The district rainfall return shows that on the whole the rainfall of the Indian region has been generally similar to that reported last week. In Burma, Moulmein received 9 inches Pegu $4\frac{1}{2}$ inches, Pagan $3\frac{1}{2}$ inches, and Tounghoo $2\frac{1}{2}$ inches, and the other districts general but moderate or slight rain. In Assam the largest amounts reported are Sylhet with 12 inches, and Cachar and Kamrup with 4 inches. The heavy falls which produced these large amounts both in Burma and Assam occurred on the last three days of the week, the earlier portion of the week having only slight rain. In East and North Bengal heavy falls also took place between the 26th and 28th, Mymensingh receiving $6\frac{3}{4}$ inches, and the Dinagepore, Bogra and Pubna districts falls of about 5 inches. In other parts of Bengal any rain which fell occurred in local storms and was generally moderate in amount. Behar was also visited by slight local thunderstorms or showers.

In the North-West Provinces and the Punjab there was practically no rain during the week.

The south of the Peninsula, like Burma, Eastern Bengal and Assam, came under the influence of what little monsoon current existed, and the rainfall was consequently heavier than elsewhere. Cochin had nearly 6 inches, and the Bombay Coast received small amounts in most districts. The northern portions of the Bombay Presidency had no rain, and this was likewise the case over Sind, the Berars, Rajputana and a large part of the Central Provinces, though in the last region a few districts report slight showers. The greater part of Madras had little or no rain, but in the extreme South the amounts recorded increase, so that in Madura, Coimbatore and the Nilgiris local falls varying between $2\frac{1}{2}$ and $3\frac{1}{2}$ inches are reported.

The final column of the return shows that, except in Amherst (Burma); some districts in Assam; Mymensingh, and a few scattered districts in Bengal and Madras, the amount of rain received up to the present date (May 14th—28th) has been deficient.

Table of District Rainfall for the Week, May 22nd to 28th, 1888.

SIMLA, *28th May, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

SUPPLEMENT TO THE GAZETTE OF INDIA, JUNE 2, 1888.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 26th May, 1888.*—Slight rain in most districts, but more wanted in Ganjam, Vizagapatam, Tinnevelly, Chingleput, Trichinopoly, Madura, and Coimbatore. Crops generally good; affected by want of rain or blight in a very few places. Pasture generally sufficient, but scanty in parts of Anantapur, Madura, Cuddapah, North Arcot, and Salem, and decreasing in Vizagapatam. Prices rising where not stationary. General prospects favourable.

Bombay.—*For week ending 30th May, 1888.*—Rain in parts of Shikarpur, Nasik, Ratnagiri, Poona, Ahmednagar, Sholapur, Bijapur, Belgaum, Dharwar, and Kanara. Harvesting of late crops continues in Karachi and Hyderabad. Ploughing for next season completed in Colaba, Poona, and Wadhwan, and progressing elsewhere. Fodder scarce in parts of Thana, Ratnagiri, Dharwar, and Kathiawar.

Bengal.—*For week ending 29th May, 1888.*—Rainfall fairly general over the whole Province,—heavy in North Bengal and at some neighbouring stations of East Bengal, scanty in Chota Nagpur, Orissa and North Behar, where, as also in parts of Western and Central Bengal, more rain is wanted. Ploughing proceeding generally. Autumn crops, and in some places winter rice being sown. Early rice and jute sowings mostly over. Plants coming up well. Sugarcane, indigo, and *cheena* promising. Reaping of spring rice nearly completed, and outturn good.

North-Western Provinces and Oudh.—*For week ending 30th May, 1888.*—Weather very hot, with easterly winds. Storms occurred during the week at Benares, Fyzabad, Sitapur, and in Kumaun. Irrigation of sugarcane continues. Ground is being prepared for *kharif*. Markets are full, and prices are generally steady. The condition of cattle continues fairly good.

Punjab.—*For week ending 30th May, 1888.*—No rain during the week. Prices are stationary; a fall is reported from Jullundur only. Harvesting and threshing of *rabi* crops nearly completed. *Kharif* ploughings and sowings are in progress; sowings suspended for want of canal water at Peshawar. Rain wanted in Hissar. *Rabi* prospects and outturn are reported good to average. No damage done to crops. Condition of stock-cattle is generally healthy. Fodder generally sufficient. Opium produce very small at Rawalpindi.

Central Provinces.—*For week ending 30th May, 1888.*—Occasional hot winds. Land being prepared for autumn sowings. Scarcity of water for sugarcane irrigation beginning to be felt in Sambalpur. Cattle fairly healthy.

Burma.—*For week ending 30th May, 1888.*—Ploughing for wet weather rice has commenced. Rain fell in all districts, except Akyab in Lower Burma and Pagan in Upper Burma. The price of rice has risen in Prome, Henzada, and Thayetmyo districts of Lower Burma, and in Myingyan and Minbu districts of Upper Burma, and has fallen in Yeu; elsewhere the price of foodgrain is stationary.

Assam.—*For week ending 30th May, 1888.*—Weather seasonable everywhere, except in Darrang, where it is cold. Prospects of crops good, except at Sibsagar, where more sun is wanted for early rice and tea. Potatoes promise fairly well in the Khasia Hills. No report from Naga Hills.

Mysore and Coorg.—*For week ending 30th May, 1888.*—Rainfall good in the civil and military station of Bangalore, and slight in other parts of the State. Condition of crops good. Agricultural operations progressing. Outturn of harvests fair. Stock-cattle in good condition. Prices slightly risen in the Chitaldrug district.

Some rain in Coorg. No standing crops.

Berar and Hyderabad.—*For week ending 30th May, 1888.*—Weather hot. Land is being prepared for ensuing *kharif* crop. Agricultural stock in good condition. Fodder insufficient in Amraoti and Wun districts. No marked change in prices.

No rain in Hyderabad during the week. Agricultural prospects continue fair. Prices stationary.

Central India.—*For week ending 30th May, 1888.*—No changes since the last report, except in the Bhopawar Agency, where a slight rise is reported, and in Goona, where prices are high.

Rajputana.—*For week ending 30th May, 1888.*—Agricultural operations about to commence. No crops standing at present. Harvests and agricultural stock generally good. Pasturage or fodder sufficient. Prices generally steady.

Nepal.—*For week ending 24th May, 1888.*—Slight rain. Weather cloudy. Prospects fair.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. V. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used, as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 7th May, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 5th May, 1888. Total. Irrigation.

REVENUE REPORT OF IRRIGATION WORKS IN SIND FOR 1886-87.

No. 961, dated Simla, the 22nd May, 1888.

RESOLUTION—By the Government of India, Public Works Department.

Read—

Letter from the Government of Bombay, No. 48 W.-I.—622, dated 27th March 1888, submitting the Revenue Report of the Irrigation Department in Sind for 1886-87, and the Resolution of the Government of Bombay thereon.

OBSERVATIONS.—The Irrigation Systems in Sind consist, altogether, of 5,824 miles of canals and 602 miles of embankments. Capital Accounts are kept for only eleven systems which comprise 2,549 miles of canals and 229

miles of embankments. The capital expenditure on these works has been as follows :—

		Number of Works.	Expenditure during 1886-87.	Expenditure to end of 1886-87.
			₹	₹
Productive Public Works	Direct	4	2,34,844	78,47,391
	Indirect		5,793	2,69,846
TOTAL		4	2,40,637	81,17,237
Minor Works (of which Capital and Revenue Accounts are kept).	Direct	7	...	30,75,900
	Indirect		...	1,35,284
TOTAL		7	...	32,11,184
GRAND TOTAL		11	2,40,637	1,13,28,421

The Productive Public Works consist of 622 miles of canals and 228 miles of embankments, the Minor Works of 1,927 miles of canals and one mile of embankment. The works for which capital accounts are *not* kept are more extensive and bring in a larger revenue than those for which Capital and Revenue Accounts *are* kept.

2. The actual financial results of the year 1886-87, as shewn in the Revenue Accounts, were as follows :—

		Gross Revenue.	Working expenses.	Net Revenue.	Percentage of Net Revenue on Total Capital outlay to end of the year.
		₹	₹	₹	
Productive Public Works	Direct	1,00,540	2,29,016	...	...
	Indirect	5,81,343	6,760	...	...
TOTAL		6,81,883	2,35,776	4,46,107	5·49
Minor Works (of which Capital and Revenue Accounts are kept).	Direct	38,893	4,29,118	...	...
	Indirect	8,59,417	11,385	...	...
TOTAL		8,98,310	4,40,503	4,57,807	14·25
GRAND TOTAL		15,80,193	6,76,279	9,03,914	7·97

while the minor irrigation works, of which no capital accounts are kept, gave these results :—

	Gross Revenue.	Working Expenses.	Net Revenue.
Direct	48,859	8,47,630	...
Indirect	17,56,210	...	...
TOTAL	18,05,069	8,47,630	9,57,439

The agricultural works gave a revenue of ₹9,846, and ₹1,73,744 was expended upon them.

These results must be considered to be very satisfactory. The works of which capital accounts are kept are paying a considerably higher percentage than that at which the money for their construction or improvement has or would have been borrowed. The total net revenue of the year on all the irrigation works combined is considerably in excess of the average of the last three years, and is

nearly equal to the most favourable of those years, 1884-85, when the revenue was exceptionally good.

3. The above statement, moreover, does not fully express the revenue which is attributable to these works. The jaghir lands in Sind, which are irrigated from the canals, do not pay to the credit of the works the revenue which, from a commercial point of view, is due to them. Were such revenues credited, the net revenue of the Productive Public Works would be increased by ₹77,615, that of the minor works (of which capital accounts are kept) by ₹1,40,563, and the remaining minor works by ₹1,32,036 during the year 1886-87. These amounts must be regarded as a contribution made by the canals to the jaghirdars.

4. The major irrigation works in Sind, that is, the four Productive Public Works, shew, collectively, a net profit to the State up to the end of the year of ₹5,35,967. The total net revenue up to the end of the year has exceeded the interest charges by that amount. Three of the four systems show a total net revenue in excess of interest charges; but one, the Eastern Nara Canals, has not yet done so.

5. The foregoing paragraphs refer to the actual revenue realised and brought to book in the accounts. The following statement shows the *assessed* revenue of 1886-87 as compared with that of the three previous years :—

	1886-87.			ASSESSMENT DUE TO CANALS.		
	Gross assessment.	Deduct "average before improvements."	Assessment due to Canals, 1886-87.	1885-86.	1884-85.	1883-84.
	₹	₹	₹	₹	₹	₹
Productive Public Works	7,17,370	28,300	6,89,070	6,59,917	6,25,777	4,95,023
Minor Works (of which Capital and Revenue Accounts are kept)	12,61,222	3,74,707	8,86,515	7,77,374	9,86,657	8,94,510
Minor Works (of which Capital and Revenue Accounts are not kept)	17,89,547	...	17,89,547	17,25,954	17,49,484	14,72,848
Agricultural Works	9,846	...	9,846	11,089	8,241	4,344
TOTAL	37,77,985	4,03,007	33,74,978	31,74,334	33,70,159	28,66,725

The "average before improvements," which is shewn in the above statement, represents the average assessment which was due to the old works before they were taken over and improved by the British Government; the actual receipts on this account are not shewn as Canal Revenue in the Administrative or Finance Accounts; so that the "assessment due to Canals" is the assessment truly comparable with the revenue which is actually credited to the works as stated in paragraph 2 above.

The above statement of the assessments is exclusive of the "difference of assessment on jaghir lands," but includes the "Hakaba" which is an actual receipt.

6. The areas irrigated in 1886-87 by the different classes of works are shewn in the following statement as compared with those of the three previous

years. The areas given below are those on which the "gross assessments" of the foregoing table are based :—

	1886-87.			1885-86.	1884-85.	1883-84.
	Government Lands.	Jaghir Lands.	TOTAL.			
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Productive Public Works . .	332,145	77,026	409,171	402,004	392,386	323,795
Minor Works (of which Capital and Revenue Accounts are kept) . .	509,733	72,388	582,121	541,070	592,448	539,810
Minor Works (of which Capital and Revenue Accounts are not kept) .	746,519	71,570	818,089	790,973	794,355	675,104
Agricultural Works .	5,269	...	5,269	5,872	3,984	2,122
TOTAL .	1,593,666	220,984	1,814,650	1,739,919	1,783,173	1,540,831

The area of cultivation under the canals is the largest on record since 1878-79, when 2,016,089 acres were irrigated. The areas show an increase in all districts as compared with those of the previous year, except in the case of the Begari Canals, where there was a falling off on both the Desert and the Begari Canal due in the former case chiefly to the unfavourable set of the Indus at the mouth of the Canal, and, in the latter case, to the formation of a sand-bank at the mouth of the creek, which supplies the Begari Canal.

7. The working expenses of the year under review, including indirect charges, are shewn in the following statement :—

	1886-87.	1885-86.	1884-85.	1883-84.
	₹	₹	₹	₹
Productive Public Works . . .	2,35,776	2,18,952	2,16,713	1,83,594
Minor Works (of which Capital and Revenue Accounts are kept) . . .	4,40,503	4,81,187	4,91,846	3 91,602
Minor Works (of which Capital Accounts are not kept)	8,47,630	8,13,623	8,37,165	8,83,032
Agricultural Works	1,73,744	63,238	55,935	91,493
TOTAL .	16,97,653	15,77,000	16,01,659	15,49,721
AVERAGE PER ACRE IRRIGATED .	0·93	0·90	0·89	1·00

The increase in working expenses may be partly ascribed to the increase in the mileage of canals and embankments which have increased by 123 and 78 miles, respectively, since 1883-84, but mainly to the expenditure of ₹1,26,298 on a new loop to the Kashmor Bund, which was rendered necessary by the rapid and dangerous erosion of the river in the neighbourhood of Kashmor. The charges for the maintenance of this and other embankments in Sind are treated in the above statement, and are spoken of in the Revenue report, as though they were charges properly debitable against the revenue of the canals in Sind: a portion of these charges only should, strictly speaking, be so debited, as the bunds serve important interests which are unconnected with irrigation.

8. The remissions of revenue on Government lands were ₹1,36,419 or nearly ₹20,000 less than in the previous year. They were still, however, considerably above the average on account of a heavy remission of ₹90,240 which was granted in the Ghar Canals district on account of deficient supply to lands on certain parts of the canals.

9. The unrealised balances, both on account of revenue due to the canals on Government land and on jaghir land, were considerably decreased during the year, the amounts outstanding were ₹92,055 and ₹90,289, respectively. The outstanding on jaghir lands are mainly in Khelat Territory, where several matters connected with irrigation revenue and remissions are not in a satisfactory condition.

The year, on the whole, was a most satisfactory one for the Irrigation Systems in Sind; the inundation was very good; the gross assessed revenue was the largest on record, and the area irrigated has rarely been exceeded; the working expenses, though larger than those of past years, must still, under the circumstances detailed, be considered moderate.

The Revenue Report of irrigation works in Sind has been received by the Government of India on the following dates :—

Report for	1883-84	on the 18th of May 1885.
,,	1884-85	on the 20th of February 1886.
,,	1885-86	on the 22nd of February 1887.
,,	1886-87	on the 31st of March 1888.

In reviewing the report of 1884-85, the Government of Bombay noticed that that report "had been submitted with increased punctuality, and it is confidently expected that this improvement will progress." The Governor-General in Council notices with regret that the improvement has not progressed. The Superintending Engineer's report for the year 1886-87 is dated the 23rd December 1887; the letter from the Government of Bombay forwarding the report to the Government of India is dated the 27th March 1888, or more than three months later. It is explained that "the delay in issuing the Report is principally due to the delay in printing it and its accompaniments." It is considered that this cause of delay might be easily obviated.

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Government of Bombay, in the Public Works Department, for information.

Also, that a copy of this Resolution, of the Report, and of the Resolution by the Government of Bombay, be forwarded for information to the Governments noted in the margin, in the Public Works Department.

Madras, Bengal, the North-Western Provinces and Oudh, and the Punjab.

Also, that a copy of this Resolution, of the Report, and of the Resolution by the Government of Bombay, be forwarded to the Department of Finance and Commerce and to the Revenue and Agricultural Department, for information.

Also, that a copy of this Resolution, the Resolution by the Local Government, and the Memorandum by the Commissioner in Sind, together with the general abstract of financial results, be forwarded to the Publisher of the *Gazette of India* for publication in the *Gazette* Supplement.

Also, that a copy of this Resolution be forwarded to Her Majesty's Secretary of State.

R. HOME, *Colonel, R.E.*,
Deputy Secretary to the Government of India.

Enclosure to P. W. D. Resolution No. 96 I. of 1888.

No. 48 W. I.—622 of 27th March 1888.

RESOLUTION—By the Government of Bombay, Public Works Department.

Read—

Letter from the Superintending Engineer for Irrigation in Sind, No. 2670, dated 23rd December 1887—Submits the Revenue Report of Irrigation Works in Sind for 1886-87, with the usual tables, charts and index map of Sind, and explains the cause of delay in submitting it.

Memorandum from the Commissioner in Sind, No. 162, dated 16th January 1888. Forwards the above with his remarks.

RESOLUTION.—The Irrigation Works in Sind, to which this report refers, comprise in all 5,824 miles of canal and 602 miles of river embankments. During the year 1886-87, the area of cultivation on the canals was 1,814,650 acres, including 220,984 acres of jaghir, and the irrigation or water share of the net consolidated assessment was ₹35,89,499. The total canal revenue amounted to ₹37,77,985.

The expenditure on maintenance and repairs was ₹10,99,852, and including outlay on extension and improvements and collection charges, the total charges against Revenue amounted to ₹16,79,508.

2. These figures, as compared with those of the previous year, show an increase of 74,731 acres in area of cultivation, and an increase in the irrigation share of net consolidated assessment of ₹1,56,309. The total canal revenue shows an improvement of ₹2,00,644.

3. The expenditure of the year (total charges against Revenue) shows an increase of ₹1,20,380, comprised as follows :—

	Outlay.		Increase.
	1885-86.	1886-87.	
	₹	₹	₹
Extension and Improvements	1,28,984	2,00,615	71,631
Maintenance and Repairs	8,31,148	8,27,922	—3,226
Establishment—			
Public Works	2,82,781	3,21,577	38,796
Revenue (collection charges)	3,16,215	3,29,394	13,179
	15,59,128	16,79,508	1,20,380

4. The net canal revenue during the year was ₹20,98,477, as compared with ₹20,18,213 in 1885-86, showing an improvement of ₹80,264.

5. The loss to canals on account of the difference between assessments of water-rates on jaghir lands and the assessments at the ordinary rates in force for Government lands amounted to ₹3,50,214, as compared with ₹3,79,115 in the previous year.

6. The inundation of 1886 is described as very good, a rise occurred early in May, and between the 15th May and 15th June there were several fluctuations: on the latter date the steady permanent rise for the season commenced. The subsequent level compared very favourably with the average of the previous 10 years, and on 22nd July the level was higher than has ever before been recorded except in 1882.

7. The Superintending Engineer draws attention to the effect of the river embankments (which are described as having now reached an almost perfect state) on the supply in the lower reaches of the river as exhibited by the gauge at Kotri. The steady rise in the river at Kotri, it is stated, continued for

quite a month after the initial supply had commenced to fail at Bukkur, and the resulting unusually lengthened supply in the lower reaches of the river adds to the duration of the water in the canals, besides having a very considerable effect in raising the head of supply in them.

8. The subject is both interesting and important, and should be further studied and investigated. The effects ascribed to the embankments which prevent the escape of floods from the river will, of course, be felt less in a year of low inundation, but, otherwise, must have an important bearing on the working of the canals. Mere clearances cannot do more than maintain revenue, when the population is limited. By large outlay for such work, cultivation may be increased on a canal, but the labour available for agriculture being limited, there must be a corresponding falling off elsewhere. These views are those held by a distinguished officer of large experience in Sind,* to whose energy and grasp of the requirements the success of the Eastern Nara Works is a permanent memorial.

* General Fife, R.E.

That Officer further remarks :—

"When there has been a large and permanent improvement in the revenue, it has been effected by *raising the water level* of the canals and giving them a supply for a longer period during the year."

* * * * * * *

"The effect of setting a large number of people and cattle free, whose labour was formerly employed upon raising water and laborious annual digging out of small but deep field channels, is [was] to at once enormously increase the area of cultivation."

9. The facilities for improvements in the case of the large majority of the old inundation canals are few, and Government are aware that any radical revision of the existing system of canals will require a large outlay of capital, and any such proposals are barred by present financial exigencies. Operations must, for the present, accordingly be restricted to minor improvements to existing canals, having for their object, as far as may be possible, the improvement in the supply both as regards level and permanency, and to this end the present report goes to show that the effect of the construction and maintenance of the river embankments generally tends.

10. Paragraph 4 of the Superintending Engineer's report refers to variations in the course and set of the river which are the cause of great anxiety and endanger the safety of the revenue and of property over large tracts and often necessitate heavy outlay on additions to the embankments. During the year the revenue on the Ghar was so affected: a large outlay on a loop bund behind the Kashmor bund had to be undertaken and also on loops near Madaji behind the Jhali bund and behind the Bukrani bund in the southern part of the Karachi Collectorate. The encroachment at the mouth of the Fuleli was, it is understood, not of importance, and is attributable to local causes.

11. The irrigation share of consolidated assessment is arrived at as follows, the figures of the previous year being shown for comparison :—

	1885-86.			1886-87.		
	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.
	₹	₹	₹	₹	₹	₹
Consolidated Revenue	33,71,718	5,99,353	39,71,071	36,43,486	4,81,262	41,24,748
Deduct—Remissions	1,45,221	11,195	1,56,416	1,31,062	5,357	1,36,419
Net Consolidated Revenue	32,26,497	5,88,158	38,14,655	35,12,424	4,75,905	39,88,329
Land share 10 per cent.	3,22,649	5,88,165	3,81,465	3,51,240	47,590	3,98,830
Water share 90 per cent.	29,03,848	,29,342	34,33,190	31,61,184	4,28,315	35,89,499

The remissions show a decrease, as compared with the previous year, of ₹19,997. Of the total remitted 66 per cent. was on the Ghar Canal, due partly to the state of the river mouth which affected the supply to upper branches. The Superintending Engineer remarks that the great reduction in cultivation on the average on this canal is not entirely due to a short supply of water, and can only be accounted for by the cultivators dreading a recurrence of last year's failure of supply and therefore not cultivating their lands, and in some cases to their want of capital, due to the failure of their crops last year.

12. Table E shows the balance outstanding for collection on account of the consolidated revenue due to canals as ₹92,055, as compared with ₹1,24,362 in the previous year, showing a decrease of ₹32,307. The figures are, however, not quite understood, the total for collection should apparently be—

	₹
Outstandings, as per Table E of report for 1885-86 . .	1,24,362
Net Assessments of year	39,88,329
TOTAL .	41,12,691

instead of ₹41,02,756. Explanation of this discrepancy should be furnished.

13. The collections of Hakaba levied on jaghir lands in British territory and in Khelat (Table D) show outstandings to the extent of ₹90,289, as compared with ₹1,31,324 at the end of the previous year. Of the balance, ₹63,774 is due from lands in Khelat. The only other noticeable outstandings are in the Hyderabad Districts, and this is explained by the Commissioner in paragraph 5 of his forwarding memorandum. The question as it affects Khelat lands will be referred to further on.

14. Four of the canal systems in Sind are classed as Major (Productive) Works, namely, the Desert Canal, Unarwah, Begari Canal and Eastern Nara Works. Taken collectively the financial results during and to the end of the year were as follows :—

	During year.			To end of year.		
	Direct.	Indirect.	Total.	Direct.	Indirect.	Total.
	₹	₹	₹	₹	₹	₹
Capital Outlay .	2,34,844	5,793	2,40,637	78,47,391	2,69,846	81,17,237
Gross Revenue .	1,00,540	5,81,343	6,81,883	8,73,256	86,13,415	94,86,671
Working Expenses	2,29,016	6,760	2,35,776	43,63,375	1,59,752	45,23,127
Net Revenue .		4,46,107			49,63,544	
Simple Interest .		3,09,199			44,27,577	
Net Profit after paying off Interest . . .		1,36,908			5,35,967	

These results would have been even more satisfactory, but for accidental causes affecting the supply of the Desert and Begari Canals.

15. The revenue from these two works is to some extent dependent on the arrangements for the recovery of revenue from lands irrigated in Khelat Territory. The attention of the Government of India should be drawn to the remarks in paragraph 9 of the Superintending Engineer's report and paragraph 4 of the Commissioner's forwarding memorandum, in view to some action being taken in the Foreign Department to ensure full returns from the water supplied by Government Canals to lands in the territory of His Highness the Khan of Khelat. It might be pointed out that, unless this can be by some means ensured, it will prejudice proposals for the construction or extension of any fresh canals from the Indus for the supply of lands beyond the Frontier.

16. The outlay charged to revenue on works of this class was as follows, as compared with the previous year :—

	1885-86. ₹		1886-87. ₹	
Revenue management—				
Public Works Establishment .	14,081		13,664	
Civil Establishment (collection charges)	61,913	75,994	59,664	73,328
Maintenance of Works—				
Public Works Establishment .	28,173		34,626	
Works	...		...	
Repairs	1,07,963		1,19,574	
Tools and Plant . . .	907		884	
Plantation	...		599	
		1,37,043		1,55,683
Refund of Revenue . .		...		5
		2,13,037		2,29,016
Indirect Charges . . .		5,915		6,760
		2,18,952		2,35,776

These figures show a considerable increase in the charge for Public Works Establishment and in the outlay on repairs.

17. Capital as well as Revenue accounts are kept of 7 other works in Sind, which belong to the class Minor Works. They are, with the exception of the Sukkur Canal (which as originally designed was an entirely new work), canals which have been enlarged and extended within a comparatively recent period at the cost of Government, and their financial results are largely dependent on the deduction made for the former net revenue, due or dependent on the works as they originally stood. Taken together, the financial results of the year after making such deduction show a net revenue of ₹9,03,914, after paying working expenses on a total Capital outlay to the end of the year of ₹1,13,28,421.

18. As regards the Sukkur Canal it is stated that the revenue is below the working power of the canal, and a defect in the system of assessing lands cultivated in the rabi as well as the kharif season is referred to as affecting the revenue. On this point a separate and special report is promised. It is observed that the head regulator on the main river at Sukkur was opened on 23rd September. Continued attention should be given to this canal with a view to its being made to fulfil its original purpose of affording a large rabi as well as a kharif supply to the lands it commands.

19. The control of the waters of the Fuleli to prevent the canals in the Badin Taluka being surcharged is now under consideration, and a project for a head regulator on the Fuleli has been called for. The proposal to expend three lakhs above the amount yearly expended contemplates, it is understood, the thorough clearance of the canals down to the bed stones set many years ago. In the opinion of the late Superintending Engineer (General LeMesurier) so large an expenditure is absolutely out of the question: it could not be done in one season, and, even if it could and money were available, it would not be advisable as the rise which has taken place in the high water-level of all the canals quite compensates the loss in depth of clearance. While there is some diversity of opinion as to the remedies possible as a whole, there is none as to the necessity for opening out the tail branches of the Lower Fuleli (Guni) and their extension, if possible, into Dhoras or Channels for the escape of surplus water, and this measure should be given effect to as funds become available.

20. The following statement gives particulars in detail of the outlay, charged to Revenue on Minor Works, as compared with that in the previous year :—

		1885-86.		1886-87.	
		₹	₹	₹	₹
Extensions and Improvements—					
Canals	Works	71,557		53,228	
	Establishment	17,279	88,836	16,595	69,823
Bunds	Works	57,427		1,47,387	
	Establishment	16,978	74,405	33,052	1,80,439
Total Extensions and Improvements		...	1,63,241	...	2,50,262
Repairs—					
Canals	Works	6,04,019		5,42,320	
	Establishment, &c.	1,76,039	7,80,058	1,74,160	7,16,480
Bunds	Works	1,19,166		1,65,424	
	Establishment	29,394	1,48,490	48,596	2,14,020
Total Repairs	Works	7,23,185		7,07,744	
	Establishment	2,05,363	9,28,548	2,22,756	9,30,500
Collection charges		...	2,54,302	...	2,69,730
GRAND TOTAL		...	13,46,091	...	14,50,492

21. The total expenditure on repairs was ₹7,07,774, as compared with ₹7,23,185 in 1885-86, showing a decrease of ₹15,441. On the canals the decrease was ₹61,699, and on the bunds there was an increase of ₹46,258. The increase in outlay in the latter case was on the Sukkur-Begari (₹10,076) and the bunds in the Karachi District (₹50,712): the outlay on repairs to the Kashmor bund shows a decrease.

22. In the current year the total grant for repairs to Minor Works has been increased by special grants to ₹9,24,298, and for 1888-89 it has been fixed at ₹7,69,000. These grants, besides fully providing for the river embankments or bunds, should, to some extent, test the limit to which revenue can be increased by mere clearance outlay.

23. The information given in Table VIII as regards the duty of water shows in most instances in the case of the more important canals an improvement in the results as compared with the previous year. The Sukkur Canal shows a slight decrease which is perhaps accounted for by the further increase in rice cultivation. On the Mithrau Canal, the duty is shown as 31·78 acres, as compared with 51·55 acres in the previous year: the area of rice here, too, shows a large increase. The matter is not commented upon in the Superintending Engineer's report.

24. It would be convenient if, in future reports, it was made quite clear in the headings of the several tables whether the figures in each case show the assessments or realisations, and whether they include jaghir areas, and Hakaba and Miscellaneous receipts, or not. Also throughout the report further information should be furnished as to the areas of cultivation by flow and lift respectively.

25. During the inundation of 1886, to which the report refers, Major-General LeMesurier held the post of Superintending Engineer. Government concur with the Commissioner in Sind in considering that the results of the year's operations are thoroughly creditable to the Superintending Engineer and the officers of the Department serving under his orders.

26. Copies of the report and of this review should be forwarded to the Government of India and the Secretary of State for India, as usual.

No. 162 OF 1888.

PUBLIC WORKS DEPARTMENT,

Commissioner's Office,

Camp Backorah, 16th January 1888.

No. 2670, dated 23rd December 1887, from the Superintending Engineer for Irrigation in Sind, forwarding Annual Revenue Report of the Irrigation Department in Sind for 1886-87.

Submitted to Government.

2. The report shows the results of the inundation for 1886, the last for which the arrangements were in the hands of Major-General LeMesurier.

3. The results in all divisions were satisfactory so far as they could be controlled by the Department. The net canal revenue results, as given in paragraph 8, are more favourable than in any previous year and are obtained by a general increase in all canal divisions except the Begari, while the results are in all cases considerably above the average of the previous 5 years except in the Ghar Division. The revenue in this division shows a small increase on the previous year, but it is, owing to the continued erosion of the river at the mouth of the Ghar, some two-and-a-half lakhs below what it should be and has been in previous years. Apparently there was some improvement in the supply last year, but the losses the people had recently suffered prevented this improvement being fully utilized. But for the condition of the Ghar the revenue in the year under report would have been considerably the highest ever realized from irrigation in Sind.

4. The remarks of the Superintending Engineer in his ninth paragraph regarding the state of things in Khelat refer to a matter with which the Commissioner cannot deal. The Superintending Engineer very naturally desires to see a full return allowed on large productive works such as the Desert and Begari canals, but Khelat being independent territory, the arrangements are not altogether in the hands of British officials, and the proposal of the Superintending Engineer that a measuring establishment under the Executive Engineer should be employed on these lands is quite impracticable.

5. The explanation as to the outstandings in the Hyderabad District, referred to in the same paragraph, is that the Superintending Engineer's report is for the financial year ending March 31st, on which date one kharif and all the rabi instalments are still to be received. On 31st July 1887, the hakaba outstanding in the Hyderabad District was ₹236-4-6 only.

6. It is not necessary to follow the Superintending Engineer through the details given in the report. The Commissioner would only draw attention to the evidence afforded by paragraph 37 of the necessity of special expenditure on the Fuleli Canal. The matter is already before Government. The necessity for exceptionally heavy expenditure on Abkalani establishment during the actual inundation is also noticeable as in part explaining the smallness of the balance of the clearance grant which remained for the cold weather work which forms a matter for comment in paragraph 1 of Government Resolution No. 147 W.I.—2044, dated 21st December 1887.

7. For the rest the report requires no further comment, and the results obtained are, in the Commissioner's opinion, thoroughly creditable to the Superintending Engineer and the officers under him.

C. B. PRITCHARD,
Acting Commissioner in Sind.

General Abstract of Financial Results of Irrigation Works in Sind for and up to the close of 1886-87.

FOREIGN DEPARTMENT.

REPORT ON THE PILGRIM SEASON OF 1887.

The following Report is published for general information:

Report on the Pilgrim Season of 1887, by Mr. Abdur Razzack, Her Britannic Majesty's Vice-Consul at Jeddah, dated the 15th February, 1888.

No. 3, dated Jeddah, the 24th February, 1888.

From—T. S. JAGO, Esq., Her Britannic Majesty's Consul, Jeddah,

To—The Secretary to the Government of India, Foreign Department.

I have the honour to transmit herewith a copy of the Report of Mr. Vice-Consul Abdur Razzack on the pilgrim season of 1887, accompanied by two Appendices.

A and B.

Dated Jeddah, the 15th February, 1888.

From—MR. ABDUR RAZZACK, Her Britannic Majesty's Vice-Consul at Jeddah,

To—T. S. JAGO, Esq., Her Britannic Majesty's Consul, Jeddah.

THE Haj season of 1887 is now over. It virtually came to an end on the 19th November, 1887, when the S.S. *Akbar* sailed for Bombay with 800 pilgrims who had returned from visiting Medina after the Haj, but a large number of pilgrims still remained, and 950 of these were carried away by the S.S. *Sumatra* on the 29th of December, 1887, completing the season with the conclusion of the year.

A considerable number of paupers are still in this place suffering from want, privation, and disease, and it is to be hoped that some good Samaritan will be found who will manage to expedite their departure for their native land.

Regarding the sanitary condition of Mecca and Muna, and the number of pilgrims who were gathered in those places during the pilgrimage, I am not in a position to make exact statements, as I was obliged to stop at Jeddah, being Acting Consul at the time; and although the Government of India was pleased, at my request, to permit Dr. Ata Muhammad, of Hodeidah, to come on the Haj and make the necessary report, my letter asking him to come over unfortunately reached him too late to enable him to come and be present during the four days of the Haj.

From the accounts that I received from various persons the sanitary state of Mecca and Muna during the Haj was as usual, but I cannot say the same as regards Jeddah, as it was in a very unclean condition after the season had commenced, and no steps were taken for sweeping and cleaning the town properly until after the arrival of Ahmed Bey, the Imperial Sanitary Commissioner, and not till I had a talk with him on the subject; but from that time up to the Haj the town was kept pretty clean.

This year the Haj took place on the 28th August, and the heat at Mecca at the time, and for some days subsequently, is said to have been much more than during the previous Haj; and Mr. Kudzi, the Consular Dragoman, who was then in Mecca, reported that a great many deaths from sunstroke had occurred.

Excepting this, and the ordinary forms of diseases, such as diarrhœa, dysentery, and fever, which generally prevail to a more or less extent when

large bodies of pilgrims are congregated together, there was no outbreak of any of those diseases which involve the destruction of human life on a large scale.

The last time that an outbreak of cholera occurred in Muna was in 1883, and since then it has not made its appearance there during four successive pilgrimages.

Those who favour the quarantine system will attribute this to its being carried out in all its strictness, but from what I have observed during six Haj seasons, it appears to me to be simply due to two reasons :

(1) Improved sanitary arrangements for cleaning and sweeping the towns of Muna and Mecca, and the prompt burial of the carcases of slaughtered animals in the former place.

(2) The use of pure water by the pilgrims. The stringent orders given by the late Vali Osman Pasha during the years 1884 and 1885, to empty all the Sahrijas, or water tanks, in the town of Muna before the Haj, compelled all the people to use the water which was brought from the Zobeida aqueduct and sold in the town by large numbers of water-carriers, as mentioned in my report for 1884, while, as stated in my report for 1886, the construction of a branch from the Zobeida aqueduct, and its introduction into the town of Muna in that year, placed a pure water-supply within the reach of the poorest.

If the two preventive measures mentioned above continue to be carried out every year as they ought to be, and no other disturbing agencies interfere, it hardly needs a prophet to foretell that cholera or any other epidemic disease is not likely to show itself in Muna again.

From enquiries which I made personally from Nauri Bey, the officer in medical charge of Mecca and Muna, when he came down to Jeddah some time after the Haj, and from Selim Bey Fehmy, the Egyptian Sanitary Delegate, I learnt that the number of pilgrims who were gathered on the day of the Haj in Arafat was computed by the former to be about 150,000, while the latter considered that 140,000 souls were present.

This large increase in the number of pilgrims in comparison with former years they attributed to an extraordinary influx of Arabs from Nejd, and Bedouins from all parts of the Hedjaz.

The total number of arrivals by sea during the season under review was 46,020, nearly 4,000 more than last year, but considerably less than the number of pilgrims who arrived in 1885; still, as shown in the table below, the annual number of pilgrims who come by the sea seems to be gradually on the increase since 1882 :

Year.	Arrivals.	Remarks.
1882 .	25,580	
1883 .	27,263	
1884 .	31,157	Haj Akbar.
1885 .	53,010	
1886 .	42,374	
1887 .	46,020	

The number of pilgrims who are classed as Indians amounted to 10,324; among these I may mention are included Afghans, Baluchis, and pilgrims from Kokand, Bokhara, Kashgar, Yarkand, and other places in Central Asia,

who find it convenient to pass through India and embark at Indian ports for Jeddah.

The number of arrivals under this head this year is the largest since 1882, as will be seen by the following table :

Year.	Arrivals.	Remarks.
1882 .	9,630	
1883 .	10,146	
1884 .	9,262	Haj Akbar.
1885 .	8,318	
1886 .	9,479	
1887 .	10,324	

One hundred and thirty-four steamers and ships arrived with pilgrims this year from all parts. Besides these, 52 native Arab craft, or sambooks and buglows, also brought small batches of pilgrims from various places on the coast of the Red Sea. A list of these vessels is given in Appendix A, showing the nationality of the pilgrims and the vessels, the number brought by each, and the order of their arrival.

This year fifteen vessels brought lists of their pilgrim passengers, but on comparison with the list received from the Jeddah Health Office (Appendix A), they are still found to be defective, as will be seen from a glance at the following table :

No.	Name of Vessel.	Date of Arrival.	Number in List.	Number actually arrived.
1	S.S. Sumatra .	8th November, 1886 .	181	200
2	„ Bangalore .	13th January, 1887 .	318	418
3	„ Sumatra .	6th March „ .	231	286
4	„ Akbar .	6th April „ .	452	584
5	„ Sumatra .	5th May „ .	315	338
6	„ Akbar .	25th „ „ .	865	934
7	„ Bangalore .	10th June „ .	909	980
8	„ Sumatra .	5th July „ .	868	1,076
9	„ Akbar .	13th „ „ .	583	677
10	„ Taif .	6th August „ .	526	570
11	„ Mobile .	13th „ „ .	472	485
12	„ Thisbe .	19th „ „ .	643	665
13	„ Bangalore .	19th „ „ .	967	1,012
14	„ Sumatra .	22nd „ „ .	808	1,057
15	„ Adowa .	23rd „ „ .	403	475
			8,571	9,757
				8,571
			Difference .	1,186

The difference is less than last year, but still considerable.

According to letter No. 1474-E., dated Simla, the 18th July, 1887, and its inclosure, addressed by the Government of India to this Consulate, it appears that this year officers have been, and will be, appointed at various ports, from which pilgrims embark from India, in order that each pilgrim ship should be supplied with a complete list of passengers, and it is to be hoped that at the end of the Haj season of 1888 the information supplied by these lists will be more accurate.

The following vessels which brought pilgrims from India presented no lists of their passengers at this Consulate :

No.	Name of Vessel.	Port of departure.	Date of Arrival.	Number of Pilgrims brought.
1	S. S. Sumatra	Bombay	3rd January, 1887	58
2	„ Mobile	Do.	30th „ „	62
3	„ Mobile	Do.	20th March „	55
4	„ Perim	Calcutta	23rd „ „	61
5	S. V. Fattel Bari	Do.	25th „ „	45
6	S.S. Glenroy	Do.	25th „ „	9

			8,571	2,086
			2,086	
		Indians Proper	6,485	

The number of passports collected here from Indian pilgrims this year was only 3,736—about 500 more than what was collected last year, but a small number when compared with the number of arrivals from India.

This is owing to several reasons. In the first place, alien passes are not collected ; secondly, all the pilgrims who land on the quarantine wharf do not take the trouble to keep their passports with them ; thirdly, the number of hands employed to collect, *viz.*, one cavass and the two clerks of the Consulate, are not enough.

The following table shows the number of passports collected and the places of their issue:

No.	Name of vessel.	Date of arrival at Jeddah.	Number of Passports collected at the Quarantine Wharf.	Places of issue in the Bengal Presidency. Calcutta Police Office.	Bankipore.	Backergunge, Barisal.	Putwa Khali.	Baksar.	Dacca.	Comilla.	Sealdah.	Mauler Bazar.	Habibgunge.	Durbhunga.	Bhola Subdul Office.	Noakhali.	Rajshahi.	Khulwa.	Total.	Places of issue in the Bombay Presidency and Ajmere. Bombay.	Mandan (Ajmere).	Karachi.	Broach.	Total.	Places of issue in the Punjab and North-Western Provinces. Delhi.	Lahore.	Multan.	Garhi Yasin.	Total.	Places of issue in the Madras Presidency. Madras.	Manjiri.	Calicut.	Chevayer.	Ponnani	Annaseri.	Perintal Mamjan.	Hyderabad, Deccan.	Total.	Grand total.

If the number of passports collected be compared with the number of Indians proper who are entered in the fifteen lists which have been received, it will appear that out of 6,485 passports issued at various places in India, 3,736 have been collected, while 3,749 did not come to hand.

The impossibility of collecting these passports on boardship before the pilgrims are landed, and the difficulty experienced in obtaining them from all the pilgrims owing to a good many leaving them with their luggage, was mentioned in my report for the last Haj season; and, as mentioned above, I find the number of persons employed in collecting them to be not enough.

If the Government of India would be pleased to sanction a peon (called here a cavass) for my establishment, he would not only help in the collection of passports during the Haj season, but would also be useful in the dispensary, where a peon is now very much wanted, to keep the patients in order and prevent them from crowding round me, especially during the hot season, which is nine months out of the twelve; and I could also avail myself of his services when necessary in making enquiries regarding the welfare of the pilgrims.

Medical diaries and returns of admissions, discharges, and deaths, were sent to this Consulate by the medical officers of 14 vessels only.

These papers show that out of 9,305 souls brought by the above vessels, 472 were registered as sick and treated for various diseases, out of which only 23 died, as shown below:

No.	Names of Vessels.	Date of arrival.	Number of passengers brought.	Number of sick.	Number of deaths.
1	S.S. Bangalore	13th January, 1887	418	22	[illegible]

List of pilgrims and medical returns are being received by this Consulate since 1884 only; and from consulting the latter it appears that comparatively the mortality, which prevailed among the pilgrims during the voyage from Bombay to Jeddah this year, is much less than that which had occurred during the three previous years, as will be seen from the numbers given below:

Year.	No. of pilgrims brought.	No. of sick.	Deaths.
1884	5,565	186	27
1885	8,066	179	58
1886	9,420	302	36
1887	9,305	472	23

The number of the sick in proportion to the number of arrivals amounts to 4·9 per cent., and the death rate with reference to the number of sick is also 4·9 per cent., but only 0·2 per cent. in comparison with the total number of arrivals according to the returns which have been received.

Regarding the cases treated, diseases of the alimentary canal show the highest number this year; diseases of the chest, general debility, and old age, and wounds and accidents, next follow in succession.

The prevalence of diseases which are classed as general, and eye, ear, and skin diseases, show a low state of health among some of the pilgrims.

Two cases of small-pox occurred among the pilgrims of the S.S. *Sumatra* on her third voyage, and one on her fourth voyage during the season under report; and out of the three cases treated, one died, but fortunately there seems to have been no tendency to spread among the other pilgrims.

Dysentery and fevers show the highest death rate, and old age and debility, which always stood first, appear third on the list this year. Altogether it is satisfactory to note that the mortality has been very low; and the pilgrims, notwithstanding the roughness of the voyages on account of the monsoons, appear to have enjoyed a fair state of health.

The following is a list of the ships which submitted medical diaries and returns, with my remarks on the condition of these documents:

(1) S.S. *Bangalore*, arrived 13th January, 1887. } Diary well kept; admission, discharge, and deaths register complete.

(2) S.S. *Sumatra*, arrived 6th March, 1887. } Diary very meagre.

(3) S.S. *Akbar*, arrived 6th April, 1887. } Diary not worth the name. Register of admissions badly kept.

(4) S.S. *Sumatra*, arrived 5th May, 1887. } Diary pretty well kept.

(5) S.S. *Akbar*, arrived 25th May, 1887. } Diary fair; admission and discharge register pretty well kept. Return of deaths not given.

(6) S.S. *Bangalore*, arrived 10th June, 1887. } Diary well kept. Returns complete.

(7) S.S. *King Arthur*, arrived 30th June, 1887. } Diary wretched.

(8) S.S. *Sumatra*, arrived 5th July, 1887. } Diary pretty well kept. Returns incomplete. See remarks of Doctor under head of Medical Report.

(9) S.S. *Akbar*, arrived 13th July, 1887. } Diary passable. Returns incomplete.

(10) S.S. *Mobile*, arrived August, 1887. 13th — Returns not correct. Though the Captain was told twice while in port to submit the medical diary, it was only received from Aden after the ship's departure from Jeddah, and has been evidently prepared in a hurry.

(11) S.S. *Taif*, arrived 6th August, 1887. — Diary fair. Returns complete.

(12) S.S. *Bangalore*, arrived August, 1887. 19th — As usual, the Doctor of this ship Mr. Sullivan's diary is very well kept. His concluding remarks deserve the attention of Government. Returns complete.

(13) S.S. *Sumatra*, arrived August, 1887. 22nd — Diary pretty well kept. Return of admission and discharges passable.

(14) S.S. *Adowa*, arrived August, 1887. 23rd — Diary very meagre. Returns complete.

Sent separately.

These diaries and returns I beg you will transmit to the Government of India, along with this report as usual.

According to the list kindly supplied me by Dr. Stepovitch, the Acting Sanitary Inspector at this place, it appears that 4,955 paupers arrived here from India and Muscat this year in the manner detailed below:

List of paupers who arrived from India during the Haj Season of 1887.

Date of arrival.	Name of vessel.	Port of departure.	Number of paupers.

Arrived by various Shambooks		Do.	299
		Total	4,955

The percentage of paupers in comparison with the total number of arrivals is therefore 47·9.

The following figures also show that the number of paupers who arrived this year from India is by far the largest which has come to this country since 1883:

Year.	Number of paupers.
1883	2,515
1884	1,580
1885	2,586
1886	3,295
1887	4,955

In speaking of the lists received from the Protector of Pilgrims by each steamer from Bombay, I have already shown that out of a total of 8,571 pilgrims of all classes entered in these lists, 2,086, or more than one-fourth, were aliens; and I can state from personal observation that of the pauper pilgrims who collect on the Quarantine Wharf, one-third of the number is composed of these aliens, or people from Afghanistan, Baluchistan, Bokhara, Kokand, Kashgar, and Yarkand, who pass through Bombay *en route* to Jeddah.

Taking for granted the proportion of aliens as shown by the above lists, only one-fourth of these paupers may be safely set aside as not belonging to the class of Indians proper.

For purposes of comparison I here give a list, also kindly furnished by Dr. Stepovitch, of pauper pilgrims of all classes who arrived by sea this year:

PAUPERS WHO ARRIVED FROM ALL COUNTRIES IN 1887:

Nationality.	Number.
Javanese	314
Indians	4,982
Persians	823
Arabs	979
Yemanis	590
Soudanese	152
Syrians and Turks	563
Egyptians	2,850
Magrabins	1,084
Total number of paupers of all classes	11,817

Paupers who are Turkish subjects are sent away by the local authorities in small batches by almost every ship bound for the north; and one steamer, the *Sakaria*, arrived here expressly from Constantinople for carrying away Turkish pauper pilgrims from this place.

For Indian pauper pilgrims no such arrangement exists, although a considerable number are annually sent away through the charity and philanthropy of the Indian merchants residing at Jeddah and Mecca.

This year a good many pauper Indians are still left in this place; and it is quite heartrending to behold the miserable condition of these poor creatures, suffering from want and dying from sickness.

I have once before represented that some sort of arrangement for sending back these poor people to India might be made, if the Rajas, Nawabs, and Raises of India could be induced to found a fund for the purpose; and I again venture to state that, at a time when all sorts of funds and institutions are being established in India for the benefit of the people of the country, it needs only a slight hint to the well-to-do Muhammadans in Bombay, Calcutta, and other leading cities in India to establish a small charity fund for the benefit of these pauper Indian pilgrims, so that, instead of dying here from destitution and starvation, they may be sent back to their native country.

I need hardly mention that, as a matter of course, it will be the duty of those who are entrusted with the management of the fund, whether this Consulate or any other person, to see that only those who are absolutely helpless should be assisted in this way.

Appendix B is a list of vessels which have left this country with homeward bound pilgrims of all classes.

According to it, the total number of Indian pilgrims who have left this place up to date is 8,329, and therefore, taking the number of arrivals into consideration, 1,995 seem to be still left in this country.

The state of the Jeddah-Mecca road since my arrival in this country in 1882 was never so safe as during the year under review; and the same may be said of the Medina road.

During the last two years, on account of the disturbed condition of the road to Medina, which passes through the country of the Harbi Bedouins, large numbers of pilgrims had adopted the sea route, and visited that city by the way of Yembo.

This is much shorter, safer, and cheaper than the old land route.

The journey from Mecca to Medina by land only generally occupies from 13 to 15 days, while the voyage from here to Yembo by steamer occupies only 24 hours, and from Yembo to Medina by camels five days, the whole journey being accomplished in less than half the time usually occupied in travelling throughout by land.

There is also a considerable difference in the expenses of the two journeys. The camel hire from Mecca to Medina is generally from 28 to 30 dollars, while the steamer fare from Jeddah to Yembo is from 2 to 3 dollars only, and the camel hire from Yembo to Medina is on an average 7 dollars, making a total of 10 dollars, which is one-third of the amount required for the expenses of the journey by land only.

It would therefore be in the interests of the pilgrims if they could be apprised of this before they leave India.

Before concluding this report, I beg to make a short statement regarding the working of the dispensary under my charge.

In the year 1882, when I was ordered to proceed to this place, my instructions enjoined me to report on the feasibility of establishing a hospital in Jeddah for the benefit of the Indian pilgrims.

The late Captain Moncrieff, then Her Majesty's Consul at this place, entered into the project warmly; but owing to the objections raised by the then Vali, Osman Pasha, the scheme for founding a hospital fell to the ground.

To see how far it would be practicable to work a dispensary here, I commenced, as a preliminary, to dispense medicines to such patients as chose of their own free will to call upon me as a medical man for advice and treatment; and the result was that from a beginning of two or three patients as much as 70 people began to attend daily. I continued this system from the 1st of March to the 10th of April 1883 only; and the result, as entered in the return given below, shows that in one month and ten days 203 new patients and 465 old patients were seen:

No.	Month.	New cases.				Old cases.	Total of new and old cases.	Daily average.
		Male.	Female.	Children.	Total.			
1	March	32	28	7	67	144	211	6·8
2	April (ten days only)	46	64	26	136	321	457	45·7
	Total	78	92	33	203	465	668	18·25

Soon after, a report on the subject drawn up by me was forwarded to the Government of India on the 23rd May 1883, and the opening of a

dispensary in my house was resolved upon; a compounder being sanctioned, arrived here about the end of April 1884, and I commenced to see the sick regularly.

In the year 1884, during the eight months that the work was carried on commencing from the 10th of May 1884, 1,144 new and 3,706 old cases were seen, showing a daily average of 19·87 throughout.

In 1885, 3,858 new cases and 29,534 old patients were treated, resulting in a daily average of 91·49 all the year round.

In 1886 the number of fresh cases who attended was 3,859, while 23,120 old patients were attended to, showing a daily average of 74·11 patients during the year.

Last year the number of new patients amounted to 4,109, and the number of old cases came up to 23,193, making a daily average of 75.

The result of the last four years is shown in the Returns Nos. 1, 2, 3 and 4. The prevailing diseases have been fevers, both intermittent and remittent, enlargements of the spleen, diarrhœa, dysentery, diseases of the chest, eye diseases, and a large proportion of sloughing sores and ulcers, with a few cases of abscesses, and other minor operations.

RETURN No. 1.

Return of Patients treated during the year 1884 at the Jeddah Dispensary.

No.	Month.	New cases.				Old cases.	Total of old and new cases.	Daily average in the month.	Remarks.

	Total	1,851	1,440	868	3,859	23,120	26,979	74·11	Daily average in the year.

RETURN No. 4.

Return of Patients treated during the year 1887 at the Jeddah Dispensary.

No.	Month.	New cases. Male.	Female.	Children.	Total.	Old cases.	Total of old and new cases.	Daily average in the month.	Remarks.
1	January	214	116	85	415	3,098	3,513	113·30	
2	February	145	73	78	296	2,173	2,469	88·17	
3	March	192	79	86	357	2,593	2,950	95·16	
4	April	177	93	89	359	2,738	3,097	103·22	
5	May	178	98	85	361	1,808	2,169	67·96	
6	June	105	55	57	217	628	845	28·16	
7	July	316	138	114	568	2,530	3,098	99·93	
8	August	210	50	70	330	1,583	1,913	83·76	
9	September	56	7	19	82	216	298	99·3	Month of the Haj.
10	October	210	58	72	340	1,303	1,643	57·0	
11	November	251	92	87	430	775	1,205	40·6	
12	December	176	98	80	354	1,748	2,102	67·80	
	Total	2,230	957	922	4,109	23,193	27,302	75·0	Daily average in the year.

From the above it will be seen that the number of new cases is yearly on the increase.

The dispensary is attended not only by Indians and Indian pilgrims during the Haj Season, but by people of all races and colour who inhabit or congregate in this town.

The Turks, who at first rather kept back, are now attending for advice and relief. Many Turkish soldiers and Zaptiahs prefer to apply at this dispensary rather than at the Government Hospital for medical aid; and I am glad to report that the fame of the "Ajza Khanai Inglez" (English Dispensary) has spread far and wide, and the Bedouins of the desert may also be now and then seen to attend after marching for days on the camel's back.

H. M. DURAND,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

FINANCE AND COMMERCE DEPARTMENT.

Decline of the China Tea Trade.

The Governor-General in Council directs that the subjoined correspondence be published for general information.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

No. 31 (Statistics and Commerce), dated 10th May, 1888.

From—The Secretary of State for India,
To—The Government of India.

Letter from Foreign Office, dated 17th March 1888, and enclosures.
Letter to Foreign Office, dated 14th April 1888.
Letter from Foreign Office, dated 19th April 1888.

I forward herewith, for the information of Your Excellency, a copy of correspondence with the Foreign Office on the subject of the decline of the China tea trade.

No. 375-88 R.S. & C., dated 17th March, 1888.

From—Sir P. H. W. Currie, K.C.M.G., Assistant Under-Secretary of State for Foreign Affairs,
To—The Under-Secretary of State for India.

Consul Alabaster, Canton, No. 6, dated 3rd February 1888.

I am directed by the Secretary of State for Foreign Affairs to transmit to you, to be laid before Her Majesty's Secretary of State for India, a copy of a Despatch, as marked in the margin, from Her Majesty's Consul at Canton on the subject of the China tea trade.

No. 6, dated 3rd February, 1888.

From—Charles Alabaster, Esq., Her Britannic Majesty's Consul at Canton,
To—The Secretary of State for Foreign Affairs.

I have the honour to enclose copy of a Despatch I have addressed to Her Majesty's Minister at Pekin, forwarding Minutes of a Meeting of a Committee appointed by the Merchants interested in the Tea Trade at this Port to consider what steps should be taken to prevent the further decline of the trade in Chinese teas.

No. 3, dated 3rd February, 1888.

From—Charles Alabaster, Esq., Her Britannic Majesty's Consul at Canton,
To—Her Britannic Majesty's Minister at Pekin.

I have the honour to enclose, for Your Excellency's information, copy of the Minutes of a Meeting of a Committee appointed by the resident Merchants interested in the Tea Trade at this Port to consider various points in regard to the trade generally raised by the Chamber of Commerce at Foochow in correspondence with the Foreign Consuls at that Port.

Your Excellency will observe that the Committee are of opinion that unless China teas are put on an equal footing with Indian teas by the abolition of all likin and export duties—a consummation which is scarcely to be looked for,—the serious decline, if not utter extinction, of the trade is probable.

I purpose laying a copy of the Minutes before the Viceroy for his consideration, although I do not suppose that His Excellency would be prepared to lighten the present burthens under which the trade suffers, and I could scarcely ask him to go so far as the Committee suggest to remove all taxes altogether, as it may prevent any additional taxes in the shape of likin being imposed; and I am also forwarding copy of this letter and enclosure to the Foreign Office, as I understand the Foochow correspondence and letters from the Chambers of Commerce at other Ports have already been forwarded to it.

Minutes of a Meeting of the Committee appointed to enquire into the state of the Tea Trade at Canton, held at Messrs. Deacon & Co.'s house on 26th January 1888.

PRESENT:—Messrs. E. Deacon (in the Chair), K. D. Adams, E. W. Mitchell, and R. B. Allen (Secretary to the Meeting).

Mr. F. O. Deacon was unavoidably absent.

The Chairman having read the notice convening the Meeting, invited the members of the Committee to give their views on the subject under consideration; a prolonged discussion then ensued, and it was finally decided to put the following on record as being some of the points worthy of the consideration of the Chinese authorities, unless the tea trade at Canton is to be seriously crippled, if not altogether annihilated, by the yearly increasing competition with India:—

SECTION I.—*Canton Scented Caper.*

This description of tea, of which the bulk of the Canton export consists, competes more keenly with Indian kinds than any other class of China teas, being especially useful for mixing purposes. The competition with India is now however growing so severe, and home prices have reached so low a range, that, unless some steps are shortly taken to relieve the produce of the excessive burdens of likin and export duty, a time must arrive when scented tea will cease to be an article of consumption altogether.

As regards quality, the districts from which the best descriptions of leaf arrive, being the most remote from Canton, suffer most heavily from inland taxation; and this induces Native merchants to admix inferior leaf, grown nearer to Canton, and suffering in consequence lighter dues. One of the greatest complaints, however, that buyers have to make is in respect to the large proportion of dust found in the teas. The dust should, if possible, not be sent to Canton from the districts at all, as the Peking dues have to be paid on it as well as on the whole leaf; and this, of course, increases the ultimate cost of the tea. This complaint is specially to be made about leaf arriving from the Loting and Hoyune districts.

SECTION II.—*Canton Scented Orange Pekoe.*

It may almost be said that this class (both the long and short leaf descriptions) has already been beaten out of the field by the success of Indian teas: this is amply proved by the significant fact that, during the past ten years, the export from Canton has fallen from 3,870,000 lbs. to 1,100,000 lbs. This decrease in export continues year by year; and it now seems impossible that this class of tea can regain its lost position on the London markets.

SECTION III.—*Congous.*

Of this kind, the best teas arrive from the Tayshan districts; and, as a rule there is a steady market for these in London. The only suggestion that might be made is that better quality would be obtained if growers were contented with fewer pickings during the year. Experience has shown that teas plucked in the months of August and September are deficient in every quality except "make," and the picking of the leaf in these months affects the supply as well as the quality of the autumn crop, which is the best produced from the district.

SECTION IV.—*Weights.*

It is worthy of remark that teas shipped from Canton waters invariably lose in weight on the homeward voyage, whereas those shipped from Foochow and the Northern ports always show a distinct gain. The remedy for this is in the hands of the Imperial Maritime Customs, for Native packers are prepared to allow an extra ¼lb. per box, provided no export duty is charged on it—a concession which the Imperial Maritime Customs will not grant.

SECTION V.—*General.*

The steady fall in exchange during late years has been of material assistance to the China grower, for it has enabled tea shippers to lay down their purchases in London at lower sterling prices year by year, while paying almost the same tael prices to the Chinese as formerly. The Native grower must be looked to for any improvement in manufacture or production; and as long as he feels no necessity for such improvement, it need not be expected.

The members of the Committee have read with much interest the correspondence which has already been published by the Shanghai and Foochow Chambers of Commerce relating to the decline of the China tea trade, and they heartily concur in the opinions expressed by these bodies, and consider that the only real remedy for preventing the total extinction of the trade is the abolition of all likin and export duties, so that the China article may be on the same footing as the Indian, Ceylon, and Java, all of which are free from tax.

No. 375 R.S. & C., dated 14th April, 1888.

From—J. A. GODLEY, Esq., C.B., Under-Secretary of State for India,

To—The Under-Secretary of State for Foreign Affairs.

I am directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 17th ultimo, enclosing a copy of papers relative to the decline of the China tea trade at Canton.

I am to request that, if possible, this office may be furnished with a copy of the correspondence published by the Shanghai and Foochow Chambers of Commerce on the same subject, with a view to the whole being communicated to the Government of India for their information.

Dated 19th April, 1888.

From—SIR T. V. LISTER, K.C.M.G., Assistant Under-Secretary of State for Foreign Affairs,

To—The Under-Secretary of State for India.

With reference to your letter marked 375 R.S. & C. of the 14th instant, I am directed by the Marquis of Salisbury to state to you, for the information of Her Majesty's Secretary of State for India, that Her Majesty's Minister at Pekin has been instructed to communicate to the Indian Government copies of the correspondence published by the Shanghai and Foochow Chambers of Commerce on the subject of the decline of the tea trade.

Sir J. Walsham has also been requested to furnish copies of these papers to the Foreign Office and as soon as they are received they will be communicated to the India Office.

Final Memorandum on the Snowfall of the cold weather, 1887-88, in Northern India.

The snowfall reports that have come to hand since the preparation of the preliminary note on the cold weather snowfall in the Himalayas and abnormal features of the weather in India during the months November 1887 to March 1888 are few in number. No reports have been received during the present season from the Darjeeling District Officer, and hence accounts of the snowfall on the Sikkhim Himalayas are not available for comparison with those of previous years.

The Deputy Commissioner of the Peshawar District states that no snow is reported to have fallen in the hills adjacent to the Yusufzai Subdivision.

The Deputy Commissioner, Kangra, has sent the following statement of the depth of snow in the passes of his district at the end of the month of April. The depth of snow on several of the passes on the same date of last year is given for comparison :

District.	Name of Pass.	Height.	Reported depth of snow, April 30th, 1888.	Reported depth of snow, April 30th, 1887.
Kulu ...	Rotang	13,500	4 feet	7 feet.
	Hamtu	14,500	3 „	8 „
	Chandarkhani	...	5 „	...
	Barsai	...	1 foot	...
	Pushtari	...	*Nil*	...
	Bubu	10,000	4 feet	4 feet.
	Lori Achri	...	3 „	...
	Majang	...	*Nil*	...
	Baragarh	...	2 feet	...
Plach ...	Jalori	1,000	*Nil*	½ foot.
	Raghopur	...	*Nil*	...
	Namu	...	*Nil*	...
	Chul	...	1 foot	...
	Basleo	10,500	1 „	1 foot.
	Maghin	...	1 „	...
	Dindku	...	3½ feet	...
	Srikand	15,000	14 „	17 feet.
	Gargarasan	17,000	7 „	13 „
	Supakhun	...	5 „	...
	Tiratti	...	7 „	...
	Lambisigran	...	*Nil*	...
	Palbach	...	2 feet	...

The Assistant Commissioner, Kulu, sends the following remarks on the depth of snow in the Kulu passes and the weather. He says :

"The Rotang Pass is not yet passable to laden animals, but sheep and travellers have crossed in large numbers during the month of April. The snow on the Bubu has probably been measured in some sheltered spot, for the pass has been open nearly the whole of the month. In Plach the Jalori and Basleo passes have been open throughout the month, and the foot of snow recorded as lying on them merely represents a sprinkling from a snowstorm which occurred at the end of April.

There were slight falls of snow down to 9,000 feet on the 1st, and again on the 24th, but not more than 2 or 3 inches fell on either occasion. The month, with the exceptions of these two days, was warm and clear. The weather in

the first week of May was broken, and several thunderstorms occurred, which reduced temperature considerably; and snow has almost certainly fallen on the higher ranges, although no reports have as yet been received."

The Reverend Mr. Ledslob, writing on the 18th of May from Leh, gives some valuable information of the stormy weather of the first week of that month in Ladakh. He says that Leh was the northern limit of the disturbed weather. Some snow fell in the valley on the 3rd and on the hills to the north. It was followed by very cold weather, and the cold was most intense on the 8th when the grass radiation thermometer fell to 9°. An extraordinary amount of snow fell as far as Purig and 4½ feet fell at Surna. The communication with Kashmir was hence interrupted for about a week.

The amount of snow on the hills in the neighbourhood does not exceed the average, and is probably under it, as Mr. Dalgleish managed to cross the passes with laden ponies between the 20th of March and the 9th of April, and traders are now coming in to Leh regularly from the north.

These additional snowfall reports confirm the conclusions given in the preliminary note. It is hence almost certain :

1st.—That the snowfall over the greater part of the Afghan mountain tract and the North-West Himalayan area has been much smaller than the normal during the past winter and up to the end of April. The same was the case to a less extent during the preceding cold weather of 1886-87. It is hence very probable that the extent and depth of snow on the Himalayas is less at present than it has been at the same date for the past five or six years. This inference is confirmed to some extent by the smaller depth of snow on the higher passes in Plach at the end of April 1888 than at the end of April 1887, and by statements which have recently appeared in the newspapers, *e.g.*, "The Indus and the Sutlej are both low this year, and the Dera Ghazi Khan and Mooltan districts are suffering in consequence." (*Pioneer* of June 6th.)

2nd.—The snowfall during the past winter in the Eastern Himalayas has been normal or (perhaps) slightly below the average.

The weather in Northern India during the past three months—March to May—has been such as usually accompanies very deficient snowfall in the Himalayas. Temperature has increased more rapidly than usually, and higher temperatures have been registered in the Punjab than for some years past. One important effect of rapidly increasing temperature in Northern India is to give rise to brief periods of general disturbance. The chief features are strong sea winds across the Bengal Coast, thunderstorms in Bengal and near the hills in Northern India, and duststorms in the plains of the Punjab and Central India. These form as it were the local expression of the disturbance. These periods rarely last for more than three or four days, and are again succeeded by fine clear weather with another burst of rapidly increasing temperature in the interior. These features have been present in an exaggerated form during the past hot weather. The southerly winds in Bengal were unusually strong in April and May, and almost increased to a gale on several occasions. Hot weather thunderstorms and hailstorms have been more numerous and more violent than for many years, and have in several cases developed into tornadoes, comparable in destruction to life and property with the whirlwinds that occur in the summer in the south-western districts of the Mississippi Valley in the United States.

Finally the pressure anomalies or variations from the normal are also such as accompany diminished snowfall in the mountain districts of Northern India. The pressure anomalies of May are identical in character and almost identical in amount with those of the month of April, described in the preliminary note. This shows that they are remarkably persistent, and due to some large and permanent cause. They are thus one expression of the meteorological conditions prevailing in India immediately antecedent to the advance of the south-west monsoon current of the present year, and hence indicate partially, if not entirely, the modifications that current will undergo during its advance into and prevalence over India.

The following are the chief anomalies of the month of May :

1st.—Pressure was slightly below the average over India.

2nd.—Pressure was, relatively to the general state, locally in defect in Burmah, Assam, Bengal, the North-West Provinces, the Punjab,

and the greater part of Rajputana and Sind. The deficiency was slight on the Burmese, Bengal, and Sind Coasts, and increased from the coast to East Assam in one direction and to the Punjab in the other. The following gives the anomalies in thousandths of an inch:

	Anomaly.
Tounghoo	— 6
Calcutta	— 6
Dhubri	— 26
Sibsagar	— 38
Saugor Island	— 9
Allahabad	— 18
Agra	— 16
Lahore	— 49
Peshawar	— 81

There is a local area of slightly different pressure relatively to neighbouring districts in North and Central Behar.

3rd.—Pressure is relatively in excess over the greater part of the Peninsula. This excess is greatest and large in the West Deccan and Central Provinces, as is shown by the following:

Belgaum	+ 46
Poona	+ 39
Sholapur	+ 50
Bellary	+ 58
Malegaon	+ 48
Akola	+ 31
Nagpur	+ 40
Jubbulpur	+ 41

The excess is less in the Bombay Coast districts than it was in April, and it is slightly greater in the Deccan.

The variations are thus in many respects similar to those of last year. The chief differences are that the excess pressure in the Deccan extends this year into the Central Provinces, and is somewhat more strongly marked, and that there is this year a largish deficiency of pressure in Assam and probably North Bengal, where last year there was a slight excess.

Hence, in the absence of information respecting the conditions on the sea area whence the current advances, the conclusions given in the preliminary note appear to require little or no modification. They are as follows:

1st.—The low pressure which at present obtains over Northern India from East Bengal to the Punjab and increases in amount westwards, favours the early establishment of the Bengal current over Bengal and the Gangetic Valley, to which it will probably give normal or abundant rain.

2nd.—The distribution of pressure in Southern India (more especially in the West Deccan and Central Provinces) is such as is usually associated with delay in the establishment of the monsoon on the Bombay Coast, and with diminished rainfall in the Bombay Deccan.

3rd.—The unfavourable conditions in Southern India accompany favourable conditions in North-West India as was the case last year. It is hence not probable that the monsoon rainfall in the Deccan and Central Provinces will be largely reduced below its normal amount.

It will thus be seen that, with the exception of the high pressure conditions in the West Deccan, indications are favourable for a strong and early monsoon.

It may be added that the presence of the high pressure area in the Central Provinces will probably cause the cyclonic storms of the rains to advance along a westerly track further to the north than usual.

JOHN ELIOT,

Offg. Meteorological Reporter to the Government of India.

Simla the 9th June, 1888.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 4th, 1888.

During the past week the weather in Southern India and in Burmah, that is the regions which last week were within the influence of the feeble monsoon currents which were affecting the southern parts of the Indian region, has remained almost unchanged, damp, warm weather, with occasional showers having been reported; but over Northern India there has taken place a slow and gradual, but very important change. The week opened with an excessively high temperature over the whole of North-Western and Central India, but after the 28th the amount of water vapour in the atmosphere steadily rose, and as it did so the heat was mitigated and the day temperatures quickly fell. At the close of the week the weather had a very unsettled appearance. A small cyclonic storm was forming over the centre of the Bay, and as the rains of Upper India are usually ushered in through the medium of one of these disturbances, the general appearance of the weather on the morning of the 3rd favoured the idea of a strong rush of monsoon winds at least in Bengal and that part of India.

On the morning of the 28th there existed, as was the case at the close of the previous week, large pressure differences between Southern and Northern India. The barometer was lowest in the Punjab and highest in Tenasserim, but an arm of relatively low pressure extended south-eastward across Bundelkhand to Chutia Nagpur. This distribution was accompanied with westerly and north-westerly winds in Western and Central India, southerly winds on the West Coast of the Bay, and easterly winds in Bengal and along the foot of the hills. With this extension of easterly winds over Northern India the humidity rose and temperature fell. The previous day had been the hottest experienced for some years in Upper India, the maximum temperature rising to 123° at Jacobabad, to 118° at Sirsa, and to 117·5° at Jhansi and Dera Ismail Khan. In Southern India, Burmah, Lower Bengal, and Assam slight rain had fallen, and the temperature in those regions was not excessive. On the 29th conditions were similar to, but more developed than those on the 28th. There was a larger barometric difference between Southern and Northern India, and the accompanying winds were in many cases stronger. At Galle and Colombo the wind was blowing with almost full monsoon strength, and the easterly current over Northern India was more developed than on the preceding day. Humidity had still further increased at several stations, and the rainfall area had extended. Rain was reported from almost every station in Southern India and in Burmah, as well as from Assam, Bengal, the east of the North-West Provinces, and the hill stations in the North-Western Himalayas. In Upper India the rainfall accompanied dust and thunderstorms. Temperature had fallen, except over the Central parts of India and of the Peninsula, and the sky was exceedingly cloudy in Bengal and the south of the Peninsula. On the 30th the distribution of pressure, the circulation of the winds, and the rainfall were generally similar to those reported on the 29th, except that the wind had shifted to North in Lower Bengal and precipitation had ceased in the east of the North-West Provinces. Temperature changes were somewhat irregular, though there had been a fall on the West Coast, in the Deccan, Bengal, and Behar. The maxima were still high in North-Western India, the highest recorded being 121·5° at Jacobabad, 117·4° at Sirsa, 115° at Jhansi, and 114° at Nagpur. The Chart on the morning of the 31st showed that a small shallow area of depression had been formed over the North-West Provinces, and that gradients were less steep over North-Western India. The winds were less regular in Upper India than for some days previously, but the rainfall in the Punjab had increased somewhat. In Southern India, on the contrary, the area of rainfall had decreased, and was almost confined to the West Coast. In Burmah, Assam, and Bengal slight rain continued to fall generally. Temperature had decreased very quickly in the Punjab. On June 1st the difference of pressure between the South and North had again increased. Pressure was lowest in the Punjab, relatively low within a tongue of low readings running south-eastward from Jeypore to Raipur, and high over the south of the Bay. The winds were strong on the Ceylon and West Coasts, but were even weaker and more irregular in Northern India than on the previous day. Rain had still further decreased. It

had ceased in Arakan and Bengal, and almost ceased in Southern India. The only regions from which falls were reported were a few stations in Travancore and Ceylon, from the shores of the Gulf of Martaban, from Assam, and from the North-West Provinces. The amounts were almost everywhere small. Temperature had very generally fallen, except in Southern India and parts of Bengal, where the cessation of rainfall had resulted in a rise. The maxima were very generally lower than for some days past, the highest being 117° at Jacobabad and 112° at Raipur. The Chart of the following day (June 2nd) showed large and important changes in barometric pressure, perhaps the most important being the tendency to the formation of a barometric depression over the centre of the Bay. Very strong winds were blowing at Colombo, and the winds on the Pegu Coast had shifted round to East. Rain in small or moderate amounts had fallen round the upper part of the Bay, in parts of Bengal and Assam, and in the Punjab and the North-West and Central Provinces. On the Malabar Coast a fall of 3½ inches was reported. The humidity of the air was high, more especially in Northern India, where the weather was about as damp as during the rains. Temperature had fallen over Northern and Central India. On the 3rd the Chart showed that a small cyclonic storm had been formed to the north-west of the Andamans. Gradients were steep to the southward of this storm, but pressure was very uniform throughout Northern India. The wind was rather strong and cyclonic on the Burmah Coast, and the weather was probably squally and stormy over the centre and south of the Bay. Temperature was nowhere excessive, and in the Punjab and North-West Provinces was very cool for the time of year. Rain was falling in Burmah, Lower Bengal, Assam, in the south of the Peninsula, and in parts of the Punjab.

The rainfall return of the past week shows that the rainfall area is extending. In the North-West Provinces and the Punjab—indeed over nearly the whole of North-Western and a large part of Central India—there was no rain last week, while the present return shows very fair rain over the whole of that region. In Lower Burmah the amounts are generally lighter than they were last week, but the rainfall has extended well into Upper Burmah, where copious showers have fallen. Of the districts in Lower Burmah, Amherst received the largest rainfall, 8½ inches, followed by Moulmein with 6½ inches, and Rangoon and Pegu with about 4 inches. In the Upper Provinces, Shwegyin reports 8 inches as the total for the head-quarters station, and an average of 4½ inches for the district. The districts of Yamethin, Kyauksé, and Yeu also had an average rainfall varying between 2½ and 3 inches, so that the rainfall of Burmah may be considered to be progressing favourably. In Assam there was heavy and continuous rain throughout the week. In the Cachar district the average fall exceeded 1 inch a day. At Cherrapungi the week's fall amounted to nearly 13 inches. In Bengal rain apparently fell in almost all districts, and in some of them, more particularly in North and East Bengal, the week's fall was large. In Tipperah one station had a fall of 11 inches, and the average of the district was 5½ inches; in Mymensingh one station received 13 inches, and the average of the district was 6½ inches. In North Bengal the falls were rather lighter, but Dinagepore received 9 inches and Bogra 5 inches. In Behar the rainfall was heavy, largely exceeding the normal average. In the North-West Provinces, as mentioned above, rather heavy and fairly constant showers characterised the weather. In consequence nearly every district reports rainfall, and the average of the week, as well as the average up to date, generally exceeds the normal. The heaviest falls of rain were in the more eastern districts.

In the Punjab the rain was not so heavy as in the North-West Provinces. It fell very generally throughout the eastern districts, and light showers were also reported from many districts in the north and west.

Malabar had constant rain. The average of the district was 1 inch per diem, but Tellicherry had nearly 2 inches per diem. In Bombay the rainfall was deficient. Some places on the West Coast and in the Deccan had fairly heavy rain, but on the whole the rainfall, both for the week and for the season, is short of the average. In the northern parts of the Presidency there was no rain.

The Berars appear to have had no rain, and the Central Provinces only slight local showers. In Madras the rainfall was general and well distributed, but except in the south there were no heavy falls of rain, and even in the south little that calls for remark. In the Salem, Trichinopoly, Madura, Coimbatore, and Nilgiris districts maximum falls exceeding 4 inches are reported, but the district averages are small, and as a whole the seasonal totals are deficient.

Table of District Rainfall for the Week, May 29th to June 4th, 1888.

Simla, *4th June, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 2nd June, 1888.*—Slight rain in most districts, but more wanted in Vizagapatam, Trichinopoly, Madura, Tinnevelly, Coimbatore, and Salem. Crops generally good; affected by want of rain in Vizagapatam and by insects in Coimbatore. Pasture scanty in Anantapur, North Arcot, Madura, and Salem, and decreasing in Vizagapatam and Cuddapah. Agricultural operations progressing. Prices generally rising where not stationary. General prospects favourable.

Bombay.—*For week ending 6th June, 1888.*—Rain in parts of Shikarpur, Ahmedabad, Kaira, Nasik, Colaba, Ratnagiri, Poona, Ahmednagar, Sholapur, Bijapur, Belgaum, Dharwar, Kanara, and Kathiawar. Harvesting of late crops still incomplete in parts of Hyderabad. Ploughing for next season completed in Ratnagiri, and progressing elsewhere. Sowing of early crops in progress in Kurrachee, Shikarpur, Hyderabad, Colaba, Bijapur, Belgaum, Dharwar, and Kanara. Fodder scarce in parts of Thana, Ratnagiri, and Kathiawar.

Bengal.—*For week ending 5th June, 1888.*—Pretty general rain all over the Province during the week. In some of the Northern and Eastern Bengal districts the falls have been rather excessive, but more rain is wanted in places in South-West Bengal and in Hazaribagh and South Bhagalpur. Cultivation is everywhere well forward, and sowings are progressing rapidly. In many places early rice and jute are already up and thriving well. Prospects of sugarcane, indigo, and other crops on the ground are generally very favourable. Spring rice harvest is still going on in some districts, with satisfactory outturn. Price of rice generally remains almost stationary.

North-Western Provinces and Oudh.—*For week ending 6th June, 1888.*—The weather is cloudy, and storms and rain have occurred in nearly all districts. Extra crops are in good condition, and the ground is being prepared for the *kharif*. Sugarcane is doing well. Supplies are sufficient, and prices generally continue steady. The condition of cattle continues satisfactory.

Punjab.—*For week ending 6th June, 1888.*—Rain has fallen in all districts, except Mooltan. A rise in prices is reported from two districts; in others the prices are stationary or falling. *Kharif* ploughings and sowings are in progress; harvesting and threshing of *rabi* crops nearly completed. *Kharif* crops, where sown, are in good condition. *Rabi* prospects and outturn are reported average. *Rabi* and fruits slightly damaged by storm at Amritsar. Stock cattle are reported healthy. Pasturage or fodder in three districts scarce; in remaining sufficient. Opium produce very small at Rawalpindi.

Central Provinces.—*For week ending 6th June, 1888.*—Weather cloudy and warm. Land being prepared for autumn sowings. Sugarcane crops in Sambalpur damaged by scarcity of water. Cattle in fair condition.

Burma.—*For week ending 2nd June, 1888.*—Ploughing for wet weather rice progresses. Rain fell in all districts, but in Thayetmyo in Lower Burma and in Mandalay, Sagaing, Pagan, and Lower Chindwin districts of Upper Burma the rainfall was insignificant. The price of rice has risen in Thayetmyo and Tounghoo in Lower Burma and at Yeu and Meiktela in Upper Burma; it has fallen in Prome in Lower Burma and in Kyaukse and Myingyan in Upper Burma; elsewhere the price of foodgrain is stationary.

Assam.—*For week ending 6th June, 1888.*—Weather seasonable everywhere, except in Sibsagar, where more heat is wanted for tea. Prospects of crops generally good, except in Sylhet, where much injury has been done by excessive rainfall.

Mysore and Coorg.—*For week ending 6th June, 1888.*—Rainfall slight in civil and military station and Bangalore district, and good in other parts. Standing crops in good condition. Sowing operations nearly completed. Outturn of harvests fair. Condition of cattle good.

Slight rainfall in Coorg during the week.

Berar and Hyderabad.—*For week ending 6th June, 1888.*—Weather warm and sometimes cloudy. Land is under preparation for the ensuing *kharif* crop. Agricultural stock generally in good condition. Scarcity of fodder in Amraoti, Akola, and Wun districts, and also in Pusad taluk in Bassein district. No marked change in prices of foodgrains.

Slight rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 6th June, 1888.*—Slight rainfall in Indore and Bundelkhand. Agricultural operations have been started in Bhopal and Western Malwa, and completed in other Agencies. Probable outturn of harvest fair, except in Bhopal, where below average, owing to crops being damaged by hail. Agricultural stock and pasturage fairly good in Agencies, except in Bhopal and Western Malwa, where they are indifferent. Prices reported high in Bhopal this week. No change in other Agencies. Weather cloudy and close in Indore, and every prospect of monsoon approaching.

Rajputana.—*For week ending 6th June, 1888.*—Fair amount of rain throughout the State. Agricultural operations about to commence. No crops standing over at present. Harvests and agricultural stock good generally. Pasturage or fodder sufficient. Prices steady; slightly rising in some places.

Nepal.—*For week ending 31st May, 1888.*—Slight rain. Weather cloudy. Condition of crops good.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. VI. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used, as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 14th May, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 12th May, 1888. Total.	Per mile open.	Total Receipts from 1st April to 14th May, 1887. Total.	Per mile open per week.	Total Receipts from 1st April to 12th May, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXECUTION OF DEEDS, CONTRACTS, &c., BY MANAGERS OF STATE RAILWAYS.

No. 1017.

Extract from the Proceedings of the Government of India, Home Department (Judicial),—under date Simla, the 15th June, 1888.

Read again the following paper relative to the execution of deeds, contracts, &c., on behalf of the Secretary of State:

Home Department Resolution No. 1444, dated the 22nd October 1878.

Read also—

An Endorsement from the Public Works Department, No. 200 P.E., dated the 22nd March 1888.

RESOLUTION.

In exercise of the power conferred by the thirty-third and thirty-fourth of Vict., Cap. fifty-nine, Section two, and in continuation of Home Department Resolution No. 1444, dated 22nd October 1878, by which Managers of State Railways were empowered to execute contracts and other instruments for supply of stores and labour on open lines of State Railways, the Governor General in Council is pleased to declare that the undermentioned classes of deeds, contracts and other instruments referred to in the twenty-second and twenty-third of Vict., Cap. forty-one, Section two, may be executed by Managers of State Railways.

(*a*) Leases of houses, land or other immoveable property either by, or to the Railway, provided that the rent reserved shall not exceed Rs. 5,000 a month; leases of small branch lines of railway are excluded from this clause.

(*b*) Reconveyance of property given as security for the due performance of contracts.

(*c*) Contracts for the cartage and delivery of goods or for the collection or farming of tolls at bridges, ferries or other means of communication provided by the Railway.

(*d*) Contracts for loading and unloading goods and for other matters necessary for, or incidental to, traffic working.

(*e*) Contracts for the sale of scrap, ashes, and other surplus material.

(*f*) Agreements for the interchange of traffic with other State Railways.

(*g*) Agreements for the interchange of traffic with Private or Guaranteed Railway Companies, Tramway Companies and other carrying Companies.

ORDER.—Ordered, that this Resolution be communicated to the Public Works Department, and be published in the *Supplement to the Gazette of India*.

A. P. MACDONNELL,
Secretary to the Government of India.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR MAY, 1888.

The relatively dry weather which prevailed during April continued into May, during which month the rainfall over by far the greater part of the country was more or less short of the average. In consequence of this absence of rain very high temperatures prevailed at times, the maxima towards the close of the month, in North-Western India, having been higher than those reported for some years past. The weather during the past May is divisable into three distinct periods. At first the large barometric differences between Northern and Southern India, which were so noticeable during the previous month, were maintained, and strong winds with much local disturbance prevailed. This condition lasted only five days, when pressure rose briskly in the North, and readings became very uniform throughout India. This condition lasted until about the 13th, when pressure again fell over Northern India and rose in the South. After this date pressure gradually recovered its former distribution, a large area of high readings overlying Southern India; while over the Punjab and the Gangetic plain pressure was much below the normal average. During the second period, *viz.*, that of uniform pressures, a small storm was formed in the south-west of the Bay, giving rather rough and unsettled weather to the south of the Peninsula.

On the 1st pressure was highest over the south of the Bay, very low in the Punjab, and relatively low over Chutia Nagpur. The winds over India had a general cyclonic movement—feeding into the low pressure areas—and both at the head of the Bay and in Western India were blowing strongly. Rain had fallen in the neighbourhoods of both low pressure areas, *viz.*, in Bengal and in the North-West Provinces and the Punjab. In both cases the rainfall accompanied dust and thunderstorms. In the west of the North-West Provinces and the east of the Punjab the storms were exceptionally severe, and the hail extraordinarily large and heavy. On the 2nd and 3rd there was very little change. The low pressure over Northern India remained very strongly marked, and the thunder and duststorms severe, though the rainfall accompanying them was generally slight. On the 4th pressure showed signs of increasing in uniformity. The number of storms consequently decreased, the rainfall became lighter, and the winds fell off in strength. On the 5th this tendency towards pressure uniformity had still further increased, and the only rainfall in Northern India was reported from Sibsagar. In the south of the Peninsula some showers were received. On the 6th pressure was very uniform, and the winds light and variable. One or two slight and unimportant thundershowers were reported from Bengal. On the 7th, 8th and 9th barometric readings remained very uniform throughout India, and the winds very light. Thundershowers were not, however, infrequent in Bengal. On the 10th rain fell generally but lightly over Burmah and the south of the Peninsula, and on the 11th a small but well marked cyclonic storm was shown off the Coromandel Coast. Very heavy rain fell at Colombo, and light or moderate rain in the south of the Peninsula and in Burmah. On the 12th the cyclonic storm had advanced westward to the Coast, and the rainfall of the Carnatic had become much heavier. The Chart of the 13th showed that moderate to heavy rain was still falling over the Peninsula, but that the storm had broken up. By the next morning pressure was rising over the Peninsula and falling quickly over Northern India, so that, instead of uniform pressures, the distribution was rapidly assuming the form which it had at the commencement of the month, large differences existing between the North and South. The Chart of the 15th showed a difference of 0·4″ between the barometric readings in Ceylon and the Punjab, and strong winds with general cyclonic movements were blowing throughout the greater part of India. Slight rain had fallen in different parts of the Peninsula, but the chief rainfall was in Burmah and Assam. From this date until the close of the month the main features of the pressure distribution remained unchanged, though local modifications occurred from day to day. During the whole period pressure was lowest over

North-Western India, relatively low over the Gangetic plain and Chutia Nagpur, and high over the south of the Indian region. Westerly winds were consequently the prevailing current over Western India and the Peninsula; southerly winds over the Bay of Bengal and North-Eastern India; while calms and variable airs were reported from Upper India. On the 16th, 17th and 18th small centres of depression were formed within the low pressure area in Upper India, and thundershowers consequently occurred at several stations. These conditions recurred on the 26th, 29th, 30th, and 31st, and, as on the first occasions, were accompanied by sharp thundershowers. Over Bengal, Burmah, and Assam more or less rain was of almost daily occurrence during the latter half of the month, the strong current from the Bay bringing up much moisture.

Temperature has, perhaps, formed the chief feature of the weather during the past month, and this element has undergone large and important oscillations. On the 2nd of May it was reported that a heavy snowstorm had occurred in the Quetta District. This fall of snow was followed by a brisk decrease of temperature in the Punjab on the 4th, and in the North-Western Provinces on the 5th. On these two days the temperature of Upper India was largely below the average of the time of year. The maxima recorded in the Punjab on May the 4th and 5th were from 20° to 30° lower than the maxima on the same day last year, and over Rajputana and the greater part of Central India from 10° to 20° lower. After this cool period temperature rose almost continuously until the 16th, when it again fell and remained relatively low for three days. On the 20th it rose again generally and remained very high until the 28th, when it fell over a large part of the country. A further fall occurred on the 31st. The following table shows fairly clearly the large oscillations temperature has undergone during the month:

Stations.	Maximum Temperatures recorded on					
	4th.	5th.	16th.	17th.	27th.	31st.
	°	°	°	°	°	°
Peshawar	82	88	103	94	111	108
Rawalpindi	79	87	107	92	113	104
Lahore	87	90	112	105	116	104
Sirsa	93	94	114	109	118	94
Jeypore	93	95	109	107	113	107
Multan	90	94	112	110	117	108
Jacobabad	97	100	116	111	123	117
Jhansi	99	101	113	110	118	112
Agra	95	98	113	110	115	108
Roorkee	91	93	112	106	110	101

As mentioned above, the rainfall during the past month has been largely defective over the greater part of India. Rather heavy rainfall in Ceylon and Southern India accompanied the small cyclonic storm which was formed over the south-west of the Bay between the 10th and 11th, but with this exception any rain which has fallen has generally been in the form of slight showers. In the Cis-Gangetic portions of the North-West Provinces, in the Central Provinces the Berars, Khandeish, Rajputana, Central India, Sind and Guzerat there has been little or no rain, and in Behar and the Punjab the total fall is largely in defect of the average. In Assam and Cachar, in the Peninsula (except the

Konkan) and in Ceylon there has been a slight excess of rain, and in the remaining districts, though the total fall of the month does not come up to the normal average, the deficiency is, in most cases, not large.

The following table shows the amount of rain and the difference from the average during the month of May 1888, according to districts, as far as is indicated by the telegraphic reports:

Districts.	Number of stations.	Average rainfall in May.	Difference from the average in May, 1888.

SIMLA, *9th June, 1888.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 11th, 1888.

There has been no important change in the weather over the Indian region during the past week. The monsoon current on the western side of India has apparently run up that Coast as far North as Bombay, and some moderately heavy falls of rain have occurred, but the current seems to have been feeble and did not carry rain beyond the Coast districts. In the Bay of Bengal the weather has been characterised by a tendency towards the repeated formation of small cyclonic whirls. Into these whirls the monsoon current has apparently fed, and the result has been that the weather in Northern India has been generally fair, and that any incursions of moist air have been feeble and intermittent.

On the 3rd, the last day of the previous week, a small storm lay off the Arakan Coast. This storm apparently travelled north-westward during that day, and at 8 A.M. on the 4th was approaching the Orissa Coast. It was of very slight intensity, and exercised but little effect on the weather even in its immediate neighbourhood. The wind had "backed" to the southward on the Bombay Coast and rain had extended northward as far as Poona and Rajkot, but had missed Bombay. Showers were reported from the majority of the Peninsula stations and from Burmah, and a few scattered showers had fallen in different parts of Central and Northern India. Very variable breezes prevailed in Upper India, and the wind over Rajputana and the Central parts of the country was more northerly than usual, but otherwise the general circulation was fairly normal. The Chart of the 5th showed that the Bay [illegible] passed away, and that a weak monsoon current was blowing over the Bay and Eastern India. Five inches of rain had fallen at Rangoon, but elsewhere the amounts were very small. On the West Coast the monsoon was blowing somewhat more strongly than of late. Rain was falling at Bombay; and Rajkot had received over 2 inches. Rather steep gradients prevailed over North-Western India, and rain bearing currents penetrated well into Upper India; Sirsa received over 1 inch, and the hill stations, Ludhiana, and Sialkot smaller amounts. On the 6th the distribution of pressure was such as normally accompanies a strong influx of monsoon winds. Readings were very low in the Punjab, and relatively low down the Gangetic plain and across Bengal, while gradients were steep generally. There was an undue amount of westing in the winds over Rajputana and the North-Western Provinces, but in other parts of the country the wind directions were fairly normal and the wind force high. Notwithstanding these favourable conditions, the rainfall was neither very heavy nor extensive. Moderate amounts were reported from the West Coast (from Rajkot to Cochin), from the Central Provinces, from the east of the Punjab and west of the North-Western Provinces, and from Burmah, Assam, and Lower Bengal. The Chart of the 7th showed very little change in the general distribution, but the rainfall area was extending, and the rain amounts were much heavier on the West Coast. Karwar received 4½ inches, Ratnagiri 3½ inches, Goa 2 inches, and Mangalore and Cochin over 1 inch. The current from the Bombay Coast passed well into the Central Provinces, and Amraoti, Hoshangabad and Nowgong reported moderately heavy rain. On the eastern side of India there was little change; the Bay of Bengal monsoon current giving only light or moderate rain to Burmah, Assam, and Lower Bengal. Westerly winds still prevailed in the North-Western Provinces, and there was no rain there, but in the east of the Punjab and at the hill stations in the North-West Himalayas showers had fallen. On the morning of the 8th both branches of the monsoon were blowing feebly, but conditions in Upper India were more favourable to rainfall, easterly winds having appeared at several places. The rainfall on the West Coast was less heavy than it

was on the previous day, but Mangalore reported $3\frac{1}{2}$ inches; Bombay about 3 inches; and Goa and Karwar nearly 2 inches. The falls were lighter in the Central Provinces, but in Upper India the rainfall area had extended, though the amounts were not large. In Assam, Bengal, and Burmah there was little change. On the 9th there was a falling off of the rainfall both in extent and amount. On the West Coast there were no heavy falls, and in the Central Provinces only slight showers. At Diamond Island 4 inches of rain had fallen, but in other parts of Eastern India the amounts were very small while in Upper India hardly any rain was reported. A dry northerly current of air was apparently blowing from the hills into the plains of Northern India. On the 10th these northerly winds had to a large extent disappeared, but still the monsoon currents did not penetrate into Upper India, and the weather was generally dry and fair. The Bay of Bengal current apparently fed into a small storm which was forming quite at the head of the Bay, and any rain due to this current was confined to Burmah, Assam, and Lower Bengal. At Bassein the rainfall was over 3 inches. On the West Coast the monsoon was very feeble, and the rainfall due to it confined to the Coast districts. The winds all over the Central parts of the country were more northerly than the normal, and in Lower Bengal there was a due northerly wind blowing into the small storm over the head of the Bay.

Temperature has oscillated a good deal during the week, but on the whole has decreased, more especially the maximum day temperatures. Sind and the Western Punjab have been hot throughout, Jacobabad on the 5th, 6th, and 7th recording temperatures exceeding 115°. Some stations in the North-Western and Central Provinces also experienced high temperatures at the beginning of the week, but on the 6th the weather became unusually cool over nearly the whole of Central and Northern India.

The rainfall return for the present week has been much reduced in size. Instead of publishing the whole of the information received, an abstract has been made, and several districts are now combined so as to form the average of a division. The whole of the information previously published is, however, still received in the Meteorological Department, and is at all times available for reference.

The return shows that on the whole the rainfall of the past week has been below the average. This is probably attributable to the feeble monsoon currents which, as is shown above, have prevailed during the week. In Tenasserim there has been a considerable excess, and several heavy falls of rain are reported from the Burmese Peninsula. One station in the Moulmein district had 12 inches of rain during the week, and parts of Pegu, Shwegyin, and Tounghoo received over 5 inches. In Upper Burmah, Pagan received $3\frac{1}{2}$ and Mandalay $5\frac{1}{2}$ inches of rain during the week. In East Bengal, though the average of the division was below the normal, several heavy falls are reported, the largest ($4\frac{1}{2}$ inches) occurring in the Backergunge district. Assam, like East Bengal, had less than its normal amount during the week. Cherrapungi had only 6 inches. The rainfall in Deltaic Bengal was about the average and in Central Bengal, and Behar slightly above. North Bengal, Orissa and Chota Nagpur had less than the average. In the first named division the rainfall at some stations was heavy, Jalpaiguri and Kurseong having both received about 10 inches. Parts of Behar also received heavy local falls. In the North-Western Provinces and the Punjab the rainfall was much lighter. The normal average for the week in all divisions of these provinces is very small, and even this small amount has not been reached except in the submontane tracks where there has been some excess. The Bombay Coast districts have received somewhat more than the usual amount during the past week, but the inland divisions to the east of the Ghâts have had less than the normal. The amounts at some places in Western India were very large; Tellicherry received 18·5 inches; Coondapur (South Kanara) 15·7 inches; and Honáwar (North Kanara) 13·4 inches. The Berars and the west of the Central Provinces have had considerably more than their average rainfall, but in all the other Central Divisions there has been greater or less deficiency. Parts of the East Coast have had a slight excess of rain.

* Information not received.

SIMLA, *11th June, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 9th June, 1888.*—Good rain on the West Coast and Nilgiris, and slight in other districts. More rain is wanted in Vizagapatam, Chingleput, North Arcot, Trichinopoly, Madura, Tinnevelly, and Salem. Crops are generally good, but affected by want of rain in Vizagapatam and North Arcot, and by insects in Coimbatore. Pasture scanty in Anantapur, North Arcot, Madura, and Salem. Agricultural operations progressing. No material fluctuation in prices. General prospects favourable.

Bombay.—*For week ending 13th June, 1888.*—Rain throughout Presidency proper. Harvesting of late crops still continues in parts of Hyderabad. Ploughing operations progressing in parts of Kaira, Surat, Khandesh, Sholapur, Satara, and Bijapur; sowing of early crops in progress in Poona, Belgaum, Dharwar, Kanara, Kathiawar, Baroda, Sind, and Konkan, and nearly complete in Kanara. Fodder scarce in parts of Broach, Thana, and Ratnagiri.

Bengal.—*For week ending 12th June, 1888.*—Weather extremely hot and sultry for the past few days. Rain fell generally at the beginning of the week and later showers also reported in places. Cultivation is generally proceeding satisfactorily, but in parts of South Behar and Chota Nagpur more rain is wanted. Most of the early rice and jute sowings are over in Behar. *Bhadoi* sowings are in full progress; sowing of late rice has also begun. Sugarcane, indigo, and other crops on the ground are everywhere in good condition. Spring rice harvest is almost over with good outturn. Price of rice remains almost stationary throughout the Province.

North-Western Provinces and Oudh.—*For week ending 13th June, 1888.*—Rain fell in most districts during the week. The weather is generally cloudy and unsettled. Ploughing is in progress, and sugarcane and indigo are being irrigated. Supplies are ample, and prices on the whole are steady. The condition of cattle remains good.

Punjab.—*For week ending 13th June, 1888.*—Rain has fallen in several districts during the last week. Prices are generally stationary. *Kharif* ploughings and sowings are in progress. Reaping of *rabi* crops nearly completed. Prospects and outturn of *rabi* crops average. Extra *rabi* in Amritsar is in good condition. No damage done to crops. Stock-cattle are reported healthy. Fodder generally sufficient though scarce in two districts.

Central Provinces.—*For week ending 13th June, 1888.*—Weather warm and cloudy. Preparations for *kharif* sowings completed in some districts. Cattle in fair condition. Prices steady.

Burma.—*For week ending 9th June, 1888.*—Ploughing operations are progressing, and transplanting of paddy has commenced. There has been heavy rain in most districts. Prome is the only district in Lower Burma where the rainfall was under 2·0. In Upper Burma the smallest rainfall reported is 1·40. Except in six districts of Lower Burma, cattle are in good condition. The price of paddy has risen in Sandoway and in Kyaukse districts, and has fallen in Bassein and Pyinmana districts. Elsewhere the price of foodgrain is stationary.

Assam.—*For week ending 13th June, 1888.*—Weather seasonable. Sowing of late rice begun. Water subsiding in Sylhet. Tea reported backward in Cachar. Prospects of crops in general good.

Mysore and Coorg.—*For week ending 13th June, 1888.*—Rainfall general and light. Standing crops in good condition, except in parts of the Mysore district, where more rain is needed. Outturn of harvests favourable. Condition of cattle generally good. Prices slightly risen in the Mysore district.

Rainfall and prospects good in Coorg, but want of plough cattle seriously felt. Monsoon set in on 7th instant.

Berar and Hyderabad.—*For week ending 13th June, 1888.*—Weather warm and cloudy. Slight rain during the week. Land still under preparation for the ensuing *kharif* crop. Sowing of cotton commenced in the Amraoti, Akola, and Dun districts, and also in the Pusad Taluq of the Bassein district. No remarkable change in the price of foodgrains.

Slight rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 13th June, 1888.*—Rain has fallen in Indore, Bundlekhand, Goona, and Neemuch. In Bhopawar it was heavy, and slight elsewhere. No other changes since last report.

Rajputana.—*For week ending 13th June, 1888.*—Rainfall general but very slight. Agricultural operations commencing; prospects generally satisfactory. No crops standing at present; harvests over. Agricultural stock good generally. Pasturage or fodder sufficient. Prices steady and slightly rising at some places.

Nepal.—*For week ending 7th June, 1888.*—Good rain. Weather warm. Transplanting of rice will shortly begin.

E. C. BUCK,

Secretary to the Government of India.

Coorg, No. 1915—4026, dated 25th October 1886.
Hyderabad, No. 57G, dated 12th February 1887.

† No. J. and P. 579—88, dated 20th April 1888.

‡ To Madras and Bombay. { With the permission of His Excellency the Governor in Council.
To Bengal and Punjab. { With the permission of His Honour the Lieutenant-Governor.
To North-Western Provinces and Oudh. { With the permission of His Honour the Lieutenant-Governor and Chief Commissioner.

Extract of a letter No. J. & P. 579-88, dated the 20th April 1888, with enclosure, from the Secretary to the Trustees of the Gilchrist Educational Trust.

The time for the withdrawal of the Scholarship has now expired, but the Gilchrist Trustees not desiring to sever their connection with the Educational advancement of India, as expressed in the communication referred to, have just decided (pending further possible consideration and also the possible receipt of important information from India which might guide them to such alteration in the terms of the Scholarship as might increase its popularity and usefulness) to continue the same for the present and until further notice on the same conditions as heretofore (copies of which conditions I forward herewith). The Scholarship will therefore be offered again on the result of the Matriculation Examination of the University of London, which, I presume, will be held as usual in India in January next 1889, and I have to request that you will cause this information to be forwarded to the Government of India with the least possible delay that candidates for the Scholarship may have time to prepare for that examination.

GILCHRIST EDUCATIONAL TRUST.

TRUSTEES.

RICHARD LEIGH HOLLAND, ESQ. (*Chairman*).
RT. HON. LYON PLAYFAIR, C.B., M.P., LL.D., F.R.S.
SIR UGHTRED JAMES KAY-SHUTTLEWORTH, BART.
THE HON. ALFRED LYTTELTON.

SECRETARY.

HENRY A. PAPPS.

[All communications to be addressed to
The Secretary of the Gilchrist Educational Trust,
4, The Sanctuary, London, S.W.]

Conditions for Scholarships instituted by the Gilchrist Educational Trust for the benefit of Natives of India and Ceylon.

[These Scholarships, like the Degrees and other Academical Rewards of the University of London, are open to Women upon exactly the same conditions as to Men.]

A Scholarship of the value of £150 per annum, and tenable for four years, will be annually awarded to a Candidate born in India or Ceylon, who shall become eligible by Competitive Examination, and shall be desirous of prosecuting a Course of Academical Study in Great Britain, with a view to Graduation in one of the Faculties of Arts, Science, Law, or Medicine, in the University of London; under the following conditions:

1. Of the Parents of each Candidate, one, at least, shall not be of pure European descent.

2. Every Candidate must furnish proof satisfactory to the Local Authorities, that he has completed his sixteenth year, and that his age does not exceed twenty-two years.

3. Every Candidate must furnish proof satisfactory to the Local Authorities, that in regard to personal character and social position he is qualified to be admitted to competition for a Scholarship.

4. Candidates approved by the Local Authorities shall present themselves at the January Matriculation Examination of the University of London, which will be held simultaneously, under the direction of Government Sub-Examiners, at the three Presidential Capitals of India, and at the Royal College, Colombo, commencing on the second Monday in January.

5. The answers of the Candidates, approved as aforesaid, will be forwarded, through the Governments of India and Ceylon respectively, to the Registrar of the University; who will cause them to be reviewed by the Examiners, and who will forward their Report to those Governments, to be by them announced to the Candidates.

6. The Scholarship shall be awarded to the Candidate whose aggregate of marks stands highest; provided that he passes either in the Honours or in the First Division. Such Candidate shall have his choice whether he will pursue his curriculum of study in the University of Edinburgh, or in University College, London.

7. The successful Candidate will be expected to arrive in London, and to present himself to the Secretary of the Gilchrist Trust, not later than the first week in the October following his appointment. If a Native of India, he will be provided by the Government of India with a free Passage to England.

8. The Scholarship shall be considered as commencing from the 1st of July following the award of the Examiners; and shall be payable in quarterly instalments on the first days of October, January, April and July.

9. Each Scholar shall attend in every Session at least Three Courses of Lectures at the Institution in which he studies; and shall transmit to the Secretary of the Gilchrist Trust, at the conclusion of each Session, a Certificate from each of the Professors whose Lectures he has attended, stating that his diligence and conduct have been satisfactory.—Should he not be able to produce such a Certificate, or should he be proved guilty of discreditable conduct elsewhere, he shall be considered to have forfeited his claim to the remaining instalments of his Scholarship.

10. Each Scholar shall be expected to present himself at the Intermediate Examination in one of the Faculties of Arts, Science, or Law, or at the Preliminary Scientific M.B. Examination, in the University of London, before the termination of the Second (Academical) Year* from the commencement of his Scholarship, unless excused from doing so by the Trustees; and if he do not so present himself (unless by permission of the Trustees), or if he fail to pass, he shall be considered as forfeiting his claim to the remaining instalments of his Scholarship. After having passed this first Examination, he will be expected to pursue his studies with the view of presenting himself at the next Examination within Two (Academical) Years.

11. The Trustees will provide for the Return-passage of every Indian Scholar who shall succeed in obtaining his Degree in the University of London. For every Indian Scholar who may fail to obtain his Degree, a Return-passage will be provided by the Government of India.

12. The foregoing Scheme shall be subject to revision from time to time; the Trustees reserving to themselves the power of altering the conditions of the Scholarships, or of altogether withdrawing them, if they deem it expedient to do either. But no change will be made in such a manner as to affect the interests of Candidates already appointed to Scholarships.

* Thus a Candidate whose Scholarship commences on the 1st of July 1884 would be considered as having fulfilled this condition if he pass the Intermediate LL.B. Examination in January 1886; or the Intermediate B.A., the Intermediate B.Sc., or the Preliminary Scientific M.B. Examination in the following July.

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 18th, 1888.

It was noticed last week that the monsoon currents on both sides of India were abnormally weak, and the rainfall attributable to both branches was below the average and confined practically to the fringes of the country. The tendency to the development of small cyclonic whirls at or about the centre of the Bay has been as strongly marked during the present as during the previous week, and into these whirls the monsoon currents of the Bay have apparently fed and probably occasioned heavy rain over the Bay to the detriment of the rainfall over the land. On the West Coast and around the Gulf of Martaban conditions have been more satisfactory, the rainfall in those districts having been moderately heavy and well distributed, but inland in the Deccan and the Central Provinces on the one hand, and Central and Upper Burmah on the other, the rainfall has been scattered and generally slight. These conditions are similar in many respects to the conditions which prevailed at the same period last year, when feeble rains prevailed throughout the whole of June and July. So far as can be judged, the whole of the disturbing influence is the tendency in the Bay towards the formation of cyclonic whirls, which, while without developing into storms, are yet sufficient to attract the whole of the Bay monsoon current, so that heavy rain and much ascensional movement is taking place over the head of the Bay and none over the land. In addition to this the cyclonic whirls over the head of the Bay drawn the wind into west and north-west over Orissa, Bengal, &c., and this air, derived from the heated plains of Upper India, has given excessively hot weather to Bengal. Perhaps the most striking proof of the completeness of the failure of the Bay monsoon is the smallness of the rainfall at Cherrapunji, where less than 3 inches was received during the week instead of about 27 inches, which is about the average of the past week.

The Chart of the 11th showed steep barometric gradients between Southern and Northern India, the pressure difference between Peshawar and Galle being as much as 0·54 inch. Fairly strong monsoon winds were blowing over Western India, more particularly in Sind and Cutch, and a fairly strong current was reported from the Central parts of the country and the Deccan. At Colombo and the Burmah stations the winds were also strong, but in Bengal and over the head of the Bay, there was much feeble cyclonic circulation. Temperature had risen and was high. Fairly heavy rain had fallen around the Gulf of Martaban and showers in East Bengal, Assam, and Orissa. The West Coast current had given moderate rain to the greater part of the Peninsula and slight showers to the Central Provinces. Comparatively little change in the distribution of pressure was reported on the 12th. Gradients remained steep; the highest readings were reported from Ceylon; the lowest from Sind. Monsoon winds of normal force were blowing across the Bengal and Orissa Coasts; but directly the coast was passed the force decreased and much irregular movement was reported. On the Bombay and Sind Coasts and also in the central parts of the country the winds were of about the average force and steadiness, but the direction was abnormally westerly. Temperature had risen over Upper and Central India and the air was

drier Lower Burmah and Arakan had received heavy rain and Assam moderate showers. Moderately heavy rain had fallen on the West Coast. Showers were reported from a few places in the Central Provinces and one or two places in the Punjab, but with these exceptions the weather over Northern and Central India was abnormally dry and hot. The Chart of the 13th showed that the distribution of pressure had altered in a direction very antagonistic to extensive rainfall. Readings were about equally low in the Punjab and West Bengal, while a shoulder of high pressure extended northward across the west of the North-West Provinces. The winds were but little changed. Further showers were reported from a few places in Upper India, but as a rule the weather was dry and hot, and rainfall was confined to Burmah, Assam, and East Bengal on the one hand and to the West Coast of the Peninsula on the other. On the 14th there was no important change in the pressure distribution, and the weather and winds were generally unchanged. Dust and thundershowers were still reported from several stations in Upper India, and fairly general, though light, rain had fallen on the West Coast and in the Central Provinces. In Bengal there was no rain and in Burmah only moderate showers. The Chart of the 15th exhibited much the same general conditions as that of the preceding day. Light or moderate rain had fallen on the West Coast and in the Central Provinces; moderate rain in Burmah (very heavy at Bassein locally) and Assam; none in Bengal proper and hardly any in Upper India. The weather was hot all over Northern and Central India, but the relative excess of temperature was greatest in Bengal, where the maxima were higher than they have been for many years past. The following day (16th) the weather still showed no sign of change. Abnormal westerly winds continued over the Gangetic plain, and there was no advance of monsoon winds into Upper India. Rain in moderate to large amounts had fallen on the West Coast, round the shores of the Bay of Bengal and in Burmah and Assam, and showers had occurred at some central stations, but all over Northern India the weather remained dry and hot. On the 17th the rainfall on the West Coast and in Lower Burmah was heavier, but there was no extension of the rainfall area, and the same unfavourable conditions existed over Northern India, while the appearance of a well defined whirl off the West Pegu Coast showed that the abnormal features over the Bay, which have interfered so largely with the proper advance of the monsoon current into Northern India, continued undiminished.

The rainfall table which appears at the close of this Summary exhibits a very unsatisfactory state of affairs. The only divisions exhibiting any important excess of rain are the West Coast districts, Tenasserim and the south of Madras. Elsewhere there is general and in several places serious deficiency. In Burmah, even in Tenasserim, there were no very heavy falls during the week, and the total was generally deficient. In East Bengal the largest total was less than 4 inches and the average fall of the division was less than one-third of the normal. In Assam the rainfall was heavier, but was less than the previous week and much less than usual. Bengal, including Chota Nagpur and Behar, had hardly any rain, and the deficiency in these divisions was very large. The North-West Provinces and the Punjab (except the hill and submontane districts) had practically no rain, but the deficiency in those Provinces is less important, as the rainfall there, up to the middle of June, is usually but slight. The West Coast had a considerable excess, but the monsoon current carried but little rainfall inland, and the whole of the Central parts of India and of the Peninsula have so far had deficient rain. In Sind and Rajputana there was practically no rain.

SIMLA, *18th June, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 16th June, 1888.*—Heavy rains on West Coast and slight in other districts. More rain is wanted in Ganjam, Vizagapatam, Cuddapah, Bellary, Chingleput, North Arcot, Trichinopoly, Madura, Tinnevelly, and Salem. Crops generally good, but affected by want of rain in Vizagapatam, North Arcot, and Madura and by insects in Coimbatore. Pasture scanty in Bellary, North Arcot, and Madura; decreasing in Vizagapatam. Agricultural operations progressing. Prices rising, where not stationary. General prospects favourable.

Bombay.—*For week ending 20th June, 1888.*—Rainfall generally insufficient, except in Kanara and Ratnagiri. Ploughing operations progressing in Shikarpur, Broach, Surat, Khandesh, Satara, and Kathiawar. Sowing of early crops complete in Kanara, continues in parts of Karachi, Hyderabad, Kaira, Khandesh, Nasik, Thana, Ratnagiri, Poona, Ahmednagar, Sholapur, Bijapur, Belgaum, Dharwar, and Kathiawar, but retarded by want of rain. Fodder scarce in parts of Surat, Thana, and Kathiawar.

Bengal.—*For week ending 19th June, 1888.*—Weather abnormally hot with absence of rain in greater part of the Province during the week. The only rainfall of importance was in East and North Bengal, while a few local showers also occurred in Central Bengal and Orissa. Except in East and North Bengal, early rain is generally wanted for the early rice and jute plants, and also for the late rice and *bhadoi* crops. Sugarcane is still doing well, and indigo prospects are favourable. In some districts the manufacture of indigo has begun. Spring rice harvest is almost over with good outturn generally.

North-Western Provinces and Oudh.—*For week ending 20th June, 1888.*—Weather very hot with clouds, but no rain, except slight falls in Banda and Jhansi. Hot west winds prevailing. Ploughing and manuring going on in places. Sugarcane and indigo being irrigated. Markets are well supplied, and prices are nearly stationary. The condition of cattle continues good.

Punjab.—*For week ending 20th June, 1888.*—Rain has fallen in several districts. Prices are stationary, except at Lahore, where they are falling. *Kharif* ploughings and sowings are in progress. Rain wanted for sowings in Hissar, Delhi, and Umballa. Reaping of *rabi* crops almost completed. Prospects and outturn of *rabi* crops average. *Kharif* crops in good condition in several districts. Wheat, fodder, and cotton crops at Ferozepore have slightly suffered from storms. Stockcattle are reported healthy. Fodder generally sufficient, but scarce in three districts. Opium produce small at Rawalpindi.

Central Provinces.—*For week ending 20th June, 1888.*—Good rain has fallen in Nagpur and Hoshangabad, but elsewhere the fall has been scanty. Land being ploughed, and sowings commenced in a few places. Sugarcane thriving.

Burma.—*For week ending 16th June, 1888.*—Ploughing for wet weather crops is progressing. Rain fell in all districts, but in Upper Burma the fall was considerably less than in the previous week. The price of paddy has risen in the Shwegyin and Tavoy districts of Lower Burma and in Meiktela district of Upper Burma; it has fallen in Rangoon and Prome districts of Lower Burma and in Shwebo in Upper Burma; elsewhere the price of paddy is stationary.

Assam.—*For week ending 20th June, 1888.*—Weather hot. Rainfall below the average. Cold weather rice being sown. Prospects generally good, except of early rice in Sibsagar. Tea reported still backward in Cachar. A very slight shock of earthquake felt in Kamrup on the 12th. No report from the Naga Hills.

Mysore and Coorg.—*For week ending 20th June, 1888.*—Rainfall good in Shimoga and Kadur districts, and slight in other parts. Crops in parts of the Mysore and Tumkur districts are reported to be suffering for want of more rain, elsewhere they are in good condition. Outturn of harvests favourable. Condition of cattle generally good. Prices slightly risen in the civil and military station of Bangalore.

Good rainfall in Coorg during the week. Ploughing and sowing very backward and partial owing to want of plough cattle.

Berar and Hyderabad.—*For week ending 20th June, 1888.*—Weather warm. Some rain during the week. Sowing of cotton commenced. Agricultural stock generally in good condition. Scarcity of fodder in Amraoti, Akola, and Wun districts, and also in Pusad taluk of Basim district. No change in prices of foodgrains.

Some rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 20th June, 1888.*—Good rain in Indore and slight in other parts of Agency. Agricultural operations started, where there has been rain. Prices have risen slightly in Bhopawar. No other changes since the last report.

Rajputana.—*For week ending 20th June, 1888.*—Rainfall partial. Agricultural operations commencing. Agricultural stock generally good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 14th June, 1888.*—Slight rain. Weather hot. Crops drying. Rain wanted.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. VIII. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used, as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 28th May, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 26th May, 1888. Total.	Per mile open.	Total Receipts from 1st April to 28th May, 1887. Total.	Per mile open per week.	Total Receipts from 1st April to 26th May, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, June 25th, 1888.

The unfavourable conditions which have prevailed over India during the past two weeks have not been materially changed during the week under review. They have remained generally unfavourable to any extensive inrush of monsoon winds. In ordinary years a large area of low pressure (29·50 inches and below) normally exists over the Punjab, and extends an arm of equally low pressure south-eastward down the Gangetic plain as far as Allahabad and at times Behar. This distribution is accompanied by an indraught of winds from both the Bombay and Bengal sides of India. During the past week, though pressure has been quite as low as the normal over Northern India, the distribution has not been regular. The slightly higher pressures, which usually exist between the arm noticed above and the line of the hills, have been absent, and an area of uniformly low pressure—lying much further to the northward than usual—has extended over the Gangetic plain and up to the foot of the hills. In consequence there has been no indraught from the Bay into Upper India, and westerly winds, derived largely from Western and North-Western India and consequently dry, have prevailed over Northern and Central India. In addition to this there has been observable over the east of the Bay the same tendency towards the formation of small cyclonic whirls as was the case last week, and consequently not only has much of the Bay branch of the monsoon been diverted towards Burma, but there has also apparently been much ascensional movement over the Bay itself. The effect of these conditions has been that there has been a continuance of the break in the rains which was noticed last week, and the monsoon rainfall has, as was then the case, been almost entirely confined to the fringes of the country. There is, however, one difference between the rainfall of the present and that of the past week which may perhaps foreshadow a change. This difference is the much heavier rainfall which has been experienced in Burma and Assam. Last week, it will be remembered, the total fall of the week at Cherrapunji was less than 3 inches, while in the present week the total is nearly 40 inches, and at several other places in Assam as well as at several in Burmah the week's fall has been large. This increase in the amount of rainfall may indicate that the main body of the monsoon current is increasing in volume, even though the surface winds have not occasioned much extra rainfall. On the South-West Coast of India the monsoon rainfall has been steady and up to the average, but further to the northward it has been lighter and more intermittent.

On the morning of the 18th pressure was rising, except in parts of the Punjab. It was low in the Punjab and in Bengal, and a shoulder of high readings extended northward across Rajputana into the south of the Punjab and the west of the North-Western Provinces. This distribution was accompanied with dry north-westerly winds over the greater part of North-Western and Central India and down the Gangetic plain into Bengal. Over the Peninsula the wind was variable, with a general westerly tendency, and over the Bay and Burmah it was southerly (south-west—south-east). Temperature had risen fast in Bengal, and

high maxima were recorded both in Orissa and West Bengal. The rainfall was slight. Moderate amounts were reported from Burmah and the West Coast, but elsewhere there was either no rain or only slight showers. On the 19th there was very little change in the general conditions, the distribution of pressure was unaltered, and the most marked feature in the weather was the hot dry winds and high temperatures which prevailed over Northern and Central India. The area of greatest heat was apparently working north-westward into Upper India, the maximum temperatures being reported from Gya and Patna. Rain fell in the same districts as on the previous day, but the amounts were less. The Chart of the 20th exhibited no improvement. There was no change of importance in the pressure distribution, and the monsoon currents were weaker than on the preceding day. Temperature continued excessive all over Northern India, but more particularly so in the Gangetic plain. Sind and the Western Punjab now represented the region of highest temperature. The Bombay monsoon had ceased to give more than local showers; and though the rainfall of the Bengal current was heavier than on the preceding day, the precipitation was entirely confined to Assam and Burmah. The remainder of Northern India was rainless. During the 21st and 22nd there was practically no change in the weather. Rain, generally moderate, fell on the West Coast and in Assam and Burmah, and slight showers in the Central Provinces. Elsewhere the weather was dry, except for slight and very local dust or thunder storms. Temperature was very high over Northern India. During the 23rd and 24th conditions looked more promising, though the improvement was very slight. Very heavy rain fell in parts of Assam; the rainfall area had extended to parts of Bengal, and the monsoon current from the Bay gave evidence of being stronger and more extensive. A few local showers were reported during these two days at some places in Northern and Central India, but their influence on the weather was very slight, and excessively high maximum temperatures were recorded within the Gangetic plain.

The table of rainfall at the close of this report exhibits much the same features as that of last week. There has been an excess of rain, generally slight in amount, in Western India, with the exception of the Konkan and the Bombay Deccan, a slight excess in Lower and Central Burmah, and a large excess in Assam. In all other places the rainfall has been deficient, and in a large number of divisions there has been no rainfall at all during the week. This has been the case in Chota Nagpur, Behar (South), and generally throughout the North-Western Provinces, the Punjab, and Rajputana. In several other divisions, such as Lower Bengal, Behar (North), the Central Provinces, &c., the total rainfall of the week has been quite insignificant and far below the normal average. In the great majority of the divisions into which India has been divided, the seasonal rainfall, as shown by the concluding column of the table, is very far indeed behind the average. Tenasserim, Assam (Surma), Malabar, Madras (S. Central), and Hyderabad (South), all show a greater or less excess, but elsewhere deficiency prevails, and in very many instances the want of rain is becoming very serious. In the great majority of cases the deficiency is between 50 and 70 per cent., and in some places as for example, the Punjab (North Western), Mysore, Central India, and Rajputana, considerably exceeds this amount. The only divisions reporting heavy falls of rain are Burmah, Assam, and Malabar. Cherrapunji reports nearly 40 inches, Kyaukphu 17 inches, South Kanara 15 inches, Shwegyin and Goalpara 14 inches, and Calicut and North Kanara 10 inches, as the totals of the weekly falls.

Province.	Division.	Rainfall data for week ending June 25th.			Rainfall data from May 14th to June 25th.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, May 14th to June 25th.	Excess or defect of seasonal rainfall expressed as a percentage.

SIMLA, *25th June, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 23rd June, 1888.*—Heavy rains in West Coast and slight in other districts. More rain wanted in Ganjam, Vizagapatam, Godavery, Bellary, North Arcot, Madura, and Salem. Crops generally good; affected by want of rain in Vizagapatam, Godavery, North Arcot, Madura, and Salem, and by insects in Coimbatore. Pasture scanty in Bellary, North Arcot, and Madura. Agricultural operations progressing. Prices, chiefly of dry grains, generally rising where not stationary. General prospects favourable.

Bombay.—*For week ending 27th June, 1888.*—River low in Sind. Rainfall generally insufficient, except in Dharwar, Bijapur, and Kanara. Agricultural operations progressing in parts of Karachi, Ahmedabad, Surat, Kaira, Thana, Poona, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, Dharwar, Kathiawar, and Baroda, but retarded generally by want of rain. Fodder scarce in parts of Kaira, Broach, Surat, Panch Mahals, Poona, and Kathiawar.

Bengal.—*For week ending 26th June, 1888.*—Weather intensely hot and close. Slight rain reported in almost all districts of Bengal Proper and Orissa and in Darbhangah and Champaran. More rain is much needed throughout the Province. Agricultural prospects are anything but satisfactory in many places. The early rice and jute seedlings have begun to wither, and the cultivation and sowing of late rice and *bhadoi* crops are stopped. Sugarcane and indigo too are suffering. Scarcity of fodder reported in parts of Chota Nagpur. Price of rice continues almost stationary.

North-Western Provinces and Oudh.—*For week ending 27th June, 1888.*—Except slight falls in Banda and Saharanpur, there was no rain during the week. The weather is intensely hot with strong west winds. Indigo and sugarcane are being irrigated and weeded. Markets are well supplied, but prices of foodgrains begin to show a slight rise. The condition of cattle continues satisfactory.

Punjab.—*For week ending 27th June, 1888.*—Slight rain has fallen at Hissar, Ferozepur, and Rawalpindi. Prices are generally stationary. *Kharif* ploughings and sowings are in progress. Rain wanted at Hissar, Delhi, Umballa, and Rawalpindi. Reaping of *rabi* crops completed. Prospects and outturn of *rabi* crops average. *Kharif* crops in good condition. No damage done to crops. Stock cattle are generally healthy. Fodder generally sufficient.

Central Provinces.—*For week ending 27th June, 1888.*—Light showers only have fallen, and more rain is required before sowings can be satisfactorily carried on. Sugarcane is also suffering from lack of moisture, as well as early rice sowings in Sambalpur. Forage scarce in Raipur and water in Sambalpur. Prices rising in places.

Burma.—*For week ending 23rd June, 1888.*—Ploughing for wet weather crops is progressing. In Upper Burma the rainfall was insufficient in Shwebo, Yeu, Mandalay, Kyaukse, Myingyan, Minbu, Yamethen, and Lower Chindwin districts. The price of paddy has risen in Rangoon, Prome, Mergui, Shwebo, Kyaukse, and Myingyan districts, and has fallen in Henzada, Minbu, and Meiktila districts; elsewhere the price of paddy is stationary.

Assam.—*For week ending 27th June, 1888.*—Rainfall has been general and beneficial. Ploughing for and sowing of cold weather rice in progress. Tea suffering from red spider in South Sylhet, and some damage done locally to rice by floods in Cachar. Prospects elsewhere good.

Mysore and Coorg.—*For week ending 27th June, 1888.*—Slight rain in civil and military station and good in Shimoga, Kadur, and Hassan districts. Standing crops in good condition, except in parts of the Chitaldroog district. Agricultural operations progressing, outturn of crops fair. Condition of cattle good.

Good rainfall in Coorg during the week. Planting of autumn rice crop in progress.

Berar and Hyderabad.—*For week ending 27th June, 1888.*—Weather still warm and cloudy. Slight rain during the week. Sowing of cotton commenced. Agricultural stock generally in good condition. Scarcity of fodder in Amraoti and Wun districts, and also in Pusad taluk of Basim district. Prices stationary.

Some rain during the week in Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 27th June, 1888.*—Rainfall slight and insufficient in Agar district. Crops fair, and probable outturn good, except in Goona and Western Malwa. Prices of foodgrains steady and high.

Rajputana.—*For week ending 27th June, 1888.*—Rainfall partial. Agricultural operations commenced. Agricultural stock good generally. Pasturage or fodder sufficient. Prices steady, slightly rising at some places.

Nepal.—*For week ending 21st June, 1888.*—No rain. Rain extremely needed, as it has not fallen since 10th June. Prospects bad.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. IX. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used, as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 4th June, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 2nd June, 1888. Total.	Per mile open.	Total Receipts from 1st April to 4th June, 1887. Total.	Per mile open per week.	Total Receipts from 1st April to 2nd June, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch*).

E. J. SINKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Circular No. 618 / 81—2.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Surveys),—dated Simla, the 26th June 1888.

Read—

The General Report on the Operations of the Survey of India Department for the year 1886-87.

RESOLUTION.

The administration of the Department remained in the hands of Colonel H. R. Thuillier, R.E., who was confirmed in the appointment of Surveyor-General on the death of Colonel G. C. DePree in February 1887. The Revenue and Trigonometrical Branches continued to be under the superintendence, respectively, of Colonel J. Sconce, S.C., and Colonel C. T. Haig, R.E.

Personnel.

2. The various operations were carried on by 25 different parties.

Number of parties.

3. One party continued the secondary triangulation on the Coromandel Coast, carrying the chain of triangles from Madras to a distance of 170 miles, a little beyond Nellore. Owing to bad weather and sickness, the party did not succeed in continuing the triangulation northwards so as to unite with the operations of the previous year. A gap of 80 miles was thus left over for the following season.

Secondary coast triangulation.

4. The number of topographical survey parties was reduced from ten in 1885-86 to eight in the year under report, the Cutch and Deccan parties having been transferred to the Central Provinces to take up the traverse surveys of districts coming under revision of settlement. Two out of the eight parties were employed partly on topographical and partly on Forest surveys in Bombay. A topographical section was, however, added to the cadastral party in Burma with the view of completing the topography of hill ranges in the Akyab district; and the Punjab traverse party also made some original surveys of portions of Native States. The two parties in Bombay, one party in Baluchistan, one in the Mirzapur district, North-Western Provinces, and one in the Himalayas, were employed in continuation of the operations of the preceding year. A second party was sent (from Rajputana) to Baluchistan to aid in the general survey of that country and for special survey work on the frontier required by the Military authorities. Another party was transferred to Madras from Mysore, and it took up the survey of the Madura and Tinnevelly districts. The area remaining to be topographically surveyed in that Presidency was, on the suggestion of the Government of India, made over to the Imperial Survey Department, with the view of accelerating the completion of revenue surveys in Madras by the local Survey Department. The eighth topographical party made a survey of the Nicobar Islands, mainly with the object of meeting the requirements of navigation. A portion of the coast of the Little Andaman Island was also surveyed at the request of the Chief Commissioner of Port Blair.

Topographical surveys.

The aggregate area topographically surveyed on various scales by all the parties amounted to 17,510 square miles, as compared with an outturn of 19,162 square miles surveyed in 1885-86 by ten parties.

Native soldiers were attached to the two Baluchistan, the Mirzapur, and the Himalaya parties for training in survey work.

It may be explained that the reduction in the number of topographical survey parties to meet demands for revenue surveys is due to the fact that the latter class of work cannot be postponed without entailing loss of State revenues, whereas topographical surveys, however useful, may be postponed without serious detriment to the administration.

Forest surveys.

5. The Forest surveys in Bombay were, as already mentioned, carried on by sections of two topographical survey parties. The areas surveyed lie partly in the Belgaum District, Southern Circle, and partly in the Thánâ district, Northern Circle. In the Southern Circle the work comprises the preparation of a skeleton map showing the survey of Forest boundaries, any details that are considered necessary being filled in afterwards by the Forest Department, whereas in the Northern Circle the Forest reserves have to be surveyed in full detail.

Two small forests in the Gorakhpur district, North-Western Provinces, were surveyed by the cadastral survey party employed there.

The Forest survey party in Burma was unable to continue its work in the Prome district on account of the unsettled state of that part of the country. Two European surveyors and a few sub-surveyors were sent to Upper Burma, and the remainder of the party was transferred to the Zamayi Forests, Pegu district, where preliminary triangulation and traversing constituted the chief work. The outturn of final survey was very small.

Cadastral surveys.

6. Five out of six cadastral survey parties continued with little change the operations of previous years. They were employed in (1) the Bilaspur and Raipur districts, Central Provinces; (2) in the Basti, and (3) the Gorakhpur and Tarai, districts of the North-Western Provinces; (4) in the Darrang and Nowgong districts, Assam; and (5) in the Akyab, Bassein, and Thongwa districts, Burma. The sixth party was divided into three sections, two of which were engaged in Bengal, on the cadastral survey respectively, of the Sankarpur Wards' State, Dinagepore district, and the Government Estate of Angul, Orissa district. The third section took up the survey of the town of Calcutta, which comprises the survey of boundaries of separate properties paying revenue to Government, in addition to the ordinary particulars concerning streets and houses, and the collection of information regarding owners of properties required for the Calcutta Collectorate.

There was a slight interruption in the progress of cadastral survey operations in the Bilaspur district, owing to the partial scarcity caused by the failure of autumn crops in 1886. Two detachments from Bilaspur party were therefore sent to Raipur. The total outturn of survey work was, notwithstanding, 259 square miles more, and the average cost Rs. 36-13 per square mile less, as compared with the previous year. The average cost of operations in the Basti district increased during the year under report by Rs. 40-8-10 per square mile. This is accounted for by the unprecedented and extremely minute subdivision of property met with, the average size of fields being 0·27 of an acre. With the view of effecting a speedy completion of the cadastral survey of Gorakhpur, the party employed therein was enlarged, resulting in a larger outturn of work and a diminution of the cost per square mile. The experiment of employing Patwaris as surveyors in place of amins was tried during the year for the first time in the Tarai district. The Patwaris showed dissatisfaction at first, and it was difficult to train the men; but the plan proved successful in the end, and it is reported that some excellent work was turned out.

Traverse surveys.

7. Traverse surveys were continued by one party in the Gurdaspur, Gujranwala, and Shahpur districts of the Punjab, and by five parties in the Raipur, Jubbulpore-Damoh, Seoni-Chhindwara, Saugor-Narsinghpur, and Sambalpur districts of the Central Provinces. The total areas traversed are 6,085 square miles in the Punjab and 10,576 square miles in the Central Provinces. Some outlying portions of Sikh States were surveyed by the Punjab party with the view of completing the topographical maps of that part of the country. A special survey was also made in the Gurdaspur district bordering on Kashmir territory, for the purpose of settling a dispute between British and Kashmir cultivators

as regards the rights to water from irrigation channels. It is satisfactory to notice that the cost of traverse surveys in the Raipur district, Central Provinces, was reduced so low as Rs. 19-7 per square mile.

Geodetic.

8. As only one officer was available for the superintendence of Astronomical work, the telegraphic longitude operations were suspended. The latitude observations were extended to the south of Jubbulpore, and observations completed at five stations.

Tidal and levelling operations.

9. Observations for registration of Tides were taken at 17 ports in India, Burma, the Andamans, Ceylon, and Aden. A new Tidal Observatory was established at Akyab, while that at Dublat, near the mouth of the Hooghly, was swept away by a cyclone in September 1886. The spirit-levelling operations consisted of six sections:—(1) from Tuticorin to Madura; (2) from Madura to Trichinopoly and Tanjore; (3) from Trichinopoly to Erode; (4) from Shoranur to Cochin Tidal Station; (5) from Kárwár Tidal Station to Marmagao; and (6) from Agoada Fort Jetty to Agoada. The heights of 418 permanent bench marks and of 6 stations of the Great Trigonometrical Survey were finally determined.

Geographical surveys in Upper Burma.

10. Two detachments, one of which was supplemented by a section of the Forest survey party on the suspension of work in the Prome district, were employed on geographical surveys in Upper Burma. One of these detachments under Major Hobday completed the reconnaissance surveys of an aggregate area of 11,000 square miles lying partly in the Shan States and the Ruby Mines district, partly in the Yaw country, and partly in the Yemethin, Mehtilla, Mandalay, and Kyaukse districts. The survey of the town of Mandalay was also continued. The second detachment, under Colonel Woodthorpe, accompanied the Military expedition that proceeded from Manipur to the Chindwin district. Colonel Woodthorpe, with his assistant Mr. Ogle, succeeded in carrying the triangulation connected with the main series of India from Manipur to the Chindwin district.

Trans-Himalayan Explorations.

11. An account of the explorations in Nepal and Thibet by explorer M. H. has been separately published, illustrated by a map of the routes; and appended to the report under review are Notes by Colonel H. C. Tanner, with sketch maps of explorations in Bhutan and on the Sangpo river, made respectively by explorers R. N. and K. P. The latter went into Thibet in the year 1880, in company with a Chinese láma. Explorer K. P. was sold as a slave in the Pemakoi country, and managing to escape has returned with information, which, combined with an account given by a Mongolian láma, has enabled Colonel Tanner to construct an amended chart of the Sangpo river.

Head-Quarters Offices, Calcutta.

12. The progress of work in the Head-Quarters Offices at Calcutta was satisfactory. The number of maps published amounted to 4,158, of which 3,843 were cadastral maps. 178,398 maps, valued at Rs. 1,36,344, were issued; and the income from map sales amounted to Rs. 9,254. Owing to the contraction of cadastral and topographical surveys, and the employment of a larger number of field parties on traverse surveys, the number of original maps received for reproduction by photography was much below the average.

The work of the Drawing Office has greatly increased in connection with the mapping of surveys and reconnaissances of the Afghan Boundary Commission and by urgent demands for maps of Burma and Baluchistan. A new edition of the map of India on the large scale of 32 miles to the inch has been taken in hand, and it is also proposed to prepare an outline map on the same scale, which will be useful for representing lines of railway, canals, &c.

Experiments were continued with the view of introducing the aid of photography for reproducing the Indian Atlas sheets in lieu of hand-engraving. Reproduction by photozincography has proved a failure, but the experiment of first photographing the map from a manuscript drawing and then transferring it to

copper by the photo-electrotype process, shows that this method is well adapted to take the place of hand-engraving for maps required for temporary use and which are likely to be superseded by later editions.

The heliogravure processes have been utilized largely for the reproduction of drawings for the Archæological Survey and for a technical art series. In the Appendix are specimens of collotype printing.

36,969 mathematical instruments, valued at Rs. 1,91,183, were added to the serviceable stock, and 37,391 serviceable instruments, valued at Rs. 1,83,519, were issued on indent.

Dehra Office.

13. The work of the computing branch of the office at Dehra made satisfactory progress, and several publications containing results of the final reduction of operations of the Great Trigonometrical Survey were made.

ORDER.—Ordered, that the above Resolution be forwarded to the Local Governments and Administrations noted on the margin, to the Surveyor-General of India, and to the Foreign and Military Departments, for information. Ordered also, that the Resolution be published in the Supplement to the *Gazette of India*.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR JUNE, 1888.

The month under review is meteorologically one of the most important throughout the year.

It usually sees the commencement of the rains over almost the whole of India, and the relative distribution and copiousness of the total monsoon rainfall can not infrequently be gauged from the rainfall of this month. The setting in of the rains is normally a very different phenomenon on the Bengal side to what it is on the western side of India.

In the former region the change to the wet season takes place on the whole gradually. The southerly winds which blow in from the Bay and pass as east and south-east winds along the face of the mountain belt become steadily damper and cooler, and finally a rush of saturated air coming from the far south spreads over the greater part of Northern India and the change to the rains is completed.

In Lower Bengal the rains usually set in about the second week in June, in the North-Western Povinces sometime during the latter half of the month, and in the Punjab hardly before July. On the West Coast the setting in of the rainy season is usually more sudden and more striking. A slight but important change in the wind direction takes place in the shape of a shift from about west-north-west to west-south-west, and a strong, cool and saturated current suddenly replaces the moderate and warm wind which has previously prevailed. The admixture of the two currents usually results in great electrical disturbance, and as the monsoon travels up the West Coast its appearance is accompanied by severe thunderstorms. The rains ordinarily commence in Ceylon in the middle of May and reach Bombay about the 5th of June. On the present occasion the setting in of the rains has been accompanied by several abnormal features, which apparently have been principally attributable to unusual conditions over the Bay of Bengal. The distributions of pressure and of temperature and the prevailing direction of the winds in the months preceding that in which the rains ordinarily appear had all been such as to promise an early and good monsoon, and the weather experienced over India during the first ten days of the month went far to fulfil this promise. During these ten days rain in fairly large amounts fell all along the West Coast and around the shores of the Gulf of Martaban, and showers in the Central Provinces and in Upper Burmah, while in Bengal and Assam there was general though slight rain and in Upper India frequent falls and all the appearance of the monsoon. These favourable conditions did not, however, last beyond the first ten days. On the 11th there was hardly any indraught of monsoon winds into Northern India. A moderate south-westerly and westerly wind blew on the West Coast, and passed over the Peninsula and the Central Provinces, giving light showers to those regions; but over the Bay the wind's direction was also westerly and south-westerly without any tendency to draw into south and south-east at the head of the Bay as is normally the case, and in consequence all the rain due to this current fell in Burmah and Arakan. Such conditions are not only unfavourable to rainfall in Bengal and Upper India, but exert a detrimental effect on the West Coast current also, so that the succeeding days showed a decrease in the extent and amount of the rainfall derived from the Bombay branch of the monsoon, though there was at no time such an entire failure of the rains in Western as occurred in Northern India.

On the disappearance of the damp south-easterly winds which blew up the Gangetic plain between the 1st and the 10th or 11th of the month, a period of calms and variable airs commenced over Northern India. These lasted until the 13th, after which the north-westerly winds which are characteristic of the hot season set in, and lasted with some temporary interruptions until the 26th. During this period the only rain which fell over North-Western and

Northern India occurred during dust or thunderstorms, and was in no way connected with the monsoon. During the same period the air motion was generally feeble and irregular on the West Coast, and though the current from the Bombay side penetrated into the Central Provinces, and gave some fain there, the amounts were generally abnormally small and insignificant. In fact the only region in which rain fell to any extent was Burmah, where some rairly large amounts were recorded.

Owing to the cessation of the rains in Northern India and the appearance there of the north-westerly winds above alluded to, very high temperatures were experienced over that part of India. The thermometer began to rise quickly directly the rain ceased, and by the 13th or 14th excessive temperatures were reported from Bengal. At this time the temperature in Bengal was higher than it had been for many years past, and the heat all over Orissa and Lower and West Bengal was most exceptional. This area of excessively high temperature apparently travelled slowly up the Gangetic plain and Allahabad, Agra, Delhi, Lahore, and finally Peshawar experienced one after the other excessive heat.

The following table which gives the highest maxima, and the date of their occurrence for several stations in Northern India shows the progress northwestward of this wave of heat:

Stations.	Highest maximum recorded.	Mean temperature of same day.	Relative humidity of same day.	Date.
	°			
Calcutta ...	106·8	95·7	61	14th
Burdwan ...	108·7	96·6	55	14th
Benares	114·3	101·8	30	23rd
Allahabad ...	114·2	103·1	35	23rd
Delhi ...	114·0	103·6	37	25th
Ludhiana ...	112·8	100·0	32	25th
Peshawar ...	118·0	99·9	44	27th

This table shows very clearly the intense heat which prevailed at this time. The highest maximum reported was 118° at Peshawar, but relatively cool nights were experienced at this station, and the mean temperature for the 24 hours was lower than at the stations in the North-Western Provinces and the south-east of the Punjab, where the actual maxima were lower. The highest mean temperatures were at Allahabad and Delhi. In Bengal both the maxima and the daily means were lower than at stations further to the north-westward, but the heat appears to have been more trying in Bengal than elsewhere, partly probably on account of its unusualness and partly on account of the relatively high state of humidity in the atmosphere.

As mentioned above, the north-westerly winds and dry weather lasted roughly until the 26th. On that day a change which had been slowly developing began to affect the weather. This change came from the western side of India. The force of the monsoon began to steadily increase from Ceylon northward as far as Sind, and the current gradually extended into the Central and North-West Provinces. It occasioned rain over these regions, and by the 28th was blowing along the face of the North-West Himalayas as a south-east wind and brought up rain as far as the east of the Punjab. On the West Coast this increase in the strength and depth of the monsoon current was accompanied by heavy falls of rain, and the general appearance of the weather at the close of the month was more promising than it had been at any time since the withdrawal of the monsoon in the early days of the month.

The concluding table shows very clearly the general feebleness of the monsoon during the past month. Only in the districts of Assam, the Berars, the Konkan, Malabar, Burmah, and Ceylon was the monthly average rainfall exceeded; in all other districts it was in defect. The greatest deficiency was in Northern India and more especially in Bengal and Orissa. In Northern Bengal the total rainfall was only 4 inches instead of the normal 18 inches; in Lower Bengal it

was 4 inches instead of the normal 12 inches, and in Orissa 2½ inches instead of 7 inches. In many other districts the defect was nearly as large, and in Sind there was no rain whatever.

The following table shows the amount of rain and the difference from the average during the month of June, 1888, according to districts, as far as is indicated by the telegraphic reports:

Districts.	Number of stations.	Average rainfall in June.	Difference from the average in June, 1888.
Punjab, West ...	7	1·49	—0·82
„ East ...	4	3·96	—1·09
North-Western Provinces, Trans-Gangetic ...	9	6·16	—3·44
„ „ Cis-Gangetic ...	3	3·83	—2·42
Behar ...	2	6·64	—4·18
Northern Bengal ...	2	17·99	—14·06
Assam—Cachar ...	3	19·89	+7·97

SIMLA, *5th July, 1888.* for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, July 2nd, 1888.

In last week's summary of the weather it was mentioned that the rainfall in Assam and Burmah and more particularly at Cherrapunji had increased very considerably, and this was taken as an indication that the monsoon current was increasing in volume and strength. The observations of the present week show that this increase has taken place, and the conditions now existing over India are more promising and more satisfactory than any that have prevailed since quite the commencement of June. This change to more favourable conditions has been brought about by two causes. In the first place, quite at the commencement of the week under review, the monsoon current along the whole length of the West Coast from Ceylon to Sind increased in force and backed slightly towards south-west. With this higher force the current penetrated first into the Central Provinces and then into the North-Western Provinces, occasioning a considerable rise of humidity and cloud and some rain in those two regions. As rain commenced to fall in Upper India the Bay of Bengal branch of the monsoon rose in force and spread out over Bengal, and by the 28th monsoon conditions of high humidity, overcast skies, and rain were established over the whole of India, except the Carnatic and the Punjab. As rain continued to fall—heavily on the West Coast and moderately elsewhere—the monsoon conditions extended and intensified, and by the close of the week rainfall had extended to all parts of India, except the Carnatic, Sind, Rajputana, and the south of the Punjab. One very important feature in the meteorology of the past week is the fact that the abnormal conditions which have existed for so long over the head of the Bay have disappeared, at least for the time being, and steady south-westerly winds have prevailed over the Bay and on the Arakan Coast. From an account kindly telegraphed to this Department by the Superintendent of the Peninsular and Oriental Company, Bombay, it would appear that normal monsoon weather prevailed over the Arabian Sea during the past week. The account says: "A moderate monsoon was experienced from Aden to the east of Socotra, with very sultry weather, but no thunder or lightning. Thence moderate winds and an unusually high sea, but no rain or thunder till 300 miles from Bombay, when frequent rain squalls passed over the vessel. The wind was south-west during the first part of the voyage, then veered to west-south-west, and finally at the close was from west."

On the 25th the Chart showed a considerable increase in the force of the winds in Ceylon, and a slight increase on the West Coast, but at the head of the Bay and in South Bengal the winds were weaker, and the north-westerly winds in Upper India were stronger and steadier. The barometer had fallen rapidly in the Punjab, but the general distribution was hardly more favourable than it had been for some days to any considerable advance of monsoon winds. The rainfall was slightly heavier in Southern and Central India, and rain in small amounts was falling over the head of the Bay. Temperature had risen in Upper India, and was very high all over the Upper Provinces. Taking all the changes into consideration, however, conditions appeared

slightly more promising than they had been for several days previously, the most favourable feature being the considerable increase in the Ceylon winds. On the 26th there occurred a slight but still distinct advance to more seasonable conditions. The monsoon current had, without exception, increased on the West Coast, and very strong winds were reported from Colombo. Rain in larger amounts had fallen on the West Coast, and showers had occurred over Guzerat and the Central Provinces. This strong current had advanced right across the Central Provinces on this day, and had begun to appear in the North-Western Provinces, so that there had occurred a considerable increase of humidity over Upper India. Temperature had consequently fallen, except in the Punjab, where very high maximum temperatures still prevailed. The Chart of the next morning (the 27th) showed a still further extension of the Bombay current into Upper India, and an increase in the amount of cloud and of humidity in that region. At several places along the foot of the hills the wind was south-easterly. Very heavy rain had fallen in the West Coast districts, and at several places in Eastern India the rainfall had considerably increased. Strong monsoons were blowing on either side of India, and appearances were altogether favourable to a general burst of rainfall. On the 28th rain was reported from all parts of India, except the extreme north-west and the Carnatic. On the West Coast the amounts continued large, and at several places in Eastern India considerable falls were also reported. Humidity and cloud had increased over the greater part of the country, and, except in the northern and western districts of the Punjab, where very high maximum readings were still reported, the temperature has generally fallen. On the morning of the 29th pressure was decreasing generally, and steep gradients prevailed. Moderately strong monsoon currents prevailed, and rain had fallen in the same districts as on the previous day. In Malabar and the Konkan the amounts continued large. The thermometer in the Western Punjab still recorded high maximum temperatures, but on the whole there was a general tendency towards decreasing temperature. The Chart of the 30th showed that the monsoon current at the head of the Bay had fallen lighter, while that on the West Coast had increased. Rain had fallen generally, though the amounts on the West Coast were not so heavy as on the previous day. Rain was falling in parts of the Punjab, and temperature had consequently decreased in that Province. On the 1st favourable monsoon conditions were shown over nearly the whole country. Rain had fallen generally and moderately heavily, and temperature had decreased over nearly the whole of India.

The table of rainfall at the close of this report exhibits much more favourable returns than those of the past two weeks. The change to normal monsoon conditions did not, as is shown above, occur till after the middle of the week under review, so that there are still large tracts of country where the rainfall has again been much below the normal; but the number of districts reporting an excess is very much larger this week than last, and in those divisions where excess is common to both weeks the excess has become very much greater. Last week the only divisions reporting an excessive fall were South-Western India, Lower and Central Burmah, and Assam. In the present week an excessive rainfall is reported from the whole of Burmah, the whole of Assam, and the greater part of Bengal, from Oudh, from the whole of the West Coast districts, from the Berars, and from Hyderabad. The largest excess has been in Assam (Surma), where it amounts to 17½ inches. Very heavy and steady rain has been experienced in this division. At Cherrapunji the

average daily fall has exceeded 9 inches, the total for the week being 64·6 inches. Heavy falls were also recorded at several places in Burmah, the largest reported being 17 inches at Kyaukpyu. In Bengal rain began to fall heavily on the 28th, but the weekly totals are not generally large, though at one station in the Jalpaiguri division over 20 inches was recorded. In Chota Nagpur and Behar the rainfall, though very much heavier than it was last week, was nowhere excessive, and the normal average was only slightly exceeded. In Oudh there occurred some heavy falls, and the totals for some places in Sultanpur, Unoa, Lucknow, Bahraich, and Gonda were large. In the North-Western Provinces and the Punjab the rainfall was not heavy, and the normal average was not reached. In the Southern Punjab, indeed, no rain at all fell. In Malabar all the districts report heavy rain, and the normal average was largely exceeded; the same is true of the Konkan, in both of which districts several places record weekly amounts exceeding 20 inches. The central parts of South Madras, the Bombay Deccan, the Berars, Guzerat, and Hyderabad (South) all had more than their normal amount, and several places within those divisions reported heavy falls. One station in the Surat district had over 18 inches, and several stations had between 5 and 10 inches within the week.

In all other parts of India, except those mentioned above, the rainfall has been deficient, but the amounts are generally not large. In Sind, Rajputana, and the west and south of the Punjab there has been either no rain or only a few drops.

The final column of the table, which gives the excess or defect of the division, expressed as a percentage, though showing that the seasonal rainfall is still largely deficient over a great part of the country, yet shows a much more satisfactory set of conditions than was the case last week. In several districts the defect which previously existed has been changed to an excess, and in other places, except in North-Western India, the percentage of defect has been largely decreased.

Province.	Division.	Rainfall data for week ending July 2nd.			Rainfall data from May 14th to July 2nd.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, May 14th to July 2nd.	Excess or defect of seasonal rainfall expressed as a percentage.

SIMLA, *2nd July, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 30th June, 1888.*—Heavy rains on the West Coast, and slight in other districts. More rain is wanted in Ganjam, Vizagapatam, Bellary, South Arcot, Trichinopoly, Madura, Tinnevelly, Coimbatore, and Salem. Crops generally good; affected by want of rain in Vizagapatam and Madura. Pasture scanty in Bellary, North Arcot, Madura, and Salem. Agricultural operations progressing. Prices generally rising where not stationary. General prospects fair.

Bombay.—*For week ending 4th July, 1888.*—River low in Sind, and field operations consequently delayed in Karachi and Shikarpur. Rainfall insufficient in parts of Kaira, Panch Mahals, Nasik, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, and Dharwar; good elsewhere. Agricultural operations progressing generally, but retarded in parts, where rain is insufficient. Fodder scarce in parts of Broach, Nasik, Poona, Kathiawar, and Baroda.

Bengal.—*For week ending 3rd July, 1888.*—Monsoon has at last set in, and temperature has fallen considerably. Rainfall has been general over the whole Province and rather heavy in most districts, but still deficient in Orissa. Agricultural prospects have considerably improved in consequence. Cultivation has been resumed and standing crops, though somewhat injured by the drought, are now safe. Indigo manufacture in progress. Cattle suffering from want of pasture in parts of Chota Nagpur.

North-Western Provinces and Oudh.—*For week ending 4th July, 1888.*—Rain has fallen throughout the Provinces, and except in a few districts in good quantities. Ploughing and sowing for the *kharif* have commenced. Markets are well supplied. Prices are on the whole steady, though with a tendency to rise in places. The condition of agricultural stock is satisfactory.

Punjab.—*For week ending 4th July, 1888.*—Rain has fallen in several districts. Prices are stationary, except at Delhi, where they are slightly rising. *Kharif* ploughings and sowings are in progress. Rain urgently wanted at Hissar and Delhi. *Kharif* crops are in good condition. No damage done to crops. Stock cattle are generally healthy. Fodder sufficient, except in three districts.

Central Provinces.—*For week ending 4th July, 1888.*—Good rain has fallen in Raipur and Bilaspur. Rice sowings are progressing favourably. Sugarcane doing well. Rain scanty in other districts, and more is required for autumn sowings which are beginning. Cattle in fair condition. No report from Sambalpur.

Burma.—*For week ending 30th June, 1888.*—Ploughing for wet weather crops is progressing; sowing has generally commenced in Lower Burma; the rainfall was ample, but in Upper Burma it was very light, and more rain is urgently required in parts of Yeu and in Minbu districts. The price of paddy has risen in Rangoon and in the Upper Chindwin district; it has fallen in Prome, Thayetmyo, Kyaukse, Myingyan districts and elsewhere. General prices are stationary. Paddy is said to be somewhat scarce in Upper Chindwin. Supplies are reaching Yamethin, where stocks were said to be very low.

Assam.—*For week ending 4th July, 1888.*—Weather seasonable. Rainfall general and heavy. Early rice being reaped; late rice being sown. Prospects of crops good, except that early rice has been injured by excessive rainfall in Darrang and Sylhet. Prospects of tea favourable, except in Cachar, where it is still backward owing to wet.

Mysore and Coorg.—*For week ending 4th July, 1888.*—Rainfall scanty throughout the State. Crops are suffering from want of water in the districts on the plains, and in parts of the Shimoga district. Dry crops are reported to be damaged by insects. Outturn of harvest fair.

Heavy rain in Coorg during the week. Sowing of rice in progress. Rains favourable.

Berar and Hyderabad.—*For week ending 4th July, 1888.*—Weather warm and cloudy. Good rainfall during the week. Cotton sowing nearly completed. Agricultural stock generally in good condition. Scarcity of fodder is being reduced in Amraoti and Wun districts, and also in Pusad taluk of the Basim district. No marked change in prices of foodgrains.

Some rain during the week in Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 4th July, 1888.*—Fairly good rain throughout the Agency, but not sufficient in some parts, as Gwalior, Bhopal, Bundelkhand, and Western Malwa. Agricultural operations have been started in Bundelkhand, Baghelkhand, and Western Malwa, and in progress in Bhopal and Bhopawar. No change in condition of agricultural stock. Scarcity of fodder in Bhopawar apprehended last week abating. Prices of foodgrains in Gwalior and Neemuch rising.

Rajputana.—*For week ending 4th July, 1888.*—Rainfall still partial and scanty. Agricultural operations commenced. Agricultural stock generally good. Pasturage or fodder sufficient. Prices steady, slightly rising at some places.

Nepal.—*For week ending 28th June, 1888.*—Some rain. Weather cooler, owing to fall of rain. The land is being prepared for cold weather rice. Indian corn crop spoilt; prospects are still not good, though rain has fallen.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. X. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used, as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 11th June, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 9th June, 1888. Total.	Per mile open.	Total Receipts from 1st April to 11th June, 1887. Total.	Per mile open per week.	Total Receipts from 1st April to 9th June, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

REVIEW OF THE GENERAL REPORT ON THE STATE AND PROGRESS OF EDUCATION IN BRITISH INDIA, BY SIR ALFRED CROFT, K.C.I.E., M.A.

No. 199.

Extract from the Proceedings of the Government of India in the Home Department (Education),—under date Simla, the 18th June 1888.

Read—

Despatch from Her Majesty's Secretary of State for India, No. 43, dated the 23rd April 1885, directing the preparation of a general annual Education Report.

Despatch to Her Majesty's Secretary of State for India, No. 64, dated the 15th March 1887.

Letter to the Hon'ble Sir Alfred Croft, No. 124, dated 18th May 1887.

Read also—

Letter from the Hon'ble Sir Alfred Croft, No. 2, dated 1st April 1888, submitting the General Report in question.

RESOLUTION.

In the Resolution No. $\frac{10}{309}$, dated 23rd October 1884, recorded in the Home Department, the Governor-General in Council reviewed the Report of the Education Commission, and laid down for the future guidance of Local Governments and Administrations the broad lines of the Educational policy which the Government of India desired to pursue. That Resolution met with the general concurrence of Her Majesty's Secretary of State, who, in expressing his approval communicated the following instructions to the Government of India. "In order to stimulate the efforts of the various authorities in the promotion of education on the lines now laid down, it would, I think, be well if Your Excellency in Council would direct the preparation of a general annual report, embracing the important features of the several provincial reports (including Madras and Bombay), and transmit copies of the same to the Secretary of State, with a Resolution by the Government of India reviewing such general report."

2. For reasons into which it is unnecessary to enter here, it was found desirable to postpone the preparation of the first General Report required by the Secretary of State until last year, when the work was entrusted to Sir Alfred Croft, K.C.I.E., Director of Public Instruction in Bengal. It was at first anticipated that the Report would be completed in three months; but after entering on the undertaking, Sir Alfred Croft found it necessary to collect from Local Governments information of various kinds which was not supplied in the departmental reports, but without which the special report called for would lose much of its value. Considerable time elapsed before all the information was collected; and it was not until last April that the report was submitted to Government. In his letter of the 1st April 1888, cited in the preamble, Sir Alfred Croft explains the cause of the delay; and the Governor-General in Council, while regretting the delay, very readily believes that it was not due to any want of industry or attention on the part of the writer of the report. The report as now submitted is an able and full exposition of the educational condition of British India; and the Governor-General in Council desires to thank Sir Alfred Croft for the careful manner in which he has carried out his instructions.

3. These instructions were devised to secure a report which should be a compendium of the information supplied by the different Local Governments, as regards the condition of education in each province, the methods and organization by which it is imparted, and the extent to which effect is being given to the recommendations of the Education Commission. Sir Alfred Croft has carried these instructions into effect by writing an introductory chapter, giving

an outline of the history of education from 1881 (the year for which statistics were supplied to the Education Commission) to 1885; and by then presenting a comprehensive view of the state of education in each province from the statistical, financial, and administrative points of view.

The Governor-General in Council does not think it necessary to make any examination of the merely introductory portion of the Report; and the following remarks are, therefore, directed to presenting a general view of the present state of education in India, with such references to the earlier statistics as may be necessary to illustrate the progress made. As the statistics for 1886-87 are now in the possession of the Government of India, they will be quoted with a view to supplement the information furnished in the Report, and to bring that information up to date.

4. Education in British India is conveyed through the medium of two classes of Institutions: Public Institutions and Private Institutions. A Public Institution is defined to be "a School or College in which the course of study conforms to the standard prescribed by the Department of Public Instruction, or by the University, and which either is inspected by the Department or regularly presents pupils at the Public Examinations held by the Department or the University." A School or College not coming within the above definition is called a Private Institution.

As may be inferred from the preceding definition, the information available regarding Private Institutions is neither exhaustive nor reliable. Such information as exists is set forth in chapter VIII of the Report; and shows that the instruction imparted in Private Schools is, as a rule, less systematic and efficient than that imparted in similar schools controlled by the Department. It is not intended in this Resolution to dwell at any length on the character or progress of the education conveyed in these private schools; but in order to present a general view of the condition of education in India, it is desirable for the moment to ignore the difference between the two classes of Institutions, and to combine the statistics of attendance at both.

5. Proceeding on this plan, it will be seen that in 1881-82, the earliest date touched by the Report, there were in British India 94,989 Institutions of all grades attended by 2,451,989 pupils. Between 1882 and 1885 there were considerable fluctuations, both in the number of Institutions and of students attending them; the most marked fluctuation being exhibited in the Province of Bengal, where over 14,000 rudimentary schools, attended by more than 120,000 pupils, were excluded from the public class without apparently being enumerated in the private class of schools. But, notwithstanding this, the total of Institutions stood in 1885-86 at 122,367, and the attendance at 3,325,080. The following year the institutions numbered 127,116, and the pupils 3,343,544. The broad fact which emerges from a comparison of these statistics is that in the five years ending with 1886-87 the number of educational Institutions of all sorts in British India increased by one-third, while the number of pupils increased by a still larger proportion.

6. The progress of education within the last five years, which the preceding figures evidence, has been marked; but, viewed with reference to the population as yet untouched by our educational agencies, the progress made still leaves a great deal to be desired. In Western countries it is commonly assumed that children of a school-going age form 15 per cent. of the population. In paragraph 94 of the Report, Sir Alfred Croft seems inclined to hold that for India that proportion is somewhat less than the reality. Assuming, however, that the conventional 15 per cent. is correct for India, it appears from a consideration of the census statistics that only one child out of every ten of a school-going age is actually under instruction. This low percentage is due to the extreme backwardness of female education. The case in regard to males is not nearly so bad; for while of females of a school-going age, not one in fifty (less than two per cent.) is at school, there are 19 males out of every hundred, or nearly one-fifth of the male population of a school-going age, under instruction of some form or other. In the opinion of the Government of India, the proportion of the male population under

instruction cannot, having regard to the circumstances of the country, be considered otherwise than satisfactory.

7. Passing from the consideration of the educational statistics in their widest aspects, to the question of the general character of the instruction imparted, it is at once apparent that to the enormous mass of children the instruction conveyed is of the most elementary kind. Broadly speaking, the system of education administered in British India operates through three grades of institutions: Primary Schools, Secondary Schools, and Colleges. The Primary School aims at teaching the elements of reading and writing, and such simple rules of arithmetic and land measurement as will enable the peasant in a purely agricultural country to look after his own interests. This is not a very ambitious programme; but, at the present time, it meets the wants of 94·5 per cent. of the entire school-going population. The Secondary Schools, in which an advanced instruction in the vernacular and a substantial knowlege of English are conveyed, claim an attendance of 5·1 per cent. of that population, while the remainder (about ½ per cent.) supplies students to all the colleges which impart the highest English education, or teach the various professions of Law, Medicine, and Engineering.

8. The preceding remarks, made with a view to indicating the relative extent of rudimentary and advanced education in India, will be more significant and intelligible if supplemented by a citation of the statistics of actual attendance at the various classes of schools. Beginning with the lowest or Primary class, it appears from the Report that in 1881-82 there were 86,269 Public Primary schools attended by 2,156,242 children (2,070,963 boys and 85,279 girls). There were also Private schools of this class, the precise number of which is not apparent; but it probably did not exceed 4,000 attended by some 50,000 children. The grand total of Primary schools, public and private, five years ago, may therefore be taken at 90,000 in round numbers, attended by 2,200,000 children. In 1885-86, the number of schools had increased to 111,117, and the attendance to 2,811,934. The returns for 1886-87 show that there were in that year 114,308 schools, and 2,806,472 pupils, the decrease in attendance being chiefly due to a temporary cause, the operation of which has now diminished, namely, the disturbed condition of Lower Burma. These totals show that on the whole there is an increasing appreciation of that form of education which is most useful and essential for the great mass of the people.

9. Incidental reference has been made to the number of girls attending Primary schools in 1881-82; and, before passing on to the statistics of secondary and collegiate education, it may be well to indicate here the progress which, during the last five years, has been made in this the elementary stage of female education. So far as can be gathered from the Report, there were in 1881-82, excluding private elementary institutions for which separate statistics are not available, 2,678 elementary schools for girls which were attended by 85,279 pupils. In 1885-86, the number of schools for girls had increased to 5,210 (including 873 private schools), and the attendance to 134,749 (12,251 pupils in private schools). In 1886-87, the number of girls' schools had reached 6,281 (including 1,767 private schools), and the attendance 149,922 (including 17,205 pupils at private institutions). It is interesting to note that for every Mahomedan girl at school there are from three to four Hindu girls, which is in accordance with the proportion which the two great creeds bear to each other both in the general and in the school population. These figures are, indeed, insignificant when compared with the total female population of a school-going age; but they seem to the Governor-General in Council to be satisfactory as indicating the fact that steady, if slow, progress is being made. It must be remembered that it is difficult to overrate the obstacles to be overcome in promoting female education in India.

10. Secondary education is the connecting link between Primary or Elementary, and Collegiate or University education. It is imparted in two classes of school, the middle and the high school; the instruction conveyed in the latter being of a more advanced character than that imparted in the former. While the middle school has always a vernacular basis thereby touching the Primary system, the high school concerns itself mainly with education through the medium of English alone, and reaches the Collegiate course.

In 1881-82, there were 3,932 secondary schools for boys attended by 215,731 pupils (149,265 attending the English and 66,466 the vernacular side). In 1885-86, the schools numbered 4,083 and the pupils 394,508 (264,918 receiving a purely English education); while in 1886-87, there were 4,160 schools and 404,189 students, of whom 271,654 were in the exclusively English division. It thus appears that during the last five years the number of male pupils receiving a purely English education introductory to a University course has increased by about 80 per cent.; while the number of boys receiving a superior mixed English and vernacular education has doubled. It should also be added that there were, in 1886-87, 7,678 advanced private schools, attended by 77,379 students learning Persian, Arabic, Sanskrit, or some other Oriental classic. It may, the Governor-General in Council considers, be confidently stated that the progress of secondary education in India during the last five years has been very satisfactory, and that it is now established on a sound and prosperous footing.

Among females, the progress of the higher or secondary education is, of course, much less marked than among males. The secondary schools for girls, which in 1881-82 numbered only 190, attended by 6,366 pupils, had in 1885-86 increased to 349, attended by 23,904 pupils, and in 1886-87 to 357 schools, attended by 24,904 pupils. These figures are only satisfactory because of the promise, slight though it be, which they afford of better things.

11. The third and highest division of the Indian educational system is the Collegiate Section comprising Arts, Law, Medicine, Engineering and teaching. By Collegiate education is to be understood the education of those students who, having successfully passed through the secondary course, are studying in a College, affiliated to the University, one or other of the courses prescribed by the University for its higher examinations. In 1881-82, the number of Colleges in India was 85; and the attendance consisted of 7,582 students. In 1885-86, the number of colleges had increased to 110, and the attendance to 10,538. In the following year, the latest for which statistics are available, there were 114 colleges, attended by 11,501 students. In 1881-82 there were 67 Arts Colleges (English and Oriental) attended by 6,037 students; in 1885-86, 86 Colleges attended by 8,127 students; and in 1886-87, 89 Colleges attended by 8,764 students. Law Colleges numbered in 1881-82, 12 with 739 students; in 1885-86, 16 with 1,371 students; and in 1886-87, the same number of Colleges with 1,602 students. In 1881-82 there were 3 Medical Colleges with 476 students; in 1885-86, also 3 Colleges with 584 students; and in 1886-87 the number of Colleges had risen to 4, and the number of students to 654. Engineering Colleges which in 1881-82 numbered 3 with 330 students rose in 1885-86 to 4 with 447 students; and in 1886-87 while the number of Colleges remained the same as in the previous year, the number of students increased to 474. There was also a College for professional teaching in the Madras Presidency in 1885-86 and 1886-87; the number of students was 9 in the former year and 7 in the latter. The history is thus, from a statistical point of view, one of progressive development.

12. The advance made in the number of schools for special instruction other than training schools has been satisfactory. Medical schools, the course of study in which is not so advanced or thorough as in Medical Colleges, were eleven in number in 1881-82, and were attended by 830 pupils. The number rose in 1885-86 to 16, with 1,227 pupils, and in 1886-87 to 18, with 1,388 pupils. Law Schools had not been established in 1881-82; but four years later there were four such schools attended by 45 pupils. In 1886-87 the schools fell to two, but the students rose to 90. There were only 9 Engineering and Surveying schools in 1881-82, with 310 pupils; but in 1885-86 there were 15, with 558 pupils, and 14 in 1886-87, attended by 616 pupils. Reference will be made in a later portion of this review to the subject of technical education.

13. The foregoing remarks have reference to education generally; but there are two classes in India for whose education it has been at different times suggested that special measures are required. These classes are the children of Europeans and Eurasians, and Muhammadan children. The subject of the education of the children of the domiciled European and Eurasian communities

was excluded from the deliberations of the Education Commission, because it had already received the serious consideration of the Government of India. The conclusion arrived at was that contributions from private sources towards the maintenance of European Schools should be supplemented by grants-in-aid from Government, regulated by the educational progress made by each school, and without reference to denominational distinctions. A School Code embodying these principles was prepared under the circumstances detailed in paragraphs 247-250 of the report of Sir A. Croft. This Code has been extended to the North-Western Provinces and Oudh, the Punjab and the Central Provinces, while portions of it have been introduced into the Code in force in Madras.

14. The records of attendance of European and Eurasian children show that the working of this grant-in-aid system has been productive of satisfactory results. In 1881-82 the number of pupils at school excluding those at private institutions was 18,750; in 1885-86 it had risen to 22,634, and in 1886-87 to 23,031. As the Bengal Code at present stands, the grants are dependent on the results of the annual examination of individuals. The Governor-General in Council does not regard this plan with unalloyed satisfaction, inasmuch as in his opinion experience tends to show that the system under which grants-in-aid are made to depend on examination of each individual student in the school results in pupils being "crammed" for examinations instead of being properly grounded in their studies. Such a system, especially when applied to pupils whose studies have not yet taken any particular direction—in other words, have not been specialized—must, in the opinion of His Excellency in Council, produce a very undesirable effect on the education imparted in this class of schools. The Bombay Code appears to recognise this; and as a remedy it provides for the concession of fixed grants for periods of years. The remedy may not be all that the case requires; in the present condition of education in India, it is impossible to establish a system in which pecuniary considerations shall not influence the teaching or the examination of the pupils; but it is undoubtedly a step in the right direction; and its adoption in other provinces has, therefore, been recommended by the Government of India.

15. Special recommendations for the education of Muhammadans were made by the Education Commission; and the Governor-General in Council, in Home Department Resolution No. 7—215-25 of July 15th, 1885, reviewed the suggestions which had been made for the special treatment of this class. The Commission proposed a differential treatment of the Muhammadan community in respect to education which the Government of India found itself unable to approve. In its Resolution just referred to, the Government of India pointed out that if the Muhammadans desired to succeed in the competition of life with their Hindu fellow subjects, the way lay in taking advantage, in the same manner as other classes do, of the high education provided by the Government. The Governor-General in Council is glad to think that the Muhammadans have themselves adopted this view of the subject. In 1881-82, there were 447,703 Muhammadan pupils; in 1885-86 they numbered 748,663, and in 1886-87, 752,441. The great increase in the first mentioned period must not, however, be taken as shewing that children not previously at school were brought under instruction. The increase is chiefly due to the extension of the State system of education, so as to include schools which were previously outside it. The percentage of Muhammadans to total pupils, which in 1881-82 was only [illegible] stood in 1886-87 at 22·5—practically a ratio identical with the proportion which the Muhammadan population (45 millions) bears to the total population (199 millions) of British India according to the census of 1881. But if this steady and marked advance of the Muhammadan community in regard to education be a gratifying feature of the educational statistics for the past five years, a closer examination of the figures shews much room for improvement. Although the total number of Muhammadans under instruction compares favourably with the total number of Hindus, the number of the former receiving education of an advanced type is very small relatively to the number of Hindus under similar instruction. Out of a total of 2,303,812 Hindus attending all classes of schools private and public, in 1886-87 216,493 were in the secondary stage, while 9,634 were attending College. On the other hand, out of

a total of 752,441 Muhammadans under instruction during the same year, only 58,222 were attending secondary schools, and only 587 attending College. Thus while one out of every seven Hindu students was receiving the higher education, only one out of thirteen Muhammadan students had passed beyond the primary stage. To this condition of things, especially regarding collegiate education, His Excellency in Council would earnestly invite the attention of the Muhammadan community, and would impress on them the necessity of their taking advantage more largely of the educational facilities within their reach. The fact that the attendance of Muhammadan students at secondary schools has since 1881-82 risen from 20,000 to over 58,000 shews, indeed, that progress is being made; but the progress might be more rapid.

16. Passing from the statistics of attendance at the various classes of Indian Schools and Colleges to the expenditure on education, we find that in 1881-82 the total expenditure on public instruction in India was, in round numbers, 186 lakhs of rupees. Four years later (in 1885-86) the total had risen to 240 lakhs; and last year it stood at a little over 252 lakhs. At the beginning of the five years, the Government bore 73 lakhs of this expenditure, while Local and Municipal funds contributed 32 lakhs; the balance of 81 lakhs, consisting of fees, subscriptions, endowments, &c., falling on the public. In the year 1885-86, the share of the Government is shewn at 80 lakhs; that of Local and Municipal bodies at 48; and that of the public at 112 lakhs. The share assigned to Local bodies, however, is not entirely the proceeds of local taxation, but includes an item of 4½ lakhs contributed by Government; so that in effect the share of Government at this period stood at about 84½ lakhs. Next year the shares are shown at 85½ lakhs for Government, 49 lakhs for Local and Municipal Boards, and 117½ lakhs for the Public. But of the 49 lakhs expended by Local bodies, 6½ were contributed by Government; so that there has been a progressive increase in the Government expenditure. The Governor-General in Council considers that the growth of the share borne by Local bodies should for the future exhibit a more marked increase than it has done since 1885; and that there should be a tendency to decrease rather than to increase in the share which now is defrayed from the public treasury.

17. The Government of India recognizes its responsibility to provide, so far as its finances permit, facilities for the education of the people. But in educational, as in all other matters, it is the policy of the Government of India to avoid entering into competition with private enterprise: it pioneers the way; but, having shown the way, it recognizes no responsibility to do for the people what the people can and ought to do for themselves. When, therefore, local effort or private enterprise shows itself able and willing to supply the educational wants of the people in any locality, it is the policy of Government to retire from the field of direct instruction and to help by reasonable subventions of money the operations of independent institutions. Under this policy, it is the aim of the Government also, wherever there is vitality of private effort, to restrict official action to the maintenance of a few schools, in which the system of instruction and discipline shall afford a standard for the emulation of private or aided institutions in the neighbourhood. In pursuance of this policy, the expenditure from Provincial revenues on Government educational institutions should not ordinarily increase in proportion to the total expenditure, but should, rather, be a constantly diminishing quantity, provided that there is the assurance that the ground abandoned by the Government is occupied by local effort.

The gradual substitution of aided for Government schools should, in the opinion of the Government of India, be accompanied by a contraction in the number of pupils educated in the institutions still maintained by Government, more especially the High Schools and Colleges. If the Government High Schools and Colleges are to afford a standard for the emulation of other institutions, it is essential that the number of pupils attending them shall be so limited as to secure to each individual that share of personal attention which is the first requisite of a sound system of education. In giving effect to these views, it is not the wish of the Government of India that the existing accommodation in Government High Schools and Colleges should not be utilized to

the fullest extent; but it is from this point of view desirable that further expenditure in expanding or increasing the number of such institutions should be incurred by Government only under exceptional circumstances.

18. Passing from the progress of education in its general aspects, the next subject which claims notice is the machinery maintained by Government for imparting instruction in colleges, and for testing the results of the teaching that is given in the schools. At present there is no distinction or line of demarcation between the European Professorial Staff and that engaged on inspection: the same officer may be engaged at one period of his service in the College lecture hall, teaching philosophy or the higher mathematics; at another period in the camp, inspecting Primary village schools. Gradually, however, it has come to be recognized that the qualities required for the one set of duties are not those required for the other, and that the usefulness of the metaphysician, or the expert in physical science, is impaired, not improved, by testing the knowledge of peasants' children in the rudiments of reading, writing and arithmetic. The Government was gradually coming to the opinion that changes in the form of the Educational Department were demanded by circumstances; and accordingly the subject formed one of the questions which were referred to the Public Service Commission.

Their opinion, briefly stated, is that the time has come when the system of a close Educational Service, the members of which would be content to enter as young men on small pay, and be ready to take up any duties the Department may assign to them, should be largely modified or entirely discontinued. They have given expression to the view that a close Educational Service in its present form is no longer called for; and while they recommend the maintenance in each Presidency and large Province of a College, with a staff of Professors capable of teaching up to the highest European literary standards under a European Principal, they consider that the recruitment of Inspectors from Europe should be considerably reduced, and their place taken by local agency. Upon these points, the Government of India has now asked for the advice of Local Governments and Administrations. Without desiring to prejudge the question, the Governor-General in Council is disposed to concur in the necessity for keeping the inspecting agency separate from the teaching staff. Experience seems to show that the work of inspecting, at all events, primary and middle schools can be very thoroughly and satisfactorily performed by local agency; and as material becomes available in India for this purpose, the reduction of the more expensive graded lists of the superior branch of the Education Department as at present maintained, must of necessity be gradually carried out. Of late years native agency has been utilised to a considerable extent for purposes of inspection; and proposals to further substitute it for officers recruited in England for the graded list of the Department are now under the consideration of the Government of India.

19. In regard to the question of substituting local agency for European Professors, and Principals of Central Colleges, a different set of considerations arises; and the Governor-General in Council does not feel assured that the possibility of dispensing with European Professors and Principals of such Colleges of the different Presidencies and Provinces is at present a question for practical discussion. On the question of the recruitment of such Professors for short terms of years, instead of recruiting them as at present for a long period of pensionable service, His Excellency in Council will await the further views of Local Governments; but, so far as he can at present see, he is inclined to the view that it will be advisable to recommend to the Secretary of State that this system of temporary appointment should be, at all events, tried to a moderate extent. It is very possible that obstacles may be found to exist in the way of the recruitment of specialists of high position for temporary employment in India without securing to them the benefits of leave and absentee allowances. It must also be admitted that a temporary residence in India of even 5 years effects a wrench from English connections and associations, and may affect the prospects of a specialist's ultimate employment in England. There is, on the other hand, in the opinion of the Governor-General in Council, no room for doubt that a Professor permanently settled in India has never the opportunity, nor sometimes the

inclination, to keep himself abreast of the times; and that as education advances in India, the necessity for the employment of Professors who are recognised as specialists in the subjects which they are employed to teach will become more and more necessary. Whether the Government will be able to induce specialists of a high class to accept temporary employment in India or not can only be tested by experiment.

20. Passing from the Professorial and Inspecting Staff to the class of school teachers, it is to be observed that the importance of maintaining properly conducted training schools in order to provide teachers of unquestionable character was insisted on in Home Department circular No. $\frac{10}{382\text{-}391}$, dated 31st December 1887. The statistics of attendance at these schools deserve notice. In 1881-82 there were in British India only 97 schools for training masters attended by 3,563 pupils, and 16 institutions for training mistresses, attended by 519 pupils. In 1885-86 the numbers were 108 training schools for masters, attended by 4,333 pupils, and 27 for mistresses, attended by 616 pupils. It is true that some advance was maintained in 1886-87 when there were 112 training schools for masters, with 4,444 pupils, and 28 for mistresses attended by 672 pupils; but it is obvious that the progress made has not been great. In a later portion of this Resolution allusion will be made to the orders which have been issued by the Government of India on this important part of the Educational question, and here all that need be said is that the Governor-General in Council trusts that all Local Governments and Administrations will continue to give their special and sustained attention to the subject. At the present time, when there is reason to insist on the maintenance of a stricter system of discipline than has been in force in most Indian schools of recent years, it is more than ever necessary that the men entrusted with the education of the youth of the country should be of unquestionable character trained to habits of teaching and capable of maintaining by their personal influence and other means a high standard of discipline and morality in the schools over which they preside.

21. Paragraphs 104 to 125 of the Report under notice deal with the question of the transfer to Local and Municipal Boards of the administrative control over Primary and Secondary Education. It is to be understood that this administrative control is always exercised in accordance with rules prescribed by Government and subject to the general supervision of the Department of Public Instruction. In some Provinces this transfer has been of a fuller character than in others. For instance, in the Madras Presidency, the Government has, according to Sir Alfred Croft's inquiries, almost retired from the direct management of Primary and Secondary Schools; while in Bombay almost all Primary and about two-thirds of the Secondary Schools have been subordinated to these Boards. In the Punjab also the transfer has extended, practically, to all Primary and Secondary Schools previously managed by the Department. In Bengal, on the other hand, while the transfer of rural schools is as full as in the Provinces mentioned, the case seems different in regard to schools situated in Municipalities. The information furnished in the report as to the extent to which transfers have been made in the North-Western Provinces and Oudh is not precise; but it is understood that the policy adopted there is not different from that followed elsewhere, though as full effect may not have yet been given to it. This qualified transfer of control over education from Government to Local Boards has been accompanied, as shown in paragraphs 16 and 17 above, by no decrease of the Government contributions towards education. The charges on Provincial revenues were not immediately diminished, though it is to be hoped that, gradually, local taxation for the support of Schools will, to a large extent, relieve the general tax-payer. The effect of this establishment of local control should manifest itself not only in such relief to the public finances, but also in the more efficient discharge of those duties of inspection and general supervision which Members of Local Boards will now share with the officers of the Department.

22. In paragraph 12 above reference was made to industrial schools. Upon this subject the Government of India in 1886 circulated a memorandum to all Local Governments and Administrations, in which the

position of industrial schools was set forth, and it was shown that hitherto little progress of a substantial character had been made in promoting technical education. Since then the subject has received much attention both from the public and the various Local Governments. Technical education has been brought into prominence by the pressure of two sets of considerations, which, though cognate, are not identical. In the first place, it had been observed that the object of the Education Despatch of 1854, that "useful and practical knowledge suited to every station in life" should be "conveyed to the great mass of the people" of India, was not being attained by a State education too purely literary, and leading too exclusively to literary culture. It was accordingly recommended by the Education Commission, and accepted by the Government of India as a reform to be desired, that a secondary school course should be introduced, which should fit boys for industrial or commercial careers. This recommendation however, though in the right direction, was wanting in the precision necessary in a working rule; and to give it the requisite definiteness, it was suggested in the memorandum of the Home Department, referred to above, that drawing and the rudiments of the sciences should be taught in all but the most elementary schools; and that generally throughout the educational system the study of natural science and the cultivation of the faculty of observing and reasoning from observation and experiment should be encouraged. In other words, it was suggested that studies which may incline to the application of natural science and to scientific research should not be neglected in favour of literature.

23. The second class of considerations which have forced this question into prominence is concerned with the need of industrial occupation for a population rapidly outgrowing the means of support supplied by a too conservative system of agriculture. It is also concerned with the need for scientific methods to develop the material resources of India and to improve its agriculture, its products and manufactures; so that they may better hold their place in the markets of the world, where competition is carried on with an intensity of purpose, which has been compared to the conditions of warfare. But technical education in this latter sense—that is in the sense of industrial education—is a matter not so easily dealt with as the technical education of the general preliminary character referred to in the preceding paragraph; and it therefore seems desirable that if the present impulse in its favour is to be successfully directed, the conditions of the question should be clearly understood.

24. Technical education proper is the preparation of a man to take part in producing efficiently some special article of commercial demand. It is the cultivation of the intelligence, ingenuity, taste, observation, and manipulative skill of those employed in industrial production, so that they may produce more efficiently. And thus technical education of the special, as contradistinguished from the preparatory, kind is an auxiliary of manufacture and industrial capital. In India at the present time the application of capital to industry has not been developed to the extent which in European countries has rendered the establishment of technical schools on a large scale an essential requisite of success. But the extension of railways, the introduction of mills and factories, the exploration of mineral and other products, the expansion of external trade, and the enlarged intercourse with foreign markets, ought in time to lead to the same results in India as in other countries, and create a demand for skilled labour and for educated foremen, supervisors, and managers. It may be conceded that the effect of these various influences on an Asiatic people is very gradual, and that it would be premature to establish technical schools on such a scale as in European countries, and thereby aggravate the present difficulties, by adding to the educated unemployed a new class of professional men for whom there is no commercial demand. Still a large field is open for the action of Government and public liberality in the direction of promoting special technical education suitable to the immediate requirements of the country and capable of expansion with its growing necessities.

25. The practical conclusion, then, which the Government of India draws from the foregoing premises is, that it should support technical education as an extension of general education in the sense indicated above; and, furthermore,

that it should promote and countenance such technical education of a special character as may be applied to the service of existing industries, which will profit by the aid of scientific research, scientific method, and higher manipulative skill.

The field of operation being thus defined, it would seem necessary to begin with industries which are in some degree centralized, which are growing into importance with the new growth of trade and manufactures, and which are capable of improvement by the application of scientific principles to materials and processes. At the centre of such industries a technical school will be useful. To the great railway workshops and factories may with undoubtedly great advantage be attached schools of drawing and design, and of practical instruction in the scientific principles of the handicrafts there carried on. And probably in large stations and municipal towns there will be a demand which will repay those who acquire in local industrial schools superior skill. If caution at the beginning secures success; if capital is tempted by degrees to launch itself in commercial enterprises and the development of the material resources of the country; if a larger demand for the products of skilled labour springs up—then larger developments of special technical education may be fostered in complete harmony with the sound principle that supply should follow demand.

The subject is of such extreme importance, and the insignificance of what has been attempted in India is so conspicuous, that the Governor-General in Council is deeply impressed with the necessity for action in whatever way may be practicable and sound. Some Local Governments have indeed recently taken practical measures to promote technical education, and these measures have been viewed with much satisfaction by the Government of India. But as it is desirable that the steps best calculated to promote technical education should form the subject of continuous enquiry and discussion, the Governor-General in Council suggests that Local Governments and Administrations should on a convenient but early opportunity take action in two ways. Impressed with the existing want of information at hand as to the extent, character, and circumstances of important local industries in every province of India, His Excellency in Council would, in the first place suggest that in each province an Industrial survey should be completed. In the second place, he would recommend that, with a view to turning the knowledge acquired by such a survey to the best account in the light of the abundant information contained in the Report of the Royal Commission on Technical Education, each Government and Administration should form a committee of educational experts and professional men, who should make suggestions from time to time for the auxiliary supply of appropriate means of technical education; for such modifications of the State system of public instruction as may aid and encourage industries and industrial employment up to the full measure of such requirement at each provincial centre as may be found to exist; and when the circumstances are opportune, for the establishment of a Technological Institute, for the enlargement of the provincial schools of Art and Design, and for the larger co-operation of the University in the promotion of the object in view.

In furtherance of these suggestions, much valuable aid can be rendered by the various Provincial Departments of Land Records and Agriculture upon which the Resolution $\frac{6}{340-50}$ of 8th December 1881 laid the duty of promoting new industries, and of leading the people to a fuller knowledge of agricultural Science.

26. The subject of discipline and moral training in schools and colleges is regarded by the Governor-General in Council as one of the most important questions connected with education in India at the present day. The provisional views of the Government of India on the subject are expressed in the letter No. $\frac{11}{382-391}$ from the Home Department, dated the 31st December 1887, a copy of which has been submitted to Her Majesty's Secretary of State for India.

The replies of Local Governments and Administrations to the Home Department letter of the 31st December last have not yet been received; and it is therefore premature to make any forecast of what the final orders of the Government of India will be. But the points on which the existing system needs improvement and change may be inferred from the suggestions which His Excellency in Council made for the consideration of Local Governments. These suggestions were—

(1) The provision of efficient training schools and colleges for teachers and the employment as teachers only of those who have given satisfaction during a course of training:

(2) the extension of a system of teaching having a direct bearing upon personal conduct:

(3) the repression of breaches of discipline in accordance with certain well-defined rules:

(4) the introduction of conduct registers:

(5) the extension of the hostel or boarding-house system to the fullest extent that the public finances or private liberality will permit:

(6) the introduction of a system of monitors to be made responsible for the conduct of the scholars while in, and as far as possible while out of, school:

(7) the exclusion from school of boys who have not reached a certain class by a certain age:

(8) the introduction of inter-school rules defining the conditions under which students should be allowed to pass from one school to another:

(9) the opening of playgrounds and gymnasia.

His Excellency in Council also suggested that while the moral supervision by Principals and Professors over students in colleges could best be rendered more effective by the example and personal qualities of the Principal and Professors, it might be possible to supplement this influence by the adoption of rules in support of authority, and the direction which the rules might take was indicated to Local Governments and Administrations. The Governor-General in Council now awaits the replies to these suggestions.

27. It is true, as has been observed in the letter under notice, that, in the case of colleges even more than in the case of schools, doubts have been expressed as to the possibility of introducing distinct moral teaching where there is no religious instruction; and in their Report the Education Commission point, as a means of meeting the difficulty, to the establishment of aided colleges in which religious teaching can be fully recognized. It is clearly stated in the circular letter from the Home Department that the Governor-General in Council entirely approves of the views of the Education Commission on this point, and would gladly see an increase in the number of aided colleges and schools, in which religious instruction may be freely given. But His Excellency in Council also observed that, though there is greater difficulty in introducing moral teaching into State than into aided colleges, the difficulty does not seem to have been hitherto seriously faced by Education Departments generally; and until failure follows an earnest effort at imparting moral instruction in colleges, he is unwilling to admit that success may not be secured.

In pursuance of this opinion attention has again been called to the proposal made by the Education Commission that an attempt should be made to prepare a moral textbook, based upon the fundamental principles of natural religion, such as may be taught in all Government and non-Government Colleges. The Government of India and the Secretary of State entertained doubts as to the wisdom of this recommendation at the time when the proposals of the Commission were under consideration; but circumstances have since occurred which have suggested to both authorities the desirability of making the attempt.

Communications have therefore been recently made to Local Governments with the object of ascertaining the best method by which a moral textbook can be prepared, and the Governor-General in Council has received suggestions on the subject from independent persons interested in the progress of education in India. The subject is still under consideration, and it is unnecessary to allude further to it here.

No. $\frac{7}{245-255}$.

ORDER.—Ordered, that copy of the above Resolution be forwarded to the Local Governments and Administrations marginally noted and to the Revenue and Agricultural Department, for information.

Madras.	Central Provinces.
Bombay.	Burma.
Bengal.	Assam.
North-Western Provinces and Oudh.	Coorg.
Punjab.	Hyderabad.

Ordered also, that the Resolution be published in the Supplement to the *Gazette of India*.

HOME DEPARTMENT,
EDUCATION;
Simla, 13th July 1888.

(True Extract.)

A. P. MACDONNELL,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, July 9th, 1888.

The more favourable rainfall conditions which appeared about the middle of last week and were noticed in the summary last issued, have continued during the week under review. The area of rainfall has not extended much during the past seven days, a large portion of the Punjab, Rajputana, and Sind being still practically rainless; but over other parts of the country the monsoon currents from the Arabian Sea and the Bay of Bengal have prevailed steadily, and though the rainfall accompanying them has in no district been very heavy, the fall has been steady and continuous, and hence probably more beneficial. Past monsoon seasons have shown that the heavy bursts of rain which occasionally occur during the rains are never associated with a regular monsoon current, but almost invariably accompany the development or passage of those cyclonic storms which at times pass from the Bay of Bengal. Hence the heaviest rainfall always occurs during a considerable deflection of the regular monsoon current. In the present week, between the 2nd and 5th of July, a small cyclonic storm travelled from Lower Bengal as far north-west as Lucknow, and during its existence comparatively heavy rain was experienced, the normal monsoon current being deflected towards, and raised within, the storm area. With the disappearance of this storm the wind assumed its normal monsoon directions, and as a consequence the weather of the past week was generally characterised by light rain, much cloud, and a high humidity.

The small storm noticed above was formed over Central Bengal and advanced slowly in a west-north-west direction as far as Lucknow where it filled up. When in the neighbourhood of Allahabad on the 4th and 5th, the depression appeared inclined to intensify, and it at this time looked as though the centre would advance into the Punjab and draw the monsoon current with it well up into North-Western India; but the Chart of the 5th showed that the disturbance had suddenly broken up, and no rain fell in the Punjab except at Simla.

The weather has been very hot and oppressive in the Punjab—more particularly in the Western districts where, as well as in Sind, some very high maximum temperatures were registered during the week.

The most important feature in the weather on the morning of the 2nd was the appearance of a small but distinctly marked depression and cyclonic circulation over Central Bengal. Except in the neighbourhood of this depression very uniform pressures existed over Northern India, but between Sind and Ceylon gradients were very steep. A strong and stoady monsoon current blew across the Bombay Coast and penetrated into the Peninsula and Central and part of Upper India. A strong monsoon also prevailed in the Bay, largely due to the indraught towards the depression over Central Bengal. Rain had fallen in most parts of India, except Madras. The largest amounts were reported from the West Coast, but Bengal and Assam also received a good deal of rain, and heavy showers were reported from other parts of the country. Temperature had fallen generally, but maxima of between 106° and 112° were reported from the Indus Valley. By the morning of the 3rd the depression had advanced westward into Central and South Behar. The barometer had consequently risen in Central Bengal and fallen in Behar. Elsewhere the barometric changes were irregular and the distribution practically unchanged, very steep gradients continuing over the Peninsula and central parts of the country. Strong monsoon currents prevailed on both sides of India, and a fairly distinct cyclonic circulation of the wind around the depression. Burma and Eastern India received favourable rains from the Bengal current, and Bombay and Northern India from the Bombay current. The heaviest falls were $3\frac{3}{4}$ inches at Hazaribagh; $4\frac{3}{4}$ inches at Khandwa, and $2\frac{1}{2}$ inches at Jhansi and Benares. Temperature had on the whole fallen, and the maximum in the Punjab was 102° at Peshawar. The Chart of the 4th showed that the depression had advanced to Allahabad, and

had become deeper, but there was little other change. Both monsoons (though weaker than on the two preceding days) were blowing fairly strongly, and a very distinct cyclonic circulation existed around the depression. Rain continued to fall except in North-Western India and the Carnatic, the heaviest falls being in connection with the depression. Sutna, Benares, Lucknow, and Jubbulpore all had about 2 inches. Temperature had risen in the Punjab. On the following day, the 5th, the Chart showed that the depression had drifted slowly west-north-westward without any alteration in its intensity, and lay near Lucknow. There was comparatively little change in the general wind movement. Rain had fallen heavily on the West Coast, moderately heavily in Burma and in the neighbourhood of the depression. The largest falls were $10\frac{3}{4}$ inches at Karwar; $6\frac{1}{2}$ inches at Goa; and 2 inches at Ratnagiri. Diamond Island, Chittagong, and Akyab had over 2 inches; and Mussoorie and Lucknow between $2\frac{1}{2}$ and $2\frac{3}{4}$ inches. On the 6th the depression had disappeared, and the general distribution of pressure approximated closely to the average. Winds were fairly normal, and ordinary monsoon conditions prevailed over the greater part of the country. Little or no rain fell in the Punjab, Rajputana, Sind, Central India, or the Carnatic. Elsewhere rain was general and moderately heavy. On the 7th there was very little change to record in pressure, winds, or weather. A moderate monsoon blew on both sides of India, and ordinary, monsoon conditions prevailed generally. In the Punjab, however, there was still no rain, and temperature there had again become excessive. The average of the maximum readings was 107°, and the highest maximum was 111·5° at Dera Ismail Khan. The rainfall, though general, was nowhere heavy. A brisk fall of pressure was reported over Northern India on the 8th, and accompanying this fall were stronger monsoon winds on both coasts of India. The rain had been fairly general, except in North-Western India where the weather remained fair, and very high temperatures were reported. In the north and west of the Punjab the average of the maximum readings was 110°. The heaviest falls of rain were 5 inches at Mercara; $4\frac{3}{4}$ inches at Hoshangabad; $3\frac{1}{4}$ inches at Mussoorie, and over 2 inches at Pachmarhi and Seoni.

The concluding table gives the rainfall of the past week. The results are very much more satisfactory than for several weeks past, more than half of the districts showing an excess. In most districts the excess is comparatively small, but in the North-West Provinces, which was the region most affected by the storm noticed above, there are some divisions with more than twice their normal amount. The regions of excessive rain are very well defined: the first includes the greater part of Burma, of Bengal, and of Assam, and extends up the Gangetic plain as far west as the borders of the Punjab; the second includes the West Coast, and extends inland over Khandeish, the Central Provinces, and part of Central India. In all other divisions there has been a deficiency, though, except in the Punjab, this deficiency is not large.

At Kyaukpyu, in Upper Burma, the rainfall of the week amounted to 30 inches, but in other parts of Burma the rain, though fairly steady and continuous, has not been heavy. The same is true of Bengal and Assam, where, as a rule, the total falls during the week vary between 4 and 6 inches. At Cherrapunji the total fall was only 26 inches. In Orissa there is rather a large deficiency. In Behar, the North-Western Provinces and Oudh, several heavy amounts are reported, the totals varying between 4 and 10 inches. In the Punjab the rainfall has been comparatively light, and the average has not been reached, except in the west, but the Province has by no means been without rain, and in some divisions, more particularly the submontane and north-west districts, there have been several heavy falls. In Western India rain has fallen continuously, and in some places heavily. At one station in the Kolhapur district 28 inches of rain were recorded, and several stations had between 10 and 20 inches. In the Berars the rainfall was light, and in the Central Provinces, though the rainfall was continuous and exceeded the average, there were no heavy bursts. In Sind there was no rain, and in Rajputana very little. The Madras Presidency had either no rain or only scattered showers.

The final column of the table shows that there is still very general deficiency in the seasonal rainfall, except in the west, but the amount of the deficiency is steadily decreasing, and, except in North-Western India, is nowhere very large.

SIMLA, *9th July, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 7th July, 1888.*—Rainfall good on the West Coast, none in Cuddapah and Madras, and slight elsewhere. More rain is wanted in several districts. Crops generally fair, but withering from want of rain in Ganjam, Vizagapatam, Cuddapah, Anantapur, Kurnool, South Arcot, Madura, and Nilgiris. Pasture scanty in Bellary, North Arcot, and Madura. Agricultural operations generally progressing. Prices generally rising except in Godavari, Kistna, and North Arcot. General prospects fair.

Bombay.—*For week ending 11th July, 1888.*—River still low in Sind and preparations for early crops consequently delayed in Shikarpur. Rainfall generally sufficient in Konkan, Khandesh, and parts of the Deccan, but much wanted in Guzerat, Kathiawar, and Baroda; also more wanted in parts of Nasik, Ahmednagar, Sholapur, Belgaum, Bijapur, and Dharwar. Sowing of early crops is progressing in parts of Ahmedabad, Surat, Khandesh, Nasik, Poona, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, Dharwar, Kathiawar, and Baroda; but retarded in parts where rainfall is insufficient. Rice transplantation progressing in Konkan, Surat, Nasik, and Poona. Fodder scarce in parts of Broach, Surat, Panch Mahals, Nasik, Poona, Belgaum, Kathiawar, and Baroda. Locusts have appeared in four talukas of Hyderabad, slightly damaging indigo in one taluka.

Bengal.—*For week ending 10th July, 1888.*—Ordinary monsoon weather prevails throughout the Province and ample rain has fallen in all parts except Orissa. General prospects have improved and are now satisfactory, but in Orissa more rain is still required. Early rice, jute, indigo, and sugarcane are coming on well. Late rice and *bhadoi* sowings are in progress and transplanting has begun. Price of rice has somewhat risen, particularly in West Bengal, Orissa, and the Chota Nagpur districts.

North-Western Provinces and Oudh.—*For week ending 11th July, 1888.*—Good rain has fallen throughout the Provinces, except in Meerut and Saharanpur, where the weather for the past week has been cloudy and sultry, and more rain is needed. Ploughing and sowing for the *kharif* are in progress. Supplies are sufficient and except in a few districts prices are steady. Condition of agricultural stock is generally satisfactory.

Punjab.—*For week ending 11th July, 1888.*—Rain has fallen in several districts. Prices are generally stationary, except at Shahpur and Peshawar, where they are falling. Ploughings and sowings are in progress except in Umballa, where they have stopped for want of rain. Rain urgently wanted at Hissar and Delhi. *Kharif* crops in good condition. No damage done to crops. Stock cattle are generally healthy. Fodder sufficient except in two districts.

Central Provinces.—*For week ending 11th July, 1888.*—Sufficient rain reported in all districts except Saugor. Autumn sowings progressing favourably. Sugarcane thriving. Condition of cattle fair.

Burma.—*For week ending 9th July, 1888.*—Ploughing and sowing continue. Transplanting has commenced. The rainfall in Lower Burma was generally copious. In Upper Burma it was insufficient and rain is much wanted. The price of paddy has risen in Rangoon, Prome, Bassein, Henzada, Amherst, Tavoy, and has fallen in Thayetmyo and Toungoo. In Upper Burma the prices are stationary.

Assam.—*For week ending 11th July, 1888.*—Weather seasonable. Rainfall general. Early rice being harvested. Cold weather rice sown or transplanted. Prospects good. Some damage done by floods in Nowgong and in parts of Sylhet and Cachar. Tea doing well.

Mysore and Coorg.—*For week ending 11th July, 1888.*—Good rain in Shimoga district, and slight in other parts of the State. Crops generally good, but more rain is much needed for them in parts of the Bangalore, Kolar, Mysore, Tumkur, and Chitaldroog districts. Fodder diminishing in parts of the Hassan and Chitaldroog districts. Prices slightly risen.

Heavy rain has fallen in Coorg.

Berar and Hyderabad.—*For week ending 11th July, 1888.*—Sky generally cloudy. Good rain during the week. Sowing of cotton nearly completed and sowing of *jowari* commenced. Insufficiency of fodder is being reduced. Agricultural stock generally in good condition. No marked change in prices of food-grains.

Some rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 11th July, 1888.*—Good rainfall throughout the Agency, but not sufficient in Gwalior. Agricultural operations in progress. No other change since last report.

Rajputana.—*For week ending 11th July, 1888.*—Rain still holding off and partial. Agricultural operations commenced, but rain wanted. Agricultural stock good generally. Pasturage or fodder scarce in some places. Prices tending to rise.

Nepal.—*For week ending 5th July, 1888.*—Tolerable rain has fallen lately, but not yet sufficient for the crops. Prospects are indifferent. Transplanting of rice commenced in the valley.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

* Chiefly rice; but as mostly all is under five-year leases, measurements are not made, and details cannot therefore be given.

Calcutta,
The 14th June 1888.

A. D. McARTHUR, *Major, R. E.*
Under-Secretary to the Govt. of Bengal, P. W. D.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, July 16th, 1888.

The Superintendent of the Peninsular and Oriental Company, Bombay, telegraphed on Monday that the mail steamer *Sutlej* experienced light southerly winds between Aden and Socotra, with a heavy south-easterly swell. Thence to Bombay a fresh to strong monsoon with wind from south-west to west-south-west, with fine weather and occasional light showers. On reaching soundings heavy rain fell at times, and off Bombay continuous heavy rain and thick weather were experienced. This account shows that for the week under review a favourable monsoon was blowing over the Arabian Sea. As is usual under these conditions, strongly marked monsoon weather prevailed over India, more particularly over that part of India directly influenced by the Bombay monsoon current. Within that region strong westerly to south-westerly winds were reported. Not only was this the case on the West Coast, but over the Deccan, Central India, Kathiawar, and at several places in the south of the Peninsula monsoon winds strong to a gale in force were reported on several days. Accompanying these strong winds was general rain, which, though on the whole not very heavy, was fairly continuous and steady. In the earlier part of the week the heaviest falls occurred over the Central parts of the country, but during the 14th, 15th, and 16th heavy falls were recorded all along the West Coast.

In the Bay conditions have been less simple. Early in the week the winds began to fall off at the head of the Bay, and the rainfall brought up by the Bay branch of the monsoon was light. On the 11th the Chart showed a tendency towards the formation of an area of low pressure in the north-west of the Bay. This disturbance slowly developed, and on the 13th a well defined depression was shown off the Ganjam Coast. Very steep gradients prevailed to the south-east of the disturbance, and it is probable that very rough weather was experienced over the centre of the Bay. Early on the morning of the 14th the depression crossed the coast on a north-west course, but the rainfall around the centre was, so far as is known, much lighter than is ordinarily the case under these conditions. On the 15th the depression had reached Nowgong (Central India), and almost filled up.

In Upper India the weather has undergone a considerable change. At first the absence of rain occasioned excessive temperatures in the Punjab and Sind, but about the 11th and 12th there occurred a rush of rain bearing winds into the Punjab, and a rapid reduction of temperature.

On the morning of the 9th the barometer was falling, except on the West Coast. The change was considerable in the Indus Valley and over the north of the Bay, while it was slight in the extreme south of the Indian region. In consequence gradients had become very steep, and a strong monsoon was blowing very generally, but more especially on the West Coast and in the Central Provinces,

the Deccan, and Rajputana. Temperature had on the whole fallen, except in the Punjab and Upper Sind, where it was excessive, the maximum temperatures being generally above 110°, and at Jacobabad and Dera Ismail Khan 118° and 117° respectively. Rain had fallen in most parts of India, except the Indus Valley and the Punjab. The amount of the rainfall was increasing at the central stations and in parts of the North-West Provinces and Behar. The Chart of the 10th showed an increase of pressure, except in the South. In consequence gradients were somewhat less steep than they were on the 9th, but there was little other change. Strong monsoon winds continued to blow over Western and Central India, but at the head of the Bay the force of the wind had decreased. Temperature had fallen, except in the north and west of the Punjab, where it remained excessive. The rainfall on the West Coast and in Western India varied between 1½ and 3 inches, and moderate falls were reported from parts of Burmah and Northern India. In Bengal only moderate showers were recorded. On the 11th the barometer was falling over the Bay and Eastern India,—rising elsewhere. There was a slight tendency towards the formation of a cyclonic storm in the north-west of the Bay. In consequence the winds were feeble and unsteady about the head of the Bay, though they were probably blowing strongly in the Centre and South. On the West Coast and over the Central parts of the country the strong monsoon winds, noticed during the previous two days, held steadily. Some rain was reported from the north of the Punjab, and showers, light or moderate in amount, were received in most parts of the country, except Sind, West Rajputana, and South Punjab. Temperature had fallen almost everywhere. In the Punjab the reduction was considerable, though high maximum temperatures continued to be reported from the Indus Valley stations. The observations of the 12th showed that a slight depression was forming over the north-west of the Bay off the Ganjam Coast. In other respects the barometric changes were generally unimportant. Over Western and Upper India normal monsoon winds, in the former region—of considerable force—prevailed, while over the Bay there existed a well marked cyclonic circulation around the low pressure area forming there. On the Bengal and Orissa coasts the winds were east-north-easterly. Rain had to a large extent ceased in Bengal, but elsewhere moderately heavy and general rain was reported. Rain had extended well into the north-west of the Punjab, and in consequence there had been a further reduction of temperature in that Province. The Chart of the 13th showed that the depression over the Bay had intensified considerably and was approaching the Ganjam Coast, where it was occasioning a brisk barometric fall. Very steep gradients prevailed to the east and south-east of the disturbance, and a well marked cyclonic circulation of the winds was shown around the storm area. The monsoon winds over Western, Central, and Upper India were practically unchanged. General and favourable rain was reported, the largest amount recorded having been 5 inches at Amraoti. Temperature had decreased, except in Bengal and Behar. High maximum temperatures continued to be reported from the Indus Valley. Early on the morning of the 14th the depression crossed the Ganjam Coast, and the wind shifted to south-west at Gopalpore and False Point. The barometer was falling briskly in the eastern districts of the Central Provinces, but elsewhere the changes were generally slight. A well marked cyclonic circulation existed around the depression, and the south-easterly and easterly current on its northern side extended right up the Gangetic plain into the Punjab. The monsoon on the West Coast was a trifle weaker than during the previous few days, but the rainfall in the

Coast districts continued fairly heavy. Elsewhere rain, though moderate, was very general. Temperature had again decreased. On the 15th the Chart showed that the depression had advanced north-westward, as far as Nowgong (Central India). It had filled up very considerably, but its advance had been attended by a rapid barometric rise in Orissa, Ganjam, and the Circars, and a moderate fall in Bundelkhand. A feeble cyclonic circulation prevailed around the storm area. Very good monsoons were blowing on both coasts. Rain had again fallen very generally, the most important feature of the rainfall being its extension into Cutch, Kathiawar, Guzerat, and parts of Rajputana, and the Punjab, where the amount had hitherto been much short of the average. Temperature changes were slight.

The concluding table shows the rainfall of the past week. In nearly half of the divisions an excess of rain is shown, and in those divisions where a defect is reported the deficiency in most instances is comparatively small and unimportant. The regions of excessive rainfall are roughly Burmah, the west of the North-Western Provinces, the centre and submontane districts of the Punjab, and the greater portion of the Peninsula and of the Central parts of the country. Elsewhere the rainfall has been short of the average, but, except in Bengal and the east of the North-Western Provinces, generally by small amounts.

In Burmah there has been more than the average amount of rain, and falls varying between 18 and 10 inches are reported from several districts. Over Bengal (except North Bengal), Assam, Orissa, Oudh, and the east of the North-Western Provinces there were no heavy falls of rain, and the monsoon current passing over that region seems to have been feeble, as even at Cherrapunji the total fall of the week was only 8 inches. In the central and western parts of the North-Western Provinces the falls were much heavier, varying between 6 and 9 inches, while along the foot of, and on the hills the maximum falls varied between 8 and 15 inches. In the central, submontane, and north-west Punjab rain was general and fairly heavy, but in the south and west there was very little, and in the Derajat, &c., none at all.

In Malabar rain fell daily and at some stations heavily, but on the whole the fall was moderate and about the average. In the Konkan, the Bombay Deccan, the Berars, and a large part of the Central Provinces, the rainfall was much heavier than usual, the maximum falls within those divisions varying between 10 and 20 inches. In Khandesh and Guzerat the total was below the average and there were no heavy falls; but the Kathiawar rainfall was up to the normal, and in Rajputana and Central India the average was exceeded. In Bhopal one station had 8 inches during the week, and at Jeypur over 9 inches was recorded. On the east side of the Peninsula (north of Nellore) rain was general and heavy, but in the extreme south there was some deficiency.

The final column of the table shows the state of the seasonal rainfall. More or less deficiency is recorded from the greater part of Northern and a large part of Central India, while in the West and South there has been, so far, more than the normal amount of rain. There has been considerable improvement in Central India and Eastern Rajputana since the previous week. The most serious deficiency is in Orissa and parts of the North-Western Provinces and the Punjab.

SIMLA, *16th July, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 14th July, 1888.*—Rainfall good on the West Coast, fair in other districts, except Vizagapatam, Cuddapah, South Arcot, Trichinopoly, Madura, Tinnevelly, Coimbatore, and Salem, where more rain is wanted. Crops generally good, but withering from want of rain in Madura and Salem, and blighted in parts of Tinnevelly and Coimbatore. Pasture scanty in North Arcot and Madura. Agricultural operations progressing. Prices generally falling where not stationary. General prospects fair.

Bombay.—*For week ending 18th July, 1888.*—Slight rain in parts of Sind, where river continues low. Rainfall during week good throughout Guzerat, Kathiawar, and Konkan, and in Khandesh, Poona, and Dharwar, but insufficient in Ahmednagar, Bijapur, and parts of Nasik, Sholapur, Satara, Belgaum, and Baroda. Sowing of early crops continues in Ahmedabad, Broach, Surat, Khandesh, Nasik, Poona, Ahmednagar, Sholapur, Satara, Bijapur, Kathiawar, and Baroda, but retarded in tracts where rainfall is insufficient. Rice transplantation progressing in Ahmedabad, Surat, Nasik, Konkan, and Baroda. Young crops good, except in parts of Kaira and Upper Sind Frontier, where they are damaged by insects. Fodder scarce in parts of Panch Mahals, Nasik, Belgaum, Kathiawar, and Baroda.

Bengal.—*For week ending 17th July, 1888.*—Ordinary monsoon weather continues, but the rainfall during the week has been moderate. General agricultural prospects are good, except in Orissa and the Singhbhum district, where there has been scanty rain. Early rice, jute, and sugarcane are looking well. Late rice seedlings are being transplanted, but more rain is required. In Behar *bhadoi* sowings are in full progress. Early rice and jute have begun to be gathered in places in East and North Bengal. Indigo manufacture is going on.

North-Western Provinces and Oudh.—*For week ending 18th July, 1888.*—Abundant rain fell during the week in most districts; and only in Rai Bareli, Sitapur, and Aligarh is there any complaint of the supply being insufficient. Ploughing and sowing for the *kharif* are in progress. Sugarcane and indigo are being weeded. Markets are well supplied, and prices generally are steady. The condition of cattle continues satisfactory.

Punjab.—*For week ending 18th July, 1888.*—Rain has fallen in several districts. Prices are unsettled: shown to be rising in Umballa, falling in Peshawar, fluctuating in Delhi; elsewhere reported to be stationary. Ploughing and sowing for *kharif* crops are in progress. More rain wanted at Hissar and Delhi. *Kharif* crops in fair condition. No damage done to crops. Condition of cattle reported to be generally good. Fodder generally sufficient, except in Jullundur and Dera Ismail Khan.

Central Provinces.—*For week ending 18th July, 1888.*—Sufficient rain in all districts, except Bilaspur. Autumn sowings progressing favourably. Rice plants healthy. Sugarcane thriving. Cattle in fair condition.

Burma.—*For week ending 14th July, 1888.*—Ploughing and sowing continue in Lower Burma. The rainfall is sufficient, except in Thayetmyo and in parts of Tharrawaddy. Ploughing is backward in parts of Bhamo and Yeu, as the rain has been insufficient. In Meikteila and Lower Chindwin the rainfall was also very slight. The price of paddy has risen in Yeu, Kyauksee, and Pagan in Upper Burma, and has fallen in Bassein in Lower Burma. Elsewhere prices are stationary.

Assam.—*For week ending 18th July, 1888.*—Rainfall general, but light. Reaping of early and transplanting of late rice continues. Growing crops doing well. More sun wanted for tea in Upper Assam.

Mysore and Coorg.—*For week ending 18th July, 1888.*—Some rain in the civil and military station. Good rain reported in Shimoga, Kadur, and Hassan districts. Standing crops generally in good condition, but want of more rain still felt in affected parts of all districts, except Shimoga and Kadur. In one taluk of the Hassan district crops are reported to be damaged by insects. Outturn of harvests fair.

Moderately heavy rain in Coorg during the week. Cultivation of paddy backward in three taluks.

Berar and Hyderabad.—*For week ending 18th July, 1888.*—Weather warm and cloudy. Rainfall during the week good. Sowing of cotton completed, and the plants are some inches above the ground. Sowing of *jowari* continues. Agricultural stock generally in good condition. Fodder plenty, except in Amraoti district, where it will be sufficient in a few days. Prices of foodgrains stationary.

Some rain during the week in Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 18th July, 1888.*—Rain general, but insufficient in Neemuch. Agricultural operations are in progress. Great scarcity of pasturage in Neemuch.

Rajputana.—*For week ending 18th July, 1888.*—Rainfall more or less throughout the Province. Agricultural operations commenced. Agricultural stock good generally. Fodder scarce in some places. Prices steady, but rising in some places.

Nepal.—*For week ending 12th July, 1888.*—There has been some rain during the week, but more and heavy rain still wanted. Weather hot. Prospects improved. Transplantation of winter rice is in progress.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

(*a*) Includes the Cawnpore-Achnera State Railway.
(*b*) Includes the Katni-Umaria State Railway.
(*c*) Includes the Bellary-Kistna State Railway.
(*d*) Includes the Amritsar-Pathánkot and Rájpura-Patiála State Railways.
(*e*) Includes the Northern Bengal, Dacca, Kaunia-Dharlla and Assam-Behar State Railways.

SIMLA, *19th July, 1888.*

M. C. BRACKENBURY, *Major, R.E.,*
Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 30.} CALCUTTA, SATURDAY, JULY 28, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

HOME DEPARTMENT.

PRACTICAL APPLICATION OF SANITARY PRINCIPLES TO TOWNS AND VILLAGES IN INDIA.

No. $\frac{3}{212-225}$.

Extract from the Proceedings of the Government of India in the Home Department (Sanitary),—under date Simla, the 27th July, 1888.

Read the undermentioned papers:

Report of the Royal Commission on the Sanitary State of the Army in India, 1863.

Despatch from Her Majesty's Secretary of State for India, No. 83 (Statistics and Commerce), dated 2nd May, 1878, forwarding, with remarks, a Memorandum by the Army Sanitary Commission on the Bengal Sanitary Report for the year 1876.

Home Department Circular letter to Local Governments and Administrations, Nos. 8—227-236, dated 7th August, 1878, circulating the above. Despatch and enclosed Memorandum.

Despatch from Her Majesty's Secretary of State for India, No. 58 (Statistics and Commerce), dated 24th April, 1879, forwarding remarks by the Army Sanitary Commission, dated 19th March, 1879, on the practical application of sanitary principles to towns and villages in India.

Resolution by the Government of India in the Home, Revenue and Agricultural Departments, Nos. 9—259-70, dated 7th July, 1879, circulating, with remarks, the above Memorandum from the Army Sanitary Commission.

Despatch from Her Majesty's Secretary of State for India, No. 102, dated 15th October, 1885, forwarding, with remarks, a Memorandum by the Army Sanitary Commission on the Bombay Sanitary Report for 1883.

Read also the following correspondence:

Report on the District Boards in the Madras Presidency for the year 1885-86, with the orders of the Madras Government thereon.

Letter to the Government of Madras, No. 132, dated 24th September 1887.

Reports for 1886 from the Sanitary Commissioners in Madras, Bombay, Bengal, the North-Western Provinces and Oudh, the Central Provinces, Burma, and Assam, with the orders of the Local Governments thereon.

Orders of the Government of India on the Reports of the Sanitary Commissioners enumerated above.

Reports for 1885-86 on the Administration of Municipalities in Bombay, Bengal, Burma, Assam, and the Hyderabad Assigned Districts, with the reviews of each Local Government and Administration concerned.

Orders of the Government of India on the Municipal Reports enumerated above.

RESOLUTION.

The practical application of sanitary principles to towns and villages in India has since the publication in 1863 of the Report of the Royal Commission on the Sanitary State of the Army in India received the continuous attention of the Government. The Report of the Royal Commission, the reports submitted subsequently from time to time by the various Provincial Sanitary Commissioners, and the suggestive reviews of those reports which have emanated from the Army Sanitary Commission in England, have brought to notice the chief sanitary defects of urban and rural areas, and have indicated the methods by which they might be remedied. It is through no want of sympathy with the cause of sanitary improvement that the Government of India has not been able hitherto to give as full effect to these recommendations as it could have wished. The difficulties to be overcome were numerous and formidable, and lay, to begin with, as much in the ignorance of the people and in the passive resistance offered by them to all departures from the practice of ages, as in the want of funds and the absence of an executive agency to give effect to the orders of the central authority. However convinced the Government of India might be of the value of

the suggestions made for its adoption, and however anxious to carry them into effect, it had to proceed with circumspection, and with a due regard to the means at its disposal as well as to the prejudices of the heterogeneous populations entrusted to its care. Under such circumstances progress has unavoidably been slow. Still considerable progress has been made. The ignorance of the people on all sanitary questions has been in some measure mitigated by the Department of Public Education, which has imported into the ordinary school curriculum instruction in the elementary principles of sanitary science. Popular prejudices have been combated by the judicious influence of the officers of Government, and by the introduction of improved sanitary methods, wherever this was practicable. Sanitary Commissioners have been appointed in all Provinces; information regarding the sanitary needs of towns, and later of rural areas, has been collected; and in many municipalities and some rural areas this information has been turned to account in the provision of a pure water-supply, of improved drainage, and of better conservancy arrangements. The Government of India readily admits that what has been done in these directions may appear small in comparison with what remains to be done. But it does not admit that, having regard to the difficulties which lay in the way, reasonable progress has not been made.

2. It has been stated that the main obstacles which have hitherto impeded sanitary improvement in India lay in the ignorance of the masses and their dislike to any change of custom, in the want of efficient executive agencies, and last, though not least, in the want of funds. Upon the first of these obstacles, the Governor-General in Council does not on the present occasion desire to dwell. It indeed still constitutes a formidable difficulty, upon which, in rural areas at all events, little sensible impression has yet been made, and its existence renders it necessary still to observe great caution in the introduction of sanitary reforms. But with the rapidly advancing tide of popular education, the perception of the beneficent intentions of the Government comes home more clearly to the people than it did; and there is less danger than there was that measures taken for the improvement of the health of the people and the prevention of disease should be misconstrued as arbitrary interference with time-honoured practices. If some years ago it was generally and correctly felt by Local Governments and Administrations that authoritatively to press the subject of sanitary improvement, especially in villages, would be of little avail, and that persuasion, not coercion, was the right plan to follow, it is no less generally felt today that a more forward, though still cautious and tentative, policy would now be opportune.

3. In considering therefore the measures most calculated to promote the cause of sanitary reform in India, attention should, in the first place, be directed to the question of executive agencies, and to the question of funds. Taking the question of executive agency first, it has to be regarded in its relation to urban and to rural areas. In relation to urban areas, the Governor-General in Council is glad to think that the question now presents far less difficulty than it did. When sanitary reform in India received its first impetus from the investigations of the Royal Commission referred to in the preamble, there was, outside the Presidency towns, practically no organization for the prosecution of sanitary work. The hardworked district officer did what he could to keep his towns clean; but sanitary science in India was then in its infancy, while the most enlightened inhabitants of Mofussil towns knew nothing about it, and never troubled themselves to learn anything. The result was manifest in the lamentable state of things depicted in the Report of the Royal Commission. Since then, however, there has been much improvement. The growth of the spirit of self-help and the perception of the advantages of sanitation in municipalities has in recent years been encouraging; and there is reason to think that the Government may with increasing confidence rely on the co-operation of municipal bodies in promoting sanitary reform. The Municipal Acts, which formerly were adapted to an early stage of civic development, have now been cast in an ampler mould. Those now in force in the various Provinces confer a larger discretion and authority to pass rules and bye-laws for sanitary purposes, and impose upon Municipal Committees the duty, as far as the funds at their disposal will permit, of providing, among other things, for the sanitation of the towns. Municipal Boards can, therefore, both entertain the requisite agency for carrying out the law, and raise the necessary funds. The areas to be dealt with are limited, and

within them the interests of the people affected are mostly identical. There is a field for concentrated effort; and the Government may, therefore, with greater confidence look to Municipal Committees for active assistance in carrying into effect the measures of sanitary improvement declared to be necessary for the towns over which they preside.

4. In rural areas the case is different. Among the village population the sense of the need for sanitary reform is but little, if at all, more developed than it was when the Royal Commission reported a quarter of a century ago. The great feature of Indian rural life is immobility of custom, upon which novel ideas make but little impression. For improving the sanitation of villages executive rules have been from time to time framed and recommended for general adoption. It does not appear however that they were anywhere productive of much good, for there was no executive agency to supervise their working or, when necessary, enforce them.

But in this important matter of executive agency a great improvement has been effected by the District and Local Boards Acts passed by the Legislative Council of the Governor-General and by the various local legislatures. In the Madras Presidency a gradation of rural Boards has been established, one of which deals with the village; another with the subdivision of a district; a third with the entire district. All these Boards have their special functions to discharge; but each has to provide within the area of its jurisdiction for the sanitation of towns and villages, and to that end is endowed with powers to entertain the necessary establishments. In Bengal and the Punjab the organization established, or to be established, is on the whole similar to that established in Madras; and though under the system introduced in Bombay, the North-Western Provinces, and Central Provinces, a larger territorial unit of self-government has been adopted, there is no reason why the executive agencies should not act effectively throughout the larger areas. The various Acts of the Legislature, which create this system of local self-government, require the Boards to undertake, among other things, local works and measures likely to promote the health of the public within the area subject to their authority, and empower them to entertain establishments for that purpose. In some instances also the laws creating these bodies confer upon them limited powers of taxation. But when this is not the case, or when it may be inexpedient to resort to taxation, or when funds may be insufficient to meet the expenditure necessary for sanitary and other improvements, it is always open to the Boards, with the sanction of the Local Government, to have recourse to loans under Act XI of 1879 (The Local Authorities Loan Act).

This legislation has therefore provided the Government of India, for the first time, with the means of creating that agency for executing sanitary reform in rural areas without which its previous exertions proved comparatively fruitless. The agency, even in the Provinces in which it has been established, is as yet in its infancy; but year by year it will grow stronger and more efficient, and the Governor-General in Council therefore desires to impress upon Local Governments that, from the beginning, the promotion of sanitation should be regarded as one of the most important duties of all District and Local Boards, and of Village Unions, where they exist.

5. In initiating and carrying approved sanitary measures into effect, it will be always essential to enlist the assistance and co-operation of the district authorities, which indeed are always available to Municipalities and Local Boards. But it must be remembered that district officers, who have generally shown themselves forward in promoting sanitary improvements and in co-operating with Local Boards in these matters, have neither the time nor the technical knowledge, nor the opportunities requisite for a comprehensive survey of the entire field of activity which is necessary for the discharge of the duties in question. Experience in India as well as in other countries has shown that, unless local executive agencies are carefully guided and controlled in sanitary matters, there is almost certain to be misdirection of energy and wasteful expenditure. As has been pertinently observed, "it is vain to hope that the numerous public bodies to which the sanitary administration of India has been committed will be found competent to discharge their important duties, so long as there is no competent authority possessing the necessary knowledge and armed with the necessary

powers to assist their deliberations, guide their actions, and, when the occasion arises, correct their mistakes and remedy their inactivity." It therefore appears to the Government of India to be eminently desirable that there should be established in each Province a Sanitary Board through which the Local Government can operate, and to which, subject in all respects to the orders of the Local Government, shall be entrusted the control and supervision over sanitary works, whether undertaken in urban or rural areas. It was one of the recommendations of Lord Stanley's Commission, referred to in the preamble to this Resolution, that a Commission of Health should be appointed at the seat of each Local Government, with purely consultative functions, to advise on all questions relating to sanitation. Something more than a consultative body is, in the opinion of His Excellency in Council, now required; and the Sanitary Boards which he wishes to create should therefore from the outset receive recognition, not only as a consultative body, but also as the executive agency through which the Government acts in the Sanitary Department.

These Sanitary Boards might be composed of an officer of approved administrative experience, the Sanitary Commissioner for the Province, and an officer of the Public Works Department skilled in sanitary engineering. With these three officers might be associated one or more non-official members appointed by the Local Government. Every Commissioner of Division in Northern India and Bombay, and possibly District Collectors in Madras, might also be *ex-officio* members of the Board when dealing with questions connected with their divisions or districts. It is probable that the duties of the Board would not, at all events for some time to come, be onerous, and could well be combined with the other and ordinary duties of the members.

Finally, it is desirable that the Provincial Sanitary Boards should, subject to the orders of the various Local Governments, be in constant communication with the Sanitary Commissioner with the Government of India, whose advice upon large schemes of sanitary reform will always be useful, and who will be in a position to communicate to one Provincial Board the results of experience gained by another. The Sanitary Commissioner with the Government of India, who acts under the general instructions of the Home Department, will thus, so far as may be needed, exercise the functions of a general co-ordinating and consultative authority; and through him the Government of India will be in a position to enforce, if necessary, that general control which it is competent to exercise over all branches of the administration. It may afterwards be necessary to associate with the Sanitary Commissioner an expert in sanitary engineering science: but this is a question which need not be raised in this place.

6. In orders issued by the Home Department on Municipal and Local Board reports for 1885-86, cited in the preamble to this Resolution, the Governor-General in Council took the opportunity of laying down the general lines on which, in his opinion, future action of local bodies should be directed in promoting sanitary reform. The principle which he had in view was, that action should be preceded by an accurate ascertainment of the requirements of each locality. Accordingly it was suggested to various Local Governments that a sanitary survey of each municipality and rural area should be undertaken with as little delay as possible, and that plans and estimates should be prepared of all the improvements necessary to provide each town or village with an efficient system of water-supply, drainage, and conservancy. The most important of these requirements, and that which, in the opinion of the Government of India, may at first be dealt with most effectively, and with the greatest chance of the active assistance and sympathy of the people, is the provision of pure water. Drainage,—especially in those localities in which the construction of public works, such as railways and canal embankments, have interfered with the natural flow of water, and may have injuriously affected the people's health,—is also a matter calling for early attention. But, while thus indicating the directions in which sanitation can be best promoted, there is on the part of the Governor-General in Council no desire to limit the discretion of Local and Provincial authorities as to their choice of action. That can best be determined by a knowledge of local requirements. In the orders in question it was added that plans, when once fixed, should be executed from year to year as

funds become available, the object aimed at being persistently kept in view until it was completed. The Government of India desires in this place to call special attention to these instructions, which were devised with the view of checking wasteful recurring expenditure; and to express the hope that the annual reports on the Administration of Municipalities and Local Boards in each Province will henceforward shew that progress is being made in the desired direction.

Another important matter to which attention must here be called is the provision in every Province of simple rules for the regulation of village sanitation. In some Provinces such rules have been for some time in operation, though with no very beneficial result, while in others it is now in contemplation to render such rules more effectual by legislation. Wherever the existing law makes no provision, or insufficient provision, for the enforcement of necessary sanitary measures in rural areas, there should be no hesitation in taking the necessary power by legislation. And in this connection His Excellency in Council thinks it may be of advantage if the attention of all interested in sanitation is again called to the valuable remarks made in 1879 by the Army Sanitary Commission on the practical application of sanitary principles to towns and villages in India. Their remarks are, therefore, published as an appendix to this Resolution.

7. Passing from the organization of the Sanitary Department to the important question of the provision of funds, it is, in the first place, to be observed that the various Municipal Acts enable the corporate bodies created by these Acts to raise by local taxation the funds necessary for local expenditure. Similar power is conferred on Local Boards by the Madras, Bengal, and Punjab Local Boards Acts, but apparently not elsewhere. It will be for the consideration of the Governments of Bombay and the North-Western Provinces and Oudh, which possess Legislative Councils, whether legislation should be undertaken with a view to confer powers of taxation upon Local Boards in those Provinces. Meanwhile it is incumbent on the Governments of the Provinces in question to place Local Boards in possession of funds sufficient to meet the reasonable requirements of local sanitation. But though sufficient money to meet current expenditure may be provided in these ways, it will probably be necessary to raise additional funds for the execution of new or large works. It is indeed probable that local income may be increased without any hardship to the tax-payers. In certain Provinces some productive methods of municipal taxation have not yet been turned to account: but even when all current revenue is taken into account, it may, and doubtless often will, be found necessary to have recourse to loans under Act XI of 1879, or to appeals to the Provincial or Imperial Governments for grants-in-aid of local resources.

With reference to loans, the Governor-General in Council desires to say that, so long as borrowed money is not spent on the ordinary current operations of a Municipal or Local Board,—so long as it is spent on works of lasting utility, there can, as a matter of principle, be no objection to imposing on the rate-payers of future years an obligation to subscribe. The Local Authorities Loan Act, XI of 1879, affords certain facilities for borrowing by public bodies; but the rates of interest at which these bodies can raise the loans in the open market are often so high as to be practically prohibitive. The Governor General in Council has therefore taken the subject of loans to Local bodies into his careful consideration, being satisfied that no policy of sanitary reform in India can be successful unless facilities are provided for local bodies to raise funds for sanitary improvements on less onerous terms than they at present can do. The Government of India has not yet come to a final conclusion on this important subject; but it is not indisposed to think that, when expensive works of the kind in question have received the previous approval of Government, and when sufficient control over the local finances has been reserved to ensure the fulfilment of the conditions on which the raising of the loan is sanctioned, it might be expedient to authorize Local Governments, subject to certain prescribed limitations and conditions, to raise and establish a Provincial loan fund, and make its own bargains with local bodies in regard to advances necessary for sanitary improvements and other works of lasting utility. The question is one of general policy, which demands careful consideration; but the decision upon it will not now be long delayed.

8. With reference to the subject of contributions from Provincial funds for sanitary works of utility, His Excellency in Council has observed with satisfaction that a willingness has already been exhibited to contribute from Provincial resources in aid of sanitary improvements, both in urban and rural areas. Where the ability of local bodies to raise loans is undeveloped and their credit not established, the Government of India approves of such contributions, and would like to see regular provision made for them in Provincial budgets, when this can be done with a just regard to other demands on Local Governments. In some cases—such, for instance, as obstructed drainage, incidentally referred to in paragraph 6 above, as resulting from great public works—contributions would be obviously appropriate. But if contributions are to take a definite place in the plan of Provincial finance, His Excellency in Council would be glad to see them systematised on the grant-in-aid principle, which has been found so effective in promoting education, care being taken to so regulate the distribution of the grants as to minimise the evils, inherent in the grant-in-aid system, of weakening local responsibility and fostering extravagance in expenditure.

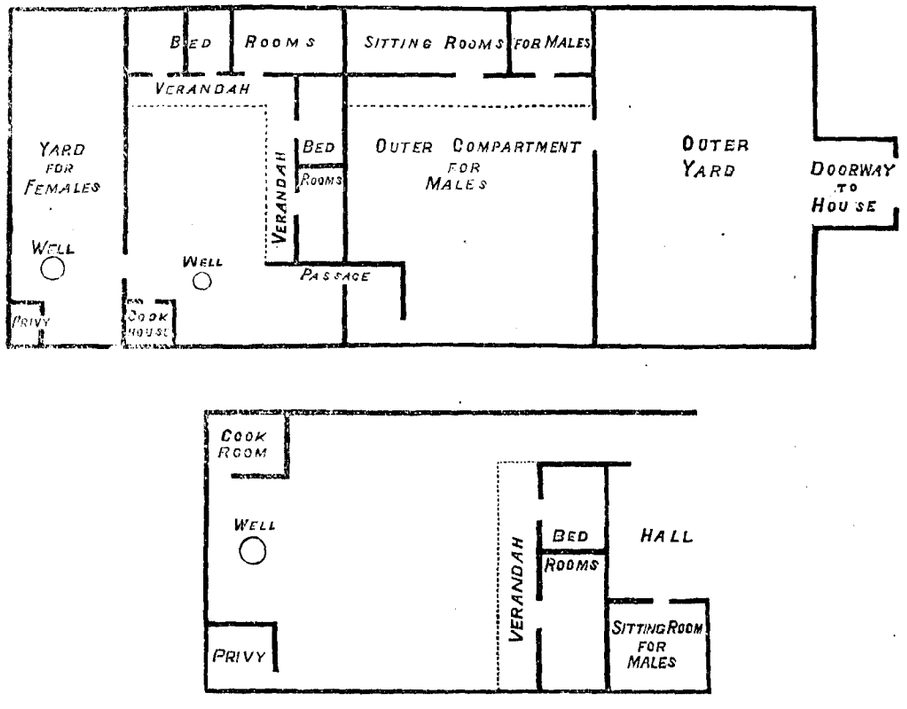
Under the system indicated above, it will, it is hoped, be possible to meet from Local resources the money necessary for Local sanitary improvements. There may, however, be very exceptional cases the requirements of which cannot be met from Local or Provincial resources or by loans. In such rare cases the Government of India will not refuse to consider applications from Local Governments in the interests of sanitary improvements of more than local importance.

ORDER.—Ordered, that a copy of the above Resolution be forwarded to Local Governments and Administrations for information and guidance; that a copy be forwarded to the Department of Finance and Commerce and to the Public Works Department, for information; and that a copy be forwarded to the Sanitary Commissioner with the Government of India, for information.

Also that the Resolution be published in the *Gazette of India*.

I.

Practical Hints for the Sanitary Improvement of the smaller Municipal Towns in India.



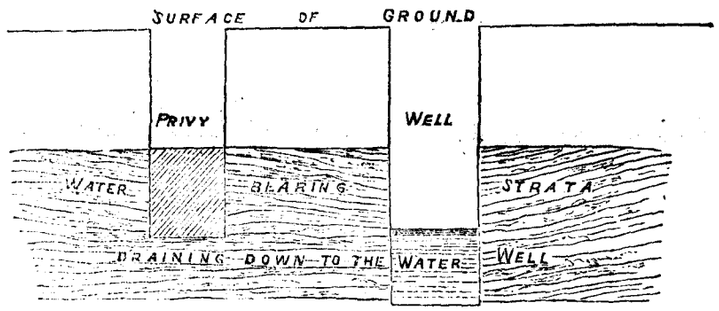
1. In the larger cities and towns in India, employing their own Engineers and Officers of Health, the foundation of sanitary improvement must be laid in works of domestic sewerage and drainage, in water-supply brought from a distance, in surface levelling, paving, and cleansing, and in surface drainage. These, together with opening up new thoroughfares, tree planting, and improved house construction, where sufficient funds are available, will improve the general health, and mitigate or prevent outbreaks of epidemic disease in all the larger groups of population. They are not only the most effectual measures which can be adopted for these objects, but for large dense populations they are in the end the cheapest.

In the smaller municipalities the chief difficulty that lies in the way of adopting them is, that where there are a few thousand people, most of whom are of the poorer classes, funds are limited, and there is no local source from which the capital sums required for the execution of permanent works can be drawn, at least at present. Although public health measures to be executed mainly by hand labour may be more costly than the current outlay for permanent works, still much may be done among small populations by the proper application of limited income; and the object of the present paper is to point out, as far as it may be practicable to do so, the chief directions in which limited local expenditure may be applied to effect this object. But the nature and extent of legislative and administrative measures and authorities required to give practical effect to the principles embodied in the following paragraphs, whether for small municipal towns or villages, must be left solely to the authorities in India.

2. In all municipalities the two primary means of preventing outbursts of disease are strict attention to domestic cleanliness, and the protection of water-sources.

There is every reason for suspecting that the chief disease causes in all Indian towns are to be found within the walls which enclose the compounds and houses.

Here are sketches of two classes of houses, taken from a Bengal report. The first of well-to-do people; the second is a middle class house.



These houses, from being enclosed within walls, have no proper ventilation, and the rooms are so dark as sometimes to require a lamp day and night.

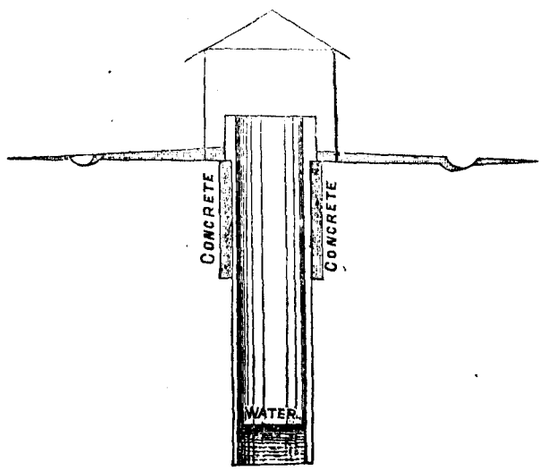
In some parts of India it is the practice to cover in the entire courtyard, so that foul exhalations are prevented from escaping into the air. In such cases ventilation of the court as well as of the houses is required. The huts of the poor have generally no enclosure walls, and have one door to the hut; they have hence more light and air.

3. The privies in all these houses are described as being "made of wells in which the dirt accumulates for years."

The plans show that the water wells are dug in the same soil, close to the privies, and this rough sketch shows the dangers to health arising from such an arrangement:

There cannot be a doubt that the well water under such circumstances is liable to constant pollution by infiltration of liquid filth from the privy, and also by foul surface washings from the yard, which is often in an exceedingly filthy state from the urine and dung of animals as well as of human beings.

Where houses have been long inhabited, the whole ground within the court walls under the sleeping rooms, from which the well draws most of its water, is fouled, and the inhabitants are exposed to all the consequences of living on foul ground, breathing impure air, especially at night, and drinking unwholesome water.



The simplest way of avoiding these dangers would be by rebuilding the houses on new ground, and adopting precautions to prevent the subsoil being polluted with filth. But as this cannot be done, the next best thing is to remedy the present evils as far as it may be practicable to do so.

4. The first step is obviously to prevent further pollution of the ground by cleansing and filling up all cesspits and filth wells. In many instances it would be advantageous to dig up and remove the surface earth of the compounds, and to replace it with fresh clean earth. Wherever means are available, the surface of the court or compound should be covered with paving, or some other hard impermeable material, such as rammed kunkur, and drained by channels to the streets outside.

Where a durable material for surface paving cannot be obtained, the most efficient substitute would probably be found in fresh clay hard rammed, so as to form a hard impervious surface, to be renewed by clean material at short intervals.

No cattle should ever be kept in small compounds. Besides the constant danger to health inseparable from this practice, it ensures rapid pollution of the subsoil, augments the difficulty of cleansing, and fouls the well water.

5. Where the cesspit has been close to the house well in the manner shewn in the plans, it would be better to fill the well up with clean earth, and dig another as far as possible from the site of the cesspit. All new wells should be cased outside with clay or cement, or with concrete, to a sufficient depth to cut off the surface and subsoil water from the well, in the manner shewn in the following section :

The well is dug and built up in the usual way, but when it comes within 8 or 10 feet of the surface, the tube must be coated outside with puddle or concrete, to cut off the upper portion of the water. The tube of the well should be carried two feet above the ground level, and covered with a roof; the ground round the well should also be coated with concrete and sloped away from the well to open channels, as shown in the plan. With these precautions, which are not difficult to take, and not costly, any well within a compound, except in very foul ground, would yield wholesome water.

6. The abolition of well or cesspit privies being absolutely necessary before the water for domestic use can be safe, the only principle that can be adopted in their stead is that of continuous daily cleansing, and removal of all house filth and refuse of food, &c. The floor of the privy should be paved or covered with concrete or asphalte, and a moveable vessel placed upon it to be

daily removed and emptied by sweepers, with or without the use of dry earth. There is absolutely no other safe plan except daily removal. If from any local cause daily removal cannot be carried out, then it may be suggested that the municipal authority should construct groups of privies with private keys for the use of families, and that all conveniences of the kind within private compounds should at the same time be abolished. The whole surface of the compound should be kept clean day by day.

7. As much of the fever from which the people suffer is due to sleeping on the ground, no greater improvement could be introduced by the municipality than inducing the people to use beds raised above the ground level.

Were these simple improvements carried out in the smaller municipal towns there would be considerable improvement in the public health, so far as the houses are concerned.

They may be summarized as follows :

(1) Abolishing all cesspits and privy wells, filling them up with clean earth, and substituting for them vessels to be emptied daily, or public privies to be provided as suggested above; all other privy arrangements to be improved in the same way, and everything removed daily.

(2) Removing all wells from the polluted ground near cesspits, and digging new wells as far as possible from them, on the principles already stated. Old wells to be filled up.

(3) Removing cattle from house compounds, improving the surface, and maintaining strict cleanliness.

(4) Raising all beds and sleeping places above the ground level.

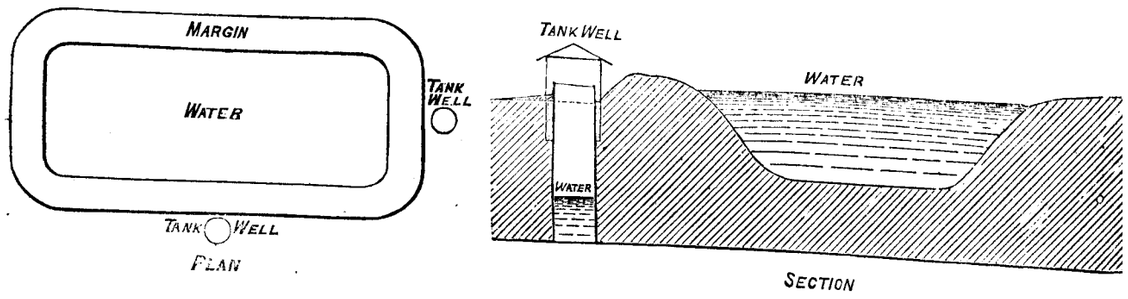
(5) Where people resort to the fields for natural purposes, provision should be made for immediately covering the deposits with fresh earth, and certain limits should be distinctly marked by posts, within which no inhabitant should be permitted to obey the calls of nature.

8. Wherever the municipality has been able to provide pure water, brought from a distance, it would be better to close all house wells, or to discourage their use. In this way the house problem would be simplified.

9. The next most important class of sanitary improvements are those required for the surface of the town outside the houses, and have for their object surface cleanliness, surface drainage, filling up and levelling all hollows and water holes not needed for supplying water for domestic purposes, or for bathing or for watering animals, and removing animals and unwholesome trades beyond the outskirts of the population.

10. It will be seen that every one of these objects can be attained without outlay of capital. All that is required is labour and a suitable direction of it.

For instance, many municipal towns suffer in health from the presence in or near them of broken ground, holes with water in them, a larger number of tanks than is required for purposes of water-supply, using the same tank for drinking, bathing, washing, and watering animals.



Where such disease causes are present, the following rules should be applied :

(1) All holes or inequalities should be filled up and levelled.

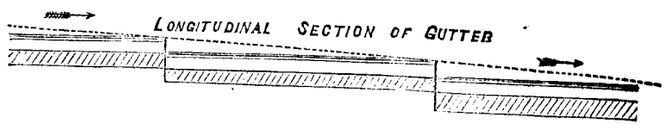
(2) No tank used for supplying domestic water should ever be used for bathing, or for watering animals. The number of tanks required for all the purposes of the town should be carefully decided, and then all others should be filled up, and the land, which is often of considerable value, should be turned to use.

(3) The margins of all tanks should be carefully formed and paved, or covered with grass. Suitable places should be provided for drawing water, not directly from the tank, which should be considered as only the water reservoir,

but connected with it, and made of masonry, as shown in the following sketch:

Wells sunk in clean ground at convenient places, and protected as already described, would supply tank water naturally filtered, and probably there would be no objection to draw the water by iron buckets, chain and windlass in a mixed community.

The municipality should take steps for the protection of all tanks and public wells. This is indeed one of their most important duties. There should always be a separate water-supply provided for low-caste people.



(4) At present the only kind of drainage suitable for small towns is open surface drainage carried along lanes and streets to some convenient outlet.

All covered drains should be avoided. The surfaces of lanes and streets should be graded so as to allow rainwater to pass readily to the surface drain, and the drain should have a shallow watertight section.

The material should be the best and cheapest to be obtained on the spot. Cut stone or concrete or asphalte might be used, or masonry or close fitting vitrified brick; but in any case it is absolutely necessary that the channel should itself be laid true, have a sufficient fall, and that all the joints should be water-tight. Open cuts in the earth are of no use, but are on the contrary to be avoided, as leading to a damp unwholesome state of the subsoil.

(5) Where lanes or roadways have a considerable fall, the strong currents produced by tropical rains are apt to injure, or even to ruin, the side drains. This may be avoided by constructing the drains with steps, to break the current.

Surfaces of roads and lanes must, as everywhere, be made of the hardest and cheapest material available. The essential points in small town and village road formation are that the gradients should be properly laid out to drain the road to the side gutters, and that the surface should be carefully kept in repair. Little labour would be required for this purpose in comparison with the outlay necessary for reinstating the road after it has been half ruined by rain and traffic.

Shallow saucer-sectioned surface drains can be kept clean by sweeping or by throwing water into them. With due care in cleansing with fresh water there would be no risk in allowing water used by households for washing and bathing to run into the surface drains.

The surface drains should discharge their contents into open impervious shallow surface sewers, by which the water could be conveyed to a distance

from the town and used at once for irrigating land, and so be finally disposed of.

All household and town impurities are best made use of by being applied to agricultural purposes, and dung-heaps near the town should be avoided.

(6) The general health of small towns may be much improved by removing all useless jungle, by lopping the lower branches of trees so as to improve the external ventilation, and by planting trees on wet or damp ground within or near the town—a measure which dries the ground and purifies the air. Tree-planting along the public roads is also beneficial to health.

(7) Another general town improvement of much importance is the removal of all ruinous dwellings and levelling their sites.

(8) Any foul unwholesome surfaces of ground within the town can readily be improved by covering the area with a few inches of clean earth, which is by far the best disinfectant to use.

11. As already stated, none of the measures proposed above need be expensive. All the materials and labour required are on the spot, and most of the work could be done by the inhabitants of houses themselves; and they ought to be required either to do what is necessary or to pay for the doing of it, on the well understood principle that an unhealthy house is not only dangerous to its own inmates, but to its neighbours, and to the town generally.

If municipalities in small towns see that these measures are carried out to the greatest practicable extent with the means at their disposal, they may confidently expect improved health and less liability to epidemic diseases.

12. But when cholera or fever, or any other epidemic, attacks a town, another duty is placed on the municipal authorities. In a small population there ought to be no difficulty in discovering the houses in which there have been cases of cholera, fever, small-pox, &c.; and whenever it comes to the knowledge of the municipal authorities that the inmates of particular houses have been attacked, immediate inquiry should be made into the sanitary state of the house. It is not safe during epidemics to stir up filth or foul ground, but there is one measure which can be taken with perfect safety—namely, to remove all animals out of the house or compound, and to cover all filth or foul ground, including cesspits, with clean earth, and in every such case the house well should be closed and water brought from outside the town. These two measures, namely, providing good water, and covering all foul matter with earth, can always be adopted with safety and advantage during epidemics; and if any other measure be considered necessary, it ought to be the removal of the people away from the affected house. When the disease has abated, the municipal authorities should proceed to improve the house and compound on the principles already mentioned.

II.

Sanitary Improvement of Villages.

13. There are four agencies by means of which village improvements can be carried out:

(1) The inhabitants,—who ought to be called on to keep their houses, cattle, privies, wells, and village streets free from nuisance.

(2) The village officers,—who might be entrusted with powers to see these things done.

(3) The zemindar or village proprietor,—who ought to be called on to keep his property in a proper condition, especially as regards village work not immediately belonging to houses and compounds, such as the conservancy of village tanks, and the adjustment of their numbers to the wants of the population, filling up all useless collections of water, and all hollows in the ground, levelling the surface, removing ruinous huts, and surface draining the village site, providing new wells, thinning jungle, &c., to improve the external ventilation. The zemindar should, in fact, see that all sanitary work is done which bears

on the health of the village as a whole, as contradistinguished from the steps necessary to keep the house and its appurtenances in a healthy condition.

(4) The Government,—whose sanitary duty in regard to village populations lies in the direction of general drainage works where these are of proved necessity for the district, and irrigation where water for agricultural purposes is deficient.

Village sanitary problems are so various, and are so much influenced by causes outside the houses, that it may be useful to state, as in the preceding paragraphs, the different agencies to be called into action, as these have been indicated in the many reports on this subject which have been received from India.

14. The village officer, where he exists, may help to remove the most important domestic causes of ill-health which afflict the great mass of the people in India. He might take the following steps, and in some way authority might be given him for this purpose. He should see that all the village streets and lanes are kept clean and free of nuisance, that no filth or foul matter is thrown on the surface, and that no one is permitted to perform the offices of nature in any village street, lane, or open space.

He should set apart some area of ground to leeward of the houses to which all filth is to be taken. He should inform the inhabitants of it, and see that the ground is used for the purpose. He should set apart one or more open spaces to which people may resort for natural purposes, and every person should be required to cover up his own filth, or where it can be done a sweeper should be paid for the purpose, as has been done at Bijnor. The field used for this object should be cropped after it has been sufficiently manured, and another field set apart. All village filth and sweepings are useful for manure, and should be spread over land at the proper season.

Care should be taken that the ground set apart for these purposes is not near any well or tank, or watersource from which drinking water is drawn.

The village officer might possibly be charged with oversight of the compounds and houses, or at all events he might call the attention of the people to the necessity for rigid cleanliness, and for removing cattle outside the compounds ; some provision might be made for stalling them outside the village but, at any rate, it would be far safer to have a cattle-pen on some open ground within the village than to keep cattle inside the houses. In such a case the village officer might enforce rigid cleanliness and removal of all manure outside the village. It would be advisable to follow the course which has been adopted in some parts of India—namely, to put up boundary marks round villages within which no deposit of any kind of filth should be allowed.

It follows from what has been said that the most urgent sanitary improvement for Indian villages is one that need cost nothing. It is simply cleanliness in which every inhabitant should lend his assistance ; but in the case of those who would prefer to pay rather than to do their own cleansing, the expense would be very small.

15. Next in importance to cleanliness is the protection of water sources; and a very simple rule of judging of the need of this can be applied by any one. It is this, to examine the ground about the well or tank. If the ground is foul and filth-sodden, no well dug in it can yield good water, and no tank is safe unless the margins are raised to prevent surface filth being washed into the tank during the rains. If in any house or compound there is a cesspit, together with a well or tank, both should be filled up. It may be taken for granted that the cesspit has so fouled the subsoil, that no good water can be got from it; and besides this, no cesspit or dung-heap should be permitted within the boundary of any house. Unless the inhabitants resort to the fields, the whole house filth should be removed daily in a portable vessel.

The safest course to take where wells are the source of the water-supply, and where they have been dug in fouled ground, is to provide a new well; probably one for the whole village might be sufficient. It should be dug in clean

ground, away from all nuisance. The subsoil water should be cut off from it by casing the well outside with concrete to a depth of 8 or 10 feet from the ground level. The tube of the well should be raised two feet above the ground, and the surface should be sloped away from the well, and paved or covered with concrete, so as to carry away all waste water. Probably the best way of drawing water would be by a windlass and iron bucket and chain, and some kind of cover should be used to keep leaves out of the well. As already stated, there should be wells for low-caste people.

Where village water is obtained from tanks, it is most important to keep one tank solely for drinking and cooking water. It should be specially protected, and never used either for bathing, washing clothes, or watering animals. Tank water can always be filtered by digging a well at a short distance from the tank.

Improved water-supply for an entire village ought to be undertaken by the proprietor, because the people have not the means of doing the work.

16. It may be repeated here that the general measures required for the whole village, and which in default of other means should be done for the people by the zemindar, are village water-supply as described, surface improvements, such as levelling ground, filling up useless tanks and holes, surface drainage, removing jungle, removing ruinous huts, &c.

These improvements would cost very little in comparison to the gain in health among the people.

17. The measures in which Government might aid have been already stated, but it may be further suggested that the Vaccination Officers might be charged by Government with the duty of instructing both village officers and people in these matters. Civil Surgeons could also render efficient aid; and all should be done under the general supervision of the Sanitary Commissioner of the Government, who would also decide the precise nature of the responsibilities resting on the village proprietors.

19th March, 1879.

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

PENSIONS AND GRATUITIES.

Special pensions to Chief and Superintending Engineers.

No. 4047, dated Simla, the 24th July, 1887.

RESOLUTION—By the Government of India, Department of Finance and Commerce.

Read—

Paragraph 2 of Resolution by the Government of India in this Department, No. 449, dated 18th April 1884.

Despatch to Her Majesty's Secretary of State for India, No. 16-P.W., dated 20th March 1888.

Despatch from Her Majesty's Secretary of State for India, No. 21-P.W., dated 17th May 1888.

By the Resolution in this Department of the 18th April 1884, special additional pensions of Rs. 2,000 and Rs. 1,000 respectively were authorised as rewards for approved service for Civil Engineers who might render three years' service as Chief Engineer or as Superintending Engineer. It was not, however, decided whether the service qualifying for these special pensions must be substantive service, or whether periods of temporary service might be included. On this question being raised, the opinions of selected officers were obtained and submitted to the Government of India, and after consideration of them, and in accordance with the principle laid down in the Civil Pension Code that two officers cannot count service for pension at one time in the same appointment, the Secretary of State was requested to allow active service, both substantive and temporary, to count as service qualifying for these special pensions, periods of furlough being excluded.

RESOLUTION.—This proposal has been sanctioned by Her Majesty's Secretary of State for India. In future, therefore, all service, whether temporary or substantive, will count as service towards the extra pensions, but periods passed on leave, other than privilege leave, will be excluded.

Periods of three months and under, during which an officer merely officiates as a purely temporary measure, will not count.

2. It is important, however, to bear in mind that these extra pensions cannot be claimed as a matter of right, but that they will only be granted, at the discretion of the Government of India, as rewards of approved services.

ORDER.—Ordered, that a copy of this Resolution be forwarded* to the Public Works Department for information and guidance, and that the Resolution be published in the Supplement to the *Gazette of India*.

* Original papers returned.

E. J. SINKINSON,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, July 23rd, 1888.

The strongly marked cyclonic conditions which prevailed over nearly the whole of India at the close of last week continued uninterruptedly during the week under review. The average barometric difference between the Ceylon stations and those of the Punjab was 0·546″, a difference which is fully equal to the average of this month. Accompanying this difference was a strong and steady monsoon current all along the West Coast, but particularly between the stations of Kurrachee and Ratnagiri. These winds extended as westerly winds right across the Peninsula, and as south-westerly winds spread across Guzerat, Rajputana, &c., into Upper India. They brought fairly heavy and general rain to the regions over which they passed, and conditions over the whole of Western and Northern India during the week were such as usually characterise a strong burst of monsoon winds from the Arabian Sea.

On the Bengal side of India the monsoon current has at times been equally strong, but has been less steady, owing to the formation of a small cyclonic storm at the head of the Bay. The first indication of this disturbance was given by the rainfall at False Point, where 5 inches of rain was reported on the morning of the 17th. On the following day the wind had shifted to north-west at Saugor Island, and the depression during the 18th and 19th developed off the Sunderbans. The storm subsequently passed inland on a west-north-westerly course, reaching Benares by the morning of the 21st and Allahabad on the 22nd, where it was apparently breaking up. The heaviest rainfall connected with the depression occurred during its formation, the amounts recorded as it travelled inland having been everywhere slight. The depression was followed by a burst of very strong winds at the head of the Bay.

In Upper India the rainfall has been general, and on the 22nd much needed rain was reported from Multan and Dera Ismail Khan. The temperature in the Punjab has been on the whole lower than it was last week, though on the 19th maxima of 115° were reported from Dera Ismail Khan and of 110° from Sialkote and Rawalpindi.

The Chart of the 16th showed that the depression which was reported from the neighbourhood of Nowgong in last week's Summary had filled up, and that the barometer had risen over the central parts of the country and over the Peninsula. At the same time a brisk fall had taken place over the Indus Valley, and gradients were consequently increasing over India. A strong monsoon current was blowing on the West Coast, south of Surat, but at the head of the Bay the winds were a trifle below their normal strength. Temperature had fallen in Guzerat, Central India, Sind, and Rajputana; increased generally elsewhere. General, and in places heavy, rain fell over Sind, Rajputana, Kathiawar, &c. The Bombay current gave rain to the West Coast districts and the Central parts of the country, but over the regions fed by the Bay of Bengal monsoon the weather was only showery. On the morning of the 17th the barometer was falling almost everywhere—most in the Punjab—and gradients were becoming steeper over the Bay and the Peninsula. The winds had not altered much. Temperature had increased especially in Upper India, and the air was generally drier. Rain had fallen, except in the east of the Peninsula and in Upper India. False Point reported 5 inches and Hyderabad 2⅔ inches, but elsewhere the falls were moderate. The Chart of the 18th showed a further fall of the barometer over Northern and Central India, and a rise over the Peninsula, so that there had occurred a considerable increase in the steepness of the gradients. Winds had

also risen except over Northern India, and at the head of the Bay, where they were light and irregular. Temperature had fallen, except in the Punjab and Sind, where high maximum temperatures were still reported. The rainfall was generally similar to that reported on the 17th. None fell in the Punjab or west of the North-Western Provinces, but elsewhere fairly general but moderate amounts were reported. On the 19th a depression had formed at the head of the Bay and very steep gradients prevailed over the Bay, as well as between the West Coast and the Punjab. A well marked cyclonic circulation existed around the storm at the head of the Bay, and a strong monsoon was blowing across the West Coast and spreading into Central and Upper India. Rain has again been fairly general, except in the Punjab and the east of the Peninsula. It had fallen moderately in Burma and heavily in parts of the North-Western Provinces. The Chart of the 20th showed that the Bengal depression had travelled slowly to North-West and that its centre lay near Burdwan. The barometer had fallen a little within the storm area, but had risen elsewhere—more especially in the Punjab. Gradients were consequently rather steeper over the Bay, while they were somewhat slighter over Western India. The cyclonic circulation around the Bengal storm continued, and a strong monsoon current was blowing across the West Coast and into Central and Upper India. Rain was fairly heavy in Burma; moderate but general elsewhere. At one or two places in the North-Western Provinces rather heavy falls were again reported. The depression had reached Benares by the morning of the 21st, and a strong southerly wind was blowing from the Bay into Bengal. A strong monsoon held on the western side of India, and the rainfall was general and fairly heavy. In the North-West Himalayas the falls were large, varying between 1 and 7 inches. By the morning of Sunday the 22nd the centre of the depression had reached Allahabad, but the disturbance was filling up. Both monsoon currents continued, however, to blow strongly, and rain was very general. Heavy falls were reported from Multan and Dera Ismail Khan, where rain was much needed. Temperature changes had been irregular, but the sky was very cloudy and the amount of moisture in the atmosphere large.

The rainfall returns show that, except in parts of Madras and perhaps in some districts in Sind, rain has fallen during the past week in all districts of India. The Punjab has received several good falls, more especially in the submontane districts, and the deficiency in Orissa has been lessened by the heavy falls which accompanied the formation of the small storm on the 17th and 18th. In Tenasserim the average rainfall was about 2 inches and in Lower and Central Burma about 1 inch a day. In Upper Burma the amounts were of course lighter, but Kyaukpyu received 11 and Bhamo 6 inches. In East Bengal, Deltaic Bengal, and Assam the rainfall was comparatively slight, though general and of almost daily occurrence. At Cherrapunji only 10½ inches were recorded. Central and Northern Bengal had larger amounts, the heaviest being Jalpaiguri, with 11½ inches. The Orissa average was above the normal, and the same is true of Chota Nagpur, though there were no very heavy amounts in these districts. Behar, the North-Western Provinces and Oudh, all received very good rains, with heavy amounts in some places. The south of the Punjab had rather scattered rainfall, and the amounts were not large, except at Fatehabad, where 4 inches was collected. The central and submontane districts received more than their average, but in the north-west and west of that Province the rainfall, though general, was short of the normal amount. In the south of the Peninsula the rain was by no means heavy, but the Konkan had heavy, and the Deccan, Khandeish, the Berars, and Central Provinces fair rain. Rajputana had less than the normal, and the same is true of the whole of the Madras Presidency. The final table shows that 23 out of the 49 divisions had more than the usual amount of rain during the past week, and that out of the 26 divisions exhibiting a defect, the deficiency in 11 of them was less than half an inch.

The seasonal returns show that there is still a deficiency over the greater part of India, the recent rainfall not having been sufficiently heavy to compensate for the long break which occurred in part of June and July. The deficiency is still considerable in Orissa, the south and west of the Punjab, Rajputana, and part of Madras. The greatest excess is in Tenasserim.

SIMLA, *26th July, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 21st July, 1888.*—Rainfall good on the West Coast, fair in Northern districts, none in Tanjore, Trichinopoly, Madura, and Tinnevelly, and slight elsewhere. Crops generally good, but withering in Madura, Salem, Anantapur, and South Arcot. Want of rain greatly felt in these districts and parts of Trichinopoly, Tinnevelly, Coimbatore, and Bellary. Pasture very scanty in Madura and insufficient in Trichinopoly, North Arcot, Tinnevelly, and Salem. Agricultural operations progressing fairly. Prices are generally rising where not stationary. General prospects fair.

Bombay.—*For week ending 25th July, 1888.*—Rain in all districts of the Presidency proper and Sind, but insufficient in parts of Kaira, Broach, Panch Mahals, Baroda, Nasik, Poona, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, and Dharwar. Sowing of early crops progressing generally, but retarded where rainfall is insufficient. Transplanting progressing in Ahmedabad, Baroda, Nasik, and Konkan. Young crops injured by caterpillars in parts of Kaira, Panch Mahals, and Upper Sind Frontier; good elsewhere. Fodder scarce in parts of Hyderabad, Broach, Nasik, Belgaum, and Baroda.

Bengal.—*For week ending 24th July, 1888.*—Rainfall has been general all over the Province during the week. In Orissa rain has come just in time to save the crops, though in the Khurdah subdivision of the Puri district scarcity is apprehended. More rain is still required in many districts for the cultivation of late rice; but the condition of early rice, jute, and sugarcane is generally good. In Behar *bhadoi* prospects are favourable. Early rice and jute are being harvested in North and East Bengal. Indigo manufacture proceeding. No marked fluctuation in the price of rice observable during the past fortnight.

North-Western Provinces and Oudh.—*For week ending 25th July, 1888.*—Good rain has fallen everywhere, and *kharif* operations are in full progress. Supplies of food-grains are sufficient, but prices in a few districts still show a tendency to rise. The condition of cattle is good.

Punjab.—*For week ending 25th July, 1888.*—Rain has fallen in almost all parts of the Province. Prices are somewhat unsettled; a rise is reported from Jullundur and Lahore districts; in others the prices are falling or stationary. Ploughings and sowings for *kharif* crops are in progress. More rain wanted in Hissar and Lahore. *Kharif* crops in fair condition. No damage done to crops. Condition of cattle is good. Fodder generally sufficient, but scarce in some districts.

Central Provinces.—*For week ending 25th July, 1888.*—Weather seasonable. Sowings continue. Rice being transplanted. Weeding commenced. *Jowari*, rice, cotton, and sugarcane thriving.

Burma.—*For week ending 21st July, 1888.*—Ploughing and sowing continue, except in the Lower Chindwin district, where no progress is made for want of rain, and in Tharrawaddy ploughing is late for the same reason. The rainfall has also been insufficient in Thayetmyo, in Lower Burma, and Mandalay, Yeu, Sagaing, Kyauksee, Pagan, parts of Minbu, Meikteila, and Yamethin districts of Upper Burma. The price of fodder has risen in Pegu in Lower Burma, and in Yeu in Upper Burma, and fallen in Toungoo in Lower Burma and in Kyauksee in Upper Burma; elsewhere prices are stationary.

Assam.—*For week ending 25th July, 1888.*—Weather seasonable. Reaping of early and transplanting of late rice still continue. Prospects of crops in general good. Tea backward in Lakhimpur.

Mysore and Coorg.—*For week ending 25th July, 1888.*—Rainfall good in parts of Shimoga, Kadur, and Hassan districts, and in the civil and military station. Standing crops generally in good condition, except in parts where more rain is much needed. Eleusine corocana (Ragee) is reported to be damaged by heavy rain in one taluk of the Shimoga district, and areca nut in another taluk of the same district. Sowing operations in progress. Outturn of crops fair.

Good rain in Coorg during the week. Standing crops promising.

Berar and Hyderabad.—*For week ending 25th July, 1888.*—Rainfall sufficient. Sowing of *jowari* is in progress, but has stopped in Amraoti district on account of heavy rain. Agricultural stock generally in good condition. Fodder sufficient, except in Amraoti district. No marked change in prices of food-grains.

Slight rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 25th July, 1888.*—Good rainfall throughout the Agency during the week. Agricultural operations in progress. Standing crops and probable outturn of harvest fairly good, except in Western Malwa and Goona. Condition of agricultural stock fair in Bhopawar. Great scarcity of fodder in Neemuch, and indifferent in Western Malwa; elsewhere fairly good. Prices high in Western Malwa, and rising in Baghelkhand.

Rajputana.—*For week ending 25th July, 1888.*—Rainfall light, but general. Agricultural operations progressing generally. Agricultural stock good. Fodder scarce in some places. Prices steady generally.

Nepal.—*For week ending 19th July, 1888.*—Good rains. Weather cooler owing to recent fall of rain. Transplanting of winter rice being pushed on. Prospects fair.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XIII. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 2nd July, 1887 (*f*). Total.	Per mile open.	Total mean length open.	Receipts for week ending 30th June, 1888. Total. GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, July 30th, 1888.

The mail steamer *Siam* from Aden to Bombay experienced, during her passage, a moderate monsoon without rain. From this report it would appear that the weather over the Arabian Sea was comparatively quiet, and that the monsoon current advancing towards India was of moderate strength, and that its rain-giving power was slight. Similar weather has prevailed over India during the week under review. The westerly wind blowing on the West Coast of the Peninsula and the south-westerly wind blowing on the Guzerat, Cutch, and Sind Coasts have generally been of about the normal strength, and the rain which they have given has been moderate in amount, though the fall has been fairly continuous and steady.

On the Bay side of India the force of the monsoon has steadily decreased during the week, and the distance between the isobaric lines over the Bay has steadily increased. The rainfall in this part of India has also been moderate or slight on most days.

In Upper India, on the contrary, conditions have been very unsettled. Several small shallow cyclonic storms have passed up the Gangetic plain—generally on a west or west-north-west course—and heavy local showers with some thunder have been experienced at several stations. During the earlier part of the week these unsettled conditions were confined to the lower part of the Gangetic plain, and the heaviest falls of rain were reported from the neighbourhood of Allahabad, Benares, &c.; but on the 28th moist winds extended well into the Punjab, and rain was reported from all stations, except those in the extreme south and west.

Temperature has continued high over the south and west of the Punjab and over Sind.

The Chart of the 23rd showed a fairly regular distribution of pressure over the Peninsula and the Central parts of the country, the isobaric lines running fairly uniformly from west to east across the country. This distribution was accompanied by a steady westerly monsoon on the West Coast, and by south-westerly winds on the East side of the Peninsula. In Northern India the distribution was very irregular. The lowest pressures were reported from the north-west of the Punjab, but over the whole of the Gangetic plain readings were nearly as low, and pressure very uniform. Small centres of depression were shown over Bengal and over Allahabad and Benares. Over the greater part of Northern India the rainfall had been light and scattered, and on the East Coast of the Peninsula, with the exception of Madras, no rain had fallen; but elsewhere rain was general, though, except at Mangalore and Mercara, on the whole light or moderate. Temperature had generally risen. On the 24th pressure had fallen fast over the Punjab, and moderately steep gradients existed over India. Notwithstanding this increase in the steepness of the gradient, nothing more than a moderate monsoon was blowing on either side of India. The general direction of the monsoon currents was the same as that reported on the previous day, but the winds over Northern India were less variable. A distinct but feeble cyclonic circulation existed around a small storm over Allahabad, and there were indications of a slight south-easterly current along the foot of the hills. There had been no rain of importance over Upper India, but elsewhere rain, though light, had been general. With this absence of rain, temperature had risen over Upper India, and high maxima were reported from the Punjab and Sind. On the following day, the 25th, a slight low pressure area had been developed over Bengal, but otherwise the distribution was the same as on the preceding day. Gradients were moderately steep over North-Western and Western India, while readings were very uniform over the North-Western Provinces and Bengal. The small depression noticed over Allahabad on the 24th had filled up. There was no change in the westerly wind across the Peninsula and the Central parts of the country, but

feeble cyclonic movements had been developed over Bengal, and the south-easterly current along the foot of the hills had increased somwhat. Strong south-westerly winds were blowing across Sind and Rajputana. Very heavy rain had fallen at Allahabad, and moderately heavy rain at Lucknow and Benares. There was no rain of importance in the Punjab and over the east of the Peninsula and the Central parts of the country, any rain which had fallen was light and scattered. Temperature had continued to rise in the Punjab and Rajputana. The Chart of the 26th showed that pressure had generally increased, and gradients between Southern and Northern India were much slighter than on the two previous days. Over Northern India the distribution remained irregular. Readings were lowest in the Indus Valley, but small shallow depressions were shown—one over Allahabad, the second between Berhampore and Purneah. The general wind directions were unaltered. Rain had fallen at the stations at the foot of the hills in the Punjab, but, in general, North-Western India remained without rain, while over the Central parts of the country and the east of the Peninsula any rain was light and scattered. Elsewhere rain was general and in places heavy. By the following morning the depression near Allahabad had increased somewhat, but otherwise there was very little change in the distribution. There was a slight indraught of wind towards the disturbance, and an irregular cyclonic circulation around it; but elsewhere the wind movements were the same as on the 26th. Rain had again fallen generally, except in North-Western India and in Madras. At some places—for example, Mussoorie and Sutna—the falls were large. The Chart of the 28th showed that there had occurred no important change in the distribution during the previous 24 hours. The slight depression near Allahabad still existed, while the lowest pressures were reported from Sind and Western Punjab. The winds were unchanged. More rain had fallen in the Punjab and Central Provinces than during the previous few days, but in parts of Bengal, the Punjab, the Konkan, Rajputana, and Madras the rainfall was slight and unimportant. Elsewhere it was general, and in some places heavy. Sutna and Rawalpindi received 5 inches. By the morning of the 29th the depression previously noticed near Allahabad had travelled westward to Jhansi, and the winds had consequently backed to south-westward over the Central parts of the country. Heavy rain had accompanied the progress of the depression westward, Agra, Jhansi, and Meerut reporting 2 inches. Rain had again been fairly general, except in Madras and the extreme west.

The rainfall return for the week shows an excess of rain in Burma, Bengal, Assam, the North-Western Provinces, and the hill districts; very little departure from the average over the West Coast districts, and some deficiency in the Punjab, the Central parts of the country, and Madras. On the Burma Coasts, Tenasserim and Arakan, the fall last week averaged 2 inches a day, and in Deltaic Burma about 1 inch. In Central and Upper Burma the amount was smaller, but there were several instances of heavy local falls, one station in Shwegyin reporting 14 inches, and Kyaukpyu reporting 27 inches. Bengal and Assam had good steady rain without any abnormal falls. At Cherrapunji the week's fall was 19 inches. In Orissa the rainfall was very slight. Chota Nagpur and Behar had constant and rather heavy rain, the largest amounts being reported from the Monghyr, Patna, and Bhagalpur districts. The North-Western Provinces and Oudh report exceedingly good rainfall, with several large amounts. In the Punjab conditions are less satisfactory. In the south of that Province there was very little rain, and in the central districts not much more. In the Submontane, Hill, and North West districts there was more, but in the West again there was very little. Along the West Coast and in Mysore the rainfall was fairly continuous during the week, but was nowhere exceptionally heavy. In the Deccan the amounts were light, and in some districts no rain at all fell during the early part of the week. Khandeish, the Berars, and the greater part of the Central Provinces experienced similar weather to that in the Deccan; Guzerat, Central India, and Rajputana had but little rain, and Kathiawar and Sind practically none. In Madras slight scattered showers occurred, but, except in South Arcot, no important fall of rain was recorded.

The final column of the table shows that over the greater part of India the seasonal rainfall is still deficient, though in a large number of the divisions the defect is not very large. The chief regions of excess are Tenasserim, Assam, the North-Western Provinces, Behar, the West Coast districts, the Berars, Central India, and the East Coast (Central). The largest deficiencies are in Orissa, the Punjab, Mysore (?), Guzerat, Rajputana, and Madras.

Province.	Division.	Rainfall data for week ending 30th July, 1888.			Rainfall data from 14th May to 30th July, 1888.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, 14th May to 30th July.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA, *30th July, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 28th July, 1888.*—Rainfall good on the West Coast, fair in Vizagapatam, Chingleput, North and South Arcot, and poor elsewhere. Crops generally good, but withering in Madura, Salem, South Arcot, and Anantapur. Want of rain greatly felt in Madura and also in the other three districts and parts of Trichinopoly, Tinnevelly, Coimbatore, Ganjam, and Vizagapatam. Pasture very scanty in Madura and in parts of Trichinopoly, and insufficient in North Arcot, Salem, and Tinnevelly. Agricultural operations progressing fairly. Prices generally rising where not stationary. General prospects fair.

Bombay.—*For week ending 1st August, 1888.*—River still low in Sind. Rain in parts of Karachi and Upper Sind Frontier and throughout the Presidency proper; but insufficient in parts of Guzerat, Kathiawar, the Deccan, and the Southern Mahratta Country. Sowing of early crops progressing in parts of Surat, Khandesh, Nasik, Poona, Satara, and Baroda, but retarded in parts of Nasik, Ahmednagar, and Belgaum. Transplanting completed in Colaba and Ratnagiri, progressing in Nasik, Thana, and Baroda, but retarded in parts of Kaira and Surat. Fodder scarce in parts of Hyderabad, Khandesh, Nasik, Sholapur, Belgaum, and Baroda.

Bengal.—*For week ending 31st July, 1888.*—Rainfall general and rather heavy in greater part of the Province. Cultivation of late rice proceeding well, but in Orissa and parts of the Rajshahye Division more rain wanted. Early rice, jute, and sugarcane generally promising. In Behar prospects of *bhadoi* crops favourable. Early rice and jute are being reaped in East and North Bengal. Indigo manufacture progressing. Considerable distress in parts of the Khurdah subdivision of Puri, and gratuitous relief and relief works on a small scale sanctioned.

North-Western Provinces and Oudh.—*For week ending 1st August, 1888.*—Abundant and general rain fell during the week. Agricultural prospects are favourable, but a break is needed for the completion of *kharif* sowings. Markets are well supplied, but prices still have an upward tendency in some districts. The condition of cattle is satisfactory.

Punjab.—*For week ending 1st August, 1888.*—Fair rain has fallen generally, except in the frontier and south-west districts. A rise in prices is reported from two districts; in others they are stationary. Ploughings for and sowings of *kharif* crops are in progress. More rain wanted at Hissar and Shahpur. Prospects of standing crops reported good. No damage done to crops. Stock cattle generally in good condition. Fodder generally sufficient, but scarce in three districts.

Central Provinces.—*For week ending 1st August, 1888.*—Weather cloudy, with light rain. More rain wanted in the rice districts in the south and east of the Provinces, but prospects are generally favourable. Sowing and weeding continue. Cattle in fair condition. Fodder sufficient.

Burma.—*For week ending 28th July, 1888.*—Ploughing and sowing continue. In Lower Burma the rainfall was sufficient, except in Thayetmyo and North Tharrawaddy. In Upper Burma the rainfall was ample in Bhamo, Myadaung, Myingyan, Lower Chindwin, and Pyinmana, but Yamethin and Mandalay got only about an inch of rain each; elsewhere the rainfall was small. The price of paddy has fallen in Prome, Henzada, Moulmein, and Pagan districts, and has risen in Tavoy; elsewhere prices are stationary.

Assam.—*For week ending 1st August, 1888.*—Weather seasonable. Early rice still being reaped and cold weather rice transplanted. Prospects of crops in general good.

Mysore and Coorg.—*For week ending 1st August, 1888.*—Rainfall good in Civil and Military Station, Shimoga and Kadur, and fair in other districts. Standing crops withering still in parts, and rain much needed in Mysore district. Sowing operations in progress in parts. Outturn of crops on the whole fair.

Good rain in Coorg during the week. Transplanting of paddy in progress.

Berar and Hyderabad.—*For week ending 1st August, 1888.*—Weather cloudy. Good rain in Berar. Weeding of cotton plants in progress. Sowing of *jowari* nearly completed. Agricultural stock good. Fodder still insufficient in Amraoti district. Prices of foodgrains almost stationary.

Slight rain fell at Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 1st August, 1888.*—No changes since last report, except improvement in agricultural stock, and pasturage in Western Malwa and Bhopawar. Prices fallen slightly in Jhabua, and risen in Neemuch.

Rajputana.—*For week ending 1st August, 1888.*—Rainfall partial and light. Agricultural operations progressing. Standing crops good generally. Agricultural stock fair. Fodder scarce in many places. Prices rising generally.

Nepal.—*For week ending 26th July, 1888.*—Good rain fell during the week. Prospects improved.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, August 6th, 1888.

The relatively quiet conditions which prevailed over India last week have continued uninterruptedly during the week under review. The monsoon on the West Coast has blown steadily, but with not more than moderate force; and the rain which has accompanied it, though fairly continuous, has in general been light or moderate in amount. On the Bombay and Malabar Coasts the wind has been usually westerly, and with this direction has travelled right across the Peninsula; while on the Sind and Cutch Coasts the wind has been south-westerly, and has penetrated inland into Rajputana, &c.

In the Bay and Northern India conditions have been much less settled than in Western India. Several small shallow depressions have been formed over Bengal, and have passed over the south side of the Gangetic plain along a west-north-west course. The depressions have occasioned the usual cyclonic circulations in their neighbourhood, and heavy showers of rain have accompanied their passage across the country.

In the Punjab showers have alternated with bright, hot weather, and the rainfall has been slighter and the temperature higher than the normal.

On the 30th the barometer was rising generally. The distribution was fairly regular and normal in Southern, Western, and North-Western India, but over the Gangetic plain conditions were unsettled, and small shallow depressions were shown—one near Berhampore, and one near Jhansi. The main low pressure area lay, as is normally the case, over the Indus Valley, and the high pressure area over Malabar, &c. A steady westerly monsoon was blowing across the West Coast and the Central parts of the country, and a south-westerly wind in Sind and Kathiawar. In Northern India the winds were very irregular in direction and feeble in force. The rainfall was fairly general, though in the Peninsula the amounts were small and scattered, and in parts of Orissa, Behar, the Punjab, and Sind there had been none. The heaviest general rainfall was in Burma, Assam, and Lower Bengal. There was no important change in the weather on the 31st. Pressure was rather more uniform over Northern India, but the feeble depressions over Bengal and near Jhansi were still shown. The winds were also very similar to those reported on the 30th. Rainfall has again been light and scattered in Upper India and a large part of the Peninsula. Burma and Lower Bengal continued to receive the heaviest general rain, but Allahabad and Sutna reported 3 inches and 2½ inches respectively.

The Chart of the 1st showed a fairly normal condition of pressure, &c. Readings were lowest in the Indus Valley, from which region an arm of relatively low pressure extended east-south-eastward down the Gangetic plain. Within this arm small centres of depression existed—one lying over Western Bengal, the second over Jhansi. The highest pressures were reported from Malabar. The wind circulation was also about normal, a well marked south-easterly current running

along the foot of the hills. The weather was showery in Upper India, but from Lucknow westward there was but little rain; while in Guzerat, Sind, and the Circars there was little or none. Elsewhere rain was general and fairly heavy. On the 2nd the barometer was falling very generally—slightly in the south, and briskly in the north—and gradients were increasing over the Peninsula. The winds had about the normal force and, except around Jhansi, where there existed a feeble cyclonic circulation, nearly the normal directions. Northern India continued to receive only local showers, but elsewhere rain was general and fairly heavy. On the 3rd the barometer was still falling very generally, and there was little or no alteration in the general distribution. Northern India and Madras reported only scattered showers, generally of small amount; but elsewhere the rainfall, though moderate, was general.

The Chart of the 4th showed that the depression which had been noticed during the previous day or two near Jhansi had almost filled up, and that a new depression was appearing over the head of the Bay. The wind had shifted to north-west at Saugor Island, and was generally variable over Northern India. Over the Peninsula and Central parts of the country a steady monsoon was blowing. Rain had been fairly general, except in the Western Punjab and Sind. On the 5th there was very little change, except that the depression near the head of the Bay had moved westward, and lay between False Point and Saugor Island. The rainfall was generally moderate, and in Upper India was slight and scattered.

The table at the close of the Summary shows that the rainfall of the week has generally been below the average, though in the great majority of districts the defect has not been large. The divisions reporting an excess of rain are Tenasserim, Bengal (Deltaic), Orissa (where rain was much needed), the Punjab (Submontane), Malabar, Madras (South Central), the Konkan, the Central Provinces (East), Guzerat, Central India, Rajputana, and the East Coast (North and South). In the other 34 divisions the rainfall has been defective, but in 14 out of the 34 the defect does not exceed ½ an inch. There are very few instances of heavy rainfall during the past week. In Tenasserim, indeed, the average for the whole division exceeded 2 inches *per diem*, but in other parts of Burma there were no cases of large local falls. In East Bengal and Assam the maximum falls in the districts varied between 3 and 6 inches, and Cherrapunji received only 6·8 inches. In Deltaic Bengal the falls were rather larger, Midnapur reporting 9½ inches; but in Central and North Bengal the maximum falls were also generally between 3 and 6 inches. In Orissa, the Cuttack and Balasore districts received good rain. Chota Nagpur and Behar had fairly continuous but generally light rain. The North-Western Provinces and Oudh had only showers, with no heavy falls; while the Punjab, though it received several heavy showers, had many days with hardly any rain. The West Coast districts had constant but not very heavy rain; and the same was true of most parts of the Deccan. Guzerat, Khandeish, the Berars, and the greater part of the Central Provinces received about an average fall; while Central India and Rajputana had a good deal more than the average. The Madras Presidency, except in the south, where there was an excess, received less than the normal amount.

The final column of the table shows that the seasonal rainfall is still defective over by far the greater part of the country.

Province.	Division.	Rainfall data for week ending 6th August, 1888.			Rainfall data from 14th May to 6th August, 1888.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, 14th May to 6th August.	Excess or defect of (seasonal) rainfall expressed as a percentage.

Simla, *6th August, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 4th August, 1888.*—Rainfall good on the West Coast, Madras, Chingleput, North Arcot, and South Arcot; fair in Tanjore, Trichinopoly, and Salem, and slight elsewhere. Crops generally good, but withering in Madura, Salem, Anantapur, and Vizagapatam. Want of rain greatly felt in these districts and parts of Trichinopoly, Coimbatore, and Ganjam. Pasturage very scanty in Madura, and insufficient in Trichinopoly, Tinnevelly, North Arcot, and Bellary. Agricultural operations progressing fairly. Prices rising in southern districts, falling or stationary elsewhere. General prospects fair.

Bombay.—*For week ending 8th August, 1888.*—River continues low in Sind. Rain in parts of Karachi and Hyderabad, and throughout the Presidency Proper; but insufficient for sowing in parts of the Deccan and Southern Mahratta Country and for rice transplantation in Guzerat; also insufficient in Kathiawar and Baroda. Sowing of early crops progressing in parts of Surat, Nasik, Satara, Dharwar, and Baroda, and transplantation in parts of Karachi, Nasik and Thana. Young crops suffering for want of moisture in parts of Karachi, Ahmedabad, Nasik, Poona, Ahmednagar, Sholapur, Bijapur and Dharwar. Rice damaged by excessive rain in parts of Kanara; cotton in parts of Kathiawar, and standing crops in parts of Upper Sind Frontier injured by insects. Fodder scarce in parts of Karachi, Khandesh, Nasik, Sholapur, Belgaum, and Baroda.

Bengal.—*For week ending 7th August, 1888.*—Rainfall has been general all over the Province during the week. In Cuttack and Puri heavy rain fell on the 4th and 5th instant, and prospects have consequently improved. Cultivation of late rice is generally proceeding well, but in places in the Rajshahye Division more rain is wanted. Early rice and jute are being harvested in some districts, and generally reported on as good crops. In Behar *bhadoi* crops are doing well, but have suffered to some extent in Patna, Monghyr and Maldah districts from the rise of the Ganges. Sugarcane promising. Indigo manufacture continues. Considerable rise in the price of rice in Cuttack and Puri during the past fortnight; elsewhere no marked fluctuation reported.

North-Western Provinces and Oudh.—*For week ending 8th August, 1888.*—Rainfall general during week. A break is needed. *Kharif* crops promise well. Sowing and weeding in progress and prospects appear favourable. Markets are well supplied, and prices are on the whole steady. The condition of the agricultural stock is generally satisfactory.

Punjab.—*For week ending 8th July, 1888.*—Rainfall general, except in Mooltan and Peshawar. Prices fluctuating in Delhi, rising in Amritsar, Lahore, Peshawar, and falling in Shahpur; elsewhere stationary. Ploughings for, and sowings of, *kharif* crops are in progress. More rain wanted at Hissar, Sialkot, Shahpur, and Peshawar. Prospects of standing crops reported good in Jullunder, Amritsar, and Lahore, average in Rawalpindi, and promising in Sialkot. No damage done to crops. Pasturage generally sufficient, but scarce in four districts.

Central Provinces.—*For week ending 8th August, 1888.*—Rain general. Weeding in progress. More rain required for rice in Seoni and Nagpur. Cotton and *jowari* thriving. Prospects generally favourable.

Burma.—*For week ending 4th August, 1888.*—In Lower Burma the rainfall was sufficient, except in Thayetmyo. Ploughing and sowing continue. The prospect in Tharrawaddy has improved. Reports have been received from eleven districts in Upper Burma, where the crop prospects have improved, except in the Minbu district, where rain is still urgently wanted. Ploughing and planting are progressing. The price of paddy has risen in Akyab, Rangoon, Henzada, Shwebo, and Lower Chindwin districts, and has fallen in Kyouksee; elsewhere prices are stationary.

Assam.—*For week ending 8th August, 1888.*—Weather seasonable. Rain somewhat wanted in Kamrup. Reaping of early rice nearly over. Transplanting of late rice continues. Prospects of crops generally good.

Mysore and Coorg.—*For week ending 8th August, 1888.*—Some rain in the Civil and Military Station. Rainfall also fair in Bangalore and Shimoga districts. Crops reported to be withering for want of rain in parts of all districts, except Bangalore and Shimoga, and sowing operations retarded in parts of Tumkur and Hassan districts. Outturn of crops in the Mysore district far below the average. Pasturage diminishing in parts. Prices slightly risen in the Mysore district and fallen in the Shimoga district.

Good rain in Coorg during the week. Standing crops in good condition.

Berar and Hyderabad.—*For week ending 8th August, 1888.*—Some rain in Berar during the week. Cotton plants one foot high. Sowing of *kharif* crops completed. Weeding in progress. Agricultural stock in good condition. Fodder and water sufficient. No marked change in prices.

Slight rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 8th August, 1888.*—Good rainfall during the week, except in parts of Bhopawar. Agricultural operations in progress. Condition of crops and pasturage improved in Nee much. No change in prices.

Rajputana.—*For week ending 8th August, 1888.*—More or less heavy rain has fallen in the Province during the week. Agricultural operations satisfactory. Standing crops good. Agricultural stock fair. Pasturage or fodder scarce in some places. Prices steady, but falling at some places.

Nepal.—*For week ending 2nd August, 1888.*—Weather hot. Insufficient rain. Early rice not very hopeful; late or winter rice requires more rain.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

(a) The difference of 1 acre in the Umballa District and 105 acres in the Karnál District between the figures for Kharif 1887, as shown in this Statement and in Form No. I for that crop, is due to additions subsequently made in the Karnál Division, Western Jumna Canal, after submission of half-yearly statements by the Executive Engineer.

(b) The general decrease in all Districts of the Western Jumna Canal during Rabi 1887-88 is due to heavy rain during the kharif and timely showers during the cold weather.

(c) The difference of 2,394 acres between the area shown in Half-yearly Return, Form No. I for Kharif 1887-88, and that shown in this statement is due to the fact that in the former the area of Chánga Mánga Plantation was shown approximately *viz.*, 6,150 acres, and now the actual area as reported by the Forest Department, *viz.*, 8,544, is shown.

(d) The decrease in the Lahore District during Rabi 1887-88 is entirely due to the shortness of supply.

Area irrigated, 1886-87	1,011,033

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR JULY 1888.

During July, in normal years, the rains are established throughout the whole of India. The monsoon currents on both sides of the country blow with their maximum strength, and in Upper India temperature undergoes a rapid fall. July is also remarkable for the large number of small cyclonic storms which form over the Bay. These storms are a common feature of the whole of the south-west monsoon period, but they are usually more numerous in July and August than in the preceding and succeeding months. They usually travel on a west-north-west or north-west course from the Bay into Upper India, and are ordinarily followed by a strong burst of monsoon winds and accompanied by heavy rainfall.

The weather of the past July has in many ways fulfilled these conditions. On the 1st, favourable monsoon conditions prevailed over nearly the whole country, and rain was falling in most places; though in the Punjab, Rajputana, and Central India the falls were somewhat slight and scattered. These conditions continued on the 2nd, except in Bengal, where a slight but distinctly marked depression was formed, and was accompanied with dry north-westerly winds in West Bengal and the east of the North-Western Provinces. Rain had been somewhat heavier in the Punjab, but was still absent from the south of that Province and from Rajputana. On the 3rd the depression from Bengal had reached Benares, and heavy rain was falling in Behar, the North-Western Provinces, and the Central parts of the country. This increase of rain in the lower part of the Gangetic plain was accompanied by a decrease in Upper India. There was very little change on the 4th and 5th. Moderately strong monsoons were blowing on both coasts, and rain was falling generally, except in the Punjab, Western Rajputana, Sind, and Guzerat. The Chart of the 6th showed that the depression which had been advancing up the Gangetic plain had disappeared, and the rainfall, except on the West Coast, had fallen off considerably. Between the 7th and 11th normal monsoon weather prevailed throughout the greater part of India, but the rain-bearing currents did not extend properly into the Punjab, where, though mist and slight rain occurred almost daily on the hills, the weather was hot and dry. On the 12th a small depression was shown off the Ganjam Coast. This depression was accompanied with easterly and north-easterly winds in Bengal, and as a consequence the rainfall over that Province decreased considerably, and only insignificant showers were experienced. On the morning of the 13th the centre of depression was off Orissa, and a well marked cyclonic circulation of the winds was shown in its neighbourhood. The rainfall remained very light in Bengal, but elsewhere it was general and fairly heavy, and had extended into the Eastern Punjab and Rajputana. Between the 13th and 14th the depression passed inland across Gopalpore, and steady monsoon winds were blowing throughout India. Rain was reported from all parts of the country, except the Carnatic, Kattiawar, Sind, and the Western Punjab. By the 15th the depression had reached the Central Provinces and to a considerable extent filled up, but there was no important change in the weather. On the 16th, 17th, and 18th the weather was of the ordinary monsoon type, moderate but general rain prevailing, except in the extreme North-West. On the 19th the Chart showed that another small cyclonic storm was forming—this time on the head of the Bay. A feeble but wellmarked circulation existed around the centre, which lay near Saugor Island, and the rainfall was light over Bengal, but heavy over Orissa. Elsewhere there was no change, and rain was reported as far west as Lahore. On the 20th the centre of the depression lay to the west of Calcutta, and a strong monsoon was blowing up the Bay and across the Bengal Coast. A strong monsoon was also blowing on the West Coast, and rain was very general, except in the Indus Valley, Rajputana, and Madras. By the morning of the 20th the depression had reached Benares and was filling up. Rain was falling in the same regions as on the 20th, the amounts being fairly large in the Central Provinces and on the West Coast. On the 22nd the centre lay near Allahabad. There was no change in the weather, but

the depression was apparently filling up; and on the 23rd it had almost entirely disappeared. With its disappearance the amount of rainfall decreased. On the 24th a small centre of depression was formed near Benares, and during this day exceptionally heavy rain fell at Allahabad. Elsewhere the rainfall was moderate, and none fell over Sind or the greater part of the Punjab and Madras. During the next few days small local depressions continued to be formed over the lower part of the Gangetic plain, and were accompanied with heavy rain; but, perhaps as a consequence of this distribution, the rainfall of the upper part of the plain was slight, and in the Punjab and Sind there was little or none. Madras also had very little rain. Just at the close of the month rain extended over the greater part of the Punjab, but not in large amounts.

The concluding table exhibits a deficiency of rainfall at the majority of the meteorological divisions. The North-Western Provinces, Northern Bengal, and the Berars report a considerable, and Behar, Lower Bengal, the Central Provinces, and Lower Burma a slight excess. In all the other divisions a deficiency is reported, though on the whole the defect is not very large.

The following table shows the amount of rain and the difference from the average during the month of July 1888, according to districts, as far as is indicated by the telegraphic reports:

W. L. DALLAS,

SIMLA, *6th August, 1888.* for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,

Secretary to the Government of India

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, August 13th, 1888.

Relatively quiet conditions have continued to prevail over India during the past week. Rain has been fairly general but not heavy, and the monsoon currents on either coast have blown with not more than the normal force. On the West Coast from Karrachee to Karwar the monsoon, though by no means strong, has been fairly steady, but to the south of Karwar the wind has been light and very variable, its direction on one occasion being from east and south-east. Rain fell continuously in the West Coast districts, but the amounts were not large, seldom much exceeding one inch in any single 24 hours.

On the Bay of Bengal side of India, the weather has been less settled, having been disturbed by a feeble depression which formed between False Point and Saugor Island and passed inland on a westerly course. The depression was very slight, and after passing inland became very diffused. It was followed by a strongish burst of monsoon winds, but the cyclonic circulation around it was in general very feeble.

In the Punjab and Sind the weather has been abnormally fine. On some days no rain whatever fell within the Province, and on others what little rain occurred was in the form of slight and scattered showers. On Tuesday the 7th falls exceeding 4 inches were reported from Delhi and Simla. In consequence temperature has been high over North-Western India, and maxima exceeding 100° have been reported from several stations. The highest reading recorded during the week was 110·5° at Dera Ismail Khan on the 12th.

At 8 A.M. on the 6th, the small depression, the formation of which over the head of the Bay was noticed in last week's summary, had increased considerably in size and passed inland. It covered a region represented by the stations of False Point, Saugor Island, Calcutta and Burdwan, and was apparently moving north-westward. The wind circulation around the centre, though distinctly marked, was very feeble. The heaviest rain connected with this disturbance fell over Orissa. In Lower Bengal the amounts were very small, and in North and West Bengal there was none. The West Coast monsoon was blowing moderately strongly, and rain in small amounts was falling over the greater part of the Peninsula, the central parts of the country, and the North-Western Provinces. Slight rain was reported from the submontane parts of the Punjab, but in general that Province as well as Rajputana and Sind was without rain. There was a fair amount of rain over the Circars, where it was much needed. Temperature had generally fallen, but high maxima were reported from the Punjab and Sind. On the 7th the Chart showed that the depression had become much larger and more diffused. The central area of low pressure extended from Lower Bengal as far west as Raipur, and from Gopalpore as far north as Allahabad. The circulation around it was feeble and irregular. Rain was reported from about the same regions as on the preceding day. The principal feature of the rainfall was the heavy showers at Delhi and in the North-West Himalaya. Temperature had again fallen over a large part of the country. On the 8th there was hardly any change in the distribution of pressure or the winds over India. The large diffused depression still occupied the same position, and light or moderate rain was reported from the greater part of the country except the south of the Punjab and the East Coast. Nowgong (Central India) reported more than 5 inches, but the amounts in the North-West were less than on the previous day. On the 9th there was again very little change, but the rainfall area had contracted, and nothing more than scattered showers were reported from Upper India or from

Madras. On the 10th the barometer had fallen over Northern India and risen over the Peninsula. In consequence the barometric gradient between the south and north had increased, but with this exception there was again very little change in the general distribution of pressure. The wind circulation was also almost unaltered. The Bay branch of the monsoon did not pass into Upper India, and hardly any rain, except on the hills, fell in that region. In Burma rain was fairly heavy, but elsewhere though general the rainfall was on the whole light. The Chart of the 11th showed that the low pressure area, recently noticed over Bengal and the east of the North-West and Central Provinces, was breaking up. There was a good deal of confused air movement within its area, and in Upper India the wind was light and variable. In most other places moderately strong monsoon currents were blowing, but on the South-West Coast an abnormal northerly breeze was reported. Rain was general, except in the North-West, and the amounts were again heavy in Burma. Temperature was rising steadily in the Punjab. On the 12th the low pressure area noticed above was still filling up, but was at the same time moving slowly west-north-westward up the Gangetic plain. There was again much confused air movement within the depression. A moderately strong monsoon current was blowing at the head of the Bay, and elsewhere the wind directions were fairly normal. Rain was again general except in the Punjab, Sind and Madras. At several central stations the falls were heavy.

The concluding table shows that the rainfall of the past week has been heavy over a considerable part of the country, and that, except in a few divisions even where a deficit is reported, the deficiency is not generally large or important. The largest deficiency is in Behar, where there has been hardly any rain compared with the normal average. Eastern, Central and Northern Bengal have also received considerably less than the average amount, though the deficiency is less than in Behar. The deficiency in these regions is due to their position with reference to the depression noticed in the previous part of the summary. During the whole time of the existence of this disturbance, easterly and northerly winds, which at this season of the year do not ordinarily bring heavy rain, prevailed over a large part of Bengal. The south and west of the Punjab had much less than their normal amount of rain. Over the whole of the Peninsula, except the West Coast, less rain than usual fell, and the same is true of Khandeish, the Berars and the west of the Central Provinces. Western Rajputana, Guzerat, Kathiawar and Sind also experienced deficient rainfall. All the other districts received ample rain. Burma, Assam and Orissa report an excess and the North-West and Central Provinces had much more than the normal amount. The West Coast districts had a moderate, and Rajputana (East) and Central India a slight excess. No exceptionally large falls are reported from any part of India during the past week. Cherrapunji had only 15 inches, and in other parts of North-Eastern India and the Eastern Peninsula there were no remarkable falls. In Orissa there was steady and rather heavy rain. In the North-Western Provinces and Oudh the maximum amounts reported varied generally between 4 and 8 inches. In the south of the Punjab, the maximum amounts were very small, but in the central and submontane parts of that Province, good falls, varying between 3 and 6 inches, were reported. In the North-West amounts were smaller, and in the west they were as small as in the south In Mysore there was no heavy rain, and in the Konkan the maximum amounts were about normal. In the Deccan (except at Banda in the Kolapore district, where 18 inches of rain has fallen) Khandeish, the Berars, and the west of the Central Provinces there were no falls of importance, but in the Central Provinces (central and east) and in Central India there were several large falls. In the east of the Peninsula the rainfall was very light.

The concluding column of the Table shows an excess in the seasonal rainfall at twelve, a deficit at thirty-four, and no departure from the mean at two of the Meteorological divisions. There is hence still considerable and widespread deficiency in the monsoon rainfall of the present season, but except in parts of the Punjab, in Orissa, East Bengal, Mysore, Madras and Guzerat, the deficiency is not usually large.

Province.	Division.	Rainfall data for week ending 13th August, 1888.			Rainfall data from 14th May to 13th August, 1888.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, 14th May to 13th August.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA, *13th August, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India*

E. C. BUCK,
Secretary to the Government of India

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 11th August, 1888.*—Rainfall good on the West Coast and Ganjam, fair in Vizagapatam and Nilgiris, and indifferent elsewhere. Crops generally good, but withering in Madura, Salem, Anantapur, Kurnool, and Tinnevelly. Want of rain generally felt in these districts and in parts of Coimbatore, Trichinopoly, Vizagapatam, and Ganjam. Pasture very scanty in Madura and Trichinopoly, and insufficient in Tinnevelly, Salem, North Arcot, and Bellary. Agricultural operations progressing fairly. No great fluctuation in prices. General prospects fair, but not so favourable in Madura, Salem, and Anantapur.

Bombay.—*For week ending 15th August, 1888.*—River low in Sind, and want of water felt throughout Karachi and in parts of Upper Sind Frontier. Rain during week throughout Presidency Proper. Total fall insufficient throughout Guzerat, Kathiawar, Khandesh, Ahmednagar, Sholapur, and Bijapur, and in parts of Nasik, Poona, Satara, Belgaum, and Dharwar. Sowing of early crops progressing in parts of Surat, Nasik, Satara, Dharwar, Kathiawar, and Baroda, and transplantation in parts of Thana and Nasik. Young crops withering for want of moisture in parts of Ahmedabad, Kaira, Khandesh, Nasik, Poona, Ahmednagar, Sholapur, Bijapur, Dharwar, Kathiawar, and Baroda. Rice in parts of Kanara, and early *jowari* in parts of Dharwar, damaged by excessive rain; cotton in parts of Kathiawar, and early crops in parts of Dharwar and Upper Sind Frontier, injured by insects. Prospects of late crops in Shikarpur unfavourable. Fodder scarce in parts of Karachi, Hyderabad, Nasik, Khandesh, Kaira, Sholapur, Belgaum, Dharwar, and Kathiawar, and cattle suffering in consequence in the first four districts. Want of water felt in two talukas of Sholapur, and in one of Broach and one of Dharwar.

Bengal.—*For week ending 14th August, 1888.*—Rainfall general, but rather light in several parts of the Provinces. In Orissa copious rain of the week has improved prospects of crops. Transplanting of winter rice well forward, but more rain wanted in parts of the Burdwan, Rajshahye, and Patna Divisions. Autumn rice and jute are being harvested, and are generally good crops; but in Bogra and Maldah autumn rice outturn will be below the average. *Bhadoi* crops and sugarcane are promising. Indigo is being manufactured. In Khoordah rain has fallen, but prices continue dear, and people are in a distressed condition.

North-Western Provinces and Oudh.—*For week ending 15th August, 1888.*—Heavy rain fell during the week throughout the Provinces doing some damage to crops on low lands in the Benares, Allahabad, Cawnpore, Banda, Farukhabad, and Jhansi districts, where a break is needed; elsewhere crops are flourishing and prospects are promising. Supplies are sufficient, and prices steady. The condition of cattle continues good.

Punjab.—*For week ending 15th August, 1888.*—Rain general, except at Lahore. Prices fluctuating in Delhi, rising in Amritsar, Lahore, and Rawalpindi, falling in Shahpur, and stationary elsewhere. Ploughings for and sowings of *kharif* crops in progress. More rain wanted at Hissar, Ferozepur, and Sialkot. *Kharif* crops in nearly all districts reported to be flourishing and in good condition. No damage done to crops. Stock-cattle are reported healthy. Pasturage or fodder generally sufficient, but scarce in three districts.

Central Provinces.—*For week ending 15th August, 1888.*—Rainfall sufficient everywhere, except in Nagpur and Bilaspur, where more is required for rice. Heavy rain has slightly damaged rice and cotton in Sambalpur. Condition of crops generally favourable.

Burma.—No report received.

Assam.—*For week ending 15th August, 1888.*—Weather seasonable, but rain wanted in Kamrup. Harvesting of early rice nearly over; transplanting of late rice continues. State and prospects of crops good.

Mysore and Coorg.—*For week ending 15th August, 1888.*—Rainfall good in the Shimoga district, but slight in other parts. Crops generally in good condition, but more rain is much needed in parts of Bangalore, Tumkur, Mysore, and Kolar districts. Sowing operations continue throughout the State.

Good rain in Coorg during the week. Season favourable for standing crops.

Berar and Hyderabad.—*For week ending 15th August, 1888.*—Good rain during the week in Berar. State of crops generally good. Weeding continues. Fodder sufficient. Prices stationary.

There has also been some rain at Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 15th August, 1888.*—Excessive rain in Bundelkhand, where condition of crops is bad. Break needed in Baghelkhand. No other changes.

Rajputana.—*For week ending 15th August, 1888.*—Rainfall in Jhallawar and Jeypore pretty good; elsewhere light. Agricultural operations satisfactory. Standing crops good. Agricultural stock good. Pasturage or fodder scarce in Meywar. Prices steady, but rising in Meywar and Jhallawar. Cotton crops satisfactory in Jeypore.

Nepal.—*For week ending 9th August, 1888.*—Slight rain almost daily. Harvesting of Indian corn commenced in the valley. Prospect of rice continues fair.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

SUPPLEMENT TO

The Gazette of India.

No. 34.} CALCUTTA, SATURDAY, AUGUST 25, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch*).

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Circular No. 75 *Ex.*
42—2.

Extract from the Proceedings of the Government of India in the Revenue and Agricultural Department (Museums and Exhibitions),—dated Simla, the 24th August, 1888.

Read the following—

Letter from the Officiating Resident in Mysore regarding the Agricultural and Industrial Exhibition to be held in Mysore in October 1888.

No. 2440—3508, dated Bangalore, the 17th July 1888.

From—GENERAL SIR H. N. D. PRENDERGAST, Officiating Resident in Mysore,

To—The Secretary to the Government of India, Foreign Department.

I have the honour to forward, for the information of the Government of India, a copy of letter No. 2068—153, dated the 3rd July 1888, from the Mysore Durbar, of the enclosed letter from the Director of Statistics and Agriculture in Mysore, regarding the Agricultural and Industrial Exhibition to be held at Mysore in October 1888.

2. Of the 1,250 copies of Prize Lists and Regulations of the Exhibition received from the Durbar, 500 have been sent to the Governments of Madras and Bombay for circulation. In forwarding the remaining 750 copies, I would invite the Government of India to assist the First Exhibition held in Mysore by circulating the Regulations to other Governments and Native States.

No. 2068—153, dated Bangalore, the 3rd July 1888.

From—R. VIJAYENDRA ROW, Esq., Chief Commissioner,

To—The Assistant to the Resident in Mysore.

I am directed to enclose copy of letter No. 27, dated 23rd June 1888, from the Director of Statistics and Agriculture in Mysore, and copies of Prize Lists and Regulations of the forthcoming Agricultural and Industrial Exhibition; and I am to request the favour of the Resident kindly assisting the Durbar in the manner suggested by Mr. Ricketts.

No. 27, dated Bangalore, the 23rd June 1888.

From—L. RICKETTS, Esq., Director of Statistics and Agriculture,

To—The Chief Secretary to the Dewan of Mysore.

I have the honour to forward 1,250 English copies and 1,000 copies in vernacular of Prize Lists and Regulations of the forthcoming Agricultural and Industrial Exhibition, and to request the favour of your transmitting these copies to the Resident in Mysore for circulation in British India and in Native States.

2. An Agricultural and Industrial Exhibition like the one proposed will not only be of local utility, but will also educate and benefit British subjects and subjects of other Native States, who may attend the Exhibition and exhibit articles. The interests of trade of the countries taking part in the Exhibition will likewise be furthered, while a large attendance will materially contribute to its success.

3. I have the honour to suggest that you will urge the British Resident to enlist the earnest co-operation of the several Administrations in British India and of the Native States, so that all interesting and important natural products and manufactured articles peculiar to each District and Province may be represented at the Exhibition.

NOTIFICATION.

The 26th June 1888.

Exhibits will, on their return from the Exhibition, be carried free of charge but at the owners' risk over the Madras, South Indian, Southern Mahratta, and Mysore State Railways, to the original forwarding station, provided a certificate accompanies the goods, signed by the Secretaries to the Exhibition Committee, stating that the goods were exhibited and have not been sold, and remain the *bonâ fide* property of the Exhibitor.

(Sd.) J. CAMERON,

(Sd.) S. A. BAPU RAO,

Joint Secretaries.

THE MYSORE AGRICULTURAL AND INDUSTRIAL EXHIBITION, 1888.

Regulations.

1. The Exhibition will be opened at Mysore at 8 A.M., on 15th October 1888, and will continue for four days.

2. The fee for admission to the Show-yard will be one rupee for adults and 8 annas for children on the 1st day and 2 annas uniformly on the subsequent days. The forenoon of the 2nd day will be set apart exclusively for the admission of native ladies.

3. Members of Committee, and other persons attending the Show-yard on duty, will be furnished with free passes.

4. The arrangement of the Show will be conducted by the Show-yard Committee selected from among the members of the General Committee. All persons entering the Show-yard will abide by these regulations and those framed by the Show-yard Committee.

5. Care-takers of valuable exhibits will be granted free passes to the Show-yard at the discretion of the Committee.

6. Cover or shelter will be provided for all exhibits except implements. Applications for space must be made to the Secretaries in the prescribed form a month prior to the opening of the Show.

7. No exhibits will be admitted without an admission order signed by the Secretaries.

8. Separate application for space must be made for exhibits competing for different classes, and each exhibit must be accompanied by an entry notice, in the form supplied, duly filled up.

9. All exhibit except live stock, vegetables, dairy produce and similar perishable articles should be produced at the Show-yard 6 clear days previous to the day on which the Show opens.

10. Live stock must be in the Show-yard clear 24 hours before the opening of the Show.

11. Vegetables, fruits, dairy produce and other perishable articles must be delivered at the Show-yard before 7 A.M. on the day of the opening of the Show.

12. Articles that are not delivered at the Show-yard as provided in the rules 9, 10, 11, shall not be eligible to compete for prizes, but may be admitted to the Show at the discretion of the Committee.

13. Exhibitors will have to pay every expense of transit, delivery, fixing and removing their exhibits, and they must either personally or by their agents superintend the reception and removal of those exhibits; in default whereof the Committee reserves to itself the right of doing whatever may be considered necessary at the expense of the exhibitor.

14. Every reasonable care will be taken of the exhibits while in the Show-yard, but no responsibility will be accepted by the Committee.

15. All stock and exhibits of all kinds must be removed within four days after the close of the Show; exhibits remaining after that time will be disposed of as the Committee see fit.

16. No exhibit of any description except perishable articles will be allowed to leave the Show-grounds until the Show is closed.

17. The competing stock and exhibits must be marked with labels supplied duly filled up.

18. The age of all live stock (classified according to age) will be calculated from the first July of the year of birth, unless the exact age is specified.

19. Every animal must be properly secured by a nose-rope or otherwise, and dangerous or diseased animals shall be refused admission or removed from the yard by order of the Show-yard Committee.

20. Each animal or lot competing separately must be in charge of a caretaker who will remain in charge of the exhibit and must be ready to lead it out at any time as required by the Committee.

21. The Committee will supply water for live stock and arrange for keeping available in the yard a supply of fodder which can be obtained on purchase, but they undertake no responsibility as to the feeding or care of stock.

22. Implements and machines will be tested and ploughing matches held on the 2nd day of the Show.

23. The Judges in each class or group will not be less than 3 in number, but they are not bound to award any or all the prizes in each case if the exhibits do not, in their opinion, merit any reward.

24. Prizes will be distributed at the close of the Show. In addition to the money prize each winner of a prize will be entitled to a certificate. Medals equivalent in value to the money prize may be awarded at the option of the prize-winner.

25. "Honourable mention" will be awarded to such articles as deserve encouraging notice though not a prize.

26. Government institutions or institutions receiving aid from Government may exhibit but not compete for prizes.

27. Judges cannot compete for prizes in the classes or sections in which they are judging.

28. Articles on sale and articles sold should in either case have cards attached to them notifying the same. The Show-yard Committee will afford all possible assistance to the owners in effecting such sales but cannot accept any responsibility.

29. The Committee have full power to make rules for the conduct of the Exhibition under these regulations and their decision is final in all cases.

J. CAMERON,

S. A. BAPU RAO,

Joint Secretaries of the Mysore Agricultural and Industrial Exhibition.

ORDER.—Ordered, that the papers read above be published in the Supplement to the *Gazette of India*, and that copies be forwarded to the Local Governments and Administrations noted on the margin* for information, with the request that any encouragement which can be reasonably given should be shown to the undertaking.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, August 20th, 1888.

The relatively quiet conditions which have prevailed over India during the past few weeks disappeared during the week under review. On the West Coast the monsoon current has blown stronger and with fewer irregularities than during the previous week, while on the opposite side of India the cyclonic vortices which have been formed have been larger and more intense than those formed during the previous three weeks. Another important characteristic of the storms formed during the present period has been the tendency they have displayed to travel on a more westerly course than their predecessors. This has exercised an important influence on the weather, as they have not interfered with the free advance of the monsoon current from the Bay of Bengal into Upper India. In consequence, not only has the rainfall been heavy in the immediate neighbourhood of the storm, but the south-easterly winds on the northern side have given fairly heavy rain to the greater part of Northern India.

In the Punjab, Rajputana, and Sind the reports of the 14th, 15th, and 16th showed that very little rain had fallen within those Provinces; but on the 16th rain had extended as far west as Sialkot, and before the close of the week had reached as far as Peshawar. This extension of rain westward was preceded and accompanied by a brisk fall of temperature, the change on some days and at some stations equalling 10°.

The Chart of the 13th showed the existence of abnormally high pressures over Rajputana, the south-east of the Punjab, and the north-west of the North-Western Provinces, while on either side of this shoulder, *viz.*, over the Indus Valley on the one hand and the neighbourhood of Allahabad on the other, relatively low pressures were shown. A feeble cyclonic storm lay between Allahabad, Benares, and Gorakhpur. The existence of this small storm and of the high pressure shoulder over Rajputana and the North-Western Provinces apparently prevented any considerable extension of monsoon rainfall into North-Western India, the only amounts reported from the Punjab being slight showers at Delhi and Ludhiana, while in Sind and the greater part of Rajputana there was no rain. In Madras any rain which fell was slight and scattered. Elsewhere the rainfall was general and in places heavy. Chittagong had over 3 inches; Gya and Lucknow, over 4 inches; Saugor (Central India), over 7 inches; and Nowgong and Jeypore, over 3 inches. On the 14th the small local storm over Allahabad had disappeared, but the general distribution of pressure and of rainfall was unaltered. There was no rain at all in the Punjab or in Sind, and only a slight shower at Jeypore in Rajputana. Elsewhere rain had fallen generally but less heavily than during the previous 24 hours. The heaviest falls recorded were $4\frac{3}{4}$ inches at Nowgong (Central India) and over 3 inches at Akyab and Chittagong. High maximum temperatures were recorded from most of the Punjab stations, as well as from parts of Sind

and South Madras. On the 15th there was again no important alteration. There was no rainfall in the Punjab, Western Rajputana, or Sind, but moderate general rainfall elsewhere. In Burma and Lower Bengal the falls were heavy. High maxima were again reported from the Punjab, Sind, and South Madras. The Chart of the 16th showed that the barometer was falling all over Northern India, but was rising in the South. A barometric depression was forming over Bengal, and easterly and south-easterly winds were advancing along the foot of the hills into Upper India. The shoulder of high pressure over the east of the Punjab and west of the North-Western Provinces showed signs of giving way. Rain was reported from Delhi, Sialkot, and Simla, but, with these exceptions, the Punjab, Western Rajputana, and Sind were without rain. Over the Central parts of the country the falls were light and scattered, but elsewhere rain was general, though on the whole not heavy. The maxima reported from the Punjab, Sind, and Madras were still high, but the mean temperature had begun to fall. On the 17th a well marked depression was shown over Bengal, and very heavy rain was falling in Behar and the east of the North-Western Provinces. The development of this depression had been accompanied with a further development of the Rajputana shoulder of high pressure, and consequently the rainfall in North-Western India was again slight. General rain continued elsewhere. During the 17th the depression advanced westward; and its centre at 8 A.M. on the 18th lay between Nowgong and Sutna. Its advance westward had broken down the Rajputana high pressure, and the monsoon current from the Bay had penetrated and carried rain into the greater part of the Punjab. Heavy rain was still falling on the western side of the depression, and moderate general rain was falling elsewhere. The monsoon currents on both sides of India were blowing strongly. There had occurred a brisk to rapid fall of temperature in the Punjab and North-Western Provinces. On the 19th the storm lay near Saugor, and rain had extended to Deesa, Rajkot, and Mooltan. The monsoon currents both continued strong; but in Northern India the winds were light. The heaviest rainfall was 6 inches at Saugor. Temperature had again fallen in the Punjab.

The following report referring to the conditions over the Arabian Sea during the past week was kindly telegraphed by the Superintendent, P. O. Company, Bombay:—In the Gulf of Aden the winds were light and variable, and the barometer about normal; from the Gulf of Aden to Long. 61° East a fresh monsoon, cloudy weather, and a slightly high pressure were experienced; and from Long. 61° to Bombay a strong monsoon and heavy sea. It is evident from this report that favourable monsoon conditions prevail over the Indian region.

The concluding table shows that very fair rain has been experienced over a very large portion of the country during the past week, and that in some divisions there has been a very considerable excess. Thirty of the meteorological divisions report an excess for the week varying from only a few hundredths of an inch to as much as $7\frac{1}{2}$ inches, while eighteen divisions report deficiencies varying from a few hundredths to nearly 4 inches. The regions where the rainfall of the week has been excessive are Burma, Bengal, Behar, the North-Western Provinces, Oudh, the Central Punjab, Malabar, Madras (South Central), the Konkan, the Deccan, the Central Provinces, and Central India, Guzerat, Kattiawar, Rajputana (East), and the East Coast (Central and

South). The divisions where there has been a deficiency are Assam, Orissa, the greater part of the Punjab, Coorg, and Mysore, the Berars, and Khandeish, and the greater part of Madras. The rainfall over Burma was very heavy and continuous. In Tenasserim some places had an average of over 2 inches a day; in some districts in Central Burma equally heavy falls were recorded; and at Kyaukpyu in Upper Burma the week's fall equalled 26 inches. At this station the total rainfall since the 14th of May is 169 inches, or rather more than 1½ inch per day throughout the whole period. For the Sandoway district the average for last week was 3 inches per diem. In East, Central, and Deltaic Bengal the rainfall was steady and continuous, but was less heavy than in Burma, the largest amount reported being 14 inches at Nuddea. In Northern Bengal the amounts were about the average. In Orissa there were some fairly heavy falls, Pibli reporting 5 inches and Kendrapan 4·8 inches; but the average for the district was a little short of the normal. Chota Nagpur and South Behar had several heavy falls, while in North Behar the amounts were generally about the average. In the North-Western Provinces and Oudh very heavy rain was experienced, the heaviest recorded falls for the seven days being 12 inches in the Mirzapur and Allahabad districts, 14 inches in the Banda district, 15 inches in the Cawnpore district, and 19 inches in the Dera Doon. The Punjab (South and Central) had fair rain, 2 inches being reported from the Ferozpur and Hissar districts, and between 2 and 3 inches from the Central division. The Submontane and Western divisions had good falls of rain at the close of the week. The West Coast and the Deccan have had steady and continuous but not heavy rain. In Khandeish, the Berars, and the west of the Central Provinces slight rain has fallen steadily; but the heaviest falls vary generally between 1 and 4 inches. In other parts of the Central Provinces, in Guzerat and in Central India several heavy falls are reported. At some places in the Chingleput, Arcot, and Trichinopoly districts heavy rain has occurred, but as a rule throughout Madras the rainfall has been light.

The final column of the concluding table shows that at 16 of the meteorological divisions the seasonal rainfall exhibits an excess, and that at 32 there is still a deficiency; but at 10 out of these 32 divisions the defect is less than 10 per cent. of the seasonal fall, and may hence be disregarded. The divisions with the largest excess of rain are Tenasserim, the North-Western Provinces (Central), and Madras (South Central); while the divisions with the greatest deficiency are the Punjab (South and West), Mysore, Rajputana (West), and the East Coast (North).

SIMLA, *20th August, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 18th August, 1888.*—Rainfall general,—good on the West Coast, poor in Anantapur, Madura, and Salem, and fair elsewhere. Crops generally good, but withering in Madura and Salem and in parts of Vizagapatam, Anantapur, North Arcot, Tinnevelly, and Nilgiris. Want of rain much felt in these districts and in parts of Coimbatore, Trichinopoly, and Ganjam. Pasture very scanty in Madura, Trichinopoly, Salem, and Tinnevelly, and insufficient in North Arcot and Anantapur. Agricultural operations generally progressing fairly. No great fluctuations in prices. General prospects fair, but not so favourable in Madura, Salem, Anantapur, and Vizagapatam.

Bombay.—*For week ending 22nd August, 1888.*—Slight rain in parts of Karachi and Hyderabad, but river still low. Area of early crops less than average, and prospects of late crops unfavourable in Shikarpur. Rain during week throughout Presidency Proper, and prospects generally improved, especially in Guzerat and Kathiawar. Total rainfall still insufficient throughout Khandesh, Ahmednagar, Sholapur, and Bijapur, and in parts of Surat, Ahmedabad, Nasik, Poona, Satara, Belgaum, and Dharwar. Crops suffering for want of rain throughout Sholapur, in three talukas of Nasik and Poona, four of Bijapur, and one of Dharwar. Prospects of early crops in Ahmednagar generally unfavourable. Sowing of early crops progressing in parts of Nasik, and transplantation in parts of Kaira, Panch Mahals, Surat, Nasik, and Thana. Rice in parts of Kanara, and other crops in parts of Belgaum and Dharwar, damaged by excessive rain. Fodder scarce in parts of Hyderabad, Nasik, Khandesh, Karachi, Ahmednagar, Sholapur, Belgaum, and Kathiawar. Want of water felt in six talukas of Karachi, in one of Upper Sind Frontier, and in parts of Sholapur.

Bengal.—*For week ending 21st August, 1888.*—Rainfall has been general all over the Province, and heavy in South-West and East Bengal, South Behar, and Chota Nagpur. Prospects of late rice are generally good, but in parts of the Rajshahye, Patna, and Orissa divisions rain is still required for transplanting. Early rice and jute harvests proceeding and good yield expected; but in Dinagepur, Bogra, Maldah the outturn of early rice will be below the average. *Bhadoi* crops are generally promising; but in Gya and Hazaribagh they have suffered from excessive rain. Sugarcane is a good crop. Indigo manufacture continues. Distress in Khurdah continues; and bad accounts are also received from some other parts of the Orissa division.

North-Western Provinces and Oudh.—*For week ending 22nd August, 1888.*—There was general and plentiful rain during the week. In Cawnpore the fall was very heavy in places, causing serious damage to crops. Crops have also suffered in Benares, Rai Bareli, Partabgarh, Allahabad, Farukhabad, and Jhansi, and in these districts a break is much needed; otherwise crops are flourishing and prospects are good. Supplies of foodgrains are sufficient; and except in Ballia, Rai Bareli, Allahabad, and Bareilly, where they are still rising, prices are steady. The condition of cattle continues satisfactory.

Punjab.—*For week ending 22nd August, 1888.*—Rainfall general, except at Shahpur. Prices fluctuating in Delhi, rising in Ferozepore, Amritsar, Rawalpindi, and Shahpur, and stationary elsewhere. Ploughings for and sowings of *kharif* crops in progress. Weeding commenced in Jullundur. Ploughing for *rabi* has also commenced in Shahpur. More rain wanted at Hissar and Ferozepore. *Kharif* crops flourishing and are in fair condition. Prospects of standing crops are reported generally good, and average in Jullundur and Rawalpindi. No damage done to crops. Stock cattle are reported healthy. Fodder generally sufficient, but scarce in three districts.

Central Provinces.—*For week ending 22nd August, 1888.*—Good rain during the week in all districts, except in the Harda tahsil of Hoshangabad and in Nagpur, where the fall has been scanty; but heavy rain has fallen in Nagpur since the week under report ended. Prospects generally continue favourable. Rice in Sambalpur in excellent condition. Cattle healthy. Prices rising in Saugor.

Burma.—*For week ending 11th August, 1888.*—In Lower Burma there was sufficient rain in all districts. Agricultural operations are everywhere progressing favourably. In Upper Burma there was but little rain, except in Bhamo, Myadaung, Minbu, Yamethin, Pyinmana, and Upper Chindwin. Rain is much wanted in parts of Bhamo and Yeu districts. Ploughing and sowing continue. The price of paddy has risen in Moulmein and Tavoy, and has fallen in Shwebo. Elsewhere prices are stationary.

Burma.—*For week ending 18th August, 1888.*—Agricultural operations advancing satisfactorily both in Lower and Upper Burma. 10,000 acres of paddy have been destroyed in Payagale township, Pegu district, owing to the bursting of the Pagaing bund. Crops have been slightly damaged in Moulmein, Shwegyin, Toungoo, and Tavoy districts by heavy rain and floods. In Lower Burma the rainfall was satisfactory in all districts, and in Upper Burma it was more plentiful than in the previous week, except in Myadaung and Minbu districts. In Upper Burma the price of paddy was stationary; in Lower Burma it rose in Sandoway, Tharrawaddy, Thongwa, Henzada, Moulmein, Amherst, and Tavoy districts.

Assam.—*For week ending 22nd August, 1888.*—Weather seasonable, but rain wanted in Lakhimpur, Darrang, and Kamrup. Reaping of early rice almost over. Transplanting of late rice still continues. Prospects of crops generally good.

Mysore and Coorg.—*For week ending 22nd August, 1888.*—Rainfal general and slight. Good showers reported in parts of Shimoga and Kadur districts. Crops in parts of the Mysore, Kadur, and Chitaldroog districts, and in the northern taluks of the Tumkur district, require more rain. Sowing of dry crops generally completed, and transplanting of paddy progressing. Outturn of harvests fair. Prices slightly risen in the Kolar and Tumkur districts.

Good rain in Coorg during the week. Transplanting of rice well advanced. Continuous rain hurtful to coffee crops in North Coorg.

Berar and Hyderabad.—*For week ending 22nd August, 1888.*—Slight rain during the week in Berar. Cotton and *jowari* good. Weeding in progress. Pasturage abundant. Agricultural stock in good condition. No change in prices.

There has been slight rain at Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 22nd August, 1888.*—Excessive rain in Bundelkhand and Baghelkhand, slight in parts of Bhopawar, and good elsewhere. Crop slightly damaged in Bundelkhand, Goona, and Bhopawar. Prices of foodgrains rising slightly in Bhopawar and Neemuch.

Rajputana.—*For week ending 22nd August, 1888.*—Heavy rainfall in Abu, Jhallawar, Jeypore, Kerowlee, and Dholepur, light elsewhere, and none in Marwar. Agricultural operations satisfactory. Standing crops good generally, but slightly damaged at places. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally, but fluctuating at places. Cotton crop favourable in Jeypore.

Nepal.—*For week ending 16th August, 1888.*—Good rain fell during last week. Agricultural prospects generally good. Sowing of *marua* commenced after harvesting Indian corn.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XVII. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 30th July, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 28th July, 1888. Total.	Per mile open.	Total Receipts from 1st April to 30th July, 1887. Total.	Per mile open per week.	Total Receipts from 1st April to 28th July, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

(*Statistical Branch*).

E. J. SINKINSON,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, August 27th, 1888.

Strongly marked monsoon conditions have prevailed over India during the past week. These conditions reached their maximum intensity on the 24th, after which they gradually fell off, and at the close of the week the weather was much less rough and unsettled than it had been previously. Between the 21st and the close of the week a small storm was formed at the head of the Bay and travelled inland as far as Chota Nagpur. It had the usual characteristics of the storms which are formed during the south-west monsoon period, but was very much more severe than any of the previous storms this year. It occasioned exceedingly heavy rain in its immediate neighbourhood, and was accompanied with very strong winds and rough weather.

Over the greater part of the Punjab and Rajputana rain has been of almost daily occurrence, and in Sind rain fell on the 21st, 22nd and 23rd. In consequence there has been a brisk fall of temperature over these regions, and except in Upper Sind the maxima have been very much lower than in the previous weeks.

On the morning of the 20th the Chart showed two well marked depressions. One had its centre near Neemuch, the other its centre to the south of Saugor Island. Around each of these disturbances there existed a well marked cyclonic circulation of the wind. A strong monsoon was blowing across the West Coast and thence into the central parts of the country, while the Bay monsoon blowing with moderate force passed round the eastern side of the Bengal depression and thence passed into Upper India, travelling as a south-easterly wind up the Gangetic plain as far as the Indus. Except in Sind and some parts of Madras, rain was falling in all parts of the Indian region, the largest amounts being 2¼ inches at Dacca, 3½ inches at Goa, and 7 inches at Mount Abu. Temperature had fallen briskly, except over the central parts of the country, Guzerat, &c. The highest maximum was 110° at Jacobabad. By the 21st the disturbance which on the previous day had been reported from Neemuch had reached the Runn of Cutch, while the Bengal disturbance had passed northward to the neighbourhood of Dacca and almost filled up. The cyclonic circulation around the Cutch depression was very distinct, while that around the Bengal depression was feeble and indistinct. Northerly breezes were reported from Lower Bengal, indicative of the formation of a fresh disturbance at the head of the Bay. Except in parts of the Punjab and Madras, rain was general, and in places heavy. Three inches fell at Berhampore, two-and-a-quarter at Calicut, three-and-a-half at Nagpur, three at Jubbulpore, and six-and-a-half at Deesa. On the 22nd a fresh and rather deep depression was shown over the head of the Bay, while the disturbance which was crossing Cutch on the previous day had almost filled up. A strong and rising cyclonic circulation of the winds prevails around the Bengal depression, and a strong indraught of south-west monsoon winds prevailed along the whole length of the West Coast. Except in Madras, rain continued general. At Diamond Island and Akyab 3 inches had fallen; at Saugor Island 5 inches; at False Point 2¼ inches; and at Cuttack 3¼ inches. Temperature had decreased very generally. The Chart of the 23rd showed that the Cutch depression had entirely disappeared, while the Bengal depression had, on the contrary, developed considerably. The centre of the disturbance was apparently near Saugor Island, where pressure was about 0·25″ below the normal. The cyclonic circulation around the Bengal depression was very strong, and a vigorous monsoon current was also blowing across the Bombay Coast and into the central parts of the country. Rain had fallen generally, except in the Indus Valley and the eastern side of the Peninsula. The heaviest amounts were 6 inches at False Point, 7 inches at Cuttack, 3 inches at Darjeeling, 5 inches at Sialkot. On the 24th the centre of the Bengal depression had advanced north-westward, and lay near Burdwan. Within the centre

pressure was probably about $\frac{1}{3}$ of an inch below the normal. Very strong winds circulated around the centre of depression, the velocity of the south-south-west wind at Saugor Island being as much as 62 miles per hour at 8 A.M. Except in Madras and the Indus Valley, rain had been very general. At Saugor Island, 14 inches fell; at Calcutta, 5 inches; at False Point, $2\frac{1}{4}$ inches; at Sialkot, $2\frac{1}{2}$ inches; and at Mount Abu, $4\frac{1}{2}$ inches. Temperature had generally risen. The Chart of the 25th showed that the depression had continued to move slowly north-westward, and that the centre lay to the west of Berhampore. It was apparently filling up, and the winds around the disturbance were less strong than on the previous day. The monsoon current on the West Coast was weaker than on the 24th, and the winds were feeble and irregular in Upper India. Rain was less general than during some preceding days, the weather being merely showery in Upper India, the central parts of the country, and the east of the Peninsula. Large falls were reported from several stations, the most important being 6 inches at Calcutta, and $3\frac{1}{2}$ inches at Darjeeling and at Ratnagiri. On the 26th the Bengal depression had to a large extent filled up. Gradients had become generally slighter, and the weather had a more settled appearance over a large part of the country. The winds were generally moderate in force, both in Bengal and on the Bombay side. Rain remained fairly general. The largest amounts reported were $2\frac{1}{3}$ inches at Hazaribagh and Mount Abu, and $3\frac{1}{2}$ inches at Madura.

The following report, referring to the conditions over the Arabian Sea during the past week, was kindly telegraphed by the P. & O Agent, Bombay: "Between Aden and Bombay light to moderate monsoon prevailed, with fine weather. Rain fell on approaching coast. Barometer normal." From this report it would appear that the monsoon current is less strong than it was in the previous week, and that the weather is generally quieter.

The rainfall table at the close of the summary shows that heavy rains have been experienced over nearly the whole country. Thirty-three of the meteorological divisions report an excess for the week and only sixteen a defect. The regions reporting deficiencies are the Assam Valley, Bengal (North), the North-West Provinces (East, North, and Submontane), Mysore, Khandeish, the Berars, the Central Provinces (East), Central India (East), and the east of the Peninsula. Of these sixteen districts, the deficiency in eight is less than half an inch, and hence is generally unimportant. The greatest excess of rain is reported from those districts which were under the influence of the depressions noticed in the preceding portion of the summary. Thus in Arakan and Deltaic Bengal the excess equalled 6 inches; in Orissa, 7 inches; in Guzerat and Kattiawar, 2 inches; and in Rajputana (West), 9 inches. In the Eeastern Peninsula, except at a few places in Upper Burma, rain fell on every day of the week, but, except at Kyaukpyu where 15 inches and at Sandoway where 16 inches fell, the amounts were not large. In East and Deltaic Bengal rain was heavy and continuous. In Assam the weather was only showery. Heavy rain fell over Central Bengal, Orissa, Chota Nagpur, and Behar; but in North Bengal the amounts were generally not large. In the North-Western Provinces rain fell almost daily. The maximum amounts were between 1 and 4 inches, and the rainfall, as a whole, differred but little from the normal. In the Punjab, though there was much fine weather, there were several heavy showers, and the rainfall generally was excessive. Malabar, the West Coast, and the Deccan, all had fair rainfall without any excessive falls; but the Berars and Khandeish had less than the normal amount. In the Central Provinces the maximum falls varied between 3 and 5 inches. In Guzerat and Kattiawar the early part of the week was very wet, and several abnormally large falls were registered. Central India (East) had moderate rain; but Central India (West) and Rajputana (East and West) had very heavy rainfall. The east of the Peninsula had generally light rainfall, with occasional heavy showers.

The concluding column of the table shows the present condition of the seasonal rainfall. In 22 divisions there is an excess, and at 27 there is still a deficiency, in the rainfall of the season. At the majority of these divisions however, except those in the west and south of the Punjab and in the east of the Peninsula, the amount of the deficiency is generally trifling.

SIMLA, *27th August, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 25th August, 1888.*—Rainfall general, good on the West Coast, and poor in Madura, Trichinopoly, Coimbatore, Tinnevelly, Bellary, Anantapur, and Kurnool. Crops generally fair, but withering in Madura, Salem, and in parts of Vizagapatam, Anantapur, Bellary, Kurnool and Tinnevelly. Want of rain much felt in these districts and in parts of Ganjam, Cuddapah, North Arcot, Coimbatore and Trichinopoly. Agricultural operations progressing fairly. Prices generally rising where not stationary. General prospects fair, but not so favourable in Madura, Salem, and in parts of Anantapur, Vizagapatam, and Bellary.

Bombay.—*For week ending 29th August, 1888.*—Rain throughout Presidency Proper and Sind. Total fall insufficient in parts of Ahmedabad, throughout Ahmednagar, Sholapur and Bijapur, in four talukas of Surat and Poona, in three of Khandesh and Satara, in six of Nasik, two of Dharwar, and in the north-east talukas of Belgaum. Standing crops suffering for want of moisture in Sholapur and Ahmednagar and in parts of Poona and Nasik, and injured by excessive rain in parts of Belgaum, Dharwar and Kanara. Transplantation in progress in parts of Karachi, Hyderabad, Ahmedabad, Kaira, Surat, Nasik, Thana, and Baroda. Sowing of cotton commenced in parts of Belgaum and Dharwar. Fodder scarce in parts of Khandesh, Nasik, Ahmednagar, and Sholapur. Want of water felt in one taluka of Upper Sind Frontier and in parts of Sholapur.

Bengal.—*For week ending 28th August, 1888.*—Copious rain with high wind over the whole Province. The rain was exceptionally heavy in Orissa, and in parts of South-West and East Bengal, where the rice crops have been submerged in many places. Transplantation of late rice is almost over. Early rice and jute harvests are proceeding. In Behar the *bhadoi* crops are doing well, but on the banks of the Ganges they have suffered from inundation. Sugarcane promises to be a good crop. In Khurdah great distress exists among labouring classes, and relief is being given gratuitously and by way of tuccavi advances and works.

North-Western Provinces and Oudh.—*For week ending 29th August, 1888.*—Rain continued during the week throughout the Provinces, and a break is now generally needed. Crops in low lands have suffered considerably, but otherwise prospects of the *kharif* are good. Rice is being transplanted, and indigo cutting has begun. Supplies are sufficient, and prices steady. The general condition of agricultural stock continues favourable.

Punjab.—*For week ending 29th August, 1888.*—Rainfall general, except at Peshawar. Prices fluctuating in Mooltan, rising in Delhi, Umballa, Amritsar, Rawalpindi and Shahpur, falling in Sialkot and Lahore, and stationary elsewhere. Ploughings for and sowings of *kharif* crops completed. Weeding finished in Umballa, and in progress in Jullundur. Ploughings for *rabi* commenced in Jullundur, Ferozepore, Lahore, and Shahpur. More rain wanted at Hissar. *Kharif* crops flourishing, and are in fair condition. Prospects of standing crops are reported good. No damage done to crops. Stock cattle are reported healthy. Fodder generally sufficient, but scarce in Dera Ismail Khan.

Central Provinces.—*For week ending 29th August, 1888.*—Rainfall somewhat deficient in parts of the Hoshangabad and Bilaspur districts; elsewhere weather seasonable. *Jowari*, rice, and cotton thriving; but in Sambalpur rice attacked by insects. Prospects generally favourable. Cattle in good condition.

Burma.—*For week ending 25th August, 1888.*—Agricultural operations making rapid progress both in Upper and Lower Burma. In Tharrawaddy and Thongwa crops have been attacked by rats and insects, and slight damage has been done to crops in Moulmein and Shwegyin by floods and heavy rains. Heavy floods also in Kyauksè have damaged crops. Two-thirds of planted area in Toungoo flooded, but no damage reported. Flood subsiding. Scarcity of food prevails in Sandoway, the Karen Hills, and the northern part of the Toungoo district. The rainfall was satisfactory in both Upper and Lower Burma. The price of paddy was stationary, except in Mandalay, where it rose, and in Kyauskè, where it fell. In Lower Burma the price rose very much in Sandoway, owing doubtless to the scarcity of food supply, and slightly in Rangoon, Bassein, Thayetmyo and Shwegyin; elsewhere prices were stationary.

Assam.—*For week ending 29th August, 1888.*—Weather seasonable. Rain wanted in Lakhimpur, Nowgong and Kamrup. Reaping of early rice almost over. Transplanting of late rice still continues. Late potato crop being planted in the Khasi Hills. Tea doing well.

Mysore and Coorg.—*For week ending 29th August, 1888.*—Rainfall good in parts of the Shimoga and Kadur districts. Crops generally in fair condition. Prospects dependent on rain throughout the State, except in Shimoga district, where dry crops are reported to have been damaged by excessive rain. Sowing operations still delayed in parts of the Hassan district for want of rain.

Some rain in Coorg during the week. Rice planting nearly completed.

Berar and Hyderabad.—*For week ending 29th August, 1888.*—Slight rain during the week. *Kharif* crops in good condition. Weeding continued. Agricultural stock good. Fodder and water sufficient. Prices almost stationary.

Slight rain in Hyderabad during the week. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 29th August, 1888.*—Rainfall general, but scanty in Indore, and needed in Kuksi Bhopawar. Condition of crops improved in Bundelkhand, but indifferent in Baghelkhand, where outturn is below average. Prices of foodgrains falling in Neemuch.

Rajputana.—*For week ending 29th August, 1888.*—Rainfall generally good. Agricultural operations satisfactory. Standing crops good. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 23rd August, 1888.*—Slight rain. Prospects good.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

Read also—

Director General of Railways' No. 125T., dated 30th June 1888, forwarding the Abstract Returns of Accidents to Trains, &c., on the open lines of Railways in India for the quarter ending 31st December 1887.

OBSERVATIONS.—In this review the procedure hitherto adopted has been modified, and the number of accidents which occurred during the quarter is compared with the average number in the corresponding quarters of five previous years, instead of being contrasted, as has hitherto been the practice, with the number which happened during the corresponding quarter of the previous year.

This procedure has been introduced because it was considered that an average of five quarters gave a better basis for comparison than the returns of one individual quarter.

A tabulated statement has also been added * in which the accidents during the year 1886 are compared with those which occurred in England the same year.

*See Table No. 5.

The number of minor accidents is greater in India; but the Casualties in India compare favourably with the results under this head from English working.

2. Compared thus with the average of five previous quarters, the number of accidents to trains, rolling-stock, permanent-way, &c., shows a decrease of 64, or 10·21 per cent., against an increase of 2,534¾ miles or 22·29 per cent., in the mean mileage open, and an increase of 1,370,805 miles, or 13·18 per cent., in the train mileage.

3. The following are the Railways on which the more important fluctuations occurred :—

Railways.	Accidents.				Mean mileages open.		Train mileages.	
	Increase.	Decrease.	Percentage of increase.	Percentage of decrease.	Percentage of increase.	Percentage of decrease.	Percentage of increase.	Percentage of decrease.
Rajputana-Malwa . .	...	32	...	35·16	11·94	...	2·24	...
North-Western . .	...	83	...	48·54	33·19	...	5·78	...
Eastern Bengal . .	...	10	...	14·08	22·46	...	37·86	...
South Indian . . .	12	...	21·82	...	...	...	23·02	...
Great Indian Peninsula .	...	17	...	39·53	1·59	...	11·88	...
Dibru-Sadiya . . .	14	...	93·33	...	150·00	...	143·64	...

4. The decrease on the Rajputana-Malwa Railway is due chiefly to the number of cattle accidents having been reduced from 40 to 29, "Failures of machinery, springs, &c., of engines" from 7 to 1, and "Broken rails" from 6 to 1. With a total decrease of 32 accidents or 35·16 per cent., the mean mileage increased by 179·85 miles or 11·94 per cent., and the train mileage by 29,351 miles or 2·24 per cent.

5. On the North-Western Railway, the principal decreases were under "Trains running over cattle on the line" 24 against 43, "The bursting of tubes, &c., of engines" 7 against 15, "The failure of machinery, springs, &c., of engines" 12 against 24, "Fire in trains" 9 against 25, and "Other accidents" 3 against 14. Although there was a decrease of 83 or 48·54 per cent. in the total number of accidents, 606·35 miles or 33·19 per cent. were added to the mean mileage, and 85,261 or 5·78 per cent. to the train mileage.

6. The chief variations on the Eastern Bengal Railways were under "Goods trains, &c., leaving the rails" 6 against 10; "Trains, &c., travelling in the wrong direction through points" 10 against 1; "Trains running over cattle on the line" 16 against 28; "Fire at stations, or involving injury to bridges or viaducts" 4 against 0. The total number of accidents shew a decrease of 10 or 14·08 per cent., whereas the mean mileage increased by 141·25 miles or 22·46 per cent., and the train mileage by 197,808 miles or 37·86 per cent.

7. The differences on the South Indian Railway were generally distributed over all the classes of accidents. The total shews an increase of 12 or 21·82 per cent. in the number of accidents, and an increase of 96,961 miles or 23·02 per cent. in the train mileage, the mean mileage worked being the same.

8. Cases of "Goods trains or parts of goods trains, engines, &c., leaving the rails" partly account for the decrease in the number of accidents on the Great Indian Peninsula Railway, 2 against 11; and it is partly attributable to 10 accidents happening under different classes during the corresponding periods of five previous years, whilst none occurred under these classes during the quarter under notice. There was a diminution of 17 or 39·53 per cent. in the number of accidents, and an increase of 23·55 miles or 1·59 per cent. in the mean mileage, and of 253,655 miles or 11·88 per cent. in the train mileage.

9. The casualties resulting from accidents to trains, &c., were, among passengers and others, 1 killed and 2 injured, against 2 killed and 11 injured; and among servants, 2 killed and 6 injured, against 2 killed and 8 injured. The high average number of passengers and others injured during the corresponding periods of previous five years is occasioned by three collisions which took place on the Eastern Section of the Eastern Bengal, Sind, Punjab and Delhi, and Southern Mahratta Railways on the 2nd and 18th of October 1884, and 16th November 1886, by which 14, 12 and 8 passengers respectively were injured.

10. Of the total casualties—3 killed and 8 injured—3 were killed on the Rajputana-Malwa, and 3 injured on the Great Indian Peninsula Railway, in three separate accidents on each; the remaining cases of injury being equally distributed over the East Indian, North-Western, Cherra-Companygauj, Bombay, Baroda and Central India, and Darjeeling-Himalayan Railways.

11. The following table exhibits the number of accidents under the different classes, during the 4th quarter of 1887, as compared with the corresponding

quarters of five previous years, and the number of persons killed and injured thereby :—

No.	Class.	Number of accidents	Number of Passengers and others.		Number of Servants.		Total all classes.	
			Killed.	Injured.	Killed.	Injured.	Killed.	Injured.

	Total 1887	563	1	2	2	6	3	8
	Total . Corresponding quarters of 5 previous years	627	2	11	2	8	4	19

12. The principal variations occurred under "Goods trains, &c., leaving the rails," 85 against 74, "Trains running over cattle" 177 against 205, "The failure of machinery, springs, &c., of engines" 38 against 56, and "Fire in trains" 23 against 43.

13. Accidents of "Goods trains, &c., leaving the rails" happened chiefly on the North-Western, Madras and Dibru-Sadiya Railways, the numbers being 13, 16, and 11 respectively.

14. Of the 177 cases of cattle accidents, 10 took place on the East Indian, 29 on the Rajputana-Malwa, 24 on the North-Western, 16 on the Eastern Bengal, 12 on the Madras, 27 on the South Indian, 15 on the Great Indian Peninsula, and 11 on the Oudh and Rohilkhand Railways. With the exception of the Great Indian Peninsula, 15 against 12, and the Oudh and Rohilkhand, 11 against 9, the number of cattle accidents was less on each Railway than during the corresponding quarters of five previous years, notably on the Rajputana-Malwa, North-Western, and Eastern Bengal Railways, as already referred to in paragraphs 4, 5 and 6.

15. The cases of "Failure of machinery, springs, &c., of engines" chiefly occurred on the North-Western 12, Eastern Bengal 8, Jorhat 5, and South Indian 6.

16. The greatest number of cases of "Fire in trains" took place on the North-Western, *viz.*, 9, but, as already pointed out in paragraph 5, this is considerably less than the average number which occurred during the corresponding quarters of the five previous years, *viz.*, 25.

17. Out of 45 accidents classed as "Other accidents" 26 happened on the Bombay, Baroda and Central India Railway.

18. The casualties to passengers, from causes other than accidents to trains, &c., were :—

Cause of accidents.	Killed.		Injured.	
	1887.	Corresponding quarters of 5 previous years.	1887.	Corresponding quarters of 5 previous years.
From falling between carriages and platforms	1	2	4	2
Falling on to the platform, ballast, &c., when getting into or out of trains	3	3	2	4
Whilst crossing the line at stations	1	...	1	..
By closing of carriage doors	...	...	2	1
Falling out of carriages during the travelling of trains	7	2	11	1
Other accidents	2	1	6	3
Total	14	8	26	25

19. The accidents to servants in the employ of Railways or of contractors, whilst performing duties connected directly with the transit of passengers and goods from causes other than accidents to trains, &c., were as follows :—

Cause of Accidents.	Killed.		Injured.	
	1887.	Corresponding quarters of 5 previous years.	1887.	Corresponding quarters of 5 previous years.
During shunting operations	4	5	7	10
Falling off engines, vans, wagons, &c.	3	3	12	9
Coming in contact with over-bridges, &c., during the travelling of trains	1	...	...	1
Coming in contact, while shunting, with vehicles, &c., standing in adjoining lines	...	...	...	1
Getting on or off trains, engines, &c.	3	3	6	8
Whilst loading, unloading, or sheeting	3	1	17	11
Whilst braking, spragging or chocking wheels	...	...	2	...
Whilst working at cranes or capstans	1	...	...	1
Whilst working on the Permanent-way or in sidings	2	2	4	4
Whilst walking along the line on the way home or to work	3	2	3	1
Whilst walking, crossing or standing on the line	3	8	4	9
Whilst passing between vehicles	2	1	2	1
Whilst attending to the machinery of engines, cleaning them, &c.	...	...	2	4
Whilst attending to gates at level crossings	3	1	...	1
Falling or being caught between vehicles and platforms	...	1	1	2
Falling off ladders, scaffolds, platforms, &c.	...	...	4	4
By falling off lamps, wagons, doors, timber, weights, &c.	...	...	5	5
Whilst coupling or uncoupling wagons	3	3	9	6
Miscellaneous	4	5	25	17
Total	35	35	103	95

20. Of other persons killed and injured by running trains, &c., *viz.*, 61 killed and 15 injured, 4 were killed and 1 injured whilst passing over the line at level crossings; 46 were killed and 12 injured whilst trespassing on the line; 9 committed suicide; and two were killed and 2 injured from miscellaneous causes.

21. The following table shews the total number of persons killed and injured from causes connected with the working of trains, as compared with the corresponding quarters of five previous years :—

	4th quarter, 1887.		Corresponding quarters of 5 previous years.	
	Killed.	Injured.	Killed.	Injured.
Passengers.				
From causes beyond their own control	1	1	2	11
„ misconduct or want of caution	14	26	8	25
Servants.				
From causes beyond their own control	...	8	4	16
„ misconduct or want of caution	37	101	33	87
Others.				
Whilst passing at level crossings	4	1	1	...
Trespasses, including suicides	55	12	36	9
Other persons	2	2	4	3
Total	113	151	88	151
Total open mileage	13,903¾		11,369	
Total train mileage	11,772,362		10,401,557	

22. In addition to the above, 14 persons are reported to have been killed and 36 injured in yards, workshops, &c., and 160 persons to have met death in carriages, and at stations from causes unconnected with the working of trains.

Resolution.—The Government of India observe with satisfaction that, with a large increase of open mileage and train mileage, there has been a considerable reduction in the percentage of accidents as compared with corresponding quarters in the five preceding years.

Order.—Ordered that this Resolution, with the Abstract Returns, be communicated, for information, to the **Local Governments, Administrations and Officers** noted on the margin.

The Governments of Madras, Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Agents to the Governor General for Central India, Rajputana and Baluchistan
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow and Central Division.

Ordered also that copies be forwarded for the information of Her Majesty's Government.

Ordered further that this Resolution, with the Abstract Returns, be published in the Supplement to the *Gazette of India*.

By order,

M. C. BRACKENBURY, *Major, R.E.*,
Under-Secretary.

Document accompanying.

Abstract Returns of Accidents on Indian Railways for the fourth quarter of 1887.

TABLE No. 1.

GENERAL TOTAL.

NUMBER of PERSONS reported during the Fourth Quarter of 1887 as KILLED or INJURED on the several RAILWAYS open for Traffic in INDIA; distinguishing between PASSENGERS, RAILWAY SERVANTS and OTHER PERSONS; and distinguishing also, in the case of the two former Classes, between ACCIDENTS happening from causes beyond their own control, and ACCIDENTS happening otherwise.

(1) These are the correct areas and differ from those shown in the Returns for Rabi, 1886-87.
(2) Increase due to the Chenab Canal having been opened.
(3) Increase due to a steadier supply in the Upper Sutlej Canals.
(4) Increase due to development of irrigation on the Lower Sohág and Pára Canal.
(5) Decrease is small; the area for 1887-88 is far above that of any other year except 1886-87.
(6) Increase due to steadier supplies, and to the Mánka Canal having run throughout the crop.

Total area irrigated in 1886-87 . . 403,278 acres.
Ditto 1887-88 . . 464,104 „
Net Increase . . 60,826 „

LAHORE,
The 10th August, 1888.

(1) The difference of 1 acre in Lahore District and 4 acres in Montgomery District between the figures for kharif 1887 as shown in this statement and in Form No. I for that crop is due to additions made after submission of half-yearly statements. The difference of 4,872 acres in the Gujranwala District is due to the Chenab Canal having been erroneously entered in the Kharif Return as a Perennial Canal.
(2) Increase due to opening of Chenab Canal.
(3) The decrease on Lower Sutlej and Chenab is due to the Rivers Chenab and Sutlej having risen later and fallen earlier than usual.

Area irrigated, 1886-87 . . 939,579 acres (as per Revenue Report).
" " 1887-88 . . 1,042,599 "
Net increase . 1,03,020

Lahore,
The 10th August, 1888.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,
(*Statistical Branch*).

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

REVIEW OF THE REPORTS ON THE ADMINISTRATION OF THE JAILS IN THE SEVERAL PROVINCES OF BRITISH INDIA FOR THE YEAR 1887.

No. 326.

Extract from the Proceedings of the Government of India in the Home Department (Jails),—under date Simla, the 5th September, 1888.

Read again—

The Reports on the Administration of the Jails of the several Provinces of British India for the year 1886; the orders of the Local Governments and Administrations thereon; and Home Department Resolution No. $\frac{23}{1639-1619}$ (Judicial), dated the 7th October 1887, and accompaniments.

Read also—

Despatch from the Secretary of State, No. 6, dated the 23rd February 1888.

The Reports on the Administration of the Jails of the several Provinces of British India for the year 1887, with the orders of the Local Governments and Administrations thereon.

RESOLUTION.

The Provincial Reports on the Administration of Jails for the calendar year 1887 were submitted to the Government of India, with the reviews recorded by Local Governments and Administrations, on the dates noted in the margin. They were, on the whole, submitted with fair punctuality, but the reports of the Inspectors General of Jails in the North-Western Provinces and Oudh, and the Punjab, were detained for an unnecessarily long time in the Secretariats of the Local Governments. The Governor General in Council trusts that further efforts will be made to submit these reports with absolute punctuality, *i.e.*, by June 1st.

	Date of receipt by Government of India of the Reports for	
	1886.	1887.
Madras ...	14th July 1887.	18th June 1888.
Bombay ...	3rd June 1887.	5th June 1888.
Bengal ...	5th April 1887.	22nd June 1888.
North-Western Provinces and Oudh.	9th August 1887.	3rd August 1888.
Punjab ...	3rd June 1887.	20th July 1888.
Central Provinces...	14th June 1887.	10th July 1888.
Lower Burma ...	7th June 1887.	4th July 1888.
Assam ...	8th July 1887.	11th June 1888.
Coorg ...	2nd June 1887.	7th June 1888.
Hyderabad ...	29th June 1887.	15th June 1888.

2. Excluding certain jails opened in Upper Burma, for which statistical information in the standard forms is not available, there were in British India, during 1887, 741 jails and lock-ups for the reception of prisoners. There were 4 fewer district jails and 9 fewer subordinate jails and lock-ups than in 1886, but the number of central jails remained the same. At the beginning of 1887 the jails contained 76,738 prisoners, as compared with 75,156 at the beginning of 1886. There was a substantial increase in the number of male prisoners received during the year, from 345,727 to 352,702, so that the total number of prisoners in the jails during the year numbered 448,741 (426,686 males and 22,055 females) against 440,090 in 1886 (418,026 males and 22,064 females). The discharges from all causes rose, however, from 363,353 in 1886 to 372,819 in 1887, so that on December 31st of the latter year the numbers actually in jail were 75,922,

as compared with 76,738 on January 1st. Despite the fact that the number in prison at the commencement of the year and also the number admitted during the year were higher than in 1886, the daily average in jail, upon which figure it is necessary for statistical purposes to base the comparison in many respects between the administration of jails in the two years, was only 70,879 in 1887, as compared with 75,978 in 1886. The diminished average was chiefly due to the special releases granted on the occasion of Her Majesty's Jubilee.

3. The statistics just enumerated relate to under-trial and civil prisoners, as well as convicts, but the actual number of convicts in the jails during the year is separately shown in the second statement attached to this Resolution. The number of convicts unreleased at the beginning of 1887 was 70,592, and 154,629 were admitted during the year, as compared with 150,108 in 1886. The number in jail at the end of the year was 69,468. 22,918 convicts (excluding about 400 released from Port Blair) were given their discharge on the occasion of the Jubilee, of whom 6,282 would, under ordinary circumstances, have been still in jail at the close of the year. The Governor General in Council is gratified to learn, from the special report received on the subject, that the act of clemency did not contribute in any considerable degree to the amount of crime during the year. This general report is supplemented in the case of one province (the North-Western Provinces and Oudh) by information contained in the jail report, that out of 7,242 convicts released at the time of the Jubilee, only 174 were remitted to jail during the year.

4. The number of European convicts admitted declined from 899 to 885, while the Eurasians increased from 219 to 229. Natives professing the Christian religion who came under sentence rose from 1,061 to 1,111. The number of Muhammadan convicts rose from 39,665 to 42,504; of Hindus and Sikhs, from 90,748 to 95,457; while the number of Buddhists and Jains fell from 12,867 to 10,938. Convicts classed as belonging to all other classes numbered 4,649 in 1886 and 3,505 in 1887. The proportion of the members of the different religions admitted into jail to the total jail admission is thus compared with the proportion borne by them respectively to the total population in India:

	Ratio per mille of each class of convicts to total convict population in 1887.	Ratio per mille of convicts admitted in 1887 to total free population of each class in India.
Christians ...	14·4	1·9
Muhammadans ...	274·9	0·9
Hindus and Sikhs ...	617·3	0·6
Jains and Buddhists ...	70·7	2·8
All other classes ...	22·7	0·6

5. Dealing next with the age at which the convicts came into jail, it will be observed that there was again a slight decline in the number of juvenile offenders admitted into jail from 2,207 to 2,117. The proportion of such convicts to the total convicts admitted fell from 1·47 to 1·36 per cent. In spite of this general result, there was an increase in all the larger provinces except Bombay, the North-Western Provinces and Oudh, and Burma. In the North-Western Provinces and Oudh, where there is as yet no reformatory, the number declined from 537 to 343, the latter figure amounting to ·8 per cent. of the total admissions in those provinces, as compared with a proportion in Madras of 2·7 per cent. These comparative figures suggest different treatment of juvenile offenders in different provinces, and complaints are made in several provinces as to the manner in which Magistrates exercise their discretion in awarding punishment to juveniles. In provinces in which there are reformatories, sentences of

imprisonment in them may reasonably be expected to be relatively more numerous; but where there are no reformatories, sentences of imprisonment are, as previously pointed out, to be more sparingly imposed. A reformatory was during the year opened at Chingleput in the Madras Presidency, and reformatories are about to be established at Yerroada in the Bombay Presidency and at Jubbulpore in the Central Provinces; while, in the North-Western Provinces and Oudh, the Local Government has a scheme for the establishment of a reformatory under consideration. Convicts between the ages of 16 and 40 increased in number from 121,355 to 124,772. Those from 40 to 60 rose from 24,088 to 25,065, and those over 60 from 2,458 to 2,675.

6. The variations in the previous occupations of persons who entered the jails as convicts are on the whole not important, but there was a considerable decline both in the number of persons engaged in service, and of the number engaged in commerce and trade, who were sent to jail. In 1886 there was an increase of 5,528 in the number of agriculturists; and this was followed in 1887 by a further increase of 3,078, which occurred almost entirely in the North-Western Provinces and Oudh, the Punjab, and the Central Provinces. Prices were high during the year in these provinces, with the natural result that more persons of the class referred to were convicted of petty crime. As noticed in the Resolution on the statistics for 1886, a far larger proportion of the convicts in Madras are reported to belong to the miscellaneous classes than elsewhere, except in the Hyderabad Assigned Districts; and a more strict method of classification is required in these two provinces.

The number of females imprisoned was 9,412, of whom 2,194 (10·0 per cent. of the convicts admitted to jail) belonged to Madras, and 2,592 (6·4 per cent. of admissions) to the North-Western Provinces and Oudh. The proportion of female convicts throughout India to the total prison population of convicts was 6·08, as compared with 6·17 in 1886. Of the females admitted, 5,676 were married and 2,675 widows. More than one-half, *viz.*, 5,269, were under sentence of not more than a month.

7. The nature and length of the sentences of imprisonment under which convicts were admitted into jail in the past two years are thus shown:

	Number of admissions.		Ratio per cent. of total admissions.	
	1886.	1887.	1886.	1887.
Not exceeding 1 month	57,312	56,562	38·18	36·58
Above one month and not exceeding 3 months ...	30,837	31,818	20·54	20·58
Above 3 months and not exceeding 6 months ...	25,649	26,578	17·09	17·19
Above 6 months and not exceeding 1 year	16,854	18,162	11·23	11·74
Above 1 year and not exceeding 2 years	9,000	11,494	5·99	7·43
Above 2 years and not exceeding 5 years	5,427	5,826	3·62	3·77
Above 5 years and not exceeding 10 years	1,821	1,702	1·21	1·10
Exceeding 10 years	147	74	·09	·05
Transportation (*a*) for life	1,631	1,062	1·09	·69
Transportation (*b*) for a term	967	926	·65	·60
Sentenced to death	463	425	·31	·27

The ratios in the above statement show that there was a tendency to impose slightly severer sentences during the year under review in cases in which imprisonment of not more than 5 years was the sentence, but the percentage of sentences of not more than one year's duration was as high as 86·09 of the whole. The subject deserves only a passing notice in connection with jail statistics; but from an examination of the crime returns of recent years the Governor General in Council thinks that there may be some justification for the opinion put forward by some authorities, that the reduction of crime is to some extent retarded by the award of punishments inadequate to the crimes to be punished.

There was a material decline in the sentences of transportation and death sentences, mainly attributable to the restoration of order in Burma. The grave crimes which are made punishable by these sentences show, the Governor General in Council regrets to note, no material decline in British India generally.

8. The year under review opened with 2,969 convicts under sentence of transportation for life, and 1,834 under transportation for a term of years, in Indian jails. As noticed above, the number sentenced to transportation for life was 1,062, and for a term of years, 926. There were thus in all under sentence of transportation 4,031 convicts for life, and 2,760 for a term of years. The number transported to the Andamans was 1,599, as compared with 1,631 in 1886; and on 31st December 1887 there were in Indian jails 2,868 convicts under sentence of transportation for life, and 1,889 under sentence for a term of years. The Governor General in Council regrets to notice that some instances of laxity on the part of Boards entrusted with the duty of selecting convicts fit to be sent to the Andamans occurred during the year.

Of the 154,629 convicts admitted into jail in 1887, 19,266 (12·45 per cent.) were identified as having been previously convicted, as compared with 17,593 (11·72 per cent.) in 1886. The ratio varied from 17·53 per cent. in Burma to 6·29 in Coorg. Of the 2,070 juvenile convicts, 230 (11·11 per cent.) had been previously convicted. The Government of India is glad to notice the favourable testimony which is generally borne to the efficiency of the rules for the identification of habitual criminals which were issued for general guidance last year.

9. The number of convicts able to read and write a little on admission was 13,274, as compared with 14,459 in 1886, but the number able to read and write well rose from 4,778 to 4,810. There was a serious decline in the average number under instruction in jail from 3,715·68 to 3,112·03, and the number released who had been under instruction fell from 5,549 to 5,193. Of the men released, only 985 had been able to read and write a little, and 321 to read and write well, on admission; but 2,778 had learnt to read and write a little, and 911 to read and write well, before release.

10. The employment of convicts in jails is dealt with in Statement No. 5. The average number of convicts sentenced to labour was 60,820, as compared with 65,810 in 1886. Of the number under sentence of labour, 4,738, as compared with 5,244 in 1886, were on an average incapacitated from labour owing to sickness or infirmity. The average number actually available for labour was thus 56,082, as compared with 60,566 in 1886. In the Punjab and the Central Provinces there was a trifling increase in the daily number available for labour, but there was

a decrease in every other province. In Bengal the average number available for labour was 9,374, as compared with 11,619; in Bombay 5,109, as compared with 6,026; in Madras 5,658, as compared with 6,369; and in Burma 4,941, as compared with 5,364, in 1886. In the North-Western Provinces and Oudh there was an average of 16,202 convicts available for labour, as compared with 16,660 in 1886.

The manner of employment of the convicts available for labour in 1886 and 1887 is compared in the following table:—

	1886.	1887.
On unremunerative labour	1,985	1,271
As prison officers	3,433	2,821
As prison servants	6,854	6,449
On gardening	3,733	3,710
On preparing articles for use or consumption in jails, *e.g.*, wheat-grinding, manufacturing of prison clothing, &c.	6,795	6,800
Jail repairs	3,083	2,800
On additions and alterations to jail buildings—		
(i) Under the Superintendent ...	3,190	2,961
(ii) Under the Public Works Department...	384	682
On new jails—		
(i) Under the Superintendent ...	2,108	1,219
(ii) Under the Public Works Department	149	97
On Manufactures	25,903	25,116
On Public Works	2,452	2,187
Hired out to municipalities or individuals or Departments other than the Public Works Department	1,020	681

The ratio per cent. of labouring convicts employed as prison officers fell from 5·21 to 4·63, while the ratio of those employed as prison servants rose from 10·42 to 10·62. Employment of convicts on jail buildings was carried out to a greater extent in the North-Western Provinces and Oudh than elsewhere. In those provinces 1,500 convicts were on an average employed on jail additions and alterations, and 1,202 on new jail buildings. The total number of convicts employed on manufactures was slightly less than in 1886, but the ratio of convicts so employed to the whole number of labouring convicts rose from 39·36 to 41·29. The average number so employed fell from 5,972 to 4,925 in Bengal, and from 3,657 to 3,179 in Burma. On the other hand, the average number employed on working days rose from 5,037 to 5,583 in the North-Western Provinces and Oudh, and from 4,764 to 5,219 in the Punjab.

11. The Governor General in Council abstained from making any detailed comments on the cash earnings of convicts in 1886, because the revised rules regulating the employment of convicts had been in force for only a portion of that year. The cash earnings fell from Rs. 11,51,206 in 1886 to Rs. 10,11,891 in 1887. The release at the Jubilee of a large number of convicts who had become skilled in jail manufactures was undoubtedly prejudicial to the financial results of the employment of convicts during the year, but after making allowance for this circumstance, the results of the employment of convicts during the year are in some provinces very unsatisfactory. In Bengal and Burma, however, both the aggregate cash earnings, and the average earnings per head showed a very satisfactory advance. The statistics in the Central Provinces are obscured by a debit on account of raw material purchased in 1886, but not paid for till 1887.

The revised orders which regulate the employment of convict labour have been in force since May 1886, but the Governor General in Council notices among some heads of the jail department a disposition to be despondent as to the success of their working. There are doubtless difficulties to be overcome in bringing the industries in jails into accordance with these rules; but if jail manufactures are regulated so as to meet the demands of the consuming departments of Government, the difficulties now felt will be diminished. The subject is a most important one, and the Governor General in Council desires to commend it again to the special attention of Local Governments and Administrations.

12. The record of offences against jail discipline and punishments awarded for such offences is contained in Statement No. 6. The grand total of such offences diminished from 84,084 in 1886 to 78,398 during the year under review. The number of criminal offences rose from 245 to 279, chiefly owing to increases in the Punjab and Assam. The number of persons detected smoking or in possession of forbidden articles showed a slight decrease. The number of such offences were highest in Bengal (3,334), where the daily average of convicts was 10,908·29 while it was, comparatively speaking, lowest in the North-Western Provinces and Oudh, where 698 such offences were recorded among a daily average of convicts amounting to 17,961·00. Offences relating to work were, as usual, most numerous, though on the whole they declined as compared with the previous year. The Provinces which show a decline are Bengal, the Punjab, Bombay, and Burma, while Madras, the Central Provinces, and Assam exhibit an increase. The variations from the figures of the previous year in other Provinces were unimportant. Other offences against prison discipline amounted to 25,754 as compared with 28,470 in 1886. In Bengal there were 13,151 such offences, as compared with 15,496, in Bombay 825, as compared with 1,145, and in Burma 3,759, as compared with 3,429 in 1886, but the changes in other Provinces were slight. The question of the more uniform record of offences against jail discipline was noticed at some length in the Resolution recorded on the reports for 1886: it is again under the consideration of the Government of India. Without losing sight of the consideration that Provincial peculiarities render complete uniformity impossible, there can be no doubt that, for various reasons, it is desirable to aim at much greater uniformity in the execution of legal sentences in the various Provinces than has yet been attained.

13. Passing to the punishments awarded for these offences, His Excellency in Council is glad to observe that on the whole they evidence a more considerate spirit than seemed to be apparent from the reports of preceding years. They shew that solitary confinement and reduced diet were inflicted less frequently than in the preceding year. In Bengal there was a marked decrease in both forms of punishment; while in the Punjab there was a marked increase, and in the Central Provinces a marked decrease, in the latter form. In other Provinces the figures present no striking variations. Solitary confinement was combined with reduced diet in 5,877 as compared with 6,054 cases in 1886. This decrease occurred mainly in Bombay and Bengal. In Burma there was a considerable increase. In the North-Western Provinces and Oudh out of a total of 6,185 punishments, no less than 2,142 were cases in which solitary confinement was combined with reduced diet. The Government of the North-Western Provinces and Oudh has been separately addressed on this point; but here the Governor General

in Council would call attention to the opinion which, in reviewing the statistics for 1886, he expressed, that sufficient discretion is not always exercised in the use of this form of punishment. The remarks made on that occasion are, practically speaking, of equal application to the figures for the year under review. Solitary confinement or a reduction of diet are by themselves forms of punishment to the use of which no objection can be urged; but solitary confinement combined with reduced diet is liable to cause both mental and physical depression, and it should be confined to cases in which the offence to be punished is a really serious one.

14. The following table compares the number of corporal punishments inflicted in the jails in the past 4 years:—

Province.	Year.	Total number of prisoners punished by whipping.						Percentage of whippings according to the number of stripes to the total number of whippings.				
		From 5 to 10 stripes.	Above 10 to 15 stripes.	Above 15 to 20 stripes.	Above 20 to 25 stripes.	Above 25 to 30 stripes.	Total.	From 5 to 10 stripes.	Above 10 to 15 stripes.	Above 15 to 20 stripes.	Above 20 to 25 stripes.	Above 25 to 30 stripes.

	1885	806	771	744	311	446	3,078	26·2	25·0	24·2	10·1	14·5
	1886	621	677	851	337	600	3,086	20·1	21·9	27·6	10·9	19·5
	1887	361	713	721	244	388	2,427	14·9	29·4	29·7	10·0	15·0

The preceding figures shew a substantial decline in the number of corporal punishments. The ratio of such punishments to the daily average of male prisoners fell from 1·2 to 9. The number of cases in which less than ten stripes were awarded fell from 20·1 per cent. of the total whippings in 1886 to 14·9 per cent. in 1887. In 1880, when the number of male prisoners was 271,633 compared with 256,193 in the year under review, the number of whippings was 17,057, and the ratio to the daily average of male prisoners 6·2. Moreover, while in 1880 corporal punishments amounted to 19·0 per cent. of the total jail punishments, in 1887 they numbered only 3·1 per cent. Out of the persons punished with whipping during the year under review, 11 persons (6 of them in Bengal) are reported to have suffered from illness as the result of being whipped.

The Governor General in Council is glad to notice the improvement which has in this respect followed the admonitions of the Government of India, and he is gratified to learn that this improvement has been secured without any forfeiture of the interests of order and good conduct among the prisoners. Discipline in Indian jails is even better now than when punishments were more numerous and more severe. While acknowledging, however, the marked advance that has been made in this respect, His Excellency in Council must call attention to the defect, with a view to its speedy correction, that prisoners are still in some cases punished with whippings for comparatively trivial offences.

15. The number of miscellaneous punishments inflicted in 1887 was 57,747, as compared with 61,617 in 1886. In Bengal the number of such punishments amounted to 33,095, and included 23,428 cases in which either fetters or handcuffs were imposed, and 5,387 cases in which marks earned towards remission were forfeited. In Burma such miscellaneous punishments numbered 4,979, and in the Punjab 10,765. In the latter Province 9,552 punishments were warnings, an apparently excessive number. Warnings appear in the registers of all Provinces except Burma, in which they do not seem to have been entered

during the year under review. All warnings by the Superintendent, which, under the orders of the Government of India noted in the margin, have to be entered in the jail punishment register, should be included in this category. His Excellency in Council considers it essential that an accurate record of such cases should be kept. If this is not done, the inevitable tendency is for the subordinate staff to deal with minor offences, and thereby prejudice of good order and discipline to the transfer part of the Superintendent's authority to themselves.

Letter to the Government of Bengal, No. 1318, dated 14th October 1884, and extract therefrom circulated to Local Governments and Administrations, under endorsement No. $\frac{21}{1364\text{-}72}$, dated the 27th idem.

16. In reviewing the statistics regarding punishments in 1886, the Governor General in Council entered with some detail into the administration of punishments in Bengal, and repeated the conclusion that it was susceptible of improvement. In the year under review the aggregate number of punishments has indeed decreased, but the ratio of punishments to the daily average in jail has risen from 299·93 to 328·41. The ratio over the whole of India, excluding Bengal, is 79·9. It is observed that of the punishments inflicted in Bengal 13,291 occurred in the Alipore Jail, in which the ratio of punishments to the daily average was 863·23. If these figures be excluded from the Bengal returns, the provincial ratio is reduced from 328·41 to 240·46. This is a matter which the Government of India is considering separately, and into which it may be necessary to institute a local enquiry.

17. In the review on the statistics for 1886 reference was made to the custom of imposing fetters on prisoners. In 1887 fetters were imposed on 12,269 prisoners for offences against discipline, of which 12,199 cases occurred in Bengal. It is in that province only that Jail Superintendents as such are by law permitted to award this form of punishment. In Madras, however, Jail Superintendents awarded it in 14 cases, and in the North-Western Provinces and Oudh and the Hyderabad Assigned Districts, in 36 and 2 cases, respectively, apparently in exercise of their additional power as Magistrates. In 50,081 cases, as compared with 47,471 in 1886, prisoners were ironed for safe custody. This practice prevails chiefly in Bombay (8,151 cases), the North-Western Provinces and Oudh (13,633 cases), the Punjab, (17,979 cases), and Burma (9,409 cases). The Bombay Government and the Chief Commissioner of Burma are opposed to any restrictions being placed on the present practice, but the Local Governments of the North-Western Provinces and Oudh, and the Punjab, have both expressed themselves willing to impose restrictions on the practice, which have been approved by the Governor General in Council. His Excellency in Council must rely much, in a matter of this nature, on the discretion of Local Governments, but he trusts that every effort will be made to confine the imposition of fetters to cases in which they are really necessary.

18. In 1886 there were 172 escapes, and at the beginning of 1887 there were 596 escaped convicts at large. During the year under review the number of escapes and recaptures in each Province was:

	Remaining uncaptured on the 31st December 1886, of those who escaped during the previous ten years.		Escaped during the year.		Recaptured during the year.		Remained uncaptured.	
	1886.	1887.	1886.	1887.	1886.	1887.	1886.	1887.
Madras	36	29	21	14	20	11	37	32
Bombay	120	128	41	18	27	20	134	124
Bengal	132	108	17	13	12	14	137	105
North-Western Provinces and Oudh.	77	65	16	16	23	16	70	66
Punjab	43	40	17	24	17	16	40	46
Central Provinces ...	61	63	10	14	8	16	63	61
Lower Burma	35	36	10	3	9	4	36	35
Assam	109	118	40	40	31	34	118	124
Coorg	14	1	...	...	...	...	14	1
Hyderabad	8	8	...	1	...	1	8	8
Total ...	635	596	172	143	147	132	657	602

There was a satisfactory decline in Madras, Bombay and Burma. In the Punjab, Central Provinces and Assam, the number of escapes was large.

19. The figures showing the operation of the mark system are contained in Statement No. 11. In 1886 the number of convicts released who were eligible for remission under the mark rules was 10,300, of whom 386 failed to gain any remission at all. In the year under review the number of convicts who gained remissions under the rules declined to 7,696, and 22 were released at the expiration of their sentences, who though eligible for remission had failed to gain any. The decline in the numbers who gained remissions under the rules is due to the fact that at the time of the Jubilee a large number of convicts who had earned some remission were released under special orders. Though the maximum remission earned has in almost every class of convicts declined, the Governor-General in Council is pleased to observe that the average remission gained has increased except in the case of convicts sentenced to from 8 to 10 years' imprisonment. There are still considerable variations in the method of granting marks, not only in different Provinces, but in different jails in the same Province, and the Governor-General

in Council trusts that endeavours will be made to work the rules in future with more uniformity. During the year under review His Excellency in Council decided to abolish the rule under which convicts, eligible for convict warderships, but not appointed to be convict warders, were permitted to gain marks at the higher rate allowed to convict warders. His Excellency in Council considers this concession to convict warders to be of the nature of a reward to them, for the services performed in that capacity.

20. Details as to the cost of maintaining prisoners in jail in 1887 are given in Statement No. 7. The total cost of guarding and maintaining a daily average of 70,953·77 prisoners was Rs. 45,84,778 as compared with Rs. 47,59,878 incurred on an average of 76,037·12 prisoners in 1886. The average cost per head thus rose from Rs. 62-9-7 in 1886 to Rs. 64-9-10 in 1887. The items composing the total expenditure in the two years were as follows:

	Total cost of maintenance. 1886.	Cost per head of average strength. 1886.	Total cost of maintenance. 1887.	Cost per head of average strength. 1887.
	Rs.	Rs. a. p.	Rs.	Rs. a. p.
Rations ...	17,78,720	23 10 9	17,10,698	24 6 5
Establishments ...	18,36,069	24 2 4	18,54,877	26 2 3
Police guard ...	3,95,922	5 3 3	3,06,082	4 6 5

Contingencies ...	3,75,581	4 15 3	3,82,166	5 6 2

The Government of India in 1887 directed that in order to render the statement of expenditure on rations more accurate, it should be supplemented by information showing the extent to which vegetables, &c., grown in the jail gardens were added to rations purchased in the market. The statement below gives the information required, so far as it has been furnished to the Government of India:

	Value of vegetables, &c., grown in jail gardens.	Expenditure on Rations.	Cost of rations plus value of vegetables, &c.	Cost per head of average strength, including value of vegetables, &c.
	Rs.	Rs.	Rs.	Rs. a. p.
Madras	3,218	2,83,914	2,87,132	40 0 0

Hyderabad Assigned Districts...	2,511	24,890	27,401	29 7 4

* Average cost excluding value of vegetables.

It is noted that in Bengal, Burma and Coorg the information has not been given for the year under review. It should be regularly furnished in future.

21. The cost of rations per head of each prisoner continues to be much higher in Madras than anywhere else except Coorg. Under the instructions of the Government of Madras the expensive contract system previously in force has been abandoned in some jails ; but, considering the fact that the price of food in Madras was generally less in 1887 than in 1886, the diminution in the cost of rations per head has not been what it should have been. The results which have been obtained in some jails accentuate the necessity for the early abandonment of the contract system in those jails in which it still exists. There are reasons for thinking that an enquiry into the expenditure in Madras jails by selected officers experienced in jail management may be productive of advantage.

The cost of rations per head declined considerably in Bengal, Assam and Coorg and slightly in Bombay. It rose by Rs. 4-7-10 per head in the Punjab, and Rs. 2-13-7 in the North-Western Provinces and Oudh, and to a smaller extent in the Central Provinces, Burma and the Hyderabad Assigned Districts. The price of food in the North-Western Provinces and Oudh, the Punjab, and the Central Provinces was high during the year. The net result was that the average cost of rations per head over India rose from Rs. 23-10-9 to Rs. 24-6-5. This increase, as just explained, is in the main attributable to the high cost of food grains in the northern provinces of the Bengal Presidency in 1887, as compared with 1886. The Governor General in Council is, however, not assured that Superintendents of Jails are generally sufficiently alive to the obligation which rests on them to arrange for the laying in of stocks for their jails at the time when the price of food grains is lowest. The variations in the average cost of rations at jails situated even in contiguous districts are often considerable, while in other cases the high cost of rations at subsidiary jails and lock-ups, compared with the cost at central or district jails situated in the same station, indicates the necessity for greater control over this item of expenditure. The Governor General in Council desires that the attention of all Inspectors-General of Jails and District Officers be drawn to this matter. It is the duty of District Officers, not only to ensure economy at the subsidiary jails and lock-ups under their charge, but also to give every assistance to Superintendents of Central and District Jails in the purchase of stocks at the time when the market is most favourable.

22. The cost of establishment rose from Rs. 18,36,069 to Rs. 18,54,877, or from Rs. 24-2-4 to Rs. 26-2-3 per head of average strength. The chief increase occurred in Madras, Rs. 2,43,547 to Rs. 2,85,381 (Rs. 29-10-4 to 38-10-9 per head) ; and there was also a rise in the Central Provinces, Burma and the Hyderabad Assigned Districts. In the other provinces the expenditure decreased. In estimating the cost of establishment, the expenditure on police should be considered. The police employed in jails are occupied upon duties similar to those of jail warders ; and it will be observed that during the year under review the increase of expenditure on establishment over India (Rs. 18,808) was far more than compensated for by the saving under the head of police (Rs. 89,840).

Statement No. VIII of the returns to provincial reports gives details as to the behaviour of convict officers generally. The system of employing convicts as

warders continues to be favourably reported on. The reasons which render the maintenance of the system imperative were stated in full in the Resolution of the Government of India on the jail statistics for 1886. His Excellency in Council would be glad to see the conduct of paid and convict warders during the year compared in future in the body of each Provincial report, which should invariably state the number of warders of each class employed.

23. During the year under review it was brought to the notice of the Governor General in Council that, though separate accommodation was provided for female prisoners in jails, the practice as to their supervision was not uniform ; and the Government of India therefore called on Local Governments and Administrations for their opinion as to how far it was possible to improve existing arrangements by collecting female prisoners into special jails, and appointing female warders to supervise them. The Prison Conference of 1877 observed in regard to this question : "The special difficulty which surrounds the question of the treatment of female prisoners is this, that, as there are strong objections to removing them far from their homes, it is inexpedient to transfer any but quite long-termed prisoners to special jails ; while their numbers are so few, that it is impossible, without incurring a quite unjustifiable expense, to entertain a female staff of warders for all District Jails. In many jails there are no female prisoners for months together." The Conference recommended that, when possible, matrons should be selected from among the wives of jail officials, and that Superintendents of Central Jails should supply trained convict matrons to District Jails where females were commonly confined. These suggestions were accepted by the Government of India and communicated to Local Governments and Administrations. It appears that in some provinces greater difficulties in obtaining really respectable and reliable matrons have been experienced than in others. In Madras the District Jails are without matrons, but they are now about to be appointed. In Bombay there are matrons at the majority of Central Jails, and female convict warders are employed at the District Jails to look after females. In Bengal it is stated that experience has shown that respectable Bengali women will not accept such posts, and that it is less dangerous to leave female convicts under the charge of male warders of good caste and respectable character than under that of the class of women who will accept the post of matron. In the Central Provinces matrons were entertained as an experiment, but the system was abandoned, as respectable women could not be obtained for the work. In Burma there are very few female convicts, and no matrons. In the North-Western Provinces and Oudh and the Punjab, on the other hand, female warders or matrons are appointed to all jails except a few small ones ; and in the former Provinces male warders are absolutely prohibited from having anything to do with female convicts. The Government of India is not however in possession of all the information it desires to have as to how the system of employing matrons works in actual practice. The difficulty of collecting female convicts in special jails is that they are thereby removed far from their homes. On their release they cannot be met by their friends, and there are obvious objections to their taking long journeys in the custody of a police guard. Experience in Bengal, where a jail for females only was established at Russa, conclusively proved that the evils apprehended from the adoption of such a system were not imaginary. Moreover, it would cause profitless expense to send all female convicts to particular jails. Out of 9,412 female convicts admitted in 1887 no less than 5,269 were under sentence of not more than a month, and 1,979 more under sentence

of not more than three months. In the majority of such cases a large portion of the term of imprisonment would be spent on the journey to the jail, and Government would have to incur considerable expense in, first of all, conveying the convict for sentence to the jail, and then again from the jail to her home. Arrangements are made in all jails to segregate female convicts, and female convict warders are employed to supervise them; but of course the employment of convict warders does not do away with the necessity of the interference and supervision of male warders, who are not convicts. The subject is in the conditions of society in India a most difficult one; but the Governor General in Council is disposed to think that the existing arrangements in some provinces are open to exception. His Excellency in Council will however defer coming to a final decision in the matter till he is in possession of further information as to how the system of appointing matrons is actually working now in those Provinces in which it has been adopted.

24. The amount spent in contingencies rose from Rs. 3,75,581 or Rs. 4-15-3 per head of average strength in 1886, to Rs. 3,82,166, or Rs. 5-6-2 per head in 1887. In Madras the increase amounted to Rs. 21,748, partly owing to the transfer of charges hitherto incorrectly shown under rations, but partly also owing to want of control. The cost per head of this item of expenditure in Madras thus rose from Rs. 5-12-2 to Rs. 9-5-9. In Bengal there was a decline of Rs. 5,284, but the cost per head rose from Rs. 6-14-4 to Rs. 7-14-6. In Burma the cost per head rose from Rs. 7-4-9 to Rs. 7-12-8, but the cost in that province is much affected by high transfer charges. The largest decrease (Rs. 7,294) occurred in the North-Western Provinces and Oudh where the cost per head was only Rs. 1-12-8. The Governor General in Council is not satisfied that sufficient justification exists for these serious differences between the charges in different provinces under this head. If this item of expenditure was more strictly scrutinised, considerable economy might, he thinks, be effected. His Excellency in Council therefore commends the subject to the careful attention of Local Governments and Administrations; and would be glad if, in future, details of this head of expenditure were noted in the body of all (as it is at present in some) of the Provincial reports.

25. As explained above in paragraph 11, the cash earnings declined from Rs. 11,51,206-10-9 to Rs. 10,11,891-5-0. After deducting the earnings from the gross cost, it will be seen that the cost of maintaining a prisoner varied from Rs. 37-11-5 in Burma to Rs. 88-8-5 in Madras. The average over India was Rs. 50-5-8, as compared with Rs. 47-7-4 in 1886, a rise having taken place in all Provinces except Bengal, Burma, Assam and Coorg.

26. In Statement No. 10 details are given as to the physical condition of prisoners as exhibited in the results of their weighment, and the statistics of sickness and mortality are contained in Statement No. 9. The number of prisoners who gained weight or whose weight remained stationary while in jail rose, while the number who lost weight fell. The total number of prisoners admitted into hospital in 1887 was fewer than in the preceding year, but the ratio per mille of admissions on average strength rose from 927·4 to 946·9.

The number of deaths in the last two years were as follows:

		Fevers.	Bowel Complaints.	Cholera.	Other causes.	Total.
1886	...	255	787	131	1,357	2,530
1887	...	224	790	325	1,174	2,513

The ratio per mille of deaths from the principal causes enumerated above among the jail population is given in the following statement. The corresponding figures for the general population are added, with however the caution that the latter figures lay claim to nothing more than an approximation to correctness:

	Jail population (daily average).				General population.			
	Ratio of deaths from fever.	Ratio of deaths from bowel-complaints.	Ratio of deaths from cholera.	Ratio of deaths from all causes.	Ratio of deaths from fever.	Ratio of deaths from bowel-complaints.	Ratio of deaths from cholera.	Ratio of deaths from all causes.

28. It would thus appear that during the year under review, while in Madras, Bombay, and Bengal the mortality was greatest in the earlier portions of terms of imprisonment, in the North-Western Provinces and Oudh and the Punjab the proportion of deaths was greatest in the later portions. Ordinarily this result would point to the existence of sanitary defects in the jails of the last mentioned Provinces; but no conclusion can with confidence be drawn from the figures for a single year, while there is no doubt that a great deal has been done to improve the sanitation in the jails of these Provinces.

One hundred and sixty-two prisoners were released by Government on the ground of sickness; the great majority in Burma (64), Madras (43) and Bengal (28). The practice in this respect varies so much, that the Government of India is led to believe that its orders on the subject have not always been completely understood. A convict should be released on the ground of sickness only when it is believed that he will have a chance of recovering outside, while he will have none in the jail. Ordinarily if the jail hospitals are properly maintained and supervised, the chance of recovery within a jail should be greater than it is outside it. The Governor General in Council admits that the surroundings of jail life may in some cases affect a sick prisoner injuriously, but he very much doubts whether natives of India, except perhaps the Burmese, are thus affected to anything like the same degree as Europeans. The slight decline in the total number of deaths was accompanied by a large increase in the number of deaths from cholera, which principally occurred in Burma, the Punjab, the North-Western Provinces and Oudh, and the Central Provinces. The jails in Bengal were singularly free from cholera during the year. The jails which suffered most from this disease were those at Lahore (Central) and Moulmein, in which the number of deaths from cholera were 57 and 91 respectively. The general unhealthiness of the Moulmein jail is so great, that it has been determined to abandon it.

The year was, as the statement given in paragraph 26 shows, marked by a serious epidemic of cholera in Northern India; and though the Governor General in Council is unable to accept the argument (sometimes put forward) that, in weighing the vital statistics in jails, the deaths from diseases such as cholera should be excluded, he is prepared to make allowances for the fact that the extensive prevalence of an epidemic outside the jail may be expected to have a prejudicial effect on the health of its inmates. It must, however, be remembered that if insanitary conditions are present in a jail, they are liable at any time to give rise to an epidemic within it; and in the Punjab, the Central Provinces and Burma the ratio of deaths from this disease in the jail considerably exceeded that among the free population. It is clear that the deaths at Moulmein, Lahore, and some other jails were the result of causes not operating on the free population.

The number of deaths from fever showed a satisfactory decline in Bengal and Bombay, but there was an increase in the North-Western Provinces and Oudh, and the Punjab, in both of which provinces the health of the general population was worse than in 1886. The ratio of deaths from bowel-complaints recorded among the jail population is higher than that recorded among the free population, while that from fever is more than correspondingly lower in jails, the

reason no doubt being that the deaths among the free population are understated, and that many deaths from bowel-complaints among it are incorrectly reported to have been caused by fever. In the jails of both the North-Western Provinces and Oudh, and the Punjab, there was a formidable rise in the number of deaths from bowel-complaints, but the fall in the number of deaths from these causes in Bombay, Bengal, and Burma more than counterbalanced this rise.

In the majority of provinces the number of deaths from miscellaneous causes declined, particularly in Bombay (from 134 to 66), Bengal (from 208 to 159), Burma (from 285 to 189), and Assam (from 30 to 14). In the Punjab only was there any material increase (from 195 to 245), but there it was very large indeed. The ratio of deaths from these causes declined in all provinces, except Madras, the North-Western Provinces and Oudh, the Punjab, and the Hyderabad Assigned Districts, and it was only in the Punjab that the increase in the ratio was really serious.

The Governor General in Council has, in letters to the Local Governments, pointed out certain defects in the management of individual jails, to which the sickness and mortality within them must in a measure be attributed; but he is on the whole satisfied that an advance was made during the year under review in the manner of treating the sick in jails. The most satisfactory feature exhibited by the statistics in this respect is the manifest improvement in the Bombay, Bengal and Assam jails. The former now show the best results in India, while in Bengal there was a smaller mortality than has ever been reported before. In Assam the ratio of mortality declined from 54·54 to 28·03 per mille. In Madras (23·03 as compared with 18·01), the North-Western Provinces and Oudh (27·64 as compared with 22·85), the Punjab (44·52 as compared with 28·56), and the Hyderabad Assigned Districts (26·70 as compared with 11·04), the mortality was higher in 1887 than in 1886. The highest ratio of mortality (the figure being practically the same as last year), *viz.*, 65·77 per cent., occurred in the Central Provinces. The administration of the jails of those Provinces has been subjected to a thorough scrutiny by the Chief Commissioner; and the Governor General in Council trusts that the results will soon be apparent in a diminution in the rate of mortality, which at present compares most unfavourably with that in the jails in the Provinces which adjoin the Central Provinces.

29. The points which on an examination of the statistics of 1887 appear to the Governor General in Council to generally call for more attention by jail authorities are—the allotment of task work in such a manner that a convict may reasonably be expected to perform his allotted task during the day, and thus escape punishment; discrimination in the award of punishments; removal of insanitary conditions in jails predisposing to disease; increased supervision over charges for rations and contingencies; and closer attention to the pro-

ductive capacities of the jails, particularly with the view of adapting their industries to the wants of the consuming Departments of Government.

No. 6
327—36.

ORDER.—Ordered, that a copy of the above Resolution be forwarded to the Local Governments and Administrations marginally noted for information and guidance, and to the Department of Finance and Commerce for information.

Madras.	Punjab.
Bombay.	Central Provinces.
Bengal.	Burma.
North-Western Provinces and Oudh.	Assam.
	Coorg.
Hyderabad.	

ORDERED also, that the Resolution be published in the Supplement to the *Gazette of India.*

[True Extract.]

A. P. MACDONNELL,

Secretary to the Government of India.

Statements appended to Home Department Resolution No. 326, dated the 5th September, 1888.

No. 1.

GENERAL SUMMARY SHOWING the DISTRIBUTION of the PRISONERS of all CLASSES CONFINED in the JAILS and SUBSIDIARY JAILS of BRITISH INDIA during the YEARS 1886 and 1887.

* Includes one extra-mural labour gang.

(a) Includes the Penitentiary.

(b) Includes the European Prison, Cotacamund, and the Debtors' Prison, Madras. Three District Jails were abolished at the close of the year 1886 and one on the 31st August 1887.

(c) Includes the Female Penitentiary.

(d) Five District Jails were converted into Subordinate Jails during the year.

(e) One subordinate Jail abolished in 1886 and one in 1887.

(f) Includes one Public Works Jail.

(g) Includes two Public Works Jails.

No. 2.

STATEMENT SHEWING the RELIGION, AGE and PREVIOUS OCCUPATION of the CONVICTS ADMITTED into the JAILS and SUBSIDIARY JAILS of BRITISH INDIA during the YEARS 1886 and 1887.

* The Jails in Bengal are guarded by warder-guards.
† These figures will not agree with the daily average number shown in column 6 of Statement No. I as the average number of prisoners in the Disang Mukh Jail was calculated by the actual number of days it remained open during the year.
(a) Including the cost of under trial prisoners in lock-ups.
(b) Excluding the cost of under trial prisoners in lock-ups which is not shown separately in the Provincial Report.
(c) Including the cost of under trial prisoners in lock-ups.
(d) For Central and District Jails only. The cost of sub-jails is not shown in the report.

* Includes two suicides.
† Excluding the figures for Subsidiary Jails.
‡ These figures do not agree with those in Statement I as the average number of convicts of the temporary jails in Assam has been calculated for the purposes of this Statement by the actual number of days those jails were in existence during the year.
§ Includes the average daily strength of lock-ups.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR AUGUST 1888.

Meteorological conditions during August are generally similar in all important respects to those of July. Both branches of the monsoon usually blow steadily throughout the month, and in several districts in India the rainfall of August is larger than that of July. Monsoon storms are also about as numerous in August as in July, but temperature as a rule is lower in the latter month. The principal points of difference between the weathers of the two months are, a general decrease in the force of the monsoon currents all round the coasts, and a slight but noticeable fall in temperature, more particularly towards the end of the month.

During the past month strongly marked monsoon conditions have prevailed throughout India, and the rainfall has been heavy and general. On several occasions during the month rain has been reported from almost all parts of India except the Carnatic and the Indus Valley, and on some occasions the rainfall, around the small cyclonic storms which passed across India during the month, was exceptionally heavy.

On the 1st typical monsoon conditions prevailed over India. Pressure was highest in the extreme south and lowest over the Indus Valley, while a trough of low pressure lay over the Gangetic plain and the northern parts of the Central Provinces. Both branches of the monsoon were blowing fairly strongly, and, except in the extreme North-West, the rainfall was very general. There were, however, no very heavy amounts, the largest being 2¼ inches at Hazaribagh and 2 inches at Jeypore. After the 1st the trough of low pressure over the Gangetic plain became less strongly marked and the influx of moist monsoon winds into Upper India less strong, so that the rainfall of the Punjab, Rajputana and the west of the North-Western Provinces decreased. These conditions lasted until the morning of the 6th, when a small depression was formed over the north-west angle of the Bay and South-West Bengal, and rain again became general in Upper India. This depression never assumed any importance, but became very diffused as it travelled inland on a westerly course. It was, however, accompanied by much general rain in nearly all parts of India, the principal falls of the 6th and 7th being 6¾ inches at Roorkee, 4½ inches at Delhi, and about 4 inches at Simla and Chakrata. On the 8th and 9th the depression was still present, but the rainfall through general was lighter. On the 10th rain ceased in North-Western India and temperature rose quickly. On the 11th there was general and in places heavy rain over the Peninsula, the central parts of the country and Burma, but in North-Western India fair weather and a high temperature continued. Between the 12th and 16th there was very little change, general rain falling except in the North-West, where several stations reported fair and rather hot weather. On the 17th a slight barometric depression was shown over Bengal, to the west of which, *viz.*, at the stations of Hazaribagh, Gya and Benares, the rainfall was very heavy. This depression travelled slowly westward, reaching Sutna on the 18th, Jhansi on the 19th, Neemuch on the 20th, and Lower Sind on the 21st. During the whole of its progress across India it gave very heavy rain to the stations within or near its line of march.

17th.	ins.	18th.	ins.	19th.	ins.	20th.	ins.	21st.	ins.
Hazaribagh	7¾	Nowgong	5½	Saugor	6½	Mount Abu	7	Deesa	6½
Gya	6½	Sutna	3½	Jhansi	1¾			Nagpur	3½
Benares	3½							Jubbulpore	3

No sooner had this depression filled up than another appeared at the head of the Bay. At 8 A.M. on the morning of the 22nd the centre lay near Saugor Island, where 4 inches of rain had fallen. This depression became rapidly deeper, and by the morning of the 23rd had become a very strongly marked storm; very heavy rain was falling in Orissa and a strong cyclonic circulation prevailed around the centre. Rain was very general elsewhere and was heavy in parts of the Punjab. By the 24th the disturbance had reached the neighbourhood of Burdwan and a gale was blowing over Lower Bengal. Fourteen inches

of rain had fallen at Saugor Island, 5 inches at Calcutta, and largish amounts in several other parts of the country. On the 25th the disturbance lay to the west of Berhampore and had apparently begun to fill up. On the 26th the centre had to a large extent filled up and the rainfall in its neighbourhood was only moderate. In North-Western India the weather was fair and generally rainfall was decreasing. The Chart of the 27th showed that the disturbance had suddenly undergone redevelopment, and 8¼ inches of rain was reported from Gya (of which 7½ inches fell between 6 P.M. of the 26th and 10 A.M. of the 27th), 3½ at Patna and 2¾ inches at Purneah, but after this effort the disturbance broke up and by the 29th had quite disappeared. On the 30th and 31st the most important feature of the weather was reported from the West Coast, where the monsoon current showed strong signs of falling off.

The temperature changes of the past month have been considerable in the Punjab, Guzerat and Sind, but elsewhere the heat has been fairly uniform throughout and about the average of the month. For the first six days the maxima were high, varying between 100° and 113°, in North-Western India, but after the 6th the thermometer fell, at first quickly, and the heat became moderate and continued so until the 22nd, when the weather became cool and remained so till the close of the month.

The table of rainfall at the end of the Summary shows that the total fall during the month was deficient in the Western Punjab, the Trans-Gangetic portions of the North-Western Provinces, Northern Bengal, the Berars and Khandeish, Sind, Guzerat, the Deccan, Mysore, the Carnatic and Ceylon, and was in excess elsewhere. The only important deficiencies were reported from the Berars, the Deccan, Mysore, and Ceylon, the falls elsewhere being only slightly below the average. The greatest excess was in Behar, but in Lower Bengal, Chutia Nagpur, Rajputana, Central India and Lower Burma the average was very largely exceeded.

The following table shows the amount of rain and the difference from the average during the month of August 1888, according to districts, as far as is indicated by the telegraphic reports:

Districts.	Number of stations.	Average rainfall in August.	Difference from the average in August 1888.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, September 3rd, 1888.

At the end of August and the beginning of September the force of the monsoon current over India usually undergoes rapid diminution, and the extent of the area affected by the current is largely diminished. At the same time the character of the rainfall changes, becoming irregular and scattered instead of continuous and general. During the week under review the monsoon currents, more particularly that on the Bombay Coast, have fallen off quickly, and the heavy and general rainfall which prevailed during the previous week has to a great extent ceased, though in some parts of the Gangetic plain and in connection with some small feeble cyclonic storms there have occurred some very heavy falls of rain.

Temperature has oscillated considerably from day to day, but on the whole the thermometer has shown a decided downward tendency, and except in the Indus Valley, where the maximum day temperatures remained high, the weather has been generally moderately cool.

At the close of the previous week the Chart showed a small depression over Western Bengal, which had travelled there from the Bay. It at that time showed a strong tendency to break up and disappear, but the report of the morning of the 27th showed that the disturbance while still moving slowly north-westward had intensified, and that a vigorous cyclonic circulation existed around it. Very heavy rain had fallen in the neighbourhood of the centre, Purneah, and Patna having received about 3 inches and Gya 8 inches. Fairly general and moderately heavy rain was reported from most other parts of the Indian region, but parts of the Punjab, Bombay, and the Berars had fair weather. Temperature had on the whole fallen except in Bengal, the change in the west of the North-West Provinces being large. On the 28th the depression had to a large extent filled up again, and had drifted slowly westward to the Benares and Gorakhpur districts. Heavy rain still accompanied it, Patna having received $3\frac{1}{2}$ inches and Lucknow 2 inches. Rain in moderate amounts had again fallen fairly generally, the principal exceptions being Khandeish, Guzerat, Sind, and the south of the Punjab. Temperature had again fallen, except in Bengal.

The Chart of the 29th showed that the depression noticed above had entirely disappeared, so that readings ranged from a high pressure on the South-West Coast to a low pressure in the Derajat. The rainfall in the Gangetic plain, though still general, was lighter than of late, and moderate or light showers were reported from all parts of the Indian region, except the Carnatic, the Southern Punjab, Sind, and Guzerat. The changes of temperature were irregular. On the 30th there were signs of the development of a fresh depression over Bengal, so that pressure ranged from an area of high readings in the extreme south to an area of relatively low readings over Bengal and to absolutely low readings in the Indus Valley. Over Rajputana and Central India there existed a strongly marked shoulder of high pressure. The winds were becoming somewhat irregular, and except over the centre and south of the Bay, the monsoon currents were unsteady. Heavy rain had fallen around the Gulf of Martaban, and moderate showers in most other parts of the country, except North-Western India and the Carnatic. The depression which had apparently been forming over Bengal on the 30th never developed much, the Chart of the 31st showing a large area of uniformly low pressure overlying North-Eastern India, with small minima—one over the north-west angle of the Bay, and a second near Allahabad. Rainfall was steadily decreasing, showers were reported from the Malabar Coast, Burma, Bengal, Assam, and the North-Western Provinces; but elsewhere the weather was fine. Temperature had changed irregularly. On September 1st the weather

was practically unchanged, and rain was still confined to the West Coast, Burmah, and Northern India. The monsoon currents were both unsteady. The Chart of the 2nd still showed practically the same conditions. A large area of uniformly low pressure overlay a large part of Northern and North-Eastern India, within which small minima existed, and occasioned heavy local rain. At Bareilly 4 inches and at Ranikhet 3 inches of rain were reported. Over the Peninsula, the central parts of the country, and the North-West there was little or no rain. Temperature had fallen, except in Burma.

From the causes stated above, the rainfall of the past week has been very much slighter than that of the preceding week. The general distribution has, however, been of the same general character, there having been, relatively to the average, much more rain in the North-Western Provinces, Behar, and parts of Bengal, Assam, and Burmah, than elsewhere.

The third column of the concluding table shows that during the week an excess of rain has fallen over Burma, over the Silchar Valley, over Deltaic and Central Bengal, over Behar, Chutia Nagpur, the North-Western Provinces, and the hill districts of the Punjab. Elsewhere there has been general deficiency. In the west of the Punjab, in Western Rajputana, and in Kathiawar there has been no rain at all during the week; and throughout the Peninsula and the central parts of the country the amounts received have been very small. There has been a very marked decrease in the amount of rainfall in Burmah, only four districts in the whole province, *viz.*, Moulmein, Henzada, Akyab, and Thayetmio, reporting falls exceeding 10 inches. East Bengal received no heavy falls; but in Cachar and the Khasia Hills the maximum falls varied between 8 and 13 inches, the latter amount being reported from Cherrapunji. In the Assam Valley the heaviest fall was 7 inches in Lakhimpur. In Bengal there are several districts reporting heavy falls; but in Orissa the amounts are small, the largest being $2\frac{1}{2}$ inches at Cuttack. In Chutia Nagpur and Behar the maximum falls varied between 7 and 11 inches, and in the North-Western Provinces were even heavier, Fatehpur and Cawnpore reporting 15 and 16 inches. In the Punjab the rainfall immediately decreases, and, except Simla, no district reports more than two inches. In the west of the Punjab there was no rain, but the fall during this week is ordinarily very light. Throughout the whole of the west of the Peninsula, the Berars, and the Central Provinces the rainfall is chiefly remarkable for its lightness, though the Damoh, Jubbulpore, and Bilaspur districts of the Central Provinces experienced some heavy falls. On the eastern side of the Peninsula some parts of Ganjam and the North Arcot district had fairly heavy rain, but over the greater part of Madras there was little or no rain.

The final column shows the state of the seasonal rainfall. Over the greater part of Burma, Bengal, the North-Western Provinces, and the West Coast the rainfall up to date has been in excess of the average; but in the Punjab and the Peninsula it has been deficient.

Simla, *3rd September, 1888.*

W. L. DALLAS,
for *Offg. Meteorological Reporter to the Government of India.*

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 1st September, 1888.*—Rainfall general; good on the West Coast, poor in Trichinopoly, Tinnevelly, Coimbatore, Salem, Bellary, Anantapur, and Kurnool, and fair elsewhere. Standing crops generally fair, but withering in Madura, Tinnevelly, Anantapur, Bellary, Kurnool, and Vizagapatam. Want of rain much felt in these districts and Salem, and in parts of Ganjam, Kistna, North Arcot, Trichinopoly, Nilgiris, and Coimbatore. Agricultural operations progressing fairly. Prices generally rising where not stationary. General prospects fair; improved in Madura, but not so favourable in Salem and parts of Anantapur, Bellary, Vizagapatam, Tinnevelly, and Coimbatore.

Bombay.—*For week ending 5th September, 1888.*—Rain in parts of Karachi; beneficial to crops and grass, but river still low in Sind, and water-supply deficient in one taluka of Upper Sind Frontier. Crop prospects unfavourable in Shikarpur. No rain during week in Kaira, Broach, Kathiawar, Baroda, and Ahmednagar; fall in other districts of Presidency Proper very slight. Rain most urgently required throughout Khandesh, Ahmednagar, Sholapur, and Bijapur, in the greater part of Nasik, in four talukas of Poona and Satara, in north-east talukas of Belgaum, and eastern talukas of Dharwar, where crops are withering. Total fall also insufficient, especially for rice, in parts of Guzerat, Kathiawar, and Baroda, though the crops are still promising. Standing crops damaged by crabs in one taluka of Karachi and by insects in parts of Colaba. Sowing of cotton progressing in Dharwar and of oilseeds in parts of Kathiawar. Fodder scarce in parts of Khandesh, Nasik, Ahmednagar, Sholapur, Belgaum, Kanara, Kathiawar, and Baroda. Agricultural stock generally in good condition. Scarcity of drinking water in Sholapur. Prices rising in Ahmednagar and Sholapur.

Bengal.—*For week ending 4th September, 1888.*—Rainfall was general, except in Orissa, where only a few local showers fell. A break in the rains appears to have set in over the whole province, and is expected to be beneficial to the crops generally. Some damage is reported to the rice crops in the Burdwan, Presidency, and Orissa Divisions, and to the *bhadoi* crops in Behar and Chota Nagpur, by the late excessive rain and floods. General prospects however are good. Transplantation of winter rice is nearly finished. Early rice and jute harvests are proceeding. According to latest estimate, about 50,000 people are in need of relief in Khurdah, and relief is being given both gratuitously and by way of works Partial distress is also reported from Angul, Bánka, and the Tributary State Baramba.

North-Western Provinces and Oudh.—*For week ending 5th September, 1888.*—There was heavy and continuous rain during the week throughout the Provinces. Over 10·10″ fell in one tahsil of Allahabad, from 7·10″ to 15·20″ in Cawnpore, 9·30″ in Ballia, and 8·00″ at Rai Bareli. *Kharif* crops have been damaged in most districts, and in Cawnpore, Allahabad, and Rai Bareli considerable injury has been sustained by *kacha* buildings. A break is urgently needed. Supplies of foodgrains are sufficient, and prices are steady. The condition of cattle is good.

Punjab.—*For week ending 5th September, 1888.*—Rain has fallen in certain districts. Prices fluctuating in Delhi, Lahore, and Mooltan, falling in Jullundur and Sialkot, rising in Ferozepore, Amritsar, and Rawalpindi, and stationary elsewhere. Sowings of some of the *kharif* crops in progress at

Lahore. Weeding commenced in Jullundur. Ploughing for *rabi* has also commenced in certain districts. Rain wanted at Hissar. *Kharif* crops flourishing and are in good condition. Crops slightly damaged at Shujabad, Mooltan district, owing to river floods. Stock cattle are reported healthy. Pasturage or fodder generally sufficient, but scarce in Dera Ismail Khan.

Central Provinces.—*For week ending 5th September, 1888.*—Light showers during the week, and more rain is now generally required for the rice, especially in Bilaspur, where the rice crop is reported to have suffered much damage. Prospects of other crops very good. The young rice in Sambalpur has suffered much from caterpillars. Cattle in fair condition. Prices rising in Jubbulpore.

Burma.—*For week ending 1st September, 1888.*—Agricultural operations are progressing in some parts of Lower Burma. Transplanting of rice is finished. Damage by flood in Pegu will be at least as large as already estimated—namely, over 20,000 acres. In Bassein, owing to a bund having burst, a large amount of paddy will be destroyed. Some damage from flood is also reported in Hanthawaddy, otherwise crop prospect is good. In Toungoo floods are subsiding. In Lower Burma there was heavy rain, except in Prome and Thayetmyo. In Upper Burma the rainfall was fair, but more rain is still wanted in parts of Shwebo and Yeu. In Upper Burma generally the crop prospect has improved. The price of paddy has risen in Henzada, and has rapidly fallen in Meiktila and Yemethin; prices have also fallen in Shwegyin and Thayetmyo, but elsewhere stationary.

Assam.—*For week ending 5th September, 1888.*—Weather variable. Rain wanted in Sibsagar, Nowgong, and Kamrup. Transplanting of late rice continues. Harvesting of early rice almost over. Prospects of tea generally good.

Mysore and Coorg.—*For week ending 5th September, 1888.*—Rainfall good in the Shimoga district. Elsewhere rain is much needed for crops. Prospects uncertain in parts and dependent upon early showers. Outturn of harvests fair. Condition of cattle generally good. Pasturage diminishing. Prices slightly risen in the Civil and Military Station, and Bangalore and Kolar districts.

Some rain in Coorg during the week. Crops in good condition.

Berar and Hyderabad.—*For week ending 5th September, 1888.*—Slight rain in Berar during the week. Cotton and *jowari* plants somewhat stunted for want of more rain. Fodder sufficient. Prices same as in last week.

Slight rain at Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 5th September, 1888.*—Good rainfall in Gwalior and Bundelkhand; partial elsewhere, except in Indore, Bhopawar, and Neemuch, where it is urgently wanted. Standing crops bad in Goona. Prices of foodgrains rising in Baghelkhand and Neemuch, steady in Western Malwa, and slightly fallen in Bhopawar. No other changes since the last report.

Rajputana.—*For week ending 5th September, 1888.*—Rainfall heavy in Jodhpore and Bikaneer; light elsewhere. Agricultural operations satisfactory. Standing crops good, but slightly damaged by excessive rains in some districts. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 30th August, 1888.*—Slight rain. Nights cooler. Prospects good.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, September 13th, 1888.

The first fortnight of September generally witnesses the termination of the great burst of the monsoon rains in India, and in about two years out of three, its final withdrawal from Upper India. Occasional feeble advances take place for some time afterwards, but they rarely reach Upper India. General rainfall in Upper India appears to be more dependent on the strength of the Bombay than on that of the Bengal monsoon current, and a weak monsoon on the Bombay Coast is usually associated with an early termination of the rains proper in Upper India. This appears to explain the conclusion of the present year's rains in the Punjab at the end of the first week of September. The character of the monsoon in the Arabian Sea is shown by the following telegram from the Agent of the P. & O. Company, Bombay, giving the weather experienced by the last mail steamer, the *Assam*: "In the Gulf of Aden winds were light and from south west, and sea smooth. From Guardafui to Socotra moderate southerly breezes, with a slight swell, prevailed. Thence to Bombay weather was fine, with light westerly airs or calms, and a westerly swell." This telegram shows that during the past week a very light south-west monsoon prevailed in the Arabian Sea.

At the end of the previous week a depression, which had been the chief feature of the weather of that week, was filling up in Upper India. It had followed the same track as the great majority of the small cyclonic storms of the present monsoon. It passed from the head of the Bay across Chutia Nagpur into the eastern districts of the North-Western Provinces, and filled up in Oudh, after remaining nearly stationary in that area for upwards of two days. The eastern and central districts of the North-Western Provinces and Oudh have, in fact, played nearly the same part in the meteorology of the present year's monsoon as the Central Provinces did last year. They have formed a kind of sink, to which the storms of the rains have drifted, and where they have finally disappeared. The week under review has been marked by the occurrence of another small cyclonic storm, similar to its predecessors in general character and line of march, but feebler, and attended with a smaller total amount of rain.

On the 3rd a small depression was shewn, chiefly by the shift of winds at the head of the Bay, to be forming. Heavy rain had fallen during the previous 24 hours at the foot of the hills and at the hill stations in Upper India from Roorkee westwards. Ranikhet registered 1⅜ inches, Simla 1½ inches, and Lucknow, Meerut, and Roorkee over 1 inch. Light showers were also received in Bengal and Burmah; but over the whole of North-Western, Western, Central, and Southern India the weather was practically rainless, and a complete break prevailed. The depression was slightly more marked on the morning of the 4th. In consequence of the indraught now established to this area, the rainfall was much smaller in amount in Northern India, and almost confined to local showers in Burmah and Bengal and at the hill stations in Upper India. Ordinary monsoon conditions of humidity and temperature, however, continued in the interior, the highest day temperature on the 3rd (in Upper Sind) being only 101°. Winds were very light and unsteady on the West Coast, due to the unusual weakness of the Arabian Sea monsoon current at this time. No important change occurred during the next 24 hours. The depression at the head of the Bay was apparently moving slowly to the west-north-west, but showed no signs of increasing in intensity, as the winds at all the Coast stations of the Bay were feeble and nowhere exceeded the average strength of the month. Burmah again received light to moderate showers. Over the whole of Northern India a partial break in the rains obtained. A few heavy local showers were received in Behar and the North-Western Provinces, *e.g.*, Bareilly 2 inches, Gya 1¾ inches, and Gorakhpur

1½ inches. The break in the rains continued in Western India. The depression on the morning of the 6th occupied the north-west angle of the Bay, and was now travelling much more rapidly than hitherto. It was also shewn by the observations of the Coast stations to be a very feeble disturbance, the depression at the centre not exceeding a tenth of an inch. Burmah and Bengal received moderate rain at this time, but elsewhere the break in the rains held. The depression crossed the coast during the afternoon of the 6th, and marched rapidly in a west-north-west direction across Chutia Nagpur, and occupied the western districts of that area on the morning of the 7th. The indraught to it during the previous 24 hours had given moderate rain to Bengal, Behar, and Chutia Nagpur, and showers in the Central Provinces and eastern districts of the North-West Provinces. Patna reported 1½ inches, Gya 1¼ inches, and Hazaribagh 1 inch. The depression advanced during the next 24 hours into the eastern districts of the North-Western Provinces, the centre of circulation being a little to the south of Benares on the morning of the 8th. A slight increase in the strength of the circulation occurred during the next 24 hours, which caused the winds on the Bombay Coast and Central India to draw round to west again. Rain was now falling in much smaller amounts in Burmah and Bengal; but the eastern districts of the North-Western Provinces and the Central Provinces received light to moderate and fairly general rain. Benares registered 1¾ inches on the 8th. The depression moved slightly to the north-west during the next 24 hours, and lay between Benares, Gorakhpur, Lucknow, and Allahabad on the morning of the 9th. Rain had fallen in larger amounts in the Central Provinces and the eastern districts of the North-Western Provinces. Assam also received a moderately heavy burst of rain during this and the next day. Dhubri recorded 3½ inches, Silchar 2 inches, and Benares, Bareilly, Gorakhpur, amounts over 1 inch, on the 9th. There was also at this time some local disturbance in Southern India, which gave heavy local rain (probably accompanying thunderstorms) in North-East Madras. Kurnool received 7¾ inches and Masulipatam 1½ inches on the 9th. The depression in the North-Western Provinces moved very slowly north-west during the next 24 hours and covered nearly the same area as on the previous day. The rainfall of this day was almost entirely confined to Burmah, Bengal, and the eastern districts of the North-West Provinces.

The general character of the distribution of the rainfall of the week is evident from the preceding remarks. Burmah, Bengal, and Assam have received moderate rain from the southerly winds feeding into the depression. Orissa, Chutia Nagpur, and the eastern districts of the North-Western Provinces obtained moderate to heavy rainfall, due to the passage of the depression, the rainfall being on the whole heaviest over the area through which the centre of the depression advanced. The Central Provinces and Central India received light to moderate local showers, caused by the feeble indraught from the West Coast to the depression on the 8th and 9th. The greater part of the Punjab, Sind, Rajputana, Western India, and a large portion of Southern India have been practically rainless during the week. Some districts in Madras, chiefly the north-eastern, including Kurnool and the Circars, have had some heavy local falls during the week, which gave excessive but very irregularly distributed rain.

The third column of the following table shows the variation of the rainfall from the average in each district. Tenasserim received only about one-third of its normal amount, and Lower Burmah two-thirds. In Central and Upper Burmah more than the average amount fell; and the rainfall in the latter area was very equally and favourably distributed. In Bengal and Assam there was a moderate deficiency, averaging nearly one inch, or about 30 per cent. The rainfall in Orissa and Chutia Nagpur for the week was practically normal in amount. It was, however, very unequally distributed in Orissa, the amount increasing from about 1⅓ inches in the Pooree to 5⅓ inches in the Balasore district. In South Behar there was a moderate excess of about three-quarters of an inch, nearly equal in amount to the deficiency of the week in North Behar. The rainfall of the week was most abundant in the eastern and submontane districts of the North-Western Provinces and in Oudh, over which areas double the normal amount was received by steady and almost continuous rain during the last four days of the week.

The eastern districts of the Central Provinces had a moderate excess averaging 50 per cent. Central and South Madras received excessive rain in some districts (especially Kurnool), which gave it an average considerably above the normal. Over the remainder of India the rainfall was more or less in defect. The deficiency was most marked in the West Coast districts from Guzerat southwards to Malabar and in Sind, the West Punjab, Rajputana, Berars, Coorg, and perhaps Mysore, in all of which districts the rainfall of the week was less than a tenth (or 10 per cent.) of the normal amount. In the Bombay Deccan, including Khandeish and in Hyderabad, the rainfall was very irregularly scattered, and was about half the normal amount. There was also a largish defect over the central and western districts of the Central Provinces, which increased in amount westwards and was greatest in the districts bordering on the Berars.

The general distribution of the rainfall of the week was, on the whole, similar to that which has characterized the present monsoon hitherto. Over the greater part of Burmah, Bengal, the North-Western Provinces, and the West Coast the total rainfall up to date is in excess of the average, whilst in the Punjab, the Central Provinces, and the Peninsula generally it is more or less in defect, the deficiency being most marked in some parts of the Bombay and Madras Deccan, Hyderabad, Mysore, and Coorg.

Province.	Division.	Rainfall data for week ending September 10th, 1888. Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Rainfall data from May 14th to September 10th, 1888. Average actual rainfall of season to date.	Average normal rainfall, May 14th to September 10th.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA, *13th September, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 8th September, 1888.*—Rainfall general; fair in Ganjam, Vizagapatam, Trichinopoly, and South Arcot, poor elsewhere. Standing crops generally fair, but withering in Madura, Salem, Tinnevelly, Nilgiris, Bellary, Anantapur, Kurnool, and Cuddapah. Want of rain much felt in these districts and parts of Ganjam, Vizagapatam, Godavari, Kistna, North Arcot, Trichinopoly, and Coimbatore. Agricultural operations progressing fairly. Prices rising where not stationary. General prospects fair; slightly improved in Madura, but not so favourable in parts of Salem, Tinnevelly, Coimbatore, Bellary, and Anantapur.

Bombay.—*For week ending 12th September, 1888.*—River low in Sind, and water-supply deficient in parts of Upper Sind Frontier. Rain during week good in parts of the Deccan and Southern Mahratta Country with indications of more, but slight throughout Guzerat, Kathiawar, and Konkan. Crops improved in Ahmednagar and Bijapur and parts of Nasik, but almost withered up in Sholapur, and suffering for want of moisture in Ahmedabad, in four talukas of Kaira and Nasik, and in parts of Khandesh, Surat, Colaba, and Kanara. Standing crops damaged by insects in parts of Colaba and Upper Sind Frontier. Harvesting of early crops commenced in parts of Hyderabad. Preparations for late crops progressing in parts of Shikarpur and Nasik, but retarded in parts of Sholapur. Sowing of cotton continues in parts of Bijapur, and of oilseeds in parts of Kathiawar. Fodder scarce throughout Sholapur, and in parts of Hyderabad, Kaira, Khandesh, Nasik, Ahmednagar, Belgaum, Kanara, and Baroda. Agricultural stock generally healthy. Scarcity of drinking water at Sholapur. Prices of foodgrains and fodder rising in Sholapur.

Bengal.—*For week ending 11th September, 1888.*—Fairly general rain reported on the 6th, 7th, and 10th instant, but on the remaining days of the week the falls were rather lighter and less general, and a partial break prevailed. General agricultural prospects are favourable, except in certain tracts in the Burdwan, Orissa, and Presidency Divisions, where damage is reported to have been done to the rice crops by floods. The *bhadoi* crops along the banks of the Ganges in South Behar, and also in Chota Nagpur, have suffered on account of heavy rain. Transplantation of winter rice is almost finished. Harvesting of early rice and jute is proceeding, and that of other autumn crops has begun in some districts. Price of rice is generally higher than at this time last year, the rise being considerable in the western districts in Orissa and Chota Nagpur, and in some of the Behar districts. Great distress still exists among labouring classes in Khurdah, Angul, Banki, and the Tributary State of Baramba.

North-Western Provinces and Oudh.—*For week ending 12th September, 1888.*—Beneficial but partial breaks in the rain have now occurred. Crops on low lands have been injured in many districts by previous excessive rain, and ploughing in places has been impeded, otherwise prospects are good. Supplies are ample, but in many districts prices continue to rise, owing probably to the excessive rain having damaged the prospects of a full autumn harvest. The condition of cattle continues good.

Punjab.—*For week ending 12th September, 1888.*—Rain has fallen in certain districts. Prices fluctuating in Delhi and Mooltan, rising in Rawalpindi and Dera Ismail Khan, and stationary elsewhere. Sowing of *kharif* crops completed at Dera Ismail Khan, weeding in progress at Jullundur. Ploughing for and sowing of *rabi* crops have been commenced in certain districts. Rain urgently

wanted at Hissar, both for standing crops and *rabi* ploughing. Prospects of the *kharif* crops good and flourishing. No damage done to crops. Pasturage or fodder sufficient, except at Dera Ismail Khan.

Central Provinces.—*For week ending 12th September, 1888.*—A moderate amount of rain has fallen, but more is required in rice growing districts, and in Nimar the need is especially great. In the western and central parts of the Raipur and Bilaspur districts prospects are however generally favourable. The damage to rice by insects in Sambalpur has ceased. Fodder sufficient. Prices rising in Saugor.

Burma.—*For week ending 8th September, 1888.*—Agricultural operations are progressing in Lower Burma. Floods are subsiding, and the fields where crops were destroyed are in many cases being replanted. In Upper Burma the crop prospect is generally improving, notably in Minbu, where there was lately much apprehension about the crops. There has been a fair rainfall in all districts during the week. The price of paddy has risen in Akyab, Rangoon, Pegu, Bassein, Henzada, Shwegyin, Mandalay, and Kyauksè districts. Prices have fallen in Tavoy, but elsewhere are stationary.

Assam.—*For week ending 12th September, 1888.*—Weather seasonable. Reaping of early rice almost finished. Transplanting of late rice continues. Pulses being sown. Prospects of tea generally good.

Mysore and Coorg.—*For week ending 12'h September, 1888.*—Rainfall general and slight, but rain is much required in Bangalore, Kolar, Tumkur, and Chitaldroog districts. Standing crops in fair condition. Prospects still uncertain in parts. Outturn of harvests tolerably good. Pasturage scarce in parts of Kadur and Chitaldroog districts. Stock cattle generally in good condition. No material change in prices.

Slight rain in Coorg during the week. Rice planting still in progress.

Berar and Hyderabad.—*For week ending 12th September, 1888.*—Weather cloudy and hot. Rainfall slight, and more is wanted throughout the province. Crops are in good condition Weeding almost completed. Ground for *rabi* is being prepared. Pasturage running short. Prices of foodgrains are rising.

No rain at Hyderabad. Agricultural prospects fair. Prices stationary.

Central India.—*For week ending 12th September, 1888.*—Fair rainfall throughout Central India, though more is wanted in most parts. Probable outturn of harvests and pasturage and fodder in Western Malwa poor, where crop is slightly damaged. Prices slightly risen in Bhopawar.

Rajputana.—*For week ending 12th September, 1888.*—Rainfall partial and light. Agricultural operations satisfactory. Standing crops good, but require rain in Sirohi and Kherwara. Prospects good. Agricultural stock good. Pasturage or fodder sufficient. Prices steady generally.

Nepal.—*For week ending 6th September, 1888.*—Slight rain, but beneficial to the crops. Nights cooler. Prospects good. Garlic and peas are being sown.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XX. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 20th August, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 18th August, 1888. Total.	Per mile open.	Total Receipts from 1st April to 20th August, 1887 Total.	Per mile open per week.	Total Receipts from 1st April to 18th August, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

DEPARTMENT OF FINANCE AND COMMERCE,
STATISTICAL BRANCH;
Calcutta, 15th September 1888.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, September 17th, 1888.

In last week's report the general character of the weather in September was briefly stated. It was also pointed out that the most marked feature of the south-west monsoon current of the present year was the weakness of the Bombay branch as contrasted with the Bengal branch. This contrast was very marked in the previous week, and has been even more prominent in the week under review.

The character of the weather in the centre of the Arabian Sea during the week is fully given by the following telegram from the Agent of the Peninsular and Oriental Company, Bombay, stating the weather experienced by the last mail steamer in her passage from Aden to Bombay:

"In the Gulf of Aden easterly winds were blowing. From thence to Long. 62° east, light west-south-west winds, and thence to Bombay west-north-west winds. Fine weather throughout." The telegram shows that the Bombay monsoon current had retreated from the northern half of the Arabian Sea, as well as from Upper and Central India.

The chief feature of the week has been the filling up of the small storm of the previous week and the commencement of another, which will probably prove to be in several respects one of the more remarkable of recent years.

At the end of the previous week, the small depression which had passed from the head of the Bay through Orissa and Chota Nagpur into the eastern districts of the North-Western Provinces and Oudh was filling up. The depression was very slight on the morning of the 11th, and the chief evidence of its existence was a moderate cyclonic movement of the air in those districts. During the previous 24 hours a rapid increase of pressure had occurred over the whole of India, and pressure was fairly uniform on the morning of the 11th over the whole of Northern India. A remarkably heavy downpour of rain took place during the day in the Gorakhpur and Basti districts. Bansi in the Basti district received 24 inches, and Maharajgunj in the Gorakhpur district 21 inches. According to the accounts published in the *Pioneer* newspaper, even heavier falls are reported, 30 inches having, it is said, fallen in the Lehra pergunnah in the Gorakhpur district. This is another example of the tremendous and concentrated downpours of rain which occasionally happen when a small storm of the rains is approaching the hills. The largest fall of this kind which has yet been recorded was at Purneah on 13th September 1879, when upwards of 35 inches fell in 24 hours. Another example was the excessive rainfall, exceeding 30 inches, in the Bijnor district on 18th September 1880 during the storm, which caused the Naini Tal landslip.

A considerable change in the distribution of pressure commenced on the 10th, which initiated a short but almost complete break in the rains from the 11th in Northern India. The most important and significant feature of the pressure distribution on that day was the appearance of a band or trough of low pressure which stretched across from Orissa to the West Pegu Coast on the morning of the 11th. Skies cleared during the day in the Central Provinces, Central India, and the western districts of the North-Western Provinces; the air became drier, and temperature began to increase somewhat rapidly. A series of severe thunderstorms (a frequent phenomenon at the end of the rains) occurred in Western and Southern India, which gave fairly general and moderately heavy rain. Bombay received $3\frac{1}{4}$ inches, Salem, Kurnool, and Ratnagiri 2 inches, Poona $1\frac{1}{4}$ inches, and Belgaum and Sholapur 1 inch.

The barometric changes of the next 24 hours were small, but were such as to reduce pressure to approximate uniformity over the whole of Northern and Central India, where light variable winds and calms hence prevailed.

The trough of low pressure in the Bay was more strongly marked than on the 11th, and had extended across Lower Burma into Tenasserim. A more or less complete break in the rains obtained over the whole of India, except on the Malabar Coast, where heavy rain fell at this time, and in the eastern districts of the North-Western Provinces and some parts of Bengal and Assam, which received light to moderate local showers.

During the next 24 hours a great fall of pressure took place in Burma and Tenasserim, and on the morning of the 13th a deep depression lay over Tenasserim and the adjacent part of the Andaman Sea.

So far as can be judged from the wind directions, it is very probable that this depression and storm passed from the Gulf of Tonquin across the narrow Malayan Peninsula. The centre was to the east or north-east of Tavoy at 8 A.M. of the 13th, and weather was threatening and squally over Lower Burma.

Fine weather with light variable winds prevailed during the day over the greater part of India. Heavy rain again fell on the Malabar Coast, and rain in connection with the approaching storm was commencing to fall generally in Lower Burma.

The storm apparently marched to the west-north-west during the day, and at 8 A.M. of the 14th covered the greater part of Lower Burma and the adjacent sea area. The centre at 8 A.M. was a little to the west of Bassein and approaching the line of hills bordering the West Pegu and Aracan Coasts. The depression at the centre was at least a third of an inch. Strong squally winds prevailed in Lower Burma during the day. Heavy rain had fallen in Lower Burma during the previous 24 hours. Diamond Inland received $3\frac{1}{2}$ inches, Bassein $2\frac{1}{4}$ inches, and Rangoon 1 inch. Temperature continued to increase steadily in Upper and Central India, and high temperatures were reported from Sind and the West Punjab, the highest being $110\frac{1}{2}^{\circ}$ at Dera Ismail Khan.

The storm centre crossed the hills in South-West Pegu during the morning, and advanced rapidly in a west-north-west direction across the north of the Bay. The centre at 8 A.M. of the 15th was in about Lat. 19° north and Long. 91° east, so far as can be judged from the coast observations. The storm almost certainly increased in intensity and extent during the day. The winds began to increase in force, and to shift round to north-east and east at the head of the Bay. Skies clouded over and rain commenced in the coast districts of Bengal. Showers also fell on this day in the West Coast districts and Central Provinces. With these exceptions, the break in the rains continued over the whole of India.

The storm moved very rapidly during the day, and crossed the Orissa Coast near False Point early on the morning of the 16th. The general disturbance, of which the storm now formed the inner portion, and the accompanying cyclonic circulation now included nearly the whole of the Bay and of India, with the exception of Sind, the Punjab, Rajputana, and the western districts of the North-Western Provinces. Very strong stormy winds prevailed in the north of the Bay and in Orissa, Ganjam, and South Bengal. Heavy rain had fallen during the previous 24 hours in Lower Burma, South Bengal, Orissa, and cloud and general rain were now extending westwards into the Central Provinces.

During the next 24 hours the storm advanced almost in a due westerly direction, and at 8 A. M. of the 17th the centre was between Raipur and Nagpur. The depression at the centre was still very large, and slightly exceeded ·3". Very strong stormy winds now prevailed over the Central Provinces, and the general cyclonic circulation included the whole of India, except the Punjab and Sind. The westerly winds on the Bombay Coast, which set in on the 15th, almost certainly extended to a very short distance from the coast, as they brought up very little moisture.

The indraught from the Bay of Bengal gave excessive rain to the Central Provinces at this time, and moderate rain to Bengal, Burma, and the eastern districts of the North-Western Provinces. Amongst the more remarkable rainfalls of the day (registered on the morning of the 18th) were—Pachmarhi $6\frac{1}{4}$ inches, Seoni $4\frac{1}{2}$ inches, Nowgong $4\frac{1}{4}$ inches, Saugor $3\frac{3}{4}$ inches, Amraoti and Akola $2\frac{3}{4}$ inches, and Khandwa and Nagpur $2\frac{1}{4}$ inches.

The storm, it may be added, will also form the prominent feature in next week's report.

The distribution of the rainfall of the week is shown by the preceding remarks. The eastern districts of the North-Western Provinces and the north-east districts of Oudh generally received moderate rain at the beginning of the week, but in this area the Basti and Gorakhpur districts obtained an excessive downpour on the 10th and 11th. With this exception, a general break in the rains obtained in Northern and Central India until nearly the end of the week. The storm which advanced west-north-west from Tenasserim gave moderate to heavy rain in Burma and heavy rain in Orissa and Ganjam, and moderate rain in Bengal and Behar, and was commencing to give excessive rain in the Central Provinces at the end of the week. Frequent thunderstorms and local showers occurred in the Deccan and Southern India, and gave moderate but very irregularly distributed rain.

The data of the rainfall for the week are given in the following table. It is to be feared that the rainfall is not always registered as carefully as it ought to be done by Subdivisional Officers, and the returns can hence only be regarded as approximate. A striking example of the inaccuracy of some of the rainfall returns occurs in this week's report. The Deputy Commissioner of Rangoon reports a total fall of 1·26 inches for the week ending 17th, whereas the amount as registered at the observatory at the same station (probably not more than two hundred yards distance) was 4·94 inches. As the rainfall was due to a large and extensive storm, it is certain that this discrepancy is due to erroneous rainfall measurement at the Deputy Commissioner's office.

The rainfall of the week was slightly in excess in Lower Burma, Orissa, Chota Nagpur, and South Behar. There was a large excess in North Oudh and in the Basti and Gorakhpur districts. There was a general deficiency over the remainder of Northern and Central India, ranging in amount from $\frac{1}{2}$ inch in Central Bengal and the South and West Punjab, to 3 inches in Guzerat and Arakan, and 5 inches in Tenasserim. The deficiency was on the whole most marked in Guzerat, the Berars, the Central Provinces, and to a less extent in the Punjab and Rajputana.

There was a general moderate excess over the greater part of Madras, Bombay, the Deccan, and Mysore and Hyderabad. It was on the whole largest in Mysore, Central and South Central Madras. As rainfall has been considerably below the normal throughout the season in these districts, this rainfall was seasonable and favourable.

The rainfall of the week has hence fallen chiefly in districts where it has hitherto been deficient, and a break in the rains prevailed over a large portion of Northern India, where it was much wanted.

Province.	Division.	Rainfall data for week ending September 17th, 1888. Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Rainfall data from May 14th to September 17th, 1888. Average actual rainfall of season to date.	Average normal rainfall, May 14th to September 17th. Simla, *17th September, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 15th September, 1888.*—Rainfall general and good in most districts. Standing crops generally fair, but withering in parts of Tinnevelly, Anantapur, Bellary, Cuddapah, and Kistna. Want of rain felt in these districts and in parts of Coimbatore, Salem, Trichinopoly, Kurnool, Nellore, Godavari, Vizagapatam, and Ganjam. Agricultural operations progressing fairly. Prices falling in four districts, but rising or stationary in others. General prospects fair, and improving in all the affected districts, except Anantapur and Tinnevelly.

Bombay.—*For week ending 19th September, 1888.*—River falling, and water-supply deficient in Sind, and crops suffering in consequence. Rain during the week good throughout the Deccan and Southern Mahratta Country and beneficial to standing crops, but slight throughout Guzerat, Kathiawar, and the Konkan. Total rainfall generally insufficient and more needed throughout the presidency, especially in Guzerat, Kathiawar, and in parts of Khandesh and Nasik, where crops are withering. Standing crops damaged by insects in parts of Upper Sind Frontier, and by blight in parts of Ratnagiri. Sowing of late crops progressing in parts of Hyderabad, Upper Sind Frontier, Ahmednagar, Poona, Bijapur, and Belgaum, and reaping of *bajri* in one taluka of Kaira. Agricultural stock generally good. Fodder scarce in parts of Khandesh, Nasik, Sholapur, Belgaum, Kathiawar, and Baroda. Prices of foodgrains rising in parts of Kaira and Nasik, and of foodgrains and grass in Sholapur.

Bengal.—*For week ending 18th September, 1888.*—A break in the rains at the beginning of the week over the greater part of the Province. On the 16th there was a cyclone accompanied with heavy rain in Orissa, and moderate rain also fell in South-West Bengal, South Behar, and Chota Nagpur. On the 17th and 18th moderate rain reported in all districts. General prospects of crops continue favourable, except in the flooded tracts of Burdwan, Presidency, Patna, Orissa, and Chota Nagpur Divisions Early rice and jute mostly harvested, other autumn crops are also being reaped. Early rice has been rather below an average crop in some districts. The cyclone in Orissa is said to have much injured the mature *beali* rice crops in Cuttack. Distress in Khurdah and other parts of the Orissa Division still reported.

North-Western Provinces and Oudh.—*For week ending 19th September, 1888.*—Very heavy rain fell during the week in the north of Gorakhpur, causing serious floods and destruction of property. Heavy rain continued in the Fyzabad, Lucknow, and part of Aligarh districts. Damage to *kharif* crops in the abovementioned districts, as well as in Benares, Rai Bareli, and Allahabad, is reported. A break is generally much needed for preparation of ground for spring crops. Supplies are sufficient, but prices continue to rise in some districts. The condition of cattle is satisfactory.

Punjab.—*For week ending 19th September, 1888.*—No rain has fallen during the week. Prices fluctuating in Mooltan and Delhi, stationary in Amritsar, Sialkot, Lahore, and Dera Ismail Khan, and rising elsewhere. Ploughing for, and sowing of, *rabi* crops are in progress. More rain wanted at Hissar and tahsil Fazilka. Condition and prospects of *kharif* crops average at Rawalpindi, and good elsewhere. Fodder sufficient, except at Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 19th September, 1888.*—Good rain has fallen in most places, but more is still required for rice in parts of Raipur and Bilaspur. *Jowari* and cotton doing well. Prices have risen in Jubbulpore, owing to large exports. Cattle in good condition.

Burma.—*For week ending 15th September, 1888.*—In Lower Burma sowing and planting is finished, except where re-sowing of flooded lands is necessary. In Upper Burma sowing is progressing. Rainfall is sufficient, except in Myadaung. In Upper Burma generally crops promise well. In Lower Burma, except where damage has been done by flood, the crop prospect is good. The price of paddy has risen in Rangoon, Prome, Bassein, Henzada, Thayetmyo, Shwegyin, Bhamo, Ruby Mines, and Myingyan. Some scarcity prevails in Sandoway, Toungoo, and Shwegyin districts of Lower Burma. Prices of grain have fallen in Tavoy, Kyaukse, and Pakôkku districts.

Assam.—*For week ending 19th September, 1888.*—Weather seasonable. More rain required in Kamrup. Transplanting of cold weather rice still continues. Pulses being grown. Prospects of tea and other crops generally good.

Mysore and Coorg.—*For week ending 19th September, 1888.*—Rain general and good in parts of Mysore. Standing crops improving in consequence. Prospects fair now.

Some rain in Coorg. Monsoon rains have abated. Season favourable for coffee and cardamoms.

Berar and Hyderabad.—*For week ending 19th September, 1888.*—Insufficient rainfall in Berar, and crops are suffering therefrom. Pasturage becoming scarce in some districts. Cattle free from disease. Prices of foodgrains rising.

No report from Hyderabad.

Central India.—*For week ending 19th September, 1888.*— Rain fell fairly throughout the Agency, and was opportune. More rain yet required. No changes since last report, except that prices of foodgrains have risen in Bundelkhand and Baghelkhand, and standing crops, probable outturn of harvest and agricultural stock in Neemuch, are fair, though crops somewhat damaged.

Rajputana.—*For week ending 19th September, 1888.*—Slight rain in Jhallawar, Jeypore, and Bhurtpur; none elsewhere. Agricultural operations and standing crops want rain urgently in many districts. Agricultural stock good. Pasturage or fodder sufficient. Prices rising everywhere.

Nepal.—*For week ending 13th September, 1888.*—Seasonable rain. Autumn rice is beginning to ripen. Good outturn expected.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XXI. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 27th August, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 25th August, 1888. Total.	Per mile open.	Total Receipts from 1st April to 27th August, 1887 Total.	Per mile open per week.	Total Receipts from 1st April to 25th August, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, September 24th, 1888.

The chief feature of the weather of the past week has been the cyclonic storm which formed or appeared in Tenasserim on the 12th, and advanced in a west-north-westerly course to the Central Provinces during the next four days. It covered the greater part of the Central Provinces at the commencement of the week under review, the centre being midway between Raipur and Nagpur on the morning of the 17th.

The following telegram gives the weather experienced by the mail steamer "Sutlej" in her passage from Aden to Bombay, where she arrived early on the 24th: "In the Gulf of Aden weather was fine, with a confused swell. Thence to about Long. 71° E. light south-west to west-south-west breezes were experienced. On approaching Bombay the wind shifted to west-north-west, the swell decreased, and some light showers fell. The barometer was normal throughout." This telegram shows that no change has occurred in the weather over the north of the Arabian Sea, and that the South-West monsoon is probably in possession only of the southern half of the Arabian Sea, and is unusually weak even there.

As already stated, the centre of the cyclonic storm was between Raipur and Nagpur on the morning of the 17th. During the previous 24 hours it had advanced westwards, with an average velocity of nearly 15 miles per hour. The storm had now reached a critical stage in its existence. The larger storms of the rains which pass into the Central Provinces always cause a shift of wind on the Bombay Coast. If a moderate or strong monsoon is blowing in the centre of the Arabian Sea, the indraught to the storm area from the Bombay Coast usually gives rise to heavy rainfall in the south-western and southern quadrants of the storm, and it continues to advance in a general westerly direction, passing frequently into Guzerat or South-West Rajputana and Cutch, and sometimes disappearing across the coast into the north of the Arabian Sea, to which it may give very stormy weather for a short time. If, on the other hand, the South-West monsoon is very weak on the Bombay Coast, and has retreated from the north and centre of the Arabian Sea, the storm either dies out in the Central Provinces, or advances by a more northerly course into Upper India—usually along the trough of low pressure in existence in Northern India immediately previous to the formation of the storm. This explains to some extent what occurred in the case of the present storm.

During the afternoon and night of the 17th it marched very slowly westwards. The rainfall was chiefly confined to the east and north quadrants, and was hence drawn from the Bay of Bengal current. Pachmarhi received 6¼ inches, Seoni 4½ inches, Nowgong 4¼ inches, and Saugor 3¾ inches on the 17th. The centre at 8 A.M. of 18th was about 50 miles to the west-north-west of Nagpur. Its rate of motion during the previous 24 hours barely averaged four miles per hour. Winds had shifted round to west on the Bombay Coast on the 15th, and were increasing considerably in force. Light showers were now falling in the Bombay Coast districts and Deccan, but the heavy cyclonic rainfall accompanying the storm occurred on the 18th, as on the 17th, chiefly in the north quadrant. Pachmarhi received 5¼ inches and Hoshangabad 3½ inches during the day. The general indraught from the Bay of Bengal was also apparently increasing in volume, as more or less general and heavy rain was now falling over the greater part of the North-Western Provinces, as well as in Burmah, Bengal, and Behar. For example, Agra received 6 inches during the day, Roorkee and Ranikhet 4½ inches, Bareilly 2¾ inches, Meerut 2½ inches, and Delhi 1¾ inches.

As the indraught of moisture from the Bombay Coast was too small to draw the storm on in a westerly direction, it changed its course during the next

24 hours and marched northwards along the trough of low pressure, as shown on the chart of the 12th, before the storm had modified the distribution of pressure.

The storm centre at 8 A.M. of the 19th was west of Nowgong and nearly midway between Jhansi and Saugor. The intensity and extent of the storm were apparently undiminished, and it was now giving rise to very strong easterly winds in the North-Western Provinces and Behar. The storm area on the morning of the 19th included Bundelkhand, the eastern districts of Central India, South-East Rajputana, and the adjacent districts of the North-West Provinces. The velocity of the storm centre during the previous 24 hours averaged 10 miles per hour. More or less heavy rain fell over the greater part of Central India, the Central Provinces, the North-West Provinces, and Behar. The heaviest rainfall continued to be received in the northern quadrant of the storm. Roorkee received 7¼ inches during the day, Delhi 6 inches, and Meerut 5¼ inches. The indraught increased in intensity during the day, and unusually strong easterly winds prevailed over the greater part of the North-Western Provinces on the evening of the 19th and morning of the 20th. The storm continued to advance in a northerly direction, and at 8 A.M. of the 20th the centre was between Delhi and Meerut. The depression at the centre was about three-tenths of an inch—the same in amount as it had been from the 16th, when the storm advanced into the Central Provinces. Its rate of motion during the previous 24 hours averaged 12 miles per hour. The storm area proper was now approaching the hills and, as frequently happens in cyclonic storms in such cases, the rainfall increased in amount, and was abnormally heavy over the districts of Meerut, Muzuffarnagar, Saharanpur, Bijnor, and Umbalia, at the foot of the hills, and also in the adjacent hill districts. Mussoorie received 3½ inches, Chakrata 2¾ inches, and Simla 2¼ inches on the 20th.

Rain had now ceased to fall in the Central Provinces and Central India, and skies were rapidly clearing. The storm area in Upper India was very sharply demarcated in the westerly quadrant, and skies were during the whole of this period quite clear to the north and west of Lahore.

The history of the storm hitherto had shown it was one of very considerable altitude. This was further confirmed by its continuing to march northwards across the outer line of hills up to the snowy range, to which it gave a considerable fall of snow. Hence it either filled up or passed beyond the snows on the evening of the 20th, and the chart of the 21st showed no signs of it. Skies cleared very rapidly on the night of the 20th in Upper India, and were nearly free from cloud in the North-Western Provinces, as well as in the Punjab, Rajputana, Central India, and the Central Provinces on the 21st.

The history of the storm hence dates from the 12th to the evening of the 20th. It gave general and heavy rain to Burmah, Orissa, the Central Provinces, some parts of Central India and Rajputana, the north-west districts of the North-Western Provinces, and adjacent districts of the Punjab (in which two last areas the rainfall was excessive in amount and gave rise to serious floods, and is said to have caused much damage to the standing crops). It also gave general rain to Bengal, Behar, and the eastern and central districts of the North-Western Provinces and Oudh. The rainfall caused a great reduction of temperature over the whole of Northern and Central India, and the mean temperature of the week was very considerably below the average.

With the disappearance of the storm in Upper India on the night of the 20th, the South-West monsoon and rains of the present year ceased in Upper India. On the 21st light variable winds and calms prevailed in Upper India. Showers continued to fall in Burmah, Bengal, and Assam. A rapid reduction of humidity occurred in Upper and Central India on the 22nd, and westerly winds set in, which extended rapidly eastwards down the Gangetic valley. On the morning of the 23rd these westerly winds had extended across Behar, and fine dry weather with clear or very lightly clouded skies prevailed over nearly the whole country. As frequently happens during the southerly retreat of the monsoon in the Arabian Sea at the end of September, light showers commenced to fall in Southern India. Coimbatore, Poona, Kurnool, and Vizagapatam received amounts during the 23rd varying between half an inch and one inch.

On the morning of the 24th light unsteady winds had set in on the Bengal Coast, and the Bengal current was very weak. Fine dry weather hence prevailed at the end of the week over the whole of India, except the south of the Peninsula, which was receiving occasional light thundershowers.

The distribution and character of the rainfall of the past week have been fully indicated in the preceding remarks.

It was above the average in Lower Burmah, Assam, North Bengal, Orissa, Oudh, the North-Western Provinces, the Punjab (excepting the north-west and west districts), the Central Provinces, Berar, Central India (East), Mysore, and some parts of Madras. The chief feature was the excessive rainfall in some parts of Upper India. The following gives the districts in which the average fall of the week exceeded eight inches, and the normal fall for comparison :

District.	Average rainfall of week.	Normal average rainfall of week.	Excess.
	Inches.	Inches.	Inches.
Saharanpur	13·80	1·32	12·48
Umballa	12·81	0·76	12·05
Muzaffarnagar	12·10	1·53	10·57
Bijnor	11·25	1·83	9·42
Kumaon	10·68	?	?
Bulandshahr	10·62	0·73	9·89
Delhi	10·10	0·81	9·29
Agra	9·89	0·97	8·92
Meerut	8·29	0·70	7·59
Etah	8·11	1·12	6·99

The largest total rainfalls of the week were as follows :

Naini Tal	...	...	22·90 inches.
Jagadhri (Umballa District)	...	...	19·20 ,,
Saharanpur	...	...	17·96 ,,
Bah (Agra District)	...	...	15·14 ,,
Sonipat (Delhi District)	...	...	15·10 ,,

The rainfall of the week was in moderate defect in the remaining districts of India, except in Arakan and Tenasserim, where the deficiency exceeded 4 inches.

A reference to the accompanying table shows that the rainfall of the present monsoon has been abundant or excessive in Tenasserim, the North-Western Provinces and Oudh,—normal or in moderate excess in Burmah, Assam, Bengal, the eastern districts of the Punjab, the West Coast districts, and the greater part of Central India and Rajputana. It is in moderate defect in the Central Provinces, the Berars, the greater part of Madras, and the Bombay Deccan, and the West Punjab. The only districts in which there appears (so far as can be judged from the returns) to have been a serious deficiency are as follows : Kathiawar (6·3 per cent.), Guzerat (4·5 per cent.), South Hyderabad (4·4 per cent.), South Madras (3·8 per cent.), and Khandeish (3·4 per cent.). The returns from Mysore and Sind have come in very irregularly, and the data for these two provinces are very doubtful.

Province.	Division.	Rainfall data for week ending September 24th, 1888.			Rainfall data from May 14th to September 24th, 1888.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, May 14th to September 24th.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA, *24th September, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 22nd September, 1888.*—Rainfall general; poor in Tinnevelly, Madura, Anantapur, Coimbatore, Bellary, and Kurnool, and good elsewhere. Standing crops generally fair, but withering in Madura, Tinnevelly, Coimbatore, Bellary, Anantapur, and Kistna; want of rain felt in these districts and parts of Vizagapatam, Ganjam, North Arcot, Kurnool, and Trichinopoly. Agricultural operations progressing fairly. Prices falling in six districts, stationary in four, and rising in others. General prospects fair, and improving in all affected districts, except Madura, Tinnevelly, and Coimbatore.

Bombay.—*For week ending 26th September, 1888.*—River still low in Sind, and want of water felt in Karachi. Rain during the week good throughout Deccan and Southern Mahratta Country, where prospects are generally improved; slight in parts of Konkan, Surat, and Panch Mahals. Total rainfall generally insufficient, and more needed urgently. Standing crops damaged by blight and rats in parts of Karachi, and by blight in parts of Ratnagiri. Harvesting of early crops in progress in parts of Hyderabad, Ahmedabad, Kaira, and Nasik, and sowing of late crops in parts of Shikarpur, Hyderabad, Nasik, Poona, Ahmednagar, Bijapur, Belgaum, and Dharwar. Fodder scarce in parts of Hyderabad, Khandesh, Nasik, Sholapur, Belgaum, Dharwar, Kathiawar, and Baroda. Agricultural stock good. Except in parts of Hyderabad, Nasik, Belgaum, and Kathiawar. Prices rising in Kaira and parts of Nasik. Water-supply in Sholapur improved.

Bengal.—*For week ending 25th September, 1888.*—The weather has been of a light monsoon character throughout the week, and the rainfall, though general, has been scanty in almost all districts. The crops are generally favourably reported on, except in parts of South and West Bengal, South Behar, Orissa, and Chota Nagpur, where floods have been prevalent and destructive. Winter rice requires more rain in parts of North Bengal and North Behar. Early rice and jute harvests are still proceeding in some districts in Behar and Chota Nagpur. The *bhadoi* crops are being reaped, and the outturn is expected to be fair, except in the inundated tracts. In Patna the *bhadoi* outturn will be very poor,—perhaps two annas for the whole district. Distress still reported in Khurdah and other parts of the Orissa Division, but prospects have improved.

North-Western Provinces and Oudh.—*For week ending 26th September, 1888.*—Heavy rain in Meerut, Aligarh, Agra, Kumaun, Moradabad, Bareilly, and especially in Saharanpur, where much damage has been caused to property; elsewhere the rainfall has been more moderate and beneficial. Reaping of *kharif* crops commenced. Ploughing for *rabi* in progress. Supplies are sufficient. Prices still fluctuate with an upward tendency.

Punjab.—*For week ending 26th September, 1888.*—Rain has fallen in Jullundur and Cis-Sutlej districts. Prices are fluctuating in Delhi, falling in Umballa, rising in Rawalpindi, Shahpur, Dera Ismail Khan, and Peshawar, and stationary elsewhere. Harvesting of *kharif* commenced at Umballa. Ploughings for and sowings of *rabi* crops in progress. More rain wanted at Hissar, Sialkot, and Shahpur. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan; otherwise the prospects of standing crops are good. No damage done to crops. Stock cattle reported healthy. Pasturage or fodder sufficient, except at Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 26th September, 1888.*—Weather showery; more rain required for rice in parts of Jubbulpore, Nagpur, Raipur, and Bilaspur. Cotton and *jowari* somewhat damaged by excessive rain in Saugor;

prospects otherwise favourable. Land being ploughed for winter sowings. Early rice in Sambalpur being reaped. Outturn good. Cattle in fair condition. Prices rising in Saugor.

Burma.—*For week ending 22nd September, 1888.*—In Lower Burma resowing and transplanting of flooded lands continues. In Upper Burma transplanting is generally progressing favourably. In Lower Burma the rainfall is sufficient and the crop prospect is good, except on such lands as have been flooded. In Upper Burma there was a fair amount of rain. In Minbu the crop prospect has greatly improved, and elsewhere crops are generally promising. In Sandoway the scarcity is practically over, and prices have fallen rapidly. Scarcity is also abating in Toungoo. Prices of paddy have risen in Rangoon, Henzada, Moulmein, Amherst, Tavoy, and Kyauksé districts, and have fallen in Sandoway, Shwebo, and Pyinmana.

Assam.—*For week ending 26th September, 1888.*—Weather seasonable. Rain still wanted in Kamrup. Transplanting of late rice nearly over. Pulses being sown. Prospects of tea and other crops generally good.

Mysore and Coorg.—*For week ending 26th September, 1888.*—Rain general, except in parts of Kolar and Mysore districts, where more rain is needed. Crops generally in good condition. Sowing operations in active progress in tracts not sown earlier for want of rain. Outturn of harvests fair. Condition of cattle good. Prices slightly risen in the Bangalore and Tumkur districts.

Moderate rain in Coorg, but more needed for rice crops.

Berar and Hyderabad.—*For week ending 26th September, 1888.*—There has been in Berar a little rain throughout the Province, which is very favourable for standing crops, which are in good condition. Weather hot. More rain wanted. Agricultural stock generally good. Fodder sufficient. Prices diminishing.

Slight rain at Hyderabad during week ending 19th September, 1888. *Kharif* crops withering for want of rain. Scarcity of fodder felt in some places. Prices stationary.

Slight rain at Hyderabad during week ending 26th September, 1888. *Kharif* crops withering in some places for want of rain. Scarcity of fodder felt in some places. Prices stationary.

Central India.—*For week ending 26th September, 1888.*—Rain during week in all Agencies—insufficient at Indore and Western Malwa, and urgently wanted at Neemuch. Agricultural operations started in Goona, where standing crops are good. Probable outturn of harvest bad in Neemuch. *Jowari* crops damaged in Bhopal and Neemuch. Prospects of pasturage in Neemuch fair. Prices steady in Baghelkhand.

Rajputana.—*For week ending 26th September, 1888.*—Heavy rain in Dholepore, Bhurtpore, and Alwar; moderate in Kotah and Kerowlee; light in Kherwara and Jeypore; none elsewhere. Agricultural operations want rain in Sirohi, Marwar, Harowti, and Meywar. Standing crops withering for want of rain in some districts. Agricultural stock good. Pasturage or fodder sufficient, except in Meywar. Prices rising in many places.

Nepal.—*For week ending 20th September, 1888.*—Good rain. Autumn rice is being harvested. *Kodo* and *marua* progressing.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XXII. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 3rd September, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 1st September, 1888 Total.	Per mile open.	Total Receipts from 1st April to 3rd September, 1887 Total.	Per mile open per week.	Total Receipts from 1st April to 1st September, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, October 1st, 1888.

THE weather of the past week has been such as usually follows immediately the termination of the south-west monsoon rains in Upper India. It was pointed out in last week's report that the storm of September 12th to 20th almost certainly gave the final burst of heavy rain to Upper India, and that the rainfall accompanying this storm was due to humid winds from the Bay of Bengal. The Bombay current retreated considerably earlier than usual from the north and centre of the Arabian Sea in the beginning of September. The following telegram from the Agent, Peninsular and Oriental Company, gives the weather experienced by the last mail steamer in her passage from Aden to Bombay: "Light westerly winds and fine weather prevailed during the voyage from Aden to Bombay. There was a slight swell near Socotra, but from thence to Bombay the sea was smooth, and no current was experienced. The barometer was normal." Fine weather, light winds, and a smooth sea, which are the conditions that usually follow the retreat of the south-west monsoon proper and precede the establishment of the north-east winds of the north-east monsoon, hence prevail at present in the northern half of the Arabian Sea.

The heavy burst of rainfall attending the storm of last week, apparently exhausted for some days the strong, humid current in the Bay, and winds fell off very rapidly in strength towards the end of the past week and were replaced during the week under discussion by light and probably variable winds. The leading conditions of the past week have hence been an unsteady and feeble monsoon in the Bay, and a weak monsoon in the southern half of the Arabian Sea, which has given occasional showers in the Deccan and Southern India.

At the end of last week, fine dry weather prevailed over the whole of India except the south of the Peninsula, which was receiving light occasional thundershowers. The barometer rose slowly during the 24th in Upper India, and the day temperature increased slightly, whilst the night temperature was being rapidly reduced. Moulmein received 1 ½ inches, Belgaum 1 inch, and Trichinopoly ½ inch of rain during the day. The barometer was unusually steady during the next 24 hours, and the distribution of pressure on the 26th was practically identical with that of the 25th. Westerly winds extended during the day across Behar into Western Bengal, and light west to north-west winds prevailed over the whole of Northern and Central India on the 26th. Bellary registered on the morning of that day 1½ inches of rain, and Maligaon (in Khandeish) 1 inch. No change occurred in Upper and Central India during the next 24 hours, either in the distribution of pressure or in the direction or character of the air movement. The weather was somewhat more unsettled in Southern India, and a large number of thunderstorms, which in several cases gave heavy rain, occurred over the greater part of Southern India including Mysore. Trichinopoly received 2 inches of rain, Wellington 1½ inches, Cochin 1¼ inches, Negapatam ¾ inch, and Salem and

Bangalore ½ inch. A brisk fall of the barometer took place in Upper India during the next forty-eight hours, and the mean daily temperature decreased 2° in the Punjab. Some showers were received in Burmah, Assam, and Southern India, but the amounts were generally small. Cuddapah obtained 2½ inches during a thunderstorm on the 28th, Sholapur 1¼ inches, and Trichinopoly ¾ inch. The barometer began to rise again on the afternoon of the 29th and continued to rise during the remainder of the week, the rise being large in Upper India, and least in Burmah. The most important effect of these changes was to transfer the area of lowest pressure from the Punjab to Lower Burmah, and at the end of the week a small depression had formed in the Bay of Bengal to the south of Diamond Island. Light showers of no great importance fell on the 30th and the 1st in Burmah and Southern India. Temperature was falling slowly but steadily at the end of the week in Upper India, the air was drier in Northern and Central India, and skies were clear except in Burmah and the Peninsula.

From the preceding brief account of the weather of the past week, it will be seen that the week was generally dry or practically rainless over a large part of the country including the Punjab, the North-Western Provinces, North and East Bengal and Assam, the Central Provinces, North Bombay, Rajputana, and the North and Central Coast districts of Madras. Burmah, South and Central Madras, Mysore, Coorg, the Bombay Deccan, and Khandeish were the only areas which received fair rain during the week. As in nearly the whole of these districts the rainfall hitherto has been considerably below the average, the rainfall of the past week has been very beneficial and favourable, more especially in Khandeish and the Bombay Deccan. Thus in Khandeish a slight excess was received, whilst the Bombay Deccan obtained an inch more than the normal average of the week. The rainfall in these districts was, as might be anticipated from the conditions under which it occurred, very local and irregularly distributed. Thus, in the Ahmednagar district the total rainfall of the week ranged from 1 inch to 5¼ inches, and in the Nasik district from a tenth of an inch at the sudder station to 6½ inches at Niphad. The same irregularity of distribution is also shown by the rainfall returns of the Southern Madras and Mysore stations.

The following table shows fully the general character of the distribution of the rainfall of the past week over the whole of India (with the exception of Sind and Mysore, for which the returns are doubtful), and also of the total rainfall of the south-west monsoon period of the present year up to date.

Province.	Division.	Rainfall data for week ending October 1st, 1888.			Rainfall data from May 14th to October 1st, 1888.		
		Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Average actual rainfall of season to date.	Average normal rainfall, May 14th to October 1st.	Excess or defect of (seasonal) rainfall expressed as a percentage.

SIMLA, *1st October, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 29th September, 1888.*—Rainfall good in all districts, except Kistna, Nellore, Ganjam, and Chingleput. Standing crops generally fair, but withering in parts of Ganjam, Kistna, Cuddapah, Bellary, Anantapur, Chingleput, and Tinnevelly. Want of rain felt in these districts, and in parts of Vizagapatam, Nellore, Kurnool, and Trichinopoly. Agricultural operations progressing fairly. Prices falling in the southern districts, stationary in six and rising in the others. General prospects favourable, and improving in the affected districts.

Bombay.—*For week ending 3rd October, 1888.*—Water-supply improved in Upper Sind, but still deficient in Karachi, where crops are suffering. Slight rain during week in parts of Thana, Ratnagiri, and Kanara, but good throughout Deccan and Southern Maratta Country, where crop prospects are greatly improved. Rain urgently needed throughout Guzerat, Kathiawar and in parts of Konkan and Kanara, where crops are withering. Harvesting of early crops progressing in parts of Karachi, Hyderabad, Ahmedabad, Kaira, Surat, Kanara, Kathiawar, and Baroda, and sowing of late crops in parts of Shikarpur, Hyderabad, Kaira, Poona, Ahmedabad, Sholapur, Bijapur, and Dharwar. Cotton damaged by storm, and excessive rain in parts of Dharwar, and by insects in parts of Kathiawar. Rice blighted in one taluka of Kanara, and standing crops damaged by crabs in one taluka of Karachi. Fodder scarce in parts of Kaira, Broach, Khandesh, Sholapur, Belgaum, Kathiawar, and Baroda. Agricultural stock good, except in one taluka of Hyderabad, and the eastern talukas of Nasik. Want of water felt in parts of Ahmedabad and Broach. Prices rising in Broach and Surat.

Bengal.—*For week ending 2nd October, 1888.*—Showers fell in parts of Bengal Proper and Orissa, but none in Behar and Chota Nagpur. Winter rice is good, except in the flooded tracts of the Burdwan, Presidency, and Orissa Divisions. More rain is now required for this crop throughout Behar, and in parts of the Rajshahye division, and also in the Burdwan district. Early rice and jute are almost harvested. The outturn of early rice is said to be less than the average in several districts in Behar and Chota Nagpur. The *bhadoi* harvest is proceeding, and is expected to yield a fair outturn, except in innundated places in Patna and Gya, where the outturn of the *bhadoi* crops will be very poor. Cultivation for the cold weather crops has begun. The condition of the people in the distressed districts of Orissa has somewhat improved.

North-Western Provinces and Oudh.—*For week ending 3rd October, 1888.*—The rains appear to have ceased, and the weather is now bright and seasonable. The heavy floods of the previous week did considerable damage in Saharanpur. Harvesting of *kharif* crops has commenced, and *rabi* sowings are in progress. Supplies are sufficient, and prices of food crops fairly steady. General condition of agricultural stock is good.

Punjab.—*For week ending 3rd October, 1888.*—Slight rain only at Rawalpindi and Peshawar. Prices are rising in Hissar, Rawalpindi, Dera Ismail Khan, and Peshawar, and stationary elsewhere. Harvesting of *kharif* going on at Umballa and Amritsar. Ploughing for, and sowing of, *rabi* crops in progress. Rain wanted at Hissar, Ferozepore, and Sialkot. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan, otherwise prospects of standing crops are good. No damage done to crops. Stock cattle are

reported healthy. Pasturage or fodder sufficient, except at Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 3rd October, 1888.*—Weather clear and warm. Rain urgently required in Jubbulpore, where prices are rising, and also for rice in parts of Seoni and the eastern districts. Prospects otherwise good. Cattle in good condition. Fodder sufficient.

Burma.—No report received.

Assam.—*For week ending 3rd October, 1888.*—Weather seasonable. Pulses and oilseeds being sown. Injury to late rice by insects reported from parts of Sibsagar and Kamrup. Prospects of tea and other crops generally good.

Mysore and Coorg.—*For week ending 3rd October, 1888.*—Rainfall general and good in Mysore. Condition and prospects of crops favourable, but more rain is much required in parts of Mysore and Kolar districts. Sowing operations continuing. Outturn of crops fair. Prices have fallen slightly in Mysore district.

Slight rain in Coorg during the week. Standing crops in good condition.

Berar and Hyderabad.—*For week ending 3rd October, 1888.*—Weather warm and sultry. Very little rain during the week; more is wanted. Cotton and *jowari* crops good. Preparations commencing for *rabi* crops. Fodder insufficient in some places. Prices of food grains rising slightly.

No rain during the week in Hyderabad. Crops withering for want of rain. Scarcity of fodder felt. Prices—wheat 11¾, coarse rice 11, white *juar* 18, and tur 15 seers per current sicca rupee.

Central India.—*For week ending 3rd October, 1888.*—Rain during the week all over the Agency, except in Neemuch, where it is urgently required. The only changes are crops slightly damaged in Bhopawar, and prices rising in Baghelkhand and Indore.

Rajputana.—*For week ending 3rd October, 1888.*—Slight rain in Meywar district and Bikaneer; elsewhere none. Agricultural operations unsatisfactory in Sirohi, Meywar, and Harowtee. Standing crops withering for want of rain in many places. Agricultural stock good. Pasturage or fodder at present sufficient, except in Meywar. Prices rising generally.

Nepal.—*For week ending 27th September, 1888.*—Slight rain. Early mornings are foggy. Weather gradually becoming cooler. Prospects good.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XXIII. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 10th September, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 8th September, 1888. GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR SEPTEMBER, 1888.

The month of September usually witnesses the retreat of the south-west monsoon currents from Upper and Central India. The period of its withdrawal depends upon the previous general strength of the monsoon and upon the conditions established in Upper India, and usually occurs about the end of the third week of this month. This withdrawal from Upper and Central India is usually a comparatively rapid process. It is followed by light and variable winds for some time, after which the north-westerly and westerly winds of the cold weather or winter season set in and blow more or less steadily during the remainder of the year. The Bengal current continues to give moderate rain in the lower Gangetic plain and Burmah for some time longer, and there is a marked tendency at this period of the formation and advance of large depressions and cyclonic storms in the Bay of Bengal. The Bombay current usually withdraws more rapidly and completely from Upper and Central India than the Bengal current from Northern India, and in the last week of September and in October it gives light to moderate rain, chiefly on the Malabar Coast and in the Deccan and Southern India. This rain frequently occurs at the same time that fine weather and easterly winds prevail on the Konkan Coast or apparently after the south-west monsoon current has entirely withdrawn from the North Bombay Coast districts.

The present monsoon has been characterized throughout by a moderately strong Bengal monsoon current and by an abnormally weak Bombay current. The conditions at the commencement were, as stated in the forecast published in May, favourable in Northern India from Bengal to the Punjab, but were more or less unfavourable in Western India and the Deccan. The meteorology of the month of June showed what was not indicated by the coast observations that there were very unusual conditions prevalent in the north-east of the Bay and perhaps in Lower Burmah. The following account of the meteorology of the month of September shews that these features were present to as marked an extent at the end of the rains as they were at the commencement, and hence were very persistent during the whole monsoon period.

At the commencement of the month a depression which had advanced from the Bay across Chutia Nagpur into the North-West Provinces was filling up. The North-West Provinces and Oudh appear to have played nearly the same part in the meteorology of the south-west monsoon period of the present year that the Central Provinces did last year. They have formed a kind of sink to which many of the storms of the rains have drifted and in which they have finally disappeared.

The chief feature of the month has been two storms which formed in the Bay and passed into Northern India giving more or less heavy rain to the districts over which they advanced. The following gives a brief account of these depressions and cyclonic storms:

First Depression of the 3rd to 11th September.—This depression was shewn by the shift of winds at the Head of the Bay to north on the 3rd to be in process of formation on that day. General break in the rains obtained over the

whole of North-Western, Western, Central and Southern India, and a partial break in the North-West Provinces and Bengal. The depression developed slightly on the 4th and 5th, and occupied the north-west angle of the Bay on the morning of the 6th. It crossed the Orissa Coast on the afternoon of the same day and passed through Chutia Nagpur on the 7th. It was now shewn to be a feeble disturbance, the depression at the centre not exceeding a sixth of an inch. The storm gave moderate to heavy rain to Bengal, Chutia Nagpur, and Behar on the 6th and 7th. It advanced into the eastern districts of the North-West Provinces on the morning of the 8th when the centre was a little to the south of Benares. The Central Provinces and eastern districts of the North-West Provinces had received moderate general rain during the preceding 24 hours. The depression moved during the day very slowly to the north-west and lay between Benares, Gorakhpur, Lucknow, and Allahabad on the morning of the 9th. Larger amounts of rain were received on the 8th in the Central Provinces and the eastern districts of the North-Western Provinces than on the previous day (Assam on this day also received a moderately heavy burst of rain and a series of thunderstorms gave fairly general and in some cases excessive rain in North-East Madras. Kurnool for example reported $7\frac{3}{4}$ inches, and Masulipatam $1\frac{1}{4}$ inches on the 9th). The depression on the morning of the 10th, as shewn by the barometric observations at Gorakhpur and Lucknow, was very slight, but there was still a very clearly marked cyclonic circulation. The storm was now approaching the hills to the north of the Gorakhpur and Basti districts, and, as frequently happens in such cases, a tremendously heavy downpour took place in these districts on the 10th and 11th. Bansi in the Basti district received 24 inches, and Maharajgung in the Gorakhpur district 21 inches. According to reports in the newspapers even larger amounts than these were received, 30 inches for example is stated to have fallen in the Lehra Pergunnah. The storm completely disappeared on the evening of the 11th, and fine weather was established over Northern India generally on the 12th.

A brief interval now succeeded before the formation of the second storm of the month. During this period a series of thunderstorms occurred in Western and Southern India which gave fairly general and moderately heavy rain. Thus, on the 11th Bombay received $3\frac{1}{4}$ inches, Salem, Kurnool, and Ratnagiri 2 inches, Poona $1\frac{1}{4}$ inches, and Belgaum and Sholapur 1 inch.

The most important feature of the interval was the gradual extension of the trough of low pressure, which is a normal feature of the season at the head of the peninsula across the centre of the Bay, on the 11th and 12th into Tenasserim and Lower Burmah. The second storm of the month appeared at the eastern extremity of this trough of low pressure on the morning of the 13th and marched along it during the greater part of its existence.

Depression and storm of 13th to 21st September.—This was one of the more remarkable storms of recent years. So far as can be judged from the change of wind directions at the Tenasserim and South Burmah stations it advanced from the Gulf of Siam across the Malayan Peninsula on the 12th and 13th. Its centre was to the north-east of Tavoy on the morning of the 13th. It advanced to the west-north-west during the day and covered the greater part of Lower Burmah and the North of the Andaman Sea on the morning of the 14th when the centre was near Bassein. The depression at the centre now exceeded a third of an inch. Lower Burmah had very squally weather at this time and heavy rain fell in the coast districts. The storm

crossed the hills in South-West Pegu apparently without deflection of its path or diminution of velocity and advanced in a west-north-west course across the centre of the Bay with an average velocity of nearly 15 miles per hour. The centre at 8 A.M. of the 15th was in about Lat. 19° N. and Long. 90° or 91° E. The storm increased very rapidly in intensity during the day and was a fierce and dangerous cyclone on the evening of the 15th when the barometric depression at the centre certainly exceeded one inch and was probably much larger. It crossed the Orissa Coast near False Point on the morning of the 16th about 6 A.M. The storm-wave accompanying it flooded the low lying districts near False Point, but was much smaller than that of the great False Point cyclone of September 1885, and caused a comparatively small amount of damage. Heavy rain had fallen during the previous 24 hours in Lower Burmah, South Bengal, and Orissa, and skies had clouded over in the Central Provinces and rain was beginning to fall in that area. The storm advanced almost due west during the next 24 hours, and the centre at 8 A.M. of the 17th was midway between Raipur and Nagpur. The depression at the centre was now about three-tenths of an inch. Stormy cyclonic winds prevailed in the Central Provinces, and the general cyclonic circulation extended over the whole of India except the Punjab and Sind. Very heavy rain fell in the Central Provinces on the 17th. Pachmarhi received $6\frac{1}{4}$ inches, Seoni $4\frac{1}{2}$ inches, Nowgong $4\frac{1}{4}$ inches, Saugor $3\frac{3}{4}$ inches, Amraoti and Akola $2\frac{3}{4}$ inches, and Khandwa and Nagpur $2\frac{1}{4}$ inches. During the previous 24 hours the storm centre had continued to advance with an average velocity of nearly 15 miles per hour. It had now reached a critical stage in its existence. In the case of the large storms of the rains proper which advance into the Central Provinces, if a moderate or strong monsoon be blowing on the Bombay Coast they usually continue to advance westwards to the North Bombay Coast into Guzerat, Kathiawar, Cutch, or South-West Rajputana, and sometimes pass out into the Arabian Sea. If the Bombay current be very weak the storm either dies out in the Central Provinces or advances by a northerly course into Upper India, and usually along the trough of lowest pressure in existence immediately previous to the advance of the storm. In the case of the present storm the Bombay current had retreated from the North-East of the Arabian Sea, and as it was an unusually vigorous storm and fed by a powerful indraught from the Bay of Bengal it gradually recurved to north during the next 48 hours. It marched very steadily to the north-west during the 17th, and on the morning of the 18th the centre was about 50 miles west-north-west of Nagpur. Its rate of motion had hence decreased during the preceding 24 hours to an average of 4 miles per hour. Heavy cyclonic rainfall continued to be received in the Central Provinces, and more or less heavy general rain fell over the greater part of the North-Western Provinces, as well as in Bengal and Burmah. Agra registered on the 18th 6 inches, Pachmarhi $5\frac{1}{4}$ inches, Roorkee and Ranikhet $4\frac{1}{2}$ inches, and Hoshangabad $3\frac{1}{2}$ inches.

The storm continued to recurve and on the morning of the 19th was advancing almost due north. The centre was at 8 A.M. nearly midway between Jhansi and Saugor. The depression at the centre was unchanged in amount (03″) and the storm was now causing very strong easterly winds over the whole of the North-West Provinces and Behar. Its average rate of motion during the previous 24 hours was 10 miles per hour. The storm on the morning of the 19th covered Bundelkhand, the eastern districts of Central India, South-East Rajputana and the adjacent districts of the North-West Provinces. Very heavy rain was received at this time in the north quadrant Roorkee registering $7\frac{1}{4}$ inches

at 8 A.M. of the 20th, Delhi 6 inches, and Meerut 5¼ inches. The storm advanced during the 19th at an average rate of about 12 miles per hour, and at 8 A.M. of the 20th the centre was midway between Delhi and Meerut. Heavy cyclonic rain was now received in the submontane districts of Meerut, Muzaffarnagar, Saharanpur, Bijnor, and Umballa.

The following gives a statement of the rainfall of the week in these and the neighbouring districts which was almost entirely due to the heavy cyclonic rainfall of the 18th, 19th, and 20th, and illustrates the excessive character of the rainfall:

District.	Average rainfall of week.	Normal average rainfall of week.	Excess.
	Inches.	Inches.	Inches.
Saharanpur	13·80	1·32	12·48
Umballa	12·81	0·76	12·05
Muzaffarnagar	12·10	1·53	10·57
Bijnor	11·25	1·83	9·42
Kumaon	10·68	?	?
Bulandshahr	10·62	0·73	9·89
Delhi	10·10	0·81	9·29
Agra	9·89	0·97	8·92
Meerut	8·29	0·70	7·59
Etah	8·11	1·12	6·99

The largest total rainfalls of the week were as follows:

Naini Tal	22·90 Inches.
Jagadhri (Umballa District)	19·20 „
Saharanpur	17·96 „
Bah (Agra District)	15·14 „
Sonipat (Delhi District)	15·10 „

Rain had now ceased to fall in the Central Provinces and Central India and skies were rapidly clearing. The storm area was very sharply demarcated in the western quadrant, clear skies and light winds prevailing to the west and north of Lahore, whilst strong winds and heavily clouded or overcast skies obtained over the whole of the North-West Provinces, Behar, and Bengal.

The fact that the storm had marched unbroken across the South Burmah hills, the Orissa hills and the Vindhyas, shew that it was one of very considerable altitude. This was further confirmed by the fact that it advanced on the 20th across the Simla hills up to the first line of snows to which it gave a considerable fall of snow. It either filled up on the night of the 20th or marched across the snows into the interior. Skies cleared very rapidly in Northern India, and fine clear weather set in on the 21st over the whole of Upper and Central India. Some showers fell in the coast districts of Bengal and in Southern India on the 22nd and 23rd. Westerly winds set in over Upper India and extended rapidly eastwards and advanced into Bengal on the 24th.

During the remainder of the month fine clear weather prevailed over the whole of Northern and Central India. A large number of thundershowers occurred in Southern India which gave fairly general rain to Khandeish, the Bombay Deccan, Mysore, and the greater part of Southern India in which it was much wanted and where the rainfall up to date was very considerably below the normal. At the end of the month there were slight indications of the formation of a cyclonic storm to the south of Diamond Island.

The barometric observations of the month indicate that pressure was considerably above the average (+ ·03 to + ·04) in Sind, Cutch, Guzerat, Kathiawar, and West Rajputana, or over the area of most deficient rainfall. It was practically normal over the greater part of Northern and Central India. It was considerably below the average in Lower Burmah (·04) and to a less extent in the south of the Peninsula (·02), in the latter respect resembling the conditions which prevailed in September, 1887.

The table of rainfall given below is based on the returns of the observatories only and is hence very imperfect. The rainfall of the month was excessive in the East Punjab and the North-West Provinces. It was slightly in excess in Mysore and Hyderabad, and was more or less in defect in all other districts. The only divisions in which the rainfall was relatively to the average very largely in defect were Sind and Cutch which were rainless during the month, Guzerat which obtained only 2 per cent. of its normal amount, and the Malabar Coast districts which obtained only 40 per cent., and the Konkan slightly more than 50 per cent. of its average amount. North Bengal also received little more than 50 per cent., and Lower Burmah 60 per cent.

In the remaining districts the deficiency ranged from 10 to 25 per cent.

The following table shews the amount of rain and the difference from the average during the month of September 1888, according to districts, as far as is indicated by the telegraphic reports:

Districts.	Number of stations.	Average rainfall in September.	Difference from the average in September 1888.
Punjab, West ...	7	2·44	—2·29
„ East ...	4	4·22	+2·74

SIMLA, *5th October, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, October 8th, 1888.

The chief feature of the weather of the past week has been a small cyclonic storm which began to form at the end of the previous week to the south of Diamond Island. The coast observations are not sufficient to enable its course to be traced with exactness. It however apparently drifted very slowly to the north-west and then recurved through north to north-east and passed into East Bengal on the 7th, where it broke up. It has been remarkable, more especially when contrasted with the storm of the second and third weeks of September, for the extreme slowness of its motion and its comparative weakness, although it was equally persistent and long-lived. At the end of the previous week weather was squally with strong winds on the south-west Pegu Coast and a small depression was evidently forming. Fine dry clear weather prevailed over nearly the whole of Northern and Central India, and light occasional showers were falling in the Deccan and Southern India. There was slight local disturbance during the day in the Punjab which gave dust-storms and showers to the north and north-west districts. The barometer was rising rapidly at this time in Northern India. The depression in the Bay slightly deepened and the centre was probably about 100 miles to the south-south-west of Diamond Island on the morning of the 2nd. Winds had increased considerably in force at Diamond Island and now indicated the prevalence of stormy weather in the area of depression. Moderate to heavy showers fell at many stations in Southern India during the previous day. For example, Sholapur received $1\frac{3}{4}$ inches, Belgaum 1 inch, and Kurnool $\frac{3}{4}$ inch.

Pressure increased generally during the next 24 hours. The area of depression was almost unchanged in position and character, the centre having moved probably not more than 50 miles to the north-west. Moderate general rain fell in Burmah and East Bengal during the day. A few light showers were also received in the Deccan and Southern India. The barometric changes of the next 24 hours were very irregular. The storm continued to drift slowly up the Bay. The centre was probably in about Lat. 17° and Long. $91\frac{1}{2}$° at 8 A.M. of the 4th. Heavy rain had fallen over the whole of Lower Burmah during the previous day and showers were commencing to fall in South Bengal. There was also some slight disturbance in the Punjab and western districts of the North-Western Provinces which gave numerous light showers in those areas. The storm centre advanced during the succeeding 24 hours at an average rate of about 8 miles per hour, and was probably in Lat. 19° N. and Long. $89\frac{1}{2}$° E. at 8 A.M. of the 5th. The winds at the Head of the Bay had shifted round to north, but were very feeble, thus indicating that the storm was one of small extent and moderate intensity. The barometer had risen considerably during the previous day in Upper India and the weather was very much drier. Skies had cleared in the Central Provinces and the North Deccan. Moderate rain had fallen in Orissa, Burmah, and East Bengal.

The slight disturbance which was in Upper India on the previous day passed across the Chakrata and Simla Hills up to the interior ranges to which they gave a heavy fall of snow, apparently extending down to about 12,000 feet.

The barometer fell rapidly during the next three days (about two-tenths of an inch) in Upper India, but this accompanied no change of weather in Northern India. The storm in the Bay had now advanced to the neighbourhood of the coast of the Sunderbunds. The centre was in Lat. 21° N. and Long. $89\frac{1}{2}$° E. at 8 A.M. of the 6th and was now marching to the north-north-east. Moderate general rain had fallen during the previous day in Burmah, Bengal, and Assam, and numerous thundershowers in Southern India and the South Deccan. The storm passed into East Bengal during the next 24 hours, and the centre was a little to the east of Dacca at 8 A.M. of the 7th. The barometric depression at the centre was about a sixth of an inch in amount at this time. Strong southerly winds had set in on the Bengal Coast as the storm advanced inland, but they appear to have hardly exceeded ordinary south-west monsoon winds in force. Rain had been almost exclusively confined to Burmah, Bengal, and Assam during the previous day, the largest amounts being received in East Bengal and Assam.

The storm broke up during the day, and on the morning of the 8th it had apparently disappeared. Rain in moderate amounts was received during the previous day in Assam and East Bengal. On the morning of the 8th, fine dry weather was established over the whole of India, and the rapid rise of the barometer which followed the disappearance of the storm speedily established cold weather pressure conditions over Northern India.

The preceding sketch of the weather shews that general rain fell in Burmah, Bengal, and Assam in connection with the storm. Tenasserim and Lower Burmah received about half an inch more than their normal amounts. Eastern Bengal and Assam obtained the largest amount of rain from their storm. The average actual rainfall of the week in Assam (Surma) was $7\frac{1}{4}$ inches or $5\frac{1}{2}$ inches in excess of the normal average amount. Eastern Bengal received $4\frac{1}{4}$ inches, or $2\frac{1}{2}$ inches in excess. There was a moderate excess (of half an inch), in Deltaic Bengal. The North and West Punjab and the hill districts received a slight excess, and Mysore, the Bombay Deccan and some parts of Madras a moderate excess.

There was general deficiency over the remainder of the country, which was greatest and most marked in North Bengal and North Behar, the Malabar Coast, the Berars, Central Provinces, Guzerat, Central India, and Southern India. There was practically no rain in Behar, the North-West Provinces, Oudh, South Punjab, the Central Provinces, Berars, Guzerat, Kathiawar, Sind, West Rajputana, Hyderabad, and South Madras.

A portion of the rainfall of the week occurred in districts where it has hitherto been more or less deficient. This was especially the case in Khandeish, the Bombay Deccan, Mysore, and East Bengal.

The following table gives rainfall data for the week and also for the whole south-west monsoon up to date for the 51 meteorological and rainfall districts into which India has been divided :

Province.	Division.	Rainfall data for week ending October 8th, 1888. Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Rainfall data from May 14th to October 8th, 1888. Average actual rainfall of season to date.	Average normal rainfall, May 14th to October 8th.	Excess or defect of (seasonal) rainfall expressed as a percentage.

Simla, *8th October, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 6th October, 1888.*—No rain in Tinnevelly, poor in Tanjore, Trichinopoly, Madura, Coimbatore, Salem, and Malabar, and good elsewhere. Standing crops generally fair, but withering in parts of Ganjam, Kistna, Tinnevelly, and Coimbatore; want of rain felt in these districts and parts of Vizagapatam, Nellore, Cuddapah, Bellary, Kurnool, Tanjore, Trichinopoly, Madura and Salem. Pasture insufficient in parts of Vizagapatam, Cuddapah, Coimbatore, and Salem, and scanty in Madura and Tinnevelly. Agricultural operations progressing fairly. Prices rising in seven districts, falling in two and stationary in others. General prospects fair, and improving in all the affected districts, except Madura, Tinnevelly, Ganjam, and Vizagapatam.

Bombay.—*For week ending 10th October, 1888.*—Rain during the week slight in parts of Hyderabad, Upper Sind frontier, Ahmedabad, Panch Mahals, Broach, Surat, and Thana, but good throughout Deccan and Southern Mahratta Country, where crops and grazing are much improved. Total rainfall generally deficient and more needed urgently throughout Guzerat, Kathiawar, and Konkan, where crops are suffering. Harvesting of early crops progressing in parts of Hyderabad, Kaira, Surat, Khandesh, Nasik, Ratnagiri, Satara, Kanara, and Kathiawar, and sowing of late crops in parts of Hyderabad, Kaira, Surat, Khandesh, Nasik, Poona, Sholapur, Satara, Bijapur, Belgaum, and Kathiawar. Cotton damaged by insects in Wadhwan, and standing crops by blight and storm in parts of Hyderabad, by storm in parts of Upper Sind Frontier, and by blight, insects, rats and crabs in parts of Karachi. Fodder scarce in parts of Karachi, Kaira, Khandesh, Nasik and Kathiawar. Scarcity of drinking water left in one taluka of Ahmedabad and parts of Broach. Prices rising in parts of Karachi and Surat.

Bengal.—*For week ending 9th October, 1888.*—General rain in South-West and East Bengal and Orissa, showers also in North Bengal, while Behar and Chota Nagpur were rainless. Winter rice, except in the inundated places, is generally doing well, but rain is much wanted in Behar, North Bengal and Chota Nagpur. In Behar and Chota Nagpur the *bhadoi* harvest is still proceeding, and the general outturn is expected to be fair, except in Patna and Gya, where the crop is very poor on account of the floods in August. Cultivation for the *rabi* crops is proceeding, and in some places the sowing has begun. Prospects in Khurdah and other distressed parts of Orissa have improved.

North-Western Provinces and Oudh.—*For week ending 10th October, 1888.*—The weather is fine and clear. The early *kharif* is being harvested and sowings for the *rabi* are in progress. Supplies are plentiful and prices somewhat steadier though still tending to rise, possibly from the demand for sowing purposes in some districts. Condition of cattle satisfactory.

Punjab.—*For week ending 10th October, 1888.*—Slight rain in certain districts. Prices are rising in five districts, and stationary in six, but fluctuating in Peshawar. Harvesting of *kharif* going on at Delhi, Umballa, and Amritsar. Ploughing for, and sowing of, *rabi* crops in progress. More rain wanted at Hissar and Ferozepur. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan. The rice crop is also suffering from drought at Sialkote, otherwise prospects are reported good. No damage done to crops. Stock cattle reported healthy. Pasturage or fodder sufficient, except at Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 10th October, 1888.*—No rain, except a few local showers in Sambalpur. Rain urgently required, especially

for rice, in Seoni and Chhattisgarh. The fall is very deficient in Jubbulpore Prospects of cotton and *jowari* favourable. Winter sowings in progress. Cattle in fair condition. Prices rising in places.

Burma.—*For week ending 29th September 1888.*—In Lower Burma rice lands that were flooded are still being replanted. In Upper Burma sowing and planting continue. The weather is seasonable, and in Upper Burma, there has been ample rain and the crop prospect is generally good, as it is in Lower Burma, except where rice lands have been flooded. The price of paddy is rising steadily in Rangoon. Prices have also risen in Tharrawaddy, Bassein, Henzada, Amherst, Moulmein, Mandalay, but elsewhere are stationary.

Burma.—*For week ending 6th October, 1888.*—In Lower Burma flooded lands are still being replanted. In Upper Burma transplanting continues, and in some places early paddy is being reaped. The rainfall has everywhere been ample. In Lower Burma the rice crop promises very well, except where floods have been high. In Upper Burma the crops are generally good. The food supply is not sufficient in the Upper Chindwin nor in parts of Toungoo. The price of paddy has risen in Bassein, Thongwa, Henzada, Moulmein, Toungoo, Tavoy, and Upper Chindwin, and has fallen in Myadaung. Elsewhere prices are stationary.

Assam.—*For week ending 10th October, 1888.*—Weather seasonable. Sowing of pulses and oilseed continues. Some injury to late rice by insects reported from Sibsagar. Tea and other crops in general doing well.

Mysore and Coorg.—*For week ending 10th October, 1888.*—Rainfall general and good in Bangalore. Standing crops in good condition, except in parts of one taluk of the Mysore district where they are reported to be affected by excessive rain. Sowing has almost been completed and harvesting of sugarcane commenced. Outturn favourable. No material change in prices.

Some rain in Coorg during the week. Picking of cardamom crop commenced.

Berar and Hyderabad.—*For week ending 10th October, 1888.*—Weather warm. Slight rain has fallen in Buldana and Basim districts. More rain wanted throughout. Crops good. Picking of cotton commenced in some districts. Preparations for *rabi* crops continue. Agricultural stock in good condition. Fodder and water insufficient in some parts of the province. Prices almost stationary.

Slight rain during the week in Hyderabad. *Kharif* crops still withering for want of rain. Scarcity of fodder in almost all taluks. Prices—wheat 11, coarse rice 10, white *juar* 16½, yellow *juar* 18½ and *tur* 15¾ seers per current sicca rupee.

Central India.—*For week ending 10th October, 1888.*—Slight rain in most parts of Central India. Rain greatly needed in Bhopawar, Western Malwa and Neemuch. Prospects in Neemuch are reported gloomy. Standing crops, outturn and agricultural stock are not good. *Maize* and *jowari* crops damaged. Pasturage only fair. Prices rising.

Rajputana.—*For week ending 10th October, 1888.*—Rainfall partial and slight. Agricultural operations generally satisfactory, except in Serohi, Meywar, and Harowtee. Standing crops withering in Serohi, Meywar, Harowtee, Ajmere, Kishengurh, and Kherwara, owing to want of rain. Harvest poor generally. Agricultural stock good. Pasturage or fodder sufficient, except in Meywar. Prices still rising in some places.

Nepal.—*For week ending 4th October, 1888.*—Mornings foggy. Monsoon appears to be over. Winter rice crop is beginning to be in ear. General prospects good.

E. C. BUCK,

Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XXIV. OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 17th September, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 15th September, 1888. CALCUTTA,
The 18th September 1888.

G. A. G. SHAWE,
Under-Secy. to the Govt. of Bengal, P. W. D.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

GOVERNMENT SCHOLARSHIPS TENABLE IN ENGLAND BY NATIVES OF INDIA.

No. $\frac{12}{416-28}$

Extract from the Proceedings of the Government of India in the Home Department (Education),—under date Simla, the 17th October 1888.

Read again the undermentioned papers on the subject of the creation of certain Government scholarships tenable in England by Natives of India:

Home Department Resolution No. $\frac{1}{45-57}$, dated the 12th February 1886.

Home Department Resolution No. $\frac{9}{269-281}$, dated the 23rd August 1886.

Home Department Resolution No. $\frac{1}{57-69}$, dated the 11th March 1887.

Read also—

Letter No. $\frac{1159}{111-857-31}$, dated the 5th September 1888, from the Government of the North-Western Provinces and Oudh.

RESOLUTION.

The claims of the University established at Allahabad under Act XVIII. of 1887 to participate in the benefits of the six scholarships established under Home Department Resolution No. $\frac{1}{45-57}$, dated the 12th February 1886, cited in the preamble, have recently been urged on the consideration of the Government of India. These scholarships have hitherto been placed at the disposal of the Universities of Calcutta, Bombay, Madras, and the Punjab in rotation, the number of scholarships awarded in each year being limited to two. Under this arrangement, the Madras and Punjab Universities elected scholars in 1887, and the two other Universities of Calcutta and Bombay in 1888. The claims of the Allahabad University, however, now render it necessary to effect such a modification in this arrangement as will ensure to each of the five Universities an equal share in the advantages of the scholarships in question. The Governor General in Council is accordingly pleased to decide that, with effect from the year 1889, each of the Universities concerned shall participate in the scholarships in the following sequence:

Allahabad Madras	...	...	...	...	1889
Punjab Calcutta	...	...	...	...	1890
Bombay Allahabad	...	...	...	...	1891
Madras Punjab	...	...	...	...	1892
Calcutta Bombay	...	...	...	...	1893

ORDER.—Ordered, that a copy of this Resolution be forwarded to the Governments of Madras, Bombay, the Punjab, and the North-Western Provinces and Oudh, for information and communication to the authorities of the Universities concerned.

Ordered also, that a copy be forwarded to the Government of Bengal, the Chief Commissioners of the Central Provinces, Burma, Assam and Coorg, and the Resident at Hyderabad, for information; and to the Registrar of the Calcutta University for information and guidance.

Ordered further, that a copy be forwarded to the Department of Finance for information; and that the Resolution be published in the Supplement to the *Gazette of India*.

[True Extract.]

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Review of India for the week ending 8 a.m. on Monday, October 15th, 1888.

As stated in last week's report, the storm which was the important feature of the weather of that week broke up on the evening of the 7th, and at the end of the week (on the 8th) fine dry weather was established over nearly the whole of India.

On the morning of the 8th pressure was two-tenths of an inch lower in the Punjab than in Ceylon and the south of the Bay. Light westerly winds prevailed in Upper India, and easterly winds on the Bombay Coast. South-westerly winds apparently extended over the whole of the Bay, but were already very weak and unsteady on the Bengal Coast.

During the next 24 hours pressure increased over the whole of India, slowly in the south of the Peninsula, and rapidly in Northern India. The isobar of 30·00″ included nearly the whole of the Deccan and Southern India, which hence formed the area of maximum pressure at this time. No change of importance had taken place in the air movement, except that winds were lighter and more unsteady in Bengal. Rain was confined almost entirely to Burmah and Southern India, and fell chiefly during thunderstorms. Cochin registered 2½ inches, Wellington 2 inches, Rangoon 1¾ inches, Calicut 1¼ inches, Madras, Bassein, and Toungboo 1 inch, at 8 A.M. of the 9th.

A further rise varying in amount from ·03″ in Southern India to ·1″ in Sind occurred during the next 24 hours, and established approximately uniform pressure over India (the normal condition in October) on the morning of the 10th. A few light showers fell during the preceding 24 hours in Burmah and Malabar, but the amounts were in all cases small. During the next 24 hours the barometer was steady over the whole of India, and the uniformity of the pressure distribution was as marked on the 11th as on the 10th. Winds were slowly shifting round to north-west at the head of the Bay, and to north in Lower Burmah, but were very unsteady on the 11th and 12th. Temperature was slowly but steadily falling from day to day in Upper India. The rainfall of the preceding 24 hours in Burmah and Southern India was even less than that of the previous day, and was confined to light local showers.

As stated above, the normal October conditions of pressure were established on the morning of the 10th, and during the remainder of the week pressure changed slowly in the oscillatory manner characteristic of fine weather in India. It commenced to fall on the 11th after the prolonged rise of the previous three days, and was on the average ·05″ lower in all districts on the morning of the 12th. Some light showers again fell in Burmah and South India. The largest reported rainfall was only four-tenths of an inch (at Coimbatore).

The barometer again fell by nearly equal amounts over the whole of India (excluding Assam) during the next 24 hours. The easterly winds on the Bombay Coast had strengthened slightly and were unusually steady. Light showers fell at some of the Burmah stations and at Sibsagar.

After the general fall of the previous two days, averaging nearly a tenth of an inch in amount, the barometer began to rise on the afternoon of the 13th. The changes were small during the next 24 hours, and the range of pressure over India on the 14th was barely a tenth of an inch. Northerly winds were fully established during the day in Burmah, and skies cleared in the Coast districts.

During the next 24 hours pressure increased by amounts varying from ·01″ in South India to ·11″ in the Punjab and ·12″ in Rajputana. This transferred the seat of maximum pressure from the Deccan to the Punjab and Rajputana. A rapid decrease of temperature occurred in Upper India and at the hill stations during the day. The cloud amount had increased during the previous 24 hours in Southern India, and a large number of showers (giving in the majority of cases very light rain) had fallen in Burmah and Southern India.

At the end of the week the pressure and temperature conditions and the winds in Northern India were rather those characteristic of the commencement of the cold weather than of the middle of October. Pressure was very high in the Central Provinces, Hyderabad, and Madras as compared with Burmah,

so that conditions were antagonistic to the commencement of the normal north-east winds of the season which usually give more or less general rain to the West Coast of the Bay, from Gopalpore southwards. The north-east monsoon appears to be established over the whole of the Arabian Sea, and light variable, or northerly winds over the north and centre of the Bay.

The preceding remarks have shown that the rainfall of the week was unusually scanty, and was confined almost exclusively to Burmah and Southern India, and even in these districts it was much below the normal. No rain was received in Behar, Orissa, the North-West Provinces, the Punjab, Rajputana, Sind, Guzerat, Central India, the Konkan, the Bombay Deccan, the Central Provinces, and the greater part of North Madras. The average deficiency exceeded an inch in the West Coast districts of the Bay (more especially in Ganjam and the Circars), Orissa, Assam, South and Central Bengal, and Chutia Nagpur. It was absolutely greatest in Assam (Surma), where it averaged 2¼ inches, and Orissa and Coorg, for which it averaged nearly 2 inches.

The collection of rainfall data by weekly telegrams will be discontinued from this week until the commencement of next year's monsoon. The following table will hence be the last of the present year's series. It gives a fairly correct view of the actual district rainfall of the present year's monsoon.

The chief feature of the monsoon of 1887 has undoubtedly been the unusual weakness of the Bombay current, shown partly by the deficient rainfall over the whole of the peninsula except the West Coast districts, and partly by its very early and rapid retreat. The Bay current has been quite up to its ordinary strength, but in consequence of the peculiar pressure conditions in Upper India it was drawn away from East and North Bengal towards the Gangetic plain and Upper India.

The following gives a brief and general summary of the district rainfall of the past monsoon:

Burmah and Assam have received normal and on the whole favourable rain. The whole of the Province of Bengal, with the exception of North and East Bengal, have obtained normal amounts of rain. The rains held off at the commencement of the season, but set in generally during the last week of June and were fairly abundant. The deficiency in North and East Bengal averaged 20 per cent. The rains ceased somewhat earlier than usual in Bengal on the 8th of October.

The rains have been unusually abundant in the North-West Provinces and Oudh, more specially in South Oudh, which has received 35 per cent. in excess, and the central districts of the North-West Provinces which have had the very large average excess of 19 inches or 59 per cent. above their normal amount.

The rainfall of the season was normal or in moderate excess in the Eastern Punjab. It was largely in defect in the South Punjab (37 per cent.), and in the North-West and West Punjab (32 per cent.).

The rains have been on the whole most deficient in Guzerat, Kathiawar, and Sind, or in the same districts in which they were very scanty last year. Guzerat received only 52 per cent. of its normal amount, Kathiawar 37 per cent., and (if the returns be correct) Sind only 5 per cent.

Rajputana and Central India received on the whole their average amount, but the rainfall was very irregularly distributed, and the rains also terminated very early in the middle of September.

In the Central Provinces and Berars the rainfall throughout the whole season was steadily below the average. The deficiency for the whole season averaged 15 per cent. in the Central Provinces, and 23 per cent. in the Berars. In these districts the rains also terminated much earlier than usual about the 15th September.

In the West Coast districts south of Guzerat the total rainfall is above the average to a moderate extent, heavy rain having fallen in July and August. The rains, however, ceased in the Konkan in the middle of September and at least two weeks earlier than usual.

Over the greater part of the peninsula (excluding the Bombay Deccan, in which there was slight excess accompanying very irregular distribution) the south-west monsoon rains have been very largely in defect. Thus in Khandeish the deficiency averages 32 per cent., in North and Central Madras it averages 27 per cent., and in South Madras 44 per cent. The returns for Mysore and Hyderabad are very defective, but apparently show that the deficiency was as large at least as in the neighbouring districts of Madras.

Province.	Division.	Rainfall data for week ending October 15th, 1888. Average actual rainfall of division.	Average normal rainfall of division.	Excess or defect, in inches.	Rainfall data from May 14th to October 15th, 1888. Average actual rainfall of season to date.	Average normal rainfall, May 14th to October 15th.	Excess or defect of (seasonal) rainfall expressed as a percentage.

Simla, *15th October, 1888.*

JOHN ELIOT,
Offg. Meteorological Reporter to the Government of India.

E. C. BUCK,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 13th October, 1888.*—No rain in Ganjam and Madras; scanty elsewhere. Standing crops generally fair, but withering in Ganjam, Kistna, Bellary, Tinnevelly, and Coimbatore; want of rain felt in these districts and in parts of Vizagapatam, Nellore, Cuddapah, Anantapur, Kurnool, Tanjore, Madura and Salem. Pasture scanty in parts of Kistna, Trichinopoly, Madura and Tinnevelly, and insufficient in Vizagapatam, Cuddapah, Kurnool, Coimbatore, and Salem. Agricultural operations progressing fairly. Prices rising in nine districts, falling in six, and stationary in others. General prospects fair except in Ganjam, where they are bad.

Bombay.—*For week ending 17th October, 1888.*—Slight rain during week in parts of Dharwar, Broach, Kanara, and Kathiawar; more rain needed urgently in parts of Khandesh and Nasik and throughout Guzerat, Konkan, and Kathiawar, where crops have mostly suffered; more also required, especially for late crops in parts of Poona, Ahmednagar, Sholapur and Bijapur. Harvesting of early crops progressing in parts of Karachi, Hyderabad, Upper Sind Frontier, Ahmedabad, Kaira, Surat, Khandesh, Nasik, Thana, Poona, Satara, Bijapur, Belgaum, Kanara, and Kathiawar, and sowing of late crops in parts of Hyderabad, Upper Sind Frontier, Ahmedabad, Kaira, Surat, Nasik, Poona, Ahmednagar, Satara, Sholapur, Belgaum, Dharwar and Kathiawar. Standing crops damaged by blight in parts of Hyderabad. Probable outturn of cotton in Baroda six, and in Shikarpur twelve annas. Fodder scarce in parts of Kaira, Khandesh, Ratnagiri, Kathiawar and Baroda. Want of drinking water felt in parts of Kathiawar. Prices rising in Panch Mahals, Surat, Sholapur and Ratnagiri.

Bengal.—*For week ending 16th October, 1888.*—Slight showers have fallen in Burdwan, Bankura, Nuddea, Jalpaigori, and Backergunj, but none in other districts. Rain is generally much wanted except in the eastern districts, where there was heavy rain on the 6th and 7th instants. In Behar, the want of rain has affected the winter rice in most parts, but elsewhere the condition of the crops is still good. Ploughing for, and sowing of, the *rabi* crops, are proceeding, but rain is required for these crops also in some of the Behar districts. Some distress is reported in the flooded tracts of the Burdwan and Presidency Divisions. The condition of the people in the distressed parts of Orissa has improved.

North-Western Provinces and Oudh.—*For week ending 17th October, 1888.*—Weather bright and seasonable. *Kharif* crops being harvested. *Rabi* ploughing and sowing in progress. Supplies ample and prices of food grains on the whole stationary. General condition of the agricultural stock continues good.

Punjab.—*For week ending 17th October, 1888.*—No rain. Prices stationary in most districts. Harvesting of *kharif* crops commenced in many districts. Ploughing for, and sowing of, *rabi* commenced in nearly all districts. More rain wanted at Hissar, Lahore and Dera Ismail Khan. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan, and those dependent on Bara Canal in Peshawar have almost dried up. No damage done to crops. Stock cattle are reported healthy. Fodder sufficient except in Hissar, Dera Ismail Khan, and in Pindigheb in the Rawalpindi District.

Central Provinces.—*For week ending 17th October, 1888.*—Rain urgently required in Jabalpur both for autumn crops and winter sowings; it is also required in Seoni, Nunar, Nagpur, and in the eastern districts for rice. In Bilaspur the rice crop is expected to yield nothing except where irrigated.

Autumn crops being cut, and winter sowings in progress. *Jowari* and cotton favourable. Prices rising in places.

Burma.—*For week ending 13th October, 1888.*—In Lower Burma crops are progressing favourably. Slight damage was caused to crops by floods and excessive rain in Akyab and Toungoo. In Upper Burma transplanting continues, and in some places early paddy is being reaped. In Lower Burma the rainfall was fair, and in Upper Burma scanty; while no rain fell in Mandalay, Lower Chindwin, Myingyan, and Pakokku. In Lower Burma crops promise well generally, and in parts of Upper Burma the crop is reported to be better than that of last year. Rice is scarce in parts of Toungoo, but no severe distress is anticipated; rice is also scarce in Upper Chindwin. The price of paddy has risen in Rangoon, Bassein, Amherst, Tavoy, Sagaing, and has fallen in Henzada and Shwebo. Elsewhere prices are stationary.

Assam.—*For week ending 17th October, 1888.*—Weather seasonable. Sowing of pulses and oilseeds progressing. Prospects of tea and other crops in general, good.

Mysore and Coorg.—*For week ending 17th October, 1888.*—Rainfall general, except in parts of the Bangalore, Kolar, and Hassan districts, where more is needed. Standing crops in good condition; prospects of season generally good. No material change in prices.

Slight rain in Coorg during the week. Standing crops good. Picking of cardamom crops completed.

Berar and Hyderabad.—*For week ending 17th October, 1888.*—No rain during the week. Rainfall hitherto insufficient; one good shower wanted. Standing crops in fair condition. Cotton in flower. Sowing of *rabi* commenced. Fodder insufficient. Prices of food grains rising.

Slight rain in Hyderabad during the week, except in Shahabad and Pattur taluqas; *kharif* crops withering for want of rain. Scarcity of fodder felt generally. Prices rising.

Central India.—*For week ending 17th October, 1888.*—The following are the only changes since last report. Rain reported insufficient for *rabi* sowings. In Bundelkhand outturn of harvest reported indifferent. Pasturage and fodder fair in Western Malwa. Rain badly wanted in parts of Kuksi, Jhabua and Dhar.

Rajputana.—*For week ending 17th October, 1888.*—Rainfall again very slight and partial. Agricultural operations unsatisfactory in Sirohi, Kherwara, Meywar, Harowtee and Kishengurh. Standing crops have suffered for want of rain in Sirohi, Harowtee, Ajmere, Kishengurh, Meywar and Kherwara. Harvests poor generally. Agricultural stock good. Pasturage or fodder sufficient except in Kherwara and Meywar. Prices rising in some places.

Nepal.—*For week ending 11th October, 1888.*—No rain. Winter has begun. Late autumn rices almost ready to be harvested. Outturn good.

E. C. BUCK,

Secretary to the Government of India.

3. The following table shows the growth of the Capital Accounts of the Guaranteed Railways during the last five years, the net increase to the aggregate subscribed Capital during that period being £4,396,262:

Total capital subscribed. Year.	Amount.	Increase.	Decrease.	Remarks.
	£	£	£	
To end of 1883	53,372,665	...	266,367	
,, 1884	54,844,594	1,471,929	...	
,, 1885	56,295,094	1,450,500	...	
,, 1886	56,210,294	...	84,800	
,, 1887	58,035,294	1,825,000	...	
		4,747,429	351,167	
Net increase ...		4,396,262		

Capital Outlay.

4. The aggregate outlay finally charged off to "Construction" has stood at the end of each of the last five years as follows:

	£	Increase. £
To end of 1883	52,096,035	666,966
„ 1884	53,240,053	1,144,018
„ 1885	54,516,361	1,276,308
„ 1886	55,517,215	1,000,854
„ 1887	55,920,875	403,660
Increase in five years		4,491,806

5. The expenditure charged to "Construction," on the open lines of railway, during and to end of the year, gives the following cost per mile:

Railway.	Construction expenditure per open mile. During 1887.	To end of 1887.	Remarks.
	Rs.	Rs.	
Madras	—1,518·87	1,34,635·01	
South Indian	1,120·74	69,066·03	Metre gauge.
Bombay, Baroda and Central India	1,379·35	2,06,667·95	
Great Indian Peninsula	1,496·19	2,04,491·04	
Oudh and Rohilkhund	12,990·39	1,28,595·00	
Average outlay excluding South Indian	1,059·10	1,70,785·78	
Ditto including ditto	1,069·43	1,53,737·73	

Capital locked up in stores.

6. The subjoined table shows the fluctuations in the value of stores in stock durng the past five years. The figures in antique represent increases of stock:

Railway.	Reduction in stock. 1883.	1884.	1885.	1886.	1887.	Total reduction in five years.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Madras	2,01,952	68,943	4,59,341	3,09,528	6,76,372	40,512
South Indian ...	2,38,593	94,461	4,83,856	3,54,188	5,54,202	5,39,438
Bombay, Baroda and Central India	1,36,077	1,86,182	2,78,348	6,48,977	4,31,054	2,62,134
Great Indian Peninsula ...	22,48,846	3,40,888	20,24,643	13,61,801	8,76,659	16,91,138
Oudh and Rohilkhund ...	21 21,133	6,62,439	8,31,436	20,34,445	34,209	1,19,518
Total ...	37,93,357	2,98,473	24,11,752	40,93,186	6,01,981	18,08,412

7. The increase in the store balances during the year under review on the South Indian Railway is due principally to heavy shipments of permanent-way materials for renewals of line, and that on the Bombay, Baroda and Central India Railway is attributed to large imports of English stores especially coal which did not reach India until after 31st December 1887, and which could not therefore be issued although brought on to the Indian Books.

8. On 31st December 1887, the value of the stores in stock on Guaranteed Railways exceeded the limits provisionally assigned for Capital to be locked up in stores to the following extent:

Railway.	Limit assigned.	Stock in hand.	Excess.
	Rs. Lakhs.	Rs. Lakhs.	Rs. Lakhs.
Madras	22½	24¾	2¼
South Indian	not fixed.	(a)28¾	...
Bombay, Baroda and Central India	21½	31½	10
Great Indian Peninsula	63	70¼	7¼
Oudh and Rohilkhund	12½	28¾	16¼
Total ...	119½	155¼	35¾

(a)—Not included in the total.

Revenue Account.

9. Excluding the East Indian, Eastern Bengal, and Sind, Punjab and Delhi Railways, which have now become state lines, the Gross Earnings, Working Expenses, and Net Earnings of all the Guaranteed Railways during the last five years have been as under:

Year.	Gross earnings.	Working expenses.	Net earnings.
	Rs.	Rs.	Rs.
1883	6,29,94,406	3,22,21,602	3,07,72,804
1884	6,24,57,699	3,26,82,475	2,97,75,224
1885	6,73,27,871	3,51,47,654	3,21,80,217
1886	7,21,55,223	3,56,28,831	3,65,26,392
1887	7,20,41,944	3,61,22,174	3,59,19,770

	Rs.	Rs.
10. For the year 1887 the net earnings amounted to ...		3,59,19,770
Deduct—		
Interest charged on overdrawn Capital ...	2,19,258	
Moiety of Surplus Profits due to Shareholders ...	53,59,123	
Contribution to Provident Funds ...	2,16,571	
		57,94,952
The net receipts by Government due to its connection with the Guaranteed Railways may be stated at		3,01,24,818

11. The results of the working of the Guaranteed Railways for the year 1887, based on the contract rates of exchange, is shown in the following table

as also the percentage of Interest and Net Profits to the Capital received. The figures in antique represent gain :

Railway.	Net earnings after deducting payments on account of moiety of Surplus Profits and contribution to the Provident Fund and interest on overdrawn Capital.	Guaranteed interest.	Loss to State. Amount.	Loss to State. Per open mile.	Loss to State. Per cent. of guaranteed interest.	Per cent. of interest paid on total Capital received.	Per cent. of Net Earnings realised during 1886 on Capital received.
	Rs.	Rs.	Rs.	Rs.			
Madras	28,66,358	56,76,348	28,09,990	3,385·16	49·50	4·87	2·46

Oudh and Rohilkhund	30,36,239	38,45,929	8,09,690	1,171·65	21·05	4·15	3·28
Total 1887 ...	3,01,24,818	2,90,54,467	10,70,351	274·29	3·68	4·67	4·84
1886 ...	3,05,61,972	2,80,70,895	15,91,077	405·00	5·40	4·84	5·07
1885 ...	2,74,49,216	2,83,52,980	9,03,764	234·75	3·19	4·69	4·54
1884 ...	2,56,12,424	2,81,07,704	24,95,280	650·48	8·88	4·77	4·34
1883 ...	2,60,57,489	2,77,85,423	17,27,934	450·07	6·22	4·84	4·54

12. The result of working the Guaranteed Railways during 1887 may be considered satisfactory. The annual result in the last five years has been turned from a loss of Rs. 17,27,934 in 1883, to a gain of Rs. 10,70,351 in 1887.

13. The actual loss to the State during the last five years due to its connection with the Guaranteed Railways, if the payments in England on account of guaranteed interest are converted at the average rates of exchange for the different years, is shown in the following statements :

Year.	Net earnings as described in synopsis, page 4.	Guaranteed Interest at contract rates.	Loss to State based on preceding column.	Guaranteed Interest at the average rate of the year.	Loss to State based on preceding column.	Loss involved in fall in exchange, being difference between columns 4 and 2.
	1	2	3	4	5	6
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1883	2,60,57,489	2,77,85,423	17,27,934	3,17,21,018	56,63,529	39,35,595

Submitting reports on the condition of lower classes of the population in India.

RESOLUTION.

1. In the Resolution which was issued in December 1881 on the organization of Agricultural Departments, and which dealt with the recommendations of the Famine Commissioners for the protection of the country against scarcity, distress and famine, His Excellency the Viceroy in Council directed that an analysis of agricultural tracts should gradually be set on foot with the view, firstly, of ascertaining in what parts of the Empire the agricultural population and the lower classes of the people are suffering from an insufficiency of food or agricultural capital; secondly, of discovering the causes of any conditions of degradation which might be found to exist; and, lastly, of suggesting or providing such remedies as might be found necessary or desirable. The policy of the Famine Commissioners was explained to be the maintenance of agricultural operations at a high standard of efficiency. The Government of India fully accepted its obligation to assist in the accomplishment of this important duty. It was urged upon Local Governments and Administrations that efficiency of agricultural operations could only be maintained at a proper standard by securing that cultivators and labourers, their families and cattle, are properly fed, and their need for labour and agricultural appliances adequately met. Insufficiency of food was pronounced to be one of the leading causes of agricultural degradation, and on this account as well as on account of the suffering due to an inadequate food-supply, to be a question which demanded the fullest investigation by Agricultural Departments.

The Government of India is aware that since the issue of the Resolution of 1881, the new Departments have been occupied in organizing a system under which complete information will eventually be collected regarding the condition and prospects of each village or tract of agricultural land, and which will ultimately lead to an intimate knowledge of the circumstances of the lower classes in every part of British India. The existence of distress and of the causes which may have produced it will then, it is anticipated, have been fully examined, and the time will then come for the application of the remedies which must, so far as they are within the means of the administration, be provided. His Excellency the Governor General is not, however, satisfied to leave to a future time, of which the distance is as yet unknown, the commencement of positive action towards the fulfilment of a duty which the Famine Commissioners appointed by Her Majesty's Secretary of State declared to be one of the most necessary functions of the Government. The recent expenditure of capital upon railways and canals has, it is true, done much in two important directions to provide for the protection of the lower classes against scarcity and distress. But there are some other remedies enumerated in the 10th paragraph of the Resolution already quoted which in His Excellency's opinion admit to some extent at least of early application. Prominent among these is the promotion of emigration whether to Colonies or to other parts of British India. It is with the latter question—the promotion of inland emigration—that the present Resolution will deal.

2. It will be well in the first place to advert to the emigration which already to a certain extent obtains in some parts of India, and to notice the more salient points indicated in the Census reports of 1881.

The relief afforded by emigration to the Colonies of Great Britain, France, and the Netherlands, which have within the last ten years taken only 151,955 Indian immigrants, is too small to meet the difficulties revealed by the Census returns of 1881. The movement is, however, beneficial to India, and may with the revival of the sugar trade again assume its former proportions. In any case the fact that natives of India can be induced even to this extent to emigrate to foreign countries seems to show that the problem with which we have to deal is not as hopelessly insoluble as it has sometimes been represented to be, and to justify the belief that they may be induced to move in larger numbers to unoccupied lands in the Indian Peninsula and Burma. There is, however, an advantage attending Colonial emigration which is wanting in any scheme which can be proposed for a comprehensive system of migration within India—in that the capital necessary to enable the emigrant to leave his home and to establish himself abroad is supplied by the planter. This advantage is also held out to emigrants who proceed to the tea gardens of Assam, and it is believed that during the last ten years nearly 300,000 persons have migrated thither; but although the relief thus afforded by the field of employment in Assam is undoubtedly perceptible, and is likely to become still more valuable as communications improve and capital increases, there are climatic influences which must at present preclude Assam from becoming a field for colonization on any very large scale. The annual movement of population to Burma, Ceylon, and the Straits Settlements is also considerable, and serves to keep up the standard of comfort in districts like Madura in Madras.

The census taken in 1881 disclosed the fact that in parts of India the pressure of population had reached a point beyond which further increase would be attended with danger. In Bengal eight districts had a village population of more than 700 souls to the square mile, and the mean of the eight districts was reported to have "reached the astonishing figure of 802·66." In the North-Western Provinces and Oudh twenty-one districts had a population of more than 500 to the square mile; and in Benares, Ballia, Jaunpur, Azamgarh, and Lucknow the mean density of population per square mile exceeded 700. In the Punjab no such figures were attained, but in eight districts the rural population varied between 300 and 400 per square mile—a condition of things which suggested the remark that "in the most populous districts the capacity of the soil to support agricultural population had been strained to the utmost."

Madras had no single instance of an entire district in which the density exceeded 600, and in the ordinary settled districts the extremes of density varied from 583 per square mile in Tanjore and 515 in Vizagapatam to 91 in Kurnool; but in certain taluks of the Tanjore district aggregating an area of 1,323 square miles the density of population was 877 per square mile. In Bombay the density of normal population nowhere reached a high figure; but the census taken in that Presidency indicated that in some districts the struggle for subsistence was severe.

As was to be expected, the density of the rural population was found to a great extent to depend on the fertility of the soil and on a favourable rainfall. In one district a population even of 800 to the square mile may live in comfort, while in another 200 to the square mile may mean starvation. But there can be little doubt that even in the most fertile districts of India, in some of which, as in Azamgarh, the population amounts to over 1,000 to each square mile of cultivation, the situation must be perilous.

Among other facts brought to light by the census operations of 1881 was the migration within India of large numbers of people from the province of their birth; and this fact suggested to His Excellency the Viceroy the desirability of, in the first place, instituting an enquiry into those cases in which a considerable population had been induced to move from overcrowded districts to sparsely inhabited tracts. The practical object of the enquiry was to set forth the agency or influences employed to initiate such movements, the difficulties attending them, and in the case of unsuccessful efforts, the causes of failure. The result has been the acquisition of valuable information, which is published in a condensed form as an Appendix (B) to this Resolution.

3. In anticipation of the detailed analytical examination of agricultural tracts, which it is the duty of the Departments of Land Records and Agriculture eventually to provide but which may not be fully worked out for many years to come, His Excellency next considered it desirable that an enquiry should be made into the condition of the lower classes of the population, with a view to discovering what localities are on account of the pressure of population and insufficiency of produce in urgent need of relief.

The replies to the enquiry thus instituted are, on the whole, of an encouraging nature, and testify to the great progress in the prosperity and protection of agricultural interests which has followed the extension of railways and canals. But the Government of India desires it to be distinctly understood that the enquiry to which reference is now made was necessarily only of a cursory and incomplete character, and in no way supersedes the obligation, placed upon Departments of Land Records and Agriculture by the Resolution of 1881, to continue to work out the careful analysis of agricultural tracts, which is necessary in order to ascertain with certainty and precision in what localities any section of the lower classes of the population is suffering from insufficiency of food, or from other causes which tend to a degradation of agricultural operations and to local distress. In the meantime the enquiry which has been made enables the Government of India to place before Local Governments and Administrations a sketch (Appendix A) of the general condition of the lower classes in India, and to indicate roughly the localities in respect to which it appears desirable to examine the question whether the inland migration can be usefully encouraged.

4. It may be stated briefly that, over the greater part of India, the condition of the lower classes of the agricultural population is not one which need cause any great anxiety at present. The circumstances of these classes are such as to secure in normal seasons physical efficiency for the performance of agricultural work, though in the tracts classed as "insecure" there is always a risk in the event of a failure of the rains, that the more indigent class of the people may be overtaken by distress in various degrees and forms, and be deprived of the wages ordinarily provided by the agricultural operations on which in normal seasons they depend for their livelihood. There is evidence to show that in all parts of India there is a numerous population which lives from hand to mouth, is always in debt owing to reckless expenditure on marriages and other ceremonies, and in consequence of this indebtedness and of the fact that their creditors, the middlemen, intercept a large proportion of the profits of agriculture, does

not save, and has little or nothing to fall back upon in bad seasons. Nevertheless, in the majority of cases, there is no sufficient cause for the direct interference of Government.

In one or two parts of the country, however, there seem to be grounds for anxiety. In Behar, it is believed, that 40 per cent. of a population of 15,313,359 is in a state of agricultural degradation. The chief remedy suggested by the Government of Bengal is emigration. Emigration to the Colonies, to the tea plantations of Assam, and with far greater effect to the eastern districts of Bengal, already relieves, in a certain measure, the congestion of population in Behar, but the obstacles of climate and language and the risk to health in reclaiming land in Assam or Eastern Bengal have hitherto impeded emigration on a larger scale. In the North-Western Provinces and Oudh there is now no evidence of marked agricultural degradation, and even in districts such as Ballia, where the density of population is over 700 to the square mile, the fertility of soil which is the cause of the density of population secures general prosperity. Still the census figures, which show that in twenty-one districts there is a population of more than 500 to the square mile, suggest the inference that the time may not be far distant when it may be necessary to relieve overpopulation by some comprehensive scheme of emigration. This remark especially applies to the districts east of Lucknow. And although the Government of the North-Western Provinces and Oudh is of opinion that there is at present nothing which demands special action in those Provinces, it recognizes as the best corrective for local distress the emigration of the surplus population from one part of the country to another. In the rest of India, with the one exception of the Ratnagiri District in the Bombay Presidency, no precautionary measures of exceptional character seem to be immediately called for; so that in existing circumstances Behar is the tract which demands the chief and closest attention of the Administration. But as before remarked the enquiry which has been made and which has led to the above conclusion is only of a preliminary character, and must be supplemented by the careful analysis of agricultural tracts which was enjoined on Departments of Land Records and Agriculture in the Resolution of 1881.

5. In considering the areas which are or may be rendered available for the relief of these overpopulated districts (which may briefly be described as the alluvial region between Lucknow and Patna), it will be convenient to make some attempt to group unoccupied tracts under the several classes into which they naturally fall when certain well marked physical peculiarities are taken into consideration. The classification thus roughly assumed is not however put forward as accurate or exhaustive.

Land which is either unoccupied or insufficiently occupied may be divided into four classes:

(*a*) culturable land which can support no population without irrigation;

(*b*) culturable land which can support only a scanty population until supplied with irrigation or other protection against drought;

(*c*) waste culturable land which when reclaimed can support a full population;

(*d*) land unculturable owing to natural causes inherent in the soil.

Broadly speaking, the entire country west of a line from Peshawar to Bikanir and Bikanir to Karachi lies within class (*a*), and comprises about a third of the Punjab, with Sind, and the adjacent Native States. The average monsoon rainfall is much below 10 inches; the soil, though fertile, is arid, except along the line of rivers; water occurs only at a considerable depth, and wells are difficult of construction. Expanding population in these tracts must follow canal irrigation, which has been largely extended in recent years both in the Punjab and Sind, and will continue to be developed as rapidly as means permit.

The second division (*b*) embraces the regions to which the south-west monsoon gives only a rainfall varying from 10 to 30 inches. It is split into two sections, a northern and a southern, which together occupy about a third of the whole peninsula. The northern section lies within the angle formed between a line from Peshawar to Allahabad and a line from Allahabad to

Baroda, and is of course exclusive of the tract already classed under (*a*). The southern section is roughly represented by the interior of a triangle having the delta of the Godavery for its apex and the inner line of the Western Ghats for its base. Though sparsely populated, these regions are already almost wholly occupied, and the areas at the disposal of Government for colonization are small. But even if extensive areas were available, it is open to grave doubts whether Government would act wisely in encouraging the increase of population in these districts. Except in the lower half of the southern section, which is fed by the north-east or cold weather monsoon, the rainfall is exceedingly precarious, and the population has at various periods been reduced by famine. Of recent years railways have done much to open up these tracts; but while improved communications will mitigate the loss of human life from starvation, they exercise no protective influence on agriculture, or the principal agencies through which agriculture is maintained—water and cattle. Protection can only be efficiently afforded by artificial irrigation, and in a great part of the tracts in question the means of irrigation are wanting, while in others the soil is unsuited for irrigation.

A consideration of climatic conditions and physical characteristics leads to the conclusion that the area grouped under the second class, though large and in parts fertile, affords little or no suitable outlet for redundant population.

A more hopeful prospect is offered by the tracts which may be grouped under class (*c*.) These comprise the whole of the sub-Himalayan belt, large tracts in the Central Provinces, the unreclaimed forests lying between those Provinces and Madras, and so much of Burma as is not yet cultivated. A great part of this area, particularly in Burma, is at the disposal of Government; the soil is fertile, and the rainfall sufficient and regular. There is already a spontaneous expansion of agriculture going on; but ample opportunity exists for a more rapid and regular effort at colonization. In the central and western sub-Himalayan tracts there is perhaps but little land which could be utilized, while in the eastern portion of the same belt which lies below Darjeeling and in Assam, waste lands are already being opened up under the influence of European capital and improved communications, and it would seem unwise to interfere with or hasten this development. But in the Central Provinces there exists a fairly considerable area of Government land possibly suitable for emigrants from the North-Western Provinces; and in Burma, where the acquisition of the Upper Province has given to India an accession of culturable land, of which the area is sufficient to meet the needs of the redundant population of Madras and Bengal for many years, there are extensive tracts of land fitted for settlers from those Provinces. His Excellency the Governor General in Council has consulted the Local Governments as to the measures which may be taken to bring these lands under colonization.

Coming to class (*d*), it may be said to comprise all the barren tracts of pure rock, sand and saline soils which are to be found scattered over India, and which amount roughly to one-sixth of the total area of British territory. Though at present unfitted to support population, certain of these tracts may by skilful treatment be rendered culturable; and with this object in view, it is of importance that they should be retained in the possession of Government. The measures which may be taken for their reclamation deserve discussion; they do not, however, come within the scope of the present enquiry.

6. It is of importance to bear in mind the exact words of the Famine Commissioners when alluding to a possible scheme of migration. They spoke of the "physical wants and the mental and moral idiosyncracies of the Indian agricultural population," and the following typical instances of migration, which will be briefly noticed, show that these wants and idiosyncracies require most careful attention.

The Jagdispur jungle in the Shahabad district, Bengal, about 8,000 acres in extent, was cleared by Government, and a lease of it given to a European firm. The whole area has been reclaimed, and is now cultivated by a thriving tenantry. In 1859 there was not a single inhabitant. In 1881 the population was 8,597. The success in Jagdispur is, to a large extent, due to the cautious manner in which the lessees proceeded. They did not risk failure by gathering too many emigrants at a time. They found that a very few families sufficed to

form a nucleus; and that when once a reasonable prosperity was assured to them, other families soon followed in their footsteps. They found it necessary to place some one in charge of their emigrants, who could communicate with the authorities, help them in their troubles, whether domestic, social or agricultural, and prevent them from getting into debt to money-lenders. Materials for roofing their huts, and assistance in the way of loans of seed, cattle and implements, were given, and the emigrants were secured in a right of occupancy after they had ploughed and sown the land.

In the Chanchal estate in the Maldah district, in Bengal, a ridge of waste about six miles in length was reclaimed by the Manager of the estate, who induced some 30 families of Santals to settle. For the first year the Santals were helped with seedgrain, and were given employment of various descriptions until their crops were fit to cut. Light rates were charged, and in ten years the number of families increased from 30 to 300.

Another instance of Santal migration deserves to be mentioned, In 1880 the Indian Home Mission to the Santals after prospecting the neighbourhood of Guma Dwar in the Goalpara District of Assam took twenty Santals there as pioneers to build sheds for the coming settlers. At the beginning of 1881 220 Santals started and after surrounting many difficulties they have established nine villages with a population of some 700 persons. They metain their own village system, they settle their differences among themselves and are all now well to do. The success of the movement is due to the fact that it has been led and supervised by practical Europeans of the Mission who possessed the confidence of the Santals. Government has also assisted by defraying the travelling expenses of the emigrants from the Santal Parganas to Guma Dwar and by granting advances free of interest to the settlers until they could reap a crop of their own.

There are numerous other instances of successful reclamation effected by capitalists, which will be found in the Appendix (B) to this Resolution. A scheme of colonization, which was directly initiated by Government, deserves to be noticed here as the circumstances attending its failure furnish an useful lesson. The details of the Charwa colonization scheme were as follows. An agricultural colony was to be established in the Charwa jungle, in the west of the Hoshangabad district, Central Provinces, the site proposed being within a few miles of the Bombay road and the Great Indian Peninsula Railway; the land was rich and the climate good. The colonists were to be drawn from the Kurmi, Jat, Ahir, and other good cultivating castes in the trans-Ganges portion of the Allahabad and adjoining districts, and in the neighbouring parts of Oudh, and they were to be numerous enough to permit of 10 villages of 50 families each being founded. Men of character and influence were to be attracted to lead the emigration by promises of revenue free land. The colonists were to be transported by rail to Charwa; and when there, were to be supplied with plough cattle and agricultural implements. The settlement of each family was estimated to cost Rs. 200. The requisite funds, amounting to one lakh of rupees, were made available on condition that all rents paid by the colonists until the expiry of the settlement of Hoshangabad were credited in repayment of the amount advanced. In sanctioning the scheme the Government of India was not sanguine as to its success; and the subsequent history of the Charwa colony justified this doubt. It will be seen, in the first place, that one of the conditions which led to success in the Jagdispur estate was neglected in the Charwa scheme, and that an attempt was made to found off-hand 10 villages of 50 families each. Recruitment on so large a scale made it difficult to exercise much selection; and owing to the unfortunate choice of an agent for recruiting, the great majority of the persons who were located in Charwa, amounting at one time to 211 families of 1,056 souls, were not really cultivators; and even those of them who were accustomed to agricultural work were by no means the substantial rayats whose settlement it was the object of the scheme to promote. In addition to this mistake in the selection of the settlers, which in itself was fatal to success, there was an entire absence of leaders among the people, and consequently of any bond of union to enable them to overcome the hardships necessarily incident to any attempt to colonise an uncultivated tract in a new country. The scheme failed utterly; and although its

failure was almost entirely due to a neglect of the principles upon which it had been based and sanctioned. the discouraging experience of the Charwa colony has perhaps led to exaggerated ideas of the difficulties attending large reclamation and colonization projects.

It is also instructive to notice the various attempts made by Government to encourage emigrants to settle in Lower Burma. In 1874 Bengal immigrants were introduced into Burma under a three-years' agreement. Most favourable terms were given, and about 7,000 persons were imported. Of these, 800 absconded and returned to India; some found employment on the railways, roads, and canals; some few enlisted in the police; others took to domestic service; and a very small number settled down to cultivation in the Moulmein district. The expenditure on this scheme amounted to nearly 3 lakhs of rupees, of which only $1\frac{3}{4}$ lakhs was recovered.

In 1876 a scheme was started to introduce labour from Madras. The immigrants bound themselves under contract to work at a certain rate of wages, and Government undertook to pay them the specified wages, if no other employment were found for them. The scheme proceeded on the erroneous assumption that there were large employers of labour in Burma, who would gladly avail themselves of the services of the coolies, and who might induce the immigrant families to settle down on farms in the country. About 758 persons were imported and the scheme was abandoned at a loss to Government of Rs. 37,448.

In 1882 the Behar emigration scheme was introduced. Again most favourable terms were offered by Government. The passage of each family was paid to Rangoon, and their conveyance to the village in which they were to live was defrayed by Government. Houses were supplied, and food given, free of cost, until wages could be earned; and work was assured to able-bodied labourers for one year. After completion of a year's work holdings of culturable land in proprietary right of an area varying from 10 to 20 acres were to be allotted to each family. These holdings were to be exempt from land revenue for five years. Finally a special officer was to be deputed to take charge of the colonists and to guard their interests. About 70 men and 4 women were sent to the Pyuntaza plain. They remained for a few weeks on the sites selected for them, receiving Government rations and doing but little work. At the end of that time they abandoned their homes, and took employment as coolies on the railway line, or returned to Rangoon. The scheme failed after costing Government Rs. 33,000.

The failure of the above schemes has been attributed by local officers to three causes:—

(i) The dislike of the natives of India to abandon their homes and to settle down in a foreign country. The result of this feeling is, that only the lower classes of the population, who are useless as agricultural settlers, can be induced to move.

(ii) The agency which Government is compelled to employ is very varied, and the agents often induce the people to abandon their homes by fallacious promises, the non-fulfilment of which produces discontent among the immigrants.

(iii) Government is unable to watch over the immigrants, and protect them against the petty annoyances which they meet with in a new country amongst people differing from them in language and customs.

It may be remarked in connection with this explanation of failure that the experience gained from Colonial emigration does not support the view that the classes who are induced to move are useless as agricultural settlers, and suggests the theory that the success attending Colonial emigration is due to the existence of an agency for recruiting which understands its work. Language is an undoubted difficulty but not of serious importance, if colonization is carried out on prudent lines.

The inferences which may perhaps be drawn from the history of the Charwa scheme in the Central Provinces, and the three attempts in Burma, are, that if private capitalists are forthcoming, it will be better to work through them than to undertake direct responsibility on behalf of Government, and that personal supervision and continuity of effort are essential to success.

7. It is encouraging to turn from these records of failure to the consideration of a scheme which has been carried out in the Multan district in the Punjab under careful personal supervision and with laudable continuity of effort. The Sidhnai canal in Multan was opened in May 1886, and can irrigate about 48,000 acres annually. The area irrigable from the canal was almost entirely destitute of population; and it was necessary to attract cultivators from other districts. For four months the Deputy Commissioner of the district failed to obtain any cultivators; but at last one man came down to prospect. He was satisfied, and returned to his home in the Lahore district, whence he brought a number of his relatives. He was allowed to choose his own watercourse; and fortunately the first crop sown gave a good outturn. Thereafter the Deputy Commissioner was inundated with applications for land; and by March 1888 some 600 adults of the cultivating classes, emigrants from other districts, were settled on plots averaging 90 acres each. The scheme has proved in every way successful; and its success is due to the fact that the Deputy Commissioner watched the location of immigrants, carefully selected the men who were to bring their relatives and friends to his district, and corresponded freely with Deputy Commissioners of other districts as to the class of men he wished to settle on the new lands.

In congratulating the Punjab Government on the manner in which this measure has been carried through, His Excellency the Governor General in Council considers that the lines laid down by that Government may be found within certain limits applicable to other parts of India. In the first place, recruitment proceeded under the supervision of district officers; and the greatest care was taken in the selection of leaders. Next, arrangements were made to enable the settlers to irrigate their lands at once, and thus, at the first harvest, to obtain a crop, without which the cattle could not have been fed. Takavi advances were freely given; and settlers were encouraged to sink wells. Lastly, as far as it was possible, men of the same brotherhood or caste, or in some way connected and having common interests, were settled in the same village.

It is, however, evident that the movement of population from Lahore to Multan involves far less change of climate of social customs and of language, and far fewer difficulties, than the translation of population from Bengal to Burma, or from the North-Western Provinces to the Central Provinces; but His Excellency feels assured that, with a liberal and wise use of the provisions of the Land Improvement Loans Act and the Agriculturists' Loans Act, and with fair rules for the lease of waste land, accompanied by proper supervision and continuous effort, the measure can be commenced and sustained with no very great outlay of capital.

The offer by the Local Government of a fairly liberal lease of 15,000 acres of waste land in the Tennasserim Division has recently induced a well-known pioneer of colonization schemes to undertake at his own expense the settlement in Lower Burma of agriculturists from Behar, and to endeavour to introduce new staples and new methods of agriculture, and it is hoped that others will follow this example.

8. Before coming to any decision as to the measures which should be advocated for the colonization of waste tracts, His Excellency in Council desired that the opinion of those officers who would hereafter be employed in directing the movement should be obtained; and accordingly at the beginning of April last a Conference of the Directors of the Provincial Departments of Land Records and Agriculture was held at Delhi, at which, with the permission of the various Local Governments, the question of moving population to unoccupied tracts was discussed. The details of such movements received careful consideration, and the difficulties experienced in the past were fully set forward. The Conference was agreed that it was desirable to take measures for generally promoting the policy, and that in

particular every facility should be given to emigrants from Behar and the North-Western Provinces for obtaining land in the Central Provinces, or in Burma. It was pointed out that the people of Behar had much in common with the natives of the Central Provinces, and that a ryotwari settlement might be offered to immigrants from crowded districts of Bengal in the latter Province, but that such a system of settlement would greatly depend for its success on the liberal grant of advances by Government under the Agriculturists' Loans Act. The question of working through capitalists was discussed; and it was agreed that when capitalists or adjoining landowners were ready to undertake schemes of colonization, it would be better to employ them and afford to them every reasonable facility. The Conference was of opinion that the best plan for carrying out a scheme of colonization from one Province to another would be to appoint in each a Special Officer, acquainted with the agricultural conditions of his own Province, for the conduct of operations or negotiations with capitalists; to circulate information as to the precise terms on which land could be obtained in the Central Provinces, Burma, and elsewhere, the nature of the soil, and the climatic conditions of the neighbourhood. The three chief difficulties which, in the opinion of the Conference, beset the scheme of colonization were climate, expense of moving and settling, and language; and in appraising the success which had attended the Sidhnai colonization in the Punjab, they noticed that these difficulties had hardly been present. Two courses seemed open in moving population on a large scale to Burma or the Central Provinces, *viz.*, either to trust to capitalists working for their own profit, or to adopt a system of emigration, under the supervision of Government officers, with advances made by Government. Although the latter course might not in some cases prove financially successful, yet, considering the importance of the end in view, the Conference did not deprecate a trial of it, and their conclusions have been placed for consideration before the Local Governments chiefly interested.

The question has so far been viewed under one aspect, that of the necessity of relieving congested tracts. But there is another important aspect under which it must be regarded, *viz.*, that of the desirability of promoting the wealth of the country by developing the cultivation of tracts now lying waste and unproductive. This financial consideration is one which should not be left out of sight; and while commending the scheme to Local Governments as a means of meeting the exigencies of over population, His Excellency in Council trusts that the ultimate financial benefits of the movement may induce the various Administrations concerned to deal with the question in a liberal and far-seeing manner.

9. It must be remembered that the Government of India is in a very different position now from that in which it stood when the report of the Famine Commission was presented and when the schemes of emigration which have been alluded to in paragraph 5 of this Resolution were undertaken. A large tract of country has recently been added to the Empire in Burma, and though the information about its agricultural capabilities is necessarily incomplete at present, it cannot be doubted that the annexation of Upper Burma will help to solve the problem of relieving the congested tracts of India on a scale and in a manner which could never have been obtained by emigration to the limited and unhealthy area of the Central Provinces. It has been held by those who have considered the question that a large initial mortality must be expected in the reclamation of waste lands, and this opinion, so far as it relates to tracts in the Central Provinces, in the Terai, and in Assam, is more or less based on experience. But as at present advised the Government of India does not anticipate that the climate and conditions of Upper Burma will prove prejudicial to the health of the Indian agriculturist, and it seems in every way expedient that attention should be chiefly directed to that country as the possible field for relieving over-population in India. The first essential in colonization in India is the opening out of communications, and it is found that when once good roads are established population moves along them easily and rapidly. A great step has been already made by the construction of the railway to Mandalay, and feeder roads will probably bring within the reach of emigrants land of excellent quality. In the past the

subsidies to steamers plying to Rangoon produced a much larger influx of population than any of the schemes which were directly undertaken by Government.

Some preliminary proposals of a practical nature have already been submitted by the Chief Commissioner of Burma, and are now under the consideration of the Government of India. Large grants of land to capitalists are advocated, and it is proposed to set aside 100,000 acres for this purpose in Lower and Upper Burma. It is recommended that the grantees should be allowed to settle their own terms with tenants, that the grants should at first be made on liberal conditions, that precautions should be taken to avoid the importation of immigrants at inconvenient seasons when employment is not forthcoming, that care should be taken in the selection of immigrants, that they should not be kept in depôt in Rangoon, and lastly, that no immigrants except those who come to settle as cultivators should at first at any rate be accompanied by their wives.

10. It is especially important that the Chief Commissioners of Burma and the Central Provinces should collect information which would show the area of waste land available for cultivation, the nature of the soil, the character of the cultivation practised in the vicinity, the climatic conditions of the neighbourhood, the routes by which the land may be reached, and the conditions under which the land is to be leased. This information will be published in all Provinces of India, the Governments of which should require the Departments of Land Records and Agriculture to take early steps towards disseminating among the people of overcrowded tracts the particulars furnished by the Chief Commissioners, to submit definite proposals for further suitable action, and to encourage the development of such schemes as that which has already secured the colonization of a tract in Lower Burma by settlers from Bengal.

11. It will be convenient in conclusion to summarize the measures which the Government of India has, under the direction of His Excellency Lord Dufferin, already taken in connection with the subject of inland emigration: Firstly, the obligation has been placed upon Departments of Land Records and Agriculture to ascertain in what tracts relief is needed. Secondly, an enquiry has been instituted into the facts and circumstances under which population now moves from one part of India to another. Thirdly, an enquiry has been made into the condition of the agricultural population in all parts of India. Fourthly, the subject has been with the permission of the Local Governments, discussed at a Conference of the Directors of the Departments, of Land Records and Agriculture whose proceedings have been placed before them for consideration. Fifthly, the Governments of the North-Western Provinces and Bengal, which contain the most crowded tracts, were invited to depute officers to the Central Provinces and Burma for discussion with the authorities there of the procedure which should be adopted.

It now remains for the Local Governments concerned to submit their opinion and advice to the Supreme Government.

ORDER.—Ordered, that a copy of the foregoing Resolution be forwarded to Local Governments and Administrations* for information and guidance and to the Foreign Department for communication to the Political officers named in the margin.†

*Govt. of Madras.
Ditto Bombay.
Ditto Bengal.
Ditto North-Western Provinces and Oudh.
Ditto Punjab.
Chief Commissioner, Centra Provinces.
Chief Commissioner, Burma.

Chief Commissioner, Assam.
Chief Commissioner, Coorg.
Chief Commissioner, Ajmere.
Secretary for Berar to Resident at Hyderabad
†Agent to the Governor General, Rajputana.
Resident at Mysore.
Resident at Hyderabad.

Also that the Resolution be published in the *Supplement to the Gazette of India*,

[True Extract.]

E. C. BUCK,

Secretary to the Government of India.

Appendix A.

Précis of the Reports received on the enquiry made into the condition of the lower classes of the population.

There are many points brought to notice in the reports which are universal throughout the country. The indebtedness of the agriculturist, and his dependence on the money-lender, is a common feature in all Provinces. The absence of thrift is a very prominent characteristic of the people; and it is not an exaggeration to say that over the greater part of the continent the small cultivators and labourers live from hand to mouth. The prevailing custom of extravagant expenditure on marriages and other ceremonies appears in every report. The depression of certain classes of artisans, whose occupation has disappeared before the inroad of foreign goods, is noticed in most Provinces; but there is evidence that this class is finding new forms of employment, and the fact need not cause much anxiety.

The information given regarding diet, clothes, and houses is both useful and interesting. In *Bengal* the two meals a day, with rice as the staple food, change in the *North-Western Provinces and Oudh* into three meals a day, consisting of maize, millets, and pulse, and, as the spring crop is harvested, of barley, peas, and gram, eked out with vegetable pottage. Milk everywhere is a great auxiliary; and in normal years the people seem to enjoy a rude plenty. In the *Punjab* the *ser ata*, i.e., two pounds of flour, is the ordinary ration; and this is supplemented by pulse, vegetables, and condiments. Similarly in *Bombay* the ration of an adult man consists of two pounds of grain, chiefly millets, and occasionably rice and wheat, helped with pulse and condiments. In *Sind* the diet is more generous. Meat is not unfrequent, and milk or curd and ghi seldom absent. In *Madras* a wage of 6 rupees a month enables a whole family to have three meals a day of rice and ragi (millet), with toddy or fish (near the coast), and butcher meat once or twice a week. But such a wage does not admit of the use of milk, butter-milk, or ghi.

The information given about clothing is valuable, for the style of dress very often reflects the condition of the rural poor, while the evidence as to the general use of ornaments and jewelry suggests that the mass of the people have a margin they could fall back upon when labour was not forthcoming. In *Bengal* the dress of an ordinary peasant is a *dhooti*, or cloth worn round the waist and reaching down to the knee, and a piece of smaller cloth called a *gumcha*, or scarf. This serves the double functions of a towel at the bathing ghât, and a turban in the fields. Some can afford the luxury of a shirt or *piran* and a *chadur*, or long scarf worn on the upper part of the body, a pair of slippers and an umbrella. The women wear a single *dhooti* or *sari* wrapped round from the head to the ankles. The ordinary *dhooti* costs about one rupee. "Their clothes are always scanty, not so much from poverty, as from the fact that they are not used to wearing much clothes." In *Behar* a *rezai*, or quilt, is added to the wardrobe for winter use. Trinkets and jewelry are common, and it is a noticeable fact that English piece-goods seem universally used in Bengal. In the *North-Western Provinces and Oudh* the men are fairly clad, most of them have a padded quilt or blanket for the cold weather. The women and children are worse off. A village woman rarely has any wraps. Most of them pass the nights in their day clothes—a cotton petticoat, wrapper, and bodice. "As a rule, they and the children sleep in the cold weather during the warm afternoons and the early hours of night, and from midnight to dawn cower over a fire of rubbish in the yard of the dwelling house." Mr. Irwin, in *Rae Bareli*, comments on the scarcity of warm clothing. He found among 173 persons only 10 blankets, 16 *rezais* (quilts stuffed with cotton) and 24 quilts; so that more than three-fourths of these persons went through the winter with no better covering than the common sheet. There is evidence to show that during the three months of severe cold, *viz.*, from December to February, the lowest classes, especially the women and children, are insufficiently clad. In the *Punjab*, with the exception of the notice of clothes made in selected cases, of the *Delhi* Division, nothing is said as to dress, but the style is much the same as in

the *North-Western Provinces and Oudh*, though the use of *rezais* is probably more general in the colder climate of the Punjab. In *Bombay* full information is given. The usual clothing of a man consists of shoulder and waist-cloths, jacket, turban and shoes, with a blanket for protection against cold and damp. A woman has a petticoat, bodice and cotton wrapper, and generally shoes. The earlier tribes wear scantier clothing and spend about Re. 1-6-0 on their dress. For agriculturists generally the cost of clothes varies from about 4 to 5 rupees. In *Madras* nothing is said as to clothes. In *Assam* the dress of the people is above their station in life. In *Berar*, the people are well clad. In the Central Provinces but little clothing is wanted, and the people apparently possess this. It should be noticed in conclusion, that the use of ornaments is almost universal.

The houses of the agricultural classes are of the most primitive description, but they serve the purpose of shelter. *Bengal* appears to be worst off in the matter of houses. Mud-walls and a thatch, or bamboo walls, when as in *Behar* the soil is such, that mud-walls cannot be built, make up the simple architecture of *Bengal*. In *Orissa* the houses are built on each side of a fairly wide street with a background or garden. There ventilation is possible, and the houses are neat and clean. Elsewhere it may be said that the houses are dark and entirely without ventilation. Nothing is said about houses in the *North-Western Provinces and Oudh*, and the *Punjab*. In *Bombay* the style of house varies. In *Gujerat* houses are either tiled or thatched, with walls of bamboo or mud. In the *Deccan* stone and sun-dried bricks are used. In the *Konkan* wattle-walls appear, while in *Sind* the vast majority of the lower classes are contented with a thatched wattle-walled hut of tamarind twigs, which would cost about Rs. 3 a year. The Government of *Madras* states that the old thatched hut is being largely replaced by the tiled house. In the *Central Provinces* there are the usual huts, wattle-walled, clay or sundried bricks, with a grass thatch. In *Assam* the houses of the poorest peasants though constructed of the flimsiest materials are considered to be far more commodious than those of persons of a similar class in other parts of India.

Bengal.

It is to be noticed that there is far more prosperity in the eastern than in the western districts of *Bengal*. In the *Chittagong** Division the cultivators and agricultural labourers are described as being in a state of at least comparative comfort. The people of *Chittagong* are mostly agriculturists; and even day-labourers, domestic servants, &c., have their patch of land, which is cultivated by them or their families.

Their houses are larger and better than the houses in *Western Bengal*; they wear better clothes; they eat better food, not infrequently flesh—and can afford to remain idle, and to amuse themselves for days together. Several reasons are given for the prosperity in *Chittagong*:—the low assessment of land revenue; the security from failure of the principal crop—rice; the fertility of the soil; and the facilities of water-carriage. One opinion is given by a Native official, which is utterly opposed to that given by all the other officers of the division. He considers that the struggle for existence is becoming harder; that the rise in wages has been more than counterbalanced by a rise in the price of provisions; and that the export of rice is an evil.

The condition of things in the *Dacca** Division is still more prosperous though it should be remembered that the weavers, potters, and some other castes or classes, who cling to an hereditary employment in places where it has ceased to be remunerative, or in numbers exceeding the demand, are no doubt in bad circumstances. Mr. Larminie, the Commissioner, writes that, "looking to their needs, the peasantry of *Eastern Bengal* are about the most prosperous in the world." In *Central Bengal*, which is composed of the *Presidency*† and *Rajshahye*‡ Divisions, with the *Purneah*§ and *Maldah*‖ districts, the agricultural classes are almost as prosperous as those of *Eastern Bengal*. The labourer gets from 3 to 4 annas a day; and there is a great demand for skilled labour. In *Moorshedabad*,¶ in the extreme west of the division, the wages of agricultural labour sometimes fall to 2 annas a day, which may be considered as the minimum consistent with the unstinted supply of food to ordinary families; but, with this exception, *Central Bengal* is a tract where the question of deficiency of food does not arise. The Collector of *Maldah* writes that "culti-

§ Area 4,956 sq. m. Population 1,948,887.

‖ Area 1,691 sq. m. Population 710,443.

¶ Area 2,144 sq. m. Population 1,326,790.

vators with holdings less than the average (5 acres) have in ordinary years more than enough to live upon in a way that implies the best physical condition of which the climate and their habits admit, and with a margin to provide against an occasional bad season." The weavers are badly off, but the rest of the artizans are fairly well off, and the labourers, though living poorly and from hand to mouth, are not on the verge of destitution. A large proportion of them undergo suffering in bad years and need urgent relief in times of severe drought or flood. In *Purneah* the climate is enervating, and the population indolent, but in ordinary years the cultivators are "extremely comfortably off." The report of Mr. Smith, Commissioner of the *Presidency* Division, contains few opinions, but many facts of importance—

"Good seasons go to balance bad seasons in the matter of the *mahajan's* bill. During times of scarcity heavier debts are incurred, which are paid off in years of plenty. It is the nature of a native of the lower classes to accept advances wherever he can get them. *Indebtedness seldom means starvation, but usually quite the reverse.*"

Mr. Forbes writes:

"The general conclusions to which the result of the enquiries points are that, while the upper classes of cultivators, holding directly from the zamindar, are in easy and independent circumstances, the under-tenants, though paying comparatively high rents, are still able with ordinary ease to provide themselves with a sufficiency of food and clothing and other necessaries." . . . . "there is no cause for anxiety under any ordinary circumstances, such as have obtained for many years past, as regards any class of the labouring population suffering from an insufficiency of food-supply."

Mr. Smith's report should be read, as it abounds in useful statistics. His remarks upon beggars are interesting, and the following passage possesses an interest in connection with famine relief:—

"The natives of the country, both Hindus and Mahomedans, though by custom and religion exceedingly charitable, are not actively so. The recipients of charity must come to their doors to be fed. The result is that the sturdy beggar prospers while the sick and infirm, who are beggars not by choice but from necessity, are often left to starve unpitied, and their condition does not awake any active feeling of sympathy among their neighbours."

The facts quoted by Mr. Smith regarding beggars show that this numerous class is a great drain upon the resources of the agricultural classes.

The *Burdwan** Division, with the Metropolitan District of *Hooghly*,† *Howrah*‡ and *Burdwan*,§ has the full benefit of the neighbourhood of Calcutta. It has been affected by the Burdwan fever, which while reducing the population has also tended to increase the demand for labour and to keep the supply of land for cultivation undiminished. "Under such conditions it appears that a sufficient maintenance may be earned even by a people debilitated by recurring illness."

* Area 13,955 sq. m. Population 7,393,954.

† Area 1,233 sq. m. Population 1,012,769.

‡ Area 476 sq. m. Population 635,381.

§ Area 3,697 sq. m. Population 1,301,823.

Mr. Toynbee, the Collector of *Hooghly*, whose evidence before the Famine Commission as Collector of Patna was of a somewhat gloomy nature, now records:

"The condition of the poorer classes in this district, compared with that of the same classes in England, may unhesitatingly be described as superior in every respect. There is no such thing as want or starvation among them, and not one individual who does not know, when he rises in the morning, how or where he will procure food for the day. Their wants are few and easily satisfied. The climate in which they live and all their surroundings are enervating and, to our view, demoralizing; ambition they have none, beyond the immediate wants and wishes of the day; but judged from their own point of view, and by their own standard, they are prosperous and contented; and I doubt not that there are thousands upon thousands of the English poor who will gladly change their places with them."

In *Burdwan* District the effects of the fever are painfully prominent. "The sickly physique is now the ordinary physique and commands the ordinary labour rates. The healthy physique is the exceptional one and commands special and very high rates." But in spite of the fever Mr. Oldham, the Collector, is able to state after a very careful enquiry:

"Finally, taking the rates of food which have prevailed for the last 13 years, they have enough with which to procure, and they do procure, a sufficiency of wholesome food enough to support their wives, children and dependent relatives; to bestow on their universal charity; to expend on festivals and celebrations, and to enable them to meet at least the approaches of a time of scarcity. They are much better off than I, on a superficial view of their circumstances, or than their own fellow-residents of superior station, suppose them to be; and the only individuals among them who have no margin, or but the slenderest

margin, are their dependent relatives, the most numerous of whom are old widows and others disabled by sickness, age, or some bodily or mental infirmity."

In *Midnapur** District the first note of distress is struck, and, although the Bengal Government in its review states that symptoms of chronic poverty appear in *Bankoorah*† District, it can hardly be concluded from the Collector's report that the situation in *Bankoorah* is at all unfavourable. He writes: "the cultivators and other people including labourers are generally beyond the power of heartless money-lenders and live more comfortably off than their forefathers. Debts are incurred for marriages and other ceremonies. Agricultural labourers get on an average 2½ annas a day, which is barely sufficient to meet their daily expenses; but there is no want of work for them." In *Midnapur* District, however, there is evidence furnished by the native Settlement Officer which suggests that the condition of the ryots in a part of the district is unsatisfactory. Land and cattle are both stated to be deteriorating —the former from impoverishment of the soil; the latter from want of fodder. The grazing grounds have disappeared before the weavers and other castes, who have now taken to agriculture for their subsistence. The ryots live from hand to mouth. Two full meals of coarse rice per day are a luxury to them. They cannot afford *dâl* and vegetables daily: salt is their ordinary condiment and *kalmi* (a kind of aquatic plant), and boiled *brinjal* form their daily vegetable diet. The increase of salt duty has been a great hardship to them. They think themselves fortunate when they get fish and *dâl* at dinner: this they hardly do more than once a week. Their physique has deteriorated from insufficient food and constant attacks of malarious fever.

* Area 5,082 sq. m. Population 2,517,802.

† Area 2,621 sq. m. Population 1,041,752.

Great weight should be given in *Bengal* to the opinion of a Settlement Officer, as he possesses means of acquiring information which the ordinary district officers do not enjoy, but it is to be noticed that the subdivisional officers of the *Midnapur* District are of opinion that all the people have a sufficiency of food. Moreover, with Calcutta near at hand, there need be no alarm for the agricultural classes of *Midnapur*, and, briefly stated, there is nothing in the circumstances of the divisions mentioned above which would justify any presumption that the people are generally in a condition requiring relief.

But on passing into the province of *Behar*,‡ which includes the districts of *Monghyr*§ and *Bhagulpur*‖ as well as the *Patna* Division,¶ the scene changes. Excluding *Champarun*** and *Shahabad*†† districts where land remains to be broken up, the *Behar* Province comprises seven districts, *Patna*,‡‡ *Gya*,§§ *Muzzafarpur*,‖‖ *Durbhunga*,¶¶ *Sarun*,*** *Bhagulpur* and *Monghyr*, with a population of 15,313,359. Wages are low; the highest wage is 2 annas a day: employment is insufficient: rents are high and tenure is insecure.

*** Area 2,622 sq. m. Population 2,280,382.

The facts included in the following extracts apply generally to all the seven named districts of *Behar*:

The Settlement Officer, Mr. Collin, writing with special reference to two villages examined by him in the district, observes:—"From the foregoing description of the condition of the agricultural classes in this pergunnah (Daphor), it appears that they need not at present cause any apprehension, and that in ordinary years they have sufficient means of subsistence. The picture which I have drawn does not, however, show any great prosperity, and shows that the lower classes, which, including the weaving class, amounting to 25 per cent. of the population, have little chance of improving their position, and that they would have no resources to fall back upon in time of scarcity." The Collector of Monghyr remarks that he has come across many inhabitants who were thin and apparently in want of due nourishment. The Collector of Patna writes of ryots holding less than four local bighas, or two and a half acres:—"Their fare is of the very coarsest, consisting to a great extent of *khesari dâl*, and the quantity is insufficient during a considerable part of the year. They can only take one full meal instead of two. They are badly housed, and in the cold weather insufficiently clothed." As to labourers, he adds, that their condition is rather worse: "They are almost always paid in kind, the usual allowance of a grown man being 2 to 2½ seers of the coarsest and cheapest grain, value about 1¼ annas. Women receive about half this rate, but their employment is less regular. Ordinarily, male labourers do not find employment for more than eight months of the year. The conclusion to be drawn is that, of the agricultural population, a large proportion, say 40 per cent., are insufficiently fed, to say nothing of clothing and housing. They have enough food to support life and to enable them to work, but they have to undergo long fasts, having for a considerable part of the year to satisfy themselves with one full meal in the day. With regard to Gya, the Commissioner accepts a statement made by the Collector that 40 per cent. of the

population are insufficiently fed. Dr. Lethbridge, the Inspector General of Jails, writes:—"In Behar, the districts of Mozufferpore and Sarun, and parts of Durbhunga and Chumparun, are the worst, and there is almost constant insufficiency of food among those who earn their living by daily labour."

The remarks of the Bengal Government on the measures which suggest themselves for relieving the pressure in *Behar* should be read. A survey and record-of-rights under the Bengal Tenancy Act, emigration and popular education, are all mentioned; but of these, emigration which is now rendered possible on a large scale by the annexation of Upper Burma, appears to be the most practical and expedient.

Sufficient has been quoted to show that in the seven districts of the Behar Province the struggle for existence is very severe; but a few statements made by the Collector of *Bhagulpur* and the Settlement Officer of the Banaili and Srinagar estate may be added. The former writes: "the mass of ryots are not under-fed, but the labourer is under-fed for about a fourth of the year. His wage as quoted in cash is miserably low, and varies from five pice in the south and extreme north to six pice over most of the district. Cash payments are rare, and although the labourer benefits to a small degree by the rise of prices, *viz.*, to the extent that his wage on grain exceeds his actual consumption thereof, the system of grain payment is a real danger to the population. For directly a crop shows signs of failing, the grain store is husbanded, and the labourers are under-fed. The weaver is the worst-fed man in the village community.

The Settlement Officer of the Srinagar estate gives interesting details as to the employment and food of labourers. Employment is forthcoming for six months in the year; for the remainder of the year it is fitful or entirely wanting. The villagers do not purchase oil except for rubbing on the head and body occasionally. It would be a luxury if they could get some oil to cook their vegetables. The conclusions of this officer are summed up thus:—The working classes with or without small holdings are badly clothed, badly housed; do not enjoy any luxury of life; live from hand to mouth, but do not suffer from actual want of food *in ordinary years*.

The *Chota Nagpur* Division* covers an immense area and contains races whose condition varies from little more than savagery to orderly and civilized communities. The Inspector General of Jails remarks that the only parts of *Bengal* on which there need be anxiety regarding sufficiency of food, are *Behar* and *Chota Nagpur*. In *Manbhoom*† District it is stated that among the labouring classes there is a section, under one-fifth, which is well to do, but the majority have to put up with a standard of living which is barely half as high as that common among the cultivators. In the *Singhbhoom*‡ District there are no indications of want, and in some parts there is distinct prosperity. In the *Lohardugga*§ District there is good evidence to show that two meals a day is the rule, and the number of cattle and utensils argues a comfortable state of things. Emigration and employment in the local tea gardens also assist to keep up the standard of living.

* Area 36,066 sq. m. Population 4,[illegible]

† Area 4,147 sq. m. Population 1,[illegible]

‡ Area 3,753 sq. m. Population 453,775.
§ Area 12,045 sq. m. Population 1,[illegible]

In the *Hazaribagh*‖ District there is no ground for anxiety, and the district reports justify the conclusion of the Commissioner that, though debt is rife and there are many poor people in the division whose livelihood, especially when there are partial failures of crops, is precarious, there is no doubt that the great majority are not ordinarily severely pressed. "The physique of different classes, castes, and tribes varies very much; but, generally speaking, it is good."

‖ Area 7,021 sq. m. Population 1,[illegible]

The reports for the *Orissa* Division¶ are written by officers of whom many are new to the districts. As regards *Pooree*** District, however, there is the evidence of Mr. Taylor who possesses considerable experience, and he seems to think that the poorer classes are not under-fed. Even after three successive years' failure of the rice crop there was no sign of actual starvation or serious distress. Dr. Sandel, Civil Surgeon, however, is of opinion that the poorer classes, are not properly fed or clad. They barely subsist on coarse rice and a spinnage curry cooked without oil. As a rule, they do not have more than one meal a day.

¶ Area 9,053 sq. m. Population 3,790,[illegible]
** Area 2,473 sq. m. Population 666,[illegible]

Population 945,280.

In the *Balasore** District Dr. Zorab, who has had 15 years' local experience, testifies to a prosperous state of affairs. The Deputy Collector who has 9 years' local experience says:—"As regards sufficiency of food I may say that if there be people in this district really suffering from a daily insufficiency of food, their number is not greater than what is to be always found even in prosperous countries under special circumstances."

On the whole, the evidence for the *Orissa* Division is of a reassuring tendency.

The foregoing extracts are on the whole satisfactory. The reports indicate the prevalence of indebtedness, but there is reason to believe that indebtedness, usually the result of expenditure on marriages and other ceremonies, is quite compatible with a fairly comfortable condition of life.

On this point, Mr. Boxwell, Officiating Commissioner of *Patna*, states:

"General indebtedness of a poor agricultural community is not like, and is much less bad than, the common indebtedness of an extravagant man. It means nothing more than that in the tight season—that is, the season of ploughing and sowing—the mahajan advances what he recovers with interest in the harvest. The strange notion that borrowing makes a permanent addition to a cultivator's income, and the common view that a peasantry in debt is on its way to ruin, seem to be equally wrong and almost equally paradoxical. In a low state of civilization people are unable to do their own saving. Their mahajans do it for them, and make them pay well for it; but in an ordinary year the produce of the soil, including, of course, pasture and jungle, supports the cultivator, the labourer, the mahajan, and the landlord."

Frequent mention is made of the depressed condition of certain classes of the artizans and weavers have undoubtedly been injured by the introduction of English goods. They are, however, taking to other employments. In conclusion, the following quotation which gives a summary of facts and inferences made by the Bengal Government furnishes a fair picture of the situation:

"The general result of the enquiry is that, in the greater part of the Lower Provinces, the industrious classes find no difficulty in supplying their primary wants, and are, as a rule, well nourished. Their prosperity is greatest in the eastern districts, and gradually diminishes as we carry the survey towards the west. It is not impaired by endemic disease, even where this has reduced the population, and left the survivors to some extent emaciated or enfeebled. On the contrary, the reports from districts so afflicted show that the inhabitants are somewhat better off than in the neighbouring tracts. But the signs indicating prosperity cease when we reach Behar, where, though the cultivators having holdings of a size sufficient to afford full occupation to their families are well-to-do, and the middle class enjoys exceptional comfort, wages are very low, so that those who depend for their living entirely or mainly on their daily labour, earn a very scanty subsistence. The number of these labourers, including those who hold some land, is estimated at about forty per cent. of a population of over fifteen millions. The cause of the lowness of wages appears to be the multiplication of the labourers in a healthy climate, and under a social system founded on early marriages, up to the point at which employment can be found on the lowest terms consistent with the continued maintenance of families. This cause is of a permanent nature, existing social and climatic conditions remaining unchanged. Its effects would not be counteracted by any conceivable development of local industry, as such development could hardly progress in geometric ratio with the increase of population. Emigration can afford a sufficient and lasting remedy, only if it be conducted on a large scale and continuously. If, after a system of emigration had been established, its operations were to be checked by the occupation of lands now waste, the existing difficulty would arise again. It is possible that popular education, which has hardly as yet touched this part of the population, might, in the course of many years, effect a permanent change for the better, by altering the views and habits of the people. In the meanwhile it would greatly facilitate the application of partial and temporary remedies, such as the introduction of new industries and emigration.

Assam.

In *Assam* the enquiry was conducted in the most important part of the Province, *viz.*, the five upper districts of the *Brahmaputra Valley* and in *Sylhet*.

The *Brahmaputra Valley*.†—The main food of the people is everywhere rice, of which there are three principal kinds, *viz.*, *Sali* or transplanted winter rice, and *boo* or broad-cast winter rice, and *ahu* or early rice. Various pulses are also grown, and certain species of vegetables are cultivated in almost every household, and others found wild everywhere are very universally used. Scarcely

a meal is taken in which some one or more of them does not form an indispensable adjunct to the staple commodity, rice. The use of ghi is almost unknown in the Province. The ryots enjoy several advantages such as are not possessed by the inhabitants of most other parts of India. One of the most important of these is free-grazing for their cattle. No charge of any kind is made for grazing except in a part of the *Lakhimpur* District. Building materials are also obtained free of all charge: each ryot's household being allowed annually for its own use gratis the following articles:—bamboos 400 and cane 10 bundles; thatching grass can be had for the labour of cutting and carriage. Another advantage enjoyed by the Assamese consists in the amount of food that grows wild, while firewood also is practically unlimited. Each ryot's household is also allowed gratis four unreserved trees annually for its own use, and almost all the implements they require for household or agricultural purposes are made from wood, which is procurable almost everywhere. Another of the causes which allow the Assam cultivator to lead an easy life, are the facilities for taking up and abandoning lands which are perhaps greater than in any other part of India. The collateral sources of income possessed by the Assamese are numerous. The Hindus and Mohamedans use and sell milk; others engage in sericulture: the silk of the *Eri* worm sells at Rs. 5 per seer, the cocoons of the *Muga* worm sell at Rs. 2 per 1,000, and the thread costs Rs. 10 a seer.

Labour for tea-gardens is largely met from local sources, and the pay that an Assamese coolie can earn on a tea-garden, varies from Rs. 7 to Rs. 10; while work on roads generally gives a laborer 4 annas a day, or Rs. 7-8-0 a month. Rubber-cutting, another source of income, yields a rate per maund, varying from Rs. 30 to Rs. 50. Large quantities of thatching grass are also brought for sale to the more important stations during the cold weather, and sold at prices varying slightly above and below Rs. 5 per 1,000 bundles.

Breeding livestock, such as ducks, goats and pigeons is an almost universal practice; while many cultivators also supplement their income by catching and selling fish, and others supplement their ordinary meals by shooting and snaring game. Weaving, growing lac, turning cane mills, and collecting wheik shells—from which a lime which is largely eaten is made—make up the other sources of income of the ryot.

In *Sylhet** as in the *Brahmaputra Valley* the staple food is rice, of which there are six principal varieties grown. The ordinary economic condition of the people is not so good as it was a few years ago; their wealth consists of land and cattle principally. The great object of every man is to own his homestead and piece of land.

Area 5,440 sq. m.
Population [illegible]

There is no such class of people who solely depend upon their earnings as hired labourers. The land revenue in *Sylhet* is lighter than in the *Assam Valley* and the district produces more rice than is needed for its own consumption.

The conclusion drawn from the evidence, taken as a whole, seems to be that while the peasantry in the district are well above anything approaching distress, their condition cannot at this moment be said to be prosperous.

In the hills the people are everywhere comfortable, muscular and well nourished (as non-Hindus, they eat freely of meat), and ready and able to earn good wages by labour.

The general conclusion arrived at for the whole Province is that the question raised by the Government of India, need cause no anxiety whatever.

North-Western Provinces and Oudh.

In these Provinces the enquiry was made after a succession of bad seasons, when the gravest anxiety for the present, and apprehension for the future existed. In these circumstances it might have been expected that the result of the enquiry would have been far from re-assuring, but the *North-Western Provinces and Oudh* Government consider that the consensus of opinion is to the effect that the people are not generally underfed.

* Area 2,379 sq. m. Population 1,313,137.

The Commissioner of *Meerut** thinks that cultivators have the means of supplying all their actual wants, but that labourers may be occasionally hard pressed.

† Area 1,453 sq. m. Population 671,690.

Mr. Cadell, Collector of *Muttra*,† believes that the agriculturists, even after the failure of the kharif harvest, were able to hold their own; but he admits that the condition of labourers was worse, and that they had been severely tried by the past cold weather. Mr. Crooke, Collector of *Etah*,‡ whose peculiar knowledge of agricultural life lends a great value to his remarks, considers the peasantry to be a robust, apparently well fed population and dressed in a manner which quite comes up to their traditional ideas of comfort. In spite of the abnormally high prices of food-grains, there has been no sudden increase of offences against property, nor did the number of beggars seem unusually great. Mr. Crooke does not believe that anything like a large percentage of the people in *Etah*, or in any other district of the Provinces is habitually under-fed. There are times, of course, when the small cultivator and field labourer do suffer privation; but this is a very different thing from habitual privation. Indebtedness is prevalent, but the fact seems to be that with the *agricultural classes a normal state of indebtedness is quite consistent with the possibility of passing a life of comparative comfort.*

‡ Area 1,739 sq. m. Population 756,828.

Mr. Crooke observes that the sanitary evils, under which the agricultural population suffer, in particular the prevalence of malaria due to canal irrigation when unrelieved by drainage are severe, and in many cases render the agriculturists unfit to consume the varieties of grain, which are their usual food. In many villages the interruption to work produced by malaria is very serious.

§ Area 1,694 sq. m. Population 723,371.

Mr. Alexander, Collector of *Etáwah*,§ saw a good many people in March last, whose appearance showed that they had been suffering from an insufficiency of food; but writing in May, he says that none except actual paupers are in real distress.

After a careful enquiry Mr. Alexander is of opinion that the bulk of the cultivators in the villages, selected for investigation, have not been suffering from want of food, and do not ordinarily do so; but that owing to high prices the labourers and a few of the smaller or exceptionally unfortunate cultivators have been pressed between December 1887 and March 1888.

‖ Area 1,745 sq. m. Population 856,946.

Mr. Porter, Collector of *Sháhjahánpur*,‖ writes:—"The poorer classes eat only the coarsest and cheapest grains and can eke out a subsistence as long as these are procurable, at not less than 14 seers to the rupee."

¶ Area 1,373 sq. m. Population 81,601.

Mr. Holderness, writing of the *Pilibhit*¶ District, says "that the landless labourer's condition is not all that could be desired. The united earnings of a man, his wife, and two children cannot be put at more than Rs. 3 per month. When prices of food-grains are moderate, work regular, and the health of the household good, this income will enable the family to have one good meal a day, to keep a thatched roof over their head, to buy cheap cotton clothing, and occasionally a thin blanket. The small cultivator is slightly better off, but he has not always enough to eat, or sufficiently warm clothes."

** Area 2,942 sq. m. Population 1,874,106.

The Commissioner of *Allahabad*** remarks in a general way that there is very little between the poorer classes of the people and semi-starvation; and

†† Area 2,061 sq. m. Population 668,808.

the Collector of *Banda*†† writes that a very large number of the lower classes of the population clearly demonstrate by their poor physique that either they are habitually half-starved, or have been in their early years exposed to the trials and severities of a famine. It may be observed that the districts of the Allahabad Division are peculiarly subject to a very precarious rainfall.

‡‡ Area 2,270 sq. m. Population 1,151,308.

Mr. Bird, writing of the *Cawnpore*‡‡ District, considers that the cultivators do fairly well in ordinary years, and that labourers can obtain constant employment.

§§ Area 1,464 sq. m. Population 1,001,562.

Mr. Rose, Collector of *Ghazipur*,§§ has gone very thoroughly into the question. He is of opinion that no class of the agricultural community suffers from a daily insufficiency of food, but admits that a few weavers here and there know what it is to want a meal. On the whole, the daily supply of food may be of coarse quality, yet the quantity is sufficient, as a rule, to maintain health and strength; luxuries of any kind are unknown, and the clothing is not sufficient protection against the severity of the cold weather.

‖‖ Area 1,553 sq. m. Population 552,227.

The information from *Jhansi*‖‖ is meagre. The Commissioner thinks that the scantiness of the population precludes the idea of starvation, and he

notices that labour is always in demand. The Deputy Collector of *Kalpi*, a native, is emphatic in denying the insufficiency of food.

The following accounts are given in respect to Oudh:

* Mr. Boys, Commissioner of *Sitapur*,* appeals to the evidence of his own eyes. The cultivators in Oudh are far better off than they were 25 years ago.

They are in better condition; they have more household effects, and of a better kind in shape of cooking vessels and utensils of kinds: "they are happy and contented."

† Mr. Harrington, Commissioner, *Fyzabad*,† thinks otherwise. He quotes articles from the *Gazetteer* and articles of his own, and maintains that the assertion that the greater proportion of the population of India suffer from a daily insufficiency of food is "perfectly true as regards a varying but always considerable proportion of the population, for a considerable part of the year in the greater part of India." Mr. Harrington's experience, however, extends only to his own Province, in respect even to which his broad assertion must be qualified by other evidence.

‡ In *Gonda*‡ District the Deputy Commissioner states that the poorer or even the poorest agriculturists or labourers do not suffer from insufficiency of food.

§ Mr. Irwin, Deputy Commissioner of *Rae Bareli*,§ is like Mr. Harrington, regarded by his own Government as a pessimist, and his opinions expressed in his "Garden of India" certainly favoured the impression that there was a widespread want of food. He now takes a more cheerful view of the situation: "the mass of the agricultural population in ordinary times and the *élite* always do get enough to eat: a considerable minority in bad seasons feel the pinch of hunger, and a small minority, consisting of the sickly, the weak, the old, and the childless suffer from chronic hunger except just about harvest time when grain is plentiful." Mr. Irwin incidentally notices the decreasing productiveness of the soil and the gradual deterioration of the country cattle. He advocates the stopping of the exportation of grain from India when prices in any large portion of the country reach a certain point. Recent experience, however, proves that a high price in India does, as a matter of fact, in itself act as a powerful and speedy check to exportation.

The opinions, thus submitted for the *North-Western Provinces and Oudh* based in many cases on careful observation, illustrated by typical instances, and formed at a time when there was considerable anxiety on account of bad harvests, are, on the whole, sufficiently favourable to justify a general negative to the enquiry put by the Government of India. Even the artizan class live in comparative comfort.

Sir Auckland Colvin disclaims optimist views, and points out that when an officer speaks of the more indigent class of the people, as being always on the verge of starvation, the meaning is not that they are living on insufficient food, but that they run the risk in view of a failure of the rains of losing employment, and consequently losing the means of obtaining food.

The *remedies* proposed are of the usual type: Extension of communications by railway or road; irrigation; land laws; introduction of industries other than agriculture; *and, above all*, facilities for the migration of surplus population. In the matter of migration the cost of transport must be faced, and Government must be willing to forego the land revenue for, probably, not less than one generation in the tracts opened to immigration.

Punjab.

There are no grounds whatever for any anxiety as to the condition of the Agricultural population in the *Punjab* of food. The evidence given is of a very decided character. So long as men and women of the lowest classes, marry young and have families, borrow money for expenditure which is unnecessary, and are content with a low standard of living so long will periodical suffering occur, but the masses in normal seasons get as much to eat as they want.

Area 5,610 sq. m. Population 1,907,984.

In the *Delhi** Division which contains tracts of land which are distinctly insecure, a systematic enquiry was set on foot. There appears to be no actual want of food, but the standard of living is perilously low. Green crops, herbs and even berries, are consumed in quantities larger than is good for health, but the officers of the *Delhi* Division consider that it is erroneous and misleading to say that any considerable portion of the population of the *Punjab*, whether urban or rural, suffer habitually from any degree of hunger. They admit that there is an unsatisfactory mass of low diet in the country even in normal conditions, but they maintain that there is no evidence to show that poor feeding is on the increase. On the contrary, they believe that the standard of general comfort is higher now than before annexation, and doubt whether the poor of India are normally worse off as regards food than in western countries. This opinion is of value inasmuch as the officers who give it are all men of experience and habits of observation and if the assertion now under discussion were true in any part of the *Punjab*, it would be in the districts of the *Delhi* Division.

The rest of the province may be dealt with very briefly. In the *Lahore*† Division the two pounds of flour ration eked out by pulse vegetables and condiments, is available to the vast majority. The diet is plentiful and of as good a quality as the peasantry care for.

In the *Jullundur*‡ Division it is untrue to say that the greater part of the population suffer from an insufficiency of food. Rai Maya Dass, Extra-Assistant Commissioner, speaking of 33 exceptional villages in the *Ferozepore*§ District, says that many of the people lie down hungry in the evening and seldom get sufficient for both meals during the 24 hours.

In *Multan*‖ District there is no distress. The Commissioner of the *Rawal Pindi*¶ Division remarks, that the Natives of India undoubtedly suffer less from deficiency of food than in Great Britain, Canada, or British Possessions in northern latitudes.

In *Shahpur*,** where the recent harvests have been bad, the Deputy Commissioner writes, that it is not the case that any considerable proportion of the people suffer from a normal insufficiency of daily food. He appeals to the low death-rate and the high birth rate. The proportion of the starving poor is not excessive, and their existence may be traced to the following causes:—

1. Want of thrift.
2. Low standard of living.
3. Too rapid increase of population.
4. Rise in prices.

Ghulam Farid Khan, Extra-Assistant Commissioner, *Shahpur* District, holds that ½ per cent. of the Hindus live at starvation point, and that 10 per cent. have an insufficient quantity of food, while 4 per cent. of the Muhammadans are at starvation point and 20 per cent. do not obtain sufficient food.

The Commissioner of the *Derajat*†† Division scouts the idea that in ordinary times there is an insufficiency of food, and the Deputy Commissioners of the Division support this view. In *Dera Ghazi Khan*§§ District, generally speaking, all classes appear to be well fed. In one insecure tract of the *Dera Ismail Khan*‖‖ District, now deserted by the people, the inhabitants were reduced to the unwholesome berries of bushes and trees, but elsewhere the people have as much as they can eat.

In the *Peshawar*¶¶ Division there is no class of the population in want.

Briefly it may be said that in the *Punjab*, in ordinary times, the greater proportion of the population does not suffer from a daily insufficiency of food; but in times of *unusual* scarcity, not amounting to famine and high prices, the poorer classes, whose standard of living is very low, are no doubt reduced to great straits, and do not get a sufficiency of food.

Sir James Lyall points to the physique of the people, to the high birth-rate and low death-rate and to the rise in wages, and says that the *remedy* for congestion, when it occurs, lies in the construction of new canals.

Rajputana.

† Area 129,750 sq. m. Population 10,268,392

In *Rajputana** the population do not suffer from a daily insufficiency of food. Whenever there is any distress the Durbars make advances, which keep the people going until the crops ripen. In late years there has been a greater tendency to store fodder and the staple food of the masses, collected in years of plenty, to be expended when hard times come, than used to be the case.

† Area 2,710 sq. m. Population 400,722.

As regards *Ajmere-Merwara*† the Commissioner says that he has been specially struck by the generally hardy physique of the agriculturist, and has heard nothing about what is understood as insufficiency of food. There are few families in which he says there is only one bread-winner; the women and children earn something. The Judicial Assistant Commissioner remarks that the fact that the agricultural classes and village menials are seldom seen flocking at cities to partake of the charities bestowed by wealthy citizens is self-evident proof of their capability to feed themselves without relief from abroad.

Bombay.

The evidence collected in the *Bombay* Presidency and *Sind* is of a very interesting character, and furnishes, so far as that Presidency is concerned, a complete contradiction to the alleged insufficiency of food. There is a peculiar line of demarcation between the upper and lower strata of the population, and the lower is known as the *Káliparraj*, or dark-folk, and it is in this lower stratum that classes are found who live below the standard of 2 pounds of grain per man. But it appears from the reports that the early tribes who constitute the division known as the *Káliparraj* substitute for the ordinary Bombay ration, which consists of millets and occasionally rice and wheat helped with pulse and condiments, such food as *mowra* flowers and jungle products; and that, in spite of the presumably inferior quality of this diet, they are extraordinarily healthy.

‡ Area 10,158 sq. m. Population 2,857,731.

Gujarat‡ is the richest division of *Bombay*. The dark-folk form 53 per cent. of the total population, and they all drink. The standard of living has changed but slightly within the last 15 years, and many of the early tribes live during the hot weather more or less on roots, and mowra-flowers, are miserably clothed and housed, and degraded by drink.

But it is explained that a diet of forest products does not necessarily imply an insufficiency of food, and it must be remembered that with the early tribes these products are articles of normal diet.

The causes of indigence among these classes are drink, dislike of steady work, and to some extent the restraint imposed upon them by the "Forest and Excise laws." "The high prices at which liquor is sold have added a great deal to their wretched condition. The hard struggle to obtain the usual quantity of drink, even at the sacrifice of other necessities, has thrown them completely into the clutches of the local money-lenders and liquor-sellers."

The danger of a too great extension of Forests is also noticed in the Deccan-Karnáták.

The middle classes are saving, or, at any rate, are earning more and live in greater comfort. Many things formerly accounted *luxuries* have become *necessaries*. The masses do not save, and live from hand to mouth; but, on the whole, poverty is not on the increase.

§ Area 37,407 sq. m. Population 5,315,189.

In the *Deccan*§ 33 per cent. of the area with a population of 1,727,250, is chronically liable to famine. The *Deccan* has no sea-board or navigable rivers, but has excellent communications by road and rail. The population is sparse, only 148 per square mile, and the lower stratum is only 23 per cent. of the total population. Employment is constant, and it is considered that there is no widespread distress anywhere in the *Deccan*.

The Commissioner of the *Deccan* remarks at the end of a graphic letter:—

The observant among us who have passed the best part of our lives in the country, who are in sympathy with the people knowing their language, respecting them for their docility and patience and their wonderful charity to each other, we who have watched all this come to pass, and have marked this steady advance, do not assert that our agricultural and labouring classes are prosperous. We know that they are poor, in the sense that they have few possessions, and those mostly their carts and bullocks and ordinary necessaries. We know that they have little money. We know that they habitually live from hand to mouth; but we also know

that they are not in any sense poverty-stricken, that there is no widespread distress among them, and that they have no difficulty in "filling their bellies" every day. We know that their earnings and resources have increased and with them the standard of their living.

* Area 4,657 sq. m. Population 864,014.
† Area 4,535 sq. m. Population 882,907.
‡ Area 5,757 sq. m. Population 638,493.

The *Karnátak* or Southern *Marátha* country comprises the districts of *Belgaum*,* *Dhárwar*† and *Bijapur*;‡ 61 per cent. of its area is chronically liable to famine.

Mr. Trimalrao Vyankatish estimates that 5 per cent. of the *Dharwar* population is insufficiently fed, and there is supposed to be some want in the Ghat villages of *Belgaum*. The Commissioner, Mr. Propert, however, knows of no class who endure absolute want, though he estimates that poverty is universal.

"Poverty" amongst the labouring classes of the mofussil most certainly exists, and not only does it exist, but represents the normal condition of those classes. Their houses are poor, their belongings are poor, their food is poor, their clothing *very* poor. "Poverty," however, and "want," at any rate in India, are two very different things, and after many years' residence amongst the people of the country, I have no hesitation in saying that while "poverty" is the rule (I still speak of the lower classes), actual "want" is the exception.

§ Area 4,243 sq. m. Population 968,543.
‖ Area 1,496 sq. m. Population 381,649.
¶ Area 3,922 sq. m. Population 997,090
** Area 3,911 sq. m. Population 421,840.

The *Konkan* includes the districts of *Thana*,§ *Kolaba*,‖ and *Ratnagiri*,¶ and the district of *Kanara*** has also been discussed under this Division. *Ratnagiri* is the only district about which there need be anxiety. It has a dense population and a severe landlord system known as the Khoti tenure under which a rent is exigible, by the khot amounting to from one-third to one-half the gross produce. The reports on *Ratnagiri* are despondent. The Ghat cultivators for the most part cannot get enough to allay hunger in the hot weather. Mr. Rand says one-fifth cannot, and according to Mr. Candy one-fourth cannot. Mr. Crawford, who before the Famine Commissioners said "there was not a single monsoon, however favourable, in which the people do not suffer without a murmur most of the hardships incidental to a famine" now maintains that the development of the country has been so great, that there are very few isolated or inaccessible spots in the whole *Southern Konkan* where chronic distress exists. Families resort to the Bombay labour market, and 9,000 Konkanis are annually employed in the Army. On the whole, in spite of the above assertion, it is to be feared that in *Ratnagiri* District there is distress. Near the Ghats the people subsist largely on roots and wild vegetables, mango and jack fruits. They do not save, and seldom have an ornament of any kind; and 90 per cent. of them are in debt.

†† Area 46,014 sq. m. Population 2,413823.

In *Sind*†† the people are in easy circumstances, and in the absence of war or special calamity, the fear of general pauperism or acute distress will be far removed. The Sindi's diet is more generous than that of any other people in India. He consumes 3 pounds of grain, whereas the ordinary ration elsewhere is 2 pounds. Meat is not unusual; curds, milk, fish, and even ghi are common. Pulse and vegetables, and condiments are almost invariable. Millets are the staple grains, but wheat and rice are also eaten. The Sindi drinks a decoction of *bhang*, but his drink does not cost him more than 3 to 5 rupees a year. His clothing is ample, costing perhaps 5 to 6 rupees a year.

With the exception of the Ratnagiri District, it may be said that the people of the Bombay Presidency are in fairly good circumstances. Even in the famine only 10 or at the outside 15 per cent. of the population showed the effects of pressure by death or resort to relief, and in the scarcity of 1885, relief works were scorned in *Bijapur*. One anna per head all told, or 2 annas a day for an adult man, is sufficient to provide food, and this wage can be earned everywhere.

The *Bombay* reports are concluded by the summary prepared under the orders of the Governor:—

The causes of indigence and the localities in which it is to be found, are well known. The early tribesman with his drink and indolence, the Deccan Kunbi with his uncertain seasons and danger of famine, the Konkani with his rugged country, poor soil and swarming population—the existence and poverty of all these is recognized and felt for. Gigantic efforts have been made, in many points crowned with success, to deal with their cases. In Gujarát we see the Kolis, in Thána the Thákurs, in Khándesh the Bhils, settling to cultivation. In the Deccan, railways and great irrigation works and special legislation for debt have been called in to give relief. The worst part of the Konkan has been explored by roads, and the enterprise of steamer companies has been attracted there. The post offices have enabled surplus earnings to be remitted with increasing ease and facility and in annually multiplying amounts. The result is seen in more emigration, in cheaper clothing, higher wages, an evener distribution of

wealth among all including the lowest classes, and the gradual but sure diminution of distress and its localization to the least civilized and accessible tracts of the Presidency. Every Indian administrator has recognized the poverty of the people of India. A man who supports life in the Bombay Presidency on 2 or 3 annas a day will be poor, but not so poor by half is the man who is called on to do so in England, on a shilling, or what was once eight annas.

Central Provinces.

The enquiry in the *Central Provinces* has resulted in the collection of a mass of information of considerable value and interest.

* Area 4,005 sq. m. Population 564,950.

In *Saugor** investigations of a general character conducted by the Deputy Commissioner (Colonel Repton), convinced him that the average net income of a tenant was about Rs. 70, and that the smallest sum on which a family could subsist for a year was Rs. 36, when ordinary food had to be supplemented for some months of the year by wild fruits, berries and roots. Speaking generally he seems to have found amongst the tenantry a great deal of indebtedness, but no poverty to speak of.

† Area 2,799 sq. m. Population 812,997.

In *Damoh*† a considerable number of the smaller tenants seem to be hard pressed, though the Deputy Commissioner makes no mention of any cases of distress. There is a serious amount of indebtedness in this district. The Deputy Commissioner admits that "the greater part of the insolvency in the district seemed to arise from causes under the people's own control," that "few instances of harsh treatment" were found, and that the people seemed "quite cheerful owing Rs. 1,100 or Rs. 1,200."

‡ Area 3,919 sq. m. Population 657,283.

In *Jabalpur*‡ a very large proportion of the tenants was involved to greater or less extent in debt, but the excellent crop of the last season has enabled a large portion to pay off their creditors. The labouring class was found in enjoyment of little beyond a bare subsistence, but it was exceedingly difficult to get anything like reliable information from them. Village servants and artizans were better off.

§ Area 4,719 sq. m. Population 301,700.

In *Mandla*§ 60 per cent. of the population is aboriginal. The Deputy Commissioner (Colonel Brooke) enquired into the circumstances of 17 families. Eleven held land, and the enquiries brought out that they were by no means as necessitous as they appeared to be. The Settlement Officer enquired into the condition of 119 families: 97 held land, and only 6 of these appeared to be in actual distress. The people whose circumstances were hardest were the Basras (basket-makers), but their poverty seems due in some measure to the habit of *mádák* smoking. Five families spent annually among them Rs. 3 in liquor and Rs. 42 in *mádák*.

‖ Area 3,247 sq. m. Population 434,788

The aboriginal tribes contribute a large proportion to the population of the *Seoni*‖ District. No general distress exists in this district, and the Commissioner of the Division (Mr. J. W. Neill) is of opinion "that even the poorer amongst them manage in ordinary times, and even in time of short harvest to maintain an existence which contents themselves and which results in an ever-increasing population."

¶ Area 1,918 sq. m. Population 266,276

In *Narsinghpur*¶ the general result of the enquiry was that cultivating classes were comfortably off, with a sufficiency of food and clothing. They were, however, in debt to a very serious extent, a fact ascribed by the Deputy Commissioner "to the facility they enjoy for raising money on their land, which has operated as a temptation to extravagance;" and he mentions in support of this a fact discovered by the Court of Wards Manager that tenants in the neighbourhood of towns, where money is plentiful and temptations comparatively numerous, are more indebted than those of outlying villages. The circumstances of village servants and artizans were found to be comfortable according to these people's notions of living. A considerable portion of the blacksmiths, brass-makers and bangle makers, as a rule, had coolies in their employ to whom they paid from 2 to 3 annas a day. The field labourers were not found to be stinted in food, and all received their two meals a day. As regards the hill tribes the Deputy Commissioner writes that, in the famine of 1868-69, "the hill tribes were happy and flourishing while their brethren, in the plains were famishing, because when their crops failed the jungles yielded them food."

* Area 4,437 sq. m. Population 488,787.

In *Hoshangabad** the only classes amongst which there is any chronic distress are the hill tribes, the Gonds, Kurkus and Bhils; but there are hopeful signs that the Gonds and Kurkus are settling down to cultivation. The enquiry as regards the tenants, indicate a high standard of comfort; while the village servants and artizans are stated to be by no means impoverished, and the condition of the labouring classes appears to be distinctly better than in the preceding districts.

† Area 3,240 sq. m. Population 231,341.

As regards *Nimá*† the Deputy Commissioner (Mr. Ismay) is of opinion that in the open parts of the district there is no poverty among the agricultural classes, though there is a very great amount of indebtedness, due very largely to extravagance. The artizans and village servants are fairly well off, while the labouring classes in villages, the open parts of the district, appear to be rather better off than in many other parts of the Provinces.

‡ Area 3,905 sq. m. Population 304,905.

In *Betul*‡ the tenants are fairly off, and they are well supplied with cattle. Indebtedness is however very great. Village servants and artizans are reported to live very comfortably, while field labourers in regular service receive from 10 to 20 maunds of grain and Rs. 12 or 15 in cash. Their wives earn something in addition to this, and they can generally make both ends meet.

§ Area 3,915 sq. m. Population 372,909.

In *Chindwara*§ the tenants are much involved owing to extravagant expenditure on marriages and other festivals. Artizans and village servants, on the other hand, are said to be doing well; while the condition of the labouring classes has improved, work is more plentiful, and even women and children have no difficulty in finding regular or occasional employment.

‖ Area 2,601 sq. m. Population 367,321.

For *Wardha*‖ the report has been submitted by Mr. G. Geffert, the Manager of the Hinghanghat Cotton Mills, who has had much experience of the conditions of life amongst the labouring classes:—He writes, that "artizans are, as a rule, well-to-do people who can earn good wages and have money." The common cooly day-labourer earns 3 annas a day and want work for less; but on an all-round average his daily wages in money value come to about 2 annas for ordinary field work, 3½ annas for *juari* cutting and 4 to 5 annas a day according to the market price at the time for these staples. His family earns another ½ to 1½ annas per day, for six months in the year. Their ordinary food is *juari* cake, linseed oil, salt and chillies, and each adult's cost of living per annum amounts to Rs. 25 and clothing Rs. 5: total Rs. 30. The commonest labourer in the Mills commands Rs. 6 per month, and the lowest wages of a woman learning the work is Rs. 3½ per month, which is subsequently increased to as much as Rs. 6 to Rs. 8 per mensem.

Area 3,736 sq. m. Population 607,356.

In *Nagpur*,¶ though there is a good deal of indebtedness amongst the very tenants, there is very little poverty and the people bear their embarassments very lightly. The Extra-Assistant Commissioner writes:—"Had I been on other duty than that of specially enquiring into the condition of the poor, I should certainly have declared that there was nothing like poverty arising from indebtedness. The people looked happy and contented. Their food was that of men in ordinarily good circumstances." Again, of the condition of the laborers and artizans he says, "there is neither widespread poverty nor distress of a chronic character."

Area 10,795 sq. m. Population 649,146.

In *Chanda*,** the labouring class seemed tolerably well to do, while the village artizans appeared fairly well off. Enquiries into the condition of farm well-to-do tenants showed that their net expenditure was from Rs. 150 to Rs. 250 a year, a large portion of which went in marriage and festival expenses.

Area 3,932 sq. m. Population 683,779

As regards the *Bhandara*†† District the opinion of the Deputy Commissioner (Mr. Tawney) is that the condition of the cultivator has greatly improved within recent years. He does not attach much importance to indebtedness as an indication of poverty. He instances the case of a *Teli* cultivator paying a rent of Rs. 17-8, and with an income of Rs. 132, who was in debt to the amount of Rs. 100 owing to marriage expenditure, and was found to have Rs. 150 out at interest! The labouring classes have a sufficiency of daily food, if they care to work for it. Mr. Tawney shows that "the ordinary cost of food for a man, his wife, and one child is 7½ pice a day, and that if broken rice (Kanki) be substituted for rice, the cost can be reduced to 4½ pice a day. This sum will

provide the family with 2½ lbs. of grain and a small quantity of pulse, leaving 1½ pice over for salt, vegetables, and firewood. It may be observed here that living in rice districts is cheaper than in districts the staple crop of which is wheat or *juari*, in that a considerable portion of the rice crop is broken up in the process of husking, and the broken rice, which is sold very cheaply as being useless for the market, provides the poor with the means of sustaining life at an almost nominal cost." A notable feature in this district is the large number of people who annually migrate to the Berars at harvest time, subsequently returning home with their surplus earnings. Mr. Tawney understands from the people who have returned that "a woman's wages there are about equal to a man's here, and that the family can manage to save some money in consequence."

Writing of the *Balaghat** District, the Deputy Commissioner (Mr. Nedham) says, that "it may be safely said that there is no widespread poverty *amounting to distress* of a chronic character affecting a special class of the population or any particular part of this district, and I may add the opinion that all these classes have in ordinary years and apart from abnormal extravagances an adequate livelihood for the support of themselves and their families." The most instructive fact brought out by the enquiries into the conditions of the labourer class, was the extraordinary cheapness of a bare subsistence. "A Baiga basket maker, whose family consisted of himself, his wife, and two small children, made on a average 12 baskets a week, which he sold for 2 lbs. of unhusked rice or small millet each. His monthly earnings were thus about 100 lbs. of unhusked grain worth rather less than a rupee. The family not only managed to live on this, supplemented with jungle fruits and roots, but saved annually about a rupee's worth of grain, wherewith they purchased the scanty clothing which sufficed for them."

In *Raipur*† the people are better off than in any other part of the Province. Food is plentiful and living cheap; the people are, as a rule, well nourished and strong and healthy, able to perform their daily work in the fields with ease, and it is greatly doubted if their state of living would be much changed, were they far better off than they are now.

The Settlement Officer notes that "what strikes one is the remarkable equality of the economic condition of the tenant, the sole difference being that one man has a cow or a she buffalo, another has not."

The condition of village artizans are not less satisfactory than those of the tenants. They are remunerated in kind and hold in addition some land of their own. Of 42 field labourers whose state was investigated more than half, were comfortably off. No clearer indication of the easy condition of life in *Chhattisgrah* is needed than that afforded by the experience of 1886, when over a large proportion of the country the rice crop barely gave a quarter outturn. A scarcity was apprehended and relief works were started, but the people passed through the trial without assistance from Government, and the number of labourers who came to the relief works was quite inconsiderable.

In *Bilaspur*‡ cultivators are, as a rule, well off, and village artizans and servants have also found no reason to be discontented. The people of the Zamindaris to the north of the district are largely of an aboriginal race, and include a tribe known as the Dhanwars, who live by hunting, and are to all appearances the poorest of the poor. Yet it would be a mistake to consider their condition in any way distressed, according to their own ideas of life. The Deputy Commissioner writes of them that—

"The forest supplies them with bamboos, with which they make bows and arrows to hoot animals, and baskets with which they snare fish. They dispense almost entirely with clothes and all food-grains are regarded as delicacies. The failure of a harvest would deprive them of a weekly luxury, but would in no way threaten them with famine."

Writing of the cultivators in *Sambalpur*,§ the Settlement Officer (Mr. Nethersole) says, "physically they are in good condition, and I do not think that their clothing is scanty, considering the local custom in this respect. In almost all villages but the poorest, a number of people may be seen wearing a small ring of gold in their ear or a silver bangle, and 'hawkers' find it worth their while to travel about with small mirrors, combs, boxes, beads and similar

cheap pieces of uselessness." Below the small tenant comes the field labourer, hired by the year. His condition is not unlike that of the small ryot, and there is a good deal of interchange between the classes, frugal, and industrious field labourers purchasing cattle and taking up land, while poverty-stricken ryots throw up their land and take to labour. The general conclusions Mr. Nethersole arrives at on the district are that "under normal conditions far more rice is produced than is required for the food of the population, and any one who chooses to work hard, has hitherto had little difficulty in maintaining himself and his family in relative comfort."

A report on the *Chhattisgarh Feudatory States* has also been furnished. The Political Agent (Mr. F. C. Berry) writing of the *Bastar** State says, "that the aboriginals are hardy, active, and possess a physique which certainly does not indicate that they are habitually under-fed." In the *Patna*† State the condition of the agricultural population is reported by the Superintendent to be comfortable, while speaking generally of the lower classes in the *Sarangarh*‡ State, the Superintendent says, "I should say that in average seasons they obtain an adequate subsistence, but in a season of deficient harvest they feel the pressure of high prices, which however, would rarely amount to actual want in the portions of the State where the forests are still abundant." "To sum up the facts given in the reports of these States as tested by my own experience," writes the Superintendent, "I should say that the majority of the population comprised in the lower classes subsists with ease under normal conditions, a large portion manages to subsist and to make both ends meet, while a small portion leads a hand-to-mouth existence, which in seasons of high prices passes from mere poverty into distress."

Mr. Mackenzie's general conclusion on the whole enquiry is that—

"there is no doubt in these Provinces a great deal of poverty, but there is very little distress. The people are well fed and the only section of them who can be said to be hard pressed for bare subsistence are the hill tribes, who are but little more provident than the beasts of the forests, and have to undergo similar vicissitudes in daily food. The volume of wealth is rapidly increasing, and there is no lack of employment for those who wish for it. If only more of the money which the Provinces are receiving reached the producers and less was intercepted by money-lenders and middle men, the condition of the people might be described as prosperous. But over them hangs the grip of the usurer and the shadow of the Civil Courts."

Berar.

In *Berar* real distress is practically unknown, and the laboring classes have attained a standard with which very few other parts of India can claim any comparison. They are generally well clad and in good ease, and at their frequent festivals show a good deal of wealth in their attire. Their food comprises—juari, toor dhall, chillies, salt, oil for cooking purposes, while they use kerosine oil for their lamps. Their marriages are conducted with the greatest prudence and economy and not allowed to trench on the year's supply. The Deputy Commissioner of *Amraoti*§ says, that there is no want of food in that district. The Deputy Commissioner of the *Buldana*‖ District says that a fact which tends to prove that the agricultural laborer is well off is that during the season the watching of the crops and gathering of the harvest is principally performed by the *pardashees* who *swarm*, into the Province during the rains for the purpose. The Deputy Commissioner of the *Basim*¶ District says that all who are willing can obtain employment and fair wages. The Vice-President of the *Akola*** Municipality remarks that no people in *Berar* suffer from insufficiency of food throughout the year, and a Native Deputy Educational Inspector bears testimony to the fact that the lower classes get full meals and all the necessaries of life, and points to the total absence of beggars in the Mofussil as another sign of the fair condition of the lower classes. A Native Extra-Assistant Commissioner and a Judge of the Small Cause Court at *Amraoti*, further attests that there is during times unaffected by famine, little dearth of ample food for the poorest in these tracts. He considers that the agricultural classes are particularly well off in all respects of bodily nourishment. Regarding the gipsy classes, they scarcely ever, the same official remarks, go without a daily meal, which with them is usually a substantial meat one provided by the game they capture.

Madras.

The *Madras* report is preliminary, and the enquiry will be continued. The opinions of the district officers are not supported by concrete instances, but in many cases they reflect the views of men who have for years observed the conditions of agricultural life in Madras. The conclusion of these officers, which is concurred in by the Board of Revenue and by the Madras Government, is, that no considerable proportion of the population suffer from a daily insufficiency of food in ordinary years.

In the *Ganjam** district, though the income of agricultural labourers only just meets their expenditure, they have enough to eat.

In *Vizagapatam*,† the Collector says, the agriculturists live miserably, and cannot afford a sufficiency of food. With two and sometimes three meals a day, a cloth to cover himself, and a hut to live in, "the labourer is probably the poorest creature in the world." But, as pointed out by the Madras Government, the Collector admits that the inhabitants are an unusually sturdy and muscular class of men; and this is hardly compatible with a want of food. Further, it may be added that two or three meals a day is quite up to the average; that clothes in the *Madras* climate are a superfluity; and that the hut is the customary and traditional house of the peasant.

In *Godavari*‡ there is no deficiency of food among adults.

In *Kistna*§ prosperity is universal.

In *Nellore*‖ the Collector denies any insufficiency; but the Civil Surgeon supports the insufficiency dictum, on the ground that criminals always increased in weight after they had been in jail some time, and that a large number did not get sufficient food to develop their muscles to their full extent. The Board of Revenue remarks that the Madras jail dietary is the most liberal in India, and that the hard labour of a prisoner in jail is by no means such hard work as that undergone by the labourer in the fields. This question of rise in weight during incarceration is one of some importance, and has been noticed in other Provinces. Mr. Crooke in the North-Western Provinces suggests that a newly admitted prisoner has just passed through the ordeal of arrest, and that he has probably been remanded more than once or marched about the country after a Magistrate in camp. A man like this naturally loses weight in the interval between arrest and conviction. The Indian convict is not in solitary confinement: he is well dressed and lightly worked. If he is a cultivator, he is free from the labour and anxiety of field watching at night. He is promptly attended to for the most trifling ailments. Dr. Lethbridge, Inspector General of Jails, Bengal, also considers that the deep anxiety and often distress which precede conviction cause loss of weight. It may be added that a convict does not indulge in tobacco and opium.

Mr. Burditt, a missionary, says that the lower classes in *Nellore* do get enough to eat, and that they save money.

In *Cuddapah*,¶ except from the 20th April to 20th June, every one gets regularly more than enough; and even in the slack season there is little demand for work.

Great weight is attached by the Board and the Government to the opinion of Mr. Nicholson, Collector of *Anantapur*.** He says that the people are of a strong physique; that the birth rate is high; that in 1885 when relief works were opened few were attracted to them; and that the labouring classes, *depleted as they were by the famine of 1876-78*, always and everywhere in ordinary time find a sufficiency of the food to which they are accustomed.

In *Bellary*†† it is thought that the standard of comfort has risen.

In *Kurnool** Mr. Benson, who is working at an analysis of the district, says that there is no large class of persons pinched for food from year's end to year's end, and that there are few beggars or loafers.

Area 2,842 sq. m. Population 981,381.

In *Chingleput** the Collector thinks the mass of the people live from hand to mouth, and in adverse seasons are seriously hampered. But the Government of Madras believes that the condition of the people has improved in a marked degree within the last ten years.

Area 4,873 sq. m. Population 1,814,738.

In *South Arcot*† employment is obtainable without difficulty at wages that give the labourer a sufficiency of food.

Area 3,654 sq. m. Population 2,130,383.

In *Tanjore*‡ there is no sign of widespread poverty.

Area 3,561 sq. m. Population 1,215,033.

In *Trichinopoly*§ wages are high, food is cheap, and the appearance of the people is most prosperous.

[illegible] 65 s. m. Population 2,365,035.

In *Malabar*‖ the people are stout, well-grown, well-nourished, and muscular. "Children swarm and are as plump as partridges."

Area 967 sq. m. Population 91,034.

In the *Nilgiris*¶ "the proportion of the population who suffer from want of food is extremely small—as small as it is in any part of the British Empire."

** Area 5,381 sq. m. Population 1,699,747.

In *Tinnevelly*** the diet is sufficient to maintain a high degree of physical efficiency. The people are well-fed, and have a margin for superfluities, as is evidenced by the habitual use of ornaments by men and women of the common coolie caste.

†† Area 3,902 sq. m. Population 959,514.

In *Canara*†† the monsoon has never failed, and scarcity is unknown.

‡‡ Area 7,256 sq. m. Population 1,817,814.

In *North Arcot*‡‡ the Collector in a burst of rhetoric suggests that grinding poverty is the widespread condition of the masses; and two missionaries state that many poor people, who though they do not actually starve, go through life on insufficient food.

§§ Area 8,481 sq. m. Population 2,166,680.

In *Madura*§§ the labouring classes are very well off, and the condition of the district is no doubt good, owing to the large amount of emigration to Ceylon and the Straits Settlements.

‖‖ Area 7,842 sq. m. Population 1,657,690.

In *Coimbatore*‖‖ no one need starve who can or will work.

On the whole, it may be said that in ordinary seasons the lower agricultural classes generally get throughout the year a sufficiency of food, that is, food enough to maintain them in bodily health and strength and in full efficiency for labour.

Coorg.

[illegible] Area 1,583 sq. m. Population 178,302.

In *Coorg*,¶¶ which is so favourably situated from a climatic point of view, there has not been that scope as in other Provinces for an enquiry of the kind indicated by the Government of India. In this Province there are no causes at work which tend directly to bring about a condition of widespread poverty or distress of a chronic character, and the condition of the ryots is, on the whole, one of advancing prosperity, which, in individual cases, can be frustrated only by thriftless and reckless habits among the people.

APPENDIX B.

Extract from a letter from the Director General of Statistics dated 26th March 1887.

* * * * * * * *

BENGAL.—The Lieutenant-Governorship of Bengal consists of a densely-crowded centre radiating off, except on the north-west, to a very thinly-peopled circumference. But while there is a steady increase of population in the outlying districts, the movement has generally been spontaneous, and in few cases have direct attempts at colonization proved successful. Thus, in the Darjeeling District on the northern frontier, at least two-thirds of the population are returned as immigrants, or the descendants of immigrants since 1835. "The whole district," writes the Deputy Commissioner, "is a single case of general reclamation"; but "no mass of immigrants moving in a body or at one time has migrated to the district." An effort which the Deputy Commissioner made to start an immigration into the district failed, and he knows of no other such attempt. In the adjoining border district of the Western Duárs, a large influx of labour has also taken place. But this influx "has been purely spontaneous, so far as Government is concerned," and has been the natural result of the demand for labour at good wages on the tea plantations, and of the low rates of arable land.

On the opposite or southern, border of Bengal, there has been a large influx of population into the Bánkurá District. But here again, the inflow has been gradual and spontaneous and

from the outer Santal country rather than from the central overcrowded districts. Since the Land Improvement Act of 1871, only Rs 9,386 have been advanced by Government for reclaiming lands. The work is usually conducted on a small scale, or by jungle leases from the *zamindars*. The lessees excavate tanks and bring the land into cultivation, retaining about one-third of it rent-free, and paying a low progressive rate for the remainder.

In the South-West Frontier District of Bengal, Chittagong, and its Hill Tracts, reclamations are effected by a vagrant agricultural population, who move about in a region of spare land. It is reclamation by squatting, and their rights may be described a sort of tenure by trespass. In parts, the nomadic cultivation known as *jum* is still the most profitable. In other parts, such nomadic cultivation competes with regular tillage. But even in the settled localities, the cultivation still retains something of the migratory type. In many cases, the squatter will only pay for the area actually cultivated, and the intervening patches yield no rent.

On the other hand, in the Sundarban maritime tracts, reclamations have been to a large extent effected by capitalists. Apart from old historical cases of this class, considerable areas have been brought under cultivation of late years by *zamindars* and capitalists. Such tracts are to a large extent cultivated by immigrant labourers who come for the season, and then depart with their wages. Many of the old cultivators as they grow rich extend their holdings by means of these immigrant labourers, or by under-tenants. Here also, as in Chittagong, reclamation by trespass and squatting is also common.

Two cases of reclamation by capitalists in inner Bengal have been prominently brought to notice—the Jagdispur Jungle and the Chanchal Estate. The Jagdispur Jungle belonged to the rebel Koer Singh, and consists of about 8,000 acres. It has been reclaimed and peopled by Messrs. Burrows, Thompson and Mylne. * * * In 1859-60, there was not a single inhabitant in the tract. In 1881, there were 8,597. * * * The Chanchal Estate in the Maldah District was cleared of jungle, and partly brought under cultivation by an able manager employed by the Court of Wards.

* * * * * * *

Broadly speaking, the settled Hindu agriculturists, even of the most thickly peopled of the Bengal Districts, do not move to outlying tracts. The pioneers of colonization in Bengal are the hill and forest races. These tribes send forth colonizers across the heart of Bengal. But in some cases when they have cleared the jungle, and raised a few rough crops, they fail to become good permanent cultivators. Thus, in the Maldah District, they sell their clearings to Muhammadan husbandmen, and move on. The Santal is there the pioneer, and the Muhammadan cultivator enters into his labours.

THE NORTH-WESTERN PROVINCES.—Advancing up the Gangetic valley, the papers, taken together with the census, indicate that the middle river districts of the North-Western Provinces are already quite sufficiently inhabited. The movements of the population here are towards the Central Provinces and the south, and towards the outlying Oudh and Sub-Himalayan districts on the north. The advance of cultivation is to a large extent spontaneous. But there are several remarkable and very interesting examples of reclamation on a large scale conducted by capitalists, European and Native among, which may be noticed five large estates aggregating 58,284 acres, and under reclamation by English capitalists. Within the district of Basti, indeed, the total number of considerable reclamation grants is 43, aggregating 90,152 acres.

The history of some of these reclamations is very instructive. The largest estate is the Birdpur grant, the property of Mr. Peppe, with a population of 23,688, living in 250 villages or hamlets, and running conterminous with the Nepal frontier for nine miles. Other reclamations by European capitalists have been effected in Partabgarh, Basti, and Gonda Districts. A large and important case of such reclamation by Captain Chapman, assisted by Government loans, and involving expensive irrigation works, deserves mention.

Captain Chapman's case leads by an easy transition to examples of reclamation by direct Government effort. A conspicuous example of this latter class in the North-Western Provinces is the reclamation of the Kumaun *Bhabar*. This tract was a dense, almost waterless forest, the refuge of gangs of banditti. It was used as a grazing-ground during a short period of each year, but its deadly climate seemed to preclude any hope of settled cultivation. After various efforts, General Sir Henry Ramsay took the matter firmly in hand. He obtained an advance of Rs. 10,000 from Government, and was left unfettered in his management of the tract. The result is that after many vicissitudes and temporary disappointments, the *Bhabar* has now a population of 103,000 in the winter months. At least two-thirds of them are cultivators of the land, and about one-fourth seem to have settled permanently down—the census in September (the unhealthy time of the year) giving a return of 25,000. An example of unsuccessful effort to reclaim forest is afforded by the Eastern *Bhabar*. But here, it is hoped that success is only deferred until the unhealthiness of the climate yields to cultivation.

Grants of jungle tracts in the Saharanpur District have been brought under cultivation, partly by European, partly by Native agency. The reclamations in the Gorakhpur District and the attempts made by Government to settle special classes of men on the land, are of considerable interest. The change which has been effected under steady British

administration would be almost incredible were it not attested by the contemporary records, "When the first Collector encamped in the environs of the city, he had to light fires to keep off the tigers. Another Magistrate, many years afterwards, employed the convicts to dig elephant pits as a protection on the north of the town; and when the present cantonments (which adjoin the city) were formed in 1810, the Collector had to request that lines might be cut through the jungle before the boundary pillars could be erected." As British rule gave security to property, a regular scramble for immigrants took place among the native landlords and tenure-holders. Government, on its part, made four separate attempts at colonization in Gorakhpur, the history of which discloses many sides of the task of peopling a large tract by official and by native effort.

THE PUNJAB.—Proceeding still further up the river valleys, the problem of reclamation in the Punjab is, broadly speaking, a problem of irrigation. The movements of the people in this Province have been so admirably treated by Mr. Ibbetson in his Census Report, that it is unnecessary to do more than to refer to his volume. The detailed process of reclaiming and cultivating a large tract is clearly set forth in the Sirsá Settlement Report. The increase takes place both by the establishment of new villages, or the re-establishment of old ones, and by the growth of the existing villages, and the extension of the cultivated margin arround them. Much of the increase is due to the fact that large tracts of the Punjab were practically depopulated by invasion and rapine in the last century. In the Sirsá District, the returns show an increase from 35 villages in 1800 to 635 in 1881.

The manner in which the population follows the canals, or springs upon either side of them, has been prominently brought before the Government. There is also evidence of the extension of village and population by means of wells. In Jhang, a lease of 50 acres is given to any cultivator who sinks an ordinary well, and a lease of 100 acres for a well with a double Persian wheel. The Deputy Commissioner reports 387 such leases, and states that applications for them are increasing. The Punjab, as a whole, exhibits a rapid extension of cultivation, with a corresponding growth of population, promoted by irrigation and roads; and without the intervention of European or Native capitalists on a large scale.

THE CENTRAL PROVINCES.—These Provinces exhibit the rapid peopling of long uncultivated or depopulated tracts. They also present in a striking light the difficulties of Government intervention. The best known case of such intervention was the Charwa scheme. The failure of this scheme has operated, perhaps more than any other example, as a discouragement to Government efforts at colonization.

* * * * * * *

Another prominent case in the Central Provinces is the reclamation in the Nimár District. The circumstances of this reclamation show exactly what can be done by direct official agency, both under British and Native rule. They also show that in such attempts, the Government must be prepared for a long continuous period to exercise a close supervision, not only in regard to advances and digging wells, but even in such particulars as re-roofing houses injured by fire.

The materials collected for the Central Provinces Tenancy Act showed that, apart from direct efforts by the Government, its general land system is leading to a rapid increase, both in the cultivation and in the number of cultivators, and also in the more intensive husbandry which results from the breaking up of holdings. One great difficulty in the way of direct Government effort seems to be that in certain parts of the Central Provinces, as in parts of Bengal, the clearers of jungle are not the eventual cultivators of the soil. In the District of Sambalpur, the process is described as follows, "The first settlers are Kandhs, propelled by the pressure of better agriculturists, such as the Agharyas from behind. They are the hardiest caste in this part of India. As soon as they (the Kandhs) have cleared a portion of the jungle with their fire-and-axe cultivation and rendered it habitable by less vigorous but more intelligent cultivators, they advance onward and are succeeded by Agharyas; and eventually the Agharyas are in turn driven onwards by the Kultas, our best agriculturists. This is the order in which cultivation is extended, and no instance has been brought to light in which waste lands—including under that term good arable land which has not as yet been brought under cultivation, but capable of the highest cultivation—have been first cleared and broken up by cultivating castes coming from an open country."

BOMBAY.—In Bombay the question of land-reclamation is disclosed in a new light. Schemes or proposals by Pársí and other capitalists for reclaiming the saline coast strip are numerous. Tank excavation on a large scale also emerges into view.

* * * * * * *

MADRAS.—The expansion of agriculture has there been steady and spontaneous, and the only check upon its further extension is stated by one officer to be the want of roads to the still land-locked localities.

* * * * * * *

SIND.—The problem of reclamation in Sind is the problem of irrigation.

BURMA.—In Burma land is still so plentiful that the old wasteful system of nomadic cultivation goes on side by side with the settled tillage of the plough. The efforts made by

the Chief Commissioner to promote the extension of agriculture form a salient feature in the Local Administration. Such extension takes place partly by means of temporary agricultural immigrants from Bengal and elsewhere, partly by the gradual settling down of the nomadic cultivators into regular husbandmen, partly by the rapid increase of the population, and partly by direct Government efforts. In Burma, the question is directly and inseparably connected with the system of rules for leasing waste lands.

ASSAM.—The same remarks apply to the outlying Province of Assam. But this province has formed the scene of the most interesting effort at direct agricultural colonization on a considerable scale which has taken place of late years. The Norwegian or Danish Missionaries in the Santál country on the west of Bengal, led forth a regular agricultural colony across the whole centre of the province, and settled it in Assam.

* * * * * * *

There is evidence to show, first, that an enormous expansion of agriculture is steadily and spontaneously going on in the less thinly populated parts of India. Second, that, direct efforts at agricultural colonization, whether by Government or companies or by private individuals, have frequently failed. Third, that there are, however, conspicuous examples of success. Fourth, that in such efforts, the chief difficulties lie at the outset, and that in most cases, a large initial mortality must be expected. Fifth, that the two essentials of success are close personal supervision, and persistent continuity of effort.

(*a*) Includes the Cawnpore-Achnera State Railway.
(*b*) Includes the Katni-Umaria State Railway.
(*c*) Includes the Bellary-Kistna State Railway.
(*d*) Total Receipts from 15th to 24th September, 1887.
(*e*) Includes the Amritsar-Pathánkot and Rájpura-Patiála State Railways.
(*f*) Includes the Northern Bengal, Dacca, Kaunia-Dhardla and Assam-Behar State Railways.

SIMLA, *18th October, 1888.*

M. C. BRACKENBURY, *Major, R.E.,*
Under-Secretary.

Printed and published for the GOVERNMENT OF INDIA *at the* GOVERNMENT CENTRAL PRESS, *Simla.*

SUPPLEMENT TO

The Gazette of India.

No. 43.} CALCUTTA, SATURDAY, OCTOBER 27, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 20th October, 1888.*—Rainfall: none in Ganjam; fair in Madras, Tinnevelly and Madura, and poor elsewhere. Standing crops generally good, but withering in Ganjam, Vizagapatam, Kistna, Cuddapah and Salem, and damaged by insects in parts of Ganjam, Vizagapatam, Salem, and Tinnevelly. Want of rain felt in all districts except South Arcot, Nilgiris and South Canara. Pasture scanty in Kistna, Trichinopoly and Madura, and insufficient in Cuddapah and Salem. Agricultural operations progressing. Prices rising in ten districts, falling in three and stationary in others. General prospects fair, except in Ganjam and Vizagapatam, where they are very unfavorable. Merchants in Ganjam holding back stocks, and rice is selling higher than scarcity rate.

Bombay.—*For week ending 24th October, 1888.*—Slight rain during the week in parts of Broach, Surat, Poona, Bijapur, Dharwar, and Kanara. Total rainfall generally insufficient, and more rain required urgently in most districts for preservation of standing early crops and sowing of late crops. Standing crops withering throughout Guzerat, Konkan and Kathiawar and in parts of Nasik for want of moisture, and damaged by insects in parts of Karachi and by blight in parts of Hyderabad and Bijapur. Harvesting of early crops progressing in parts of Karachi, Shikarpur, Hyderabad, Ahmedabad, Kaira, Surat, Khandesh, Nasik, Thana, Colaba, Poona, Bijapur, Belgaum, Kanara, and Kathiawar. Sowing of late crops in parts of Shikarpur, Hyderabad, Upper Sind Frontier, Kaira, Surat, Khandesh, Ahmednagar, Sholapur, Bijapur, Belgaum, Dharwar, and Kathiawar. Probable outturn of early crops in Thana from 8 to 9 annas Fodder scarce in parts of Karachi, Kaira, Khandesh, Nasik, Poona, Baroda, and Kathiawar. Scarcity of water felt in parts of Broach, Nasik, Kathiawar, and Baroda. Prices rising in parts of Surat, Nasik, Sholapur, and Kanara.

Bengal.—*For week ending 23rd October, 1888.*—No rain, and the weather is becoming cool. Except in the eastern districts which have had good rain lately, the condition of the rice crop is not satisfactory. The rice on high and unirrigated lands is suffering much for want of rain, and if there be no rain shortly the crop generally will be short, and in some parts of Behar will be a failure. *Rabi* cultivation is also in want of rain, and sowings are backward in Behar with no rain. There is a sensible rise in the price of rice throughout Behar and in some other parts of the province also. Distress in Khurdah has diminished. No further report of the distress in the flooded tracts of the Burdwan and Presidency Divisions received.

North-Western Provinces and Oudh.—*For week ending 24th October, 1888.*—Weather seasonable. *Kharif* crops being harvested. *Rabi* ploughing and sowing in progress. Rain wanted in some places. Supplies ample and prices on the whole are steady. General condition of agricultural stock is good.

Punjab.—*For week ending 24th October, 1888.*—No rain. Prices are somewhat unsettled; rise is reported from Sialkote and Rawalpindi and fall from Shahpur; in others prices are stationary. Reaping and harvesting of *kharif* crops are going on. Ploughing for, and sowing of *rabi* crops continue. Rain wanted at Hissar. Crops are suffering for want of rain in parts of Lahore and Dera Ismail Khan, and those dependent on Bara Canal in Peshawar have almost dried up. Prospects and outturn on the whole fair. No damage done to crops. Stock cattle are reported healthy. Fodder sufficient, except in Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 24th October, 1888.*—Weather clear. The early cessation of rain has injured prospects of autumn crops; rice especially has suffered in Eastern districts. Winter sowings progressing, but rain is required for them. Prices rising.

Burma.—*For week ending 20th October, 1888.*—In Lower Burma the crops are still reported as progressing favourably. Slight damage was done to crops in Thongwa and Amherst districts by floods and drought respectively. In Upper Burma transplanting continues in one or two districts, and in some places early sowings are being reaped. In Lower Burma the rainfall was seasonable. In Upper Burma rain fell in three districts only, and is much wanted in Myingyan and in Meiktila, where some paddy plants are reported to have withered away from want of rain. In Lower Burma crop prospects are good everywhere, and in Upper Burma the outturn of harvest is expected to be better than last year. In Pakokku a good harvest is expected if the rains at the end of the month are favourable; and in Minbu the estimated area under paddy cultivation is reported to be 40 per cent. more than last year. The price of paddy has risen in Moulmein, Shwegyin, Toungoo, and Mandalay, and has fallen considerably in Yamethin, Meiktila, Sandoway, Ye-u, and Kyaukse, and slightly in Henzada and Sagaing.

Assam.—*For week ending 24th October, 1888.*—Weather seasonable and cold. Sowing of pulses nearly over; that of oil-seeds continues. More rain would do good. Tea doing well. Prospects of rice crop favorable.

Mysore and Coorg.—*For week ending 24th October, 1888.*—Rainfall slight throughout the State. In parts of Bangalore, Kolar, Tumkur, and Mysore districts crops need more rain. Dry crops are being harvested in parts; outturn generally favourable.

No rain in Coorg during the week. Rain much needed for maturing rice crops and coffee seedlings.

Berar and Hyderabad.—*For week ending 24th October, 1888.*—No rain during the week. Crops in fair condition, but more rain is wanted. Weeding of *Jowari*, cotton, &c., completed. Picking of cotton commenced in some places. Sowing of *rabi* in progress. Fodder and water insufficient. Prices of grain increasing.

Slight rain in Hyderabad during the week. *Kharif* crops withering and *rabi* sowings impeded for want of rain. Scarcity of fodder in all taluks. Prices rising.

Central India.—*For week ending 24th October, 1888.*—No rain. Rainfall insufficient in Indore, Bhopal, Bundelkhand, and Baghelkhand, and badly wanted in Bhopawar and Neemuch. Probable outturn of crops indifferent in Western Malwa. No other changes since last report.

Rajputana.—*For week ending 24th October, 1888.*—Very slight rainfall during the week. Agricultural operations unsatisfactory in Kherwara, Meywar and Kishengurh. Standing crops want rain in Kotah and Harowtee. Harvest poor generally. Agricultural stock good. Pasturage or fodder scarce in Kherwara, Meywar, and in some parts of Marwar and Jeypore. Prices still rising in some places.

Nepal.—*For week ending 18th October, 1888.*—No rain. Weather cool. Late autumn rice is being harvested. Good crop of *Marwa* and *Kodo* expected.

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Cir. No. $\frac{95}{19-3}$ Arch.

Extract from the Proceedings of the Government of India, in the Revenue and Agricultural Department (Archæology),—dated Simla, the 18th October, 1888.

Read again the following extracts from the Proceedings of the Government of India, in the Home Department:

No. $\frac{4}{153-66}$ *(Archæological),—dated Simla, the 11th August 1885.*

In 1882 Her Majesty's Secretary of State, when sanctioning the appointment of Mr. Fleet as Epigraphist to the Government of India, suggested the desirability of training Native scholars in such a way as to fit them hereafter for taking a prominent place in the prosecution of historical research. Mr. Fleet, whose opinion was obtained on this suggestion, advised that Professors of Sanskrit in Government Colleges should form classes of selected students for special training in epigrahical and historical researches. He observed that, with such a preliminary training, a few students would be secured who would be fitted to commence under him the more rigid study of critically examining new inscriptions, of translating and editing them, and of disposing of their contents in a scholarlike manner.

2. The views of Local Governments and Administrations were invited on the suggestions made by Mr. Fleet. From these letters it appears that the adoption of Mr. Fleet's suggestion regarding the formation of palæographic classes under Sanskrit Professors in Government Colleges is not practicable. The time of the Professors is already fully occupied with their ordinary duties, while it is doubtful whether, if such classes were formed, students would, under present circumstances, be forthcoming to attend them. There is a general agreement, however, that the Universities might with advantage be moved to make Indian palæography an optional subject for the higher degrees; and the Governor General in Council would be glad if the Governments of Madras, Bombay, and Bengal would move the Universities of their respective provinces to consider what steps should be taken for attaining this object. It is observed that the Government of Madras has already consulted the Syndicate of the Madras University, and that the Government of Bengal proposed to address the Senate of the Calcutta University on the subject. The question whether similar action might not usefully be taken in regard to the Punjab University will doubtless be considered by the Local Government.

3. In order further to encourage the education and training of natives of India in epigraphy, the Governor General in Council would suggest that a special prize of Rs. 500 should be offered by the Local Government annually at each University to the student who does best in this subject, if he is recommended for it by the Examiners. This prize would probably be supplemented by the liberality of the private gentlemen interested in the ancient history of their country, if their attention were invited to the subject. His Excellency in Council is also pleased to direct that an annual prize of Rs. 500 be offered for the best collections of inscriptions with a critical essay on them by *bonâ fide* graduates of the Universities under 30 years of age. The essays should be sent to the Epigraphist to the Government of India on or before the 1st April of each year, and the amount of the prize will be charged in the contingent bill of the Epigraphist. The selected essay will be printed at the expense of Government. Lastly, in order to encourage the study of epigraphy among the Surveyors and Assistant Surveyors employed in the Archæological Survey Department, the Governor General in Council sanctions the grant of a reward of Rs. 500 to any employé of that Department who qualifies in epigraphy within two years from the date of his appointment to the Department.

4. As regards British Burma, the circumstances of which province are peculiar and which does not fall under the scope of the above orders, it will be left to the Chief Commissioner to take such steps as he may deem necessary for encouraging the study of epigraphical research among Native students and others.

No. $\frac{14}{17-33}$ *(Archæology),—dated Calcutta, the 18th January 1886.*

In paragraph 3 of the Resolution, dated 11th August 1885, it was decided—

(1) that a special prize of Rs. 500 should be offered by the Local Government annually at each University to the student who does best in epigraphy, if he is recommended for it by the Examiners;

(2) that an annual prize of Rs. 500 be offered for the best collection of inscriptions, with a critical essay on them, by *bonâ fide* graduates of the Universities under 30 years of age, the essay to be sent by 1st April of each year to the Epigraphist to the Government of India; and

(3) that a reward of Rs. 500 should be given to any Surveyor or Assistant Surveyor in the Archæological Survey Department who qualifies in epigraphy within two years from the date of his appointment to the Department.

The Governor General in Council sees no ground for modifying or expanding the first two of these proposals; but as regards the third point, His Excellency in Council is willing to grant a reward of Rs. 500 to any employé of the Archæological Survey who qualifies in epigraphy at any period of his service in the Department. The reward will be given for a competent knowledge in any one or more of the ancient languages of India, but cannot be earned more than once during service.

Letter from the Government of the North-Western Provinces and Oudh, No. $\frac{1119}{III\text{-}109\text{-}9}$, dated 31st August 1888.

RESOLUTION.

From the Resolution of 1885, it will be seen that Her Majesty's Secretary of State when sanctioning the appointment of Mr. Fleet as Epigraphist to the Government of India, suggested the desirability of training Native scholars in such a way as to fit them to take a prominent place in the prosecution of historical research. Mr. Fleet, who was consulted on the subject, recommended that Professors of Sanskrit in Government Colleges should form classes of selected students for special training in epigraphical and historical researches. Local Governments were addressed accordingly on the subject, but on receipt of their replies the Government of India came to the conclusion that it was not expedient to adopt the suggestion put forward by Mr. Fleet. It was, however, thought desirable that Indian Universities should make Palæography an optional subject for the higher degrees; and in order to further encourage the study of epigraphy, a system of moderate money-rewards for proficiency in that branch of learning was established. From the replies of the Local Governments read above, the Government of India learns with satisfaction that the Syndicates of the several Universities in Madras, Bombay, Bengal, and the North-Western Provinces and Oudh, have resolved to allow Palæography to be studied as an optional subject for the higher degrees.

In paragraph 3 of Resolution mentioned above, it was said that the essays on inscriptions should be sent to the Epigraphist to the Government of India on the 1st of April of each year. As the appointment of Epigraphist to the Government of India has since then been abolished, the essays should be transmitted to the Director General of the Archæological Survey of India.

ORDER.—Ordered, that the above Resolution be forwarded to the Local Governments and Administrations noted on the margin for information; also that it be forwarded to the Director General of the Archæological Survey of India and the Department of Finance and Commerce, and Home Department, and that it be published in the Supplement to the *Gazette of India*.

Review of the working of the Indian Companies Act, VI of 1882, during the year 1887-88.

No. 5861, dated Simla, the 26th October, 1888.

RESOLUTION—By the Government of India, Department of Finance and Commerce.

Read the following communications submitting the Reports of Registrars of Joint Stock Companies on the working of the Indian Companies Act, VI of 1882, during the official year 1887-88:

From the Government of Madras, Nos. 1292 and 1293, dated the 9th June 1888.
From the Government of Bombay, No. 4258, dated the 28th June 1888.
From the Government of Bengal, No. 2493-P., dated the 21st July 1888.
From the Government of the North-Western Provinces and Oudh, No. $\frac{521}{VII\text{—}117\text{-}B.}$, dated the 16th July 1888.
From the Government of the Punjab, No. 21, dated the 27th April 1888.
From the Chief Commissioner, Central Provinces, No. $\frac{5003}{261}$, dated the 24th August 1888.
From the Chief Commissioner, Burma, No. $\frac{317}{25\text{-}C.}$, dated the 11th June 1888.
From the Chief Commissioner, Assam, No. 4780, dated the 28th August 1888.
From the Secretary for Berar to Resident, Hyderabad, No. 191-G., dated the 23rd May 1888.
From the Resident in Mysore, No. $\frac{2461}{535}$ and No. $\frac{2830}{535}$, dated respectively the 20th July and the 22nd August 1888.

RESOLUTION.—The statistics contained in these reports are summarised in the three tables annexed to this Resolution. There were at the close of 1886-87 in the different provinces 888 joint stock companies possessing a total nominal capital of 2,913 lakhs, the actual (paid-up) capital being 2,138 lakhs. Of these companies the capital of 40 was increased nominally by 28½, but actually by only 1¼ lakhs; while 103, with a paid-up capital of 4 lakhs, so far as reported, ceased to work. The number of companies registered during the year was 125, with a nominal capital of 195 lakhs; but their paid-up capital cannot be completely stated, the amount of such capital not having been reported in several cases up to the end of the year. The net result at the close of 1887-88 was a total of 910 companies possessing a nominal capital aggregating 3,025 lakhs, and an actual capital, so far as reported, of 2,233 lakhs.

2. The following table shews the number of companies and the amount of paid-up capital in each of the provinces in the last two years:

Province.	Number of Companies.		Paid-up capital.		Increase or Decrease per cent. in 1887-88.		Provincial proportion of paid-up capital to all paid-up capital in 1887-88.
	1886-87.	1887-88.	1886-87.	1887-88.	Number of Companies.	Capital.	
			Rs.	Rs.			Per cent.
Bengal	230	227	9,67,74,825	9,85,97,905	— 1	+ 2	44
Bombay	204	204	8,72,53,025	9,20,82,917	*Nil*	+ 6	41

Breweries	.....	3	12,00,000	12,00,000
Others	.....	13	86,61,000	77,64,450
	GRAND TOTAL ...	910	30,25,42,842	22,32,61,925

The largest part—960 lakhs paid-up—of the aggregate capital is invested in mills and presses chiefly for working or pressing cotton, jute, wool, and silk. The greater number of these are registered in Bombay, that Presidency representing under this head a paid-up capital of 663 lakhs, or about two-thirds of the whole, most of it invested in cotton mills and presses. The sum of 196 lakhs represents the paid-up capital invested in mills and presses registered in Bengal, their working being mainly limited to jute.

In tea, coffee, and other plantations 365 lakhs of paid-up capital are invested, of which 346 lakhs are held in Bengal, most of the tea companies being registered in Calcutta.

The paid-up capital invested in banking or loan companies amounts to 342 lakhs, of which 175 lakhs are in companies registered in Bengal and 93 lakhs in Madras.

Trading companies have a paid-up capital of 341 lakhs, of which 89½ lakhs are invested in coasting and river steamer companies and about 69 lakhs in railways and tramways. Of the sum of 173 lakhs placed opposite "merchants and traders" in the foregoing table, a considerable proportion is invested in retail shops and stores to which the principle of limited liability has been somewhat extensively applied in India, especially in Bombay.

Mining and quarrying companies engage 101 lakhs paid-up, of which 80 lakhs are invested in companies registered in Bengal, where about 60 lakhs are invested in coal mining companies.

The other industries individually represent much smaller sums; thus ice-making employed 19 lakhs paid-up, chiefly in Bombay and Bengal; breweries, 12 lakhs paid-up, all in the Punjab and the North-Western Provinces and Oudh.

Particulars in regard to each company registered under the Act will be found in Part XVI of the "Statistical Tables for British India" published annually.

4. The following table shows the number of Companies under each category during the last five years :

Companies.		1883-84.	1884-85.	1885-86.	1886-87.	1887-88.	Increase or decrease per cent. in 1887-88 compared with 1883-84.

1885-86	805	28,54,34,367	21,00,25,677	36,67,233 = 2 ,,
1886-87	888	29,13,61,646	21,38,04,422	37,78,745 = 2 ,,
1887-88	910	30,25,42,842	22,32,61,925	94,57,503 = 4 ,,

The increase during the year was 94½ lakhs, being at the rate of 4⅖ per cent., which was much higher than in the two previous years. The average annual rate of increase during the eight years has been 5¼ per cent.

6. The statistics of companies limited by guarantee have apparently been defectively reported. The figures, so far as they go, show that there were 191 such companies at the close of 1886-87, almost all in the Madras Presidency, being mostly small benefit societies, of a speculative and not infrequently fraudulent character. A great number of these companies was started in 1885-86 in Madras, collapsing after a year or two. One hundred and fifteen ceased to work in 1887-88. Three new companies being added, there were 79 such companies at the close of the year.

7. The fees realised and the expenditure in each province last year were :

Province.	Fees.	Expenditure.
	Rs. A. P.	Rs. A. P.
Bengal	5,479 2 0	632 0 0
Bombay	8,362 8 0	1,046 14 0

SUPPLEMENT TO

The Gazette of India.

No. 44.} CALCUTTA, SATURDAY, NOVEMBER 3, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

REPORT ON THE OPERATIONS OF THE CURRENCY DEPARTMENT FOR THE YEAR 1887-88.

No. 310, dated Calcutta, the 25th October 1888.

From—The Head Commissioner of Paper Currency, Calcutta,
To—The Secretary to the Government of India, Department of Finance and Commerce.

I have the honour to submit the report upon the operations of the Currency Department for the year 1887-88.

Arrangements of Subjects.

PARAS.
2. OFFICERS IN CHARGE.
3. ACCOUNTS AND AUDIT.
4. CIRCULATION.
12. ANALYSIS OF CIRCULATION.
14. THE RESERVE—
16. The Investment.
17. Profits of Circulation.
TRANSACTIONS WITH THE PUBLIC—
18. Issue and Receipt of Notes.
21. Encashment of Foreign Notes.
25. Issue and Receipt of Coin.
26. State of the Coinage.
31. Exchange of small Coin.

No. I.—Statistics of Circulation during 1887-88.
„ II.—Statement of Notes issued, received and cancelled during 1887-88.
„ III.—Statement of Receipts and Expenditure.
„ IV.—Classification of Treasuries according to encashment of Notes.
„ V.—Statistics of Treasury and other Balances on December 31st, 1887.

Other Statements.

No. VI.—Issues and Receipts of Home Notes.
„ VII.—Issues and Receipts of Coin.
„ VIII.—Value of Notes in circulation from 1862.
„ IX.—Details of ditto ditto 1876.

OFFICERS IN CHARGE.

2. Mr. E. Gay was Head Commissioner at the beginning and latter part of the year; during his absence Mr. E. T. Atkinson acted from 20th April to 3rd

August; Mr. E. W. Kellner from 4th to 8th idem, and Mr. H. F. Clogstoun from 9th August to 9th November 1887. In Madras, Mr. H. F. Clogstoun was Commissioner, but Mr. W. Donald officiated for him from 1st August to 21st November 1887. In Bombay the Office of Commissioner was held by Mr. T. W. Rawlins from 1st to 24th April; by Mr. E. J. Sinkinson from 25th April to 11th December, and by Mr. A. C. Tupp from 12th December to 31st March. In Rangoon Mr. T. H. Biggs was Commissioner.

ACCOUNTS AND AUDIT.

3. The monthly audit of the accounts has been duly reported for each office to the Comptroller General, and the following special audits have also been made:—

Accounts of	Auditing Officer.	Date of report.	Period under audit.
Lahore . . .	Deputy Auditor General.	23rd November 1887	January to September 1887.
Kurrachee . .	Ditto .	3rd December 1887	January to November 1887.
Calicut . . .	Mr. R. C. Chapman, Assistant Accountant General.	20th October 1887	1st October 1886 to 30th September 1887.

CIRCULATION.

4. The following figures show the state of the net circulation:—

	Gross Circulation.	Retired by other Offices.	Net Circulation.
1st April 1887 . .	14,13,99,465	26,31,100	13,87,68,365
31st March 1888 . .	16,78,60,015	36,16,220	16,42,43,795

As explained in previous reports, a note is in "Gross Circulation," when it is not yet returned to the original office of issue; but if it has meantime been paid off by another office of issue, and is held by it pending return to the original office of issue, then it has ceased to be in "Net Circulation," though it is still part of the "Gross Circulation."

5. The details of the net circulation of March 1888 are as follows:—

	Number of Notes for Rupees								Total.	
	5	10	20	50	100	500	1,000	10,000	Pieces.	Value.
										R
Calcutta . . .	131,544	1,727,865	68,371	53,927	130,198	17,173	18,141	273	2,147,492	6,44,77,440
Allahabad . . .	13,639	30,431	17,774	13,632	16,638	2,160	2,203	269	96,746	90,46,385
Lahore . . .	14,673	47,103	28,830	15,809	19,683	3,283	2,189	51	131,621	82,20,245
Bombay . . .	229,378	699,774	108,274	71,001	87,177	7,414	15,272	1,178	1,219,468	5,83,36,860
Kurrachee . .	3,659	28,691	9,489	3,901	7,122	493	1,175	203	54,733	48,53,735
Madras . . .	38,449	112,371	32,736	29,581	102,601	4,706	2,366	137	322,947	1,97,96,825
Calicut . . .	9,537	8,511	3,803	2,762	3,458	74	35	2	28,182	7,84,755
Rangoon . . .	9,848	16,285	5,768	4,190	6,056	612	437	184	43,380	37,25,550
Total for 31st March 1888 . . .	450,727	2,671,031	275,045	194,803	372,933	35,915	41,818	2,297	4,044,569	16,42,43,795
Total for 31st March 1887 . . .	464,635	2,385,881	262,169	175,084	327,418	31,386	36,054	1,410	3,684,037	13,87,68,365
Total for 31st March 1886 . . .	535,993	2,252,667	256,497	174,745	316,599	28,960	36,649	1,987	3,604,097	14,17,32,725

6. It will be observed that there is a marked increase in the circulation of 31st March 1888 as compared with that of 31st March 1887, the increase being more than 2½ crores. An analysis of the figures for the two years shows that,

except in the case of notes R5, the increase arises in the circulation of all denominations.

There is again, as last year, a decrease in the R5 note circulation probably arising from the forgeries of those notes; the distrust of R5 notes has again led to a corresponding increase of the R10 denomination.

7. The average value of each note in circulation on the last day of the year, compared with the past two years, was—

	1885-86.	1886-87.	1887-88.		1885-86.	1886-87.	1887-88.
Calcutta Circle .	28	29	30	Kurrachee Circle .	105	87	88
Allahabad „ .	69	68	93	Madras „ .	62	68	61
Lahore „ .	65	65	62	Calicut „ .	37	35	27
Bombay „ .	44	36	44	Rangoon „ .	70	74	86

The chief variation is in the Allahabad Sub-Circle, and arises mainly from nearly twenty-seven lakhs being in circulation, in ten thousand rupee notes probably held by Banks as reserve.

8. The variations in the net circulation of each Circle are shown in the following table, omitting 000—

Last day of	Calcutta.	Allahabad	Lahore.	Bombay.	Kurrachee.	Madras.	Calicut.	Rangoon.	Total.
	R	R	R	R	R	R	R	R	R
March 1887 . .	5,96,40	61,17	79,78	3,81,26	43,98	1,83,49	9,74	31,86	13,87,68

March „ . .	6,44,77	90,46	82,20	5,33,37	48,54	1,97,99	7,85	37,26	16,42,44
Average of last 12 figures .	6,21,18	88,36	91,59	5,17,61	47,59	1,80,21	11,46	58,23	16,16,23
„ of 1886-87 . .	5,72,39	77,81	83,10	4,29,10	49,99	1,60,49	13,28	33,93	14,20,11
„ of 1885-86 . .	6,06,34	60,16	77,28	4,99,06	46,01	1,40,74	12,12	29,31	14,71,02

9. The figures in the above table include the amounts in the Reserve Treasuries of Government which, so far as they are in notes, are always held in the higher denominations. These balances are excluded from the following table, which gives the monthly circulation in lakhs of the Calcutta, Bombay, Madras and other Circles for each of the past three years:—

Last day of	Calcutta.			Bombay.			Madras.			Other Circles.			Total.		
	1885-86.	1886-87.	1887-88.	1885-86.	1886-87.	1887-88.	1885-86.	1886-87.	1887-88.	1885-86.	1886-87.	1887-88.	1885-86.	1886-87.	1887-88.
April . .	562	556	584	477	384	406	131	141	148	201	242	223	1,271	1,323	1,361

March . .	582	589	644	403	370	502	140	154	192	222	227	266	1,347	1,340	1,604
Average .	594	557	607	448	376	481	125	142	169	228	258	297	1,395	1,333	1,554

The figures under all Circles show a considerably increasing average circulation. The Calcutta circulation during the past year averaged 50 lakhs more than that of 1886-87, and 13 lakhs more than that of 1885-86.

10. The Bombay average circulation shows an increase of 1 crore 5 lakhs as compared with that of 1886-87, and of 33 lakhs as compared with that of 1885-86. The large fluctuations in the Bombay circulation occur almost entirely in notes of ₹1,000 and of ₹10,000 held by banks for commercial convenience, and depend largely upon fluctuations in trade. The circulation is, moreover, influenced to a considerable extent by the amount of the importations of silver for coinage, silver taken in the Mints to be coined being paid for in the first instance by the Currency Department.

The total average circulation of the year for all circles, excluding the notes held by the Reserve Treasuries, is 2 crores 21 lakhs greater than the average of 1886-87, and 1 crore 59 lakhs greater than that of 1885-86.

11. The following figures show (in lakhs and thousands) the gross circulation in the Presidency Circles of notes not exceeding ₹100 each :—

Last day of	1886-87.			1887-88.		
	Calcutta.	Bombay.	Madras.	Calcutta.	Bombay.	Madras.
	₹	₹	₹	₹	₹	₹
April	3,13,84	1,91,28	1,07,85	3,18,21	2,02,69	1,12,89
May	2,99,80	1,95,50	1,02,42	3,09,43	2,08,56	1,12,46
June	2,89,49	1,88,37	95,57	3,03,64	2,05,41	1,10,05
July	2,86,01	1,87,20	94,10	3,05,65	2,05,40	1,08,52
August	2,93,75	1,94,61	97,50	3,08,04	2,08,84	1,10,40
September	3,12,03	2,00,27	1,01,27	3,30,96	2,12,26	1,10,98
October	3,08,83	1,89,90	1,04,69	3,21,92	2,19,27	1,17,91
November	3,10,78	2,05,67	1,07,39	3,32,56	2,19,82	1,24,81
December	3,14,41	2,06,20	1,17,21	3,43,43	2,23,37	1,38,39
January	3,25,18	1,97,27	1,12,13	3,53,46	2,20,08	1,41,61
February	3,30,13	1,95,60	1,17,97	3,52,45	2,18,99	1,38,97
March	3,29,50	1,98,70	1,12,12	3,52,57	2,27,38	1,38,75

These figures show that the notes of lower denominations maintain on the whole great steadiness in their circulation.

ANALYSIS OF CIRCULATION.

12. The process of verifying the outstanding balance of the circulation with that obtained from the Issue Registers, has proved a most laborious task as far as the transactions prior to 1885 are involved, though the system works easily for transactions from that year, except in the Calcutta Office in which the supervision has not been satisfactory.

13. There are no differences in the Madras, Calicut, and Rangoon offices, while in the Sub-circles of Lahore, Allahabad and Kurrachee, there are still some differences which are expected shortly to be cleared off on a comparison being effected with the duplicate registers kept in the Head Circle office; but there are still numerous discrepancies remaining to be cleared in Bombay and in Calcutta.

RESERVE.

14. The value held against the net circulation upon 31st March 1888 was as follows :—

	₹	a.	p.	₹	a.	p.
Silver Coin—						
At Calcutta	2,06,97,777	15	11			
„ Allahabad	83,46,135	0	0			
„ Lahore	97,86,815	0	0			
„ Bombay	3,12,99,563	15	6			
„ Kurrachee	48,01,295	0	0			
„ Madras	1,52,60,885	0	0			
„ Calicut	2,20,415	0	0			
„ Rangoon	40,71,310	0	0			
				9,44,84,226	15	5
Small Silver Coin—						
At Bombay	5,82,000	0	0			
„ Kurrachee	13,400	0	0			
				5,95,400	0	0
Silver Bullion—						
At Calcutta	4,86,457	14	6			
„ Bombay	86,87,681	1	9			
				91,74,139	0	3
Invested in Government Securities				5 99,90,029	0	4
Total agreeing with the net Circulation				16,42,43,795	0	0

15. The half-yearly verifications of the currency balances were held as follows :—

	1st half.	2nd half.
Calcutta	Sept. 30, 1887	March 31, 1888.
Allahabad	„ 30, „	„ 31, „
Lahore	„ 30, „	„ 31, „
Bombay	„ 30, „	„ 31, „
Kurrachee	„ 30, „	„ 31, „
Madras	„ 30, „	„ 31, „
Calicut	„ 30, „	„ 31, „
Rangoon	„ 30, „	„ 31, „

The balances of the last working day of each half-year were verified in accordance with the orders issued on the subject.

Investments.

16. No alteration has been made since the last report in the amount of the invested reserve, which is held in book debt certificates as below :—

	₹
No. 59 of 4 per cent. loan of 1842-43	5,00,00,000
„ 72 „ „ „	1,00,00,000
„ 115 „ „ „	20,21,700
„ 166 of 4½ per cent. loan (Transfer), 1879	5,00,000
	6,25,21,700

Taking the whole investment, the average rate is equal to 95·92 for 4 per cents., and, as explained below, par for 4½ per cents.

Its book value, *i.e.*, the actual price at which it was purchased, has been reduced from R5,99,92,500, at which it was taken last year, to R5,99,90,029-0-4, thus—

	Nominal Value.		Book Value.	
	4%	4½%	4%	4½%
	R	R	R	R
1st April 1887.—Balance .	6,20,21,700	5,00,000	5,94,90,029-0-4	5,02,470 15 8
Deduct— Interest at ½% on 4½% securities to reduce cost of its purchase, *vide* letter No. 1885 of 17th December 1883.	...	...	...	2,470 15 8
31st March 1888.—Balance .	6,20,21,700	5,00,000	5,94,90,029-0-4	5,00,000 0 0
	Net Book Value .		5,99,90,029 0 4	

It was decided when the 4½% Government Securities for R5,00,000 were purchased in 1884, that ½% interest should be taken towards reducing the price which had been paid for the investment so long as the value was above par. R2,500 has accordingly been appropriated yearly for this purpose, and, as the above sum of R2,470-15-8, which is the last payment on that account, has reduced the value to par the whole of future interest realisations will be credited to "Profits of Note Circulation."

Profits of Circulation.

17. The interest realised on the above-stated nominal value for the year was—

	R	R
On 4% paper of the loan of 1842-43 for .	6,20,21,700 =	24,80,868
„ 4½% „ 1879 „ .	5,00,000 =	22,500
		25,03,368
Deduct— The ½% interest taken as above		2,470 15 8
Net credit to Profits		25,00,897 0 4

18. The following are the gross statistics of the year, the details by circle being shown in Statement VI:—

	R	R
Gross circulation, 1st April 1887 . . .		14,13,99,465
Issues—		
a. Over the counter	73,15,95,820	
b. At Agencies	70,86,515	
c. In remittance transactions . . .	9,33,58,330	
		83,20,40,665
	Total .	97,34,40,130
Receipts—		
d. Over the counter	60,64,50,320	
e. At Agencies	20,81,860	
f. From currency circles	6,15,78,675	
g. In remittance transactions . . .	13,54,69,260	
		80,55,80,115
Balance being gross circulation, March 31st, 1888 (*vide* para. 4)		16,78,60,015

Explanations.

a and *d*.—These are the ordinary issues and receipts in exchange for other notes or for coin.

b and *e*.—These are exchange transactions with Treasuries, as the Agencies do not deal directly with the public, but only enable the Treasuries to do so to a greater extent than would otherwise be the case.

f.—This figure represents notes cashed at other currency circles from March 16th, 1887, to March 15th, 1888, and returned during the year under report to the circles to which they belong.

c and *g*.—These remittances are for the most part payments and receipts of one currency office, in consideration of receipts or payments at another.

Comparison.	Issues. R	Receipts. R
1887-88	83,20,40,665	80,55,80,115
1886-87	74,12,56,165	74,47,96,640
1885-86	76,10,25,730	76,55,44,465
1884-85	73,99,22,010	72,12,80,855

19. The aggregate issues and receipts of the several denominations of notes at both offices of Issue and Agencies during the year were as follows:—

	Number of Notes for Rupees								Total	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.
										R
Issues . . .	838,981	4,035,653	524,814	446,493	951,963	149,440	254,292	33,046	7,234,682	83,20,40,665

Rangoon .	1,880	105	750	430	...	...	...	730	10	...	...	3,855
TOTAL .	93,71,635	1,05,96,850	1,20,03,255	1,57,95,995	145	2,755	30,45,765	63,92,370	20,73,395	305	6,25,850	5,99,08,320

The letter (*c*) marks the cases in which the foreign notes are legally encashable, *i.e.*, shows the amounts of Sub-Circle notes encashed by their respective Head Circles aggregating R2,21,30,030.

23. The comparison for three years is as follows :—

Notes cashed at—	1885-86. R	1886-87. R	1887-88. R
Calcutta	2,89,93,660	4,08,03,545	3,16,13,695
Allahabad	47,16,025	35,55,385	51,97,540
Lahore	42,59,465	31,13,485	31,53,610
Bombay	99,67,650	1,76,45,030	1,27,52,985
Kurrachee	31,230	26,515	4,92,275
Madras	37,93,545	54,46,620	51,24,625
Calicut	12,50,645	21,55,805	15,69,735
Rangoon	10,075	16,080	3,855
	5,30,22,295	7,25,62,465	5,99,08,320

24. Of this, the amount of notes issued by each Sub-Circle and cashed under the requirements of the law at its Head Circle Office was in—

	1885-86. R	1886-87. R	1887-88. R
Calcutta	92,05,150	1,90,79,500	1,77,61,685
Bombay	8,76,515	50,54,895	26,93,140
Madras	18,86,400	28,56,850	16,75,255
	1,19,68,065	2,69,91,245	2,21,30,080

Issue and Receipt of Coin.

25. The transactions in coin are as follows (for details by circles refer to Statement VII) :—

	Coin. R	a.	p.	Small Coin. R	a.	p.

28. The usual statements are attached of whole rupees coined and issued from the Indian Mints during the years 1835 to 1887, and the proportions of each of those issued found on examination in every District Treasury of a bag of 2,000 rupees of the coin ordinarily current in the districts.

29. The difficulty in drawing any detailed conclusions from these statements has been pointed out in previous Reports, but they show the very gradual disappearance of old coin from circulation and the equally gradual spread of new coin to take its place.

30. The circumstances of India and Burma are exceptional as explained in last Report; but leaving these Provinces out of consideration, the figures continue to show that, as might be expected, the percentage of the coin of the later years held in Madras and in the North-Western Provinces and Oudh is largely below the percentage of the same coin held in Bengal and Bombay, which are nearer to the Mints; while the percentage held in Bengal is largely below that in Bombay, into which Presidency the great bulk of the silver is imported.

Statement of whole rupees coined and issued from the Indian Mints from 1835 to 1887.

AGENCIES.

35. The following are the transactions at the Agencies :—

	Number of Agencies.	Issues of Notes.	Receipts of Notes.
Agencies of the Calcutta Circle . . .	15	6,26,500	9,08,500
„ Allahabad „ . . .	4	1,000	...
„ Lahore „ . . .	5	45,43,000	40,000
„ Bombay „ . . .	2	4,82,000	1,68,400
„ Madras „ . . .	2	8,56,135	9,32,080
	28	65,08,635	20,48,980

36. The Agencies enumerated in the above figures are the following :—

Calcutta Circle.
1. Backergunge.
2. Cachar.
3. Cuttack.
4. Chittagong.
5. Chumparun.
6. Gowhati.
7. Gya.
8. Lohardugga.
9. Moorshedabad.
10. Mint.
11. Patna.
12. Rajshahye.
13. Sarun.
14. Shillong.
15. Sylhet.

Allahabad Circle.
1. Meerut.
2. Benares.
3. Lucknow.
4. Moradabad.

Lahore Circle.
1. Rawal Pindi.
2. Amballa.
3. Peshawar.
4. Simla.
5. Multan.

Madras Circle.
1. Cocanada.
2. Vizagapatam.

Bombay Circle.
1. Nagpore.
2. Akola.
*

* During the year 8 other agencies were temporarily established at Treasuries in Bombay under the orders of the Accountant General.

CLAIMS ON LOST NOTES.

37. The following is the statement of lost and mutilated notes paid during the year on bond of indemnity :—

Nature of Loss.	Number of Notes for Rupees								Total.	
	5	10	20	50	100	500	1,000	10,000	Number.	Value.
										₹
Half Notes . Lost by Post .	15	134	34	57	134	10	7	...	391	30,345
Half Notes . Lost accidentally	33	95	40	41	82	18	4	...	31	25,165
Half Notes . Mutilated .	5	88	4	7	11	...	...	...	115	2,435
	53	317	78	105	227	28	11	...	819	57,945
Whole Notes . Lost by Post .	...	...	...	...	...	...	...	...	...	...
Whole Notes . Lost accidentally	...	...	1	2	5	1	...	...	9	1,120
Whole Notes . Mutilated .	10	10	1	4	6	...	...	...	31	970
	10	10	2	6	11	1	...	...	40	2,090
1887-88 .	63	327	80	111	238	29	11	...	859	60,035
1886-87 .	56	275	64	116	277	31	27	...	846	80,310
1885-86 .	49	239	64	122	261	10	8	...	753	49,115

FRAUD AND FORGERY.

38. The following forgeries of notes came to light in the year under review, and they were all of the Calcutta Circle :—

Of 5-rupee notes, sixty-nine pieces.
„ 10 „ „ one piece.
„ 20 „ „ four pieces.
„ 1,000 „ „ one piece.

One of the 20-rupee notes belonged to the forgeries of 1882. This note was presented by the Bank of Bengal in Allahabad. The other three, as well as the 10-rupee note, were presented at Calcutta, and were all hand-made, and were very bad forgeries indeed. The 5-rupee note forgeries belong to the same set as those presented before, *viz.*, five in 1883-84, six in 1884-85, six in 1885-86, and ten in 1886-87. Of the 69 notes presented during the year under report, 15 were presented and discovered at Allahabad, 2 at Lahore, and the remaining 52 at Calcutta. They were printed from wood and on paper to imitate the genuine paper, the water-lines being mere impressions from wooden stamps moistened with oil. On the 13th of January last a native was sentenced to 7 years' transportation in connection with the 5-rupee note forgeries, and another man was sentenced to 2 years' rigorous imprisonment for having such notes in his possession. The utterer of the 1,000-rupee note of the Calcutta Circle noticed in last year's report was convicted and sentenced to 5 years' rigorous imprisonment. Two men were sentenced to 3 years' rigorous imprisonment for uttering a forged 1,000-rupee note which was made by hand.

39. Rangoon reports that one fraudulently altered note for R5 was presented. It was branded and payment refused ; the note is with the Currency Officer there, and the presenter has not called to ask for its return. In Bombay a fraud occurred within the office, the clerk dealing with claims on lost and imperfect notes having embezzled money passing through his hands, and falsified the records to conceal his crime. On conviction he was sentenced to 6 years' rigorous imprisonment. A full report of the case was made to Government at the time. No other fraud or forgery is reported by Bombay.

REMITTANCES OF SILVER.

40. The following is the detail of silver remittances :—

	₹	
Calcutta to Madras	30,00,000	
Calcutta to Rangoon	60,00,000	
Allahabad to Calcutta	45,96,460	(R25,96,460 of this was of shroff-marked and uncurrent coin.)
Allahabad to Bombay	30,00,000	
Allahabad to Lahore	20,00,000	
Lahore to Calcutta	31,37,770	The whole of this was shroff-marked and uncurrent coin.
Bombay to Madras	20,00,000	
Bombay to Kurrachee	60,10,000	
Bombay to Rangoon	20,00,000	
Madras to Rangoon	20,00,000	
Calicut to Madras	3,00,000	

TREASURY STATISTICS.

41. The transactions in notes at the several Treasuries in India during 1885-86, 1886-87 and 1887-88 have been as follows :—

	1885-86.	1886-87.	1887-88.
	₹	₹	₹
Receipts from the Public in payment of Government dues .	9,08,26,615	9,03,04,820	9,87,00,135
Receipts from the Public in exchange for silver .	3,19,78,560	3,05,22,080	3,04,07,155
Receipts from the Public for other notes .	26,38,745	25,05,895	26,43,280
Total Receipts .	12,54,43,920	12,33,32,795	13,17,50,570
Issues to the Public in payment of Government dues .	3,61,91,125	3,81,90,680	3,94,37,520
Issues to the Public in exchange for silver .	3,08,36,800	3,08,04,965	3,22,23,720
Issues to the Public for other notes .	26,38,745	25,05,895	26,43,280
Total Issues .	6,96,66,670	7,15,01,540	7,43,02,720

42. The total Treasury transactions in notes during the last three years have been as follows (in lakhs of Rupees) :—

	1885-86.	1886-87.	1887-88.
	₹	₹	₹
Government of India .	285	319	278
Central Provinces .	40	34	40
Burma .	16	29	24
Assam .	64	59	60
Bengal .	555	540	563
North-Western Provinces and Oudh .	187	172	181
Punjab .	303	247	279
Madras .	252	258	291
Bombay .	235	279	333
Hyderabad .	14	11	11
	1,951	1,948	2,060

43. Statement IV classifies the treasuries of the Government of India as follows:—

	1885-86.	1886-87.	1887-88.
Where notes were cashed throughout the year to the extent of the public demand	155	163	148
Where notes were ordinarily cashable, but not always . .	33	28	43
Where notes were not usually cashable	33	39	46
TOTAL .	221	230	237

44. Statement V shows the proportion of treasury and bank balances, which in each province was held in the form of Currency Notes, and, as stated before, the holdings of the Reserve Treasuries greatly affect the comparisons in this statement.

Including Reserve Treasuries, the percentage of balances held in notes was—

	1887.	1886.
Calcutta Circle	39	22
Bombay „	40	35
Madras „	18	17

But if Reserve Treasuries were omitted, the figures would be—

	1887. Balance in		1886. Balance in		Percentage of Notes.	
	Notes.	Cash.	Notes.	Cash.	1887.	1886.
Calcutta Circle . . .	36,26	104,11	42,01	79,65	25	34
Bombay „ . . .	15,87	62,59	11,87	65,82	20	16
Madras „ . . .	15,23	92,06	13,04	86,77	14	13

Receipt and Expenditure.

45. The receipts and expenditure of the department are shown in detail in Statement No. III. The final disbursements of 1886-87 were less by R684-13-3 as compared with the approximate figures given in last year's Report as per details given at foot of the above statement. The expenditure in 1887-88 was in excess of that of the former by rupees thirty-eight thousand, owing to the value of note forms received from England being higher by R40,357.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

RAILWAY RATES AND FARES IN INDIA.

No. 1101 R. T., dated Simla, the 17th October, 1888.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Despatch from the Secretary of State, No. 132, Railway, dated 19th October 1882.
Public Works Department, No. 162R. T., dated 2nd March 1883, to the Government of Bombay.
Public Works Department Resolution No. 655R. T., dated 18th July 1884.
Public Works Department Resolution No. 200R. T., dated 25th February 1886.
Despatch from the Secretary of State, No. 16, Railway, dated 25th February 1886.
Public Works Department Resolution No. 1446R. T., dated 12th December 1887.

Read also—

Letter from the Director General of Railways, No. 775T., dated 20th August 1887, and extract from enclosure.

OBSERVATIONS.—At the Railway Conference of 1884 it was suggested that a General Classification should be adopted by all Railways, to include all articles carried on any railway and recognized by a distinctive name. It was also proposed that for *purposes of through booking*, commodities entered in the General Classification list should be sub-divided into two sections. That in Section I should be included all articles, the carriage of which was of real importance to any railway as a source of revenue, and that in respect of articles named in this section each railway should retain entire discretion in fixing or adopting rates for their carriage over the Home line, or any portion of the Home line included in the through journey. That in Section II should be included all other articles in the General Classification, in regard to which the traffic was of no great importance, and that in respect of these a scale of common mileage rates should be adopted in through booking.

2. It was further provided that any Railway should be at liberty to transfer any item of through traffic, which at any time became of importance, from Section II to Section I, on giving three months' notice of such transfer; but that transfers from Section I to Section II should be made only by general agreement. Although these proposals were agreed to by a majority of the Delegates at the Conference, little or no action has since been taken in regard to them by any of the Railways concerned.

3. The intention of Public Works Department Resolution No. 1446R. T., dated 12th December 1887 (Railway Rates and Fares in India), paragraph (*c*), was, as far as was practicable, to bring into operation the proposals brought forward at the Conference of 1884 and enumerated above.

4. The Railway Conference which has just concluded its sittings has to some extent modified the decisions of the Conference of 1884. Resolutions bearing on the subject of the General Classification of, and the rates for, goods, were passed in the following terms:

Resolution No. 52.—"That the Committee is of opinion that a uniform classification, and uniform conditions, are very desirable. The Committee is not prepared, however, to deal with the question at the Conference, but considers that each railway should endeavour to make its own classification and conditions uniform with others, as far as may be practicable."

"That all articles, of which the classification is uniform on all railways, be printed in small capitals."

["It was stated that the Oudh and Rohilkhand State Railway, the Eastern Bengal State Railway and the South Indian Railway agree to adopt, for purposes of through booking, the five and special classes of goods obtaining on other railways."]

Resolution No. 53.—"In respect to through goods traffic, each Railway shall publish tables of rates from each of its junctions with foreign lines to every station on its own system. Terminals, when charged, shall be included in the rates quoted."

5. The Conference of 1888, while making a considerable advance towards the acceptance of uniform charges for various descriptions of through coaching traffic, has thus abandoned the scheme, accepted by the Conference of 1884, for uniform rates for all the articles which would have been included in the proposed Section II of the General Goods Classification. It is, therefore, necessary to somewhat modify Resolution No. 1446 R. T., dated 12th December 1887, with the object of making it as far as possible in accord with the conclusions arrived at by the Conference of 1888.

RESOLUTION.—His Excellency the Governor General in Council is accordingly pleased to rule—

(*a*) That in *local* booking of goods, every Railway Administration shall be free to fix its own rates for all staples, subject to the maximum rate and the minimum rate of $\frac{1}{10}$th pie prescribed by Government.

(*b*) That the Eastern Bengal State Railway, and the Oudh and Rohilkhand Railway on its transfer to the State, shall, as soon as is practicable and convenient, adopt, *for through booking purposes*, the five and special classes of goods generally obtaining throughout the Indian Railway system. It is understood that the South Indian Railway Company also agrees to adopt this classification for through booking. If this be so (these three having been hitherto the only important exceptions), the uniformity of the division of goods for through booking into five and special classes will be practically secured throughout India.

(*c*) That in all cases in which the East Indian Railway and the Great Indian Peninsula Railway have come to an agreement as to the inclusion into one of the five classes of any articles, the State Railways, and those Railways* over which the Government has reserved authority with regard to the regulation of rates, shall accept the same classification, provided that the receipts from such article are not of importance as a source of revenue to the railway concerned.

* The Indian Midland.
The Bengal-Nagpur.
The Southern Mahratta.

(*d*) That in the event of the receipts of any such article being of importance as a source of revenue, the Governor-General in Council will be prepared to consider an application from the Railway Administration interested, for the inclusion of the article into a different class, or to its being carried at a differential (or sliding scale) rate.

(*e*) That where an article is carried on the Great Indian Peninsula and East Indian Railways at *special* rates, or, when an article is not included on both these railways in the same class, every railway will be free to classify the article in through booking from time to time as thought desirable. But in such cases where the receipts from such articles are unimportant, the classification adopted by the East Indian Railway should be followed by the State Railways and the three railways indicated in the margin of clause (*c*) *ante*.

(*f*) So long as an article is under clauses (*c*), (*d*) or (*e*) included in any of the five classes, it will on the State Railways and on the railways indicated in clause (*c*) in respect of through booking, be carried at the rates per maund per mile prescribed in the schedule that accompanied Resolution No. 1446R. T., dated 12th December 1887.

(*g*) It will be convenient, whenever the following special (not differential) rates are used on State Railways, that the following nomenclature should be adopted in order to distinguish them:

Class A—$\frac{1}{4}$ pie per maund per mile.
" B—$\frac{1}{5}$ " "
" C—$\frac{1}{6}$ " "
" D—$\frac{1}{7}$ " "
" E—$\frac{1}{8}$ " "
" F—$\frac{1}{9}$ " "
" G—$\frac{1}{10}$ " "

2. Further orders will be passed regarding the Resolutions of the Conference prescribing uniform charges in through booking for certain descriptions of coaching traffic, as soon as it is known how far these proposals are accepted by the Boards of Directors in England, the effect of one of these resolutions being to alter the rates for parcels laid down in the schedule of maximum and minimum rates and fares, which accompanied Resolution No. 1446R.T., dated 12th December 1887.

3. In giving these enlarged powers in regard to rates, His Excellency the Governor General in Council trusts that Railway Administrations will realize the necessity of acting on the general principles which are accepted by the Legislature in England, and which the Railway Commissioners in that country are empowered to enforce; and will recognize that, in through booking, the various Railway Administrations should serve the country as though they were under one management; and that, when there are two alternative routes, the shorter should fix the minimum rate for both routes.

ORDER.—Ordered that this Resolution be communicated, for information and guidance, to the Governments and Administrations and Officers noted in the margin, also for information to the Government of the Punjab, the Agents to the Governor General for Rajputana, Central India and Beluchistan, and the Accountant General, Public Works Department.

The Governments of Madras, Bombay, Bengal, and the North-Western Provinces and Oudh.
The Chief Commissioners of the Central Provinces, Burma, and Assam.
The Resident at Hyderabad.
The Director General of Railways.
The Consulting Engineers to the Government of India for Railways, Calcutta, Lucknow, and Central Division.

Ordered also that this Resolution be published in the Supplement to the *Gazette of India*.

L. CONWAY-GORDON,
Deputy Secretary.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 27th October, 1888.*—Rainfall good in all districts except in Ganjam, Vizagapatam, Godavari, Kistna, Kurnool, Bellary and Anantapur. Standing crops generally good, but withering in Ganjam, Vizagapatam, Kistna, Cuddapah, Bellary, Anantapur, Kurnool, and Coimbatore, and damaged by insects in Ganjam, Vizagapatam, Salem, and Anantapur. Pasture scanty in parts of Kistna and Trichinopoly, and insufficient in Vizagapatam, Cuddapah, Salem, and Coimbatore. Agricultural operations progressing. Prices rising in sixteen districts, falling in three, and stationary in others. General prospects fair except in Ganjam and Vizagapatam, where they are very unfavourable. Scarcity apprehended in Ganjam where rice is selling higher than scarcity rate, though slightly lower than preceding week.

Bombay.—*For week ending 31st October, 1888.*—More or less rain during the week throughout Deccan and Southern Mahratta Country and in parts of Thana and Ratnagiri. Standing crops in parts of Nasik, Poona, and Ahmednagar improved by it. Total rainfall insufficient throughout Presidency, and more required urgently, especially in Guzerat and Kathiawar for standing crops and sowing operations. Cotton damaged by caterpillars in parts of Kathiawar, and standing crops by blight, insects and rats in parts of Karachi, by blight in parts of Hyderabad, and by insects in parts of Kanara. Harvesting of early crops progressing in parts of Karachi, Hyderabad, Upper Sind Frontier, Kaira, Broach, Surat, Nasik, Thana, Colaba, Ratnagiri, Satara, Bijapur, Belgaum, Dharwar, and Kanara, and sowing of late crops in parts of Shikarpur, Hyderabad, Upper Sind Frontier, Ahmedabad, Kaira, Surat, Nasik, Belgaum, Dharwar, and Kathiawar. Probable outturn of early crops in Baroda between six and seven annas. Fodder scarce in parts of Kaira, Khandesh, Nasik, Thana, Sholapur, and Kathiawar. Agricultural stock healthy except in parts of Hyderabad and Kathiawar. Scarcity of drinking-water felt in parts of Broach, Nasik, Kathiawar and Baroda. Prices of food-grains rising in Surat and Sholapur.

Bengal.—*For week ending 30th October, 1888.*—Showers at Julpigori, Gya, Puri, Hazaribagh, and Ranchi; elsewhere no rain. These showers were beneficial to the suffering rice, but general rain is urgently required except in the eastern districts. In these districts the condition of the rice crop is good; but in the rest of the Province, unless early rain falls, considerable loss is expected. In Behar much of the highland rice has been already lost, and the plants are being cut for fodder. *Rabi* sowings too are retarded for want of rain, and are not germinating satisfactorily. The price of rice has risen throughout Behar, and also in some other parts of the Province. In Orissa evil is apprehended from drought.

North-Western Provinces and Oudh.—*For week ending 31st October, 1888.*—Harvesting of the *kharif* continues. *Rabi* sowings are in progress. Rain for them is needed in several districts. Supplies of food-grains are sufficient, but prices are rising in most districts.

Punjab.—*For week ending 31st October, 1888.*—Slight rain in a few districts. Prices are somewhat unsettled; a rise is reported from Delhi and Rawalpindi; in other districts they are stationary or fluctuating. Reaping and harvesting of *kharif* crops, and ploughings for and sowings of *rabi* crops are going on. Rain wanted at Hissar. Crops have suffered for want of rain in parts of Lahore and Sialkote, and those dependent on the Bara Canal in Peshawar have almost dried up. No damage done to crops. Stock cattle are reported healthy. Pasturage or fodder sufficient, except in Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 31st October, 1888.*—Slight rain in Saugor, Jubbulpur, Seoni, Nagpur, Raipur and Bilaspur, with cloudy weather. More rain required for standing crops and for winter sowings. Rice on high land in Sambalpur has withered. Prices high.

Burma.—*For week ending 27th October, 1888.*—In Lower Burma the crop prospect is good, but a little rain is wanted in some districts. In Upper Burma crops promise well, but rain is still wanted in Minbu. Early paddy is being reaped in several districts. The price of paddy has risen in Tharrawaddy, Myadaung, Shwebo and Taungdwingyi districts, and has fallen in Prome, Henzada and Amherst districts.

Assam.—*For week ending 31st October, 1888.*—Weather seasonable and cold. Rain wanted in some districts. Sowing of oilseeds continues. Paddy is being reaped in hill districts. Cold weather potatoes poor in Khasi Hills.

Mysore and Coorg.—*For week ending 31st October, 1888.*—Crops in the Bangalore district improved by slight rainfall; elsewhere more rain is much required. Prospects uncertain in Tumkur and Chitaldrug districts. Outturn fair. Prices slightly risen in Shimoga and Chitaldrug.

Some rain in Coorg during the week. Coffee crop ripening in parts. Rain needed for rice crops.

Berar and Hyderabad.—*For week ending 31st October, 1888.*—Very light rainfall during the week in Berar; more is much needed. Standing crops in fair condition. Cotton picking in progress. *Rabi* sowings nearly completed. Agricultural stock in fair condition. Fodder and pasturage insufficient. Prices of food-grains still high.

Slight rain at Hyderabad. *Kharif* and *rabi* crops suffering for want of rain. Scarcity of fodder everywhere. Prices rising.

Central India.—*For week ending 31st October, 1888.*—Good rain at Indore and slight showers in Bhopal, Bhopawar, Goona and Neemuch. Rain badly wanted in Bhopawar, but reported sufficient in Bhopal. Prospects in Neemuch slightly better.

Rajputana.—*For week ending 31st October, 1888.*—Slight rainfall in Jhallawar and Jeypore, none elsewhere. Agricultural operations unsatisfactory at places. Standing crops in good condition generally. Harvests poor in some tracts. Agricultural stock good generally. Pasturage or fodder sufficient, except in Kherwara, Meywar and parts of Marwar and Jeypore. Prices rising in some parts.

Nepal.—*For week ending 25th October, 1888.*—No rain. Weather seasonable. Prospects good.

W. R. LAWRENCE,
Offg. Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 45.} CALCUTTA, SATURDAY, NOVEMBER 10, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

REVENUE AND AGRICULTURAL DEPARTMENT.

WEATHER SUMMARY FOR OCTOBER, 1888.

The retreat of the south-west monsoon, which takes place in Upper and Central India during September, is continued during October, when the change to cold weather conditions usually spreads to Bengal. At the same time the north-east monsoon commences on the Coromandel Coast. This change has a most important effect on the weather. During the prevalence of the south-west monsoon current, even when it is as feeble as is normally the case during October, moist winds penetrate into Northern India, and, over the head of the Bay and cyclonic storms are still formed. As soon, however, as the final retreat of the south-west current from Northern India takes place, dry winds from north-west and north-east set in, and the area of disturbance is transferred from the north to the centre and south of the Bay. The trajectory of the cyclones is also changed, and, instead of passing northward and north-westward, the storms ordinarily travel more or less on a due westerly course. During the past October this change to cold weather conditions occurred rather suddenly, more particularly in Bengal where there was little or no interval between the disappearance of strongly marked south-west monsoon conditions and the appearance of northerly winds and dry weather. The reason of this sudden change in Bengal, and of the fact that strongly marked cold weather conditions appeared relatively earlier and were more persistent in north-eastern than in north-western India, is not improbably associated with the course of the cyclone which was formed over the Bay in the earlier days of the month. This storm, after travelling from the neighbourhood of the Andamans north-westward towards the East coast of the Peninsula, subsequently turned to north and then to north-east and crossed the coast in the Khoolna and Bakergunj districts. It is probable that it was accompanied by a fall of snow over the North-East Himalayas, and that following this there occurred an outset of relatively cold and heavy air from the mountains, producing high pressures along the foot of the hills and the depression of temperature which occurred in Bengal during the middle weeks of the month.

Towards the close of the month pressure rose very quickly over North-Western India, and a period of exceptionally high readings set in, which brought the average of the month considerably above the normal in this region.

The greatest departure of pressure from the average took place, however, over the more central districts of India and of the Peninsula. In this region a high pressure area appeared about the 9th and held uninterruptedly until the 22nd, when the rapid rise noticed above commenced in the north-west.

Accompanying this generally excessive pressure and, except during the periods of disturbance which occurred at the commencement and close of the month, the winds reported were light, and the weather fine. Temperature was generally low—more especially in Rajputana and the more central stations.

The north-east monsoon.—Shortly after the disappearance of the cyclonic storm of the early days of the month, the wind shifted round to the northward on the Coromandel Coast, some rain fell and appearances pointed to the early setting in of the monsoon in this region, but with the establishment of high pressures over the eastern half of the Peninsula, these favourable indications disappeared, and it was not until the 24th or 25th that conditions changed, and rain of any importance fell on the East coast.

The depression of the 1st to the 8th October.—The reports of the 1st indicated irregular cyclonic movements of the air in Burmah, where the wind was increasing very considerably in force, and it appeared that a cyclonic storm of moderate intensity was forming in the neighbourhood of the Andamans. On the 2nd there was no apparent change in the position of the storm, but it had seemingly increased in intensity and become of considerable importance. At Rangoon and Diamond Island the wind force was 20 miles per hour at 8 A.M. On the 3rd there was no practical change, though, as the barometer had begun to rise at Diamond Island, it was probable that the depression had commenced a north-westerly advance. On the 4th rain, generally in small amounts, was falling all round the head of the Bay, and the storm had advanced north-westward. Judging from the shore observations, the centre lay not far from latitude 17° North Lat. and 89° East longitude. The winds were blowing freshly in Burmah, but were generally moderate in strength round the other shores of the Bay. The chart of the 5th showed that the storm had advanced north-north-west, and that its centre lay in about latitude 19° North Lat. and 89° East longitude. The winds, as reported from the shore observations, were still light. After 8 A.M. on the 5th the curving of the storm towards north or north-east continued, and the chart of the 6th showed that it was moving to north-east, and that its centre had passed to the east of Saugor Island. Strong squally winds were reported from the northern half of the Bay, and rain had fallen in Burmah, Assam, and Bengal. On the evening of the 6th the storm crossed the Bengal Coast in the Khoolna and Bakergunj districts, and at 8 A.M. on the 7th the centre lay near Dacca. Strong winds blew around the storm centre, and rain was reported from Lower Bengal and Assam. On the following day the depression broke up.

Depression of the 27th to 31st October.—On the 27th the barometer fell over the whole of the Indian region. The fall was fairly uniform at first, but on the 28th it was greater in the Peninsula than over Northern India. On the 29th there occurred a recovery, except over parts of the Peninsula where during that and the two following days pressure continued to decrease. The chart of the 31st showed that a storm of considerable intensity had developed over the Bay to the east of the Madras Coast, and that strong cyclonic winds were blowing within the storm area. The further history of this storm, which, so far has been the most severe of the year, belongs to the November summary.

Rain.—The rainfall returns of the month show that rain has been deficient in all parts of the India region, except the Carnatic where there has been an average fall, and in Ceylon where there has been an excess. In the Punjab, Sind, and Cutch, the normal fall during October is small, and the deficiency there is comparatively unimportant; but in the other Divisions there should occur a

considerable amount of rain during the month, and in these Divisions the deficiency is more or less serious, as the following figures show:—

	Inches.		Inches.
In Behar the normal rainfall is	2·69	the actual in the past month	0·20
„ North Bengal ...	5·17	... ...	... 0·04
„ Orissa	9·09	... ...	... 1·98
„ Berars	1·93	... ...	... 0·01
„ Guzerat	1·01	... ...	... 0·05

In the west and south of the Peninsula the variations from the average, though in some places considerable, were smaller than in Northern and Central India.

The following table shows the amount of rain and the difference from the average during the month of October 1888, according to districts, as far as is indicated by the telegraphic returns from the observatories:—

Districts.	Number of stations.	Average rainfall in October.	Difference from the average in October 1888.

W. L. DALLAS,

SIMLA, *5th November, 1888.* for *Offg. Meteorological Reporter to the Government of India.*

W. R. LAWRENCE,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the State of the Season and Prospects of the Crops.

Madras.—*For week ending 3rd November, 1888.*—Rainfall general, heavy in Madras, Chingleput, North Arcot; moderate elsewhere. Standing crops generally good, but withering in parts of Vizagapatam, Kistna, Bellary, Coimbatore; slightly damaged by excessive rain in parts of Chingleput and Tinnevelly, and by insects in parts of Trichinopoly, Tinnevelly, Coimbatore and Salem. Pasture scanty in parts of Kistna and Salem. Agricultural operations progressing. Prices rising in six districts, falling in seven, and stationary in others: general prospects fair, and improving in Ganjam and Vizagapatam. Prices still high in Ganjam. Rice selling higher than scarcity rate.

Bombay.—*For week ending 7th November, 1888.*—Rain during week throughout Deccan and Southern Mahratta Country and in parts of Surat in Konkan. Beneficial to cotton and *jowari* in Surat and to standing crops in Nasik, Poona and Sholapur. More rain generally wanted; urgently in Guzerat and Kathiawar. Cotton damaged by caterpillars in parts of Kathiawar; harvesting of early crops and sowing of late crops progressing generally. Probable outturn of early crops in Hyderabad twelve annas and of cotton in parts of Kathiawar from two to eight annas. Cotton in Baroda poor; in Broach on the whole healthy. Fodder scarce in three talukas of Kaira, five of Nasik, one of Thana, in north-east talukas of Belgaum, and in parts of Hyderabad, Khandeish, Ratnagiri, Sholapur, Kathiawar and Baroda. Scarcity of drinking water felt in parts of Kathiawar and Baroda.

Bengal.—*For week ending 6th November, 1888.*—General rain in Orissa but none elsewhere in the whole province. Want of rain is seriously affecting the rice crop which is already much injured, particularly in Behar. In Orissa the rain of this week is expected to have done much good to the dying crops. In the eastern districts only the rice crop is reported to be good, but even in these districts the want of rain is now beginning to be felt. Rain is required for the *rabi* sowings which are proceeding slowly and are not germinating satisfactorily. Price of rice has risen considerably in most of the Western and Central Bengal districts, and prices generally have risen considerably in Behar. In Cuttack relief works have been opened at Banki and Kanika, but recent rain throughout the district has been beneficial.

North-Western Provinces and Oudh.—*For week ending 7th November, 1888.*—Weather fine; rain needed in eastern districts. *Kharif* crops being harvested and *rabi* sown. Supplies of foodgrains sufficient, but the absence of rain keeps up prices in some districts.

Punjab.—*For week ending 7th November, 1888.*—No rain during the week. A rise in prices is reported from Rawalpindi, in Peshawar they are unsettled, and in other districts they are stationary. Reaping and harvesting of *khurif* crops and ploughings for and sowing of *rabi* crops are in progress. Rain much wanted at Hissar for *rabi* sowings. Crops have suffered for want of rain in parts of Lahore, and those dependent on the Bara Canal in Peshawar have almost dried up. Outturn reported to be poorer in Hissar, Sialkote, and Dera Ismail Khan. No damage done to crops. Stock cattle are healthy. Pasturage or fodder sufficient, except in Hissar and Dera Ismail Khan.

Central Provinces.—*For week ending 7th November, 1888.*—Slight rain in Nimar, Nagpur and Raipur, and a good fall in part of Bilaspur. Weather cloudy, more rain urgently required for autumn crops and winter sowings. Prices rising in northern districts. Cattle in good condition.

Burma.—*For week ending 3rd November, 1888.*—There were showers in a few districts. Elsewhere no rainfall. Rain is generally wanted for the later crops, and especially in the Akyab, Pegu, Prome, Bassein, Thayetmyo, Bhamo, Yeu, Lower Chindwin, Pokoko and Minbu districts; still crops for the most part promise well. Prices of grain are in most districts stationary, but the price of paddy has fallen in Henzada and Moulmein. Nowhere have prices risen.

Assam.—*For week ending 7th November, 1888.*—Weather seasonable. Rain wanted in most districts. Paddy being reaped, cotton plucked and potatoes gathered in hill districts. Sowing of oilseeds continued. Tea operations coming to a close.

Mysore and Coorg.—*For week ending 7th November, 1888.*—Good rain in the Civil and Military station. Rainfall good throughout the State, except in the Southern and North-Western districts. Standing crops in parts of the Mysore district are fading for want of more rain, elsewhere they are in good condition. Prospects improved by rainfall. Harvesting of dry crops in progress; outturn favourable. Prices slightly fallen.

Some rain in Coorg during the week. Picking of coffee crop has commenced.

Berar and Hyderabad.—*For week ending 7th November, 1888.*—Slight rain in some districts during the week. The *kharif* crop is not as good as was expected owing to scanty rainfall. The *rabi* crops also need more rain. Agricultural stock in fair condition. Fodder insufficient. Prices of grain steady.

Slight rain in Hyderabad during the week. Rainfall of week has benefited *rabi* sowing. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 7th November, 1888.*—Western Malwa, probable outturn reported below average and crops damaged. Condition of stock fair, except in Goona. No other changes.

Rajputana.—*For week ending 7th November, 1888.*—Rainfall slight in Jhallawar and Ulwar. *Rabi* sowings commenced. Standing crops generally good at places. Harvests fair generally. Agricultural stock good at most places. Pasturage or fodder sufficient, except in Kherwara, Meywar, and parts of Malwa and Jeypore. Prices steady generally. Cotton injured in Harowtee, but favourable in Jeypore.

Nepal.—*For week ending 1st November, 1888.*—No rain. Weather cold, and mornings foggy. Garlic and onions are being sown. Prospects generally good.

W. R. LAWRENCE,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

No. XXVIII OF 1888-89.

APPROXIMATE STATEMENT OF GROSS RECEIPTS AND EXPENSES OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total Receipts from 1st April to date*, audited figures have been used as far as possible.

Latest Return received.	Railways.	Total mean length open.	Receipts for week ending 15th October, 1887. Total.	Per mile open.	Total mean length open.	Receipts for week ending 13th October, 1888. Total.	Per mile open.	Total Receipts from 1st April to 15th October, 1887. Total.	Per mile open per week.	Total Receipts from 1st April to 13th October, 1888. Total.	Per mile open per week.	Total increase in 1888-89.	Total decrease in 1888-89.

SUPPLEMENT TO

The Gazette of India.

No. 46.} CALCUTTA, SATURDAY, NOVEMBER 17, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 10th November, 1888.*—Rainfall general; fair in all districts, but more rain still wanted in parts of Vizagapatam and Salem. Standing crops generally good and reviving in the affected districts, but damaged by floods and cyclone in parts of Chingleput, and by insects in Trichinopoly, Tinnevelly, Coimbatore and Salem. Pasture sufficient except in parts of Coimbatore and Salem. Agricultural operations progressing. Prices falling in eleven districts, rising in four and stationary in others. General prospects fair and improving in Ganjam and Vizagapatam. Rice in Ganjam, though cheaper than previous week, is still higher than scarcity rate.

Bombay.—*For week ending 14th November, 1888.*—Good rain during week throughout Presidency Proper, except in Surat, Panch Mahals, Baroda, Khandesh and Kanara, where the fall was light. Standing early crops and prospects of late crops and of fodder and water-supply greatly improved by it. More rain still wanted in parts of Guzerat, Khandesh, Nasik and Ahmednagar. Standing crops in one taluka of Nasik and two of Belgaum, cotton in parts of Baroda and reaped crops in parts of Thana and Kathiawar, and fodder in parts of Ratnagiri damaged by excessive rain. Crops also damaged by blight, insects and drought in parts of Karachi, and cotton damaged by storm in parts of Kathiawar. Harvesting of early crops and sowing of late crops progressing in several districts, as well as cotton-picking in Shikarpur and Khandesh. Harvesting impeded by excessive rain in parts of Colaba and Ratnagiri. Probable outturn of early crops in Nasik nine annas and in Thana from six to twelve annas. Early

crops generally poor in Colaba and Baroda. Cotton in Guzerat and Kathiawar promises well. Fodder scarce in parts of Hyderabad, Khandesh, Sholapur, Nasik, and Thana.

Bengal.—*For week ending 13th November, 1888.*—General rain in Orissa, and showers also in the Burdwan, Birbhum, Hughli, Murshidabad and Singbhum districts. Heavy showers in Calcutta on the 13th. In Orissa the crops have considerably improved, except in parts of the Balasore district where the recent rain was scanty. In other parts of the Lower Provinces the crops are suffering from drought. The winter rice harvest is generally expected to be deficient, and very poor in parts of Behar. In the eastern districts only the crop is reported to be fair. Rice has proved almost an absolute failure in a strip of some ten miles along the northern part of the Muzufferpur and Durbhanga districts on the frontier of Nepal. *Rabi* and poppy sowings are proceeding, but are retarded in many places for want of sufficient moisture. Prices continue generally high, but show a tendency to fall in some districts.

N.-W. P. and Oudh.—*For week ending 14th November, 1888.*—Weather generally bright and clear. *Kharif* harvesting nearly completed. *Rabi* sowings in progress, but more rain for them is much needed. Poppy sowing and cotton-picking commenced. Supplies sufficient. Prices nearly stationary. The condition of cattle is satisfactory.

Punjab.—*For week ending 14th November, 1888.*—No rain during the week. Prices somewhat unsettled, but a rise is reported from two districts only. Reaping and harvesting of *kharif* crops and ploughing for and sowing of *rabi* crops are in progress. Rain much wanted at Hissar and Sialkote for *rabi* sowings. Crops dependent on Bara Canal in Peshawar have almost dried up on account of scarcity of water. Outturn reported to be below average in some districts. No damage done to crops. Stock cattle are generally healthy. Fodder sufficient, except in Hissar, Dera Ismail Khan and in parts of Mooltan and Rawalpindi.

Central Provinces.—*For week ending 14th November, 1888.*—Showers have fallen throughout the provinces, but in the northern districts they have been too light to be of much benefit; they have greatly improved the prospects of the *rabi* crops in the south and in Chhattisgarh, and have done good to the rice in Chhattisgarh and Sambalpur. The cloudy weather has been injurious to linseed. Cattle in good condition. Prices steady.

Burma.—*For week ending 10th November, 1888.*—Slight rain in the Kyaukphyu, Sandoway, Bassein, Tavoy, Bhamo, Shwebo, Minbu and Yamethin districts; in the Myadaung, Sagaing, Myingyan, Pakokku, Meiktila and Yamethin districts there were scarcely appreciable showers. Over one inch of rain fell in Henzada, Toungoo, Mergui and Kyauksè. More rain is wanted. Average crops are still expected. The price of paddy has fallen in Yeu and Pakokku and is stationary elsewhere.

Assam.—*For week ending 14th November, 1888.*—Weather cold and dry in some districts; sowing of oilseeds not yet finished. Tea season nearly over. Prospects of crops in general, good.

Mysore and Coorg.—*For week ending 14th November, 1888.*—Rainfall general and good. Crops in good condition, and in parts of the Mysore district dry crops reported to be much improved. Outturn generally favourable. No material change in prices.

Some rain in Coorg. The rice crop has generally benefited by timely rain.

Berar and Hyderabad.—*For week ending 14th November, 1888.*—Slight rain in some places in Berar. Cotton-picking in progress; *jowari* in ear, sowing of *rabi* over, crops above ground. Cattle healthy, fodder and pasturage insufficient. No noticeable change in price of food grains.

Good rain at Hyderabad. The rainfall of the week has proved of little benefit to *abi* crops; it has, however, much benefited *rabi* sowings. Prices falling.

Central India.—*For week ending 14th November, 1888.*—Slight rain in most parts of Central India. Prices falling in Neemuch. Opium sowing started in Bhopawar and Neemuch, and reported poor in Western Malwa. No other changes since last week.

Rajputana.—*For week ending 14th November, 1888.*—Rainfall moderate and partial. *Rabi* sowings in progress. Standing crops good. Harvest generally poor. Agricultural stock good. Pasturage or fodder sufficient except in Kherwara, Meywar, and parts of Marwar and Jeypore. Prices steady generally. Cotton fair in Jeypore and Ulwar.

Nepal.—No report received.

W. R. LAWRENCE,

Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

RETAIL PRICES FOR THE 1st AND 2nd HALVES OF SEPTEMBER AND 1st HALF OF OCTOBER 1888.

SUPPLEMENT TO

The Gazette of India.

No. 47.} CALCUTTA, SATURDAY, NOVEMBER 24, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and prospects of the Crops.

Madras.—*For week ending 17th November, 1888.*—Rainfall general; fair in all districts, but more rain wanted in parts of Salem. Standing crops generally good and reviving in the affected districts, but damaged by excessive rain in parts of Vizagapatam, Chingleput, North Arcot and Tinnevelly, and by insects in Trichinopoly, Tinnevelly, Coimbatore and Salem. Agricultural operations progressing. Prices falling in thirteen districts, rising in two, and stationary in others. General prospects fair; considerably improved in Ganjam, Vizagapatam and Madura. Rice in Ganjam lower than scarcity rate.

Bombay.—*For week ending 21st November, 1888.*—Rain during week in parts of Poona, Ahmednagar, Sholapur, Satara, Bijapur, Belgaum, Dharwar, Kanara, Ratnagiri and Kathiawar; more rain wanted especially for late crops throughout Khandesh and in three talukas of Nasik, six of Ahmednagar and two of Belgaum. Exotic cotton damaged by blight in two talukas of Dharwar, and crops generally by blight, drought and rats or insects in Karachi and Ratnagiri. Cotton in one taluka of Sholapur, early *jowari* in one taluka of Dharwar and crops in parts of Baroda damaged by the late rain. Standing crops otherwise good. Harvesting of early crops and sowing of late crops progressing in several districts, and cotton picking in parts of Shikarpur, Kaira and Khandesh. Probable outturn of early crops, ten annas in Karachi and from six to nine annas in Nasik. Fodder scarce in parts of Hyderabad, Khandesh and Baroda and in six talukas of Nasik and one of Ahmednagar. Scarcity of water felt in parts of Broach, Khandesh and Baroda.

Bengal.—*For week ending 20th November, 1888.*—Rainfall during the week has been general, though slight, throughout Bengal Proper, Orissa and Chota-Nagpore. It was heavier in the Burdwan and Presidency Divisions than elsewhere in the Lower Provinces. In Behar a few showers fell in the districts of Gya, Shahabad, Purneah, Malda and Sonthal Parganas, but the remaining districts in this province were absolutely rainless. The rain has been rather too late to do much good to the winter rice, but has been beneficial to the *rabi* crops. In the Patna and parts of the Bhagulpore Divisions the rice crop has been considerably destroyed, and the *rabi* prospects also are not hopeful on account of the drought. Distress is apprehended in parts of the Patna Division, and the latest report shows that the extreme north of Durbhunga and Mozufferpore and the east of Patna are in a precarious state.

North-Western Provinces and Oudh.—*For week ending 21st November, 1888.*—Weather clear and cool. Rain required in places. *Rabi* germinating well. Poppy sowings in progress. Sugarcane pressing begun. Markets well supplied. Prices steadier. Health of cattle good.

Punjab.—*For week ending 21st November, 1888.*—No rain during the week. Prices almost stationary. Harvesting of *kharif* crops and sowings of *rabi* crops are in progress. Rain much wanted at Hissar and Sialkote for *rabi* sowings. Outturn reported to be average in some districts. Prospects of *rabi* crops unfavourable for want of rain in Peshawar. No damage to crops. Stock cattle generally healthy. Fodder sufficient except in Hissar, Dera Ismail Khan and Rawalpindi. Poppy cultivation in progress at Amritsar.

Central Provinces.—*For week ending 21st November, 1888.*—Very light rain in Saugor, Jabalpur and Sambalpur. Recent rain has improved prospects of winter crops in south and east districts, but has been insufficient in north. Autumn crops being reaped. Prospects poor in Jabalpur and Nimar, elsewhere generally favourable. Cattle in good condition.

Burma.—*For week ending 17th November, 1888.*—There was a fair rainfall in Lower Burma except in the Arakan Division. The crop prospect has in consequence improved and is now decidedly good, except in Prome and Thayetmyo. In Upper Burma rain fell in all districts except Yeu, Shwebo, Upper Chindwin and Lower Chindwin, and the crop prospect is generally good; but more rain is wanted in Shwebo, Yeu, Myingyan, Pakokku, Minbu and Meiktila. The price of paddy has fallen in Tharrawaddy, Mandalay, Myadaung, Lower Chindwin and Yamethin Districts, and has risen in Shwebo, Myingyan and Minbu Districts.

Assam.—*For week ending 21st November, 1888.*—Weather cold. Late rain in all districts except Kamrup has done much good. Harvest of winter rice has begun in most districts. Sowing of oilseeds continues. Tea season nearly over.

Mysore and Coorg.—*For week ending 21st November, 1888.*—Rainfall slight during the week throughout the State. Condition of crops and prospects good. Sowing operations almost completed. Outturn of harvests fair. Prices slightly risen in the Bangalore District.

Crops in good condition in Coorg. Prices stationary.

Berar and Hyderabad.—*For week ending 21st November, 1888.*—A little rain in Amraoti and Bassim Districts. Second pickings of cotton commenced in some districts. *Rabi* crops are above ground and in good condition. Cattle healthy. Pasturage insufficient. Prices same as last week.

Very slight rainfall during the week at Hyderabad. Rainfall of week favourable to *rabi* sowings, but not of much benefit to *abi* crops. Prices stationary.

Central India.—*For week ending 21st November, 1888.*—No rain during the week and no changes since the last report.

Rajputana.—*For week ending 21st November, 1888.*—Slight rainfall in Harowtee and Tonk. *Rabi* sowings in progress. Standing crops good. Harvests poor on the whole. Agricultural stock good generally. Fodder sufficient except in Kherwara, Meywar and some parts of Marwar and Jeypore. Prices falling in some places, steady in others. Cotton and opium good in Marwar, fair in Jeypore.

Nepal.—*For week ending 8th November, 1888.*—No rain. *Marwa* is being harvested. Prospects good.

For week ending 15th November, 1888.—A few drops of rain. Weather getting cooler day by day. Cloudy weather for the last two days. *Kodo* is being harvested. Garlic is progressing.

W. R. LAWRENCE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

MODIFICATION OF THE RULES FOR THE REGULATION OF APPOINTMENTS IN THE SECRETARIAT CLERICAL SERVICE OF THE GOVERNMENT OF INDIA AND ATTACHED OFFICES.

No. 39 / 2970—84.

Extract from the Proceedings of the Government of India in the Home Department (Public),—under date Simla, the 13th November 1888.

READ—

Home Department Notification No. 1817, dated 3rd July 1888, publishing Rules for the regulation of appointments in the Secretariat Clerical Service of the Government of India and attached offices.

RESOLUTION.

The rules published with the Notification read in the preamble are applicable to (1) the office of the Accountant General, Military Department, and (2) the Military Account Offices in the Bengal Presidency, in common with the other offices enumerated in paragraph 18 of the rules. On reconsideration, the Governor-General in Council is satisfied that the special account duties of the Military Account Department render it necessary that clerks for these offices should be selected under a separate system or should be recruited from the Army. The service is, moreover, Imperial, open to all India, and not confined to the Bengal Presidency. His Excellency in Council is therefore pleased to direct that the offices in question shall be excluded from the list in paragraph 18 of the rules, and be placed on the same footing as the Department of Finance and Commerce.

2. Rule 18 of the rules published in the Notification of 3rd July 1888 will accordingly run as follows:—

18. The above rules will apply to the Secretariat Offices of the Government of India, except the Foreign Department, and the Department of Finance and Commerce, and the office of the Accountant General, Military Department, whenever the latter Department or office fill vacancies by recruitment of officers already holding clerical appointments in any Government Account Office. When the Department of Finance and Commerce, and the

office of the Accountant General, Military Department, do not recruit in this manner, the rules will apply. They will also apply to the offices of—

The Sanitary Commissioner with the Government of India,
The Surgeon General with the Government of India,
The Director General of the Post Office of India,
The Northern India Salt Revenue Department,
The Inspector General of Forests,
The Director General of Telegraphs,
The Accountant General, Public Works Department,
The Consulting Engineers for Railways,
The Surveyor General of India,
The Superintendent of the Geological Survey,
The Meteorological Reporter to the Government of India,
The Commissary-General-in-Chief,
The Commissary-Generals of Circles,
The Director General of Ordnance in India,
The Inspector General of Ordnance,
The Surgeon General, Her Majesty's Forces,
The Office Establishments of the several Arsenals, Depôts and Factories in Bengal,

and to such other Imperial or Provincial offices as may hereafter be notified as having adopted them.

3. His Excellency in Council is also pleased to direct that after the words "Accountant General" in the second last line of Rule 4 of the rules of the 3rd July, the words "Military Department and of the Accountant General" shall be inserted.

ORDER.— Ordered, that a copy of this Resolution be forwarded to all Departments of the Government of India;

* Surgeon-General with the Government of India.
Sanitary Commissioner with the Government of India.
Registrar, Calcutta University.

heads* of offices under the Home Department;
Governments of Bengal, the North-Western Provinces and Oudh and the Punjab, and the Chief Commissioner, Central Provinces; and
the Secretary to the Board of Examiners, Calcutta, for information; in continuation of Home Department communication Nos. 1818—1830, dated 3rd July 1888.

Ordered also, that a copy of the Resolution be published in the *Gazette of India* for general information.

A. P. MACDONNELL,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

HOME DEPARTMENT.

EXECUTION OF LEASES OF HOUSES TO THE TELEGRAPH DEPARTMENT.

No. 1762—63.

Extract from the Proceedings of the Government of India in the Home Department (Judicial),—under date Calcutta, the 28th November, 1888.

READ—

A communication from the Public Works Department, No. 571 B., dated 25th October 1888.

RESOLUTION.

IN exercise of the power conferred by the thirty-third and thirty-fourth of Vict., Cap. fifty-nine, Section two, the Governor General in Council is pleased to declare that the undermentioned class of instruments referred to in the twenty-second and twenty-third of Vict., Cap. forty-one, Section two, may be executed by the Director and Deputy Director General of Telegraphs :—

Leases of houses to the Telegraph Department, containing, where necessary, an agreement making the Government liable for loss by fire caused by the act of the lessee; provided that the rent reserved in such lease shall not exceed Rs. 500 a month.

ORDER.—Ordered, that this Resolution be communicated to the Public Works Department, and be published in the Supplement to the *Gazette of India*.

(True Extract.)

A. P. MACDONNELL,

Secretary to the Government of India.

(*a*) Includes the Cawnpore-Achnera State Railway.
(*b*) Includes the Katni-Umaria State Railway.
(*c*) Includes the Bellary-Kistna State Railway.
(*d*) Total receipts from 15th September to 5th November, 1887.
(*e*) Includes the Amritsar-Pathankot and Rajpura-Patiala State Railways.
(*f*) Includes the Northern Bengal, Dacca, Kaunia-Dharlla and Assam-dehar State Railways.

CALCUTTA,
The 29th November, 1888.

M. C. BRACKENBURY, *Major, R.E.*,
Under-Secretary

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and prospects of the Crops.

Madras.—*For week ending 24th November, 1888.*—Rainfall fair in Tanjore and Madras and little or none elsewhere; more rain wanted in parts of Ganjam, Coimbatore, and Salem. Standing crops generally good and reviving in the affected districts, except in one taluk in Coimbatore where wet crops are withering. Dry crops damaged by insects in parts of Tinnevelly and Coimbatore. Pasture generally sufficient. Agricultural operations progressing. Prices falling in nine districts, stationary in ten, and rising in others. General prospects fair and improving in all the affected districts. Rice in Ganjam cheaper than last week and lower than scarcity rate.

Bombay.—*For week ending 28th November, 1888.*—Slight rain during week in parts of Shikarpur, Hyderabad, and Poona. More rain wanted for late crops in Khandesh, Nasik, and Ahmednagar. Cut crops damaged by rain in one taluka of Hyderabad, and exotic cotton injured by blight in parts of Dharwar; standing crops otherwise good. Harvesting of early crops and sowing of late crops progressing generally. Cotton-picking continues in parts of Kaira and Khandesh. Probable outturn of early crops in Nasik from seven to nine annas. Fodder scarce in parts of Hyderabad, Broach, Khandesh, and Kathiawar, and in six talukas of Nasik and one of Ahmednagar. Scarcity of drinking water felt in parts of Khandesh and in coast villages of Broach.

Bengal.—*For week ending 27th November, 1888.*—No rain during the week. Weather has been cloudy for the last two days. Rice harvest has begun, and the general outturn is expected to be considerably below the average. In several districts the outturn is estimated at about eight annas and in a few districts about twelve annas of an average crop. In some parts of the Patna Division the crop has proved a failure. *Rabi* crops have improved by the late rain, but in parts of Behar and Chota Nagpore, where there was no rain, sowings are backward, and prospects are not hopeful. Poppy cultivation is proceeding well. Price of rice during the past fortnight has somewhat fallen in Behar and in some of the western and central districts, but has risen in East Bengal generally.

North-Western Provinces and Oudh.—*For week ending 28th November, 1888.*—A little rain fell during the week in a few districts, but more is urgently needed everywhere for *rabi* sowings which have now to be irrigated. Late *kharif* being cut. Poppy sowings in full progress. Markets well stocked and prices stationary. The health of cattle continues good.

Punjab.—*For week ending 28th November, 1888.*—Rain has fallen in all districts except Lahore. Prices are unsettled in Delhi, rising in Rawalpindi, falling in Dera Ismail Khan and Peshawar, and in other districts are stationary. Reaping and harvesting of *kharif* crops nearly completed. Sowings of *rabi* crops are in progress. Rain much wanted at Hissar for *rabi* sowings and at Lahore for standing crops. Outturn average in Shahpur. Prospects improved by recent rain. No damage to crops. Stock cattle are generally healthy. Fodder sufficient except in Hissar and Dera Ismail Khan and in parts of Mooltan and Rawalpindi.

Central Provinces.—*For week ending 28th November, 1888.*—Weather cloudy and cool. Rain wanted for winter crops. Autumn crops being harvested; outturn rather poor in Northern Districts, but fair elsewhere. Winter sowings retarded in Jabalpur. Cattle in good condition.

Burma.—*For week ending 24th November, 1888.*—In Lower Burma there was a little rain in most districts and the crop prospect is generally good. In parts of Thayetmyo, Prome, Pegu, and Mergui the rainfall has been insufficient. In Upper Burma no rain fell and the rainfall has been short in Shwebo, Yeu,

Myingyan, Pakokku, Minbu, and Meiktila, still crops are generally doing well. The price of paddy has risen in the Tharrawaddy, Thayetmyo, Upper Chindwin and Minbu districts, and has fallen in Tavoy, Mandalay, Shwebo, Lower Chindwin and Meiktila; elsewhere they are stationary.

Assam.—*For week ending 28th November, 1888.*—No rain. Weather cold. Reaping of late rice continues. Sowing of oilseeds almost over. Prospects generally favourable.

Mysore and Coorg.—*For week ending 28th November, 1888.*—Slight rain in Hassan and none elsewhere. Standing crops in good condition except in parts of the Mysore district where they need more rain. Harvesting of dry crops progressing; outturn generally favourable. Prices slightly fallen in Kolar and Chittaldroog districts.

Slight rain in Coorg during the week. Standing crops in good condition.

Berar and Hyderabad.—*For week ending 28th November, 1888.*—Hailstorm during the week in Amraoti district. Picking of cotton continues. Harvesting of *kharif* crops commenced. General condition of *rabi* crops good. Agricultural stock in good condition. Fodder insufficient. Prices stationary.

No rain during the week in Hyderabad. Reaping of *abi* crops commenced. *Rabi* crops good. Prices stationary.

Central India.—*For week ending 28th November, 1888.*—Some rain during the week in Bhopal in Bundelkhand. Condition of standing crops reported bad, and of pasturage and fodder average. No other changes.

Rajputana.—*For week ending 28th November, 1888.*—Slight rain in Bhurtpore. Agricultural operations statisfactory. *Rabi* sowing continues. Standing crops good. Harvests poor at some places. Agricultural stock good generally. Pasturage or fodder good, except in Kherwara, Meywar, and some parts of Marwar. Prices steady generally. Cotton, opium, and oil-seed crops good in Marwar. Cotton fair in Jeypore and Ulwar.

Nepal.—*For week ending 22nd November, 1888.*—No rain. Weather seasonable. Prospects good.

SUPPLEMENT TO

The Gazette of India.

No. 49.} CALCUTTA, SATURDAY, DECEMBER 8, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and prospects of the Crops.

Madras.—*For week ending 1st December, 1888.*—No rain in Ganjam and Vizagapatam, poor in Kistna, Bellary, Anantapur, Kurnool, Malabar, and South Canara, and fair elsewhere. More rain wanted in parts of Coimbatore, Salem and Trichinopoly. Standing crops generally good and improving in the affected districts, but wet crops withering in one taluk of Coimbatore. Crops damaged by disease and insects in parts of South Arcot and Coimbatore and by excessive rain in Tinnevelly. Pasture generally sufficient except in parts of Salem and Coimbatore. Agricultural operations progressing. Prices falling in five districts, rising in four and stationary in others. General prospects favourable and improving in all the affected districts. The price of rice in Ganjam same as last week; that of other grains higher.

Bombay.—*For week ending 5th December, 1888.*—Rain in parts of Karachi, Khandesh, Poona, Ahmednagar, Sholapur, Satara, Belgaum and Kanara; more needed urgently in three talukas of Ahmednagar. Wheat and gram in one taluka of Belgaum and exotic cotton in one taluka of Dharwar damaged by blight; standing crops otherwise good except wheat in Broach and late crops generally in Khandesh and parts of Nasik and Upper Sind Frontier, which need moisture. Harvesting of early crops and sowing of late crops progressing in several districts, and cotton-picking in parts of Hyderabad, Broach and Khandesh; probable outturn of early crops in Belgaum from 6 to 12 annas. Fodder scarce in eight talukas of Nasik, one of Ahmednagar and in parts of Hyderabad, Broach, Khandesh, Kathiawar, and Baroda. Scarcity of drinking-water in parts of Khandesh and Baroda. Prices rising in one taluka of Nasik.

Bengal.—*For week ending 4th December, 1888.*—Rainfall has been fairly general over the whole of Behar, except in parts of the Durbhunga and Chumparun districts, while showers are also reported in places in North Bengal and Chota Nagpore. In Behar prospects of the *rabi* crops look brighter on account of the rain, but in Chota Nagpore more rain is wanted. Rice harvest is progressing, and the outturn will be generally deficient, except in parts of East Bengal and Chota Nagpore, where a fair crop of 12 to 14 annas is expected. In most districts rice is estimated to be only half of an average crop, and in parts of the Patna Division it has failed entirely. Poppy sowings are nearly finished, and prospects are generally favourable. In the north of Tirhoot and parts of Chumparun distress among the people is apprehended owing to the failure of the rice crop and the poor prospect of the *rabi*.

N.-W. P. and Oudh.—*For week ending 5th December, 1888.*—Slight rain fell during week, doing much good, but more is still needed, especially for crops on high lands. *Rabi* sowings approaching completion, except poppy sowings, which are still in progress. Supplies ample and prices slightly falling where previously high. The condition of agricultural stock continues satisfactory.

Punjab.—*For week ending 5th December, 1888.*—No rain during the week. Prices are unsettled in Delhi, rising in Rawalpindi, and stationary in other districts. Reaping and harvesting of *kharif* crops nearly completed; sowings of *rabi* crops still in progress. Rain much wanted at Hissar for *rabi* sowings and at Lahore for standing crops. Prospects improved in Peshawar and good in Jullundur. Crops flourishing in Amballa. Stock cattle are generally healthy. Fodder sufficient, except in Hissar, Dera Ismail Khan, parts of Multan, and Rawalpindi. Poppy sowings commenced in Amritsar.

Central Provinces.—*For week ending 5th December, 1888.*—Weather cloudy and cool. Slight rain in Jabalpur and Seoni, and fair in Bilaspur. Winter sowings retarded in Jabalpur, but nearly completed elsewhere. Autumn crops being harvested. Slight damage by hail in parts of Bilaspur. Cattle in good condition.

Burma.—*For week ending 1st December, 1888.*—Practically no rain has fallen, but crop prospects remain generally good, except in the Amherst, Prome, and Thayetmyo districts of Lower Burma, where crops have suffered from want of rain, and in Akyab in which 20,000 acres of crops have been destroyed. In Upper Burma want of rain is being felt in Ye-u, Minbu, Meiktila, and in a part of Pakôkku. The price of rice has risen in Tharrawaddy, Prome and Minbu, and fallen in Henzada, Thayetmyo, Tavoy, Shwebo, Upper Chindwin and Pyinmana districts.

Assam.—*For week ending 5th December, 1888.*—Weather cold; harvesting of winter rice continues; sowing of mustard completed; pulses being gathered in some districts; tea season over with prospects generally good.

Mysore and Coorg.—*For week ending 5th December, 1888.* Rainfall general but very slight. Crops in parts of the Mysore district need more rain, elsewhere they are reported to be in good condition. Harvesting operations almost completed in parts. Outturn fair. No material change in prices.

No rain in Coorg during the week. Standing crops in good condition. Prices stationary.

Berar and Hyderabad.—*For week ending 5th December, 1888.*—Picking of cotton and harvesting of food crops continue. General condition of *kharif* crops is fair. *Rabi* also promises well. Agricultural stock good. Fodder insufficient. Prices stationary.

No rain at Hyderabad during the week. Harvesting of *rabi* crops continues; estimated outturn eight annas, in some places only five annas. *Rabi* crops good. Prices stationary.

Central India.—*For week ending 5th December, 1888.*—Very slight rain in Bundelkhand only. Crops reported to be suffering from want of water in Bhopawar. No other changes during the week.

Rajputana.—*For week ending 5th December, 1888.*—No rain. *Rabi* sowings still in progress at some places or completed and satisfactory at others. Standing crops good generally. Harvests fair. Agricultural stock in good condition generally, except in parts of Marwar. Pasturage and fodder sufficient, except in Kherwarra, Meywar, and parts of Marwar. Prices steady generally. Cotton and opium crops good in Marwar. Cotton fair in Jeypore.

Nepal.—*For week ending 29th November, 1888.*—No rain. Weather cloudy. Land is being prepared for wheat crop.

W. R. LAWRENCE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

PUBLIC WORKS DEPARTMENT.

RAILWAY TRAFFIC.

GENERAL RULES FOR WORKING INDIAN RAILWAYS.

No. 018R.T., dated Calcutta, the 28th November 1888.

RESOLUTION—By the Government of India, Public Works Department.

Read again—

Section 8 of Act IV (the Indian Railway Act) of 1879.

Public Works Department Notification No. 299, dated 13th September 1880, publishing the General Rules for all Railways in India, and Public Works Department Circular No. 17 Railway, dated 21st August 1880.

Notification by the Government of India in the Foreign Department, No. 1356 I., dated the 16th April 1884.

Notification by the Government of India in the Foreign Department, No. 3108 I., dated the 10th September 1885.

Public Works Department Resolution No. 789 R. T., dated 2nd July 1887, publishing revised rules 342 and 343 of the General Rules for all Railways in India.

Public Works Department letter No. 871 R. T., dated 19th July 1887, to the Consulting Engineer for Railways, Central Division.

Read also—

Letter from the Consulting Engineer to the Government of India for Railways, Central Division, No. 2206 T., dated the 17th October 1888, and enclosures.

OBSERVATIONS.—In accordance with the provisions of Section 8 of the Indian Railway Act, IV of 1879, as extended to the lands in the territories of the Native States of Nandgaon, Khairagarh and Rewah, occupied by the Bengal-Nagpur Railway Company, Limited, by the Notifications of the Government of India in the Foreign Department, Nos. 1356 I., dated 16th April 1884, and 3108 I., dated 10th September 1885, the Agent and Chief Engineer of that Railway Company has applied that the General Rules for Indian Railways, which have received the sanction of the Governor General in Council and were published in the *Gazette of India*, dated 18th September 1880, may be applied to the Bengal-Nagpur Railway with the exception of Rules 342 and 343, which he requests may be modified so as to read as follows:—

No. 342.—No engine or train shall be moved from any station until the Driver has in his possession a "Line Clear," "Caution Message," or other permission written on the authorized form showing that he can proceed to the next station. The Driver is to receive this written permission from no other person than the Guard of his own train, or from the Station Master, or from one of the Station staff duly authorized for such duty; but on all occasions when the Guard does not personally deliver the permission to the Driver, it must be countersigned by the Guard before

delivery to the Driver. The Driver must also receive from the Guard the usual starting signal before moving.

When a train is arranged to run through a station without stopping, the written permission to proceed to the next station may be handed to the Driver direct by the Station Master or other authorized person of the Station staff, and a duplicate of it handed to the Guard in the same manner.

No. 343.—The Station Master, or other authorized person of the Station staff, is to hand the written permission to the Guard, who must satisfy himself that it is properly filled up and dated with the time added, and is signed in full and in ink, and that it applies to the particular train or engine for which it is given and received before handing it to the Driver. The Driver must also satisfy himself on these points before starting.

This written permission is never to be given to the Driver until the train is to start; and when waiting to pass another train, it must not be given to the Driver until the whole of such other train has come in and is clear of the points.

When a train is not timed to stop at a station, and the written permission is handed both to the Driver and Guard of the train, the Station Master will be held wholly responsible that it applies to the particular train or engine for which it is given, and that it is properly filled up and dated, with the time added, and is signed in full and in ink.

RESOLUTION.—With Rules 342 and 343 altered as proposed, and with the exception of Section XVII which refers to the working of a single line of Railway on the system termed in Rule 3 of the said Rules "Train Despatching," the Governor General in Council is pleased, under section 8 of the said Act as so extended, to sanction the application to the Bengal-Nagpur Railway of the General Rules for Indian Railways as published in the *Gazette of India*, dated 18th September 1880.

ORDER.—Ordered that the General Rules, which have already been published in the *Gazette of India*, be further notified to the Railway servants and the public by a copy thereof [with the exception and alterations noted] and of this Resolution being kept open to inspection free of any charge in the Office of the Station Master of every station on the said Railway.

Ordered also that this Resolution be communicated to the Consulting Engineer to the Government of India for Railways, Central Division, for information, and that it be published in the *Gazette of India*.

R. C. B. PEMBERTON, *Colonel, R.E.*,
Secretary to the Govt. of India.

SUPPLEMENT TO

The Gazette of India.

No. 50.} CALCUTTA, SATURDAY, DECEMBER 15, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weather Summary for November, 1888.

The month of November forms a part of the transition period from the south-west monsoon to the north-east monsoon. In Northern and Central India fine bright weather with clear skies and rapidly diminishing temperature usually obtains almost without interruption during the month. In the north of the Bay of Bengal fine weather with light north-easterly winds generally prevails, but skies cloud over in that area as well as in Bengal during stormy weather in the south of the Bay. The south-westerly winds of the south-west monsoon continue to blow during the month at the entrance of the Bay. The humid air current of which these winds form a part, instead of continuing to move in the same general direction up the Bay, gradually curve round in the south and centre of the Bay and finally advance to the Coromandel Coast districts to which it gives humid north-east winds and frequent rain. Storms occasionally originate in this current in the Bay during the month and usually march almost due westwards (with a very slight northing). These storms are sometimes very severe and form one of the most important features of the month. They frequently give a deluge of rain to the narrow belt of country across which they advance, and at the same time drain away the moisture from the more distant districts. Hence the occurrence of cyclonic storms during the month is generally associated with a very irregular distribution of rainfall in the south of the Peninsula, excessive rainfall in the districts visited by the cyclonic storms usually accompanying deficient rain in the districts outside of the storm areas of the month.

In the Arabian Sea north-east monsoon winds usually set in steadily during October and extend over the whole of it except the extreme south. Hence fine weather generally prevails in that area. Storms which form in the Bay of Bengal

and cross the Peninsula, occasionally pass out into the Arabian Sea and give stormy weather for some days to the central and northern portions of that sea.

The chief feature of the meteorology of the month of October was the excessive pressure which prevailed over the whole Indian area and which was most marked in Upper India. The same feature has characterized the meteorology of India during the past month. The average pressure of the whole of India for the month was ·02″ in excess of the normal pressure of the month. Pressure was, relatively to the general variation, considerably in excess in Rajputana, the Deccan, the Himalayan mountain region and adjacent plain districts, and Burma. It was more or less in defect in Sind, Bombay, the Coromandel Coast districts, and South Bengal. This distribution of pressure is such as usually accompanies a stronger and steadier north-east monsoon than usual, more especially in the Arabian Sea. This was undoubtedly the case during the month so far as can be judged by the land observations.

The only important feature of the weather of the first ten days of the month was a cyclonic storm which formed in the Bay and advanced across the Peninsula into the Arabian Sea. The following gives a brief account of it.

Cyclonic storm of October 30th to November 8th.—It apparently formed to the south-west of the Andamans on the 28th and 29th of October. It began to affect the weather in the Coromandel Coast districts on the evening of the 29th and morning of the 30th when the barometer began to fall and skies to cloud over. The centre crossed the coast a little to the north of Madras on the evening of the 31st. The barometer was lowest at Madras at about 10 P. M. of the 31st when it stood at 28·9—the lowest reading recorded at that station during the past twenty-eight years. The storm was an unusually severe one and gave very violent winds and excessive rain to the coast districts near Madras. The centre advanced slowly in a west-north-westerly direction and was nearly midway between Cuddaph and Madras at 8 A. M. of the 1st November. It crossed the West Ghâts early on the morning of the 2nd and was near Mangalore at 8 A.M., when it was passing out into the Arabian Sea. Its subsequent course can only be conjectured from the coast observations. The storm apparently recurved and advanced in a northerly or north-north-westerly direction not far from the Bombay, Kattiawar and Cutch Coasts, and influenced the weather in these coast districts for the next three or four days. Several steamers reported that they experienced very rough stormy weather in the Arabian Sea during this period. The storm gave more or less heavy rain over the greater part of Madras, the Deccan, and the west coast districts as far north as Cutch, and moderate rain to the Central Provinces and some portion of Central India.

Heavy rain continued to fall in the west coast districts of the Bay, the Circars and Ganjam (in which the rainfall of the previous month had been very scanty) receiving very favourable rain at this period. Thus Vizagapatam reported 2·1 inches on the 4th, 4·5 inches on the 5th, and 2·6 inches on the 6th, and Masulipatam received 2·8 inches on the 4th, 1 inch on the 5th and 1·6 inches on the 6th.

The land observations of the 7th indicated that the storm in the Arabian Sea had apparently filled up. Fine weather prevailed on that day over the whole of Northern and Central India; whilst moderate rain continued to fall over the greater part of the Peninsula.

The weather however continued unsettled in the northern portion of the Arabian Sea and a small and feeble cyclonic storm was shewn by the observations of the 9th to be lying over Kattiawar.

It is not possible, in the absence of observations on board ships in the Arabian Sea, to decide whether this small storm passed into Kattiawar from the Arabian Sea or originated in the land area. The former appears on the whole to be more probable and the storm was hence subsidiary to the large storm of the preceding week. It was throughout very feeble and drifted slowly to the north-east on the 10th and filled up during the next twenty-four hours. It gave general rain to Kattiawar, Cutch and Guzerat on the 9th and 10th. Weather continued somewhat unsettled in Northern and Central India for some days

afterwards. The Central Provinces received rain on the 9th and 10th and 11th, the North-Western Provinces on the 11th and 12th, and the greater part of Bengal and Assam on the 12th, 13th and 14th. The rainfall in Lower Bengal accompanied a series of thunderstorms which gave some unusually heavy rainfalls for the season. Thus Calcutta received 3 inches and Burdwan nearly 2 inches on the 13th.

The diffused disturbance of the second week of the month (which was a continuation of the general disturbances accompanying the cyclonic storm of the first week) passed away on the evening of the 15th and fine weather with normal cold-weather conditions was established on the 16th over the whole of Northern and Central India. Showers, however, continued to fall in the south of the Peninsula.

Pressure was for some days afterwards lowest in the Andaman Sea, or to the south of the coast of Pegu, and the wind directions at the coast stations indicated a tendency to the formation of a cyclonic storm. It apparently never advanced beyond the preliminary stage of squally weather. Frequent showers fell in Lower Burma for some days and gave it moderate rain until the 20th. Rain ceased to fall in South Madras from the 17th until the last week of the month. On the 20th a slight cold-weather disturbance appeared in Sind and the Punjab. Rain fell in the northern districts of the Punjab and snow or hail in the adjacent hills on the 20th and 21st, when fine weather again set in over Upper India.

Meanwhile the conditions were apparently unchanged in the south and centre of the Bay where weather was still unsettled and squally, more especially in the Andaman Sea. Rain again fell generally in Lower Burma on the 22nd, after which the barometer rose rapidly, and the area of lowest pressure was transferred on the 23rd and 24th to the south-west of the Bay. This determined a flow of humid winds to the Coromandel Coast, and frequent showers giving favourable rain fell during the remainder of the month in the south of the Peninsula.

Weather again became disturbed in Upper India on the 29th. Moderate general rain fell in the western districts of the North-Western Provinces and south-eastern districts of the Punjab on the 24th, 25th and 26th. Frequent showers of hail and snow occurred in the hill districts. The general disturbance appeared to travel eastwards along the Himalayas as the eastern districts of the North-Western Provinces had showers on the 27th and Behar and North Bengal on the 28th and 29th, after which the disturbance filled up and disappeared.

At the end of the month normal cold-weather conditions were established over the whole country with somewhat steeper gradients and stronger north-easterly or cold-weather winds than usual. Rain was falling in South Madras but was diminishing rapidly in amount, and a short break commenced on the 1st of December which lasted for three or four days.

Rainfall of the month.—The preceding statement has shewn the conditions under which the rainfall of the month occurred. The normal total rainfall of the month is small for the whole of Northern and Central India. In consequence of the unusually frequent disturbances during the month in that area, the rainfall was considerably in excess, more especially in the Punjab, the north-western districts of the North-Western Provinces, Assam and Bengal, which received from two to five times their normal amounts.

The rainfall of the month was exceptionally abundant and favourable in the west coast districts of the Bay from Orissa southwards. These districts had obtained very scanty rain in the preceding month and the prolonged drought had commenced to affect the crops very seriously. Orissa and the Circars received nearly 5 inches in excess of their normal amount (3 inches). Mysore and Bellary nearly 5 inches in excess, Malabar 2 inches, the Deccan and Hyderabad nearly 2 inches, and the Carnatic 1 inch. Hence the whole of the Peninsula received abundant and favourable rain during the month. Lower Burma was the only area in which there was a considerable deficiency, as it only received an average of an inch and three quarters, or less than half its normal amount.

The following table shows the amount of rain and the difference from the average during the month of November, 1888, according to districts, as far as is indicated by the telegraphic returns from the observatories:—

Districts.	Number of stations.	Actual average rainfall.	Normal average rainfall in November.	Difference from the average in November, 1888.
Punjab, West	7	0·93	0·55	+0·38
Do., East	4	0·62	0·14	+0·48

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt. of India.

SIMLA,
The 10th December, 1888.

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and prospects of the Crops.

Madras.—*For week ending 8th December, 1888.*—No rain in Ganjam Godavari, Kistna, Cuddapah, Bellary, Anantapur and Kurnool, poor in Vizagapatam, Nellore, Salem, Malabar and South Canara, fair in Coimbatore, Nilgiris, and North Arcot, and good elsewhere. More rain wanted in parts of Coimbatore and Salem. Standing crops generally good and improving in the affected districts, but damaged by disease, insects or excessive rain in parts of South Arcot, South Canara, Cuddapah, Chingleput, and Tinnevelly; wet crops withering in one taluk of Coimbatore. Pasture generally sufficient except in parts of Salem and Coimbatore. Agricultural operations progressing. Prices falling in six districts, stationary in ten and rising in others. General prospects fair.

Bombay.—*For week ending 12th December, 1888.*—Rainfall during the week *nil*; wanted in parts of Nasik and in four talukas of Ahmednagar. Late *jowari* in parts of Bijapur, wheat and gram in four talukas of Belgaum and exotic cotton in three talukas of Dharwar suffering from blight; gram in one taluka of Nasik injured by insects, and late crops withering in parts of Khandesh; standing crops otherwise good except wheat in Broach. Harvesting of early crops and sowing of late crops progressing in several districts and cotton-picking in

parts of Ahmedabad, Kaira, and Broach; probable outturn of early crops in Kaira from four to eleven annas and in Ahmednagar from one to six annas. Fodder scarce in parts of Broach, Khandesh, Nasik, and Kathiawar. Scarcity of drinking-water in parts of Khandesh. Prices rising in parts of Khandesh and Nasik.

Bengal.—*For week ending 11th December, 1888.*—No rain, but fine weather over the whole of the Province during the week. Rice harvest is proceeding. The average outturn is estimated at between 8 and 10 annas in many districts. In Chota Nagpore, the estimated outturn is 14 annas in the Singbhoom district and 12 annas in the remaining three districts. No estimate of outturn is given for the eastern districts, but the crop in almost all of them is reported to be fair. Condition of the *rabi* crops is generally fair, except in parts of Chota Nagpore. Prospects of poppy are good, the weather having been favourable for the sowing. *Boro* or spring rice cultivation has begun. Considerable distress is apprehended in a tract along the Nepal frontier in the Chumparun, Mozufferpore, and Durbhunga districts, about 90 miles in length from east to west. Test works have been opened in the distressed tract, and the Collector of Chumparun reports that the number of workers is daily increasing. Gratuitous relief and relief in the shape of tuccavi advances have also been sanctioned.

N. W. P. and Oudh.—*For week ending 12th December, 1888.*—Weather clear and cold. Sowings of *rabi* crops and opium nearly completed. Reaping of late rice commenced and sugarcane-pressing in progress. Rain much needed. *Rabi* sowings being irrigated. Supplies sufficient and prices generally steady. Condition of cattle good.

Punjab.—*For week ending 12th December, 1888.*—No rain during the week. Prices rising in Delhi and Rawalpindi, but stationary in other districts. Reaping and harvesting of *kharif* crops nearly completed. Sugarcane and cotton still standing at Amritsar and Sialkote. Sowings of *rabi* crops still in progress. Rain much wanted at Hissar for *rabi* sowings and at Lahore for standing crops. *Kharif* outturn poor in Hissar. *Rabi* prospects generally good, but in Rawalpindi average only. Stock cattle are reported healthy. Fodder sufficient except in Hissar, Dera Ismail Khan, and parts of Mooltan and Rawalpindi. Poppy sowings completed in Amritsar.

Central Provinces.—*For week ending 12th December, 1888.*—Prospects unchanged. *Rabi* sowings completed, area being, on account of insufficient rainfall, below the average in the northern districts where rain is urgently needed. Elsewhere prospects are favourable. *Kharif* outturn, cotton excepted, is generally below the average.

Burma.—*For week ending 8th December, 1888.*—Little or no rain has fallen throughout Upper and Lower Burma during the past week. Favourable reports of the crops have been received from all districts, except Prome, Thayetmyo, and Amherst in Lower Burma, and Bhamo, Ye-u, Pakôkku, and Meiktila in Upper Burma, where the want of rain has been felt. The price of paddy has fallen in Pegu, Tharrawaddy, Henzada, Thayetmyo, Tavoy, Myingyan, Pakôkku, Minbu, and Pyinmana, and risen slightly in Mergui.

Assam.—*For week ending 12th December, 1888.*—Weather cold. Rainfall *nil*. Reaping of cold-weather rice continues. Pulses being gathered. Tea season over. Prospects of crops in general good.

Mysore and Coorg.—*For week ending 12th December, 1888.*—No rain. Crops in good condition except in parts of the Mysore district, where rain is much needed. Harvesting operations still continue in parts. Outturn reported to be favourable. No change in prices.

Slight rain in Coorg during the week. Standing crops good. Prices risen slightly.

Berar and Hyderabad.—*For week ending 12th December, 1888.*—Slight rain in the Buldana district. Picking of cotton and harvesting of food crops still continues. Both *kharif* and *rabi* crops are fairly good, though in some

places *jowari* is blackened by late rains. Agricultural stock in good condition. Fodder insufficient in almost all districts. Prices of food grains stationary.

No rain during the week in Hyderabad. Harvesting of *abi* crops continues. *Rabi* crops in good condition. Scarcity of fodder still felt. Prices stationary.

Central India.—*For week ending 12th December, 1888.*—There has been no material change during the week in the condition of crops and weather since the last report.

Rajputana.—*For week ending 12th December, 1888.*—No rain. *Rabi* sowings generally completed. Standing crops good generally. Harvests fair. Cattle generally in good condition. Fodder sufficient, except in Kherwara, Meywar, and parts of Marwar. Prices generally steady. Cotton satisfactory in Jeypore, average in Ulwar.

Nepal.—*For week ending 6th December, 1888.*—No rain. Weather seasonable. Prospects good.

W. R. LAWRENCE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE,
STATISTICAL BRANCH;
Calcutta, 1xth December, 1888.

E. J. SINKINSON,
Offg. Secretary to the Government of India.

Printed and published for the GOVERNMENT OF INDIA, *at the Office of the* SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA, *No. 8, Hastings Street, Calcutta.*

SUPPLEMENT TO

The Gazette of India.

No. 51.] CALCUTTA, SATURDAY, DECEMBER 22, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 15th December, 1888.*—No rain in Godavari, Kistna, Cuddapah, Bellary, Kurnool, South Canara, and Malabar; slight in Ganjam, Vizagapatam, Anantapur, Coimbatore, Salem, and Tinnevelly; and fair elsewhere. More rain wanted in parts of Coimbatore and Salem. Standing crops generally good; damaged by insects, disease, or excessive rain in parts of South Arcot, Chingleput, and Tinnevelly. Wet crops withered in one taluk of Coimbatore. Pasture generally sufficient, except in parts of Salem and Coimbatore. Agricultural operations progressing. Prices rising in six districts, falling in eight, and stationary in others. General prospects fair.

Bombay.—*For week ending 19th December, 1888.*—Rain needed for late crops in three talukas of Poona, and six of Ahmednagar, and urgently in Khandesh and Nasik, where crops are withering. Oil-seeds in one taluka of Hyderabad, exotic cotton in four talukas of Dharwar, gram and wheat in parts of Belgaum, and late *jowari* in parts of Bijapur, blighted. Gram in two talukas of Ahmednagar injured by worms. Standing crops otherwise good, except wheat in Broach. Harvesting of early crops and sowing of late crops progressing in several districts, and cotton-picking in parts of Kaira, Broach, and Khandesh. Fodder scarce in two talukas of Ahmednagar, four of Nasik, and in parts of Khandesh, Kathiawar, and Baroda. Agricultural stock poor in four talukas of Nasik and in parts of Kathiawar. Drinking water scarce in parts of Khandesh, Nasik, and Baroda. Prices rising in Khandesh and in one taluka of Nasik.

Bengal.—*For week ending 18th December, 1888.*—Weather has been cold and dry. No rain. Rice harvest is in full progress. The general outturn will be very deficient, but nowhere is it estimated to be less than half an average crop, excepting in limited portions of the Patna, Bhagulpore, and Rajshahye

Divisions, while in the districts of Dacca, Furreedpore, Mymensingh, Tipperah, Noakholly, and Singbhoom almost a full average yield is expected. Prospects of the *rabi* crops are generally fair, except in the affected tracts close to the Nepal frontier and in parts of the Chota Nagpore Division, where there has been no rain of late. Poppy and tobacco crops are generally promising. Sugarcane is also reported to be a good crop all round. Cultivation of spring rice is progressing. Prices of rice and of all commoner grains have generally been somewhat lower than in the preceding fortnight. No further report regarding threatened distress in the Patna Division has been received.

N.-W. P. and Oudh.—*For week ending 19th December, 1888.*—Weather seasonable. *Kharif* harvest nearly finished. Rain needed in places. *Rabi* being irrigated. Poppy crop thriving. Sugarcane-pressing in progress. Supplies sufficient and prices generally steady. Condition of cattle satisfactory.

Punjab.—*For week ending 19th December, 1888.*—No rain except a slight fall at Murree, Rawalpindi district. Prices are unsettled in Delhi, falling in Ferozepur, and stationary in other districts. Harvesting of *kharif* crops nearly over. Cotton-picking still going on in Shahpur. Sowings of *rabi* crops nearly completed. Rain wanted at Hissar for *rabi* sowings, and at Lahore for standing crops. Prospects of *rabi* crops are generally good, but only average in Rawalpindi. Stock cattle are generally healthy. Fodder sufficient except in Hissar, Dera Ismail Khan, and parts of Mooltan and Rawalpindi.

Central Provinces.—*For week ending 19th December, 1888.*—Prospects unchanged. Rain urgently required for winter crops in northern districts. Prospects elsewhere favourable. Outturn of autumn crops excepting cotton generally below average.

Burma.—*For week ending 15th December, 1888.*—The crop prospects in Lower and Upper Burma remain unchanged and are generally favourable. There has been a little rain in Prome, Thayetmyo, Myingyan, Pakôkku, Minbu, Meiktila, Yamethin, and Pyinmana. The price of paddy has fallen slightly in Akyab, Tharrawaddy, Thayetmyo, Moulmein, Amherst, Tavoy, Mandalay, and Minbu, and is stationary in the remaining districts of Lower and Upper Burma.

Assam.—*For week ending 19th December, 1888.*—Weather cold. No rainfall. Winter rice still being harvested. Gathering of pulses continues. Prospects of standing crops generally good.

Mysore and Coorg.—*For week ending 19th December, 1888.*—No rain in Mysore. Standing crops in good condition, except in one taluk of the Mysore district where want of rain is felt. Outturn on the whole favourable. Prices slightly fallen in the Chitaldroog district.

Slight rain in Coorg. Standing crops fairly good, but likely to be generally deficient in outturn.

Berar and Hyderabad.—*For week ending 19th December, 1888.*—No rain. Weather cool. Cotton-picking approaching completion in some districts. *Kharif* good. Crops are being cut and stacked for threshing. *Rabi* crops generally good throughout the Province. Agricultural stock also good. Price of fodder high. No noticeable change in prices of food-grains.

There has been no rain at Hyderabad during the week. Harvesting of *abi* crops continues. *Rabi* crops thriving. Prices falling.

Central India.—*For week ending 19th December, 1888.*—Agricultural operations have been completed in Goona. Prospects in Western Malwa slightly better this week; no other changes.

Rajputana.—*For week ending 19th December, 1888.*—No rain. Agricultural operations satisfactory at places. Standing crops good and agricultural stock in good condition generally. Pasturage or fodder scarce in Kherwara, Meywar and parts of Marwar; sufficient at other places. Prices steady generally; fluctuating and falling at places. Cotton and opium crops satisfactory in Jeypore and Harowtee and fair in Meywar.

Nepal.—*For week ending 13th December, 1888.*—No rain. Weather cold; mornings foggy. Sowing of wheat commenced in the valley. Prospects good.

W. R. LAWRENCE,
Offg. Secretary to the Government of India.

GOVERNMENT OF INDIA.

M. C. BRACKENBURY, *Major, R.E.*,
Under-Secretary.

CALCUTTA,
The 20th December, 1888.

Printed and published for the GOVERNMENT OF INDIA, *at the Office of the* SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA, *No. 8, Hastings Street, Calcutta.*

SUPPLEMENT TO

The Gazette of India.

No. 52.} CALCUTTA, SATURDAY, DECEMBER 29, 1888.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

GOVERNMENT OF INDIA.

REVENUE AND AGRICULTURAL DEPARTMENT.

Weekly Report on the state of the Season and prospects of the Crops.

Madras.—*For week ending 22nd December, 1888.*—No rain in Ganjam, Godaveri, Kistna, Bellary, Madras, South Canara, and Malabar; fair in Tinnevelly; and slight elsewhere. More rain wanted in parts of Coimbatore and Salem. Standing crops generally good, but damaged by insects, disease, or excessive rain in parts of South Arcot, Tinnevelly, and Coimbatore; wet crops withering in two taluks of Coimbatore. Water supply insufficient in parts of Ganjam, Cuddapah, Salem, Coimbatore, and Madura. Pasture generally sufficient, except in parts of Salem and Coimbatore. Agricultural operations progressing. No material fluctuations in prices. General prospects fair.

Bombay.—*For week ending 26th December, 1888.*—Slight rain in parts of Shikarpur, Hyderabad, and Upper Sind Frontier; more needed in three talukas of Sholapur, also in one taluka of Poona, six of Ahmednagar, and in parts of Khandesh and Nasik where late crops are withering. Exotic cotton in four talukas of Dharwar, wheat and gram in parts of Sholapur and Belgaum, and *jowari* in parts of Bijapur, blighted, and gram in two talukas of Ahmednagar injured by worms; standing crops otherwise good, except wheat in Broach. Harvesting of early crops and sowing of late crops progressing in some districts and cotton-picking in parts of Ahmedabad, Kaira, Broach, and Khandesh. Probable outturn of early crops in Satara from eight to ten annas. Fodder scarce in six talukas of Nasik, two of Ahmednagar, one of Belgaum, and in parts of Broach, Khandesh, and Kathiawar. Drinking water scarce in two talukas of Nasik and in parts of Khandesh.

Bengal.—*For week ending 25th December, 1888.*—No rain fell during the week. Weather seasonably cold. *Aman* harvest is nearly completed, and is estimated to yield between eight and ten annas of an average crop in majority of districts, about twelve annas in the district of Chota Nagpur, and almost a full

average crop in Dacca, Furreedpore, Mymensingh, Noakholly and Tipperah. *Rabi* crops are generally reported on fairly well, except in the affected tracts in the Patna Division and in parts of Chota Nagpur, where the prospects are poor for want of rain. Poppy is coming up well, the weather being very favourable. Sugarcane and tobacco are promising crops. Cultivation of spring rice is proceeding well. Latest report regarding affected tracts in the Patna Division shows that the attendance on test relief works in Chumparun has increased, but no labourers have appeared in Gya; that grain stocks everywhere are sufficient, and prices are fairly steady and not excessively high; and that no gratuitous relief has yet been given.

North-Western Provinces and Oudh.—*For week ending 26th December, 1888.*—Weather clear and cold. Rain much wanted. *Rabi* crops being irrigated. Sugarcane being pressed. Poppy sowings continue. Supplies sufficient. Prices have a tendency to rise. Fodder scarce in places. General condition of agricultural stock satisfactory.

Punjab.—*For week ending 26th December, 1888.*—Slight rainfall in Amritsar, Sialkote, and Rawalpindi districts. Prices are unsettled in Delhi, falling in Ferozepore, rising in Rawalpindi, and stationary in other districts. Harvesting of *kharif* crops nearly completed; sowings of *rabi* crops finished. Rain wanted at Amballa and Lahore for standing crops. Prospects of *rabi* crops generally good, though only average in Rawalpindi. Stock cattle are generally healthy. Fodder sufficient, except in Dera Ismail Khan, parts of Mooltan and Rawalpindi. Poppy crops are reported in good condition in Amritsar.

Central Provinces.—*For week ending 26th December, 1888.*—Prospects unchanged. Rain required for winter crops in northern districts. Prospects elsewhere favourable. Harvesting of autumn crops in progress. Winter sowings completed. Fodder sufficient. Cattle in good condition.

Burma.—*For week ending 22nd December, 1888.*—Crop prospects are still favourable, except in Prome, Thayetmyo, Amherst, and part of Meiktila. Rain has fallen in Mergui alone. The price of paddy has fallen in Tharrawaddy, Prome, Thôngwa, Henzada, Amherst, Tavoy, and risen slightly in Thayetmyo, Mergui, and Minbu.

Assam.—*For week ending 27th December, 1888.*—Weather seasonable. No rain. Reaping of winter rice continues. Tea manufacturing closed. State and prospects of crops generally good.

Mysore and Coorg.—*For week ending 26th December, 1888.*—No rain. Standing crops generally in good condition. Harvesting operations almost completed in parts. Prospects on the whole favourable.

Standing crops generally good in Coorg.

Berar and Hyderabad.—*For week ending 26th December, 1888.*—The outturn of the *kharif* crops is estimated at 10 to 12 annas. *Rabi* crops promise well at present. Cattle healthy. Fodder insufficient. Prices stationary.

No rain in Hyderabad. Harvesting of *abi* crops finished. *Rabi* crops thriving. Prices stationary.

Central India.—*For week ending 26th December, 1888.*—Prospects in Western Malwa reported to be slightly improving. No changes in other Agencies, except in Bhopal, where prices are high. Opium sowing completed in Bhopawar and Neemuch; in progress in Gwalior and Bhopal; poor in Western Malwa, and good in Goona.

Rajputana.—*For week ending 26th December, 1888.*—Agricultural operations satisfactory. Standing crops thriving well. Agricultural stock in good condition generally. Pasturage or fodder sufficient, except in Kherwara, Meywar, and parts of Marwar. Prices steady generally. Opium and cotton crops satisfactory in Marwar, Kotah, and Harowtee. Cotton crop satisfactory in Jeypore.

Nepal.—*For week ending 20th December, 1888.*—No rain. Hoar frost every morning. Wheat has been sown. Potatoes progressing. Food-grains dear.

W. R. LAWRENCE,
Under-Secretary to the Government of India.

GOVERNMENT OF INDIA.
