In Madras, the North-Western Provinces and Oudh, and Burma there was a decline in the number of whippings during the year under review; while in Bombay, Bengal, the Punjab, the Central Provinces, Assam, Coorg and the Hyderabad Assigned Districts there was an increase. Having regard to the larger jail population during the past year, the increase was, to some extent, to be expected; but the circumstances of the increase in the Punjab and the Central Provinces call for comment. In the former province 160 prisoners (4·56 per cent. of the total population) were flogged in the Chinawan jail, chiefly for persistently refusing to work. In the Wardha jail, in the Central Provinces, 25 out of 29 whippings were inflicted for short work; while the state of insubordination into which the Nagpur jail had fallen under its late Superintendent necessitated an increase in the number of floggings inflicted as punishments for the use of violence. The Governor-General in Council cannot but think that the management of the Chinawan jail must have been seriously defective to produce such results; and he desires that to the Superintendent of the Wardha jail an expression of his displeasure be conveyed for that officer's disregard of the strict orders of the Government of India regarding the use of the punishment of whipping in jails. The Government of India has frequently deprecated the infliction of the punishment of whipping for any except the most serious offences against jail discipline; and has advised that recourse should be had to it even in such cases only when a severe flogging is necessary. The infliction of a few stripes except in the case of juvenile offenders has been systematically discouraged. Under the Prisons Act (Act XXVII of 1870) the Superintendent of a jail is empowered to inflict the punishment of whipping in some cases in which it is not permitted in England; but it is not intended that the punishment of whipping should be inflicted for these offences except under circumstances of aggravation. It is therefore a satisfaction to notice that the cases in which from 5 to 10 stripes were awarded declined from 806 to 621 while those in which from 10 to 15 stripes were awarded fell from 771 to 677. On the other hand, there was an increase in the number of cases in which the punishment was more severe. While inculcating the necessity for a more sparing recourse to the punishment of whipping generally, the Governor-General in Council regards those figures as not unsatisfactory, inasmuch as they indicate that considerable attention has been paid to the orders on the subject in most of the jails in India. He repeats his earnest wish that all Local Governments and Administrations will maintain their efforts to reduce the punishment of whipping in jails to a minimum, and to reserve it as a last resource of discipline against contumacy. His Excellency in Council is glad to observe that only 4 cases of illness were reported as having resulted, in 1886, from the infliction of the punishment of whipping.

17. Among the punishments classed as "Other punishments" in Statement No. 6 appended to this Resolution, the most severe is the punishment of confinement in irons. Under section 52 of the Prisons Act (Act XXVI of 1870) (which does not apply to Madras, Bombay or Bengal), the Superintendent of a jail can direct the confinement of prisoners in irons for safe custody; and in case of urgent necessity the gaoler is permitted by section 53 to put a prisoner in irons or under mechanical restraint, provided that immediate notice be sent to the Superintendent. Under section 49 of the Act, a Magistrate can sentence a prisoner to be put in irons for any term not exceeding 6 months. The Bombay Prisons Act (II of 1874) authorises the confinement of prisoners in irons when this is necessary for the maintenance of discipline and security against escape. The Madras Act (V of 1869) makes no reference to the imposition of irons

or fetters on prisoners under any circumstances. In Bengal, under the local Act (V of 1865), irons may be used as a punishment for an ordinary jail offence. There is thus no uniformity in the law upon the subject; but in August 1885, the Government of India, while of opinion that there was no necessity then for undertaking legislation in order to secure uniformity, prescribed an annual statement to show how far this form of punishment is employed. The statements submitted by the various Governments and Administrations for the year 1886 show considerable variation in the practice in different provinces. In only fourteen cases were irons imposed under the orders of the Magistrate as a punishment; but in 12,269 cases (of which 12,199 were in Bengal) they were imposed by order of the Jail Superintendent for offences against discipline. On the other hand, 17,471 prisoners were confined in irons for safe custody for different periods. There were 13 such confinements in Madras and 136 in Bengal; but there were 16,045 in the Punjab, 13,384 in the North-Western Provinces and Oudh, 8,483 in Bombay, and 8,484 in Burma. The opinions of Jail authorities in Bengal and the North-Western Provinces in the matter of the use of irons exhibit no such variety as their practice would indicate. The Inspector-General of Jails, Bengal, writes: "I would draw attention to the remarkably small number of prisoners who were confined in fetters for safe custody * * I do not believe in fettering prisoners for safe custody. * * * Under a properly organised system of jail guarding, fetters are useless and rather apt to make warders lax by giving them a false idea of their power to prevent escapes." The Inspector-General of Jails in the North-Western Provinces and Oudh says: "I would explain that the practice in our jails has been to fetter all male criminal prisoners sentenced to one year and over on first arrival; and to keep them so fettered during the first half of their term, after which it is presumed that the spirit of rebellion has subsided. * * * In a vast number of cases I am of opinion that it is unnecessary to fetter the ordinary convict on arrival; at the same time, I do not judge it expedient to interfere with that discretion which must be left to the Superintendent as the person responsible for the safe custody of the prisoners." There is thus practical unanimity of opinion as to the unwisdom of fettering convicts on admission into jail between the Inspector-General of a Province in which fetters have hardly been at all used for the purpose of safe custody and of a province in which the use of them with this object seems to have been carried to an extreme point. The Governor-General in Council has, therefore, determined to consult Local Governments and Administrations with a view to imposing further restrictions on the use of fetters on newly-admitted convicts in these provinces where the use of them seems to admit of restriction without prejudice to discipline or the safe custody of convicts.

18. It will be observed that column 6 of Statement No. 6 gives the ratio per cent. of the total number of punishments which have been inflicted during the year to the daily average number of convicts. When this information was called for, it was pointed out by some authorities that if a correct inference was to be drawn as to the extent to which individuals in the various provinces became liable to punishment, the ratio should be struck not on the average daily strength, but on the total annual jail population. The Government of India is inclined to think that there is force in this objection, and the question, will be further examined; meanwhile the information now supplied may be discussed, as showing the relative proportion of punishments in the various provinces with reference to an uniform standard supplied by the average daily strength. From this point of view the ratio per cent. of the total number of punishments in all Indian jails to the average daily number of convicts in jail, recorded in Statement No. 6, was 121·69 as compared with 121·12 in 1885. The variation in different provinces was very considerable. In Bengal the ratio amounted to 299·93; and though that ratio was less than in the preceding year (354·65), it is still far greater than the ratio obtaining in other provinces. In the Punjab the ratio rose in 1886 from 93·2 to 162; in the Central Provinces from 77·44 to 103·28; and in Burma from 101·62 to 112·12. In the other provinces the ratio for 1886 varies but slightly from that for 1885; the lowest ratio in 1886 is found in the jails of the North-Western Provinces and Oudh (31·53).

19. In commenting on the statistics of the punishments in jails for 1884 and 1885, the Government of India remarked, as regards Bengal, that "the decrease in the latter year is no doubt considerable; but there is still much room for improvement; and as the attention of the Bengal authorities has now been fully directed to the matter, the Governor-General in Council trusts that a sure approach to the standard at which existing orders aim will be effected."

Adverting apparently to these observations, the Bengal Government, when reviewing the Bengal Jail Report now under notice remarked: "This figure is still far above any of those reported from other provinces for 1885, the last year for which statistics are at present available; but the Lieutenant-Governor is not prepared to admit that any other Local Government in India has established a standard in this matter to which it would be desirable to conform. The following figures are instructive in this connection—

Country or Province.	Year.	Ratio per cent. of offences to daily average number of prisoners.
Bengal	... 1886	299·9
England (local prisons) ...	... 1885-86	284·6
Ireland (local prisons) ...	... „	231·6
Ireland (convict prisons) ...	... „	219·0
England (convict prisons) ...	... „	158·6
Scotland	... „	132·3
Burma	... 1885	101·6
Punjab	... „	93·2
Coorg	... „	78·9
Central Provinces	... „	77·4
Assam	... „	67·5
Madras	... „	59·4
Bombay	... „	45·1
North-Western Provinces and Oudh	... „	36·1
Hyderabad Assigned Districts...	... „	32·6

"Conducted to a great extent on the separate system, under which convicts see very little of each other, and have therefore fewer opportunities and temptations to offend against discipline, a fairer comparison can be made between the figures for English local prisons and Irish prisons of both kinds on the one hand, and the prisons of India on the other; but, even in this case, the comparison must be made with an important reservation. In England, and the Lieutenant-Governor believes in Ireland also, all prisoners sleep in separate cells at night; their association during the day, when permitted at all, is subject to strict limitation, and every sentence to a long term of imprisonment in England begins with the discipline of 9 months' solitary confinement; whereas in Bengal prisoners are in close association throughout the day and night, and are subjected to no special preliminary discipline during the first months of confinement, when through sheer ignorance they are most likely to transgress rules. Having regard to these facts, and considering further the necessarily inferior material of the Indian warder staff, the Lieutenant-Governor cannot but conclude that, if the Bengal system errs on the side of over-registration of offences, the Jail administrations of England and Ireland are still more liable to the charge. Other provinces in India have hitherto proceeded on a different method from that followed in the United Kingdom and Bengal; but, under the new mark rules recently sanctioned by the Government of India, it will be necessary in all provinces to keep up accurate registers of all offences; and it will then, perhaps, become possible to institute some comparison between the statistics of different provinces of the Empire."

In these observations the all-important fact that there is an essential distinction between the character of the criminals respectively confined in the jails of India and in those of the United Kingdom has not received sufficient attention. The convict prisons in the United Kingdom contain, as a rule, only hardened offenders. The number of admissions into the local prisons of England and Ireland, respectively, during 1885-86, were 157,779 and 30,554; of the former, 77,068 had been previously committed to prison once or more than once, while of the latter only 13,168 had not been previously committed.

In the case of English local prisons, therefore, the inmates who may be considered as habitual criminals were about 50 per cent., and in the case of Irish local prisons about 55 per cent. of the total number of jail inmates. As shown above, of the convicts admitted to Indian jails in 1886, only 17,593, or 11·72 per cent., were identified as having been previously convicted. The percentage of reconvicted prisoners in Bengal was 11·70. A sharp distinction must therefore be drawn between the character of the jail population of the United Kingdom and of Bengal or any other province in India; and no argument can be sustained whose object is to justify measures of severe jail discipline in India because such measures are necessary in the United Kingdom.

In the passage quoted above from the Resolution of the Bengal Government the ratio per cent. of offences to the daily average number of prisoners for the jails of England, Scotland and Ireland is given; but the figures given below from the reports of the Commissioner of Prisons for 1885-86 do not support the contention of the Bengal Government. The total number of inmates of the jails of the United Kingdom in 1885-86 and of Bengal jails in 1886, and the total number of punishments are thus contrasted:

Country.	Year.	Total number of prisoners.	Total number of offences.	Total number of punishments.
England (convict prisons)	1885-86	13,772	*	17,263
Ireland (convict prisons and convicts in local prisons)	„	1,157	1,327	1,448
England (local prisons)	„	1,97,874	43,771	35,356
Scotland	„	49,820	3,187	3,187
Ireland (local prisons)	„	30,156	6,017	5,665
Bengal	„	93,012	40,512	40,504

As just remarked, no comparison is possible between the convict prisons of England or Ireland and the Bengal jails. If any comparison is possible, it is between local prisons in the United Kingdom and Bengal jails. And if such a comparison be instituted, the ratio of punishments to the total number of prisoners will be found to be far higher in Bengal than in the United Kingdom. The Governor-General in Council is therefore unable to accept the conclusion that, if the Bengal system errs on the side of over-registration of offences, the Jail administration of England and Ireland is still more liable to the charge.

21. It has been suggested that the great excess of punishment in Bengal jails, as compared with the jails of other Provinces, is due not to a more severe system of administration, but to a more careful registration of offences against jail rules. The suggestion seems to be that trivial short-comings are noted in Bengal jails which in other presidencies are ignored. The Government of India has already expressed its fear that from the persistent notice of insignificant faults on the part of people who often err more from inadvertence than design, as much harm may come as good. But a careful review of the various Provincial Reports for 1886 satisfies the Governor-General in Council that, as a matter of fact, the registration of punishments in some other provinces is not less minute than it is in Bengal. To give an example, among the 40,504 punishments recorded in the Bengal Report as having been inflicted in 1886 only 165 miscellaneous items recorded in paragraph 49 of the Report can have been simple warnings. The rest were more or less substantial punishments. In the Punjab, on the other hand, of the 16,146 punishments recorded, 11,496 were warnings. Of the 3,782 jail punishments in Bombay 504 were simple admonitions: and warnings are included among the punishments inflicted in all other larger provinces.

In discussing this important subject, the character of the population with which we have to deal must also not be left out of consideration. It may be assumed that the ordinary Bengal criminal is not more troublesome than the criminal in the North-Western Provinces and Oudh, the Punjab or Bombay. If we find the inference suggested by the Bengal statistics that he is more troublesome the idea suggests itself that there must be a difference in the method in which the Bengal jails are managed from that which prevails in the other provinces. And when we find that in the other provinces on the whole

* Not shown in the Judicial Statistics, 1885.

the discipline is not inferior to the discipline in Bengal jails, the conclusion that the system of administration in Bengal is susceptible of improvement becomes unavoidable. This conclusion is confirmed by the extraordinary variations in the extent to which punishments are inflicted even in jails within the Lower Provinces. The ratio per cent. of total punishments to average population (again taking this somewhat arbitrary but uniform standard of reference) varied from 632·22 in Alipore to 80·64 in Bankura; from 414·45 in Dacca to 85·84 in Saran; from 411·59 in Bogra to 78·66 in Durbhungah. These variations suggest that even within the limits of the Bengal Province the infliction of jail punishments requires to be regulated on a more uniform plan.

These considerations moreover borrow additional force from the fact that since the attention of the Bengal authorities was drawn to the subject of jail punishments, the number of such punishments fell from 56,558 in 1884 to 40,504 in 1886. A fall of 30 per cent. in two years, when considered in conjunction with an improvement in discipline, of which the report under notice must be held to give evidence, affords strong ground for the belief that punishments have been unnecessarily inflicted in the Bengal jails; and that there exists in the jails of that province a tendency on the part of the establishment to interfere unnecessarily, and be somewhat overbearing in their dealings, with the prisoners. The Governor-General in Council will now dismiss this portion of the subject with the remark that although he willingly recognises the many excellent points which characterise the administration of Bengal jails, he has no longer any doubt that the system of inflicting punishment in them stands in need of improvement and closer approximation to that in force in other provinces.

22. In 1885 there were 182 escapes from Indian jails. On 31st December of that year there were 701 escaped convicts who had not been recaptured. During the year under review the number of escapes and recaptures in each province was as follows:—

	Escapes.	Recaptures.
Madras	... 21	20
Bombay	... 41	27
Bengal	... 17	12
North-Western Provinces and Oudh	... 16	23
Punjab	... 17	17
Central Provinces	... 10	8
Burma	... 10	9
Assam	... 40	31
Coorg	... ...	...
Hyderabad Assigned Districts ...	... ...	...
	172	147

The number was high in Madras, Bombay, the Central Provinces and Assam, considering the number of the jail population in those provinces; and at Ahmedabad, in the Bombay Presidency, the escape of 7 prisoners was clearly connived at by the Jail authorities.

23. The working of the mark system during the year is shown in Statement No. 11. In 1885, of 9,831 convicts who became eligible for remission under the mark system, 2,193 failed to benefit by the rules. In 1886 the number of convicts eligible for remission rose to 10,300, while the number of those who failed to obtain any remission declined to 386. Somewhat less than 4 per cent. of those eligible for remission thus failed to gain it as compared with 22 per cent. in 1885; and of the 386 convicts who failed, 131 and 210 belonged to the jails of Bengal and the Punjab respectively, the provinces in which the number of punishments inflicted on convicts was higher than elsewhere. The chief increase among convicts who benefited under the rules has occurred among those sentenced to two years' imprisonment, to whom the rules were last extended. From allusions to the subject made in the reports and connected papers, it appears to the Governor-General in Council that there is some misapprehension in the minds of Jail Superintendents as to the manner in which one of the mark rules ought to be worked. In circulating the mark rules to Local

Governments, the Government of India observed: "In the Conference rules, and those Jail Manuals which follow them, no separate marks are allowed for good conduct; nor are marks granted for the performance of the ordinary daily task. The experience of some Local Governments goes, however, to show that, in view of the weak establishments entertained in Indian jails, it is very desirable to bring clearly before the convicts the advantage to be gained by a cheerful submission to discipline and an honest performance of the daily task." Provision was, therefore, made in the rules that one mark should be daily given for industry and the exact and skilful performance of the daily task; and one for thoroughly good conduct and scrupulous attention to all jail regulations. The Governor-General in Council adheres to the view that the grant of separate marks for good conduct and industry is desirable; but he desires to point out that there was never any intention to regard good conduct as so independent of industry that, as has sometimes happened, a mark for good conduct might be given to a lazy or systematically idle prisoner. Such a prisoner should get a mark neither for industry nor for good conduct. The attention of all Local Governments and Administrations is invited to the necessity for seeing that the intention of the rule should be strictly followed in future.

The Prison Conference laid down certain rules which were accepted in the main by the Government of India, under which convicts should become eligible for promotion as convict officers. It was in addition provided that no prisoner should be appointed as a convict officer, unless his appointment would promote discipline or economical jail administration; and the Government of India forbade the appointment as convict officers of persons convicted of thuggee or of unnatural offences. In the discretion vested in them, some Local Governments have imposed further conditions. It is thus apparent that there are convicts who, by reason of the nature of their crimes, or of physical infirmity, cannot, though they may have been well conducted in jail, and have complied with the other conditions necessary to qualify them for appointment as convict officers, ever hope to become convict officers. To meet their cases, the rules provide that such prisoners shall be eligible for the higher rate of marks allowed to convict officers. On recently reconsidering this portion of the rules, however, the Governor-General in Council had doubts as to the propriety of rewarding prisoners who are not convict officers in the same way as if they were; and he inclined to the opinion that the extra marks granted to convict warders should be regarded as granted for work done, and as recognition of the greater responsibility which rests upon convict warders. For this reason, and because the practice upon the point varies in different provinces, His Excellency in Council will take an early opportunity of consulting Local Governments as to the desirability of restricting extra warder marks to prisoners who are actually convict warders.

24. The financial results of the administration of jails during the year are contained in Statements Nos. 7 and 8 appended to this Resolution. The total cost of guarding and maintaining an average number of 76,038 prisoners was Rs. 47,59,878, as compared with Rs. 46,42,075, expended in 1885 on an average of 74,069 prisoners. The gross cost per head was thus Rs. 62-9-7 as compared with 62-10-9 in 1885.

The items of which the grand total of expenditure in each year was composed were the following:—

	1885.	Cost per head of average strength.	1886.	Cost per head of average strength.
	Rs.	Rs. A. P.	Rs.	Rs. A. P.
Rations ...	16,63,333	22 12 1	17,78,720	23 10 9
Establishments ...	18,25,827	24 10 5	18,48,282	24 4 11
Police guards ...	4,29,976	5 12 10	3,99,995	5 4 2
Hospital charges ...	1,40,770	1 14 5	1,40,744	1 13 7
Clothing ...	2,14,588	2 14 4	2,15,320	2 13 4
Contingencies ...	3,67,581	4 15 5	3,76,817	4 15 4

25. In Madras the average number of convicts and under-trial prisoners declined from 8,116 to 7,994; yet the total cost of rations rose from Rs. 3,00,833 to Rs. 3,26,399; and the cost per head from Rs. 37-7-4 to

Rs. 41-6-4. The high cost of rations in the Madras jails had previously attracted the attention of the Finance Committee and the Government of India. There was no general rise of prices in Madras in 1886, and no satisfactory explanation has been given of the rise in the cost of rations in that year. The Government of India has directed further inquiry into the matter; but the facts as at present before it indicate a culpable neglect of duty on the part of the jail authorities in the Madras Presidency. In Bombay, Bengal and Assam both the gross cost of rations and the cost per head of average strength declined during the year. In Burma the gross expenditure rose owing to the increase in the number of prisoners; but the cost per head was slightly reduced. In the North-Western Provinces and Oudh, the Punjab, and the Central Provinces the increase in the number of prisoners caused a considerable increase in the total cost of rations which was also augmented by a rise in prices of food in those provinces. The cost per head in each province showed a sensible increase, which amounted in the Central Provinces to as much as Rs. 5-1-5. But in the opinion both of the Government of India and the Chief Commissioner, this rise is only partially accounted for by the rise in prices. The cost per head in the North-Western Provinces and Oudh was as before lower than elsewhere (Rs. 15-2-5); and affords a strong contrast to the cost per head in Madras (Rs. 41-6-4). These figures, however, require a certain amount of modification, inasmuch as it appears from the larger number of convicts employed on gardening in the North-Western Provinces and Oudh that vegetables produced by the labour of the convicts were more extensively consumed in the jails of those provinces than elsewhere. In order to prevent any misconception on this point in future, His Excellency in Council directs that a statement shall be given in the body of the report for each province, showing the extent to which food purchased in the market was supplemented by vegetables and other products raised by the labour of the convicts, and the approximate amount of saving effected by the consumption of such articles. It is only with this information before it that the Government of India can make an accurate comparison between the cost of feeding prisoners in different provinces. In most provinces the variations in the cost of rations at different jails are such as to require attention from the Inspectors-General of Jails.

26. In Madras there has been an apparent increase under the head of establishments from Rs. 2,33,427 to Rs. 2,43,547; but this is in reality due to the substitution of warder for police guards, and is far more than compensated for by the decline in the cost of police guards. In Bengal the cost of establishments has increased from Rs. 4,42,863 to Rs. 4,67,459, or from Rs. 29-2-10 to Rs. 31-8-5 per head. This rate of cost per head is higher than in any other province in India; but there are no charges in Bengal on account of police guards at jails. The increase is in a great measure due to the increments of pay which fell due to the Superintendents, Assistant and Deputy Superintendents in the course of the year, and to the grant of extra allowances to warders stationed in unhealthy districts. The jail establishment in Bengal was organised for a strength of 20,000 prisoners, but the numbers are now far below this figure, and as there seems no probability of the higher number being reached again in the immediate future, arrangements have been made between the Government of India and the Local Government for a reduction of establishment. A saving was effected in the North-Western Provinces and Oudh by the closing of the Central Jail at Meerut; but this was partly counterbalanced by the reopening of the District Jail at that place. In the Punjab most of the increase was due to the increase in the jail population, and the rest, to pay being drawn in 1886 which fell due in 1885. A considerable reduction in the police guard was effected in Sind; and the Inspector-General of Jails in the North-Western Provinces and Oudh is endeavouring to arrange for reduction of the cost under this head in those provinces. The hospital charges varied very little from those of the previous year over India generally; and the cost per head of average strength consequently declined from Rs. 1-14-5 to Rs. 1-13-7. As, however, the year was more healthy than the previous one, the cost per head of average number sick rose from Rs. 59-0 5 to Rs. 60-1-11. The chief decline

in total cost was in Bengal; but the average cost per head of average number of sick in that province rose from Rs. 63-13-3 to Rs. 66-1-1. In the Central Provinces the total cost rose from Rs. 3,829 to Rs. 5,532; the cost per head of average strength, from Rs. 1-2-1 to Rs. 1-8-1; and the cost per head of average number sick, from Rs. 29-15-10 to Rs. 41-1-1.

27. With the increased number of prisoners the total cost of clothing naturally rose; but the cost per head of average strength declined from Rs. 2-14-4 to Rs. 2-13-4. The increases under this head in Madras and the Central Provinces have been imperfectly explained. The slight increase in the North-Western Provinces and Oudh (where the cost per head was Rs. 2-2-1) was the result of too rigid economy in the two previous years, which necessitated considerable renewals of clothing during the year under review. In Burma cotton clothing was more liberally distributed than formerly; in addition a large supply of blankets was obtained from the Bengal Jail Department; and all sick and convalescent prisoners were provided with specially warm clothing.

The charges under the head of contingencies were reduced in most provinces, but they rose over India generally from Rs. 3,67,581, or Rs. 4-15-5 per head, to Rs. 3,76,817, or Rs. 4-15-4 per head. This increase was mainly due to the rise in Burma of expenditure of this nature from Rs. 28,932 to Rs. 60,490 (or from Rs. 4-3-2 to Rs. 7-4-9 per head); and in the Central Provinces, from Rs. 19,703 (Rs. 5-13-5 per head) to Rs. 24,830 (Rs. 6-12-4 per head). The charges on account of the transfer of prisoners from the Rangoon jail, owing to the large number of convicts deported to India and the Andamans, account for Rs. 30,936 of the increase in Burma. In the Central Provinces the increase was due to an increase of expenditure on account of petty construction and repairs. This item of expenditure is one over which the strictest control is necessary; and the Governor-General in Council trusts that Local Governments and Administrations will find it possible to reduce the charges now incurred on this account.

28. The total cash earnings of the prisoners were Rs. 11,51,206-10-0 as compared with Rs. 12,92,318-8-0 in 1885. Deducting these sums from the gross expenditure in each of these years, the net cost of the Jail Department to Government was Rs. 33,49,756-8-0 in 1885, and Rs. 36,08,671-6-0 in 1886. The average net cost per head was Rs. 47-7-4 as compared with Rs. 45-3-7. The net financial result cannot, in the opinion of the Governor-General in Council, be regarded as entirely satisfactory. The net cost per head is, it is true, lower than it was in 1884, and the earnings of prisoners were considerably higher than in that year. At the same time the net cost to Government in 1886 was 2½ lakhs more than in 1885; the average net cost per head was Rs. 2-3-9 more than in that year; while the earnings of an average strength of 65,810 convicts sentenced to labour amounted to only Rs. 11,51,206 as compared with Rs. 12,92,318, earned in 1885 by an average daily strength of 64,394. In 1885 the number engaged on manufactures was 24,944 per diem, while the number in 1886 was 25,903.

The Governor-General in Council has already indicated the items of expenditure in which Local Governments and Administrations may find it possible to effect economy. It is observed that in Bombay the cash earnings rose from Rs. 1,20,528 to Rs. 1,40,930; in the Central Provinces, from Rs. 48,057 to Rs. 56,386; in Burma, from Rs. 1,63,587 to Rs. 1,84,653; and in Assam, from Rs. 14,963 to Rs. 16,103. In Bengal they declined from Rs. 3,65,202 to Rs. 2,53,338; in the North-Western Provinces and Oudh, from Rs. 2,83,719 to Rs. 2,74,237; in the Punjab, from Rs. 2,29,570 to Rs. 1,78,989; and in Madras, from Rs. 52,123 to Rs. 31,861. The number employed on manufactures declined in Bengal from 6,341 to 5,972, and in the Punjab from 4,810 to 4,764. The numbers so employed rose from 4,351 to 5,037 in the North-Western Provinces and Oudh, and from 1,534 to 1,890 in Madras. These decreases in the earnings of convicts have not been satisfactorily explained; the decrease in Madras, where the average cash earnings were smaller than anywhere else in India, while the average gross cost of maintaining and guarding prisoners was higher than anywhere except Coorg, is particularly unsatisfactory. The Governor-General in Council trusts that the results for the current year may be more encouraging.

29. In Statement No. 9 are contained the statistics which show the sickness and mortality of the prisoners of all classes in the jails during the year. The aggregate number of deaths in 1886 was 2,530 as compared with 2,670 in 1885; and this figure represents a ratio of 33·3 per mille as compared with 36·2 per mille in 1885. The deaths according to the age of convicts are thus shown:—

(1) Under 16	...	1
(2) From 16 to 40	...	1,428
(3) From 40 to 60	...	695
(4) Over 60	...	195
Total	...	*2,319

The causes of the deaths in each year are thus shown:—

	Fevers.	Bowel complaints.	Cholera.	Other causes.	Total.
1885 ...	275	748	282	1,204	2,509
1886 ...	227	733	110	1,255	2,325

The ratio per mille of average strength of deaths from cholera declined from 4·1 to 1·7; and in the jails of Madras, Bombay, the Punjab, Coorg and the Hyderabad Assigned Districts, there were in 1886 no deaths from cholera. The ratio per mille of average strength of deaths from all other causes was 31·6 as compared with 32·1 in 1885.

30. Simultaneously with the decline in the number of deaths the number of admissions into hospital fell from 72,212 to 70,365, and the number of daily sick from 2,477 to 2,432. Calculated upon the daily average strength, the ratio per mille of admissions into hospital and of daily average strength, respectively, were 927·4 and 32·1. The corresponding figures for 1885 were 978·8 and 33·5.

Turning to the results for the different provinces it will be seen that the number of deaths declined in Madras (from 162 to 148), in Bombay (from 241 to 210), in Bengal (from 887 to 548), in the Central Provinces (from 255 to 239), in Coorg (from 9 to 7), in the Hyderabad Assigned Districts (from 20 to 12). In Assam the figures were stationary, while there was a slight rise in the mortality, in the North-Western Provinces and Oudh (432 to 463), and the Punjab (284 to 307). In Burma the increase of deaths was from 295 to 510.

31. The figures exhibiting the number of admissions into hospital show somewhat different results. The number admitted into hospital fell in Bombay (4,617 to 4,082), Bengal (23,160 to 20,146), the North-Western Provinces and Oudh (15,378 to 14,319), Assam (3,181 to 2,840), Hyderabad Assigned Districts (577 to 537). The number of admissions rose in Madras (5,338 to 5,868), the Punjab (10,463 to 11,644), the Central Provinces (3,313 to 4,249), Burma (6,014 to 6,494), Coorg (171 to 186).

The daily average number of sick increased in Madras (191 to 197), the Punjab (262 to 277), the Central Provinces (128 to 135), Burma (264 to 341). It declined in Bombay (173 to 168), Bengal (774 to 649), North-Western Provinces and Oudh (561 to 550), Assam (104 to 97), and Hyderabad Assigned Districts (15 to 13).

32. These results are, in the opinion of the Governor-General in Council, so far satisfactory that they indicate a distinct decrease in the mortality among convicts during the year which would have been more marked than it was, but for the exceptional circumstances of Burma. The improvement is, as might be expected from the previous results, most noticeable in Bengal, while in the North-Western Provinces and Oudh and the Punjab, where there has been a rise in the mortality, the ratio of deaths per mille is still less than it is in any of the large provinces except Madras. The high mortality in Burma jails was the result of the conditions to which the convicts were exposed prior to admission. Of the 142,163 prisoners (*Statement No. 10*) discharged from all the jails in India during the year, 77,448 had gained weight, 26,594 had remained stationary,

* Excluding 6 deaths of which details are not given in the Reports.

and 38,121 had lost weight. The number who gained weight of the 138,567 prisoners discharged in 1885 was 74,453, and the number who had lost it, 38,508. The figures for 1886 are generally more favourable than those of 1885; but in the North-Western Provinces and Oudh the number who increased in weight fell from 21,646 to 21,558; while the number who lost it rose from 11,811 to 13,275. A similar result, though on a smaller scale, is also observable in the Central Provinces. During 1886, 172 convicts were released on account of sickness as compared with 134 in 1885. The increase occurred chiefly in Burma, where 56 convicts were released on this ground as compared with 8 in 1885.

33. While, however, the Governor-General in Council recognises that the statistics of sickness and mortality in the jails of India collectively for the year 1886 are less discouraging than those for 1885, an examination of the following table, would seem to show that there is still much to be done in the way of rendering the conditions of jail life less prejudicial to the health of convicts than they are at present.

Provinces.	DEATH-RATE PER 1,000 OF POPULATION IN 1886.							
	Cholera.		Fevers.		Bowel-Complaints.		All Causes.	
	Prisoners.	Free population.	Prisoners.	Free population.	Prisoners.	Free population.	Prisoners.	Free population.
Madras	...	0·4	·87	7·9	4·64	0·9	17·53	19·7
Bombay	...	0·01	2·07	17·10	8·87	2·23	30·44	23·17
Bengal	2·85	1·78	4·41	15·97	16·87	0·84	38·30	21·99
North-Western Provinces and Oudh.	·40	0·78	1·56	27·58	6·33	1·34	22·65	33·27
Punjab	...	0·0006	2·98	17·85	8·09	0·95	28·46	26·60
Central Provinces	6·87	1·89	3·02	20·01	31·30	2·92	65·07	33·24
Burma	4·14	1·10	1·82	7·79	22·26	0·69	61·55	15·54
Assam	13·78	4·47	3·45	14·10	21·53	3·74	63·73	27·77
Coorg	...	...	10·31	17·85	30·93	0·87	72·16	20·33
Hyderabad Assigned Districts	...	0·4	4·60	17·3	·92	6·4	11·04	36·7

It must be admitted that, while the mortality statistics for the jails given in the above table show with absolute exactness the number of deaths and the ratio which they bear to the total jail population, the record of mortality among the free population is, and must be for some time to come, defective. It is probably true that in most Provinces the death-rate among the free population is more than is stated above. On the other hand, it must be remembered that infant mortality which contributes so largely to the aggregate of mortality among the free population is entirely absent from the jails. Moreover, in the matter of food, clothing, lodging, and regularity of habit, the prisoners have a decided advantage over the free population; and if against this has to be set the effect which depression of spirits and separation from relatives and friends may be expected to exercise on the health of convicts, it cannot be denied that the balance of advantage in the matter of health should, at all events in the lower ranks of life, be in favour of the convict as against the free subject. In England the death-rate among the free population was, in 1885-86, 19 per mille; and in the jails for the same period, 7·5 per mille. If proper account be taken of all the considerations mentioned above as likely to affect the record of mortality among the free and jail population respectively, it might be anticipated that the ratio of deaths per mille of the population in the jails in India would, if not so favourable when compared with that of the free population as it is in England, at all events have been generally less than the rate which would

result from an addition to the recorded death-rate among the free population of a reasonable allowance for the imperfections of present knowledge. Judged by such a standard the Central Provinces, Assam, Lower Burma, Bengal, and Bombay exhibit a very abnormal death-rate among the jail population, while it is only in regard to Madras, the North-Western Provinces and Oudh, and the Hyderabad Assigned Districts that the table exhibits results which are not unsatisfactory.

34. Further evidence of the necessity for more careful attention to the health of convicts in jails is to be found in the statistics of mortality among convicts given in provincial reports for the different periods of imprisonment. For the purposes of these statistics, convicts are subdivided into: (1) those under 6 months in jail; (2) those in jail from 6 to 12 months; (3) those in jail from 1 to 2 years; (4) those in jail from 2 to 3 years; (5) those in jail from 3 to 7 years; and (6) those in jail over 7 years. The ratios are calculated on the daily average of the convicts which has to be ascertained by means of a monthly census. This is the only method available for ascertaining the daily average according to length of imprisonment; and though it cannot give absolutely accurate results, the figures approximate to the true ones with sufficient closeness to justify their use for purposes of comparison. An examination of these figures for 1886 shows that in only one province, *viz.*, Burma, did the ratio of mortality progressively decline during each period of detention in jail. In Assam also the ratio of mortality among convicts in jail for 6 months and under exceeded that among convicts in the second period; but with these two exceptions and Coorg and Berar, (in which provinces no deaths at all occurred during the second period) the ratio in the second period was in every instance higher than in the first. Excluding Coorg and Berar, the ratio for the third period exceeded that for the first in every province except Burma; while it exceeded that for the second period in all provinces except Bombay, Bengal, the Punjab, the Central Provinces and Burma. In the fourth period the ratio fell below that of the first period in every province except Madras, Bombay, the Punjab and the Hyderabad Assigned Districts. In Madras the ratios for the two periods were identical. In the fifth period the ratio was below that for the first period only in Madras and Burma; and in the sixth period, only in Bengal and Burma. The following table will help to illustrate the preceding remarks:—

1	2			3			4			5			6			7		
Province.	Under six months in Jail.			From six months to twelve months.			From one to two years.			From two to three years.			From three to seven years.			Above seven years.

35. These figures, in the opinion of the Governor-General in Council, call for very serious consideration at the hands of Local Governments and Jail

authorities; and he has in separate communications directed the attention of Local Governments and Administrations to the subject. One of the primary causes of sickness is, in the opinion of His Excellency in Council, to be found in the overcrowding which is sometimes permitted to take place in jails. In exceptional circumstances, such as those of Burma during the year under review, the capacity of the jails may be temporarily insufficient to afford proper accommodation to all the convicts; but this was not the case in the rest of India where the accommodation is far more than enough for the diminished jail population that has now to be accommodated. The Governor-General in Council, therefore, trusts that Local Governments will impress upon their Inspectors-General of Jails the urgent necessity of seeing that, as soon as a jail is becoming overcrowded, some of the convicts are drafted off to jails which are put to less pressure; and he desires to give most emphatic expression to the opinion that no question of increasing the profits of a jail can be regarded as an excuse for keeping in it even temporarily more convicts than it has been constructed to hold. While attention should invariably be given to the removal of defects in ventilation, care should be taken not to expose, especially during inclement weather, prisoners to cold and chills who in their own homes rigidly avoid such exposure when they can. To the supply of warm clothing, should the conditions of any jail at some periods of the year be less healthy than at others, special attention should be given.

36. An examination of the monthly returns of mortality in jails which are submitted to the Sanitary Commissioner with the Government of India, and which in each instance of death give the number of days for which the patient was in hospital before his death, shows that one fruitful source of mortality in jails is to be found in the neglect to send convicts to hospital so soon as they are attacked by disease. Numerous instances occurred during the year in which sufferers from pneumonia and similar diseases died after one, two, three, or four days' treatment in hospital. The Governor-General in Council is fully aware of the fact that convicts, as a rule, are averse to entering the jail hospital, and that they are in the habit of dissembling to avoid detection of disease; but in a large proportion of the jails the Superintendent is himself a medical man, and in all of them there is a competent subordinate medical staff, so that this circumstance affords no excuse for, or explanation of, the failure to detect disease in its earlier stages. His Excellency in Council trusts that instructions will now be issued which shall have the effect of fixing the responsibility of the medical officers and their subordinates in this matter, and that Local Governments and Administrations will take measures to secure that on each occasion in which neglect of such instructions is brought home to a jail official, suitable notice may be taken of the dereliction of duty.

37. The scale of diet adopted in the jails of different provinces is sufficient, but not more than sufficient, for the nourishment of the convicts from whom hard labour is exacted; and it is very essential that every precaution should be taken to ensure that each convict gets the full amount of each article of diet that is intended for him. The proper distribution of diet is a matter in which native subordinates are apt to be very careless; and unless proper supervision is exercised by the Superintendent, some of the essential constituents of a convict's dole, such for instance as oil, are liable to be purloined. It is, it appears to the Governor-General in Council, also possible that the importance of the proper cooking of the food may have sometimes been overlooked. Close attention should be directed to this matter; checks being applied both before and after cooking at unknown intervals. It often happens that the raw materials are seen to be accurate in weight, but that insufficient care is used in seeing that the cooked quantity is equivalent to the raw materials, and the cooking has been properly done. It is scarcely necessary to add that the quality of the drinking-water must be maintained above suspicion; and the instructions issued in the letter No. 16-979-87, dated 15th July 1886, for the periodical analysis of the water, should, if properly observed, secure this object.

38. In conclusion, the Governor-General in Council desires to express his opinion that the most important lessons to be learned from an examination of

the Reports and of the statistics for the jails in India during the year under review are the necessity for effecting improvement in the conditions of jail life, with the object of ensuring greater uniformity and considerateness in the methods devised to preserve discipline, and of diminishing the sickness and mortality which now occur within the jails. These objects he earnestly commends to all Local Governments and Administrations. The subject of punishments inflicted on convicts calls for particular attention in Bengal and, though to a smaller degree, in the Punjab; while the financial management of the jails in Madras and the Central Provinces needs to be carefully investigated. Finally, His Excellency in Council would express the hope that all Local Governments and Administrations will devote attention to the subject of promoting remunerative labour in jails.

ORDER.—Ordered that a copy of the above Resolution be forwarded to the Local Governments and Administrations marginally noted for information and guidance, to the Department of Finance and Commerce.

Madras.	Central Provinces.
Bombay.	Burma.
Bengal.	Assam.
North-Western Provinces and Oudh.	Coorg.
Punjab.	Hyderabad.

Ordered, also, that the Resolution be published in the Supplement to the *Gazette of India*.

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 6th OCTOBER, 1887.

GENERAL REMARKS.—Rain has fallen in varying quantities in most parts of Madras, Bombay and Bengal, and in Burma, Assam, and Mysore and Coorg. Elsewhere it has been rainless.

The harvesting of the *kharif* is progressing in Bombay, the North-Western Provinces and Oudh, and the Punjab, and has begun in Rajputana. The prospects of the crops are satisfactory, but more rain is needed in some parts.

Rabi operations continue throughout the country, and sowings are in progress in Bombay, the North-Western Provinces and Oudh, the Punjab, and Rajputana.

In Madras the prospects are pretty fair, except in parts of Tinnevelly and Madura. In Mysore and Coorg the condition of the crops is good, but more rain would be beneficial.

The rice crop is being harvested in the North-Western Provinces and Oudh and Bombay, but the crop needs more rain in parts of the latter Province and in Bengal; in Burma and Assam the prospects continue favourable.

Cotton sowing is progressing in Bombay.

The public health is satisfactory. Cholera is dying out, but fever is still prevalent in parts of the country.

Prices are rising slightly in Mysore and in two districts of the Punjab. Elsewhere they are generally steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 5th.)		
Bellary	Average ·55	Standing crops good, but early crops begin to wither in parts of two taluks. Harvest *korra*, yield below average. Cholera in four, and cattle-disease decreasing in three taluks.
Kurnool	Average ·48	Standing crops fair, but in three taluks partially suffered from excessive rain. Small-pox in two, cholera increasing, and cattle-disease decreasing in four taluks.
Ganjam	Average ·03	More rain wanted. Harvest *ragi*. Small-pox in five, fever in eight, and cattle-disease increasing in six divisions. Cholera exists.
Kistna	Average ·06	Standing crops suffering from want of sufficient rain. Harvest *cumbu*, maize, outturn about average. River 3 feet over Anicut. Slight fever. Cholera in one, and cattle-disease decreasing in four taluks.
Chingleput (Madras)	Average 2·49	Standing crops fair. Harvest *ragi*, and *cumbu*, outturn below average. Small-pox in three, cholera in one, and cattle-disease decreasing in five taluks.
Coimbatore	Average ·19	Standing crops generally fair, but require rain in parts. Harvest wet and dry grains, outturn average. Fever in one taluk.
Tanjore	Average ·39	Standing crops indifferent in most parts for want of sufficient rain. Harvest wet and dry grains, outturn below average. Cattle-disease decreasing in two taluks.
Madura	Average ·36	More rain wanted. Standing crops withering. Slight fever, Small-pox in parts and cattle-disease in one taluk. Water-supply deficient in all but two taluks.
Malabar	. . . . .	Standing first crop paddy ripening. Harvest paddy, outturn below average. Second crop cultivation retarded for want of rain. Fever in one, slight small-pox in six, and cattle-disease in two taluks.
Travancore	. . . . .	Harvest of first crop paddy over. Fever and small-pox in parts.
		General Remarks.—General prospects pretty fair, excepting in parts of Tinnevelly and Madura.
Bombay—(Oct. 5th)		
Karachi	. . . . .	River at Kotri on 3rd, 10 feet 9 inches against 10 feet 4 inches on same date last year. *Kharif* harvesting commenced in three talukas. Fever in twelve and cattle-disease in four talukas. Three cases small-pox at Manora, 2 deaths. Wheat, red rice, and *bajri* in Karachi 22, 30 and 32 and in Sehwan 26, 30 and 40 pounds per rupee, respectively.
Hyderabad	. . . . .	*Kharif* harvesting commenced. Rice crop attacked by blight in parts of Guni and Dero Mohbat talukas. River at Kotri on 3rd, 10 feet 9 inches against 10 feet 4 inches on same date last year. Slight small-pox in three, and cattle-disease in two, and usual fevers in eleven talukas. Wheat 24, *jowari* 40, *bajri* 33½, white rice 18, and red rice 28 pounds per rupee.
Ahmedabad	. . . . .	Reaping of *kharif* commenced in some talukas. Rain urgently wanted for cotton and rice crops, which are withering generally in all the talukas. Fever in Dholka, Dhandhuka, and Sanand talukas. Wheat 27 and *bajri* 30 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda	. . . . .	Cholera continues in city Baroda and in parts of Naosari and Kadi divisions. Land prepared for *rabi*. Standing crops good. *Bajri* 27, wheat 19, and rice 23 pounds per rupee.
Surat	Rain in Chikli taluka, ·25; total in district, 87·76,—maximum 3·4 and minimum ·21.	Weeding progressing. Rain wanted throughout the district. Inferior rice harvest commenced in certain places. Fever in Olphad, Bardoli and Jalalpur. Cholera in Chikli, Bulsar, and Pardi, 50 cases, 34 deaths. *Jowari* 32 and 43 pounds per rupee.
Nasik	Rain in Igatpuri, ·41; Dindori, 1·71; Sinnar, 1·30; Niphad, ·78; Kalwan, ·51; Baglan, ·48; Nasik, ·31; Malegaon, ·02; and Yeola, ·16.	Standing crops healthy. Preparations for *rabi* sowings going on, but retarded for want of rain. Rain badly wanted throughout the district. Weeding in progress in Peint. Cholera in Nasik, Sinnar, Malegaon, and Baglan, total attacks 32, deaths 9. Prices steady.
Colaba (Bombay)	·10 on 29th, total 90·98, being 22·38 above average.	Average abnormal temperature 2° cool from 28th to 30th, afterwards 1° cool. Vapour in air slightly in defect of normal. Wind normal.
Poona	Copious rain throughout the district, — maximum, 6·30 in Purandhar taluka and minimum 1·22 in Petha Mulshi.	More rain is still wanted in *desh* portion of the Haveli taluka and in some parts of Indapur and Bhimthari. Crops doing well. Reaping of *bajri* has commenced in Khed taluka. Sowing of *jowari* is in progress. Public health generally good. Small-pox in Khed taluka. In the district 202 cholera cases, 104 fatal. In Poona city 2 attacks, 1 death. *Bajri* 41 and *jowari* 52 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar	Rain in Karjat, 3·05; Parner, 2·76; Rahuri, 2·40; Shrigonda, 1·69; Nagar, 1·62; Newasa, 1·42; Kopargaon, 1·16; Jamkhed, ·92; Akola, ·76; Sheogaon, ·53; and Sangamner, ·08.	*Kharif* crops good. Sowing of *rabi* in progress. Cholera attacks 63, deaths 28. *Bajri* 36 and *jowari* 57 pounds per rupee.
Sholapur	Maximum in Sangola, 2·85, and minimum in Sholapur, ·77.	*Kharif* crops doing well. Sowing of *rabi* crops in progress. Slight cholera in Madha, Karmala, and Sangola talukas, cases 19, fatal 8. *Jowari* 57½ and *bajri* 48½ pounds per rupee.
Dharwar	Rain in Nawalgund, 4·89; Ron, 2·69; Dharwar, 1·65; Mugud, and Nadgund, ·60; and Gadag, ·51; elsewhere none.	Rice crops suffering from want of rain. *Jowari* and minor crops good. Heavy rain urgently required, especially in western and southern talukas. Cotton sowing almost completed. Slight cholera in Gadag, Kalghatgi, and Ron talukas. No cattle-disease. *Jowari* 57 and rice 24 pounds per rupee.
Kanara	. . . . .	Rice harvest in Karwar taluka. Rain wanted above Ghat. Cattle-disease, 99 deaths in Haliyal and slight in three other talukas. Common rice in Karwar 12 and district average 11½ seers per rupee.
Rajkot	. . . . .	Weather hot. One cholera case in Nawanagar. Fever generally prevalent. Early crops middling for want of later rains. Late crops not promising. Wheat 23, *bajri* 23, and *jowari* 29 pounds per rupee.
		General Remarks.—Good rain in most districts of the Deccan and Southern Mahratta Country, but urgently required throughout Guzerat and in parts of several other districts. Crops suffering for want of rain in parts of Ahmedabad, Wadhwan, Dharwar, and Ratnagiri and from blight in parts of Hyderabad and Ratnagiri. *Kharif* harvest and *rabi* sowing in progress in several districts. Cholera in parts of seventeen, fever in parts of twelve and cattle-disease and small-pox in parts of seven districts. Cholera ceased in Khandesh.
Bengal—(Oct. 5th.)		
Chittagong (Oct. 4th)	·06	Weather seasonable. *Aman* and sugarcane thriving. Cholera reported, public health otherwise good. Prices stationary.
Dacca	*Nil*	Prospects of crops good. *Aus* paddy being harvested. Cultivation for mustard and pulses begun. Public health fair.
24-Pergunnahs (Calcutta).	·32	*Aus* harvest practically over, outturn fair. Recent rain has done some good to *aman* crop. Public health generally good, but isolated cases of fever reported.
Khoolna	·11	Weather hot. Transplanting of *aman* completed. Prospects good. Public health fair.
Moorshedabad	·59	Weather seasonable. Prospects of *aman* good. Sowing of *til* and *kalai* going on. Public health generally good.
Pubna	·14	Rivers have fallen. Prospects of crops and public health good.
Dinagepore	·41	State and prospects of late rice good. Harvesting of jute nearly finished. Cholera reported from Parbatipur station only.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Rungpore	·35	Rice backward, but progress fairly well. Prices stationary. Public health fair.
Midnapore	·25	Prospects of crops hopeful, except partly in thanas Pataspur and Bhagwanpore in Contai subdivision. More rain wanted in Ghatal subdivision. Public health good.
Burdwan	·63	Break in rains. Rain much wanted for late rice. Prices unchanged. Public health generally good.
Bhagalpur	*Nil*	Harvesting of *marua* completed, that of early rice going on, with good outturn. Late rice doing well, but rain wanted.
Purneah	*Nil*	*Bhadoi* harvest completed, fair outturn. *Aghani* promises well. Lands being prepared for cold weather crops. Public health bad. Rivers low.
Durbhanga	*Nil*	*Bhadoi* harvest completed. Rain much needed for rice crop which however continues favourable. Some fever, public health otherwise generally good.
Chumparun	*Nil*	Prospects of crops good, but rain much needed for rice. *Bhadoi* harvest almost finished. Public health fair.
Patna	*Nil*	Prospects of rice crop fair, but more rain urgently required on high lands. *Rahar* and castor doing well. Lands being prepared for other *rabi* crops. Public health good.
Gya	*Nil*	*Bhadoi* being harvested, outturn estimated at more than 12 annas. Paddy suffering much for want of rain. Public health good. Fever reported from some parts of districts.
Hazareebagh	*Nil*	Weather fine. Rain urgently wanted all over the district. Damages to paddy and other crops apprehended. *Bhadoi* being harvested, with fair outturn. Public health good.
Cuttack	Rain on 24th in certain parts of district; none fallen since.	Clouds occasionally appearing. *Beali* outturn estimated at 10 annas. *Sarad* requires rain urgently. Early *sarad* coming into ear. Public health generally good.
		General Remarks.—Weather fine, with rather high temperature throughout the week. A few showers fell in East and North Bengal districts on the 28th, but since then no rain has fallen in the Lower Provinces. Late rice crop doing well so far, but needs rain in the Chota Nagpur, Orissa, Patna, Bhagalpur and Burdwan divisions, and in the Tipperah district, especially on high lands. **Autumn harvest is nearly over and cultivation for cold weather crops has begun. Public health is generally good.**
N.-W. Provinces and Oudh—(Oct. 5th)		
Benares (Oct. 4th)		Weather fine. Average *kharif* prospects. Ploughing for *rabi* commenced. Supplies sufficient. Prices steady. Some fever, otherwise health generally good.
Ballia („ 3rd)		Sky clear. Wind westerly. Weather cool. Ploughing for *rabi* going on. Supplies ample. Prices stationary. General health good.
Gorakhpore(„ „)		Harvest prospects good. Prices stationary. Cholera almost disappeared.
Fyzabad („ 4th)		Weather fair. Reaping of *kharif* crops in progress. *Rabi* sowing commenced. Supplies abundant. Cholera still lingers. Condition of cattle fair.
Lucknow („ 3rd)		West wind. Prospects of *hewant* crops good. Gram, peas, and barley being sown, poppy sowing not yet commenced. Supplies ample. Prices continue the same, except of new *kharif* grains which are cheaper.
Rai Barelli („ „)		Weather clear. Ploughing for *rabi* in progress. Prices stationary. Some cases of cattle-disease reported.
Partabgarh („ 4th)		*Kharif* prospects fair. Prices steady. General health good.
Allahabad („ „)		Weather seasonable. Early rice being harvested. Markets full. Prices showing a tendency to fall. Cholera dying out. Fever of ordinary type prevalent.
Cawnpore („ „)		*Kharif* thriving and being cut. Ploughing for *rabi* in progress. Prices stationary. Fever prevailing. Cholera in places. Cattle-disease in three tahsils.
Farakhabad („ „)		Weather getting cool. Standing crops doing well. *Rabi* ploughing continues. Supplies ample. Prices still rising. Cholera continues. Fever and ague in places.
Sitapur („ „)		Weather fine. Outturn of *kharif* crops said to be good. Cholera is gaining ground in one tahsil.
Bareilly („ „)		Crops good. Market steady. Slight cholera.
Banda („ 3rd)		Weather clear. *Kharif* crops improving. *Sawan* and *kakun* being harvested. *Rabi* sowing commenced. Supplies abundant. Prices stationary. Fever prevalent.
Kumaon („ 4th)		Weather good. Crops good. Harvest progressing. Small-pox reported from one *patti* and *Mahamari* from Gangoli. Cattle healthy.
Agra („ 3rd)		Fine weather. *Kharif* being cut. *Rabi* ploughings continue. Prices falling slightly. Fever prevalent. Cholera much decreased.
Jhansi („ „)		Cotton flowering. *Bajri* in ear. Prices rising partly owing to demand for *rabi* seed. Fever on increase.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
N.-W. Provinces and Oudh—*contd.*		
Meerut (Oct. 4th		Weather seasonable. Sugarcane being cut and lands prepared for *rabi* sowings. Supplies sufficient. Prices steady. Fever abating.
		General Remarks.—There was no rain, and the weather is seasonable. The *kharif* is being cut. Prospects continue good. Markets are full, and prices continue steady. The general health is good, but cholera continues in places, and fever is still prevalent in Kumaon. *Mahamari* has appeared in Pargana Gangoli, some cattle-disease is reported in a few tahsils.
Punjab—(Oct. 5th)		
Hissar (Oct. 4th)		Fever prevalent. Prices stationary. *Rabi* sowings in progress. *Kharif* prospects good.
Delhi		Fever prevalent. Cholera continues. Prices stationary. *Kharif* prospects unfavourable.
Umballa		Cholera abating. Fever prevailing. Prices stationary. *Kharif* crops being harvested.
Jullundur		Health good. Prices stationary. *Kharif* prospects average.
Ferozepore		Fever prevalent. Prices stationary.
Amritsar		Seasonal fever. Prices stationary. *Kharif* crops good.
Sialkot		Health fair. Prices stationary. *Kharif* crops suffering from drought.
Lahore		Cholera decreasing. Prices stationary. *Rabi* ploughings progressing.
Multan		Health good. Prices almost stationary. Preparations for *rabi* sowings progressing. *Kharif* crops good.
Rawalpindi	·10	Health good. Prices rising. *Kharif* crops gathered in.
Shahpur		Rain much needed. Health good. Prices stationary. *Rabi* ploughings in progress.
Dera Ismail Khan		Health good. Prices stationary. *Rabi* ploughings commenced.
Peshawar	Slight rain	Fever prevalent. Cholera almost disappeared. Prices rising. *Kharif* prospects average.
		General Remarks.—Rain has fallen in Rawalpindi and Peshawar, and is much needed in Shahpur. Health is good in Jullundur, Multan, Rawalpindi, Shahpur and Dera Ismail Khan and is fair in Sialkot. Fever is prevalent in Hissar, Delhi, Umballa, Ferozepore, Peshawar and Amritsar. Cholera continues in Delhi, Umballa, Lahore and Peshawar, but is abating in Umballa and Lahore, and has almost disappeared in Peshawar. Prices are stationary, except in Rawalpindi and Peshawar, where they are rising. *Kharif* prospects are generally good, but in Delhi they are unfavourable, and in Sialkot the crops are suffering from drought. *Rabi* sowings in progress in Hissar and Multan and ploughings progressing in Shahpur, Lahore, and Dera Ismail Khan.
Central Provinces—(Oct. 5th)		
Nagpur		Weather clear. *Rabi* ploughings continue. Fever prevalent.
Jubbulpore		Weather cloudy. *Rabi* ploughings commenced. Prospects favourable. Fever prevail. Prices steady.
Saugor		Weather clear. Preparations for *rabi* continue. Fever prevalent. Prices unchanged.
[illegible]ni		Weather cloudy. *Rabi* ploughings progressing. Cholera decreasing. Prices unchanged.
[illegible]gabad		Weather clear and cool. Rice being cut. *Rabi* ploughings in progress. Fever prevalent. Prices unchanged.
		Weather clear and warm. Prospects good. Health fair. Prices steady.
		Rain wanted. Linseed being sown. Cattle-disease in parts. Prices stationary.
		Weather clear and seasonable. Linseed and pulses being sown. More rain required for rice. Fever prevalent.
(Oct. 1st)		Weather generally clear. Crops promising. A good shower would be most beneficial. Fever prevalent.
		General Remarks.—Clear weather. Prospects of crops good, but a little more rain would be beneficial in eastern districts. Fever prevalent. Prices steady.
Akyab	1·99 (Total rainfall to date 158·69).	Two deaths from cholera in town, and 29 in district. Crop prospects favourable.
Bassein	1·37 (Total rainfall to date 87·55).	Transplanting completed.
Amherst (Moulmein)	3·07 (Total rainfall to date 175·10).	Crop prospects good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Tavoy	7·47 (Total rainfall to date 176·99).	Crops very healthy.
Henzada	·35 (Total rainfall to date 73·42).	Crops healthy.
Prome	·41 (Total rainfall to date 34·85).	Ploughing and planting nearly finished.
Toungoo	·41 Total rainfall to date 75·36.	Prospects of crops good.
Thayetmyo	·23 (Total rainfall to date 26·08).	Transplanting continues.
Mandalay (Sept. 24th)	.06 (Total rainfall to date 26·56).	Transplanting of *kyaukki* crops progressing. Food-supply sufficient. Prices normal.
Minbu	*Nil* (Total rainfall to date 21·61).	Crop prospects fair. Prices normal.
Yamethen	·03 (Total rainfall to date 27·59).	Cultivation progressing.
		General Remarks.—Some cholera in Akyab town and district, otherwise health of Lower Burma satisfactory. Crops doing well. Reports from seven Upper Burma districts. Measles in Pagan, and anthrax continues in Pyinmana. Food grains scarce in Yeu. Crop prospects favourable.
Assam—(Oct. 5th)		
Gauhati (Oct. 4th)	·24	Weather hot, mornings and evenings cool. Public health fair. Malarial fever still prevalent in Sastra Barpetta and its vicinity, also in parts of Polasbari, Luki, and Chomoria tahsils. Cattle-disease reported from Mauza Rupsi. Ploughing of land for mustard commenced, sowing of *mati kalai* in progress. Prospects of crops good.
Sylhet	1·07	Habiganj report not received. Crops in other subdivisions benefited by recent rain. Seven deaths from cholera in Karimganj.
Cachar	·28	Weather hot. Prospects of crops good. Tea is again suffering from drought. Public health good. Price of rice steady.
Dibrugarh	1·86	Weather hot during day; cool at night. Public health indifferent.
Mysore and Coorg—(Oct. 5th)		
Bangalore	Civil and Military Station, ·43; Bangalore district headquarters, ·73; Mysore, ·33; Kolar, 1·00; rainfall in other districts either *nil* or very scanty.	Standing crops in good condition, but are reported to be withering for want of rain, especially in parts of the Bangalore, Mysore, Tumkur, Kolar, and Kadur districts. Prospects of season fair. Fodder becoming scarce in parts of Tumkur and Kadur districts. Public health generally good. Cholera in Bangalore and Mysore and in parts of Tumkur, Shimoga and Hassan districts. Fever and cattle-disease prevalent in parts. Prices slightly risen in Tumkur, Shimoga, Chitaldroog and Kadur districts.
Mysore		
Mercara	·70	The paddy crops have suffered from want of sufficient rain, other crops in good condition. Some cholera cases have occurred in South Coorg.
Berar and Hyderabad—(Oct. 5th)		
Amraoti		Weather clear and warm. Weeding in progress. [illegible]oeing prepared for *rabi*. Fevers prevalent. Wheat [illegible]*ari* 25 seers per rupee.
Akola	·11	Weather occasionally cloudy. *Kharif* crops [illegible]dition. *Rabi* ploughing in progress. Cholera abating. [illegible]cattle-disease in places.
Hyderabad		No report received.
Central India States—(Oct. 5th)		
Indore	Slight showers	One fatal case of cholera amongst Europe[illegible]troops.
Morar (Gwalior)		Weather clear and hot.
Sutna		Fever prevalent.
Neemuch		Health good.
Goona		Four deaths from cholera in Ramraj pargana, otherwise health good.
Agar		Health and prospects fair.
Sehore		Weather clear and cool. Crops and health fair.
Nowgong		Weather clear. Health fair. Fever prevalent in Nowgong. Prices steady.
Bhopawar		Fever prevalent in Alirajpur and Jhabna and cholera in Sagore.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Oct. 5th)		
Abu (Oct. 5th)		Weather seasonable and cooler.
Sirohi („ 2nd)		Little water in tanks; wells low. Health good. Crops being cut, and very poor. Dried up for want of rain. Weather cool. Afternoons cloudy.
Marwar („ 1st)		Cholera almost subsided. Crops doing well, except in some districts. Clear nights. Weather cooler. Market light. Prices tending to rise.
Meywar („ „)		Water in tanks and wells decreasing. Crops prospects average. Health fair. Prices stationary. Weather seasonable.
Pertabgurh („ „)		Tanks and wells full. Health good. Prices fluctuating.
Harowti („ „)		Weather clear. Crops doing well. *Rabi* sowings in progress. Fever very prevalent.
Jhallawar („ 2nd)		Fever and cholera in one thana nearly disappeared. *Rabi* operations progressing.
Ajmere („ 4th)		Weather clear. Crops being reaped at places. Cholera in Kekri now said to have ceased. Wheat 23, barley 37, gram 38½ pounds per rupee.
Jeypore („ „)		Weather seasonable. Prospects fair.
Kerowlee („ 1st)		Tanks and wells full. *Bajri* being reaped. *Rabi* being cultivated. Health good. Fever continues. Prices stationary. Days hots; nights cool.
Dholepore („ „)		Tanks and wells full. *Kharif* being harvested. Fever still prevails, health otherwise good. Prices low. Weather clear.
Bhurtpore („ 4th)		Weather seasonable. Prospects fair. Fever prevalent. Prices steady.
Ulwar („ „)		*Bajri* being harvested. *Rabi* ploughings continue. Health fair. Fever prevalent. Cholera nearly gone.
Kotah („ 1st)		*Rabi* ploughing progressing. Some fever, otherwise health good. Prices rising.
Kherwara („ 2nd)		Tanks and wells low. Cutting of indian-corn commenced. Health good. Prices unchanged. Weather fine and cool, somewhat cloudy.
Bickanir („ 1st)	Slight rain in two districts.	Prospects good. Fever in some districts. Prices stationary. Weather hot.
Nepal—(Sept. 30th)		
Katmandu (Sept. 29th)	1·63	Character of the weather shows signs that the rains are ending. The year's rainfall to date is 49·78. Prospects fair as far as they go, but as already reported the rice crop will be short.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 5th October, 1887.

Very quiet weather has prevailed throughout nearly the whole of India during the past week. Over the whole of the North-Western and Central parts of the country the weather has been fine and bright with scarcely a cloud in the sky, but in Burmah, Assam, and the South of the Peninsula conditions have been less settled, and showers of rain have fallen on most days.

On September the 29th, in Western India, the wind was generally north-westerly and westerly and moderate or light in force, but on the Sind and Guzerat Coasts a fresh south-westerly and southerly wind was reported, which penetrated inland as far as Rajputana and the Punjab. The latter current, though bringing up a good deal of moisture, occasioned no rain, but the former gave slight showers to several stations, both in Bombay and in the Carnatic. On the 30th there was no change, but on the 1st October there was a slight tendency in that direction, north-easterly winds having appeared in the south of the Central Provinces and at Malegaon and Bombay. The only falls of rain reported on these two days were light local showers at one or two places in the Berars and the Deccan. On the 2nd these north-easterly winds had more or less disappeared again, and north-westerly to westerly winds were reported from the Peninsula and Central parts of the country. With this return to north-westerly winds rain became somewhat more general, and Belgaum received over 2 inches. The Chart of the 3rd showed no change beyond a slight increase in the extent of the rainfall area,—particularly in the south of the Peninsula. On the 4th and 5th similar conditions prevailed, north-westerly breezes blowing steadily over the Peninsula, and giving rain to most of the inland stations of the Bombay Presidency and to the whole of the south of the Peninsula. In Sind, Guzerat, and Cutch the wind was generally south-westerly, and the weather fine.

In Eastern India a steady change has been in progress towards cold weather conditions. During the first two days of the week slight gradients for westerly winds were reported over the Bay and Bengal, and winds from that quarter were blowing generally, but on the 1st pressure became very uniform over the Bay and the surrounding Coasts, and the winds became light and variable. Subsequently northerly (north-north-west—north-west) winds were developed on the West Coast of the Bay and southerly winds over Burmah, and these conditions lasted until the close of the week. In consequence warm dry weather has prevailed in Bengal and on the Orissa and Circars Coasts, while very general rain has fallen in Lower Burmah and Arakan.

In Upper India the weather has been very fine, with variable or north-westerly breezes.

The rain which has fallen during the week has in no way affected the relation of the seasonal fall with respect to the average. As the following table shows:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to October 5th.	Difference.
Akyab ...	140·31	159 00	—18·69
Saugor Island ...	55·02	56·91	— 1·89
Calcutta ...	44·43	50·37	— 5·94
Dhubri ...	53·87	66·10	—12·23
Purneah ...	42·00	58·09	—16·09
Gya ...	35·96	36·50	— 0·54
Allahabad ...	33·40	35·53	— 2·13
Meerut ...	24·66	23·02	+ 1·64
Delhi ...	35·22	22·47	+12·75
Lahore ...	16·07	13·60	+ 2·47
Peshawar ...	3·24	6·03	— 2·79
Cochin ...	61·90	84·59	—23·05
Ratnagiri ...	109·24	100·00	+ 9·24
Bombay ...	90 87	68·28	+22·59
Poona ...	22 58	22·87	— 0·29
Surat ...	37·27	41·71	— 4·44
Khandwa ...	30·88	30·40	+ 0·48
Nagpur ...	47·31	38·17	+ 9·14

there has been an unimportant deficiency in the season's rainfall in Arakan and Lower Bengal, a moderate deficiency in the Assam Valley and North Bengal, an average rainfall in the North-Western Provinces, and an excess in the Punjab (except the Derajat Division). In Central and Southern India the table shows a slight excess of rain in Bombay and the Central Provinces, and a deficiency in Malabar.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	6	9·49
Bengal and Assam ...	5	3·51
North-Western Provinces and Oudh ...	0	0
Punjab ...	2	0·28
Hill Stations ...	2	0·47
Ceylon ...	0	0
Malabar Coast ...	4	2·59
Bombay ...	6	7·74
Berar and Central Provinces ...	1	0·11
Guzerat and Central India ...	1	0·18
Sind—Rajputana ...	0	0
Madras ...	11	7·47

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR SEPTEMBER, 1887.

The weather during September has been of the normal character. During the most part of the month the monsoon blew strongly over the greater part of the country, and the rainfall accompanying it was fairly heavy and well distributed. As the month advanced, however, the amount of rain gradually decreased, while the area over which it fell steadily diminished, so that by the close of the month the weather was fine and bright, except over the Peninsula, in Lower Bengal, and in Burmah, in all which regions rain still fell. Although the weather showed this general improvement, it is remarkable that there occurred very little change in the wind's direction or force, fairly strong winds crossing the Indian coasts from the Arabian Sea and the Bay of Bengal, just as during the height of the monsoon. In like manner there was very little change in the barometric distribution. Instead of the uniform pressures which usually appear at this season, the barometric difference between Southern and Northern India remained at the close of the month almost as considerable as at its commencement, and probably as a consequence the cessation of the present rains was unaccompanied by the thunderstorms and unsettled, showery weather, which, in normal years, is the ordinary concomitant of that phenomenon.

The monsoon.—At the commencement of the month moderate to strong monsoon winds were blowing across the West Coast and giving rain in fairly heavy amounts to the West Coast districts and the Central Provinces, and local showers to the Peninsula. These favourable conditions continued until the 5th, when there occurred some diminution in the strength of the monsoon current and a consequent decrease in the amount and area of rainfall. As this diminution in the strength of the monsoon continued, a break in the rains commenced in the Central parts of the country, and spread to most districts of Northern, Central, and Western India. The break lasted during the 7th, 8th and partially into the 9th, but on the latter date conditions began to change, the wind increased all along the West Coast, and with it the rainfall became heavier. On the 10th a marked rise in the force of the monsoon was reported from the West Coast, together with general and heavy rain. At Bombay nearly 10 inches of rain fell between 10 A.M. of the 9th and 10 A.M. of the 10th. Moderate to strong monsoon winds prevailed from the 10th to the 17th, when the current again slackened somewhat. During that time the weather gradually changed on the West Coast, heavy rain being reported from the 10th to the 13th, and fairly clear skies from the 14th to the 17th. After the 18th, and up to the close of the month, the wind was moderate in the West, and any rainfall over the West Coast and Central districts was light and unimportant.

Over the Bay of Bengal the weather has been somewhat unsettled. On the 1st a moderate southerly current was crossing the Bengal Coasts, giving moderate rain to Burmah and Bengal, but the current was apparently wholly confined to these two Provinces, and the rainfall, which was taking place in Upper India at this time, was attributable to the Bombay branch of the monsoon. On the

2nd the current from the Bay showed a greater inclination to penetrate into Upper India, and consequently rain fell all over Northern India. These conditions continued during the 3rd, 4th, and 5th, but after the last date the current from the Bay of Bengal became exceedingly light, and rain ceased over almost the whole of Northern India. This break lasted until the 9th, when conditions slowly changed. On the 10th a slight depression began to form at the head of the Bay. This depression continued to develop during the 11th, occasioning general rain in Burmah, Orissa, and South Bengal, and on the 12th passed across the North Orissa Coast as a well formed cyclonic storm. It gave fairly heavy rain to all parts of Bengal and the North-Western Provinces. This depression filled up on the 14th, after giving general rain to the whole of Northern and Central India, except the Punjab. On the 15th a fresh but very slight depression was shown in the north-west angle of the Bay. This storm passed west-north-westward through the Central Provinces, and either owing to it or to a subsequently formed disturbance, very unsettled weather prevailed at this time in Upper India. Between the 17th and 20th rain fell at nearly all stations in Northern India, the maximum fall being reported from Umballa, where 8½ inches was measured. On the 21st the monsoon current from the Bay practically ceased to extend beyond Bengal, the air became drier throughout the whole of Northern India, and rain was almost entirely confined to Burmah, Bengal, and Assam. Westerly winds now set in over the greater part of the Gangetic Plain, and though showers still fell at some stations, the weather generally became much finer. On the 23rd fine weather prevailed, except in Lower Bengal, Assam, and Burmah, and these conditions lasted until the close of the month.

Pressure.—The mean pressure of the month was below the normal average over Burmah, Assam, Bengal, and the east of the North-Western Provinces, but above it over the west of the North-Western Provinces and the Punjab generally. In the centre and south the variations from the average were less regular. In Bombay and the west of the Central Provinces there was a marked excess, and in the south of the Carnatic an even more marked deficiency, but elsewhere the variations were slight and irregular. The only serious disturbance of pressure, which occurred during the month, was the depression which was formed at the head of the Bay on the 10th and 11th. This storm advanced on an almost due westerly course, and broke up between Nagpur and Seoni on the 14th.

Temperature.—Over the greater part of the country September was a cool month. In East Bengal and in Assam there was an excess, varying between 0·5° and 2·5°, in Sind an excess varying between 0·2° and 1·0°, and in the Carnatic an excess varying between 0·2° and 2·2°, but in all other regions the mean temperature was below the normal average. The greatest deficiency (between 2° and 3°,) was in the Punjab and the west of the North-Western Provinces.

Rainfall.—The rainfall of the month was on the whole deficient. In the east of the Punjab, in the Cis-Gangetic portions of the North-Western Provinces, in Assam, over nearly the whole of the Peninsula, except the Circars and the Carnatic and in Lower Burmah, the total rainfall was slightly above the normal, but in all other places it was short, though, generally speaking, the

deficiency was unimportant. As the rainy season of 1887 appears now to be practically over for the greater part of India, the ordinary table of rainfall has been supplemented by two columns, the first showing the normal rainfall for the four months June 1st to September 30th, the second the difference from this average of the rainfall of the present season. From these figures it will be seen that the rains of 1887 have been on the whole satisfactory. In Behar, North Bengal, Assam, Lower Bengal, Orissa, Sind, Guzerat, and Malabar the rainfall has been deficient, but except in Sind and Guzerat the amount of deficiency is unimportant when compared with the total amount received. In the Punjab, the North-Western Provinces, the Central Provinces, the Berars, Rajputana, and the whole of the Peninsula, except Malabar, the rains have been above the average.

The following table shows the amount of rain and the difference from the average, during the month of September, 1887, according to Districts as far as is indicated by the telegraphic reports :—

Districts.	Number of Stations.	Average Rainfall for September.	Difference from the average in September, 1887.	Average Rainfall, June 1st to September 30th, 1887.	Difference from the average in 1887.
Punjab, West	7	2·44	— 0·49	15·79	+ 0·81
„ East	6	4·15	+ 1·51	26·54	+ 5·56
North-Western Provinces, Trans-Gangetic ...	14	7·40	— 0·07	41·44	+ 1·65
„ „ Cis-Gangetic ...	7	5·44	+ 0·10	28·79	+ 8·65
Behar	4	7·56	— 1·38	36·01	— 4·31
Northern Bengal	3	14·88	— 2·34	70·51	— 3·44
Assam—Cachar	5	11·41	+ 1·52	58·91	— 5·08
Lower Bengal—Chutia Nagpur	7	10·42	— 1·86	51·49	— 3·58
Orissa—Northern Circars	6	8·54	— 2·74	32·81	— 5·37
Central Provinces, South	7	9·11	— 0·75	46·43	+ 14·25
Berar—Khandesh	3	5·27	— 0·75	23·93	+ 12·25
Rajputana, Central India—Saugor and Narbudda	10	10·04	— 4·37	38·93	+ 6·22

* Exclusive of "formal warnings."
† Exclusive of 5 under-trial prisoners whipped.

Explanatory Notes relating to the Statement in paragraph 16 of the Resolution.

* Excluding 13 prisoners caned on the palm of their hands; and two prisoners in Subsidiary Jails, of whom the number of stripes is not shown.
† Six of these received four cuts each.
‡ The total number in 1884 was 7, and in 1886, 9; but as the classification of the stripes is not shown in the reports, these figures have been excluded from grand totals.
§ Exclusive of the total for Coorg, the omission of which is explained in foot-note (‡).
(a) The total number is 199; but as the stripes of the 4 prisoners whipped in Subsidiary Jails are not classified under the headings of this statement, they have been left out of the total.
(b) Includes 5 under-trial prisoners.

No. 13.

STATEMENT SHOWING the STATE of the EDUCATION of the CONVICTS IMPRISONED in, and RELEASED from, the JAILS and SUBSIDIARY JAILS of BRITISH INDIA DURING the YEAR 1886.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch.*)

E. T. ATKINSON,
Offg. Secretary to the Government of India

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 13th OCTOBER, 1887.

GENERAL REMARKS.—The rainfall of the past week has been chiefly confined to Madras, Bombay, Bengal, and Burma. In the Punjab, Central India, and Rajputana there has been no rain, and elsewhere only a few showers.

The *kharif* harvest promises well in most Provinces, though more rain would be beneficial in several parts of the country. *Rabi* sowings are now in progress everywhere.

The crops need more rain in some districts in Madras and Mysore; otherwise prospects are favourable.

The rice crop is being cut in Bombay, the North-Western Provinces and Oudh, and the Central Provinces; but in these Provinces and also in Bengal and Assam the crop is in want of more rain. In Burma rice prospects are generally excellent.

Cotton sowing continues in Bombay, and the plant is in pod in Berar.

Except for the usual autumnal fever, the public health is generally satisfactory.

Prices are fluctuating in the North-Western Provinces and Oudh, and rising in three districts of the Punjab and in parts of Rajputana. Elsewhere they are fairly steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 12th.)		
Bellary . . .	Average .77	Standing crops generally good. Early crops improving under recent rains. Harvest early *korra*, gingelly and *cumbu*, outturn below average. Cholera in six, and cattle-disease decreasing in two taluks.
Kurnool . . .	Average .21	Standing crops generally fair, but in three taluks partially injured by excessive rain. Early cereals being harvested in one taluk, outturn up to average. Cholera decreasing. Small-pox in two and cattle-disease in five taluks.
Ganjam . . .	Average last week since revised, .12; this week, .35.	Fever and small-pox in six, and cattle-disease decreasing in two taluks. Cholera exists.
Kistna . . .	Average .03	Standing crops suffering from want of rain. Harvest *cumbu*, *korra* and maize in places, outturn about average. River 49 feet over Anicut. Fever slight. Cholera in one, and cattle-disease increasing in five taluks.
Chingleput (Madras) .	Average .36	Standing crops fair. Harvest paddy, *ragi* and *cumbu* in parts, outturn below average. Cholera in one, small-pox in three, and cattle-disease increasing in five taluks.
Coimbatore . .	Average 1.91	Standing crops generally fair, but require rain in parts. Harvest paddy and *ragi* in parts, outturn about average.
Tanjore . . .	**Average 2.47**	Standing crops generally good. Rain still wanted in parts of Mayavaram taluk. Harvest wet and dry grains, outturn up to average. Cholera and cattle-disease slight in one taluk.
Madura . . .	Average 1.12	Standing crops generally fading. Want of rain generally felt. Harvest *ragi* and *cumbu* at Tirumangalam and Melur, outturn below average. Slight fever in one taluk. Water-supply deficient in all but two taluks.
Malabar . . .	Average .69	Second crop cultivation progressing. Harvest paddy, outturn below average. Slight small-pox in seven, fever in four, and cattle-disease in two taluks.
Travancore . .	2.98	Paddy cultivation begun. Small-pox and fever in places.
Bombay—(Oct. 12th)		*General Remarks.*—General prospects fair, except in parts of Madura and Tinnevelly.
Karachi . . .	. . .	River at Kotri on 10th, 8 feet 11 inches against 9 feet 6 inches on same date last year. Fever in twelve and cattle-disease in three talukas. Previous case of small-pox in Karachi remaining. Wheat, red rice and *bajri* in Karachi 23, 28 and 30, and in Tatta 22, 34 and 34 pounds per rupee, respectively.
Hyderabad . .	. . .	*Kharif* harvesting commenced. More water required in the whole district. Rice crop attacked by blight in Guni and Dero Mohabat talukas. River at Kotri on 9th, 9 feet 2 inches against 9 feet 7 inches on same date last year. Small-pox in two, cattle-disease in two, and fever in ten talukas. Wheat 24, *jowari* 40, *bajri* 34, white rice 18, and red rice 28 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Ahmedabad	. . . . .	Reaping of *kharif* commenced throughout the district. Rain urgently wanted for cotton and rice crops in all talukas. Fever in Dholka, Dhandhuka, and Sanand talukas. Eleven cases of cholera in the city, 5 fatal. Wheat 27 and *bajri* 29 pounds per rupee.
Baroda	. . . . .	Cholera in Baroda city, 3 cases, 1 death; it continues in parts of Naosari and Kadi divisions. *Rabi* sowings commenced. Crops in good condition generally, but suffering in Naosari from want of rain. *Bajri* 27, wheat 23, and rice 19 pounds per rupee.
Surat	Rain in Bardoli, ·09 (total, 58·99).	Weeding progressing. Rice and millet harvest commenced in certain places. Rain wanted throughout the district. Cattle healthy. Fever in Olphad, Bardoli and Jalalpur. Cholera in Chikli, Bulsar, Pardi, and Surat city, 17 cases, 9 deaths. *Jowari* 30 and *nagli* 43 pounds per rupee.
Nasik . . .	Rain, maximum in Peint 2·20 and minimum in Nandgaon, ·03	Standing crops generally good. Some damage to *kharif* crops in Nandgaon and Malegaon through long break in the weather. Preparations for *rabi* sowing continue, but sowing operations retarded for want of rain which is felt throughout the district. Cholera in seven talukas, total attacks 3 and 9 deaths. Wheat 25½ pounds per rupee.
Colaba (Bombay) . .	Rain accompanied by thunder-storms on 10th and 11th, heavy on 11th; total of week, 2·70; total to date, 93·68; being 24·10 above average.	Abnormal temperature rose from 1° cool on 5th to 3° warm on 10th and it was 1° warm on 11th. Vapour in air excessive from 6th to 8th and 11th, and normal on all other days. Wind normal.
Poona	Rain in all talukas, except in Petha Baramati and taluka Maval—maximum 2·95 in Sirur taluka, and minimum ·03 in Poona city.	More rain still wanted in *desh* portion of the Haveli taluka. Crops doing well. Reaping of *kharif* has commenced in Khed taluka and in Petha Baramati. Sowing of *rabi* still continues in some talukas. Public health generally good. Small-pox in Khed taluka. 155 cholera cases in the district, 65 fatal. In Poona city 2 attacks and 1 death. *Bajri* 41 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 48 pounds per rupee in Poona city.
Ahmednagar . .	In Rahuri, 1·70; Parner, 1·44; Nagar, ·64; Sangamner; ·54, Kopargaon, ·50, and Nevasa, ·44, very slight in other talukas.	*Kharif* crops good. Reaping commenced in four talukas. Sowing of *rabi* in progress in eight and completed in three talukas. Cholera attacks 41, deaths 21. *Bajri* 36 and *jowari* 57 pounds per rupee.
Sholapur . . .	Rain in 7 talukas—maximum in Karmala, 1·03 and minimum ·24 in Malsiras.	Standing crops good. Sowing of *rabi* in progress. Slight cholera in Karmala, Sangola and Malsiras talukas, cases 13, fatal 7. *Jowari* 55⅓, and *bajri* 50$\frac{2}{10}$ pounds per rupee.
Dharwar	Rainfall general varying from ·20 in Karajgi to 2·75 in Mugud.	Rice crops improving. More rain required. *Jowari* and minor crops good. Cotton sowing nearly completed. Slight cholera in Gadag, Bankapur, Kalghatgi and Ron talukas. Slight cattle-disease in Dharwar taluka. *Jowari* 28 and rice 24 pounds per rupee.
Kanara	In Karwar, ·67 (total 125·09), Honawar, 1·80, and Haliyal, ·55.	Rice harvest in Karwar. Cardamom harvest in Sirsi, and Siddapur talukas. Cattle-disease in seven talukas. Cholera, deaths 6 in Sirsi and 3 in Kumta taluka. Common rice in Karwar 12, district average 10½ seers per rupee.
Rajkot	. . . . .	Weather hot. Fever prevalent. Sowing operations of wheat and gram commenced in Halar. Wheat 22, *bajri* 23 and *jowari* 28 pounds per rupee. Want of rain felt.
		General Remarks.—Rain in most districts of the Deccan and Southern Mahratta Country, but urgently required throughout Gujrat and Kattiawar and in parts of Nasik, Khandesh, Dharwar and the Konkan, where crops have suffered. *Kharif* reaping and *rabi* sowing in progress in most districts. Cholera in parts of 18, fever in parts of 13, cattle-disease in parts of 10 and small-pox in parts of seven districts.
Bengal—(Oct. 12th.)		
Chittagong (Oct. 11th)	2·14	Weather hot. Prospects of standing crops fair. Transplantation of *aman* nearly over. Prices stationary. Public health good.
24-Pergunnahs (Calcutta).	1·25	A fair crop of *aus*. Jute being cut. Prospects of sugarcane favourable. *Aman* prospects somewhat improved by recent rain. Ploughing for cold weather crops continues. Public health generally good, but cholera and fever reported.
Khoolna . . .	1·41	Weather cloudy with occasional rain. Prospects of *aman* good. Ploughing for winter crops begun. Public health fair.
Moorshedabad . .	2·12	Weather seasonable. *Aman* good. *Til* and *kalai* sowing goes on. Sugarcane promising. Fever prevails.
Pubna	·32	Weather seasonable. Prospects of crops and public health good.
Dinagepore . . .	Rain on one day	State and prospects of winter paddy and sugarcane good.
Dacca . . .	1·64	Prospects continue good. Paddy being harvested. Ploughing for winter crops going on. Public health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Patna	8·75	More rain urgently wanted for rice crop. Sowing of *rabi* crops going on. Cholera reported from Behar police station, otherwise public health good.
Rungpore . . .	·06	More rain wanted. Crops fair. Prices falling. Fever prevalent.
Midnapore . . .	·03	State and prospects of crops good.
Burdwan . . .	·20	Rain urgently needed for rice crop which is damaged in Cutwa. Prices rising. Fever prevalent.
Bhagalpur . . .	·48	Rain wanted for late rice which has already suffered on high lands. *Kurthi* doing well. Preparation for *rabi* sowings forward. Public health much better.
Purneah . . .	·28	All crops doing well. Ploughing for *rabi* in progress. Much sickness among people; an exceptionally unhealthy year. Rivers low.
Durbhanga . . .	*Nil*	Rain urgently wanted for rice crop. Land being prepared for *rabi*. Prices falling. Public health generally good.
Chumparun . . .	·96	Harvesting of *bhadoi* completed, yield good. Rain much needed for rice crop. *Rabi* sowings begun. Public health good.
Gya	Slight drizzling	Paddy suffering for want of rain. *Rabi* cannot be sown for want of moisture in the field. Fever in some places.
Hazareebagh . .	·60	Rice on high land has suffered severely for want of rain, and damage to low land crop also apprehended. *Bhadoi* has generally yielded fairly. *Rabi* promising so far. General health fair.
Cuttack . . .	·46	Weather cloudy. Prospects of rice fair. Rain much required. Prices of food grains slightly risen. Fever prevails, otherwise public health good.
		General Remarks.—Weather unsettled from the 7th, and showers fell in most districts. Comilla received 2½ inches on 9th. Bankura and some of the Behar districts had no rain. More rain is wanted in the Burdwan, Bhagulpur, Patna, Chota Nagpur and Orissa Divisions for the *aman* crop, and the crop which is good elsewhere has suffered in these divisions and in Tipperah from the drought. Ploughing for *rabi* crops is in progress and sowing has begun. General health not so good. Fever being more prevalent.
N.-W. Provinces and Oudh—(Oct. 12th)		
Benares (Oct. 11th)	. . . . .	Another shower much needed. Weather clear. Early rice being cut. Ploughing for *rabi* continues. Supplies ample. Prices somewhat risen owing to falling off in imports. General health good.
Ballia („ 10th)	. . . . .	Weather cloudy. Rain much needed for rice. Sugarcane thriving. *Rabi* sowings commenced in some places. Public health good.
Gorakhpore(„ 10th)	1·20 at Sadr	Harvest prospects fair, but the deficient rainfall is injurious to the prospects of the *rabi*. Prices rising.
Fyzabad („ 11th)	·30, rain at Sadr, none elsewhere.	Gram, peas, and barley being sown. Supplies ample. Health of people and condition of cattle fair.
Lucknow („ 10th)	. . . . .	*Kharif* nearly gathered. *Hewant* crops in fair condition. *Rabi* sowing in progress. Supplies sufficient. Prices of wheat and gram are rising on account of the large demand for seed.
Rai Barelli („ „)	Slight drizzle on the 8th.	Weather seasonable. Prices almost steady. Cholera again appearing in some villages. Fever as usual at this time of the year.
Partabgarh („ 11th)	. . . . .	Rain wanted. Peas and gram being sown. Markets well stocked. Prices fluctuating. Men and cattle healthy.
Allahabad („ „)	. . . . .	Weather unseasonably hot. Rain needed for *rabi* sowings which are in progress. Prices falling. Slight cholera. Ordinary fever in all tahsils.
Cawnpore („ „)	. . . . .	Crops in good condition and being cut. *Rabi* sowings commenced. Prices steady. Fever prevailing. Cholera and cattle-disease dying out.
Farakhabad („ „)	. . . . .	Weather seasonable. Prospects good. Supplies ample. Prices lowering. Cholera decreasing. Fever and ague in places.
Sitapur („ „)	Slight rain in parts of one tahsil.	Weather clear but warm. *Kharif* crops are being cut. *Hewant* crops promising. Prices rising slightly. Cholera still lingers in the district.
Bareilly („ „)	. . . . .	Crops good. Market steady. Slight cholera. Fever increasing.
Banda („ 10th	. . . . .	Weather seasonable. Cotton being picked. *Bajri* and *jowari* in ear. Supplies ample. Fever being prevalent.
Kumaon („ 11th)	. . . . .	Harvest nearly over. Crops everywhere good. Prices stationary. Slight small-pox still continues. *Mahamari* in three villages in Gangoli, and rinderpest in two *pattis*.
Agra („ 10th)	. . . . .	Weather clear. *Kharif* being cut. *Rabi* ploughing and sowing in progress. Prices slightly risen. Fever prevalent. Cholera almost disappeared.
Jhansi („ „)	. . . . .	Prices unchanged. Fever prevalent. Condition of cattle good.
Meerut („ 11th)	. . . . .	Prices steady. Cholera and fever still prevalent especially latter.
		General Remarks.—The weather has been clear and seasonable. Some more rain is needed in places. *Kharif* crops being harvested and ploughing and sowing for the *rabi* are in progress. Supplies are ample and the fluctuations exhibited in prices are merely due to the demands for seed grains. The fever usual to the season is still prevalent, and cholera lingers in places, while *mahamari* continues in pergana Gangoli of Kumaon. The general health of the people is fair and condition of cattle satisfactory.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—(Oct. 12th)		
Hissar (Oct. 11th)		Fever prevalent. Prices slightly rising. *Rabi* sowings in progress. *Kharif* prospects good.
Delhi		Fever prevalent. Cholera abating. Prices fluctuating. *Kharif* prospects unfavourable.
Umballa		Fever prevalent. Cholera almost abated. Prices rising. *Rabi* ploughings commenced. Cutting of *kharif* crops in progress.
Jullundur		Health good. Prices stationary. *Rabi* ploughings commenced. *Kharif* prospects average.
Ferozepore		Health good. Prices stationary.
Amritsar		Seasonal fever. Prices stationary. *Kharif* crops good.
Sialkot		Health good. Prices rising. *Kharif* crops damaged by drought.
Lahore		Cholera disappearing. Prices stationary. *Rabi* sowing commenced.
Multan		Health good. Prices almost stationary. Preparations for *rabi* sowings in progress. *Kharif* crops being harvested.
Rawalpindi		Health good. Prices rising. *Rabi* sowings commenced. *Kharif* outturn average.
Shahpur		Health good. Prices almost stationary. *Rabi* sowings in progress. *Kharif* crops being harvested.
Dera Ismail Khan		Health good. Prices stationary. *Rabi* ploughings in progress.
Peshawar		Fever prevalent. Prices almost stationary. *Kharif* prospects average.
		General Remarks.—No rain has fallen during the week. Health is good in Jullundar, Ferozepore, Sialkot, Multan, Rawalpindi, Shahpur, and Dera Ismail Khan. Fever prevails in Hissar, Delhi, Umballa, Amritsar and Peshawar. Cholera abating in Delhi, Umballa and Lahore. Prices are generally stationary, but rising in Hissar, Umballa, Rawalpindi and Sialkot and fluctuating in Delhi. *Kharif* prospects are good in Hissar and Amritsar, unfavourable in Delhi and Sialkot, and average in Jullundur, Rawalpindi and Peshawar. Crops are being harvested in Umballa, Multan and Shahpur. *Rabi* sowings and ploughings in progress in Hissar, Umballa, Jullundur, Lahore, Multan, Shahpur and Dera Ismail Khan and commenced at Rawalpindi.
Central Provinces—(Oct. 12th)		
Nagpur		Weather cloudy. *Rabi* preparations continues. Fever prevalent.
Jubbulpore		Weather cloudy. *Rabi* sowings commenced. Prospects favourable. Fever prevail. Prices steady.
Saugor		Weather cloudy. *Rabi* preparations continue. Fever prevalent. Prices unchanged.
Seoni		Weather cloudy. *Rabi* sowings commenced. Cholera in places. Prices stationary.
Hoshangabad		Weather cloudy and cool. *Rabi* ploughing in progress. Fever prevalent. Prices unchanged.
Khandwa	0·1	Weather hot and occasionally cloudy. Prospects good. Prices stationary.
Bilaspur	·15	Rain wanted. Cattle-disease in Mungeli tahsil. Fever prevalent. Prices stationary.
Raipur	·43	Weather cloudy. More rain wanted for rice and *rabi* ploughings. Fever prevalent.
Sambalpur (Oct. 8th)	·02	Weather cloudy and hot. Crops promising, but more rain wanted. Early rice being harvested, outturn good.
		General Remarks.—Weather today is rainy and cool. Prospects favourable, but some rain is now required. Fever prevalent. Prices steady.
Burma—(Oct. 12th)		
Akyab (Oct. 8th)	1·02 (Total rainfall to date 159·71).	Eighteen cases of cholera in district. Slight cattle-disease. Crop prospects favourable.
Bassein	3·53 (Total rainfall to date 91·08).	Slight cattle-disease. Crops generally good.
Rangoon (Oct. 1st)	1·00	
(„ 8th)	1·26 (Total rainfall to date 98·24).	
Amherst (Moulmein)	1·18 (Total rainfall to date 176·28).	Crop prospects good.
Tavoy	2·25 (Total rainfall to date 179·24).	Crops very healthy.
Pegu (Oct. 1st)	3·71 (Total rainfall to date 128·67).	Crops in excellent condition. Transplanting finished.
Henzada	1·25 (Total rainfall to date 174·67).	Crops flourishing.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Prome	1·36 (Total rainfall to date 36·11).	
Toungoo	1·05 (Total rainfall to date 76·41).	Crop prospects fair. Slight damage to the crops in two townships by inundation.
Thayetmyo	1·85 (Total rainfall to date 27·93).	Transplanting continues.
Shwebo (Oct. 1st)	·75 (Total rainfall to date 32·03).	
(„ 8th)	*Nil*	
Kyaukse („ 1st)	*Nil*	Prospects of crops good.
Myingyan („ „)	·05 (Total rainfall to date 20·44).	Food-supply sufficient.
(„ 8th)	2·20 (Total rainfall to date 22·67).	
Mandalay	*Nil* (Total rainfall to date 21·67).	Transplanting of *kyaukki* crops progressing. Food-supply sufficient. Prices normal.
Minbu	·70 (Total rainfall to date 22·31).	Three deaths from cholera. Crop prospects fair. Prices normal.
Yamethen	·50 (Total rainfall to date 29·09).	Cultivation progressing.
		General Remarks.—Cholera in Akyab district. Slight cattle-disease in three Lower Burma districts. Crop prospects continue good. Slight damage from floods in Toungoo. Reports from twelve Upper Burma districts. Health generally good. Crop prospects fair. Anthrax continues in Pyinmana.
Assam—(Oct. 12th)		
Gauhati (Oct. 11th)	·21	Weather seasonable. Public health fair. Malarial fever still reported from Sastra Barpetta and its vicinity. *Sali* paddy in low land doing well. Land for mustard seeds being ploughed. Cattle-disease reported in some parts of the district.
Sylhet	·12	Prospects of *aman* and *sail* crops on highlands not favourable for want of rain. Transplantation of *sail* and reaping of *aus* nearly finished. Prospects of tea favourable. Eighteen deaths from cholera reported from Karimganj.
Cachar		Weather seasonable. Public health good. Price of rice steady. Ploughing of fields for winter crops commenced.
Dibrugarh	2·57	Weather hot during day; cool at night. Fever prevalent in town.
Mysore and Coorg—(Oct. 12th)		
Bangalore	Civil and Military Station, 7·06; Bangalore district headquarters, 6·64; Mysore, 5·70; Kolar, 2·90; Tumkur, 4·18, rainfall in general throughout the State.	Standing crops in good condition, except in parts of the Tumkur, Shimoga, Kadur and Hassan Districts, where they need more rain. Prospects of season favourable. Public health generally good. Cholera abating in Mysore, but continues in Closepet taluk of the Bangalore District and in parts of Tumkur, Shimoga, Kadur and Hassan Districts. Cattle-disease prevalent in parts. No material change in prices.
Mysore		
Mercara	11·74; heavy rain since 9th instant.	Prospects improved. Prices risen slightly.
Berar and Hyderabad—(Oct. 12th)		
Amraoti	Rain on 10th.	Rain on 10th beneficial to standing *kharif* as well as to *rabi* which is being sown. Cotton in pod. *Jowari* in ear. Slight cholera in Amraoti and Morsi taluks. Fever in the district. Cattle healthy. Wheat 15 and *jowari* 23 seers per rupee.
Akola		Weather warm and cloudy. Cotton in pods. *Kharif* healthy. *Rabi* sowing in progress. Cholera in Akote taluk. Cattle suffering from hoof and mouth disease.
Hyderabad (Oct. 7th)	·27; total since 1st January, 22·83.	Harvesting of *kharif* crops commenced. Cattle-disease prevalent in some places. General health good. Prices—wheat 10¾, coarse rice 12, white *juar* 18, yellow *juar* 20, and *tur* 14¾ seers per current sicca rupee.
„ („ 12th)	·06; total since 1st January, 22·89.	Harvesting of *kharif* crops in progress. Cholera has appeared in parts of Pathar taluka. Cattle-disease continues. Prices—wheat 10¾, coarse rice 12, white *juar* 18, yellow *juar* 20, and *tur* 14¾ seers per current sicca rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Central India States—(Oct. 12th)		
Indore	1·10	Weather cloudy and wet today. No more cholera.
Morar (Gwalior)		Weather cloudy and hot. Fever prevailing.
Sutna		Fever still prevalent.
Neemuch		Weather very warm. Fever prevalent.
Goona		Five deaths from cholera in Kumraj pergana, otherwise health good.
Agar		Health and prospects fair.
Sehore		Weather hot and cloudy. Crops fair. One death from cholera.
Nowgong		Weather clear. Health fair. Fever in parts. Prices steady.
Bhopawar		Weather hot. Fever prevalent in Jhabna, Alirajpur, and parts of Barwani. Prices slightly falling.
Rajputana—(Oct. 12th)		
Abu (Oct. 12th)		Weather occasionally cloudy and windy but seasonable, little hotter.
Sirohi („ 9th)		Little water in tanks; wells low. Health good. Crops cut, generally a failure. Weather warm and dry.
Marwar („ 8th)		Cholera almost disappeared. Crops doing well, except in some districts. Weather cloudy and close. Prices rising.
Meywar („ „)		Water in tanks and wells decreasing. Crops being reaped. Health very fair. Prices rising. Weather seasonable.
Pertabgurh („ „)		Tanks and wells full. Health good. Prices rising.
Harowti („ „)		*Rabi* sowings continue. Days hot, nights cool. Fever prevalent. Prices high.
Jhallawar („ 9th)		Fever general. *Rabi* preparations in progress.
Ajmere („ 11th)		Weather clear and warm. Fever and slight diarrhœa prevailing throughout the districts. *Rabi* operations progressing. *Kharif* prospects fair. Wheat 22, barley 35, and gram 37 pounds per rupee.
Jeypore („ „)		Weather seasonable. Prospects fair.
Kerowlee („ 8th)		Tanks and wells full. *Rabi* cultivation in progress. Fever prevalent. Prices steady.
Dholepore („ „)		Tanks and wells full. *Rabi* sowings commenced. Fever still prevails, health otherwise good. Prices stationary. Weather seasonable.
Bhurtpore („ 11th)		Weather sunny. Prospects fair. Fever continues. Prices steady.
Ulwar („ „)		Ploughing continues. *Kharif* crops being harvested. Prices steady. Fever prevalent. Cholera nearly gone.
Kotah („ 8th)		Prospects good. Weather seasonable. Fever still prevalent. Prices stationary.
Kherwara („ 9th)		Tanks and wells unfilled. Crops good. Health good. Prices lower. Weather fine.
Bickanir („ 8th)		Prospects fair. Fever in district. Prices stationary. Weather hot.
Nepal—(Oct. 7th)		
Katmandu (Oct. 6th)	*Nil.*	Weather seasonable. Rice being cut.

SUSPENSIONS AND REMISSIONS OF REVENUE TO BE REPORTED TO THE GOVERNMENT OF INDIA.

Circular No. 63R. / 121—2.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Revenue), dated Simla, the 10th October, 1887.

Read—

Resolution No. 58-R., dated the 12th October, 1882, by the Government of India, Revenue and Agricultural Department.

RESOLUTION.

Under the orders conveyed in para. 27 of the Resolution read in the preamble, proposals for suspensions and remissions of revenue are sanctioned by Commissioners of Divisions and their orders, subject to revision by the Local Government or Administration, are final. The Governor-General in Council has no desire to interfere with the discretionary powers thus conferred on the Local Authorities, but requests that in future when suspensions or remissions of revenue are sanctioned, the Government of India may be informed without delay of the probable effect of such suspensions or remissions upon Land Revenue collections.

Madras.

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 12th October, 1887.

During the first three days of the past week the weather remained as quiet and fine as was the case during the preceding week, but after the 8th conditions changed and the weather became very unsettled. Hence the week naturally divides itself into two parts. During the first, ordinary October conditions prevailed, that is, pressure was very uniform, the winds very light, and the weather fine, except in the south of the Peninsula, where the last of the monsoon current was giving fairly general rain. On the 8th it was evident that these quiet conditions were undergoing change. A comparatively brisk fall of the barometer at Madras, accompanied by overcast weather, and a north-north-west wind showed that a storm was advancing towards the Carnatic Coast from the Bay of Bengal. This storm crossed the Coast at about 8 A.M. on the 9th, and proved to be a well marked though small disturbance. It gave heavy rain (6 inches) to Madras and general rain throughout the whole of Southern India. The wind circulated cyclonically around the centre, and blew freshly at Madras, Masulipatam, and Gopalpore. By the morning of the 10th the centre of the storm had apparently reached the West Coast, its motion occasioning a rapid recovery of pressure on the Coromandel Coast and an equally rapid fall on the West Coast. All over Central and Southern India the winds were determined by this disturbance, and circulated cyclonically around the centre. In Northern India the winds and weather were but little affected, the former remaining light and variable, the latter generally fair. By the 11th the storm had advanced out into the Arabian Sea. Apparently, however, the centre had travelled more towards north than west and at no great distance from the Coast. Hence the weather remained very unsettled all over the Peninsula and the Central Provinces, and the wind there remained cyclonic. Rain was general and moderately heavy over the Peninsula and the south of the Central Provinces and the Berars, and showers had fallen in Bengal, but in Upper India the weather, though more cloudy than of late, was still generally fine. On the 12th there was comparatively little change in the relative distribution of pressure, the chief feature, as on the preceding day, being the large shallow area of depression over and off the West Coast of India. The winds of nearly all parts of India were determined by this low pressure area, and had a general cyclonic movement. They gave rain to the whole of India, except the north-west, where the weather remained fine. On the West Coast the amounts received were in some cases considerable. With this burst of rain there occurred a general and brisk fall of temperature.

The following table shows the total rainfall from the 1st June to the present time and the average rainfall for the same interval:

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to October 12th.	Difference.
Akyab ...	141·41	162·08	—20·67
Saugor Island ...	57·61	58·98	— 1·37
Calcutta ...	45·78	53·19	— 7·41
Dhubri ...	54·38	67·38	—13·00
Purneah ...	42·31	58·84	—16·53
Gya ...	35·96	37·64	— 1·68
Allahabad ...	33·48	36·88	— 3·40
Meerut ...	24·66	23·40	+ 1·26
Delhi ...	35·22	22·83	+12·39
Lahore ...	16·07	13·70	+ 2·37
Peshawar ...	3·24	6·05	— 2·81
Cochin ...	66·55	88·73	—22·18
Ratnagiri ...	109·47	100·84	+ 8·63
Bombay ...	93·59	68·95	+24·64
Poona ...	23·43	24·09	— 0·66
Surat ...	37·27	42·42	— 5·15
Khandwa ...	31·44	30·61	+ 0·83
Nagpur ...	48·85	38·76	+10·09

It will be seen that on the whole the main features of the table are same as those shown by the table in last week's summary.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	5	2·93
Bengal and Assam ...	15	19·31
North-Western Provinces and Oudh ...	4	1·27
Punjab ...	1	0·62
Hill Stations ...	4	0·97
Ceylon ...	2	5·52
Malabar Coast ...	5	36·22
Bombay ...	8	17·24
Berars and Central Provinces ...	10	13·83
Guzerat and Central India ...	1	1·10
Sind—Rajputana ...	0	0
Madras ...	14	40·43

(*a*) Includes the Cawnpore-Achnera State railway.
(*b*) Includes the Bellary-Kistna State railway.
(*c*) Includes the Northern Bengal, Dacca, Kaunia-Dhurlla, and Assam-Behar State railways.
(*d*) Return not received.
(*e*) Total receipts from 1st July to 26th August, 1886.
(*f*) Total receipts from 1st April to 27th August, 1887.
(*g*) Includes the Amritsar-Pathankot and Rajpura-Patiala State Railways.
(*h*) Calculated on percentage used for the corresponding period of 1886.

SIMLA;
The 13th October, 1887.

JAMES RAMSAY,
Offg. Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA at the GOVERNMENT CENTRAL PRESS, Simla.

SUPPLEMENT TO

The Gazette of India.

No. 43.} CALCUTTA, SATURDAY, OCTOBER 22, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT to the GAZETTE OF INDIA will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in PART VI of the GAZETTE.

Non-Subscribers to the GAZETTE may receive the SUPPLEMENT separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The SUPPLEMENT and PART VI of the GAZETTE can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA is required by Law, or which it has been customary to publish in the CALCUTTA GAZETTE, will be included in the SUPPLEMENT. For such Orders and Notifications the body of the GAZETTE must be looked to.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 20th OCTOBER, 1887.

GENERAL REMARKS.—Except in the Punjab and Rajputana, rain has occurred generally throughout the country during the week under report. The falls were heaviest in parts of Bombay, Bengal, the North-Western Provinces and Oudh, and the Central Provinces.

The *kharif* harvest is approaching completion in the North-Western Provinces and Oudh, and is in general progress elsewhere, and prospects are on the whole very favourable.

Rabi sowings are going on throughout the country.

The standing crops in Madras, Mysore and Coorg are generally in good condition.

The rice crop in Bombay, the North-Western Provinces and Oudh, the Central Provinces, Bengal, Assam and Burma, promises well.

Cotton sowing has been completed in parts of Bombay. In the Central Provinces and Berar the crop has been injured to some extent by heavy rain.

Except for the usual fever prevalent at this time of the year, the public health continues to be generally satisfactory.

Prices are rising in four districts of the Punjab. Elsewhere they are steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 19th.)		
Bellary	Average ·39	Standing crops good, but early crops begin to wither in parts of one taluk. Harvest dry grains, yield below average. Cholera in five, and cattle-disease decreasing in three taluks.
Kurnool	Average ·53	Sowing of white *cholum* continues. Harvest early cereals, outturn below average. Small-pox in two, and cattle-disease increasing in six taluks. Cholera increasing.
Ganjam	**Average last week since revised, ·40; this week, 5·84.**	**Fever and small-pox in six, and cattle-disease increasing in five taluks. Cholera decreasing.**
Kistna	Average 2·97	Standing crops improving. Harvest dry grains, outturn below average. River 4·1 feet over Anicut. Slight fever. Cholera increasing in one, and cattle-disease decreasing in eight taluks.
Chingleput (Madras)	Average 7·15	Standing crops fair. Harvest paddy and *ragi*, outturn moderate. Small-pox in three, cholera in two, and cattle-disease decreasing in six taluks.
Coimbatore	Average 1·41	Standing crops generally good, but require rain in parts. Harvest paddy and *ragi*, outturn above average. Fever and cholera in one taluk.
Tanjore	Average last week since revised, 2·65; this week, ·80.	Standing crops generally good, but submerged in floods in parts of two taluks. Harvest wet and dry grains, outturn up to average. Cattle-disease increasing in three taluks.
Madura	Average last week since revised, 1·14; this week ·58.	More rain wanted. Slight fever. Small-pox in one, and cattle-disease in two taluks. Water-supply deficient in all but two taluks.
Malabar	Average 5·74	Harvest first crop paddy, outturn about average. Second crop cultivation progressing. Slight small-pox in seven, fever in two, cholera in one, and cattle-disease in two taluks
Travancore	2·40	Second crop cultivation progressing. Fever and small-pox in parts.
		General Remarks.—General prospects fair, except in parts of Madura and Tinnevelly.
Bombay—(Oct. 19th)		
Karachi	. . . .	River at Kotri on 17th, 8 feet 5 inches against 9 feet 1 inch on same date last year. *Kharif* harvesting in progress in seven talukas. Previous case of small-pox in Karachi still remaining. Fever in twelve and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 28 and 28 and in Sehwan 26, 30 and 40 pounds per rupee, respectively.
Hyderabad	. . . .	*Kharif* harvesting commenced. Crops generally suffering from scarcity of water. Rice crops attacked by blight in parts of Guni and Dero Mohabat talukas. Fever in eight and small-pox and cattle-disease in two talukas. River at Kotri on 17th, 8 feet 5 inches against 9 feet 1 inch on same date last year. Wheat 23$\frac{11}{16}$, *jowari* 40, *bajri* 33$\frac{1}{2}$, white rice 19, and red rice 28 pounds per rupee.
Ahmedabad	. . .	Reaping of *kharif* in progress throughout district. Crops withering owing to want of rain. Fever in Dholka, Dhandhuka, and Sanand talukas. Wheat 26 and *bajri* 29 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda . . .	. . . . .	Cholera continues in mild form in Baroda city. Crops generally fair. *Bajri* 27, wheat 19, and rice 23 pounds per rupee.
Surat	Rain in three talukas—maximum in Jalalpore, ·15 and minimum in Mandvi, ·10.	Weeding progressing. Rice and millet harvest going on in certain places. Rain wanted throughout district. Cattle healthy. Fever in Olphad, Bardoli, and Jalalpore. Cholera in Bulsar, Mandvi, and Surat city, 22 cases, 8 deaths. *Jowari* 30 and *nagli* 43 pounds per rupee.
Nasik . . .	Nasik, 1·76; Dindori, 1·35; Niphad, 1·07; Chandor, 3·59; Yeola, 1·56; Nandgaon, ·81; Malegaon, ·93; Baglan, 1·98; Kalwan, ·97; and Peint, ·20.	More rain wanted in almost all the talukas. *Kharif* crops generally good. *Rabi* sowings in progress. Reaping of rice crops commenced in Peint taluka. Public health good. Cholera in Dindori, 5 attacks, deaths none. Cattle-disease in Baglan taluka, attacks 44, deaths 34. Prices stationary.
Colaba (Bombay) . .	·05 on 12th; total to date 93·73, being 23·96 above average.	Abnormal temperature *nil* on 12th, 2° cool on 13th, and afterwards rose to 1° warm by the 18th. Vapour in air normal from 12th to 16th and excessive on 17th and 18th. Abnormal wind southerly on 14th and 15th; wind normal on other days. Thunder and lightning on 12th; lightning on 13th.
Poona	Rain throughout district—maximum 2·92 in taluka Khed and minimum ·68 in Petha Baramati.	More rain wanted in *desh* portion of the Haveli taluka. Crops doing well. Sowing of *rabi* still continues in Junnar and Bhimthari talukas and in Petha Ambegaon. Public health generally good. Slight cattle-disease in Haveli and small-pox in Khed taluka. 84 cholera cases in the district, 39 fatal. *Bajri* 41 and *jowari* 53 pounds in district and *bajri* 37 and *jowari* 44 pounds per rupee in Poona city.
Ahmednagar . .	Parner, 2·83; Newasa, 2·37; Rahuri, 2·44; Sangamner, 2·11; Nagar, 1·78; Akola, 1·38; Shevgaon, 1·16; Jamkhed, 1·00; and Karjat, ·71; slight in other talukas.	*Kharif* crops good. Reaping commenced in seven talukas. Sowing of *rabi* completed in six and in progress in remaining talukas. Cholera attacks 45, deaths 20. *Bajri* 30 and *jowari* 60 pounds per rupee.
Sholapur . . .	Rain in 7 talukas—Maximum in Sholapur, 2·29 and minimum in Barsi, ·53.	*Kharif* crops doing well. Sowing of *rabi* crops almost completed. Slight cholera in Barsi, Karmala, Sangola, and Malsiras talukas, cases 11, fatal 3. *Jowari* 57⅛ and *bajri* 47⅛ pounds per rupee.
Dharwar . . .	Rain general, varying from ·43 in Mundargi to 5·23 in Kalghatgi.	Rice crops improving. *Jowari* and minor crops good. Cotton sowing completed, except in Kod taluka. Slight cholera in Ron and Gadag talukas and slight cattle-disease in Dharwar taluka. *Jowari* 58 and rice 23 pounds per rupee.
Kanara . . .	Rain in Karwar, 12·42; total 137·51; Kumpta, 27·31; Sirsi, 8·61; Haliyal, 5·61; Supa, 7·24.	Rice harvest continues in Karwar, Akola, Kumpta, and Haliyal talukas. Cardamom and betelnut harvest in Sirsi and Siddapur. Slight cattle-disease in six talukas. Common rice in Karwar 12, district average 11½ seers per rupee.
Rajkot . . .	. . . . .	Weather hot. Fever prevalent. *Kharif* crops middling for want of latter rains. Sowing of *rabi* commenced in parts of Halar Prant. Wheat 22, *bajri* 23, and *jowari* 28 pounds per rupee. *General Remarks.*—Good rain throughout the Deccan and Southern Mahratta Country, but urgently required throughout Guzerat and Kathiawar and in parts of Nasik, Khandesh, and the Konkan. Crops suffering from scarcity of water and blight in parts of Hyderabad. *Kharif* harvest and *rabi* sowing in progress generally. Cholera in parts of fifteen, fever in parts of thirteen, cattle-disease in parts of eleven, and small-pox in parts of seven districts. No cholera reported from Ahmedabad, Ratnagiri, and Kanara.
Bengal—(Oct. 19th).		
Chittagong (Oct. 18th)	1·95	Weather seasonable. Early *aman* in ear. Prospects fair. Prices steady. Public health generally good.
Dacca . . .	3·73	Rain has done good to crops. Paddy being harvested. Sowing of pulses begun. Prospects good. Health good.
24-Pergunnahs (Calcutta).	1·51	Rain has done much good to *aman*. Ploughing for cold weather crops continues. Public health generally good.
Khoolna . . .	1·88	Prospects of *aman* good. Ploughing for winter crops going on. Public health fair.
Moorshedabad . .	3·87	Weather cloudy and rainy. Prospects of *aman*, *rahar*, and *til* good. *Kalai* and *moong* being sown. Recent rain has improved prospects in Kandi.
Pubna . . .	2·06	Weather stormy. Prospects of crops good. General health good.
Dinagepore . . .	4·00	State and prospects of winter rice good. Sporadic cholera and cattle-disease reported.
Rungpore . . .	3·44	Crops safe. Prices falling.
Midnapore . . .	2·89	Crops good, except in Ghatal, where rain wanted.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Burdwan . . .	1·69	Opportune rain has benefited crops much, but more wanted. Prices still rising in Cutwa, elsewhere stationary. Fever prevalent.
Bhagalpur . . .	·85	Prospects generally improved. *Rabi* sowings going on.
Purneah . . .	3·31	*Aghani* rice much benefited by rain. All crops doing well. *Rabi* sowings in progress. Health of people and cattle very bad.
Durbhanga . . .	3·64	Recent rain has immensely benefited rice crop, and prospects are very satisfactory. *Rabi* sowing has begun. Prices falling. Public health generally good.
Chumparun . . .	6·25	*Bhadoi* harvest finished, with good outturn. Prospects of rice excellent. *Rabi* sowings commenced. Prices show a tendency to fall. Public health good.
Patna	2·46	Rain has greatly benefited paddy crop and has improved prospects of *rabi* which is now being sown. Public health good.
Gya	·73	Paddy still suffering for want of rain. *Rabi* being sown. Fever reported.
Hazareebagh . .	1·18; rain on 11th, 13th and 14th.	Prospects greatly improved by rain. General health fair.
Cuttack . . .	·83	Weather fair. Rainfall of last week favourable to rice crop. Fever prevails. *General Remarks.*—Rain fell during the week, but the fall in parts of the Burdwan and Chota Nagpur divisions and in Tipperah and Gya scanty, except in these parts the prospects of the *aman* crops have generally improved considerably. Cultivation for the *rabi* crops advancing rapidly. Sugarcane promises well. Usual autumnal fever is prevalent in many districts.
N.-W. Provinces and Oudh—(Oct. 15th)		
Benares (Oct. 18th)	Average 3·70	Weather much cooler. Agricultural prospects greatly improved since last rainfall. Markets full. Prices steady. Health good.
Ballia („ 17th)	Heavy rain averaging 5·40, accompanied with storm.	Wind easterly. Weather getting cool. *Rabi* operations retarded, but rice crops benefited. Prospects continue favourable, and prices are unchanged. Market well supplied. Health good.
Gorakhpore („ „)	8·30 at Sadr	Harvest prospects fair. Prices falling.
Fyzabad („ 18th)	. . . . .	Weather seasonable. *Kharif* nearly gathered. *Rabi* sowing in progress. Public health good. Condition of cattle fair.
Lucknow („ 17th)	Slight rain	Weather during the greater part of the week cloudy. Prospects of *hewant* crops fair. *Rabi* sowing going on. Supplies ample. Prices almost stationary. Public health and condition of cattle good.
Rai Barelli („ „)	About 1·40 at Sadr	Supplies abundant. Prices rising. Cholera prevailing in some villages.
Partabgarh („ 18th)	About 2·00	Rain doing much good to the *rabi* sowings. Prices steady. Health good.
Allahabad („ „)	From 1·00 to 2·30 in all parganas.	Rain very beneficial to late rice and for *rabi* sowings. Markets well stocked. Prices steady. Slight fever of usual autumnal type. Cholera dying out.
Cawnpore („ „)	Rainfall in two tahsils from ·10 to 1·40	*Kharif* in good condition and being cut. *Rabi* sowings in progress. Prices steady. Fever prevalent. Cholera lingering. Cattle-disease in one tahsil.
Farakhabad („ „)	·20 in one tahsil on 12th.	Weather seasonable. Supplies ample. Prices steady. Fever and ague in places. Cholera decreasing.
Sitapur („ „)	Rainfall on 13th averaging ·50	Rain has done much good. *Rabi* sowings continue, and prospects are favourable. Cholera still prevalent.
Bareilly („ „)	. . . .	*Kharif* being harvested. General prospects good. Prices steady. Cholera decreasing. Fever somewhat prevalent.
Banda („ 17th)	General rainfall on the 12th, 13th and 14th.	Rain has done much good to both the crops. Rice being cut. Prices falling. Fever prevalent.
Kumaon („ 18th)	. . . .	Millets not harvested yet. Ploughing for *rabi* commenced. Prices falling. Three deaths from typhus fever in pargana Shor. Cattle-disease continues.
Agra („ 17th)	. . . .	*Kharif* being cut, and ploughing for *rabi* going on. Prices rising slightly. Fever prevalent.
Jhansi („ „)	Slight drizzle during the week.	*Rabi* prospects good. Prices almost stationary. Fever abating. Condition of cattle good.
Meerut („ 18th)	. . . .	Prices steady. Cholera ceasing. Fever still severe. *General Remarks.*—There was good rain during the week in the eastern districts and some also fell in a few others. The weather is cool and seasonable. *Kharif* crops have been nearly gathered, and *rabi* sowings are in progress. Prospects generally are favourable. The supplies of food-grains are ample, and prices on the whole continue steady. Fever is still prevalent, but cholera is abating, and the general health is good.
Punjab—(Oct. 15th)		
Hissar (Oct. 18th) .	. . . .	Fever prevalent. Prices slightly rising. *Rabi* sowings in progress. Prospects of *kharif* good.
Delhi . . .	. . . .	Fever prevalent. Cholera abating. Prices fluctuating. Prospects of *kharif* unfavourable.
Umballa . . .	. . . .	Fever prevalent. Cholera abated. Prices stationary. *Rabi* sowings commenced. Cutting of *kharif* crops in progress.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Jullundur	. . . .	No report received.
Amritsar	. . . .	Fever abating. Prices rising. Prospects of *kharif* crops good.
Sialkot	. . . .	Health good. Prices stationary. Prospects of *kharif*. Rice crops suffering much for want of rain.
Ferozepore	·70 at Moga; ·60 at Muktsar.	Slight fever prevalent. Prices rising.
Lahore	. . . .	No report received.
Rawalpindi	·40	Health good. Prices stationary. *Rabi* sowings in progress. *Kharif* outturn average.
Multan	. . . .	No report received.
Dera Ismail Khan	. . . .	Health good. Prices stationary. *Rabi* ploughings in progress.
Peshawar	. . . .	Fever prevalent. Prices rising. *Kharif* crops average.
Shahpur	. . . .	Slight fever in tahsils Bhera and Khushab. Prices almost stationary. *Rabi* sowings in progress. *Kharif* crops being harvested.
		General Remarks.—No rain has fallen during the week, except in the Ferozepore and Rawalpindi districts. Health is good in Sialkot, Rawalpindi, and Dera Ismail Khan. Fever prevails in Hissar, Delhi, Umballa, Ferozepore, Amritsar, Peshawar, and in the Bhera and Khushab tahsils of the Shahpur district. Cholera has abated in Delhi and Umballa. Prices are stationary in Umballa, Sialkot, Rawalpindi, Shahpur, and Dera Ismail Khan, rising in Hissar, Ferozepore, Amritsar, and Peshawar, and fluctuating in Delhi. *Kharif* prospects are good in Hissar and Amritsar, unfavourable in Delhi and Sialkot, and average in Rawalpindi and Peshawar. Crops are being harvested in Umballa and Shahpur. *Rabi* sowings in progress in Hissar, Rawalpindi, and Shahpur, commenced in Umballa, and ploughings in progress in Dera Ismail Khan.
Central Provinces—(Oct. 19th)		
Nagpur	4·86	Weather clear. *Rabi* ploughings continue. Rain very beneficial. Fever still prevalent.
Jubbulpore	5·08	Rain beneficial. Prospects good. Fever prevalent. Prices steady.
Saugor	3·33	*Rabi* sowings in progress. Fever prevalent. Prices steady.
Seoni	Rain over whole district.	Rain very beneficial. Health good. Price of rice falling. Superior rice being cut.
Hoshangabad	2·47	Weather cloudy and hot. *Kharif* crops being cut. *Rabi* ploughings in progress. Fever prevalent. Prices unchanged.
Khandwa	1·90	Weather clear and warm. *Jowari* and cotton somewhat damaged by rain. Prices unchanged.
Bilaspur	·47	More rain wanted for *rabi* sowings. Prospects fair. Fever and cattle-disease prevalent. Prices rising.
Raipur	1·98	Weather seasonable. Rain beneficial to rice and *kodo*. Fever prevalent. Prices steady.
Sambalpur	. . . .	No report received.
		General Remarks.—Rain has been very beneficial in all districts, except Khandwa, where the *jowari* and cotton suffered. More rain is wanted in Bilaspur. Prospects favourable.
Burma—(Oct. 15th)		
Akyab (Oct. 15th)	2·76 (Total rainfall to date 162·47).	Five cases of cholera in district. Crop prospects favourable. More rain wanted.
Bassein	·21 (Total rainfall to date 91·29).	Slight cattle-disease. Crops good.
Rangoon	·88 (Total rainfall to date 99·12).	
Amherst (Moulmein)	2·04 (Total rainfall to date 174·32).	Prospects of crops good.
Tavoy	. . . .	No report received.
Pegu (Oct. 8th)	1·33 (Total rainfall to date 130·0).	Crops good.
(„ 15th)	·29 (Total rainfall to date 130·29).	Crops in good condition.
Henzada	1·60 (Total rainfall to date 76·27).	Crops flourishing.
Prome	1·23 (Total rainfall to date 37·41).	Slight cattle-disease.
Toungoo	2·30 (Total rainfall to date 78·71).	Some damage to *taungyas* by rats. Prospects of crops good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Thayetmyo	·52 (Total rainfall to date 28·45).	Slight cattle-disease in two townships. Transplanting completed.
Kyaukse (Oct. 8th)	·27. (Total rainfall to date 21·01).	Prospects of crops good.
Minbu	·09 (Total rainfall to date 22·40).	Crop prospects fair. Prices normal.
Yamethen	1·23 (Total rainfall to date 30·32)	Cultivation progressing.
		General Remarks.—Cholera in Akyab and Amherst districts. Cattle-disease in four districts. Crops in Lower Burma doing well. Rain wanted in Akyab. Reports from eight Upper Burma districts. Health satisfactory. Crop prospects good. Cattle-disease and anthrax decreasing in Pyinmana.
Assam—(Oct. 19th)		
Gauhati (Oct. 18th)	·06	Weather seasonable. Public health fair. Malarial fever still prevalent in Sastra Barpetta and its vicinity, also in parts of Polasbari and Luki tahsils. *Sali* paddy in low land doing well. Ploughing land for mustard in progress. Reaping of *asra* and *kharua* paddy in parts commenced.
Sylhet	2·45	Reaping of *aus* finished. The slight rain during the week has done much good to all crops, more rain still wanted. Prospects of tea good. 60 deaths from cholera reported from Karimganj.
Cachar	·74	Weather fair. Prospects of crops good. Public health good. Price of rice steady. Tea suffering from blight.
Dibrugarh	·69	Weather hot during day; cool at night. Fever prevalent in the town.
Mysore and Coorg—(Oct. 19th)		
Bangalore	Rainfall good in Shimoga, Kadur and Hassan districts and scanty in other parts of the State.	Standing crops in good condition, being much benefited by the recent rains. Prospects of season favourable. Public health generally good. Two fatal cases of cholera reported in the Civil and Military Station, the epidemic is prevalent in Closepet and Shimoga towns and in parts of Tumkur and Kadur districts. Small-pox and cattle-disease continues in parts. Prices fallen in the Kadur district and risen in the Mysore district slightly.
Mysore		
Mercara	1·99	Standing crops in good condition. No fresh cases of cholera reported.
Berar and Hyderabad—(Oct. 19th)		
Amraoti	. . . .	Weather clear. Cotton plants in pods. *Jowari* plants in ear. Present rain has done much good to *kharif*. Fever in some taluks, and cholera in Morsi taluk. Cattle healthy. Wheat 15 and *jowari* 24 seers per rupee.
Akola	8·59	Weather cloudy and cool. *Kharif* and cotton crops suffered from excessive rain some places. Sowing of *rabi* crops in progress. Fever throughout the district. Cholera in some taluks.
Hyderabad	1·77; total since 1st January, 24·66.	Harvesting of *kharif* crops continues. Wet cultivation not progressing, owing to insufficient water in tanks. General health fair Prices—wheat 10¾, coarse rice 12¼, white *juar* 18, yellow *juar* 21 and *tur* 15 seers per current sicca rupee.
Central India States—(Oct. 19th)		
Indore	·13	Weather threatening.
Morar (Gwalior)	. . . .	Weather fair. Fever still prevalent.
Sutna	3·67	Prospects good.
Neemuch	. . . .	Fever prevalent. Weather warm.
Goona	·05	Two deaths from cholera in Kamraj pargana, otherwise health good.
Agar	. . . .	Health and prospects fair.
Sehore	·19	One death from cholera at Sehore, disease also reported at Serong and Narsingarh. Crops fair.
Nowgong	1·62	Weather seasonable. Health fair. Fever still prevalent. Prices steady.
Bhopawar	. . . .	Weather hot. Cholera cases reported in Barwani territory. Fever prevalent in Jhabna, Alirajpur, and Barwani. Prices steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Oct. 15th)		
Abu (Oct. 19th)	. . . .	Evenings little cloudy. Weather seasonable but hotter. Sharp shock of earthquake last night at 10-40.
Sirohi („ 16th)	·30	Water in tanks and wells low. Health good. Crops all cut except *til*. Sharp thunderstorm on 14th. Evenings cloudy.
Marwar („ 15th)	. . . .	About three months' water in Jodhpur city tanks. Health good in city. *Kharif* being cut. Weather cloudy. Nights cool. Market light. Prices rising.
Meywar („ „)	·19	Water in tanks and wells decreasing. Prospects unchanged. Health very fair. Prices rising. Weather seasonable.
Pertabgurh („ „)	. . . .	Tanks and wells decreasing daily. Health good. Prices fluctuating.
Harowti („ „)	. . . .	Weather partially cloudy. Sowings progressing. Fever still prevalent. Prices high but steady.
Jhallawar („ 16th)	. . . .	Fever general. Cholera again reported in one pargana. *Rabi* sowings begun.
Ajmere („ 18th)	. . . .	Weather clear and warm. Fever and slight diarrhœa continue. Agricultural operations for both harvests progressing. Prices slightly risen.
Jeypore („ „)	. . . .	*Rabi* operations progressing. Fever prevalent.
Kerowlee („ 15th)	. . . .	Tanks decreasing; wells full. *Rabi* being cultivated. Fever continues. Prices stationary. Weather cloudy. Days hot; nights cool.
Dholepore („ 14th)	. . . .	Tanks and wells full. *Rabi* sowings continue. Fever still prevails, health otherwise good. Prices stationary. Weather seasonable.
Bhurtpore („ 18th)	. . . .	Weather fine. Prospects fair. Fever continues. Prices steady.
Ulwar („ „)	. . . .	Harvesting progressing. Prices almost stationary. Fever prevalent.
Kotah („ 15th)	. . . .	Fever continues. *Rabi* sowings progressing. Weather cloudy.
Kherwara („ 16th)	. . . .	Tanks and wells not filled. *Kharif* harvest good. No *rabi* sowings owing to insufficient rains. Health good. Prices steady. Weather fine.
Bickanir („ 15th)	. . . .	Prospects fair. Fever in districts. Prices stationary. Weather hot.
Nepal—(Oct. 14th)		
Katmandu (Oct. 13th)	3·44	Heavy rain for the last 36 hours. The rain is bad for the uncut rice.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 19th October, 1887.

The unsettled weather, which prevailed over a large part of India at the close of the previous week, continued during the greater part of the week under review. On the 13th the barometer was falling over the Central parts of the country, and a well marked, though feeble depression, was shown over Khandeish and the Bombay Deccan. This depression more or less affected the winds of the whole of India, occasioning south-westerly and southerly winds over the Peninsula, north-easterly winds over the Central parts of the country and in Guzerat, and northerly winds down the Indus Valley. It gave very unsettled weather to all parts of India, except the north-west, and occasioned heavy rain very generally, but especially in the south of the Central Provinces, and at Goa, Karwar, and False Point. Between the 13th and 14th the centre of lowest pressure was transferred quickly to the north-eastward, and the Chart of the latter date showed a well marked depression lying between Raipur and Allahabad. In consequence the weather remained exceedingly unsettled. On the West Coast the amount of rainfall had decreased somewhat, but in the North-Western Provinces, on the contrary, the fall had become heavier, and rain had also extended north-westward to all the stations in the North-West Himalaya. A very clearly marked cyclonic circulation of the wind existed around the depression. On the 15th the disturbance had almost disappeared, but had left the weather in Northern and North-Eastern India in an unsettled state, and rain was reported from several stations in Bengal, the North-Western Provinces, the Central Provinces, and the Punjab. Over the greater part of the Peninsula the weather was fine. On the 16th the barometer rose rapidly over North-Western, Western, Central, and Southern India, but still fe.. in the north-east. The weather was slowly improving, and was very fine over a large part of the country, though in Lower Bengal, Assam, and Burma, as well as in the south of the Peninsula, rain still fell. On the 17th, owing to a rapid decrease of pressure over Northern India, the westerly current from the Arabian Sea strengthened and a burst of rain occurred over the Peninsula. With this exception rain was confined to Burma and a few places in Bengal. On the 18th the barometer rose again in the north and fell in the south. Consequently the westerly winds on the West Coast decreased in strength, though some rain was still reported from the Peninsula. On the 19th pressure became very uniform, and conditions became quiet again. Normal October weather prevailed generally, and the tendency was towards the establishment of north-easterly winds, and fine clear weather in Northern and Central India and the usual north-east monsoon in the Carnatic.

The following table shows the progress of the season's rainfall. The main features of the return are the same as those shown in the tables published in the last two summaries :

Stations.	Total Rainfall since June 1st, 1887.	Average Rainfall, June 1st to October 19th.	Difference.
Akyab ...	143·14	163·92	—20·78
Saugor Island ...	63·80	61·86	+ 1·94
Calcutta ...	46·98	55·91	— 8·93
Dhubri ...	56·05	69·01	—12·96
Purneah ...	45·62	59·04	—13·42
Gya ...	36·70	37·84	— 1·14
Allahabad ...	34·71	36·92	— 2·21
Meerut ...	24·66	23·41	+ 1·25
Delhi ...	35·22	22·93	+12·29
Lahore ...	16·07	13·98	+ 2·09
Peshawar ...	3·24	6·19	— 2·95
Cochin ...	68·49	92·65	—24·16
Ratnagiri ...	109·65	101·32	+ 8·33
Bombay ...	93·62	69·18	+24·44

During the week the weather was much cooler than the normal over the greater part of India. Only in Sind and the Carnatic was the mean temperature above the normal, and there only slightly. In the North-Western and Central Provinces, Central India and Guzerat, on the contrary, there was a deficiency of between 3° and 4°.

The final table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.

Weather Review of India for the week ending the 26th October, 1887.

The change towards cold weather conditions, which was in progress at the close of the previous week, has advanced steadily during the week under review. During that time pressure has increased over Northern India and decreased over the Peninsula,—changes which have resulted in the establishment of gradients for easterly winds over the greater part of the country, and the appearance of the north-east or winter monsoon in most places.

On the 20th pressure was rising over Northern India and falling over the Peninsula. It was very uniform generally, but was rather higher in the north than in the south. The absolutely highest reading was reported from Multan. In Northern and Central India very light and variable breezes prevailed, but at the Peninsular stations the direction was generally from between north and east. The weather was fine. On the 21st the barometer was still rising, except on the Malabar Coast. Hence the differences of pressure between the north and south were increasing and the north-easterly wind becoming more general and more decided. At the same time rain began to fall generally in the south of the Peninsula. The highest pressure reported was 30·12″ at Rawalpindi. The Chart of the next day, the 22nd, showed that the area of maximum pressure was travelling south-eastward, so that the highest reading reported (30·057″) was shown at Nowgong (Central India). With this movement south-eastward of the high pressure area the normal cold weather circulation of the winds was established, north-westerly winds being reported from the Gangetic plain, northerly winds from Bengal, and north-easterly and easterly winds from the Peninsula and Central parts of the country. In the Peninsula the area of rainfall was extending and the amounts becoming generally heavier. On the 23rd there was very little change. The area of maximum pressure was reported from Ajmere, and the wind circulation remained unaltered. In consequence exceedingly fine weather continued to prevail over Northern and Central India, while over the Peninsula as far north as a line connecting Sholapur, Secunderabad and Vizagapatam rain was falling everywhere. The Chart of the 24th showed that the area

of maximum pressure was being transferred gradually eastward, the highest reading recorded being 30·05″ at Jubbulpore, but this movement in no way affected either the winds or weather, which remained unchanged. On the 25th pressure rose quickly over Assam and North Bengal, and the main area of high pressure was transferred eastward to that region, though over the Central Provinces there existed an area within which the barometer was equally high. Rain was falling over the whole of the Peninsula, and at some stations the amounts were large. On the 26th the highest barometric reading (30·07″) was reported from Sibsagar, so that during the week the area of highest pressure had travelled right across India from the extreme North-West to the extreme North-East Frontier. The weather remained unchanged, fine settled conditions prevailing over the whole of Northern and Central India, and rainy, showery weather over the whole of the Peninsula.

During the past week pressure has been considerably above the average throughout the whole Indian region, but the excess has been much greater over Northern and Central India than over the Peninsula; hence the barometric gradient for easterly and north-easterly winds has been greater than usual. The variations of temperature from the monthly mean have been much less regular than those of pressure. In Burmah and Bombay the mean temperature has slightly exceeded the normal, but elsewhere it has been generally below. The deficit has been greatest in the north-west, where both on the hills and plains it amounted to over 3°.

The rainfall of the past week has been very remarkable. Slight local showers have occurred at different times at the stations of Dhubri, Sibsagar, Darjeeling, Delhi, Ludhiana and Indore, but with these exceptions the whole of Northern and Central India has been without rain. The parallel of 20° practically forms a divisional line to the north of which the weather has been steadily fine and to the south steadily wet. At Negapatam the week's fall exceeded 7 inches; at Colombo 6 inches; at Coimbatore and Cochin 4 inches; and at Vizagapatam, Madras and Madura 3 inches.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	3	1·91
Bengal and Assam ...	3	0·46
North-Western Provinces and Oudh ...	0	0
Punjab ...	2	0·10

SIMLA, *28th October, 1887.*

W. L. DALLAS,
for *Meteorological Reporter to the Government of India.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 27th OCTOBER, 1887.

GENERAL REMARKS.—The rainfall of the past week has been confined entirely to Burma, Madras, Coorg, and parts of the Bombay Presidency. Elsewhere the week has been rainless.

The reaping of the *kharif* harvest is now in progress throughout, and prospects are on the whole very satisfactory.

The *rabi* sowings are generally well advanced in most Provinces, though more rain would be beneficial in some parts of the country, notably in Bombay and the Punjab.

In Madras the harvest is yielding generally an average outturn and prospects are fair. In Mysore and Coorg the outlook is favourable.

The late rains have improved the prospects of the rice crop in Bombay and Bengal, and the condition of the crop in Burma is also promising. In Assam the crop wants more rain. Sugarcane is doing well in Bengal.

The cotton crop is in good condition in Berar, but in Kathiawar prospects are unfavourable owing to the want of rain.

Poppy sowing has commenced in the North-Western Provinces and Oudh.

Except that the usual seasonal fever is on the increase in Bengal, the public health is generally satisfactory.

Prices are rising in the Central Provinces and in some of the Rajputana States. Elsewhere they remain stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Oct. 26th.)		
Bellary . . .	Average last week since revised, ·55; this week, ·89.	Standing crops good, but early crops withering in parts of one taluk. Harvest dry grains, yield below average. Cholera decreasing in five, and cattle-disease increasing in two taluks.
Kurnool . . .	Average last week since revised, ·64; this week, ·60.	Harvest early cereals, yield below average. White *cholum* and cotton being sown. Cholera decreasing. Small-pox in two and cattle-disease decreasing in five taluks.
Ganjam . . .	Average ·31	Small-pox in five, fever in eight, and cattle-disease decreasing in five taluks. Cholera increasing.
Kistna . . .	Average ·62	Standing crops generally good, but paddy slightly affected by insects in two taluks. Harvest dry grains, outturn about average. River 5·2 feet over Anicut. Fever slight and cattle-disease decreasing in several taluks.
Chingleput (Madras) .	Average 2·41	Standing crops good. Harvest paddy and *ragi*, outturn indifferent. Small-pox in three, cholera decreasing in two, and cattle-disease increasing in six taluks.
Coimbatore . . .	Average 1·06	Standing crops good. Harvest wet and dry grains, outturn above average. Fever in one taluk.
Tanjore . . .	Average 3·86	Standing crops generally good. Harvest wet and dry grains, outturn up to average. Cattle-disease decreasing in three taluks.
Madura . . .	Average 1·50	Standing crops fair, owing to recent rain, but more wanted for wet crops. Small-pox slight, and cattle-disease decreasing in one taluk.
Malabar . . .	Average ·75	Harvest first crop paddy almost over, outturn about average. Second crop cultivation requires more rain. Small-pox slight in eight, cholera in one, and cattle-disease decreasing in two taluks.
Travancore . . .	8·89	Harvest first crop paddy, yield average. Small-pox and fever in parts. *General Remarks.*—General prospects fair.
Bombay—(Oct. 26th)		
Karachi . . .	. . . . .	River at Kotri on 24th, 7 feet 8 inches against 8 feet on same date last year. *Kharif* harvesting in progress in eight or nine talukas. Remaining case of small-pox in Karachi recovered. Fever in twelve and cattle-disease in one taluka. Wheat, red rice and *bajri* in Karachi 22, 28 and 28 and in Shahbandar 18, 32 and 40 pounds per rupee, respectively.
Hyderabad . . .	. . . . .	Harvesting commenced. Rice crop attacked by blight in Guni taluka. Fever in nine and small-pox in three talukas. River at Kotri on 24th, 7 feet 8 inches against 8 feet on same date last year. Wheat 24, *jowari* 40, *bajri* 33½, white rice 19 and red rice 28 pounds per rupee.
Ahmedabad . . .	. . . . .	Reaping of *kharif* in progress throughout the district and sowing of *rabi* commenced in Viramgaon taluka. Fever in Dholka, Dhandhuka and Sanand. Wheat 26 and *bajri* 28 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Baroda		Cholera appears to have disappeared from city Baroda, it prevails in Kathor and Palsaur taluka in Naosari division. Fever in Kadi, Kheralu, Kalol, Sidhpur and Debgaon talukas. *Rabi* sowings in progress. *Bajri* 27, wheat 19 and rice 23 pounds per rupee.
Surat	Rain in Bulsar, ·15; total to date, 82·76.	Rice harvest going on in certain places. Sowing of *rabi* crops commenced in certain places for which rain is wanted. Cattle healthy. Fever in Olphad, Bardoli, Jalalpur and Bulsar. Cholera in Chorasi, Bardoli, Chikli, Bulsar, Pardi, and Mandvi survey city; 36 cases, 21 deaths. *Jowari* 30 and *nagli* 43 pounds per rupee.
Nasik	Nasik, 1·80	Rain wanted in Dindori, Yeola and Malegaon. *Kharif* crops are generally in good condition. Reaping of *kharif* crops in progress. *Rabi* sowings in progress. Public health good. Cholera in Sinnar and Yeola; total attacks 8, deaths 4.
Colaba (Bombay)	·04 on 20th; total to date 93·77, being 23·66 above average.	Abnormal temperature 1° warm on 19th, 20th and 25th, and 2° warm from 21st to 24th. Vapour in air excessive from 19th to 21st; normal on 22nd, 23rd and 25th and defective on 24th. Wind normal. Thunder and lightning on 19th.
Poona		Crops doing well. Reaping of *kharif* is still in progress. Sowing of *rabi* completed in taluka Purandhar and Petha Baramati. Public health generally good. Slight cattle-disease in Petha Ambegaon and Haveli taluka, and small-pox in Khed taluka. 167 cholera cases in the district, 73 deaths. *Bajri* 40 and *jowari* 53 pounds in the district, and *bajri* 37 and *jowari* 43 pounds per rupee in Poona city.
Ahmednagar		Reaping of *kharif* in progress in all talukas, except Akola. Sowing of *jowari* finished in seven and in progress in four talukas, and that of wheat and gram begun almost throughout the district. Cholera; attacks 29, deaths 15. *Bajri* 36 and *jowari* 57 pounds per rupee.
Sholapur	Rain in Sholapur ·06.	Reaping of *kharif* crops commenced. *Rabi* sowing almost completed. Slight cholera in Sangola and Malsiras talukas. Cases 14, fatal 6. *Jowari* 56½ and *bajri* 47¼ pounds per rupee.
Dharwar	Rainfall general, varying from ·10 in Kalghatgi to 2·70 in Hubli.	Rice crops improving. *Jowari* and minor crops good. Sowing of cotton completed, except in Kod and another taluka and that of wheat in progress in eastern talukas. Slight cholera in Gadag and Ron and slight cattle-disease in Dharwar taluka. *Jowari* 57 and rice 24 pounds per rupee.
Kanara	Karwar, ·10; total to date, 137·61; Kumpta, ·26; Sirsi, 1·33; Haliyal, 3·43.	Rice harvest in Karwar and Akola talukas. Cardamom and betelnut harvest continue in Sirsi and Siddapur. Rice crops injured by late rain in Kumpta and Haliyal. Slight cattle-disease in three and fever in four talukas. Common rice in Karwar 12½, and district average 11½ seers per rupee.
Rajkot		Weather hot. Fever still prevalent. Harvesting of early crops commenced. Sowing of wheat and gram in progress in parts of Hallar Prant. Cotton crop promises unfavourably for want of later rains. Wheat 23, *bajri* 23, and *jowari* 29 pounds per rupee.
		General Remarks.—More or less rain in parts of seven districts. More wanted especially for *rabi* crops in parts of Guzrat, Nasik and Khandesh. Prospects of the cotton crop in Kathiawar unfavourable for want of later rains. Standing crops damaged by blight in parts of Hyderabad and by blight and insects in parts of Ratnagiri. *Kharif* harvest and *rabi* sowing in progress in most districts. Cholera in parts of fifteen, fever in parts of sixteen, cattle-disease in parts of nine, and small-pox in parts of four districts.
Bengal—(Oct. 25th).		
Chittagong (Oct. 28th)	*Nil*	Late rice in ear. Sugarcane doing well. Prospects fair. Lands being prepared for winter crops. Cholera still reported. Public health good. Prices steady.
Dacca	*Nil*	Recent rain has done much good to standing crops. Pulses being sown. Prospects of crops good. Public health good.
24-Pergunnahs (Calcutta)	*Nil*	Prospects of rice much improved by recent rain. Sugarcane continues favourable. Ploughing for cold weather crops continues. Public health generally good, but fever prevalent as usual in this season.
Khoolna	*Nil*	*Aman* prospects favourable. Ploughing for winter crops going on. Some fever. General health good.
Moorshedabad	*Nil*	Weather hot in day time; cool at night. *Aman* paddy good. *Kalai* and *moong* still being sown. *Til* and *rahar* prospering. Fever reported from Lalbagh.
Pubna	*Nil*	State and prospects of crops good.
Dinagepore	*Nil*	Prospects of winter rice good. Sporadic cholera and cattle-disease.
Rungpore	*Nil*	Crops progressing. Fever prevalent. Prices stationary.
Midnapore	*Nil*	Crops generally doing well. Prospects in Ghattal improved by recent rain.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Burdwan	*Nil*	Prospects of rice crop now fair, but more rain wanted. Sugarcane good. *Rabi* preparations in progress. Prices stationary. All round fever prevalent.
Bhagalpur	*Nil*	Prospects of *aghani* paddy improved by recent rain. *Rabi* sowings going on.
Purneah	*Nil*	All crops doing well. *Rabi* being sown.
Durbhanga	*Nil*	Rice prospects favourable. *Rabi* sowings in progress. Tobacco coming up well. Prices stationary. Public health generally good.
Chumparun	*Nil*	*Rabi* sowings in progress. Prospects of rice favourable. Prices stationary. Public health fair.
Patna	*Nil*	Weather getting cooler every day. Recent rain has improved prospects of paddy. *Rabi* sowings being pushed on. Public health good.
Gya	*Nil*	Paddy has suffered seriously for want of rain. *Rabi* being sown. Fever reported.
Hazareebagh	*Nil*	Weather bright and clear. Cloudy on 21st. Prospects of crops much improved by recent rain, but more wanted. Public health good.
Cuttack	*Nil*	Weather cloudy. *Laghu sarad* paddy ripening, *garu sarad* paddy in ear. Prospects good. Price of rice slightly risen. Fever prevails. Public health otherwise good.
		General Remarks.—No rain has fallen in any of the reporting districts during the week and the weather is becoming cool. The rain reported last has generally much improved the prospects of the rice crop, but more is still wanted in the Burdwan and Chota Nagpore divisions. The *rabi* sowings are in full progress. Sugarcane doing well. Fever is on the increase.
N.-W. Provinces and Oudh—(Oct. 26th)		
Benares (Oct. 25th)		Weather seasonable. *Kharif* prospects good. *Rabi* ploughing continues. Markets full. Prices steady. Health good.
Ballia		No report received.
Gorakhpore (Oct. 24th)		Harvest prospects fair. Prices falling.
Fyzabad („ 25th)		*Rabi* sowing in progress. Supplies ample. Prices steady. Public health and condition of cattle good.
Lucknow („ 24th)		Weather clear. *Bajri* being cut in places. Condition of other *hewant* crops good. *Rabi* sowing continues. Fields being prepared for poppy. Condition of cattle fair. Prices of wheat, barley, gram, and peas continue to rise on account of large demand for seed.
Rai Barelli		No report received.
Partabgarh		No report received.
Allahabad (Oct. 25th)	Slight rain in four tahsils.	*Rabi* sowings in progress. Some *kharif* crops being harvested. Poppy being sown. Prices show a tendency to fall. Some fever in all tahsils. Cholera dying out. Slight cattle-disease in one tahsil.
Cawnpore		No report received.
Farakhabad (Oct. 25th)		Weather pleasant. Standing crops doing well. *Rabi* ploughings continue. Supplies ample. Prices steady. Cholera in places. Fever and ague continue. No cattle-disease.
Sitapur („ „)		Weather fine. Sowing operations in progress. Mischief done to grain by catterpillars. Cholera still lingers.
Bareilly („ „)		Harvest proceeding. Prices tending to rise. Cholera still lingers. Fever abating slightly.
Banda („ 24th)		*Kharif* is being harvested in places. *Rabi* is being sown. Prospects good. Prices stationary.
Kumaon („ 25th)		Harvest over, except in northern parganas, good everywhere. *Rabi* operations in progress.
Agra		*Kharif* being cut. *Rabi* sowings continue. Prices steady. Fever prevalent.
Jhansi (Oct. 24th)		Weather cooler. *Jowari* in ear. *Rabi* sowings begun. Fever abating.
Meerut („ 25th)		Cold weather set in. Cholera disappearing. Fever still general. Prices steady. Barley dearer.
		General Remarks.—Rain in four tahsils of the Allahabad district only. Weather cool and seasonable. *Kharif* being harvested and *rabi* sowings in progress. Prospects generally favourable. Supplies ample and prices on the whole continue steady. Fever still prevalent. Cholera is abating. Cattle-disease in one tahsil of Saharanpore and in one of the Allahabad district. General health good.
Punjab—(Oct. 26th)		
Delhi		Fever prevalent. Prices rising. *Kharif* prospects unfavourable.
Hissar		Fever on decrease. Prices slightly rising. *Kharif* prospects generally good. Cutting of crops in progress. *Rabi* crops sown, except barley and wheat, which are now being sown.
Umballa		Cholera abated. Fever prevalent. Prices stationary. *Rabi* crops being sown. *Kharif* prospects fair.
Jullundur		Health good. Prices rising. *Rabi* ploughings in progress. *Kharif* reaping commenced.
Amritsar		Fever decreasing. Prices rising. *Kharif* crops good. Rain wanted.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Sialkot		Health good. Prices rising. Wheat and barley sowings commenced. *Kharif* crops average, and rice crop on *barani* lands injured much by want of rain. Crops being harvested.
Ferozepore		Slight fever prevalent. Prices stationary. *Kharif* prospects fair.
Lahore		Cholera disappeared. Prices rising. *Rabi* sowings in progress. *Kharif* crops being reaped.
Rawalpindi		Health good. Prices stationary. *Rabi* crops being sown. *Kharif* crops generally good.
Multan		Health good. Prices almost stationary. *Rabi* crops being sown. *Kharif* crops good.
Dera Ismail Khan		Health good. Prices stationary. *Rabi* ploughing in progress. Barley, turnips, peas, and gram being sown. *Kharif* prospects in Thal bad, owing to drought, in Daman fair and in Kacha good.
Peshawar		Slight cholera. Fever prevalent. Prices fluctuating. *Kharif* prospects average. Rain wanted.
Shahpur		Health good. Prices almost stationary. Wheat sowings in progress, but more rain wanted for *rabi* sowings, particularly in the *bhar*. *Kharif* prospects generally fair, except in parts of tahsil Kushab.
		General Remarks.—There has been no rain during the week. The health of the province is generally good. Fever is still prevalent in Delhi, but is abating elsewhere. Cholera is disappearing. Prices are stationary, but there is a slight tendency to rise in the districts, where important markets exist. The *kharif* prospects are fair to good everywhere, except in Delhi, where owing to excessive rain they are unfavourable. Ploughings and sowings for the *rabi* are in progress, but in some districts more rain would be beneficial.
Central Provinces—(Oct. 26th)		
Nagpur		Weather clear. *Rabi* sowings in progress. Cholera abating. Fever prevalent.
Jubbulpore		*Rabi* sowings continue. Prospects good. Fever prevail. Prices steady.
Saugor		Weather clear and pleasant. Cholera and fever continues. *Rabi* sowings in progress. Prices rising slightly.
Seoni		Weather fine and cool. Health good. Price of rice falling. *Rabi* sowings in progress.
Hoshangabad		Weather cool. *Rabi* sowings in progress. Fever prevalent. Prices rising.
Khandwa (Nimar?)		Weather clear and warm. Prospects somewhat improved by recent rain. Three cases of cholera fatal. Prices steady.
Bilaspur	·47	More rain required for *kharif* crops. Fever prevalent. Prices rising. Trade in grain.
Raipur		Weather cloudy. *Kharif* crops doing fairly well. *Rabi* sowings commenced. Fever continues. Prices slightly risen.
Sambalpur		No report received.
		General Remarks.—Weather clear. Prospects generally good, but more rain would be beneficial in eastern districts. *Rabi* sowings in progress. Fever prevalent. Prices rising in some districts.
Burma—(Oct. 26th)		
Akyab (Oct. 22nd)		No report received.
Bassein	1·11 (Total rainfall to date 92·40).	Cattle-disease in two townships. Crops good.
Amherst (Moulmein)	4·05 (Total rainfall to date 182·37).	Prospects of crops good.
Tavoy (Oct. 15th) („ 22nd)	2·49 ·16 (Total rainfall to date 181·89).	Reaping of *taungya* crops commenced. Crops good. Appearance of crops good.
Pegu	1·11 (Total rainfall to date 131·40).	Crops in good condition.
Henzada	·48 (Total rainfall to date 76·75).	Crops flourishing.
Prome	1·38 (Total rainfall to date 38·82).	
Toungoo	·93 (Total rainfall to date 79·64).	Crop prospects favourable.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Burma—*contd.*		
Thayetmyo	*Nil* (Total rainfall to date 28·45).	Cattle-disease in two townships. Transplanting finished.
Shwebo (Oct. 15th) („ 22nd)	*Nil* 1·49 (Total rainfall to date 33·52).	Crops doing well. Water insufficient.
Yamethen	·27 (Total rainfall to date 30·59).	Cultivation progressing. Rain much needed.
Ningyan (Oct. 15th & 22nd)	·22 & ·07 (Total rainfall to date 23·97).	Food-supply sufficient. Prices ordinary.
Minbu	*Nil* (Total rainfall to date 22·40).	Crop prospects fair.
Kyaukse (Oct. 15th & 22nd)	·27 & ·92 (Total rainfall to date 21·93).	Crops in good condition.
Mandalay	·82 (Total rainfall to date 28·03).	*Kyaukkyi* crops withering for want of rain. Food-supply sufficient. Prices normal.
		General Remarks.—Cholera in Amherst. Cattle-disease in three districts. Crops doing well in Lower Burma. Reports from twelve Upper Burma districts. Health good. Reaping well advanced in Yeu. Crop prospects fair, but rain urgently wanted in Shwebo, Mandalay, Yamethen and Pyinmana districts.
Assam—(Oct. 26th) Gauhati (Oct. 25th)		Weather seasonable. Public health fair. Malarial fever still prevalent in Sastra Barpetta, and its vicinity; also in parts of Polasbari and Luki tahsils. *Sali* paddy plants in parts dying for want of rain. Ploughing land for mustard still in progress.
Sylhet	·10	The state of both *aman* and *sail* good, but more rain is wanted. Ploughing for mustard has commenced, the arrangement has affected sugarcane in the jurisdiction of the South Sylhet subdivision. State of tea is favourable. Subdivisional officer, Karimganj reports 60 deaths from cholera, of which 43 reported from the jurisdiction of the Joldhup police station.
Cachar		Weather seasonable. Ploughing for mustard crop continues. Prospects of *sail* crops and public health good. Common rice 20 seers per rupee. Tea doing well.
Dibrugarh	·68	Weather hot during day and cool at night. Public health indifferent.
Mysore and Coorg—(Oct. 26th)		
Bangalore	Civil and Military Station, ·44, Bangalore district headquarters, ·81; Kolar, ·10; slight rain reported throughout the State.	Standing crops in good condition, except in parts of the Tumkur district, where they need more rain. Prospects of season favourable. Public health generally good. Four fatal cases of cholera reported in the Civil and Military Station, the disease is prevalent in Closepet and Kankanhalli taluks of the Bangalore district and in parts of Shimoga and Tumkur districts. Small-pox and cattle-disease continue in parts. Prices fallen in the Mysore and Shimoga districts, and risen in the Bangalore, Chitaldroog, and Hassan districts slightly.
Mysore		
Mercara	1·19	Standing crops promise well. Health good.
Berar and Hyderabad—(Oct. 26th)		
Amraoti		Weather cold. Cotton and *jowari* plants in good condition. Sowing of *rabi* in progress. Coughs in Amraoti taluk. Cattle healthy. Wheat 16 and *jowari* 23 seers per rupee.
Akola		Weather clear. *Kharif* crops have good prospects. Sowing of *rabi* commenced. Fever and ague throughout the district. Cholera in one village of the Ballapur taluk. Cattle suffering from disease. Wheat 15 and *jowari* 22 seers per rupee.
Hyderabad	·02; total since 1st January, 24 68.	Harvesting of *kharif* crops continues. Sowing of *rabi* commenced. Prices—wheat 10¾, coarse rice 12¼, white *juar* 17¾, yellow *juar* 20¾, and *tur* 15 seers per current sicca rupee.
Central India States—(Oct. 26th)		
Indore		Weather clear and cool.
Morar (Gwalior)		Weather fair and dry.
Sutna		Prospects good.
Neemuch		Fever prevalent. Weather seasonable. Prices rising.
Goona		Health and prospects good.
Agar		Health and prospects fair.
Sehore		Cold weather commencing. Crops fair. Cholera disappearing.
Nowgong		Weather seasonable. Prices steady. Health good.
Bhopawar		Weather hot. Cholera reported from Rajpur in Barwani. Fever in Jhabna, Alirajpur, and Barwani. Prices steady.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Rajputana—(Oct. 26th)		
Abu (Oct. 26th)	. . . . .	Cold setting in. Weather seasonable.
Sirohi („ 23rd)	. . . . .	Tanks and wells low. Health good, but some fever. Preparations for *rabi* sowings going on. Weather dry and cool.
Marwar („ 22nd)	. . . . .	Health good. *Kharif* being cut. *Rabi* in progress. Prices rising. Slight shock of earthquake on night of 18th at 10-25.
Meywar („ „)	. . . . .	Water in tanks and wells decreasing. Crops gathered. *Rabi* ploughing commenced. Health fair. Prices stationary. Weather seasonable.
Pertabgarh („ „)	. . . . .	Tanks and wells decreasing daily. Health good. Prices slightly fluctuating.
Harowti („ „)	. . . . .	Weather seasonable. *Jowari* ripening, wheat and barley being sown. Fever continues.
Jhallawar („ 23rd)	. . . . .	Much fever. *Rabi* sowings proceeding.
Ajmere („ 25th)	. . . . .	Weather clear and cool. Slight shock of earthquake on 18th night. Fever still continues. Prospects unchanged. Prices rising.
Jeypore („ „)	. . . . .	Weather seasonable. Fever prevalent. Prices still high.
Kerowlee („ „)	. . . . .	No report received.
Dholepore („ 22nd)	. . . . .	Tanks and wells full. *Rabi* sowings still going on. Fever still continues, health otherwise good. Prices stationary. Weather clear. Nights cold.
Bhurtpore („ 25th)	. . . . .	*Kharif* reaping and *rabi* ploughing commenced. Fever prevalent.
Ulwar („ „)	. . . . .	*Rabi* sowing progressing. Prices rising. Fever prevalent.
Kotah („ 22nd)	. . . . .	Health good. Weather seasonable. Prices fluctuating.
Kherwara („ 23rd)	. . . . .	Tanks and wells filled. *Rabi* unsown for want of rain. Health good. Prices steady. Weather fine. Mornings and evenings cool.
Bickanir („ 22nd)	Rain in three districts.	Crops fair. Fever in districts. Prices stationary. Weather hot.
Nepal—(Oct. 21st)		
Katmandu (Oct. 21st)	5·42	Weather clear and sunny. State and prospects of crops not good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORTS ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 3rd NOVEMBER, 1887.

GENERAL REMARKS.—In Madras, Mysore, and in parts of Bombay there has been good rain during the past week, and some showers are also reported from Bengal and Assam. Elsewhere the week has been rainless.

The *kharif* harvest is almost over in the North-Western Provinces and Oudh, and is still progressing elsewhere. Prospects are on the whole very favourable.

Rabi sowings are in active progress everywhere.

In Madras, Mysore and Coorg the outlook continues satisfactory.

The rice crop in Bombay is being harvested. In Bengal the recent rain has improved the prospects of the crop, but in Assam more rain is wanted. In parts of the Punjab and the Central Provinces the crop has been injured by want of rain.

Cotton in Hyderabad and Wadhwan in Bombay is expected to be below average. Picking has begun in Berar and the Punjab.

Poppy is being sown in Bengal, and sugarcane is doing well there.

The public health is generally good.

Prices still show a tendency to rise in a few districts in the Punjab, and have risen in Agra and Jhansi in the North-Western Provinces and Oudh. Elsewhere they are generally stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Nov. 2nd.)		
Bellary	Average ·64	Standing crops good, but early crops withering in parts of one taluk. Harvest dry grains, yield below average. Cholera decreasing in five, and cattle-disease increasing in six taluks.
Kurnool	·58	Harvest early cereals, outturn below average. White *cholum* and cotton being sown. Cholera increasing. Small-pox in two, and cattle-disease in four taluks.
Ganjam	Average ·64	Small-pox in six, fever in seven, and cattle-disease increasing in four taluks. Cholera increasing.
Kistna	Average 1·23	Standing crops generally good. River 3·65 feet over Anicut. Cholera slight in one, and cattle-disease increasing in five taluks.
Chingleput (Madras)	Average 6·32	Standing crops generally good. Harvest paddy, outturn moderate. Cholera in one, small-pox in two, and cattle-disease increasing in six taluks.
Coimbatore	Average 1·93	Standing crops good, but *cumbu* attacked by insects in one taluk. Harvest wet and dry grains, outturn above average. Fever in one taluk. Cholera in Coimbatore town.
Tanjore	Average last week since revised, 4·07; this week, 4·67.	Standing crops generally good, but submerged in parts of one taluk. Harvest wet and dry grains, outturn up to average. Cattle-disease increasing in three taluks.
Madura	Average last week since revised, 2·04; this week, 2·04.	Standing crops improving.
Malabar	Average 3·21	Harvesting completed. Second crop cultivation progressing. Small-pox slight in eight, fever in two, cholera increasing in one, and cattle-disease in nine taluks.
Travancore	4·41	Second crop paddy thriving fairly. Small-pox and fever in parts. *General Remarks.*—General prospects very fair.
Bombay—(Nov. 2nd)		
Karachi		River at Kotri on 31st October, 7 feet 3 inches against 7 feet 1 inch on same date last year. *Kharif* harvesting continues. Fever in eleven talukas. Wheat, red rice, and *bajri* in Karachi 22, 28 and 29 and in Mirpur Batoro 22, 42 and 34 pounds per rupee, respectively.
Hyderabad		*Kharif* harvesting continues. Ground being prepared for *rabi* sowings. Crops, except at the banks of Canals good. Cotton will be a short crop. Small-pox in one and usual fever in ten talukas. River at Kotri on 31st October, 7 feet 3 inches against 7 feet 1 inch on same date last year. Wheat 28, *jowari* 36, *bajri* 33½, white rice 19 and red rice 28 pounds per rupee.
Ahmedabad	Total rain 24·62.	Reaping of *kharif* and sowing of *rabi* commenced in Viramgaon taluka. Fever in Dholka, Dhandhuka, Sanand, Parantij and Gogo talukas. Six cases of cholera in the city, all fatal. Wheat 25 and *bajri* 26 pounds per rupee.
Baroda		No report received.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Surat	Total rain in Surat at camp, 37·62; Olpad, 38·09; Chorasi, 34·21; Bardoli, 58·99; Jalalpore, 75·35; Chikli, 86·69; Bulsar, 82·76; Pardi, 87·90; and Mandvi, 56·03.	Rice harvesting in progress in certain places. Sowing of *rabi* crops commenced in certain places. Cattle healthy. Fever in Olpad and Bardoli. Cholera in Chorasi and Bardoli, 7 cases, 5 deaths. *Jowari* 30 and *nagli* 43 pounds per rupee.
Nasik		*Kharif* crops are being harvested. *Rabi* sowings in progress in Niphad and Chandor talukas. More moisture in land is required in Malegaon taluka. *Kharif* crops damaged to the extent of 8 annas in the rupee for want of timely rain while *rabi* sowings retarded in some places and in others the seeds sown have not germinated for want of sufficient and timely rain. Cholera in Dindori, 6 attacks, 3 deaths. Cattle-disease in Baglan.
Colaba (Bombay)		Abnormal temperature 2° warm on 26th and 28th, 3° warm on 27th, *nil* on 29th and 30th and 2° cool on 31st October and 1st November. Vapour in air defective, except on 29th, when it was normal. Abnormal wind from east on 26th, east-north-east on 27th, 28th and 30th October. Wind normal on all other days.
Poona		Crops doing well. Reaping of *bajri* and rice and sowing of *kharif* still continues. 159 cholera cases in the district, 68 fatal. Slight cattle-disease in Haveli and small-pox in Khed talukas. *Bajri* 40 and *jowari* 52 pounds in the district, and *bajri* 37 and *jowari* 43 pounds per rupee in Poona.
Ahmednagar		Reaping of *kharif* finished in two and in progress in nine talukas. Sowing of *jowari* in progress in four and of wheat and gram in all talukas. Cholera; attacks 32, deaths 18. *Bajri* 36 and *jowari* 54 pounds per rupee.
Sholapur	Rain in Sholapur, ·22; Barsi, ·15; Madha, ·10; Pandharpur, 1·99; and Malsiras, ·38.	Reaping of *kharif* crops in progress. *Rabi* crops doing well. Slight cholera in Sangola and Malsiras talukas. Cases 19, fatal 7. Cattle-disease in Pandharpur taluka. *Jowari* 59⅛ and *bajri* 46½ pounds per rupee.
Dharwar	Rainfall at all stations, except Hangal, varying from ·15 in Ranibennur to 3·14 in Navalgund.	Rice and early *jowari* crops in ear. Minor crops good. Young cotton plants thriving. Sowing of wheat, gram and late *jowari* in progress in eastern talukas. Slight cholera in Gadag and slight cattle-disease in Dharwar taluka. *Jowari* 57 and rice 23 pounds per rupee.
Kanara	Rainfall in Karwar, ·63; total 138·24; Kumpta, ·32; Sirsi, ·79; and Haliyal, 1·87.	Rice harvest in coast talukas. Cardamom and betelnut harvest in Sirsi and Siddapur. Slight fever in four and cattle-disease in five talukas. Common rice in Karachi 12½ and district average 12 seers per rupee.
Rajkot		Weather hot. Cholera at Porbandar, 1 case fatal. Fever and bowel-complaints generally prevalent. Wheat 23, *bajri* 23 and *jowari* 27 pounds per rupee.
		General Remarks.—Good rain throughout the Southern Mahratta Country. Slight in parts of Sholapur, Kanara and Ratnagiri. *Kharif* harvests and *rabi* sowings in progress. Generally crops slightly damaged by excessive rain in parts of Belgaum and by insects in parts of Ratnagiri. Cotton crop in Hyderabad and Wadhwan expected to be below average. Cholera in parts of fifteen, fever in parts of fourteen, cattle-disease in parts of ten and small-pox in parts of four districts.
Bengal—(Nov. 1st).		
Chittagong	0·17	Prospects fair. Lands being prepared for winter crops. Sugarcane doing well. Prices stationary.
Dacca	*Nil*	*Aman* paddy being harvested. Pulses and mustard being sown. Sugarcane thriving. Prospects continue good.
24-Pergunnahs (Calcutta)	0·5	Prospects of *aman* favourable. Sugarcane doing well. Ploughing for cold weather crops continues.
Khoolna	0·25	Weather cool. Prospects of *aman* good. Winter sowings commenced.
Moorshedabad	0·20	Weather hot at day; cool at night. *Aman* paddy in ear. Prospects good. *Kalai* and *moong* still being sown. *Til* and *rahar* progressing.
Pubna	*Nil*	Weather cloudy and close. Crops good.
Dinagepore	0·05	Weather getting cold. Prospects of paddy crop good.
Rungpore	0·20	Crops good. Mustard and pulses being sown. Prices stationary.
Midnapore	*Nil*	Crops good. Rain still needed in parts of Ghatal.
Burdwan	*Nil*	More rain still required. Prospects fair. Price of rice stationary.
Bhagalpur	*Nil*	*Rabi* sowings continue. Prospects of late rice very fair.
Monghyr		Opium sowings in progress, about 10 anna crop sown. Late rain has done much good. Prospects seem fair.
Purneah	*Nil*	All crops doing well. Sowing of winter crops in progress. River low.
Durbhanga	*Nil*	Prospects of rice continue very favourable. *Rabi* sowings in progress. Prices stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bengal—*contd.*		
Sarun		Poppy sowings going on, 35,000 bighas sown in Aliganj.
Chumparun	*Nil*	Prospects of crops favourable. Sowing of *rabi* going on.
Patna	*Nil*	Sowing of *rabi* going on. Crops sown have germinated well. Poppy being sown. Rice on low lands promising.
Gya	*Nil*	Paddy has suffered seriously for want of rain. *Rabi* being sown.
Hazareebagh	*Nil*	Weather cloudy for the past three days. Paddy being harvested, 10 to 12 annas, outturn expected. *Rabi* doing well.
Cuttack	*Nil*	Weather cloudy. *Laghu sarad* ripening and being cut. *Garu sarad* requires more rain. Prices almost stationary.
		General Remarks.—The weather has been unsettled. Showers have fallen in Orissa and in some districts of Bengal Proper, but Behar and Chota Nagpore have had no rain. Sky is now overcast. Prospects of *aman* paddy have considerably improved and are now generally fair, but more rain is still required in the Burdwan and Orissa divisions. *Rabi* crops and poppy are being sown and sugarcane is doing well.
N.-W. Provinces and Oudh—(Nov. 2nd)		
Benares (Nov. 1st)	*Nil*	Weather bright and seasonable. Agricultural prospects fair. No change in prices. Health good.
Ballia (Oct. 31st)		Sky clear. Weather cool and seasonable. *Rabi* sowings in active progress. Prospects favourable. Supplies plentiful. Prices stationary. Public health good.
Gorakhpore („ „)		Harvest prospects good. Prices stationary.
Fyzabad (Nov. 1st)	*Nil*	Weather seasonable. *Rabi* sowings in progress. Supplies ample. Health of human beings and cattle fair.
Lucknow (Oct. 31st)		Weather clear. *Bajri* being harvested. Other *hewant* crops nearly ripe. *Rabi* sowings nearly finished. Supplies abundant. Prices of *kharif* grains lowering, those of wheat stationary. Condition of cattle fair.
Rai Barelli („ „)		Weather seasonable. *Rabi* crops germinating well. Supplies ample. Prices stationary. Cholera lingering.
Partabgarh (Nov. 1st)	*Nil*	West winds. Clear weather. *Rabi* sowings nearly completed and the seeds germinating well. Prices almost stationary.
Allahabad („ „)		Weather seasonable. *Rabi* sowings including opium in progress. Prices slightly rising. Cholera almost disappeared. Fever reported in five tahsils. Slight cattle-disease in tahsil Manjhanpur.
Cawnpore („ „)	*Nil*	Condition of *kharif* fair. *Rabi* sowings approaching completion. Prices steady. Fever continues.
Farakhabad („ „)	*Nil*	Weather seasonable. *Bajri* being harvested. *Rabi* sowings progressing. Standing crops doing well. Supplies ample. Prices steady. Cholera in places. Fever and ague decreasing.
Sitapur („ „)		Weather fine. *Rabi* sowings continue. Prospects favourable. Cholera still prevails in tahsil Sitapur.
Bareilly („ „)		*Rabi* germinating and promises well. Prices decidedly rising. Cholera disappearing. General health good.
Banda („ „)	*Nil*	*Kharif* being harvested. *Rabi* being sown. Prices stationary.
Kumaon („ „)	*Nil*	*Kharif* harvest nearly over, outturn good. *Rabi* operations in progress. Wheat sowings commenced.
Agra (Oct. 31st)	*Nil*	*Kharif* continues to be cut and *rabi* sowings are going on. Prices high and rising. Fever prevalent in parts of the district.
Jhansi (Nov. 1st)	*Nil*	Weather seasonable. *Kodon* and *bajri* being cut. *Rabi* sowings continue. Prices slightly rising. Fever abating.
Meerut („ „)	*Nil*	Prices stationary. Cholera disappeared. Fever lingering in parts.
		General Remarks.—No rain has fallen during the week and the weather throughout the Provinces has been bright and seasonable. The *kharif* harvest is all but over and prospects are favourable. *Rabi* sowings are in active progress. Prices fairly stationary, except in the Agra and Jhansi districts, where they ars rising. Cholera lingers in a few districts but with the exception of this, and of a little fever the public health is good. Slight cattle-disease is reported from a few districts.
Punjab—(Nov. 2nd)		
Delhi		Fever prevalent. Prices rising. *Kharif* prospects unfavourable.
Hissar		Health improving. Prices fluctuating with tendency to rise. *Kharif* crops perhaps above average, but *moth* and *moong* poor. Crops mostly harvested, some damage in Sirsa from hail. Wheat and barley being sown. *Rabi* prospects good.
Umballa		Cholera abated. Fever prevalent. Prices stationary. *Kharif* cutting nearly completed. *Rabi* crops being sown.
Jullundur		Health good. Prices stationary. *Kharif* reaping in progress. *Rabi* sowings commenced.
Amritsar		Fever abating. Prices fluctuating. *Kharif* prospects good. *Rabi* sowings in progress.
Sialkot		Health good. Prices rising. Rice crop on Barani land much injured by want of rain. Cotton in addition to crops reported last week being harvested. Wheat and barley sowings progressing.
Ferozepore		Slight fever prevalent. Prices stationary. *Rabi* prospects good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Punjab—*contd.*		
Lahore		Slight fever, but the general health of the people is good. Prices stationary as compared with the last week. *Kharif* crops being reaped. *Rabi* sowings in progress.
Rawalpindi		Health good. Prices stationary. *Rabi* crops being sown. Prospects generally good.
Multan		Health good. Prices stationary. *Rabi* crops being sown.
Dera Ismail Khan		Health fair. Prices stationary. Prospects bad in Thal owing to drought, in Daman fair, in Kachi good. *Til* and cotton in Kachi bad. *Rabi* sowings in progress.
Peshawar		Fever prevalent. Slight cholera. Prices fluctuating. *Kharif* reaping commenced Ploughing for *rabi* progressing. Rain wanted.
Shahpur		Health good. Prices rising. *Kharif* crops being harvested. Wheat sowings in progress. Rain wanted.
		General Remarks.—No rain during the week. Health of the Province is generally good. Fever prevalent in Delhi, Umballa and Peshawar and cholera still lingers at Peshawar. Prices are stationary, except in a few districts, where there is still a slight tendency to rise. *Kharif* prospects good, except in Delhi and Dera Ismail Khan. Reaping in progress. *Rabi* ploughings and sowings in progress, and prospects are generally good, but more rain is still wanted in Shahpur and Peshawar.
Central Provinces— (Nov. 2nd)		
Nagpur		Weather clear and cold. *Rabi* sowings in progress: Cholera abating.
Jubbulpore		*Rabi* sowings continue. Prospects excellent. Fevers prevail. Prices steady.
Saugor		Weather clear and pleasant. Few cases of cholera. Fever continues. Prices slightly rising.
Seoni		Weather fine and clear. *Rabi* sowings in progress. Rice being cut. Health good. Prices falling.
Hoshangabad		Weather clear and cool. *Rabi* sowings in progress. Fever prevalent. Prices unchanged.
Khandwa (Nimar?)		Weather becoming cool. Prospects unchanged. 29 cases of cholera, 12 fatal Prices unchanged.
Bilaspur		*Rabi* sowings continue. Linseed injured by insects. *Dhan* reaping commenced. Fever and cattle-disease prevalent. Prices rising.
Raipur		Weather cloudy. *Kharif* crops doing well. *Rabi* sowings continue. Fever continues. Prices falling.
Sambalpur (Oct. 20th)	·70	Weather clear and cool. Rice on highlands suffering for want of rain. Pulses promising. Fever prevalent. Prices unchanged.
		General Remarks. Weather clear and cool. *Rabi* sowings continue. Prospects good, except in Bilaspur, where linseed injured by insects and in Sambalpur, where rice suffering for want of rain.
Assam—(Nov. 2nd)		
Gauhati	*Nil.*	Malarial fever still prevalent in parts of the district, affecting to certain extent progress of agricultural operations. Winter rice crop and pulse reported to have suffered from want of rain. Tea operations closing. Ploughing for mustard in progress.
Sylhet	0·12	Prospects of *aman* and *sali* hopeful; but more rain for *sali* and *aman* wanted at places. State of tea favourable. Ploughing for mustard has commenced. Drought has affected sugarcane in South Sylhet. 38 deaths from cholera reported from Karimganj. Subdivisional Officer, Habiganj also reports sporadic cases of cholera in Habiganj thana.
Cachar	·91	Weather unseasonable. 10 days drizzle. Ploughing for mustard crop continues. Prospects of *sail* crop, and health good. Common rice 17 seers 12 chittacks 2 kachas per rupee. Prospects of tea good.
Dibrugarh		Weather seasonable and fine. Public health good. Crops doing well.
Mysore and Coorg— (Nov. 2nd)		
Bangalore Mysore	Civil and Military Station, 1·33, Bangalore district headquarters, ·60; Mysore, ·95; Kolar, 1·32.	Rain reported more or less in other parts of the State. Standing crops in good condition, except in parts of the Tumkur district, where they are reported to be failing for want of more rain. Prospects of season fair. Public health generally good. Three fatal cases of cholera in Civil and Military Station. The epidemic is prevalent in Kankanhalli taluks of the Bangalore district and in parts of Shimoga, Tumkur, Mysore, Kadur and Chitaldroog districts. Cattle-disease in parts. Prices fallen in Kadur district and risen in Shimoga, Chitaldroog and Hassan districts slightly.
Mercara	3·31	Standing crops good. Prices slightly fallen. Health good.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Berar and Hyderabad— (Nov. 2nd)		
Amraoti		*Jowari* in ear. Cotton plants in pod. First picking of cotton commenced in some places. Sowing of linseed completed and that of wheat in progress. *Jowari* 23 and wheat 15 seers per rupee.
Akola		Weather clear and cool. Prospects of *kharif* crops good. Sowings for *rabi* in progress. *Jowari* 21 and wheat 15 seers per rupee.
Hyderabad	·94; total to date 25·62	*Rabi* sowings in progress. Agricultural prospects on the whole are fair. Cattle-disease still prevalent. Prices—wheat 11, coarse rice 12, white *juar* 18½, yellow *juar* 20½ and *tur* 15 seers per *halli* sicca rupee.
Central India States— (Nov. 2nd)		
Indore	*Nil*	Weather cool and bright.
Morar (Gwalior)	*Nil*	Weather cool.
Sutna	*Nil*	Agricultural prospects excellent.
Neemuch		Fever prevalent. Prices rising.
Goona		Health and prospects good. Prices rising.
Agar		Cholera at Piploda. Prospects fair.
Sehore		Weather getting cool. Crops fair.
Nowgong		Weather seasonable. Ploughing and *rabi* sowings continued. Prices rising. Health good.
Manpur		Weather colder. *Rabi* sowings almost finished. Prices slightly risen.
Rajputana—(Nov. 2nd)		
Abu (Nov. 2nd)		Weather seasonable and cold.
Sirohi (Oct. 30th)		Tanks and wells low. Health good. Preparations for *rabi* sowings going on. Weather dry and much cooler.
Marwar („ 29th)		Health good. *Rabi* sowing progressing. Prices steady.
Meywar („ „)		Tanks and wells decreasing. *Rabi* being sown. Health fair. Prices stationary. Weather seasonable.
Harowti („ „)		Weather seasonable. Cultivation progressing. Fever continues.
Jhallawar („ 30th)		Health slightly improved. Prices high. Scarcity of gram and wheat.
Ajmere (Nov. 1st)		Weather clear. Fever still continues. *Kharif* crops reaped; outturn poor. Prices high.
Jeypore („ „)		Weather seasonable. Fever prevalent.
Dholepore (Oct. 29th)		Wells full; tanks low. *Rabi* sowings progressing. Fever continues. Prices stationary. Weather clear.
Bhurtpore (Nov. 1st)		*Kharif* reaping and *rabi* sowing progressing. Fever continues.
Ulwar („ „)		*Rabi* sowing progressing. Prices steady. Fever continues.
Kotah (Oct. 29th)		Fever and slight diarrhœa prevailing, otherwise health good. Prices high. Weather clear.

Pertabgarh („ „)		Tanks and wells decreasing daily. Health good. Prices slightly risen.
Kerowlee („ „)		Tanks decreasing; wells full. *Rabi* cultivation progressing. Fever continues. Prices rising. Weather cool.
Nepal—		
Katmandu		No report received.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending the 2nd November, 1887.

During the week under review the weather over the Peninsula and the Bay has been in a very unsettled state, and at the close of the week these unsettled conditions extended northward, and spread into Bengal and Assam. In Northern India, though the weather throughout has been fair, the sky became more cloudy towards the close of the week, the air damper and temperature lower.

On the 27th slight showers were reported from Berhampore and Dhubri, but with this exception the weather conditions were the same as those prevailing at the close of the previous week—clear skies being reported to the north of Lat. 20° and unsettled rainy weather to the south. A large area of high pressure overlay Northern India, while the lowest barometer was reported from the Bay. On the 28th there was no practical change in the weather, the whole of the Peninsula experienced rain, while the whole of Northern India enjoyed fine clear weather. A slight barometric rise was reported from a large part of Southern India, and it appeared on that day that conditions there might shortly improve, but on the 29th the barometer was falling fast on the Coromandel Coast, and the Chart of that day showed a well-defined depression off the South Carnatic, with its centre near Madras. This disturbance occasioned moderate to heavy rain (the largest amounts reported being 4 inches at Madras and Nellore and 3 inches at Negapatam) and densely overcast skies all over the Peninsula. On the following day the barometer was still falling over Southern India with overcast rainy weather, and the storm centre was apparently off the Coast between the stations of Negapatam and Madras. On the 31st the Chart showed that the depression was travelling northward, and as a consequence, while the amount and the extent of the rainfall in the Peninsula had decreased, rain had spread northward as far as the head of the Bay. On the 1st the storm over the Bay was rapidly filling up and the barometer was rising briskly over parts of the Peninsula. At the same time at the head of the Bay rain was increasing, False Point receiving nearly 5 and Calcutta nearly 3 inches. In the Peninsula, though the amounts were smaller than of late, the extent of the rainfall area was unchanged. On the 2nd the barometer was rising all over the Bay and the depression rapidly filling up and disappearing, but the weather all around the Bay and over the south of the Peninsula remained unchanged.

In Northern and North-Western India there has occurred little worthy of notice. On the 1st, when the depression began to move northward, the sky became more cloudy and the air damper at a number of stations in Upper India, but with this exception fine settled weather has prevailed throughout.

The rainfall around the Bay has been very remarkable. During the seven days Madras received 12½ inches; Negapatam 11 inches; False Point nearly 6 inches; Galle 5½ inches; and Colombo and Wellington 4½ inches.

The weather has been cool generally for the time of year, and pressure has been above the average. In the south of the Peninsula the humidity has been much above the average, and the air on several days almost at saturation.

The concluding table gives the total rainfall of the past week for the different Provinces:

Divisions.	No. of Stations.	Total Rainfall.
Burmah ...	3	2·43
Bengal and Assam ...	8	14·13
North-Western Provinces and Oudh ...	0	0
Punjab ...	0	0
Hill Stations ...	0	0
Ceylon ...	2	10·27
Malabar Coast ...	5	12·12
Bombay ...	5	2·78
Berars and Central Provinces ...	0	0
Guzerat and Central India ...	0	0
Sind—Rajputana ...	0	0
Madras ...	14	44·01

SIMLA, *4th November, 1887.*

(*a*) Includes the Cawnpore-Achnera State Railway.
(*b*) Includes the Bellary-Kistna State Railway.
(*c*) Total receipts from 15th September to 1st October, 1887.
(*d*) Includes the Northern Bengal, Kaunia-Dharlla, Dacca, and Assam-Behar State Railways.
(*e*) Return not received.
(*f*) Total receipts from 16th June, 1886, to 11th September, 1886.
(*g*) Total receipts from 1st April to 10th September, 1887.
(*h*) Includes the Amritsar-Pathankot and Rajpura-Patiala State Railways.
(*i*) Calculated on percentage used for the corresponding period of 1886.

SIMLA;
The 3rd November, 1887.

JAMES RAMSAY,
Offg. Under-Secretary.

GOVERNMENT OF INDIA 12 NOV 87 REVENUE DEPARTMENT

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY CONSTRUCTION.

PROPOSED RAILWAY FROM UMBALLA TO KALKA, WITH EXTENSION TO SIMLA.

No. 1183 R.C., dated Simla, 2nd November, 1887.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Public Works Resolution No. 520R.C., dated 24th June 1884.

Letter from the Government of India, Public Works Department, No. 553R.C., dated 3rd July 1884, to the Secretary to Government of Punjab, Public Works Department.

Letter from the Secretary to the Government of the Punjab, Public Works Department, No. 2785, dated 17th May 1886, to the Secretary to the Government of India, Public Works Department, with enclosures.

Read also—

Letter from Secretary to Government, Punjab, Public Works Department, No. 82C., dated 16th June 1887, to Secretary to Government of India, Public Works Department, submitting detailed estimates of, and reports on, a line of railway on 2′ gauge from Kalka to Simla.

OBSERVATIONS.—With the Resolution above read again* was published a Report by Mr. T. B. Morris, M.I.C.E., with Appendices and Abstract Estimates for a line of Railway on the 5′ 6″ gauge from the Umballa Cantonment station of the North-Western Railway to Kalka, a distance of 35·6 miles.

* Published as a Supplement to the *Gazette of India*, dated 28th June 1884, on page 1011.

2. The estimate, of which detailed abstracts accompanied the Resolution, gave the following figures :—

See Abstracts, Parts I and II, appended to Reports published with Resolution No. 520R.C., dated 24th June 1884.

	Rs.
Direct charges	29,59,749
Indirect	2,74,420
Total ...	32,34,169

This estimate includes no provision for Rolling-stock, as the line would probably be worked with North-Western Railway stock under an arrangement with the authorities of that line.

This estimate was commented on favourably by Mr. Molesworth.

3. Various statistics of traffic were given, but these were said in the report† to be "conspicuously inaccurate" as shown by the item of liquor alone, which, according to the returns supplied by the two firms of Messrs. Meakin and Dyer, gave a down traffic in the period included in the returns of 145,000 maunds, whilst the registered down traffic at Kalka for this item was entered as 1,544 maunds and at Lalru as 17,288 maunds.

† Paragraph 12 of Report.

4. But on the statistics in his possession, with corrections in the item above referred to, the estimate of returns per mile framed by Mr. Morris was as follows‡ :—

‡ Paragraphs 18-26 of Report.

	Rs.
994,112 maunds of goods, at 1 pie per maund per mile ...	5,178
166,991 3rd class passengers, at 4 pies per mile	3,479
1st and 2nd class passengers	840(*a*)
Military transport	500(*b*)
Total per mile ...	9,997

(*a*) Based on returns of actual numbers, received from Postal Department, with railway rates.
(*b*) Based on actual cost of transport, as supplied by Postal and Commissariat Departments, with an allowance for decreased cost of carriage by railway.

C

Deducting from these estimated gross earnings per mile, 60 per cent. for working expenses, the balance (Rs. 3,999) gave a return of 4·39 per cent. on the estimated capital outlay, including indirect charges, and 4·79 per cent. on the direct charges alone.

Paragraph 27 of Report.

5. In a later part of his report, Mr. Morris showed that, in his opinion, comparisons of various kinds with the neighbouring main line (then the Sind, Punjab and Delhi Railway) gave grounds for the conclusion that the gross earnings as calculated from existing traffic statistics, "are misleading, and far below what the actual earnings are likely to be."

Paragraph 34 of Report.

6. The Government of the Punjab in reviewing this report remarked on the high rates assumed by Mr. Morris for both goods and 3rd class passengers (an average of 1 pie per maund per mile, and 4 pies per mile respectively) as compared with those in force on the neighbouring line, where the 3rd class passenger rate was only $2\frac{1}{2}$ pies per mile, and the average rate of goods was supposed not to be much more than $\frac{1}{4}$ pie per maund per mile, and they further considered that the allowance for working expenses on a line with such steep gradients for a portion of its length, should be increased to 70 per cent.

Paragraph 5 of Punjab Public Works letter No. 1441, dated 18th March 1884, published with Resolution No 520 R. C., dated 24th June 1884.

The capital outlay was further increased by the Punjab Government to 38 lakhs to provide for rolling-stock.

On this basis the gross returns were reduced to Rs. 7,000 per mile, and the net return on capital to 2 per cent.

The Government of the Punjab, in making these calculations, retained the figures referring to weight of goods and numbers of passengers which were used in Mr. Morris' report, but expressed its willingness to arrange for a further registration of traffic.

7. The Government of India in their Resolution remarked that a further registration of traffic would furnish a more reliable basis for the calculation of probable earnings of the proposed railway, and that they would await with interest a further report on the subject.

8. Some further statistics relating to the whole line from Umballa to Simla were supplied with the Punjab Government letter as per margin, and abstracts of these, with the covering letter, are appended to this Resolution as Enclosure No. 1. They refer chiefly to the period from the beginning of August 1884 to the end of July 1885.

Punjab Public Works Department No. 2785, dated 17th May 1886.

The detailed lists, showing the traffic of each kind, referred to in the covering letter as statements 1 to 4, are voluminous and are not now published, but can be obtained from the Public Works Department of the Government of India or of the Punjab.

9. The registration at Lalru shews but little variation in the aggregate from the figures of 1878-79, but the Kalka returns show an increase in up traffic from 550,622 to 837,524 maunds, and of down traffic from 102,350 to 138,695.

The Punjab letter contains the following remarks as to the value of these statistics :—

Paragraph 12.

"In some respects these statistics, as registered at the various posts, involve certain anomalies that tend to shake confidence in their value for practical purposes, and seem to require further analysis and enquiry."

No further communication on this part of the subject has been received, but the report on the Kalka-Simla section, referred to further on, contains other statistics.

KALKA-SIMLA SECTION.

10. The papers relating to this section which were published in 1884 consisted merely of a report of a reconnaissance survey by Mr. Morris, on two routes, called respectively A and B, of which the latter was recommended, and of a Note on the same by Mr. Molesworth, Consulting Engineer to the Government of India for State Railways, in which some modifications of Mr. Morris' route B were proposed.

11. With Punjab Public Works letter No. 82C., dated 16th June 1887 (Enclosure 2) a report by Mr. Morris [Enclosure 2 (*a*)], together with fully detailed estimates for this section of the complete project were submitted; abstracts of which are appended to this Resolution [Enclosures (*a* i) and (*a* ii) 2].

They aggregate—

		Rs.
Direct charges	... ...	56,90,021
Indirect ,,	... ...	4,88,389
	Total ...	61,78,400

for a line $68\frac{1}{8}$ miles in length with 35 lbs. flat-footed rails on a 2-feet gauge.

This estimate includes a sum of Rs. 4,92,852 for Rolling-stock.

12. A note on the project by the Under-Secretary to the Government of the Punjab, Public Works Department [Enclosure No. 2(*b*)] shows that he considers the estimate generally fair except as regards "Establishment" which he notes as being Rs. 3,05,283, on an estimate of Rs. 53,84,738.

In that Note it is proposed to raise the estimate for establishment to 23 per cent. on works, making the total—

		Rs.
Direct charges without establishment	...	53,84,738
23 per cent. on above for establishment	...	12,38,490
Total	...	66,23,228
Indirect charges, say	...	5,00,000
Grand Total	...	71,23,228

13. Mr. Molesworth, in a note appended to this Resolution [Enclosure No. 3], would increase the estimate for direct charges alone from Rs. 83,523 to Rs. 96,000 per mile, and strongly advocates the use of steel instead of deodar sleepers at a further cost of Rs. 4,000 per mile, or one lakh per mile for direct charges only.

The first figure would bring the direct charges to Rs. 65,40,000, and the latter figure to Rs. 68,12,500. In each case about five lakhs of rupees would, on the basis adopted in the estimate, have to be added for indirect charges, bringing the total to about seventy and-a-half lakhs and seventy-three lakhs of rupees respectively.

14. As to probable returns, Mr. Morris appends to his report various abstracts, numbered A to L, which give the best information now available as to the traffic between Simla and Kalka [see Enclosure No. 2 (*a* iii)]; and the probable returns based on this traffic are reviewed in the body of his report, and are criticised in the Under-Secretary's Note [Enclosure No. 2(*b*)] paragraphs 4 to 15.

RESOLUTION.—With reference to the estimates summarised above, it appears necessary to make a correction in both with regard to indirect charges, it not being the practice of the Government of India to include in estimates for railways any charge for interest on capital during construction.

The charges on this account which are included are—

		Rs.
Umballa-Kalka	... ...	1,18,390
Kalka-Simla	... ...	2,23,601

and the revised figures after making this correction would be—

Umballa-Kalka :

		Rs.
Direct charges, excluding Rolling-stock	... ...	29,59,749
Indirect ,,	... ...	1,56,030
	Total ...	31,55,779

Kalka-Simla (with deodar sleepers) :

	Rs.
Direct charges, according to Mr. Molesworth's estimate ...	65,40,000
Indirect ,, ,, ,, ,, ...	2,76,399*
Total ...	68,16,399

Kalka-Simla—(with steel sleepers) :

	Rs.
Direct charges, according to Mr. Molesworth's estimate ...	68,12,500
Indirect ,, ,, ,, ,, ...	2,76,399
Total ...	70,88,899

2. The statistics of traffic are obviously subject to considerable qualification; whether in the direction of excess, or the reverse, must be a matter of opinion. The Government of India must be understood as not accepting any responsibility with respect to them.

3. The Government of India are not prepared under present circumstances to undertake the construction of either of these lines as a State Railway, or to offer any guarantee or subsidy on their concession to private enterprise.

4. In the event, however, of any substantial private Company being disposed to embark in one or both undertakings, they would be prepared—

I.—To permit the construction of the Umballa-Kalka Railway on terms similar to those which have been arranged with the Tarakeshwar Railway Company, namely, that the Company make the line at their own expense, and that it be worked by the North-Western Railway, which will receive $\frac{1}{5}$th net profits as remuneration, and also 5 per cent. on the value of rolling-stock supplied.

II.—To permit the construction of the Kalka-Simla Railway on terms similar to those granted to the Bengal and North-Western Railway Company.

III.—In the event of a Company offering to construct the Umballa-Kalka Railway, and no other Company simultaneously expressing a desire to undertake the Kalka-Simla Railway, the first named Company will receive, should they so desire, a preferential right for a term of 3 years to the concession of the Kalka-Simla Railway.

The Governor-General in Council desires to notice with special commendation the very excellent manner in which the details of this project have been elaborated by Mr. Morris.

ORDERED, that this Resolution be sent to the Government of the Punjab, and also be published for general information in the *Gazette of India*.

UMBALLA-SIMLA RAILWAY.

List of Enclosures to P. W. Dept. Resolution No. 1183 R.C., dated November 2, 1887.

1. Punjab P. W. D. letter to Government of India, No. 2785, dated 17th May 1886, and enclosures as follow :—

(*a*) Bullock train traffic from 1st September 1884, to 31st August 1885 between Umballa and Simla.

(*b*) Abstract of passenger traffic between Umballa and Simla.

(*c*) Summary of traffic by Bullock train and other means of conveyance for 12 months between Umballa and Simla.

2. Punjab P. W. D. letter No. 82C., dated 16th June 1887 and enclosures, as follow :—

(*a*) Report by Mr. Morris, Executive Engineer, on Kalka-Simla Railway project, and accompaniments.

i Abstract Estimate, direct charges.
ii Ditto indirect charges.
iii Abstract of traffic, A to L.

(*b*) Extract from Note by Mr. E. E. Oliver, Under Secretary to the Government of Punjab, Public Works Department, on Kalka-Simla Railway project, dated 18th May 1887.

3. Note by Mr. G. L. Molesworth, Consulting Engineer to the Government of India for State Railways, on the Kalka-Simla Railway project, dated 13th August 1887.

* Estimate of five lakhs, framed by Under-Secretary, Punjab (see paragraph 12 *ante*) reduced by amount named above.

Enclosures Nos. 1—3 to P. W. D. Resolution No. 1183 R. C., dated 2nd November, 1887.

[Enclosure No. 1.] No. 2785, dated 17th May, 1886.

From—The Secretary to the Government, of the Punjab, Public Works Department,

To—The Secretary to the Government of India, Public Works Department.

With reference to Public Works Department Resolution No. 520 R. C., dated the 24th June 1884, forwarded under cover of your Office letter No. 553 R. C., dated 3rd July 1884, and to subsequent reminders on the subject, I am directed to submit, herewith, Statements 1 to 7 of Statistics of Traffic in connection with the proposed Railway from Amballa to Kalka, with possible extension to Simla.

2. Statements marked A (1 to 4)* contain returns of traffic registered at the four posts of Lalru, Kalka, Badhaighat, and Mamlik-ka-Kupri.

Statement No. 5 shews the maundage carried in Bullock Train, registered at Amballa and Simla, and the intervening stations of Kalka, Kasauli, Dagshai, Sabathu, and Solon.

Statement No. 6 shews the passenger traffic registered at Lalru, Kalka, Badhaighat, and Mamlik-ka-Kupri.

Statement No. 7 is a summary of goods and passenger traffic on the proposed line of railway.

3. Of the four statements marked A. (1 to 4)* no account has been taken of the traffic at Mamlik-ka-Kupri, as from the accompanying sketch* it will be seen it is off the Amballa and Simla road.

The remaining statements (1 to 3)* are taken to represent traffic along the sections of the road as follows :—

(*a*) Section of road, Amballa to Kalka, 36 miles, registration post at Lalru (Sheet 1).*

(*b*) Section of road, Kalka to Solon, 33 miles, approximately, registration post at Kalka (Sheet 2).*

(*c*) Section of road, Solon to Simla, 34 miles, approximately, registration post at Badhaighat (Sheet 3).* In the summary (Sheet 7) the above order has been followed.

4. Statement (5) Bullock Train maundage. The returns in this statement have been worked into the summary sheet (7) as follows :

The total weight of goods is assumed to have been carried over two-thirds of the whole length of 103 miles of road. This plan of dealing with the figures is adopted in consequence of the position of the stations between Amballa and Simla, and the absence of information as to the actual distances over which the goods were *conveyed*.

5. Thus the total upward traffic, statement (5), is 86,939 maunds from all stations, and two-thirds of 86,939 = 57,959, which is the quantity assumed to have been carried over the whole length of road. The quantity carried over each section is as follows :—

	Miles.	*Maunds.*
Amballa to Kalka	36	20,258
Kalka to Solon	33	18,569
Solon to Simla	34	19,132
Total		57,959

Similarly, the total downward traffic, statement (5), is 77,143 maunds, and two-thirds of 77,143 = 51,429, the quantity for each section is given below :—

	Miles.	*Maunds.*
Simla to Solon	34	16,977
Solon to Kalka	33	16,476
Kalka to Amballa	36	17,976
Total		51,429

6. In the summary statement (7) these several quantities have been added to the totals obtained from Statement A (1 to 3), making a grand total of traffic over each section of the roads, as follows :—

	Maunds.
Amballa to Kalka	5,05,443
Kalka to Solon	9,76,219
Solon to Simla	2,96,311

7. Statement 6. The last six columns have been neglected as representing passenger traffic at Mamlik-ka-Kupri, for reasons stated at paragraph 3.

The returns of passenger traffic at the remaining three stations of Solon, Kalka, and Badhaighat are included in the summary statement (7).

* Not printed.

8. A comparison of the goods traffic registered on the present occasion (1884-85) and previously in (1878-79) give the following results:—

Stations.	Year.	Up traffic.	Down traffic.
		To Simla, maunds.	*From Simla, maunds.*
Lalru	1878-79	2,78,039	2,19,163
	1884-85	2,66,588	2,38,855
Kalka	1878-79	5,50,622	1,02,350
	1884-85	8,37,521	1,38,695

The returns for Lalru approximate very closely. At Kalka there is considerable difference, showing a large increase in 1884-85. The up traffic has increased by 50 per cent., down traffic 30 per cent., on the previous figures.

9. Of the upward trade, the principal items in which a large increase has occurred, are the following:—

	1878-79. *Maunds.*	1884-85. *Maunds.*
Grain	1,46,667	2,56,215
Brass and Copper	1,768	51,770
Oils	6,847	37,060
Salt	18,696	55,040
Sugar	32,504	69,638

In the downward traffic returns for 1878-79, beer is not shown; in those for 1884-85 the quantity registered is 66,918 maunds. A further communication in regard to this item will follow after reference to Messrs. Dyer and Meakin, Brewers.

10. The following is a comparison of the passenger traffic in 1878-79 and 1884-85:—

Passengers.	Travelling up towards Simla.		Travelling down from Simla.	
	1878-79.	1884-85.	1878-79.	1884-85.
Lalru.				
In vehicles	20,613	38,279	20,613	46,923
Mounted	5,213	13,745	3,580	16,328
On foot	44,586	60,358	41,615	70,172
Total ...	70,412	112,382	65,808	133,423
Kalka.				
All passengers	83,213	99,723	83,748	84,731

which shows an increase in every case in the returns for 1884-85.

11. The summary statement (7) shewing amount of goods and passenger traffic is incomplete, the rates for carriage of goods and the fares for passengers not having been included.

12. In some respects these statistics, as registered at the various posts, involve certain anomalies that tend to shake confidence in their value for practical purposes, and seem to require further analysis and enquiry. This will subsequently be made, but the reply to your letter under reference having already been so long delayed, I think it is better, in the first instance, to send on the figures as received in this office, reserving for a subsequent letter, any explanation that further enquiries may result in.

[Enclosure 1 (a).]

STATEMENT No. 5.

Statement showing maundage of Goods carried in Bullock Train, as registered at Stations between Amballa and Simla, from September 1884 to August 1885, compiled from figures furnished by the Post Master General, Punjab.

Month and year.	Upward Traffic, i.e., in direction towards Simla.						Downward Traffic, i.e., in direction Simla towards Amballa.						Grand Total ... 77,143 maunds.
	Amballa.	Kalka.	Kasauli.	Dagshai.	Sabathu.	Solon.	Simla.	Solon.	Sabathu.	Dagshai.	Kasauli.	Kalka.	Amballa.

[Enclosure No. 2.] No. 82C., dated 16th June 1887.

From—The Officiating Secretary to Government of Punjab,

To—The Secretary to the Government of India, Public Works Department.

With reference to Public Works Department Resolution No. 520R. C. of the 24th June 1884, and Public Works Department letter No. 553R. C. of the 3rd July 1884, I am directed to forward the detailed plans, reports, and estimates, as per accompanying list, for the Mountain Railway from Kalka to Simla.

2. The project is based on the alignment of the alternative route B. of the barometrical reconnaissance as modified by Mr. Molesworth, referred to in the above mentioned Resolutions. The Engineering details have been carefully elaborated, and the project generally submitted in such a form as to leave no doubt that within the lines laid down for his guidance the essential features have been fully considered by Mr. Morris.

3. The financial aspect of the present project has been dealt with in the accompanying note by the Under-Secretary in this Department, in which conclusions the Officiating Chief Engineer generally concurs. While acknowledging the care with which Mr. Morris has prepared the project, His Honor the Lieutenant-Governor thinks the anticipated returns as set forth in that gentleman's report are somewhat too sanguine. The conditions of the Kalka-Simla Line would differ materially from those of the Darjeeling Railway, on which Mr. Morris relies mainly for his comparison, and it appears to Mr. Lyall exceedingly problematic if the former could be expected to pay 4 per cent. at any rate for many years to come.

4. Some allowance must undoubtedly be made for the development of traffic, which, although not likely to be so rapid or so extensive as in districts possessing agricultural or mineral resources, might, however, to a certain extent, be looked for. The statistics quoted by Mr. Morris go to show that the traffic between Simla and the Plains has materially increased during recent years, and it may be reasonably assumed that the establishment of Railway communication would go far to stimulate this still further.

5. It will be gathered from the foregoing remarks, that if this line had nothing to recommend it beyond the prospect of success as a commercial enterprise, the Lieutenant-Governor would scarcely feel justified in advocating its construction. But there is another aspect of the question, and while recognising the somewhat uncertain prospect of an adequate direct financial return, Mr. Lyall has no doubt as to the considerable administrative and military advantages the proposed line would possess.

6. In regard to the latter, a letter has been addressed to the Quarter Master General enquiring if the conditions as regards the locating of troops, and the value of a Mountain Railway serving the various Hill Depôts have in any way altered, and a subsequent communication in regard to this will follow on receipt of the Quarter Master General's reply.

7. To some of the administrative advantages attention has been drawn both in Mr. Morris' report and in the Office Note referred to above, His Honor the Lieutenant-Governor recognises that the want of effective communication between the station which has become the Head Quarters of the Government of India for several months of the year, and the Railway system of the country is commonly regarded in the present day as a reproach to the administration. Moreover, there can be no doubt that its construction would be not merely a great public convenience, but would in many ways, result in a considerable saving to the State of both time and money.

8. On the grounds of public policy, therefore, His Honor would desire to record his sense of the desirability of the construction of such a line.

[No. 2 a.] KALKA—SIMLA RAILWAY PROJECT.

Report by MR. T. B. MORRIS, M. I. C. E., *Executive Engineer.*

PART I.—TRADE, STATISTICS AND REVENUE PROSPECTS.

Authority for the preparation of the project. Estimated cost.

The project herewith submitted was called for by the Government of India in Public Works Department Resolution No. 520 R. C., dated Simla, June 24th, 1884, and provides for the construction and equipment with rolling stocks of a 2 feet gauge railway from Kalka to Simla, length 68⅛ miles, at the following estimated cost, *viz.*:—

	Rs.
(1) Direct charges ...	56,90,021
(2) Indirect „ ...	4,88,389
Total ...	61,78,400

2. The traffic statistics, on which the estimate of gross probable earnings is based, will be described further on, also the method by which the working expenses have been calculated, but with a view to clearness and brevity, it will be convenient to bring forward at once the main results arrived at, *viz.*:—

Estimated gross earnings, working expenses, and return on capital.

	Rs.	
(1) Estimated gross earnings ...	6,86,830	
(2) Estimated working expenses ...	4,34,152	
(3) Estimated nett earnings ...	2,51,634	
(4) Estimated return on capital outlay, direct charges only	4·42	per cent.
(5) Estimated return on direct charges *plus* cost of exchange on English payments	4·27	„
(6) Estimated return on total amount of direct and indirect charges ...	4·07	„

3. The estimated gross earnings are based on traffic statistics for the year 1884-85, furnished by the Financial Commissioner, Punjab, and by the Postmaster General, Punjab. The rates adopted are the lowest now obtaining on the Kalka-Simla Cart Road, for the carriage of passengers and goods. The following statement shows the total estimated maundage annually over each section of the proposed railway:—

Estimated maundage annually over each section of the proposed Railway.

	Miles.	Upwards.	Downwards.	Total Maunds.
(1) Kalka to Dhurmpore	17	8,62,852	1,80,932	10,43,784
(2) Dhurmpore-Muthan	10½	5,54,342	99,667	6,54,009
(3) Muthan-Solon	12	4,51,294	93,416	5,44,710
(4) Solon-Simla	28⅝	2,66,358	47,163	3,13,521

4. The authorised loads and rates of hire for country carts on the Kalka-Simla road, as communicated by the Deputy Commissioner, Simla, are as follow:—

Authorized loads and rates of hire for country carts on the Kalka-Simla Road.

	Rs.	
2 Bullock cart, load 8 maunds, hire	1-8	per stage.
3 Do. do. 12 do.	2-4	do.
4 Do. do. 16 do.	3	do.

There are five stages between Kalka and Simla, therefore the cost of carrying, say 8 maunds, the entire distance by country cart, will be Rs. 7-8-0, to which must be added 4 annas for toll at Dhurmpore, making in all Rs. 7-12-0 or 15·5 annas per maund. Taking the road mileage as 57½ the rate per maund per mile will be $\frac{186}{57\cdot5}=3\cdot23$ pies.

Rate adopted in calculating earnings from goods traffic.

5. Assuming, however, that native carriers will take 50 per cent. more than the authorized loads (by agreement), the rate per maund per mile will then come to $\frac{124}{57\cdot5}=2\cdot15$ pies. The equivalent to this rate by the proposed railway (which is longer than road) will be $\frac{2\cdot15\times57\cdot5}{68\cdot125}=1\cdot8$ pies per maund per mile, and this is the rate adopted in framing an estimate of probable earnings by railway for the total quantity of goods registered as having been carried over the road in country carts.

6. The Government Bullock Train rate for carriage of goods from Kalka to Simla is 14 annas per maund, or 2·92 pies per maund per mile. The equivalent of this rate by railway will be, therefore, $\frac{2\cdot92\times57\cdot5}{68\cdot125}=2\cdot45$ pies per maund per mile, and this rate has been adopted in framing the estimate of probable earnings, by railway, for the quantity of goods carried by the Government Bullock Train. Bearing in mind the class of goods carried by Government Bullock Train, *i. e.*, personal baggage and goods imported from Europe, it seems legitimate to adopt a higher rate (in our estimate of probable earnings by railway) for the quantity so carried than for the class of goods carried by country carts, which mainly consists of country produce.

7. Working therefore on the foregoing data for quantities and rates, the estimated gross earnings from goods traffic over each section of the proposed railway will be as follows :—

Estimated gross earnings from goods traffic over each section of the proposed railway.

	Miles.	Up. (Maunds).	Down. (Maunds).	Rs.
(1) Kalka to Dhurmpore	17	1,40,043	29,929	1,69.972
(2) Dhurmpore to Muthan	10½	55,221	10,434	65,655
(3) Muthan to Solon	12	52,084	11,169	63,253
(4) Solon to Simla	28⅝	74,304	14,206	88,510
Total gross estimated earnings from goods traffic ...				3,87,390

8. For the purpose of framing a fairly reliable estimate of the gross annual earnings likely to accrue to the railway from 3rd class passenger traffic, only one-half the number of passengers shown in the returns of the Financial Commissioner as travelling over the Kalka-Simla Road are taken into account as likely to avail themselves of the railway. Proceeding on this assumption, the following figures have been arrived at of the probable number of 3rd class passengers likely to travel annually, over each section of the proposed railway, *viz* :—

Probable number of 3rd class passengers likely to travel annually over each section.

	Miles.	Up.	Down.	Total.
(1) Kalka to Dhurmpore	17	49,862	42,365	92,227
(2) Dhurmpore to Muthan	10½	31,862	30,884	62,746
(3) Muthan to Solon	12	25,862	24,884	50,746
(4) Solon to Simla	28⅝	13,054	12,384	25,438

9. The authorized rates of hire for ekkas on the Kalka-Simla Road have been ascertained from the Civil Authorities of the Simla District and are as follow, *viz* :—

Authorised rates of hire of ekkas on the Kalka-Simla Road.

	Rs.
(1) Hire of an ekka from Kalka to Simla from April to June	9
(2) *Vice versa*	7
(3) Hire of an ekka from Simla to Kalka from October to December	9
(4) *Vice versa*	7

Taking, therefore, Rs. 8 as the average rate and adding 4 annas for toll, we have Rs. 8-4 as the hire of an ekka between Kalka and Simla. The maximum number of passengers each vehicle is allowed to carry is three; therefore each passenger has to pay one-third of the total hire, or Rs. 2-12. This comes to 9·18 pies per passenger per mile.

10. The Government Bullock Train rate for a passenger from Kalka to Simla is Rs. 2-10 or 8·76 pies per mile. The equivalent of this rate by railway, will be $8·76 \times 57·5 \div 68·125 = 7·39$ pies, and the equivalent of the ekka rate = 7·75 pies. The average of the two comes to 7·57 pies per mile. The rate adopted in calculating probable gross earnings from 3rd class passenger traffic on the proposed Railway, is 7 pies per mile, which means a saving of four annas, in the journey from Kalka to Simla, to a 3rd class passenger, compared with what he would have to pay by road at the average rate hire for an ekka. This in addition to the saving in time,

Government Bullock Train rate for carriage of passengers.

and the greater comfort of the railway journey, would, no doubt, attract passengers to the railway.

10*a*. Working on the foregoing data for probable number of passengers and rate of fare per mile, the following figures exhibit the gross probable earnings annually from 3rd class passenger traffic over each section of the proposed railway, *viz.* :

Gross probable earnings from 3rd class passenger traffic over each section of the proposed railway.

	Miles.	Up.	Down.	Total.
		Rs.	Rs.	Rs.
(1) Kalka to Dhurmpore	17	30,903	26,257	57,160
(2) Dhurmpore to Muthan	10½	12,196	11,823	24,019
(3) Muthan to Solon	12	11,314	11,016	22,330
(4) Solon to Simla	28⅝	13,623	12,924	26,547
Total gross earnings from 3rd class passenger traffic ... ... Rs.				1,30,056

11. The probable number of 1st and 2nd class passengers is arrived at from information furnished by the Post Master General, Punjab, with regard to the Tonga Service at present maintained by Government on the Kalka-Simla Road. The total number of tongas despatched, both ways, during the year 1885-86 was 7,782. Assuming 2 as the average number of passengers travelling in each tonga, we have 15,564. This number may be accepted, for present purposes, as representing the probable total number of 1st and 2nd class passengers the railway would have to carry annually between Kalka and Simla both ways. Assuming one-third of this number to be 1st class passengers and two-thirds 2nd class, the number of each class respectively will be 5,188 and 10,376. The passenger service rates on the Kalka-Simla Road by the conveyances of the Postal Department are as follow, *viz.* :

Probable number of 1st and 2nd class passengers. Tonga rates on the Kalka-Simla Road.

(1) Phæton or Invalid Hill carriage, carrying 2 inside and 1 outside ...	... Rs. 50
(2) Express Tonga carrying 3 passengers	... „ 20
(3) One seat in the Ordinary	... „ 7

Tolls in addition, have to be paid at Dhurmpur, amounting to Rs. 2 for a four wheeled carriage and Re. 1 for a tonga.

12. The 1st and 2nd class passenger fares proposed to be charged for the single journey between Kalka and Simla by railway, are Rs. 10 and Rs. 5 respectively. The probable gross earnings annually from this class of traffic will therefore be as follow, *viz.* :

Proposed rates by railway for 1st and 2nd class passengers and gross earnings.

(1) 5,188 1st class passengers	@ Rs. 10—Rs. 51,880
(2) 10,376 2nd „ „	@ „ 5— „ 51,880
Gross probable earnings annually from 1st and 2nd class passenger traffic	... Rs. 1,03,760

13. With regard to the carriage of Mails and Parcels, from which a considerable revenue might reasonably be expected to accrue to the proposed railway, no definite information can be furnished by the Postal Department as to what the annual cost by the present arrangement amounts to, as the mail bags are not weighed, and no separate accounts are kept of the mail and passenger services. The following figures have, however been furnished by the Post Master General, Punjab, in his No. 4329C, dated 11th December 1886, to the address of the Superintending Engineer, 2nd Circle, and from them it will be seen that the working of the combined passenger and mail service between Kalka and Simla results in a heavy annual loss to Government.

Carriage of Mails and Parcels. Annual loss to Government under the present arrangement.

(1) Gross annual expenditure on the passenger service between Umballa and Simla for the year 1885-86, as per statement furnished by the Post Master General, Punjab	Rs. 2,49,703
(2) Gross annual earnings of the passenger service during the same period, as per statement furnished by the Post Master General, Punjab ...	Rs. 2,02,571
Annual deficit	Rs. 47,132

14. Of the above mentioned annual deficit on the working of the Mail and Passenger Service between Umballa and Simla (96 miles by road) the proportion chargeable to the Kalka-Simla section of the road (58 miles) cannot be less than Rs. 28,475. If, therefore, an annual subsidy of Rs. 18,000 (say) is paid by the Postal Department to the Railway, for the carriage of mails and parcels between Kalka and Simla, there will be a clear annual saving to Government of Rs. 10,475 (*vide* also para. 36).

Proposed amount of annual subsidy for carriage of Mails. Saving to Government.

15. As one of the most important advantages of the proposed railway will be the serving of the five military stations between Kalka and Simla, a considerable revenue may be expected from military transport. The actual expenditure annually incurred under this head cannot (it is stated by the Examiner, Military Accounts, Bengal) be furnished without an expenditure of considerable time and labour. To avoid delay, therefore, in submitting the accompanying project, a sum of Rs. 500 per mile is assumed as representing what the gross annual earnings under this head will probably amount to. This was the amount entered in the Umballa and Kalka railway project, based on information received at the time from the Military Department.

Military Transport.

16. The following statement shows the estimated gross earnings annually, over the entire length of the proposed railway from Kalka to Simla from all classes of traffic, *viz.*:

Gross probable earnings of the proposed railway.

	Up.	Down.	Total.	Per mile.
	Rs.	Rs.	Rs.	Rs.
Goods	3,21,652	65,738	3,87,390	5,686
Passengers	1,19,916	1,13,900	2,33,816	3,432
Mails and Parcels	9,000	9,000	18,000	264
Miscellaneous	6,812	6,812	13,624	200
Military Transport	17,000	17,000	34,000	500
TOTAL ...	4,74,380	2,12,450	6,86,830	10,082

17. Working on the data of the registered traffic returns, the average number of tons daily to be carried over each section of the proposed railway, upwards, *i.e.*, in direction from Kalka towards Simla, will be as follow, *viz.*:

Average tonnage daily (upwards) over each section.

	Miles.	Tons.
(1) Kalka to Dhurmpore	17	84½
(2) Dhurmpore-Muthan	10½	54½
(3) Muthan-Solon	12	44½
(4) Solon-Simla	28¾	26$\frac{1}{16}$

18. The greatest paying load an engine of the type proposed to be used, can take up the steepest incline on each section is worked out in the Engineering Report, and the results are as follow:

Greatest paying load engines of the proposed type can take over each section of the line.

	Miles.	Tons.
(1) Kalka to Dhurmpore	17	30·18
(2) Dhurmpore-Muthan	10½	44·42
(3) Muthan-Solon	12	86·73
(4) Solon-Simla	28¾	31·42

19. Two goods trains (with two engines each) will, therefore, be required, on an average, daily to work the traffic between Kalka and Dhurmpore. Over the upper sections one goods train daily will suffice, except between Dhurmpore Station and the Toll Bar where an auxiliary engine will be required for about a mile, to push the train when it exceeds 45 tons in weight. The Goods Train Mileage will therefore be as follow:

Goods Train Mileage.

17 × 2 × 365 = 12410
51½ × 1 × 365 = 18661 } = 31071 up.
68½ × 1 × 365 = ... 24866 down.
TOTAL ... 55937

20. The average number of passengers over each section of the railway daily deduced from the figures already given, will be approximately, as follows, *viz.*:

Average number of 1st, 2nd and 3rd class passengers daily over each section of the proposed railway.

	Miles.	Up.	Down.	Total.
(1) Kalka to Dhurmpore	17	157	137	294
(2) Dhurmpore-Muthan	10½	108	106	214
(3) Muthan-Solon	12	91	89	180
(4) Solon-Simla	28¾	57	56	113

The average weight of a passenger train, on the Kalka-Dhurmpore section, will be about 50 tons, and as one engine can only take a paying load of 30·18 tons up the steepest gradient on this section, it follows that two engines will be required for an average passenger train. One train will be sufficient for the traffic (except during the busy season when there will be two passenger services daily).

Average weight of a Passenger Train on the Kalka-Dhurmpore section.

21. The passenger train mileage will therefore be as follow:

Passenger Train Mileage.

(1) One train each way daily $68\frac{1}{2} \times 2 \times 365$ ... = 49,732
(2) Extra service for three months of the year each way $\frac{68{\cdot}125 \times 365}{2}$ ... ... = 12,432
} 62,164

22. The total train mileage will, therefore, be approximately as follows:

Total Train Mileage.

Goods 55,937
Passengers 62,164
} = 1,18,101

and adding 5 per cent for shunting and contingencies the grand total of train mileage comes to 1,24,000.

23. The additional engine mileage will be:

Additional Engine Mileage.

17 × 3 × 365 = 18,615
17 × 1 × $\frac{3{\cdot}5}{4}$ = 1,301
} = 19,916 up

and as these engines will run back to Kalka light, the total additional engine mileage will be 19,916 × 2 = 39,832.

24. In estimating the probable working expenses of the proposed Kalka-Simla Railway, the most reliable basis to work upon will be the actual expenditure annually incurred in working a line of similar character, and for this purpose we may take the Darjeeling Railway as a fair criterion. For the year ending 31st December 1885 (being the latest complete returns at hand) the working expenses of that Railway amounted to Rs. 2,67,753. The proportional expenditure, under this head, on the Simla line will be 26,773 × 68·125 ÷ 50·75 = Rs. 3,59,422 and adding 10 per cent. to these figures for contingencies, the total working expenses of the proposed railway should not exceed Rs. 3,95,364 or 3,95,364 ÷ 1,24,000 = Rs. 3·18 per train mile.

Working expenses per train mile.

25. Taking, therefore, the train miles at Rs. 3·18 and adding auxiliary engine mileage at Re. 1 we arrive at the following figures for annual working expenses on the proposed Kalka-Simla Railway, *viz.*,

Annual working expenses of the proposed railway.

	Rs.	Rs.	Rs.
1,24,000 Train miles @ ...	... 3·1884	= 3,95,364	4,35,196
39,832 Additional engine miles @ ...	1 =	39,832	

26. The gross annual earnings are estimated at Rs. 6,86,830, therefore the percentage of working expenses to gross earnings comes to 63·2. Deducting working expenses from gross earnings, there remains a balance of Rs. 2,51,634 for nett annual earnings, representing the following percentages on the estimates for direct and indirect charges, *viz.*,

Probable return on estimated cost of Railway.

(1) Direct charges (Rs. 56,90,021) ... ... 4·42 per cent.
(2) Direct charges *plus* cost of exchange on English payments (Rs. 58,90,616) ... ... 4·27 „
(3) Total estimated capital outlay direct and indirect charges combined, Rs. (61,78,400) ... ... 4·07 „

27. For the purpose of comparison, the following information in connection with the Darjeeling Railway, obtained from the traffic returns for 1885, is placed side by side with the corresponding figures for the proposed Kalka-Simla Railway:

Comparative Statement.

		Darjeeling Railway.	Kalka-Simla Railway.
1	Gauge	2 feet.	2 feet.
2	Length in miles	50·75	68·125
3	Cost per mile ... ... Rs.	53,750	90,622
4	Ruling gradient	1 in 28	1 in 33
5	Gross earnings per mile ... ... Rs.	8,495	10,082
6	Nett ditto ... ... ,,	3,219	3,694
7	Working expenses per mile ... ... ,,	5,276	6,373
8	Percentage of working expenses to gross earnings	62·10	63·20
9	Percentage of nett earnings to capital outlay	5·98	4·07
10	Number of train miles per mile of railway	2029·57	2112·5
11	Gross earnings per train mile ... ... Rs.	4·18	4·77
12	Working expenses per train mile ... ... ,,	2·56	3·18
13	Ditto per additional engine mile ... ... ,,	0·78	1·00
14	Nett earnings per train mile ... ... ,,	1·62	1·75
15	1st class passenger fare per mile	6 annas	2 As. 4 P.
16	2nd ditto ditto	3 ,,	1 A. 2 P.
17	3rd ditto ditto	1 A. 3 P.	7 pies.
18	Lowest goods rate per maund per mile (excluding coal rate)	2·35 pies	1·8 pies.
19	Highest goods rate per maund per mile	5 pies	2·45 pies.

28. In the above statement the figures given for percentage of nett earnings to capital outlay are (in the case of the Kalka-Simla Railway) the lowest result arrived at. The working expenses per train mile (also in the case of the Kalka-Simla Railway) *i.e.*, Rs. 3·18, are for trains with one engine only. When two engines are required, the working expenses are taken at Rs. 4·18, *i.e.*, Rs. 3·18 for the train miles and one rupee per additional engine mile. Nos. 10, 11, 12 and 13 include light running.

Explanatory remarks with regard to the foregoing statement.

29. It may here be pointed out that in estimating the gross probable earning on the proposed railway, future development of trade has not been taken into account, but that such a contingency may be considered certain, the following figures will amply demonstrate:

Future development of trade not taken into account in calculating probable earnings of proposed railway. Increase in traffic on the Kalka-Simla road in five years.

	Up.	Down.	Total.
(1) Maundage registered at Kalka in 1878-79, as shown in the returns of the Financial Commissioner, Punjab	550,622	102,350	652,972
(2) Ditto 1884-85	818,955	122,219	941,174
Increase in five years	...	....	288,202

30. Of the total quantity of goods shown in the 1884-85 returns of the Financial Commissioner as passing upwards from Kalka towards Simla, *viz.*, 818,955 maunds, the following are the percentages of the principal items:—

Percentages of principal commodities carried upwards.

1	Gram and Pulse	31·27
2	Grain of all kinds	19·43
3	Sugar (refined and unrefined)	11·51
4	Salt	6·72
5	Iron (wrought and unwrought)	6·32
6	Oil (common and kerosine)	4·52
7	Tobacco	2·83
8	European Piece Goods	2·23
9	Fruits	2·10
10	Drugs and Medicines	1·97
11	Firewood	1·80
12	Potatoes	1·49
13	Brass and Copper	1·05
14	Indian Piece Goods	·67
15	Other articles	7·09

30. (*a*) Of the downward traffic from Simla, shown in the Kalka returns (for 1884-85) of the Financial Commissioner, *viz.*, 1,22,219 maunds, the following are the percentages of the principal items:—

Percentage of principal commodities carried downwards.

1	Beer	54·75
2	Spring Crops	14·11
3	Dyes	8·17
4	Potatoes	6·51
5	Drugs	4·26
6	Other articles	12·20

31. The above percentages show that the greater part of the downwards goods traffic to Kalka consists of Brewery produce. Messrs. Meakin & Co. and Messrs. Dyer & Co. have kindly furnished the following figures with regard to their Export and Import trade *viâ* the Kalka-Simla Cart Road. The returns of the former firm refer to the year ending the 31st October 1886, whilst those of the latter firm refer to the year ending 30th September 1885.

Malt Liquor Trade. Unreliable nature of the registered traffic returns on the Kalka-Simla Road.

	Down maunds.	Up maunds.
Messrs. Meakin & Co.	87,964	89,120
Messrs. Dyer & Co.	44,286	31,463
Total maundage	1,32,250	1,20,583

The above totals include malt liquor, malt, fuel, barley, empty casks and sundries. The notable point is, that the export traffic of these two firms alone considerably exceeds the gross total maundage downwards, shown in the Kalka returns of the Finance Commissioner for 1884-85. This fact points to the unreliable nature of the registered traffic returns on the Kalka-Simla road, and should be borne in mind when viewing the prospects of the proposed railway in the light of such data.

32. The following statement, furnished by the Quarter Master General in India, shows the number of European troops located during the summer of 1886, in the hill stations which the proposed Kalka-Simla Railway will serve:—

Number of European Troops stationed in hills.

Station.	Men.	Women.	Children.
(1) Kasauli ...	559	69	153
(2) Dagshai ...	1061	63	86
(3) Subathu ...	589	25	34
(4) Jutogh ...	279	10	16
Totals ...	2,488	167	289

33. The population of the Simla District in 1881 (when the latest census was taken) was 2,386 per square mile. The number of inhabitants within the Municipal limits of Simla was 12,305, but as the census was taken during the month of February, these figures do not, of course, include the summer population. The Secretary to the Municipality is unable to furnish any further information on the subject. A fair idea however, of the European population of Simla during the season, may be formed from the fact that there are about 450 houses in the station (exclusive of those occupied by natives), besides numerous hotels and public offices. The income of the Simla Municipality for the year 1884-85 amounted to Rs. 2,03,911.

Population of Simla District. Income of the Simla Municipality.

34. The details submitted in the preceding pages with regard to traffic, working expenses, rates, number of troops located in the hills, civil population, &c., will, it is hoped, be sufficient to enable Government or private promoters (with the aid of the accompanying detailed plans and estimates) to judge whether the financial prospects of the proposed railway herein shown are sufficiently encouraging to warrant its construction. It has already been pointed out that the registered traffic statistics of the Kalka-Simla Road (on which are mainly based the gross probable earnings of the railway) fall far short of the actual maundage carried over the road. The fares and rates adopted in estimating the probable revenue likely to accrue to the railway from passenger and goods traffic are, for the former class of traffic, lower than existing fares, whilst for the latter class, they do not exceed established rates for the carriage of goods between Kalka and Simla.

Financial prospects of the proposed railway rates.

35. The conclusion therefore arrived at by undersigned, that the undertaking will yield a return of over 4 per cent. on the estimated capital, does not appear to him open to question on any grounds other than those which may be advanced to prove that a much *higher* rate of return on capital may be expected, when railway communication with Simla is established and the certain development of traffic follows. This view of the case is fully borne out by the fact brought forward in para. 29 of this report.

Conclusion arrived at as to probable return on capital outlay.

36. The general grounds on which the construction of a railway to Simla is regarded as necessary have often been discussed in the public press, and are well known to everybody. They are briefly as follow, and need no enlargement here:—(1) The railway would meet a long-felt public want. (2) It would, by facilitating communication and decreasing cost of transport of military stores, enable Government to locate more troops in the hills. (3) The summer Capital of the Government of India would be placed in direct communication with the railway system of the country, instead of being isolated (as at present) by a tedious road journey of 96 miles. The saving to Government in the matter of travelling allowances and carriage of office records, would, no doubt, be considerable if a railway were made from Umballa to Simla; how much this saving would amount to cannot here be stated, as no information on the subject is at hand. The following figures will show, however, that quite independent of the saving in travelling allowances, &c., a very large annual saving would accrue to Government by the construction of a railway to Simla *viz.*:—

General grounds on which the Construction of the Simla Railway is regarded as necessary. Gross annual saving to Government.

	Rs.	Rs.
(1) Annual deficit in the passenger and mail service between Umballa and Simla	47,132	1,22,132
(2) Annual cost of maintaining the Umballa-Kalka-Simla cart road ...	75,000	

From the above total must be deducted the following items, *viz*:—

(1) Loss of tolls on the Kalka-Simla road consequent on the opening of the Railway	20,000	55,000
(2) Probable cost of maintaining the metalled road after the Railway is open	35,000	

The net annual saving to Government (on the above two items of expenditure alone), consequent on the construction of a railway to Simla, would be 1,22,132 – 55,000 = Rs. 67,132, or, deducting the probable annual subsidy to be paid to the Railway administration for the carriage of mails and parcels between Umballa and Simla, say Rs. 25,000, the clear saving to Government would be Rs. 42,132 annually.

37. The following traffic statements are appended to this report, *viz.*:—

Traffic statements herewith submitted.

A. Abstract of registered traffic (upwards) (exclusive of Government Bullock Train maundage) between Kalka and Simla, for the year 1884-85, compiled from returns furnished by Financial Commissioner, Punjab.

B. Ditto ditto ... ... (downwards).

C. Statement showing Government Bullock Train traffic (upwards) between Umballa and Simla, for the year 1884-85, compiled from returns furnished by Post-master General, Punjab.

D Ditto ditto ... ... (downwards).

E. Abstract of maundage (upwards) over each section of the proposed railway between Kalka and Simla, compiled from returns for 1884-85 furnished by Financial Commissioner, Punjab, and Post-master General, Punjab.

F. Ditto ditto ... ... (downwards).

G. Abstract (compiled from returns furnished by Financial Commissioner, Punjab) of probable number of 3rd class passengers (upwards) over each section of the proposed railway.

H. Ditto ditto ... ... (downwards).

I. Abstract of probable gross receipts from passenger traffic (upwards).

J. Ditto ditto ... ... (downwards).

K. Abstract of gross probable earnings from goods, passengers, mails, military transport, &c. (upwards).

L. Ditto ditto ... ... (downwards).

38. The following is a statement of the territories through which the alignment for the proposed railway passes, *viz.*:—

Territories through which the Kalka-Simla Railway would pass.

(1)	British Territory	3 miles	3½ furlongs.
(2)	Puttiala „	34 „	1 furlong.
(3)	Bhaghat „	26 „	4½ furlongs.
(4)	Junga „	4 „	
	Total length of line ...	68 „	1 furlong.

KALKA-SIMLA RAILWAY.

[No. 2 *(a)* ii.]

KALKA TO SIMLA, 68¾ MILES.

General Abstract of probable cost.

Part II.—Indirect charges.

Vide *Circular No XX, Government of India, dated 7th March* 1881.

Main Heads.	Amount.	Remarks.
	Rs.	
Capitalization of abatement of Land Revenue ...	25,296	25 years purchase at an average rate of Rs. 2 per acre.
Charges for exchange on English payments, calculated at 1s. 6d. per rupee	2,00,595	Calculated on the English cost of articles specified in form 130K.
Leave and Pension allowances calculated @ 20 per cent. on the provision for salaries ...	38,897	
Interest on money to be provided during construction	2,23,601	Calculated at 4 per cent. on direct charges, less preliminary expenses.
Total ...	4,88,389	

T. B. MORRIS, Mem. Inst., C.E.,

Executive Engineer, Kalka-Simla Railway.

[No. 2 *(a)* iii.]

A

KALKA-SIMLA RAILWAY PROJECT.

Abstract of Registered Traffic (exclusive of Government Bullock Train Traffic) between Kalka and Simla.

UPWARD TRAFFIC,

i.e., in direction from Kalka towards Simla.

Goods.

	Maunds.
Total quantity registered at the Kalka Post during the year ending 30th June 1885	818,955
Total quantity registered at the Badhaighat Post during the year ending 30th September 1885	236,184
Difference between quantity registered at Kalka and that registered at Badhaighat	582,771
Distribution of difference (no data for this)	

	Maunds.	
Kasauli, Sanawar and Dagshai	300,000 (*a*)	
Sabathu	100,000 (*b*)	582,771
Solon Cantonments, Brewery, Kandaghat and Sogi ...	182,771 (*c*)	

Working from the tolerably reliable basis of the actual quantity of goods despatched from Kalka, *viz.*, 818,955 maunds, the following statement exhibits the probable maundage over each section of the proposed Railway (supposing the whole of the carrying trade to accrue to the Railway).

	Maunds.		Miles.
Kalka to Dhurmpur	818,955	...	17
Dhurmpur to Muthan 818,955—300,000 (*a*) = 518,955 ...	518,955	...	10½
Muthan (Sabathu) to Solon 518,955—100,000 (*b*) = 418,955	418,955	...	12
Solon to Simla 418,955—182,771 (*c*) = 2,36,184... ...	236,184	...	28⅝

B

KALKA-SIMLA RAILWAY PROJECT.

Abstract of Registered Traffic (exclusive of Government Bullock Train Traffic) *between Simla and Kalka.*

DOWNWARD TRAFFIC,

i.e., in direction from Simla towards Kalka.

Goods.

	Maunds.	Add difference between quantity of malt Liquor as shown in the Registered Traffic returns and that certified to by Messrs. Meakin and Dyer. Maunds.	Total. Maunds.
Total quantity registered at the Badhaighat Post during the year ending 30th September 1885 ...	28,705	2,465	31,170
Total quantity registered at the Kalka Post during the year ending 30th June 1885	122,219	39,717	161,936
Difference between total quantity of goods passing Badhaighat downwards and total quantity of goods reaching Kalka	...	...	130,766
Distribution of Difference—			

	Maunds.		
Despatched from Solon Cantonments and Brewery	46,000	(*a*)	
Ditto Subathu ...	5,000	(*b*)	1,30,766
Kasauli and Dagshai	79,766	(*c*)	

Working (as in the case of upward traffic) from the registered traffic at starting point (in this case we assume the quantity registered at Badhaighat to be the quantity actually despatched from Simla) the following statement exhibits the probable maundage over each section of the proposed Railway. Supposing, as in the case of the upward traffic, the whole of the carrying trade to accrue to the railway.

	Maunds.		Miles.
Simla to Solon	31,170	...	28½
Solon to Muthan (Subathu) 31,170 + 46,000 (*a*) = 77,170 ...	77,170	...	12
Muthan (Subathu) to Dhurmpur 77,17 0+ 5,000 (*b*) = 82,170	82,170	...	10½
Dhurmpur to Kalka 82,170 + 79,766 (*c*) = 1,61,936 ...	1,16,936	...	17

C.

KALKA-SIMLA RAILWAY PROJECT.

Statement showing maundage of Goods carried by Government Bullock Train between Umballa and Simla, from September 1884 to August 1885, compiled from Returns furnished by Post Master General, Punjab.

UPWARDS TRAFFIC,

i.e., in direction from Umballa towards Simla.

Period.	1. Maunds despatched from Umballa.	2. Maunds delivered at Kalka.	3. Maunds delivered at Kasauli.	4. Maunds delivered at Dagshai.	5. Maunds delivered at Subathu.	6. Maunds delivered at Solon.	7. Maunds delivered at Simla.	8. Maunds locally despatched from Kalka.	9. Maunds locally despatched from Kasauli.	10. Maunds locally despatched from Dagshai.	11. Maunds locally despatched from Subathu.	12. Maunds locally despatched from Solon.	13. Total maundage despatched from Kalka, *vide* note in Remarks Column.*	14. Total maundage despatched from Dharmpur, *vide* note in Remarks Column.	15. Total maundage despatched from Dagshai, *vide* note in Remarks Column.	16. Total maundage despatched from Solon, *vide* note in Remarks Column.	17. Received at Simla, as per Column 7.	Remarks.
September 1884 ...	3,162	808	411	467	583	175	1,532	112	132	8	43	2						
October ,, ...	3,210	927	384	607	297	101	1,985	4	63	32	9	22						
November ,, ...	3,269	506	255	184	129	1	767	31	18	3	Nil	6						
December ,, ...	1,389	427	230	216	12	4	626	20	4	15	5	3						
January 1885 ...	1,292	294	192	186	59	18	850	35	95	45	49	9						
February ,, ...	2,727	572	280	278	94	6	1,140	35	44	77	44	Nil						
March ,, ...	7,965	772	289	314	100	61	6,618	26	19	194	29	Nil						
April ,, ...	9,145	827	442	369	585	30	7,106	100	45	85	6	Nil						
May ,, ...	5,827	906	621	798	576	529	3,709	110	467	Nil	229	18						
June ,, ...	3,301	879	578	Nil	2	142	1,917	256	112	59	8	7						
July ,, ...	4,646	889	791	861	472	365	1,923	55	42	59	20	10						
August ,, ...	4,495	496	989	747	597	372	2,251	155	315	76	16	19						
Total ...	50,429	7,455	5,462	4,997	3,506	1,804	29,724	933	1,346	603	468	90	43,897	36,733	32,339	30,625	29,724	

* The total maundage despatched from Kalka is arrived at by subtracting the quantity delivered at Kalka from the quantity despatched from Umballa, and adding the quantity locally despatched from Kalka, and similarly for Dharmpur, Dagshai and Solon.

Working from the above results we arrive at the total quantity of the Bullock Train traffic that will accrue to each section of the proposed Railway.

Kalka to Dharmpur ...	(5,462 + 4,997) + (1,346 + 603) =	43,897 maunds	17 miles.
Dharmpur to Muthan	43,897 — (5,462 + 4,997) + (1,346 + 603) =	35,387 ,,	10½ ,,
Muthan to Solon	35,387 — 3,506 + 466 =	32,339 ,,	12 ,,
Solon to Simla	32,339 — 1,804 + 90 = 30,625 + 23,724 / 2 =	30,174 ,,	28½ ,,

D.

KALKA-SIMLA RAILWAY PROJECT.

Statement showing maundage of Goods carried by Government Bullock Train between Simla and Umballa, from September 1884, to August 1885, compiled from Returns furnished by Post Master General, Punjab.

DOWNWARD TRAFFIC,

i.e., in direction from Simla towards Umballa.

Period.	1 Maunds despatched from Simla.	2 Maunds delivered at Solon.	3 Maunds delivered at Subathu.	4 Maunds delivered at Dagshai.	5 Maunds delivered at Kasauli.	6 Maunds delivered at Kalka.	7 Maunds delivered at Umballa.	8 Maunds locally despatched from Solon.	9 Maunds locally despatched from Subathu.	10 Maunds locally despatched from Dagshai.	11 Maunds locally despatched from Kasauli	12 Maunds locally despatched from Kalka.	13 Total maundage despatched from Solon Downwards (*vide* Remarks).*	14 Total Maundage despatched from Dugshai Downwards (*vide* Remarks).	15 Total maundage despatched from Dharmpore Downwards (*vide* Remarks).	16 Total maundage despatched from Kalka Downwards (*vide* Remarks).	17 Received at Umballa as per Column 7.	Remarks.
September 1884 ...	1,025	9	27	82	51	95	1,712	50	162	293	50	511						* The total quantity despatched from Solon is arrived at by subtracting the quantity delivered at Solon from the quantity despatched from Simla, and adding the quantity locally despatched from Solon, and similarly for Dugshai, Dharmpur and Kaika.
October „ ...	4,089	35	196	105	39	329	6,308	182	870	687	213	1,473						
November „ ...	6,716	6	*Nil*	117	374	285	7,942	24	397	222	100	588

G

KALKA-SIMLA RAILWAY PROJECT,

Abstract of probable number of 3rd Class Passengers,

UPWARDS,

i.e., in direction Kalka towards Simla.

Total number of passengers shown in the Returns as passing Kalka towards Simla, during the year ending July 1885. } 99,723 ... Classification (*viz.*, whether mounted, in vehicles or on foot) incomplete.

Total number of passengers shown in the Returns as passing Badhaighat towards Simla, during the year ending July 1885. } 26,108 ... Classification (*viz.*, whether mounted in vehicles or on foot) incomplete.

The difference between the above figures, *viz*, 73,615 may be taken as representing the number of passengers passing off at Dharmpur, Dagshai, Subathu, Solon and other places, *en route*, say 36,000 are bound for Dharmpur, Dagshai and surrounding places, 12,000 for the Subathu District, 15,000 for Solon and vicinity, 10,615 for Kandaghat and Sogi, we arrive approximately at the number of passengers due to each section of the proposed railway, *viz.*, Kalka to Dharmpur 99,723, Dharmpur to Mathan (Subathu) 99,723—36,000 = 63,723, Mathan to Solon 63,723—12,000 = 51,723, Solon to Simla 51,723—(15,000 + 10,615) = 26,108. Assuming that one-half only of the above numbers to represent the probable number of passengers likely to avail themselves of the Railway, we have the following figures on which to base our estimate of probable earnings, *viz.*:—

Kalka to Dharmpur	... 49,863 ...	3rd class passengers	... 17 miles.
Dharmpur to Mathan	... 31,862 ...	Ditto	... 10½ „
Mathan to Solon	... 25,862 ...	Ditto	... 12 „
Solon to Simla	... 13,054 ...	Ditto	... 28¾ „

Average number of passengers daily.

Kalka to Dharmpur, 3rd class passengers	...	136
Dharmpur to Mathan,	ditto	... 87
Mathan to Solon,	ditto	... 70
Solon to Simla,	ditto	... 36

The probable number of 1st and 2nd class Passengers respectively is arrived at [redacted] Master General, Punjab. The number of Tongas of all kinds despatched both ways between Kalka and Simla = 7,782. The number respectively for Up and Down traffic is not given, but assuming one-half go up and the remainder down we have $\frac{7782}{2}$ = 3,891 each way. The average number of passengers in each Tonga may be taken as 2 and 3891 × 2 = 7,782 = the number of 1st and 2nd Class passengers going upwards annually. Say one-third of this number to represent 1st class passengers and two-thirds 2nd class passengers, we have $\frac{7782}{3}$ = 2594 1st class passengers and $\frac{7782 \times 2}{3}$ = 5,188 2nd class passengers.

H

KALKA-SIMLA RAILWAY PROJECT.

Abstract of probable number of 3rd Class Passengers,

DOWNWARDS,

i. e., in direction from Simla towards Kalka.

Total number of Passengers shown in the Returns as passing Badhaighat towards Kalka, during the year ending July 1885 24,769

Total number of Passengers shown in the Returns as passing Kalka towards Umballa, during the year ending July 1885 84,731

The difference between the above figures, *viz.*, 59,962 may be taken as representing the number of passengers from Sogi, Kandaghat, Solon, Subathu, Dagshai, &c., assuming that 10,000 passengers come from Sogi and Kandaghat 15,000 from Solon and vicinity, 12,000 from the Subathu side, and 22,962 from Dagshai, Sanawar and surrounding places, we arrive approximately at the number of passengers due to each section of the proposed Railway, *viz.*, Simla to Solon 24,769, Solon to Mathan (Subathu) 24,769 + 10,000 + 15,000 = 49,769, Mathan to Dharmpur 49,769 + 12,000 = 61,769, and Dharmpur to Kalka 61,769 + 22,962 = 84,731. Assuming that one-half only of the above numbers to represent the probable number of passengers likely to avail themselves of the Railway, we have the following figures on which to base our estimate of probable earnings, *viz.:*

Simla	to Solon	...	12,384	3rd Class Passengers	28½ miles.
Solon	to Mathan	...	24,884	ditto	12 ,,
Mathan	to Dharmpur	...	30,884	ditto	10½ ,,
Dharmpur	to Kalka	...	42,365	ditto	17 ,,

Average number of Passengers daily :—

Simla	to Solon	3rd Class Passengers	35
Solon	to Mathan	ditto	68
Mathan	to Dharmpur	ditto	85
Dharmpur	to Kalka	ditto	116

The number of 1st and 2nd class passengers respectively, will be the same as that arrived at for up traffic, *vide* note on opposite page.

[Enclosure No. 2. *b.*] KALKA-SIMLA RAILWAY PROJECT.

Extract from a note by the Under-Secretary to Government, Punjab, Public Works Department.

* * * * * *

3. The project has been somewhat delayed—it was begun in October 1884 and submitted in April 1887—but it appears to have been most carefully got up and in the fullest detail. Much credit, I think, is due to Mr. Morris for the neat and admirable way in which it has been sent up.

4. To deal first with the financial aspect of the project. The estimate seems fairly complete. It includes a lakh for preliminary expenses, which would include cost of preparation of present project. There would seem to be few, if any, items on which material reduction is probable. It is possible a saving might be arranged in "Temporary Quarters," but the total provision is only Rs. 17,000. Contingencies are put at 8 instead of 5 per cent., certainly a desirable precaution in a work of the kind.

5. On the other hand, there may prove to be some additions. Establishment would seem to be much under-estimated, Rs. 3,05,283 on a total of Rs. 53,84,738 only is allowed, and it is assumed the work would be completed by one Executive Engineer and six Assistants in two years. Nothing is allowed for Direction and Accounts. This is less than 6 per cent. The usual 23 per cent. would amount to—

	Rs.
on	53,84,738
at 23 per cent.	12,38,490
	66,23,228
Again, the indirect charges on this would amount to, say ...	5,00,000
	71,23,228

or in round numbers 71¼ lakhs.

6. In regard to the probable gross earnings, I think Mr. Morris assumes somewhat too favourable rates. To do a successful business in the lowest class goods and passengers, which in all cases form the bulk of the traffic to which a Railway has mainly to look, it will be necessary to offer both great inducements to take the rail rather than the road. For his lowest goods rates Mr. Morris takes 1·8 pies per maund mile, or about 10½ annas per maund from Kalka to Simla, equal to 43·6 pies per ton mile. Taking the cheapest form of carriage which I believe at times prevails, probably about 6 annas per maund for the whole distance, or 1·08 pies per maund mile or 29·16 per ton mile. But say even 36 pies or 3 annas per ton mile.

7. Then for the lowest class passenger he assumes Rs. 2-8 from Kalka to Simla. An Ekka in the season will generally take a man up for Rs. 2 to 2-8, at times for less. It will certainly, within my knowledge, often bring him down for less. By the old road the distance can easily be walked in two days, and the rate for coolies carrying loads between Kalka and Simla is only Rs. 1-1. I should think Rs. 1-4 is a much more probable rate than Mr. Morris' Rs. 2-8, and I doubt if even that would catch all the foot passengers. Assuming 1-4 for the 68 miles by rail, this would be nearly 4 pies per passenger mile as against the 7 pies of Mr. Morris' paragraph 10.

8. The rates he takes for 1st class passengers of Rs. 10, and 2nd class of Rs. 5, seem fair enough, and I think perhaps 2-8 might be got for intermediate class; those who, for instance, now use the bullock train.

9. Reducing Mr. Morris' figures to ton miles (see his para. 3) we have 14,78,260 ton miles at 3 annas=to, say, Rs. 2,80,000, though it may be admitted a portion of these would represent goods of a nature justifying a higher rate. And reducing his lowest class passengers (see his para. 8) to passenger miles, we have 3,541,973 which at 4 pies=Rs. 73,800.

10. Perhaps very little useful comparison can be made between this proposal and the recently opened Amritsar and Pathankot line, which is of about equal length, but during the latter's first two years after opening—1884 and 1885—the passenger miles amounted to 10,842,230 and 13,114,216 respectively. The estimate of little more than one quarter as many passengers on the Simla line is probably within rather than over the mark. Mr. Morris, moreover, has only taken half the number of people shown by the Financial Commissioner, as travelling over the road as likely to use the Railway.

11. It might, I think, be fair to add double as many Intermediate as Second Class passengers, or say 20,000; and these at Rs. 2-8 would add another Rs. 50,000 to the receipts.

J

12. Then comparing Mr. Morris' para. 16 we have—

	Rs.	Rs.
Lowest class goods	...	2,80,000
Passengers, 1st & 2nd	1,03,760	
Intermediate	50,000	
Lowest class	73,800	
Total Passengers	...	2,27,560
Mails and Parcels	...	18,000
Miscellaneous	...	13,624
Military Transport	...	34,000
Total gross receipts	...	5,73,184

This would equal about Rs. 8,700 per mile, which corresponds very closely with what is given in para. 27 as the gross earnings per mile on the Darjeeling-Himalayan Railway (*viz.*, Rs. 8,495).

It is only fair to note that the rates for goods and passengers, even as assumed by Mr. Morris, are very much under those said to prevail on the Darjeeling Railway, and I think it may be fairly assumed that the gross earnings on the Kalka-Simla ought to be much greater. And it should also be noted that the last Traffic statement of that Railway shows the percentage of net earnings on total Capital outlay to be 8·86 per cent. The actual dividends paid according to the last Report by the Directors, amounted to 8½ per cent. for the year 1886, and the *ad interim* dividend for the last half year, *viz.*, 31st January 1887, was at the rate of 6 per cent.

13. In the matter of working expenses it is exceedingly difficult to form any reliable estimate. Mr. Morris takes as a basis of comparison, the rates quoted for the Darjeeling Railway, which are shown as 62·10 per cent. only. Taking these figures and adding 10 per cent., and allowing for additional Engine-power on one length, he works out the "Working Expenses" for the Kalka-Simla Railway as a probable 63·2 per cent.

This is less than many lines in the Plains, and considering the nature of a mountain Railway like the one proposed, is, I think, much too hopeful.

In this respect (see also Mr. Morris' para. 27), a comparison with the Darjeeling line is misleading. The latter Railway differs materially from the Simla-Kalka line.

The Darjeeling Company, I understand, simply laid their line on a road made for them by Government at great expense, and I have an idea Government is still saddled with the upkeep of the road, or a part of it. The Company found the curves in some parts of the road too sharp, and has had to alter them, and possibly here and there the gradients; but certainly the main part of the line was laid on road already made [and (?) partly maintained by Government]. On the contrary the Kalka-Simla line has to be made quite apart from the road; if in any part it encroaches on the road, a corresponding widening is provided. And it has to provide for a separate maintenance.

14. I understand the configuration of the hills is sharper and the rock more rotten in the case of the Simla hills. In any case the maintenance of the Kalka-Simla line, liable as it will be to constant slips of shale, &c., is likely to be exceptionally expensive.

Any estimate must be more or less of a guess, but I should say 70 or 75 per cent. would be a much safer figure to take.

Taking working expenses at 75 per cent., and the gross earnings at 5,73,184, the net earnings would amount to Rs. 1,43,296, or about 2 per cent. on an outlay of Rs. 71,23,228. (Rs. 1,42,465 is exactly 2 per cent.)

15. Nothing, as I propose to notice lower down, is allowed in this calculation for development of traffic. But the construction of the line would undoubtedly bring about some actual savings to Government, which should not be left out of the account. Mr. Morris refers to these in his paragraph 36.

The saving in travelling allowances, carriage of official records, and the time of Government officers, cannot, perhaps, be assessed, but in the matter of the existing mail service, and maintenance of road, I think, after allowing for sums to be paid to Railway and spent on road, a saving of some Rs. 35,000 a year might be effected. And at least another ½ per cent. could be credited to the proposed line under this head.

16. It does not seem necessary to review at length, the Engineering features of the line, which are set forth in detail in Mr. Morris' report, and which requires to be read in connection with the reference Maps.

17. The project, based on Route B. of the reconnaissance as modified by Mr. Molesworth, is divided into six sections, aggregating a total length of 68½ miles. It follows, with one or two exceptions, the general alignment of the present cart road, in places close alongside, and occasionally cutting into and crossing, but in every case the maintenance of existing width of road is fully provided for. The steepest gradient is 1 in 33 of which there is a total of nearly 12 miles, all on the Kalka-Dharmpur section, and for this length extra engine power is provided.

There is a little bit of 1 in 34 on the length from Badhaighat to Simla, and on all the sections there are 42 miles with gradients between 1 in 33 and 1 in 50.

The sharpest curve is 70 feet radius, and 32 miles of the line are on curves from 70 to 750 feet radius.

18. Stations are provided at Kalka, Dharmpur (for Kasauli, Sunawar and Dagshai), Mathan (five miles from Subathu), Solon and Simla. The last is in the compound known as "Innes' Own." There are in addition six watering stations.

19. There are only two bridges of any importance; one at Jhajra, with two openings of 60 feet, and one at Jabli with one of 50 feet. The others, though numerous, are all unimportant bridges and culverts, for which type drawings are provided.

20. When the transverse slope of the hill side exceeds 30°, breast walls are provided. It is very possible, I think, additional expenditure may be found necessary under this head.

21. Nine tunnels are provided of an aggregate length of 842 yards, the longest being 267 yards through the Sabathu Ridge.

22. The gauge is to be 2 feet with 35 lb. steel rails laid on deodar sleepers with bearing plates.

23. It is proposed to dispense with feneing, on the ground of its excessive cost, a dry stone wall being substituted between the road and the railway. Provision being also made for planting cactus on either side of the latter. This, I think, may well be accepted.

24. Rolling stock is included in the estimate. Provision being made for 16 locomotives, 50 coaching vehicles and 125 goods wagons, of types similar to those now on the Darjeeling Railway.

25. It is proposed to limit the speed between Kalka and Dharmpur, and again between Badhaighat and Simla, to seven miles an hour, and on the other portions of the line to 10 miles an hour.

26. The rates appear to have been drawn up in communication with the Executive Engineer, Simla Provincial Division. This is a matter on which we should have had Superintending Engineer's opinion. The cost of land has not been checked by the Deputy Commissioner, but the rates seem very ample.

27. Mr. Morris' estimate may, I think, be taken as representing very fairly, with the [redacted] as regards the probable [redacted] such a line would pay anything like 4 per cent. at any rate for some time to come.

28. There are, however, several points that would render such a return hopeful in the not distant future. The traffic returns are not very reliable, the amount of traffic on the road seems to have been under-estimated. In the matter of beer only, Mr. Morris shows (paragraph 31) that in the returns supplied by Messrs. Meakin and Dyer, their gross total maundage downwards alone exceeds the total registered traffic returns. Their up and down traffic is not far short of 10,000 tons per annum. Mr. Morris' statistics and the above note are both based on the registered returns, but Mr. Morris considers "the returns fall far short of the actual traffic passing over the road."

29. Another important feature is the future development of the traffic, which has, of course, been entirely left out of the calculation. That, even without a railway, this development has in recent years been considerable is amply demonstrated by the fact that during the five years between 1879 and 1884-85 this traffic has increased by upwards of 10,000 tons; see (Mr. Morris' paragraph 29) and there can be no reasonable doubt that the stimulus of a railway would tend to develop this with arithmetical progression.

30. The possibilities of developing mineral wealth should not be lost sight of. Mr. Morris refers in his paragraph 5 ii, to the probability of some good slate beds being exposed; and in both directions some trade in building stone might be looked for.

31. Great additional facilities would also be afforded for the opening out of industries, such as the cultivation of tea and of fruit, &c.; Mr Morris instances the property at Shalegra, as admirably adapted for this purpose (paragraph 6 ii). Indirectly this would all tend to bring traffic to the line.

32. The general grounds demanding the construction of such a line are, of course, well known. The importance of bringing the summer capital of both the Supreme and Local Governments into direct communication with the Railway system in the Plains and by facilitating communication with the hill Sanitaria, enabling Government to locate more troops in the hills, and to materially decrease the cost of keeping those already so located.

33. The Military value of a line connecting some half a dozen hill depôts with Railway communication to the Bolan and the North-West Frontier is, perhaps, alone a justification for the construction of the line, and a line that, besides being an administrative necessity, will pay at present 2½ per cent. on outlay and offer a fair prospect of working up to 4 per cent. in the future, can hardly be classed as an extravagance.

18-5-87. (Sd.) E. E. O.

[Enclosure No. 3.]

Note by the Consulting Engineer to the Government of India for State Railways, dated 13th August 1887.

The general question of the alignment of the Simla-Kalka Railway has already been dealt with by me after a reconnaissance I made of the line of country in 1884.

After that reconnaissance I made certain suggestions for the improvement of the alignment, which Mr. Morris has carried out with satisfactory results. An alternative line, which I marked on the map, near Dharampore, has led to the elimination of the long tunnel originally proposed through the Dharampore ridge, and the gap through which I recommended the line to be taken through the Subathu range has effected a saving of 10 miles in the through lengths between Kalka and Simla. The tunnel rounding the bluff near 29½ mile has been avoided without heavy work, and the deviation which I suggested to the west of Solon, has been proved by survey to be satisfactory.

My reconnaissance of 1884 convinced me that but little use could be made of the existing cart road for the purposes of the railway, the conditions being totally dissimilar from those which existed in the case of the Darjeeling Light Railway, for which the cart road was utilized to a considerable extent.

In the case of the Simla-Kalka road the country is more rugged and broken, the angular turns sharper and more numerous, and the material less reliable.

In fact I am of opinion that even in the small degree to which Mr. Morris has utilized the Simla-Kalka road in the project now under consideration, he has done so to a greater degree than is desirable, and that in many cases the cost of providing for the road is not justified by the advantages gained by utilising it for railway purposes; but I propose to deal with this question in greater detail at a later stage of this note.

The project for the Simla-Kalka Railway appears to have been prepared by Mr. Morris with very great care and ability, and I cannot speak too highly of the very thorough manner in which he has dealt with every detail connected with the project. The line passes through a most difficult country, which renders the work of setting out most difficult and arduous, the route being on sidelong ground for nearly its entire length and traversing extremely broken and rugged ground.

As the cart road cannot be utilized for the purposes of the railway, the line will be longer and more expensive than was originally anticipated; it is necessarily very tortuous, and the curves, in order to avoid excessively heavy work, must be very sharp; even with curves of 75 feet radius, the work is very heavy.

The total length of the line from Kalka to Simla is 68⅛ miles, the ruling gradient 1 in 33, and the sharpest curve 75 feet radius.

The gauge is two feet, and the weight of the rails 35 lbs. per yard.

The line, immediately on leaving Kalka, diverges from the cart road and curves round into the valley of the Guggur, in order to avoid the very steep ascent which the cart road makes on quitting Kalka. Afterwards, however, the line sweeps round and joins the cart road about the third mile post and unavoidably runs close to it, and in some places on it, as far as the sixth mile post. It then gradually passes below it, following the contour lines of the valley, so far as is necessary to preserve a ruling gradient of 1 in 33, as it gradually ascends the same valley as that in which the cart road has been made, until it reaches Dharampore; it then curves round the Dharampore spur and, running under Dharampore, sweeps round below the road and thence, rounding the "Temple spur," passes underneath the Simla-Kalka road close to the toll-bar.

After this it diverges from the cart road, gradually descending to the river which divides the Kasauli range from that of Subathu, and, after crossing this river, it rises gently to a gap in the range, about five miles from Subathu; here it crosses the range with a short tunnel, after which it turns up a subsidiary valley, after crossing which it rounds a steep rocky bluff, and thence generally follows the direction of the Subathu and Solon bridle road.

Before reaching Solon, however, it turns off to the west of the cantonment, whereas the cart road passes to the east of it; but it joins the cart road again about a mile beyond Solon.

Thence it keeps, with little variation, close to the cart road, and in many places on it, as far as Kandaghat. From Kandaghat it follows the general direction of the cart road, but considerably below it, diverging, where necessary, to round certain spurs, the crossing of which would involve sharp gradients or heavy work, until the Chakidula spur has been rounded, after which it approaches the cart road once more and keeps close to it, and in many places on it, until it approaches Badaighat, where it passes over the road and thence diverges from it, keeping along the contour of the hills until it reaches "Innes' Own," which is the proposed site for the Simla Station.

The line appears to have been judiciously set out; but, as in all railways of this character, the setting out must be considered simply as a basis for work, subject to modification, after a careful study of all the conditions during construction.

The estimate, as submitted by Mr. Morris, stands as follows, per mile of railway:

	Rs.
Preliminary expenses	1,648
Land	1,223
Earthwork	16,367
Retaining walls	7,073
Tunnels	1,235
Minor bridges	8,749
Large „	2,630
Level crossings	83
Fencing, mileposts, &c.	119
Road diversions	4,825
Ballast	1,351
Permanent-way	14,147
Stations	2,222
Staff quarters	1,016
Workshops	...
Station machinery	792
New roads	220
Rolling stock	7,223
Plant	2,771
Establishment	4,480
Contingencies	5,541
Total direct charges	83,523

The principal rates on which this estimate has been based are as follows:

	Rs.	
Cutting in clay	4	per 1,0 0 cubic feet.
Do. boulders and gravel	6	„ „ „
Do. rock and clay	10	„ „ „
Do. loose rock	20	„ „ „
Do. hard rock	25 to 30	„ „ „
Do. dry stone rubble	5 „ 7	„ 100 „
Do. side drains and retaining walls	7	„ „ „
Do. coursed rubble	31 „ 40	„ „ „
Masonry in arching	50 „ 70	„ „ „
Concrete	22 „ 30	„ „ „
Boulder pitching	4	„ „ „
Tunnelling	100	per linear yard.
Ironwork for girders	250	per ton.
Deodar timber	2	per cubic foot.
Ballast	2-14 to 6-8	per 100 cubic feet.
Sleepers	1-14	each.
Laying permanent-way	500	per mile.

The rates for earthwork appear to me to be somewhat low, especially that for hard rock, which varies from Rs. 22 to 30 per 1,000 cubic feet, and I should be disposed to estimate it at Rs. 40.

Between the 4th and 6th miles the line interferes with the road to some extent; this however appears to be unavoidable; but between the 39th and 47th miles, as well as between the 59th and 64th miles, it appears to me that the interference with the road might be avoided.

At mile 38½ I should be disposed to keep the gradient up, so as to be somewhat higher than the road, where it joins it near the 28th milepost, and then, instead of crossing the road, the railway line should keep, with a tolerably even gradient, well above the road, and clear of it from the 39th mile to Kandaghat. I have roughly marked on the large scale map, in dotted blue pencil lines, the alignment which I think should be adopted between the 39th and 47th miles of the railway. Between the 59th and 65th miles I have also marked on the map, in dotted blue lines, an alternative alignment, which I think should be adopted to prevent interference with the road.

The railway keeps on or near the cart road for about 16 miles of its entire length, and on this portion it involves an expenditure of Rs. 3,28,581 for road diversions, &c., and this, divided over a length of 16 miles, amounts to upwards of Rs. 20,000 per mile, although the utilization of the road on these 16 miles is only partial, as the sharp turns of the road render it impossible for the railway to keep to it in all its sinuosities.

It appears to me therefore very questionable whether any advantage is to be gained by adhering to the cart road in the places abovementioned.

At Badaighat it will be desireable to lower the level of the railway so as to pass underneath the cart road; this arrangement will keep the line more clear of the road just after passing it.

At Kandaghat the road should be diverted to the back of the houses through which the line is shewn to pass, and the railway line should take the present site of the road in passing through the neck at that part.

The rates for dry rubble masonry appear to me to be somewhat low, more especially as the stone in many portions of the line is liable to disintegration, and for building purposes it may have to be carried for a considerable distance with very scanty means of transport where a road may not exist. The rate for tunnels also appears to be low; I should be disposed to double it.

The tunnel at Boch (the 31st mile) might probably be saved by a deviation; but as the more circuitous line would not effect a very large saving, and as it would interfere with some temple buildings, I am of opinion that the tunnel line at that part may be retained. At mile 33½ however, if the contouring correctly represents the outline of the hillside, the tunnel at that point might probably be avoided by a slight deviation. With regard to the fencing, I agree with Mr. Morris in thinking that dry stone walling will be the most suitable fencing for this railway in the majority of cases.

The bridge drawings will suffice for the purposes of the estimate, but will require careful revision for the purposes of construction.

In each case the special conditions of the site will have to be separately considered. In some places drop wells at the inlet and outlet of the bridge or culvert will be desirable so as to break the force of the falling stream by water cushions.

In other cases where a solid outlet can be obtained the culverts may be contoured out on sidelong ground, instead of descending steeply.

In other places where the stream takes its source close at hand, or where the quantity of water is small, the stream may be bunded or passed between the sleepers or through rail openings; but all such cases must be the subject of judicious and intelligent study of the Engineer charged with the execution of the work of construction.

In several of the bridge drawings the rails are shown supported on cross girders *between* the main girders, which have to be a considerable distance apart in order to allow for the curvature; but in such cases, when the head-way is sufficient to allow it, I should prefer to place the cross girders on the top of the main girders and to draw the main girders nearer together.

When there is no curve the transverse sleepers might be placed directly on the top of the main girders, without the intervention of cross girders.

In many cases I think it may be advisable to insert girders of greater span than it absolutely necessary for the waterway, in order to keep the abutments well clear of the stream, and to save masonry.

Level crossings for bridlepaths, &c., should be avoided as far as practicable, and the traffic passed under the line by small bridges or "cattle-creeps." The sidelong ground, which prevails throughout the line between Kalka and Simla, affords great facilities for passing such traffic under the line.

In the drawing of the level crossing gate it may be noted that the pin which actuates the locking bolt should be in the signal handle, and the slot should be in the bolt; this alteration has been found necessary in practice.

The rate for sleepers seems to be low; but on further consideration I think the length of sleepers may be reduced from 4 feet 6 inches to 4 feet, so that perhaps the rate may stand. It may, however, be a question for consideration whether it would not be prudent on this line, which abounds with excessively sharp curves, to adopt transverse steel sleepers 3 feet 9 inches in length.

The preservation of the gauge is a matter of great importance on such curves; and although steel sleepers would be more expensive than deodar, they would be far more durable and would economise in maintenance. Their adoption would probably add about 4,000 rupees per mile to the cost of the railway.

Where curves are so sharp and so numerous as on this line, I would advise that the rails should be laid "*break-joint*," as this arrangement will save much expense and trouble in cutting the rails, which would be necessary if it were attempted to keep the joints of the rails opposite to each other.

The distance of the stations apart is as follows:

	Miles.
Kalka to Dharampore	17
Dharampore to Mathan	10½
Mathan to Solon	12
Solon to Kandaghat	7½
Kandaghat to Badaighat	17½
Badaighat to Simla	3½

I think that a small station might with advantage, be interpolated between Kalka and Dharampore, near Koti, and also between Kandaghat and Badaighat, near Shalighat, or else near Shogi.

At Kalka station some of the sidings should be extended so as to run alongside the passenger station platform of the 5-feet 6-inch gauge railway, which might be made of a medium height, say 15 inches, above rail level, being somewhat low for the 5-feet 6-inch gauge and somewhat high for the 2-feet gauge. As an alternative site for Simla station, I think the spur on which "*Mervin Lodge*" is situated might be examined. The site selected at "*Innes' Own*," however, appears to be suitable and convenient.

The provision for staff quarters appears to be insufficient, and will probably have to be increased. The same remark may apply to the item of station machinery.

No provision has been made for workshops; and as the Simla-Kalka Railway will be a short isolated line, the cost of workshops will be comparatively greater, mile for mile, than would be necessary in a more extended system.

For engines, Mr. Morris proposes to use an engine of 11 tons weight, similar to those in use on the Darjeeling Light Railway; and for carriages, the Cleminson flexible type. The type of engine may be adopted; but for carriages and wagons I should prefer the double bogie system, care being taken to allow the bogies to adjust themselves horizontally to the rails as well as to the curves.

The quantity of rolling stock proposed is—

16 engines.
50 coaching vehicles.
125 goods vehicles.

This provision may probably suffice for the first opening; but as the steep gradients of this railway will necessitate a larger proportion of engine power to carriage and wagon stock than is usual on lines with flatter gradients, an increase will probably be necessary with the development of the traffic.

The railway for a considerable portion of its length, runs near the watershed of the country, and consequently there are no bridges of any magnitude on it; the provision for plant therefore need not be large.

The amount provided for establishment appears to be low.

Taking into consideration the foregoing remarks, I am of opinion that the mileage estimate of Rs. 83,524 will require to be increased to Rs. 96,000 per mile for direct charges; and if steel sleepers be adopted instead of deodar, the mileage rate should be increased, in round numbers, to one lakh of rupees per mile.

With regard to the probable returns of this railway, I consider that Mr. Morris, in allowing no increase on the existing traffic for future development, has under-estimated the returns.

The facilities afforded by a railway are certain to bring a large accession to existing traffic, and past experience has shewn that even without a railway the traffic between Kalka and Simla has been largely and steadily on the increase.

On the other hand, I do not thinking that the working expenses of the Darjeeling Light Railway can be taken as a guide for estimating the probable cost of working the Simla-Kalka Railway. It is true that this railway will have the advantage of a better ruling gradient than that of the Darjeeling Railway, the former having a ruling gradient of 1 in 33, whilst the latter has a ruling gradient of 1 in 28; but the Simla-Kalka Railway will have one important factor in the working expenses, which is to a great extent, wanting in the case of the Darjeeling Railway, namely the maintenance of bridges, embankment walls, and other works.

The Darjeeling Railway is, as I have already observed, laid for a considerable portion of its length, on an existing road; and one provision in the contract of agreement between the Secretary of State and the Darjeeling Railway Company is "that the Secretary of State shall at all times hereafter, and at his own expense, maintain the said cart road, with all bridges, walls, fences, culverts, and other works, now and hereafter to be constructed for the upkeep and maintenance thereof."

The maintenance of such works as those above specified must necessarily form a very important factor in the working expenses of such a railway as the Simla-Kalka line, for the soil is, as a general rule, of a very unreliable character, very subject to slips and failures of foundations of the retaining walls and other structures; and even though curves of a very sharp radius have been adopted, it has been impossible to avoid numerous and deep cuttings or high retaining walls throughout the whole length of the line, and it is impossible for any human being to predict with any certainty the cost of maintaining such works.

I am of opinion, however, that the working expenses of the Simla-Kalka Railway will be largely in excess of those of the Darjeeling Railway.

As a set off against this excess, however, it must be remembered that the rates which have been adopted by Mr. Morris for the carriage of passengers and goods on the Simla-Kalka Railway, are considerably lower than those ruling on the Darjeeling Railway, which appear to be sufficiently low to attract traffic, and the development of the existing traffic, which will certainly be consequent on the construction of a railway, would appear to offer a fair prospect of success for the future, moreover, the cost of maintenance of the earthworks and retaining walls on this railway will probably as time goes on, diminish as the weak places are cleared away.

The manner in which the whole project has been prepared reflects very great credit on Mr. Morris.

R. C. B. PEMBERTON, *Colonel, R.E.,*
Secretary to the Government of India.

Note by Major A. G. BEGBIE, R.E., Officiating Accountant General, Public Works Department, No. 1140R., dated 22nd September 1887.

I beg to lay before the Government of India the Synopsis of transactions of Guaranteed Railways for and to end of the year 1886.

A

2. The subscribed Capital on 31st December 1886 of the several Railway Companies bears interest as shown below:

Railway.	Capital bearing interest at 3½%	4%	4½%	4⅝%	5%	Premium on Stock.	Discount on Stock.	Total Capital raised.
	£	£	£	£	£	£	£	£
Madras	157,800	102,200	500,000	999,960	8,757,670	12,014	...	10,529,644
South Indian	870,000	...	425,000	166,904	3,042,841	62,410	3,750	4,563,405
Bombay, Baroda and Central India	888,500	...	...	...	7,550,300	32,270	14,000	8,457,070
Great Indian Peninsula	820,500	2,992,450	...	...	20,000,000	74,187	2,773	23,884,364
Oudh and Rohilkund	2,455,000	2,345,000	...	...	4,000,000	19,672	43,861	8,775,811
(1) Total to end of 1886	5,191,800	5,439,650	925,000	1,166,864	43,350,811	200,553	64,384	56,210,294
(2) Ditto ditto 1885	4,481,800	6,217,450	925,000	1,169,624	43,348,189	209,165	56,134	56,295,094
(3) Ditto ditto 1884	4,325,750	4,911,950	925,000	1,179,519	43,338,789	209,702	46,134	54,844,594
(4) Ditto ditto 1883	1,501,900	6,254,650	925,000	1,196,834	43,322,340	437,820	265,879	53,372,665
(5) Ditto ditto 1882	2,117,800	5,905,250	925,000	1,198,768	43,322,873	431,470	262,129	53,639,032
(1) Compared with (2) Increase	710,000	...	...	...	2,622	...	8,250	...
(1) Compared with (2) Decrease	...	777,800	...	2,760	...	8,612	...	84,800

3. The following table shows the growth of the Capital Accounts of the Guaranteed Railways during the last five years, the net increase to the aggregate subscribed Capital during that period being £3,069,187.

Total capital subscribed. Year.	Amount.	Increase.	Decrease.	Remarks.
	£	£	£	
To end of 1882	53,639,032	497,925	...	
„ 1883	53,372,665	...	266,367	
„ 1884	54,844,594	1,471,929	...	
„ 1885	56,295,094	1,450,500	...	
„ 1886	56,210,294	...	84,800	
		3,420,354	351,167	
Net Increase	...	3,069,187		

Capital Outlay.

4. The aggregate outlay finally charged off to "Construction" has stood at the end of each of the last five years as follows:—

	£	Increase. £
To end of 1882	51,429,069	320,561
„ 1883	52,096,035	666,966
„ 1884	53,240,053	1,144,018
„ 1885	54,516,361	1,276,308
„ 1886	55,517,215	1,000,854
Increase in five years	...	4,408,707

5. The expenditure charged to "Construction," on the open lines of railway, during and to end of the year, gives the following cost per mile:

Railway.	Construction expenditure per open mile. During 1886.	To end of 1886.	Remarks.
	₹	₹	
Madras	942·17	1,31,265·94	
South Indian	632·31	67,945·29	Metre gauge.
Bombay, Baroda and Central India	2,170·84	2,05,288·59	
Great Indian Peninsula	1,695·60	2,02,944·08	
Oudh and Rohilkhund	20,369·48	1,16,367·41	
Average outlay, excluding South Indian	3,036·48	1,68,391·75	
Ditto including ditto	2,636·18	1,51,667·47	

Capital locked up in stores.

6. The subjoined table shows the fluctuations in the value of stores in stock during the past five years. The figures in antique represent increases of stock:—

Railway.	Reduction in stock. 1882.	1883.	1884.	1885.	1886.	Total reduction in five years.
	₹	₹	₹	₹	₹	₹
Madras	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
South Indian	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Bombay, Baroda and Central India	1,23,525	1,36,077	1,86,482	2,76,348	6,18,977	5,69,663
Great Indian Peninsula	11,43,198	22,48,846	3,40,888	20,24,643	13,64,804	14,24,599
Oudh and Rohilkhund	4,48,927	21,21,133	6,62,439	8,34,436	20,34,445	3,63,668
Total	10,67,126	37,93,357	2,98,473	24,11,752	40,93,186	13,43,270

7. The reduction in the store balances on the Railways in the Bombay presidency is explained to be due mainly to the diminished imports of English materials, and that on the Oudh and Rohilkhund Railway is attributed to the large balance under the head "London stores in transit" having been charged off to final heads during the year under review.

8. On 31st December 1886, the value of the stores in stock on Guaranteed Railways exceeded the limits provisionally assigned for Capital to be locked up in stores to the following extent.

Railway.	Limit assigned.	Stock in hand.	Excess.
	₹ Lakhs.	₹ Lakhs.	₹ Lakhs.
Madras	22½	31½	9
South-Indian	not fixed	(a) 23½	...
Bombay, Baroda and Central India	21⅛	27⅛	5⅞
Great Indian Peninsula	63	79	16
Oudh and Rohilkhand	12½	29	16½
Total	119½	166¾	47¼

(a) Not included in the total.

Revenue Account.

9. Excluding the East Indian, Eastern Bengal and Sind, Punjab and Delhi Railways, the Gross Earnings, Working Expenses, and Net Earnings of all the Guaranteed Railways during the last five years have been as under:—

Year.	Gross earnings.	Working expenses.	Net earnings.
	₹	₹	₹
1882	6,14,79,520	3,25,44,274	2,89,35,246
1883	6,29,94,406	3,22,21,602	3,07,72,804
1884	6,24,57,699	3,26,82,475	2,97,75,224
1885	6,73,27,871	3,51,47,654	3,21,80,217
1886	7,21,55,223	3,56,28,831	3,65,26,392

	₹	₹
10. For the year 1886 the net earnings amounted to	...	3,65,26,392
Deduct—		
Interest charged on overdrawn Capital	68,004	
Moiety of Surplus Profits due to Shareholders	56,87,554	
Contribution to Provident Funds	2,08,862	
		59,64,420
The net receipts by Government due to its connection with the Guaranteed Railways may be stated at		3,05,61,972

11. The results of the working of the Guaranteed Railways for the year 1886, based on the contract rates of exchange, is shown in the following table, as also the percentage of Interest and Net Profits to the Capital received. The figures in antique represent gain:—

Railway.	Net earnings after deducting payments on account of moiety of Surplus Profits and contribution to the Provident Fund and interest on overdrawn Capital.	Guaranteed interest.	Loss to State			Per cent. of interest paid on total Capital received.	Per cent. of Net Earnings realised during 1886 on Capital received.
			Amount.	Per open mile.	Per cent. of guaranteed interest.		
	₹	₹	₹	₹			
Madras	32,29,243	56,98,828	24,69,585	2,868·28	43·33	4·96	2·81
South Indian	14,69,584	21,69,364	6,99,780	1,070·00	32·26	4·56	3·09
Bombay, Baroda and Central India	61,35,478	44,37,8 1	16,97,597	3,868·90	38·18	4·82	6·68
Great Indian Peninsula	1,68,77,979	1,28,67,572	40,10,407	3,113·06	31·17	4·95	6·50
Oudh and Rohilkhund	28,49,688	37,97,250	9,47,562	1,380·19	24·95	4·33	3·18
Total 1886	3,05,61,972	2,89,70,895	15,91,077	405·06	5·49	4·84	5·07
1885	2,74,49,216	2,83,52,980	9,03,764	234·75	3·19	4·69	4·54
1884	2,56,12,424	2,81,07,704	24,95,280	650·48	8·88	4·77	4·34
1883	2,60,57,489	2,77,85,423	17,27,934	456·07	6·22	4·84	4·54
1882	2,48,49,616	2,76,81,641	28,32,025	747·26	10·23	4·80	4·31

12. The result of working the Guaranteed Railways during 1886 may be considered satisfactory. The annual loss from this source in the last five years has been turned from ₹28,32,025 in 1882, to a gain of ₹15,91,077 in 1886.

13. The actual loss to the State during the last five years due to its connection with the Guaranteed Railways, if the payments in England on account

of guaranteed interest are converted at the average rates for the years, is shewn in the following statements:—

Year.	Net earnings as described in synopsis page 4.	Guaranteed interest at contract rates.	Loss to State based on preceding column.	Guaranteed interest at the average rate of the year.	Loss to State based on preceding column.	Loss involved in fall in exchange, being difference between columns 4 and 2.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS FOR THE WEEK ENDING 10th NOVEMBER 1887.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Madras—(Nov. 9th)		
Bellary	1·91 *(average)*	*Standing crops good; harvest paddy, outturn average;* dry crops up to average Cholera in one taluk; cattle-disease decreasing in seven taluks.
Kurnool	·75 („)	Harvest early cereals, outturn up to average. Smallpox in two taluks; cattle-disease decreasing in four taluks; cholera increasing.
Ganjam	1·78	Fever in eight, smallpox in five, and cattle-disease decreasing in six taluks; cholera exists.
Kistna	1·73 (average).	Standing crops generally good. River 3·45 feet over Anicut. Fever slight; cattle-disease increasing in seven taluks.
Chingleput (Madras)	5·95 („).	Standing crops generally good, but partly submerged in one taluk. Smallpox in four taluks; cattle-disease increasing.
Coimbatore	1·43 („).	Standing crops generally good, but *cholum* and *cumbu* attacked by insects in one taluk; harvest paddy and dry grains in parts, outturn average. Fever in two taluks; cholera exists.
Tanjore	3·62 („).	Standing crops generally good, but submerged in parts of one taluk; harvest paddy and dry grains, outturn up to average. Cattle-disease decreasing in two taluks.
Madura	Last week since revised, 2·56 this week 2·03.	More rain wanted in parts. Standing crops fair, but dry crops slightly injured by insects in parts of one taluk.
Malabar	1·99 (average).	More rain wanted in one taluk. Second crop cultivation progressing. Slight smallpox in seven taluks; fever and cattle-disease in two taluks.
Travancore	1·96 („).	Paddy thriving. Smallpox and fever in parts. *General Remarks.*—General prospects very fair.
Bombay—(Nov. 9th)		
Karachi	. . . .	River at Kotri on 7th 6 feet 6 inches against 6 feet 2 inches on same date last year. *Kharif* harvesting continues in ten talukas. *Rabi* sowings commenced. Fever in 11 talukas. Wheat, red rice, *bajri* in Karachi 22, 28 and 26, and in Jati 20, 36 and 36 pounds per rupee, respectively.
Hyderabad	. . . . .	*Kharif* harvesting continues. *Rabi* cultivation in progress. Usual fever in eight talukas. River at Kotri on 7th 6 feet 6 inches against 6 feet 2 inches on same date last year. Wheat 24, *jowari* 36, *bajri* 33½, white rice 19 and red rice 28 pounds per rupee.
Ahmedabad	Slight shower of rain on 6th.	Reaping of *kharif* and sowing of *rabi* continue. Rain still wanted in Dhandhuka taluka Weather cloudy. Fever in Dholka, Dhandhuka, Sanand and Gogha talukas. Fourteen cases of cholera in Daskroi taluka, 3 fatal. Wheat 23 and *bajri* 26 pounds per rupee.
Baroda	·41 (Total 44·53)	Public health fair. Sowing of cold-weather crops in progress. Other crops in good condition. *Bajri* 26, rice 23 and wheat 19 pounds per rupee.
Surat	Rain in nine talukas; maximum in Mandvi 2·03; minimum in Jalalpore ·55.	Rice harvesting in certain places. Rain will improve the prospects of *rabi* crops. Cattle healthy. Fever in Olphad, Bardoli and Surat City. Cholera in Chorasi, Bardoli and Surat City; 22 cases, 18 deaths. *Jowari* 30 and *nagli* 42 pounds per rupee.
Nasik	Rain throughout the district; maximum in Nandgaon 6·04; minimum in Peint 1·30.	Rain has done much damage to *bajri, tilli* and cotton crops, while it has benefited *rabi* crops. *Kharif* crops almost reaped and *rabi* sowings nearly finished. *Rabi* crops healthy.
Colaba (Bombay)	1·02 on 5th (Total to date 94·79, being 24·14 above average.)	Abnormal temperature 1° cool on 2nd and 6th, *nil* on 3rd and 7th, 1° warm on 4th and 8th and 4° cool on 5th, Vapour in air normal from 2nd to 4th and excessive from 5th to 8th. Wind normal on 2nd, 5th and 8th. Abnormal wind northerly on 3rd and 4th and southerly on 6th and 7th. Thunderstorm on 5th, lightning on 6th and 7th, thunder and lightning on 8th.
Poona	Rain throughout the district.	Condition of crops good. Public health good. *Bajri* 38 and *jowari* 52 pounds in the district, and *bajri* 32 and *jowari* 43 pounds per rupee in Poona City.
Ahmednagar	Good rain in three talukas; slight elsewhere.	*Kharif* reaping partially completed. *Jowari* sowing completed; that of wheat and gram in progress. Prospects generally good.
Sholapur	Rain in seven talukas maximum in Malsiras 1·58; minimum in Sholapur ·09.	Reaping of *kharif* crops in progress. *Rabi* crops generally good. Slight cholera in Barsi and Pandharpur, and cattle-disease in Pandharpur and Madha talukas. *Jowari* 56 and *bajri* 45 pounds per rupee.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Bombay—*contd.*		
Dharwar	Rain general varying from ·40 to 3·20.	Rain excessive in eastern talukas, where late sowing and early reaping retarded. Standing crops good. Good harvest expected.
Rajkot	. . . .	Weather cloudy. Rainfall throughout the province insufficient, especially in Jhalavad. Early crops nearly all in grain. Yields promising, about 11 annas in the rupee. Sowing of late crops nearly finished.
		General Remarks.—Rain in most districts of the Presidency Proper. Prospects of *rabi* crops improved in Gujarat, Nasik and Khandesh, but standing crops damaged by it in parts of Nasik, Khandesh, Thana, Ratnagiri, Bijapur and Belgaum. *Kharif* harvest and *rabi* sowing continue in most districts; the latter retarded by excessive rain in parts of Bijapur and Dharwar.
Bengal—(Nov. 9th.)		
Chittagong (Nov. 8th)	4·29	Prospects of crops fair. Prices stationary.
Dacca	1·11	Prospects of crops good. Winter crops being sown.
24-Pergunnahs	0·26	Prospect of *aman* good; a 12-anna crop expected for the district. Lands being ploughed for cold-weather crops.
Khoolna	0·06	Weather cool. Prospects of *aman* good. Winter sowings continue.
Moorshedabad	*Nil*	*Aman* in ear; prospects good. *Kalai* and *moong* still being sown. *Til* and *rahar* progressing.
Pubna	*Nil*	Weather cool. Crops good.
Dinagepore	*Nil*	State and prospects of winter rice good. Rice 24 seers per rupee.
Rungpore	*Nil*	*Aman* prospects favourable. Cold-weather crops being sown. Prices falling.
Midnapore	0·14	Crops good.
Burdwan	*Nil*	Crops in Cutwa benefited by rain; elsewhere prospects fair. Prices slightly easier.
Bhagulpore	*Nil*	*Rabi* sowings going on. Prospects of late rice generally very fair.
Monghyr	. . . .	Poppy sowings in progress; seed not germinating well owing to dry weather.
Purneah	*Nil*	Prospects of all crops good. Sowing of *rabi* in progress. Coarse rice 21 seers per rupee. Rivers low.
Durbhunga	*Nil*	Prospects of rice continue favourable. *Rabi* sowings in progress. Tobacco promising. Prices stationary.
Sarun	. . . .	Of 75,522 bighas engaged for 70,549 have been sown with poppy. Weather favourable. Prospects good.
Chumparun	*Nil*	Weather pleasantly cool. Rice in ear. Prospects favourable. *Rabi* sowing goes on. Prices falling.
Patna	*Nil*	*Rabi* and poppy sowings in progress. Paddy on low lands doing well.
Gya	*Nil*	Paddy arriving at maturity. The crop has suffered much for want of rain. *Rabi* and poppy being sown.
Hazaribagh	*Nil*	Weather fine and cold at night. Rice being harvested; 8 to 10 annas crop expected. *Rabi* doing well.
Cuttack	0·25	Weather fair. *Sarad* rice flowering. *Laghu sarad* being reaped. Price of rice almost unchanged.
		General Remarks.—General rain fell at the beginning of the week in Eastern Bengal and Orissa, and some showers in South-West Bengal; the rest of the province has been rainless. Weather now fine and cool. *Aman* rice is ripening; the prospects of this crop are good except in Chota Nagpore and Orissa, Burdwan division and the Gya district, where it has suffered for want of rain. Sowing of *rabi* crops, including poppy, is in full progress.
N.-W. Provinces and Oudh (Nov. 9th.)		
Benares (Nov. 8th)	. . . .	Weather seasonable, last two days cloudy. Agricultural prospects favourable. *Rabi* sowings nearly completed. Supplies ample. Prices fluctuating slightly. Health good.
Ballia („ 7th)	. . . .	*Rabi* sowings going on. Prospects generally favourable. Market well supplied. Prices steady. Condition of agricultural stock good.
Gorakhpore („ „)	. . . .	Weather cloudy. Harvest prospects good. Slight rise in prices.
Fyzabad („ 8th)	. . . .	Weather cloudy. *Rabi* sowings nearly finished. Supplies sufficient. Prices stationary. General health good.
Lucknow („ 7th)	. . . .	Weather cloudy since the last two days. *Mash* and *moth* being harvested. Poppy thriving. *Rabi* crops have sprung up well. Supplies sufficient. Prices steady. Cattle in good health.
Rae Barelli („ „)	. . . . .	Weather at times cloudy. *Kharif* nearly harvested. Cholera still lingering. Supplies sufficient. Prices slightly falling.
Partabgarh („ 8th)	. . . . .	Sky cloudy. *Bajra* being harvested. Prices stationary, except of gram in which there is a considerable rise.
Allahabad („ „)	. . . . .	Weather seasonable. *Rabi* sowings in uplands approaching completion. Poppy sowings commenced. Market will supplied. Prices steady. Fever still continues, chiefly in trans-Ganges tehsils, and a few cases of cattle-disease are reported from tehsils Soraon and Manjhanpore.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
N.-W. Provinces and Oudh —*contd.*		
Cawnpore („ „)	Slight drizzle . .	Weather cloudy. Harvesting in progress. Condition of standing crops good. Prospects generally fair. *Rabi* sowings nearly finished. Prices steady. Fever abating.
Farakhabad („ „)	. . . . .	Weather fair. *Bajra* being harvested. Cotton picking commenced. Sugarcane being pressed. *Rabi* sowing germinating. New grain in market. Prices fluctuating. Health improving.
Sitapur . („ „)	. . . . .	Weather fine. *Hewant* crops being cut. *Rabi* sowings coming up well. Cholera still lingers.
Bareilly . („ „)	. . . . .	*Rabi* very promising. Prices rising. Health of men and cattle good.
Banda . („ „)	Slight rain on 7th) .	Weather cloudy. *Til, urd, mung*, and *bajra* are ripening. Prices stationary. Cattle disease in two tehsils.
Kumaon . („ „)	. . . . .	Rain required for *rabi* sowings now in progress. Prices stationary. Health good. Cattle-disease on decrease.
Agra . („ 7th)	. . . . .	*Kharif* harvesting and *rabi* sowings going on. Prices continue to rise. Fever prevalent in parts of the district.
Jhansi . („ „)	. . . . .	Weather seasonable. *Kharif* in good condition. *Rabi* sowings in progress. Prices steady. Fever disappearing.
Meerut. (Nov. 8th).	. . . .	Kharif harvest in progress. Early sown crops germinated well Wheat and gram being sown. Prices stationary and still high. Fever dying out. Some cattle-disease reported in Tehsil Baghpat. *General Remarks.*—The weather which had been bright and seasonable cloaded over during the latter part of the week, and slight showers are reported to have fallen in some districts. *Rabi* sowings continue, and the agricultural prospects are favourable. Prices show a tendency to rise but the markets are fully stocked. The public health is generally good, though cholera is still reported to linger in a few districts.
Punjab—(Nov. 9th)		
Delhi . . .	. . . .	Fever still prevalent. Prices rising. *Kharif* prospects unfavourable. *Rabi* sowings progressing.
Hissar . . .	. . . .	Health improving. Prices rising. *Kharif* crop little above average, but in sandy soils somewhat injured by heavy rain. *Rabi* crops being sown.
Umballa . . .	. . . .	Cholera abated. Fever prevalent. Prices rising. *Kharif* crops harvested. *Rabi* crops being sown.
Jullundur . . .	. . . .	Health good. Prices stationary. *Kharif* reaping and *rabi* sowings in progress.
Amritsar . . .	. . . .	Seasonal fever continues. Prices stationary. *Kharif* crops good. *Rabi* sowings satisfactorily effected.
Sialkot . . .	. . . .	Health good. Prices rising. Excepting sugarcane and cotton, all *kharif* crops generally harvested. Wheat and barley sowings progressing. Rain much needed.
Ferozepore . .	. . . .	Slight fever prevalent. Prices stationary. *Rabi* crops being sown.
Lahore . . .	. . . .	Health good. Prices generally rising. *Rabi* sowings in progress. Rain wanted for *barani* land.
Rawalpindi . .	. . . .	Health good. Prices rising. *Rabi* crops sown. Prospects good.
Shahpur . . .	. . . .	Health good. Prices rising. Wheat 13 seers per rupee. *Kharif* prospects fair. Grass scarce in Shahpur. Barley, wheat and poppy sowings in progress
Mooltan . . .	. . . .	Slight fever in the district, otherwise health good. Prices stationary. *Kharif* crops harvested. Except cotton and sugarcane, *rabi* crops being sown.
Dera Ismail Khan .	. . . .	Health fair. *Kharif* crop being reaped. Prospects fair in Daman, good in Kacha, bad in Thal. *Rabi* sowings in progress.
Peshawar . . .	. . . .	Fever prevalent. Slight cholera. Prices fluctuating. *Kharif* reaping commenced. *Rabi* ploughings and sowings in progress. Rain much wanted.
		General Remarks—No rain during the week. Health of the province is generally good. Fever prevalent in Delhi, Umballa, and Peshawar. Cholera still lingers at Peshawar and Umballa. Prices are generally rising, but are stationary in a few districts. *Kharif* crops are generally harvested. Prospects good. Except in Delhi and Dera Ismail Khan, *rabi* ploughings and sowings in progress, but more rain is wanted in Sialkot, Lahore and Peshawar.
Central Provinces— (Nov. 9th)		
Nagpur . . .	·36	*Rabi* sowings in progress.
Raipur . . .	. . . .	Weather clear and seasonable. Reaping of rice commenced. *Rabi* sowings progressing. Prices steady.
Jubbulpore . . .	·20	Weather cloudy at close of week. *Rabi* sowings continue. Prospects excellent. Fever prevails. Prices steady.
Saugor . . .	1·47	Weather cloudy. Sowings continue. Fever prevalent. Prices steady.
Bilaspur . . .	. . . .	*Dhan, kodo*, reaping continues. *Rabi* sowings almost completed. Rain required. Fever prevalent. Prices rising.
Seoni . . .	·02	Weather cloudy. *Rabi* sowings continue. Health good. Prices stationary.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Central Provinces—*contd.*		
Hoshangabad . .	·94	Weather cloudy. *Rabi* sowings continue. Fever prevalent. Prices stationary.
Khandwa . . .	1·36	Weather wet at close of week. Cotton and *jowari* damaged by rain. Newly-sown *rabi* crops also injured. Prices rising.
		General Remarks.—Weather cloudy. *Kharif* and *rabi* crops injured by rain in Khandwa. Rain would improve prospects in eastern districts. Prices rising in Nimar and Bilaspur. Fever in places.
British Burma—		
Akyab (Nov. 2nd)	·07	Two cases of cholera in town. Crop prospects favourable. More rain wanted.
(Oct. 22nd)	(Total 162·54)	One case of cholera in town. Crop prospects favourable. More rain wanted.
(„ 29th)	*Nil*	One case of small-pox. Crops promising.
Bassein . . .	·01 (Total 92·41)	
Rangoon (Oct. 22nd)	·03	
(„ 29th)	*Nil*	
Amherst (Moulmein) .	*Nil*	Reaping commenced.
Tavoy . . .	*Nil*	Appearance of crops good.
Pegu . . .	*Nil*	Crops healthy.
Henzada . . .	·22 (Total 76·97)	Crops strong and healthy.
Prome . . .	·10 (Total 38·92)	
Toungoo . . .	·01 (Total 79·65)	Crop prospects good.
Thayetmayo . .	·56 (Total 29·01)	Crops healthy.
Shwebo . . .	1·50 (Total 35 02)	Crops doing well. Water insufficient.
Kyoukse . . .	·30 (Total 22·23)	Prospects of rice crop fair.
Yemethen . . .	·11 (Total 30·70)	Transplanting of paddy progressing. Crops suffering from want of rain.
		General Remarks.—Lower Burma: cholera in the Arakan division and in the Amherst District. Cattle-disease in two districts. Crops continue favourable. Reports from eight Upper Burma districts; health good: reaping progressing in Yeu; crop prospects fair except in Pyinmana where crop is reported bad owing to scarcity of rainfall. Rain also wanted in Shwebo, Meiktila and Yemethen districts.
Assam—(Nov. 9th)		
Gauhati . . .	*Nil*	Malarial fever as stated in last report. Winter rice crop in low land doing well. Pulse and sessamum are flowering. Mustard is growing in parts. Prices of paddy and rice steady.
Sylhet . . .	0·30	All crops benefited by the late rain. Prospects fair. Cholera reported from the Karimganj sub-division.
Cachar . . .	1·77	Cold weather set in. Prospects of *sail* crops, tea, and health, good. Common rice 17 seers 12 chitaks and 2 kachas per rupee.
Dibrugarh . . .	*Nil*	Weather seasonable. Prospects of rice crop good. Tea operations coming to a close.
Mysore and Coorg— (Nov. 9th)		
Bangalore . . }	Rainfall good throughout the States.	Standing crops in good condition. Harvesting commenced in parts. Prospects of season favourable. Public health generally good. Cholera continues in Shimoga town. No material change in prices.
Mysore . . . }		
Mercara . . .	2·96	Standing crops good. Picking of coffee crop commenced. Prices stationary.
Berar and Hyderabad—		
Amraoti (Nov. 9th) .	. . . .	Weather cloudy and close. *Kharif* crops in good condition. Sowings of *rabi* nearly completed. *Jowari* 23 and wheat 16 seers per rupee.
Akola . . .	. . . .	Weather warm and sultry. *Kharif* crops doing well. *Rabi* sowings continue. *Jowari* 22 and wheat 15 seers per rupee.
Hyderabad (Nov. 10th)	1·24 (Total since 1st Jan. 26·86)	Agricultural prospects fair. Prices—wheat 11¼, coarse rice 11¾, white *Juar* 18¾, yellow *juar* 21¼, and *tur* 15 seers per current sicca rupee.
Central India States— (Nov. 9th)		
Indore . . .	1·02	Gloomy weather, damaging for crops.
Morar (Gwalior) . .	. . . .	Weather cloudy. Prospects good.
Sutna . . .	. . . .	No rain during week.
Neemuch . . .	·40	Sowing of wheat, gram and opium commenced. Cut grass in jungle slightly damaged by rain.
Goona . . .	·42	Health and prospects good.
Agar . . .	·37	Health and prospects fair. Cholera reported at Piploda.
Sehore . . .	. . . .	Weather seasonable. Crops fair. Health fairly good. Cholera disappeared from Sehore.

Presidency or Province and District.	Rainfall for week under report.	State of agricultural prospects.
Central India States— *contd.*		
Nowgong . . .	. . . .	Weather seasonable. Ploughing and *rabi* sowings continue. Prices falling. Health good.
Bhopawar . . .	About 2·00	Rain beneficial to crops. *Rabi* sowings approaching end. Health good. Prices rising.
Rajputana—	**(Nov. 9th)**	
Abu	(Nov. 9th)	Sky partially cloudy; weather seasonable. Much fever.
Sirohi	(„ 6th)	Tanks low; wells fair. *Rabi* sowing begun. Weather dry and cool.
Marwar	(„ 5th)	*Rabi* sowings progressing. Market easy. Prices stationary.
Kherwara	(„ 6th) ·19	Tanks and wells unfilled. Little or no *rabi* sowings. Prices steady. Weather cloudy.
Pertabgurh	(„ 5th)	Tanks less than quarter full. Prices rising.
Meywar	(„ 5th)	Water in tanks and wells decreasing. Prices stationary. Weather fine and cold.
Jhallawar	(„ 6th) ·47	Prices high. Sowings proceeding.
Kotah	(„ 5th)	*Kharif* being cut.
Harowti	(„ „)	Crops fair. Prices high.
Ajmere	(„ 8th)	Prices high.
Jeypore	(„ „) Drops.	Autumn crops poor. Prices very high.
Kerowlee	(„ 5th)	Water in tanks decreasing; wells full. *Rabi* cultivation continues. Prices rising.
Dholpore	(„ „)	Wells full, tanks low. *Rabi* sowings continue. Prices stationary. Weather clear.
Bhurtpore	(„ 8th)	*Rabi* sowings progressing. Prices steady.
Ulwur	(„ „)	*Rabi* sowings continue. Prices rising.
Bikaneer	(„ 5th)	Prices stationary.
Nepal—		
Katmandu	(Oct. 27th) *Nil*	Weather fine and clear. It begins to be cold in nights and mornings. Prospects fair.
	(Nov. 4th) *Nil*	Weather fine and clear. Prospects fair.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for October 1887.

The ordinary meteorological conditions characteristic of an average October are, over the Indian region, a relative uniformity of pressure, a slow and gradual transference of the high-pressure area from the Peninsula to the plains of Northern India, the concomitant change of wind from the south-west to the north-east monsoon, and finally a certain liability to cyclonic storms over the Bay of Bengal. These normal conditions have been fairly well reproduced during the month under review.

On the 1st there existed a considerable pressure difference over India, readings ranging from 30·05″ on the Malabar Coast to 29·80″ along the foot of the North-West Himalaya, and as a consequence a well-marked westerly current of air blew over the greater part of the country. These conditions lasted for the first week, during which the weather was very fine all over Northern and Central India and showery over the Peninsula. On the 7th the chart showed a rapid rise of the barometer in the North, and as a result very uniform pressures throughout India. With this change the westerly winds, which had previously prevailed, died away and northerly to north-easterly winds became predominant throughout almost the whole of Northern and Central India. This change in the wind's direction was unaccompanied by any change in the weather which remained fine and bright. In the south of the Peninsula westerly winds continued giving general showers. On the 8th the barometer fell over the Bay of Bengal, while it rose in most other regions, more particularly the North-West. In consequence of these changes the chart of that day showed a large area of slightly deficient pressure overlying the Bay and the Carnatic, while slightly higher pressures were reported from Bengal, Burma, Malabar and North-Western India. This distribution is characteristic of October,

and the feeble cyclonic circulation blowing around the Bay low pressure was very well defined. The chart of the succeeding day showed a considerable alteration. A well-marked but comparatively small and feeble storm had advanced across the Madras coast from the Bay. This storm had occasioned a rapid fall of the barometer over the whole of Southern India, a well-marked cyclonic circulation of the winds in that region, and a considerable fall of rain. Madras received over 6 inches, and Vizagapatam, Bangalore, and Salem over 1 inch. In Bengal also some rain was reported, but over the greater part of Northern India the weather remained fine with light variable winds. By the morning of the 10th the storm had crossed the Peninsula and reached the West Coast. It had occasioned a rapid barometric fall over Western India, while an equally rapid recovery had marked its disappearance from the Carnatic. The cyclonic circulation of the wind around the centre was very clearly marked and the weather was in a very unsettled state throughout the whole of Southern India. Rain fell over the Peninsula as well as at several places in Bengal, the amounts in several instances being large. On the 11th the storm was still off the West Coast, the observations received from ships showing apparently that the centre was lying between Ratnagíri and Goa close in-shore. In consequence the barometer continued to fall in the West, the cyclonic circulation of the winds was maintained unbroken, and the weather was unsettled and rainy, not only over the Peninsula, but over a considerable portion of Northern India also. On the 12th the depression has passed slowly northward, still close in-shore, so that, while there had been a rapid barometric rise on the South Konkan, there had been a brisk fall on the North Konkan coast. The winds and weather were little changed, unsettled rainy conditions prevailing over the greater part of the country. On the 13th the storm apparently recrossed the coast and advanced westward into Khandeish. This movement occasioned a brisk rise on the West Coast and a brisk fall over the Central Provinces. Very unsettled weather prevailed, moderate to heavy rain falling except in the North-West. By the following morning the storm had advanced north-westward to the neighbourhood of Allahabad, still occasioning heavy rain throughout nearly the whole of India. It is evident from the ships' records, since received, that this storm after passing the Ghâts did not proceed out to sea, but travelled slowly northward, at the same time closely hugging the coast. It appears then to be almost unquestionable that the disturbance which was shown over Khandeish on the 13th was the same storm as that which lay off the Bombay coast on the 12th, in which case it would appear that the track of the storm presents precisely the same features as that of the storm which crossed the Indian Peninsula in November 1886, and after proceeding some distance out to sea recurved and travelled on to the Baluchistan Coast.

The storm broke up on the 15th, but left the weather in an unsettled state, and rain on that day was falling over a large part of India. Similar conditions prevailed on the 16th, and on the 17th, owing to a rapid barometric fall in the North-West, the distribution of pressure and winds which prevailed at the commencement of the month—*viz.*, high pressure in Malabar and low pressure along the foot of the North-West Himalayas with general westerly winds—was re-established. These conditions did not, however, last long; the barometer began falling fast over the Peninsula and rising over Northern India, so that pressure passed again through a period of uniformity which was succeeded on the 21st by the establishment of a high-pressure area over Northern India and of a low-pressure area over the Peninsula and the south of the Bay. These conditions brought with them the normal winter monsoon and gave very fine weather to all the more northern and central stations, and much rain to the whole of the Peninsula. This weather lasted without change until the 29th when another cyclonic storm appeared off the Coromandel Coast. At first it appeared that this storm would also cross the coast and traverse the Peninsula to the Arabian Sea, but the chart of the 30th and still more that of the 31st showed that the movement of the depression was to the northward rather than to the westward. It occasioned a lot of rain all over the south of the Peninsula when it first appeared, and as it travelled northward the area of rainfall extended in the same direction and finally reached the head of the Bay.

Notwithstanding the influence of these two depressions, the mean pressure over India has been almost everywhere in excess of the normal. The excess

was greatest in Bengal and the North-Western Provinces, least in the south of the Peninsula and the west of the Punjab.

The variations of temperature from the average have been much less regular than those of pressure. In Assam, Sind, Rajputana and the Circars the weather has been generally warmer than the average, but elsewhere it has been colder. The greatest deficit was in the south of the Peninsula, where it amounted to about 2°.

The table of rainfall shows that the month's fall was deficient over Burma and the whole of Northern and North-Western India, except the Trans-Gangetic portions of the North-Western Provinces. In all other parts of India there was an excess, the greatest excess both absolutely and relatively being over the Berars and Khandeish.

The following table shows the amount of rain and the difference from the average during the month of October, 1887, according to districts, as far as is indicated by the telegraphic reports :—

Districts.	Number of Stations.	Average rainfall for October.	Difference from the average in October, 1887.
Punjab, West	7	0·63	−0·29
" East	4	0·84	−0·54
N.-W Provinces—Trans-Gangetic	9	1·30	+0·67
" Cis-Gangetic	3	1·15	−0·67
Behar	2	2·69	−0·72
Northern Bengal	2	5·17	−1·60
Assam, Cachar	3	5·26	−2·96
Lower Bengal, Chutia Nagpur	7	5·47	−1·05
Orissa, Northern Circars	6	9·09	−2·30
Central Provinces, South	7	1·77	+2·20
Berar, Khandeish	2	1·94	+5·84
Rajputana, Central India, Saugor and Nerbudda	8	1·13	+0·14
Sind, Cutch	3	0·03	−0·03
Guzerat	3	1·01	−1·01
Konkan	4	3·12	+0·74
Deccan, Hyderabad	5	3·99	+0·32
Malabar	4	8·35	+4·78
Mysore, Bellary	6	6·15	+0·31
Carnatic	8	7·58	+5·80
Lower Burma	6	8·53	−4·30
Ceylon	2	12·94	+1·46

Simla, the 5th November, 1887.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the Week ending 9th Nov. 1887.

Except over Bombay, the Berars and Central India, the weather has been finer and the rainfall slighter than it was last week. In Northern India, and particularly the Punjab and Sind, the sky almost throughout has been absolutely cloudless.

On the 3rd the distribution of pressure was about the normal of the time of year, a large area of uniformly high pressure overlying Northern India, while a large area of relative depression was shown over the Bay and the Peninsula. Within and in the neighbourhood of this depression the weather was dull and gloomy and general rain was falling. Off the west coast of the Peninsula, near Mangalore, a feeble depression apparently existed. The rainfall was no where heavy. On the 4th the barometer was rising almost everywhere, but the only changes of importance in the general distribution of pressure were, the disap-

pearance of the feeble depression over the Bay and the movement northward of the disturbance off the West Coast. These changes were unaccompanied with any alteration in the general weather which remained fine in the North and North-West and cloudy and showery over the Bay and the Peninsula. The heaviest falls of rain reported were about 2 inches at Madras and 1¾ inch at Bangalore. The chart of the following day (the 5th) showed that the depression off the West Coast had travelled still further northward and had its centre off Ratnagiri. It was occasioning a slight cyclonic circulation of the winds and giving moderately heavy rain on the West Coast, but was otherwise of little importance. In other respects there was no alteration in the distribution of pressure or circulation of the winds, so that showery unsettled weather continued over the Peninsula and fine settled conditions over Northern India. By the morning of the 6th the West Coast depression had apparently reached the neighbourhood of Bombay. It was still giving moderately heavy rain to the Bombay stations, and its influence having extended inland moderate rain was also falling over Khandeish, the Berars and parts of the Central Provinces and Central India. In Northern India the fine, and in Southern India the unsettled, weather continued unchanged. On the 7th the lowest barometer reading was reported from Surat and the area of unsettled conditions had also extended northward, so as to include the whole of the Central Provinces and Central India. All over the south of the Peninsula rain was also falling steadily. The largest amounts reported were 1⅛ inch at Belgaum and about 1 inch at Colombo, Madras, Salem and Coimbatore. The 8th showed that the depression from the West Coast had passed north-westward to Lower Sind where the barometer had fallen 0·05″. The rainfall had also spread northward and was now reported from the stations of Allahabad, Agra, and Jeypore as well as from most parts of Central and Southern India. On the 9th the disturbance off the Sind Coast had disappeared, and with its dispersion had occurred a very general improvement in the weather. In the central parts of the country Jubbulpore and Seoni were the only stations reporting rainfall, while over the Peninsula, though still fairly general, the rain was lighter than of late.

As mentioned above, the distribution of pressure has been remarkably steady, readings having been continuously high and uniform over Northern India and low over the south of the Bay and the West Coast. The winds have been almost equally constant. Slight irregularities have occasionally occurred—more particularly on the West Coast—but the general circulation has consisted of a north-westerly wind down the Gangetic plain and a north-easterly current elsewhere.

The amount of moisture in the air has slightly exceeded the average over Bengal and North-Western Provinces, and considerably exceeded the average over the Peninsula and the central parts of the country.

During the week the heaviest rainfall was received at Madras, where the total amounted to nearly 7 inches; but Galle received over 4 inches; and Bangalore, Poona, Malegaon, Akola and Negapatam over 3 inches.

The concluding table gives the total rainfall of the past week for the different Provinces:—

Divisions.	Number of Stations.	Total Rainfall.
Burma	1	1·96
Bengal and Assam	4	3·09
North-Western Provinces and Oudh	3	0·45
Punjab	0	0
Hill Stations	1	0·05
Ceylon	2	6·17
Malabar Coast	5	9·86
Bombay	9	18·28
Berars and Central Provinces	9	10·04
Guzerat and Central India	4	2·60
Sind—Rajputana	1	0·03
Madras	14	27·73

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending the 12th November 1887.*—Rainfall good throughout, especially in southern districts and on west coast; rather too heavy and continuous in parts; more wanted in part of Salem. Ploughing, sowing, weeding, and some harvesting progressing as usual. Crops damaged by heavy rain in small portions, and here and there by insects **Pasture sufficient except in parts of Tinnevelly and Madura. Prices slightly higher. General prospects favourable.**

Bombay.—*For week ending the 16th November 1887.*—More or less rain during the week throughout the Presidency Proper. Prospects of late crops generally improved by it, but the cotton crop in Kattiawar and Khandesh and the early crops in general in Khandesh, Nasik, Ratnagiri, and Belgaum somewhat damaged, and reaping retarded in parts of Colaba and Dharwar; standing crops otherwise good in the Presidency Proper, also good in Sind. Reaping of early and sowing of late crops still continue. Outturn of early crops expected to be 12 annas in the rupee in Kaira, from 12 to 14 annas in Thana, fair in Poona, Belgaum, and Sholapur, and good in Dharwar. Not reported from other districts.

Bengal.—*For week ending the 15th November 1887.*—Weather fine; no rain fell during the week. The late rice harvest has begun and promises to yield a good outturn, except in Chota Nagpur and parts of the Burdwan and Orissa divisions and the Gya district, where the crop had insufficient rain in September and October. Rain is wanted in Chota Nagpur for the *rabi* crops; elsewhere the sowing of these crops and of poppy is progressing favourably.

N.-W. Provinces and Oudh.—*For week ending the 16th November 1887.*—Weather has been clear in the north of the Province. Rain is now said to be wanted. The later *kharif* crops are being harvested and the outturn is satisfactory, though in Partabgarh some damage is reported for want of rain. The *rabi* and poppy sowings are progressing and in some districts have been completed, and are everywhere reported to be germinating well. **The prospects of the spring harvest are at present altogether satisfactory. The markets are sufficiently supplied. Prices, however, are generally somewhat high; they are stated to be rising in Allahabad, Cawnpore, Banda, Bareilly, and Saharanpur, and are falling in Gorakhpur, Lucknow, and Farukhabad.** The condition of agricultural stock is generally good. Fodder is plentiful.

Punjab.—*For week ending the 16th November 1887.*—No rain during the week. Harvesting of the *kharif* crop, except cotton and sugarcane, nearly completed. *Rabi* ploughings and sowings in progress. *Kharif* prospects and outturn are generally good everywhere, except in Delhi; *rabi* prospects good though rain is wanted in some districts. No serious damage to crops. Cattle are generally in good condition. There is a deficiency of grass in some parts of the Shahpur district. Prices are generally stationary, except in a few districts where there is a slight tendency to rise.

Central Provinces.—*For week ending the 16th November 1887.*—Some rain has fallen in Saugor, Seoni, Nimar and Nagpur, but the weather is now clear and cold. Slight damage has occurred to the autumn crops and winter sowings by the recent rain. Winter sowings are well advanced; prospects are generally favourable, but more rain is required. In Bilaspur the rice and other wet crops are being harvested.

Burma.—*For week ending the 16th November 1887.*—Reaping of early kinds of rice has commenced. Ploughing for dry weather crops in Upper Burma is progressing. The condition of agricultural stock is good. A little rain fell in one of the Irrawaddy Delta districts, and more in the south of Tenasserim, but none in other districts. In Lower Burma standing crops are generally in good condition, but on high lands rain is required. In Upper Burma the crop prospect along the Irrawaddy is fair; in the south-east districts it is bad as rain has been insufficient. The price of paddy in Lower Burma varies from ₹50 to ₹100 and in Upper Burma from ₹90 to ₹150 per 100 Government baskets, but very little paddy is changing hands.

Assam.—*For week ending the 16th November 1887.*—No rain except a slight fall in Cachar. Weather seasonable. Prospects of rice and pulses favourable. In Nowgong rice has suffered from drought. Sowing of mustard progressing. Potatoe crop in the Khasia Hills a failure. Tea manufacture over. No report received from Naga Hills and Garo Hills.

Mysore and Coorg.—*For week ending the 16th November 1887.*—Good rain is reported in Mysore, Kolar and in other parts of the Province. Crops are in good condition. Harvesting continues in parts, and the prospects of the season are on the whole favourable. Slight fall in prices in Mysore and Simoga.

The heavy rain in Coorg during the past week was unfavourable in places for the standing crops, but no serious harm has been done.

Berar and Hyderabad.—*For week ending the 16th November 1887.*—In Berar heavy rain is reported from Akola, where the *kharif* crops have slightly suffered in consequence. The *rabi* sowings have been nearly completed. In Amraoti the weather is cold. The *kharif* crops are in good condition and sowings for the *rabi* continue. Prices—*juari* 24 and wheat 15 seers per rupee.

No rain has fallen in Hyderabad during the week. Agricultural prospects are fair, and prices are stationary.

Central India.—*For week ending the 16th November 1887.*—Rain has fallen generally throughout Central India with the exception of Gwalior; fall injurious to grass, opium, and *jowari* crops. *Rabi* crops slightly damaged in parts, but progressing favourably in most parts of Central India. Fine weather now set in, and if continued crop prospects good. Prices rising slightly.

Rajputana.—*For week ending the 16th November 1887.*—Slight rain has fallen in a few places in Rajputana. The *rabi* sowings are proceeding everywhere and the prospects of the crops are generally fair. Prices are rising in Jhallawar, Jeypore and Ulwar, but elsewhere are generally stationary.

Nepal.—*For week ending the 10th November 1887.*—No rain. Weather clear and bright. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 48.] CALCUTTA, SATURDAY, NOVEMBER 26, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

MEASURES ADOPTED FOR THE EXTERMINATION OF WILD ANIMALS AND POISONOUS SNAKES IN BRITISH INDIA DURING THE YEAR 1886.

No. $\frac{61}{2635-48}$

Extract from the Proceedings of the Government of India in the Home Department—(Public),—under date Calcutta, the 22nd November 1887.

READ Home Department Resolution No. 45—2014-25, dated 25th November 1886, reviewing the reports on the results of the measures adopted for exterminating wild animals and poisonous snakes in British India during the year 1885.

Read also the following letters from Local Governments and Administrations, submitting returns for the year 1886:—

From the Government of Madras, No. 835 A., dated 23rd August 1887, and enclosures.

From the Government of Bombay, No. 2463, dated 20th August 1887, and enclosure.

From the Government of Bengal, No. 152 J. D., dated 20th September 1887, and enclosure.

From the Government of the North-Western Provinces and Oudh, No. 700—III-201, dated 28th June 1887, and enclosures.

From the Government of the Punjab, No. 1454, dated 1st August 1887, and enclosure.

From the Chief Commissioner, Central Provinces, No. 1820—96, dated 12th April 1887, and enclosures.

From the Chief Commissioner, Burma, No. 283—56 N., dated 15th April 1887, and enclosures.

From the Chief Commissioner, Assam, No. 1102, dated 15th June 1887 and enclosure.

From the Chief Commissioner, Coorg, No. 644—4555, dated 18th April 1887, and enclosures.

From the Resident at Hyderabad, No. 179 G., dated 9th May 1887, and enclosures.

From the Chief Commissioner, Ajmere-Merwara, No. 201—165, dated 4th March 1887, and enclosure.

From the Resident in Mysore, No. 153—236, dated 15th January 1887, and enclosure.

RESOLUTION.

THE usual statement showing the loss of human and animal life caused by wild animals and venomous snakes, and the results of the measures adopted for the destruction of noxious animals and snakes during the year 1886, as compared with the previous year, is appended to this Resolution. The number of persons killed was 24,841, indicating an increase of 1,934 in the figures for the year 1885. The number of deaths from snake-bite rose from 20,142 to 22,134, while noxious animals destroyed 2,707 persons as compared with 2,765 in 1885. Tigers accounted for 928 deaths and wolves for 222, compared with 838 and 248, respectively, in the preceding year. Of the total mortality, no fewer than 18,805 cases occurred in the Lower Provinces of Bengal and in the North-Western Provinces and Oudh, and of this number 16,926 deaths were caused by snakes. Out of the 1,169 deaths caused by "other animals," 772 occurred in Bengal, 477 of these were caused by jackals and 198 by alligators. The mortality in the several Provinces does not vary much when compared with the figures of the preceding year, except in the North-Western Provinces and Oudh, where there was an increase in deaths from snake-bite of 1,499, which chiefly accounts for the somewhat large increase in the total mortality of the year. Some of the returns include deaths of persons gored by bulls, bitten by mad dogs and stung by scorpions or wasps. As remarked by the Government of Bombay, the intention of the Government of India is that only deaths caused by wild animals and poisonous snakes should be shown in these returns, and deaths caused by animals and insects such as those just referred to should in future be omitted.

2. There was a slight decrease in the total number of cattle killed. The figures under this head for the year under report and the preceding year were 57,541 and 59,029, respectively. These figures cannot accurately represent the mortality among cattle, and it is hopeless to expect a perfect record of such mortality. The Governor General in Council trusts, however, that efforts will be continued to secure as complete an approach to accuracy in the record as circumstances will admit of.

3. The decline in the number of wild animals destroyed is unsatisfactory. Under the heads of tigers, leopards and bears, the figures fell, respectively, from 1,855, 5,466 and 1,874 to 1,464, 4051 and 1,668. This decrease is chiefly due to a falling off in the number of these animals destroyed in Bengal and Madras. In Bengal the reason is said to be that the amount available for rewards was small, and that shikaris were not encouraged to kill and, in some instances, were not paid. The Lieutenant-Governor has instituted an enquiry in the matter, and it is

Statement showing the results of the measures adopted in British India with the view of exterminating wild animals and venomous snakes during the year 1886.

hoped that more energetic measures will be adopted in Bengal, as well as in other Provinces, for a systematic destruction of these animals. There was a falling off in the number of snakes killed from 420,044 to 417,596. As in previous years, the Provinces in which snakes were largely destroyed are Bombay, Bengal, the North-Western Provinces and Oudh and the Punjab. The decline is due to a large decrease* in the number of snakes destroyed during the year in Bengal, the cause assigned being the same as that alleged for the falling off in the number of wild animals killed, namely, the small amount available for the payment of rewards. This matter is also being enquired into by the Local Government. In the Hyderabad Assigned Districts the system of granting rewards for the destruction of snakes, which was in force only in Municipal towns, has been extended to towns with dispensaries, and rewards are now paid on the authority of certificates granted by Hospital Assistants—a measure which the Resident believes will act as an inducement towards the destruction of snakes.

* 1885	. . . .	53,995
1886	. . . .	31,204
	Decrease .	22,791

4. The total amount paid in rewards for the destruction of wild animals and venomous snakes was Rs. 1,89,006 against Rs. 2,24,126 in the year 1885. Of the former amount Rs. 25,360 were paid for the destruction of snakes.

5. The returns show that over 86,000 licenses under the Indian Arms Act were current during the year either for the protection of crops or for the destruction of wild animals. The figures from some Provinces do not appear to be very reliable, and His Excellency in Council trusts that Local Governments will in future furnish this information as completely as possible in the tabular form given in the three columns under heading 5 in the Statement appended to this Resolution. The Rules under the Arms Act permit of licenses to possess and carry arms for the protection of crops and for the destruction of wild animals being freely granted without payment of any fee; but though so large a number of guns were licensed, rewards were claimed and given for the destruction of only 22,417 wild animals.

ORDER.—Ordered that this Resolution, with the appended table, be forwarded to Local Governments and Administrations for information and guidance, and that it be published in the Supplement to the *Gazette of India*.

Also that a copy be communicated to the Foreign Department for information.

(True Extract.)

A. P. MACDONNELL,
Secretary to the Government of India.

(*f*) Total receipts from 16th June to 23rd October, 1886.
(*g*) Calculated on the percentage for the corresponding period of 1886.

FORT WILLIAM,
The 23rd November, 1887.

M. C. BRACKENBURY, *Major, R.E.*,
Under-Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the Week ending 16th Nov. 1887.

Conditions during the past week have been remarkably settled. Not only has the weather been undisturbed by any storms, but the distribution of pressure, the winds and the state of the sky have been practically constant throughout. The chart for each day showed a large area of high and uniform pressure overlying North-Western and Northern India and almost equally high pressures over the inland parts of the Peninsula, while along the coasts of the Peninsula, over the south of the Bay and over Burma, readings were relatively low. This distribution was maintained with some slight oscillations from the commencement till the close of the week and it was accompanied by the following circulation of the air, *viz.*:—North-westerly winds down the Gangetic plain, north-easterly winds in Assam, northerly (north-western and north-eastern) winds in Bengal and north-easterly to easterly winds over the Bay, the Peninsula and the central parts of the country.

On the 10th there was some rainfall in the south of the Peninsula, in Cutch, Khandeish and the south of the Central Provinces. By the 11th the rainfall had disappeared from the Central Provinces, but reappeared on the 12th, and to a slight extent on the 13th, after which date it entirely ceased and did not recommence during the week. In the Peninsula fairly general rain continued from the 10th till the 13th, but the area of rainfall gradually retreated southward, and on the 14th, 15th, and 16th, with the exception of a very slight shower at Cochin, the rainfall of this part of the Indian region was confined to Ceylon. In the Bay during the last three days of the week there were some signs of disturbed conditions in the neighbourhood of the Andamans, conditions which gave **⅛ an inch of rain to Diamond Island on the 14th, 1¼ inch of rain on the 15th, and showers at Diamond Island, Tounghoo and Akyab on the 16th.**

The concluding table gives the total rainfall of the past week for the different Provinces :—

Divisions.	Number of Stations.	Total Rainfall.
Burma	3	2·86
Bengal and Assam	2	0·26
North-Western Provinces and Oudh	0	0
Punjab	0	0
Hill Stations	0	0
Ceylon	2	5·99
Malabar Coast	5	10·41
Bombay	7	2·51
Berars and Central Provinces	3	1·34
Guzerat and Central India	3	0·94
Sind—Rajputana	0	0
Madras	8	9·97

W. L. DALLAS,
for *Meteorological Reporter to the Govt. of India.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending the 19th November 1887.*—Rainfall good generally, but more is wanted in parts of Bellary, Madura and Salem. Ploughing, sowing, transplanting and weeding progressing as usual. Crops slightly damaged here and there by heavy rain, insects or disease. Pasture sufficient except in parts of Madura and Tinnevelly. Prices improving. General prospects favourable.

Bombay.—*For week ending the 22nd November 1887.*—Slight rain in parts of Khandesh, Nasik, Sholapur, Belgaum and Kanara; more is required in one taluka of Sholapur. Total rainfall of the season considered insufficient throughout Jhalavad in Kattiawar. Early crops damaged to the extent of from 4 to 6 annas by later rains in Nasik. Linseed damaged by blight in one taluka of Bijapur. Standing crops otherwise good throughout the Presidency Proper and in Sind. Harvesting and sowing operations in progress generally. Probable outturn of cotton 8 annas in Ahmedabad, 10 annas in Kaira and from 10 to 12 annas in Jhalavad, and of early crops in general 11 annas in Karachi, 10 annas in Ahmedabad and 12 annas in Satara. Condition of agricultural stock in tracts dependent on rainfall in Karachi unsatisfactory, owing to failure of pasturage. Fodder scarce throughout Hyderabad and in one taluka of Nasik, owing to deficiency of early rains.

Bengal.—*For week ending the 22nd November 1887.*—No rain. Weather fine and cool. Late rice harvest has begun. The crop is generally a good one, except in Chota Nagpore and parts of the Burdwan and Orissa divisions and the Gya district, where it suffered from insufficient rain. *Rabi* and poppy sowings are almost completed, and are germinating well. In Chota Nagpore, rain is wanted for the *rabi* crops. Rice is dearer in Chota Nagpore and generally in Behar than at this time last year, but cheaper in most of the districts.

N.-W. Provinces and Oudh.—*For week ending the 23rd November 1887.*—There has been no rain and the weather is seasonable. The *kharif* crops have mostly been cut; rice is being reaped and sugarcane-pressing has commenced. Supplies are ample and the *kharif* outturn generally is satisfactory, but below the average in Jhansi and Saharanpur districts, and in Meerut failure of maize and cotton is reported. Prices are generally steady, but that of wheat continues to rise in Bareilly and Moradabad. *Rabi* prospects are good everywhere. Irrigation is in progress. The poppy crop is doing well. Fodder is plentiful, and the condition of cattle is generally good.

Punjab.—*For week ending the 22nd November 1887.*—No rain during the week. Harvesting of the *kharif* crops is nearly completed. *Rabi* sowings are progressing favourably. *Kharif* prospects and outturn are average; *rabi* prospects good, though rain is wanted in some districts. No serious damage done to crops. Stock cattle are generally in a healthy condition. There is some scarcity of fodder in certain districts. Prices are generally stationary, except in a few districts where they are rising.

Central Provinces.—*For week ending the 23rd November 1887.*—Weather clear and cold. Harvesting of autumn crops everywhere in progress. Winter sowings nearly completed. Young crops healthy and prospects generally favourable, except that linseed has been damaged by insects in Bilaspur. Cattle in fair condition.

Burma.—*For week ending the 23rd November 1887.*—There has been a little rain during the week in eight districts in Lower Burma, but more is wanted for all rice which was planted late or on high land, otherwise the prospect of the crop is good. In Upper Burma there has been a little rain in the three districts of the Eastern Division, where the prospect was reported to be bad; but what fell was quite insufficient, and any rain there may be now will probably be too late for the rice crop there. It is apprehended that the rice crop of two of these three districts may be complete failures; in other districts of Upper Burma there has been no rain, but crop prospects continue generally fair. Reaping of early kinds of rice is progressing; the harvest of other kinds has not commenced. The condition of agricultural stock is good. The price of grain remains much as before.

Assam.—*For week ending the 23rd November 1887.*—Weather seasonable. No rain, except a little in Cachar. Prospects of rice favourable. Reaping begun. In Nowgong and Cachar rice has suffered from drought. Prospects of mustard crop good. Tea season closing. No report from Darrang.

Mysore and Coorg.—*For week ending the 23rd November 1887.*—Rain is reported in Kolar and there have been good falls in other parts. Standing crops in good condition, except in parts of the Hassan district, where the *rabi* crop has been slightly damaged by rain. Prospects of season fair. No material change in prices.

The prospects of the standing crops in Coorg are generally good. Coffee-picking has commenced.

Berar and Hyderabad.—*For week ending the 23rd November 1887.*—First picking of cotton is nearly completed in Berar. *Jowari* in full ear; sowing of wheat and gram completed. Prospects of crops good.

There has been no rain in Hyderabad during the week. Agricultural prospects are good and prices are stationary.

Central India.—*For week ending the 23rd November 1887.*—No rain during the week throughout the Agency *Rabi* sowings approaching completion. Prospects of standing crops generally favourable. Weather getting cold. Prices of food-grains high and rising in some parts.

Rajputana.—*For week ending the 23rd November 1887.*—Except in Harowtee and Dholepur, there has been no rain in the Agency during the week. Agricultural operations are proceeding satisfactorily, and the prospects of the *rabi* are generally good. In Dholepur the *kharif* has been seriously damaged by excessive rain, and in Ulwar the outturn has been much below the average. Prices are high in several States.

Nepal.—*For week ending the 17th November 1887.*—No rain. Mornings and evenings a little cloudy. Prospects not good.

E. C. BUCK,
Secretary to the Government of India.

„ VIII.—Value of Notes in circulation from 1862.
„ IX.—Details of ditto ditto 1875.

OFFICERS IN CHARGE.

2. Mr. E. Gay acted as Head Commissioner, except from 21st April to 23rd July 1886, when Mr. E. T. Atkinson officiated for him. In Madras, Mr.

H. F. Clogstoun was Commissioner, but Mr. W. Donald officiated for him from 10th May to 6th July 1886. In Bombay, Mr. T. W. Rawlins was Commissioner, except from 22nd May to 23rd August 1886, when Mr. Cox acted for him, and in Rangoon the late Mr. W. Wells, except for the period 27th February to 4th March and 5th to 31st March 1887, when Mr. W. D. F. Cowley and Mr. T. H. Biggs respectively officiated.

ACCOUNTS AND AUDIT.

3. The monthly audit of the accounts has been duly reported for each office to the Comptroller General, and the following special audits have also been made :—

Accounts of	Auditing Officer.	Date of report.	Period under audit.
Allahabad . .	Deputy Auditor General.	9th April 1887 .	January to December 1886.
Rangoon . .	Ditto .	11th March 1887 .	Ditto.
Calicut . . .	Mr. J. C. E. Branson, B.C.S., Assistant Accountant General.	13th October 1886	1st April 1884 to 30th September 1886.

CIRCULATION.

4. The following figures show the state of the net circulation :—

	Gross Circulation.	Retired by other Officers.	Net Circulation.
1st April 1886 . .	14,49,39,940	32,07,215	14,17,32,725
31st March 1887 . .	14,13,99,465	26,31,100	13,87,68,365

As explained in previous reports, a note is in "Gross Circulation," when it is not yet returned to the original office of issue; but if it has meantime been paid off by another office of issue, and is held by it pending return to the original office of issue, then it has ceased to be in "Net Circulation," though it is still part of the "Gross Circulation."

5. The details of the net circulation of March 1887 are as follows :—

	Number of Notes for Rupees								Total.	
	5	10	20	50	100	500	1,000	10,000	Pieces.	Value.
										₹
Calcutta . . .	189,322	1,566,415	67,571	51,638	122,125	15,794	16,507	248	2,029,620	5,96,40,580
Allahabad . . .	13,309	27,965	16,938	12,827	14,294	1,670	2,526	...	89,529	61,16,705

Madras	36,967	93,690	29,590	22,342	82,118	3,654	2,140	334	270,835	1,83,49,435
Calicut	8,685	7,375	3,810	3,123	4,410	100	43	9	27,555	9,73,525
Rangoon . . .	11,810	13,548	6,437	4,335	5,714	659	415	133	43,051	31,85,920
Total for 31st March 1887	464,635	2,385,881	262,169	175,084	327,418	31,386	36,054	1,410	3,684,037	13,87,68,365
Total for 31st March 1886	535,993	2,252,667	256,497	174,745	316,599	28,960	36,649	1,987	3,604,097	14,17,32,725
Total for 31st March 1885	557,474	2,143,262	266,420	176,183	309,870	28,489	41,760	2,042	3,525,500	14,57,69,040

6. The Report of last year showed a falling off in the circulation of the 31st March of about 40 lakhs as compared with that of the 31st March 1885. The figures of the 31st March 1887 show a further falling off amounting to nearly 30 lakhs, thus showing a total decrease during the two years of nearly 70 lakhs. A juster criterion, however, of the real state of the circulation is obtained by taking the average of the circulation of the last day of each month as representing the circulation of the year. This is done in paragraph 9 below, and gives more favourable results.

An analysis of the denominations in the statement given in paragraph 5 shows that the decrease occurs mainly in notes of the highest denominations kept by banks as a convenient form for holding their reserve balances. The decrease in notes for ₹10,000 amounts to 63 lakhs and in notes for ₹1,000 to 57 lakhs. There is a slight increase in the notes for ₹500 and a large increase in the notes for ₹100 and ₹10, whilst those for ₹50 and ₹20 are steady. The falling off in the circulation of notes for ₹5 is very marked. It is almost entirely confined to the Calcutta Circle, where it amounts to the very large number of 398,073 pieces. It is probably due to the fact that a small number of forged notes of the denomination, a very small number it is believed, were in circulation during the year. The falling off is more than compensated by the increase in the circulation of ₹10 notes.

7. The average value of each note in circulation on the last day of the year, compared with the past two years, was—

	1884-85.	1885-86.	1886-87.		1884-85.	1885-86.	1886-87.
Calcutta Circle .	32	28	29	Kurrachee Circle .	84	105	87
Allahabad ,, .	67	69	68	Madras ,, .	58	62	68
Lahore ,, .	69	65	65	Calicut ,, .	33	37	35
Bombay ,, .	47	44	36	Rangoon ,, .	102	70	74

The decrease in the average value in Kurrachee is due to the smaller number of notes for ₹10,000 in circulation during the year.

8. The variations in the net circulation of each circle are shown in the following table, omitting 000 :—

Last day of	Calcutta.	Allahabad.	Lahore.	Bombay.	Kurrachee.	Madras.	Calicut.	Rangoon.	Total.

,, of 1884-85	6,57,43	75,99	87,32	4,44,12	30,90	1,33,49	12,59	20,56	14,62,40

9. The figures in the above table include the balances of the Reserve Treasury of Government, which are always held in notes of the higher denomina-

tions. These balances are excluded from the following table, which gives the monthly circulation in lakhs of the Calcutta, Bombay and Madras Circles for each of the past three years :—

Last day of	Calcutta.			Bombay.			Madras.			Other Circles.			Total.		
	1884-85.	1885-86.	1886-87.	1884-85.	1885-86.	1886-67.	1884-85.	1885-86.	1886-87.	1884-85.	1885-86.	1886-87.	1884-85.	1885-86.	1886-87.

Average	559	594	557	405	448	376	122	125	142	219	228	258	1,305	1,395	1,333

The figures under Madras and under other Circles show a considerably increasing average circulation. The Calcutta circulation during the past year averaged about 37 lakhs less than that of 1885-86, but was only two lakhs less than that of 1884-85, while it was 3 lakhs in excess of the circulation of 1883-84, which averaged 554 lakhs.

10. The Bombay average circulation shows a fall of 72 lakhs as compared with that of 1885-86, and of 29 lakhs as compared with that of 1884-85. It is, however, 38 lakhs in excess of the circulation in 1883-84, which averaged 338 lakhs. The fluctuations in the Bombay circulation, which is peculiarly variable, occur almost entirely in notes of ₹1,000 and of ₹10,000 held by banks for commercial convenience, and depend largely upon fluctuations in trade. The circulation is, moreover, influenced to a considerable extent by the amount of the importations of silver for coinage, silver taken in the Mints to be coined being paid for in the first instance by the Currency Department.

The total average circulation of the year for all circles, excluding the notes held by the Reserve Treasuries, is 62 lakhs less than the average of 1885-86, but 28 lakhs in excess of that of 1884-85.

11. The following figures show (in lakhs and thousands) the gross circulation in the Presidency Circles of notes not exceeding ₹100 each :—

Last day of	1885-86.			1886-87.		
	Calcutta.	Bombay.	Madras.	Calcutta.	Bombay.	Madras.
	₹	₹	₹	₹	₹	₹
April	3,16,97	1,92,46	96,88	3,13,84	1,91,28	1,07,85
May	3,02,84	1,92,54	83,54	2,99,80	1,95,50	1,02,42
June	2,89,91	1,85,15	79,21	2,89,49	1,88,37	95,57
July	2,89,39	1,87,64	75,20	2,86,01	1,87,20	94,10
August	2,94,61	1,89,72	75,78	2,93,75	1,94,61	1,97,50
September	2,95,27	1,90,84	79,42	3,12,03	2,00,27	1,01,27
October	3,04,24	1,92,46	84,97	3,08,83	1,89,90	1,04,69
November	3,02,07	1,95,07	88,39	3,10,78	2,05,67	1,07,39
December	3,10,36	1,96,65	96,29	3,14,41	2,06,20	1,17,21
January	3,24,73	1,89,75	1,00,71	3,25,18	1,97,27	1,12,13
February	3,24,44	1,87,93	1,09,25	3,30,13	1,95,60	1,17,97
March	3,24,99	1,85,98	1,08,59	3,29,50	1,98,70	1,12,12

These figures show that the notes of lower denominations not only maintain their relative position in the circulation, but have not decreased proportionately to the decrease in the number of notes of higher denominations.

ANALYSIS OF CIRCULATION.

12. The process of verifying the outstanding balance of the circulation with the details obtained from the Issue Registers of the several currency offices is still in progress. The work is a laborious but necessary one and involves the check of many lakhs of entries. The following statement shows the results of the enquiry as on the 31st December 1886: the figures for the Calcutta and Bombay Circles are not yet available.

All differences in the Madras Circle have since been satisfactorily accounted for, with the exception of those under ₹100 notes, which are still under investigation.

Differences on 31st December 1886 between Issue Registers and Ledger Balance.

	5	10	20	50	100	500	1,000	10,000	Total.
Calcutta	Figures not yet available.								
Allahabad	5	42	26	24	33	...	...	...	130
Lahore	107	329	228	169	110	18	11	...	972
Bombay	Figures not yet available.								
Kurrachee	...	...	...	...	...	...	...	...	...
Madras	7	15	12	6	29	...	...	...	69
Calicut	...	...	...	...	...	...	...	...	...
Rangoon	...	...	...	...	...	...	...	...	...

13. The following instructions describe the process generally followed in this investigation :—

"The clerks employed on the work will take up the old Issue Registers and count the number of blank spaces, *i.e.*, of uncancelled notes and record the number in a rough book No. 1 (working sheet), which must be carefully preserved, and the name of the clerk responsible for each part of the book recorded. The work is of a monotonous and tedious character, and peculiarly liable to be vitiated by careless performance, especially when entrusted to a temporary establishment; and it is essential that if errors are afterwards discovered by the process detailed in paragraph 5, the responsibility should be brought home to the clerks concerned, and that they shall know that this will be the case. To make this check effective, care must be taken that no record of the summations is made in the Registers themselves but only in the working sheets.

"After all the numbers have been extracted, totals should be made and the grand total compared with the Ledger balance, when, if the figures do not agree, it will be necessary to re-check the summations in the rough book; if this does not account for the discrepancy, it will then be necessary to have the Issue Registers re-checked.

"This latter process, however, will be different to that followed in the first stage, as the enumeration should be of the number of notes cancelled, *i.e.*, of spaces filled up. In no case is this re-check to be performed by any clerk on the Registers with which he performed the first process, nor is he to be allowed access to book No. 1 until the re-check is completed. This number must be recorded in a rough book (No. 2), and the summation of the figures in books Nos. 1 and 2 will show at once any error which may have been committed.

"In the event of these processes not clearing up the differences with the Ledger balances, such differences must be shown and recorded an "Unsettled difference prior to 1885" until they are reduced by notes being presented or by any other method which may be decided on hereafter."

RESERVE.

14. The value held against the net circulation upon 31st March 1887 was as follows:—

	₹	a.	p.	₹	a.	p.
SILVER COIN—						
At Calcutta	1,26,92,910	15	2			
Allahabad	1,01,13,535	0	0			
Lahore	94,81,310	0	0			
Bombay	1,50,04,202	14	2			
Kurrachee	50,37,860	0	0			
Madras	1,41,67,060	0	0			
Calicut	4,53,225	0	0			
Rangoon	47,72,350	0	0			
				7,17,22,453	13	4
SMALL SILVER COIN—						
At Bombay	1,82,000	0	0			
Kurrachee	20,400	0	0			
Madras	1,60,000	0	0			
				3,62,400	0	0
SILVER BULLION—						
At Calcutta	22,93,278	15	7			
Bombay	43,97,732	3	1			
				66,91,011	2	8
Invested in Government Securities				5,99,92,500	0	0
TOTAL AGREEING WITH THE NET CIRCULATION				13,87,68,365	0	0

As noted in last year's report there was a transfer of 51 lakhs of bullion from Bombay to Calcutta to equalise the drain caused by ordinary absorption, especially in Eastern Bengal. The receipts of bullion, as usual, are very much larger in Bombay.

15. The half-yearly verifications of the currency balances were held as follows :—

	1st half.	2nd half.
CALCUTTA	Sept. 30, 1886	March 31, 1887.
Allahabad	" 30, "	" 31, "
Lahore	" 30, "	" 31, "
BOMBAY	" 30, "	" 31, "
Kurrachee	" 30, "	" 31, "
MADRAS	" 30, "	" 31, "
Calicut	" 30, "	" 31, "
RANGOON	" 30, "	" 31, "

The balances of the last working day of each half-year were verified in accordance with the orders issued on the subject.

Investments.

16. No alteration has been made since the last report in the amount of the invested reserve, which is held in book debt certificates as below :—

	₹
No. 59 of 4 per cent. loan of 1842-43	5,00,00,000
" 72 " " "	1,00,00,000
" 115 " " "	20,21,700
" 166 of 4½ per cent. loan (Transfer), 1879	5,00,000
	6,25,21,700

Taking the whole investment, the average rate is equal to 95·95 for 4 per cents.

Its book value, *i. e.*, the actual price at which it was purchased, has been reduced from ₹5,99,95,000, at which it was taken last year, to ₹5,99,92,500, thus—

	Nominal Value.		Book Value.	
	4%	4½%	4%	4½%
	₹	₹	₹	₹
1st April 1886.—Balance	6,20,21,700	5,00,000	5,94,90,029-0-4	5,04,970 15 8
Deduct—				
A year's interest at ½% on 4½% securities to reduce cost of its purchase, *vide* letter No. 1885 of 17th December 1883.	...	...	...	2,500 0 0
31st March 1887.—Balance	6,20,21,700	5,00,000	5,94,90,029-0-4	5,02,470 15 8
NET BOOK VALUE			5,99,92,500	0 0

Profits of Circulation.

17. The interest realised on the above-stated nominal value for the year was—

	₹	₹
On 4% paper of the loan of 1842-43 for	6,20,21,700	= 24,80,868
" 4½% " 1879 "	5,00,000	= 22,500
		25,03,368
Deduct—		
The ½% interest taken as above		2,500
Balance		25,00,868

TRANSACTIONS WITH THE PUBLIC.

Issue and Receipt of Notes.

18. The following are the gross statistics of the year, the details by circle being shown in Statement VI :—

	₹	₹
Gross circulation, 1st April 1886		14,49,39,940
ISSUES—		
a. Over the counter	66,38,97,390

TOTAL		88,61,96,105
RECEIPTS—		
d. Over the counter	55,80,45,960	
e. At Agencies	17,14,325	
f. From Currency Circles	7,48,88,590	
g. In remittance transactions	11,01,47,765	
		74,47,96,640
Balance, being gross circulation, March 31st, 1887 (*vide* paragraph 4)		14,13,99,465

EXPLANATIONS.

a and *d*.—These are the ordinary issues and receipts in exchange for other notes or for coin.

b and *e*.—These are exchange transaction with treasuries, as the Agencies do not deal directly with the public, but only enable the treasuries to do so to a greater extent than would otherwise be the case.

f.—This figure represents notes cashed at other currency circles from March 16th, 1886, to March 15th, 1887, and returned during the year under report to the circles to which they belong.

c and *g*.—These remittances are for the most part payments and receipts of one currency office, in consideration of receipts or payments at another.

COMPARISON.	Issues. ₹	Receipts. ₹
1886-87	74,12,56,165	74,47,96,640
1885-86	76,10,25,730	76,55,44,465
1884-85	73,99,22,010	72,12,80,855
1883-84	67,02,69,925	68,93,02,090

19. The aggregate issues and receipts of the several denominations of notes at both offices of Issue and Agencies during the year were as follows:—

	Number of Notes for Rupees.								Total.	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.
Issues	819,661	3,709,497	501,742	407,779	899,436	134,797	236,787	27,551	6,737,250	74,12,56,165

Madras	3,42,335	28,035	36,170	18,93,255	45	50	43,350	...	28,56,850(*c*)	...	46,530	52,46,620
Calicut	6,470	10,970	1,505	1,92,025	...	...	3,890	19,40,565	...	...	380	21,55,805
Rangoon	14,490	500	30	500	...	...	...	560	...	...	...	16,080
	80,49,215	1,19,55,180	1,22,67,500	2,05,12,905	250	860	58,63,300	85,57,950	33,49,790	470	20,05,945	7,25,62,465

The letter (*c*) marks the cases in which the foreign notes are legally encashable, *i.e.*, shows the amounts of Sub-Circle Notes encashed by their respective Head Circle aggregating ₹2,69,91,245.

23. The comparison for three years is as follows:—

Notes Cashed at—	1884-85. ₹	1885-86. ₹	1886-87. ₹
Calcutta	4,64,47,100	2,89,93,660	4,08,03,545
Allahabad	18,99,490	47,16,025	35,55,385
Lahore	26,03,310	42,59,465	31,13,485
Bombay	1,33,80,985	99,67,650	1,76,45,030
Kurrachee	31,215	31,230	26,515
Madras	75,71,185	37,93,545	54,46,620
Calicut	18,51,445	12,50,645	21,55,805
Rangoon	1,41,070	10,075	16,080
	7,39,25,800	5,30,22,295	7,25,62,465

24. Of this, the amount of notes issued by each Sub-Circle and cashed under the requirements of the law at its Head Circle Office, was in—

	1884-85. ₹	1885-86. ₹	1886-87. ₹
Calcutta	2,28,15,540	92,05,150	1,90,79,500
Bombay	12,40,810	8,76,515	50,54,895
Madras	27,41,990	18,86,400	28,56,850
	2,67,98,340	1,19,68,065	2,69,91,245

Issue and Receipt of Coin.

25. The transactions in coin are as follows (for details by circles refer to Statement VII) :—

	Coin. ₹ a. p.	Small Coin. ₹ a. p.

TOTAL .		1,43,259	30,193	1,053	840	5,265	208	178	116	1,02,089	1,375	42	2	...	...	...	...

28. I give below statements similar to those given last year of the whole rupees coined and issued from the Indian Mints during the years 1835 to 1886, and the proportions of each of those issued found on examination in every District Treasury of a bag of 2,000 rupees of the coin ordinarily current in the districts.

The difficulty in drawing any general conclusion from these statements has been pointed out in previous reports. New coin being largely used for melting into ornaments, the coinage of a prosperous year, or perhaps of the year preceding, is likely to disappear comparatively quickly. The large remit-

tances of coin to the Punjab from Bombay in 1879 to provide for war expenditure, account for the high proportion of coin of that year circulating in the province. Very large specie remittances are made to Burma at the commencement of the rice season, but whether it is new or old coin depends on whether it is found convenient to obtain the actual coin from Calcutta or Bombay, where it would probably be freshly minted, or from Madras where it would be accumulated from general circulation.

29. Two interesting facts, however, seem to be deducible from the statements. They seem in the first place to show how much the percentage of coin in circulation of the coinage of years prior to 1862 is below the percentage which the coinage of those years bears to the total coinage to the end of the year 1886, and in the second, that the enormous quantities of silver annually coined in Bombay and Calcutta are very gradually distributed over the country.

As regards the first point, I show for the three years, 1875, 1880 and 1885, the number of coins of the coinages prior to 1862 which would be found in a 2,000-rupee bag in which the percentage of each year's coinage was fairly represented compared with the actual numbers found in an average bag selected in the manner described in paragraph 27—

Year.	Total coinage to end of year.	Coinage prior to 1862.	Proportion in 2,000 of column 3 to column 2.	Proportion in actual circulation.
1875	2,02,36,36,560	1,24,22,10,433	1,227	979
1880	2,45,68,91,653	1,24,22,10,433	1,011	664
1885	2,70,46,41,488	1,24,22,10,433	919	561

These figures would seem to show that a very large amount of the coinage of the years prior to 1862 has disappeared from the current circulation.

As regards the second point, I show for each Presidency and Province the number of coins of the coinage of the years 1880 to 1887 found in a 2,000-rupee bag representing the ordinary current circulation of the Province—

India	922	North-Western Provinces and Oudh . . .	280
Central Provinces . .	694	Punjab	466
Burma	938	Madras	320
Assam	394	Bombay	887
Bengal	447		

The circumstances of the Punjab and of Burma are exceptional for the reasons given in paragraph 27. Those of India, by which term is here meant the Treasuries of Ajmere, Bank of Bengal, Coorg, Quetta, Sambhar and Port Blair are equally exceptional. Leaving these Provinces out of consideration it is sufficient to point out that the percentage of the coin of the later years held in Madras and in the North-Western Provinces and Oudh is largely below the percentage of the same coin held in Bengal and Bombay, while the percentage held in Bengal is largely below that in Bombay, into which Presidency the great bulk of the silver is imported.

1884-85	80	221	81	98	209	16	22	...	727	60,030

FRAUD AND FORGERY.

38. The following forgeries of notes of the Calcutta, Bombay and Calicut Circles came to light in the year under review:—

Calcutta Circle.

5-rupee notes . . . . . 10 pieces.
20 „ „ . . . . . 2 „
1,000 „ „ . . . . . 1 piece.

Bombay Circle.

20-rupee notes . . . . . 12 pieces.

Calicut Circle.

10-rupee notes . . . . . 1 piece.

39. The Calcutta forgeries were all executed by hand on ordinary paper. As regards the Bombay forgeries, the Commissioner of Currency remarks that the paper used is very flimsy; that the figures are all hand-made and unequal, and the green medallions crude in colour and execution. The Commissioner of Police, Bombay, was, however, of opinion that the notes were cleverly executed and good enough to deceive ordinary European and Native merchants. This might perhaps be the case in the hurry of business, but the slightest examination of the notes would at once lead to their detection.

The forged note of the Calicut Circle belonged to the forgery brought to light in 1879.

The 20-rupee note forgeries of the Calcutta Circle belonged to the forgeries of 1882. The notes were presented in Bombay. The 5-rupee note forgeries of the Calcutta Circle seem to have commenced in 1883-84, when five forged pieces were discovered. Six additional forged 5-rupee notes were discovered in 1884-85 and six in 1885-86.

The usual Police enquiries have been made in these cases, but I have at present no results to mention in this report.

REMITTANCES OF SILVER.

40. The following is the detail of silver remittances:—

	₹
Calcutta to Rangoon	30,00,000
Allahabad to Calcutta	21,00,000
Lahore to Calcutta	1,00,000
Bombay to Calcutta	50,00,000
Bombay to Allahabad	26,00,000
Bombay to Lahore	20,00,000
Bombay to Kurrachee	70,72,000
Bombay to Rangoon	60,00,000
Madras to Rangoon	60,00,000
Calicut to Madras	8,00,000

The large remittances from Bombay were, as usual, to disperse a part of the large sums tendered in bullion for coinage. A large share of these remittances was directed to Rangoon, but the necessities of Burma required a further remittance of 60 lakhs of silver from Madras, whence it could ill be spared.

TREASURY STATISTICS.

41. The transactions in notes at the several treasuries in India during 1883-84, 1884-85 and 1885-86, have been as follows:—

	1884-85.	1885-86.	1886-87.
	₹	₹	₹
Receipts from the public in payment of Government dues	8,70,85,960	9,08,26,615	9,03,04,820
Receipts from the public in exchange for silver	2,96,53,600	3,19,78,560	3,05,22,080
Receipts from the public for other notes	18,76,485	26,38,745	25,05,895
Total Receipts	11,86,16,045	12,54,43,920	12,33,32,795
Issues to the public in payment of Government dues	3,41,81,990	3,61,91,125	3,81,90,680
Issues to the public in exchange for silver	3,45,13,420	3,08,36,800	3,08,04,965
Issues to the public for other notes	18,76,435	26,38,745	25,05,895
Total Issues	7,05,71,845	6,96,66,670	7,15,01,540

42. The total treasury transactions in notes during the last three years have been as follows (in lakhs of rupees):—

	1884-85.	1885-86.	1886-87.
	₹	₹	₹
Government of India	319	285	319
Central Provinces	44	40	34
Burma	14	16	29
Assam	58	64	59
Bengal	526	555	540
North-Western Provinces and Oudh	173	187	172
Punjab	262	303	247
Madras	247	252	258
Bombay	237	235	279
Hyderabad	12	14	11
	1,892	1,951	1,948

43. Statement IV classifies the treasuries of the Government of India as follows :—

	1884-85.	1885-86.	1886-87.
Where notes were cashed throughout the year to the extent of the public demand	140	155	163
Where notes were ordinarily cashable, but not always . .	50	33	28
Where notes were not usually cashable	35	33	39
TOTAL .	225	221	230

44. Statement V shows the proportions of treasury and bank balances, which in each province was held in the form of Currency Notes. The state of the Reserve Treasuries greatly affects the comparisons in this statement.

Including Reserve Treasuries, the percentage of balances held in notes was—

	1886.	1885.
Calcutta Circle	22	19
Bombay „	35	20
Madras „	17	11

But if Reserve Treasuries were omitted, the figures would be—

	1886. Balance in		1885. Balance in		Percentage of Notes.	
	Notes.	Cash.	Notes.	Cash.	1886.	1885.
Calcutta Circle . . .	42,01	79,65	12,12	61,56	34	16
Bombay „ . . .	11,87	65,82	8,01	89,68	16	8
Madras „	13,04	86,77	11,05	87,28	13	11

STATEMENTS.

No. I.

Statement of the value of Government Currency Notes in circulation throughout India during 1886-87 and previous years.

Dates.	Calcutta. Value of Notes in circulation.	Calcutta. Monthly increase + or decrease −.	Allahabad. Value of Notes in circulation.	Allahabad. Monthly increase + or decrease −.

Weather Review of India for the Week ending 23rd Nov. 1887.

As during the preceding week, the weather of nearly the whole of India has been remarkably quiet and settled. Between the 18th and 19th conditions over the west of the Bay were slightly disturbed by a small storm, but the disturbance proved to be both feeble and shortlived, and its influence on the weather was very limited.

On the 17th pressure was comparatively uniform throughout India, though somewhat higher in the North than along the shores of the Peninsula. The wind was light and variable except over the Bay, where a fairly well-marked cyclonic circulation existed. On the 18th the chart showed that a small feeble storm had advanced from the centre of the Bay to the Coromandel Coast. It occasioned a fall of the barometer over Madras and a slight increase in the force of the wind, but its effect on the weather was exceedingly slight, and, except in Ceylon, no rain was reported from any part of the Indian region. The chart of the 19th showed that the disturbance had retreated southward and the barometer was rising at all stations. In the extreme North-West pressure marked above 30·25″. The weather generally remained clear or nearly so, but in the Peninsula it was less fine than on the preceding day, and rain was falling from False Point southward to Madura. On the next day the disturbance had disappeared, and the distribution of pressure become normal, a large area of high and uniform readings overlying the whole of Northern India with relatively low readings along both coasts of the Peninsula. The weather in the east of the Peninsula remained somewhat unsettled and rain was reported from several stations. On the 21st there was no change in the main features of the pressure distribution, and the wind circulation was about the normal. Rain continued to fall at several places in the Peninsula. On the two following days there occurred nothing worthy of note. Relatively high pressures accompanied with very fine weather prevailed over the whole of Northern and Central India, while in the Peninsula the barometer was somewhat lower and the weather unsettled with occasional slight showers.

On the mean of the whole week pressure was above the average of the month throughout the whole of the Indian region, the excess being greatest in the North-West and least in the Carnatic. Temperature on the contrary has been lower than the average except in Burma, Bengal, Ceylon, Malabar, Bombay, Sind and the Carnatic. The variations are however slight.

With the exception of insignificant showers at Thyetmio and False Point, rain has been entirely confined to the Peninsula, and even there the amounts reported are everywhere slight. The highest total for the week is 1·64 inch at Madras followed by 1·50 inch at Masulipatam and 1 inch at Goa.

The concluding table gives the total rainfall of the past week for the different Provinces:—

Divisions.	Number of Stations.	Total Rainfall.
Burma	1	0·08
Bengal and Assam	1	0·05
North-Western Provinces and Oudh	...	...
Punjab	...	...

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending the 26th November 1887.*—Rainfall good generally, but more is wanted in parts of Bellary, Madura, Tinnevelly and Salem. Agricultural operations progressing as usual. Crops slightly damaged here and there by excessive rain, insects or disease. Pasture sufficient except in parts of Madura and Tinnevelly. Prices improving. General prospects favourable.

Bombay.—*For week ending the 30th November 1887.*—Slight rain in parts of Ratnâgiri, Satara, Belgaum, Dharwar and Kanara. Standing crops generally good except linseed in parts of Sholapur and Bijapur where it is blighted. Harvesting of early crops completed in Ahmedabad and Thana and sowing of late crops in Ahmedabad; both operations continue in other districts. Opium sowing in progress in Baroda. Probable outturn of early crops 8 annas on an average in Bijapur; from 10 to 12 annas in Nasik and 12 annas in Shikarpur, Hyderabad and Rajkot. Prospects of cotton crop in Rajkot and Baroda favourable. Condition of agricultural stock in Hyderabad poor owing to scarcity of fodder.

Bengal.—*For week ending the 29th November 1887.*—No rain. Cold weather has set in. Late rice harvest is progressing. The general outturn of this crop is expected to be good, but the crop is below the average in Chota Nagpore, in parts of the Burdwan and Orissa divisions, and in the Gya and Sonthal Pergunnahs districts. *Rabi* and poppy crops are doing well. Rain is wanted for *rabi* in Chota Nagpore and in Nuddea. Sugarcane is promising.

N.-W. Provinces and Oudh.—*For week ending the 30th November 1887.*—Weather cool and seasonable. Harvesting of *kharif* completed in the eastern districts. Late rice and sugarcane are being reaped. The *rabi* and poppy crops are progressing satisfactorily in all districts. The markets are sufficiently supplied, and prices are generally steady, but they are stated to be rising slightly in Benares, Allahabad, Agra and Saharanpur. In Partabgarh pasturage is said to be scanty, otherwise fodder is plentiful in all districts. Condition of agricultural stock generally good.

Punjab.—*For week ending the 30th November 1887.*—No rain during the week. *Kharif* crops are nearly harvested; *rabi* sowings are nearly completed. *Kharif* prospects and outturn are below average; *rabi* prospects are good, though rain is wanted in some districts. [redacted] serious damage to crops. Cattle are reported to be generally healthy. There is some scarcity of fodder in certain districts. Prices are rising, except in five districts where they are stationary. Poppy cultivation has commenced.

Central Provinces.—*For week ending the 30th November 1887.*—Weather clear and cool. Rain required in Bilaspur. Rice and other autumn crops being harvested. Wheat and other winter crops coming up well. Linseed in Raipur is being attacked by insects. Cattle in fair condition.

Burma.—*For week ending the 1st December 1887.*—The rice harvest has begun all over the country. The condition of agricultural stock is good except in the two delta districts of Bassein and Thonegwa. There has been no rain anywhere in the province during the week. The crop all over Lower Burma will be lighter than was at first expected owing to want of rain when the grain was approaching maturity. It is expected that in Pegu, Akyab and Shwegyin there will be a 16-anna crop; that in Henzada there will be a 15-anna crop; and that in Hanthawaddy, Prome and Amherst there will be a 14-anna crop. The outturn all over Lower Burma will be probably between 14 and 15 annas. In Upper Burma the prospect has somewhat improved in consequence of the recent rain in the districts of the Eastern Division, notably in Pyinmana. The crop will be a poor one in the Mandalay, Shwebo, Minbu, and Pagan districts owing to want of rain, but there is a fair prospect in the Kyaukse, Ava and Yen districts. The local prices of paddy remain generally much the same as previously reported, but a slight rise is reported in one district in Lower Burma and in one in Upper Burma, and a considerable fall in two districts of Lower Burma and in three districts of Upper Burma. There is a marked fall in price throughout the Eastern Division of Upper Burma, and this fall is doubtless due to the improved prospect of the crop consequent on the late rain.

Assam.—*For week ending the 30th November 1887.*—Weather cold and dry. Slight rain in the Garo Hills and a slight fall in Darrang. Reaping of winter rice and sowing of mustard continues. Outturn of rice good and prospects of standing crops favourable. Tea manufacture practically over. No report from Nowgong.

Berar and Hyderabad.—*For week ending the 30th November 1887.*—In Berar the rain for the season has been over the average throughout the province. *Rabi* sowings completed; first picking of cotton nearly completed; probable outturn of *jowari* and cotton 12 annas. Fodder sufficient.

In Hyderabad there was little or no rain. Agricultural prospects are good.

Mysore and Coorg.—*For week ending the 30th November 1887.*—There has been slight rain in parts of Mysore. Wet and dry crops are in good condition, and the prospects of the season continue favourable. Agricultural operations are in progress, and *ragi* has been harvested in parts. Public health generally good. Prices risen slightly in Kolar and fallen in Mysore and Bangalore.

In Coorg there has been slight rain. Standing crops are in good condition. General health good.

Central India.—*For week ending the 30th November 1887.*—No rain. *Rabi* sowings finished. Prospects of standing crops generally good. Weather cold. Prices of food grains high and rising all over Central India. Supply of fodder sufficient. Health good. Opium crop expected to be late, and consequently liable to damage from hot weather. Opium prices here rising.

Rajputana.—*For week ending the 30th November 1887.*—Except in Harowtee and Dholepore, there has been no rain in the Agency. The standing crops are generally promising and the *kharif* harvest is yielding a fair outturn. Prices continue high in a few of the States.

Nepal.—*For week ending the 24th November 1887.*—No rain. Weather has begun to be colder now. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

No. 8, Hastings Street, Calcutta.

SUPPLEMENT TO

The Gazette of India.

No. 50.} CALCUTTA, SATURDAY, DECEMBER 10, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending 3rd December 1887.*—Rainfall good generally but more is wanted in parts of Bellary, Madura, Tinnevelly and Salem. Agricultural operations progressing as usual. Crops slightly damaged here and there by excessive rain, insects or disease, and fading in parts of Kistna and Madura for want of rain. Pasture sufficient except in parts of Madura. Prices improving. General prospects are favourable.

Bombay.—*For week ending 7th December 1887.*—No rain during week. More rain is still required in two talukas of Sholapur. Standing crops in parts of Bijapur, cotton in two talukas of Dharwar, wheat in one taluka of Belgaum and linseed in two talukas of Sholapur have been damaged by blight. Crops have also been injured in two talukas of Ahmednagar, but otherwise they are good in the Presidency Proper and in Sind. The opium crop in Baroda is in good condition. Harvesting of early crops completed in Surat and Colaba; in progress in Karachi, Shikarpur, Hyderabad, the Upper Sind Frontier, Khandesh, Nasik, Ratnagiri, Belgaum, Dharwar and Kanara. Sowing of late crops continues in Shikarpur, Hyderabad, the Upper Sind Frontier, Kaira, Nasik, Thana, Ratnagiri, Dharwar and Baroda; probable outturn of early crops from 8 to 10 annas on an average in Surat and in other districts as already reported. There is a scarcity of fodder in two taluks of Nasik, in the hilly regions of Karachi and in a few talukas of Hyderabad. Agricultural stock in good condition, except in Hyderabad.

Bengal.—*For week ending 6th December 1887.*—No rain. Weather clear and cold. The rice harvest is proceeding and is generally expected to yield a good outturn; but in Chota Nagpore, in parts of the Burdwan and Orissa Divisions, and in the Gya and Sonthal Parganas districts, the crop is below the average, on account of deficient rain in September and October. *Rabi* and poppy crops are well advanced and promising. Sugarcane prospects are favourable. Price of rice remains almost stationary.

N.-W. Provinces and Oudh.—*For week ending 7th December 1887.*—Weather fine and cold. The *kharif* outturn generally is good. Late rice nearly reaped. *Rabi* and poppy crops thriving everywhere. Irrigation going on. Rain needed in Kumaon and Saharanpore. Markets well stocked, though most districts show a rise in prices. Fodder

reported scarce in Partabgarh, but in other districts plentiful. Condition of agricultural stock generally good.

Punjab.—*For week ending 7th December 1887.*—No rain during the week. Prices are rising except in five districts, where they are stationary. *Kharif* crops are harvested. *Rabi* sowings are nearly completed. *Kharif* prospects and outturn are below average. *Rabi* prospects good, though rain is wanted in some districts. No serious damage done to crops. Stock cattle are reported to be generally healthy. There is a scarcity of fodder in some districts. Poppy sowings in progress.

Central Provinces.—*For week ending 7th December 1887.*—Weather clear and cold. Rain required in Bilaspur. Reaping and threshing of autumn crops continue; the young winter crops are thriving well. Prospects of all crops good except linseed in Raipur, which has been attacked by insects. Cattle in fair condition.

Burma.—*For week ending 7th December 1887.*—There has been a little rain in the Shwegyin district of Lower Burma and in the Myingyan and Mandalay districts of Upper Burma, but none elsewhere. The rain that fell is not likely to affect the crops in any way. Rice is being reaped throughout the country. The planting of tobacco and dry-weather crops progresses. The condition of agricultural stock is good. The estimates of crop given last week are now modified as follows: Pegu between 15 and 16 annas instead of 16 annas; Amherst 12 instead of 14 annas; Henzada 14 instead of 15 annas; in the Thonegwa, Tharrawaddy and Bassein districts the present estimate is between 12 and 13 annas; but further enquiry is being made. In Upper Burma the prospect has not altered, except that a partial failure of the crop is reported in the southern part of the Chindwin district and in the adjoining tract of the Myingyan district. No change in Pyinmana, Yamethen, Meiktila and Shwebo, but traders are importing rice into Pyinmana and Yamethen. In Lower Burma prices are stationary except in Bassein where there is a fall of 10 rupees per 100 baskets and in Prome and Tharrawaddy where there is a rise of 11 rupees and 5 rupees, respectively, per 100 baskets. In Upper Burma there is a fall in prices generally, except in Pyinmana, Yamethen and Meiktila districts where prices remain stationary.

Assam.—*For week ending 7th December 1887.*—Weather cold and fine. No rain. Reaping of winter rice progressing; full crop expected. Sowing of mustard completed. Prospects of standing crops good. Soil is being prepared for potatoes in the Khasia Hills. Tea plants are being pruned. No report from Sylhet.

Mysore and Coorg.—*For week ending 7th December 1887.*—Slight rain has fallen in Hassan and Kolar. Standing crops in good condition and *ragi* is being harvested in parts. Prospects of season continue favourable. No material change in prices.

No rain fell in Coorg during the week. The prospects of the standing crops are good.

Berar and Hyderabad.—*For week ending 7th December 1887.*—No rain during the week in Berar. Rainfall during the season has been ample. *Jowari* has reached maturity. Picking of cotton in progress. Sowings of *rabi* completed. Outturn of *kharif* crops estimated as a 12-anna crop.

In Hyderabad the agricultural prospects are good. No rain.

Central India.—*For week ending 7th December 1887.*—No rain throughout Central India since last report. Agricultural operations in progress, in some parts completed and in others the state of the standing crops is good. Prospects and probable outturn of harvests good. No damage to crops. Condition of agricultural stock good. Pasturage and fodder good, except in Bhopawur, where cut fodder has been injured. Prices of food-grains high. Opium sowing commenced in parts. No report from other parts. Opium prices high.

Rajputana.—*For week ending 7th December 1887.*—No rain. Agricultural operations generally satisfactory. Standing crops are in good condition excepting in Marwar, and the harvest is favourable. In Harowtee Indian-corn has been damaged by heavy rain. Prices high in some States.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the Week ending 30th Nov. 1887.

The only important feature, in the weather of the week under review, has been the steady decrease in the amount and the extent of rainfall in the south of the Peninsula. In every other respect the weather has been settled and practically unchanged throughout the week.

On the 24th pressure was highest at Hoshangabad and lowest at Galle, and the wind circulation was such as is characteristic of the cold-weather months—a north-westerly current prevailing down the Gangetic plain, a northerly current over Bengal and the head of the Bay, and a north-easterly current elsewhere. The weather was very fine (in places quite cloudless) except over the Peninsula, where the sky was more or less obscured and rain was falling from Cuddapah southward. On the 25th pressure was highest at Agra, lowest at Galle, and the wind circulation was the same as on the previous day. The area of rainfall was also unaltered, the most northern station reporting rain being again in Cuddapah. The amounts were, however, somewhat larger than on the 24th, Madras having received over 2 inches and Galle and Colombo nearly 1 inch. The chart of the 26th showed the highest pressure at Hoshangabad, the lowest at Cochin, and the winds practically unchanged. Rain had extended as far north as Bellary and the amounts were about the same as those reported on the 25th. Negapatam had received 2½ inches and Cuddapah nearly 1 inch. On the 27th, while the general distribution of pressure and the circulation of the winds remained unaltered, the area of rainfall had retreated southward again, and did not extend beyond Bangalore. The largest amounts recorded were 1¾ inches at Coimbatore and Colombo and 1¼ inch at Trichinopoly and Negapatam. On the 28th the rainfall area had still further contracted and the amounts were everywhere below 1 inch. On the 29th, when the barometer was rising everywhere, the only places reporting rainfall were Galle, Colombo and Mercara. On this day pressure ranged from 30·193″ at Multan to 29·966″ at Galle, the area of absolutely highest pressure having been transferred north-westward to the Punjab. On the 30th pressure was again highest at Agra and lowest at Cochin; the wind circulation was regular and characteristic of the season, and the only rainfall, throughout the whole Indian region, was a slight shower at Colombo.

Compared with the average of the month, pressure has been high everywhere; the excess being greatest in the North-Western and Central Provinces, Central India, the Berars and Guzerat, and least in Ceylon. Much of this excess is, however, probably due to the method of comparison and is more apparent than real. In the same way the week's temperature has been below the average at nearly all stations—a result due to comparing the mean of the last week of the month with the average of the whole month.

Rainfall has been entirely confined to Madras, Malabar and Ceylon. The heaviest total fall for the week is 15½ inches in Madras.

The concluding table gives the total rainfall of the week according to the different provinces :—

REVIEW OF THE WORKING OF THE INDIAN COMPANIES ACT, VI OF 1882, DURING THE YEAR 1886-87.

No. 3298., dated Calcutta, the 13th December 1887.

RESOLUTION—By the Government of India, Department of Finance and Commerce.

Read the following communications submitting the Reports of Registrars of Joint Stock Companies on the working of the Indian Companies Act, VI of 1882, during the official year 1886-87 :—

From the Government of Madras, Nos. 1478 and 1479, dated the 9th July 1887.
„ „ Bombay, No. 4048 „ 4th July 1887.
„ „ Bengal, „ 2629 P.D., „ 15th August 1887.
„ „ N.-W. P. and Oudh, No. $\frac{465}{VII-425}$, dated the 16th June 1887.
„ „ Punjab, No. 14, dated the 25th April 1887.
„ Chief Commissioner, Central Provinces, No. $\frac{2746}{154}$, dated the 4th June 1887.
„ „ Burma, No. $\frac{853}{140}$, dated the 31st May 1887.
„ Secretary for Berar to Resident, Hyderabad, No. 210 G., dated the 4th June 1887.
„ Resident in Mysore, No. $\frac{2390}{635}$, and No. $\frac{2918}{635}$, dated, respectively, the 29th July and the 7th September 1887, and No. $\frac{2918}{535}$, dated the 7th September 1887.

RESOLUTION.—The statistics contained in these reports are summarised in the three tables annexed to this Resolution. There were at the close of 1885-86 in the different provinces 806 joint stock companies possessing a total capital, nominal and actual, of 2,854 and 2,100 lakhs; 45 of these increased their capital by 28 and 3½ lakhs, nominal and actual; and 64 with a paid-up capital, so far as reported, of nearly 9 lakhs ceased to work. There were registered during the year 158 companies with a nominal capital of 193 lakhs. The paid-up capital of several of these companies has not been reported, the necessary documents not having been received within the period to which the report relates. The net result at the close of 1886-87 was a total of 886 companies possessing a nominal capital aggregating 2,913 lakhs, and an actual capital, so far as reported, amounting to 2,138 lakhs.

Bengal, Bombay, and Madras head the list with a paid-up capital, at the close of 1886-87, of 968, 872, and 144 lakhs, respectively, so far as ascertained, making a sum of about 1,984 lakhs out of the aggregate for all India, or about $92\frac{3}{4}$ per cent.

2. The following table compares the number of companies and paid-up capital in the several provinces in the last two years :—

Province.	Number of Companies.		Paid-up Capital.		Increase or Decrease per cent. in 1886-87.		Provincial proportion of paid-up capital to all paid-up capital in 1886-87.
	1885-86.	1886-87.	1885-86.	1886-87.	Number of Companies.	Capital.	
			₹	₹			Per cent.

Breweries	.....	3	12,00,000	12,00,000
Others	.....	13	87,11,000	77,64,020
	GRAND TOTAL	886	29,13,23,646	21,38,04,422

The largest part—911 lakhs paid-up—of the aggregate capital is invested in mills and presses chiefly for working or pressing cotton, jute, wool, and silk. The Bombay Presidency (see table I appended) shows the largest contribution (619 lakhs) under this head, chiefly for working or pressing cotton; Bengal following (196 lakhs), chiefly with jute.

Tea and other plantations follow with a total of 362 lakhs paid-up capital, of which 343 lakhs are placed against Bengal, most of the tea companies being registered in Calcutta.

Banking or loan companies rank third with 324 lakhs paid-up. Bengal heads the list here (174 lakhs), the Madras Presidency coming next (77 lakhs).

Trading companies rank fourth, with a paid-up capital of 316 lakhs. Bombay heads the list here (147 lakhs), Bengal coming next (141 lakhs).

Mining and quarrying engaged 98 lakhs paid-up. Here Bengal heads the list (78 lakhs), the Madras Presidency being next (10 lakhs).

The other industries individually represent much smaller sums; thus ice-making, 21 lakhs paid-up, chiefly in Bombay and Bengal; breweries, 12 lakhs paid-up, all in the Punjab and the North-Western Provinces and Oudh.

4. The following table shows the number of Companies under each category during the last five years :—

		1882-83.	1883-84.	1884-85.	1885-86.	1886-87.	Increase or decrease per cent. in 1886-87 compared with 1882-83.

	GRAND TOTAL	547	649	694	805	886	+ 62

The following table shows, so far as reported, the total number of joint stock companies at work in India with their nominal and paid-up capital at the end of each of the last seven years:—

Years.	Companies at work.	Nominal capital.	Paid-up capital.	Increase of paid-up capital.
		₹	₹	₹
1880-81 . . .	475	19,74,10,150	14,86,66,364	...
1881-82 . . .	500	21,29,73,730	15,45,80,041	59,13,677= 4 %
1882-83 . . .	547	22,17,01,800	17,01,59,044	1,55,79,003=10 „
1883-84 . . .	649	26,67,34,384	18,75,06,107	1,73,47,063=10 „
1884-85 . . .	696	27,88,76,908	20,63,58,444	1,88,52,337=10 „
1885-86 . . .	805	28,54,34,367	21,00,25,677	36,67,233= 2 „
1886-87 . . .	886	29,13,23,646	21,38,04,422	37,78,745= 2 „

The increase during the year was only 37¾ lakhs, being at the rate of 1⅘ per cent.—almost exactly the same rate as in 1885-86, which was very much smaller than in previous years. The average annual rate of increase during the seven years has been a little under 5½ per cent.

6. Companies limited by guarantee have, it is feared, been defectively reported. The figures, so far as they go, however, show that there were 354 such companies at the close of 1885-86, almost all in the Madras Presidency, being mostly of the nature of associations for mutual assistance of a comparatively small character. One hundred and seventy-eight of these companies ceased to work in 1886-87, and their number was added to by 43 new companies, making a net result of 198 companies at the close of the year.

7. The fees realised and the expenditure in each province last year were:—

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for November 1887.

During November the high pressure area, which appears over Northern India during October, becomes a more strongly marked and more permanent feature of the distribution, while at the same time the area of low average pressure, over the Bay, which is, perhaps, the most striking feature of the October distribution, moves southward towards the Equator and is followed over the Bay by a brisk barometric rise, an improvement in the weather and a cessation of the north-east monsoon rainfall of the Carnatic. During the past November this course of events has been followed in a typical manner. On the first day of the month the mean pressure over the Panjab, the North-Western Provinces, Sind and Rajputana was about 30·000 inches and over Madras about 29·885 inches, while on the 30th November the mean pressure over the former region was about 30·170 inches and over the latter about 30·069 inches, showing a nearly equal rise over both regions. Similarly, on the 1st of November rain was reported at nearly all the Bay stations and as far north as Dacca and Silchar, while on the 30th the only rainfall reported was a slight shower at Colombo.

On the 1st of the month the cyclonic storm, which was noticed over the west of the Bay in last month's summary, was still shown off the Coromandel Coast, but it was fast filling up. It was, however, occasioning rather heavy rainfall over the whole of the Bay area, in Malabar, Ceylon and as far north as Calcutta, Dacca and Cachar. A large area of high pressure overlay the whole of Northern India and, except for the cyclonic circulation induced by the storm off the Coromandel coast, north-easterly and easterly winds prevailed almost everywhere. Over the Peninsula and Bengal the sky was heavily clouded. During the 2nd and 3rd conditions did not materially change. The depression over the Bay continued to fill up, but it left the weather in an unsettled state and rain fell generally around the Bay and over the south of the Peninsula. On the 4th the chart showed a feeble depression off the west coast of the Peninsula. This de-

pression occasioned rain in Malabar and Bombay as far north as Goa and Belgaum, and as the weather remained unsettled over the Bay of Bengal rain was thus reported from both coasts and from the interior of the Peninsula. In Northern India pressure was high, the wind circulation normal and the weather fine. On the 5th the low pressure area off the west coast had travelled northward as far as Ratnagiri, while the attendant rainfall had advanced as far as Bombay and Poona. All over the west and interior of the Peninsula rain was consequently falling, but in the Bay region the weather had improved, the only stations recording rainfall being Diamond Island, Masulipatam, Vizagapatam, and Gopalpore. In Northern India there was no change. The chart of the 6th showed that the west coast depression had advanced to between Ratnagiri and Bombay, while the area of rainfall and unsettled conditions had spread northward and north-eastward, and now included in addition to the Peninsula, Khandesh, the Berars, the south of the Central Provinces and part of Central India. The wind had become very variable over Northern India, and indeed the weather over the greater part of the country had become more or less affected by the low pressure area in the west. On the 7th though the depression off the Bombay coast appeared to be filling up, the weather over a large part of India remained in an unsettled state. Rain was reported from the Peninsula, Khandesh, the Berars, the Central Provinces, and as far north as Jhansi, and the cloud proportion was high except at the extreme north-eastern and north-western stations. On the two following days, *viz.*, the 8th and 9th, conditions improved somewhat, the rainfall gradually fell off over the central parts of the country and became lighter over the Peninsula, while the distribution of pressure and the circulation of the winds became more such as is characteristic of the cold weather months. Between the 9th and 13th slight showers continued to fall over Central India, Khandesh and Guzerat as well as the south of the Peninsula, but by the 14th these unsettled conditions had disappeared, a large area of high pressure had been established over the central and north-western parts of the country, while relatively low pressures were reported from the south-west and south-east coasts of the Peninsula. On this day the weather was clear, over by far the greater part of the country, and the only rainfall reported was from Ceylon and Diamond Island. From the 15th high pressures and fine, settled, weather prevailed throughout almost the whole of the Indian region, the actually highest readings being reported from the Central Provinces and slightly lower readings from the coasts of the Peninsula. All over Northern and Central India during this period the sky was almost cloudless. On the 18th the chart showed that a small area of deficient pressure was forming over the Bay. This depression occasioned a slight "backing" of the wind on the east coast of the Peninsula, and the re-appearance of cloudy and rainy weather in that region. This depression subsequently moved away southward, but it left conditions over the Peninsula in a somewhat unsettled state, and showers of rain fell there for many subsequent days. The area of rainfall, however, steadily contracted from day to day. On the 20th showers were reported from Madura northward as far as Secunderabad and Vizagapatam, on the 25th they did not extend beyond Cuddapah, and by the close of the month rain had deserted the Peninsula and was only reported from one station in Ceylon. Over Northern and Central India, between the 18th and the end of the month, the weather was remarkably settled and fine. A large area of high pressure held steadily over that region accompanied by north-westerly winds down the Gangetic plain, northerly winds over Bengal, north-easterly to easterly winds over the central plateau, and clear or nearly clear weather throughout the whole region.

The variations of the different elements from the mean show that, with the exceptions of Rangoon, Roorkee, Hyderabad and Kurnool, pressure has been above the average of the month throughout the whole of the Indian region. The excess has been greater in the north-west and centre than elsewhere, and as great on the hills as on the plains.

The departures of temperature from the normal average have been less regular than those of pressure. In Burma, Assam, Orissa, Behar, and one or two stations in the North-Western Provinces and the Panjab, and at several places on the Bombay coast and in Sind, the weather has been abnormally warm, but elsewhere the changes are very irregular. At the hill stations and in the Upper

Indus Valley, temperature has been lower than usual. The only regions within which rain was entirely absent during the month were the Panjab, both east and west, Behar, Sind, and Cutch. In every other part of India some rain fell, though in the trans-Gangetic portions of the North-Western Provinces in North Bengal the amount received was insignificant. The total rainfall of the month was generally deficient over Upper India, from Behar westward to the Indus, over Lower Burma and over Ceylon. Elsewhere it was in excess of the average. The greatest excess (4 inches) occurred in the Berars and Khandesh, but in Lower Bengal, Chutia Nagpore, the Central Provinces, Rajputana, the Konkan and Malabar the month's fall was about twice the average.

The following table shows the amount of rain and the difference from the average during the month of November 1887, according to districts as far as is indicated by the telegraphic reports :—

Districts.	Number of Stations.	Average rainfall in November.	Difference from the average in November 1887.

W. L. DALLAS,
for *Meteorological Reporter to the Govt. of India.*

Simla, 5th December 1887.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the Week ending 7th Dec. 1887.

During the first three days of the present week the fine settled conditions noticed throughout the whole of India at the close of the previous Summary continued uninterruptedly. During this period a large area of high pressure overlay the whole of northern Europe and from this area an arm or tongue of relatively high pressure extended southward over the Peninsula.

In consequence, anticyclonic or fine weather conditions were predominant everywhere, and the sky was clear, or nearly so, of clouds throughout almost the whole of the Indian region. On the 1st a slight shower was reported from Galle, on the 2nd from Madras, and on the 3rd from Diamond Island and Galle, but with these exceptions, the weather was rainless throughout the whole area of the chart for these three days. On the 4th there were signs of a change of weather not only in the Bay but in North-Western India also. In the Carnatic the wind had "backed" to north and north-north-west the sky had become more cloudy, rain had commenced and the barometer was falling, while in North-Western India the wind was inclined to shift to south-west and humidity to increase.

On the 5th both changes had developed somewhat. On the Coromandel Coast there existed a slight cyclonic circulation of the winds, the amount of cloud had increased, and 1¼ inch of rain had fallen at Madras. In North-Western India there had occurred a considerable barometric fall, the winds had become more distinctly south-westerly and the amount of cloud had increased. The report of the 6th showed the existence of two slight, but distinct depressions,— one of the Madras coast between Madras and Negapatam the other in Lower Sind. Around the former a well-marked cyclonic circulation of the winds prevailed, the weather had become very cloudy in the south of the Peninsula, and rain had fallen at Madras and Coimbatore. The effects of the latter depression were less marked, south-easterly and southerly winds prevailed, indeed, over a large part of North-Western India, but the weather was unchanged. By the morning of the 7th the Carnatic depression had apparently passed through Palk Strait and crossed the extreme south of the Peninsula. It had occasioned strong easterly winds at some of the most southern stations and had given 2⅝ inches of rain to Madras and Negapatam and smaller amounts to some of the inland stations. The Sind depression was apparently filling up, but the south-easterly winds, which had appeared with it, remained and were occasioning cloudy and damp weather in the North-West.

Compared with the average of the month the mean temperature of the week has been above the normal. The excess was most marked in the north-west.

Humidity has been above the average in the South Carnatic below it elsewhere.

With the exception of slight showers in Burma and Malabar rain has been confined to the Carnatic and Ceylon, but within those two regions the amount of rainfall has been considerable.

The concluding table gives the total rainfall of the past week for the different Provinces :—

P. RAJARATNA MOODALIAR,
Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending 10th December 1887.*—Rainfall good generally, but more is wanted in parts of Bellary, Madura and Salem. Agricultural operations progressing as usual. Crops slightly damaged here and there by excessive rain, insects or disease. Pasture sufficient except in parts of Anantapur and Tinnevelly. Prices almost stationary. General prospects favourable.

Bombay.—*For week ending 14th December 1887.*—Slight rain in one taluka of Dharwar, more is still required in one taluka of Sholapur. *Jowari*, wheat and gram in three talukas of Bijapur, linseed and cotton in parts of Sholapur, and cotton in parts of Dharwar, have been damaged by blight. Late crops are also suffering from adverse winds in parts of Bijapur and from want of water in the canals in parts of Upper Sind Frontier, and wheat in parts of Dharwar from excessive moisture. Standing crops otherwise good. Harvesting of early crops completed in Shikarpur, and sowing of late crops in Kaira, Thana and Dharwar; the harvest still continues in Karachi, Hyderabad, Upper Sind Frontier, Khandesh, Nasik, Belgaum, Dharwar and Kanara and sowings in Karachi, Shikarpur, Hyderabad, Upper Sind Frontier, Nasik, Colaba, Ratnagiri, Rajkot and Baroda. The opium crop in Baroda is good, but cotton in Bijapur is middling. Probable outturn of crops as already reported. Condition of agricultural stock fair in Nasik and poor in Hyderabad, good in other districts. Fodder is scarce in parts of Karachi, other than hilly tracts, in parts of Hyderabad and in two talukas of Nasik.

Bengal.—*For week ending 13th December 1887.*—Weather has been cold and dry. No rain. The rice harvest is in full progress, and a good outturn is expected throughout the Presidency, Rajshahye, Dacca, Chittagong and Bhagulpore Divisions, except the Santal Parganas; in Chota Nagpore and in parts of the Burdwan, Patna and Orissa Divisions and in the Santal Parganas district, the crop is short for want of sufficient rain in September and October. *Rabi* and poppy crops are generally in good condition. In Mozufferpore first sowings of poppy failed in places. In Chota Nagpore rain is wanted for *rabi*. Sugarcane is a good crop.

North-Western Provinces and Oudh.—*For week ending 14th December 1887.*—The weather has been fine. Rain is required in some districts. The *kharif* crops are being threshed. The *rabi* crops promise well in nearly all districts. The poppy sowings have been completed and are progressing favourably. Supplies are sufficient, but prices are rising everywhere except in Kumaun, Jhansi and parts of the Meerut Division. Fodder is still scarce in Partabgarh.

Punjab.—*For week ending 14th December 1887.*—No rainfall during the week. Prices stationary in some districts, but generally rising. *Kharif* crops are harvested. *Rabi* sowings are nearly completed. *Kharif* prospects and outturn are average. *Rabi* prospects good. Rain wanted in some districts. No damage to crops. Stock cattle are generally in good condition. There is a scarcity of fodder in many districts. Poppy sowings in progress.

Central Provinces.—*For week ending 14th December 1887.*—Weather clear and cold. Winter crops promise well, except in Raipur, where more rain is required and where insects have damaged the linseed. The autumn crops are being harvested. Rice yield in Sambalpur fair and sugarcane promising. Cattle in fair condition. Fodder below normal yield in Raipur. No report from Bilaspur.

Burma.—(No report received.)

Assam.—*For week ending 14th December 1887.*—Weather cold and seasonable. Rainfall *nil*. Harvesting of winter rice not completed. Outturn good. Gathering of pulses begun. Prospects of standing crops good, except mustard which is suffering from drought in Nowgong. Land is being prepared for wheat. In the Garo Hills cotton not yet wholly plucked. Tea pruning begun.

Mysore and Coorg.—*For week ending 14th December 1887.*—There has been a slight fall of rain in Mysore, Kolar and Bangalore districts. The standing crops are generally in good condition and dry crops are being harvested in parts. Prices have fallen in Kadur and Bangalore districts.

Slight rain fell in Coorg during the week. The standing crops continue good. Prices stationary.

Berar and Hyderabad.—*For week ending 14th December 1887.*—No rain during the week in Berar. The picking of cotton continues; outturn of *kharif* crops estimated at twelve annas in the rupee. Sowing of *rabi* completed.

In Hyderabad, there has been no rain during the week. Agricultural prospects good.

Central India.—*For week ending 14th December 1887.*—No rain throughout Central India. Agricultural operations in progress. State of standing crops and prospects and probable outturn of harvest fairly good. Condition of agricultural stock good, except in parts of Goona. Pasturage and fodder good, except in Bhopal, where fodder somewhat damped by recent rains. Prices of food-grains rising. Opium sowings in progress; prospects fair.

Rajputana.—*For week ending 14th December 1887.*—Agricultural operations satisfactory. Standing crops fairly good, but want rain in some places. Harvests generally good. No damage, except to Indian-corn, in Harowtee. Agricultural stock fair, except in portions of Marwar. Prices steady.

Nepal.—*For week ending 8th December 1887.*—No rain. Weather clear and cold. Prospects fair.

E. C. BUCK,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 52.} CALCUTTA, SATURDAY, DECEMBER 24, 1887.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RAILWAY RATES AND FARES IN INDIA.

No. 1446 R. T., dated Fort William, December 12, 1887.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Despatch from the Secretary of State, No. 132 Railway, dated 19th October 1882.
Public Works Department No. 162 R.T., dated 2nd March 1883, to the Government of Bombay.
Public Works Department Resolution No. 200 R.T., dated 25th February 1886.
Despatch from Secretary of State, No. 16 Railway, dated 25th February 1886.

Read also—

Letter from the Director General of Railways, No. 775T., dated 20th August 1887, and extract from enclosure.

OBSERVATIONS.—In his Despatches read again the Secretary of State expressed the opinion that the rates and fares on Indian Railways should be dealt with as nearly as possible as they would be by independent Companies, *i.e.*, that the Managers of Railways should be left to fix their own rates and fares, that the interests of Railways and trade generally would be better served by accepting the legitimate consequences of competition, and that the interposition of Government would be justified only in cases where Companies, under the security of a guarantee, might fix rates below what would cover the cost of transport with a margin of profit. The Government of India unreservedly accepted these principles, *vide* Public Works Department No. 162 R.T., dated 2nd March 1883, to the Government of Bombay, and in paragraph 11 of this letter His Excellency the Governor General in Council promised to subsequently issue certain general rules, subject to which the Managers of Railways might be left free to fix such rates and fares as seemed most advantageous for their respective lines.

2. The time now appears opportune for promulgating these rules, which His Excellency the Governor General in Council conceives should take the form of formally accepting certain general principles based upon the best recognized practice of the English and American Railways. Some of the more important of these principles seem to His Excellency in Council to be as follows :—

I.—That to protect the public and to prevent unreasonable charges on the part of the Railway Administrations, it is necessary for Government to impose restrictions as regards the maxima fares to be levied for the carriage of all classes of passengers, and the maxima rates for all descriptions of goods.

This principle has been recognized in every English Railway Act and in all the Continental ones, as well as in all the American Acts authorizing the construction of railways.

In India, however, circumstances exist, not to be found generally in the railways of other countries, which make it necessary to fix minima as well as maxima rates and fares. In consequence of the Government guarantee granted to certain railways, it is possible to work a railway in this country at a loss to Government without affecting the pecuniary interests of the shareholders in any way, and at the expense of the tax-payer, *viz.*, when a Guaranteed line is not paying the guaranteed interest, and has no near prospect of so doing. A Guaranteed Company, under these circumstances, might unduly lower the rates and fares in competition below a point which would allow of a margin of profit, unless prevented from following this course by a minimum rate being fixed by Government. These minima, however, will be enforced only when circumstances have shown them to be necessary in the financial interests of Government.

II.—That the charges made to the public are admissible of division into two heads—(*a*) mileage rates and fares which necessarily vary to some extent with the distance the passengers and goods are carried; and (*b*) terminals, this latter being a fixed charge for services incidental to the business of a carrier.

The maxima rates and fares are most conveniently fixed at a certain sum as a maximum charge per mile for each class of passenger and per mile per ton (or maund) for each class of goods. As regards terminal charges, however, it may be said at once that it is impossible to prescribe any maximum and minimum to meet all cases. Government must be contented with reserving to itself the power, in the event of cause being shown by any person concerned, of taking evidence on the matter and of fixing what, under the circumstances of any particular case, appears to be a fair and reasonable charge for terminals at that particular station. As regards the classification of goods, an attempt was made at the Traffic Conference of 1884 to introduce an uniform classification, but owing to the opposition of one important Railway it was devoid of results. A move in this direction has, however, been made by the adoption by the East Indian Railway, North-Western Railway, Bengal and North-Western Railway, and Tirhoot State Railway of a classification common to all four railways, and it appears to His Excellency in Council advisable to order the introduction of this classification on all State lines, and, unless due cause can be shown, on all railways to be opened in future.

III.—That when once maxima and minima rates and fares have been fixed, any further interference on the part of Government in the matter of rates and fares is only a restraint of trade. The Railway Administrations, who know their own interests best, should be allowed to alter their rates within the prescribed maxima and minima to suit the varying conditions under which commercial business is everywhere carried on.

In granting this freedom, however, it is assumed that the English Clearing House principle, that in the case of two competitive routes between two stations the Company owning the shortest route fixes the rate, is accepted.

IV.—That, although in the interests of the public, the Government should abstain from direct interference in the matter of rates and fares, yet there are certain ruling principles which Government, as the guardian of the public interests, must see are complied with by Railway Administrations. There should be no undue preference; in other words, Railway Administrations ought not to be permitted to make preferential bargains with particular persons or companies, such as granting them scales of charges more or less favourable than those granted to the public generally. Again, in cases where the traffic offering is sufficient to justify this arrangement, Railway Administrations must give reasonable facilities for public traffic between any two Railway stations, each Railway Administration being contented to receive for its share of the through rate less than its ordinary local rate.

The justice of this is evident when it is considered that all goods traffic is carried for long distances at lower rates than for short distances, so that if each Railway Administration were to charge its full local rate over its own comparatively short length of line, the aggregate would be so great as to restrict the traffic. The principles enunciated by Sir B. Leslie in his letter No. 633G., dated 25th August 1880, for working through traffic, are all that could be required :—

"The various railway systems should, as far as possible, serve the country as if they were under one management, and the dealer in country produce should not be hampered in his operations by the necessity to base his calculations on as many different scales of rates as there may be railways between the starting point and destination. This can only be attained by adopting an uniform scale of rates for special or lower class goods which form the bulk of the country produce, and where there are alternative routes, by sending goods according to sender's option. The adoption of an uniform scale of rates for special class goods for the whole of the districts served by the East Indian Railway and Oudh and Rohilkhund Railway will, in my opinion, contribute largely to develop traffic. It will be, in my opinion, to the material advantage of the Railways and interests of the public to adopt an uniform gradation scale of rates for special class goods, both for through and local traffic, on both Railways; the earnings from through traffic to be divided in the ratio of the mileage."

These rights were secured to the public in England by the Railway and Canal Traffic Acts of 1854 and 1873. Care will be taken to secure the same rights to the public in India in the new Indian Railway Act now under consideration; but in the meantime His Excellency in Council relies on all Railway Administrations, in the interests of the public, giving effect to the above principle IV as if it already had the force of law.

The question whether the charging of a lower or an equal rate for a longer than for a shorter distance does or does not constitute "undue preference" appears to be at present unsettled in England, although the weight of legal authority is very much against the practice, and it seems to be at least settled that the charging by a Railway Company of a lower or even an equal rate for a longer than for a shorter distance *does* constitute *primâ facie* evidence of undue preference. The Governor General in Council is disposed to instruct the Managers of all State Railways to accept this view of the matter until the Courts of Law in India give a decision on the legality or otherwise of charging a lower or an equal rate for a longer than for a shorter distance, and the Consulting Engineers should use their influence, in the interests of the public, to prevent any undue preference being allowed to exist on guaranteed lines.

3. The Government of India, while enunciating the above principles, which it considers should be observed in the working of all Railways, and which it has determined shall be observed on all State Railways and Railways about to be opened, entertains the hope that the Railway Companies open at present will see that it is to their own advantage to adopt principles which the experience of

English Railways and of those of other countries has shown to be most to the interests of all concerned, and leaves it to the good sense and business instincts of the several Railway Boards and Agents to recognize the advantage of uniformity in the working of the Indian Railway system as a whole. A beginning has already been made by the assembling of periodical Railway Conferences; and Government would now go a step further and propose the formation of a Standing Committee of Railway Managers, somewhat of the nature of the Committee of General Managers of English Railways parties to the Clearing House, with the Director General of Railways as *ex-officio* Chairman.

Resolution.—His Excellency the Governor General in Council is accordingly pleased to order as follows:—

(*a*) That the schedule of maxima and minima rates and fares, forming Appendix A to this Resolution, shall be adopted on all Railways worked directly by the State, and by all other Railway Administrations, whether their lines be already opened or not, so far as this schedule is not inconsistent with any contracts or agreements previously entered into; and that it shall not be departed from without due cause being shown.

(*b*) That in order that the public may have complete information as to the maxima rates and fares which every railway is authorized to charge, the maxima and minima rates and fares fixed for each railway shall be published in their goods and coaching tariffs, under the signature of a Consulting Engineer if a private Company, and of the Secretary to Government in the case of a State line.

(*c*) That unless sufficient reasons can be brought forward against the adoption of this course, the general goods classification now in force on the East Indian Railway shall be accepted for all Railways worked directly by the State, and by all other Railway Administrations with the same proviso as to interference with existing Contracts as under (*a*) above.

(*d*) That there shall be no undue preference, either as between two Railway Companies or between a Railway Company and a particular person or class of individuals, by making preferential bargains or by granting to one particular Company or person more favourable conditions for the carriage of goods than to the rest of the public at large.

(*e*) That the Director General of Railways be instructed to place himself in communication with the several Railway Companies, with a view to establishing a Standing Committee of Railway Managers.

ORDER.—Ordered, that this Resolution be communicated to the Governments and Administrations and Officers noted in the margin for information and guidance; also to the Governments of the Punjab, the Resident in Mysore, the Agents to the Governor General for Rajputana, Central India, and Baluchistan, and the Accountant General, Public Works Department, for information.

The Governments of Madras, Bombay, Bengal, and the North-Western Provinces and Oudh.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Central Division.

Ordered also that this Resolution, and its enclosures, be published in the Supplement to the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary.

Documents accompanying—
Appendix A.—Schedule of maxima and minima Rates and Fares.
Appendix B.—Extract paras. 1 to 49 and 122 to 171 from Note by the Director General of Railways, dated 31st July 1887, on Railway Rates and Fares in India.

Appendix A to P. W. D. Resolution No. 1446 R.T., dated 12th December 1887.

SCHEDULE OF MAXIMA AND MINIMA RATES AND FARES.

	Maximum. Pies per mile.	Minimum. Pies per mile.
Passenger Fares—		
1st class	18	12
2nd ,,	9	6
Intermediate class	4½	3
3rd class	3	1¾

	Maximum. Pies per maund per mile.	Minimum. Pies per maund per mile.
Luggage	2	1

	Maximum. Pies per mile.	Minimum. Pies per mile.
**Carriages*—		
Single carriages	42	30

	Maximum. Pies per truck.	Minimum. Pies per truck.
Two or more carriages on one truck	54	42

	Maximum. Pies per mile.	Minimum. Pies per mile.
**Horses*—		
Single horse	24	18

	Maximum. Pies per fifty miles or portion thereof.	Minimum. Pies per fifty miles or portion thereof.
Dogs—		
Each	96	48

Parcels—

The rates passed at the Railway Traffic Conference of 1884, as under:—

	First 100 miles. Annas.	Every additional 100 miles. Annas.
† Not exceeding 5 seers or 1 cubic foot	3	1
,, ,, 10 ,, 2 cubic feet	6	3
,, ,, 20 ,, 4 ,,	10	5
,, ,, 30 ,, 6 ,,	13	6½
,, ,, 40 ,, 8 ,,	16	8
For every additional 10 seers or 2 cubic feet, or portion of 10 seers or 2 cubic feet	4	2

Parcels exceeding 40 seers in weight or 8 cubic feet in measurement may be booked if accommodation will allow.

	Maximum. Pies per maund per mile.	Minimum. Pies per maund per mile.
Goods rates—		
5th class	1	1
4th ,,	5/6	5/6
3rd ,,	3/4	3/4
2nd ,,	1/2	1/2
1st ,,	1/3	1/3
Coal, edible grain, and other low-priced staples carried at special rates	1/8	1/10

* Subject to a minimum *charge* of Rs. 5.

† Subject to a maximum *charge* of one rupee for a parcel not exceeding 5 seers, irrespective of distance.

Appendix B to P. W. D. Resolution No. 1446 R.T. of 1887.

Extracts (paragraphs 1 to 49 and 122 to 171) from a Note by Lieutenant-Colonel L. Conway-Gordon, R.E., Director General of Railways, dated 31st July 1887, on Railway Rates and Fares in India.

RATES AND FARES (*a*).

I believe the time has now come when Government must intervene more actively than it has hitherto done in the matter of rates and fares in force on the Indian Railways. In the first stage of railway development, when railways are practically isolated and competition hardly exists, railway rates and fares are necessarily based solely on local requirements. At a later stage, when the railway system has extended, and the net-work of lines has become more complicated, the railways cease to be useful merely to the local public (*b*). They pass from being what the French classify as "*Chemins d'intérêt local*," into being "*Chemins d'intérêt général*." They become intermediaries between distant points, and their tariffs have to be adjusted to meet the altered circumstances of the case. The numerous cases of disputes between the various competing railway Companies in India, the many complaints put forward by Chambers of Commerce and traders on the subject of Railway rates and fares, that are now referred so frequently to Government for settlement, prove conclusively that India is now passing beyond the first and simple stage of railway development into the later and more complex.

2. I shall, in this note, first indicate what appear to be the principles in regard to railway tariffs that are generally accepted by the best authorities in England, America, and elsewhere; I will then shortly sketch the actual state of railway tariffs in India; and finally put forward some recommendations as to what is now, in my opinion, the best course for Government to pursue.

3. The leading principles which have been accepted in England and elsewhere in regard to railway rates and fares appear to be as follows:—

I. That, in the interests of the public, in order to prevent unreasonable charges on the part of Railway Administrations who have by Government been given a practical monopoly of the land-carrying trade of the country, it is necessary to lay down some restriction on the maxima fares to be levied by Railway Administrations for the carriage of all classes of passengers and on the maxima rates for the conveyance of all descriptions of goods.

4. It is perhaps hardly necessary to make any remarks on this principle, for it has been recognized in every English Railway Act, in the German and French Railway Legislatures, and not only in the Railway Acts of the separate American States, but also in the general Act of the United States to regulate commerce passed in February 1887.

5. This restriction is imposed as a matter of public policy, it being impracticable for each one of the public to contract freely with a strong Railway Administration in a small matter of which the Railway Administration holds the monopoly (*c*).

6. It may be observed, however, that legal maxima rates afford little real protection to the public, since they are usually fixed so high that it is, or becomes sooner or later, the interest of the Railway Administrations to carry at lower rates (*d*).

7. After maxima rates are fixed, Railway Administrations should have the power of applying to Government for permission to raise these maxima on

(*a*) In this note, I have made use of all the works on the subject of rates and fares which the very limited resources of the Public Works Secretariat Library placed at my disposal; and I have, as far I could, purposely adhered to the actual wording of the report, evidence, &c., to which I have referred. In most cases I have given my authority; but in many cases I have been unable to show the extract as a quotation, owing to the necessity of slightly altering the wording in order the better to suit the context.

(*b*) "Nothing, however, in our investigation of the subject has struck us more forcibly than the fact that the growth of railroad business has been such as to take from the several trunk roads nearly all of the purely local character they formerly possessed." [B; page 3.]

"Moreover, with the rapid extension of railways in India, the old conditions under which the traffic was worked must necessarily be modified."—Extract from letter from the Government of India, Public Works Department, No. 923 R.T., dated 16th September 1886.

(*c*) C—Mr. J. H. Balfour Browne; Question No. 1404.

(*d*) C—Report of the Committee, page V.

due cause being shown that the prescribed rates or fares are insufficient; but they should not be allowed to take the matter in their own hands, and to charge rates and fares to the public in excess of the prescribed maxima (*a*).

8. *II. That the tolls charged to the public, at all events so far as goods rates are concerned, must practically be divided into two heads*:—

A. Mileage rates, *i.e.*,—*Tolls for the use of the railway, including the use of wagons and trucks, locomotive power, and every other expense incidental to the conveyance of the goods, inclusive of profit.*

B. Terminals, *i.e.*—*Charges for services incidental to the business or duty of a carrier, such as the working charges, repairs, renewals, and insurance of station buildings, sidings, sheds, platforms, warehouses, cranes, turn-tables, weighing machines, hydraulic power, fixed appliances, machinery, &c.; ground-rent; loading and unloading; clerkage; weighing and checking of goods; stores; covering; porterage, and labour of every description; shunting; gas and lighting; rates and taxes; risk of damage in loading and unloading; cartage; claims for compensation, &c., &c., inclusive of profit.*

9. This division was recognized in the Report of the Select Committee on Railways (Rates and Fares) of 1882, *vide* page V:

"Your Committee, therefore, are of opinion that the right of Railway Companies to charge for station terminals should be recognized by Parliament."

10. It is also recognized in the United States Act to regulate commerce, and in the tariffs laid down by the continental Governments.

11. It is to be noticed that the tolls or mileage rates necessarily vary with the distance the goods are carried, while the terminals are independent of that distance. The sum of the two, which is the charge made by the railway to the public, forms what might be termed a natural differential rate.

12. *III. That the fixed maxima rates and fares under the head mileage rates are most conveniently given in a schedule, showing the maxima fares for each class of passenger per mile, and the rate per ton (or maund) per mile for each class of goods, all the different articles which have to be carried being entered into a prescribed classification, showing the class under which each article is to be considered as belonging for the purpose of fixing the rate.*

13. In the English Railway Acts, for the most part, the classification of goods laid down is most imperfect. It seems to have been the intention of Parliament to give Railway Companies the power of charging a uniform rate per passenger per mile and per ton of goods per mile without distinction of class, with certain exceptions which are specified. The ruling rate is what is called the "Et cetera" rate, or the rate which appears in the "Et cetera" clause; but that seems to be the standard rate of charge which Parliament authorized the Railway Companies to make, and all the articles which are enumerated, and which are put at a lower figure, are exceptions to that rule. These are articles which either are carried in large quantities everywhere, or have some special reference to the district through which the line was about to be constructed (*b*).

14. On the other hand, the classification attached to the American Railway Acts appears to be as complete as could be desired (*c*).

15. A general goods classification should be drawn out by railway experts and sanctioned by Government, or be issued by some Railway Conference, so as to command general acceptance. Even when drawn out, exceptions must be allowed to particular lines, as it may happen that in certain districts

(*a*) C—Mr. J. H. Balfour Browne; Question No. 1170.
(*b*) C—Mr. John Noble, General Manager, Midland Railway; Question 1908. Also L.—Paragraph No. 62.
(*c*) C—Appendix No. 6.

there is a large traffic in certain goods which can be carried at something less than the recognized general rates (*a*).

16. Companies need not be bound to accept the same classification for local as for through traffic, but it is of course more convenient if they do (*b*).

17. Such general goods classifications must be elastic; that is, the Conference should have power to change articles from one class to the other.

18. Two points here particularly call for attention,—

1st, The very fact of having any goods classification at all—and no one would dispute the convenience of having a classification—is nothing but recognizing preferential rates for certain articles (*c*);

2nd, That if Government prescribe a maximum rate for each class of goods without at the same time prescribing a classification, or if prescribing a classification, without placing any restriction on a Railway Administration altering goods from one class to another, it is obvious that the Railway Administration is practically unrestricted for any article whatever within the maximum rate allowed for the highest class of goods.

19. IV. *That under the second head,* Terminals—*i.e., the charges for services incidental to the business or duty of a carrier—the expense which a Railway Administration must incur in working different descriptions of traffic at different stations varies so greatly that it is useless to attempt to prescribe any maximum to rule all cases. All that can be said is that the charges should be reasonable, and that Government should have the power, in the event of cause being shown by any person concerned, of taking evidence on the matter and of fixing what, under all the circumstances of the particular case, appears to be a fair and reasonable charge at that station for that particular description of traffic.*

20. The Select Committee of 1882, in their report remarked—

"The same thing is true of terminal charges. The circumstances are so various and so constantly changing that any legal maxima which might now be fixed would probably be above the charges now actually made, certainly far above those which will hereafter be made. Indeed, attempts made in 1861 and 1866 to fix a maximum for terminals broke down because the only maximum that could be agreed upon was so much beyond the charge then actually made to coal-owners that the coal-owners feared it would lead to a rise in that charge." * * * * * * *

"Your Committee, therefore are of opinion that the right of Railway Companies to charge for 'station terminals' should be recognised by Parliament, so as to provide by a general Act that the sums which they claim a right to demand for terminals of any kind at each station shall be clearly entered in the rate book, or otherwise publicly notified at such station, so that it may be open to anybody at any time to challenge before the Railway Commissioners, under the provisions of section 15 of the Railways and Canals Traffic Act of 1873, the reasonableness of such sums; the Commissioners having power in giving their decision to take into account the maximum rates of the Company." (*d*).

21. The following is the section of the American Railway Act dealing with terminals:—

"All charges made for any service rendered, or to be rendered, in the transportation of passengers or property as aforesaid, or in connection therewith, or for the receiving, delivering, storage, or handling of such property, shall be reasonable and just; and every unjust and unreasonable charge for such service is prohibited and declared to be unlawful" (*e*).

22. Were Government to fix a maximum terminal, it would have to be a maximum sufficient to cover the heaviest expense the Railway Administration might incur in working the traffic at any one station, so that the Railway Administration everywhere else would be practically unrestrained (*f*).

(*a*)—C Mr. John Noble, General Manager, Midland Railway; Question No. 1911.
(*b*)—C The same witness; Question No. 1969.
(*c*)—C Mr. J. S. Forbes, Chairman, London, Chatham and Dover Railway; Question No. 2400.
(*d*)—C Report by Committee, page V.
(*e*)—D Section 1.
(*f*)—C Mr. J. H. Balfour Browne; Question No. 1382.

23. It is to be remembered that the terminal recognized in the division of a through rate between two or more Railway Administrations need not be, and practically is not, regulated by the same considerations that ought to regulate the terminal charge to the public (*a*).

---

24. That in fixing within the prescribed legal maxima the actual rates and fares to be charged to the public, Railway Administrations must be regarded as other ordinary traders, and allowed to alter their charges to suit the varying conditions under which commercial business is everywhere carried on ; that all idea of fixing rates on the basis of their varying directly with the mileage, or with the cost of working, or with the cost of the line, or with the profits gained, or upon any other fixed and invariable principle, must be definitely abandoned; that although these are all necessarily factors in fixing rates, as well as the amount of traffic to be carried, the value of the articles, the bulk of goods, the risk in, and expense of, handling, the result, after allowing for these factors, has to be profoundly modified by the necessities of trade and by the competition on other routes by water or by other railways.

That, in fact, it has to be recognized that the only principle involved is that the rates should be, not the highest rates that Railway Administrations can obtain, but the highest rates they can obtain consistently with keeping up their traffic.

25. This issue may be considered as definitely decided by the Select Committee on Railways (Rates and Fares) of 1882, and the whole argument, admirably stated, will be found in the Chapter on "*Fixing fares*" in their report.

26. See also the following :—

Report of Messrs. Thurman, Washburne, and Cooley, constituting an Advisory Commission on Differential Rates by railroads between the West and the Seaboard.

Article by Sir Thomas Farrer on the Equalisation of Railway Rates in the Fortnightly Review.

Articles on Railway Rates and British trade in the Contemporary Review—Vol. XLVI.

Letter from the Government of Bombay, No. 874, dated 24th February 1882.

27. In the case of Baxendale *versus* the Great Western Railway Company in 1858, the Lord Chief Justice, in his judgment, said—

"We must endeavour to prevent any injustice either in the rate of charge or the degree of accommodation afforded, at the same time that we carefully avoid interfering, except where absolutely necessary for the above purpose, with the ordinary rights which (subject to the before-named qualification) a Railway Company, in common with every other company or individual, possesses of regulating and managing its own affairs, either with regard to charges or accommodation, or to the agreements and bargains it may make in its particular business."

28. The following are some of the principal considerations involved :—

The question of direct control by Government.—It is not sound policy to interfere too much in the details of railway charges. The circumstances in which Railway Companies find themselves placed from time to time are so very various that the rates should be left, to a great extent, with the companies themselves. The companies know their own interests, and their interests are almost identical with those of the public (*b*).

Government interference would be a restraint of trade which eventually would be a mischief to the public (*c*).

The fixing of all working rates is far too great a business for any Government department to undertake; such a department simply could not do it (*d*).

(*a*) C—The same witness : Question No. 1484.
(*b*) C—Mr. Thomas Shaw, Manager of the Great Northern Railway of Ireland; Question No. 914.
(*c*) C—Mr. R. D. M. Littler, Q. C.; Question No. 3657.
(*d*) C—Mr. R. E. Webster, Q. C; Question No. 1743.

Traders prefer to see the officers of the Railway Administration and get a rate settled off-hand than to make application to any Government authority as such application would be sure to take time, and commercial business seldom admits of any delay (*a*).

29. *The cost principle.*—The attempt to carry all traffic at the average cost of carriage would destroy all trade. The traffic in all materials carried in large quantities at very low rates, and all long-distance traffic would disappear, (*b*).

If the companies were to charge according to actual cost of conveyance, the rates would vary day by day according to the quantities carried and the seasons, and the trader could never depend upon having the same rate all the year round (*c*).

"There is literally no end to the difficulties which beset the apparently simple question of determining the actual cost of carriage. It varies with different classes of goods. It varies according to the direction in which the same goods are carried. It varies from day to day and on different sections of the same railway" (*d*).

The cost of the carriage of any ton or number of tons carried by rail can never be accurately apportioned (*e*). It varies daily. With the odd general traffic carried by railways under constantly changing circumstances it is impossible to assess the rate rateably (*f*).

"We doubt the possibility, however, of ascertaining the cost of carrying particular commodities. To ascertain the *average* cost of carrying a unit of coaching or goods traffic during an entire half-year is in itself a complicated problem involving various assumptions which may not be absolutely correct, and must in some cases be purely conjectural. But the *actual* cost of carrying goods varies for different lines; for different sections of the same line; for different seasons; almost it may be said from day to day. No practically useful results can, we believe, be derived from a minute investigation into actual carrying cost at any particular time. The *average* cost ascertained from the [illegible] fixed to suit the [illegible] of the trade. They cannot be varied to correspond with the fluctuations in cost of carriage, even if these could be accurately ascertained. Reductions, when their necessity is apparent, should be made without hesitation in view of the broad general results to be attained. Their effect can only be judged of by the general aspects of the receipts and working expenses of the railway after they have been in operation for some time, which is the special province of every skilful Manager to study" (*g*).

The only case I am aware of in which working rates vary with the cost of working is on some of the English railways, where, by special agreement between the trades and the railways concerned, the mineral traffic rates vary with the price paid for coal by the Railway Company (*h*).

30. *The question of competition.*—Goods will find their way to market by the cheapest possible route, all things considered; and as this is so, the Railway Companies in respect to these particular things are just as much entitled to compete for them as any other carrying agency (*i*).

Rates are in the first instance made upon a mileage scale as far as circumstances permit; but they have to be reduced directly a competition is set up (*j*); every care and attention having to be shown to the wants of the public in adjusting rates which will bring traffic (*k*).

(*k*) C—Mr. J. Walker, General Manager, North British Railway; Question No. 564.

To get the traffic, rates have to be materially altered from time to time (*a*), to such a paying price as the traffic can fairly afford. New rates have to be made and existing rates altered, to meet the daily varying circumstances of trade (*b*).

If railways did not give greater facilities for long distance traffic and lower rates for shipment traffic, foreign trade would die away, and the consuming public would eventually suffer (*c*).

While a Railway Administration is justified in taking however small a profit to get the traffic, it is not justified in carrying at a loss, as that would be carrying the traffic of one person at expense of another (*d*).

31. The above considerations are, however, somewhat modified in the case of State Railways by the principle that the main object of State Railways is not to gain extravagant dividends for Government, but to develop and encourage the trade of the country (*e*). Any net profits gained in excess of the interest payable by Government on the capital expended constitute a direct tax on the trade of the country.

---

32. VI.—That although, in the public interests, Government should carefully abstain from direct intervention in the matter of the working rates and fares, and "should take no step which would induce so much as a reasonable suspicion of its good faith with regard to the integrity of privileges already granted," there are certain ruling principles which Government, as the guardian of the public interests, must see are complied with by Railway Administrations in working :—

(*A*). *That there must be no undue preference,* i.e., *that the Railway Administration is not to make preferential bargains with any particular person or company, or with individuals of a particular class, and give them conditions of carriage or scales of charges either more or less favourable than those allowed to the public generally.*

(*B*). *That, as far as the public are concerned, the railway between any two given points, no matter to how many different Railway Administrations this length may belong, must be worked as if it belonged to a single Administration. In other words, that Railway Administrations must give reasonable facilities for public traffic between any two connected railway stations, in cases where the amount of public traffic between these two places is sufficient to justify such facilities being given.*

That this intervention on the part of Government pre-supposes that each Railway Administration concerned must be content to receive for its share of the through rate a lower rate than its ordinary local rate over the same distance. All goods traffic, it may be said, is carried for long distances at rates lower than for short; so that if each Railway Administration were to charge its full local rate over its own comparatively short length of line, the aggregate rate would be so great as to restrict the traffic. In other words, reasonable facilities would not be given to the public.

33. This limited interference on the part of Government was first authorized by the English Railway and Canal Act of 1854, clause 2, which runs as follows :—

2. "Every Railway Company, Canal Company and Railway and Canal Company shall, according to their respective powers, afford all reasonable facilities for the

(*e*) Letter from Bombay Chamber of Commerce, dated 1st July 1882.

receiving and forwarding and delivering of traffic upon and from the several railways and canals belonging to, or worked by, such companies respectively, and for the return of carriages, trucks, boats, and other vehicles; and no such company shall make or give any undue or unreasonable preference or advantage to, or in favour of, any particular person or company, or any particular description of traffic, in any respect whatsoever: nor shall any such company subject any particular person or company, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; and every Railway Company and Canal Company and Railway and Canal Company having or working railways and canals which form part of a continuous line of railway or canal, or railway and canal communication, or which have the terminus, station, or wharf of the one near the terminus, station, or wharf of the other, shall afford all due and reasonable facilities for receiving and forwarding all the traffic arriving by one of such railways or canals by the other, without any unreasonable delay and without any such preference or advantage as aforesaid; and so that no obstruction may be offered to the public desirous of using such railways or canals, or railways and canal, as a continuous line of communication; and so that all reasonable accommodation may, by means of the railways and canals of the several Companies, be at all times afforded to the public in that behalf."

34. The Regulation of Railways Act, 1873, went somewhat further, to the extent of saying that the facilities required to be given by Railway Companies for through traffic shall include the granting of through rates, *vide* section 11, as follows:—

11. "Whereas by section 2 of the Railway and Canal Traffic Act, 1854, it is enacted that every Railway Company and Canal Company and Railway and Canal Company shall, according to their respective powers, afford all reasonable facilities for the receiving and forwarding and delivering of traffic upon and from the several railways and canals belonging to or worked by such companies respectively, and for the return of carriages, trucks, boats, and other vehicles; and that no such company shall make or give any undue or unreasonable preference or advantage to or in favour of any particular description of traffic, in any respect whatsoever, or shall subject any particular person or company, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; and that every Railway Company and Canal Company, and Railway or Canal Company having or working railways or canals which form part of a continuous line of railway, or canal, or railway and canal communication, or which have the terminus station or wharf of the one near the terminus station or wharf of the other, shall afford all due and reasonable facilities for receiving and forwarding by one of such railways or canals all the traffic arriving by the other, without any unreasonable delay, and without any such preference or advantage or prejudice and disadvantage as aforesaid, and so that no obstruction may be offered to the public desirous of using such railways or canals or railways and canals as a continuous line of communication, and so that all reasonable accommodation may by means of the railways and canals of the several companies be at all times afforded to the public in that behalf:"

"And whereas it is expedient to explain and amend the said enactment: Be it therefore enacted that"—

"Subject as hereinafter mentioned, the said facilities to be so afforded are hereby declared to and shall include the due and reasonable receiving, forwarding, and delivering by every Railway Company and Canal Company, and Railway or Canal Company, at the request of any other such company, of through traffic to and from the railway or canal or any other such company at through rates, tolls, or fares (in this Act, referred to as through rates)."

Provided as follows:—

(1) "The company requiring the traffic to be forwarded shall give written notice of the proposed through rate to each forwarding company, stating both its amount and its apportionment, and the route by which the traffic is proposed to be forwarded."

(2) "Each forwarding company shall, within the prescribed period after the receipt of such notice, by written notice inform the company requiring the traffic to be forwarded whether they agree to the rate and route; and if they object to either, the grounds of the objection:"

(3) "If at the expiration of the prescribed period no such objection has been sent by any forwarding company, the rate shall come into operation at such expiration:"

(4) "If an objection to the rate or route has been sent within the prescribed period, the matter shall be referred to the Commissioners for their decision:"

(5) "If an objection be made to the granting of the rate or to the route, the Commissioners shall consider whether the granting of the rate is a due and reasonable facility in the interest of the public, and whether, having regard to the circumstances the route proposed is a reasonable route, and shall allow or refuse the rate accordingly:"

(6) "If the objection be only to the apportionment of the rate, the rate shall come into operation at the expiration of the prescribed period, but the decision of the Commissioners as to its apportionment shall be retrospective; in any other case, the operation of the rate shall be suspended until the decision is given:"

(7) "The Commissioners in apportioning the through rate shall take into consideration all the circumstances of the case, including any special expense incurred in respect of the construction, maintenance, or working of the route, or any part of the route, as well as any special charges which any company may have been entitled to make in respect thereof:"

(8) "It shall not be lawful for the Commissioners in any case to compel any company to accept lower mileage rates than the mileage rates which such company may for the time being legally be charging for like traffic carried by a like mode of transit on any other line of communication between the same points, being the points of departure and arrival of the through route:"

(9) "The prescribed period mentioned in this section shall be ten days, or such longer period as the Commissioners may from time to time by general order prescribe:"

"Where a Railway Company or Canal Company use, maintain, or work, or are party to an arrangement for using, maintaining, or working steam vessels for the purpose of carrying on a communication between any towns or ports, the provisions of this section shall extend to such steam vessels, and to the traffic carried thereby."

35. The American law on the subject is substantially the same, as may be seen from the following extracts from the United States Act to regulate commerce:—

Clause 3. "That it shall be unlawful for any common carrier, subject to the provisions of this Act, to make or give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation or locality, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever."

"Every common carrier, subject to the provisions of this Act, shall, according to their respective powers, afford all reasonable, proper, and equal facilities for the interchange of traffic between their respective lines, and for the receiving, forwarding, and delivering of passengers and property to and from their several lines and those connecting therewith, and shall not discriminate in their rates and charges between such connecting lines; but this shall not be construed as requiring any such common carrier to give the use of its trucks or terminal facilities to another carrier engaged in like business."

36. It should be distinctly understood that there may be preference without being *undue* preference. There may be circumstances that justify the preference. The fact of there being preference at all is *primâ facie* evidence of its being undue preference; but this *primâ facie* evidence may be rebutted by showing that the rate has been *bonâ fide* reduced to meet competition, or that the arrangement is otherwise so much in favour of the public generally as to make it advisable for the arrangement to continue (*a*).

37. The following extracts from the Reports of the Railway Commissioners show the meaning they attach to the English Acts as regards compulsory through traffic:—

"To prevent undue preference and to ensure the proper transmission and interchange of traffic were the two objects in view in passing the Railway and Canal Traffic Act of 1854; and it is a principal part of our duty to carry out upon demand the provisions of that Act" (*b*).

(*a*) C—Questions No. 1266—1270.
(*b*) H—Extracts from the 4th Report of the Railway Commissioners.

"The Act of 1854 requires the interests of traffic coming to a line from other lines to be as much cared for as those of local traffic. It requires that it should be made as easy to go from any place on the railway of one company to any place on the railway, forming a through route, of another company, as if both railways belonged to the same company. Where, however, companies are competing, arrangements for working their lines in harmony are not unfrequently overlooked; and the provisions of the Act, and ready means of enforcing them, are very necessary to prevent through traffic being impeded" (*a*).

"The Act of 1854 was passed, as we have said, in order, first, that all persons might be able to use the railways upon equal terms as to charge and accommodation; and, secondly, that Railway Companies might be compellable to interchange through traffic without delay, and to convey it, as also local traffic, with reasonable facilities, such facilities including as declared by the Act of 1873, the carrying at through rates at the request of any Railway Company" (*a*).

"The second section of the Traffic Act, 1854, is in three parts; and the third part is a provision regarding through traffic, or traffic going over more than one railway. It enjoins the two or more Railway Companies engaged in forwarding such traffic to afford all reasonable facilities for its transit; but it leaves the rates and charges to be levied and taken in return to be settled or agreed to by the companies. These rates, however, are now, to some extent, regulated by section 11 of the Act of 1873, which enacts that the facilities enjoined by the Act of 1854 shall include conveyance at through rates, and gives to us, as Railway Commissioners, the power of imposing such rates on the proposal of any of the companies interested" (*b*).

38. Mr. R. E. Webster, Q.C., in his evidence, in reply to question No. 1669, puts the issue very clearly—

"Where it was shown to the Commissioners that there was a considerable traffic, or, I will put it, a considerable public demand, and where it was shown to the Commissioners that either the rates being charged by the route were higher than necessary, having regard to all the interests, or that the traffic was prevented from having as convenient a route in the interests of the public, and then a rate was proposed, I think the Commissioners should have jurisdiction to entertain that application. I know it may be said, and truly said, that I have, to a certain extent, only put in other language some part of the clauses of section 11; but that is a kind of case which, I think, may be fairly left to the Railway Commissioners; and I do not think Railway Companies are right in saying that there is any injustice in that kind of jurisdiction being exercised. On the other hand (I can only define it this way), I do not think it would be a right thing that they should have power to impose a through rate simply because another company wanted to get the traffic their way, if the public were thoroughly well served and the rates were proper and fair, there not being shown to be any public necessity for the change" (*c*).

39. VI. Mr. J. H. Balfour Browne, at one time Secretary to the Railway Commissioners, says, in reply to question 1262—

"In the interests of the public it is peculiarly expedient that the traffic should be carried without hindrance or obstruction, one of the obstructions being local rates, or re-booking, or matters of that sort."

40. Through rates should not be allowed in the case of a steamer Company, unless there was complete evidence of the Steamer Company being able to maintain an efficient service.

41. That Companies in England always receive for through traffic less than their local rates seems to be generally admitted. Mr. John Walker, General Manager of the North British Railway, in his evidence before the Select Committee on Railways (Rates and Fares) in the year 1882, says, in reply to question No. 643—

"The proportion of the through rate is always smaller practically than the ordinary rate; we get practically in the division a smaller sum."

Again, Mr. Thomas Shaw, the Manager of the Great Northern Railway of Ireland, says, in reply to question 742—

"In the fixing of (through) rates, the rule almost invariably followed is to take the shortest and cheapest route between the given points; ascertain what the local charges are upon the route, add them together, and then form a through rate

(*a*) H—Extracts from the 4th Report of the Railway Commissioners.
(*b*) K—Extract from 7th Report of the Railway Commissioners.
(*c*) C—Question No. 1669.

something lower than the sum of the local charges. The through rate thus formed is common to every route, both long and short. Some routes are more circuitous than others; and the result is that the public have the advantage of all the routes at their own option, at the charge of the shortest or cheapest route."

And in reply to question 895, the same gentleman says:—

"When we come to divide the receipts more or less between the companies, we do not have a different mode of division between each station (junction?), but we have a uniform allowance for terminals, and the rest is divided according to mileage."

42. The question regarding the subsequent division of the through rates between the different Railway Administrations has to be dealt with on a reasonable consideration of the facts involved; it is probable, however, that no better solution of the question will be found than the ordinary railway practice in this respect in England, where the receiving and delivering railways receive terminals, and the remainder of the through rate is divided between all the railways concerned, according to mileage.

---

43. VII. *That the question whether the charging of a lower rate, or even on equal rate, for a larger than for a shorter distance does or does not constitute* undue *preference, may be considered at present unsettled, but that the weight of legal authority is very much against the legality of the practice. It is at least settled even in England, where Railway Administrations probably enjoy more liberty of action than anywhere else, that the charging by a Railway Company of a lower or even an equal rate for a longer than for a shorter distance does constitute* primâ facie *evidence of undue preference. And the American law goes even further.*

44. The decision of the Railway Commissioners in the case of the Denaby Main Colliery Company *versus* the Manchester, Sheffield and Lincolnshire Railway Company, decided in the year 1880, was actually to the effect that to charge the same rate for different distances *did* constitute *undue* preference. This decision was, however, much commented upon by the legal witnesses who appeared before the Select Committee on Railways (Rates and Fares) in 1882. The decisions in the cases of Budd *versus* London and North-Western Railway Company, and of Evershed *versus* the London and North-Western Railway Company are also against the legality of the practice, and show that competition alone will not justify preferential rates.

45. The American law in some of the States somewhat supports the same view by refusing to admit the plea of competition. This may be seen from section 3 of the Act to prevent extortion and unjust discrimination by Railroad companies passed by the State of Illinois in May 1873:—

"*Section 3. Primâ facie evidence of unjust discrimination.*—If any such Railroad Corporation shall charge, collect, or receive, for the transportation of any passenger, or freight of any description, upon its railroad, for any distance within this State, the same or a greater amount of toll or compensation than is at the same time charged, collected or received for the transportation, in the same direction, of any passenger, or like quantity of freight of the same class over a greater distance of the same railroad;"

"Or if it shall charge, collect, or receive, at any point upon its railroad a higher rate of toll or compensation for receiving, handling, or delivering freight of the same class and quantity than it shall at the same time charge, collect, or receive, at any other point upon the same railroad;"

"Or if it shall charge, collect, or receive, for the transportation of any passenger or freight of any description, over its railroad, a greater amount as toll or compensation than shall at the same time be charged, collected, or received by it for the transportation of any passenger, or like quantity of freight of the same class, being transported in the same direction, over any portion of the same railroad, of equal distance;"

"Or if it shall charge, collect, or receive from any person or persons a higher or greater amount of toll or compensation than it shall at the same time charge, collect, or receive from any other person or persons, for receiving, handling or delivering freight of the same class and like quality at the same point upon its railroad;"

"Or if it shall charge, collect, or receive from any person or persons, for the transportation of any freight upon its railroad, a higher or greater rate of toll or compensation than it shall at the same time charge, collect, or receive from any other person or persons, for the transportation of the like quantity of freight of the same class, being transported from the same point, in the same direction, over equal distances of the same railroad;"

"Or if it shall charge, collect, or receive from any person or persons, for the use and transportation of any railroad car or cars upon its railroad, for any distance, the same or a greater amount of toll or compensation than is at the same time charged, collected, or received from any other person or persons, for the use and transportation of any railroad car of the same class or number, for a like purpose, being transported in the same direction, over a greater distance of the same railroad; or if it shall charge, collect, or receive from any person or persons, for the use and transportation of any railroad car or cars upon its railroad, a higher or greater rate of toll or compensation than it shall at the same time charge, collect, or receive from any other person or persons, for the use and transportation of any railroad car or cars of the same class or number, for a like purpose, being transported from the same point, in the same direction, over an equal distance of the same railroad;"

"All such discriminating rates, charges, collections, or receipts, whether made directly or by means of any rebate, drawback, or other shift or evasion, shall be deemed and taken against such Railroad Corporation as *primâ facie* evidence of the unjust discriminations prohibited by the provisions of this Act; and it shall not be deemed a sufficient excuse or justification of such discriminations on the part of such Railroad Corporation, that the railway station or point at which it shall charge, collect, or receive the same or less rates of toll or compensation for the transportation of such passenger or freight or for the use and transportation of such railroad car the greater distance than for the shorter distance is a railway station or point at which there exists competition with any other railroad or means of transportation. This section shall not be construed so as to exclude other evidence tending to show any unjust discrimination in freight and passenger rates. The provisions of this section shall extend and apply to any railroad, the branches thereof, and any road or roads which any Railroad Corporation has the right, license, or permission to use, operate or control, wholly or in part, within this State: provided, however, that nothing herein contained shall be so construed as to prevent Railroad Corporations from issuing commutation, excursion, or thousand-mile tickets, as the same are now issued by such Corporations."

46. It seems undoubted that to charge a higher or an equal rate for a shorter than for a longer distance is *primâ facie* evidence of undue preference.

47. The following extract from the Judgment delivered by Mr. Justice Manistry in the Queen's Bench Division, in the appeal of the Denaby Main Colliery Company *versus* the Manchester, Sheffield, and Lincolnshire Railway Company bears upon this point:—

"The first point being whether there was any evidence to go to the Commissioners as to whether or not the Railway Company were giving an undue preference, say, among others, to the Grange Colliery, I should have thought really it was not arguable, because the moment it is admitted to be the fact that the Grange Colliery is 17 miles further distant from the shipping port than the Denaby Main, in my judgment there is *primâ facie* evidence,—not only *primâ facie* evidence, but a *primâ facie* case. It may be, then, there are many circumstances which would explain that and rebut that inference; but that is a question for the Commissioners, and they have come to the conclusion that there are no circumstances here to rebut that which is a *primâ facie* case. Therefore, I cannot doubt but that there was evidence before them" (*a*).

48. Section 4 of the United States Act to regulate Commerce seems to me to be perhaps as equitable a provision as the circumstances of the case admit of:—

Section 4.—"That it shall be unlawful for any common carrier, subject to the provisions of this Act, to charge or receive any greater compensation in the aggregate for the transportation of passengers or of like kind of property, under substantially similar circumstances and conditions, for a shorter than for a longer distance over the same line, in the same direction, the shorter being included within the longer distance, but this shall not be construed as authorizing any common carrier within the terms of this Act to charge and receive as great compensation for a shorter as for a longer distance: Provided, however, that, upon application to the Commission appointed under the provisions of this Act,

(*a*) K—Appendix No. III.

such common carrier may, in special cases, after investigation by the Commission, be authorized to charge less for longer than for shorter distances for the transportation of passengers or property, and the Commission may from time to time prescribe the extent to which such designated common carrier may be relieved from the operation of this section of this Act."

This would appear to be the opinion of Sir Thomas Farrer, as may be seen from the following extract from his article on the Equalization of Railway Rates :—

"Under these circumstances, if there is to be legislation on this subject at all, the justice and expediency of the case would probably be met by a provision requiring the companies, wherever a case of differential charge was proved, to give their reasons for it. If the companies could show that in the particular case the lower rate complained of was founded either on difference of cost or convenience to the companies, or on competition, actual or probable, or on reasonable prospect of profit to the companies, these circumstances should be held to justify the lower rate. If they could not show any of these justifications the Railway Commissioners should have power to put an end to the differential rate."

49. It seems clear that Railway Administrations should be obliged to show cause before such an arrangement is permitted. On the other hand, the system of grouping stations is very convenient, as it involves the fixing and the putting in force of only one rate. This system is largely in force in England, as many as 115 stations *close together* being sometimes grouped together.

* * * * * * *

122. After a perusal of the above, it will probably be admitted that the question of rates and fares has not at present received in India the close attention that has been paid to it in other countries. Beginning our railway system after what might be termed the experimental stage of English railways, not only have we failed to make use of the experience there gained—not only have we repeated all their mistakes,—but we have, to the present time, neglected to take some of the measures to place matters on a more satisfactory footing which have from time to time been recommended to Parliament by Select Committees of the House, and which for years past, both in England and in America, have been enforced by legislative enactment.

123. I have, in paragraphs 1 to 49 *ante*, given the principles that I think should be accepted for the working of the Indian railways. I think it is important that these or any other principles as may be accepted by the Government of India should be definitely laid down, in order that the Local Governments, the Consulting Engineers, and the Managers of State Railways may all work together with a common aim in view, and that in the future some substantial progress may be made towards uniformity in railway working in matters in which uniformity is essentially necessary in the interests of the public.

124. Before entering into details, I should like to say a few words in regard to the Traffic Conferences which have hitherto been the sole means tried in this country to secure some uniformity in railway working, and particularly in regard to the position which Government should assume in regard to them.

125. In the first place, I think, they have failed to some extent owing to Government not having openly accepted any definite principles.

126. In the next place, I consider that care should be taken not to go in any case beyond recognized railway practice at home. The aim should be, not to secure absolute uniformity, but that reasonable amount of uniformity that railway practice all over the world has shown to be compatible with a due regard to the rights of the Railway Companies. There has been, in my opinion, on too many occasions an attempt on the part of Government to drive principles home to their logical conclusion, regardless of consequences. The whole correspondence between the Secretary of State and the Home Boards shows that as long as we keep strictly within the four walls of English practice, we shall meet with support.

127. In the third place, caution should be taken to prevent even a suspicion being aroused that the influence of Government is being exercised to force the Railway Companies into certain courses of action against their own interests. Whatever uniformity may be secured, will be secured only

with the full consent of the Companies concerned. My opinion therefore is that Government should appear in these conferences only in its capacity as a Railway proprietor, and not as the supreme governing authority of the country. In other words, that the only Government officers that should attend these conferences should be the delegates representing the large State Railways, the Director General appearing as representing the aggregate mileage of all the lesser State lines. At the last Traffic Conference, I think it was a mistake to allow an officer of the Financial Department, or any other outsider not representing railway interests, to have a vote on such subjects as the fixing of railway rates.

128. Fourthly, there is, it appears to me, a radical error about the constitution of these conferences which more than anything else robs them of the usefulness they would otherwise possess. They occur, from time to time, every two or three years; certain subjects are discussed and certain decisions arrived at; the delegates separate; and there apparently is an end of the matter. As Manager of one of the State Railways, I never could even subsequently find out which railways had, and which had not, accepted the decisions arrived at. There is no recognized authority responsible for seeing that the decisions are carried into effect, even by the companies that agree to them; and no attempt is made to see how far the objections raised by those who disagree can be met or compromised. If a proposal is not carried unanimously at the time, it is practically shelved till the next Conference.

129. At this rate, progress will be extremely slow, the distances in India being too great to allow of the delegates frequently meeting. There seems to be a general impression that the work of fixing rates and deciding between the conflicting interests of the various railways is getting to be too difficult a work for Government to carry out, and that some body independent of the Government is required to settle such questions (*a*). On the other hand, it should be recognized that all healthy institutions are developed slowly from small beginnings.

130. A beginning has already been made in assembling these conferences, and this could now easily be continued further by simply appointing all the large railways as members of a standing Committee, to work under certain rules, and to consider and express opinions on matters brought before it, somewhat like the meetings held by the General Managers of Railways parties to the Clearing House. The Director General of Railways should be appointed *ex-officio* Chairman of the Committee. (I propose this, not because I am willing to add to my responsibilities, which, I am satisfied, are at present sufficient, but simply because the Director General of Railways has always been Chairman of these conferences, and the Railway Companies have got accustomed to the fact.) One of the Assistants to the Director General of Railways should be Secretary, and his business should be simply to report progress; to put before each Railway Company the views of the rest; and bring the matters discussed into a state complete enough for an opinion to be expressed on it. In all this, I do not mean that any railway should be compelled to adopt anything decided upon by the majority, any more than it would be in England. Each administration should be allowed to dissent from regulations accepted by the majority, or to withdraw from regulations to which they have previously assented: each should have full power to manage its own business. I should, however, trust a great deal to time, and to the tranquilizing effect of the steady pressure of the majority continuously applied. The Committee should have no power of fixing rates, except when applied to for the purpose of arbitrating between two companies, nor should it have any executive functions whatever; it should be simply a medium for recording and distributing collective opinions.

131. In this way a beginning would be made very much in the same way as the Clearing House Committee was itself started. The proposal is in fact nothing more than the 'modified plan on a more limited basis' to be 'prepared in communication with the representatives of the Companies' which was

(*a*) Despatch to the Secretary of State, No. 120, dated 7th August 1885.

suggested by the Secretary of State in his despatch No. 16 of the 5th February 1886.

132. *Principles I to IV.—Extent and amount of Government control over rates and fares.*—At present it would be difficult to give any satisfactory reason for the extreme divergence in the amounts of the maximum rates and fares that have been and are fixed for the various Indian lines.

133. The mere fact that in the year 1868 12 pies per mile was fixed as the maximum 2nd class fare for *all* the railways in Bombay and 9 pies for *all* the railways in Bengal and 5* pies for *all* the railways in Madras proves conclusively that none of those factors were considered which alone have been recognized by the Courts of Law as justifying preferential rates and fares in different districts.

* Subsequently raised to 6 pies.

134. Similar divergences are shown in the goods rates. It is not easy to account for the following differences in the maxima goods rates fixed at the same time:—

	All the lines in Bombay.	*All* the lines in Madras.
	Pies.	Pies.
5th class	54	36
4th „	36	24
3rd „	24	16
2nd „	18	14
Coal	10	8

Not only does the amount vary, but the extent of ground covered by the maxima rates and fares fixed. I do not know why maxima rates have been laid down for horses, carriages, and dogs on the Bombay lines, and apparently on no other railways. Nor why no other lines but the railways administered by the Bombay Government should be restrained in the matters of terminals and insurance rates. The Oudh and Rohilkhand Railway is restrained as regards terminals, but not as regards insurance.

135. A definite restriction has been placed on the rate for passengers' luggage in the case of the Bombay, Baroda and Central India Railway, the Great Indian Peninsula Railway, the Bhavnagar Railway, the Rohilkhand and Kumaun Railway, and the South Mahratta Railway, but on no other lines. In fact, on the Oudh and Rohilkhand Railway the Government specifically said it would not interfere (*a*).

136. As regards low class special goods, in December 1879, the maximum rate agreed upon in the contract with the East Indian Railway was $\frac{1}{6}$th pie; in July 1881, with the Bengal Central Railway it was $\frac{1}{3}$rd pie; in June 1882, with the Southern Mahratta Railway it was $\frac{1}{4}$th pie; and in December 1882, it was also $\frac{1}{5}$th pie, but under different conditions. In fact, the articles specifically mentioned, the rate, and the conditions, seem to vary in almost every case.

137. In the case of the Southern Mahratta Railway under the contract the whole of the maxima rates depend on the actual rates in force from time to time on another line, so that it is within the power of Government to practically take all control over the rates out of the hands of the management of the line. In other cases, such as the Rohilkhand and Kumaon Railway, only some of the maxima rates depend on the rates prevailing on another line; and in one case, the Bareilly-Pilibhit line, the Government has the power of reducing the rates to those prevailing on other State Railways in the North-Western Provinces.

138. I deem it even more important that maxima and minima rates should be fixed for State and especially for Provincial State Railways than for private companies, for the private Railway Companies are supervised by Boards composed of business men, whereas the provincial railways, it appears to me, are not sufficiently controlled.

(*a*) Letter from Government of India, Public Works Department, No. 3012 R., dated 20th July 1878.

139. For some railways only maxima rates are fixed; for others both maxima and minima. In some cases the maxima rates and fares have been notified in the Gazette; in other cases they have not. Considering the importance which successive Select Committees have attached to the fact of the public being able to obtain information as to the maxima rates and fares which companies may legally charge, I think it would be advisable that the maxima rates and fares fixed for every railway should be notified in the Gazette, and a schedule of these rates inserted in the Coaching and Goods pamphlets sold to the public.

140. As regards the restriction that it may be considered necessary in the interests of the public to place on the power of Railway Administrations in the matter of their rates and fares, it seems advisable to at once consider and to decide how far these restrictions should extend, and what should be the *normal* maxima rates and fares to be referred to when prescribing maxima rates and fares in future. I do not think it is possible to lay down any actual maxima which would be applicable to every case. Ghât lines would certainly require higher maxima than lines in the plains. The probable cost of the line and of the working, the length of the line, the amount and description of the traffic to be moved, and the average wages paid in the districts traversed, might all be properly considered as factors in determining the actual maxima to be fixed; but these factors should be referred to some recognized standard, and their influence determined on some clear principles. In other words, I would suggest that a model schedule of maxima rates and fares be drawn up, which should not be departed from unless due cause were shown.

141. *Classification of goods.*—There is probably no subject in connection with railway working over which the control of Government has been weaker. Every railway in India has more or less a different classification, and to the present time not even a uniform classification for through booking has been agreed to.

142. A start in the direction of a uniform classification for through booking was made in the Traffic Conference of 1884, and certain decisions were arrived at; but owing to objections brought forward, and rightly brought forward by the Great Indian Peninsula Railway, nothing appears to have been done since. Nothing practical, at all events, has yet been effected. I do not find that there is any uniform classification generally adopted by the State lines, nor that Government has any general classification prepared for adoption by new railways about to open. Every day the matter gets worse instead of better, and the general apathy shown to this important subject seems to me unaccountable.

143. My suggestion is that this subject be vigorously pursued by the Standing Committee I have suggested in paragraph 130; that a general classification of through goods be drawn up; that all consenting railways be asked to print in their Goods Tariffs all such articles in Roman of which the classification and rate is the same as that in the general classification; that special and exceptional articles be printed in capital; that this exception be taken up one after the other, and the matter pursued until in each case definite grounds are recorded for the exception being retained; that with regard to the State lines, exceptions be only allowed when strong reasons are alleged for their continuance; and that all lines newly opened be obliged to accept the general classification with only such exceptions as will allow them to compete fairly with other lines.

144. In this way, I believe that a material amount of uniformity could be secured, especially on the East Indian, the Bombay, Baroda and Central India, the Bengal and North-Western, the Indian Midland, and the Bengal-Nagpur Railways. The union of these with the State and probably with some of the Madras lines would form a very strong body, which would get stronger and stronger with the affiliation of each new railway.

145. *Terminal charges.*—Terminal charges appear to have been recognized on the Indian railways from the very first, although the only lines for which a

maximum charge for terminals would appear to have been definitely fixed are the lines in Bombay, and the Oudh and Rohilkhand Railway. The maxima there fixed are the following:—

	Per ton.	Per maund.
	Rs. a. p.	Annas.
Great Indian Peninsula Railway, at Bombay . . .	5 0 0	2·94
Ditto ditto at all other stations .	2 8 0	1·47
Bombay, Baroda and Central India Railway, at Bombay .	5 0 0	2·94
Ditto ditto at all other stations .	2 8 0	1·47
Bhavnagar-Gondal Railway, at all stations . .	2 4 0	1·32
South Mahratta Railway, ditto . . .	...	1·60
Oudh and Rohilkhand Railway	2 pies per maund.	

146. An attempt was made at the Traffic Conference of 1884 to fix a uniform rate at *all* stations on *all* descriptions of through traffic not carried at special rates without terminals, leaving the different railways free to charge what they liked (within their fixed maximum charge, if any) for local traffic. The rate proposed was 6 pies per maund, or 3 pies for the forwarding and 3 pies for the delivering railways.

147. The proposal was voted against by the East Indian Railway, the Oudh and Rohilkhand Railway, and the South Indian and, in my opinion, most properly resisted by the Great Indian Peninsula Railway on the grounds—

1st, that the rate did not take into consideration the varying cost of handling different descriptions of traffic at different stations; and

2nd, that the attempt to force by the verdict of a majority any rate on any railway without its full consent would be prejudicial to the rights of that railway as secured by its contract.

148. Both pleas are perfectly justifiable. The determination of a uniform terminal charge at *all* stations for *all* descriptions of traffic is contrary to the English Acts of Parliament, and to American law, in which the subject is more definitely dealt with. It also runs counter both to the weight of the evidence taken before the Select Committee on Railways (Rates and Fares) in 1881 and 1882, and to the recommendations of that Committee put forward in 1882. [*Vide* paragraph *ante*.]

149. *Principle V.*—The attitude of Government in respect to this principle is at present somewhat half-hearted and undecided; and it is perhaps difficult to see how this can be otherwise, as Government has to regard the matter not only theoretically from the point of view to the Government of the country, but also from a business point of view as being the proprietor of a number of the railways and directly interested in nearly the whole of them.

150. After accepting the principle that "an equalization of rates from Delhi and Agra to the ports of Calcutta and Bombay must form the basis of consideration of all changes in the through rates of all traffic" (*a*), this principle was modified to "mileage tempered with the proper commercial principle of an even return on the capital expended" (*b*). A week later, "the charges *viâ* the Rajputana route from Agra and Delhi to Bombay were not to be lower than the charges for similar goods to Howrah" (*c*).

151. In March 1882, the Secretary of State practically disposed of all these principles, and apparently favoured the adoption of principle No. V, pure and simple (*d*).

"3. It would appear from these papers that, recognizing competing interests between Calcutta and Bombay you were in favour of an equalization of rates on the

(*a*) Letter from Government of India, Public Works Department, No. 1119R. T., dated 26th September 1881.
(*b*) Letter from Government of India, Public Works Department, No. 1192R. T., dated 19th October 1881.
(*c*) Letter from Government of India, Public Works Department, No. 1215R. T., dated 25th October 1881.
(*d*) Despatch from Secretary of State No. 41 R., dated 9th March 1882.

two routes mentioned, but that you subsequently considered that they should be regulated on the principle that the profits on the capital expended on each undertaking should be the same."

"4. I am not aware of the reasons which induced your Government to adopt your views, but I cannot but think that the natural course of traffic on two lines, proceeding from the same place to ports on different sides of the continent of India, should not be interfered with by any idea of adjudicating on the rivalry between them, and that the advantages due either to geographical position or other circumstances should furnish no reason for imposing on either artificial restrictions, in the shape of enhanced rates, in order to produce an equal return of net profits on the capital of both.

152. The Government of India then came "to the conclusion that in fixing the charges for the carriage of the same commodity on different railways, the cost of carriage cannot be neglected, nor can this important element be omitted in arranging the division of through rates between lines working in connection." The equal mileage rate principle was condemned (*a*). In the meantime, the Government of Bombay had consistently supported the principle of equal mileage rates (*b*).

153. The Secretary of State again disagreed with the basis proposed. His opinion was that the rates on the Indian Railways should be dealt with as nearly as possible as they would be by independent companies; that Managers of Railways should be left to fix such rates as they might deem most advantageous for their respective lines; that the interests both of the railways and of trade generally would be better served by accepting the legitimate consequences of competition; and that the interposition of Government would be justified only in cases where Companies, under the security of a guarantee, might fix rates below what would cover cost of transport with a margin of profit (*c*).

154. The Government of India then unreservedly accepted the principles advocated by the Secretary of State; but while accepting them in theory, the Government fixed a minimum rate between Delhi and Bombay, allowing the other competing railways to subsequently decrease their rates as they pleased (*d*); until it has come about that while the original contention between the two ports of Bombay and Calcutta was whether the difference in rate should be as much as one anna, the rate to Bombay for wheat is now 11 annas per maund, whereas that to Calcutta is 8·48 annas. In other words, there is at this date a difference of over $2\frac{1}{2}$ annas. With a fixed minimum rate on the Bombay, Baroda and Central India and the North-West Railways, and with the rates on the East Indian Railway directly in the hands of Government, it cannot be said that principle No. V is yet allowed its full development in India. It certainly cannot be said that complete expression has been given to the following views of the Secretary of State:—

"I observe that the chief point on which stress is laid in your Excellency's letters on this subject is the importance of obtaining some means of settling the rates by different routes competing for the traffic which lead to the various seaports. It appears to me that it is beyond the proper scope of the duties of the Government of India to interfere in such matters otherwise than by exercising the influence it possesses whether by reason of its powers under the contracts with various Companies, or as the owner of the State Lines of railway, or as the representative of the general interests of the country" (*e*).

155. I doubtfully incline to the belief that it would be better for Government to accept Principle V unreservedly, and to leave the Railway Administrations to fix their own rates and fares, within their maxima, and subject to prescribed general principles, as may seem most advantageous for their respective lines. But in doing this, I assume that as between two competitive routes, the Clearing House principle that the shortest and cheapest route between the two points fixes the rate, is accepted.

(*a*) Letter from the Government of India, Public Works Department, No. 472R. T., dated 19th May 1882.
(*b*) Letter from the Government of Bombay, No. 1476, dated 22nd July 1882.
(*c*) Despatch from Secretary of State, No. 132 Ry., dated 19th October 1882.
(*d*) Letter from the Government of India, Public Works Department, No. 162R.T., dated 2nd March 1882.
(*e*) Despatch from Secretary of State, No. 16 Ry., dated 25th February 1886.

156. I also recommend another additional safeguard. At present, I regret to see that a system of what I may term 'jockeying' other Railway Administrations has grown up under the following clause of the conference rules :—

"Advices shall be sent of all changes on or before the 20th of each month, and of alterations consequent thereon by the receiving railway not later than the end of the month. Advices so sent become operative one month after the 1st of the month following the date of advice."

Railway Administrations now appear to try (especially towards other rival Railway Administrations which are somewhat hampered in making changes of rates by having to apply to Government before being allowed to do so) to arrange for sending out their notice of the decrease of rates so late that the other administration has not time to notify their corresponding reduction, and thus to secure a whole month with rates less than the rival company. This should be summarily put a stop to. I think it is essential that every administration before carrying out a reduction in a competitive through rate should have before it full information as to what corresponding reductions the other administrations intend to make if the reduced rate is introduced. This more than anything else would tend to stop the disputes and the ceaseless changes of rates now going on. The length of notice now given is not long enough to allow of the railways interested in the proposed reduction communicating with one another or with Government before notifying the corresponding reduction. In England changes of classification are considered only once a year. In India, I would recommend that all changes of rates come in quarterly on the 1st January, April, July, and October; and that the system be modified so as to compel companies to give much longer notice of proposed changes than they do now; changes to be brought in force otherwise than quarterly as proposed, only with the full consent of all companies concerned.

---

157. *Principle VI (A).*—The 'undue preference' clause, though introduced in English law in 1854, was not inserted in the Indian Railway Act of 1879, nor in any railway contract previous to the year 1882, when it was entered for the first time in the contract with the Rohilkhand and Kumaon Railway. Subsequent to this, it has been forgotten in the contracts with the Nizam's Railway; with the East Indian Railway for working State lines; with the Bombay, Baroda and Central India Railway for working the Rajputana-Malwa line; and with the Great Indian Peninsula Railway for working the Bhopal line. It is probable, however, that any Court would consider it to be part of the common law of the country; and an "undue preference" clause has been inserted in the draft Railway Act.

158. It seems to me that there is a good deal of undue preference shown in India, which the Consulting Engineers should be instructed to stop. As a glaring case, I might mention the salt rates from Sambhar to and *viâ* Achnera as compared with the rates from Sambhar to and *viâ* Agra introduced by the Bombay, Baroda and Central India Railway on the 20th October 1886, which were specifically complained of by the Agent of the East Indian Railway in his letter No. 1066G., dated October 30th, 1886. In this case Government apparently did nothing, although it is difficult to imagine a more striking instance of undue preference between the East Indian Railway and the Cawnpore-Achnera Railway; the whole object of the preferential rate to Achnera being to benefit the Cawnpore-Achnera line at the expense of the East Indian. On the other hand, on the East Indian Railway in February 1885, the through rate for salt from Howrah *viâ* Benares, 475 miles, was Rs. 31 per 100 maunds. The through rate from Howrah *viâ* Patna, 332 miles, was Rs. 38 per 100 maunds. This was complained of by the Agent of the Bengal and North-Western Railway in his letter No. 6823, dated February 3rd, 1885.

159. The matter seems to need Government intervention, as these preferential rates on the East Indian Railway show how, in moments of temptation, Railway Administrations slide back from the high principles they have previously expressed. In the year 1882, the Agent of the East Indian Railway wrote :—

"This discrimination in favour of traffic *viâ* Agra to Bombay by means of a lower rate per mile for a shorter distance is directly opposed to the recognized practice." (*a*).

And so late as the year 1884 :—

"And since we could not quote this rate from Delhi, and at the same time maintain in force higher rates for stations below Delhi with a shorter lead to Howrah, we had also to consider how the rates for these stations should best be adjusted" (*b*).

---

160. *Principle VI (B).*—No "traffic facilities" clause was entered in any of the contracts previous to the year 1878, although it was introduced in England in 1854. Even now, the latest contracts do not give Government the powers of ordering Railway Administrations to accept through rates which were given to the English Railway Commissioners by the Regulation of Railways Act of 1873. Nor does the draft Railway Act contain any provisions to this effect.

161. This is more to be regretted, because our present experience shows that these are the powers which are more specially required by Government in dealing with the disputes now arising between the various Railway Companies. In India, the almost universal practice is to make the through rates the sum of the local rates; in other words, lengths of line belonging to two or more Railway Administrations are *not* worked as if they belonged to a single administration.

162. The disputes between the Oudh and Rohilkhand Railway and the East Indian Railway, between the Bengal and North-Western Railway and the East Indian Railway, and between the North-Western Railway and the Bombay, Baroda and Central India Railway, are all questions of quoting through rates. The matter seems to be one of the very greatest importance for the new Railway Companies, such as the Bengal and North-Western Railway, the Indian Midland Railway, and the Bengal-Nagpur Railway, which have all been floated in England, under the tacit assumption that the Government of India will see to their getting their rights in the same way as the Railway Commissioners would have done at home. They are all cut off from the sea-board by other powerful companies, and unless Government intervenes and insists on these companies quoting through rates, the traffic of all these new companies will be most prejudicially affected. The story of the way the rates of the East Indian Railway have been worked, first to make as much as possible of the Oudh and Rohilkhand Railway through traffic come on the East Indian Railway at Aligarh instead of Benares, and now to make the traffic which is being competed for between the Oudh and Rohilkhand Railway and the Bengal and North-Western Railway come on the East Indian Railway at Benares instead of Digha Ghât, is not a very bright page in the history of Indian Railways.

163. I think it is to be regretted that Government did not unreservedly accept the principles for working through traffic put forward by Sir B. Leslie in his letter No. 633G., dated 25th August 1880. They are all that could possibly be required :

"The various railway systems should, as far as possible, serve the country as if they were under one management, and the dealer in country produce should not be hampered in his operations by the necessity to base his calculations on as many different scales of rates as there may be railways between the starting point and destination. This can only be attained by adopting a uniform scale of rates for special or lower class goods which form the bulk of the country trade, and where there are alternative routes, by sending goods according to sender's option. The adoption of a uniform scale of rates for special class goods for the whole of the district served by East Indian Railway and Oudh and Rohilkhand Railway will in my opinion contribute largely to develop traffic."

"It will be in my opinion to the material advantage of the two railways and interest of the public to adopt a uniform gradation scale of rates for special class goods both for through and local traffic on both railways, the earnings from through traffic to be divided in the ratio of the mileage."

(*a*) Letter from Agent, East Indian Railway, No. 527G., dated 3rd June 1882.
(*b*) Letter from Agent, East Indian Railway, No. 950G., dated 28th August 1884.

Had Government accepted these principles in the year 1880, it would probably not have been necessary in the year 1885 to recommend to the East Indian Railway Company a return to the principles which their Agent himself had advocated five years previously (*a*).

164. I strongly recommend that the powers secured under the Regulation of Railways Act of 1873 be secured to Government by the new Railway Act; and that the whole influence of Government be exerted to make the various Railway Administrations in India carry into practice the measures required in the general interests of the public. At the very least, Government should see that the State lines are worked on proper principles.

165. *Principle VII.*—Until the Courts of Law in India give a decision on the legality or otherwise of charging a lower or an equal rate for a longer than for a shorter distance, it would be as well for Government to instruct their Railway Officers as to the view they would wish taken on this subject.

166. The Railway Commissioners in the Denaby Main Colliery case objected to the same rates being charged for a difference of only 17 miles. What they would say to the East Indian Railway in this country charging the same rates to Howrah from Delhi and Cawnpore, a difference of 270 miles, it is almost impossible to conceive, especially as this railway charges higher rates from the intermediate stations. For instance, the present rate for wheat from Delhi to Howrah, 954 miles, is Rs. 53 per 100 maunds; the rate from Cawnpore, 684 miles, is also Rs. 53; on the other hand, the rate from Aligarh, 876 miles, is Rs. 57; and from Phaphund, 735 miles, and a whole group of stations near it, Rs. 60. It seems to me that this difference in rates *does* constitute *undue* preference between merchants residing at Delhi and Phaphund and elsewhere. The rate for salt from Howrah to Cawnpore, 684 miles, is Rs. 45, whereas the rate from Howrah to Fatehpur, 687 miles, is Rs. 54. And many other instances of preferential rates could be mentioned.

167. It may here be noticed that in his letter No. 2357, dated 29th June 1882, the Consulting Engineer, Calcutta, actually argues in favour of lower rates for longer distances; but the principle was not admitted by the Government of India, in their reply No. 678R.T., dated 11th July 1882. This is the only indication of any leaning on the part of the Government, either to one side or the other, that I have been able to find on record.

168. It is to be remembered that Mr. Mundella's draft English Railway Bill to a certain extent legalized grouping; but at the same time, clause 25 proposed a radical alteration in the law by throwing upon the Railway Company concerned the burden of proving that any disputed preferential rate did *not* amount to undue preference. This question should be settled in the draft Indian Railway Act.

169. Some of the recommendations I have brought forward cannot obviously be introduced without either the consent of the older companies or legislative action. As regards the consent of the companies, I think the various questions should be kept in mind, and whenever the companies apply for any additional privileges or powers, these privileges or powers should be giving only on the company agreeing to accept such reasonable restrictions as Government may consider are necessary in the interests of the public. For instance, at the present time, I would certainly give the East Indian Railway greater liberty of action in regard to rates on condition of their accepting the general principles approved by Government.

170. And lastly, I think the record of the measures taken by Government in respect to rates and fares shows forcibly the necessity of permanently attaching to the head-quarters of the Government of India an officer intimately acquainted with the detailed railway management, and with the working of railway tariffs generally.

(*a*) Letter from the Government of India, Public Works Department, No 429R.T., dated 15th May 1885.

171. In conclusion, I will briefly recapitulate my recommendations:—

I.—That a model schedule of maxima rates and fares be drawn up, to be departed from only on due cause being shown:

II.—That the maxima rates and fares fixed for each railway be notified, and be available to the public:

III.—That a general goods classification be drawn up for acceptance by all new companies:

IV.—That the principles under which Railway Agents and Managers may regulate their rates within their maxima be decided upon, and advised to all concerned:

V.—That *undue* preference be put a stop to:

VI.—That powers be secured to Government in the new Railway Act to order companies to accept through rates:

VII.—That a standing Committee of Railway Managers be formed to secure a reasonable amount of uniformity in working:

VIII.—That all proper influence be brought by Government to induce the various Railway Companies to accept the principles decided upon, *vide* IV above; and also the conclusions generally accepted by the standing Committee, *vide* VII above:

IX.—That an experienced traffic officer or railway Manager be permanently attached to the head-quarters of the Government of India.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending 17th December 1887.*—Rainfall generally sufficient, but more is wanted in parts of Bellary, Madura and Salem. Agricultural operations progressing as usual but impeded in parts of Tinnevelly by rain. Crops slightly damaged here and there by excessive rain, insects or disease. Pasture sufficient except in parts of Anantapur. Prices improving. General prospects favourable.

Bombay.—*For week ending 21st December 1887.*—Reaping of early crops completed in the Upper Sind Frontier and in progress in Karachi, Hyderabad, Khandesh, Nasik, Sholapur, Belgaum and Dharwar. Sowing of late crops continues in Shikarpur, Hyderabad, the Upper Sind Frontier, Nasik, Ratnagiri and Rajkot. Wheat and *jowari* in two talukas of Poona, exotic cotton in two talukas of Dharwar, and *jowari*, linseed and cotton in parts of Sholapur and Bijapur suffering from blight. Crops also damaged by cloudy weather in three talukas of Ahmednagar and by adverse winds in parts of Bijapur, and wheat by excessive moisture in parts of Dharwar. Standing crops otherwise good in the Presidency Proper and in Sind. Opium crop in Baroda is in good condition. Probable outturn of early crops twelve annas in the rupee in the Upper Sind Frontier and in other districts as already reported. Probable outturn of late crops from eight to ten annas in the Panch Mahals. Agricultural stock in poor condition in a few talukas of Hyderabad, good elsewhere.

Bengal.—*For week ending 20th December 1887.*—No rain during the week. Weather fine and cold. Rice harvest is progressing with good outturn in most districts, but in Chota Nagpore and in parts of the Burdwan, Patna and Orissa Divisions and in the Sonthal Pergunnahs District, the outturn is below the average. *Rabi* and poppy are generally reported on favourably, but rain is wanted in Chota Nagpore and in South Behar. Sugarcane is generally doing well. No marked change in the price of common rice which is dearer in Behar, Chota Nagpore and Western Bengal than last year, but cheaper in the central and eastern districts.

N.-W. Provinces and Oudh.—*For week ending 21st December 1887.*—There was no rain during the week and the weather is clear and cold. Rain is, however, needed for the *rabi* sowings in a few districts. The *rabi* crops are in good condition and prospects are promising, except in Kumaun where the *rabi* has not germinated for want of rain. Poppy sowings are thriving. Supplies are ample. Prices of food grains, however, continue to rise in many districts. Fodder is reported scarce in Partabgarh and Meerut. The condition of cattle is generally satisfactory.

Punjab.—*For week ending 21st December 1887.*—No rainfall during the week except a shower at Peshawar. Prices generally rising. *Kharif* crops harvested. *Rabi* sowings nearly completed. *Kharif* outturn average. *Rabi* prospects good. Rain is wanted generally in the Province. No damage to crops. Cattle are generally in good condition. There is a scarcity of fodder in many districts. Poppy sowings completed.

Central Provinces.—*For week ending 21st December 1887.*—Weather cool and clear. Rain required in Chhattisgarh. Prospects of winter crops in all other districts good. Harvesting of autumn crops continues. Fodder is below average yield in Raipur, elsewhere sufficient. Cattle in good condition.

Burma.—*For week ending 10th December 1887.*—Reaping of rice continues throughout the country. Dry-weather crops are being planted. The condition of agricultural stock is good. No rain fell anywhere during the week except in Rangoon town, where there was a slight shower. Estimates of probable outturn of harvest in the districts of both Upper and Lower Burma remain much the same as those reported in last week's telegram. Slightly reduced estimate of crops owing to want of rain reported in parts of the Kyaukpyu, Sandoway, Prome and Tharrawaddy districts of Lower Burma. Probable outturn in Tharrawaddy and Bassein is now given as twelve annas. In Thayetmyo crop prospects very unfavourable owing to drought. Crops in the Myingyan, Minbu and Shwebo districts of Upper Burma are also short from same cause. In the Pegu, Thayetmyo and Shwegyin districts of Lower Burma the local price of rice has risen by 8, 6 and 5 rupees, respectively. The price of rice in the Myingyan district of Upper Burma has risen by 10 rupees. In no districts of the Province except the four above-mentioned, has there been any marked fluctuations in the prices of food grain.

For week ending 17th December 1887.—Reaping of rice is progressing. The condition of agricultural stock is good. No rain fell anywhere throughout the Province during the week. Crops in eight districts of Lower Burma, namely, Kyaukpyu, Sandoway, Tharrawaddy, Prome, Bassein, Thayetmyo, Amherst and Shwegyin, have suffered slightly from drought. Prospects have not improved in Thayetmyo. Partial failure of crops on account of drought reported from the Upper Burma districts of Mandalay, Shwebo, Yeu,

Miubu, Meiktila, Yimithan and Pyinmana. Estimate of the paddy crop remains much as before; the other food crops, chiefly millet, in Upper Burma, have not suffered to the same extent as paddy. Local price of paddy has risen in Akyab by rupees 5, in Tavoy by rupees 10, in Shwebo by rupees 5, in Sagaing by rupees 15, in Kyauksi by rupees 5, in Myingyan by rupees 5, and in Pagan by rupees 10. Price of rice has decreased in Tharrawaddy by rupees 11, in Thongwa by rupees 5, in Henzada by rupees 8, in Thayetmyo by rupees 11, and in Shwegyan by rupees 5.

Assam.—*For week ending 21st December 1887.*—Weather cold and dry. No rain. Gathering of winter rice and pulses in progress. Outturn good. Prospects of standing crops good, except of mustard in Tezpur and Nowgong where it is suffering for want of rain. Grass is being burnt and land broken up for cultivation in hill districts. Tea pruning continues. No report from the Naga Hills.

Mysore and Coorg.—*For week ending 21st December 1887.*—There has been a little rain in three districts in Mysore which is not likely to affect the crops in any way. Standing crops in good condition. Harvesting of paddy, sugarcane and dry crops nearly completed throughout the country. Sowing operations in progress in parts. Prospects and probable outturn of harvests fair. Condition of agricultural stock good.

No rain in Coorg during the week. Rice crops ripening. Picking of coffee in progress.

Berar and Hyderabad.—*For week ending 21st December 1887.*—No rain during the week in Berar. *Kharif* crops being cut and stacked for threshing. Average outturn expected of these crops, annas twelve. Second picking of cotton progressing. Cattle healthy.

No rain in Hyderabad during the week. Agricultural prospects good.

Central India.—*For week ending 21st December 1887.*—No rain. Agricultural operations completed except in Baghelkhand, Westerr Malwa and Bhopal. State of standing crops and prospects and probable outturn of harvests good. Condition of agricultural stock good except in parts of Bnopal. Pasturage and fodder good. Prices of food grains rising throughout Central India, except in Gwalior where they are steady. Opium sowings in progress. Prospects fair.

Rajputana.—*For week ending 21st December 1887.*—Agricultural operations satisfactory. Standing crops in fair condition generally, harvests average; on the whole no serious damage. Agricultural stock fair generally. Pasturage and fodder fairly sufficient. Prices high and rising in some States..

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the Week ending Dec. 14th 1887.

The daily weather charts for the period December 8th to 14th show that, while from day to day the barometer has oscillated considerably, the general distribution of pressure and the general circulation of the winds have remained constant throughout, and have not been far removed from the distribution and circulation which is characteristic of this season of the year. During the entire week the barometer has been highest over Northern and Central India, and lowest over Ceylon. At times the apex of the high-pressure area was reported from the Punjab, at others from the Central Provinces, while on some days the lowest readings were reported from the Malabar Coast, and on others from Ceylon. These were practically the only variations in pressure which occurred during the month.

As a rule, the wind has been north-westerly and westerly down the Gangetic plain, northerly over Bengal, north-easterly over Assam and Burma and easterly (north-easterly and south-easterly) over the Peninsula, but on some days a south-easterly current appeared in the North-West, bringing with it a considerable increase of cloud and of moisture and occasioning raw disagreeable weather over North-Western India. These conditions were reported on the 8th, the 11th and the 12th. On the 12th slight rain fell at Bareilly and Roorkee and on the 13th slight snow on the hills around Simla.

Rain was falling at the beginning of the period all over the south of the Peninsula and Ceylon, but as the week progressed both the amount and area of rainfall steadily decreased, and on the 15th no rain fell in any part of the Indian region. With the exception of the slight showers at Roorkee and Bareilly, noticed above, the rainfall of the week was entirely confined to Southern India.

Compared with the average of the month, the mean pressure of the week was below the normal in the Irrawaddy Valley, over the greater part of the North-

Western Provinces and the Punjab, and over the Peninsula and central parts of the country generally, but was above the normal over Arakan, Bengal, Assam and at the hill stations in the North-West Himalaya. The greatest excess was at Purneah.

The mean temperature of the week was much above the monthly average in the North-Western Provinces, the Punjab, Central India, Guzerat, Sind and Rajputana. Elsewhere the variations were irregular.

The concluding table gives the total rainfall of the week according to the different Provinces.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the Week ending 21st Dec. 1887.

During the past week the main features of the pressure distribution have been such as are characteristic of the time of year, that is to say, readings have been steadily high over North-Western and Central India and low over the south-west corner of the Bay. Though the geographical positions of the areas of high and low pressure were thus approximately normal, the mean pressure differences between North-Western India and Ceylon were much greater than is usually the case, and this difference increased as the week progressed. The normal mean difference between Rawalpindi and Colombo during the month of December is 0·165″. On the 15th of the present month the actual difference between these two places was 0·196″, and on the 20th was 0·315″. Most of this excessive difference was due to the presence of a large area of deficient pressure over Ceylon and the south-west corner of the Bay. On the 15th a strong northerly wind suddenly sprang up at Colombo and the chart showed a rather large area within which pressure was below the normal lying over and to the eastward of Ceylon. On the 16th the barometer was steady at the Ceylon stations and the northerly wind had fallen somewhat lighter, but on the following day the barometer again fell and the force of the wind rose. On the 18th pressure, which was still decreasing, fell below 29 inches at the Ceylon stations, and the barometric gradient over the south-west corner of the Bay became very steep. On the 19th there occurred a slight recovery, but on the 20th the barometer again fell below 29 inches and so continued during the 21st, while the wind

remained strong from the northward. During nearly the whole of the week the effects of this depression of the barometer were confined to Ceylon where slight rain fell daily, but on the 21st the influence of the disturbance extended to the Indian Peninsula, and rain, generally in small amounts, fell at all the most southern stations.

In North-Western India, though the barometer has been relatively high, it has been far from steady, upward and downward oscillations succeeding each other quickly during the week. With each change of pressure the weather also changed, clouds accompanying or succeeding the barometric descent and clear skies its ascent. On one or two occasions the sky became so cloudy as to threaten rain, and on the afternoon of the 19th a few drops fell at Murree Rawalpindi, and Peshawar.

The weather in other parts of the country calls for no remark, as it has been steadily fair throughout.

Compared with the mean of the month, pressure has been above the normal in Behar, the west of the North-Western Provinces, parts of the Punjab and in Bombay and the Central Provinces, but below it elsewhere. The defect was greatest at Colombo, but at Ranikhet and Quetta it was nearly as large, while the excess was greatest in the North-Western Provinces.

Temperature variations were rather irregular, but the weather was several degrees colder than usual in Bengal, the south of the Peninsula, and at the hill stations.

Rain has been confined to the extreme north-west and extreme south and has been everywhere light.

The concluding table gives the total rainfall of the week according to the different Provinces :—

Divisions.	Number of Stations.	Total Rainfall.

W. L. DALLAS,
for *Meteorological Reporter to the Govt. of India.*

Simla, 23rd December 1887.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEEKLY REPORT ON THE STATE OF THE SEASON AND PROSPECTS OF THE CROPS.

Madras.—*For week ending 24th December 1887.*—Rainfall generally sufficient, but more is wanted in parts of Bellary, Madura and Salem. Agricultural operations progressing as usual. Crops slightly damaged here and there by excessive rain, insects or blight. Pasture sufficient except in parts of Anantapur. Prices improving. General prospects favourable.

Bombay.—*For week ending 28th December 1887.*—Slight rain in Bombay City on 27th. Rain still required in one taluka of Sholapur. Harvesting of early crops continues in Karachi, Hyderabad, Khandesh, Nasik, Sholapur, Belgaum and Dharwar, and sowing of late crops in Shikarpur, Hyderabad, the Upper Sind Frontier, Nasik and Ratnagiri. Certain crops in parts of Poona, Ahmednagar, Sholapur, Bijapur and Dharwar are still suffering from blight or other causes. Condition and prospects of standing crops otherwise good in the Presidency Proper and in Sind. Opium crop in Baroda good. Agricultural stock in good condition except in a few talukas of Hyderabad.

Bengal.—*For week ending 27th December 1887.*—No rain during the week. Sky is now cloudy and rain is expected. Rice harvest is yielding a good outturn in most parts of the Lower Provinces, but in Chota Nagpore and in the Burdwan, Bankura, Hooghly and Santal Parganas districts the outturn is estimated at eight to ten annas only, and in parts of the Patna and Orissa Divisions it is also below the average. *Rabi* and poppy crops are generally doing well, but Chota Nagpore and Behar want rain.

N.-W. Provinces and Oudh.—*For week ending 28th December 1887.*—No rain has fallen and the weather is cold and clear. *Rabi* crops are doing well, though in Banda, Moradabad, Kumaun and Jhansi rain for them is now needed. Sugarcane is being pressed. Poppy crops are thriving except in a few villages of Partabgarh. Supplies are sufficient, but prices of food-grains continue to rise. The condition of agricultural stock is satisfactory.

Punjab.—*For week ending 28th December 1887.*—Some rain fell in Rawalpindi and a few showers in other districts. Prices are rising. *Rabi* sowings are being completed. *Kharif* outturn below average. *Rabi* prospects good. Rain is wanted throughout the Province for the *rabi* crops. A slight fall of hail in Sialkot; no damage done to crops. Cattle are healthy. Scarcity of fodder in many districts. Poppy sowings completed.

Central Provinces.—*For week ending 28th December 1887.*—Weather rather cloudy with slight rain in places. Prospects of winter crops continue good, except in Chhattisgarh where they are suffering from want of rain. Cattle in fair condition.

Burma.—*For week ending 24th December 1887.*—The rice harvest is progressing. *Sessamum* is being reaped. The condition of agricultural stock continues good. In Lower Burma the estimates of the paddy crop remain as before, except that the estimate has fallen in Shwegyin from 16 annas to 15 annas, and in Akyab from 16 annas to 14 annas. On the other hand, the estimated outturn in Bassein may be put at 13 annas. In Upper Burma the estimates of the crops remain as before. A good gram crop is expected in Meiktila. In Lower Burma the price of paddy has slightly risen in Tharrawaddy and fallen in Thonegwa. A large advance in price is reported in Mergui. In Upper Burma, the price of paddy has fallen considerably in Myingyan and Meiktila, and is stationary elsewhere.

Assam.—*For week ending 28th December 1887.*—Weather cold and dry. No rain. Winter rice and pulses are being gathered. Outturn good. Prospects of standing crops favourable. Pressing of sugarcane commenced. A slight earthquake occurred on the 23rd instant.

Mysore and Coorg.—*For week ending 28th December 1887.*—No rain in Mysore. Weather fine and cold. Prospects of standing crops good. Sowing operations continue, and harvesting completed in parts. Outturn of crops generally favourable. Stock cattle are reported to be healthy.

Slight rain in Coorg during the week. Standing crops in good condition.

Berar and Hyderabad.—*For week ending 28th December 1887.*—In Berar the weather is cold and cloudy. Picking of cotton and cutting of *jowari* and *tur* are in progress. Average outturn of these crops estimated at annas 12. The young *rabi* crops are thriving well and seem to have good prospects.

No rain in Hyderabad during the week. Agricultural prospects continued good.

Central India.—*For week ending 28th December 1887.*—No rain. Agricultural operations in progress, except in Gwalior and Bhopawar where they have been completed. Standing crops good. Probable outturn of harvest good. Pasturage and fodder good. *Mucca* and *jowar* have failed in Bhopawar. Prices of food-grains high. Opium sowings in progress, except in Bhopawar where they are completed.

Rajputana.—*For week ending 28th December 1887.*—Agricultural operations satisfactory. Standing crops fair on the whole. Average harvest at places, but below average generally. Agricultural stock fairly good. Pasturage or fodder pretty sufficient generally. Prices steady, but high in some States.

E. C. BUCK,
Secretary to the Government of India.
