,4 was added to provide for heavy renewals of permanent-way near Buxar, for replacement of condemned locomotives, and expenditure to meet the increase of third-class traffic. The estimate was therefore taken at 1,766,4. This estimate was considerably exceeded, mainly in the outlay in the Locomotive Department; and the credits given for returned stores were also smaller than expected.

XXVI.—Guaranteed Railways, Net Traffic Receipts.

Accounts, 1881-82.			Guaranteed Interest, 1882-83.	Guaranteed Railways.	Budget, 1882-83.			Revised, 1882-83.			Accounts, 1882-83.			Percentage of Maintenance.
Gross.	Maintenance.	Net.			Gross.	Maintenance.	Net.	Gross.	Maintenance.	Net.	Gross.	Maintenance.	Net.	
976,5	419,1	557,4	395,0	Bombay, Baroda, and Central India	1,060,0	420,0	640,0	1,040,0	550,0	490,0	1,075,4	553,8	521,6	51'5

7,003,1	3,987,6	3,015,5	3,317,8	Total	7,370,0	3,897,0	3,473,0	7,735,0	4,205,0	3,530,0	7,813,5	4,250,4	3,562,1	54'4

243. These figures for 1881-82 will be found not to agree, except in their net column, with those in last year's report. The reason is that the figures hitherto shown have been—

On Receipt Side.	On Expenditure Side.
1. Traffic earnings of the Railway itself.	3. Maintenance.
2. Traffic earnings received on account of other Railways.	4. Traffic earnings paid over to other Companies.

244. The account thus made up may from one point of view be considered correct as regards each Railway taken by itself, but it is obvious (1) that in the totals of all the accounts taken together, the traffic earnings passed in transfer from one Railway to another are reckoned twice over, (2) that the percentage of working expenses to traffic earnings is overstated. The account accordingly has been corrected by taking item (4) as a deduction from the Receipt side, instead of as an addition to the Expenditure side, and gross traffic earnings must be understood to mean the earnings of each line taken by itself *after* settlement of the transfers with other Railways on account of through traffic, which are almost entirely transfers of traffic earnings.

245. The figures taken together show net earnings 3,582,1 in 1882-83 against 3,615,5 in 1881-82 and 3,473,0 estimated for 1882-83. The falling off was mainly in the figures of the Great Indian Peninsula line, which the grain traffic had raised to a very high figure in 1881-82. A continuance of that high traffic was not expected, but the figures were still very high in 1882-83, and the falling off was nearly compensated for by improvements in other lines.

246. *Bombay, Baroda, & Central India.*—The revenue was estimated 888,0 in 1880-81, but a considerable accession of traffic came in in 1881-82 by the through opening of the Rajputana line during that year, and the realizations were 976,5. As this increase would operate still more in the year 1882-83 the traffic was put down in the Estimates at 1,060,0, but the stagnation of trade caused by the Egyptian War and serious breaks in the line in September so much affected the traffic that in the Revised Estimate it was put down at 1,040,0

Section G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS—*continued.*

only. At the end of the year came a great increase of through traffic from the Rajputana Railway, and the receipts were raised to 1,075,4. The expenditure was put down at 420,0 against 419,1 in the last year. The break of September 1882 caused heavy outlay for restoration of communications, and there were also large renewals; the Revised Estimate was put at 550,0, which was very closely followed.

247. *Eastern Bengal Railway.*—The Estimate of traffic earnings was placed at 520,0, being considerably less than the earnings of 1881-82 (584,9), in which there had been an unusual jute traffic. This traffic, however, increased still more, and the Revised was taken at 625,0, even this being more than realized.

The Estimates provided on the Expenditure side for heavy repairs; and they were very slightly exceeded.

248. *Great Indian Peninsula Railway.*—The Receipts of 1881-82 were raised to an unusually high figure by the wheat traffic, but a continuance of this was not estimated for, and the figures were placed at 3,200,0 against 3,483,3 received in 1881-82. The grain traffic continued, and raised the earnings to 3,508,9.

Renewals and additional working expenses caused large additions to be made to the originally estimated expenditure, and 1,737,1 were spent against an Estimate of 1,550,0.

The net outturn was 1,771,8 against the Budget Estimate of 1,650,0.

249. *Madras Railway.*—The Estimates provided for nearly the same rate of Receipts as 1881-82 but added 23,7 to Expenditure to provide for renewals of Rolling Stock and other charges. By improved traffic and economy in working, the final outturn became 682,6—433,3=249,3 against Budget Estimate of 630,0—450,0=180,0.

250. *Oudh and Rohilkund Railway.*—The traffic on this line fell off, and the result was only 479,4 against 531,4 last year. The expenditure on the other hand was increased from 315,0 Budget to 324,2 Actuals, chiefly by heavy renewals. So that the result on the whole was a great falling off in the net return.

251. *Sind, Punjab, and Delhi.*—The traffic was taken in the Estimate at a little over the figures of 1881-82, and the amount was nearly realized. The Estimate of Expenditure was placed at 660,0 against 691,8 in 1881-82, in the hope that economical management would bring about a better result. This hope was only partially realized.

252. *South Indian Railway.*—Both traffic and expenditure continue at about the same figure.

XXVII.—Irrigation and Navigation, Direct Receipts.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
	Imperial—			
49,1	North-West Provinces	...	...	...
233,0	Punjab	224,0	215,5	225,4
15,2	Madras	11,0	13,6	21,3
24,5	Bombay	22,8	26,7	24,2
321,8	Total Imperial	257,8	255,8	270,9
	Provincial—			
125,5	Bengal	120,0	120,0	130,3
418,3	North-West Provinces	466,0	507,5	528,3
543,8	Total Provincial	586,0	627,5	658,6
2	England	2	1,4	1,5
865,8	Total	844,0	884,7	931,0

253. The Imperial item under *North-West Provinces* in 1881-82 has been made provincial from the beginning of 1882-83.

254. The *Punjab* receipts of 1881-82 were swollen by arrear collections of 1880-81; and a smaller figure was therefore taken in the estimates for 1882-83; from the Revised Estimates, some receipts were by error under-estimated, but the Budget Estimate was ultimately realized.

255. The revenue in *Madras* includes about 5,5, which had been estimated under "Land Revenue."

Section G.—REVENUE FROM PRODUCTIVE PUBLIC WORKS—*continued.*

256. The revenue in *Bombay* fell slightly below the expectation of the Revised Estimate, owing to non-realization, within the year, of certain receipts assessed on the Mittrau and Krishna Canals.

257. The *Provincial* Revenue in Bengal was slightly better than estimate, owing to an improvement in Miscellaneous receipts on the Sone Canal. In the North-West Provinces, the figures of 1882-83 include the revenue which was imperial in 1881-82. The favourable receipts of *Khanif* revenue raised the Revised Estimates from 466,0 to 507,5, and the actual receipts turned out even better.

258. The excess in *England* was a casual receipt not included in Budget.

Madras Irrigation and Canal Company, Net Traffic Receipts.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
7,6	Earnings	...	...	9
16,5	Working Expenses	...	...	6,5
—8,9	Net Earnings	—15,0	—5,4	—5,6

259. The works were taken over by Government on 6th July 1882, and the figures of 1882-83 therefore show only the transactions of three months.

XXVIII.—Portion of Land Revenue due to Irrigation.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
87,2	North-West Provinces	87,0	87,2	87,3
33,3	Punjab	34,0	38,5	33,8
334,5	Madras	541,0	362,3	314,4
36,2	Bombay	23,0	44,0	33,6
491,2	TOTAL	685,0	532,0	469,1

260. This revenue comes in by transfer from the ordinary head of Land Revenue. The North-West and Punjab figures require no explanation.

261. In *Madras* an investigation has been made by the Agricultural Department into the subject of Irrigation Revenue, and the amount of deduction to be made on this account has been worked out, at various times pending this investigation, upon different principles, so that the results in Budget, Revised, and Actuals considerably differ. One result of this readjustment has not been foreseen: the effect is obviously to transfer about 226,6 from Land Revenue due to irrigation (a wholly Imperial head of receipt) to ordinary Land Revenue (of which in Madras about $\frac{3}{10}$ is Provincial). By this transfer Provincial has gained, and Imperial has lost, Land Revenue to the extent of $\frac{3}{10}$ of 226,6 or about 68,0.

262. In *Bombay* an addition to the revenue transferred on this account has been made in consequence of the Desert Canal and the Eastern Nara works being transferred to the category of Productive during 1881-82. This transfer raised the receipts from 18,9 in 1880-81 to 36,2 in 1881-82, and in the same way raised the Budget of 1882-83, 23,0, to the Revised of 44,0. But only 33,6 were actually transferred.

Section G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS REVENUE ACCOUNT.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
11,127,3	EXPENDITURE	11,793,4	11,643,4	11,741,7

263. The Budget Estimate provided for 54,6, increase on State Railways, mainly due to extension of traffic and mileage; and for 288,1, increase on East Indian Railway, due to special requirements; for 133,2 for payment of surplus profits to the Guaranteed lines, and for the usual increase of charges on account of interest on the increased capital account. There was a saving by the

Section G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS REVENUE ACCOUNT—*continued.*

transfer of charges on the Punjab and Kandahar lines to Non-productive, but on the other hand the expenditure on the East Indian Railway was even more than estimated.

36.—State Railways, Working Expenses:—Including East Indian Railway.

	EXPENDITURE—			
1,686,4	State Railways	1,741,0	1,532,6	1,534,2
	EAST INDIAN RAILWAY—			
1,478,3	Working expenses	1,766,4	1,726,5	1,822,2
184,7	One-fifth surplus profits paid to Company	...	...	216,2
13,5	Contribution to Provident Fund of 1 per cent. on net traffic earnings	214,7	247,1	31,0
1,1	Payment for Land	...	...	...
1,677,6	Total East Indian Railway	1,981,1	1,973,6	2,069,4

264. The first two figures in the statement have been fully explained in the remarks upon the receipt side.

The payments in respect of net earnings of the East Indian Railway were in the Budget Estimate calculated upon the Revised Estimate of earnings for 1881-82 (3,110,0), and the Budget Estimate of earnings for 1882-83 (2,660,0). The outturn, however, was 3,261,8 and 2,779,1, and the payments were proportionally increased.

37.—Guaranteed Railways, Surplus Profits, Land and Supervision.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	MOIETY SURPLUS PROFITS—			
86,4	Bombay, Baroda, and Central India	100,0	83,5	83,5
57,9	Eastern Bengal Railway	84,2	76,4	76,4
186,9	Great Indian Peninsula Railway	265,0	326,2	326,7
2,1	Sind, Punjab, and Delhi Railway	...	...	...
74,7	LAND AND CONTROL	92,0	85,0	72,2
408,0	TOTAL	541,2	571,1	558,8

265. The estimates of payment of *Surplus profits* require no further explanation that that the difference in the Actuals as compared with Budget follows the differences in the Net Revenue explained on the Revenue side.

266. Under *Land and Control*, the largest items in the estimates were the acquisition of land for the Benares Bridge works and for the northern extension of the Oudh and Rohilkhund Railway. In the former case a saving was caused by delays in the settlement of compensation, and in the latter case the route was not settled in time to admit of the land being taken up.

38.—Irrigation and Navigation, Working Expenses.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	IMPERIAL—			
85,3	Punjab	90,9	95,4	96,6
73,0	Madras	109,7	116,1	78,4
22,2	Bombay	22,0	24,0	24,1
180,5	TOTAL	222,6	235,5	199,1
	PROVINCIAL—			
104,1	Bengal	106,0	107,2	114,8
170,9	North-West Provinces	174,4	183,5	187,8
275,0	TOTAL	280,4	290,7	302,6
2	England	...	2	2
455,7	TOTAL	503,0	526,4	501,9

Section G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS REVENUE ACCOUNTS—*continued.*

267. Under Imperial, the Budget Estimate in the Punjab provided for the same scale of expenditure as was estimated for in 1881-82, although the Actuals of that year showed certain savings; but in the Revised Estimates new expenditure for building offices at Amritsar, and for emergent repairs at the head-works of the Bari Doab Canal, were added. The slight excess in the actual expenditure was caused by some refunds.

268. In *Madras* the Budget Estimate provided a considerable increase in the appointment of Revenue Establishments. The charges of the maintenance of the old Irrigation Works was, under orders of Government, transferred to the Non-productive category, and the Actuals by so much fell short of the Estimates.

269. The addition made in the Revised Estimates and in the Actuals in *Bombay* is caused by the transfer to "Productive" of the canals mentioned in paragraph 262 above.

270. Under *Provincial*, the Bengal charges were increased by works on the Orissa Canals for strengthening the distributory channels, and by unexpectedly heavy charges for establishment on the Sone Canals. The increase in the North-West is mostly a matter of establishment on the Sone Canals. The increase in the North-West is mostly a matter of account; that is, the short expenditure on capital caused a larger proportion of establishment to be charged against the Revenue account.

Madras Irrigation and Canal Company—Land and Supervision.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
5	Land and Control . . . . . See Receipt side.	2	...	1

39.—Charges in respect of Capital.

(*a.*)—Interest on Debt.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	INTEREST ON CAPITAL FOUND BY GOVERNMENT—			
1,160,5	State Railways	1,242,6	1,226,4	1,226,7
81,0	East Indian Railway	155,0	141,0	138,3
726,4	Irrigation	734,0	785,9	784,2
17,9	Public Improvements	...	20,2	20,3
1,985,8	TOTAL .	2,131,6	2,173,5	2,169,5
	INTEREST ON OTHER CAPITAL—			
	East Indian Railway Commutation Stock—			
4	Rupee . . .	4	4	3
203,6	Sterling . . .	204,6	204,6	202,6
145,5	East Indian Railway Debentures . . .	119,9	119,9	119,9
3,7	3½ per cent. E. I. R. Annuity Redemption Stock .	17,5	23,6	25,6
2,339,0	TOTAL .	2,474,0	2,522,0	2,517,9

271. The particulars of the charges for *Capital found by Government* will be understood from the following statement of the Capital Account, excluding East Indian Railway:—

	State Railways.	Irrigation.	Public Improvements.	TOTAL.	Interest Rate per cent.	Amount of interest.
Capital Expenditure during 1881-82	1,635,2	565,8	68,9	2,269,9	4	90,8
Capital account at end of 1881-82	29,703,7	18,442,6	483,2	48,629,5	4	1,945,2
Capital transferred from ordinary, 1882-83 . . .	15,2	...	...	15,2	4	6
Capital Expenditure during 1882-83	1,647,3	2,324,3	49,8	4,021,4	4	160,8
Capital account at end of 1882-83, being the sum of the last three lines . . .	31,366,2	20,766,9	533,0	52,666,1	4	2,106,6

Section G.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS REVENUE ACCOUNTS—*concluded.*

272. From these figures calculating the interest at the rate of 4 per cent. we get:—

	State Railways.	Irrigation.	Public Improvements.	Total.
Interest on Capital account at beginning of the year .	1,188,2	737,7	19,3	1,945,2
Interest on Capital transferred	6	...	...	6
Half interest on Capital spent	32,9	46,5	1,0	80,4
TOTAL INTEREST CHARGED	1,221,7	784,2	20,3	2,026,2
Add ½ per cent. on the Holkar Loan of a crore which bears 4½ per cent. interest .	5,0	...	...	5,0
TOTAL AS ABOVE . .	1,226,7	784,2	20,3	2,031,2

273. The *East Indian Railway* figure in this part of the account is the reckoning at the contract rate of 4½ per cent. on the advances on Capital and Stores Accounts. Part of the increase compared with 1881-82 is accounted for by the charge to Capital for the discharge of debentures which brings about a corresponding reduction under the next portion of the charges.

274. Under *Interest on other Capital*, which at present is all connected with East Indian Railway, we have a reduction on account of discharge of debentures (as just mentioned); and an increase under the head of 3½ per cent. annuity redemption stock. The debt account shows that during the year 480,3 of this stock was issued in redemption of annuity, under which it will be found that a decrease of charge occurs.

(*b.*)—Annuities in Purchase of Guaranteed Railways (including Sinking Funds).

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	ENGLAND—			
262,0	4 per cent. on the deferred annuity . .	262,0	262,0	262,0
949,8	Annuity of 1,179,0; unredeemed portion .	957,3	955,4	922,7
26,6	Investment made in respect of the redeemed portion			30,9
1,0	Contribution to Management . . .			1,1
1,239,4	TOTAL ENGLAND .	1,219,3	1,217,4	1,216,7

275. The charge in respect of the annuity, including both the redeemed and the unredeemed portion, is:—

1881-82	. Actuals	3,7	+949,8	+26,6	+1,0	=981,1
1882-83	. Budget	17,5		+957,3		=974,8
1882-83	. Actuals	25,6	+922,7	+30,9	+1,1	=980,3

(*c.*)—Guaranteed Railways Interest.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	GUARANTEED RAILWAYS INTEREST—			
7,0	India	5,8	5,8	8,0
3,264,8	England	3,278,0	3,269,5	3,309,9
3,271,8	TOTAL .	3,283,8	3,275,3	3,317,9
50,0	MADRAS IRRIGATION AND CANAL CO. . .	50,0	25,0	24,9

276. The charge on account of Railways interest includes an arrear of 40,3 coming down from the accounts of 1867 and not anticipated in the Estimates. Apart from this, there was a saving of 6,2 chiefly owing to debentures not being replaced by other debt as soon as expected. Under the last head the Budget provided for a whole year's interest, but as the Company was purchased on 30th June 1882, only one half-year's interest came under payment.

Section H.—RECEIPTS ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
727,8	RECEIPTS . . .	619,0	771,5	830,6

277. As the figures now included under State Railways were last year shown under other heads, they should be omitted in the comparison from the Revised Estimates and Accounts of 1882-83; which then stand at 648,4 and 691,8 against 727,8 in 1881-82 and 619,0 for Budget of 1882-83.

278. The differences are mainly in the receipts on account of Civil Buildings, &c. Under this head, there were first exceptional receipts of about 70,0 in 1881-82, which the Budget at least did not expect to recur, but which did in a great measure come into the account at the end of the year; and there were also about 20,0 of receipts in 1881-82, which were in 1882-83 more properly classified as Land Revenue.

XXIX.—State Railways.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	IMPERIAL—			
0	Bhopal Railway	0	1,7	1.4
0	Kandahar Railway	0	41,5	48.4
0	Punjab Railway, Northern Section . .	0	65,0	72.6
0	TOTAL . .	0	108,2	122.7
	PROVINCIAL—			
0	Sonarpur-Diamond Harbour Railway .	0	5,2	5.5
0	Kawnia-Dhurla Railway	0	9,7	10.6
0	TOTAL .	0	14,9	16,1
0	TOTAL BOTH .	0	123,1	138.8

279. Of the Railways whose receipts are now shown under this head, the Kandahar and the Punjab Railways were, in the Budget Estimate, included in the figures of the Indus Valley and Punjab Northern Railways respectively. The returns from both these lines are very poor, but they turned out slightly better than Estimate.

280. Of the Bhopal Railway, 12 miles south of the Nerbudda were opened and produced a small revenue.

281. For the Sonarpur-Diamond Harbour Railway, the Budget Estimate was included with the Calcutta and South-Eastern; and for the Kawnia-Dhurla, with the Estimate under Civil Buildings, &c. In both cases, the revenue was a little better than Estimate.

XXX.—Subsidized Railways.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
2,3	BENGAL CENTRAL RAILWAY . . .	1,0	3,7	3,7

282. This is a small receipt of interest on investment of money deposited by the Bengal Central Railway, which is practically a reduction of the charge for interest which the Secretary of State has to allow the Company.

Section H.—RECEIPTS ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE —*continued.*

1,3 + 71,3	Bengal . . .	1,5 + 70,0	1,0 + 71,3	0 + 78,2
1 + 11,8	North-West Provinces . .	0 + 12,2	0 + 12,5	0 + 14,7
13,6 + 2,9	Punjab	12,3 + 2,0	12,6 + 2,9	11,9 + 2,6
3,1 + 12,6	Madras	2,4 + 11,7	3,1 + 12,9	1,3 + 15,1
10,8 + 0	Bombay	16,0 + 0	11,0 + 0	10,0 + 1
29,2 + 102,0	TOTAL . .	33,0 + 100,0	28,5 + 103,4	24,0 + 115,1
131,2		133,0	131,9	139,1

These figures are in two sets, Imperial and Provincial.

283. The decrease in Imperial is mainly in Bombay, and is due to the transfer to the Productive category of the Desert Canal and the Eastern Nara works. But the realizations on Non-productive works were also somewhat less than anticipated, a result owing in part to arrears being handed over to next year.

284. In the Provincial figures, nearly all the figures show a fair increase both over Budget and over last year's figures; the chief share coming in from navigation receipts on the Calcutta Canals.

XXXII.—Military Works.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
27,2	India	23,0	25,5	29,2
4,7	Madras	3,0	3,0	2,8
12,1	Bombay	11,2	11,2	9.6
6,3	Other Provinces	1,9	2,4	2.7
50,3	TOTAL .	39,1	42,1	44.3

285. The figures are better than Estimate. They fall a little behind last year, in which there were some exceptional receipts; but, as they still under India, include some special receipts by sale of materials, they are better than an ordinary year's revenue.

XXXIII.—Civil Buildings, Roads, and Services.

153,5 + 353,6	TOTAL .	122,6 + 302,5	135,2 + 314,7	166,6 + 318.0
544,0	TOTAL .	445,9	470,7	504,7

286. On the Imperial Account, we have fallen back to ordinary figures, after the special receipts included in the accounts of 1881-82. The English receipts are fees from students at the Royal Engineering College, the number of whom was less than last year.

287. Under Provincial and Local, the figures are separately stated for receipts in charge of Public Works officers and receipts in charge of Civil officers. Under the first of these, the Estimates provided for less revenue than 1881-82, chiefly because of the special receipts (7,0 + 10,9 + 13,4 = 31,3) included in that year's figures. The Revised estimated an

Section H.—RECEIPTS ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE —*continued.*

improvement in the North-West, mainly profits from Roorkee Work-shops, and a large addition in Bombay by sales of buildings, and by sale of land belonging to the Kurrachi Harbour Works. Some unusual transactions came into the Roorkee Work-shops after the Revised Estimates—first, in connexion with work done for sugar-mills for a firm in Bengal, and second, advance receipts on orders received at the end of the year. The receipts of these work-shops were 30,8 more than entered in the Revised Estimate. A decrease in Madras arose from restrictions imposed upon the Madras Work-shops; and in other provinces there were slight excesses which do not call for remark.

288. Under receipts in charge of Civil officers, a small increase in the Revised Estimates and in the Actuals in the Central Provinces arises from the receipts of the Saugor Work-shops being shown under this head instead of, as formerly, under Miscellaneous.

289. In the North-West Provinces, an amount of about 18,5, receipts of the Bhabar Improvement Fund, have been transferred from the head of Public Works to their proper head of Land Revenue, and this accounts for the diminution of figures there in 1882-83. The changes in the other provinces may be described as ordinary variations, the class of receipt mostly concerned being tolls.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
6,393,5	EXPENDITURE .	7,210,0	7,313,3	7,165,8

290. Although on the whole the Budget Estimates have been nearly followed, there have been great differences in detail. The general scheme of the year was for more liberal expenditure than last year on construction of Railways (592,0 against 247,7), on Irrigation (974,0 against 789,9), and on Civil Buildings, &c. (4,371,0 against 4,043,2); but the formation of the Southern Mahratta Railway Company, and the transfer to it of much of the work included in the Estimates both of this section of the account and of the Famine Section, placed the Government in funds to push on the Railways under construction in Bengal, the North-West, and the Punjab, and 89,8 was added to the cost of Provincial Railway construction. To this amount of extra expenditure we must add 136,2 on working account of Railways transferred from Productive, giving a total excess expenditure of 226,0, about equal to the amount saved to Government by the Southern Mahratta Railway, 150,0, and the savings in Irrigation caused apparently by the grants not being worked up to.

Section H.—EXPENDITURE ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE —*continued.*

291. Of the *Bhopal Railway*, the first 12 miles from the Great Indian Peninsula Railway to Hoshangabad were opened for traffic on 1st June 1882. Satisfactory progress was made with the bridge over the Nerbudda (which was finished in May 1883). The Gadaria Viaduct, another large work, was nearly completed. The earthwork on the ghats and on the rest of the line proceeded rather more slowly than expected, and the terminal buildings at Bhopal were commenced only in the cold weather. The line is expected to be opened in October 1884.

292. The Estimates provided 150,0 for the construction of part of the Southern Mahratta Railway from *Hubli to the Portuguese frontier*, but a concession was made to a private Company in respect of this line, and the Company were to take over the works already completed and repay an amount which in the Revised Estimate was taken at 50,0, on account of them. As mentioned under "Protective Works," these repayments were not settled before the end of the year, and the full amount expected was not received.

293. The other charges under Imperial are mostly surveys, and the savings in them are due to the fact, first, that a reserve of 30,0 for new demands arising during the year was not fully utilised; and secondly, that part of the charges budgetted for was transferred to other heads—7,6 for Punjab Northern Railway, Northern Section to Frontier Railways; 5,3 for Rewari-Ferozpur Survey to Protective Railways; and 7,2, Patna-Bahraich Survey to the Bengal and North-West Railway Company.

294. The *Provincial Railways* were all pushed on more rapidly than had been estimated for, as it was desirable, the money being available, to bring the works to an end as soon as possible. The expenditure here rose from Budget 300,4 to Actuals 390,2.

Of the Diamond Harbour Railway, the 15 miles to Mugrah Hát were opened on 18th December 1882; and the Diamond Harbour station was under construction at the end of the year.

Of the Dinagepur Railway, 9 miles (nearly a half) were opened on 1st July 1882. The earthwork on the rest was almost completed, and the bridge work also in a very advanced state.

295. On the Cawnpur-Farukhabad Extension, the works were not commenced till October 1882. By the end of the year one-third of the earthwork had been finished, more than half the material for bridges had been collected, and masonry work had been commenced, and 25 miles of ballast had been delivered. The line is to be 162 miles long, and to cost 450,0.

296. The Jumna Bridge at Muttra is meant to connect the North-West metre lines with the Rajputana system; it was sanctioned at a cost of 87,6, to which provision for road traffic costing 15,0 was added in England. The estimated expenditure for the year was raised from 30,0 to 68,0; and at the end of the year all the wells had been sunk from 15 to 30 feet below water level (an old town being discovered, in the operation, 15 feet beneath the bed of the river), and the work on the approaches more than half completed. The girders were not expected from England till December 1883.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
...	Southern Mahratta Railway	0	33,1	33,0

298. The figures against the *Bengal Central Railway* are mostly provision for the acquisition of land; the increase in the Revised, as compared with the Original Estimate, was due to short outlay in 1881-82, which was noticed in last year's report. The amounts included in the Revised did not, however, come under actual payment in 1882-83. Of the original provision made for interest payment, 16,5, also included against this head, only 13,3 was required.

299. The provision made under *Bengal and North-West Railway* was also for acquisition of land. That against Rohilkund and Kumaon Railway is the charge on account of guarantee of interest, which, though a Provincial charge, has to be classed as Imperial in the first place, because it is paid in the English accounts, and it is afterwards adjusted in India between the two Governments. A certain provision for land for this line is shown as a Provincial charge.

300. The charge against the *Southern Mahratta Railway* is the payment of interest at 4 per cent. upon the Capital of the Company; the Company not being formed at the time of the Budget, it did not appear till the Revised Estimates.

43.—Frontier Railways.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
420,9	Punjab Railway, Northern Section	223,0	281,5	295,5
	Kandahar Railway			25,3
	Stores, India			
363,5	Stores, England	...	...	1,6
784,4	TOTAL	223,0	281,5	—62,9
559,7	Deduct transferred to War Account	...	...	259,5
224,7	NET	223,0	281,5	...
				259,5

301. The Budget Estimate as at first framed was afterwards increased by additional grants, in order that the works might be the sooner brought to completion. The short outlay occurs mainly in respect of stores, that is, the stores, purchased for and held under the account of Frontier Railways, were very largely disposed of by transfer to other heads of charge, and this brought in great deductions from expenditure.

Section H.—EXPENDITURE ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE —*continued.*

302. On the Punjab Northern, the line from Khairabad on the Indus to Peshawur, 41 miles, was opened on May 1st, 1882, and at the end of the year the only part of the line from Lahore to Peshawur yet unopened was the section between Campbellpore and Khairabad on which are the Attock Bridge and its approaches. This section was so nearly complete that it was opened on 1st June 1883.

44.—Irrigation and Navigation.

789,9		974,0	919,9	901,1

The two sets of figures distinguish the Imperial and the Provincial (including a small amount of local) works.

303. Taking first the *Imperial*, the India Estimate was reduced in the Revised by the omission of the amount held as a reserve for demands afterwards arising in all provinces. The Revised Estimate reduced the intended expenditure in Madras, owing to delay in the inception of works on the Palar Anicut System, but added an equal amount to Bombay, where demands were made for the clearance of silt, and repair of flood damages on the Sind canals.

304. The accounts fell short of the Estimates mainly in Bengal.

305. Under *Provincial* in Burmah, the Budget estimated provided for two items on which no outlay was required during the year, namely, the purchase of a steam dredger and a navigation project in the Henzada plain. These were omitted in the Revised Estimate, but heavy expenditure upon embankments made up for part of the decrease. The similar reduction in the Revised in Assam was due to the arrangements for a daily steamer service not being completed within the year. Bengal made a reduction in its Revised Estimates, and Madras made an increase, caused in both cases by alterations in the scheme of working mapped out for the year.

45.—Military Works.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
714,7	India	671,5	658,3	638,0
30,9	Central Provinces	37,2	32,7	26,0
50,5	Burmah	33,7	36,2	36,4
22,0	Assam	25,0	24,1	25,2
14,4	Bengal	23,2	136,1	32,1
2,8	North-West Provinces	1,9	8	7
63,7	Punjab	32,5	30,5	29,3
49,0	Madras	62,0	69,0	66,0
122,5	Bombay	113,0	111,1	108,8
...	England	0	1,2	1,8
1,070,5	TOTAL	1,000,0	1,000,0	964,3

306. The grant for these is 1,000,0 a year, and both the Budget and the Revised Estimates worked up to this figure, but the expenditure fell a little short of the Estimate. The differences between Estimates and Actuals run over a variety of items and hardly require separate specification.

2,562,2	+918,4	TOTAL . .	2,762,8+1,097,5	2,784,8+1,033,8	2,792,3 +973,1
3,480,6			3,860,3	3,818,6	3,765,4
4,043,2		TOTAL . .	4,371,0	4,422,2	4,350,3

307. Under *Imperial*, the Estimate was for 510,7, rather less than the previous year's grant; but 92,9 were added to it by new grants made during the course of the year, chiefly for Public Offices at Simla and for the Uru Salt Works in Bombay. The final expenditure differed from the Revised Estimate chiefly in saving of grants for expenditure on the Mint in Calcutta, and in the slower progress of the salt works referred to which were under construction by the Bombay, Baroda, and Central India Railway. Against this additional grants were sanctioned for the Simla buildings.

308. Under *Provincial and Local*, the two sets of figures show the expenditure in charge of the Public Works Department and of Civil Officers respectively. In the first of these two cases, there can be little comparison between the rates of expenditure in the two years, because it depends greatly upon the disposition of the Local Governments to utilize the balances at their credit upon Provincial account. Bengal estimated to open the year with 708,8, the North-Western Provinces with 1,062,6, Punjab with 301,7, and Bombay with 552,1, all being very high, and all higher than the previous year. All of these therefore increased their rate of expenditure, except Bengal, which had considerable railway construction in hand, and which made up for its moderation in Estimate by largely exceeding its Budget provision. In Assam some administrative arrangements caused a transfer of part of the works from the category of Departmental to that of Civil Officers.

309. The Budget Estimates were accordingly framed for 2,762,8 Departmental and 1,097,5 Local against last year's 2,562,2 and 918,4.

310. As regards the former the several Governments, in the course of the year, made considerable additions to their grants by sanctioning new works for which Budget provision had not been made. These excesses were, in Burmah and Assam, mostly for new roads, and in Bengal, Punjab, and Bombay, for new civil buildings. Thus the Revised Estimate added 5,7 in Central Provinces; 14,8 in Burmah; 6,8 in Assam; 27,4 in Bengal; 7,1 in North-West Provinces; 1,9 in Punjab, and 25,6 in Bombay. Bengal greatly overspent its increased Estimate, but in other provinces they were not worked up to. The excesses in Bengal were chiefly on original works, and although the probability of the excess was known at the time, it was considered unnecessary to make special provision for it in the Estimates, as it was also known that an equal amount of savings in the same head of Civil Buildings, &c., would come in to meet it.

Section H.—EXPENDITURE ON PUBLIC WORKS NOT CLASSED AS PRODUCTIVE—*concluded.*

The outlay in Madras was very far short of the grants.

Upon the whole Estimate the excesses and defects balanced each other, and the outturn was 2,792,3 against Estimate 2,762,8.

311. Of the expenditure under charge of Civil Officers, about 80,0 must be considered as a transfer in the Province of Assam from Departmental Public Works expenditure; and of the other provinces, where the expenditure is largely that of Local Funds under the management of Local Committees, Bengal and Madras both estimated more liberally than they had spent in the former year, their local balances being in both cases high. The Local Committees in Bengal utterly failed to work up to their Estimates; they estimated for 469,4 and spent 370,9, just as in 1881-82 they estimated for 477,4 and spent 397,0. The figures elsewhere do not call for remark.

K.—ARMY SERVICES.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
3,821,5	Receipts . .	868,0	1,526,0	1,592,2
18,861,1	Expenditure .	16,128,0	17,509,3	17,440,3
15,039,6	Net Expenditure	15,260,0	15,983,3	15,848,1

312. The principal difference between the Budget Estimate and the final figures is the inclusion in the latter of the transactions arising in connexion with the Egyptian Expedition. Allowing for these the Budget figures were fairly followed. The figures of 1881-82 in the same way included special receipts and expenditure arising in connexion with the war in Afghanistan.

313. Excluding the special war expenditure, the net figures under "Army" are:—

Accounts, 1881-82, excluding 409,5 which were estimated last year to be really war expenditure, 15,645,0; Budget, 1882-83, 15,260,0; Revised, 1882-83, 15,186,1; Accounts, 1882-83, 15,130,9.

Section K.—RECEIPTS BY MILITARY DEPARTMENTS.

XXXIV.—Army.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
	INDIA—			
657,7	Commissariat	532,0	568,3	576,6
90,7	Clothing	73,9	77,7	78,9
102,9	Ordnance	71,5	92,0	113,7
242,1	Other Receipts	136,1	175,0	163,2
1,093,4	TOTAL INDIA .	813,5	913,0	932,4
68,3	ENGLAND	54,5	73,0	75,1
1,161,7		868,0	986,0	1,007,5

314. The excess over Budget in Commissariat was due to a special recovery of 10,0 from Mysore, and to continued sales of transport cattle, alluded to in the last year's report; the greater part of the increase was anticipated in the Revised Estimate.

315. Under Clothing no remark is necessary; under Ordnance, the excess in the Revised Estimates arose out of supplies of tents, for the Egyptian Expedition, made to Her Majesty's Government; but a still greater excess comes into the accounts for large sales of condemned stores in Bengal, and issues to the Hyderabad Contingent and to Native States.

316. The excess under "Other Receipts" came in connexion with the closing of transactions on account of the war in Afghanistan. The accounts would have fairly agreed with the Revised Estimate, but that the latter included credits for issues to other departments, which in the accounts were properly taken by deduction from expenditure.

Section K.—RECEIPTS BY MILITARY DEPARTMENTS—*continued.*

317. The increase of receipts in England was due to payments made by the Admiralty for services performed by Indian Troop-ships in connexion with the Egyptian Expedition.

318. The receipts of the year 1882-83 have on the whole fallen behind those of 1881-82, but nearly the whole explanation lies in the special revenues credited in 1881-82 under the head of Commissariat. See para. 187 of last year's report.

Section K.—ARMY SERVICES—EXPENDITURE—*continued.*

321. The fluctuations under the first head are mere questions of the rank of the officers on duty; the saving as compared with 1881-82 is partly a transfer of certain charges to "Medical."

322. In the Revised Estimate, there was a saving in *Regimental pay*, both as compared with the Budget Estimate and as compared with last year, which was owing to reductions in the Native Army carried into effect from 1st July 1882; a further part of the apparent saving is only nominal, being caused by the transfer of the pay of Medical Officers of British Regiments to the "Medical" Grant. The accounts closely followed the Revised Estimate.

323. The Estimates under *Commissariat* were very closely followed. The charges under this head for the five preceding years have been 2,273,9, 2,362,8, 2,689,6, 2,677,5, and 3,178,8. This last was entirely due as was explained in last year's report to the inclusion of heavy war charges; but these being eliminated we have now an immediate reduction to peace level.

324. The *Medical* Grant provided in 1882-83 for Medical Officers who formerly had been attached to regiments, but are now posted to stations as required. Apart from this transfer there is a real reduction in the amount of the charge, as there is a reduction in the number of officers.

325. Under *Ordnance* there was a considerable increase (35,9) in charges in Bengal mainly on account of stores purchased for the Egyptian Expedition but not sent; of a similar excess over Budget in Bombay 52,3 the explanation is nearly the same, namely, the stores were purchased for, and sent to, Egypt, but not being used there, were on their return charged off to the ordinary head.

326. The chief part of the increase over Budget under *Other effective Services* was due to gratuities of 83,3 paid to men of reduced Native Regiments, and there was also an increase under "Sea Transport" in consequence of the hire of a steamer to take to Burmah mules returned from Egypt.

327. Under *Pensions* the increase of charge is caused by the reductions last alluded to, and also by increase of family payments consequent on the Afghan war. Other Non-effective Charges" were increased by nearly 20,0 by certain retired officers commuting their pensions and drawing the capitalized value in India.

328. The English figures shew a decrease under ***Regimental pay***, chiefly of regiments during the voyage to and from India; a considerable decrease under Transport charges, due to the late commencement of the troop season, and to the postponement till 1883-84 of certain repairs; and stores, chiefly Ordnance and Medical, cost nearly £ 100,0 less than estimated.

329. Of the increase under *Retired Officers, &c.*, 30,5 was a short estimate of the effect of the measures taken to promote retirements, and 21,3 is a transfer to this head of charges shown in Budget against "Superannuation, Retired, and Compassionate Allowances."

330. The adjustment for unaudited expenditure was found to be blank, as the Military Accounts were found to show a slightly larger debit than was calculated upon the issues to them from the Civil and other Departments. The starting point for these adjustments was taken at April 1st 1878, and the figures show that the audit was, upon March 31st 1883, behind the actual expenditure by a smaller amount than it was behind it on April 1st 1878.

48.—Military Operations in Afghanistan.

Being true sterling £1,035,5 of which £500,0, was repaid by Her Majesty's Imperial Government.

Section L.—EXCHANGE ON TRANSACTIONS WITH LONDON.

XXXVI & 49.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
3,798,5	On Secretary of State's Bills	3,118,5	3,240,0	3,238,9
...	On Southern Mahratta Railway	...	126,5	114,0
15,3	On Hong-Kong Bills	...	48,0	44,9
3,813,8	TOTAL	3,118,5	3,414,5	3,397,8
	DEDUCT CREDITS—			
	On Guaranteed and Subsidized Companies' Transactions—			
38,5	Capital Transactions	—1,1	24,4	36,9
67,7	Revenue Stores	94,9	96,0	102,1
46,7	On Capital Transactions, East Indian Railway	150,0	95,2	92,3
104,2	On Miscellaneous Transactions	99,7	83,3	85,1
257,1		343,5	298,9	316,4
3,556,7	NET EXCHANGE	2,775,0	3,115,6	3,081,4

Section L.—EXCHANGE ON TRANSACTIONS WITH LONDON—*concluded.*

334. The Estimate on account of Secretary of State's drawings was taken at sterling 15,592,5 (including Hong-Kong Bills 250,5); exchange 3,118,5; Rs. 18,711,0, the exchange being taken at 20*d*. The actual outturn was sterling 14,119,1; exchange 3,238,9; Rs. 17,358,0, the rate being 19·522 pence. The Revised, made when the transactions of the year were nearly complete, differed only very slightly from this. These figures, it must be remembered, exclude the transactions on which the exchange was charged to the account of the Commission for the Reduction of Debt.

335. The exchange on transactions of the *Southern Mahratta Railway* arose out of the arrangements made during the course of the year for booking the transactions of that Company, capital receipts and capital expenditure in India having to be brought to account at the rate of $\frac{5}{6}$ under capital and $\frac{1}{8}$ under exchange; and a further small adjustment having to be made every half year for the difference between the result thus obtained, and the terms of the contract depending upon the rate of Council Bills for each half year. The Company's transactions accordingly brought 114,0 exchange to debit of the Revenue account, their expenditure in India being nearly 578,0.

336. The exchange on *Hong-Kong* Bills was not separately estimated in the Budget, but was taken along with Secretary of State's Bills, as the Bills drawn on India for the supply of the Hong-Kong Treasure chest were to come in in reduction of them. The drawings at the end of the year were less than estimated.

337. The difference under *Guaranteed, &c., Companies'* transactions arose chiefly in those of the Bengal Central Railway, which was taken in the Budget as likely to draw through the Government 250,0 sterling with a loss by exchange of 50,0, but which took only 185,0 with an account loss of 31,3.

The other Companies' transactions, as explained in the report of 1880-81, are nearly always net gain, and the outturn on account of them was not very different from the Estimate.

338. On transactions of the *East Indian Railway* the Budget Estimate was placed at 150,0, being 750,0, the estimated expenditure on stores in England, brought to debit of the Rupee capital account by a credit of 150,0 to exchange. The expenditure fell far short of this (see paragraph 366), and of course the exchange did the same also.

339. On *Miscellaneous Transactions* the credits are mostly of a casual nature. They come in by Family Remittances of Military officers, by payments received on account of stores supplied to Native States, and also Public Works stores supplied to Provincial Governments, by money-order remittances to the United Kingdom (those on the Continental Governments are not remitted through the remittance account, and therefore produce no exchange), and by many other transactions.

The Original Estimate would have been better followed had not a charge come in in Bengal by the remittance through the Government account of £28,767 out of the Bruce Legacy, to which Government had to add the exchange in paying it out in India.

Section M.—PROVINCIAL ADJUSTMENT.

Provincial and Local Revenue as by Budget.	Provincial Balance. April 1st, 1882.	Provincial Balance. March 31st, 1883.		Budget.	1882-83. Revised.	Accounts.
15,8	5,2	9,5	India	—3,3	—2,2	4,4
739,2	200,2	231,8	Central Provinces	—9,4	18,3	31,6
1,204,3	441,5	242,1	Burmah	—254,0	—138,5	—199,4
451,4	103,8	117,5	Assam	—31,5	—11,3	13,7
4,361,8	918,1	369,3	Bengal	—699,7	—555,1	—548,8
3,591,7	1,358,7	1,076,0	North-West Provinces	—471,5	—376,7	—282,8
1,616,9	409,9	305,9	Punjab	—121,9	—92,7	—104,0
3,060,9	647,7	710,2	Madras	—74,4	—18,8	62,5
3,739,0	732,7	552,9	Bombay	—324,4	—348,4	—179,8
18,781,0	4,817,8	3,615,2	TOTAL	—1,990,1	—1,525,4	—1,202,6

Section M.—PROVINCIAL ADJUSTMENT—*continued.*

340. The Provincial Governments had all of them high balances at the beginning of the year, partly the result of enforced economy during the Afghan war, and partly through the return to them, as part of the new provincial contract of 1882, of 670,0 levied from them during the period of financial pressure (paragraph 42 of the Financial Statement), and the further grants mentioned in paragraph 64 of the Financial Statement. Naturally, therefore, they estimated for high expenditure,—that is, to spend not only the income of the year, but, out of previous accumulations, the further sums above mentioned.

341. The chief improvement in the *Central Provinces* came in in Railway Receipts, which were estimated at 55,0, but produced 85,9.

342. In *Burmah* the Provincial Revenue under Excise, Customs, and Forest gave an advance of 90,9 over Budget, against which the Provincial share of Land Revenue fell short by 30,6.

343. In *Bengal* the scale of transactions is so large that the difference under Provincial, which amounts to an improvement over Estimate of 150,9, is a little more than three per cent. of the whole, and perhaps requires no special explanation.

344. The *North-Western Provinces*, though they had to bear the new demand of 198,8, alluded to in paragraph 56, note *d*, saved 85,0 in Land Revenue charges (see paragraph 95), and very much short-spent the provision for Public Works. In the final outturn therefore they were better in their Provincial balance by 188,7.

345. In the *Punjab* the difference was not very great, and of that under *Madras* nearly 68,0 is accounted for by the different treatment of Land Revenue alluded to in para. 261

346. In *Bombay* the Land Revenue was worse than the Estimates by about 90,0, but that was almost made up by improvement in Excise of 55,0; and in Forests of over 20,0. The chief differences in Bombay lay in the special Land Revenue refunds referred to in paragraph 86, for which 193,3 was provided in the Estimates, but 33,1 only spent within the year.

EXTRAORDINARY RECEIPTS.

347. These are two in number, and they are classed as Extraordianary because, although as a matter of account-keeping they must come in on the receipt side, they form no proper part of the year's revenue.

348. The first is the cancellation, upon the Books of Government, of the balance hitherto held under "Unfunded Debt" at credit of the Bombay Civil Fund. The assets and liabilities of this fund were taken over by Government upon December 1st, 1882, in accordance with Act of Parliament, 45 and 46 Victoria, Cap. 45. The future receipts and expenditure on account of the fund will be classified as Government Revenue and Expenditure (taking the place of the past payments of interest and donation to the fund), but the accumulated balance had to be charged off under "Unfunded Debt, Deposits of Service Funds," and credited *per contra* as an Extraordinary receipt.

349. The second is the addition of expenditure already incurred and charged off in former years to the Capital Account of Productive Public Works. When it is decided that the work is to reckon as Productive, the Capital Account must necessarily be increased, and this can be done only by a *per contra* entry of receipt.

Section N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNT).

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
3,311,4	EXPENDITURE	3,250,0	4,844,4	4,649,9

350. The capital expenditure on State Railways and on Irrigation both fell behind the expectation of the Budget Estimates, but the total charge was made up by expenditure not included in that Estimate, namely, 480,3 on redemption of East Indian Railway Annuity, 1,762,6 on purchase of the works of the Madras Irrigation Company, and 49,8 expenditure upon the Madras Harbour Works.

Section N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNT)—*continued.*

50.—State Railways.

79,2	Punjab Northern	34,7	57,0	56,5
20,2	Amritsar-Patankote	180,0	187,0	186,8
2,5	BOMBAY	12,8	7,1	5,7
1,897,8	TOTAL	1,923,2	1,720,2	1,666,4
...	ADD—Reserve	...	...	...
262,6	DEDUCT—Excess Credits Store Account	55,2	45,8	19,1
1,635,2	TOTAL	1,868,0	1,674,4	1,647,3
	Out of which in England	550,0	372,0	370,1

351. The Budget Estimate provided for the expenditure of the usual annual grant of 1,800,0 plus 67,7 expected to lapse from the previous year, which lapse, however, actually amounted to 369,4. This gives the following account of the fixed grant:—

	Revised, 1882-83.	Actuals. 1882-83.
Available for 1882-83	2,169,4	2,169,4
Transferred from Irrigation Portion	100,0	100,0
TOTAL	2,269,4	2,269,4
Expended in 1882-83	1,674,4	1,647,3
Carried forward to 1883-84	595,0	622,1

352. The large saving in the original grants is accounted for by delay in receipt of stores from England, difficulty in obtaining labour, and transfers of stores and tools to works classed as unproductive. The expenditure as originally sketched out in the Budget Estimates is liable to many alterations as the year goes on, partly by new projects being sanctioned, and partly by transfer of grant from works on which money seems likely to be saved, to works where it is found possible to push on the expenditure more rapidly.

The following details of the principal works are given.

353. *Rajputana Line.*—The principal works on this line are extensions of the station works and buildings at Rewari, Bandikui, and Jeypore; a large number of official residences, office buildings, &c., at Ajmere; completion works to earthwork ballast, &c., on the Neemuch-Nasirabad section which was opened on 1st December 1881; and the extension to Ujjain begun in November 1882, and to be opened, it is hoped, by the monsoon of 1884. The saving in the original budget was entirely due to the postponement of expenditure which it was thought could be deferred, nearly 70,0 on the Ajmere buildings,

Section N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNTS)—*continued.*

another 10,0 on tools and machinery for the Ajmere shops, and also certain new Locomotives.

354. *Sindia Railway.*—The principal works were additional sleepers between Agra and Gwalior; and stone-pitching, &c., at the Chambal bridge. There was a slight saving on the estimates.

355. *Holkar Railway.*—There was considerable saving on this estimate, which was mainly for stations and buildings, and for extension of shops at Khandwa.

356. *Nagpur-Chattisgarh.*—On the Amgaon section, the bridge over the Wainganga river was still incomplete, and the traffic was carried by a temporary bridge. The permanent bridge was completed and opened on 7th June 1882. Construction was actively carried on from Amgaon, 95 miles, to Nandgaon, 145 miles; more money being made available for the work than at first intended. The Revised Estimate was stated at an unnecessarily high figure.

357. *Rangoon-Irrawadi.*—The expenditure on this line was mostly reconstruction with iron girders, of bridges built in the first place of timber. The large excess on the estimates occurs in the suspense account, and represents the charge for rolling-stock which when completed will be charged to the Sittang Line.

358. *Rangoon-Sittang.*—This line 166 miles long, of which the construction commenced in 1881-82, was in progress throughout the year. The first 92 miles are likely to be opened by January 1884. The saving in the estimate reckons in part against the excess on the last mentioned line.

359. *Tirhoot Railway.*—The expenditure against this head is mostly the construction of a new connection with the East Indian Railway by the extension of the line to the banks of the Ganges, opposite Mokameh. The work was for the most part provided for by additional grants made after the Budget Estimate, and the extension was ready in November 1882, but could not be opened till May 1883, as the East Indian Railway had not made their Ghât line from the Mokameh Station.

360. *Tirhoot Extensions.*—There were three extensions of this Railway under construction, *viz.*, Mozaffarpore to Bettiah, 76½ miles; Durbhunga to Pipra Ghat, 24½ miles; Mozaffarpore to Hajipur, 44 miles.

The first, it was hoped, would be opened within the year, but the contractors were unable to fulfil their contracts and a part of it only, to Motihari, 49½ miles, was opened on February 1st, 1883. The Pipra Ghat Extension was opened the same day, the work having been carried on departmentally after the contractors' failure. The Hajipur Extension was only under survey and estimate.

The short expenditure on these extensions was due to the failure of the contractors above noticed, and also in part to debit not being received within the year for rolling-stock under construction at the Saidpur Workshops of the Northern Bengal Railway.

361. *Dacca-Mymensing Railway.*—The sanction for the construction of this line, 86 miles, was not received in time for its being entered in the Budget Estimates. The construction was put in hand on 1st December 1882, and better progress was made with the earthwork than anticipated in the Revised Estimates.

362. *Indus Valley.*—The work here done is raising of embankments, miles 160 to 202; additional bridging, especially three bridges at the part of the line, miles 483, 491, and 494, damaged by floods; fencing; large offices, workshops, and barracks at Sukkur.

These works (except the fencing) were for the most part carried out as intended, but a large provision had been made for the commencement of the bridge at Sukkur over the Indus, which was not begun within the year.

363. *Punjab Northern Railway.*—The works here include a new siding and dock for the Chenab Ferry Trains; additions to the Wazirabad and Lala Musa Stations; commodious Stations at Rawalpindi; new permanent-way between Kharian and Jhélum; staff quarters at Rawalpindi.

The addition in the expenditure over the Estimate was mainly a transfer of stores from the Northern Section of the line, which is not now on the Productive list.

364. *Amritsar-Patankote.*—66 miles from the Sind, Punjab and Delhi Railway to Patankote. The works began practically with 1882-83, and good progress had been made by the end of the year, the expenditure reaching a slightly higher figure than the Estimates. The line will be open by November 1884.

Section N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNT)—*continued.*

East Indian Railway.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
586,3	Redemption of Annuity	...	450,0	480,3
455,2	Other Capital Transactions	485,0	263,2	148,2
1,041,5	TOTAL	485,0	713,2	628,5

365. The transaction under *Redemption of Annuity* was not inserted in the Estimates as it enters on both sides; that is, it is charged to the Capital account of the Railway, but re-appears as a receipt for Permanent debt incurred.

366. The principal works included in the Capital outlay are (1) completed: additional goods sheds and sidings at Cawnpore, flood openings at Arrah; (2) in progress: additional accommodation of all kinds at Howrah, with goods sheds, sidings, pontoon stage, &c., doubling of the line from Buxar to Mogul Serai.

The Hooghly bridge and connexion with the Eastern Bengal Railway at Naihati was sanctioned on 7th December 1882.

The Revised Estimate fell largely behind Budget Estimate owing chiefly to delay in the supply from England of the materials for the Hooghly Bridge; and the Expenditure was shorter still owing to the same cause which produced an excess in the Revenue Account,—the non-transfer of stores from Revenue.

51.—Irrigation and Navigation.

1881-82. Accounts.		Budget.	1882-83. Revised.	Accounts.
71,2	BENGAL— Soane Project	49,6	50,5	37,2
33,3	Orissa Project	60,6	67,0	36,5
11,1	Midnapur Series	29,8	22,5	12,2
	N.-W. PROVINCES—

23,8	Other Works	70,5	39,6	37,4
	PUNJAB—			
315,1	Sirhind Canal	169,2	145,6	201,6
—129,4	Less Contributions			—63,8
42,1	Other Works	60,8	60,8	53,4
39,5	MADRAS	100,0	108,2	99,1
	BOMBAY—			
14,4	Deccan	30,0	17,3	15,8
36,3	Sind		43,5	43,4
0	RESERVE	197,0		0
565,8	TOTAL	897,0	649,1	561,7
0	Purchase of Madras Irrigation Company's undertaking	0	1,763,5	1,762,6
565,8	TOTAL	897,0	2,412,6	2,324,3

367. There was considerable short expenditure everywhere during the year, and as this became evident, transfers of the grant were made—100,0 to State Railways and 44,2 to the Madras Harbour Works.

368. In all the projects in *Bengal* there was a large lapse of the grant, and in all three cases it is explained to arise from delay in sanctioning the works for which the money was granted; in other words, too sanguine an estimate of the rate at which the works could be prepared and entered upon. The Bengal Government did not report the lapses in time for the reduction to be made in the Revised Estimates.

369. In the *North-West Provinces* the short expenditure is explained in the same way, namely, want of sanctioned estimates and inability of the establishments to work up to the larger grants now given for irrigation works. At the end of the year some moneys came in by large sales of the surplus plant belonging to the Lower Ganges Canal, and reduced the expenditure below the Revised Estimate.

Section N.—EXPENDITURE ON PRODUCTIVE PUBLIC WORKS (CAPITAL ACCOUNTS)—*continued.*

370. In the *Punjab* the expenditure on the Sirhind Canal fell somewhat short of estimate owing to difficulty in finding labour, and delay in making payments for land. The difference would be greater, but for a falling off also in the contributions from the Native States, which however are in most cases very well up to date. On the Western Jumna Canal, the short expenditure was due to delay on sanctioned Estimates for distributories, and to retardation of the works by the heavy rains of January 1883.

371. The Estimates in *Madras* were heavy, compared with previous year's expenditure, and they were nearly worked up to.

372. The Original Estimates for *Bombay* were supplemented by grants of 41,9 for the Eastern Nara Works and the Desert Canal which were transferred to the Productive category and 10,0 emergent works on the Bewari Canals. The presence of water in the bed of the River Nara impeded the works, and this, together with the postponement of work on the Mutha Canal, reduced the total charges to 59,2.

373. The purchase of the *Madras Irrigation Company's* undertaking not having been carried out in 1881-82 it was not considered necessary to make any entry in the Budget on account of it. The terms however were settled and the purchase completed on 30th June 1882. The following are the details of the purchase:—

Redemption of Capital Stock	1,051,0
Redemption of Mortgage Debentures	338,4
Compensations and miscellaneous	14,8
Write-off of unrecovered portion of advance made to the Company	358,4
TOTAL	1,762,6

52.—Miscellaneous Public Improvements.

1881-82. Accounts.		1882-83. Budget.	1882-83. Revised.	Accounts.
68,9	Madras Harbour	...	44,2	49,8

374. No provision was made in the Estimates for the Madras Harbour Works. The state of these works was under investigation at the time of the Estimates, and any expenditure which Government might determine upon making was left for after-consideration. It was eventually provided for by deduction from the grant of Irrigation works in which a large "Reserve" had been provided.

Section O.—PERMANENT DEBT.

	Budget.	1882-83. Revised.	Accounts.
INDIA—			
Incurred	...	2,680,0	2,670,1
Discharged	590,0	638,0	634,5
NET	—590,0	2,042,0	2,035,6
ENGLAND—			
For redemption of East Indian Railway Annuity	...	450,0	480,3
Other debt incurred	1,950,0	2,000,0	2,000,0
Total incurred	1,950,0	2,450,0	2,480,3
Discharged	2,048,0	2,023,4	2,006,8
NET	—98,0	426,6	473,5
NET	—688,0	2,468,6	2,509,1

375. In *India* the question of raising new debt was left open in the Estimates, as it was doubtful if the necessity would arise. In July, when it became known that a military expedition would be made from India to Egypt, of which the immediate cost was calculated at 1,800,0, it was considered advisable to raise a loan of 2,500,0, which was accordingly notified on 26th September 1882, and was raised at an average rate of Rs. 98-14-7 annas. The balance is mainly Stock-notes, of which 169,2 were issued; the issues of these

Section O.—PERMANENT DEBT—*continued.*

were experimental (see Financial Statement, paragraph 258), and the item was not shown in the Estimate.

376. The discharge of loans was that falling under the operations of the Commissioners for the Reduction of Debt, namely, two small Sicca loans, aggregating 37,9 and the 5 per cent. debentures amounting to 600,3 falling due on June 1st. The Sicca loans were dischargeable on 27th March, 1882, but as a matter of fact the payments nearly all came after 31st March. 590,0 was taken as the amount coming under payment on this account, and 631,2 were paid.

377. The first figure shown against *England* is the operation of redeeming the East Indian Railway Annuity by issue of 3½ per cent. stock; the entry on the payment side coming into the account of Capital Expenditure on that Railway.

The remaining part of the English operations, according to the Budget Estimate, were the raising of 1,950,0, 3½ per cent. stock to pay off East Indian Railway Debentures of that amount and some other small amounts falling due. Later in the year it was determined to raise instead a 4 per cent. Debenture Loan of 2,000,0; and the discharges against this were a little short of the Estimate by reason of small amounts remaining unclaimed at the end of the year.

Section P.—UNFUNDED DEBT.

	Budget.	1882-83. Revised.	Accounts.
INDIA—			
Incurred	2,722,0	2,937,1	3,082,5
Discharged	2,211,5	2,233,3	3,250,7
NET INCURRED	510,5	703,8	—168,2
ENGLAND—			
Incurred	4,0	4,254,0	4,254,1
Discharged	500,5	4,250,6	4,250,6
NET INCURRED	—496,5	3,4	3,5
NET INCURRED	14,0	707,2	—164,7

378. The *Indian* figures are much affected by the exceptional operation of the transfer to Government, under Act of Parliament (45 & 46 Vic., Cap. 45) of the Bombay Civil Fund. The balance of the Fund on December 1st, 1882, 815,3, is charged to this head and credited as an extraordinary receipt. Omitting this charge the result in India would be net incurred, 647,1. This is better than the Budget Estimates, mainly by reason of the net receipts of the Post Office Saving Banks. These were a new institution in 1882-83, and were reckoned in the Estimates at only 80,0, but they received net deposits, 279,7.

379. The *English* Estimate provided for repaying 500,0 of temporary loan borrowed in 1881-82; but as the repayment was made before the beginning of the year, this provision was not required. The Secretary of State, however, borrowed 4,250,0 during the time for which he failed to place his Bills on India, but was able to repay it by his excessive drawings towards the end of the year.

Section Q.—DEPOSITS AND ADVANCES.

INDIA—	Budget.		Revised.		Accounts.	
Provincial Balances (net)	.....	—1,990,0	.....	—1,525,4	.....	—1,202,6
Commission for Reduction of Debt (Indian Account)	+ 750,0	= 750,0	+ 1,330,2 − 1,227,0	= 103,2	1,343,6 − 481,0	= + 862,6
Other deposits and advances	+19,016,4—18,426,4	= 590,0	+20,467,0 − 20,282,3	= 184,7	+21,871,4 − 22,320,5	= − 449,1
England	...	+ 500,0	.....	+1,500,0	.....	+1,497,1
		= 150,0	.....	= 262,5	.....	+708,0

380. The Provincial Governments were upon their whole accounts better than Budget by 787,4, as mentioned in paragraph 30, so that the deposit account of their balances was short drawn on to this extent.

Section Q.—DEPOSITS AND ADVANCES—*continued.*

381. The Commission for the Reduction of Debt estimated to receive their usual yearly sum of 750,0, against which there would be no operations, because the discharge of debt would be placed in the accounts against the head of permanent debt. In the Revised Estimate their transactions were known to be a receipt of about 1,330,2 (see paragraph 218) against which they would bear the charge of a million Sterling of Bills (or in Rs. 1,227,0). As these bills were issued only at the end of the year they did not all come in course of payment before March 31st, and the result appeared in short charge against this head. The intentions of the Secretary of State not being fully known, the full charge was taken in the Revised against this head, and the short charge against the head of Secretary of State's Bills paid, whereas in the accounts the opposite was done.

382. It is not possible to give a very satisfactory account of the whole of the difference under other deposits and advances. Of the estimated receipts 460,0 were to come in from a transaction which it became advisable to postpone as soon as it was decided to raise a loan of 2,500,0; and of the rest of the difference it may be said generally that the transactions on both sides are very large, and that they are affected by a variety of circumstances that are hardly capable of estimate.

383. In the English account the figures are, in the Budget Estimate the receipt of the annual payment on account of English contribution to the Afghan War, and in the Revised Estimates and the Accounts the further receipt of £1,001,393 by remittance from India of the amount at credit of the Commission for the Reduction of Debt.

Section R.—LOANS TO MUNICIPALITIES, NATIVE STATES, &c.

	Budget.	1882-83. Revised.	Accounts.
India	210,0—125,0	231,7—126,5	390,5—91,5
	85,0	105,2	299,0

384. The advances were not drawn up to the full amount; on the other hand some re-payments were received from Native Chiefs in anticipation of the due dates.

Section S.—CAPITAL OF GUARANTEED AND SUBSIDIZED COMPANIES.

Guaranteed Companies.

	Budget.	1882-83. Revised.	Accounts.
INDIA—			
Bombay, Baroda, and Central India	7,8	110,0	141,7
Eastern Bengal	22,0	32,1	52,0
Great Indian Peninsula	281,9	256,7	337,7
Madras	91,7	88,9	79,4
Oudh and Rohilkund	—530,0	—253,5	—118,2
Sind, Punjab, and Delhi	121,0	103,8	104,2
South Indian	28,6	33,5	38,8
TOTAL	23,0	371,5	635,6

Subsidized Companies.

Central Bengal	—250,0	—154,2	—148,6
Southern Maharatta	...	—668,3	—578,0
TOTAL	—250,0	—822,5	—726,6
	—227,0	—451,0	—91,0
ENGLAND	—315,0	1,543,0	1,687,7
TOTAL	—542,0	1,092,0	1,596,7

Section S.—CAPITAL OF GUARANTEED AND SUBSIDIZED COMPANIES —*continued.*

385. Under the *Guaranteed Companies* the principal transactions in India are the credits given to capital by issue of stores for revenue purposes.

386. The better receipts on the Bombay, Baroda, and Central India line are due to heavy issues of stores in connection with the repairs of flood damages alluded to in paragraph 246, and to recoveries from Government at the end of the year of outlay on the Uru Salt Works (see paragraph 307). On the Eastern Bengal Railway there were unexpected recoveries on account of loss of a river flat and for iron issued for construction of wagons out of revenue. On the Great Indian Peninsula Railway besides better recovery of stores there has been short outlay in the Engineering Department. The main difference under Oudh and Rohilkund Railway was that out of 350,0 provided for expenditure upon the Northern Extension only 45,1 were spent. There was a saving on the main line also, as of 145,0 provided on account of Benares Bridge Works only 72,8 was spent.

387. The issues to the *Subsidized Companies* in India are mainly moneys advanced to them for their capital expenditure against receipts in England. The Bengal Central Railway did not take so much as it estimated for, and the Southern Mahratta Railway made its arrangements only after the year had commenced.

388. The net receipts in *England* from the other Companies did not greatly differ from the Estimates, but the Southern Mahratta Railway paid in net 1,593,6, of which of course there was no entry in the Estimates. The credit of 358,4 on account of advance to the Madras Irrigation Company, which is mentioned in paragraph 373 above, also came in in excess of the Budget Estimate.

Section T.—REMITTANCES.

	Budget.	1882-83. Revised.	Accounts.
Money Orders (net)	18,0	5	14,2
Other Local Remittances (net)	2,0	—35,0	84,0
Other Departmental Accounts (net)	—11,0	— 4,5	3,6
Accounts between Civil and other Departments (net)—			
Post Office	0	0	17,6
Telegraph	0	0	—3
Guaranteed Railways	0	278,8	...
Marine	0	0	—7
Military	0	0	—8,9
Public Works	0	300,0	53,2
Remittance account between England and India (net)	—19,0	—168,4	23,5
TOTAL (NET)	—10,0	308,4	186,2

389. These amounts are the balances of large transactions carried forward; the only large figures are those against Guaranteed Railways and Public Works in the Revised Estimates, and those against other local remittances in the actuals. In the first two cases the amounts practically represent the sum by which the detailed Estimates of the departments concerned (both service heads and debt heads) appeared, from their transactions with the Civil Department, to be short estimating their receipts, and were necessarily entered so as to bring out the real anticipated closing cash balance upon the Revised Estimate. The latter arises in a new account opened for the adjustment of outstanding arrears and represents for the most part credits by debit to railway service heads for services in other departments, outstanding in account on 1st April 1882.

Section U.—SECRETARY OF STATE'S BILLS.

	Budget.	Revised.	Accounts.
Drawings	15,342,0	14,042,0	14,119,1
Payments	15,342,0	14,468,0	15,018,0

390. The Original Estimate of requirements, 15,342,0, was reduced by 1,300,0 by the Secretary of State when he found he was to receive large deposits from the Southern Mahratta Railway Company. For a long time during the year he failed to place his bills at the rates he had fixed, but he took advantage of the heavy demand at the end of the year

Section T.—REMITTANCES—*continued.*

to bring up the arrears, and as he was able to draw about a million sterling more than his estimated amount, it was arranged that advantage should be taken of this demand to remit home money on account of the Commission for the Reduction of Debt.

391. The Bills drawn during the year are thus arranged by month of allotment:—

	£	₹	Rate in pence
March 1882	73,1	8,72	20·12
April „	973,9	1,15,96	20·16
May „	773,5	92,47	20·07
June „	353,1	42,33	20·02
July „	202,9	24,35	20·00
August „	1,183,9	1,42,00	20·01
September „	250,4	30,05	20·00
October „	345,1	41,67	19·88
November „	591,6	72,32	19·63
December „	2,421,4	3,03,50	19·15
January 1883	4,234,1	5,27,54	19·26
February „	2,153,2	2,65,88	19·44
March „	562,9	69,01	19·58
TOTAL	14,119,1	17,35,80	19·52
Besides bills drawn in March on account of Commission for the Reduction of Debt	1,001,4	1,22,77	19·58

And the payment account is as follows:—

	£	Rs.
Bills outstanding, March 31st, 1882	1,471,5	1,76,17
Drawn in 1882-83	14,119,1	17,35,80
TOTAL FOR PAYMENT	15,590,6	19,11,97
Paid in 1882-83	15,018,0	18,41,53
Outstanding, March 31st, 1883	572,6	70,44

392. It will be seen that the payments advanced very largely as compared with the drawings. This was due in part to the fact, of which account was taken in the Revised Estimates, that the arrear on March 31st 1882 was unusually large, but also and chiefly to the circumstance that as all drawings after about 14th March were taken against the account of the Commission for the Reduction of Debt, there were only about one week's bills, instead of about three, *en route* from England to India when the year closed. The Secretary of State's intentions not being fully known, this excess payment was provided in the Revised Estimates, under the deposit account, instead of against the remittance account (see paragraph 381).

Section V.—CASH BALANCE.

	Budget.	1882-83. Revised.	Accounts.
Opening Balance	17,251,0	17,143,8	17,143,8
Closing Balance	12,995,0	16,877,1	18,251,4
NET DECREASE	4,256,0	266,7	INCREASE 1,107,6

393. Every item that has been under explanation in the report has its part in the explanation of difference of Balance, but the main items in the difference of 5,363,6 between estimate and actuals are—

(1) the surplus of revenue over expenditure which was 1,209,1 better than Estimate; and so far as its effect upon the cash balance was concerned was better by a further amount of 593,6 or by 1,802,7 in all. This 593,6 being the amount estimated for outlay on Protective Works, but afterwards diverted for Reduction of debt, and still held in the cash balances on March 31st.

(2) the loan raised in India of 2,500,0; and 500,0 taken in the Estimates for repayment of Temporary Debt in England, but coming into the account before the year began.

Section V.—CASH BALANCE—*continued.*

(3) a net receipt of 1,593,6 from the Southern Mahratta Railway Company, less 1,404,2 paid out in the purchase of the Madras Irrigation and Canal Company's undertaking. These two items may, as a matter of ways and means, though not as a matter of account, be reckoned against each other.

394. The closing balances compare as follows with the Estimates—

	Budget.	Accounts.	Accounts Better.
England	2,146,6	3,429,8	1,283,2
India	10,848,4	14,821,6	3,973,2
TOTAL	12,995,0	18,251,4	5,256,4

Of these last figures the following analysis may be given:—

ENGLAND.	Budget.	Accounts.	Accounts better or worse.
In the English Account the Secretary of State estimated to open with a balance of	+3,051,3	...	
and to pay off out of it a temporary loan of	—500,0	...	+69,6
As a matter of fact he paid off this temporary loan before the year began, and thus opened with a balance of	...	2,620,9	
Under loan operations he estimated to raise	+1,950,0	...	...
and to pay off	—2,048,0	...	...
And against this, he raised 50,0 more	...	2,000,0	+91,2
and paid off 41,2 less	...	—2,006,8	
A further loan transaction in connection with the Capital Account of the East Indian Railway brought into the accounts.	...	+480,3	0
	...	—480,3	
The transactions on various deposit accounts were estimated at 7,0 —3,5	+3,5	...	—4,3
but were actually 11,9 —12,7	...	—8	
The receipt of the Afghan War contribution which is credited under suspense, followed the estimate	+500,0	+500,0	0
On Guaranteed Companies' Accounts, he estimated to receive 1,055,0 and spend 1,370,0	—315,0		
But the transactions of the Southern Mahratta Railway came into the account, and altered these figures to 3,226,5—1,538,8	...	+1,687,7	+240,1
Placing the Secretary of State in funds to meet the unestimated requirement for the purchase of the Madras Irrigation and Canal Company	...	—1,762,6	
The transactions to be provided for by Drawings on India were—			
Net Ordinary Expenditure	—13,947,2		
Productive Public Works	—550,0		
And Expenditure on Remittance Account	—1,340,0	—15,837,2	
Requiring Drawings to the extent of	...	15,342,0	
The actual disbursements under the three classes mentioned were	—13,800,0		
	—390,1		—114,8
	—1,050,0	—15,229,1	
And as he received a Contribution towards the Egyptian war of		500,0	
It was found enough to raise money by Drawings to the extent of		14,119,1	
These produce a better result in the final cash balance by	...	...	+281,8
To which we have to add the receipts on account of reduction of debt	...	...	1,001,4
Giving a total addition to the estimated closing cash balance of	...	...	1,283,2

Section V.—CASH BALANCE—*concluded.*

INDIA.	Budget.	Accounts.	Accounts better.
The opening balance was here somewhat better than estimated, owing to better results in the transactions at the end of 1881-82	14,199,7	14,522,9	323,2
On Revenue Account we have better results, the surplus in India being	12,242,2	12,804,0	561,8
The expenditure on Productive Public Works was short of Estimate by	—2,700,0	—2,036,9	+663,1
Under Permanent Debt we raised a new loan, not entered in the Estimates of	.....	2,500,0	2,500,0
And the other transactions under permanent debt were nearly the same as Estimate	—590,0	—464.4	+125.6
The unfunded debt (excluding the cancellation of the Bombay Civil Fund) brought in somewhat better results, mainly through Savings Bank Deposits . . .	+510,5	+647,1	+136.6
Deposits and Advances, excluding Provincial Balances, gave worse results	+1,340,0	+413,7	—926.3
But under Loans, &c., we got some unexpected repayments	+85,0	+299,0	+214.0
Under Guaranteed Companies' Capital Accounts there were considerable variations though not very large in the net results	—227,0	—91,1	+135 9
Under Remittances in India, the net figures are necessarily small	+9,0	+162,6	+153.6
But under Remittance Account with England, we get .	+1,321,0	+1,082.7	—238.3
Under Council Bills we made up a great part of the short drawings by bringing the payments much more nearly up to the amount drawn	—15,342,0	—15,018,0	+324.0
TOTAL			3,973.2

Budget Estimates . . . . . 1882-83.
