ORDER.—Ordered, that a copy of this Resolution and of the Report and Resolution by the Local Government be forwarded to the Secretary of State, and to the Finance and Commerce and Revenue and Agricultural Departments of the Government of India, for information.

Also, that a copy of this Resolution be forwarded to the Government of the North-Western Provinces and Oudh, Public Works Department, for information and guidance, and to the Local Governments and Administrations noted in the margin, in the Public Works Department, for information, and to the Foreign Department for communication to the Government of Mysore.

The Governments of Madras, Bombay, Bengal, and the Punjab.
The Chif Commissioners, Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General, Central India and Rajputana.

Also, that this Resolution and the Resolution of the Local Government be published in the Supplement to the *Gazette of India*.

R. HOME, *COLONEL, R.E.*,
Deputy Secretary to the Government of India.

Accompaniment to Public Works Department Resolution No. 891 of 1887.

NORTH-WESTERN PROVINCES.

Irrigation Revenue Report for the year ending 31st March 1886.

GOVERNMENT, N.-W. P. AND OUDH.

PUBLIC WORKS DEPARTMENT.

Irrigation Branch.

No. 257½ I., dated Allahabad, the 15th February, 1887.

RESOLUTION—By His Honour the Lieutenant-Governor, North-Western Provinces, and Chief Commissioner of Oudh.

READ—

Irrigation Revenue Report of the North-Western Provinces for the year ending 31st March 1886, by the Chief Engineer, Irrigation Works, North-Western Provinces and Oudh.

CAPITAL OUTLAY.

RESOLUTION.—The total outlay on the capital account of canals in the North-Western Provinces and Oudh for and to the end of 1885-86 is shown below :—

	Canal.	Outlay on Construction under all heads. During 1885-86.	Outlay on Construction under all heads. To end of 1885-86.
		₹	₹
Capital expenditure on Public Works not charged against Revenue. 48—Irrigation Works.	Upper Ganges	26,834	2,81,03,924
	Lower Ganges	9,13,674	2,84,30,533
	Agra	25,437	88,91,646
	Eastern Jumna	39,354	31,04,153
	TOTAL OUTLAY ON PUBLIC WORKS NOT CHARGED AGAINST REVENUE	10,05,299	6,85,30,256
	Carried over	10,05,299	6,85,30,256

	Canal.	Outlay on Construction under all heads. During 1885-86.	Outlay on Construction under all heads. To end of 1885-86.
		₹	₹
	Brought forward	10,05,299	6 85,30,256
Irrigation. 43—Minor Works and Navigation.	Dún	431	6,37,413
	Rohilkhand and Bijnor	3,574	17,43,579
	Bundelkhand Irrigation Works	—252	82,664
	Ditto ditto Survey	228	1,73,715
	Sardha Canal Survey	1,377	49,642
	Cawnpore Branch Extension Survey	—460	56,746
	TOTAL OUTLAY ON MINOR WORKS AND NAVIGATION	4,898	27,43,759
Famine relief and insurance. 34—Construction of Protective Irrigation Works.	Betwa Canal	5,68,240	38,75,580
	GRAND TOTAL	15,78,437	7,51,49,595

The total capital expenditure of ₹15,78,437 was ₹4,80,063 less than in 1884-85. This decrease was mainly due to the completion of works on the Betwa Canal.

ASSESSMENTS.

2. The gross assessments of the year amounted to ₹60,33,016, and the working expenses were ₹24,88,393. The net revenue was therefore ₹35,44,623, or 4·72 per cent. on the total capital. Excluding, however, the Betwa Canal, a "protective" work, the funds for which are debitable to "Imperial," the return is 4·95 per cent. as against 4·45 per cent. in the previous year. The interest charged on the capital amounted to ₹26,75,204, deducting which amount from the net revenue, the assessments exhibit a clear profit of ₹8,69,419, against ₹6,32,064 in the previous year and ₹25,71,285 in 1883-84.

INTEREST CHARGES.

3. The total interest charges on productive and protective works to the end of the year amounted to ₹5,34,39,539, and the total net revenue realized to ₹5,39,17,884, leaving a clear surplus of ₹4,78,345. Excluding the Betwa Canal as in former years, the surplus is ₹9,11,421, against ₹4,79,318 at the end of 1884-85. In 1880-81 the *debit* against canals was ₹84,08,747. This deficit has since annually been reduced, and it is satisfactory to note that the surplus is increasing.

REALIZATIONS.

4. The actual income realized from all sources during the year was ₹54,60,668 After paying all expenses (excluding interest charges on the Betwa Canal), the *net* revenue was ₹4,34,414, against ₹22,69,209 in 1884-85.

WORKING EXPENSES.

5. The working expenses amounted to ₹24,88,393, or ₹39,715 less than in the previous year. The decrease would have been considerably greater had it not been necessary to write back under this head the first instalment on account of the cost of the Nadrai aqueduct, on the Lower Ganges Canal, which was entirely destroyed by the unprecedented flood which occurred during the year.

The percentage of working expenses to revenue, as shown in the statement below, has decreased on all canals except the Lower Ganges :—

Year.	Upper Ganges Canal.		Lower Ganges Canal.		Agra Canal.		Eastern Jumna Canal	
	Revenue.	Percentage.	Revenue.	Percentage.	Revenue.	Percentage.	Revenue.	Percentage.
	₹		₹		₹		₹	
1881-82	21,92,884	40·23	15,19,556	35·76	5,38,384	45·25	7,77,297	24·39
1882-83	24,42,835	36·03	15,36,089	43·73	5,82,424	39·38	8,16,577	25·89
1883-84	28,40,019	32·48	16,81,426	41·42	8,13,712	31·00	8,21,088	25·61
1884-85	21,04,551	47·11	14,04,856	62·42	4,51,040	62·35	6,02,811	34·33
1885-86	23,05,116	40·12	12,47,323	70·27	6,63,655	42·1	7,04,507	27·84

The cost of making measurements and preparing demand statements fell during the year from ₹2·22 to ₹2·06 per 100 acres.

The cost incurred by the Civil Department in collecting the water-rate was ₹1,19,508, or 3·13 per cent. on the gross collections, as against 3·07 in 1884-85.

Mileage of Canals and Drainage Cuts.

6. The total mileage that has to be maintained is detailed below :—

Canal.	Main canal and branches.	Navigation channels.	Escapes.	Distributaries.	Drainage cuts.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.
Upper Ganges	441	19	59	2,573	897	3,989
Lower Ganges	564	...	(a)	1,967	294	2,825
Agra	140	25	10	491	43	709
Eastern Jumna	130	...	31	640	308	1,109
Betwa	150	...	7	131	10	298
Dur	...	...	...	74	3	77
Rohilkhand	20	...	...	331	3	354
Bijnor	...	...	...	36	...	36
Total	1,445	44	107	6,243	1,558	9,397

(a) Not reported.

There has been an increase during the year of 150 miles of main canal (Betwa), 153 miles of distributaries, and 10 miles of drainage cuts, or a total length of 313 miles.

Irrigated Area.

7. The following table gives the areas of "kharif" and "rabi" crops for 1885-86 and the previous five years :—

Year.	Kharif.	Rabi.	Total acres.	Percentage.	
	April to September.	October to March.		Kharif.	Rabi.
	Acres.	Acres.			
1880-81	700,587	1,032,109	1,732,696	40·43	59·57
1881-82	706,025	1,209,924	1,915,949	36·85	63·15
1882-83	740,390	1,233,785	1,974,175	37·50	62·50
1883-84	825,747	1,471,927	2,297,674	35·94	64·06
1884-85	773,603	843,701	1,617,304	47·83	52·16
1885-86	702,259	1,007,417	1,709,676	41·08	58·92

During the "kharif" season the rainfall was most favourable and well distributed and was much in excess of the average. The canal-irrigated area in consequence decreased by 71,359 acres, and is less than that obtained in any year since 1880-81. The decrease has chiefly occurred on the Upper Ganges Canal.

In the lower part of the Doab the September rainfall was abundant, and there was very little demand anywhere for rabi irrigation until the middle of November. On the 11th and 12th of December good rain fell generally all over the province, and the demand for canal water afterwards was unusually light. The area irrigated is 163,730 acres in excess of the previous year, but is still below the average area irrigated during the three years preceeding 1884-85.

Double-cropped Area.

8. The double-cropped area has increased by 14,685 acres, but the percentage as compared with 1884-85 has fallen from 18·37 to 18·24.

Principal Crops.

9. The subjoined statement compares the acreage of the principal crops during the last six years :—

Crop.		1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
		Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	Sugarcane	135,493	165,019	198,322	155,147	153,652	175,944
	Rice	138,224	107,963	104,046	111,512	92,687	100,706
	Indigo	195,001	319,627	316,145	294,429	392,302	297,314
	Cotton	63,574	64,161	52,493	93,545	66,791	60,580
Rabi	Wheat	545,651	727,428	728,385	824,982	512,324	550,891
	Barley	262,139	261,688	266,651	286,073	108,267	118,569
	Gram	34,511	49,851	48,400	61,123	16,954	42,087
	Poppy	17,230	17,140	16,233	16,370	10,762	15,622

Sugarcane and rice show an increase, but the area under indigo has decreased by 93,988 acres. This falling-off is accounted for by the low prices realized for the previous year's crop and by the serious losses sustained by the heavy rainfall and floods of 1884.

There is an increase under all crops in the "rabi area." Wheat forms 54·7 per cent. of the whole, as against 60 per cent. in the previous year and 56 per cent. in 1884-85.

Villages and Outlets.

10. During the year 8,274 villages were watered from 35,817 outlets in the distributaries of the Upper and Lower Ganges, the Agra, the Eastern Jumna, and the Betwa Canals.

Value of Crops.

11. The total value of the crops raised with canal water was ₹4,97,91,920. The crop values as derived from data supplied by the Agricultural Department and the average incidence of the occupiers' rate for the last three years is compared below :—

Year.	Area irrigated.	Value of crop.	Occupiers' rate.	Value of crop per acre.	Occupiers' rate per acre.	Percentage on value of crops.
	Acres.	₹	₹	₹	₹	₹
1883-84	2,297,674	6,41,44,211	54,05 911	27·91	2·35	8·42
1884-85	1,617,304	4,49,52,406	40,03,058	27·80	2·47	8·85
1885-86	1,709,676	4,97,91,920	43,21,185	29·12	2·53	8·68

Rainfall.

12. The rainfall was exceptionally heavy over nearly the whole of the tract of country commanded by the canals; in fact at many stations the fall recorded was far more than double the average of the preceding 10 years.

The most marked feature of the rainy season was the extraordinary fall which occurred between the 14th and 16th July in the Bulandshahr and Aligarh districts chiefly. At Gangaoli 18·2 inches were registered on the 15th, 14·5 inches on the same date at Gangagarh, and 11·9 on the following day; and equally exceptional falls were measured at other places.

The floods resulting from this unprecedented amount of rain were most disastrous all over the area affected, but more especially along the valley of the Kali Nadi. The Lower Ganges Canal aqueduct at Nadrai, which had been partially wrecked in the floods of the previous year, was entirely carried away, and every road or railway bridge over the stream below Bulandshahr was either totally destroyed or outflanked and seriously injured. The maximum flood volume passing down the river at Nadrai was 140,000 cubic feet per second, or considerably more than the highest flood yet recorded of the Jumna at the Okla weir near Delhi.

River Supplies.

13. The supply, both in the Ganges and Jumna, was more than sufficient to meet all requirements.

During the "rabi" season, owing to the destruction of the Nadrai aqueduct, the Lower Ganges Canal was dependent on the upper canal for its supply, but no difficulty was experienced in meeting the demand.

Duty of Water on the Principal Canals.

14. The areas irrigated by and the value of each cubic foot of water entering the canal heads are detailed in the accompanying table:—

Canal.	Area irrigated per cubic foot of water.					Value of each cubic foot of water at occupiers' rate.				
	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
	Acres.	Acres.	Acres.	Acres.	Acres.	₹	₹	₹	₹	₹
Upper Ganges	213	232	264	213	216	550	602	644	542	578
Lower Ganges	168	180	187	167	138	371	407	415	375	320
Agra	148	155	262	165	170	415	451	674	448	493
Eastern Jumna	228	243	290	310	208	668	717	786	885	622

Considering the nature of the seasons, the results obtained are on the whole satisfactory.

Maintenance Charges per Acre.

15. The maintenance charges per acre irrigated are given below:—

Canal.	Rupees.				
	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.
Upper Ganges	1·14	1·03	·91	1·45	1·25
Lower Ganges	·86	1·11	1·06	1·64	1·89
Agra	1·60	1·47	1·02	2·20	1·58
Eastern Jumna	·74	·83	·76	1·24	0·91

Except on the Lower Ganges, there is a material decrease on all canals; but, as might be expected in a year of heavy floods and damage, the charges are still above the average.

Navigation Operations.

16. The result of the year's operations under navigation are shown below:—

Canal.	1885-86.			1884-85.			1883-84.		
	Gross revenue.	Working expenses.	Deficit.	Gross revenue.	Working expenses.	Deficit.	Gross revenue.	Working expenses.	Deficit.
	₹	₹	₹	₹	₹	₹	₹	₹	₹
Upper & Lower Ganges	20,026	31,924	11,898	18,698	30,845	12,147	27,068	29,714	2,646
Agra	5,674	5,321	—353	5,783	6,293	510	6,593	6,870	277
Total	25,700	37,245	11,545	24,481	37,138	12,657	33,661	36,584	2,923

On the Upper and Lower Ganges Canals there is a loss of ₹11,898, against a loss of ₹12,147 in the previous year. No great improvement in the navigation revenue of these canals can be expected until the new Nadrai aqueduct is completed and constant running introduced on the Cawnpore Branch.

The Agra Canal shows a profit of ₹353, against a loss of ₹510 in 1884-85.

Minor Receipts.

17. The actual receipts realized from Minor sources of income are exhibited below:—

	1882-83.	1883-84.	1884-85.	1885-86.
	₹	₹	₹	₹
Plantations	1,55,092	1,47,040	1,49,502	1,60,657
Water power	68,394	72,765	60,668	73,761
Miscellaneous	44,314	54,263	50,917	50,404

Spring-level Observations.

18. On the upper part of the Upper Ganges Canal the saturation level, although higher than in the previous year, was not so high as in 1881. On the lower part, near Aligarh, it was exceptionally high in October 1885, but fell very considerably within the next three months.

On the Lower Ganges Canal the unusually heavy rainfalls of 1884 and 1885 produced an average rise of nearly 3 feet above the level of 1883; and from the same cause the spring level on the Agra Canal showed a rise varying from 2¼ to 3½ feet.

Drainage Works.

19. All the drainage cuts were even more severely tried than in the previous year and acted well and efficiently. By the end of September the flood-water had been entirely drained off and a larger area than usual of rabi was sown.

The khádir drainage works on the Lower Ganges Canal resulted in a marked improvement and curtailment of the swamped area.

Profits of Productive Works.

20. The following statement summarizes and compares the net profits and the percentage on capital of the four productive works:—

Year.	Upper Ganges.		Lower Ganges.		Agra.		Eastern Jumna.	
	Net profit.	Percentage on capital.	Net profit.	Percentage on capital.	Net profit.	Percentage on capital.	Net profit.	Percentage on capital.
	₹		₹		₹		₹	
1881-82	17,53,670	6·40	11,83,905	4·75	2,94,749	3·48	8,09,213	28·46
1882-83	20,09,684	7·24	10,72,107	4·14	3,53,028	4·15	8,26,665	28·42
1883-84	23,00,388	8·45	11,92,654	4·45	5,61,425	6·47	8,32,307	27·96
1884-85	15,55,938	5·54	7,35,746	2·67	1,69,814	1·91	6,17,349	20·14
1885-86	18,23,237	6·48	5,78,616	2·04	3,84,202	4·32	7,29,881	23·51

Protective Works.

21. The Betwa Canal was opened on 24th September 1885, in time for the "rabi" irrigation.

There was at first a brisk demand for water and 12,356 acres were irrigated, but the December rainfall entirely put a stop to any further irrigation.

The capital outlay to the end of the year amounted to ₹38,75,581, and the water-rate on the area irrigated to ₹13,794. The successful construction of this

very important work—which adds greatly to our resources for the prevention of famine and for the advancement of cultivation in districts that have been hitherto much exposed to drought and scarcity—reflects great credit on the officers who accomplished it.

MINOR WORKS.

22. On the Rohilkhand Canals there has been a loss of ₹35,929, as compared with a profit of ₹16,213 in 1884-85. The heavy floods of July and August, 1885, caused the river Kicha to completely outflank the weir at the head of the canal, and the cost of repairs was necessarily very heavy.

On the Bijnor Canals the net profits were ₹15,478, against ₹11,717 in the previous year.

On the Dún Canals there was a net profit of ₹44,056, or a return of 69 per cent. on the capital outlay, as against a profit of ₹15,951 in 1884-85.

On the Bundelkhand Lakes there was a loss of ₹6,578, against a loss of ₹5,260 in 1884-85.

NET PROFITS AND PERCENTAGE ON TOTAL CAPITAL OUTLAY.

23. The net profits and the percentage on the total capital outlay derived in 1885-86 from all the canals in the North-Western Provinces is compared with the results of the previous 10 years in the following statement :—

YEAR.	Capital at end of each year.	Net profits.	Percentage on capital.
	₹	₹	₹
1875-76	3,98,56,800	24,26,186	6·08
1876-77	4,20,12,822	25,76,406	6·13
1877-78	4,34,66,488	31,55,858	7·26
1878-79	4,46,21,616	38,28,437	8·57
1879-80	4,60,35,380	28,06,249	6·09
1880-81	6,45,61,716	35,38,941	5·48
1881-82	6,62,06,214	40,82,750	6·17
1882-83	6,76,33,960	43,01,052	6·36
1883-84	6,90,92,987	50,69,145	7·33
1884-85	7,02,83,698	31,28,769	4·45
1885-86	7,51,49,595	35,44,623	4·72

Notwithstanding a second year of abnormally heavy rainfall and disastrous floods and the increase of the capital account by 48½ lakhs, due to the completion of the Betwa Canal, and commencement of work on the new Nadrai aqueduct, it will be seen that the net result is a clear profit of ₹35,44,623, or 4.72 per cent. on the total outlay of 751½ lakhs invested in the canals of the North-Western Provinces.

24. The Lieutenant-Governor takes this opportunity of again acknowledging the skill and ability with which this very important and profitable system of irrigation, the most extensive in India, continues to be administered by Colonel J. G. Forbes and the officers under him. Sir Alfred Lyall believes that no Department of the public service has better or more capable officers, and he thoroughly recognises the value, to Government, of their unfailing exertions and their experienced management.

ORDER.—Ordered that the above Resolution be submitted to the Government of India and that it be published in the *North-Western Provinces and Oudh Gazette*.

Ordered, also, that it be circulated to other Governments and Departments as usual.

J. G. FORBES, *COLONEL, R.E.*,
Joint Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

PRELIMINARY REPORT ON THE METEOROLOGY FOR THE YEAR 1886, PREPARED IN THE METEOROLOGICAL OFFICE, GOVERNMENT OF INDIA.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Meteorology), No. 83 Met.—45-2, dated Simla, the 1st June, 1887.

Read the following:

Preliminary Report on the Meteorology for the year 1886.

January.—The relatively warm weather, which prevailed over the greater part of the country during the closing months of last year, lasted into January 1887 at many stations in Northern India, at a few in the south of the Peninsula, and over Ceylon and the Bay Islands, within which region the thermometer was on the average about 0·5° above the normal. Throughout the whole of the intervening region, comprising Sind, Guzerat, the Central Indian plateau, the Deccan, the West Coast as far as Belgaum, and the East as far as Negapatam, temperature was below the average. The amount of the deficiency varied from 1·8° at Chikalda and Akola to 0·1° in Sind. In Lower Burma also, with the exception of Akyab and Bassein, the weather was cooler than usual, the deficiency being greater in Tenasserim than in Burma proper.

Pressure was below the average, except at some of the hill stations and at a few places in the Peninsula.

This was a damp month over the greater part of India. In Sind, parts of Assam, and East Bengal there was a slight deficiency in the relative humidity, but elsewhere there was an excess, which was most marked in the north of the Punjab and south of the Peninsula.

The sky generally was more cloudy than usual. In the eastern parts of the North-Western Provinces and some stations in North Bengal serenity slightly exceeded the average.

Several disturbances appeared over the Punjab during January, that on the 19th being exceptionally intense, and the generally unsettled conditions which had prevailed over India during December 1886 continued over Northern India during January 1887. In all parts of the Punjab and the Meerut and Bareilly Districts of the North-Western Provinces the rainfall of the month was above the average, the excess being greater in the hills than on the plains and greatest at Kilba. In Rajputana, Central India, Oudh, and the eastern half of the North-Western Provinces, on the contrary, the weather was more settled and the rainfall short of the average. In Bengal the rainfall was deficient, except at a few stations, generally in Lower Bengal. In Assam, the Central Provinces, the Berars, and nearly the whole of the Peninsula the rainfall was also deficient, the only important exception being a tract of country stretching from Negapatam to the Shevaroy Hills, where there was a slight excess. Western India from Guzerat to the Deccan was rainless throughout. In Ceylon there was a deficiency at Hambantola, Anuradhapura, and Colombo, and an excess elsewhere. In Burma there was a general deficiency, while in the Bay Islands there was an excess at Nancowry and deficiency at Port Blair.

February.—In February, temperature, relatively to the average, fell very considerably over Northern India, and the month was cool throughout almost the whole country. The greatest deficiency (4°) was at Murree, but all over the north temperature was from 1·5° to 3° below the normal. The principal exception to this general coolness in Northern India was the Assam Valley, where there was a slight excess; but over the Peninsula the variations from the

normal were less regular, and in the extreme south there was, as in the preceding month, a slight excess of temperature. In Ceylon the variations were irregular. In Arakan and the valley of the Irrawaddy the weather was cooler, while in Tenasserim and the Bay Islands it was warmer than the average.

At the hill stations, as well as over Assam, the greater part of Bengal, at several stations in the Indian Peninsula, and at most stations in Ceylon and the Eastern Peninsula pressure was below the normal, but elsewhere it was above, the excess being greatest in Sind.

In the north of the Punjab, the south of the Peninsula, and in Burma, the relative humidity remained above the average; but elsewhere there had been a brisk decrease in the amount of moisture since the previous month, and the relative humidity was generally below the mean.

The sky, relatively to the average, was much clearer than during January; only in the Punjab, the east of the Central Provinces, and Burma was the normal cloudiness exceeded. In all other regions the serenity was greater than usual.

In February, the only disturbance affecting Northern India was on the 16th, so that there occurred a marked improvement in the weather over Northern India. The amount of rainfall was below the average in the Punjab and the North-Western Provinces (both on the hills and in the plains), in Rajputana, Central India, Bengal, Assam, the Central Provinces, the Berars, and the whole of the Peninsula except parts of the Carnatic. In Ceylon there was a deficiency except on the north-west coast; but in Burma the rainfall was heavier than usual, except on the Arakan coast and in parts of Tenasserim. In the Bay Islands the variations were again irregular; but in this month the excess was at Port Blair, the deficiency at Nancowry.

March.—The relative coolness which had characterized the weather during February continued, except in the south, during March. The deficiency was rather greater on the hills than the plains; but all over Northern and Central India the mean temperature was from 1° to 2° below the normal. In Bombay and the Deccan this deficiency sensibly decreased, and further to the southward entirely disappeared, being replaced by an excess of from 0·5° to 1·5°. In Ceylon, Burma, and the Bay Islands there was everywhere an excess.

In this month the variations of pressure from the normal were irregular: an excess being reported from the North-Western Provinces, Bengal, and at one or two stations in the Peninsula and Ceylon, and a deficiency from all other parts.

In this month the relative humidity was generally above the average, except in Ceylon and on the Arakan Coast.

The general serenity which had characterized the weather during February disappeared during March, the sky being more cloudy than usual over the greater part of India. At most stations on the West Coast and in Ceylon, at a few stations in the south of the Peninsula, and over the central parts of the country the normal serenity was maintained or exceeded: these were the only exceptions to the generally excessive cloudiness.

Unsettled conditions again made their appearance over Northern India, and there was a large excess of rain over the Punjab* (except the stations in the extreme south and south-east), the North-Western Provinces (except between Saharanpur and Muzaffarnagar), and Oudh, and a slight excess in Sind, Central India, and East and South Rajputana. In other parts of Rajputana there was a deficiency of rainfall. In Bengal the rainfall compared with the average was irregularly distributed: generally in Behar, Western, South-Western and Lower Bengal, Orissa, and the Sikkim-Himalayas there was an excess, but in Northern Bengal, Durbhanga, Chyebassa, and Mymensingh there was a deficiency. The Assam reports showed an excess at Sylhet, Cachar, Dhubri, and Dibrugarh, and a deficiency elsewhere. In the Central Provinces the variations from the normal were irregular; but in the Berars and generally throughout the Peninsula rainfall was either deficient or altogether absent. In the Circars,

* A good deal of snow fell on the lower ranges of the North-Western Himalaya on the 7th and 8th.

however, there was a slight excess. In Ceylon the rainfall was considerably short of the normal. In Burma even the small amount which usually falls in this month was not received, and in the Bay Islands the fall was deficient.

April.—Cooler weather than usual continued to prevail over a large part of Northern and Central India. The principal exceptions were the south of the Punjab, Rajputana, Sind, Guzerat, and parts of Central India, where there was an excess. In the Peninsula, except at the station of Madras, in Burma, the Bay Islands, and in East Ceylon the mean was above the normal average. In other parts of Ceylon there was a slight deficiency.

Pressure had risen above the average over the greater part of the country; but the excess was not greater in the North-Western Provinces and Bengal than it had been during the preceding month.

With few exceptions, the amount of moisture in the atmosphere was below the normal, the greatest relative dryness being reported from Rajputana and the central parts of the country.

In April the sky cleared again and, except in some parts of Ceylon, the normal serenity was exceeded.

In April the rainfall was very short in the Punjab,* no rain falling over a large part of the Province. In Rajputana, Central India, and the North-Western Provinces there was practically no rain. Over the greater part of Bengal rainfall was very deficient, but in parts of Eastern Bengal there was a slight excess. In Assam the variations were irregular, an excess being reported from Sylhet, Silchar, and the south slope of the Garo hills, and a deficiency elsewhere. In the Central Provinces little or no rain fell, and this was likewise the case in the Berars and in Hyderabad. In the Bombay Presidency the rain was either deficient or altogether wanting. In Madras, though some rain fell over a large part of the Presidency, the amount received was almost everywhere below the average. This was also the case in Mysore, Ceylon, Burma, and the Bay Islands.

May.—In May relatively cool weather continued at the hill stations in the Punjab, at nearly all stations (both hill and plain) in the North-Western Provinces, and Bengal, and also extended to most parts of the Peninsula; on the plains of the Punjab and over Rajputana, Sind, Guzerat, and the whole of the Central Indian plateau, temperature, on the contrary, rose above the average after some months of relative coolness. The excess was greatest (nearly 4°) at Pachbudra and Jacobabad; but throughout the whole of the western desert, Sind and Guzerat, the thermometer was generally about 2° above the normal. In Ceylon and the Bay Islands the variations were irregular, but in Burma, except at Akyab and Thayetmyo, there was a slight deficiency.

Pressure remained above the average over the Punjab, the North-Western Provinces, and Bengal, but fell below it over Sind, Rajputana, the central parts of the country, the Peninsula, and Ceylon. In Burma the variations were irregular, though, on the whole, pressure was low.

Except in the Punjab, Rajputana, and Assam, the relative humidity was generally above the normal. The most general excess was over the North-Western Provinces, the other Provinces showing irregular variations.

In May the amount of cloud, relatively to the average, was generally excessive; but the variations were irregular, and in some regions the sky was much clearer than usual. This was particularly the case in the north of the Punjab, Rajputana, and Sind.

The variations in the rainfall of this month were irregular. In the Punjab there was an excess at most of the hill stations and in the north-west of the Province, and a deficiency elsewhere. In Rajputana rain fell generally, but not heavily, except in the eastern districts, where it was above the average. In Central India there was less than the normal rain in Rewah, Bundelkund, and Gwalior, and more elsewhere. In the North-Western Provinces the rainfall was abnormally heavy, more particularly on the hills; and in Oudh there was an excess, except at Sitapur and Bahraich. In Bengal there was a very general

* Snow again fell on the outer Himalayan range on the 1st April.

excess, but departures from this general excess were shown in different parts of the Province, the principal exceptions being parts of Behar, Northern Bengal, Mymensingh, and the Tipperah hill tracts. In Assam the rainfall was short — in some places considerably so. The Central Provinces, like Bengal, showed irregular variations from the average, but at most stations the differences were small. In the Berars the weather was slightly wetter than usual. In Hyderabad and the greater part of the Bombay Presidency the rainfall was abnormally heavy, but in Cutch and Sind there was no rain. In the Madras Presidency, except about Bellary and Kurnool, owing principally to a cyclonic storm which crossed the Madras Coast from the Bay of Bengal on the morning of the 24th, there was a large excess of rain; and, to a less extent, this was also the case in Mysore and Ceylon. In the Eastern Peninsula the rain was generally deficient, except at Tounghoo, Moulmein, and Mergui. In the Bay Islands there was an excess, which was large at Nancowry.

June.—In June the temperature of the Punjab, North-Western Provinces, Lower Bengal, Central Provinces, and Rajputana, relatively to the average, fell considerably, and cool weather was experienced throughout nearly the whole of Northern and Central India, except Assam, Northern Bengal, and the 24-Pergunnahs, where there was a slight excess of temperature. In Sind and Guzerat the weather was somewhat warmer than the normal, but in the Peninsula the temperature was slightly lower than usual. Ceylon had a slightly higher temperature than the normal, while over the Eastern Peninsula and the Bay Islands the variations from the average were irregular.

Pressure fell below the mean in Assam, and remained below it in the Central Provinces, the Berars, Sind, the two Peninsulas, and Ceylon. Elsewhere it was above the normal average, the excess being greater in the Punjab and North-Western Provinces and less in Bengal than it was during the preceding month.

This was also a generally damp month, more especially in the Central Provinces.

During June the variations in the cloud proportion were as irregular as during the preceding month. All over the central parts of the country and the greater part of Bombay and Burma the normal serenity was not reached, while in most other regions it was very generally exceeded.

On the 13th a small storm formed off the Orissa Coast, and subsequently moved, first towards Calcutta, and subsequently north-westward across Western Bengal and Central India to the south-east of the Punjab. It brought with it rather heavy rainfall, and ushered in the monsoon rains over the North-Western Provinces, Central India, and the east of Rajputana and the Punjab. At the close of the month the Punjab showed a deficiency of rain on the hills and in the west, but an excess elsewhere, more particularly in the centre and south-east, where the amount was at some stations three or four times the normal. In Rajputana there was an excess of rain over the desert and in the south and south-east districts, but a deficiency elsewhere. Central India received abundant rain at all the western stations, but less than usual in the east. In the North-Western Provinces and Oudh the rainfall at almost all stations exceeded the average. In Bengal the variations from the normal were in general moderate and irregular, but in North Bengal there was a large deficiency, the fall there averaging only about a third of the normal. Mymensingh again received a short rainfall, but the Tipperah hill tracts had a large excess. In Assam the variations were irregular and in places considerable. In the Central Provinces the rainfall was deficient, except in the valleys of the Nerbudda and Godavery, where it was heavier than usual. In the Berars, Hyderabad, and at most of the Bombay stations, except those in Sind, the rainfall of the month was excessive. In Madras and Mysore the variations were irregular, but on the west coast there was a large deficiency. In Ceylon the variations were also irregular, but generally small. In Burma there was a large deficiency in Arakan and a small deficiency at Tounghoo, Shwegyin, and Moulmein, and an excess elsewhere. The Bay Islands showed an excess at Nancowry and a deficiency elsewhere.

July.—This was a generally cool month, though the relative deficiency was on the whole less over Northern and Central India than during June. In North

Bengal, Orissa, the east of the Central Provinces, and at Rangoon, Moulmein, and Mergui there was a slight excess of temperature. The defect over Upper India was between 1° and 2° at most stations, but in the central parts of the country, Rajputana and Sind, it was generally below 1°. In the Peninsula the defect varied considerably. The Ceylon and Bay Islands averages showed but little departure from the normal; and this, with the exceptions noticed above, was equally the case in the Eastern Peninsula.

The variations of pressure from the normal over Northern India were irregular. In the east of the Punjab, Rajputana, the North-Western Provinces, and Bengal there was an excess; in the west of the Punjab, Sind, and Assam a slight deficiency. In the Central Provinces, the Peninsula, Ceylon, and the Bay Islands there was a general deficiency. In the Eastern Peninsula the variations were irregular.

The relative humidity was almost everywhere above the mean, more particularly in the Punjab, where, at some stations, the excess was large.

This was a generally cloudy month, though in Assam, North Bengal, on the Bombay Coast, and in Tenasserim the amount of cloud was less than usual.

The rainfall was rather heavier and better distributed than during June; but on the whole the variations of the rainfall from the average were similar to those in the previous month. On the hills of the Punjab there was a general excess. There was also an excess in some of the northern plain districts, such as Peshawar, Kohat, Rawal Pindi, &c. In Rajputana the average rainfall was exceeded in the west, north, and south, but not in the east, where there was a decided deficiency. In Central India the distribution of rainfall was the reverse of that in June, there being a deficiency at the western and an excess at the eastern stations. In the North-Western Provinces there was a deficiency in Rohilkund and a large part of Oudh and an excess in most other divisions. In Bengal the variations from the average were irregular. In Behar, North Bengal, West Bengal, and the Tipperah hill tracts the rain was in excess of the average; elsewhere it was generally below it. In Assam there was general excess. In the Central Provinces and the Berars the variations were irregular, but in Hyderabad the fall was everywhere heavier than the normal. In the Bombay Deccan the rainfall was short, but all other parts of the Bombay Presidency had more than their average amount. In Madras deficient rain was reported from the most northern stations and from a few places on the west coast, but generally the amounts received exceeded the normal. Mysore had also abnormally heavy rain; and this was also the case in Ceylon, except at the hill station of Newera Eliya. In Burma, except the south of Tenasserim, the rainfall was light, and in the Bay Islands the variations were irregular; Nancowry receiving more and Port Blair considerably less than the average.

August.—With the exception of the Indus Valley and one or two stations in the North-Western Provinces, this month, like July, was cooler than usual over Upper India, Assam, and the greater part of Bengal. In the 24-Pergunnahs, Orissa, the Central Provinces, and the Berars, on the contrary, temperature increased and showed a slight excess over the normal average. In Central India, Rajputana, Sind, Guzerat, the Peninsula, and Ceylon temperature remained below the normal, but in the Bay Islands and the Eastern Peninsula the weather was warmer than usual. In Northern India the deficiency was generally between ½° and 1°, but in the Peninsula it was greater, varying between 1° and 2°.

The variations of pressure from the normal were again irregular, comprising a slight excess in the eastern districts of the North-Western Provinces, Bengal, Central India, Rajputana, and Khandesh, and a general deficiency elsewhere.

In Sind and the west of the Punjab, as well as over a large part of the Central Provinces, Ceylon, and the Eastern Peninsula, the relative humidity of the month was either normal or below the average, but in all other districts the normal was again exceeded.

The skies were again more than usually clouded. Only in the north of the Punjab, Sind, the West Coast, and Tenasserim did the amount of cloud fall short of the average; elsewhere there was a decided excess.

August was a relatively dry month over Western India. In the Punjab, except at one or two hill stations, at Rawal Pindi, Hoshiarpur, and Hissar, the rainfall was deficient. In Rajputana there was again an excess at all the more southern stations, but a deficiency elsewhere. In Central India, the Berars, and the Central Provinces nearly every station received less than the normal rainfall; and in Bombay, excepting some stations in Guzerat, Khandesh, and the Deccan, there was a general deficiency. In the North-Western Provinces and Oudh, except between Allahabad and Fatehpur and in the neighbourhood of Aligarh and Jhansi, the rainfall was heavy. In Bengal the variations were irregular. There was an excess in Behar, a large part of North and West Bengal, Mymensingh, and the Tipperah hill tracts; but in Orissa, and most parts of Lower Bengal the rainfall was below the average. Assam showed an excess in Cachar and Sylhet and a deficiency in the Brahmaputra Valley, except at the stations of Nowgong, Chardner, and Dibrugarh. In Hyderabad there was a deficiency in the north-western districts and an excess elsewhere. In Madras the rainfall was excessive, except on the west coast, where it was decidedly deficient. In Mysore it was also generally short of the average; but in Ceylon, with the exception of Galle, Colombo, and Pattalam, it was heavier than usual. In Burma the rainfall was on the whole deficient, though less generally so than during July. Port Blair again had less and Nancowry more than the average.

September.—Owing to the early cessation of the rains, the relatively cool weather which had generally prevailed since April disappeared over the greater part of India during September, when the thermometer in most places rose above the normal average. The principal exceptions to this general excess were the eastern parts of the North-Western Provinces, the greater part of Bengal, and the western desert, where temperature remained below the normal. The excess was greatest (about 3°) in the Punjab, and exceeded 2° over a large part of the Central Provinces and the Berars. In the Peninsula the excess was smaller in amount and somewhat less general than in other parts of the country. In Burma it was very general, but comparatively slight.

In the Punjab, the western half of the North-Western Provinces, Assam, Lower Bengal, and over both Peninsulas (except the Khandesh district and the Deccan), the mean pressure of the month was below the average; elsewhere it either exceeded the normal or varied slightly and irregularly from it.

At a few stations in the North-Western Provinces and over the greater part of Assam, Bengal, and the Carnatic the humidity remained above the average, but in all other places it was less than the normal, more particularly in the Punjab.

The rains ceased early in this month, the weather cleared, and the abnormal cloudiness which had prevailed during July and August disappeared over the greater part of India. Only in Assam, Bengal, and the east of the North-Western and Central Provinces was there an excess of cloud. In all other regions there was abnormal serenity.

September was dry in all parts of India, except Bengal and the south of the Peninsula. In the Punjab the rainfall was deficient, except at the stations of Abbottabad, Shahpur, and Gurdaspur, where it was slightly in excess. In Rajputana the rainfall was everywhere deficient; and this was equally the case in Central India, except in Rewah. In the North-Western Provinces and Oudh the great majority of stations received less than their normal amount of rain, but the deficiency was less general there than further to the westward. In Bengal the month was exceptionally wet almost everywhere, but particularly so in North Bengal and Behar, where the average was considerably exceeded. The Central Provinces had abnormally dry weather in most districts, but the stations in the east participated in the excess which fell over Bengal. In the Berars, Hyderabad, and the whole of the Bombay Presidency there was a general and considerable deficiency. In Madras excessive rain was reported from the Circars, the neighbourhood of Chittoor and most stations

in the extreme south, but in all other parts of the Province the fall was deficient. Mysore and Ceylon had abnormally heavy rain; but in the Eastern Peninsula, with the exceptions of Diamond Island, Henzada, Tavoy, and Mergui, the fall was very deficient. At the Bay Islands the variations were the same as in preceding months, Port Blair having a deficient and Nancowry an excessive supply.

October.—The relative coolness which prevailed over Bengal and a part of the North-Western Provinces in September disappeared in October, and the mean temperature of the month was above the normal average over nearly the whole country, the only important exception being Bombay, the Deccan, and the north of the Madras Presidency, where there was a slight deficiency. The excess was greatest over the Indus Valley, Sind, Rajputana, and Guzerat, and averaged 3°. Over Northern and Central India the weather was very considerably warmer than usual.

Except at the hill stations, pressure was below the average throughout the whole of the Indian area. The deficiency was generally considerable, but was less in Upper India than in the centre and south. The largest defect was in Sind and Guzerat.

Except in the Indus Valley, part of Rajputana, the south of the Peninsula, and Ceylon, the amount of moisture in the atmosphere was everywhere above the average, and in the North-Western Provinces, Central India, and the Deccan very considerably so.

The clear skies which were reported during September did not continue during October, except in the Punjab, the south of the Peninsula, and part of Burma. In all other districts the sky was unusually clouded.

In October the weather was much more unsettled than during September, and the rainfall exceeded the normal in the Punjab, except in the west and north. In Rajputana the variations were irregular, but on the whole the weather was wetter than usual. In Central India every station reported a considerable excess. There was a deficiency in the western districts of the North-Western Provinces and an excess in the eastern districts, in Oudh, and on the hills. West and South-West Bengal also had abnormally heavy rain; but in other parts of the Province of Bengal the rainfall was generally below the average. In Assam there was a deficiency, except at Nowgong, Tezpur, Sibsagar, and Kohima. All over the central parts of the country and the greater portion of the Peninsula the weather was abnormally wet, and the Central Provinces, the Berars, Hyderabad, the Bombay Presidency (except Guzerat and Sind), and the Madras Presidency as far south as Cuddapah, all had excessive rainfall. In the Madras Presidency, South Cuddapah, except in the neighbourhood of Negapatam and at a few stations on the West Coast, the fall was generally deficient; and this was also the case in Mysore and Ceylon. In the Bay Islands and the Eastern Peninsula the variations from the mean were irregular.

November.—In this month not only was temperature over India higher relatively to the average than in October, but the area of excess was larger, the only region within which the means were below the normal average being the south of the Peninsula, and even there the defect was very trifling. In the Punjab, the North-Western Provinces, Bengal, and the Central Provinces, the excess, though occasionally large, was generally between 1° and 2°; but in Rajputana, Sind, and Guzerat the average excess was much greater, and at Rajkot was as much as 4·3°. In the northern portions of the Peninsula the excess was much less, and in the south was replaced by a slight deficiency. Ceylon partook of the relative coolness of the south of the Peninsula, though the variations were everywhere small. In Burma the weather was much cooler than the normal, the defect varying between 1° and 2°. In the Bay Islands the means showed a considerable excess at Port Blair and a small defect in the Nicobars.

There was a fairly general excess of pressure during this month throughout Upper India, Rajputana, Khandesh, and Bengal, and a general deficiency over the Central Provinces, Sind, and Guzerat; but elsewhere the variations from the normal were very irregular.

November was an unusually damp month. Only in the north of the Punjab, Assam, the south of the Peninsula, and Ceylon was there any decided deficiency in the relative humidity. In all other places there was a general and large excess.

In this month skies cleared again over Upper India and Assam and remained serene in the south of the Peninsula. Elsewhere the sky, though less thickly covered relatively to the average than in the preceding month, continued abnormally cloudy.

Except in some parts of Bengal, the unsettled weather which had prevailed over Northern India during October disappeared during November. In the Punjab, the Indus Valley stations exhibited a slight excess of rain, but in all other parts of the Province the rainfall was below the average. In Rajputana little or no rain fell; and in Central India the amount was below the average. In the North-Western Provinces and Oudh there was practically no rain. At several places in North and West Bengal, in Chutia Nagpur, and Orissa more than the normal amount of rain fell; but generally throughout Bengal rain was either absent or below the average. In Assam the rainfall was everywhere deficient. In most parts of the Central Provinces there was no rain, but at the most eastern stations there was more than the usual amount. In the Berars no rain fell, and in Hyderabad considerably less than the normal amount. The Bombay returns showed an excess of rain at the station of Bombay, at some places in the Deccan and most places in Sind, but a deficiency elsewhere. In North Madras the rainfall, like that in Orissa, exceeded the average, but in other parts of the Presidency there was a very general deficiency. In Mysore the rainfall was abnormally heavy. In Ceylon the rainfall was short, except at the stations of Manaar, Batticaloa, and Hambantotta, while in the Eastern Peninsula the variations were irregular. In the Bay Islands there was a large excess.

The excessive rainfall reported from the Bay Islands and parts of the Madras Presidency was probably due to the unusual intensity of the cyclonic storms formed over the Bay during this month. The first storm was formed in the immediate neighbourhood of the Andamans on the 1st and 2nd of the month. The centre travelled slowly west-north-westward and struck the Madras coast a little to the north of Madras on the 9th, crossed the Deccan rapidly, also in a west-north-west direction, and passed out into the Arabian Sea, where it occasioned extremely rough weather. The second storm was formed in the Gulf of Martaban. It travelled first parallel to the Andamans, then passed through the South Preparis Channel, and moved west-north-westward towards the Circars Coast, which it struck between Coconada and Vizagapatam about midnight on the 23rd and, after occasioning rather heavy rain, broke up on the 24th.

December.—The temperature was above the average over the whole of Northern and Central India. In the Peninsula (except at a few stations) and in Ceylon there was, on the contrary, a slight deficiency (averaging 1°); and over Burma there was a deficiency varying from $\frac{1}{2}$° to $2\frac{1}{2}$°.

Generally pressure was below the average in the Punjab and North-Western Provinces, and above it elsewhere; but, except in Ceylon and the south of the Peninsula (where almost all stations reported an excess), the variations were very irregular.

This was a damp month over a large part of India, though less generally so than November. In the Punjab, Rajputana, Sind, the south of the Peninsula, Ceylon, and Burma, the amount of moisture continued deficient; in all other places it was in excess of the average.

Except in Ceylon and parts of the Eastern Peninsula, December was abnormally cloudy, the greatest excess being over the central parts of the country.

The weather was unsettled in several parts of the country in December. In the Punjab the rainfall was abnormally large at most of the hill stations, as well as at Rawal Pindi and Gurdaspur, but was deficient elsewhere. In the

south-west and south of the Province, as well as in Rajputana, no rain fell. In Central India the rainfall exceeded the average. At all the more western stations in the North-Western Provinces, in Oudh, and the hills the rainfall was slight and short of the average, but at all the eastern stations there was a considerable excess. Those portions of Bengal lying to the north of the Ganges also had more than the normal amount of rain, but elsewhere in Bengal the rainfall was deficient. In Assam the variations were irregular and generally small. In the north and west of the Central Provinces the weather was abnormally wet, but in other parts as well as over the Berars the rainfall was generally lighter than usual. This was also the case in Hyderabad and over the greater part of the Bombay Presidency; but on the Ghâts and in the Bombay Deccan there was more rain than usual. In Madras all the more northern stations had excessive rain, but in the south and west and in Mysore general deficiency prevailed. The Ceylon rainfall was deficient, except at Hambantotta and Galle. In the Eastern Peninsula and the Bay Islands there was general deficiency.

On the 1st of December a storm was formed in the south of the Bay and, moving west-north-west, struck the coast some distance to the north of Madras on the 9th. The excessive rainfall at the Northern Madras stations was in part attributable to the action of this disturbance.

Year.—On the mean of the year the departures from the normal temperature were very slight, seldom exceeding 1°, the warm weather at the beginning and close of the year compensating for the cool weather in the middle. In the Punjab the variations from the normal were irregular; but in the North-Western Provinces there was a general defect, and in Assam and North Bengal an excess. In other parts of Bengal and the east of the Central Provinces the variations were irregular; but in the south of the Central Provinces, the Berars, Rajputana, Sind, and Guzerat, the mean of the year was above the normal. In both Peninsulas and in Ceylon there was very little variation from the normal. In the Bay Islands there was a slight excess.

On the mean of the year there was a general excess of pressure in Bengal and a general deficiency in the Peninsula, but elsewhere there were no well-marked variations.

On the mean of all the months the amount of moisture in the atmosphere was in excess of the average over the greater part of India. The exceptions were Assam and Burma, where it was normal, and Rajputana, Sind, and Ceylon, where there was a slight deficiency.

On the mean of all the months the weather was somewhat cloudy over the greater part of the country, the excess being greater in the north than in the south. In parts of the Peninsula indeed the normal serenity was exceeded.

On the mean of all the months the rainfall of the year was in excess of the average over the Punjab (except at Simla and in the Derajat), the south of Rajputana, nearly the whole of the North-Western Provinces and Oudh, Bengal (except parts of Lower and Eastern Bengal), Assam, and Hyderabad, the Bombay Presidency (except Guzerat, Sind, and parts of the Deccan), the Madras Presidency (except the south and west), Tenasserim, and the Nicobars; and below the average in the west of the Punjab, the greater part of Rajputana and Central India, parts of Lower and East Bengal, the Central Provinces, Guzerat, and part of the Bombay Deccan, the south and west of Madras, the greater part of Ceylon, and British Burma. In the Berars, Mysore, and the Bay Islands the variations were irregular.

RESOLUTION.—Resolved, that the Report be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 31st May, 1887.

The principal meteorological feature of the past week has been the progress of the cyclonic storm which was noticed last week as approaching the South-West Bengal Coasts. The storm centre apparently crossed the Orissa Coast near Balasore in the early morning of the 26th, and by 10 A.M. had reached the Midnapore District. Excessively strong winds prevailed over the head of the Bay as the cyclone approached the Coast, False Point reporting 69 miles an hour and Saugor Island velocities of from 60 to 67 miles an hour for several hours in succession. A good deal of rain fell at the Coast stations. By the morning of the 27th the storm had travelled as far as Gya. It had considerably decreased in intensity, but was still occasioning a strong humid monsoon current throughout Bengal, which brought up much rainfall. By the morning of the 28th the storm had become exceedingly slight and the cyclonic circulation of the winds very feeble. It still, however, occasioned general rainfall throughout the Province of Bengal, very large amounts falling over Behar. By the 29th the depression had entirely disappeared, but the monsoon winds which it had initiated over Bengal continued to blow steadily, and rain continued over the greater part of Bengal. The most remarkable falls during the progress of the storm were as follows:

	Inches.
Burdwan	4·95 + 2·00
Darjeeling	4·02 + 8·13
Hazaribagh	3·82 + 1·06
Chittagong	2·77
False Point	8·75
Purneah	6·56 + 2·84 + 0·88
Patna	2·48 + 1·50 + 4·34
Saugor Island	1·75
Gya	1·72 + 1·33 + 1·20

With the disappearance of the above depression, the monsoon current fell off temporarily in strength, and the rainfall became slighter. The change was, however, only in intensity, and the general distribution remained favourable to a further and probably more widely extending influx of the monsoon current and rains.

In Upper India the influence of the above storm has been very slight, and the weather during the greater part of the week over the Punjab, Sind, Rajputana, and Central India has been hot and very dry, and the contrast between the conditions prevailing in Upper India and in Bengal has been very striking. The highest temperature recorded was 122° at Jacobabad on the 29th, while in parts of the Punjab readings of 115° to 118° were registered during the week. Towards the close of the period the humidity generally rose, and the heat was somewhat mitigated.

The winds on the west coast have, so far, been much feebler than those on the opposite side of the Peninsula, and the monsoon current there, as compared with that over Bengal, seems to be much retarded. Rain has, indeed, fallen on most days in Southern India and Ceylon, but, except perhaps at Colombo, the rain has fallen as local showers, not as general rain, due to the influx of the monsoon current.

The following table gives for Northern India the actual and average rainfall for the six months, November to May, and the difference between the fall of the present year and that of a normal year:

Stations.	Actual rainfall from 1st November, 1886, to 31st May, 1887.	Average rainfall from 1st November, 1886, to 31st May, 1887.	Difference.
Mooltan	0·67	2·09	— 1·42
Peshawar	2·48	7·84	— 5·36
Murree	10·44	17·31	— 6·87
Rawal Pindi	5·00	11·83	— 6·83
Lahore	0·76	4·27	— 3·51
Simla	10·94	15·42	— 4·48
Delhi	2·49	3·98	— 1·49
Roorkee	4·06	6·65	— 2·59
Meerut	2·76	4·78	— 2·02
Bareilly	3·66	4·42	— 0·76
Agra	1·13	2·26	— 1·13
Lucknow	1·40	2·46	— 1·06
Allahabad	4·58	2·23	+ 2·35
Darjeeling	27·54	15·93	+11·61
Calcutta	10·80	11·50	— 0·70

The final table shows that pressure was below the average, except in Burma and Ceylon. The temperature anomalies are irregular, the most remarkable being the large excess in the Punjab and the large deficit in Behar:

Districts.	Difference of Barometer from mean, May 25th to May 31st.	Difference of Temperature from mean, May 25th to May 31st.	Difference of Humidity from mean, May 25th to May 31st.	Total Rainfall in week, May 25th to May 31st.

W. L. DALLAS,

for *Meteorological Reporter to the Government of India.*

SIMLA, *June 3rd, 1887.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 2nd JUNE, 1887.

GENERAL REMARKS.—The rainfall has been general throughout Bengal, Assam, and Mysore, and the falls in some districts of the first-named Province and in one district of Assam were very heavy. Showers have also occurred in parts of Madras and in a few places in Bombay and the North-Western Provinces and Oudh. Elsewhere the week has been rainless.

In Burma there was general rain during the week ending 25th May. No report has been received for the week under notice.

Ploughing and sowing for the *kharif* continue in Bombay, the Central Provinces, and Berar, and have commenced in Rajputana and in some districts of the North-Western Provinces and Oudh and the Punjab. Sowings are advancing in parts of Bombay, the North-Western Provinces and Oudh, and the Punjab. The standing crops in Madras and Mysore and Coorg are generally good, and the outlook is favourable.

The early rice in Bengal and Assam is in good condition, but more rain is wanted in the eastern districts of the former Province. Rice sowings have also commenced in the Central Provinces.

Sugarcane cultivation is progressing in the North-Western Provinces and Oudh, Assam, and Rajputana; and the crop is doing well in Bengal and the Central Provinces.

Indigo is in good condition in Bengal; in the North-Western Provinces and Oudh the crop is being irrigated.

Cholera is still prevalent in some districts of the North-Western Provinces and Oudh, but has abated in Bengal. Elsewhere the public health is generally satisfactory. Cattle-disease chiefly exists in Madras.

Prices are rising in two districts of the Punjab and in three districts of the Central Provinces, and have slightly risen in the Bangalore and Mysore districts. They also show an upward tendency in the North-Western Provinces and Oudh. Elsewhere prices are fairly steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(June 1st)		
Bellary . . .	Average ·10	Standing crops generally good. Harvest paddy and sugarcane, yield about average. Cholera increasing and cattle-disease decreasing in four taluks.
Kurnool . .	. . . . .	Lands being ploughed for next crops. Small-pox in two, cholera in one, and cattle-disease increasing in sixteen taluks.
Ganjam . . .	Average ·03	Small-pox in two and fever in five divisions. Cholera increasing and cattle-disease decreasing.
Kistna . . .	Average last week since revised, ·11; this week, ·03.	Standing crops good. Slight fever in three, cholera increasing in seven, and cattle-disease decreasing in three taluks.
Chingleput (Madras) .	. . . . .	Standing crops fair, but withered to some extent for want of rain. Harvest paddy, yield below average. Small-pox in one and cattle-disease increasing in three taluks.
Coimbatore . . .	Average ·10	Standing dry crops generally good. Harvest paddy, outturn above average. Fever in one taluk and cattle-disease decreasing in another.
Tanjore . . .	. . . . .	Standing crops generally good. Harvest paddy and gingelly, outturn up to average.
Madura . . .	Average last week since revised, ·39; this week, ·16.	Cattle-disease in one taluk.
Malabar . . .	Average ·48	Rain insufficient for first crop cultivation. Harvest third crop paddy, outturn below average. Fever in two and small-pox in nine taluks.
Travancore . .	2·21	Paddy sprouting. Small-pox and fever in places. *General Remarks.*—General prospects good.
Bombay—(June 1st)		
Karachi . . .	*Nil*	River at Kotri on 30th, 9 feet 7 inches against 11 feet 1 inch on same date last year. Fever in six talukas. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Tatta 22, 42 and 40 pounds per rupee, respectively.
Hyderabad . . .	*Nil*	*Rabi* harvesting continues in three talukas. *Kharif* cultivation in progress. Fever in two, small-pox in one and cattle-disease in one taluka. River at Kotri on 30th, 9 feet 7 inches against 11 feet 1 inch on same date last year. Wheat 24, *bajri* 37, *jowari* 40, white rice 20 and red rice 30 pounds per rupee.
Ahmedabad . . .	*Nil*	Land being prepared for cultivation. Public health good. Wheat 22 and *bajri* 30 pounds per rupee.
Baroda . . .	*Nil*	Public health good. Standing crops in good condition. *Bajri* 28, wheat 18 and rice 21 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Surat	*Nil*	Field operations continue. Cattle healthy. Fever in Bardoli taluka. *Jowari* 38 and *nagli* 42 pounds per rupee.
Nasik . . .	*Nil*	Threshing is over. Preparation for *kharif* sowing continues. Burning of land for *kharif* sowing in progress in Igatpuri and Kalwan talukas. Cholera at Manmad in Chandor taluka, 7 attacks, 6 deaths; at Yeola 9 attacks, 1 death. Small-pox in Yeola and Nandgaon talukas. With the above exceptions, public health good. Prices stationary.
Colaba (Bombay) . .	*Nil*	Abnormal temperature 1° cool on 26th and 30th, *nil* on all other days. Vapour in air normal. Abnormal wind from north-west on 25th, 29th and 30th. Wind normal on all other days.
Poona	Petha Baramati, ·86; Indapur, 1·31; Bhimthari, ·66.	Sowings in places in Petha Baramati. Land being prepared for cultivation in Indapur, Purandhar and Bhimthari talukas. Public health generally good. Slight cattle-disease in Indapur, Purandhar and Bhimthari talukas. One fatal case of cholera in Poona city on the 25th. *Bajri* 44 and *jowari* 56 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	*Nil*	Cholera in Newasa and Kopargaon. Cattle-disease in Jamkhed. *Bajri* 54 and *jowari* 63 pounds per rupee.
Dharwar . . .	Nargund, 4·4; Gadag, Bankapur and Haliyal above 1·0; and in Nawalgund and Ron, nearly 1·0; and slight rain in Hubli.	Ground being prepared for early crops. Sowing of rice retarded in some places for want of rain. Scarcity of fodder in Nawalgund and of drinking-water in Nawalgund, Gadag, Ranibennur and Kod talukas. Public health generally good. Slight cattle-disease in Nargund Petha. Rice 24 and *jowari* 55¾ pounds per rupee.
Kanara . . .	Siddapur, ·18	Sowing continues. Seeds sprouted. Slight fever in Haliyal. Common rice in Karwar and district average 13 seers per rupee.
Rajkot . . .	*Nil*	Small-pox in Virpur. Measles in Rajkot and Gadka. Small-pox affecting cattle at Morvi. Wheat 23, *bajri* 24 and *jowari* 25 pounds per rupee. *General Remarks.*—Rain in parts of seven districts. Preparations for *kharif* cultivation still going on. Fever and small-pox in parts of seven, cattle-disease in parts of ten and cholera in parts of six districts.
Bengal—(June 1st)		
Chittagong (May 31st).	2·95	Weather seasonable. Prospects good. *Aus* cultivation continues. Prices stationary. Cholera still reported. Public health good.
Dacca	1·14	Prospects of crops good. *Aman* being sown on highlands. Rivers rising. Rain wanted. Public health good.
24-Pergunnahs (Calcutta).	2·66	Weather showery, with high winds, but cooler. Sugarcane doing well. Ploughing progressing. Sowing in lowlands begun. Cases of cholera and fever still reported, public health otherwise good.
Khoolna . . .	0·79	Weather very showery. Slight rain. High tides have done some damage and have suspended ploughing. Public health good.
Moorshedabad . .	2·05	Weather still hot, though heavy rain fell during last two days. *Bhadoi* prospects good. Sugarcane promising. *Boro* harvesting over. Public health good.
Pubna	2·00	Weather cloudy, with strong wind and some heavy showers. Crops doing well. General health good.
Dinagepore . . .	11·52	Heavy and incessant rain throughout the district. Since last five days damaging *bhadoi* on lowlands. No more rain wanted for the present. Cattle-disease reported. Cholera in one thana and small-pox in two.
Rungpore . . .	10·71	Crops promising. Cholera abating.
Midnapore . . .	4·08	Weather cyclonic. Crop prospects excellent.
Burdwan . . .	7·8	Weather cloudy, with strong east wind and occasional rain. Prospects of crops good. Public health good. Cattle-pox in Cutwa subdivision.
Bhagulpore . . .	6·42	Weather stormy and cool. Prospects good. Cholera abating in north.
Purneah . . .	13·56	Crops doing well. Present rain, if not excessive, will be highly beneficial. Rivers rising. Health of people and cattle fair.
Durbhanga . . .	4·12	Prospects of *rabi*, rice, *moong* and indigo very promising. Fields being prepared for *bhadoi* sowings. Mango considerably injured by rain. Prices stationary. Public health good.
Chumparun . . .	1·08	Rain beneficial to cultivation. *Bhadoi* and *aghani* sowing in progress. Prices stationary. Mortality from cholera increasing.
Patna	9·32	Continuous rain from evening of 26th to night of 30th. Sky not yet clear. Rain will do much good to sugarcane and facilitate paddy sowing. Some damage done to *rabi*. Corn in threshing floors. Cholera reported from Barh and Behar subdivisions.
Gya	4·25	Weather cool and cloudy. Sugarcane doing well. Cholera in all parts of the district. Fever and small-pox also reported.
Hazareebagh . .	5·10	Weather unsettled. Incessant rain, with strong winds, on 27th and 28th. Sugarcane doing well. Paddy sowings begun. General health fair.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Cuttack . . .	3·0	Weather cloudy, with high winds. Sowing of rice in progress. Price of rice unchanged. Public health good. *General Remarks.*—General rain, accompanied with storms, had cooled the atmosphere. A cyclone struck the coast with centre near Balasore on morning of 26th, and passed through Midnapur and then north-north-west. Sky still overcast, and more rain expected. Agricultural operations proceeding well. Early rice, jute, sugarcane and indigo are in good condition. More rain wanted in some of the eastern districts. Cholera has much abated, and general health is fair, except in Behar, where it is indifferent.
N.-W. Provinces and Oudh—(June 1st)		
Benares (May 31st)	·07 at Sadr	Weather cooler. Supplies sufficient. Prices steady. A few cases of cholera, health otherwise good.
Ballia („ 30th)	Heavy rain during week.	Weather cloudy. Sugarcane thriving well. Supplies ample. Cholera abating.
Gorakhpore („ „)	·50 at Sadr	Weather cloudy. Prices stationary. Epidemic cholera continues in several tahsils.
Fyzabad („ 31st)	. . . .	Weather cloudy and cool. Markets well supplied. Prices almost stationary Cholera continues.
Lucknow („ 30th)	. . . .	East wind during greater part of the week. *Sawan* cut Fields being manured. Markets well supplied. Prices slightly rising. Public health good.
Rai Barelli („ „)	. . . .	Heavy clouds, with cool north-east wind. Prices almost stationary. Supplies abundant. Cholera spreading.
Partabgarh („ 31st)	. . . .	Prices steady. Cholera prevalent.
Allahabad („ „)	. . . .	Weather somewhat cooler. Wind easterly. Markets well supplied. Prices show a slight fall. Cholera in trans-Ganges and trans-Jumna chiefly.
Cawnpore („ „)	. . . .	Strong easterly winds. Extra crops in good condition. Prices stationary. Small-pox and cattle-disease in places.
Banda („ 30th)	. . . .	Weather hot. Supplies plentiful. Prices stationary. Cholera in six tahsils. Cattle-disease in eight villages.
Farakhabad („ 31st)	. . . .	Cool easterly breeze. Supplies ample. Prices moderate. Health fair.
Sitapur („ „)	. . . .	Weather cloudy, with easterly winds. Ground being got ready for *kharif* sowings. No sickness.
Bareilly („ „)	. . . .	Heat continues. Prices decidedly risen. Health good. Cholera beginning to appear in a few places.
Kumaon („ 30th)	Partial rain on 29th May.	Weather cooler. *Rabi* entirely harvested. *Kharif* sowings in progress. Prices stationary. Severe cholera in one pargana. Cattle-disease continues.
Agra („ „)	. . . .	Weather hot. Irrigation of sugarcane and indigo continues. Prices rising. Small-pox in city, otherwise general health good.
Jhansi („ „)	. . . .	Intense heat. Land being manured for *kharif* crops in places. Prices generally steady. Cholera increasing in pergunnah Moth. Some small-pox and cattle-disease reported.
Meerut („ 31st)	. . . .	Cool east wind in morning, with hot west wind in afternoon. Cane and indigo flourishing. Supplies sufficient. Prices unchanged. Health good. *General Remarks.*—Easterly winds. Cloudy weather and lower temperature in the greater part of the Provinces. Rain has fallen in the Benares division. Preparation of the ground for *kharif* sowings has commenced in some districts. Supplies ample and prices fairly steady, but with a tendency to rise. Cases of cholera continue to be reported, otherwise the public health is fair.
Punjab—(June 1st)		
Hissar . . .	*Nil*	Health good. Prices stationary.
Delhi . . .	*Nil*	Health good. Prices rising.
Umballa . . .	*Nil*	Health fair. Prices stationary. *Kharif* ploughing commenced in some places.
Jullundur . . .	*Nil*	Health good. Prices stationary. *Rabi* harvest, yield below average.
Ferozepore . . .	*Nil*	Health good. Prices stationary.
Amritsar . . .	*Nil*	Health good. Prices stationary. *Rabi* yield good.
Sialkot . . .	*Nil*	Health good. Prices stationary. *Rabi* harvesting nearly completed.
Lahore . . .	*Nil*	Health good. Prices stationary. *Rabi* yield below average.
Multan . . .	*Nil*	Health good. Prices stationary. *Rabi* crops nearly harvested. *Kharif* crops being sown.
Rawalpindi . . .	*Nil*	Health good. Prices rising. *Rabi* crops reaped, outturn below average.
Shahpur . . .	*Nil*	Health good. Prices high and falling. *Kharif* crops being sown.
Dera Ismail Khan .	*Nil*	Health good. *Rabi* crops nearly harvested, outturn much below average.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Peshawar . . .	*Nil*	Health fair. Prices almost stationary. *Kharif* sowings in progress. *General Remarks.*—No rain has fallen during the week, except in Umballa and Peshawar, where it is fair. Health is good. Prices are rising in Delhi and Rawalpindi, high and falling in Shahpur, almost stationary in Peshawar, stationary elsewhere. Harvesting of *rabi* crops nearly completed in Sialkot, Multan and Dera Ismail Khan, and completed in Rawalpindi. Outturn good in Amritsar, below average in Jullundur, Lahore and Rawalpindi, and much below average in Dera Ismail Khan. *Kharif* ploughings commenced in Umballa, and sowings begun in Multan, Shahpur and Peshawar. Fodder scarce in Shahpur.
Central Provinces—(June 1st)		
Nagpur . . .	. . . .	Weather cloudy and hot. Land under preparation for *kharif* sowings. Small-pox and fever prevalent. Prices steady.
Jubbulpore . . .	. . . .	Days very hot; nights close. *Kharif* ploughings commenced. Cholera still prevalent. Prices steady.
Saugor . . .	. . . .	Weather hot and occasionally cloudy. Land being prepared for *kharif* sowings. Fever prevalent. Prices slightly rising.
Seoni . . .	. . . .	Weather cloudy and hot. Fields prepared for *kharif* sowings. Health good. Prices steady.
Hoshangabad . .	. . . .	Weather hot. *Kharif* ploughing in progress. Fever prevalent. Three cases of cholera in Harda. Prices stationary.
Khandwa . . .	·53	Weather windy. Preparation being made for *kharif* sowings. 281 cases of small-pox, 20 fatal. Prices rising.
Raipur . . .	. . . .	Weather hot and cloudy. Manuring of fields nearly completed. Rice sowings in progress. Cattle-disease continues. Prices steady.
Bilaspur . . .	. . . .	Weather cloudy and hot. Rice sowings commenced in places. Sugarcane doing well. Fever prevalent. Small-pox and cattle-disease continue. Prices rising.
Sambalpur (May 28th)	A slight shower on 26th May.	Weather very warm and sometimes cloudy. Sugarcane doing well. Cholera in places. *General Remarks.*—Weather cloudy and hot. *Kharif* ploughings continue. Cholera in Jubbulpore, Hoshangabad and Sambalpur districts. Fever and small-pox in places. Prices rising in Saugor, Khandwa and Bilaspur, in other places steady.
Burma—(May 25th)		
Akyab (May 21st) .	1·07 (Total rainfall to date 17·00).	
Bassein . . .	2·49 (Total rainfall to date 6·61).	
Rangoon . . .	4·61 (Total rainfall to date 12·56).	
Amherst (Moulmein) .	2·83	
Tavoy . . .	2·59	No report received.
Pegu . . .	. . . .	
Henzada . . .	2·15	Some cases of cholera and slight cattle-disease.
Prome . . .	·60 (Total rainfall to date 2·05).	
Toungoo . . .	·42	No report received.
Thayetmayo . . .	. . . .	Spring crops commenced producing grain.
Shwebo (May 14th) .	1·39	Crop prospects good.
Kyaukse . . .	5·16	Some cases of measles. Supplies sufficient. Prices ordinary.
Myingyan . . .	4·88	Food-supply sufficient. Prices normal.
Minbu . . .	·31 (Total rainfall to date 2·28).	*General Remarks.*—Slight measles and some cholera in several districts of Lower Burma and some cattle-disease, otherwise public health and health of cattle good. Weather seasonable. Reports received from six Upper Burma districts. Some measles and small-pox. Food scarce in Yeu and Shwebo. Crop prospects good.
Assam—(June 1st)		
Gauhati . . .	1·69	Weather rainy. Public health fair. Cattle-disease reported from Mauzah Beltola. Prospects of crops good.
Sylhet . . .	2·40	State of crops good. Prospects fair.
Cachar . . .	1·60	Weather very warm. Ploughing and sowing of *dumai* and *murali* crops finished. Cultivation of *sáil* crops continues. Common rice 13 seers 15 chittacks per rupee. Cholera and cattle-disease prevalent.
Dibrugarh . . .	Heavy rain throughout the week 8·55.	Sugarcane being planted. Ploughing for *sáil* progressing. Prospects of crops good. Public health fair.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Mysore and Coorg—(June 1st)		
Bangalore	At Civil and Military Station, 2·13; in Mysore district, 2·00; good rain throughout the State.	Standing crops in good condition. Prospects of season favourable. Public health good. Cattle-disease prevalent in parts. Prices slightly risen in the Bangalore and Mysore districts.
Mysore		
Mercara	1·09	Prospects good. Slight small-pox in three taluks. Prices unaltered.
Berar and Hyderabad—(June 1st)		
Amraoti	Sprinkling of rain	Weather cloudy and hot. *Kharif* ploughings continue. Fever in two taluks. Cattle healthy. Wheat 15 and *jowari* 27 seers per rupee.
Akola	. . . . .	Weather sultry and cloudy, with high winds occasionally. Preparation of land still in progress. Slight sickness. Cattle-disease continues. Prices steady.
Hyderabad	*Nil*	Reaping of *rabi* crops continues. Cholera abated to some extent in almost all taluks. Prices—wheat 13¼, coarse rice 12¼, white *juar* 18, yellow *juar* 23½ and *tur* 13 seers per current sicca rupee.
Central India States—(June 1st)		
Indore	. . . .	Weather hot, with strong westerly winds.
Morar (Gwalior)	. . . .	Small-pox decreasing. Health good. Heat intense.
Neemuch	. . . .	Weather warm. Health good. Prices rising. Scarcity of water.
Goona	. . . .	Small-pox decreasing. Prices rising.
Sutna	. . . .	Weather hot and cloudy. Health and prospects good.
Agar	·64	Health and prospects fair.
Sehore	. . . .	Weather very hot. Outturn of wheat below average. Health good.
Nowgong	. . . .	Weather hot and sultry. Health fair. Prices steady.
Bhopawar	. . . .	No report received.
Rajputana—(June 1st)		
Abu (June 1st)	*Nil*	Weather seasonable. Winds with dust.
Sirohi (May 29th)	*Nil*	Tanks dry; wells good. Health good. Weather warm and fine, with less wind.
Marwar („ 28th)	*Nil*	About two months' water in Jodhpur city tanks. Health good. Harvesting almost over. Weather partially cloudy. Wind strong, hot and dusty. Heat intense. Nights close and hot. Market tight.
Meywar („ „)	*Nil*	Tanks and wells low. Health good. Prices stationary. Weather very hot.
Harowti („ „)	*Nil*	Weather intensely hot. Duststorm on 24th. Health good. Prices steady.
Jhallawar („ 30th)	*Nil*	Weather very hot. Wells and tanks low. Health good.
Ajmere („ 31st)	·08	Weather excessively hot and windy. Health good. Drinking-water diminishing. Wheat 24, barley 41 and gram 40½ pounds per rupee.
Jeypore („ „)	*Nil*	Weather very hot and dry. Health fair.
Dholepore („ 28th)	*Nil*	Wells drying; tanks almost dry. Sugarcane being irrigated. Small-pox still reported. Prices stationary. Weather very hot. Winds hot.
Bhurtpore („ 31st)	. . . .	Weather intensely hot. Cholera prevails. Wells full. Prices steady.
Ulwar („ „)	. . . .	Heat great. *Kharif* preparations in progress. Fever in three and small-pox in one district. Prices steady.
Kotah („ 28th)	·24	Weather hot, with occasional clouds. Health good. Prices stationary.
Kherwara („ 29th)	*Nil*	Tanks and wells lower. Health good. Prices steady. Weather windy, with occasionally heavy clouds.
Bickanir („ 28th)	Slight rai	Fever in five districts and small-pox in one. Prices rising. Weather very hot.
Nepal—(May 26th)		
Katmandu (May 27th)	·73	Thunder, showers and sultry weather seem to betoken the beginning of the rains. Prospects fair.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

(*a*) Includes the Cawnpore-Achnera State Railway.
(*b*) Includes the Northern Bengal, Dacca, Kaunia-Dharla and Assam-Behar State Railways.
(*c*) Return not received.
(*d*) Includes the Amritsar-Pathankot State Railway.

SIMLA,
The 2nd June, 1887.

R. GARDINER, *Captain, R.E.,*
Offg. Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL BRANCH PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 24.} CALCUTTA, SATURDAY, JUNE 11, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

MEMORANDUM ON THE HIMALAYAN SNOWFALL FOR THE SEASON 1886-87.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Meteorology), No. 90 Met.—48-2, dated Simla, the 10th June, 1887.

Read the following:

Memorandum on the Himalayan Snowfall for the Season 1886-87.

In accordance with the practice of recent years, I give a résumé of the snowfall reports that have been received during the north-east monsoon period, November 1886 to April 1887, in the India Meteorological Office. The information is smaller in amount than that of the past three years, but is sufficient to enable the general character of the winter snowfall in the Himalayan region to be estimated.

WESTERN HILL REGIONS.—The Political Officer, Khyber Pass, reports that on the 29th of December slight rain fell in the Khyber and Tirah hills, and a fall of 1½ feet of snow was received on the higher peaks. A little snow also fell on the Sarghar Range in January, but it quickly melted. No snow fell in February or March. The Afridis stated that there has been very little snow this year in comparison with previous years.

The Deputy Commissioner, Dera Ismail Khan, says that the season has been excessively dry, and that very strong north-west winds prevailed. There was a slight snowfall on the Takht-i-Suleiman in January, but owing to the continued drought it soon disappeared. The snowfall throughout the mountainous country to the west was also unusually scanty.

The Deputy Commissioner of the Bannu District reports generally that in the hills adjacent to Bannu the snowfall in January, February, and March was below the average of previous years.

The Deputy Commissioner, Kohat District, describes the winter in the Kurram Valley as follows: "The snowfall up to the present time (March 11th) is much less than during the corresponding period of last year. The snow of 1886 melted away completely by September. There was a slight fall in October, and moderately heavy snow in November and December."

The Assistant Commissioner, Thall Outpost, sent the following notes of the snowfall on the Safed Koh and neighbouring mountains:

October.—Slight fall on the 7th and 26th on the Safed Koh, which melted away in a couple of days on each occasion.

November.—Heavy snowfall on the Safed Koh on the 24th.

December.—Snow showers occurred on the 3rd, 11th, 13th, 20th, 21st, 22nd, 26th, and 27th. The depth of the snowfall on the 11th on the maidan of Paiwar was 1½ feet. The fall of the 20th to the 22nd extended down to the lower hills.

January.—There were snowstorms on the 9th, 11th, 12th, 13th, 14th, 24th, and 28th. The snowfall of the 9th, 11th, and 12th was heavy on the Safed Koh. The upper portion of the Safed Koh and of the mountains south of Kurram were covered with snow at the end of the month; but the total fall was less than in January 1886.

February.—Snow fell on the 2nd, 10th, 11th, and 19th in the higher districts. The fall on the 19th averaged 2 feet in depth in the higher mountains. The snowfall of February was small in amount compared with that of February 1886.

March.—Light snow fell on the night of the 14th, 15th, and on the 19th, 20th, and 21st on the Safed Koh and higher mountains.

April.—There was a severe snowstorm on the 5th in the higher mountain districts.

MURREE HILLS.—The Deputy Commissioner, Rawal Pindi District, reports that there was no snow at Murree in December; 4 feet fell in January, 5½ inches in February, 4 inches in March, and none in April. The total fall on the hills adjacent to Kahuta during the same period was only 2 feet 2 inches, and fell in January only. The snowfall in this area was very much smaller than during the three preceding winters. The total fall at Murree from January to April 1886 was 15 feet, as compared with 4 feet 9½ inches during the corresponding period of 1887.

LAHOUL AND KULU.—The Reverend A. W. Heyde, writing from Kailang in Lahoul on the 7th March, says: "Since 1st October 1886 up to the present time we have had scarcely 5 feet of snow, whilst during the same period in the preceding year we had 8½ feet; and the southern slopes of the hills in the neighbourhood of Kailang are now completely free from snow up to a height of 12,500 feet."

The following details of the snowfalls during the past season in Kulu have been contributed by the Assistant Commissioner.

January.—On the 8th, 9th, and 10th heavy snow fell at elevations above 6,000 feet and torrents of rain below that height. Between the 11th and 24th there were frequent light showers of snow, extending down as far as 4,200 feet. From the 24th to the end of the month occasional snow fell on the higher mountains.

February.—The weather was very mild during the whole of the month and quite warm during the latter half. There were slight falls of snow on the 3rd and 5th. There was much less snow lying on the hills at the end of the month than at the end of February 1886.

March.—The weather was very warm until the 13th, when a heavy storm occurred which brought the snow-line down to 5,200 feet. The weather was cold during the remainder of the month, and the snow-line was at 8,500 feet at the end of the month.

April.—There were storms on the 5th, 6th, and 17th of the month. The weather was warm and sunny, and the snow melted very fast in exposed situations. The height of the snow-line at the end of the month was about 11,500 feet.

The Resident Commissioner of Kulu has again sent very full and detailed reports of the thickness of the snow covering on different passes. The following is a summary of the data for some of the chief passes in Kulu and Plach:

	Name of Pass.	Elevation.	Depth of snow at end of the month.			
			January.	February.	March.	April.
		Feet.				
Kulu ...	Rotang ...	13,500	15	?	13½	7
	Hamtu ...	14,500	15	?	14	8
	Bhabbu ...	10,000	10	?	9	4
Plach ...	Basleo ...	10,500	13½	12	8	1
	Jalori ...	10,000	13	11	6	½
	Srikhand ...	15,000	32	36	25	19
	Gargarasan ...	17,000	27	28	20	13

The Commissioner notes that the figures are in the great majority of cases very much exaggerated, and that probably the numbers divided by two would

give fairly correct values. He also states that at the end of the month there was no snow below 10,000 feet, and that many hillsides were clear up to a height of 12,000 feet.

BISSAHIR.—The Deputy Conservator of Forests, Bissahir Division, reports that at Kilba 10 inches of snow fell in December, 5 feet 11 inches in January, 1 foot 10 inches in February, and 1 foot 6 inches in March. He also states that there was a great quantity of snow in the Rupar Barung passes (between the Baspa and Palear valleys) at the beginning of March, but that it was melting very quickly and the passes were expected to be open earlier than usual.

LADAKH.—The Reverend F. Redstob sends the following interesting account of the winter at Leh in Ladakh (elevation 11,500 feet): "We have had scarcely any snow during the month of February. According to information I collected from people coming from Dras and Kargyal in the beginning of February on my side of the Zogi pass, they had also little snow. In Dras, they say, only about 3½ feet fell, and in Kargyal and on the Potola pass (13,400 feet high) not more than 2 feet; and the communication over that pass, which is frequently suspended for two months in winter, has been open almost throughout the whole of the past winter. The snowfall to the north must also have been light, as traders managed to cross the Kailas range from the Yarkhand direction even in the middle of January." In a subsequent letter, dated 30th April, he states that the season was backward and the weather cold. He, however, makes no mention of snowfall or stormy weather.

UPPER SUTLEJ VALLEY.—The Reverend F. Redstob, in his letter of 30th April, says that he had just heard from a friend living in the Upper Sutlej valley that the weather was exceedingly dry in December, January, and February. A heavy fall of snow was recorded in March—as large in amount as had fallen in that month during recent years.

THE HILL STATES OF THE NORTH-WESTERN PROVINCES.—The Civil Surgeon, Mussoorie, states that 1 foot 6½ inches of snow fell, chiefly on the 14th and 20th of January. No snow occurred in either February or March. Two feet 7½ inches of snow were recorded on the 14th and 19th January at Naini Tal and 2 feet in the Sub-Himalayan districts of Garhwal.

The Senior Assistant Commissioner, Kumaon, has sent the following statement of snowfall in the Johar Pass and on the neighbouring mountains:

	November.	December.	January.	February.	March.	April.
	Feet.	Feet.	Feet.	Feet.	Feet.	Feet.
Johar Pass ...	2½	2	2½	1	*Nil*	*Nil*
Neighbouring ranges	3	3	3	2	*Nil*	*Nil*

SIKKHIM HIMALAYAS.—The following table gives the reported snowfall at seven passes in the Darjeeling District. The December and April returns have not been received in the Simla Meteorological Office:

Name of Pass.	November.	January.	February.	March.
	Ft. In.	Ft. In.	Ft. In.	Ft. In.
Jelep-La	0 2	6 0	3 6	3 7
Cho-La	0 2½	6 3	3 5	3 6
Gnathui-La	0 1½	5 4	3 7	3 7
Dankhia-La	0 3	6 8	3 4	4 4
Thanku-La	0 2	4 10	3 3	3 3
Giagung	0 1½	6 0	3 5	3 5
Nako-La	0 1½	5 7	2 10	2 11

These amounts are, on the whole, greater than the snowfall of the previous year in the same district.

ASSAM HIMALAYAS.—The Deputy Commissioner of Kamrup states that on the Himalayas to the north of his district the fall of snow appears to have

been unusually heavy. The passes were blocked to such an extent that communication with the plains was not effected for at least a fortnight later than the date at which it takes place in normal years.

The Deputy Commissioner of Durrung writes that the Charduar Bhutia Sát Rajas informed him that the snowfall was much heavier than in the previous year. In consequence of this the Bhutias were later in coming down to Tezpur than usual. The Bhutias stated that the snowfall on the Koriapara side was very heavy, and that in January there was an exceptionally heavy snowfall, which blocked all the passes.

The Assistant Political Officer of Sadiya gives his opinion that the snowfall in the neighbouring mountains during December and January was greater than during the same months of the past four years. The temperature was also much lower than usual. All the hillmen with whom he conversed stated that an unusually heavy fall of snow occurred during the early part of the present year.

SUMMARY.—The snowfall reports of the past cold weather season are consistent, and appear to establish the following facts:

1st.—The snowfall in the hills to the west of the Punjab was unusually small in amount and the season exceptionally dry as compared with recent years.

2nd.—In the Western Himalayas (*i.e.*, the Himalayas of the Punjab and North-West Provinces) the winter snowfall was also much smaller than usual. The snow level in March and April was consequently considerably higher than is generally the case in these months, and the passes were open for traffic earlier than usual. The same appears also to have been the case in Ladakh and in the mountain ranges to the north. Hence generally the snowfall over the large mountain area to the north-east and east of the Punjab was considerably below the average amount of the season.

3rd.—The snowfall in the Eastern Himalayas (*i.e.*, the Himalayas of Sikkhim, Bhutan, and Assam) was above the average, and the meteorological conditions and weather in that portion of the mountain area north of India were in marked contrast to those of the area further west. The excess apparently increased in amount eastwards, and the fall was so large as to block the passes and delay traffic across them at least a fortnight. So far as can be judged, the heavy snowfall occurred chiefly during the earlier winter months, November to March, and not in April or May.

According to Mr. Blanford's snowfall theory, heavy snowfall during the winter and spring months in the mountain districts encircling Upper India impresses peculiar conditions on the distribution of pressure and the accompanying air motion, which are antagonistic to the advance of the south-west monsoon current over the area thus affected. The partial failure of the monsoon current to penetrate into Upper India is hence followed by partial or complete drought. Mr. Blanford's theory is useful in that it assigns a physical cause for the effect. But our knowledge of the winter snowfall over the large Himalayan region must be very limited and imperfect for many years to come, and it therefore seems to be more practical and safer to judge of the probable character of the approaching monsoon by the antecedent meteorological conditions in India, as these can be ascertained with approximate accuracy from the observations taken daily throughout India.

That the snowfall of the past season has been much smaller than usual in the Western Himalayas is confirmed by the following peculiarities in the weather in Northern India during the north-east monsoon period, November to May:

1st.—The cold-weather rains in Upper India were very deficient in amount and failed almost entirely in some districts.

2nd.—The cold weather terminated earlier than usual, and the months of April and May were exceptionally warm and dry in Upper India. The mean daily temperature in the Punjab was from 5 to 10° above the average during these two months.

3rd.—Pressure has been very considerably below the average in the Punjab and North-Western Provinces.

4th.—The peculiar features were more exaggerated in May than in the preceding months, and the weather was drier in the plains as well as in the hills during that month than it has been for many years. There was also an unusual absence of thunderstorms in the hill districts.

The heavy snowfall in the Eastern Himalayas accompanied and preceded the following abnormal features in the weather in North-Eastern India:

(1) The pre-monsoon rains (*i.e.*, from January to May) were unusually heavy in Bengal and Behar.

(2) The season was remarkably cool throughout Bengal and Assam until the middle of May, and the temperature was occasionally as much as 10° and 15° below the normal.

(3) An unusual number of cold-weather storms affected Bengal, Behar, and Assam, some of which were exceptionally severe. This was more especially the case in March and January.

The meteorological observations of the past five months furnish evidence of other abnormal conditions, which are of great importance in forecasting the character of the south-west monsoon of 1887. But before stating these, a few general remarks on the south-west monsoon will be of value.

The south-west monsoon current is undoubtedly the prolongation of the south-east trade winds. During the months of April and May, whilst temperature is increasing rapidly in the interior, strong sea winds blow in the coast districts of India. These winds, however, are quite local and do not extend to any great distance out at sea. About the middle or end of May a rapid advance of southerly winds takes place from the equator northwards, and these winds bring up general rain to India. Southerly winds, with more or less easting, extend up to the equator, and southerly winds, with more or less westing, to the north of the equator in the Bay of Bengal and Arabian Sea. These winds pass over a large sea area and arrive in India charged with aqueous vapour, which is chiefly condensed and precipitated as rain over Burmah and India. The very slightest experience shows that the rainfall is distributed very differently in different years, but that during any one year the larger and more prominent features are generally continued throughout the whole season. For example, last year, 1886, the rainfall was steadily and largely in excess during every month of the south-west monsoon period in Behar, and almost as markedly in defect in the Central Provinces. It is therefore certain that there must have been present before and during the rains of 1886 local peculiarities or abnormal features which determined a larger portion of the monsoon rainfall to South Behar and a smaller portion to the Central Provinces than usual.

The following is a statement of the chief peculiarities or abnormal features in the meteorology of India during the five months antecedent to the south-west monsoon period of the present year, and their probable influence upon the monsoon rainfall:

The whole period, January to May, has been marked by pressure considerably below the average for the whole of India. In January there was an average deficiency of ·077 inch, in February a slight excess of ·008 inch, in March a deficiency of ·045 inch, in April a slight excess of ·010 inch, and in May a deficiency of ·032 inch. There has been for the whole period an average deficiency of ·027 inch. Hence pressure has been below the average, but the tendency has been for the deficiency to diminish in amount. This feature was hence less prominent just before the monsoon than it was in January. General deficiency of pressure during the pre-monsoon period is usually followed by an earlier and stronger monsoon than usual. It may be noted that diminished pressure

usually accompanies deficient snowfall in the hills and a high temperature in Upper India.

In addition to this general feature, there are two local features on the large scale, which will probably have a very considerable influence on the distribution of the monsoon rains. These are:

1st.—Pressure relatively to the general average state has been in defect over the whole of North and North-Eastern India—that is, in the Punjab, North-Western Provinces, Central India, the Central Provinces, Bengal, Assam, and Burmah. This area hence formed a deeper sink or trough than usual into which the moisture-laden southerly winds are beginning to pour. The deficiency was small in Burmah, Bengal, and the eastern portion of the North-Western Provinces, and was large in the Punjab, the western districts of the North-Western Provinces, and some parts of the Central Provinces. Those conditions generally accompany a strong monsoon from the Bay of Bengal and favourable or heavy rains over the whole of Northern India.

2nd.—Pressure has been during the same period as uniformly in excess in West and South-West India (including Sind, Guzerat, Bombay, the western districts of the Central Provinces, the Dekkhan, and the southern districts of the Madras Presidency) as it was in defect in Northern and North-Eastern India. The deficiency is large in the districts represented by the stations of Bombay, Poona, Sholapur, and Belgaum. High pressure in the Bombay coast districts appears to act as a partial barrier to the Bombay monsoon current. It retards its commencement and diminishes the rainfall. This abnormal feature was very marked before and during the Madras Famine of 1876-77. There were, however, unfavourable conditions further north in North-Western India which do not appear to be present this year.

It may also be noted that these features were even more marked in May than they were in January.

The following hence appear to be the chief inferences from the present and previous meteorological conditions of the character of the approaching monsoon:

(1) The general indications are favourable in North-East and North India and somewhat unfavourable in Southern India.

(2) The Bay of Bengal monsoon current will probably be stronger than usual, and give early and abundant rainfall to Northern India, and more especially in Upper India.

(3) The Bombay monsoon current will probably be retarded and perhaps be feebler than usual. It will be late in being established on the Bombay coast, and there is a strong probability that the rains will be more or less deficient in the Poona, Sholapur, Belgaum, and adjacent districts.

(4) Indications are especially favourable to abundant rain in the Punjab and to a less extent in the Central Provinces, and hence it is probable that the high pressure in the Bombay coast districts will be much less influential than in 1876-77, and that it will not do more than slightly retard the Bombay monsoon and diminish the rainfall in the districts above mentioned.

There are also apparently large local abnormal variations at Khandwa, Gya, and one or two other stations, but it is not possible to determine at present whether they are real or are merely due to inaccurate observation.

JOHN ELIOT,

RESOLUTION.—Resolved, that the Memorandum be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

SUMMARY OF THE WEATHER REPORT FOR MAY, 1887.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Meteorology), No. 91 Met.—24-9, dated Simla, the 10th June, 1887.

Read the following:

Weather Summary for May, 1887.

The principal features of interest in the meteorology of the past month have been on the one hand the excessive heat and dryness of Upper India, on the other the progress of a well-marked and moderately intense cyclonic storm from the Bay into North Bengal.

Except during the passage of the abovementioned storm, pressure over India has maintained great uniformity in its general distribution. It has been steadily high on the west coast of the Peninsula, low over Orissa, Northern Bengal, and the east of the Central Provinces, and lowest over the Punjab. Compared with the average of the month, there was a slight excess of pressure at Bhuj, along the west coast of the Peninsula, at a few inland stations in the Peninsula, and at Colombo. Elsewhere pressure has been in defect—most so in the Punjab, where at Sialkot and Rawalpindi the deficiency amounted over a tenth of an inch. The largest excess was at Karwar and Mangalore (+·037 inch), the largest defect at Rawalpindi (—·104 inch), so that the amplitude of the variation from the normal throughout the whole of India amounted to ·141 inch.

The winds have been generally very steady. They have been moderate or light from the westward (north-west to south-west) over the west coast, the Peninsula, and the Central Provinces; strong from the southward (south-west to south-east) over the Bay and Bengal; and variable, but generally south-easterly, up the Gangetic valley. On the whole, the Bay of Bengal branch of the summer monsoon has been much stronger and earlier than that on the West Coast. The latter up to the close of the month was very feeble, neither the rainfall nor the strength of the wind on the Malabar and Konkan Coasts being equal to the average. On the contrary, on the Bengal side the southerly winds were generally strong, on some occasions exceedingly so, and the moisture which they brought up occasioned very heavy rain around the head of Bay and as far north-west as Behar.

In Upper India temperature was much above the average, and the air both on the hills and on the plains was excessively dry. At Murree the moisture in the atmosphere was as much as 26 per cent. below the normal on the average of the month, and at nearly all places in North-Western India the deficiency considerably exceeded 10 per cent. At Rawalpindi the mean 10 A.M. temperature of the month was almost 10° above the average, but from this point the amount of the excess gradually decreased till over Bengal, the greater part of the Peninsula, and in Burmah it disappeared and was replaced by a deficiency.

Rainfall was deficient over the greater part of the country, but was slightly in excess in the Berars, Khandesh, Orissa, and Lower Bengal, and largely in excess over Northern Bengal and Berar.

The Cyclone.—On 23rd May the wind began to blow strongly from south about Cape Negrais, and stormy squally weather prevailed off the West Pegu Coast. The depression which was causing these unsettled conditions subsequently travelled slowly north-westward towards the head of the Bay; on the 24th it lay between False Point and Akyab, on the 25th between False Point and Saugor Island, and in the early morning of the 26th it apparently crossed the Orissa Coast near Balasore, and by 10 A.M. on that day had reached Midnapore. During its progress up the Bay the wind had blown with a well-marked cyclonic circulation,

and had risen to the force of a strong gale (rates of 60 to 69 miles per hour) over the head of the Bay. From newspaper reports the barometer near the centre of the storm fell as low as 28·200 inches; but the lowest reading given by any of the meteorological stations was 28·42 inches at Balasore at 4-30 on the morning of the 26th. After crossing the coast the storm advanced rather quickly through Chutia Nagpur to South Behar, and then, while drifting slowly northward towards North Behar, gradually filled up and disappeared. It occasioned very heavy rainfall all over Orissa, Chutia Nagpur, Behar, and Central and Northern Bengal, the principal amounts beyond those already quoted in the daily reports being—

District.	Station.	Date.	Inches.
Cuttack	Jaipur ...	26th May ...	9·15
	Dhurmsala ...	26th „ ...	5·00
Balasore	Bhudduck ...	26th „ ...	7·66
Moorshedabad	Jungipur ...	27th „ ...	6·11
Sonthal Pergunnahs	Ra mahal ...	27th „ ...	7·70
	Pakur ...	27th „ ...	6·35
Hazaribagh	Chatra ...	27th „ ...	5·56
Nuddea	Meharpur ...	28th „ ...	5·33
Rangpur	Nelphamari ...	28th „ ...	6·79
Julpigori	Devigunge ...	28th „ ...	5·62
Darjeeling	Siliguri ...	28th „ ...	5·65

The following statement shows the amount of rain and the difference between the average during the month of May 1887, as far as is indicated from the telegraphic reports:

	No. of Stations.	Average rainfall in May.	Difference between the average rainfall in May, 1887.
Punjab West	7	1·30	— 0·25
„ East	4	1·81	— 1·78
North-Western Provinces, Trans-Gangetic ...	9	1·61	— 1·39
„ „ Cis-Gangetic ...	3	0·44	— 0·44
Behar	2	1·37	+ 5·56
Northern Bengal	2	5·25	+13·89
Assam—Cachar	3	14·10	— 4·56
Lower Bengal—Chutia Nagpur	6	5·81	+ 0·83
Orissa—Northern Circars	6	2·87	+ 0·55
Central Provinces South	7	0·65	— 0·28

W. L. DALLAS,

SIMLA, *5th June, 1887.* for *Meteorological Reporter to the Government of India.*

RESOLUTION.—Resolved, that the Summary be published in the Supplement to the *Gazette of India.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 8th June, 1887.

During the past week the Bombay monsoon current has broken on the West Coast. It set in somewhat feebly on the Malabar Coast on the 3rd, where heavy rain fell for the first time this season. Karwar received 6½ inches, and Secunderabad, Mercara, Cochin, and Mangalore between 1 and 1½ inches of rain. On the following day the report showed that the influence of this branch of the monsoon was steadily extending, Karwar receiving 5 inches, Goa 3 inches, and Cochin, Mercara, Salem, and Mangalore between 1 and 2 inches of rain. The report of the 6th showed that the monsoon current had, on the preceding day, extended northward as far as Bombay, where a fall of nearly 5 inches of rain had occurred, the amounts registered along other parts of the coast remaining about the same as those of the 5th. The reports received on the 7th showed little change, beyond a slight extension of the rainfall towards the Central Provinces, where Pachmarhi received moderately heavy rainfall. On the 8th there was a slight falling off in the amount of rainfall, due to the Bombay branch of the monsoon current. During the whole week the West Coast current has been rather feeble, and a slight depression has existed off the Bombay Coast; and as a consequence, while the rainfall along the coast was heavy and the weather squally, the monsoon current extended but a slight distance inland, and the Central Provinces, Deccan, &c., have had but little rainfall.

On the opposite side of the Peninsula and in Northern India there has been a steady change from unsettled conditions towards finer weather. From the 1st to the 3rd strongish monsoon winds were blowing at the head of the Bay, bringing up much cloud and occasioning heavy falls of rain in Burma and Bengal. Among these falls the most important were—

	Inches.	
Bogra	15·6	on the 1st.
Silchar	11·25	on the 1st and 2nd.
Serajgunj	10·42	on the 1st.
Dhubri	4·5	on the 1st.
Rangoon	4·2	on the 1st and 2nd.

After the 3rd the force and the rain-bearing qualities of the Bengal current both decreased. At first local showers occurred in several parts of Bengal and Burmah; but these gradually fell off, and by the 8th an almost complete break in the rains obtained over the whole of Northern India, and the only rainfall pertaining to this branch of the monsoon was in Burmah.

In Upper India the weather was somewhat unsettled at times, and on the 2nd and 3rd thunderstorms occasioned rather heavy falls of rain on and near the hills of the Punjab and the North-Western Provinces.

The mean pressure of the week has been generally about the average of the month; but along the West Coast and also over the Berars and Central Provinces there has been a deficiency, the sudden fall of pressure in these regions being connected with the sudden extension northward of the monsoon current on the West Coast.

Temperature also shows but little departure from the monthly average, except in the case of the Central Provinces and Berars, where there is an excess of 5°. In the Punjab and North-Western Provinces the heat since the previous

week has considerably decreased, though maxima exceeding 110° were still reported from those Provinces, Rajputana, and Sind.

Division.	No. of stations.	Total Rainfall.
Burma	6	28·42
Bengal and Assam	16	43·19
N. W. Provinces and Oudh	9	4·69
Punjab	9	2·55
Hill Stations	6	6·70
Ceylon	1	4·53
Malabar Coast	5	29·04
Bombay	9	51·21
Berars and Central Provinces	10	2·28
Guzerat and Central India	6	0·55
Sind—Rajputana	6	0·44
Madras	14	8·34

W. L. DALLAS,

for *Meteorological Reporter to the Government of India.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 5th JUNE, 1887.

GENERAL REMARKS.—Rain in varying quantities has fallen generally throughout Madras, Bombay, Bengal, Assam, and Mysore; and showers have also occurred in several districts in the North-Western Provinces and Oudh and the Punjab and in parts of Rajputana.

The rainfall was general in Burma during the fortnight ending 4th June.

Kharif cultivation is progressing in Bombay, the Punjab, the Central Provinces, Berar, and Rajputana. Sowings have commenced in parts of Bombay and Rajputana and in the eastern districts of the North-Western Provinces and Oudh, and continue in the Punjab.

The prospects of the standing crops in Madras and Mysore are good.

The early rice in Bengal and Assam promises well, but the recent heavy rain in Bengal has caused some damage to the crop. Rice sowings are in progress in the Central Provinces and have commenced in Bombay.

Sugarcane is doing well in Bengal, and the crop is being irrigated in the North-Western Provinces and Oudh.

Indigo has suffered from rain in one district in Bengal, but the general condition of the crop is good; the irrigation of the crop continues in the North-Western Provinces and Oudh.

Cholera has increased in the North-Western Provinces and Oudh, and there has been a large mortality from the disease in the Sholapur district of the Bombay Presidency. Fever of a severe type also exists in the Ahmednagar district. In the Central Provinces fever and small-pox are prevalent in most districts. Elsewhere the public health is generally good.

Prices are rising in the North-Western Provinces and Oudh and in parts of Rajputana and the Central Provinces, and fluctuating in the Punjab. Elsewhere they are generally steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(June 8th)		
Bellary	Average last week since revised, ·15; this week, ·63.	Standing crops generally good. Harvest paddy, yield about average. Cholera increasing in four and cattle-disease also increasing in four taluks.
Kurnool	Average ·72	Lands being ploughed for next crop. Small-pox in three, cholera in one, and cattle-disease decreasing in five taluks.
Ganjam	Average ·40	Small-pox prevalent. Fever in five divisions. Cholera decreasing, and cattle-disease in one taluk.
Kistna	Average ·21	Standing crops good. Slight fever. Cholera decreasing in four and cattle-disease increasing in three taluks.
Chingleput (Madras)	Average ·23	Standing crops fair, but withered to some extent. Harvest paddy, outturn bad. Small-pox in one taluk.
Coimbatore	Average ·75	Standing dry crops generally good. Harvest *cholum*, outturn above average. Fever in one, and cattle-disease increasing in two taluks.
Tanjore	Average ·66	Standing crops generally good. Harvest paddy and gingelly, outturn up to average. Very slight cholera.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 15th June, 1887.

The depression which had existed during the previous week over the Arabian Sea off the Bombay Coast disappeared on the 9th, and was followed by strong south-west to west-south-west winds all along the West Coast of India. These strong westerly winds blew steadily throughout the week. They brought heavy rainfall to the Coast districts, the average daily fall for the week being—at Goa and Ratnagiri, 4·2 inches; at Karwar, 3·6 inches; and at Mangalore, 3·3 inches. They carried also much vapour and cloud into the Deccan, the Central Provinces, and Central India, but the accompanying rainfall was during the earlier part of the week generally scanty.

The Bay of Bengal branch of the monsoon current continued feeble from the 9th to the 11th. During those days it was, in fact, practically suspended over Northern India, being replaced by westerly winds bringing drier weather and a higher temperature to the North-Western Provinces and the Punjab. On the 10th the report gave indications of the formation of a small storm over the head of the Bay. On the 11th this disturbance had undergone further development without, however, changing its position; but on the morning of the 12th the centre was approaching Ganjam, and heavy rain was falling on the Madras and Circars Coasts. On the 13th the storm centre lay midway between Gopalpore and Vizagapatam, and moderate rain was falling over Burma, Bengal, Assam, and Orissa, as well as at some of the hill stations in North-Western India. On the morning of the 14th the storm centre was moving across the Central Provinces, and moderate but general rain was falling over the central parts of India and at a few places in the North-West. In the rear of the depression strong monsoon winds set in, which extended across Bengal into the North-Western Provinces. On the 15th both branches of the monsoon were blowing strongly, and rain was falling over a large part of India, though in the North-West the precipitation was light and sporadic.

The mean pressure of the week has differed but little from the average of the month, being slightly above it in the Punjab and Malabar and below it elsewhere.

On the whole, the temperature has been below the average, the amount of cloud and vapour brought up by the increasing strength of the monsoon currents having very considerably mitigated the heat, which during the past few weeks has prevailed over Upper and Central India.

The amount of moisture in the atmosphere has been below the average, except in the west and south.

The rainfall of the Bay branch of the monsoon for the first half of June, as compared with the average of the same period, has been short of the normal on the Arakan Coast, in Bengal Proper, and at the majority of stations in the North-Western Provinces and the Punjab; but above it in Assam, North Bengal, and Behar. The rainfall of the Bombay branch for the same period has exceeded the average along the West Coast (Karwar + 27 inches and Ratnagiri + 20 inches) and over the Central Provinces, but has been short in the Bombay Deccan and apparently in Guzerat, Central India, and Rajputana.

Division.	No. of stations.	Total Rainfall.
Burma	6	26·42
Bengal and Assam	16	37·82
N. W. Provinces and Oudh	8	3·55
Punjab	7	1·71
Hill Stations	5	6·81
Ceylon	1	1·53
Malabar Coast	5	46·62
Bombay	9	105·39
Berars and Central Provinces	10	31·28
Guzerat and Central India	5	1·91
Sind—Rajputana	3	0·82
Madras	13	22·53

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 16th JUNE, 1887.

GENERAL REMARKS.—Except in the Punjab, rain has been general throughout the country during the week under review. The falls were heaviest in Bombay, Bengal, and Assam.

Kharif ploughings and sowings are now in active progress in most parts of the country. In the Punjab more rain would be beneficial for ploughing operations.

In Madras, Mysore and Coorg the outlook is favourable.

Ploughing and sowing for the rain-weather crops are going on in Bengal, and the crops above ground are generally doing well, though in the Northern Bengal districts some damage was caused by the heavy rain at the end of May.

Rice is being sowed in Bombay, the Central Provinces, and Assam. In Burma ploughing for the rice crop has commenced.

Sugarcane promises well in Bengal, the North-Western Provinces and Oudh, the Central Provinces, and Assam.

Cholera is chiefly prevalent in the North-Western Provinces and Oudh and Bombay, and the mortality from the disease in two districts of the latter—Ahmednagar and Sholapur—has been high. Elsewhere the public health is generally good.

Prices show an upward tendency in the North-Western Provinces and Oudh, and are rising and high in three districts of the Punjab. Elsewhere they are fairly steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(June 15th)		
Bellary . . .	Average last week since revised, ·69; this week, ·31.	Standing crops generally good. Harvest paddy, yield average. Cholera decreasing in four taluks and cattle-disease also decreasing in one.
Kurnool . . .	Average ·25	Agricultural operations progressing for next crop. Small-pox in three, cholera decreasing in one, and cattle-disease increasing in four taluks.
Ganjam . . .	Average ·28	Small-pox in five and fever in seven divisions. Cholera decreasing, and cattle-disease in one taluk.
Kistna . . .	Average 1·21	Harvest crops on irrigation channels. River 1·6 feet over Anicut. Slight fever prevalent. Cholera increasing in four and cattle-disease decreasing in three taluks.
Chingleput (Madras) .	Average ·45	Standing crops fair, but withered to some extent. Harvest paddy, outturn middling. Small-pox in one and cattle-disease in three taluks.
Coimbatore . . .	Average ·36	Standing dry crops good. Harvest *cholum*, outturn above average. Fever in one taluk.
Tanjore . . .	Average ·66	Standing crops generally good. Harvest paddy, cotton, gingelly, outturn up to average. Cattle-disease in one taluk.
Madura . . .	Average ·06	Health of people and cattle generally good.
Malabar . . .	Average 15·92	Harvest third crop paddy, outturn average. Fever in two and slight small-pox in eight taluks.
Travancore . .	15·79	Paddy thriving. Small-pox and fever in places. *General Remarks.*—General prospects good.
Bombay—(June 15th)		
Karachi . . .	Tatta, ·04	Weather hot and cloudy. General health good. River at Kotri on 13th, 12 feet 7 inches against 12 feet 1 inch on same date last year. Fever in six talukas. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Dadu 30, 42 and 38 pounds per rupee, respectively.
Hyderabad . . .	Badin, ·07	*Rabi* harvesting continues in two talukas. *Kharif* cultivation in progress. Fever in two, small-pox in one, and cattle-disease in one taluka. River at Kotri on 13th, 12 feet 7 inches against 12 feet 1 inch on same date last year. Wheat 24, *bajri* 37½, *jowari* 40, white rice 20, and red rice 30 pounds per rupee.
Ahmedabad . . .	·17; total ·55; rain in three talukas—maximum ·16 in Dholka and minimum ·17 in Daskroi.	Preparations for *kharif* cultivation in progress throughout the district. Public health good. Wheat 28 and *bajri* 31 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda	Rain general; ·63 in Baroda.	Health good. Crops in good condition. *Bajri* 28, rice 21 and wheat 18 pounds per rupee.
Surat	Rain in all talukas—maximum in Bulsar, 4·96 and minimum in Bardoli, 1·35.	Sowing operations commenced. Fever in Bardoli and cholera in some villages of Pardi and Bulsar talukas. *Jowari* 35 and *nagli* 41 pounds per rupee.
Nasik	. . . . .	*Kharif* sowing commenced in Igatpuri and Peint talukas, but retarded in other talukas for want of rain. Small-pox in Yeola and Kalwan talukas. Cholera in Chandor, Yeola and Malegaon talukas, 56 attacks, 22 deaths. Prices stationary.
Colaba (Bombay)	Rain every day; heavy on 11th and 14th; total of week, 6·83; total to date, 14·21, being 4·86 above average.	Abnormal temperature 3° cool on 8th, fell to 8° cool by the 11th, rose to 2° cool by the 13th and was 5° cool on 14th. Vapour in air defective on 10th and 11th. Normal on all other days. Abnormal wind from south-east (and strong) from 8th to 10th, from east-south-east on 11th, and from north-west on 13th. Wind normal on 12th and 14th.
Poona	Rain throughout the district—maximum 3·38 and minimum ·05 in Khed and Bhimthari talukas, respectively.	More rain wanted in Sirur, Purandhar, and Bhimthari talukas. Sowing of rice and *nagli* in Mawal, portion of Junnar, Khed and Petha Ambegaon, and that of *moong* in Sirur and Purandhar talukas in progress. Sowing of rice, *nagli* and *jvari* completed in Mawal taluka. Public health generally good. Slight cattle-disease in Indapur and Purandhar talukas. *Bajri* 43 and *jowari* 52 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar	Sangamner, 1·45; Newasa, 1·23; Rahuri, ·95; Jamkhed, ·68; Parner, ·65; and Kopergaon and Akola, ·52; very slight in others.	Cholera in five talukas, attacks 309, deaths 105. *Bajri* 36 and *jowari* 51 pounds per rupee. Rain required for *kharif* sowings.
Sholapur	Rain in all talukas; maximum in Karmala, ·87 and minimum in Madha, ·07.	Cattle-disease in Sholapur, Pardi, Pandharpur, and Sangola talukas. Slight cholera here and there in all talukas, 529 cases, 244 fatal. *Jowari* 56½ and *bajri* 49⅜ pounds per rupee.
Dharwar	Rain general; maximum 4·0 in Hangal and minimum ·04 in Ron.	Sowing of rice commenced in some talukas. Scarcity of fodder in Nawalgund and of drinking-water in Gadag, Kalghatgi, and Kod talukas. Cholera in Ranibennur, cases 44, fatal 23. Slight cattle-disease in Nawalgund and Nargund. Rice 23¾ and *jowari* 55 pounds per rupee.
Kanara	Heavy rain throughout the week; Karwar, 18·41; total 36·33; Honore, 23·94; Sirsi, 7·52, and Haliyal, 4·15.	Slight cattle-disease in Sirsi and small-pox in Mundgod Petha. Common rice in Karwar and district average 12½ seers per rupee.
Rajkot	·44	Weather hot and cloudy. Wheat 23, *bajri* 24, and *jowari* 29 pounds per rupee. *General Remarks.*—More or less rain throughout the Presidency. Sowing operations in progress in parts of thirteen districts. Fever and small-pox in parts of seven, cattle-disease in parts of ten, and cholera in parts of eight districts.
Bengal—(June 15th)		
Chittagong (June 14th)	1·92	Weather seasonable, with occasional showers. Early rice being transplanted. Prices stationary. Cholera still reported, public health otherwise good.
Dacca	1·41	Rain has improved prospects, but rivers rising fast and damage in lowlands anticipated. *Til* (sessamum) being cut. *Aman* paddy and jute doing well. Public health generally good.
24-Pergunnahs (Calcutta)	·98	Prospects promising. *Aus* sowing in progress. Public health generally good.
Khoolna	6·01	Weather stormy. Ploughing and sowing continue. Prospects of early rice fair. Public health good.
Moorshedabad	9·38	Weather still hot. *Bhadoi* prospects good. *Aman* being sown. Jute and sugarcane promising. Public health good.
Pubna	9·40	Weather sultry, with occasional rain. Crops doing well. Public health good.
Dinagepore	1·14	General rain on two days. *Bhadoi* sowing over. Jute and *bhadoi* suffered from heavy rain.
Rungpore	·63	Crops generally good, but in some instances damaged by flood. Public health improved.
Midnapore	9·29	Early sowing commenced. Some lands in Tumlook subdivision damaged by overflow of salt-water. Public health good.
Burdwan	·56	Monsoon broke on 12th. Prospects good. Agricultural operations in progress. Public health good.
Bhagulpore	*Nil*	Weather sultry. Fine weather has done much to right the damage done by previous week's heavy rain. Sowing and cultivation going on. Prospects good. Public health improving.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Purneah	2·87	All crops, except indigo, doing well. Ploughing and weeding in progress. Public health fair. Rivers falling.
Durbhanga	*Nil*	Prospects of rice continue satisfactory. *Bhadoi* being sown. Prices rising. Cholera in Madhubani.
Chumparun	·57	Prospects of indigo and other standing crops favourable. Sowing of *bhadoi* and *aghani* in progress. Prices stationary. Cholera abating.
Patna	1·77	*Bhadoi* sowings going on. Fields being prepared for sowing of paddy. Cheena being sown on *deara* land. Cholera prevalent in Barh and Behar subdivisions.
Gya	1·16	*Bhadoi* being sown. Sugarcane doing well. Cholera in all subdivisions. Fever also reported. Small-pox only in Nowada.
Hazareebagh	. . . . .	Weather rainy. Monsoon appears to have set in. Rice and *bhadoi* crops being sown. Cholera in one village in Giridih subdivision, otherwise general health good.
Cuttack	2·05	Weather cloudy. Very high winds. Sowing of rice in progress. Price of rice unchanged. Public health good, *General Remarks.*—Weather sultry. The monsoon winds, which came in rear of the cyclone at the end of May and which brought up heavy rain, slackened at the beginning of the week, and the rainfall of the week has been moderate. More rain is expected. Crops are generally doing well, but some damage has been done, particularly in the Northern Bengal districts by the heavy rain at the end of May. Ploughing and sowing of *aman* and *bhadoi* crops are going on. Cholera still reported in the Patna division, elsewhere general health is good.
N.-W. Provinces and Oudh—(June 15th)		
Benares (June 14th)	Slight rain	Markets full. Prices steady. Few cases of cholera in the district, otherwise health good.
Bal'a (13th)	. . .	Weather fair, with occasional clouds. Sugarcane being irrigated. Prices steady. Sporadic cholera continues.
Gorakhpore („ „)	·20 at Sagr	Prices stationary. Cholera considerably decreased.
Fyzabad („ 14th)	·10 at Sadr	Weather cloudy. Markets well supplied. Cholera in all districts.
Lucknow („ 13th)	. . . .	Weather often cloudy. Supplies sufficient. Prices rising gradually. Public health good. No cattle-disease.
Rai Bareli („ „)	. . . .	Heat intense. Markets well stocked. Prices rising. Cholera all over the district.
Partabgarh („ 14th)	. . . .	Heat excessive. Winds variable. Indigo and sugarcane being irrigated. Prices show a marked rise. Cholera continues. No cattle-disease.
Allahabad („ „)	. . . .	Weather sultry. Clouds gathering. Markets full. Prices rising slightly. Cholera still continues in Trans-Ganges and Trans-Jumna tracts.
Cawnpore („ „)	. . . .	Weather oppressive. Indigo and sugarcane being irrigated. Prices somewhat risen. Sporadic cholera in places. Cattle-disease in two pergunnahs.
Farakhabad („ „)	2·0 at Sadr and believed to be general in the district.	Indigo and sugarcane thriving. Maize sowings commenced. Markets well supplied, but prices high and still rising. Fever and itch in one tahsil, otherwise health good. No cattle-disease.
Sitapur („ „)	3·3 on 14th	Weather close.
Bareilly („ „)	Good rain on 13th	Weather cool. Prices stationary. Slight cholera in tahsil Baheri.
Banda („ 13th)	. . . .	Weather hot. Supplies ample. Prices stationary. Cholera throughout the district. Cattle-disease in one village.
Kumaon („ 14th)	. . . .	Weather occasionally cloudy, with slight rain. *Kharif* operations in progress. Prices falling. Cholera severe in Shor, 54 deaths in week. Cattle-disease on the decrease.
Agra („ 13th)	. . . .	Weather cloudy. Sugarcane and indigo crops being irrigated. Prices steady. Cholera reported in two tahsils and small-pox in city.
Jhansi („ „)	. . . .	Weather cloudy and close. Prices steady. Cholera bad in pergunnah Moth, and extending to other pergunnahs, 1 case reported from city. Some small-pox and cattle-disease reported.
Meerut („ 14th)	Slight rain in three tahsils on 12th.	Temperature lowered. Prices risen slightly. Health good, except some fever. *General Remarks.*—The rainfall has been pretty general, but not heavy. Indigo and cane crops doing well. Supplies ample, but prices show an upward tendency. Cholera reported in most districts, and small-pox and fever in a few places.
Punjab—(June 15th)		
Hissar (June 14th)	. . . .	Rain much wanted. Health good. Prices stationary.
Delhi	·25	Health good, 1 fatal case of cholera. Prices slightly rising.
Umballa	·02	More rain wanted for *kharif* ploughing. Few cases of cholera in Umballa and Thanesar town. Prices stationary.
Jullundur	. . . .	Health good. Prices stationary. *Kharif* ploughing commenced.
Ferozepore	·20	Health good. Prices stationary.
Amritsar	. . . .	Rain wanted. Health good. Prices stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Sialkot		Health good. Prices stationary.
Lahore		Health good. Prices stationary.
Multan		Health good. Prices stationary. *Rabi* being garnered. *Kharif* sowing in progress.
Rawalpindi	Slight rain	Health good. Prices rising. *Rabi* crops reaped.
Shahpur		Health good. Prices high and stationary. *Kharif* sowings in progress.
Dera Ismail Khan	Slight rain	Health fair. *Rabi* outturn much below average.
Peshawar		Rain wanted. Health fair. Prices almost stationary. *Kharif* sowing in progress.
		General Remarks.—Rain has fallen in Delhi, Umballa, Ferozepore, Rawalpindi, and Dera Ismail Khan, and is wanted in Hissar, Umballa, Amritsar, and Peshawar. Health good, except in Dera Ismail Khan and Peshawar, where it is fair and in Umballa, where there were a few cases of cholera. Prices slightly rising in Delhi, rising in Rawalpindi, high and stationary in Shahpur, almost stationary in Peshawar, elsewhere stationary. *Rabi* crops being garnered in Multan, and crops reaped in Rawalpindi. In Dera Ismail Khan the outturn is much below average. Fodder scarce in Shahpur. *Kharif* ploughings commenced in Jullundur, and sowings in progress in Multan, Shahpur, and Peshawar.
Central Provinces—(June 14th)		
Nagpur	1·98	Weather rainy. *Kharif* ploughings in hand. Health fair. Prices steady.
Jubbulpore	Showers	*Kharif* ploughings in progress. Early rice sowings commenced in places. Cholera still present. Prices steady.
Saugor	1·89	Weather cloudy and close. Preparations for *kharif* sowings in progress. Cholera in one tahsil. Fever prevalent. Prices rising.
Seoni	1·76	Weather cloudy and stormy. Field prepared for sowings. Health good. Prices steady.
Hoshangabad	1·59	Weather cloudy, rainy, and warm. Ploughings in progress. Cholera, small-pox, and fever in parts. Prices stationary.
Khandwa	2·16	Weather cloudy and windy. Preparations for *kharif* sowings in progress. 317 cases of small-pox, 21 fatal. Prices unchanged.
Bilaspur	1·49	Rice sowings progressing. Sugarcane promising. Fever and small-pox prevalent. Cattle-disease in one tahsil. Prices stationary.
Raipur	5·26	Weather cloudy and cool. Rice sowings in progress. Cattle-disease in places. Price of wheat risen.
Sambalpur (June 11th)	3·54	Weather very warm and cloudy. Early sowings in progress. Price of rice falling.
		General Remarks.—There has been general rain. Ploughing continues, and sowing has commenced in places. Cholera, small-pox, and fever in a few districts. Prices generally steady.
Burma—(June 15th)		
Akyab (June 11th)	·85 (Total rainfall to date 20·81).	Some cholera and cattle-disease. Ploughing commenced.
Bassein	1·16 (Total rainfall to date 14·74).	Slight cattle-disease.
Rangoon	7·42 (Total rainfall to date 28·03).	
Amherst (Moulmein)	6·47 (Total rainfall to date 28·47).	Ploughing progressing. Transplanting commenced. Wages of ploughing labour eight annas per day or Rs. 12 to Rs. 14 per month.
Tavoy	9·82 (Total rainfall to date 37·31).	Ploughing progressing.
Henzada	2·98 (Total rainfall to date 14·96).	Ploughing commenced.
Prome	1·48 (Total rainfall to date 6·40).	
Toungoo	1·39 (Total rainfall to date 12·43).	
Thayetmayo	·26 Total rainfall to date 3·39).	
Shwebo	·61 (Total rainfall to date 7·31).	One case of small-pox.
Kyaukse	1·11	Large caravans of Shan traders coming down.
Myingyan	1·81 (Total rainfall to date 7·72).	Slight measles and small-pox prevalent. Food-supply sufficient. Prices ordinary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Mandalay (June 4th)	4·87 (Total rainfall to date 13·62).	Slight increase of measles in town. Reaping of spring crops continued. Transplanting of *kaukkyi* crops progressing. Food-supplies sufficient. Prices ruling high.
Minbu	1·49	Food-supply sufficient. Prices normal.
Yamethen	·01	Spring harvest progressing.
		General Remarks.—Health of Lower Burma generally good. Ploughing begun in majority of districts. Weather seasonable. Reports received from seven Upper Burma districts. Public health good. Agricultural operations going on.
Assam—(June 15th)		
Gauhati (June 14th)	·92	Weather rainy. Public health fair. Cattle-disease reported from one tahsil. Prospect of crops good.
Sylhet	4·70	State and prospects of the crops good.
Cachar	2·23	Weather dry for first three days. Reaping of *dumai* and *murali* crops commenced. Cultivation of *sáil* crops continues. Common rice $10\frac{8}{16}$ seers per rupee. Cholera prevalent. Growth of tea retarded.
Dibrugarh	3·99	Weather seasonable. Planting of sugarcane over. Prospects good. Transplanting of *sáil* commenced in some parts of the district. General health fair.
Mysore and Coorg—(June 15th)		
Bangalore	Mysore, 1·14; slight in Bangalore, Kolar, and Tumkur districts and heavy in Shimoga, Kadur, and Hassan districts.	Standing crops in good condition. Prospects of season favourable. Public health good. Small-pox and cattle-disease continue in affected parts. Prices slightly risen in Tumkur district and fallen in Hassan district.
Mysore		
Mercara	13·23	Rain seasonable. Sowings of rice commenced. Prices stationary.
Berar and Hyderabad—(June 15th)		
Amraoti	1·94	Weather hot, with occasional showers. Fields prepared for *kharif* sowings. Cholera in Amraoti town. Cattle healthy. Wheat 14 and *jowari* 26 seers per rupee.
Akola	1·20	Weather still hot. Field operations continue. Sowing of cotton commenced in Akola taluka. Fever prevalent throughout the district. Cholera still prevalent. Cattle-disease slight.
Hyderabad	1·37 (Total since 1st January 2·9).	Monsoon set in. Preparations for *kharif* sowings commenced. Cholera still prevalent. Prices—wheat 13½, coarse rice 12½, white *juar* 19, yellow *juar* 21½, and *tur* 14¾ seers per current sicca rupee.
Central India States—(June 15th)		
Indore	·41	No heavy rain till 15th.
Morar (Gwalior)		Health good. Heat intense. Weather cloudy.
Sutna	No rain at Sutna, but slight falls in other places.	Cholera abating in Rewah. Health and prospects good.
Neemuch	·60	Weather cloudy. Health good.
Goona	·40	Health and prospects good.
Agar	·17	Weather cloudy and threatening. Cholera at Bangrode in Sailana. Prospects fair.
Sehore	1 86	Weather cloudy. Crops and health good.
Nowgong	·06	Weather hot, cloudy, and windy. Health fair. Prices unchanged.
Bhopawar	·52	Health good. Prices stationary.
Rajputana—(June 15th)		
Abu (June 15th)	·28	Occasionally cloudy and sultry. Weather seasonable.
Sirohi („ 12th)	·22	Tanks empty; wells good. Health good. Weather overcast and cloudy. Cool south-west winds.
Marwar („ 11th)	·04	About two months' water in Jodhpore city tanks. Health good, though some pergunnahs unhealthy. Weather partially cloudy, windy, dusty, and less hot. Nights little cooler. Indications of rain. Markets easy. Prices show a tendency to fall.
Meywar („ „)	·97; rain general	Tanks and wells low. Cholera prevalent mildly in some districts. Prices stationary. Weather cloudy.
Harowti („ „)	Deoli, ·01; Tonk, ·22; Shaspura, ·97. Few scattered showers.	Weather unsettled. Health good.
Jhallawar („ 13th)		Great heat. Much scarcity of water at Shahabad. Health good.
Ajmere („ 14th)	·23	Weather clear. Cattle-disease and small-pox still prevalent in Todgarh tahsil. Health good. Ploughing operations continue. Wheat 24, barley 41⅛, and gram 38¼ pounds per rupee.
Jeypore („ „)		Weather hot. Rain anxiously expected.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana —*contd.*		
Kerowlee (June 11th)	. . . .	Tanks dry; wells drying. Rain wanted. Cultivators engaged in *kharif* operations. Health good. Prices rising. Weather very hot and stormy.
Dholepore („ „)	*Nil*	Weather cloudy Wells drying; tanks almost dry. Small-pox disappearing and fever still prevails. Prices rising. Weather very hot.
Bhurtpore („ 14th)	·25	Heat intense. Health fair.
Ulwar („ „)	*Nil*	*Kharif* preparations in progress. Prices rising. Fever continues.
Kotah („ 11th)	·08	Weather cloudy. Health good. Prices fluctuating.
Kherwara („ 12th)	1·17	Tanks and wells lower. Health good. Prices steady. Weather cool and cloudy.
Bickanir („ 11th)	·05; Reni, 2·00; drops in eight districts.	Fever in five districts and small-pox in one. Prices rising. Weather very hot, cloudy, and stormy.
Pertabgurh („ „)	·55	Little water in wells. Health good. Prices slightly fallen. Weather partially cloudy.
Nepal—(June 10th)		
Katmandu (June 9th)	·37	Weather seasonable. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

SIMLA,
The 16th June, 1887.

JAMES RAMSAY,
Offg. Under-Secretary.

17 JUN 87

Memorandum on the Himalayan Snowfall for the Season 1886-87.

IN accordance with the practice of recent years I give a résumé of the snowfall reports that have been received during the north-east monsoon period, November 1886 to April 1887, in the India Meteorological Office. The information is smaller in amount than that of the past three years, but is sufficient to enable the general character of the winter snowfall in the Himalayan region to be estimated.

WESTERN HILL REGIONS.—The Political Officer, Khyber pass, reports that on the 29th of December slight rain fell in the Khyber and Tirah hills, and a fall of 1½ feet of snow was received on the higher peaks. A little snow also fell on the Sarghar range in January, but it quickly melted. No snow fell in February or March. The Afridis stated that there has been very little snow this year in comparison with previous years.

The Deputy Commissioner, Dera Ismail Khan, says that the season has been excessively dry, and that very strong north-west winds prevailed. There was a slight snowfall on the Takt-i-Suleiman in January, but owing to the continued drought it soon disappeared. The snowfall throughout the mountainous country to the west was also unusually scanty.

The Deputy Commissioner of the Bannu district reports generally that in the hills adjacent to Bannu the snowfall in January, February, and March was below the average of previous years.

The Deputy Commissioner, Kohat district, describes the winter in the Kurram valley as follows: "The snowfall up to the present time (March 11th) is much less than during the corresponding period of last year. The snow of 1886 melted away completely by September. There was a slight fall in October and moderately heavy snow in November and December."

The Assistant Commissioner, Thall outpost, sent the following notes of the snowfall on the Safed Koh and neighbouring mountains :—

October.—Slight fall on the 7th and 26th on the Safed Koh, which melted away in a couple of days on each occasion.

November.—Heavy snowfall on the Safed Koh on the 24th.

December.—Snow showers occurred on the 3rd, 11th, 13th, 20th, 21st, 22nd, 26th, and 27th. The depth of the snowfall on the 11th on the maidan of Paiwar was 1½ feet. The fall of the 20th to the 22nd extended down to the lower hills.

January.—There were snowstorms on the 9th, 11th, 12th, 13th, 14th, 24th, and 28th. The snowfall of the 9th, 11th, and 12th was heavy on the Safed Koh. The upper portion of the Safed Koh and of the mountains south of Kurram were covered with snow at the end of the month, but the total fall was less than in January 1886.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL BRANCH PRESS, *Simla.*

February.—Snow fell on the 2nd, 10th, 11th, and 19th in the higher districts. The fall on the 19th averaged 2 feet in depth in the higher mountains. The snowfall of February was small in amount compared with that of February 1886.

March.—Light snow fell on the night of the 14th, 15th, and on the 19th, 20th, and 21st on the Safed Koh and higher mountains.

April.—These was a severe snowstorm on the 5th in the higher mountain districts.

MURREE HILLS.—The Deputy Commissioner, Rawal Pindi district, reports that there was no snow at Murree in December; 4 feet fell in January, 5½ inches in February, 4 inches in March, and none in April. The total fall on the hills adjacent to Kahuta during the same period was only 2 feet 2 inches, and fell in January only. The snowfall in this area was very much smaller than during the three preceding winters. The total fall at Murree from January to April 1886 was 15 feet, as compared with 4 feet 9½ inches during the corresponding period of 1887.

LAHOUL AND KULU.—The Reverend A. W. Heyde, writing from Kailang in Lahoul on the 7th March, says: "Since 1st October 1886 up to the present time we have had scarcely 5 feet of snow, whilst during the same period in the preceding year we had 8½ feet, and the southern slopes of the hills in the neighbourhood of Kailang are now completely free from snow up to a height of 12,500 feet."

The following details of the snowfalls during the past season in Kulu have been contributed by the Assistant Commissioner.

January.—On the 8th, 9th, and 10th heavy snow fell at elevations above 6,000 feet and torrents of rain below that height. Between the 11th and 24th there were frequent light showers of snow, extending down as far as 4,200 feet. From the 24th to the end of the month occasional snow fell on the higher mountains.

February.—The weather was very mild during the whole of the month and quite warm during the latter half. There were slight falls of snow on the 3rd and 5th. There was much less snow lying on the hills at the end of the month than at the end of February 1886.

March.—The weather was very warm until the 13th, when a heavy storm occurred which brought the snow-line down to 5,200 feet. The weather was cold during the remainder of the month, and the snow-line was at 8,500 feet at the end of the month.

April.—There were storms on the 5th, 6th, and 17th of the month. The weather was warm and sunny, and the snow melted very fast in exposed situations. The height of the snow-line at the end of the month was about 11,500 feet.

The Resident Commissioner of Kulu has again sent very full and detailed reports of the thickness of the snow covering on different passes. The following is a summary of the data for some of the chief passes in Kulu and Plach:—

	Name of Pass.	Elevation.	Depth of snow at end of the month.			
			January.	February.	March.	April.
		Feet.				
Kulu	Rotang ...	13,500	15	?	13½	7
	Hamtu ...	14,500	15	?	14	8
	Bhabbu ...	10,000	10	?	9	4
Plach	Basleo ...	10,500	13½	12	8	1
	Jalori ...	10,000	13	11	6	½
	Srikhand ...	15,000	32	36	25	19
	Gargarasan ...	17,000	27	28	20	13

The Commissioner notes that the figures are in the great majority of cases very much exaggerated, and that probably the numbers divided by two would give fairly correct values. He also states that at the end of the month there was no snow below 10,000 feet, and that many hill sides were clear up to a height of 12,000 feet.

BISSAHIR.—The Deputy Conservator of Forests, Bissahir Division, reports that at Kilba 10 inches of snow fell in December, 5 feet 11 inches in January, 1 foot 10 inches in February, and 1 foot 6 inches in March. He also states that there was a great quantity of snow in the Rupar Barung passes (between the Baspa and Palear valleys) at the beginning of March, but that it was melting very quickly and the passes were expected to be open earlier than usual.

LADAKH.—The Reverend F. Redstob sends the following interesting account of the winter at Leh in Ladakh (elevation 11,500 feet):—"We have had scarcely any snow during the month of February. According to information I collected from people coming from Dras and Kargyal in the beginning of February on my side of the Zogi pass they had also little snow. In Dras, they say, only about 3⅓ feet fell, and in Kargyal and on the Potola pass (13,410 feet high) not more than 2 feet, and the communication over that pass, which is frequently suspended for two months in winter, has been open almost throughout the whole of the past winter. The snowfall to the north must also have been light, as traders managed to cross the Kailas range from the Yarkhand direction even in the middle of January." In a subsequent letter dated 30th April, he states that the season was backward and the weather cold. He, however, makes no mention of snowfall or stormy weather.

UPPER SUTLEJ VALLEY.—The Reverend F. Redstob, in his letter of 30th April, says that he had just heard from a friend living in the Upper Sutlej valley that the weather was exceedingly dry in December, January, and February. A

heavy fall of snow was recorded in March, as large in amount as had fallen in that month during recent years.

THE HILL STATES OF THE NORTH-WESTERN PROVINCES.—The Civil Surgeon, Mussoorie, states that 1 foot 6½ inches of snow fell, chiefly on the 14th and 20th of January. No snow occurred in either February or March. Two feet 7½ inches of snow were recorded on the 14th and 19th January at Naini Tal and 2 feet in the Sub-Himalayan districts of Garhwal.

The Senior Assistant Commissioner, Kumaon, has sent the following statement of snowfall in the Johar pass and on the neighbouring mountains :—

	November. Feet.	December. Feet.	January. Feet.	February. Feet.	March. Feet.	April. Feet.
Johar Pass ...	2½	2	2½	1	*Nil*	*Nil*
Neighbouring ranges	3	3	3	2	*Nil*	*Nil*

SIKKHIM HIMALAYAS.—The following table gives the reported snowfall at seven passes in the Darjeeling district. The December and April returns have not been received in the Simla Meteorological Office :—

Name of Pass.	November. Ft. In.	January. Ft. In.	February. Ft. In.	March. Ft In.
Jelep-La	0 2	6 0	3 6	3 7
Cho-La	0 2½	6 3	3 5	3 6
Gnathui-La	0 1½	5 4	3 7	3 7
Dankhia-La	0 3	6 8	3 4	4 4
Thanku-La	0 2	4 10	3 3	3 3
Giagung	0 1½	6 0	3 5	3 5
Nako-La	0 1½	5 7	2 10	2 11

These amounts are, on the whole, greater than the snowfall of the previous year in the same district.

ASSAM HIMALAYAS.—The Deputy Commissioner of Kamrup states that on the Himalayas to the north of his district the fall of snow appears to have been unusually heavy. The passes were blocked to such an extent that communication with the plains was not effected for at least a fortnight later than the date at which it takes place in normal years.

The Deputy Commissioner of Durrung writes that the Charduar Bhutia Sát Rajas informed him that the snowfall was much heavier than in the previous year. In consequence of this the Bhutias were later in coming down to Tezpur than usual. The Bhutias stated that the snowfall on the Koriapara side was very heavy, and that in January there was an exceptionally heavy snowfall which blocked all the passes.

The Assistant Political Officer of Sadiya gives his opinion that the snowfall in the neighbouring mountains during December and January was greater than during the same months of the past four years. The temperature was also much lower than usual. All the hillmen with whom he conversed stated that an unusually heavy fall of snow occurred during the early part of the present year.

Summary.—The snowfall reports of the past cold weather season are consistent and appear to establish the following facts :—

1st.—The snowfall in the hills to the west of the Punjab was unusually small in amount and the season exceptionally dry as compared with recent years.

2nd.—In the Western Himalayas (*i.e.*, the Himalayas of the Punjab and North-West Provinces) the winter snowfall was also much smaller than usual. The snow level in March and April was consequently considerably higher than is generally the case in these months and the passes were open for traffic earlier than usual. The same appears also to have been the case in Ladakh and in the mountain ranges to the north. Hence generally the snowfall over the large mountain area to the north-east and east of the Punjab was considerably below the average amount of the season.

3rd.—The snowfall in the Eastern Himalayas (*i.e.*, the Himalayas of Sikkhim, Bhotan, and Assam) was above the average, and the meteorological conditions and weather in that portion of the mountain area north of India were in marked contrast to those of the area further west. The excess apparently increased in amount eastwards, and the fall was so large as to block the passes and delay traffic across them at least a fortnight. So far as can be judged, the heavy snowfall occurred chiefly during the earlier winter months, November to March, and not in April or May.

According to Mr. Blanford's snowfall theory, heavy snowfall during the winter and spring months in the mountain districts encircling Upper India impresses peculiar conditions on the distribution of pressure and the accompanying air motion which are antagonistic to the advance of the south-west monsoon current over the area thus affected. The partial failure of the monsoon current to penetrate into Upper India is hence followed by partial or complete drought. Mr. Blanford's theory is useful in that it assigns a physical cause for the effect. But our knowledge of the winter snowfall over the large Himalayan region must be very limited and imperfect for many years to come, and it therefore seems to be more practical and safer to judge of the probable character of the approaching monsoon by the antecedent meteorological conditions in India, as these can be ascertained with approximate accuracy from the observations taken daily throughout India.

That the snowfall of the past season has been much smaller than usual in the Western Himalayas is confirmed by the following peculiarities in the weather in Northern India during the north-east monsoon period, November to May :—

1st.—The cold-weather rains in Upper India were very deficient in amount and failed almost entirely in some districts.

2nd.—The cold weather terminated earlier than usual and the months of April and May were exceptionally warm and dry in Upper India. The mean daily temperature in the Punjab was from 5 to 10° above the average during these two months.

3rd.—Pressure has been very considerably below the average in the Punjab and North-Western Provinces.

4th.—The peculiar features were more exaggerated in May than in the preceding months, and the weather was drier in the plains as well as in the hills during that month than it has been for many years. There was also an unusual absence of thunderstorms in the hill districts.

The heavy snowfall in the Eastern Himalayas accompanied and preceded the following abnormal features in the weather in North-Eastern India :—

(1) The pre-monsoon rains (*i.e.*, from January to May) were unusually heavy in Bengal and Behar.

(2) The season was remarkably cool throughout Bengal and Assam until the middle of May, and the temperature was occasionally as much as 10 and 15° below the normal.

(3) An unusual number of cold-weather storms affected Bengal, Behar, and Assam, some of which were exceptionally severe. This was more especially the case in March and January.

The meteorological observations of the past five months furnish evidence of other abnormal conditions, which are of great importance in forecasting the character of the south-west monsoon of 1887. But before stating these, a few general remarks on the south-west monsoon will be of value.

The south-west monsoon current is undoubtedly the prolongation of the south-east trade winds. During the month of April and May, whilst temperature is increasing rapidly in the interior, strong sea winds blow in the coast districts of India. These winds, however, are quite local and do not extend to any great distance out at sea. About the middle or end of May a rapid advance of southerly winds takes place from the equator northwards, and these winds bring up general rain to India. Southerly winds, with more or less easting, extend up to the equator, and southerly winds, with more or less westing, to the north of the equator in the Bay of Bengal and Arabian Sea. These winds pass over a large sea area and arrive in India charged with aqueous vapour, which is chiefly condensed and precipitated as rain over Burmah and India. The very slightest experience shows that the rainfall is distributed very differently in different years, but that during any one year the larger and more prominent features are generally continued throughout the whole season. For example, last year, 1886, the rainfall was steadily and largely in excess during every month of the south-west monsoon period in Behar, and almost as markedly in defect in the Central Provinces. It is, therefore, certain that there must have been present before and during the rains of 1886 local peculiarities or abnormal features which determined a larger portion of the monsoon rainfall to South Behar and a smaller portion to the Central Provinces than usual.

The following is a statement of the chief peculiarities or abnormal features in the meteorology of India during the five months antecedent to the south-west monsoon period of the present year, and their probable influence upon the monsoon rainfall : —

The whole period, January to May, has been marked by pressure considerably below the average for the whole of India. In January there was an average deficiency of ·077 inch, in February a slight excess of ·008 inch, in March a deficiency of ·045 inch, in April a slight excess of ·010 inch, and in May a deficiency of ·032 inch. There has been for the whole period an average deficiency of ·027 inch. Hence pressure has been below the average, but the tendency has been for the deficiency to diminish in amount. This feature was hence less prominent just before the monsoon than it was in January. General deficiency of pressure during the pre-monsoon period is usually followed by an earlier and stronger monsoon than usual. It may be noted that diminished pressure usually accompanies deficient snowfall in the hills and a high temperature in Upper India.

In addition to this general feature there are two local features on the large scale which will probably have a very considerable influence on the distribution of the monsoon rains. These are :—

1st—Pressure relatively to the general average state has been in defect over the whole of North and North-Eastern India—that is, in the Punjab, North-Western Provinces, Central India, the Central Provinces, Bengal, Assam, and Burmah. This area hence formed a deeper sink or trough than usual into which the moisture-laden southerly winds are beginning to pour. The deficiency was small in Burmah, Bengal, and the eastern portion of the North-Western Provinces, and was large in the Punjab, the western districts of the North-Western Provinces, and some parts of the Central Provinces. Those conditions generally accompany a strong monsoon from the Bay of Bengal and favourable or heavy rains over the whole of Northern India.

2nd.—Pressure has been during the same period as uniformly in excess in West and South-West India (including Sind, Guzerat, Bombay, the western districts of the Central Provinces, the Dekkhan, and the southern districts of the Madras Presidency) as it was in defect in Northern and North-Eastern India. The deficiency is large in the districts represented by the stations of Bombay, Poona, Sholapur, and Belgaum. High pressure in the Bombay coast districts appears to act as a partial barrier to the Bombay monsoon current. It retards its commencement and diminishes the rainfall. This abnormal feature was very marked before and during the Madras Famine of 1876-77. There were, however, unfavourable conditions further north in North-Western India which do not appear to be present this year.

It may also be noted that these features were even more marked in May than they were in January.

The following hence appear to be the chief inferences from the present and previous meteorological conditions of the character of the approaching monsoon :—

(1) The general indications are favourable in North-East and North India and somewhat unfavourable in Southern India.

(2) The Bay of Bengal monsoon current will probably be stronger than usual, and give early and abundant rainfall to Northern India, and more especially in Upper India.

(3) The Bombay monsoon current will probably be retarded and perhaps be feebler than usual. It will be late in being established on the Bombay coast, and there is a strong probability that the rains will be more or less deficient in the Poona, Sholapur, Belgaum, and adjacent districts.

(4) Indications are especially favourable to abundant rain in the Punjab and to a less extent in the Central Provinces, and hence it is probable that the high pressure in the Bombay coast districts will be much less influential than in 1876-77, and that it will not do more than slightly retard the Bombay monsoon and diminish the rainfall in the districts above mentioned.

There are also apparently large local abnormal variations at Khandwa, Gya, and one or two other stations, but it is not possible to determine at present whether they are real, or are merely due to inaccurate observation.

JOHN ELIOT,

1st June 1887. *Offg. Meteorological Reporter to the Govt. of India.*

G. C. B. Press, Simla,—No. 79 M. R. G. I.—9-6-87.—100.

SUPPLEMENT TO

The Gazette of India.

No. 26.} CALCUTTA, SATURDAY, JUNE 25, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

INTERNATIONAL EXHIBITION OF INDUSTRY, SCIENCE AND ART, TO BE HELD IN GLASGOW IN 1888.

Circular No. $\frac{9Ex.}{7A—22}$.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Museums and Exhibitions),—under date Simla, the 20th June, 1887.

Read the following Despatch, with enclosures, from Her Majesty's Secretary of State for India, regarding the International Exhibition of Industry, Science and Art, to be held in Glasgow during the summer of 1888:

No. 50 (Statistics and Commerce), dated India Office, London, 28th April, 1887.

From—Her Majesty's Secretary of State for India,

To—His Excellency the Right Honourable the Governor-General of India in Council.

I forward herewith a copy of a letter, and its enclosure, from Sir Archibald Campbell Campbell, Bart., M.P., and the Honourable the Lord-Provost of Glasgow, for the information of Your Excellency, and for such measures as you may see fit to take, with a view to give publicity to the proposal they announce for holding an International Exhibition at Glasgow during the summer of 1888.

No. 488, dated Glasgow, March 1887.

From—Sir Archibald C. Campbell, Bart., President, and the Hon'ble James King, Chairman, Executive Council, International Exhibition of Industry, Science and Art, Glasgow,

To—Her Majesty's Secretary of State for India.

We have the honour to inform Your Lordship that an International Exhibition of Industry, Science and Art is to be held in Glasgow during the summer of 1888.

We enclose a list of the Executive Council, from which Your Lordship will see that the project is to be guided by the leading Noblemen and Gentlemen of Scotland, as well as by the most influential of the Citizens of Glasgow.

To show the interest taken in the proposed Exhibition, we may mention that the Guarantee Fund amounts to over £227,000, being larger than that raised by any previous Exhibition.

As Glasgow may be regarded as the Commercial Capital of Scotland, it is of the utmost importance that exhibits of Indian industries and arts should be collected for the information and education of the people.

Recognizing the great advantages which would accrue to the Exhibition through the support of Her Majesty's Government, we beg most respectfully to bring it under Your Lordship's notice, in the hope that you may be pleased to take measures for having the Exhibition made known throughout the Indian Empire by the India Office.

INTERNATIONAL EXHIBITION OF INDUSTRY, SCIENCE AND ART,
KELVINGROVE PARK, GLASGOW, 1888.

Under the patronage of Her Most Gracious Majesty the Queen.

T. R. H. Duke and Duchess of Edinburgh.
H. R. H. Duchess of Albany.
T. R. H. Prince and Princess Christian.
H. R. H. Duke of Cambridge.

President:

Sir Archibald C. Campbell, of Blythswood, Baronet, M.P.

Chairman of Executive Council:

The Hon. James King, Lord-Provost of Glasgow.

Vice-Chairmen of Executive Council:

J. H. Dickson.

John Shearer.

Honorary Secretaries:

Anderson Kirkwood, LL.D.
Alexander Bennet M'Grigor, of Cairnoch, LL.D.
James Roberton, LL.D.

Honorary Treasurers:

James Wyllie Guild, C.A.
Walter Mackenzie, C.A.
William Walls.

Secretary:

William M. Cunningham.

Treasurer:

Alfred Brown.

General Manager:

TO PATENTEES.

PATENTS, DESIGNS, AND TRADE MARKS.

46 & 47 VIC., CAP. 57.] [A.D. 1883.

An Act to amend and Consolidate the Law relating to Patents for Inventions, Registration of Designs, and of Trade Marks.

* * * * * * * * * * * * * * * *

PART II.—PATENTS.

Exhibition at Industrial or International Exhibition not to prejudice patent rights.

39. The Exhibition of an invention at an Industrial or International Exhibition, certified as such by the Board of Trade, or the publication of any description of the invention during the period of the holding of the Exhibition, or the use of the invention for the purpose of the Exhibition in the place where the Exhibition is held, or the use of the invention during the period of the holding of the Exhibition by any person elsewhere without the privity or consent of the inventor, shall not prejudice the right of the inventor or his legal personal representative to apply for and obtain provisional protection and a patent in respect of the invention or the validity of any patent granted on the application, provided that both the following conditions are complied with, namely:

(*a*). The Exhibitor must, before exhibiting the invention, give the Comptroller the prescribed notice of his intention to do so; and

(*b*) The application for a patent must be made before or within six months from the date of the opening of the Exhibition.

* * * * * * * * * * * * * * * *

PART III.—DESIGNS.

Exhibition at Industrial or International Exhibition not to prevent or invalidate Registration.

57. The Exhibition, at an Industrial or International Exhibition, certified as such by the Board of Trade, or the Exhibition elsewhere during the period of the holding of the Exhibition, without the privity or consent of the proprietor, of a design, or of any article to which a design is applied, or the publication, during the holding of any such Exhibition, of a description of a design, shall not prevent the design from being registered or invalidate the registration thereof, provided that both the following conditions are complied with, namely:

(*a*) The Exhibitor must, before exhibiting the design or article, or publishing a description of the design, give the Comptroller the prescribed notice of his intention to do so; and

(*b*) The application for registration must be made before or within six months from the date of the opening of the Exhibition.

"*Patents, Designs, and Trade Marks Act, 1883.*"

"Upon the application of Mr. William M. Cunningham, of 27, St. Vincent Place, "Glasgow, made to the Board of Trade on the Eleventh day of March, 1887, the Board of "Trade do hereby certify that the INTERNATIONAL EXHIBITION OF INDUSTRY, SCIENCE AND "ART, proposed to be held in the year 1888 at Kelvingrove Park, Glasgow, is an Interna- "tional Exhibition.

"Signed by order of the Board of Trade this Fifteenth day of March, 1887.

"COURTENAY BOYLE,

"*Assistant Secretary, Board of Trade.*"

PROSPECTUS.

It has been decided to hold an International Exhibition at Glasgow during the Summer of 1888, and Her Majesty the Queen has been graciously pleased to lend her Royal patronage to the undertaking.

The proposal has been taken up by the Nobility and Gentry of Scotland, and by the Citizens of Glasgow and other Towns, with such general approval that the Guarantee Fund already exceeds £235,000, and is still being increased.

The City of Glasgow is situated in the centre of the Chief Industries of Scotland, and has, including its suburbs, a population of 761,000, and including the surrounding district and neighbouring towns, a population exceeding 1,500,000. Edinburgh and other centres of population are within one hour's journey, and the Tourist routes to the Western Highlands radiate from Glasgow.

The objects of the Exhibition are to promote and foster Industry, Science and Art, by inciting the inventive genius of our people to a still further development in Arts and Manufactures, and to stimulate Commercial Enterprise, by inviting all Nations to exhibit their Products, both in the raw and finished state. Examples of the Manufactures by which Glasgow and the surrounding districts have become famous—Chemical, Iron, and other Mineral Products, Engineering, Shipbuilding, Electrical and Scientific Appliances, and Textile Fabrics—will be exhibited both in process of manufacture and in the finished state.

Similar and more varied Exhibits may be expected from other parts of Great Britain and from the Continent, whilst from America, India, the Canadian, Australian, Cape and other Colonies, promises of substantial support have been received.

A Fine Art Section will form an important part of the Exhibition. For the accommodation of the Art Treasures and Historical Objects a special block of the building will be reserved; and the most ample precautions will be taken for the security of valuable property lent for the purposes of the Exhibition. A special Prospectus, Classification, and series of Regulations will be issued for this Section.

Two Sections—viz., "The Women's Industries Section" and the "Artisan Section"—will be special features; and, in connection with the former, Her Grace the Duchess of Abercorn is Convener for Ireland, the Right Hon. the Countess of Rosebery for England and Wales, and the Hon. Lady Campbell, of Blythswood, and Mrs. King for Scotland, the Colonies, and Foreign Countries.

The site which has been granted by the City Corporation for the Exhibition Buildings extends to 60 acres, and is one of exceptional beauty and convenience. It comprises the Western portion of the Kelvingrove Park and the slopes of Gilmorehill, which are crowned by the University Buildings.

The Buildings which it is proposed to construct will cover about 10 acres, and will be erected according to plans prepared by eminent architects. The ornamental flower plots, pond, and fountains of the Kelvingrove Park will be included in the Exhibition Grounds, and the terraces in front of the University Buildings are well adapted for the effective display of electric lighting and pyrotechnic illuminations, as well as for the enjoyment of musical promenades and other entertainments which it is intended to provide.

The River Kelvin, which intersects the grounds, will be available for the Exhibition of Naval Shipbuilding and Life-Saving Apparatus, either in motion or not. The reach of the river which can be utilised for this purpose has a length of 1,500 feet, a width of 90 feet, and a depth of 6 feet.

The situation of the Exhibition Buildings is specially convenient of access for Exhibitors, as by means of the lines of rails—which can be made use of at night for the passage of railway trucks, and which will, if possible, be carried into the Exhibition Grounds at more than one point—heavy goods can be delivered at a minimum cost and with the least possible amount of risk. In addition to this, the port of Glasgow offers a cheap and ready means for the delivery and redelivery of sea-borne goods.

It is intended to afford full postal, telephonic, telegraphic, and banking facilities within the Exhibition Buildings, so that all necessary business may be conducted by Exhibitors and others without leaving the premises.

The whole arrangements are in the hands of the Executive Council, which has been chosen from the General Council of Guarantors, and has for its Chairman the Hon. the Lord-Provost of Glasgow.

GLASGOW, *April*, 1887.

President :

SIR ARCHIBALD CAMPBELL CAMPBELL, OF BLYTHSWOOD, BARONET, M.P.

PETER CLOUSTON, Esquire, 1, Park Terrace, Glasgow.

Regulations for Exhibitors.

1. AN INTERNATIONAL EXHIBITION OF INDUSTRY, SCIENCE AND ART, under the patronage of Her Majesty the Queen, will be held in Glasgow in 1888.
   Date.
2. The Exhibition will be opened early in May, and will continue open for a period of about six months.
   Opening.
3. The principal objects to be exhibited are comprised in the accompanying Classification, which must not be considered to be exhaustive.
   Objects.
4. It is not intended to issue any Awards.
5. Charge will be made for space, except in special cases to be determined by the Executive Council. The charge for space inside the Building will be 2*s.* per square foot, with a minimum charge of £2 10*s.* Whatever vacant space Exhibitors require around their Exhibits, beyond the usual passages, will have to be paid for, and Exhibitors requiring
   Expenses to be borne by Exhibitors.

wall-space must mention the fact when making application, when they will be informed on what conditions it will be granted. Space in the grounds will be let at rates to be arranged by the Committee, but in such cases plans must accompany application, and all surface damage must be made good by the Exhibitor on removal. Payment to the extent of 25 per cent. of the amount payable must accompany the application, and the balance must be forwarded on receipt of the notice of allotment. In no case, however, can the deposit be less than the minimun charge of £2 10s. Exhibits will on no account be allowed to be placed unless payment has been arranged. Spaces not occupied seven days previously to the opening of the Exhibition will be otherwise allotted, and all payments made in respect thereof absolutely forfeited. Exhibitors will have to pay all expenses of conveying, delivering, arranging, fixing, and removing their Exhibits, and also the cost of the erection of all fixtures, screens, and counters when required; and they must personally, or by a representative, superintend the transmission, reception, unpacking, installation, and (at the close of the Exhibition) the removal of their goods. The Executive Council reserve to themselves the right of doing whatever may be considered necessary at the expense of the Exhibitor, unless this regulation is strictly complied with. Should any goods be deposited in the Exhibition premises during the absence of the Exhibitor or his representative, the Executive Council will not be responsible for any loss or damage from whatsoever cause arising.

6. Motive Power, gas and water, will be supplied by the Executive Council free of charge within certain limits, and subject to certain regulations. Exhibitors requiring motive power must fill up the special Application Form which has been prepared for this Section, and which will be supplied by the Secretary upon application. Exhibitors requiring Counter Shafting, Pulleys, and Belting, must supply these at their own expense.

Motive Power.

7. Schedules of Application for space may be had from the Secretary, W. M. Cunningham, 27, St. Vincent Place, Glasgow. These must be filled up and returned on or before 1st October, 1887. The decision of the Space Committee will be notified as soon as possible after that date.

Applications to Exhibit.

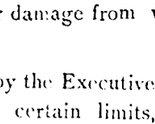
8. The nature of the articles which it is proposed to exhibit must be fully specified in the Form of Application for space.

Nature of Exhibits.

9. The Executive Council reserve the right to refuse any Exhibit, without stating any reason for so doing.

Right to refuse Exhibits.

10. The Foreign and Colonial Commissioners appointed by the respective Governments are invited to communicate with the Secretary. The Executive Council will place at their disposal all information and plans that may be useful to them.



Foreign and Colonial Exhibits.

11. Applicants for space from Countries in which no Commissioner has been appointed will correspond directly with the Secretary.

Foreign Countries.

12. The Executive Council will endeavour to obtain from the various Railways and Carriers special terms for the conveyance of Exhibitors' goods to and from the Exhibition, and these arrangements will be communicated to intending Exhibitors.

Railway Rates.

13. All packages containing goods for Exhibition must have painted on them the distinctive Mark 

together with the name and address of the Exhibitor, and the allotment number of the space. Labels for this purpose will be supplied to each Exhibitor.

Marks on Packages.

14. Packages from Foreign Countries must likewise have painted on them the distinctive mark.

Marks on Foreign Packages.

They must also be marked in such a way as to show distinctly the name of the Exhibitor and the country from whence they come, as well as the allotment number of the space.

15. No Case, Counter, Platform, Screen or Partition must (without special permission) exceed the following dimensions:

Dimensions of Cases, &c.

Show cases and partitions	10 feet above the floor.
Counters	2 feet 6 inches above the floor.
Platforms	1 foot above the floor.

16. Exhibitors may erect Railings around their Stands, and provide Canopies, subject to approval; in every instance these Railings and Canopies must be within the area of the space allotted. In the case of machinery in motion, it is imperative that it be sufficiently railed.

Railings and Canopies.

17. The Flooring must not be altered, removed, or strengthened, except by sanction of the Executive Council, and at the expense of the Exhibitor.

Flooring.

18. No Exhibitor will be permitted to display Exhibits in such a manner as to obstruct the light, or project beyond the space allotted, or impede the view along the open spaces, or occasion injury or inconvenience to other Exhibitors.

Obstructions.

19. In order to insure uniformity of decoration, no Exhibitor will be allowed to put up flags, banners, or other kind of decoration without permission, and for covering counters, screens, or partitions, a material will be selected, which may be bought by Exhibitors at the building.

Decorations.

20. Signs or Name-boards must be placed to the satisfaction of the Space Committee, and must in no case interfere with the lighting. They must be black, with gold letters.

Sign-boards.

21. All Hand-bills, Printed Matter, &c., connected with Exhibits, and intended for gratuitous distribution, must first receive the approval and authority of the Executive Council, which permission may be withdrawn at any time.

Hand-bills.

22. Cases must be unpacked immediately on arrival, and the empty cases removed by the Exhibitors or their Agents. The Executive Council cannot accept any responsibility with reference to empty cases, which must be at once removed from the buildings at the expense of the Exhibitors. The Executive Council reserve to themselves the right of doing whatever may be considered necessary, at the expense of the Exhibitors, unless this rule is strictly complied with.

Empty Cases.

23. Exhibitors will be required to provide all necessary attendance, and to keep their Stands and Exhibits properly cleaned and in good order during the whole period of the Exhibition. The Executive Council reserve the right to impose a penalty for a breach of this regulation, and to order the removal of any Attendant whose behaviour they consider unseemly.

Attendance.

24. No Exhibitor will be allowed to transfer any portion of the space allotted to him, or to allow any other than his own duly-admitted Exhibits to be placed thereon, except by permission of the Executive Council.

Non-transfer of Space.

25. All Goods must be exhibited in the name of the individual or Firm signing the Application Form.

Name.

26. Exhibitors are requested to mark the selling price of the articles exhibited for the information of visitors, to whom they may explain their Exhibits; but they will in all cases be forbidden, unless special permission in writing has been obtained from the Executive Council, to invite or to allow visitors to purchase goods for removal at the time of purchase, the Exhibition being intended for the purposes of display. Orders can be

Selling.

taken within the Exhibition, but the goods must be delivered from establishments outside. Special Regulations will, however, be made with regard to perishable articles manufactured in the Exhibition.

27. No Exhibit or part thereof can be removed before the close of the Exhibition without the special permission of the Executive Council. Exhibits not removed within fifteen days after the close of the Exhibition will be warehoused at the cost and risk of the owners, and whatever may remain after three months will be sold by auction, and the proceeds applied to defray expenses.

Removal.

28. No goods will be received prior to March, 1888, without special permission, nor after 20th April, 1888; but prior arrangements may be made for Motors, Boilers, or any Exhibits requiring under-building.

Date of Reception.

29. Special care will be required by the Executive Council, who may make special regulations, in cases where Fire or Gas is used by Exhibitors, and a responsible officer will be appointed to carry out the injunctions of the Council in this respect. Exhibitors will require to effect their own insurance on their Exhibits.

Fire Risk.

30. No explosives, or any substances which in the judgment of the Executive are dangerous, will be admitted, but they may be represented by models.

Dangerous Substances.

31. Spirits, oils, corrosive substances, and generally all substances which might spoil other articles or inconvenience the public, can only be exhibited in solid and suitable vessels.

Spirits, Oils, &c.

32. The Executive Council reserve to themselves the right of examining or testing any of the Exhibits. If any damage or injury shall be occasioned during the Exhibition by any exhibited machine, implement, or article to any visitor or other person, then the Exhibitor to whom such machinery, implement, or article may belong, shall be responsible for in the first instance, and shall besides indemnify and hold harmless the said Council from or against all actions, suits, expenses, and claims on account or in respect of any such damage or injury which may be so caused.

Testing. Damage caused by Exhibits.

33. No article exhibited may be copied, photographed, drawn, or reproduced in any manner without the special permission of the Exhibitor and of the Executive Council.

Photography, &c.

34. Passes to the Exhibition will be granted to Exhibitors and to a reasonable number of attendants. If these Passes be used by any but those to whom they are issued, they will be immediately cancelled.

Passes.

35. The Executive Council reserve to themselves the sole right of compiling and printing a Catalogue of Exhibits, under Regulations which will be duly notified.

Catalogue.

36. The right to alter, amend, add to, or cancel any of these Rules, is reserved by the Executive Council.

Right to alter Rules.

37. All who become Exhibitors shall be held by so doing to signify their compliance with the whole of these Regulations, together with such other Regulations as the Executive Council may issue from time to time.

Rules binding.

38. The Executive Council reserve the right to remove the Exhibits of any one who does not conform to the Regulations.

Right of Removal.

39. The Executive Council will not be responsible for loss or damage occurring from any cause whatsoever to any Exhibit or other property belonging to any Exhibitor or any other person.

Non-Liability.

The following are the Headings of the Classification of Exhibits:

Class I.—Agriculture, Horticulture, and Arboriculture.

Class II.—Mining and Metallurgy; Minerals; Quarrying and Fuel.

Class III.—Civil Engineering, Construction, and Architecture; Sanitary Appliances; Aëronautics.

Class IV.—Naval Architecture and Engineering.

Class V.—Prime Movers and means of Distributing their Power; Railway Plant.

Class VI.—Machinery; Machine Tools; Hydraulic Machines, and Machines for Raising Heavy Weights; Elements of Machines; Furnaces.

Class VII.—Road Carriages; Bicycles; Tricycles; Ambulance.

Class VIII.—Cutlery and Ironmongery; Fire Arms; Military Weapons.

Class IX.—Heating and Cooking Apparatus.

Class X.—Gas and Illuminants (other than Electricity).

Class XI.—Electricity.

Class XII.—Chemistry and Apparatus, Processes, and Appliances connected with Applied Chemistry and Physics; Philosophical Instruments and Apparatus.

Class XIII.—Food (including Drinks).

Class XIV.—Textile Fabrics; Leather; India-Rubber and Gutta-Percha; Clothing.

Class XV.—Paper; Printing; Bookbinding and Stationery.

Class XVI.—Furniture and Decoration; Fancy Goods.

Class XIX.—Fisheries.

Class XX.—Education, and Apparatus for Physical Training.

Class XXI.—Music and Musical Instruments.

Class XXII.—Fine Arts (including Photography, Engraving, &c.).

Women's Industries Section.

Artisan Section.

In the Fine Art Section, Women's Industries Section, and Artisan Section, the space will be given free. In all the other Sections, space will be charged for, at the rate of 2s. per square foot.

Read also the following Notification, dated the 22nd April, 1887, issued by Messrs. Finlay, Muir & Co., on behalf of the Glasgow Exhibition Executive Council:

Glasgow International Exhibition.

An International Exhibition will be opened at Glasgow in May, 1888, for which specimens of art-exhibits will be received from private exhibitors.

2. Besides articles which will be displayed at the Exhibition during the whole time it is kept open, extra sets of art-manufactures will be accepted for sale and immediate delivery to purchasers. Stalls will be opened at the Exhibition for the sale of such articles. The price of articles sold either at the Exhibition or in the stalls will be at once realised and remitted to the exhibitors in India every week or fortnight, as it may be found convenient.

3. Articles of inferior workmanship, or articles on which an undue price has been put, will not be accepted.

4. Applications for space should be made in the accompanying form before the 1st of July next. If the exhibits are approved, space will be given free.

5. The Exhibition authorities undertake to pay freight of such exhibits from Calcutta, Bombay, or Madras to Glasgow, and the same of unsold articles returned from Glasgow to the above-mentioned ports. Inland freight in India must be borne by the exhibitor.

6. All exhibits must be despatched from India before the 1st of January, 1888.

7. The authorities of the Glasgow International Exhibition have, with the permission of the Government of India and the Trustees of the Indian Museum, entrusted the general

arrangements of the Indian Section of this Exhibition to Mr. T. N. Mukharji, F.L.S., Assistant Curator, Economic and Art Museum, Calcutta, and the collection of exhibits from the different Provinces of India, except Madras and Bombay, Committees having been appointed to look after the representation of these Presidencies.

For the whole of India the entire working of the following Departments has been left in the hands of Mr. Mukharji:

Products (Raw, &c., Native Shops, &c.).
Ethnology (Types, Models, &c.).
Tea, Coffee, and Cigar Rooms.

8. The following are the Committees:

For Madras—

Dr. G. Bidie, M.B., F.L.S., C.I.E, Surgeon-General with the Government of Madras.
Dr. E. Thurston, L.R.C.P., L.R.C.S.E., Superintendent, Central Museum.
Mr. E. B. Havell, Principal, School of Art.
Mr. G. Jackson, of Messrs. Gordon, Woodroffe & Co., to whom all communications should be addressed.

For Bombay—

Hon. Forbes Adam (Chairman).
Sir Jamsetjee Jeejeebhoy.
Mr. Jairazbhoy Peerbhoy.
Mr. Varjeevundass Madhawdass.
Hon. S. D. Sassoon.
Mr. E. Greenwood, Principal, School of Art.
Mr. J. Littleton Symons, Messrs. Finlay, Muir & Co.
Mr. A. Arthur. } to either of whom all communications should be addressed.

For N. W. Provinces and Oudh—

Mr. A. H. Pirie, Secretary, Provincial Museum, Lucknow.
Babu Gungadhar Ganguli, Assistant Curator, Provincial Museum, Lucknow.

For Jaipur and Rajputana—

Surgeon-Major T. H. Hendley.

For Bengal and the North-West.—All communications should be addressed to Mr. T. N. Mukharji, F.L.S., Assistant Curator, Economic and Art Museum, Calcutta, or to Mr. R. Williamson, of Messrs. Finlay, Muir & Co., Calcutta, who, with Sir Edward Buck, Secretary to the Government of India, as Chairman, will form a Committee for Bengal.

On behalf of the Glasgow Exhibition Executive Council.

FINLAY, MUIR & Co.

Calcutta, 22nd April, 1887.

GLASGOW INTERNATIONAL EXHIBITION.

Form of Application for Space.

Name of Exhibitor.	Address.	Details of Exhibits.	Price.	Space required.	Remarks.

ORDER.—Ordered, that the above papers be published in the Supplement to the *Gazette of India* for general information, and that a copy be sent to the Local Governments and Administrations noted on the margin for information, with the request that the papers may be published in the Local Gazette.

Ordered also, that a copy be forwarded to the Chief Commissioner of Ajmere and Merwara for information, and to the Foreign Department for information and communication to Native States.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 23rd JUNE, 1887.

GENERAL REMARKS.—Except in the Punjab, Madras, and Rajputana, where the rain has been slight, there has been generally a good fall throughout the country during the week under report.

Kharif sowings are most advanced in Bombay and the Central Provinces; in the North-Western Provinces and Oudh, the Punjab, Berar and Hyderabad, and Central India and Rajputana, the preparation of the land for the *kharif* crops is being actively prosecuted.

In Madras, Mysore and Coorg agricultural prospects are good.

The autumn sowings are progressing well in Bengal, where the early rice is also thriving. Rice is being sown in Bombay, the Central Provinces, Coorg, and in Burma ploughing for the crop is well advanced. In Assam three varieties of rice are being reaped, and the cultivation of a fourth is progressing.

Heavy rain in Bengal has done some injury to indigo; but in the North-Western Provinces and Oudh the prospect of the crop is good.

Sugarcane is doing well in the North-Western Provinces and Oudh.

Cotton-sowing has commenced in Berar.

The public health is generally fair, though cholera is more or less prevalent everywhere, but especially in Bombay and the North-Western Provinces and Oudh, where the mortality in a few districts is still high.

Prices continue to rise in the North-Western Provinces and Oudh and in two districts in the Punjab. Elsewhere they are generally stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(June 22nd)		
Bellary . . .	Average last week since revised, ·37; this week, ·15.	Standing crops generally good. Cholera decreasing in four and cattle-disease also decreasing in two taluks.
Kurnool . . .	Average last week since revised, ·32; this week, ·60.	More rain wanted. Agricultural operations progressing. Cholera abating. Small-pox in three, and cattle-disease decreasing in six taluks.
Ganjam . . .	Average 2·12	Small-pox in four and fever in two divisions. Cholera decreasing, and cattle-disease in two taluks.
Kistna . . .	Average 2·36	Harvest crops on sides of irrigation channels, outturn below average. River 1·2 feet over Anicut. Slight fever prevalent. Cholera decreasing in three and cattle-disease increasing in six taluks.
Chingleput (Madras) .	Average ·10	Standing crops fair, but withered to some extent. Harvest wet and dry crops, outturn indifferent. Small-pox prevalent, and cattle-disease decreasing in three taluks.
Coimbatore . . .	Average ·28	Standing dry crops good. Harvest *cholum* and *cumbu*, outturn above average. Fever and cattle-disease prevalent.
Tanjore . . .	Average ·15	Standing crops generally good. Harvest paddy and gingelly, outturn below average. Slight cattle-disease in one taluk.
Madura . . .	Average ·07	Slight cattle-disease in one taluk.
Malabar . . .	Average 11·57	Agricultural operations progressing. Fever in two and slight small-pox in eight taluks.
Travancore . .	5·05	Paddy thriving. Small-pox and fever in places.
		General Remarks.—General prospects good.
Bombay—(June 22nd)		
Karachi . . .	. . . . .	River at Kotri on 19th, 11 feet 6 inches against 11 feet 4 inches on same date last year. Fever in four and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Tatta 24, 40 and 40 pounds per rupee, respectively.
Hyderabad . . .	Badin, ·07	*Rabi* harvesting continues in two talukas. *Kharif* cultivation in progress. Fever in three, small-pox in two, and cattle-disease in one taluka. River at Kotri on 19th, 11 feet 6 inches against 11 feet 4 inches on same date last year. Wheat 24, *bajri* 37½, *jowari* 40, white rice 20, and red rice 30 pounds per rupee.
Ahmedabad . . .	5·35; total 5·90; rain in all the talukas—maximum 9·10 in Gogha and minimum 1·97 in Dhandhuka.	Ploughing for *kharif* in progress throughout the district. Public health good. Wheat 29 and *bajri* 30 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda . . .	. . . . .	No report received.
Surat	Maximum 9·59 in Jalalpore and minimum 3·60 in Chorasi.	Sowing operations continue. Fever in Bardoli and cholera in some villages of Pardi and Bulsar talukas. *Jowari* 35 and *nagli* 42 pounds per rupee.
Nasik . . .	Rain throughout the district—maximum 12·74 in Igatpuri and minimum ·96 in Chandor.	Preparation for *kharif* sowing in progress throughout the district. Small-pox in Yeola taluka. Cholera in Yeola, Malegaon, and Nandgaon talukas, 216 attacks, 91 deaths. Prices stationary.
Colaba (Bombay) . .	Rain on 15th, 16th and 21st; heavy on 15th and 16th, 5·49; total 19·70, being 4·34 above average.	Abnormal temperature rose from 6° cool on 15th to 1° cool on 17th, remained 1° cool on 18th, and was *nil* from 19th to 21st. Vapour in air normal. Abnormal wind westerly from 15th to 17th. Wind normal from 18th to 21st.
Poona	Rain throughout the district; maximum 5·51 in Petha Moshi and minimum ·16 in Petha Baramati.	More rain wanted in Indapur, Sirur, Bhimthari, and Haveli talukas. Cholera, 11 cases, 6 fatal. Cattle-disease in Indapur and Purandhar talukas. *Bajri* 43 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	Rahuri, 1·54; Parner, ·90; Newasa, ·87; Sheogaon, and Kopergaon, ·74; Sangamner, ·49; and Akola, ·48; very slight in rest.	Rain required for *kharif* sowings. Cholera in seven talukas, attacks 353, deaths 153. *Bajri* 33 and *jowari* 54 pounds per rupee.
Sholapur . . .	Sholapur, ·66; Barsi, 1·03; Madha, ·13; and Pandharpur, ·04.	Sowing operations retarded for want of sufficient rain. Cattle-disease in Sholapur, Barsi, Pandharpur, and Sangola talukas. Cholera here and there in the whole district, 542 attacks, 221 fatal. *Jowari* 57 and *bajri* 49¾ pounds per rupee.
Dharwar . . .	Rain general; maximum 3·75 in Hangal and minimum ·13 in Ron.	Sowing of rice commenced in some talukas. Scarcity of fodder in Nawalgund and of drinking-water in Gadag and Kod talukas. Cholera in Gadag and Ranibennur talukas, 56 cases, 28 fatal. Slight cattle-disease in Nargund Petha. Rice 23¾ and *jowari* 54¾ pounds per rupee.
Kanara . . .	Karwar, 16·35; total 52·68; Kumpta, 20·06; Honawar, 19·36; Sirsi, 11·54; and Haliyal, 4·11.	Rice plants thriving. Slight fever and cattle-disease in Haliyal and Sirsi. Common rice in Karwar and district average 12 seers per rupee.
Rajkot . . .	·94; total 3·28	Weather hot and cloudy. Measles in some villages in Und and Jetpur. Public health generally good. Sowing operations commenced in some places. Wheat 25, *bajri* 24 and *jowari* 29 pounds per rupee.
		General Remarks.—Fair rain throughout the Presidency, except Sind, where slight rain fell in parts of two districts. More rain wanted for *kharif* sowings in parts of the Deccan. Sowing operations going on in fifteen districts, and completed in the Tanna and Colaba districts. Fever in parts of seven, small-pox in parts of five, and cholera and cattle-disease in parts of eleven districts.
Bengal—(June 22nd)		
Chittagong (June 21st)	5·80	Weather seasonable. Transplantation goes on. Extraordinary high tide at end of May damaged some coast lands in Cox's Bazar. Prices stationary. Cholera still reported. Public health otherwise good.
Dacca	2·71	Weather hot and cloudy. *Aman* paddy and jute doing well. Rivers rising rapidly. Public health good.
24-Pergunnahs (Calcutta).	4·56	Weather hot, with occasional rain. Prospects promising. *Aus* sowings in progress. Public health generally good.
Khoolna . . .	·18	Weather rainy and cloudy. Ploughing for *aman* paddy going on. *Aus* crop doing well. Public health good.
Moorshedabad . .	2·02	Weather very hot and cloudy at intervals. *Aman* being sown. Jute and sugarcane promising. Public health good.
Pubna	·54	Weather rainy and cloudy. Prospects of crops good. General health good.
Dinagepore . . .	8·68	Rain on four days. *Bhadoi* crops have suffered to some extent. No cholera.
Rungpore . . .	17·67	Crops damaged by flood. Public health fair.
Midnapore . . .	1·94	Prospects excellent.
Burdwan . . .	·78	Prospects of all crops good. Prices low and unchanged. Public health good.
Bhagulpore . . .	4·47	Sowing and transplanting begun. *Moong* crop in the north poor, and mango crop everywhere an utter failure. Indigo prospects going off a little. Cholera fast abating.
Purneah . . .	6·59	Crops doing well, but indigo and to some extent jute have suffered from heavy rain. Sowing and weeding in progress. Public health fair. Rivers high.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Durbhanga . . .	4·50	Prospects of early rice favourable. *Bhadoi* sowings in progress. Prices rising. Cholera still reported from interior.
Chumparun . . .	1·77	*Mahai* of indigo has commenced. *Bhadoi* sowings in progress. Prices stationary. Cholera decreasing.
Patna	3·46	Weather hot, with occasional showers. Sowing of *bhadoi* crops is being pushed on. In some places *makai* and *kauni* have germinated well. Paddy also being sown. Sugarcane promising. Cholera still prevalent in Barh and Bihar subdivisions.
Gya	4·63	Weather hot. *Bhadoi* being sown. Cholera, fever and small-pox reported from all the subdivisions.
Hazareebagh . .	Rainfall general and ample.	Weather seasonable. Agricultural operations in full progress, and prospects favourable. General health good.
Cuttack . . .	2·73	Weather cloudy, with occasional showers of rain. Rice plants growing well. Sowing still going on in many places. Public health generally good. Cholera and cattle-disease reported from some parts in interior.
		General Remarks.—Weather hot and cloudy throughout the week. Strong monsoon current is now blowing over the Lower Provinces. Rainfall has been general, and in some of the Northern Bengal districts has been very heavy. Jute, early rice and indigo are generally doing well, but too much rain in North Bengal has done some injury. *Aman* and *bhadoi* sowings going on well. Cholera has somewhat abated in the Patna division. General health is good.
N.-W. Provinces and Oudh—(June 22nd)		
Benares (June 21st)	1·6 in the district	Prices steady. Some cases of cholera and cattle-disease reported.
Ballia („ 20th)	Averaging 2·90	*Kharif* sowings fairly begun. Supplies ample. Sporadic cholera on the increase.
Gorakhpore („ „)	2·50 at Sadr	Rice sowings commenced. Prices stationary. Cholera decreased considerably.
Fyzabad („ 21st)	About 2·00 at Sadr	Supplies sufficient. Cholera in all tahsils.
Lucknow („ 20th)	1·60	Markets well supplied. Prices stationary. Public health good. A few cases of cholera reported in district.
Rai Barelli („ „)	4·90 at Sadr on 15th	Supplies abundant. Prices rising. Cholera prevailing.
Partabgarh („ „)	Rain on 15th	Prices stationary. Cholera continues.
Allahabad („ 21st)	Slight rain in three tahsils on 16th and 17th.	Markets full. Prices rising slightly. Cholera still continues in Trans-Ganges and Trans-Jumna tracts. A few cases in the city.
Cawnpore („ „)	·20 in one tahsil	Weeding of indigo in progress. Prices stationary. Cholera in places. Cattle-disease in four pergunnahs.
Farakhabad („ „)	Averaging about 1·00 in district.	Ploughing commenced. Maize and cotton being sown. Markets well supplied. Prices lowering. Itch and fever in one tahsil and sporadic cholera in another.
Sitapur („ 22nd)	From 1·30 to 3·30	Fields being prepared for *kharif*. Prices steady. Some cases of cholera reported.
Bareilly („ 20th)	. . . . .	Rain partial, but on the whole beneficial. Ploughings extensively begun. Prices continue to show an upward tendency. Health of people and cattle good.
Banda („ „)	Rain in seven tahsils	Supplies ample. Prices rising. Cholera throughout the district. Cattle-disease in three villages.
Kumaon („ „)	Rain every day.	Prices stationary. Cholera continues. Cattle-disease decreasing.
Agra („ „)	. . . . .	Weather hot and cloudy. Cane and indigo being irrigated. Prices steady. Cholera in two tahsils. Small-pox in city.
Jhansi („ „)	Slight rain in parts of district.	Prices rising. Cholera, deaths exceed 100 a day. Small-pox continues.
Meerut („ 21st)	Slight rain	Cane and indigo flourishing. Prices steady.
		General Remarks.—Rainfall general. Ploughing for *kharif* in progress. Cane and indigo crops doing well. Supplies ample, though prices are rising. Cholera continues to be reported and is severe in Jhansi. Cattle-disease in a few districts.
Punjab—(June 22nd)		
Hissar (June 21st) .	. . . . .	Rain much wanted. Health good. Prices stationary.
Delhi . . .	·18	More rain wanted. Health good. A few cases of cholera. Prices slightly rising. *Kharif* ploughings commenced.
Umballa . . .	1·89	Cholera abating. Prices stationary. *Kharif* ploughings in progress.
Jullundur . . .	·50	Health good. Prices stationary. *Kharif* ploughings in progress.
Ferozepore . . .	·90	Health good. Prices stationary.
Amritsar . . .	·40	Health good. Prices stationary.
Sialkot . . .	. . . . .	No report received.
Lahore . . .	1·90	Health good. Prices stationary. *Kharif* ploughings in progress.
Multan . . .	·90	Health good. Prices stationary. *Kharif* sowings in progress.
Rawalpindi . . .	·20	More rain wanted. Health good. Prices rising. *Kharif* sowings commenced.
Shahpur . . .	Slight rain	Health good. Prices high and stationary. *Kharif* sowings in progress.
Dera Ismail Khan .	·57	Health fair. Prices stationary. *Rabi* outturn much below average.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Peshawar . . .	. . . .	Rain wanted. Health fair. Prices stationary. *Kharif* sowings in progress. *General Remarks.*—Rain has fallen in Delhi, Umballa, Jullundur, Ferozepore, Amritsar, Lahore, Multan, Rawalpindi, Shahpur, and Dera Ismail Khan, and is wanted in Hissar and Peshawar. Health is good, except in Dera Ismail Khan and Peshawar where it is fair. Prices are slightly rising in Delhi, rising in Rawalpindi, high and stationary in Shahpur, and stationary elsewhere. In Dera Ismail Khan the *rabi* outturn is below average. Fodder is scarce in Shahpur. *Kharif* ploughings commenced in Delhi and Rawalpindi, and sowings in progress in Umballa, Jullundur, Lahore, Multan, Shahpur, and Peshawar.
Central Provinces— (June 22nd)		
Nagpur . . .	4·26	Weather rainy. Ploughing continues. Prices stationary. Health good.
Jubbulpore . . .	4·22	Heavy thunderstorm on 19th. *Kharif* sowings commenced. Cholera prevalent. Prices steady.
Saugor . . .	5.20	*Kharif* operations in progress. Health good. Prices rising.
Seoni . . .	·34	Weather cloudy and cool. Sowings commenced. 46 cases of cholera, 29 deaths. Prices slightly risen.
Hoshangabad . .	Heavy rain	Weather cool. Ploughing in progress. Fever prevalent. Cholera and small-pox in places. Prices steady.
Khandwa . . .	1·60	Weather cloudy. *Kharif* sowings commenced. Health fair. Prices rising.
Bilaspur . . .	1·19	Rice sowings progressing. Sugarcane favourable. Cattle-disease disappearing. Trade dull. Prices rising.
Raipur . . .	5·62	Weather cloudy. Rice sowings progressing favourably. Prices steady.
Sambalpur (June 18th)	·16	Weather cloudy and warm. Rain wanted. Ploughing and sowing in progress. Cholera in interior. Prices rising. *General Remarks.*—Good rain has fallen in all districts, except Sambalpur. *Kharif* sowings in progress. Cholera in four districts and fever in one. Prices rising in four districts.
Burma—(June 22nd)		
Akyab (June 18th)	5·94 (Total rainfall to date 26·75).	Some cattle-disease. Ploughing progressing.
Bassein . . .	6·84 (Total rainfall to date 21·58).	Some cattle-disease in town.
Rangoon . . .	. . . .	Public health and health of cattle good.
Amherst (Moulmein) .	12·02 (Total rainfall to date 40·49).	Ploughing and transplanting progressing. Prospect good.
Tavoy	11·17 (Total rainfall to date 48·48).	Ploughing progressing. Sowings commenced.
Pegu	4·00 (Total rainfall to date 37·47).	Sowing progressing. Ploughing fairly advanced.
Henzada . . .	5·58 (Total rainfall to date 20·54).	Ploughing commenced.
Prome	1·62 (Total rainfall to date 8·02).	Slight cholera and cattle-disease. Ploughing commenced.
Toungoo . . .	3·16 (Total rainfall to date 15·59).	
Thayetmayo . . .	1·08 (Total rainfall to date 4·47).	
Yemethen . . .	1·19	Spring harvest progressing.
Kyaukse . . .	. . . .	Condition of crops good.
Myingyan . . .	. . . .	Slight measles and small-pox. Food-supply sufficient and prices ordinary. *General Remarks.*—Except some cholera and cattle-disease here and there, the health of Lower Burma is good. Ploughing well advanced and sowings begun. Reports received from five Upper Burma districts. Health generally good, and crop prospects satisfactory.
Assam—(June 22nd)		
Gauhati (June 21st) .	1·84	Weather rainy. Public health fair. Cattle-disease reported from Beltola. *Ahu* crop in lowlands being harvested. Ploughing land for *sáil* commenced. Prospects of crops good.
Sylhet	14·93	State and prospects of the crops good.
Cachar	4·07	Weather cloudy with rain. Cultivation of *sáil* and reaping of *dumai* and *murali* crops continue. Common rice 11 seers 13¾ chittacks per rupee. 25 deaths from cholera from Sadr reported. Prospects of tea good.
Dibrugarh . . .	3·87	Weather seasonable. Transplanting of *sáil* progressing. *Ahu* doing well. District healthy.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Mysore and Coorg— (June 22nd)		
Bangalore . .	Rainfall good in Shimoga, Kadur, and Hassan districts, and slight in other parts.	Standing crops in good condition. Prospects of season fair. More rain needed in the Bangalore district for agricultural operations. Public health good. Cattle-disease and small-pox prevailing in parts. Prices slightly risen in the Bangalore and Hassan districts.
Mysore . .		
Mercara . . .	10·72	Sowing of rice lands for *kurtika* (autumn) crops in active progress. Rains somewhat excessive. Small-pox much abated.
Berar and Hyderabad— (June 22nd)		
Amraoti . . .	4·24	Weather cloudy and rainy. Monsoon apparently commenced. Sowing of cotton in progress. Slight sickness in Amraoti taluk only. Wheat 15 and *jowari* 25 seers per rupee.
Akola . . .	2·10	Weather cloudy and close. More rain expected. Ploughing continues and sowing has commenced in places. Cattle-disease and small-pox prevalent. Cholera still reported.
Hyderabad (June 23rd)	Average 1·5; total 3·67.	Preparations for *kharif* sowings in progress. Cholera still prevalent in some places. Prices—wheat 13¾, coarse rice 11¾, white *juar* 19, yellow *juar* 21½, and *tur* 14¾ seers per current sicca rupee.
Central India States— (June 22nd)		
Indore . . .	1·79	Weather oppressive. No rain for several days.
Morar (Gwalior) . .	·06	Health good. Weather cloudy.
Neemuch . . .	5·04	Weather cold. Health good.
Goona . . .	·18	Health and prospects good.
Sutna . . .	·77	Cholera has disappeared at Rewa, but is reported at Maihar. Weather cloudy. Health and prospects good.
Agar . . .	3·49	Health fair.
Sehore . . .	1·03	Weather seasonable. Health good.
Nowgong . . .	·51	Weather changing. Prices steady. Cholera reported from Baoni and Chhatarpur.
Bhopawar . . .	·82	Weather cloudy and close. Health good. Prices steady.
Rajputana—(June 22nd)		
Abu (June 22nd)	1·48	Weather cloudy and monsoonish at times, but no steady rain yet, seasonable.
Sirohi („ 19th)	·94	Tanks dry; wells good. Health good. Weather overcast and windy
Marwar („ 18th)	·04	About two months' water in Jodhpore city tanks. Health good, though unhealthy in some districts. *Kharif* sowings commenced, where favoured with rain. Weather cloudy. Prices tending to fall.
Pertabgurh („ „)	1·15	Little water in wells. Health good. Prices fluctuating. Weather cloudy.
Meywar („ „)	·88	Tanks and wells low. Health fair. Diarrhœa rather prevalent. Prices steady. Weather cloudy and fairly cool.
Harowti („ „)	Deolie, ·88; Tonk, ·62; Shahpura, ·09.	Weather cloudy. Ploughing commenced. Some cholera in Jehazpore.
Jhallawar („ 19th)	1·45	Weather cloudy and cool. Ploughing commenced.
Ajmere („ 21st)	·88	Weather hot and occasionally cloudy. Seven cases of cholera in Ajmere city, all fatal. Ploughing continues. Prices slightly falling.
Jeypore („ „)	Slight rain	Weather hot and cloudy.
Kerowlee („ 18th)	·34	Tank dry; wells drying. Sugarcane being irrigated. Land being prepared for *kharif*. Rain wanted. Small-pox among cattle. Prices rising. Weather very hot.
Dholepore („ „)	. . . .	Weather cloudy and sultry. Wells drying; tanks almost dry. Small-pox disappearing. Fever still prevails. Prices rising.
Bhurtpore („ 21st)	. . . .	Weather close. Health fair. Prices rising.
Ulwar („ „)	Slight rain	Ploughing progressing. Few cases of cholera, otherwise health good. Prices rising.
Kotah („ 18th)	1·03	Health good Weather cloudy.
Kherwara („ 19th)	·50	Tanks and wells low. Ploughing commenced. Health good. Prices steady. Weather showery.
Bickanir („ 18th)	1·25; Rani, ·50	Fever in three districts and small-pox in one. Prices rising. Weather very hot and cloudy.
Nepal—(June 17th)		
Katmandu (June 16th)	2·14	Weather seasonable. Prospects fair.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 22nd June, 1887.

There has been comparatively little change in the weather during the past week. Both the branches of the monsoon have been intermittent in character, the strength of the wind both on the Bengal and on the Bombay Coasts varying considerably between the commencement and end of the week.

On the 16th the winds were blowing very strongly and steadily along the Bombay Coast, and thence extended inland to the majority of stations in Bombay and the Central Provinces. The rainfall accompanying these winds was smaller than of late, but over the Coast districts the amounts were fairly large, and in the Central Provinces, Central India, and Rajputana were moderate.

On the 17th there were indications of the Bombay current becoming feebler, the winds on the Malabar Coast having fallen lighter; but otherwise there was little change, moderately heavy rain being reported from the West Coast and showers from Central India and the Central Provinces. A further decrease in the strength of the Bombay monsoon was reported on the 18th; but the rainfall continued much the same as on the preceding day.

By the 19th the strength of the winds on the West Coast had fallen below the average, and the rainfall over the districts fed by this branch had correspondingly decreased.

On the 20th, 21st, and 22nd there was practically no change in the West, an unusually feeble monsoon blowing all along that Coast, under the influence of which the rainfall gradually decreased, till at the close of the week a well-marked break in the rains obtained throughout Western India.

On the eastern side of the Peninsula the general changes were the reverse of those obtaining for the Bombay branch. On the 16th two small cyclonic circulations,—one over the Sonthal Pergannahs, the other in Oudh,—gave fairly heavy and general rain to most parts of Bengal; but the monsoon current itself was moderate, and the Coast stations had little or no rain. On the 17th the Bay of Bengal current was even feebler than on the previous day, calms being reported from Behar; and though moderate showers had fallen in Bengal, Assam, and Behar, the weather had become drier and warmer and the skies clearer in the Punjab, North-Western Provinces, Behar, and Rajputana. On the 18th the winds were stronger at the Ceylon stations and at Diamond Island, and the Bengal monsoon current was strengthening generally over the Bay.

On the morning of the 19th a further strengthening of the monsoon was reported, and at the same time a small depression had formed near the head of the Bay. This depression advanced towards Central Behar on the 20th, giving fairly general rain to North-Eastern India and occasioning much damper weather throughout Northern India. By the 21st the disturbance had reached Patna, giving rain to a large part of Northern and North-Eastern India and moderately strong monsoon winds on the Bengal Coast. Subsequently the depression filled up without moving further westward, but the strong monsoon winds it had occasioned brought rain and unusually cool damp weather to most parts of Northern and North-Western India.

Both pressure and temperature have been below the monthly average. In the latter element, the greatest defect was in the Central Provinces and the Berars, where it amounted to as much as 6°; at the hill stations and in Guzerat the defect was about 4°, and in the Punjab, the North-Western Provinces, and Bombay about 3°.

The rainfall of the Bengal branch for the three weeks June 1st to 22nd is still short, as compared with the average for the same period in Burmah, Lower Bengal, and the greater part of the Punjab, but is above elsewhere; while the rainfall of the Bombay branch is above the average at all stations on the West Coast and at most of those in the Central Provinces, but is short elsewhere. On the West Coast the relative excess is less than it was at the close of the previous week, showing that the rainfall of the past seven days has been deficient. In the Deccan the deficiency is considerable.

Divisions.	No. of Stations.	Total Rainfall.
Burmah	6	27·90
Bengal and Assam	16	67·64
N. W. Provinces and Oudh	8	8·98
Punjab	8	6·00
Hill Stations	5	8·71
Ceylon	2	2·51
Malabar Coast	5	33·25
Bombay	8	37·59
Berars and Central Provinces	10	24·74
Guzerat and Central India	6	8·11
Sind—Rajputana	3	2·41
Madras	10	3·17

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 30th JUNE, 1887.

GENERAL REMARKS.—Good rain has fallen generally throughout the country during the week under report. The falls were lightest in the North-Western Provinces and Oudh and the Punjab.

Kharif sowings are progressing favourably in Bombay, Berar, and the Central Provinces. In Sind great anxiety is reported to be felt for *kharif* cultivation, owing to the inundation of the Indus being much below average. In the North-Western Provinces and Oudh and the Punjab more rain is wanted for the *kharif* ploughings.

Agricultural prospects continue satisfactory in Madras, Mysore and Coorg.

In Bengal the early rice promises well, and the *aman* rice is being transplanted. One variety of the rice crop is also being transplanted in Assam, and the reaping of three other varieties still continues. In Burma sowings have begun, and in Bombay they are progressing.

Except in Rajshahye and Bhagulpore, indigo is doing well in Bengal, and the crop is in good condition in the North-Western Provinces and Oudh.

Cotton sowings have commenced in the North-Western Provinces and Oudh.

Tea promises well in Assam.

Cholera is increasing in the North-Western Provinces and Oudh and in three districts of the Bombay Presidency; the mortality from the disease is still high. Elsewhere the public health is generally satisfactory.

Prices are rising in the North-Western Provinces and Oudh and in four districts of the Punjab, and show an upward tendency in a few districts of the Central Provinces. Elsewhere they are on the whole steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(June 29th)		
Bellary . . .	Average last week since revised, ·19; this week, 1·15.	Standing crops generally good. Fever in one, cholera increasing in five, and cattle-disease increasing in two taluks.
Kurnool . . .	Average last week since revised, ·62; this week, ·70.	Harvest second crop paddy. Agricultural operations progressing. Small-pox in one, and cattle-disease increasing in five taluks.
Ganjam . . .	Average last week since revised, 3·32; this week, 1·12.	Small-pox in four and fever in six divisions. Slight cholera, and cattle-disease decreasing in one.
Kistna . . .	Average ·20	Agricultural operations commenced. River 7·35 feet over Anicut. Fever almost subsided. Cholera decreasing in three and cattle-disease decreasing in four taluks.
Chingleput (Madras) .	Average 1·05	Standing crops fair. Harvest wet and dry crops, outturn middling. Small-pox in one, and cattle-disease increasing in three taluks.
Coimbatore . . .	Average ·21	Standing crops good. Harvest *cholum* and *cumbu*, outturn average. Fever and slight cattle-disease in one taluk.
Tanjore . . .	Average last week since revised, ·17; this week, ·68.	Standing crops generally good. Harvest paddy, outturn up to average. Cattle-disease increasing in one taluk.
Madura . . .	Average last week since revised, ·08; this week, ·37.	Health of people and cattle generally good.
Malabar . . .	Average 5·72	Agricultural operations progressing. Fever in two and slight small-pox in eight taluks.
Travancore . .	1·68	Paddy thriving. Small-pox and fever in places. *General Remarks.*—General prospects good.
Bombay—(June 29th)		
Karachi . . .	Rain up to 27th; Shahbandar, 1·90; average of three other stations, ·36.	River at Kotri on 27th, 11 feet 5 inches against 15 feet 10 inches on same date last year. Fever in five and cattle-disease in one taluka. Want of water felt everywhere. Wheat, red rice and *bajri* in Karachi 24, 32 and 32 and in Mirpur Batoro 20, 38 and 40 pounds per rupee, respectively.
Hyderabad . . .	Slight rain in three talukas.	*Rabi* harvesting continues in one taluka. *Kharif* cultivation in progress. Fever, small-pox, and cattle-disease in one taluka. River at Kotri on 27th, 11 feet 5 inches against 15 feet 10 inches on same date last year. Wheat 24, *jowari* 40, *bajri* 37½, white rice 20, and red rice 30 pounds per rupee. Lowness of river causing some anxiety.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad . . .	1·13; total 7·03	Sowing of *kharif* begun in some talukas. Public health good. Wheat 28 and *bajri* 31 pounds per rupee.
Baroda . . .	. . . .	No report received.
Surat	Rain in all talukas—maximum in Bulsar, 6·30 and minimum in Olpad, ·32.	Sowing operation in progress. Fever in Bardoli and cholera in some villages of Bulsar and Pardi talukas. *Jowari* 42 and *nagli* 44 pounds per rupee.
Nasik . . .	Igatpuri, 4·16; Nandgaon, 1·89; Malegaon, 1·46; Yeola, 1·15; and Peint, 1·15; in other talukas—maximum in Dindori, ·26 and minimum in Niphad, ·08; none in Chandor.	Sowing of *kharif* retarded in some talukas for want of rain, in others it is in progress. Cholera in Nandgaon and Malegaon, 154 attacks, 64 deaths. Public health good in other talukas. More rain wanted. Prices stationary.
Colaba (Bombay) . .	Rain every day, except on 22nd and 27th; total of week 3·61; total to date 23·31, being 2·92 above average.	Average abnormal temperature *nil* on 22nd and 23rd; 4° cool from 24th to 26th and 1° cool on 27th and 28th. Vapour in air normal. Abnormal wind northerly, except on 23rd, when wind was normal. Distant lightning on 28th.
Poona	Rain in five talukas and in Petha Baramati; maximum 2·88 in Indapur taluka, minimum ·05 in Poona city; no rain in Sirur, Purandhar, and Bhimthari talukas, where it is badly wanted.	Rice and *nagli* plants doing well in the *mawal* portion of Junnar, Khed, and Haveli talukas. Sowing of *kharif* commenced in some talukas. Public health generally good. Cattle-disease in Purandhar taluka. 10 cholera cases in Bhimthari and Haveli talukas, 4 fatal. *Bajri* 43 and *jowari* 54 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	Newasa, 1·0; Kopargaon and Shrigonda, ·93; Jamkhed, ·40; and Sheogaon, ·45; very slight in three and none in other talukas.	Cholera—attacks 511, deaths 212. *Bajri* 33 and *jowari* 51 pounds per rupee.
Sholapur . . .	·63; Barsi, ·35; Madha, 4·4; and Pandharpur, ·64.	Sowing operations retarded for want of rain. Cattle-disease in Sholapur, Barsi, and Pandharpur talukas. Slight cholera here and there in the whole district, 531 cases, 229 fatal. *Jowari* 56½ and *bajri* 49½ pounds per rupee.
Dharwar . . .	Rain in all stations, except in Mundargi, varying from 1·03 in Ron to ·04 in Dharwar.	Rice sowing in progress in western talukas. Elsewhere land being prepared for sowing early crops. Cholera in two villages of Ron taluka and in Ranibennur. Slight cattle-disease in one village of Nawalgund taluka. *Jowari* 54 and rice 24 pounds per rupee.
Kanara . . .	3·85; total 56·53; Kumpta, 5·19; Sirsi, 0·43; and Haliyal, 2·34.	Rice plants healthy. Anthrax in Karanjoda, Supa Petha, 20 cattle died. Common rice in Karwar and district average 12 seers per rupee.
Rajkot . . .	·70; total 3·98	Weather hot and cloudy. Measles in some villages in Und and Jetpur. Public health generally good. Wheat 24, *bajri* 24 and *jowari* 30 pounds per rupee.
		General Remarks.—Rain throughout the Presidency, except the Upper Sind districts; more still wanted in parts of the Deccan, Bijapur, and Panch Mahals Sowing operations progressing in parts of several districts. In Sind great anxiety felt for *kharif* cultivation, owing to the inundation of the Indus being much below average. Fever in parts of six, small-pox in parts of four, and cholera and cattle-disease in parts of ten districts.
Bengal—(June 28th)		
Chittagong (June 8th)	4·11	Weather seasonable. Prospects fair. Transplanting continues. Prices steady. Cholera still lingers. Public health good.
Dacca	1·30	Weather hot and cloudy, with occasional rain. Jute and *aman* doing well, but have somewhat suffered, owing to rapid rise of rivers. Public health good.
24-Pergunnahs (Calcutta).	0·4	Prospects satisfactory. Ploughing and sowing continue. Public health generally good.
Khoolna . . .	4·28	Weather cloudy. *Aus* growing well. Sowing of *aman* going on. Public health good.
Moorshedabad . .	3·16	Weather very hot and cloudy at intervals. *Aman* still being sown. Jute and sugarcane thriving well. Public health good.
Pubna	0·26	Weather cloudy and rainy. Rivers rising. Prospects of crops good. Public health good.
Dinagepore . . .	10·77	Heavy rain and floods doing considerable damage to *bhadoi* and jute crops. Flood now subsiding. *Haimanti* rice being sown.
Rungpore . . .	5·71	Crops generally fair, except in lowlands, where *aus* and jute have suffered. Public health has improved.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Midnapore . . .	3·24	Weather seasonable. Prospects of crops excellent.
Burdwan . . .	1·26	Weather seasonable, though sultry. Prospects of crops good. Fever appearing.
Bhagulpore . . .	5·04	Rain too much for *bhadoi* crops and indigo. Much indigo lost in the north. Transplanting in progress. Public health improving.
Purneah . . .	3·72	Crops promise well, except indigo. Jute has suffered from excessive rain Ploughing and weeding going on. Rivers high. Public health fair.
Durbhanga . . .	5·77	Prospects of early rice continue favourable. *Bhadoi* sowing retarded by continued rain for last six days. Fine weather absolutely necessary. Prices rising. Cholera prevailing.
Chumparun . . .	10·75	Indigo, *makai* and *bhadoi* sowings in progress. Transplanting of paddy begun on lowlands. Prices stationary. Cholera decreasing. Public health fair.
Patna	1·85	Sowing of *bhadoi* and paddy going on. Crops already sown growing well. Sugarcane in good condition. Cholera still reported from Barh and Behar subdivisions.
Gya	0·86	*Bhadoi* and paddy being sown. Cholera and small-pox reported. Fever also continues.
Hazareebagh . .	1·93	Weather seasonable. Ploughing and sowing in full swing. Prospects of all crops favourable. General health good.
Cuttack . . .	4·05	Weather cloudy. Rice plants thriving well. Price of rice unchanged. Sporadic cases of cholera reported, public health otherwise good.
		General Remarks.—General rain fell at the beginning of the week; from the 24th to 27th there was a break in the rains, except in the northern and eastern districts. The monsoon winds are now again strengthening, and more rain is expected. Early rice, jute, and indigo promise well; but in Rasjhaye and Bhagulpore divisions some damage is reported from excessive rain. *Aman* and *bhadoi* are being sown, and in places transplanting of *aman* seedlings has begun. Cholera is diminishing in the Patna division, and elsewhere general health is good.
N.-W. Provinces and Oudh—(June 25th)		
Benares (June 28th)	·50	More rain wanted badly for *kharif* sowings. Supplies sufficient. Prices rising slightly. Cholera still lingers in places, otherwise health good.
Ballia („ 27th)	. . . .	Weather clear, with occasional clouds and rain. *Kharif* sowings progressing. Prices stationary. Cholera increasing.
Gorakhpore („ „)	·20 in the district	Weather close and sultry at Sadr. Prices rising slightly. Sporadic cholera continues.
Fyzabad („ 28th)	. . . .	Rain much wanted. Ploughing and sowing of *kharif* crops commenced. Prices rising slightly. Cholera throughout district.
Lucknow („ 27th)	·20 at Sadr	Weather very hot. Supplies sufficient. Prices stationary. Cholera reported in one tahsil. No cattle-disease.
Rai Barelli („ „)	About ·30 at Sadr on 22nd.	Weather very sultry and close. Supplies ample. Prices rising. Cholera all over the district.
Partabgarh („ 28th)	Slight rain at Sadr on 23rd, but heavier at two tahsils on 22nd.	Prices steady. Cholera continues.
Allahabad („ „)	Averaging about ·70 all over the district.	Sugarcane being irrigated. Ploughing for *kharif* not yet commenced. Markets full. Prices easy. Cholera increasing in district.
Cawnpore („ „)	From ·40 to 3·20 in all tahsils.	Indigo and cane crops in good condition. Prices stationary. Cholera in many places. Cattle-disease in three pergunnahs.
Farakhabad („ „)	Averaging 1·20 in district.	More rain urgently wanted. Ploughing for *kharif* sowings continues. Supplies ample. Prices fluctuating. Cholera reported in two tahsils.
Sitapur („ „)	Some rain fell on 23rd, but partially.	Weather intensely hot, with westerly winds. Prices slightly rising.
Bareilly („ „)	Rain scanty and partial.	Sowings begun. Markets fairly steady. Health good.
Banda („ 27th)	Averaging about 1·00 in district.	Supplies ample, though prices are rising. Cholera increasing. Cattle-disease in one village
Kumaon („ 28th)	. . . .	Want of rain felt, yet no sign of monsoon. Prices stationary. Cholera still in the district. Some cattle-disease reported.
Agra („ 27th)	From ·20 to 2·80 throughout the district.	More rain is much needed. Irrigation continues. Prices rising. Small-pox in city and cholera in two tahsils and city.
Jhansi („ „)	Rain during week, but unequally distributed.	Ploughing in progress. Prices unchanged. Cholera still severe. Some small-pox.
Meerut („ 28th)	. . . .	Weather extremely hot, with westerly wind. *Kharif* sowings commenced on irrgated lands. Prices stationary. Health good.
		General Remarks.—Rain has fallen in nearly every reporting district, but more is wanted for *kharif* sowings. Cane and indigo crops are in good condition. Cotton sowings commenced. Supplies ample, but prices are still rising. Cholera continues to be reported and is increasing in some places.
Punjab—(June 25th)		
Hissar (June 28th)	Slight rain	Rain generally insufficient for ploughings. Health good. Prices stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Delhi	·56	More rain wanted urgently. Health good, 6 cases cholera. Prices almost stationary.
Umballa	·68	More rain needed. Cholera disappearing. Prices rising.
Jullundur	. . .	Health good. Prices stationary. *Kharif* ploughings in progress.
Ferozepore	·30	Health good. Prices rising.
Amritsar	·60	Health good. Prices stationary. *Kharif* crops good.
Sialkot	·40	Health good. Prices rising. *Rabi* harvesting completed. *Kharif* ploughings commenced.
Lahore	. . .	Rain wanted. Health good. Prices almost stationary.
Multan	·20	Health good. Prices stationary. *Kharif* sowings benefited by rain.
Rawalpindi	·40	More rain wanted. Health good. Prices rising. *Kharif* sowings commenced.
Shahpur	Rain fell throughout the district.	Health good. Prices falling. *Kharif* prospects improved.
Dera Ismail Khan	·36	Prices almost stationary. *Kharif* prospects improved.
Peshawar	. . .	Rain much wanted. Health fair. Prices almost stationary. *Kharif* sowings in progress.
		General Remarks.—Rain has fallen in all districts, except Jullundur, Lahore, and Peshawar. It is wanted in Hissar, Delhi, Umballa, Lahore, Rawalpindi, and Peshawar. Health good, except in Peshawar, where it is fair. Prices are stationary in Hissar, Jullundur, Amritsar, and Multan; almost stationary in Delhi, Lahore, Dera Ismail Khan, and Peshawar; rising in Umballa, Ferozepore, Sialkot, and Rawalpindi; and falling in Shahpur. *Rabi* harvesting completed in Sialkot. *Kharif* ploughings in progress in Jullundur, and commenced in Sialkot. Sowings commenced in Rawalpindi, and in progress in Peshawar. In Multan, Shahpur, and Dera Ismail Khan prospects have improved. Crops good in Amritsar. Fodder is scarce in Shahpur.
Central Provinces—(June 29th)		
Nagpur	2·49	Weather cloudy and warm. *Kharif* sowings commenced. Prices stationary. Health good.
Jubbulpore	1·11	Weather hot and close. *Kharif* sowings continue. Cholera prevalent. Prices risen slightly.
Saugor	·28	Weather very warm, with occasional clouds. General health good. *Kharif* ploughings continue. Prices slightly rising.
Seoni	4·80	Weather cloudy and hot. Sowings in progress. Slight cholera and small-pox. Prices steady.
Hoshangabad	1·46	Ploughing and sowing in progress. Fever and cholera prevalent. Prices stationary.
Khandwa	2·56	Weather cloudy and cool. Sowings progressing favourably. Health fair. Prices steady.
Bilaspur	5·24	Sowing progressing. More rain wanted. Prices stationary. Health fair.
Raipur	·62	Weather clear and hot. Sowings in progress. Small-pox in places. Prices slightly risen.
Sambalpur	. . .	No report received.
		General Remarks.—Good rain has fallen in most districts, and sowings are progressing favourably. Fever and cholera prevail in places. Prices show an upward tendency in a few districts.
Burma—(June 25th)		
Akyab	2·70 (Total rainfall to date 29·45).	Some cases of cholera and cattle-disease.
Bassein	2·94 (Total rainfall to date 24·52).	Slight cattle-disease.
Rangoon	For week ending 18th, 3·68; for past week 3·53. (Total rainfall to date 35·24).	
Amherst (Moulmein)	6·65 (Total rainfall to date 47·14).	Ploughing and transplanting progressing.
Tavoy	3·08 (Total rainfall to date 51·56).	Ploughing and sowing progressing.
Pegu	11·30 (Total rainfall to date 48·77).	Slight cattle-disease. Sowing progressing. Ploughing far advanced.
Henzada	2·28 (Total rainfall to date 22·82).	Ploughing progressing.
Prome	·63 (Total rainfall to date 8·65).	Some cases of cholera and cattle-disease.
Toungoo	1·87 (Total rainfall to date 17·46).	

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Thayetmayo	·87 (Total rainfall to date 5·34).	
Myingyan	·14 (Total rainfall to date 7·86).	Slight measles. Food-supply sufficient. Prices ordinary.
Minbu	·10	Food-supply sufficient. Prices normal.
		General Remarks.—A few cases of cholera and slight cattle-disease in Lower Burma. Ploughing and sowing going on Reports received from three Upper Burma districts. Health generally good and prospects satisfactory.
Assam—(June 29th)		
Gauhati (June 28th)	4·38	Weather rainy. Public health fair. *Kala azar* reported from Chomoria tahsil. Reaping of *ahu* crop in lowland and ploughing of land for *sáil* in progress. Prospects of crops good.
Sylhet	14·76	Some damage done to crops on lowlands by heavy rains, otherwise state and prospects of the corps good.
Cachar	2·83	Weather cloudy. Cultivation of *sáil* and reaping of *dumai* and *murali* crops in progress. Common rice 12 seers 4⅝ chittacks per rupee. No cholera reported. Prospects of tea good.
Dibrugarh	2·42	Weather seasonable. Prospects of *ahu* good. *Sáil* being transplanted. Tea doing well.
Mysore and Coorg—(June 29th)		
Bangalore	Mysore, 1·87; rainfall good in Shimoga and Kadur districts; and slight in other parts.	Standing crops in good condition. Prospects of season fair. More rain needed in parts of Bangalore and Tumkur districts and in Pagoda taluk of the latter district. Wet crops are reported to be suffering from deficient moisture. Public health generally good. Small-pox in Tumkur and cattle-disease in Bangalore continue. Prices slightly fallen in Hassan district, and risen in other parts.
Mysore		
Mercara	1·31	Rain diminished since 21st instant. Standing crops in good condition.
Berar and Hyderabad—(June 29th)		
Amraoti	2·94	Weather rainy. Sowing operations commenced in places. Cholera in Amraoti town. Cattle healthy. Wheat 15 and *jowari* 23 seers per rupee.
Akola	1·06	Weather cloudy, with heavy showers at intervals. Ploughing and sowing in progress. Cholera, small-pox, and fever prevail in parts. Cattle-disease disappearing.
Hyderabad	1·18 (Total since 1st January 4·85).	Cholera abated to some extent. Cattle-disease prevalent in some talukas. Prices—wheat 13¼, coarse rice 12, white *juar* 18¾, yellow *juar* 22½, and *tur* 14¼ seers per current sicca rupee.
Central India States—(June 29th)		
Indore	3·94	Prospects of more rain.
Morar (Gwalior)	·21	Heat intense. One case of cholera in Morar. Prices rising slightly.
Sutna	·94	Cholera continues in various parts of the Agency. Weather cloudy. Prospects favourable.
Neemuch	1·60	Health good. Weather cool.
Goona	1·20	Health and prospects good.
Agar	1·02	Cholera in Sailana. Prospects good.
Sehore	·70	Weather cloudy and hot. Health good.
Nowgong	·96	Weather changing. Prices steady. Cholera reported in Baoni, Chhatarpar, Charkhari, and Samthar.
Bhopawar	·24	Weather cloudy. Rain much wanted.
Rajputana—(June 29th)		
Abu (June 29th)	1·23	Weather cloudy; no regular monsoon yet, seasonable.
Sirohi („ 26th)	·44	Some water in tanks; wells good. Health good. Weather cloudy and windy.
Marwar („ 25th)	. . .	Rain wanted. About two months' water in Jodhpore city tanks. Health good, though some districts unhealthy. Excepting at few villages, cultivation not yet commenced. Weather cloudy; dusty winds; nights cooler. Markets easy. Prices tending to fall.
Meywar („ „)	1·28	Tanks and wells low. Crops sown in some places. Health fair. Bowel-complaints prevalent. Prices stationary. Weather cool.
Pertabgurh („ „)	1·79	Health good. Prices fluctuating. Weather occasionally cloudy.
Harowti („ „)	Deolie, ·45; Tonk, 3·62; Shahpura, ·37.	Agricultural operations continue. Cholera in Jehazpore, otherwise health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—*contd.*		
Jhallawar (June 26th)	·56	Sowings begun in many places. Health good.
Ajmere („ 28th)	·75	Weather occasionally cloudy and close. Ploughing progressing. Prices rising. Of 11 fresh cholera cases, 6 fatal. Cattle suffering for scarcity of fodder.
Jeypore („ „)	. . . .	Weather hot. Rain much wanted.
Kerowlee („ 25th)	1·24	Wells filling. Sowing operations commenced. Health good. Prices steady. Weather seasonable.
Dholepore („ „)	·84	Wells low; tanks nearly dry. Ploughing commenced. Fever prevails. Prices stationary. Weather sultry.
Bhurtpore („ 28th)	1·70	Ploughing commenced. Cholera decreasing.
Ulwar („ „)	Average 1·18	Cholera in places, otherwise health good.
Kotah („ 25th)	·38	Health good. Weather cloudy. Prices rising.
Kherwara („ 26th)	·44	Tanks and wells low. Ploughing continues. Health good. Prices steady. Weather cloudy. Rain needed for sowing.
Bickanir („ 25th)	·95; rain heavier in some districts.	Fever in five districts and small-pox in one. Prices stationary. Weather very hot, cloudy, and stormy.
Nepal—(June 23rd)		
Katmandu (June 24th)	1·97	Weather seasonable. Transplanting of rice in full operation.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 29th June, 1887.

During the past week there has occurred a very general break in the rains throughout almost the whole of India. At the close of last week the Bombay current was blowing very feebly on the West Coast, and this feebleness has distinguished it during the whole of the period under discussion. The Bengal current was fairly strong on the last date of the previous Summary, but with the commencement of the present week it became much weaker, and so continued until the close of the period.

On the 23rd westerly winds with velocities varying from 10 to 20 miles an hour were blowing on the West Coast. The weather was fairly fine, and the only rainfall was a few light showers in Malabar, Mysore, and the Central Provinces. On the 24th the winds were even weaker than on the previous day, and the principal rainfall in Central, Western, and Southern India was local and irregular. Some heavy local showers fell in Southern India, and moderate but fairly general rain in the Central Provinces. The 25th showed a slight increase in the force of the monsoon winds, and a corresponding increase in the rainfall of Malabar, Madras, and the Central Provinces. A few local showers also fell in Bombay, Central India, and Rajputana. On the 26th the Bombay current appeared to be slowly strengthening, and a further increase in the amount and extent of the rains was reported, but both the force of the winds and the amount of the rainfall remained below the normal. The 27th showed no change, and the only sign of improvement on the 28th was a considerable increase in the force of the winds at Colombo and Galle. On the 29th this increase was repeated, and the winds on the Ceylon Coast were blowing with unusual strength. This rise in the force of the wind extended in a modified degree to the west of India, but not sufficiently so to raise the wind to the normal strength of the month. This deficiency in the strength and rain-bearing properties of this branch of the monsoon current does not seem to be confined to the Indian Coasts, as from the reports of the mail boat which reached Bombay on the 26th quiet fine weather and only moderate winds prevailed for the whole distance between Arabia and India.

The velocity of the Bengal current was decreasing rapidly on the 23rd, and the rainfall, which had previously been fairly general, was rapidly becoming irregular and partial. The largest amounts fell in Burmah and the west of the North-Western Provinces. Steady and moderately strong monsoon winds prevailed at the head of the Bay on the 24th, but they did not extend to any distance inland, and light variable airs and calms prevailed in Upper India. The rainfall over Burmah, Bengal, and Assam was light and sporadic. The 25th showed much weaker winds at the head of the Bay and no change in the conditions prevailing over Bengal, Assam, and the North-Western Provinces. On the 26th there was no change, except that the rainfall in Bengal was even lighter than on the preceding day. During the 27th, 28th, and 29th conditions remained unchanged, the break in the rains being only interrupted by occasional, slight, local showers.

In Upper India the weather has been close and oppressive throughout the week. The break in the rains has been accompanied by a decided rise of temperature and dry westerly winds. On the 23rd only two stations in Upper India showed maximum temperatures exceeding 100°; but by the 25th maxima exceeding 100° were registered at the great majority of stations, and by the 29th every station in the Punjab, except Multan, registered maximum temperatures exceeding 110°, the highest being 116° at Peshawar.

In Madras the weather has been abnormally wet, and the greater part of that province, as is often the case during breaks in the rains in Northern and Central India, has received much more than its usual amount of rain.

The following table gives for a few representative stations (1) the total amount of rain for the four weeks June 1st to 29th, (2) the average for the

same period, and (3) the difference from the average of the present season's rainfall:

Stations.	Total rainfall since June 1st, 1887.	Average rainfall, June 1st to 29th.	Difference.
Akyab	13·25	45·88	—32·63
Saugor Island	8·68	11·20	— 2·52
Calcutta	6·44	11·25	— 4·81
Dhubri	25·56	24·71	+ 0·85
Purneah	16·17	11·23	+ 4·94
Gya	5·32	5·35	— 0·03
Allahabad	0·74	3·13	— 2·39
Meerut	0·27	2·13	— 1·86
Delhi	1·51	2·25	— 0·74
Lahore	2·41	1·44	+ 0·97
Peshawar	0	0·20	— 0·20
Cochin	34·10	29·66	+ 4·44
Ratnagiri	45·23	31·79	+13·44
Bombay	23·71	19·86	+ 3·85
Poona	3·79	6·00	— 2·21
Surat	8·28	7·26	+ 1·02
Khandwa	6·87	6·15	+ 0·72
Nagpore	9·43	8·11	+ 1·32

This table shows that, except on the West Coast, in the Central Provinces and in North Bengal, the monsoon rainfall of 1887 has so far been deficient.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah	6	13·13
Bengal and Assam	15	34·24
N.-W. Provinces and Oudh	8	7·60
Punjab	3	0·43
Hill Stations	3	1·51
Ceylon	2	1·12
Malabar Coast	5	18·63
Bombay	9	18·05
Berars and Central Provinces	10	31·94
Guzerat and Central India	5	8·38
Sind—Rajputana	4	2·39
Madras	13	24·61

(a) Includes the Cawnpore-Achnera State Railway.
(b) Includes the Northern Bengal, Dacca, Kaunia-Dharla and Assam-Behar Railways.
(c) Return not received.
(d) Total Receipts from 1st April, 1887, to 30th April, 1887.
(e) Includes the Amritsar-Pathankot Railway.

JAMES RAMSAY,
Offg. Under-Secretary.

SIMLA,
[illegible] June, 1887.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL BRANCH PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 28.] CALCUTTA, SATURDAY, JULY 9, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and Information as the Government of India may deem to be of interest to the Public, and such as may lawfully be issued. Reports of Proceedings of the Legislative Council of the Lieutenant-Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENTS *separately on a payment of ten Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE,
(Statistical Branch).

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 7th JULY, 1887.

GENERAL REMARKS.—Except in the Punjab, there has been generally good rain throughout the country during the week under report.

Kharif ploughings and sowings are now in progress everywhere. More rain is however wanted to facilitate operations in parts of Bombay, the Punjab, Rajputana, and Central India.

In Madras, Mysore and Coorg the standing crops are in good condition.

The *aman* rice is being sown in Bengal, where in some districts seedlings are being transplanted. The *sáil* rice is also being transplanted in Assam, where three varieties are being reaped. In Bombay and the Central Provinces rice sowings are doing well. Ploughing and sowing for the rice crop in Burma are progressing.

Sugarcane is doing well in Bengal, Assam, and the North-Western Provinces and Oudh.

Cotton sowing has commenced in the North-Western Provinces and Oudh, and has been completed in Berar.

Cholera is still very prevalent in Bombay, and is reported from most districts in the North-Western Provinces and Oudh. Elsewhere the public health is generally good.

Cattle-disease exists chiefly in the Bombay Presidency.

Prices continue to rise in the North-Western Provinces and Oudh and in four districts of the Punjab. Elsewhere they are fairly steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(July 6th)		
Bellary . . .	Average last week since revised, 1·62; this week, 1·91.	Standing crops good. Fever in one, cholera decreasing in five, and cattle-disease decreasing in three taluks.
Kurnool . . .	Average last week since revised, ·84; this week, 1·80.	Agricultural operations progressing. Small-pox in three, and cattle-disease decreasing in five taluks.
Ganjam . . .	Average last week since revised, 1·35; this week, 1·29.	Small-pox in three, fever in six, and cattle-disease increasing in three divisions.
Kistna . . .	Average 1·90	River 3·5 feet over Anicut. Slight cholera in one, and cattle-disease decreasing in four taluks.
Chingleput (Madras) .	Average 1·24	Standing crops fair. Harvest wet and dry crops, outturn bad. Small-pox in three, and cattle-disease decreasing in three taluks.
Coimbatore . . .	Average ·38	Standing crops generally good. Harvest dry grains, outturn about average. Fever in one taluk, and cattle-disease increasing in another.
Tanjore . . .	Average 1·14	Standing crops generally good. Harvest gingelly, outturn up to average. Cattle-disease decreasing in one taluk.
Madura . . .	Average last week since revised, ·38; this week, ·72.	Health of people and cattle generally good.
Malabar . . .	Average 4·58	Agricultural operations progressing. Fever in two and slight small-pox in eight taluks.
Travancore . .	6·63	Paddy thriving. Small-pox prevalent and fever in places. *General Remarks.*—General prospects good.
Bombay—(July 6th)		
Karachi . . .	Average rain in three stations, ·09 up to 4th.	River at Kotri on 4th, 10 feet 11 inches against 11 feet 2 inches on same date last year. *Kharif* cultivation suffering from want of water. Fever in five and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 24, 32 and 32, and in Sehwan 28, 40 and 40 pounds per rupee, respectively.
Hyderabad . . .	Rain in three talukas—average ·12.	*Rabi* harvesting continues in one taluka. *Kharif* preparations in progress, but prolonged absence of usual inundation causing anxiety. Fever and small-pox in two talukas. River at Kotri on 4th, 10 feet 11 inches against 11 feet 2 inches on same date last year. Wheat 30, *jowari* 40, *bajri* 36½, white rice 20, and red rice 30 pounds per rupee.
Ahmedabad . . .	. . . . .	Sowing of *kharif* in progress; Rain wanted in all talukas. Public health good. Wheat 28 and *bajri* 31 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda . . .	3·59; total 14·46	Cholera in a mild form has broken out in the city, 59 cases since outbreak, 17 deaths. Sowing in progress. *Bajri* 27, wheat 18, and rice 21 pounds per rupee.
Surat	Rain in all talukas—maximum in Mandvi, 5·69 and minimum in Olpad, ·52.	Sowing progressing. Prospects good. Fever in Bardoli taluka. *Jowari* 37 and *nagli* 44 pounds per rupee.
Nasik . . .	Rain in all talukas—maximum in Igatpuri, 3·87 and minimum in Kalwan, ·19.	Sowing operations in progress, where there has been sufficient rain; but retarded in other places for want of it. Rain wanted in Nasik, Sinnar, Dindori, Chandor, and Kalwan. Cholera in Yeola, Nandgaon, and Malegaon, attacks 24, deaths 10. Small-pox in Yeola. Public health is good in other talukas. Prices stationary.
Colaba (Bombay) . .	Rain every day, except on 1st; heavy from 3rd to 5th; total of week 16·11; total to date 39·42, being 14·21 above average.	Abnormal temperature rose from 3° cool on 29th to 1° warm on 1st, fell to 1° cool by the 2nd, and was 4° cool from 2nd to 5th. Vapour in air normal. Abnormal wind northerly. Lightning on 29th and thunder on 2nd.
Poona	Rain in all talukas—except Mawal; maximum 4·19 and minimum ·06 in Indapur taluka and Petha Mulshi, respectively.	More rain wanted throughout the district. Rice and *nagli* plants doing well in the *mawal* portion of the district. Sowing of *kharif* and transplantation of rice plants retarded for want of rain. Public health generally good. Cattle-disease in Purandhar taluka. Nine cholera cases in Purandhar, Bhimthari and Haveli talukas, 2 fatal. *Bajri* 43 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	Jamkhed, 1·97; Rahuri, 1·59; Nagar, 1·49; Karjat, 1·40; Newasa, ·97; Sheogaon, ·95; Sangamnar, ·56, and Kopargaon, ·56; very slight in rest.	*Kharif* sowings commenced in Nagar, Newasa, and Sangamnar talukas. Cholera in seven talukas, attacks 522, deaths 221. Cattle-disease in Jamkhed. *Bajri* 33 and *jowari* 48 pounds per rupee.
Sholapur . . .	Rain in all talukas—maximum in Barsi, 4·33 and minimum in Karmala, ·44.	Sowing operations commenced in parts of Sholapur, Barsi, Pandharpur, Sangola and Malsiras talukas. More rain wanted in other talukas. Cattle-disease in Sholapur, Barsi, and Sangola talukas. Cholera here and there in the whole district, 548 cases, 214 fatal. *Jowari* 56¼ and *bajri* 50¼ pounds per rupee.
Dharwar . . .	Rain in all stations, except Mugud and Nargund Pethas and Kalghatgi and Kod talukas, varying from 2·16 in Ron to ·09 in Bankapur.	Sowing of rice completed in western talukas. Young plants healthy. Sowing of *jowari* commenced in parts of eastern talukas, and light cholera in Ranibennur. Rice 24 and *jowari* 54 pounds per rupee.
Kanara . . .	Rain in Karwar, 12·54; total 69·07; in Kumpta, 4·64; and in Yellapur, 2·09.	Crops thriving. Severe cattle-disease in Supa Petha, 41 died of rinderpest, 60 of anthrax. Common rice in Karwar and district average 11½ seers per rupee.
Rajkot	·53; total 4·51	Weather cloudy. Crops withering for want of rain. Measles in some villages in Und and Jetpur. Public health generally good. Wheat 24, *bajri* 24, and *jowari* 22 pounds per rupee.
		General Remarks.—More or less rain in all districts, except three. *Kharif* sowing still going on in several districts, but retarded in parts of some districts for want of sufficient rain. River in Sind continues low, and there is no improvement in the prospects of *kharif* cultivation. Fever in parts of seven, small-pox in parts of five, and cholera and cattle-disease in parts of twelve districts.
Bengal—(July 6th)		
Chittagong (July 5th)	5·82	Weather seasonable. Transplanting of *aus* continues. Lands being prepared for *aman*. Prices stationary. Cholera still reported.
Dacca	·22	Weather hot and cloudy. Prospects of *aman* paddy and jute continue good. Public health good.
24-Pergunnahs (Calcutta).	·79	Weather hot and cloudy. Prospects continue satisfactory, but more rain wanted. Public health generally good.
Khoolna . . .	·82	Weather hot and cloudy. Preparations of *aman* land going on. Prospects good. *Aus* growing well. Public health good.
Moorshedabad . .	1·66	Weather still very hot. Rain at intervals. Sowing of *aman* almost over. Jute and sugarcane thriving. Public health good.
Pubna	3·56	Prospects of crops good. Rivers rising. General health good.
Dinagepore . . .	4·62	Heavy rain at intervals. Transplantation going on. Crops on lowlands damaged by floods.
Rungpore . . .	2·85	Considerable damage to crops from floods. *Aman* being planted out and *aus* being cut. Public health fair.
Midnapore . . .	1·45	Weather sultry. More rain wanted.
Burdwan . . .	1·49	Weather very sultry. Rain far too light, except at Cutwa. Prospects not so good. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Bhagulpore . . .	3·16	Weather much too wet for *bhadoi* crops. *Aghani* prospects favourable, except in very lowlands. Transplanting in progress.
Purneah . . .	1·89	Some injury from excessive rain reported, but prospects of crops on the whole good. Rivers high. Health of people and cattle fair.
Durbhanga . . .	2·77	Weather cloudy and sultry. *Bhadoi* sowings in progress. Prospects of paddy favourable. Indigo manufacture has begun. Prices rising. Cholera continues in subdivision.
Chumparun . . .	4·21	Weather hot and cloudy. Indigo manufacture and *bhadoi* sowings in progress. More rain wanted for paddy crops. Prices stationary. Cholera decreasing.
Patna	1·69	Weather hot and close. *Bhadoi* and paddy sowings progressing; those sown earlier growing well. Sugarcane looks well. Cholera still prevailing in Behar subdivision.
Gya	·03	Weather hot and cloudy. *Bhadoi* and paddy being sown. Cholera still prevailing. Small-pox and fever also reported.
Hazareebagh . .	1·80	Weather seasonable. All crops doing well. Agricultural prospects favourable. General health good.
Cuttack . . .	7·29	Weather cloudy. Rice plants doing well. Price of rice unchanged. Sporadic cases of cholera reported, public health otherwise good.
		General Remarks.—Rainfall has been general, but very irregularly distributed during the week. In Calcutta the sky has been overcast, with frequent light showers, since last night. General agricultural prospects are favourable, but in the Burdwan and Chota Nagpur divisions some damage is reported from excessive rain. *Bhadoi* and *aman* sowings are going on, and in some districts *aman* seedlings are being planted out. Indigo manufacture has begun in Behar. Cholera still prevalent in parts of the Patna division, but elsewhere public health is good.
N.-W. Provinces and Oudh—(July 6th)		
Benares (July 5th)	·70 at Sadr	*Kharif* cultivation begun in some places. Supplies sufficient, but prices rising. Cholera still in district, otherwise health good.
Ballia („ 4th)	Heavy showers on 2nd and 3rd.	*Kharif* sowings in progress. Prospects favourable. Market steady. Cholera prevalent.
Gorakhpore („ „)	4·50 at Sadr	Prices slightly risen. Sporadic cholera continues.
Fyzabad („ 5th)	Averaging 2·70	Sowing of *kharif* crops continues. Supplies ample. Cholera in district.
Lucknow („ 4th)	1·80 at Sadr	*Kharif* sowing in progress. Markets well supplied. Prices stationary. Some cholera in district. No cattle-disease.
Rai Barelli („ „)	2·90 at Sadr	Fields being prepared for *kharif*. Supplies ample. Prices rising. Cholera continues.
Partabgarh („ 5th)	Heavy rain throughout.	Prices steady. Cholera much abated. No cattle-disease.
Allahabad („ „)	Averaging 2·00 all over district.	Ploughing and in places sowings have commenced. Markets full. Prices rising. Cholera decreasing. Health generally good.
Cawnpore („ „)	From ·80 to 4·70	Indigo and some crops flourishing. Ground for *kharif* being prepared. Sowing of cotton and maize commenced in places. Prices steady. Cholera prevailing. Cattle-disease in two pergunnahs.
Farakhabad („ „)	General rain on 3rd and 4th.	Prospects improving. Ploughing continues. Early crop of maize and cotton destroyed. Supplies ample. Prices fluctuating. Some sporadic cholera. No cattle-disease.
Sitapur („ „)	Good rain everywhere, but at Sadr.	Cultivators are engaged in sowing. Cases of cholera are reported, and seem to be on the increase.
Bareilly („ „)	Very little rain	Ploughing retarded, owing to want of rain. Prices rising. Health of men and cattle good.
Banda („ 4th)	About 1·00 at Sadr on 2nd and 3rd.	*Kharif* ploughing commenced. Supplies sufficient. Prices stationary. Cholera in one district.
Kumaon („ 5th)	. . . .	Rain favourable during week for *kharif*, crops being weeded. Prices stationary. Cholera in district, otherwise public health good. Cattle-disease on decrease.
Agra („ 4th)	Good and general rain.	*Kharif* ploughings and sowings going on. Prices rising. Small-pox in city. Some cases of cholera reported.
Jhansi („ „)	. . . .	Ploughing is in progress. Prices rising. Cholera still unabated and small-pox decreasing.
Meerut („ 5th)	From 1·60 to 2·50 all over district on 2nd.	Ploughs at work everywhere. Prices of wheat, barley, and gram risen, owing to delay in rain. Health good.
		General Remarks.—Rainfall has been general in the Provinces and rather heavy in some districts. *Kharif* operations in progress in most places. Indigo and cane doing well. Cotton sowings begun. Supplies ample, but prices are still rising. Cholera continues to be reported. Cattle-disease decreasing.
Punjab—(July 6th)		
Hissar (July 5th) .	Some rain	Health good. Prices stationary.
Delhi . . .	2·97	Health good, 1 case cholera. Prices rising. *Kharif* ploughings commenced.
Umballa . . .	1·58	Cholera disappearing. Prices stationary. *Kharif* sowings commenced.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Jullundur	·40	Health good. Prices slightly rising. *Kharif* ploughings in progress.
Ferozepore		Health good. Prices rising.
Amritsar		Health good. Prices stationary. *Kharif* crops good.
Sialkot		Rain wanted. Health good. Prices falling. *Kharif* sowings not yet commenced.
Lahore	1·04	Few cases of cholera. Prices tending to rise. *Kharif* ploughings progressing.
Multan		Rain wanted badly. Health good. Prices stationary. *Kharif* sowings somewhat retarded for want of water.
Rawalpindi	·40	Health good. Prices stationary. *Kharif* sowings commenced.
Shahpur		Rain much wanted. Health good. Prices rising.
Dera Ismail Khan		Health good. Prices almost stationary. Ploughings on well lands commenced.
Peshawar		Rain much wanted. Cholera has appeared in city. Prices rising. Sowings in progress.
		General Remarks.—Rain has fallen in Hissar, Delhi, Umballa, Jullundur, Lahore, and Rawalpindi, and is much wanted in Multan, Shahpur, and Peshawar. Health is good, but some cases of cholera in Delhi, Umballa, Lahore, and Peshawar. Prices are stationary in Hissar, Umballa, Amritsar, Multan, and Rawalpindi, and almost stationary in Dehra Ismail Khan; rising in Delhi, Ferozepur, Shahpur, and Peshawar; and tending to rise in Jullundur and Lahore. *Kharif* ploughings commenced in Delhi and on well lands in Dera Ismail Khan, and in progress in Jullundur and Lahore. Sowings commenced in Umballa and Rawalpindi, in progress in Peshawar, and somewhat retarded in Multan for want of water. Fodder scarce in Shahpur.
Central Provinces— (July 6th)		
Nagpur	3·49	Weather rainy. Sowings progressing. Health good. Prices stationary.
Jubbulpore	4·64	Weather hot and close. Sowings in progress. Prospects favourable. Cholera prevalent. Prices unchanged.
Saugor (July 5th)	Rain during latter end of week.	Weather cloudy and close. Sowings in progress. Cholera prevalent. Prices steady.
Seoni	6·08	Weather cloudy. Sowings progressing. Slight cholera. Prices steady.
Hoshangabad	Showers almost daily	Weather cloudy. Cholera prevalent. Sowings completed in places. Prices stationary.
Khandwa	4·15	Weather cloudy. Heavy rain. Sowings nearly completed. One case of cholera reported. Prices steady.
Bilaspur	3·56	*Dhan* sowing half done. More rain wanted. Health good. Prices rising.
Raipur	2·63	Weather cool and cloudy. Sowings continue. Young rice favourable, except in one pergunnah, where rain is insufficient. Health good. Prices rather lower.
Sambalpur (July 2nd)	·12	Weather very warm and cloudy. Rain wanted. No good showers. Sowing in progress. Cholera prevalent.
		General Remarks.—Favourable rain everywhere, except in Raipur and Bilaspur, where there is some deficiency. Sowings continue. Cholera in northern districts. Prices steady.
Burma—(July 6th)		
Akyab (July 2nd)	4·64 (Total rainfall to date 34·09).	Slight cattle-disease. Ploughing progressing.
Bassein	2·13 (Total rainfall to date 26·65).	
Rangoon	3·82 (Total rainfall to date 39·06).	Ploughing and transplanting progressing.
Amherst (Moulmein)	1·92 (Total rainfall to date 49·06).	Ploughing and sowing progressing.
Tavoy	3·06 (Total rainfall to date 54·62).	Ploughing progressing.
Henzada	*Nil* (Total rainfall to date 22·82).	Slight cholera and cattle-disease.
Prome	1·62 (Total rainfall to date 10·27).	Ploughing commenced.
Toungoo	2·20 (Total rainfall to date 19·66).	
Thayetmayo	·02 (Total rainfall to date 5·36).	Food-supply sufficient. Prices ordinary.
Myingyan	·66 (Total rainfall to date 8·52).	*General Remarks.*—Sporadic cholera and slight cattle-disease in parts of Lower Burma. Ploughing and sowing progressing. Reports received only from two Upper Burma districts.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Assam—		
Gauhati (July 6th)	·84	Weather rainy. Public health fair. Cattle-disease reported from Satidarang. Transplanting of *sáil* commenced. Sugarcane and tea doing well.
Sylhet	6·14	State and prospects of the crops good.
Cachar	5·45	Reaping of *dumai* and *murali* and cultivation of *sáil* crops continues. Common rice 14 seers 8⅝ chittacks per rupee. General health and prospects of tea good.
Dibrugarh	3·02	Weather seasonable. *Ahu* crops being cut. *Sáil* being transplanted. Tea and sugarcane doing well. Public health fair.
Mysore and Coorg— (July 6th)		
Bangalore, Mysore	Bangalore, 2·18; Kolar, 3·65; rain more or less throughout the State.	Standing crops in good condition. More rain needed in parts of the Bangalore and Tumkur districts for agricultural operations. Prospects of season favourable. Public health generally good. Fever prevalent in parts. No material change in prices.
Mercara	7·50	Rain recommenced on 1st instant. Standing crops good. Health good.
Berar and Hyderabad— (July 6th)		
Amraoti	2·57	Weather cloudy and rainy. Cotton and *tur* sowings completed. Cholera in Amraoti town and in the interior of the district. Cattle-disease slight. Wheat 15 and *jowari* 26 seers per rupee.
Akola	4·15	Weather warm and cloudy. *Kharif* sowing operations in progress. Fever and cholera prevail in places. Cattle suffer from hoof-disease.
Hyderabad (July 7th)	Average ·82; total 5·67.	*Kharif* crops continue to be sown. Cholera prevalent in a few villages of the Ashtagar taluka. Prices wheat—13, coarse rice 12½, white *juar* 18¼, yellow *juar* 21¾, and *tur* 14¼ seers per current sicca rupee.
Central India States— (July 6th)		
Indore	4·85	Weather cloudy, with frequent showers.
Morar (Gwalior)	2·00	One fatal case of cholera in Lashkar. Weather seasonable.
Sutna	2·00	More rain required. Slight cholera in the Agency.
Neemuch	3·15	Health good. Weather cool and pleasant.
Goona	·59	Health good.
Agar	·37	Prospects good. Health fair.
Sehore	2·53	Weather seasonable. Health good.
Nowgong	·69	Weather hot and cloudy. Rain much wanted. Prices rising. Cholera in parts.
Bhopawar	.....	No report received.
Rajputana—(July 6th)		
Abu (July 6th)	·88	Weather seasonable and overcast.
Sirohi („ 3rd)		A little water in tanks; wells good. Health good. Weather overcast and windy.
Marwar („ 2nd)	·37	About two months' water in Jodhpur city tanks. Health good in city, but some districts unhealthy. *Kharif* sowings only in districts favoured with rain. Weather cloudy. Prices stationary.
Meywar („ „)	3·34	Tanks and wells low. Crops sown. Health fair. Prices stationary. Weather seasonable.
Pertabgurh („ „)	1·10	Health good. Prices fluctuating. Weather occasionally cloudy.
Harowti („ „)	Deolie, 1·09; Tonk, ·18; Shahpura, ·96.	Sowings commenced. Health good.
Jhallawar („ 3rd)	2·38	*Makka* and *jowari* sowings progressing.
Ajmere („ 5th)	In Ajmere town, 3·79; in Beawar, 65.	Weather cooler and cloudy. Cultivation progressing. Wheat 23, barley 39½, and gram 40 pounds per rupee. Of 4 fresh cases of cholera in city, 2 fatal. Cholera reported prevalent in Ajmere district.
Jeypore („ „)	Good rain	*Kharif* sowings begun.
Dholepore („ 2nd)	·09	Wells stationary; tanks rising. Cultivation progressing. Fever disappearing. Prices rising. Weather cool.
Bhurtpore („ 5th)	·50	Ploughing commenced. Health fair.
Ulwar („ „)		No rain, consequently cultivation suspended. Cholera in five tahsils.
Kotah („ 2nd)	·58	Health good. Prices fluctuating.
Kherwara („ 3rd)	·18	Tanks and wells low. Health good. Prices steady. Weather bright and sunny. Rain much needed.
Bickanir („ 2nd)	*Nil*; good rain in some districts.	Fever in three districts. Prices rising. Weather very hot and partially cloudy.
Nepal—(June 30th)		
Katmandu	·22	Weather fair. Transplanting of rice nearly completed.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR JUNE 1887.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Meteorology), No. 100 Met.—24-11, dated Simla, the 7th July, 1887.

Read the following:

Weather Summary for June 1887.

During the past month the weather over India has been somewhat changeable. At times both branches of the monsoon current have blown with normal strength, and have occasioned heavy rains over a considerable part of India; at others both currents have been feeble, and the accompanying rainfall partial and intermittent.

The Bombay monsoon current broke on the West Coast quite at the commencement of the month. It set in somewhat feebly on the Malabar Coast on the 3rd; by the 4th it had extended as far north as Karwar; by the 5th to Bombay; and by the 7th it had penetrated inland over a large part of the Central Provinces. During the whole of this period very unsettled weather had prevailed over the Arabian Sea, where a cyclonic storm had apparently been formed. This storm disturbed the normal distribution of pressure, and as a consequence the barometric gradient along the West Coast of India was less steep and less regular than usual, hence the monsoon current in that region was feebler and less steady than the normal, though under the influence of the depression the rainfall was exceptionally heavy. On the 8th the rainfall at the Coast stations fell off somewhat, and by the 9th the storm over the Arabian Sea had disappeared. With its dispersion the wind direction became normal, and strong south-west to west-south-west winds set in across the West Coast, and continued until the 16th. They brought heavy rain to the Coast districts, the average daily fall at Goa, Ratnagiri, and Karwar for the period 9th to 15th June being about 4 inches, and much cloud and vapour, though only moderate rain, to the Deccan, Central Provinces, and Central India. On the 17th the Bombay current was evidently becoming feebler; and from that date until almost the close of the month an unusually weak monsoon was blowing across the Coast. As a consequence, the rainfall decreased quickly; and from the 20th to the 29th the weather was fairly fine in Western India, and a well-marked break in the rains obtained. In the Central Provinces, the Berars, and Khandesh this break was less marked than on the West Coast, the weather continuing showery; but in the Bombay Deccan the weather was abnormally fair.

The information with regard to the unsettled weather which prevailed off the Bombay Coast during the first week of the month is, at present, incomplete; but the logs of ships which were traversing the Arabian Sea at this time showed that—

On June the 6th and 7th the storm was forming between longitude 68° and 70° and latitude 70° and 18°. The Peninsular and Oriental steamer *Assam*, which left Bombay at 5-35 P.M. on the 7th, had squally weather from south-west and south-south-west. The *Draco* had a strong squall of wind and rain from north-north-east. At noon on the 7th the centre of the storm was in latitude 17°30′ and longitude 68°50′, or about 350 miles west-south-west from Bombay.

On the 8th the *Assam* had a moderate south-south-east gale in the forenoon, and a strong easterly to east-north-easterly gale in the afternoon. The storm centre crossed this ship's track, and immediately afterwards a terrific south-east gale was experienced. The lowest barometer reading was 29·10 inches at midnight on the 8th. The apparent position of the storm centre at noon on the 8th was latitude 17°50′ and longitude 68°10′, so that the movement was very slowly west-north-westward.

On the 9th between noon on the 8th and noon on the 9th the storm had moved very much more quickly, the apparent position of the centre at noon

on the 9th being latitude 18°20′ and longitude 65°, about 200 miles west-north-west of its position on the previous day. The *Assam* in 17°50′ and 67°1′ had squally southerly winds; the *Clan Forbes* in latitude 17° and longitude 65° had a terrific gale from south-south-west; and the *Lorna Doone* in latitude 19°43′ and longitude 64°33′ had a hurricane from north-east.

Between the 9th and 10th the storm had again moved very quickly, the centre at noon on the latter date being apparently in latitude 19° and longitude 61°10′. The *Assam* in latitude 17°25′, longitude 63°33′, had a southerly squally gale; the *Rothesay* in latitude 14°39′, longitude 58°13′, had a heavy south-south-west gale; the *Clan Forbes* in latitude 16°36′, longitude 66°, a strong south-west gale; the *Darien* in latitude 17°16′, longitude 62°40′, a south-westerly hurricane; the *Lorna Doone* in latitude 19°52′, longitude 63°53′, a south-south-east fresh gale and the barometer as low as 28·80 inches; the *Nizam* in latitude 16°6′, longitude 59°19′, a strong south-west gale, with furious squalls and heavy rain; while the *Albany* in latitude 19°49′, longitude 60°35′, on the north-western side of the centre had a northerly gale, with the barometer marking 29·10 inches.

On the 11th the rate of movement of the storm seems to have slackened considerably. The centre apparently passed over the *Albany* at noon on the 11th in latitude 19°4′ and longitude 60°25′, when the barometer marked about 28·75 inches. For about 15 minutes after noon a dead calm prevailed over the ship, during which numerous birds, hawks, &c., flew about the rigging. At the end of that time the wind, which had previously been north, burst out with hurricane force from south. The *Assam* in latitude 17°23′, longitude 62°10′, and the *Nizam*, hove to in about latitude 15°30′ and longitude 58°54′; both had hard south-west gales.

On the Bengal side strong monsoon winds blew from the 1st to the 3rd of June, and heavy falls of rain, ranging from 5 to 15 inches, occurred over Burma and Bengal. After the 3rd the current steadily decreased in force, and the rainfall fell off till, by the 8th, an almost complete break in the rains was reported from Northern India. On the 10th, however, a change took place. This change was brought about by the formation of a small storm over the head of the Bay. On the morning of the 12th the centre of the storm was approaching Ganjam, and rain was falling heavily in the Carnatic and the Circars. On the 13th the storm centre crossed the coast between Gopalpore and Vizagapatam, and rain was falling over Burma, Bengal, Assam, and Orissa; and on the 14th the depression was crossing the Central Provinces, causing general moderate rain over the Central part of India and at some places in the North-West. Between the 14th and 17th the force of the monsoon current was moderate and the weather showery. On the 18th the current again strengthened; and on the 19th a small depression formed over the head of the Bay. This depression travelled towards Central Behar, and by the 21st had reached Patna. It had given fairly general rain to a large part of Northern and North-Eastern India; and the strong monsoon winds it engendered brought unusually cool, damp weather to a large part of Northern and North-Western India. On the 21st the storm broke up; and after the 23rd the monsoon current decreased rapidly. The rainfall became first moderate and intermittent, and finally ceased almost entirely, and a break in the rains set in, which lasted until the close of the month.

In the south of the Peninsula there was little to call for remark during the earlier half of the month; but, with the break in the rains in Northern and Central India, a period of heavy rainfall set in over the Madras Presidency, which raised the month's fall above the average.

In Upper India the weather has been generally hot and oppressive. On the 2nd and 3rd thunderstorms and rather heavy falls of rain occurred on and near the hills of the Punjab and the North-Western Provinces; but the temperature on the whole was high during the first eight days of the month. After the 8th more cloud and moisture prevailed, and the heat was somewhat mitigated; but in the latter half of the month the weather again became hot with dry westerly winds, and temperatures exceeding 110° were registered at almost

all stations in the Punjab. At Dera Ismail Khan on the 30th the thermometer in the shade reached 118°.

The mean pressure of the month on the whole exceeded the normal average, the principal exceptions being the hill stations of the North-West Himalaya, the West Coast (except Bombay, Cochin, and Mangalore), Guzerat, Sind, and the Circars, in all of which districts pressure was deficient.

Temperature was below the mean, except at some stations in the North-Western Provinces, the Punjab, and Sind, where the average was exceeded. The defect was greatest and most general in Western, Central, and Southern India, amounting to over 5° at Cochin and Neemuch, and to over 4° at Seoni and Hyderabad (Sind).

The month's rainfall has been generally fair. In the Punjab, the North-Western Provinces, Rajputana, Sind, Guzerat, Bengal and the Circars, Burma and the Deccan, the amount has been short; but in the majority of cases the deficiency is not large. It is mostly attributable to the weakness of the Bengal current, and to the fact that the monsoon storms, which have been formed over the Bay, have been less numerous and less lasting than is the case in years of normal conditions, and that they have not penetrated into Upper India. The Bombay and Malabar Coasts and the districts fed by the Bombay current have generally had excessive rain; and this is also the case in Mysore and the Carnatic.

The following table shows the amount of rain and the difference from the average, during the month of June 1887, according to districts as far as is indicated by the telegraphic reports:

Districts.	Number of Stations.	Average Rainfall for June.	Difference from the Average in June 1887.
Punjab, West	7	1·49	— 0·28
„ East	6	3·69	— 0·65
North-Western Provinces, Trans-Gangetic	14	6·46	— 2·26
„ „ Cis-Gangetic	7	3·21	— 1·66
Behar	4	7·13	+ 1·05
Northern Bengal	3	17·78	+ 1·87
Assam—Cachar	5	17·14	+ 1·55

W. L. DALLAS,

SIMLA, *5th July 1887.* for *Meteorological Reporter to the Government of India.*

RESOLUTION.—Resolved, that the Summary be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 6th July, 1887.

Meteorological conditions during the past week have been fairly quiet over the greater part of India—that is to say, no cyclonic disturbance of any magnitude has appeared over the Bay or on the West Coast; but monsoon weather has prevailed throughout almost the whole country, and rain has been more or less general and in places heavy.

On the West Coast the monsoon current on the 30th June was feeble and irregular, a north-easterly breeze being reported from Bombay; but by the next morning, though still unusually weak, the current had resumed its normal westerly direction. During these two days the rainfall due to this branch of the monsoon was very limited and partial; and though showers occurred in all Provinces, the general amount was small. On the 2nd very strong winds were blowing across the Sind Coast, and there had been a slight increase also in the force of the winds down the West Coast of the Peninsula. Probably in consequence of this, rain fell in larger amounts at the West Coast stations and at some places in the Central Provinces. On the following day a further increase in the current was observable, accompanied by a rapid rise of humidity in the Central Provinces, and general and rather heavy rain over Western and Central India. On the 4th steady westerly winds were blowing across the West Coast, where, as well as over the Central parts of the country, there had occurred a further increase of humidity and general rain. On the 5th and 6th the winds had reached their normal strength, blowing strongly along the whole line of Coast from Mangalore to Kurrachee. Moderate to heavy rain was falling on the Malabar and Bombay Coasts, and showers in the more Central parts of the country.

The Bay of Bengal branch of the monsoon has been more or less feeble and irregular throughout the week. On the 30th June the wind directions round the Bay were very irregular, and the weather over the centre unsettled and squally. On the 1st, 2nd, and 3rd of July southerly to easterly winds prevailed over Bengal, Behar, and the North-Western Provinces. They were generally feeble and unsteady, but were damp, and brought fairly general showers to those regions. On the 4th the wind had shifted to east-north-east on the Bengal and Orissa Coasts, while the southerly wind at Diamond Island had risen. These changes were indicative of the formation of a cyclonic storm at the head of the Bay, and conditions were, therefore, apparently becoming favourable to a rush of monsoon winds up the Gangetic plain; but the storm proved to be very feeble, and produced but little effect on the weather. It lay between False Point and Saugor Island on the 5th, and had developed into an irregularly shaped disturbance by the morning of the 6th. The rainfall due to the Bay of Bengal monsoon current was at first light and partial; but later in the week general and at times heavy rain fell in Burmah and Bengal.

In Upper India the weather on the 30th June and 1st July was generally fine, though local showers were reported from several stations. On the 2nd, however, there were signs of a change. Very strong winds were blowing across the Sind Coast into Upper India, and the air became much moister and the sky more cloudy. These strong winds holding, the air continued to grow damper, and moderately heavy rain fell over the North-Western Provinces, the Eastern Punjab, and at the hill stations on the 3rd. On the 4th, 5th, and 6th general rain was reported from the North-Western Provinces, Eastern Rajputana, and the hill stations, and showers from several parts of the Punjab.

With the setting in of the moist monsoon current in Upper India, a very brisk fall of temperature took place over the North-Western Provinces, the Punjab, and Rajputana. The effect of this change is best displayed by a comparison of the maxima reported on the 30th June with those reported on the 6th

July. The following table gives this information for a few representative stations:

Stations.		Maximum reported on the 30th June.	Maximum reported on the 6th July.	Difference.
Agra	...	109·5	93·0	—16·5
Meerut	...	105·2	90·3	—14·9
Delhi	...	110·0	91·6	—18·4
Lahore	...	110·1	97·1	—13·0
Rawalpindi	...	115·0	89·0	—26·0
Peshawar	...	118·0	98·0	—20·0
Dera Ismail Khan	...	114·5	107·5	— 7·0
Ajmere	...	98·8	80·2	—18·6
Jeypore	...	100·1	82·0	—18·1

The week's rainfall has been light in Burmah (Thyetmio, 1·6 inches; Moulmein, 7·3 inches), in Bengal, and Assam (Dacca, 0·29 inch; Silchar, 6·4 inches), and somewhat deficient in the North-Western Provinces and the Punjab. On the West Coast the rainfall of the week was fairly heavy, the totals ranging from 5·5 inches at Cochin to 18·6 inches at Bombay. The state of the seasonal rainfall is shown by the following table, which gives (1) the total amount of rain for the period June 1st to July 6th; (2) the average for the same period; and (3) the difference from the average of the present season's rainfall:

Stations.		Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to July 6th.	Difference.
Akyab	...	19·35	56·68	—37·33
Saugor Island	...	11·97	14·26	— 2·29
Calcutta	...	7·97	14·32	— 6·35
Dhubri	...	27·68	29·19	— 1·51
Purneah	...	17·91	14·87	+ 3·04
Gya	...	5·62	7·94	— 2·32
Allahabad	...	6·05	5·03	+ 1·02
Meerut	...	2·88	4·20	— 1·32
Delhi	...	3·84	4·70	— 0·86
Lahore	...	3·34	2·21	+ 1·13
Peshawar	...	.....	0·26	— 0·26
Cochin	...	39·55	36·79	+ 2·76
Ratnagiri	...	57·14	40·06	+17·08
Bombay	...	42·28	25·08	+17·20
Poona	...	5·73	6·98	— 1·25
Surat	...	14·19	10·73	+ 3·46
Khandwa	...	10·70	7·84	+ 2·86
Nagpur	...	12·50	11·03	+ 1·47

Pressure has been below the average in Burmah, the Punjab, along the West Coast, and in Madras, above it elsewhere; but except in Bengal and the North-Western Provinces, where the excess was considerable, the departures from the mean were nowhere large.

The mean temperature of the week was above the average in Burmah, Bengal, the Punjab, the Central Provinces, Guzerat, Sind, and Rajputana; below it elsewhere. The excess was most marked in the Central Provinces; the defect, in Southern India.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.		No. of Stations.	Total Rainfall.
Burmah	...	6	26·13
Bengal and Assam	...	16	40·97
North-Western Provinces and Oudh	...	9	27·11
Punjab	...	6	10·23
Hill Stations	...	5	33·52
Ceylon	...	2	2·35
Malabar Coast	...	5	26·05
Bombay	...	9	77·92
Berars and Central Provinces	...	10	28·18
Guzerat and Central India	...	6	13·05
Sind—Rajputana	...	4	9·32
Madras	...	13	19·70

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 14th JULY, 1887.

GENERAL REMARKS.—Rain has fallen throughout the country during the week under report, and was heaviest in Bombay and the North-Western Provinces and Oudh.

Operations for the *kharif* harvest are everywhere in active progress, and sowings are most advanced in the North-Western Provinces and Oudh, Bombay, and the Central Provinces. In Sind the prospects of the *kharif* have improved greatly.

Agricultural prospects are good in Madras, Mysore and Coorg.

In Bengal the early rice is doing well, and the *aman* rice is being transplanted. Transplantation is also in progress in Bombay and Assam, and in the latter Province three varieties of the crop are being reaped. Ploughing and sowing for the rice crop in Burma are well advanced.

Cholera is abating in the North-Western Provinces and Oudh, but is still a good deal prevalent in Bombay. The public health is generally good in other parts of the country.

Prices show a tendency to fall in the North-Western Provinces and Oudh. Elsewhere they are generally steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(July 13th)		
Bellary	Average ·42	Standing crops good. Fever in one, cholera increasing in seven and cattle-disease increasing in three taluks.
Kurnool	Average last week since revised, 2·08; this week, 2·28.	Agricultural operations progressing. Small-pox in three, and cattle-disease increasing in three taluks. Slight cholera.
Ganjam	Average 2·80	Small-pox in four, fever in five, and cattle-disease increasing in three divisions. Cholera prevalent.
Kistna	Average last week since revised, 1·98; this week, 2·70.	Agricultural operations progressing. River 3·2 feet over anicut. Slight fever, slight cholera in one, and cattle-disease increasing in five taluks.
Chingleput (Madras)	Average ·57	Standing crops fair. Harvest wet and dry crops, outturn moderate. Small-pox in one and cattle-disease decreasing in four taluks.
Coimbatore	Average ·16	Standing crops generally good, but cholera affected by insects in one taluk. Harvest *cholum* and *cumbu*, outturn about average. Fever and slight cattle-disease in one taluk.
Tanjore	Average last week since revised, 1·20; this week, 8·08.	Standing crops generally good. Harvest gingelly, outturn up to average.
Madura	Average ·03	Health of people and cattle generally good.
Malabar	Average 9·44	Agricultural operations almost over. Fever in two, and slight small-pox in seven taluks.
Travancore	1·21	Paddy thriving fairly. Small-pox and fever in places. *General Remarks.*—General prospects good.
Bombay—(July 13th)		
Karachi	Manjhand, ·90; Sehwan, ·52; and Tatta, ·25.	Weather cloudy, with strong winds. River at Kotri on 11th, 13 feet 5 inches against 17 feet 3 inches on same date last year. Fever in five talukas. Wheat, red rice and *bajri* in Karachi 24, 32 and 32 and in Sehwan 28, 40 and 40 pounds per rupee, respectively.
Hyderabad	Rain in twelve talukas	*Kharif* cultivation in progress. Fever and cattle-disease in Badin taluka. River at Kotri on 11th, 13 feet 5 inches against 17 feet 3 inches on same date last year. Wheat 24, *jowari* 40, *bajri* 34½, white rice 18, and red rice 28 pounds per rupee. River rising at last.
Ahmedabad	2·72; total 9·75; rain throughout the district,—maximum, 10·57 in Dholka and minimum ·93 in Parantij.	Sowing of *kharif* in progress. Young crops doing well. Public health good. Wheat 28 and *bajri* 31 pounds per rupee.
Baroda	7·25; total 22·25	Cholera still continues, 8 deaths.
Surat	Rain in all talukas—maximum in Jalalpur, 15·03 and minimum in Surat, 5·86.	Sowing progressing. Transplantation commenced. Prospects good. Fever in Bardoli. *Jowari* 31 and *nagli* 43 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik . . .	Igatpuri, 26·73; Nasik, 3·30; Sinnar, 2·44; Dindori, 2·75; Niphad, 3·23; Yeola, 1·79; Nandgaon, 2·30; Baglan, 1·02; Kalwan, 2·20; Peint, 8·83.	Sowing operations in progress. Transplantation going on in Igatpuri and Peint. Fever and dysentery prevalent in Sinnar. Cholera in Nasik, 4 attacks, 2 deaths; in parts of Nandgaon, 5 attacks, 1 death; and in Yeola, 40 attacks, 19 deaths. Small-pox also prevalent in Yeola to a slight extent. Public health in other talukas good. Prices stationary.
Colaba (Bombay) .	Rain every day; heavy on 6th and 8th; total of week, 9·69; total to date, 49·11, being 19·60 above average.	Average abnormal temperature 3° cool from 6th to 8th, 1° cool on 9th and 12th, and 2° cool on 10th and 11th. Vapour in air normal. Abnormal wind from west-north-west on 6th and 8th, and from west-south-west on all other days.
Poona	Copious rain in six talukas—maximum 20·27 in Pesha Mulshi, taluka Haveli, and minimum 1·15 in Sirur taluka; very slight in Indapur and Bhimthari talukas, being ·31 and ·54, respectively.	Transplantation of rice and sowing of *kharif* crops commenced in some talukas. In Khed, Purandhar, and Mawal talukas sowing is retarded, owing to excessive moisture, and in Sirur and Bhimthari for want of sufficient rain. Public health generally good. Small-pox in Haveli taluka. 69 cholera cases in Indapur, Purandhar, Bhimthari, and Haveli talukas, 34 fatal. *Bajri* 42 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	Sheogaon, 1·97; Akola, 1·95; Nagar, 1·70; Parner, 1·66; Karjat, 1·48; Newasa, 1·24; Jamkhed, 1·0; Shrigonda, ·72; Sangamner, ·64; Rahuri, ·54; and Kopargaon, ·41.	Sowing in progress in five talukas only. Cholera—attacks 545 deaths 224. *Bajri* 36 and *jowari* 51 pounds per rupee.
Sholapur . . .	Rain in all talukas—maximum in Barsi, 3·32 and minimum in Malsiras, ·22.	Sowing of *kharif* crops in progress. More rain wanted in Sangola, Malsiras, and Pandharpur talukas. Cholera here and there in the whole district, 710 cases, 308 fatal. Cattle-disease in Sholapur and Sangola talukas. *Jowari* 56$\frac{3}{16}$ and *bajri* 50$\frac{1}{8}$ pounds per rupee.
Dharwar . . .	Rain at all stations, varying from ·42 in Mundargi to 4·42 in Hangal.	Rice sowing completed in western talukas. Young plants healthy. Heavy rain required in Nawalgund, Gadag, and Ranibennur talukas for sowing *jowari*, which is progressing slowly elsewhere. Slight cholera in two villages of Ron taluka. *Jowari* 54 and rice 24 pounds per rupee.
Kanara . . .	Heavy rain below Ghâts; Karwar, 10·03; total 70·10; Ankola, 22·30; Kumpta, 21·21; Honawar, 21·10; Yellapur, 15·35; and Haliyal, 3·35.	Crops doing well. Weeding in progress. Common rice in Karwar and district average 11½ seers per rupee.
Rajkot . . .	7·88; total 12·39	Weather cloudy and windy. Public health generally good. Wheat 24, *bajri* 24, and *jowari* 30 pounds per rupee.
		General Remarks.—Good rain throughout the Presidency Proper and slight in Sind. River in Sind rising steadily, and agricultural prospects there are much improved. Sowing operations still continue in several districts, and transplantation commenced in parts of eight districts. Slight fever and cattle-disease in parts of nine, small-pox in parts of six, and cholera in parts of seven districts.
Bengal—(July 13th)		
Chittagong (July 13th)	4·91	Weather seasonable. Transplanting of rice completed. Cultivation for *aman* going on. Prices unchanged. Sporadic cholera reported.
Dacca	2·56	*Aman*, *aus*, and jute thriving. Rivers rising fast. Some loss has occurred by too rapid rise of rivers in lowlands. Public health good.
24-Pergunnahs (Calcutta).	9·85	Prospects favourable. All agricultural operations in progress. Public health generally good.
Khoolna . . .	1·02	Weather cloudy with rain. *Aman* lands being prepared. *Aus* rice doing well. Cattle-disease in Bagirhat. Public health good.
Moorshedabad . .	3·27	Rain at intervals. Sowing of *aman* almost over. Jute and sugarcane thriving well. Public health good.
Pubna	4·74	Prospects of crops good. Public health good. Rivers rising.
Dinagepore . . .	1·71	Weather hot and clear. Prospects of crops fair. Public health fair.
Rungpore . . .	·87	Weather hot. Crops doing well. Public health fair.
Midnapore . . .	6·23	Recent downpour most opportune.
Burdwan . . .	6·0	Prospects much improved by rain. Public health good.
Bhagalpur . . .	·84	Brighter weather has benefited *bhadoi* crop. Weeding still backward. Young rice damaged on lowlands within reach of Kosi floods, otherwise *marua* and rice prospects good. Transplanting in progress.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Purneah . . .	2·02	Crops, where not injured by excessive rain, promise well. Transplantation of *aghani* going on. Public health fair. River high.
Durbhanga . . .	5·38	*Bhadoi* sowings in progress. Rice prospects continue favourable. Transplantation of *marua* going on. Cholera abating.
Chumparun . . .	1·78	Transplantation of paddy in progress. *Bhadoi* crops coming up well. Indigo manufacture progressing. Cholera much diminished.
Patná	1·95	*Bhadoi* and paddy seedlings growing well. Sugarcane progressing. Public health generally good
Gya	3·57	*Bhadoi* and paddy being sown. Cholera, small-pox, and fever reported from different parts of the districts.
Hazareebagh . .	Ample rain everywhere.	Weather seasonable. Agricultural operations in full swing. All crops doing well. General health good.
Cuttack . . .	·77	Weather cloudy. Rice plants doing well. *Beali* being weeded. Price of rice unchanged. Public health good. Sporadic cholera reported.
		General Remarks.—Weather has been of ordinary monsoon character throughout the week, and rainfall has been fairly general in all districts. *Aus* rice and jute are promising, except in parts of the Rajshahye and Bhagalpur divisions, where they have been injured by excessive rain and floods. Transplanting of *aman* rice is going on, and *bhadoi* crops in Behar are being sown. General health is good.
N.-W. Provinces and Oudh—(July 13th)		
Benares (July 12th)	. . . .	Sufficient rain to improve *kharif* prospects and lower prices. Health good, except for a few cases of cholera. Slight cattle-disease in Sadr.
Ballia („ 11th)	Rain general; averaging 1·00	*Kharif* operations progressing. Supplies sufficient. Prices rising. Cholera still prevailing.
Gorakhpore („ „)	From ·80 to 1·00 at Sadr.	Prices slightly risen. Sporadic cholera continues.
Fyzabad („ 12th)	Averaging 1·00	*Kharif* sowings in progress. Markets well supplied. Cholera still prevalent.
Lucknow („ 11th)	From 1·10 to 2·90	Supplies sufficient. Prices steady. Cholera still reported in the district, a few cases occurred at Sadr also.
Rai Barelli („ „)	Rain general; averaging about 2·20	*Kharif* operations going on. Supplies abundant. Prices stationary. Cholera decreasing.
Partabgarh („ 12th)	. . . .	Rain continues. Rice sowings begun. Prices steady. Cholera prevalent.
Allahabad („ „)	From 1·10 to 3·40	Sowings in full swing. Market full. Prices slightly lower. Cholera decreasing everywhere.
Cawnpore („ „)	From 1·50 to 5·4 in all tahsils.	*Kharif* sowings in good condition. Prices almost stationary. Cholera continues.
Farakhabad („ „)	. . . .	Rain beneficial. *Kharif* sowings in progress, although somewhat retarded for want of rain. Supplies ample. Prices lowering. Cholera still continues in a mild form in two tahsils.
Sitapur („ „)	Good rain throughout the district.	*Kharif* sowings in progress. Prices remain steady. Cholera still prevalent in the river tracts of Biswan tahsil.
Bareilly („ „)	Rain somewhat scanty..	Sowings doing well. No further rise in prices. Health good.
Banda („ 11th)	Heavy showers throughout.	Ploughing and in places sowings have commenced. Supplies sufficient. Prices stationary. Cholera abating somewhat.
Kumaon („ 12th)	Rain almost every day.	*Kharif* crops making good progress. Prices stationary. Public health fair. Cholera on decrease. Cattle-disease continues in parts.
Agra („ 11th)	Rain general; average from ·90 to 6·20	*Kharif* operations in progress. Prices steady. Small-pox and cholera continue to be reported.
Jhansi („ „)	Rainfall good	Ploughing going on. Prices slightly falling. Cholera unabated. Some small-pox.
Meerut („ „)	Rain general; average from 2·50 to 6·00.	*Kharif* sowings in progress. Prices stationary. Health good.
		General Remarks.—General rain throughout the Provinces, and heavy in some districts. *Kharif* prospects good everywhere. Supplies ample, and prices show a tendency to fall. Public health generally fair. Cholera abating a little. Cattle-disease reported.
Punjab—(July 13th)		
Hissar (July 12th)	Good rain over district and on the east excessive.	Health good. Prices stationary. *Kharif* ploughing and sowing in progress.
Delhi . . .	2·30	Health good, but several cases of small-pox. Prices almost stationary. *Kharif* ploughings progressing.
Umballa . . .	6·54	Health fair. Prices stationary. *Kharif* sowings in progress.
Jullundur . . .	1·70	Health good. Prices stationary. *Kharif* sowings commenced.
Ferozepore . . .	·30	Health good. Prices stationary.
Amritsar . . .	·09	Health good. Prices rising. *Kharif* crops good.
Sialkot . . .	1·40	Health good. Prices stationary. *Kharif* ploughings general. Sowings only partial.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Lahore		Rain wanted. A few cases of cholera. Prices stationary. *Kharif* ploughing progressing.
Multan		Rain wanted. Health good. Prices almost stationary. *Rabi* crops below average. *Kharif* sowings nearly finished.
Rawalpindi	1·0	Health good. Prices stationary. *Kharif* sowings in progress.
Shahpur	Slight rain	More rain urgently wanted. Health good. Prices stationary.
Dera Ismail Khan	3·16	Health good. Prices almost stationary. *Kharif* ploughings commenced. Prospects improved.
Peshawar		Rain much wanted. Cholera prevalent. Prices almost stationary *Kharif* sowings in progress.
		General Remarks.—Rain has fallen in all districts, except Lahore, Mooltan, and Peshawar, where it is wanted. Health is fair in Umballa and good elsewhere. Several cases of small-pox in Delhi, and some of cholera in Lahore and Peshawar. Rinderpest has appeared among cattle in the Sún Valley of the Shahpur district. Prices almost stationary in Delhi, Mooltan, Dera Ismail Khan, and Peshawar, rising in Amritsar, and stationary elsewhere. *Rabi* crops below average in Mooltan and fodder scarce in Shahpur. *Kharif* ploughings have commenced in Sialkot and Dera Ismail Khan, and progressing in Hissar, Delhi, and Lahore. Sowings in progress in Hissar, Umballa, Rawalpindi, and Peshawar, and nearly finished in Mooltan. Crops good in Amritsar.
Central Provinces— (July 13th)		
Nagpur	5·47	Weather rainy. Sowings in progress. Health good. Prices stationary.
Jubbulpore	5·43	*Kharif* sowings in progress. Prospects favourable. Cholera decreasing. Prices steady.
Saugor		Weather cloudy and showery. *Kharif* sowings progressing Fever and cholera prevalent. Prices slightly rising.
Seoni	10·21	Weather cool. Sowings continue. 24 deaths from cholera. Prices steady.
Hoshangabad	5·66	Sowings continue. Isolated cases of cholera. Prices steady.
Khandwa	3·11	Weather cool. Rain abundant. Crops sprouting. Prospects good. Health fair. Prices steady.
Bilaspur		More rain wanted. Rice sowings nearly completed. *Kodo*, cotton, and *til* being sown. Health fair. Prices rising.
Raipur	1·60	Weather cloudy and cool. Sowings nearly completed. Rice thriving. Some small-pox. Prices rather lower.
Sambalpur		No report received.
		General Remarks.—Favourable rain everywhere, except in Bilaspur, where more is wanted Sowings progressing actively. Cholera in some districts. Prices generally steady.
Burma—(July 13th)		
Akyab (July 9th)	13·76 (Total rainfall to date 47·85).	Some cholera and cattle-disease in district. Ploughing progressing.
Bassein	0·99 (Total rainfall to date 33·64).	Some cattle-disease.
Rangoon	5·93 (Total rainfall to date 44·99).	
Amherst (Moulmein)	15·34 (Total rainfall to date 64·40).	Ploughing and transplanting progressing.
Tavoy	17·88 (Total rainfall to date 72·50).	Ploughing and sowing progressing.
Pegu	6·02 (Total rainfall to date 57·67).	One case of cholera.
Henzada	3·58 (Total rainfall to date 26·40).	Slight cattle-disease. Ploughing progressing.
Prome	2·41 (Total rainfall to date 12·08).	Some cases of cholera.
Toungoo	5·13 (Total rainfall to date 24·79).	Some cattle-disease.
Thayetmayo	2·36 (Total rainfall to date 7·72).	
Shewbo (July 2nd)	2·19 (Total rainfall to date 9·99).	
Myingyan	1·79 (Total rainfall to date 10·31).	Food-supply sufficient. Prices ordinary.
Mandalay	·74 (Total rainfall to date 15·29	Reaping of spring crops commenced. Food-supply sufficient. Prices rising.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Minbu	For fortnight, 3·36	Food-supply sufficient. Prices normal.
Yamethen	1·32	Spring crop harvest nearly over.
		General Remarks.—Health of Lower Burma generally good. Cattle-disease to some extent in Mergui, and slight in several other districts. Ploughing and sowing well advanced. Reports received from five Upper Burma districts. Health good and crop prospects satisfactory.
Assam—		
Gauhati (July 13th)	During week ending 12th July, '68.	Weather hot, with occasional rain. Public health fair. Malaria fever reported from Barpetá. Transplanting of *sáil* in progress.
Sylhet	3·86	*Aman* paddy in parts of the districts damaged by sudden rise of river, otherwise state and prospect of the crops good.
Cachar	5·05	Weather sultry. Nights rainy Reaping of *dumai* and *murali* and cultivation of *sáil* crops progresses. Common rice 15¼ seers per rupee. Prospects of tea good Health good.
Dibrugarh	2·70	Weather very hot. Transplanting of *sáil* progressing. *Ahu* being cut, outturn good. Tea and sugarcane doing well. Public health fair.
Mysore and Coorg— (July 13th)		
Bangalore	Rainfall good in Shimoga and in parts of Kadur district, slight in other parts, and wanted in Kadur taluk.	Standing crops in good condition. Prospects of season favourable. Public health generally good. Small-pox and cattle-disease prevalent in parts. Prices slightly risen in Kolar district and fallen in Tumkur district.
Mysore		
Mercara	11·61	Prospects of crops and health continue good.
Berar and Hyderabad— (July 13th)		
Amraoti	4·54	*Jowari* sowings suspended, owing to incessant rain. Cholera in places. Fever prevalent. Cattle healthy. Wheat 15 and *jowari* 26 seers per rupee.
Akola	6·81	Weather cloudy, with heavy rain. Cotton sowings nearly completed. *Jowari* being sown. Cholera still prevalent in the district. Cattle-disease slight.
Hyderabad	Average 1·53; total since 1st January, 7·20.	*Kharif* sowings progressing. Prospects favourable. Cholera and cattle-disease prevalent at some places. Prices—wheat 13, coarse rice 12½, white *juar* 18¼, yellow *juar* 22, and *tur* 14½ seers per current sicca rupee.
Central India States— (July 13th)		
Indore	4·43	Continual showers. A break wanted.
Morar (Gwalior)	5·51	Health and prospects good. Weather seasonable.
Sutna	10·13	Cholera less prevalent.
Neemuch	1·65	Weather cloudy. Health good.
Goona	1·23	Health good.
Agar	5·42	Prospects good Cholera continues in Sailana.
Sehore	5·75	Weather seasonable. Health good. Crops fair.
Nowgong	2·75	Weather cloudy. Prospects fair. Cholera in Behat, Dhuswai, and Pahra. Prices rising.
Bhopáwar	.....	No report received.
Rajputana (July 13th)		
Abu (July 13th)	9·14	Weather stormy and overcast.
Sirohi („ 10th)	1·78	Tanks filling; wells good. Health good. Crops being sown. Weather overcast and misty.
Marwar („ 9th)	Heavy rain in districts, ·86.	Little water brought into Jodhpur city tanks. Health good in city and improving in districts. Sowing general. Weather very cloudy. Prices stationary. Market easy.
Meywar („ „)	1·05	Water in tanks and wells increasing. Crops fair. Health fair. Prices rising. Weather seasonable.
Pertabgurh („ „)	3·89	Health good. Prices fluctuating. Weather occasionally cloudy.
Harowti („ „)	Deoli, 1·61; Tonk, 4·96	Weather cloudy. Sowings continue. Health good.
Jhallawar („ 10th)	4·78	Prospects and health good.
Ajmere („ 12th)	·98; Beawar, 3·25; Todgurh, 4·80.	Ploughing and sowing in progress. Cholera still in Ajmere and district, of 20 fresh cases in city, 13 were fatal. Wheat 23, barley 40, and gram 40 pounds per rupee.
Jeypore („ „)	. . . .	Agricultural operations in full progress. Some cholera in eastern districts.
Kerwolee („ 9th)	2·43	Tanks and wells filling. Sowing operations in progress. Cholera in city. Prices falling. Weather seasonable.
Dholepore („ „)	Average 4·02	Tanks and wells filling. Ploughing and sowing still going on. Health good. Prices low. Weather seasonable.
Bhurtpore („ 12th)	3·90	Sowing progressing. Health fair.
Ulwar („ „)	2·27	Sowing commenced. Cholera in three tahsils, otherwise health good.
Kotah („ 9th)	2·20	Health good. Prices falling.
Kherwara („ 10th)	2·40	Tanks and wells low. Indian corn sown. Rice hardly begun. Health good. Prices steady. Rains begun.
Bickanir („ 9th)	·45	Sowings commenced. Fever in three districts. Prices rising. Weather hot and cloudy.
Nepal—(July 8th)		
Katmandu (July 7th)	3·87	Weather seasonable. Prospects good. Transplanting of rice is finished.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 13th July, 1887.

During the past week (July 7th to 13th) both branches of the monsoon have been somewhat stronger, and brought up more rain than during the preceding seven days; but owing to unfavourable pressure conditions in Upper India, neither branch has extended properly into the Punjab, and the rainfall of that Province, though good in some districts, has been generally deficient, more especially in the Peshawar, Rawalpindi, and Derajat Divisions.

On the 7th very strong and steady westerly winds prevailed along the whole line of the West Coast, and extended inland over the Deccan and Central India. General rain in consequence prevailed over the Western and Central parts of India. On the following morning a further increase of force along the West Coast was registered, and at several places in Western India the wind was 50 per cent. stronger than usual in July. As a consequence, the rains depending on this current were not only generally heavier, but were more extensive than on the previous day. On the 9th conditions in the West were practically unchanged. On the 10th, though there was no change on the West Coast, the effect of the strong winds which had blown so continuously from the Arabian Sea during the previous three days was very marked over Central India, the Central Provinces, the Deccan, and Rajputana, where a steady monsoon current was giving general rain—in some places heavy. These conditions continued on the 11th, by which time the monsoon had penetrated as far as Meerut, Roorkee, and Umballa. On the 12th there occurred a slight contraction in the extent of the current, the Punjab being practically rainless. In other respects there was little alteration, large amounts of rain being registered over the Central parts of the country, especially so at Nowgong. On the 13th the monsoon again advanced north-westward. Heavy rain was reported from Rajputana and the south-east of the Punjab, and small amounts from Rawalpindi and Jullundur.

The Bay of Bengal current on the 7th was unusually feeble. Nevertheless, the rainfall due to it was fairly plentiful. General rain fell all the way up the Gangetic plain, and heavy showers in some places. On the 8th there was an increase in the force of the wind at the head of the Bay; but this increase did not extend far inland, so that in Upper India the winds were weak and unsteady. Most of the rainfall appeared to be directed towards Burmah and East Bengal, so that the rainfall of the Gangetic plain was light and unimportant. On the morning of the 9th conditions were similar to those on the 8th; but the increased strength of the wind had apparently carried the monsoon current further up the Gangetic Valley, and moderately heavy falls of rain had occurred in West Bengal, Chutia Nagpur, and Behar. At Mussoorie 11½ inches of rain had fallen during a thunderstorm. On the 10th a very rapid fall of the barometer was reported from West Bengal and Chutia Nagpur, and a well-marked depression had been formed over that region. This depression had occasioned a strong indraught of air from the Bay; and consequently strong monsoon winds were blowing across the Bengal Coasts. These winds gave the large amount of 7·27 inches of rain to Calcutta, and more or less rain over the whole Gangetic plain, more particularly over and near the hills. By the 11th the depression had reached the eastern districts of the North-Western Provinces, and was occasioning heavy rain over those Provinces and the south-east of the Punjab. The 12th showed that the depression mentioned on the 10th and 11th had advanced as far west as Jhansi, and that a new depression was forming over East Bengal. The latter depression had advanced as far as Jessore by the morning of the 12th, and, like its predecessor, was moving steadily westward. Along the path of these depressions the rainfall has been steadily heavy, with strong winds and squalls.

The upper part of the Punjab has, so far, been outside the range of the monsoon currents; and though the air has been moist, and the weather close

and oppressive, the amount of rain has been very slight, and the seasonal fall shows a serious deficiency. At Peshawar there has not been a drop of rain since the commencement of the monsoon season.

The following table gives (1) the total amount of rain for the period June 1st to July 13th; (2) the average for the same period; and (3) the difference from the average of the present season's rainfall:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to July 13th.	Difference.
Akyab ...	36·85	66·66	—29·81
Saugor Island ...	15·54	17·30	— 1·76
Calcutta ...	18·80	16·81	+ 1·99
Dhubri ...	36·01	32·86	+ 3·15
Purneah ...	20·77	17·89	+ 2·88
Gya ...	9·23	10·05	— 0·82
Allahabad ...	7·33	7·72	— 0·39
Meerut ...	6·63	6·00	+ 0·63
Delhi ...	9·60	6·71	+ 2·89
Lahore ...	3·34	3·59	— 0·25
Peshawar ...	.....	0·40	— 0·40
Cochin ...	42·65	42·95	— 0·30
Ratnagiri ...	64·37	48·17	+16·20
Bombay ...	49·03	29·85	+19·18
Poona ...	10·75	7·87	+ 2·88
Surat ...	17·00	14·40	+ 2·60
Khandwa ...	13·66	9·97	+ 3·69
Nagpur ...	18·47	13·81	+ 4·66

The temperature of the week has been slightly above the average in the Punjab, but below it elsewhere; while the humidity variations have been exactly the opposite.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	65·13
Bengal and Assam ...	16	60·65
North-Western Provinces and Oudh ...	9	29·18
Punjab ...	6	12·59
Hill Stations ...	5	33·83
Ceylon ...	2	0·31
Malabar Coast ...	5	26·81
Bombay ...	9	49·98
Berars and Central Provinces ...	10	61·90
Guzerat and Central India ...	6	32·91
Sind—Rajputana ...	4	16·57
Madras ...	12	9·32

Docket by the Consulting Engineer to the Government of India for Guaranteed Railways, Calcutta, No. 614, dated 10th March 1887, and enclosure, letter from the Agent, East Indian Railway Company, No. 289/G., dated 1st March 1887.

OBSERVATIONS.—In accordance with the provisions of section 8 of the Indian Railway Act IV of 1879, as in force in British India and in the dominions of Princes and States in India in alliance with Her Majesty the Railway Administrations noted in the margin have applied that the General Rules for Indian Railways which have received the sanction of the Governor General in Council, and were published in the *Gazette of India*, dated 18th September 1880, may be applied to the respective Railways specified in the margin, worked by them, with the exception of rules 342 and 343, which they request to be altered as follows:—

The Oudh and Rohilkhand Railway Company.
The Managers, Wardha Coal and Bilaspur-Etawah State Railways.
The Manager and Engineer-in-Chief, Burma State Railway.
The Managers, Jorhat and Cherra-Companyganj State Railways.
The Rohilkhand and Kumaon Railway Company, Limited.
The Managers, Northern Bengal, Tirhoot, Dacca and Nalhati State Railways.
The Manager, North-Western Railway; the Bengal and North-Western Railway Company, Limited; the Managers, Nagpur-Chhattisgarh and Eastern Bengal State Railways and the Assam Railways and Trading Company, Limited.
The Bombay, Baroda and Central India Railway Company.
The Southern Mahratta Railway Company.
The East Indian Railway Company.

Lucknow-Sitapur-Sitamau State Railway, worked by the Oudh and Rohilkhand Railway Company.
Wardha Coal and Bilaspur-Etawah State Railways.
Burma State Railway.
Jorhat and Cherra-Companyganj State Railways.
Rohilkhand-Kumaon Railway and Bareilly-Pilibhit State Railway, worked by the Rohilkhand and Kumaon Railway Company, Limited.
Northern Bengal, Tirhoot, Dacca and Nalhati State Railways.
North-Western Railway and lines worked by the Director of that Railway, Bengal and North-Western Railway, Nagpur-Chhattisgarh State Railway, Eastern Bengal State Railway, Bengal Central Railway and Dibru-Sadiya Railway.
Rajputana-Malwa, Rewari-Ferozepore and Cawnpore-Achnera State Railways.
Mysore State Railway.
Scindia State Railway, Patna-Gya State Railway, Dildarnagar-Ghazipur State Railway, and Tarakessur Railway.

No. 342.—No engine or train shall be moved from any station until the Driver has in his possession a "Line Clear," "Caution Message," or other permission written on the authorized form showing that he can proceed to the next station. The Driver is to receive this written permission from no other person than the Guard of his own train, or from the Station Master, or from one of the Station Staff duly authorized for such duty; but on all occasions when the Guard does not personally deliver the permission to the Driver, it must be countersigned by the Guard before delivery to the Driver. The Driver must also receive from the Guard the usual starting signal before moving.

When a train is arranged to run through a station without stopping, the written permission to proceed to the next station may be handed to the Driver direct by the Station Master or other authorized person of the Station Staff, and a duplicate of it handed to the Guard in the same manner.

No. 343.—The Station Master, or other authorized person of the Station Staff, is to hand the written permission to the Guard, who must satisfy himself that it is properly filled up and dated with the time added, and is signed in full and in ink, and that it applies to the particular train or engine for which it is given and received before handing it to the Driver. The Driver must also satisfy himself on these points before starting.

This written permission is never to be given to the Driver until the train is to start; and when waiting to pass another train, it must not be given to the Driver until the whole of such other train has come in and is clear of the points.

When a train is not timed to stop at a station, and the written permission is handed both to the Driver and Guard of the train, the Station Master will be held wholly responsible that it applies to the particular train or engine for which it is given, and that it is properly filled up and dated, with the time added, and is signed in full and in ink.

RESOLUTION.—With Rules 342 and 343 altered as proposed, and with the exception of section XVII which refers to the working of a single line of railway on the system termed in Rule 3 of the said Rules "Train Despatching," the Governor General in Council is pleased, under section 8 of the said Act, to sanction the application to the Railways noted in the margin of the observations above, of the General Rules for Indian Railways, published in the *Gazette of India*, dated 18th September 1880.

ORDER.—Ordered, that the General Rules which have already been published in the *Gazette of India* be further notified to the railway servants and the public, by a copy thereof with the exception and alteration noted, and of this Resolution, being kept open to inspection, free of any charge, in the office of the Station Master of every station on the said railways.

Ordered also, that this Resolution be communicated to the Local Governments, Administrations and Officers noted in the margin, for information and guidance, and that it be published in the *Gazette of India*.

The Governments of Bombay, Bengal and the North-Western Provinces and Oudh.
The Chief Commissioners of the Central Provinces, Assam and Burma
The Director General of Railways.
The Consulting Engineers to the Government of India for Guaranteed Railways, Calcutta and Lucknow.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary.

RESOLUTION.

The subject of discussion in the papers cited in the preamble is the preparation and printing of Annual Departmental Reports submitted to the Government of India in the Home Department. In a letter No. 392S., dated the 22nd June 1885, the Government of the Punjab solicited a reconsideration of the whole question of the preparation and treatment of Annual Reports, so far as that Province was concerned. The alterations suggested by Sir Charles Aitchison and the views provisionally held by the Government of India on the question are summarized in Home Department Resolution of the 12th August 1885. But as the subject was not one of merely local importance, the Governor General in Council desired, before coming to a final decision, to have a full expression of the opinions of Local Governments and Administrations upon the proposals of the Punjab Government, so far as they affected the reports which are submitted to the Home Department. The replies from Local Governments and Administrations, read in the preamble, contain their opinions on the matter.

2. The proposals of the Punjab Government were made with the double object (1) of removing the burden thrown upon District Officers, Heads of Departments, and Secretariat Establishments in connection with the preparation and reviewing of Annual Reports; and (2) of reducing the cost of printing the reports. These proposals have not been accepted in full by any Local Government or Administration, except by the Chief Commissioner of Burma; and Mr. Crosthwaite, the present Chief Commissioner of that Province, holds, as his reply from the Central Provinces shows, different views from those held by Sir Charles Bernard. The Governments of Madras, Bombay, and Bengal have, to some extent, accepted the proposals in question; and the Chief Commissioner of Coorg has expressed his opinion generally in favour of having statistical tables, accompanied by notes, for two years, and in the third year a set of comprehensive departmental reports.

3. The most adverse criticism of the proposals made by the Punjab Government proceeds from the Government of the North-Western Provinces and Oudh, from the Administrations of the Central Provinces and of Assam, and from the Resident at Hyderabad. The Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh is of opinion that the presentation of evidence of departmental efficiency and the collection, in a convenient form, of information useful for administrative and other purposes cannot be secured under a system of triennial reporting, with intermediate statistical tables and brief explanatory notes. He considers that, as was suggested in paragraph 7 of Home Department Resolution of 12th August 1885, the brief notes would probably be of little practical value, while the triennial report would necessarily be prolix and involve much labour in its preparation. The latter, moreover, would be four years old before the orders of Government could be passed or any subsequent action taken upon it. Sir A. Lyall observes that the labour of scrutinizing statistics is little augmented by that of writing a report on them, and that a careful scrutiny and comparison of past and present returns is a necessary part of the duty of the Heads of Departments in administrating. But, while opposed to the general adoption of the proposals of the Punjab Government, Sir A. Lyall would meet them to some extent by doing away with reports on certain subjects, and by substituting for them statistical tables, accompanied every year by a brief commentary in the form of notes, such as is now supplied by the local High Courts of Judicature in reviewing the Criminal and Civil Justice Returns.

4. Mr. Crosthwaite, at the time Chief Commissioner of the Central Provinces, concurs in the views of the Government of the North-Western Provinces and Oudh in regard to the small amount of labour required to write a report, when once the relevant statistics have been systematically studied. He remarks that the system of writing reports is useful, inasmuch as it ensures that statistics have been scrutinized, and that it enables the Government to see how much care and intelligence have been devoted to this scrutiny. Reports moreover, in Mr. Crosthwaite's opinion, enable administrative officers to periodically survey the whole of their work and to judge of the effects of it, while they assist Government in seeing how far the recognized principles of administration have been applied, and how far errors require to be corrected. If for annual reports triennial reports were substituted, there is, he thinks, likely to be the disadvantage that the officer who had done the work would not ordinarily write the report, or, if he did, that his recollection of the facts regarding which he was writing would have grown dim with time. Under such a system, too, errors of administration could not be corrected at once. Mr. Crosthwaite admits that reports and reviews are often unnecessarily prolix and should be curtailed, and he suggests that the extended distribution of reports, which at present prevails, is unnecessary and expensive. He also deprecates the style of review, which merely repeats, in other and perhaps fewer words, what is stated in the report.

The Officiating Chief Commissioner of Assam considers that the proposals of the Punjab Government are unsuitable to that Province, and would lead to serious practical inconvenience. Mr. Ward is of opinion that the value of reports to departmental officers would be lost by triennial reports, while the labour of compiling the latter would be very great, particularly to officers who had held their charges only for a small portion of the three years.

The Resident at Hyderabad doubts if the proposed reform would have an useful effect, and argues that the review of the year's transactions by the Head of the Government affords an incentive to work. Praise or blame, in the Resident's opinion, loses its effect, if it relates to a time long passed away. The officer concerned may have left the locality, and it does not always happen that an officer remains at his post for the whole three years for which he would have to write the report.

5. The opinions briefly summarized above confirm the view taken by the Government of India in the Home Department, as expressed in the Resolution of the 12th August 1885, that it was not possible to go as far as was proposed by the Punjab Government in the direction of curtailing the preparation and submission of annual reports. After giving the subject full consideration

the Government of India agrees in the main with the remarks made by the Government of the North-Western Provinces and Oudh and the present Chief Commissioner of Burma regarding the usefulness of annual reports as a means of testing departmental efficiency and the judgment and energy of officers, and also of checking and correcting administrative mistakes. Applying this principle, the Governor-General in Council is of opinion that annual reports must be maintained in the two following cases:

(*a*) Where the reports deal with the application of administrative principles still open to modification, or the concrete working of which has to be watched.

(*b*) Where the reports contain statistics which, for administrative purposes, must be compiled and examined annually.

These two heads comprise so many of the reports now falling under the cognizance of the Home Department, that the conclusion to which His Excellency in Council has come is that, beyond insisting on brevity and methodical arrangement in the reports themselves, and on curtailment of reviews of them, it is impossible to afford much relief to Local Governments in the direction contemplated by this enquiry. The Government of India therefore desires that the Reports dealt with in the Home Department should, from 1887 onwards, be treated in the following manner:

(i) To be submitted annually as heretofore:

Report on General Administration.
Report on Municipal Administration.
Report on Local Boards' Administration.
Report on Education.
Report on Sanitation.
Report on Civil and Criminal Justice.
Report on Jail Administration.
Report on Police Administration.
Report on Lunatic Asylums.

(ii) To be submitted in full every third year, statistical returns and brief commentaries in the shape of notes being submitted in the intermediate years:

Report on Registration.
Report on Dispensaries.
Report on Lock Hospitals.
Report on Vaccination.
Report on Destruction of Wild Beasts and Snakes.

The notes to be submitted with the statistical returns in the years intermediate between the submission of the reports should give a clear, though brief, indication of the supervising or controlling officer's opinion as to the significance of the statistics.

6. The following special Reports should continue to be submitted as before:

Chemical Examiner's Report.
Report on Calcutta Medical Institutions.
Report of the Port Health Officer, Calcutta.
Report of the Commissi ners of the Town of Calcutta.
Report on Publications under Act XXV of 1867.
The Review of Publications.
The Report on Vernacular Newspapers.

The Government of India leaves to Local Governments who submit Reports on Legal Affairs and Criminal Tribes discretion to determine whether these reports shall be annually prepared as at present, or prepared every third year, with brief notes in the intermediate years.

7. The Governor-General in Council would desire to express his earnest hope that Local Governments and Administrations will insist on curtailment of reports to the utmost extent which is consistent with a proper examination

of the facts and figures presented in them. A reduction in the size of the reports on Jails, Police, Education, and Sanitation is especially necessary. In most Provinces these reports have become far too discursive.

Compression of reviews is not less called for than curtailment of reports: a review should contain only what is necessary to communicate the judgment of the reviewing authority regarding the salient features of the report. The Governor-General in Council attaches no value to reviews which merely repeat in abridged form what is set forth in the report reviewed.

8. While thus recognizing the need which exists for compression in the reports and reviews which reach the Government of India, His Excellency in Council is no less desirous that the same principles should be carefully followed as regards reports received by Local Governments and Administrations, but not forwarded to the Government of India. He fears that the time of administrative and executive officers is unnecessarily occupied as much by the preparation of reports and returns submitted for the information of the local authorities as by the preparation of those which reach the Government of India. He has therefore observed with satisfaction that the Government of Bengal has recently, in connexion with the Report of the Salaries Commission, directed its attention to this aspect of the case; and he trusts that all other Local Governments and Administrations will exercise a vigorous discretion not only in reducing the bulk of the reports and returns which are retained, but also in abolishing those that are not really required.

ORDER.—Ordered, that a copy of this Resolution be forwarded to all Local Governments and Administrations for information and guidance; and that a copy be forwarded to the other Departments of the Government of India for information and further necessary action, and that it be published in the Supplement to the *Gazette of India*.

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 21st JULY, 1887.

GENERAL REMARKS.—Except in the Punjab, good rain has fallen generally everywhere in the country during the week under notice.

The *kharif* sowings are progressing in all Provinces, though in some parts, notably in Bombay, the North-Western Provinces and Oudh, and the Punjab, more rain is wanted.

The agricultural outlook in Madras, Mysore and Coorg continues favourable.

The condition of the rice crop is good in Bombay, and sowing is going on in the Central Provinces. In Bengal the early rice is promising where not injured by floods, and the late variety is being transplanted. Of the four varieties of the crop being reaped in Assam, two—the *aus* and *ahu*—are yielding well. A fifth variety is being transplanted. In Burma ploughing, sowing, and transplanting continue. The Nepal rice crop promises well.

Cotton sowing has begun in Bombay; in the Central Provinces and Berar the crop has been damaged in places by rain.

Cholera is abating in the North-Western Provinces and Oudh; but the mortality from the disease is still high in parts of Bombay. Elsewhere the public health is generally satisfactory.

Prices show an upward tendency in the North-Western Provinces and Oudh, and are rising in four districts of the Punjab. Elsewhere they are fairly stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(July 20th)		
Bellary . . .	Average ·45	Standing crops good. Fever in one, cholera decreasing in seven and cattle-disease decreasing in three taluks.
Kurnool . . .	Average ·25	Standing crops good. Slight cholera. Small-pox in three, and cattle-disease decreasing in three taluks.
Ganjam . . .	Average last week since revised, 2·89; this week, 1·83.	Small-pox in four, fever in seven, and cattle-disease increasing in five divisions.
Kistna . . .	Average last week since revised, 2·88; this week, ·31.	Agricultural operations progressing. River 14 feet over Anicut. Slight fever. Cholera decreasing in two and cattle-disease decreasing in four taluks.
Chingleput (Madras) .	Average ·05	Standing crops fair. Small-pox in one, and cattle-disease decreasing in two taluks.
Coimbatore . . .	Average ·15	Standing crops generally good, but *cholum* affected by insects in parts of two taluks. Harvest *cholum* and *cumbu*, outturn about average. Fever in one taluk.
Tanjore . . .	Average ·14	Standing crops generally good. Harvest gingelly, outturn up to average. Cattle-disease in one taluk.
Madura . . .	Average ·03	Cattle-disease in one division.
Malabar . . .	Average 7·38	Agricultural operations over. Fever in two and slight small-pox in seven taluks.
Travancore . .	1·90	Paddy in ear and thriving. Small-pox and fever in places. *General Remarks.*—General prospects good.
Bombay—(July 20th)		
Karachi . . .	Rain for week ending 11th—in Jati, 2·70; in Thano Bula Khan, 1·30; average of four other stations, ·15; for week ending 18th—in Sakro, 3·40 and Karachi, 1·57.	River at Kotri on 18th, 15 feet 7 inches against 18 feet 5 inches on same date last year. *Kharif* crops injured by crabs in Ghorabari taluka and by crabs and turtles in Shahbandar. Fever in four and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 24, 32 and 32 and in Tatta 22, 38 and 34 pounds per rupee, respectively.
Hyderabad . . .	Rain in nine talukas	*Kharif* cultivation in progress. Fever, small-pox, and cattle-disease in one taluka. River at Kotri on 18th, 15 feet 7 inches against 18 feet 5 inches on same date last year. Wheat 24, *jowari* 40, *bajri* 36½, white rice 18, and red rice 28 pounds per rupee.
Ahmedabad . . .	5·0; total rainfall, 14·75.	Rain throughout the district. Young crops doing well. Transplantation of rice and sowing of cotton begun. Public health good. Wheat 28 and *bajri* 31 pounds per rupee.
Baroda . . .	5·72; total rainfall, 27·97.	Cholera still continues in city, 31 cases, 7 deaths. *Bajri* 28, wheat 18, and rice 23 pounds per rupee.
Surat	Rain in all talukas—maximum in Mandvi, 8·78 and minimum in Olpad, 3·57.	Sowing and transplantation in progress. Crops damaged in some talukas owing to heavy rain. Prospects good. Fever in Bardoli and cholera in Bulsar and Pardi towns. *Jowari* 34 and *nagli* 44 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik . . .	Rain in Igatpuri, 2·07; Nasik, 2·46; Dindori, 3·50; Niphad, 1·77; Chandor, 2·90; Yeola, 1·85; Nandgaon, 2·07; Malegaon, 1·71; Baglan, 1·50; Kalwan, 3·46; and Peint, 10·38.	Sowing and transplantation going on. Cholera in Nasik, Yeola, Nandgaon, and Malegaon, 72 attacks, 45 deaths. Public health as regards other talukas good. Prices stationary.
Colaba (Bombay) . .	Rain every day; total of week, 1·44; total to date, 50·55, being 13·39 above average.	Abnormal temperature 1° cool on 14th and 15th, 1° warm on 19th, and *nil* on all other days. Vapour in air normal. Wind from west on 13th backed from west-north-west on 14th to north on 19th; strong on 17th.
Poona	Rain throughout the district—maximum 14·61 in Petha Ambegaon and minimum ·68 in Indapur taluka.	More rain wanted in parts of Indapur and Sirur talukas. Transplantation in progress in the *mawal* portion of the district. Sowing of *kharif* commenced in some talukas, in others retarded owing to excessive moisture. Public health is generally good. Small-pox in Haveli taluka. 67 cholera cases in Indapur, Purandhar, Bhimthari, and Haveli talukas, 31 fatal. *Bajri* 42 and *jowari* 54 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	Akola, 2·70; Jamkhed and Sangamner, 1·74; Parner, 1·70; Karjat, 1·37; Shrigonda, 1·31; Newasa, 1·28; Sheogaon, 1·05; Rahuri, ·90; Nagar, ·78; and Kopargaon, ·34.	*Bajri* sowing in progress in nine talukas. Cholera—attacks 572, deaths 282. *Bajri* 30 and *jowari* 51 pounds per rupee.
Sholapur . . .	Maximum in Karmala, 1·61 and minimum in Sangola, ·70.	Sowing of *kharif* crops in progress. More rain wanted in Sangola and Malsiras talukas. Cholera—cases 641, fatal 282. Cattle-disease in Sholapur and Sangola talukas. *Jowari* 57¼ and *bajri* 50¼ pounds per rupee.
Dharwar . . .	Rain at all stations, except Mundargi, varying from ·10 in Nargund to 7·15 in Mugud.	Rice and minor crops good. Sowing of early *jowari* in progress throughout the district, except in Nawalgund and Gadag talukas and Nargund and Mundargi Pethas, where it is retarded for want of sufficient moisture. Public health good. *Jowari* 54 and rice 23 pounds per rupee.
Kanara . . .	Karwar, 7·74; total 80·84; Kumpta, 14·08; Yellapur, 19·01; and Haliyal, 6·95.	Transplanting continues. Crops thriving. Slight cattle-disease throughout the district, subsiding in Supa, in Haliyal 21 died. Common rice in Karwar 10 seers 40 tolahs, and district average 11½ seers per rupee.
Rajkot . . .	4·28; total rainfall, 16·67.	Public health good. Sowing operations in progress. Wheat 23, *bajri* 24 and *jowari* 31 pounds per rupee.
		General Remarks.—More or less rain throughout the Presidency, more still wanted in parts of Poona, Sholapur, Bijapur, and Dharwar. In Sind the river continued to rise during the week, but is still below the average height. *Kharif* sowing and transplantation of rice going on in several districts. Fever in parts of eight, small-pox in parts of seven, cattle-disease in parts of eleven, and cholera in parts of thirteen districts.
Bengal—(July 20th)		
Chittagong (July 19th)	·95	Weather variable. Ample rain in south, more rain wanted in other parts. Prospects of *aus* fair; *aman* being transplanted. Prices stationary. Cholera still reported.
Dacca	3·32	*Aman*, *aus*, and jute doing well. Prospects good. Public health generally good.
24-Pergunnahs (Calcutta).	2·95	Prospects favourable. Transplanting of *aman* continues. Public health generally good.
Khoolna . . .	·98	Weather hot. Transplanting of *aman* going on. More rain wanted. Prospects fair. Public health good.
Moorshedabad . .	1·91	Weather hot. Transplanting of *aman* going on. *Til*, sugarcane, and jute progressing. Public health good.
Pubna	·61	Weather seasonable. Prospects of crops good. Public health good.
Dinagepore . . .	·10	Slight rain. Weather hot. Prospects of *bhadoi* fair. Transplanting going on. Cholera and cattle-disease in one *thana*.
Rungpore . . .	1·39	Weather hot, but favourable to crops. Prices stationary. Public health fair.
Midnapore . . .	1·52	Prospects of crops excellent.
Burdwan . . .	·90	Prospects of crops fair. Public health good.
Bhagalpur . . .	1·44	*Bhadoi* prospects improving. Rice and *marua* doing well. Transplanting in progress. A little cholera still reported.
Purneah . . .	·99	Prospects favourable. Transplanting in progress. Public health fair. Rivers high.
Durbhanga . . .	·91	*Bhadoi* prospects favourable. Transplanting of paddy and *marua* in progress. Cholera abating.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Chumparun . . .	·77	*Bhadoi* crops coming up. Transplanting of paddy in slow progress for want of rain. Prices stationary. Public health fair.
Patna	·81	Maize, *kauni*, and paddy growing well. Sowing of *rahar* and *jowar* going on. Cholera reported from the interior.
Gya	·67	*Marua*, *makai* and sugarcane coming on well. Paddy being sown. Cholera still virulent in the mofussil. Fever and small-pox also reported.
Hazareebagh . .	. . . .	A break in the rains. Rice being transplanted. Prospects of *bhadoi* crops good. General health good.
Cuttack . . .	·61	Weather hot. Rice plants thriving, but require more rain. Price of rice unchanged. Scattered cases of cholera reported.
		General Remarks.—A strong monsoon easterly current blew at the beginning of the week and in the middle of the week a westerly current set in. Rainfall of the week generally slight. More rain is wanted in some of the central and eastern districts. Early rice and jute are generally promising, except where flooded in parts of the Rajshahye and Bhagalpur divisions. Prospects of *bhadoi* crops in Behar are favourable. Transplanting of late rice is going on. General health is good, but cholera is still prevalent in parts of Behar. Cattle-disease is spreading in Beerbhoom.
N.-W. Provinces and Oudh—(July 20th)		
Benares (July 19th)	Rainfall up to date only one-fourth of last year.	*Kharif* cultivation backward for want of sufficient rain. Supplies sufficient. Prices steady. Cholera still lingers in places. Some cattle-disease at Sadr.
Ballia („ 18th)	General rain averaging 2·80.	*Kharif* operations in progress. Prospects fair. Supplies ample. Cholera continues.
Gorakhpore („ „)	1·90 at Sadr	Prices stationary. Sporadic cholera continues.
Fyzabad („ 19th)	Averaging 1·10	*Kharif* sowings nearly finished. Supplies sufficient. Prices rising. Cholera in city and three tahsils and small-pox in one.
Lucknow („ 18th)	Averaging 1·30	*Kharif* crops and sugarcane progressing. Supplies sufficient. Prices stationary. Cholera prevailing in south-west of the district.
Rai Barelli („ „)	Averaging about ·60	*Dhan* suffering for want of rain. Markets well stocked. Prices rising. Cholera continues.
Partabgarh („ 19th)	Break in the rains	*Kharif* sowings completed. Prices stationary. Cholera continues.
Allahabad („ „)	Averaging 1·20	Weather hot. *Kharif* sowing continues. Markets well supplied. Prices steady. Cholera seems to be abating. Health otherwise good.
Cawnpore („ „)	General rain from ·60 to 5·70.	*Kharif* sowings in progress. Prices of wheat, *bajri*, and gram slightly risen. Cholera abating.
Farakhabad („ „)	Slight rain	More rain urgently wanted. *Kharif* sowings in progress. Earlier sowings germinating. Supplies ample. Prices fluctuating. Slight cholera and fever in ten tahsils, otherwise health good.
Sitapur („ „)	Rain in one tahsil only.	Rain is anxiously expected. Prices show a tendency to rise.
Bareilly („ „)	Fair amount of rain, more needed.	Sowings progressing moderately. Prices tending to rise. Health good.
Banda („ 18th)	Good and general rain early in week.	*Kharif* sowings in progress. Prices stationary. Cholera abating. Cattle-disease in one village.
Kumaon („ 19th)	. . . .	Crops doing well. Prices stationary. Cholera on the decrease, but 5 cases have occurred in Almora town. Cattle-disease in some *pattis*.
Agra („ 18th)	General rain averaging from 2·40 to 5·80.	*Kharif* operations in progress. Prices falling slightly. Cholera abating.
Jhansi („ „)	Good rain all over district.	*Kharif* sowings commenced. Slight fall in prices. Cholera abating.
Meerut („ 19th)	Weather cloudy, with occasional showers.	*Kharif* ploughings and sowings being actively carried on under favourable conditions. Prices stationary. Health good.
		General Remarks.—Rainfall heavy in Agra and Cawnpore, but lighter in other districts. More rain wanted for *kharif* sowings. Prospects promise well. Supplies ample, though prices show an upward tendency. Public health generally fair. Cholera abating.
Punjab—(July 20th)		
Hissar (July 19th) .	. . . .	Rain much wanted. Health good. Prices stationary.
Delhi . . .	2·97	Health good. Two more cases of sporadic cholera. Prices fluctuating. *Kharif* sowings commenced.
Umballa . . .	·07	Health fair. Prices stationary. *Kharif* sowings in progress.
Jullundur . . .	·90	Health good. Prices rising. *Kharif* sowings commenced.
Ferozepore . . .	. . . .	Rain greatly wanted. Health good. Prices rising.
Amritsar . . .	·10	Health good. Prices stationary. *Kharif* crops good.
Sialkot . . .	1·30	More rain wanted. Health good. Prices stationary. *Kharif* sowings below the average.
Lahore . . .	. . . .	Cases of cholera. Prices rising.
Multan . . .	. . . .	Rain wanted. Health good. Prices stationary. *Kharif* crops good on canal lands.
Rawalpindi . . .	1·90	Health good. Prices stationary. *Kharif* sowings in progress.
Shahpur . . .	. . . .	Rain urgently needed. Health good. Prices rising.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Dera Ismail Khan	. . . . .	Health good. Prices stationary. *Kharif* ploughings in progress.
Peshawar	. . . . .	Rain much wanted. Cholera prevalent. Prices slightly falling. *Kharif* sowings in progress.
		General Remarks.—Rain has fallen in Delhi, Umballa, Jullundur, Amritsar, Sialkot, and Rawalpindi, and is much needed in Hissar, Ferozepore, Multan, Shahpur, and Peshawar. More is needed in Sialkot. Health good in all districts, except Umballa, where it is fair. Cases of cholera in Delhi, Lahore, and Peshawar. Prices are stationary in Hissar, Umballa, Amritsar, Sialkot, Multan, Rawalpindi, and Dera Ismail Khan; fluctuating in Delhi; rising in Jullundur, Ferozepore, Lahore, and Shahpur; and slightly falling in Peshawar. *Kharif* sowings commenced in Delhi and Jullundur, and in progress in Umballa, Rawalpindi, and Peshawar. Sowings below average in Sialkot. Ploughings in progress in Dera Ismail Khan. Crops good in Amritsar and on canal lands in Multan. Fodder scarce in Sialkot and Shahpur
Central Provinces—(July 20th)		
Nagpur	6·79	Weather cloudy *Jowari* sowings in progress. Rice being transplanted. Prospects good. Health good. Prices stationary.
Jubbulpore	1·48	Sowings well advanced. Prospects favourable. Cholera decreasing. Prices steady.
Saugor	2·23	Weather cloudy. Ploughing and sowing in progress. Few cases of cholera. Fever prevalent. Prices rising.
Seoni	9·63	Weather cloudy and windy. Ploughing and sowing in progress. Prospects favourable. Cholera continues. Prices steady.
Hoshangabad	4·69	Weeding in progress. Prospects favourable. Fever prevalent. Isolated cases of cholera. Prices stationary.
Khandwa	4·11; continuous rain	Cotton somewhat damaged. Prospects otherwise good. Slight cholera. Prices stationary.
Bilaspur	4·03	Rice sowing continues. More rain wanted. Wet ploughing commenced. Health fair. Prices rising.
Raipur	3·28	Weather cloudy and close. Rice sowings completed. Second ploughing commenced. Plants thriving. Small-pox and cattle-disease in places. Prices steady.
Sambalpur	. . . . .	No report received.
		General Remarks.—Good rain has fallen during the week, and the prospects of the *kharif* harvest are favourable.
Burma—(July 20th)		
Akyab (July 15th)	14·56 (Total rainfall to date 62·41).	Ploughing progressing.
Bassein	11·09 (Total rainfall to date 45·33).	Slight cattle-disease
Rangoon	6·59 (Total rainfall to date 51·58).	
Amherst (Moulmein)	16·27 (Total rainfall to date 80·67).	Two deaths from cholera in jail. Ploughing and transplanting progressing.
Tavoy	16·07 (Total rainfall to date 88·57).	Slight cattle-disease. Ploughing and sowing nearly completed. Crops healthy.
Pegu	7·43 (Total rainfall to date 65·10).	
Henzada	6·51 (Total rainfall to date 32·91).	Ploughing progressing. Transplanting commenced.
Prome	2·67 (Total rainfall to date 15·35).	Slight cattle-disease.
Toungoo	5·38 (Total rainfall to date 30·17).	Ploughing progressing. Sowing commenced.
Thayetmayo	2·77 (Total rainfall to date 10·49).	Ploughing commenced everywhere.
Myingyan	·25 (Total rainfall to date 10·56).	Some cases of measles. Food-supply sufficient. Prices ordinary.
Minbu	·47 (Total rainfall to date 8·81).	Food-supply sufficient. Prices normal.
Mandalay	·56 (Total rainfall to date 15·85).	Reaping of *kaukkyi* crops continues. Food-supply sufficient. Prices rising.
		General Remarks.—Public health of Lower Burma good. Some cholera in Moulmein jail and in Shwegyin district. Slight cattle-disease in parts. Agricultural work well advanced. Ploughing interrupted by heavy floods in Sandoway. Reports received from three Upper Burma districts only.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Assam—(July 20th)		
Gauhati	·67	Weather hot, with occasional rain. Public health fair. Malaria fever still reported from Barpeta. Cattle-disease reported from Pattidarrang. Rain much wanted for transplanting *sâil*. *Aus* crop being reaped, reported abundant.
Sylhet	·96	State and prospects of crops good.
Cachar	3·21	Weather seasonable. About half of the *dumai* and *murali* crops reaped. Cultivation of *sâil* crops continues. Prospects of tea, and general health, good. Common rice 14 seers 8⅜ chittacks per rupee.
Dibrugarh	1·41	Weather seasonable. Reaping of *ahu* propressing, outturn good. Tea doing well. Public health fair.
Mysore and Coorg—(July 21st)		
Bangalore	Rainfall very good in Shimoga and in parts of Kadur and Hassan districts, slight in other parts, wanted in Bangalore and Tumkur districts and in the Kadur taluk.	Standing crops in good condition. Prospects of season favourable. Public health generally good. Fever, small-pox, and cattle-disease prevalent in parts. Prices stationary.
Mysore		
Mercara	7·41	Standing crops in good condition. Transplanting of rice in progress.
Berar and Hyderabad—(July 20th)		
Amraoti	8·14	Weather cloudy and rainy. Cotton plants slightly injured by excessive rain. *Jowari* sowings progressing. Cholera less prevalent. Wheat 15 and *jowari* 25 seers per rupee.
Akola	8·87	Weather cool, with abundant rain. *Kharif* sowings in progress. Cholera still prevalent. Cattle-disease continues.
Hyderabad	Average 1·09; total since 1st January, 8·29.	Cattle-disease prevalent in almost all talukas. Prices—wheat 12½, coarse rice 12¼, white *juar* 18¼, yellow *juar* 21, and *tur* 14½ seers per current sicca rupee.
Central India States—(July 20th)		
Indore	5·28	Constant rain, but clear the last two days.
Morar (Gwalior)	3·60	Two fatal cases of cholera in Lashkar. Prospects good. Weather seasonable.
Sutna	4·65	Cholera still lingers, otherwise health good.
Neemuch	4·37	Health good.
Goona	3·10	Health good.
Agar	2·50	Prospects good. Health fair.
Sehore	4·00	Weather seasonable. Crops and health good.
Nowgong	11·17	Weather cloudy. Prices rising. Cholera reported from Datia.
Bhopawar	4·39	Health good. Prices stationary.
Rajputana—(July 20th)		
Abu (July 20th)	11·17	Weather windy and overcast, but seasonable.
Sirohi („ 17th)	3·14	Tanks nearly full; wells good. Health good. Crops being sown. Weather overcast and cool.
Marwar („ 16th)	·93	Some water brought into Jodhpore city tanks. Health good in city, but districts unhealthy. Sowings general. Weather very cloudy. Rains general, but unusually little in city and very heavy in districts. Prices tending to fall.
Meywar („ „)	5·21	Water increasing in tanks and wells. Crops fair. Health fair. Prices stationary. Weather seasonable.
Pertabgurh („ „)	6·24	Water in tanks and wells increasing. Health good. Prices fluctuating. Weather cloudy.
Harowti („ „)	Deoli, 8·24; Tonk, 16·29; Shahpura, 3·45; previous week, 1·79	Weather rainy. Sowings progressing. Health good.
Jhallawar („ 17th)	8·91; good and general rain.	Health and prospects excellent.
Ajmere („ 19th)	Average 4·00	Weather cloudy. Four small tanks in Todgurh overflowed. Cattle, which suffered for want of fodder, are dying. Out of 17 fresh cholera cases in city, 9 fatal. Prices stationary.
Jeypore („ „)	. . . . .	Prospects favourable.
Kerowlee („ 16th)	10·96	Tanks and wells full. Cultivation in progress. Cholera decreasing. Prices steady. Weather seasonable.
Dholepore („ „)	Average 4·90	Tanks and wells filling. Sowing continues. Prospects good. Health good. Prices stationary. Weather seasonable.
Bhurtpore („ 19th)	2·70	Sowings in progress. Health good.
Ulwar („ „)	Average 2·89	Cholera decreasing.
Kotah („ 16th)	4·21	Health good. Crops germinating.
Kherwara („ 17th)	3·11	Tanks and wells not so low. Grass growing at last. Health good. Prices steady. Weather seasonable and excellent for crops.
Bickanir („ „)	·36; heavier in some districts.	Sowings continue. Health good. Prices stationary. Weather cloudy and stormy.
Nepal—(July 15th)		
Katmandu (July 14th)	2·61	Heavy showers and sultry weather in the intervals. The rice crops promise well at present.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 20th July, 1887.

For the first few days of the past week the weather over the greater part of India was largely dependent on the cyclonic storm, which traversed the country from East to West between the 13th and 17th. After the latter date there occurred a general recovery of pressure, and meteorological conditions underwent a sudden change, a break in the rains setting in over the Gangetic Plain and partially on the West Coast also.

On the 14th, on the West Coast, from Kurrachee as far south as Cochin, strong monsoon winds were blowing. In the South they passed inland right across the Peninsula; but in the North they were influenced by the low pressure area lying near Raipur, and on reaching the Central Provinces became merged in the circulation existing round that depression.

On the 15th comparatively little change was reported. In the South the monsoon current crossing the West Coast continued its course westward right across the Peninsula, while in the North it poured into the cyclonic vortex over the Central Provinces.

On the 16th, except on the Malabar Coast, the winds of Western India had become much more southerly. This southerly direction carried the current northward across the Berars up the Gangetic Plain; but on the following day there were indications of its growing lighter, while at the same time the rainfall due to it was diminishing. On the 16th the current from the Bay was practically interrupted, and the winds over Bengal were light and variable, with little or no rain. On the 17th, owing to a brisk barometric fall over Bengal and the head of the Bay, the normal south-easterly direction of the wind was reversed, and north-westerly breezes prevailed over the Lower Gangetic Plain and across Bengal. The chart of the 18th showed that, while the prevailing current over Bengal continued north-westerly, local eddies had been set up in different parts of Bengal, which had resulted in several moderate or heavy falls of rain. Variable winds and local showers of rain continued on the 19th; but on the 20th there occurred a change towards more normal conditions. The low pressure area, which had existed over the head of the Bay and which had deflected the monsoon current towards Arakan, showed signs of moving westward, leaving the way open to the monsoon to once more spread over Bengal.

In Upper India, and particularly in the Punjab, conditions during this week have not been altogether satisfactory. In the early part of the week a feeble current from the Bay passed up the northern side of the Gangetic Plain, giving slight rain to several places on or near the Central Provinces, &c., as far as the Gangetic Plain, where the wind backed to south-east, and so travelled north-westward across the Punjab to the Indus Valley. On the 17th similar conditions prevailed over the greater part of Western and North-Western India; but over the Central parts of the country the current had undergone a shift to west, and in some places even showed a tendency to veer towards north-west. On the 18th the chart showed that the whole of the current from the Arabian Sea had become more or less westerly. With this change had come a considerable decrease in its rainbearing properties, and a few showers only were reported from the more Western and Central stations. On the following day the westing in the wind's direction continuing strongly marked, the amount and the area of the rainfall still further diminished. On the 20th there were some indications of a change. The current crossing the West Coast had become stronger and more southerly, and the rainfall area larger; but the character of the fall was unchanged, rain occurring rather as local showers than as part of a general fall.

The Bay of Bengal branch of the monsoon current has been very irregular. On the 14th a fairly strong wind was blowing across the Bengal Coasts, and extending for some distance to the hills, but hardly affecting the weather in the Punjab. After the 17th, however, this current was cut off; and from this date until the last day of the period the plains of the North-Western Provinces had no rain, though a little was received by the north and east of the Punjab, derived from the Bombay current.

So far, then, the seasonal rainfall of Upper India has not improved at all during the past week, and, as will be seen from the following figures, the deficiency in some parts of the Punjab is now proportionately very large:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to July 20th.	Difference.
Akyab ...	46·44	78·30	—31·86
Saugor Island ...	20·97	21·13	— 0·16
Calcutta ...	21·65	19·61	+ 2·04
Dhubri ...	36·09	35·81	+ 0·28
Purneah ...	21·02	21·55	— 0·53
Gya ...	9·59	12·15	— 2·56
Allahabad ...	7·94	10·36	— 2·42
Meerut ...	6·98	7·73	— 0·75
Delhi ...	10·40	7·96	+ 2·44
Lahore ...	3·34	5·25	— 1·91
Peshawar ...	.....	0·66	— 0·66
Cochin ...	43·63	48·25	— 4·62
Ratnagiri ...	67·06	56·29	+10·77
Bombay ...	50·47	36·15	+14·32
Poona ...	12·95	9·50	+ 3·45
Surat ...	21·61	17·88	+ 3·73
Khandwa ...	17·76	12·46	+ 5·30
Nagpur ...	24·66	16·40	+ 8·26

This table shows that there is a large deficiency on the Arakan Coast; that over Bengal and Assam the rainfall is about, or a little in excess of, the average, but that from Behar right up the Gangetic Plain as far as Peshawar, except about Delhi, the seasonal fall is deficient, the largest relative deficiency being in the Punjab. On the West Coast and over the Central Provinces the rainfall has been exceptionally heavy.

The Cyclonic Storm.—The storm mentioned above lay near Jessore on the morning of the 13th; on the 14th it had reached Raipur, on the 15th Hoshangabad, and on the 16th Hyderabad. By the 17th it had disappeared across the Indus into Baluchistan. It had been followed in its course across the country by a very rapid recovery of pressure, the rise in twenty-four hours at some stations in the rear of the storm amounting to as much as 0·25″.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	43·57
Bengal and Assam ...	16	34·07
North-Western Provinces and Oudh ...	9	9·55
Punjab ...	4	3·23
Hill Stations ...	6	23·03
Ceylon ...	2	0·83
Malabar Coast ...	5	12·42
Bombay ...	9	27·02
Berars and Central Provinces ...	10	57·99
Guzerat and Central India ...	6	17·42
Sind—Rajputana ...	5	17·18
Madras ...	13	6·40

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 4th AUGUST, 1887.

GENERAL REMARKS.—Rain was reported throughout the country; and in the Punjab the fall has been better than has been recorded for some weeks.

The prospects of the *kharif* are generally very satisfactory in all Provinces, though rain is wanted here and there, and a break would be beneficial in the Central Provinces and in one or two places in Central India and Rajputana.

In Madras the crops need rain in four districts, otherwise prospects are fair. In Mysore and Coorg the outlook is good.

In Bombay the rice crop is good, and the prospects of the early variety in Bengal, which is being harvested, are also favourable. In the latter Province the late rice is being transplanted, and transplantation is also in progress in the North-Western Provinces and Oudh, the Central Provinces, and Burma. In Assam more rain would help the cultivation of the *sáil*. In Nepal rain is also wanted for rice.

Cotton sowings have been damaged by wet weather in Bombay and Berar, and a break would be good for the crop in the Central Provinces.

Cholera shows no signs of abating in the affected districts in Bombay, and is also prevalent in several places in the North-Western Provinces and Oudh. Elsewhere the public health continues satisfactory.

Prices are rising in the districts of the Punjab. Otherwise they are generally stationary in all Provinces.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Aug. 3rd)		
Bellary	Average ·11	Standing crops generally good, but young early crops withering in parts for want of rain. Cholera decreasing in four, and cattle disease increasing in four taluks.
Kurnool	Average last week since revised, ·71; this week, ·25.	Standing crops good. Small-pox in three, and cattle-disease increasing in five taluks. Slight cholera.
Ganjam	Average last week since revised, 1·79; this week, 1·04.	Small-pox in four, fever in seven, and cattle-disease decreasing in four divisions. Slight cholera.
Kistna	Average last week since revised, ·67; this week, ·56.	More rain wanted. Agricultural operations progressing. River 7 feet over Anicut. Slight fever. Cholera increasing in two, and cattle-disease decreasing in five taluks.
Chingleput (Madras)	Average ·85	More rain wanted in three taluks. Standing crops fair. Harvest wet and dry crops, outturn below average. Small-pox in one, and cattle-disease increasing in five taluks.
Coimbatore	Average ·21	More rain wanted in parts. Standing crops generally good, but *cholum* affected by insects in one taluk. Harvest *cholum* and *cumbu*, outturn about average. Fever in one, and slight small-pox in two taluks. Slight cattle-disease in one taluk.
Tanjore	Average ·10	Standing crops are generally good. Harvest gingelly, outturn below average. Cattle-disease in two taluks.
Madura	Average last week since revised, ·08; this week ·23.	Cattle-disease increasing in one division.
Malabar	Average 4·37	First crop paddy cultivation good. Slight small-pox in six taluks, and cattle-disease in one.
Travancore	1·01	Paddy ripening. Small-pox and fever in places. *General Remarks.*—General prospects fair.
Bombay—(Aug. 3rd)		
Karachi		Weather cool. Rain still threatening. River at Kotri on 1st, 17 feet 4 inches against 19 feet 7 inches on same date last year. Heavy rain at Sakro has injured *kharif* crops. Fever in three and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Sehwan 28, 38 and 40 pounds per rupee, respectively.
Hyderabad	Rain in one taluka on 26th July.	*Kharif* cultivation in progress. Fever in one taluka. River at Kotri on 1st, 17 feet 4 inches against 19 feet 7 inches on same date last year. Wheat 24, *jowari* 40, *bajri* 36, white rice 18, and red rice 29 pounds per rupee.
Ahmedabad	2·42; total 19·57	Rain in all talukas. Overmoisture has retarded the sowings of cotton in Dhandhuka, and slightly injured young crops in Gogo, Daskroi, and Dholka talukas. Break in weather desirable. Public health good. Wheat 28 and *bajri* 30 pounds per rupee.
Baroda	4·25; total 36·80	Cholera still continues in city, 11 deaths. Sowing operations going on in Naosari division. Sowing of *jowari*, *bajri*, and cotton stopped on account of excessive rain. Young plants thriving. *Bajri* 24, wheat 18, and rice 18 pounds per rupee.
Surat	Rain in all talukas—maximum in Bulsar, 20·01 and minimum in Olpad, 4·33.	Break much needed. *Jowari* and cotton seed rotten in places. Sowing and resowing retarded. Transplantation completed. Cattle healthy. Cholera abating in Bulsar and Pardi. *Jowari* 34 and *nagli* 43 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik . . .	Igatpuri, 18·10; Peint, 15·98; Dindori, 4·03; Chandor, 2·74; Nasik, 2·69; Kalwan, 2·29; Niphad, 2·03; Sinnar, 1·53; Yeola, ·82; Nandgaon, ·78; Baglan, ·67; and Malegaon, ·47.	Transplanting and sowings in progress. Standing crops healthy. Sowing operations retarded in Igatpuri and other parts in consequence of heavy rain. Break in weather desirable. Cholera in Niphad, Yeola, Nasik, Nandgaon, Malegaon, and Baglan talukas, total attacks 122 and deaths 55. Slight dysentery in Sinnar. Cattle-disease in Dindori, small-pox in Yeola, and fever and ague in Peint.
Colaba (Bombay) .	Rain every day, except on 30th; total of week, 1·89; total to date, 56·09, being 9·11 above average.	Abnormal temperature 1° cool on 29th, 1° warm on 31st, 2° cool on 2nd, and *nil* on all other days. Vapour in air normal. Wind normal.
Poona	Rain throughout district—maximum 5·08 in Petha Mulshi and minimum ·09 in Bhimthari taluka.	More rain wanted in Indapur and Sirur talukas. Sowing of *kharif* in progress. Transplantation continues in Petha Mulshi. Crops little damaged in Khed taluka by excessive moisture. General health good. Small-pox in Haveli taluka. 207 cholera cases in Indapur, Khed, Purandhar, Bhimthari, and Haveli talukas, 90 fatal; in Poona city 64 attacks, 26 deaths. *Bajri* 41 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 44 pounds per rupee in Poona city.
Ahmednagar . .	Sangamner, ·85; Akola, ·79; very slight elsewhere.	*Kharif* sowing in progress, where there has been sufficient rain. Cholera attacks 428, deaths 229. *Bajri* 36 and *jowari* 51 pounds per rupee.
Sholapur . . .	Sholapur, ·16; Barsi, ·44; Madha, 33; Karmala, ·42; and Pandharpur, ·59.	Sowing of *kharif* crops almost completed. More rain wanted. Cholera more or less in all talukas, except Pandharpur, cases 342, fatal 177. Cattle-disease in Sholapur and Pandharpur talukas. *Jowari* 58½ and *bajri* 51½ pounds per rupee.
Dharwar . . .	Hangal, 1·30; Mugud, ·71; Kalghatgi and Bankapur, ·58; Kod and Hubli, ·29; and Dharwar and Ron, ·20; none in other talukas.	Rice and minor crops good in western talukas. Heavy rain urgently required in eastern talukas, both for sowing *jowari* crops and those already sown. Slight cattle-disease in one village in Dharwar taluka. Public health good. *Jowari* 54 and rice 24 pounds per rupee.
Kanara . . .	Karwar, 3·38; total 91·91; Kumpta, 3·21; and Sirsi, 3·82.	Crops doing well. Cattle-disease subsiding. Slight fever in Sirsi and Sidapur. Common rice in Karwar 10 seers, district average 12 seers per rupee.
Rajkot . . .	4·13; total 22·02	Weather windy and cloudy. Break in rain much needed. Public health generally good. Wheat 24, *bajri* 24, and *jowari* 30 pounds per rupee.
		General Remarks.—More or less rain throughout the Presidency, more still wanted in parts of five districts. *Kharif* sowing and transplanting not yet finished in some districts. Young crops slightly injured by excessive moisture in parts of Guzerat, Khandesh, Poona, and Karachi. In Sind the river continues rising. Fever and small-pox in parts of eight, cattle-disease in parts of eleven, and cholera in parts of fourteen districts.
Bengal—(Aug. 3rd)		
Chittagong (Aug. 2nd)	10·72	Weather seasonable. *Aman* transplanted. Prices steady. General health good, notwithstanding a few sporadic cases of cholera.
Dacca	2·93	Jute and early rice being harvested. Prospects of *aman* good. Some early rice lost by rapid rise of rivers. Public health good.
24-Pergunnahs (Calcutta).	2·70	Prospects favourable. All agricultural operations in progress. Public health generally good.
Khoolna . . .	3·83	Weather cloudy, with rain. *Aus* paddy ripening. Transplanting of *aman* going on. Prospects fair. Public health good.
Moorshedabad . .	2·19	Weather very hot, rain at intervals. Transplanting of *aman* proceeding. *Til*, sugarcane, and jute progressing. Public health good.
Pubna	1·29	More rain wanted. Prospects of crops and general health good.
Dinagépore . . .	2·72	Both *bhadoi* and *haimanti* paddy suffering from want of rain; present rainfall beneficial as far as it goes, but scanty.
Rungpore . . .	2·39	Planting of *aman* going on. Prospects of crops fine. Prices rising. Public health good.
Midnapore . . .	1·57	Heavy downpour since 31st July. Rivers swollen. Prospects of crops excellent.
Burdwan . . .	2·18	Prospects of crops fair. Some cholera, but public health generally good.
Bhagalpur . . .	4·88	Transplantation going on. *Marua* and early rice in good condition. *Makai* can scarcely be more than a half crop. Cholera still about.
Purneah . . .	2·02	Rain has done much good, and cause for present anxiety is removed. Transplantation of *aghani* rice going on. Public health fair. Rivers low.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Durbhanga . . .	2·01	Prospects of *bhadoi* continue favourable. More rain wanted for transplantation of paddy. Indigo manufacture in progress. Public health generally good.
Chumparun . . .	1·57	Weather hot and cloudy, with occasional showers. *Bhadoi* crops look healthy. Rain much wanted for rice crop. Prices stationary. Deaths from cholera again increasing.
Patna	2·76	*Bhadoi* crops growing well. Rain will facilitate paddy transplantation. Cholera reported from the interior.
Gya	1·94	Paddy transplantation going on. *Bhadoi* getting on well. Heavy shower of rain wanted. Cholera almost everywhere. Fever also reported.
Hazareebagh . .	Incessant rain	All crops doing well, and agricultural prospects very favourable. Cholera and fever reported from several *thanas*.
Cuttack . . .	·97	*Beali* rice in ear. *Sarad* rice doing well. Price of rice unchanged. Sporadic cholera prevails almost everywhere.
		General Remarks.—Weather has been of ordinary monsoon character throughout the week, and good general rain is reported in all districts. More rain is wanted in some of the Central Bengal districts and in North Behar. Transplanting of late rice seedlings is now generally going on well. Prospects of early rice, jute, and *bhadoi* crops are favourable. In some districts harvesting of early rice and jute has begun. Cholera prevalent in the Patna division and Cuttack, and fever in Beerbhoom. Elsewhere general health good.
N.-W. Provinces and Oudh—(Aug. 3rd)		
Benares (Aug. 2nd)	Averaging 2·00	More rain wanted. Prospects improved. Supplies ample. Prices falling slightly. Cholera has decreased since rain fell, otherwise health good. Cattle-disease abating.
Ballia („ 1st)	Slight rain	Weather cloudy. *Kharif* prospects fair. Sugarcane doing well. Transplantation of rice begun. Market well supplied. Prices rising. Cholera prevailing.
Gorakhpore („ „)	2·20 at Sadr	More rain needed. Prices rising. Cholera continues.
Fyzabad („ 2nd)	Averaging about 2·10	Prospects fair. Supplies sufficient. Cholera in city and three tahsils, and small-pox in one.
Lucknow („ 1st)	Rain still insufficient	Weeding in progress. *Bajri* and *mash* being sown in places. Prices almost stationary. Cholera still prevailing in the district.
Rai Barelli („ „)	From ·70 to 2·30	Markets full. Prices stationary. Cholera continues.
Partabgarh („ 2nd)	Heavy rain	Sky cloudy. Prices steady. Health of men and cattle fair.
Allahabad („ „)	Averaging 2·80	*Bajri, jowari* and rice sowings in progress. Supplies sufficient. Prices stationary. Cholera continues.
Cawnpore („ „)	General rain from 1·80 to 5·80.	*Kharif* flourishing. Prices stationary. Cholera prevailing.
Farakhabad („ „)	Abundant rain	Prospects good. Supplies ample, but prices are rising. Cholera in three tahsils.
Sitapur („ „)	Good rain at all tahsils, but Biswan, where it is much wanted.	Prices steady. Cholera on the increase.
Bareilly („ „)	Fair amount of rain	Crops progressing. Rice still behind hand. Market steady. Health good.
Banda („ 1st)	Good rain	*Kharif* sowings have germinated well. Weeding in progress. Prices stationary. Cholera continues slightly. Cattle-disease in one pergunnah.
Kumaon („ 2nd)	Rainfall good	Crops flourishing. Prices stationary. Cholera in Ranikhet and Almora, but has ceased for the last three days in the latter place.
Agra („ 1st)	Heavy rain during week.	Crops making progress. Prices rising slightly. Cholera continues.
Jhansi („ „)	Varying from 7·60 to 14·20.	Rain has interfered with weeding on black soil. *Kharif* crops germinating well. Prices unchanged. Cholera decreasing.
Meerut („ 2nd)	Good general rain from ·80 to 2·30.	*Kharif* crops flourishing. Prices stationary. Health good.
		General Remarks.—Rainfall in all districts; but more is wanted in Benares, Gorakhpur, Lucknow, Sitapur, and Moradabad. Crops are flourishing; supplies are ample and prices remain steady. There is still cholera in several districts, but the general health of the population is good.
Punjab—(Aug. 3rd)		
Hissar (Aug. 2nd) .	Good rain	Prices stationary. *Kharif* sowings in progress.
Delhi	·30	Health good. Two sporadic cases of cholera. Prices fluctuating. *Kharif* sowings completed.
Umballa . . .	1·30	Health fair. Prices rising. *Kharif* sowings completed.
Jullundur . . .	3·80	Health good. Prices stationary. *Kharif* sowings in progress.
Ferozepore . . .	·80	A few cases of cholera, otherwise health good. Prices falling.
Amritsar . . .	1·0	Health good. Prices rising. *Kharif* crops good.
Siakot	3·80	Health good. Prices stationary. *Kharif* crops expected to be above average.
Lahore . . .	2·90	Cholera in district. Prices stationary.
Multan	Slight rain	Health good. Prices stationary. *Kharif* crops improving.
Rawalpindi . . .	·20	Health good. Prices stationary. *Kharif* prospects good.
Shahpur . . .	1·0	More rain wanted. Health good. Prices stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Dera Ismail Khan	. . . .	Health good. Prices steady. *Kharif* ploughings in progress.
Peshawar	·90	Rain much wanted. Cholera prevalent. Prices almost stationary. *General Remarks.*—Rain has fallen in all districts, except Dera Ismail Khan; more wanted in Shahpur and Peshawar. Health good, except in Umballa, where it is fair; cases of cholera in Delhi, Ferozepore, Lahore, and Peshawar. Prices stationary in Hissar, Jullundur, Sialkot, Lahore, Multan, Rawalpindi, and Shahpur; steady in Dera Ismail Khan; fluctuating in Delhi; rising in Umballa and Amritsar; falling in Ferozepore; and almost stationary in Peshawar. *Kharif* sowings in progress in Hissar and Jullundur; completed in Delhi and Amballa; ploughings in progress in Dera Ismail Khan; and prospects good in Rawal Pindi. Crops good in Amritsar, and expected to be above average in Sialkot. Fodder scarce in Shahpur.
Central Provinces— (Aug. 3rd)		
Nagpur	1·99	Weather rainy; break wanted. *Jowari* and cotton being damaged. Slight cholera. Prices stationary.
Jubbulpore	. . . .	No report received.
Saugor	6·89	Weather rainy. Ploughing continues. Cholera slightly prevalent. Prices unchanged.
Seoni	4·32	Weather rainy. Transplanting of rice commenced. Weeding in progress. Prospects good. Slight cholera. Prices steady.
Hoshangabad	5·60	Weeding in progress. Fever prevalent. Cholera in parts. Prices stationary.
Khandwa	·60	Weather cloudy and showery. Prospects good, except cotton and *til* suffering from too much moisture. Cholera 32 cases, deaths 12. Prices unchanged.
Bilaspur	2·32	Weather wet. *Ploughing continues.* Cotton and sugarcane doing well. Wheat and gram being exported to Sambalpur. Prospects good. Prices slightly fallen.
Raipur	4·04	Weather cool and cloudy. Second ploughing progressing. Weeding commenced. Small-pox and cattle-disease in Simga tahsil. Prices steady.
Sambalpur	. . . .	No report received. *General Remarks.*—A break in the rains is wanted for all crops, except rice. Prospects, however, continue favourable.
Burma—(Aug. 3rd)		
Akyab (July 30th)	7·69 (Total rainfall to date 81·52).	Slight cholera in district. Sowing progressing.
Bassein	2·08 (Total rainfall to date 52·65).	Slight cattle-disease. Ploughing far advanced. Transplanting progressing.
Rangoon	5·56 (Total rainfall to date 67·21).	
Amherst (Moulmein)	12·89 (Total rainfall to date 112·89).	One death from cholera in jail. Ploughing and transplanting progressing.
Tavoy	8·08 (Total rainfall to date 103·17).	Ploughing and sowing completed. Crops healthy.
Pegu	7·09 (Total rainfall to date 80·53).	
Henzada	6·78 (Total rainfall to date 43·38).	
Prome	1·03 (Total rainfall to date 19·73).	Slight cattle-disease.
Toungoo	4·82 (Total rainfall to date 38·99).	Ploughing not completed. Sowing progressing.
Thayetmayo	1·92 (Total rainfall to date 14·49).	Ploughing continues.
Yamethen	1·25 (Corrected total rainfall to date 12·76).	Food-grains insufficient. Ploughing begun. Price of paddy Rs. 170.
Myingyan	·59 (Total rainfall to date 11·31).	Food-supply sufficient. Price of paddy Rs. 125.
Minbu	·37 (Total rainfall to date 10·15).	Pice of paddy Rs. 110.
		General Remarks.—Health of Lower Burma good. Slight cattle-disease here and there. Agricultural operations proceeding. Prospects satisfactory. Reports from five Upper Burma districts. Public health good. Price of rice high.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Assam—(Aug. 3rd)		
Gauhati (Aug. 2nd)	2·63	Weather hot. Rain much wanted. *Sáil* cultivation retarded in parts for want of sufficient rain. Public health fair. Malarial fever still continues in Barpetta. Reaping of *aus* crop almost finished.
Sylhet	11·97	State and prospects of the crops good.
Cachar	3·57	Weather last two days rainy. Transplanting of *sáil* crops commenced. Reaping of *dumai* and *murali* crops continues. Common rice 16 seers per rupee. Health good. Weather too dry for tea.
Dibrugarh	4·13	Weather seasonable. Reaping of *ahu* and transplanting of *sáil* progressing. Prospect of tea and sugarcane good. Public health fair. More rain wanted for *sáil*.
Mysore and Coorg— (Aug. 3rd)		
Bangalore	Slight rain in parts	Rain wanted in Mysore, Tumkur, and Kolar districts. Standing crops in good condition. Public health generally good. Cattle-disease prevalent in parts. Prospects of season continue favourable. Prices stationary.
Mysore		
Mercara	3·76	Standing crops in good condition. Health good.
Berar and Hyderabad— (Aug. 3rd)		
Amraoti	1·95	*Jowari* sowings completed. Cotton plants damaged by continuous rain. Weeding continues. Cholera still prevalent. Prices—wheat 15 and *jowari* 25 seers per rupee.
Akola	3·27	Weather warm and cloudy. *Jowari* sowings delayed, but completed in places. Cotton promising well. Isolated cases of cholera in three taluks. Fever prevalent.
Hyderabad	. . . .	No report received.
Central India States— (Aug. 3rd)		
Indore	1·18	Cloudy and wet weather injuring *kharif* crops.
Gwalior	6·48	Cholera in Lashkar increasing. Prospects of crops good.
Neemuch	2·38	Health good. Weather cool.
Goona	7·88	A few cases of small-pox in Bajrangarh district, otherwise health good.
Sutna	3·25	
Agar	6·36	Health and prospects good.
Sehore	8·21	Continuous rain; break wanted. Health good. Crops fair.
Nowgong	9·95	Cholera in Sarila and Alipura.
Bhopawar	2·18	Crops in Manpur damaged by excessive rain. Health good. Prices stationary.
Rajputana—(Aug. 3rd)		
Abu (Aug. 3rd)	18·81	Heavy rain; break needed. Weather overcast, but seasonable.
Sirohi (July 31st)	1·35	Tanks nearly full. Wells good. Health good. Crops being sown. Weather overcast.
Marwar („ 30th)	1·12	Two months' water brought into Jodhpore city tanks by week's rain. Health good in city, and improving in district. Crops thriving. Weather cloudy. Prices stationary.
Meywar („ „)	1·21	Water in tanks and wells increasing. Crops fair. Health fair. Prices stationary. Weather seasonable.
Pertabgurh („ „)	4·67	Health good. Prices steady. Weather occasionally cloudy.
Harowti („ „)	Deoli, 4·13; Tonk, 3·78	Weather misty. Health good. Prospects good. Prices risen.
Jhallawar („ 31st)	5·28	Health good. Prospects good.
Ajmere (Aug. 2nd)	1·35; rain throughout district.	Weather cloudy. Weeding continues. Cholera still in district, of 23 fresh cases in city, 11 fatal. Cattle-disease in Todgarh abating. Prices stationary.
Jeypore („ „)	Continuous rain	Cultivation retarded. Some cholera.
Kerowlee	. . . .	No report received.
Dholepore (July 30th)	5·75	Tanks and wells full. Weeding continuing. Prospects good. Health good. Prices stationary. Weather seasonable.
Bhurtpore (Aug. 2nd)	5·80	Crops good. Health good.
Ulwar („ „)	Average 3·50	Prospects good. Cholera increasing in city. Prices steady.
Kotah (July 30th)	4·74	Health good. Weather cloudy, with frequent rain; break wanted.
Kherwara („ 31st)	2·43	Tanks and wells slightly rising. Rain insufficient for general rice sowings. Health good. Prices still unchanged. Weather seasonable.
Bickanir („ 30th)	Drops; more in districts.	Sowings continue. Health good. Prices stationary. Weather cloudy.
Nepal—(July 29th)		
Katmandu (July 28th)	3·46	Heavy showers and sultry weather. More rain needed for the rice.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 3rd August, 1887.

The pressure distribution and wind circulation during the past week have both been abnormal over a large part of India, but more particularly in the East. Over Bengal there has been a steady deficiency of pressure, which has been accompanied by a very unsteady and intermittent wind current from the Bay, and a strong current across the Peninsula from the Arabian Sea. The Bombay monsoon has, on the contrary, been exceptionally strong and steady, and has extended to almost all parts of the country.

On July 28th an exceptionally strong westerly wind, varying from 9 to 23 miles an hour, was blowing from the Arabian Sea across the West Coast of India, and thence passing on—in the South right across the Peninsula, and in the North into Rajputana and the Central parts of the country. Though very humid and carrying with it much cloud, it gave but little rain generally. Mount Abu, lying in the direct line of the wind, received 3 inches, and Jhansi, owing to some local peculiarity in the pressure distribution, 2½ inches; but elsewhere the amounts were much smaller. On the following day there was little or no change in the West; but over the Central parts of the country the monsoon current, instead of continuing its course westward, poured into a large shallow depression, which had advanced to that position from Bengal, and ascensional movement being thereby developed, very heavy rainfall occurred. Jubbulpore received 13 inches, Nowgong 6 inches, and Saugor 5 inches of rain; while several stations had between 1 and 3 inches. On the 30th the chart still showed traces of the shallow depression, and the rainfall, though less heavy than on the preceding day, was yet considerable all over the Central parts of the country. In the West Coast districts strong westerly winds and moderate or light rain continued. By the 31st the disturbance had entirely disappeared, the monsoon current had resumed its horizontal movement, and the only rainfalls of any importance were at Mount Abu and Goona. On the 1st of August very little rain fell either over the West Coast districts or over the Central Provinces, the monsoon current apparently passing on into the Gangetic Valley, where moderate precipitation occurred. The 2nd saw the establishment of almost normal pressure and wind conditions over India. Moderate rain was falling all over the West Coast districts and the Central parts of the country, with a large local fall at Morar. On the 3rd similar conditions prevailed; but the heaviest rainfall was reported from Mount Abu and Jeypore.

The monsoon current from the Bay of Bengal has been, except at quite the close of the week, very unsteady, and at times apparently entirely suspended. On the 28th a fairly strong monsoon current was blowing over the head of the Bay and across the Bengal Coasts. At False Point and Saugor Island the direction of the wind was south-westerly; but in East Bengal it was south-easterly, and in Central and North Bengal easterly. The current only extended as far as Behar, to the west of which Province the wind was westerly. The only place at which any heavy rain was recorded was Saugor Island, where 4 inches were measured. On the 29th both the extent and the velocity of the monsoon crossing the Bengal Coasts had increased, while the current had extended north-westward as far as Oudh. At the same time the amount of rainfall had considerably increased, more particularly so in North Bengal and Behar. These conditions did not however last long. On the 30th the wind had veered to south-west over the greater part of Bengal, the velocity had decreased, and the amount of rain had fallen off very quickly and largely. In North Bengal one or two stations reported amounts of about 1 inch, but in other parts of the Province the falls were generally under ½ inch. On the 31st the veering of the wind had increased, and westerly winds prevailed at almost all stations. With this change the amount of rainfall still further decreased. On the 1st August a small depression formed between Calcutta and Burdwan. This disturbance occasioned some rainfall in its immediate vicinity; but it prevented the ingress of the monsoon current from the Bay, and the principal rainfall over Bengal was in Chutia Nagpur and Behar, and was largely due to moisture brought from the Arabian Sea by the Bombay current. On the 2nd the chart showed that the small depression had travelled north-westward to the neighbourhood of Benares.

This movement, combined with other changes, had occasioned the formation of a trough of low pressure along the Gangetic plain, and the establishment of almost normal conditions over India. In consequence, during this and the following day a strong steady monsoon current entered Bengal from the Bay, backed from south to south-east and east in North Bengal, and passed up the northern side of the Gangetic plain as far as the Punjab. With this change moderate but general rainfall occurred all over Bengal, the North-Western Provinces, &c.

In Upper India very little rain fell on the 28th; but on the 29th the North-Western Provinces and the east of the Punjab received moderate falls. On the 30th Rawalpindi received nearly 4 inches; but elsewhere the rainfall of Upper India was slight and scattered. On the 31st there was no change, except that there was no rain at Rawalpindi. On the 1st rain fell all over the north of the Punjab as far as Murree; and on the 2nd 5 inches of rain were reported from Mussoorie and 4 from Sialkot. On the 3rd, for the second time this season, rain extended to Peshawar, but only as a slight shower.

The following table shows the rainfall up to date:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to August 3rd.	Difference.
Akyab ...	71·56	101·03	—28·07
Saugor Island ...	30·51	28·55	+ 1·96
Calcutta ...	27·05	26·51	+ 0·54
Dhubri ...	29·47	40·44	—10·97
Purneah ...	24·25	28·55	— 4·30
Gya ...	17·14	19·58	— 2·44
Allahabad ...	14·16	18·38	— 4·22
Meerut ...	10·21	11·92	— 1·71
Delhi ...	17·10	11·80	+ 5·30
Lahore ...	5·80	7·29	— 1·49
Peshawar ...	0·86	2·34	— 1·48
Cochin ...	49·34	58·91	— 9·57
Ratnagiri ...	71·11	67·64	+ 3·47
Bombay ...	56·16	45·80	+10·36
Poona ...	15·12	15·53	— 0·41
Surat ...	31·84	22·70	+ 9·14
Khandwa ...	19·87	16·70	+ 3·17
Nagpur ...	29·94	22·34	+ 7·60

The variations are generally the same as those shown last week. Saugor Island, Calcutta, the Konkan Coasts, and the Central parts of the country have all had more than their average amounts, while elsewhere there is a greater or less deficiency. In most places this deficiency is not large, but at Dhubri it amounts to 25 per cent. of the total.

There have been no storms of any importance during the week.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	37·02
Bengal and Assam ...	16	75·78
North-Western Provinces and Oudh ...	9	34·33
Punjab ...	8	23·38
Hill Stations ...	5	16·00
Ceylon ...	1	0·29
Malabar Coast ...	5	9·51
Bombay ...	9	12·11
Berars and Central Provinces ...	10	61·87
Guzerat and Central India ...	6	18·83
Sind—Rajputana ...	4	31·21
Madras ...	10	2·47

(1) The difference of 1 acre in the Umballa District and of 30 acres in the Karnál District between the figures for **Kharif**, 1886, as shown in this statement and in form No. I, for that crop, is due to additions subsequently made in the Karnál Division after submission of half-yearly statements by the Executive Engineer.

(2) The difference of 2,100 acres in the Lahore District between the area shown the half-yearly statement No. I of **Kharif** crop, 1886-87, and that shown in this statement, is due to the actual area of Chánga Mánga plantation irrigated, *viz.*, 8,350 acres being now shown.

(3) On the Bári Doáb Canal the decrease in the **Kharif** is due mainly to the April closure, also to the shortness of supply in July and August owing to the silted condition of the Inlet, and lastly to the rains having been good. In the Rabi the decrease is due to the favorable rain on 7th October which enabled large areas to be sown without the aid of canal water.

Area irrigated, 1885-86 . . 925,679 Acres.
Ditto 1886-87 . . 1,011,033 ,,
Net increase . 85,354 ,,

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 11th AUGUST, 1887.

GENERAL REMARKS.—Rain is reported throughout the country during the week under notice.

Kharif operations are in progress everywhere, and prospects are generally very good, though a break in the rains in some parts of the country would be beneficial for the sowings.

In Madras the crops are in need of rain in several districts, and in Mysore more rain would also be welcome. In Coorg the outlook is favourable.

The rice crop promises well in Bombay, and the early rice in Bengal is reported to be a good crop. The late variety is being transplanted in Bengal, and transplantation also goes on in the Central Provinces. In Burma prospects are good. The reaping of two varieties of rice has been nearly finished in Assam, two more are still being cut, and a fifth is being transplanted.

Cotton requires a break in the weather in the Central Provinces and Berar.

Cholera is still prevalent in Bombay, North-Western Provinces, and in parts of Bengal. Elsewhere the public health is generally satisfactory.

Prices are rising in one district of the Punjab and are high in another. Elsewhere they are generally stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Aug. 10th)		
Bellary	Average ·96	Standing crops generally good, but young early crops withering in parts for want of rain. Cholera decreasing in five, and cattle-disease increased in three taluks.
Kurnool	Average 1·09	Standing crops good. Small-pox in three, and cattle-disease decreasing in four taluks. Cholera slight.
Ganjam	Average last week since revised, 1·18; this week, ·52.	Agricultural operations deferred for want of more rain. Small-pox in four, fever in five, and cattle-disease increasing in two divisions. Cholera increasing.
Kistna	Average ·46	More rain wanted. Agricultural operations progressing. River 5·8 feet over Anicut. Fever slight. Cholera decreasing, and cattle-disease increasing in four taluks.
Chingleput (Madras)	Average ·26	Standing crops fair. Harvest wet and dry crops, outturn below average. Small-pox in two, and cattle-disease increasing in four taluks.
Coimbatore	Average ·15	More rain wanted in parts. Standing crops generally good, but *cholum* affected by insects in parts. Harvest *cholum* and *cumbu*, outturn about average. Fever, and small-pox in one taluk.
Tanjore	Average 1·05	Standing crops generally good. Harvest gingelly, outturn up to average. Cattle-disease increasing in five taluks.
Madura	Average last week since revised, ·27; this week, ·36.	Cattle-disease decreasing in one taluk.
Malabar	Average ·68	First crop paddy in ear in most parts, but require more rain. Fever in one, and small-pox slight in six taluks. Cattle-disease decreasing in one taluk.
Travancore	·46	Paddy being reaped. Fever in parts. *General Remarks.*—General prospects moderate.
Bombay—(Aug. 10th)		
Karachi	. . .	River at Kotri on 8th, 18 feet 3 inches against 19 feet 9 inches on same date last year. *Kharif* transplanting in progress. Fever in five talukas. Wheat, red rice, and *bajri* in Karachi 22, 30 and 32 and in Tatta 22, 34 and 34 pounds per rupee, respectively.
Hyderabad	Rain in three talukas	*Kharif* cultivation in progress. Fever in two and small-pox and cattle-disease in one taluka. River at Kotri on 8th, 18 feet 3 inches against 19 feet 9 inches on same date last year. Wheat 24, *jowari* 40, *bajri* 36, white rice 18, and red rice 29 pounds per rupee.
Ahmedabad	2·07; total 21·64; rain in three talukas and light showers in others.	Young crops doing well. Transplantation of rice in progress. Break in weather desirable Public health good. One fatal case of cholera in the city. Wheat 28 and *bajri* 30 pounds per rupee.
Baroda	2·37; total 39·17	Cholera decreasing in Baroda city, 3 deaths. Sowing of *bajri*, *jowari*, and cotton stopped in Navsari on account of excessive rain. *Bajri* 27, wheat 19 and rice 22 pounds per rupee.
Surat	Rain in all talukas—maximum in Bardoli, 4·67 and minimum in Chorasi, 1·80.	Break much needed. Crops have suffered from excessive moisture. Sowing and resowing retarded. Rice crops healthy. Cattle in Olpad taluka dying of sore-throat. Cholera in Bulsar, 27 cases, 20 deaths. *Jowari* 34 and *nagli* 44 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik	Igatpuri, 14·85; Peint, 6·71; Nasik, 1·86; Dindori, 1·43; Sinnar, ·92; Niphad, ·91; Kalwan, ·71; Chandvad, 63; Yeola, 30; Baglan, ·21; and Malegaon, ·13.	Sowing and transplanting in progress. Transplanting retarded in Igatpuri, in consequence of heavy rain. Standing crops healthy and progressing. Cholera in Nasik, Niphad, Chandvad, Yeola, Nandgaon, Malegaon, and Baglan, attacks 151, deaths 53. Slight fever and ague in Peint.
Colaba (Bombay)	Rain every day; total of week 1·95; total to date 58·04, being 8·29 above average.	Abnormal temperature 2° cool on 3rd, *nil* on 5th and 1° warm on all other days. Vapour in air normal. Abnormal wind easterly on 6th and 7th, wind normal in all other days.
Poona	Rain in six talukas—maximum 5·45 in Petha Mulshi and minimum ·25 in Petha Baramati; none in Indapur and Bhimthari talukas.	In Indapur and Bhimthari talukas as well as in parts of Haveli taluka more rain is wanted. Sowing of *kharif* crops still continues. Excessive moisture has slightly damaged the crops in Khed taluka. Public health generally good. Cattle-disease in Petha Ambegaon and small-pox in Khed taluka. 641 cholera cases in Indapur, Khed, Purandhar, Bhimthari, and Haveli talukas, 271 fatal; in Poona city, 90 attacks, 40 deaths. *Bajri* 41 and *jowari* 53 pounds in the district, and *bajri* 34 and *jowari* 43 pounds per rupee in Poona city.
Ahmednagar	Akola, 1·19; Karjat, ·62; Parner, ·59; and Sheogaon, ·56; very slight in five and none in two talukas.	*Kharif* sowing finished in six and in progress in five talukas. Rain urgently wanted. Cholera attacks 279, deaths 134. *Bajri* 36 and *jowari* 51 pounds per rupee.
Sholapur	Sholapur, 1·74; Barsi, ·24; Madha ·06; and Karmala, ·20.	Rain urgently required for standing *kharif* crops in all talukas except Sholapur. Slight cholera here and there in the district, cases 157, deaths 70. Cattle-disease in a mild form in Sholapur and Sangola talukas. *Jowari* 57⅞ and *bajri* 51 pounds per rupee.
Dharwar	Dharwar, 1·21; Hangal, 1·29; Nargund, ·65; Kalghatgi, ·57; Ron ·48; Bankapur, ·13; Mugud, ·12; and Karajgi, ·05; none in other talukas.	Rice and minor crops good. Heavy rain urgently wanted throughout the districts. Sowing of *jowari* retarded for want of rain in eastern talukas. Slight cholera in Hubli, and slight cattle-disease in Dharwar and Nawalgund talukas. *Jowari* 54 and rice 24 pounds per rupee.
Kanara	Karwar, 2·06; total 93·97; Kumpta, 1·39; Sirsi, 1·96; and Haliyal, ·93.	Crops healthy. Slight cattle-disease throughout the district. Common rice in Karwar 10½ and district average 12 seers per rupee.
Rajkot	1·15; total 23·17.	Prevailing disease—bowel-complaints and fever. Crops damaged in some places, owing to excessive rain. Wheat 23, *bajri* 24 and *jowari* 29 pounds per rupee. *General Remarks.*—Rain in most districts, more still wanted in parts of the Deccan and Southern Mahratta country. *Kharif* sowing and transplanting in progress in several districts, but retarded by excessive rain in parts of Guzerat and Nasik, and for want of rain in parts of Dharwar and Bijapur. Standing crops damaged by excessive rain in parts of Kathiawar, Panch Mahals, Khandesh, and Poona. Cholera in parts of seventeen, cattle-disease in parts of twelve, fever in parts of seven, and small-pox in parts of five districts.
Bengal—(Aug. 10th)		
Chittagong	15·00	Weather seasonable. Transplanting of *aman* continued. Prospects of crops good. Prices stationary. Cholera still reported. General health good.
Dacca	1·39	*Aus* paddy and jute being cut. Prospects of *aman* paddy good. Some injury sustained by fall of rivers. Public health good.
24-Pergunnahs (Calcutta).	1·22	Weather seasonable, with occasional showers. Prospects of crops favourable. Transplanting of *aman* in progress. Public health generally good.
Khoolna	3·0	Weather cloudy, with rain. Transplanting of *aman* going on. Prospects of *aus* fair. Public health good.
Moorshedabad	3·56	Weather very hot. Rain at intervals. Transplanting of *aman* paddy proceeding. *Til*, sugarcane, and jute progressing. Public health good.
Pubna	2·55	Seasonable rain. Prospects of crops good. Public health good.
Dinagepore	16·00	Heavy rain. *Bhadoi* harvest and transplanting of winter rice in progress.
Rungpore	11·84	Heavy rain favourable for rice planting. Prospects fairly good. Prices rising. Public health fair.
Midnapore	4·31	Heavy floods in north of district subsiding. Prospects excellent, except in flooded areas.
Burdwan	5·4	Prospects good, except in Culna, where rain is short. Cholera in Burdwan and cattle-pox in Culna and Burdwan.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Bhagalpur	4·15	Rain has much benefited all crops. Transplanting can now be completed. Early rice and *marua* good. There will be a further loss in *makai* from floods. Outturn of this crop will be very poor.
Purneah	2·81	Transplanting of *aghani* paddy in progress, but rain wanted in Kishengunge subdivision. Rivers falling. Public health fair.
Durbhanga	6·29	*Bhadoi* crops doing well. Transplanting of paddy progressing. Injury to indigo in north from excessive rain. Public health generally good.
Chumparun	4·00	Rain has much improved prospects of both *bhadoi* and paddy crops. Deaths from cholera still increasing.
Patna	1·69	*Bhadoi* crops and sugarcane promising. Transplanting of paddy going on. Cholera prevalent in Behar subdivision. Sporadic cases also reported in other subdivisions.
Gya	5·53	*Bhadoi* coming on very well. Paddy transplantation freely going on. Prospects very good. Cholera still raging. Fever and small-pox also reported.
Hazareebagh	5·68	Incessant rain. Prospects very favourable. All crops doing well. Rice being transplanted. General health fair, except cholera here and there.
Cuttack	2·10	*Beali* rice ripening in places. *Sarad* rice doing well. Price of rice unchanged. Cases of cholera still reported. Public health generally good. *General Remarks.*—Rainfall has been fairly general over the whole Province. Agricultural prospects generally favourable, except in north of Midnapore, where heavy floods have occurred. Transplanting of late rice now proceeding well. Early rice and jute are being harvested in some districts, and generally reported of as good crops, except in Julpaiguri, where the outturn will be very short. Sugarcane promising, as also the *bhadoi* crops in Behar. Public health generally good, but indifferent in Beerbhoom and some of the Behar districts.
N.-W. Provinces and Oudh—(Aug. 10th)		
Benares (Aug. 9th)	8·7 at Sadr and general over district.	Prospects much improved. Prices steady. Fewer cases of cholera.
Ballia („ 8th)	Averaging 2·9	Supplies ample. Prices rising. Cholera abating.
Gorakhpore („ „)	2·7 at Sadr and abundant rain throughout district.	Prices falling. Cholera continues.
Fyzabad („ 9th)	Averaging 3·4	Prospects improved. Supplies ample. Cholera in city and two tahsils, and small-pox in one.
Lucknow („ 8th)	Heavy rain on the 5th August.	Rain has benefited very much the young *kharif* crops. *Mash* and *mothi* being sown. Supplies sufficient. Prices stationary. Cholera both in the city and district.
Rai Barelli („ „)	Averaging 2·4	Prospects fair. Markets full. Prices steady. Cholera continues.
Partabgarh („ 9th)	Rain continues	Crops generally promising. Prices nearly stationary. Cholera still lingers.
Allahabad („ „)	General rain from 2·3 to 5·4	Crops have germinated well. *Bajri* sowing continues. Prices have a tendency to rise. Sporadic cholera continues.
Cawnpore („ „)	General rain from 1·4 to 5·6.	Crops doing well. Prices stationary. Cholera continues. Cattle-disease in one pergunnah.
Farakhabad („ „)	Abundant rain	Crops thriving. *Kharif* sowing completed. Prospects good. Supplies ample. Prices lowering. Cholera in three tahsils.
Sitapur („ „)	Good and general rain	*Kharif* prospects favourable. Cholera decreasing.
Bareilly („ „)	Ample rain	Crops doing very well. Prices easier. Health good.
Banda („ 8th)	Good and general rain.	*Kharif* crops flourishing, but sowing in some places stopped by rain. Prices stationary. Cholera continues. Slight cattle-disease in two pergunnahs.
Kumaon („ 9th)	Heavy rain yesterday and fair before.	Crops good. Prices steady. Cholera almost ceased. Slight cattle-disease.
Agra („ 8th)	General rain from 1·8 to 7·8	Break much needed. Prices steady. Cholera continues.
Jhansi („ „)	Varying from ·5 to 6·1	Break needed. Weeding in progress. Prices steady. Cholera continues.
Meerut („ 9th)	General rain from 1·0 to 6·4	Condition of *kharif* crops excellent. Prices stationary. Health good. *General Remarks.*—Rainfall has been general and abundant, and in some districts a break is needed. *Kharif* crops are flourishing. Supplies are ample and prices steady. Cholera is prevalent, but not increasing, and fever is reported from two districts. Otherwise the health of the people is generally good.
Punjab—(Aug. 10th)		
Hissar (Aug. 9th)	Rain sufficient for sowings.	Prices falling. *Kharif* sowings in progress.
Delhi	3·38	Health fair. Prices stationary. *Kharif* crops progressing.
Umballa	3·30	Health fair. Prices stationary. *Kharif* crops flourishing.
Jullundur	·30	Health good. Prices stationary. *Kharif* sowings completed.
Ferozepore	2·70	Health good. Prices falling. *Kharif* sowings in progress.
Amritsar	·40	Health good. Prices stationary. *Kharif* crops good.
Sialkot	7·30	Health good. Prices steady. *Kharif* crops and sowings benefited by rainfall.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Lahore	·30	Prices stationary.
Multan	. . .	Health good. Prices rising. *Kharif* crops good on canal lands.
Rawalpindi	2·0	Health good. Prices stationary. *Kharif* prospects good.
Shahpur	1 0	More rain wanted. Health good. Prices high.
Dera Ismail Khan	. . .	Health good. Prices steady. *Kharif* ploughings in progress.
Peshawar	·20	More rain wanted. Prices stationary *Kharif* sowings progressing.
		General Remarks.—Rain has fallen in all districts, except Multan and Dera Ismail Khan; more rain wanted in Shahpur and Peshawar. Health good, except in Delhi and Umballa, where it is fair. Cases of cholera in Delhi, Ferozepore, Lahore, and Peshawar. Prices stationary in Delhi, Umballa, Jullundur, Amritsar, Lahore, Rawalpindi and Peshawar; steady in Sialkot and Dera Ismail Khan; rising in Multan; falling in Hissar and Ferozepore; and high in Shahpur. *Kharif* sowings and ploughings generally satisfactory.
Central Provinces—(Aug. 10th)		
Nagpur	3·39	Weather rainy; break wanted. *Jowari* and cotton suffering. Health good. Prices steady.
Jubbulpore	3·08	Weather cloudy and showery. Prospects favourable. Weeding commenced. Fever prevalent. Prices steady.
Saugor	·65	Weather cloudy and showery. Slight cholera in Rehli tahsil. Prices rising.
Seoni	9·15	Weather wet. Rice transplanting progressing well. Weeding impeded. Prospects good. Slight cholera. Prices steady.
Hoshangabad	2·18	Weeding in progress. Some cholera and small-pox. Prices stationary.
Khandwa	1·45	Weather cloudy and showery. Break would do good. Prospects unchanged. Slight cholera. Prices steady.
Bilaspur	4·66	More rain needed in Mungeli tahsil. Cotton slightly injured in Seorinarain. Fever prevalent. Wheat being exported.
Raipur	3·62	Weather cool and cloudy Second ploughing nearly finished. Weeding progressing. Price of rice fallen.
Sambalpur	. . .	No report received.
		General Remarks.—Rainy weather has continued throughout the week and a break is much required for the *jowari* and cotton crops, especially in the Warda and Nagpur districts. More rain is wanted in parts of Bilaspur.
Burma—(Aug. 10th)		
Akyab (Aug. 6th)	13·14 (Total rainfall to date 94·93).	Slight cattle-disease. Sowing nearly completed.
Bassein	6·21 (Total rainfall to date 58·86).	Two cases of small-pox in one township. Slight cattle-disease. Transplanting continues.
Rangoon	4·43 (Total rainfall to date 71·64).	Nineteen cases of cholera, of which 8 proved fatal at Dallah.
Amherst (Moulmein)	8·75 (Total rainfall to date 121·01).	Five deaths from cholera in jail. Ploughing and transplanting progressing. Prospect of crops bad.
Tavoy	11·29 (Total rainfall to date 114·46).	Crops healthy.
Pegu	7·38 (Total rainfall to date 87·91).	Fever prevailing in one township, with great mortality.
Henzada	3·63 (Total rainfall to date 46·91).	Transplanting progressing.
Prome	3·83 (Total rainfall to date 23·56).	
Toungoo	7·36 (Total rainfall to date 46·35).	Health of cattle fair in district and cattle-disease prevalent in town. Sowing progressing. Transplanting commenced.
Thayetmayo	1·05 (Total rainfall to date 15·54).	Ploughing continues.
Shwebo	1·70 (Total rainfall to date 19·12).	Sowing commencing. Prices of paddy Rs. 130.
Myingyan	2 80 (Total rainfall to date 14·11).	Food-supply sufficient. Prices of paddy Rs. 125.
Mandalay	2·32 (Corrected total rainfall to date 20·17).	Small-pox in one township. Transplanting of *mayin* crops progressing. Food-supply sufficient. Prices of paddy Rs. 80 to Rs. 100.
Minbu	1·15 (Total rainfall to date 11·30.)	Prices of paddy Rs. 110.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Yamethen	2·58 (Total rainfall to date 15·34).	Food-grain insufficient. Prices of paddy at head-quarters Rs. 170. Ploughing commenced.
		General Remarks.—Cholera in Dallah quarter, Rangoon, and in Moulmein jail. Fever in Pegu and small-pox at Bassein. Cattle-disease in several districts. Crops have suffered in Moulmein and Amherst from heavy rain, otherwise prospects good. Reports from nine Upper Burma districts. Health generally good. Food scarce in Yeu and Yamethen. Slight cattle-disease.
Assam—(Aug. 10th)		
Gauhati (Aug. 9th)	3·67	Weather rainy and cool. Public health fair. Malarial fever still continues in Barpetta. Cattle-disease reported from Patidarrang and Chomoria tahsils. Reaping of *aus* crop in Barpetta finished, and in Sadr nearly finished. Transplanting of *sáil* in progress. Sugarcane and tea doing well.
Sylhet	3·43	State and prospects of the crops good. More rain wanted at places.
Cachar	4·88	Weather wet. Transplanting of *sáil* and reaping of *dumai* and *murali* crops continues. Common rice 16 seers per rupee. Public health good. Tea doing well.
Dibrugarh	10·60	Weather rainy. Reaping of *ahu* nearly over. Transplanting of *sáil* progressing. Health fair.
Mysore and Coorg—(Aug. 10th)		
Bangalore	Except in parts of the Shimoga and Kadur districts, slight rain reported throughout the State.	Standing crops in good condition. Prospects of season fair. More rain needed for crops in Bangalore, Mysore, and Tumkur districts Public health generally good. Fever and cattle-disease prevalent in parts. Prices have slightly risen in Bangalore and Chitaldrug districts, and fallen in Hassan district.
Mysore		
Mercara	3·41	Standing crops in good condition. Health and prospects good.
Berar and Hyderabad—(Aug. 10th)		
Amraoti	1·85	Weather cloudy, and sowing and weeding in progress. Cotton doing well. Cholera in parts. Cattle healthy. Wheat 15 and *jowari* 25 seers per rupee.
Akola	1·96	Weather cloudy and close. *Jowari* and cotton suffering in places from too much moisture. Cholera, fever, and cattle-disease still prevalent.
Hyderabad	Average rainfall during week ·75; total since 1st January 11·6.	Sowing of *kharif* and *rabi* crops progressing. Prices—wheat 12¾, coarse rice 12, white *jowari* 16¾, yellow *jowari* 20¾, and *tur* 14¾ seers per current sicca rupee.
Central India States—(Aug. 10th)		
Indore	1·76	Break badly wanted.
Gwalior	9·52	Cholera in Lashkar, of 484 cases, 200 reported fatal. Prospects of crops good.
Neemuch	1·20	Few cases of cholera in adjoining districts, 3 fatal cases of cholera among European troops.
Goona	2·83	Health and prospects good.
Sutna	2·95	No report received.
Agar	1·80	Weather cloudy. Break required. Health good.
Sehore	·92	Break wanted. Health good.
Nowgong	4·21	Weather seasonable. Prospects favourable. Cholera in parts.
Bhopawar	1·94	Crops damagad in some places by excessive rain. Slight cholera at Jhubna. Prices slightly rising.
Rajputana—(Aug. 10th)		
Abu (Aug. 10th)	8·39	Excessively damp. Weather overcast and foggy. Break much needed.
Sirohi („ 7th)	1·49	Weather overcast. Rainfall small. Tanks fairly full. Wells good. Health good. *Kharif* nearly all sown.
Marwar („ 6th)	·12	Weather cloudy, and very little rain in city and districts. Tanks and wells same as last week. Few cases of cholera in Jodhpur. Health improving in city and districts. Crops thriving. Market easy. Prices stationary,
Meywar („ „)	·13	Rain below average. Weather cloudy. Water in wells and tanks increasing. Crops fair. Health fair. Prices stationary. Sunshine needed.
Pertabgurh („ „)	1·53	Weather cloudy all over the week. Health good. Prices falling.
Harowti („ „)	Deoli, ·97; Tonk, 4·24; Shahpur, 4·23 in previous week.	Indian corn slightly damaged in parts by wet weather. Break needed. Health good.
Jhallawar („ 7th)	·50	Weather cleared in time. Little fever.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—*contd.*		
Ajmere (Aug. 9th)	Rain throughout district, but insufficient to fill tanks.	Maize slightly damaged in Merwara from rain. Cattle-disease still prevalent. Cholera still in district. Twenty-nine fresh seizures in city and 17 deaths. Prices almost stationary.
Jeypore („ „)	Break in rain	Prospects generally favourable. Few cases of cholera.
Kerowlee . . .	. . . .	No report received.
Dholepore (Aug. 6th)	Average 5·90	Tanks and wells full. Prospects good. Health good. Prices stationary. Weather seasonable.
Bhurtpore („ 9th)	3·70	Weeding retarded by continual rains.
Ulwar („ „)	Average 7·50	Break much needed. Cholera prevalent in city.
Kotah („ 6th)	1·0	Sporadic cases of cholera, otherwise health good.
Kherwara („ 7th)	1·0	Weather cloudy and misty. Tanks and wells slightly rising. Sun needed for crops. Fever and dysentery somewhat prevalent. Prices slightly risen.
Bickanir („ 6th)	·27; heavier in some districts.	Sowing continue. Health good. Prices stationary. Weather cloudy.
Nepal—(Aug. 5th)		
Katmandu (Aug. 4th)	3·05	

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR JULY 1887.

During the month of July the weather over nearly the whole of India has been of the normal monsoon type, but owing to certain abnormal variations in the pressure distribution over Bengal, which will be subsequently referred to, the Bay branch of the monsoon has been weaker and more intermittent than usual, and, as a consequence, those districts dependent on this current for their rain have received a somewhat deficient supply. Indirectly this feebleness of the Bengal monsoon has had a considerable effect on the weather of the Punjab. In that province, experience has shown, abundant rainfall is ordinarily a result produced by the conjunction of the two branches of the monsoon, *viz.*, that from the Bombay Coast and that from the Bay of Bengal. In the present year, owing to the weak and intermittent character of the Bay monsoon, this conjunction seldom or never occurred, and the province has depended for its rainfall on the Bombay current alone. The result has been very deficient rains, except in the south-east of the province and locally at Rawalpindi and Murree. At Peshawar only one shower of rain occurred throughout the month.

The monsoon.—Though less intermittent in character than the Bay branch, the Bombay monsoon has nevertheless exhibited considerable variations. The month opened with unusually weak winds all along the West Coast, but after the 1st an increase of strength commenced. This increase first showed itself on the Sind Coast, and subsequently extended to the Konkan and Malabar Coasts; but it was not until the 5th that the winds reached their normal force. From this date on the West Coast and inland over the Deccan, the Central Provinces, and Central India monsoon winds considerably exceeding the normal strength prevailed until the 19th, when the current became rapidly weaker. This feebleness did not, however, last long, for by the 24th a strong monsoon was again blowing along the whole line of the West Coast from Karachi to Mangalore—a condition which lasted until quite the close of the month.

Over the Bay of Bengal the wind was from south and of about the average strength at the commencement of the month, but the westerly extension of the current was very small, variable winds being reported from the Gangetic Valley. Though by the 2nd moist easterly winds had advanced to Behar and the North-Western Provinces, and by the 3rd had reached the Punjab, the current crossing the Coast had become much lighter, and on the following day had shifted to east-north-east in Bengal and Orissa. On the 5th the normal monsoon winds were entirely interrupted and replaced by light winds feeding into a slight cyclonic vortex forming in the north-west angle of the Bay. These conditions continued during the 6th, but on the 7th the southerly to south-westerly current was restored, and on the 8th was blowing with more than its normal strength. From the 9th to the 15th the winds were generally above the normal force, and a strong monsoon blew across the Bengal Coasts. After the 15th the wind became westerly over a large part of Bengal and the head of the Bay, and the whole of the Bay monsoon was apparently deflected towards the East Coast, whence it spread out over East Bengal, Assam, and Burma. After the 19th more normal conditions set in, and the monsoon current from the Bay was reestablished over a large part of East and South Bengal, and by the 25th a fairly strong monsoon current was blowing up the Bay and across the Bengal Coasts. This was interrupted again on the 27th, when westerly winds were reported from Lower Bengal and the head of the Bay,—conditions which prevailed, with some interruption, till the close of the month.

In the Gangetic plain the monsoon current has been very unsteady. At times a moist south-easterly current from the Bay has prevailed, but during a large part of the month an abnormal westerly and north-westerly wind has been reported over the east of the Punjab and the greater part of the North-Western Provinces, effectually preventing the ingress of the ordinary easterly winds. In the Punjab the wind has been on the whole south-easterly.

Pressure.—Accompanying the north-westerly and westerly winds above mentioned there has been a slight excess of pressure over the eastern districts of the Punjab and the western districts of the North-West Provinces. In all other parts of Northern India there has been a deficiency. Over the Peninsula and the central parts of the country the variations are irregular, but on the whole there has been an excess in the former and deficit in the latter region.

Storms.—The storms which have been observed have generally been slight and have formed over Lower Bengal or the head of the Bay, whence they have travelled slowly in a westerly direction. The first was formed over the head of the Bay on the 3rd, 4th, and 5th, and apparently travelled north-westward into Chutia Nagpur. It occasioned a very slight depression of the barometer, but gave fairly heavy rain to Lower Bengal and Orissa. The second commenced on the 9th over Central Bengal. On the 10th pressure fell rapidly, and the disturbance, the centre of which lay near Burdwan (barometer 29·361″), was much more sharply defined than on the previous day. The chart of the 11th showed the depression near Allahabad, the 12th showed it over Bundelkhand, and the 13th over the north-east of Rajputana, where it filled up. On the day that this depression disappeared, a fresh disturbance was developed over the Sunderbuns with its centre between Calcutta and Saugor Island. This storm advanced in a westerly direction. On the morning of the 14th it lay near Raipur, on the 15th near Hoshangabad, on the 16th near Hyderabad (Sind), and on the 17th had disappeared across the Indus. Between the 19th and 22nd a slight barometric depression existed over the north-west angle of the Bay. On the 24th a small but well defined disturbance was formed between Saugor Island and False Point. This storm travelled north-westward into south-west Bengal on the 25th, to Sutna on the 26th, and to Jhansi on the 27th.

Temperature.—The variations of temperature from the mean have been rather irregular over Northern India. In Assam, Northern Bengal, Behar, and the north-west and west of the Punjab, there is general excess, while elsewhere there is a deficiency. Over the Peninsula and central parts of the country on the contrary there is a deficiency throughout. This deficiency varies between $\frac{1}{2}°$ and 1° in Malabar; between $\frac{1}{2}°$ and 6° in Bombay; between 1° and 3° in the Berars and Central Provinces; between 2° and $2\frac{1}{2}°$ in Guzerat and Central India; between $1\frac{1}{2}°$ and 5° in Sind and Rajputana; and between $\frac{1}{2}°$ and 2° in Madras. The greatest excess in Northern India is in the Indus Valley, where the mean temperature is $2\frac{1}{2}°$ above the average. At Multan and Dera Ismail Khan the mean maximum temperature of the month was 105°.

Humidity is on the whole deficient in Bengal and Malabar, and excessive elsewhere.

Rain.—No rain fell during July over two tracts of country,—the first in the north-west represented by the stations of Dera Ghazi Khan, Multan, Ferozepore, Jacobabad, Shikarpur; the second in the south by Tanjore, Trichinopoly, Madura, and Tuticorin. In the district in the north-west the average rainfall for July is about 3 inches; in the southern district only about 1·5 inches: so that in the former case the deficiency is rather serious; in the latter comparatively unimportant. In all other parts of India rain has fallen. In Northern India, *i.e.*, Assam, North Bengal, the whole country between the north bank of the Ganges and the Himalaya, and over the whole of the Punjab, Sind, and Cutch, the fall has been somewhat deficient. This is likewise the case in Orissa, the Konkan, and the Peninsula, but over the central parts of the country, including Rajputana, the Cis-Gangetic stations of the North-West Provinces, the Central Provinces, Central India, Khandesh, and the Deccan, there has been an excess of rain,—in some districts a very considerable excess. In Lower Burma the rainfall was about 20 per cent. above the average.

The heaviest falls of rain were reported generally from the central parts of the country, where several stations received more than 40 inches during the month. At Jubbulpore between 10 A.M. on the 28th and 10 A.M. on the 29th 13 inches of rain fell.

The following table shows the amount of rain and the difference from the average, during the month of July 1887, according to districts as far as is indicated by the telegraphic reports:

Districts.	Number of Stations.	Average Rainfall for July.	Difference from the Average in July, 1887.
Punjab, West	7	6·16	−0·75
„ East	6	10·23	−5·36
North-Western Provinces, Trans-Gangetic	14	14·58	−1·03
„ „ Cis-Gangetic	7	11·22	+3·76

W. L. DALLAS,

SIMLA, *4th August 1887.* for *Meteorological Reporter to the Government of India.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 10th August, 1887.

The general characteristics of the weather in the past week have been the same as those during the period ending August 3rd. The Bombay branch of the monsoon has been of more than the normal strength and extent, while the Bay branch has, on most days, been unsteady and largely deflected towards East Bengal, Assam, and Burma. One feature in the pressure distribution of the present week differs, however, from that of the preceding. A slight but comparatively shallow depression has existed over the Gangetic Valley, and a large portion of the Bombay monsoon current has fed into this area instead of passing across the head of the Peninsula towards the Bay of Bengal.

On the 4th August the Bombay monsoon was blowing with abnormal force along the greater part of the West Coast. From Karrachee to Karwar its direction was westerly and to the south of Karwar north-westerly. It practically extended to all parts of the Peninsula, the Central parts of the country, and the North-West. Though exceptionally strong, the rainfall accompanying it was neither heavy nor extensive. Sind, Kathiawar, Western Rajputana, Western and South-Eastern Punjab, Rohilkhand, and the whole of the Peninsula (except the West Coast) were without rain, and the only places reporting heavy falls were Mount Abu with 3 inches and Nowgong (Central India) with $1\frac{1}{2}$ inches. The chart of the 5th showed little change, except that the monsoon current was

slightly weaker. The rainfall area was much the same as that reported on the preceding day, but the amounts were somewhat larger. Slight rain fell along the West Coast districts and across the Deccan to Kurnool, Secunderabad, Cuddapah, and Masulipatam. Over the central districts the fall was also slight, but in the Gangetic plain Lucknow and Fyzabad received 2 inches, Morar 3½ inches, and Dinagepore 4 inches. On the 6th there occurred a further slight decrease in the strength of the monsoon current, but otherwise there was little change; Sind, Rajputana, a large part of Central India, Bundelkhand, the Berars, and the extreme south of the Peninsula, were without rain. Elsewhere precipitation was general, the principal falls being 2 inches at Goa, Gooty, Aligarh, and Allahabad, and Dinagepore 6 inches. On the 7th the Bombay current fell below its normal strength on the West Coast south of Bombay, but to the north of that port it continued to blow strongly. Rain, in moderate amounts, fell generally, except in the west of Rajputana and the Punjab and in Sind and Guzerat. The reports of the following day indicated no change beyond a slight increase of strength in the winds on the West Coast. Seoni received over 5 inches of rain. On the 9th there occurred a further strengthening of the monsoon. It was above its normal strength all along the West Coast, and strong westerly winds prevailed over nearly the whole of India. The principal feature in the rainfall returns was the large increase in the amounts received at the stations within the plain of the Ganges. Allahabad reported 7, Lucknow 4, and Fyzabad 3 inches. These conditions continued during the 10th, when Mirzapore received 5 and Benares and Cawnpore 4 inches of rain.

The Bay of Bengal current has been, as was mentioned above, much less steady than that on the Bombay side. On the 4th this branch of the monsoon was weak and unsteady. Westerly to north-westerly winds prevailed from Bareilly eastward across Behar and Western Bengal, and west-south-westerly winds in Lower and Central Bengal. Normal south-south-easterly winds were reported from Arakan, but elsewhere in Burma the wind was variable. The rainfalls connected with this current were 1½ inches at Moulmein, Dhubri, and Mozufferpore. Chutia Nagpore, South-West and Lower Bengal enjoyed fair weather. On the 5th abnormal westerly winds still prevailed between Bareilly and Purneah, but southerly winds had reappeared on the Bengal Coasts, and extended as far north as Berhampore and Dacca. The rainfall was slightly better, 3 inches falling at Nowgong (Assam) and Dhubri and 2 inches at Darjeeling. The reports of the 6th showed that most of the Bay current was again deflected towards the Arakan Coast, and that in Bengal the wind had veered to South-West. Rain was, however, fairly general, Dhubri receiving 4 and Darjeeling 2 inches. On the 7th the winds at the head of the Bay exceeded their normal strength, but they were generally from South-West, indicating that the Bay current was still deflected towards the East Coast of the Bay. Most of the rainfall was in Assam and Burmah. The chart of the 8th showed that slight cyclonic conditions had been established over the head of the Bay in place of the strong south-westerly winds which prevailed on the 7th. These conditions, slight though they were, occasioned a good deal of ascensional movement over the Bay, and, as a consequence, Chittagong received 8 and Akyab 4 inches of rain. This distribution continued on the 9th, but the resulting rainfall was much slighter. On the 10th south-south-easterly winds appeared in Bengal and easterly winds over Behar and along the foot of the hills to the Punjab. Partly in consequence of this, heavy rainfall was received along the valley of the Ganges and moderate rainfall over nearly the whole of Bengal.

In Upper India the area of rainfall on the 4th was less extensive than it was at the close of the previous week, but Lahore received over 3 inches. On the 5th rain fell over the whole of Upper India to the east of Lahore, but did not extend beyond that station—Delhi received 1, Umballa 2, and Sirsa 3 inches. On the 6th Sirsa again received 3 inches and Delhi ½ inch, but the rain was generally lighter and more scattered than on the previous day. On the 7th rain became heavier again, and moderate to heavy falls occurred from that date till the close of the week.

On the whole the rainfall of the week, except in Upper Sind and the Western Punjab, has been very satisfactory. At Jacobabad there has, as yet, been no rain this season, and at Peshawar only two showers, while at Mooltan and over the south-west of the Punjab generally there has either been no rain or none for several weeks past. For these districts the returns for last week exhibit no improvement, but in other parts of India, as will be seen from the following table, the seasonal rains have, so far, been heavy or merely slightly deficient:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to August 10th.	Difference.
Akyab ...	85·40	110·33	—24·93
Saugor Island ...	33·53	33·56	— 0·03
Calcutta ...	30·11	29·46	+ 0·65
Dhubri ...	39·77	43·51	— 3·74
Purneah ...	28·43	31·53	— 3·10
Gya ...	22·88	22·27	+ 0·61
Allahabad ...	24·56	20·78	+ 3·78
Meerut ...	11·56	13·27	— 1·71
Delhi ...	23·75	12·79	+10·96
Lahore ...	9·76	8·78	+ 0·98
Peshawar ...	0·86	3·36	— 2·50
Cochin ...	49·89	63·30	—13·41
Ratnagiri ...	74·53	72·63	+ 1·90
Bombay ...	59·13	48·59	+10·54
Poona ...	15·70	14·02	+ 1·68
Surat ...	33·16	24·80	+ 8·36
Khandwa ...	20·83	18·70	+ 2·13
Nagpur ...	31·63	24·67	+ 6·96

The weather during the past week has been cooler than the average throughout almost the whole of India. In the North-West Provinces and Central India the defect of temperature amounted to 4°, in the Punjab, the Central Provinces, and Rajputana to 3°, and elsewhere to between ½° and 2°. In the Indus Valley there was a local excess of temperature,—greatest at Mooltan, where it amounted to 2½°.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	37·20
Bengal and Assam ...	16	81·93
North-Western Provinces and Oudh ...	9	45·55
Punjab ...	6	26·20
Hill Stations ...	5	27·13
Ceylon ...	2	3·19
Malabar Coast ...	5	6·76
Bombay ...	9	18·74
Berars and Central Provinces ...	10	20·40
Guzerat and Central India ...	6	8·75
Sind—Rajputana ...	4	13·08
Madras ...	13	18·10

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

Railway Construction.

PROJECTED RAILWAY FROM MOGHALSARAI TO PURI.

No. 799 R. C., dated Simla, 12th August, 1887.

RESOLUTION—By the Government of India, Public Works Department.

READ the following papers:—

Resolution of the Government of India, No. 862 Ry. Constn., dated 24th Sept. 1883.
Ditto No. 73 do. „ 29th Jan. 1884.

RESOLUTION.—The desirability of utilising the Palamow coal-field for the supply of the Railways to the north-west of Moghalsarai has been for many years recognised, and surveys with this object were made between that field and Baroon, the head of the Sone canal system, in the year 1876-77. In the course of the investigation regarding railway construction throughout India which took place in 1882, however, it became evident that a larger project was required, which would afford an outlet to the east, as well as the west, for the mineral and agricultural produce of the large province of Chutia-Nagpur, and also that such a project might, with the intervention of the contemplated Nagpur-Sitarampur Railway, be extended to Cuttack and Puri, so as to aid by railway transit the vast number of pilgrims who annually visit the latter place, and to afford to the province of Orissa, by direct access from the food-supply of Chhatisgarh, an effective protection against famine. The substantial objects of this project have also been well described as (1) to provide a quick and easy means of travelling for the army of pilgrims who visit the shrines of Benares, Gaya and Puri; (2) to open out the resources of large and important tracts of country now almost cut off from communication with the rest of India, to supply them with food if scarcity prevails, or to carry it to other districts if a surplus is available; and (3) to facilitate emigration from overcrowded districts to those which are but sparsely inhabited, yet capable of supporting a very considerable increase of population.

2. In the autumn of 1882, the Government of India consequently ordered the commencement of a series of surveys which have been carried on up to the past year, and have embraced all the more promising alternative routes between Benares and Puri.

3. The result of these investigations has been to establish the fact that the project practically resolves itself into two portions: the one providing for the

development of Chutia-Nagpur, and aiding the coal supply of Upper India, the other securing the famine protection of Orissa, and the opening out of the portions of the Central Provinces and Bengal traversed by the line, but both possessing the object and common interest of facilitating transit of pilgrims to Puri. The two portions become, in fact, separate Railways linked by a section of the Bengal-Nagpur Railway now under construction, and by a common interest, but free to be constructed by one and the same, or by two totally distinct agencies. The principal features of each of these portions of the project will now be briefly described.

Chutia-Nagpur Railway.

3. *Moghalsarai to Sukhua*—(Palamow Coal-fields) 147½ miles. The original project for opening out these coal-fields started from Meral, and proceeded *vid* Bhikhee, Chutterpore, Sultanee, Maharajgunj and Kutumbeh to Baroon on the river Sone, which is at the head of the Patna Canal, and opposite Dehree, whence starts the Buxar Canal. A western route to Baroon, *vid* Kunda Khas, Chutterpore, Burdag and Nubeenuggur, as also sundry minor variations of both routes, were examined and condemned. This route, however, was deemed unsuitable for the larger scheme originated in 1882, on account both of the heavy cost of crossing the Sone in the locality of Baroon, and of the expediency of opening out the country farther west, if possible. Reconnaissances made in the spring of 1883 resulted in the selection of a line running from Moghalsarai *vid* the Kaimur plateau and Ghaggar river to the Sone at Urgurh, and thence, after crossing the river at Hardi, to Chapparbar, Gurwa and Daltongunj. In the following season, a preferable route was found over the Vindhya plateau, passing east of Bijaygurh to a crossing of the Sone at Parcha, but the latter crossing led to the proposal of an alternative which, after running along the banks of the Sone to Tilotu, should surmount the narrow hills about four miles west of Sasseram and then go direct to Moghalsarai. The Government of the North-Western Provinces and Oudh, while recognising that the former would open out an undeveloped locality, held that the latter must be deemed preferable, since it would be much cheaper, it would traverse a richer tract of country, and its far better gradients would facilitate the cheap transit of coal. In this conclusion the Government of India concurred, and the section from Moghalsarai has been located and estimated accordingly to Sukhua, a place close to Meral, in the centre of the coal-field, whence the branch line to Gaya will take off.

A suggestion has been made that the line might be shortened greatly by proceeding direct from the coal-field to the Sone, and facing the difficulties of a large bridge there, to the cost of which the saving by less distance and avoiding a bridge over the Koel would be a material set off. This suggestion might be investigated whenever the railway was taken in hand, but there would probably be found a material drawback in the loss of traffic from Gurwa and the country to the south of it.

4. *Sukhua to Rud*—50 miles. This section presents no very remarkable features, being partly easy and partly through hilly and broken country, with gradients of 1 in 100. The location runs for about 15 miles through the Aurunga coal-field.

5. *Rud to Purulia*—110½ miles; with branch, 50 miles long, from mile 275½ (near Jhalda Station) to Chandel.

The question of which route from the locality of Rud in the direction of Cuttack would best accommodate the various interests involved has been found to be the most complicated of any which have arisen.

In 1882 and 1883 it was understood to be necessary to traverse the plateau of Ranchi in order to develop it. The best information then obtainable shewed that a line running directly southwards to the locality of Suadi or Laingurh, on the Bengal-Nagpur Railway, would pass through difficult mountainous country very sparsely inhabited. A route in a more south-easterly direction was consequently deemed necessary. In the seasons of 1883 and 1884 several lines were examined for ascending the plateau, that by the Mahlan Ghat being eventually selected. After crossing the plateau, unsuccessful attempts were made to descend direct upon the locality of Chakardarpur and Chaibasa, by the Ghats in the direction of Bandgam, and eventually a line by Pirihati and Aruki to Chandel, a station much farther north on the Bengal-Nagpur Railway, was alone found to be suitable.

In 1884, however, an opinion which had originally been offered in 1882 by Mr. H. H. Risley, B.C.S., that the plateau of Ranchi could be as effectively and more cheaply served by a railway passing along its northern base through the valley of the Damuda than by one surmounting the plateau itself, was exhaustively discussed, with the result that the alternative line through the valley was surveyed in 1884-85, and is now recognised by both the Government of Bengal and the Government of India as the more suitable of the two. This valley line traverses the Kurunpura coal-field, and also is expected to receive traffic from parts of the Hazaribagh District. At the same time the importance and capacity for development of the Chutia-Nagpur traffic has brought into prominence the necessity that the Damuda Valley line should leave the Chandel route near Jhalda station, and join the Bengal-Nagpur Railway at Purulia, instead of at Chandel, so as to afford the nearest transit to Calcutta. This will shorten the line by 16½ miles, in the first instance, but pilgrims from Benares to Puri will thereby have to make a detour of about 15 miles. This may eventually be avoided, if their numbers should hereafter develope sufficiently to warrant the construction, as a chord alternative, of the portion of the Chandel route (50 miles long) which will thus in the first instance be discarded.

6. *Gaya Branch*—80 miles. A connection between Gaya and the locality of Daltongunj has been from the first accepted as an indispensable accessory to the main project, because of the goods traffic which may reasonably be expected, and also of the pilgrims who would pass on from Gaya to Puri in the course of the normal round of sacred places to be visited. Three routes have at various times been examined, *viz.*, an easterly one from Tori by Chutra, another to the west by Chutterpore, and an intermediate one by Manatu, the valley of the Mohur and Sherghati. The last of these has been approved.

7. *Total cost.*—The cost of the Chutia-Nagpur Railway* has been estimated as follows:—

	Miles.	Direct charges. Lakhs.	Indirect, including exchange at 1s. 6d.	Total.
Section I Moghalsarai—Sukhua	147½	170	14½	184½
„ II Sukhua—Rud	50	46½	4½	51
„ IIIa. Rud—Jhalda	77½	83½	6½	90
„ IIIb. Jhalda—Purulia	33	32½	2½	35
TOTAL MAIN LINE	308	332½	28½	360½
Gaya Branch	80	69	6	75
GRAND TOTAL	388	401½	34½	435½

The estimates of the line from Moghalsarai to Chandel have been examined by Mr. Molesworth, the Consulting Engineer to the Government of India, with the result that, while some items are increased or reduced, the total is increased by only about a lakh of rupees. His note is appended.

8. *Probable Traffic.*—It is impossible to present any definite and reliable estimates on this subject in respect of a large tract of country which at present is to a great extent land-locked, unable to export except along country roads and paths, by means of carts and pack bullocks, and for the most part devoid of effective stimulus to production. Various estimates of produce and returns will be found among the papers appended to this Resolution; but while they appear for the most part to have been framed with extreme caution, it is impossible to predicate to what extent, if at all, they are likely to be exceeded, and any attempt to do so might only prove misleading. The Government of India are unable to say more than that the coal and other mineral resources of Chutia-Nagpur have been described in the geological writings of Dr. Ball, Dr. Oldham, Mr. Hughes, and others, as also in recent articles in the *Indian Engineer*; that the trade has been analysed, with much care and local knowledge, by Mr. H. H. Risley, of the Bengal Civil Service, whose note is appended; and that the pilgrim traffic is an important factor, the extent or expansion of which it is equally difficult to ascertain and to foresee.

* The Jhalda-Chandel Branch, 49½ miles long, estimated at 58½ lakhs, is not added, as the probability of its being required appears to be remote.

Panchpara-Puri Railway.

9. *Panchpara to Naraj*—170 miles. For the upper portion of this section various lines have been surveyed, the result being that it is found to be on the whole desirable to take the line close to the town of Sambalpur. Running thence to the southward, a route passing through Gopalprasad in the centre of the Talcher coal-field, and Denakal, the most considerable town in those parts, has been preferred to a more westerly one *viâ* Angul. This route will be convenient for the Bamra State, which is reported to be "rich in timber and iron, and capable of great development."

10. *Naraj to Puri*—52 miles. Naraj has been selected as the point for crossing the Mahanadi, because the river here is suitable for either a ferry or a bridge of 3,250 running feet, and the continuation to Puri presents no difficulties. At Cuttack, on the contrary, the bridging of the Mahanadi, which is a mile and a half wide, is practically out of the question, and moreover, supposing the town had been reached, there would remain another channel to the south, called the Katjori, which would need a bridge of 3,000 feet, or nearly equal to the one sufficing at Naraj. At Naraj, a ferry might be adopted in the first instance, leaving the bridge, which is estimated at about 22½ (or 33) lakhs, to follow whenever the traffic was found to justify it.

11. *Cuttack Branch.*—It is by no means certain that any further facilities are needed for the town of Cuttack than those which will be afforded by the main line passing Naraj, within a few miles of it. But should such be hereafter demanded, a branch line might be made from that line either on the north of the Mahanadi, to opposite the town, or on the south to the southern side of the Katjori, a ferry in either case completing the communication. The Katjori ferry, however, would hardly be workable during the rains. The distance in the former case would be 8⅓ miles, and in the latter 6 miles; the cost in either about one lakh per mile. Mr. Molesworth, the Consulting Engineer to the Government of India, has, however, suggested, in a note which is appended, that the line between Naraj and Puri might be taken direct instead of *viâ* Khurda, by which improved gradients would be obtained, distance saved, and possibly a separate branch to Cuttack avoided altogether. The question depends mainly upon the exigencies of local traffic, which would be very large, and needs further investigation in communication with the local authorities.

12. *Keonjhur alternative.*—An account of the Panchpara-Naraj project would be incomplete without some notice of the alternative route *viâ* Keonjhur originally investigated. This route, starting from Kantera (on the Bengal-Nagpur Railway) which is in the vicinity of Chakardarpur, would obviously have been very direct, if a suitable line across the Ranchi plateau could have been brought to the same locality, as at one time anticipated (*supra*, paragraph 5) and the Keonjhur and Mohurbunj tract which it would traverse was believed to be fertile and known to have been more populous in former days. The reconnaissances of 1884 and 1885, however, shewed that the engineering difficulties were far more formidable, but the capabilities of the country less, than had been anticipated. The ascent and descent of the plateau involved expensive work, there was much difficult country and several rivers, one of which, the Brahmini, required a bridge 5,400 feet in length, and costing 32½ lakhs of rupees, and the cost of working would permanently be high. The abandonment of the route thus became unavoidable. The Panchpara-Naraj route, which has been substituted for it, will involve some extra miles of journey to pilgrims from the eastward, but a corresponding gain to those who come from Western, Central and Northern India.

13. *Total cost.*—The cost of the Panchpara-Puri Railway has been estimated as follows:—

	Miles.	Direct charges. Lakhs.	Indirect, including Exchange at 1-6.	Total.
Section I.—Panchpara-Naraj	170	144⅔	9⅔	154
„ II.—Naraj-Puri with ferry	52	56⅔	4⅔	61⅓
Total Main Line	222	201	14⅓	215⅓
„ III.—Mahanadi Bridge	...	22⅓	⅔	23
Total Main Line, with Bridge	222	223⅓	15	238⅓
„ IV.—Cuttack Branch, Northern alternative	8⅓	7⅓	⅓	8
Grand Total	230⅓	231	15⅓	246⅓

It has already been explained that neither the Mahanadi Bridge nor a Cuttack Branch are indispensable, and may stand over until called for by experience.

The estimates have been examined by Mr. Molesworth, whose note is appended. He would increase the main line from 201½ to 208½ lakhs, the bridge from 22½ to 33 lakhs and the branch by a lakh. But the adoption of his suggestion, above alluded to, as to running direct to Puri and dispensing with a branch might go far to reduce this excess.

14. *Probable traffic.*—The general remarks which have been made in paragraph 8 with respect to the Chutia-Nagpur Railway may be applied to this case also. The capabilities of an undeveloped country can be but imperfectly appraised by statistics of existing traffic. The goods traffic between Sambalpur and Cuttack appears to be by no means inconsiderable, notwithstanding the absence of roads, and will be subject to large temporary influxes whenever scarcity of food grains may exist in Orissa, while the pilgrims are believed by the local authorities to be not fewer than 300,000 per annum. The opinions of the local authorities as to the prospects of development are unanimously favourable. That so large a number of persons should present themselves at Puri annually notwithstanding the obstacles presented by the journey, whether by land or sea, the ravages of cholera and other diseases on the former, and the risk of shipwreck (just fatally illustrated) on the latter, may well excite surprise, and justify anticipations of what the facilities of railway transit might produce.

General Remarks.

15. While thus putting forward, with the general approval of the Government of India, the two distinct lines constituting the Benares-Puri Railway project, which have been described above, it is necessary to state briefly, with reference to the remarks in paragraph 5 as to the difficulties of a direct line from the Palamow coal-fields to the locality of Suadi or Laingurh on the Bengal-Nagpur Railway, that reconnaissances made in 1886 may be held to shew that these are not so formidable as were supposed. Between Panchpara on the Bengal-Nagpur Railway and Sathbarwa station near Palamow on the Chutia-Nagpur line, the distance is reported to be 178 miles, and the cost is very roughly estimated at 189 lakhs of rupees. The gradients, however, are very steep in some parts, and the population undoubtedly scanty. This route was recommended to the consideration of the Government of India by the Government of Bengal, with the suggestion that, supposing its directness were considered to give it the preference as a means of communication between Northern India and Puri, the construction of the Palamow-Gaya line might perhaps suffice for present requirements, leaving for future development the question of a connection between the coal-fields and Moghalsarai—possibly from Shergotty, with a bridge over the Sone, and through Sasseram.

After fully considering the matter, and even assuming that the Panchpara-Palamow line might prove far less expensive and more profitable than it has been shewn to be, the Government of India entirely concur with the final opinion of the Hon'ble Sir Steuart Bayley, expressed in the Bengal Government letter No. 1108R. of 17th May last, that by such a line, running north and south, the important object of opening out and serving the Chutia-Nagpur Province would be foregone, while the pilgrim traffic derivable from Benares and the market for coal presented in that direction would both be sacrificed. The Chutia-Nagpur Railway project, as described in this Resolution, is in complete harmony with the views of His Honor, as expressed in that letter.

16. With regard to the estimates which have been put forward in paragraphs 7 and 13, it may be explained that these are in all cases the result of carefully located surveys accompanied by plans, sections and detailed drawings of bridges, buildings, &c., upon a large scale, and estimates framed upon the best information available at the time. The former, however, must necessarily be considered as subject to the detailed scrutiny which would precede actual operations, and the latter, framed at different, and not always very recent dates, may in many particulars not be in conformity with present rates of labour, or prices of iron and steel. Exchange has been applied at a uniform rate of 1*s.* 6*d.* Under such circumstances, the results presented cannot be deemed to be more than a general indication of probable operations and cost, and no definite responsibility on their account can attach to the Government of India.

It has already been explained that neither the Mahanadi Bridge nor a Cuttack Branch are indispensable, and may stand over until called for by experience.

The estimates have been examined by Mr. Molesworth, whose note is appended. He would increase the main line from 201½ to 208½ lakhs, the bridge from 22½ to 33 lakhs and the branch by a lakh. But the adoption of his suggestion, above alluded to, as to running direct to Puri and dispensing with a branch might go far to reduce this excess.

14. *Probable traffic.*—The general remarks which have been made in paragraph 8 with respect to the Chutia-Nagpur Railway may be applied to this case also. The capabilities of an undeveloped country can be but imperfectly appraised by statistics of existing traffic. The goods traffic between Sambalpur and Cuttack appears to be by no means inconsiderable, notwithstanding the absence of roads, and will be subject to large temporary influxes whenever scarcity of food grains may exist in Orissa, while the pilgrims are believed by the local authorities to be not fewer than 300,000 per annum. The opinions of the local authorities as to the prospects of development are unanimously favourable. That so large a number of persons should present themselves at Puri annually notwithstanding the obstacles presented by the journey, whether by land or sea, the ravages of cholera and other diseases on the former, and the risk of shipwreck (just fatally illustrated) on the latter, may well excite surprise, and justify anticipations of what the facilities of railway transit might produce.

General Remarks.

15. While thus putting forward, with the general approval of the Government of India, the two distinct lines constituting the Benares-Puri Railway project, which have been described above, it is necessary to state briefly, with reference to the remarks in paragraph 5 as to the difficulties of a direct line from the Palamow coal-fields to the locality of Suadi or Laingurh on the Bengal-Nagpur Railway, that reconnaissances made in 1886 may be held to shew that these are not so formidable as were supposed. Between Panchpara on the Bengal-Nagpur Railway and Sathbarwa station near Palamow on the Chutia-Nagpur line, the distance is reported to be 178 miles, and the cost is very roughly estimated at 180 to 200 lakhs. The gradients, however, are very steep in some parts, and the population undoubtedly scanty. This route was recommended to the consideration of the Government of India by the Government of Bengal, with the suggestion that, supposing its directness were considered to give it the preference as a means of communication between Northern India and Puri, the construction of the Palamow-Gaya line might perhaps suffice for present requirements, leaving for future development the question of a connection between the coal-fields and Moghalsarai—possibly from Shergotty, with a bridge over the Sone, and through Sasseram.

After fully considering the matter, and even assuming that the Panchpara-Palamow line might prove far less expensive and more profitable than it has been shewn to be, the Government of India entirely concur with the final opinion of the Hon'ble Sir Steuart Bayley, expressed in the Bengal Government letter No. 1108R. of 17th May last, that by such a line, running north and south, the important object of opening out and serving the Chutia-Nagpur Province would be foregone, while the pilgrim traffic derivable from Benares and the market for coal presented in that direction would both be sacrificed. The Chutia-Nagpur Railway project, as described in this Resolution, is in complete harmony with the views of His Honor, as expressed in that letter.

16. With regard to the estimates which have been put forward in paragraphs 7 and 13, it may be explained that these are in all cases the result of carefully located surveys accompanied by plans, sections and detailed drawings of bridges, buildings, &c., upon a large scale, and estimates framed upon the best information available at the time. The former, however, must necessarily be considered as subject to the detailed scrutiny which would precede actual operations, and the latter, framed at different, and not always very recent dates, may in many particulars not be in conformity with present rates of labour, or prices of iron and steel. Exchange has been applied at a uniform rate of 1*s.* 6*d.* Under such circumstances, the results presented cannot be deemed to be more than a general indication of probable operations and cost, and no definite responsibility on their account can attach to the Government of India.

17. In conclusion, the Governor-General in Council has much pleasure in recognising the zeal, ability and fortitude with which these extensive surveys have been prosecuted, for a period of four years, in an extremely difficult and for the most part unhealthy country. To Mr. W. H. Parker, who held the post of Engineer-in-Chief throughout the whole of the active operations, thanks are specially due for the ability, tact, and perseverance displayed, amongst the officers of his staff, Captain Laugharne, R.E., and Mr. Von. Ahn, Executive Engineers, and Mr. W. E. Newham, and Mr. E. T. Faulkner, Assistants, have been specially distinguished; Mr. F. J. E. Spring, Executive Engineer, and Mr. E. C. Hawkes, Temporary Engineer, as also Messrs. G. Deuchars, and Monson, and C. Warde, Assistants, are deserving of praise; Messrs. J. M. Chabrel and E. J. McCudden also did good service.

Mr. T. Owen officiated as Engineer-in-Chief during the latter half of 1886, and submitted the final report and estimates.

ORDER.—Ordered that this Resolution, together with the Index Map and documents specified below, be communicated to the Governments of Bengal and the North-Western Provinces and Oudh, and the Chief Commissioner, Central Provinces, and published in the Supplement to the *Gazette of India* for general information.

Enclosure No. 2 to Railway Resolution No. 799 R.C. of 1887.

Note by H. H. RISLEY, Esq., C.S., Asst. Commr. of Manbhoom, on the trade of Chota Nagpore,—dated 15th July 1882.

Object of this note.

An attempt is made in this note to indicate, so far as existing materials permit, the general character of the export and import trade of the Chota Nagpore Division, the marts at which it is collected, and the routes by which it is conveyed. Some of the figured estimates, which have been made at various times, of the quantity and value of portions of this trade will be reproduced and examined, and it will be shown that, with one trifling exception, such estimates are purely conjectural, and furnish no trustworthy data for a forecast of the probable traffic on the proposed railway from Sitarampore on the East Indian Railway to Nagpore in the Central Provinces. With the through traffic, which may be looked for between the Central Provinces and Calcutta, I shall not attempt to deal; nor shall I concern myself with *local* trade, properly so called, between places situated within Chota Nagpore.

Character of the country.

Tributary States.

2. The Chota Nagpore Division is a pear-shaped tract of hilly and undulating country, forming three successive steps from the highlands of Central India to the alluvial plains of Bengal. On the extreme west of the Division, the Tributary States, a confused mass of hills, ravines and plateaux, project like a wedge into Rewa and the Central Provinces, sending off streams on the north towards the Sone and the river system of Behar, and on the south towards Orissa and the Bay of Bengal. It is believed that, at a remote geological period, the entire country now included in the Tributary States formed a uniform table-land, elevated about 3,600 feet above the sea. Traces of such a state of things are to be found in the flat-topped hills, locally known as *pâts*, several of which mark the descent from the State of Sirgoojah into the British District of Lohardugga.

Lohardugga District.

3. The District of Lohardugga, forming the central and north-western portion of the Division, comprises two tracts of country, which differ essentially in aspect and physical conformation—Chota Nagpore Proper, and the Sub-Division of Palamow. Chota Nagpore Proper, as distinguished from the Commissioner's Division bearing that name, is an elevated table-land situated about 2,100 feet above the sea, and occupying the central and south-eastern portion of Lohardugga District. On the north-west, the table-land falls away into the Sub-Division of Palamow, which extends on the north to Behar and the Mirzapore District of the North-West Provinces. On the east and south, Palamow consists of spurs thrown off from the plateaux of Hazaribagh and Chota Nagpore Proper, while the rest of the Sub-Division is a tangled mass of isolated peaks and long irregular stretches of broken hills. The average elevation of the country is about 1,200 feet above sea level, but the surface is wilder and more cut up by rock and jungle than in Chota Nagpore Proper, and there are no level areas of any extent except the valleys of the north Koel and Amanat, to which rice cultivation is confined.

Hazaribagh District.

4. On the north and north-east of Lohardugga, the central plateau of Hazaribagh rises to an average height of 2,000 feet above the sea. This plateau, which is connected by a narrow neck of land with the corresponding level in Lohardugga, occupies only a limited area, while the rest of the district lies at an average elevation of 1,200 or 1,300 feet above sea level. The northern portion of Hazaribagh is divided by a well marked range of hills from the plains of Gaya District, which are about 800 feet below the lower level of Hazaribagh.

Manbhoom District.

5. Due east of Lohardugga, and south-east of Hazaribagh, the district of Manbhoom forms the last step in the gradual descent from the highland of Central India to the delta of Bengal. Here the undulations of the surface become less pronounced, and follow each other at longer intervals than in Lohardugga and Hazaribagh, while level tracts of considerable extent are of more frequent occurrence. In the northern and eastern portions of the district the country is open, and consists of rolling downs dotted here and there with isolated conical hills.

Singbhoom District.

6. The south-eastern corner of the Division is occupied by the district of Singbhoom, an elevated basin shut in on the north, west, and south, by the spurs of the Chota Nagpore plateau and the hills of the Orissa Tributary States, and open on the east towards the district of Midnapore.

Geological character.

Coal.

7. The prevailing geological formations of the Chota Nagpore Division belong to the metamorphic or granite and gneiss series, and to the sub-metamorphic or slate and quartzite series. Coal-bearing shales and sandstones occur over the whole area frequently in conjunction with iron stone, shales and hæmatite. Limestones are rarely met with, and in most places where they occur, it is believed that the supply would not suffice for large iron works for a lengthened period. The known coal-

fields of the Division and some of their more important characteristics are shown in the following table :—

No.	Name of coal-fields.	Where situated.	Area in square miles of coal-bearing strata.	Thickness of coal-bearing strata.	Estimated yield in tons.	Percentage of carbon, ash and volatile matter.	Maximum thickness of seams.	REMARKS.
			sq. m	ft.				
1	Lakharpur }	Sirgoojah	400	4,500	...	... ...	...	
2	Bisrampur }	State.						
3	Jhilmilli .	Sirgoojah .	35	...	...	... ...	...

15	Jharia .	Manbhoom .	200	...	...	... ...	60 ft.	

Iron, &c.

8. Iron of excellent quality is worked on a small scale by the aborigines in all parts of the Division. Specimens of ore from the Karanpura valley in Hazaribagh were found, on analysis, to yield from 35 to 60 per cent. of iron, and the magnetic iron ore found in the metamorphic rocks contained as much as 70 per cent. of metal. Copper is found in Singbhoom, and lead, containing a large proportion of silver, has been met with in Hazaribagh and Manbhoom. Tin and antimony were formerly worked in Hazaribagh. Mica mines, long managed on the wasteful native system, are likely to be opened out by European practical miners in the north of that district. Gold is washed in small quantities from the sands of the rivers Subarnrekha and Sunkh in Lohardugga, and the Ib and Brahmini in the State of Gangpore. Good building stone is found in many places throughout the Division.

Forests.

9. The gradual spread of cultivation, the incessant demand for railway sleepers, and the practice of girdling the trees for resin, have combined to denude the districts of Hazaribagh, Lohardugga and Manbhoom of most of their valuable *sál* forests. Extensive jungles still remain uncleared in these districts, but nearly all the trees big enough to make sleepers have been thinned out, and little besides saplings is left. Forest reserves have been formed by Government in the north-west of Hazaribagh and in the western corner of Singbhoom, and throughout the Division the landholders are now beginning to establish small reserves locally known as *rakhwats*. These, however, are not worked on any regular system; their boundaries are usually ill defined, and the conflicting claims of the landlord and the villagers are a fruitful source of litigation in the criminal courts. A scheme for preserving the private forests of Chota Nagpore has recently been under consideration by Government. A forest officer was deputed to examine the forests, but it is believed that, except in Singbhoom, which has only been resorted to for sleepers within the last two or three years, the private forests of the Division contain no timber worth preserving. In the Tributary States, the original forests are still virtually untouched. Cart roads do not exist, and the rivers cannot be used for floating timber. Here the proposed railway will open out an enormous area of virgin forest which, if properly worked, ought to meet almost any demand for an indefinite period.

Agriculture : rice cultivation.

10. The system of agriculture followed in Chota Nagpore is determined, particularly in the case of rice, by the physical conformation of the country. This consists mostly of long undulating ridges, between which the drainage runs off to join the large streams. The lower slopes of these ridges and the swampy ground between, supply the only land on which a wet rice crop can be raised. The soil is, in the first instance, brought under cultivation by cutting level terraces out of the hill side, a small bank to hold up water being left round the edge of each plot. The hill sides, thus treated, present the appearance of a series of steps, varying

from one to five feet in height; and when the slopes are too steep for terracing or the soil too stony for cultivation, the bed of the stream is banked up and made into one long narrow rice field.

Oilseeds and other upland crops.

Tea.

11. Wheat, barley, various kinds of millet, Indian-corn, *marua*, pulses, oilseeds, sugarcane, betel-nut, cotton, tobacco are cultivated on the higher levels of the surface where the rice terraces leave off. In Hazaribagh and Chota Nagpore Proper, tea is grown by European planters on lands of this class. In 1880-81 thirty-six tea plantations had been opened in the two districts. The gross yield for that year is reported as 237,666 pounds.

Area and population.

12. The area and population of the Chota Nagpore Division, as ascertained in the census of 1881, are as follows :—

	Area in Sq. miles.	Population.
Lohardugga	12,044	1,607,038
Hazaribagh	7,021	1,072,486
Manbhoom	4,914	1,042,117
Singhoom	4,503	551,348
Tributary States	15,419	441,302
	43,901	4,714,291

These figures represent the results of the preliminary totalling of the detailed returns and consequently are liable to some correction; but they are accurate enough for practical purposes. The details of the census of 1881 have not yet been published, but it may be noted that, of the population recorded in the previous census of 1872, 54 per cent. belonged to aboriginal or semi-aboriginal races. Taking the Division as a whole, we may fairly assume that at least 50 per cent. of the population are more or less of aboriginal descent. No difficulty, therefore, need be anticipated in procuring cheap labour for the earthwork of the new railway, even in the most unhealthy parts of the line. The aborigines of Chota Nagpore are conspicuous for their immunity from malarious fever, and it is mainly by labourers of this class imported into Assam that new tea gardens are opened out in that unhealthy province.

Trade routes.

13. It will be clear from paras. 2 to 6 above, and from the annexed map, on which some of the chief lines of hills have been roughly delineated, that on the west and south Chota Nagpore is shut in by the hills of the Central Provinces and Orissa, while there are but few practicable outlets through the bordering ranges which mark the descent into the plains of Behar. Hence the main currents of export trade, like the main lines of drainage, follow the natural slope of the country from west and north-west towards the east, converging gradually after entering Manbhoom District, on the great trade centre of Raneegunge in Burdwan. Three main exceptions to this general rule deserve special notice :—

(i) Of the surplus produce of Palamow and Sirgoojah, which is collected in the marts of Garwa, Daltongunge, and Maharajgunge in Palamow, a certain portion is exported to Gaya, Shahabad and Mirzapore, and it may be expected that the Gaya-Patna State Railway will attract a continually increasing proportion of the trade of these marts, as well as of Chuttra in the west of Hazaribagh.

(ii) Part of the trade of the north of Hazaribagh, collected in the mart of Mirzagunge, finds its way into Monghyr District, and part is exported from Giridih on a branch of the East Indian Railway.

(iii) The export trade of that part of Dhulbhoom, the eastern pergunnah of Singbhoom, which lies to the east of the Kâpargâdi hills, has its natural outlet towards Midnapore. Ghatsila, the chief village of Dhulbhoom, is not much more than 60 miles from the mouth of the Midnapore Canal, and we may expect that when the roads in Singbhoom are put in order, a very considerable traffic will pass out of the district by this route.

Export routes.

14. The areas of country which either now export, or may ultimately be expected to export, by way of Gaya, Giridih and Midnapore, have been roughly marked on the map in blue. At present a certain proportion of the trade, even of these remote parts, flows towards Raneegunge, but it can hardly be expected that this reversal of natural conditions will continue when communications come to be improved. All the exports from the remaining areas find their way sooner or later through Manbhoom District to Raneegunge or Bankura, on one or other of the roads marked with green arrows on the map. I shall attempt to show in detail for each district how this takes place. In Hazaribagh the surplus for export is collected at Chuttra, Tandawa, Mirzagunge, Gola and Hazaribagh, all of which are shown on the map. The exports of Tandawa, Chuttra and Hazaribagh pass for the most part down the Grand Trunk Road by cart to Burrakur or Raneegunge direct; Mirzagunge exports by Giridih on the East Indian

Railway, and Gola through Manbhoom to Raneegunge or Bankura. The produce of Lohardugga, excluding that of the area marked blue which exports to Mirzapore or Behar, and that of an undefined area in the west of the district which deals with Chuttra, is concentrated at Ranchi or Jhalda in Manbhoom, and dispatched to Raneegunge or Burrakur through Purulia. The exports of Singbhoom, excluding Dhulbhoom, are sent by Chaibasa to Purulia, and thence to Bankura or Raneegunge.

Import routes.

15. The import trade follows the same main lines as the export trade, and needs no special description. Places which export to Raneegunge procure their exports from there, and the same holds good in the case of the areas exporting by Gaya or Mirzapore, Giridih and Midnapore.

Attraction of Raneegunge.

16. It was remarked above that the bulk of the exports of Chuttra and Hazaribagh are sent by cart along the Grand Trunk Road to Burrakur or Raneegunge. In the former case they pass within 26 miles of the Giridih Railway Station, and in the latter also within a mile of the station at Burrakur. This preference for Raneegunge over the two nearest stations on the line is mainly due to the fact that the trade of Raneegunge is incomparably larger than that of either Burrakur or Giridih, and that consignors can count upon disposing of their entire produce to a single wholesale dealer and getting at once whatever they may require for the return journey. At Burrakur or Giridih, where the machinery of trade is as yet imperfectly developed, a consignor of country produce would probably have to dispose of his stock in driblets, and to pick up his return load of piece-goods, salt and tobacco from half a dozen different dealers. For this reason, and probably also because the consignors have running accounts with the large merchants at Raneegunge, the majority of carts exporting country produce travel for their market 70 miles beyond Giridih, their nearest railway station, and 25 miles beyond Burrakur. The point is chiefly of importance as illustrating the indifference to delay, and the reluctance to abandon traditional routes and methods which are so characteristic of the ordinary country trader. If, in cases like this, the common economical maxim, that trade will seek out and follow the shortest and cheapest routes, could be implicitly relied on, it ought to follow that when the railway is open, Purulia will at once take the place of Raneegunge as the distributing centre for the trade of a large portion of Chota Nagpore. This, however, will hardly be the case unless the native firms at Raneegunge open branches at Purulia, or unless some influential dealers migrate from the large mart of Jhalda in the west of Manbhoom.

Conservatism of native trade.

Minor trade agencies.

17. It is not pretended that the foregoing paragraphs give anything more than a very general outline of the operations of trade over a large province. No reference has been made to the weekly markets held in all large villages, to the small travelling dealers (*bepāris*), or to the agents of large merchants who settle for a time at convenient centres and buy up the produce of the neighbourhood. In a country where but few large centres of trade exist, it is from sources such as these that the chief marts shown in the map derive their stocks for export, and the imports are distributed through the same channels. No statistical record of these operations is possible. As Chota Nagpore is gradually opened up by the railway and by improved roads, we may expect that the new marts will spring up, and that the trade of the Division will tend to concentrate itself, while itinerant dealers, and transport by means of pack bullocks will tend to disappear.

Exports.

18. The chief exports of the Chota Nagpore Division are the following :—

Rice—
Indian-corn—chiefly from Manbhoom.
Wheat—from Hazaribagh.
Pulses.—Mung (Phaseolus Mungo).
Urid (Phaseolus Roxburghii) known as Biri in Manbhoom.
Gram (Cicer arietinum), not grown in Lohardugga.
Oil seeds.—Sarsua—Mustard.
Til (Sesamum orientale).
Tisi—Linseed.
Surgujia (Guizotia oleifera).
Cotton—only from Palamow.
Timber—from South Lohardugga and North Singbhoom.
Bamboos—
Chope—or rope made of jungle fibre.
Bábui—string made of bábui grass.
Tusser Silk—Manbhoom and Hazaribagh.
Tusser Cocoons—
Hides—
Shellac—from Ranchi and Manbhoom.
Ghee—Hazaribagh and Palamow.
Tea—Hazaribagh and Lohardugga.
Jungle products—Petals of the *mohua* tree.
Catechu.
Resin.
Sticklac.
Dye substances of various kinds.
Wax.
Gallnuts (*haritáki*.)
Coal, *Iron*, *Mica*—from Hazaribagh and Lohardugga.

Imports.

19. The chief imports are—

European piece-goods.
„ twist.
Blankets.
Salt.
Spices.
Molasses.
Tobacco.
Umbrellas.
Brass utensils.
Paper.
Wines and spirits.
Oilman's stores.
Gunny bags—to Hazaribagh.

Trade of Tributary States.

20. I will now attempt to summarize, as concisely as possible, the available information regarding the trade of each district of the Division. Nothing certain is known about the trade of the Tributary States, except that there are no marts worth mentioning; that the resources of the country are quite undeveloped, and that the export and import trade is carried on pack bullocks, and is in the hands of itinerant traders who barter salt and piece-goods for local produce.

Trade of Lohardugga.

21. The principal seats of trade in Lohardugga District are Ranchi, Lohardugga, Palkot, Barwa, Tamar, Bundu, Garwa, Daltongunge and Maharajgunge. Garwa, in Palamow, forms the distributing trade centre for the surplus produce of great part of Sirgoojah, of the Tributary States further west, and of Palamow Sub-Division itself. The Garwa market is held during the dry season on the sands of a river, and is one of the largest in the Chota Nagpore Division. Sticklac, resin, catechu, cocoons of tusser silk, hides, oilseeds, ghee, cotton and iron are there collected for exportation. Rice and other food-grains, brass vessels and piece-goods, blankets, silk, salt, tobacco, spices, drugs, and beads are brought to market for local consumption, and to supply the stocks of itinerant merchants, who take these articles into Sirgoojah and Korea. All over Lohardugga District trade is carried on by periodical markets, held once or twice a week, according to the importance of the neighbourhood which they supply. But by far the largest amount of business, at any rate in Palamow, is transacted in what may be called the "door-to-door trade," by travelling merchants who buy up produce from the cultivators. Owing to the general insolvency of the producing classes of Lohardugga, this trade is to a great extent carried on by advances, and the prices paid are consequently very low. A large and increasing amount of country produce is exported from Lohardugga. Rice goes to Behar through Chuttra and Gya: oilseeds to Calcutta through Jhalda in Manbhoom. Hides are bought up at Ranchi by wholesale dealers, who employ paid agents in the interior to work in connexion with the village chamars. The value of the export of hides in 1879-80 was estimated at Rs. 35,000. In the same year the gross produce of tusser cocoons was estimated at Rs. 31,50,000 sold for export at from 4 annas to 8 annas per 100 cocoons. Of these, 150,000 were produced in Palamow and exported to Gaya, Shahabad and Mirzapore: the remainder being sent through Jhalda and Eloo in Manbhoom to Lower Bengal. A considerable amount of ghee is exported from Palamow, where cattle are driven in for pasturage from Shahabad, Mirzapore and Gaya. In the following year (1880-81) the crop of sticklac was very large and the demand unusually brisk. The prices per maund fluctuated remarkably during recent years, thus :—

Years.	₹		₹
1875-76	50	@	20
1877-78	30	„	16
1879-80	21	„	14
1880-81	0	„	18

The imports of piece-goods into Lohardugga for local consumption and for re-export to the Tributary States are said to be increasing rapidly; but as they enter or leave the district at numberless points, no accurate account of the quantity can be kept. It is extremely difficult to register trade carried on pack bullocks. The following table, taken from the Administration Report of the Chota Nagpore Division for 1879-80, shows the approximate proportions of the several descriptions of piece-goods imported, their value, and the price at which they are sold :—

	Approximate proportion of import from Calcutta.	Approximate value imported.	Selling price per piece.
		₹	₹ a. to ₹ a.
Grey jacconets	4	20,000	3 14 to 6 0
„ shirtings	40	2,00,000	3 14 „ 8 0
„ madapollams	3	15,000	1 8 „ 2 12
„ dhooties	28	1,40,000	0 12 „ 1 6
White jacconets	1	5,000	3 14 „ 8 0
„ mulls	4	20,000	2 0 „ 8 0
Coloured, printed or dyed cambrics	1	5,000	1 4 „ 4 0
Prints and chintz	6	30,000	9 0 „ 12 0
Other sorts each less than 3 per cent. of whole imports	13	65,000	
	100	5,00,000	

About 100,000 maunds of salt are supposed to be consumed annually in Lohardugga District. Most of it is Liverpool salt imported from Calcutta by way of Raneegunge, Purulia, Chuttra, and Gaya; but in the south of the district the people use "Kurkutch" salt brought from Ganjam and Sumbulpore on pack bullocks. Taking the average annual consumption per head at 12 lb., the figure adopted by Sir John Strachey at page 230 of the Finances and Public Works of India, it would appear that the district ought to

consume no less than 241,055 maunds of salt, or more than twice the amount of the official estimate.

As affecting the Railway.

22. No sort of guess at the quantity or value of the Lohardugga trade can be arrived at from the information put together in the last paragraph. I need only remark that whatever proportion of this trade comes on to the proposed Railway will at first be carried only 45 miles from Seetarampore to Purulia or *vice versâ*. As time goes on, and feeder roads are opened out, we may expect that the traffic of the south and south-east of the district will strike the line somewhere in the Subarnrekha Valley.

Trade of Hazaribagh.

23. Chuttra, about 36 miles north-west of the civil station, is the chief market of the Hazaribagh District. Situated on a comparatively level tract between the central plateau of the district and the tangled mass of rock and ravine which forms its western frontier, in such a way as to command the openings of the passes from the north-west, west and south-west, it is well suited by its position to be the distributing market for the country produce of Palamow and the Tributary States. The principal articles imported into Chuttra are the following:—Rice, Indian-corn, oilseeds, pulses and mohua petals are imported from Lohardugga and the Tributary States of Gangpore, Jushpore and Sirgoojah. From the same places are also brought sticklac, resin, tusser silk cocoons, gum, cotton and unwrought iron. The districts of Gaya and Shahabad send wheat, gram, *masur* (Ervum lens), *khesari* (lathyrus sativus) and similar cereals, as well as turmeric, pepper, and other vegetables. Zinc and tin are also sent in small quantities from these districts. Tobacco, is imported from Patna. English cloth, brass or bell metal, household utensils, salt, pepper and *supari* or betel-nut are imported from Burdwan, Raneegunge and Calcutta. The export trade supplies Lohardugga and the Tributary States with English cloth, salt, pepper, tobacco, household utensils, turmeric, &c. Rice, Indian-corn, *marua* (eleusine coracana), pulses, oilseeds, mohua flowers and ghee are sent to Gaya and Shahabad. Oilseeds and ghee are also exported to Burdwan and Raneegunge. Patna takes iron and certain proportion of sticklac; but the bulk of the lac which finds its way into the Chuttra market is sent to the great lac factories of Mirzapore District.

Exports.

24. The exports from Hazaribagh District in 1879-80 and 1880-81 are estimated as follows:—

Articles.	1879-80. Quantity.	Value.	1880-81. Quantity.	Value.
	Mds.	₹	Mds.	₹
Tusser cocoons (*a*)	...	30,000 to 35,000	...	
Tusser silk	200	...	200	
Catechu	1,100 to 1,200	...	...	
Rice	50,000	...	35,000 to 40,000	
Grain and pulses	20,000	...	10,000 „ 12,000	
Oilseeds	100,000	...	15,000 „ 20,000	
Ghee	...	...	30,000 „ 40,000	

(*a*) Partly produced in Hazaribagh, partly imported from Singbhoom (*sic*); exported to Mobarakpore in the North-Western Provinces.

(*b*) Exported to Calcutta.

Besides these, says the report from which the foregoing figures are taken, iron, timber, bamboos, *chope*, &c., are exported to Patna, and coal, timber, tea, hides, &c., to Calcutta; but as these articles do not pass through the local marts, no attempt was made to collect statistics regarding them.

Imports.

26. The imports from Hazaribagh during the same year are thus estimated.

European piece-goods.

	1879-80. Value. ₹		1880-81. Value. ₹
To Hazaribagh	73,438		
Giridih	14,292	=1,89,430	1,29,828
Chuttra	1,01,700		

The decrease in 1880-81 is attributed to a decline in the number of marriages; but this cause itself is left unexplained. All the piece-goods received in Hazaribagh and Giridih are required for local use, but of the Chuttra imports nearly one-fourth is exported

to Lohardugga and Palamow. The different descriptions of piece-goods and the proportion each bear to the entire quantity imported are shown as follows:—

1. Grey jacconets	1 5
2. „ shirtings	42 6
3. Madapollams	24 0
4. Dhooties	2 2
5. White jacconets	7 0
6. „ mulls	3 5
7. „ shirtings	6 0
8. Colored, printed or dyed cambrics	0 6
9. Prints or chintz	1 2
10. Colored garments	2 7
11. All other sorts	8 7
TOTAL	100 0

The imports of salt in 1879-80 and 1880-81 are given as follows, only the estimated value being shown for the latter year:—

	1879-80. Quantity. Mds.	1880-81. Value. ₹
Hazaribagh	8,000	34,000
Giridih	30,000	35,000
Chuttra	75,000	1,94,750
TOTAL	1,13,000	4,68,650

Here, again, more than half of the import to Chuttra is re-exported to Ranchi, Lohardugga and Palamow. In 1879-80 it was estimated that from 55,000 to 60,000 gunny bags were imported into Chuttra, and from 15,000 to 20,000 into Giridih. Doubtless there is a steady demand for gunny bags for use in the export trade both by carts and pack bullocks, but no reliance can be placed on any estimate of the quantities.

Trade of Singbhoom.

27. The exports and imports of Singbhoom are much the same as those of other districts in Chota Nagpore. Rice and oilseeds are exported by petty itinerant traders, who move about from village to village during the cold weather purchasing country produce, or taking it in exchange for salt which they import, mostly on pack bullocks, from Midnapore. Tusser cocoons and hides are collected on a system of advances by agents from Bankura and Midnapore, the latter being exported by carts. The following table shows the estimated exports for 1879-80:—

	Mds.	Value. ₹
Rice	18,400	26,450
Tusser cocoons	17,591 kahans	1,08,294
Hides	47,500 pieces	65,312
Horns	1,040 mds.	12,505
Til	3,000	6,375
Surgujia	2,200	3,300
Sarsua	1,771	4,095
Lac	919	18,954
Haritaki (gallnuts)	4,200	3,150
TOTAL VALUE OF EXPORT		2,48,435

The imports are returned as follows:—

	Mds.	Value. ₹
Salt	29,511	1,56,777
Tobacco	4,940	90,772
Betel-nut	2,030	25,628

28. I have already pointed out, in paras. 14 to 16 above, the important position occupied by Manbhoom in relation to the trade of the Chota Nagpore Division. In this district considerable attention has been paid to the question of trade statistics, and for the last three years special reports on the subject have been drawn up by a native officer of great local experience, from whose estimates the following tables have been compiled. The figures, however, are admittedly conjectural, and must be taken as approximate only. The table of imports includes articles afterwards exported to other districts, while the table of exports purports to deal only with exports from Manbhoom itself :—

Trade of Manbhoom.

Exports.

Estimated exports of Manbhoom District for the year 1879-80 to 1881-82.

29. Sticklac is exported to Burdwan, Bankura, Beerbhoom, Calcutta and to Mirzapore in the North-Western Provinces. It is collected by paid agents of the manufacturers, who come to the trade centres of

Sticklac.

Manbhoom during the gathering seasons, and make advances to petty brokers dealing direct with the cultivators. Shellac is manufactured at Jhalda, Eloo, Ragunathpur and Chas, and exported to Calcutta. In 1879-80 twenty-six lac factories were at work in the district, but most of them are small concerns, and in 1881-82 only one of them worked throughout the year.

Shellac.

30. Very little is known about the export of rice. On the one hand, the short exports of 1879-80 and 1880-81, and the stoppage of exportation in 1881-82 shown in the estimate, are attributed to the reduced demand consequent on good harvests in Bengal Proper, and the local surplus is supposed to be stored, awaiting a rise of prices. On the other hand, the district officer doubts the existence of any considerable surplus, and thinks that a good deal of the rice exported from Manbhoom comes from Singbhoom. My own enquiries in the Govindpur Sub-Division, to which I shall refer in detail below, lead me to think that the latter view is correct. In 1879-80 Indian-corn was exported to Patna and Monghyr. *Vrid* locally known as *biri* is the only pulse exported. It goes to Ghatal in Midnapore by way of Bankura and Burdwan. The export of oilseeds appears to be under-estimated. From February to July 1881, about 4,000 maunds of oilseeds were exported from the western part of the Govindpur Sub-Division, and the surplus of the whole district is probably at least 10 or 12 times as much.

Rice.

Oilseeds.

31. Hides are exported to Calcutta from the south of Manbhoom through Bankura by merchants residing at the latter place, who have agents at Purulia, Jaipur, Jhalda, Raghunathpur and Manbagar. From Govindpur they are exported through Burrakur.

Hides.

32. The export of timber for the last three years is estimated as follows :—

Timber.

	1879-80.	Rate.	1880-81.	1881-82.	Rate for last two years.
Large sâl beams	1,000	1-0 to 1-8 p. c. ft.	700 or 800	1,000	1-6 per c. ft.
Sâl sleepers	10,000	3-0 to 3-8 each.	5,000	10,000	3-8 to 4-0 each.

There is also a considerable export of *rollahs* (sâl saplings) to Burdwan and Bankura, where they are used for house posts, rafters, &c. The district officer remarks that "the large demand for these young trees probably causes much more harm to the forests than that for heavy timber, which can only be cut from mature trees."

33. The trade in *bábui* string made from jungle grass is on the increase. Large quantities pass through Purulia from Singbhoom, and the article is in great demand in Bankura and Burdwan for use in thatching.

34. Tusser cocoons are exported to Bankura, Burdwan, Beerbhoom and Azimgurh in the North-Western Provinces. No reliance can be placed on the figures entered in the table under this head. There is no reason for believing that the exports have declined in the last three years so remarkably as the estimate would show. It may be hoped that the cultivation of tusser silk will some day be developed under European supervision, and the improved processes of reeling described by W. Wardle introduced.

Tusser silk cocoons.

35. The trade in potstone plates is said to have increased greatly of late years. Its chief centre is Patkum in the south-west corner of the district. The opening of the railway will probably stimulate the demand for these heavy articles. The supply of the stone is said to be unlimited. The following remarks on the subject are extracted from a paper on Manbhoom District by Mr. V. Ball :—"Chloritic schists, passing on the one hand into Talcox, and on the other into serpentinous rocks, occur not uncommonly in the sub-metamorphic and somewhat less frequently in the metamorphic series. In building, the varieties of this material have only been used on a small scale for ornamental purposes, for which some of them, as being tough and at the same time easily carved, are particularly suited. They are more extensively employed in the manufacture of altars, idols, plates and bowls. In the southern part of Manbhoom on the frontiers of Singbhoom there are numerous workings, which generally take the form of narrow mines, but are deserted during the rains. From these mines a considerable quantity of stone is annually extracted; the blocks are roughly dressed to the shape required, be it for *lingam* plate or bowl. They are then fixed in a rude lathe, cut into form, and finished with a smooth surface. When finished, they are carted off to Burdwan, where they are in great demand, and a portion are sent on to Calcutta for sale. One class of the varieties used stands fire well, while the other does not. The former is, of course, the most esteemed by the natives. The cracking of the latter is probably due to the water in combination in the more chloritic varieties which becomes released on the application of heat. In many of the ancient temples in Chota Nagpore, images made from this material are met with."

Potstone plates.

Estimated imports of Manbhoom District for the years 1879-80 to 1881-82.

36. European piece-goods are imported from Bankura, Raneegunge and Burrakur. The principal centres of distribution are Purulia, Jhalda, Raghunathpore, Govindpur and Chas. The following statement shows the value of the amount estimated to have been imported into each centre during the last three years :—

European piece-goods.

	1879-80.	1880-81.	1881-82.
	₹	₹	₹
Purulia	2,26,000	2,82,500	3,75,000
Raghunathpore	65,000	81,375	1,55,000
Jhalda	62,000	77,500	1,55,000
Govindpur	27,000	33,750	1,30,000
Chas	16,000	20,375	52,832
TOTAL	3,96,000	49,55,000	8,67,832

The consumption of European piece-goods has increased of late among the aboriginal and semi-aboriginal races of Manbhoom, who are also believed to have taken a large proportion of the umbrellas imported in the last three years. Salt is imported by way of Raneegunge and Burrakur, and distributed through the same centres as piece-goods. Brass utensils are imported from Bankura, and the import is likely to continue, as the Manbhoom braziers do not make enough for local wants, and their workmanship is clumsy.

Salt.

37. Clearly the Manbhoom statistics have been compiled with great labour, and aim at a higher standard of completeness than those supplied from other districts of the division. They are based almost entirely on the following data :—

Manbhoom figures how compiled.

(a) Statements of local traders resident in Purulia as to the quantity or value of the stocks passing through their hands during the year; and the proportion of such stocks drawn from, or exported to, districts other than Manbhoom. Traders from the interior of the district were questioned on these points when they visited Purulia; and in all cases, from 30 to 50 per cent. was added by way of correcting the Mahajan's natural tendency to understate his stocks.

(b) Estimates made by local traders at the instance of the compiling officer of the quantity or value of particular articles exported from, or imported into, the whole district.

(c) Estimates framed by the compiling officer of the quantity or value of particular articles which the population of the district ought, on an average, to consume.

(d) In some few instances the traders' books were referred to.

38. With regard to (a) it would be waste of time to dwell upon the various sources of error which such a method of enquiry involves. Every local trader is possessed with a constant dread of enhanced license-tax, and regards statistical enquiries of any kind with the more suspicion because he is quite incapable of understanding the remote general objects which such enquiries have in view. He may believe that the officer with whom he is talking at the moment has no ulterior designs in respect of taxation; but nothing would persuade him that incautious disclosures made by him as to the extent of his dealings, might not hereafter be used by another officer, or another department, for the purpose of assessing a new tax or enhancing an old one. The clumsy expedient of adding a uniform percentage to the statements of stock could only yield correct results if every man lied in exactly the same ratio to the truth. In the present case, as the Mahajans were informed that this correction would be applied, there can be little doubt that many of them made allowance for it in framing their statements. As to (b), no one who has seen anything of the Mahajan class in Chota Nagpore can have failed to be struck by their peculiar inability to take a general view of any subject. Each man knows his own business and nothing more, and it is simply preposterous to expect him to be able to estimate the exports or imports of a whole district, which to him represents merely a set of arbitrary boundaries laid down for the convenience of the courts. Least of all would he be able to distinguish local exports and imports from goods in direct or indirect transit to other districts. At the best, moreover, the enquiry was only partial. It is not pretended that all the traders in the district were consulted, and that the figures represent the total of their statements and estimates. On the contrary, the compiling officer admits that he never left Purulia, and that he merely took any opportunity that offered of questioning traders from the interior who happened to come to Purulia.

Statements of Mahajans untrustworthy.

39. To argue from the recorded population of a district to its probable ultimate consumption is no doubt a legitimate process, but it can only be applied with confidence in the case of salt, and perhaps of some staple food-grains. Thus, in the case of salt, we can say that 17 lbs. is the amount required during the year by an adult, and that 12 lbs. is the average consumption in India, and we may infer from this, that with improved communications and a low duty, the Chota Nagpore Division may be expected to consume perhaps 600,000 maunds of salt. An attempt has been made by the compiler of the Manbhoom figures to calculate the import of European piece-goods on a somewhat similar method. Taking the population of the district at 1,042,117 as recorded in the last census, and deducting 281,174 for children and persons who do not wear European cloth, the remaining 760,943 persons are divided into four classes, spending respectively ₹75, 4, 1, and 0-8 per head on European cloth during the year. The number of persons in each class is then estimated, and their consumption calculated on the following scale :—

Estimates from population not generally applicable.

		₹	₹
2,000	of the upper class spending per annum	75-0 =	1,50,000
200,000	of the middle class	4-0 =	8,00,000
200,000	of the cultivators	1-0 =	2,00,000
358,943	of the poorer classes	0-8 =	1,79,471
760,943	persons spend per annum		13,29,471

Deducting from this ₹3,62,000, being the value of twist imported from Calcutta to be made into cloth in the district, the remainder ₹9,67,471 is taken as "the minimum value" of piece-goods imported from Calcutta for the "consumption of the people of Manbhoom." It is not clear why a smaller amount was entered in the figured estimate for 1881-82, and subjected to a further deduction on account of re-exports; but the whole calculation rests upon such highly conjectural data, that it would be waste of time to examine it in detail. Again, the import of salt is calculated on the assumption that 999,452 men consume 1 tola a day or 4·56 seers (say 9 pounds) in the year. I have not ascertained why the salt-consuming population was taken at this particular figure, which corresponds neither with the total population of the district nor with the total number of males or heads of families recorded in the last census.

40. Enough has perhaps been said to show that the existing estimates of the trade of Chota Nagpore are based upon methods which could, in no case, be expected to yield correct results, and must be treated as wholly fallacious. I will now reproduce, in a condensed form, the only local statistics which can pretend to even approximate accuracy. In February 1881, arrangements were made for recording daily number of carts passing through the *serai* or rest-house at Govindpur on the Grand Trunk Road, with the starting place and destination of each cart, and the quantity of goods carried. The system was carefully supervised, and the figures are believed to be substantially correct. They certainly do not exaggerate the traffic, as it was to the interest of the farmer of the *serai*, by whom the register was kept, to understate the number of carts on which his own profits depended.

Registered trade on the Grand Trunk Road.

Perhaps 10 per cent. might be added to make up for carts which escaped registration, or were purposely omitted by the farmer, but I have not thought it worth while to apply this correction. In August 1881 the Sub-divisional Officer of Govindpur compiled these statistics for the six months, February to July, and reported on the subject to the district officer, suggesting the introduction of a system by which the traffic of the whole division, except the areas exporting by Gaya, Giridih and Midnapore might be registered at certain points in Manbhoom District. This proposal was recommended to the Commissioner of the Division, but was lost sight of at the time. Shortly afterwards, a new Sub-divisional Officer stopped the registration of traffic at Govindpur. The proposal has since been revived, and a system of registration has been introduced within the last month, which will record a large portion of the trade passing through Manbhoom on the roads marked with green arrows in the map.

41. Exports from Chota Nagpore to Bengal, registered at Govindpur on the Grand Trunk Road during the six months, February to July 1881.

Registered exports.

Articles.	Quantity in Mds.

TOTAL	43,229

Registered imports. The imports during the same period were :—

Articles.	Quantity in Mds.
Salt	34,979
Condiments	608
Piece-goods	515
Ganja	300
Wine, &c.	238
Tobacco	206
Rice	250
TOTAL	37,096

42. Out of the 43,229 maunds of exports, 33,180 maunds were from Hazaribagh, Lohardugga and Gaya Districts. Chuttra in the north-west of Hazaribagh sent 10,511 maunds of oilseeds and cotton. Only 4,682 maunds of produce, chiefly timber and bamboos, were exported from these districts to Burrakur, the remainder being sent direct to Raneegunge past the two stations of Giridih and Burrakur. A much larger proportion (3,316 out of 10,247 maunds) of the Manbhoom exports as opposed to the through trade, was sent to Burrakur.

Sources of export.

43. Of the imports 1,557 maunds were sent from Burrakur, 768 maunds from Burdwan, and the remainder direct from Raneegunge. Out of the total 37,096 maunds recorded, no less than 32,779 maunds were destined for Hazaribagh and Lohardugga. Chuttra in Hazaribagh took 14,454 maunds, including 13,543 maunds of salt.

Sources of import.

44. It is not suggested that these figures supply data for estimating the traffic of the entire division. They only relate to a portion of a single route, and it is believed that they do not fairly represent the magnitude of the trade even on that section. The stream of carts passing along the Grand Trunk Road, which is noticeably large from September to March inclusive, falls off with the beginning of the hot weather in April, while during the rainy months the amount of traffic from distant places is very trifling. The period covered by the statements given above includes, therefore, four months when traffic is slack, and only two (February and March) when it is fairly brisk. Similar figures for an entire year would certainly show a much larger proportional total.

Figures incomplete.

45. Here I may bring this note to a close. Nothing would be gained by piecing together incomplete and conjectural estimates of the trade of particular districts, and endeavouring to surmise how far

Totals of official estimates worthless.

their total falls short of, or exceeds, the entire exports or imports of Chota Nagpore. Nor would facts justify us in assuming that the trade registered at Govindpur represents any definite proportion of the trade of the division. Without some such assumption the Govindpore figures, interesting and curious as they are, can have no direct bearing on the prospects of the new railway. No portion of the trade which they record is likely to be carried by a line running from Sitarampur through Purulia. The causes which at present bring a large share of the trade of Hazaribagh, and of the other areas which send their produce to Chuttra down the Grand Trunk Road to Raneegunge, will operate with equal force when the railway is open; and, if in course of time, this stream of traffic should change its channel, it will flow to Gaya and Giridih rather than to any centre on the new line of rail. At present Giridih, like Burrakur, is little more than an overgrown coal depot, its produce market being four miles off at Pachamba. It is, moreover, cut off from the Trunk Road by the unbridged Burrakur river. Carters from Chuttra halting at Govindpur on their way to Raneegunge have repeatedly assured me, that if the Burrakur were bridged, they would take their goods to Giridih; and I expect that when the recently sanctioned bridge over the Burrakur is completed, there will be a sensible decline in the exports through Govindpur from Chuttra, Burhee and Bagodar.

Summary.

46. For the present this note can only claim to have established the following rather meagre conclusions:—

(i) No materials exist for framing even a probable estimate of the quantity or value of the exports or imports of the Chota Nagpore Division.

(ii) The system of trade registration recently introduced in Manbhoom will furnish a mass of statistics accurate enough for all practical purposes; but the new arrangements have only been working since the 1st of June, and figures for any period less than a year would be misleading.

(iii) The railway through Manbhoom and Singbhoom may count upon carrying the surplus produce of those districts, of a great part of Lohardugga, and of that portion of Hazaribagh which exports, by way of Gola and Chasnanda or Jhalda. It will not carry the exports of Palamow or of Hazaribagh districts generally, and it will also miss so much of the trade of the tributary States and Lohardugga as is collected at Chuttra. If I might hazard a conjecture on a subject so obscure, I should be inclined to suggest that the road from Rabkob in Udaipur, through Jashpur to Lohardugga and thence to Ranchi, might fairly be taken to indicate roughly a line north of which trade will flow towards Garwa, Daltongunge and Chuttra, while on the south it will be attracted by the railway. To the east of Ranchi the railway ought to absorb the whole trade of the country except that of the extreme eastern border of Manbhoom District. I say *ought* to absorb advisedly, because great allowance must be made for the strong attraction of Raneegunge, and for the time required for an important trade centre to establish itself on the new line. Until such a centre springs up, the experience of Burrakur teaches us that a large proportion of the traffic with Bengal will run direct to, or from, Raneegunge, even though it has to cross the new railway to reach its consignees.

Enclosure No. 3 to Railway Resolution No. 799 R.C. of 1887.

No. 1080R.C., dated Fort William, the 16th December 1882.

From—The Secretary to the Government of India, Public Works Dept., Railway,

To—The Secretary to the Government of Bengal, Public Works Department.

I am directed to intimate for the information of His Honour the Lieutenant-Governor that at a Conference recently held at Gaya, for the purpose of discussing the question of the reconnaissances which should be made in connection with the projected line of railway between Benares and Cuttack, and at which—

The Hon'ble T. C. Hope, C.S.I., C.I.E.,
Colonel W. S. Trevor, V. C., R. E., Secy. to the Govt. of India, in the P. W. Dept.,
Mr. G. F. K. Hewitt, Commissioner of Chota Nagpur,
Mr. H. H. Risley, Assistant Commissioner of Manbhum,
Mr H. W. Warden, Assistant Secretary to the Govt. of Bengal, P. W. Dept.,
Mr. W. C. Furnivall, Agent and Chief Engineer, Bengal Central Ry. Co.,

were present, the following conclusions were arrived at:—

I.—That in connection with the projected Sitarampur-Nagpur Railway, Mr. Hewitt has now withdrawn all opposition to the southern route.

II.—That a through railway from Moghal Serai to Cuttack was unanimously approved of and considered the best means of opening up Chota Nagpur coupled with a connection between such a line and Gaya.

III.—That a line traversing the Ranchi plateau, and descending by Bandgaon and Chakadarpur, or by Palkhet to Laingarh or other suitable point, to a junction with the Nagpur-Sitarampur Railway, was admitted to be the best, but doubts were expressed whether either ghât would prove practicable.

IV.—That in default of such a line over the top of the plateau, a line skirting its base, through the Damuda Valley to Jhalda (a great mart), and thence to Purulia, preferably, or Chandil, joining the through line from Nagpur to Sitarampur at one of those points, was approved. It would open up the Karanpura and Ramgarh coal-fields.

V.—That a variety of reconnaissances were found to be necessary before the best route could be determined upon with any certainty.

2. In pursuance of the above, arrangements have already been made with the Government of the North-Western Provinces and Oudh for examining a line from Moghal Serai to Gharwa near Daltonganj, *vid* Naughar and the Upper Son, in hopes of finding a less costly crossing of that river than that at Dehri—*vide* Public Works Department docket No. 1045 R. C. of the 9th December 1882, enclosing copy of those orders for the information of His Honour the Lieutenant-Governor.

3. I am accordingly to request that, with the permission of His Honour the Lieutenant-Governor, every effort may be made to complete this season the following reconnaissances.

A.—A line from Gaya to the neighbourhood of Tori at the foot of the Ranchi plateau to the westward of the direct line by Chuttra, which was examined last year.

B.—A junction between some suitable point on this line and Gharwa, up to which the Government, North-Western Provinces, are examining the line from Moghal Serai.

C.—The best ascent discoverable between the Tori point and the top of the Ranchi plateau.

D.—A continuation thence across the plateau and a descent *vid* Bandgaon and Chakadarpur to the "southern" route of the Nagpur-Sitarampur line. The Government of India, I am to add, attach considerable importance to the discovery of a suitable descent from the plateau in this quarter. Bandgaon and Chakadarpur should not be considered obligatory points, in the event of a better line being obtainable elsewhere. The ghâts in this direction should be carefully and thoroughly explored.

E.—In the event of failure to obtain such a descent (but not otherwise), a line which has been suggested as possible, from Lohardugga to the west of Palkot and descending to either Suadi or Laingharh, may be examined.

F.—A continuation from the descent by Chakadarpur (or thereabouts) by Chaibassa, to the bank of the Mahanadi opposite Cuttack by the valley of the Baitarni, or otherwise, as the Government of Bengal may deem most advisable.

4. I am also to request that the Government of India may be favoured with any information, derived from canal or other surveys, which the Government of Bengal may possess as to this last route and others to Cuttack, including that from Sambalpur.

Enclosure No. 4 to Railway Resolution No. 799 R.C. of 1887.

BENARES-CUTTACK RAILWAY—GAYA BRANCH.

Mr. Parker's Preliminary Report and Estimate.

This branch line, which is included in the general scheme of the Benares-Cuttack Railway, is projected to afford communication between Gaya and Palamow, and to afford an outlet for the coal of the Daltonganj field to the north-east.

2. A considerable amount of goods from Daltonganj and Garwa is exported to Gaya and Maharajganj, from which places also the requirements of Palamow and Sirgujia are imported.

3. The branch leaves the main line at Sukhua, a village six miles from Daltonganj and 145⅛ miles from Mogulserai. A preliminary survey was executed in 1879, but the project does not appear to have been matured. In the cold season of 1882-83, Captain Laugharne, E. G., made a reconnaissance of the country, and, without any knowledge of the existence of the previous survey, followed, almost mile per mile, the route selected in 1879, the only exception being a slight divergence between Sherghati and Gaya, the reconnaissance line avoiding the double crossing of the Jamna and its tributary.

4. A trial line was run by Mr. Luff in the cold season of 1883-84 *vid* Chattarpur and Patan, but as the line would have been six miles longer than that originally selected, and involved gradients of 1 in 75 through the hills between Chattarpur and Daltonganj, this route has been abandoned.

5. The alignment located leaves the Sukhua station with a mile radius curve, and, running to the north-east, crosses the Jingoi Nulla at 5¼ miles, near the village of Sirma. It will probably be found advisable to correct the alignment between Sirma and Sukhua so as to join on to the main line east of the Jingoi Nulla, and thus avoid the construction of a second bridge.

6. The country is fairly easy, and gradients are 5 and 6 feet per 1,000 up to the 9th mile, where the line rounds the corner of the hill range which lies east and west, and runs down very nearly to the left bank of the Jingoi Nulla. For two miles some very rough and broken ground is passed over, and up to the 16¼ mile the drainage from the hills, running into the Jingoi river, is crossed, the country being partially cultivated.

7. There is a continuous rise up to the 21¾ mile, Mannatu village, where the line crosses the ridge which borders the Ganges plain on its south side. The gradients are in short lengths not exceeding 8 feet in 1,000 with intermediate levels. With the exception of two short heavy banks, the work is not very expensive.

8. From the summit, which is 1,087 feet above mean sea-level, a continuous descent of 1 in 100 for five miles brings the line down into the valley of the Mohur river, crossing the Baludah Nulla, a tributary of the Mohur, on a level half a mile long. There is a heavy cutting at the top 1½ miles in length and from 13 to 48 feet deep. Near the bottom of the incline is a very heavy embankment for 1½ miles, the Bewalthar Nullah being crossed twice at a height of 48 and 42 feet above its bed. The double crossing is said to be unavoidable, owing to the sharp bend of the stream.

9. The cuttings are in hard gneiss rock, and will be expensive to work. The banks also will be expensive as soil is not easily procurable, and must be tipped from the cutting.

10. From the Baludah river, 26¾ mile, the work is comparatively easy, and gradients flatten off, the country improving up to the crossing of the Mohur river near Lokudi, at 33rd mile, which is 486 feet below the summit at Mannatu.

11. From the 33rd to 56¾ miles the line follows the course of the Mohur, and crosses several tributaries which flow into that river from the adjacent hills. The gradients are easy, but there is a good deal of bridging and comparatively heavy work. The country is undulating, partly under cultivation, with large patches of scrub jungle.

12. From the 57th mile to Gaya the gradients are light and the work easy. The grand Trunk Road is crossed at Gopalpúr, 1½ miles from Sherghati, mile 59; thence keeping west of the Jamna river, the line crosses it at mile 76, and joins in to the Patna-Gaya State Railway at the south end of the station ground, following the curve already laid out through Macleodganj, which is now enclosed by houses.

13. The length of line from Sukhra junction to Gaya is 80 miles, 1·96 chains. This is shorter than the original reconnaissance route, which was estimated up to Daltonganj. The probable cost, calculated from preliminary survey section, will be ₹67,39,013, or ₹84,238 per mile, which is probably a maximum.

14. The only trading towns on the route are Daltonganj and Raniganj, a mart on the east bank of the Morhur river opposite to Imamganj, which is simply a thana and postal station. At Sherghati there is but little trade. Raniganj is the central depôt for the south-western portion of the Gaya district.

15. It is estimated that coal can be landed at Gaya for ₹6-3 per ton, assuming the cost of Daltonganj coal to be ₹3-8 per ton at Sukhua station. The cost at Bankipur would be ₹6-14-6. The Giridih coal delivered at Gaya would cost ₹9-3 per ton, and at Bankipur ₹7-13-9 per ton. The saving in cost of coal at Gaya would be ₹3 per ton, and at Bankipur 12 annas 6 pie per ton, if Daltonganj coal be used.

16. The consumption of coal for 1882 on the Tirhoot and Patna-Gaya Railways is estimated as follows:—Tirhoot 4,000 tons, Patna-Gaya 3,000 tons. As considerable extensions are being made to the Tirhoot line, the consumption will probably rise to 10,000 tons before the completion of this projected branch railway: 10,000 tons may be also allowed for the Bengal-North-Western Railway now nearly completed.

17. The saving in cost of coal to these railways would amount to ₹25,062, thus—

Tirhoot, 10,000 tons	at ₹15-3	₹	9,531
Bengal-North-Western, 10,000 tons	„ 15-3	„	9,531
Patna-Gaya, 3,000 tons	„ 2-0	„	6,000
	Total	„	25,062

18. The carriage of 23,000 tons of coal at 4¼ pie per ton mile over 80 miles of line would bring in ₹43,125. There would probably be also a traffic in firewood, as fuel is scarce in the Ganges Valley, while it is very abundant in Palamow.

19. In addition to these items Captain Laugharne shewed in his reconnaissance report that the general traffic in goods between Daltonganj and Gaya would probably amount to ₹5,713 per mile per annum, which, for 80 miles, would be ₹4,57,040 per annum, or ₹110 per mile per week.

20. These figures were obtained from statistics furnished by Mr. R. W. Renny, Assistant Commissioner of Palamow, and are in excess of the actual receipts for goods of the Gaya Railway for 1882; the total receipts of the Patna-Gaya Railway for merchandise in 1882 were only ₹1,75,540 for the year, which probably included the trade with Palamow. Considering that this trade is carried on principally by pack bullocks, Mr. Renny's figures

probably represent the trade of the whole district in every direction. A great deal goes to Maharajganj in the western part of Gaya district, which is a great depôt from which merchandise is again exported to the surrounding districts and to the East Indian Railway. This will probably be now diverted to Gaya.

21. It will probably be safe to take half the amount estimated by Captain Laugharne as the receipts from goods traffic, *i. e.*, ₹2,28,500, equivalent to a freight per annum of 8,22,600 maunds at two-thirds pie per maund per mile over the whole distance, and half of this may be be taken as extra freight to be carried over Patna-Gaya Railway.

22. The pilgrims for Gaya who would go on to Cuttack would probably travel onwards by the Benares-Cuttack Railway, as the distance to Chandil, where the line joins the Bengal-Nagpur Railway, is only 246½ miles against 335⅜ from Gaya to Chandil by Bankipur and Sitarampur.

23. The passenger traffic of the Patna-Gaya Railway for 1882-83 produced gross receipts ₹3,64,762, which compared with receipts from goods traffic ₹1,75,540 is over 2 to 1. On other main lines the passenger traffic is from half to one-third of the goods traffic. The passenger traffic of the Patna-Gaya Railway must therefore be greatly increased by the pilgrims visiting Gaya. The average number carried per diem was some 1,700.

24. A large number of pilgrims do travel now on foot southwards from Gaya, who would probably take advantage of the proposed railway. Assuming that 500 passengers per diem travel from Gaya to Sukhua the receipts per annum at 3 pie per mile would be ₹2,23,125.

25. The total direct returns therefore would be ₹4,94,745 per annum, thus—

	₹
Coal traffic	43,125
Goods	2,28,500
Passengers	2,23,128
TOTAL	4,94,745

of which working expenses would be about ₹2,47,370, or 50 per cent. The balance ₹2,47,375 represents a return of 3·67 on a capital of ₹67,09,000.

26. The indirect returns would be ₹1,30,947, thus—

	₹
Saving in cost of fuel on Tirhoot and other railways	25,062
Extra freight over Patna-Gaya Railway of 20,000 tons of coal at 4⅓ pie per ton per mile	26,719
Extra freight on Patna-Gaya Railway over 400,000 maunds carried 57 miles at ⅔ per maund per mile	79,166
TOTAL	1,30,947

which is equivalent to 1·94 per cent. more on the capital to be invested, *i.e.*, the profit to the State would be 5·61 per cent.

27. An index plan and section accompany this report. The final estimate will be submitted on completion of the working drawings. The amount of this preliminary estimate is not likely to be exceeded.

Enclosure No. 5 to Railway Resolution No. 799 R.C. of 1887.

No. C. 150 W. R., dated 17th September 1884.

From—COLONEL J. O. MAYNE, R. E., Secretary to the Government of the North-Western Provinces andOudh, Public Works Department, Railway Branch,

To—The Secretary to the Government of India, Public Works Department.

I am directed to acknowledge the receipt of your letter No. 772 R. C. of 3rd September 1884, forwarding a copy of a report and estimate on the Benares-Cuttack Railway Survey, with a map showing the alignment west of Gurhwa, and asking for an expression of opinion from His Honour the Lieutenant-Governor, North-Western Provinces, as to the alternative routes suggested for reaching Mogulserai.

2. In reply, I am directed by the Lieutenant Governor to state as follows. The two routes crossing the Sone River at the same site, *viz.*, Parcha, may be thus described :—

(1) From the north bank of the River Sone running along the banks of the river in a westerly direction for about 30 miles, then turning northwards and traversing a portion of the Ghazipur District, yet undevoloped, for some 45 miles, and then 25 miles well cultivated country, making a total length of 100 miles to Mogulserai.

(2) From the north bank of the river hugging the banks of the Sone in a north-westerly direction for some 40 miles, and then turning towards the west, would traverse some 60 miles of country already well developed and cultivated, of which only about 16 miles would lie within the limits of the Ghazipur District. The total distance to Mogulserai being about 105 miles. The two routes are practically the same length.

3. Route (1) practically serves the North-Western Provinces locally to the best advantage, whilst route (2) would traverse a more fully developed tract of country. The location, however, of so important a line demands consideration on a larger basis than purely local interests.

4. It is gathered from the report received that route (2) will be nearly a level line with easy work the whole way, whereas from former reports it is known that route (1) necessitates heavy gradients and difficult works.

5. The cost of the first section by route (2) excluding cost of bridge, it is also understood, will be about ₹ 88,000 per mile against ₹ 1,02,600, the estimated cost of first section per mile by route (1), so by adopting the former, a saving of some 10 lakhs will be gained.

6. Further, as a very heavy coal traffic is anticipated between Chota Nagpur and Mogulserai, rout (2) will possess very considerable advantages in allowing full loads to be hauled and thus keep down the cost of the coal.

7. Sir Alfred Lyall, therefore, whilst feeling that for provincial interests route (1) is so far preferable that it would open out and develope a tract of country now much shut off and land-locked for want of communications, considers that the larger views in favour of route (2) should prevail.

Enclosure No. 6 to Railway Resolution No. 799 R.C. of 1887.

Report by MR. H. GRAVES upon the First Division from Garwa to Rud.

Alignment.—In the first 30 miles (from Garwa) of this section the alignment is determined by the following considerations :—

(*a*) The necessity of passing through the Daltonganj coal-field.

(*b*) Selection of the best crossings for the numerous rivers and nallahs.

In fact it may be said that the latter consideration rules the location.

2. Commencing from Garwa with a square crossing of the Dauronaddi, the line proceeds on a bearing of 285° 10′ to the neighbourhood of Banpurwa at the 6th mile, from which curve No. 1 takes it into a straight run of seven miles across the Tuhleh nallah and its two sub-tributaries, the Amriti and Kankuria, to the 13th mile at Ledki, avoiding the heavy ravines just north of this village. Here curve No. 2 brings the alignment to a bund opposite the village of Pattria in the 16th mile, where a slight bend (curve No. 3) carries it square across the river Koel and into the heart of the coal-field.

From Garwa to the Koel river, the locations is abandoned, as the line from the north-west must keep to the north side of the Garwa hill, and joins Mr. Graves' location close to the Koel river.

W. H. P.

3. On the east bank of the Koel, curve No. 4, at mile 18, brings the alignment into straight run, the location of which, after a great deal of trouble, was effected, giving good crossings to the Jingoi nallah and its sub-tributary, the Banka nallah. On this piece of straight is the Sukhua station at mile 19, from where the Gaya-Palamow branch takes off. At mile 22, on leaving the coal-field, curve No. 5 takes the alignment across the Amanat river and the Kundri nallah to mile 24½ ; here a bend to the left (curve No. 6) was necessary in order to avoid the ravines of the Maila nallah, and another curve to the right (No. 7), near Mundarria, at mile 26, gives a square crossing of that river.

4. At this spot some difficulty was experienced in effecting a location so that the crossing, which will not bear shifting either way, should not be altered, and at the same time the small tributary nallah to the east avoided. This was managed by putting in two small curves (Nos. 8 and 9) at mile 28½.

5. From here the alignment proceeds up the watershed between the tributary nallahs to curve No. 10 at the 30th mile. A bend to the left carries it to the neighbourhood of Barikhas at the 33rd mile, where curve No. 11 was necessary to avoid the hill at milli 35, curving No. 12, round which, in order to keep clear of the Maila naddi, it runs to curve No. 13 at the village of Ponchi (36½ mile). From here the line runs past Chafti Sathbarwa to the 38th mile, where a curve No. 14 is necessary in order to cross the hill range at mile 39½ at the lowest point consistent with a fair alignment.

6. On leaving this hill range, curve No. 15 at the 40th mile takes the line past the hillock north of Pipra through difficult ground covered with ravines to the neighbourhood of the Charwadih Hills at mile 42½. Here the location gave a great deal of trouble, the country being dotted over with isolated hills and hill ranges covered with dense jungle obscuring the view on all sides. On running the trial from Mankah, the lowest pass among the numerous hills was taken, and it was only on the return journey that, on obtaining a view from Charwadih Hill, it was seen that a line run straight from there towards Sinjoh, at mile 46, would in all probability avoid the hills as well as the village of Mankah through which the trial line ran. This was accordingly done, and the result proving favourable, curve No. 16 at Charwadih Hill was put in and the line taken straight to Sinjoh, where curve No. 17 carries it across the Sukri naddi at the 49th mile.

This crossing of the Sukri nallah is obligatory.

W. H. P.

7. From here commenced the most difficult part of the alignment, the country for the next nine miles being nothing but rocky hills covered with dense forest. After crossing the Sukri, curve (No. 18) takes the line to the bank of the Auranga at mile 52, the country to the north being a mass of high hills, making it necessary to look for a route by keeping in the valley of the river. By a succession of curves Nos. 19, 20, 21, 22, 23, 24, the first three of which are of 1½° deflection, a practicable line was obtained, and the 57th mile reached on the heights north of and close to Latiahur. Here a curve (No. 25) carries the alignment past the village to curve No. 26 at mile 58½, and, avoiding the high ground to the north of the police rest-house, brings it into the Auranga coal-field. After crossing the Auranga river a turn (curve No. 27) to the left at the 61st mile is necessary to avoid the Gawa nallah.

8. From here the line runs up the watershed with a slight bend (curve No. 28) at the 63rd mile near Jalum, where it leaves the coal-field, to the 2nd crossing of the Auranga at the 65th mile. Crossing this river square to curve No. 29 at the 66th mile, it proceeds so as to avoid the numerous nallahs west of Keeta to mile 67½, from where curve No. 30 brings it through another small corner of the coal-field to the neighbourhood of Rud. The last curve (No. 31), the only curve of 4° deflection in the alignment, carries it into the prolongation of the first piece of straight in the alignment of the 2nd division.

This alignment has since been improved by connecting the location of this season with that of the valley alternative of 1884-85.
W. H. P.

9. *Gradients.*—The first 37 miles, *i.e.*, from Garwa to Sathbarwa, may be considered fairly easy, rising and falling with short grades until a total rise of 222 feet is accomplished at the latter station. From here there is a continuous ascent of one in 100 to Mankah in the 46th mile, broken in two places by a short stretch of level 3,000 feet long and a falling grade of 1 in 100 (for 1,200 feet) at Namudag. The total rise in this run of 10 miles is 340 feet. A more surface line avoiding the heavy embankment east of Sathbarwa could undoubtedly have been obtained by curving to the south from Sathbarwa, running along the north base of the hills shown in the working plan, and rejoining the line just before entering the pass through the hill range; but a considerable increase in the length of the line, together with the necessity of running over four extra curves of probably short radii made this improvement a doubtful one.

When marking out the line, it would be advisable to endeavour to effect this improvement which, from inspection of the plans, would appear to be very desirable.
W. H. P.

10. From Mankah to the Sukri at mile 49, the descent is made up of easy grades varying from 1 in 100 to 1 in 200, broken by a short stretch of level, the total fall being 102 feet. From the Sukri river the grades are much cut up, rise and fall abruptly, until the second crossing of the Auranga between Jalum and Kita (at the 65th mile), from where a rise of 1 in 100, broken by a stretch of level 1½ miles long, brings the line to the junction with the 2nd section at Rud, having surmounted 430 feet after leaving the level run over the Sukri bridge.

11. *Character of country.*—The country in the neighbourhood of Garwa, our point of departure, may be described as open and undulating as far as Banpurwa at the 7th mile. From this the ground is much cut up with deep ravines covered with dense jungle on the banks of the Tuhleh nallah and its tributary the Amirti nallah, after a break on the east bank of this latter stream, where a new village, Goriadamar, has sprung up.

12. The dense jungle and ravines are again continued across the Kankarria to within a short distance of Ledki at the 13th mile. The country is now open and under cultivation as far as the west bank of the Koel river, where ravines are again met with. From the east bank, with the exception of the plots which immediately surround the villages, and have been brought under cultivation, the same ravines continue, becoming very heavy in the neighbourhood of the Jingoi and Banka nallahs at the 21st mile, where great difficulties were experienced from the dense jungle consisting of Khair trees, the branches of which are interwoven with creepers.

13. From the 21st mile to the west bank of the Amanat river, the land is cultivated, but jungle again stretches from the east bank of this river across Kundri nallah into heavy ravines in the neighbourhood of the 25th mile, from where a couple of miles of rice cultivation bring us to the difficult ground near the Maila river and its tributaries. Here nothing but jungle and ravines is seen until, on reaching the 32nd mile, the country again becomes open near Barikhas and up to Sathbarwa.

14. From Sathbarwa to Latiahur, a long stretch of 20 miles, the most difficult ground is met with, especially between the Sukri nallah and Latiahur, where low hills, covered with dense forest, made the location of a practicable line a matter of great trouble and difficulty.

15. From Latiahur to the junction with the 2nd division at Rud alternate patches of jungle and cultivation are found, with the exception of the neighbourhood of the Auranga river, the banks of which are cut up with ravines and covered with jungle.

16. There are in this district miles and miles of country which, although very uneven, could be brought under cultivation. Wherever this has been done, the new settlers have,

owing to the excellent quality of the soil, been rewarded with luxuriant crops of wheat and gram, &c.

17. *Waterways and sites of river-crossings.*—There are altogether 193 bridges and culverts on this section. Excluding the larger bridges, 123·2 square feet of waterway have been allowed per mile of line, and taking the larger bridges into account, this item is raised to 1,192 square feet.

18. The amount of waterway in running feet per mile is as follows:—

Major bridges	Feet	56·3	Total 78·7 running feet per mile.
Minor bridges	„	22·4	

19. The foundations of the minor bridges and culverts present no difficulty whatever, rock being found throughout in the bed, or with only a thin layer of 3 or 4 feet of sand and gravel overlying it.

20. The major bridges (*i.e.*, of more than 60 feet waterway) of this section are nine in number, and the rivers for which they provide waterway are as follow (showing depth of rock below bed):—

River	Depth of rock below bed.
Dauru	4′
Tuhleh	Rocky bed.
Koel	25′
Jingoi	Rocky bed.
Amanat	15′
Maila	8′
Sukri	6′
Auranga, 1st crossing	8′
Auranga, 2nd „	8′

Rock crops up in the banks of all at the crossings, so that the abutments would in all cases have rock foundations about bed level; the beds themselves also show rock cropping up here and there except in the beds of the Koel, the Amanat, the Maila, and the second crossing of the Auranga.

21. The following notes were taken of the various streams at the railway crossings:—

Dauro Nallah, 9 spans of 40 feet, mile 1.—The spot selected, which gives a square crossing, is the only one (north of the sharp bend) where rock exists throughout in the bed, and where the breadth of the stream is a minimum.

Tuhleh Nallah, 10 spans of 40 feet, mile 8½.—The banks at the crossing are high and well-defined, and the stream narrower here than elsewhere.

Koel river, 14 spans of 100 feet, mile 17.—A mile above the crossing, the Koel is joined by the Amanat, and the cross action of the waters of these two rivers is such that considerable erosion of both banks takes place, except at one spot where it is prevented by the presence of rock, by which the stream is necessarily confined within the narrowest limits. This spot has been chosen for the crossing.

Jingoi, 5 spans of 40 feet, mile 21.—This stream is similar in all respects to the Tuhleh Nallah, both having a fall of between 13 and 14 feet per mile, and showing the same huge gneiss boulders in the bed. Some difficulty was experienced in obtaining a good crossing of this stream and its tributary the Banka Nallah combined.

Amanat, 7 spans of 100 feet, mile 24.—This river is a tributary of the Koel, and joins it one mile above the crossing of the latter. The spot at which the trial line crossed being found unsuitable in consequence of its breadth, another point, a mile further down, was chosen, and a saving effected of from 300 to 400 feet of waterway. The stream here is confined between high banks and shows rock on both abutments, stretching well out towards the centre of the bed.

Maila Nallah, 5 spans of 40 feet, mile 28.—The crossing of this stream is square, and the banks high and well-defined.

Sukri Nallah, 9 spans of 40 feet, mile 49.—The line crosses just below the junction of this river with the Kurkut Nallah, and the spot was necessarily fixed by the alignment on either side.

Auranga, 1st crossing, 3 spans of 60 feet, mile 60.—The crossing of this river, which was fixed to a great extent by the necessity of avoiding the hills to the north-west and the Gawa Nallah, is almost square, and the bed and banks are all rock.

Auranga, 2nd crossing, 4 spans of 40 feet, mile 65.—The crossing here is square, and the banks high and well-defined.

22. *Station sites.*—The stations on this section are as follow:—

1. Sukhua	Mile	19
2. Kodelwar	„	30
3. Sathbarwa	„	37
4. Manka	„	45½
5. Latiahur	„	57½

23. *Sukhua* is an engine-station, and the junction with the Gya-Palamau Branch. It is on a straight run, 1,400 feet of level in the centre, and the remainder, 800 feet on the west and 1,150 feet on the east, on falling grades of 1 in 200. Its situation is about the centre of the Daltonganj coal-field, and two miles from the Singra workings, from which the supply of coal is at present derived. It would also be the station for Daltonganj, which is 6½ miles distant. Water for the engines would be got from wells, the depth to which they would have to be sunk to hold 15 feet of water being 35 feet.

Chattar station has since been added to this list.
W. H. P.

24. *Kodelwar* is a third class station, the whole length on a curve of 1° deflection and on a falling grade, from south to north, of 1 in 500. The engine-well would here have to be sunk through 50 feet of hard soil and rock.

25. *Sathbarwa* station is close to the large village of Sathbarwa, at the foot of the ascent leading to Manka and on the road from Ranchi to Daltonganj. It is a third class station, and the water-level is at about 15 feet from the surface. The well would therefore have to be sunk 30 feet. The alignment here is on the straight and formation all on the level.

26. *Manka* station (third class) is close to the large village of that name, and on the main district road. The engine-well would be sunk 30 feet. The alignment is on the straight and level, with the exception of 940 feet at the west end, which is on a grade of 1 in 100. This will, however, not effect the level of the station yard, as the ground will allow the sidings to be run out on the level without embankment.

27. *Latiahur* is a third class station close to the village of Latiahur, where a considerable trade in grain is carried on. The alignment is straight and the station ground level throughout. The engine-well would be sunk 30 feet. This station is situated on the western edge of the Auranga coal-field and 3½ miles from the village of Gawa, which is close to the line, and is mentioned in the report of the Geological Survey as one of the likely spots where good coal would be found.

28. *Material available and rates.—Building-stone* of good quality, but difficult to work, is to be had from the Banda and Sanpurwa Hills, about four miles north of the village of Garwa, and also directly on the line on the banks of the Tuhleh river; also two miles north of the line between the villages of Maddia and Lakhna. Sandstone fit for building is found at Kotam Raj hill, eight or nine miles south of Garwa.

29. The sandstone of the Daltonganj coal-field, *i.e.*, all within the area of the coal-bearing strata, does not appear to me fit for building purposes; its texture is granular, coarse, friable and earthy; a fair stone is obtainable outside this area near the village of Pokraha, about seven miles sourth-east of Daltonganj, as also in the neighbourhood of the Maila river crossing at the 28th mile. At this point the crystalline series is met with, and rocks of granitic gneiss are found all along the line at intervals as far as the Auranga coal-field, which commences about a mile east of Latiahur.

When construction is put in hand, further search will probably show that sandstone fit for building purposes can be obtained.
W. H. P.

31. A great deal having been heard of the stone in the Palamau forts, I paid the latter a visit. They are built on isolated hills, and were in former days the stronghold of the Rajahs of Palamau; to judge from the height (in some places 90 feet) and thickness of the walls, they must have been almost impregnable; they are now in ruins and overgrown with dense jungle inhabited only by wild beasts. The walls are made of stone and brick indiscriminately mixed and cemented together by a profusion of the best mortar. In the jambs and soffits of some of the gateways are large slabs of beautifully-dressed stone, eminently suitable for girder-bed pieces; one I measured was 8′ × 1′ 8″ × 8″. Amongst the ruins were found most exquisite carvings as sharp and well-defined as if they had only just been executed, notably the brackets of a balcony over one of the gateways, each bracket containing the figure of an elephant carved in full, its size being only about 1′ 3″ long by 9″ high.

32. The stone used is apparently a crystalline limestone almost approaching quartzose in hardness, but capable, as shewn by the above-mentioned decorations, of bearing the most delicate chiselling. Another slab measured 6 feet square by 8 inches thick, hewn in the form of a *dais*; the body, to a depth of 4 inches, being chiselled out underneath, leaving eight pedestals at exact intervals of 2 feet round the outer edge of the slab.

33. The same remark, as regards the unfitness for building purposes of the sandstone of the Daltonganj coal-field, applies also to the Auranga field; all specimens that were obtainable shewed the same coarse, friable texture, and broke off easily under the hammer. Some large slabs were found upright, embedded in the soil 500 feet west of the village of Kinanmand; one of these measured above ground 11′ × 3′ × 1′, but the quality of this stone would render it useless in such a position as the lower courses of the pier of a large bridge, as it would crush under the superincumbent weight.

34. Outside the area of the coal-bearing strata, however, at the junction of the latter with the metamorphic rocks, near Kurkut about mile 53, this soft friable texture is lost, and good building-stone can be obtained. It is, of course, a matter of future enquiry as to whether, on opening out a quarry within the area of the coal-field, better material would not be found than shown on the surface, from which the specimens inspected were taken. Should this be the case, an extensive supply could be obtained from the low hill running parallel to the line and within a few hundred feet of it near mile 57, the bed of the sandstone being normal to the hill face, and therefore easily detached in large blocks.

35. From here to the junction with the second division at Rud the supply of building-stone would necessarily be obtained from outside the coal-field, or as nearly as possible along the line taken by the reconnaissance, in the neighbourhood of the Auranga near the village Sose, and in the adjoining hills.

36. To conclude on this head, it would appear certain that the crystalline rocks which are distributed over most of the Palamau district constitute the source from which the supply of building-stone will be mostly derived when the work of construction is commenced; and although the material is hard and rather difficult to work, there can be no doubt as to its superior strength and durability.

37. *Lime* of good quality can be manufactured from the Kunkur nodules which are found in any quantity along the line between the terminus at Garwa and the neighbourhood of Maila river at mile 30. The stone found in the beds of the nallahs enumerated in the margin also appears to be calcareous.

Birka nallah, Kundri nallah and Banka nallah.

38. On the north bank of the Auranga, between Patki and Latiahur, among the metamorphic rocks, is found a deposit of limestone yielding a pure white lime suitable for white-washing; the extent of this deposit laterally is not known; it shows the following sections:—

Earth above	3 feet thick.
Limestone proper	1½ ,,
Ditto mixed with quartz and felspar and clay	3 ,,
Sand and grit	depth unknown.

This limestone is also found in the neighbourhood of Semri, three miles south-west of mile 61 of our line.

39. Kunkur nodules are found at about 2 feet below and occasionally on the surface of the ground within the area of the Auranga coal-field. There are none to speak of between it and the Maila crossing.

40. The geological survey refer to a very superior limestone between Olherpat and Deridag on the Balumath-Chattra road, and the spot was accordingly visited. The deposit is about five miles off this road due west from Balumath, about half a mile south-west of Deridag, on the southern edge of the country mentioned by the geological survey as being peculiarly rich in iron-ore It appears to me very similar to the deposit found on the banks of the Auranga near Hutwag, and again at Semri, both of which have been alluded to in this report The limestone at Deridag crops up out of the ground in masses rising to a maximum height of 6 feet, and having an aggregate area of about a mile square. Beyond these limits it disappears beneath the surface of the ground, to what extent is not known. The supply would seem practically unlimited.

41. I also found a crystalline limestone four miles from Chandwa on the road to Balumath, but cannot state as to its quality, although it effervesces freely under the action of hydrochloric acid.

42. *Timber* may be said to be an unknown quantity on this section; there are extensive areas occupied by sâl forest, but none of the trees are even large enough to yield a sleeper of good quality. The permanent-way might derive their supplies to a certain extent from the Sargujia forests, but the Chaibasa district would appear from all accounts to be the depôt of the future.

Unlimited in quantity, but inferior in quality.
W. H. P.

43. Since writing the above, I met with, at Chandwa, about twenty sâl logs that were said to have come from the Surju forest, 12 miles south-west of Latiahur, and were on their way to the railway at Sahibganj (Gya). The logs were rough-hewn, and about the size of broad and narrow gauge sleepers, but their shape was so irregular that a square sleeper, 5 inches thick, certainly could not have been got out of them. The wood seemed finer and closer grained than the Nepal sâl, but there was a good deal of sap.

44. *Iron-ore* exists in large quantities all over the district except within the limits of the coal-bearing strata, and numerous signs of iron-smelting having been carried on formerly are met with. I came across slag in several places where now there is nothing but dense forest, without a sign of a human habitation: in one instance, notably on the banks of the Auranga, near the spot where the deposit of rich limestone has been also discovered.

45. The rates of materials which at present prevail are as follow :—

	Rs.	A.	P.
Ashlar, dressed at quarry, per cubic foot	0	12	0
Stone, rubble, at quarry, per 100 cubic feet	2	0	0
Bricks, 1st class at kiln, per 1,000	11	0	0
Lime, kunkur, at kiln, per 100 cubic feet	12	0	0
„ stone			
Flags, stone, at quarry, per 100 square feet	10	0	0
Ballast, kunkur, at site, per 100 cubic feet	2	0	0
„ stone „ „	3	0	0
Timber, in scantling, per cubic foot	1	12	0

46. *Daltonganj coal-field.*—The only spots where coal has been got out are as follow :—

I.—*Rajhera*, right bank of Koel, two miles above Gaddikhas.

II.—*Pandua*, 1½ miles east of Rajhera.

III.—*Singra*, at the confluence of the Koel and the Amanat rivers.

Rajhera and Pandua were worked by the Bengal Coal Company, the material being obtained by surface workings principally. There is one shaft at Pandua, 13 feet in diameter, now full of water, the mouth of which has been entirely closed by jungle. The coal lying on the ground from the old workings is now being picked and carted to Daltonganj, where it is used for burning bricks.

47. At Singra several shafts have been sunk; they are all full of water except one, from which Mr. Hodges, a resident of Daltonganj and proprietor of the land, has been extracting coal since the year 1882. About 60 feet from the surface, a seam 12 feet in thickness is met with. The material has been used for locomotive purposes, and appears to be fully equal to the Raniganj coal.

48. *Auranga coal-field.*—There are several out-crops of coaly shale in the Auranga and its tributaries near Jagaldagga, but very little workable coal appears.

49. *Labour available and rates.*—Skilled labour of all kinds would be obtained from the Dehri canal, Sasseram, and the stations north, as Mirzapur, &c.

50. There being comparatively so little cultivation throughout the Palamau district, the indigenous labour could not be relied on to any extent, and regular excavators would therefore have to be imported. The rates of labour are as follow :—

Coolies, per diem	2 annas.
Bullocks	3 „
Carts (carrying 8 maunds each)	8 „

51. *Market and traffic.*—The principal marts in the Palamau district are—

Garwa.	Sathbarwa.
Daltonganj.	Latiahur.

Manka, although a large village, does not possess a trade of any importance.

52. The exports are lac, *harri* (a dye expressed from the seed of the tree of that name, and exported in large quantities from the Government waste lands), til-seed, wheat, fuller's earth, *geru* (a mineral dye), *gur*, horns, hides, iron in large quantities, also cotton to some extent.

The imports are piece-goods, salt, tobacco, and utensils.

Enclosure No. 7 to Railway Resolution No. 799R.C. of 1887.

Report by Captain M. LAUGHARNE, R.E., Executive Engineer, on the North-West Provinces Division.

THIS division commences at the Moghalsarai station of the East Indian Railway, which is the proposed starting point of the Benares-Cuttack line, and extends to the left bank of the Koel in Palamau, where it joins the first survey division located in 1883-84, its length being 143⅝ miles. The original intention was for this line to pass through the Kaimur range to Palamau, but this idea was abandoned; the line now skirts the range on the north and east.

Alignment and character of Country.

2. The first 63 miles of the line from Moghalsarai to Sasseram pass over a flat, open plain, and are laid out as straight as possible in a south-easterly direction, deviations only being necessary to obtain suitable and rectangular crossings to the Karamnassa and Durganti rivers, and to avoid the many villages which are thickly scattered over the country

3. The line leaves the East Indian Railway with a curve of 66 chains in length and 7,640 feet radius, and commences 790 feet from the distant signal of the Moghalsarai station, or 468¾ miles from Calcutta.

4. The Grand Trunk road is crossed on the 6th mile, and with one slight curve on the 8th mile the line runs on the straight to the 14th mile, where the Karamnassa river is crossed, the site selected for the bridge being at the lower end of a fairly long, straight reach with well-defined clay banks, below which the river winds considerably: the choice for the crossing was limited by the confluence of the Chandarprova nullah with the main stream just above the site selected. After continuing on the straight for another 4 miles, a deflection of 19° to the south enables the line to run almost direct to the Durganti river, skirting the large and important village of Bhabua on the south, which is at present the most important place in this part of the Shahabad district.

5. There are three fair-sized nullahs that have to be passed in this portion of the route—the Gauhua, Kora and Sura—requiring 4 openings of 20 feet, 4 of 40 feet, and 3 of 60 feet, respectively, and in constructing the line it will probably be advisable to alter the location so as to cross the latter nullah on the straight.

6. The next point of importance in the alignment was the crossing of the Durganti river, whose banks are much cut up with ravines and whose course is very devious. A fairly long, straight reach was found, and a point selected where the banks were better defined and the ravines less prominent. A deflection of 31° to the north was rendered necessary to bring the line at right angles to the river course, followed by a reverse one of 36° to the south to regain the general direction, and keep the line to the south of the Kudra nullah, which throws out a sudden bend southwards about the 57th mile of the line. The straight on which the river is crossed between these two curves is 4,400 feet. Between Bhabua and the Durganti there is a stream necessitating a bridge of 3 spans of 40 feet on mile 37, and on the east of the Durganti a bridge of 4 × 20 feet is required on mile 51, and 1 of 3 × 40 feet on mile 52 over the Dharmsot nullah.

7. On the 57th mile the line deflects 29° to the north, and runs to the mouth of the Kota pass, which is situated between the main Kaimur range and a detached hill. Just before entering this pass the station for Sasseram, about two miles south of the town itself, is situated.

8. From Moghalsarai to Sasseram the country is, as has been stated, very level, there being a total rise of 100 feet in the 62 miles, and the gradients being very easy, none steeper than 1 in 400 occurring, except for half a mile before Sasseram station, where the gradient is 1 in 250.

9. The line is all embankment, 75 per cent. being under 10 feet in height and only a few chains being over 20 feet. Though the ground is so flat, the line cannot be carried on the surface, as a certain amount of height is necessary to raise the line above the flood level, the minor waterways required being considerable. The major streams are few in number, and, except the Karamnassa and Durganti, there are no deep water channels to take off the drainage from the Kaimur range, which seems to spread over the country generally, and to be retained by the cultivators by long bunds over which the formation has been carried.

10. This portion of the line passes through a well-cultivated and thickly-populated district, the principal towns of which are Sasseram and Bhabua. In laying out the line through the Kota pass, the upper part was fixed by the necessity of taking the line in the gap between the two hills and on the south of the Kudra stream, so as to avoid interference with the road, which runs just on the other side of this stream at the pass. To allow of a ruling gradient of 1 in 200, a bank, some half mile in length and 25 to 35 feet in height, will be necessary, and a short cutting in sandstone rock at the lower end is necessitated to keep the line clear of the stream, which runs in a considerable hollow.

11. The double crossings of the nullah shown in the centre of the pass might be avoided, either by deflecting it and keeping it entirely to the north of the line, or else by introducing two extra curves and running the line as shown, dotted in red, in the plan, which would reduce the height of bank necessary.

12. After emerging from the pass, the line skirts the base of the hills, and on mile 66-67 turns sharply to the south, with two curves of 30° and 26° deflection, with a short straight of 800 feet between them; and after 1½ mile on the straight another deflection of 42° 30° on the 69th mile brings the line parallel with the Son, up the left bank of which it runs to the 105th mile until a suitable crossing is met with.

13. Near Rhotas the line passes between the main hill and a small detached hill, it being found that the country on the river side of this hill was liable to inundation.

14. From the top of the Kota pass to the 83rd mile the ground is open, level and well cultivated; the line being mostly in bank, the greater part of which is under 10 feet in height: the same necessity is experienced for providing abundance of minor waterways as over the first portion.

15. The Kota ghât is ascended with a gradient of 1 in 200 for a little over one mile, but the remaining gradients are very easy up to the 84th mile: the line is continued up

the valley of the Son till the 104th mile is reached, the Ausoni being crossed on the 88th mile with a bridge of 3 spans of 60 feet. The ground is undulating and less cultivated than over the previous portion of the line, considerable patches of thick, thorny jungle being met with. This portion of line is principally in light bank with a few slight cuttings: there are no waterways of importance and the minor ones are better defined.

16. The crossing of the Son has been selected at a point above the junction with the Koel, where the river narrows and rock crops up on the surface at the right bank (and from borings taken was found to dip to about 35 feet below water level in the centre, rising to 22 feet on the left bank). In order to cross the river the line bends sharply to the south with a curve of 75 chains in length, the deflection of the curve being 1° per chain: the formation is carried over the river at a height of 20 feet above high flood level and about 48 feet above the bed of stream.

17. The waterway allowed is 27 spans of 150 feet each, and the approach on the west is by a bank some 20 to 30 feet in height. After crossing the Son the line is carried up the valley of the Koel to join the line located from Garwa to Daltonganj, with which it unites just before the latter crosses the river.

18. The line is carried between the river and a series of detached hills which border it. The Paknaha nullah with a waterway of 3 spans of 40 feet is crossed on the 113th mile.

19. The Banki river is crossed on the 118th mile with a bridge of 8 spans of 60 feet: this crossing is on the skew, but a better crossing could not be obtained. There is a considerable amount of jungle between the Son and the Banki; the ground is undulating and in many places intersected with deep gullies and ravines.

20. A heavy bank above 25 feet high is required on the 108th and 109th mile in order not to exceed the ruling gradient of 1 in 200, and a hard rock cutting, ¼ mile long, is met with on the 118th mile. After crossing the Banki the line continues on the straight to the 124th mile where it deflects 31° 11′ to the east and continues on the straight to the 135th mile, where it deflects 43° 44′ more to the east to cross the Tahli nullah at right angles.

21. The Danru is crossed on the 131st mile with a bridge of 7 spans of 60 feet. **Between the Banki and the Danru there are a considerable number of streams to be crossed, the—**

Bichli	**on mile 123**	**taking 2 spans of**	. . . . .	.	**60 feet.**
Phalarni	,, 125	,, 1 span ,,	. . . . .	.	80 ,,
Kunilwah	,, 126	,, 2 spans ,,	. . . . .	.	25 ,,
Bhagi	,, 127	,, 2 spans ,,	. . . . .	.	25 ,,
Gura	,, 130	,, 1 span ,,	. . . . .	.	60 ,,

This latter stream will require diverting so as to reduce the bridging required. Rock will probably be found at no great depth for the foundations of all these bridges.

22. The ground over this portion of the line is undulating, and several lengths of 1 in 200 will be required. A bridge of 60 feet will be required, for the Udra nullah on 133rd mile.

23. The Tahli nullah is crossed on the 136th mile with a bridge of 10 × 40 feet span, and the Kankaria on the 138th mile with 2 of 60 feet After which the line runs over tolerably level ground to its junction with first division, located in 1883-84, joining it with an easy curve at chain 86,940, 143⅝ mile from Moghalsarai and some 3,000 feet from the crossing of the Koel.

Waterways and river crossings.

The waterways in this division are of considerable extent: the line runs across the drainage of the country for its entire length. The major bridges of 100 feet span and over are 14 in number.

The Karamnassa, which is crossed on the 14th mile, requires a bridge of 4 spans of 100 feet and two flood openings of 40 feet. The site selected for the crossing was chosen for reasons given under description of alignment: the banks are well defined and consist of a stiff clay, which also underlies the sand in the bed at a depth of about 12 feet in the centre. The drainage area of this river is 1,053 square miles, and the raise of flood above water level is 30 feet, the declivity of bed per mile being 1·66 feet. The pier will be on wells.

The Kora nullah on the 29th mile necessitates a bridge of 4 spans of 40 feet: the drainage area of this stream is 73 square miles, and rise of floods 8 feet.

The Sura nullah 33rd mile, is crossed on the skew, and it will probably be advisable to alter the alignment so as to obtain a square crossing: the drainage area is 162 square miles, the declivity of the bed 1·9 feet per mile, and the rise of the flood is reported to be 15 feet, which shows it to overflow a considerable tract of country. The pier will be on wells.

The Bhabua nullah on 36th mile has a drainage area of 32 square miles, and a bridge of 3 spans of 40 feet has been allowed. Owing to bunds, &c., it is difficult to ascertain the real flood level and area of these three streams.

The Durganti, mile 48½, requires a bridge of 4 spans of 80 feet girders, and two land openings of 40 feet. The selection of site has been described under alignment; the banks are of stiff clay and well defined; the drainage area is 322 square miles, and the flood rises 30 feet; declivity of bed 2·9 feet per mile. The piers will be on wells.

The Dharmsot on mile 52½ takes a bridge of 3 spans of 40 feet. The drainage area is 57 square miles, and the rise of flood 15 feet. The banks are of clay.

The Ausani, mile 87, has a drainage area of 50 square miles, and the flood rises 18 feet. Three spans of 60 feet are required. The stream will probably be diverted into an old channel more on the square with the line than the present one, and into which there seems a tendency for it to cut naturally. The foundation will be on rock, which will probably be found some 10 feet below the bed of stream.

The Son.—**This river drains an area of 20,040 square miles: in the cold seasons the depth of water is about 9 feet and breadth about ¼ mile, but in the rain the flood rises 26 feet, and a bridge of 27 spans of 150 feet each has been provided.**

At the site chosen for the crossing, which is about 9 miles above the junction of the Koel, the river narrows somewhat, and rock crops out at the surface on the right bank, giving a favourable abutment. The rock was found from boring to dip to a depth of 35 feet below the surface in the centre. The pier will be on wells carried down to this rock.

The Paknaha, mile 112½.—This nullah requires a bridge of 3 spans of 40 feet with land arches: the pier will be founded on rock; the drainage area is 26 miles, and the rise of flood 10 feet.

The Banki, mile 118, is crossed on the skew, but it is impossible to get a more favourable crossing: 8 spans of 60 feet will be required; rock crops out at the surface on the right bank, and probably exists at no great depth on the left bank. The rise of flood is 17 feet.

The Bichli, mile 122⅞, requires a bridge of 2 spans of 60 feet with land arches. Rock exists at no great depth. The rise of flood is 6½ feet.

The Danru, mile 130½, requires a waterway of 7 spans of 60 feet each: the drainage area is 200 square miles; the rise of flood is 13 feet; rock probably will be available for foundation at a depth of 12 feet.

The Talheh, mile 136, requires a waterway of 10 spans of 40 feet: the banks are well defined, but low rock crops out on the surface at the left bank, and foundation will rest on it at a depth of about 12 feet: the drainage area is 136 square miles, and the height of flood 17 feet.

***The Kankaria,* mile 137, is crossed with a bridge of 2 × 60 feet land arches. Rock does not exist here, and the foundation will be on wells 20 feet below the bed.**

Station sites.

1. *Moghalsarai,* junction station.—The ground for this station will be in extension of that occupied by the present station of the East Indian Railway, which is about to be enlarged as a junction for that line with the Oudh and Rohilkhund Railway.

The position is rather confined on the northern side owing to a large tank and village, but there is ample room on the south of the line. The curve at the junction has been laid out with a deflection of 45 feet per chain, which can be sharpened to give more room, if found necessary.

2. *Majhwar,* mile 9½, is situated near the large village of Chandali on the Grand Trunk road, the ground being open and level.

3. *Govindpur,* mile 18⅝ (water).

4. *Bhadari,* mile 28⅛.

These two stations divide the distance between Majhiwar and Bhabua, and are in open and level ground.

5. *Bhabua,* mile 34½ (goods and water), is near the village of that name, which is the principal mart for the produce of the Kaimur range: the site presents no difficulties.

6. *Nawadih,* mile 44⅞.

7. *Maldahar,* mile 53⅛ (water). The stations divide the distance between Bhabua and Sasseram, and are in open and level ground.

8. *Sasseram,* mile 62⅝ (goods and water), is situated 1½ mile to the south of important town of the same name on a gradient of 1 in 500, and just before the line enters some raviny ground at the entrance to the Kota pass.

9. *Tilothu,* mile 75 (second class and engine). This station is situated half-way between Moghalsarai and Sukhua (where the Gya-Palamau branch joins the main line), and has been selected as an engine station: it is near the village of the same name, which is of some size, and stands in open and level country.

10. *Rhotas,* mile 86¾ (goods and water)—This station is at the foot of the Kaimur range, below the old fort of Rhotas, and near the thriving village of Akbarpur.

The formation is on the level, but on a curve of 1° deflection.

11. *Jaitipur,* mile 95⅝, is situated in open rice cultivation, and is the last station on the left bank of the Son.

12. *Mainabar,* mile 107¾ (water)—Is situated on the right bank of the Son, on the only available piece of high ground in the neighbourhood: the greater part of its length is on a gradient of 1 in 400.

13. *Munjianwan,* mile 121⅛—Is about two miles from the large village of the same name on the bank of the Koel, and is situated at the end of a long incline of 1 in 200, the station ground being ⅓ on the level and ⅔ on a gradient of 1 in 400.

14. *Garwa road,* mile 128¾ (goods and water)—Is situated about four miles from the village of Garwa, one of the most important marts in Palamow: the site selected for the station is in open country, and the formation on the level for most of its length.

15. *Korta,* mile 136⅞—Is the last station in this division of the line, and is situated on the only available piece of high ground between the Tahleh and Kankari nullahs. The formation is for the most part on the level.

Labour and Materials.

Throughout the Benares and Shahabad districts, that is, for the first 104 miles of line, the country is well populated, and plenty of unskilled labour would be available. Round Sasseram masons could also be obtained, but after crossing the Son the population is scanty, and labour of all sorts would probably have to be imported. The rates for unskilled labour in the Shahabad district are 2 annas to 3 annas per day; masons and carpenters receive 4 annas to 6 annas. Kunkur and clay for bricks are obtainable throughout the line, and the Kaimur hills, which border it, consist almost entirely of red sandstone of an excellent building quality. There are Government quarries used for the Son canal work at Dhodhand, and a tramway connects them with Dehri. Limestone is also obtainable at many spots at the edge of the hills. Timber for sleepers would have to be brought from Palamow.

Markets and Traffic.

The principal villages are Chanudali on the 9th mile, situated on the Grand Trunk Road and a place of some size. Chenpur, some 4½ miles to the south of the 30th mile, has a population of 4,000, and was formerly a place of some trade, which seems recently to have been diverted to Bhabua on the 36th mile, which is stated to have recently much increased in size, and to be the principal market to which the produce of the Kaimur hills is brought. Chinari, near the 50th mile, is said to be another mart for hill produce. Sasseram on the 63rd mile is a town of over 20,000 inhabitants. The imports of Sasseram are stated in Hunter's Statistics to be 95,698 maunds, valued at ₹1,98,553, and the exports 35,253 maunds, valued at ₹66,603. Tilothu on the 76th mile is a thriving village, and Akbarpur on the 87th mile has about 2,000 inhabitants, but from thence to the end of the division there are no places of importance until Garwa is reached, which is the principal trade centre of the Palamow district, and is situated about four miles from the line and at a distance of 128 miles from Moghalsarai.

Enclosure No. 8 to Railway Resolution No. 799R.C. of 1887.

Report by Mr. E. C. HAWKES, Temporary Engineer, on the West Damuda Division.

General.—The preliminary survey was in the first instance ordered to be made up the Damuda valley, from Ramgarh to Rud, a distance of about 59½ miles, keeping along the south side of the Damuda river, locally called Deonad, as far as the village of Dumerbera, and thence along the north bank to Rud. This was carried out, but on an inspection of the country on the south bank by the Engineer-in-Chief, it was decided to make the crossing of the Damuda at Ruhbea, from which point fresh trial surveys had to be made for the purpose of the location, resulting in getting a better section, better gradients, lighter work and in a saving of 1·79 miles in length. The selection of the line was limited with respect to the gradients and curves: the former had not to exceed 1 in 100 and the latter were not to be sharper than 2,865 feet radius.

The located line starts from a point on the first section of last year's located line, *viz.*, chainage 3,698·42 near the village of Rud, and passes to the north of Chandwa, where it enters the Damuda valley, and thence to Ramgarh, following the valley, which lies to the north of the Ranchi plateau.

The line passes through both the Lohardagga and Hazaribagh districts, and there is every reason to believe that the principal traffic from these districts would in time be attracted to it.

Alignment.

Starting from Rud, at a point 197 miles 9·34 chains, from Mogulserai, the line takes a slight turn to the left, by a curve of 5,730 feet radius, and crosses the Gagri nullah on the square, thus avoiding the sharp curve of 1,433 feet radius, which occurs on the line as located last year. The crossing of the Gagri at this point was advantageous for the climb up to the Koel-Damuda watershed. Shortly after leaving Rud the valley becomes very steep, the ground being much broken up by ravines and covered with jungle, and is surrounded by hills. To the right of the Gagri the ground seemed particularly broken up and hilly, and the windings in the nullah projected awkwardly on that side. The alignment was carried winding along the left bank, where the ground was comparatively clear. Moreover, this side was more cultivated, and the line more direct than if carried to the right of the nullah, and by following a rising contour of 1 in 100 the ascent is made with comparatively light work. The height to be overcome was 173 feet, while the distance was barely sufficient, necessitating several trial lines and numerous cross sections. The level of the watershed here reached is 1,728 feet above the level of the sea, and is the highest point crossed by the line between Mogulserai and Chandil.

The country now opens out into the extensive fields of the Tori pargannah, is well cultivated, and studded all over with villages; the ground is gently undulating, and the gradients favourable (1 in 125 to 1 in 500).

After a stretch of three miles over this open space, the country falls rapidly towards the Lohsingna-Murmur nullah on the east and the Damuda on the south, and it was necessary to try several possible routes, resulting in the selection of the most northerly, which is also the most direct line. The route to the south of Mahawa Milan was found impracticable for a grade of 1 in 100. The located line follows the course of a nullah the whole way till the valley is crossed near the village of Murmur. The double crossing of this nullah could not be avoided owing to an awkward bend occurring in close proximity to the low range of hills which skirt the south bank, right down to the Lohsingna-Murmur river.

The next three miles (206½ to 209½) runs along a cultivated strip between the lower Sulaia Hills and the Damuda: it is rainy, and slopes off rapidly towards the river. At the 209th mile the hills rise up abruptly from the Damuda, making it obligatory for the line to pass at this point, and the location had to be fixed very minutely.

The line now follows the tortuosities of the Damuda river along its northern bank and at no great distance from it, as far as the villages of Kotar and Rulaia, near the 214th mile, where it crosses the Damuda. The ground in this section of the line is principally formed from the numerous small spurs which roll down from the higher peaks of the Sulaia range of hills. It is sidelong, cut up by very deep ravines which cross the line at right angles, and is covered with jungle. Good gradients are, however, obtained, the greater part being $\frac{1}{150}$ and $\frac{1}{100}$. The location of this length was very tedious and difficult indeed, curves needing to be set out more than once before the required points on the ground were hit off. Along this length the cultivation is almost *nil,* and, judging from the nature of the ground, probably no considerable extension of the cultivated area is ever likely to take place.

Near this an alternative line was also located, crossing over the Damuda near mileage 209½, passing close to the village of Domaru and joining on to the main line near Rulia. It did not, however, give such favourable gradients as the line *viâ* Chainpur, and there was no saving in expense.

Not far from Koter stands the village of Santi, from whence, as before mentioned, a network of trial lines and cross sections had been run with a view to the line being taken along the north bank of the Damuda and crossing it at Dumarbera. This was a work of great labour, the country being very difficult indeed.

The crossing of the Damuda and Chatti rivers was carefully fixed at points where the banks were well defined and square with the line. There were two main features which determined the precise location of the crossing, *firstly,* the rocky hills which tail out a little to the south of Rulia had to be avoided; and *secondly,* an easy ascent from the opposite bank to the next obligatory point at Nawadih had to be found. Nawadih is situated on one of the principal spurs from the Ranchi plateau. The spur at this part shelves gradually down, and has no very abrupt features. The height to be gained was about 80 feet, and the distance somewhat limited. By taking advantage of the Koel nullah, which is shown between Rulia and Hesalong, along which ran a narrow open strip of ground, a section with very light work is obtained. The ground is hilly on both sides of this nullah.

From Nawadih the ground slopes away rapidly southward and eastward, while to the north the country is broken up by high ridges and deep valleys, which run down to the Damuda on the left. The descent to the Chatra nullah at Dukanda was over 130 feet in a distance of about three miles. This alignment was laid out so as to avoid the low hills and spurs about the locality of Bisrampur, and to turn an awkward bend in the river at the 219th mile, at the same time maintaining a continuous falling gradient, without which the valley could not have been crossed within any reasonable height.

K

From the 219th mile the choice lay between a line following the course of the Chatra nullah, then turning easterly along the Damuda and crossing over the next spur opposite Rai, and a line crossing the same spur at Mankitand. An inspection of the country on an elephant showed that the latter was the best route to adopt, for by taking advantage of the counter spur and the Sappei river, both of which features run parallel with the required direction, almost any level could be obtained along the base of the hill.

The Sappei river is then crossed a little to the south of the important village of Rai, the Rai-Bamni road crosses here. There is rock all across the bed at this particular point, and from the fact that the river forms a big bay immediately to the north, and on account of the sharp bend on the south, this crossing becomes an obligatory point from which the next ascent to Bachra must start.

The ascent of 64 feet to the Bachra spur was unavoidable. Beginning in the high range of hills which lie about a mile to the south, it runs northwards straight down to the Damuda, a distance of two miles, and could not possibly have been turned.

Between Bachra and Chapur, 10 miles, no more important ascents are made, and the line falls about 250 feet in eight miles. A good deal of jungle is met with in this length, but the ravines are not numerous. Four abrupt spurs, which run down to the Damuda, are encountered at Hosil, Mendi, Hendigir and Chapur, each of which had to be turned, necessitating a good deal of winding about. The location was a very laborious task, as often a divergence of 10 feet altered the levels some 15 to 20 feet. The cross sections were plotted daily, and every chain of the line carefully located therefrom.

The Binjaspur, at the 235th mile, terminates at the Damuda in a high rocky scarp, and is crossed at its most favourable point, and a good crossing of the next river, the Margamdaha, is also obtained.

The line now makes an ascent of about 30 feet to Tukisud, crossing a low range of hills. Advantage is taken of the nullah shown at the 236th mile to get a very smooth ascent.

The country here opens out, it is pretty clear from jungle, is cultivated, is more thickly populated, and the ground is undulating as far as the Naikari river. The line skirts the high ground of Barwadih and Sakul, leaving those villages on the right, and piercing the ridge at Patratu at its narrowest and lowest part reaches Jainagar.

After crossing the Naikari river another ridge had to be crossed near Kursa, 244th mile, and from thence there was a fall of 112 feet to the Maramgarah nullah, in a distance of about two miles. The lowest point in the ridge was first determined by a line of levels, and as there appeared to be a considerable choice of ground, several trial lines were run down to the nullah, one to the north, and the other to the south of a stream which runs almost parallel to the located line between the 244th and 245th mile. The line to the north ran over a mass of bare high rocks, and had nothing to recommend it.

The line for the next eight miles as far as Ramgarh passes through a pretty open but very undulating strip of country, between the Damuda and the lower hills of the Ranchi plateau; it is mostly cultivated; there are numerous villages studded about, and the inhabitants seem well to do; the alignment here is very direct, and there are no special features connected with it which require to be mentioned. Both high and low level lines were tried, and approval was accorded to the higher one, in order to keep well up for the rise to Ramgarh and the final junction with the east Damuda Division. Ramgarh is about 1,122 feet above mean sea level, and is 606 feet below the crossing of the Koel-Damuda watershed.

The length of the division as staked out is 57·77 miles. There were 172½ miles of trial lines run, surveyed, and levelled, up and down the valley, while 100 miles of cross sections were necessitated by the difficult nature of the country. Some 26½ miles of the most important rivers were also levelled and surveyed, and an alternative line *viâ* Domaru, 4½ miles in length, was located, making a total of 361½ miles of work during the season.

The average height of embankment or depth of cutting is 8·65 feet. The total estimated quantity of earthwork, however, is equivalent to average section of the height of 10¼ feet. One-half the division has grades of from 1 in 100 to 1 in 150. One-tenth is on the level, and the remainder, or four-tenths, has grades varying from 1 in 200 to 1 in 1,000.

About two-thirds of the alignment is on the straight, and the remainder is set out with curves of 2,865, 2,438, 3,820, 5,730 and 11,360 feet radii, about one fourth of these being of the minimum radius.

Character of the Country.

From the zero of the division up to the Koel-Damuda watershed the country has already been described as a narrow valley surrounded by hills, forming one of the head waters of the Auranga. The line then enters the Damuda valley and traverses it as far as Ramgarh. Though, generally speaking, the Damuda river follows a pretty direct course from west to east, it winds very considerably; its tortuosities in some

instances being very eccentric. For at least 30 miles, mile 205 to mile 235, the valley is very much contracted by the hills on both sides, and by the numerous lofty and rocky spurs which project from the Ranchi plateau on the south, with the Sulaia hills, and the lower hills belonging to the Hazaribagh plateau, to the north. These hills, which are exceedingly irregular in plan, broken and rugged, give the country a wild and picturesque aspect. To the right and left of the village of the road lofty peaks rise up some 1,700 to 1,800 feet above the village level. Conspicuous to the south, and rising above the valley to a height of some 1,200 or 1,300 feet is the Ranchi plateau, with its outlying spurs and hills, with their deeply furrowed and wooded slopes. These hills are never lost sight of. Nearer the located line, however, the hills are lower, as at Mahlan they rise up some 766 feet, in the locality of Patal 829 feet, the Sulaia group 200 to 400 feet, and the Mahudi block 829 feet above the valley. The ground naturally inclines towards the Damuda, being in some cases very steep and in places is freely intersected by deep ravines. In the rougher parts of the valley, in the vicinity of the line, the cultivation occurs in patches, and appears to be sufficient only for the requirements of a sparse local population: the uncultivated parts are covered with a forest of small sâl trees. However, towards the Chandwa and Ramgarh extremities of the division there is extensive cultivation, and the same may be said of the Karanpura valley lying a few miles to the north, which is a very populous part of the district and the inhabitants well to do. The principal towns are Bargaon and Tandwa.

There is no road or cart track down the valley, except for a short length, 14 miles at the Ramgarh end. The valley, however, is crossed by two very important district roads and by three good fourth class roads, all of which routes serve to connect the most important traffic centres of the Hazaribagh and Ranchi plateaux, including Palamow. They are as follows:—(1) The Lohardagga to Chattra and Palamow road crosses the proposed line near Chandwa, the descent of the plateau being made at the Bohlia pass; (2) a road crossing at Hesalong (Deonad station) *viâ* the Upa ghat; (3) the Rai-Bamni road *viâ* the Serun ghat; (4) a road crossing the line at Jainagar *viâ* the Radha-Pira ghat; (5) the Ranchi to Hazaribagh road crossing at Ramgarh.

Minerals.

This division passes through a country having a very large coal-producing area, which has hitherto never been worked. The located line taps the north Karanpura coal-field at a point four miles to the east of the Chandwa station, and runs through it for a distance of nine miles. After crossing the Damuda, the south Karanpura coal-field is entered, the line passing through its entire length of 37 miles, many parts being situated in the very heart of the coal-field. The Ramghar coal-field is also touched at Ramghar.

The following information regarding the extent of these coal-fields is obtained from Ball's Geology of India. The Karanpura coal-fields, north and south, are situated towards the head of the Damuda valley, the areas being 472 and 72 square miles respectively. The estimated total thickness of seams is 38 feet in the north and 70 feet in the south Karanpura fields. The coal is a fuel with high calorific power.

The Ramgarh coal-field has an area of 40 square miles, and is considered to be of poor quality.

The geology of the valley is described as belonging to the metamorphic, Upper Panchet Talchir, and Barakar coal series.

Two quartz pebbles were picked up near Chenpur in the hills, having marks and specks of gold on their surfaces. The natives at Santi also report the existence of gold and silver in the surrounding hills, and specimens of a yellow mica shale, which were said to contain silver, were obtained.

Red and brown hæmatite ironstone was picked up at Sonda, Dumerbera, Lupanga and between Nawadih and Chapur (six specimens), but it is found also in other parts of the division, and remains of native furnaces, long since abandoned, are numerous all over the valley. At Tandwa small quantities of iron are still manufactured.

The 15 specimens of coal are principally surface coal, picked up in the beds of rivers and nullahs in the following localities. Naikari river, Sulaichanwan, Kunkariatand, Kirigarha, Chatta river at Rulia, Hesalong, Loharsa, Bundu Huphwa, Beti, Kollra, Bhugia, Chircluriatand, Santi, Murmur, Lohsinghna, Mahua Milan.

Four specimens of Kaolin were obtained at the Gharri river, at Bijan, and other places. The natives call it *dudh mattee*, meaning milk clay.

Borings were taken along the line, and the quality of soil met with is noted on the sections.

Waterways and sites of river crossings.

The waterways have been determined on a consideration of the areas of the different drainage basins crossed, as well as for reasons of height to formation level and nature of the crossing. The principal rivers crossed are the Gagri, 6 spans of 40 feet; the Lohsingna, 8 spans of 30 feet; the Deonad, 3 spans of 100 feet; the Chatti, 3 spans of 60 feet; the Dukanda, 6 spans of 30 feet; the Sappei, 9 spans of 40 feet; the

Hendigir, 6 spans of 20 feet; the Margamdaha, 1 span of 100 feet; the Naikari, 5 spans of 60 feet; the Murumgurha, 1 span of 80 feet; the Siarbhuki, 1 span of 80 feet; the Harharri, 1 span of 80 feet. These crossings are all on the square, and are well selected.

The Gagri and Damuda bridges would require well foundations, sunk some 15 to 20 feet below the surface of the sand, or cold weather level of the stream. Rock is found near the surface in the beds of all the other rivers and nullahs.

The minor waterways necessary average about 40 running feet per mile, or the major and minor together 77 running feet per mile.

Station sites.

The only favourable place for an engine station anywhere about midway between Sukhua and Chandil (both engine stations) is Jainagar, which is 103 miles from the former and 83 miles from the latter station.

Jainagar is the principal centre of the south Karanpura coal-field, is rather an important village, and is situated on the north bank of the Naikari river, in open cultivated country. It has a post office, and is on one of the cross roads, running between the civil stations of Ranchi and Hazaribagh, being 19 miles from the former and 23 miles from the latter. Water is obtainable from wells at no great depth, and there is a suitable valley not far off, for the construction of a reservoir, if necessary. The ridge to the north would afford excellent sites for residences.

The following is a complete list of the stations, in the order in which they occur :—

Name of station.	Mile.	Distance from last station.	Class.	Remarks.
Chandwa	201¼	5¼	3	Water and goods.
Deonad	213	11¾	3	Passing.
Bachra	224¼	11¼	3	Water.
Jainagar	241¼	17¼	2	Engine station and water.
Ramgarh	254¾	13½	3	Water and goods.

Chandwa, the first station, is situated on the watershed, at the summit of the road incline, and close to the important district road which connects the towns of Ranchi and Lohardagga on the south with Chattra and Palamow on the north and north-west. The greater part of the export and import trade passes through this place, and it is a post-town and police outpost.

The next station, the Deonad, near the small village of Koter, takes its name from the river which is here about a quarter of a mile distant. This station is midway between Chandwa and the next station at Bachra; it is at a suitable distance for working the traffic (about 11¾ miles), and would catch the traffic entering the valley by the Upa road.

Bachra station is favourably situated for catching the cross traffic from the Ranchi and Hazaribagh plateaux, which usually passes down through the village of Rai along the Rai-Bamni road. Raie is an important village situated at a distance of about two miles from Bachra, but gradual considerations compelled the selection of the latter place for the station, the distance being 23 miles from Chandwa: watering arrangements are necessary at this mileage.

Jainagar station has already been referred to at some length as being favourably situated for an engine station.

Ramgarh station is situated on high ground nearly half a mile to the south of the town, and close to the Ranchi and Hazaribagh district road. The Gola road, leading into the fertile district of Manbhum, also branches off here. There are several large tanks in the vicinity which might be utilized for watering purposes, as they retain a good supply of water all the year round. Ramgarh is an important zemindari centre, and a periodical market is held there, which is well attended by people from all parts, within a large radius. Ramgarh is about midway between the civil stations of Ranchi and Hazaribagh, or, more exactly speaking, 24 miles from the former and 29 miles from the latter.

The stations are all favourably situated for tapping the best tracts of the Hazaribagh district and Ranchi plateau.

It will probably be found advisable to introduce a passing station at Churugarha or Chapur, midway between Bachra and Jainagar, as the traffic becomes developed.

Labour available and rates.

A limited number of carpenters and masons are always obtainable at the principal towns, as Hazaribagh, Chattra, Ramgarh, Lohardagga, Ranchi, &c., but ordinary labour

is plentiful and cheap. In the Karanpura valley and surrounding country men coolies can be had for 1½ to 2 annas a day. The daily wage of a woman is 1 anna, a boy 1 anna, a plasterer 6 annas, a head mason 8 annas, a common mason 4 annas, and ordinary two bullock cart and driver gets from 6 to 8 annas a day; saggars 3 to 4 annas a day. The rate for carting is from ₹1 to ₹1-4 per 100 maunds per mile.

Materials.

No quarrying has been done in the neighbouring hills, but a variety of rocks crop up at the surface in different parts of the valley, and in the dry beds of rivers, from which it is inferred that *stone* of almost every degree of hardness is obtainable within a reasonable distance of the line. The principal rocks met with were gneiss, syenite, sandstones, conglomerates, and yellow and blue shales.

Good *clay* for bricks is obtainable at Ramgarh, Jainagar, and Chandwa. Tiles are used in all the larger villages.

Gneiss was observed at Changarha, Dumerbera, Mahlan hill, and other places, two specimens of syenite were obtained at Loharsa, and 15 specimens of sandstones were obtained from the following localities:—Pachanda, Gahrri river, Damuda river at the Mendi rapids, Chainpur, Naikari river, Gahrri river, Lohsingna nullah, and other places.

The average level for the stone *ballast* will be about 0·63 miles, and the average rate (not spread) would be under ₹2-12 per 100 cubic feet.

There will be no difficulty in obtaining *lime*, as will appear from the following details:—At Daredagiepat there is a deposit of limestone rock of considerable extent. This locality lies about 14 miles to the north of Chandwa. Good kunkur is found at a good many parts of the line, notably at Bhusar, Murmur (banks of Damuda), Santi (two miles off), Bundu, Kursa, Sonda, and Ramgarh, 11 specimens were obtained.

A large area of rock kunkur or massive kunkur was found in the banks and bed of the Damuda river at Dumerbera.

Coralated limestone is obtainable in large blocks in a hill at Bunda, about six miles to the west of Mondu, and is used by the Public Works Department. Similar limestone is obtainable at Lugu pahar, which is about 16 miles to the north-east of Ramgarh, and just beyond the Jugessur thana. The best specimen was obtained from the latter place, where the supply is unlimited.

Sharp, clean, *sand* is easily obtained.

There were plenty of sâl trees in the jungles passed through, of a suitable size for fencing posts or roofing poles, but *timber* large enough for sleepers and beams was not seen in any quantity. The villagers, however, report that in the vicinity of Mahudi hill and westwards a considerable number of sleepers may be obtained.

Probably the greater number of the *sleepers* required would be got from the southern slopes of the Ranchi plateau. There is a plentiful supply of jungle wood for lime burning.

Markets and traffic.

The principal trade centres of the districts passed through are Lohardagga, Chattra, and Hazaribagh; and most of the traffic passes over the road between Lohardagga and Chattra, and its branch from Chandwa to Palamow.

The imports are salt, rice, piece-goods, tobacco, spices, wheat, goor, mahowa, lac, and ghee.

The exports are oil-seeds, ghee, catechu, cocoons, lac, hides, coal and mahowa.

The exports, which are likely to be largely developed, are coal, iron ore, timber, cereals, pulses, oil-seeds, tobacco, lac, mahowa, and tea.

Lac is cultivated on the palash tree, and almost all the villages along the line.

The mahowa is also plentiful at all the villages; and as brandy has been made from it in the south of France, an increase in its export may be expected.

It is estimated that about 2,000 maunds of tea will annually finds its way to the railway at Chandwa and Ramgarh from the numerous tea gardens which are dotted about the Ranchi and Hazaribagh districts. This would be despatched to Calcutta.

There are periodical markets at Ramgarh, Umendanda, Pali, Barkagaon, Tundwa, Balumath, and Chandwa, along the line and to the north, as well as at all the most important villages on the Ranchi plateau.

Except at the Ramgarh station, the local passenger traffic will probably be very small.

Enclosure No. 9 to Railway Resolution No. 799 R. C. of 1887.

Report by Mr. J. M. CHABREL, Executive Engineer, on the East Damuda Division.

Alignment.

1. The zero of the division is about half a mile east of the village of Ramgarh, where the west Damuda Division ends at mileage 254, chain 50. 19, and from there the line follows the valley of the Damuda river to Ruhpura on the watershed, whence it descends to the valley of the Subanrika river, which it follows for the remainder of the distance to Chandil.

Immediately after the starting point, the line turns slightly towards the village of Kaitha to avoid the end of a spur from the main range of hills planking the Ranchi plateau; near Kaitha the line bends again to the right or south-east to cross the nullah, at chain 357 on the square, and another curve to the left takes the line on the Simra nullah at right angles. There are three small cuttings in this portion through hard earth or moorum soil. From the Simra nullah the line runs close to Chattan, a fair-sized village, crosses a nullah at chain 344,350, and making a slight bend near Barlong runs straight to Chiturpur, a large village at the 264th mile. In this length the ground undulates considerably, requiring numerous small waterways in paddy depressions and rather heavy bank and cutting. From Chiturpur the line turning south-east descends to the Kochi nullah, after passing which another slight bend takes its square across the Bhera nullah, a large stream rising in the Ranchi plateau, and thence it passes about a mile and a half south of the town of Gola, opposite 269th mile, to Ruhpura on the watershed. In this section there is heavy bank opposite Sikni, 267th mile, and again at the Bhera nullah; the remainder of the work is comparatively light.

The descent to the Subanrika valley commences a little beyond Ruhpura in the 271st mile, and involves the heaviest work in the division. There is a continuous descent of 1 in 100 for 155 chains followed by 1 in 200 for 26 chains, with a heavy cutting at the summit and a heavy bank over one and a half miles in length. This, however, is the most feasible way of crossing the watershed.

From the foot of this descent the line runs almost due east crossing the Jhuria nullah, and then turns to the right past Sondimra, 276th mile, and thence with two more curves to the Parchando hill pass, an obligatory point in the 279th mile. The Parchando spur juts out abruptly on to the left bank of the Subanrika river, and can only be rounded by crossing some low-lying flooded ground. The small pass through which the present road winds was therefore selected for the alignment. In this section the work consists almost entirely of bank, and is not heavy.

From the Parchando hill the line runs straight to Burlanga, 280th mile, and thence almost due east crossing the Dakkagarha nullah to Burjpur, mile 282, whence it follows the general curvature of the river up to Tholen on the Purulia-Ranchi road, crossing the Dhuriar, Kurial and Sanpahi nullahs on the way. In this length, especially in the latter part, the work is heavy, there being some very high bank and several large waterways. At Tholen the main road from Purulia to Ranchi crosses the line.

From Tholen the line descends to the Soldaha nullah, mile 289½, where there is not a very good crossing as the stream follows a continuous bend from its junction with the Rupai nullah to that with the Subanrika, and it was therefore not possible to get the crossing on a straight reach of the river. From this nullah the line runs straight to the 292nd mile and is nearly all in bank, but the work is not heavy. From Hariband it turns to the right and crosses a valley opposite Ilu, where there is a considerable bank, and thence crossing the ridge at Kusi descends with gradients varying from 1 in 100 to 1 in 400 to the Posti nullah, mile 297, the work being nearly all embankment and comparatively light. From this nullah the line ascends to the Phultang spur, mile 297½, which runs right out on to the Subanrika, causing the river to make a sharp bend, and cannot be rounded without excessive length of line and sharp curvature. From this ridge there is a considerable fall to the Chota nullah, mile 300, which is disposed of by a grade of 1 in 100 for 73 chains with two shorter lengths of 1 in 500 and 1 in 200. There is one heavy bank in this length, the remainder being moderate.

There is a good crossing of the Chota nullah after passing which the line near Muhtodi, mile 300¾, turns to the right and runs nearly due south past Soisa to Sumali, mile 303½, whence there is a descent to the Karru nullah which is crossed at mile 305. Before reaching this nullah near mile 304, the line bends to the left crossing the Karru nullah on the square, and the ridge at mile 306 at the most favourable point. In this length there is heavy bank near the Karru nullah; the remainder of the work is however moderate.

From the abovementioned ridge (through which there is a long cutting) there is a sharp descent to the Sobha nullah (the gradient being 1 in 100) which, with the aid of two slight curves, is crossed nearly square, and then the line runs straight to a high ridge at

Harmuli, mile 308¼, the ascent to which is all on a gradient of 1 in 100. The work in this length is heavy, there being a very high bank at and before the Sobha nullah, and another considerable bank at the latter part of the 308th mile.

There is a considerable cutting through the Harmuli ridge from which the line descends to the low ground at mile 309½, from which it runs fairly level to near Inchadih, whence there is a descent to Kenda Inda a short level, and then another short descent to the Janum nullah near mile 313. In this section there is a long rather heavy bank at the beginning and two shorter ones at Kenda Inda and the Janum nullah, the remainder of the work is light. From this nullah there is a general ascent on moderate gradients to mile 314½, there being a curve to the right about midway, and then a descent to the Sakha nullah, mile 315, which is crossed on the square. The work in this length is generally bank, which is only heavy in two places. From the Sakha nullah the line runs straight across the ridge at mile 316¾, a moderate ascent, and thence past Gopalpur descending to the Chengra nullah, mile 318¼, before which there is a sharp curve to the right, and from this point there are several curves which take the line around the end of the Sason hill near Ruvani which runs out to within a short distance of the Subanrika river. In this length the work is nearly all embankment which is not heavy excepting for a short length at the Chengra nullah. From the Sason hill the line, curving eastward, runs with short lengths of ascent and descent to the Bamni nullah, whence there is a considerable ascent to the Chandil station, where the line running almost due east joins on to the Bengal-Nagpur Railway opposite to chainage 4134·00 on that line. The principal work in this section is embankment of which there is a considerable quantity.

It will be seen from the foregoing that owing to the excessively undulatory nature of the country, the work throughout the line will be very heavy, especially in the Subanrika valley, where the ridges run sharp out on to the river bank, necessitating continually recurring ascents and descents generally on a gradient of 1 in 100. This will readily be seen from the list of gradients, where out of a total of 69·92 miles there are 27·25 miles of 1 in 100 and only 12 miles of level. The character of the country also entails heavy bridging owing to the large number of nullahs to be crossed and the numerous depressions for which outlets have to be provided.

Character of the Country.

2. As already mentioned above, the general configuration of the country is undulatory. The country in the Damuda valley in the vicinity of the line is well cultivated throughout the high lands with dry crops and the low grounds of the depressions with rice almost exclusively. The valley is, however, hemmed in by the hills of the Ranchi plateau, and there is therefore no great extent of country under cultivation. The Subanrika valley from Begedih to Badoluhur is more jungly, but beyond that the lands lying along the alignment are rich and well cultivated. This valley is also not extensive, being shut in a few miles from the river bank by jungle clad hills. The cultivation is similar to that in the Damuda valley, consisting of oil seeds, pulses, &c., on the high lands, and rice in the depressions. Throughout the route proposed there is probably only as much cultivation as is necessary for the sparse population.

Waterways.

3. The waterways do not call for any special mention. As already stated, the bridging will be very heavy, but there are no very large bridges, and owing to the nature of the country, there will probably be no difficulty about foundations.

Labour.

4. It will probably be difficult to obtain labour in large number locally. The villagers appear to be entirely of the cultivator class who did not as a rule take readily to other works, and when they do, only work during such intervals of leisure as they have from their ordinary vacations; most of the cooly labour will therefore probably have to be imported from other parts of the province. This applies with greater force to artisans, of whom there are but a few unskilful members in the district.

Materials.

5. But few indications of good building *stone* were meet with in the vicinity of the alignment, but it is probable that a more extended exploration of the neighbouring country would lead to suitable material being discovered. At Soisa there was a large quantity of fine slab-stones used as tomb-stones which would make excellent covering slabs or rough masonry. The villagers stated that they were obtained from the neighbouring hills. On the other side of the Subanrika, almost opposite to this place and also near Ilu, mill-stones are obtainable, but this stone would not stand weather well and seems to be brittle.

Kunkur *lime* can be obtained all along the line, and stone lime of good quality occurs about five miles from Chiturpur in the Ramgarh valley. Rock kunkur can also be obtained not far from Chandil. There is good *brick earth* at most places along the line, and fuel

for brick burning can be obtained at a moderate rate. *Sand* for mortar can be obtained from the Subanrika and Damuda rivers or from the larger nullahs.

Good sâl *timber* can be obtained from the slopes of the hills of the Ranchi plateau. Timber is at present exported from the Sillighât in these hills. There are also large exportations from Patkum; good sleepers at a low cost can therefore be obtained.

Good *ballast* can generally be obtained, the lead will generally be about one mile.

Trade, Traffic, &c.

6. There does not appear to be much trade or traffic in the districts traversed by the line. Periodical hâts or markets are held at some of the principal villages where the inhabitants procure domestic necessaries and dispose of small quantities of local produce. These markets are, however, not far from the villages they serve, and it is unlikely that they will cause any appreciable passenger traffic until the general condition of the people improves. The imports are owing to the simple wants of the people, necessarily small, and the exports are not large, cultivation generally being practised only to an extent that suffices for local wants. Lac and timber are probably the principal articles of exports.

Enclosure No. 10 to Railway Resolution No. 799 R. C. of 1887.

Report on an alternative route from mile 275 to Purulia.

A trial line was run to the station of the Nagpur-Bengal Railway at Purulia, from the 275th mile of the main line, under instructions from the Bengal Government.

2. From the departure from main line to Purulia station is a length of 33 miles The country traversed is mostly cultivated and open, but very undulating. The estimate is based on the section taken over the trial line. By locating more to the south between Baduluku and the crossing of the Kasai river, there would be a saving in earthwork, and probably the gradients might also be eased. The waterways on this branch are very much less than on the length from Baduluku to Chandil, the largest stream being the Kasai river which would be spanned by one girder of 100 feet.

3. In paragraph 33 of report on main line it was pointed out that for goods and passenger traffic to Calcutta, this branch would be the shortest connecting link of the Benares-Cuttack Railway, northern section, with the Nagpur-Bengal Railway, although for pilgrim traffic it would involve a detour of 29 miles. The construction of this branch would attract the goods and ordinary passenger traffic of north Lohardagga and south Hazaribagh districts, and transfer it to the Nagpur-Bengal Railway.

4. The cost of the branch works amount to ₹1,11,817 per mile, including indirect charges, or ₹36,89,981 for the 33 miles. Its construction would direct most of the goods traffic of the main line from Chandil to Purulia. The goods traffic would be the exports and imports of the northern half of Lohardagga and the southern half of Hazaribagh, in addition to a fair local traffic between Ramgarh, Gola, Jhalda and Purulia.

5. In the event of construction of the southern section of the main line being set aside in favour of the alternative pilgrim route from Panchpara to Cuttack, the construction of this branch in preference to the portion of main line between Baduluku and Chandil might be advisable. For such pilgrims or travellers desiring to proceed south, the route *viâ* Midnapur and the coast road and canals would be the line of country they would adopt, and Purulia would be preferable as a terminus to Chandil, from which place there is no communication with Cuttack.

6. Owing to the smaller waterways required and the shorter length by six miles of line to be constructed, there would be a considerable economy in constructing these 33 miles in preference to the 39 miles between Baduluku and Chandil, there would be greater traffic in goods, and indirect benefit to the Nagpur-Bengal Railway.

Enclosure No. 11 to Railway Resolution No. 799 R.C. of 1887.

Mr. Parker's Report at the end of 1884-85.

* * * * *

Northern Section.

10. *The Northern Section* of the railway leaves the East Indian Railway at Mogul Sarai Station, which is also the junction station of the East Indian and the Oudh and Rohilkand Railways, distant six miles from Benares, which city is on the left bank of the Ganges; a bridge is now being constructed over this river by the Oudh and Rohilkand Railway Company. From Mogul Sarai to the Karamnassa river, the line traverses the Benares district of the North-West Provinces.

11. For a distance of 65 miles, the line traverses in a south-easterly direction a flat cultivated country, with a population of 270 to the square mile, but subject to inundation during the rains from the drainage pouring down from the Vindhya plateau, the base of which it gradually approaches, passing through a gap which divides the main plateau from a range of low hills east of Sasseram.

12. After crossing the Karamnassa, the line enters the Shahabad district in Bengal. Bhabua, 35th mile, is a large and important village, with a population of 5,000, and is the trade centre for produce from the Vindhya plateau. Sasseram, 62nd mile, is a town of 24,000 inhabitants, through which the Grand Trunk road passes, and is at present the terminus of a branch of the Son canals. The exports and imports aggregate 1,30,000 maunds per annum, valued at 2¾ lakhs of rupees.

13. Turning to the south-west, up the valley of the Son, and along the narrow strip of country between the foot of the Kaimur range and the Son river, the line makes for a comparatively narrow crossing of the Son at Parcha some five miles above the junction of the Son and Koel rivers. Dehri, the head of the Son canal, is about seven miles from the line at the 67th mile.

14. At Tilothu, mile 75, the produce from a large tract of flat cultivated portion of the Gya district on the right bank of the Son will probably be attracted to the line.

15. At mile 87 is the village of Akbarpur, at the foot of the Rhotas hill. The produce of the Son valley, which is now floated down the river to Nasriganj, consisting principally of bamboos and wood, will probably be intercepted here by the railway. Akbarpur is a village of some 2,000 inhabitants; communication from the west by cart with the Bengal plains ends here.

16. The Son river is crossed at the 106th mile. A bridge of 27 spans of 150 feet each on well foundations, will be required. Rock crops up in the bed, on the right bank of the river, but dips to a depth of 36 feet on the left bank, below low-water level. The abutment on the right bank will be founded at the foot of the slope of a small rocky hillock on which is the small hamlet of Srinagar.

17. After crossing the Son, the line enters the Palamau sub-division of the Lohardagga district. The country from the Son eastwards is thinly populated, hilly and undulating. The line runs up the valley of the Koel river, crossing a considerable amount of drainage from the hilly country between the Koel and Kanhan. Opposite the 128th mile is the important market of Garwa on the left bank of the Danro river, which is the trade centre for produce from the Sarguja State, and a market is held here twice a week at which lac, resin, tusser cocoons, hides, and oil-seeds are the principal articles of export. The population is about 5,000, and the town is five miles from the proposed Garwa road station. The hilly nature of the country does not admit of the line being taken nearer to the town.

18. The Koel river will be crossed at the 144th mile, a bridge of 14 spans of 100 feet on well foundations being required. At the 146th mile it is proposed to locate the Sukhua engine-station, which will also be the junction station of the Gya-Palamau Branch. Up to this point a ruling gradient of 1 in 200 is feasible. From this station to Chandil, the ruling gradient is 1 in 100. Sukhua being within the limits of the Daltonganj coal-field will be the principal coal-station on the line. Daltonganj, the head-quarters of the Palamau sub-division, five miles south of Sukhua, is a rising town of 7,400 inhabitants. A civil officer, a police and a forest officer reside here, and a court-house, school-house and charitable dispensary have been built. An increasing trade is carried on with Jashpur, Sarguja, Mirzapur, and the districts of Gya, Behar and Hazaribagh.

19. In Appendix A attached to the reconnaissance report by Captain Laugharne (*vide* enclosure No. 2 to Resolution No. 73R.C. of 29th January 1884) the present exports from Palamau sub-division are given as 4,38,380 maunds, and the imports 14,53,711 maunds. These amounts, as stated in paragraph 20 of the preliminary estimate report of the Gya-Palamau Branch, probably represent the whole trade of the sub-division, and may practically be divided between Daltonganj and Garwa.

20. Between Sukhua and Rud, 197th mile, the line traverses the Auranga coal-field, and runs within 15 miles of the Hutar coal-field, which lies to the south. A trial line was run to the village of Hutar situated on the bank of the Koel river, which shows a line of country much the same as that traversed by the main line. Should a branch be at some future time constructed, it would start from the Kodelwar station, 157th mile. The coal is said to equal the average of the Raniganj coal, but is inferior to that of Daltonganj.

21. The Auranga coal is of an inferior description, containing a large percentage of ash, but as the specimens, experimented on, both of this and the Hutar coal, were probably from the surface, it is possible that borings and further examination of the field might bring to light some better quality. Valuable deposits of iron ore and limestone, ten miles north of the line, are known to exist, the limestones being of a very fine quality, fit for building purposes, statuary, and as flux for smelting the iron. The samples of iron ore tested by Mr. Ball, the Geologist, *vide* page 459, "Economic Geology," gave from 39 to 49 per cent. of metallic iron.

22. From Rud, two alternative lines have been located. The "Plateau line," which after ascending the watershed dividing the Damuda valley from that of the Auranga, descends some 200 feet into the Deonand or Damuda valley, crossing the river, ascends the Lohardagga plateau by the Mahlan spur, and again descends at the south-east corner of the plateau to Chandil.

23. "The Valley alternative" crosses the Deonand lower down, and keeping to the low grounds at the foot of the Lohardagga plateau runs into the valley of the Subanrikha and joins the Nagpur-Bengal Railway also at Chandil. The valley of the Deonand is a trough with high hills shutting it in on either side.

24. On neither alternative can the long rising gradient of 1 in 100 from Rud to the watershed near Chandwa be avoided, but, as stated in paragraph 6 of this report, the plateau alternative, after descending 200 feet to the foot of the Mahlan incline, has an immediate ascent of 700 feet to overcome by an incline of 1 in 100, and a further rise of nearly 270 feet beyond the top of this incline to the summit level at Similia, and then descends to the level of Chandil, a fall of 1,200 feet, the incline descending from the plateau being on a grade of 1 in 100 19 miles in length.

25. The valley line, with the exception of occasional short rises and falls, necessary to pass the successive cross ridges, descends continuously to Chandil. The respective lengths of these two alternatives from Rud are 128½ and 130½ miles, the valley line being slightly the longer.

26. The cost of the line by each alternative is shown in the comparative estimates attached; the amount of waterways on each is given in Form E, and gradients in Form B.

27. The "Plateau alternative," after touching a corner of the north Karanpura coal-field, ascends the Mahlan spur, and makes for the station of Ranchi, which is the principal sudder station of Chutia Nagpur, joining on to the military station of Daranda. The description of this alignment is given in full detail in paragraphs 29 to 43 of the preliminary survey report.

28. As the whole export trade of the plateau flows to the north and to the east, from which directions also the imports come in, it follows that the same amount of goods would be carried by a railway running along the base to Chandil as by the line crossing the top. The plateau route has this disadvantage, that all through traffic must be lifted 967 feet to be dropped again 1,200 feet at Chandil. The coal required for working the 128½ miles between Rud and Chandil must be lifted in a similar manner, and if quarried in the Karanpura field must be led by carts to the station at the foot of the Mahlan incline, and by rail 37 miles to Similia engine station. Ranchi is the only important market on this alternative. The town has a population of 18,000 and a large fair is held yearly at the outlying village of Chutia.

29. The valley alternative would obtain the whole of the traffic from the plateau, and, in addition, receive that of the southern part of the Hazaribagh district. It would traverse the southern portion of the Karanpura coal-fields from end to end, passing through the middle of that portion known specially as the "South Karanpura" field, in which, moreover, would be located the engine-station of Jainagar, mile 241¼. The coal at this place is reported to be of very good quality. The pergunnah of Karanpura is said to be the "granary" of the Hazaribagh district.

30. At Chandwa, mile 201, the traffic of the western portion of the Lohardagga plateau, and the eastern portion of Sarguja, which is now led northward from the town of Lohardagga to Chatra, would be intercepted. The traffic at present amounts to 17,000 maunds of imports and 88,000 maunds of exports annually, which is carried by pack-bullocks only, and would be common to the two lines.

31. The principal stations on the valley line between Chandwa and Chandil are—*Deonath*, on the left bank of the Deonath river, which would serve the villages in the Tandawa thana, the population of which is estimated at over 70,000. *Jainagar*, an engine-station, the site of which has been selected—first, as the nearest convenient division of distance between Sukhua and Chandil; second, on account of the coal seams which crop up in the Neckari river within a quarter of a mile of the station; and third, a good site for location of quarters. *Ramgarh*, mile 254½, on the Ranchi and Hazaribagh road, nearly half way between the two sudder stations. *Gola road*, on the Ranchi and Gobindpur road, the principal market in the south-east corner of Hazaribagh, and centre of trade of the country for some miles round. Tholen, on the Ranchi and Purulia road, five miles from Jhalda, which is a well known market in Manbhum.

32. It appears doubtful, however, if the traffic either from the Hazaribagh or Lohardagga districts would be attracted to the railway, if compelled to go round by Chandil; the main line located to that station would probably carry pilgrim passengers only and a small local traffic; for trade purposes, a branch to Purulia, on the Nagpur-Bengal Railway, leaving the main line about the 275th mile, would be required.

33. A trial line in this direction was run in accordance with instructions received from the Bengal Government, which shows a section very similar to the main line to Chandil, but with less waterway, and the cost would be about ₹ 1,11,681 per mile. A saving would be effected in distance for carriage of goods from Hazaribagh and Lohardagga districts to Calcutta, of 39 miles; the distance from mile 275 of main line to Purulia being 32 miles, but to Chandil and back to Purulia the distance would be 71 miles.

Enclosure No. 12 to Railway Resolution No. 799 R. C. of 1887.

* * * * * * * *

No. 516, dated Cuttack, the 14th April 1883.

From—A. SMITH, Esq., Commissioner of the Orissa Division,

To—The Secretary to the Government of Bengal, Public Works Department.

* * * * * * * *

2. Of the many benefits that the province will derive from being connected with the other parts of India by a system of railways there can be but one opinion, and the only question for consideration is the financial prospects of such a scheme.

* * * * * * * *

13. From whatever point of the Barakur and Nagpur line the branch railway to Cuttack starts, it is certain that, both from a political and economical point of view, the gain to the country would be enormous; that the line will pay there cannot be the slightest doubt; it will attract an immense number of pilgrims from Bengal and Upper and Central India; it will monopolise a large portion of the trade that is now being carried on with great difficulty and enormous cost by land and water; trade and commerce will spring up where it is not now thought of; and a vast extent of country now lying unoccupied and useless for all practical purposes will be utilised.

* * * * * * * *

15. Statistics of trade carried on over one of the principal roads along the course of the Mahanaddi are now being collected in accordance with the instructions contained in paragraph 5 of your No. 898R. of the 6th March 1882.

16. These statistics are being collected at Cuttack and at Barmul in Daspala on the line of road that runs from Cuttack to Sambulpur through Sonpur and also on the river Mahanaddi. Two statements, marked A and B, are annexed, showing the figures for the past eight months, from July 1882 to February 1883. This, it must, however, be remembered, is only a portion—a very small portion—of the traffic that will without doubt, be carried by a line of railway taking this direction. It will monopolise nearly the whole of the trade that now passes through this line; it will take up at least three-fourths of the trade that is now being carried on chiefly by means of pack-bullocks along the road to Sambalpur from Cuttack *viâ* Angul. It will accommodate a large portion of the pilgrims that now come in immense numbers by different routes from all parts of India, and will also take up a portion of the trade between Cuttack and Northern India. It will take up, up to a certain distance, the trade that comes from the Madras Presidency to Cuttack, Sonpur, and Sambulpur, and will also have an immense amount of local trade. This it will have at starting, and the greater influx of pilgrims that will certainly come on account of the facilities afforded by railway communication, and the stimulus that the trade of the country will receive, should not be lost sight of.

17. Orissa, on account of its isolated position, is liable to famine. It has a system of canals which gives protection to a portion of the Cuttack and Balasor districts, but a large portion of the province lies beyond its influence, and can be protected only if, in addition to the canals, a railway is provided, and it is connected with the other parts of India by land as well as by water.

* * * * * * *

19. There is another and also a very potent reason why the system of railways should be extended to Orissa. Owing to the immense number of pilgrims that at all times and seasons of the year, and specially during the rains, when the Rath festival comes on, crowd to Puri, it has specially become the home of cholera, and the suffering and loss of human life that it causes in each and every part of India is great. Weary, emaciated, under-fed and under-clothed pilgrims, who continually pass to and fro in sunshine and rain, carry the disease along with them in every direction; and although the sanitary arrangements that have in recent years been made have partly reduced the death-rate, still the loss of life is terrible to contemplate. There is no doubt that the pilgrims become amenable to the influences of the disease from the long and tiresome journeys without good food and prbper shelter, and nothing will afford such efficacious relief to Orissa—nay India—from this scourge as the construction of a railway.

* * * * * * *

53. We have no statistics to show the traffic that comes from the different directions which the railway will catch at Khurda; but looking into the figures of the statement of traffic coming from one direction and collected at Mardah, a copy of which was forwarded with my No. 975 of the 3rd July last, it appears that between the months of March 1880 and February 1881 the traffic was as follows, *viz.*:—

Passengers	86,284
Pack-bullocks	5,084
Loaded carts	6,928

54. The statistics collected at Tangi show that during the nine months from December 1878 to August 1879, 32,126 loaded carts, 7,907 laden bullocks, and 33,145 foot passengers came from Ganjam to Khurda and *vice versâ*, and adding one-third for the remaining three months, we find that for a whole year the figures come to—

Foot passengers	44,183
Laden carts	42,833
„ bullocks	10,663

55. Having these figures in view, we may safely calculate that by making a detour through Khurda we will at the outset increase the railway traffic by 60,000 passengers, 30,000 carts and 5,000 bullocks, and then if we reduce the rate for through passengers in consideration of the greater distance to 2 pies, and of the goods traffic to ½ pie per maund, we will arrive at the following figures:—

Khurda Route.

Coaching	Through passengers	$4,51,000 \times 2 \times 60 \times \frac{7}{8} \div 192$	= 2,46,640
	Khurda ditto	$60,000 \times 2 \times 30 \times \frac{7}{8} \div 192$	= 16,406
	Local ditto	$60 \times 10 \times 52$	= 31,200
Goods	As per direct route	$9,53,000 \times 30 \times \frac{3}{4} \times \frac{1}{2} \div 192$	= 55,859
	Additional for Khurda	30,000 × 10 = 3,00,000 5,000 × 3 = 15,000	
		$\frac{3,15,000 \times 30 \times \frac{1}{2}}{192}$	= 24,609
Ferry and miscellaneous			= 40,000
		TOTAL	4,14,694

56. The above figures give a total gross income of ₹4,14,694, and deducting 60 per cent. on account of working expenses, the net profit stands at ₹1,65,878, which means an income of over 4 per cent. on a capital of 40 lakhs.

Enclosure No. 13 to Railway Resolution No. 799 R.C. of 1887.

No. 22R.T.—R., dated Dacca, the 29th August 1883.

From—The Secretary to the Govt. of Bengal, Public Works Dept., Railway,

To—The Secretary to the Govt. of India, Public Works Department.

I AM directed to acknowledge the receipt of your letter No. 732R.C. of the 18th instant, and, in reply to the second paragraph, to state that His Honour the Lieutenant-Governor, having no personal knowledge of the tract of country which a railway from Lainghar or other suitable point on the Nagpur and Barakur line would serve, has to rely to a great extent upon opinions recorded by the Commissioner of Orissa and other local officers on the subject.

2. The line of country referred to is, for want of good communications, generally perhaps the least known in this province; and though since the Orissa famine of 1867-68, communications with Cuttack and Orissa generally have been largely developed by sea, and the canals made and still under construction, these advantages only extend to the sea-coast towns and their neighbourhood, and do not in any way affect the hill tracts in the interior.

3. The Commissioner has remarked that Orissa, from its isolated position, is liable to famines, and its system of canals by itself affords no adequate protection to the province generally against the calamities of drought and scarcity; and having regard to the configuration of the country, and the vast area which stretches north-westwards into the interior from Cuttack, now almost entirely without good communications, the Lieutenant-Governor quite concurs in what the Commissioner reports in the 13th paragraph of his letter No. 516 of the 14th April last, copy of which was forwarded to the Government of India, with this office letter No. 3072R. of the 6th instant, and which is here quoted:—"From whatever point of the Barakur and Nagpur line the branch railway to Cuttack starts, it is certain that, both from a political and economical point of view, the gain to the country would be enormous; that the line will pay there cannot be the slightest doubt; it will attract an immense number of pilgrims from Bengal and Upper and Central India; it will monopolise a large portion of the trade that is now being carried on with great difficulty and enormous cost by land and water; trade and commerce will spring up where it is not now thought of; and a vast extent of country now lying unoccupied and useless for all practical purposes will be utilised."

4. I am to observe that what Mr. Smith thus says regarding the great difficulty and enormous cost of conducting the trade is confirmed by the statement recorded later on in the 17th paragraph of his letter, that that trade is now being carried on chiefly by means of pack-bullocks along the road from Cuttack *viâ* Angul.

5. Further statistics of existing traffic are being collected, and will be submitted as soon as received; but whatever it may be, a railway in these parts will not only rapidly develop it, but will be the only means of giving security in times of famine to a wide area of country extending some thousands of square miles.

Enclosure No. 14 to Railway Resolution No. 799 R.C. of 1887.

Copy of a letter No. 13C., dated 31st December 1884, from the Secretary to the Chief Commissioner, Central Provinces, P. W. Dept., to the Secretary to the Government of India, P. W. Dept.

I AM now directed to reply as follows to your memorandum No. 01R.C., dated 19th November last, forwarding, for the opinion of the Chief Commissioner, certain correspondence connected with the proposed Benares-Puri Railway, and enquiring how far a route which would to some extent serve the Sambalpur district might be practicable from Laingarh or some station further west which would not entail too long a detour on the pilgrim traffic from the north-east.

It was deemed desirable to obtain this opinion on the reference of Colonel Bowie, Inspector-General of Prisons and Police, who is intimately acquainted with the Sambalpur district; and I am desired to submit, for the information of the Government of India, a copy of his letter No. 7230, dated 10th current.

The Chief Commissioner's opinion (in which he is supported by that of Colonel Browne, Secretary, Public Works Department) is that Colonel Bowie's advice is sound. The distance of the proposed line through or near Sambalpur will be under 200 miles, differing little from that of the line through the Keunjhar plateau. There will, however, be no large bridges to construct, and the heavy work of crossing the Brahmini river will be avoided. The objection to this proposal is that pilgrims from the east will have about 100 miles more of the Nagpur-Bengal line to traverse than they would if the Cuttack line took off from Kuchai and about 50 miles more than if the point of leaving the Bengal line was at Laingarh. The pilgrims from the west will, however, be the gainers to the same extent, and therefore it seems open to the Government to adopt the cheapest and easiest route. The pilgrim traffic will not be appreciably affected, whichever route is chosen.

The Chief Commissioner records this as his opinion, having regard to the general interests of the country, and not with any desire of benefiting the Sambalpur district in particular.

Copy of a letter No. 7230, dated the 10th December 1884, from LIEUT.-COL. M. M. BOWIE, Inspector-General of Police, to the Secretary to the Chief Commissioner, P. W. Dept.

I HAVE the honour, in acknowledging the receipt of your No. 7890, dated the 8th instant, with its annexure, to state that, in my opinion, the Sambalpur district would not be in any way served by a line running from Laingarh to Cuttack. If such a line were taken along the valley of the Brahmini river, the only part of the Sambalpur district through which it would pass would be the Bamra State. From Laingarh to Talcher also the line would pass through a waste of hill and jungle, and if a practicable route could be found, which I am almost certain would not be the case, the construction of a railway along it would be certain to prove very expensive. I have myself travelled through the greater part of the Bamra hills, and I should say that a line from Laingarh to Cuttack would prove just as difficult as a line across the Keunjhar plateau to Cuttack.

2. I think then that the line should start from a point considerably further west; and as the Sambalpur district would be best served by a line which ran in the neighbourhood of the town of Sambalpur, I think the nearest point to Sambalpur on the east of the Ib river should be the point selected. As the papers regarding the Nagpur and Sitarampur Railway are not at present in your office, I have been unable to learn what is the name of the station for Sambalpur on this main line; but I believe it is Panchpara, a village close to the point where the line crosses the Ib at Rajpur. Assuming this to be the name of the station, I would strongly recommend that the line should run from Panchpara to Sambalpur, and from Sambalpur along the old Rampur and Angul road to Cuttack. This is the shortest and I believe the best route that could be taken. If the starting point of the line were made at a point midway between Panchpara and Laingarh, it would still be necessary to skirt the hills which lie within 20 miles of Sambalpur, so that the distance which pilgrims from the east and north would have to travel would be very little decreased, while the length of the line, and consequently the cost of construction, would be very greatly increased.

3. From Panchpara to Sambalpur the line would run through a well cultivated and thickly populated tract of country, and from Sambalpur through Rampur and Angul to Cuttack it would run along the watershed between the Brahmini and Mahanaddi rivers; and though a great part of this route, as far as Angul, is through jungle, there is much land capable of cultivation, and the sâl forests of Radhakol are perhaps the finest in India. I can say confidently also that no serious engineering difficulties exist along the whole of this line. The country between Panchpara and Sambalpur is thoroughly well known to me, and I have frequently travelled along the Sambalpur and Rampur road to Angul and Cuttack.

From Panchpara to Sambalpur the country is open and undulating, and only a few large nullahs running into the Ib have to be crossed. On the section between Sambalpur and Cuttack some hill ranges have to be crossed; but these are low, and there is no difficult Ghât on the road; there are also very few rivers or nullahs of any size. In fact I do not think that anywhere along the whole line it would be found necessary to construct a bridge as large as that over the Wainguna.

4. If it be considered compulsory to take the line *through* the Talcher coal-fields, it would be necessary to take a line to the north of that I have here indicated, and it will be seen that there is another road marked in the map running through the villages of Megpal and Hiraloi, which also goes to Angul. I am not so well acquainted with this route, having only travelled along it a short distance into the Radhakol State; but I believe that it also does not present any serious difficulties. It is not, however, I believe, so direct as the road through Rampur to Angul; and as this last-named route also must pass close to coal-fields, there would be no great difficulty in constructing a branch to Talcher if workable coal were ever found there in sufficient quantity.

5. My opinion then is that the line which ought now to be surveyed is that above detailed, *viz.*, from Panchpara to Sambalpur and from Sambalpur to Cuttack *viâ* Angul. I am quite certain that an attempt to get a practicable line from Laingarh to Cuttack would fail, and any intermediate line would prove more expensive in construction and would have no compensatory advantages that I can see.

No. 319, dated the 10th January 1885.

Memo. by the Offg. Secretary to the Chief Commr., Central Provinces, P. W. D.

COPY of the following is forwarded to the Secretary to Government of India, Public Works Department, for information, in continuation of Central Provinces Public Works letter No. 13C., dated 31st ultimo.

Copy of a letter No. 110C.—A., dated 16th December 1884, from the Director of Agriculture, C.P., to the Secretary to Chief Commissioner, C. P., P. W. D.

IN reply to your letter No. 7889 of the 8th instant, I have the honour to state that I have no personal knowledge of the greater portion of the tract through which it seems that the proposed line would pass, and am therefore quite unable on so short a notice to offer an opinion which would be in the least worth having. The line which the proposed railway would take is not quite clear from the papers annexed to your letter; but I presume that the alternative route now referred to would carry the Puri Railway down the valley of the Ib, and that the railway would therefore pass in the close vicinity of Sambalpur instead of running some distance east of it, as would be the case were it carried over the Keunjhar plateau on the eastern border of the Bamra State. A railway running to Sambalpur, down the valley of the Ib, would pass through a tract which I know to be of considerable fertility, and so far as provincial interests are concerned, would be of course out of all comparison more advantageous than a line which would merely touch the Sambalpur district on the eastern border of the Bamra State, which is, I believe, a tract of little present fertility.

Copy of a letter No. 373, dated 13th January 1885, from the Secretary to Chief Commissioner, C. P., P.W.D., to the Secretary to the Government of India, P. W. D.

IN continuation of Central Provinces letter No. 13C., dated 31st ultimo, and enclosure, having reference to the proposed Benares-Puri Railway, I am now desired to forward a copy of a letter No. 7372, dated 18th idem, and enclosure, from the Commissioner, Chhattisgarh Division, connected with the subject.

Copy of a letter No. 7372, dated Camp Desgaon, 18th December 1884, from Commissioner, Chhattisgarh Division, to the Secretary to the Chief Commissioner, C. P., P. W. D.

IN reply to your No. 7888, dated 8th instant, I have the honour to forward the accompanying letter from Deputy Commissioner, Sambalpur, dated 17th instant, advocating Talpachia as the point to which the junction of the Benares-Puri line with the Nagpur-Bengal Railway should be brought in order to serve to some extent the requirements of the Sambalpur district. I agree with the Deputy Commissioner that, in the interests of the Sambalpur district, Telpachia would be a better point for the junction than Laingarh or Sagra. At the same time if the line is brought either to Laingarh or Sagra, it will draw a considerable portion of the trade and pilgrim traffic of the Sambalpur district; but the further west and south the line can be brought consistent with other conditions, the better it will serve the wants of the district.

Enclosure No. 15 to Railway Resolution No. 799 R.C. of 1887.

MAHANADDI-VALLEY RAILWAY FROM PANCHPARA STATION OF THE BENGAL-NAGPUR RAILWAY, *vid* SAMBALPUR, TO CUTTACK.

Note by MR. W. H. PARKER, Engineer-in-Chief, Benares-Cuttack Railway Survey, and Offg. Joint-Secretary to the Government of Bengal, Public Works Department.

This line has been suggested as an alternative pilgrim route, in place of the section of the Benares-Cuttack Railway, from Kantera to Cuttack, of which a survey was made in 1884-85, and which ran through the Keunjhar State, a line affording no immediate prospects of any traffic beyond that of pilgrim passengers from Benares and Gya to Puri.

2. That section of railway, with additions made by the Secretary to the Government of Bengal, Public Works Department, was estimated to cost ₹2,41,90,000 for 182 miles of line, terminating on the left bank of the Mahanaddi. To connect it with the Cuttack-Puri section, *vid* Khurda, would add ten miles to the length and ₹17,00,000 to the cost, making a total of ₹2,58,39,000, of which amount ₹49,00,000 was due to the bridges required over the Brahmini and Mahanaddi rivers.

3. The estimate of the alternative route now proposed up to the left bank of the Mahanaddi, after correction and addition of "Indirect charges," amounts to ₹1,95,30,651, and adding ₹25,00,000 for the cost of the Mahanaddi bridge and 3½ miles connection with the Cuttack-Khurda-Puri line, the total would be ₹2,20,30,651 or ₹38,08,349 less than the Kantera-Cuttack route.

4. This line would not accommodate the pilgrims from Northern India and Lower Bengal; but quite as many persons, if not more, visit Puri from Western India, who would not have travelled over the Kantera-Cuttack route. It has the advantage of running through the Talchir coal-field, would tap the valleys of the Brahmini and Mahanaddi, many parts of which are very fertile, and would carry the trade of Sambalpur, a town of 12,000 inhabitants, which is now conveyed between Cuttack and Sambalpur by boats and pack-bullocks. The navigation of the Mahanaddi is so difficult that the pack-bullocks compete successfully with the boats. There is little fear, therefore, of the river competing with the railway for traffic.

5. Captain Laugharne, in paragraphs 9 and 10 of his note, details the further advantages of this line over the Keunjhar route, *viz.*, the reduced cost of working, due to more favourable gradients, the proximity of the Talchir coal-field, and the shorter distance grain would have to be carried, to supply the famine-stricken districts of Orissa in times of scarcity.

6. The alignment suggested by Mr. Von Ahn *vid* Denkanal and Hero to Panchpara, leaving Sambalpur ten miles to the west, appears to be the best. It might be advisable to take the line closer into Sambalpur, which would add five miles to the length. Although the trade of Sambalpur itself is not very great, the proximity of the line to the town would soon increase it, and the necessity of a branch at a future date would be avoided.

7. In the note by the Chief Commissioner, Central Provinces, on Mr. Fuller's report, No. 240 of 11th July 1883 (paragraph 5), he states that the crossing of the Mahanaddi at Sambalpur is very difficult, and that the traffic from the south of the river is all carried by boat, and will probably continue to be so carried, as the tributaries on the south are all more or less navigable.

8. The railway traffic at first would, perhaps, be confined principally to the district north of the Mahanaddi, the trade of which at present is but small, owing to the difficulties of carriage; but the cheapness, and greater speed in transit, afforded by the railway, would probably soon attract the traffic also from the southern districts.

9. From a statement of statistics collected at Burmul on the right bank of the Mahanaddi and of traffic on the Mahanaddi from July 1882 to July 1883, the most important articles of export and import amount to 2,118,180 maunds exports, 780,739 imports, and 103,932 passengers up and down.

10. Mr. Smith, Commissioner of Cuttack, in 1883, reports, in his No. 516 of 14th April 1883, that, from whatever point of the Nagpur-Bengal Railway the branch railway to Cuttack may start, the gain to Orissa would be enormous, that such a line would attract an immense number of pilgrims, would monopolise a large portion of the trade now carried on by land and water, that trade would spring up where now it is not thought of, and that large tracts of country now lying unoccupied would be utilised.

11. Mr. Gupta, Officiating Collector of Puri, in his No. 1363 of 22nd December 1883, reports to the Commissioner of Orissa that the average number of pilgrims visiting the shrine at Puri for nine years from 1874 to 1882 was 210,605, the largest number in any one year being 337,235, and this estimate taken from police reports he considers on the safe side.

12. Taking half the existing traffic reported in paragraph 9, and adding for pilgrims and the extra traffic in wood, fuel, coal, and timber that would immediately be created, a moderate estimate of the gross receipts per annum would be as follows; taking passenger fares at 3 pie per mile, and goods at ½ pie per maund per mile:—

	₹
300,000 passengers at R2-13 for 180 miles	8,43,750
14,49,460 maunds goods, at As. 7-6 for 180 miles	6,79,434
Local and miscellaneous traffic, at R20 per mile per week	1,87,200
GROSS ANNUAL RECEIPTS	17,10,384

13. This return would amount to 7·76 per cent. on ₹2,20,30,651, the cost of the line including the Mahanaddi bridge, and 8·74 per cent. if the bridge and connection with the Cuttack-Puri line be omitted. As coal is procurable within a short distance of Panchpara, the western end of the line, and in the Talchir district at the eastern end, working expenses would be under the average of Indian lines, and 50 per cent. of the gross receipts a fair

allowance, leaving a profit of 3·88 per cent. for a line crossing the Mahanaddi, or 4·37 per cent. for a line terminating at Naraj.

14. The construction of this line would add to the traffic on the Cuttack-Puri line by the additional number of pilgrims visiting Puri from Central India, which may be taken at least as 200,000 per annum up and down. At the rate of 3 pie per mile, for 50 miles, a passenger traffic would be added to the Puri line of ₹1,56,250, or ₹60 per mile per week. In addition to this may be added the extra receipts that would be taken by the Nagpur-Bengal Railway between Nagpur and Panchpara.

15. Since the return of the Panchpara-Cuttack reconnaissance party to head-quarters, a letter* has been received from the Commissioner of the Orissa Division, suggesting, as a better route between Orissa and the Central Provinces, a line from Khurda on the Cuttack-Puri proposed railway to "a point between Sambalpur and Raipur on the bank of the Raipur-Mahanaddi." The object of this line would be to connect the Central Provinces more directly with Puri, as a seaport outlet for the trade between the Central Provinces and Madras, and to save the cost of bridging the Mahanaddi at Naraj.

* No. 659, dated 6th June, to the Secretary to the Government of Bengal, Public Works Department.

16. The Commissioner's proposal is based on information from native sources to the effect that the country is fairly open, presenting no great natural difficulties, and he does not apparently contemplate a junction with the Nagpur-Bengal Railway; but it is presumed that it would be necessary to cross the Mahanaddi near Raipur to effect this junction. The Indian Atlas maps do not confirm this native report of fairly open country to the west of Khurda, through which a railway might be economically constructed. The country appears to be a mass of hills, and the rough tracing of the proposed routes shows by its sharp bends and twists that natural difficulties do exist.

17. A suggestion somewhat similar to this was made by Mr. Smith, Commissioner of Orissa, in 1883, in his No. 516 of 24th April, for an alternative line up the right bank of the Mahanaddi; but in paragraph 14 he acknowledges that heavy banks would be required to keep above floods and tunnelling through the hill ranges.

18. Part of the route suggested by Mr. Metcalfe would be on the alignment of the Raipur-Vizianagram project, which has been rejected, and the construction of a line in this direction would, judging from the heights shown of the different ranges of hills, and the magnitude of two tributaries of the Mahanaddi, which have to be crossed, prove very expensive, and involve the construction of some 70 or 80 miles of extra railway.

19. The advantage of the coal-fields of Talchir and Hengir would be lost to the line and working expenses be increased by the cost of coal. The construction of the Mahanaddi bridge at Naraj, would not be an undertaking of such difficulty as is represented by the Commissioner, and might be completed in four years at the outside.

20. The town of Cuttack is unapproachable on any side by a railway, except at great expense, the Mahanaddi, on the north side of the town, being a mile-and-a half wide, the Katjori, on the south side, being as wide as the Mahanaddi at Naraj. A station on the south bank of the Katjori would be easier to get at from Cuttack town than one on the north bank of the Mahanaddi. A branch of six miles would connect the Katjori station with the through line from Panchpara to Puri.

21. Considering the extra length of construction required to connect Raipur directly with Puri, also the topographical features of the country shown on the map, and the disadvantage of leaving out the Talchir coal-field, this route does not appear one that can be recommended as a substitute for the line from Panchpara to Naraj.

Enclosure No. 16 to Railway Resolution No. 799 R. C. of 1887.

Note by MR. J. B. FULLER, on the extension of Railway Communication to the Sambalpur District, dated August 1886.

The object of this note is to discuss the advantages which would result from the extension of railway communication to the Sambalpur district. The facts on which the consideration of this question is based, so far as they are not supported by statistics, are derived from my personal acquaintance with the Sambalpur district, in which I have spent a portion of two camping seasons, and from information which has been contributed by Mr. Goodridge, the present Deputy Commissioner of the district.

2. The Sambalpur district forms an oasis of highly cultivated land in the midst of an extensive region of hills and forests. Towards the west it is separated from the Chhattisgarh plain by 75 miles of almost continuous jungle. On the south it is bordered by the feudatory chiefships of Patna, Sonpur, and Kalahandi, which cover a tract of wild country extending almost as far south as the Godavari. On the east a wide belt of hills and forest separates it from the plains of Orissa, and, extending round towards the north, merges into the wild country of Chota Nagpur. The only approach to the district which does not lie through thick jungle is by the left bank of the Mahanaddi, along which there lies a narrow strip of cultivated country forming the Padampur-Chandarpur zemindari and part of the feudatory State of Raigarh. The lie of the district compared with the country

which adjoins it will be seen from the annexed map, in which the open country is coloured yellow, and hills and forests green.

3. The open portion of the Sambalpur district covers about 2,468 square miles, of which 1,89- square miles are held direct from Government by the villagers and 576 square miles belong to the zemindaries of Padampur-Chandarpur, Kodibaga, and eight other petty zemindaries towards the south. Isolated though it is, this tract is one of the best cultivated and most thickly populated in the Provinces. The population of the part of Sambalpur held direct from Government falls at the rate of 191 to the square mile, a rate which is exceeded in only two districts out of the eighteen which comprise these Provinces. The population of the Nagpur district falls at the rate of 200 to the square mile, but this is in great part due to the large urban population of the towns of Nagpur and Kampti. The population of Bilaspur falls at the rate of 203 to the square mile. Hence in regard to density of population the Sambalpur district ranks third in the Provinces. As might then be expected, the proportion of the total area which has come under the plough in Sambalpur is higher than in most other districts. Exact figures will not be forthcoming till the conclusion of the present settlement survey, but the statistics which have been collected up to date indicate that between 60 and 70 per cent. of the total area is under cultivation, whereas in only one other district (Wardha) does the percentage of cultivated to total area exceed 50. Next after Wardha come Narsinghpur (49 per cent.), Raipur (49 per cent.), Nagpur (48 per cent.), and Bilaspur (46 per cent.). Hence the Sambalpur district may be regarded as exceptionally well cultivated. Of the total "open" area of 2,468 square miles, 1,600 square miles may be regarded as under cultivation.

4. Not only is the proportion of cultivated to total area exceptionally high in Sambalpur, but the cultivation is of exceptionally good character. Rice covers nearly three-fourths of the area under the plough. The produce of this crop depends very greatly indeed on the method of its cultivation. If grown from transplanted seedling, its yield is very much larger than if grown from seed sown broadcast. In the districts of Raipur and Bilaspur the rice crop is almost entirely grown from broadcasted seed, but in Sambalpur a very large proportion is grown from transplanted seedlings, and this is a very striking difference between the agricultural system of Sambalpur and that of the other tracts included in the Chhattisgarh Division. The Sambalpur district is also noted for the production of sugar, and the sugarcane plays a very important part in its agriculture. For its successful cultivation a fine loam is absolutely necessary, and this occurs abundantly in Sambalpur, but is comparatively rarely met with over the rest of the Provinces, or indeed anywhere in the Deccan, where the prevailing soils are black soil or soils into the composition of which black soil largely enters. The area under sugarcane in Sambalpur cannot be stated even approximately, but it is considerable, and sugar is exported in considerable quantities eastward towards Cuttack and westward towards Nagpur. It is a striking indication of the low cost at which sugarcane can be grown in Sambalpur that it is found possible to cart the produce 350 miles to the Nagpur market. There is also a considerable export trade in the til oilseed (or gingelly), which is produced in large quantities in the poorer soils, and last cold weather I met 80 carts belonging to a single village returning to Raipur laden with til seed.

5. So far as production is concerned, the Sambalpur district is then exceptionally well off, and it might be expected to pay a relatively rather larger revenue to Government than the other districts of these Provinces. But its contribution is almost ludicrously small. The present land revenue of the tract held direct from Government is, including assignments, only ₹1,15,600, which falls at the rate of 1·5 anna per acre of total area and 2·3 annas per acre of cultivation. I contrast below the land revenue incidences in some other typical districts :—

	Incidence of Land Revenue,	
	Per acre of total area.	Per acre of cultivated area.
Raipur	2·1	4·2
Bilaspur	1·6	3·5
Bhandara	3·3	9·2
Wardha	5·2	8·7
Narsinghpur	5·4	11·0

The re-settlement now in progress may be expected to result in a very considerable increase of revenue, but when this is included, the incidence of the land revenue per acre will still be strikingly small. The reason of this lies in the great difficulty which the people have in exchanging their produce for cash. There is a distance beyond which raw produce cannot be carried with profit, though its cost of production be extraordinarily low, and the distance which separates Sambalpur from markets is exceedingly near this limit. Rice—the staple product—will not bear the cost of transport to Raipur, and though sugar and til seed can be transported with some profit, yet the profit is small and uncertain. The main export route is the river Mahanaddi, down which a considerable amount of rice is annually exported in boats to Cuttack. But unfortunately the navigation of the Mahanaddi is exceptionally difficult below Sambalpur owing to rocks and rapids, and only boats of small size can be employed. As a rule, a boat carries no more than 175 maunds. The boatmen can

only navigate by day, and have to cast anchor at night: even with this precaution wrecks are not uncommon; and the channel is only open for four months in the year. Moreover, the market to which Mahanaddi leads—Cuttack—is one in which rice is exceptionally cheap. The tract in which the rice of Sambalpur would be in demand lies on the western side of the Peninsula. But its only communication is with the eastern coast, where rice is at times almost a drug in the market.

6. The line which a railway to Sambalpur should follow, if it was aligned along the most open route, would be from the Bilaspur district following the course of the Mahanaddi, and keeping as near to the river as engineering considerations permitted. The alignment of the proposed railway between Bilaspur and Calcutta lies considerably to the north of the cultivated tract on the left bank of the Mahanaddi, but provided that it is brought into connection with the town of Sambalpur by a branch from Panchpara, it should serve the requirements of the district tolerably well. But the construction of this branch is of the highest importance if the line is to derive much traffic from the Sambalpur district, or is to benefit the Sambalpur district to the extent which should be expected of it. Panchpara lies at the extreme north-east corner of the plain, 45 miles distant from Sambalpur, and 70 miles distant from the fertile tract which lies round Bargarh to the west of Sambalpur. The construction of a branch to Sambalpur should form part of the project for the Bilaspur-Calcutta line, whether it is intended to carry it on to Cuttack or not.

7. A branch line to Sambalpur in addition to attracting the traffic of the district might be expected to gain something by intercepting a considerable traffic which now runs down the Mahanaddi past Sambalpur. "The proposed line of railway from Nagpur to Calcutta," writes Mr. Goodridge, "will not touch the main arteries of the water system of the Chhattisgarh country at suitable points, will not in fact touch the Mahanaddi at any point. It will cross its tributaries, the Sheonath at Drug, and again on the borders of the Raipur and Bilaspur district at Nandghât, and the Arpa and Hassod in the Bilaspur district. But at none of these places is there likely to be any great boat traffic. By bringing the line to Sambalpur, Cuttack and the Eastern Coast will be placed in communication by water with every portion of the Chhattisgarh country from Pendra in the north of the Bilaspur district to Khariar and Kanker in the south, and from Khairagarh and Kawardha in the west to the eastern portions of the Sambalpur district. It will be noticed that all of the rivers that water the Chhattisgarh country converge towards Sheorinarain, and also that between that town and Sambalpur several large rivers from the north fall into the Mahanaddi before it reaches Sambalpur. During the rainy season, therefore, the whole of the productive Chhattisgarh country, and a portion of the Chota Nagpur Garjat States, are in easy water communication with Sambalpur, and would be with Cuttack also but for the rocky beds and rapids below Sambalpur. If the railway does pot touch the river at some point between Sheorinarain in the Bilaspur district and Sambalpur in this district, it will never, in my opinion, be able to work in communication with the boat traffic of this district and the Chhattisgarh country. The most convenient point in the Mahanaddi for the railway to tap the water-borne trade is Sambalpur."

8. It will be inferred from what has been written above that the present export trade of Sambalpur cannot be accepted as an indication of what the export trade would be were Sambalpur given the benefit of railway communication with the places where its produce is most in demand. The routes along which the present trade of the Sambalpur district run are—

(1) to Cuttack down the Mahanaddi,
(2) to Cuttack by road *viâ* Angol,
(3) to Raipur by road.

We possess statistics of only the first stream of traffic, which has been registered since April 1884, at a registration post established on the river at Binka. The returns of each of the two subsequent years are abstracted below :—

Year.	Rice.	Sugar.	Metals.	Salt.	Cocoanut.	All other commodities.	Total.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
			Down stream to Cuttack.				
1884-85	1,24,297	614	...	...	...	20,678	1,45,589
1885-86	1,28,493	244	...	...	...	18,299	1,47,036
			Up stream from Cuttack.				
1884-85	...	...	2,813	53,345	13,130	5,799	75,087
1885-86	...	...	3,374	32,603	27,057	7,156	70,190

There was then a down stream traffic amounting to something under 1½ lakh maunds per annum, and an up-stream traffic of about half this amount. These figures are borne out very closely by the result of enquiries made by Mr. Goodridge as to the number of boats employed in the trade, the freights carried by them, and the number of trips made by them.

Of the road traffic to Cuttack on one side, and to Raipur on the other, no statistics are available; but Mr. Goodridge's investigations indicate that the exports by road to Cuttack amount to about 75,000 maunds, consisting chiefly of sugar and oilseeds. The export to Raipur may be set down as 25,000 maunds, bringing up the total exports of the district by road and river to 2½ lakhs maunds.

9. But in addition to the traffic of the Sambalpur district a line of railway to Sambalpur might expect to catch some trade which now runs between the Raipur district and the Orissa coast *viâ* the Sambalpur district. This trade runs *viâ* Binka and does not now come to Sambalpur, though there can be very little doubt that it would be diverted to Sambalpur were Sambalpur in railway communication with the Chhattisgarh plain. The trade comes to Binka partly by river and partly by road, thence proceeds by road to Raipur *viâ* Sohela. It has been registered during the last two years with the following result :—

Year.	Rice.	Sugar.	Salt.	Cocoanuts.	All other commodities.	Total.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
			Towards	Raipur.		
1884-85	...	...	25,142	2,681	84,578	1,12,401
1885-86	...	...	40,352	7,369	3,946	51,667
			Towards	Cuttack.		
1884-85	4,627	168	...	...	22,998	27,793
1885-86	24,460	183	...	...	10,096	34,739

10. In discussing the commercial effect of the extension of railway communication to Sambalpur, a leading fact to be borne in mind is that a far more extended demand exists for Sambalpur produce on the west than on the east side of India. Rice and sugar are the typical products of Bengal and of Orissa, and to place Sambalpur in communication with those tracts is merely to offer facilities for the export of rice and sugar to places where they are already abundantly produced. On the other hand, the agricultural system of Western India and the Deccan is, speaking generally, characterized by the absence of rice and sugarcane cultivation, for which black soil is very unsuitable, and for which the rainfall is, as a rule, insufficient. A great deal of rice is of course grown in the Bombay coast districts, but the area under rice in these districts is small in relation to the total cropped area of Bombay and Berar, and accordingly the prices of rice as well as of sugar range much higher west than they range east of Nagpur.

One of the most striking results of the extension of railway communication to the Chhattisgarh plain has been the enormous increase in the export of rice from these Provinces to places in the Bombay Presidency and Berar.

The amount of rice exported from these Provinces during each of the last five years has been—

Year.	Mds.
1881-82	5,50,117
1882-83	9,95,365
1883-84	10,63,865
1884-85	12,83,019
1885-86	13,59,014

During 1881-82 the Nagpur and Chhattisgarh Railway was only open as far as Amgaon in the Bhandara district, and had not pierced the hills and forests which shut off the Chhattisgarh plain. During the next year the railway was completed to Nandgaon, its present terminus, and the increase in export is very striking. To the total amount of rice exported the contribution of Chhattisgarh, in each year since the railway reached it, has been as follows :—

	1883-84.	1884-85.	1885-86.
	Mds.	Mds.	Mds.
To Bombay Presidency	4,28,488	6,18,927	5,76,482
„ Berar	2,49,441	1,27,782	1,54,375
„ all other places	76,358	58,624	60,308
Total	7,54,287	8,05,333	7,91,165

The following figures give the average prices ruling for rice per maund of 40 seers in Sambalpur, Cuttack, Burdwan, Calcutta, Nagpur, Akola, and Dhulia (in Khandesh) at the end of April during the last ten years. The end of April is selected as being the period when trade is briskest. These prices are contrasted with the cost of carrying a maund of rice from Sambalpur to each of the other places named, and with the cost at which a maund of Sambalpur rice could be delivered at each of these places, were railway communication available :—

	Average price ruling at end of April during 10 years, 1877 to 1886.	Cost of carrying a maund by rail from Sambalpur.	Cost at which a maund of Sambalpur produce could be delivered by rail, *i.e.*, its price at Sambalpur *plus* freight.	Difference between this cost and average price at each place, *i.e.*, profit per maund exported.
	R a. p.	*R a. p.*	*R a. q.*	*R a. p.*
Sambalpur	1 7 0	.....	.....	.....
Cuttack	2 1 2	0 9 2	2 0 2	0 1 0
Burdwan	2 2 1	0 9 7	2 0 7	0 1 6
Calcutta	3 0 5	0 11 5	2 2 5	0 14 0
Nagpur	2 14 10	0 11 5	2 2 5	0 12 5
Akola	4 10 0	0 15 7	2 6 7	2 3 5
Khandesh (Dhulia)	3 14 9	*1 7 0	*2 14 0	1 0 0

* Including an allowance of R 0-2-0 per maund for carriage from Chalisgaon to Dhulia (34 miles.)

It will be observed that the profit on exports to either Cuttack or Burdwan would be very small. Calcutta offers a better opening owing to the exceptional demand of a large urban population, but the profit which would result from export to Nagpur (which would be equidistant with Calcutta from Sambalpur) would be almost as large, with the difference that the demand would not be limited by the consumption of a single town, but would be capable of great expansion for the supply of places in Berar and Khandesh. The large profit which these figures indicate on the export of rice from Sambalpur to Akola and Khandesh is very noticeable.

The extent to which the value of sugar in Western India exceeds its value in Eastern India is indicated by the following figures (taken from the table annexed to Government of India's Resolution No. 505A., dated May 30th, 1882) which give the average price of *gurh* in Bengal, in the Central Provinces, in Berar, and in the Bombay Presidency :—

	Bengal.	Central Provinces.	Berar.	Bombay Presidency.
	R a. p.	*R a. p.*	*R a. p.*	*R a. p.*
Price per maund of 40 seers	4 10 0	6 5 0	9 8 0	6 7 0

It would appear then from these figures that Sambalpur has much more to hope for from a connection with Nagpur than from a connection with either Cuttack or Calcutta.

11. There is then a good deal to be urged in favour of making a branch line to Sambalpore a part of the project of the Nagpur-Bengal Railway, irrespective of any intention to carry the line on to Cuttack; and indeed, even were the project for a through line between Nagpur and Calcutta abandoned, there would still remain good reasons in favour of carrying on the line from Bilaspur to Sambalpur. A great portion of the country between Bilaspur and Sambalpur is no doubt very unproductive, but, as remarked above, some local traffic may be expected from the country lying along the left bank of the Mahanaddi if the line be aligned at no great distance from it. If the Nagpur-Bengal Railway be proceeded with, a branch line to Sambalpur would leave the main line at Panchpara and run down the valley of the Ib river. The country which the branch line would traverse, though not of such fertility as the central portion of the district, is still by no means destitute of possibilities. I am only acquainted with the southern portion of the Ib valley, which contains some very fine villages, and regarding the valley as a whole, I quote the words of Mr. Goodridge :—

"The country on both banks of the Ib is open and well cultivated. That on the eastern side is principally a *rice* country of great fertility, and the accompanying sketch map will show what proportion of the total area is well cultivated, what proportion is fairly well cultivated, and what is either uncultivated or under forest. There are altogether about 200 villages on this side falling under the first class containing 130,000 acres, and 80 villages under the second class containing 7,000 acres. A reference to the settlement records shows that in these villages there are altogether about 30,000 acres of land of the first quality, 20,000 of the second, 65,000 of the third, and 85,000 of the fourth quality."

"The land on the west side of the Ib is perhaps even more fertile than that on the east bank, and is well watered. In nearly every village there are one or more large tanks which are used for irrigation purposes, and here a great deal of coarse sugar (*gurh*) is made. During a recent tour in this part of the district, I observed also in many places that spring crops were also being introduced and I saw in several villages some good wheat and gram-fields. The soil on the west bank, having more clay in it, and there being greater facilities here for constructing tanks, is better adapted for spring crops than the land on the east bank."

12. If, however, the construction of a branch line to Sambalpur will not be undertaken except as a portion of a line to Cuttack, I venture to represent the very great importance of carrying the line as near the town of Sambalpur as possible, as shown by the considerations already adduced. On this point Mr. Goodridge writes :—"The high lands surrounding the town of Sambalpur on the north do not permit of the railway being conveniently brought into the town of Sambalpur itself, and the best site for the station would probably be a couple of miles outside at a place named Sarla, but it would be well if arrangements could be made to unload boats into the railway wagons at all seasons of the year by providing a siding running down to the banks of the river at the Panch Kouria landing and ferry. The Executive Engineer, who has laid out the line to Sambalpur, informs me that there will be no difficulty in arranging for such a siding, which will be less expensive and more convenient than having the station itself at Sambalpur."

It is understood that for a railway to Cuttack two alternative routes have been surveyed—one running *viâ* Nakridol and Dhenkanal, and the other lying to the south *viâ* Rampur and Angol. Whether the line takes the northern or southern route it will on leaving the open country round Sambalpur "enter," writes Mr. Goodridge, "a hilly, thickly wooded, and sparsely cultivated tract not at first of much agricultural importance. The southern route *viâ* Rampur will doubtless render the railway more accessible to a small tract of open country lying to the south and east of the town of Sambalpur, but that area is, as shown on the accompanying map, comparatively insignificant, and would not, I apprehend, be considered of much importance in deciding the question one way or the other. On the other hand, the northern route would be more convenient to the Bamra State, which is rich in timber and iron and capable of great development."

But so long as the railway comes to Sambalpur it makes very little difference, so far as the district and the feudatory chiefships are concerned, what course it takes to Cuttack; and hence the alignment would seem to depend on purely engineering considerations.

Enclosure No. 17 to Railway Resolution No. 799 R. C. of 1887.

No. 424, dated Cuttack, the 27th February 1886.

From—C. T. METCALFE, Esq., C.S.I., Commissioner of the Orissa Division,

To—The Chief Secretary to the Government of Bengal.

I have the honour, in reply to your letter No. 89A, dated the 9th of January 1886, to submit a report on the line of country between Sambalpur in the Central Provinces, and Cuttack, through which it is proposed that the Cuttack-Benares line of railway shall pass.

2. The proposed line, after leaving the Sambalpur district, passes through the State of Bamra, also under the Central Provinces Agency, and enters Talchir at Sapkata Hill, and runs for 30 miles parallel to the Government estate of Angul.

3. In the western part of the Talchir State, the country for miles is covered with scrub jungle intersected by numerous nullahs; scattered villages here and there are to be found, wretched in appearance, the people very poor. The Talchir estate generally is poor: the total area of cultivated land is estimated at 14,502 acres, and of jungle land 7,043 acres. The soil is hard and so stiff that iron crowbars are used in digging the earth in place of spades. The ground under the influence of the sun, even in the cold weather, binds and then splits, forming miniature crevasses. The iron bar is worked into these, and the earth removed in lumps. The State is small, containing only 116 villages in all—in the north-west, 105 villages; in the west, the direction the line will come, 7 villages; and in the south-west, 4.

4. The proposed line will pass near the Talchir coal-fields. I have no description of the value of the coal; but it was examined and reported on by Mr. Ball of the Geological Department. It is described to be as inferior; but the lower stratum has not been yet examined. The same coal-field extends to the Government estate of Angul.

5. The only possible exports from Talchir will be timber from the forests of the neighbouring State of Pal Lahera.

6. The population of the State is 35,590 as found at the census of 1881. There is very little trade of any kind: a little rice may be bartered in exchange for salt, sugar, and other necessaries of life.

7. There is no culturable waste land in the State. The scrub grows on a rocky soil not capable of cultivation; only in detached plots is the soil productive. These are marked by the presence of villages.

8. Facing Talchir on the south is the British territory of Angul, formerly one of the Gurjat States, but taken from its former chief, who was convicted of murder. The country has improved considerably under English administration. The people are exceedingly well to do, but far too proud to think of working on the roads, and too lazy to exert themselves beyond cultivating their fields. There is a considerable area of uncultivated land on scattered parts of the estate.

9. Coal exists along the banks of the Ouli river near Patrapara, six miles distant from Chendipara, through which the proposed line passes. I have no reports as to the quality of the coal; but the coal field extends for some distance—I should say over a square mile.

10. Rice, mustard, moong (a pulse), koolthi, a small pea, and oil-seeds are abundantly cultivated and exported. Angul feeds itself with paddy, but requires cotton-cloths, salt and spices.

11. The area of the estate is 563,840 acres, of which 259,797 are occupied by hills; of the remaining 304,083 acres, 51,022 were found cultivated at the last rough settlement. It is believed that 108,981 acres more have been reclaimed from waste and brought under cultivation, leaving 144,080 acres still capable of cultivation. Of this area, 71,295 are devoted to forest, leaving 72,785 for increase of cultivation.

12. After leaving Talchir, the line skirts the Hindol hills on the one side and the Brahmini river on the other, till it enters the State of Dhenkanal, the chief of which is a minor, the administration being under the Superintendent of the Tributary States. The country is in every way superior to Talchir and Hindol. The land is well wooded, the soil rich, the villages large and well populated, the scenery very pretty, high hills rise covered with dense vegetation, the green of which contrasts with the red soil below.

13. The chief produce is rice, of which there is little exported. The chief place is Dhenkanal; the residence of the chief is a long straggling village without trade or manufacture, but there are extensive forest lands in places, capable of cultivation. The character of the country is valleys with overhanging hills, the highest of which is Kapilas, 2,098 feet above mean sea-level.

14. The State is divided into two parts by the Brahmini river; the proposed line will pass through the southern portion, but the line will materially benefit the northern portion also, which abounds in iron, and where there is plenty of land available for extension of cultivation.

15. The line passes from Dhenkanal into the State of Athghar, a small state of 168 square miles, containing some 200 villages with a population of 2,000. The southern portion is very low and covered in floods by the spill of the Mahanaddi. It is proposed to carry the line through the low country in order to reach Naraj, a gorge through which the Mahanaddi passes, and across which it is proposed to carry the railway on its way to Puri. Scrub jungle on rocky soil with low intervening paddy-fields is the chief feature of the country. The branch to the station of Cuttack will pass along the northern bank of the river to a spot opposite the fort.

16. There is not much available land for increase of cultivation. There are no engineering difficulties along the whole route, large rivers to be crossed, or deep cuttings required. The difficulties arise when the Mahanaddi is reached. The line will pass through land which will probably be given free to the British Government for the Railway; but questions of jurisdiction over British subjects will arise which will require to be settled.

17. The evidence is against any large export or import trade except in oil-seeds from the States of Talchir, Dhenkanal, Athgar: from Angul rice and oil-seeds will be exported. A considerable local passenger traffic may also be expected from Sambalpur, Bamra, Pal Lehara, Athmallik, Talchir, Hindol, Dhenkanal, Athgar and Angul; but oil-seeds will form the chief export to Cuttack, while salt, sugar, shirtings, silks, spices, will be carried inwards. The line selected is the cheapest and the best that can be selected for joining Cuttack to Sambalpur, although a more direct line between Raipur and Puri could be found west of the Mahanaddi, avoiding the larger rivers, such as the Mahanaddi and the Katjori.

18. The Sambalpur and Cuttack line will pass through a country with a population of 335,917 persons, *viz.*:—

Pal Lehara	15,450
Dhenkanal	178,072
Talchir	38,021
Angul	78,374
Athgar	26,000
TOTAL	335,917

19. No statistics of the productive capabilities of the States or of the amount of the produce likely to be exported can be obtained. If compiled, the figures would be mere guess work. I have not therefore given any figures. The inhabitants of the Tributary States of Orissa through which the line will pass cannot be said to be energetic or alive to their material interests like their countrymen in Cuttack; they will allow the whole trade to be taken away from them by either European or Mahomedan merchants from Bombay. The Uriya has no energy, and is so apprehensive of sustaining loss that he would rather continue poor than hazard his capital in opening out the trade of his country. As regards trade, then, it will be developed very speedily by others than Uriyas: but as regards cultivation, the pressure of the population on land in Orissa will rapidly

convert the waste land into cultivated field wherever the nature of the soil will permit of it, and the undoubted effect of the railway will be to bring the waste lands of the Tributary States rapidly under cultivation.

20. In matters of cultivation the Uriyas cannot be charged with apathy or indifference; but it is in matters connected with trade that they are chargeable with indifference.

21. The present export trade of Cuttack depends mainly on the supply of grain from Sambalpur and the Central Provinces. I have no doubt that the railway will enormously develope this trade. The present route is by water, 200 miles by the Mahanaddi down stream, with a long and tedious return journey of 17 to 20 days. The carriage, under these circumstances, is expensive, besides being hazardous. A railway will largely develope this trade. The difference between the local selling price of grain and the market value at Cuttack is very large. I have known paddy selling at 70 seers for the rupee in the Gurjats, and the same quantity at the same time selling in Cuttack at 2 rupees, and I have no doubt that further into the interior the difference is even much larger.

22. I believe the development of trade will be enormous. It is only a few years ago that the value of export at False Point amounted to R12,71,575, while in the last year it had reached the sum of R26,49,195. When in addition to the present exports the vast stores of grain now cooped up in Central India are released, the traffic by rail must become very large.

Enclosure No. 18 to Railway Resolution No. 799R.C. of 1887.

Note left by MR. PARKER, Engineer-in-Chief, when going on furlough, 1886.

The object of the railway is to provide railway communication for pilgrims from Central and Western India visiting the shrine of Jaggannath at Puri. The railway will also open out the country between Sambalpur, Cuttack, and Puri, and it is supposed will materially facilitate and increase the trade of the three towns. As a famine relief work it will connect the districts of Orissa, periodically stricken with famine, with the rich grain-producing district of Chattisgarh, being connected with the Nagpur-Bengal Railway at Panchpara station, 3½ miles east of the Ib river.

2. The original project of the Benares-Cuttack Railway comprised a line from Mogul Serai station of the East Indian Railway, near Benares, to Chandil, a station on the Nagpur-Bengal Railway. From Chandil junction to Kantera on the Nagpur-Bengal Railway (ten miles north of Chaibassa, the sudder station of Singbhum) the traffic would have to be taken a distance of 28¾ miles over the Nagpur-Bengal line. From Kantera junction a length of 180 miles would bring the line to the north bank of the Mahanaddi.

3. From this station two alternatives existed—one for running the line up the north bank of the Mahanaddi, crossing that river at Naraj, and thence running in *viâ* Khurda to Puri, the other for establishing a ferry across the Mahanaddi at the terminus near the Beropa river, opposite Jobra, a suburb of Cuttack, and thence running a line across the Khukai river *viâ* Khurda to Puri. The comparative cost of these alternatives was given in the preliminary report and estimate on the line submitted by Mr. Parker in 1884.

4. A final estimate of the lines located from Mogul Serai to Chandil, from Kantera junction to the Beropa terminus, and from the south bank of the Khukai river to Puri, was submitted in 1885.

5. The section of the line between Kantera junction and the north bank of the Mahanaddi proved to be very expensive, amounting to R2,57,81,818, or R1,41,659 per mile on the 180 miles, the cost of this section being materially enhanced by the cost of a bridge required over the Brahmini river, and heavy ghât work at the descent from the Keunjhar plateau to the Orissa plains. The gradients were unfavourable, and the country traversed promised no results within any reasonable time that would warrant so expensive a line being made.

6. A reconnaissance was ordered by the Government of India, in the cold season 1884-85, of a line connecting Cuttack with the Nagpur-Bengal Railway near Panchpara, a village some 30 miles north of the town of Sambalpur and passing near to the town. The reconnaissance showed that a line could be constructed at a very much less cost than the Kantera-Cuttack section of the main line, Benares-Cuttack-Puri Railway, with more favourable gradients, and some prospects of a paying traffic, although this line would not serve passengers from the North-West of India, Benares and Gya. It would, however, be of material benefit to a very large number of pilgrims who visit Puri from Central and Western India.

7. The project to be submitted comprises therefore working plans and estimates for a railway from Panchpara to Naraj, crossing the Mahanaddi at Naraj, either by a ferry or by a permanent bridge, and joining the line located in 1884-85 from the south bank of the Khukai river to Puri, about three miles south of the Naraj bridge and four miles from the Katjori terminus, Cuttack-Puri section. To the amount of this estimate must be added the estimated cost of the Cuttack-Puri section, omitting the portion of the line between Katjori station and the junction.

8. It seems to me that the line now proposed might be connected with the Benares-Cuttack Railway at Sathbarwa in the Palamau district, by running a line northward from Panchpara up the valley of the Ib river as far as Amriha, a village in the Jashpur State, thence turning eastward *viâ* Kurdeg, Tainsar, Ramdega, Reidih to Gumla in the Panari pergunnah of Lohardugga. From Gumla the line would make for the pass near Saranga at the head of the Phuljar tributary of the north Koel river, run down the valley of the tributary and north Koel to Kuku in the Simah pergunnah, Palamau, cross a ridge, and join located line at Sathbarwa station.

9. There would be a rise of some 1,400 feet to Gumla, a further rise of 900 feet to the pass near Saranga, and a corresponding fall to Mankah, but the line would traverse a rich part of the Lohardugga plateau. No suggestion of this subject has yet been made to the Government, but I have myself traversed the country as far as Rehi, and the remainder has been levelled over by Mr. Concanon.

10. Should the Government of India entertain the idea, there would be a very large increase to the traffic of the Panchpara-Puri line, as pilgrims would make direct from Benares and Gya for Puri; and the section of main line, between Palamau and Mogul-serai was shown in the estimate submitted for main line to be also the most favourable for construction as regards cost and prospects of the traffic.

11. The line from Panchpara to Puri would, besides the pilgrim traffic, attract a considerable traffic between Sambalpur and Cuttack. The Deputy Commissioner, Sambalpur, has been asked for an estimate of this traffic. The railway should be able to compete with the boats of Sambalpur and Cuttack. Some 2,000 boats are employed during the period the river is navigable. The navigation is difficult, and boats are occasionally lost. From Sambalpur to Katjori terminus is 144 miles: at ¼ pie per maund per mile, lowest rate, the cost of carriage of one maund is 4 annas; but the boats charge 6 to 8 annas up from Cuttack and 8 to 12 annas down.

12. There would also be through traffic between Panchpara and Cuttack in a small way, as Talpachia, which is an important market, 1½ miles from Panchpara, supplies the country round about and the Native States to the north with goods from Cuttack, such as salt, piece-goods, brass vessels.

13. There would be also some local traffic, as hundreds of carts and bullocks from Cuttack traverse the country, being employed by banjaries and mahajuns, who purchase grain, jaggree, cotton, &c., in the different villages between Sambalpur and Cuttack.

14. From Panchpara to the 19th mile the line runs down the valley of the Ib river through an easy country, which is however much covered with jungle scrub and young sal trees. The only river of importance in this is the Bonun, which takes some 600 running feet of waterway.

15. Between the 19th and 20th mile passes through a gap in a range of hills running east and west and makes for Sambalpur: the site for railway station is about two miles from the bazar, but nearer approach cannot be made, as there is a mountain on the north-east of the city, to go round which would add three or four miles to the length of the railway, and the land and buildings interfered with would be costly. Sambalpur station is about the 31st mile from Panchpara, the country from the 19th mile being much the same as before.

16. After leaving Sambalpur the line runs through some five miles of open, but undulating ground, crossing two large streams, the Harrad and Maltijor nullahs. It then enters jungle and somewhat difficult ground to locate through, having to cross the watershed between the Brahmini and Mahanaddi rivers. This watershed is crossed at Kasinda, whence the line follows the valley of the Tikaria nullah to Kusala, 104th mile. The hills stand boldly up from the comparatively flat ground between them, rising from 1,000 to 1,500 feet above the general level of the country. A tributary of the Tikaria (an alternative trial line was run through the hills *viâ* Hero and Heraloi to Konchonpur, but as the summit was 110 feet higher than at Kasinda, this was abandoned in favour of Maltijor valley line, which has also better gradients) is crossed at Nakridol, requiring 100 running feet waterway, and the Ouli nullah at the 91st mile. Between Nakridol and Kusala several ridges are crossed which run from the hill south of the line down to the Tikaria nullah, having long gentle slopes, and the country is more than half covered with jungle. Kusala is a large village of 1,500 inhabitants. Mahajuns are established here, who trade with Cuttack.

17. From Kusala to Dhenkanal, 155th mile, the line traverses the Brahmini valley crossing one rather high ridge at the 117th mile, which extends some miles to the north-east. From Jarridoh, 118th mile, the valley is open and cultivated up to Bolpur. Three large nullahs—Sankria, Nongra and Bangursinga—are crossed. Coal shale crops out in the Sankria nullah, mile 111, and the trial pit was sunk 40 feet deep some years ago near the village Gopalprosad, ¼ mile from the railway, water being 10 feet only below the surface. No specimen could be obtained, but Superintendent of Geological Survey has been addressed on the subject.

18. Kadakpershad, a mile north of railway, mile 132, on the banks of the Brahmini, is an important village of some 1,000 houses, and 25 mahajuns reside here. Bolpur and Dhenkhanal are large villages, the latter being the residence of the Chief of Dhenkhanal Tributary State. All round Dhenkhanal is a good deal of bamboo jungle, and from here to the river there is a length of some 12 miles of very dense jungle, scrub thorns, and bamboos. South of Dhenkhanal the line crosses again the dividing ridge of the Brahmini and Mahanaddi basins, passing between hills of laterite. The work is not heavy, and the gradients of 1 in 100 are not very long.

19. The line makes for a crossing of the river Mahanaddi at Naraj, 3,600 feet wide in full flood. There are low sandstone hills on either bank, but spill-water passes over the low land behind the hills on either side. On the north bank the spill-water appears to come from the large nulla that enters the river west of the Dawkoti hill. On the south side the river is embanked, but the embankment at Modilan, west of the Saidessen hill, is liable to be breached.

20. In the original project the line from Cuttack to Puri started from the bank of the Katjori river where the road to Khurda begins. The line now laid out joins this location four miles from this point, but as I understand from the Commissioner of Orissa that the Katjori terminus would not be workable for a ferry steamer in the rains owing to the fluctuation of the depth of water, a branch line has been located from near Hortikal to Sumliaband on the left bank of the Mahanaddi, opposite Cuttack fort to serve the town of Cuttack. The length of this is 8 miles, and a ferry steamer would be required to ply between the fort and Sumliaband. This station would also probably attract some of the pilgrims who travel by the Orissa Grand Trunk road to Puri.

21. Details of alignment and materials, &c., available for the line will be found in reports by Executive Engineer.

22. Permanent-way and English material would be landed at False Point and brought up to Cuttack by canal. Some might possibly be landed at Puri, but there is only an open roadstead there. I think it would be safest to land all English material at False Point, though it would be a convenience for the line south of the Mahanaddi to have a plate-laying head at Puri. There are workshops at Jobra where probably engines and wagons be set up, and for the Puri section it might be worthwhile to run a temporary line from Jobra to Naraj on the surface of the ground, crossing the Katjori by a temporary bridge, which would not cost much, as the river is fordable in the dry season.

Enclosure No. 19 to Railway Resolution No. 799R.E. of 1887.

Extract from the report by MR. T. OWEN, Officiating Engineer-in-Chief, Benares-Cuttack-Puri Railway Surveys on the line of railway from Panchpara on the Bengal-Nagpur State Railway to Cuttack.

3. The following statistics have been prepared showing the state of the water-borne trade at Sambalpur. There are about 2,000 large boats plying between Sambalpur and Cuttack, of an average carrying capacity of 250 maunds. Freight is at the rate of from 6 to 8 annas per maund on goods imported or coming up the river, and from 10 to 12 annas per maund for goods exported. About 4,50,000 maunds of rice, wheat, gram, tillee, horns, and about 500 bales of cotton, each of 3 maunds, worth about ₹25,000, are exported monthly and for six months of the year. In return 1¼ lakhs of maunds of salt, cloth worth ₹50,000, cocoanuts worth ₹3,000, and brass utensils worth ₹1,500, are also received monthly. In short, an estimate made by some of the leading merchants of the town puts the annual value of the exports at ₹12,00,000 and the imports at ₹13,00,000. The total value of the articles taxed for octroi entering the town at Sambalpur is alone ₹6,47,720. Thirty miles to the south on the river is Binka. It is the centre of the salt and cocoanut trade of the Raipur districts, it being nearer to Raipur than Sambalpur, the traffic to Raipur striking the eastern road at Sohella. The average exports and imports for a month are as follows:—

Exports.		*Imports.*	
Rice . . .	16,500 maunds.	Salt . . .	15,500 maunds.
Cotton . . .	330 ,,	Cocoanuts, valued at ₹ 25,000.	
		Brass utensils, valued at ₹ 2,000.	

Even supposing that the railway does not create any new trade, there is at present an export and import trade of not less than 25 lakhs of rupees annually between Sambalpur, Binka, and Cuttack, and considering the comparatively heavy rates for water carriage between Sambalpur and Cuttack, and still heavier cost for cart traffic, it is likely that the railway will be able to carry most of those articles much cheaper and all the year round instead of as at present for only eight months in the year. The journey to and back from Cuttack takes six weeks, and the boats at many places are subject to risk. Last year six large boats were lost. The traders of the town do not avail themselves of insurance.

4. The high lands surrounding the town of Sambalpur on the north do not permit of the railway being conveniently brought into the town of Sambalpur itself, and the best site for the station would probably be a couple of miles outside, at a place named Sorla, but it would be well if arrangements could be made to unload boats into the railway wagons at all seasons of the year by providing a siding running down to the banks of the river at the

Panchkauria landing and ferry. The Executive Engineer, who has laid out the line to Sambalpur, informs me that there will be no difficulty in arranging for such a siding, which will be less expensive and more convenient than having the station itself at Sambalpur.

5. So long as the railway comes to Sambalpur it does not matter, so far as the district and the feudatory states attached to it are concerned, what course it takes to Cuttack: therefore the shortest and easiest from an engineering point of view will probably be the best, and that selected by Mr. Parker from Sambalpur to Hiro and on to Nakridol seems a good one. Whether it take the northern or the southern road to Cuttack, it will in either case shortly enter a hilly, thickly wooded, and sparsely cultivated tract not at present of much economical importance.

The southern route *viâ* Rampur will doubtless render the railway more accessible to a small track of open country lying to the south and east of the town of Sambalpur, but that area is, as shown on the accompanying map, comparatively insignificant, and would not, I apprehend, be considered of much importance in deciding the question one way or the other. On the other hand, the northern route would be more convenient to the Bamra State, which is rich in timber and iron and is capable of great development.

6. I now proceed to give a brief sketch of the nature and productiveness of the country through which the line will run if it be brought from Panchpara to Samalpur till it reaches the hilly and sparsely cultivated country on the east of the district.

The country on both banks of the Ib is open and well cultivated. That on the eastern side is principally a rice country of great fertility, and the accompanying sketch will show what proportion of the total area is well cultivated, what portion is fairly well cultivated and what is either uncultivated or under forest. There are altogether about 200 villages on this side falling under the first class, containing 130,000 acres, and 80 villages under the second class, containing 7,000 acres. A reference to settlement records shows that in these villages there are altogether about 30,000 acres of land of the first quality, 20,000 of the second, 65,000 of the third, and 85,000 of the fourth quality. The land on the west side of the Ib is perhaps even more fertile than that on the east bank, and is well watered. In nearly every village there are one or more large tanks which are used for irrigation purposes, and here a great deal of uncured sugar (*gur*) is made. During a recent tour in this part of the district I observed also in many places that spring crops are also being introduced, and I saw in several places some good wheat and gram fields. The soil on the west bank having more clay in it, and there being greater facilities here for constructing tanks, it is better adapted for spring crops than the land on the east bank.

7. In conclusion, I would add that there is every promise of a very considerable railway-borne trade between this district and Cuttack if a line to meet the Nagpur-Bengal Railway were constructed from Panchpara to Cuttack, and such a railway would also give an enormous stimulus to the water-borne trade of the whole Chhattisgarh country if brought to Sambalpur or some other point near by on the Mahanaddi.

Enclosure No. 20 to Railway Resolution No. 799R.E. of 1887.

No. 567, dated Hazaribagh, the 13th November 1886.

From—T. E. OWEN, Esq., Engr.-in-Chief, Benares-Cuttack-Puri Railway Surveys,

To—The Chief Engineer, Bengal, Public Works Department.

I have the honour to submit complete estimates and plans for a line of railway (broad gauge) from Panchpara *vid* Sambalpur to Naraj, on the river Mahanaddi, with a branch line to Cuttack.

2. Panchpara is a station site on the proposed line from Sitarampur to Nagpur (124 miles from Sitarampur), within the district of Sambalpur, in the Central Provinces, and was fixed on as a suitable starting point for a line down the valley of the Ib and between the two great rivers Mahanaddi and Brahmini to open out Orissa and carry pilgrims to Puri, in place of another line located and estimated for from Chandil, a station on the proposed Nagpur-Bengal Railway, to Cuttack. A reconnaissance was made along this former line in 1884-85. The result being favourable, detailed estimates and plans were ordered to be prepared, and three survey parties were sent into the fields in November 1885, under the orders of Mr. Parker, Engineer-in-Chief, Benares-Cuttack-Puri Railway Surveys. Their field work was finished in April 1886.

3. This estimate is for a line 170 miles long from Panchpara to Naraj, a point on the Mahanaddi, fixed upon as the best site for crossing. Naraj is 8 miles higher up the river than Cuttack, and more in the direct route to Puri. It also provides for a branch line, 8¾ miles long, to Cuttack, leaving the main line at mile 166. The crossing of the Mahanaddi river either by ferry or bridge is not provided for in this estimate, which is a complete project in itself, and no steam ferry or bridge will be required unless a line of rail is carried on to Puri, and it is in the estimate for this latter that the cost of such is included. This estimate is submitted as a separate project with this office No. 560 of 10th November 1886. This line—Panchpara to Naraj—will bring Sambalpur, Chhattisgarh and the south-west inland portion of Orissa into communication with the lower navigable portion of the Mahanaddi river, and with Cuttack and the Orissa canal system; the Mahanaddi river being navigable for a long way above Sambalpur into Chhattisgarh, but of little use for this purpose between Sambalpur and Naraj on account of rocks and rapids. The Talcher coal-fields will be opened out, and coal at a low rate can be supplied to Cuttack and the Orissa canal system. A reconnaissance by Mr. Parker in 1886 shews that this line can be continued up north to Palamau, and so on to Gya; this would then be the chief route for pilgrims to Puri.

4. The levels commence at a point on the Nagpur-Bengal Railway line, mile 124·106, in a slight cutting. The line runs chiefly through a country much cut up into ravines, with many small ranges and isolated groups of hills, and is undulating throughout. From 0 to mile 65 the line is a fairly easy one without heavy banks or cuttings, though the nature of the country necessitates frequent changes of grade. From mile 65 to 85 the cuttings and banks are rather heavy, with some long grades of 1 in 100. This could not be avoided, as explained in Executive Engineer's report, the line running between the river and some low hills. From mile 85 to 111 the line is fairly easy and light; miles 111 to 119 have rather long grades of 1 in 100; the rest of the line is fairly easy and without heavy cuttings or embankments, except in the last 3 miles, where there is a rather heavy bank on account of the spill of the river Mahanaddi. The branch line to Cuttack, 8¾ miles, leaves the main line at mile 166; the bank is high, the country being flooded between the junction and Cuttack. The height of bank here was so fixed by Mr. Parker. The maximum gradient is 1 in 100, and the minimum curve 1,910 feet radius for the whole line. In comparison with other lines through Chota-Nagpur and Orissa the banks and cuttings are not heavy, nor the gradients excessive. Except in miles 65 to 85, there are no long continuous grades up 1 in 100, which has been taken as the ruling gradient.

From Panchpara to the Mahanaddi the ascents amount to 1780·7. The descents amount to 2397·7, so that the difference is 617 feet. The minimum radius is 1,910, but there are only two short curves of this radius, all others being above 2,800.

5. There are no large rivers crossed, the largest stream is the Bonum, 8 spans of 100 feet; in the whole length there are only 16 major bridges, and none of these present any difficulty as to foundations.

6. From mile 0 to 42 the country is fairly cultivated.
" " 42 to 71 mostly waste and jungle.
" " 71 to 91 partially cultivated.
" " 91st to 103rd cultivated.
" " 103rd to 117th mostly waste and jungle.
" " 117th to 146th well cultivated.
" " 146th to 170th mostly jungle with stretches of cultivation here and there.

7. *Soil and material available.*—The soil is chiefly a sandy clay. To mile 132nd fairly good gneiss for building is to be had; at mile 166 there is sandstone, as well as at the terminus Naraj, where there is a good sandstone quarry much used. Earth suitable for brick-burning is to be had at intervals along the line, kunkur for lime is to be had along the whole length.

8. *Water.*—Little information is given about water. Where borings were made, rock was in most instances reached at from 5 to 10 feet. The inhabitants do not use well, but tank water.

9. *Coal and iron beds.*—The Talchir coal-fields are passed through; Gopalpersad, 110th mile, is about the centre of this. The coal beds are extensive, and probably could be cheaply worked, coal being near the surface. The quality is stated by Mr. Ball (Economic Geology) to be inferior, but from experiments carried on in Orissa it seems that useful coal is to be had. Mr. Medlicott reports on samples of Gopalpersad coal—"rather below the average of Indian coals, but still a fair fuel." Iron ore is reported to be found near miles 71 and 79.

Timber.—Sâl sleepers, it is reported, can be procured from the Bamra State, about mile 64, but probably the chief supplies would be from Forest depôts at Cuttack, and somewhere near Panchpara, and on the Brahmini river from the Keunjhar forests opposite miles 130 to 150. From this latter source it is probable a considerable saving on the estimated cost might be effected in prime cost and carriage.

10. *Traffic.*—No reliable statistics can be given on this point; the principal articles of import are cloth, thread, salt, tobacco, and metal utensils; and of export, grain, timber, bamboos, charcoal, and various jungle products. Sambalpur is the principal mart passed. The imports and exports here are—imports 6¼ lakhs, exports 2¼ lakhs yearly; the latter chiefly consists of articles brought in under the head of import. A large trade may be expected here. The Deputy Commissioner reports the railway will tap the district of Chhatisgarh. The other places of most importance are Talpachia, 3¾ miles, Supanga, 12th mile, Ranikinda, 24th mile, Nakridol, 71st mile, Chudipada, 96th mile, and Gopalpersad, 110th mile, and Dhenkhanal, 152nd mile, Cuttack terminus.

A considerable trade in timber might be expected. Coal would probably be carried down to Cuttack, over 60 miles of the line, in large quantities. More than half of the country passed through is cultivated, and most of the remainder is suitable for cultivation, and a railway would increase the value of this latter. The passenger traffic from the Central Provinces to Cuttack and Puri would probably be considerable, but there are no statistics.

The estimated cost of this project is 174 lakhs, interest at 8 per cent. = ₹12,92,000. This would require gross mileage receipt of ₹2,400 per day for goods and ₹1,140 per day for passengers, or nearly ₹95 per week per mile for goods and ₹45 per week per mile for passengers, to give an interest on the outlay of 4 per cent., allowing 50 per cent. for working, which, with cheap coal and sleepers for renewal, should be sufficient.

11. Three engine-changing stations will be required: one at each end and one near the middle. These have been fixed at Panchpara, 0 mile, at Ouli 91st mile, where bank is 0, and at Cuttack junction, mile 166; turntables being provided at Cuttack and Mahanaddi stations. At Ouli the ground is high and open, and this will be a good situation for quarters for the permanent staff. Cuttack junction station is some little way back from the actual junction of the branch, but there is no suitable site for a station nearer. It will probably be necessary to have a double line for this short distance.

As Panchpara will be a station on the Nagpur-Bengal Railway, no details are estimated for station arrangements. Lump sums have been entered sufficient for a share of each, or to provide separate accommodation, if necessary, under the heads of station buildings, staff quarters, and station machinery.

Second class stations with waiting-rooms have been provided for at Sambalpur, Cuttack junction, Cuttack, and Mahanaddi stations, and refreshment-rooms at Cuttack junction. These are a simple modification of the type plans for stations except at Cuttack junction, where the height of bank being 7 feet, a framed building resting on rails is provided. Passenger platforms 600 feet long and 40 feet wide are given.

The third class stations are on the ordinary type plan, with a platform length of 350 feet and a width of 40 feet. Watering arrangements are provided for at all stations except in some few a short distance apart.

Goods sheds 100 × 40 are provided for at all the second class stations, with platform 350 feet × 50 feet.

For the third class stations a goods platform has been provided for, 150 feet in length with shelter for goods 50 × 20 open in the front. These may not at all be required, and it may be convenient in many to place this structure on the passenger platform, where no separate goods platform is required. If there is the expected traffic in grain, &c., shelter from rain is most requisite, more or less, at every station in this district, with a heavy rainfall. This is a point frequently neglected. Plans of station yards show arrangements for crossing stations and extra sidings required in dotted blue. With a clear length of siding of 1,600 feet as laid down, a minimum length of 2,200 feet is required for station yards.

12. *Staff quarters.*—These have been provided for fully, terrace roofs on flat arches, and rolled beams have been given for all buildings, as far as possible, as suitable to the climate, and necessitating fewer repairs than any other description of roof. For dwelling-houses for the permanent superior staff, lump sums have been provided, the details of these being much better left to the Engineer in charge at time of construction.

Station machinery.—This has been fully provided for in all details.

13. *Rates.*—The rates for earthwork and masonry are those allowed by Mr. Parker in his estimates for lines from Mogul Serai to Puri, and I see no reason to alter them, as they appear amply sufficient. It is probable a considerable saving can be effected in construction by the use of rubble stone masonry for all minor bridges, foundations of major bridges and perhaps for superstructure of the latter, but all plans have been drawn out for brick masonry. Until construction commences it is uncertain how far rubble masonry could be used. Rates for other details have all been carefully gone into.

The permanent-way would be delivered at Cuttack up the Mahanaddi, opposite Naraj and at Panchpara by the Nagpur-Bengal line, if this latter is constructed first; and the carriage has been estimated for accordingly—120 miles delivered from Cuttack, 50 miles delivered from Panchpara.

14. This work was under Mr. Parker as Engineer-in-Chief, with head-quarters at Hazaribagh, until 8th April 1886, when Mr. F. B. Walker took over charge, in addition to his other duties, with head-quarters at Bhagulpur. I took over charge from Mr. Walker on the 30th of June 1886, with head-quarters at Hazaribagh. The gradients were fixed before I took over charge. The plans of bridges, stations, quarters, &c., have been prepared since I took over charge, as well as all estimates.

Mr. F. L. Dibblee, Executive Engineer, 1st grade, with the following staff was in charge of the Sambalpur Division, miles 0 to 64:—Mr. E. C. Hawkes, temporary Engineer, and four surveyors.

Mr. C. Von Ahn, Executive Engineer, 3rd grade, with the following staff was in charge of the Centre Division, miles 64 to 111:—Mr. E. T. Faulkner, Assistant Engineer, 1st grade, and five surveyors.

Captain M. Laugharne, R.E., Executive Engineer, 3rd grade, with the following staff was in charge of the Cuttack Division, miles 111 to 170; the Cuttack Branch, 8 miles, and the junction (across the Mahanaddi river) with the Cuttack-Puri line, 3½ miles, until forenoon of 17th April 1886, when he took leave, and has not rejoined. Mr. Von Ahn took over charge of the Cuttack Division in addition to his own from the afternoon of 17th April 1886: Mr. E. J. Alexander, Assistant Engineer, 1st grade, and four surveyors.

The field work has been done quickly, and the alignment carefully laid out, and the survey plans and sections and land plans plotted and prepared neatly and with much detail. The original working plan and section sheets, together with land plans, details of earthwork and masonry, are kept with the records of each division. The centre line in miles 0 to 65 has been fixed on the ground by stone posts at every 10 chains fixed in a bed of concrete with exact centre of line marked on it, and the chainage on a stamped tin plate. From miles 65 to 170 and on the Cuttack branch and Naraj extension the centre line has been fixed at every 20 chains.

Report by Mr. F. L. DIBBLEE, M.I.C.E., Executive Engineer, upon the Sambalpur Division.

Alignment.—From Panchpara to Sambalpur the line runs almost due south; from thence to Ranga, the end of the division, the direction is nearly south-east, there being but a very slight divergence from a direct straight line between the two points. The obligatory points which fix the direction of the first part of the location are, 1st, the station of Panchpara where the junction with the Nagpur-Bengal-Railway is formed; 2nd, a suitable crossing of the Borun river at the 7th mile; 3rd, an opening in a range of low hills which crosses the country about the 20th mile; and 4th, the town of Sambalpur. Copy of a letter from the Deputy Commissioner of Sambalpur, in which he remarks on the question of taking the railway to that town, is appended. There was also a memorandum by the same officer regarding the route for the line generally, which was submitted and published with the Narrative Progress Report. The importance of making the town of Sambalpur a station on the main line rather than to have it served by a branch, having been recognised, the slight detour to take the line to that place became necessary, but the increase in distance is very little, as the opening above alluded to through the hills makes the same line obligatory up to the 24th mile in either case. The total length of railway to be built, as now arranged, will be slightly less than if a branch to Sambalpur had been decided on, and the only disadvantage is the carrying through traffic the short additional distance. From Sambalpur the general direction of the old Cuttack Road has been followed, excepting for a detour from the 42nd mile to mile 59 to avoid a high watershed near Heraloi, between the hills, by which the cart road passes. The highest point on the line adopted is 96 feet lower than that first tried.

Character of the country.—The country is open and well cultivated for the first 8 miles, the next 8 miles passes through jungle, with very small areas of cultivated land at long intervals. From this point, the 16th mile, to Sambalpur, the country is under cultivation for the whole distance, excepting at the point where the pass through the hills occurs. From Sambalpur, the 31st mile, to the 36th, the country is all cultivated; thence for three miles the line passes through jungle and broken ground, after which there are three miles of cultivated country; thence from the 42nd mile to the 64th the line passes through a long stretch of jungle with occasional cultivation near the widely scattered villages—one-fourth of this distance may be taken as cultivated and three-fourths jungle. It should be

remarked that the whole country is quite suited for cultivation except where broken by hills and deep ravines, if there were inhabitants enough to occupy it. The country is generally tolerably flat, and there will be but few places where the limiting gradient of 1 in 100 has to be employed in any considerable lengths. There are three places where rock-cutting will be required of any appreciable depth, and in others laterite is met with in a few instances; but for all the rest of the division the material will be earth easily excavated.

Building material.—The general geological formation is metamorphic, with a small strip of carboniferous, which is crossed at mile 23. Gneiss of good workable quality is found at short intervals, and there are quarries now being worked of soapstone, which comes out in thin slabs, at mile 27 and at Sambalpur. Laterite is also found that may prove to be workable; nodulous kunker for lime is abundant everywhere. Good brick earth can in many places be obtained, and it will doubtless be economical to manufacture bricks for purposes of arching in culverts and for buildings.

Station sites.—Stations have been fixed for the 1st, 5th, 12th, 18th, 24th, 30th, 35th, 43rd, 53rd, and 61st miles. Many of these will not at first be required as contributing to the traffic of the line, but crossing places for trains and "line-clear messages," for working trains would necessitate the distances being kept nearly as has been proposed. A table is enclosed showing list of stations, with height of bank or cutting which occurs at each. Water is likely to be obtainable at all stations with moderate depth of well. It was found not to be possible to obtain accurate information on this point, however, as there are at present no existing wells in villages near our proposed stations. Water used by the people of the country appears to be almost universally obtained from tanks, where no stream exists. In the communication alluded to above, as having been received from Deputy Commissioner of Sambalpur, reference is made at some length to the importance of having a line of rails taken down to the river Mahanaddi at Sambalpur, so that goods might be transferred from boats to railway wagons direct, and it is pointed out that the traffic would be considerable. Such a line should, if made, be considered as an extension of goods sidings, and is quite practicable; but there might be difficulty in arranging a permanent landing place for boats which could be utilized at high as well as low water. This appears to be a question that could be dealt with more advantageously after the construction is completed, and when accurate observation could be made of the amount of goods traffic that would be served by it.

Labour.—All skilled labour will probably have to be imported, and, in the event of work being pushed vigorously, ordinary common labour for earthwork will also have to be imported. Wages are at present very low, and the importing even a part of the labour will increase them, and this doubtless will attract all the available labour at such time as it is free from the field work, but the population is not very great, and the work of cultivation when in progress would doubtless employ it all at certain seasons.

Markets.—The town of Sambalpur is probably the only one which can be considered large, and having a market which would give rise to any important traffic for the railway. The quantity and value of exports and imports have been furnished by the Deputy Commissioner, and is enumerated with his letter on the subject. The imports from all sources during the year 1884-85 are given as 9,88,000 maunds of ₹6,47,700 value, and the exports during the same period were 2,42,000 maunds and ₹2,26,000 in value. The village of Talpachia, about 3½ miles distant from Panchpara station, is to a certain extent a distributing centre of trade to and from the surrounding country, and will produce an appreciable amount of traffic. At Lopanga (12th mile from Panchpara) and at Ranikinda, 24th mile, there are weekly fairs, and doubtless when the railway traffic is established, articles of consumption will be imported and grain exported from these places. It is difficult to obtain any reliable statistics, as the custom in this part of the country is for the dealers to go about from the fair at one place to another without having shops of any sort. For the rest of the line, between Sambalpur and Ranja, there are no villages of any considerable size. The inhabitants appear to live in small hamlets, cluster of huts of no very great number. Doubtless trade centres will form to supply the wants of the people when the railway is established, and the carrying goods on bullocks' backs from one fair to another has come to an end.

River crossing.—A list of major bridges is attached showing the catchment area of country drained by each. The most important rivers are *first*, the Bonun; *second*, Hunad nullah; and *third*, the Matijor river. The first requires a bridge of 8 spans 100 feet girders; it drains 1,173 square miles; the banks are high, well defined, and rock appears on the surface of the riverbed for one-third the distance, and is found at no great depth for the remaining part of the bridge site. The second, Hunad nullah, is a branch of the Mahanaddi, and is crossed near Sambalpur by a bridge 3 spans of 80 feet. Rock appears in the bed of this also, and the foundation work will be inexpensive. The banks are well defined, but if the record of the highest floods is correct, there will be a considerable portion of flooded country on either side. The Matijor is crossed three times, the third crossing is at mile 34½, where drainage of 228 miles of country is provided by a bridge of 4 spans 60 feet each; the banks are high, rock appears on one side of the river, and the floods do not overflow the banks. The second Matijor crossing is at mile 46, where 3 spans of 60 feet are proposed;

the drainage area is 85 miles. The first crossing of this river is at mile 54, with a bridge of 1 in 100 feet span, rock foundations are found, and the banks are high, very much above flood level, and well defined. The other streams over which major bridges are required seem to call for no remark.

General.—The work of the survey was commenced on the 8th December 1885, and completed on the 10th March 1886. There was 100 miles of trial survey and 64 miles of completely located line finally staked out.

No. 867, dated Sambalpur, the 9th March 1886.

From—J. P. GOODRIDGE, Esq., C.S., Offg. Deputy Commissioner, Sambalpur,
To—The Executive Engineer, Sambalpur Division, Benares-Cuttack-Puri Railway.

In compliance with your letter No. 73, dated 5th January 1886, I have the honour to forward in the form of a schedule what information I can readily collect regarding the trade of the town of Sambalpur. The main routes of traffic have been, for facility of reference, roughly indicated on the map attached to this letter, and the principle articles of export and import given against each—those in red ink indicate exports, and those in black ink imports. The river Mahanaddi is principally used in the trade with Cuttack and the Chhattisgarh country and other places on the east coast.

I would add that it is most essential that the railway should be brought to Sambalpur. The main difficulties of the navigation of the Mahanaddi occur between Sambalpur and Cuttack; and if the railway touched at Sambalpur, that town would be extensively used as an entrepôt for the produce of the whole of the Chhattisgarh country. Further, grain and other produce could be brought down in the rains at Sambalpur and stored there, and shipped to Cuttack at convenient times. A railway, therefore, from Sambalpur to Cuttack, would keep not only the country around Sambalpur in direct rapid communication with Cuttack and the eastern coast, but would open up the granaries of the extensive and fertile plain of Chhattisgarh, which is so rich in the production of cereals, silk, lac, and hides.

It would be most inconvenient for the trade if the railway did not touch the river at Sambalpur, as it would otherwise be necessary for the boats to undertake a short journey by land in a country where wheeled traffic is very rare and costly; grain, too, would be liable to serious damage during the rains in being transferred from boats to carts, and then to the railway. Moreover, in any case an expensive bridge and road will have to be made connecting Sambalpur with the railway, and it would perhaps be just as well to put Sambalpur at once in direct communication with the railway. The country, too, lying to the north and north-west of Sambalpur is also well populated and productive, and a considerable trade in rice and forest produce might be expected from the country situated in the Ib valley.

I would therefore strongly recommend that the line be brought down direct from Panchpara to the river at Sambalpur, and that at Sambalpur itself adequate arrangements be made off the banks of the river for boats to unload their cargoes direct into the railway wagon.

Report by MR. C. VON. AHN, Executive Engineer, on the Central Division.

1. *Alignment.*—This division joins the Sambalpur Division at the village of Ronja. From this point it runs approximately parallel to a low range of hills on the south, and the first two miles are fairly level. Beyond this, in the 67th mile, the line crosses a pass in the hills, running along the right bank of the Tikaria river. Some difficulty was experienced in obtaining a suitable alignment here, and curves of two degrees and three degrees' deflection per chain had to be adopted. The hills referred to jut right into the river with an almost vertical face towards the river, so that it was inadvisable to take the line along the river bank. After crossing this low range, the line runs between it and another higher range, until it crosses the Champali nullah. The ground here is very undulating, and the line passes over the spur of a hill just before crossing the Champali. This portion will require some rather heavy work, which from the nature of the country could not be avoided. At Nakridol the line crosses the Champali nullah, a tributary of the Tikaria river. This nullah will require a bridge of five spans of 40 feet. The foundations are on rock.

From Nakridol the line runs over fairly level ground as far as the village of Keloberani, passing the village of Saibi, where it is proposed to have a third-class station. There are a number of minor water-courses in this portion of the line. The drainage areas of these, however, are small, as they are crossed within a few miles of their sources. Several curves were required here, so as to avoid the spurs of hills lying to the south of the line.

From Keloberani to Totabari the line passes over very undulating ground, skirting several hills and crossing a number of minor water-courses. It is proposed to have a third-class station at Bindapur, where there is a fairly level piece of ground. The Gadgadi nullah is crossed in the 80th mile, near the village of Intosoro. This nullah will require a

bridge of five spans of 40 feet. The foundations are on rock. The crossing is about half a mile below a rapid.

At Totabari there is a deflection to the south, so as to take the line over the narrowest portion of the sandstone ridge, in the 87th mile. Several trial lines were run over this portion of the line, and a number of cross sections were also taken. The alignment adopted proved to be the least expensive, although some rather heavy banking and cutting are required between Totabari and Chorimora.

From Chorimora there is a steady descent to the Ouli river, which is one of the main streams in this division. The crossing of this river was decided on after a careful survey including a number of cross sections, and the site was chosen independently by Mr. Parker and myself, near the village of Noapara. For most part the banks of this river are low, and the floods spread for a considerable distance on either side. The proposed site proved to be the only suitable crossing for some miles up and down stream. It is proposed to have a bridge here of six spans of 60 feet (girders). At Sorapal, on the right bank of the Ouli river, it is proposed to have a second-class and engine station called Ouli station.

After crossing the Ouli river the line runs over fairly level ground as far as the village of Purnagad, from which place there is an ascent of 1 in 100 extending for nearly a mile, beyond which the line again passes over fairly level ground as far as the village of Kusdi. This portion of the line passes within a short distance of the important villages of Bagadia and Chindipada, and runs through a well-cultivated district.

From Kusdi the line ascends for about one and a quarter mile with a gradient of 1 in 100, crossing a minor watershed near the village of Paljori, from which there is a steady descent to the Sandria river. The gradients, with the exception of about a mile at the end of this descent which is 1 in 100, are easy, averaging 1 in 200, and 1 in 250. There will be a third-class station in the 101st mile, named Kusdi station. From the 103rd mile to the Sandria river, the line runs close to a watershed for most of the way. The Sandria river is crossed in the 110th mile at a fairly long straight reach. This river will require a bridge of five spans of 60 feet. After crossing the Sandria the line goes straight to the village of Kuringa, where it joins the Cuttack division. There is an ascent of 1 in 100 extending for about a mile. The banks and cuttings of this portion are rather heavy, averaging about 15 feet. There will be a third-class station at Kuringa.

2. *Character of country.*—From the village of Ronja to Nakridol (mile 64 to 71) the country is wild and uncultivated. From Nakridol to Ouli river (mile 91) there are patches of cultivation round the villages, with stretches of jungle intervening. The portion about Bagadia, Chindipad and as far as the village of Kusala is for the most part well cultivated. From Kusala to Gopalpershad there is a good deal of jungle, with patches of cultivation here and there. From Gopalpershad to Kuringa the line passes through a dense bamboo jungle.

The ground along the whole line is more or less undulating, and a great number of minor water-courses are crossed. For the first seven miles the soil is rocky, the remainder being chiefly sandy clay with portions of red laterite earth. At Totabari and between Gopalpershad and Kuringa, rocky soil is again met with.

In nearly all instances where borings were taken along the line, rock was obtained within 5 to 10 feet from the surface.

3. *Station sites.*—There are five stations in this division, and it is intended to have watering arrangements at each of them with the exception of Kusdi station. They are all third-class stations except the one at Ouli, which will be a second class and engine station. The sites have been chosen in the most populous and best cultivated localities. They are nearly all on level ground throughout. The following is a list of the stations, with the approximate height of banks and depth of water from surface :—

Name of Station.	Miles.	Distance from last station.	Class.	Height of bank.	Approximate depth of water.	
Saibi	73¾	.....	3rd	1′	5′	
Bindapur	81¼	7½	3rd	3′	5′	
Ouli	91	9¾	2nd	*Nil*	10′	Engine station.
Kusdi	100½	9½	3rd	1′	20′	
Kuringa	111	10½	3rd	4′	10′	

4. *Labour.*—There is no skilled labour, and unskilled labour is also scarce, so that it will be preferable to import suitable labour from a distance, specially as the natives of these parts are mostly unwilling to work. The ordinary daily wages for a cooly is two annas.

Traffic.—The traffic at present consists chiefly of salt, tobacco, and cloth goods brought from Cuttack, and in raw cotton and cereals taken to Cuttack. The means of conveyance is pack bullocks, the road being for the greater part unsuited for carts.

Building materials.—Sandstone is found in almost all portions of the line, and kankar suitable for line-burning is also obtainable. Stone for ballasting can be had everywhere

within a sort distance of the line. Timber for sleepers could be obtained from the sâl forests of the Bamra State. There is also some sâl timber in the Radhakole State, through which the line passes.

5. *Markets.*—There are weekly markets at most of the important villages along the line. Bagadia is the largest village, and is the centre of an extensive grain-producing district. The villages next in importance are Nakridol, Chindipada, and Gopalpershad, which latter is the centre of the Talcher coal-field.

Minerals.—There is an extensive coal-field, the Talcher coal basin, whose centre is about the village of Gopalpershad. There was no time for taking borings but the Geological Department has sunk several shafts, and will be able to give all the necessary information regarding the quality of the coal. Iron is found at Nakridol and Intosoro.

6. *Major waterways.*—There are four major waterways on this section, *viz.*, the Champali, the Gadgadi, the Ouli, and the Sandria rivers.

The *Champali* is crossed in the 71st mile. It is a tributary of the Tikaria river and the crossing is about half a mile above the junction. It drains an area of 71 square miles. The fall of the bed is 7½ feet per mile. The channel is well defined, and the bed and banks are of rock. There will be a bridge here of 5 spans of 40 feet (girders).

The *Gadgadi* is crossed in the 80th mile. There are several rapids in this river. The crossing is about half a mile below the fall at Intosoro. The velocity at the crossing is about 10 feet per second. The bed is composed of solid sandstone. This river drains an area of 80 square miles. The bridge will consist of 5 spans of 40 feet (girders).

The *Ouli* is crossed in the 91st mile. The difficulty experienced in obtaining a suitable crossing has been already pointed out (see alignment). This river has a drainage area of 122 square miles. The left bank is low and the country flooded for some distance during heavy floods. There is a fall in the bed of 13½ feet per mile. The bed is composed of sand to a depth of ten feet. The bridge will consist of 6 spans of 60 feet (girders), the piers being on wells.

The *Sandria* is crossed in the 110th mile. The drainage area of this river is 98 square miles, and the fall of the bed 10 feet per mile. The bed is of sand overlying dead coal. The river overflows both banks during heavy floods. The channel is well defined. The bridge will consist of 5 spans of 60 feet (girders). Two piers will be on wells, and the others on concrete. All the above rivers are crossed on the square.

General.—The party, consisting of one Executive Engineer, one Assistant Engineer, one European and four native surveyors, left Hazaribagh about the beginning of November 1885 and arrived at Nakridol, from which place survey operations were to commence on the 4th of December. The trial lines it was proposed to run had been roughly decided on by Mr. Parker and myself, guided by the information obtained during the previous year's reconnaissance. The ground being for the most part hilly and covered with dense jungle, it was found necessary to take a number of cross sections. The country was also accurately surveyed for about half a mile on either side of the trial lines, which proved of great use during the location. By the 20th of January 1886 the trial line had been completed, and the location was roughly decided on.

Report by Mr. C. Von Ahn, Executive Engineer, upon the Cuttack Division, located by Captain Laugharne, R.E.

1. *Alignment.*—The zero point of the division is at chain 10·95 of the Central Division near the village of Kuringa, about 111 miles from Panchpara. It was necessary here to give a curve of 30° deflection to the right in order to take the line over the lowest point of the Nathidi ridge. The line runs level for about a mile, when a short descent is required so as to reduce the bank over the Kuringa nullah, after crossing which the ascent to the Nathidi ridge commences. This ascent is about two miles in length, the greater portion having a gradient of 1 in 100. The summit of the hill is reached at mile 115; from this point the line begins at once to descend with a gradient of 1 in 100, extending for 2½ miles after which it lessens to 1 in 166. The line curves to the right to reduce the cutting in a small ridge running parallel to the main one, and then bends sharply to the left to enable a gradient of 1 in 100 to be obtained, as the ground falls very rapidly towards the Noondara nullah. This river is crossed in the 121st mile, and requires a bridge of four spans of 40 feet. After crossing this nullah the line again ascends for about a mile with a gradient of 1 in 166, and then passes over slightly undulating ground with easy gradients as far as the villige of Kadakpershad. This portion of the line runs mainly along a minor watershed, and considerable undulations are avoided, which would have interposed had the line been taken more to the north. The work is light and the drainage small. The gradients, except for a small portion, do not exceed 1 in 200. A third-class station will be given at Balrampershad, mile 122. This station will be on the direct road from Angul to Talcher being 14 miles distant from the former and 7 miles from the latter place. At mile 132, the Ningrajori nullah is crossed. The stream at the proposed crossing is much more confined than lower down. It does, however, overflow its banks during heavy floods, and it will be necessary to give some land arches to carry off the excess drainage. The

total requirements for this river are five spans of 60 feet (girders) and 6 arches of 20 feet, making a total of 420 lineal feet of waterway. The line now passes along the valley of the Brahmini river, and has been taken as near the hills to the south of this river as practicable, so as to be well above the flood level, care being taken to avoid passing through any of the numerous villages. The ground is slightly undulating, the gradients are easy, and there are long stretches of level, the total fall in 10 miles being only 30 feet. The Bangursinga nullah is crossed in the beginning of the 139th mile. The banks of t his river are not well defined, and it spreads for some distance on either side during high floods. A bridge of one central span of 100 feet and four spans of 60 feet will be required here. There will be a third-class station at Haldiabahar in the 134th mile, and another at Gulundai in the 143rd mile. Both these stations are on level ground throughout and on the straight. For the next ten miles, *i. e.*, from Gulundai to Dhenkanal, the line passes over considerable undulations and the maximum gradient of 1 in 100 had to be resorted to, so as to keep down the amount of banking and cuttings, which averages only about 6 feet. There are several passes in this portion, and it was found that the alignment now adopted was preferable to the road alignment between Bolupura and Dhenkanal, being shorter and requiring less earthwork. The pass at Koria is an obligatory point, the line passing between the Koria hill on the south and a detached hill on the north. From this point to Dhenkanal the alignment is carried parallel with the existing road. It skirts the village of Dhenkanal on the north side, being kept as much as possible on the high ground near the village to afford a good position for the station site. Dhenkanal is the most important town between Cuttack and Sambalpur, and a number of baniahs reside at this place. From Dhenkanal there is a steady ascent of nearly two miles of 1 in 100 to the summit of the Dhenkanal pass, and the line then descends in gradients of 1 in 100 and 1 in 120 as far as the village of Bolabendo. From this point, as far as the village of Bobra, the ground is very undulating, and presented considerable difficulties in aligning. The hills which border the line on the north throw out many spurs which had to be avoided, but there are two which could not be easily circumvented, without throwing the line into too low ground near the village of Bobra. This portion of the line passes through very dense jungle. It is intended to have a second class and engine station at Bobra, where there is a good stretch of level. This station will be about 2½ miles distant from the point where the Cuttack branch diverges from the main line, and it is intended to make it the Cuttack junction, there being no other suitable ground for a station in the vicinity. From Bobra the line curves to the south, to carry it to the lowest point of the next range of hills. This pass necessitates a rise of 1 in 100 for about a mile, and the line then again descends as far as the village of Hontikal, and thence passes over fairly level ground into the Mahanaddi bridge alignment. This latter part of the line is subject to floods from the spills of the Sapua, and a large amount of banking will therefore be required.

The crossing of the Mahanaddi river is determined by the position of the hills on either side of the stream, and lies between the confluence of the Sapua nullah with the Mahanaddi, and the divergence of the latter into its two branches,—the Mahanaddi and Katjori.

The connection of the right bank of the Mahanaddi with the Cuttack-Puri line presents no difficulties; the alignment has been kept close to the detached hills, so as to avoid heavy banks as much as possible. This portion is subject to spills from the Mahanaddi.

The branch line, which is intended to serve Cuttack, commences at mile 166 from Panchpara, and turning to the east runs along the left bank of the Mahanaddi to Simliaband, where the Cuttack station will be located. The line has been kept as near the foot of the hills as practicable, the ground being much flooded. Two curves were found necessary on this line to avoid some detached hills. The station site has been selected on the highest ground available, parallel to the river and just clear of the village. The line will be almost entirely in bank, there being only two short cuttings in the whole length of eight miles.

2. *Character of country and soil.*—From Kuringa up to the village of Jaruda, miles 111 to 117, the line passes chiefly through jungle. From this point along the valley of the Brahmini and as far as the village of Bolupora, mile 146, the country is well cultivated. Between Bolupora and Dhenkanal there is a good deal of jungle with patches of cultivation, and beyond Dhenkanal over the pass and as far as the village of Hontikal, mile 167, the line passes chiefly through jungle, with stretches of cultivation near the villages. The soil consists chiefly of clay along the whole line. Gneiss rock is met with on either side of the Ningrajori nullah. There are two outcrops of laterite between Bolabendo and Bobra, and the hill beyond Bobra, mile 166, is composed of sandstone. At Naraj there is a magnificent sandstone quarry.

3. *Station sites.*—There are seven stations in this division—six on the main line and one on the Cuttack branch. Each of these stations will have watering arrangements. Three of these stations will be second class, viz., the Cuttack junction (Bobra), the Mahanaddi, and the Cuttack stations. The remainder are all third-class stations. All the stations are on the level throughout. The following is a list of the stations, giving the approximate height of banks and depth of water from the surface :—

Name of Station.	Mile.	Distance from last station.	Class.	Height of bank.	Approximate depth of water.	Remarks.
		Miles.			Feet.	
Bulramprasad . .	122	11	3rd	1 ft.	15	
Haldiabahar . . .	134	12	3rd	3 ft. cutting.	15	
Gulundai . . .	142⅓	8¾	3rd	2 ft. „	20	
Dhenkanal . . .	152⅔	9¾	3rd	4 ft. bank.	10	
Bobra	163½	10¾	2nd	4 ft.	15	Cuttack junction.
Mahanaddi . . .	160¾	6¼	2nd	4 ft.	.....	
Cuttack* . . .	8 from the point where the line branches off from the main line.	10¼	2nd	7 ft.	.....	

* This station is about 10¼ miles from the Cuttack junction and 174 miles from Panchpara.

4. *Labour.*—Very little skilled or unskilled labour will be obtainable in the district through which the line passes, so that most of the labour will have to be imported.

5. *Markets.*—There is a large bazar at Dhenkanal. There are also weekly markets at the more important villages along the line.

6. *Major waterways and sites of river crossings.*—There are three major waterways on this section, viz., the Nundara nullah, the Ningrajori nullah, and the Bangursinga nullah.

The Nundara nullah is crossed in the 121st mile. It drains an area of 52 square miles, and its bed falls 8½ feet per mile. The flood rises about 13 feet above bed level. This river is crossed on the square, and will require a bridge of 4 spans of 40 feet (girders). The foundations will be on rock, which is met within a few feet from the bed.

The Ningrajori nullah is crossed in the 132nd mile. It drains an area of 440 square miles, and has a fall of 5½ feet per mile in its bed. The flood rises 20 feet above bed level. The crossing is at right angles to a fairly long straight reach. This river will require a bridge of 5 spans of 60 feet (girders), and six arches of 20 feet to carry off spill water. The foundations of the main piers are on wells taken down to solid rock. The arch piers are on clay with inverts.

The Bangursinga nullah is crossed in the 139th mile. It drains an area of 134 square miles. The fall of bed per mile is 7 feet, and the flood rises 17 feet above bed. The crossing is on the square, and the banks are of stiff clay. This river will require a bridge of 1 span of 100 feet and 4 spans of 60 feet (girders). The foundations will be taken down to stiff clay.

Enclosure No. 21 to Railway Resolution No. 799 R. C. of 1887.

Enclosure No. 31 to Railway Resolution No. 799 R. C. of 1887.

No. 623 R., dated Calcutta, the 30th March 1887.

From—Col. S. T. Trevor, R.E., Secy. to the Govt. of Bengal, Public Works Department,

To—The Secy. to the Government of India, Public Works Department.

In compliance with the instructions conveyed in the letters noted in the margin, with reference to the Benares-Cuttack Railway project, I am now directed by the Lieutenant-Governor to submit the following estimates for the consideration and orders of the Government of India:—

No.	924R.C., dated	25th October	1882.
"	1045R.C., "	9th December	"
"	1080R.C., "	16th "	"
"	567R.C., "	26th January	1883.
"	732R.C., "	18th August	"
"	01R.C., "	19th November	1884.
"	1096R.C., "	22nd December	"
"	114R.C., "	30th January	1885.
"	670R.C., "	27th July	"
"	833R.C., "	25th September	"
"	840R.C., "	26th "	"
"	373Stat., "	19th October	"

Mogul Serai to Chandil, Valley alternative.
Mogul Serai to Chandil, Plateau alternative.
Kantera to Cuttack.
Panchpara to Naraj.
Cuttack to Puri.
Gya to Palamau.
Naraj to Cuttack.

2. When these surveys were first ordered, over five years ago, in your letter No. 924R.C., dated the 25th October 1882, their object was described as being—

1st.—To open up the Chota Nagpur district with its vast mineral resources.

2nd.—To provide a convenient route for the pilgrim traffic to Puri.

3rd.—To afford protection from famine in time of drought to the population of those regions.

These orders were subsequently amplified in a letter No. 1080R.C., dated the 16th December 1882, communicating the results of a conference which was held at Gya for the consideration of the various routes which it seemed advisable to examine. In this letter the Government of Bengal was enjoined to make every effort to find a practicable route for a line from Mogul Serai southwards across the Ranchi plateau to the Bengal-Nagpur line in the neighbourhood of Chakadarpur, or thereabouts, with a branch to Gya. It was also ordered that, in the event of failure to obtain such a route in the Chakadarpur direction, but not otherwise, an alternative line was to be looked for in a direction west of Palkot, and coming on to the Bengal-Nagpur line in the neighbourhood of Suadi or Lainghar. A practicable route was also ordered to be searched for from the Bengal-Nagpur line southward to Cuttack in continuation of the descent by Chakadarpur, or otherwise, as this Government might direct.

It will avoid confusion if it is here noted that the neighbourhood of Chakadarpur is now called Kantera, and that the Suadi locality is now known as Panchpara. Kantera and Panchpara will therefore be referred to in future in place of Chakadarpur and Suadi, respectively.

3. As the result of the surveys which were set on foot in compliance with these orders, two practicable routes, known as the Damuda Valley and Ranchi plateau alternatives, were discovered between Mogul Serai and Chandil, the nearest practicable point on the Bengal-Nagpur Railway to Kantera. A route from Kantera over the Keunjhar plateau to Cuttack and thence to Puri was also discovered to be practicable. The Gya branch was also located. The alternative route from Lohardugga west of Palkot to Panchpara, which was to have been examined if the abovementioned routes to Chandil had been found impracticable, was at the time therefore set aside as unnecessary, and the question at issue appeared to have narrowed itself into that of the relative merits of the routes by the Damuda Valley and the Ranchi plateau, and the financial prospects of the extension of the line southward across the Keunjhar plateau from Kantera to Puri.

4. When matters had arrived at this stage, information was furnished by the Chief Commissioner of the Central Provinces, which gave reason for believing that access to Puri from Panchpara in the neighbourhood of Sambalpur was comparatively easy. The survey of this route was therefore ordered in December 1884, with the result that, as shown by the estimates now submitted, the Panchpara-Puri route has been proved to be some 20 miles shorter and 100 lakhs cheaper than the Kantera-Puri route. The information which it has been found possible to collect regarding the Keunjhar plateau is very meagre, but such as it is, it tends to show that there is nothing on this plateau which would make it now, or prospectively, profitable to take a railway over it. **The Panchpara-Puri line will, if constructed, fully provide for all the needs of Orissa, for famine protection as well as for administrative purposes, and it appears probable that the pilgrim traffic will be quite as well accommodated by it as by the Kantera-Puri line. The question of the best means of access from the Bengal-Nagpur Railway to Puri appears therefore to the Lieutenant-Governor to be no longer open to argument, and he recommends the Panchpara-Puri line for adoption.**

5. The adoption of this route, however, renders it desirable to reconsider the location of the projected lines which lie north of the Bengal-Nagpur Railway. An inspection of the map will show that if these are taken to Chandil or Purulia, while the extension to Puri starts from Panchpara, a great zig-zag will be formed which will add 145 miles to the length of the through journey from Mogul Serai to Puri. Assuming the pilgrim traffic to amount to 500 or 600 passengers per diem, this additional distance will throw an additional expenditure of 8 or 10 lakhs per annum on the pilgrims, a result which would no doubt tend to discourage the extensive use of the railway by pilgrims from the North-Western Provinces and Behar. In anticipation of these considerations having some weight with the Government of India, instructions were issued to Mr. Parker to make a reconnaissance of the route from Palamau west of Palkot to Panchpara which had been originally indicated as a possible alternative to the route *viâ* Chandil, annd his report shows the route to be both practicable and economical. I am therefore to recommend the consideration of it to the Government of India.

6. If the Government of India, however, should decide on giving the preference to the more easterly route to Chandil or Purulia, I am to say that the Lieutenant-Governor is of opinion that the Damuda Valley route should be adopted, and not that over the Ranchi plateau. The comparative merits of these alternative routes are discussed in the accompanying memorandum by Mr. Risley, to whom the question was referred for opinion by desire of the Government of India, and his report seems to leave no doubt as to the superiority of the valley route. The Lieutenant-Governor would recommend, however, that, instead of effecting a junction with the Bengal-Nagpur line at Chandil, the valley line should be taken to Purulia, which is a place of more importance and the capital of the Manbhoom District.

7. Turning now to the consideration of the northern section of the line, connecting the Palamau coal-fields with the East Indian Railway, I am to remark that, so far as the requirements of Bengal are concerned, they will be fully satisfied by the extension of the existing Patna-Gya line to the Palamau coal-fields, and this extension, the Lieutenant-Governor thinks, should be carried out as soon as possible. The alternative exit for the coal *viâ* Mogul Serai is of minor interest to this province. It appears to the Lieutenant-Governor, however, that, once the construction of the Gya-Palamau section has been decided on, it will at least be worthy of consideration whether the problem of bridging the Sone river near the Grand Trunk road, and of the construction of the Mogul Serai route through Sasseram direct to Sherghati, had not better be faced. The bridging of a river of the magnitude of the Sone is, in these days, a matter of much less difficulty than formerly; and it is probable that by this arrangement the exit of the coal, both towards Patna and towards Mogul Serai, would be most economically provided for, and the line to Sasseram would have the remote, but still tangible, advantage of lying on the direct route for the possible future alternative railway running as a chord from Mogul Serai to Burrakur—a question which there appears to be a growing tendency to re-open.

8. Accompanying this letter are five index maps, the object of which is to show separately and independently the several routes referred to in the preceding paragraphs:—

No. 1 shows the original route over the Ranchi plateau and *viâ* Kantera to Puri with a branch to Gya.

No. 2 shows how this is modified by the adoption of the Panchpara route and the Damuda Valley alternative.

No. 3 shows the two sections which, in the Lieutenant-Governor's opinion, might be advantageously constructed as soon as possible.

No. 4 shows how, judging from the most recent information, these two sections might best be connected.

No. 5 shows in addition the Sasseram-Mogul Serai branch, and gives the form which the whole project might finally and most advantageously assume.

I am also to note here that sixteen separate abstracts have been appended to the main estimates, which show the length and cost of the several sections between the points where the various alternative routes diverge or meet. They have been prepared with the object of enabling the cost of any through route that may be selected to be ascertained by adding together the cost of its component parts.

9. The Lieutenant-Governor's recommendations may be conveniently summarised as follows:—

1st.—That the Panchpara-Puri line, with a short branch to Cuttack, be adopted in preference to that over the Keunjhar plateau. The distance from Panchpara to Puri is 224 miles, and the branch to Cuttack is eight miles in length, and their costs are about 131 and 9 lakhs, respectively, with about 24 lakhs additional if a bridge over the Mahanaddi is substituted for a ferry.

2nd.—That the extension of the Patna-Gya line, a distance of 80 miles to Palamau, at a cost of 80 lakhs, be undertaken as soon as funds can be made available.

3rd.—That, before deciding finally about the route to be chosen to the north of the Bengal-Nagpur Railway, careful consideration should be given to the advantages of a direct line between Palamau and Panchpara.

No. 3003R., dated Calcutta, the 27th November 1884.

From—F. J. E. SPRING, Esq., Under-Secretary to the Government of Bengal, Public Works Department, Railway,

To—H. H. RISLEY, Esq., Under-Secretary to the Government of Bengal.

Mr. Parker's report and estimate of the Benares-Cuttack Railway.
Mr. Spring's note on the Benares-Cuttack Railway.
Mr. Hewitt's note on the Benares-Cuttack Railway.
Mr. Spring's reply to Mr. Hewitt.

I AM directed to forward the accompanying copy of a letter No. 01R.C. of the 19th instant, from the Secretary to the Government of India, Public Works Department, together with copies of the marginally noted papers, and to request that you will be so good as to put up a note upon the points referred to.

MR. H. H. RISLEY'S *note upon the Benares-Puri Railway.*

I HAVE very little to add to Mr. Spring's notes on the Damuda valley route. These notes were written at Darjeeling after repeated discussion of the subject with me, in the course of which I said nearly all that I know about the question.

I have also talked the matter over on several occasions with Mr. Hewitt, and my impression is that in urging the advantages of the plateau route he has in view not merely the traffic of Chutia Nagpur proper, that is of the head-quarters sub-division of the Lohardagga district, but the prospects of a great development of the Tributary States lying farther west. He thinks that a line through Ranchi is more likely to be extended in the direction of Sarguja than a line through Jhalda, and it is of this State and of Jashpur that he is thinking when he speaks of "the magnificent country" which will be served by the plateau line. Without disputing anything that Mr. Hewitt says about the capabilities of the country further west, I may say at once that the prospects of any profitable development of it are so remote that they need not and cannot be taken into account now.

This confines the discussion to the trade of Chutia Nagpur proper, and we have to consider whether the quantity of traffic which will be carried by the plateau line is likely to be so largely in excess of the quantity carried by the valley line as to counterbalance the additional expenditure involved in constructing and working the former. No precise statistics are available, and I may remark here that the statistics collected by me in Manbhum during 1882 and 1883 do not profess to illustrate the trade of the whole division. They were collected by an unpaid agency under very great difficulties and with the minimum of intelligent supervision, and they throw hardly any light upon the trade of the west of the plateau. I understand, however, that this trade is at present collected at four chief centres—Lohardagga, Gola, Jhalda and Tamar. The last named place may be left out of account altogether, as its trade will in any case come on to the Bengal-Nagpur Railway. The trade of Lohardagga, Gola, and Jhalda will be carried by the valley line which will pass near Lohardagga and through Gola and Jhalda. It seems to me therefore that the valley line will carry the entire surplus produce of the plateau, which is all that is claimed for the line through Ranchi. Indeed, it is not at all certain that the valley line will not catch more trade than the plateau line. Mr. Hewitt's argument assumes that Ranchi will become the chief centre of trade for the eastern part of Lohardagga district, and that it will get everything that now goes to Jhalda, I think this very doubtful. Jhalda is below the plateau; it is very strong in mahajans, and its trade relations with the places which supply it rest, it is believed, on a very strong basis. I do not believe that the Jhalda people (I include in Jhalda the rising mart of Tulin about three miles off) will be at all disposed to transfer themselves and their business to Ranchi, and I think it more likely that the edge of the plateau will mark the point from which trade will flow in one direction to Ranchi and in the other to Jhalda for Purulia. If this should be the case, and I refer to the experience of Raniganj given in my report of 1883, to show that such a state of things is possible, the plateau line will lose the trade of that very fertile portion of Lohardagga which lies below the plateau to the east The Bengal-Nagpur line will also lose a part of the profit it would get if the valley line were made. For instead of carrying these exports from Chandil to Sitarampur, it will carry them only from Purulia to Sitarampur.

On the whole, then, I believe that the valley line will intercept the entire trade of the area now in question, while the plateau line will probably only get the trade of a part. The former line has also the further advantage of conforming more closely to the existing distribution of trade and involving very little disturbance of the present trade centres. I have already pointed out at length the importance of this during the first few years after a new line has been made.

The 22nd December 1884. H. H. RISLEY.

Enclosure No. 32 to Railway Resolution No. 799 R. C. of 1887.

No. 1108R., dated Calcutta, the 17th May 1887.

From—Offg. Secy. to the Government of Bengal, P, W. Dept. (Railway),

To—The Secy. to the Government of India, Public Works Department.

ADVERTING to this office letter No. 623R., dated 30th March last, submitting the various estimates prepared for the several alternative lines of the Benares-Puri Railway project, I am instructed by Sir Steuart Bayley to intimate to the Government of India that His Honour's attention having been drawn to the letter before quoted, Sir Steuart Bayley has carefully examined the whole projeet, and desires to submit to the Government of India certain modifications in the recommendations made by his predecessor.

2. In paragraph 2 of Bengal Government letter No. 623R., dated 30th March last (already referred to), the three main objects are described for which the surveys were

ordered, and in the concluding paragraph (9), the recommendations thus made by the Local Government are summarized as follows :—

I.—That southward of the Bengal and Nagpur Railway, the Panchpara and Puri line, with a short branch to Cuttack, be adopted.

II.—That the extension of the Patna-Gya line to Palamau be undertaken.

III.—That before deciding finally on the route to be chosen to the north of the Bengal and Nagpur Railway, careful consideration should be given to the advantages of a direct line between Palamau and Panchpara.

These proposals and the contemplated extensions to result therefrom are shown on index plans numbered III, IV, and V, accompanying this office letter before quoted.

3. I am to state that Sir Steuart Bayley entirely concurs in the first conclusion, that the southern access to Puri from the Bengal and Nagpur Railway should be by the Panchpara and Naraj route, with a short branch to Cuttack. His Honour also supports the proposal for the extension of the Patna and Gya line to Palamau. But on a careful review of all the circumstances, His Honour is not prepared to recommend to the consideration of the Government of India the alternative of a direct line between Palamau and Panchpara, nor is His Honour disposed to adopt the contemplated scheme of subsequent extensions.

4. Sir Steuart Bayley is clearly of opinion that, if (as recommended), the Patna and Gya line be simply extended to Sukhua (Palamau coal-fields), and thence a direct line run north to south from Sukhua to Panchpara; that one of the main objects of the line, *viz.*, the opening out of Chota-Nagpur proper would be foregone, as a line so located would merely skirt the western edge of this tract of country. I am to state that His Honour considers it of material importance that the Chota-Nagpur district, with its vast mineral resources, should be thoroughly opened out, and served.

5. It is admitted that the pilgrim traffic would certainly save in distance by a direct line to Panchpara, but I am to point out against this minor saving in distance, that a line so situated would probably lose largely in volume by the loss of Benares as one of its immediate sources.

6. Sir Steuart Bayley is further inclined to think that the coal traffic from Palamau to Patna would probably be not extensive, since it would have but a small advantage in distance over that from the existing Bengal coal-fields. His Honour is, however, convinced that it is to the interests of this province that the Palamau coal should have a direct outlet to the North-Western Provinces, *viâ* Mogul Serai, and to this he attributes very great importance. It is an additional advantage that this line would afford a more direct route, than by Patna and Gya, for the pilgrim traffic expected from Benares.

7. I am now requested to submit, for the approval of the Government of India, the following modified proposals of this Government, as advocated by Sir Steuart Bayley, in accord with the views expressed in paragraphs 4, 5, and 6 of this letter :—

I.—That the Panchpara and Puri line, with a short branch to Cuttack, be adopted.

II.—That the extension of the Patna-Gya line to Palamau be undertaken.

III.—That a line from Mogul Serai, *viâ* Sasseram and Gharwa, to Sukhua be constructed.

IV.—That a line from Sukhua (Palamau) *viâ* Rud, down the Damuda Valley to Purulia, be provided.

8. I am to explain that the location of the line from Mogul Serai to Sasseram, *viâ* Gharwa to Sukhua, is preferred to that of a line, *viâ* Sasseram direct to Sherghati, because every ton of coal sent to the North-West would have to travel 33 miles further by the route *viâ* Sherghati; also that the last-mentioned route would be more costly owing to the heavy outlay requisite for the bridging of the Sone and Mohur rivers on this line.

9. Again there is no question as to the superiority of the route from Sukhua *viâ* Rud, along the valley of the Damuda to Purulia, over that of a line *viâ* Rud, across the Ranchi plateau to Chandil, as the rise of 700 feet up to the Ranchi plateau is avoided; also the descent of 1,200 feet on the south. Moreover, the valley line recommended will, according to Mr. Risley's note, intercept the entire traffic of Lohardagga and the plateau. Further, in the event of an alternative through line towards Calcutta being required for the produce of the Upper Provinces, the line as surveyed from Mogul Serai through Sukhua and the Damuda valley to Purulia would perhaps effectually meet the want by an extension from Purulia direct to Tarkessur, and it would probably be throughout a remunerative line. This, however, is a matter for future consideration.

10. I am requested to append an index map, figured No. VI, on which the lines which are herein recommended for adoption, as described in paragraph 7 of this letter, are shown in green colour.

Enclosure No. 33 to Railway Resolution No. 799 R.C. of 1887.

Govt. of Bengal, P. W. Department, endorsement No. 48 T. R., dated 27th June 1887.

The undermentioned document is forwarded to the Secretary to the Government of India, Public Works Department, for consideration.

2. It has been intimated to the Secretary of the British Indian Association that the project for connecting Orissa by Railway with the Bengal and Nagpur line is before the Supreme Government, and that it has the full support of the Bengal Government.

Dated 17th June 1887.

From—Babu Peary Mohun Mukerjee, Hony. Secy., British Indian Association,
To—The Secretary to the Govt. of Bengal, P. W. Department.

I am directed by the Committee of the British Indian Association to respectfully submit to His Honour the Lieutenant-Governor the necessity and desirability of constructing a branch line of Railway connecting the province of Orissa and its chief towns, Puri and Cuttack, with the projected Bengal-Nagpur Railway.

2. The hardships and privations to which the thousands of pilgrims who periodically resort to the shrine at Jagunnath are subjected, the epidemic diseases which such privations annually give rise to, and the heavy mortality in the ranks of the pilgrims which result therefrom, have long suggested the desirability of some easier means of communication between Puri and the other provinces of the Empire.

3. Nor is the necessity based entirely on humanitarian grounds. Easy access to Orissa by Railway will greatly tend to the development of trade and commerce. The general fertility of the province, and, at the same time, its liability to frequent famines, owing to its peculiar physical aspect, make it specially desirable that it should be connected with other parts of the Empire more advantageously situated. The want of such communication was most severely felt during the famine of 1865-66, and much of the mortality during that calamity was due to the difficulty met with promptly bringing in supplies.

4. The proposed Bengal-Nagpur (Imperial) State Railway, to the construction of which the Committee understand sanction has been recently granted by the Secretary of State, will afford great facilities for constructing a branch line connecting Puri with Bengal, the North-Western Provinces, and Central Provinces, and Bombay. It has been proposed to have a station on this line at Panchpara, which is about 240 miles west from the junction of the Bengal-Nagpur and East Indian Railways, whether Assensole or Burrakur be ultimately fixed upon as the place for such junction, and 382 miles east from Nagpur. The distance from Panchpara to Puri is about 231 miles, which will be the length of the proposed branch line.

5. A number of different routes, the Committee are aware, have already been surveyed. But it has been shown that the Panchpara-Puri route possesses economic and other advantages over those which were previously surveyed. This route, moreover, is specially recommended for the comparatively few engineering difficulties which it presents. Commercially this line will be very profitable both as regards passenger and goods traffic. All these considerations, therefore, point out this route as the most eligible on economic grounds.

6. The Committee do not apprehend that the revenue from the canals in Orissa will in any way be affected by the construction of a Railway through the province. These canals are mainly intended to regulate the water-supply for irrigation in the province. More than half of the income of these canals are derived from that source. As trade-routes, they cannot, under the present circumstances of the surrounding provinces, be much affected by the proposed branch railway. At present the canal route is used for purposes of trade and passenger traffic by the people of Bengal proper alone, and as route from Calcutta to Chandbally is cheap and convenient, it will continue to be used by these people; few will abandon it for the sake of the very circuitous route from Calcutta to Assensole, thence to Panchparah, thence to Puri *viâ* Cuttack. On the other hand, people of the Central Provinces and Western India go to Orissa and carry on their trade, such as it is, with that Province by quite different routes. The sea-route, it is hardly necessary to say, would be extremely circuitous and expensive to them. The canal navigation and the income therefrom will not therefore suffer in the least by the proposed line of railway. It would, on the other hand, have the effect of opening up the province for trade with the Central Provinces and Bombay and facilitating the employment in those provinces of the poor people of Orissa to whom access thereto is at present practically closed, and who therefore flock to Calcutta and to the metropolitan districts for employment as peons, *palkee*-bearers and other menial servants.

7. The Committee venture to hope in conclusion that His Honour will be pleased to take these circumstances into consideration, and to take such steps as His Honour may seem fit for securing to the people of these provinces the proposed line of railway to Orissa.

Enclosure No. 34 to Railway Resolution No. 799 R.C. of 1887.

BENARES-PURI RAILWAY.

Moghal Sarai-Chandil Section viâ the Damuda Valley.

The total length of the Northern Section of the Benares-Puri Railway from Moghal Sarai to Chandil *viâ* the Damuda Valley is 325 miles. The line has been divided into three sections, the cost of which has been estimated as follows per mile of Railway :—

	Moghal Serai to Sukhua.	Sukhua to Rud.	Rud to Chandil
	₹	₹	₹
Length in miles	147½	50	127½
Preliminary	1,117	1,117	1,117
Land	2,348	616	1,265
Earthwork	9,135	12,687	18,599
Bridges	30,929	14,899	21,106
Fencing	2,000	2,000	2,000
Level crossings	248	250	217
Ballast	5,740	4,737	5,346
Permanent-way	28,683	25,220	23,865
Stations	1,743	1,705	1,806
Workshops	1,500	2,000	2,000
Staff Quarters	4,178	3,705	3,863
Station machinery	2,110	1,785	1,902
Plant	1,785	1,785	1,785
Rolling Stock	9,686	9,666	9,666
Establishment	8,973	7,072	8,308
Contingencies	5,660	4,108	4,727
TOTAL DIRECT CHARGES	1,15,239	93,354	1,07,572

The principal rates upon which these estimates have been based are earthwork—

Embankment	under	10	feet	high						at	₹	4	per 1,000 cubic feet.
,,	above	10	and	under	20					,,		6	,, ,, ,, ,,
,,	,,	20	,,	30						,,		10	,, ,, ,, ,,
,,	,,	30	,,	40						,,		15	,, ,, ,, ,,
,,	,,	40								,,		20	,, ,, ,, ,,
Cutting soft										,,		4	,, ,, ,, ,,
,, gravel										,,		6	,, ,, ,, ,,
,, soft rock										,,		30	,, ,, ,, ,,
,, hard										,,		40	,, ,, ,, ,,
Excavation for foundation										,,		13-12-0	,, ,, ,,
Sand filling										,,		7	per ,, ,, ,,
Masonry										,,		35	,, 100 ,, ,,
Arching										,,		43	,, ,, ,, ,,
Concrete										,,		20	,, ,, ,, ,,
Stone pitching										,,		7	,, ,, ,, ,,

Girder work from ₹212 to ₹276 per ton.
Sleepers . . . . . at ₹4 each.
Timber . . . . . ,, ,, 3 per foot.
Laying permanent-way ₹1,320 per mile.

The rates for earthwork appear to be somewhat liberal, and some reduction may possibly be made in the quantities. I have marked on the sections the places at which I think regrading of the line may be desirable. A list of these is appended to this note. Some of these alterations involve an increase in quantities, but their general tendency is towards a considerable saving. From Moghal Sarai to Sasseram, 62 miles, the line passes over a very flat country, and the work is generally light. With the exception of the bridge approaches of some of the larger streams beyond Sasseram, there is some heavy work for a mile or two; but afterwards the work is, on the whole, light, until the approaches of the bridge over the Sone river are reached. But some considerable economy may here be effected by running down with a gradient of 1 in 200, allowing a saving of much of a very heavy embankment. Beyond the Sone river between miles 108 and 110 there are some heavy embankments; and thence to the 144th mile. The embankments are rather heavy, but may be lightened somewhat by the alterations in the grading which I have marked in blue on the sections.

From the Koel river, the 144th mile, the work is moderate, being heavy only in and about the crossings of the rivers and nullahs until the 164th mile is reached, where the work until the 188th mile is very heavy; but possibly a careful examination of the ground might result in some economy at this part of the line.

I have roughly marked on the plan, in blue pencil, a suggestion for a deviation which might be examined between chains 1970 and 2080; also between chains 2325 and 2455.

Thence the work continues to be very heavy, skirting the Oorunga river to mile 197 (Rood or Rud). Beyond Rud the works on the line skirting the Damuda river are very heavy, high banks alternating with deep cuttings.

The line crosses the Damuda at mile 213½, after which the works are somewhat lighter until the 218th mile is reached, where it is again heavy as far as the 255th mile. Between the 255th and the 267th mile the works are lighter; but at the 267th mile there is some heavy work.

Between miles 270 and 271 there are some very heavy rock cuttings, which may possibly be reduced by a diversion which I have roughly marked for examination in blue on the plan.

There is also a heavy embankment between miles 271½ and 273, which may possibly be reduced by some such deviation as I have roughly indicated in blue on the plan. Another possible reduction has been indicated on the plan between miles 280½ and 281½.

From this point to Chandil station, mile 325, the works on the line are moderately heavy.

With reference to the bridges on this section I may remark, as a general rule, that segmental arches, with a high rise (say one-third of the span) are preferable to semi-circular arches, especially in high embankment; and that when there are land arches over the slope of the embankment, it is desirable to block such arches by means of a thin wall so as to prevent the run of water through them.

At chain 2116, from Moghal Sarai, the line cuts across a small tank in which it is proposed to place 2 spans of 20 feet; but the necessity for a bridge of this character is not apparent without further explanation.

In drawing No. 18, probably 1 span of 20 feet as a land arch would be preferable to 2 spans of 10 feet. In drawing No. 21 is shown one span of 80 feet, with 2 arches 15 feet on each side; but probably one span of 60 and two of 40 feet would be preferable. The foundations in this drawing do not appear to have been carried sufficiently low, unless rock or some very hard foundation is met.

Where spans of 60 feet are adopted, the ordinary type of plate girder may be substituted for triangulated girders.

At the Doorgowtee nullah, 6 spans of 60 feet might be substituted for 4 spans of 80 feet.

The foundations of the Sone bridge appear to be of doubtful depth; and it will become a question for consideration whether it may not be preferable to adopt smaller spans than those of 150 feet if foundations should prove to be shallow and of an easy character.

At the Dandur nulla, it will be preferable to adopt 10 spans of 40 feet each instead of 7 spans of 60 feet.

At the Oorunga river also 4 spans of 40 feet may with advantage be substituted for 4 spans of 60 feet each.

At the Hindigir nulla it would be better to substitute 3 spans of 40 feet for 6 spans of 20 feet; the arches should be segmental with a rise of about ⅓rd of the span.

At the Margamdaha river three spans of 60 feet might be substituted for 1 span of 100 feet.

At the Bhera nulla, 3 spans of 60 feet might be substituted for 1 of 100 and 2 of 40 feet.

At the Suldhana nulla, 7 spans of 60 feet might be substituted for 5 spans of 80 feet.

At the Chota nulla, 6 spans of 40 feet might be substituted for 3 spans of 60 feet and 2 of 40 feet.

At the Sobha nulla, 6 spans of 60 feet might be substituted for 7 spans of 80 feet.

The rate for iron work appears to be low, and will probably need increase.

The Sone and Koel bridges appear to be estimated at too low a rate, the cost for lineal feet being 540 feet and 340 feet respectively.

The bridge over the Sutlej at Ferozepore has cost about ₹740 per lineal foot, exclusive of training works.

The cost of fencing is, I think, put at too low a rate. I would not advocate the use of wooden posts for fencing, as the wooden standards rot so very rapidly, especially in that portion of India. It would be better to adopt either iron or stone posts where it is proposed to use wood.

The quantity of ballast provided in the estimate is excessive, being 21¾ cubic feet to the lineal foot, whereas 16 feet should suffice.

The rate for laying permanent-way, ₹1,360 per mile, is also excessive; the laying should be done for half that sum.

The provision for stations is somewhat low; but the provision for staff quarters and station machinery is larger than is necessary.

At the stations, ramps should in all cases be substituted for steps.

Water columns should be placed between the tracks and about 200 feet in advance of the platform.

Engine sheds should have the doorway 13′ 6″ wide to agree with the latest types. The sidings should not be brought into the goods shed; and at junction stations it is desirable, if possible, to have a joint platform for both lines.

The item of Establishment appears to be high.

So far as the information at my disposal enables me to judge, I should be disposed to adopt provisionally the following mileage rates for this line :—

	Cost per Mile.		
	Moghal Sarai to Sukhua.	Sukhua to Rud.	Rud to Chandil.
Length in miles	147½	50	127½
	₹	₹	₹
Preliminary	1,000	1,000	1,000
Land	2,400	600	1,300
Earthwork	9,000	11,600	18,000
Bridges	34,000	17,000	24,000
Fencing	2,800	2,800	2,800
Level crossings	300	300	300
Ballast	4,400	4,000	4,200
Permanent-way	28,000	28,000	28,000
Stations	2,000	2,000	2,000
Staff quarters	2,000	2,000	2,000
Workshops	2,000	2,000	2,000
Station machinery	1,500	1,500	1,500
Plant	1,800	1,800	1,800
Rolling Stock	10,000	10,000	10,000
Establishment	7,000	6,000	7,000
Contingencies	5,000	4,000	4,500
Total	1,13,200	94,600	1,10,400

From Moghal Sarai to Sasseram, 62 miles, the ruling gradient is 1 in 400; and from Sasseram onwards to the 145th mile the ruling gradient is 1 in 200; and from the 145th mile to Chandil the ruling gradient is 1 in 200.

It is a question which will have to be carefully considered, where the locomotive stations for this line should be situated. If an engine station were fixed at Sasseram, the engine could take the double run to Moghal Sarai and back, keeping to this ruling gradient of 1 in 400 with large loads. From the same station the engines might take a double run out to some station 60 or 65 miles away and back, keeping to the ruling gradient of 1 in 200; but the run would be too long from Sasseram to the end of that portion on which the ruling gradient is 1 in 200. It may, therefore, be desirable on this account to arrange the engine stations with a view to making the best of these ruling gradients.

The 21st July 1887.

G. L. M.

G. L. M.,—21-7-87.

Enclosure No. 35 to Railway Resolution No. 799R.C. of 1887.

BENARES-PURI RAILWAY.

Panchpara-Puri Section.

The estimates for the Panchpara-Puri Saction of the line, as submitted by Mr. Owen on the 10th of November 1886, stand as follows per mile of railway :—

	Panchpara to Naraj, length 170 miles.	Naraj to Puri, length 52 miles.	Cuttack Branch, length 8 miles.
	₹	₹	₹
Preliminary	1,049	1,117	1,092
Land	631	973	979
Earthwork	10,589	14,481	18,085
Minor Bridges	12,409	18,339	13,682
Major do.			
Level-Crossings	255	342	191
Fencing	3,400	2,599	3,540
Ballast	5,963	7,771	7,237
Permanent-way	20,100	23,964	20,079
Stations	2,446	2,509	2,913
Workshops	1,500	1,500	1,562
Staff quarters	2,775	2,462	1,477
Station machinery	1,812	2,732	2,180
Plant	1,514	1,720	1,577
Rolling stock	9,390	11,450	9,777
Establishment	6,841	7,879	7,123
Contingencies	4,025	4,382	4,520
Maintenance	200	200	209
Total ₹	85,780	1,04,420	96,223

This is exclusive of the Mahanaddi Bridge or Ferry and indirect charges. The cost of a ferry would add in round numbers ₹1,000* per mile to the cost of the line if distributed over the 220 miles between Panchpara and Puri, whilst a bridge over the Mahanaddi, according to the estimate, would add about ₹10,000* per mile to the cost. Adding these charges we have—

* These calculations are based on the estimated cost as follow :—

	₹
Ferry with contingencies	2,36,250
Bridge	22,50,000

	With Ferry.	With Bridge.
	₹	₹
Cost per mile, Panchpara to Naraj	86,780	95,780
,, ,, Naraj to Puri	1,05,420	1,14,420

I consider the cost of the Mahanaddi bridge is underestimated.

The principal rates on which the estimates are based, so far as I have been able to ascertain them, are as follows :—

	₹	a.	
Earthwork in embankments from 0 to 10 feet high	4	0	per 1,000 c. ft.
,, ,, 10 to 25 ,,	8	0	,, ,,
,, ,, 25 to 40 ,,	12	8	,, ,,
,, ,, over 40 ,,	20	0	,, ,,
Ditto in cutting soft	4	0	,, ,,
,, ,, gravel, &c.	7	0	,, ,,
,, ,, soft rock	30	0	,, ,,
,, ,, hard	40	0	,, ,,
Excavation of founds	15	0	,, ,,
Well sinking	200	0	,, ,,
Concrete	20	8	per 100 c. ft.
Masonry	37	0	,, ,,
Arching	45	0	,, ,,
Ashlar	200	0	,, ,,
Stone pitching	13	8	,, ,,
Ironwork in curbs	336	0	per ton.
Ditto in girders from	233 to 281	0	,,

The rates for earthwork appear to me to be rather high; but as much of the labour will probably have to be imported, they must be rather higher than in other parts of India; still, I think they err on the side of liberality.

The line will require re-grading in several places. I have marked roughly on the sections, in blue, many places where I think the line might be improved. A list of these is appended to this note. In some of these cases the alteration may slightly increase the quantities, though improving the line; but the tendency of the alterations, as a whole, will be to effect a considerable saving both in rock-cuttings and embankments.

I have roughly marked on the plans for examination, certain deviations which I think if possible may effect an economy, in saving earthwork and rock-cutting; these deviations should be examined before the line is permanently adopted. They occur at the following places:—

Between chains	2,250 and 2,160	Between chains	203 and 342
" "	2,415 " 2,338	" "	1,893 " 1,940
" "	1,597 " 1,284	" "	2,696 " 2,745
" "	1,330 " 1,284	" "	2,832 " 2,892
" "	500 " 557		

There is a long embankment 17 or 18 feet high between chains 2,944 and 3,067, the formation level of which is at reduced level of 95; and it appears probable that this may be considerably reduced; but there is no flood level marked on the section at that point to guide me. Again, there is another long bank on the Cuttack Branch from chain 128 to chain 308, with the same formation level, whereas the embankment at Cuttack Station is 10 feet lower, and the high flood level at the Katjori river is shown as 85 reduced level. I think it probable therefore that these embankments may be considerably reduced. In other parts of this section the line is apparently in parts kept unnecessarily high above high flood level; and considerable saving may probably be effected by judicious alterations of the formation level.

With reference to the bridgework, I am of opinion that the rates for iron work are too low and should be increased.

Where land arches have been shewn in the drawing, it will be in many cases desirable to build thin walls across the openings to prevent the flow of water over the slopes which they cover; and in some cases, one arch of larger span is preferable to two arches.

Where two or more spans of plate girders are in one and the same bridge, the space between the abutting ends of the girders should be filled in with either timber or masonry, leaving only sufficient space for expansion.

At the Bonun bridge, 8 spans of 100, the slope of the embankment 1 to 1 is too steep even though pitched; it should be increased to 1½ to 1.

The Pouli nulla bridge might, I think, with advantage be shifted slightly, so as to bring the pier No. 2 in such a position that the founds will be on rock above low water level. The slopes at the abutments of this bridge are also too steep and should be flattened.

The slopes at the abutments of the Rangali bridge should also be flattened.

The Harrad nulla bridge consists of 3 spans of 100 feet each; but as the piers are not high, and the foundation on rock, I think that 5 spans of 60 feet might, with advantage, be substituted for 3 spans of 100. I estimate roughly that between 30,000 and 40,000 rupees may be saved by the adoption of the smaller spans.

At the Bhuttori bridge, splay wings or land arches are required, as the slopes at the abutments as shown in the drawings are too steep.

At the Maltijor bridge 2nd crossing the slopes should be flattened. At the second crossing of the Maltijor river 3 spans of 40 feet might be substituted for 1 span of 100. I estimate roughly that more than 10,000 rupees may be saved by the adoption of shorter spans.

At the Sonknadi bridge the slopes should be flattened, and the bridge might with advantage be shifted slightly so as to use as a foundation the rock that is above low water level.

The Nangrajori nulla bridge consists of 5 spans of 60 feet and 6 of 20 feet arches, founded at high level and inverted; it is a matter for consideration whether it would not be better to substitute either 2 spans of 60 or 3 spans of 40 feet, with deeper foundations for the 6 arches of 20 feet span. The arrangement would be slightly more expensive; but I am of opinion that it would be safer, the foundations being carried down further in the case of the larger spans.

In several cases triangulated girders have been shown for bridges of 60 feet span; the ordinary plate girders should be substituted for these.

The Bangursinga nulla bridge is shown to consist of 4 spans of 60 feet and 1 of 100 feet; I think it may probably be found better in this case to substitute 6 spans of 60 feet for the spans adopted.

The amount of ballast provided in the estimate is unnecessarily large, being 12¾ cubic feet per foot run, whilst 16 feet should suffice.

The rate for laying permanent-way is also high and may be reduced to ₹660 per mile.

The mileage rates for station staff quarters and station machinery also appear to be high; but the rate for workshops is low if the section from Panchpara and Puri is to be maintained as a special and independent system.

Taking into consideration the points above mentioned, I should be disposed to place the estimate, so far as at present advised, at the following mileage rates:—

	Pnnchpara to Naraj, 170 miles.	Naraj to Puri, 52 miles.	Cuttack Branch, 8 miles.
	₹	₹	₹
Preliminary	1,000	1,000	1,000
Land	600	1,000	1,000
Earthwork	8,500	13,500	17,000
Bridging	15,000	21,000	16,000
Fencing	2,800	2,800	2,800
Level-crossings	300	300	300
Ballast	4,400	5,600	5,600
Permanent-way	28,000	27,000	27,000
Stations	2,000	2,000	2,000
Workshops	2,000	2,000	2,000
Staff quarters	2,000	2,000	2,000
Station machinery	1,500	1,500	1,500
Plant	1,800	1,800	1,800
Rolling-stock	10,000	10,000	10,000
Establishment	6,000	5,600	6,500
Contingencies	4,000	5,500	5,500
TOTAL	90,900	1,03,500	1,02,000

These rates are exclusive of the cost of the Mahanuddi bridge or a ferry or indirect charges. No details are given to enable me to form a definite opinion on the cost of a bridge over the Mahanuddi river; but as the river floods up 55 feet above its bed, and the water is 30 feet deep in the dry season, it would appear *primâ facie* that the cost (21½ lakhs of rupees) has been under-estimated.

I am inclined to put it rather at a cost of 33 lakhs of rupees. Adopting this sum, we have as a total for this section of the railway—

	₹
170 Miles from Panchpara to Naraj at ₹90,900 per mile	1,54,53,000
52 From Naraj to Puri at 1,03,500 per mile	53,82,000
8 Miles Cuttack Branch at ₹1,02,000	8,16,000
Total excluding Mahanuddi bridge and ferry	2,16,51,000
Total including Mahanuddi bridge	2,49,51,500
Total including ferry	2,18,87,000

It appears, however, desirable to reconsider carefully the question of the route to be adopted south of the Mahanuddi river to Puri.

Since the question of adopting the route *viâ* Khoordah was considered, the conditions affecting the question have somewhat changed.

The line was then supposed to be an independent line running from Cuttack to Puri, and one advantage claimed for the route *viâ* Khoordah, over the direct route to Puri, was that the bridges over the Kooshbudra and Bargovi rivers would be avoided by the more circuitous route; but as it is now proposed to bring the railway across the Mahanuddi river about 8 miles to the west of Cuttack, the direct line would be on the west of the Bargovi and the crossing of the rivers above mentioned would be avoided. But the most important advantage to be gained by the direct line will probably be the better gradient which it will afford. The circuitous line *viâ* Khoordah entails a ruling gradient of 1 in 100; whilst by the direct line it is probable that a ruling gradient of 1 in 200 or 300, or even less, may be obtained, as the difference of level between the Mahanuddi and Puri is only about 60 feet.

It is of considerable importance to secure flat gradients on the Cuttack-Puri section, because the pilgrim traffic will flock from all quarters to Cuttack: by railway, by local roads, and by water from Bengal and Orissa: and the engines should be capable of taking as large trains as possible in festival time; and if the ruling gradient can be reduced to 1 in 200 or 300, the adoption of such gradients will effect considerable economy in the working expenses. In connection with this question must be considered the Chuttack branch (8 miles in length). This branch is at present proposed on the North bank of the Mahanuddi river, whilst Cuttack is on the south bank. The natural position for a station at Cuttack would, therefore, appear to be on the South bank; and if the direct line were to be made instead of the circuitous line *viâ* Khoordah, the Cuttack station might be on the main line; thus saving the construction of 8 miles of branch railway, and the more expensive working of a separate branch and terminal station.

M

A station for Cuttack at the Kajori river would have the disadvantage of being in bank averaging 3 feet more than on the north of the river; but this disadvantage would not appear to outweigh its other apparent advantages. In an engineering point of view, the direct line appears, as far as information is at present available, to be infinitely superior to the more circuitous line *viâ* Khoordah; and the only ground for preferring the more circuitous line seems to be that of traffic. The saving of length effected by the direct line would, however, probably admit of the construction of a branch line to Khoordah at nearly an equal cost; provided that the Khoordah traffic would justify the construction of 9 or 10 extra miles, which the direct line will probably save: for if the direct line were made, a branch line to accommodate Khoordah could be made running out at right angles to the direct line nearly parallel to the Koormosteree river; and a length of 9 miles would bring this branch as near to Khoordah as it is proposed to take the circuitous route. It appears, however, to be very doubtful whether the Khoordah traffic would justify the construction of 9 or 10 additional miles of railway—a separate branch, and bad gradients.

Mr. Parker, however, with whom I have discussed this question, believes that the direct route would pass through a considerable length of heavily flooded country, which would involve very heavy cost in the construction of the railway; he also states that the Kajori river, though much smaller than the Mahanuddi, is not so easily crossed at all seasons, and that consequently a station on the north of the Mahanuddi is more suitable than one to the south. The question should be thoroughly ventilated before the construction is commenced, though at present it appears unnecessary to move further in the matter.

Enclosure No. 36 to Railway Resolution, No. 799 R.C. of 1887.

To

HIS EXCELLENCY THE VICEROY AND GOVERNOR GENERAL OF INDIA.

The humble memorial of the Orissa Association.

MOST RESPECTFULLY SHEWETH,

That your Excellency's memorialists represent the interests, wishes and feelings of not only the permanent resident population of the Province of Orissa, but also those of traders, pilgrims and travellers who are brought to the Province, when your memorialists approach your Excellency with this respectful but earnest supplication for speedy measures to connect Orissa with the more advanced parts in Her Majesty's Indian Empire by means of Railway Lines which have proved a most successful agency in promoting the material prosperity of the Indian Empire. Your humble memorialists respectfully submit that the present backward condition of Orissa, in matters intellectual and material, is due to the isolated position of the Province in the Indian Empire. Foreign capital and foreign enterprise which have done so much to advance the material prosperity of India, have not set foot in Orissa owing to its isolated position from want of Railway communication. The resources of the Province have in consequence been neglected. Orissa has a busy rice market and the resources of her forests, if utilized, will develope a busy timber trade as well; but for want of Railway communication, the natives of a province so well provided by nature are poverty stricken. The devastations of the Orissa Famine would not have proved half so disastrous if Railways had been in existence in the Province.

The health of the several thousands of men, women and children, who resort annually on pilgrimage to Puri, has always been a matter of anxious concern to Government, and the loss of *Sir John Lawrence* with her live freight of nearly 800 pilgrims has enhanced the sympathy of Government officials and of the private public; and efforts are being made to improve the sanitation of the halting places along the Trunk Road to Puri, as also to provide places of shelter for the poor pilgrims.

While your memorialists appreciate and acknowledge with gratitude all such noble efforts on the parts of the benevolent public towards alleviation of the sufferings of these pilgrims, they feel that these remedies are very inadequate; for in most cases, fatigue of the journey and unwholesome nature of the food procured along the journey engender diseases which work devastation rapid in the exhausted frame of the pilgrims.

The memorialists beg to submit that the only preventive measure against this is the introduction of Railways, which by annihilating time and distance will remove all the troubles and discomforts to which the traveller is now exposed in this Province.

The poverty of the people, the emergency of a famine in future, the loss of several thousands of lives among pilgrims—all these interests combined move the memorialists to approach your Excellency with the humble, respectful prayer that your Excellency be pleased to expedite the introduction of Railways in this Province by ordering the speedy construction of the Puri-Cuttack-Benares Railway, the surveys and estimates of which have been completed, and which promises not only to serve this Province most effectually but to be one of the most profitable lines in India; and thereby confer an everlasting boon on the Natives of Orissa.

And for this your memorialists shall ever pray.

By

ଉତ୍କଳମଣି ଗୋପବନ୍ଧୁ ଦାସ, *President*

RESOLUTION.

In the letter dated the 16th June 1886, cited in the preamble, the Adjutant-General in India conveyed a suggestion made by His Excellency the Commander-in-Chief that some revision of the existing regulations for the appointment of Cantonment Magistrates was desirable. It was represented that, under the rules as they at present stand, an officer might, to the detriment of the service, retain charge of the office of Cantonment Magistrate until he should reach the age of 55, or attain Colonel's allowances, although he might have, since his appointment, become unfitted to perform the duties of the office. It was therefore recommended that the same care should be exercised in the selection of officers for these appointments as in the case of officers appointed to the General Staff of the Army, and that, in order to secure continued efficiency, the tenure of service of military officers as Cantonment Magistrates should be limited to five years, with a proviso that an extension might, under special circumstances, be granted up to a maximum of seven years.

The Government of India has consulted Local Governments and Administrations as to whether there were any administrative objections to this proposal, with the result that, though Local Governments are not unanimous on the subject, the balance of opinion is decidedly in favour of His Excellency the Commander-in-Chief's recommendation. The main argument advanced against it seems to be that it would result in untrained military officers being brought into civil employ every five years to learn important magisterial work to which they

would up to the date of their appointment have been unaccustomed. It appears to the Government of India that this difficulty would be greatly reduced in force, if not altogether obviated, if officers desirous of becoming Cantonment Magistrates were required, before appointment, to pass a qualifying examination in the Codes of Civil and Criminal Procedure, the Indian Penal Code, and such other laws as are commonly administered by Cantonment Magistrates. The officers thus passing would practically be in the position of men who have passed the departmental examination by the lower standard, and could be appointed as Cantonment Magistrates on probation until they had, by passing the higher standard examination as required by existing rules, become fully qualified and entitled to investment with full magisterial powers. The Governor-General in Council has therefore resolved, subject to provision being made for the elementary examination just referred to in the case of future appointments, on the adoption of the proposal made by His Excellency the Commander-in-Chief as a provisional arrangement, and that all officers appointed to be Cantonment Magistrates on and after 1st January 1887 shall be brought under the operation of the five-years' rule. In order that uniformity may be secured in the preliminary test, Local Governments and Administrations are invited to make, as early as possible, suggestions as to the exact nature of the examination to be prescribed.

2. The Governor-General in Council considers that it is unnecessary to continue the existing rates of pay to officers appointed to be Cantonment Magistrates for five years only, and has accordingly been pleased to decide that the scale of pay to be drawn by officers appointed to be Cantonment Magistrates after the date of this Resolution be as follows :—

Rank of Officer.	Initial pay.	On passing the higher standard examination.
	Rs.	Rs.
Subaltern	600	700
Higher rank	700	800

ORDER.—Ordered, that this Resolution be communicated to the Local Governments and Administrations marginally noted, for information and guidance, and to the Foreign and Military Departments and the Department of Finance and Commerce, for information, and that it be published in the Supplement to the *Gazette of India*.

Madras.	Punjab.
Bombay.	Central Provinces.
Bengal.	Burma.
North-Western Provinces and Oudh.	Hyderabad.

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 18th AUGUST, 1887.

GENERAL REMARKS.—Rain has occurred throughout the country during the week under report. The falls were heaviest in the North-Western Provinces and Oudh, the Punjab, and Central India.

The *kharif* crops are generally thriving in all Provinces, though they have been injured in places by too much rain, and a break in the weather would be very beneficial.

Standing crops require rain in three districts of the Madras Presidency, otherwise prospects are fair. In Mysore and Coorg the outlook is favourable.

Rice is doing well in Bombay; in Bengal the late variety is being transplanted, and the early rice is being cut. In Assam the early varieties have been reaped, and the cultivation of late varieties is proceeding. In Burma ploughing, sowing, and transplanting continue.

Excessive rain has injured cotton in the Central Provinces and Berar.

Tea is doing well in Assam.

Mortality from cholera continues high in Bombay, but elsewhere the public health is generally good.

Prices show a tendency to fall in the North-Western Provinces and Oudh, are fluctuating in two districts of the Punjab, and are falling in a third. Elsewhere they are generally steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Aug. 17th)		
Bellary . . .	Average last week since revised, 1·12; this week, ·47.	Standing crops generally good, but young early crops withering in parts for want of rain. Cholera in five, and cattle-disease in two taluks decreasing.
Kurnool . . .	Average 1·98	Standing crops good. Small-pox in three, and cattle-disease increasing in three taluks. Slight cholera.
Ganjam . . .	Average 1·50	More rain wanted. Small-pox in three, fever in four divisions and cattle-disease in one. *Cholera decreasing.*
Kistna . . .	Average 1·48	Agricultural operations progressing. River 5·7 feet over Anicut. Slight fever. Cattle-disease increasing in five taluks.
Chingleput (Madras) .	Average 1·95	Standing crops fair. Harvest *ragi*, outturn bad. Small-pox in three, and cattle-disease decreasing in four taluks. Slight cholera.
Coimbatore . . .	Average ·15	More rain wanted in parts. Standing crops generally good, but *cholum* affected by insects in one taluk. Harvest dry grains, outturn above average. Fever and small-pox in one taluk.
Tanjore . . .	Average 1·32	Standing crops generally good, but require more rain in parts of one taluk. Harvest gingelly, outturn below average. Cattle-disease decreasing in one taluk.
Madura . . .	Average ·39	Slight fever in one taluk.
Malabar . .	Average 1·64	First crop paddy cultivation fair. Slight fever in one, small-pox in six, and cattle-disease increasing in two taluks.
Travancore . .	·94	Paddy being reaped. Fever in parts.
		General Remarks.—General prospects moderate.
Bombay—(Aug. 17th)		
Karachi . . .	Kotri, 1·33; Manjhand, 1·09; average of two other stations, ·70.	River at Kotri on 15th, 18 feet 11 inches against 20 feet 6 inches on same date last year. Fever in five and cattle-disease in one taluka. Wheat, red rice, and *bajri* in Karachi 22, 30 and 32 and in Ghorabari *nil*, 40 and 36 pounds per rupee, respectively.
Hyderabad . . .	Rain in eleven talukas	*Kharif* cultivation in progress. Fever in three and small-pox and cattle-disease in one taluka. River at Kotri on 15th, 18 feet 11 inches against 20 feet 6 inches on same date last year. Wheat 24, *jowari* 37½, *bajri* 36, white rice 18, and red rice 30 pounds per rupee.
Ahmedabad . . .	Rain ·46; total 22·10; rain throughout the district—maximum 2·13 in Gogo and minimum ·20 in Dhandhuka.	Transplantation of rice continues. Young crops well. Three cholera cases in the city, 2 fatal. Wheat 27 and *bajri* 30 pounds per rupee.
Baroda . . .	·54; total 39·71	Cholera in Baroda city, 5 deaths. Sowing operations completed. Excessive rain slightly damaged young plants. Prices have risen. *Bajri* 24, wheat 18, and rice 17 pounds per rupee.
Surat . . .	Rain in all talukas—maximum in Bulsar, 5·60 and minimum in Chorasi, 1·07.	Break still wanted. Crops suffered from excessive moisture. Sowing and resowing retarded, except in Olpad taluka. Rice crops healthy. Cattle in Olpad taluka dying of sorethroat. Cholera in Bulsar, 10 cases, 10 deaths. *Jowari* 34 and *nagli* 44 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik . . .	Rain in Igatpuri, 11·52; Peint, 6·52; Nandgaon, 1·76; Malegaon, 1·36; Niphad, 1·25; Nasik, 1·17; Yeola, 1·01; Chandor, ·75; Sinnar, ·63; Dindori ·53; and Baglan, ·08.	Sowing and transplanting vigorously going on. They are almost finished in Igatpuri, Sinnar, Dindori, Niphad, and Baglan. Standing crops in a thriving condition. Cholera in Nasik, Niphad, Chandor, Yeola, Malegaon, Nandgaon, Baglan, and Peint, attacks 153, deaths 39.
Colaba (Bombay) .	Rain every day, except on 14th; heavy on 10th, 11th and 12th; total of week, 7·18; total to date 65·22, being 22·47 above average.	Abnormal temperature 3° cool on 10th, 4° cool on 11th, 2° cool on 12th, and *nil* from 13th to 16th. Vapour in air normal. Wind normal on 10th, 11th, and 16th; abnormal wind from north-east from 12th to 15th.
Poona	Rain all over the district—maximum 3·15 in Maval, taluka and minimum ·13 in Bhimthari taluka.	More rain wanted in Indapur, Sirur, Purandhar, Bhimthari, and Haveli talukas. Sowing still continues in some talukas. Young crops doing well, except in Purandhar and Bhimthari talukas, where they are withering for want of rain. Public health generally good. Slight cattle-disease in Petha Mulshi. 684 cholera cases in Indapur, Khed, Purandhar, Bhimthari, Haveli, and Mawal talukas, 289 fatal; in Poona city 39 attacks, 14 deaths. *Bajri* 41 and *jowari* 53 pounds in the district, and *bajri* 34 and *jowari* 43 pounds per rupee in Poona city.
Ahmednagar . .	Rain in Karjat, 1·74; Parner, 1·42; Jamkhed, 1·15; Nagar, 1·11; Sheogaon, 1·08; Rahuri, ·81; Kopargaon, ·68; Newasa, ·52; Shrigonda, ·44; Sangamner, ·37; and Akola, ·25.	*Kharif* crops doing well. Sowing operations almost finished in Akola. Rain urgently wanted in Kopargaon and Sangamner. Cholera attacks 196, deaths 100. *Bajri* 36 and *jowari* 54 pounds per rupee.
Sholapur . . .	Rain in Sholapur, 2·34; Barsi, 1·21; Madha, ·71; Karmala, ·86; Pandharpur, 3·34; Sangola, ·88; and Malsiras, ·98.	*Kharif* crops doing well. More rain required in Karmala, Sangola, and Malsiras talukas. Slight cholera here and there in the district, cases 177, deaths 76. Cattle-disease in two villages of the Sangola taluka. *Jowari* 58 and *bajri* 52 pounds per rupee.
Dharwar . . .	Rain at all stations, except Ranibennur, varying from ·10 in Nargund to 3·43 in Nawalgund.	Rice and minor crops good. Heavy rain urgently required throughout the district. Early *jowari* crops already sown in Gadag, Mundargi, and Nargund suffering from want of rain. Cotton sowing commenced in Dharwar and Bankapur talukas. Slight cholera in Bankapur and slight cattle-disease in Dharwar. *Jowari* 54 and rice 22 pounds per rupee.
Kanara . . .	Rain in Karwar, 9·56; total 193·53; Kumta, 7·79; Sirsi, 1·56; and Haliyal, ·97.	Rice plants healthy. Slight cattle-disease throughout the district. Common rice in Karwar 10 seers 40 chittacks, district average 12 seers per rupee.
Rajkot	·27; total 23·44	Crops in good condition. Public health generally good. Wheat 23, *bajri* 24, and *jowari* 29 pounds per rupee.
		General Remarks.—Rain throughout the Presidency, more wanted in parts of the Deccan and Southern Mahratta Country. *Kharif* sowings and transplanting completed in some districts, in progress in others. Standing crops generally good, but withering for want of rain in parts of Poona and Dharwar. Cholera in parts of seventeen, cattle-disease in parts of fifteen, fever in parts of six, and small-pox in parts of four districts.
Bengal—(Aug. 17th)		
Chittagong Aug. 16th	·26	Weather seasonable. Outturn of *aus* expected eight annas. *Aman* being transplanted. Prices stationary. Cholera still reported. Public health fair.
Dacca	·26	*Aus* paddy and jute being cut. Prospects of crops continue good. Rivers rising again. Public health good.
24-Pergunnahs (Calcutta).	2·13	*Aus*, sugarcane and jute promising. *Aman* transplanting nearly completed, but more rain required. Public health generally good, but a few cases of cholera and fever still reported.
Khoolna . . .	·23	Weather very hot. Transplanting of *aman* going on. More rain wanted. Cutting of *aus* commenced. Public health fair.
Moorshedabad . .	Rain at intervals	Weather very hot. Transplantation of *aman* paddy still going on. *Til*, sugarcane, and jute progressing. Public health good.
Pubna	1·97	Rain rather scanty. Crops fair. Public health good.
Dinagepore . . .	3·84	*Bhadoi* crops progressing. Transplantation of *haimanti* paddy going on. Prospects favourable.
Rungpore . . .	2·27	Transplantation of *aman* going on. *Aus* and jute being cut. Prospects fair. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Midnapore . . .	2·14	Weather dry and sultry, with intervals of heavy rain. Flood in Ghatal subsiding gradually. Crops damaged in flooded parts in Ghatal and Tumlook. Some deaths from cholera in Ghatal.
Burdwan . . .	1·01	Prospects of crops continue favourable. Break in rains. Cholera in Sadr, otherwise public health fair.
Bhagalpur . . .	1·17	Transplantation of late rice being completed. Outturn of *makai* poor. Prospects of *marua* and early rice very fair. Cholera decreasing.
Purneah . . .	4·99	Crops doing well. *Aghani* being transplanted. Early *bhadoi* being cut. Rivers rising. Public health fair.
Durbhanga . . .	6·91	Prospects of *bhadoi* continue very favourable. Transplantation of paddy in progress. Prices remain stationary. Public health generally good.
Chumparun . . .	2·90	*Bhadoi* and rice crops thriving well. Prospects excellent. Cholera still prevails in the district.
Patna	1·01	Paddy transplantation going on. *Bhadoi* crops promising. *Makai* being reaped in some places. Cholera prevailing in Behar and Dinapur subdivisions, a few cases reported from other parts.
Gya	2·46	Weather fair and bright. Prospects of both *bhadoi* and *aghani* excellent. Cholera still raging in the interior of the district. Fever also reported.
Hazareebagh . .	4·28	A break in the rains since 12th. All crops doing well, and agricultural prospects favourable in every respect.
Cuttack . . .	·22	Weather bright. *Beali* rice in ear and in some places ripening. *Sarad* rice doing well, but more rain required. Price of rice unchanged. Cases of cholera reported.
		General Remarks.—Rain at the beginning of week, but a break set in on the 12th, and still continues over the greater part of the Province. More rain wanted in some places of the Central Bengal districts and in Orissa. Prospects continue generally favourable, except in the flooded tracts in Midnapur. Trans-planting of late rice still proceeding. Harvesting of early rice and jute in progress. *Bhadoi* crops and sugarcane doing well. Prevalence of cholera still reported in some places in Patna division, elsewhere general health good.
N.-W. Provinces and Oudh—(Aug. 17th)		
Benares (Aug. 16th)	Averaging 4·10	Rainfall is ample for present requirements. Crops thriving. Prices slightly rising. Cholera decreasing.
Ballia („ 15th)	Rain abundant	Prices steady. Prospects generally good. Cholera gradually decreasing.
Gorakhpore („ „)	2·80 at Sadr and abundant throughout the district.	Prices stationary. Cholera decreasing.
Fyzabad („ 16th)	Averaging 7·50	A break is wanted. Supplies sufficient. Prices stationary. Cholera decreasing.
Lucknow („ 15th)	7·10 at Sadr and heavy throughout the district.	Crops promise well. Supplies sufficient. Prices stationary. Cholera still reported both in the city and district.
Rai Barelli . . .	Heavy rain	No report received.
Partabgarh (Aug. 16th)	Averaging 5·70	Prices steady. Cholera still to be heard of.
Allahabad („ „)		Weather seasonable. *Kharif* crops doing well. Markets are well supplied. Prices show a slight fall. Cholera has decreased, but some few cases are still reported. Health otherwise good.
Cawnpore („ „)	General rain from 1·80 to 8·40.	Slight injury to crops by heavy and continuous rain reported from three tahsils. Prices steady. Cholera continues.
Farakhabad („ „)	Averaging 7·40	Low-lying tracts flooded. Crops thriving. Prospects good. Supplies ample. Prices steady. Cholera decreasing.
Sitapur („ „)	Abundant rain has fallen.	A break would now be beneficial. Cholera decreasing.
Bareilly („ „)	Rain abundant	Prospects excellent. Prices steady. Health good.
Banda („ 15th)	Rain continuous	A break is wanted. Crops generally promising. Prices stationary. Cholera continues. Fever increasing. Cattle-disease in one village.
Kumaon („ 16th)	Heavy rain	Crops promising. Prices slightly falling. A few deaths from cholera in Almora, but none reported from Ranikhet. Since the 6th cattle-disease continues.
Agra („ 15th)	Incessant rain	Crops suffering from incessant rain. Clear weather needed. Prices steady. Cholera continues.
Jhansi („ „)	Rain excessive	Break much needed. Weeding stopped. Prices of wheat risen and that of *mung* and *urd* falling. Cholera continues.
Meerut („ 16th)	General rain from 4·10 to 7·50	Continuous rain prevents weeding and ploughing. Prices slightly risen, owing to difficulty of transport. Cholera reported in two tahsils and cattle-disease in one.
		General Remarks.—Heavy and general rainfall during the week, and clear weather would now benefit the crops. Prospects generally are good and markets well supplied; and prices are steady, with a tendency to fall. Cholera is still prevalent, though decreasing in most districts, and the general health continues good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Aug. 17th)		
Hissar (Aug. 16th)	Rain sufficient	Health good. Prices falling. *Kharif* sowings in progress.
Delhi	0·40	Health fair. Prices fluctuating. *Kharif* crops somewhat injured by continuous rain.
Umballa	5·36	Health fair. Prices stationary. *Kharif* crops flourishing.
Jullundur	11·50	Health good. Prices stationary. *Kharif* sowings completed.
Ferozepore	2·70	Health good. Prices stationary.
Amritsar	5·01	Health good. Prices stationary. *Kharif* crops good.
Sialkot	4·40	Health good. Prices stationary. *Kharif* crops good.
Lahore	5·06	Cholera decreasing. Prices stationary.
Multan	·80	Health good. Prices fluctuating. *Kharif* prospects favourable.
Rawalpindi	2·10	Health good. Prices stationary. *Kharif* prospects good.
Shahpur	Slight rain	Health good. Prices stationary.
Dera Ismail Khan	1·16	Health good. Prices steady. *Kharif* ploughings in progress.
Peshawar	·20	More rain much needed. Cholera prevalent. Prices almost stationary. *Kharif* sowings in progress.
		General Remarks.—Rain has fallen throughout the Province, but more is much needed in Peshawar and Shahpur. Cholera is prevalent in Peshawar and in some villages of the Delhi district, abating in Lahore. There are a few cases of cholera of a mild type in Ferozepore. Health is fair in Umballa, elsewhere it is good. Prices are stationary, except in Hissar, where they are falling; fluctuating in Delhi and Multan; almost stationary in Peshawar. *Kharif* crops are flourishing in Umballa, Amritsar, and Sialkot and somewhat injured from continuous rain in Delhi. Sowings in progress in Hissar, Dera Ismail Khan, and Peshawar, and completed in Jullundur. Prospects favourable in Multan and Rawalpindi.
Central Provinces—(Aug. 17th)		
Nagpur	1·55	Weather cloudy and warm. *Jowari* and cotton suffering from excessive moisture. Cholera, 5 cases. Prices steady.
Jubbulpore	6·03; heavy rain on 14th.	Break desirable. Fever continues. Prices stationary.
Saugor	3·41	Weather cloudy and showery. Fever and bowel-complaints prevalent. Cholera continues. Prices steady.
Seoni	1·36	Weather showery. Transplanting and weeding progressing. Cholera, 45 cases, 24 deaths. Prices steady.
Hoshangabad	·98	Weather cloudy and warm. Weeding in progress. Fever prevalent. Prices—wheat 15 and rice 9 seers per rupee.
Khandwa	·34	Break appears to have set in and is very beneficial. Prospects good. Cholera, 68 cases. Cattle-disease in Burhanpur. Prices stationary.
Bilaspur	1·58	Wet ploughing finished. Rain has injured cotton. Weeding begun. Fever and cattle-disease in parts. Prices rising.
Raipur	·25	Weather cloudy and close. Weeding in progress. Crops look healthy. Prices steady.
Sambalpur (Aug. 12th).	8·37	Weather seasonable. Transplanting going on. Crops doing well. Cholera in places.
		General Remarks.—A break is much wanted, especially in the Nagpur and Wardha districts, where the cotton and *jowari* are suffering greatly from the excessive moisture and lack of sunshine.
Burma—(Aug. 17th)		
Akyab (Aug. 13th)	9·93 (Total rainfall to date 104·86).	Two cases of cholera in district and one in town. Slight cattle-disease. Crop prospects favourable.
Bassein	2·33 (Total rainfall to date 61·19).	Slight cattle-disease. Ploughing and transplanting continues.
Rangoon	·72 (Total rainfall to date 72·30).	Four deaths from cholera.
Amherst (Moulmein)	1·21 (Total rainfall to date 122·22).	Ploughing and transplanting progressing. Young crops were destroyed by flood, heavy rain, and worms.
Tavoy	2·37 (Total rainfall to date 116·83).	Crops healthy.
Pegu	...	No report received.
Henzada	1·94 (Total rainfall to date 48·85).	Transplanting progressing.
Prome	·51 (Total rainfall to date 24·07).	Slight cattle-disease. Ploughing and transplanting progressing.
Toungoo	5·11 (Total rainfall to date 51·46).	Ploughing not completed. Sowing going on. Transplanting slow.
Thayetmayo	·75 (Total rainfall to date 16·29).	Ploughing retarded, owing to want of rain. Transplanting commenced in some parts of district.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Shwebo	1·36 (Total rainfall to date 20·48).	Sowing commencing. Price of paddy Rs. 125.
Yamethen	·25 (Total rainfall to date 15·59).	Food-grain insufficient. Ploughing commenced. Price of paddy Rs. 170.
Myingyan	(Total rainfall to date 14·11).	Some cases of measles. Food-supply sufficient. Prices ordinary. Price of paddy Rs. 125.
Minbu	1·80 (Total rainfall to date 13·10.)	Price of paddy Rs. 110.
Mandalay	·58 (Corrected total rainfall to date 19·75).	Transplanting of *mayin* crops progressing. Food-supply sufficient. Prices normal. Price of paddy Rs. 80 to 120.
		General Remarks.—Slight cholera in Akyab and Rangoon. Cattle-disease in several districts. Young crops in Moulmein and Amherst have suffered from heavy rain. Reports from ten Upper Burma Districts. Measles in Myingyan. Cattle-disease in Pyinmana, where rain is wanted. Some scarcity in Yeu and Yamethen.
Assam—(Aug. 17th)		
Gauhati (Aug. 16th)	·39	Weather sensibly cooler in evenings and mornings. Public health fair. Malarial fever still continues in Barpetta; also reported from Chomoriah, Luki and Chaigam tahsils. Cattle-disease reported from some parts of the district. Reaping of *ahu* crop finished. Rain much wanted. Cultivation of *sali dhan* retarded almost in all places for want of rain. Condition of sugarcane and tea reported to be favourable.
Sylhet	·37	State and prospects of crops good. Prospects of tea favourable.
Cachar	2·59	Weather dry. Rain much needed. Three-fourths of land for transplanting *sáil* ploughed, one-fourth transplanted. Three-fourths *aus* paddy reaped. Common rice selling at 17 seers $12\frac{8}{16}$ chittacks per rupee. Tea doing well.
Dibrugarh	1·48	Weather seasonable. Reaping of *ahu* over. Transplanting of *sali* progressing. Prospects good. Tea and sugarcane doing well. Public health indifferent.
Mysore and Coorg—(Aug. 17th)		
Bangalore	Civil and Military Station of Bangalore 3·09; Bangalore district, 3·40; Mysore 1·28.	Rain much required in Kadur taluk. Except in parts of Kadur district, standing crops are reported to be in good condition. Prospects of season favourable. Public health generally good. Fever and cattle-disease are prevalent in parts. No material change in prices.
Mysore		
Mercara	4·12	Crop prospects and health good.
Berar and Hyderabad—(Aug. 17th)		
Amraoti	2·35	Weather warm and rainy. Weeding in progress. Cotton damaged in some places by excessive rain. Cholera continues. Wheat and *jowari* 25 seers per rupee.
Akola	2·23	Weather warm and cloudy. *Kharif* prospects favourable. Weeding operations impeded owing to continuous rain. Cholera decreasing. Slight cattle-disease in one taluk.
Hyderabad	1·69 (Total since 1st January 12·74).	*Kharif* crops prospering. Wet cultivation suspended, owing to insufficiency of water in tanks. General health good. Prices: Wheat $11\frac{3}{4}$, coarse rice $12\frac{1}{2}$, white *jowari* $18\frac{1}{2}$, yellow *jowari* $21\frac{1}{2}$, and *tur* 14 seers per current sicca rupee.
Central India States—(Aug. 17th)		
Indore	·65	Weather clearer. Health good. Crops somewhat damaged by rain.
Gwalior	3·91	Cholera in Lashkar, 285 cases, of which 150 fatal. Crops suffering from excessive rain.
Neemuch	1·40	Eighteen fatal cases of cholera among European and Native troops.
Goona	·74	Health and prospects good.
Sutna	2·16	Health and prospects good.
Agar	·78	Break badly needed to save *jowari* crops. Cholera reported in parts of Bhopal, otherwise health good.
Sehore	3·41	Weather cloudy. Prospects favourable. Cholera at Beri and Nowgong cantonment.
Nowgong	7·61	*Jowari* and *makka* crops seriously injured by incessant rain. Prices slightly rising. Health good.
Bhopawar	1·35	

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Aug. 17th)		
Abu (Aug. 17th)	2·88	Weather clearing and seasonable.
Sirohi („ 14th)	·22	Tanks fairly full. Wells good. Health good. Crops good. Weather overcast and little rain.
Marwar („ 13th)	·60; drizzling rain	No water brought into Jodhpore city tanks by week's rain. Health good in city and improving in districts. *Kharif* doing well in districts favoured with abundant rain. Weather cloudy. Prices stationary. Market easy.
Meywar („ „)	·08	Tanks and wells still low. Crops fair. Health fair, but diarrhœa and dysentery increasing. Prices stationary. Rain wanted.
Pertabgurh („ „)	·44	Health good. Prices fluctuating. Weather occasionally cloudy.
Harowti („ „)	Deoli, ·33; Tonk, 1·69; Shahpura previous week, ·38	Weather clear. Weeding commenced. Health good. Prospects fair.
Jhallawar („ 14th)	·97	Weeding progreesing. A little fever.
Ajmere („ 16th)	Average throughout the district, ·68.	Cholera abating, 6 fresh seizures, 1 death in Ajmere city and 16 seizures and seven deaths in Beawar. Cattle-disease in Merwara still prevalent. Prices stationary.
Jeypore („ „)	. . . . .	Damage to *kharif* sowings by excessive rain. Prospects generally fair.
Kerowlee . . .	. . . . .	No report received.
Dholepore (Aug. 13th)	5·40	Tanks and wells full. Crops partially injured by constant rain. Few cases of cholera. Health elsewhere good. Prices stationary. Weather seasonable.
Bhurtpore („ 16th)	3·60	Health good. Prices rising.
Ulwar („ „)	Average 2·50	Crops suffering from excessive rain. Cholera still prevalent, but decreasing. Health good.
Kotah („ 13th)	·15	Isolated cases of cholera continue. Weather clear.
Kherwara („ 14th)	·56	Crops fair. Fever prevalent. Weather bright and sunny.
Bickanir („ 13th)	·15; much heavier in some districts.	Tanks and wells full. Prospects fair. Health good. Prices stationary. Weather cloudy.
Nepal—(Aug. 12th)		
Katmandu (Aug. 11th)	5·18	Constant rain and cloudy weather. Crops improving with the rain.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 17th August, 1887.

The principal feature in the weather of the past week has been the partial break in the rains which has prevailed over a large part of the country. The break commenced in North-Eastern India on the 11th and slowly spread westward, so that at the close of the week it had reached Western and Central India. As is frequently the case when fine weather prevails at this season in Northern and Central India, rather heavy precipitation occurred over the Peninsula, where the rain was considerably heavier in the present than in the preceding week. In the Punjab pressure conditions have been unsteady, and large local falls of rain have occurred over that Province—more particularly on the 13th and 14th. On the former date rain extended into Upper Sind, and Jacobabad received its first rain during the present monsoon.

On the 11th a fairly strong monsoon was blowing along the West Coast. It brought general rain to Bombay, the Central Provinces, and Central India, but did not penetrate into Northern India, where the rainfall was due to the Bay current. On the 12th the strength of the monsoon on the West Coast had sensibly decreased, and the current was confined almost entirely to Western, Central, and Southern India. It gave heavy rain to the Bombay Coast districts, but only light local showers to the more inland stations. On the 13th the winds all along the West Coast were below the average August force, but the extent of the current was apparently increasing, as south-westerly winds had appeared in the Cis-Gangetic portions of the North-Western Provinces. The rainfall was similar to that reported on the previous day, except that the amounts on the West Coast were smaller. The chart of the 14th showed that the monsoon was increasing again along the West Coast, but the extent and amount of rain remained unaltered. On the following day, though the strength of the monsoon current on the West Coast was unchanged, westerly and south-westerly winds belonging to this branch of the monsoon were appearing in the south-east of the Punjab and west of the North-Western Provinces, and displacing the easterly winds which had prevailed there for the past few days. Moderate rain fell in Western and Central India and the south-east of the Punjab. On the 16th a slight further increase occurred in the strength of the monsoon from the Arabian Sea, but the rainfall accompanying it was generally light and scattered. No change was shown by the report of the next day.

The Bay of Bengal monsoon current has been very unsteady. On the 11th nearly normal conditions prevailed, the current from the Bay passing across Bengal and penetrating westwards over the whole of the North-Western Provinces and the Punjab. Rain fell rather heavily at the hill stations in North-Western India, and generally in the North-Western Provinces, but only local showers in Bengal, Assam, and Burma. On the next day the monsoon winds had fallen off very considerably at the head of the Bay, and rain had almost ceased over Burma and Bengal, though moderate amounts were received over nearly the whole of the North-Western Provinces and the Punjab. On the 13th light and variable breezes prevailed around the Bay. The break in the rains was extending westward, and only a few light showers were received in Bengal, the Central Provinces, and the east of the North-Western Provinces. There was no important change in the winds on the 14th and 15th, but the break in the rains had still further extended, and fair weather was reported from parts of Central India also. On the 16th the report showed that a cyclonic whirl was forming over the upper part of the Bay. As a consequence, the wind shifted to north-east in South Bengal, and, except at Dacca, there was no rain of any importance over Bengal. On the 17th the cyclonic whirl was approaching the Orissa and Ganjam Coasts, and was occasioning showers of rain around the head of the Bay; in other parts of Bengal the break in the rains continued.

In Upper India there has been a good deal of heavy rain during the week. On the first day, when easterly winds from the Bay prevailed throughout Northern India, rain fell generally in the North-Western Provinces and on the North-West Himalaya, and by the 12th had extended over the Punjab also. Similar conditions prevailed on the 13th, when rain for the first time this season extended into Upper Sind. On the 14th a slight depression was formed over the Punjab,

and heavy local rainfall was the result. Ludhiana on this day received over 6 inches. On the 15th rain, though much lighter, was still falling over Upper India, but on the 16th the fall ceased in the Punjab, and on the 17th the rainfall was generally slight all over North-Western India.

On the whole, the rainfall of the past week has been very satisfactory. There has been a partial break in the rains over the Central parts of the country, where the seasonal fall had been largely exceeded, while fairly continuous rain has fallen over the North-Western Provinces and the Punjab, where the total amount has hitherto been somewhat deficient. The following table shows an unimportant deficiency over Bengal, a considerable excess over the North-Western Provinces and the Punjab (except Peshawar), and a slight excess over the Central Provinces and the greater part of the West Coast:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to August 17th.	Difference.
Akyab ...	86·82	119·67	—32·85
Saugor Island ...	34·15	38·82	— 4·67
Calcutta ...	30·35	33·36	— 3·01
Dhubri ...	40·95	46·36	— 5·41
Purneah ...	31·27	34·48	— 3·21
Gya ...	24·69	24·65	+ 0·04
Allahabad ...	25·73	22·60	+ 3·13
Meerut ...	16·66	14·76	+ 1·90
Delhi ...	27·46	14·17	+ 13·29
Lahore ...	13·80	9·73	+ 4·07
Peshawar ...	1·76	4·04	— 2·28
Cochin ...	52·61	65·94	—13·33
Ratnagiri ...	82·46	76·35	+ 6·11
Bombay ...	65·46	51·50	+13·96
Poona ...	16·41	15·34	+ 1·07
Surat ...	33·91	26·54	+ 7·37
Khandwa ...	21·10	20·28	+ 0·82
Nagpur ...	33·60	26·42	+ 7·18

The weather has been warmer than the normal in Burma, Assam, and Bengal Proper, but cooler than usual in Behar and the Upper Provinces. In the Punjab at some stations the mean temperature of the week was from 5° to 7° below the average.

In the Central Provinces the weather was a little warmer than the average, but in the Peninsula, and particularly in Madras, it was cooler.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	14·86
Bengal and Assam ...	16	18·96
North-Western Provinces and Oudh ...	9	31·52
Punjab ...	9	26·00
Hill Stations ...	5	23·76
Ceylon ...	2	2·83
Malabar Coast ...	5	16·20
Bombay ...	9	42·46
Berars and Central Provinces ...	10	23·88
Guzerat and Central India ...	6	7·58
Sind—Rajputana ...	6	7·84
Madras ...	13	26·83

Calcutta, 23rd August 1887.

E. T. ATKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 25th AUGUST, 1887.

GENERAL REMARKS.—The rainfall during the week has been heavy in the North-Western Provinces and Oudh, the Central Provinces and Central India, and general but slight in Bengal and Assam, the Punjab, Madras, Bombay, and other Provinces.

The *kharif* crops are doing well, except in the Central Provinces, Central India, and some districts of the North-Western Provinces and Oudh and Bombay, where they have been injured by excessive moisture and a break in the rains is needed. In four districts of Bombay, in parts of Madras and Mysore, and in the western districts of the Punjab more rain is required, though prospects have improved.

Ploughing for the *rabi* has commenced in the North-Western Provinces and the Deccan.

Early rice continues to be harvested in Bengal, Bombay, and Madras, with prospects of a fair outturn, but transplanting of late rice is retarded in Bengal and Assam, owing to want of rain. Ploughing and transplanting are in active progress in Burma.

Jute is being cut in Bengal and promises a good yield, and sugarcane is in good condition. Tea in Sylhet is in need of rain. Cotton in Berar and the Central Provinces has suffered from cloudy weather and heavy rains.

The usual autumnal fever exists in most Provinces.

Prices are generally stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Aug. 24th)		
Bellary . . .	Average last week since revised, ·98; this week, 3·14.	Standing crops generally good. Cholera in four; cattle-disease in two taluks, decreasing.
Kurnool . . .	Average last week since revised, 2·55; this week, 3·54.	Standing crops good. Small-pox in two, cattle-disease decreasing in three taluks.
Ganjam . . .	Average last week since revised, 1·87; this week, 3·84.	Agricultural operations progressing. Small-pox in six, fever in eight, cattle-disease in three divisions. Cholera decreasing.
Kistna . . .	Average 2·70	Standing dry crops improving. River 9·1 feet over Anicut. Slight fever. Cholera in two taluks, cattle-disease decreasing in six.
Chingleput (Madras) .	Average 1·19	Standing crops fair. Harvest paddy, outturn middling. Fever in one, small-pox in three, cholera increasing in one, cattle-disease increasing in four taluks.
Coimbatore . .	Average ·37	More rain wanted in parts. Standing crops generally good, but *cholum* affected by insects in one taluk. Harvest dry grains, outturn about average. Fever, and small-pox in one taluk.
Tanjore . . .	Average 1·09	Standing crops generally good, but require more rain in parts of one taluk. Harvest gingelly, outturn below average.
Madura . . .	Average last week since revised, ·65; this week, ·38.	Health of people and cattle generally good.
Malabar . . .	Average 2·44	First crop paddy ripening in parts. Slight small-pox in eight, fever in two, and cattle-disease decreasing in two taluks.
Travancore . .	·48	Paddy being reaped. Fever in parts.
		General Remarks.—General prospects very fair.
Bombay—(Aug. 24th)		
Karachi . . .	. . .	River at Kotri on 22nd, 19 feet 8 inches against 18 feet 9 inches on same date last year. *Kharif* crops injured in Johi taluka by deficient water-supply in Nara. Fever in six and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Mirpur 22, 42 and 34 pounds per rupee, respectively.
Hyderabad . . .	Rain in six talukas	*Kharif* cultivation in progress. Fever in four, small-pox in one, and cattle-disease in two talukas. River at Kotri on 22nd, 19 feet 8 inches against 18 feet 9 inches on same date last year. Wheat 24, *jowari* 36, *bajri* 36, white rice 18, and red rice 30 pounds per rupee.
Ahmedabad . . .	*Nil*	Transplanting of rice in progress. Young crops in good condition. Four cases of cholera in the city, 2 fatal. Wheat 27 and *bajri* 30 pounds per rupee.
Baroda . . .	·04; total 39·75	Cholera still continues in Baroda city, 4 deaths. General health good.
Surat . . .	Rain in all talukas	Partial break continues. Sowing and resowing progressing. Prospects improved, except in Bulsar, where crops have suffered from excessive moisture. Rice and other standing crops healthy. Fever in Bardoli, and cholera in Bulsar, Chikli, and Mandvi, 19 cases, 7 deaths. *Jowari* 34 and *nagli* 43 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Nasik . . .	Nandgaon, 3·57; Malegaon, 2·09; Peint, 1·48; Chandwad, 1·27; Yeola, ·50; Baglan, ·50; Sinnar, ·14; Nasik, ·11; and Niphad, ·10.	Sowing almost completed. Transplanting vigorously going on in Peint, and land being prepared for *khurasni* (niger seed) sowing. Standing crops promising. More rain much needed in Sinnar. Cholera in Nasik, Niphad, Chandwad, Yeola, Nandgaon, Malegaon, Kalwan, and Baglan, attacks 239, deaths 59.
Colaba (Bombay) .	Rain every day; total of week, 1·86; total to date, 67·08, being 11·45 above average.	Abnormal temperature rose from 2° cool on 17th to 1° warm on 19th, and was *nil* from 20th to 23rd. Vapour in air normal. Abnormal wind from north-east from 17th to 19th, wind normal from 20th to 23rd.
Poona	*Rain in* Indapur, Khed and Sirur talukas and in Baramati and Mulshi Pethas; none elsewhere; maximum 3·47 in Indapur and minimum ·13 in Khed taluka.	More rain wanted in Sirur, Purandhar, Bhimthari, and the eastern portion of Haveli taluka. Young crops doing well, except in Bhimthari taluka, where they are withering for want of rain. Public health generally good. Slight cattle-disease in Petha Mulshi. 189 cholera cases in Indapur, Khed, Purandhar, Bhimthari, Sirur, Mawal, and Haveli talukas, 110 fatal; in Poona city, 9 attacks, 5 deaths. *Bajri* 41 and *jowari* 34 pounds in the district, and *bajri* 34 and *jowari* 43 pounds per rupee in Poona city.
Ahmednagar . .	Jamkhed, 3·33; Newasa, 2·55; Nagar, 1·89; Shrogaon, 1·73; Karjat, 1·55; Kopargaon, 1·25; Rahuri, ·88; Parner, ·84; and Shrigonda, ·64; very slight in Sangamner and Akola.	*Kharif* crops good, except in Sangamner, where they are withering for want of rain. *Rabi* sowing commenced in Rahuri. Cholera attacks 270, deaths 100. *Bajri* 39 and *jowari* 57 pounds per rupee.
Sholapur . . .	In seven talukas—maximum in Sholapur, 8·45 and minimum in Karmala, 2·42.	*Kharif* crops doing well. Slight cholera in all talukas, except Pandharpur and Malsiras, total cases 81, fatal 43. Cattle-disease in parts of Sangola taluka. *Jowari* 58 10/16 and *bajri* 50 1/2 pounds per rupee.
Dharwar . . .	General rain varying from ·30 in Karajgi to 5·06 in Nawalgund.	Rice and minor crops good. Early *jowari* crop in eastern talukas improved by the rainfall of the week, and in other talukas moderate heavy showers generally and urgently required. Cotton sowing in progress in Bankapur and Dharwar talukas. Slight cholera in Bankapur and slight cattle-disease in Dharwar talukas. *Jowari* 55 and rice 24 pounds per rupee.
Kanara . . .	Karwar, 1·80; *total* 105·42; Kumpta, 7·33; Sirsi, 2·22; and Haliyal, ·38.	Crops healthy. Slight cattle-disease throughout the district. Common rice in Karwar 11, district average 12 seers per rupee.
Rajkot . . .	·02; total 23·40	Fever at Rajkot and Manekwada. Crops in good condition. Wheat 23, *bajri* 23, and *jowari* 29 pounds per rupee. *General Remarks.*—Rain in most districts, more still wanted in parts of Poona, Nasik, Belgaum, and Dharwar. Standing crops generally good, but injured by excessive moisture in parts of Surat and Khandesh, and for want of it in parts of Poona, Ahmednagar, and Karachi. Cholera in parts of eighteen, cattle-disease in parts of sixteen, fever in parts of eight, and small-pox in parts of five districts.
Bengal—(Aug. 24th)		
Chittagong (Aug. 23rd)	·48	Weather unseasonable. *Aus* paddy being harvested. *Aman* paddy being transplanted. Rain much wanted. Prices stationary. Public health fair. Cholera still reported.
Dacca	4·43	Prospects of crops improving, owing to rivers rising and rain falling. Transplantation of winter paddy going on. *Jute* and *aus* paddy being harvested. Public health good.
24-Pergunnahs (Calcutta).	·46	Prospects of *aus*, jute, and sugarcane satisfactory. More rain wanted for *aman*. Transplantation nearly completed. A few cases of cholera and fever reported, public health otherwise good. Cattle-disease reported from Bhangore and Canning Town.
Khoolna . . .	2·32	Weather hot. Occasional rain. Transplanting of *aman* going on. Cutting of *aus* continues, outturn good. Public health fair.
Moorshedabad . .	·60	Weather very hot. Rain at intervals. *Aman* growing well. Reaping of *bhadoi* commenced. *Til*, sugarcane, and jute progressing. Public health good.
Pubna	·98	Weather seasonable. Crops good. Public health fair.
Dinagepore . . .	·20	Ten annas outturn of *bhadoi* expected. Transplanting of winter rice continues, and prospects favourable.
Rungpore . . .	·14	Jute being cut, outturn good. More rain wanted for transplantation of *aman* to be completed. Public health fair. Prices stationary.
Midnapore . . .	1·84	Prospects of crops good. A little cholera in north.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Burdwan . . .	1·08	Break in rain till near end of week. Paddy transplantation now resumed and approaching completion. Cholera in Sadr, public health otherwise fair.
Bhagalpur . . .	·77	*Marua* harvest commenced in north. Early rice doing well. About three-fourths of late rice transplanted. Floods from the Kusi have caused some loss in lowlands in the two northern subdivisions. Cholera still hangs about.
Purneah . . .	·09	Weather hot and cloudy, with light showers. Transplanting of *aghani* and harvesting of *bhadoi* in progress. Rivers high. Public health bad.
Durbhanga . . .	·09	Prospects of *bhadoi* continue favourable. *Makai* and *marua* harvest begun. Transplantation of late rice still in progress. Public health generally good.
Chumparun . . .	·77	Transplantation of rice approaching to a close. Prospects excellent. Prices stationary. Public health fair.
Patna	·11	Transplantation of paddy still going on. More rain wanted. *Bhadoi* crops looking well, and prospects satisfactory. Cholera of severe type still prevalent in Bihar and Dinapore subdivisions.
Gya	1·10	Prospects of crops very good. Cholera still lingering. Small-pox and fever here and there.
Hazareebagh . . .	. . . . .	Weather bright and clear up to 22nd. Transplantation of rice nearly completed. All crops doing well. Prospects excellent. General health fair.
Cuttack . . .	3·70	*Beali* rice being reaped. *Sarad* rice doing well. Price of rice unchanged. Public health generally good. Cases of cholera still reported. *General Remarks.*—Rainfall general, but very slight, in most of the districts. More rain wanted to complete transplantation of late rice. Early rice and jute are being harvested, with expectation of good general outturn. *Bhadoi* (autumnal) crops and sugarcane are promising. Cholera still prevalent in places in Behar and in Pooree, otherwise public health generally good.
N.-W. Provinces and Oudh (Aug. 24th)		
Benares (Aug. 23rd)	Averaging 2·00	Agricultural prospects fair. Ploughing for *rabi* commenced. Supplies ample. Prices lowered. Very few cases of cholera now.
Ballia („ 22nd)	Averaging 3·40	*Kharif* crops in good condition. Market well supplied. Prices stationary. Cholera rapidly decreasing.
Gorakhpore („ „)	1·00 at Sadr	Prices stationary. Cholera decreasing.
Fyzabad („ 23rd)	Averaging 5·80	A break in the rains is wanted. Crops promising. Supplies sufficient. Cholera decreasing.
Lucknow. („ 22nd)	Continuous rain averaging 2·70	Crops flourishing. *Mash* being sown. Supplies sufficient. Prices steady. Cholera disappearing. Cattle in fair condition.
Rai Barelli („ „)	Averaging about 2·80	Prospects good. Prices stationary. Cholera decreasing. Cattle-disease reported from two tahsils.
Partabgarh („ 23rd)	Rain continues	Prospects of crops good. Prices steady. Cholera has almost disappeared.
Allahabad („ „)	Average rainfall 1·80.	Crops thriving. Markets well supplied. Prices show a slight fall. Some cholera still continues. Health otherwise good.
Cawnpore („ „)	Rain general from 1·70 to 6·70.	*Jowari* and cotton injured in four tahsils and *bajri* sowings retarded in places by heavy and continuous rain. Prices stationary. Cholera abating.
Farakhabad („ „)	Averaging 4·00	Crops thriving, except those in lowlands. Supplies ample. Prices lowering. Cholera decreasing.
Sitapur („ „)	Abundant rain has fallen.	*Kharif* prospects very good. Cholera continues.
Bareilly („ „)	Rain continues ample.	Crops promise well. Market steady. Slight fever and a few cases of cholera in the north of the districts. Otherwise health good.
Banda („ 22nd)	Rain abundant	A break is wanted. Crops injured in lowlands, and ploughing and sowing stopped by continuous rain. Prices stationary. Cholera decreasing. Fever on the increase.
Kumaon („ 23rd)	. . . .	Weather seasonable. Crops very promising. Prices falling slowly. Cholera on the borders of Garhwal. Cattle-disease in several places.
Agra („ 22nd)	. . . .	Crops suffering much from continuous rain and cloudy weather. A break much needed. Prices rising slightly. Cholera decreasing.
Jhansi („ „)	. . . .	Crops suffering from heavy rain. Weeding stopped. Prices fluctuating. Cholera diminishing. Some fever reported.
Meerut („ 23rd)	Rainfall general from ·10 to 4·70.	Slight fall in prices. Cholera continues in a few villages. Some cattle-disease reported. *General Remarks.*—Rainfall heavy during the week. Crops injured in some places by continuous rain. A break is now wanted. Prospects generally good. Supplies ample, and prices fairly steady. Public health good. Cholera decreasing a little. Cattle-disease reported from some places.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Aug. 24th)		
Hissar (Aug. 23rd)		A few cases of cholera in tahsil; otherwise health good. Prices stationary. *Kharif* sowings completed.
Delhi	2·59	Health fair. Cholera continues in Ballabgarh. Prices fluctuating. *Kharif* crops damaged by continuous rain.
Umballa	1·08	A few cases of cholera in the district. Prices stationary. *Kharif* crops good.
Jullundur		Health good. Prices stationary. *Kharif* weeding commenced.
Ferozepore	·70	Health good. Prices stationary.
Amritsar	1·04	Health good. Prices stationary. *Kharif* crops good.
Sialkot	·60	Health good. Prices stationary. *Kharif* crops very good.
Lahore		Cholera decreasing. Prices stationary. *Kharif* ploughings commenced.
Multan		Health good. Prices stationary. *Kharif* prospects good.
Rawalpindi	·80	Health good. Prices stationary. *Kharif* prospects good.
Shahpur	Slight rain	More rain wanted. Health good. Prices almost stationary. *Kharif* prospects improved.
Dera Ismail Khan		Health good. Prices almost stationary. *Kharif* ploughings in progress.
Peshawar	·10	Cholera decreasing. Prices almost stationary. *Kharif* prospects average.
		General Remarks.—Rain has fallen in all districts, except Hissar, Jullundur, Lahore, Multan and Dera Ismail Khan. More rain is much wanted in Shahpur. Health is good, except in Delhi, where it is fair. There are a few cases of cholera in Hissar, Delhi, and Umballa. Cholera is decreasing in Lahore and Peshawar. Prices are generally stationary, fluctuating in Delhi, and almost stationary in Shahpur, Dera Ismail Khan, and Peshawar. Crops good in Umballa, Amritsar, and Sialkot, but somewhat damaged by continuous rain in Delhi. Sowings completed in Hissar. Ploughings commenced in Lahore and in progress in Dera Ismail Khan. Prospects good in Multan and Rawalpindi, improved in Shahpur, and average in Peshawar.
Central Provinces—(Aug. 24th)		
Nagpur	3·67	A break in the rains is wanted. *Jowari* and cotton being damaged. Fever prevalent. Seven cases of cholera, 1 death.
Jubbulpore	5·91	Weather very wet. Break wanted. Fevers prevalent. Prices steady.
Saugor	4·04	Weather cloudy and showery. Break much needed. Cholera in places. Prices steady.
Seoni	2·87	Weather very wet. Break wanted. Transplanting almost completed. Thirty cases of cholera, 18 deaths. Prices stationary.
Hoshangabad	4·31	Crops progressing fairly. Fever prevalent. Cholera decreasing. Prices unchanged.
Khandwa	4·18	Weather showery. Very heavy rain on 20th. Sunshine badly wanted. All crops except rice suffering. Thirty-seven cases of cholera, 14 fatal. Prices stationary.
Bilaspur	3·50	Break required. Weeding continued. Fever and cattle-disease prevalent. Prices rising.
Raipur	4·12	Weather rainy. Weeding continues. Crops healthy. Cattle-disease in Sunga. Prices steady.
Sambalpur		No report received.
		General Remarks.—A break in the rain is very much wanted, and serious injury is being caused to the *jowari* and cotton crops by excessive moisture and the absence of sunshine.
Burma—(Aug. 24th)		
Akyab (Aug. 20th)	6·40 (Total rainfall to date 111·26).	Eight deaths from cholera in district and 4 in town. Slight cattle-disease. Crop prospects favourable.
Bassein	6·08 (Total rainfall to date 67·27).	Ploughing and transplanting continue.
Rangoon	3·75 (Total rainfall to date 76·11).	One case of cholera.
Amherst (Moulmein)	10·24 (Corrected total rainfall to date 133·09).	Ploughing and transplanting progressing. Prospects of crops good.
Tavoy	20·1 (Total rainfall to date 136·84).	Crops reported healthy.
Pegu (Aug. 13th)	2·54 (Total rainfall to date 90·45).	About three-fourths of ploughing and transplanting finished.
„ („ 20th)	6·77 (Total rainfall to date 97·22).	Slight cattle-disease in two townships.
Henzada	2·61 (Total rainfall to date 51·46).	Transplanting almost completed.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Prome	·54 (Total rainfall to date 24·61).	Cattle-disease in two townships, severe in one of them. Ploughing and transplanting progressing.
Toungoo	5·21 (Total rainfall to date 56·67).	Sowing not completed. Transplanting slowly progressing.
Thayetmyo	·75 (Total rainfall to date 17·04).	Ploughing operations still continue. Transplanting commenced in a very few parts. Rain much wanted.
Shwebo	4·07 (Corrected total rainfall to date 24·55).	
Kyaukse	·22 (Total rainfall to date 16·08).	Prospects of crops good.
Myingyan	·40 (Total rainfall to date 14·51).	Food-supply sufficient. Prices ordinary.
Mandalay	4·75 (Total rainfall to date 24·50).	Transplanting of *mayin* crops progressing. Food-supply sufficient. Prices normal.
Minbu	·83 (Total rainfall to date 13·93).	
Yamethen	1·93 (Total rainfall to date 17·52).	Cultivation progressing.
		General Remarks.—Some cholera in Akyab and Rangoon, otherwise public health of Lower Burma good. Cattle-disease severe in parts of Prome and slight in several other districts. Ploughing and transplanting well advanced. Rain wanted in Thayetmyo. Reports from eleven Upper Burma districts. Slight fever and cattle-disease in Pyinmana, where rain is wanted. Food scarce in Yeu, otherwise health and crop prospects good.
Assam—(Aug. 24th)		
Gauhati (Aug. 23rd)	1·00	Mornings cool, days hot. Public health fair. Malarial fever reported from Barpetta, Luki, and Palasbari tahsils. Cattle-disease in some parts of district. More rain wanted for *sali* crop. Prospects of sugarcane and tea favourable.
Sylhet	4·19	Rain urgently wanted for all crops. Insects destroying *sali* in South Sylhet and Habiganj. Tea also requires rain.
Cachar	1·71	Weather dry. More rain wanted. *Sáil* seedlings half transplanted. Common rice selling at 17 seers 12⅜ chittacks per rupee. Tea doing well.
Dibrugarh	2·98	Weather seasonable. Transplanting of *sali* nearly over. Sugarcane thriving well. Tea doing well. Public health better.
Mysore and Coorg—(Aug. 24th)		
Bangalore	Civil and Military Station, 1·64; Bangalore district, 1·36; slight rain reported in other parts of the State.	Standing crops in good condition. Prospects of season fair. More rain needed in parts of the Mysore, Tumkur, and Kadur districts. Public health generally good. Cattle-disease prevalent in parts. Prices have slightly fallen in Shimoga and Kadur districts.
Mysore		
Mercara	2·97	Standing crops in good condition. Health good.
Berar and Hyderabad—(Aug. 24th)		
Amraoti	3·07	Weather rainy. Cotton and *tur* plants damaged by constant rain. Cholera still prevalent. Wheat 17 and *jowari* 24 seers per rupee.
Akola	·20	Weather warm and cloudy. *Jowari* sowing completed. Cotton being resown in parts. Weeding in progress. Cholera in places in the district.
Hyderabad	1·95 (Total since 1st January, 14·69).	*Kharif* crops prospering. Wet cultivation will probably not be attempted, owing to insufficiency of water in tanks. General health good. Prices—wheat 11¼, coarse rice 12½, white *juar* 18¼, yellow *juar* 21¼, and *tur* 14 seers per current sicca rupee.
Central India States—(Aug. 24th)		
Indore	2·35	Constant rain. Break much needed.
Morar (Gwalior)	3·18	Cholera decreasing.
Sutna	4·23	
Neemuch		No report received.
Goona	3·55	Crops on lowlands suffering from heavy rains. Health good.
Agar	1·68	Health and prospects fair.
Sehore	2·45	Weather cloudy, with occasional showers. Crops fair. Cholera in parts of Bhopal, 1 case in cantonment.
Nowgong	2·72	Weather cloudy. Fresh report of cholera from Garowli, 4 fatal cases with European Artillery at Nowgong.
Bhopawar	·55	*Jowari* and *makka* crops injured by continuous rain. Prices rising. Sporadic cholera reported from Barwai, Mahesar, and Mandlesar.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Aug. 24th)		
Abu (Aug. 24th)	1·96	Weather again overcast, damp and close.
Sirohi („ 21st)	·12	Tanks fairly full; wells good. Health good. Crops fair. Weather warmer and overcast. More rain wanted.
Marwar („ 20th)	·21	No water brought into Jodhpore city tanks. Cholera prevails to some extent in city. *Kharif* doing well, though some damage has been done by insects. Weather cloudy. Market easy. Prices tending to rise.
Meywar („ „)	3·67	Water in tanks and wells increasing. Crops fair. Health fair. Diarrhœa prevalent. Prices stationary. Weather seasonable. Rain daily during week.
Pertabgurh . . .	. . . . .	No report received.
Harowti . . .	. . . . .	No report received.
Jhallawar (Aug. 21st)	·35	Prospect good. Some fever.
Ajmere („ 23rd)	Average throughout the district, 1·50.	Weather occasionally cloudy. Prospects fair. Cholera ceased in city, but lingers in district and Merwara. Prices falling slightly.
Jeypore . . .	. . . . .	No report received.
Kerowlee (Aug. 20th)	1·16	Tanks and wells full. Crops suffering, owing to excessive and continuous rain. Cholera in city and Machilpur tahsil. Prices rising.
Dholepore („ „)	Average 3·80	Tanks and wells full. Crops injured by continual rain. Cholera still continues at Bari. Prices rising. Weather seasonable.
Bhurtpore („ 23rd)	1·90	Weeding progressing. Prices risen.
Ulwar . . .	. . . . .	No report received.
Kotah (Aug. 20th)	·49	Cholera still continues, otherwise health good. Prospects favourable. Weather cloudy.
Kherwara . . .	. . . . .	No report received.
Bickanir . . .	. . . . .	No report received.
Nepal—(Aug. 19th)		
Katmandu (Aug. 18th)	3·02	Constant light rain. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 24th August, 1887.

The partial break in the rains which was the principal feature in the meteorological record of last week continued during the first three days of the present week, after which ordinary monsoon weather set in throughout the whole country and some heavy local falls of rain were recorded.

On the 18th the monsoon current along the Bombay Coast was slightly below its average August strength, but the rainfall accompanying it was fairly heavy, more particularly over the Coast districts. The report of the 19th showed that in some parts of the Bombay Coast the winds were even lighter than on the preceding day, and the rainfall due to this current was everywhere slight. On the 20th a small depression, which had advanced westward from the Bay of Bengal to the Central Provinces, was occasioning a steady indraught of air towards that region, and, as a consequence, the winds crossing the West Coast had become somewhat stronger. From the same cause the rainfall over the central parts of the country was also heavier. By the morning of 21st the depression over the Central Provinces had filled up, but fairly strong winds were blowing towards the Central parts of the country, and moderate but general rain had fallen over the Central Provinces and Western and Southern India. The report of the 22nd showed that the winds along the West Coast were above the average force, and that moderate but general rain had fallen in Bombay and Central and Southern India. From the chart of the following day it appeared that another depression had advanced to the Central Provinces, and that owing to the indraught towards it the current across the Bombay Coast was still rising in force. This increase in the strength of the monsoon had been accompanied by an increased rainfall, the amounts registered over the Central Provinces and Central India being in some cases large. On the 24th the depression noticed above lay between Sutna and Jubbulpore, and strong winds bringing up much moisture were blowing across Bombay and into the Central parts of the country. As on the previous day, the rainfall at several of the central stations was large.

The Bay of Bengal monsoon current has undergone rapid changes during the week. On the 18th it was slightly below its average strength, and, with the exception of a heavy local fall at Gopalpore, the rainfall due to this current was generally slight. Light winds prevailed over the Bay on the 19th, and the break in the rains continued over the greater part of Bengal. On the 20th however the winds increased at the head of the Bay, and rain in larger amounts fell in Burmah and Bengal, and a few local showers were registered in Behar and the North-Western Provinces. On the 21st a slight depression was forming in the north-west angle of the Bay. This depression occasioned a slight cyclonic circulation of the winds over the Bay, so that, while Burmah and the stations around the head of the Bay had fairly general rain, dry weather prevailed in North Bengal and Behar. The report of the next day showed that the depression was passing through South-West Bengal towards Chutia Nagpur, and that a strong monsoon current was blowing over the eastern part of the Bay. Rain had fallen over the whole of Bengal. On the following day the depression having travelled west-north-west up the Gangetic plain, the strong southerly winds noticed on the Arakan Coast, &c., extended over the whole of the head of the Bay, and rain fell generally in Burmah, Orissa, Bengal, Chutia Nagpur, Behar, and Assam.

In Upper India the weather has been changeable. On the 18th rain fell over the western districts of the North-Western Provinces, the extreme south-east of the Punjab, and at the hill stations, but elsewhere the weather was fine. On the 19th rain still further decreased, and Behar, the North-Western Provinces,

the Punjab, and Sind all experienced dry weather; but on the 20th, except in the Punjab, showers fell generally. The 21st was again more or less fine; but on the 22nd some heavy local showers fell in parts of the North-Western Provinces and the Punjab. At Mussoorie the very large amount of 17·84 inches was measured during the 20th and 21st. Light local showers fell at several places during the 23rd and 24th.

On the whole the week's rainfall has effected very little change in the situation. As the following table shows, the seasonal rainfall continues below the average in Bengal, above the average in the North-Western Provinces, the Punjab (except Peshawar), on the West Coast, and over the Central Provinces:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to August 24th.	Difference.
Akyab ...	102·60	127·43	—24·83
Saugor Island ...	38·01	41·26	— 3·25
Calcutta ...	33·34	36·58	— 3·24
Dhubri ...	41·25	48·43	— 7·18
Purneah ...	32·54	38·27	— 5·73
Gya ...	26·27	27·63	— 1·36
Allahabad ...	25·96	24·63	+ 1·33
Meerut ...	17·74	16·30	+ 1·44
Delhi ...	29·36	15·33	+14·03
Lahore ...	13·96	10·54	+ 3·42
Peshawar ...	1·82	4·57	— 2·75
Cochin ...	53·35	68·64	—15·29
Ratnagiri ...	85·26	80·36	+ 4·90
Bombay ...	67·76	54·04	+13·72
Poona ...	16·70	16·34	+ 0·36
Surat ...	34·64	27·63	+ 7·01
Khandwa ...	26·96	21·57	+ 5·39
Nagpur ...	38·67	27·77	+10·90

The weather has been generally cooler than the normal, except in Bengal, where there is a slight excess of temperature.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	37·79
Bengal and Assam ...	16	38·19
North-Western Provinces and Oudh ...	8	11·97
Punjab ...	5	5·03
Hill Stations ...	5	39·58
Ceylon ...	2	2·97
Malabar Coast ...	5	7·05
Bombay ...	9	18·04
Berars and Central Provinces ...	10	53·02
Guzerat and Central India ...	5	14·31
Sind—Rajputana ...	3	9·90
Madras ...	13	22·16

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 1st SEPTEMBER, 1887.

GENERAL REMARKS.—Rain has fallen throughout the country during the week under report, though in Bengal, the North-Western Provinces and Oudh, and Bombay the falls have been lighter than in the previous week.

The *kharif* crops are generally promising everywhere. More rain is however wanted in parts of Bombay and the Punjab, while in the North-Western Provinces and Oudh, the Central Provinces, Berar, Central India, and Rajputana a break in the weather is very desirable.

In Madras and Mysore the crops need more rain in parts, otherwise prospects are favourable.

The cultivation of the late rice is proceeding in Bengal and Assam. In Burma ploughing and transplanting have been nearly completed.

Tea and sugarcane are doing well in Assam.

The public health continues generally satisfactory.

Prices are steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Aug. 31st.)		
Bellary	Average ·01	Standing crops good. Cholera in six, cattle-disease increasing in one taluk.
Kurnool	Average last week since revised, 4·02; this week, ·24.	Standing crops good. Small-pox in two, cattle-disease increasing in five taluks.
Ganjam	Average last week since revised, 3·96; this week, ·48.	More rain wanted. Small-pox in five, fever in six, and cattle-disease increasing in four divisions.
Kistna	Average ·76	Standing dry crops good. River 4·3 feet over Anicut. Slight fever, cholera decreasing in two, and cattle-disease increasing in four taluks.
Chingleput (Madras)	Average 1·16	Standing crops fair. Harvest paddy, outturn middling. Small-pox in three, cholera in one, and cattle-disease decreasing in five taluks.
Coimbatore	Average 1·44	Standing crops generally good, but require rain in parts. Harvest dry grains, outturn about average. Fever in one taluk.
Tanjore	Average 1·55	Standing crops generally good, but require more rain in parts of one taluk Harvest *cumbu*, outturn below average. Cattle-disease increasing in two taluks.
Madura	Average 1·20	Health of people and cattle generally good.
Malabar	Average ·24.	First crop paddy requires rain. Harvest paddy, outturn average. Slight small-pox in eight, fever in two, and cattle-disease decreasing in three taluks.
Travancore	·28	Paddy being reaped. Fever and small-pox in parts. *General Remarks.*—General prospects fair.
Bombay—(Aug. 31st)		
Karachi	*Nil*	Weather pleasant. River at Kotri on 29th, 18 feet 6 inches against 18 feet 9 inches on same date last year. Fever in seven and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Dadu 28, 38 and 34 pounds per rupee, respectively.
Hyderabad		*Kharif* cultivation in progress. Fever in three, small-pox in one, and cattle-disease in two talukas. River at Kotri on 28th, 18 feet 11 inches against 17 feet on same date last year. Wheat 24, *jowari* 38, *bajri* 35, white rice 18, and red rice 30 pounds per rupee.
Ahmedabad	1·98; total 24·08; rain throughout the district—maximum 3·56 in Dholka and minimum ·67 in Dhandhuka.	Transplantation of rice in progress. Standing crops in good condition. Seven cases of cholera in the city, of which 5 were fatal. Wheat 28 and *bajri* 30 pounds per rupee.
Baroda	2·17; total 41·92	Cholera has broken out in Patan and Sidhapur, but has disappeared from Baroda. Cattle-disease in two talukas of Naosari and three of Kadi division. Crops generally slightly injured. *Bajri* 24, wheat 18, and rice 17 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Surat	Chorasi, ·92 minimum; Chikli, 4·64 maximum; total 33·41 minimum, 80·16 maximum.	Sowing and resowing nearly completed. *Jowari* and cotton crops suffered from excessive moisture, other standing crops healthy. Cattle-disease abating in Olpad; fever in Bardoli, and cholera in Chikli and Bulsar, 35 cases, 31 deaths. *Jowari* 33 and *nagli* 43 pounds per rupee.
Nasik	Igatpuri, 8·92; Peint, 4·46; Nandgaon, ·96; Dindori, ·87; Nasik, ·67; Sinnar, ·72; Yeola, ·63; Niphad, ·57; Kalwan, ·50; and Malegaon, ·31.	Sowing and transplanting finished. Standing crops healthy. Land being prepared for *rabi* sowing. Rain badly wanted in Sinnar. Cholera in Nasik, Niphad, Chandwad, Yeola, Nandgaon, Malegaon, Baglan, and Kalwan, to al 192 cases, deaths 57. Small-pox is prevalent in Yeola, 4 cases, 2 fatal. Cattle-disease in Peint to a slight extent.
Colaba (Bombay)	Rain every day, except on 25th; total of week, 3·91; total to date, 70·99, being 13·05 above average.	Abnormal temperature 1° cool on 24th, 27th and 30th, 1° warm on 25th, *nil* on 26th and 28th, and 3° cool on 29th. Vapour in air normal. Abnormal wind from north-east on 29th, wind normal on all other days.
Poona	Rain in six talukas—maximum, 2·66 in Petha Mulshi and minimum ·09 in Indapur taluka; none in Bhimthari and Sirur talukas.	More rain wanted in Bhimthari and parts of Sirur and Purandhar talukas. Crops doing well, except in Khed, Purandhar, and Bhimthari talukas, in the former they are slightly injured, owing to excessive moisture, and in the latter two they are withering for want of rain. Public health generally good. 243 cholera cases in Khed, Sirur, Purandhar, Bhimthari, Haveli, and Mawal talukas, 111 fatal. In Poona city 5 attacks and 3 deaths. *Bajri* 41 and *jowari* 54 pounds in the district, and *bajri* 32 and *jowari* 43 pounds per rupee in Poona city.
Ahmednagar	Very slight rain in eight and none in three talukas.	*Kharif* crops fair. *Rabi* sowing postponed for want of rain, which is urgently needed. Cholera attacks 240, deaths 130. *Bajri* 36, and *jowari* 59 pounds per rupee.
Sholapur	Sholapur, ·78; Barsi, ·31; Madha, 2·73; Karmala, ·10; Purandhar, ·20; and Malsiras, ·19.	*Kharif* crops doing well. *Rabi* sowing commenced in Malsiras taluka. Rain wanted in Karmala taluka. Slight cholera still in the district, except in Pandharpur and Sangola talukas, cases 83, deaths 46. *Jowari* 59$\frac{1}{16}$ and *bajri* 51$\frac{5}{14}$ pounds per rupee.
Dharwar	Mugud, ·09; Nargund, ·10; Bankapur, ·05; Kalghatgi, ·06; and Ron, ·08; elsewhere none.	Rice, *jowari*, and minor crops good. Heavy rain urgently required both for standing crops and for sowing cotton. Slight cholera in Kalghatgi and Bankapur talukas. *Jowari* 56 and rice 24 pounds per rupee.
Kanara	Karwar, 3·20; total 108·62; Kumpta, 1·20; Sirsi, ·88; and Haliyal, ·03.	Rice crop in ear. In Karwar taluka slight cattle-disease. Common rice in Karwar and district average 11 seers per rupee.
Rajkot	5·08; total 24·04	Fever at Rajkot and Manekwada and cholera at Porebandar, 1 case fatal. Crops in good condition. Wheat 24, *bajri* 24, and *jowari* 29 pounds per rupee.
		General Remarks.—Rain in all districts of the Presidency Proper; more urgently required in several talukas of the Deccan and Southern Mahratta Country. Standing crops generally good, but slightly injured in parts of some districts. *Rabi* sowing commenced in parts of Nasik, Sholapur, Khandesh, and Bijapur. Cholera in parts of nineteen, cattle-disease in parts of fourteen, fever in parts of nine, and small-pox in parts of six districts.
Bengal—(Aug. 31st)		
Chittagong (Aug. 30th)	1·29	Weather seasonable. *Aus* still being harvested and *aman* transplanted. Rain still wanted. Prices stationary. Public health fair.
Dacca	1·78	Prospects of crops good. *Aus* and jute being harvested. Transplantation of winter crops going on. Public health good.
24-Pergunnahs (Calcutta)	3·89	Occasional heavy falls of rain. Prospects good. Harvesting of *aus* and jute commenced. Transplanting of *aman* nearly finished. Public health fairly good for the time of the year. Cattle-disease decreasing.
Khoolna	·14	Weather hot and close. More rain wanted. Transplanting of *aman* going on. *Aus* being cut with good outturn. Public health fair.
Moorshedabad	·70	Weather hot. Rain at intervals. *Bhadoi* paddy being reaped. *Aman* growing well. *Til*, sugarcane and jute progressing. Public health good.
Pubna	1·18	Crops fair. More rain wanted. Public health fair.
Dinagepore	·76	Weather hot. *Bhadoi* expected ten annas and jute seven annas. Transplantation of *aman* still in progress.
Rungpore	1·90	Weather hot. Crops promising fairly. Public health good.
Midnapore	1·66	Weather sultry. State and prospects of crops good. Sporadic cholera.
Burdwan	4·64	Weather seasonable. Transplantation of *aman* nearly over. *Aus* and jute being gathered. Prospects fair. Public health good, except in Sadr, where cholera and fever prevail.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Bhagalpur	·65	Weather sultry. Harvesting of *marua* and early rice begun, outturn of former likely to disappoint expectations. Prospects of late rice good, but rain wanted.
Purneah	1·85	Crops promising well. *Aghani* being transplanted and *bhadoi* cut in places with fair outturn. Rivers high. Health of people and cattle bad.
Durbhanga	·74	Prospects of *bhadoi* continue favourable. *Makki* and *marua* being harvested. Transplantation of late rice still going on. Public health generally good.
Chumparun	·72	Crops in good condition. More rain wanted in some parts. Public health not very good.
Patna	·26	Transplantation of rice seedlings suffering for want of rain. Prospects of *bhadoi* crops favourable. Cholera still reported from Behar and Dinapore.
Gya	·76	Cessation of rain for week now becoming a cause for anxiety. Transplantation not yet finished, and in places now stopped for want of rain. Cholera decreasing, but still reported from several places. Fever and small-pox also reported.
Hazareebagh	1·35	Weather fair. Moderate rain. Agricultural prospects continue favourable, but more rain wanted in parts of the district. Public health good.
Cuttack	3·93	*Beali* rice being reaped. Prospects of *sarad* rice good. Price of rice unchanged. Public health good. Cases of cholera reported.
		General Remarks.—Rainfall of the week generally below the average. More rain much wanted in greater part of the Province. Transplantation of late rice not yet completed. Harvesting of early rice and jute in progress. Good outturn expected, except in the Rajshahye division, where the crops suffered from floods at end of May. Prospects of *bhadoi* crops in Behar favourable and some of them being harvested in places. Sugarcane generally promising. General health fair, but in the Patna Division cholera still prevalent in places.
N.-W. Provinces and Oudh—(Aug. 31st)		
Benares (Aug. 30th)	Showers at Sadr	Supplies ample. Prices steady. Health generally good.
Ballia („ 29th)	. . . .	Weather fair. *Kharif* crops thriving. Supplies ample. Cholera has almost disappeared. Public health good.
Gorakhpore(„ „)	·90 at Sadr	Prices stationary. Cholera decreasing.
Fyzabad („ 30th)	Averaging ·70	Weather cloudy. *Kharif* crops thriving. Prospects good. Supplies ample. Cholera decreasing.
Lucknow („ 29th)	Averaging 2·40	*Kharif* crops promising, and weeding in progress. *Mash* sowing nearly finished. Supplies ample. Prices slightly falling. Cholera disappearing. Condition of cattle good.
Rai Barelli („ „)	. . . .	No report received.
Partabgarh („ 30th)	Heavy rain	*Kharif* prospects good. Prices rising. Cholera much abated. Cattle healthy.
Allahabad („ „)	From 4·00 to 5·00. A week would be beneficial.	Crops are looking well. Markets full. Prices steady. Cholera decreasing rapidly. Health generally good.
Cawnpore („ „)	General rain from ·50 to 4·80.	Weeding and *bajri* sowings retarded, and *jowari* and cotton injured by heavy and continuous rain. Prices stationary. Cholera diminishing. Cattle-disease in one pergana.
Farakhabad („ „)	Averaging 1·00	Crops thriving. Prospects good. Supplies ample. Prices steady. Cholera decreasing.
Sitapur („ „)	. . . .	There has been a beneficial break, allowing cutting of *sawan*, *kakun*, &c., and sowing of *hewant* crops.
Bareilly („ „)	Slight rain	Crops continue to do well. Market steady. Cholera very slight. General health of men and cattle good.
Banda („ 29th)	Heavy rain on 28th, break much wanted.	Crops injured in places by continuous rain. Sowing of *til* stopped. Prices stationary. Strong cases of cholera. Fever much prevalent.
Kumaon („ 30th)	Good fall of rain on 27th and 28th.	Rainfall was favourable to standing crops. Prices falling slowly. Two deaths reported from cholera, in short general health fair. Cattle-disease continues.
Agra („ 29th)	. . . .	Crops continue to suffer from rain and cloudy weather. Prices rising slightly. Cholera continues, but has much decreased.
Jhansi („ „)	. . . .	Excessive rain has injured the *kharif* crops. Some fever. Cholera still lingers.
Meerut („ 30th)	General rain from 1·00 to 8·50.	Rain too continuous for some crops, and for *rabi* ploughing. Prospects good. Prices stationary. Cholera reported from four tahsils. Cattle-disease abating.
		General Remarks.—The rainfall though lighter than in the previous week, has somewhat retarded sowing and weeding. Prospects are favourable. Supplies ample and prices generally steady. Cholera has everywhere decreased, except in Meerut and Saharanpur; some fever is reported, but on the whole the health of the people is fair. A little cattle-disease in some places.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Aug. 31st)		
Hissar (Aug. 30th)	. . . . .	Health good, but a few cases of cholera in the Hansi tahsil. Prices stationary. *Rabi* ploughings in progress. *Kharif* prospects good.
Delhi	3·03	Health fair. Cholera in Ballabgarh tahsil. Prices fluctuating. *Kharif* crops damaged by continuous rain.
Umballa	·80	A few cases of cholera in district. Prices stationary. *Kharif* crops flourishing.
Jullundur	·90	Health good, but a few cases of cholera in district. Prices stationary. *Kharif* weeding commenced.
Ferozepore	·20	Health good. Prices stationary.
Amritsar	·50	Health good. Prices stationary. *Kharif* crops good.
Sialkot	1·40	Health good. Prices stationary. *Kharif* crops good.
Lahore	·30	A few cases of cholera. Prices stationary. *Rabi* ploughings progressing.
Multan	. . . .	Health good. Prices stationary. *Kharif* crops good.
Rawalpindi	2·10	Health good. Prices stationary. *Kharif* prospects good.
Shahpur	Slight rain	More rain much needed. Health good. Prices almost stationary. *Kharif* prospects improved.
Dera Ismail Khan	. . . .	Health good. *Kharif* sowings in progress.
Peshawar	. . . .	Rain wanted Cholera decreasing. Prices stationary. *Kharif* prospects average.
		General Remarks.—Rain has fallen in all districts, except Hissar, Multan, Dera Ismail Khan, and Peshawar, is wanted in Shahpur and Peshawar. Health is good, but a few cases of cholera have occurred in Hissar, Delhi, Umballa, Jullundur, Lahore, and Peshawar, it is decreasing in Peshawar. Prices are stationary, except in Delhi, where they are fluctuating. *Kharif* prospects are good in Hissar, Umballa, Amritsar, Sialkot, Multan, and Rawalpindi, and average in Peshawar. Crops damaged by continuous rain in Delhi. Weeding commenced in Jullundur and sowings in progress in Dera Ismail Khan. Fodder plentiful in Sialkot. Ploughings for *rabi* commenced in Hissar and Lahore.
Central Provinces—(Aug. 31st)		
Nagpur	2·87	Break urgently wanted for *jowari* and cotton. Fever prevalent. Cholera continues.
Jubbulpore	5·65	Weather clear and warm. Fever prevalent. Prices steady.
Saugor	4·43	Weather clear. Weeding in progress. Fever prevalent. Cholera continues. Prices rising slightly.
Seoni	4·89	Weather cloudy with heavy showers. Break much needed. Cholera increasing. Prices stationary.
Hoshangabad	3·86	Crops suffered in places from excessive rain. Fever prevalent. Prices stationary.
Khandwa	2·31	Weather cloudy with occasional heavy rain. Prospects good. Cholera continues. Prices unchanged.
Bilaspur	·95	Weeding continues. Rice and sugarcane doing well. *Kodo, rahar,* and cotton injured. Fever and cattle-disease prevalent. Prices stationary.
Raipur	1·30	Weather close and cloudy. Weeding continues. Crops healthy. Health good. Prices stationary.
Sambalpur	. . . .	No report received.
		General Remarks.—Break needed for *jowari* and cotton. Rice prospects good. Weather close, and rain falls almost daily.
Burma—(Aug. 31st)		
Akyab (Aug. 27th)	15·62 (Total rainfall to date 126·88).	Two deaths from cholera in town. Crop prospects favourable.
Bassein	4·42 (Total rainfall to date 71·69).	Ploughing and transplanting continues.
Rangoon	1·76 (Total rainfall to date 77·87).	
Tavoy	7·48 (Total rainfall to date 144·32).	Crops reported healthy.
Pegu	1·77 (Total rainfall to date 98·99).	Ploughing and transplanting nearly completed.
Henzada	3·15 (Total rainfall to date 54·61).	Transplanting almost completed.
Prome	1·74 (Total rainfall to date 26·35).	Slight cattle-disease in two townships. Planting and ploughing progressing.
Toungoo	1·35 (Total rainfall to date 58·02).	Transplanting progressing.
Thayetmyo	1·49 (Total rainfall to date 18·53).	Ploughing and transplanting retarded for want of rain.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Kyaukse	·10 (Total rainfall to date 16·18).	Prospects of crops good.
Myingyan	·40 (Total rainfall to date 14·91).	Food-supply sufficient. Prices ordinary.
Mandalay	·26 (Total rainfall to date 24·76).	Transplanting of *kyaukkyi* crops progressing. Food-supply sufficient. Prices normal.
Minbu	1·05 (Total rainfall to date 14·98).	Prices normal.
Yamethen	2·16 (Total rainfall to date 19·68).	Cultivation progressing.
		General Remarks.—Slight cholera and small-pox in Thongwa and slight cholera in Akyab town. Some cattle-disease in parts of five districts of Lower Burma. Ploughing and transplanting nearly finished in parts. Rain still needed in Thayetmyo. Reports from nine Upper Burma Districts. Health and crops satisfactory. Cattle-disease spreading and anthrax prevalent amongst ponies in Pynmana, where rain is much needed. Food scarce in Yeu.
Assam—(Aug. 31st)		
Gauhati (Aug. 30th)	1·81	Mornings and evenings cool. Public health fair. Malarial fever still prevalent in Sastra Barpetta and its vicinity, also in parts of Polasbari, Luki, and Chomoria tahsils. Cattle-disease still continues in some parts of the district. More rain wanted for *sali* crops. Prospects of sugarcane and tea good.
Sylhet	4·27	Weather still dry in South Sylhet and Habiganj, especially. *Sali* being reaped; some damage done by insects in South Sylhet and Habiganj. Tea prospects favourable. Public health good.
Cachar	6·28	Weather dry. Rice planting almost completed. Prospects good. Tea continues to do well. Blight is increasing and interferes with the outturn. Market is easier. Rice is selling at 17 seers $12\frac{2}{5}$ chittacks per rupee. Public health good.
Dibrugarh	4·35	Weather seasonable. Tea and sugarcane doing well.
Mysore and Coorg—(Aug. 31st)		
Bangalore	Mysore, 2·44; slight rain reported in other parts of the State.	Standing crops in good condition. Prospects of season favourable. More rain needed for crops in Tumkur, Kadur, Hassan, and Auckul taluk of the Bangalore district. Public health generally good. Cattle-disease and fever continue in parts. No material change in prices.
Mysore		
Mercara	1·23	Prospects and health good. Prices slightly risen.
Berar and Hyderabad—(Aug. 31st)		
Amraoti	·91	Weather warm and rainy. Break much needed. Weeding commenced. Cholera in places. Wheat 15 and *jowari* 25 seers per rupee.
Akola	·29	Weather cloudy and showery. Weeding continues. Crop healthy. Cholera and fever prevalent.
Hyderabad	Average during week ·27 (Total since 1st January, 14·96).	*Kharif* crops prospering. Water in tanks still insufficient for wet cultivation. General health fair, but cholera still prevalent at Hyderabad. Prices—wheat $11\frac{3}{4}$, coarse rice $12\frac{1}{2}$, white *juar* $18\frac{1}{4}$, yellow *juar* 21, and *tur* 14 seers per current sicca rupee.
Central India States—(Aug. 31st)		
Indore	1·04	Weather clearer but hot. Eight cases of cholera in European regiment at Mhow.
Morar (Gwalior)	4·40	Great injury to crops from excessive rain. Prices rising. Cholera disappearing.
Sutna	3·39	
Neemuch	11·20	Weather cloudy. Total deaths from cholera among troops 26. No fresh cases during week. Prices rising. *Makka* crop slightly damaged.
Goona	2·70	Break much wanted. Health good.
Agar	8·86	Health and prospects good.
Sehore	9·91	Break badly wanted. *Jowari* and *makka* crops injured in most places. Solitary cases of cholera in Bhopal territory; otherwise health good.
Nowgong	·55	Weather cloudy. Cholera in parts. Prices steady.
Bhopawar	2·26	Prospects of *kharif* crop bad. Prices slightly rising. A few cases of cholera at Dhar, Bagode, and Ranapur.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Aug. 31st)		
Abu (Aug. 31st)	11·69	Break needed. Weather cloudy.
Sirohi („ 28th)	2·92	Tanks fairly full; wells good. Health good. Crops good. Weather overcast.
Marwar („ 27th)	1·72	Three months' water-supply brought into Jodhpore city tanks. Cholera still prevails. Crops doing well, where rains have been sufficient. Weather cloudy. Markets easy. Prices slightly falling.
Meywar („ „)	5·35	Water in tanks and wells increasing. Crops fair. Health fair. Diarrhœa rather prevalent. Prices stationary. Weather rainy.
Pertabgurh („ „)	7·22	Health good. Prices steady. Weather cloudy.
Harowti („ „)	Deoli, 8·70; Tonk, 9·13; Shahpura, 5·94.	Crops suffering. Break very urgently needed. Health good.
Jhallawar („ 28th)	8·29	Floods have caused damage to crops in some districts. Fever and diarrhœa prevail.
Ajmere („ 30th)	Average throughout 3·42	Crops in danger from excessive rain. Cholera still lingering in Ajmere district and Merwara. Prices slightly falling.
Jeypore („ „)	. . . . .	Much damage done by excessive rain. Prices rising.
Kerowlee („ 27th)	4·15	Tanks and wells full. Crops suffering. Break wanted. Cholera continues. Small-pox among cattle. Prices rising.
Dholepore („ „)	Average 2·13	Tanks and wells full. Crops injured by rain. Cholera still lingering at Kari. Prices stationary. Weather seasonable.
Bhurtpore („ 30th)	3·00	Health good. Prices rising.
Ulwar („ „)	Average 1·51	Crops much injured. Health good. Cholera subsiding in city, but increasing in district. Break in rain much required.
Kotah („ 27th)	13·52	Crops suffering from excessive rain. Health good. Weather cloudy.
Kherwara („ 28th)	3·40	Tanks and wells slightly risen. Crops fair. Diarrhœa and dysentery prevalent. Weather rainy and cloudy.
Bickanir („ 27th)	·50; report for two weeks, heavy rain in some districts.	Tanks and wells full. Prospects good. Health good. Prices stationary. Weather cloudy.
Nepal—(Aug. 26th)		
Katmandu (Aug. 25th)	1·67	Weather sultry. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

SUPPLEMENT TO

The Gazette of India.

No. 37.} CALCUTTA, SATURDAY, SEPTEMBER 10, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY CONSTRUCTION.

RAILWAY TO ASSAM.

No. 868 R.C., dated Simla, the 25th August, 1887.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Resolution of the Government of India, Public Works Department, No. 59 R. C., dated 24th January 1884, with enclosures.

Resolution of the Government of India, Public Works Department, No. 433 R. C., dated 30th May 1884.

Resolution of the Government of India, Public Works Department, No. 949 R. C., dated 22nd October 1884.

RESOLUTION.—In the first of the Resolutions quoted above it was briefly explained that, in consequence of the unsatisfactory results of the investigation in 1881-82 of the project for continuing the Dacca-Mymensing Railway to the valley of the Brahmaputra near Gauhati, it had been determined, at the suggestion of the Chief Commissioner of Assam (Sir Charles Elliott) to look for a route into Upper Assam through the North Cachar Hills, which might be combined with a line from Cachar to Chittagong, comprising a branch to the Megna for access to Calcutta. The results of surveys and reconnaissances consequently undertaken in the cold season of 1882-83 by the Engineer-in-

Chief, Mr. J. W. Buyers, were stated to be that "a practicable route can be found across the North Cachar Hills into Assam; and there appears little reason to doubt that a railway following this route, and serving, as it would, the important districts of Sylhet and Cachar, has enormous advantages over a railway simply running down the valley of the Brahmaputra, parallel throughout its length to a navigable river, and commanding only a narrow tract of country." The estimated cost of the project was found to be moderate, the gradients through the hills easy, and the financial prospects, on the whole, favourable, but it was pointed out that no reliable judgment could be formed upon these points until detailed surveys and estimates had been prepared, and the prospects of traffic more closely examined.

2. The second Resolution quoted above made public a report by Mr. Molesworth, the Consulting Engineer to the Government of India for State Railways, on his examination of the projected line through the North Cachar Hills, and of the branch from Lumding, at their northern outlet, to Gauhati on the Brahmaputra. His opinion entirely confirmed the previous reports as to the route obtainable through the hills, which he described as a good "locomotive line, with gradients of about 1 in 70." On the general question, he remarked that—

> It is difficult to overrate the importance of this line to Assam in a strategical, political, administrative point of view. The whole line between Silchar and Golaghat is, however, virgin forest, and the population practically *nil*. But there are rich tracts of land suitable for tea along the line of railway, which would be eagerly taken up if a railway were constructed, especially in the Dimapur Valley, and such a line would undoubtedly revolutionise Upper Assam. As a direct route to Calcutta, such a line would possess many advantages compared with the route *viâ* Dhubri. * *

The third Resolution contained the report on surveys in 1883-84, with the views of the Chief Commissioner (Sir Charles Elliott), in para. 9 of which he expressed concurrence with the Engineer-in-Chief (Mr. Buyers) in preferring the Dimapur Valley route to one parallel to the Brahmaputra River.

3. In consequence of the favourable prospects thus continuously held out, and also owing to the impossibility of connecting Mymensing with Sylhet and Cachar by a direct line, the surveys and other investigations for the line connecting Cachar and Chittagong, with branch to the Megna, have been prosecuted without interruption up to their completion in March last, and the Government of India are now in a position to state, for general information, the final aspects of the project, and to append to this Resolution several interesting and valuable documents in illustration of it.

4. *Chittagong to Comilla*, 96½ miles, with branch from Laksham to Chandpur, 32 miles. Daoodkhandi was originally designated as the terminus of this Branch, but Chandpur was found to be a better port, and also within six hours' easy steaming of the terminus of the Eastern Bengal Railway. Naraingunj is within four hours of it. No further operations on this section have taken place since the project was submitted by the Bengal Government in 1883, and published with the Resolution No. 59 R. C. of 24th January 1884. In March last that Government were requested to state whether they still held the opinions as to the traffic and remunerativeness expressed in 1883. Their reply (enclosure No. 14) is to the effect that the estimate of cost will probably be found susceptible of reduction, from various causes, but that little reliance can be placed on estimates of traffic, and therefore Sir R. Thompson is disposed to give a less confident answer as to the particular rate of interest which may be expected. At the same time, His Honor "maintains unchanged the opinion that this railway is second to none in Bengal in importance, and that there is every prospect of its proving to be very remunerative." In support of this view is adduced the extraordinary development of the trade of the port of Chittagong, from Rs. 40,68,429 in 1876-77 to Rs. 2,30,87,811 in 1885-86, with even higher years in the interim, notwithstanding deficient means of communication with both the interior and the sea.

5. *Comilla to Badarpur*, 157 miles.—Badarpur is 18 miles from Silchar, but has been selected, after prolonged investigations, as the best point for the main line to cross the Surma River and enter the North Cachar Hills. The town of Silchar, consequently, cannot be reached by railway except by means of a branch which, in consequence of the number of large streams to be crossed, will cost the high figure of Rs. 1,05,603 per mile. The necessity for constructing this branch, at least at the outset, will be a matter for consideration whenever the main project comes to be actually taken in hand. At the same time, and possibly in precedence of it, will come forward the two short branches, to the Megna near Bhairab Bazar, and to Fenchuganj, which are noticed in Mr. Buyers' final report (enclosure No. 7).

Regarding the alignment of this section, Mr. Buyers explains that it has been a good deal determined by the necessity of avoiding formidable streams and inundated ground on the one hand, and the Tipperah and Lushai Hills, on the other.

6. *Badarpur to Lumding*, 115½ miles.—The alignment of this section, lying entirely in the North Cachar Hills, between the Cachar District and the Dhansiri Valley of Upper Assam, has been worked out with remarkable perseverance, in the face of extraordinary difficulties. The results have proved highly satisfactory, for it has been established that a line, with a ruling gradient of 1 in 70, is obtainable at a cost which, whether we adopt Mr. Buyers' estimate of 1½ lakhs or Mr. Molesworth's precautionary increase to 1¾ lakhs, cannot be deemed otherwise than moderate. If, however, a gradient of 1 in 40 be accepted in two places, for an aggregate of 6½ miles, a reduction of 28½ lakhs in the entire cost of the section may be secured.

7. *Lumding to Kamarband Ali*, 96½ miles.—This section runs through the Dhansiri or Dimapur Valley, a locality now mostly uninhabited and covered with forest, but believed to have been peopled and cultivated, until devastated by invaders from Upper Burma. Two alignments have been examined. One, keeping to the west of the Dhansiri, passes conveniently the town of Golaghat, but is open to certain engineering objections relating to water-way; the other, crossing the Dhansiri and Daiang rivers over higher ground, unites with the former alignment about 6 miles beyond that town. Mr. Buyers would prefer the latter, but the question is one for further enquiry into the circumstances of the local trade and final decision by the Chief Commissioner.

8. *Kamarband Ali to Makum Junction*, 116½ miles.—This section involves an important alteration in the project. The original intention was that the railway should run from Golaghat to Dibrugarh, and the Resolution No. 59 R. C. of 24th January 1884 proceeds upon that basis. Later investigations, however, established the fact that an alignment keeping closer to the hills, through Jaipur, to Makum Junction, would serve better all local interests, and at the same time avoid crossing several large rivers, and much inundated ground. So expensive would the latter difficulties have proved, that the new alignment is found to cost only 6½ lakhs more, though 25 miles longer.

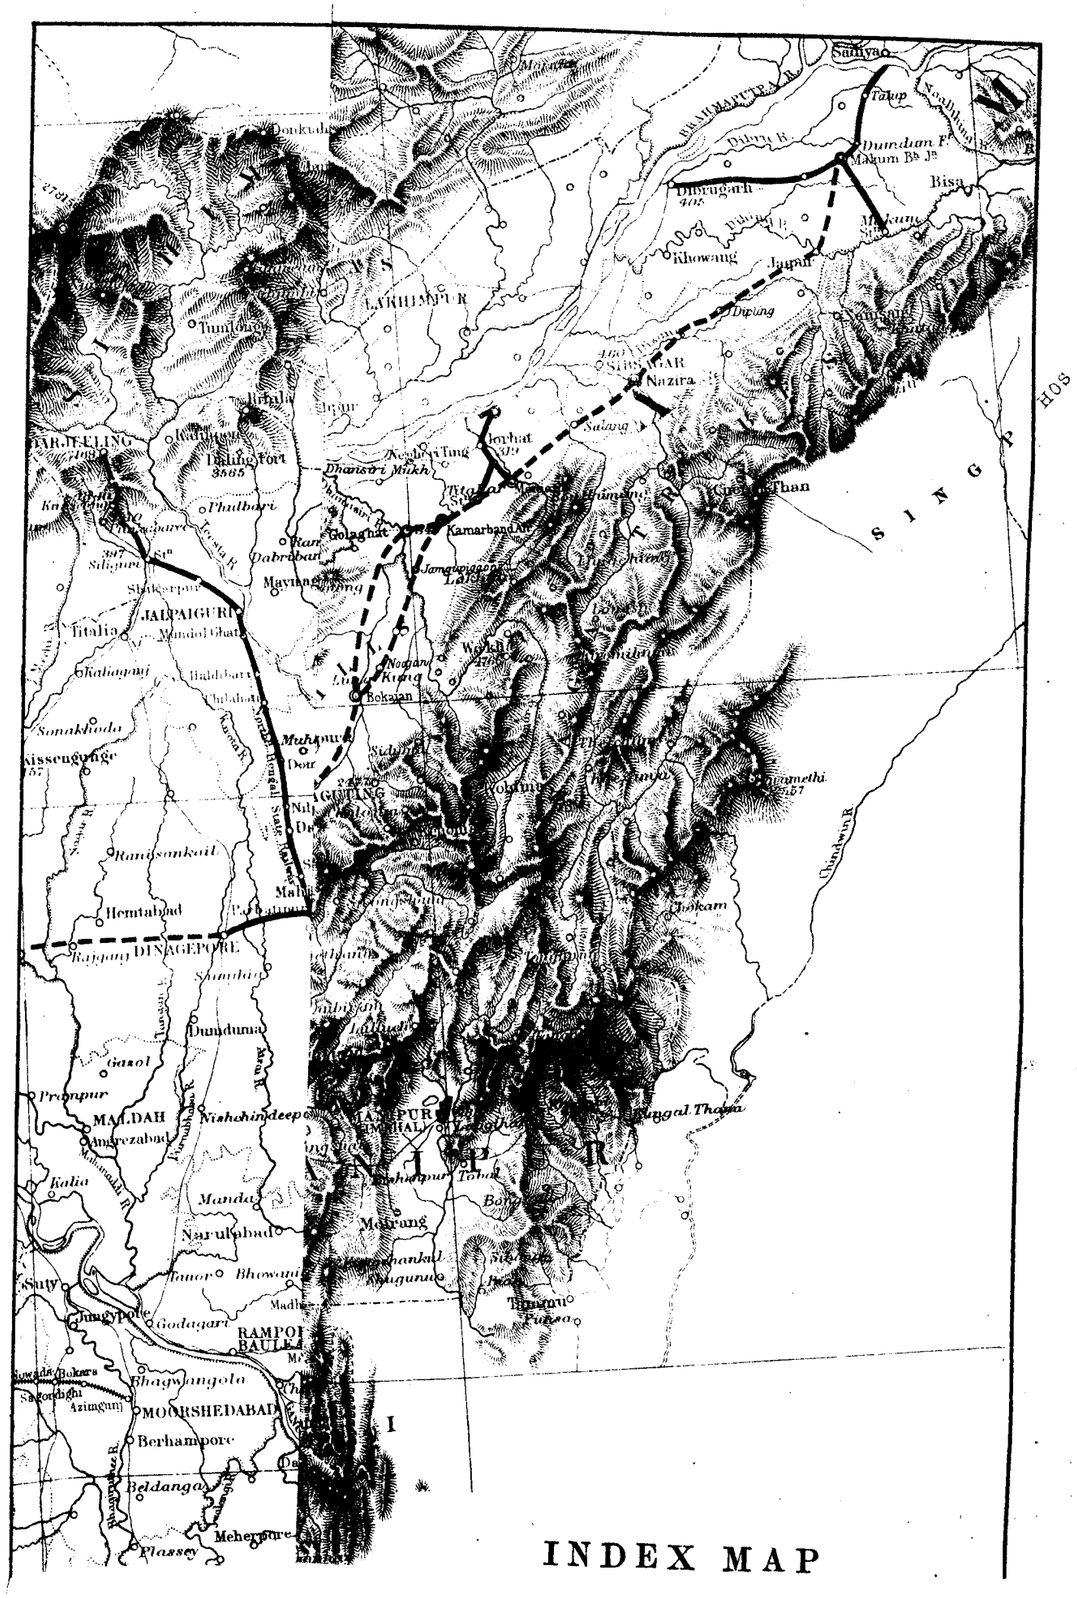
9. *Lumding to Gauhati*, 110½ miles.—This Branch has from the first been contemplated, with the object, not merely of opening up the valley of the Kopili and Kalong rivers and affording facilities to such cultivation as they now contain, but, of providing cross communication between the Dhansiri or Dimapur Valley and the Brahmaputra, and ready access to the former for the coolies who pass between Behar and Assam.

10. *Total lengths and cost.*—Particulars of these will be found in the abstract estimates appended to Mr. Buyers' general report (enclosure No. 8), but after applying the necessary corrections for the amendments of last season,

and Mr. Molesworth's precautionary enhancement of the mileage rate in the North Cachar Hills, the figures may be stated as under :—

	Miles	Rate per mile.	Cost.
		Rs	Rs. Lakhs.
Chittagong to Badarpur	253¾	80,522	204
Laksham-Chandpur Branch	32	84,072	27
Badarpur to Lumding	115½	1,75,000	202
Lumding to Makum	213¼	67,505	144
Gauhati Branch	110½	76,005	84
Total (ruling grade 1 in 70)	724	...	661
Deduction if exceptional gradient of 1 in 40 be introduced.	...	...	28½
Total with exceptional gradient of 1 in 40	...	...	632½
Silchar Branch when required	18	1,05,603	19
	712	...	651½

These results contrast very favourably with those put forward preliminarily in the Resolution No. 59 of January 24, 1884, considering that, although the main line goes 25 miles farther east, the final excess is only about 6 miles in length and 5 lakhs in cost. The estimates have been examined by Mr. Molesworth, the Consulting Engineer to the Government of India, whose notes are appended. It must, however, be distinctly understood that they are subject to the farther detailed scrutiny which would precede actual operations, and to revision in accordance with the prices of iron and steel, and the rates of exchange, which might prevail when outlay commenced. The Government of India can undertake no responsibility in respect of them.



11. *Traffic and remunerativeness.*—The calculations of net returns put forward in the Resolution No. 59 are specified in the margin and comprised allowance for cheap working by the use of Makum coal. The further discussions which will be found in the reports do not seem to have thrown much new light upon the question, owing to the absence of trade statistics for the populated tracts and the impossibility of estimating the effect of railway facilities upon the course of existing trade and the capacity of the country for development. The Government of India concurs with His Honor the Lieutenant Governor of Bengal in receiving all such estimates with caution, and must leave private enterprise to form its own judgment of the undertaking upon such data as it may deem to be reliable.

	Per cent.
Chittagong to Comilla and Chandpur	8·5
Comilla to Badarpur	7·85
Badarpur to Dibrugurh and Gauhati	2·74
Mean on whole undertaking	5·38

12. Fully as the Government of India recognise the importance of opening up by railway the tracts of Eastern Bengal and Assam now in question, they are not in a financial position which would justify the offer of a guarantee for a purely commercial railway, and must therefore adhere to the decision of January 1883, by which the project was classed in "Schedule B," and can receive no aid from the State beyond such as is comprised in a concession under what are known as "Bengal and North-Western Railway terms." The Government of India also consider that the entire project should be taken up by one Company or Administration.

Vide Report of the Parliamentary Committee of 1884 on East India Railway communications, page 530.

13. *General remarks.*—The grounds upon which the route which passes from Sylhet and Cachar through the North Cachar Hills was originally selected for the opening out of Upper Assam, in preference to one simply running down the Brahmaputra Valley, have been briefly stated in the opening paragraphs of this Resolution, and will be found at greater length in the documents appended to the previous Resolutions quoted in the heading. Subsequent examination (see Resolution No. 949 R. C., dated 22nd October 1884), has demonstrated the unsuitability for a railway of the country lying along the Brahmaputra to the north of the Meikur Hills, between Joklabundha and the mouth of the Dhan-

siri. The question is thus narrowed to that of whether it would be desirable to forego the connection of Sylhet and Cachar with Upper Assam through the North Cachar Hills, *i.e.*, the Badarpur-Lumding Section of the present project, and to substitute for it an extension of the Lumding-Gauhati Branch from the latter place to Fakirgunj opposite Dhubri. The length and cost of the former are 118 miles and about 164 lakhs; those of the latter, 122 miles and about 109 lakhs. The Officiating Chief Commissioner of Assam, Mr. W. E. Ward, who is understood to advocate the Fakirgunj alternative, has stated his views fully in enclosure No. 4 to this Resolution. Whether tea can be conveyed to Calcutta a few annas cheaper by the Fakirgunj or the Chandpur route, and how far steamers will be utilized in the former, are questions which depend upon competition and various other circumstances which it is difficult to appraise. The Government of India, however, cannot consider the matter upon the comparatively narrow basis of the cost of export of a single not very bulky, though highly important, article; they must look at the immigration, planting and commercial interests as a whole. From this point of view, they cannot but hold that it is better to confer the benefits of railway communication upon fertile, but now completely landlocked tracts, than upon such as are at present tolerably well served by steamer transport; that it is more prudent to allot rail and steamer to different portions of a developing Province than to bestow both on one alone; and that it is in the best interests of Upper Assam to place it in direct communication with the seaport nearest to it, namely, Chittagong.

14. In conclusion, the Government of India have much pleasure in recognising the care, ability, and perseverance, exhibited, for some five years, in the preparation of this project by Mr. Buyers and his staff, among whom Messrs. H. W. Clift, E. J. Moore, and W. H. P. Sherman may be specially mentioned as distinguished. Messrs. A. R. Lilley and H. T. Gwyther, Executive Engineers, and Sub-Engineer B. A. Maine are also deserving of praise. Messrs. C. J. S Baker, R. L. Campbell and R. T. Denne, Assistant Engineers, did good service.

ORDER.—Ordered, that this Resolution, together with the documents specified below, be communicated to the Government of Bengal and the Chief Commissioner of Assam, and published in the Supplement to the *Gazette of India* for general information.

R. C. B. PEMBERTON, *Colonel, R.E.,*
Secretary.

Enclosure No. 2 to P. W. D. Resolution No. 868 R. C. of 1887.

Note by Mr. G. L. MOLESWORTH, Consulting Engineer for Guaranteed Railways, dated 24th October 1883.

The report of Mr. Buyers on the exploration of the North Cachar Hills is very satisfactory; it shews beyond a doubt that these hills may be surmounted at a reasonable elevation about the level of the adjacent plains, and that there are no serious engineering obstacles to the construction of a railway through these hills, which will give a very direct line into Assam. From an exploration of this kind, however, it would be premature to give any decided opinion on the estimate until the detailed survey has been further advanced; there is however sufficient ground for pushing forward with the surveys and sections of the line that has been explored. Two crossings of the river Barak have been suggested—one at Badapur, and the other at Tila; the latter appears to have some advantages in an engineering point of view, but the saving should be very marked to weigh against the shortening of the railway as a through line by the adoption of the Badapur crossing. The advantages of the Telyn Tila crossing appear moreover to be neutralized to a certain extent by the necessity for an expensive crossing of the Jatinga river which the Badapur crossing avoids. I lean therefore to a preference of the Badapur crossing.

After passing through the Cachar Hills, it would be well to consider whether a route which I have roughly indicated in blue on the map might not, with advantage, be taken.

This line would cross the Dhansiri river a little to the north of Dimapur; and if the map be correct, would keep on a water shed avoiding a number of streams which flow from the hills situated on the north-west of Dimapur.

This line would serve impartially both sides of the valley; and, judging by the configuration of the map, this valley must contain excellent sites for tea plantations which would probably be developed by the construction of a railway through the valley.

The railway through the North Cachar Hills for developing Assam appears to me to be far preferable to one following the course of the Bramaputra river to Dubri.

It is evident that the Chittagong and Silchar lines must be made, and that the rich country through which that line is to pass will amply justify its construction irrespective of its being considered a line into Assam. If this line be extended through the Cachar Hills to Dibrugurh, it will open out the heart of Assam, and develope an important coal trade; it will moreover enable the rich districts of Sylhet to pour grain into Assam. Whereas the line from Dibrugurh to Dubri would run parallel to the Sibu, affecting for the most part a district not capable of much development and already provided with means of communication by steamer. The distance of Dibrugurh to the port *viâ* Chittagong would be from 150 to 200 miles less than that *viâ* Dubri to Calcutta, and without break of bulk, whereas the line *viâ* Dubri to Calcutta involves two breaks of bulk.

The British India steamers now make Chittagong their port of call, and by using that port all the difficulties and dangers of the Hooghly would be avoided.

On these grounds I would strongly recommend the active prosecution of the detailed surveys of the line of railway through the North Cachar Hills.

Enclosure No. 3 to P. W. D. Resolution No. 868 R. C. of 1887.

Mr. J. W. BUYERS' report on Survey operations during 1884-85, dated 16th September 1885.

Plans and estimates forwarded with report for season 1884-85.

The plans and estimates, detailed in the forwarding note, and submitted with this report, represent the results of the third year's work in connection with the survey for a railway to connect Assam with the port of Chittagong.

Resumé of operations during season 1882-83.

2. During 1882-83 the survey operations were confined to the section between Chittagong and Silchar, over which a line was located, and to an exploration of the North Cachar Hills.

There was little doubt that a railway could be carried from Chittagong to Cachar without encountering any extraordinary difficulties, but it was not known if it would be possible to extend the line across the North Cachar Hills into the Brahmaputra Valley, and this was the main question which the exploration was intended to decide. Should these hills offer an impracticable barrier, the line from Chittagong would terminate in Cachar in a *cul de sac*, and all hope must be abandoned of giving the Brahmaputra Valley direct railway communication with a seaport of the value of which there could be no doubt.

Other benefits, economical, administrative, and strategical, which it was anticipated would result from the establishment of this connection, combined to render the solution a question of interest and importance.

The exploration was successful in its chief object, for a route was discovered in which the highest elevation was only slightly over 2,000 feet above mean sea level, and by which it was believed the hills could be surmounted with maximum gradients of about 1 in 70 at a cost of Rs. 1,30,000 per mile.

The detailed estimates of the Chittagong-Cachar Section presented the following results:—

Sections.	Length in miles.	Rate per mile.	Amount.
		Rs.	Rs.
Chittagong to Comillah, with branch to Chandpur .	128·5	87,335	1,12,27,801
Comillah to Silchar	174·8	80,425	1,40,58,349
Chittagong to Silchar, with branch	303·3	83,370	2,52,86,150

Work of 1883-84.

3. The question of the feasibility of the extension of the railway through the hills having been so far determined, the season of 1883-84 was chiefly devoted to the survey of the country north of the Cachar Hills, the sections taken in hand being those between the Lumding river and Golaghat on the main line and the same river and Roha on a branch towards Gauhati, but one party was also set to commence a detailed survey on the proposed route through the hills.

The field of operations was limited by the strength of the staff and the difficult nature of the country generally for survey. Between the Lumding and Dimapur, the ground along the projected route was in fact absolutely unknown before the railway survey parties entered the field, and the survey of this section could not be completed during the season.

The results of the season's work were as follows in the way of submitted estimates:—

Sections.	Length in miles.	Rate per mile.	Amount.
		Rs.	Rs.
North Cachar Hills	12·198	1,43,496	17,50,365
Lumding-Dimapur (Dhansiri traverse) . . .	24·56	66,564	16,34,643
Ditto alternative (Diphu „) . . .	21·87	68,685	15,02,152
Dimapur-Golaghat	45·0	65,276	29,37,422
Ditto Jamguri alternative	38·8	65,776	25,52,097
Lumding-Roha	56·715	70,640	40,06,344

A cursory examination was also made of the country between Roha and Gauhati, and in the report the belief was stated that this section of railway can be made for Rs. 68,000 per mile.

Preliminary remarks on work of 1884-85.

4. During the cold season of 1884-85, which now comes under review, the staff was distributed over a length of upwards of 300 miles of country, extending from the south bank of the Barak river in Cachar to Dibrugarh in Upper Assam. The objects in view were the completion of the survey of the plains portion of the main line, both north and south of the North Cachar Hills, and of as much also of the hill section as the difficulty in supplying coolies for jungle-cutting and other purposes, without overtaxing the scanty hill population, would permit, a consideration which, more than any other, has always determined the amount of work which could be undertaken in the hills. To accomplish the work, permission was granted to increase the staff by the entertainment of temporary men, and this was effected greatly through the assistance which was rendered by the Government of Bengal, Public Works Secretariat.

Jatinga valley and approaches from the Chittagong-Cachar line.

5. A strong party was set to work under Mr. Sherman, Executive Engineer, in the Jatinga Valley, and approaches to it from the Chittagong-Cachar line.

As stated in my report on the exploration of the North Cachar Hills during the season of 1882-83, there are two routes by which a railway may enter the Jatinga valley; the one crosses the Barak river at Badarpur, several miles below the confluence of the Jatinga, and admits to the right side of the valley; the other crosses the Barak at Telyn Tila, about two miles above the mouth of the Jatinga, and admits to the left side; and they will, for the purpose of distinction, be styled respectively the Badarpur and Telyn Tila routes.

Two routes available.

Lines have been laid down on the ground on both these routes, to points about 5 miles inside what may be considered as the mouth of the valley.

Lines laid out on both routes.

In the early part of the season much of the land in the open country outside the valley was under rice cultivation, and work was, therefore, commenced from arbitrary points inside the valley where there was no cultivation; this accounts for the chainages on the plans and sections running from north to south, and not in the natural reverse direction as continuations of the Chittagong-Cachar line; but the through mileages from Comillah have been shown, and Mr. Bell's report on the survey between Chittagong and Comillah shows that 96·67 miles must be added to get the through distance from Chittagong.

Reasons for starting work from the Jatinga valley end.

Between the respective zeros and the connections with the Chittagong-Cachar line both lines have been fully located, with curves complete, and from the zeros traverses have been run, and cross sections taken, for a further short distance up the valley to a point where the two lines are connected on the right side, after carrying the Telyn Tila line across the Jatinga river, the reasons for which, having already been fully explained by me, need not be recapitulated.

Estimates are submitted for both lines, and are for the complete sections between their respective connections with the Chittagong-Cachar line and mutual junction.

Estimates submitted for both approaches.

6. The Badarpur line takes off from the Chittagong-Cachar line near mile 157 from Comillah, and crosses the Barak river where a narrow spur of rock, on which is situated a small ruined fort, projects from the south bank, and forms a stable foundation for one of the bridge abutments.

Description of line by Badarpur route.

The river here has a tolerably straight reach, but the north bank is to some extent subject to erosion, as it is composed of an alluvial silt.

The estimate for the bridge is framed on a design, the chief characteristics in which are the employment of steel girders of 250 feet span, supported by steel cylinders, resting on brick wells, which are estimated to be sunk to a depth of 80 feet below the bed of the river.

Bridge across Barak river.

Three spans of 250 feet are provided, giving 750 lineal feet of waterway. The cylinders, two of which form a pier, are 16½ feet in diameter at the bottom, diminishing to 12 feet at the top, and it is intended to fill them with cement concrete. The abutments are of brickwork. High brick piers are considered objectionable, as the country is subject to violent earthquakes.

There has not been time to do more than sketch a general design of the bridge, and in making a finished drawing some modifications may recommend themselves, but these are not likely to be of such a nature as to materially affect the estimates, which, as they stand, show a total cost of Rs. 5,74,872, exclusive of share of establishment.

Large spans are adopted, in order not to interfere with the navigation of the river, and to suit the contour of the section of the bed, the first span clearing a deep channel scoured in front of the spur.

There is a strong element of uncertainty as yet as regards the depth to which it may be necessary to carry the pier foundations, which may affect the bridge estimate: the depth assumed is 80 feet below the ordinary bed of the river, but the borings only got down to a depth of 52 feet, and so far nothing but quicksand was met with. Mr. Sherman was seriously delayed in getting the borings started, owing to the difficulty he experienced in procuring suitable boats to carry the shear-legs and boring tackle; and after getting to the depth named he found that no progress was made, fresh sand blowing into the tubing as fast as it could be cleared out, and at the same time he was troubled by the inefficiency of his tools. The season was by this time so far advanced that it became a question of either stopping work here or of running the risk of not being able to get any borings taken at the Telyn Tila crossing, and he considered it more important to do something there.

A depth of 80 feet below the bed of the river is 65 feet below mean sea level at Chittagong, and it will probably be sufficient, and considerably below any danger of scour, but, if survey operations are continued, I purpose to have the questions thoroughly determined during the next season.

The upper flood level marked on the section is the highest of which there is any record, and occurred more than forty years ago; the high flood of May 1883, which was eighteen inches lower, is also marked. A depth of 18½ feet has been allowed between underside of girders and highest flood level: this is quite sufficient for ordinary country boats, but not for large river steamers; but I have not deemed it necessary to consider these, as they can only get so far up the river during a few months of the year, and the probabilities are that the railway will run them off the course altogether, at least above the point which they can reach all the year round, while at the worst they would have to make Badarpur their terminus, instead of Silchar; at the same time it must be considered that during such extraordinary floods river traffic is practically suspended.

After crossing the Barák, the line runs north, flanked on the east, for a distance of nearly five miles, by a low range of hills. The section here shows a stretch of country liable to heavy inundations from the Barák, but without a word of comment, the effects of these might be considerably exaggerated. The flood must be to a great extent back or still water, which can have little effect on the embankment, the range of hills acting as a breakwater generally: there are in it, however, two or three gaps, through which the water pours, and opposite these bridges are provided, which will probably be sufficient to pass the heaviest flood, but which should be built with pier abutments to permit of ready extension if necessary. Much of the low land is covered with a dense growth of high grass and *ekra*, which must greatly retard any flowing water.

Country north of Barák river as far as Bikrampore.

Near Bikrampore the country rises above the influence of the Barak floods, and it is proposed to place the engine-changing station near mile 166. Were a branch line made from Badarpur to Silchar, there would be, at least, one obvious advantage gained from placing the changing station near Badarpur; but, as the ground there is low, the work would be very costly.

Engine-changing station placed near Bikrampore.

Leaving the changing station, the great mass of hills, which form a continuous range about 100 miles broad, separating the Surma and Brahmaputra valleys is approached, but the Jatinga valley is closed to view by the spurs which here project into the plain, and through which an entrance must be effected. Both steeper gradients and sharper curves are now employed to suit the altered nature of the ground.

Country north of Bikrampore.

The Arang river is crossed near mile 168, with a bridge of three 40-feet spans, and beyond this the line enters a small valley, up which it runs to mile 171, when it curves sharp to the left, and, passing by a tunnel slightly over two hundred yards long through a narrow neck in the intervening range of hills, emerges into the Jatinga valley at a point on the right side about 3½ miles above the gap through which the river issues from the hills into the plains.

Entrance into the Jatinga Valley.

The line has been carried about five miles up the valley above this point, skirting the side of the hills. The work is of the character to be expected in such a country, that is, a succession of banks and cuttings with retaining walls in places. A short tunnel is necessitated by a sharp bend which the valley makes near the point where the Telyn Tila line joins in.

Work in Jatinga valley.

The estimate amounts to Rs. 25,25,486 for a total mileage of 19·789 miles, which gives a mean rate of Rs. 1,27,620 per mile; but this includes the cost of the Barák bridge, amounting, with its proper share of establishment, to Rs. 6,32,359, which should fairly be distributed over a longer section. Exclusive of the Barák bridge, the mean mileage rate is Rs. 95,666.

Estimate for Badarpur approach.

7. The Telyn Tila alternative leaves the Chittagong-Cachar line in the 107th mile, near which it crosses the Gagara river with a bridge of three 100-feet spans.

Description of line by Telyn Tila approach.

The Barák river is reached nearly three miles farther on. A low range of hills, nearly parallel with which the line has for some distance been running, here terminates on the south bank of the Barák in a small detached hill, known as the Telyn Tila, the base of which is washed by the river.

Barák crossing and bridge.

The borings here were more satisfactory than those at Badarpur. Rock is proved to extend for about 200 feet across the channel, and elsewhere the bed appears to be composed of a stiff blue sandy clay: little or no running sand was met with, and the bore-hole at the site of No. 2 pier was put down to a depth of 72 feet below the bed. It is proposed to adopt for the bridge a central span of 250 feet, which clears the deep portion of the channel, with a single span of

150 feet on each side of it. The south abutment and No. 1 pier will be founded on rock, the remaining piers have been estimated to be carried to a depth of 64 feet below the bed.

There can be no question that the river can be more easily bridged here than at Badarpur, and that the waterway required must be considerably less, for the Barák receives a large amount of drainage between the two crossings; but these are not the only considerations to be taken into account, though due weight must be attached to them, when determining the selection of route.

It may be noted that the area of country drained by the Barák cannot be arrived at, as many of its sources lie outside the existing maps.

General character of the country between the Barák and North Cachar Hills.

The country between the Barák and the North Cachar Hills is broken by low detached hills, separated by valleys subject to inundation in very high floods of the Barák and Jatinga: it is not, however, so bad in this respect as the country north of Badarpur, but the section is a rougher one.

Engine-changing station placed near commencement of this alternative line.

There is no ground north of the Barák suitable for an engine-changing station (all ground which might otherwise have been suitable being taken up by tea), and this has therefore been placed south of the river near the beginning of the alternative; the ruling hill gradient of 1 in 70 and sharper curves have been utilised, by which economy has been effected in first cost of construction, but at the expense of what is equivalent to lengthening the hill section in working.

Streams between Barák and North Cachar Hills.

The most important streams between the Barák and the main range of hills are the Badri in mile 175, and the Dulu in mile 177, each crossed by bridges of three 60-feet spans; the former, though comparatively insignificant in itself, acts as a spill channel for the Barák when it is in high flood, and must then discharge a large body of water.

The line may be said to enter the North Cachar Hills proper in the 181st mile near the Marwa tea-garden. The features of the ground, and not the question of waterway, have led to the adoption of a viaduct of five 60-feet spans across a large watercourse, in mile 181.

Work in Jatinga Valley.

For a short distance near mile 182, the line skirts the left bank of the Jatinga, the hills here generally running sharp down to the water's edge; it then curves to the right, and passes by a deep cut, through a narrow depression in the hills, into a subsidiary valley, thus avoiding a long detour which the Jatinga makes, and issues again into the main valley, in mile 184, near the Jatinga valley, or Katlacherra tea-garden. It thence continues for another three miles, along the left side of the valley, and finally crosses in the 187th mile to the right side, and connects with the Badarpur line; this necessitates bridging the Jatinga river, for which 10 spans of 60 feet have been allowed as giving the most economical results.

Bridge across the Jatinga.

As regards the crossing, Mr. Sherman states that both the width of stream and fall are here abnormally great, but that the depth cannot be very much, and that the flood level shown in the section is merely assumed at a very safe height: the left bank is precipitous, and both it and the bed are rocky. This line avoids tunnelling.

Estimate of Telyn Tila approach.

The length of this alternative is 17·928 miles and the total estimated cost Rs. 23,94,401, or Rs. 1,33,556 per mile, of which Rs. 4,05,100 are due to the Barák bridge: without the bridge, the mean cost per mile amounts to Rs. 1,10,961.

I have not been able to go over any of the ground since the lines have been located so that I cannot say if any improvements can be made: in the hill sections no doubt further elaboration would suggest some slight alterations in the alignments, but nothing of such a nature as can materially affect the estimates. Mr. Sherman has taken great pains with the work, and complete trust can, I feel confident, be placed in the accuracy of what he has done.

8. Coming to the question of which line to adopt, the figures already given show a difference in length and cost in favour of the Telyn Tila line of 1·86 miles and Rs. 1,31,085, as under:—

Comparison of two routes.

Designation.	Length in miles.	Total estimated cost.
		Rs.
Badarpur line	19·79	25,25,486
Telyn Tila „	17·93	23,94,401
Difference in favour of Telyn Tila	1·86	1,31,085

Supposing, first, the line to have been made from Chittagong to Silchar, the above difference represents what would have to be paid extra for the adoption of the Badarpur route: the set off against which would be saving of 10·37 miles in the through route to Assam, arrived at thus:—

	Miles.	
Length of Badarpur line		19·79
„ of Telyn Tila „	17·93	30·16
Distance between Badarpur and Telyn Tila connections with Chittagong-Cachar line	12·23	
Difference		10·37

Badarpur approach recommended.

In my opinion it would be worth paying the sum stated simply for such a saving in through distance, but, further than this, I would recommend that the line should not be extended up the Barák Valley above Badarpur, on the grounds that no such amount of extra traffic can be expected from the extension, for a very long time at least, as to justify the great expense. The section between Badarpur and the Gagara river, that is, between the connections, is the most expensive on the whole line between Comillab, if not Chittagong and Silchar, owing to the number of large streams that are crossed, and, according to the estimates of 1882-83, the cost of the 12·23 miles is Rs. 11,72,823, or Rs. 95,866 per mile; if this be added to Rs. 23,94,401, the cost of the Telyn Tila alternative, the total will be Rs. 10,41,738 in excess of that of the direct Badarpur route, or, in other words, this represents the extra expenditure which will be necessary to establish the Telyn Tila route. It may be argued that the extension above Badarpur will eventually have to be made; but this may well be left for time to decide: it appears to me that it will be long before it will pay to make it, and I do not see that the railway is likely to lose any but a very small amount of local traffic from stopping short at Badarpur.

No account has been or need be taken of the short section between the Gagara river or Telyn Tila and Silchar, for whatever route were adopted into the Jatinga Valley, the same reasons would apply for constructing it.

I may remark that I was not prepared to find the Telyn Tila line work out to a higher rate per mile than the Badarpur.

Work at head of Jatinga Valley.

9. A sufficient number of men having been detailed for the survey of the approaches, the remainder of the party was set to work downward, from the watershed at the head of the valley between the Jatinga and the Aboijee.

My preliminary observations indicated that the only portion of the Jatinga Valley in which difficulty might be experienced as regards gradients, was that above the junction of the Kayeng, but that by utilising the Kayeng Valley, more or less to extend the base, a gradient of about 1 in 70 might be secured up to the watershed. It was hoped that the season's work would decide such questions by determining the true difference in distance and level between the two points.

The object proposed was unfortunately not completely attained, owing to heavy rains and sickness after the middle of March, and these two causes combined finally compelled the party to beat a retreat; but the work, so far as it has gone, and further observations, tend to confirm the belief that the gradient of 1 in 70 can be obtained.

A traverse was run for thirteen miles down from the watershed, but, as cross sections have only been taken on the upper six miles, it has only been possible to prepare an estimate for that length on a line laid down on the plan from the cross sections: about five miles remain between the end of the traverse and the Kayeng.

Estimate.

The estimate for the six miles amounts to Rs. 12,33,718, or Rs. 2,05,619 per mile. Formation level has been started at 80 feet below the summit of the watershed, and has been run uniformly down at an incline of 1 in 70, but this of course is liable to alteration hereafter. It is not, however believed that such alteration can greatly affect the estimate, as within the possible margin the character of the hill slope is very uniform. The minimum radius of curvature employed in laying down the line on the plan is 573 feet; a considerable saving in first cost of construction could no doubt be effected by employing curves of 400 feet radius, and when the whole scheme is complete before me, I propose to work this out.

There is little calling for special description.

The side of the range which forms the northern slope of the Jatinga Valley along which the railway is carried, is scored by numberless watercourses, some worn into deep cut chasms, though none in this short upper section bring down any great volume of water, as the summit of the ridge is not distant. The line is a succession of short banks and cuttings, and at two points it is carried by tunnels through the spurs: some of the ravines are crossed by viaducts, either because these are most economical, or because the features of the ground leave no room for choice.

Opposite zero the Jatinga is about 500 feet below the line, and it is here a very insignificant stream, only a few feet broad; in its upper course it has a more rapid fall than the railway, so that opposite mile 4½ it is 780 feet beneath the latter; but afer this the fall of

the river becoming comparatively gentle, while that of the railway continues uniform, the difference between the two becomes rapidly diminished.

Work of No. 2 party in northern section of the hills.

10. No. 2 Party was engaged under Mr. Moore in the northern section of the hills in connecting the previous year's work with the point near the Lumding river where the Gauhati line branches off. Last year estimates were submitted for a section of 12 miles extending from the watershed which separates the Mahur and Mupa Valley to the Langting river. The present estimates are for an additional length of nearly 22 miles, which completes the hill work north of the Mahur.

Estimates.

The totals of the two estimates are shown in the subjoined table:—

Sections.	Miles.	Rate per mile.	Amount.
		Rs.	Rs.
1884-85.			
Mahur to Langting	12·198	1,43,496	17,50,365
1885-86.			
Langting to Lumding	21·830	88,498	19,31,923
Total Mahur to Lumding .	34·028	1,08,213	36,82,288

Preliminary and detailed estimates compared.

The following table shows how these estimates compare with the preliminary estimates given in the report on the exploration of the North Cachar Hills after reduction to corresponding sections:—

Sections.	Preliminary estimates, 1882-83.			Detailed estimates, 1884-85 and 1885-86.		
	Miles.	Rate per mile.	Amount.	Miles.	Rate per mile.	Amount.
		Rs.	Rs.		Rs.	Rs.
Mahur Mupa watershed to head of Dijakho	5·5	1,80,000	9,90,000	6·648	1,80,552	12,00,314
Head of Dijakho to watershed above Gireso at head of Langladisa	18·0	1,00,000	18,00,000	14·48	1,10,580	16,01,204
Head of Langladisa to zero near the Lumding	10·0	80,000	8,00,000	12·90	68,277	8,80,770
Total .	33·5	1,07,164	35,90,000	34·028	1,08,213	36,82,288

Line laid down on plan from cross sections.

The line on which the estimates are based has been laid down on the plan from the cross sections, and the chainage is carried on in continuation of the previous season's work, zero being on the watershed between the Mahur and Mupa valleys.

There is not much calling for special comment.

Description.
Large bridges.

The Langting and the Lumding are the only streams of any importance, and they are bridged with four 60 and three 60-feet spans respectively.

Stations.

Provision has been made for a station at mile 13 on the north bank of the Langting in place of at mile 10½, where it was placed last year; this does away with the difficulty about water-supply. Other two stations have been placed between this and the junction station, one at the head of the Langladisa in mile 23, and the other about two miles above its mouth at mile 31. The choice of position is restricted by the nature of the ground; a better distribution could have been got had there been suitable ground south of the Langladisa watershed.

Langting station to Lamong.

Shortly after leaving the Langting station, the line turns out of the Langting valley, and ascends a small side valley, the head of which it cuts through in the 16th mile at its lowest point and thence it has a fall of one mile to the Lamong, a small stream which drains into the Langting: the line thus crosses the ridge which divides the Lamong from the Langting, but to carry it round by the mouth of the Lamong would add about four miles to the length.

Lamong to Langladisa watershed.

Between the Lamong, which is crossed in the 17th mile, and the watershed at the head of the Langladisa at mile 21, there are three low depressions in the spurs thrown out from the water-shed, respectively at chains 965, 1,011, and 1,061, which may be considered obligatory points: the line rises up to the second from the Lamong with an uniform gradient of 1 in 70 for 185½ chains, but above this the inclines become easier.

Difficulty in choice of alignment.

The determination of the best alignment between the Langting crossing and the Langladisa was a task of considerable difficulty from the variety of routes which appeared to offer themselves, and required very careful examination: that adopted is very direct, while it is also believed to be the best that can be had.

The plan shows various trial lines which have been run, and it may be here remarked that the season's trial lines and cross sections aggregate 143 miles, all in jungle, which had to be cut.

Langladisa Valley.

After crossing the watershed, the alignment follows the Langladisa valley throughout until it becomes connected with the Lumding: the ground becomes very much easier, and there is only one point in the whole length of 12 miles, where the inclination of the valley necessitates the adoption, for 35 chains, of the ruling gradient of 1 in 70.

The Langladisa is quite an insignificant stream, only carrying water in the upper half of its course during the rainy season. The valley, nowhere very broad, contracts in a few places into narrow but easy gorges, and its course being very direct, leaves nothing to be desired.

Formation has been kept about 20 feet above the bed of the stream in the upper portion of the valley and 25 feet in the lower.

Connection with zero at Lumding and position of junction station.

This section of the survey is connected with zero of the survey of 1883-84 towards Gauháti, but it is proposed to place the junction station about three miles to the east, where a very good site exists is an open plateau, with a plentiful supply of good water close at hand.

Questions affecting choice of junction station site.

There is a certain objection in not having the junction station immediately opposite the mouth of the Langladisa valley in that, by moving it east, the length of the Gauháti Branch is increased; but the counter objections are that the ground opposite the Langladisa is broken and covered with forest, probably, not so healthy, and that the water-supply would be a greater difficulty: this station must develope into a place of considerable importance, and a large staff will be located at it. It is, therefore, worth making the one sacrifice for the advantages which the site selected offers.

Provision made for a double line of rails between zero and junction station.

Provision has been made in the Lumding-Golághát estimates for a double line between this zero and the junction site, though, when the final alignment comes to be made, it may be found better to keep the main line and the branch distinct either by crossing the Lumding somewhat higher up, or, if the present crossing be adhered to, by curving off immediately afterwards sharp to the east.

No curve of less radius than 573 feet has been introduced.

Work between Lumding and connection with Golághát-Dibrugarh traverse.

Survey between Lumding and Dimapur finished during season.

11. It has been noted that the survey between the Lumding and Dimapur was not completed during the season of 1883-84, owing to the difficulties which were encountered, in fact, the traverses which were run barely extended halfway from Dimapur to the Lumding junction. During the past season the survey has been completed. Work was started from the Lumding end.

Portion of Gauháti branch altered.

It was found that a better alignment could be got by altering the first 66 chains of the Gauháti Branch laid out in 1883-84, but the new zero is immediately opposite the old one, and the alteration is shown on the plan and section. The distance from this zero to Dimapur is 47 miles.

Alternative north of Dimapur.

North of Dimapur, an alternative line has been run between the Dhansiri and Daiang rivers, and after crossing the latter, has been carried on to connect with the traverse from Golaghat to Dibrugarh near the Kamarband Ali, about six miles east of Golághát.

Estimate.

The total distance from Lumding zero to the junction with the Golághát-Dibrugarh traverse is 96·643 miles, and the estimates submitted amount to Rs. 67,01,270, giving a mean rate of Rs. 69,340 per mile.

Portion of alignment of 1883-84 retained.

Only 18¾ miles of the alignment of 1883-84 have been retained near Dimapur; the remainder, nearly 78 miles, represents fresh work done during the past season.

Examination of country between the Lumding and Dhansiri rivers.

I devoted several weeks to exploring the country between the Lumding and the Dhansiri rivers, and though, no doubt, some improvements may be possible in the alignment, as it has been laid down on the ground, yet I believe the valleys which have been followed must be adhered to, and that, as these are narrow, any improvements will be simply confined to slight lateral deviations in them.

General description of country.

The country consists of undulating ground and low hills, intersected by valleys, covered with dense forest, and it presents great difficulties to exploration and survey. The map is little or no guide, and, indeed, frequently misleads.

Starting from zero, the line traverses an undulating country between the Lumding and Langpher rivers, until it emerges on a grassy plain or plateau, where the site for the junction station, already referred to, has been fixed at mile 3, just beyond which is a small stream, with a constant plentiful supply of good water, crossed by a 60-feet span.

Zero to junction station.

Between this and the Langpher river, which is crossed in the seventh mile with a bridge of three 100-feet spans, the line encounters a series of low ridges, which run generally at right angles to it, and necessitate a number of curves to avoid heavy earthwork.

Junction station to Langpher river.

Crossing to the north bank of the Langpher, the line then passes into a subsidiary valley, drained by a small stream, known to the Mikirs of the neighbouring hills as the Langsloet, and then up a branch of it, the watershed being crossed a little beyond mile 15, at the lowest point in a ridge, which runs east and west, and which was examined for several miles. It is probable that a somewhat more direct alignment may be got between the junction station and the entrance to the Langsloet valley, without any heavier work: the alignment was fixed as far as the Langpher crossing before it was provided that the Langsloet valley was the best to take beyond; and the shortness of the working season, with an unknown country in front, rendered it unadvisable to spend time in attempting improvements which could, at the best, be but slight. From the watershed the line dips into a valley which, by a circuitous course and through almost impassable swamps, also drains into the Langsloet near mile 12, and, cutting it almost at right angles, ascends to the parting between the drainages into the Langpher and into the Diphu, which it crosses in the eighteenth mile.

Langpher to watershed of Langsloet.

The inclines to these two saddles, with gradients of 1 in 150, entail some rather heavy earthwork, but it is worth incurring some extra expense in the first instance, to maintain the ruling gradient, seeing that there is scarcely another point in the whole Assam valley where any economy worth considering could be effected by departing from it.

The line now descends a very easy valley to the Dilangi, a tributary of the Diphu, which is reached in the 22nd mile. Above this the Dilangi runs through a fine broad valley generally, in which I found traces of old cultivation in the shape of bunds. I spent some days in examining the country between the Dilangi and the Diphu, and though there appeared no great difficulty in the way of surmounting the dividing ridge, no good route could be found further east across the hills between the Diphu and the Dhansiri. I therefore turned my attention north and north-east.

Dilangi valley.

About two miles below the junction of the Dilangi, the Diphu is met by another stream, flowing from the east, known to a few Mikirs, who occasionally venture here for the purposes of hunting and fishing, as the Dharram. The line follows the left bank of the Diphu, and enters the valley of the Dharram in mile 24: it adheres to the main valley to mile 29, and then passes up a tributary, crossing into the Dhansiri drainage at mile 32.

Diphu valley.

The main valley of the Dharram is in places of considerable breadth, but at others is narrowed by spurs, through which the line cuts; the earthwork from the cuttings will be easily disposed of, if not led into bank, and is not so formidable as it looks in the section.

Dharram valley.

At mile 28 the Dharram issues from a large *bil* or *pathar*, much frequented by wild elephants, which extends for some miles, forming a basin for the reception of the water from the surrounding hills. I found that what Mr. Tyndall termed his Diphu traverse ended near the head of this *bil*, about three miles south of the present line, and that he had not nearly reached the Diphu, as he thought he had, between which river and the termination of his line there really exists some very difficult ground.

An improvement can, in my opinion, be made in the present alignment by carrying the line through the *bil*, which can easily be drained, thus avoiding cutting through several spurs and doing away with some small waterways. Mikirs with the party believed that in this *bil*, they recognised a place which they had heard old men describe as having once been cultivated and then abandoned on account of Naga raids. Now that a feeling of security is being established, it is possible that they may find their way back here; as within the last year I have found them coming down on to the Langpher and Langsloet.

An alternative alignment from the Diphu into the Dharram valley has been set out which effects a saving in distance of 1·6 mile between miles 22 and 26, but it involves very heavy earthwork, three bridges, and a tunnel 200 yards long, and is estimated to cost Rs. 76,830 more than the longer line; it is not, therefore, recommended for adoption.

Alternative alignments between Diphu and Dharram valleys.

The new work is connected with the traverse of 1883-84 on the left bank of the Dhansiri, 9¼ miles south of Dimapur. Between mile 32 and this point some small streams, mostly dry when I saw them, are crossed, which, after flowing from north to south, unite to form one stream,

Connection with traverse of 1883-84.

which enters the Dhansiri just above the line, and in the tenth mile from Dimapur. These small streams take their rise in a ridge, 300 to 500 feet high, which runs from east to west, some three miles north of the line. I spent a considerable time in trying to find a more direct route from the Dharram valley to Dimapur, but I found this ridge an impracticable barrier.

Direct line from Dharram valley to Dimapur not found practicable.

The incorrectness of the map, the country never having been thoroughly surveyed, has already been commented on. The Langpher river, for instance, rises close to the Dhansiri, but the ground along its course is so broken and rough and intersected by so many watercourses that the attempt to carry a traverse by it to connect with the termination of that of 1883-84, twenty-five miles from Dimapur, was abandoned.

Reasons for not attempting to take the line along the Langpher to the Dhansiri.

Some alteration has been made in the grading of the 9¾ miles of the line south of Dimapur, as from my examination of the ground it appeared to me that the Dhansiri floods had been taken too low.

Grading of traverse of 1883-84 south of Dimapur slightly altered.

It may be noted that scarcely a vestige of rock is seen between the Lumding and Dimapur save in the beds of some of the small streams.

Nearly 9¼ miles of the traverse of 1883-84 have been retained immediately north of Dimapur; but when the final alignment is undertaken, it will be better to move it somewhat closer to Dimapur and the Dhansiri.

Portion of traverse of 1883-84 north of Dimapur retained, but may be slightly altered.

A little beyond mile 56, on the through mileage from Lumding zero, the new line turns off and crosses the Dhansiri river, with a bridge of three 100-feet spans, near Bokajan, the stream of which name is avoided, as it falls into the Dhansiri above the point shown on the map.

Divergence of new alternative.

Before commencing any alignment between the Dhansiri and Daiang, a series of cuts were made into the forest from the Dhansiri and sectioned, after which the traverse was run so as to keep as nearly as possible to the highest ground. The work is light until the Daiang is reached beyond mile 85, near which the ground becomes somewhat broken. The river is crossed with a bridge of four 100-feet spans. Further examination may find a better crossing somewhat higher up.

Country between Dhansiri and Daiang rivers.

The line here quits the forest, and enters upon an open cultivated country, across which it makes for the Kamarband Ali where it connects with the traverse from Golaghat to Dibrugarh.

Daiang river to Kamarband Ali.

Though the rates of work are necessarily, from the circumstances of the case, high, the mean mileage rate is a moderate one; this is in a considerable measure due to the fact that there are very few large bridges, the Langpher, the Dhansiri, and the Daiang being the only streams of any real importance in the whole length of 96½ miles.

Remark on estimate.

Were the line taken to Golaghat, after crossing the Daiang, about four miles would be added to the length of the through route. The question then is, is it worth incurring all that this involves, in addition to an increased first cost of, say, 2½ lakhs of rupees, for the sake of directly serving Golaghat? It does not seem to me that it is; Golaghat chiefly derives whatever importance it possesses as a trade centre from its being situated on the Dhansiri; but the river traffic can find its way to the Daiang station, so, as far as this is concerned, the railway is not likely to suffer from not being taken through Golaghat. Were it a *sine qud non* that the main line should pass through Golaghat, the new alignment, north of Bokajan, would no longer compare favourably with that of 1883-84, which followed the left bank of the Dhansiri.

Considerations affecting question of taking line through Golaghat.

As they at present stand, the two projects compare as under—

Sections.	Miles.	Total cost. Rs.
Lumding Zero to Kamarband Ali junction by left bank of Dhansiri and Golaghat.	98·29	68,90,662
Ditto by route between Dhansiri and Daiang rivers.	96·64	67,01,270
Difference in favour of latter	1·65	1,89,392

But this difference will more than disappear if four miles be added to the latter for divergence by way of Golaghat.

I recommend, therefore, for adoption the new direct alignment to the Kamarband Ali.

The country between the Dhansiri and the Daiang, for some distance above their confluence, is low and flooded, and any improvement in the crossing of the latter is to be looked for above the crossing adopted, and not lower down, so that any reduction by this route to

Golaghat does not appear possible. As regards serving the Dimapur valley, it does not seem to me that one line has any strong claims to preference over the other.

Mr. Clift, who had charge of the survey, confined his personal attention to the portion between the Lumding and Dimapur, while Mr. Lilley was deputed to do that north of Bokajan. Great credit is due to Mr. Clift for the manner in which he kept to his work, through his zeal to see it through, while he was suffering severely from the effects of the climate.

Golaghat to Dibrugarh.

12. The traverse from Golaghat to Dibrugarh starts from the point on the right bank of the Dhansiri, where the traverse of the former year from Dimapur terminated.

Mr. Tyndall had charge of the work.

Alignment to be altered through Golaghat if this route be adopted.

I do not approve of the alignment through the station of Golaghat, but this was in a measure fixed by the crossing which had been previously taken of the Dhansiri. If the line is brought by the left bank of the Dhansiri, a crossing should be looked for a little lower down the river, which would permit the line being taken immediately north of the station.

Throughout the country traversed above Golaghat is essentially flat, as the sections show.

Golaghat-Nazira section.

For the first 57 miles, until the Dikhu river is reached, the line adheres fairly closely to the Dhodar Ali and, though improvements can be made in the alignment, as have been shown on the plans and index map, there is no doubt that the neighbourhood of this road is the best a line can keep. On this section two considerable streams are crossed, the Disoi in mile 26, and the Jhanzi in mile 42, with bridges of three 100 and four 100-feet spans respectively.

Main considerations affecting alignment.

After fixing the river crossings, the chief points to be considered in making the alignment are, to avoid, as much as possible, damage to villages, to valuable cultivation, and especially to tea.

Nazira-Dibrugarh section.

After crossing the Dikhu river, about two miles below the Assam Tea Company's station of Nazira, the line runs fairly straight for Dibrugarh, the course being, however, slightly affected by considerations already stated, but the work becomes much heavier, for several large rivers are passed, the most important being, in addition to the Dikhu, the Disang and the Dehing, and the country traversed is subject to heavy inundations.

Work heavy on account of the country being subject to inundation.

The three rivers named issue as large streams from the Naga Hills and are bridged with 3, 4, and 8 spans of 100 feet respectively; between them are smaller streams, whose courses are confined to the plains, which take off the surface drainage under ordinary circumstances, but which are swollen by great additions to their volumes when the large rivers overflow their banks, by no means an infrequent occurrence.

The Dehing.

The Dehing especially is a very formidable stream on this line, and puts a wide extent of country, from south of the Diroi to north of the Seesa, under water. For these causes great additions have had to be made to the waterways of the smaller streams, such as the Diroi, the Dimu, and the Sessa, beyond what they would at first sight appear to require, and immediately south of the Dehing two sets of 40-feet flood openings have in addition been allowed, the sections showing that no efficient addition can be made to the waterway by extending the main bridge beyond the natural channel.

There are no means of arriving at the catchment area of the Dehing, but even if these existed, the question of the discharge would scarcely be elucidated, for a fresh element of uncertainty is introduced by the fact, for such it may be considered, as the information has been derived from various sources, that a considerable quantity of the water now passes off by the Noa Dehing (hence I presume its name), which joins the Brahmaputra far up the valley near Sadiya. The truth of this, and the extent to which the Noa Dehing at present acts, and may continue to act, as a spill channel, were questions which none of the party could be deputed to investigate on the spot, as it lay far distant from the scene of operations. But it may be noted that the levels on the section, north of the Dehing at least, refer to a flood which is said to have occurred within the last six years, that is, well within the period since which the Noa Dehing is acknowledged to have come into action.

Discharge of Dehing how obtained.

The discharge of the Dehing at Jaipur, where the river is confined within its banks, has been calculated from the section and an assumed velocity; adding a very moderate amount for the drainage which is received below Jaipur, and allowing a somewhat less velocity for the current, as must be the case, it becomes apparent that the main channel at the lower crossing can barely carry off one-half of the water, in extreme floods; and the remainder must spill over the country, but this spill water cannot move, except in the deep hollows, with any velocity, as the fall is slight, and it must be greatly impeded by the heavy and extensive forests, while it may also be held back if the Brahmaputra happens to be in heavy flood at the same time.

Connection with Assam Trading Company's line at Dibrugarh.

Connection is established with the Assam Trading Company's line a short distance west of the Dibrugarh (Rajabaree) Station. The position of the junction station can be much improved by moving it a few chains farther east.

Estimate for total section.

The length of the traverse is 97·73 miles, and the total estimated cost of Rs. 73,83,338, or Rs. 75·549 per mile.

Estimate divided into two sections.

Divided into two sections, as treated above, the estimates stand as under:—

Sections.	Miles.	Rate per mile. Rs.	Amount. Rs.
Golaghat to near Dikhu river	57·0	63,570	36,23,516
Near Dikhu river to Dibrugarh	40·73	92,311	37,59,882
TOTAL	97·73	75,549	73,83,338

Estimate from Kamarband Ali to Dibrugarh.

If the section between Golaghat and Kamarband Ali be struck out, the mileage and amount columns will be reduced by 6·23 miles and Rs. 3,49,541, and the totals will then be 91·5 miles and Rs. 70,33,797.

Mean height of bank.

In the first section the bank averages 6·3 feet in height and on the second 9 feet.

Dikhu bridge designed to take road traversed.

The bridge over the Dikhu is designed for a combined road and railway bridge on the same level, in order to facilitate communication between the Nazira Railway Station on the left bank of the river and the district and station of Sibsagar on the right bank.

Cheap line only to be obtained by keeping formation low and allowing floods to pass over.

If a cheap line is desired between Dikhu and Dibrugarh, it can only be obtained by allowing the flood-water to pass freely over the line, accepting the inevitable stoppage of traffic which must ensue; but this I cannot recommend, for such a line would fail precisely at the season when it was most wanted to carry tea.

Golaghat-Makum junction.

13. After seeing the country, I am persuaded that it would be a mistake to take the railway direct to Dibrugarh, which, as far as I know, only came to be spoken of as the terminus, because at present it is the place of greatest importance in Upper Assam.

General reasons for recommending this route.

A much easier line can be got by making for Makum junction on the Assam Trading Company's railway thirty-three miles east of Dibrugarh, and this line will both open up and serve the country better, and be more favourably placed for giving access to the Naga Hills and for tapping the coal-fields which lie along their base.

Alignment practically common to either route for first 50 miles.

For the first 50 miles from Golaghat the alignment would be practically the same for either line, but from this point the Makum junction line diverges and crosses the Dikhu river just above Nazira; it then makes for the Rajgurh Ali, which it follows to near the Disang river, crosses the Disang a little below the junction of the Saffrai, and keeps along the right bank until within seven miles of Jaipur; the Dehing is crossed just above the Jaipur bazar, and the line then runs straight, and almost due north, to Makum junction.

General route thereafter of alternative.

It was not possible to run a traverse over the whole of this alternative, but practically the only portion remaining unsurveyed is one of about twenty-five miles along the right bank of the Disang, which is so particularly easy that, after having gone over most of the ground personally, I can give an estimate which cannot be far from the mark. Plans and sections are submitted for the whole line, save these 25 miles between Nazira and Makum junction.

Alternative crossing of Jhanzi river.

In connection with the project a large plan is also submitted containing an alternative crossing of the Jhanzi river, and a survey of the adjacent tea-gardens: the line laid down on it may be adopted with advantage to several gardens, and might even be taken for the Dibrugarh line, though it will add slightly to the length of that.

Rajgurh Ali between the Dikhu and Disang rivers.

Between the Dikhu and the Disang I propose to make use of the Rajgurh Ali for about ten miles. This is an old Assamese embankment, averaging here about twelve feet high, and from 25 to 30 feet broad on the top. The Managers of the Nahorhabi and Lukwa gardens, who have within the last few years reclaimed from the jungle the portion which lies between the Dhodar Ali and the Disang, are perfectly agreeable that it should be taken up for the railway, and, as they are the only interested parties, no objection can be raised in other quarters to my proposal. It is the finest piece of embankment which I have seen in Assam, raised high above floods, thoroughly well consolidated, and laid out in good straight reaches, so that it is very

well adapted for the railway. I propose to give a cart-road alongside, but beyond the foot of the slope on the east side, and the cost of this has been included in the estimate.

Reasons for adoption of route along the right bank of the Disang.

The Dhodar Ali, north of Nazira, keeps between the Disang and Nága Hills until it is within seven miles of Jaipur. The reason for crossing to the right bank of the Disang will at once be apparent from the map: it will be seen that the river, for nearly 30 miles of the proposed railway, intercepts the drainage from the hills, and for this distance it would appear possible to make an alignment, in which not a single opening would be required. This would, of course, involve a certain amount of curving which would remain as a permanent blemish on the line, while it is doubtful if it would effect any economy, even in the first instance. I have, therefore, assumed in the estimate for a line running fairly straight, 24 lineal feet of waterway per mile, and allowed for a bank of an uniform height of five feet.

The section between miles 22 and 24 from Makum junction shows the nature of the work.

The Mamoora Ali.

The Mamoora Ali, near which the line will run, is covered with jungle, with the exception of where there is a narrow foot track along the centre, and, as far as I have seen, the embankment varied from a few inches to about four feet high. In answer to all enquiries, I was assured that the Disang has never been known to flood over the road, and there were no traces of its having done so. In this upper part of its course the banks, wherever I saw them, and more especially the right one, are very high, and I, therefore, believe the information to be correct. The alignment should keep fairly close to the right bank, where the ground is highest, and whence it slopes towards the Diroi, which carries off the surface drainage.

The Rajgarh Ali, north of the Disang.

North of the Disang I believe the Rajgarh Ali is not nearly so fine an embankment as the portion on the south side. I have only seen five miles of it, which have been cleared between the Tinkhan and Joriapokhar gardens; the rest, I was assured, lay buried in jungle, such as I saw the clearance end in. This portion of the road is narrow, traverses ground cut up by a multitude of small watercourses draining into the Diroi, and had evidently been breached in several places; the Mamoora Ali, on the other hand, traverses a perfectly flat country, with scarcely a sign of a watercourse of any kind.

Objections to taking line between the Nága Hills and the Disang.

Were the line taken along the left bank of the Disang, it would have to cross a large number of streams, many of considerable size; but such an alignment, while being very costly, would not also, in my opinion, serve the country so well, inasmuch as it would be too much to one side of the valley, from the greater portion of which it would be isolated for some 30 miles by the Disang river.

Dhodar Ali, neither suited nor available for the railway.

The Chief Commissioner, Mr. Elliott, has recorded his objection to the Dhodar Ali being taken up for the railway. Entirely concurring in his objection, it may be well to add that, so far as I saw the Dhodar Ali north of the Dikhu, it is quite unsuited for the railway, and that it is a mistake to suppose that any economy would be effected by making use of it, were it desired to carry the line east of the Disang. I do not propose to utilise the Mamoora Ali, as it winds about too much, though, as at present it lies buried in jungle, no objection would probably be raised to doing so.

Disang to Jaipur.

Between the Disang and Jaipur some drainage from the Nága Hills is encountered, but nothing of any great consequence.

Dehing river.

Ten spans of 100 feet have been provided for the Dehing, equal to the full width of channel.

About one mile above Jaipur, the river issues from a gorge in the Tippam range, and the crossing selected is between this and the bázár, where the banks are stable and the river cannot alter its course. The highest flood is said never to have quite topped the left bank, on which Jaipur is situated, but the levels would show that the right bank has been topped by a few inches; but this can easily be prevented by making a small bund along the bank of the river between the railway embankment and the hills.

A narrower crossing might be got close up to the gorge, but the water here is deep, and it would be very difficult to found the piers, while they would have to be made very secure to resist the violent action of the water. I understand, too, that the river is sometimes covered with masses of floating timber, so that I prefer to place the bridge some distance below the gorge, where the river is wider and the velocity of the current is much reduced.

Jaipur to Makum junction.

Between Jaipur and Makum junction the line passes entirely through forest, and there is nothing calling for special mention.

Comparison of distances.

The distance between Golághát and Dibrugarh by this route will be about 156 miles, against 98 by the direct route; but, on the other hand, it slightly reduces the through distance to all points above Makum junction.

Estimate for the alternative.

The estimates for the total alternative may be taken as under:—

Sections.	Mile.	Rate per mile.	Amount.
		Rs.	Rs.
Golaghat to Nazira	56·5	63,225	35,72,222
Nazira to Makum junction	66·43	69,495	46,16,521
TOTAL .	122·93	66,613	81,88,743

Thus, this alternative project gives about 25 miles more of railway to construct, but at an increased cost of only Rs. 8,05,405.

Alternative easier to maintain.

It will also be an easier line to maintain, for it is on higher ground, and not liable to be breached by the Dehing; while a minor point in its favour is the existence of natural stone ballast in the upper courses of the Disang and Dehing close to the line.

Opinions regarding the route proposed.

The Deputy Commissioner of Lakhimpur and many tea-planters have expressed their concurrence in my views regarding the superior merits of this route; in fact, I did not meet any one who had anything to urge in favour of the other. One gentleman wrote, urging upon me the claims of the Dhodar Ali as a route between Nazira and Jaipur, using as an argument that the road might be utilised for the railway, but the objections to this need not be reiterated.

Concluding remarks on work above Golághát.

Before quitting the subject, I have only two or three more remarks to make.

Possible insufficiency of waterways allowed for Dehing flood to be provided against.

I think that the waterways allowed to pass the Dehing flood on the Dibrugarh line err, if anything, on the side of being under the mark, and some of the bridges should be built with pier abutments, so that they may be readily extended if necessary.

General designs for large bridges.

The larger bridges of 100-feet span are designed to have the girders supported on brick piers, resting, with one or two slight exceptions, on wells, which, in the absence of borings, are assumed to be carried to a depth of 50 feet below lowest point in bed of stream.

Curves not laid out and traverses worked in sections.

No attempt has been made to lay out any curves, and, on account of the great extent of forest, the traverse was done in sections, the connections between which are sometimes rather acute: the traverses, therefore, are very slightly longer than the final alignments will be. Only 39 miles out of the 98 between Golághát and Dibrugarh are said to be in cultivation, the remainder being waste or forest.

Opinion on the project.

14. My visit to Upper Assam gave me the first opportunity I have had of discussing with any considerable number of tea-planters the question of railway communication with those parts.

As the result of investigation and discussion, the various projects which have been proposed are now practically reduced to two; one offering a connected scheme by which the Brahmaputra valley would be linked, through the North Cachar Hills, with a line from Chittagong to Cachar; the other two totally independent and disconnected lines, confined to the Brahmaputra valley on the one side and Chittagong-Cachar on the other; the former is the scheme which the last two years have been spent in elaborating.

Whichever of these two projects were adopted, the alignment above Golághát would be practically identical, and the men whose gardens lie along this portion of the route should, therefore, be impartial judges, while any consensus of opinion from them must be valuable, as it is from this section that the railway will draw by far the greatest bulk of any traffic which the gardens can give.

Where I have had an opportunity of explaining the subject, the result has been, I think, entire concurrence with my views, and general assent to the expression made by Mr. Phillips of Nazira, that the second project, giving them simply a line to Dhubri, would place them in little better position than they are in now. I have endeavoured to put the position clearly before them, so far as it affected them.

It was agreed at once that those gardens which send their tea direct to London would ship through Chittagong, but a belief was also not infrequently expressed that trade would gradually be diverted to that port; and one of the most influential planters saw no hindrance to the bulk of the tea being shipped through Chittagong, but still sold, without dislocating present arrangements, from samples in Calcutta. But, apart from all this, it was

unhesitatingly granted, that if both routes existed, one *viâ* Chandpur and the other *viâ* Dhubri, offering a choice of communication with Calcutta, the former would be selected. The question was discussed simply on the basis of difference of mileage with equality of mileage rates, one line against the other, not the railway *versus* the river, which is a different question. Whether the railway can compete with the river steamers for the trade with Calcutta (the steamers having no chance with Chittagong) depends greatly upon the rate at which it can afford to carry the tea: if it can afford to carry at such a rate that the total charges do not exceed those by the river, the great saving in time and some minor considerations, such as the trouble and vexation of long carriage to the Brahmaputra, will turn the scale in its favour. That the railway can do this there can be little doubt.

The great majority of the gardens in the Sibsagar District, and a considerable number of those in South Lakhimpur, lie close to it. These probably on an average do not at present pay less than one rupee per maund to get their tea to the river, whereas four annas should suffice to carry it to the railway, and the balance will convey it well on towards Chandpur: taking Nazira as a centre and a rate of one-third pie per maund per mile for the railway carriage, 12 annas would in fact just land it there, so that it is evident a higher rate could, if necessary, be charged.

In the reports on the work of the season 1882-83, I ventured to make an estimate of the probable amount of traffic the railway may expect, and as I can offer nothing better, I shall not cumber this report by going over the ground afresh. The existence of good water-communications, and in parts the absence of reliable data render any estimate little better than pure conjecture. I took what I considered a moderate estimate, and showed from these figures that the scheme, as a whole, should pay 5 per cent. on the capital outlay after deducting 50 per cent. for working expenses.

Manner in which the lines are shown on the index map.

15. On the index map the line which is recommended for adoption following the traverses described is shown by a full red line. The dotted red lines indicate improvements which can be made in the final alignment, the blue lines represent alternatives which have been surveyed, and the black lines the portions which have been examined, but not yet surveyed, and which consist of about fifty-eight miles in the North Cachar Hills, fifty-two miles between Gauháti and Roha, and twenty-five miles on the right bank of the Disang.

Proposed work during cold weather of 1885-86.

While writing this report I have received intimation that the Government of India desire that the surveys may be entirely completed during the coming cold weather. If the staff be maintained at its present strength, I have no doubt this can be accomplished. It will be necessary to put three parties into the North Cachar Hills, and this has already been approved of. A fourth weak party will be available for the Gauháti-Roha Section, and as it will not have enough to employ it during the whole of the season, I propose also to give it the short length along the right bank of the Disang to do. This is a very easy section, and I should not have thought of doing it if the survey of the Gauháti-Roha Section had not been required. The detailed survey will, however, be somewhat useful, as it will fill up an existing gap and enable complete plans for the project being submitted.

Concluding remarks.

16. In conclusion, I have to express my thorough appreciation of the manner in which the various members of the staff have worked, and I trust the results will be considered satisfactory. Mr. Soppitt, as usual, gave the greatest assistance in the North Cachar Hills in the way of furnishing coolies and supplies, and the Deputy Commissioners of the Nágn Hills and of Nowgong rendered valuable aid to the work in the Dimapur valley.

Enclosure No. 4 to P. W. D. Resolution No. 868 R. C. of 1887.

Note by W. E. Ward, Esq., C.S., Officiating Chief Commissioner of Assam,— dated 19th September 1885.

This report may be at once sent on to the Government of India, who, I hope, will sanction the completion of the survey this next cold season.

2. I agree with all Mr. Buyers' proposals as to the alignment from Badarpur to Dibrugarh, though I should prefer to see the line pass through Silchar. I hope shortly to see an accelerated daily steamer service established between Narainganj and Silchar. Obstacles in the river which cannot be removed except at great expense prevent the steamers from going right up to Silchar in the dry season, and it will probably be necessary to make Karimganj the terminus for five months in the year. In order, therefore, to connect Silchar with Calcutta a tramway from Karimganj to Silchar will probably be required if these two stations are not connected by the railway.

3. In paragraph 14 the Engineer-in-Chief discusses the relative merits of two schemes, *viz.*, (1) that of two disconnected lines, one in the Assam Valley, and the other in the Surma Valley, and (2) that of connecting these two lines by a section through the North Cachar Hills. Upon this question I have read with interest Mr. Buyers' report of the survey operations of the year 1883-84 (No. 1527, dated the 31st July 1884), but neither here nor elsewhere have I found any reply to my arguments against what I may call the North Cachar connection scheme as contained in my note of the 29th August 1883, which was forwarded to the Government of India with Mr. Buyers' report on the survey operations of 1882-83. Those arguments simply amounted to this:—There can be no reasonable doubt that the Surma Valley or Cachar-Comilla-Chandpur line would pay a fair rate of interest to Government or to any Company who chose to take it up. On the other hand, an Assam Valley line from Dibrugarh to Gauhati or Dhubri would probably not for some years yield a sufficiently remunerative interest on its capital expenditure, in whatever direction that line be taken, whether along the Trunk Road, or *viâ* Lumding. These being the facts, I think it would be most unwise to hamper these two lines by an unprofitable and expensive connection between Lumding and Badarpur, a distance of about 114 miles, passing through a barren country and no population. I am fully convinced that this connection will bring no additional traffic to the Assam Valley, that a disconnected Assam Valley line from Dibrugarh to Gauhati and Dhubri would not also bring. It will, of course, bring additional traffic and also cheap coal to the Cachar-Comilla line, particularly if the connection between Lumding and Gauhati or Dhubri is postponed, as it probably will be, for some years; but the view which I take is that the Cachar-Comilla line does not want this additional traffic, as it can stand upon its own legs without being connected with the Assam Valley. In that case, if the Government of India ever contemplated a State Railway scheme in this Province, I could not advise it to expend Rs. 1,34,00,000 on the North Cachar Hill section; but I would certainly advise it to save this money, and spend it on the completion of a disconnected Assam Valley line from Dibrugarh to Fakirganj (opposite Dhubri). If this recommendation be adopted, the Assam Valley may hope to see before many years, what it stands so much in need of, a line of railway running through its whole length; otherwise, I fear much that the requirements of the Assam Valley will be sacrificed with no compensating gain to any other portion of the Province. I am aware that the whole scheme which has been brought under Mr. Buyers' survey contemplates a connection between Lumding and Gauhati; but, if the railway be taken through the North Cachar Hills, I think it is not difficult to foresee that this connection will be indefinitely postponed, and the Assam Valley will suffer in consequence.

4. In paragraph 73 of his report of 1883-84, Mr. Buyers quoted the opinion of Mr. Phillips, of Nazira, upon the relative merits of the two schemes referred to, and in paragraph 14 of his present report he states he has consulted several other planters on the same question; and the conclusion he has come to is that the planters of Upper Assam are unanimously in favour of the North Cachar connection and agree with the opinions expressed in Mr. Phillips' letter that an unconnected line from Dibrugarh to Dhubri would put them "in little better position than they are now." I think I should warn the Government of India against accepting this as the planters' view of the question, without knowing more clearly than Mr. Buyers' report tells us upon what considerations it is based. The matter has been discussed by me with many planters; and it is quite certain that it is perfectly immaterial to them whether they ship their tea for Calcutta at Fakirganj or at Chandpur. All the planter cares about is the cheapest and most expeditious means of conveyance. As regards expedition, there is certainly something to be said in favour of the line to Chandpur, as there would be a saving in time of, perhaps, some 4 or 5 days; but I doubt if this saving is of very great importance to the planter. As to the comparative cost of freight to Calcutta under either scheme, Mr. Buyers' report gives no information. This can only be determined when it is settled at what mileage rate the Railway will carry tea either to Fakirganj or Chandpur, as the case may be, and at what rate the Steamer Companies will carry to Calcutta from Chandpur or Fakirganj.

5. The question of mileage rates was discussed in paragraphs 10 and 11 of my Note of the 29th August 1883. I there pointed out that, if tea were carried along an Assam Valley line to Fakirganj at the rate of $\frac{1}{4}$th pie per maund, it would cost 8 annas a maund to land Dibrugarh tea at Fakirganj; if the freight was fixed at $\frac{3}{8}$th pie per maund the cost for the whole distance would be 12 annas a maund. Mr. Buyers in his present report calculates that the large majority of tea-gardens in Sibságar, and a considerable number of those in the south of the Lakhimpur district, pay now on the average not less than Re. 1 a maund for carriage of their tea from the gardens to the Brahmaputra river, whereas he thinks 4 annas would suffice to carry it to the Railway, thus effecting a saving of 12 annas a maund, which, Mr. Buyers very truly says, will carry the tea "well on to Chandpur; but if this estimate be accepted, it applies equally to an unconnected Assam Valley line; that is to say, the saving noticed will carry Upper Assam tea as far as Dhubri, and even farther than that if the freight is reduced to $\frac{1}{4}$th pie, or, as Mr. Buyers suggests, to $\frac{1}{3}$rd pie per maund per mile. It only, therefore, remains to ascertain and compare the rate at which the steamers will carry from Fakirganj and from Chandpur; and as in this matter both the Government and the planter are in complete ignorance of what the Steamer Companies will or can do, it is quite impossible that the planters of Upper Assam can give any opinion worth having upon the relative merits of the two schemes under discussion. It must be borne in

mind that no presumption can be drawn from the fact of Chandpur being nearer Calcutta than Fakirganj, that steamer freights from the former place will necessarily be cheaper. We know from experience that the River Companies do not regulate their freights according to the distance travelled. The case then stands thus, if we assume, as I think we fairly may do, that the Companies will carry tea from Fakirganj or Chandpur at Re. 1 a maund:—The mean distance from Upper Assam to Fakirganj along the Trunk Road is 347 miles (*see* paragraph 14 of my Note of 1883). If the Assam Valley line be taken *viâ* Lumding, the distance is, according to paragraph 72 of Mr. Buyers' report of last year, 30 miles longer, *i.e.*, 377 miles. Tea carried over this distance at ⅓rd pie per maund per mile will cost 10 annas a maund to land at Fakirganj; if carried to Chandpur, a distance of 474 miles, the cost to land it there will be 13 annas a maund. Thus, the freight (railway and steamer) from Upper Assam to Calcutta will be *viâ* Fakirganj Re. 1-10, and *viâ* Chandpur Re. 1-13 a maund. It is difficult to see how, with these figures before them, the planter of Upper Assam could prefer the Chandpur route. Still more difficult is it to understand Mr. Phillips' statement that the planter will gain little by carrying his tea to Fakirganj by rail and shipping it there. The Assam Company, of which Mr. Phillips is Superintendent, has its tea carried to Calcutta by the India General Steam Navigation Company at a contract rate of Re. 1-8 a maund, and it is probable that Mr. Phillips compared only this rate with that of Re. 1-10 a maund mentioned above, or Re. 1-8 a maund if the mileage rate on the Assam Valley line be reduced to ¼th pie per maund per mile. But the saving of 12 annas a maund in land carriage, alluded to by Mr. Buyers as resulting from the establishment of the railway, whether connected or unconnected with Cachar, has been entirely overlooked by Mr. Phillips. At present, the gardens pay Rs. 2-8 a maund for carriage of their tea to Calcutta, including land carriage, and those gardens which have no contract with the Companies pay Rs. 3. With a railway to Fakirganj the freight to Calcutta, including land carriage, will be—

	Rs.	As.
Land carriage	0	4
Railway freight to Fakirganj	0	10
Steamer freight to Calcutta	1	0
Total	1	14

as compared with Rs. 2-8 or Rs. 3.

6. But, irrespective altogether of these figures, which go, I think, very clearly to show that, so far as the planter of Upper Assam is concerned, a disconnected Assam Valley line is preferable to one connected with the Surma Valley, I deprecate most strongly the merits of the question being determined from the planter's point of view only. Even if we accept the planter's view that he would gain nothing by a disconnected Assam Valley line, it is perfectly clear that he would lose nothing by it; and as the enormous gain which would accrue from such a line to the Assam Valley generally, irrespective of any consideration of the planting interest, cannot be disputed, I feel bound to urge all I can in support of it. I hold very strongly that the Assam Valley will never emerge from its present state of wilderness and isolation until a railway runs through it from one end to the other. The present fast line of steamers have no doubt done much to improve communication with Bengal, but they will not do in fifty years what a railway connected with Bengal *viâ* Dhubri will do in five.

7. I notice that Mr. Buyers is confident that a railway through North Cachar to Chandpur can compete with the steamers. I am not so sanguine on this point. It is well known that the steamers can reduce present freights very considerably. But, however this may be, if a line through the North Cachar Hills can compete, *a fortiori* can a disconnected Assam Valley line do so (upon this point see paragraph 11 of my Note of 1883).

8. These remarks make no reference to the prospect of Assam tea being at some future day for the most part exported direct to England *viâ* Chittagong. As I said two years ago this is a prospect too remote to affect the question under discussion. A few gardens may wish to export that way when the way is open, but I doubt much if the majority of gardens would do so.

Enclosure No. 5 to P. W. D. Resolution No. 868 R. C. of 1887.

No. 3176, dated 28th September 1886.

From—F. J. JOHNSTONE, Esq., M.I.C.E., Secretary to the Chief Commissioner of Assam, P. W. Dept.
To—The Secretary to the Government of India, P. W. Dept.

BENGAL-ASSAM RAILWAY.

Survey Operations for 1885-86.

I am directed to forward, for the information and orders of the Government of India, two reports* with estimates by the Engineer-in-Chief, Bengal-Assam State Railway, the one dealing solely with last season's survey operations and the other a final report in which the whole work done by Mr. Buyers' survey party is reviewed.

* The two reports accompany this letter; the bundle of estimates has been forwarded by parcel post.

F. J. J.

2. The Chief Commissioner has no remarks to offer on the first report. In his second report Mr. Buyers enters again upon the discussion of the relative merits of a disconnected Assam Valley line and a connected line through the Cachar Hills with special reference to Mr. Ward's note of September 1885, submitted to the Government of India with Mr. Buyers' report of last year.

3. The Government of India will not expect the Chief Commissioner to prolong this discussion further. They are in possession of Mr. Ward's views and arguments and of the Engineer-in-Chief's reply to them and nothing more is required to enable the Government to judge of the comparative merits of the two schemes from a commercial as well as a financial point of view; Mr. Ward adheres to the views he has already expressed.

4. Setting apart as was done in Mr. Ward's note of September last, the question of tea being possibly exported at some future day *viâ* Chittagong, Mr. Ward must again repeat what he said in paragraph 4 of that note. It is quite immaterial to the planter whether he ships his tea for Calcutta at Fakirganj or Chandpur; all that he cares about is the cheapest and most expeditious means of transit to Calcutta, and, where difference in time is not great; what he mainly looks to, is the cheapest route. Mr. Buyers says he has not found a planter opposed to the connected line which he advocates, when the facts have been properly placed before him. Mr. Buyers has, of course, told the planter that his line is the cheapest route to Calcutta for their tea, irrespective of the possible advantages which hereafter may accrue to him when Chittagong is made fit to receive tea for export. It goes, therefore, without saying that the planter of Upper Assam is all in favour of the North Cachar route. It is a question, however, for the Government of India to decide whether that route will, when the line is made, be a cheaper route for tea than one down the Assam Valley to Fakirganj, and also whether it will be able to compete with the steamers. If the Government of India entertains any doubt on these points, then the Chief Commissioner's advice is that money should not be wasted on what he considers is a very risky speculation.

5. If the question of Chittagong as a possible future port of export for tea is brought into the discussion, then the Chief Commissioner would urge that no decision whatever be come to by the Government of India upon the two alternative schemes under discussion until we know something more about Chittagong and its capabilities than, so far as the Chief Commissioner is aware, we know at present. Twenty years hence Chittagong may have developed into something considerably more than it is at present. If this is found to be the case, it will be sufficient time then to think of constructing a line through the North Cachar Hills; in Mr. Ward's opinion it is premature to think of such a line now. There is nothing, however, to prevent our commencing, or to our offering inducement to private Companies to commence, on the Chandpur-Comilla-Cachar line. A commencement might also be made at the other end from Makum to Lumding. When these two lines have been completed, we shall probably know more about Chittagong as the probable future port of export for Eastern Bengal and of Upper Assam than we do at present.

6. As the Government of India are in a hurry for the enclosed reports they are sent up in manuscript to save time, and it is asked that after they have been printed in Simla that 24 copies may be sent to this office.

Enclosure No. 6 to P. W. D. Resolution No. 868 R. C. of 1887.

BENGAL-ASSAM STATE RAILWAY.

Report by J. W. Buyers, Esq., M.I.C.E., Engineer-in-Chief, on the Survey operations during the season 1885-86.

Introductory.

To ensure the completion of the survey during the season it was necessary to make provision for placing three parties in the North Cachar Hills. We are greatly indebted to the Deputy Commissioner of Cachar, and to the local Sub-Divisional officer, Mr. Soppitt, for the assistance which they rendered, and which made this possible; the latter furnished a larger number of coolies than on any previous occasion, and his efforts were supplemented by the Executive Engineers themselves recruiting about 100 men in the Khasi hills, who did not however prove very valuable for the purpose for which they were engaged, *viz.*, jungle-cutting, and they were therefore chiefly employed in bringing in supplies from the Gunjong Depôt; the Deputy Commissioner purchased in the plains the necessary supplies and had them carried up to Gunjong; this alone employed a considerable number of men. During the last two seasons there has been no difficulty in procuring survey khallassies, of whom about 150 men have been yearly required. Many men of good stamp (a considerable proportion Goorkhas) have presented themselves for employment at the commencement of the season, and thus difficulties which we had in this respect at the outset have year by year diminished.

No. 1 Division.

Jatinga Valley.

2. Mr. Sherman took up the work where he had left it the previous cold season; he had then carried two lines into the Jantinga Valley, starting from two different points on the Chittagong-Silchar line, and crossing the Barak river respectively at Badarpur and at Telyn-Tila: the former entered the Jatinga Valley on the right side, while the latter entered it on the left, but near its termination, crossed the Jatinga river and connected with the former at about 19½ miles from Badarpur. The Badarpur line is the one which I have recommended. In addition to the above, a length of six miles had been surveyed at the extreme head of the Jatinga working from the saddle downwards.

Work done on this section during previous season 1884-85.

3. Mr. Sherman's work during the past cold season then chiefly consisted in connecting the common point of the Badarpur and Telyn-Tila lines with the work at the head of the valley, but in addition to this he had one Engineer employed in taking borings in the Barak river at Badarpur, a work which it had not been possible satisfactorily to accomplish during the previous season.

Work during season 1885-86.

4. Treating of the latter first: the borings of the Barák proved a work of very considerable difficulty owing to the trouble and delay experienced in procuring suitable boats, the depth of water, and, after the end of February, to the rapid fluctuations in the level of the stream, and to the violent storms which sweep the valley and severely testing the tackling. The intention had been to carry the line across the Barák at the Badarpur fort where a small rocky spur projects into the river. It had been previously noticed that the river had scoured out a deep and broad hole immediately in front of the spur, the bottom of which was about 10 feet below mean sea level at Chittagong, while the mean low water level of the river was about 27 feet above sea level.

Difficulties in way of taking borings in the Barák at Badarpur.

5. The borings taken this season proved that it would be necessary to carry the foundations deeper even than had been estimated for; the greatest depth to which they have gone is 92 feet below the general bed of the river, or say 76 feet below mean sea level; fine sand and silt were met with, without intermission, the whole way, and from near the bottom a few pieces of brick were brought up which had probably fallen into the river from the fort. The results were altogether so unsatisfactory, that it was determined to try fresh borings about 700 feet lower down stream, at a point where the course of the river cannot materially change, as it is directed by small hills. Here stiff clay, intermixed with a little sand, was almost invariably found in the three borings, which were taken to a depth of 80 feet, but in one the auger struck, at a very considerable depth, upon what appears to be a snag. In consequence of the more favourable results obtained from these borings it is proposed to cross the river here, and a small piece of line has been laid down to connect this crossing with the lines on either side already surveyed, as shown on the plan.

Proposed crossing moved below Badarpur fort.

6. The design for the bridge has been altered to suit the new conditions: instead of three spans of 250 feet as proposed for the fort crossing the design is now for a bridge having two centre spans of 250 feet and two side spans of 200 feet: the estimate for the new bridge amounts to Rs. 85,953 more than that for the old, but no comparison can fairly be instituted between the two, as the latter was based on an assumed depth and nature of foundations on which it is now proved that we cannot calculate. The design for the piers of this bridge consists of a couple of 23 feet brick wells sunk about 76 feet into the bed of the river with a steel trestle 50 feet high on top, the latter being composed of four raking columns three feet diameter filled with concrete, and braced together in the usual way. In a country subject to frequent shocks of earthquake, it was thought advisable to adopt a design and material which, combined, possess the greatest elasticity.

Design for Barák Bridge.

7. On account chiefly of these alterations, a revised estimate is submitted for the 19½ miles of line from Badarpur into the Jatinga in lieu of the estimate of last year.

Revised estimate submitted.

8. The distance from this, the common point or junction of the Badarpur and Telyn-Tila lines, to the point six miles below the saddle is 19·25 miles. Work was commenced from the upper point. In my report on the exploration of the North Cachar Hills it was noticed that the Kayeng Valley would afford the means by which a grade of 1 in 70 or even an easier grade, might be secured. But as it was believed that 1 in 70 would be the limiting grade on other sections in these hills, the traverse was run to secure this, as there was little to be gained by an easier gradient, which would have entailed a corresponding lengthening of the line. From the traverse, and the cross sections, a line has been laid down on the plan which practically gives a gradient of 1 in 70 for nearly

Section above junction of Badarpur and Telyn-Tila lines.

22 miles from the saddle down, but broken by short lengths of level and one short length of an easy gradient, including provision for three stations, the length of such breaks aggregating 57 chains. Thence down to the common point is 3¼ miles, in which varying gradients, none exceeding 1 in 70 and these only few and for comparatively short lengths, have been employed to suit the configuration of the ground.

9. The alignment over these 3¼ miles was tied by the latter consideration: on the one side there is the Jatinga river and on the other steep hill sides, further up which the line could only be thrown at great increase of cost, owing to the numerous ravines. Where time did not permit of elaboration, it was the simplest plan to lay down the uniform gradient of 1 in 70. No doubt the alignment can be somewhat improved upon even with this gradient, though, in laying down the line finally, it would be well to somewhat ease this grade on the curves at the expense of stiffening it on the straights. The minimum curve employed is one of 573′ radius (five degrees deflection per chain), and a short length of straight, at least 100 feet has always been interpolated between reverse curves of whatever radius.

Consideration determining alignment.

10. This section of 19·25 miles is estimated to cost Rs. 52,61,491 or a mean rate of Rs. 2,73,324 per mile, and this may be accepted as a fair estimate of what any line, following approximately the alignment laid down with the above limiting curves, would cost, though with further elaboration, some, but no very material reduction, could doubtless be made; if such be sought for on this alignment it can only be obtained by adopting sharper curves, and there can be no doubt that these would better suit the topography of the ground. It is to be regretted that there has not been time to lay down and estimate for a continuous line with curves of a minimum radius of about 400 feet, but a calculation has been made of the effects of using curves of 400 feet radius at certain points which are indicated on the plans and sections, and this shows that the estimate of the 19·25 miles may be reduced by Rs. 6,96,117 and of the 6 miles at the head by Rs. 1,24,037.

Estimates.

11. This high estimate is due to the broken and rugged nature of the ground, consisting of deep ravines separated by sharp spurs. From the point where the line enters the hills up to the saddle at the Jatinga head, there are 13 tunnels aggregating 5,281 lineal feet. Viaducts, spanning ravines are both numerous and heavy: by far the most formidable being over the Lokamah and Lokasah, the former being estimated to cost Rs. 3,73,020 and the latter Rs. 3,34,637; another very heavy viaduct is that over the Dittok Cherra, the estimate for which amounts to Rs. 2,65,762: there are 6 other viaducts, each of which is estimated to cost over one lakh of rupees. The longest span adopted is 150 feet, and the greatest height of formation above bottom of ravine is 236 feet, the maximum height of centre piers in this case being 216 feet. All the heavy viaducts lie above the Kayeng, that is they are concentrated in the upper length of 19 miles, where the line runs up the hill side: they are with scarcely an exception on sharp curves, and this has been one reason for limiting the spans, but in the larger spans employed allowance has been made for increased width and consequently weight of girders to take the curvature. All the large spans are carried on steel or iron trestles which rest on masonry pedestals.

Causes of high rate.

12. The rate for minor bridging amounts to Rs. 21,208 per mile, which high rate is due to the great number and size of culverts required to pass the large amount of drainage, due to the heavy rainfall which frequently exceeds 200 inches per annum; the co-efficient for these has been fixed with reference to a fall of six inches in an hour, and adopting Colonel Dickens' formula comes to 1,856.

Minor bridging.

13. In my report on the exploration of the North Cachar Hills, I assumed that the hill section commenced at a point 11 miles from Badarpur, and I estimated that the cost of the line from this point to the Jatinga saddle would amount to Rs. 1,80,000 per mile, practically on the alignment which has been adopted. The distance from Badarpur to the saddle is 44·819 miles, from which, deducting 11 miles, leaves 33·819 miles for this portion of the hill section: at my rate the estimate for this would amount to Rs. 60,87,420, whereas employing minimum curves of 573 feet radius, it works out to Rs. 74,13,868, or roughly 13¼ lakhs above my estimate; but in the above report I stated that my estimate was based on work done in the Garo Hills, wherein curves of 400 feet radius had been employed, and, to institute a fair comparison, the lower estimate, which shows a reduction of Rs. 8,20,154, at least, from using 400 feet curves should be taken.

Comparison with preliminary estimate.

14. The following figures referring to levels may be interesting: at Badarpur station, mile 254 from Chittagong, reduced level of formation is 66 feet; near mile 267, where the line may be said truly to enter the hills, the reduced level of formation is 110 feet; at mile 276½, where the continuous ascent of 1 in 70 begins, it is 285 feet; and at the Jatinga saddle near mile 298½ it is 1,863 feet, formation here being in cutting 80 feet below the top of the saddle.

Level of formation at certain points.

15. From what has been said, and from the sections, it will be seen that the bulk of the heavy work lies above the Kayeng, and the following figures further bring this out :—

Statement of length and cost from 11 miles from Badarpur to Jatinga saddle.

Section.	Miles.	Estimated cost.	Rate per mile.	Remarks.
		Rs.	Rs.	
Miles from Badarpur 11 to 24·38 .	13·38	16,61,506	1,24,178	Mile 24·38 is just below the mouth of the Kayeng and is equivalent to mile 278 from Chittagong.
,, ,, 24·38 to 44·82 .	20·44	57,52,362	2,81,427	
Total .	33·82	74,13,868	2,19,215	

That is when the line is carried along the base of the hills, as it is between miles 11 and 24·38, the cost per mile is only slightly over Rs. 1,24,000 per mile, whereas, after it begins fairly to ascend the hill side, the mileage cost amounts up to over Rs. 2,81,000.

16. It then becomes of importance to consider what will be the effect of continuing the line by easy gradients along the bottom of the valley as far as a point from which it will be possible to ascend with a sharp gradient, say not less than 1 in 40. The great point, if possible, is to avoid the heavy viaducts over the Lokamah and Lokashah, and the adjacent long tunnels. Mr. Sherman was able to run an alternative of 6½ miles, starting from mile 24·38, and terminating about a mile above the Lokashah (the upper of the two ravines, and not the lower, as shown in the topographical maps.) This line starts off with reduced level of formation 400 and terminates with reduced level 516 : it thus rises 116 feet in 6½ miles, which enables generally easy gradients to be employed, although the grade of 1 in 70 is necessary at a few points to surmount spurs. The line keeps close to the Jatinga, avoids all heavy viaducts and tunnelling, and is estimated to cost Rs. 7,94,587, a mean rate of Rs. 1,22,621 per mile, or very nearly the same rate per mile that the lower section is estimated to cost. Between the termination of this alternative and formation of the upper line at the saddle, a height of 1,347 feet has to be overcome ; the distance from the opposite point on the upper line to the saddle is 10·34 miles, so that, assuming that the distance would be the same, the ascent can be accomplished with a uniform grade of 1 in 40, leaving a margin of about 7 chains, but judging from the contour of the hills, it is believed that the line would be somewhat longer ; it certainly cannot be less. From comparison with the corresponding section of the upper line, and making allowance for the fact that on the first two or three miles the line would not be far up the hill-side, an estimate has been framed, which it is believed may be accepted as tolerably accurate, but if any thing it probably errs on the side of excess ; this amounts for the 10·34 miles to Rs. 20,82,891, a mean rate of Rs. 2,01,440 per mile. The results of this alternative may then be tabulated :—

Alternative line from the Kayeng river upwards.

Section.	Miles.	Estimated cost.	Rate per mile.	Remarks.
		Rs.	Rs.	
Miles from Badarpur 11 to 24·38 .	13·38	16,61,506	1,24,178	
,, ,, 24·38 to 41·20 .	16·82	28,77,478	1,71,075	6·48 + 10·34 miles.
Total .	30·20	45,38,984	1,50,297	
Difference in favour of lower alternative	3·62	28,74,884	...	

or comparing the two lines between their common points, mile 24·48 and the Jatinga saddle, the alternative effects a saving of nearly 50 per cent. in cost.

17. I recommend that this alternative be adopted, the following being some of the chief reasons :—

Grounds for recommending this alternative.

(1) Great economy in first cost.

(2) Economy of time in constructing, any reduction of work being a matter of special importance in a country where labour is difficult to procure and the working season is short.

(3) Maintenance will cost less and be easier, on account of the position of the line, the reduction in length, and the avoidance of several very heavy viaducts. The difference in cost of operation will be scarcely appreciable, as there is, first, a direct saving in distance of 3½ miles, while against 20½ miles of a nearly uniform gradient of 1 in 70 with sharp curves, there will be 10 miles of 1 in 40 also with sharp curves, but 6½ miles of generally easy gradients and curves with long lengths of straight ; and if there be a slight difference in this respect in favour of the upper line, it is as nothing if the interest on the amount saved from the Capital outlay be put in the opposite scale. We consider it a matter of the highest importance to get rid of the enormously high viaducts on sharp curves, which would not only be difficult to erect, but would always be a source of anxiety, especially in a country subject to earthquakes and violent storms. The grade of 1 in 40 being concentrated in one short length may be economically worked by an assistant engine, so that this cannot be considered the ruling grade, and the weight of trains may be fixed with reference to the real ruling gradient of 1 in 70.

18. This alternative may be slightly modified, and an easier gradient of about 1 in 45 be obtained, by winding the line round the head of the valley beyond the saddle ; or again by commencing the sharp ascent a mile back from a point opposite the Lokashah, a uniform grade of 1 in 44 may be obtained instead of 1 in 40 ; or by combining the two modifications, a gradient of close on 1 in 50 would be possible.

Modifications of this alternative.

No. 2 Division.

Jatinga Saddle to Mahur Saddle.

19. This extends from the Jatinga saddle to the saddle at the head of the Tawi branch of the Mahur ; the length is 18·888 miles and the estimated cost Rs. 24,23,704 or Rs. 1,28,320 per mile, a close approximation to my preliminary estimate for this section of Rs. 1,30,000 per mile.

Length and estimated cost of section.

The line is carried round what I have termed the Haflong spur, on generally descending gradients, but none steeper than 1 in 70, until the Dyung river is reached ; this portion is 11¾ miles long : the line then crosses to the right bank of the Dyung by a bridge of 3 spans of 100 feet, and 3 of 40 feet, and ascends steadily with a gradient of 1 in 70 for 7 miles up to the Mahur saddle ; a short length of level only being introduced near the head for a station.

20. On the whole division there is only one stream of any importance crossed, and that is the Dyung, and the spans of the bridge have been fixed to suit the configuration of the ground. In passing round the Haflong spur, which separates the Dyung from its tributary the Aboijee, the watershed is close to the line, and the same is the case after the Dyung is crossed : here, if the line were carried along the left bank of the Dyung, the work would be enormously increased, both on account of the more broken nature of the ground, and the much greater amount of waterway that would require to be provided to pass the drainage from the high and comparatively distant Barail range, which intercepts and precipitates the rain borne forward by the south-west monsoon : the mean annual rainfall on this range may be taken at 200 inches, whereas at Gunjong on the watershed between the Dyung and Mahur about 50 inches only are registered.

Reasons for alignment adopted.

21. Between the Jatinga saddle and the Dyung there are certain points where the features of the ground determine the neighbouring gradients : examples of this are found at chains 96 to 114, and 522 to 530 ; in the former case, to avoid very heavy work, the line is carried into a side valley, but this is very narrow, and the level at which the maximum 10° curve can be economically fitted in is practically fixed ; this curve forms a complete horse-shoe carried round at one level, with gradients on each side of 1 in 100 and 1 in 70, but the latter may be eased at the expense of the level on the curve ; in the latter case the line cuts into a perpendicular scrap overhanging the Dyung, the level being fixed by the gradient of 1 in 70 between this point and the Dyung viaduct, the height of which has been determined after some trials as to which gave the best result. Tunnelling on this division amounts to 1,066 lineal feet, divided between two tunnels.

Effects of the points on gradients.

22. There is a very good site for a station at the nose of the Haflong spur in mile 307, and if an engine-changing station is required in the hills, this would be a better site as regards the health of the staff than the only alternative sites in the Mahur valley, which are comparatively low and confined.

Good site for engine-changing station.

No. 3 Division.

Mahur Saddle to Mahur Mupa Saddle.

23. A great deal of labour was expended before the ruling gradient of 1 in 70 was secured between the Mahur saddle and the junction of the Tawi and Mahur. Below this junction the natural fall of the Mahur valley is for about 3 miles equal to the ruling gradient of 1 in 70, and as the bottom of the valley is favourable, while the hill sides are broken and in places precipitous, with considerable streams at intervals, it became an object of the greatest importance, that the line should strike the bottom of the valley near this point. Traverses were run down both sides of the Tawi valley as shewn in the plans, but the left side, as was anticipated, was found in every respect the best.

Direct descent into bottom of Mahur valley at junction of Tawi not practicable with grade of 1 in 70.

24. The distance for a direct line was only about 4 miles, while the height to be overcome, taking formation level at the saddle as 1,836 feet, and at the junction as 1,336 feet, was 500 feet, necessitating a gradient of about 1 in 40. Distance was not gained in the bays on the hillside nearly to the extent expected, but a long spur, terminating in a conical hill, exists on the left bank of the Mahur about a mile below the mouth of the Tawi, which gives the means of extending the base sufficiently to secure the grade of 1 in 70, without having recourse to a reversing station. The only other alternative, adhering to this as the ruling gradient, would have been to keep to the hillside, but the cost of so doing would have been prohibitory. The result of taking advantage of this spur is, that the line makes a double loop and the distance is thereby increased from 4 to 6·72 miles, the cost of which amounts to Rs. 11,17,374, or Rs. 1,66,276 per mile, adopting limiting curves of 573 feet radius. The effect of using curves of 400 feet radius on the same gradient at four points, aggregating about four miles on this portion would be to reduce the estimate to Rs. 8,95,600, a saving of Rs. 2,21,774, without affecting the length.

Manner in which 1 in 70 grade has been obtained.

25. The heaviest work between the Mahur and Mahur-Mupa saddles, a length of 17·83 miles, falls in this short section. There are six tunnels with a total length of 3,456 feet including that at the head, a portion of which, however, is included in the 2nd division. There are several considerable ravines, but it has been found both practicable and cheaper to bank them, and pass the water through culverts at a high level, than to span them by viaducts, the amount of waterway absolutely necessary being very small, as the watershed runs parallel, and close to the line.

Heaviest work in division is at head of the Mahur or in the Tawi valley.

26. A uniform gradient has been adopted, but in finally setting out the line, in order to equalise the resistance to traction, it will no doubt be better to ease the gradient on curves at the expense of that on the straights.

Modifications in finally grading line.

27. An alternative line with a uniform gradient of 1 in 45, and the same limiting curve of 573 feet radius has been laid down on the plan, and the cost approximately estimated only, for want of time. Starting from the Mahur saddle, it joins the previous line at chain 417, its own chainage being 267, thus effecting a saving in length of 150 chains, and in cost of Rs. 5,30,740. The difference in cost is due chiefly to the saving in mileage, but also in a considerable measure to the fact, that as the line falls more rapidly, it sooner reaches the more favourable ground which skirts the bottom of the hills, where the ravines are not so deep and spurs have easier contours; the tunnelling is considerably lessened and aggregates 2,421 feet only against 3,456 feet given above. For reasons apparent from the above remarks, the proportion of straight to curve is greater than on the high level line.

Alternative proposed.

28. Below the Tawi mouth the line adheres to the right bank of the Mahur for the remainder of the distance comprised in this Division, that is until it reaches the Mahur-Mupa watershed at mile 335, where work was first commenced in these hills in the cold season of 1883-84. For the first 150 chains the gradient of 1 in 70 is generally maintained; a length of 18 chains however is interpolated at mile 325 for a station. For the remaining 8¼ miles gradients are generally easy, the ruling grade of 1 in 70 being introduced for 24½ chains only, which is necessiated in order to keep formation well above flood at a point where the valley narrows and the water consequently heads up. Formation generally has been fixed with reference to an extreme height which it is believed the Mahur floods can reach, for no very accurate data on this point can be obtained, and an extra allowance has been given wherever the width of the valley is restricted. Curves also are generally fairly easy, the limiting curve of 573 feet radius being seldom found necessary. At mile 331 a length of 16½ chains of level is allowed for a station; here the hills recede for some distance from the river, and form a comparatively wide and level bay, known by the name Moibong: this formed the site of the old capital of the Cachari Rajahs after they retired from Dimapur, and remains of old brick walls,

Lower Mahur Section.

buildings, wells and tanks are still to be seen. A short distance below mile 333 the Mahur turns sharp to the right through a gorge, but the line takes advantage of a narrow depression in the hills, through which it passes by a tunnel 135 feet long into a small subsidiary valley, and after about half a mile again approaches close to the Mahur. From the Tawi down to this tunnel the ground is, on the whole, very easy, but the drainage crossed is much heavier than on the upper section, although, owing to the fact that the bulk of the water is passed in a few comparatively large streams, the cost per mile for bridging amounts to only Rs. 3,000 more. The lowest point of formation in the Mahur valley, the reduced level of which is 834 feet, is reached at mile 334; from this the line ascends in 48 chains with a uniform grade of 1 in 100 to the Mahur-Mupa watershed, where the reduced level of formation is 882 feet.

29. The total cost of this division, 17·83 miles long, is Rs. 20,35,554, or Rs. 1,14,164 per mile. The lower portion therefore 11·11 miles, the estimated cost of which amounts to Rs. 9,18,180, a mean mileage rate of Rs. 82,644.

Length and cost of division.

30. In estimating for minor bridging, economy has been studied by placing the culverts at a high level up the sides of the ravines, wherever the character of the ground did not absolutely forbid it, and such cases are confined to the Jatinga valley. Stone cairns or earthen mounds have been built at salient points on the traverses throughout the hills. With these points, marked on the plans, it will not be difficult to pick up the traverses at any future time.

Economy effected in minor bridging and traverse in the hills generally marked by cairns.

No. 4 Division.

Brahmaputra Valley, Disang Section.

31. During 1884-85, a traverse was run from Golaghat to Dibrugarh, and an alternative to Makum junction, with the exception of a section on this alternative which I stated was so particularly easy that after having gone over most of the ground personally, I could give an estimate which could not be far from the mark. This link has now been filled in; it is 24·94 miles long and the estimate amounts to only Rs 47,305 per mile, a lower rate by far than for any other section of corresponding length; the ground is high, comparatively level, and there is practically no water to pass.

Section along right bank of Disang.

32. The following was the estimate of 1885 for the section from Kamarband Ali to Makum junction. Length 116·7 miles. Cost Rs. 78,39,202, or Rs. 67,174 per mile. The final estimate stands as under—Length 116·58 miles. Cost Rs. 76,92,286 or Rs. 65,983 per mile.

Length and cost of section from Kamarband Ali to Makum junction of which above forms part.

The advantages of this line, as compared with a direct line to Dibrugarh, were detailed in last year's report.

Roha-Gauhati Section.

33. The only remaining work was the completion of the survey of the branch line from Lumding to Gauhati; the portion between Lumding and the village of Degulihati near Roha was surveyed during the cold season of 1883-84; it is 56·715 miles long and is estimated to cost Rs. 40,06,354. The remaining section from Degulihati to Gauhati is 53·788 miles, the estimated cost of which amounts to Rs. 43,92,408, or Rs. 81,661 per mile: this is a very much higher rate than either Mr. Molesworth or I anticipated, and the excess is almost entirely due to the one item earthwork; the quantities in bank and cutting being equal to a mean height of embankment of over 11 feet, whereas it was considered that a mean of 6 to 7 feet might be taken. The great height of embankment is necessary to keep formation above the Brahmaputra floods, the effect of which on the estimate a cursory examination could not possibly enable one to judge, especially in so flat a country, and in fact only levels could accurately determine it.

Branch Lumding to Gauhati.

34. Between Degulihati and the 24th mile from Gauhati, the railway is 5 miles shorter than the trunk road, but from the 24th mile into Gauhati the former loses one mile, so that the difference on the whole is four miles.

Line shorter than trunk road.

35. Two points chiefly determine the alignment, first the crossing of the Kopili river and the second the passage through the hills between the Digru river and Gauhati. It is desirable to cross the Kopili below the point where it receives its last affluent, the Umiam, by which a separate bridge for that considerable stream is saved, and a long detour such as the trunk road makes is avoided, this fixes the first point approximately, then comes the passage through the hills. Near the trunk road the hills are quite impracticable for any thing but a mountain railway, but attention had been called to a passage near the Amchong tea garden, and an officer deputed to examine it declared it to be quite feasible; when, however, a line was laid down, it was found that the maximum gradient of 1 in 150 adopted in the plains, could

Considerations affecting alignment, &c.

only be maintained at the expense of a tunnel nearly a mile long, and that very heavy work would be entailed even with a gradient of 1 in 40.

Passage through hills west of the Digru river.

36. I therefore personally examined the hills up to their northern extremity near the Brahmaputra, and found that there was only one point through which a line could be taken, and that the only other alternative was to carry it round the northern extremity of the hills, and then to work along the slopes which descend into the Kallang river, but there were the following objections to this course, (1) it would add 2 miles to the length, (2) there would still remain as heavy work in cutting through the spurs on the bank of the Killang, (3) it would involve great damage to the Chandrapur tea garden, and complete demolition of the tea houses and coolie lines. I therefore had no hesitation in coming to the determination to adopt the passage through the hills which lies a short distance above the mouth of the Digru river, seeing it so short and that even with the gradient of 1 in 150 there is only one heavy cutting within a length of 40 chains.

Large streams.

37. In the entire section only two large streams are encountered, the Kopili and Digru; the former is crossed about 4 miles above its junction with the Kallang. It receives the entire northern drainage of the North Cachar hills, and that of the Khasi-Jaintia hills to a point west of Shillong and also of the portion of the Mekir hills which occupies the south-western and the south-eastern angles of the Naga hills and Nowgong districts; the drainage area above the railway crossing is estimated to be 6,153 square miles; the actual width of the river between banks is only 350 feet, but when in flood, it spills over the surrounding country or aids in raising the level of the Brahmaputra inundations: the question of waterway is scarcely soluble by ordinary methods, and the waterway allowed 15—100-feet spans may be considered rather tentative than exact, though the ordinary methods have, to a certain extent, been employed in fixing it, to permit of ready extension; if the waterway is not sufficient, a pier abutment is provided in the estimates at one end; this is a contingency which is very likely to arise, as the country becomes further settled and denuded of forest. The Kopili bridge is next to the Pheni, the longest in the scheme. For the Digru 7 spans of 100 feet have been allowed, and the design on which the estimate is based is the same as for the Kopili, and for the other large bridges generally in the Brahmaputra valley, with slight modifications to suit any special features. In the case of both these bridges, the roadway is carried on the bottom boom of the girders to give headway for boats with reduced formation level; the substructure is brick with either wells or open foundations, according to position: in the Digru all the piers are on wells, whereas in the Kopili seven are on wells, and the remainder are designed to be built solid to a level of 10 feet below bed of river, the well piers are thus carried 250 feet back from the river bank under the idea that with the restriction of the water the river may erode and widen its banks, but that this action can never extend so far as to reach the solid piers, which, even should it happen, would be tolerably safe without any further special precautions to protect them: the banks of the Kopili are generally good stiff clay.

Heavy embankment.

38. The country generally for some miles above Roha to the hills on the left bank of the Digru is liable at intervals to heavy inundations from the Brahmaputra, to which the above two rivers add their respective quotas: where such is the case formation has been kept about 3 feet above the highest floods of which records have been obtained. Where the line runs between the Kopili and the Kallang no small openings have been allowed in the embankment as I consider they would only be a source of weakness.

Section between Kopili and Digru rivers.

39. Three miles after the Kopili is crossed the line approaches the base of the Khasi Hills, and here I propose to run an earthen bund between the line and the hills, so as to restrain the overflow of the Umiam and to force all its water through the Kopili bridge. From the point at mile 37 to mile 24 the line is fairly close to the trunk road and the Khasi hills and the waterways required are small: it then turns off and makes for the passage in the hills, crossing the Digru river at mile 15, immediately opposite the entrance, in this length of 8 miles the embankment is heavy and no small openings have been allowed in it, which would permit the Brahmaputra and Kallang flood water to break through. A short distance east of the Digru and on the left bank of the Kallang there is a detached block of hills round which, as the map shows, the Kallang floods find a way; as the floods subside the water drains off, partly directly into the Kallang and partly into the Digru and thence into the Kallang, by small channels; if a continuous embankment is made the flood water is forced into the Kallang and the only way by which it can thereafter find a passage to the south side of the line is through the Digru bridge, and in fixing the waterway this has been taken into consideration. Another crossing higher up the Digru was tried, and a line runs thence along the left side of the river to the passage in the hills: this is shown by a dotted line on the plan, but it has not been adopted as it involves a number of small openings to pass the water from the hills.

Line between the Digru and Gauhati for a short distance on old road.

40. After passing through the hills the line enters on a bay where the ground is low and subject to heavy inundation by the Brahmaputra: in crossing this bay it runs for nearly 2 miles on a road, which is said to have been laid out with a view to the possibility of its being eventually utilized for a railway, but the cost does not appear to have been carefully considered before the work was commenced and the road was never completed; about 13 miles from Gauhati it becomes lost in the jungle, and within these miles little is adapted for the railway, owing to the very sharp turns which are made; where the railway runs on it for these two miles there is little or no traffic, and the Deputy Commissioner of Kamrup has expressed his readiness to make the whole road over if wanted.

Gauhati station.

41. For the last 10 miles the line is generally protected from the Brahmaputra by low hills, amongst which it winds its way into Gauhati. The site for the terminal station was selected by me in company with the Deputy Commissioner; it is well situated both with respect to the civil station and the bazar, fairly equidistant from the two steamer ghats, and is close to the Shillong road: no site is available actually on the river bank.

Alternative between the Kopili and Digru along left bank of the Kallang.

42. An alternative has been run between the Kopili and the Digru rivers, keeping fairly close to the left bank of the Kallang and detailed estimates for it are also forwarded, with a comparative statement of the two. It effects a saving in distance of 3 miles, but is estimated to cost Rs. 88,850 more, due to heavier embankment, and a third large bridge being necessary. For 14 miles from the Kopili no opening of any kind is allowed in the bank: the traverse keeps between the Kallang and a small channel which helps to carry off the overflow of the Umiam and the drainage of the Khasi Hills; this channel is then crossed by a bridge of 6—60 feet spans, and the line then passes through the block of hills already referred to as lying east of the Digru; these hills in their northern aspect present the appearance of a horse-shoe, the eastern division of which is generally lower and less continuous than the western. The line then passes without any difficulty through the former but has to be carried round the northern extremity of the latter, approaching at this point close to the Kallang, thence it passes across the Digru valley with a high bank.

Objections to alternative.

43. The chief objection in my eyes to this alternative is, that it would prevent what is, in reality, mainly the Brahmaputra flood-water from spreading freely over any thing like the same extent of country which it can do now, and which the line near the Khasi hills will scarcely restrict; and unless plentiful provision in the way of openings were made to allow of this, which would very much increase the estimate, a much greater extent of country would be put under water and villages might be endangered, the line itself at the same time standing in greater danger of being breached. The Kallang, too, acts as a highway for communication, and there neither is, nor can be, any great population north of the river who would be materially benefited by this alignment.

First alignment recommended.

44. The alignment first discussed is that which I recommend, notwithstanding that it is 3 miles longer, and on the whole it passes through a more cultivated country: any traffic from the north side of the Kallang will easily find its way to the stations at Degulihati, Durrumtool and Digru.

Length and cost of complete scheme.

45. Accompanying this will be found a final report which contains a summary of the results of the survey operations: it will be seen that the total length of scheme is 736·143 miles which are estimated to cost Rs. 6,16,23,466, or a mean of Rs. 83,711 per mile, which is not a high rate considering the nature of much of the country.

Concluding remarks.

46. I cannot conclude without recording my appeciation of the manner in which the members of the staff generally have worked, and I would bring specially to notice the services of Messrs. H. W. Clift, E. J. Moore, and W. H. Sherman, Executive Engineers, who have had charge of divisions, and among their assistants of Messrs. A. R. Lilley, Executive Engineer, H. T. Gwyther, temporary Executive Engineer, and Mr B. A. Maine, Sub-Engineer. The bulk of the men temporarily engaged for the work have also done very well, and have gained experience which cannot fail to be useful to them in the future.

Enclosure No. 7 to P. W. D. Resolution No. 868 R. C. of 1887.

BENGAL-ASSAM RAILWAY.

Final Report by J. W. BUYERS, Esq., M.I.C.E., Engineer-in-Chief, on the Survey Operations.

Object of report.

The survey of the Bengal-Assam Railway has, after four years of continuous work, been brought to completion, and the question of routes into the Brahmaputra Valley is now, it is hoped, thoroughly threshed out. The object of this report is to briefly describe the project with the aid of the

fuller information which is now possessed, to bring together the results which have been obtained, and to examine the grounds on which are based its claims to support in preference to any other of the schemes which have been proposed.

2. This railway then comprises—

Length and cost of projected railway scheme.

(1) A main line, 575·903 miles long, from the seaport of Chittagong to Makum junction, a station on an existing line of railway in Upper Assam.

(2) branch line of 31·895 miles from Laksham to Chandpur; this leaves the main line in the 80th mile from Chittagong.

(3) A branch from Badarpur to Silchar of 17·842 miles, leaving the main line in the 254th mile from Chittagong.

(4) A branch from Lumding to Gauhati, 110·503 miles long, taking off from the main line in the $\frac{370\text{th}}{363\text{rd}}$ mile from Chittagong.

The total length of main line and the branches is therefore 736·143 miles.

Appended to the report will be found abstracts of the estimates of the main line and each of the branches, compiled from the detailed estimates which have year by year been presented in sections.

In the following statement the length, total estimated cost, and mean cost per mile of each are tabulated :—

Section.	Length.	Total estimated cost.	Mean rate per mile.	Remarks.
	Miles.	Rs.	Rs.	
(1) Main Line . .	575·903	4,86,59,064	84,492	Where mileage is denoted by two figures as $\frac{370}{363}$, the upper denotes through mileage on the plans, the lower alternative alignment recommended: the exact total difference between the two being 6·51 miles.
(2) Chandpur Branch .	31·895	26,81,477	84,072	
(3) Silchar Branch .	17·842	18,84,163	1,05,603	
(4) Gauhati Branch .	110·503	83,98,762	76,005	
Total .	736·143	6,16,23,466	83,711	

Narrative of preliminary work.

3. The importance of opening out the Brahmaputra Valley by a railway has been long recognised, but the project of which the survey is now completed does not appear to have been the one which first suggested itself; with the small amount of information, professional at least, available regarding the hills, which form the southern boundary of the valley, it seems natural that operations should at first have been confined to its western outlet, and the construction of the Northern Bengal Railway directed attention particularly to that quarter. Survey parties were for some seasons at work in the country between the Northern Bengal Railway and Gauhati, but the very formidable streams which are encountered have prevented that Railway being extended as yet even so far as the right bank of the Brahmaputra.

The proposal to construct a railway from a point opposite Goalundo through Dacca to Mymensing led in 1877-78 to a reconnaissance being made round the western end of the Garo Hills from Mymensing to opposite Dhubri, and this, as an alternative project to the connection with the Northern Bengal Railway had the recommendation that only one formidable stream, the old Brahmaputra, was crossed. My first work in Assam was directed to deciding the question of the feasibility of extending the Dacca-Mymensingh line across the Garo Hills into the Brahmaputra Valley. Meanwhile attention had been drawn to the wants of the country lying east of the river Megna, in which, though populous and fertile, there was not a single mile of railway, and it had been pointed out that it might be found practicable to extend a line through these districts across the North Cachar Hills into the Brahmaputra Valley; thus the idea of the present scheme was gradually evolved. Towards the close of 1882 the Government of India recognising the urgency of the claims of these districts, and the importance of settling the question of the best route into the Brahmaputra Valley, took the matter in hand, and ordered a thorough reconnaissance of the North Cachar Hills to be made in connection with the location of a line from Chittagong to Silchar. During the ensuing cold season this work was accomplished, a feasible route through the hills was discovered, and when it was subsequently examined by Mr. Molesworth, Consulting Engineer to the Government of India for State Railways, the results were approved and confirmed.

Mymensing connection condemned.

4. The advantages of thus connecting the Brahmaputra Valley with Eastern Bengal were so great and obvious that they at once gave the death blow to the connection with Mymensing,

either by the route through or round the Garo Hills; and the results obtained from the preliminary examination of the country were deemed sufficiently satisfactory to authorise the prosecution of a detailed survey of the schemes as it now stands.

General nature of country surveyed.

5. The survey between Chittagong and Silchar, including the branch to Chandpur, 303¾ miles long (or 41 per cent. of the total mileage) was finished in one season; while it has taken 3 seasons to do the remaining 432¾ miles; this will help to show the different nature of the work in the two sections: the former lay through a country generally open and highly cultivated; of the latter much was in thick forest, while about 100 miles of it was amongst the rough and densely wooded hills which divide the basins of the Surma or Barak and Brahmaputra rivers, and these 100 miles engaged more than half the strength of the survey parties spread over three years.

Chittagong-Kumilla Section.

6. The survey south of Kumilla was carried out by a party working under the orders of Mr. Horace Bell, as Engineer-in-Chief. The length of this section is 128·56 miles, including the branch to Chandpur, and it is estimated to cost with indirect charges, Rs. 87,335 per mile.

Only one large river is encountered, the Pheni, for which 20—100 feet spans have been allowed; but the country is said to be more or less under water throughout the whole extent, during the rainy season, and the allowances to be made on this account, as well as the heavy terminal works at Chittagong, contribute to swell the estimate.

Very full allowance has been made at Chittagong for the works comprised under the main head "Stations and Buildings," and at the outset it would probably be unnecessary to work up to the full provision; indeed, Mr. Bell has stated that the estimates represent rather what the line may ultimately be expected to cost than the outlay which he would at first recommend.

Description, Kumilla-Badarpur Section.

7. My own work commenced at Kumilla, thence to Silchar; hills form a chief element in determining the alignment. For the first 60 miles the line runs north, skirting the Tipperah Hills, but keeping to British territory, and is laid out so as to avoid crossing the Teetas, a very formidable stream, and, when in flood, several miles broad in many places; it then sweeps round the northern extremity of the Lakhipati range, the name given to the north-western offshoot of the Tipperah Hills, and adopts an easterly course for about 34 miles, crossing two low ranges of hills without any very heavy work; a north-easterly course nearly is then adopted for 39 miles, after which turning more easterly, it passes through a third range of low hills, and emerges on the south bank of the Kooseeara river 237 miles from Chittagong, and about 3 miles west of the civil station of Karimgunj; thence, all the way into Silchar, the line keeps fairly close to the Kooseeara and the Barak, the parent stream of the Kooseeara and the Surma and of their multitudinous offshoots, and about 4 miles before Silchar is reached the fourth range of low hills is crossed.

A large proportion of the country is low and subject to inundation; every endeavour has been made to get the best ground, but a relative degree of success only is attainable; consequently there is a great deal of heavy embankment, and especially at the Silchar end after the Kooseeara is reached. A considerable number of large streams also are encountered, all with one exception, flowing northwards from the Tipperah and Lushai Hills into the Kooseeara and the Barak. For these reasons this section of the line, from Kumilla to Silchar, is not a cheap one, being estimated to cost, exclusive of indirect charges, Rs. 76,596 per mile. The following facts exemplify how slightly the surface of much of the country is raised above sea level even along the railway: north of Kumilla there is a stretch of some miles which is only about 20 feet above mean sea level at Chittagong; at Badarpur, distant by the line 254 miles from Chittagong, it averages less than 60 feet, while low water level in the Barak at this point is only about 27 feet above mean sea level, the highest elevation is in South Sylhet.

Silchar branch.

8. Owing to the extension of the system across the North Cachar hills into the Brahmaputra Valley, and the adoption of Badarpur as the point to cross the Barak river, the section between Badarpur and Silchar becomes a branch. It will be noted that this branch is 17·842 miles long, and that it is estimated to cost Rs. 18,84,163, or Rs. 1,05,603 per mile: this rate is due to the high embankment required to keep formation above the Barak floods, and the great amount of drainage crossing the line for which waterway has to be provided. As I do not consider that any advantage at all commensurate with the cost is to be gained by this branch in itself, I recommend that the construction be deferred, at least until the main line has had time to develop the full effects of its operation; the reasons are more fully set forth in paragraph 43 of my report on the survey between Kumilla and Cachar during the season 1882-83, and it is also the recommendation of the Consulting Engineer, Mr. Molesworth. If a feasible route can be found through the hills which separate Cachar from Burma, this branch from Badarpur, or, perhaps better, one from Bikarampur engine-changing station at mile 263, may eventually form a portion of a connection between the Assam and Burma Railway systems.

9. There are some points from which it may be desirable to throw out feeder lines: the two which suggest themselves to me as of the greatest importance are (1) from either Nayanpur or Kusbah stations (respectively at miles 111 and 117) to the bank of the Megna below the junction of the Teetas, which is not far from Bhairab Bazaar, and (2) from Kalaoora station, mile 205, to Fenchugunj, and perhaps on to Sylhet and Companygunj: the former would traverse a rich and populous country producing a considerable quantity of jute which holds a high reputation in the market, and it would probably bring to the main line a large accession of traffic from the position of its terminus on the Megna, and the latter would tap the centre of Sylhet and give communication with the Khasi-Jaintia Hills.

Possible feeder line.

10. It is proposed that the main line shall cross the Barak river not at the Badarpur fort, as first intended, but about seven chains lower down, owing to the unsatisfactory results which have been obtained from the borings at the former crossing. The design for the bridge provides for two central spans, each 250 feet long, and two side spans of 200 feet: the piers consist of steel trestles 50 feet high, each complete trestle resting on a couple of brick wells, 23 feet diameter, sunk 76 feet into the bed of the river. This bridge, from the size of the spans and its height, is the most important individual structure on the line, and, with 900 lineal feet waterway is estimated to cost Rs. 6,60,825. These figures may be compared with the corresponding ones for the 3 longest bridges on the system, *viz.*, the Pheni, which, with 2,000 lineal feet waterway, is estimated to cost Rs. 6,51,000; the Dihing at Jaipur, 1,000 lineal feet waterway, and cost Rs. 3,81,492; and the Kopili 1,500 lineal feet waterway, cost Rs. 4,96,552. But the above does not represent all that is required to pass the Barak water, for on the north side there are two bridges, each consisting of 5 spans of 60 feet, together estimated to cost Rs. 1,08,254, which are required to take the spill. This river has probably the largest discharge of any crossed by the line, but the exact amount would be difficult to arrive at from the manner in which it spills over the country and the whole of its catchment area does not lie within the topographical surveys; the mean annual rainfall is heavier over its area than over any corresponding area in the Brahmaputra valley which affects the line.

Barak river at Badarpur.

11. Within the limits of this report a few facts only can be brought together regarding the work in the north Cachar Hills. An index map and section of this portion of the line is attached to this report. **The detailed survey has confirmed, quite as closely as could have been expected, the anticipations formed from the preliminary examination of the country.** The hill section was assumed to commence 11 miles from Badarpur, and to terminate near the Lumding river, 114 miles from Badarpur, the length thus being 103 miles: the actual distance, on the same alignment, between these points is 104·565 miles: a ruling gradient of about 1 in 70 was expected, and it is proved that this can be obtained, if it is considered worth paying for: the estimate of Rs. 1,30,000 per mile was based on a comparison with a short section surveyed on the Garo Hills in which limiting curves of 400 feet radius were employed, and with such curves this mean rate there can be little doubt would not be exceeded. The traverses have in the first place been run with the object of securing the gradient of 1 in 70, but in laying down a line on the plans the minimum radius of curvature employed has been 573 feet, and with these limiting gradients and curves the estimate for the 104·565 miles has worked out to Rs. 1,55,55,414, which gives a mean mileage rate of Rs. 1,48,763 No doubt with more time we should have been able to make improvements in the alignment with the result of reducing these amounts, and it would be possible to go on elaborating for some time before it could be confidently asserted that little further in this way could be done; but I am aware that the Government of India are anxious to have the work at an early date, and we have therefore had to be content this season with a few days only to lay down the lines, so as to permit the tedious work of estimation to be put in hand. I should have been glad if we could have laid down and estimated for a continuous line with limiting curves of about 400 feet radius, in the same way as has been done with the line with curves of 573 feet radius, but time has only allowed us to try the effect of using these at certain points in the upper parts of the Jatinga and Mahur Valleys, and they reduce the estimate by Rs. 10,41,928, justifying my remark that, were they introduced throughout as the limiting curves, the mean mileage rate would not exceed Rs. 1,30,000. It will be seen in the accompanying report, dealing in detail with last season's operations, that there are two points, one in the Jatinga Valley and the other at the head of the Mahur Valley, where I recommend a departure from the gradient of 1 in 70, and the adoption of stiffer gradients, entailing an alteration also of alignment, which effects a reduction, in the first case of 3·62 miles in distance and of Rs. 28,74,884 in cost, and the latter of 2·89 miles and Rs. 5,30,740; making allowance for which the total length of the hill section will be 98·055 instead of 104·565 miles and the cost Rs. 1,21,49,790 instead of Rs. 1,55,55,414: the lower figures have been adopted in framing the totals of length and cost given in paragraph 2.

General remarks on the North Cachar Hills section and comparison with preliminary estimate.

12. In traversing the hills the line crosses five main watersheds, which separate what, with reference to it, may be called six main systems of drainage, *viz.*, the Jatinga, the Dyung, the Mahur, the Mupa, the Langting, and the Lumding; the first alone flowing south into the Barak, while the remaining five, after uniting to form one stream to which the Dyung gives its name, find their way into the Kopili, and thence into the Brahmaputra. Low and narrow saddles are selected in these watersheds at which to cross, the hills on each side generally rising to a much greater height. The line reaches its maximum elevation at the saddle at the head of the Jatinga, mile $\frac{2084}{2048}$, where the reduced level of the formation is 1,863, the summit of the saddle being 80 feet higher; but the same level is nearly attained in crossing the watershed between the Dyung and Mahur, at mile 317, where formation is 1,836, and the summit of the saddle is 2,112 feet, being therefore 169 feet higher than the Jatinga saddle.

Watersheds and drainage crossed with greatest elevations attained.

13. The long valley of the Jatinga gives the means of effecting the ascent of the first watershed, and in it the heaviest work is encountered. **The southern face of the hills receives the full force of the monsoon and a heavier rainfall, and it is therefore scoured into deep ravines which are often separated by sharp spurs. To reduce the number of tunnels, and of long and lofty viaducts, thereby effecting a great reduction in cost, a line should be kept as long as possible near the base of the hills.** The Jatinga valley is entered by a short tunnel in mile 268, with reduced level of formation 155, the line for the previous three miles having traversed a narrow but easy valley; thence it falls 40 feet in about a mile, after which the ascent may fairly be said to begin. At mile 276½ reduced level of formation is 285, shewing a rise of 170 feet in 7½ miles, effected with varying gradients to suit the configuration of the ground, but none steeper than 1 in 70, and these are comparatively few and short. From near mile 276½ to mile 278, near the mouth of the Kayeng, there is a continuous rising gradient of 1 in 70; the latter may be considered a tie point, and from this, still adhering to the right bank of the Jatinga, there is a choice of alignment up to the saddle, dependent on the limiting gradient adopted; if a gradient of 1 in 70, or any gradient easier than about 1 in 60, be desired, the line must turn up the valley of the Kayeng, and thereby gain the easier grade at the expense of increased length; or the direct ascent can be accomplished by either one of two ways: *viz.*, by a steady gradient of about 1 in 60, with only sufficient level for stations, or by continuing along the base of the hill with easy gradients for nearly 6 miles, and thence a sharp ascent. The intermediate course has nothing to recommend it, except that it would save about 3½ miles, and the amount paid for this in winding round the Kayeng valley with the grade of 1 in 70, and, mile for mile, it would cost at least as much; but the latter course in addition to saving 3½ miles effects a reduction of cost of nearly 29 lakhs rupees. This is the course recommended. A line has been surveyed on it for 6½ miles beyond mile 278 and from the termination the ascent can be effected with a gradient of 1 in 40. The distance from mile 278 to the saddle by the **nearly continuous 1 in 70 grade is 20·44 miles, which are estimated to cost Rs. 57,52,362; between the same points by the lower line the distance is 16·82 miles, and the cost Rs. 28,77,478, which vast reduction is due chiefly to the fact that the lower 6½ miles avoids several extremely heavy viaducts, and a considerable amount of tunnelling. This subject is more fully discussed in the accompanying report, and the remarks on this question contained in the two reports may be read together.**

Description of work in Jatinga Valley.

14. The saddle through which the line quits the Jatinga valley separates that from the Aboijee, a tributary of the Dyung: the saddle at the extreme head of the Jatinga, about two miles higher up, is nearly 150 feet higher and leads into almost impracticable ground. The line descends to the Dyung river, winding round the Haflong spur, which separates the Aboijee from the Dyung; the descent of 543 feet is accomplished in 11¾ miles, a mean fall of 46 feet per mile: the gradients, therefore, are generally fairly easy, but there are two tiepoints at the bottom which necessitate the adoption of the 1 in 70 grade for the 93 chains which intervene. The Dyung is spanned by a viaduct of 3 spans of 100 feet and 3 of 40 feet, the extreme height in centre above of stream being 105 feet. From the Dyung there is, with the exception of one short length for a station, a continuous grade of 1 in 70 for 7·17 miles up to the saddle between the Dyung and the Tawi, a branch of the Mahur. The length between the Jatinga and Mahur saddles is 18·888 miles and the estimated cost Rs. 24,23,704, which gives a mean rate of Rs. 1,28,320 per mile against my preliminary estimate for the same section of Rs. 1,30,000 per mile.

Section between Jatinga and Mahur saddle.

15. From the Mahur saddle the descent is effected along the left side of the Tawi Valley to the point where that stream joins the Mahur, below which the mean valley has for about 3 miles itself a fall of 1 in 70. Here again there is a choice of gradient, to effect the descent direct to a point about one mile below the junction of the two streams, a uniform gradient of 1 in 45 is required for 5 miles, whereas the gradient of 1 in 70 can only be obtained by forming a loop in the line, which the plan shews, and which extends the length from 5 to 7·89 miles. This is the second point referred to in paragraph 11, from which considerable economy can be obtained by departing from the grade of 1 in 70. The 7·89 miles with limiting curves of 573 feet radius are estimated to cost Rs. 12,30,740, whereas the estimate for the 5 miles amounts to Rs. 7,00,000, the difference being due partly to mileage and partly to causes detailed when treating of the work in the Jatinga valley, though here, on the upper or longer line, there are no heavy viaducts which it is important to avoid. The effect of curves of

Section between Mahur and Mahur-Mupa saddle.

400 feet radius on the upper line has been estimated to save Rs. 2,21,774, equivalent to 18 per cent. The two lines unite on the right bank of the Mahur at mile $\frac{362\frac{1}{2}}{318\frac{1}{2}}$ and the Mahur-Mupa saddle is reached at mile $\frac{335}{328\frac{1}{2}}$. In these 10 miles approximately there is not much calling for special mention; for the first 7 miles there is no heavy work: the grade of 1 in 70 is only used to a limited extent and easy curves are generally employed; much of the ground is very level. Below mile $\frac{333}{326}$ the Mahur turns at right angles through a gorge, but heavy work is avoided by carrying the line through a low and extremely narrow depression which exists in the hills a short distance above. The point selected for crossing the Mahur-Mupa watershed is low and the ascent to it from the Mahur valley is effected in 48 chains with a uniform gradient of 1 in 100. Formation level here is 882 feet.

Muppa valley section.

16. Hence to the saddle at the head of the Dijakho, lower down and on the opposite side of the Mupa valley, is about 6½ miles; and this section is estimated to cost Rs. 12,00,314, or Rs. 1,80,552 per mile, my preliminary estimate having been Rs. 1,80,000 per mile; it is, as I said, the heaviest section out of the Jatinga valley. The line runs sharp down with the gradient of 1 in 70 to the Mupa river, and after crossing to the right bank keeps along it for nearly 3 miles, when the Boila, a tributary, as large as the Mupa itself, is reached, it then sweeps round into a side valley, and has a sharp ascent for a mile, piercing the Dijakho saddle by a tunnel, and in this mile there are altogether four tunnels, the aggregate length of which is 1,590 feet. The viaducts across the Mupa and Boila are considerable structures respectively, 302 feet and 474 feet long and 76 feet and 120½ feet high at the centres.

Section between Dijakho and Langladisa saddle.

17. From the Dijakho saddle the line descends to the Langting river, which is crossed by a bridge of 4-60 feet spans at mile $\frac{348}{341\frac{1}{2}}$, and then after mounting by a short ascent and descent over a spur which divides the Langting from its small tributary the Lamong it climbs up to the watershed which parts the drainage of the Langting and the Langladisa, which is reached at mile $\frac{356}{349\frac{1}{2}}$: the ascent is partly effected by a continuous grade of 1 in 70 for 185½ chains. This section of 14½ miles nearly is estimated to cost Rs. 16,01,204, or Rs. 1,10,580 per mile; the work is not very formidable.

Langladisa valley section.

18. After passing the Langladisa saddle the work becomes light, and the gradients generally are easy and a few facts will shew clearly how favourable are the results which the Langladisa valley has given. From the saddle to the point near the Lumding river where the Assam valley traverse is joined is 12·9 miles: on this length the gradient of 1 in 70 is only employed for 35 chains; there is only one major bridge of 3-60 feet spans across the Lumding river, into which the Langladisa drains; not a single tunnel, and the estimated cost only amounts to Rs. 68,277 per mile; the valley, too, has a very direct course, though narrow, and in fact so favourable is it that these 13 miles can scarcely be classed as a hill line.

Effect of characteristic features of country on estimates.

19. The saddle at the head of the Mahur may be taken as the centre of the hill section, and the following statement may be of interest as shewing how the two halves contrast with each other:—

Sections.	Miles with no gradient steeper than 1 in 70.	Cost.	Miles with the grade of 1 in 40 and 1 in 45 at two points.	Cost.
		Rs.		Rs.
SOUTHERN. Mile 11 from Badarpur to Mahur saddle . .	52·707	98,37,572	49·087	69,62,688
NORTHERN. Mahur saddle to junction with the Assam valley traverse	51·858	57,17,842	48·968	51,87,102
Total .	104·565	1,55,55,414	98·055	1,21,49,790

The great excess in cost of the southern half points to what are some of the most prominent features in the conformation of the great range which separates the basins of the Surma and the Brahmaputra, such as the more rugged and precipitous nature of the southern face, and of the propinquity to it of the main watershed and of the greatest elevations; rising abruptly from the alluvial plains on the south, the range falls gradually towards the north, and it is the ascent of the southern face that everywhere presents the greatest difficulty. The

distance from mile 11 to the Jatinga saddle, by the alignment in which the maximum gradient of 1 in 70 and limiting curves of 573 feet radius are used, is 33·819 miles and the estimated cost is Rs. 74,13,868, from the Jatinga saddle to the Lumding junction with the same limiting gradients and curves, is 70·746 miles and estimated cost Rs. 81,41,576; for this latter section my preliminary estimate gave 71 miles and Rs. 78,40,000, which therefore exceeds the actual distance by only a quarter of a mile, but is less than the final estimate by 3 lakhs of rupees; but it has been shewn how this difference may be reduced by nearly 2¼ lakhs rupees by employing curves of 400 feet radius over a short section at the head of the Mahur. The above figures give a mean mileage rate of Rs. 2,19,222 for the 33·819 miles, and of Rs. 1,15,081 for the 70·746 miles, or the ascent of the southern face costs nearly double, mile for mile, than that of the northern descent, and there is less than half the distance to accomplish it in: with the 1 in 40 and 1 in 45 gradients interpolated at two places the figures are respectively as follows:—

Section.	Length in miles.	Estimated cost.	Mean mileage rates.
		Rs.	Rs.
Southern	30·199	45,38,984	1,50,302
Northern	67·856	76,10,806	1,12,161

Here the mileage of the southern section remains as before less than half that of the northern, but the introduction of the 1 in 40 grade has greatly reduced the cost.

Remarks on engine-changing stations and gradients.

20. An engine-changing station is provided at Bikrampur, 9 miles from Badarpur, and near the foot of the hills; and another on the north side at Lumding junction. I consider an intermediate engine station will be required in the hills, and the best point for it is at the nose of the Haflong spur, mile $\frac{306\frac{1}{2}}{303}$; the only alternative site would be in the Mahur valley; both are about equally distant from being quite central, but the former would no doubt be healthier for the staff from its elevated situation, and water is reported good and plentiful. I do not attach much importance to any saving from departure from the 1 in 70 grade at the head of the Mahur valley: the 1 in 40 grade in the Jatinga valley is concentrated and can be worked with the aid of an assistant engine, and the weights of trains can be fixed with reference to the 1 in 70 grade, which will thus remain the true ruling gradient of the hill line.

Lumding to Dimapur.

21. From Lumding the main line makes for Dimapur, which is reached in mile $\frac{416}{409}$; here a road leads off to Kohima, the head-quarters of the Nága Hills district. The country between Lumding and Dimapur is broken by low hills and narrow valleys, and the whole covered with heavy forest; but by winding about, a line without any formidable work has been got, the cost of which averages only Rs. 78,800 per mile. The railway parties were the first to traverse this tract of country. The largest bridge on this section is one of 3-100 feet spans across the Langpher river; the rest are insignificant.

Lumding to Kamarbund Ali.

22. North of Dimapur, two lines have been run: the first keeps to the west or left side of the Dhansiri river until it comes opposite Golaghat; the other crosses the Dhansiri about 12 miles north of Dimapur, thence runs between that river and the Daiang for 27 miles, and connects with the first about 6 miles east of Golaghat at mile $\frac{466}{459\frac{1}{2}}$. There is a difference in favour of the latter of 1·65 miles in length, and Rs. 1,89,392 in cost, and although it avoids Golaghat, it is the one recommended and adopted in all calculations. On the first line the Dhansiri is crossed at Golaghat by a bridge of 6 spans of 100 feet, and on the latter the Dhansiri has 3 spans and the Daiang 4 spans of 100 feet. The distance between Lumding and the northern connection of the two lines by the route recommended is 96·643 miles, and the estimated cost Rs. 67,01,270, or Rs. 69,340 per mile. Though forest prevails as far as the Daiang, there are not infrequent signs of old cultivation and habitation, and the soil is rich and well adapted for the cultivation of tea.

Kamarbund Ali to Makum Junction.

23. The line now runs for Nazira, the central station of the Assam Tea Company. In this section of 50 miles there are only two considerable streams, the Disoi and Jhanzi, for which 3 or 4—100 feet spans respectively have been allowed: the work otherwise is easy. Passing Nazira, within the next 16 miles, two important streams, Dikhu and the Disang are crossed, also with 3 and 4—100 feet spans, and the line then enters upon a particularly easy stretch of country which extends for 35 miles until Jaipur is reached at mile $\frac{566}{559\frac{1}{2}}$, when the Dehing is crossed with a bridge of 10—100 feet spans; this is the longest bridge on the main line,

the Pheni excepted, although it will not be nearly so difficult or costly an undertaking as the bridge across the Barak. The line then makes for Makum junction through a country covered with forest, but presenting no engineering difficulties. Between the Daiang and Disang rivers many large tea gardens are passed, and the country generally is fairly cultivated, though there are still one or two considerable belts of forest, but north of the Disang to Makum junction, with the exception of a few miles near Jaipur, comparatively little cultivation of any kind is to be seen, and the gardens are few in number. The total length of the section of line treated of in this paragraph is 116·58 miles, which are estimated to cost Rs. 76,92,286 or Rs. 65,983 per mile. An alternative line was run direct from Nazira to Dibrugarh; the reasons for preparing Makum junction for the terminal station have been fully detailed elsewhere. Although the line to Dibrugarh is 25 miles shorter than the Makum junction line, it is only estimated to cost 6½ lakhs rupees less.

Lengths of plains and hill section.

24. The main line thus consists of 264·625 miles in the plains between Chittagong and the North Cachar Hills; 98·055 miles in the hills; and 213·223 miles in the Assam Valley between Lumding and Makum junction.

Gauhati branch.

25. The branch from Lumding to Gauhati does not present many features of interest or importance. The section between Lumding and the village of Degulihati, near Roha, was surveyed during the cold season of 1883-84: it is 56·715 miles long and is estimated to cost Rs. 40,06,354, which gives a mean mileage rate of Rs. 70,640.

Lumding to Degulihati near Roha.

In the report of 1884 which accompanied the estimates, it was stated that the alignment of the first 13 miles from Lumding could be considerably improved; these 13 miles have the heaviest work and are estimated to cost Rs. 1,09,404 per mile. The effects of such improvements will probably be to reduce the mileage rate of the Lumding-Roha Section to Rs. 68,000; but in the statement given in paragraph 2 the actual figures of the estimates, both for this branch as well as for the remainder of the system, have been retained, and no credit has been taken for possible improvements the extent of which is uncertain.

Degulihati to Gauhati.

26. The section between Degulihati and Gauhati was surveyed during the last cold season. It is desirable to cross the Kopili below the point where it receives its last tributary the Umiam, and this also gives the most direct route: the traverse then keeps for 13 miles from Degulihati, between the Kopili and the Kallang and here no small openings have been allowed, as I consider they would be a source of weakness. At the Kopili 15 spans of 100 feet have been allowed; it is thus next to the Pheni the longest bridge in the entire system, and it is quite possible that the waterway given may not be sufficient especially as the increase of population leads to the denudation of the country. The Digru river about 21 miles further west, is the only other stream of any consequence on this section, and 7—100 feet spans are here provided. The position of the crossing of this river is practically fixed by the range of hills which intervene between it and Gauhati: the only feasible passage through these hills lies a short distance above the mouth of the Digru. Between the Kopili and this point two routes are available, both of which have been surveyed, and for which estimates are now submitted: the southernmost line is that which I have recommended, in preference to the one along the bank of the Kallang, which, though three miles shorter, is estimated to cost more. This section is fully described in the accompanying report. The passage through the hills is accomplished in 40 chains, and thereafter the line generally winds among hills all the way to Gauhati. The distance from Degulihati to Gauhati is 53·788 miles, which are estimated to cost Rs. 43,91,408, or Rs. 81,661 per mile; this high rate is chiefly due to the heavy embankment required to keep formation above the Brahmaputra floods.

Levels checked with trigonometrical bench marks.

27. The levels, brought up from Chittagong mean sea level across the North Cachar Hills, have been connected with trigonometrical bench marks at Golaghat and Gauhati, and checked with these to one foot.

Object of line.

28. Such is the large scheme by which it is intended to open out the fertile and populous districts of Bengal and Assam, leaving east of the river Megna, and to render more accessible the distant Brahamaputra Valley, at present sparsely populated, but with rich waste lands awaiting the cultivator; rich also in its undeveloped mineral resources, and in the possession of an industry which has reclaimed from the jungle extensive tracts, and brought wealth of the land which, but for it, would probably have slumbered on for many years, without the thought even of a railway being spent upon it; this tea industry has encountered many difficulties, among the chief of which may be reckoned the want of a free and plentiful supply of cheap labour, and this a railway alone can satisfactorily meet.

Financial aspects.

29. The question then arises, will this scheme pay? In my reports of 1883, on the exploration of the North Cachar Hills, and of the survey between Kumilla and Silchar, attempts were made to answer this question. It was stated that the lowest net return which the

Government of Bengal calculated receiving from the operation of the Chittagong-Kumilla and Chandpur Section without any extension northwards, was 9 per cent., and that such generally was the fertility and populousness of the country between Kumilla and Silchar that 6 per cent. did not seem too much to assume for that section: the figures then for these two sections stood as follows:—

Section.	Miles.	Net return per cent.	
Chittagong-Kumilla and Chandpur .	129	9	
Kumilla-Silchar	175	6	
Total . .	304	7·27	Mean net return.

The question of the extension of the Brahmaputra Valley was then considered in its different bearings. The distance between Badarpur-Dibrugarh and Gauhati was taken at 433 miles, which were estimated to cost Rs. 3,97,90,000, and calculations, framed in part on figures contained in the report on the river-borne trade of the Province of Assam during the year 1881-82, for the Brahmaputra Valley, were given to shew that it was not unreasonable to expect a net return of 2·75 per cent. on the Capital outlay on this section treated independently, it was further stated that the effect of the connection with the Chittagong-Silchar system would be to throw a heavier traffic over the latter, and this was estimated to add 1·85 to the former net returns of 9 and 6 per cent.

The results finally arrived at from the working of the whole system were as under:—

Section.	Miles.	Net Return per cent.	
Chittagong-Kumilla and Chandpur . .	129	10·85	304 miles, 9·12 per cent.
Kumilla-Silchar	175	7·85	
Badarpur-Dibrugarh and Gauhati . .	433	2·75	
Total .	737	5·38	Mean net return.

The fact was not sought to be concealed that these returns were in a great measure based on conjectural estimates, and reasons were given how it could not be otherwise; for some districts there were no trade return whatever; for all there was the uncertainty of the extent to which the Railway would succeed in attracting traffic from the river. Regarding the section south of Silchar I have nothing more to say: at the time the above reports were written that section had been actually surveyed and estimated, and nothing has been done to it since; but as regards the extension into the Brahmaputra Valley there was the additional element of uncertainty that both the length and cost were conjectural: Dibrugarh was taken for the terminal station in Upper Assam; it has been altered to Makum Junction: this alone would have added 25 miles, but the detailed survey has effected a reduction in other parts, and instead of 433 miles estimated to cost Rs. 3,97,90,000, the correct figures are 432·781 miles, which are estimated to cost Rs. 3,66,35,378.

A net return of 5 per cent. on the whole system anticipated.

30. Appended to this report is a statement which shews the weights for the main staples of Import and Export of the Brahmaputra Valley between the years of 1881-82 and 1885-86 inclusive, carried both by boat and by steamer on the Brahmaputra river, which for all practical purposes may be regarded as the sole highway, seeing that the traffic which passes in and out of the valley by all other routes combined is quite insignificant. This statement shows that the trade of the valley has made some progress since the railway returns were calculated, and when it is considered that at the best, it must be several years before the railway is completed, during which interval further progress may confidently be anticipated, it seems safe to assume that the estimated return of 2·75 per cent. for the section north of Badarpur, based on the trade of 1881-82 does not err on the side of being a too sanguine one. It seems to me unnecessary to cumber this report with fresh calculations, seeing that so much is unavoidably based on speculation, and I shall therefore leave these figures alone; if the calculations have any value they shew that a net return of upwards of 5 per cent. may be anticipated from the capital outlay on the complete system.

31. The advantages which this scheme possesses, or is claimed to possess, as regards the Brahmaputra Valley—and it is unnecessary to to go beyond that—may be briefly enumerated.

Advantages of the scheme.

(1) Economic: as a direct route to Calcutta it possesses, as Mr. Molesworth has remarked, many advantages compared with the route *viâ* Dhubri: it connects the Brahmaputra Valley with the rich and populous districts lying east of the Megna, and gives it unbroken railway communication with the seaport of Chittagong; while the branch to Gauhati furnishes an outlet towards Northern Bengal, and the means of intercommunication within the valley itself.

(2) Administrative: the province of Assam is divided by a range of hills about 100 miles broad, across which there is practically only one road, leading from Gauhati to Sylhet *viâ* Shillong and Cherrapunji, and intercommunication is consequently very tedious; this the railway would entirely alter.

(3) Military: it offers the means whereby troops can be most readily poured into the country and brought into positions which command the whole mountainous districts which separates the province of Assam from Upper Burma and which is inhabited by savage and unruly tribes; while it will enable the troops stationed in Upper Assam and Cachar to render the mutual support which at present they cannot efficiently do.

32. I should have been glad to have left the question here, but Mr. Ward has advocated the extension of the line from Gauhati to Fakirgunj, opposite Dhubri, in place of the connection across the North Cachar Hills; or in other words he has advocated two independent systems of railway, one between Chittagong and Silchar and the other confined to the Brahmaputra Valley, instead of the one connected system which this project is intended to give: and as Mr. Ward in his note of September 1885 has stated that he has seen no reply to his arguments against what he calls the North Cachar connection scheme, it seems to me that I may as well treat the question here as make it the subject of a detached note. With reference to Mr. Ward's remark I would note that I considered little good was to be gained by discussing this question further than I had done in my two reports of 1883, except in a very general manner, until the completion of the work should provide me with fuller and more trustworthy data.

Preliminary remarks with regard to Mr. Ward's objections to the scheme.

I shall endeavour to shew as briefly as possible the grounds on which I differ from Mr. Ward, and I must premise my remarks by saying that I am not conscious of a mind unduly prejudiced in favour of the North Cachar Hills route or filled with a quixotic ambition to run a tilt against engineering difficulties: the question has been to me the subject of very anxious consideration, and I have endeavoured to look at it dispassionately in all its bearings. Had I been able to fall in with Mr. Ward's view from the first, I should have saved all concerned in the survey very much toil and very much discomfort for which they would have been thankful, and all this I fully foresaw. I am only conscious of having had one object in view, *viz.*, to devise a scheme of railway which should be the best for the Province, both in the present and in the future. As years and the progress of the work have furnished me with fuller information and time more thoroughly to consider the question, my opinions have gained strength, but I must regret not having been successful so far in enlisting Mr. Ward's support.

33. Mr. Ward in paragraph 7 of his note, dated 29th August 1883, writes—"Mr. Buyers had reminded me that his scheme No. 4 does practically give me all I want, *viz.*, an Assam Valley line. This is perfectly true, and if the Government of India will sanction this scheme I shall have no reason to complain. But it is because I fear it will not be sanctioned that I have proposed in the next paragraph a less expensive scheme." Mr. Ward then goes on to argue in favour of a line down the Assam Valley following generally the Trunk Road. In the following year I examined this Trunk Road route between Gauhati and the Dhansiri river, and the concluding portion of my report on the survey operations of 1883-84 was chiefly devoted to describing it and to detailing my objections to it. Mr. Elliott in the forwarding note with this report stated his objection "to the principle of laying a railway on a Trunk Road under any circumstances," and further expressed his opinion that my arguments were sound, and that the Dimapur Valley route possessed superior claims. I understand Mr. Ward now to have waived his objections on the question of alignment, so that the question between us I take it is now narrowed simply to this—which is of prior importance—the connection across the North Cachar Hills, or the extension from Gauhati to Fakirgunj—it being assumed that at the commencement money would not be forthcoming for both. Mr. Ward would sacrifice the connection in favour of the extension to Fakirgunj. The connection is 109·055 miles and is estimated to cost Rs. 1,38,43,060; the extension is 122 miles, and, if the old figure of Rs. 80,000 per mile be taken in estimating, it will cost Rs. 97,60,000. It is, however, probable that this estimate is too low, for the Government of India have an estimate for the section between Gauhati and Goalpara which gives a rate of Rs. 81,000 per mile for a line laid, for the most part, on the Trunk Road; and the experience gained from the present surveys shews that when any considerable length of line comes within the area of country liable to be inundated by the Brahmaputra, the cost exceeds Rs. 80,000 per mile; we have had two instances of this, *viz.*, in the section between Nazira and Dibrugarh, 40¾ miles, the estimate for which amounts to Rs. 92,311 per mile; and again in the section between Roha and Gauhati, 53¾ miles, with a mileage rate of Rs. 81,661. As between Gauhati and Fakirgunj there are proportionately a greater number of large streams than on the Gauhati-Roha Section, the mileage rate is not likely to be less. Allowing, however, the above figures to stand the connection is 13 miles shorter than the extension, but is estimated to cost Rs. 40,83,060 more.

Respective lengths and cost of the connection and of the extension.

34. It is for the Government of India to decide whether the claims set forth on behalf of the connection are just and warrant the extra expenditure; my own opinion is that the advantages which the connection will confer will be cheaply purchased at such a rate; and that the branch to Gauhati with fast steamers between that place and Dhubri will satisfy all just requirements of the Brahmaputra Valley for some time to come. Mr. Ward disputes these claims; he appears to me practically to deny the importance of having direct railway communication between the Brahmaputra valley and Chittagong, for he notices this point only in connection with my remark that tea may be expected to adopt that route in course of time, and dismisses it with the remark that this is a prospect too remote to affect the question under discussion. The claims of Chittagong may not in my opinion be so lightly set aside. Supposing the scheme to be made as proposed, the position of the Brahmaputra Valley, relatively to Chittagong and to Calcutta taking Lumding as a central point, would be as under:—

Position of Chittagong with regard to the scheme.

Mr. Buyers is quite wrong here. I have to look at the financial as well as the commercial point of view.

(Sd.) W. E. W.

		Miles.
Lumding to Chittagong		363
Lumding to Calcutta	(1) *Viâ* Chandpur and Goalando	533
	(2) *Viâ* Gauhati, Dubri, Jatrapur and Sara	585
	(3) *Viâ* Gauhati, Dubri and Sara if Kaunia and Dhubri are connected by rail	575

Chittagong then may be taken roughly as 200 miles nearer than Calcutta, and goods would reach it without break of bulk, whereas to Calcutta *viâ* Chandpur and Goalundo they would be subject to two extra transhipments; and *viâ* Gauhati, Dhubri and Sara, to four even with the railway completed between Kaunia and Dhubri; the result could scarcely fail to be that the great bulk of the goods traffic between the Brahmaputra Valley and Calcutta would pass beween Chandpur and Calcutta, or Gauhati and Calcutta by water, and the difference of mileage would be greatly increased in favour of Chittagong but to a much less extent in the case of the Chandpur than in that of the Gauhati route.

I have never contemplated tea going to Calcutta from Goalundo or from Dhubri and Kaunia by rail. What I have contemplated is from Chandpur or Fakirganj (Dhubri) by river.

(Sd.) W. E. W.

The Commissioner of the Chittagong Division, in a letter dated 11th February 1882, to the Secretary to the Government of Bengal, Public Works Department, states that freights will always be more in the case of Calcutta than in that of Chittagong, the towage and port charges at the latter being infinitely less. Here are surely just and reasonable grounds for anticipating that trade will gravitate towards Chittagong, and for considering the connection with that seaport an important point in favour of the scheme. That Chittagong will become the port for the districts of Eastern Bengal is the expressed conviction of the Bengal Government, and the Brahmaputra Valley will stand in much the same relation to it and to Calcutta that these districts will do. As a port it has already made rapid progress notwithstanding that it has to contend against very faulty internal communications. I have been informed that about 30 per cent. of the tea exported does not pass through the hands of Calcutta brokers, and that there is no reason to doubt but that this would adopt the Chittagong route, and although opinions may be divided regarding the balance, may consider that the keen competition which exists, and the small margin of profit will lead to the early adoption of the cheaper route. Tea is a typical article, and all other goods passing in or out of the port of Calcutta will be subject to the same influences. Mr. Ward's project will not give the Brahmaputra valley any connection with Chittagong and by it the distance from Lumding to Calcutta will be 566 miles *viâ* Dhubri, Jatrapur and Sara; or 558 miles if Kaunia and Dhubri be connected by rail.

When it has become the port for Eastern Bengal it will then be time enough to speak about the North Cachar connection.

(Sd). W. E. W.

35. Mr. Ward again expresses his conviction that the North Cachar Hills connection "will bring no additional traffic to the Assam Valley line that a disconnected Assam Valley line from Dibrugarh to Gauhati and Dhubri would not also bring." The process of reasoning by which this conviction is arrived at is not shewn. I shall merely mention one or two facts which lead me to an opposite conclusion. By the last census reports the population of the districts of Cachar, Sylhet, Tipperah, Noakholly and Chittagong, through all of which the railway would pass, is nearly 6 millions, while the population of Dacca and Mymensing is upwards of 5 millions. The total value of the trade between the Brahmaputra Valley, the population of which is 2¼ millions, and the whole of these districts containing 11 millions, was only valued at Rs. 8,16,815 for the year ending 31st March 1885; to this one article, timber alone contributed nearly 5 lakhs rupees or 61 per

Reasons for believing that the connection will bring extra traffic to the Brahmaputra.

cent.; a truly insignificant trade indeed when the vastness of the population concerned is considered; but to my mind this implies nothing more than faulty communications, for first I find that the whole of this trade was carried by country boats, and to those who know how great are the difficulties which boats have to contend against in navigating the Brahmaputra further explanation is scarcely necessary; and again, confining ourselves simply to the Brahmaputra and Surma Valleys, the trade reports bring out the fact that "the exports of the one are sometimes the imports of the other;" surely a favourable condition for the development of trade. Again, I find that during the same year the districts of the Surma Valley, that is Cachar and Sylhet with their populations of about 2¼ millions carried on with the remaining districts grouped above, that is Tipperah, Noakholly, Chittagong, Dacca and Mymensing, having a population of 8¾ millions, a river trade valued at Rs. 82,31,9.09; this is accounted for in part of course by their propinquity, but this would not help them so much as it does had they not the great comparative facilities which the easily navigated rivers afford, and if the Brahmaputra Valley is given railway communication with these districts, I can see no reason to doubt but that trade between them will follow. To a great extent of course this will consist simply of a diversion of trade into a new channel; for instance if the Brahmaputra Valley can get from the Chittagong direction what it wants cheaper than from Calcutta or Northern Bengal, it will naturally go in that direction, and the one quarter will gain what the other loses, but this all means impetus to traffic, money saved in one way being available for investment in another, and given improved means of communication between 13 millions of people, who have practically none at present, surely the result would not be *nil*. It would be tedious to go into greater detail, as I could easily do.

Mr. Ward's and projected schemes contrasted.

36. Before going further it may be useful to tabulate for ready reference the mileage and cost of the projected scheme north of Badarpur, and of Mr. Ward's Assam Valley line.

(1) *Projected Scheme.*

Sections.	Miles.	Estimated cost.
		Rs.
Badarpur to Lumding	109·055	1,38,43,060
Lumding to Makum Junction	213·223	1,43,93,556
Lumding to Gauhati	110·503	83,98,762
Total .	432·781	3,66,35,378

(2) Assam Valley Line.

Section.	Miles.	Estimated cost.
		Rs.
Makum Junction to Lumding	213·223	1,13,93,556
Lumding to Gauhati	110·503	83,98,762
Gauhati to Fakirgunj	122·000	97,60,000
Total .	445·726	3,25,52,318

The difference between the two is the same as that already given in paragraph 33. In paragraph 29 it has been stated that a mean net return of 5·38 per cent. was anticipated from the operation of the entire projected scheme of 707 miles: the results obtained from the detailed survey shew that, while mileage is not altered, the estimated cost is reduced, the effect of which will be somewhat to increase the returns; but I shall allow the above figures to stand, and proceed to contrast the working of Mr. Ward's disconnected scheme. The most favourable result that I could work out for this is fully set forth in paragraph 70 of my report of 1883 on the survey of the line between Kumilla and Silchar, and that gave a mean net return of 2·16 per cent. on a Capital outlay of Rs. 3,11,20,000, for a line laid along the Trunk Road 389 miles long. Retaining this net return for the longer length of 446 miles,

with its greater Capital outlay, the result from the working of the two disconnected lines will be as under:—

129 miles @ 9 per cent. } 304 miles = 727 per cent. mean.
175 „ @ 6 „ }
446 „ @ 216 „

Total . 750 miles = 4·23 per cent. mean net profit

and in order to earn the same net return as that calculated for the connected system, *viz.*, 5·38 per cent., the Assam Valley line must return 4·69 per cent. instead of 2·16 per cent. If, however, the same net return of 2·75 per cent., which has been taken for the 433 miles of the projected scheme be also taken here, the 750 miles will shew a mean net return of 4·58 per cent. It is inconceivable that the volume of traffic on the 446 miles of Mr. Ward's Assam Valley line will be greater than on the 433 miles of the extension; and the only other alternative that remains to make the results from the operation of the two distinct entire schemes tally is to reduce the percentage of the Chittagong-Silchar Section of the projected scheme which stands at a mean of 9·12 per cent.; this must be reduced in one case to 6·52 per cent., and in the other to 7·38 in order to arrive at the mean of 4·23 or 4·58 per cent. for the total 750 miles, while the mean of the Chittagong-Silchar Section in Mr. Ward's scheme is 7·27 per cent., so that in the one case there would be absolutely a great loss from the connection, and in the other an inappreciable gain. But Mr. Ward acknowledges that the connection will bring additional traffic and also cheap coal to the Chittagong-Silchar line, and I may add that it will otherwise reduce the working expenses, for I need scarcely say that one connected line will be worked more cheaply than two disconnected ones. Mr. Ward's schemes will not mutually benefit one another, nor will a single other railway gain more from them than it will do from the projected scheme.

Question of carriage of tea.

37. Mr. Ward then in paragraph 5 of his note of September 1885 goes on to discues the question of the carriage of tea from Upper Assam to Calcutta, and after assuming that steamer freight from Chandpur would not be less than from Fakirgunj, arrives at the result that the route *viâ* Fakirgunj would be the cheaper one; if this assumption could be proved to be correct this conclusion would be just, but I shall give my reasons for believing that it will not hold good. Taking Nazira as a convenient control point, the true distances then will be as follows:—

	Miles.
to Chittagong	509
to Chandpur	462
to Fakirgunj	379

and taking ⅓rd pie per maund per mile as the rate of railway freight the through freight on one maund to Chittagong will amount to 14 annas 2 pie; to Chandpur 12 annas 10 pie; and to Fakirgunj 10 annas 6 pie; therefore if Mr. Ward's assumption be correct the through freight *viâ* Fakirgunj to Calcutta would be 2 annas 4 pie less than *viâ* Chandpur, and the only set-off the latter route would have would be the saving in time. Mr. Ward shows how he has arrrived at this assumption, for he writes thus: "It must be borne in mind that no presumption can be drawn from the fact of Chandpur being nearer Calcutta than Fakirgunj that steamer freights from the former place will necessarily be cheaper: we know from experience that the river companies do not regulate their freights according to the distance travelled."

Let us look at this argument in the light of the two chief staples which the steamers carry; tea the chief article of export, and rice that of import. Of the former about 70 per cent. is produced in Sibsagar and Lakhimpur, the two districts which lie at the extreme limit of steamer navigation, and the amount produced in the lower districts of Kamrup and Goalpara is so insignificant that it may be absolutely neglected; the steamer companies may then well fix an all round rate for tea: again rice is imported to feed the garden coolies, and it is these same two districts that take the great bulk of it: in the lower districts, including Nowgong and Durrang, rice is produced in sufficient quantities on the spot to meet local wants generally, and the quantity imported into them is small, so here again the companies can afford to simplify matters by fixing an all round rate. The fact that steamer companies charge the same rate for tea carried through to Calcutta as to Goalundo does not affect the question, for no tea is now transhipped into train at Goalundo for reasons which Mr. Phillips has given in his note appended to my report of 1884. Now there must be some limit to this argument of equality of steamer freight, otherwise it might bs extended until the distance became a vanishing quantity, which would be manifestly absurd. Chandpur lies roughly about one-third of the distance from Calcutta that Dibrugurh does, and half the distance of Fakirgunj, and there the Brahmaputra steamers come within a circle where competition with other steamer companies and with native boats becomes very keen: whereas above Serajgunj two companies have the river to themselves and can compete on the most favourable terms with native boats, which with difficulty contend against the strong current of the Brahmaputra, while the boatmen are subjected to hardships and risks from which they

have comparative immunity on other streams: boat carriage is therefore relatively high to what it is in other parts. The appended trade report shews the respective weights of the main staples both of import and export, which fall to steamer and boat on the Brahmaputra. Taking values during the year ending 31st March 1885, steamers carried 87 per cent. of the total trade on the Brahmaputra, whereas on the Surma they carried only 57 per cent., and if we take weights of the chief commodities, instead of values of the total trade, for the same year, we shall find the proportions respectively about 64 per cent. and 6 per cent.; the percentage here for the Brahmaputra being taken from the appended sheet, and for the Surma being derived from information contained in page 17 of the report on the river-borne trade of the Province of Assam, in which the chief articles of import and export are shewn. Cocoanuts, oranges and bamboos alone have been excluded from among the articles given, as no information is present by which their weights can be deduced; but as they have been entirely carried by boat, their introduction would go to reduce the percentage of steamer traffic even below 6 per cent. These facts clearly demonstrate the different characteristics of the two rivers, and they shew how much keener would be the competition the steamers would meet at Chandpur, and that the companies would not have it in their power to keep up freights in the same manner that they could at Fakirgunj; it must also be remembered that it would not take nearly the same capital to establish steam competition between Chandpur and Calcutta that would be required between Fakirgunj and Calcutta. It is not very apparent what is to induce the two steamer companies to reduce freights from Fakirgunj, but the remote fear of fresh competition, and the experience of the Flotilla Company is not hopeful. Mr. Ward has assumed that they would be ready to reduce the freight for tea from the present rates of Rs. 2 or 1 rupee 8 annas, to 1 rupee 8 annas or 1 rupee; it may be so, but whatever the rate the fact remains that as the railways cannot be expected materially to touch the trade of the north bank of the Brahmaputra, steamers will continue to ply above Fakirgunj, and they will probably be glad to fill up with tea for a slight increase on the freight charged from Fakirgunj, in which case even the gardens most favourably situated with regard to the Railway might decline to make use of it, for to the slightly lesser cost in the through charges must be added one extra transhipment.

Mr. Ward's figures for carriage of tea not those which I placed before planters.

38. Mr. Ward then, having assumed that the rate for carriage of tea *viâ* Fakirgunj would be 3 annas less than *viâ* Chandpur, says "it is difficult to understand how with these figures before them the planters of Upper Assam could prefer the Chandpur route" and "still more difficult is it to understand Mr. Phillips's statement that the planter will gain little by carrying his tea to Fakirgunj by rail, and shipping it there." In the first place Mr. Ward's figures were certainly not those which I put before any planter, nor do I know on what grounds it is assumed that they were: on the contrary, my calculation was just the reverse of the above. In the report of 1883 on the survey between Kumilla and Silchar I stated that steamer freight on tea between Cachar and Calcutta was 1 rupee per maund and further that from Chandpur, only about half the distance, it should not exceed 10 annas, and in comparing the two routes in this respect the figures I made use of were the following:—

	Rs.	a.	p.
1. Railway freight to Fakirgunj	0	10	0
Steamer freight to Calcutta	1	0	0
Total .	1	10	0
2. Railway freight to Chandpur	0	13	0
Steamer freight to Calcutta	0	10	0
Total .	1	7	0

and I laid particular stress on the saving in time the latter route would effect. The planter prefers the Chandpur route because he believes it will be more expeditious and cheaper, and that it will give him the option of diverting his tea to Chittagong and shipping it here. I have met planters in Upper Assam, ignorant of the question at issue and of the position of Chandpur, who have begun by saying that a railway along the valley was what was wanted, chiefly to bring cheap labour into the country, but I have not met a single one among these who after the scheme had been explained and comprehended did not end by giving his assent to my views.

Question of competition.

39. Mr. Ward considers that competition will be less keen between the steamers and the railway if his plan of a railway to Fakirgunj is adopted; but will not competition accelerate the development of the province? and Mr. Ward has doubtless this as strongly at heart as any one.

Facilities which the two schemes offer for immigration.

40. Mr. Ward finally deprecates the merits of the question being determined from the planter's point of view only, and expresses his strong conviction "that the Assam Valley will never emerge from its present state of wilderness and isolation until a railway runs through it from one end to the other." I am very strongly of opinion that the scheme proposed will effect this desirable consummation much more rapidly than Mr. Ward's scheme would do. This emergence is, I presume, to be effected chiefly by the increased facilities for immigration which railways will afford. The bulk of the immigrants come at present from Southern Bengal; now the Chandpur line will serve all immigrants coming from Southern and Eastern Bengal to the districts of Nowgong, Sibsagar and Lakhimpar, better than the Fakirgunj line would do. Figures previously given shew that the point of equal distance from Calcutta lies some distance west of Lumding, and the fact that, whereas by the Chandpur route there will only be one river break, by the Fakirgunj at the best there must be two, will in practice tend to move this point further west. As regards immigration to the upper half of Assam it is the districts of Northern Bengal only that the extension of the railway from Gauhati to Fakirgunj will serve somewhat better than the projected scheme will do, and the extent of this will be to save immigrants at the utmost one night on board a river steamer; on the downward journey between Gauhati and Dhubri the advantage is altogether in favour of the steamers, the time which they take being only 10 hours against 18 to 20 hours taken on the upward journey. This difference further illustrates my previous remarks regarding the Brahmaputra and the river about Chandpur, inasmuch as between Goalundo and Chandpur the difference of time in the up and down stream journeys is only half an hour or 7 hours against 6½. It is the planter and those dependent upon him who contribute in a measure far beyond the proportion due to their numbers to the trade of the Brahmaputra Valley; the former is not merely interested in the cheap and expeditious export of his tea, but also in the cheap import of rice and other commodities to feed his coolies, and of tools and machinery to work his garden, and it is he also who has been chiefly instrumental in introducing population into the country; I think therefore he has strong claims to be heard.

Concluding remarks.

41. Mr. Ward then in my opinion very much over-estimates the benefits to be derived in this respect from his extension: except as regards the country between Gauhati and Fakirgunj, I doubt very much if the want of his extension would have the slightest appreciable effect. I do not mean to argue that the extension is not in the least desirable; what I contend is that the connection across the North Cachar Hills is of infinitely greater importance, and I would go further and say that this connection is of greater importance than the branch from Lumding to Gauhati: however I should be sorry to see it struck out of the scheme, as it will much improve the means of communication between Upper and Lower Assam and give all that for some time at least will be required in the direction of Northern Bengal. Mr. Ward, however, evidently fears such a contingency, but I trust that this fear will be proved to be groundless by the acceptance of the scheme, intact, as it stands. This branch to Gauhati, if made first, will considerably facilitate the construction of the northern section of the connection. In conclusion I would venture to suggest that this scheme is of greater importance than the connection of Kaunia with Dhurla and that it should first be put in hand. I have only seen two reliable estimates for the Kaunia-Dhubri line, 54 or 55 miles long, and they amount without indirect charges respectively to Rs. 1,22,26,473 and Rs. 1,95,64,708, either amount nearly sufficient to establish the connection between Badarpur and Lumding.

Correspondence with Mr. Phillips attached.

42. I append copies of correspondence which has lately passed between Mr. Phillips and myself. It will be seen that Mr. Phillips maintains his former position that a line to Fakirgunj will very slightly benefit planters; and Mr. Buckingham of Amgoori has endorsed and countersigned his letter. I shall forward the further expressions of opinion which Mr. Phillips has promised to collect when they reach me.

Information regarding steamer freights.

43. Since writing the above I have received from the Manager, Eastern Bengal State Railway, the rates of freight for seven of the chief articles of traffic between Calcutta and Cachar and Calcutta and Naraingunj; the freights by steamer direct are, for six of the articles, in the two cases in the proportion of about sixteen to seven, and for the remaining article, a little less: no tea is shipped at Naraingunj, but at the same ratio steamers must be prepared to carry tea from Chandpur to Calcutta for about 7 annas a maund and my rate of ten annas may be accepted as an outside one.

Enclosure No. 10 to P. W. D. Resolution No. 868 R. C. of 1887.

Note by Mr. G. L. Molesworth, dated 16th October 1886.

The detailed plans and sections of the Bengal-Assam State Railway—as now submitted by Mr. Buyers, the Engineer-in-Chief—fulfil, in the most satisfactory manner, the anticipations formed by Mr. Buyers from his preliminary investigations, as confirmed by my personal reconnaissance and barometer observations, described in my note of March 27th, 1884.

These plans and sections shew that a practical Locomotive line may be constructed, at a reasonable cost, through the mountain range that has hitherto separated Upper Assam, or the valley of the Burhampootra, from Lower Assam or the plains of Cachar and Sylhet, and from Eastern Bengal; and prove that it is quite feasible to develop the rich districts of Upper Assam by railway communication, which will enable goods to be shipped at the port of Chittagong without break of continuity.

The ruling gradient of the line through the mountain range, as submitted, is 1 in 70, with curves of a minimum radius of 573 feet; but I am of opinion that it will be desirable to adopt Mr. Buyers' suggestion for the introduction of an exceptional gradient of about 1 in 45 in the Jatinga Valley, and possibly in the vicinity of the Mahur Saddle.

Mr. Buyers estimates that the saving to be effected in the Jatinga Valley alone by the adoption of this exceptional grade, will be about 28¾ lakhs of rupees; and after a careful examination of the plans and sections, I have arrived at the conclusion that the exceptional grade may be adopted with advantage.

This grade may be easily worked by additional engines from the changing station on the "Haflong Spur" without diminishing the load due to the otherwise ruling gradient of 1 in 70 on the remainder of the Ghât Section.

I am also of opinion that the minimum radius of curves may be reduced to 400 feet, but only when it will be productive of considerable saving, and that, if this minimum radius be adopted, there will be a large diminution in the earthworks and bridges over the ravines of the Ghât Section.

It will be desirable, however, in this case, that the whole of the rolling stock of the Bengal-Assam Railway should be constructed on the bogie principle, and as this system is entirely isolated by the Burhampootra and Megna Rivers, the rolling stock of other railway systems of India will never run over these curves, which, however, would not render the use of such stock prohibitory.

The Ghât Section of the Railway will, if the exceptional grade of 1 in 45 or thereabouts be adopted, be about 85 miles in length from an elevation of about 400 feet above the sea, at the southern base of the range, to the same level at the northern base of the range.

The route will pass over the following water-sheds :—

	Miles from Chittagong.	Elevation above sea level.
Jatinga	295	1,863
Mahur	314	1,836
Mupur	329	881
Dijako	335	793
Langladisa	350	812

An examination of the detailed plans and sections of the alternative projects for approaching the Jatinga Valley confirm the opinion I expressed in my notes of 24th October 1883 and March 27th, 1884, to the effect that the route *vid* Budapur is preferable to that *vid* Telyntila.

The work on the former alternative being fairly easy except where a short tunnel is necessary to enter the Jatinga Valley. But, as borings at the Buda-

pur Fort crossing proves its unsuitability, the site shown on the plans is about 7 chains lower down the stream from the Fort.

Taking, however, into consideration the fact that the constriction of the river at the Fort is liable to hold back the flood waters of the Barah River, to some extent, I would advise the adoption of a site for the bridge still lower down, so as to keep away from the rush of water that must necessarily ensue from the contraction of the river in times of flood.

After crossing the Barah River the formation level of the line keeps some close to the level of the flood-spill of the Barah, but as Mr. Buyers has explained that this height of flood has not been attained for 50 years; and that the spill water is, from its character, almost dead water, the level of formation adopted may be allowed.

The work in the Jatinga Valley is exceedingly heavy; in some cases averaging in cost about $2\frac{3}{4}$ lakhs of rupees per mile, but the introduction of the exceptional grade of 1 in 45 or thereabouts will materially diminish the work.

From the top of the Jatinga Valley to the Saddle at the head of the Langladisa Valley the work will be lighter, but still very heavy, especially in the vicinity of the Mahur Saddle, and between the Mupur and Dijako Saddles; but after the Langladisa Saddle has been crossed, the descent into the plains along the Langladisa Valley is easy, and comparatively inexpensive.

From the northern base of the hills to Dimapur the atlas sheets are misleading, representing an alluvial plain in which the streams are by no means correctly shown, but this portion is very much cut up by low hills covered with dense jungle, which has rendered the alignment a matter of considerable difficulty.

Beyond Dimapur the route I suggested in my note of the 28th of October 1885,—crossing the Dhansiri a little to the north of Dimapur, and keeping in the delta between the Dhansiri and the Daiang Rivers,—has been surveyed with the most satisfactory results, affording an extremely light and inexpensive, with scarcely any cross, drainage. After the crossing of the Daiang River the country is very flat, the principal work being caused by the crossing of the drainage of the Naga Hills, and the necessity for keeping above the flood level of the country, but the line has been judiciously selected and is far preferable to one taken through the low land in the immediate vicinity of the river Burhampootra. For 25 miles a very inexpensive line has been obtained by crossing to the right bank of the Disang River and keeping along it; as this river intercepts the drainage from the Naga Hills, on the left bank, whilst nearly all the drainage on the right bank falls towards the Burhampootra, I am of opinion that the Bengal-Assam line should be carried on to Makum Junction rather than to Dibrugurh.

With reference to the Gauhati branch I have little to add to my former note of the 27th of March 1884, except that the flood level shewn on the detailed sections renders it necessary to raise the embankments to a higher level than I had anticipated at the time of my reconnaissance; and consequently increases the cost of the branch.

The only part of this branch which I considered doubtful in my reconnaissance was the portion between Gauhati and the Digru River, and it has been found necessary to adopt the more circuitous route of the two alternatives which I indicated in dotted red lines marked A A on the map that accompanied my previous note, and this has given a fairly easy line for a railway.

The cost of the Bengal-Assam State Railway, as now estimated from the plans and sections, averages as follows per mile of railway :—

	Miles.	Per mile.
		R
Chittagong to Budapur	253¾	80,522
Budapur to Lumding	115½	1,49,255
Lumding to Makum	213¼	67,505
Gauhati Branch	110½	76,005

These estimates must, to a certain extent, be considered approximate; for the country, in the Ghât Section especially, is sparsely populated and unhealthy, and labour and supplies will have to be imported, so that it is difficult to predict how the rates may be influenced by an unhealthy season or by the difficulty of obtaining supplies or labour, and so soon as it may be decided to construct the railway, no time should be lost in constructing those portions of the line by which the permanent way can be pushed forward rapidly to the foot of the hills so as to facilitate the construction of the Ghât Section by railway carriage. On the other hand, the plans and sections must be considered as only approximately representing the work to be executed.

In so difficult a country a close and intelligent revision of even the most carefully prepared plans and sections is certain to result in reductions by improved alignment; and by the adoption of the exceptional grade of 1 in 45 and a minimum radius of 400 feet for the curves will be followed by a considerable diminution of work.

I would strongly recommend that Mr. Buyers should at once be instructed to revise the plans and sections in accordance with the above remarks, and that the survey of the line for an exceptional gradient of 1 in 45 in the Jatinga Valley should be undertaken during the present cold season.

Mr. Buyers, to whom I have spoken on this subject, estimates that the cost of such operations, including the necessary field work and jungle clearing, will be about Rs. 20,000, exclusive of the salaries of the permanent members of the engineering staff.

Pending the results of this revision I think that the Government may accept provisionally the estimated cost of the line from Chittagong to Makum Junction at an average of Rs. 90,000 per mile, and that of the Gauhati branch at Rs. 78,000 per mile.

With reference to the general question I may confine the opinions expressed in the last five paragraphs of my note of the 27th of March 1884.

I may add that the close approximation of the detailed results to those of the preliminary reports reflects great credit on the engineering qualifications of Mr. Buyers.

Enclosure No. 11 to P. W. D. Resolution No. 868 R. C. of 1887.

Extract from note by Colonel F. S. Stanton, Director General of Railways, dated 18th October 1886.

Mr. Buyers has evidently carried out the difficult work entrusted to him with great care and excellent judgment, and I think it would be a great pity if he cannot be allowed to complete the further survey required in the Jatinga Valley to ascertain the result on the estimate of adopting an exceptional gradient of 1—45 and curves of 400 feet radius, as there is an anticipation of reducing the estimate by 28 lakhs of rupees if this course is adopted.

In regard to the great question of route to Assam *viâ* the Cachar Hills or *viâ* the Valley of the Brahmaputra, it certainly seems to me that the former possesses enormous advantages over the latter, as a means of developing this backward region.

Chittagong should obviously be the port for Assam and Cachar, and this railway by supplying the one great want, good coal for sea-going steamers, would enable shipping business to be dealt with there at a cost with which Calcutta with its dangerous river approach cannot compete.

* * * * *

I would further beg to suggest that the thanks of the Government of India be given to Mr. Buyers and his staff for the care and ability with which the project has been worked out; and should the further work recommended in the Jatinga Valley be authorized, Mr. Buyers might be asked to submit an estimate of the cost of the survey required before he leaves Simla.

Enclosure No. 12 to P. W. D. Resolution No. 868 R. C. of 1887.

No. 856 R. C., dated 27th October 1886.

From—The Government of India, P. W. Dept.,
To—The Chief Commissioner of Assam.

I am directed to acknowledge the receipt of your letter No. 3176, dated the 28th September 1886, forwarding the Bengal-Assam Railway's estimates with reports dealing with last season's survey operations as well as the entire work done by Mr. Buyers' survey party, and, in reply, to request that the thanks of the Government of India may be conveyed to Mr. Buyers and his staff for the care and ability with which the project has been prepared. A formal Resolution on the subject will be prepared and published with Mr. Buyers' report in the *Gazette of India*, but meanwhile some further orders on the subject are necessary in order that the project may be left in a complete form and ready to be taken up at any moment by any Company desiring to construct the line.

2. With reference to Mr. Buyers' remarks as to a gradient of 1 in 45 in the Jatinga Valley, the Government of India desires that the effect on the estimate of the adoption of this grade should be investigated. In this view Mr. Buyers, while in Simla, has submitted a revised estimate, a copy of which is herewith forwarded, in which he puts the cost of the further surveys necessary to determine the question at Rs. 42,150; to this estimate I am to accord the sanction of the Government of India, and to state that such further staff as Mr. Buyers needs for this work is being collected.

3. I am, however, at the same time to express a hope that the work will be completed well within this sum and also within the time of 6 months which the estimate covers. It is very desirable that the results of this investigation should be submitted to the Government of India by April next if possible.

4. This sanction has been registered as No. 1 B. A. Ry. of 1886-87.

One estimate.

Enclosure No. 13 to Public Works Department Resolution No. 868 R. C. of 1887.

No. 833 R. C., dated 20th October 1886.

From—The Government of India, Public Works Department,
To—The Secretary to the Government of Bengal, P. W. Dept.

With reference to your letter No. 4338 R., dated 14th December 1883, forwarding an estimate of cost of a railway from Chittagong to Chandpore with branch to Comillah, I am directed to inquire whether the Government of Bengal maintains, unchanged, the opinion expressed in that letter as to the estimated traffic and remunerativeness of such a line.

Documents accompanying.

Nil.

Enclosure No. 14 to Public Works Department Resolution No. 868 R. C. of 1887.

No. 463 R., dated 2nd March 1887.

From—Colonel S. T. Trevor, R.E., Secy. to the Govt. of Bengal, P. W. Dept.,
To—The Secretary to the Government of India, P. W. Dept.

I am directed to acknowledge the receipt of your letter No. 833 R. C., dated 20th October last, enquiring whether the Government of Bengal maintains unchanged the opinion expressed in this office letter No. 4338 R., dated 14th December 1883, as to the estimated traffic and

remunerativeness of the projected railway from Chittagong to Chandpore with branch to Comillah, and, in reply, to communicate the following observations.

2. The estimate for this railway, which was forwarded to the Government of India with the letter above quoted, amounted to Rs. 1,12,27,802, or Rs. 87,335 per mile; and in submitting it, the remark was made that, though it required several minor alterations, it might be accepted as fairly correct. This estimate was made in 1883, and subsequent experience gained on other lines, which have been since constructed in Bengal, shows that it needs revision. For example, the outlay provided in it for stations and buildings is Rs. 21,97,706, and unless the line is to be built at once as the base of a future independent railway system into Assam, this amount seems excessive. It provides for the construction of warehouses, sheds, and a jetty at Chittagong, at a cost of rupees 3¾ lakhs, which, now that a Port Trust is to be established there, will probably be provided by the Port Commissioners. It provides also for extensive workshops, offices and staff-quarters, which the experience of the Dacca line shows it to be inexpedient to build before the state of the traffic and the conditions under which the line is to be managed make it absolutely necessary to build them. It provides, moreover, for a ferry service at a cost of rupees 2 lakhs. If the line is to have an independent ferry service, this sum would be quite insufficient; but it will probably be found that a suitable expansion of the ferry service of the Eastern Bengal Railway will be sufficient for all practical purposes. Under some misapprehension of the rules on the subject, the provision for indirect charges is a *minus* quantity, while a sum of Rs. 4,80,000 is included in the estimate for interest on outlay during construction, which is unusual. Finally, there has been a considerable fall in the market price of rails and other material since the estimate was made. It will certainly be necessary, therefore, to revise the estimate before the construction of the line is undertaken, and it seems probable that the result of the revision will be that it will be found to be susceptible of reduction.

3. Turning now to the estimates of traffic, I am to remark that those which were forwarded to the Government of India with this office letter No. 200 T. R., dated 23rd June 1882, were prepared with the greatest possible care and attention from the trade returns of the province, and they showed that a gross revenue of over 18 lakhs of rupees might be expected from the Chittagong Railway, and a net return of 8 per cent. on the capital outlay of 112 lakhs. Experience has shown, however, that little reliance can be placed on any estimates of traffic, however carefully they may be prepared, as there are many influences at work in regulating the course of trade which cannot be foreseen. On now being asked, therefore, whether the Government of Bengal maintains unchanged the opinion expressed more than three years ago as to the estimated traffic and remunerativeness of the line, Sir Rivers Thompson is disposed to give a less confident answer as to the particular rate of interest which may be expected from the capital to be employed on the undertaking. But he maintains unchanged the opinion that this railway is second to none in Bengal in importance, and that there is every prospect of its proving to be very remunerative. The extraordinary development of the trade of the Port of Chittagong during the last ten years, as shown by the figures given on the margin, appears to him to afford ample ground for this opinion, especially when it is remembered that this development has taken place in spite of many adverse circumstances as regards the means of communication between the Port and the interior as well as between the Port and the sea. The railway will not only serve this trade, but also a large inland trade from the districts through which it passes. These districts are densely populated, and the people are in very easy circumstances, so there is every prospect of a large traffic in passengers as well as goods. The districts, moreover, are at present so badly off for communication that it is well-known that year after year a large part of the crops is left uncut for want of means of conveying the produce to any market.

	Imports. Rs.	Exports. Rs.	Total. Rs.

Enclosure No. 15 to Public Works Department Resolution No. 868 R. C. of 1887.

Supplementary Report by J. W. Buyers, Esq., *M.I.C.E., Engineer-in-Chief, Bengal-Assam State Railway, on the Bengal-Assam Railway Survey,—dated the 18th February 1887.*

During the past cold season a party has been employed under Mr. E. J. Moore, Executive Engineer, in completing the survey of the alternative alignment at the head of the Jatinga Valley, ordered in para. 2 of Government of India letter No. 856 R.C., dated the 27th October 1886.

2. In recommending this alternative, in place of the alignment first proposed between the Kayeng river and the Jatinga saddle (*vide* paras. 16—18 of my report on the survey operations

during the seasons 1885-86 and 11 and 13 of my final report, both submitted in September 1886), I stated that it was anticipated that it would save 3·62 miles in length, and Rs. 28,74,884 in cost, and that a portion, 6½ miles long, had already been surveyed at the lower end, leaving 10·34 miles to be done, which, judging from the corresponding section of the upper trace, might cost Rs. 20,82,891, or Rs. 2,01,440 per mile.

3. The party has been engaged in filling in the survey of this latter section and has now returned to head-quarters having completed the fieldwork, but until the estimates are finished the accuracy of the above figures cannot be exactly determined. Mr. Moore, however, thinks that the cost will be somewhat under the figures I have given, probably lying somewhere between Rs. 1,80,000 and Rs. 1,90,000 per mile: if this prove to be the case, the estimate will be affected by something under two lakhs rupees, and the saving which this alternative will effect will be increased to over Rs. 30,00,000.

4. A traverse has been run direct down from the Jatinga saddle to the end of the lower section, which was carried, during the previous season, to a distance of 6½ miles above the Kayeng. By the aid of this and cross sections a line will be laid down on the plans. The cross sections have been taken so as to cover a minimum gradient of 1 in 40. I have seen the rough field plans on which two approximate lines have been laid down—one to suit a uniform gradient of 1 in 45, and the other 1 in 40. From the saddle to chain 440, that is on the upper 8·33 miles, Mr. Moore says that, so far as he can judge by the eye, there is nothing to choose between the two as regards the nature of the ground, but that the production below chain 440 from the 1 in 45 gradient leads into much heavier work than the production of the 1 in 40 grade. This is what might be expected, for the 1 in 40 gradient sooner reaches the bottom of the valley, and as long as they are both well up the hill side, there is little difference in the work.

In order to decide the question of which alignment should be adopted in preparing the plans and estimates, Mr. Moore has prepared for me rough sections on the production of both lines below chain 440; this in both cases being made with a uniform 1 in 40 gradient, as the further prolongation of the 1 in 45 grade would carry the line across the Lokashah with a viaduct which it is desirable to avoid, as stated in the paragraphs of the reports previously referred to. After examining both sections, I have instructed Mr. Moore to lay out the line on the plan for a uniform 1 in 40 grade from the saddle down to chain 526 (10 miles), where reduced level of formation would be 548 feet above mean sea-level at Chittagong; to run down from chain 526 to about chain 578 with a gradient of 1 in 70, after which there would be about 20 chains level where there is suitable ground for a station. Mr. Moore may find it necessary to make some slight modifications when the line is finally laid down on the finished plans, but I understand that these are the general ideas which also commend themselves to him. If found desirable, about 50 feet more may be taken off the Jatinga saddle; this will somewhat ease the gradients on each side, and only increase the work immediately at the saddle itself.

5. As I am leaving, Mr. Moore will submit the plans and estimates for this section, and I see no reason why he should not be able to do so by the middle of April. The advantages of this lower alternative have been detailed by me in the reports referred to, and it is not likely that he will have much to add beyond giving the correct figures, and altering the tabular statement given in para. 2 of my final report, which, as I have said above, may possibly be reduced by about 2 lakhs rupees.

6. I have gone through the hill plans with a view of determining what improvements, if any, could be made, and the results are shewn both on plans and sections in full blue lines. In doing this, I have had the following objects in view:—

(1) To improve the alignment generally, either by reduction of the number of curves or degree of curvature, without, at the same time, increasing the amount of work.

(2) To extend the length of straight between reverse curves from the minimum of 100 feet, which had been employed, to a minimum of 30 feet.

(3) To try the effects of using curves to a minimum radius of 410 feet (14°) in place of 573 feet (10°), which had been the limit employed.

The second naturally increases the amount of work, but not to any considerable extent except in one instance, *viz.*, in mile 319, where no alteration has been made, as the length of straight between the reverse curves is already 200 feet. In all the other cases, I think the changes are advisable. I have not had time to work out the results of the alterations which have been made (indeed this would be the labour of two or three months), but I think the sections shew that, with a considerably improved alignment, the work on the whole is at least not heavier.

7. In paragraph 11 of my final report of September 1886 I stated that the employment of curves of 400 feet radius, instead of 573 feet, at certain points in the upper parts of the Jatinga and Mahur valleys, was calculated to effect a reduction of ₹10,41,928 in the estimates; of this, ₹8,20,154 are the share of that portion of the line in the Jatinga Valley which, I take it for granted, will be abandoned in favour of the lower alternative; the balance of ₹2,21,774 represents the contribution of the Mahur Valley section, to which must be added

any economies which can be effected in the same way elsewhere. In going through the plans I have found that the places are extremely few where anything but a very trifling economy can be effected, so that I am not now prepared to recommend the adoption of such sharp curves. I think that on the stiff ascent with a gradient of 1 in 40 or 1 in 45 at the head of the Jatinga Valley, it will be worth paying a good deal for the easier 10° curves.

8. I have not been able to make any alterations in the first 5 miles of the Jatinga Valley, and also between the Mahur-Mupa watershed and the Langting river, miles 335 to 347, as there is not sufficient information on the plans in the shape of cross sections to enable me to make these with any degree of accuracy. The line on this short section of the Jatinga Valley, as also between miles 335 and 342, has been actually located, and therefore few cross sections were taken.

The alterations, except such as are due to lengthening the straight between reverse curves, are, with one exception, confined to those sections of the line the plans and estimates of which were prepared last year under some degree of pressure, as noted in paragraph 11 of my final report.

Enclosure No. 16 to P. W. D. Resolution No. 868 R.C. of 1887.

Report by Mr. E. F. Moore, Executive Engineer in charge Bengal-Assam Survey, in operations in 1886-87, revised with General Abstract Estimate.

1. With the submission of the accompanying plans and estimates of the work of 1886-87, the project for the Bengal-Assam Railway is completed, and there is but little to add to the supplementary report of Mr. J. W. Buyers, late Engineer-in-Chief, forwarded with this office letter No. 1000, dated 18th February 1887. The

Object of survey.

object of the survey of 1886-87 was the completion of the alternative route up the Jatinga valley (*vide* Mr. Buyers' Report, paragraph 16, page 41 for 1885-86), by a steep grade line from the Jatinga saddle, to join Mr. Sherman's Low Leve, Line along the bottom of the Jatinga Valley surveyed during the season of 1885-86, and, as explained in paragraph 16 of Mr. Buyers' report above referred to, it appeared certain that a grade of 1 in 40 could be obtained, and possibly 1 in 45 if distance were gained. Traverses were, therefore, run and sections taken to cover both these grades.

2. As a matter of fact, however, there has been a saving of 0·28 mile in distance, for, while the estimated mileage from Badarpur to the

Grading and alignment.

Jatinga saddle (*vide* paragraph 16 of the same report) is 30·20 miles, the actual mileage as now ascertained is 29·92 miles. The steep grade line joins Mr. Sherman's Low Level line at chain 61·00 on his section, thereby overlapping it by a distance of 1·16 miles. So much of Mr. Sherman's line is, therefore, cancelled. The question of gradient on the Steep Grade line was determined by Mr. J. W. Buyers before leaving Shillong (*vide* paragraph 4 of his supplementary report of 1886-87). The reasons for the adoption of the ruling gradient of 1 in 40 are there given and need not be repeated. From chain O at the Jatinga Saddle, corresponding to mile $\frac{298{\cdot}45}{294{\cdot}55}$ of the through line from Chittagong there is a continuous fall of 1 in 40 to chain 522·00, and thence a grade of 1 in 70 for 46·90 chain to chain 568·90. From chain 568·90 to 586·15 there is a level of 17·25 chains, where the only ground suitable for a station exists. From chain 592·50, corresponding with Mr. Sherman's chain 61·00, at which point this season's work ends, Mr. Sherman's grade of 1 in 70 is carried back until it meets the station level at chain 586·15. The 46·90 chains of the 1 in 70 grade on the north side of the station yard will afford a fair start for trains before reaching the steep portion. The level of the station yard is 491·00, which is at least 31 feet above the low water level of the Jatinga, a height which I consider perfectly safe from flood.

3. The length in miles of the survey of 1886-87 is 11·2286 and the cost Rs. 18,25,877 or Rs. 1,62,711 per mile, against a rate of Rs. 2,01,440

Length and cost.

per mile for the corresponding section of the upper line—a result fully justifying Mr. Buyers' arguments in favour of the lower alternative and even more favourable than I led him to expect.

4. The rate of Earthwork, although high, Rs. 77,307 per mile, compares favourably with Rs. 79,420 per mile for the 19·25 miles of upper

Earthwork.

line surveyed by Mr. Sherman during the season of 1885-86 and Rs. 1,00,211 per mile of the 6·48 miles at the head of the Jatinga valley surveyed during the season of 1884-85. On the 11·22 miles there are seven tunnels of an aggregate length of 2,730 feet.

5. Although I think I have allowed ample waterway, the rate for minor bridging is but Rs. 3,042 per mile. This economy is entirely

Minor bridging.

effected by raising the culverts wherever possible to the point at which the line runs from bank into cutting, allowance being made for filling in

earth on the upper side of the line to prevent the lodgment of any standing water against it. This plan has the further advantage of admitting of the easy extension of the culverts should the waterway anywhere be found insufficient.

Major bridging.

6. There are eleven major bridges, the highest and most important of which is that over the Mailongdisa, consisting of one span of 100 feet and seven spans of 40 feet each and costing Rs. 81,935, or Rs. 190 per foot run. The rate per mile for major bridging is Rs. 31,530 as against Rs. 1,12,029 of the 19·25 miles of upper line surveyed in 1885-86 and Rs. 32,266 per mile of the 6·48 miles, at the head of the Jatinga valley surveyed during the season of 1884-85. The height of the viaduct over the Mailongdisa is but 100 feet, and the difference in the rate per mile is chiefly due to the fact that the ravines on the lower line are crossed at a much less height from stream bed to formation than the upper one, and also because, as the streams approach the bottom of the valley, they run together, and become fewer in number.

Deduction from Estimate of 1885-86 due to overlap and total cost of Jatinga alternative.

7. In paragraph 2 I have stated that the line surveyed this season overlaps Mr. Sherman's Low Level Line by 1·16 miles, the cost of which, as abstracted from Mr. Sherman's estimate, is Rs. 1,34,656. This amount will be deducted from Rs. 7,94,587, the cost of the 6·48 miles run by Mr. Sherman (*vide* paragraph 16, page 4 of Report of 1885-86), and the difference of Rs. 6,59,931 added to Rs. 18,25,877, the estimate of the Steep Grade Line surveyed this season, gives Rs. 24,85,808, the cost of the whole Jatinga valley alternative from mile 24·38 from Badarpur (*vide* Report, same paragraph) to mile 40·92 from Badarpur at the Jatinga saddle. This is a rate of Rs. 1,50,290 per mile for 16·54 miles.

Possible minor alternative.

8. I may remark that while adopting the present Steep Grade Line as far as the end of the station yard, I think it would be advisable to try a line crossing the Lokashah somewhere opposite chain 80 on Mr. Sherman's section, keeping to the right bank of that river as far as the Lakamah, which would be crossed somewhat higher than at present. This would not involve a high viaduct over the Lokashah. Mr. Sherman's line at present between the Lokashah and Jatinga, for about a mile runs in high bank, the toe of which is but about 10 feet above the Jatinga low water level, a height scarcely safe from flood. Owing to the very limited time at our disposal it was not intended to carry this season's survey further than it has been taken, and the above change of alignment is but a minor alternative.

Limiting curves.

9. The limiting curves as in previous years is one of 10 degrees equivalent to a radius of 573 feet; and straight of not less than 300 feet has always been allowed between reverse curves.

Corrections in Mr. Buyers' Reports resulting from work of 1886-87.

10. There now only remains to correct those portions of Mr. Buyers' Report of 1885-86 in which the figures are affected by the work of the past season.

In paragraph 2 (i), page 9, instead of 575·903 miles, the main line becomes 575·625 miles, as shewn below :—

Total mileage, page 24 of Report	582·413
Miles by upper line table, paragraph 15, page 4	20·44
Deductions.	
Mr. Sherman's line 6·48 less 1·16 miles	5·32
Steep Grade Line of 1886-87	11·222, 16·542
Actual difference in favour of Lower alternative in Jatinga valley	3·898
Add saving by Mahur alternative	2·890
Total saving by alternative	6·788
Total mileage of main line by alternative	575·625

Table, para 2, page 10, will be recast as follows :—

Section.	Length, Miles.	Total estimates cost.	Mean rate per mile.	Remarks.
		Rs.	Rs.	
1. Main line	575·625	4,82,67,394	83,852	When mileage is denoted by two figures, as $\frac{370}{338}$, the upper denotes through mileage on the plans, the lower, alternative alignment recommended, the exact total difference between the two being 6·788 miles.
2. Chandpur Branch	31·895	26,81,477	84,072	
3. Silchar Branch	17·842	18,84,163	1,05,603	
4. Gauhati Branch	110·503	83,98,762	76,005	
Total	735·865	6,12,31,796	83,211	

For comparison with the table given in paragraph 16, page 4, I insert a similar one with actual results.

Section.	Miles.	Estimated cost.	Rate per mile.	Remarks.
		Rs.	Rs.	
Miles from Badarpur 11 to 24·38	13·38	16,61,506	1,24,178	
Ditto ditto 24·38 to 40·92	16·54	24,85,808	1,50,290	5·32 + 11·22 miles.
Total	29·92	41,47,314		
Difference in favour of lower alternative.	3·90	32,66,554		

I attach to my estimate a revised abstract in place of that at page 24 of Mr. Buyers' Report. The alterations effected in this by the work of season 1886-87 are as given in the following table :—

Main line by subdivisions, Chittagong to Makum Junction, miles 582·413 or 575·625.

Miles 582·413 or 575·625.

	575·625	4,82,67,394	83,852	

11. In conclusion, I beg to bring to the notice of the Government of India the services of Mr. A. R. Lilley, Executive Engineer, and Messrs. E. I. Alexander and E. T. Faulkner, Assistant Engineers, on account of their very hard work in the field and afterwards in the office. Orders for the survey being received late in the season, field work was not commenced until December 10th, 1886, Messrs. Alexander and Faulkner arriving there a week later. Field work was closed on January 29th, 1887, while I left the Jatinga Valley on the 19th of January to take over charge from Mr. Buyers, leaving Mr. Lilley to complete the survey. The plans submitted are therefore the result of six weeks' field work only. And it is due to the subsequent exertion of these officers that the estimates have been completed at such an early date.

EDWARD J. MOORE, *M.I.C.E.*,
Executive Engineer in charge
Bengal-Assam Railway.

Enclosure No. 17 to P. W. D. Resolution No. 868 R. C. of 1887.

Note by G. L. Molesworth, Esq., Consulting Engineer to the Government of India for State Railways, dated 27th May 1887.

The results of the survey of the alternative steep gradient line have verified the anticipations of Mr. Buyers, that a saving of 28½ lakhs of rupees may be effected by the adoption of an exceptional gradient of not less than 1 in 40 in the Jatinga Valley.

In fact, the estimate prepared by Mr. Moore shews a saving of 3·9 miles and 32½ lakhs of rupees, but this amount must be reduced, because the introduction of an exceptionally steep gradient must involve some increased expenditure in station staff quarters, station machinery and rolling stock. Making allowance for these, I think that Mr. Buyers' anticipated survey of 28½ lakhs may stand. I think that Mr. Moore and his assistants deserve great credit for the rapidity with which they have carried out this survey in a most difficult country.

With reference to the general question of the estimate of the hill section between Badarpur and Lumding, I am of opinion that, in view of our recent experience in the large increase of quantities, due to slips, and flattening slopes beyond what was considered necessary in the estimates of the Sind-Pishin Railway, and moreover looking to the difficulty in locomotive railways in predicting the relative amount of rock that may be met in the various cuttings or the material in the tunnels, it would be prudent to increase Mr. Buyers' mileage estimate in the hill section from 1½ to 1¾ lakhs per mile. Mr. Buyers' rates are certainly not high. The line has not yet been set out, but the longitudinal section has merely been deduced from cross sections; and as I have already pointed out in my previous note, the country is sparsely populated and unhealthy, labour and supplies will have to be imported, so that it is difficult to predict how the rates may be influenced by an unhealthy season, or by the difficulty of obtaining supplies.

Taking the project as a whole, the figures would stand in round number as follows:—

	Miles.	Rates per Mile.	Cost. Lakhs.
Chittagong to Badarpur	253¾	80,522	204
Badarpur to Lumding	115½	1,75,000	202
Lumding to Mahur	213¼	67,505	144
Gauhati Branch	110½	76,005	84
Total (ruling grade 1 in 70) .	693	91,486	634
Deduction if exceptional gradient of 1 in 40 be introduced	...	...	28½
Total with exceptional gradient of 1 in 40 .	...	...	605½

The case therefore stands as follows:—

The whole project with a ruling gradient of 1 in 70, in the hill section, will cost about 634 lakhs of rupees, which may be reduced to 605½ by the introduction of an exceptional gradient of 1 in 40. The portion affected by the exceptional gradient will be probably about 20 miles, and on this length the increased cost of carrying one ton of goods per mile, due to the exceptional gradient, will probably be about 7 pie or an increase of about 1 ½ annas on each ton carried as through traffic. Against this there would be a saving on the interest of capital expenditure which, if placed as a set-off against increased working expenses, would vary about as follows:—

With 2 trains each way per day 15 pie per ton.
„ 3 „ „ 10 „
„ 4 „ „ 7½ „
„ 5 „ „ 6 „
„ 6 „ „ 5 „

The introduction of the exceptional gradient would therefore be an economy if the traffic on this railway were small, but it would be the source of an economy if the number of trains each way exceeded four. Looking to the difficulties of raising money in the market for the construction of this line by private enterprise, it may be politic to adopt the exceptional gradient of 1 in 40, with the view of reducing the first capital expenditure as much as possible; but if the future of this railway is expected to be brilliant, if it should largely develope the resources of Upper Assam and cause a large track to spring between that district and the port of Chittagong, then the introduction of the exceptional gradient will be a mistake.

At the commencement, however, it is probable that the traffic on this railway will be limited until the work of development by the railway shall have made due progress.

Enclosure No. 18 to Railway Resolution No. 868 R. C. of 1887.

CHITTAGONG STATE RAILWAY.

This projected Railway, which forms a continuation of the projected main line from Assam and Silchar, commences at Comillah and passes in a southerly direction to Laksam, and thence turns in a south-westerly direction, crossing the Pheni river near its mouth; it then keeps to the strip of country comprised between the Sitakund range of hills and the sea until it reaches Chittagong.

From Laksam it is proposed to construct a branch to Chandpur, on the left bank of the Megna river. It was originally proposed to make the branch to Daudkhandi, but Chandpur is obviously the most suitable position for the terminus of the branch line. The proposed line passes for nearly its whole length over low-lying alluvial land which is nearly a dead flat, the average formation-level at Chandpur being 21 feet above mean sea-level, at Laksam 22 feet, at the Pheni river 24 feet, and at Chittagong 33 feet above mean sea-level, gradients being scarcely necessary, except in the approaches to the bridges over the streams and rivers that have to be crossed.

The Railway has to be in embankment throughout its entire length, in order to keep the formation well above high flood-level. The only work of any magnitude will be the bridge over the Pheni river.

This, according to the proposed alignment, crosses the Pheni where it is almost an estuary of the sea, exposed to the storm-waves of the Bay of Bengal, and I agree with Mr. Horace Bell that it is absolutely necessary to alter the site of this bridge, so as to cross the river higher up, where the bed will be better defined and the country less exposed to the effects of the storm-wave.

With the present alignment, the funnel-shaped channel of the Pheni river enables the storm-wave to attain large proportions; and as the formation-level there appears to be about 5 feet below the level of the storm-wave, except where the line is raised in the bridge approaches, the results of a cyclonic wave would be most disastrous to railway works on that alignment. I have roughly marked in full blue pencil lines on the Index plan, a line which I think might be examined for the crossing of the Pheni river; it would cross the two branches of the river separately more than two miles above the present site, and would involve an additional length of a mile and a half to the through mileage of the Railway, if the present alignment be adhered to, up to the point from which I have marked the line of deviation.

I presume that the alignment, south of Laksam, has been adopted for local reasons connected with the development of the district, but, if not, it would appear that a saving of about 4 miles might be effected, if the upper crossing of the Pheni be adopted, by taking the line from Laksam in nearly a straight line to Dewaniganj, and producing that line to the upper crossing, as I have marked in dotted blue pencil lines on the Index plan.

The question of carrying the Railway through the Halda Valley, instead of skirting the coast, has been carefully considered; and the Executive Engineer of Chittagong has made a reconnaissance with the view of ascertaining whether such a line is feasible; but the crossing of the water-shed which divides the Valley of the Halda from that of the Pheni is attended with difficulties which render the cost of a line through the Halda Valley prohibitory. This crossing would involve at least 7 miles of very heavy work in crossing 6 steep rocky ridges, from 350 to 500 feet in height. The Executive Engineer of Chittagong proposed, as an alternative entrance to the Halda Valley, the tunnelling through the range about 6 miles north of Sitakund; but this entrance would apparently involve tunnelling to an extent of nearly a mile and a half in length, as well as an increase in the length of the through mileage, and in all probability a steeper ruling gradient which under the present alignment is as flat as 1 in 300.

The idea of passing through the Halda Valley may therefore be dismissed as impracticable. The length of the line under the present alignment is 128·56 miles, including the branch to Chandpur. If the upper crossing of the Pheni river be adopted, the length will probably be increased to 130 miles. If, on the other hand, the direct line *vid* Dewaniganj were adopted, the length might be reduced to 126 miles.

The estimated cost per mile of railway as submitted by Mr. Horace Bell, the Engineer-in-Chief, stands as follows:—

	Rs.
Preliminary Expenses	536
Land	3,000
Earthwork	6,206
Bridging	11,916
Level-crossings	624
Fencing	1,973
Ballast	4,569
Permanent-way	19,350
Stations, &c.	7,310
Workshops	2,497
Staff Quarters	4,176
Station Machinery	2,661
Plant	2,649
Steam Ferries	1,556
Rolling-stock	9,000
Establishment	5,727
Indirect Charges	3,135
TOTAL	87,335

The principal rates upon which this estimate has been based are as follows:—

	Rs.	A.	
Earthwork	6	12	per 1,000 c. ft.
Turfing	2	8	,, sup. ft.
Excavation for foundations	5 to 10	0	,, c. ft.
Rammed filling	9	0	,, ,,
Well sinking	12	0	per lineal ft.
Concrete	28	0	per 100 c. ft.
,, cement	45	0	,, ,,
Brickwork	40	0	,, ,,
,, in cement	65	0	,, ,,
Ironwork	253 to 293	0	per ton.
Timber	4	4	per c. ft.
Fencing	1,750	0	per mile.
Ballast	8	0	per 100 c. ft.
Sleepers	3	4	each.
Laying permanent-way	660	0	per mile.

Some further preliminary expenses will probably be necessary for investigating the question of the alteration of the Pheni bridge site.

With reference to the earthwork, I may remark that the embankments in some cases appear to have been graded at too low a level, but there seem to be some discrepancies in the flood-levels, as marked on the section, which I have not been able wholly to reconcile.

I have prepared a rough diagram which is annexed to this note, to indicate generally the relative position of the formation, and of the high flood-levels between Chittagong and Chandpur. A study of this diagram will enable the situation to be more readily comprehended. In an almost dead level country like that under consideration, it is evident that no very abrupt variations in the high flood-level can exist at places which are not separated by high land, or by artificial embankments, because the high flood level, being above the general level of the country, must equalise itself, unless the flood water of one portion be separated from that of another contiguous portion. Such a case may exist where the cart-road is below the railway alignment; and it is possible that between the 10th and 13th mile from Chittagong the flood water may be held up by the road, whilst beyond the 14th mile, where the alignment crosses the road and keeps below it, the road cannot exert any influence in holding up the flood level; but there does not appear to be any influence of this character about mile 35, and yet in three quarters of a mile distance there is an apparent difference of about $5\frac{1}{4}$ feet in the high flood level as marked on the section. If the flood level at the 35th mile be correct, it will be necessary to raise the formation level of the greater part of the embankment in the neighbourhood of that part by 4 or 5 feet at least.

Again the high flood level at the Pheni river is nearly on the same level as that of the formation of the embankment about 2 miles distant from the bridge. Again near Chandpur the formation level is shewn to be only about half a foot above high flood level about 2 miles distant. The construction of the Railway will doubtless tend to increase the height of the flood level generally.

In any case it appears to me that the embankments must be raised between the 13th and the 44th mile to a level which *as a minimum* should be 24 feet above mean sea level; and between the 18th and 30th mile of the Chandpur branch to a minimum of 21 feet above mean sea level. The cost of raising the embankments to this extent will be in round numbers about Rs. 1,80,000; but if, on the other hand, the high flood level marked on the section near the 35th mile be correct, then it will probably be necessary to grade the embankments between the 13th and 44th mile to a minimum of 26 feet above mean sea level, and the additional cost of this would be about Rs. 1,20,000, making, with the previous addition, about 3 lakhs of rupees extra to the estimate for the earthwork.

On the other hand, the rates for earthwork, Rs. 6-12 per 1,000 cubic feet, with turfing Rs. 2-8 per 1,000 s. ft., which will probably bring up the cost of earthwork to about Rs. 7-2 per 1,000 cubic feet, appears to be excessive. A rate of Rs. 4-8 or Rs. 5 would appear to be sufficient, and in that case the cost of raising the embankments would be to a great extent counterbalanced by the reduction of the rates. Turfing is certainly unnecessary in Bengal, but if the rates for earthwork cannot be reduced, then the raising of the embankments to the extent above mentioned would add about Rs. 2,300 per mile to the cost of the earthwork.

In considering the question of bridging I may remark that the drainage which affects the railway may be divided into four distinct areas—

1st.—That which has to pass the line between Laksam and Chandpur;

2nd.—That which has to pass into the Little Pheni river.

3rd.—That which has to pass into the Great Pheni river.

4th.—The drainage from the Sitakund range between Chittagong and the 42nd mile.

In the first case the amount of water that must pass the line between Laksam and Chandpur is indeterminate, because the country is dead level,

and any water that cannot pass the line will naturally flow into the Megna river.

In the second case the amount of water which drains into the Little Pheni is rendered somewhat doubtful by the fact that the spill waters of the Goomptee river may pass down between Comillah and the high ground to the east, and unite with the drainage proper of the Little Pheni. I think it is possible that it may be found expedient to prevent this contingency, by blocking off the spill waters of the Goomptee by an embankment running from Comillah to the high ground at the base of the Tipperah hills. The length of such an embankment could not be more than 6 or 7 miles, and the cost would probably not exceed Rs. 10,000 or Rs. 50,000, probably less, if existing bunds could be supplemented, and this cost would probably effect more than an equivalent saving in the bridging of the Great and Little Pheni rivers.

Assuming then the exclusion of the spill waters of the Goomptee, the drainage area of the district supplying the Little Pheni river must exceed 300 square miles, but it is probable that any surplus water that could not be taken by the Little Pheni bridge would flow into the Great Pheni river, so that the Pheni river bridges together should be capable of taking the whole of the water from the drainage areas combined.

The atlas sheets, however, do not clearly define the catchment areas of the Pheni river, but, as far as I can ascertain it, the catchment area will not probably exceed 1,000 square miles, making, with the catchment area of the Little Pheni river, a total of about 1,300 or 1,400 square miles, which, according to Dickens' formula ($D = 825\ M^{\frac{3}{4}}$), will give a maximum flood discharge of from 180,000 to 190,000 cubic feet per second. Assuming for this a velocity of flood discharge at 5 feet per second, we shall require an area of from 36,000 to 38,000 square feet, and this, with a mean depth of 20 feet in high flood, will require 1,800 to 1,900 lineal feet, or say 18 to 19 spans of 100 feet each. Mr. Horace Bell has provided 24 spans of 100 in the estimates for the Great and Little Pheni bridges, so that his provision will probably be sufficient.

A final decision on the question of the waterway to be given at these bridges must, however, await the further investigation of the proposed alternative site; meanwhile the estimate of Mr. Horace Bell for them may be provisionally accepted.

It may possibly be desirable to prepare alternative estimates for the Pheni bridge with 100 feet spans on wells and for 60 feet spans on cast-iron screw pile piers.

Between Chittagong and the 42nd mile the drainage is to a great extent cut off from the coast by the Sitakund range; consequently the whole drainage area intercepted by the railway on this length cannot far exceed 100 square miles, representing a maximum flood discharge by Dickens' formula of about 26,100 cubic feet per second, which, on the assumption of a flood velocity of 5 feet per second, would require a discharge area of about 5,250 feet. The quantity provided I make out by rough calculation to be approximately about 6,400 square feet, which would appear to be sufficient.

The raising of the embankments will increase the cost of the bridges somewhat, but not to any serious extent, because the majority of the bridges are already in raised embankments.

The amount provided for fencing appears to be low, and will, I believe, require to be increased. The amount provided for stations appears, on the other hand, to be excessive; but it provides for a Jetty at Rs. 2,50,000, Warehouses at Rs. 1,25,000, and General Offices at Rs. 1,80,000. The Jetty and Warehouses will probably be undertaken by the Chittagong Port Trust, and if so, need not be included in the cost of the Railway. The General Offices should be a charge divided over the whole of the Bengal-Assam Railway system.

The amount provided for the workshops appears to be more than necessary, for although it may be decided to construct general workshops for the system at Chittagong, yet the cost of such shops should be divided equally over the whole cost of the system.

The amount provided for Staff Quarters and Station Machinery appears to be excessive, and the necessity for Steam Ferries, as an integral portion of this railway, is not apparent. The amount of Rolling-stock is high, at all events for the first opening of the line before the traffic has developed, and as the bridging, with the exception of that for the Pheni river, is of an insignificant character, I think the amount of plant might be reduced. The works generally, with the exception of the Pheni Bridge, might be pushed through in a very short time, so that I think the establishment would bear reduction.

Taking into consideration the points above mentioned, I should be disposed to place the estimate at the following mileage rates:—

	Rs.
Preliminary Expenses	600
Land	3,000
Earthwork	6,500
Bridging	12,000
Level-crossings	600
Fencing	2,800
Ballast	4,700
Permanent-way	19,500
Stations, &c.	2,000
Workshops	2,000
Staff Quarters	2,500
Station Machinery	1,500
Plant	1,500
Rolling-stock	8,000
Establishment	4,000
Indirect Charges	3,000
TOTAL	74,200

I visited Chittagong in November last on my way to Burma, and I then formed a very favourable opinion of it as a terminal port for the Bengal-Assam Railway system, and as a means of developing the rich district of Eastern Bengal; the port is well sheltered by a double bend in the river, and the large increase, which has of late taken place in the traffic of the port, proves that its advantages are beginning to be appreciated.

17th August 1887. GUILFORD L. MOLESWORTH.

WEATHER SUMMARY FOR AUGUST, 1887.

As in the previous month, the weather during August was of the normal monsoon character. In fact over Northern India, owing to the increased strength of the current from the Bay of Bengal, the rainfall was heavier and of greater extent than during July, and those districts of the Punjab, where dry hot weather had previously prevailed, have during August received fairly abundant rainfall. As a general rule the precipitation has taken the form of steady continuous rain, and not only have there been no breaks in the rains of any importance in any part of India, but the exceptionally heavy local falls, which characterize the weather of some years at this season, have been exceedingly few during the present August.

The monsoon.—At the commencement of the month the monsoon current on the West Coast was exceptionally strong, and westerly to south-westerly winds of more than normal strength were blowing over Rajputana, the Berars, Central India, and the Central Provinces. This strong current held until the 7th when the wind decreased quickly on the West Coast, south of Bombay, though it continued to blow very strongly across the Cutch and Guzerat Coasts. This decrease proved, however, to be only temporary, and disappeared as quickly as it had come, so that, by the morning of the 9th, the monsoon current was above its normal velocity along the whole West Coast, though more so between Bombay and Kurrachee than along the Peninsula Coast. These strong steady monsoon winds continued to blow all along the West Coast and far into the Central parts of the country until the 28th, when the current became weaker on the Malabar and Bombay Coasts, and the wind directions there exhibited a slight northerly element. In Sind and Cutch there was no change. These conditions lasted until the close of the month.

The Bay of Bengal current was, on the whole, much less steady than that from the Arabian Sea, but was much stronger and steadier and extended further inland, than was the case with the same current during July. The month commenced with a well-marked southerly wind blowing from the Bay across Arakan and East Bengal and an easterly wind over Assam and North Bengal. By the 2nd the current from the Bay had become more distinct. A strong southerly wind blew across the Bengal Coasts, backed to south-east and east in North and West Bengal, and with that direction penetrated up the Gangetic plain to the Punjab. These favourable conditions continued only for a day or two, when the monsoon current again became feeble and unsteady, and westerly winds from the Arabian Sea advanced into Bengal, and the Bay current instead of travelling north-westward was deflected towards Assam. On the 11th westerly winds more or less disappeared from the Gangetic plain, and normal easterly and south-easterly winds reappeared. These conditions lasted with occasional interruptions until quite the close of the month, and it is probably to this favourable easterly current that the general and abundant rain over Upper India is mainly due.

Pressure.—The mean barometric pressure of the month is below the August average at several stations in Southern India, and at a few in Sind and in Burma, but elsewhere it is above, the greatest excess being in Bengal. Pressure has, as a rule, been very steady during the month, and the absence of any considerable storms is probably the cause of the generally high barometer, which has prevailed.

Storms.—As mentioned in the preceding paragraph, no storms of any magnitude have traversed the country during the month, but small local depressions have frequently formed, giving a cyclonic circulation to the winds in their neighbourhood and more or less heavy rain. On the 1st a well-marked disturbance was shown lying between Calcutta and Burdwan; this disturbance subsequently travelled north-westward to Benares where it filled up. On the 16th a feeble depression was formed over the head of the Bay, whence it advanced west-north-west towards the Ganjam Coasts, which it crossed on the morning of the 19th. It gave heavy rain to some Coast stations, but was, on the whole, a small and unimportant disturbance. It reached Raipur on the morning of the 20th, after which it filled up. On the 21st there were indications of the formation

of another depression in the north-west angle of the Bay. This disturbance subsequently travelled on a north-west course as far as Agra, where it also filled up. Other shallow depressions have appeared in different parts of the Indian area during the month, but they have all been of small size and intensity and exceedingly short-lived.

Temperature.—The weather generally has been cool—only at a few places in Burma, Lower Bengal, Assam, and the south of the Peninsula, and at the stations of Jacobabad and Multan has the mean temperature of the month exceeded the average. In all other places the mean temperature has been below the normal. In parts of the North-Western Provinces, Rajputana, and the Punjab the deficiency was between 4° and 5°, in the Central Provinces and Central India about 2°, and elsewhere generally between 1° and 2°. In the Indus Valley the day temperatures continued high, the mean maximum at Dera Ismail Khan being 102·8° and at Mooltan 100·5°.

Humidity.—Humidity was above the average, except in East and Lower Bengal, Sind, and Malabar Coast.

Rain.—Rain fell in all parts of India during the month. In the Derajat, in Sind, and in the extreme south of the Carnatic the amounts were small, in several instances not exceeding 1 inch, but the general distribution and extent of the rainfall during August was an improvement on that in July. In the Punjab, the North-Western Provinces, North Bengal, the whole of the Central parts of the country, the Konkan, Mysore, the Carnatic, and Ceylon the total fall was in excess of the average, while in Behar, Assam, Burma, Lower Bengal, Orissa, and the Deccan there was a slight, and in Sind, Guzerat, and Malabar a considerable deficiency.

Exceptionally heavy falls of rain occurred at Chittagong (8½ inches) on the 8th, at Allahabad (7½ inches) on the 9th, at Ludhiana and Jullundur (6 inches) on the 14th, at Fyzabad (6 inches) on the 17th, and at Mussoorie (18 inches) on the 21st and 22nd.

With regard to the seasonal fall the report for the last day of August shows that since June 1st there has been generally deficient rainfall throughout Burma, Bengal, and Assam, and the east of the North-Western Provinces; an excess of rain over the remainder of the North-Western Provinces, Rajputana, the Central parts of the country, and the Punjab, except the stations of Peshawar and Mooltan, a deficiency in Malabar and Mysore, an excess in Bombay, a deficiency in Sind, and irregular variations in Madras.

The following table shows the amount of rain and the difference from the average, during the month of August, 1887, according to districts as far as is indicated by the telegraphic reports:

Districts.	Number of Stations.	Average Rainfall for August.	Difference from the Average in August, 1887.
Punjab, West	7	5·70	+ 2·33
„ East	6	8·47	+ 5·00

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 31st August, 1887.

The meteorological conditions of the past week have been such as is normally experienced at this period of the rains, that is, the weather has shown a slight but general tendency to improve, and both the extent and amount of rainfall has slowly decreased. The monsoon currents on both sides of the Peninsula have been fairly steady, but the amount of moisture they have brought up has apparently been relatively slight and the weather generally has been showery rather than wet.

On the 25th strong monsoon winds continued on the Bombay Coast, more particularly in Guzerat and Cutch, where, owing to the indraught towards the depression near Jhansi, winds of from 12 to 16 miles per hour were experienced. Most of the rainfall connected with this branch of the monsoon fell over the region traversed by this portion of the current, and amounts exceeding an inch were reported from Neemuch, Deesa, Mount Abu, and Ajmere. There was very little change on the following day, though except at Mount Abu the rainfall was lighter. On the 27th there occurred a sudden rise in the velocity of the winds at the Ceylon stations and in Malabar, but elsewhere in the West, there was no change of importance. The weather was showery, but no heavy falls of rain were reported. The report of the 28th showed that except on the Sind Coast, where the wind had an average velocity of 19 miles per hour, the monsoon on the West Coast had become much weaker and at the same time veered towards North-West, both indications of the growing unsteadiness of the current. Notwithstanding this weakness fairly general rain fell in Bombay and the Central Provinces, and some heavy showers in Central India and Rajputana. Jeypore received 3½ inches, and Nowgong and Hoshangabad over 1 inch. On the 29th the monsoon current had become steadier again, and was quite up to its average velocity all along the West Coast. It had given general rain to the Central Provinces and Bombay, and some heavy showers to Central India and North Madras. The principal falls were Neemuch and Masulipatam about 3 inches, and Goa and Karwar about 2 inches. On the 30th winds fell lighter on the Bombay Coast, and again exhibited a tendency to veer to North-West. Local heavy showers occurred at some places, but, on the whole, the area of rainfall was restricted. On the 31st there was but little change. A striking feature about the West Coast monsoon during the past week has been the great steadiness and strength of the wind on the Sind at Cutch Coasts.

In the Bay of Bengal, as was the case last week, the monsoon current has suffered several interruptions. On the 25th a strong current was blowing from the Bay into Bengal, and showers were reported from Burma and Assam, but only slight rain in Bengal. These conditions continued during the 26th, but on the 27th a slight depression was developed at the head of the Bay occasioning a feeble cyclonic circulation of the winds at the Coast stations, with moderate rain and light unsteady winds in North Bengal, and Behar with no rain. By the next day the depression had disappeared and south-easterly winds of light force were re-established in Lower Bengal. In consequence of this change moderate rain was received over the whole of Bengal and the east of the North-Western Provinces. On the 29th the wind increased without altering its direction, so that a strong set blew up the Gangetic Valley, and several places in Northern India received heavy showers of rain. There was very little change on the 30th, but the winds were rather lighter and some parts of Northern India were without rain. On the 31st the monsoon current from the Bay and up the Gangetic plain was light and unsteady, and light local showers only were received in Burma, Bengal, Behar, and the North-Western Provinces.

The weather in Upper India has been very unsettled. Continuous rain has nowhere been experienced, but heavy local showers have alternated with periods of fair weather. On the 27th, Murree received 1¼ inches and Rawalpindi 2½ inches; on the 28th, Allahabad received 2¾ inches; Bareilly, Roorkee, and Ludhiana over 1 inch; and on the 29th Mussoorie received 9 inches, while the weather on the 25th and 26th, the 30th and 31st was generally fine.

Pressure has been above the average of the month everywhere, while temperature, on the contrary, has been almost equally generally below it. The greatest deficiency of temperature was at the Punjab hill stations and in Rajputana, where it considerably exceeded 2°. The amount of moisture in the atmosphere was generally in excess of the normal.

Regarding the rains as a whole, the report for August the 31st shows that since the 1st of June there has been general but comparatively unimportant deficiency in Bengal, Assam, and the east of the North-Western Provinces, and a considerable excess in Oudh, the west of the North-Western Provinces, and the Punjab, except the Indus Valley. In Sind and the south of the Peninsula the season's rainfall is also short, but over the whole of the Central parts of the country and the Bombay Coast the rains have been exceptionally heavy. The following table gives for a few representative stations the amount of rain since June 1st, the average for the same period, and the difference :

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to August 31st.	Difference.
Akyab ...	109·44	133·10	—23·66
Saugor Island ...	41·03	43·13	— 2·10
Calcutta ...	34·89	38·76	— 3·87
Dhubri ...	41·25	51·88	—10·63
Purneah ...	26·69	29·73	— 3·04
Gya ...	31·04	26·15	+ 4·89
Allahabad ...	19·05	18·58	+ 0·47
Meerut ...	31·30	17·18	+14·12
Delhi ...	14·89	11·10	+ 3·79
Lahore ...	1·94	4·92	— 2·98
Peshawar ...	54·82	72·21	—17·39
Cochin ...	88·47	84·49	+ 3·98
Ratnagiri ...	72·34	56·99	+15·35
Bombay ...	16·87	17·32	— 0·45
Poona ...	35·66	30·88	+ 4·78
Surat ...	27·60	23·30	+ 4·30
Khandwa ...	40·61	29·98	+10·63
Nagpur ...			

The concluding table gives the total rainfall for the past week :

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	15·53
Bengal and Assam ...	15	27·44
North-Western Provinces and Oudh ...	9	20·55
Punjab ...	6	7·53
Hill Stations ...	5	17·47
Ceylon ...	2	1·72
Malabar Coast ...	5	12·31
Bombay ...	9	23·41
Berars and Central Provinces ...	10	18·06
Guzerat and Central India ...	6	16·45
Sind—Rajputana ...	3	17·17
Madras ...	13	21·42

for *Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 8th SEPTEMBER, 1887.

GENERAL REMARKS.—Rain in varying quantities has fallen throughout the country. The falls were lightest in the Punjab and Bombay.

The *kharif* crops are generally thriving everywhere, though in some Provinces, notably in Rajputana, the Central Provinces, and the North-Western Provinces and Oudh, they have been injured by excessive rain.

Operations for the *rabi* season have commenced in Bombay, the North-Western Provinces and Oudh, the Punjab, and the Central Provinces.

In Madras, Mysore and Coorg agricultural prospects are generally satisfactory.

The rice crops in Bombay, Bengal, the Central Provinces, Assam, and Burma are on the whole promising, though more rain would be beneficial in places.

Sugarcane is doing well in Bengal and Assam.

The public health is generally good in all Provinces.

Prices are rising in Mysore. Elsewhere they remain fairly stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Sept. 7th.)		
Bellary . . .	Average last week since revised, ·04; this week, ·88.	Standing crops generally good, but young early crops withering in parts of one taluk. Cholera decreasing in four and cattle-disease increasing in two taluks.
Kurnool . . .	Average 2·43	Standing crops good. Small-pox in two, and cattle-disease decreasing in four taluks. Slight cholera.
Ganjam . . .	Average 2·65	Agricultural operations nearly completed. Small-pox and fever in six, and cattle-disease increasing in seven divisions. Slight cholera.
Kistna . . .	Average 2·27	Agricultural operations progressing. River 6·3 feet over Anicut. Slight fever, cholera decreasing in two, and cattle-disease increasing in four taluks.
Chingleput (Madras) .	Average 1·60	Standing crops fair. Harvest paddy, outturn middling. Small-pox in one, cholera in two and cattle-disease increasing in five taluks.
Coimbatore . .	Average ·52	More rain wanted. Standing crops generally good, but *cholum* affected by insects in one taluk. Harvest dry grains, outturn above average. Fever in one taluk.
Tanjore . . .	Average last week since revised, 1·57; this week, 2·16.	Standing crops generally good, but require more rain in parts of one taluk. Harvest *cumbu* and gingelly, outturn below average. Cattl -disease increasing in two taluks.
Madura . . .	Average last week since revised, 1·22; this week, 1·60,	Standing crops fair. Cattle-disease in one taluk.
Malabar . . .	Average 1·48	More rain wanted. First crop paddy ripening. Harvest paddy, outturn average. Slight small-pox in seven, fever in two and cattle-disease increasing in three taluks.
Travancore . .	2·82	Harvest of first crop paddy almost over. Fever in parts. *General Remarks.*—General prospects fair.
Bombay—(Sept. 7th)		
Karachi . . .	. . . . .	River at Kotri on 5th, 16 feet 8 inches against 18 feet 1 inch on same date last year. *Kharif* crops injured in Shahbandar taluka by turtles and rats. Fever in nine and cattle-disease in one taluka. Wheat, red rice, and *bajri* in Karachi 22, 30 and 32 and in Tatta 22, 34 and 34 pounds per rupee, respecuvely.
Hyderabad . . .	Rain in three talukas	*Kharif* cultivation in progress. Fever in six and slight cattle-disease in three talukas. *Jowari* in places in Kandiani attacked by insects. River falling rapidly, height at Kotri on 5th, 16 feet 8 inches against 18 feet 1 inch on same date last year. Wheat 24, *jowari* 36, *bajri* 33½, white rice 18 and red rice 26 pounds per rupee.
Ahmedabad . . .	·40; total 24·48	Rain throughout the district. Standing crops good. Cattle-disease in Gogha, Parantej and Daskroi talukas. Seven cases of cholera in the city, of which 5 were fatal. Wheat 28 and *bajri* 29 pounds per rupee.
Baroda . . .	1·80; total 43·72	Public health fair. Standing crops in good condition. *Bajri* 26, wheat 19, and rice 20 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Surat	Rain in nine talukas—maximum in Pardi, 3·90 and minimum in Chorasi, ·41.	Weeding progressing. *Jowari* and cotton crops suffered in places from excessive moisture; other standing crops healthy. Cattle healthy. Fever in Bardoli and Jalalpur. Cholera in Bardoli, Chikli and Bulsar talukas, 61 cases, 25 deaths. *Jowari* 32 and *nagli* 43 pounds per rupee.
Nasik	Rain maximum in Igatpuri, 4·87 and minimum in Dindori, ·07.	Sowing and transplanting completed. Crops healthy. *Udid* and *khurashni* crops damaged on account of excessive rain in Peint. Land being prepared for *rabi* sowing. Rain wanted in Sinnar and Baglan. Want of fodder is felt in Sinnar and Baglan. Cholera in Nasik, Chandor, Nandgaon, Malegaon and Baglan, total attacks 124, deaths 52.
Colaba (Bombay)	Rain every day, except on 6th; total of week, 2·08; total to date, 73·07, being 13·46 above average.	Abnormal temperature rose from 4° cool on 31st to 1° cool on 3rd and was *nil* from 4th to 6th. Vapour in air normal. Abnormal wind easterly on 31st August, and 1st, 5th and 6th September; wind normal on all other days. Thunder and lightning on 31st August.
Poona		No report received.
Ahmednagar	Sheogaon, 3·32; Kopargaon, 1·80; Rohuri, 1·23; and in Shrigonda, ·52; very slight rain in five and none in two talukas.	*Kharif* crops generally fair, except in Karjat and Sangamner, where rain is much needed. *Rabi* sowings begun in Nagar only. Cholera attacks 255, deaths 113. *Bajri* 30 and *jowari* 57 pounds per rupee.
Sholapur	Sholapur, 2·17; Barsi, ·77; Karmala, ·21; Madha, ·88; Pandharpur, 2·30; Sangola, ·85; and Malsiras, ·65.	*Kharif* crops doing well. *Rabi* sowing in progress. Rain required in Malsiras and Karmala talukas. Cholera cases 90, fatal 34. *Jowari* 58¾ and *bajri* 52½ pounds per rupee.
Dharwar	Rain at all stations, except Navalgund, Ranibennur and Kod talukas, and Nargund and Mundargbi Pethas, varying from 1·19 in Gadag to ·05 in Hubli.	Young rice, *jowari* and minor crops withering for want of rain. Heavy showers urgently required both for standing crops and for sowing of cotton. Slight cholera in Nargund, Badkapur and Kalghatgi, and slight cattle-disease in Dharwar. *Jowari* 56 and rice 24 pounds per rupee.
Kanara	Rain in Karwar, 4·60; total 118·22; Kirwatti, 2·05; Sirsi; ·80; and Haliyal, ·31.	Rice crop healthy. Slight cattle-disease in two talukas and Mungod Petha. Common rice in Karwar and district average 11 seers per rupee.
Rajkot	2·77; total 26·81	Weather hot and cloudy. Prevailing diseases—fever and bowel-complaints; one cholera case in Navanagar. Wheat 23, *bajri* 24 and *jowari* 28 pounds per rupee. *General Remarks.*—Rain in most districts, more still required in parts of the Deccan and Southern Mahratta Country. Crops suffering from insufficiency of moisture in parts of Shikarpur and Upper Sind frontier, and damaged by rats and insects in parts of Kurachi and Hyderabad, and by excessive moisture in parts of Gujarat and Nasik. Scarcity of fodder in two talukas of Nasik. *Rabi* sowing in progress in parts of four districts. Cholera in parts of seventeen, cattle-disease in parts of thirteen, fever in parts of eleven, and small-pox in parts of four districts. Cholera ceased in Baroda.
Bengal—(Sept. 7th)		
Chittagong (Sept. 6th)	·94	Weather hot. *Aus* harvested, outturn good. *Aman* still being transplanted. Prices high. Cholera reported, public health otherwise good.
Dacca	·94	Prospects of crops continue good. Harvesting of jute continues. *Aus* nearly reaped. Transplanting of winter rice still going on. Public health good.
24-Pergunnahs (Calcutta).	1·06	Prospects of *aus*, jute, and sugarcane good, those of *aman* not so favourable for want of rain. Harvesting of *aus* continues. Transplantation of *aman* going on. Public health fairly good.
Khoolna	2·91	Weather hot. Occasional rain. Transplanting of *aman* continues slowly for want of rain. *Aus* being harvested. Public health fair.
Moorshedabad	1·95	Weather hot. Rain at intervals. Harvesting of *bhadoi* paddy almost over. *Aman* growing well. Sowing of *til* commenced in some places. Sugarcane and jute progressing. Public health good.
Pubna	2·81	Weather seasonable. Rivers risen. Prospects of crops and general health good.
Dinagepore	8·40	Rain on six days, heavy on 4th. *Bhadoi* and jute being harvested. Transplantation of *aman* nearly completed.
Rungpore	7·09	Prospects of crops fair. Fever prevalent.
Midnapore	1·65	Prospects of crops good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Burdwan	2·44	Winter rice now suffering much from deficient rain in Culna and Cutwa, elsewhere prospects good. Autumn paddy being cut, outturn fair. Cholera and fever continue in Sadr.
Bhagalpur	3·77	*Bhadoi* harvest yielding fairly. Late rice doing well.
Purneah	7·09	All crops doing well. *Bhadoi* giving fair outturn. *Aghani* being transplanted Rivers high Health bad.
Durbhanga	3·69	*Bhadoi* harvest continues. Rice transplantation still going on. Prospects very favourable. Public health generally good, but fever reported.
Chumparun	7·38	Prospects of crops good. Rain of the week has much benefited them. Prices stationary. Public health fair.
Patna	1·15	Harvesting of *bhadoi* crops still going on. Rain wanted for paddy crop. Crops on *dearah* lands in Dinapore subdivision have suffered from floods of the Soane and Ganges. Cholera still reported from Behar and Dinapore, but decreasing.
Gya	1·65	*Bhadoi* being harvested. Prospects of paddy better than last week. More rain wanted. Cases of fever have increased. Cholera still reported.
Hazareebagh	Good rain at Headquarters and neighbourhood.	Want of rain reported from several thanas. Indian-corn being harvested. Rice and other crops doing well. So far general health fair.
Cuttack	1·47	*Beali* being reaped with moderate outturn. Prospects of *sarad*—good, but more rain wanted. Cholera still continues. *General Remarks.*—Heavy rain reported in the northern districts, but showers only in the rest of the Province. More rain much needed for *aman* crop in many parts. Transplantation not yet quite finished. *Aus*, jute, and other autumn crops are being harvested with general outturn. Sugarcane promising. General health fair, though in some districts fever and cholera reported.
N.-W. Provinces and Oudh—**(Sept. 7th)**		
Benares (Sept. 6th)	Average 1·90	Weather bright. Agricultural prospects fair. Supplies plentiful. Prices steady. Health good.
Ballia („ 5th)	Heavy rain on the 4th.	Weather cloudy. Prospects favourable. Market steady. General health good.
Gorakhpore („ „)	1·30 at Sadr	Prices stationary. Cholera has nearly disappeared.
Fyzabad („ 6th)	Averaging 4·10	*Kharif* crops promising. Weeding in progress. Supplies ample. Cholera disappearing. Slight cattle-disease.
Lucknow („ 5th)	4·10 at Sadr	Break much needed. Supplies sufficient. Prices steady. Cholera nearly disappeared. Condition of cattle good.
Rai Barelli („ „)	Good rain all over the district, a break wanted now.	Prices slightly rising. Cholera still lingering. Cattle-disease reported from some villages.
Partabgarh („ 6th)	Heavy rain	*Kharif* somewhat injured by excessive rain. Prices rising. No cholera.
Allahabad („ „)	Average 2·50	*Jowari* and cotton slightly damaged by excessive rain, otherwise crops looking well. Markets well supplied. Prices stationary. A little fever, but cholera has almost disappeared. General health good.
Cawnpore („ „)	Rain in all, but one tahsil from ·20 to 1·90.	Crops in lowlands injured by continuous and heavy rains. *Rabi* ploughing commenced in places. Prices of wheat and gram slightly risen. Cholera abating, fever in two and cattle-disease in three parganas.
Farakhabad („ „)	Averaging 1·10	Crops thriving except in lowlands. Maize and indigo being cut. Supplies ample. Prices rising. Cholera decreasing. Some fever and ague in places. Cattle-disease in one tahsil.
Sitapur („ „)	Good rain has fallen	*Kharif* prospects are favourable. Cholera still lingers in two tahsils.
Bareilly („ „)	Ample rain	Crops in excellent condition. Prices slightly lower. Slight cholera in two villages. General health of men and cattle good.
Banda („ 5th)	Rain abating	Weeding of *kharif* crops and ploughing for *rabi* going on. Prices stationary. Cholera disappearing. Fever prevalent.
Kumaon („ 6th)	. . . .	Crops in excellent condition. Prices falling. Cholera has ceased. Health good. Cattle-disease almost ceased.
Agra („ 5th)	From 2·20 to 5·80	*Kharif* crops much injured and *rabi* ploughings delayed by heavy and continuous rain. Prices steady. Cholera decreasing.
Jhansi („ „)	Heavy rain	Crops doing well on light soils but injured on black soils. Prices rising. Cholera disappearing. Some fever reported.
Meerut („ 6th)	General rain from 1·60 to 4·40.	Break now commenced. Some damage to *kharif* crops from excessive rain reported. Slight rise in prices. Cholera and fever still prevalent. *General Remarks.*—Again the rainfall has been ample and in some districts the crops have been injured by excessive moisture. Weeding of *kharif* going on; *rabi* ploughing commenced in places. Agricultural prospects promise well. Supplies ample and prices fairly steady. Public health generally good. Cholera is fast disappearing. Outside the Meerut division fever is reported and slight cattle-disease.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Sept. 7th)		
Hissar (Sept. 6th) .	. . . .	Fever prevalent. Prices falling. *Rabi* ploughings in progress. *Kharif* prospects good.
Delhi . . .	3·83	Health fair. Prices rising. *Kharif* crops damaged by rain.
Umballa . . .	·75	Prices stationary. *Kharif* crops in good condition.
Jullundur . . .	1·80	Health good. Prices stationary. *Kharif* prospects good.
Ferozepore . . .	1·10	Health good. Prices stationary.
Amritsar . . .	1·20	Health good. Prices stationary. *Kharif* crops good.
Sialkot . . .	Slight rain	Prices stationary. *Kharif* crops good.
Lahore . . .	1·70	Prices stationary. *Rabi* ploughings progressing.
Multan . . .	. . . .	Health good. Prices stationary. *Kharif* prospects good.
Rawalpindi . . .	1·00	Health good. Prices stationary. *Kharif* prospects good.
Shahpur . . .	Rain has fallen	Health good. Prices stationary. *Rabi* ploughings commenced. *Kharif* prospects improved.
Dera Ismail Khan .	. . . .	Health good. Prices almost stationary. *Kharif* sowings completed.
Peshawar . . .	Slight rain	Prices fluctuating. *Kharif* prospects average.
		General Remarks.—Rain has been general, except in Hissar, Multan, and Dera Ismail Khan. Health good, except in Hissar, where fever is prevalent, and in Delhi, where health is fair. Cholera decreasing. Prices are falling in Hissar, rising in Delhi, and fluctuating in Peshawar; elsewhere stationary. *Kharif* crops generally good, but crops in Delhi damaged by rain. *Rabi* ploughings in progress in Hissar, Lahore and Shahpur. Cattle-disease in Pathial, Jullundur district.
Central Provinces—(Sept. 7th)		
Nagpur . . .	4·64	Weather showery, break wanted for *jowari* and cotton. Slight cholera and fever prevalent.
Jubbulpore . . .	3·96	Weather warm and clear. Prospects favourable. Fever prevalent. Prices steady.
Saugor . . .	2·55	Weather clear and warm. Cholera continues. Weeding in progress. Prices unchanged.
Seoni . . .	6·43	Weather showery, break much needed. *Rabi* ploughing retarded. Cholera continues. Prices slightly fallen.
Hoshangabad . .	4·08	Break wanted. Weeding stopped. Fever slightly prevalent. Prices unchanged.
Khandwa . .	3·00	Weather cloudy and warm. Prospects good. Cholera continues. Prices steady.
Bilaspur . . .	2·58	Rice, cotton, and sugarcane doing well; *til* and *urd* sowing continues. Fever and cattle-disease prevalent. Prices slightly fallen.
Raipur . . .	2·11	Weather close and cloudy. Weeding nearly completed. Crops healthy. Fever in places. Prices stationary.
Sambalpur . . .	. . . .	No report received.
		General Remarks.—Prospects favourable, except of cotton and *jowari*. Break needed in central and southern districts. Fever prevalent.
Burma—(Sept. 7th)		
Akyab (Sept. 3rd)	5·04 (Total rainfall to date 131·92).	Ten cases of cholera in town and 2 in district. Slight cattle-disease. Crop prospects favourable.
Bassein . . .	2·57 (Total rainfall to date 74·26).	Slight cattle-disease in one township. Ploughing and transplanting far advanced.
Rangoon . . .	2·67 (Correct total rainfall to date 80·65).	
Amherst (Moulmein) (Aug. 27th)	5·22 (Total rainfall to date 138·31).	Ploughing and transplanting progressing. Prospects of crops good.
,, (Sept. 3rd)	·48 (Total rainfall to date 138·79).	Ploughing and transplanting progressing. Prospect of crops good.
Tavoy	2·90 (Total rainfall to date 147·22).	Crops reported very healthy.
Pegu	2·71 (Total rainfall to date 101·70).	Ploughing and transplanting nearly finished.
Henzada . . .	2·53 (Total rainfall to date 57·14).	Transplanting completed.
Prome	·66 (Total rainfall to date 27·01).	Slight cattle-disease in two townships. Planting and ploughing progressing.
Toungoo . . .	3·40 (Total rainfall to date 61·42).	Transplanting progressing.
Thayetmyo . . .	1·29 (Total rainfall to date 19·82).	Ploughing and transplanting resumed.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Shwebo (Aug. 27th)	·66 (Total rainfall to date 26·16).	
,, (Sept. 3rd)	·94 (Total rainfall to date 27·10).	
Kyaukse . . .	. . . .	Condition of crops good.
Myingyan . . .	·56 (Total rainfall to date 15·47).	Food-supply sufficient. Prices ordinary.
Mandalay . . .	1·0 Total rainfall to date 25·76)	Transplanting of *Kyaukki* crops progressing. Food-supply sufficient. Prices normal.
Minbu . . .	1·10 Total rainfall to date 16·08).	Prices normal.
Yamethen . .	·49 (Total rainfall to date 20·17).	Cultivation progressing.
		General Remarks.—Some cholera in Akyab and Thongwa. Cattle-disease in five Lower Burma districts. Agricultural operations proceeding. Reports from ten Upper Burma districts. Health satisfactory. Anthrax and cattle-disease prevalent in Pyinmana, where rain is much wanted.
Assam—(Sept. 7th)		
Gauhati (Sept. 6th)	3·01	Weather rainy. Public health fair. Malarial fever still prevalent in Sastra, Barpeta and its vicinity, also in parts of Polasbari, Luki and Chomoria tahsils. Cattle-disease still continues in some parts of the district. More rain wanted for *sali* crops. Prospects of crop good.
Sylhet	2·12	Crops doing better since rain has fallen, but more rain is required. Reaping of *aus* and transplantation of *sali* still going on. Tea prospects good. Eight deaths from cholera in Karimganj. Some fever in south Sylhet and Habiganj.
Cachar	3·80	Weather dry. Prospects of rice crop good. Tea doing well. Fever reported from Chatta. Rice selling at 17 seers 12¾ chittacks per rupee.
Dibrugarh . . .	4·08	Weather seasonable. Tea and sugarcane doing well. Land being prepared for *mati kalai*. Public health indifferent.
Mysore and Coorg—(Sept. 7th)		
Bangalore . . .	Civil and Military Station, 2·44; Bangalore district headquarters, 2·35; Mysore, 1·63; Kolar 5·13; rainfall reported heavy in Tumkur.	Standing crops in good condition, except in parts of the Kadur and Hassan districts, where they are reported to be failing for want of more rain. Prospects of season continue favourable. Public health generally good. One case of cholera reported in the Tumkur district, one in Bangalore town, and three in the Civil and Military Station. Prices have slightly risen in the Shimoga, Kadur, and Hassan districts.
Mysore . . .		
Mercara . . .	5·49	Prospects and health good. Rain deficient for rice transplanting in parts.
Berar and Hyderabad—(Sept. 7th)		
Amraoti . . .	·10	Weather close and cloudy. Weeding continues. Crops promising fairly. Cholera in places. Wheat 15 and *jowari* 25 seers per rupee.
Akola . . .	·32	Weather warm and cloudy. Crops in good condition. Weeding in progress. Cholera and fever still prevalent.
Hyderabad . . .	1·50 (Total since 1st January, 16·46).	*Kharif* crops thriving. Water in tanks still insufficient for wet cultivation. General health fair. Prices—wheat 11¾, coarse rice 12, white *juar* 18¼, yellow *juar* 20¾ and *tur* 14 seers per current sicca rupee.
Central India States—(Sept. 7th)		
Indore . . .	1·87; (Total to date 31·83).	Weather oppressive and thundery.
Morar (Gwalior) .	1·82	Health good.
Sutna . . .	·34	
Neemuch . . .	·60	Health good. Cholera has disappeared. *Makka* crops slightly damaged.
Goona . . .	4·18	Prices rising. Health good.
Agar . . .	1·03	Health and prospects fair. Slight cholera in Ujjain.
Sehore . . .	1·12	*Jowari* crops mostly failed. Occasional cases of cholera in the city and surrounding country, one case in bazaar.
Nowgong . . .	5·26	Weather cloudy. Cholera disappearing in Nowgong. Crops likely to be damaged by continuous rain. Prices steady.
Bhopawar . . .	. . . .	Cases of cholera reported from Sirdarpore, Ranapur in Jhabua, Bagode and Barwai. Prices slightly increasing.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Sept. 7th)		
Abu (Sept. 7th)	·24	Weather clear and seasonable, with passing clouds.
Sirohi („ 4th)	·97	Tanks fairly full; wells good. Crops good. Weather fine.
Marwar („ 3rd)	. . . . .	Cholera still prevails. *Kharif* suffering from insufficient rain in some districts. Weather partially cloudy. Market easy. Prices rising.
Meywar („ „)	1·46	Tanks and wells full. *Makki* crops slightly suffered from excessive rains in some districts. Health fair. Prices slightly cheaper.
Pertabgurh . . .	. . . . .	No report received.
Harowti (Sept. 3rd)	Deoli, 1·02; Tonk, 3·89.	Crops improved by partial break in rain. Health good. Prices risen.
Jhallawar („ 4th)	1·79	Further reports of damage to crops by flood. Health fair.
Ajmere („ 6th)	Average ·08.	Cholera in Ajmere district and Merwara has not yet disappeared. Cattle-disease reported in some parts of Merwara. Prices stationary.
Jeypore („ „)	. . . . .	Prospects depend on break in rains. Ten cases of cholera in Jeypore city.
Kerowlee („ 3rd)	1·67	Tanks and wells full. Crops damaged. Cholera continues. Prices rising.
Dholepore („ „)	Average 5·20	Tanks and wells full. Crops injured by excessive rains. Cholera still lingering at Bari. Prices rising. Weather seasonable.
Bhurtpore („ 6th)	Continuous rain 4·70	Crops suffering. Break needed.
Ulwar („ „)	. . . . .	No report received.
Kotah („ 3rd)	3·20	Health good. *Makki* crops injured by continuous rain. Weather overcast.
Kherwara („ 4th)	·15	Rain needed to fill tanks and wells. Crops fair. Bowel-complaints prevail. Cattle mortality from disease spreading. Prices unchanged. Weather fine.
Bickanir („ 3rd)	·40; Rainfall heavier in some districts.	Tanks and wells full. Prospects good. Health good. Prices stationary. Weather cloudy.
Nepal—(Sept. 2nd)		
Katmandu (Sept. 1st)	4·38	Weather seasonable. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 7th September, 1887.

During the week under review there has occurred a steady change in the weather over a large part of India, from general rain towards finer conditions. This change has been most marked in Northern India, where at the close of the week a general break in the rains obtained.

On the 1st a moderate monsoon was blowing along the West Coast and a strong monsoon on the Sind and Cutch Coasts. Most of the rainfall connected with this current fell at the more southern of the Indian Stations and in Ceylon. Rajkot received 2 inches, but in Bombay and the Central Provinces the rainfall was only moderate. There was no change in the winds in the West on the 2nd, but the rainfall was generally rather slighter though fairly general over the West Coast districts and the Central Provinces. On the 3rd there occurred a large increase in the force of the wind along the West Coast (from Ceylon as far North as Surat), and the strong monsoon current penetrated far into the Central parts of the country. As a consequence, moderate rain fell over the whole of the West Coast districts, the Central Provinces, and nearly the whole of the Deccan and Madras, while showers fell in Rajputana and Central India. This strong monsoon continued during the 4th, but the rainfall, though heavier in the West and Centre than on the 3rd, was more restricted as to extent, and Sind, Guzerat, Rajputana, Central India, and Southern India were practically rainless. On the 5th the force of the wind fell again, and, except in Ceylon, the monsoon was below its average strength. This change was accompanied by a decrease in the amount and extent of the rainfall. On the 6th a further decrease in the strength of the monsoon occurred, and the rainfall was everywhere small in amount and confined chiefly to the West Coast and Southern India. Only local showers fell in the Central Provinces and Central India, and no rain in Sind or Rajputana. On the 7th very feeble winds prevailed on the West Coast and light variable airs at the inland stations. Southern India was the only region receiving general rain, the falls elsewhere being confined to light showers of no importance.

The monsoon of the Bay of Bengal has undergone a change similar to that experienced by the West Coast current. On the 1st there was a moderate monsoon blowing from the Bay into Bengal, and moderate but general rain fell in Bengal and Burma. On the 2nd the monsoon continued up to the average, and somewhat heavier rain fell over the districts fed by this current. On the 3rd the winds at the head of the Bay strengthened considerably, and this increase was felt inland as far as Behar. Accompanying this increase in the wind came heavier and more general rain. Assam, Bengal, Behar, Chutia Nagpur and the North-Western Provinces, all had moderate rain, and these favourable conditions lasted over the following day. On the 5th, however, a change set in. The force of the wind decreased and the rain, though fairly general, was much lighter than on the preceding day. On the 6th and 7th the winds were very light, and a general break in the rains prevailed.

In Upper India conditions have been more or less similar. Heavy local showers fell in the Punjab and western districts of the North Western Provinces on the 1st. These were continued during the 2nd, 3rd, and 4th, but on the 5th the weather began to change, the sky cleared considerably, and during the 6th and 7th fine bright weather prevailed, and a well-marked break in the rains obtained throughout Northern, Western, and Central India.

As is almost invariably the case when a break occurs in the rains over Northern India, the rainfall over the Peninsula has been above the average.

The following table shows the state of the seasonal rainfall:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to September 7th.	Difference.
Akyab ...	112·90	139·28	—26·38
Saugor Island ...	41·25	46·88	— 5·63
Calcutta ...	35·33	41·46	— 6·13
Dhubri ...	50·94	54·95	— 4·01
Purneah ..	40·29	45·13	— 4·84
Gya ...	28·34	31·43	— 3·09
Allahabad ...	32·30	28·35	+ 3·95
Meerut ...	21·08	20·14	+ 0·94
Delhi ...	33·61	18·76	+14·85
Lahore ...	16·07	11·85	+ 4·22
Peshawar ...	1·96	5·09	— 3·13
Cochin ...	59·57	74·97	—15·40
Ratnagiri ...	90·96	88·73	+ 2·23
Bombay ...	73·92	59·83	+14·09
Poona ...	17·95	18·31	— 0·30
Surat ...	36·09	33·40	+ 2·69
Khandwa ...	27·75	25·73	+ 2·02
Nagpur ...	43·68	32·45	+11·23

Except in the North-Western Provinces, the Punjab, the Konkan, and the Central parts of the country, the rainfall is generally deficient, but, on the whole, the differences, as compared with the totals, are small enough to be without importance.

Pressure has been generally above the average over Upper and Central India and below it over the Peninsula. The distribution during the latter part of the week was very irregular and more like that of October than that of the early part of September.

On the mean of the whole week temperature was below the normal, but during the past few days there has occurred a brisk rise of the thermometer, which, if the present break in the rains continues, will soon bring the temperature above the normal.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	15·07
Bengal and Assam ...	16	43·76
North-Western Provinces and Oudh ...	9	18·69
Punjab ...	7	14·64
Hill Stations ...	5	10·05
Ceylon ...	2	5·62
Malabar Coast ...	5	27·75
Bombay ...	9	14·93
Berars and Central Provinces ...	10	23·41
Guzerat and Central India ...	4	6·09
Sind—Rajputana ...	3	3·13
Madras ...	14	38·19

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

Civil Works—Irrigation.

USE OF WATER-POWER FOR WORKING MACHINERY ON THE SIRHIND CANAL.

Proceedings of the Hon'ble the Lieutenant-Governor of the Punjab in the Public Works Department, Irrigation Branch,—No. 3539 I., dated the 28th July 1887.

READ—

Punjab Government Resolution No. 3765, dated 5th October 1881.

OBSERVATIONS.—In accordance with the abovementioned Resolution, lists of sites at which water-power was available on the Bári Doáb and Western Jumna Canals were published for general information.

2. The Sirhind Canal having now been opened for irrigation and navigation, the Lieutenant-Governor considers that the vast power which is available thereon should be brought before public notice in a similar manner.

3. The annexed map shows the position of the falls, roads, rail-roads, railway stations and principal towns.

The portions of the canal which are navigable have been distinguished from those which are not, and the horse-power available at each site is also shown.

4. The total power available on the Sirhind Canal will be about 9,914 horse-power distributed over 44 sites, *viz.*—

Abohar Branch	4,334 H.-P. at	14 sites.
Bhatinda Branch	3,589 „ „	14 „
Kotla Branch	1,648 „ „	9 „
Gaggar Branch	233 „ „	4 „
Choa Branch	110 „ „	3 „
TOTAL	9,914 H.-P. at	44 sites.

5. The standard assumed for calculation of one horse-power is the same as for the Bári Doáb and Western Jumna Canals, *viz.*, 15 cubic feet per second falling one foot, and in making the calculation for each site 50 H. P. have been deducted from the result to allow for existing flour mills or for those that may be erected in future.

6. The Sirhind Canal lies partly in British territory and partly in the Native States of Patiála, Nábha, Jínd, Maler Kotla and Farídkot. The principal British districts traversed are Ludhiána and Ferozepore with populations of 450 and 236 per square mile respectively.

The principal crops grown in these districts are—

Name of Crop.	Districts.	
	Ludhiána.	Ferozepore.
	Acres.	Acres.
Rice	2,683	2,921
Wheat	177,644	395,850
Other food-grains	154,336	450,057
Pulses	184,289	363,463
Drugs and spices	1,725	3,108
Oil-seeds	5,515	52,970
Fibres	19,261	14,326
Sugarcane	14,209	2,712

and the rates for labour are—

Skilled	6 to 8 annas per diem.
Unskilled	2½ to 4 annas per diem.

7. The Government is prepared to grant the use of the water for working machinery for periods not exceeding 20 years on the terms shown below :—

Approximate rates per H.-P. per annum.

	Years.	R
For first term	3	*Nil.*
„ second term	5	60
„ third „	6	100
„ fourth „	6	150

The exact terms will be the subject of special agreement in each case, and special rates will be levied on water used for the purpose of grinding grains, based upon the rates paid by Native millers at various sites on the canal.

8. Particulars regarding the conditions on which mill heads and tails may be built and the water-power used, and any further information required, will be supplied to applicants by the Superintending Engineer, Sirhind Canal Circle, Umballa.

RESOLVED—that the above observations, with the list of water-power available, be published in the Supplement to the *Punjab Gazette* for general information.

Also that 20 copies with explanatory maps be forwarded to the Government of India for information and distribution.

By order of the Hon'ble the Lieutenant-Governor,

F. J. HOME, *Lieut.-Col., R.E.*,

Offg. Joint Secretary to Government, Punjab, P. W. D., Irrigation Branch.

(1) The increase on Upper Sutlej Canals in Lahore District is due to the better supply of water in canals, and decrease on Lower Sohág Canal is partly due to the early failure of water in the river and to there being no suitable water-courses for existing villages along the new part opened up during the year. In previous rabi the whole supply was ponded up at Haveli, and the country round was flooded; but this wasteful system was exceptional, and cannot be repeated now that the canal below Haveli has been opened.

	Acres.
Area irrigated in 1886-87	403,046
Ditto 1885-86	360,073
Net increase	42,973

T. T. ATKINSON,
Offg. Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,
STATISTICAL BRANCH;
Calcutta, 15th September 1887.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 15th SEPTEMBER, 1887.

GENERAL REMARKS.—The rainfall of the past week has been generally confined to Madras, Bombay, Bengal, the Central Provinces, Berar, and Burma. Elsewhere the rainfall has been sparse and breaks have occurred.

The *kharif* crops are generally doing well in all parts of the country, and in the North-Western Provinces and Oudh the harvest has begun.

Operations in connection with the *rabi* harvest are extending, and are now in progress in the North-Western Provinces and Oudh, the Punjab, the Central Provinces, and Bombay. Sowings have commenced in the last named Presidency.

The standing crops in Madras, Mysore and Coorg promise well.

The rice crops in Bombay, the Central Provinces, and Bengal are thriving. In Assam however more rain would be beneficial, and in Nepal a short crop is anticipated.

Sugarcane prospects are satisfactory in Bengal and the North-Western Provinces and Oudh.

Cotton sowing is in progress in Bombay; in the North-Western Provinces and Oudh and the Central Provinces the crop has been slightly damaged in places by excessive rain.

Indigo is being cut in the North-Western Provinces and Oudh.

Severe drought has considerably checked the growth of tea in Cachar.

The public health is fairly good in all Provinces.

Prices are on the whole stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Sept. 14th.)		
Bellary	Average 3·14	Standing crops good. Cholera increasing in two, and cattle-disease decreasing in three taluks.
Kurnool	Average 3·95	Standing crops fair, but in three taluks suffered from excessive rain. Small-pox in two, and cattle-disease decreasing in three taluks. Cholera slightly increasing.
Ganjam	Average 1·62	Small-pox in four, fever in six, and cattle-disease decreasing in four divisions.
Kistna	Average last week since revised, 2·58; this week, 3·65.	Standing crops good. River 6·8 feet over Anicut. Slight fever. Cholera in one, and cattle-disease increasing in four taluks.
Chingleput (Madras)	Average 2·83	Standing crops fair. Harvest wet and dry crops, outturn below average. Cholera in three, small-pox in six, and cattle-disease increasing in four taluks.
Coimbatore	Average 1·03	Standing crops generally good. Harvest dry grains, outturn about average. Fever in one taluk.
Tanjore	Average last week since revised, 2·21; this week, ·97.	Standing crops generally good, but in parts of one taluk indifferent for want of sufficient rain. Harvest dry grains, outturn below average. Cattle-disease increasing in one taluk.
Madura	Average last week since revised, ·84; this week, ·47.	Standing crops fair, but withering in parts of two taluks for want of sufficient rain. Cattle-disease decreasing in one taluk.
Malabar	Average 2·45	Standing first crop paddy ripening. Harvest paddy, outturn about average. Slight small-pox in six and fever and cattle-disease in two taluks.
Travancore	1·14	Harvest of first crop paddy almost over. Small-pox and fever in parts. *General Remarks.*—General prospects fair.
Bombay—(Sept. 14th)		
Karachi		River at Kotri on 12th, 15 feet 7 inches against 17 feet 2 inches on same date last year. *Kharif* crops in ear in certain parts. Want of water is felt in some talukas. Fever in eight talukas. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Sehwan 26, 30 and 40 pounds per rupee, respectively.
Hyderabad	Slight rain in Bago Tando on 30th August.	*Kharif* cultivation in progress. Fever in seven and small-pox and cattle-disease in two talukas. River at Kotri on 12th, 15 feet 7 inches against 17 feet 2 inches on same date last year. Early fall of river most unfavourable to agricultural prospects. Wheat 24, *jowari* 40, *bajri* 33½, white rice 18 and red rice 28 pounds per rupee.
Ahmedabad		Standing crops promising. More rain wanted in Parantij, Dhandhuka, Sanand and Daskroi talukas. Cattle-disease in Goghadhuka, Sanand and Daskroi talukas. Fever in Dholka and Parantij talukas. Fourteen cases of cholera in the city, of which ten were fatal. Wheat 28 and *bajri* 30 pounds per rupee.
Baroda		Public health fair. Cholera has again appeared in Baroda city, 5 cases fatal out of 7 attacked. It also prevails in Kathor taluka of Naosari division and in Sidhpur, Patan and Mehsana talukas of the Kadi division. Cattle-disease in Petha Vakal and Vyara taluka of the Naosari division and in Kadi and Vadnagar Mahals. Standing crops in good condition. *Bajri* 25, rice 23, and wheat 19 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Surat	Rain in six talukas—maximum in Chikli, 5·49 and minimum in Chorasi, ·39.	Weeding progressing. *Jowari* and cotton crops suffered in several places in Bardoli, Chikli, Bulsar, and Pardi talukas; other young crops healthy. Cattle-disease in Jalalpur taluka. Fever in Bardoli, Jalalpur, and Chikli. Cholera in Chikli, Bulsar, and Pardi talukas, 151 cases, 61 deaths. *Jowari* 32 and *nagli* 43 pounds per rupee.
Nasik	Igatpuri, 9·79; Peint, 8·36; Nasik, 7·74; Kalwan, 6·59; Sinnar, 5·02; Nandgaon, 4·39; Dindori, 3·74; Chandor, 3·54; Malegaon, 2·23; Yeola, 1·94; Baglan, 1·71; and Niphad, 1·29.	Standing crops flourishing. Rain beneficial, save in Peint, where *nagli* crops damaged to some extent. Land being prepared for *rabi* in some of the talukas. Weeding in progress in Peint. Cholera in Nasik, Nandgaon, Malegaon, and Baglan, total attacks 73, deaths 26; public health of the remaining talukas good. Prices steady.
Colaba (Bombay)	Rain every day, except on 12th and 13th; heavy from 9th to 11th; total of week, 15·03; total to date, 89·25, being 25·71 above average.	Abnormal temperature 1° cool on 7th, 1° warm on 8th, fell to 4° cool on 10th, rose to *nil* on 12th, and remained *nil* on 13th. Vapour in air excessive on 8th and 9th, normal on all other days. Abnormal wind from north-east on 7th and 8th, from north-north-west from 9th to 12th, strong only on 10th; wind normal on 13th; thunder and lightning on 8th, thunderstorm on 9th, and thunder on 10th.
Poona	Copious rain throughout the district—maximum 7·34 in Petha Baramati and minimum 3·43 in Poona city.	Crops doing well. Late rain has proved beneficial to the crops in places, where it was much wanted. *Public health generally good.* Eighty-seven cholera cases in Khed, Sirur, Purandhar, Bhimthari, and Haveli talukas, 49 fatal; in Poona city ten attacks and two deaths. *Bajri* 41 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 43 pounds per rupee in Poona city.
Ahmednagar	Rain in Jamkhed, 7·08; Karjat, 6·88; Shrigonda, 5·63; Akola, 5·17; Parner, 4·84; Rahuri, 4·55; Newasa, 3·94; Sheogaon, 3·55; Nagar, 3·24; Sangamner, 3·05; and Kopargaon, 2·47.	*Kharif* crops progressing. Sowing of *rabi* retarded by excessive moisture. Cholera attacks 147, deaths 51. Cattle-disease in Jamkhed. *Bajri* 36 and *jowari* 60 pounds per rupee.
Sholapur	Rain in Sholapur, 3·42; Barsi, 3·48; Madha, 5·43; Karmala, 9·02; Pandharpur, ·80; Sangola, 2·32; and Malsiras, 4·32.	*Kharif* crops doing well. Sowing of *rabi* crops retarded in parts of Sholapur, Pandharpur, and Malsiras talukas, owing to excessive moisture. Cholera in all talukas, except Pandharpur, cases 142, deaths 53. *Jowari* 58⅛ and *bajri* 51⅛ pounds per rupee.
Dharwar	General rain varying from ·27 in Bankapur to 5·76 in Nawalgund.	Rice crops good, but require heavy showers soon. *Jowari* and minor crops also good. Cotton sowing in progress throughout the district. Slight cholera in Bankapur and Kalgatgi, and slight cattle-disease in Dharwar taluka. *Jowari* 57 and rice 24 pounds per rupee.
Kanara	Rain in Karwar, 9·34; total 122·58; Kumta, 3·53; Sirsi, 1·68; and Haliyal, 1·29.	Rice crop in ear in Karwar and Akola talukas. Slight fever and cattle-disease throughout the district. In Supa 75 cattle died from rinderpest, severe cattle-disease in Mugud. Common rice in Karwar 11, and district average 12 seers per rupee.
Rajkot	·04; total 26·85	Weather hot. Fever and bowel-complaints in Rajkot and in some villages under Jetpur and Bagasra. Crops in good condition. Wheat 24, *bajri* 23, and *jowari* 29 pounds per rupee. *General Remarks.*—Good rain in most districts. Crops generally benefited throughout the Deccan and Southern Mahratta Country, but injured by excessive moisture in parts of Surat and Ratnagiri. River falling in Sind. Crops suffering from want of moisture in parts of Shikarpur. *Rabi* sowing in progress in several districts. Cholera in parts of seventeen, fever in parts of fifteen, cattle-disease in parts of fourteen and small-pox in parts of five districts. Cholera not reported from Kaira and Rajkot.
Bengal—(Sept. 14th)		
Chittagong (Sept. 13th)	2·42	Weather hot. *Aman* and sugarcane thriving. Cholera reported, public health otherwise good. Prices stationary.
Dacca	1·92	Prospects of crops good, but rain much wanted. Jute being cut, outturn good. *Aus* nearly reaped. Public health good.
24-Pergunnahs (Calcutta).	1·83	Prospects of *aus*, jute and sugarcane satisfactory. *Aman* not doing so well for want of sufficient rain. Harvesting of *aus* over. Public health fairly good for the time of year.
Khoolna	3·48	Weather hot. Occasional heavy showers. Transplanting of *aman* and cutting of *aus* continued. Public health fair.
Moorshedabad	2·78	Weather hot. Rain at intervals. Harvesting of *bhadoi* paddy almost over. Prospects of *aman* still good, except in Kandi, where it is suffering from want of rain. Sowing of *til* commenced. Sugarcane and jute progressing. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Pubna	2·78	Weather seasonable. General health and prospects of crops good.
Dinagepore	*Nil*	*Bhadoi* and jute being harvested. Transplantation of *aman* nearly finished.
Rungpore	*Nil*	Prospects of crops good. Public health fair.
Midnapore	1·75	Prospects of crops good. More rain wanted.
Burdwan	3·88	*Aman* rice prospects improved by rain on 10th. More rain wanted. Prices stationary. Cholera and fever still in Sadr.
Bhagalpur	·34	Late rice promising. Transplanting finished. *Bhadoi* harvest continues with fair outturn. Cholera abating.
Purneah	·12	All crops doing well. *Aghani* being transplanted. Public health bad. Rivers falling.
Durbhanga	·10	*Bhadoi* harvest continues. Rice transplantation going on. Public health generally good.
Chumparun	*Nil*	*Prospects* of crops continue favourable. Rice transplantation almost completed. *Bhadoi* crops being harvested. Prices stationary. Public health fair.
Patna	9·87	Transplantation of paddy still going on in some places. Reaping of *bhadoi* crops almost finished. Cholera still reported from Behar and Dinapore subdivisions, but decreasing.
Gya	9·59	Harvesting of *bhadoi* going on. Paddy suffering much from want of rain. Cholera still reported, but decreasing. Fever also reported.
Hazareebagh	3·18	Weather occasionally cloudy. Moderate rain. More rain wanted for rice crop. *Bhadoi* being harvested in places. General health fair. Cholera in a few places.
Cuttack	2·50	Weather cloudy at times. Reaping of *beali* rice in progress. *Sarad* rice growing splendidly on irrigated lands, but scorching in many places. Prices unchanged. Cholera still continues. *General Remarks.*—Moderate rain reported in parts of the province, excepting some of the Northern Bengal districts, but showers only in Behar. Rainfall of the week very beneficial to the *aman* crop, but more rain is still needed in South-West and East Bengal, Orissa and Chota Nagpur. Autumn crops are being harvested, general outturn expected to be fair. Sugarcane prospects continue favourable. Some fever and cholera, but general health fair.
N.-W. Provinces and Oudh—(Sept. 14th)		
Benares (Sept. 13th)	·20 at Sadr	Agricultural prospects fair. Supplies ample. Prices slightly fluctuating. Health generally good.
Ballia („ 12th)	. . . . .	Weather fair and sultry. *Jowari, sawan, kakun,* and *marua* being cut. Sugarcane thriving. Supplies ample. Prices steady. Health good.
Gorakhpore („ „)	·20 at Sadr	Prices stationary. Cholera almost disappeard.
Fyzabad („ 13th)	Average ·40 only	Weather bright. Agricultural prospects favourable. Cholera almost disappeard. Slight cattle-disease.
Lucknow („ 12th)	No rain	Break very beneficial for *mash* crops and *rabi* sowing. *Sawan* and *kakun* being cut. Supplies ample. Prices stationary. Health of people good, and condition of cattle fair.
Rai Barelli („ „)	. . . . .	Break in the rains. Crops look well. Prices steady. Cholera disappearing. A little fever and ague reported. Slight cattle-disease.
Partabgarh („ 13th)	Rain much abated	*Kharif* crops being reaped. Prices steady. No illness.
Allahabad („ „)	Slight showers in Sadr and Karchana tahsils. No rain elsewhere.	Crops on the whole good. *Jowari, bajri,* and cotton slightly damaged in places by previous heavy rainfall. Markets full. Prices rising slightly. Isolated cases of cholera still continue and a good deal of fever is reported.
Cawnpore („ „)	Rain in three tahsils from ·20 to ·70.	Condition of *kharif* improving. Ground for *rabi* being prepared. Prices almost stationary. Cholera and fever in places. Cattle-disease in two parganas.
Farakhabad („ „)	No rain except a slight shower on 12th.	Heat intense. Crops thriving. *Makki* and indigo being cut. Ploughing for *rabi* commenced. Supplies ample. Prices still rising. Some cholera in places.
Sitapur („ „)	Good rain has fallen at the Sadr and Misrik tahsils.	Good accounts received of the crops. Cholera not in the increase.
Bareilly („ „)	A little rain	Crops doing excellently. Prices steady. Cholera very slight here and there. General health good.
Banda („ 12th)	Rain on 11th at Sadr	*Kharif* crops injured by excessive moisture. *Rabi* ploughing continues. Prices risen. Fever prevalent.
Kumaon („ 13th)	. . . . .	Weather favourable. Crops excellent. Prices steady. Cholera in one *patti*. General health good. Cattle disease on decrease.
Agra („ 12th)	. . . . .	Weather drier and more seasonable. *Kharif* weeding and *rabi* ploughings continue. Prices rising slightly. Cholera decreasing.
Jhansi („ „)	. . . . .	Clear weather has allowed weeding to be resumed. Preparation of lands for *rabi* crops begun. Cholera almost disappeared. Some fever and cattle-disease prevalent.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
N.-W. Provinces and Oudh—*contd.*		
Meerut (Sept. 13th)	No rain	Break beneficial to crops. Sugarcane in first rate condition. Maize and cotton somewhat injured. Ploughing for *rabi* commenced. Prices again show slight rise owing to difficulties of transport. Cholera reported from all tahsils, except one. Fever and some cattle-disease also reported.
		General Remarks.—There has been a general and beneficial break in the rains during the week. Ploughing for the *rabi* is in progress, and in the eastern districts the *kharif* crops are being cut. Supplies are ample, and there is no material alteration in prices. Cholera is rapidly dying out and, with the exception of the fever, natural to the season, the public health is good.
Punjab—(Sept. 14th)		
Hissar (Sept. 13th)	. . . .	Fever prevalent. Prices stationary. *Rabi* ploughings in progress. *Kharif* prospects good.
Delhi . . .	·22	Health fair. Prices rising. *Kharif* crops damaged by rain.
Umballa . . .	. . . .	Prices falling. *Kharif* crops flourishing.
Jullundur . . .	. . . .	Health good. Prices stationary. *Kharif* prospects good.
Ferozepore . . .	. . . .	Health good. Prices stationary.
Amritsar . . .	. . . .	Slight fever. Prices stationary. *Kharif* crops good.
Sialkot . . .	. . . .	Health good. Prices stationary. *Kharif* paddy crops withering, other crops flourishing.
Lahore . . .	. . . .	Prices stationary. *Rabi* ploughings in progress.
Multan . . .	. . . .	Health good. Prices stationary. *Rabi* ploughings commenced. *Kharif* prospects good.
Rawalpindi . . .	·10	Health good. *Kharif* prospects good.
Shahpur . . .	Rain has fallen	Health good. Prices stationary. *Kharif* prospects improved.
Dera Ismail Khan .	·29	Health good. Prices stationary. *Kharif* prospects fair.
Peshawar . . .	Slight rain	Prices fluctuating. *Kharif* prospects average.
		General Remarks.—Slight rain has fallen in Delhi, Rawalpindi, Shahpur, Dera Ismail Khan, and Peshawar. Health is generally good, but cholera is still present in Hissar, Delhi and Umballa; in Lahore and Peshawar it is decreasing. Fever is prevalent in Hissar and slight in Amritsar. Prices are rising in Delhi, falling in Umballa, and fluctuating in Peshawar; elsewhere stationary. *Kharif* prospects generally good. In Delhi crops have been damaged by rain and paddy crops withering in Sialkot. *Rabi* ploughings in progress in Hissar, Lahore, and Mooltan.
Central Provinces—(Sept. 14th)		
Saugor . . .	1·51	Weeding continues. Cholera declining. Fever prevalent. Prices steady.
Jubbulpore . . .	2·75	Weather showery. Prospects favourable. Fever prevails. Prices steady.
Nagpur . . .	·66	Weather rainy, break urgently wanted. All crops, except rice suffering. 109 cases of cholera, 47 deaths. Fever prevalent.
Seoni . . .	2·00	Break much needed. *Rabi* lands unploughed. Cholera slight. Prices unchanged.
Hoshangabad . .	1·37	*Kharif* crops injured by excessive rain. *Rabi* ploughings retarded. Fever in places. Prices unchanged.
Khandwa . . .	·77	Weather cloudy and close. Prospects good. 41 cases of cholera, 27 deaths. Prices unchanged.
Bilaspur . . .	2·34	Rice on black soil injured by rain. Prospects good. Fever and cattle-disease prevalent. Prices falling.
Raipur . . .	4·99	Weather cloudy and cool. Weeding almost finished. *Til* and cotton slightly injured by rain. *Rabi* ploughings in progress. Prices steady.
Sambalpur (Sept. 10th)	·64	Weather close and cloudy. Crops promising, but backward owing to late sowings. Cholera in places.
		General Remarks—Break generally needed, rain continues, except in Nimar and Raipur and eastward. Cholera in Nagpur, Seoni, and Khandwa. Prices as a rule steady.
Burma—(Sept. 14th)		
Akyab (Sept. 10th)	3·88 (Total rainfall to date 135·80).	Slight cholera in the town and district. Slight cattle-disease. Crop prospects favourable.
Bassein . . .	1·25 (Total rainfall to date 75·51).	Some cattle-disease in district. Ploughing and transplanting almost completed.
Rangoon . . .	2·52 (Total rainfall to date 83·17).	
Amherst (Moulmein)	2·09 (Total rainfall to date 140·87).	Ploughing and transplanting progressing. Prospects of crops good.
Tavoy	7·30 (Total rainfall to date 154·52).	Crops reported healthy.
Pegu	7·72 (Total rainfall to date 109·42).	

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Henzada . . .	3·03 (Total rainfall to date 60·17).	Crops healthy.
Prome	2·88 (Total rainfall to date 29·89).	Slight cattle-disease in one township. Ploughing and transplanting finished in one township.
Toungoo . . .	3·07 (Total rainfall to date 65·09).	Transplanting far advanced.
Thayetmyo . . .	2·21 (Total rainfall to date 22·03).	Cattle-disease prevalent in two townships. Ploughing and transplanting continued.
Kyaukse . . .	Last week ·48; this week ·04. (Total rainfall to date 16·70)	Crops in excellent condition.
Myingyan . . .	2·05 (Total rainfall to date 17·52).	Food-supply sufficient. Prices ordinary.
Mandalay . . .	·19 (Total rainfall to date 25·95).	Transplanting of *kyaukki* crops progressing. Food-supply sufficient. Prices normal.
Yamethen . . .	2·35 (Total rainfall to date 22·52).	Cultivation progressing.
		General Remarks.—Slight cholera in Akyab and cattle-disease in seven districts of Lower Burma. Transplanting nearly over. Crops everywhere healthy. Reports from nine Upper Burma districts. Public health good. Anthrax severe and cattle-disease spreading in Pyinmana, where plentiful rain has now fallen. Paddy scarce there and in Yeu. *Kyaukki* paddy will be reaped in Yeu a month hence.
Assam—(Sept. 13th)		
Gauhati (Sept. 13th)	. . . .	Weather very hot. Public health fair. Malarial fever still prevalent in Sastra Barpetta and its vicinity, also in parts of Polasbari, Luki, and Chomoria tahsils. Cattle-disease reported to have abated. More rain wanted for *sali* crop. Sowing of *mati kalai* commenced.
Sylhet	1·83	Tea prospects good, and all other crops requiring rain. Insects injurious to paddy in Sunamganj and South Sylhet. Thirteen deaths from cholera in Karimganj.
Cachar	. . . .	Weather sultry and dry. Prospects of crop not good for want of rain; the severe drought has checked the growth of tea very considerably, blight still hangs about. Rice selling at 17 seers 12½ chittacks per rupee. Public health good.
Dibrugarh . . .	. . . .	Weather very hot. *Mati kalai* being sown. Public health indifferent.
Mysore and Coorg—(Sept. 14th)		
Bangalore . .	Civil and Military Station, 1·82; Bangalore district headquarters, 2·52; Mysore, 2·71; rainfall general throughout the State.	Standing crops in good condition. Prospects of season favourable. More rain needed for crops in Kadur taluk. Public health generally good. Three cases of cholera in Bangalore town and 4 in the Civil and Military Station. Prices slightly fallen in the Bangalore district.
Mysore . .		Standing crops generally in good condition. Small-pox in one "*nad*."
Mercara . . .	7·45	
Berar and Hyderabad—(Sept. 14th)		
Amraoti . . .	3·91	Weather cloudy and close, with heavy showers at intervals. Weeding of *kharif* crops stopped owing to excessive rain. Fever in Amraoti and Morsi. Cholera in places, but abating. Wheat 16 and *jowari* 26 seers per rupee.
Akola . . .	2·64	Weather cloudy and warm. Prospects of *kharif* crops favourable, except in Jalgaon taluk, where they are suffering from excessive rain. Cholera continues. Fever prevalent.
Hyderabad (Sept. 15th)	2·42; total 18·88	*Kharif* crops continue to thrive. Weeding commenced. Wet cultivation begun in most of the taluks. General health good. Prices—wheat 12¾, coarse rice 12, white *juar* 18¾, yellow *juar* 20¾, and *tur* 14 seers per current sicca rupee.
Central India States—(Sept. 14th)		
Indore . . .	1·90	Oppressive weather followed by steady rain.
Morar (Gwalior) .	. . . .	Fever prevalent.
Neemuch . . .	. . . .	Two fatal cases of cholera among troops. Weather very warm.
Sutna . . .	. . . .	Fever prevalent.
Goona . . .	. . . .	Prices almost stationary. Health good.
Agar . . .	. . . .	Health and prospects fair.
Sehore . . .	·70	Weather hot and cloudy. Cholera in Sehore, 13 cases, 5 deaths.
Nowgong . . .	·16	Cholera in parts and lingering in the Cantonment. Weather cloudy. Prices steady.
Bhopawar . . .	2·50; (total to date 40·80).	Prices steady. Cholera reported from Sirdarpur, Dhamode, and Bagode, otherwise health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Sept. 14th)		
Abu (Sept. 14th)	. . . . .	Weather clear and seasonable.
Sirohi („ 11th)	. . . . .	Tanks fair; wells good. Health good. Crops good. Few clouds.
Marwar („ 10th)	. . . . .	Cholera still prevails. *Kharif* doing well, except in some districts. Weather clear, but oppressively close. Market easy. Prices stationary.
Meywar („ „)	. . . . .	Tanks and wells full. Crops average. Health very fair. Prices stationary. Weather bright.
Pertabgurh („ „)	. . . . .	Health good. Prices steady.
Harowti („ „)	Shahpura, ·09	Weather fine. Crops recovering. *Rabi* ploughing commenced. Two fatal cases of cholera in Shahpura, elsewhere health good.
Jhallawar („ 11th)	. . . . .	Health generally good. *Makka* being cut, poor outturn expected.
Ajmere („ 13th)	. . . . .	Weather sultry. Cholera lingering in Ajmere district and Beawar. Land being prepared for *rabi* cultivation. Prices slightly rising.
Jeypore („ „)	. . . . .	Weather showery. Slight cholera in Jeypore city continues. Prices high.
Kerowlee („ 10th)	·36	Tanks and wells full. Cholera disappearing. Prices slightly falling.
Dholepore („ „)	. . . . .	Tanks and wells full. Crop prospects average. Health good. Prices stationary. Weather clear.
Bhurtpore („ 13th)	. . . . .	Break beneficial. Weeding continues. Health good.
Ulwar („ „)	. . . . .	Since break in rains, crop prospects are improving. Health good. Cholera subsiding, almost going from city.
Kotah („ 10th)	. . . . .	Health good. Prices stationary. Weather clear.
Kherwara („ 11th)	. . . . .	Tanks and wells still unfilled. Crops good. Prices not cheaper. Weather fine.
Bickanir („ 10th)	Good rain in the district.	Tanks and wells full. Prospects good. Fever in some districts. Prices stationary. Weather partially cloudy and hot.
Nepal—(Sept. 9th)		
Katmandu (Sept. 8th)	2·33	**Weather seasonable. A short crop of rice in the hills is anticipated. Prices already are very high.**

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 14th September, 1887.

During the last few days of the preceding week, it will be remembered, a break in the rains obtained over a large part of India. This lasted into the beginning of the week under review, during which time fine weather was reported over nearly the whole of Northern India with a rising temperature and low humidity.

On the 8th a feeble monsoon current was blowing on the Bombay Coast, and the rainfall due to it was almost entirely confined to the West Coast districts, only slight showers falling in the Central Provinces, and none in Central India or Rajputana. On the 9th there were some signs of a change of weather; the winds had increased a little on the West Coast, and the rainfall became heavier. On the 10th this change further developed, and a strong monsoon was blowing across the Bombay and Guzerat Coasts. These strong winds penetrated to a considerable distance inland, so that, while general and heavy rain was reported in the West Coast districts, the Central Provinces received moderate amounts. At Bombay 10 inches, and at Ratnagiri 4 inches of rain fell. The report of the 11th showed that a strong monsoon current continued all along the West Coast from Colombo to Kurrachee, and that, in the Berars and the Central Provinces, the winds were rising. The area of rainfall was the same as on the preceding day, but the amounts on the West Coast were lighter. On the 12th conditions were unaltered, except that heavy rain had extended to the Deccan; Sholapur and Secunderabad receiving about 3 inches. On the 13th the strength of the current crossing the West Coast had somewhat diminished, and the rainfall in the Coast districts at the same time decreased, but over the Central Provinces and Central India, owing to the indraught towards a depression lying near Seoni, the rainfall was general and moderately heavy. The chart of the 14th showed no change in the winds. The West Coast districts reported slight unimportant showers, but the rainfall of the Central parts of the country continued moderately heavy.

In the Bay of Bengal the weather has been much more unsettled than during the previous week. On the 8th feeble unsteady winds prevailed at the head of the Bay and light variable breezes inland. In consequence the rainfall was exceedingly slight, the only important falls being reported from Burmah. These feeble and irregular winds continued during the 9th, when hardly any rain fell in Bengal and only moderate showers in Burmah. On the 10th a well marked depression was shown over the head of the Bay and in Lower Bengal, where the barometer was also falling fast. This distribution of pressure occasioned northerly winds over a large part of Western and Lower Bengal, but gave a fairly good monsoon current to Burmah. A few unimportant showers fell in Lower Bengal and general moderate rain in Burmah. The report of the 11th showed a slight development of the cyclonic disturbance at the head of the Bay, and a fairly good monsoon current swept over the east of the Bay and travelled inland over the greater part of Bengal. Moderate general rain accompanied this change. On the 12th the depression had advanced westward towards the Central Provinces, and ordinary monsoon weather prevailed over the Bay and Bengal. On the 13th the same favourable conditions continued, but on the 14th the wind became unsteady again at the head of the Bay, and the rainfall became less general, though Saugor Island received a heavy fall. In Burmah heavy rain was experienced generally, particularly on the Coast.

In Upper India the greater part of the week has been occupied by a decided break in the rains. On the 8th there was no rain; on the 9th and 10th slight showers fell in the Indus Valley, but no rain in any other part of Upper India. On the 11th the fine weather continued, but on the 12th the monsoon current from the Bay of Bengal penetrated into the Upper Provinces and rain

fell all over the North-Western Provinces and at Peshawar. On the 13th and 14th similar conditions prevailed.

The table of seasonal rainfall shows very clearly the effect of the week's break in Northern India and of the week's heavy rain over the Central Provinces. At Calcutta, Dhubri, Purneah, and Gya the deficiency is larger than it was at the close of the previous week. At Allahabad the excess then reported has almost and at Meerut wholly disappeared; while at Delhi and Lahore the excess is much slighter than it was on the 7th. At Peshawar and Cochin the deficiency has increased during the past seven days, while at Ratnagiri, Bombay, Poona, and Nagpur the excess has increased. On the whole the rainfall has so far been deficient in Burmah and Northern India, except parts of the North-Western Provinces and the Punjab, and excessive over the greater part of Central and Southern India:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to September 14th.	Difference.
Akyab ...	121·25	144·99	—23·74
Saugor Island ...	46·94	50·38	— 3·44
Calcutta ...	37·33	44·20	— 6·87
Dhubri ...	51·02	57·70	— 6·68
Purneah ...	40·55	51·38	—10·83
Gya ...	28·93	33·24	— 4·31
Allahabad ...	32·48	31·49	+ 0·99
Meerut ...	21·08	21·30	— 0·22
Delhi ...	33·61	20·69	+12·92
Lahore ...	16·07	12·45	+ 3·62
Peshawar ...	2·42	5·82	— 3·40
Cochin ...	61·17	77·78	—16·61
Ratnagiri ...	106·45	92·06	+ 14·39
Bombay ...	88·89	62·73	+ 26·16
Poona ...	20·95	18·97	+ 1·98
Surat ...	37·27	36·15	+ 1·12
Khandwa ...	29·26	27·43	+ 1·83
Nagpur ...	47·25	34·12	+13·13

The mean pressure of the week is everywhere below the average of the month, while the mean temperature is on the contrary on the whole above. In the Indus Valley high day temperatures were recorded all the week.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	46·00
Bengal and Assam ...	14	21·21
North-Western Provinces and Oudh ...	8	8·92
Punjab ...	2	0·75
Hill Stations ...	3	2·84
Ceylon ...	2	2·21
Malabar Coast ...	4	13·48
Bombay ...	9	60·43
Berars and Central Provinces ...	10	35·99
Guzerat and Central India ...	4	4·54
Sind—Rajputana ...	2	0·73
Madras ...	12	14·82

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

CURTAILMENT OF ANNUAL REFORTS.

Circular No. $\frac{52G.}{69-6.}$

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department—(General),—under date Simla, the 14th September, 1887.

READ the undermentioned papers relating to the curtailment of annual reports:

(1) Circular to Local Governments and Administrations No. $\frac{6}{24-1}$, dated the 21st January, 1886.

(2) From the Government of Madras, No. 482A., dated the 14th June, 1886.

(3) „ „ „ 1456, „ 12th July, 1886.

(4) „ „ Bombay, No. 2183, dated the 19th June, 1886.

(5) „ „ Bengal, No. 635—21 Mis., dated the 19th February, 1886.

(6) From the Government of Bengal, No. 1531T.R., dated the 3rd November, 1886.

(7) „ „ „ 3595, dated the 30th December, 1886.

(8) „ „ North-Western Provinces and Oudh, No. $\frac{161}{111-703}$, dated the 13th February, 1886.

(9) From the Government of Punjab, No. 408, dated the 10th September, 1886.

(10) „ „ „ 1068, „ 19th May, 1887.

(11) To the Government of Punjab, No. 482, dated the 2nd June, 1887.

(12) From the Chief Commissioner, Central Provinces, No. 564, dated the 27th July, 1886.

(13) From the Chief Commissioner, Burma, No. 395—58R., dated the 17th March, 1886.

(14) From the Chief Commissioner, Assam, No. 1192, dated the 22nd February, 1886.

(15) „ Resident at Hyderabad, No. 63G., dated the 5th March 1886.

(16) Resolution recorded in the Home Department, No. $\frac{28}{1579-95}$, dated the 15th July, 1887.

RESOLUTION.

This Resolution may be considered as supplementary to that issued in the Home Department, No. 28, dated 15th July 1887, the general principles expressed in which may be applied to reports submitted to the Government of India, in the Revenue and Agricultural Department. The reports thus submitted are concerned with the subjects enumerated below:

(1) Land Revenue Administration.

(2) Forest Administration.

(3) Land Records and Agriculture.

(4) Court of Wards and other estates administered by Government.

(5) Horticultural and Botanical Gardens.

(6) Experimental Farms.

(7) Trade Statistics, Quarterly and Annual.

(8) Colonial and Inland Emigration.

2. *Land Revenue Administration and Forest Administration Reports.*—The Government of India concurs with the general opinion expressed in the replies which have been received that no material alteration should be made in the preparation of the Land Revenue Administration and Forest Administration Reports; and that these should continue, as at present, to be annually submitted.

3. *Report of the Department of Land Records and Agriculture.*—The annual publication in every Province of the Report of the Department of Land Records and Agriculture in the form prescribed in Circular Resolution No. 54A, dated the 28th April 1884, is, in the opinion of His Excellency in Council, essential for the purpose of indicating the progress which may be annually made by the Department of Land Records and Agriculture in connection with the measures adopted in pursuance of the recommendation of the Famine Commissioners in each portion of the Empire. The report consists of two main divisions—Land Records and Agriculture—and is designed to show the executive work of the Department, not to comprise discussions on administrative measures, or to contain any description or summary of the economic or agricultural circumstances of the season. The Local Government may, however, require information of this kind to be submitted by the Department to the Chief Revenue authorities of the Province, for utilization in preparing the Land Revenue Administration Report, and may prefer that for that purpose it should be included in the land record section of the Departmental Report, rather than be submitted by independent communication. There will be no objection to this course. But there seems to be no reason why statistical statements concerning crops, irrigation, tenures, &c., should find a place in the Report of the Department as well as in the Annual Land Revenue Administration Report, to which latter they should, in the opinion of His Excellency in Council, be confined. The Agricultural section of the Departmental report should be restricted to an account of the executive operations of the Departmental officers, and to a brief description of, or reference to, any results of special interest which may have been obtained during the preceding twelve months, whether in farms, gardens, Government estates, or otherwise, but should avoid lengthy discussions on agricultural subjects and need not contain any detailed examination of the working of gardens, farms, or other agricultural institutions, which should be dealt with in the Department by orders on the annual reports. In accordance with the above remarks, His Excellency in Council is of opinion that no other review of the Annual Report of the Director of the Department of Land Records and Agriculture than that which may be included in the review by the Local Government of the Land Revenue Administration Report is necessary; and that it will suffice if a copy of the Report, together with any orders which may be passed thereon, is submitted for the information of the Government of India.

4. *Report on Court of Wards and other estates administered by Government.*—Much importance is attached by Her Majesty's Secretary of State, as well as by His Excellency in Council, to the manner in which estates under Government management are administered, and to the use made of the opportunities afforded by them for ascertaining the economic condition of the agricultural population. Reports on such estates should, in the opinion of the Government of India, continue to be annually prepared. These and not the reports of the Department of Land Records and Agriculture should contain an account of any agricultural improvements that may have been introduced.

5. *Annual Reports on Horticultural and Botanical Gardens.*—These may, as already indicated, be dealt with departmentally, and need not, in the opinion of the Government of India, be reviewed at length by any higher authority than the Director of the Department of Land Records and Agriculture, or other controlling officer, but should be forwarded to the Government of India for information, with a copy of any orders that may have been passed on them by the Local Government. A representation recently received through the Secretary of State from the authorities at Kew, as to the utility of such reports, indicates the advisability of their maintenance as a record of useful or interesting facts and experiments.

6. *Reports on Experimental Farms* are divided into two sections—Statistical and Administrative—the former are issued yearly, or half yearly, and should, under existing orders, be distributed by Departments of Land Records and Agriculture direct to the Government of India, other provinces, and Agricultural institutions. They should continue to be prepared, but require no review or orders by the Local Government. The complete reports, including the Administrative section, will be dealt with in the same manner as reports on gardens.

7. *Internal Trade Statistics.*—The quarterly and annual returns are, under existing orders, distributed and briefly reviewed by the Department of Land Records and Agriculture, or by such other authority as may be responsible for them. In future the annual report on Internal trade may, in the opinion of His Excellency in Council, be dealt with in the same manner as reports on sea-borne trade; and no further review will be required from Local Governments and Administrations.

8. *Reports on Colonial and Inland Emigration* should be retained in their present form.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Local Governments and Administrations noted in the margin, for information and guidance; and to the Home Department, for information.

Madras.	Punjab.
Bombay.	Central Provinces.
Bengal.	Burma.
North-Western Provinces and Oudh.	Assam.
	Hyderabad.

Ordered also, that it be published in the Supplement to the *Gazette of India.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 22nd SEPTEMBER, 1887.

GENERAL REMARKS.—Rain has fallen throughout the country during the week, the falls being heaviest in Bengal, the North-Western Provinces and Oudh, and the Central Provinces.

Kharif prospects are generally excellent in all Provinces.

Ploughing for the *rabi* is in progress in the North-Western Provinces and Oudh, the Punjab, Central Provinces, and Rajputana, and sowings have commenced in Bombay.

In Madras the standing crops are promising, though in two or three districts more rain is required. In Mysore and Coorg prospects are favourable.

In Bengal the early rice has yielded a fair outturn, and the late variety is doing well. The prospects of the crop in Bombay, the Central Provinces, the North-Western Provinces and Oudh, Coorg, and Burma are good. In Assam more rain is needed; and in Nepal a short crop has been gathered.

Except that the usual autumnal fever exists in most Provinces, the public health is generally satisfactory.

Prices are generally stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Sept. 21st.)		
Bellary	Average ·44	Standing crops good. Cholera in three, and cattle-disease increasing in two taluks.
Kurnool	Average last week since revised, 5·19; this week, ·76.	Standing crops fair, but in three taluks suffered from excessive rain. Small-pox in two, and cattle-disease increasing in five taluks. Cholera increasing.
Ganjam	Average last week since revised, 1·73; this week, 1·90.	More rain wanted. Small-pox in five, fever in seven, and cattle-disease increasing in seven divisions. Slight cholera.
Kistna	Average last week since revised, 4·02; this week, ·75.	Standing crops good. River 9·2 feet over Anicut. Slight fever. Cholera in one and cattle-disease decreasing in four taluks.
Chingleput (Madras)	Average ·02	Standing crops fair. Harvest wet and dry crops, outturn below average. Small-pox in two, cholera increasing in three, and cattle-disease decreasing in five taluks.
Coimbatore	Average ·05	Standing crops generally good, but require rain in parts. Harvest dry grains, outturn about average. Fever in one taluk.
Tanjore	Average last week since revised, 1·0; this week, ·01.	Standing crops generally good, but in parts of two taluks indifferent for want of sufficient rain. Harvest dry grains, outturn up to average. Cattle-disease decreasing in three taluks.
Madura	Average ·05	More rain wanted. Standing early dry crops withering in parts. Cattle-disease increasing in one taluk.
Malabar	Average 2·56	Standing first crop paddy ripening. Harvest paddy, outturn middling. Slight small-pox in six, fever in one, and cattle-disease in two taluks.
Travancore	1·03	Harvest of first crop paddy over, yield good. Small-pox and fever in parts. *General Remarks.*—General prospects fair.
Bombay—(Sept. 21st)		
Karachi		River at Kotri on 19th, 12 feet 5 inches against 14 feet 9 inches on same date last year. *Kharif* crops damaged in Sujawal taluka by breaches caused by overflow of Shorawak and Pinjri canals. Fever in eight, and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 30 and 32 and in Tatta 22, 34 and 34 pounds per rupee, respectively.
Hyderabad		*Kharif* cultivation in progress. Crops want water in eleven talukas. Small-pox and cattle-disease in one, and fever in eight talukas. *Jowari* attacked by insects in parts of Kandiaro. River at Kotri on 19th, 12 feet 5 inches against 14 feet 9 inches on same date last year. Wheat 24, *jowari* 36, *bajri* 33½, white rice 18, and red rice 28 pounds per rupee.
Ahmedabad	·05; total 24·53; 1·45 at Parantij.	Standing crops good. More rain wanted in the other talukas. Fever in Dholka, Gogha and Sanand talukas. 7 cases of cholera in the city of which 6 fatal. Wheat 27, and *bajri* 30 pounds per rupee.
Baroda	·40; total 44·12	Cholera in city, 11 cases, 6 deaths. It is present in parts of Naosari and Kadi divisions. Land under preparation for *rabi*. *Bajri* 26, rice 23, and wheat 19 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Surat		Weeding progressing. Rain wanted for *jowari* and cotton crops, other standing crops healthy. Cattle-disease in Jalalpur taluka. Fever in Olphad, Jalalpur and Bardoli. Cholera in Bardoli, Chikli, Balsar and Pardi talukas and Surat city, 151 cases, 81 deaths. *Jowari* 32, and *nagli* 42 pounds per rupee.
Nasik	Rain in Peint, ·71; Igatpuri, ·21; Chandor, ·10; Kalwan, ·05 and Yeola, ·02.	Standing crops good. Land being prepared for *rabi* sowings. Cholera in Nasik, Chandor, Nandgaon, Malegaon and Baglan, total attacks 64, deaths 30. Prices stationary.
Colaba (Bombay)	Rain on 16th, 18th, 19th and 20th; total of week, ·28; total to date, 89·28, being 23·39 above average.	Average abnormal temperature *nil*. Vapour in air slightly in defect of normal. Abnormal wind from west on 15th and from north-west on 19th; wind normal on all other days.
Poona	No rain in the district, except ·06 in Petha Mulshi.	Rain is still wanted in *desh* portion of the Haveli taluka. *Kharif* crops doing well. Sowing of *rabi* commenced in Indapur, Sirur, Bhimthari and Maval talukas. Public health generally good. 238 cholera cases in the district, 114 fatal; in Poona city 6 attacks and 1 death. *Bajri* 41 and *jowari* 52 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar	Very slight rain in three talukas only.	*Kharif* crops good. *Rabi* sowing commenced throughout district, except Jamkhed and Akola. Cholera attacks 257, deaths 100. *Bajri* 36 and *jowari* 57 pounds per rupee.
Sholapur	Rain in Sholapur, 4·33; Barsi, 2·82; Madha, ·07; Karmala, ·57; and Pandharpur, ·47.	*Kharif* crops doing well in all talukas, except Sholapur, where owing to excessive moisture a little damage has been done to rice and *bajri* crops. Sowing of *rabi* crops in progress. Slight cholera here and there in all talukas, except Pandharpur, cases 93, fatal 60. Cattle-disease in parts of Pandharpur and Sangola talukas. *Jowari* 59⅛ and *bajri* 51 1/16 pounds per rupee.
Dharwar	Rain at all stations, except Dharwar, Gadag, Ranibennur, and Mundargi, varying from ·06 in Nawalgund to ·86 in Ron.	Rice crops suffering from want of rain. *Jowari* and minor crops good. Heavy rain generally and urgently required. Cotton sowing in progress throughout the district. Slight cholera in Gadag, Bankapur, Kalghatgi, and Ron talukas, and slight cattle-disease in Dharwar taluka. *Jowari* 57 and rice 24 pounds per rupee.
Kanara	Rain in Karwar, 1·52; total 124·08; Honovar, 3·84; Sirsi, 2·90; and Yellapur, 1·99.	Rice crop in ear throughout the district, except in Yellapur. Cardamom harvest commenced in Siddapur and Sirsi. Slight fever and cattle-disease subsiding in Supa. Common rice in Karwar 10½ and district average 11¼ seers per rupee.
Rajkot	1·01; total 26·86	Weather hot. Fever in parts of Halar, Sorath, and Gohelvad. Crops in good condition. Wheat 24, *bajri* 23, and *jowari* 29 pounds per rupee. *General Remarks.*—Rain in several districts, more wanted in parts of Guzerat, Poona, Dharwar, and Belgaum. River still low in Sind. Crops suffering for want of water in parts of Hyderabad and Shikarpur, and damaged by blight in parts of Ratnagiri, by insects in parts of Hyderabad, by excessive moisture in parts of Sholapur, and by breaches in canals in parts of Karachi. *Rabi* sowing in progress in eight districts. Cholera in parts of seventeen, fever in parts of fourteen, cattle-disease in parts of eleven and small-pox in parts of five districts.
Bengal—(Sept. 21st.)		
Chittagong (Sept. 20th)	1·94	Weather seasonable. Late rice thriving. Cholera reported. Public health otherwise good. Prices stationary.
Dacca	1·11	Weather hot with occasional showers. Jute harvest still continues, outturn good. Late rice thriving. Prospects good. Rivers rising. Public health good.
24-Pergunnahs (Calcutta).	2·69	Prospects favourable, but more rain still wanted for *aman*. Harvesting of *aus* nearly complete. Jute being cut. Public health generally good. Some cattle-disease in Sadr subdivision.
Khoolna	1·04	Weather hot and cloudy with occasional rain. Transplanting of *aman* going on. Cutting of *aus* completed. Outturn fair. Public health fair.
Moorshedabad	2·11	Weather hot. Rain at intervals. Harvesting of *bhadoi* paddy almost over. Prospects of *aman* good. Sowing of *til* and *kalai* commenced. Sugarcane and jute progressing. Public health good.
Pubna	1·81	Weather seasonable. Rivers falling. Prospects of crops good. General health good.
Dinagepore	·77	*Bhadoi* harvest and *aman* transplanting finished. Jute harvest nearly completed.
Rungpore	2·60	Prospects of crops good. Fever prevailing.
Midnapore	2·02	Weather variable with occasional rain. Prospects of winter rice good, except in parts of Contai and Ghatal subdivisions.
Burdwan	·41	Rain much wanted for *aman* rice in most parts of the district. Autumn rice nearly harvested, outturn fair. Prices stationary. Cholera abating. Fever prevalent.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Bhagalpur	1·18	State and prospects of crops good. *Bhadoi* harvest in north continues.
Purneah	1·42	All crops doing well. *Aghani* being transplanted and *bhadoi* cut. Rivers falling. Health of people and cattle very bad.
Durbhanga	1·17	*Bhadoi* harvest continues. Prospects of rice very promising. Public health generally good.
Chumparun	1·31	Harvesting of *bhadoi* continues. Rice transplantation almost completed. More rain wanted in some parts of district. Public health fair. Prices stationary.
Patna	1·18	*Bhadoi* crops still being reaped. Paddy growing well. *Rahar* and cotton progressing. Castor being sown. Cholera still reported in Behar and a few cases in Dinapur, otherwise public health good.
Gya	At Sadr 4·75	Rain not so much in the mofussil, where it is badly wanted. Paddy suffering. *Bhadoi* being harvested. Cholera has much decreased. Fever reported.
Hazareebagh	·63	Weather bright, occasionally cloudy. Rain wanted in parts, elsewhere prospects of all crops good. Indian-corn has yielded fairly, except in parts. General health good.
Cuttack	1·71	Weather fair, occasional rain. Prospects of rice continue good. Price of rice almost unchanged. Cholera reported, but public health generally good. *General Remarks.*—Rain was generally light throughout the Lower Provinces in the first five days of the week, but on the 19th heavy showers began and still continue. More rain wanted, specially in Tipperah and Gya, and except in these two districts, prospects of late rice crop are generally good. Early rice and jute mostly harvested, with fair outturn, other autumn crops also being reaped. Fever prevalent in some districts, otherwise public health is fair.
N.-W. Provinces and Oudh - (Sept. 21st)		
Benares (Sept. 20th	Average 1·90	Weather cloudy on and off. Crops doing well. Supplies plentiful. Prices steady. Some fever in district, otherwise health good.
Ballia („ 19th)		Weather clear with occasional clouds. *Kharif* crops being reaped. *Rabi* ploughing commenced. Supplies ample. Market steady. Health good.
Gorakhpore(„ „)	1·70 at Sadr	Harvest prospects good. Prices stationary. Cholera almost disappeared.
Fyzabad („ 20th)	Average 2·70	*Dhan, kodo,* and *jowari* being cut. Markets full. Prices rising. Slightly cholera almost disappeared. Condition of cattle fair.
Lucknow („ 19th)	Averaging 1·90	*Hewant* crops look well. Fields being prepared for *rabi*. New *kharif* grain coming into market. Prices unchanged. Public health good. Condition of cattle fair.
Rai Barelli („ „)	Rain all over the district.	Crops in good condition. Markets full. Prices slightly falling. Cholera disappearing.
Partabgarh („ 20th)	Heavy rain	Cloudy sky. Prices stationary. Cattle-disease reported in district.
Allahabad („ „)	Averaging 1·40 all over district.	The rain has been beneficial to late rice, early rice being harvested and ploughing for *rabi* commenced. Markets full. Prices steady. A few cases of cholera still reported and fever is prevalent.
Cawnpore („ „)	Rain in three tahsils from ·20 to ·70.	*Kharif* improved and being cut in places. Ground for *rabi* under preparation. Prices stationary. Cholera and fever in places. Cattle-disease in four parganas.
Farakhabad („ „)	Average 5·50	*Kharif* prospects good, but *bajri* slightly injured by late rains. Supplies ample. Prices fluctuating. Cholera again increasing. No cattle-disease.
Sitapur („ „)	Plentiful rain has fallen.	A break seems now to have set in. Prospects of a good *kharif* very favourable. Cholera still continues.
Bareilly („ „)	Rain sufficient	Crops doing well. Prices steady. General health good, but slight sporadic cholera still continues.
Banda („ 19th)	Rainfall during the greater part of the week at Sadr.	Clear weather has now allowed *kharif* weeding and *rabi* ploughing to be resumed. Prices rising. Fever prevalent.
Kumaon („ 20th)		Crops excellent. Prices falling a little. Typhus fever here and there, otherwise health good. Cattle-disease decreasing.
Agra („ 19th)	Rainfall general and rather heavy.	Good break needed as crops are being much injured especially those on low land. Prices steady. Cholera decreasing.
Jhansi („ 20th)		Crops severely injured by recent heavy rain. Prices risen. Some fever and cattle-disease.
Meerut („ „)	Heavy rain all over the district on 18th from ·80 to 7·60.	Sky now clear, and westerly wind has set in. Rice being cut. Prices still show a tendency to rise. Cholera and fever prevalent, except in Sirdhana. Cattle-disease in three tahsils. *General Remarks.*—Plentiful and in the western districts heavy rain fell during the week. Crops are doing well, except in a few places, where they have been somewhat injured in lowlying lands by the heavy rainfall, but general prospects are excellent. Supplies are ample and prices continue steady. Cholera reports are unfavourable from Farukhabad, Meerut and Saharanpur, elsewhere the disease is dying out. The usual autumnal fever prevails, but on the whole the health of the people is good. Some cattle-disease is reported.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Sept. 21st)		
Hissar (Sept. 20th)	. . . . .	Fever prevalent. Prices stationary. *Rabi* ploughings in progress. *Kharif* prospects good.
Delhi . . .	2·29	Cholera continues. Prices almost stationary. *Kharif* crops damaged.
Umballa . . .	14·09	Cholera abating. *Kharif* crops injured.
Jullundur . . .	. . . .	Health good. Prices stationary. *Kharif* prospects good.
Ferozepore . . .	. . . .	Health indifferent. Prices stationary.
Amritsar . . .	. . . .	Rain wanted. Prices stationary. *Kharif* crops good.
Sialkot . . .	. . . .	Rain wanted. Health good. Prices stationary. *Kharif* crops being injured.
Lahore . . .	. . . .	Cholera decreasing. Prices stationary. *Rabi* ploughings in progress.
Multan . . .	. . . .	Health good. Prices almost stationary. *Rabi* sowings about to commence. *Kharif* prospects good.
Rawalpindi . . .	·10	Health good. Prices stationary *Kharif* prospects average.
Shahpur . . .	Rainfall occurred	More rain urgently wanted. Health good. Prices falling. *Kharif* crops in fair condition.
Dera Ismail Khan .	. . . .	Health good. Prices stationary. *Kharif* prospects fair.
Peshawar . . .	. . . .	Cholera decreasing. Prices almost stationary. *Kharif* prospects average.
		General Remarks.—Rain has fallen in Delhi, Umballa, Rawalpindi, and Shahpur, is wanted in Amritsar, Sialkot, and Shahpur. Health is generally good, but cholera still continues in Delhi; in Umballa, Lahore and Peshawar, it is decreasing. Fever is prevalent in Hissar. Prices are stationary, except in Shahpur, where they are falling. *Kharif* prospects generally good, but in Delhi and Umballa crops have been injured by rain, and in Sialkot by drought. *Rabi* ploughings in progress in Hissar and Lahore, and sowings about to commence in Multan.
Central Provinces—(Sept. 21st)		
Nagpur . . .	·81	Weather clear. Break beneficial. *Rabi* ploughings commenced. Cholera continues.
Jubbulpore . . .	6·03	Showers daily. Prospects good. Fever prevalent. Prices steady.
Saugor . . .	3·35	Weather clear at end of week. *Jowari* damaged by excessive moisture. Cholera continues. Fever prevalent. Prices steady.
Seoni . . .	2·66	Break in weather. General health good. Prices unchanged.
Hoshangabad . .	4·57	All crops except rice suffering from excessive rain. *Rabi* ploughings stopped. Break urgently wanted. Fever in parts. Prices stationary.
Khandwa . . .	2·45	Weather now clear. Prospects good. Harvesting of pulse commenced. Cholera continues. Prices risen.
Bilaspur . . .	1·08	Rice on black soil below average, other crops favourable. Fever and cattle-disease prevalent. Prices falling.
Raipur . . .	3·35	Weather seasonable. Lands ready for *rabi* sowings. Break needed to sow linseed. Crops promising. Fever prevalent.
Sambalpur (Sept. 17th)	7·06	Weather seasonable. Crops promising. Cholera in places. Fever prevalent.
		General Remarks.—There has been a timely break in the southern and eastern districts, but a break is still needed in the Narbudda Valley. Fever prevalent.
Burma—(Sept. 21st)		
Akyab (Sept. 17th)	9·87 (Total rainfall to date 145·67).	Slight cholera in town and district. Slight cattle-disease. Crop prospects favourable.
Bassein . . .	4·32 (Total rainfall to date 79·83).	Slight cattle-disease in one township. Ploughing completed. Transplanting almost over.
Rangoon . . .	6·99 (Total rainfall to date 90·16).	
Amharst (Moulmein)	13·10 (Total rainfall to date 153·97).	Ploughing and transplanting completed. Prospects of crops good.
Tavoy	12·36 (Total rainfall to date 166·88).	Crops reported very healthy.
Pegu	. . . . .	No report received.
Henzada . . .	6·45 (Total rainfall to date 66·62).	Crops healthy.
Prome	2·97 (Total rainfall to date 32·86).	Slight cattle-disease. Ploughing and planting nearly finished.
Toungoo . . .	5·43 (Total rainfall to date 70·52).	Transplanting nearly finished.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Thayetmyo . . .	2·50 (Total rainfall to date 24·62).	Slight cattle-disease. Ploughing almost finished. Transplanting progressing.
Shwebo (Sept. 10th)	02	
(„ 17th)	3·08 (Total rainfall to date 31·10).	
Kyaukse . . .	1·0 (Total rainfall to date 17·70).	Crops good.
Myingyan . . .	2·24 (Total rainfall to date 19·76).	Food-supply sufficient. Prices ordinary.
Mandalay . . .	·55 (Total rainfall to date 26·50).	Transplanting of *kyaukki* crops progressing. Food-supply sufficient. Prices normal.
Minbu (Sept. 10th)	3·49	Crop prospects fair. Prices normal.
(„ 17th)	1·22 (Total rainfall to date 20·79).	
Yamethen . . .	3·54 (Total rainfall to date 26·16).	Cultivation progressing.
		General Remarks.—Slight cholera in Akyab town and district. Cattle-disease in six districts of Lower Burma. Transplanting almost finished. Crops looking well. Reports from twelve Upper Burma districts. Public health good. Crop prospects fair. Cattle-disease decreasing in Pyinmana, but anthrax still severe. Food-grains scarce in Yeu.
Assam—(Sept. 21st)		
Gauhati (Sept. 20th)	6·84	Weather hot. Public health fair. Malarial fever still prevalent in Sastra Barpetta and its vicinity, also in parts of Polasbari, Luki, and Chomoria tahsils. Sowing of *mati kalai* in progress.
Sylhet	7·32	Reaping of *aus* nearly over. Transplanting continues. More rain wanted for *sali* crops. Tea is doing well. Public health indifferent, 87 deaths from cholera in Karimganj subdivision.
Cachar	1·83	Weather hot, last three nights rainy. Prospects of crops not good. More rain wanted. Rice selling at 17 seers 12⅞ chittacks per rupee. Public health good.
Dibrugarh . . .	3·64	Weather seasonable. Public health indifferent.
Mysore and Coorg—(Sept. 21st)		
Bangalore . .	Civil and Military Station, ·41; rainfall general throughout the State, except in the Bangalore and Tumkur districts.	Standing crops in good condition. Prospects of season continue favourable. Public health good. Cholera in Bangalore and Gubbi taluk in Tumkur district. Cattle-disease prevalent generally throughout the State. Prices stationary.
Mysore . . .		
Mercara . . .	·78	Transplanting of rice generally completed. Crops in good condition.
Berar and Hyderabad—(Sept. 21st)		
Amraoti . . .	. . . . .	Weather warm and clear. Weeding in progress. Break very beneficial to *kharif* crops. Cholera and fever in some places. Wheat 15 and *jowari* 25 seers per rupee.
Akola . . .	1·82	Weather cloudy and close. Weeding continues. Standing crops generally in good condition. Isolated cases of cholera still continue and a good deal of fever is reported. Cattle-disease in three taluks.
Hyderabad . .	2·97 (total since 1st January, 21·85).	*Kharif* crops thriving. Paddy cultivation retarded in some taluks, owing to insufficient water in tanks and wells. Ague, fever, and cattle-diseases prevalent in some places. Prices—wheat 13, coarse rice 12, white *juar* 16½, yellow *juar* 20, and *tur* 15 seers per current sicca rupee.
Central India States—(Sept. 21st)		
Indore . . .	2·99 (total 36·72)	Weather now clear. Health good.
Morar (Gwalior) .	6·27 (total 48·90)	Fever still prevalent.
Sutna . . .	3·40	
Neemuch . . .	1·70 (total 39·70)	No fresh cases of cholera. Health good.
Goona . . .	11·88 (total 42·30)	Prices rising. Health good.
Agar . . .	9·74	Health and prospects fair.
Sehore . . .	6·33	Break badly wanted. 8 cases of cholera, 4 fatal, otherwise health fairly good.
Nowgong . . .	4·24 (total 47·43)	Weather cloudy. Cholera in parts. Prices steady.
Bhopawar . . .	6·25 (total 47·50)	Cholera reported from Bagode and Bhobra Alirajpur, otherwise health good. Prices steady. Cattle-disease prevails in Manpur, Dhar and Alirajpur.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Sept. 21st)		
Abu (Sept. 21st)	·45	Weather clear, but latterly strong winds with light clouds.
Sirohi („ 18th)	No rain for a fortnight.	Water in tanks falling; wells good. Health good. Prospects not good. Rain wanted.
Marwar („ 17th)	No rain	Cholera abating. Crops doing well, except in some districts. Weather partially cloudy. Market easy. Prices stationary.
Meywar („ „)	1·32	Tanks and wells full. Crop prospects average. Health fair. Prices stationary. Bright nights. Weather very cool.
Pertabgurh („ „)	2·03	Prices fluctuating.
Harowti („ „)	Deolie, 2·10; Tonk, 2·36.	Weather clear. Crops thriving. Some fever, otherwise health good.
Jhallawar („ 18th)	8·11	Floods again will further damage to crops. Some fever.
Ajmere („ 20th)	Average ·60	Prospects fair. Cholera abating in Beawar, but prevalent in Kekri and other villages. Prices stationary.
Jeypore („ „)	. . . .	Slight cholera in Jeypore city continues. Prices still high.
Kerowlee („ 17th)	2·30	Tanks and wells full. Cholera disappeared. Prices steady. Break wanted.
Dholepore („ „)	4·30	Tanks and wells full. Prospects average. Health good. Prices stationary. Weather seasonable.
Bhurtpore („ 20th)	2·70	Prices steady. Health good.
Ulwar („ „)	Average ·35	Ploughing for *rabi* progressing. Prices stationary. Health good. Cholera subsiding.
Kotah („ 17th)	5·63	Crops slightly suffered from excessive rains in some districts. Health good.
Kherwara („ 18th)	1·11	Rain needed for tanks and wells. Crops good. Health fair. Prices steady. Weather fine and cool.
Bickanir („ 17th)	Rain in three districts	Prospects good. Fever in some districts. Prices stationary. Weather hot.
Nepal—(Sept. 16th)		
Katmandu (Sept. 15th)	1·67	Weather sultry. Sky overcast, occasional thunder. Prospects fair, but the crop of rice is less extensive than usual.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 21st September, 1887.

During the week under review the weather, over the greater part of India, has been of the normal monsoon type, though, except in some districts, the resulting rainfall has been generally moderate or slight. There has existed much ascensional movement over a large portion of the Central parts of the country. Into this region (the North-Western Provinces, the south-east of the Punjab, the Central Provinces, and Central India) both branches of the monsoon poured, and, as a consequence, constant rain was experienced.

On the 15th a strong monsoon current was blowing across the Bombay Coast into the Berars and the western districts of the Central Provinces and Central India. This wind gave little or no rain to the Coast districts, but the Central parts of the country and Eastern Rajputana received fairly heavy showers. Similar conditions continued on the 16th and 17th, but after the latter date the force of the wind decreased on the Bombay Coast, and, while slight showers still fell on the 18th at several of the central stations, the day was almost rainless over Bombay, the Berars, the Deccan, and Southern India. Conditions were unchanged on the 19th, when hardly any rain fell in Bombay, the Central Provinces, or Central India.

On the 20th the force of the western branch of the monsoon was still steadily decreasing, and the only rainfalls due to it were a few slight showers on the Malabar Coast. On the 21st similar quiet conditions prevailed in the west.

On the Bengal side the weather has been much more unsettled. On the 15th a small cyclonic whirl was forming at the head of the Bay. As a consequence the wind was light and irregular in Lower Bengal, and a large part of the monsoon current was deflected towards Burma, East Bengal, and Assam, over which regions the greater part of the rain fell. On the 16th the Chart showed that the small cyclonic whirl had advanced across Orissa and Chutia Nagpur into the north of the Central Provinces. Its removal from the head of the Bay permitted of the extension of the monsoon current over Bengal and up the Gangetic plain into Upper India. Hence the rainfall area became considerably larger, moderate falls being reported from Burma, Bengal, Behar, and heavy falls from parts of the North-Western Provinces. On the next day the force of the current crossing the Bengal Coast had decreased, but the monsoon still penetrated inland as far as the south-east of the Punjab, and gave rain to the whole of the Gangetic plain. On the 18th there was very little change. On the 19th, owing to some local disturbance, the entry of the Bay monsoon into Upper India was again interrupted, and most of the rainfall connected with current occurred in Burma, Arakan, and Assam. On the 20th the winds at the head of the Bay again increased in force, and general rain fell over Burma, Bengal, and Assam. On the 21st the winds over Bengal were irregular, with a slight cyclonic tendency. This resulted in a good deal of ascensional movement, and, as a consequence, in fairly general rain.

In Upper India the week has been one of almost continuous wet weather. The 15th was fine generally, but on the 16th, with the passage westward of the disturbance from the Bay of Bengal, the weather became overcast, and humidity rose all over Upper India, while rain fell on the plains as far north as Bareilly and on the hills as far north as Simla. On the 17th, though the cyclonic whirl had disappeared, low pressures were shown all over the Central Provinces, the North-Western Provinces, and the Punjab, and towards this region the two branches of the monsoon converged, occasioning steady and continuous rain. On the 18th a slight local whirl was developed within the large low pressure area over North-Western India. This disturbance apparently lay between Simla and Chakrata, and hence the rainfall over this portion of the North-West Himalayas and the neighbouring plains was particularly heavy. On the 19th Umballa reported 8½ inches of rain, and all the stations in this neighbourhood received over 1 inch. On the 20th the barometer rose briskly in the Punjab, and during that and the following day the weather considerably improved.

The table of the seasonal rainfall shows that, on the whole, the monsoon of 1887 has been fairly satisfactory. There is a deficiency of 18 inches at Akyab, but this forms but a small proportion of the total amount received. In Lower Bengal there is a slight, and in North Bengal and Assam a moderate deficiency. Behar and the east of the North-Western Provinces show very little departure from the average, while the west of the North-Western Provinces and the greater part of the Punjab have received abundant rains. At Peshawar, however, the total rainfall since June has been only a little more than half the normal. On the Malabar Coast the rains have so far been short, but on the Bombay Coast and over the Central parts of the country they have been heavier than the average—in some cases considerably so :

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to September 21st.	Difference.
Akyab ...	132·13	150·86	—18·55
Saugor Island ...	50·32	52·81	— 2·49
Calcutta ...	41·09	46·64	— 5·55
Dhubri ...	52·68	60·84	— 8·16
Purneah ...	41·98	54·04	—12·06
Gya ...	33·11	34·32	— 1·21
Allahabad ...	33·40	33·64	— 0·24
Meerut ...	24·66	22·71	+ 1·95
Delhi ...	35·22	21·86	+13·36
Lahore ...	16·07	12·94	+ 3·13
Peshawar ...	3·19	5·96	— 2·77
Cochin ...	61·63	80·01	—18·38
Ratnagiri ...	109·01	96·12	+12·89
Bombay ...	89·92	65·46	+24·46
Poona ...	20·95	20·19	+ 0·76
Surat ...	37·27	39·56	— 2·29
Khandwa ...	30·88	28·95	+ 1·93
Nagpur ...	47·31	35·89	+11·42

Pressure has been below the normal, except on the West Coast. The largest deficiency, amounting to about 0·05″, was in the north-west over the region occupied by the large low pressure area noticed above.

Temperature was also low, more especially in Central and North-Western India, where the continuous cloud and rain occasioned a considerable deficiency. At several stations the mean temperature was from 4° to 6° below the average.

The concluding table gives the total rainfall of the past week for the different provinces :

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	30·98
Bengal and Assam ...	16	47·95
North-Western Provinces and Oudh ...	9	31·60
Punjab ...	4	6·83
Hill Stations ...	5	17·19
Ceylon ...	2	0·02
Malabar Coast ...	4	1·98
Bombay ...	5	5·76
Berars and Central Provinces ...	10	16·62
Guzerat and Central India ...	4	11·21
Sind—Rajputana ...	3	1·98
Madras ...	8	4·32

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 25th SEPTEMBER, 1887.

GENERAL REMARKS.—The rainfall of the past week has been confined to Bengal, Assam, Burma, and Bombay. Elsewhere there has been little or no rain.

The *kharif* harvest has begun in Bombay and the North-Western Provinces and Oudh, and prospects elsewhere are on the whole very satisfactory.

Rabi operations are now in progress throughout the country, and sowing has commenced in Bombay and the North-Western Provinces and Oudh and in some parts of the Punjab and Rajputana.

Except in parts of Tinnevelly and Madura, prospects are fair in Madras. In Mysore and Coorg more rain would be beneficial.

In some districts of Bombay and Bengal the rice crop is in want of rain. In the North-Western Provinces and Oudh the crop is being reaped; and in Burma and Assam prospects are favourable.

Cotton sowing is in progress in Bombay; in the North-Western Provinces and Oudh the crop has been injured by excessive rain in places.

The public health is on the whole good in all Provinces.

Prices are fluctuating in Mysore, elsewhere they are generally steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Sept. 28th.)		
Bellary	Average ·26	Standing crops good. Harvest *korra*, yield below average. Cholera decreasing in three and cattle-disease increasing in two taluks.
Kurnool	Average ·57	Standing crops fair, but in three taluks partially suffered from excessive rain. Small-pox in two, and cattle-disease increasing in five taluks. Cholera decreasing.
Ganjam	Average last week since revised, 2·09; this week, ·67.	Small-pox in four, fever in five, and cattle-disease decreasing in three divisions.
Kistna	Average ·22	Standing crops generally good, but require rain in parts. River 4·1 feet over Anicut. Cholera in one, and cattle-disease increasing in five taluks.
Chingleput (Madras)	Average ·34	Standing crops fair. Harvest wet and dry grains, outturn below average. Small-pox in two, cholera in two, and cattle-disease decreasing in five taluks.
Coimbatore	*Nil*	Standing crops generally good, but require rain in parts. Harvest wet and dry grains, outturn about average. Fever in one taluk.
Tanjore	Average ·01	More rain wanted. Standing crops generally good. Harvest wet and dry grains, outturn below average. Slight cholera. Cattle-disease decreasing in three taluks.
Madura	Average ·07	Standing crops withering for want of rain. Slight cattle-disease in one taluk. Water-supply deficient in all but three taluks.
Malabar	Average ·05	Rain insufficient for second crop cultivation. Standing first crop paddy ripening. Harvest paddy, outturn below average. Fever in one, slight small-pox in six, and cattle-disease decreasing in two taluks.
Travancore	. . . . .	Harvest of first crop paddy over, yield good. Fever and small-pox in parts.
		General Remarks.—General prospects fair, excepting in parts of Tinnevelly and Madura.
Bombay—(Sept. 28th)		
Karachi	. . . . .	River at Kotri on 26th, 10 feet 9 inches against 12 feet 6 inches on same date last year. *Kharif* crops slightly damaged by insects in some talukas. Fever in seven and cattle-disease in two talukas. Wheat, red rice and *bajri* in Karachi 23, 30 and 32 and in Sujawal 24, 40 and 38 pounds per rupee, respectively.
Hyderabad	. . . . .	*Kharif* crops ripening rapidly. More water required in eleven talukas; hope lies only in rainfall as river has fallen to 10 feet 9 inches on 26th as compared with 12 feet 6 inches on same date last year. Slight small-pox and cattle-disease in two and fever in ten talukas. Wheat 24, *jowari* 40, *bajri* 34, white rice 18, and red rice 28 pounds per rupee.
Ahmedabad	·09; total 24·62	Standing crops good, except in Dhandhuka, where they are withering, owing to want of rain. More rain wanted throughout the district. Fever in Dholka, Gogha and Sanand talukas. Two cases of cholera in the city, of which one was fatal. Wheat 27 and *bajri* 29 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda . . .	. . . . .	Cholera in city, 12 cases, 5 deaths. It is present in parts of Naosari and Kadi divisions. Cattle-disease in Kadi and Kalol. Standing crops in good condition. *Bajri* 26, wheat 19, and rice 23 pounds per rupee.
Surat	. . . . .	Weeding progressing. Rice harvest commenced in places. Rain wanted throughout the district. Cattle healthy. Fever in Olphad, Bardoli, and Chikli. Cholera in Bardoli, Chikli, Bulsar, Pardi ar d Surat city, 33 cases, 27 deaths. *Jowari* 32 and *nagli* 43 pounds per rupee.
Nasik . . .	Rain in Igatpuri, 1·75; Sinnar, ·78; Baglan, ·50; Niphad, ·44; Yeola, ·36; and Peint, ·27.	Standing crops thriving. Land being prepared for *rabi* sowings in all the talukas, except Sinnar, where *rabi* sowings are commenced. Weeding in progress. Rain needed throughout the district. Cholera in Nasik, Sinnar, Nandgaon, Malegaon, and Baglan, total attacks 34, deaths 15. Small-pox prevalent in Sinnar, 6 attacks only. Prices steady.
Colaba (Bombay) .	Rain on 21st, 22nd, 25th and 27th; total 1·60; total to date, 90·88, being 23·52 above average.	Abnormal temperature 3° cool on 21st and 22nd, *nil* on 23rd and 24th, and 2° cool from 25th to 27th. Vapour in air slightly in defect of normal. Abnormal wind easterly on 21st and 22nd, northerly from 24th to 27th, and wind normal on 23rd.
Poona	Rain in five talukas,—maximum 1·16 in Petha Baramati and minimum ·05 in Mawal talukas.	More rain wanted in *bealt* portion of the Haveli taluka. *Kharif* crops doing well. Sowing of *rabi* in progress. Public health generally good. 249 cholera cases in the district, 129 fatal. In Poona city 1 attack, 1 death. *Bajri* 41 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	Rain in Jamkhed, 1·89; Rahuri, ·80; Karjat, ·70; and Parner, ·27; very slight in four and none in three talukas.	*Kharif* crops doing well, but want rain. *Rabi* sowing in progress throughout the district. Cholera attacks 133, deaths 63. Cattle-disease in Jamkhed, 42 heads of cattle reported as died during the week. *Bajri* 36 and *jowari* 57 pounds per rupee.
Sholapur . . .	Rain in Sholapur, ·78; Barsi, ·27; Madha, ·13; Pandharpur and Sangola, ·19; and Malsiras, 1·39.	*Kharif* crops doing well. Sowing of *rabi* crops in progress. Slight cholera in Barsi, Karmala, Sangola and Malsiras talukas, cases 73, fatal 31. *Jowari* 57½ and *bajri* 52½ pounds per rupee.
Dharwar . . .	Rain in Nargund, 1·30; Ron, 1·37; Gadag, ·90; Mugud, ·12; elsewhere none.	**Rice crops suffering from want of rain.** *Jowari* and minor crops good. Heavy rain generally and urgently required. Cotton sowing partly completed and partly in progress throughout the district. Slight cholera in Dharwar, Gadag, Kalghatgi, and Ron talukas. No cattle-disease. *Jowari* 58 and rice 24 pounds per rupee.
Kanara . . .	Rain in Karwar, ·34; total 124·42; Kumpta, 1·48; Sirsi, ·81; and Haliyal, ·30.	Weather fair. Rice harvest in Karwar taluka, and cardamom and betelnut harvest in Sirsi and Yellapur, respectively. Slight cattle-disease in six talukas. Common rice in Karwar 11 and district average 11½ seers per rupee.
Rajkot . . .	. . . . .	Weather hot. Fever generally prevalent. Wheat 23, *bajri* 23, and *jowari* 29 pounds per rupee. Rain much wanted
		General Remarks.—Slight rain in several districts, more wanted in most districts of the Presidency, except the Konkan. River continues low in Sind. Crops suffering from want of moisture in parts of Sind, Belgaum, Dharwar, Ahmedabad, and Wadhwan, and damaged by blight in parts of Ratnagiri, and by insects in parts of Karachi. *Kharif* reaping commenced in four districts. *Rabi* sowing in progress in nine districts. Cholera in parts of eighteen, fever in parts of fourteen, cattle-disease in parts of ten, and small-pox in parts of five districts.
Bengal—(Sept. 28th.)		
Chittagong (Sept. 27th)	1·98	Weather seasonable. Prospects of *aman* and sugarcane good. Cholera reported, public health otherwise good. Prices stationary.
Dacca	1·62	Prospects of crops good. Rivers falling. Public health generally good.
24-Pergunnahs (Calcutta).	4·24	Prospects favourable. Rain has done good to crops, but more wanted in some places in Sadr subdivision. General health good, but a few cases of cholera and fever reported from Bussirhat and Sadr subdivisions.
Khoolna . . .	2·67	Weather hot, with occasional heavy showers. Transplanting *aman* nearly finished. Prospects good. Public health fair.
Moorshedabad . .	3·77	Weather seasonable. Rain at intervals. Prospects of *aman* good. Sowing of *til* and *kalai* commenced. Sugarcane and jute progressing. Public health good. Fever prevails in Lal Bagh subdivision.
Pubna	1·50	Weather rainy. Prospects of crops good. Public health good.
Dinagepore . . .	2·22	State and prospects of late rice good. Harvesting of jute nearly finished.
Rungpore . . .	1·90	Prospects of crops good. Jute being cut. Fever prevailing.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Midnapore . . .	·55	Prospects of rice crop generally good, except in flooded parts of Ghatal and Contai subdivisions. Public health good, but a few cases of cholera and malarious fever reported.
Burdwan . . .	2·39	Timely showers keep rice prospects fair, but good rain now wanted. Prices somewhat easier. No fresh cholera. Fever prevalent.
Bhagalpur . . .	*Nil*	Harvesting early rice and *marua* closing, with good outturn. Late rice doing well.
Purneah . . .	1·17	*Aghani* rice promises well. *Bhadoi* rice and jute being harvested. Health of people and cattle very bad. Rivers falling.
Durbhanga . . .	*Nil*	*Bhadoi* harvest nearly completed. Prospects of rice continue very promising. A few heavy showers at intervals still required to secure rice crop. Public health generally good.
Chumparun . . .	4·44	Prospects of *bhadoi* crops good. Harvesting of *makai* in progress. *Aghani* looks promising, but more rain wanted. Public health fair. Prices stationary.
Patna	1·0	Reaping of *bhadoi* crops completed. Paddy growing well. Sowing of castor continues. Public health generally good.
Gya	2·28	*Bhadoi* reaped. Paddy good. Cholera and fever reported from some stations.
Hazareebagh . .	*Nil*	Weather bright and clear. Rain much wanted all over the district. *Bhadoi* being harvested, with fair outturn. General health good.
Cuttack . . .	2·80	*Beali* rice still being reaped. *Sarad* rice growing well. Cases of cholera still reported, public health otherwise good.
		General Remarks.—Rain has been fairly general over Bengal Proper and Orissa, but in Behar rain was scanty, and Hazaribagh and Ranchi have been rainless. Late rice has been much benefited by rain, but more is wanted, especially in Tipperah. Autumn harvest is rapidly being completed, and is generally yielding a fair outturn. Sugarcane is promising. Public health is generally fair, but in some districts fever is prevalent.
N.-W. Provinces and Oudh—(Sept. 28th)		
Benares (Sept. 27th)	Very little rain	Weather cooler Agricultural prospects generally good. Markets full. Prices steady. Some fever, otherwise health good.
Ballia („ 26th)	. . . . .	Weather fair. Reaping of *kharif* crops in progress. Market well supplied. Prices steady. Public health good.
Gorakhpore(„ „)	1·20 at Sadr	Harvest prospects good. Prices rising. Cholera almost disappeared.
Fyzabad („ 27th)	. . . . .	Weather clear. New *kharif* grain coming into market. *Rabi* ploughing commenced. Prices unchanged. Public health fair. Cattle-disease in parts of district.
Lucknow („ 26th)	. . . . .	Weather clear. *Hewant* crops thriving. *Rabi* sowing commenced. Supplies abundant. Prices almost stationary. Public health good. Condition of cattle fair.
Rai Barelli („ „)	. . . . .	Weather fair and cool. Outlook of crops good. Prices steady. Cholera has almost disappeared. Some cases of fever and ague reported.
Partabgarh („ 27th)	. . . . .	Sky clear. Weather seasonable. Prices almost stationary. Cattle-disease in tahsil Patti.
Allahabad („ „)	Average ·40	Weather getting colder. Early rice being harvested. *Rabi* ploughing continues. Markets full. Prices steady. Cholera still lingers, but is diminishing daily. Fever of the ordinary type prevalent.
Cawnpore („ „)	. . . . .	Crops doing well. Ploughing for *rabi* in progress. Prices steady. Cholera in places. Fever prevailing. Cattle-disease in three tahsils.
Farakhabad („ „)	. . . . .	*Urd, mung*, and cotton slightly injured by late rains. Supplies ample. Prices rising. Cholera continues.
Sitapur („ „)	. . . . .	Weather fine. *Rabi* sowing of peas, gram, &c., commenced. Prospects favourable.
Bareilly („ „)	Ample rain	Prospects most promising. Prices steady. General health good. Cholera disappearing.
Banda („ 26th)	. . . . .	Ploughing for *rabi* going on. Prices stationary. Public health good, except the usual autumnal fever.
Kumaon („ 27th)	. . . . .	Weather seasonable. Rice and millets being reaped in parts. Prices falling. General health fair. Cattle-disease on the decrease.
Agra („ 26th)	. . . . .	Good clear weather. *Bajri* being cut. Ploughing for *rabi* in progress. Prices steady. Fever prevalent. Cholera decreasing.
Jhansi („ 27th)	. . . . .	Weather clear. Ground being prepared for *rabi*. Prices almost stationary. Some fever and cattle-disease.
Meerut („ „)	. . . . .	Clear sky and westerly wind. Cold nights and mornings. Maize and rice being cut; gram being sown. Price of wheat still rising. Cholera dying out. Fever prevalent. Cattle-disease decreasing.
		General Remarks.—The weather has cleared. Crops are thriving, and general prospects are favourable. Supplies are ample, and prices continue steady. Cholera is dying out, and apart from the usual autumnal fever, the health of the people continues good. Cattle-disease is decreasing.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Sept. 28th)		
Hissar (Sept. 27th)		Fever prevalent. Prices stationary. *Rabi* sowings in progress. *Kharif* prospects good.
Delhi		Cholera continues. Prices almost stationary. *Kharif* crops damaged
Umballa		Cholera abating. Fever prevailing. Prices stationary. Cutting of crops commenced.
Jullundur	·90	Health good. Prices stationary. *Kharif* prospects good.
Ferozepore		Fever prevalent. Prices falling.
Amritsar	1·30	Slight fever. Prices stationary. *Kharif* crops good.
Sialkot		Health good. Prices stationary. *Kharif* crops somewhat damaged by drought.
Lahore		Cholera decreasing. Prices stationary. *Rabi* ploughings progressing.
Multan		Health good. Prices stationary. Preparations for sowings in progress. *Kharif* crops good.
Rawalpindi	·90	Health good. Prices stationary. *Kharif* prospects average.
Shahpur	Rainfall occurred	Health good. Prices almost stationary. *Kharif* crops in fair condition..
Dera Ismail Khan		Health good. Prices stationary. *Kharif* prospects fair.
Peshawar		Cholera disappearing. Slight fever. Prices almost stationary.
		General Remarks.—Rain has fallen in Jullundur, Amritsar, Rawalpindi, and Shahpur. Health is good in Jullundur, Sialkot, Multan, Rawalpindi, Shahpur, and Dera Ismail Khan. Fever is prevalent in Hissar, Umballa, and Ferozepore, and to a slight degree in Amritsar and Peshawar. Cholera continues in Delhi and is abating in Umballa, Lahore, and Peshawar. Prices stationary, except in Ferozepore, where they are falling. *Kharif* prospects generally good, but in Delhi crops have been injured by rain, and in Sialkot by drought. *Rabi* ploughings in progress in Hissar and Lahore, and preparations for sowings in progress in Multan.
Central Provinces—(Sept. 28th)		
Nagpur		Weather cloudy and close. Land being ploughed for *rabi*. Cholera abating.
Jubbulpore		No report received.
Saugor		Weather clear. Preparations for *rabi* sowings in progress. General health good. Prices steady.
Seoni		Weather fine. Land being prepared for *rabi*. Cholera decreasing. Prices unchanged.
Hoshangabad		Weather occasionally cloudy. Prospects improved by break. Slight fever. Prices unchanged.
Khandwa		Weather clear and warm. Prospects good. Harvesting of pulses in progress. Slight cholera. Prices steady.
Bilaspur	·12	Crops promising. Linseed being sown. Fever prevalent. Prices falling.
Raipur		Weather clear. Crops promising. Fever prevalent.
Sambalpur (Sept. 24th)	1·39	Weather seasonable. Crops good. Fever prevalent.
		General Remarks.—Weather clear, break beneficial. Prospects favourable. Cholera decreasing. Fever in places. Prices steady.
Burma—(Sept. 28th)		
Akyab (Sept. 24th)	11·03 (Total rainfall to date 156·70).	Some cholera in town and district. Crop prospects favourable.
Bassein	6·35 (Total rainfall to date 86·18).	Slight cattle-disease. Transplanting almost completed.
Rangoon	5·82 (Total rainfall to date 95·08).	
Amherst (Moulmein)	18·06 (Total rainfall to date 172·03).	Prospects of crops good.
Tavoy	2·64 (Total rainfall to date 169·52).	Crops very healthy.
Pegu	6·89 (Total rainfall to date 124·96).	Transplanting finished. Crops good.
Henzada	6·45 (Total rainfall to date 73·07).	Crops healthy.
Prome	1·58 (Total rainfall to date 34·44).	Slight cattle-disease.
Toungoo	4·43 (Total rainfall to date 74·95).	Crop prospects good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Thayetmyo	1·23 (Total rainfall to date 25·85).	Transplanting continues.
Shwebo	·17 (Total rainfall to date 31·28).	
Kyaukse	·18 (Total rainfall to date 21·66).	Crop prospects good.
Myingyan	·63 (Total rainfall to date 20·39).	Food-supply sufficient.
Minbu	·82 (Total rainfall to date 21·61).	Crop prospects fair.
Yamethen	1·50 (Total rainfall to date 27·66).	Cultivation progressing.
		General Remarks.—Some cholera in Akyab and Amherst. Cattle-disease in four Lower Burma districts. Crop prospects favourable. Reports from eleven Upper Burma districts. Health good. Crop prospects fair. *Kyaukki* paddy reaped in Meiktela and coming to market. Paddy scarce in Yeu and Pyinmana. Anthrax continues in latter district.
Assam—(Sept. 28th)		
Gauhati (Sept. 27th)	2·12	Weather hot. Public health fair. Malarial fever still prevalent in Sastra Barpetta and its vicinity, also in part of Polasbari, Lukí, and Chomoria tahsils. Sowing of *mati kalai* in progress.
Sylhet	1·97	Rain has done good to crops. Prospects of *aman* rice favourable. Reaping of *aus* and transplanting of *sail* over in most parts of the district. Outturn of tea satisfactory. Karimganj reports 29 deaths from cholera.
Cachar	4·88	Weather rainy for the first four days. Reaping of *aus* continues, transplanting of *sali* rice nearly finished. Prospects of tea good. Rice selling at 17 seers 12⅝ chittacks per rupee. Public health good.
Dibrugarh	2·41	Weather very hot. *Mati kalai* being sown. Public health indifferent.
Mysore and Coorg—(Sept. 28th)		
Bangalore	Rainfall scanty in the Kolar, Kadur, Shimoga, Hassan, and Chitaldroog districts; no rain in other districts.	Standing crops in good condition, but need rain. Prospects of season continue favourable. Public health good. Cholera in Bangalore, Mysore, and Gubbi taluk, Tumkur district. Fever and cattle-disease prevalent in parts of the State. Prices fluctuating.
Mysore		
Mercara	·03	The south-west monsoon rains have ceased. More rain required for the paddy crops in South and East Coorg. Prices stationary.
Berar and Hyderabad—(Sept. 28th)		
Amraoti	1·51	Weather warm. Weeding continues. *Rabi* ploughings commenced. Cholera in places. Fever prevalent. Wheat 16 and *jowari* 25 seers per rupee.
Akola		Weather clear. Crops promising. Cholera continues. Fever still prevalent. Slight cattle-disease.
Hyderabad	·71	Total since 1st January to date 22·56. Standing crops thriving. Weeding of *kharif* crops in progress. Ague and fever prevalent in all talukas. Prices—wheat 11¾, coarse rice 12, white *juar* 18¼, yellow *juar* 20¾ and *tur* 14 seers per current sicca rupee.
Central India States—(Sept. 28th)		
Indore		Weather clear and cool.
Morar (Gwalior)		Fever still prevailing.
Sutna	·55	Health good.
Neemuch		Seven deaths from cholera at Bajgarh, otherwise health good.
Goona		Health and prospects fair.
Agar		Weather clear and cool. Crops fair. Cholera disappearing, 1 fatal case of cholera during week.
Sehore		Weather clear. Cholera disappearing. Prices steady.
Nowgong	1·17	Cholera reported from Barwani. Malarious fever prevalent in Alirajpur and Jhabua. Prices steady.
Bhopawar		
Rajputana—(Sept. 28th)		
Abu (Sept. 28th)		Weather quite clear and seasonable.
Sirohi („ 25th)		Little water in tank; wells low. Health good. Crop prospects bad at present. Weather cool. Rain much wanted.
Marwar („ 24th)		Cholera much abating. Crops doing well, except in some districts. Weather clear and cooler. Prices tending to rise.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—*contd.*		
Meywar (Sept. 24th	. . . . .	Water in tanks and wells decreasing. Crop prospects average. Health fair. Prices stationary. Weather fine. Warm days; cool nights.
Pertabgurh („ „)	. . . . .	Tanks and wells full. Health good. Prices rising.
Harowti („ „)	Deoli, ·21; Tonk, ·22; Shahpura, previous week, ·15.	Weather seasonable. Health and prospects good.
Jhallawar („ 25th)	·09	*Rabi* ploughing in progress. Cholera in one thana.
Ajmere („ 27th)	. . . . .	Weather clear and warm. *Kharif* prospects fair. *Rabi* sowings commenced. Cholera still prevalent in Kejri and other villages. Wheat 23, barley 37, and gram 38 pounds per rupee.
Jeypore („ „)	. . . . .	Weather seasonable. *Rabi* ploughings in progress.
Kerowlee („ 24th)	·05	Tanks and wells full. Fever continues. Prices steady. Break beneficial to crops.
Dholepore („ „)	. . . . .	Tanks and wells full. Crop prospects average. Fever prevails, otherwise health good. Prices stationary. Weather clear.
Bhurtpore („ 27th)	. . . . .	Prospects fair. Fever prevalent. Prices steady.
Ulwar („ „)	Slight rain in three tahsils.	*Rabi* ploughing continues. Prices stationary. Health fair. Fever prevalent. Cholera absent from city, and subsiding in districts.
Kotah . („ 24th)	. . . . .	*Rabi* ploughing commenced. Fever prevalent. Weather clear.
Kherwara („ 25th)	. . . . .	Rain needed for tanks and wells. Crops good. Health fair. Prices unchanged. Weather fine and cool.
Bickanir („ 24th)	Drops; Dungurgurh, ·40.	Prospects good. Fever in some districts. Prices stationary. Weather hot.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 28th September, 1887.

During the past week the weather has been very quiet generally, and the rains appear to have practically ended over the greater part of India. But, though the rains appear to have ceased, this phenomenon has not, up to the present time, been accompanied with those changes in pressure and wind with which the cessation of the rains is usually associated. In ordinary years as the rains cease the barometer rises briskly in Northern India, while it falls slowly in the South. Hence very uniform pressures become established, and variable winds take the place of the steady monsoon current which has previously prevailed. These variable winds are composed of the last breezes of the moist summer monsoon and of the first breezes of the dry winter monsoon, and the mixture of these two currents apparently generates the thunderstorms and showers which, in normal years, mark the cessation of the rains. In the present year this uniformity of pressure has not been developed, and the barometric distribution at the present time approximating more closely to that of the end of August than that of the end of September. Hence, though the rains seem to have ceased, the change has been unaccompanied by the usual concomitant phenomena, and a return of slight rainfall seems by no means impossible.

In the west light and rather variable winds prevailed on the 22nd, and the only rainfall recorded was a few slight showers on the West Coast and in the Carnatic. On the 23rd the wind remained light on the West Coast, but, though light, the current from the Arabian Sea was steadily extending and was spreading across the Peninsula into Bengal. The only rainfall connected with this current was a very light shower at Bellary. On the 24th westerly and north-westerly winds prevailed right down the West Coast and across the Peninsula, and the weather was everywhere fine. The Chart of the 25th showed no change in the wind direction, but slightly more rain fell than on the preceding day, though only as light local showers. Over the greater part of Western India, conditions were unaltered on the 26th, but in Sind the wind had backed, and a fresh south-westerly breeze was blowing across the Coast. The Chart of the 27th showed that the south-westerly wind in Sind still held, and also that the north-westerly wind over the Peninsula had given showers to several stations in that region. On the 28th there was practically no change.

In Bengal conditions have been less quiet. On the 22nd a feeble depression was shown over the head of the Bay. This occasioned a slight cyclonic circulation of the wind over Bengal and the North of the Bay, and gave a good deal of rain to Burma and South Bengal. The Chart of the 23rd showed no change in the position of the Bengal storm, which still occasioned a feeble cyclonic circulation of the winds and a good deal of precipitation over that region. On the 24th the storm had somewhat intensified, so that the cyclonic circulation of the winds and the rainfall were both more marked than on the preceding day. The next day showed that a brisk barometric rise had occurred within the storm area, and that the depression had almost disappeared. With the breaking up of this depression, the weather improved. The westerly wind from Central and Upper India spread into Bengal, and from the 26th to the 28th fairly fine weather prevailed all over this part of India. In Upper India the weather has been fine throughout. On the 22nd thunderstorms gave moderate rain to a few places in the Punjab, but after that date there was no rain

throughout the whole of Behar, the North-Western Provinces, the Punjab, Rajputana, and Central India during the rest of the week.

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to September 28th.	Difference.
Akyab ...	138·37	155·85	—17·48
Saugor Island ...	55·02	55·14	— 0·12
Calcutta ...	44·43	48·77	— 4·34
Dhubri ...	53·33	64·50	—11·17
Purneah ...	42·00	57·01	—15·01
Gya ...	35·96	35·97	— 0·01
Allahabad ...	33·40	34·85	— 0·45
Meerut ...	24·66	22·82	+ 1·84
Delhi ...	35·22	22·20	+13·02
Lahore ...	16·07	13·51	+ 2·56
Peshawar ...	3·19	5·98	— 2·79
Cochin ...	61·63	82·53	—20·90
Ratnagiri ...	109·20	98·41	+10·79
Bombay ...	90·77	67·04	+23·73
Poona ...	21·80	21·60	+ 0·20
Surat ...	37·27	40·35	— 3·08
Khandwa ...	30·88	29·94	+ 0·94
Nagpur ...	47·31	37·12	+10·19

The table of seasonal rainfall shows the same features as were recorded last week, *viz.* :—a trifling deficiency in Aracan and Bengal; an average rainfall in Behar and the North-Western Provinces; an excess in the Punjab (except the Derajat Division), on the West Coast, and in the Central Provinces.

The weather has been cooler than usual in the centre and north of India; warmer than the normal elsewhere. In the Indus Valley maxima exceeding 100° are still recorded almost daily.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	34·50
Bengal and Assam ...	14	26·89
North-Western Provinces and Oudh ...	0	0
Punjab ...	2	0·36
Hill Stations ...	1	0·15
Ceylon ...	0	0
Malabar Coast ...	2	0·48
Bombay ...	5	2·78
Berars and Central Provinces ...	2	0·02
Guzerat and Central India ...	0	0
Sind—Rajputana ...	1	0·04
Madras ...	9	6·96

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RETURNS OF ACCIDENTS ON INDIAN RAILWAYS FOR THE FIRST QUARTER OF 1887.

No. 1106 R. T., dated Simla, September 19th, 1887.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Department Resolution No. 902 R. T., dated 11th September 1886.
" " " " " 764 R. T., dated 29th June 1887.

Read also—

Director General of Railways' No. 773 T., dated 20th August 1887.
Abstract Returns of Accidents to trains, &c., on the open lines of railway in India for the quarter ending 31st March 1887.

OBSERVATIONS.—As compared with the corresponding quarter of the previous year, the number of accidents to trains, rolling-stock, permanent-way, &c., shows an increase of 38 or 7·12 per cent., against an increase of 812 or 6·66 per cent. in the mean mileage open, and of 138,273 or 1·19 per cent. in the train mileage of all descriptions. The above comparison excludes the figures of the Thaton-Duyinzaik and Dibru-Sadiya Railways for the corresponding quarter of 1886, as the returns for these lines were received too late for incorporation in the general abstract returns for that period.

2. The following are the Railways on which the numbers chiefly varied :—

Railways.	Accidents.				Train Mileage.	
	Increase.	Decrease.	Percentage of increase.	Percentage of decrease.	Percentage of increase.	Percentage of decrease.
	No.	No.				
Rajputana-Malwa	...	13	...	21·67	...	11·21
Southern Mahratta	14	...	140·00	...	73·66	...
North-Western	20	...	45·45	...	...	11·69
Eastern Bengal	...	13	...	24·07	8·43	...
Northern Bengal	...	15	...	44·12	...	10·04
Dacca	17	...	340·00	...	32·71	...
Madras	19	...	55·88	...	5·51	...
Great Indian Peninsula	...	13	...	26·53	4·35	...
Oudh and Rohilkhand	...	10	...	45·45	3·41	...

3. The decrease on the Rajputana-Malwa Railway, and increase of the Southern Mahratta Railway occurred chiefly under "Trains running over cattle on the line," the numbers recorded being 16 and 19 respectively, against 27 and 6.

4. On the North-Western Railway the cattle accidents and accidents due to fire in trains decreased from 22 and 16, respectively, to 7 in each case. But these decreases were more than counterbalanced by increases under several other classes of accidents, particularly under "The bursting of tubes, &c., of engines," "The failure of machinery springs, &c., of engines," and "The failure of couplings," the numbers under which are 6, 15 and 8, respectively, against *nil* during the corresponding quarter of 1886.

5. Of the decrease on the Eastern Bengal State Railway, 9 occurred under "Trains running over cattle on the line," and 7 under "Failure of couplings."

6. On the Northern Bengal, Great Indian Peninsula, and Oudh and Rohilkhand Railways, there were no variations of importance under any one class of accidents, with the exception of a decrease of 7 on the Great Indian Peninsula Railway under the head "Goods trains or parts of goods trains, engines, &c., leaving the rails."

7. On the Dacca Railway the increase is due to the cattle accidents having risen from 5 to 15, and to 5 accidents having occurred under "Goods trains or parts of Goods trains, engines, &c., leaving the rails," against *nil* recorded during the corresponding period.

8. The increase on the Madras Railway occurred chiefly under "Trains running over cattle on the line" and "Fire in trains," the numbers being 26 and 18 against 18 and 8, respectively.

9. The casualties resulting from accidents to trains, &c., were among passengers and others, 47 injured against 6 injured; and among servants, 4 killed and 6 injured against 11 injured. Of these casualties, 28 passengers and 2 guards were injured on the Great Indian Peninsula Railway in a collision that took place on the 11th March 1887 between a passenger train and a down empty special train, between Khervadi and Niphad, owing chiefly to the carelessness of the Station Master at the latter station. On the same date a down goods train collided with an up goods at Khervadi owing to the driver of the former, who was under the influence of liquor, having disregarded the signals. The driver was killed and the rolling stock damaged to the extent of R30,000.

On the Mysore Railway a driver and 2 firemen were killed, and a Permanent-way Inspector and an underguard slightly injured, in an accident that occurred on the 18th March 1887 to the engine of a down goods train, which was thrown off the line between Maddur and Maudya stations, owing to the connecting rod of the engine having fallen foul of the line.

On the East Indian Railway 9 passengers were injured in a collision that took place on the 15th January 1887 between an up mixed train (which was turned into a wrong line at Bhagalpore through the carelessness of the points Jemedar), and the down loop mail which was standing on the down platform line.

On the Madras Railway the engine and tender and a loaded wagon attached to a mixed train were derailed while entering Jalarpet station on the 26th January 1887, in consequence of the points having shifted through the negligence of the pointsman, 8 third class passengers were slightly bruised.

10. The following table exhibits the number of accidents under the various classes, and the number of persons killed and injured thereby :—

	No. of accidents.	No. of Passengers and others.		No. of servants.		Total.	
		Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
1. Collisions between passenger trains or parts of passenger trains	1	...	9	...	...	...	9
2. Collisions between passenger trains and goods or mineral trains, engines and vehicles standing foul of the line	12	...	28	...	2	...	30
3. Collisions between goods trains or parts of goods trains	18	...	...	1	1	1	1
4. Collisions between light engines	2	...	...	...	1	...	1
5. Passenger trains or parts of passenger trains leaving the rails	31	...	8	...	...	...	8
6. Goods trains or parts of goods trains, engines, &c., leaving the rails	40	...	...	...	...	...	...
7. Trains or engines travelling in the wrong direction through points	6	...	...	...	...	...	...
8. Trains running into stations or sidings at too high a speed	2	...	...	...	...	...	...
9. Trains running over cattle on the line	210	...		...	...	...	...
10. Trains running over obstructions on the line	30	...	2	...	...	...	2
11. Trains running through gates at level crossings	8	...	...	...	...	...	...
12. The bursting of boilers of engines	...	...	...	...	...	...	...
12A. The bursting of tubes, &c., of engines	17	...	...	...	...	...	...
13. The failure of machinery, springs, &c., of engines	46	...	...	...	...	...	...
14. The failure of tyres	1	...	..	...	...	...	...
15. The failure of wheels	...	...	...	...	...	...	...
16. The failure of axles	5	...	...	...	...	...	...
17. The failure of brake apparatus	1	...	...	...	...	...	...
18. The failure of couplings	45	...	...	3	2	3	2
19. The failure of tunnels, bridges, viaducts, culverts, &c.	1	...	...	...	...	...	...
20. Broken rails	5	...	...	...	...	...	...
21. The flooding of portions of permanent-way	1	...	...	...	...	...	...
22. Slips in cuttings or embankments	...	...	...	...	...	...	...
23. Fire in trains	49	...	...	...	...	...	...
24. Fire at stations, or involving injury to bridges or viaducts	8	...	...	...	...	...	...
25. Other accidents	33	...	...	...	...	...	...
Total	572	...	47	4	6	4	53

11. The number of cases of "Passenger trains, or parts of passenger trains, leaving the rails" increased from 15 to 31.

On the Jorhat and Dibru-Sadiya Railways the numbers recorded under this class of accidents are 12 and 9, respectively, against 1 and 3.

12. The accidents from "Trains running over cattle on the line" also shows an increase, the number having risen from 197 to 210. On the East Indian Railway there were 16 such accidents against 9 previously recorded, and on the Southern Mahratta, Dacca and Madras Railways the numbers are, respectively, 19, 15 and 26 against 6, 5 and 18. On the Rajputana-Malwa, North-Western, Eastern Bengal, and Northern Bengal Railways the numbers have decreased by 11, 15, 9 and 4 respectively.

13. Under "Failure of couplings" the number rose from 30 to 45, due chiefly to the number of cases on the Rajputana-Malwa aud Dibru-Sadiya Railways having increased from 6 and *nil* to 12 and 13 respectively.

14. Out of 49 cases of "Fire in trains," 18 occurred on the Madras Railway and 14 on the Great Indian Peninsula Railway, and out of 33 cases of accidents, classed as "Other accidents," 17 occurred on the Bombay, Baroda and Central India Railway.

15. The numbers of cases occurring under the other classes of accidents exhibit no variations of any importance.

16. The casualties to passengers from causes other than accidents to trains were:—

	Killed.	Injured.
From falling between carriages and platforms	1	*Nil.*
Falling on to the platform, ballast, &c., when getting into or out of trains	1	1
Falling out of carriages during the travelling of trains	...	3
Other accidents	8	5
TOTAL	10	9

17. The accidents to servants in the employ of railways, or of contractors, whilst performing duties connected directly with the transit of passengers and goods, from causes other than accidents to trains were:—

	Killed.	Injured.
During shunting operations	3	7
Falling off engines, vans, &c.	2	9
Coming in contact with over-bridges, &c., during the travelling of trains	...	1
Coming in contact, while shunting, with vehicles, &c., standing in adjoining lines	...	1
Getting on or off trains, engines, &c.	5	11
Whilst loading, unloading, or sheeting	3	24
Whilst breaking, spragging or chocking wheels	...	1

	Killed.	Injured.
Whilst working on the permanent-way or in sidings	...	4
Whilst walking along the line on the way home or to work	...	2
Whilst walking, crossing or standing on the line	6	6
Whilst passing between vehicles	2	2
Whilst attending to the machinery of engines, cleaning them, &c.	...	3
Whilst attending to gates at level crossings	...	2
Falling or being caught between vehicles and platform	1	...
Falling off ladders, scaffolds, platforms, &c.	1	5
By falling of lamps, wagon doors, timber, weights, &c.	...	6
Whilst coupling or uncoupling wagons	...	5
Miscellaneous	5	18
TOTAL	28	107

18. Of other persons killed and injured by running trains, &c., 4 were killed and 6 injured, whilst passing over the line at level crossings; 26 were killed and 6 injured whilst trespassing on the line; 8 committed suicide, and 3 were killed and 4 injured from miscellaneous causes.

The total numbers killed and injured from the above causes amount to 41 killed and 16 injured against the same number killed and 18 injured during the corresponding quarter of 1886.

19. The following table shows the total number of persons killed and injured from "Causes connected with the working of railways," as compared with the corresponding quarter of 1886.

	First quarter, 1886.		First quarter, 1887.	
	Killed.	Injured.	Killed.	Injured.
PASSENGERS.				
From causes beyond their own control	...	10	...	45
From misconduct or want or caution	10	31	10	11
SERVANTS.				
From causes beyond their own control	...	13	5	10
From misconduct or want of caution	22	122	27	103
OTHERS.				
Whilst passing at level-crossings	3	1	4	6
Trespassers, including suicides	35	15	34	6
Other persons	3	2	3	4
TOTAL	73	194	83	185
TOTAL OPEN MILEAGE	12,190		13,002	
TOTAL TRAIN MILEAGE	11,627,244		11,765,517	

20. In addition to the above 13 persons are reported to have been killed and 59 injured in yards, workshops, &c., and 152 passengers to have met death in carriages and at stations from "Causes unconnected with the working of railways."

RESOLUTION.—The attention of the officers concerned should be drawn to the increases in the number of accidents on the Jorhat, Dibru-Sadiya, East Indian, Southern Mahratta, Dacca, Madras and Rajputana-Malwa Railways noticed in paragraphs 11, 12 and 13 of the observations.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Residents at Hyderabad and Mysore.
The Agents to the Governor General for Central India, Rajputana, and Baluchistan.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Central Division.

ORDER.—Ordered that this Resolution, with the Abstract Returns, be communicated to the Local Governments, Administrations and Officers noted in the margin for information.

Ordered also, that copies be forwarded for the information of Her Majesty's Government.

Ordered further, that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

JAMES RAMSAY,
Offg. Under Secretary.

Document accompanying.

Despatch from the Secretary of State, No. 22, dated the 14th July 1887.

The Reports on the Administration of the Jails of the several Provinces of British India for the year 1886.

RESOLUTION.

THE statistics relating to jail administration in British India for the years 1884 and 1885 were discussed in the Home Department Resolution of 14th February 1887, cited in the preamble; and the papers on the subject have been transmitted for the information of the Secretary of State. The jail reports for the different provinces for the year 1886, together with the remarks and orders recorded on them by Local Governments and Administrations, have since been received by the Government of India; and the table in the margin compares the dates on which the reports were received in the past two years. The reports for the year now under review (1886) were, on the whole, submitted with greater punctuality than in the preceding year; but there is no reason why the reports should not all be sent in on or before the prescribed date, *viz.*, 1st June. Instructions have been issued in Home Department Resolution No. $\frac{28}{1579-95}$ (Public), dated the 15th July 1887, for the abbreviation of reports and reviews. It will much conduce to brevity and conciseness if a report be prepared while the facts and figures to which it relates are still fresh in the mind of the writer. It need scarcely be added that the value and interest of a report are enhanced if it be published while the facts recorded in it are of recent occurrence.

Province.	Date of Receipt by Government of India of the Reports for	
	1885.	1886.
Madras ...	3rd Nov. 1886	14th July 1887.
Bombay ...	22nd June 1886	3rd June 1887.
Bengal ...	1st Sept. 1886	5th April 1887.
N.-W. P. and Oudh ...	3rd Sept. 1886	9th Aug. 1887.
Punjab ...	19th June 1886	3rd June 1887.
C. Provs. ...	19th June 1886	14th June 1887.
Burma ...	26th July 1886	7th June 1887.
Assam ...	31st July 1886	8th July 1887.
Coorg ...	18th June 1886	2nd June 1887.
Hyderabad ...	2nd July 1886	20th June 1887

It has hitherto been the practice of the Home Department to review the various Provincial Jail Reports separately, and to convey to each of the Governments in a separate letter the observations of the Governor-General in Council on the results of the year's administration. It was not always possible under this arrangement to compare the Jail administration of one province with that of another, and herein there was a forfeiture of the advantage resulting from a comparison of experience gained in many provinces and under varying circumstances. It has, therefore, been decided to review all the Provincial Jail Reports, together, and thus make the most of the lessons which Provincial experience teaches. To this decision effect has been given in the present Resolution.

2. The number of jails for the accommodation of prisoners in British India, including lock-ups, in 1886, was 718: the only difference between that year and 1885 in this respect being that the number of district jails was decreased by three and that of lock-ups by six. At the end of 1885, there were 75,133 prisoners of all classes in the jails, of whom 68,647 were convicts (66,019 males and 2,628 females). The number of prisoners (convicts, under-trial and civil prisoners) received during the year 1886 was 364,934, of whom 150,108 (140,843 males and 9,265 females) were received after trial and conviction. The admissions during the year of prisoners of all kinds were 13,969 in excess of those for 1885; while the convicts admitted in 1886 exceeded those admitted in 1885 by 6,634. The increase in the number of convicts admitted was distributed thus: 160 in Bombay; 3,395 in the North-Western Provinces and Oudh; 2,490 in the Punjab; 1,514 in the Central Provinces; 1,376 in Burma; 391 in Assam; and 4 in Coorg. In Madras the number of convicts admitted in 1886 was less than in the preceding year by 1,663; in Bengal there was a decrease of 855; and in the Hyderabad Assigned Districts, of 178. The increase in the number of convicts in the jails of Burma was the result of the disturbances in that province; while the same cause also accounts for a portion of the increase in Indian jails, to which 1,261 Burmese convicts were transported during the year. Apart from this source of increment the increases in admissions shewn by other provinces are in the main attributed to crime due to the rise in the price of food-grains, the result of a not altogether prosperous season; and this explanation tallies with the character of the sentences imposed by the Courts. Of the 6,634 convicts who entered the jails in 1886 in excess of those admitted in 1885, no less than 5,139 were under sentence of terms of imprisonment varying from one month to a year.

3. The daily average of prisoners in the jails was 75,978 as compared with 74,035 in 1885. Of the total number of inmates, *viz.*, 440,090, 363,353 obtained their discharge during the year, and the balance in jail on 31st December 1886 was 76,737 as compared with 75,133 at the close of 1885. The number of convicts unreleased at the end of 1885 and 1886 was 68,647 (66,019 males and 2,628 females), and 70,592 (68,117 males and 2,475 females) respectively.

4. The statistics regarding the nationality and religion of the convicts admitted into jail during the year are contained in Statement 2 appended to this Resolution. The number of European convicts increased from 690 to 899, and of Eurasians from 190 to 219. These, together with 1,061 natives, are recorded as being members of the Christian religion. The number of Muhammadan convicts rose from 37,345 to 39,665; of Hindus and Sikhs, from 88,611 to 90,748; and of Buddhists and Jains from 11,425 to 12,867. The figures relating to the two latter classes are, however, inaccurate, owing to the Inspector-General of Jails in Madras having entered as Hindus all the convicts received into the Madras jails from Burma. Contrasting the above figures with the census statistics of population according to creed, the following results, indicative of the extent to which each class contributed to the jail population, have been calculated:—

	1885.	1886.	
Muhammadans ...	8·1	... 8·8	per 10,000 of the population according to religion.
Hindus and Sikhs ...	6·2	... 6·3	
Buddhists and Jains ...	29·7	... 33·5	

5. There was a satisfactory decline in the number of juvenile offenders, from 2,115 to 2,207; and the proportion borne by convicts whose age did not exceed 16 to the total number of convicts admitted was 1·5. The decrease was most noticeable in Madras and Bengal. Although it was only in the North-Western Provinces and Oudh and the Central Provinces that there was any considerable increase, the returns suggest the inference that sufficient discrimination is not always exercised by Magistrates in the infliction of punishments on juvenile offenders; and that a sentence of imprisonment has frequently been awarded when a whipping would have been a more suitable punishment. The attention of all Local Governments and Administrations is invited to the desirability of saving juvenile offenders from the contaminating influences of jail life, whenever they can be adequately and properly punished without sending them to jail. When a sentence of imprisonment on a juvenile offender is unavoidable, he should, if possible, be sent to a reformatory for confinement. A reformatory was established in Madras shortly after the close of the year under report; and such institutions now exist in all the larger provinces except the North-Western Provinces and Oudh and the Punjab. The difficulties in the way of providing the necessary funds have hitherto interfered with their establishment in those provinces; but it is understood that the subject is at present receiving the attention of the Local Governments. Convicts whose age varied from 16 to 40 increased in number from 116,138 to 121,355; and those between 40 and 60 from 22,676 to 24,088. There were 2,458 admissions of persons over 60 years of age as compared with 2,215 in 1885.

6. Coming to the previous occupation of convicts, it will be observed that there was scarcely any variation from the figures for 1885 in the number of persons convicted who were either in the service of Government, of public bodies, or persons engaged in professions, service, commerce and trade, or miscellaneous employment. There was, however, an increase of 5,528 in the number of prisoners belonging to the agricultural classes; and of 654 in prisoners belonging to the artizan classes. This result is what might have been expected from the character of the season. In Bengal, the North-Western Provinces and Oudh, and the Punjab, the agricultural classes furnish about 60 per cent. of the total number of prisoners; but the proportion falls to about 50 per cent. in Bombay and to still less in Madras. In the latter province, prisoners classed as "Miscellaneous" are proportionately far more numerous than elsewhere; and the inference suggested is that possibly the classification in the Madras jails is susceptible of improvement.

The figures present no striking features as regards female prisoners except that in Madras the proportion of female to male criminals is greater than in any other province. For all India females formed 6·17 per cent. of the total admissions. In Madras the ratio exceeds 10 per cent.

7. The nature and length of the sentences of imprisonment under which convicts were admitted to jail in the past two years are thus shown :—

	Number.		Ratio per cent. to total admissions.	
	1885.	1886.	1885	1886.
Not exceeding one month ...	55,225	57,312	38·49	38·18
Above one month and not exceeding 3 months	29,885	30,837	20·83	20·54
Above 3 months and not exceeding 6 months	24,186	25,649	17·07	17·09
Above 6 months and not exceeding 1 year	15,917	16,854	11·09	11·23
Above 1 year and not exceeding 2 years	9,858	9,000	6·88	5·99
Above 2 years and not exceeding 5 years	4,983	5,427	3·47	3·62
Above 5 years and not exceeding 10 years	1,402	1,821	·98	1·21
Exceeding 10 years ...	49	117	·03	·09
Transportation—				
(*a*) for life	795	1,631	·55	1·09
(*b*) for a term	409	967	·29	·65
Sentenced to death	469	465	·32	·31

The number of sentences of imprisonment not exceeding a year showed a very considerable increase; but the ratio of sentences of less than a year to the total number of sentences shows very little alteration. And this fact seems to afford indication, as far as jail statistics can be relied on, that there was no exacerbation in the character of the crime which occurred in the latter as compared with the former year. More than 87 per cent. of the whole number of sentences were for terms of imprisonment not exceeding one year.

8. At the end of 1885 there were 2,279 persons under transportation for life in the jails in India, and 1,430 under sentence for a term of years. As shown, the number sentenced to transportation for life in 1886 was 1,631; and the number sentenced to a term of transportation, 967. Of these numbers, 912 and 659, respectively, were Burmese. The number actually transported to the Andamans was about 1,631 as compared with 958 in 1885; and there remained on 31st December 1886 in Indian Jails: (1) under sentence of transportation for life, 2,969; (2) under transportation for a term of years, 1,834. The new rules regulating the selection of convicts for removal to the Andamans resulted in a considerable clearance of Indian convicts under sentence of transportation from Indian jails; but this result was neutralised by the importation into Indian jails of convicts from Burma under sentence of transportation. The convicts in Indian jails under sentences of transportation at the close of the year were thus distributed:—Madras, 788; Bombay, 781; Bengal, 634; North-Western Provinces and Oudh, 1,104; the Punjab, 593; and Burma, 681. The number of male convicts sentenced to death was exactly the same—445 both in 1885 and 1886; while the number of females increased in the latter year from 15 to 18. But for the increase from 35 to 105 in Burma there would have been a material decline common to all the larger provinces in these figures for 1886. On 31st December 1886, there were 109 male and 6 female convicts in the jails under sentence of death.

9. Of the convicts admitted into jail during the year, 11,661 had been previously convicted once, 3,375 twice, and 2,557 more than twice. The total number of reconvicted prisoners was 17,593, which is slightly in excess of the figures for 1885; but the percentage of reconvicted prisoners to the total number of convicts was slightly less (11·72) in the year under review than in the previous year (12·04). This ratio was exceeded in the Hyderabad Assigned Districts (16·5), Bombay (14·1), the Punjab (13), and Burma (12·60). Excluding Coorg (6·33), the lowest ratio occurred in Assam (10·02), Madras (10·61), and the North-Western Provinces and Oudh (10·65). Of the juvenile prisoners, 208 (10 per cent.) had been previously convicted. The measures adopted for

the better identification of convicts who had been previously convicted were enumerated in paragraph 20 of the Home Department Resolution No. $\frac{3}{46-86}$, dated 14th February 1887, on the statistics of the jails for 1884 and 1885. The rules were issued so shortly before the close of the year now under review that the effect of their operation is not observable in the figures now before the Government of India. The Governor-General in Council trusts, however, that the statistics for the current year will bear satisfactory evidence of their beneficial effect in practice.

10. *Statement No. 13.*—There were 14,459 convicts who were able to read or write a little, and 4,778 who were able to read and write well. The daily average number under instruction in jail was 3,715·68, and 5,549 convicts were released during the year who had been under instruction in jail: of this number, 4,155 had been unable to read and write when they entered jail, 1,040 had been able to read and write a little, and 354 had been able to read and write well.

11. Statement No. 5 deals with the employment of the convicts while in jail. During the year under report the regulations in force respecting the employment of convicts were modified by the issue of Resolution No. 10-605—618, dated 7th May 1886. The employment of large concentrated bodies of convicts on public works is now to be carried into effect whenever it is feasible, while well-regulated intramural industrial employments are permitted on a large scale, provided they do not interfere with the operations of private enterprise in the locality save in the case of special industries, such as carpet-making. The direction of such employments, must, however, be determined by the requirements of the consuming departments of the Government. The employment of small gangs of convicts on station roads and the hiring out of convicts to municipalities is now forbidden except in Burma and Assam. By these arrangements it is hoped that Government will be able to utilise the labour which it has at its command in supplying to some extent and in a more economical manner than at present the articles for which it is itself in need; while at the same time the employment of the convicts will be rendered more punitive and reformatory in its effects.

12. During the year 1886 the average number of convicts under sentence of labour on working days was 65,810; the corresponding figure in 1885 having been 64,394. In Bengal, Assam and Bombay there were slightly fewer convicts available for labour; in the remaining provinces the number increased, chiefly in the North-Western Provinces and Oudh (by 850) and Burma (by 506). By far the largest averages of convicts under sentence of labour on working days were in the jails of the North-Western Provinces and Oudh (18,119) and Bengal (13,339). The Punjab came next with 9,829.

The average daily number of convicts sentenced to labour who were sick was 2,319 compared with 2,391 in 1885; and the average number of convalescent and infirm was 2,925 as compared with 2,753. There were thus on the average 60,566 prisoners available for labour as compared with 59,250 in 1885. The average number of convicts employed on working days with the labour in which they were employed is thus shown below for the two years:—

	1885.	1886.
On remunerative labour	1,672	1,592
As prison officers	3,184	3,133
As prison servants	7,109	6,854
On gardening	3,881	3,733
On preparing articles for use or consumption in jails, *e.g.*, wheat-grinding, manufacturing of prison clothing, &c.	6,199	6,795
On jail repairs	2,899	3,083
On additions and alterations to jail buildings—		
(i) under the Jail Superintendent ...	2,488	3,190
(ii) under the Public Works Department	394	384
On new jails—		
(i) under the Superintendent ...	2,769	2,108
(ii) under the Public Works Department...	191	149
On manufactures	24,944	25,903
By the Public Works Department ...	2,858	2,815
Hired out to municipalities or individuals or Departments other than Public Works Department	1,079	1,020

13. The revised rules regulating the employment of convicts were in force for a portion only of the year to which these figures relate; and the

arrangements under which the public consuming departments will receive their supplies of certain articles from the jails have not as yet been matured. In these circumstances the Governor-General in Council does not consider it necessary to closely examine these statistics. It will be observed, however, that the number of convicts employed as prison officers rose from 3,184 to 3,433, or to 5·21 per cent. of the daily average of convicts sentenced to labour, as compared with 4·94 per cent. in 1885. Excluding Coorg, the percentage of convicts thus employed was highest in Madras (9·84) and lowest in the Punjab (2). In the latter province proposals for extending the system have been held in abeyance pending the result of a special enquiry recently undertaken at the wish of the Government of India into the manner in which the system of employing convicts as officers in jails has been working in practice. The results of this inquiry are now before the Government of India. At the Jail Conference in 1877, one of the members, Dr. Henderson, raised the following objections to the employment of convicts in enforcing discipline: (1) that the system places the convict in a false position, inasmuch as if he permits a prisoner to escape, he cannot be punished; (2) that it tends to degrade the jail service to the level of convicts and to demoralise its members; and (3) that it implies a contract between the Government and a convict, which should not be deemed to exist. The majority of the Conference were unable to accept Dr. Henderson's views, and recommended the employment of convicts as prison warders, both because they held that the system had a great reformatory value in teaching respect and self-control, and also on the lower but important ground of financial necessity. The Government of India satisfied of the soundness of the view held by the majority gave effect to it; and has since had no sufficient reason to repent having done so. Indeed the special reports which have been called for by the Government of India from Local Governments and Administrations are universally favourable to the maintenance of the present system. An objection has recently been taken to the system, on the ground that the arguments which have in England prevailed against it are founded on the facts of human nature, and must therefore be applicable to India; and that it affords a means of intercommunication most favourable to corruption, demoralisation and the spread of crime. It may be admitted that the system is open to objection in theory, but, under the peculiar circumstances of Indian jails, it works successfully in practice. The reasons why it does work well in practice are clearly indicated by the statistics appended to this Resolution. These statistics as well as the figures examined in paragraph 7 above, demonstrate that the general character of the jail population in India differs from that of the population of the jails of the United Kingdom in the important respect of the comparative absence from Indian jails of professional criminals. The vast majority of prisoners in Indian jails not being professional criminals are free from the vices of the habitual offender; and they are not permanently degraded, because for some petty offence they happen to have fallen within the Magistrate's jurisdiction. This makes an important difference in the method that should be adopted of treating prisoners in India as compared with the United Kingdom. It is, again, impossible, both on sanitary and financial grounds, even if it were on other grounds desirable to adopt the cellular system in India; and this fact not only renders necessary a much larger staff than is required in England, but also introduces a set of considerations materially different from those on which the argument against the employment of prisoners as warders is based. Again, it is to be remembered that the continuous nature of the work and the severity of the discipline which has to be maintained among free warders are peculiarly distasteful to Natives of India, and this fact, coupled with the important circumstance that the Government of India cannot afford to offer exceptional rates of pay, renders the jail service unattractive. On the other hand, the rules under which the convict officers are selected preclude the appointment of degraded criminals and prescribe a high standard of past conduct in jail; while they hold out strong inducements to future good conduct in the special rewards which under the mark system can be obtained by warders for the proper performance of their work. The Governor-General in Council has, therefore, after a very careful reconsideration of the arguments advanced both for and against the present system, come to the conclusion that its maintenance, as a general rule, is imperatively called for on administrative as well as on financial grounds. If in any central jail where habitual criminals are assembled it be found possible to enforce the cellular system there indeed the Governor-General in Council thinks that the free warder system may

appropriately be enforced. This part of the subject is under the consideration of the Government of India.

14. Statement No. 6 contains the record of the offences committed by convicts and the punishments inflicted on them in jails during the year. The total number of offences recorded rose from 82,115 to 84,046; but in the Central Provinces, owing to a misunderstanding of the instructions in the Jail Manual for that province, warnings have not always been entered as they should have been. The number of offences punished by the criminal Courts has declined from 302 to 237. Such offences were fewer in Madras and Bombay than in any other of the larger provinces, while the diminution was most marked in the Punjab. The next division of breaches of jail rules relates to smoking or being in possession of forbidden articles. The number of such offences, which was in 1885 7,637, rose in 1886 to 9,540, the increase being most marked in the Punjab and Bengal. The number of breaches of jail rules relating to work rose from 42,587 to 45,829. The number in Bengal (21,799) was far higher than elsewhere; but it was less than in 1885 (25,792). In the Punjab the number of such offences rose from 7,143 to 12,616; in the other provinces the variations in the figures were comparatively small; the increase in Bombay being from 1,434 to 2,037; in the Central Provinces, from 1,500 to 1,999; and in Burma, from 2,075 to 3,114, while there was a decline in Madras (1,261 to 887) and Assam (516 to 414). There were 28,470 other offences against discipline compared with 31,812 in 1885, the number in Bengal though it has fallen from 20,214 in 1885 to 15,496 in the year under report, being still far in excess of any other province. In the North-Western Provinces and Oudh, the number of such offences fell from 3,012 to 2,758, while in the Punjab the number rose from 1,288 to 1,971; in the Central Provinces, from 706 to 1,111; and in Burma, from 3,189 to 3,429. The variations in other provinces were inconsiderable. The enormous number of offences against discipline in Bengal jails as compared with those of other provinces has been commented upon more than once by the Government of India, and the subject will be again discussed later in this Resolution.

15. Passing on from offences against jail rules to the punishments inflicted, we find a decrease in the number of cases of solitary confinement and reduced diet. In 5,886 cases as compared with 6,161 in 1885, solitary confinement was awarded as a punishment by Jail Superintendents. In Bengal the number of instances in which this punishment was inflicted fell from 3,333 to 2,504; while in the Punjab it rose from 808 to 1,324. In the remaining provinces the figures varied very slightly. In 7,153 cases compared with 7,825 in 1885 reduced diet was the punishment. In Bengal there were 1,015 cases of this punishment compared with 2,486 in the previous year; in the Punjab 626 cases compared with 253; in the Central Provinces 921 cases compared with 582; and in Burma 1,235 compared with 907.

If the preceding totals be satisfactory, as on the whole showing lesser necessity for recourse to the more extreme methods of punishment, the figures which exhibit the extent to which solitary confinement and reduced diet were combined are decidedly unsatisfactory. In 1886 there were 6,054 cases in which this form of punishment was inflicted as compared with 5,167 cases in 1885. It was not resorted to in Madras; but in every other province in India, except Burma and Coorg, it was more frequently inflicted than in 1885. In Bombay the number of such punishments rose from 611 to 931; in Bengal from 472 to 499; in the North-Western Provinces and Oudh from 2,007 to 2,060; in the Punjab from 539 to 1,068; and in the Central Provinces from 469 to 536. There is reason to fear that this form of punishment tends to affect prejudicially the health of convicts; and although in certain cases its adoption may be inevitable His Excellency in Council would be glad that great care should be exercised in having recourse to it, and he desires to call the attention of Local Governments to the necessity for seeing that discrimination is observed in reserving this punishment for the more serious offences against jail discipline. The number of other punishments rose from 59,788 to 61,617. In Bengal there was a satisfactory decline from 42,081 to 36,046; but the figures are still, absolutely and relatively, very large. In the Punjab there was a rise from 7,044 (including 6,861 formal warnings) to 12,521 (including 11,496 formal warnings); in the Central Provinces, from 941 to 1,525; and in Burma, from 3,492 to 4,912.

16. The following table compares the number of corporal punishments inflicted in the jails in the past three year:

Province.	Year.	Total number of prisoners punished by whipping.						Percentage of whippings according to the number of stripes to the total number of whippings.				
		From 5 to 10 stripes.	Above 10 to 15 stripes.	Above 15 to 20 stripes.	Above 20 to 25 stripes.	Above 25 to 30 stripes.	Total.	From 5 to 10 stripes.	Above 10 to 15 stripes.	Above 15 to 20 stripes.	Above 20 to 25 stripes.	Above 25 to 30 stripes.

N.B.—For explanatory remarks see footnotes appended to Statement No. 12.

As shown in Statement No. 12 the total number of male prisoners in jail in 1886 was 249,142: a higher figure than has been reached since 1880. Concurrently with this increase in the male jail population, the total number of punishments inflicted on male prisoners declined from 82,480 in 1884 and 72,217 in 1885 to 70,749 in 1886; and this decline was also exhibited in the number of

corporal punishments which fell from 3,498 in 1884 to 3,094 in 1886. The number of such punishments (3,094) inflicted in 1886 shewed a slight increase (19) over those inflicted in 1885; but in 1886, the percentage of prisoners whipped on the whole male jail population fell to 1·2: the smallest percentage indicated by the statistics for the period of seven years of which it was the last. It may be added that while there was a decline in the number of total punishments inflicted on male prisoners, there was a slight increase (from 4·2 to 4·4) in the percentage of whippings to total punishments inflicted on males.
